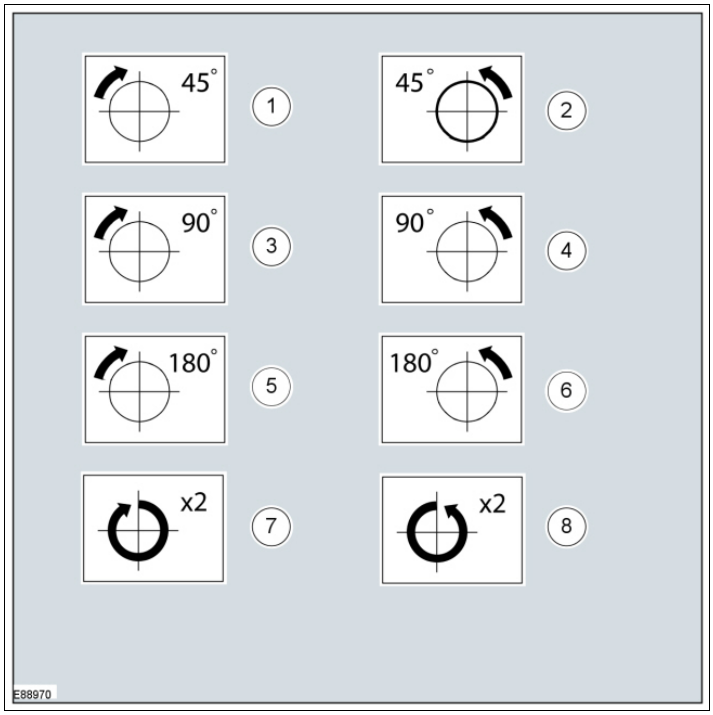
Symbols Glossary

Symbols are used inside the graphics and in the text area to enhance the information.

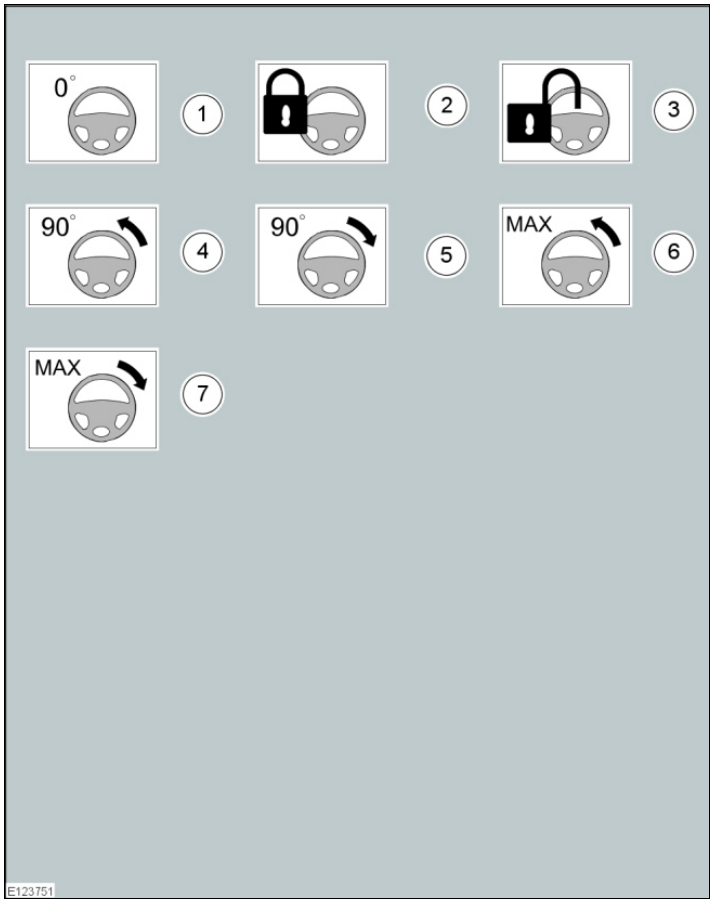
Movement Symbols



Movement symbols provide detailed information to a required component movement. These component movements can be rotational or 1-3 dimensional movements.

Item	Description
1	Minor component movement clockwise or counterclockwise
2	Major component movement clockwise or counterclockwise
3	Component movement to the left, right, up, or down
4	Component movement towards or away
5	3 dimensional component movement
6	2 dimensional component movement
7	3 dimensional component rotation
8	3 dimensional component cycling

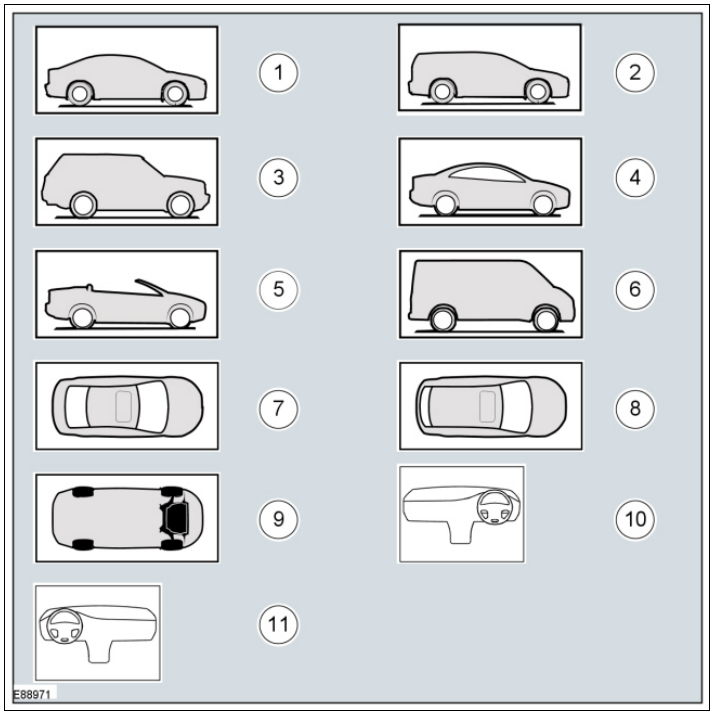
Turn Symbols



Turn symbols are used to provide further information on the direction or angle of component turns.

Item	Description
1	Turn the component clockwise through 45°
2	Turn the component counterclockwise through 45°
3	Turn the component clockwise through 90°
4	Turn the component counterclockwise through 90°
5	Turn the component clockwise through 180°
6	Turn the component counterclockwise through 180°
7	Turn the component clockwise through 2 complete turns
8	Turn the component counterclockwise through 2 complete turns

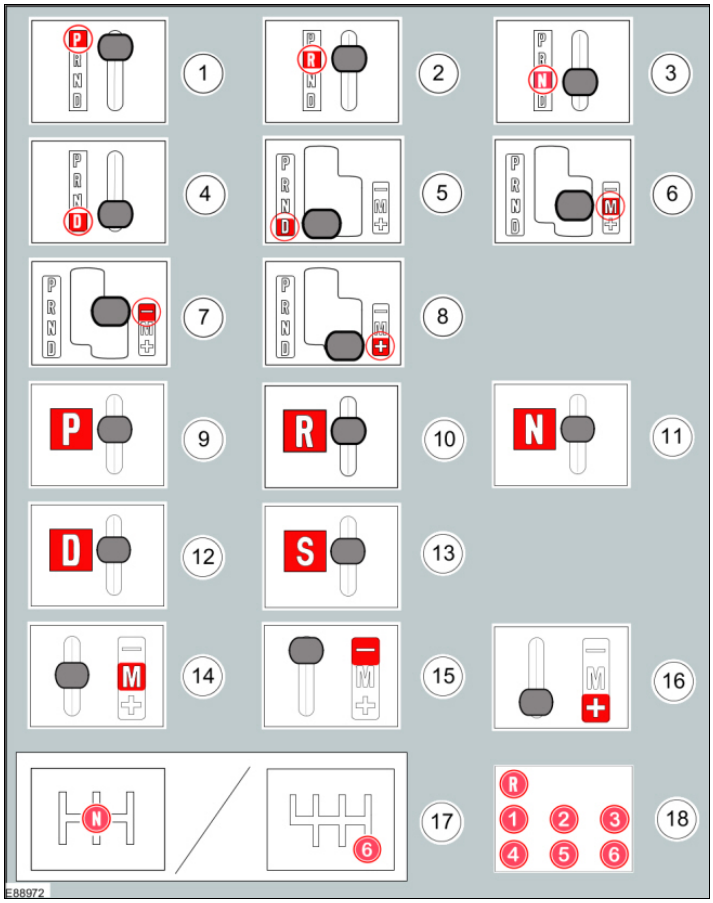
Steering Wheel Symbols



Steering wheel symbols are used to provide further information to a required steering wheel position or steering column lock status.

Item	1	Steering wheel in straight ahead position
2	Steering column locked	
3	Steering column unlocked	
4	Rotate steering wheel 90° left from center	
5	Rotate steering wheel 90° right from center	
6	Turn steering wheel fully counterclockwise to stop	
7	Turn steering wheel fully clockwise to stop	

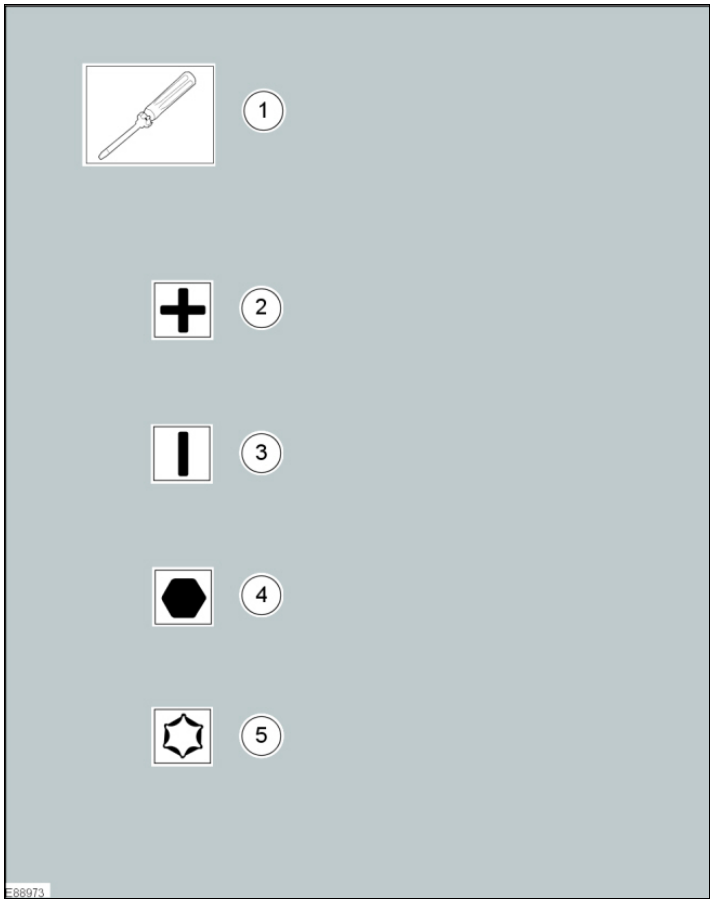
Body Types



Body type symbols are used to identify different body configurations.

Item	Description
1	3, 4, 5-door body style
2	Wagon body style
3	Sport Utility Vehicle (SUV) body style
4	Coupe body style
5	Convertible body style
6	Van body style
7	3, 4, 5-door body style - Top View
8	Wagon body style - Top View
9	Underbody view
10	Right-hand drive (RHD) vehicle
11	Left-hand drive (LHD) vehicle

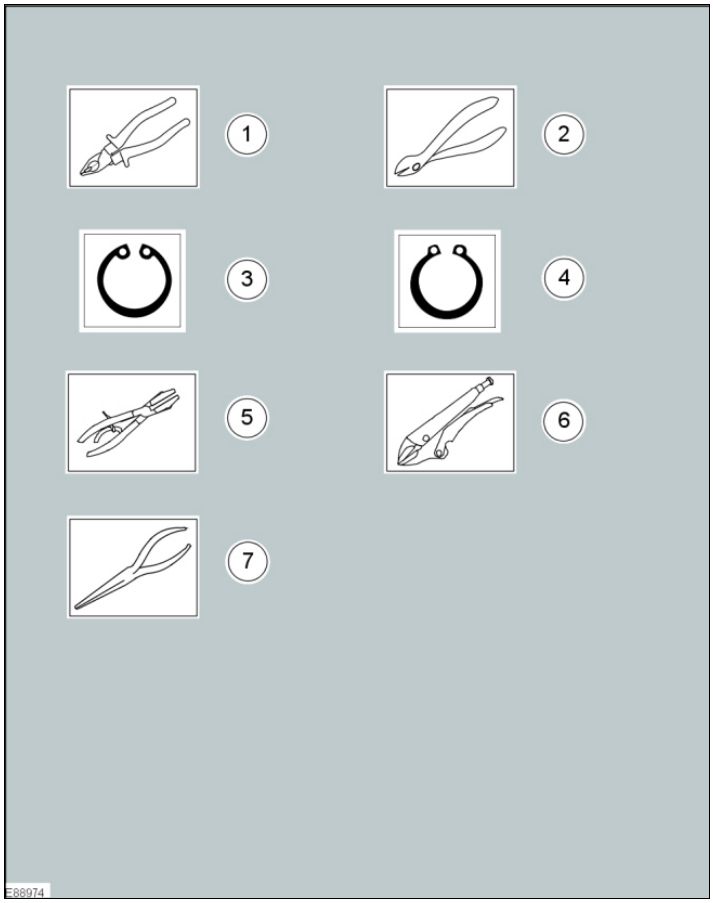
Gearshift Lever Position Symbols



Gearshift lever position symbols are used to show the gear position required for the procedure.

Item	Description
1	Set the selector lever to the park (P) position
2	Set the selector lever to the reverse (R) position
3	Set the selector lever to the neutral (N) position
4	Set the selector lever to the drive (D) position
5	Set the selector lever with manual shift option to the drive (D) position
6	Set the selector lever with manual shift option to the manual (M) position
7	Set the selector lever with manual shift option to the shift down (-) position
8	Set the selector lever with manual shift option to the shift up (+) position
9	Set the manual shift lever to the neutral (N) position
10	Set the manual shift lever to indicated gear position (all possible gears shown here)

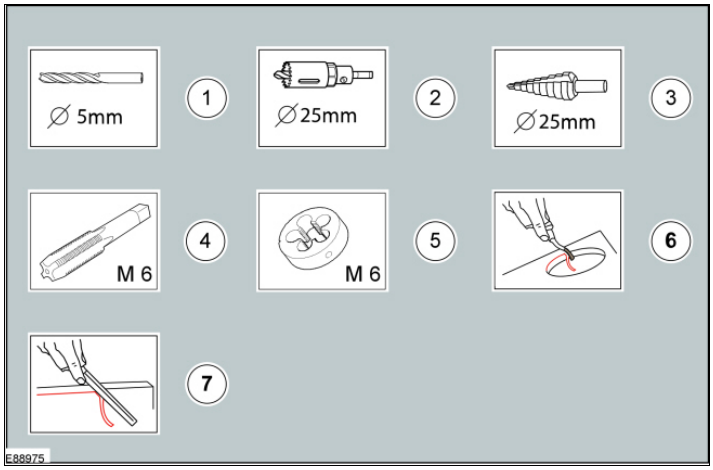
Screwdriver Symbols



The screwdriver symbols are used to indicate which screwdriver bit is required for the procedure step.

Item	Description
1	Screwdriver
2	Phillips or cross-bladed screwdriver
3	Flat-bladed screwdriver
4	Hexagonal or Allen screwdriver
5	TORX screwdriver

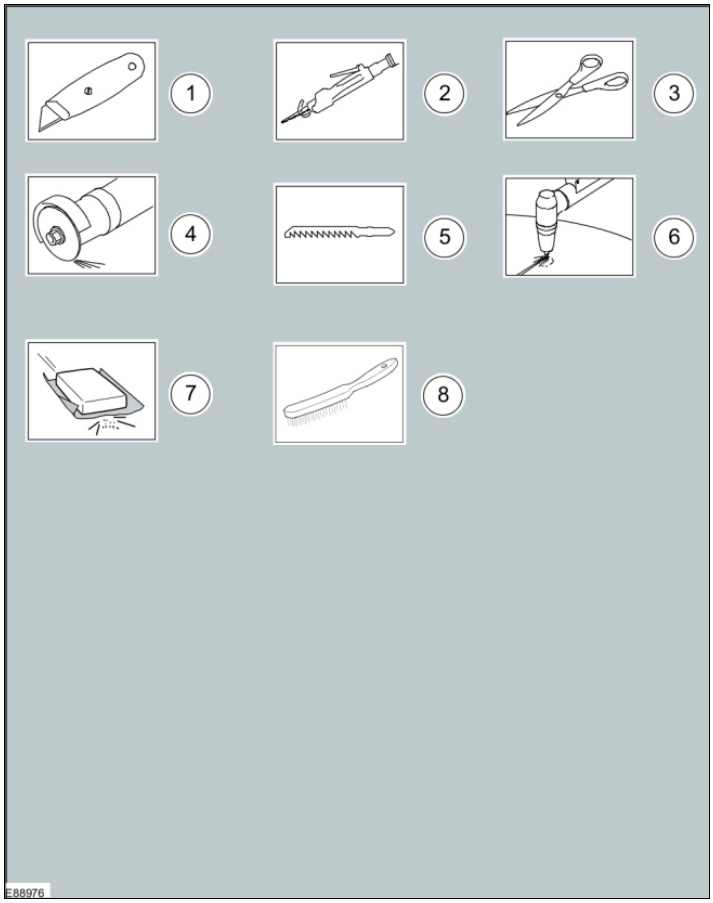
Plier Symbols



The plier symbols are used to indicate which plier is required for the procedure step.

Item	Description
1	Combination pliers
2	Side cutter pliers
3	Internal snap-ring pliers
4	External snap-ring pliers
5	Hose clamping pliers
6	Locking pliers
7	Long or Needle-nosed pliers

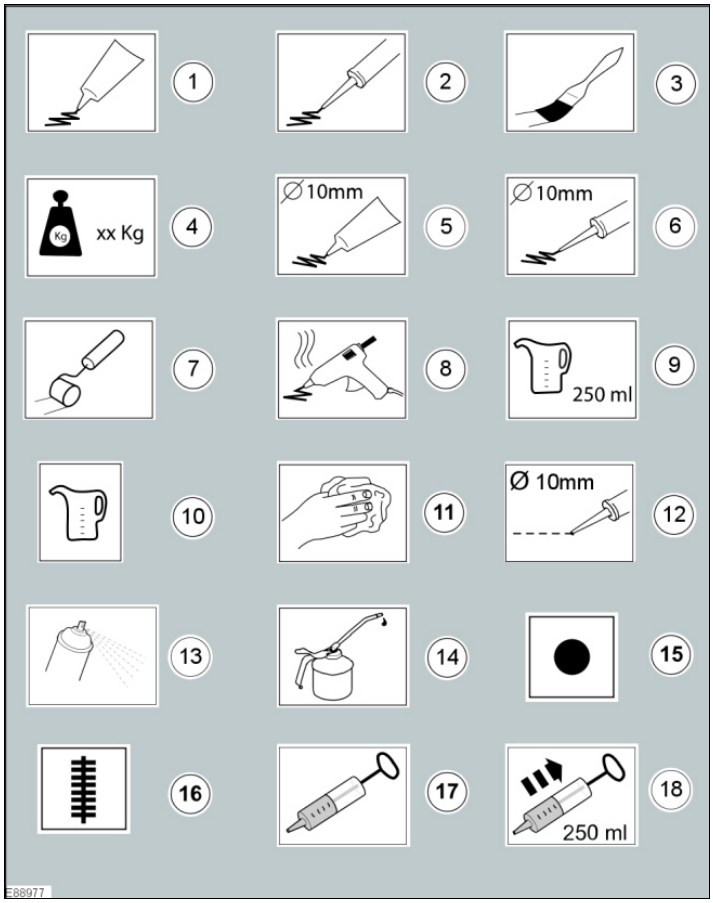
Drilling and Threading Tool Symbols



The drilling or threading tool symbols are used to indicate which type and size drill, thread-cutting device, or file is required for the procedure.

Item	Description
1	Drill bit with a specified diameter
2	Hole saw with a specified diameter
3	Stepped drill bit using a specified step diameter
4	Tap with a specified diameter
5	Die with a specified diameter
6	File or de-burring tool for circular holes
7	File or de-burring tool

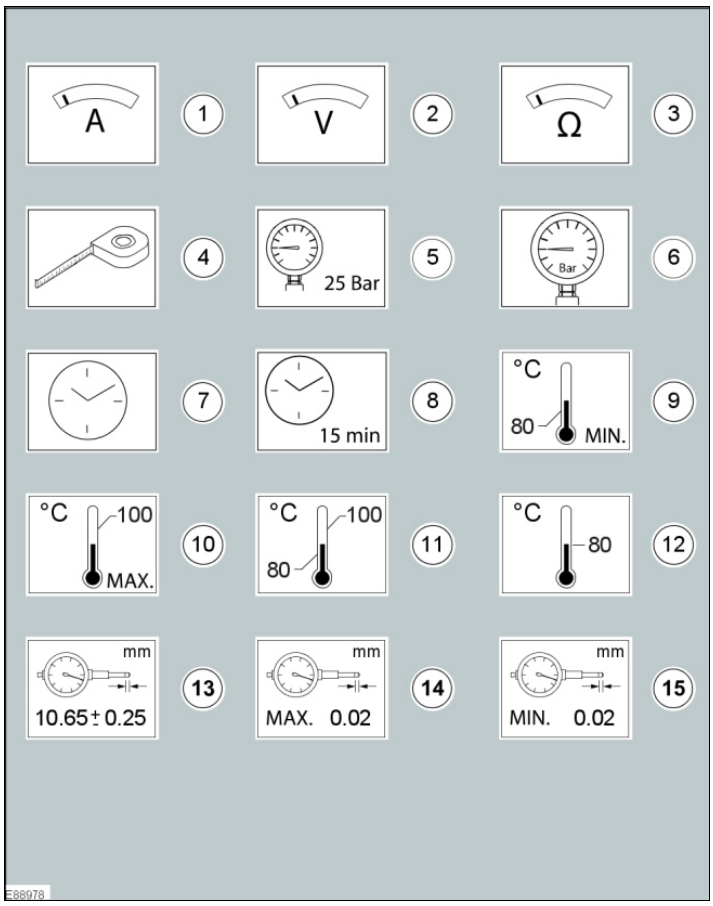
Cutting Tool Symbols



The cutting tool symbols are used to indicate which type of cutting tool is used for the procedure.

Item	Description
1	Box-cutter or cutting knife
2	Pneumatic body saw
3	Scissors
4	Grinder
5	Jig saw
6	Plasma cutter
7	Sanding block or paper
8	Drill through the indicated number of body layers with the specified diameter drill bit
9	Drill through the indicated number of body layers with an appropriate size drill bit
10	Drill through first body layer with the specified diameter drill bit
11	Drill through first body layer with an appropriate size drill bit
12	Wire brush

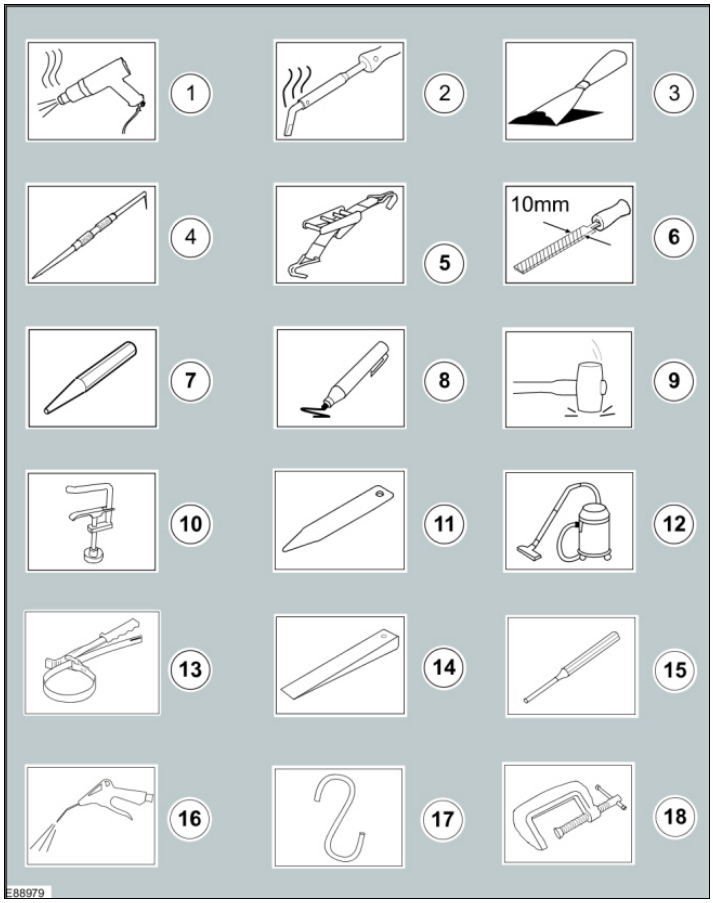
Apply Chemicals, Lubricants, or Clamping Load Symbols



The apply chemicals, lubricants or clamping load symbols are used to direct the application of chemicals, lubricants, or loads for the procedure.

Item	Description
1	Apply a bead from the specified tube
2	Apply a bead from the specified cartridge
3	Apply the specified chemical with a brush
4	Apply the specified clamping load to the specified component
5	Apply the specified diameter bead from the specified tube
6	Apply the specified diameter bead from the specified cartridge
7	Apply the specified chemical with a roller
8	Apply hot glue to the specified component
9	Apply the specified amount of fluid
10	Apply the fluid
11	Clean the specified component with the specified material
12	Apply a broken bead of the specified diameter
13	Apply the specified chemical with a spray can
14	Apply the specified lubricant to the specified component
15	Spot weld the specified component
16	Apply a continuous line of weld to the specified component
17	Apply the fluid with a syringe
18	Extract the fluid with a syringe

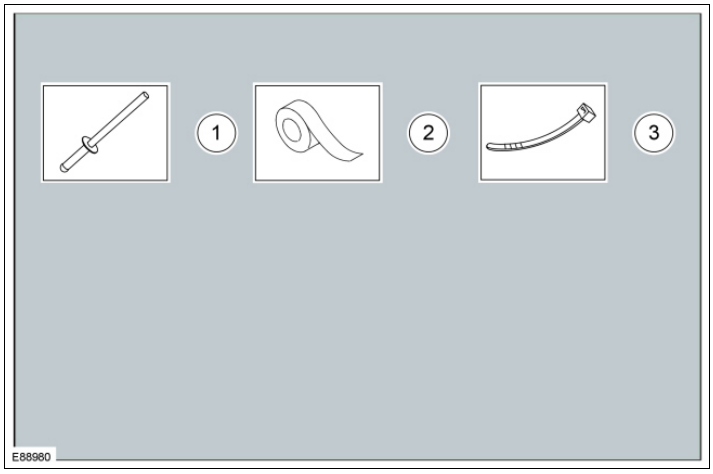
Measurement Symbols



The measurement symbols are used to show which measurement will be made at a specified point.

Item	Description
1	Measure the amperage using a digital multimeter
2	Measure the voltage using a digital multimeter
3	Measure the resistance using a digital multimeter
4	Measure the length or distance
5	Check that the specified pressure is available using a suitable pressure gauge
6	Measure the pressure at the specified port using a suitable pressure gauge
7	Measure the time with a stopwatch
8	Wait for the indicating amount of time
9	The minimum temperature for the specified task
10	The maximum temperature for the specified task
11	The allowable temperature range for the specified task
12	The required temperature for the task
13	Measure for the specified movement
14	Measure for movement not to exceed specified amount
15	Measure for the miniumum-specified movement

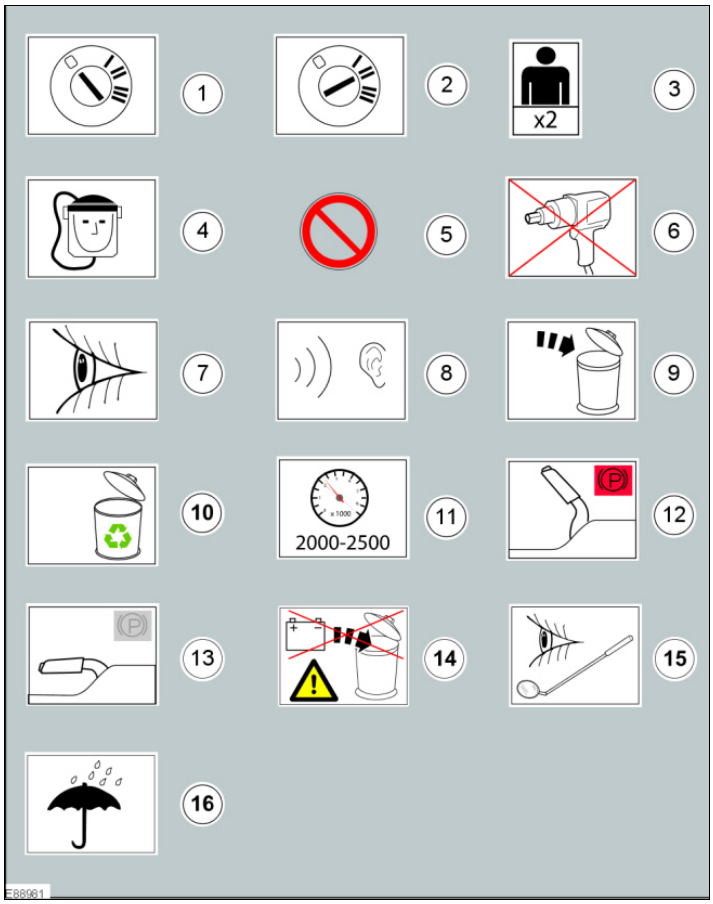
General Equipment Symbols



The general equipment symbols specify which general equipment is used to carry out the procedure.

Item	Description
1	Hot air gun
2	Soldering iron
3	Putty knife or scraper
4	Awl or scriber
5	Hold-down or securing strap
6	File with specified size
7	Center punch
8	Marker
9	Metal Inert Gas (MIG) welder
10	Hose clamp
11	Trim tool
12	Shop vacuum
13	Strap wrench
14	Wedge
15	Pin punch

Material Symbols

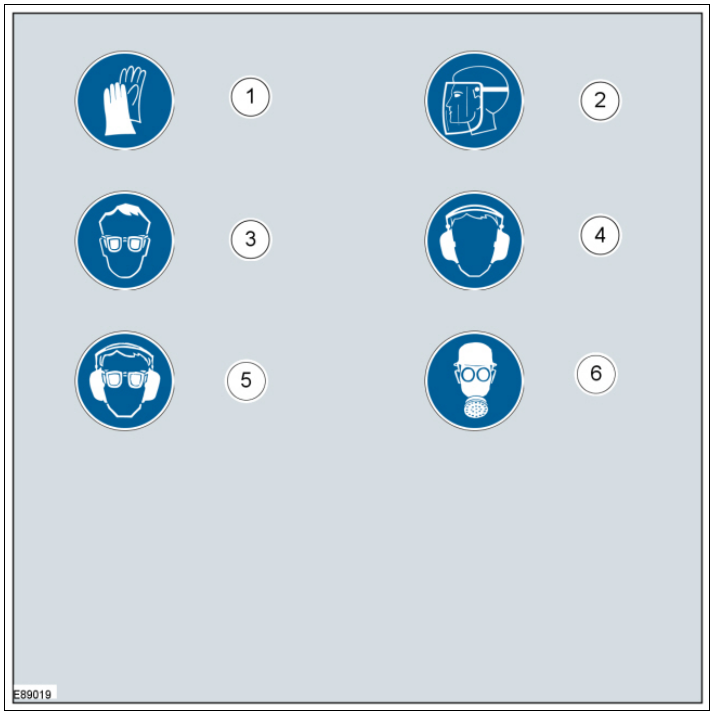


The material symbols are used to indicate where to use the specified material.

Item	Description
1	Remove or install a pop-rivet
2	Apply tape to specified area
3	Remove or install a cable tie

Miscellaneous Symbols

These symbols provide miscellaneous information required for the procedure.

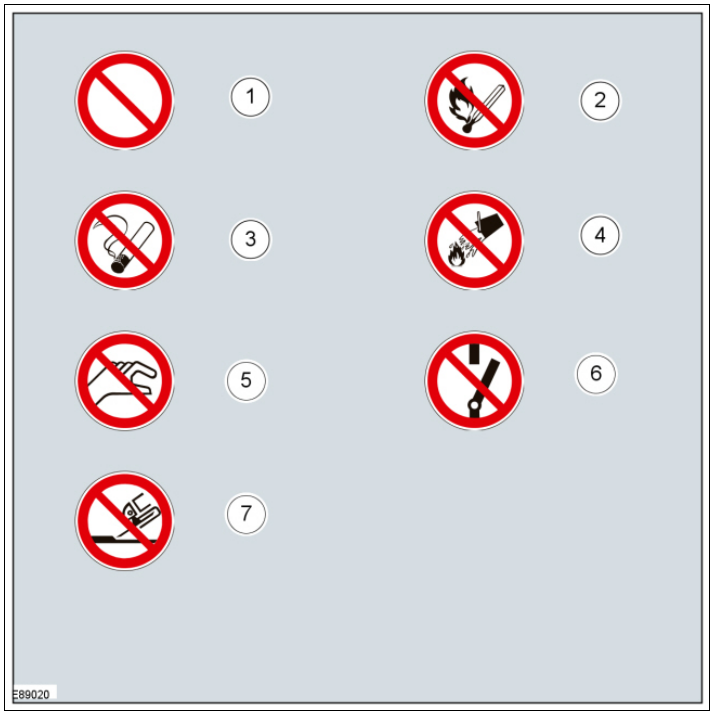


Item	Description

1	Turn Ignition off
2	Turn Ignition on (run position)
3	This procedure requires the specified number of technicians
4	Respirator or self-contained breathing apparatus
5	Prohibited action used in combination with another symbol
6	Do not use power tools
7	Visual inspection
8	Noise check
9	Dispose the specified component
10	Dispose the specified component
11	Set engine speed to the specified RPM
12	Firmly apply the parking brake
13	Fully release the parking brake
14	Special disposal required
15	Visually inspect using a mirror
16	Area or component must be dry

Mandatory Protective Equipment

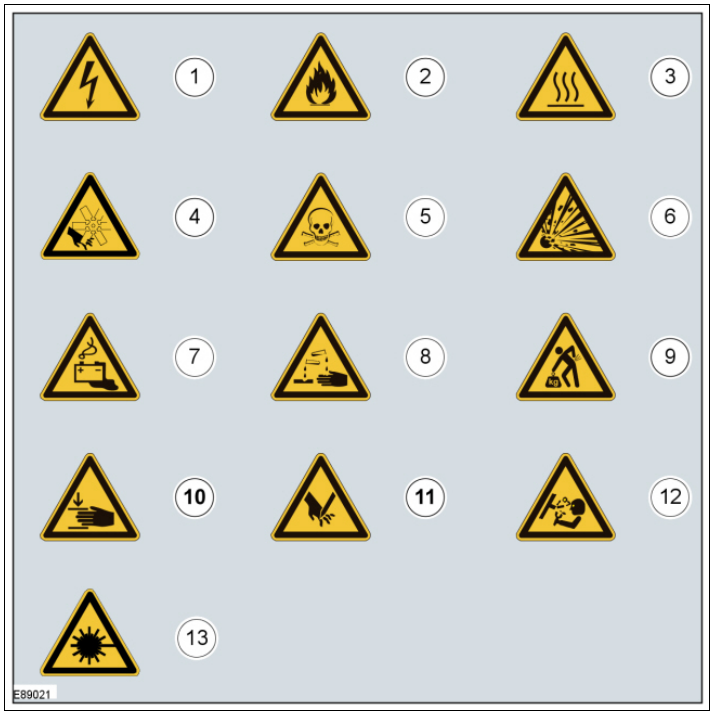
The protective equipment symbols indicate required safety equipment to avoid or reduce health and safety risks.



Item	Description
1	Wear protective gloves
2	Wear face shield
3	Wear safety goggles

4	Wear ear protection
5	Wear safety goggles and ear protection
6	Wear a respirator

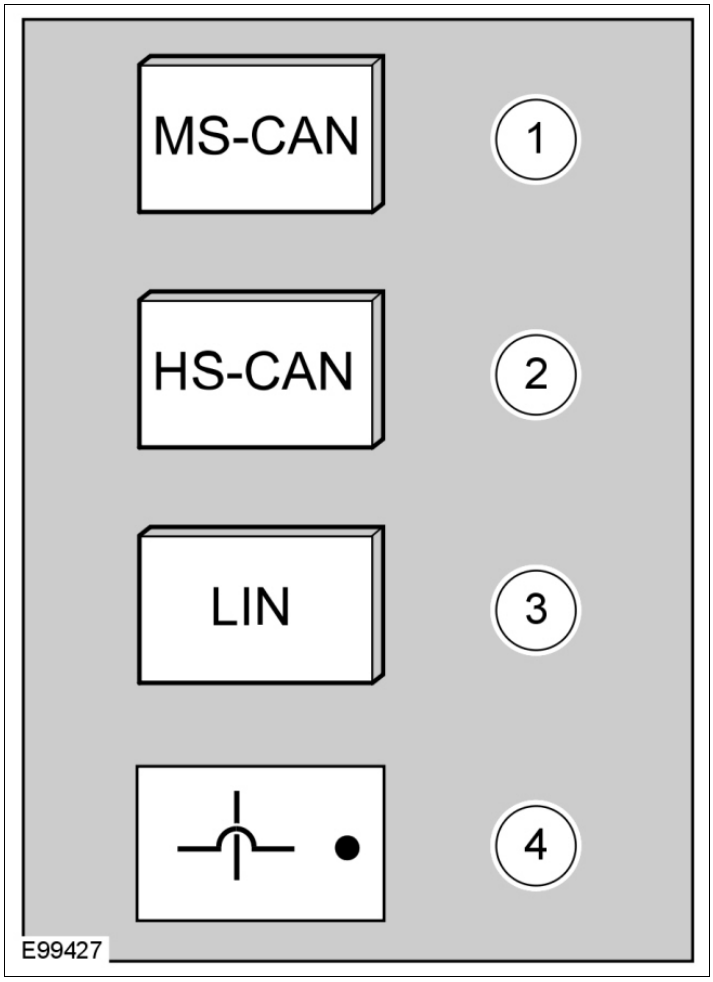
Prohibition Symbols - Health, Safety, and Component Care



The prohibition symbols are used to prohibit specified actions to avoid safety hazards or component damage.

Item	Description
1	Prohibited action used in combination with another symbol
2	No open flames
3	No smoking
4	No water
5	Do not touch
6	Do not switch
7	No grinding

Warning Symbols - Health and Safety Warnings or Component Care



The warning symbols are used to avoid hazardous conditions and to avoid component damage.

Item	Description
1	Hazardous voltage or Electrical shock or Electrocution danger
2	Fire hazard or highly flammable
3	Burn hazard or hot surface
4	Device has automatic start-up
5	Toxic
6	Explosive material
7	Battery hazard
8	Corrosive material
9	Lifting hazard
10	Hand crush or force from above hazard
11	Cutting of fingers or hand hazard
12	Pressure hazard
13	Invisible laser radiation. Do not view directly with optical instruments (magnifiers). Class 1M laser product.

System Diagram Symbols

The symbols provide Information about networks or wiring.

Item	Description
1	Medium Speed Controller Area Network
2	High Speed Controller Area Network
3	Local Interconnect Network
4	Wires cross but are not connected

Using This Manual

Introduction

This manual describes and directs repair procedures for this vehicle model year. It includes diagnostics for all vehicle systems except driveability and emission control. Refer to the separate Powertrain Control/Emissions Diagnosis (PC/ED) manual for driveability and emission control diagnostics.

Information is organized into groups, with sections that have subsections dividing them.

Warnings, Notices, and Notes in This Manual

Warnings provide information to avoid personal injury and to make sure service actions on critical safety systems are performed correctly.

Notices provide information to avoid damage to the vehicle or a component.

Notes provide information critical for a complete and effective repair.

Warnings that apply to an entire system or workshop manual section are located in section 100-00 Description and Operation Safety Warnings .

Warnings, Notices, or Notes that apply to an entire procedure will be placed at the beginning of the procedure.

Warnings, Notices, or Notes that apply to a single step are placed at the beginning of the step. Those that apply to a group of steps will be placed at the first step requiring it.

Vehicle and Engine Orientation Identifiers

LH and RH vehicle designations are oriented from the driver's seat position looking forward. LH and RH engine designations are oriented from the flywheel position looking towards the crankshaft pulley.

How to Use Diagnostic Information

DTC and Symptom Charts

Module DTC Charts are used to begin and direct the diagnosis of a DTC. Symptom Charts contain concern symptoms and direct solutions either in the chart or in a linked Diagnostic Routine. Both DTC and Symptom Charts may provide the solution within the chart, or provide a link to the appropriate Diagnostic Routine.

In some sections, the Symptom Chart is preceded by a Preliminary Inspection which must be followed prior to using the Symptom Chart

Using Module DTC Charts

This Workshop Manual contains diagnostics for DTCs set by vehicle modules. Driveability and emission DTCs are covered in the separate Powertrain Control/Emissions Diagnosis (PC/ED) manual. If a PCM-set DTC is not listed in the Workshop Manual, it is serviced in the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

DTC diagnostics are found in both on-line and printed publications and are used as follows:

- On-line publications: Using the left side menu, click on the Master DTC Chart link to view the vehicle module DTC charts. Each module has a chart with links or in-chart solutions for all DTCs diagnosed in the Workshop Manual.
- Printed publications: Use the DTC index in the rear of the book.

Diagnostic Methods

Diagnostic Methods provides information to support diagnosing Ford vehicles. Diagnostic strategies, diagnostic tool support information, and advanced circuit testing methods are included. REFER to Diagnostic Methods .

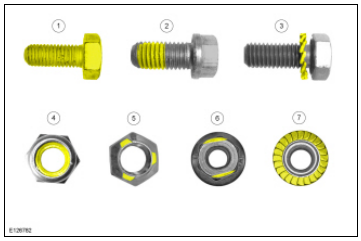
Diagnostic Routines

Diagnostic Routines provide information to determine the root cause of concerns addressed in either a DTC Chart or Symptom Chart. Each Diagnostic Routine contains:

- Diagnostic Overview
  - ♦ Wiring Diagram References (as applicable)
  - ♦ Normal Operation and Fault Conditions
  - ♦ Visual Inspection and Diagnostic Pre-checks
- Tool Table (as applicable)
- Material Table (as applicable)
- Pinpoint Test Steps

Component Tests

Component Tests are used to separately analyze a single common component in a system. The test will determine if the part is functioning correctly.



Mechanical Procedures Such As Removal and Installation

Reuse Of Fasteners, Seals, Or Gaskets

The following is a list of assumptions made in the reuse of fasteners, seals, or gaskets.

- Seals and gaskets must be replaced unless otherwise specified.
- Standard fasteners are reused unless otherwise specified.
- Fasteners with self-locking features must be replaced unless otherwise noted. Reminder text may or may not be included with the procedure step. Examples of fastener coatings or fasteners with mechanical locking (with the locking features highlighted yellow) are shown in illustration 1.
- Torque to yield bolts (bolts with more than one stage of tightening torque and a final torque angle specification) must be discarded and new torque to yield bolts installed unless otherwise stated within the procedure.

Illustration 1 - self-locking coatings or locking feature are highlighted yellow

Graphics

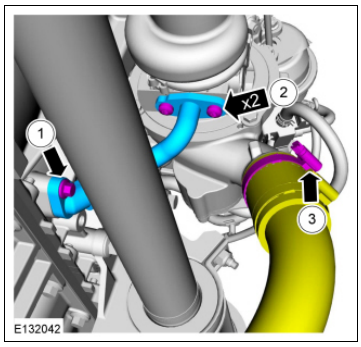
Illustrations in this manual may be used to replace written step instructions. Color-coding (see color scheme in this document) is used to communicate the required step action or actions. Service action icons (see Symbols Glossary) are used to add additional information regarding the required action.

- The color scheme in a step graphic (an illustration used in removal or installation steps) indicates servicing information as follows:
  - Fasteners (including panel retainers) or electrical connectors - Magenta (Purple)
  - Target component that is to be removed - Blue
  - Components that must be removed prior to the target component shown in blue - Brown or Green
  - Components placed aside for access, but not removed; highlighted areas such as inspection areas, adjustments or measurements - Yellow
  - Essential Special Service Tools (ESSTs) and other tools - Pale Blue
  - Chemical or Sealer apply areas - Alternating blue and white dashes (see illustration 4)
  - Sectioned or cut-away areas - Red
  - Remaining components - Grey

Callouts in graphics indicate removal (or tightening) order, or identify individual instructions in substeps of the same number (such as different torque values).

Arrows containing x numbers (Illustration 2) indicate the number of identical fasteners or connectors to be removed or installed in the graphic.

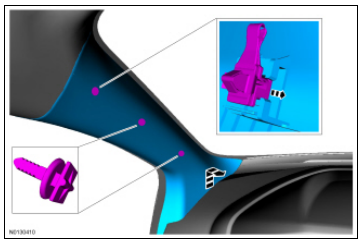
In Illustration 2, two identical fasteners are indicated by the x2 arrow, with another arrow illustrating a third fastener of a different type. Because the different fasteners require different torques, callouts are used to identify those two torque values in the associated step text. The hose clamp is another fastener to be removed. The yellow coloring of the hose indicates it is to be moved aside (not removed).



The following written steps would be necessary if the illustration did not have color coding:

1. Remove the engine oil pipe fastener at the engine connection.

2. Remove the two engine oil pipe fasteners from the turbocharger and remove the pipe.



3. Remove the air inlet hose from the turbocharger and position aside.

Illustration 2

Hidden fasteners, such as panel retainers, are identified in the illustration by a magenta disc. An inset detail view illustrating the fastener type may be included (Illustration 3).

Illustration 3 - Note motion arrow at panel bottom; it indicates to lift panel up, then move inward to remove

Symbols

Symbols may be used inside graphics or in the text area to communicate service actions. The following examples demonstrate the use of some of these symbols. REFER to Symbols Glossary for a complete symbols list with explanations.

In the Illustration 4 example, service action symbols are shown as used to direct the application of sealer, lubricant, weight, tape or cleaning detergent to a component. In this example a bead diameter of "xx" millimeters is prescribed. The blue and white dashes indicate where the material is applied.

Illustration 4

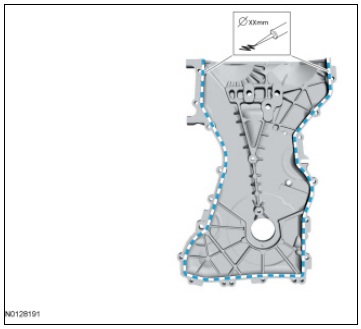


Illustration 5 is an example of location symbols used to show the location of a component tem within the vehicle.

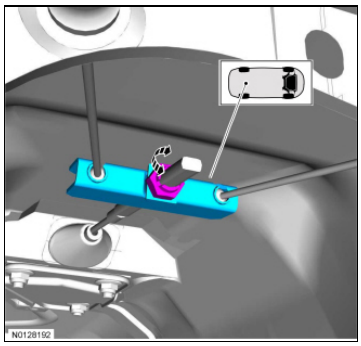
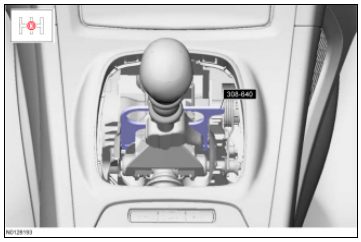
Illustration 5





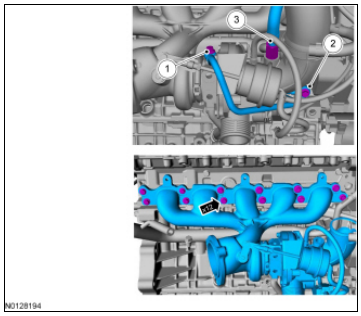


Illustration 6 shows how gearshift lever or selector lever position symbols may be used to indicate the gearshift lever or selector lever position required. The required Essential Special Service Tool to align the shift mechanism is shown in pale blue and identified by ESST number.

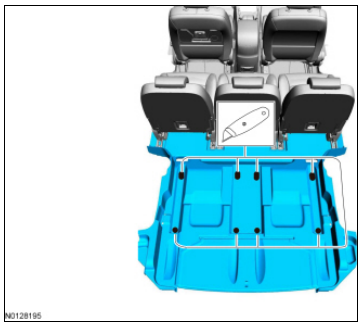
Illustration 6



Callouts or arrows may be used to identify components for supporting special information, such as a required sequence or to indicate a number of identical components. Illustration 7 shows a removal order in the top graphic and the bottom graphic indicates 12 identical bolts.

Illustration 7

Standard tool symbols direct the use of standard tools to perform a service action, such as the cutting of carpet shown in Illustration 8. Tool symbols may include dimensional values (for example, a drill with a specified diameter).

Illustration 8

Safety Warnings

Heating, Ventilation and Air Conditioning Safety Warnings

⚠ WARNING: Take the following precautions when repairing an air conditioning system containing R-134a:

- Always wear safety goggles.
- Avoid contact with liquid refrigerant R-134a. R-134a vaporizes at approximately -25°C (-13°F) under atmospheric pressure and will freeze skin tissue.
- Never allow refrigerant R-134a gas to escape in quantity in an occupied space. It will displace the oxygen needed to support life.
- Never use a torch in an atmosphere containing R-134a gas. R-134a is non-toxic at all normal conditions, but it decomposes when exposed to high temperatures such as a torch flame. During decomposition it releases irritating and toxic gasses (as described in the Material Safety Data Sheet from the manufacturer). Decomposition products are hydrofluoric acid, carbon dioxide and water.

Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Before disconnecting any heater water hoses, shut OFF the engine and wait until engine is fully cool. Failure to comply with this warning may result in serious injury or burns from hot liquid escaping from the engine cooling system.

⚠ WARNING: Use extreme care and observe all safety and service precautions related to the use of refrigerants as outlined on refrigerant tank and on recovery and charging equipment. Failure to follow these instructions may result in serious personal injury.

Battery System Service Warnings

⚠ WARNING: Always disconnect the battery ground cable at the battery before disconnecting the starter motor battery terminal lead. If a tool is shorted at the starter motor battery terminal, the tool can quickly heat enough to cause a skin burn. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Before carrying out maintenance on the starting system, disconnect the battery ground cable from the frame to completely isolate the starter from the dual frame-mounted batteries. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Batteries contain sulfuric acid and produce explosive gases. Work in a well-ventilated area. Do not allow the battery to come in contact with flames, sparks or burning substances. Avoid contact with skin, eyes or clothing. Shield eyes when working near the battery to protect against possible splashing of acid solution. In case of acid contact with skin or eyes, flush immediately with water for a minimum of 15 minutes, then get prompt medical attention. If acid is swallowed, call a physician immediately. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Always lift a plastic-cased battery with a battery carrier or with hands on opposite corners. Excessive pressure on the battery end walls may cause acid to flow through the vent caps, resulting in personal injury and/or damage to the vehicle or battery.

⚠ WARNING: Do not get underneath the frame-mounted battery when disconnecting or connecting the auxiliary battery safety straps. The battery is heavy and could fall. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Battery posts, terminals and related accessories contain lead and lead components. Wash hands after handling. Failure to follow these instructions may result in serious personal injury.

Brake System Service Warnings

⚠ WARNING: Do not use any fluid other than clean brake fluid meeting manufacturer's specification. Additionally, do not use brake fluid that has been previously drained. Following these instructions will help prevent system contamination, brake component damage and the risk of serious personal injury.

⚠ WARNING: Do not breathe dust or use compressed air to blow dust from storage containers or friction components. Remove dust using government-approved techniques. Friction component dust may be a cancer and lung disease hazard. Exposure to potentially hazardous components may occur if dusts are created during repair of friction components, such as brake pads and clutch discs. Exposure may also cause irritation to skin, eyes and respiratory tract, and may cause allergic reactions and/or may lead to other chronic health effects. If irritation persists, seek medical attention or advice. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Remove air pressure from the air brake system prior to servicing the system. Attempting to service the air brake system while it is under pneumatic pressure may result in serious injury from unexpected hose whip, component movement or component propulsion.

⚠ WARNING: Always install new brake shoes or pads at both ends of an axle to reduce the possibility of brakes pulling vehicle to one side. Failure to follow this instruction may result in uneven braking and serious personal injury.

Body and Frame Service Warnings

⚠ WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: On vehicles equipped with Safety Canopy® options, prior to carrying out any sectioning repairs near the roof line or sail panel areas of the vehicle, remove the Safety Canopy® module and related components. Failure to comply may result in accidental deployment or damage to the Safety Canopy®. Refer to Section 501-20B . Failure to follow these instructions may result in serious injury to technician or vehicle occupant(s).

⚠ WARNING: Do not cut or grind body side components within 50 mm (1.96 in) of restraint anchoring points. Welding within 50 mm (1.96 in) of restraint anchoring points may result in incorrect operation of restraint devices. For additional restraints anchoring location information, refer to Section 501-20A and Section 501-20B . Failure to follow these instructions may result in serious injury to vehicle occupant(s).

⚠ WARNING: Do not carry out body side sectioning repairs in areas of laser welds. Factory laser

welds cannot be duplicated with conventional welding equipment and structural integrity may be compromised. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

⚠ WARNING: Do not carry out body side sectioning repairs in areas of door hinge or striker anchoring points. Welding within 50 mm (1.96 in) of door hinge or striker locations may compromise structural integrity during a collision. Failure to follow these instructions may result in serious injury to vehicle occupant(s).

⚠ WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may result in serious personal injury or death in a crash.

⚠ WARNING: Do not permanently remove the trailer hitch. The trailer hitch is an integral part of the vehicle frame. Always reinstall the hitch before delivery of the vehicle to the customer. Failure to follow this instruction may compromise vehicle crash integrity and increase the risk of personal injury in a rear end collision.

⚠ WARNING: Collision damage repair must conform to the instructions contained in this workshop manual. Replacement components must be new, genuine Ford Motor Company parts. Recycled, salvaged, aftermarket or reconditioned parts (including body parts, wheels or safety restraint components) are not authorized by Ford.

Departure from the instructions provided in this manual, including alternate repair methods or the use of substitute components, risks compromising crash safety. Failure to follow these instructions may adversely affect structural integrity and crash safety performance, which could result in serious personal injury to vehicle occupants in a crash.

Engine Cooling System Service Warnings

⚠ WARNING: Always allow the engine to cool before opening the cooling system. Do not unscrew the coolant pressure relief cap when the engine is operating or the cooling system is hot. The cooling system is under pressure; steam and hot liquid can come out forcefully when the cap is loosened slightly. Failure to follow these instructions may result in serious personal injury.

Fuel System Service Warnings

⚠ WARNING: Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be

ignited. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Clean all fuel residue from the engine compartment. If not removed, fuel residue may ignite when the engine is returned to operation. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Contact with exposed fuel injector wiring, if energized, may result in electric shock. Use care when working on or around energized fuel injector wiring. Fuel injector wiring supplies high voltage to operate the fuel injectors. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Always disconnect the battery ground cable at the battery when working on an evaporative emission (EVAP) system or fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: When handling fuel, always observe fuel handling precautions and be prepared in the event of fuel spillage. Spilled fuel may be ignited by hot vehicle components or other ignition sources. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Remove the fuel filler cap slowly. The fuel system may be under pressure. If the fuel filler cap is venting vapor or if you hear a hissing sound, wait until it stops before completely removing the fuel filler cap. Otherwise, fuel may spray out. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Do not work on the fuel system until the pressure has been released and the engine has cooled. Fuel in the high-pressure fuel system is hot and under very high pressure. High-pressure fuel may cause cuts and contact with hot fuel may cause burns. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Avoid contact with fuel during a visual inspection for fuel leaks with the engine running. Do not work on the fuel system until the pressure has been released and the engine has cooled. Fuel in the high-pressure fuel system is hot and under very high pressure. High-pressure fuel may cause cuts and contact with hot fuel may cause burns. Failure to follow these instructions may result in serious personal injury.

General Service Warnings

⚠ WARNING: Never get underneath a vehicle that is supported only by a jack. The jack could unintentionally lower. Always support vehicle with floor stands. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Always wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Do not apply heat or flame to the shock absorber or strut tube. The shock absorber and strut tube are gas pressurized and could explode if heated. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Carefully read cautionary information on product label. For emergency medical information seek medical advice. In the USA or Canada on Ford/Motorcraft products call: 1-800-959-3673. For additional information, consult the product Material Safety Data Sheet (MSDS) if available. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Use tools, not fingers, to hold flagnuts. Flagnuts may slip or spin unexpectedly when removing fasteners. Failure to follow this instruction may result in injured fingers.

⚠ WARNING: Keep solvents away from ignition sources. Solvents may be flammable and can ignite or explode if not handled correctly. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Place a shop towel between the hands and the exterior mirror glass for protection in case of glass breakage during mirror service. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Use only a type-D fire extinguisher to extinguish magnesium fires. Never attempt to use a type-A, -B, -C extinguisher, or water, as these items are ineffective and may accelerate a magnesium fire. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Only raise the vehicle when positioned on a hard, level surface. Attempting to raise the vehicle on an uneven or soft surface may result in vehicle slipping or falling from the jack or jackstand. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Identify the correct jacking points by locating the triangle stamped into the uni-body sheet metal or vehicle frame. Raising a vehicle in any other location may result in vehicle shifting or falling. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Install only FCC-approved radio transmitting equipment. See your authorized radio dealer for the correct transmitter. Use of incorrect transmitting equipment may cause the vehicle to malfunction or stall, resulting in loss of power brake and power steering assist. Failure to follow these instructions may result in serious personal injury to vehicle occupant(s).

⚠ WARNING: Vehicle may have multiple drive wheels. Do not use engine to power the driveline unless all drive wheels are elevated off the ground. Drive wheels in contact with ground could cause unexpected vehicle movement. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Do not operate the engine with the hood open until the fan blade has been examined for possible cracks and separation. A damaged fan can separate during operation. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Do not stand in line with or near the engine cooling fan blade when revving the engine. A damaged fan can separate during operation. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: When jacking or lifting the vehicle, block all wheels remaining on the ground. Set the parking brake if the rear wheels will remain on the ground. These actions help prevent unintended vehicle movement. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Turn OFF the ignition switch for a minimum of 5 minutes before removing high-voltage cables. High-voltage cables and wiring are orange in color. The nominal high-voltage traction battery voltage (HVTB) is 330 V DC. Failure to follow these instructions may result in serious personal injury or death.

⚠ WARNING: Vehicles with engine auto start-stop technology may start automatically with the

ignition on. Make sure the ignition is off when servicing or working in close proximity to rotating engine parts. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Wear high-voltage insulated safety gloves and a face shield when working with high-voltage batteries or cables. The high-voltage insulated safety gloves should be of the appropriate safety and protection rating. Inspect the gloves before use and always wear them with the leather outer glove. Any hole in the rubber insulating glove is a potential entry point for high-voltage. Failure to follow these instructions may result in serious personal injury or death.

⚠ WARNING: Depower the high-voltage traction battery (HVTB) before carrying out any removal or installation procedures affecting the high-voltage battery system. Failure to follow this instruction may result in serious personal injury or death.

⚠ WARNING: Secure the torque converter in the transmission during removal or installation. The torque converter is heavy and may result in injury if it falls out of the transmission. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: When using compressed air, never let air pressure exceed 172 kPa (25 psi) and always wear safety glasses. Compressed air may cause foreign material or parts to become airborne. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Wear protective gloves when handling components or parts that have pointed or sharp edges. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Turn off (disable) the power running boards (if equipped) before jacking, lifting or placing any object under the vehicle. Never place your hand between the power running board and the vehicle. Extended power running boards will retract when doors are closed. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Disconnect the window regulator motor connector before working inside the vehicle doors. Service actions inside the door (such as door latch, handle or lock cylinder service) or operating the remote keyless entry (RKE) fob may activate the windows on vehicles equipped with global open/close. Serious injury to hands or arms may occur if a window motor is activated during service. Failure to follow these instructions may result in serious personal injury.

Safety Restraints Service Warnings

⚠ WARNING: Anytime the Safety Canopy® or side air curtain module has deployed, a new headliner and new A-, B- and C-pillar upper trim panels and attaching hardware must be installed. Remove any other damaged components and hardware and install new components and hardware as needed. Failure to follow these instructions may result in the Safety Canopy® or side air curtain module deploying incorrectly and increases the risk of serious personal injury or death in a crash.

⚠ WARNING: Deploy all supplemental restraint system (SRS) devices (air bags, pretensioners, load limiters, etc.) outdoo with all personnel at least 9 meters (30 feet) away to make sure of personal safety. Due to the loud report which occurs when an SRS device is deployed, hearing protection is required. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: The fire suppression system backup power supply must be depleted before lifting the vehicle or when repairing or replacing any of the following:

- Fire suppression system components
- Components located near the fire suppression manual switch

- Fuel tank and components located near the fuel tank
- Rear axle and components located near the rear axle

To deplete the backup power supply, disconnect the battery and wait at least 1 minute. Be sure to disconnect all auxiliary batteries and power supplies (if equipped). Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may result in serious personal injury or death in a crash.

⚠ WARNING: Never disassemble or tamper with seat belt deployable components, including pretensioners, load limiters and inflators. Never back probe deployable device electrical connectors. Tampering or back probing may cause an accidental deployment and result in personal injury or death.

⚠ WARNING: Never probe the electrical connectors on airbag, Safety Canopy® or side air curtain assemblies. Failure to follow this instruction may result in the accidental deployment of these assemblies, which increases the risk of serious personal injury or death.

⚠ WARNING: Never put any type of fastener or tie strap around any part of a Safety Canopy® module, side air curtain module or interior trim panel. This will prevent the Safety Canopy® or side air curtain module from deploying correctly. Failure to follow this instruction may increase the risk of serious personal injury or death in a crash.

⚠ WARNING: Always tighten the fasteners of the restraints control module (RCM) and impact sensor (if equipped) to the specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.

⚠ WARNING: Always carry or place a live Safety Canopy®, or side air curtain module, with the module and tear seam pointed away from your body. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

⚠ WARNING: Always deplete the backup power supply before repairing or installing any new front or side air bag supplemental restraint system (SRS) component and before servicing, removing, installing, adjusting or striking components near the front or side impact sensors or the restraints control module (RCM). Nearby components include doors, instrument panel, console, door latches, strikers, seats and hood latches. Refer to the Description and Operation portion of Section 501-20B for location of the RCM and impact sensor(s). To deplete the backup power supply energy, disconnect the battery ground cable and wait at least 1 minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped). Failure to follow these instructions may result in serious personal injury or death in the event of an accidental deployment.

⚠ WARNING: Always install new brake shoes or pads at both ends of an axle to reduce the possibility of brakes pulling vehicle to one side. Failure to follow this instruction may result in uneven braking and serious personal injury.

⚠ WARNING: Do not paint any airbag trim covers or deployment doors. Paint may cause the airbag to deploy incorrectly. Failure to follow this instruction may increase the risk of serious personal injury or death in a crash.

Tire and Wheel Service Warnings

⚠ WARNING: Replacement wheels must be equivalent to the original equipment wheels in:

- load carrying capacity.
- diameter, width and offset.
- pilot hole and bolt circle.

Combined load carrying capacity of replacement wheels for a given axle, must be equal to or greater than that axle's gross axle weight rating (GAWR) identified on the vehicle's Safety Compliance Certification label. All other specifications should be evaluated by measurement of both the original wheel and the replacement wheel. If specifications are not equivalent, the safety and handling of the vehicle may be degraded, which may result in serious injury to the vehicle occupant(s).

⚠ WARNING: Never inflate a tire that has been run flat without first removing the tire from the wheel to inspect for damage. A damaged tire can fail during inflation. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Do not hit the wheel or tire with a metallic hammer. This action may damage the wheel or tire, resulting in tire or wheel failure. Failure to follow this instruction may result in serious personal injury to the technician or vehicle occupant(s).

⚠ WARNING: When a wheel is installed, always remove any corrosion, dirt or foreign material present on the mounting surface of the wheel and the mounting surface of the wheel hub, brake drum or brake disc. Make sure that any fasteners that attach the rotor to the hub are secured so they do not interfere with the mounting surfaces of the wheel. Failure to follow these instructions when installing wheels may result in the wheel nuts loosening and the wheel coming off while the vehicle is in motion, which could result in loss of control, leading to serious injury or death to vehicle occupant(s).

⚠ WARNING: Inflating tires to pressures that exceed maximum tire inflation rating on tire sidewall may result in tire failure and serious personal injury to the technician or vehicle occupant(s).

⚠ WARNING: Only use replacement tires that are the same size, load index, speed rating and type (such as P-metric versus LT-metric or all-season versus all-terrain) as those originally provided by Ford. The recommended tire and wheel size may be found on either the Safety Compliance Certification Label or the Tire Label, which is located on the B-pillar or edge of the driver's door. If the information is not found on these labels, consult a Ford dealer. Use of any tire or wheel not recommended by Ford can affect the safety and performance of the vehicle, which could result in an increased risk of loss of vehicle control, vehicle rollover, personal injury and death. Additionally, the use of non-recommended tires and wheels could cause steering, suspension, axle or transfer case/power transfer unit failure.

⚠ WARNING: Do not mount tube-type tires on tubeless wheels or tubeless tires on tube-type wheels. Incorrect combinations could result in tire separation from wheel and may result in serious injury to vehicle occupant(s).

⚠ WARNING: Cracked wheels can be dangerous. Deflate tires on cracked wheels prior to removal of wheels from the vehicle. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Retighten wheel nuts within 160 km (100 mi) after a wheel is reinstalled. Wheels can loosen after initial tightening. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

⚠ WARNING: Retighten wheel nuts within 160 km (100 mi) after a wheel is reinstalled. For dual rear

wheel (DRW) only, a second retightening is required within 800 km (500 mi). Wheels can loosen after initial tightening. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

⚠ WARNING: Always match the tire size to the wheel size during assembly. Incorrect matching can result in tire bead damage or tire separation from the wheel. Failure to follow this instruction may result in serious personal injury to technician or vehicle occupant(s).

⚠ WARNING: Keep eyes away from valve stem when deflating tires. Reduce air pressure in tire as much as possible by pushing in valve core plunger prior to removing the core. Escaping air can carry particles that can injure the eyes. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Never use wheels different than the original equipment. Additionally, never use wheel nuts different than the original equipment. Failure to follow these instructions may result in damage to the wheel or mounting system. This damage could cause the wheel to come off while the vehicle is being driven, which could result in serious personal injury or death to vehicle occupant(s).

⚠ WARNING: Do not weld or peen wheels. A wheel needing such repairs must have a new wheel installed. Failure to follow these instructions may result in wheel failure and serious personal injury.

⚠ WARNING: The tire pressure monitoring system (TPMS) sensor battery may release hazardous chemicals if exposed to extreme mechanical damage. If these chemicals contact the skin or eyes, flush immediately with water for a minimum of 15 minutes and get prompt medical attention. If any part of the battery is swallowed, contact a physician immediately. When disposing of TPMS sensors, follow the correct procedures for hazardous material disposal. Failure to follow these instructions may result in serious personal injury.

Diagnostic Methods

⚠ WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in Section 100-00 . Failure to follow this instruction may result in serious personal injury.

Effective Diagnostic Techniques

The following diagnostic process is critical for consistently successful diagnoses. Random methods work inconsistently and often lead to multiple repairs and the accompanying frustration.

- Understand and verify the **symptom** .
  - ♦ Understanding a symptom requires understanding normal operation.
  - ♦ Duplicate the concern. Re-create the same conditions that demonstrated the original concern (road testing may be necessary).
- Determine the responsible **system** .
  - ♦ Gather data, such as a visual inspection and an OASIS report.
  - ♦ Perform system tests, such as pressure tests or DTC retrieval.
- Identify the responsible **component** .
  - ♦ Test the suspect component and related parts.
- Determine the root **cause**
  - ♦ Examine related components (wiring faults, misalignments, incorrect adjustments) that may be the actual cause or may have caused the component failure.
  - ♦ Repair all related faults to avoid repeat failures.
  - ♦ Verify the repair has corrected the concern (and not created any new ones) using the identical conditions that demonstrated the original concern.

Diagnostic Scan Tool Testing

Network Test

Performing a network test is always recommended for analysis of electronic system concerns. Always solve network issues before addressing individual symptoms or DTCs.

Recommended Practice: REFER to Symptom Chart in Section 418-00 to diagnose a network outage or no response from an individual module (or modules).

DTC Retrieval

Generally, a good diagnostic strategy is to resolve all on-demand codes related to the system concern. Retrieving all continuous DTCs can also be beneficial to understand historic issues or issues outside of the suspect system that may be affecting your concern. On-demand testing should be done to ensure the fault represented by a continuous DTC is still present.

Continuous Memory Diagnostic Trouble Codes (CMDTCs)

Modules that produce diagnostic trouble codes have a program that evaluates system conditions, normally while the vehicle or system is in use. Module inputs can be checked for values indicating an electrical fault with the monitoring circuit or component. Module outputs can be monitored for correct function. Codes are stored when predefined limits are exceeded and retained even if the ignition is turned off (generally DTC-retention is for 40+ ignition cycles). Not all continuous codes have a matching on-demand code - and

vice versa; this varies with different modules. For example, some network communication codes are continuous only. It is important to note that the presence of a continuous DTC does not guarantee that the fault currently exists.

Ford On-Demand DTCs

Ford Motor Company modules have a unique feature that performs a special diagnostic program at the request of the technician (using a scan tool). This "On-demand" diagnostic program can exercise system outputs not normally running when the car is parked and record observed faults. These diagnostic codes are communicated to the scan tool; they are not recorded in module memory. An on-demand test is an effective tool for evaluating real input and output conditions during module activity - activity that might not normally be occurring during service bay conditions. For example, an air suspension module on-demand test can run the compressor, vent the system, and observe the report from the height sensor even when the car is already at correct trim height and not requiring height adjustment.

Network Communication DTCs

Network DTCs (U-prefix codes) are often a result of intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures (such as module reprogramming or diagnostics with modules disconnected) often set network DTCs. Replacing a module to resolve a network DTC is unlikely to resolve the concern. To prevent recurrence of intermittent network concerns, inspect all network wiring, especially in-line and module connectors; test the vehicle battery.

Recommended practice: Clear the DTC and retest. If the DTC repeats, test the vehicle communication network.

DTC Nomenclature (SAE J2012 and ISO 14229)

Many modules use 5-character DTCs followed by a 2-character failure-type code. The failure-type (sometimes called "fault byte") digits provide information about specific fault conditions such as opens or shorts to ground. Continuous memory DTCs have an additional 2-character DTC status code suffix to assist in determining DTC history.

Integrated Diagnostic System (IDS) Scan Tool Usage

If The IDS Scan Tool Does Not Communicate With The Vehicle

The IDS scan tool first attempts to communicate with the PCM. After establishing communication with the PCM, the scan tool then attempts to communicate with all other modules on the vehicle.

1. Verify the scan tool operation with a known good vehicle.

2. Verify the ignition is ON.

3. If an IDS session cannot be established with the vehicle (IDS may state "No communication can be established with the PCM"):
    - Choose "NO" when the scan tool prompts to retry communication.
    - Enter either a PCM part number, tear tag, or calibration number to identify the vehicle and start a session.
        - The PCM part number can be determined from OASIS -- choose "HVBoM" from the OASIS page and search for the PCM part number
        - The PCM part number and 4-character tear tag are printed on the PCM label.
    - Establish a session based on the PCM information (above).

4. Using the tool box menu, run the network test.
    - Determine if all modules on the network are unresponsive or if only the PCM does not communicate.
    - **Recommended practice:** REFER to Symptom Chart in Section 418-00 to diagnose the network outage or no response from the PCM.

Measuring Automotive Circuits

Wiring Pin (Terminal) Fit And The Use Of Rotunda Flex Probes

- To avoid wiring pin (terminal) damage, Rotunda Flex Probes NUD105-R025D must be used to connect test equipment or jumper wires to pins (terminals).
- Male to female pin (terminal) fit is critical for connection reliability.
    - ♦ Pin (terminal) fit may be checked by using the mating pin (terminal) to test for normal separation force (a damaged pin or terminal will have very low separation force from the mating pin or terminal)
    - ♦ Correctly checking the separation force of small pins (terminals) may require removal of the connector terminal guide/retainer if it adds drag to the pin (terminal) insertion or removal
- Replace damaged connectors or pins (terminals).
    - ♦ Use the Wiring Diagram connector view (cell 150) to identify the correct replacement connector with pigtail.
    - ♦ Use the Wire Harness Terminal Repair Guide to identify and order the correct replacement pin and pigtail. Available through Ford Dealers, REFER to FMC dealer website, or REFER to www.fcs.dealersonnection.com/wire .

Checking Power-Providing Circuits

- Measuring a power wire with the intended load disconnected using a DMM will only find open circuits (open fuse or wire).
- **Recommended practice:** Circuits carrying approximately 200-1000 mA* may be loaded with the specified test light SGT27000. Measure circuit voltage with a DMM while the test light is connected and illuminated. A reduction in the voltage present during test-light-loading indicates excessive circuit resistance.
- **Recommended practice:** Circuits carrying more than one ampere* should be loaded with a device requiring similar current (e.g., a headlamp bulb may be effective). A reduction in the voltage present during loading indicates excessive resistance.
- *Circuit current is matched to wire gauge/size; Examples:
    - ♦ Conductor sizes of 24 gauge (.5 mm) or smaller are generally used to carry approximately 1 ampere (1000 mA) or less. Use of the test light to load these circuits is appropriate.
    - ♦ Conductor sizes of 20 gauge (.8 mm) or larger are generally used to carry approximately 5 amperes (5000 mA) or more. Match the substitute load (measure substitute load current first as necessary) to this current level.

Checking Ground-Providing Circuits

- The best method of checking ground circuits is to measure the circuit voltage drop during component operation (or attempted operation).
- An ohmmeter may be accurately used if the battery has been disconnected.
- **Recommended practice:** Expect less than 2 ohms for most small diameter (18 gauge and smaller) wires.
- Ohmmeter low-resistance resolution (approximately 0.1 ohm) limits its use to circuits carrying less than approximately 5 amperes (this is due to the fact that very small resistances, undetectable by a DMM , cause significant voltage loss in higher current circuits).
- DMM ohmmeter readings are easily corrupted by the normal voltage present (battery connected) in

many ground circuits.

- **Recommended practice:** Reverse the leads and check for changes in the measurement. Reversing the DMM lead connections should never change the resistance measurement (unless the circuit contains a semi-conductor). Measurement (non-semi-conductor) differences when leads are interchanged at the test points indicate invalid test results. The presence of voltage corrupts the reading, and causes the meter reading to change when the leads are reversed.

Checking Circuit Continuity

- **Recommended practice:** Expect less than 2 ohms of resistance for most wires.
- Ohmmeter low-resistance resolution (approximately 0.1 ohm) limits its use to circuits carrying less than approximately 5 amperes. This is due to the fact that very small resistances, below the resolution of a DMM , cause significant voltage loss in higher current circuits.
- The DMM applies a small amount of voltage to the circuit or component to calculate resistance. As a result, DMM ohmmeters are very sensitive to any level of voltage present. Voltage present in the circuit will corrupt the DMM reading.

Checking For Unintended Continuity (Shorts) To Other Circuits

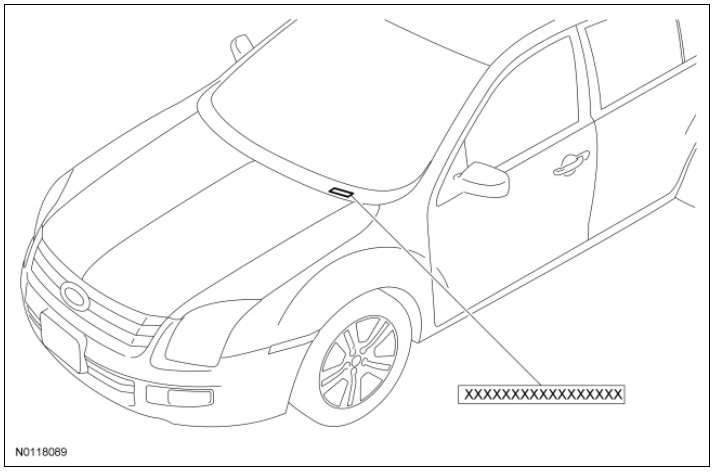
- A DMM ohmmeter may be used to detect undesired circuit connections to:
  - Ground
  - Other unpowered circuits
- **Recommended practice:** Expect greater than 10,000 ohms of resistance between two separate circuits; the best result is an open circuit DMM indication (no detected resistance).
- Shorts to voltage are checked with a DMM voltmeter
- **Recommended practice:** Turn ignition on (with battery connected) and measure the circuit for any voltage present (none should be present)

Checking Circuits By Back-Probing A Connector

- Back-probing should be performed only when directed by a service manual diagnostic routine. Never back-probe safety restraint deployable devices such as airbags or belt pretensioners. Back-probing is a testing method of last resort and should only be employed where a diagnostic step requires a circuit to be tested under actual operating conditions. Back-probing is a risky testing method due to the uncertainty of the probe connection and the possibility of damaging terminals.
- Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors and subsequent electrical faults.
  - Use Rotunda Back-Probe Pins POMA6411 to assist in making a good test connection and to prevent connector or terminal damage during back-probing.
- Do not test for the presence of voltage at a single point where zero volts is a possible result (you cannot tell the difference between a bad probe contact and a zero volt result).
- Do not test for continuity/opens (using a DMM ohmmeter) between two points (you cannot tell the difference between bad probe contacts and an open circuit).
- Back-probing may be used where the circuit must be analyzed with the voltage-drop method (if the circuit carries greater than 5 amperes and no other means of testing will definitively eliminate circuit resistance as a possible fault). A zero-volt result indicates incorrect test conditions (no current flow) or bad back-probe connections.
- Occasionally, module failure mode behavior will change the operation of a circuit when it is opened for testing. Back-probing is an acceptable remedy for these testing dilemmas.

Circuit Analysis Using Jumper Wires (Creating Substitute Circuits)

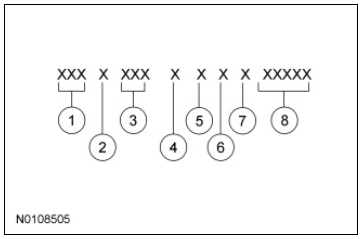
- Jumper wires may be employed for circuit analysis.
- **Cautions:**
    - ♦ Always use fused jumper wires - the recommended universal-testing jumper wire fuse is 2-5 amperes; larger fuse ratings should be used only in special circumstances.
    - ♦ Use flex probes or equivalent to prevent connector terminal damage (flex probes are not intended to carry higher currents necessary to operate motors such as a cooling fan or blower motor).
    - ♦ Follow workshop manual testing directions when using jumper wireso avoid component or harness damage due to incorrect jumper connections.
    - ♦ Never repair a circuit by adding a new wire in parallel to the old one (overlaying the circuit) without fully understanding what caused the circuit to fail. Always find, examine, and repair the fault to correct the root cause and to repair any adjacent wiring that has been damaged.



Checking Modules

- Generally, module failure rate is very low and therefore replacement modules usually do not resolve the root cause. Incorrect replacement of a module is often the result of inadequate testing.
    - ♦ Understand the correct module function.
    - ♦ Make sure programmable parameters are set correctly for the function in question (see the list in Section 418-01).
    - ♦ Resolve DTCs first - as directed by Diagnostic Routines.
    - ♦ Test all inputs, both hard-wired and networked.
    - ♦ Test outputs (see "Checking module switching circuits" below).
    - ♦ Check applicable TSBs for module software changes (flash programming).
- Checking module switching circuits.
    - ♦ Using the scan tool module-output command function (e.g., IDS Output State Control) to activate components is a fast way to confirm an output is capable of being switched on by the module. Testing that reveals normal module-output function confirms the need to analyze the module inputs.
    - ♦ Don't apply ground or power directly to module-switched components with jumper wes (unless directed by a workshop manual procedure), as the component can be damaged by a direct connection to ground/power.

Identification Codes



Vehicle Identification Number (VIN)

Vehicle Identification Number (VIN) Tag Locator

The Vehicle Identification Number (VIN) is a 17-digit combination of letters and numbers. The VIN is stamped on a metal tab riveted on the instrument panel, top upper left of the dash. The VIN is also found on the Vehicle Certification (VC) label.

If the VIN plate requires replacement, authorized dealers must contact their respective regional office.

Item	Description
1	World Manufacturer Identifier (WMI)
2	Restraint system type
3	Vehicle line and series type
4	Engine type
5	Check digit
6	Model year
7	Assembly plant
8	Production sequence number

World Manufacturer Identifier (WMI)

The first 3 VIN positions are the World Manufacturer Identifier (WMI).

- 3FA - Ford, Mexico, passenger car
- 3LN - Lincoln, Mexico, passenger car

Restraint System Type

The fourth VIN position identifies the vehicle restraint system used.

- D - Active safety belts, all positions with driver, front passenger air bags and driver side knee bolster
- H - Active safety belts, all positions, driver and front passenger air bags and driver and front passenger side impact air bags

Vehicle Line and Series Type

VIN positions 5 through 7 indicate the vehicle line and series type.

- L2G - Lincoln, Front Wheel Drive (FWD)
- L2J - Lincoln, All-Wheel Drive (AWD)
- L2L - Lincoln, Hybrid FWD
- P0C - Ford, SEL, AWD
- P0D - Ford, Sport, AWD
- P0G - Ford, S, FWD
- P0H - Ford, SE, FWD
- P0J - Ford, SEL, FWD
- P0L - Ford, Hybrid SEL, FWD

Engine Type

The eighth VIN position is the engine type (displacement and number of cylinders).

- 3 - ATK-CVC, 2.5L, 4-valve Gas/Electric (Hybrid)
- A - 2.5L, Dual Overhead Camshaft (DOHC), 4-cylinder, Duratec
- C - 3.5L, DOHC , V6
- G - 3.0L, Overhead Camshaft (OHC), V6, Duratec

More specific engine information can be found on the engine tag. For additional information, refer to Section 303-01A , Section 303-01B , Section 303-01C or Section 303-01D .

Check Digit

The ninth VIN position is a government-assigned, computer-generated check digit.

Model Year

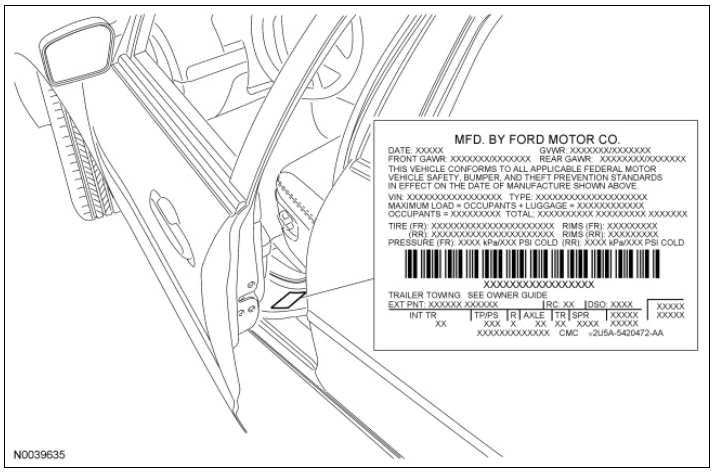
The tenth VIN position is the model year code.

- C - 2012

Assembly Plant

The eleventh VIN position is the assembly plant code.

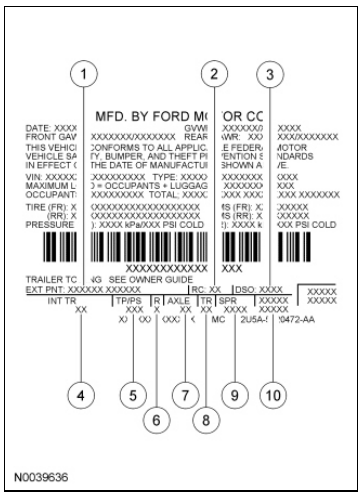
- R - Hermosillo Assembly (Hermosillo, Mexico)



Build Sequence

VIN positions 12 through 17 are an alphanumeric code for the vehicle build sequence. This is also the vehicle serial and warranty number. These 6 characters are also found on the engine block and transmission.

- 100001-599999 - Ford
- 600001-999999 - Lincoln



Vehicle Certification (VC) Codes

Vehicle Certification (VC) Label Locator

The upper portion of the Vehicle Certification (VC) label contains the manufacturer's name, the month and year of manufacture, the certification statement and the Vehicle Identification Number (VIN). It also includes Gross Vehicle Weight Rating (GVWR). The VC label is located on the LH door jamb.

If a vehicle requires replacement of the VC label and is 4 years old or less, an authorized dealer must submit the VIN to their respective regional office. The regional office will submit a web form to the assembly plant for the replacement label. Once the label has been printed, a representative from the regional office will deliver the label to the dealer and witness installation on the vehicle. If a vehicle is more than 4 years old and requires a replacement label, the dealer must submit a request to the Department of Motor Vehicles.

Item	Description

1	Exterior paint code
2	Region code
3	District Special Order (DSO)
4	Interior trim code
5	Tape/paint stripe code
6	Radio code
7	Axle code
8	Transmission code
9	Spring code
10	Powertrain calibration information

Exterior Paint

Exterior paint codes may be listed as a 2-part code. The first set of characters identify the primary body color. The second set of characters (if applicable) identify the vehicle accent or 2-tone body color. All colors are base coat/clear coat.

Exterior Color Codes

- HT - Cinnamon
- JY - Ginger Ale
- JZ - Crystal Champagne
- R2 - Red Candy Tint
- SZ - Blue Flame
- UA - Ebony
- UG - White Platinum (tri-coat)
- UJ - Sterling Gray Metallic
- UN - Steel Blue
- UX - Ingot Silver Metallic
- WS - White Suede (tri-coat)

Interior Trim

Interior trim codes are listed as a 2-part code. The first character identifies the interior trim type. The second character identifies the interior trim color.

Interior Trim Type

- A - Perforated leather/SOHO grain le- F-appearance cloth, Ford
- D - B-cloth, Ford
- F - Verona leather, Ford
- L - Hero perforated leather, Lincoln
- M - Perforated leather, Lincoln
- T - E-cloth, Ford
- V - Variation perforated leather, Ford
- Z - Premium perforated leather, Lincoln

Interior Trim Color

- B - Blue, Ford
- C - Camel, Ford
- G - Ginger, Ford
- H - Cashmere, Lincoln
- L - Medium Light Stone, Ford

- R - Red, Ford
- S - Light Camel, Lincoln
- W - Charcoal Black, Ford/Lincoln

Tape/Paint Stripe

Tape and paint stripe codes do not apply.

Radio Type

Radio type codes are as follows:

- B - AM/FM stereo, in-dash 6-disc CD changer, MP3 and clock
- F - AM/FM stereo, CD player, MP3 and clock
- N - AM/FM stereo, in-dash single disc CD changer with navigation system

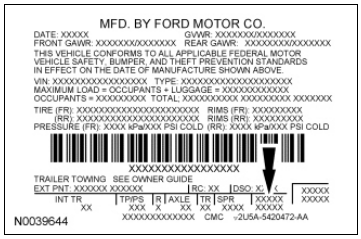
Axle Ratio Codes

The axle ratios are:

- 25 - 2.57 - Ford
- 30 - 3.06 - Ford
- 32 - 3.21 - Ford
- 33 - 3.33 - Ford, Lincoln
- 43 - 4.39 - Ford

Transmission Type

Transmission type codes are as follows:



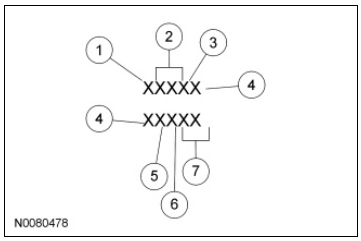
- 6 - 6-speed manual transmission (Mazda G6M) - Ford
- B - 6-speed automatic transmission (Aisin F21) - Ford, Lincoln
- H - Continuously Variable Transaxle (CVT) - Ford Hybrid, Lincoln Hybrid
- W - 6-speed automatic transmission (6F) - Ford

Refer to the transmission tag information in Section 307-01A Section 307-01B , Section 307-01C or Section 308-00 .

Spring Code

Spring codes are listed as a 2-part code. The first 2 characters identify the front springs. Characters 3 and 4 identify the rear springs. Front spring base part number is 5310, rear spring base part number is 5560.

Powertrain Calibration Information



NOTE: Powertrain calibration information is limited to a maximum of 5 characters per line on the Vehicle Certification (VC) label. Because of this, calibration identification consisting of more than 5 characters will

wrap to the second line on the VC label.

Powertrain calibration information is printed in the lower right corner of the VC label. Only base calibration information is printed. Revision levels will not appear, however, they can be obtained through a scan tool using the most current software revision.

Powertrain Calibration Information

Item	Description
1	Model year (model year in which calibration strategy was first introduced)
2	Vehicle code
3	Transmission code
4	Unique calibration (designates different hardware to similar vehicles). Example: tires and drive ratios
5	Fleet code (describes fleet to which the vehicle belongs). Example: 6 - Evaporative Emission (EVAP)
6	Certification region (lead region where multiple regions are included in one calibration). Example: A - U.S. federal
7	Revision level (will advance as revns occur). Not printed on label

Model Year

- 7 - 2007
- 8 - 2008
- 9 - 2009
- A - 2010
- B - 2011
- C - 2012

Vehicle Line

- DE - Ford, Lincoln

Transmission

- 1 - Automatic transmission
- 2 - Manual transmission

Unique Calibration

The Emissions/Corporate Average Fuel Economy/Carbon Dioxide Compliance Department is responsible for assigning these calibration numbers. Unique calibration identifications are assigned to cover similar vehicles to differentiate tires, drive configurations, final drive ratios and other calibration-significant factors.

These 2 characters are chosen by the analyst to provide identifiable information unique to each calibration. For example, using the number 2 to denote a 2-valve engine versus using the number 4 to denote a 4-valve engine, offers an easily identifiable difference.

Fleet Code

- 0 - Certification (U.S. 4K, final sale in export markets)
- 1 - Heavy duty gas engine/Dyno
- 2 - Fast-Automobile Manufacturers' Association, U.S.
- 3 - Alternative Durability Protocol, U.S.
- 4 - Not assigned
- 5 - Not assigned
- 6 - Evaporative Emission (EVAP)
- 7 - Mileage accumulation, aging endurance durability
- 8 - On-Board Diagnostic (OBD)
- 9 - Not assigned

Certification Region

- 5 - U.S. 50 states
- A - U.S. federal, including altitude, may include Canada and/or Mexico
- B - U.S. California, includes U.S. green states
- C - Canada
- D - China
- E - European Community (Austria, Belgium, Denmark, Finland, France, Germany, Greece, Ireland, Italy, Luxembourg, Netherlands, Portugal, Spain, Sweden, United Kingdom)
- F - Extended Estonia, Hungary, Norway, Poland, Romania, Russian Federation, Slovakia, Slovenia, Switzerland, Yugoslavia)
- G - Gulf Cooperative Council (Bahrain, Kuwait, Oman, Qatar, Saudi Arabia, United Arab Emirates)
- H - Hong Kong
- J - Japan

Revision Level (not printed on label)

- 91-99 - Hardware calibration levels
- 01-04 - Preliminary levels
- 00 - Job 1 production (initial calibration)
- 05-09 - Pre-job 1 revisions to calibrations
- 10-89 - Post-job 1 revisions to calibrations
- 0B - Durability test level
- BD - OBD intermediate level (pre-05)

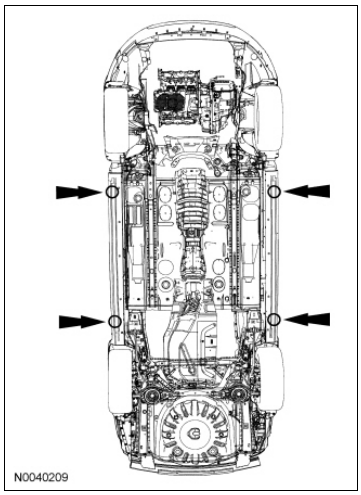
Jacking and Lifting

⚠ WARNING: When jacking or lifting the vehicle, block all wheels remaining on the ground. Set the parking brake if the rear wheels will remain on the ground. These actions help prevent unintended vehicle movement. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Never get underneath a vehicle that is supported only by a jack. The jack could unintentionally lower. Always support vehicle with floor stands. Failure to follow these instructions may result in serious personal injury.

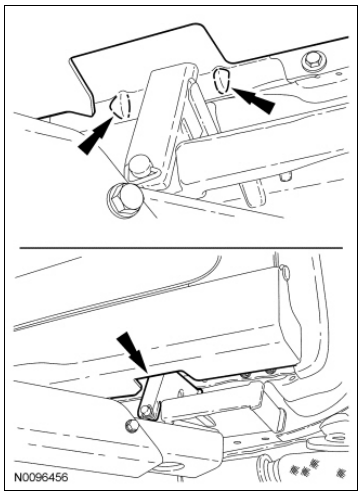
⚠ WARNING: Only raise the vehicle when positioned on a hard, level surface. Attempting to raise the vehicle on an uneven or soft surface may result in vehicle slipping or falling from the jack or jackstand. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Position the hoist lift arms as shown in the illustration. Incorrect positioning could result in vehicle slipping or falling from the hoist. Failure to follow this instruction may result in serious personal injury.



NOTICE: **The jack provided with the vehicle is intended to be used in an emergency for changing a deflated tire. To avoid damage to the vehicle, never use the jack to hoist the vehicle for any other purpose.**

NOTICE: **To prevent possible damage to the underbody, do not drive the vehicle onto the drive-on lift without first checking for possible interference, or damage may occur.**



NOTICE: **Damage to the suspension, exhaust or steering linkage components may occur if care is not exercised when positioning the hoist adapters prior to lifting the vehicle.**

NOTICE: **To prevent possible damage to the Sport package trim when lifting with a hoist, position the hoist pad on the pinch weld as indicated.**

Noise, Vibration and Harshness (NVH)

Noise is any undesirable sound, usually unpleasant in nature. Vibration is any motion, shaking or trembling, that can be felt or seen when an object moves back and forth or up and down. Harshness is a ride quality issue where the vehicle's response to the road transmits sharply to the customer. Harshness normally describes a firmer than usual response from the suspension system. NVH is a term used to describe these conditions, which result in varying degrees of dissatisfaction. Although a certain level of NVH caused by road and environmental conditions is normal, this section is designed to aid in the diagnosis, testing and repair of NVH symptoms.

Acceptable NVH

All internal combustion engines and drivelines produce some noise and vibration; operating in a real world environment adds noise that is not subject to control. Vibration isolators, mufflers and dampers reduce these to acceptable levels. A driver who is unfamiliar with a vehicle can think that some sounds are abnormal when actually the sounds are normal for the vehicle type. As a technician, it is very important to be familiar with vehicle features and know how they relate to NVH symptoms and their diagnosis. For example, if the vehicle has automatic overdrive, it is important to test drive the vehicle both in and out of overdrive mode.

Glossary of Terms

Amplitude

The quantity or amount of energy produced by a vibrating component (G-force). An extreme vibration has a high amplitude. A mild vibration has a low amplitude. See Intensity.

Boom

Low frequency or low pitched noise often accompanied by a vibration. Also refer to Drumming.

Buffet/Buffeting

Strong noise fluctuations caused by gusting winds. An example would be wind gusts against the side glass.

Buzz

A low-pitched sound like that from a bee. Often a metallic or hard plastic humming sound. Also describes a high-frequency vibration. Vibration feels similar to an electric razor.

Chatter

A pronounced series of rapidly repeating rattling or clicking sounds.

Chirp

A short-duration, high-pitched noise associated with a slipping drive belt.

Chuckle

A repetitious, low-pitched sound. A loud chuckle is usually described as a knock.

Click

A sharp, brief, non-resonant sound, similar to actuating a ball point pen.

Clonk

A hydraulic knocking sound. Sound occurs with air pockets in a hydraulic system. Also described as hammering.

Clunk/Driveline Clunk

A heavy or dull, short-duration, low-frequency sound. Occurs mostly on a vehicle that is accelerating or decelerating abruptly. Also described as a thunk.

Conductor

The components that carry (transmit) a vibration frequency from the originator to the reactor.

Cycles Per Second

Cycles per second. Same as hertz (Hz).

Cracks

A mid-frequency sound, related to squeak. Sound varies with temperature conditions.

Creak

A metallic squeak.

Cycle

The process of a vibrating component going through a complete range of motion and returning to the starting point.

Decibel (dB)

A unit of measurement, referring to sound pressure level, abbreviated dB.

Drone

A low-frequency, steady sound, like a freezer compressor. Also described as a moan.

Drumming

A cycling, low-frequency, rhythmic noise often accompanied by a sensation of pressure on the ear drums. Also described as a low rumble, boom or rolling thunder.

Flutter

Mid to high intermittent sound due to air flow. Similar to a flag flapping in the wind.

Frequency

The rate at which a cycle occurs within a given time.

G-force

The additional load or weight produced in an object during acceleration. When measuring the level or amplitude of a vibration without sound, the unit G is added to associate the force of the vibration to gravity. This is similar to measuring the weight of an object, which is also a function of gravity.

Gravelly Feel

A grinding or growl in a component, similar to the feel experienced when driving on gravel.

Grind

An abrasive sound, similar to using a grinding wheel, or rubbing sand paper against wood.

Hertz (Hz)

A unit of measure used to describe noise and vibration concerns expressed in cycles per second.

Hiss

Steady, high-frequency noise. Vacuum leak sound.

Hoot

A steady, low-frequency tone, sounds like blowing over a long neck bottle.

Howl

A mid-range frequency noise between drumming and whine. Also described as a hum.

Hum

Mid-frequency steady sound, like a small fan motor. Also described as a howl.

Intensity

The physical quality of sound that relates to the strength of the vibration (measured in decibels). The higher the sound's amplitude, the higher the intensity and vice versa. See Amplitude.

Knock

A heavy, loud, repetitious sound, like a knock on the door.

Moan

A constant, low-frequency tone. Also described as a hum.

Ping

A short-duration, high-frequency sound, which has a slight echo.

Pitch

The physical quality of sound that relates to its frequency. Pitch increases as frequency increases and vice versa.

Pumping Feel

A slow, pulsing movement.

Rattle

A random and momentary or short-duration noise.

Reactor

The component, or part, that receives a vibration from an originator and conductor and reacts to the vibration by moving.

Roughness

A medium-frequency vibration. A slightly higher frequency than a shake. This type of vibration is usually related to drivetrain components.

Rustling

Intermittent sound of varying frequency, sounds similar to shuffling through leaves.

Shake

A low-frequency vibration, usually with visible component movement. Usually relates to tires, wheels, brake drums or brake discs if it is vehicle speed sensitive, or engine if it is engine speed sensitive. Also referred to as a shimmy or wobble.

Shimmy

An abnormal vibration or wobbling, felt as a side-to-side motion of the steering wheel in the driveshaft rotation. Also described as waddle.

Shudder

A low-frequency vibration that is felt through the steering wheel or seat during light brake application.

Slap

A resonance from flat surfaces, such as safety belt webbing or door trim panels.

Squeak

A high-pitched transient sound, similar to rubbing fingers against a clean window.

Squeal

A long-duration, high-pitched noise.

Tap

A light, rhythmic or intermittent hammering sound, similar to tapping a pencil on a table edge.

Thump

A dull beat caused by 2 items striking together.

Tick

A rhythmic tap, similar to a clock noise.

Tip-In Moan

A light moaning noise heard during light vehicle acceleration, usually between 40-100 km/h (25-65 mph).

Transient

A noise or vibration that is momentary, a short duration.

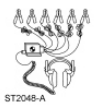
Vibration

Any motion, shaking or trembling, that can be felt or seen when an object moves back and forth or up and down.

Whine

A constant, high-pitched noise. Also described as a screech.

Whistle



High-pitched noise with a very narrow frequency band. Examples of whistle noises are a turbocharger or air flow around an antenna.

Wind Noise

Any noise caused by air movement in, out or around the vehicle.

Noise, Vibration and Harshness (NVH)

Special Tool(s)

 ST2311-A	Electronic Vibration Analyzer (EVA) 100-F027 (014-00344) or equivalent
 ST2312-A	EngineEAR 107-R2100 or equivalent
 ST2048-A	EngineEAR/ChassisEAR 107-R2102 or equivalent
 ST3025-A	Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) 257-00018 or equivalent
 ST3108-A	Squeak and Rattle Repair Kit 164-R4900
 ST2314-A	Ultrasonic Leak Detector 134-R0135 or equivalent

Diagnostic Theory

The shortest route to an accurate diagnosis results from:

- system knowledge, including comparison with a known good system.
- system history, including repair history and usage patterns.
- condition history, especially any relationship to repairs or sudden change.
- knowledge of possible sources.
- using a systematic diagnostic method that divides the system into related areas.

The diagnosis and correction of NVH symptoms requires:

- a road or system test to determine the exact nature of the symptom.
- an analysis of the possible causes.
- testing to verify the cause.
- repairing any symptoms found.
- a road test or system test to make sure the cause has been corrected or brought back to within an acceptable range.

Diagnostic Procedure Overview

Qualifying the symptom by the particular sensation present can help narrow down the cause. Always use the

"symptom" to "system" to "component" to "cause" diagnosis technique. This diagnostic method divides the problem into related areas to correct the customer concern.

- Verify the "symptom".
- Determine which "system(s)" can cause the "symptom" using the diagnostic tools described in this section.
- After determining the possible "system(s)", refer to the appropriate section in this manual to identify the worn or damaged "components".
- After identifying the "components", identify the "cause" of the failure.

Tools and Techniques

The diagnostic tools allow for a systematic collection of information that is necessary to accurately diagnose and repair NVH problems. Remember that the vibrating source component (originator) may only generate a small vibration. This small vibration can in turn cause a larger vibration/noise to emanate from another receiving component (reactor), due to contact with other components (transfer path). For the best results, carry out the test as follows:

a. Test drive the vehicle with the vibration sensor inside the vehicle.
b. Place the sensor in the vehicle according to feel.
    - ♦ If the condition is felt through the steering wheel, the source is most likely in the front of the vehicle.
    - ♦ A vibration that is felt in the seat or floor only will most likely be found in the driveline, drive axle or rear wheels and tires.
c. Record the readings. Also note when the condition begins, when it reaches maximum intensity and if it tends to diminish above/below a certain speed.
    - ♦ If a vibration symptom is vehicle speed related, the tire and wheel rpm/frequency and driveshaft frequency should be calculated.
    - ♦ If a vibration symptom is engine speed related, the engine, engine accessory and engine firing frequencies should be calculated.
    - ♦ Frequencies with an amplitude reading of 0.06 Gs or less are barely perceptible NVH levels. No corrective action is necessary.
d. Place the vibration sensor on or near the suspect area outside the vehicle.
e. Continue the road test, driving the vehicle at the speed the symptom occurs and take another reading.
f. Compare the readings.
    - ♦ A match in frequency indicates the problem component or area.
    - ♦ An unmatched test could indicate the symptom is caused by the engine, torque converter or engine accessory. Use the diagnostic tools in the rpm mode and check if symptom is rpm related.

The following diagnostic tools and techniques can be used separately or in conjunction with each other to aid in the diagnosis of NVH symptoms. They are listed in order of preference for ease in their use for locating these symptoms.

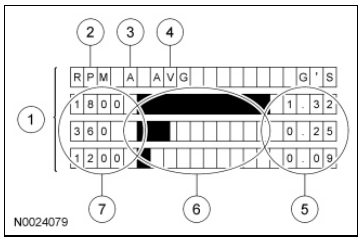
NVH Analyzer (Vetronix)

The Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) and the MTS 4100 NVH analyzers are tools to aid in the identification and isolation of a noise, vibration or harshness symptom in a vehicle. They measure noise and vibration data and compare it with data obtained from the vehicle's PCM as well as vehicle variants that were entered by the user such as pulley size, axle ratio and tire size in order to provide possible sources. The Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) and the MTS 4100 have the following characteristics:

- Interface with the vehicle's computer system

- Support and store vibration data input from 1 or 2 accelerometers
- Support and store noise data input from 2 microphones
- Provide a photo-tachometer for operation of the driveshaft balancing function
- Provide a strobe output capable of driving a standard timing light
- Contain a real-time clock circuit that provides time and date information which is used for tagging test data
- Have the capability to print to an external printer and interface with a PC
- Can be powered from a variety of power sources: cigarette lighter, AC power or the internal battery pack

The Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) and the MTS 4100 NVH analyzers have 4 main operating modes. The first is for vibion diagnosis. This mode measures data from 1 or 2 accelerometers simultaneously while obtaining data from the vehicle. Then it carries out a frequency analysis on the accelerometer information and compares the vibration frequencies with the frequencies associated with various rotating components within the vehicle. The data can be presented in 4 different display modes: principle component, bar chart, frequency spectrum or waterfall. All display mode formats contain the same common elements, such as amplitude.



The second is for noise diagnosis. This mode measures noise from 1 or 2 microphones simultaneously. All noise measurements are in decibels (dBs). All frequency bands used for noise measurements are the same as for the vibration measurements, up to 1,000 Hz.

The third is driveshaft balancing. Driveshaft balancing is done using 1 or 2 accelerometers and a photo-tachometer. The accelerometers measure the vibration at both ends of the driveshaft, while the photo-tachometer measures the rotation speed and position reference. Refer to Section 205-00 .

The fourth is the strobe. A strobe or standard timing light can be connected to an analyzer, to provide a means for measuring rotation speed. The strobe function is used for isolating the source of a vibration.

Electronic Vibration Analyzer (EVA)

The Electronic Vibration Analyzer (EVA) is a hand-held electronic scan tool which will assist in locating the source of unacceptable vibrations. The vibration sensor can be remotely mounted anywhere in the vehicle for testing purposes. The unit displays the 3 most common vibration frequencies and their corresponding amplitudes simultaneously. A bar graph provides a visual reference of the relative signal strength (amplitude) of each vibration being displayed and its relative G-force. The keypad is arranged to make the EVA simple to program and use. Some of the functions include the ability to average readings as well as record, play back and freeze readings. The EVA has a strobe balancing function that can be used to detect imbalance on rotating components such as a driveshaft or engine accessories.

Item	Description
1	Electronic Vibration Analyzer (EVA) screen
2	Frequency mode displayed in rpm or Hz
3	Active sensor input (A or B)
4	Current active mode

5	G-force indicators or the strongest frequencies in descending strength of each vibration
6	Strength of each vibration
7	Frequency in rpm/Hz of each vibration

Record the readings taken with the diagnostic tool.

- Frequencies should be read in the "average" mode.
- Frequencies have a range of plus or minus 2 Hz. A reading of 10 Hz can be displayed as an 8 Hz through 12 Hz.

Vibrate Software®

Vibrate Software® (Rotunda tool number 215-00003) is a diagnostic aid which will assist in pinpointing the source of unacceptable vibrations. The engine's crankshaft is the point of reference for vibration diagnosis. Every rotating component will have an angular velocity that is faster, slower or the same as the engine's crankshaft. Vibrate Software® calculates the angular velocity of each component and graphically represents these velocities on a computer screen and on a printed vibration worksheet. The following steps outline how Vibrate Software® helps diagnose a vibration symptom:

- Enter the vehicle information. Vibrate will do all the calculations and display a graph showing tire, driveshaft and engine vibrations.
- Print a Vibration Worksheet graph. The printed graph is to be used during the road test.
- Road test the vehicle at the speed where the vibration is most noticeable. Record the vibration frequency rpm and the engine rpm on the worksheet graph. The point on the graph where the vibration frequency rpm reading and the engine rpm reading intersect indicates the specific component group causing the symptom.
    - A frequency measurement tool capable of measuring vibration frequency and engine rpm will be needed.
- Provides graphics of diagnostic procedures to aid in testing components.

Reed Tachometer

The Reed tachometer is a hand-held vibration sensor which will assist in locating the source of unacceptable vibrations. The vibration sensor can be placed anywhere in the vehicle fosting purposes. The Reed tachometer contains several reeds that are tuned to vibrate or resonate at different frequencies ranging from 10 to 80 Hz or 600 to 4,800 rpm. Though the Reed tachometer is able to measure multiple frequencies, it does not measure amplitude.

Sirometer

The Sirometer measures frequency in hertz and rpm. To use the Sirometer, place it on any vibrating component and slowly scroll the wire out by turning the knob. As the length of wire changes, so does its natural frequency. Find the length of wire that vibrates with the highest amplitude. This frequency will match that of the vibrating component. Read the frequency for that length of wire.

Combination EngineEAR/ChassisEAR

An electronic listening device used to quickly identify noise and the location under the chassis while the vehicle is being road tested. The ChassisEARs can identify the noise and location of damaged/worn wheel bearings, CV joints, brakes, springs, axle bearings or driveshaft carrier bearings.

EngineEAR Basic Unit

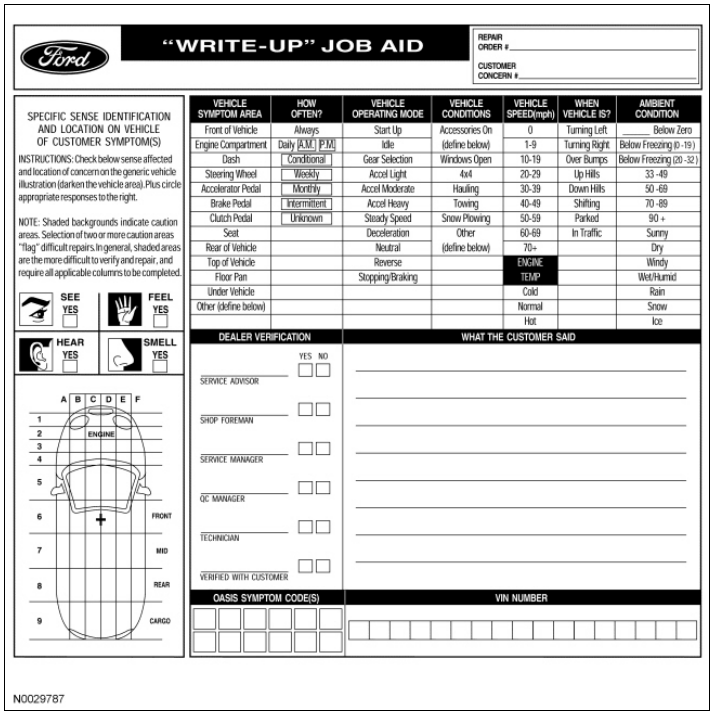
An electronic listening device used to detect even the faintest noises. The EngineEARs can detect the noise of damaged/worn bearings in generators, coolant pumps, A/C compressors and power steering pumps. They are also used to identify noisy lifters, exhaust manifold leaks, chipped gear teeth and for detecting wind noise. The EngineEAR has a sensing tip, amplifier and headphones. The directional sensing tip is used to listen to the various components. Point the sensing tip at the suspect component and adjust the volume with the amplifier. Placing the tip in direct contact with a component will reveal structure-borne noise and vibrations, generated by or passing through, the component. Various volume levels can reveal different sounds.

Mechanic's Stethoscope

A mechanic's stethoscope is an inexpensive tool for locating noises in engines and other moving parts. It can be used to help diagnose piston slap, worn gears, faulty valves, coolant pump failure, damaged gaskets, defective bearings and body squeaks.

Squeak and Rattle Repair Kit

The Squeak and Rattle Repair Kit (Rotunda tool number 164-R4900) contains lubricants and self-adhesive materials that can be used to eliminate interior and exterior squeaks and rattles. The kit consists of the following materials:



- PVC (soft foam) tape
- Urethane (hard foam) tape
- Flocked (black fuzzy) tape
- UHMW (frosted) tape
- Squeak and rattle oil tube
- Squeak and rattle grease tube

Ultrasonic Leak Detector

The Ultrasonic Leak Detector is used to detect wind noises caused by leaks and gaps in areas where there is weatherstripping or other sealing material. It is also used to identify A/C leaks, vacuum leaks and evaporative emission noises. The Ultrasonic Leak Detector includes a multi-directional transmitter (operating in the ultrasonic range) and a hand-held detector. The transmitter is placed inside the vehicle. On the outside of the vehicle, the hand-held detector is used to sweep the area of the suspected leak. As the source of the leak is approached, a beeping sound is produced which increases in both speed and frequency.

Write-Up Job Aid

To assist the service advisor and the technician, a Write-Up Job Aid used during the interview process is included with this material. The Write-Up Job Aid serves as a place to record all important symptom information.

1: Customer Interview

The diagnostic process starts with the customer interview. The service advisor must obtain as much information as possible about the symptom and take a test drive with the customer. There are many ways a customer will describe NVH symptoms and this will help minimize confusion arising from descriptive language differences. It is important that the symptom is correctly interpreted and the customer descriptions are recorded. During the interview, complete the write-up job aid and ask the following questions:

- When was it first noticed?
- Did it appear suddenly or gradually?
- Did any abnormal occurrence coincide with or precede its appearance?

Use the information gained from the customer to accurately begin the diagnostic process.

2: Pre-Drive Check

It is important to do a pre-drive check before road testing the vehicle. A pre-drive check verifies that the vehicle is relatively safe to drive and eliminates any obvious faults on the vehicle.

The pre-drive check consists of a brief visual inspection. During this brief inspection, take note of anything that will compromise safety during the road test and make those repairs/adjustments before taking the vehicle on the road.

3: Preparing for the Road Test

Observe the following when preparing for the road test:

- Review the information recorded on the write-up job aid. It is important to know the specific symptom the customer has with the vehicle.
- Do not be misled by the reported location of the noise/vibration. The cause can actually be some

distance away.
- Conduct the road test on a quiet street where it is safe to duplicate the vibration/noise. The ideal testing route is an open, low-traffic area where it is possible to operate the vehicle at the speed in which the condition occurs.
- While observing that they are not related to the symptom, eliminate the following:
    - ♦ If possible, lower the radio antenna in order to minimize turbulence.
    - ♦ Identify anything that could potentially make noise or be a source of wind noise.
    - ♦ Inspect the vehicle for add-on items that create vibration/noise.
    - ♦ Turn off the radio and the heating and cooling system blower.
- The engine speed is an important factor in arriving at a final conclusion. Therefore, connect a diagnostic tool, Vetronix, or an accurate tachometer to the engine, even if the vehicle has a tachometer. This will make sure of an exact engine speed reading.

4: Verify the Customer Concern

Verify the customer concern by carrying out a road test, an engine run-up test or both.

The decision to carry out a road test, an engine run-up test or both depends on the type of NVH symptom. A road test may be necessary if the symptom relates to the suspension system or is sensitive to torque. A Drive Engine Run-Up (DERU) or a Neutral Engine Run-Up (NERU) test identifies noises and vibrations relating to engine and drivetrain rpm. Remember, a condition will not always be identifiable by carrying out these tests, however, they will eliminate many possibilities if carried out correctly.

5: Road Test

NOTE: It may be necessary to have the customer ride along or drive the vehicle to point out the symptom. During the road test, take into consideration the customer's driving habits and the driving conditions. The customer's concern just may be an acceptable operating condition for that vehicle.

The following is a brief overview of each test in the order in which it appears. A review of this information helps to quickly identify the most appropriate process necessary to make a successful diagnosis. After reviewing this information, select and carry out the appropriate test(s), proceeding to the next step of this process.

- The Slow Acceleration Test is normally the first test to carry out when identifying an NVH symptom, especially when a road test with the customer is not possible.
- The Heavy Acceleration Test helps to determine if the symptom is torque-related.
- The Neutral Coast Down Speed Test helps to determine if the symptom is vehicle speed-related.
- The Downshift Speed Test helps to determine if the symptom is engine speed-related.
- The Steering Input Test helps to determine how the wheel bearings and other suspension components contribute to a vehicle speed-related symptom.
- The Brake Test helps to identify vibrations or noise that are brake related.
- The Road Test Over Bumps helps isolate a noise that occurs when driving over a rough or bumpy surface.
- The Engine Run-Up Tests consist of the Neutral Engine Run-Up (NERU) Test and the Drive Engine Run-Up (DERU) Load Test. These tests help to determine if the symptom is engine speed-related.
- The Neutral Engine Run-Up (NERU) Test is used as a follow-up test to the Downshift Speed Test when the symptom occurs at idle.
- The Drive Engine Run-Up (DERU) Load Test helps to identify vibration/noise sensitive to engine load or torque. It also helps to reproduce engine speed-related symptoms that cannot be duplicated when carrying out the Neutral Engine Run-Up (NERU) Test or the Neutral Coast Down Test.
- The Engine Accessory Test helps to locate faulty belts and accessories that cause engine speed-related

symptoms.
- The Vehicle Cold Soak Procedure helps to identify symptoms occurring during initial start-up and when an extended time lapse occurs between vehicle usage.

Slow Acceleration Test

To carry out this test, proceed as follows:

- Slowly accelerate to the speed where the reported symptom occurs. Note the vehicle speed, the engine rpm and, if possible, determine the vibration frequency.
- Attempt to identify from what part of the vehicle the symptom is coming.
- Attempt to identify the source of the symptom.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Heavy Acceleration Test

To carry out this test, proceed as follows:

- Accelerate hard from 0-64 km/h (0-40 mph).
- Decelerate in a lower gear.
- The symptom is torque-related if duplicated while carrying out this test.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Neutral Coast Down Speed Test

To carry out this test, proceed as follows:

- Drive at a higher rate of speed than where the symptom occurred when carrying out the Slow Acceleration Test.
- Place the transmission in NEUTRAL and coast down past the speed where the symptom occurs.
- The symptom is vehicle speed-related if duplicated while carrying out this test. This eliminates the engine and the torque converter as sources.
- If the symptom was not duplicated while carrying out this test, carry out the Downshift Speed Test to verify if the symptom is engine speed related.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Downshift Speed Test

To carry out this test, proceed as follows:

- Shift into a lower gear than the gear used when carrying out the Slow Acceleration Test.
- Drive at the engine rpm where the symptom occurs.
- The symptom is engine speed related if duplicated while carrying out this test. This eliminates the tires, wheels, brakes and the suspension components as sources.

- If necessary, repeat this test using other gears and NEUTRAL to verify the results.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Steering Input Test

To carry out this test, proceed as follows:

- Drive at the speed where the symptom occurs, while making sweeping turns in both directions.
- If the symptom goes away or gets worse, the wheel bearings, hubs, U-joints (contained in the axles of Four-Wheel Drive (4WD) applications), and tire tread wear are all possible sources.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Brake Test

To carry out this test, proceed as follows:

- With the brake released, accelerate the vehicle. While coasting (brake pedal released) to a stop in NEUTRAL, note any abnormal rate of deceleration. Abnormal deceleration could indicate a parking brake or service brake that is not fully releasing.
- Warm the brakes by slowing the vehicle a few times from 80-32 km/h (50-20 mph) using light braking applications.
- Accelerate to 89-97 km/h (55-60 mph). Moderately apply the brakes and slow the vehicle to a stop.
- A brake vibration can be felt in the steering wheel, seat or brake pedal. A brake noise can be heard upon brake application and should diminish when the brake is released. For vehicles with separate park brake shoes, noise or vibration from the parking brake system will not be affected by applying the hydraulic brakes. On these systems, the parking brake system requires inspection if a parking brake concern is suspected.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate brake section(s) for further diagnosis and repair. If the source has not been identified, continue with the road test.

Road Test Over Bumps

To carry out this test, proceed as follows:

- Drive the vehicle over a bump or rough surface one wheel at a time to determine if the noise is coming from the front or the back and the left or the right side of the vehicle.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Neutral Engine Run-Up (NERU) Test

To carry out this test, proceed as follows:

- Install a tachometer.

- Increase the engine rpm up from an idle to approximately 4,000 rpm while in PARK on Front Wheel Drive (FWD) vehicles with automatic transmissions, or NEUTRAL for all other vehicles. Note the engine rpm and, if possible, determine the vibration frequency.
- Attempt to identify what part of the vehicle the symptom is coming from.
- Attempt to identify the source of the symptom.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Drive Engine Run-Up (DERU) Load Test

To carry out this test, proceed as follows:

⚠ **WARNING: Block all wheels, set the parking brake and firmly apply the service brake to reduce the risk of vehicle movement during this procedure. Failure to follow these instructions may result in serious personal injury.**

NOTICE: **Do not carry out the Engine Load Test for more than 5 seconds or damage to the transmission or transaxle may result.**

- Block the front and rear wheels.
- Apply the parking brake and the service brake.
- Install a tachometer.
- Shift the transmission into DRIVE, and increase and decrease the engine rpm between an idle to approximately 2,000 rpm. Note the engine rpm and, if possible, determine the vibration frequency.
- Repeat the test in REVERSE.
- If the vibration/noise is duplicated when carrying out this test, inspect the engine and transmission or transaxle mounts.
- If the symptom is definitely engine speed-related, carry out the Engine Accessory Test to narrow down the source.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Engine Accessory Test

To carry out this test, proceed as follows:

⚠ **WARNING: Block all wheels, set the parking brake and firmly apply the service brake to reduce the risk of vehicle movement during this procedure. Failure to follow these instructions may result in serious personal injury.**

NOTICE: **Limit engine running time to one minute or less with belts removed or serious engine damage will result.**

NOTE: Use a frequency measurement tool to pinpoint accessory vibrations. A listening device, such as an EngineEAR, will also help to identify noises from specific accessories.

- Remove the accessory drive belt(s).
- Increase the engine rpm to where the symptom occurs.
- If the vibration/noise is duplicated when carrying out this test, the belt(s) and accessories are not sources.

- If the vibration/noise was not duplicated when carrying out this test, install the accessory belt(s), one at a time, to locate the source.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Vehicle Cold Soak Procedure

To carry out this procedure, proceed as follows:

- Test preparations include matching customer conditions (if known). If not known, document the test conditions: gear selection and engine rpm. Monitor the vibration/noise duration with a watch for up to 3 minutes.
- Park the vehicle where testing will occur. The vehicle must remain at or below the symptom temperature (if known) for 6-8 hours.
- Before starting the engine, conduct a visual inspection under the hood.
- Turn the key on, but do not start the engine. Listen for the fuel pump, ABS and air suspension system noises.
- Start the engine.
- Isolate the vibration/noise by carefully listening. Move around the vehicle while listening to find the general location of the vibration/noise. Then, search for a more precise location by using a stethoscope or EngineEAR.
- If the source of the symptom has been identified as a result of this test, proceed to the appropriate section for further diagnosis and repair. If the source has not been identified, continue with the road test.

Classify NVH Symptom

For NVH concerns, it is necessary to classify the customer's concern into one of the 3 categories: noise, vibration or harshness. The reason for this is that a customer concern may consist of a combination of symptoms involving noise and vibration, or vibration and harshness. In cases where there are combination symptoms, determine which diagnostic path to follow: noise, vibration or harshness. For example, if a customer has a concern involving a noise and a vibration, and it is determined that it is vehicle speed-related, follow the vibration diagnostic path.

Noise Symptoms

Once a symptom is classified as a noise, the particular conditions under which the noise occurs need to be identified. These conditions are identified and verified during the road test. For example, a noise may only occur while turning. The next step is to determine which systems on the vehicle are related to that condition. In this case, the steering system and wheel/tire system may be suspect. After identifying possible systems, a preliminary inspection of these systems should be done. If the source of noise is still unidentified, use a listening device (such as the ChassisEAR) to pinpoint the source. Once the source has been identified, determine if this source is related to the suspected system previously identified. If it is related, then complete the repair to resolve the customer concern. If it is unrelated, then it is possible that the source of the noise is a reactor to a noise being transmitted through a transfer path. If this is the case, repairing the reactor will not resolve the customer concern. The transfer path must be identified and a determination made if the noise is normal, but accentuated by the transfer path (conductor), or if the originator is the fault causing excessive noise to transfer to another component through a conductor. There is a relationship between systems identified as related to conditions and the noise transfer path. In some cases, the condition under which the noise occurs has nothing to do with the identified source. This relationship is important in the diagnosis of noise concerns.

It is the first clue that the identified source of noise might be a reactor and that further investigation is needed to diagnose a possible noise transfer path concern. Based on the results from the road test, make a determination of which action in the symptom chart to take first.

Vibration Symptoms

Most vibrations consist of movements back and forth or up and down that repeat. Every time the vibrating component goes through its complete range of motion and returns to the starting point is called a cycle. The rate at which these cycles occur within a given time is called the frequency. Frequency is measured in cycles per second or Hertz (Hz). One cycle per second equals one Hz. Once the frequency of a vibration is known, calculations can be done to determine the system that is the source of the concern.

Order of Vibration

The order of a vibration refers to how often the vibration is present in one revolution of the component. For example, a vibration that is present once each revolution of a component would be a first order vibration. A vibration present twice each revolution of the component would be a second order vibration. Vibration orders do not have to be whole numbers, they can have decimal values such as 1.5 order vibration or 3.08 order vibration.

The concept of order of vibration is important to remember when the measured frequency of a vibration does not seem to match the frequency calculations of any of the likely systems or components. As the order increases, the frequency of the vibration will also increase by a multiple of that number.

For example, vibration may be present where the frequency is measured at 14 Hz. After doing the necessary calculations it is determined the first order tire and wheel frequency is 7 Hz and the first order driveshaft frequency is 22 Hz. Based on this information if can be determined the vibration is most likely a second order tire and wheel vibration: 7 Hz (first order tire and wheel frequency) multiplied by 2 (second order) equals 14 Hz (second order tire and wheel frequency).

Relationship of Vibration Frequency to Order of Vibration

After carrying out the road test as described in this section, the vibration was determined to be either vehicle-speed related or engine-speed related. That determination will identify the vibration frequency calculations that should be done.

Vibration Type	Calculate
Vehicle-speed related	Tire-speed vibration frequency Driveshaft-speed vibration frequency
Engine-speed related	Engine vibration frequency Engine accessory vibration frequency Engine firing vibration frequency

In calculating and using frequency readings, it is important to remember the direct relationship between Hz and rpm. One Hz is equal to 60 rpm. This is easy to remember; think of Hz as cycles per second. There are 60 seconds in a minute, therefore multiply Hz reading by 60 to get rpm. Conversely, divide rpm by 60 to get Hz.

Use the Frequency and RPM Calculations Worksheet to calculate system/component frequencies. The worksheet provides the necessary steps to determine each system/component group frequency.

Frequency Calculations

Calculating Tire and Wheel Frequency

For a vibration concern, use the vehicle speed to determine tire/wheel frequency and rpm. Calculate tire and wheel rpm and frequency by carrying out the following:

- Measure the diameter of the tire.
- Record the speed at which the vibration occurs.
- Obtain the corresponding tire and wheel rpm and frequency from the Tire Speed and Frequency Chart.
- If the vehicle speed is not listed, calculate the tire and wheel frequency as follows:
    - Divide the vehicle speed at which the vibration occurs by 16 km/h (10 mph). Multiply that number by the 16 km/h (10 mph) tire rpm listed for that tire diameter in the chart. Then divide that number by 60.
    - For example, if calculating the frequency based on vehicle speed in km/h for a 64 km/h vibration with 835 mm tires, divide 64 km/h by 16 km/h = 4. Multiply 4 by 105 rpm = 420. Divide 420 by 60 seconds = 7 Hz at 64 km/h.
    - If calculating the frequency based on vehicle speed in mph for a 40 mph vibration with 33 inch tires, divide 40 mph by 10 mph = 4. Multiply 4 by 105 rpm = 420. Divide 420 by 60 seconds = 7 Hz at 40 mph.
    - The calculated frequency of 7 Hz is the first order tire and wheel vibration; the second order tire and wheel vibration would be twice this number at 14 Hz; the third order tire and wheel vibration would be 21 Hz; and so on.

Tire Speed and Frequency Chart

Tire Diameter	Tire RPM/Hz	Tire RPM/Hz	Tire RPM/Hz	Tire RPM/Hz
mm (in)	@ 16 km/h (10 mph)	@ 80 km/h (50 mph)	@ 97 km/h (60 mph)	@ 113 km/h (70 mph)
483 (19)	182	910/15	1,092/18	1,274/21
508 (20)	173	865/14	1,038/17	1,211/20
533 (21)	165	825/14	990/16	1,155/19
560 (22)	158	790/13	948/16	1,106/18
585 (23)	151	755/13	906/15	1,057/18
610 (24)	145	725/12	870/14	1,015/17
635 (25)	139	695/12	834/14	973/16
660 (26)	134	670/11	804/13	938/16
685 (27)	129	645/11	774/13	903/15

710 (28)	124	620/10	744/12	868/14
735 (29)	119	595/10	714/12	833/14
760 (30)	115	575/10	690/11	805/13
785 (31)	111	555/9	666/11	777/13
810 (32)	108	540/9	648/11	756/13
835 (33)	105	525/9	630/10	735/12
864 (34)	102	510/8	612/10	714/12

Calculating Driveshaft Frequency

Knowing the tire and wheel frequency allows for easy calculation of driveshaft frequency. The driveshaft drives the tires through the rear axle. Therefore, to determine driveshaft frequency, multiply tire and wheel frequency by the ratio of the rear axle. Calculate driveshaft frequency by performing the following steps:

- Obtain the axle ratio of the vehicle. Suppose the vehicle has a vibration problem at 64 km/h (40 mph) and a rear axle ratio of 2.93:1.
- Multiply the tire and wheel frequency of 7 Hz (calculated previously) with the rear axle ratio of 2.93:1. This results in a driveshaft frequency of 21 Hz at a vehicle speed of 64 km/h (40 mph).

The calculated frequency of 21 Hz is the first order driveshaft frequency; the second order frequency of the driveshaft is twice this number, or 42 Hz; and so on.

Calculating Engine Frequency

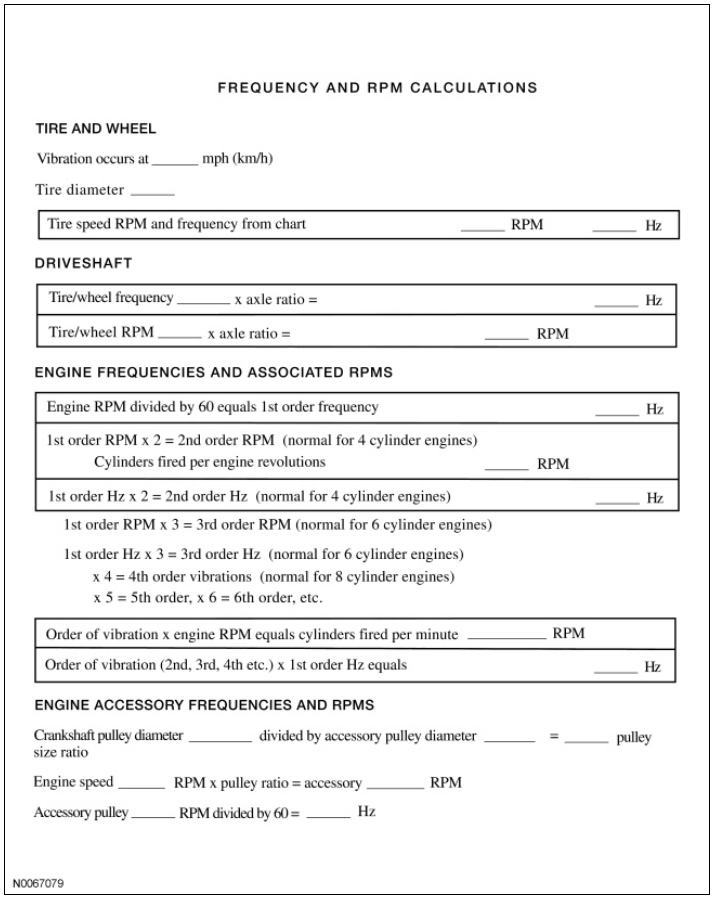
Use the engine rpm where the vibration symptom occurs to determine engine frequency. Calculate engine frequency by dividing the engine rpm by 60 (the number of seconds in a minute). For example, if the corresponding engine rpm of a vibration concern on a vehicle is 2,400 rpm, the resulting engine frequency is 40 Hz. Therefore, a 40 Hz vibration is a first order engine vibration. For purposes of vibration diagnosis, the engine also includes the torque converter and exhaust system.

Calculating Engine Accessory Frequency

Belt-driven engine accessories often produce vibrations at different frequencies than the engine itself. This is because the drive ratio created by the different size pulleys causes them to rotate at different speeds. Determining engine accessory frequency is comparable to calculating driveshaft frequency.

Calculate engine accessory frequency by performing the following steps:

- Determine the size ratio factor between the accessory pulley and the crankshaft pulley. For example, if the diameter of the crankshaft pulley is 6 inches and the accessory pulley diameter is 2 inches, the accessory pulley rotates 3 times for every crankshaft rotation (6 divided by 2).
- Multiply the engine rpm where the vibration condition occurs by the number of times the accessory pulley is rotating per crankshaft revolution. For example, if the engine rpm is 2,400 rpm, the accessory is rotating at 7,200 rpm (2,400 rpm multiplied by 3).
- Divide the accessory rpm by 60 (the number of seconds in a minute). In this example, the engine accessory frequency is 120 Hz (7,200 divided by 60).



Calculating Engine Firing Frequency

Engine firing frequency is a term used to describe the pulses an engine creates from the firing of the cylinders. Engine firing frequency depends on how many cylinders an engine has. The number of times an engine fires a cylinder with each crankshaft revolution is equal to one-half the number of cylinders. A 4-cylinder engine fires 2 cylinders with each crankshaft revolution. Two revolutions of the crankshaft fire all 4 cylinders. A 6-cylinder engine fires 3 cylinders with each crankshaft revolution. An 8-cylinder engine fires 4 cylinders for each crankshaft revolution.

Calculate engine firing frequency by performing the following steps:

- Multiply the engine rpm where the vibration symptom occurs by the number of cylinders fired with each crankshaft revolution. For example, a vehicle with a 6-cylinder engine experiences a vibration concern at 2,400 rpm. The engine is firing the cylinders at 7,200 times per minute (3 multiplied by 2,400).
- Divide this number by 60 (the number of seconds in a minute) to obtain the engine firing frequency. In this example, the engine firing frequency is 120 Hz (7,200 divided by 60) at 2,400 rpm.

Frequency and RPM Calculations Worksheet

FREQUENCY AND RPM CALCULATIONS

TIRE AND WHEEL

Vibration occurs at _____ mph (km/h)

Tire diameter _____

Tire speed RPM and frequency from chart	_____ RPM	_____ Hz

DRIVESHAFT

Tire/wheel frequency _____ x axle ratio =		_____ Hz
Tire/wheel RPM _____ x axle ratio =	_____ RPM	

ENGINE FREQUENCIES AND ASSOCIATED RPMS

Engine RPM divided by 60 equals 1st order frequency		_____ Hz
1st order RPM x 2 = 2nd order RPM (normal for 4 cylinder engines) Cylinders fired per engine revolutions	_____ RPM	
1st order Hz x 2 = 2nd order Hz (normal for 4 cylinder engines)		_____ Hz

1st order RPM x 3 = 3rd order RPM (normal for 6 cylinder engines)

1st order Hz x 3 = 3rd order Hz (normal for 6 cylinder engines)
x 4 = 4th order vibrations (normal for 8 cylinder engines)
x 5 = 5th order, x 6 = 6th order, etc.

Order of vibration x engine RPM equals cylinders fired per minute _____	RPM
Order of vibration (2nd, 3rd, 4th etc.) x 1st order Hz equals	_____ Hz

ENGINE ACCESSORY FREQUENCIES AND RPMS

Crankshaft pulley diameter _____ divided by accessory pulley diameter _____ = _____ pulley size ratio

Engine speed _____ RPM x pulley ratio = accessory _____ RPM

Accessory pulley _____ RPM divided by 60 = _____ Hz

Harshness Symptoms

Harshness is customer perception which gives the impression of no isolation from the tire/wheel and suspension system. Harshness may be caused by road conditions, temperature changes, component damage and/or incorrect customer modifications on original components/specifications. Customers usually experience harshness when the vehicle is driving over bumps or potholes and in cold weather conditions. Harshness can also be experienced with excessive tire pressure, sporty tires, heavy-duty springs and shocks, or other vehicle modifications. Some aftermarket tires, even with the correct size, may change vehicle behavior and produce

customer concerns. The first step in diagnosing a harshness concern is to determine if the concern was experienced only in certain specific operating conditions, such as large potholes or extremely cold weather. In these cases, harshness should be considered normal. A known good vehicle can be driven under the same conditions and the rides can be compared to determine whether the concern is normal or vehicle specific. The second step is to check tire pressure and make sure it was set within vehicle specifications. The third step is to inspect for aftermarket or modified components and determine if they are the cause of the harshness complaint. If the harshness concern persists after the above steps, it is possible that some components are damaged. Based on the results from the road test, make a determination of which action in the symptom chart to take first.

NVH Symptom Chart Categories

A good diagnostic process is a logical sequence of steps that lead to the identification of a causal system. Use the symptom and possible system categories as follows:

- Identify the operating condition that the vehicle is exhibiting.
- Match the operating condition to the symptom.
- Verify the symptom.
- Calculate the frequency and order of the symptom.
- Identify which category or system(s) could cause the symptom.
- Refer to the section indicated to identify and diagnose the symptom or confirm that the system is not the source of the condition.

Use the diagnostic instructions in this section along with the necessary listed tools to identify the vibration order and to isolate the symptom and the possible systems associated with that symptom. Then based on the results from the road test, make a determination of which action in the symptom chart to take first. Since it is possible any one of multiple systems may be the cause of the symptom, it may be necessary to use a process of elimination type diagnostic approach to pinpoint the concern. Refer to the section(s) indicated to identify and isolate the cause or rule that system out as being the causal system for the symptom.

Vehicle-Speed Related Vibrations

NOTE: Any assembly that is out of balance will only cause a first order vibration, it will not cause a higher order vibration.

When a vehicle-speed related vibration is present, both tire-speed related vibration and driveshaft-speed related vibration calculations should be carried out.

Insulation

Insulation is used as a sound-deadener to reduce exterior road and powertrain noises from the interior of the vehicle. Mastic insulators are also used as insulation. For information on the location of the mastic insulators, refer to Section 501-35 . Insulation is installed:

- under the roof.
- above and below the instrument panel.
- at the cowl side panels.
- over the front and rear floor pans.
- inside the A-, B- and D-pillar sections.
- behind the rear quarter trim panel.

It has heat-bondable mastic deadeners for improved NVH characteristics.

 P>

Body Sealer Types And Applications

Seam Sealer

Seam Sealer TA-2 or equivalent:

- is a heavy-bodied, non-sag adhesive/sealer for use on standing cosmetic seams, truck bed seams, tooled door skin seams and floor pans.
- can be used on water leaks and noise concerns.

Clear Silicone Rubber

Clear Silicone Rubber TA-32 or equivalent meeting Ford Specification ESB-M4G92-A:

- does not run.
- is fast drying.
- remains semi-elastic.
- can be used for sealing water leaks, noise concerns, remounting trim and repairing torn weatherstripping.

Silicone Gasket and Sealant

Silicone Gasket and Sealant TA-30 or equivalent meeting Ford specification WSE-M4G323-A4:

- is a form-in-place gasket and multi-purpose adhesive/sealant.
- is a room temperature curing silicone rubber.

Caulking Cord

3MTM Strip Caulk-Black 051135-08578 or equivalent meeting Ford specification WSB-M4G32-C:

- is a heavy-bodied, plastic base with a filler.
- is commonly known as perma-gum.
- is used on spot-weld holes and between surfaces not sealed with a gasket.

Weatherstrip Adhesive

Trim and Weatherstrip Adhesive TA-14-A or equivalent:

- is a quick drying, strong adhesive designed to hold weatherstripping onto all body panels and surrounding metal.

Silicone Lubricant

Silicone Spray Lubricant XL-6 or equivalent meeting d specification ESR-M13P4-A:

- is used to keep the door and the window weatherstrip pliable and soft.
- makes the door easier to close.
- retards weatherstrip squeaks.
- retards weatherstrip wear.

- helps retain door window alignment by reducing friction between the glass frame and the rubber weatherstrip.
- should not be used prior to painting.

Body System

Material

Item	Specification
Seam Sealer TA-2	-
Silicone Gasket and Sealant TA-30	WSE-M4G323-A4

Inspection and Verification

Dust and Water Leaks

Most dust and water leaks occur due to missing or mis-installed body sealer or components. The source of the leak is detected by:

- pressurizing the vehicle and testing with soapy water.
  - ♦ Locate and tape off the body vents.
  - ♦ Turn the blower motor on the high position.
  - ♦ Turn the air recurculation to the off mode.
  - ♦ Close the windows and doors.
  - ♦ Open the hood and spray soapy water along body seams and grommete sure to test the areas arround the A-pillar at the fender and the hood hinge area.
  - ♦ Check for bubbles.
- inspecting for a dust pattern or water path near and above the area in question.
- removing any trim or carpet in the general area of the leak.
- road testing or water-hose testing the vehicle.
- placing a bright light under the vehicle, removing any necessary trim or carpet and inspecting the interior of the body at joints and weld lines.

Wind Noise

Most wind noise leaks occur at the corners of the windows or in the doors. Wind noise is detected by driving the vehicle at highway speeds or at speeds as specified by the customer. The vehicle should be driven in 4 different directions, with all the windows CLOSED, the radio OFF and the A/C blower motor OFF.

Squeak and Rattle

Squeak and rattle noises are generally caused by loose parts, contact or relative movement between 2 surfaces or loose wires and connectors. The source of the noise can be detected by stopping movement of the suspect part by hand or by using dampening or low friction materials.

Symptom Chart - NVH

Symptom Chart - NVH

NOTE: NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04 . Since it is possible that any one of multiple systems may be the cause of a symptom, it may bcessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to Section 100-04 for the next likely system and continue diagnosis.

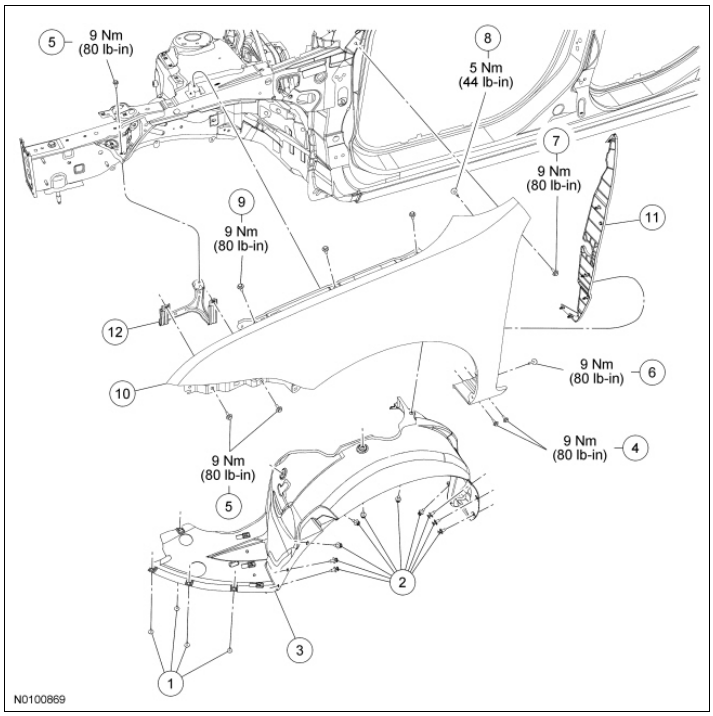
ConditionPossible SourcesAction

- Draft/wind noise and water leak around door perimeter
- Loose fit seal
- PINCH seal carrier to improve retention on seal flange.
- Seal installed incorrectly
- REINSTALL the seal.
- Door misaligned
- REALIGN the door. CHECK door gaps and fit in door opening and ADJUST as necessary. REFER to Section 501-03 .
- Scuff plate installed incorrectly
- REINSTALL the scuff plate.
- Seal or seal pushpins damaged
- INSTALL a new seal/pushpins.
- Sheet metal joints in door or door opening
- SEAL leaks with silicone gasket and sealant.
- Draft/wind noise and water leak around glass run
- Door glass misaligned
- ADJUST door glass.
- Glass run installed incorrectly
- REINSTALL glass run.
- Leak path behind glass run
- INSTALL foam rope behind glass run.
- Glass run channel spread wide
- PINCH glass run channel to reduce size of opening.

- Glass run damaged
- INSTALL a new glass run.
- Draft/wind noise and water leak at inner belt line
- Belt line seal installed incorrectly on flange
- ADJUST seal. (Do not bend the flange.)
- No contact with side glass
- ADJUST door glass.
- No contact with glass runs at both ends of belt line seal
- ADJUST belt line seal or ADD foam at seal ends.
- Belt line seal damaged
- INSTALL a new seal.
- Draft/wind noise and water leak at outer belt line
- Belt line seal installed incorrectly on flange (no glass contact)
- ADJUST seal.
- Belt line seal does not contact the glass
- ADJUST door glass.
- No contact with glass runs at both ends of belt line seal
- ADJUST belt line seal or ADD foam at seal ends.
- Belt line seal damaged
- INSTALL a new seal.
- Draft/wind noise at inner door handle/speaker opening
- Hole in weathershield
- SEAL hole with suitable tape.
- Weathershield misaligned
- REALIGN weathershield. INSTALL a new weathershield if pressure sensitive adhesive fails.
- Exterior door handle seal misaligned/damaged
- REALIGN or INSTALL a new seal as necessary. REFER to Section 501-14 .

- Speaker or speaker seal missing or damaged
- INSTALL a new door speaker.
- Draft/wind noise and water leaks at floor pan and grommets
- Missing or damaged plugs/grommets
- CHECK plugs/grommets for correct installation or damage. INSTALL new plugs/grommets if necessary.
- Road noise
- Missing mastic insulators
- CHECK for missing mastic insulators. REFER to Section 501-35 .
- Missing body insulators
- CHECK for missing body insulators.
- Rattles in body/doors and instrument panel
- Loose wires/cables
- CHECK that all wires/cables are correctly routed and inserted in correct retainers.
- Loose objects/components in door wells, pillars quarter trim panels
- CHECK doors by carefully striking underside of doors with a rubber mallet while listening for rattles in doors and pillars. REMOVE or TIGHTEN loose objects/components.
- Buzz from instrument panel components
- IDENTIFY which components of the instrument panel are buzzing. SECURE/FASTEN components as necessary, ADD foam or felt as needed if rattle persists.
- Door drain holes collecting water
- Holes clogged with mud or road tar
- CLEAN drain holes of foreign material with a punch or screwdriver. CHECK drain holes regularly.
- Wind noise from exterior rear view mirror
- Exterior mirror housing misaligned
- REALIGN with edges shingled to airflow, with no gaps.
- Mirror sail gasket folded/misaligned
- REINSTALL with gasket unfolded and aligned correctly.
- Mirror housing trim cap installed incorrectly

- REINSTALL with edges shingled to airflow.
- Air leak through mirror housing hinge
- Fully ENGAGE mirror into its operating position. USE foam to block air path through hinge.
- Inner sail trim installed incorrectly
- REINSTALL sail trim. ADJUST door trim.
- Inner sail gasket/barrier installed incorrectly
- REINSTALL trim cover with gasket/barrier aligned correctly.
- Air path through wiring bundle/fastener access holes
- BLOCK air path(s) with foam/tape.
- Exposed fastener access hole on mirror housing/sail
- INSTALL a new cap if missing.
- Rattle/vibration from exterior rear view mirror
- Mirror glass adjustment screws loose
- REMOVE mirror glass and TIGHTEN mirror glass adjustment motor screws. REFER to Section 501-09 .
- Mirror mounting nuts loose
- TIGHTEN mirror mounting nuts. REFER to Section 501-09 .
- Aftermarket air deflector/stone shields
- If possible, REMOVE aftermarket air deflector/stone shield, then ROAD TEST vehicle. If concern is no longer present, ADVISE customer that aftermarket component was causing concern.
- Draft/wind noise and water leak around perimeter of all fixed glass
- Gaps in the sealant bead
- APPLY approved sealant.
- Air traveling up windshield molding along A-pillar
- INSTALL foam rope full length of the A-pillar.
- Gaps in sealant bead of windshield/rear glass
- RESEAL windshield/rear glass. REFER to Section 501-11 .
- Windshield/rear glass misaligned or not installed correctly



- REINSTALL windshield/rear glass. REFER to Section 501-11 .
- Rear hood seal at base of windshield misaligned/damaged
- REALIGN or INSTALL a new seal as necessary.
- Draft noise at cowl
- Cowl seal misaligned/damaged
- REALIGN or INSTALL a new seal as necessary.
- Draft/water leak or noise from roof opening panel
- Roof opening panel/components
- REFER to Section 501-17 for diagnosis.
- Wind noise created by airflow over or behind body panels
- Fender splash shield misaligned
- REALIGN fender splash shield.
- Body panel misaligned (exposed edge)
- REALIGN appropriate body panel.
- Hood misaligned (front margin)
- CHECK hood gaps and fit. ADJUST hood as necessary.
- Front grille edge noise
- APPLY foam in hollow areas behind louvers.
- Wind noise created by grille opening panel
- Grille relationship to leading edge on hood
- If possible, ADJUST grille opening panel forward to eliminate wind noise.
- Sharp edges due to material imperfections
- REMOVE sharp edges (no damage to visible surface).
- Wind noise from air extractor (body vent)
- Air extractor housing seated incorrectly
- REINSTALL air extractor housing.
- Air extractor housing or flaps damaged

- INSTALL a new air extractor.
- Wind noise from bug shield/exterior windshield sun visor
- Turbulence created by location and shape
- DETERMINE if an OEM part or aftermarket. If aftermarket ADVISE customer accordingly. If OEM, VERIFY correctly installed. If noise is abnormal, REPAIR or INSTALL new as required.

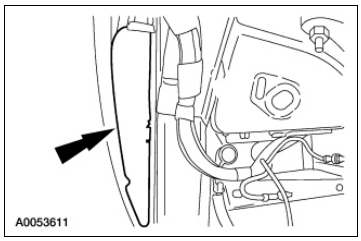
Radiator grille support bolts		-	106
Windshield washer reservoir retaining bolt	7	-	62
Wiper mounting arm and pivot shaft assembly bolts	5	-	44
Wiper pivot arm nuts	20	-	177

Front End Body Panels - Exploded View

Item	Part Number	Description
1	W706805	Splash shield screw (4 required)
2	W712196	Splash shield pin-type retainer (10 required)
3	5416034 RH/ 5416035 LH	Splash shield
4	W505421	Fender lower bolts
5	W505421	Fender support brace bolt
6	W505421	Fender rear lower bolt
7	W505421	Fender rear upper bolt
8	W505421	Fender upper rear inner bolt
9	W505421	Fender upper bolt (3 required)
10	16005 RH/ 16006 LH	Fender
11	16E132 RH/ 16E133 LH	Fender baffle
12	16A023 RH/ 16A024 LH	Fender support brace

1. For additional information, refer to the procedures in this section.



Fender

Removal and Installation

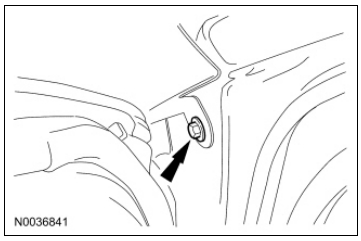
All vehicles

1. Remove the front fender splash shield. For additional information, refer to Fender Splash Shield in this section.

2. Remove the fender baffle.

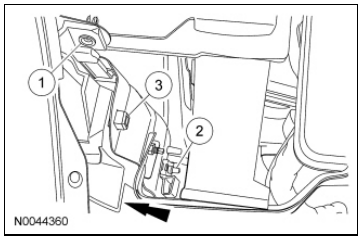
3. Remove the upper rear inner fender bolt.
   - To install, tighten to 5 Nm (44 lb-in).

4. Remove the 2 lower fender bolts.
   - To install, tighten to 9 Nm (80 lb-in).



Fusion only

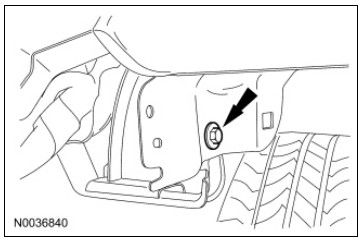
5. Remove the side turn signal lamp. For additional information, refer to Section 417-01 .



All vehicles

NOTE: The front door must be open to gain access to the rear fender bolt.

6. Remove the upper rear fender bolt.
   - To install, tighten to 9 Nm (80 lb-in).



7. Remove the bumper cover bracket from the front fender.
   1. Remove the screw.
   2. Remove the bolt.
   3. Pull outward to release the clip.

8. **NOTE:** Two bolts are required for Fusion and Milan, one bolt is required for MKZ.

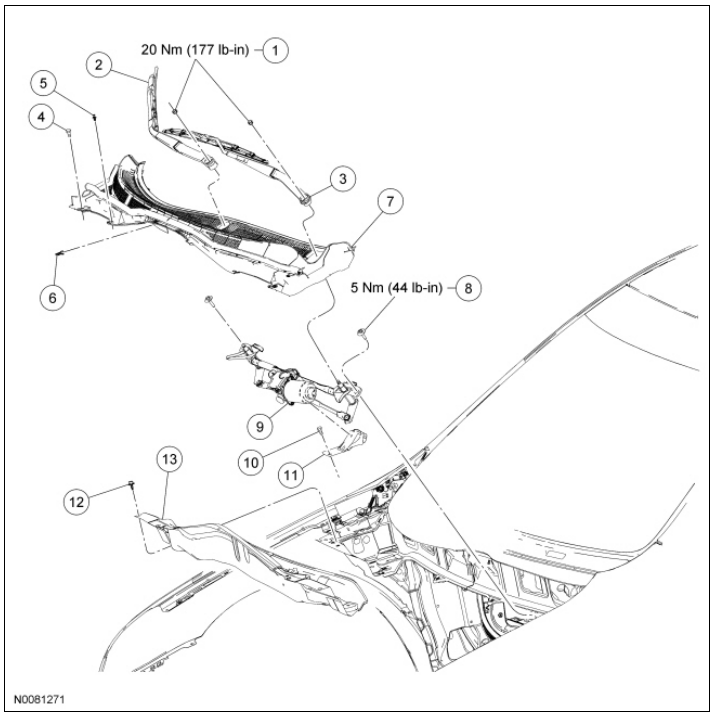
   Remove the fender support brace bolt.

   - To install, tighten to 9 Nm (80 lb-in).

9. Remove the pushpin from the front fender to headlamp.

10. Remove the upper rear inner fender bolt.
    - To install, tighten to 5 Nm (44 lb-in).

11. Remove the 3 upper fender bolts and the front fender.
    - To install, tighten to 9 Nm (80 lb-in).



12. To install, reverse the removal procedure.

Fender Splash Shield

Removal and Installation

1. Remove the fender splash shield screws.
2. Remove the 11 fender splash shield pin-type retainers.
3. Remove the fender splash shield.
4. To install, reverse the removal procedure.

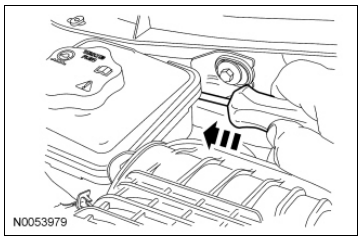
Cowl Panel Grille

Item	Part Number	Description
1	W520403-S	Wiper pivot arm nuts (2 required)
2	17526	Wiper pivot arm
3	17526	Wiper pivot arm
4	W701121-S	Cowl panel grille bolt (2 required)
5	1502316-A	Pin-type retainer (4 required)
6	W709919	Cowl panel retaining clip (2 required)
7	5402010	Upper cowl panel grille
8	W701121	Wiper mounting arm and pivot shaft assembly bolt (2 required)
9	17508	Wiper mounting arm and pivot shaft assembly
10	W707717	Cowl panel center brace bolt (3 required)
11	54022A06	Cowl panel center brace
12	W707717	Lower cowl panel grille bolt (10 required)
13	5402000-A	Lower cowl panel grille

Upper cowl panel grille

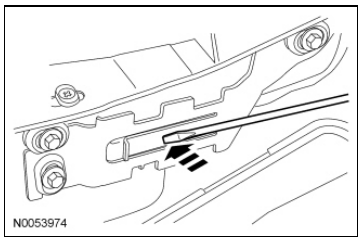
1. Remove the 2 wiper pivot arms nuts.
   - To install, tighten to 20 Nm (177 lb-in).

2. Remove the LH and RH wiper pivot arms.



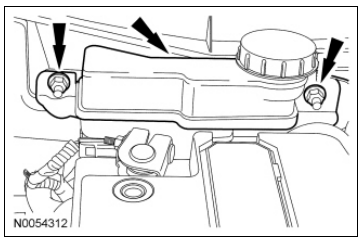
3. Remove the 4 pin-type retainers from the upper cowl panel grille.

4. Remove the 2 bolts from the upper cowl panel grille.
    - To install, tighten to 10 Nm (89 lb-in).



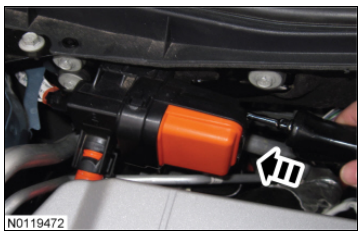
5. Remove the 2 retaining clips and the upper cowl panel grille.

3.5L only

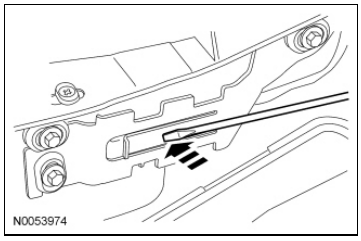


6. Insert a flat-blade screwdriver behind the power steering reservoir.

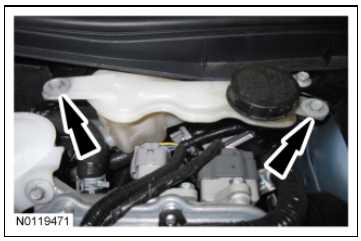
7. Push the retainer rearward to remove the power steering reservoir and position the power steering reservoir aside.



8. Remove the 2 brake fluid reservoir retainers and position the brake fluid reservoir aside.
    - To install, tighten to 10 Nm (89 lb-in).



Hybrid only



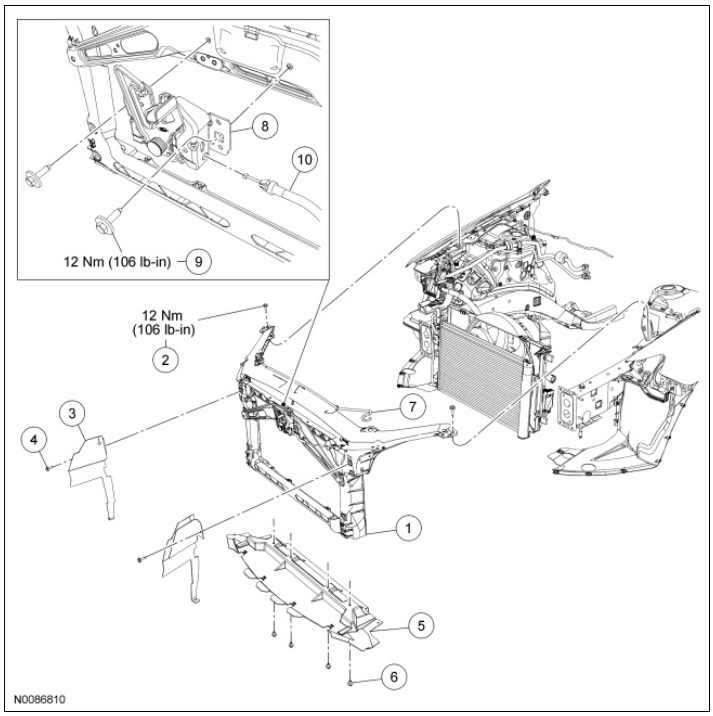
9. Insert a flat-blade screwdriver behind the high voltage junction box.

10. Push the retainer rearward to remove the high voltage junction box and position the high voltage junction box aside.

11. Remove the 2 brake fluid reservoir bolts and position the brake fluid reservoir aside.
    - To install, tighten to 10 Nm (89 lb-in).

Lower cowl panel grille

12. Remove the wiper mounting arm and wiper pivot shaft assembly in the following sequence.
    1. Disconnect the electrical connector.
    2. Remove the 2 bolts.
        - To install, tighten to 5 Nm (44 lb-in).



13. Remove the 3 bolts and the lower cowl panel center brace.
    - To install, tighten to 10 Nm (89 lb-in).

14. Remove the 10 lower cowl panel grille bolts.
    - To install, tighten to 10 Nm (89 lb-in).

15. Remove the lower cowl panel grille.

16. To install, reverse the removal procedure.
    - Adjust the pivot arms. For additional information, refer to Section 501-16 .

Radiator Grille Support

Item	Part Number	Description
1	16138	Radiator grille support
2	W505425	Radiator grille support bolt (2 required)
3	8311 LH/ 8310 RH	Air deflector
4	-	Air deflector pushpin (2 required)
5	8327	Lower air deflector
6	N807389	Lower air deflector scrivet (4 required)
7	5416826	Hood prop rod
8	16700	Hood latch
9	N808727	Hood latch bolt (2 required)
10	16916	Hood release cable

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. **NOTE:** Applies to 3.5L engines only.

   Remove the Air Cleaner (ACL) outlet pipe and ACL assembly. For additional information, refer to Section 303-12C .

3. Disconnect the hood security switch electrical connector.

4. Remove the windshield washer reservoir retaining bolt.
   - To install, tighten to 7 Nm (62 lb-in).

5. Remove the A/C line retaining bolt.

6. Remove the front headlamps. For additional information, refer to Section 417-01 .

7. **NOTE:** This step is necessary to relieve stress from the radiator grille support prior to removal.

   Using a suitable hood prop tool, prop and support the hood. Latch the vehicle hood prop rod into position on the radiator grille support.

8. Remove the front bumper. For additional information, refer to Section 501-19 .

9. Remove the front impact severity sensor and release the harness clip. For additional information, refer to Section 501-20B .

10. Disconnect the ambient air temperature sensor electrical connector and harness clip. Position the harness aside.

11. Disconnect the hood latch release cable from the latch assembly.

12. Remove the hood latch bolts.
    - To install, tighten to 12 Nm (106 lb-in).

13. Remove the cooling module retaining clip screws and release the clips.

14. Remove the radiator grille support bolts (3 each side) and remove the support.
    - To install, tighten to 12 Nm (106 lb-in).

15. To install, reverse the removal procedure.
    - Transfer all necessary components.

Torque Specifications

Description	Nm	lb-ft	lb-in
Door check arm-to-body bolt	25	18	-
Door check arm-to-door nuts	12	-	106
Door hinge-to-body bolts	25	18	-
Door hinge-to-door bolts	30	22	-
Door latch striker plate bolts	22	16	-
Luggage compartment lid hinge-to-body bolts	25	18	-
Luggage compartment lid hinge-to-luggage compartment lid nuts	25	18	-
Luggage compartment lid striker plate bolts	22	16	-

Door Alignment - Front

All alignments

1. Remove the door latch striker plate.

Front door in and out, up and down alignment

2. Loosen, but do not remove, the front door hinge-to-front door fasteners enough to allow door alignment.

Front door fore, aft and tilt alignment

3. Remove the front fender. For additional information, refer to Section 501-02 .

4. Loosen, but do not remove, the upper front door hinge-to-body fasteners enough to allow door alignment.

5. Loosen, but do not remove, the lower front door hinge-to-body fasteners enough to allow door alignment.

All alignments

6. Adjust the door. For additional information, refer to Section 501-35 .

7. Tighten the door fasteners.
   - Tighten the front door hinge-to-front door bolts to 30 Nm (22 lb-ft).
   - Tighten the front door hinge-to-body bolts to 25 Nm (18 lb-ft).

Front door fore, aft and tilt alignment

8. Install the front fender. For additional information, refer to Section 501-02 .

All alignments

9. Install and adjust the door striker as necessary. For additional information, refer to Section 501-35 .
   - Tighten the door latch striker plate bolts to 22 Nm (16 lb-ft).

Door Alignment - Rear

All alignments

1. Remove the door latch striker plate.

Rear door in and out, up and down alignment

2. Loosen, but do not remove, the rear door hinge-to-rear door fasteners enough to allow door alignment.

Rear door fore, aft and tilt alignment

3. Position aside the B-pillar panel.

4. Loosen, but do not remove, the upper rear door hinge-to-body fasteners enough to allow door alignment.

5. Loosen, but do not remove, the lower rear door hinge-to-body fasteners enough to allow door alignment.

All alignments

6. Adjust the door. For additional information, refer to Section 501-35 .

7. Tighten the door fasteners.
   - Tighten the rear door hinge-to-rear door bolts to 30 Nm (22 lb-ft).
   - Tighten the rear door hinge-to-body bolts to 25 Nm (18 lb-ft).

Rear door fore, aft and tilt alignment

8. Install the B-pillar trim panel.

All alignments

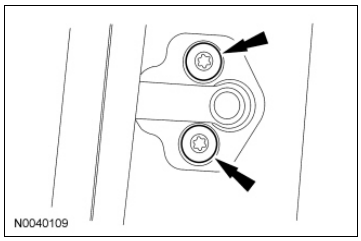
9. Install and adjust the door striker as necessary. For additional information, refer to Section 501-35 .
   - Tighten the door latch striker plate bolts to 22 Nm (16 lb-ft).

Luggage Compartment Lid Alignment

1. Remove the luggage compartment lid struts.

2. Loosen the 4 luggage compartment lid hinge-to-body bolts.

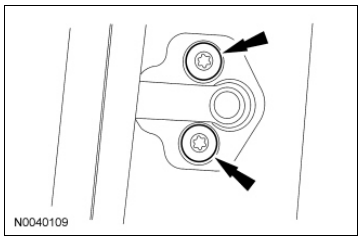
3. Adjust the luggage compartment lid as necessary.
   - For additional information, refer to Section 501-35 .



4. Tighten the 4 luggage compartment lid hinge-to-body bolts.
   - Tighten to 25 Nm (18 lb-ft).

5. Install the luggage compartment lid struts.

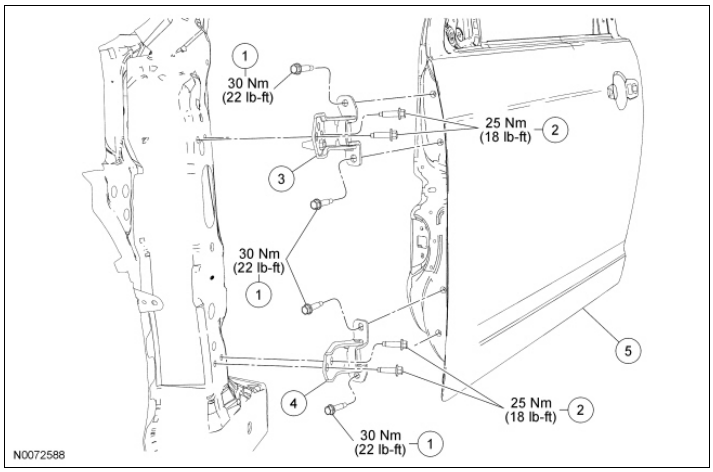
Striker Adjustment



NOTE: Before adjusting the door latch striker plate, verify that the door can be closed easily and fits tightly.

1. Loosen the door latch striker bolts.

2. Reposition the door latch striker plate from side-to-side or up and down as necessary.



3. Tighten the door latch striker plate bolts.
   - Tighten to 22 Nm (16 lb-ft).

4. Check the adjustment of the door. For additional information, refer to Section 501-35 .
   - Repeat the procedure as necessary.

Door

NOTE: Front door shown, rear door similar.

Item	Part Number	Description
1	W711119	Hinge-to-door bolts
2	W506023	Hinge-to-body bolts
3	5422800	Upper hinge
4	5422810	Lower hinge
5	5420124	Front door

Removal and Installation

1. Remove the door check arm-to-body bolt.
   - To install, tighten to 25 Nm (18 lb-ft).

2. ***NOTICE:*** **To avoid damaging the door, this step requires an assistant.**

   NOTE: To minimize the possibility of cross threading, hand start all fasteners during the installation.

   Mark the position of each hinge and remove the hinge-to-door bolts.

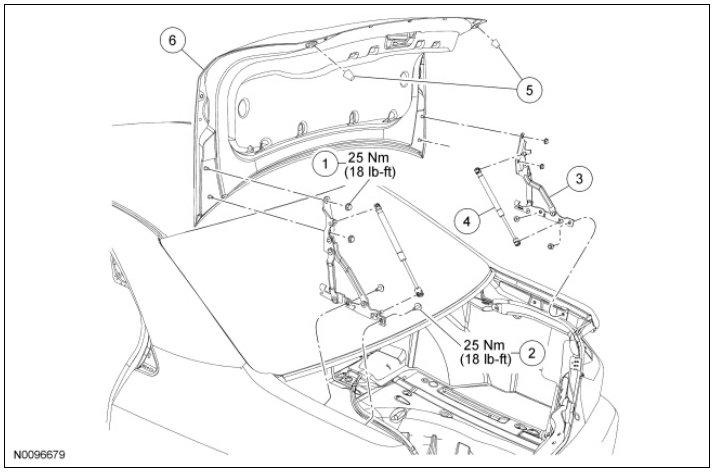
   - To install, tighten to 30 Nm (22 lb-ft).

3. Remove the front door.

4. To install, reverse the removal procedure.
   - If necessary, align the door. For additional information, refer to Door Alignment - Front or Door Alignment - Rear in this section.

Door Check Arm

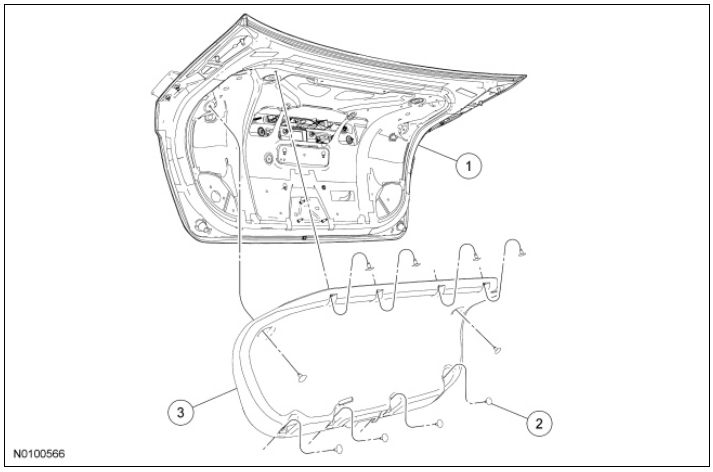
Item	Part Number	Description
1	5423552	Door check arm
2	W520111	Door check arm-to-door nuts
3	-	Door check arm-to-check arm bracket (part of 5423552)
4	-	Door check arm bracket (part of 5423552)
5	W707375	Door check arm-to-body bolt



1. Remove the door trim panel. For additional information, refer to Section 501-05 .

2. Remove the door check arm-to-body bolt.
   - To install, tighten to 25 Nm (18 lb-ft).

3. Remove the door check arm-to-door nuts.
   - To install, tighten to 12 Nm (106 lb-in).

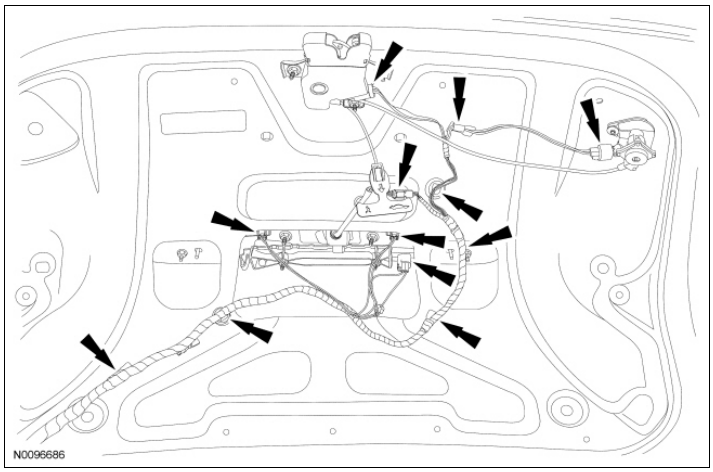


4. To install, reverse the removal procedure.

Luggage Compartment Lid

Item	Part Number	Description
1	N811478-S	Hinge-to-luggage compartment lid nut (4 required)
2	W503931	Hinge-to-body bolt (4 required)
3	42700 RH/ 42701 LH	Luggage compartment lid hinge
4	54406A10	Luggage compartment lid assist strut (RH/LH)
5	W712985	Luggage compartment bumper (2 required)
6	40110	Luggage compartment lid

Luggage Compartment Lid Trim Panel



Item	Part Number	Description
1	40110	Luggage compartment lid

2	W706635	Luggage compartment lid trim panel pin-type retainer (10 required)
3	45594	Luggage compartment lid trim panel

1. Open the luggage compartment lid.

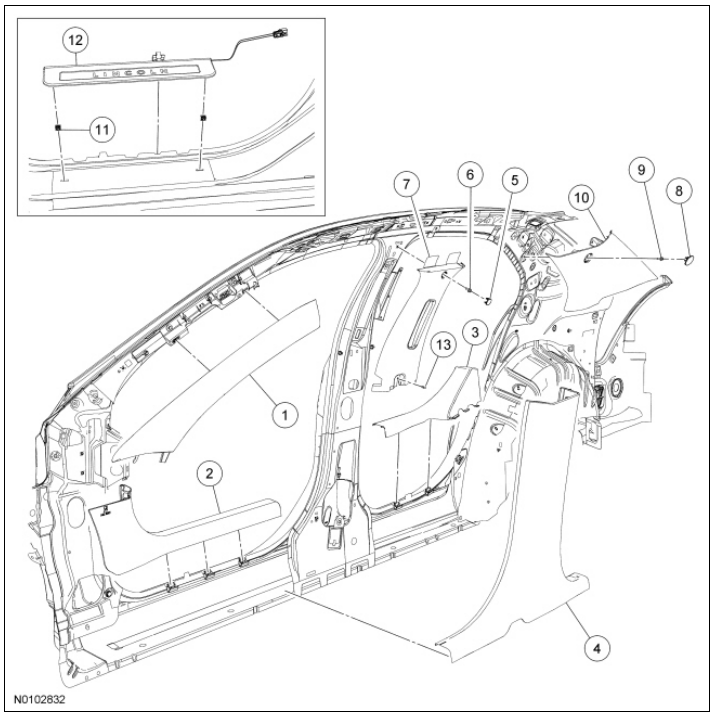
2. Remove the luggage compartment lid trim panel and pin-type retainers.

3. Disconnect the electrical connectors and remove the wiring harness clips from the luggage compartment lid.

4. Remove the luggage compartment lid lift struts.

5. With the help of an assistant, remove the hinge-to-luggage compartment lid nuts.
   - To install, tighten to 25 Nm (18 lb-ft).

6. With the help of an assistant, remove the luggage compartment lid.



7. To install, reverse the removal procedure.

8. Adjust the luggage compartment lid as necessary. For additional information, refer to Luggage Compartment Lid Alignment in this section.

Torque Specifications

Description	Nm	lb-ft	lb-in
Assist handle bolts	5	-	44
Child seat tether anchor bolts	22	16	-
D-ring bolt	40	30	-

Interior Trim - Exploded View

Item	Part Number	Description
1	03598 RH/ 03599 LH	A-pillar trim panel
2	13208 RH/ 13209 LH	Front door scuff plate (with Inertia Fuel Shutoff (IFS) switch emblem shown, others similar)
3	13228 RH/ 13229 LH	Rear door scuff plate
4	24346 RH/ 24347 LH	B-pillar lower trim panel
5	672A40A	B-pillar trim panel screw cover
6	W705604	B-pillar trim panel screw
7	24356 RH/ 24357 LH	B-pillar upper trim panel
8	672A40B	C-pillar trim panel screw cover
9	W705604	C-pillar trim panel screw
10	52018 RH/ 52019 LH	C-pillar trim panel
11	-	Scuff plate trim panel - front, lighted outer clip (part of 5413208) (2 required)
12	5413208	Scuff plate trim panel - front, lighted outer

1. For additional information, refer to the procedures in this section.

&nnbsp;

A-Pillar Trim Panel

NOTE: The A-pillar trim panel is a one-time-use. If removed, a new A-pillar trim panel must be installed.

1. **NOTE:** When removing the A-pillar trim panel, use a gentle side-to-side rocking motion to free the clip from the trim panel.

   Remove the A-pillar trim panel and the clip from the sheet metal.

2. To install, reverse the removal procedure.
   - Align attachment clips to the holes and snap the new A-pillar trim panel in place.

B-Pillar Trim Panel

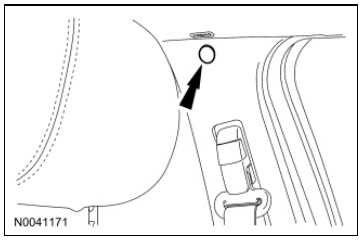
Removal and Installation

1. Position the front seats in the full forward position.

2. **NOTE:** Inspect the safety belt D-ring cover for damage. If the safety belt D-ring cover does not remain in place, install a new cover.

   Remove the safety belt D-ring cover and remove the D-ring bolt.

   - To install, tighten to 40 Nm (30 lb-ft).



3. Position the front and rear door weatherstrips aside.

4. Remove the front door scuff plate trim panel. For additional information, refer to Scuff Plate Trim Panel - Front in this section.

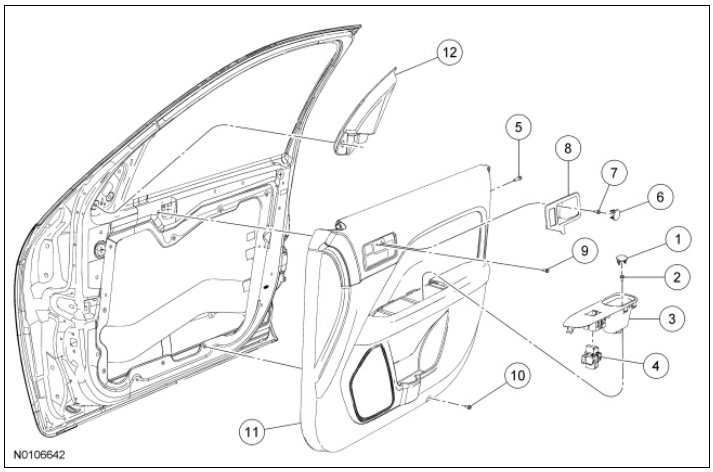
5. Remove the rear door scuff plate trim panel. For additional information, refer to Scuff Plate Trim Panel - Rear in this section.

6. Remove the lower B-pillar trim panel.
   - Lift the lower area of the lower B-pillar trim panel and pull inward toward the center of the vehicle.
   - Slide the lower B-pillar trim panel down to disengage it from the upper B-pillar trim panel.

7. Remove the upper B-pillar trim panel.
   - Remove the screw cover.
   - Remove the screw.
   - Remove the push-pin with the B-pillar trim panel.

8. To install, reverse the removal procedure.

C-Pillar Trim Panel

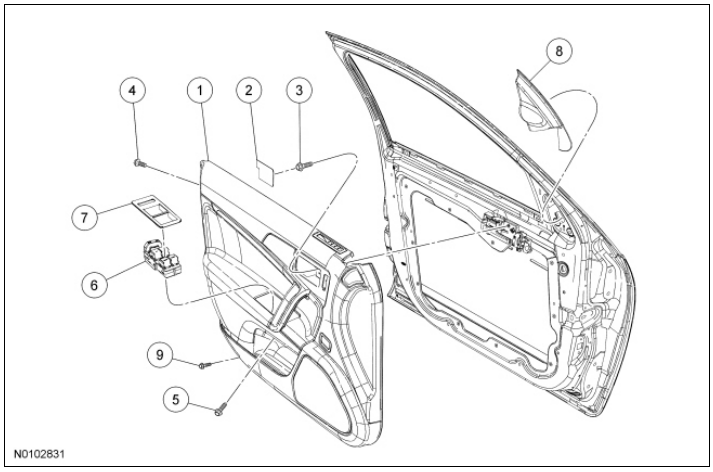


Removal and Installation

1. Position the rear door weatherstrip aside.
2. Remove the screw cover.
3. Remove the screw.
4. Remove the C-pillar trim panel.
5. To install, reverse the removal procedure.

Door Trim Panel - Front

Fusion



NOTE: RH shown, LH similar.

Item	Part Number	Description
1	047A74	Front door inside handle bezel screw cover
2	W505153	Front door inside handle bezel screw
3	54266B	Front door inside handle bezel
4	14529B	Front door window switch
5	W707745	Front door trim panel upper screw
6	22621 LH/ 22620 RH	Front door inside handle screw cover
7	W505942	Front door inside handle screw
8	22621 LH/ 22620 RH	Front door inside handle bezel
9	W709494	Front door trim panel center screw
10	W706476	Front door trim panel lower screw
11	5423942	Front door trim panel
12	17K709	Front door trim sail panel

MKZ

NOTE: LH shown, RH similar.

Item	Part Number	Description
1	5423942	Front door trim panel
2	5424057	Front door inside handle escutcheon screw cover
3	W505942	Front door inside handle escutcheon screw
4	W707745	Front door trim panel upper screw
5	W712297	Front door trim panel center screw
6	14529	Front door trim panel multiswitch
7	14524	Front door trim panel multiswitch bezel
8	17K709	Front door trim panel sail panel
9	W707745	Front door trim panel lower screw

Removal and Installation

All vehicles

1. Remove the front door inside handle screw cover.

2. Remove the front door inside handle screw.

Fusion

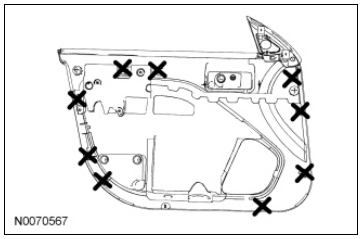
3. Remove the front door inside handle bezel screw cover.

4. Remove the front door inside handle bezel screw.

5. Remove the front door inside handle bezel.
   - Lift upward on the rear of the front door inside handle bezel.
   - Disconnect the electrical connector.

All vehicles

6. Remove the front door trim panel upper screw.



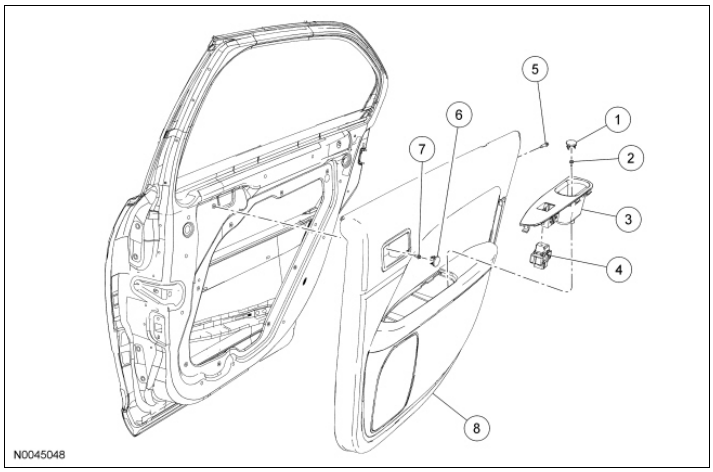
7. Remove the front door trim panel lower screw.

8. Remove the front door trim panel center screw.
   - Fusion is located behind the inside door handle bezel.
   - MKZ is located above the map pocket.

9. **NOTE:** The back of the front door trim panel shown with the location of the pin-type retainers.

   Remove the front door trim panel.

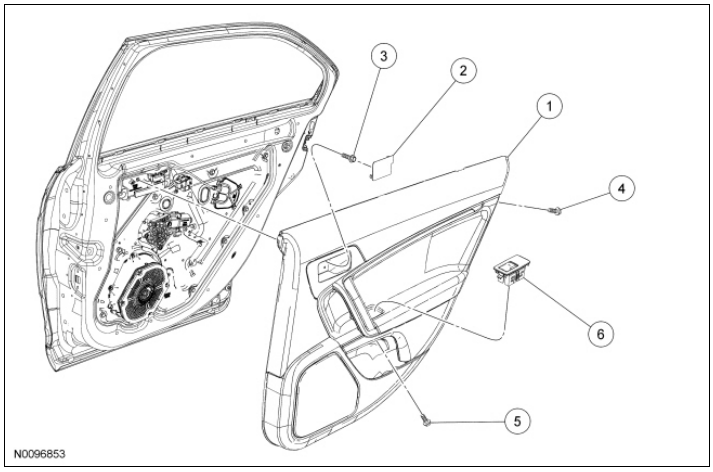
   - Pull the front door trim panel outward to release the pin-type retainers.
   - Disconnect the electrical connector.



10. To install, reverse the removal procedure.

Door Trim Panel - Rear

Fusion



NOTE: RH shown, LH similar.

Item	Part Number	Description
1	047A74	Rear door inside handle bezel screw cover
2	W505153	Rear door inside handle bezel screw
3	54266	Rear door inside handle bezel
4	14529	Rear door window switch
5	W707745	Rear door trim panel upper screw
6	22620 RH/ 22621 LH	Rear door handle screw cover
7	W505942	Rear door handle screw
8	5427406	Rear door trim panel

MKZ

NOTE: RH shown, LH similar.

Item	Part Number	Description
1	5427406	Rear trim panel
2	5424056	Rear door inside handle escutcheon bolt cover
3	W505942	Rear door inside handle escutcheon bolt
4	W707745	Rear door trim panel upper screw
5	W712297	Rear door trim panel lower screw
6	14529	Rear door trim panel switch

Removal and Installation

All vehicles

1. Remove the rear door inside handle bolt cover.

2. Remove the upper rear door inside handle bolt.

Fusion

3. Remove the rear door handle screw cover.

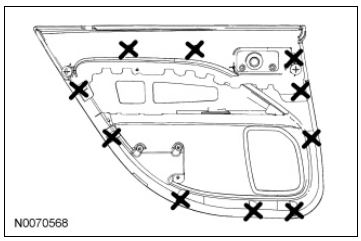
4. Remove the rear door handle screw.

5. Remove the rear door inside handle bezel.
   - Lift upward on the rear of the rear door inside handle bezel.
   - Disconnect the electrical connector.

All vehicles

6. Remove the rear door trim panel upper screw.

MKZ

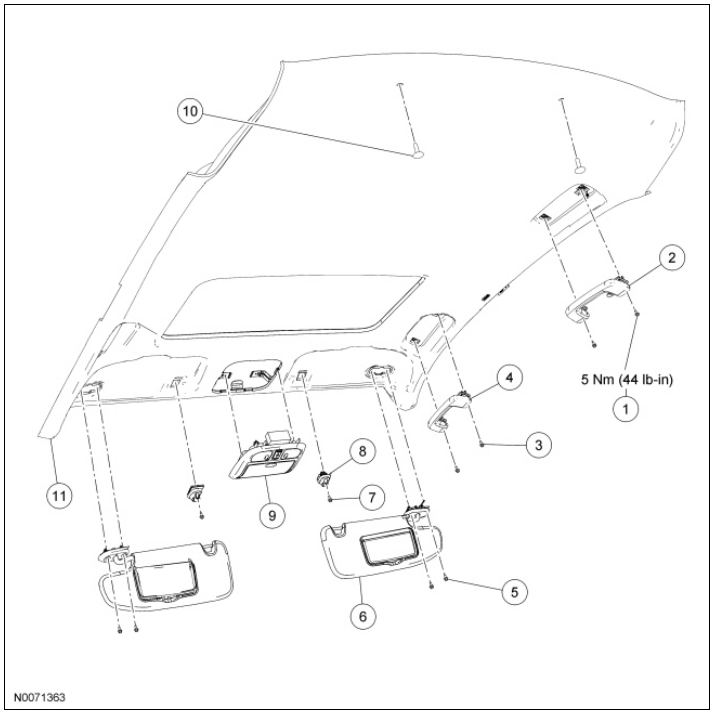


7. Remove the rear door trim panel lower screw.

All vehicles

8. **NOTE:** The back of the rear door trim panel shown with the location of the rear door trim panel pin-type retainers indicated.

   Remove the rear door trim panel.

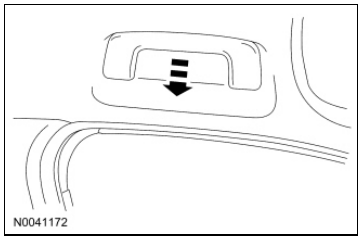


- Pull the rear door trim panel outward to release the rear door trim panel pin-type retainers.

9. To install, reverse the removal procedure.

Headliner

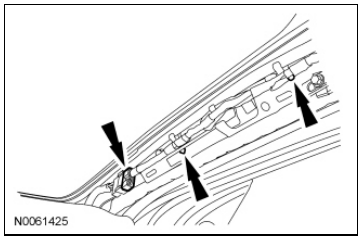
NOTE: Headliner with moonroof shown, headliner without moonroof similar.



Item	Part Number	Description
1	W504265	Assist handle bolt (2 required)
2	31406B RH/ 31407B LH	Rear assist handle
3	W504265	Assist handle bolt (2 required)
4	31406A RH/ 31407A LH	Front assist handle
5	W505003	Sun visor screw (2 required)
6	04104 RH/ 04105 LH	Sun visor
7	W505003	Sun visor arm clip screw
8	04132	Sun visor arm clip
9	519A70	Overhead console
10	W709571	Pushpin retainer (2 required)
11	51916	Headliner

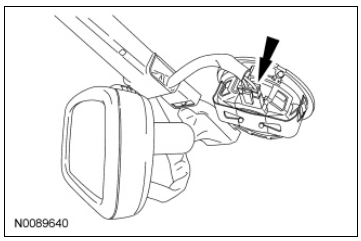
Removal and Installation

1. Remove the driver seat and rear seat cushion. For additional information, refer to Section 501-10 .



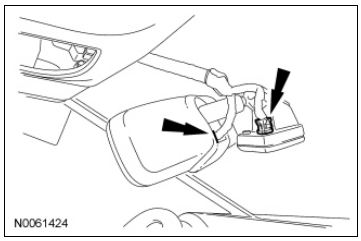
2. Position the passenger seat fully rearward and recline fully.

3. Open the assist handle covers.
   - Remove the bolts and remove the handles.
     - ♦ To install, tighten to 5 Nm (44 lb-in).



4. Remove the A-pillar trim panels. For additional information, refer to A-Pillar Trim Panel in this section.

5. Disconnect the wire harness connector and the 2 pushpins.



6. If equipped, remove the rain sensor cover.
    - Pull the rain sensor cover outward off the windshield.

7. If equipped, disconnect the rain sensor electrical connector.

8. If equipped, disconnect the automatic dimming rear view mirror and compass electrical connectors.

9. Remove the B-pillar trim panels. For additional information, refer to B-Pillar Trim Panel in this section.

10. Remove the C-pillar trim panels. For additional information, refer to C-Pillar Trim Panel in this section.

11. Remove the overhead console.
    - Disconnect the electrical connector.

12. Remove the sun visor clips.

13. **NOTE:** The sun visor wiring is secured to the headliner and cannot be separated in vehicle.

Remove the 4 sun visor screws and lower the sunvisors.

14. Remove the 2 headliner pushpin retainers at the rear.

15. If equipped, position the headliner forward to gain access to disconnect the roof opening panel motor electrical connector.

16. ***NOTICE:*** **To avoid damaging the headliner, an assistant is required to support the sun visors for this step.**

    Remove the headliner through the LH rear door.

17. **NOTE:** Obtain the 3M Duramix 4747 Super Fast Adhesive commercially. The 3M Duramix 4747 Super Fast Adhesive is a 2-part adhesive in a 50 ml dual-tube applicator. Depending on the size of the headliner and optional wire harness(es), the purchase of two to five 50 ml tubes is suggested.

    If installing a new headliner, transfer the wire harness in the following sequence:

    1. Using a suitable marking tool, mark the new headliner with the routing and exit points of the wire harness from the original headliner.
    2. Carefully remove the wire harness from the original headliner.
    3. ***NOTICE:*** **Make sure not to damage the wire harness when cutting the excess adhesive from the wire harness.**

       Cut and remove any excess adhesive from the wire harness.
    4. Position the wire harness onto the new headliner and check that the harness has enough length to be connected to the body/roof connectors. Apply tape to temporarily hold the wire harness in that position on the headliner.
    5. **NOTE:** The 3M Duramix 4747 Super Fast Adhesive will set in 20 seconds. Continually make sure that the wire harness is routed correctly when applying the adhesive.

       Apply the 3M Duramix 4747 Super Fast Adhesive in the same location as the factory installed adhesive along the full length of the wire harness-to-headliner to avoid any NVH concern(s).
    6. Transfer all necessary components.

18. To install, reverse the removal procedure.

Parcel Shelf

NOTE: Fusion shown, MKZ and Hybrid similar.

Item	Part Number	Description
1	W706635	Parcel shelf pushpin (2 required)
2	63874	Parcel shelf seat back latch cover (2 required)
3	46668	Parcel shelf

Removal and Installation

1. Remove the C-pillar trim panels. For additional information, refer to C-Pillar Trim Panel in this section.
2. Remove the rear seat bolsters. For additional information, refer to Section 501-10 .
3. Fold the rear seats down.
4. Pull the seat back latch covers forward and remove from the vehicle.
5. Remove the high mounted stoplamp. For additional information, refer to Section 417-01 .
6. Remove the 2 pushpins.
7. Thread the seat belts through the guides.
8. To install, reverse the removal procedure.

Scuff Plate Trim Panel - Front

Removal and Installation

NOTE: On the MKZ, there is an outer lighted scuff plate. For additional information, refer to Scuff Plate Trim Panel - Front, Lighted Outer .

1. Pull the front inboard section of the scuff plate trim panel outward to release the 1 retaining clip.
2. **NOTE:** The 3 retaining clips must stay attached to the door weather strip and pinch weld.

   Lift the scuff plate trim panel straight up to release the scuff plate trim panel from the 3 retaining clips.
3. To install, reverse the removal procedure.
   - Align the scuff plate trim panel into the clips and snap into place.

Scuff Plate Trim Panel - Front, Lighted Outer

Removal and Installation

NOTE: The front lighter outer scuff plate is only available on the MKZ.

1. Remove the front door scuff plate. For additional information, refer to Scuff Plate Trim Panel - Front in this section.

2. Remove the B-pillar lower trim panel. For additional information, refer to B-Pillar Trim Panel in this section.

3. Disconnect the scuff plate trim panel electrical connector located behind the lower B-pillar trim panel.

4. ***NOTICE:*** **To avoid damage to the scuff plate trim panel, remove any retaining clips from the body and attach them to the scuff plate trim panel before installing.**

   Remove the front, lighted outer scuff plate trim panel by lifting straight up and releasing the 2 retaining clips from the body.

5. To install, reverse the removal procedure.
   - Align the retaining clips to the body and snap in place.

Scuff Plate Trim Panel - Rear

Removal and Installation

1. **NOTE:** The 2 retaining clips must stay attached to the door weather strip and pinch weld.

   Lift the rear scuff plate trim panel straight up to release the rear scuff plate trim panel from the 2 retaining clips.

2. To install, reverse the removal procedure.
   - Align the rear scuff plate trim panel into the clips and snap into place.

Torque Specifications

Description	Nm	lb-in
Luggage compartment lid applique nuts	5	44
Spoiler-to-luggage compartment lid nuts	6	53

Radiator Grille - MKZ

Item	Part Number	Description
1	N802539	Upper radiator air deflector J-clip (4 required)
2	8A164	Upper radiator air deflector
3	W706805	Upper radiator grille screws (6 required)
4	8150-B LH/ 8150-A RH	Upper radiator grille
5	17C831	Front bumper cover
6	17K946-A LH/ 17K947-A RH	Fog lamp bezel trim
7	17K946-B LH/ 17K947-B RH	Fog lamp bezels
8	8B262	Badge
9	8150-C	Lower center radiator grille
10	8150-D	Lower center radiator grille moulding
11	W706805	Front bumper cover valance screw (6 required)
12	W711035	Front bumper cover valance pin-type retainer (9 required)
13	N802539	Front bumper cover valance J-clip (6 required)
14	17B635	Front bumper cover valance

Removal and Installation

All radiator grilles

Section 501-19 .

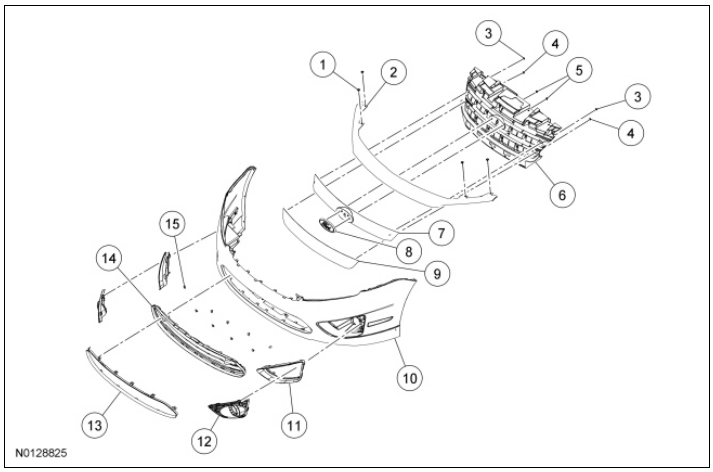
Upper radiator grille

2. Remove the 6 upper radiator grille screws.

3. Remove the upper radiator deflector.

4. Remove the upper radiator grille.

Lower radiator grille



5. Pull outward to remove the lower radiator grille moulding.

6. Remove the lower center radiator grille.
   - Remove the lower center radiator grille from the clips on the bumper cover.
   - Remove the lower center radiator grille from the bumper cover.

All radiator grilles

7. To install, reverse the removal procedure.

Radiator Grille - Fusion

Item	Part Number	Description
1	50980	Pin-type retainer (4 required)
2	8150-A	Upper radiator grille
3	W707501	Center radiator grille nuts (2 required)
4	W707501	Lower radiator grille nuts (2 required)
5	W707501	Badge nut (2 required)
6	8A164	Radiator grille reinforcement
7	8150-B	Center radiator grille
8	8B262	Badge
9	8150-C	Lower radiator grille
10	17C831	Front bumper cover
11	17K946-J LH/ 17K947-J RH	Fog lamp bezel moulding
12	17K946-F LH/ 17K947-F RH	Fog lamp bezel
13	17K945	Lower bumper grille moulding
14	8150-D	Lower bumper grille
15	-	Lower bumper grille moulding clip (9 required) (part of 17K945)

Upper radiator grille

1. Remove th pin-type retainers.
2. Press the tabs to release the upper radiator grille from the radiator grille reinforcement and remove the upper radiator grille.

Center and lower radiator and lower bumper grilles

3. Remove the front bumper cover. For additional information, refer to Section 501-19 .

Center and lower radiator grilles

4. Press the tabs to release the radiator grille reinforcement and remove the radiator grille reinforcements.

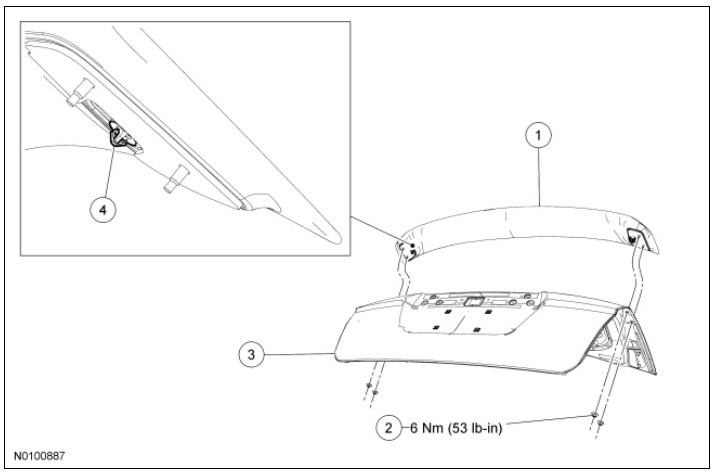
Center radiator grille

5. Remove the center radiator grille nuts.
6. Remove the center radiator grille.

Lower radiator grille

7. Remove the lower radiator grille nuts.
8. Remove the lower radiator grille.

Lower bumper grille



9. Remove the lower bumper grille moulding clips.
10. Remove the lower bumper grille moulding.
11. Press the tabs to release the lower bumper grille from the front bumper cover.
12. Remove the lower bumper grille from the bumper cover.

All vehicles

13. To install, reverse the removal procedure.

Spoiler

Fusion

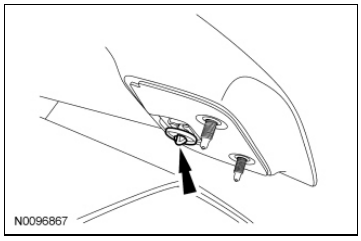
Item	Part Number	Description
1	40602	Spoiler
2	N621926-S	Spoiler nut (4 required)
3	40110	Luggage compartment lid
4	-	Spoiler pin-type retainer (2 required) (part of 40602)

Removal and Installation

1. Open the luggage compartment lid.

2. If equipped, disconnect the spoiler electrical connector.

3. Remove the spoiler-to-luggage compartment lid nuts.
   - To install, tighten to 6 Nm (53 lb-in).



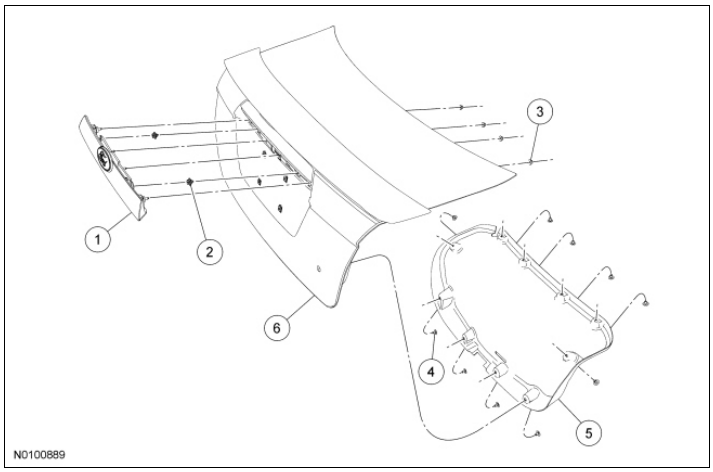
4. **NOTE:** The spoiler is attached to the luggage compartment lid with double-sided tape. New tape must be installed during installation.

   Position a piano wire, or equivalent tool, between the spoiler and the luggage compartment lid.

5. Cut the double-sided tape.

NOTE: There are 2 pin-type retainers on the bottom of the spoiler. If the pin-type retainers break during removal, a new spoiler must be installed.

6. Slide a suitable tool between the luggage compartment lid and the spoiler at each end until contact is made with the pin-type retainers. Push in the pin-type retainer and pull up on the spoiler to release the spoiler from the luggage compartment lid.



7. Remove the spoiler.

8. **NOTE:** Clean the mounting surfaces of the luggage compartment lid and the spoiler prior to installing. Press along the front edge of the spoiler after securing the fasteners to make sure of correct tape adhesion.

   To install, reverse the removal procedure.

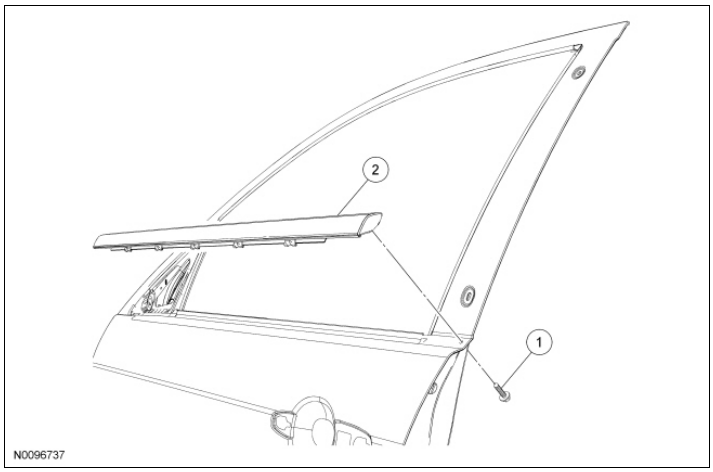
Applique - Luggage Compartment Lid

Item	Part Number	Description
1	42509	Luggage compartment lid applique
2	-	Luggage compartment lid applique pin-type retainer (part of 42509)
3	W709764	Luggage compartment lid applique nut (4 required)
4	W706635	Luggage compartment lid trim panel pin-type retainer (12 required)
5	45594	Luggage compartment lid trim panel
6	40110	Luggage compartment lid

Removal and Installation

1. Remove the luggage compartment lid trim panel pin-type retainers.

2. Remove the luggage compartment lid trim panel.



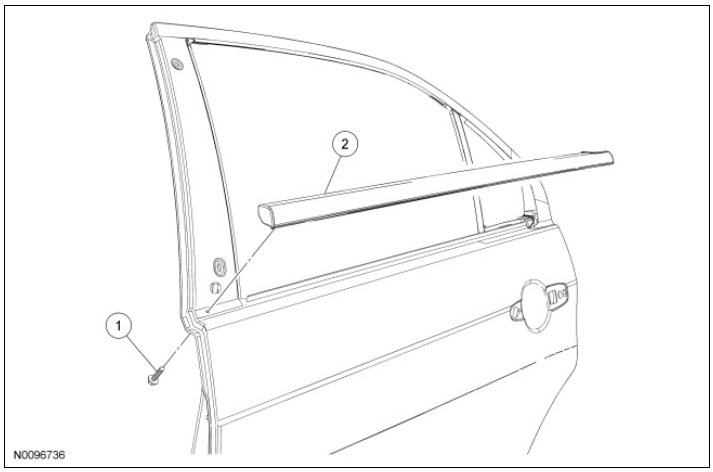
3. Disconnect the luggage compartment lid applique electrical connectors.

4. Remove the luggage compartment lid applique nuts.
   - To install, tighten to 5 Nm (44 lb-in).

5. Remove the luggage compartment lid applique.
   - Squeeze the tabs on the luggage compartment lid applique pin-type retainer to release it from the luggage compartment lid.

6. To install, reverse the removal procedurei>

Beltline Moulding - Front Door

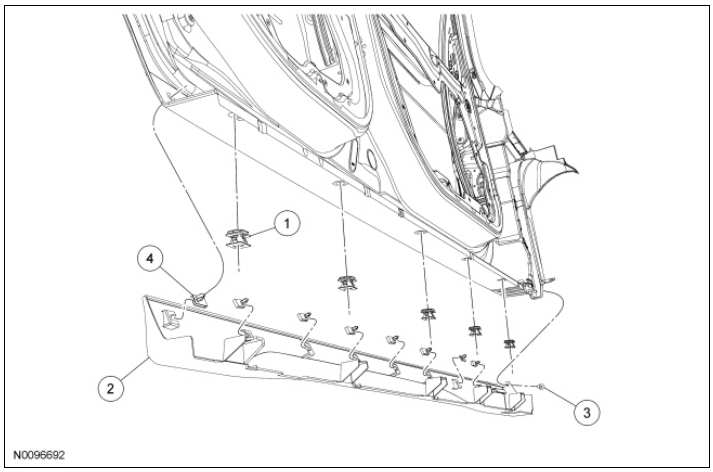


Item	Part Number	Description
1	-	Front door beltline moulding screw (part of 21453)
2	21453	Front door beltline moulding

Removal and Installation

1. Remove the front door beltline moulding screw.
2. Starting at the rear of the moulding, pull upward to release the moulding from the door.
3. Pull rearward to remove the beltline moulding.
4. To install, reverse the removal procedure.

Beltline Moulding - Rear Door



Item	Part Number	Description
1	-	Rear door beltline moulding screw (part of 25597)
2	25597	Rear door beltline moulding

Removal and Installation

1. Remove the beltline moulding screw.
2. Starting at the front of the moulding, pull upward to release it from the door.
3. Pull forward to release the beltline moulding from the quarter window trim.
4. To install, reverse the removal procedure.

Rocker Panel Moulding

Item	Part Number	Description
1	-	Rocker panel moulding lower clip (5 required) (part of 10154 LH/ 10155 RH)
2	10154 LH/ 10155 RH	Rocker panel moulding
3	W505421	Rocker panel moulding pin-type retainer
4	-	Rocker panel moulding upper clip (8 required) (part of 10154 LH/ 10155 RH)

Removal and Installation

1. Remove the rocker panel pin-type retainer.
2. Pull downward on the rocker panel lower clip flanges to release them from the body.
3. Pull outward on the rocker panel moulding to release the rocker panel upper clips from the body.
4. To install, reverse the removal procedure.

Torque Specifications

Description	Nm	lb-in
Exterior mirror mounting nuts	8	71

Rear View Mirrors

The main components of the exterior rear view mirrors are:

- Exterior mirror control switch
- Exterior mirror cover
- Exterior mirror glass
- Exterior mirror glass adjustment motors
- Exterior mirror plastic housing
- Exterior mirror glass with blind spot monitoring indicator (optional)
- Heated exterior mirror glass (optional)
- LH exterior auto-dimming mirror glass (optional)
- Memory exterior mirrors (optional)
- Puddle lamps (optional)

For information on the puddles lamps, refer to Section 417-01 .

For information on the blind spot monitoring system, refer to Section 419-04 .

Exterior Mirrors

Heated Exterior Mirrors

The power exterior rear view mirrors are available with a heated mirror glass feature, which heats the mirror glass to remove frost, snow, ice and condensation. The rear window defrost switch controls the operation of the heated exterior rear view mirrors. The heated exterior mirrors should be warm to the touch after 4 minutes of operation.

Memory Exterior Mirrors

The memory mirror function recalls the preferred positioning of the LH and RH exterior mirror glass. The preferred positioning of the LH exterior mirror glass is retained in the Driver Door Module (DDM) memory, while the preferred positioning of the RH exterior mirror glass is retained in the Driver Seat Module (DSM) memory. The memory mirror function is activated by the door mounted switches or the Remote Keyless Entry (RKE) transmitter. When a memory position is recalled by the operator, the LH and RH exterior mirror glass will automatically adjust to the preferred position. The DDM and DSM are capable of setting a DTC for the memory mirror system when a system concern exists. For information on the DDM , refer to Section 501-14 . For information on the DSM and Memory Position Programming, refer to Section 501-10 .

LH Auto-Dimming Mirror

The LH exterior mirror may be equipped with an auto-dimming feature. This feature automatically reduces the glare caused by headlamps reflecting in the mirror. To provide increased visibility when backing up, the LH exterior mirror will automatically return to a high reflectance mode whenever the vehicle is in REVERSE.

Interior Mirror

The vehicle can be equipped with one of the following interior rear view mirrors:

- Interior rear view mirror
- Interior auto-dimming rear view mirror with compass (optional)
- Interior auto-dimming rear view mirror with compass and video display (optional)

Interior Rear View Mirror

The interior rear view mirror consists of a mirror glass and housing. The interior rear view mirror mounts to an interior rear view mirror bracket at the upper center of the windshield glass. The interior rear view mirror can be adjusted left, right, up and down using the 2 pivot points on the support arm. The interior rear view mirror can be adjusted from a day position to a night position to reduce unwanted glare caused by headlamps reflecting in the mirror. Adjusting the interior rear view mirror day/night tab, located at the bottom of the interior rear view mirror, rearward will adjust the interior mirror to the night position. Adjusting the interior rear view mirror day/night tab forward will adjust the interior mirror to the day position.

Interior Auto-Dimming Rear View Mirror

The interior rear view mirror may be equipped with an auto-dimming feature. The interior auto-dimming rear view mirror feature automatically reduces the glare caused by headlamps reflecting in the interior rear view mirror. The auto-dimming feature is activated when the ignition is in the RUN or ACC position. The interior auto-dimming rear view mirror adjusts the reflectance level of the interior rear view mirror glass to eliminate unwanted glare. The reflectance level of the mirror glass is variable and depends on the amount of rear glare in relation to ambient light conditions in front of the interior mirror. When the forward sensor detects daytime conditions, the rearward sensor is inactive and the interior rear view mirror stays in a high reflectance mode. When the forward sensor detects nighttime conditions, the rearward sensor is active and detects glare from the headlights of vehicles approaching from the rear or other glare-producing light sources. To provide increased visibility when backing up, the interior rear view mirror will automatically return to a high reflectance mode whenever the gear selector is in REVERSE.

On vehicles equipped with a compass, the interior rear view mirror will be equipped with an integrated compass module. For compass information, calibration or diagnostics, refer to Section 413-01 .

On vehicles equipped with a rear-mounted object detection camera, a video image will be displayed on the LH side of the interior rear view mirror glass when the gear selector is in REVERSE. For information on the rear-mounted object detection system, refer to Section 413-13 .

Rear View Mirrors - Exterior

Special Tool(s)

 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Principles of Operation

The movement of the LH and RH exterior mirror glass is controlled by the exterior mirror control switch and the LH and RH exterior mirror motors. Adjusting the exterior mirror switch to the LH or RH position determines which exterior mirror motor will be controlled. The exterior mirror control switch logic is the selected movement request from the exterior mirror control switch. When the exterior mirror control switch is adjusted to the left, right, up or down position, the exterior mirror control switch will supply voltage and ground to the selected exterior mirror motor to move the exterior mirror glass to the desired position.

Only vehicles equipped with memory exterior rear view mirrors are capable of setting DTCs.

The exterior mirrors use a jumper harness between the vehicle wireness connector and the exterior mirror motor. The exterior mirror jumper harness is integral to the exterior mirror. If a concern with the exterior mirror jumper harness exists and cannot be repaired, a new exterior mirror must be installed.

Heated Exterior Mirror

The rear window defrost switch controls the operation of the heated exterior mirror glass. The heated exterior mirror glass only operates when the rear window defrost system is ON. The heated exterior mirror glass power is supplied by the rear window defrost relay through Smart Junction Box (SJB) fuse 9 (10A), which isolates the heated exterior mirror system from the rear window defrost system in the event of a concern. The heated exterior mirrors should be warm to the touch after 4 minutes of operation.

LH Auto-Dimming Mirror

The interior auto-dimming rear view mirror controls the reflectance level of the LH exterior mirror to eliminate unwanted glare. The reflectance level of the mirror glass is variable and depends on the amount of rear glare in relation to ambient light conditions in front of the interior mirror. To provide increased visibility when backing up, the interior rear view mirror glass and LH exterior mirror glass will automatically return to a high reflectance mode whenever the gear selector is in REVERSE.

For information and diagnostics, refer to Rear View Mirrors - Interior in this section.

Memory Exterior Mirror

The memory mirror function recalls the preferred positioning of the exterior mirror motors when the gear selector is in PARK or NEUTRAL and the door mounted switches or Remote Keyless Entry (RKE) transmitter are activated.

Each exterior mirromotor is equipped with a potentiometer, which the Driver Door Module (DDM) and Driver Seat Module (DSM) use to monitor the position of the mirrors. The DDM constantly tracks LH mirror motor position. The DSM constantly tracks RH mirror motor position. When a mirror motor position is stored in memory by the operator, the module will retain this position in memory for future recall. The position of the mirror motors are stored within the DDM and DSM memory as long as the modules retain power. When a memory position is recalled by the operator, the DDM and DSM will power the exterior mirror motors simultaneously and monitor the potentiometer circuits. When the stored memory position is reached, the DDM and DSM will remove power from the exterior mirror motors. If the exterior mirror control switch is operated during a memory recall, the DDM and DSM will stop the memory recall and respond to the exterior mirror control switch command.

For information on the DDM , refer to Section 501-14 .

For information on the DSM and Memory Position Programming, refer to Section 501-10 .

Puddle Lamps

The exterior mirrors may be equipped with puddle lamps, which will illuminate when the interior lights are turned on by opening a door or by pressing the unlock button on the remote transmitter, if equipped. For information on the mirror-mounted puddle lamps, refer to Section 417-01 .

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage:

Visual Inspection Chart

Mechanical	Electrical
• Exterior mirror • Exterior mirror control switch • Exterior mirror cover • Exterior mirror glass	• Smart Junction Box (SJB) fuse 12 (7.5A) • Power Distribution Box (PDB) fuse 38 (10A) • Circuitry • Driver Door Module (DDM) • Driver Seat Module (DSM) • Exterior mirror control switch • Exterior mirror glass • Exterior mirror motor • Exterior mirror • Loose or corroded connections • Bent pins

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :

   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM .
   - refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition key is in the ON position.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 to diagnose no response from the DDM or the DSM .

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the DDM and DSM .

9. If the DTCs retrieved are related to the concern, go to Driver Door Module (DDM) DTC Chart or Driver Seat Module (DSM) DTC Chart. For all other DTCs, refer to Section 419-10 .

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart - Exterior Mirrors or GO to Symptom Chart - NVH .

Symptom Chart - Exterior Mirrors

Symptom Chart - Exterior Mirrors

Symptom Chart - NVH

Symptom Chart - NVH

NOTE: NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04 . Since it is possible any one of multiple systems may be the cause of a symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to Section 100-04 for the next likely system and continue diagnosis.

ConditionPossible SourcesAction

- Exterior mirror vibrates/loose
- Exterior mirror mounting nuts loose
- TIGHTEN the exterior mirror mounting nuts to the specified value located in the Torque Specifications table.
- Exterior mirror glass loose
- PRESS the center of the exterior mirror glass up, down, left and right to make sure that the exterior mirror glasss seated correctly. If the exterior mirror glass is still loose, REMOVE the exterior mirror

glass and INSPECT the exterior mirror backing plate for damage. If the exterior mirror backing plate is damaged, INSTALL a new exterior mirror glass. REFER to Exterior Mirror Glass in this section.

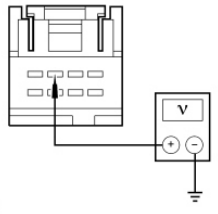
- Aftermarket air deflector/stone shields
- If possible, REMOVE aftermarket air deflector/stone shield, then ROAD TEST the vehicle. If concern is no longer present, ADVISE customer that aftermarket components were causing undesired vibration.
- Wind noise
- Foam gasket between the exterior mirror and door frame is missing or damaged
- VERIFY that the foam gasket is present and in good condition. If necessary, REPOSITION the foam gasket between the exterior mirror and door frame.
- Exterior mirror is not correctly fitted to the door
- VERIFY that there are no gaps between the exterior mirror and the door. If necessary, LOOSEN the exterior mirror nuts and REPOSITION the exterior mirror.
- Exterior mirror cover
- VERIFY that the exterior mirror cover is not loose or broken. If necessary, INSTALL a new exterior mirror cover. REFER to Exterior Mirror Cover in this section.

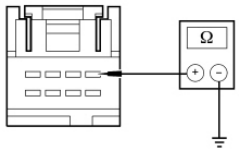
Pinpoint Tests

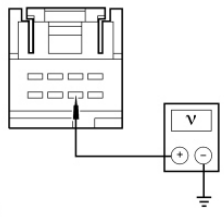
Pinpoint Test A: The Mirrors are Inoperative - Non-Memory Mirrors

Refer to Wiring Diagrams Cell 124 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Mirrors for schematic and connector information.

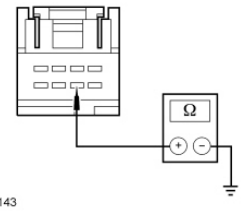
Normal Operation

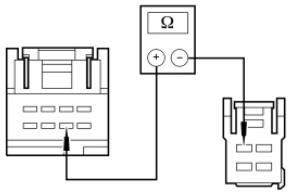


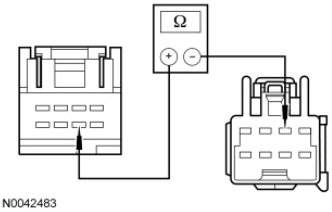




Under normal operation, the exterior mirror control switch receives power through circuit SBP12 (GN/RD) and ground through circuit GD126 (BK/WH). The exterior mirror control switch uses circuit CPM23 (GY) as the common circuit for both exterior mirror motor up/down and right/left movement.







This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Exteor mirror control switch

PINPOINT TEST A: THE MIRRORS ARE INOPERATIVE - NON-MEMORY MIRRORS

Test Step	Result / Action to Take
A1 CHECK THE VOLTAGE TO THE EXTERIOR MIRROR CONTROL SWITCH	

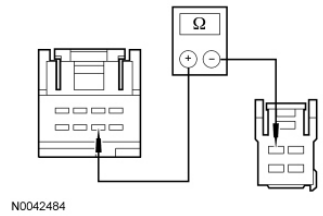
• Ignition OFF. • Disconnect: Exterior Mirror Control Switch C527. • Measure the voltage between exterior mirror control switch C527-3, circuit SBP12 (GN/RD), harness side and ground.  N0006111 • **Is the voltage greater than 10 volts?**	**Yes** GO to A2 . **No** VERIFY Smart Junction Box (SJB) fuse 12 (7.5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation.
A2 CHECK GROUND TO THE EXTERIOR MIRROR CONTROL SWITCH	
• Measure the resistance between exterior mirror control switch C527-1, circuit GD126 (BK/WH), harness side and ground.  N0006112 • **Is the resistance less than 5 ohms?**	**Yes** GO to A3 . **No** REPAIR the circuit. TEST the system for normal operation.
A3 CHECK CIRCUIT CPM23 (GY) FOR A SHORT TO VOLTAGE	
• Ignition ON. • Measure the voltage between exterior mirror control switch C527-6, circuit CPM23 (GY), harness side and ground.  A0073142 • **Is any voltage present?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to A4 .
A4 CHECK CIRCUIT CPM23 (GY) FOR A SHORT TO GROUND	

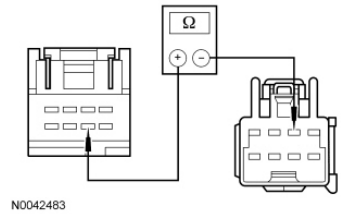
• Ignition OFF. • Measure the resistance between exterior mirror control switch C527-6, circuit CPM23 (GY), harness side and ground.  A0073143 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to A5 . **No** REPAIR the circuit. TEST the system for normal operation.
A5 CHECK CIRCUIT CPM23 (GY) FOR AN OPEN	
• Disconnect: LH Exterior Mirror C516 (without heated mirrors) or C517 (with heated mirrors). • **Without heated mirrors:** Measure the resistance between exterior mirror control switch C527-6, circuit CPM23 (GY), harness side and LH exterior mirror C516-2, circuit CPM23 (GY), harness side.  N0042484 • **With heated mirrors:** Measure the resistance between exterior mirror control switch C527-6, circuit CPM23 (GY), harness side and LH exterior mirror C517-2, circuit CPM23 (GY), harness side.  N0042483 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new exterior mirror control switch. REFER to Exterior Mirror Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test B: A Single Mirror is Inoperative - Non-Memory Mirrors

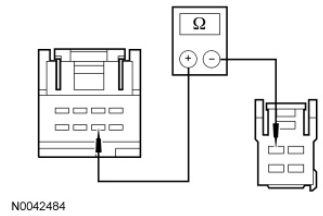
Refer to Wiring Diagrams Cell 124 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Mirrors for schematic and connector information.

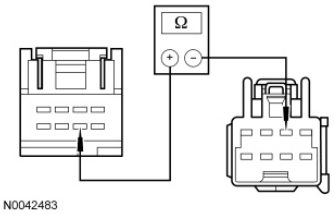
Normal Operation





Under normal operation, the exterior mirror control switch uses circuit CPM23 (GY) as the common circuit for both exterior mirror down/up and left/right movement.





This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Exterior mirror control switch
- Exterior mirror motor
- Exterior mirror

PINPOINT TEST B: A SINGLE MIRROR IS INOPERATIVE - NON-MEMORY MIRRORS

Test Step	Result / Action to Take
B1 CHECK THE LH MIRROR OPERATION	
• Operate the LH exterior mirror using the exterior mirror control switch. • **Does the LH exterior mirror operate?**	**Yes** GO to B2 . **No** GO to B4 .
B2 CHECK THE EXTERIOR MIRROR CONTROL SWITCH	
• Ignition OFF. • Disconnect: Exterior Mirror Control Switch C527. • Carry out the Exterior Mirror Control Switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did the exterior mirror control switch pass the component test?**	**Yes** GO to B3 . **No** INSTALL a new exterior mirror control switch. REFER to Exterior Mirror Control Switch in this section. TEST the system for normal operation.
B3 CHECK CIRCUIT CPM23 (GY) FOR AN OPEN	
• Disconnect: RH Exterior Mirror C622 (without heated mirrors) or C625 (with heated mirrors). • **Without heated mirror:** Measure the resistance between exterior mirror control switch C527-6, circuit CPM23 (GY), harness side and RH exterior mirror C622-2, circuit CPM23 (GY), harness side.	**Yes** CHECK the RH exterior mirror jumper harness between the vehicle harness and the exterior mirror motor for open circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness cannot be repaired, INSTALL a new RH exterior mirror. REFER to Exterior Mirror in this section. If the jumper harness is OK, INSTALL a new exterior mirror motor. REFER to Exterior Mirror Motor in this section. TEST the system for normal operation.

 N0042484 • **With heated mirror:** Measure the resistance between exterior mirror control switch C527-6, circuit CPM23 (GY), harness side and RH exterior mirror C625-2, circuit CPM23 (GY), harness side.  N0042483 • **Is the resistance less than 5 ohms?**	**No** REPAIR the circuit. TEST the system for normal operation.
B4 CHECK THE EXTERIOR MIRROR CONTROL SWITCH	
• Ignition OFF. • Disconnect: Exterior Mirror Control Switch C527. • Carry out the Exterior Mirror Control Switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did the exterior mirror control switch pass the component test?**	**Yes** GO to B5 . **No** INSTALL a new exterior mirror control switch. REFER to Exterior Mirror Control Switch in this section. TEST the system for normal operation.
B5 CHECK CIRCUIT CPM23 (GY) FOR AN OPEN	
• Disconnect: LH Exterior Mirror C516 (without heated mirrors) or C517 (with heated mirrors). • **Without heated mirror:** Measure the resistance between exterior mirror control switch C527-6, circuit CPM23 (GY), harness side and LH exterior mirror C516-2, circuit CPM23 (GY), harness side.	**Yes** CHECK the LH exterior mirror jumper harness between the vehicle harness and the exterior mirror motor for open circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness cannot be repaired, INSTALL a new LH exterior mirror. REFER to Exterior Mirror in this section. If the jumper harness is OK, INSTALL a new exterior mirror motor. REFER to Exterior Mirror Motor in this section. TEST the system for normal operation. **No**

 N0042484 • **With heated mirror:** Measure the resistance between exterior mirror control switch C527-6, circuit CPM23 (GY), harness side and LH exterior mirror C517-2, circuit CPM23 (GY), harness side.  N0042483 • **Is the resistance less than 5 ohms?**	REPAIR the circuit. TEST the system for normal operation.

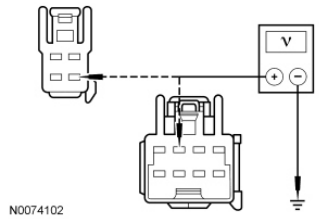
Pinpoint Test C: A Single Mirror Does Not Operate Correctly - Non-Memory Mirrors

Refer to Wiring Diagrams Cell 124 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Mirrors for schematic and connector information.

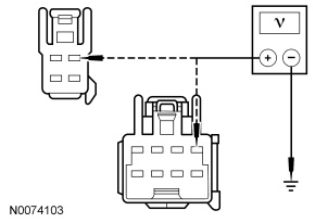
Normal Operation

Under normal operation, the exterior mirror control switch uses circuits CPM16 (BN/BU), CPM17 (BU/GN), CPM20 (BN/WH), CPM21 (YE/VT) and CPM23 (GY) to control the exterior mirror motor movement. The exterior mirror switch controls the LH exterior mirror motor movement by switching voltage and ground to circuits CPM16 (BN/BU), CPM17 (BU/GN) and CPM23 (GY). The exterior mirror switch controls the RH exterior mirror motor movement by switching voltage and ground to circuits CPM20 (BN/WH), CPM21 (YE/VT) and CPM23 (GY).

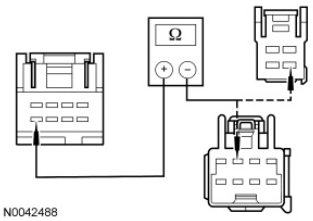
Mirror Movement

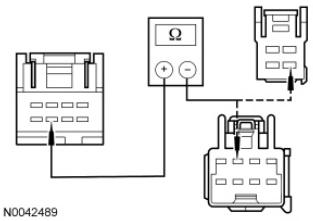


- When the LH/RH exterior mirror motor receives ground through circuit CPM16 (BN/BU)/CPM20 (BN/WH) and power through circuit CPM23 (GY), the LH/RH exterior mirror motor will operate rightward.
- When the LH/RH exterior mirror motor receives power through circuit CPM16 (BN/BU)/CPM20 (BN/WH) and ground through circuit CPM23 (GY), the LH/RH exterior mirror motor will operate leftward.
- When the LH/RH exterior mirror motor receives ground through circuit CPM17 (BU/GN)/CPM21 (YE/VT) and power through circuit CPM23 (GY), the LH/RH exterior mirror motor will operate upward.
- When the LH/RH exterior mirror motor receives power through circuit CPM17 (BU/GN)/CPM21 (YE/VT) and ground through circuit CPM23 (GY), the LH/RH exterior mirror motor will operate downward.

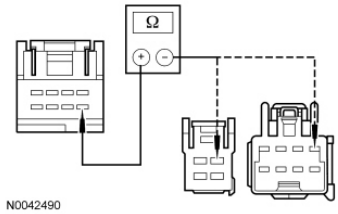


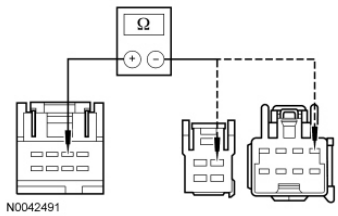
This pinpoint test is intended to diagnose the following:





- Wiring, terminals or connectors
- Exterior mirror control switch
- Exterior mirror motor
- Exterior mirror





PINPOINT TEST C: A SINGLE MIRROR DOES NOT OPERATE CORRECTLY - NON-MEMORY MIRRORS

Test Step	Result / Action to Take
C1 CHECK THE MIRROR MOVEMENT (RIGHT/LEFT)	
• Operate the RH and LH exterior mirrors in the right and left direction using the exterior mirror control switch. • **Do the exterior mirrors move left and right?**	**Yes** GO to C2 . **No** GO to C3 .
C2 CHECK THE MIRROR MOVEMENT (DOWN/UP)	
• Operate the RH and LH exterior mirrors in the down and up direction using the exterior mirror control switch. • **Do the exterior mirrors move up and down?**	**Yes** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation. **No** GO to C4 .
C3 CHECK THE VOLTAGE TO THE INOPERATIVE MIRROR	
• Ignition OFF. • Disconnect: Inoperative LH Exterior Mirror C516 (without heated mirrors) or C517 (with heated mirrors). • Disconnect: Inoperative RH Exterior Mirror C622 (without heated mirrors) or C625 (with heated mirrors). • **NOTE:** Position the exterior mirror control switch to the LH or RH position. • **Without heated mirrors:** While operating the exterior mirror control switch in the LEFT position, measure the voltage between ground and exterior mirror: ♦ **LH:** C516-3, circuit CPM16 (BN/BU), harness side.	**Yes** CHECK the RH or LH exterior mirror jumper harness between the vehicle harness and the exterior mirror motor for open circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness cannot be repaired, INSTALL a new RH or LH exterior mirror. REFER to Exterior Mirror in this section. If the jumper harness is OK, INSTALL a new RH or LH exterior mirror motor. REFER to Exterior Mirror Motor in this section. TEST the system for normal operation. **No** GO to C5 .

♦ **RH:** C622-3, circuit CPM20 (BN/WH), harness side. • **NOTE:** Position the exterior mirror control switch to the LH or RH position. • **With heated mirrors:** While operating the exterior mirror control switch in the LEFT position, measure the voltage between ground and exterior mirror: ♦ **LH:** C517-3, circuit CPM16 (BN/BU), harness side. ♦ **RH:** C625-3, circuit CPM20 (BN/WH), harness side.  • **Is the voltage greater than 10 volts?**	
C4 CHECK THE VOLTAGE TO THE INOPERATIVE MIRROR	
• Ignition OFF. • Disconnect: Inoperative LH Exterior Mirror C516 (without heated mirrors) or C517 (with heated mirrors). • Disconnect: Inoperative RH Exterior Mirror C622 (without heated mirrors) or C625 (with heated mirrors). • **NOTE:** Position the exterior mirror control switch to the LH or RH position. • **Without heated mirrors:** While operating the exterior mirror control switch in the DOWN position, measure the voltage between ground and exterior mirror: ♦ **LH:** C516-1, circuit CPM17 (BU/GN), harness side.	**Yes** CHECK the RH or LH exterior mirror jumper harness between the vehicle harness and the exterior mirror motor for open circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness cannot be repaired, INSTALL a new RH or LH exterior mirror. REFER to Exterior Mirror in this section. If the jumper harness is OK, INSTALL a new RH or LH exterior mirror motor. REFER to Exterior Mirror Motor in this section. TEST the system for normal operation. **No** GO to C6 .

♦ **RH:** C622-1, circuit CPM21 (YE/VT), harness side. • **NOTE:** Position the exterior mirror control switch to the LH or RH position. • **With heated mirrors:** While operating the exterior mirror control switch in the DOWN position, measure the voltage between ground and exterior mirror: ♦ **LH:** C517-1, circuit CPM17 (BU/GN), harness side. ♦ **RH:** C625-1, circuit CPM21 (YE/VT), harness side.  • **Is the voltage greater than 10 volts?**	
C5 CHECK CIRCUIT CPM16 (BN/BU) OR CPM20 (BN/WH) FOR AN OPEN	
• Disconnect: Exterior Mirror Control Switch C527. • **Inoperative LH mirror:** Measure the resistance between exterior mirror control switch C527-8, circuit CPM16 (BN/BU), harness side and LH exterior mirror: ♦ **without heated mirror:** C516-3, circuit CPM16 (BN/BU), harness side. ♦ **with heated mirror:** C517-3, circuit CPM16 (BN/BU), harness side.	**Yes** INSTALL a new exterior mirror control switch. REFER to Exterior Mirror Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

 N0042488 • **Inoperative RH mirror:** Measure the resistance between exterior mirror control switch C527-7, circuit CPM20 (BN/WH), harness side and RH exterior mirror: ♦ **without heated mirror:** C622-3, circuit CPM20 (BN/WH), harness side. ♦ **with heated mirror:** C625-3, circuit CPM20 (BN/WH), harness side.  N0042489 • **Is the resistance less than 5 ohms?**	
C6 CHECK CIRCUIT CPM17 (BU/GN) OR CPM21 (YE/VT) FOR AN OPEN	
• Disconnect: Exterior Mirror Control Switch C527. • **Inoperative LH mirror:** Measure the resistance between exterior mirror control switch C527-5, circuit CPM17 (BU/GN), harness side and LH exterior mirror: ♦ **without heated mirror:** C516-1, circuit CPM17 (BU/GN), harness side. ♦ **with heated mirror:** C517-1, circuit CPM17 (BU/GN), harness side.	**Yes** INSTALL a new exterior mirror control switch. REFER to Exterior Mirror Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

 • **Inoperative RH mirror:** Measure the resistance between exterior mirror control switch C527-2, circuit CPM21 (YE/VT), harness side and RH exterior mirror: ♦ **without heated mirror:** C622-1, circuit CPM21 (YE/VT), harness side. ♦ **with heated mirror:** C625-1, circuit CPM21 (YE/VT), harness side.  • **Is the resistance less than 5 ohms?**	

Pinpoint Test D: The Memory Mirror is Inoperative

Refer to Wiring Diagrams Cell 124 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Mirrors for schematic and connector information.

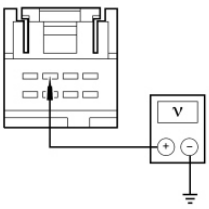
Normal Operation

Under normal operation, the exterior mirror control switch receives power from circuit SBP12 (GN/RD) and ground from circuit GD126 (BK/WH). The exterior mirror control switch uses circuits CPM16 (BN/BU), CPM17 (BU/GN), CPM20 (BN/WH), CPM21 (YE/VT) and CPM23 (GY) to send input signals to the Driver Door Module (DDM). The DDM controls the LH exterior mirror motor movement by supplying the appropriate power and ground to circuits CPM27 (GY/BU), CPM28 (BU/BN) and CPM29 (GN). The DDM communicates with the Driver Seat Module (DSM) through the Medium Speed Controller Area Network (MS-CAN) whenever the DDM receives an input signal from the exterior mirror control switch for the RH mirror. The DSM controls the RH exterior mirror motor movement by supplying the appropriate power and ground to circuits CPM31 (YE/GY), CPM33 (WH/VT) and CPM34 (WH/BN).

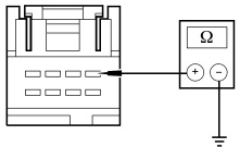
The memory mirror system uses feedback potentiometers, located in the LH and RH exterior mirror motors, in order to track the movement and position of the LH and RH exterior mirror motors. The DDM supplies the LH exterior mirror feedback potentiometer reference voltage through circuit LPM30 (GY/VT) and ground through circuit RPM30 (YE). The DSM supplies the RH exterior mirror feedback potentiometer reference voltage through circuit LPM30 (GY/VT) and ground through circuit RPM30 (YE). The DDM receives feedback from the LH exterior mirror feedback potentiometer through left/right circuit VPM35 (YE/BU) and

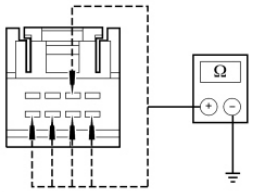
up/down circuit VPM36 (BN/YE). The DSM receives feedback from the RH exterior mirror feedback potentiometer through left/right circuit VPM37 (BU/OG) and up/down circuit VPM38 (BN/GN).

DTC Description	Fault Trigger Conditions
• B1667 Mirror Driver Up/Down Motor Stalled	Incorrect mirror motor position reported to the DDM during On-Demand Self Test.
• B1668 Mirror Driver Right/Left Motor Stalled	Incorrect mirror motor position reported to the DDM during On-Demand Self Test.
• B1669 Mirror Passenger Up/Down Motor Stalled	Incorrect mirror motor position reported to the DSM during On-Demand Self Test.
• B1670 Mirror Passenger Right/Left Motor Stalled	Incorrect mirror motor position reported to the DSM during On-Demand Self Test.
• B1733 Mirror Driver Vertical Switch Circuit Failure	Mirror switch failure detected by the DDM when switch is activated.
• B1737 Mirror Driver Horizontal Switch Circuit Failure	Mirror switch failure detected by the DDM when switch is activated.
• B1741 Mirror Passenger Vertical Switch Circuit Failure	Mirror switch failure detected by the DDM when switch is activated.
• B1745 Mirror Passenger Horizontal Switch Circuit Failure	Mirror switch failure detected by the DDM when switch is activated.
• B2223 Mirror Driver Drive Circuit Failure	Short to ground or battery.
• B2224 Mirror Passenger Drive Circuit Failure	Short to ground or battery.
• B2312 Mirror Passenger Horizontal Feedback Potentiometer Circuit Failure	Open or short to ground.
• B2314 Mirror Passenger Horizontal Feedback Potentiometer Circuit Short to Battery	Short to battery.
• B2316 Mirror Passenger Vertical Feedback Potentiometer Circuit Failure	Open or short to ground.
• B2318 Mirror Passenger Vertical Feedback Potentiometer Circuit Short to Battery	Short to battery.
• B2320 Mirror Driver Horizontal Feedback Potentiometer Circuit Failure	Open or short to ground.
	Short to battery.



• B2322 Mirror Driver Horizontal Feedback Potentiometer Circuit Short to Battery	
• B2324 Mirror Driver Vertical Feedback Potentiometer Circuit Failure	Open or short to ground.
• B2326 Mirror Driver Vertical Feedback Potentiometer Circuit Short to Battery	Short to battery.

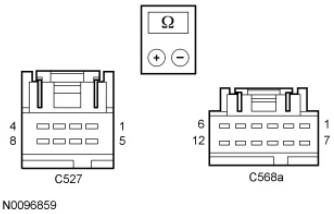




This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- DDM
- DSM
- Exterior mirror motor
- Exterior mirror
- Exterior mirror control switch

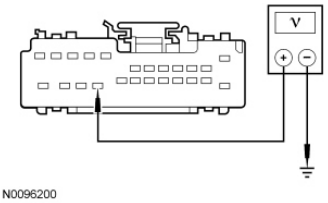
PINPOINT TEST D: THE MEMORY MIRROR IS INOPERATIVE

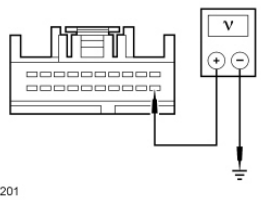


Test Step	Result / Action to Take
D1 RETRIEVE THE DTCs FROM THE DSM AND DDM	
• Use the recorded DSM and DDM DTCs from the continuous and on-demand self tests. • **Are DTCs retrieved?**	**Yes** If DTC B1733, B1737, B1741 or B1745 - CARRY OUT the Exterior Mirror Control Switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. If the switch tests OK, GO to D11 . If DTC B1667 or B1668 - If other DTCs are present, DIAGNOSE them first. If no other DTCs are present, INSPECT the LH exterior mirror motor for foreign material, damage or a binding condition. If no condition is found, GO to D12 . If DTC B1669 or B1670 - If other DTCs are present, DIAGNOSE them first. If no other DTCs are present, INSPECT the RH exterior mirror motor for foreign material, damage or a binding condition. If no condition is found, GO to D14 . If DTC B2223, GO to D16 . If DTC B2224, GO to D19 . If DTC B2312, B2316, B2320 or B2324, GO to D22 . If DTC B2314, B2318, B2322 or B2326, GO to D26 . **No** GO to D2 .

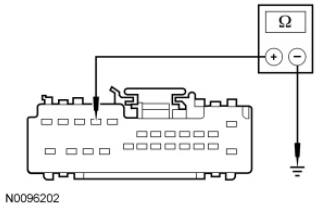
D2 CHECK THE OPERATION OF THE EXTERIOR MIRRORS FROM THE EXTERIOR MIRROR CONTROL SWITCH	
• Operate the mirrors using the exterior mirror control switch. • **Do the mirrors operate momentarily using the exterior mirror control switch?**	**Yes** GO to D8 . **No** GO to D3 .
D3 CHECK THE EXTERIOR MIRROR CONTROL SWITCH	
• Ignition OFF. • Disconnect: Exterior Mirror Control Switch C527. • Carry out the Exterior Mirror Control Switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did the exterior mirror control switch pass the component test?**	**Yes** GO to D4 . **No** INSTALL a new exterior mirror control switch. REFER to Exterior Mirror Control Switch in this section. TEST the system for normal operation.
D4 CHECK CIRCUIT SBP12 (GN/RD) FOR VOLTAGE	
• Ignition ON. • Measure the voltage between exterior mirror control switch C527-3, circuit SBP12 (GN/RD), harness side and ground.  N0006111 • **Is the voltage greater than 10 volts?**	**Yes** GO to D5 . **No** VERIFY Smart Junction Box (SJB) fuse 12 (7.5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation.
D5 CHECK CIRCUIT GD126 (BK/WH) FOR AN OPEN	
• Ignition OFF. • Measure the resistance between exterior mirror control switch C527-1, circuit GD126 (BK/WH), harness side and ground.	**Yes** GO to D6 . **No** REPAIR the circuit. TEST the system for normal operation.

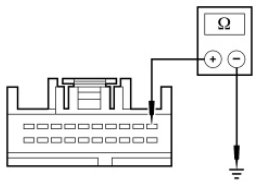
 N0006112 • **Is the resistance less than 5 ohms?**	
D6 CHECK CIRCUITS CPM16 (BN/BU), CPM17 (BU/GN), CPM20 (BN/WH), CPM21 (YE/VT) AND CPM23 (GY) FOR A SHORT TO GROUND	
• Disconnect: DDM C568B. • Measure the resistance between ground and exterior mirror control switch: ♦ C527-2, circuit CPM21 (YE/VT), harness side. ♦ C527-5, circuit CPM17 (BU/GN), harness side. ♦ C527-6, circuit CPM23 (GY), harness side. ♦ C527-7, circuit CPM20 (BN/WH), harness side. ♦ C527-8, circuit CPM16 (BN/BU), harness side.  N0006283 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to D7 . **No** REPAIR the circuit(s). TEST the system for normal operation.
D7 CHECK CIRCUITS CPM16 (BN/BU), CPM17 (BU/GN), CPM20 (BN/WH), CPM21 (YE/VT) AND CPM23 (GY) FOR AN OPEN	
• Measure the resistance between exterior mirror control switch C527, harness side and DDM C568A, harness side using the following chart:	**Yes** GO to D29 . **No** REPAIR the circuit(s). TEST the system for normal operation.



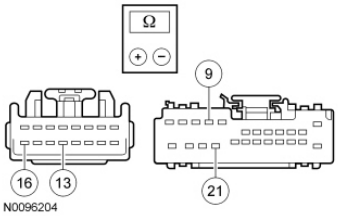


Exterior Mirror Control Switch	Circuit	DDM
C527-2	CPM21 (YE/VT)	C568A-7
C527-5	CPM17 (BU/GN)	C568A-9



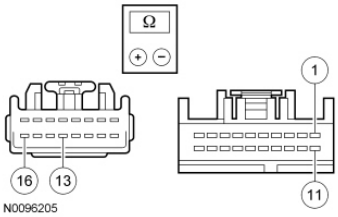


C527-6	CPM23 (GY)	C568A-11
C527-7	CPM20 (BN/WH)	C568A-8
C527-8	CPM16 (BN/BU)	C568A-10



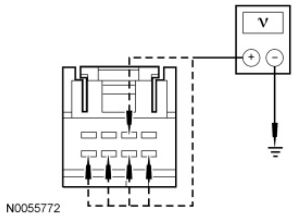
N0096859

- **Are the resistances less than 5 ohms?**



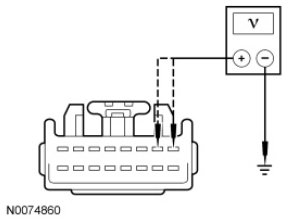
D8 CHECK CIRCUIT RPM30 (YE) FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: **Inoperative LH Mirror:** DDM C568A and DDM C568B. • Disconnect: **Inoperative RH Mirror:** DSM C3299C and C3299D. • Ignition ON. • **Inoperative LH mirror:** Measure the voltage between DDM C568B-21, circuit RPM30 (YE), harness side and ground.  N0096200 • **Inoperative RH mirror:** Measure the voltage between DSM C3299D-11, circuit RPM30 (YE), harness side and ground.  N0096201 • **Is any voltage present?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to D9 .
D9 CHECK CIRCUIT LPM30 (GY/VT) FOR SHORT TO GROUND	

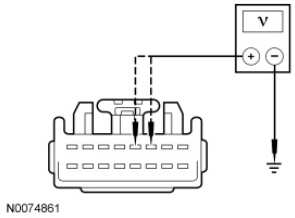
• Ignition OFF. • Disconnect: Inoperative Exterior Mirror C522 (LH) or C626 (RH). • **Inoperative LH mirror:** Measure the resistance between DDM C568B-9, circuit LPM30 (GY/VT), harness side and ground.  N0096202 • **Inoperative RH mirror:** Measure the resistance between DSM C3299D-1, circuit LPM30 (GY/VT), harness side and ground.  N0096203 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to D10 . **No** REPAIR the circuit. TEST the system for normal operation.
D10 CHECK CIRCUITS RPM30 (YE) AND LPM30 (GY/VT) FOR AN OPEN	
• **Inoperative LH mirror:** Measure the resistance between LH exterior mirror C522, harness side, DDM C568A, harness side and DDM C568B, harness side using the following chart: **LH Exterior Mirror** / **Circuit** / **DDM** C522-16 / RPM30 (YE) / C568B-21 C522-13 / LPM30 (GY/VT) / C568B-9	**Yes** CHECK the LH or RH exterior mirror jumper harness between the vehicle harness and the exterior mirror motors for open or shorted circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness cannot be repaired, INSTALL a new LH or RH exterior mirror. REFER to Exterior Mirror in this section. If the jumper harness is OK, INSTALL a new LH or RH exterior mirror motor. REFER to Exterior Mirror Motor in this section. TEST the system for normal operation. **No** REPAIR the circuit(s). TEST the system for normal operation.

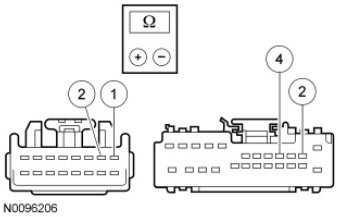


- **Inoperative RH mirror:** Measure the resistance between RH exterior mirror C626, harness side and DSM C3299C, harness side using the following chart:

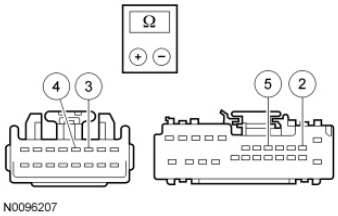
RH Exterior Mirror	Circuit	DSM
C626-13	LPM30 (GY/VT)	C3299D-1
C626-16	RPM30 (YE)	C3299D-11

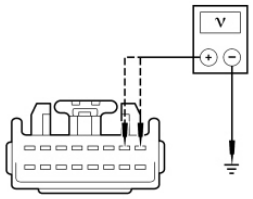


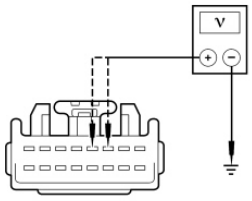




- **Are the resistances less than 5 ohms?**

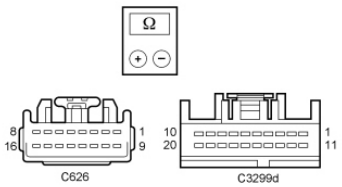






D11 CHECK CIRCUITS CPM16 (BN/BU), CPM17 (BU/GN), CPM20 (BN/WH), CPM21 (YE/VT) AND CPM23 (GY) FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: Exterior Mirror Control Switch C527. • Disconnect: DDM C568B. • Ignition ON. • Measure the voltage between ground and exterior mirror control switch: ♦ C527-2, circuit CPM21 (YE/VT), harness side. ♦ C527-5, circuit CPM17 (BU/GN), harness side. ♦ C527-6, circuit CPM23 (GY), harness side. ♦ C527-7, circuit CPM20 (BN/WH), harness side. ♦ C527-8, circuit CPM16 (BN/BU), harness side.	**Yes** REPAIR the circuit(s). CLEAR the DTCs. TEST the system for normal operation. **No** GO to D29 .

- **Is any voltage present?**

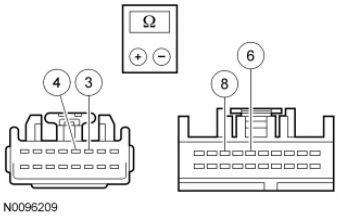


D12 CHECK THE EXTERIOR MIRROR FOR VOLTAGE FROM THE DDM	
• Ignition OFF. • Disconnect: LH Exterior Mirror C522. • Ignition ON. • Enter the following diagnostic mode on the scan tool: DDM DataLogger. • **DTC B1667:** Measure the voltage between LH exterior mirror C522-1, circuit CPM29 (GN), harness side and ground while toggling the LH exterior mirror DDM PID DR_UP to ON; and between LH exterior mirror C522-2, circuit CPM27 (GY/BU), harness side and ground while toggling the LH exterior mirror DDM PID DR_DOWN to ON.  • **DTC B1668:** Measure the voltage between LH exterior mirror C522-3, circuit CPM27 (GY/BU), harness side and ground while toggling the LH exterior mirror DDM PID DR_LEFT to ON; and between LH exterior mirror C522-4, circuit CPM28 (BU/BN), harness side and ground while toggling the LH exterior mirror DDM PID DR_RIGHT to ON.  	**Yes** CHECK the LH exterior mirror jumper harness between the vehicle harness and the exterior mirror motor for shorted and open circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness cannot be repaired, INSTALL a new LH exterior mirror. REFER to Exterior Mirror in this section. If the jumper harness is OK, INSTALL a new LH exterior mirror motor. REFER to Exterior Mirror Motor in this section. CLEAR the DTCs. TEST the system for normal operation. **No** GO to D13 .

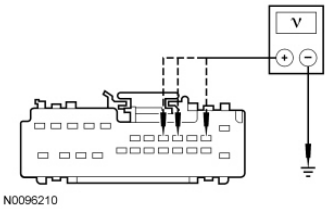
• **Do the voltages momentarily change from 0 volt to greater than 10 volts when the active command is toggled ON?**	
D13 CHECK CIRCUITS CPM27 (GY/BU), CPM28 (BU/BN) AND CPM29 (GN) FOR AN OPEN	
• Ignition OFF. • Disconnect: DDM C568B. • **DTC B1667:** Measure the resistance between LH exterior mirror C522, harness side and DDM C568B, harness side using the following chart: **LH Exterior Mirror** / **Circuit** / **DDM** C522-1 / CPM29 (GN) / C568B-4 C522-2 / CPM27 (GY/BU) / C568B-2  N0096206 • **DTC B1668:** Measure the resistance between LH exterior mirror C522, harness side and DDM C568B, harness side using the following chart: **LH Exterior Mirror** / **Circuit** / **DDM** C522-3 / CPM27 (GY/BU) / C568B-2 C522-4 / CPM28 (BU/BN) / C568B-5	**Yes** GO to D29 . **No** REPAIR the circuit(s). CLEAR the DTCs. TEST the system for normal operation.

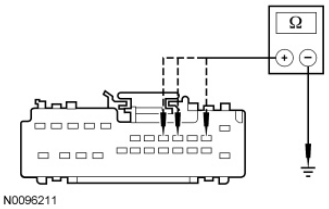
 N0096207 • **Are the resistances less than 5 ohms?**	
D14 CHECK THE EXTERIOR MIRROR FOR VOLTAGE FROM THE DSM	
• Ignition OFF. • Disconnect: RH Exterior Mirror C626. • Ignition ON. • Enter the following diagnostic mode on the scan tool: DSM DataLogger. • **DTC B1669:** Measure the voltage between RH exterior mirror C626-1, circuit CPM34 (WH/BN), harness side and ground while toggling the RH exterior mirror DSM PID PR_UP to ON; and between RH exterior mirror C626-2, circuit CPM31 (YE/GY), harness side and ground while toggling the RH exterior mirror DSM PID PR_DOWN to ON.  N0074863 • **DTC B1670:** Measure the voltage between RH exterior mirror C626-3, circuit CPM31 (YE/GY), harness side and ground while toggling the RH exterior mirror DSM PID PR_LEFT to ON; and between RH exterior mirror C626-4, circuit CPM33 (WH/VT), harness side and ground while toggling the RH exterior mirror DSM PID PR_RIGHT to ON.  N0074864 • **Do the voltages momentarily change from 0 volt to greater than 10 volts when the active command is toggled ON?**	**Yes** CHECK the RH exterior mirror jumper harness between the vehicle harness and the exterior mirror motor for shorted and open circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness cannot be repaired, INSTALL a new RH exterior mirror. REFER to Exterior Mirror in this section. If the jumper harness is OK, INSTALL a new RH exterior mirror motor. REFER to Exterior Mirror Motor in this section. CLEAR the DTCs. TEST the system for normal operation. **No** GO to D15 .

D15 CHECK CIRCUITS CPM31 (YE/GY), CPM33 (WH/VT) AND CPM34 (WH/BN) FOR AN OPEN	
• Ignition OFF. • Disconnect: DSM C3299D. • **DTC B1669:** Measure the resistance between RH exterior mirror C626, harness side and DSM C3299D, harness side using the following chart:	**Yes** GO to D28 . **No** REPAIR the circuit(s). CLEAR the DTCs. TEST the system for normal operation.

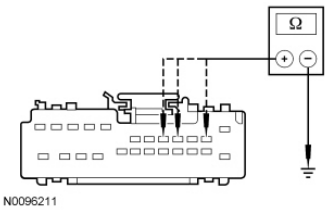


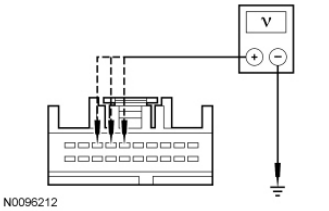
RH Exterior Mirror	Circuit	DSM
C626-1	CPM34 (WH/BN)	C3299D-7
C626-2	CPM31 (YE/GY)	C3299D-8



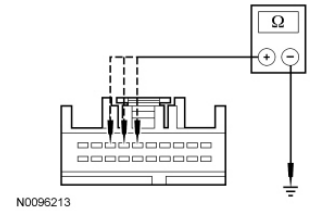


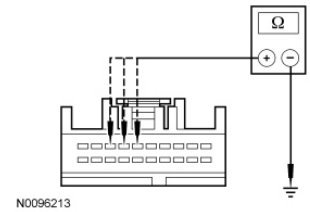
N0096860



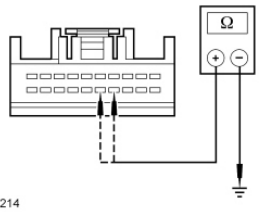


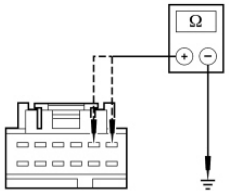
• **DTC B1670:** Measure the resistance between RH exterior mirror C626, harness side and DSM C3299D, harness side using the following chart:

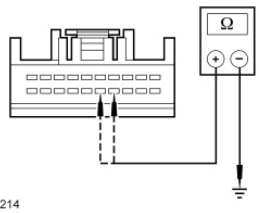


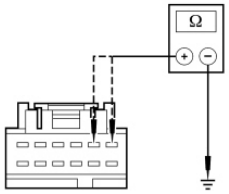


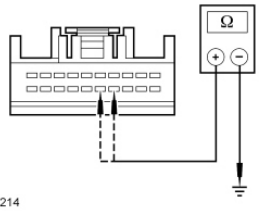
RH Exterior Mirror	Circuit	DSM
C626-3	CPM31 (YE/GY)	C3299D-8
C626-4	CPM33 (WH/VT)	C3299D-6

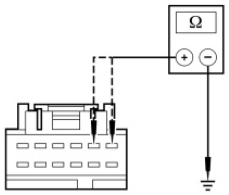






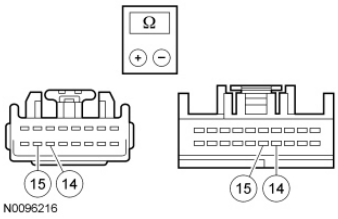






N0096209

• **Are the resistances less than 5 ohms?**	
D16 CHECK CIRCUITS CPM27, CPM28 (BU/BN) AND CPM29 (GN) FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: DDM C568B. • Ignition ON. • Measure the voltage between ground and DDM : ♦ C568B-5, circuit CPM28 (BU/BN), harness side. ♦ C568B-4, circuit CPM29 (GN), harness side. ♦ C568B-2, circuit CPM27 (GY/BU), harness side.  N0096210 • **Is any voltage present?**	**Yes** REPAIR the circuit(s). CLEAR the DTCs. TEST the system for normal operation. **No** GO to D17 .
D17 CHECK CIRCUITS CPM27 (GY/BU), CPM28 (BU/BN) AND CPM29 (GN) FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between ground and DDM : ♦ C568B-5, circuit CPM28 (BU/BN), harness side. ♦ C568B-4, circuit CPM29 (GN), harness side. ♦ C568B-2, circuit CPM27 (GY/BU), harness side.  N0096211 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to D29 . **No** GO to D18 .
D18 CHECK THE LH EXTERIOR MIRROR FOR A SHORT TO GROUND	



• Disconnect: LH Exterior Mirror C522. • Measure the resistance between ground and DDM : ♦ C568B-5, circuit CPM28 (BU/BN), harness side. ♦ C568B-4, circuit CPM29 (GN), harness side. ♦ C568B-2, circuit CPM27 (GY/BU), harness side.  N0096211 • **Are the resistances greater than 10,000 ohms?**	**Yes** CHECK the LH exterior mirror jumper harness between the vehicle harness and the exterior mirror motor for shorted circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness cannot be repaired, INSTALL a new LH exterior mirror. REFER to Exterior Mirror in this section. If the jumper harness is OK, INSTALL a new LH exterior mirror motor. REFER to Exterior Mirror Motor in this section. CLEAR the DTCs. TEST the system for normal operation. **No** REPAIR the circuit(s). CLEAR the DTCs. TEST the system for normal operation.
D19 CHECK CIRCUITS CPM31 (YE/GY), CPM33 (WH/VT) AND CPM34 (WH/BN) FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: DSM C3299D. • Ignition ON. • Measure the voltage between ground and DSM : ♦ C3299D-7, circuit CPM34 (WH/BN), harness side. ♦ C3299D-8, circuit CPM31 (YE/GY), harness side. ♦ C3299D-6, circuit CPM33 (WH/VT), harness side.  N0096212 • **Is any voltage present?**	**Yes** REPAIR the circuit(s). CLEAR the DTCs. TEST the system for normal operation. **No** GO to D20 .
D20 CHECK CIRCUITS CPM31 (YE/GY), CPM33 (WH/VT) AND CPM34 (WH/BN) FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between ground and DSM : ♦ C3299D-7, circuit CPM34 (WH/BN), harness side.	**Yes** GO to D28 . **No** GO to D21 .

♦ C3299D-8, circuit CPM31 (YE/GY), harness side. ♦ C3299D-6, circuit CPM33 (WH/VT), harness side.  N0096213 • **Are the resistances greater than 10,000 ohms?**	
D21 CHECK THE RH EXTERIOR MIRROR FOR A SHORT TO GROUND	
• Disconnect: LH Exterior Mirror C626. • Measure the resistance between ground and DSM : ♦ C3299D-7, circuit CPM34 (WH/BN), harness side. ♦ C3299D-8, circuit CPM31 (YE/GY), harness side. ♦ C3299D-6, circuit CPM33 (WH/VT), harness side.  N0096213 • **Are the resistances greater than 10,000 ohms?**	**Yes** CHECK the RH exterior mirror jumper harness between the vehicle harness and the exterior mirror motor for shorted circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness cannot be repaired, INSTALL a new RH exterior mirror. REFER to Exterior Mirror in this section. If the jumper harness is OK, INSTALL a new RH exterior mirror motor. REFER to Exterior Mirror Motor in this section. CLEAR the DTCs. TEST the system for normal operation. **No** REPAIR the circuit(s). CLEAR the DTCs. TEST the system for normal operation.
D22 CHECK THE LH AND RH EXTERIOR MIRRORS	
• Ignition OFF. • Disconnect: **DTC B2312 or B2316:** DSM C3299D. • Disconnect: **DTC B2320 or B2324:** DDM C568A. • **DTC B2312 or B2316:** Measure the resistance between ground and DSM : ♦ **DTC B2312:** C3299D-15, circuit VPM37 (BU/OG), harness side. ♦ **DTC B2316:** C3299D-14, circuit VPM38 (BN/GN), harness side.	**Yes** GO to D24 . **No** GO to D23 .

 N0096214 • **DTC B2320 or B2324:** Measure the resistance between ground and DDM : ♦ **DTC B2320:** C568A-2, circuit VPM35 (YE/BU), harness side. ♦ **DTC B2324:** C568A-1, circuit VPM36 (BN/YE), harness side.  N0096215 • **Is the resistance greater than 10,000 ohms?**	
D23 CHECK CIRCUITS VPM35 (YE/BU), VPM36 (BN/YE), VPM37 (BU/OG) AND VPM38 (BN/GN) FOR A SHORT TO GROUND	
• Disconnect: **DTC B2312 or B2316:** RH Exterior Mirror C625. • Disconnect: **DTC B2320 or B2324:** LH Exterior Mirror C522. • **DTC B2312 or B2316:** Measure the resistance between ground and DSM : ♦ **DTC B2312:** C3299D-15, circuit VPM37 (BU/OG), harness side. ♦ **DTC B2316:** C3299D-14, circuit VPM38 (BN/GN), harness side. If the jumper harness is OK, INSTALL a new RH or LH exterior mirror motor. REFER to Exterior Mirror Motor in this section. CLEAR the DTCs. TEST the system for normal operation.

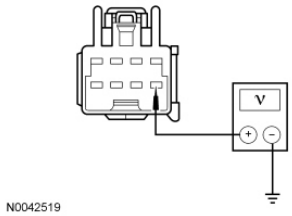
♦ **DTC B2322:** C568A-2, circuit VPM35 (YE/BU), harness side. ♦ **DTC B2326:** C568A-1, circuit VPM36 (BN/YE), harness side.  • **Is any voltage present?**	
D28 CHECK THE DSM FOR CORRECT OPERATION	
• Disconnect all DSM connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all DSM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new DSM . REFER to Section 501-10 . CLEAR the DTCs. REPEAT the self-test. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.
D29 CHECK THE DDM FOR CORRECT OPERATION	
• Disconnect all DDM connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all DDM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new DDM . REFER to Section 501-14 . CLEAR the DTCs. REPEAT the self-test. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

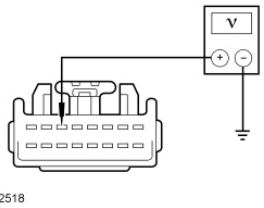
Pinpoint Test E: The Heated Exterior Mirror is Inoperative

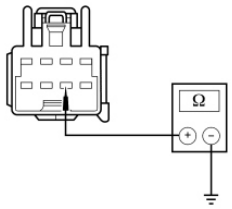
Refer to Wiring Diagrams Cell 56 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Heated Windows for schematic and connector information.

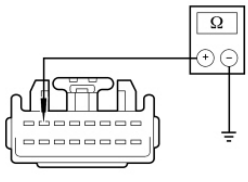
Refer to Wiring Diagrams Cell 124 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Mirrors for schematic and connector information.



Normal Operation







Under normal operation, the LH and RH exterior mirror glass receives power from Power Distribution Box (PDB) fuse 38 (10A) and through circuit CBB38 (GY/BU), when the rear window defrost system is on. Ground is supplied to the LH heated exterior mirror glass through circuit GD126 (BK/WH) and to the RH heated exterior mirror glass through circuit GD139 (BK/YE).

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Exterior mirror glass
- Exterior mirror

PINPOINT TEST E: THE HEATED EXTERIOR MIRROR IS INOPERATIVE

Test Step	Result / Action to Take
E1 CHECK THE OPERATION OF THE REAR WINDOW DEFROST SYSTEM	
• Ignition ON. • Press the rear window defrost switch to the ON position. • Place a hand on the rear window to verify that the rear window heats up. • **Does the rear window defrost system operate?**	**Yes** GO to E2 . **No** REFER to Section 501-11 to diagnose the rear window defrost system.
E2 CHECK THE VOLTAGE TO THE EXTERIOR MIRRORS	
• Ignition OFF. • Disconnect: LH Exterior Mirror C517 (without memory mirrors)/C522 (with memory mirrors) or RH Exterior Mirror C625 (without memory mirrors)/C626 (with memory mirrors). • Ignition ON. • Press the rear window defrost switch to the ON position. • **Without memory mirrors:** Measure the voltage between ground and inoperative exterior mirror: ♦ **LH:** C517-5, circuit CBB38 (GY/BU), harness side. ♦ **RH:** C625-5, circuit CBB38 (GY/BU0), harness side.  • **With memory mirrors:** Measure the voltage between ground and inoperative exterior mirror: ♦ **LH:** C522-6, circuit CBB38 (BU/OG), harness side.	**Yes** GO to E3 . **No** VERIFY that PDB fuse 38 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation.

♦ **RH:** C626-6, circuit CBB38 (GY/BU), harness side.  N0042518 • **Is the voltage greater than 10 volts?**	
E3 CHECK THE EXTERIOR REAR VIEW MIRROR GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • **Without memory mirrors:** Measure the resistance between ground and inoperative exterior mirror: ♦ **LH:** C517-6, circuit GD126 (BK/WH), harness side. ♦ **RH:** C625-6, circuit GD139 (BK/YE), harness side.  N0042521 • **With memory mirrors:** Measure the resistance between ground and inoperative exterior mirror: ♦ **LH:** C522-7, circuit GD126 (BK/WH), harness side. ♦ **RH:** C626-7, circuit GD139 (BK/YE), harness side.  N0042520 • **Is the resistance less than 5 ohms?**	**Yes** CHECK the LH or RH exterior mirror jumper harness between the vehicle harness and the exterior mirror glass for open circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness cannot be repaired, INSTALL a new LH or RH exterior mirror. REFER to Exterior Mirror in this section. If the jumper harness is OK, INSTALL a new LH or RH exterior mirror glass. REFER to Exterior Mirror Glass in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

Rear View Mirrors - Interior

Special Tool(s)

 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent

Principles of Operation

Interior Auto-Dimming Rear View Mirror

The interior auto-dimming rear view mirror automatically reduces the glare caused by headlamps reflecting in the interior rear view mirror. Voltage is supplied to the interior auto-dimming mirror when the ignition is in RUN or ACC. The auto-dimming feature is disabled when the vehicle is in REVERSE.

The interior auto-dimming rear view mirror has 2 photoelectric sensors, forward facing and rearward facing sensors, that detect forward and rearward light conditions. Based on these inputs, the automatic dimming feature adjusts the reflectance level of the interior rear view mirror glass to eliminate unwanted glare. The reflectance level of the mirror glass is variable and depends on the amount of rear glare in relation to ambient light conditions in front of the interior mirror.

When the forward facing sensor detects daytime conditions, the rearward facing sensor is inactive and the mirror stays in a high reflectance mode. When the forward facing sensor detects nighttime conditions, the rearward facing sensor is active and detects glare from the headlights of vehicles approaching from the rear, or other glare producing light sources. To provide increased visibility when backing up, the interior rear view and LH exterior mirror automaticallturns to a high reflectance mode whenever the vehicle is in REVERSE.

If the forward or rearward sensors are blocked, the automatic dimming interior mirror might not work correctly.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage:

Visual Inspection Chart

Mechanical	Electrical
• Interior rear view mirror	• Smart Junction Box (SJB) fuse 41 (15A) • Circuitry • LH exterior mirror glass • LH exterior mirror

	• Interior auto-dimming rear view mirror • Loose or corroded connections

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the concern is not visually evident, verify the symptom and GO to Symptom Chart - Interior Mirror or GO to Symptom Chart - NVH .

Symptom Chart - Interior Mirror

Symptom Chart - Interior Mirror

Symptom Chart - NVH

Symptom Chart - NVH

NOT> NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04 . Since it is possible any one of multiple systems may be the cause of a symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to Section 100-04 for the next likely system and continue diagnosis.

ConditionPossible SourcesAction

- The interior mirror loose/vibrates
- Interior mirror mounting loose
- If the mirror is still on the windshield **do not remove.** ATTEMPT to fully seat the mirror first (use Rear View Mirror Installer Tool for non-auto-dimming mirror). If the mirror is still loose or vibrates, REMOVE and REINSTALL the mirror. REFER to Interior Rear View Mirror in this section. If the condition still exists, INSTALL a new mirror.

Pinpoint Tests

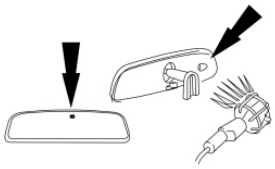
Pinpoint Test F: The Auto-Dimming Mirror Does Not Operate Correctly

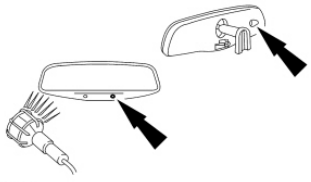
Refer to Wiring Diagrams Cell 124 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Mirrors for schematic and connector information.

Normal Operation

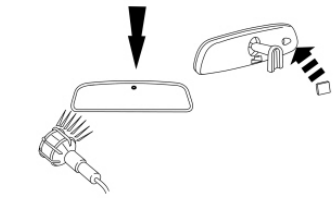
Under normal operation the interior auto-dimming mirror receives voltage from the Smart Junction Box (SJB). The interior auto-dimming mirror contains 2 photoelectric sensors: one in the front of the interior rear view mirror and one mounted on the glass side of the mirror. If the sensors are blocked, the LH exterior mirror and auto-dimming feature may not operate correctly. Always verify both sensors are not physically blocked before attempting to diagnose auto-dimming mirror concerns. Whenever the gear selector lever is placed in REVERSE, the interior auto-dimming mirror temporarily disables the auto-dimming feature. The auto-dimming feature is enabled again when the gear selector lever is moved out of REVERSE.

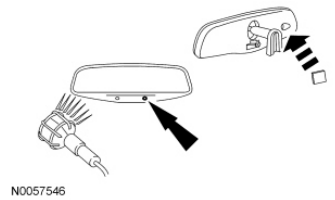
This pinpoint test is intended to diagnose the following:



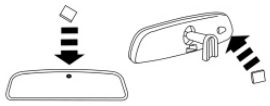


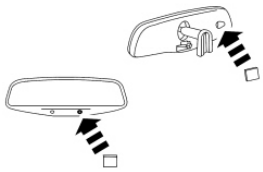
- Fuse
- Wiring, terminals or connectors
- Interior auto-dimming mirror
- LH exterior mirror auto-dimming glass
- LH exterior auto-dimming mirror (if equipped)

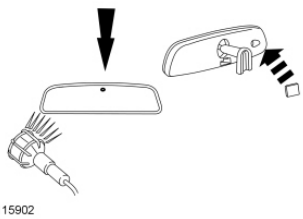




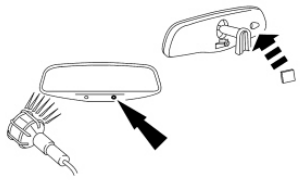
PINPOINT TEST F: THE AUTO-DIMMING MIRROR DOES NOT OPERATE CORRECTLY

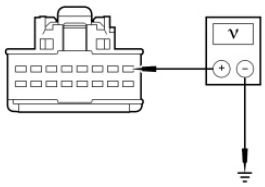




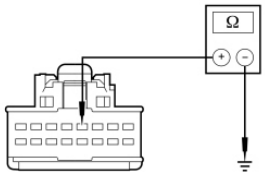


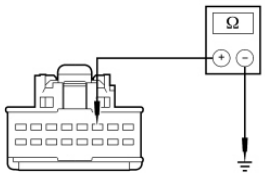
NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

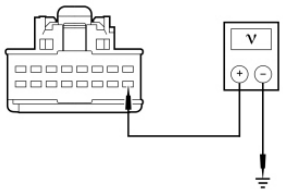


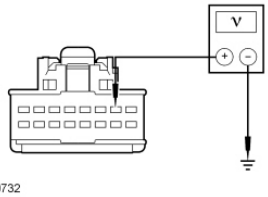


NOTE: If the Transmission Range (TR) sensor is malfunctioning and the backup lamps are on all the time or do not turn on, the auto-dimming interior mirror will not darken or return to normal view.

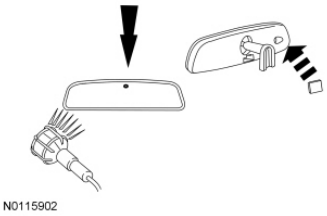


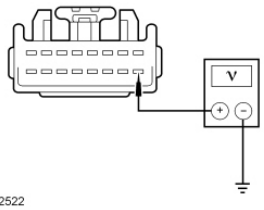




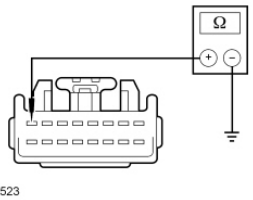


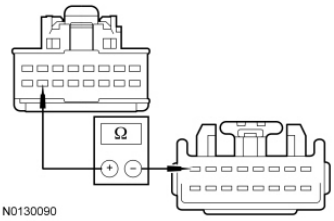
Test Step	Result / Action to Take
F1 CHECK THE OPERATION OF THE BACKUP LAMPS	
• Ignition ON. • Move the selector lever through the entire range. • **Do the backup lamps illuminate and only in REVERSE?**	**Yes** **MKZ only:** If the LH exterior mirror only is always dim, REPAIR circuit LRD12 (BU/GY) for a short to voltage. TEST the system for normal operation. **MKZ only:** If the LH exterior mirror only does not dim correctly, GO to F10 . **MKZ only:** If the interior mirror only does not dim correctly and the LH exterior mirror does dim correctly, INSTALL a new interior mirror, REFER to Interior Rear View Mirror in this section. TEST the system for normal operation. **MKZ only:** If the LH exterior mirror and interior mirror does not dim correctly, GO to F2 . **Fusion only:** If the interior mirror does not operate correctly, GO to F2 . **No** REFER to Section 417-01 to diagnose the backup lamps.
F2 VERIFY THAT THE FORWARD AND REARWARD FACING SENSORS ARE NOT BLOCKED	
• Visually verify that the forward and rearward facing sensors are not blocked.	**Yes** If possible, REMOVE the blockage. TEST the system for normal operation. If the blockage cannot be

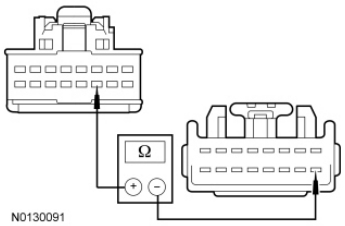




Sources of blockage can include: ♦ stickers, window decals or tags. ♦ fold-down screens for TVs or DVD players. ♦ non-OEM window tinting. • **Were either of the sensors blocked?**	removed, ADVISE the customer of the correct operation of the interior auto-dimming mirror. **No** GO to F3 .
F3 CHECK THE OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR - DAYLIGHT CONDITIONS	
• Ignition ON. • **Without video display:** Use a bright lamp to simultaneously illuminate the forward-facing sensor and the rearward-facing sensor. The mirror should adjust to a high reflectance mode (mirror will be clear).  N0116951 • **With video display:** Use a bright lamp to simultaneously illuminate the forward-facing sensor and the rearward-facing sensor. The mirror should adjust to a high reflectance mode (mirror will be clear).  N0057545 • **Does the mirror adjust to the high reflectance (clear) mode?**	**Yes** GO to F4 . **No** INSTALL a new interior mirror. REFER to Interior Rear View Mirror in this section. TEST the system for normal operation.
F4 CHECK THE OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR - NIGHTTIME CONDITIONS WITH GLARE	
• Ignition ON. • **Without video display:** Simulate nighttime conditions with glare: **NOTE:** Covering the sensor with a finger or hand is not adequate.	**Yes** GO to F5 . **No** GO to F7 .







♦ Cover the forward-facing sensor with black electrical tape or other dark material. ♦ Illuminate the rearward-facing sensor. The mirror should darken to a lower reflectance mode.  N0115902 **With video display:** Simulate nighttime conditions with glare: **NOTE:** Covering the sensor with a finger or hand is not adequate. ♦ Cover the forward-facing sensor with black electrical tape or other dark material. ♦ Illuminate the rearward-facing sensor. The mirror should darken to a lower reflectance mode.  N0057546 • **Did the mirror darken to a lower reflectance (darker) mode?**	
F5 CHECK THE OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR - NIGHTTIME CONDITIONS WITHOUT GLARE	
• Ignition ON. • **Without video display:** Simulate nighttime conditions without glare: **NOTE:** Covering the sensor with a finger or hand is not adequate. ♦ Cover the rearward-facing sensor. The mirror should adjust to e high reflectance mode.	**Yes** GO to F6 . **No** GO to F7 .

 N0116353 • **With video display:** Simulate nighttime conditions without glare: **NOTE:** Covering the sensor with a finger or hand is not adequate. ♦ Cover the rearward-facing sensor. The mirror should adjust to the high reflectance mode.  N0057547 • **Did the mirror adjust to the high reflectance (clear) mode?**	
F6 CHECK THE OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR - NIGHTTIME CONDITIONS WITH THE VEHICLE IN REVERSE	
Ignition ON. • **Without video display:** Simulate nighttime conditions with glare: **NOTE:** Covering the sensor with a finger or hand is not adequate. ♦ Cover the forward-facing sensor with black electrical tape or other dark material. ♦ Illuminate the rearward-facing sensor.  N0115902 • **With video display:** Simulate nighttime conditions with glare:	**Yes** The system is operating normally at this time. REVIEW operation of the interior auto-dimming mirror feature with the customer. **No** GO to F7 .

NOTE: Covering the sensor with a finger or hand is not adequate. ♦ Cover the forward-facing sensor with black electrical tape or other dark material. ♦ Illuminate the rearward-facing sensor.  N0057546 • Select REVERSE. • **Did the mirror adjust to a high reflectance (clear) mode?**	
F7 CHECK THE VOLTAGE TO THE INTERIOR MIRROR	
• Ignition OFF. • Disconnect: Interior Mirror C911 or C9039 (with video display). • Ignition ON. • Measure the voltage between ground and: ♦ **Without video display** , interior auto-dimming mirror C911-1, circuit CBP41 (BU), harness side. ♦ **With video display** , interior auto-dimming mirror C9039-1, circuit CBP41 (BU), harness side.  N0070730 • **Is the voltage greater than 10 volts?**	**Yes** GO to F8 . **No** VERIFY SJB fuse 41 (15A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation.
F8 CHECK THE GROUND TO THE INTERIOR MIRROR	
• Ignition OFF. • **Without video display:** Measure the resistance between interior auto-dimming mirror C911-4, circuit GD139 (BK/YE), harness side and ground.	**Yes** GO to F9 . **No** REPAIR the circuit. TEST the system for normal operation.

 N0122756 • **With video display:** Measure the resistance between interior auto-dimming mirror C9039-3, circuit GD139 (BK/YE), harness side and ground.  N0070731 • **Is the resistance less than 5 ohms?**	
F9 CHECK REVERSE INPUT CIRCUIT	
• Ignition ON. • Select REVERSE. • **Without video display:** Measure the voltage between interior auto-dimming mirror C911-3, circuit CLS10 (GN/BN), harness side and ground.  N0122757 • **With video display:** Measure the voltage between interior auto-dimming mirror C9039-2, circuit CLS10 (GN/BN), harness side and ground.  N0070732	**Yes** INSTALL a new interior auto-dimming mirror. REFER to Interior Rear View Mirror in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

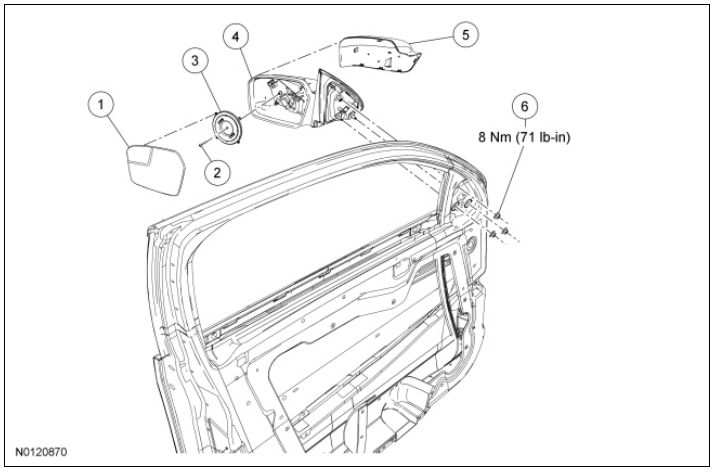
• **Is the voltage greater than 10 volts?**	
F10 CHECK CIRCUIT LRD12 (BU/GY) FOR VOLTAGE	
• Ignition OFF. • Disconnect: LH Exterior Mirror C522. • Ignition ON. • Simulate nighttime conditions with glare: **NOTE:** Covering the sensor with a finger or hand is not adequate. ♦ Cover the forward-facing sensor with black electrical tape or other dark material. ♦ Illuminate the rearward-facing sensor. The mirror should darken to a lower reflectance mode.  N0115902 • Measure the voltage between LH exterior mirror C522-9, circuit LRD12 (BU/GY), harness side and ground.  N0042522 • **Is the voltage greater than 1 volt?**	**Yes** GO to F11 . **No** GO to F13 .
F11 CHECK CIRCUIT RRD12 (BN) FOR GROUND	
• Measure the resistance between LH exterior mirror C522-8, circuit RRD12 (BN), harness side and ground.	**Yes** GO to F12 . **No** CHECK the LH exterior mirror jumper harness between the vehicle harness and the exterior mirror glass for shorted or open circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness cannot be repaired, INSTALL a new LH exterior mirror. REFER to Exterior Mirror in this section. If the jumper harness is OK, INSTALL a new LH

 N0042523 • **Is the resistance greater than 10,000 ohms?**	exterior mirror glass. REFER to Exterior Mirror Glass in this section. TEST the system for normal operation.
F12 CHECK CIRCUIT RRD12 (BN) FOR AN OPEN	
• Ignition OFF. • Disconnect: Interior Mirror C911. • Measure the resistance between LH exterior mirror C522-8, circuit RRD12 (BN), harness side and interior auto-dimming mirror C911-15, circuit RRD12 (BN), harness side.  N0130090 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL new interior mirror. REFER to Interior Rear View Mirror in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
F13 CHECK CIRCUIT LRD12 (BU/GY) FOR AN OPEN	
• Ignition OFF. • Disconnect: Interior Mirror C911. • Measure the resistance between LH exterior mirror C522-9, circuit LRD12 (BU/GY), harness side and interior auto-dimming mirror C911-11, circuit LRD12 (BU/GY), harness side.  N0130091 • **Is the resistance less than 5 ohms?**	**Yes** GO to F14 . **No** REPAIR the circuit. TEST the system for normal operation.
F14 CHECK CIRCUIT LRD12 (BU/GY) FOR A SHORT TO GROUND	

• Measure the resistance between ground and interior auto-dimming mirror C911-11, circuit LRD12 (BU/GY), harness side.  N0130299 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL new interior mirror. REFER to Interior Rear View Mirror in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

Exterior Mirrors - Exploded View

Exterior mirror with Blind Spot Information System (BLIS®)



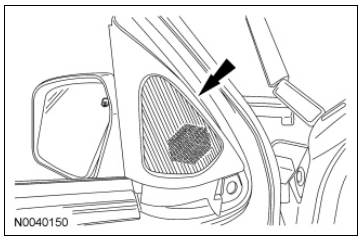
NOTE: LH exterior mirror shown, RH exterior mirror similar.

Item	Part Number	Description
1	17K707	Exterior mirror glass
2	-	Exterior mirror motor screw (part of 17D696)
3	17D696	Exterior mirror motor
4	17682 RH/ 17683 LH	Exterior mirror
5	17D742 RH/ 17D743 LH	Exterior mirror cover
6	N621906	Exterior mirror nut (3 required)

Exterior mirror with integrated spotter mirror

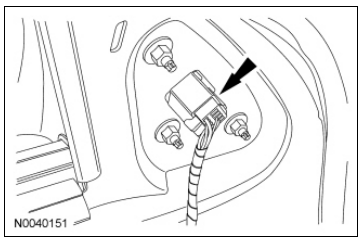
NOTE: LH exterior mirror shown, RH exterior mirror similar.

Item	Part Number	Description
1	17K707	Exterior mirror glass>
2	-	Exterior mirror motor screw (part of 17D696)
3	17D696	Exterior mirror motor
4	17682 RH/ 17683 LH	Exterior mirror housing
5	17D743 LH/ 17D742 RH	Exterior mirror cover
6	N621906	Exterior mirror nut (3 required)



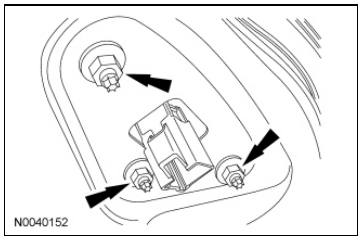
1. For additional information, refer to the procedures in this section.

Exterior Mirror



Removal and Installation

1. Remove the front door trim panel. For additional information, refer to Section 501-05 .



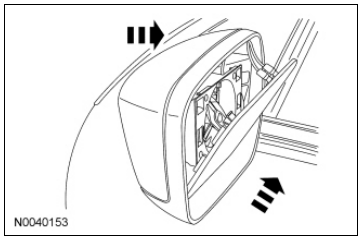
2. Remove the front door sail panel.
   - If equipped, disconnect the speaker electrical connector.

3. Disconnect the exterior mirror electrical connector.

4. Remove the 3 exterior mirror nuts and the exterior mirror.
   - To install, tighten to 8 Nm (71 lb-in).

5. To install, reverse the removal procedure.

Exterior Mirror Glass



Removal

Vehicles with Blind Spot Information System (BLIS®)

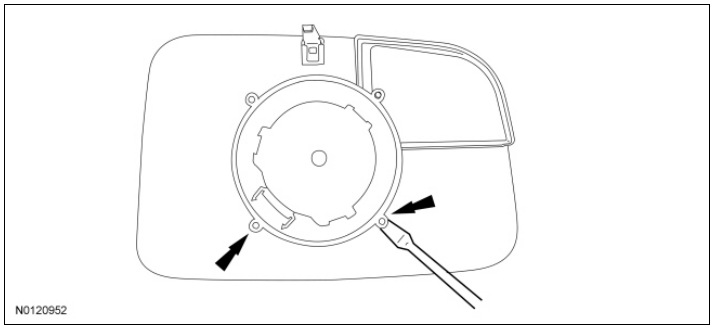
1. Position the exterior mirror glass in the full down position.

2. WARNING: Place a shop towel between the hands and the exterior mirror glass for protection in case of glass breakage during mirror service. Failure to follow this instruction may result in serious personal injury.

   Pull the upper edge of the exterior mirror glass outward and then upward to release the locking tabs from the exterior mirror motor.

3. Disconnect the electrical connectors from the exterior mirror glass.

Vehicles with integrated spotter mirror

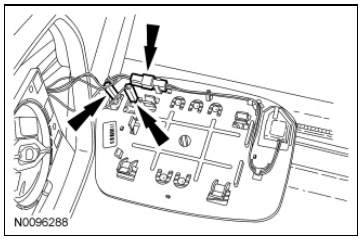


4. Position the exterior mirror glass to the full upward and inboard position and insert a thin, flat-blade screwdriver.

5. ⚠ **WARNING: Place a shop towel between the hands and the exterior mirror glass for protection in case of glass breakage during mirror service. Failure to follow this instruction may result in serious personal injury.**

   NOTE: LH mirror and motor removed from the housing and viewed from the back to show location of clips and placement of screwdriver.

   Using the thin, flat-blade screwdriver, remove the exterior mirror glass by releasing the tabs. Starting at the lower outboard side of the mirror and continuing to the lower inboard side.



6. If equipped, disconnect the electrical connectors and remove the exterior mirror glass.

Installation

Vehicles with Blind Spot Information System (BLIS®)

1. If equipped, connect the electrical connectors to the exterior mirror glass.

2. Install the lower exterior mirror glass onto the exterior mirror motor.

3. Position the exterior glass upward.

4. ⚠ **WARNING: Place a shop towel between the hands and the exterior mirror glass for protection in case of glass breakage during mirror service. Failure to follow this instruction may result in serious personal injury.**

   NOTE: An audible click will be heard during installation.

   Place a hand against the back of the exterior mirror and a hand flat against the upper exterior mirror glass and press the exterior mirror glass into the upper exterior mirror motor retainers.

Vehicles with integrated spotter mirror

5. If equipped, connect the electrical connectors.

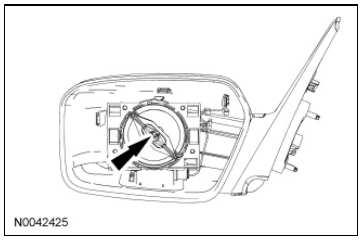
6. ⚠ **WARNING: Place a shop towel between the hands and the exterior mirror glass for protection in case of glass breakage during mirror service. Failure to follow this instruction may result in serious personal injury.**

   Position the exterior mirror glass onto the exterior mirror motor.

7. **NOTE:** An audible click will be heard during installation.

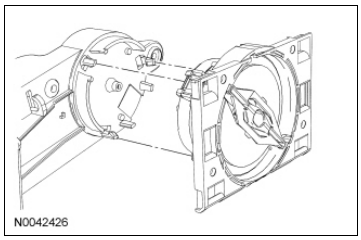
   Firmly press the exterior mirror glass until it snaps onto the exterior mirror motor.

8. Rotate the exterior mirror glass in all directions after the installation to make sure that all of the exterior mirror glass retaining clips are completely fastened.



Exterior Mirror Motor

Removal and Installation

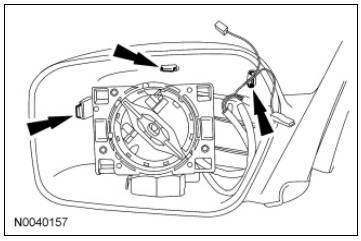


NOTE: Exterior mirror with Blind Spot Information System (BLIS®) shown, exterior mirror with integrated spotter mirror similar.

1. Removethe exterior mirror glass. For additional information, refer to Exterior Mirror Glass in this section.

2. Remove the exterior mirror motor screw.

3. Use a flat-blade screwdriver and remove the exterior mirror motor from the 3 mounting clips.
   - Disconnect the electrical connector(s).



4. To install, reverse the removal procedure.

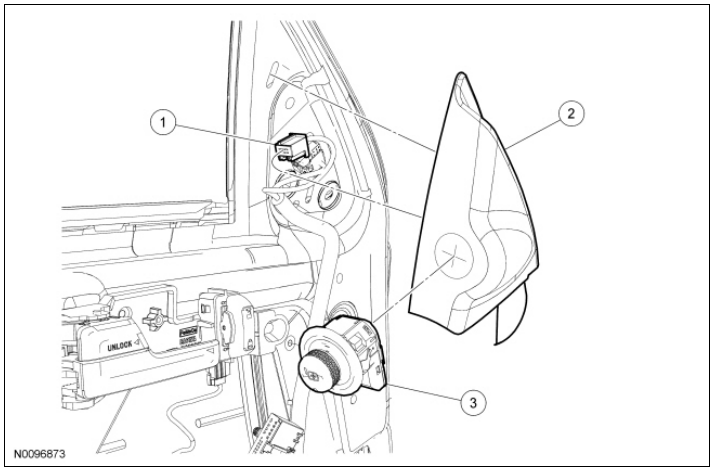
Exterior Mirror Cover

1. Remove the exterior mirror glass. For additional information, refer to Exterior Mirror Glass in this section.

2. **NOTE:** Exterior mirror with Blind Spot Information System (BLIS®) shown, exterior mirror without BLIS® similar.

   Depress the 3 tabs and remove the exterior mirror cover.

3. To install, reverse the removal procedure.



Exterior Mirror Control Switch

Fusion

Item	Part Number	Description
1	W505153	Window control switch screw
2	22635	Window control switch bezel
3	17B676	Exterior mirror control switch

MKZ

Item	Part Number	Description
1	14631	Exterior mirror electrical connector
2	17K709	Front door trim sail panel
3	17B676	Exterior mirror control switch

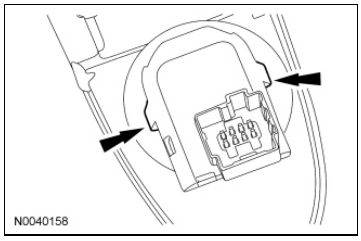
Removal and Installation

Fusion

1. Remove the window control switch bezel in the following sequence.
    1. Remove the window control switch screw.
    2. Pull upward and remove the control switch bezel.
    3. Disconnect the electrical connectors.

MKZ

2. Remove the front door trim panel. For additional information, refer to Section 501-05 .



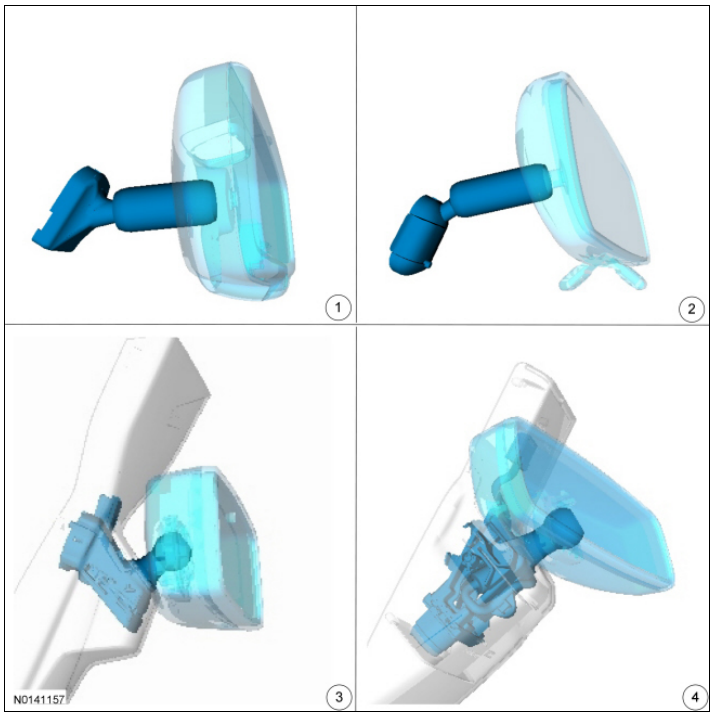
3. Pull outward to remove the front door trim sail panel and disconnect the electrical connector.

All vehicles

4. **NOTE:** Fusion shown, MKZ similar.

   Remove the exterior mirror control switch.

   - Depress the 2 locking tabs.



5. To install, reverse the removal procedure.

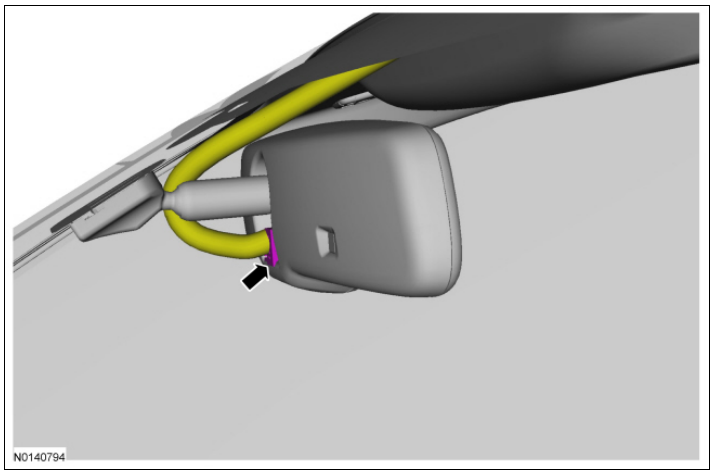
Interior Rear View Mirror

Special Tool(s)

 ST1793-A	Installer, Rear View Mirror 501-025 (T94P-17700-AH)
 ST3250-A	Mirror Remover 501-D118A
 ST3311-A	Installer, Rear View Mirror 501-191
 ST3310-A	Mirror Remover 501-190

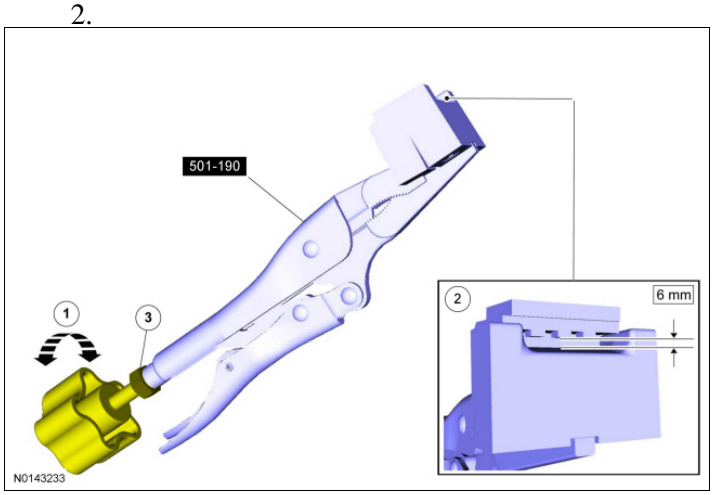
Mirror Identification

Item	Part Number	Description
1	-	Mirror type 1
2	-	Mirror type 2
3	-	Mirror type 3
4	-	Mirror type 4



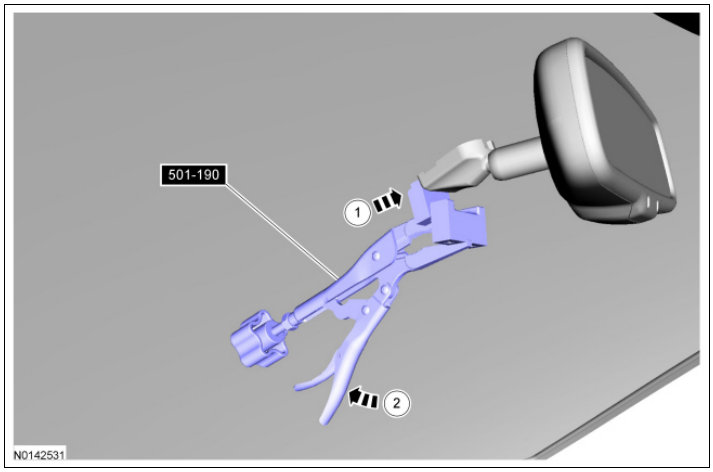
Removal

Mirror Type 1

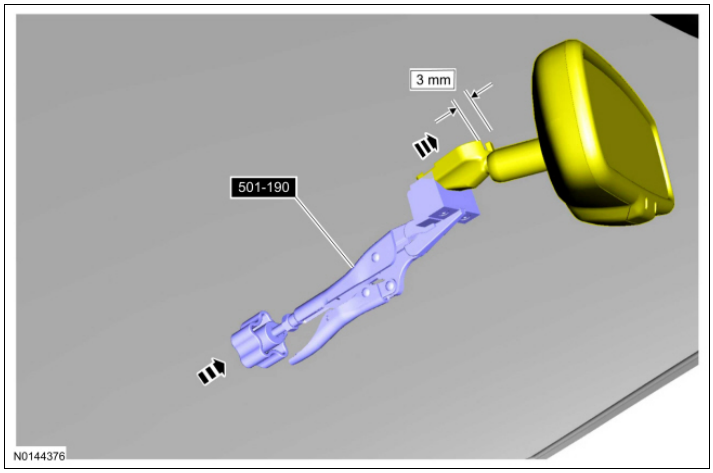


NOTICE: **The windshield must be at room temperature. Otherwise, damage to the windshield glass may occur.**

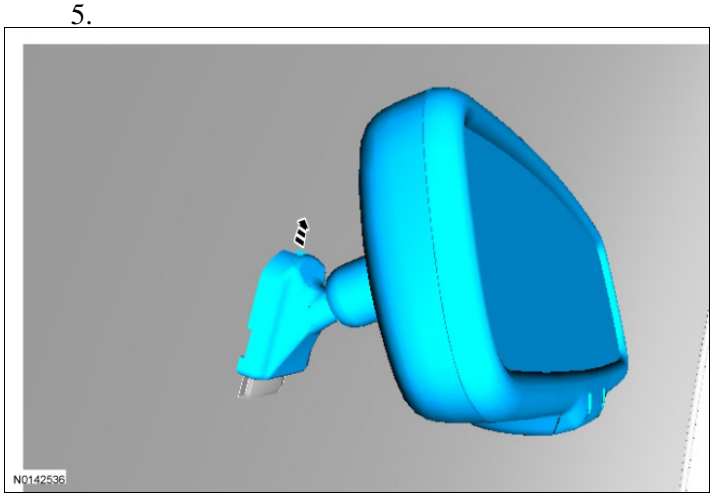
NOTE: Click here to view a video version of this procedure.



1. If equipped.

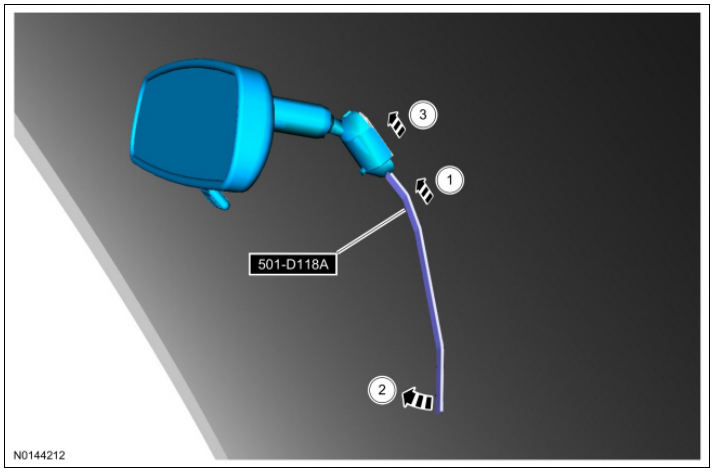


2.

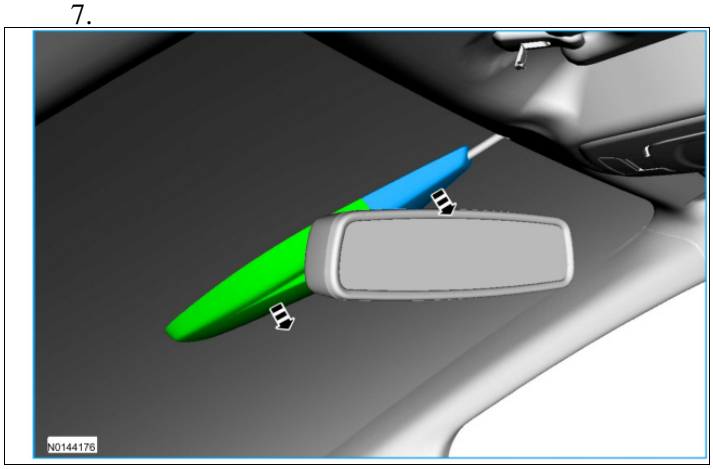


3. ***NOTICE:*** **Make sure the Mirror Remover is fully insertthe interior rear view mirror mount access hole. Otherwise, damage to the windshield glass may occur.**

4. Using a closed hand, bump the adjustment handle of the Mirror Remover to slide the mirror upward on the mirror mount.

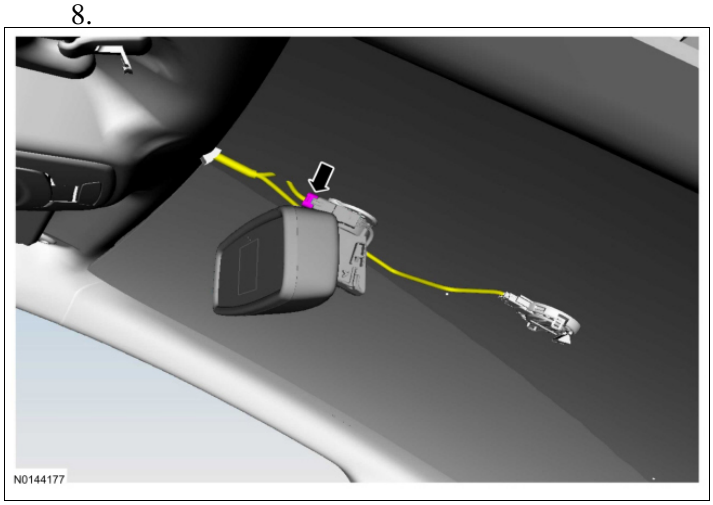


5.

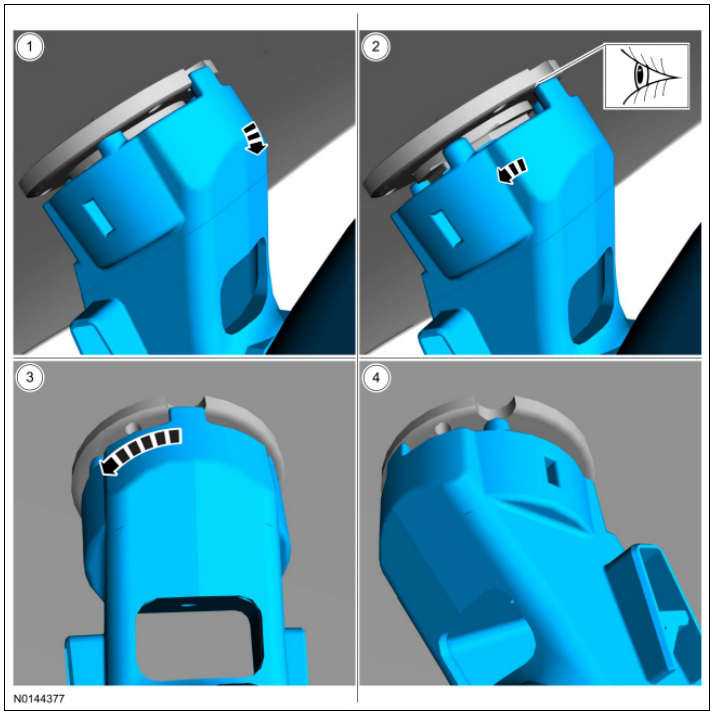


Mirror Type 2

6.

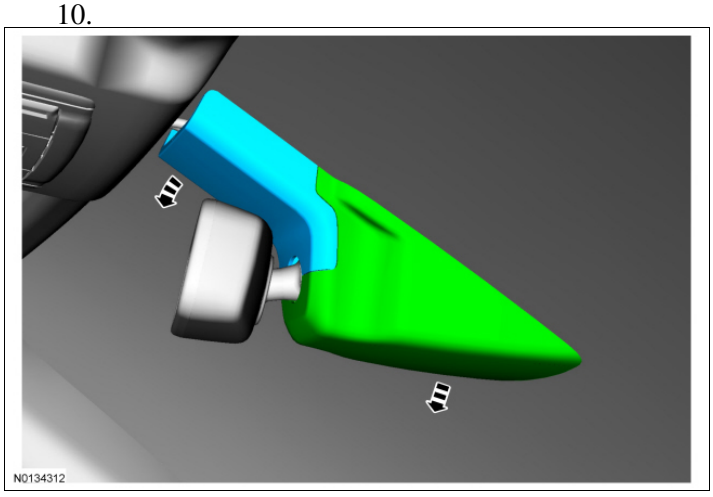


Mirror Type 3

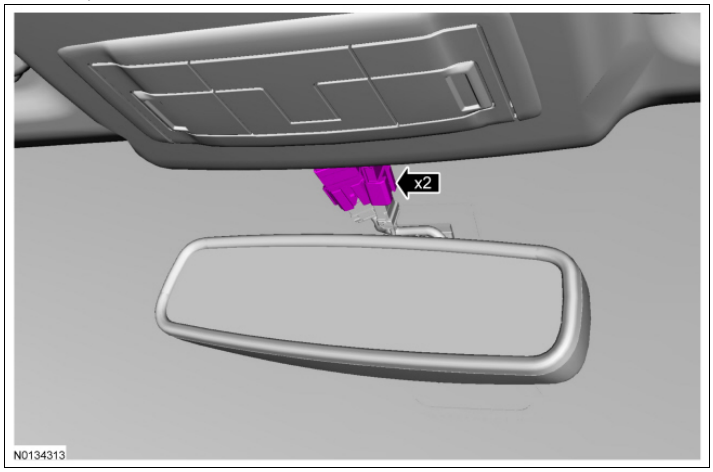


7.

8.

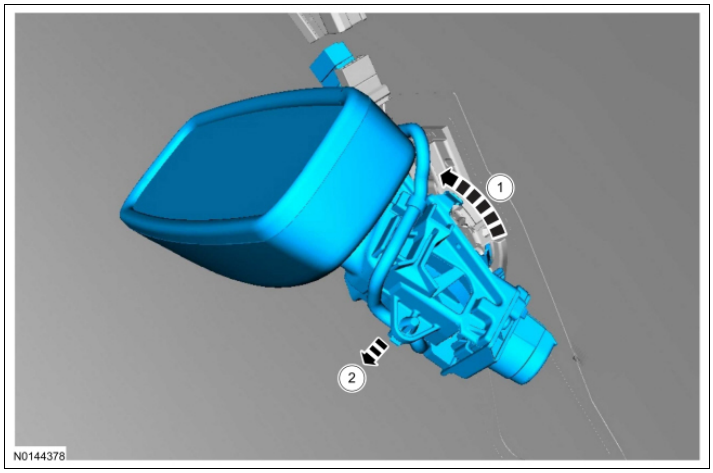


9.



Mirror Type 4

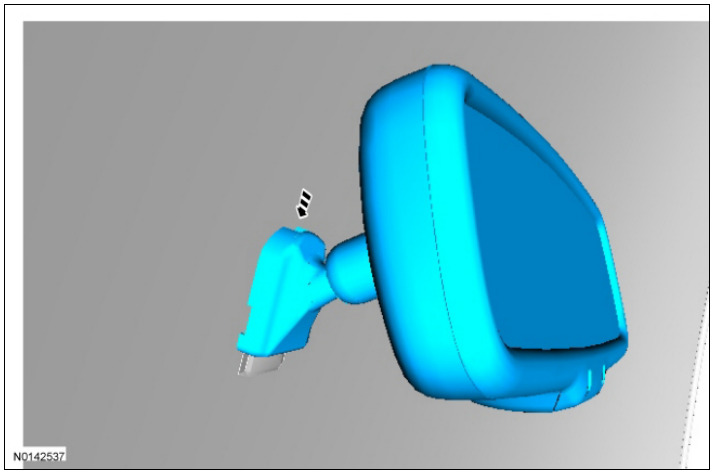
10.



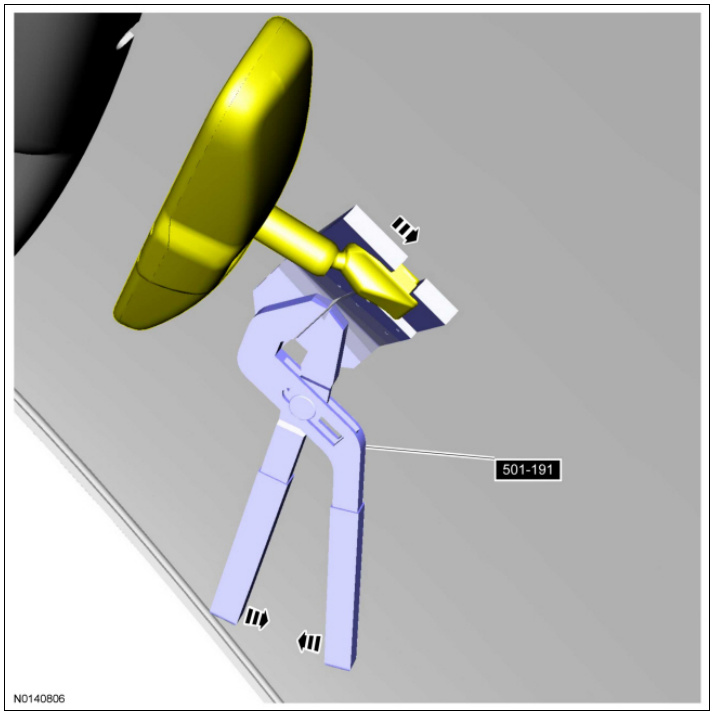
11.

12. ***NOTICE:*** **To prevent damage to the mirror or base, rotate the mirror base with hands only do not use tools.**

    NOTICE: **To prevent damage to the mirror wiring, do not rotate the mirror head beyond 180 degrees.**

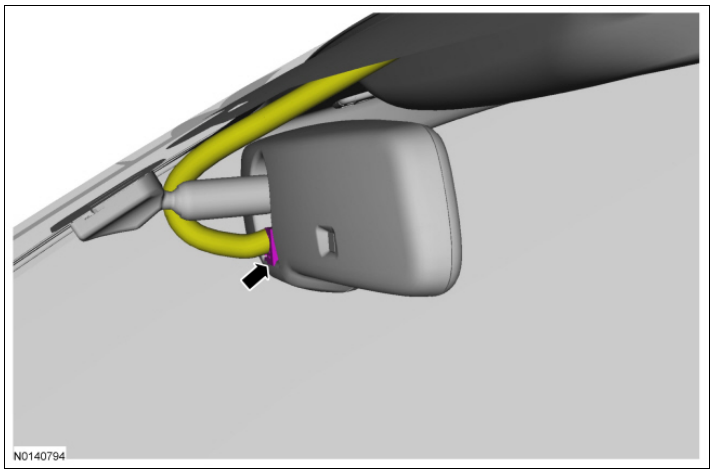


Installation



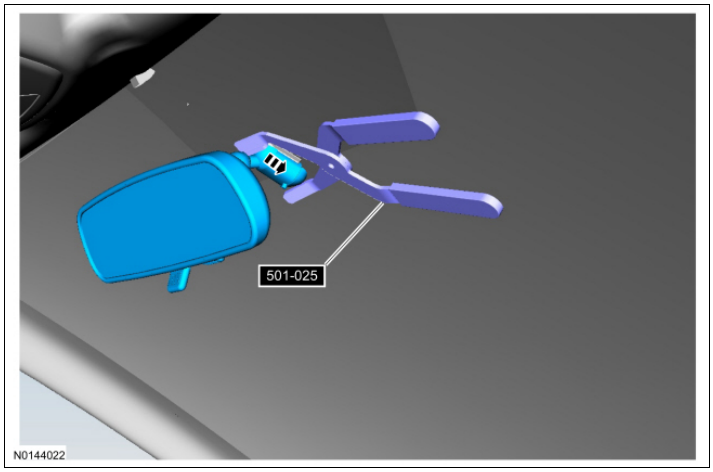
Mirror Type 1

NOTE: Click here to view a video version of this procedure.



1. Slide the interior rear view mirror mount over the windshield bracket from the top.

2. **NOTE:** An audible click will be heard as the mirror fully seats.



3. If equipped.

4. If equipped with compass module, check the compass zone and calibration. Refer to General Procedures in Section 413-01 or Section 419-11.

Mirror Type 2

5.

6. If equipped with a compass module which requires calibration, check the compass zone adjustment and calibration. Refer to General Procedures in Section 413-01 or Section 419-11.

Mirror Type 3

7. To install, reverse the removal procedure.

Mirror Type 4

8. To install, reverse the removal procedure.
    - If a new mirror has been installed, download the IPM-A configuration information from the scan tool to the new IPM-A .
    - If a new mirror has been installed, perform camera alignment using a scan tool.

Torque Specifications

Description	Nm	lb-ft	lb-in
Front Seat			
Cushion Thermo-Electric Device (TED) assembly nuts	6	-	53
Occupant Classification System (OCS) rail-to-seat track bolts	25	18	-

Seats

Front Seats

Each front seat can be equipped with the following serviceable items and systems:

- Power or manual seat track
- Backrest recliners
- Heated or climate controlled seat system
- Driver memory seat
- Power or manual lumbar
- Seat side air bags
- Occupant Classification System (OCS) system on front passenger seat

For a detailed list of front seat serviceable parts, refer to Seat - Exploded View, Front in this section.

Driver Memory Seat

When equipped with the memory option, the seat is controlled by the Driver Seat Module (DSM).

The system contains the following serviceable components:

- DSM , mounted to the seat track
- Memory SET switch, located on the driver door
- Power seat track
- Seat control switch

Heated Seat System

The system contains the following serviceable components:

- Seat heater mats located in the seat cushion and backrest
- Heated seat module, mounted to the bottom of the front passenger seat track
- Heated seat buttons, located on the HVAC module (without navigation) or on the Front Controls Interface Module (FCIM) (with navigation)
- Heated seat indicators, located on the heated seat button
- HVAC module (with navigation)

The FCIM and HVAC module operate the heated seat system independently from other systems. Upon pressing a heated seat button, the heated seat module will cycle off, high, low and off. Both indicators illuminate in high, the lower indicator illuminates in low and neither will be illuminated when off.

If the ignition source is turned off, the heated seat module will enter an off state and will not return to on until the heated seat control button is once again pressed with the ignition in RUN. The heated seat module does not time out.

Climate Controlled Seat System

The system contains the following serviceable components:

- Thermo-Electric Device (TED) and blower assembly within each front seat cushion and backrest

  TED and blower assembly (for cushion TED filter, turn to the left to remove) (backrest TED filter is not serviceable but can be removed)
- Cushion and backrest manifolds
- Cushion and backrest foam pads
- Cushion and backrest trim covers
- Climate controlled seat buttons, located on the FCIM
- Dual Climate Controlled Seat Module (DCSM), mounted to the bottom of the front passenger seat cushion
- HVAC module

Backrest Recliners

All backrest recliners are serviced with the backrest frame.

Seat Side Air Bags

The driver and front passenger seat side air bags are standard equipment attached to the front seat backrest frame. If a seat side air bag deployment has occurred, or for more information, refer to Section 501-20B .

Occupant Classification System (OCS) System

The OCS system is standard equipment on all front passenger seats. For diagnosing or servicing the OCS system, refer to Section 501-20B .

Rear Seats

The rear seats contain the following serviceable parts and systems:

- 60/40 split folding backrest
- Fold-down armrest that may be equipped with cup holders
- A latch attached to the package tray sheet metal for each backrest
- Backrest latch release handles, located in the luggage compartment (non-hybrid vehicles only)

For a detailed list of rear seat serviceable parts, refer to Seat - Exploded View, Rear in this section.

Non-Hybrid Vehicle

The center tunnel is higher on an All-Wheel Drive (AWD) vehicle, creating the need for a shorter cushion foam pad. Make sure when installing a new cushion foam pad, the correct part is being installed.

Hybrid Vehicle

The cushion has a 2-piece foam pad to allow for traction battery ventilation. Make sure when installing a new cushion the correct hard and soft foam pads are being installed.

/body>

Seats

Special Tool(s)

 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent
 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Medium Speed Controller Area Network (MS-CAN)

This vehicle utilizes a communication system called a Medium Speed Controller Area Network (MS-CAN). When diagnosing the memory seat, heated seats or climate controlled seats, use a Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool with the latest software update with the capability of communicating over the MS-CAN bus.

Principles of Operation

Driver and Passenger Power Seats Without Memory

The 10-way power seat control feature moves the seat in 10 possible directions: the seat can be moved forward or backward and the front and back of the cushion can be moved up and down independently. The backrest of the seat can be moved forward and backward, and the lumbar can be moved in and out. All 10 positions are controlled by one switch. The power seat feature operates independent of the ignition position.

The 8-way power seat control feature moves the seat in 8 possible directions. It is like the 10-way power seat, less power lumbar.

The 4-way power seat control feature moves the seat in 4 possible directions: the seat can be moved forward or backward and the backrest of the seat can be moved forward and backward.

The power seat motors are hardwired to the seat control switch. The circuits are normally at ground through the seat control switch. An individual circuit is switched to voltage when a specific adjustment position is selected.

Power Driver Seat With Memory

NOTE: Verify good battery condition before diagnosing the memory seat system. Poor battery condition may interfere with memory seat operation, even if vehicle starting is possible.

NOTE: A memory recall in progress does not prohibit the initiation of another memory recall; the most recently requested memory recall will be executed.

The driver power memory seat is controlled by the Driver Seat Module (DSM). The memory seat feature allows the driver to program a personalized seat position that can be recalled using the memory switch or a Remote Keyless Entry (RKE) transmitter. There are 2 memory settings possible. The 2 settings consist of 8 possible directions: the seat can be moved forward or backward and the front and back of the cushion can be moved up and down independently. The backrest of the seat can be moved forward and backward. Adjustable lumbar is not a memory option. The power seat feature operates independent of the ignition position.

The driver seat control switch provides voltage to the DSM when activated. The NEUTRAL position of the driver seat control switch position is a ground state through the seat control switch contacts. A voltage input causes the DSM to power the appropriate motor until the input is removed. Ground is the normal state of the motor circuits through the DSM and is not switched to control the motors. The DSM internally switches the appropriate circuit from ground to voltage for operating the motors.

As the seat is adjusted, the DSM constantly monitors the motor position sensors to record the current seat position. The DSM will remove voltage from the motor upon termination of the seat control switch input or if the DSM does not see movement from the motor by monitoring the position sensor.

The DSM communicates DTCs and other information using the MS-CAN communication bus. It should be noted for diagnostics that because Controller Area Network (CAN) bus communication is more robust and reliable than other methods, it may be possible to have limited module communication with one of the CAN bus circuits disconnected or shorted to ground. Refer to Section 418-00 for information concerning MS-CAN bus communication.

For information on programming memory positions or recalling a stored memory position, refer to Memory Position Programming in this section. For information on RKE transmitter programming, refer to Section 501-14 .

The DSM is located under the driver seat. To install a new DSM , refer to Driver Seat Module (DSM) in this section. Programmable Module Installation (PMI) must be carried out when installing a new DSM . Refer to Section 418-01 .

This section only diagnoses concerns specific to the memory seat. To diagnose a memory exterior mirror concern, refer to Section 501-09 .

Easy Exit/Easy Entry

The easy entry/easy exit feature is a function of the DSM that moves the driver seat backwards about 50.8 mm (2 in) when the ignition key is removed from the ignition. The DSM receives a key out command over the MS-CAN communication network and powers the driver seat rearward. This function will not operate if the seat is less than the 50.8 mm (2 in) travel distance to the end of the track or the function has been disabled. The DSM will also cancel this operation if a valid input command is received from the driver seat control switch, memory SET switch or exterior mirror control switch.

The DSM will record the current seat position before powering the seat for an easy exit function. This recorded position will be used to return the seat to this position on the easy entry operation. During easy entry operation, the seat is returned to the position previous to the easy exit operation. Easy entry operation will be cancelled if a valid input command from the seat control switch, memory SET switch or exterior mirror control switch is received by the DSM .

The easy entry/easy exit feature can be enabled/disabled using a scan tool. When enabled, the feature becomes

a user accessible item on the message center allowing the user to turn the feature on and off. Refer to the Owner's Literature or Section 413-01 for information on the message center.

Heated Seats

When equipped with navigation, heated seat request and indicator messages are communicated between the Front Controls Interface Module (FCIM) and HVAC module over the Controller Area Network (CAN), otherwise, heated seat request and indicator messages are always communicated between the HVAC module and heated seat module.

The engine must be running for the heated seat system to operate and it does not time out. The heated seat module supplies voltage to the heater mats. The heated seat module regulates seat temperature by monitoring a thermostat located in the cushion heater mat.

The heated seat module does not report DTCs and does not communicate on the communication network. If a fault is detected, the module will disable the affected seat(s) and indicator(s). After the fault is corrected, the heated seat module needs to be reset by cycling the ignition.

The heated seat module control circuits are monitored by the HVAC module and will set a DTC if a circuit fault is detected. Refer to the HVAC Module DTC Chart.

Climate Controlled Seat System

NOTICE: **Avoid applying voltage directly to a Thermo-Electric Device (TED) for testing its operation. Doing so may cause damage to the TED .**

NOTE: When installing a new Dual Climate Controlled Seat Module (DCSM), it is necessary to carry out Programmable Module Installation (PMI). Refer to Section 418-01 .

The driver and front passenger climate controlled seats are independently controlled by the DCSM . The climate controlled seat system only operates with the engine running, however, if using a scan tool to command the DCSM , diagnostic testing can be carried out with the ignition ON and engine OFF. The DCSM receives voltage from the Battery Junction Box (BJB) on DCSM C3265A pins E and F. If one pin does not receive voltage, both seats will remain operational because the voltage supply circuits are internally connected in the DCSM .

If a fault is detected, only the affected seat will be disabled. If the system shuts down, cycling the ignition OFF and then ON again will reset the DCSM to function until the DTC resets.

The 4 buttons (identified with seat icons), located on the FCIM , activate each seat system setting and illuminate indicators on each button to indicate the operating mode, 3 indicators for HIGH, 2 indicators for MED or 1 indicator for LOW. The push-buttons with the blue seat icon operate the seat cooling mode and the push-buttons with the red seat icon operate the seat heating mode.

The climate controlled seat button commands are communicated from the FCIM over the MS-CAN to the HVAC module and then to the DCSM . Upon receiving a command, the DCSM then communicates indicator illumination commands back to the HVAC module which then commands the FCIM to turn the indicators on or off. The climate controlled seat system can only operate if all 3 modules are communicating correctly on the CAN .

Each cushion and backrest is equipped with a Thermo-Electric Device (TED) assembly that includes a seat blower (fan motor, serviced as an assembly with the TED). Applying voltage polarity to the TED in one

direction, causes it to heat. Applying voltage polarity in the opposite direction causes the TED to cool. Cabin air is drawn through the blower and distributed to each of the TED modules located in the seat cushion and backrest. The TEDs then heat or cool the incoming air depending on the control switch settings. The air is then directed into the manifold where it is distributed along the surface of the cushion and backrest of the seat. Once the system is activated, the DCSM controls the heating/cooling modes and the blower speed dependant on the settings.

The temperature differences between the individual heated and cooled settings is minimal. For example, it is difficult to distinguish between LOW COOL and MEDIUM COOL settings. Measuring seat temperature at different settings is possible by monitoring the DCSM PIDs using the scan tool.

The climate controlled seats can be commanded using the scan tool to verify both module communication on the MS-CAN bus and operation of the DCSM . This method may be useful for isolating a control switch concern. It should also be noted that because CAN bus communication is more robust and reliable than other methods, it may be possible to have limited module communication with one of the CAN bus circuits disconnected or shorted to ground. Refer to Section 418-00 for information concerning CAN bus communication.

Heating Characteristics

NOTE: The presence of overtemperature faults (DTCs B2729, B2730, B272A and B272B) can be induced by incorrect operation of the climate controlled seat system after an initial heat setting has been attained. If a heat setting is repeatedly turned OFF and ON in an attempt to increase the seat temperature, an overtemperature condition can result and the DTCs will be set.

- In the LOW setting, the DCSM is set to maintain TED temperature at approximately 46°C (115°F).
- In the MEDIUM setting, the DCSM is set to maintain TED temperature at approximately 60°C (140°F).
- In the HIGH setting, the DCSM is set to maintain TED temperature at approximately 65°C (149°F).
- When heating, the DCSM will vary the speed of the fans and the TED duty cycle in order to reach and maintain the temperature determined by the switch setting.
- Engine must be running over 3 and seat heating does not time out.

Cooling Characteristics

- In cool mode, the TED circuits of a given seat are wired in series internally in the DCSM .
- In cool mode, the TED can remove up to 8°C (14°F) from the ambient air temperature entering the system.
- When cooling, the DCSM maintains constant speed of the fans and constant TED supply voltage (duty cycle) in open loop cool mode.
- Engine must be running over 350 rpm and seat cooling does not time out.

The climate controlled seat system is deactivated by one of the following actions:

- Selecting the HVAC module setting to manual OFF.
- Turning the vehicle OFF.

Climate Controlled Seat System Recovery Mode

NOTE: The presence of overtemperature faults (DTCs B2729, B2730, B272A and B272B) can be induced by incorrect operation of the climate controlled seat system after an initial heat setting has been attained. If a heat

setting is repeatedly turned OFF and ON in an attempt to increase the seat temperature or repeatedly toggled between heat and cool modesan overtemperature condition can result and the DTCs will be set.

If the temperature at one of the TEDs falls below 5°C (41°F), the DCSM will shut down the TEDs and initiate system recovery mode. If the temperature continues to drop below 2°C (36°F), the DCSM will shut down the affected seat operation.

If the temperature at one of the TEDs rises above 110°C (230°F) in the heat mode or 65°C (149°F) in the cool mode for more than 4 seconds, the DCSM will record an overtemperature DTC, remove voltage from the TEDs and go into recovery mode (blower only) for 30 seconds to cool down the TEDs . The same will occur if a temperature difference of 60°C (108°F) or greater is seen between the backrest and cushion TEDs on either front seat. The DCSM will continue to monitor the TEDs while in recovery mode. If the temperature of the TEDs does not drop to 105°C (221°F) in the heat mode or 60°C (140°F) in the cool mode after 30 seconds, the system will continue to cool the TEDs in recovery mode for up to 5 minutes. If the TEDs cool down at any time after 30 seconds, but before 5 minutes (checked at 4-second intervals), the system will operate as normal. An overtemperature DTC will still be recorded even if the system recovers and is operating normally. Recovery mode is more likely to occur during extreme cabin temperatures with significant seat back sunload. If the system does not recover within 30 seconds in heat mode or within 5 minutes in cool mode, the DCSM will disable that seat (fault mode) and remain off until the ignition is cycled. Also, if the DCSM detects temperature differentfault twice during the same ignition cycle, it will shutdown. When a fault causes a shutdown, the climate controlled seat indicators will turn off for the affected seat and that seat will not be operational until the next key cycle.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Switch(es) • Seat tracks obstructed or damaged • Lumbar assembly damaged • Recliner assembly damaged (backrest frame) • Thermo-Electric Device (TED) assembly filter dirty (cushion or backrest)	• Battery Junction Box (BJB) fuse(s): ♦ 12 (30A MKZ) (climate controlled seats) ♦ 31 (30A) (passenger power seat) ♦ 32 (30A) (driver power seat or driver memory seat) • Smart Junction Box (SJB) fuse(s): ♦ 12 (7.5A) (driver memory seat) ♦ 18 (20A Fusion) (heated seat module) ♦ 35 (10A Fusion) (heated seat module) • Wiring harness • Loose or corroded connections • Seat control switch(es)

	• Power seat motor (seat track) • Memory SET switch • Seat cushion heater • Seat backrest heater • Lumbar control switch • Power lumbar motor • TED assembly (cushion or backrest) • Power recliner motor • Driver Door Module (DDM) • Driver Seat Module (DSM) • Dual Climate Controlled Seat Module (DCSM) • Front Controls Interface Module (FCIM) • Heated seat module • HVAC module

NOTE: The Smart Junction Box (SJB) may also be identified as the Generic Electronic Module (GEM).

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the concern is with the power seat (non-memory seat) or heated seat and the cause is not visually evident, verify the symptom and GO to Symptom Chart .

5. **NOTE:** Make sure to use the latest scan tool software release.

   If the concern is with the memory seat or climate controlled seat and the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

6. **NOTE:** The VCM LED prove out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :

   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM .
   - refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

7. If the scan tool does not communicate with the vehicle:
   - verify the ignition key is in the ON position.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 to diagnose no response from the PCM.

8. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record CMDTCs .

9. Clear the continuous DTCs and carry out the self-test diagnostics for the Driver Seat Module (DSM), Driver Door Module (DDM), DCSM , FCIM and HVAC module.

10. If the DTCs retrieved are related to the concern, go to Driver Seat Module (DSM) DTC Chart, Dual Climate Controlled Seat Module (DCSM) DTC Chart, HVAC Module DTC Chart or Driver Door Module (DDM) DTC Chart. For all other DTCs, refer to Section 419-10 .

11. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

B2730	Back Over-Temp Detected (Driver)	GO to Pinpoint Test AS .
U2050	No Application Present	INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test.

HVAC Module DTC Chart

NOTE: This module utilizes a 5-character DTC followed by a 2-character failure type code. The failure type code provides information about specific fault conditions such as opens or shorts to ground. Continuous Memory Diagnostic Trouble Codes (CMDTCs) have an additional 2-character DTC status code suffix to assist in determining DTC history.

NOTE: Some PCM DTCs may inhibit A/C operation. If any PCM DTCs are retrieved, diagnose those first. Refer to the PCM DTC Chart.

DTC	Description	Action to Take
B1030:12	Left Front Seat Heater: Circuit Short To Battery	GO to Pinpoint Test R .

Pinpoint Tests

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

Refer to Inspection and Verification, Driver Seat Module (DSM) DTC Chart, Driver Door Module (DDM) DTC Chart, Dual Climate Controlled Seat Module (DCSM) DTC Chart, HVAC Module DTC Chart and the Symptom Chart for direction to the appropriate pinpoint test.

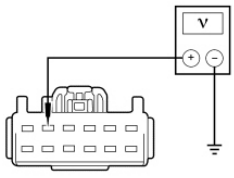
Pinpoint Test A: The Power Seat is Inoperative - Driver, Without Memory

Refer to Wiring Diagrams Cell 120 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Seats for schematic and connector information.

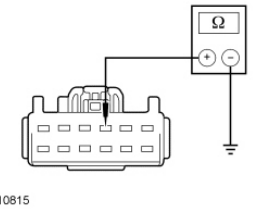
Normal Operation

The driver seat control switch is supplied voltage and ground. When the driver seat control switch is activated, voltage and ground is supplied to the applicable seat track motor to move the seat to the desired position. There are 3 seat track motors that combine to move the seat cushion horizontally (forward/rearward) and vertically (front up/down and rear up/down). If a new motor on the seat track needs to be installed, it is necessary to install an entire seat track assembly. There is an additional motor in the seat recliner mechanism to move the seat backrest forward and rearward.

This pinpoint test is intended to diagnose the following:



- Fuse
- Wiring, terminals or connectors
- Seat control switch



PINPOINT TEST A: THE POWER SEAT IS INOPERATIVE - DRIVER, WITHOUT MEMORY

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
A1 CHECK FOR VOLTAGE TO THE SEAT CONTROL SWITCH	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Driver Seat Control Switch C360. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the voltage between driver seat control switch C360-5, circuit SBB32 (VT/RD), harness side and ground.  N0010816 • **Is the voltage greater than 10 volts?**	**Yes** GO to A2 . **No** VERIFY Battery Junction Box (BJB) fuse 32 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
A2 CHECK FOR GROUND TO THE SEAT CONTROL SWITCH	
• Measure the resistance between driver seat control switch C360-3, circuit GD126 (BK/WH), harness side and ground.	**Yes** INSTALL a new driver seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

 • **Is the resistance less than 5 ohms?**	**No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test B: DTCs B106E and B106F

Refer to Wiring Diagrams Cell 120 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Seats for schematic and connector information.

Normal Operation

The Driver Seat Module (DSM) controls the output of several vehicle systems by means of solid state drivers. When an overload occurs on any of these drivers, a DTC is set. The module also tracks the number of repetitive faults on each of these circuits. The module compares this number of overloads to 3 progressive thresholds established for each circuit. If the 3 thresholds have not been exceeded, then the DTC of the affected circuit can be cleared by eliminating the fault, then clearing the DTCs and running the self-test. At the point that each of the first 2 thresholds are exceeded, B106E is set along with the DTC relating to the affected circuit. Once the final threshold has been exceeded, the affected output is permanently disabled, and B106F is set along with B1342, at which time the DSM must be replaced.

- DTC B106E (Solid State Driver Disabled Due To Short Circuit) - sets when the DSM has disabled a circuit due to a repetitive fault causing a circuit overload. A corresponding DTC for the circuit in question is also set.
- DTC B106F (Module Disabled Due to External Fault) - sets when one or more output functions are permanently disabled due to a repetitive circuit overload fault. DTC B106F is set with DTC B1342. When DTC B106F is present, a new DSM must be installed after the fault condition has been corrected.

This pinpoint test is intended to diagnose the following:

- Output circuit short to ground or voltage
- DSM

PINPOINT TEST B: DTCs B106E, B106F

NOTICE: **If DTC B106F is present, the fault condition mbe corrected prior to installing a new DSM . Failure to correct the fault condition first may cause damage to the new DSM , resulting in a repeat repair.**

Test Step	Result / Action to Take
B1 REVIEW THE DTCs	
• Review the DTCs from the DSM self-test.	**Yes** CORRECT the cause of any other DTCs present. When the other DTCs are corrected, INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section. TEST the system for normal

• **Are DTCs B106F and B1342 present?**	operation. **No** GO to B2 .
B2 REPAIR OTHER DTCs	
• Repair the cause of any DTCs present, other than DTC B106E. Refer to DTC Charts in this section. • Clear the DTCs. • Carry out the DSM self-test. • **Is DTC B106E still present?**	**Yes** The fault causing the output state to be disabled is still present. REPAIR the cause of the concern. CLEAR the DTCs. REPEAT the self-test. **No** The system is operating correctly at this time. The concern was caused by a fault in one of the output circuits.

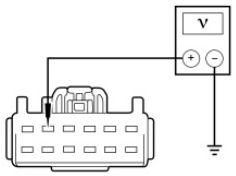
Pinpoint Test C: The Power Seat is Inoperative - MKZ, Passenger

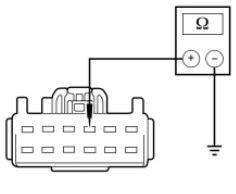
Refer to Wiring Diagrams Cell 120 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Seats for schematic and connector information.

Normal Operation

The passengeseat control switch is supplied voltage and ground. When the passenger seat control switch is activated, voltage and ground is supplied to the applicable seat track motor to move the seat to the desired position. There are 3 seat track motors that combine to move the seat cushion horizontally (forward/rearward) and vertically (front up/down and rear up/down). If a new motor on the seat track needs to be installed, it is necessary to install an entire seat track assembly. There is an additional motor in the seat recliner mechanism to move the seat backrest forward and rearward.

This pinpoint test is intended to diagnose the following:
- Fuse
- Wiring, terminals or connectors
- Seat control switch





PINPOINT TEST C: THE POWER SEAT IS INOPERATIVE - MKZ, PASSENGER

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
C1 CHECK FOR VOLTAGE TO THE SEAT CONTROL SWITCH	

• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: Passenger Seat Control Switch C3190. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the voltage between passenger seat control switch C3190-5, circuit SBB31 (WH/RD), harness side and ground.  N0010819 • **Is the voltage greater than 10 volts?**	**Yes** GO to C2 . **No** VERIFY Battery Junction Box (BJB) fuse 31 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
C2 CHECK FOR GROUND TO THE SEAT CONTROL SWITCH	
• Measure the resistance between passenger seat control switch C3190-3, circuit GD126 (BK/WH), harness side and ground.  N0010825 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new passenger seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test D: The Power Seat is Inoperative - Fusion, Passenger

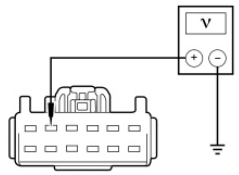
Refer to Wiring Diagrams Cell 120 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Seats for schematic and connector information.

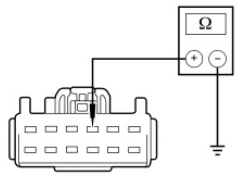
Normal Operation

The passenger seat control switch is supplied voltage and ground. When the passenger seat control switch is activated, voltage and ground is supplied to the seat track motor to move the seat to the desired position. The seat track motor moves the seat cushion horizontally (forward/rearward). If a new motor on the seat track needs to be installed, it is necessary to install an entire seat track assembly. There is an additional motor in the seat recliner mechanism to move the seat backrest forward and rearward.

This pinpoint test is intended to dgnose the following:

- Fuse
- Wiring, terminals or connectors
- Seat control switch





PINPOINT TEST D: THE POWER SEAT IS INOPERATIVE - FUSION, PASSENGER

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
D1 CHECK FOR VOLTAGE AT THE SEAT CONTROL SWITCH	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: Passenger Seat Control Switch C330. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the voltage between passenger seat control switch C330-5, circuit SBB31 (WH/RD), harness side and ground.	**Yes** GO to D2 . **No** VERIFY Battery Junction Box (BJB) fuse 31 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

 N0010819 • **Is the voltage greater than 10 volts?**	
D2 CHECK FOR GROUND TO THE SEAT CONTROL SWITCH	
• Measure the resistance between passenger seat control switch C330-3, circuit GD139 (BK/YE), harness side and ground.  N0010825 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new passenger seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test E: The Power Seat Moves But is Loose

Normal Operation

Power seat movement should be smooth and the seat cushion should not rock during or after operation.

This pinpoint test is intended to diagnose the following:
- Loose fastening hardware
- Seat track

PINPOINT TEST E: THE POWER SEAT MOVES BUT IS LOOSE

Test Step	Result / Action to Take
E1 CHECK THE FASTENING HARDWARE	
• Inspect for loose mounting hardware on the seat. • **Are the seat fasteners tight?**	**Yes** IDENTIFY the cause and REPAIR as necessary. TEST the system for normal operation. **No** TIGHTEN all fastening hardware to specification. TEST

	the system for normal operation.

Pinpoint Test F: The Power Seat Moves But is Noisy

Normal Operation

The power seat should move quietly during operation. Some noise is acceptable.

This pinpoint test is intended to diagnose the following:

- Seat track
- Seat track component
- Object obstructing seat movement

PINPOINT TEST F: THE POWER SEAT MOVES BUT IS NOISY

Test Step	Result / Action to Take
F1 CHECK THE TRACK ALIGNMENT	
• Check the alignment of the track to the floor and the track to the seat. • **Is the seat track aligned correctly?**	**Yes** IDENTIFY the cause and REPAIR as necessary. TEST the system for normal operation. **No** ALIGN the track to the seat and the floor. TEST the system for normal operation.

Pinpoint Test G: The Power Seat Does Not Make Full Travel

Normal Operation

The power seat should travel fully horizontal (forward/rearward) and vertical (front up/down and rear up/down).

This pinpoint test is intended to diagnose the following:

- Obstruction
- Seat track

PINPOINT TEST G: THE POWER SEAT DOES NOT MAKE FULL TRAVEL

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take

G1 CHECK FOR AN OBSTRUCTION IN THE SEAT TRACK	
• Ignition OFF. • Remove the seat. Refer to Seat - Front in this section. • Check the seat track for any obstructions. • **Is the seat track clear of obstructions?**	**Yes** IDENTIFY the cause and REPAIR as necessary. REPOWER the SRS . REFER to Section 501-20B . TEST the system for normal operation. **No** REMOVE the obstruction(s). INSTALL the seat. REPOWER the SRS . REFER to Section 501-20B . TEST the system for normal operation.

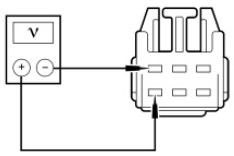
Pinpoint Test H: The Power Seat Does Not Move Horizontally/Vertically/Recline - Driver

Refer to Wiring Diagrams Cell 120 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Seats for schematic and connector information.

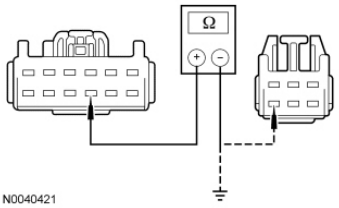
Normal Operation

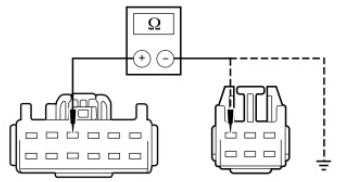
The driver seat control switch is supplied voltage and ground. When the driver seat control switch is activated, voltage and ground is supplied to the applicable seat track motor to move the seat to the desired position. There are 3 seat track motors that combine to move the seat cushion horizontally (forward/rearward) and vertically (front up/down and rear up/down). If a new motor on the seat track needs to be installed, it is necessary to install an entire seat track assembly. There is an additional motor in the seat recliner mechanism to move the seat backrest forward and rearward.

This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- Seat control switch
- Seat track
- Seat recliner motor

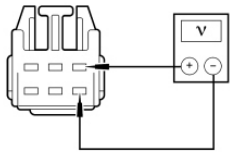


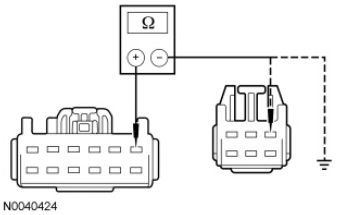
PINPOINT TEST H: THE POWER SEAT DOES NOT MOVE HORIZONTALLY/VERTICALLY/RECLINE - DRIVER



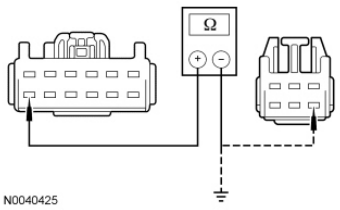


NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

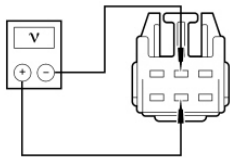


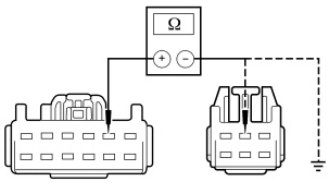


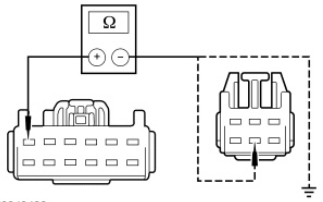
NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.



NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.







Test Step	Result / Action to Take
H1 CHECK THE HORIZONTAL MOTOR FOR CORRECT OPERATION	
• Operate the driver power seat forward and rearward. • **Does the seat move horizontally?**	**Yes** GO to H2 . **No**

	GO to H3 .
H2 CHECK THE RECLINER MOTOR FOR CORRECT OPERATION	
• Recline the driver backrest forward and rearward. • **Does the seat backrest recline forward and rearward?**	**Yes** GO to H6 . **No** GO to H13 .
H3 CHECK VOLTAGE TO THE DRIVER SEAT HORIZONTAL MOTOR	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Driver Seat Motor C357. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the seat control switch is activated. • Measure the voltage between driver seat motor C357-6, circuit CPS23 (GN/VT), harness side and C357-3, circuit CPS22 (BN), harness side, while operating the seat control switch horizontal adjust forward and rearward.  N0040420 • **Is the voltage greater than 10 volts when the seat control switch is operated and 0 volt in the rest position?**	**Yes** INSTALL a new driver seat track assembly. REFER to Seat Track in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to H4 .
H4 CHECK HORIZONTAL MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Disconnect: Driver Seat Control Switch C360. • Measure the resistance between: ♦ driver seat control switch C360-9, circuit CPS23 (GN/VT), harness side and driver seat motor C357-6, circuit CPS23 (GN/VT), harness side. ♦ driver seat control switch C360-9, circuit CPS23 (GN/VT), harness side and ground.	**Yes** GO to H5 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side

 N0040421 • **Is the resistance less than 5 ohms between the driver seat motor and the driver seat control switch; and greater than 10,000 ohms between the driver seat control switch and ground?**	air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
H5 CHECK HORIZONTAL MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Measure the resistance between: ♦ driver seat control switch C360-4, circuit CPS22 (BN), harness side and driver seat motor C357-3, circuit CPS23 (GN/VT), harness side. ♦ driver seat control switch C360-4, circuit CPS22 (BN), harness side and ground.  N0040422 • **Is the resistance less than 5 ohms between the driver seat motor and the driver seat control switch; and greater than 10,000 ohms between the driver seat control switch and ground?**	**Yes** INSTALL a new driver seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
H6 DETERMINE THE SEAT HEIGHT ADJUST FAILURE	
• Operate the front and rear seat height adjustments. • **Does the seat front and rear height adjust up and down?**	**Yes** If only front height adjust operates, GO to H7 . If only rear height adjust operates, GO to H10 . **No** INSTALL a new driver seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section

	501-20B .
H7 CHECK VOLTAGE TO THE DRIVER SEAT REAR HEIGHT MOTOR	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Driver Seat Motor C357. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the seat control switch is activated. • Measure the voltage between driver seat motor C357-1, circuit CPS27 (BU/BN), harness side and C357-4, circuit CPS26 (YE/BU), harness side, while operating the seat control switch rear height adjust up and down.  N0040423 • **Is the voltage greater than 10 volts when the seat control switch is operated and 0 volt in the rest position?**	**Yes** INSTALL a new driver seat track assembly. REFER to Seat Track in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to H8 .
H8 CHECK REAR HEIGHT MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Disconnect: Driver Seat Control Switch C360. • Measure the resistance between: ♦ driver seat control switch C360-1, circuit CPS27 (BU/BN), harness side and driver seat motor C357-1, circuit CPS27 (BU/BN), harness side. ♦ driver seat control switch C360-1, circuit CPS27 (BU/BN), harness side and ground.  N0040424	**Yes** GO to H9 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

• **Is the resistance less than 5 ohms between the driver seat motor and the driver seat control switch; and greater than 10,000 ohms between the driver seat control switch and ground?**	
H9 CHECK REAR HEIGHT MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Measure the resistance between: ♦ driver seat control switch C360-12, circuit CPS26 (YE/BU), harness side and driver seat motor C357-4, circuit CPS26 (YE/BU), harness side. ♦ driver seat control switch C360-12, circuit CPS26 (YE/BU), harness side and ground.  • **Is the resistance less than 5 ohms between the driver seat motor and the driver seat control switch; and greater than 10,000 ohms between the driver seat control switch and ground?**	**Yes** INSTALL a new driver seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
H10 CHECK VOLTAGE TO THE DRIVER SEAT FRONT HEIGHT MOTOR	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Driver Seat Motor C357 . • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the seat control switch is activated. • Measure the voltage between driver seat motor C357-2, circuit CPS25 (WH/VT), harness side and C357-5, circuit CPS24 (GY), harness side, while operating the seat control switch front height adjust up and down.	**Yes** INSTALL a new driver seat track assembly. REFER to Seat Track in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to H11 .

 N0040426 • **Is the voltage greater than 10 volts when the seat control switch is operated and 0 volt in the rest position?**	
H11 CHECK FRONT HEIGHT MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Disconnect: Driver Seat Control Switch C360. • Measure the resistance between: ♦ driver seat control switch C360-2, circuit CPS25 (WH/VT), harness side and driver seat motor C357-2, circuit CPS25 (WH/VT), harness side. ♦ driver seat control switch C360-2, circuit CPS25 (WH/VT), harness side and ground.  N0040427 • **Is the resistance less than 5 ohms between the driver seat motor and the driver seat control switch; and greater than 10,000 ohms between the driver seat control switch and ground?**	**Yes** GO to H12 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
H12 CHECK FRONT HEIGHT MOTOR CIRCUIT FOR AN OPEN AND A SHORT TO GROUND	
• Measure the resistance between: ♦ driver seat control switch C360-6, circuit CPS24 (GY) harness side, and driver seat motor C357-5, circuit CPS24 (GY), harness side. ♦ driver seat control switch C360-6, circuit CPS24 (GY), harness side and ground.  N0040428 • **Is the resistance less than 5 ohms between the driver seat motor and the driver seat control switch; and greater than 10,000 ohms between the driver seat control switch and ground?**	**Yes** INSTALL a new driver seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section

	501-20B .
H13 CHECK VOLTAGE TO THE DRIVER SEAT RECLINER MOTOR	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Driver Seat Recliner Motor C3187. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the seat control switch is activated. • Measure the voltage between driver seat recliner motor C3187-1, circuit CPS29 (WH/BN), harness side and C3187-5, circuit CPS30 (VT/BN), harness side, while operating the seat control switch recline adjust forward and rearward.  N0040429 • **Is the voltage greater than 10 volts when the seat control switch is operated and 0 volt in the rest position?**	**Yes** INSTALL a new driver seat recliner motor. REFER to Seat Recliner Motor in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to H14 .
H14 CHECK RECLINER MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Disconnect: Driver Seat Control Switch C360. • Measure the resistance between: ♦ driver seat control switch C360-11, circuit CPS29 (WH/BN), harness side and driver seat recliner motor C3187-1, circuit CPS29 (WH/BN), harness side. ♦ driver seat control switch C360-11, circuit CPS29 (WH/BN), harness side and ground.	**Yes** GO to H15 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

 N0040430 • **Is the resistance less than 5 ohms between the driver seat recliner motor and the driver seat control switch; and greater than 10,000 ohms between the driver seat control switch and ground?**	
H15 CHECK RECLINER MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Measure the resistance between: ♦ driver seat control switch C360-8, circuit CPS30 (VT/BN) harness side, and driver seat recliner motor C3187-5, circuit CPS30 (VT/BN), harness side. ♦ driver seat control switch C360-8, circuit CPS30 (VT/BN), harness side and ground.  N0040431 • **Is the resistance less than 5 ohms between the driver seat recliner motor and the driver seat control switch; and greater than 10,000 ohms between the seat control switch and ground?**	**Yes** INSTALL a new driver seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test J: The Power Seat Does Not Move Horizontally/Vertically/Recline - MKZ, Passenger

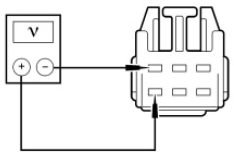
Refer to Wiring Diagrams Cell 120 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Seats for schematic and connector information.

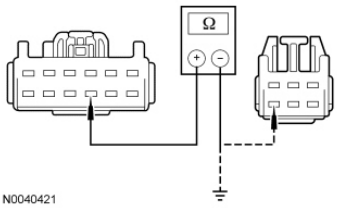
Normal Operation

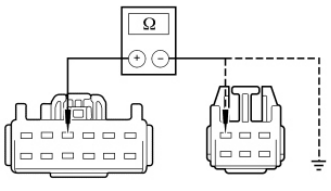
The passenger seat control switch is supplied voltage and ground. When the passenger seat control switch is activated, voltage and ground is supplied to the applicable seat track motor to move the seat to the desired position. There are 3 seat track motors that combine to move the seat cushion horizontally (forward/rearward) and vertically (front up/down and rear up/down). If a new motor on the seat track needs to be installed, it is necessary to install an entire seat track assembly. There is an additional motor in the seat recliner mechanism to move the seat backrest forward and rearward.

This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- Seat control switch
- Seat track

- Seat recliner motor

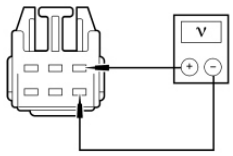


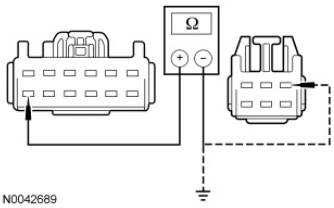


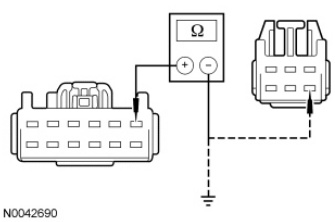


PINPOINT TEST J: THE POWER SEAT DOES NOT MOVE HORIZONTALLY/VERTICALLY/RECLINE - MKZ, PASSENGER

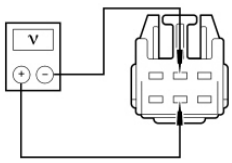
NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .



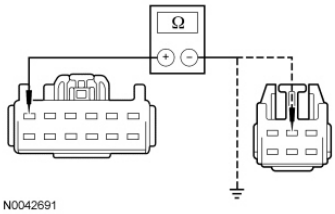


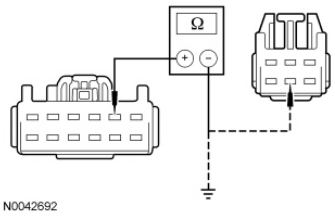


NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.



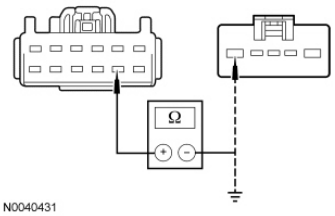
NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.





Test Step	Result / Action to Take
J1 CHECK THE HORIZONTAL MOTOR FOR CORRECT OPERATION	
• Operate the passenger power seat forward and rearward. • **Does the seat move horizontally?**	**Yes** GO to J2 . **No** GO to J3 .
J2 CHECK THE RECLINER MOTOR FOR CORRECT OPERATION	
• Recline the passenger backrest forward and rearward. • **Does the seat backrest recline forward and rearward?**	**Yes** GO to J6 . **No** GO to J13 .
J3 CHECK VOLTAGE TO THE PASSENGER SEAT HORIZONTAL MOTOR	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: Passenger Seat Motor C3015. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the seat control switch is activated. • Measure the voltage between passenger seat motor C3015-6, circuit CPS38 (GN/BU), harness side and C3015-3, circuit CPS33 (WH), harness side, while operating the seat control switch horizontal adjust forward and rearward.	**Yes** INSTALL a new passenger seat track assembly. REFER to Seat Track in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to J4 .

 N0040420 • **Is the voltage greater than 10 volts when the seat control switch is operated and 0 volt in the rest position?**	
J4 CHECK HORIZONTAL MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Disconnect: Passenger Seat Control Switch C3190. • Measure the resistance between: ♦ passenger seat control switch C3190-9, circuit CPS38 (GN/BU), harness side and passenger seat motor C3015-6, circuit CPS38 (GN/BU), harness side. ♦ passenger seat control switch C3190-9, circuit CPS38 (GN/BU), harness side and ground.  N0040421 • **Is the resistance less than 5 ohms between the passenger seat motor and the passenger seat control switch; and greater than 10,000 ohms between the passenger seat control switch and ground?**	**Yes** GO to J5 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
J5 CHECK HORIZONTAL MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Measure the resistance between: ♦ passenger seat control switch C3190-4, circuit CPS33 (WH), harness side and passenger seat motor C3015-3, circuit CPS33 (WH), harness side. ♦ passenger seat control switch C3190-4, circuit CPS33 (WH), harness side and ground.  N0040422 • **Is the resistance less than 5 ohms between the passenger seat motor and the passenger seat control switch; and greater than 10,000 ohms between the passenger seat control switch and**	**Yes** INSTALL a new passenger seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal



ground?	operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
J6 DETERMINE THE SEAT HEIGHT ADJUST FAILURE	
• Operate the front and rear seat height adjustments. • **Does the seat front and rear height adjust up and down?**	**Yes** If only front height adjust operates, GO to J7 . If only rear height adjust operates, GO to J10 . **No** INSTALL a new passenger seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
J7 CHECK VOLTAGE TO THE PASSENGER SEAT REAR HEIGHT MOTOR	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: Passenger Seat Motor C3015. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the seat control switch is activated. • Measure the voltage between passenger seat motor C3015-1, circuit CPS37 (WH/BU), harness side and C3015-4, circuit CPS36 (YE/GY), harness side, while operating the seat control switch rear height adjust up and down.	**Yes** INSTALL a new passenger seat track assembly. REFER to Seat Track in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to J8 .

 N0040423 • **Is the voltage greater than 10 volts when the seat control switch is operated and 0 volt in the rest position?**	
J8 CHECK REAR HEIGHT MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Disconnect: Passenger Seat Control Switch C3190. • Measure the resistance between: ♦ passenger seat control switch C3190-12, circuit CPS37 (WH/BU), harness side and passenger seat motor C3015-1, circuit CPS37 (WH/BU), harness side. ♦ passenger seat control switch C3190-12, circuit CPS37 (WH/BU), harness side and ground.  N0042689 • **Is the resistance less than 5 ohms between the passenger seat motor and the passenger seat control switch; and greater than 10,000 ohms between the passenger seat control switch and ground?**	**Yes** GO to J9 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
J9 CHECK REAR HEIGHT MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Measure the resistance between: ♦ passenger seat control switch C3190-1, circuit CPS36 (YE/GY), harness side and passenger seat motor C3015-4, circuit CPS36 (YE/GY), harness side. ♦ passenger seat control switch C3190-4, circuit CPS36 (YE/GY), harness side and ground.  N0042690 • **Is the resistance less than 5 ohms between the passenger seat motor and the passenger seat control switch; and greater than 10,000 ohms between the passenger seat control switch and**	**Yes** INSTALL a new passenger seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal

ground?	operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
J10 CHECK VOLTAGE TO THE PASSENGER SEAT FRONT HEIGHT MOTOR	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: Passenger Seat Motor C3015. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the seat control switch is activated. • Measure the voltage between passenger seat motor C3015-2, circuit CPS35 (VT/GN), harness side and C3015-5, circuit CPS34 (GY/BU), while operating the seat control switch front height adjust up and down.  N0040426 • **Is the voltage greater than 10 volts when the seat control switch is operated and 0 volt in the rest position?**	**Yes** INSTALL a new passenger seat track assembly. REFER to Seat Track in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to J11 .
J11 CHECK FRONT HEIGHT MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Disconnect: Passenger Seat Control Switch C3190. • Measure the resistance between: ♦ passenger seat control switch C3190-6, circuit CPS35 (VT/GN), harness side and passenger seat motor C3015-2, circuit CPS35 (VT/GN), harness side. ♦ passenger seat control switch C3190-6, circuit CPS35 (VT/GN), harness side and ground.	**Yes** GO to J12 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT

 N0042691 • **Is the resistance less than 5 ohms between the passenger seat motor and the passenger seat control switch; and greater than 10,000 ohms between the passenger seat control switch and ground?**	passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
J12 CHECK FRONT HEIGHT MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Measure the resistance between: ♦ passenger seat control switch C3190-2, circuit CPS34 (GY/BU) harness side, and passenger seat motor C3015-5, circuit CPS34 (GY/BU), harness side. ♦ passenger seat control switch C3190-2, circuit CPS34 (GY/BU), harness side and ground.  N0042692 • **Is the resistance less than 5 ohms between the passenger seat motor and the passenger seat control switch; and greater than 10,000 ohms between the passenger seat control switch and ground?**	**Yes** INSTALL a new passenger seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
J13 CHECK VOLTAGE TO THE PASSENGER SEAT RECLINER MOTOR	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: Passenger Seat Recliner Motor C3189. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 .	**Yes** INSTALL a new passenger seat recliner motor. REFER to Seat Recliner Motor in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to

• **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the seat control switch is activated. • Measure the voltage between passenger seat recliner motor C3189-1, circuit CPS39 (GY/YE), harness side and C3189-5, circuit CPS40 (VT/GY), harness side, while operating the seat control switch recline adjust forward and rearward.  N0040429 • **Is the voltage greater than 10 volts when the seat control switch is operated and 0 volt in the rest position?**	Section 501-20B . **No** GO to J14 .
J14 CHECK RECLINER MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Disconnect: Passenger Seat Control Switch C3190. • Measure the resistance between: ♦ passenger seat control switch C3190-11, circuit CPS39 (GY/YE), harness side and passenger seat recliner motor C3189-1, circuit CPS39 (GY/YE), harness side. ♦ passenger seat control switch C3190-11, circuit CPS39 (GY/YE), harness side and ground.  N0040430 • **Is the resistance less than 5 ohms between the passenger seat recliner motor and the passenger seat control switch; and greater than 10,000 ohms between the passenger seat control switch and ground?**	**Yes** GO to J15 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
J15 CHECK RECLINER MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Measure the resistance between: ♦ passenger seat control switch C3190-8, circuit CPS40 (VT/GY) harness side, and passenger seat recliner motor C3189-5, circuit CPS40 (VT/GY), harness side. ♦ passenger seat control switch C3190-8, circuit CPS40 (VT/GY), harness side and ground.	**Yes** INSTALL a new passenger seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT

 • **Is the resistance less than 5 ohms between the passenger seat recliner motor and the passenger seat control switch; and greater than 10,000 ohms between the seat control switch and ground?**	passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

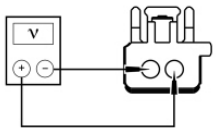
Pinpoint Test K: The Power Seat Does Not Move Horizontally/Recline - Fusion, Passenger

Refer to Wiring Diagrams Cell 120 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Seats for schematic and connector information.

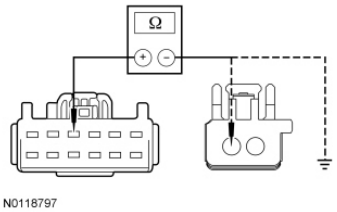
Normal Operation

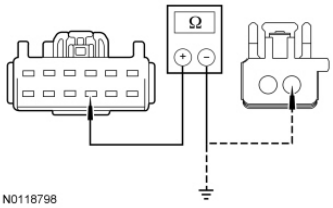
The passenger seat control switch is supplied voltage and ground. When the passenger seat control switch is activated, voltage and ground is supplied to the seat track motor to move the seat to the desired position. The seat track motor moves the seat cushion horizontally (forward/rearward). If a new motor on the seat track needs to be installed, it is necessary to install an entire seat track assembly. There is an additional motor in the seat recliner mechanism to move the seat backrest forward and rearward.

This pinpoint test is intended to diagnose the following:
- Wing, terminals or connectors
- Seat control switch
- Seat track

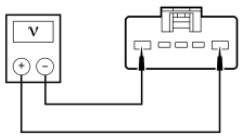


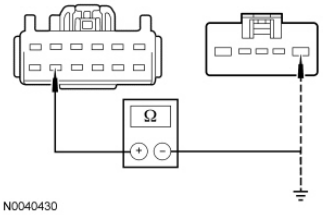
PINPOINT TEST K: THE POWER SEAT DOES NOT MOVE HORIZONTALLY/RECLINE - FUSION, PASSENGER



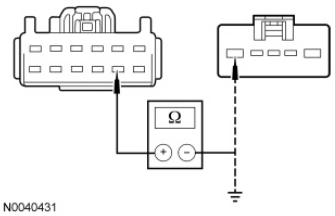


NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .





NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.



NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
K1 CHECK THE HORIZONTAL MOTOR FOR CORRECT OPERATION	
• Operate the passenger power seat forward and rearward. • **Does the seat move horizontally?**	**Yes** GO to K5 .

	No GO to K2 .
K2 CHECK VOLTAGE TO THE PASSENGER SEAT HORIZONTAL MOTOR	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: Passenger Seat Horizontal Motor C332. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the seat control switch is activated. • Measure the voltage between passenger seat motor C332-1, circuit CPS38 (GN/BU), harness side and C332-2, circuit CPS33 (WH), harness side, while operating the seat control switch horizontal adjust forward and rearward.  N0118796 • **Is the voltage greater than 10 volts when the seat control switch is toggled in both directions and 0 volt in the rest position?**	**Yes** INSTALL a new passenger seat track assembly. REFER to Seat Track in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to K3 .
K3 CHECK THE HORIZONTAL MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Disconnect: Passenger Seat Control Switch C330. • Measure the resistance between: ♦ passenger seat control switch C330-4, circuit CPS33 (WH), harness side and passenger seat horizontal motor C332-2, circuit CPS33 (WH), harness side. ♦ passenger seat control switch C330-4, circuit CPS33 (WH), harness side and ground.	**Yes** GO to K4 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

 N0118797 • **Is the resistance less than 5 ohms between the passenger seat horizontal motor and the passenger seat control switch; and greater than 10,000 ohms between the passenger seat control switch and ground?**	
K4 CHECK THE HORIZONTAL MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Measure the resistance between: ♦ passenger seat control switch C330-9, circuit CPS38 (GN/BU), harness side and passenger seat horizontal motor C332-1, circuit CPS38 (GN/BU), harness side. ♦ passenger seat control switch C330-9, circuit CPS38 (GN/BU), harness side and ground.  N0118798 • **Is the resistance less than 5 ohms between the passenger seat horizontal motor and the passenger seat control switch; and greater than 10,000 ohms between the passenger seat control switch and ground?**	**Yes** INSTALL a new passenger seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
K5 CHECK VOLTAGE TO THE PASSENGER SEAT RECLINER MOTOR	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: Passenger Seat Recliner Motor C3189. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 .	**Yes** INSTALL a new passenger seat recliner motor. REFER to Seat Recliner Motor in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to

• **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the seat control switch is activated. • Measure the voltage between passenger seat recliner motor C3189-1, circuit CPS39 (GY/YE), harness side and C3189-5, circuit CPS40 (VT/GY), harness side, while operating the seat control switch recline adjust forward and rearward.  N0040429 • **Is the voltage greater than 10 volts when the seat control switch is operated and 0 volt in the rest position?**	Section 501-20B . **No** GO to K6 .
K6 CHECK RECLINER MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Disconnect: Passenger Seat Control Switch C330. • Measure the resistance between: ♦ passenger seat control switch C330-11, circuit CPS39 (GY/YE), harness side and passenger seat recliner motor C3189-1, circuit CPS39 (GY/YE), harness side. ♦ passenger seat control switch C330-11, circuit CPS39 (GY/YE), harness side and ground.  N0040430 • **Is the resistance less than 5 ohms between the passenger seat recliner motor and the passenger seat control switch; and greater than 10,000 ohms between the passenger seat control switch and ground?**	**Yes** GO to K7 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
K7 CHECK RECLINER MOTOR CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Measure the resistance between: ♦ passenger seat control switch C330-8, circuit CPS40 (VT/GY) harness side, and passenger seat recliner motor C3189-5, circuit CPS40 (VT/GY), harness side. ♦ passenger seat control switch C330-8, circuit CPS40 (VT/GY), harness side and ground.	**Yes** INSTALL a new passenger seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT

 • **Is the resistance less than 5 ohms between the passenger seat recliner motor and the passenger seat control switch; and greater than 10,000 ohms between the seat control switch and ground?**	passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test L: The Memory Seat is Inoperative/Does Not Operate Correctly - Does Not Operate Horizontally/Vertically/Recline

Refer to Wiring Diagrams Cell 123 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Memory Seats for schematic and connector information.

Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Component Testing for component testing.

Normal Operation

When activated, the seat control switch supplies voltage and ground to the applicable Driver Seat Module (DSM) inputs. The DSM then supplies voltage and ground to the appropriate seat track motor or seat recliner motor to move the seat in the desired direction. There are 3 seat track motors that combine to move the seat horizontally (forward/backward) and vertically (front up/down and rear up/down). The seat recliner mechanism uses a single motor to pivot the seat backrest forward and backward.

Each motor in the memory power seat track and power recliner contains a Hall-effect position sensor. The DSM supplies a signal supply circuit to each position sensor and a shared reference signal return circuit. Each position sensor sends a signal voltage back to the DSM used to monitor the position of the power seat and seat backrest. The DSM uses this information to return the seat to a stored pre-programmed position when pressing the memory SET switch or a Remote Keyless Entry (RKE) transmitter. Refer to Principles of Operation in this section or the Owner's Literature for information on programming the DSM for storing memory seat positions.

The following pinpoint test diagnoses a memory seat that does not operate in one or more directions when using the seat control switch. If the memory seat moves in all directions using the seat control switch, GO to Pinpoint Test M .

DTC Description	Fault Trigger Conditions
• B1342 - ECU is Faulted	If a programming error is detected, the DTC is set.

• B1663 - Seat Driver Front Up/Down Motor Stalled • B1664 - Seat Driver Rear Up/Down Motor Stalled • B1665 - Seat Driver Forward/Backward Motor Stalled	During self-test, the DSM attempts to operate the appropriate seat track motor and uses the motor's position sensor to monitor movement. If no motor movement is sensed, the DTC is set. The DSM will retry motor operation on the next activation of the seat control switch. If no movement continues to be monitored after 250 milliseconds, the DSM disables the output.
• B1666 - Seat Driver Recline Motor Stalled	During self-test, the DSM attempts to operate the recliner motor and uses the recliner motor position sensor to monitor movement. If no motor movement is sensed, the DTC is set. The DSM will retry motor operation on the next activation of the seat control switch. If no motor movement is still monitored after 250 millisthe DSM disables the output.
• B1703 - Seat Driver Recline Forward Switch Circuit Short to Battery • B1707 - Seat Driver Recline Rearward Switch Circuit Short to Battery	If voltage is sensed on the switch input circuit during the DSM Self Test, the DTC is set. If voltage is sensed on the input circuit for greater than 2 minutes, the DTC is set as continuous. With the DTC set, any input signal on the circuit is ignored.
• B1711 - Seat Driver Front Up Switch Circuit Short to Battery • B1715 - Seat Driver Front Down Switch Circuit Short to Battery	If voltage is sensed on the switch input circuit during the DSM Self Test, the DTC is set. If voltage is sensed on the input circuit for greater than 2 minutes, the DTC is set as continuous. With the DTC set, any input signal on the circuit is ignored.
• B1719 - Seat Driver Forward Switch Circuit Short to Battery • B1723 - Seat Driver Rearward Switch Circuit Short to Battery	If voltage is sensed on the switch input circuit during the DSM Self Test, the DTC is set. If voltage is sensed on the input circuit for greater than 2 minutes, the DTC is nuous. With the DTC set, any input signal on the circuit is ignored.
• B1727 - Seat Driver Rear Up Switch Circuit Short to Battery • B1731 - Seat Driver Rear Down Switch Circuit Short to Battery	If voltage is sensed on the switch input circuit during the DSM Self Test, the DTC is set. If voltage is sensed on the input circuit for greater than 2 minutes, the DTC is set as continuous. With the DTC set, any input signal on the circuit is ignored.

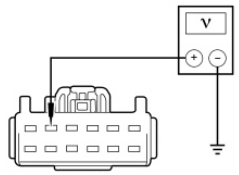
This pinpoint test is intended to diagnose the following:

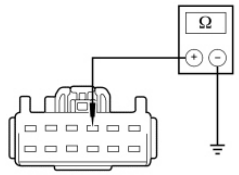
- Fuse
- Wiring, terminals or connectors
- Seat control switch
- Seat track
- Seat recliner motor
- DSM

PINPOINT TEST L: THE MEMORY SEAT IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - DOES NOT OPERATE HORIZONTALLY/VERTICALLY/RECLINE

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

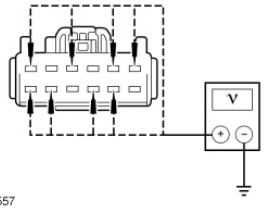
NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.





NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: Verify good battery condition before diagnosing the memory seat system. Poor battery condition may interfere with memory seat operation, even if vehicle starting is possible.



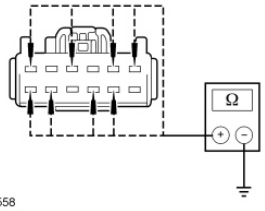
Test Step	Result / Action to Take
L1 CHECK THE TCM TRANSMISSION RANGE (TR) PID	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger - TCM - PID: TR. • Operate the transmission gear selector in all positions while monitoring the TCM PID TR states. • **Do the PID states agree with the selected positions?**	**Yes** GO to L2 . **No** To diagna transmission gear selector (PRNDL) status concern, REFER to Section 307-01A , Section 307-01B or Section 307-01C .
L2 CHECK THE DSM IGNITION SWITCH STATUS (IGN_SW) PID	
• Enter the following diagnostic mode on the scan tool: DataLogger - DSM - PID: IGN_SW. • Cycle the ignition in all positions while monitoring the DSM PID states. • **Do the PID states agree with the selected positions?**	**Yes** GO to L3 . **No** To diagnose an ignition status concern, REFER to Section 211-05 .
L3 RETRIEVE THE DSM DTCs	
• Operate the memory seat and memory exterior mirrors in all	**Yes** If DTCs B1663, B1664, B1665 and B1666 are all retrieved, GO to L12 .

directions through the full range of travel. • Place the memory seat and memory exterior mirrors in central travel positions. • Enter the following diagnostic mode on the scan tool: Self Test - DSM . • **Are any DTCs retrieved?**	If DTC B1663, GO to L22 . If DTC B1664, GO to L25 . If DTC B1665, GO to L28 . If DTC B1666, GO to L31 . If DTC B1703, GO to L5 . If DTC B1707, GO to L5 . If DTC B1711, GO to L5 . If DTC B1715, GO to L5 . If DTC B1719, GO to L5 . If DTC B1723, GO to L5 . If DTC B1727, GO to L5 . If DTC B1731, GO to L5 . If DTC B1342, INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section. REPEAT the self-test. CLEAR the DTCs. For any other DSM DTCs, REFER to the Driver Seat Module (DSM) DTC Chart. **No** GO to L4 .
L4 CHECK THE DSM SEAT CONTROL SWITCH PIDs	
• Enter the following diagnostic mode on the scan tool: DataLogger - DSM - PIDs. ♦ Driver Power Seat Front Up/Down Switch (SFNT_SW) ♦ Driver Power Seat Forward/Backward Switch (SFWD_SW) ♦ Driver Power Seat Rear Up/Down Switch (SREARSW) ♦ Driver Power Seat Recline Switch Status (SRCL_SW) • Operate the seat control switch in all positions and monitor the	**Yes** GO to L11 . **No** VERIFY Smart Junction Box (SJB) fuse 12 (7.5A) is OK. If SJB fuse 12 (7.5A) fails while operating the seat control switch, DISCONNECT the seat control switch C3297 and GO to L9 . If SJB fuse 12 (7.5A) is OK, GO to L5 .

DSM seat control switch PIDs. • **Do the PID states agree with the switch positions?**	
L5 CHECK THE SEAT CONTROL SWITCH	
• Remove the seat control switch. Refer to Seat Control Switch in this section. • Check the seat control switch. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Component Testing for component testing. • **Is the seat control switch OK?**	**Yes** GO to L6 . **No** INSTALL a new seat control switch. REFER to Seat Control Switch in this section. REPEAT the self-test. CLEAR the DTCs.
L6 CHECK FOR VOLTAGE TO THE SEAT CONTROL SWITCH	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the voltage between seat control switch C3297-5, circuit SBP12 (GN/RD), harness side and ground.	**Yes** GO to L7 . **No** VERIFY SJB fuse 12 (7.5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. REPEAT the self-test. CLEAR the DTCs. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

 N0010816 • **Is the voltage greater than 10 volts?**	
L7 CHECK FOR GROUND TO THE SEAT CONTROL SWITCH	
• Measure the resistance between seat control switch C3297-3, circuit GD126 (BK/WH), harness side and ground.  N0010815 • **Is the resistance less than 5 ohms?**	**Yes** GO to L8 . **No** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
L8 CHECK CIRCUITS BETWEEN THE SEAT CONTROL SWITCH AND DSM FOR A SHORT TO VOLTAGE	
• Disconnect: DSM C3299B. • Ignition ON. • Measure the voltage between seat control switch C3297, harness side and ground using the following chart: **Connector** / **Circuit** C3297-9 — CPS06 (GN/WH) C3297-4 — CPS01 (GN/BU) C3297-2 — CPS03 (VT/GY) C3297-6 — CPS02 (GY/YE) C3297-11 — CPS07 (GY/BN) C3297-8 — CPS08 (VT/OG) C3297-12 — CPS04 (YE/OG)	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to L9 .

C3297-1	CPS05 (BU/WH)



- **Is voltage present on any circuits?**

L9 CHECK CIRCUITS BETWEEN THE SEAT CONTROL SWITCH AND DSM FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: DSM C3299B. • Disconnect: Driver Seat Control Switch C3297. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the resistance between seat control switch C3297 pins, harness side and ground using the following chart:	**Yes** GO to L10 . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

Connector	Circuit
C3297-9	CPS06 (GN/WH)

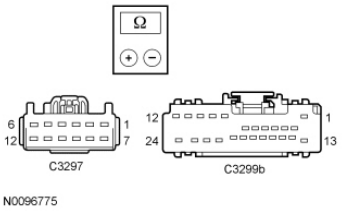
C3297-4	CPS01 (GN/BU)
C3297-2	CPS03 (VT/GY)
C3297-6	CPS02 (GY/YE)
C3297-11	CPS07 (GY/BN)
C3297-8	CPS08 (VT/OG)
C3297-12	CPS04 (YE/OG)
C3297-1	CPS05 (BU/WH)

- **Are the resistances greater than 10,000 ohms?**

L10 CHECK CIRCUITS BETWEEN THE SEAT CONTROL SWITCH AND DSM FOR AN OPEN

- Measure the resistance between seat control switch C3297, harness side and DSM C3299B pins, harness side using the following chart:

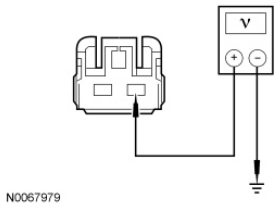
Seat Control Switch Connector	Circuit	DSM Connector
C3297-9	CPS06 (GN/WH)	C3299B-15
C3297-4	CPS01 (GN/BU)	C3299B-16
C3297-2	CPS03 (VT/GY)	C3299B-18
C3297-6	CPS02 (GY/YE)	C3299B-6
C3297-11	CPS07 (GY/BN)	C3299B-19
C3297-8	CPS08 (VT/OG)	C3299B-7
C3297-12	CPS04 (YE/OG)	C3299B-5



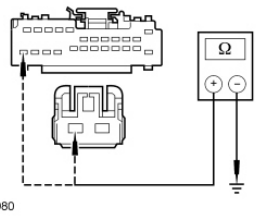
Yes
INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section. REPEAT the self-test. CLEAR the DTCs.

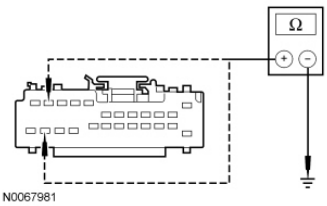
DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

No
REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs.

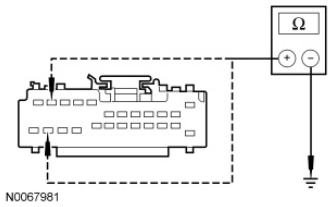


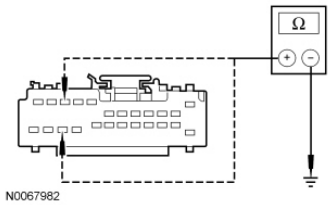
DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

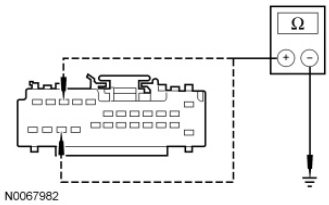


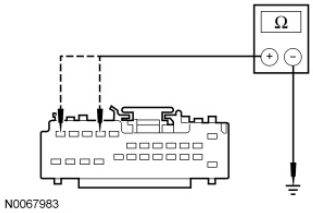


C3297-1	CPS05 (BU/WH)	C3299b-17	

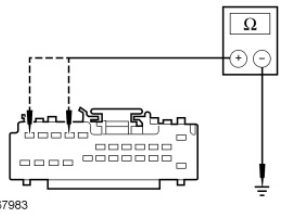


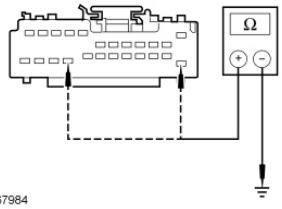




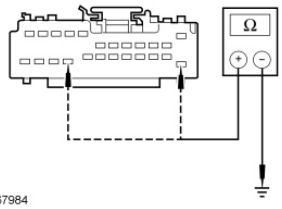


- **Are the resistances less than 5 ohms?**





L11 CHECK SEAT TRACK OPERATION USING DSM SEAT TRACK MOTOR PIDs	
• Enter the following diagnostic mode on the scan tool: DataLogger - DSM - PIDs. ♦ Front Motor Up (FRONT_UP) ♦ Front Motor Down (FRONT_DWN) ♦ Rear Motor Up (REAR_UP) ♦ Rear Motor Down (REAR_DWN) ♦ Horizontal Motor Forward (HORZ_FWD) ♦ Horizontal Motor Backward (HORZ_BWD) ♦ Recline Motor Backward (RECL_BWD) ♦ Recline Motor Forward (RECL_FWD) • Toggle the DSM active commands ON and OFF while monitoring the seat movement. • **Does the driver seat operate correctly?**	**Yes** The condition may be intermittent. CHECK for causes of an intermittent concern, particularly the pins and terminals of electrical connectors that were disconnected. **Do not install any new components at this time. Components should only be installed when directed to do so in the pinpoint test.** REPAIR any intermittent wiring, terminal or connector concerns found. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** If no seat movement, GO to L12 . If no front vertical seat movement, GO to L22 . If no rear vertical seat movement, GO to L25 . If no horizontal seat movement, GO to L28 . If no recline seat movement, GO to L31 .
L12 CHECK FOR VOLTAGE TO THE DSM	



• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: DSM C3299A . • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the voltage between DSM C3299A-1, circuit SBB32 (VT/RD), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to L13 . **No** VERIFY Battery Junction Box (BJB) fuse 32 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
L13 CHECK FOR GROUND TO THE DSM	
• Disconnect: DSM C3299B. • Measure the resistance between: ♦ DSM C3299A-2, circuit GD126 (BK/WH), harness side and ground. ♦ DSM C3299B-24, circuit GD126 (BK/WH), harness side and ground.	**Yes** GO to L14 . **No** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

 N0067980 • **Is the resistance less than 5 ohms?**	
L14 CHECK THE FRONT HEIGHT MOTOR CIRCUITS FOR A SHORT TO GROUND	
• Disconnect: DSM C3299B. • Measure the resistance between: ♦ DSM C3299B-23, circuit CPS25 (WH/VT), harness side and ground. ♦ DSM C3299B-11, circuit CPS24 (GY), harness side and ground.  N0067981 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to L16 . **No** GO to L15 .
L15 CHECK THE FRONT HEIGHT MOTOR CIRCUITS FOR A SHORT TO GROUND	
• Disconnect: Power Seat Motor C357. • Measure the resistance between: ♦ DSM C3299B-23, circuit CPS25 (WH/VT), harness side and ground. ♦ DSM C3299B-11, circuit CPS24 (GY), harness side and ground.	**Yes** INSTALL a new driver seat track assembly. REFER to Seat Track in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to

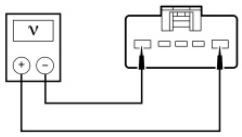
	Section 501-20B .
 N0067981 • **Are the resistances greater than 10,000 ohms?**	
L16 CHECK THE REAR HEIGHT MOTOR CIRCUITS FOR A SHORT TO GROUND	
• Measure the resistance between: ♦ DSM C3299B-22, circuit CPS27 (BU/BN), harness side and ground. ♦ DSM C3299B-10, circuit CPS26 (YE/BU), harness side and ground.  N0067982 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to L18 . **No** GO to L17 .
L17 CHECK THE REAR HEIGHT MOTOR CIRCUITS FOR A SHORT TO GROUND	
• Disconnect: Power Seat Motor C357. • Measure the resistance between: ♦ DSM C3299B-22, circuit CPS27 (BU/BN), harness side and ground. ♦ DSM C3299B-10, circuit CPS26 (YE/BU), harness side and ground.	**Yes** INSTALL a new driver seat track assembly. REFER to Seat Track in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

 N0067982 • **Are the resistances greater than 10,000 ohms?**	
L18 CHECK THE HORIZONTAL MOTOR CIRCUITS FOR A SHORT TO GROUND	
• Measure the resistance between: ♦ DSM C3299B-9, circuit CPS23 (GN/VT), harness side and ground. ♦ DSM C3299B-12, circuit CPS22 (BN), harness side and ground.  N0067983 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to L20 . **No** GO to L19 .
L19 CHECK THE HORIZONTAL MOTOR CIRCUITS FOR A SHORT TO GROUND	
• Disconnect: Power Seat Motor C357. • Measure the resistance between: ♦ DSM C3299B-9, circuit CPS23 (GN/VT), harness side and ground. ♦ DSM C3299B-12, circuit CPS22 (BN), harness side and ground.	**Yes** INSTALL a new driver seat track assembly. REFER to Seat Track in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

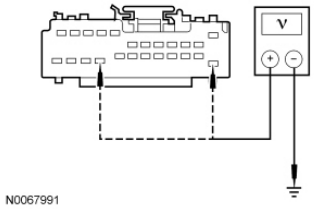
 N0067983 • **Are the resistances greater than 10,000 ohms?**	
L20 CHECK THE RECLINER MOTOR CIRCUITS FOR A SHORT TO GROUND	
• Measure the resistance between: ♦ DSM C3299B-13, circuit CPS29 (WH/BN), harness side and ground. ♦ DSM C3299B-21, circuit CPS30 (VT/BN), harness side and ground.  N0067984 • **Are the resistances greater than 10,000 ohms?**	**Yes** INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to L21 .
L21 CHECK THE RECLINER MOTOR CIRCUITS FOR A SHORT TO GROUND	
• Disconnect: Driver Power Seat Recliner Motor C3187. • Measure the resistance between: ♦ DSM C3299B-13, circuit CPS29 (WH/BN), harness side and ground. ♦ DSM C3299B-21, circuit CPS30 (VT/BN), harness side and ground.	**Yes** INSTALL a new driver seat recliner motor. REFER to Seat Recliner Motor in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

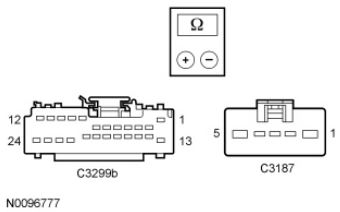
 • **Are the resistances greater than 10,000 ohms?**	
L22 CHECK FOR VOLTAGE AT THE FRONT HEIGHT MOTOR USING DSM SEAT TRACK MOTOR PIDs	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Power Seat Motor C357. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger - DSM - PIDs. ♦ Front Motor Up (FRONT_UP) ♦ Front Motor Down (FRONT_DWN) • Measure the voltage between power seat motor C357-2, circuit CPS25 (WH/VT) and C357-5, circuit CPS24 (GY), harness side while toggling DSM active commands FRONT_UP and FRONT_DWN, ON and OFF.	**Yes** INSTALL a new driver seat track assembly. REFER to Seat Track in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to L23 .

 N0040325 • **Is the voltage greater than 10 volts when command ON in both directions and 0 volt when commanded OFF?**	
L23 CHECK THE FRONT HEIGHT MOTOR CIRCUITS FOR A SHORT TO VOLTAGE	
• Disconnect: DSM C3299B. • Ignition ON. • Measure the voltage between: ♦ DSM C3299B-23, circuit CPS25 (WH/VT), harness side and ground. ♦ DSM C3299B-11, circuit CPS24 (GY), harness side and ground.  N0067985 • **Is voltage present on either circuit?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to L24 .
L24 CHECK THE FRONT HEIGHT MOTOR CIRCUITS FOR AN OPEN	
• Measure the resistance between: ♦ DSM C3299B-23, circuit CPS25 (WH/VT), harness side and power seat motor C357-2, circuit CPS25 (WH/VT), harness side. ♦ DSM C3299B-11, circuit CPS24 (GY),	**Yes** INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs.



harness side and power seat motor C357-5, circuit CPS24 (GY), harness side.  • **Are the resistances less than 5 ohms?**	DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
L25 CHECK VOLTAGE AT THE REAR HEIGHT MOTOR USING DSM SEAT TRACK MOTOR PIDs	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Power Seat Motor C357. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger - DSM - PIDs. ♦ Rear Motor Up (REAR_UP) ♦ Rear Motor Down (REAR_DWN) • Measure the voltage between power seat motor C357-1, circuit CPS27 (BU/BN),	**Yes** INSTALL a new driver seat track assembly. REFER to Seat Track in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to L26 .





harness side and C357-4, circuit CPS26 (YE/BU), harness side while toggling DSM active commands REAR_UP and REAR_DWN, ON and OFF.  N0040327 • **Is the voltage greater than 10 volts when command ON in both directions and 0 volt when commanded OFF?**	
L26 CHECK THE REAR HEIGHT MOTOR CIRCUITS FOR A SHORT TO VOLTAGE	
• Disconnect: DSM C3299B. • Ignition ON. • Measure the voltage between: ♦ DSM C3299B-22, circuit CPS27 (BU/BN), harness side and ground. ♦ DSM C3299B-10, circuit CPS26 (YE/BU), harness side and ground.  N0067987 • **Is voltage present on either circuit?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to L27 .
L27 CHECK THE REAR HEIGHT MOTOR CIRCUITS FOR AN OPEN	

• Ignition OFF. • Measure the resistance between: ♦ DSM C3299B-22, circuit CPS27 (BU/BN), harness side and power seat motor C357-1, circuit CPS27 (BU/BN), harness side. ♦ DSM C3299B-10, circuit CPS26 (YE/BU), harness side and rear height power seat motor C357-4, circuit CPS26 (YE/BU), harness side.  • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
L28 CHECK VOLTAGE AT THE HORIZONTAL MOTOR USING DSM SEAT TRACK MOTOR PIDs	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Power Seat Motor C357. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01	**Yes** INSTALL a new driver seat track assembly. REFER to Seat Track in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to L29 .

. • Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger - DSM - PIDs. ♦ Horizontal Motor Forward (HORZ_FWD) ♦ Horizontal Motor Backward (HORZ_BWD) • Measure the voltage between power seat motor C357-3, circuit CPS22 (BN) and C357-6, circuit CPS23 (GN/VT), harness side while toggling DSM active commands HORZ_FWD and HORZ_BWD, ON and OFF.  N0040329 • **Is the voltage greater than 10 volts when command ON in both directions and 0 volt when commanded OFF?**	
L29 CHECK THE HORZONTAL MOTOR CIRCUITS FOR A SHORT TO VOLTAGE	
• Disconnect: DSM C3299B. • Ignition ON. • Measure the voltage between: ♦ DSM C3299B-9, circuit CPS23 (GN/VT), harness side and ground. ♦ DSM C3299B-12, circuit CPS22 (BN), harness side and ground.	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to L30 .

 N0067989 • **Is voltage present on either circuit?**	
L30 CHECK THE HORIZONTAL MOTOR CIRCUITS FOR AN OPEN	
• Ignition OFF. • Measure the resistance between: ♦ DSM C3299B-9, circuit CPS23 (GN/VT), harness side and power seat motor C357-6, circuit CPS23 (GN/VT), harness side. ♦ DSM C3299B-12, circuit CPS22 (BN), harness side and horizontal power seat motor C357-3, circuit CPS22 (BN), harness side.  N0096776 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
L31 CHECK VOLTAGE AT THE RECLINER MOTOR USING DSM RECLINER MOTOR PIDs	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327.	**Yes** INSTALL a new driver seat recliner motor. REFER to ref="SCS~us~en~file=SCS1A014.HTM~gen~ref.HTM" >Seat Recliner Motor in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No**

• Disconnect: Driver Seat Power Recliner Motor C3187. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger - DSM - PIDs . ♦ Recline Motor Forward (RECL_FWD) ♦ Recline Motor Backward (RECL_BWD) • Measure the voltage between driver seat power recliner motor C3187-1, circuit CPS29 (WH/BN) and C3187-5, circuit CPS30 (VT/BN), harness side while toggling the DSM commands ON and OFF.  N0040377 • **Is the voltage greater than 10 volts when commanded ON in both directions and 0 volt when commanded OFF?**	GO to L32 .
L32 CHECK RECLINER MOTOR CIRCUITS FOR A SHORT TO VOLTAGE	

• Disconnect: DSM C3299B. • Ignition ON. • Measure the voltage between: ♦ DSM C3299B-13, circuit CPS29 (WH/BN), harness side and ground. ♦ DSM C3299B-21, circuit CPS30 (VT/BN), harness side and ground.  N0067991 • **Is voltage present on either circuit?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to L33 .
L33 CHECK THE RECLINER MOTOR CIRCUITS FOR AN OPEN	
• Ignition OFF. • Measure the resistance between: ♦ DSM C3299B-13, circuit CPS29 (WH/BN), harness side and recliner power seat motor C3187-1, circuit CPS29 (WH/BN), harness side. ♦ DSM C3229B-21, circuit CPS30 (VT/BN), harness side and recliner power seat motor C3187-5, circuit CPS30 (VT/BN), harness side.  N0096777 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test M: The Memory Seat Does Not Operate Correctly - Does Not Operate Using the Memory SET Switch

Refer to Wiring Diagrams Cell 123 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Memory Seats for schematic and connector information. /p>

Normal Operation

Each motor in the memory seat track and recliner mechanism contains a Hall-effect position sensor. The Driver Seat Module (DSM) supplies a shared signal return feed circuit to each sensor. Each position sensor sends a signal pulse back to the DSM on the sensor feed circuit to monitor the position of the power seat and seat backrest. The DSM stores the sensor position data when a SET command is received and uses this information to return the seat to the stored position when a recall command is received.

When the memory SET switch button 1 or 2 is pressed, a ground signal is supplied to the Driver Door Module (DDM). The DDM communicates a memory SET command to the DSM on the Medium Speed Controller Area Network (MS-CAN). The DSM then supplies voltage and ground to the power seat track motors and power recliner motor to move the seat to the stored position. For information on programming memory positions or recalling a stored memory position, refer to Memory Position Programming in this section.

The following pinpoint test diagnoses a memory seat that does not operate correctly using the memory SET switch. If the memory seat does not move in all directions using the seat control switch, GO to Pinpoint Test L .

DTC Description	Fault Trigger Conditions
• B1342 - ECU is Faulted	If a programming error is detected, the DTC is set.
• B1534 - Memory 1 Switch Circuit Short to Ground • B1538 - Memory 2 Switch Circuit Short to Ground	If a short to ground is sensed on the switch input circuit during the DDM Self Test, the DTC is set. If activity is sensed on the input circuit for greater than 2 minutes, the DTC is set as continuous. With the DTC set, any input signal on the circuit is ignored.
• B1663 - Seat Driver Front Up/Down Motor Stalled • B1664 - Seat Driver Rear Up/Down Motor Stalled • B1665 - Seat Driver Forward/Backward Motor Stalled	During self-test the DSM attempts to operate the appropriate seat track motor and uses the motor's position sensor to monitor movement. If no motor movement is sensed, the DTC is set. The DSM will retry motor operation on the next activation of the seat control switch. If no movement continues to be monitored after 250 milliseconds, the DSM disables the output.
• B1666 - Seat Driver Recline Motor Stalled	During self-test the DSM attempts to operate the recliner motor and uses the recliner motor position sensor to monitor movement. If no motor movement is sensed, the DTC is set. The DSM will retry motor operation on the next activation of the seat control switch. If no motor movement is still monitored after 250 milliseconds, the DSM disables the output.

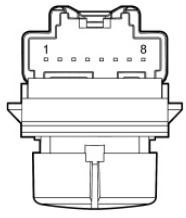
• B1952 - Seat Rear Up/Down Position Feedback Circuit Short to Battery • B1956 - Seat Front Up/Down Position Feedback Circuit Short to Battery • B1960 - Seat Recline Forward/Backward Position Feedback Circuit Short to Battery • B1964 - Seat Horizontal Forard Position Feedback Circuit Short to Battery	If a short to voltage or an open condition is present on the affected motor's position sensor (Hall effect) feedback circuit, the DTC is set. After a DTC is set, a memory recall is not possible but the seat control switch can operate the associated motor in 1-second increments.
• B1953 - Seat Rear Up/Down Position Feedback Circuit Short to Ground • B1957 - Seat Front Up/Down Position Feedback Circuit Short to Ground • B1961 - Seat Recline Forward/Backward Position Feedback Circuit Short to Ground • B1965 - Seat Horizontal Forward/Rearward Position Feedback Circuit Short to Ground	If a short to ground condition is present on the affected motor's position sensor (Hall effect) feedback circuit, the DTC is set. After a DTC is set, a memory recall is not possible but the seat control switch can operate the associated motor in 1-second increments.

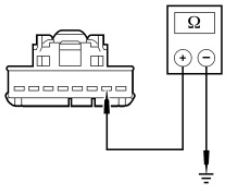
This pinpoint test is intended to diagnose the following:

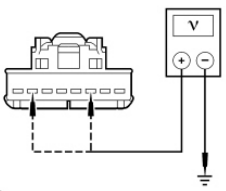
- Wiring, terminals or connectors
- Memory SET switch
- Missing status information - MS-CAN communication bus messages:
  - ♦ ignition switch status
  - ♦ gear selector position
- Memory power seat track
- Seat recliner motor
- DDM
- DSM

PINPOINT TEST M: THE MEMORY SEAT DOES NOCORRECTLY - DOES NOT OPERATE USING THE MEMORY SET SWITCH

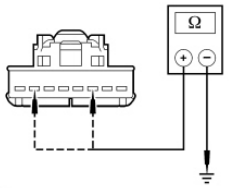
NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

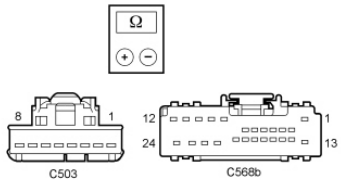




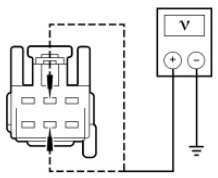


NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

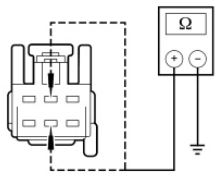


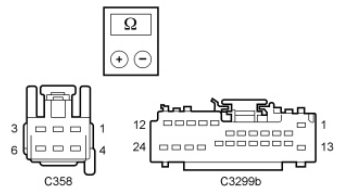


NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.



NOTE: Verify good battery condition before diagnosing the memory seat system. Poor battery condition may interfere with memory seat operation, even if vehicle starting is possible.

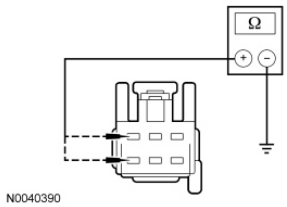


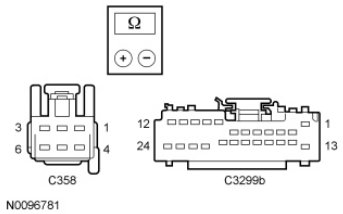


Test Step	Result / Action to Take
M1 CHECK TCM TRANSMISSION RANGE (TR) PID	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger - TCM - PIDs: TR. • Operate the transmission gear selector in all positions while monitoring the TCM PID TR states. • **Do the PID states agree with the selected positions?**	**Yes** GO to M2 . **No** To diagnose a transmission gear selector (PRNDL) status concern, REFER to Section 307-01A , Section 307-01B or Section 307-01C .
M2 CHECK DSM IGNITION SWITCH STATUS (IGN_SW) PID	
• Enter the following diagnostic mode on the scan tool: DataLogger - DSM - PID: IGN_SW. • Cycle the ignition in all positions while monitoring the DSM PID states. • **Do the PID states agree with the selected positions?**	**Yes** GO to M3 . **No** To diagnose an ignition status concern, REFER to Section 211-05 .
M3 RETRIEVE THE DTCs	
• Operate the memory seat and memory exterior mirrors in all directions through the full range of travel. • Place the memory seat and memory exterior mirrors in central travel positions. • Enter the following diagnostic mode on the scan tool: Self Test - DSM . • Enter the following diagnostic mode on the scan tool: Self Test - DDM . • **Are any DTCs retrieved during the DDM Self Tests?**	**Yes** If one or both of the following DDM DTCs are retrieved; B1534 or B1538, GO to M5 . If DTCs B1952, B1956, B1960 and B1964 are all retrieved, GO to M10 . If DTCs B1953, B1957, B1961 and B1965 are all retrieved, GO to M10 . If DTC B1663, GO to M11 . If DTC B1664, GO to M14 . If DTC B1665, GO to M17 . If DTC B1666, GO to M20 . If DTC B1952, GO to M14 . If DTC B1953, GO to M15 .

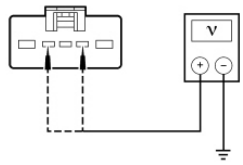
	If DTC B1956, GO to M11 . If DTC B1957, GO to M12 . If DTC B1960, GO to M20 . If DTC B1961, GO to M21 . If DTC B1964, GO to M17 . If DTC B1965, GO to M18 . If DTC B1342, INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section. REPEAT the self-test. CLEAR the DTCs. **No** GO to M4 .
M4 CHECK THE DSM MEMORY SET SWITCH PID STATES	
• Enter the following diagnostic mode on the scan tool: DataLogger - DSM - PIDs. ♦ Memory 1 recall switch status ♦ Memory 2 recall switch status • While activating the memory switch recall 1 and recall 2 buttons, monitor the DDM memory SET switch PID states. • **Do the PID states agree with the switch button positions?**	**Yes** GO to M10 . **No** GO to M5 .
M5 CHECK THE MEMORY SET SWITCH	
• Ignition OFF. • Disconnect: Memory SET Switch C503. • Measure the resistance between memory SET switch pins, component side, while pressing the indicated buttons using the following chart and illustration: **Switch Button** / **Pins** / **Ohms** Memory Switch 1 / 7 and 2 / Less than 20 Memory Switch 2 / 3 and 2 / Less than 20	**Yes** GO to M6 . **No** INSTALL a new memory SET switch. REFER to Memory Set Switch in this section. REPEAT the self-test. CLEAR the DTCs.

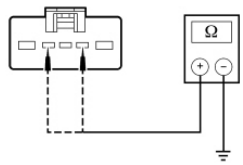
 N0054920 • **Is the memory SET switch OK?**	
M6 CHECK MEMORY SET GROUND CIRCUIT FOR AN OPEN	
• Measure the resistance between memory SET switch C503-2, circuit GD126 (BK/WH), harness side and ground.  N0091010 • **Is the resistance less than 5 ohms?**	**Yes** GO to M7 . **No** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs.
M7 CHECK MEMORY SET CIRCUITS FOR A SHORT TO VOLTAGE	
• Disconnect: DDM C568B. • Ignition ON. • Measure the voltage between memory SET switch C503, harness side and ground using the following chart: **Connector** / **Circuit** C503-7 — CPS15 (VT/WH) C503-3 — CPS16 (YE)  N0091011 • **Is voltage present on any circuits?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. **No** GO to M8 .
M8 CHECK MEMORY SET CIRCUITS FOR A SHORT TO GROUND	

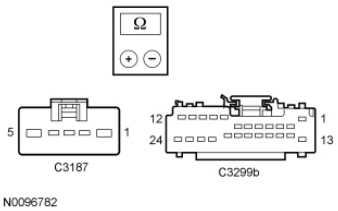




• Ignition OFF. • Measure the resistance between memory SET switch C503, harness side and ground using the following chart: **Connector** / **Circuit** C503-7 — CPS15 (VT/WH) C503-3 — CPS16 (YE)  N0091012 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to M9 . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs.
M9 CHECK MEMORY SET CIRCUITS FOR AN OPEN	
• Measure the resistance between memory SET switch C503 pins and DDM C568B pins using the following chart: **Memory SET switch connector** / **Circuit** / **DDM connector** C503-7 — CPS15 (VT/WH) — C568B-16 C503-3 — CPS16 (YE) — C568B-17  N0096778 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new DDM . REFER to Section 501-14 . REPEAT the self-test. CLEAR the DTCs. **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs.
M10 CHECK DSM SENSOR PIDs	
• Enter the following diagnostic mode on the scan tool: DataLogger - DSM - PIDs. ♦ Driver Power Seat Front Up/Down Sense (SFNT_MT) ♦ Driver Power Seat Forward/Backward Sense (SFWD_MT)	**Yes** INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section. REPEAT the self-test. CLEAR the DTCs. **No**







♦ Driver Power Seat Rear Up/Down Sense (SREARMT) ♦ Driver Power Seat Recline Sense (SRCL_MT) • **NOTE:** If the DSM detects a fault while carrying out this step, the associated motor may operate in one-second intervals. • Using the switch, operate the memory seat in all directions through the full range of travel while monitoring the DSM PIDs. • **Does each PID indicate the sensor is operational throughout each motor's full range of travel?**	If the PID indicates driver seat front vertical position sensor is not present, GO to M11 . If the PID indicates driver seat rear vertical position sensor is not present, GO to M14 . If the PID indicates driver seat horizontal position sensor is not present, GO to M17 . If the PID indicates driver seat recline position sensor is not present, GO to M20 .
M11 CHECK THE FRONT HEIGHT SENSOR CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: DSM C3299B . • Disconnect: Memory Seat Position Sensor C358. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between: ♦ memory seat position sensor C358-2, circuit VPS10 (BU/GN), harness side and ground. ♦ memory seat position sensor 358-5, circuit RPS13 (GN/OG), harness side and ground.  N0040383 • **Is voltage present on either circuit?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to M12 .
M12 CHECK THE FRONT HEIGHT SENSOR CIRCUITS FOR A SHORT TO GROUND	

• Ignition OFF. • Measure the resistance between: ♦ memory seat position sensor C358-2, circuit VPS10 (BU/GN), harness side and ground. ♦ memory seat position sensor 358-5, circuit RPS13 (GN/OG), harness side and ground.  N0040384 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to M13 . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
M13 CHECK THE FRONT HEIGHT SENSOR CIRCUITS FOR AN OPEN	
• Measure the resistance between: ♦ memory seat position sensor C358-2, circuit VPS10 (BU/GN), harness side and DSM C3299B-4, circuit VPS10 (BU/GN), harness side. ♦ memory seat position sensor 358-5, circuit RPS13 (GN/OG), harness side and DSM C3299B-8, circuit RPS13 (GN/OG), harness side.  N0096781 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new driver seat track assembly. REFER to Seat Track in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
M14 CHECK THE REAR HEIGHT SENSOR CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: DSM C3299B. • Disconnect: Memory Seat Position Sensor C358. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to M15 .

• Connect the battery ground cable. Refer to Section 414-01 . • Measure the voltage between: ♦ memory seat position sensor C358-1, circuit VPS11 (GN/BN), harness side and ground. ♦ driver seat position sensor C358-4, circuit RPS13 (GN/OG), harness side and ground.  N0040386 • **Is voltage present on either circuit?**	
M15 CHECK THE REAR HEIGHT SENSOR CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between: ♦ memory seat position sensor C358-1, circuit VPS11 (GN/BN), harness side and ground. ♦ memory seat position sensor C358-4, circuit RPS13 (GN/OG), harness side and ground.  N0040387 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to M16 . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
M16 CHECK THE REAR HEIGHT SENSOR CIRCUITS FOR AN OPEN	
• Measure the resistance between: ♦ memory position sensor C358-1, circuit VPS11 (GN/BN), harness side and DSM C3299B-3, circuit VPS11 (GN/BN), harness side. ♦ memory seat position sensor C358-4, circuit RPS13 (GN/OG), harness side and DSM C3299B-8, circuit RPS13 (GN/OG), harness side.  N0096781 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new driver seat track assembly. REFER to Seat Track in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit(s) in question. REPEAT the self-test. CLEAR the DTCs.

	DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
M17 CHECK THE HORIZONTAL SENSOR CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: DSM C3299B. • Disconnect: Memory Seat Position Sensor C358 . • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between: ♦ memory seat position sensor C358-3, circuit VPS09 (BN/BU), harness side and ground. ♦ memory seat position sensor C358-6, circuit RPS13 (GN/OG), harness side and ground.  N0040389 • **Is voltage present on either circuit?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to M18 .
M18 CHECK THE HORIZONTAL SENSOR CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between: ♦ memory seat position sensor C358-3, circuit VPS09 (BN/BU), harness side and ground. ♦ memory seat position sensor C358-6, circuit RPS13 (GN/OG), harness side and ground.	**Yes** GO to M19 . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

 N0040390 • **Are the resistances greater than 10,000 ohms?**	
M19 CHECK THE HORIZONTAL SENSOR CIRCUITS FOR AN OPEN	
• Measure the resistance between: ♦ memory seat position sensor C358-3, circuit VPS09 (BN/BU), harness side and DSM C3299B-14, circuit VPS09 (BN/BU), harness side. ♦ memory seat position sensor C358-6, circuit RPS13 (GN/OG), harness side and DSM C3299B-8, circuit RPS13 (GN/OG), harness side.  C358 C3299b N0096781 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new driver seat track assembly. REFER to Seat Track in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
M20 CHECK THE RECLINER SENSOR CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: DSM C3299B. • Disconnect: Driver Seat Recliner Motor C3187. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the voltage between: ♦ driver seat recliner motor C3187-2, circuit RPS13 (GN/OG), harness side and ground. ♦ driver seat recliner motor C3187-4, circuit VPS12 (GY/OG), harness side and ground.	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to M21 .

 N0040392 • **Is voltage present on either circuit?**	
M21 CHECK THE RECLINER SENSOR CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between: ♦ driver seat recliner motor C3187-2, circuit RPS13 (GN/OG), harness side and ground. ♦ driver seat recliner motor C3187-4, circuit VPS12 (GY/OG), harness side and ground.  N0040393 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to M22 . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
M22 CHECK THE RECLINER SENSOR CIRCUITS FOR AN OPEN	
• Measure the resistance between: ♦ driver seat recliner motor C3187-2, circuit RPS13 (GN/OG), harness side and DSM C3299B-8, circuit RPS13 (GN/OG), harness side. ♦ driver seat recliner motor C3187-4, circuit VPS12 (GY/OG), harness side and DSM C3299B-20, circuit VPS12 (GY/OG), harness side.  N0096782 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new driver seat recliner motor. REFER to Seat Recliner Motor in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test N: Easy Exit/Easy Entry is Inoperative/Does Not Operate Correctly

Normal Operation

The Driver Seat Module (DSM) receives a key out command over the Medium Speed Controller Area Network (MS-CAN) and powers the driver seat rearward about 50.8 mm (2 in).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Key-in-ignition warning switch
- Instrument Panel Cluster (IPC) module
- DSM

PINPOINT TEST N: EASY EXIT/EASY ENTRY IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

NOTE: The Smart Junction Box (SJB) may also be identified as the Generic Electronic Module (GEM).

Test Step	Result / Action to Take
N1 CHECK POWER SEAT OPERATION	
• Ignition ON. • Check the message center to verify the easy entry/easy exit feature is enabled. ♦ The easy entry/easy exit feature can be enabled/disabled using a scan tool in module programming. When enabled, the feature becomes a user accessible item on the message center allowing the user to turn the feature on and off. Refer to the Owner's Literature or Section 413-01 for information on the message center. • Operate the seat fully forward and rearward with the switch to verify the power seat track is OK. • **Does the power seat operate forward and rearward correctly?**	**Yes** GO to N2 . **No** REFER to the Symptom Chart for diagnosis of inoperative driver power seat horizontal movement.
N2 CHECK EASY EXIT OPERATION	
• Position the driver seat at least 50.8 mm (2 in) from the rear stop point. • Ignition OFF. • Remove the key from the ignition. • **Does the seat move rearward approximately 50.8 mm (2 in)?**	**Yes** GO to N5 . **No** GO to N3 .
N3 CHECK THE GEM / SJB IGNITION SWITCH POSITION (IGN_SW) PID STATES	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger - GEM - PID: IGN_SW. • Monitor the GEM PID states with the ignition key in and with the key removed. • **Do the PID states agree with the key positions?**	**Yes** GO to N4 . **No** To diagnose the key-in-ignition warning switch fault, REFER to Section 413-01 .
N4 CHECK DSM DTCs	

• Enter the following diagnostic mode on the scan tool: Self Test - DSM . • **Are any DSM DTCs present?**	**Yes** REFER to the Driver Seat Module (DSM) DTC Chart for DSM DTC diagnosis. **No** INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section. REPEAT the self-test. CLEAR the DTCs.
N5 CHECK THE EASY ENTRY OPERATION	
• Insert the ignition key. • **Does the driver power seat move forward approximately 50.8 mm (2 in)?**	**Yes** The system is operating correctly at this time. RETEST the system for intermittent operation. If no fault is found, INSTRUCT the customer on the correct operation of the system. **No** INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section. REPEAT the self-test. CLEAR the DTCs.

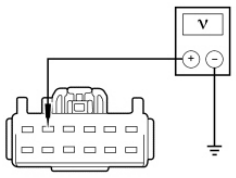
Pinpoint Test O: The Power Lumbar is Inoperative - Driver

Refer to Wiring Diagrams Cell 123 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Memory Seats for schematic and connector information.

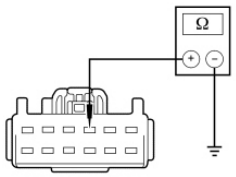
Normal Operation

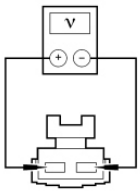
The seat control switch is supplied battery voltage and ground. When the lumbar button (part of seat control switch) is pressed, voltage and ground are supplied to the power lumbar motor to move the lumbar mechanism in or out.

This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- Seat control switch
- Power lumbar motor assembly

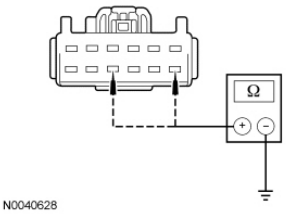


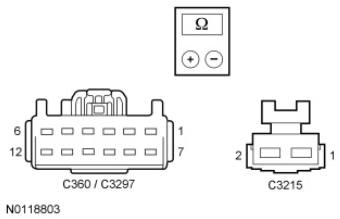
PINPOINT TEST O: THE POWER LUMBAR IS INOPERATIVE - DRIVER





NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .





NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take

O1 CHECK FOR VOLTAGE TO THE SEAT CONTROL SWITCH	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Seat Control Switch C3297 (MKZ) or C360 (Fusion). • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the voltage between seat control switch and ground. ♦ For Fusion, measure the voltage between seat control switch C360-5, circuit SBB32 (VT/RD), harness side and ground. ♦ For MKZ, measure the voltage between seat control switch C3297-5, circuit SBP12 (GN/RD), harness side and ground.  N0010816 • **Is the voltage greater than 10 volts?**	**Yes** GO to O2 . **No** VERIFY Smart Junction Box (SJB) fuse 12 (7.5A) (MKZ) or Battery Junction Box (BJB) fuse 32 (30A) (Fusion) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .
O2 CHECK FOR GROUND AT THE SEAT CONTROL SWITCH	
• Measure the resistance between seat control switch and ground. ♦ For Fusion, measure the resistance between seat control switch C360-3, circuit GD126 (BK/WH), harness side and ground. ♦ For MKZ, measure the resistance between seat control switch C3297-3, circuit GD126 (BK/WH), harness side and ground.	**Yes** GO to O3 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

 N0010815 • **Is the resistance less than 5 ohms?**	
O3 CHECK VOLTAGE TO THE LUMBAR MOTOR	
• Connect: Seat Control Switch C3297 (MKZ) or C360 (Fusion). • Disconnect: Power Lumbar Motor C3215. • **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the seat control switch is activated. • Measure the voltage between power lumbar motor C3215-1, circuit CPS18 (BN/GN), harness side and power lumbar motor C3215-2, circuit CPS19 (GY/VT), harness side.  N0040627 • Operate the seat control switch in both directions. • **Is the voltage greater than 10 volts when the seat control switch is operated and 0 volt in the rest position?**	**Yes** INSTALL a new power lumbar assembly. REFER to Lumbar Assembly in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** GO to O4 .
O4 CHECK THE LUMBAR MOTOR CIRCUITS FOR A SHORT TO GROUND	
• Disconnect: Seat Control Switch C3297 (MKZ) or C360 (Fusion). • Measure the resistance between: ♦ seat control switch C3297-7 (MKZ) or C360-7 (Fusion), circuit CPS18 (BN/GN), harness side and ground. ♦ seat control switch C3297-10 (MKZ) or C360-10 (Fusion), circuit CPS19 (GY/VT), harness side and ground.	**Yes** GO to O5 . **No** REPAIR the circuit(s). TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

 • **Are the resistances greater than 10,000 ohms.**	
O5 CHECK THE LUMBAR MOTOR CIRCUITS FOR AN OPEN	
• Measure the resistance between: ♦ seat control switch C3297-7 (MKZ) or C360-7 (Fusion), circuit CPS18 (BN/GN), harness side and power lumbar motor C3215-1, circuit CPS18 (BN/GN), harness side. ♦ seat control switch C3297-10 (MKZ) or C360-10 (Fusion), circuit CPS19 (GY/VT), harness side and power lumbar motor C3215-2, circuit CPS19 (GY/VT), harness side.  • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit(s). TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. REPOWER the SRS . REFER to Section 501-20B .

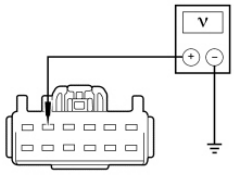
Pinpoint Test P: The Power Lumbar is Inoperative - Passenger

Refer to Wiring Diagrams Cell 120 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Seats for schematic and connector information.

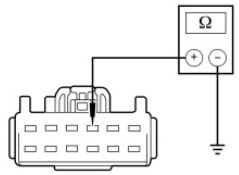
Normal Operation

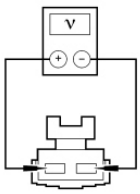
The seat control switch is supplied battery voltage and ground. When the lumbar button (part of seat control switch) is pressed, voltage and ground are supplied to the power lumbar motor to move the lumbar mechanism in or out.

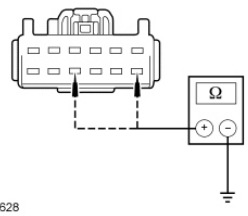
This pinpoint test is intended to diagnose the following:



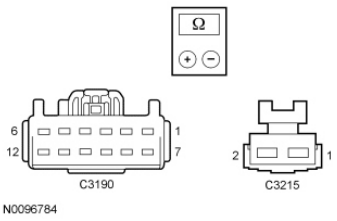
- Wiring, terminals or connectors
- Seat control switch
- Power lumbar motor assembly







PINPOINT TEST P: THE POWER LUMBAR IS INOPERATIVE - PASSENGER



b>NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
P1 CHECK FOR VOLTAGE TO THE SEAT CONTROL SWITCH	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: Seat Control Switch C3190. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the voltage between seat control switch C3190-5, circuit SBB31 (WH/RD), harness side and ground.  N0010816 • **Is the voltage greater than 10 volts?**	**Yes** GO to P2 . **No** VERIFY Battery Junction Box (BJB) fuse 31 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
P2 CHECK FOR GROUND TO THE SEAT CONTROL SWITCH	
• Measure the resistance between seat control switch C3190-3, circuit GD126 (BK/WH), harness side and ground.	**Yes** GO to P3 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag

 N0010815 • **Is the resistance less than 5 ohms?**	module C313. REPOWER the SRS . REFER to Section 501-20B .
P3 CHECK FOR VOLTAGE TO THE LUMBAR MOTOR	
• Connect: Seat Control Switch C3190. • Disconnect: Power Lumbar Motor C3216. • **NOTE:** During the following step, the voltage being measured changes polarity dependent upon which direction the seat control switch is activated. • Measure the voltage between power lumbar motor C3216-1, circuit CPS20 (VT), harness side and power lumbar motor C3216-2, circuit CPS21 (WH/OG), harness side.  N0040627 • Operate the seat control switch in both directions. • **Is the voltage greater than 10 volts when the seat control switch is operated and 0 volt in the rest position?**	**Yes** INSTALL a new power lumbar assembly. REFER to Lumbar Assembly in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to P4 .
P4 CHECK THE LUMBAR MOTOR CIRCUITS FOR A SHORT TO GROUND	
• Disconnect: Seat Control Switch C3190. • Measure the resistance between: ♦ seat control switch C3190-7, circuit CPS20 (VT), harness side and ground. ♦ seat control switch C3190-10, circuit CPS21 (WH/OG), harness side and ground.  N0040628 • **Are the resistances greater than 10,000 ohms.**	**Yes** GO to P5 . **No** REPAIR the circuit(s). TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
P5 CHECK THE LUMBAR MOTOR CIRCUITS FOR AN OPEN	

• Measure the resistance between: ♦ seat control switch C3190-7, circuit CPS20 (VT), harness side and power lumbar motor C3215-1, circuit CPS20 (VT), harness side. ♦ seat control switch C3190-10, circuit CPS21 (WH/OG), harness side and power lumbar motor C3215-2, circuit CPS21 (WH/OG), harness side.  • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new seat control switch. REFER to Seat Control Switch in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test Q: The Heated Seats are Inoperative - Driver and Front Passenger

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

The engine must be running for the heated seat system to operate. When the driver or passenger heated seat button is pressed, a momentary ground signal is sent on the driver or passenger request circuit to turn the heated seat system on or off. The heated seat module monitors temperature sensors contained within the cushion heater mats. The temperature sensors share the same return circuit to the heated seat module. If the temperature sensor return circuit opens (resistance greater than 300,000 ohms), the heated seat module will disable the outputs to both seats.

The Front Controls Interface Module (FCIM) (with navigation), HVAC module and heated seat module must be communicating correctly for the system to operate correctly. PIDs are available to check heated seat switch operation in the FCIM (with navigation) and HVAC module (with and without navigation).

Normal heat cycle may require several minutes to initially warm the seat. The seat should be occupied to correctly test for normal operation. Temperature measuring devices do not provide an accurate method for testing heated seat operation as surface temperatures are subject to human and environmental characteristics. Correct testing requires heater mat resistance measurements which have tight tolerances affecting the length of time for the heater mats to reach maximum operating temperature.

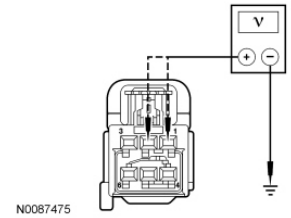
The heated seat module does not report DTCs. If a fault is detected, the module will disable the affected seat(s) and indicator(s). After the fault is corrected, the heated seat module needs to be reset by cycling the ignition.

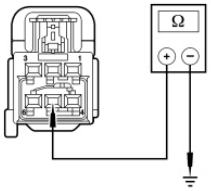
This pinpoint test is intended to diagnose the following:

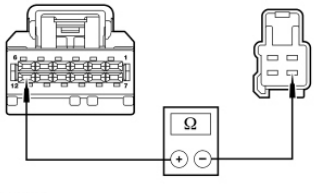
- Fuse(s)
- Wiring, terminals or connectors
- Medium Speed Controller Area Network (MS-CAN) fault
- FCIM (if equipped)

- Heated seat module
- HVAC module

PINPOINT TEST Q: THE HEATED SEATS ARE INOPERATIVE - DRIVER AND FRONT PASSENGER







NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation andoes not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
Q1 CHECK HEATED SEAT OPERATION	
• Ignition OFF. • Start the engine. • Verify both heated seats do not heat. • **Does either heated seat operate?**	**Yes** GO to Symptom Chart to diagnose the heated seat is inoperative/does not operate correctly - driver or the heated seat is inoperative/does not operate correctly - passenger. **No** GO to Q2 .
Q2 CHECK HEATED SEAT INDICATOR ILLUMINATION	
• Ignition OFF. • Start the engine. • Verify system indicator illumion. • **When pressing and releasing each heated seat button individually, does any heated seat indicator illuminate or flash and then turn off?**	**Yes** GO to Q7 . **No** For vehicles with navigation, GO to Q3 . For vehicles without navigation, GO to Q4 .
Q3 RETRIEVE THE FCIM DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test - FCIM . • **Are any FCIM DTCs retrieved?**	
Q4 RETRIEVE THE HVAC MODULE DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test - HVAC Module. • **Are any HVAC module DTCs retrieved?**	**Yes** For any HVAC module DTCs, REFER to the HVAC Module DTC Chart in this section. **No** For vehicles with navigation, GO to Q5 . For vehicles without navigation, GO to Q6 .
Q5 MONITOR THE FCIM PIDs AND CHECK INPUTS	

• Enter the following diagnostic mode on the scan tool: DataLogger - FCIM - PIDs. ♦ Driver Heated Seat (CC_SW_D_HSEATS) ♦ Passenger Heated Seat (CC_SW_P_HSEATS) • Monitor the FCIM PIDs while individually pushing the driver and passenger heated seat buttons. • **Do the PID values agree with the switch button positions?**	**Yes** GO to Q6 . **No** INSTALL a new FCIM . REFER to Section 415-00 < TEST the system for normal operation.
Q6 MONITOR THE HVAC MODULE PIDs AND CHECK INPUTS	
• Enter the following diagnostic mode on the scan tool: DataLogger - HVAC Module - PIDs. ♦ Driver Heated Seat (CC_SW_D_HSEATS) ♦ Passenger Heated Seat (CC_SW_P_HSEATS) • Monitor HVAC module PIDs while individually pushing the driver and passenger heated seat buttons. • **Do the PID values agree with the switch button positions?**	**Yes** The fault is intermittent, CHECK for causes of the intermittent fault. INSPECT the connectors, terminals and wiring. ATTEMPT to recreate the fault by flexing the wire harness and operating the system. CHECK the electrical connectors for corrosion, poor pin contact or pushed-out pins. REPAIR any intermittent concerns found and TIGHTEN any loose connector pins. REPEAT the self-test. CLEAR the DTCs. CHECK the system for normal operation. **No** INSTALL a new HVAC module. REFER to Section 412-01 . TEST the system for normal operation.
Q7 CHECK VOLTAGE TO THE HEATED SEAT MODULE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedurestion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: Heated Seat Module C3304B. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between:	**Yes** GO to Q8 . **No** VERIFY Smart Junction Box (SJB) fuses 18 (20A) and 35 (10A) are OK. If OK, REPAIR the affected circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

♦ heated seat module C3304B-1, circuit SBP18 (YE/RD), harness side and ground. ♦ heated seat module C3304B-2, circuit CBP35 (YE/GY), harness side and ground.  N0087475 • **Are the voltages greater than 10 volts?**	
Q8 CHECK THE HEATED SEAT MODULE GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Measure the resistance between heated seat module C3304B-5, circuit GD139 (BK/YE), harness side and ground.  N0087476 • **Is the resistance less than 5 ohms?**	**Yes** GO to Q9 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
Q9 CHECK HEATED SEAT MODULE SENSOR RETURN CIRCUIT FOR AN OPEN	
• Disconnect: Heated Seat Module C3304A. • Disconnect: Passenger Seat Cushion Heater C334. • Measure the resistance between heated seat module C3304A-12, circuit RHS05 (YE/VT), harness side and passenger seat cushion heater C334-4, circuit RHS05 (YE/VT), harness side.  N0090927 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new heated seat module. REFER to Heated Seat Module in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable.

	CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test R: The Heated Seat is Inoperative - Driver

Refer to Wiring Dgrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

The heated seat module receives battery voltage. The HVAC module supplies a momentary ground signal to the heated seat module to request the system on/off. The heated seat module supplies voltage to the heater mats. The heated seat module monitors the heater mat temperature sensor. If the temperature sensor circuits open, the heated seat module will disable output voltage to the heater mat. The heated seat module control circuits are monitored by the HVAC module and will set a DTC if a circuit fault is detected.

The Front Controls Interface Module (FCIM) (with navigation), HVAC module and heated seat module must be communicating correctly for the system to operate correctly. PIDs are available to check heated seat switch operation in the FCIM (with navigation) and HVAC module (with and without navigation).

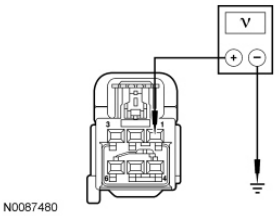
Normal heat cycle may require several minutes to initially warm the seat. The seat should be occupied to correctly test for normal operation. Temperature measuring devices do not provide an accurate method for testing heated seat operation as surface temperatures are subject to human and environmental characteristics. Correct testing requires heater mat resistance measurements which have tight tolerances affecting the length of time for the heater mats to reach maximum operating temperature.

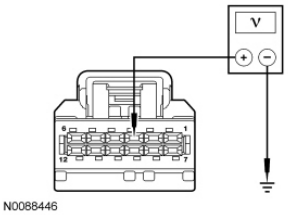
- DTC B1030:12 (Left Front Seat Heater: Circuit Short To Battery) - If the driver seat control circuit from the HVAC module to the heated seat module is shorted to voltage, the DTC is set in the HVAC module.
- DTC B1030:14 (Left Front Seat Heater: Circuit Short To Ground or Open) - If the driver seat control circuit from the HVAC module to the heated seat module is shorted to ground or open, the DTC is set in the HVAC module.

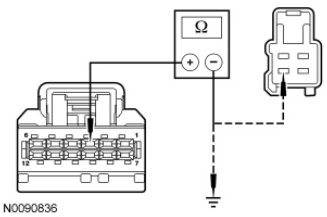
This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Heater feed circuit short to battery, ground or open
- Sensor circuit short to battery, ground or open
- Heated seat switch stuck closed to ground
- Heater mat
- Heated seat module
- HVAC module
- FCIM (if equipped)

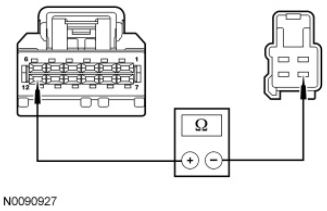
PINPOINT TEST R: THE HEATED SEAT IS INOPERATIVE - DRIVER

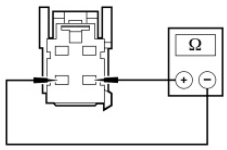




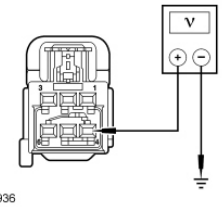


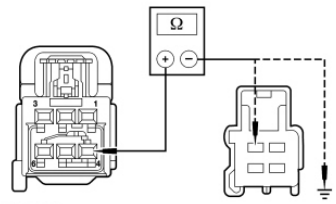
NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

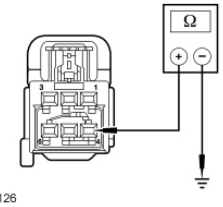




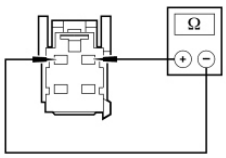
NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

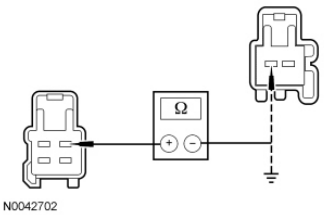




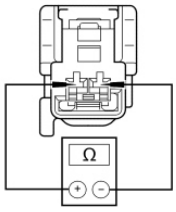


NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.



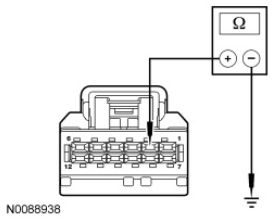


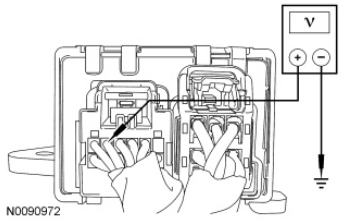
Test Step	Result / Action to Take
R1 CHECK HEATED SEAT OPERATION	
• Start the engine. • Verify the passenger heated seat is operational. • **Is the passenger heated seat operational?**	**Yes** GO to R2 . **No** GO to Symptom Chart to diagnose the heated seats are inoperative - driver and front passenger or the heated seat is inoperative/ds not operate correctly - passenger.
R2 CHECK HEATED SEAT INDICATOR ILLUMINATION	
• Verify system indicator illumination. • **Do the driver heated seat indicators illuminate or flash and then turn off?**	**Yes** GO to R7 . **No** Vehicles with navigation, GO to R3 . Vehicles without navigation, GO to R4 .
R3 RETRIEVE THE FCIM DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test - FCIM . • **Are any FCIM DTCs retrieved?**	**Yes** For all FCIM DTCs, REFER to the Master DTC Chart in Section 415-00 . **No** GO to R4 .
R4 RETRIEVE THE HVAC MODULE DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test - HVAC Module. • **Are any HVAC module DTCs retrieved?**	**Yes** If DTC B1030:12, GO to R18 . If DTC B1030:14, GO to R19 . For any other HVAC module DTCs, REFER to the HVAC Module DTC Chart in this section. **No** For vehicles with navigation, GO to R5 . For vehicles without navigation, GO to R6 .
R5 MONITOR THE DRIVER HEATED SEAT (CC_SW_D_HSEATS) PID AND CHECK INPUTS	
• Enter the following diagnostic mode on the scan tool: DataLogger - FCIM - PIDs: CC_SW_D_HSEATS.	**Yes** GO to R6 . **No** INSTALL a new FCIM . REFER to Section 415-00 .



• Monitor the FCIM PID while pushing the driver heated seat button. • **Do the PID states agree with the switch button positions?**	TEST the system for normal operation.
R6 MONITOR THE DRIVER HEATED SEAT (CC_SW_D_HSEATS) PID AND CHECK INPUTS	
• Enter the following diagnostic mode on the scan tool: DataLogger - HVAC Module - PIDs: CC_SW_D_HSEATS. • Monitor the HVAC module PID while pushing the driver heated seat button. • **Do the PID values agree with the switch button positions?**	**Yes** The fault is intermittent, CHECK for causes of the intermittent fault. INSPECT the connectors, terminals and wiring. ATTEMPT to recreate the fault by flexing the wire harness and operating the system. CHECK the electrical connectors for corrosion, poor pin contact or pushed-out pins. REPAIR any intermittent concerns found and TIGHTEN any loose connector pins. REPEAT the self-test. CLEAR the DTCs. CHECK the system for normal operation. **No** INSTALL a new HVAC module. REFER to Section 412-01 . TEST the system for normal operation.
R7 CHECK FOR VOLTAGE TO THE HEATED SEAT MODULE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C327. • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: Heated Seat Module C3304B. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the voltage between heated seat module C3304B-1, circuit SBP18 (YE/RD) harness side and ground.	**Yes** GO to R8 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

 N0087480 • **Is the voltage greater than 10 volts?**	
R8 CHECK THE TEMPERATURE SENSOR OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE	
• Disconnect: Heated Seat Module C3304A. • Disconnect: Driver Seat Cushion Heater Mat C364. • Ignition ON. • Measure the voltage between heated seat module C3304A-3, circuit VHS26 (VT), harness side and ground.  N0088446 • **Is any voltage present?**	**Yes** REPAIR the circuit. GO to R11 to check the temperature sensor for damage. If OK, TEST the system for normal operation. If not OK, INSTALL a new driver seat cushion heater mat. REFER to Seat Cushion Cover - Front in this section. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO t R9 .
R9 CHECK THE TEMPERATURE SENSOR OUTPUT CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between: ♦ heated seat module C3304A-3, circuit VHS26 (VT), harness side and rear seat cushion heater mat C364-3, circuit VHS26 (VT), harness side. ♦ heated seat module C3304A-3, circuit VHS26 (VT), harness side and ground.  N0090836 • **Is the resistance less than 5 ohms between C3304A-3 and C364-3, and**	**Yes** GO to R10 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .





greater than 10,000 ohms between C3304A-3 and ground?	
R10 CHECK THE TEMPERATURE SENSOR RETURN CIRCUIT FOR AN OPEN	
• Measure the resistance between heated seat module C3304A-12, circuit RHS05 (YE/VT), harness side and driver seat cushion heater mat C364-4, circuit RHS05 (YE/VT), harness side.  N0090927 • **Is the resistance less than 5 ohms?**	**Yes** GO to R11 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
R11 CHECK THE TEMPERATURE SENSOR FOR AN OPEN	
• Measure the resistance between rear heated seat cushion C364 pin 3 and pin 4, component side.  N0090831 • **Is the resistance between 300 ohms and 300,000 ohms?**	**Yes** GO to R12 . **No** INSTALL a new cushion heater mat. REFER to Seat Cushion Cover - Front in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
R12 CHECK THE HEATER MAT OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition ON. • Measure the voltage between heated seat module C3304B-4, circuit CHS02 (YE/BU), harness side and ground.	**Yes** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to R13 .

 N0096936 • **Is any voltage present?**	
R13 CHECK THE HEATER MAT OUTPUT CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between: ♦ heated seat module C3304B-4, circuit CHS02 (YE/BU), harness side and cushion heater mat C364-1, circuit CHS02 (YE/BU), harness side. ♦ heated seat module C3304B-4, circuit CHS02 (YE/BU), harness side and ground.  N0091127 • **Is the resistance less than 5 ohms between C3304B-4 and C364-1, and greater than 10,000 ohms between C3304B-4 and ground?**	**Yes** GO to R14 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
R14 CHECK THE HEATER MAT RESISTANCE	
• Connect: Driver Seat Backrest Heater Mat C365. • Connect: Driver Seat Cushion Heater Mat C364. • Measure the resistance between heated seat module C3304B-4, circuit CHS02 (YE/BU), harness side and ground.  N0091126	**Yes** GO to R21 . **No** GO to R15 .

• **Is the resistance between 1.2 and 4.0 ohms?**	
R15 CHECK THE CUSHION HEATER MAT FOR AN OPEN	
• Disconnect: Driver Seat Cushion Heater Mat C364. • Measure the resistance between driver seat cushion heater mat C364 pins 1 and 2, component side.  N0090832 • **Is the resistance between 0.6 and 2.0 ohms?**	**Yes** GO to R16 . **No** INSTALL a new driver seat cushion heater mat. REFER to Seat Cushion Cover - Front in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
R16 CHECK THE CIRCUIT BETWEEN THE CUSHION HEATER MAT AND BACKREST HEATER MAT FOR AN OPEN AND SHORT TO GROUND	
• Disconnect: Driver Seat Backrest Heater Mat C365. • Measure the resistance between: ♦ seat cushion heater mat C364-2, circuit CHS11 (VT/GN), harness side and seat backrest heater mat C365-1, circuit CHS11 (VT/GN), harness side. ♦ seat cushion heater mat C364-2, circuit CHS11 (VT/GN), harness side and ground.  N0042702 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to R17 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
R17 CHECK THE BACKREST HEATER MAT FOR AN OPEN	

• Measure the resistance between driver seat backrest heater mat C365 pins 1 and 2, component side.  N0042705 • **Is the resistance between 0.6 and 2.0 ohms?**	**Yes** REPAIR circuit GD126 (BK/WH) for an open. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new driver seat backrest heater mat. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
R18 CHECK HEATED SEAT MODULE SWITCH INPUT CIRCUIT FOR SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: Heated Seat Module C3304A. • Disconnect: HVAC Module C2356A. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between heated seat module C3304A-2, circuit CHS29 (WH/BU), harness side and ground.	**Yes** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new HVAC module. REFER to Section 412-01 . TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

 • **Is any voltage present?**	
R19 CHECK THE HEATED SEAT MODULE SWITCH INPUT CIRCUIT FOR AN OPEN	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: Heated Seat Module C3304A. • Disconnect: HVAC Module C2356A. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the resistance between heated seat module C3304A-2, circuit CHS29 (WH/BU), harness side and HVAC module C2356A-5, circuit CHS29 (WH/BU), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to R20 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
R20 CHECK THE HEATED SEAT MODULE SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND	

• Measure the resistance between heated seat module C3304A-2, circuit CHS29 (WH/BU), harness side and ground.  • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new heated seat module. REFER to Heated Seat Module in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
R21 CHECK THE HVAC MODULE OUTPUT	
• Connect: Heated Seat Module C3304A and C3304B. • Ignition ON. • **NOTE:** The following measurement must be taken by back-probing heated seat module C3304A. • **NOTE:** Voltage on circuit CHS29 (WH/BU) should drop momentarily when the driver heated seat control button is pressed. • Measure the voltage between heated seat module C3304A-2, circuit CHS29 (WH/BU), harness side and ground by back-probing heated seat module connector. Press the driver heated seat button on the HVAC module and note the voltage.  • **Is the voltage greater than 10 volts before pressing the driver heated seat control button, then momentarily drops when the heated seat control button is pressed?**	**Yes** INSTALL a new heated seat module. REFER to Heated Seat Module in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** If voltage is greater than 10 volts but did not drop when the driver heated seat button was pressed, INSTALL a new HVAC module. REFER to Section 412-01 . TEST the system for normal operation. If voltage is less than 10 volts, INSTALL a new heated seat module. REFER to Heated Seat Module in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test S: The Heated Seat is Inoperative - Passenger

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

Theeated seat module receives battery voltage. The HVAC module supplies a momentary ground signal to the heated seat module to request the system on/off. The heated seat module supplies voltage to the heater mats. The heated seat module monitors the heater mat temperature sensor. If the temperature sensor circuits open, the heated seat module will disable output voltage to the heater mat. The heated seat module control circuits are monitored by the HVAC module and will set a DTC if a circuit fault is detected.

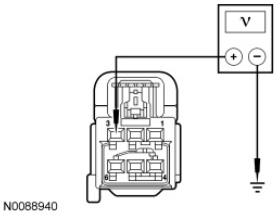
The Front Controls Interface Module (FCIM) (with navigation), HVAC module and heated seat module must be communicating correctly for the system to operate correctly. PIDs are available to check heated seat switch operation in the FCIM (with navigation) and HVAC module (with and without navigation).

Normal heat cycle may require several minutes to initially warm the seat. The seat should be occupied to correctly test for normal operation. Temperature measuring devices do not provide an accurate method for testing heated seat operation as surface temperatures are subject to human and environmental characteristics. Correct testing requires heater mat resistance measurements which have tight tolerances affecting the length of time for the heater mats to reach maximum operating temperature.

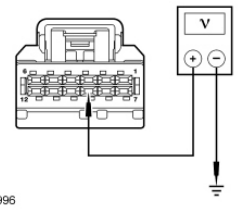
- DTC B1032:12 (Right Front Seat Heater: Circuit Short To Battery) - If the passenger seat control circuit from the HVAC module to the heated seat module is shorted to voltage, the DTC is set in the HVAC module.
- DTC B1032:14 (Right Front Seat Heater: Circuit Short To Ground or Open) - If the passenger seat control circuit from the HVAC module to the heated seat module is shorted to ground or open, the DTC is set in the HVAC module.

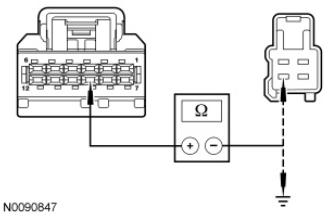
This pinpoint test is intended to diagnose the follo:
- Wiring, terminals or connectors
- Heater feed circuit short to battery, ground or open
- Sensor circuit short to battery, ground or open
- Heated seat switch stuck closed to ground
- Heater mat
- Heated seat module
- HVAC module
- FCIM (if equipped)

PINPOINT TEST S: THE HEATED SEAT IS INOPERATIVE - PASSENGER

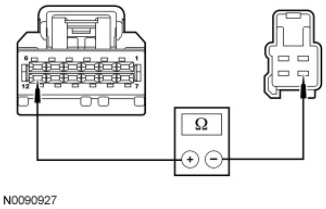


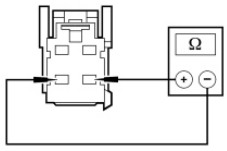
NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

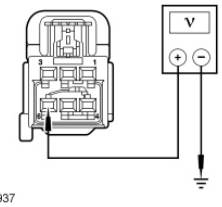




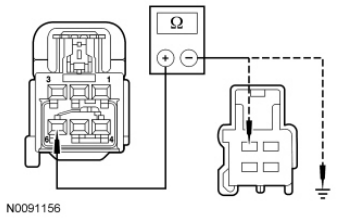
NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

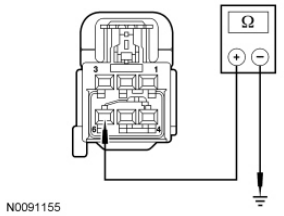


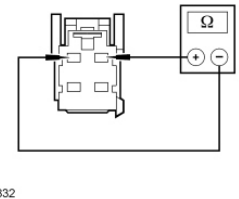




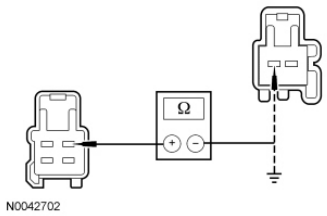
NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

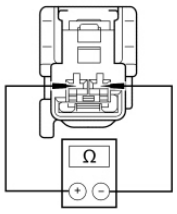




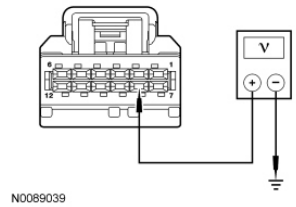


Test Step	Result / Action to Take
S1 CHECK HEATED SEAT OPERATION	

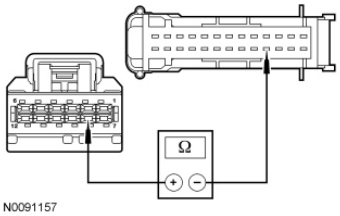


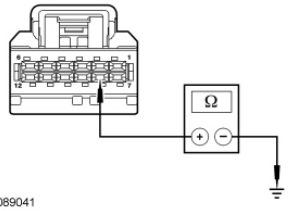


• Ignition OFF. Start the engine. • Verify the driver heated seat is operational. • **Is the driver heated seat operational?**	**Yes** GO to S2 . **No** GO to Symptom Chart to diagnose the heated seats are inoperative - driver and front passenger or the heated seat is inoperative/does not operate correctly - driver.
S2 CHECK HEATED SEAT INDICATOR ILLUMINATION	
• Verify system indicator illumination. • **Do the passenger heated seat indicators illuminate or flash and then turn off?**	**Yes** GO to S7 . **No** Vehicles with navigation, GO to S3 . Vehicles without navigation, GO to S4 .
S3 RETRIEVE THE FCIM DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test - FCIM . • **Are any FCIM DTCs retrieved?**	**Yes** For all FCIM DTCs, REFER to the Master DTC Chart in Section 415-00 . **No** GO to S4 .
S4 RETRIEVE THE HVAC MODULE DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test - HVAC Module. • **Are any HVAC module DTCs retrieved?**	**Yes** If DTC B1032:12, GO to S18 . If DTC B1032:14, GO to S19 . For any other HVAC module DTCs, REFER to the HVAC Module DTC Chart in this section. **No** For vehicles with navigation, GO to S5 . For vehicles without navigation, GO to S6 .
S5 MONITOR THE PASSENGER HEATED SEAT (CC_SW_P_HSEATS)ID AND CHECK INPUTS	
• Enter the following diagnostic mode on the scan tool: DataLogger - FCIM - PIDs: CC_SW_P_HSEATS. • Monitor the FCIM PID while pushing the passenger heated seat button. • **Do the PID states agree with the switch button positions?**	**Yes** GO to S6 . **No** INSTALL a new FCIM . REFER to Section 415-00 . TEST the system for normal operation.
S6 MONITOR THE PASSENGER HEATED SEAT (CC_SW_P_HSEATS) PID AND CHECK INPUTS	



• Enter the following diagnostic mode on the scan tool: DataLogger - HVAC Module - PIDs: CC_SW_P_HSEATS. • Monitor the HVAC module PID while pushing the passenger heatedtton. • **Do the PID values agree with the switch button positions?**	**Yes** The fault is intermittent, CHECK for causes of the intermittent fault. INSPECT the connectors, terminals and wiring. ATTEMPT to recreate the fault by flexing the wire harness and operating the system. CHECK the electrical connectors for corrosion, poor pin contact or pushed-out pins. REPAIR any intermittent concerns found and TIGHTEN any loose connector pins. REPEAT the self-test. CLEAR the DTCs. CHECK the system for normal operation. **No** INSTALL a new HVAC module. REFER to Section 412-01 . TEST the system for normal operation.
S7 CHECK FOR VOLTAGE TO THE HEATED SEAT MODULE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: Heated Seat Module C3304B. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the voltage between heated seat module C3304B-3, circuit SBP18 (YE/RD), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to S8 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
S8 CHECK THE TEMPERATURE SENSOR OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE	





• Disconnect: Heated Seat Module C3304A. • Disconnect: Passenger Seat Cushion Heater Mat C334. • Ignition ON. • Measure the voltage between heated seat module C3304A-9, circuit VHS27 (WH/OG), harness side and ground.  N0088996 • **Is any voltage present?**	**Yes** REPAIR the circuit. GO to S11 to check the temperature sensor for damage. If OK, TEST the system for normal operation. If not OK, INSTALL a new driver seat cushion heater mat. REFER to Seat Cushion Cover - Front in this section. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to S9 .
S9 CHECK THE TEMPERATURE SENSOR OUTPUT CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between: ♦ heated seat module C3304A-9, circuit VHS27 (WH/OG), harness side and seat cushion heater mat C334-3, circuit VHS27 (WH/OG), harness side. ♦ heated seat module C3304A-9, circuit VHS27 (WH/OG), harness side and ground.  N0090847 • **Is the resistance less than 5 ohms between C3304A-9 and C334-3, and greater than 10,000 ohms between C3304A-9 and ground?**	**Yes** GO to S10 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
S10 CHECK THE TEMPERATURE SENSOR RETURN CIRCUIT FOR AN OPEN	
• Measure the resistance between heated seat module C3304A-12, circuit RHS05 (YE/VT), harness side and passenger seat cushion heater mat C334-4, circuit RHS05 (YE/VT), harness side.	**Yes** GO to S11 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag

 N0090927 • **Is the resistance less than 5 ohms?**	module C313. REPOWER the SRS . REFER to Section 501-20B .
S11 CHECK TEMPERATURE SENSOR FOR AN OPEN	
• Measure the resistance between rear heated seat cushion C334 pin 3 and pin 4, component side.  N0090831 • **Is the resistance between 300 ohms and 300,000 ohms?**	**Yes** GO to S12 . **No** INSTALL a new cushion heater mat. REFER to Seat Cushion Cover - Front in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
S12 CHECK THE HEATER MAT OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition ON. • Measure the voltage between heated seat module C3304B-6, circuit CHS07 (GY/BU), harness side and ground.  N0096937 • **Is any voltage present?**	**Yes** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. COECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to S13 .
S13 CHECK CUSHION HEATER MAT OUTPUT CIRCUIT FOR AN OPEN AND SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between: ♦ heated seat module C3304B-6, circuit CHS07 (GY/BU), harness side and passenger seat cushion heater mat C334-1, circuit CHS07 (GY/BU), harness side.	**Yes** GO to S14 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable.

♦ heated seat module C3304B-6, circuit CHS07 (GY/BU), harness side and ground.  N0091156 • **Is the resistance less than 5 ohms between C3304B-6 and C334-1, and greater than 10,000 ohms between C3304B-6 and ground?**	CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
S14 CHECK THE HEATER MAT RESISTANCE	
• Connect: Passenger Seat Backrest Heater Mat C335. • Connect: Passenger Seat Cushion Heater Mat C334. • Measure the resistance between heated seat module C3304B-6, circuit CHS07 (GY/BU), harness side and ground.  N0091155 • **Is the resistance between 1.2 and 4.0 ohms?**	**Yes** GO to S21 . **No** GO to S15 .
S15 CHECK THE CUSHION HEATER MAT FOR AN OPEN	
• Disconnect: Passenger Seat Cushion Heater Mat C334. • Measure the resistance between passenger seat cushion heater mat C334 pins 1 and 2, component side.  N0090832 • **Is the resistance between 0.6 and 2.0 ohms?**	**Yes** GO to S16 . **No** INSTALL a new driver seat cushion heater mat. REFER to Seat Cushion Cover - Front n this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

S16 CHECK THE CIRCUIT BETWEEN THE CUSHION HEATER MAT AND BACKREST HEATER MAT FOR AN OPEN AND SHORT TO GROUND	
• Disconnect: Passenger Seat Backrest Heater Mat C335. • Measure the resistance between: ♦ seat cushion heater mat C334-2, circuit CHS12 (YE/GN), harness side and seat backrest heater mat C335-1, circuit CHS12 (YE/GN), harness side. ♦ seat cushion heater mat C334-2, circuit CHS12 (YE/GN), harness side and ground.  N0042702 • **Is the resistance less than 0.5 ohm?**	**Yes** GO to S17 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
S17 CHECK BACKREST HEATER MAT FOR AN OPEN	
• Measure the resistance between passenger seat backrest heater mat C335 pins 1 and 2, component side.  N0042705 • **Is the resistance between 0.6 and 2.0 ohms?**	**Yes** REPAIR circuit GD139 (BK/YE) for an open. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new passenger seat backrest heater mat. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
S18 CHECK HEATED SEAT MODULE SWITCH INPUT CIRCUIT FOR SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .	**Yes** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS .

• Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: Heated Seat Module C3304A. • Disconnect: HVAC Module C2365A. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between heated seat module C3304A-8, circuit CHS30 (GY/YE), harness side and ground.  N0089039 • **Is any voltage present?**	REFER to Section 501-20B . **No** INSTALL a new HVAC module. REFER to Section 412-01 . TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
S19 CHECK THE HEATED SEAT MODULE SWITCH INPUT CIRCUIT FOR AN OPEN	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: Heated Seat Module C3304A. • Disconnect: HVAC Module C2356A. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the resistance between heated seat module C3304A-8, circuit CHS30 (GY/YE), harness side and HVAC module C2356A-4, circuit CHS30 (GY/YE), harness side.	**Yes** GO to S20 . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

 N0091157 • **Is the resistance less than 5 ohms?**	
S20 CHECK THE HEATED SEAT MODULE SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND	
• Measure the resistance between heated seat module C3304A-8, circuit CHS30 (GY/YE), harness side and ground.  N0089041 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new heated seat module. REFER to Heated Seat Module in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
S21 CHECK THE HVAC MODULE OUTPUT	
• Connect: Heated Seat Module C3304A and C3304B. • Ignition ON. • **NOTE:** The following measurement must be taken by back-probing heated seat module C3304A. • **NOTE:** Voltage on circuit CHS30 (GY/YE) should drop momentarily when the passenger heated seat control button is pressed. • Measure the voltage between passenger heated seat module C3304A-8, circuit CHS30 (GY/YE), harness side and ground by back-probing the heated seat module connector. Press the passenger heated seat button on the HVAC module and note the voltage.	**Yes** INSTALL a new heated seat module. REFER to Heated Seat Module in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** If voltage is greater than 10 volts but did not drop when the passenger heated seat button was pressed, INSTALL a new HVAC module. REFER to Section 412-01 . TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

 • **Is the voltage greater than 10 volts before pressing the passenger heated seat control button, then momentarily drops when the heated seat control button is pressed?**	If voltage is less than 10 volts, INSTALL a new heated seat module. REFER to Heated Seat Module in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

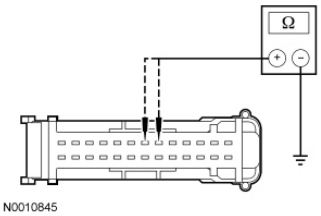
Pinpoint Test T: The Heated Seat Does Not Operate Correctly - Seat Does Heat But the Heated Seat Indicator Does Not Illuminate When Pressed

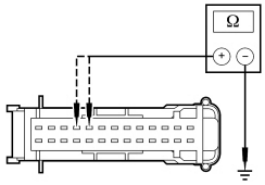
Rer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

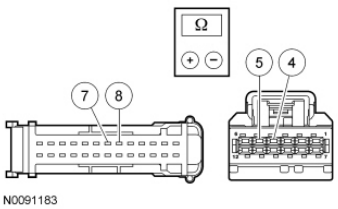
Normal Operation

When the heated seat module is commanded ON, voltage is supplied from the heated seat module to the HVAC module on the low/high heat mode indicator circuits. When voltage is not supplied from the heated seat module, none of the indicators illuminate.

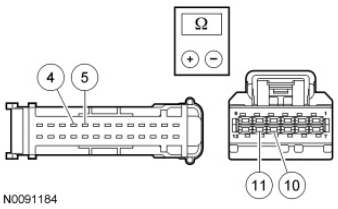
This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- Heated seat module
- HVAC module
- Front Controls Interface Module (FCIM)

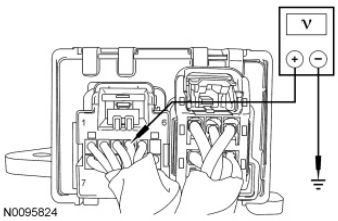




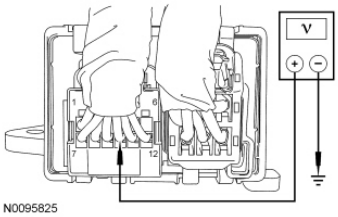


PINPOINT TEST T: THE HEATED SEAT DOES NOT OPERATE CORRECTLY - SEAT DOES HEAT BUT THE HEATED SEAT INDICATOR DOES NOT ILLUMINATE WHEN PRESSED





NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .



NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
T1 CHECK INDICATOR CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: HVAC Module C2356B. • Disconnect: Heated Seat Module C3304A.	**Yes** GO to T2 . **No** REPAIR the circuit(s). TEST the system for normal operation. DISCONNECT the battery ground

• For driver seat, measure the resistance between: ♦ HVAC module C2356B-7, circuit CHS04 (YE/GY), harness side and ground. ♦ HVAC module C2356B-8, circuit CHS13 (VT/BN), harness side and ground.  N0010845 • For passenger seat, measure the resistance between: ♦ HVAC module C2356B-4, circuit CHS09 (GY), harness side and ground. ♦ HVAC module C2356B-5, circuit CHS14 (GN), harness side and ground.  N0067896 • **Are the resistances greater than 10,000 ohms?**	cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
T2 CHECK INDICATOR CIRCUITS FOR AN OPEN	
• For driver seat, measure the resistance between: ♦ HVAC module C2356B-7, circuit CHS04 (YE/GY), harness side and heated seat module C3304A-4, circuit CHS04 (YE/GY), harness side. ♦ HVAC module C2356B-8, circuit CHS13 (VT/BN), harness side and heated seat module C3304A-5, circuit CHS13 (VT/BN), harness side.  N0091183 • For passenger seat, measure the resistance between: ♦ HVAC module C2356B-4, circuit CHS09 (GY), harness side and heated seat module C3304A-10, circuit CHS09 (GY), harness side. ♦ HVAC module C2356B-5, circuit CHS14 (GN), harness side and heated seat module C3304A-11, circuit CHS14 (GN), harness side.	**Yes** For driver seat, GO to T3 . For passenger seat, GO to T4 . **No** REPAIR the circuit(s). TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

 • **Are the resistances less than 5 ohms?**	
T3 CHECK THE HEATED SEAT MODULE INDICATOR CIRCUIT OUTPUT	
• Connect: HVAC Module C2356B. • Connect: Heated Seat Module C3304A. • Start the engine. • **NOTE:** The following measurement must be taken by back-probing heated seat module C3304A. • **NOTE:** There should be no voltage on circuit CHS04 (YE/GY) when the driver seat side of the heated seat module is off. When the heated seat module is commanded on, voltage on circuit CHS04 (YE/GY) should drop momentarily each time the driver heated seat control button is pressed. • Measure the voltage between heated seat module C3304A-4, circuit CHS04 (YE/GY), harness side and ground by back-probing heated seat module C3304A-4. Press the driver heated seat control button and note the voltage.  • **Is there less than 1 volt when the heated seat module is off and greater than 10 volts when the driver heated seat module is in low or high mode?**	**Yes** For vehicles without navigation, INSTALL a new HVAC module. REFER to Section 412-01 . For vehicles with navigation, INSTALL a new FCIM . REFER to Section 415-00 . TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new heated seat module. REFER to Heated Seat Module in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
T4 CHECK THE HEATED SEAT MODULE INDICATOR CIRCUIT OUTPUT	

• Connect: HVAC Module C2356B. • Connect: Heated Seat Module C3304A. • Start the engine. • **NOTE:** The following measurement must be taken by back-probing heated seat module C3304A. • **NOTE:** There should be no voltage on circuit CHS09 (GY) when the passenger seat side of the heated seat module is off. When the heated seat module is commanded on, voltage on circuit CHS09 (GY) should drop momentarily each time the passenger heated seat control button is pressed. • Measure the voltage between heated seat module C3304A-10, circuit CHS09 (GY), harness side and ground by back-probing heated seat module C3304A-10. Press the passenger heated seat control button and note the voltage.  • **Is there less than 1 volt when the heated seat module is off and greater than 10 volts when the driver heated seat module is in low or high mode?**	**Yes** For vehicles without navigation, INSTALL a new HVAC module. REFER to Section 412-01 . For vehicles with navigation, INSTALL a new FCIM . REFER to Section 415-00 . TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new heated seat module. REFER to Heated Seat Module in this section. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test U: All Climate Controlled Seats Are Inoperative - Switch Indicators May or May Not Illuminate

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

The Dual Climate Controlled Seat Module (DCSM) is supplied voltage at all times, but the climate controlled seat system only operates with the engine running. The system can be operated with the ignition ON engine OFF by using a scan tool to bypass the climate controlled seat buttons on the touchscreen interface. When commanding a heat or cool mode operation in this manner, it only operates in 15-second intervals. Both voltage supply circuits are spliced together internal to the DCSM , so if one circuit becomes open, both seats can still be operated. However, if a fault occurs setting a DTC specific to either climate controlled seat, only the affected seat is disabled by the DCSM .

Climate controlled seat button commands are communicated from the Front Controls Interface Module (FCIM) over the Medium Speed Controller Area Network (MS-CAN) to the HVAC module and then to the DCSM . Upon receiving a command, the DCSM then communicates indicator illumination commands back to the HVAC module which then commands the FCIM to turn the indicators on or off. No direct connection exists between the FCIM , HVAC module and DCSM . The climate controlled seat system can only operate if all 3 modules are communicating correctly on the Controller Area Network (CAN).

This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- MS-CAN
- FCIM
- HVAC module
- DCSM

PINPOINT TEST U: ALL CLIMATE CONTROLLED SEATS ARE INOPERATIVE - SWITCH INDICATORS MAY OR MAY NOT ILLUMINATE

NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

Test Step	Result / Action to Take
U1 VERIFY CLIMATE CONTROLLED SEAT BLOWER OPERATION	
• Ignition OFF. • Remove the driver and front passenger cushion Thermo-Electric Device (TED) filters to verify blower operation. ♦ Turn the filters to the left (counterclockwise) and remove. • Start the engine. • Operate climate controlled seat buttons while verifying both blowers operate. • **Does either blower operate?**	**Yes** If only one blower operates, GO to Symptom Chart to diagnose a single climate controlled seat is inoperative. If both blowers operate, GO to U5 . **No** GO to U2 .
U2 VERIFY CLIMATE CONTROLLED SEAT INDICATOR ILLUMINATION	
• Ignition OFF.	**Yes** GO to U5 .

• Start the engine. • Verify system indicator illumination. • **Does any climate controlled seat indicator illuminate or flash and then turn off?**	**No** GO to U3 .
U3 CHECK THE FCIM FOR DTCs	
• Ignition In ACC. • Enter the following diagnostic mode on the scan tool: Self Test - FCIM . • **Are any DTCs retrieved?**	**Yes** REFER to the Master DTC Chart in Section 415-00 . **No** GO to U4 .
U4 CHECK THE HVAC MODULE FOR DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test - HVAC module. • **Are any DTCs retrieved?**	**Yes** REFER to the Master DTC Chart in Section 412-00A or Section 412-00B . **No** GO to U6 .
U5 CHECK THE DCSM FOR DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test - DCSM . • **Are any DTCs present?**	**Yes** GO to the Dual Climate Controlled Seat Module (DCSM) DTC Chart in this section. **No** CHECK for causes of the intermittent fault. INSPECT the connectors, terminals and wiring. ATTEMPT to recreate the fault by flexing the wire harness and operating the system. CHECK the electrical connectors for corrosion, poor pin contact or pushed-out pins. REPAIR any intermittent concerns found and TIGHTEN any loose DCSM connector pins. REPEAT the self-test.

	If no intermittent concerns are found, CARRY OUT the Component Test - Thermo-Electric Device (TED) Cooling Performance in this section for both seats.		
U6 MONITOR THE FCIM PIDs AND CHECK INPUTS		• Enter the following diagnostic mode on the scan tool: DataLogger - FCIM - PIDs. ♦ Driver Cooled Seat (CC_SW_D_CL_S) ♦ Driver Heated Seat (CC_SW_D_HSEATS) ♦ Passenger Cooled Seat (CC_SW_P_CL_S) ♦ Passenger Heated Seat (CC_SW_P_HSEATS) • Monitor the FCIM PIDs while individually pushing driver and passenger climate controlled seat switch buttons. • **Do the PID values agree with the switch positions?**	**Yes** GO to U7 . **No** INSTALL a new FCIM . REFER to Section 415-00 . TEST the system for normal operation.
U7 MONITOR THE HVAC MODULE PIDs AND CHECK INPUTS			
	Yes GO to U8 . **No** INSTALL a new HVAC module. REFER to Section 412-01 . TEST the system for normal operation.	• Enter the following diagnostic mode he scan tool: DataLogger - HVAC module - PIDs. ♦ Driver Cooled Seat (CC_SW_D_CL_S) ♦ Driver Heated Seat (CC_SW_D_HSEATS)	

♦ Passenger Cooled Seat (CC_SW_P_CL_S) ♦ Passenger Heated Seat (CC_SW_P_HSEATS) • Monitor the HVAC module PIDs while individually pushing driver and passenger climate controlled seat switch buttons. • **Do the PID values agree with the switch positions?**	
U8 CHECK DCSM USING ACTIVE COMMANDS	
• Enter the following diagnostic mode on the scan tool: DataLogger - DCSM - PIDs. ♦ Seat Cushion Thermal Electric Device Temperature (CSHTEMP) ♦ Seat Back Thermal Electric Device Temperature (BK_TEMP) ♦ Climate-conSeat Heat Command (TED_HEAT_D) ♦ Passenger Cushion Thermal Electric Device (TED) Temperature (PCSHTMP) ♦ Passenger Back TED Temperature (PBKTMP) ♦ Passenger TED Heat Mode (TED_HEAT_P) • **NOTE:** The DCSM active commands TED_HEAT_D (driver seat) and TED_HEAT_P	**Yes** CHECK for causes of the intermittent fault. INSPECT the connectors, terminals and wiring. ATTEMPT to recreate the fault by flexing the wire harness and operating the system. CHECK the electrical connectors for corrosion, poor pin contact or pushed-out pins. REPAIR any intermittent concerns found and TIGHTEN any loose HVAC module connector pins. REPEAT the self-test. CHECK the system for normal operation. **No** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. CLEAR the DTCs.

(passenger seat) are limited to 15 seconds in the ON state, then turn OFF. • Operate the climate controlled seats using active commands while monitoring the appropriate PIDs. ♦ When the command is in process, the TED temperature PIDs on the seat being commanded should momentarily increase. If no temperature increase is noted, remove the cushion blower filter and repeat the active command while physically monitoring the cushion blower for fan movement. • **Do the PID states or cushion blower movement indicate climate controlled seat operation?**	

Pinpoint Test V: A Single Climate Controlled Seat is Inoperative - Switch Indicators May or May Not Illuminate

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

The Dual Climate Controlled Seat Module (DCSM) is supplied voltage at all times, but the climate controlled seat system only operates with the engine running. The system can be operated with the ignition ON engine OFF by using a scan tool to bypass the climate controlled seat buttons on the touchscreen interface. When commanding a heat or cool mode operation in this manner, it only operates in 15-second intervals. Both voltage supply circuits are spliced together internal to the DCSM , so if one circuit becomes open, both seats can still be operated. However, if a fault occurs setting a DTC specific to either climate controlled seat, only

the affected seat is disabled by the DCSM .

Climate controlled seat button commands are communicated from the Front Controls Interface Module (FCIM) over the Medium Speed Controller Area Network (MS-CAN) to the HVAC module and then to the DCSM . Upon receiving a command, the DCSM then communicates indicator illumination commands back to the HVAC module which then commands the FCIM to turn the indicators on or off. No direct connection exists between the FCIM , HVAC module and DCSM . The climate controlled seat system can only operate if all 3 modules are communicating correctly on the Controller Area Network (CAN).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- MS-CAN
- FCIM
- HVAC module
- DCSM

PINPOINT TEST V: A SINGLE CLIMATE CONTROLLED SEAT IS INOPERATIVE - SWITCH INDICATORS MAY OR MAY NOT ILLUMINATE

NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

Test Step	Result / Action to Take
V1 VERIFY CLIMATE CONTROLLED SEAT BLOWER OPERATION	
• Ignition OFF. • Remove the driver and front passenger cushion TED filters to verify blower operation. ♦ Turn the filter to the left (counterclockwise) and remove. • Start the engine. • Operate climate controlled seat buttons while verifying both blowers operate. • **Are all climate controlled seats inoperative?**	**Yes** GO to Symptom Chart to diagnose all climate controlled seats are inoperative. **No** If both blowers operate, GO to V3 . If only one blower operates, GO to V2 .
V2 VERIFY CLIMATE CONTROLLED SEAT INDICATOR ILLUMINATION	
• Ignition OFF. • Start the engine. • Verify system indicator illumination. • **Does any climate controlled seat indicator illuminate or flash and then turn off?**	**Yes** GO to V3 . **No** GO to V4 .
V3 CHECK THE DCSM FOR DTCs	

• Ignition In ACC. • Enter the following diagnostic mode on the scan tool: Self Test - DCSM . • **Are any DTCs present?**	**Yes** GO to the Dual Climate Controlled Seat Module (DCSM) DTC Chart in this section. **No** GO to V8 .
V4 CHECK THE FCIM FOR DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test - FCIM . • **Are any DTCs retrieved?**	**Yes** REFER to the Master DTC Chart in Section 415-00 . **No** GO to V5 .
V5 CHECK THE HVAC MODULE FOR DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test - HVAC module. • **Are any DTCs retrieved?**	**Yes** REFER to the Master DTC Chart in Section 412-00A or Section 412-00B . **No** GO to V6 .
V6 MONITOR THE FCIM PIDs AND CHECK INPUTS	
• Enter the following diagnostic mode on the scan tool: DataLogger - FCIM - PIDs. ♦ Driver Cooled Seat (CC_SW_D_CL_S) ♦ Driver Heated Seat (CC_SW_D_HSEATS) ♦ Passenger Cooled Seat (CC_SW_P_CL_S) ♦ Passenger Heated Seat (CC_SW_P_HSEATS) • Monitor the FCIM PIDs while individually pushing the affected driver or passenger climate controlled seat switch buttons. • **Do the PID values agree with the switch positions?**	**Yes** GO to V7 . **No** INSTALL a new FCIM . REFER to Section 41 . TEST the system for normal operation.
V7 MONITOR THE HVAC MODULE PIDs AND CHECK INPUTS	
• Enter the following diagnostic mode on the scan tool: DataLogger - HVAC module - PIDs. ♦ Driver Cooled Seat (CC_SW_D_CL_S) ♦ Driver Heated Seat (CC_SW_D_HSEATS) ♦ Passenger Cooled Seat (CC_SW_P_CL_S)	**Yes** GO to V8 . **No** INSTALL a new HVAC module. REFER to Section 412-01 . TEST the system for normal operation.

♦ Passenger Heated Seat (CC_SW_P_HSEATS) • Monitor the HVAC module PIDs while individually pushing the affected driver or passenger climate controlled seat switch buttons. • **Do the PID values agree with the switch positions?**	
V8 CHECK DCSM USING ACTIVE COMMANDS	
• Enter the following diagnostic mode on the scan tool: DataLogger - DCSM - PIDs. ♦ Seat Cushion Thermal Electric Device Temperature (CSHTEMP) ♦ Seat Back Thermal Electric Device Temperature (BK_TEMP) ♦ Climate-controlled Seat Heat Command (TED_HEAT_D) ♦ Passenger Cushion Thermal Electric Device (TED) Temperature (PCSHTMP) ♦ Passenger Back TED Temperature (PBKTMP) ♦ Passenger TED Heat Mode (TED_HEAT_P) • **NOTE:** The DCSM active commands TED_HEAT_D (driver seat) and TED_HEAT_P (passenger seat) are limited to 15 seconds in the ON state, then turn OFF. • Operate the affected climate controlled seat using active commands while monitoring the appropriate PIDs. ♦ When the command is in process, the TED temperature PIDs on the affected seat being commanded should momentarily increase. If no temperature increase is noted, remove the cushion blower filter and repeat the active command while physically monitoring the cushion blower for fan movement. • **Do the PID states or cushion blower movement indicate climate controlled seat operation?**	**Yes** CHECK for causes of the intermittent fault. INSPECT the connectors, terminals and wiring. ATTEMPT to recreate the fault by flexing the wire harness and operating the system. CHECK the electrical connectors for corrosion, poor pin contact or pushed-out pins. REPAIR any intermittent concerns found and TIGHTEN any loose HVAC module connector pins. REPEAT the self-test. CHECK the system for normal operation. If no intermittent concerns are found, CARRY T the Component Test - Thermo-Electric Device (TED) Cooling Performance in this section for both seats. REPEAT the self-test. **No** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. CLEAR the DTCs.

Pinpoint Test W: DTCs B103B and B1111

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

The Dual Climate Controlled Seat Module (DCSM) is supplied volta at all times, but the climate controlled seat system only operates with the engine running. The system can be operated with the ignition ON engine OFF by using a scan tool to bypass the climate controlled seat buttons on the touchscreen interface. When commanding a heat or cool mode operation in this manner, it only operates in 15-second intervals. Both voltage supply circuits are spliced together internal to the DCSM , so if one circuit becomes open, both seats can still be operated. However, if a fault occurs setting a DTC specific to either climate controlled seat, only the affected seat is disabled by the DCSM .

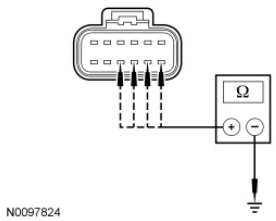
The seat cushion is equipped with a Thermo-Electric Device (TED) assembly that includes a seat blower (fan motor, serviced as an assembly with the TED). Similarly, the seat backrest is also equipped with its own TED assembly with blower. Cabin air is drawn through the blower and distributed to each of the TED modules located in the seat cushion and backrest. The TEDs then heat or cool the air. The air is then directed into the foam pad and manifold where it is distributed along the surface of the cushion and backrest of the seat. Once the system is activated, the DCSM uses a set of flexible algorithms to control the heating/cooling modes and the blower speed dependant on the HVAC module seat switch settings.

- DTC B103B (Thermo-Electric Driver Overcurrent Low) - If DCSM outputs to the driver seat backrest or cushion TED (circuit pin G, H, J or K at the DCSM connector) or any components within these circuit loops are shorted to ground or a TED resistance of less than 0.9 ohm is sensed, the DCSM will shut down the driver seat system and set this DTC.
- DTC B1111 (Driver Thermo-Electric Device Control Overtemperature Fault) - If the DCSM TED driver integrated circuit temperature exceeds 175°C (347°F), the DCSM will shut down the driver seat system and set this DTC.

This pinpoint test is intended to diagnose the following:

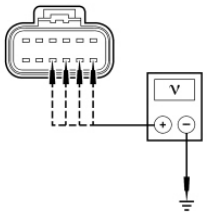
- Wiring, terminals or connectors
- TED assembly
- DCSM

PINPOINT TEST W: DTCs B103B AND B1111



NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

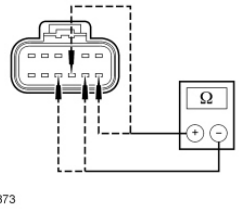


NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
W1 CHECK TED CIRCUITS FOR A SHORT TO	

GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: DCSM C3305A. • Measure the resistance between DCSM C3305A, harness side and ground using the following chart: **Connector** / **Circuit** C3305A-G — CHS02 (YE/BU) C3305A-H — RHS02 (BU/OG) C3305A-J — CHS01 (GY/VT) C3305A-K — RHS01 (WH/VT)  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to W2 . **No** If the resistance of C3305A-G, circuit CHS02 (YE/BU) and/or C3305A-H, circuit RHS02 (BU/OG) to ground is **not** greater than 10,000 ohms, GO to W6 . If the resistance of C3305A-J, circuit CHS01 (GY/VT) and/or C3305A-K, circuit RHS01 (WH/VT) to ground is **not** greater than 10,000 ohms, GO to W7 .
W2 CHECK TED CIRCUITS FOR A SHORT TO VOLTAGE	
• ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between DCSM C3305A, harness side and ground using the following chart: **Connector** / **Circuit** C3305A-G — CHS02 (YE/BU)	**Yes** If voltage is present at C3305A-G and/or C3305A-H, GO to W8 . If voltage is present at C3305A-J and/or C3305A-K, GO to W9 . **No** GO to W3 .



C3305A-H	RHS02 (BU/OG)
C3305A-J	CHS01 (GY/VT)
C3305A-K	RHS01 (WH/VT)

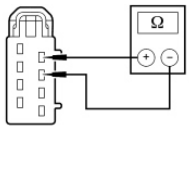
- **Is voltage present on any circuits?**

W3 CHECK THE RESISTANCE OF THE TED AND WIRING

- Ignition OFF.
- Measure the resistance between:
  - DCSM C3305A-G, circuit CHS02 (YE/BU), harness side and DCSM C3305A-H, circuit RHS02 (BU/OG), harness side.
  - DCSM C3305A-J, circuit CHS01 (GY/VT), harness side and C3305A-K, circuit RHS01 (WH/VT), harness side.

- **Are the resistances between 0.9 and 10 ohms?**

Yes
INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. CLEAR the DTCs.



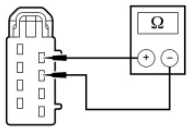
DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

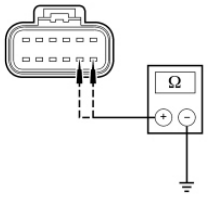
No
If the resistance between DCSM C3305A-G and C3305A-H is **not** between 0.9 and 10 ohms, GO to W5 .

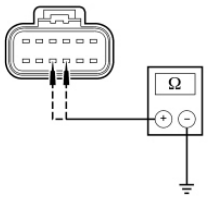
If the resistance between DCSM C3305A-J and C3305A-K is **not** between 0.9 and 10 ohms, GO to W4 .

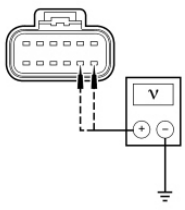
W4 CHECK THE BACKREST TED RESISTANCE

- Disconnect: Backrest TED C3310.
- Measure the resistance between backrest TED C3310 pin 1 and pin 3, component side.

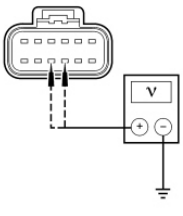








- **Is the resistance between 0.9 and 10 ohms?**



Yes
REPAIR circuit CHS01 (GY/VT) or RHS01 (WH/VT) for an open. REPEAT the self-test. CLEAR the DTCs.

DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

No
INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric

	Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
W5 CHECK THE CUSHION TED RESISTANCE	
• Disconnect: Cushion TED C3300. • Measure the resistance between cushion TED C3300 pin 1 and pin 3, component side.  N0042874 • **Is the resistance between 0.9 and 10 ohms?**	**Yes** REPAIR circuit CHS02 (YE/BU) or RHS02 (BU/OG) for an open. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
W6 CHECK CUSHION TED CIRCUITS FOR A SHORT TO GROUND	
• Disconnect: Cushion TED C3300. • Measure the resistance between: ♦ DCSM C3305A-G, circuit CHS02 (YE/BU), harness side and ground. ♦ DCSM C3305A-H, circuit RHS02 (BU/OG), harness side and ground.  N0042875 • **Are the resistances greater than 10,000 ohms?**	**Yes** INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs.

	DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
W7 CHECK BACKREST TED CIRCUITS FOR A SHORT TO GROUND	
• Disconnect: Backrest TED C3310. • Measure the resistance between: ♦ DCSM C3305A-J, circuit CHS01 (GY/VT), harness side and ground. ♦ DCSM C3305A-K, circuit RHS01 (WH/VT), harness side and ground.  N0042876 • **Are the resistances greater than 10,000 ohms?**	**Yes** INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
W8 CHECK CUSHION TED CIRCUITS FOR A SHORT TO VOLTAGE	
• Disconnect: Cushion TED C3300. • Ignition ON. • Measure the voltage between: ♦ DCSM C3305A-G, circuit CHS02 (YE/BU), harness side and ground. ♦ DCSM C3305A-H, circuit RHS02 (BU/OG), harness side and ground.  N0042877 • **Is voltage present on either circuit?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT

	passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
W9 CHECK BACKREST TED CIRCUITS FOR A SHORT TO VOLTAGE	
• Disconnect: Backrest TED C3310. • Ignition ON. • Measure the voltage between: ♦ DCSM C3305A-J, circuit CHS01 (GY/VT), harness side and ground. ♦ DCSM C3305A-K, circuit RHS01 (WH/VT), harness side and ground.  N0042878 • **Is voltage present on either circuit?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test X: DTC B103C

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

The Dual Climate Controlled Seat Module (DCSM) is supplied voltage at all times, but the climate controlled seat system only operates with the engine running. The system can be operated with the ignition ON engine OFF by using a scan tool to bypass the climate controlled seat buttons on the touchscreen interface. When commanding a heat or cool mode operation in this manner, it only operates in 15-second intervals. Both voltage supply circuits are spliced together internal to the DCSM , so if one circuit becomes open, both seats can still be operated. However, if a fault occurs setting a DTC specific to either climate controlled seat, only the affected seat is disabled by the DCSM .

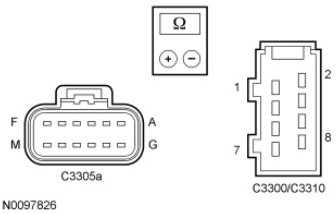
The seat cushion is equipped with a Thermo-Electric Device (TED) assembly that includes a seat blower (fan motor, serviced as an assembly with the TED). Similarly, the seat backrest is also equipped with its own TED assembly with blower. Cabin air is drawn through the blower and distributed to each of the TED modules located in the seat cushion and backrest. The TEDs then heat or cool the air. The air is then directed into the foam pad and manifold where it is distributed along the surface of the cushion and backrest of the seat. Once the system is activated, the DCSM uses a set of flexible algorithms to control the heating/cooling modes and the blower speed dependant on the HVAC module seat switch settings.

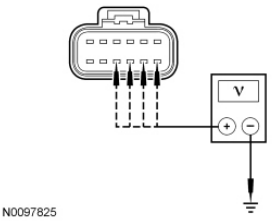
- DTC B103C (Thermo-Electric Driver Open Load) - If DCSM outputs to the driver seat backrest or cushion TED (circuit pins G, H, J or K at the DCSM connector) or any components within these circuit loops are open, disconnected or a TED resistance greater than 90 kohms is sensed, the DCSM continues normal operation and sets this DTC.

This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- TED assembly
- DCSM

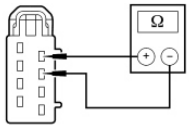
PINPOINT TEST X: DTC B103C

NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**





NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .



NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
X1 CHECK TED CIRCUITS FOR AN OPEN	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: DCSM C3305A. • Disconnect: Cushion TED C3300. • Disconnect: Backrest TED C3310. • Measure the resistance between DCSM C3305A, harness side and cushion TED C3300, harness side; and between DCSM C3305A, harness side and backrest TED C3310, harness side using the following chart:	**Yes** GO to X2 . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

DCSM Connector	Circuit	TED Connector
C3305A-G	CHS02 (YE/BU)	C3300-1
C3305A-H	RHS02 (BU/OG)	C3300-3
C3305A-J	CHS01 (GY/VT)	C3310-1
C3305A-K	RHS01 (WH/VT)	C3310-3

 • **Are the resistances less than 5 ohms?**	
X2 CHECK TED CIRCUITS FOR A SHORT TO VOLTAGE	
• ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between DCSM C3305A, harness side and ground using the following chart: **Connector** / **Circuit** C3305A-G — CHS02 (YE/BU) C3305A-H — RHS02 (BU/OG) C3305A-J — CHS01 (GY/VT) C3305A-K — RHS01 (WH/VT)  • **Is voltage present on either circuit?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to X3 .
X3 CHECK THE BACKREST AND CUSHION TED RESISTANCE	
• Ignition OFF. • Measure the resistance between: ♦ backrest TED C3310 pin 1 and pin 3, component side. ♦ cushion TED C3310 pin 1 and pin 3, component side.	**Yes** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery

 N0042874 • **Are the resistances between 0.9 and 10 ohms?**	ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** If backrest TED resistance is **not** between 0.9 and 10 ohms, INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. If cushion TED resistance is **not** between 0.9 and 10 ohms, INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test Y: DTC B103D

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

The Dual Climate Controlled Seat Module (DCSM) is supplied voltage at all times, but the climate controlled seat system only operates with the engine running. The system can be operated with the ignition ON engine OFF by using a scan tool to bypass the climate controlled seat buttons on the touchscreen interface. When commanding a heat or cool mode operation in this manner, it only operates in 15-second intervals. Both voltage supply circuits are spliced together internal to the DCSM , so if one circuit becomes open, both seats can still be operated. However, if a fault occurs setting a DTC specific to either climate controlled seat, only the affected seat is disabled by the DCSM .

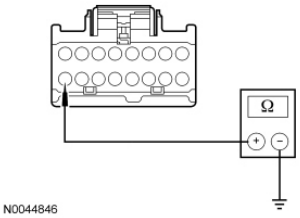
The seat cushion is equipped with a Thermo-Electric Device (TED) assembly that includes a seat blower (fan motor, serviced as an assembly with the TED). Similarly, the seat backrest is also equipped with its own TED assembly with blower. Cabin air is drawn through the blower and distributed to each of the TED modules located in the seat cushion and backrest. The TEDs then heat or cool the air. The air is then directed into the foam pad and manifold where it is distributed along the surface of the cushion and backrest of the seat. Once

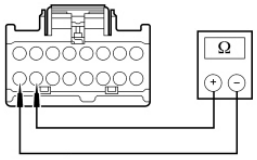
the system is activated, the DCSM uses a set of flexible algorithms to control the heating/cooling modes and the blower speed dependant on the HVAC module seat switch settings.

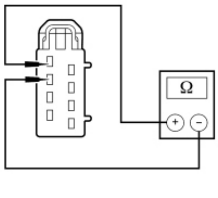
- DTC B103D (Blower Driver Overtemperature) - If the DCSM outputs to the driver seat blower or any components within these circuit loops are shorted to ground or cause an excessive current draw, the DCSM will overheat, shut down the driver seat system and set this DTC.

This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- TED assembly
- DCSM

PINPOINT TEST Y: DTC B103D







NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

NOTE: If a seat equipped with a seat mounted side air bag being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
Y1 CHECK THE BLOWER MOTOR FEED CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C327. • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: DCSM C3305C. • Disconnect: Cushion TED C3300. • Disconnect: Backrest TED C3310. • Measure the resistance between DCSM C3305C-16, circuit CHS03 (GN/BN), harness side and ground.	**Yes** GO to Y2 . **No** REPAIR the circuit. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

 N0044846 • **Is the resistance greater than 10,000 ohms?**	
Y2 CHECK FOR A SHORT BETWEEN THE BLOWER MOTOR FEED AND GROUND CIRCUITS	
• Measure the resistance between DCSM C3305C-15, circuit RHS03 (GY/OG), harness side and C3305C-16, circuit CHS03 (GN/BN), harness side.  N0044847 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to Y3 . **No** REPAIR the circuits. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
Y3 CHECK THE BACKREST AND CUSHION BLOWER MOTOR RESISTANCE	
• **NOTE:** The ohmmeter must be connected with the positive lead to pin 2 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between: ♦ backrest TED C3310 pin 2 and pin 4, component side. ♦ cushion TED C3300 pin 2 and pin 4, component side.  N0042881 • **Are the resistances between 4,000 and 10,000 ohms?**	**Yes** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** If cushion TED resistance is **not** between 4,000 and 10,000 ohms, INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. If backrest TED resistance is **not** between 4,000 and 10,000 ohms, INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module

	C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test Z: DTCs B1113 and B111B

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

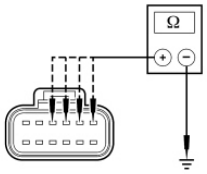
The Dual Climate Controlled Seat Module (DCSM) is supplied voltage at all times, but the climate controlled seat system only operates with the engine running. The system can be operated with the ignition ON engine OFF by using a scan tool to bypass the climate controlled seat buttons on the touchscreen interface. When commanding a heat or cool mode operation in this manner, it only operates in 15-second intervals. Both voltage supply circuits are spliced together internal to the DCSM , so if one circuit becomes open, both seats can still be operated. However, if a fault occurs setting a DTC specific to either climate controlled seat, only the affected seat is disabled by the DCSM .

The seat cushion is equipped with a Thermo-Electric Device (TED) assembly that includes a seat blower (fan motor, serviced as an assembly with the TED). Similarly, the seat backrest is also equipped with its own TED assembly with blower. Cabin air is drawn through the blower and distributed to each of the TED modules located in the seat cushion and backrest. The TEDs then heat or cool the air. The air is then directed into the foam pad and manifold where it is distributed along the surface of the cushion and backrest of the seat. Once the system is activated, the DCSM uses a set of flexible algorithms to control the heating/cooling modes and the blower speed dependant on the HVAC module seat switch settings.

- DTC B1113 (Passenger Thermo-Electric Device Control Overtemperature Fault) - If the DCSM TED driver integrated circuit temperature exceeds 175°C (347°F), the DCSM will shut down the passenger seat system and set this DTC.
- DTC B111B (Passenger Thermo-Electric Driver Overcurrent Low) - If DCSM outputs to the passenger seat backrest or cus TED (circuit pins A, B, C or D at the DCSM connector) or any components within these circuit loops are shorted to ground or a TED resistance of less than 0.9 ohm is sensed, the DCSM will shut down the passenger seat system and set this DTC.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- TED assembly
- DCSM



PINPOINT TEST Z: DTCs B1113 AND B111B

NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER

	the SRS . REFER to Section 501-20B .

Pinpoint Test AA: DTC B111C

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

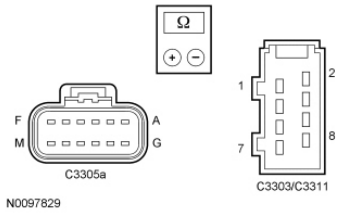
The Dual Climate Controlled Seat Module (DCSM) is supplied voltage at all times, but the climate controlled seat system only operates with the engine running. The system can be operated with the ignition ON engine OFF by using a scan tool to bypass the climate controlled seat buttons on the touchscreen interface. When commanding a heat or cool mode operation in this manner, it only operates in 15-second intervals. Both voltage supply circuits are spliced together internal to the DCSM , so if one circuit becomes open, both seats can still be operated. However, if a fault occurs setting a DTC specific to either climate controlled seat, only the affected seat is disabled by the DCSM .

The seat cushion is equipped with a Thermo-Electric Device (TED) assembly that includes a seat blower (fan motor, serviced as an assembly with the TED). Similarly, the seat backrest is also equipped with its own TED assembly with blower. Cabin air is drawn through the blower and distributed to each of the TED modules located in the seat cushion and backrest. The TEDs then heat or cool the air. The air is then directed into the foam pad and manifold where it is distributed along the surface of the cushion and backrest of the seat. Once the system is activated, the DCSM uses a set of flexible algorithms to control the heating/cooling modes and the blower speed dependant on the HVAC module seat switch settings.

- DTC B111C (Passenger Thermo-Electric Driver Open Load) - If DCSM outputs to the passenger seat backrest or cushion TED (circuit pins A, B, C or D at the DCSM connector) or any components within these circuit loops are open, disconnected or a TED resistance greater than 90 kohms is sensed, the DCSM continues normal operation and sets this DTC.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- TED assembly
- DCSM



PINPOINT TEST AA: DTC B111C

NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

	module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AB: DTC B111D

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

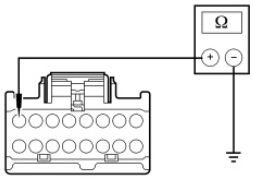
The Dual Climate Controlled Seat Module (DCSM) is supplied voltage at all times, but the climate controlled seat system only operates with the engine running. The system can be operated with the ignition ON engine OFF by using a scan tool to bypass the climate controlled seat buttons on the touchscreen interface. When commanding a heat or cool mode operation in this manner, it only operates in 15-second intervals. Both voltage supply circuits are spliced together internal to the DCSM , so if one circuit becomes open, both seats can still be operated. However, if a fault occurs setting a DTC specific to either climate controlled seat, only the affected seat is disabled by the DCSM .

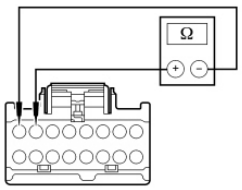
The seat cushion is equipped with a Thermo-Electric Device (TED) assembly that includes a seat blower (fan motor, serviced as an assembly with the TED). Similarly, the seat backrest is also equipped with its own TED assembly with blower. Cabin air is drawn through the blower and distributed to each of the TED modules located in the seat cushion and backrest. The TEDs then heat or cool the air. The air is then directed into the foam pad and manifold where it is distributed along the surface of the cushion and backrest of the seat. Once the system is activated, the DCSM uses a set of flexible algorithms to control the heating/cooling modes and the blower speed dependant on the HVAC module seat switch settings.

- DTC B111D (Passenger Blower Driver Overtemperature) - If the DCSM outputs to the passenger seat blower or any components within these circuit loops are shorted to ground or cause an excessive current draw, the DCSM will overheat, shut down the passenger seat system and set this DTC.

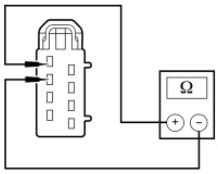
This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- TED assembly
- DCSM





PINPOINT TEST AB: DTC B111D



NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
AB1 CHECK THE BLOWER MOTOR FEED CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305C. • Disconnect: Cushion TED C3303. • Disconnect: Backrest TED C3311. • Measure the resistance between DCSM C3305C-8, circuit CHS08 (BN/YE), harness side and ground. AB3 CHECK THE BACKREST CUSHION BLOWER MOTOR RESISTANCE	
• **NOTE:** The ohmmeter must be connected with the positive lead to pin 2 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between: ♦ cushion TED C3303 pin 2 and pin 4, component side.	**Yes** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

♦ backrest TED C3311 pin 2 and pin 4, component side.  N0042881 • **Are the resistances between 4,000 and 10,000 ohms?**	**No** If cushion TED resistance is **not** between 4,000 and 10,000 ohms, INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. If backrest TED resistance is **not** between 4,000 and 10,000 ohms, INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AC: DTC B19A1

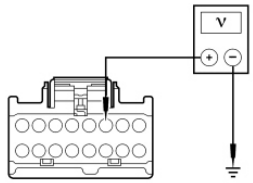
Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

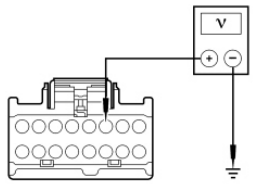
Normal Operation

The Dual Climate Controlled Seat Module (DCSM) supplies voltage and ground to the passenger seat cushion Thermo-Electric Device (TED). The DCSM also sends a speed control voltage signal to the TED to control blower speed.

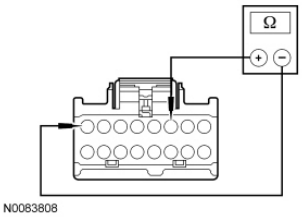
- DTC B19A1 (Passenger Seat Cushion Blower Speed Short to Battery) - If the passenger seat cushion blower speed circuit is shorted to voltage, the DCSM will shut down the passenger seat system and set this DTC.

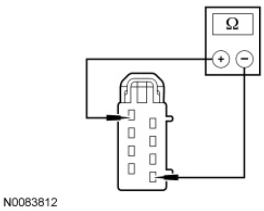
This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- TED and blower assembly
- DCSM





PINPOINT TEST AC: DTC B19A1





NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

NOTE: If a seat equipped with a seat mounted side air bag is being rviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
AC1 CHECK THE CUSHION TED BLOWER MOTOR SPEED CONTROL CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305C. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between C3305C-3, circuit VHS23 (BN/BU), harness side and ground.  N0083372 • **Is any voltage present?**	**Yes** GO to AC2 . **No** GO to AC3 .
AC2 CHECK THE CUSHION TED BLOWER MOTOR SPEED CONTROL CIRCUIT FOR A SHORT TO VOLTAGE	
• Disconnect: Cushion TED C3303. • Measure the voltage between DCSM C3305C-3, circuit VHS23 (BN/BU), harness side and ground.  N0083372 • **Is any voltage present?**	**Yes** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AC3 .
AC3 CHECK THE CUSHION TED BLOWER MOTOR SPEED CONTROL AND BLOWER MOTOR FEED CIRCUITS FOR A SHORT TOGETHER	

• Ignition OFF. • Disconnect: Cushion TED C3303. • Measure the resistance between DCSM C3305C-3, circuit VHS23 (BN/BU), harness side and C3305C-8, circuit CHS08 (BN/YE), harness side.  N0083808 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AC4 . **No** REPAIR the circuits. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AC4 CHECK THE CUSHION TED RESISTANCE FOR AN INTERNAL SHORT	
• Measure the resistance between cushion TED C3303 pin 2 and pin 7, component side.  N0083812 • **Is the resistance greater than 2,000,000 ohms?**	**Yes** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AD: DTC B19A2

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

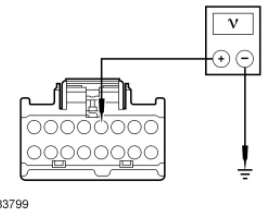
Normal Operation

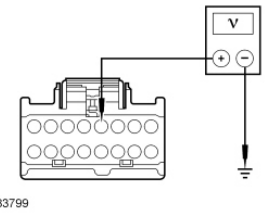
The Dual Climate Controlled Seat Module (DCSM) supplies voltage and ground to the passenger seat backrest Thermo-Electric Device (TED). The DCSM also sends a speed control voltage signal to the TED to control blower speed.

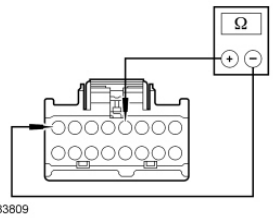
- DTC B19A2 (Passenger Seat Back Blower Speed Short to Battery) - If the passenger seat backrest blower speed circuit is shorted to voltage, the DCSM will shut down the passenger seat system and set this DTC.

This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- TED and blower assembly
- DCSM

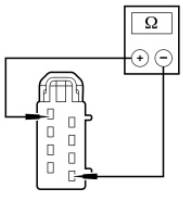
PINPOINT TEST AD: DTC B19A2







NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**



NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
AD1 CHECK THE BACKREST TED BLOWER MOTOR SPEED CONTROL CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305C. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between C3305C-4, circuit VHS21 (BU/WH), harness side and ground.	**Yes** GO to AD2 . **No** GO to AD3 .

 N0083799 • **Is any voltage present?**	
AD2 CHECK THE BACKREST TED BLOWER MOTOR SPEED CONTROL CIRCUIT FOR A SHORT TO VOLTAGE	
• Disconnect: Backrest TED C3311. • Measure the voltage between DCSM C3305C-4, circuit VHS21 (BU/WH), harness side and ground.  N0083799 • **Is any voltage present?**	**Yes** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AD3 .
AD3 CHECK THE BACKREST TED BLOWER MOTOR SPEED CONTROL AND BLOWER MOTOR FEED CIRCUITS FOR A SHORT TOGETHER	
• Ignition OFF. • Disconnect: Backrest TED C3311. • Measure the resistance between DCSM C3305C-4, circuit VHS21 (BU/WH), harness side and C3305C-8, circuit CHS08 (BN/YE), harness side.  N0083809 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AD4 . **No** REPAIR the circuits. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AD4 CHECK THE BACKREST TED RESISTANCE FOR AN INTERNAL SHORT	

• Measure the resistance between backrest TED C3311 pin 2 and pin 7, component side.  N0083812 • **Is the resistance greater than 2,000,000 ohms?**	**Yes** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AE: DTC B19A3

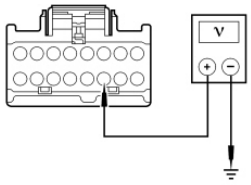
Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

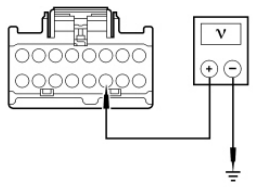
The Dual Climate Controlled Seat Module (DCSM) supplies voltage and ground to the driver seat cushion Thermo-Electric Device (TED). The DCSM also sends a speed control voltage signal to the TED to control blower speed.

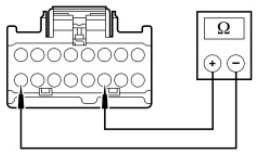
- DTC B19A3 (Driver Seat Cushion Blower Speed Short to Battery) - If the driver seat cushion blower speed circuit is shorted to voltage, the DCSM will shut down the driver seat system and set this DTC.

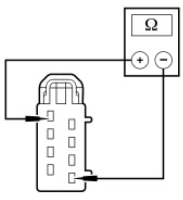
This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- TED and blower assembly
- DCSM



PINPOINT TEST AE: DTC B19A3







NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
AE1 CHECK THE CUSHION TED BLOWER MOTOR SPEED CONTROL CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305C. • **⚠ WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between C3305C-11, circuit VHS18 (BN/GN), harness side and ground.  N0083800 • **Is any voltage present?**	**Yes** GO to AE2 . **No** GO to AE3 .
AE2 CHECK THE CUSHION TED BLOWER MOTOR SPEED CONTROL CIRCUIT FOR A SHORT TO VOLTAGE	

• Disconnect: Cushion TED C3300. • Measure the voltage between C3305C-11, circuit VHS18 (BN/GN), harness side and ground.  N0083800 • **Is any voltage present?**	**Yes** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AE3 .
AE3 CHECK THE CUSHION TED BLOWER MOTOR SPEED CONTROL AND BLOWER MOTOR FEED CIRCUITS FOR A SHORT TOGETHER	
• Ignition OFF. • Disconnect: Cushion TED C3300. • Measure the resistance between DCSM C3305C-11, circuit VHS18 (BN/GN), harness side and C3305C-16, circuit CHS03 (GN/BN), harness side.  N0083810 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AE4 . **No** REPAIR the circuits. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AE4 CHECK THE CUSHION TED RESISTANCE FOR AN INTERNAL SHORT	
• Measure the resistance between cushion TED C3300 pin 2 and pin 7, component side.  N0083812 • **Is the resistance greater than 2,000,000 ohms?**	**Yes** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

	No INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AF: DTC B19A4

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

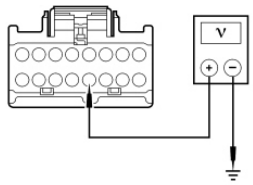
Normal Operation

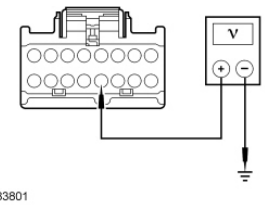
The Dual Climate Controlled Seat Module (DCSM) supplies voltage and ground to the driver seat backrest Thermo-Electric Device (TED). The DCSM also sends a speed control voltage signal to the TED to control blower speed.

- DTC B19A4 (Driver Seat Back Blower Speed Short to Battery) - If the driver seat backrest blower speed circuit is shorted to voltage, the DCSM will shut down the driver seat system and set this DTC.

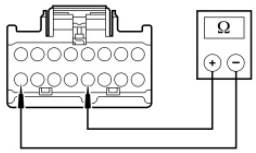
This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- TED and blower assembly
- DCSM

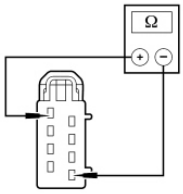
PINPOINT TEST AF: DTC B19A4





NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**





NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignitn switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take

AF1 CHECK THE BACKREST TED BLOWER MOTOR SPEED CONTROL CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305C. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between C3305C-12, circuit VHS16 (BU/GN), harness side and ground.  • **Is any voltage present?**	**Yes** GO to AF2 . **No** GO to AF3 .
AF2 CHECK THE BACKREST TED BLOWER MOTOR SPEED CONTROL CIRCUIT FOR A SHORT TO VOLTAGE	
• Disconnect: Backrest TED C3310. • Measure the voltage between C3305C-12, circuit VHS16 (BU/GN), harness side and ground.  • **Is any voltage present?**	**Yes** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AF3 .
AF3 CHECK THE BACKREST TED BLOWER MOTOR SPEED CONTROL AND BLOWER MOTOR FEED CIRCUITS FOR A SHORT TOGETHER	

• Ignition OFF. • Disconnect: Backrest TED C3310. • Measure the resistance between DCSM C3305C-12, circuit VHS16 (BU/GN), harness side and C3305c-16, circuit CHS03 (GN/BN), harness side.  N0083811 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AF4 . **No** REPAIR the circuits. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AF4 CHECK THE BACKREST TED RESISTANCE FOR AN INTERNAL SHORT	
• Measure the resistance between backrest TED C3310 pin 2 and pin 7, component side.  N0083812 • **Is the resistance greater than 2,000,000 ohms?**	**Yes** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AG: DTC B19A5

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

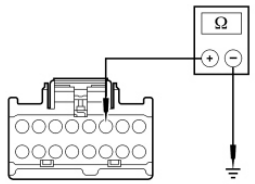
Normal Operation

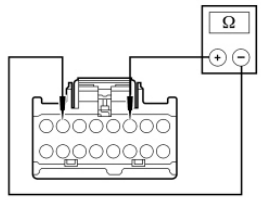
The Dual Climate Controlled Seat Module (DCSM) supplies voltage and ground to the passenger seat cushion Thermo-Electric Device (TED). The DCSM also sends a speed control voltage signal to the TED to control blower speed.

- DTC B19A5 (Passenger Seat Cushion Blower Speed Short to Ground) - If the passenger seat cushion blower speed circuit is shted to ground, the DCSM will shut down the passenger seat system and set this DTC.

This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- TED and blower assembly
- DCSM

PINPOINT TEST AG: DTC B19A5





NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
AG1 CHECK THE CUSHION TED BLOWER MOTOR SPEED CONTROL CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305C. • Disconnect: Cushion TED C3303. • Measure the resistance between DCSM C3305C-3, circuit VHS23 (BN/BU), harness side and ground.	**Yes** GO to AG2 . **No** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

 N0083842 • **Is the resistance greater than 10,000 ohms?**	
AG2 CHECK THE CUSHION TED BLOWER MOTOR SPEED CONTROL AND BLOWER MOTOR GROUND CIRCUITS FOR A SHORT TOGETHER	
• Measure the resistance between DCSM C3305C-3, circuit VHS23 (BN/BU), harness side and C3305C-7, circuit RHS08 (VT/WH), harness side.  N0083843 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuits. REPEAT the self-test. CLEAR the DTCs. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AH: DTC B19A6

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

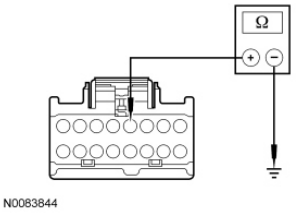
The Dual Climate Controlled Seat Module (DCSM) supplies voltage and ground to the passenger seat backrest Thermo-Electric Device (TED). The DCSM also sends a speed control voltage signal to the TED to control blower speed.

- DTC B19A6 (Passenger Seat Back Blower Speed Short to Ground) - If the passenger seat backrest blower speed circuit is shorted to ground, the DCSM will shut down the passenger seat system and set this DTC.

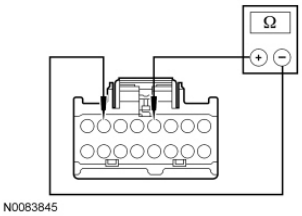
This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- TED and blower assembly

- DCSM



PINPOINT TEST AH: DTC B19A6



NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
AH1 CHECK THE BACKREST TED BLOWER SPEED CONTROL CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305C. • Disconnect: Backrest TED C3311. • Measure the resistance between DCSM C3305C-4, circuit VHS21 (BU/WH), harness side and ground.  N0083844 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AH2 . **No** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AH2 CHECK THE BACKREST TED BLOWER MOTOR SPEED CONTROL AND BLOWER MOTOR GROUND CIRCUITS FOR A SHORT TOGETHER	

• Measure the resistance between DCSM C3305C-4, circuit VHS21 (BU/WH), harness side and C3305C-7, circuit RHS08 (VT/WH), harness side.  N0083845 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuits. REPEAT the self-test. CLEAR the DTCs. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AI: DTC B19A7

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

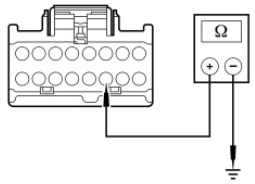
Normal Operation

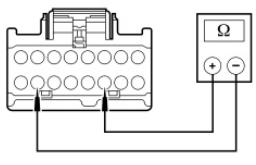
The Dual Climate Controlled Seat Module (DCSM) supplies voltage and ground to the driver seat cushion Thermo-Electric Device (TED). The DCSM also sends a speed control voltage signal to the TED to control blower speed.

- DTC B19A7 (Driver Seat Cushion Blower Speed Short to Ground) - If the driver seat cushion blower speed circuit is shorted to ground, the DCSM will shut down the driver seat system and set this DTC.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- TED and blower assembly
- DCSM





PINPOINT TEST AI: DTC B19A7

NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCsand system failure. Touching the tip of these connector pins is recommended instead.**

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
AI1 CHECK THE CUSHION TED BLOWER MOTOR SPEED CONTROL CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305C. • Disconnect: Cushion TED C3300. • Measure the resistance between DCSM C3305C-11, circuit VHS18 (BN/GN), harness side and ground.  N0083846 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AI2 . **No** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AI2 CHECK THE CUSHION TED BLOWER MOTOR SPEED CONTROL AND BLOWER MOTOR GROUND CIRCUITS FOR A SHORT TOGETHER	
• Measure the resistance between DCSM C3305C-11, circuit VHS18 (BN/GN), harness side and C3305C-15, circuit RHS03 (GY/OG), harness side.  N0083847 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

	No REPAIR the circuits. REPEAT the self-test. CLEAR the DTCs. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AJ: DTC B19A8

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

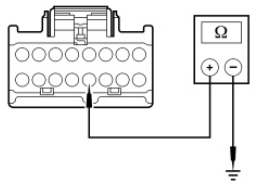
Normal Operation

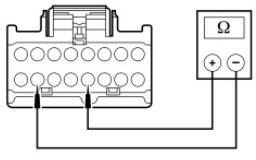
The Dual Climate Controlled Seat Module (DCSM) supplies voltage and ground to the driver seat backrest Thermo-Electric Device (TED). The DCSM also sends a speed control voltage signal to the TED to control blower speed.

- DTC B19A8 (Driver Seat Back Blower Speed Short to Ground) - If the driver seat backrest blower speed circuit is shorted to ground, the DCSM will shut down the driver seat system and set this DTC.

This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- TED and blower assembly
- DCSM

PINPOINT TEST AJ: DTC B19A8





NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take

AJ1 CHECK THE BACKREST TED BLOWER MOTOR SPEED CONTROL CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305C. • Disconnect: Backrest TED C3310. • Measure the resistance between DCSM C3305C-12, circuit VHS16 (BU/GN), harness side and ground.  N0083848 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AJ2 . **No** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AJ2 CHECK THE BACKREST TED BLOWER MOTOR SPEED CONTROL AND BLOWER MOTOR GROUND CIRCUITS FOR A SHORT TOGETHER	
• Measure the resistance between DCSM C3305C-12, circuit VHS16 (BU/GN), harness side and C3305C-15, circuit RHS03 (GY/OG), harness side.  N0083849 • **Is the resistance greater than 10,000 ohms?**	**Yes** INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** REPAIR the circuits. REPEAT the self-test. CLEAR the DTCs. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag

	module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AK: DTC B2486

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

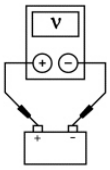
The Dual Climate Controlled Seat Module (DCSM) monitors the input voltage for correct operation. If the DCSM detects input voltage below 10 volts or above 15 volts, it will store DTC B2486 in memory. If DTC B2486 is set, the DCSM enters a standby mode and suspends the system outputs for the operation of both seats until system voltage between 10 and 15 volts is restored and a climate controlled seat switch button is selected on.

- DTC B2486 (Climate Control Seat Module Voltage Out of Range) - If the DCSM detects voltage below 10 volts or greater than 15 volts, the DTC is set.

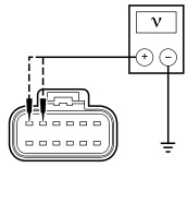
This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- DCSM

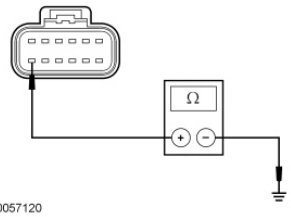
PINPOINT TEST AK: DTC B2486

NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**



NOTE: DTC B1676 can be set if the vehicle has been recently jump started, the battery has been recently charged or the battery has been discharged. The battery may become discharged due to excessive load(s) on the charging system from aftermarket accessories or if the battery has been left unattended with the accessories on.





NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
AK1 RETRIEVE ALL CMDTCs IN ALL MODULES	
• Ignition ON.	**Yes** REFER to Section 414-00 to diagnose the charging system.

• Enter the following diagnostic mode on the scan tool: Self Test - ALL CMDTCs . • **Is DTC B2486 or B1676 present in one or more modules AND P0563, P0620, P0625, P0626 or P065B retrieved from the PCM?**	**No** GO to AK2 .
AK2 CHECK THE BATTERY CONDITION	
NOTE: DTC B1676 can be set if the vehicle has been recently jump started, the battery has been recently charged or the battery has been discharged. The battery may become discharged due to excessive load(s) on the charging system from aftermarket accessories or if the battery has been left unattended with the accessories on. • Ignition OFF. • Carry out the Battery Condition Test. Refer to Section 414-01 . • **Did the battery pass the condition test?**	**Yes** If the battery passed the condition test, but required a recharge, REFER to Section 414-00 to diagnose the charging system. CLEAR all Continuous Memory Diagnostic Trouble Codes (CMDTCs). TEST the system for normal operation. If the battery passed the condition test and did not require a recharge, GO to AK3 . **No** INSTALL a new battery. CLEAR all CMDTCs . TEST the system for normal operation.
AK3 CHECK THE CHARGING SYSTEM VOLTAGE	
NOTE: Do not allow the engine speed to increase above 2,000 rpm while performing this step or the generator may self excite and result in default charging system output voltage. If engine speed goes above 2,000 rpm, shut the vehicle OFF and restart the engine before performing this step. • Start the engine. • Measure voltage of the battery with and without a load on the charging system as follows: ♦ Turn off all accessories and run the engine at 1,500 rpm for a minimum of 2 minutes while measuring battery voltage. ♦ Turn on headlights and HVAC fan on high and run engine at 1,500 rpm for a minimum of 2 minutes while measuring battery voltage.  AJ0210-A • **Are the voltages between 13 and 15.2 volts?**	**Yes** GO to AK4 . **No** REFER to Section 414-00 to diagnose the charging system. CLEAR all CMDTCs . TEST the system for normal operation.
AK4 CHECK VOLTAGE TO THE DCSM	

• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305A. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between: ♦ DCSM C3305A-E, circuit SBB12 (GN/RD), harness side and ground. ♦ DCSM C3305A-F, circuit SBB12 (GN/RD), harness side and ground.  N0042997 • **Are the voltages greater than 10 volts?**	**Yes** GO to AK5 . **No** VERIFY BJB fuse 12 (30A) is OK. If OK, REPAIR the circuit in question. If not OK, REFER to the Wiring Diagrams manual to identify possible causes of the circuit short. CLEAR all CMDTCs . REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AK5 CHECK THE DCSM GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Measure the resistance between DCSM C3305A-M, circuit GD139 (BK/YE), harness side and ground.  N0057120 • Repeat this measurement while wiggling the harness. • **Is the resistance less than 5 ohms?**	**Yes** GO to AK6 . **No** REPAIR the circuit. CLEAR all CMDTCs . REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AK6 CHECK FOR CORRECT DCSM OPERATION	
• Check the harness and component side connectors for the following: ♦ corrosion. ♦ damaged pins.	**Yes** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. CLEAR all CMDTCs . REPEAT the self-test.

♦ pushed-out pins. • Connect: DCSM C3305A. • Make sure the DCSM connector is seated correctly. • Start the engine. • Operate the climate controlled seats and verify system operation. • Enter the following diagnostic mode on the scan tool: Self Test - DCSM . • **Is DTC B1317 or B1318 still present?**	DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR all CMDTCs . REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AL: DTC B2729

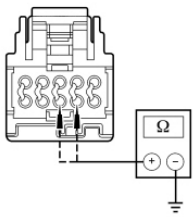
Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

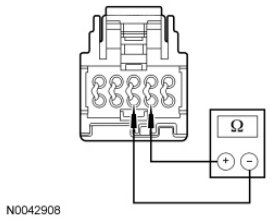
The Dual Climate Controlled Seat Module (DCSM) monitors seat cushion temperature while it supplies voltage and ground to both blower motors. The DCSM also supplies a variable voltage signal to control the blower speed. Cabin air enters the blower through a filter attached to the Thermo-Electric Device (TED) housing. Conditioned air exits the TED and flows through a manifold attached to the foam pad.

- DTC B2729 (Cushion Over-Temp Detected) - In the heating mode, if the driver seat cushion TED temperature exceeds 85°C (185°F) for more than 34 seconds, the TED is disconnected or the duct is blocked, the DCSM will shut down the driver seat system and set this DTC.
- DTC B2729 (Cushion Over-Temp Detected) - In the cooling mode, if the driver seat cushion TED temperature exceeds 70°C (158°F) for more than 34 seconds, the TED is disconnected or the duct is blocked, the DCSM will shut down the driver seat system and set this DTC.

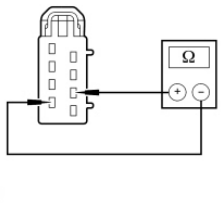
This pinpoint test is intended to diagnose the following:



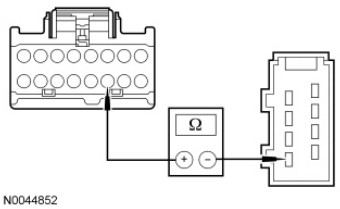
- Wiring, terminals or connectors
- Restricted cushion TED filter
- Crushed or restricted climate controlled seat manifold
- Cushion TED assembly



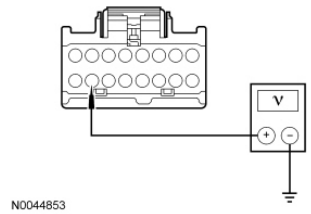
PINPOINT TEST AL: DTC B2729

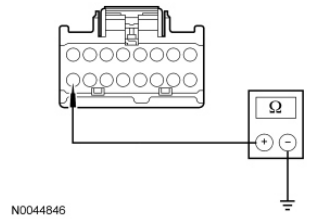


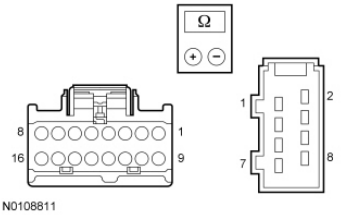
NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and systeilure. Touching the tip of these connector pins is recommended instead.**



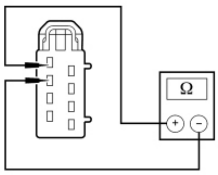
NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

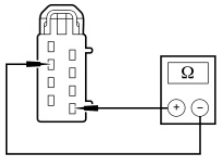




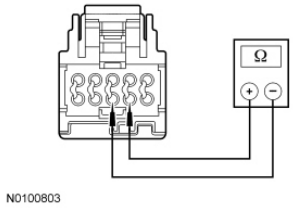


NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.



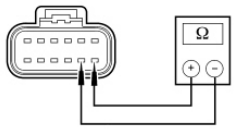


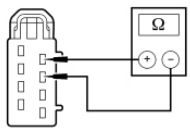
Test Step	Result / Action to Take
AL1 CHECK THE DCSM FOR ON-DEMAND DTCs	
• Start the vehicle and set the driver seat to HIGH heat. • Enter the following diagnostic mode on the scan tool: Self Test - DCSM . • **Was DTC B2729 retrieved on-demand during the self-test?**	**Yes** GO to AL2 . **No** GO to AL5 .
AL2 CHECK THE DRIVER SEAT CUSHION TED THERMISTOR CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327 and Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305B. • Disconnect: Driver Seat Cushion TED C3300. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the resistance between: ♦ DCSM C3305B-7, circuit VHS26 (VT), harness side and ground. ♦ DCSM C3305B-8, circuit RHS05 (YE/VT), harness side and ground.  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to AL3 . **No** REPAIR the circuit(s). CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AL3 CHECK THE DRIVER SEAT CUSHION TED THERMISTOR AND WIRING	



• Connect: Driver Seat Cushion TED C3300. • Measure the resistance between DCSM C3305B-7, circuit VHS26 (VT), harness side and DCSM C3305B-8, circuit RHS05 (YE/VT), harness side. Note the ambient temperature and refer to the following table. **Temperature / Resistance** 0-10°C (32-50°F) — 2,782-1,663 ohms 10-20°C (50-68°F) — 1,837-1,140 ohms 20-30°C (68-86°F) — 1,260-806 ohms 893-570 ohms 40-50°C (104-122°F) — 630-428 ohms  N0042908 • **Is the resistance within the limits indicated?**	**Yes** GO to AL18 . **No** GO to AL4 .
AL4 CHECK THE DRIVER SEAT CUSHION TED THERMISTOR	
• Disconnect: Driver Seat Cushion TED C3300. • Measure the resistance between driver seat cushion TED C3300 pin 5 and pin 8, component side. Note the ambient temperature and refer to the following table. **Temperature / Resistance** 0-10°C (32-50°F) — 2,782-1,663 ohms 10-20°C (50-68°F) — 1,837-1,140 ohms 20-30°C (68-86°F) — 1,260-806 ohms 30-40°C (86-104°F) — 893-570 ohms 40-50°C (104-122°F) — 630-428 ohms	**Yes** REPAIR circuit VHS26 (VT) or RHS05 (YE/VT) for an open or high resistance. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new driver seat cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313.

 N0042890 • **Is the resistance within the limits indicated?**	REPOWER the SRS . REFER to Section 501-20B .
AL5 CONFIRM THE FAULT WHILE MONITORING THE DCSM SEAT BACK THERMAL ELECTRIC DEVICE TEMPERATURE (BK_TEMP) AND SEAT CUSHION THERMAL ELECTRIC DEVICE TEMPERATURE (CSHTEMP) PIDs	
• Set the driver seat to OFF. • Enter the following diagnostic mode on the scan tool: Clear DTCs - DCSM . • Enter the following diagnostic mode on the scan tool: DataLogger - DCSM . • Monitor the DCSM PIDs BK_TEMP and CSHTEMP. • **NOTE:** A crushed seat cushion foam pad or a crushed climate controlled seat manifold may be the cause of the fault making it necessary to occupy the seat to recreate and identify the fault. • Attempt to recreate the fault. Start the vehicle and set the driver seat to HIGH heat for at least 15 minutes while occupying the seat. • **Do the PIDs increase incrementally (gradually) and stay within 15°C (27°F) of each other?**	**Yes** Fault not present at this time. Fault may have been set due to a past failure, incorrect use of the climate controlled seat system by repeated switching between heat and cool modes or due to excessive passenger compartment temperature. CLEAR the DTCs. REPEAT the self-test. **No** If the CSHTEMP PID increases incrementally and is greater than 15°C (27°F) of the BK_TEMP PID, GO to AL6 . If the CSHTEMP PID increases quickly (temperature "jumps" and does not increase incrementally) and is greater than 15°C (27°F) of the BK_TEMP PID, GO to AL16 .
AL6 COMPARE OPERATION OF THE DRIVER AND PASSENGER SEATS	
• With the engine running, set both front seats to HIGH cool. • Note the airflow exhausting from the driver seat cushion TED and compare it to the airflow exhausting from the passenger seat cushion TED . • Carry out a wiggle test of the wire harnesses between the DCSM and the driver seat cushion TED while monitoring blower operation of the TED . The blower should operate consistently and not change speeds • **Is the airflow exhausting from the driver seat cushion TED comparable to the airflow exhausting from the passenger seat cushion TED with no change in operation when carrying out the wiggle test?**	**Yes** GO to AL7 . **No** If the airflow exhausting from the driver seat cushion TED is not comparable to the airflow exhausting from the passenger seat cushion TED , GO to AL8 . If the driver seat cushion TED blower operation changed while carrying out the wiggle test, IDENTIFY and REPAIR the wiring fault. CLEAR the DTCs. REPEAT the self-test.
AL7 COMPARE OPERATION OF THE DRIVER AND PASSENGER SEATS WHILE OCCUPIED	





• Note the airflow exhausting from the driver seat cushion TED with the driver seat occupied and compare it to the airflow exhausting from the passenger seat cushion TED with the passenger seat occupied. • **Is the airflow exhausting from the driver seat cushion TED comparable to the airflow exhausting from the passenger seat cushion TED ?**	**Yes** GO to AL16 . **No** INSTALL a new driver seat cushion foam pad and/or climate controlled seat manifold. CLEAR the DTCs. REPEAT the self-test.
AL8 CHECK THE DRIVER SEAT CUSHION BLOWER FOR AN OBSTRUCTION OR RESTRICTED FILTER	
• Ignition OFF. • Inspect the blower of the driver seat cushion TED assembly for an obstruction or for a restricted filter. • **Is the blower obstructed or the filter restricted?**	**Yes** REMOVE the obstruction or INSTALL a new filter. CLEAR the DTCs. REPEAT the self-test. **No** GO to AL9 .
AL9 CHECK THE DRIVER SEAT CUSHION BLOWER SPEED CONTROL CIRCUIT FOR AN OPEN	
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327 and Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305C. • Disconnect: Driver Seat Cushion TED C3300. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the resistance between DCSM C3305C-11, circuit VHS18 (BN/GN), harness side and driver seat cushion TED C3300-7, circuit VHS18 (BN/GN), harness side.  N0044852 • **Is the resistance less than 5 ohms?**	**Yes** GO to AL10 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AL10 CHECK THE DRIVER SEAT CUSHION BLOWER CIRCUIT FOR A SHORT TO VOLTAGE	

• Ignition ON. • Measure the voltage between DCSM C3305C-15, circuit RHS03 (GY/OG), harness side and ground.  N0044853 • **Is any voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AL11 .
AL11 CHECK THE DRIVER SEAT CUSHION BLOWER CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between DCSM C3305C-16, circuit CHS03 (GN/BN), harness side and ground.  N0044846 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AL12 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AL12 CHECK THE DRIVER SEAT CUSHION BLOWER CIRCUITS FOR AN OPEN	
• Measure the resistance between: ♦ DCSM C3305C-16, circuit CHS03 (GN/BN), harness side and driver seat cushion TED C3300-2, circuit CHS03 (GN/BN), harness side. ♦ DCSM C3305C-15, circuit RHS03 (GY/OG), harness side and driver seat cushion TED C3300-4, circuit RHS03 (GY/OG), harness side.  N0108811 • **Are the resistances less than 5 ohms?**	**Yes** GO to AL13 . **No** REPAIR the circuit(s). CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AL13 CHECK THE DRIVER SEAT CUSHION BLOWER RESISTANCE	

• ***NOTICE:*** **The ohmmeter must be connected with the positive lead to pin 2 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.** • Measure the resistance between driver seat cushion TED C3300 pin 2 and pin 4, component side.  N0042881 • **Is the resistance between 4,000 ohms and 10,000 ohms?**	**Yes** GO to AL14 . **No** INSTALL a new driver seat cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AL14 CHECK THE DRIVER SEAT CUSHION BLOWER SPEED CONTROL RESISTANCE	
• ***NOTICE:*** **The ohmmeter must be connected with the positive lead to pin 7 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.** • Measure the resistance between driver seat cushion TED C3300 pin 7 and pin 4, component side.  N0042893 • **Is the resistance between 240K ohms and 400K ohms?**	**Yes** GO to AL15 . **No** INSTALL a new driver seat cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AL15 CHECK THE DRIVER SEAT CUSHION TED INSTALLATION AND FOR CRUSHED SEAT CUSHION	
• Ignition OFF. • Remove the driver seat. Refer to Seat - Front in this section. • Remove the driver seat cushion cover. Refer to Seat Cushion Cover - Front in this section. • Inspect the driver seat cushion for the following: ♦ Is the driver seat cushion TED correctly installed?	**Yes** INSTALL the driver seat cushion cover and seat and GO to AL18 . **No** CORRECTLY install the driver seat cushion TED or INSTALL a new driver seat cushion foam pad and/or climate controlled seat manifold.

♦ Is the driver seat cushion seat cushion foam pad crushed or restricted? ♦ Is the driver seat cushion climate controlled seat manifold crushed or restricted? • **Is the driver seat cushion TED correctly installed and are there no signs of damage to the foam pad and manifold?**	CONNECT the battery ground cable. REFER to Section 414-01 . CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AL16 CHECK THE DRIVER SEAT CUSHION TED THERMISTOR AND WIRING	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327 and Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305B. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the resistance between DCSM C3305B-7, circuit VHS26 (VT), harness side and C3305B-8 circuit RHS05 (YE/VT), harness side. Note the ambient temperature and refer to the following table. **Temperature** / **Resistance** 0-10°C (32-50°F) / 2,782-1,663 ohms 10-20°C (50-68°F) / 1,837-1,140 ohms 20-30°C (68-86°F) / 1,260-806 ohms 30-40°C (86-104°F) / 893-570 ohms 40-50°C (104-122°F) / 630-428 ohms  	**Yes** GO to AL18 . **No** GO to AL17 .

• **Is the resistance within the limits indicated?**	
AL17 CHECK THE DRIVER SEAT CUSHION TED THERMISTOR	
• Measure the resistance between driver seat cushion TED C3300 pin 5 and pin 8, component side. Note the ambient temperature and refer to the following table. **Temperature** / **Resistance** 0-10°C (32-50°F) / 2,782-1,663 ohms 10-20°C (50-68°F) / 1,837-1,140 ohms 20-30°C (68-86°F) / 1,260-806 ohms 893-570 ohms 40-50°C (104-122°F) / 630-428 ohms  N0042890 • **Is the resistance within the limits indicated?**	**Yes** REPAIR circuit VHS26 (VT) or RHS05 (YE/VT) for an open or high resistance. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new TED . REFER to Seat Cushion Thermo-Electric Device in this section. CLEAR the DTCs. AT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AL18 CHECK THE DRIVER SEAT CUSHION TED HEATING/COOLING CIRCUITRY CURRENT DRAW	
• Connect: All DCSM , TED and body harness-to-seat harness connectors. • ***NOTICE:*** **It may be necessary to open the seat wire harness conduit to allow placing the inductive current probe around the circuit as described in the following step. Care must be taken when opening up the wire harness so as not to damage any wiring or connectors. Do not damage any wiring or induce stress on any wiring or connectors. Close up the wire harness once repairs to the seat are complete.** • **NOTE:** Use a commercially available inductive current probe (such as Electronic Specialties Current Probe/Multimeter 685 or a Fluke I410 [used with a digital multimeter]) or the low current probe from the Vehicle Measurement Module available for use with Integrated Diagnostic System (IDS). If these are unavailable, the inductive current probe feature from a battery tester may be substituted. • Place an inductive current probe around circuit CHS02 (YE/BU) near DCSM C3305A-G and monitor the	**Yes** GO to AL19 . **No** INSTALL a new driver seat cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

current draw. • Start the vehicle and set the driver seat to HIGH heat. • **Is the current draw less than 11 amps?**	
AL19 CHECK RESISTANCE OF THE DRIVER SEAT CUSHION TED AND WIRING	
• Ignition OFF. • Disconnect: DCSM C3305A. • Measure the resistance between DCSM C3305A-G circuit CHS02 (YE/BU), harness side and C3305A-H, circuit RHS02 (BU/OG), harness side.  N0042194 • **Is the resistance between 0.9 and 10 ohms?**	**Yes** GO to AL21 . **No** GO to AL20 .
AL20 CHECK THE RESISTANCE OF THE DRIVER SEAT CUSHION TED	
• Disconnect: Driver Seat Cushion TED C3300. • Measure the resistance between driver seat cushion TED C3300 pin 1 and pin 3, component side.  N0042874 • **Is the resistance between 0.9 and 10 ohms?**	**Yes** REPAIR circuit CHS02 (YE/BU) or RHS02 (BU/OG) for an open or high resistance. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new driver seat cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AL21 CHECK FOR CORRECT DCSM OPERATION	

• Inspect the DCSM and driver seat cushion TED harness and component side connectors and the body harness-to-seat harness connectors for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect: All DCSM , TED and Body Harness-to-Seat Harness Connectors. • Make sure the connectors are seated correctly. • Start the engine. • Set the driver seat to OFF. • Enter the following diagnostic mode on the scan tool: Clear DTCs - DCSM . • Attempt to recreate the fault. With the engine still running set the driver seat to HIGH heat for at least 15 minutes. • **Is the concern still present?**	**Yes** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AM: DTC B272A

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

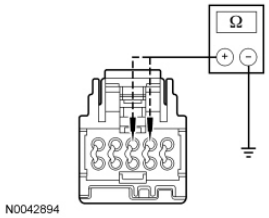
Normal Operation

The Dual Climate Controlled Seat Module (DCSM) monitors seat cushion temperature while it supplies voltage and ground to both blower motors. The DCSM also supplies a variable voltage signal to control the blower speed. Cabin air enters the blower through a filter attached to the Thermo-Electric Device (TED) housing. Conditioned air exits the TED and flows through a manifold attached to the foam pad.

- DTC B272A (Passenger Cushion Over-Temp Detected) - In the cooling mode, if the passenger seat cushion TED temperature exceeds 70°C (158°F) for more than 34 seconds, the TED is disconnected or the duct is blocked, the DCSM will shut down the passenger seat system and set this DTC.
- DTC B272A (Passenger Cushion Over-Temp Detected) - In the heating mode, if the passenger seat cushion TED temperature exceeds 85°C (185°F) for more than 34 seconds, the TED is disconnected or the duct is blocked, the DCSM will shut down the passenger seat system and set this DTC.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Restricted cushion TED filter
- Crushed or restricted climate controlled seat manifold
- Cushion TED assembly

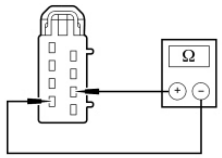


PINPOINT TEST AM: DTC B272A

NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and tgnition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.



Test Step	Result / Action to Take
AM1 CHECK THE DCSM FOR ON-DEMAND DTCs	
• Start the vehicle and set the passenger seat to HIGH heat. • Enter the following diagnostic mode on the scan tool: Self Test - DCSM . • **Was DTC B272A retrieved on-demand during the self-test?**	**Yes** GO to AM2 . **No** GO to AM5 .
AM2 CHECK THE PASSENGER SEAT CUSHION TED THERMISTOR CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305B. • Disconnect: Passenger Seat Cushion TED C3303. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the resistance between: ♦ DCSM C3305B-2, circuit VHS27 (WH/OG), harness side and ground. ♦ DCSM C3305B-3, circuit RHS10 (BU/OG), harness side and ground.	**Yes** GO to AM3 . **No** REPAIR the circuit(s). CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

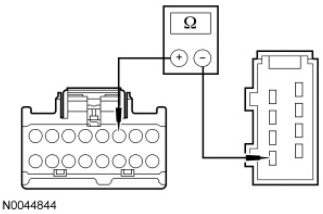
- **Are the resistances greater than 10,000 ohms?**

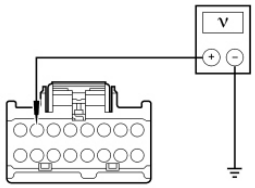
AM3 CHECK THE PASSENGER SEAT CUSHION TED THERMISTOR AND WIRING	
• Connect: Passenger Seat Cushion TED C3303. • Measure the resistance between DCSM C3305B-2, circuit VHS27 (WH/OG), harness side and DCSM C3305B-3, circuit RHS10 (BU/OG), harness side. Note the ambient temperature and refer to the following table. **Temperature / Resistance** 0-10°C (32-50°F) — 2,782-1,663 ohms 10-20°C (50-68°F) — 1,837-1,140 ohms 20-30°C (68-86°F) — 1,260-806 ohms 30-40°C (86-104°F) — 893-570 ohms 40-50°C (104-122°F) — 630-428 ohms • **Is the resistance within the limits indicated?**	**Yes** GO to AM18 . **No** GO to AM4 .
AM4 CHECK THE PASSENGER SEAT CUSHION TED THERMISTOR	
• Disconnect: Passenger Seat Cushion TED C3303. • Measure the resistance between passenger seat cushion TED C3303 pin 5 and pin 8, component side. Note the ambient temperature and refer to the following table. **Temperature / Resistance** 0-10°C (32-50°F) — 2,782-1,663 ohms 10-20°C (50-68°F) — 1,837-1,140 ohms 20-30°C (68-86°F) — 1,260-806 ohms	**Yes** REPAIR circuit VHS27 (WH/OG) or RHS10 (BU/OG) for an open or high resistance. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No**

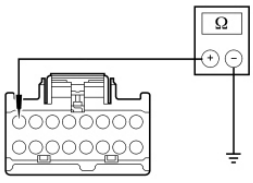
30-40°C (86-104°F)	893-570 ohms
40-50°C (104-122°F)	630-428 ohms

N0042890

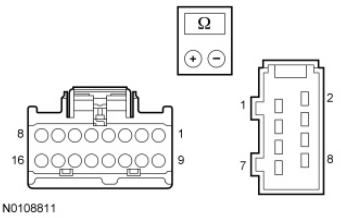
- **Is the resistance within the limits indicated?**

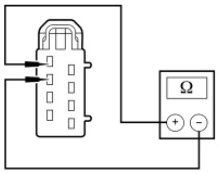


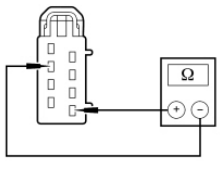




INSTALL a new passenger seat cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test.



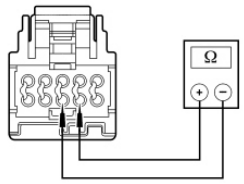




DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313.

REPOWER the SRS . REFER to Section 501-20B .

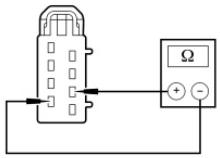
AM5 CONFIRM THE FAULT WHILE MONITORING THE DCSM SEAT BACK THERMAL ELECTRIC DEVICE TEMPERATURE (PBKTEMP) AND SEAT CUSHION THERMAL ELECTRIC DEVICE TEMPERATURE (PCSHTEMP) PIDs	
• Set the passenger seat to OFF. • Enter the following diagnostic mode on the scan tool: Clear DTCs - DCSM . • Enter the following diagnostic mode on the scan tool: DataLogger - DCSM . • Monitor the DCSM PIDs PBKTEMP and PCSHTEMP. • **NOTE:** A crushed seat cushion foam pad or a crushed climate controlled seat manifold may be the cause of the fault making it necessary to occupy the seat to recreate and identify the fault. • Attempt to recreate the fault. Start the vehicle and set the passenger seat to HIGH heat for at least 15 minutes while occupying the seat. • **Do the PIDs increase incrementally (gradually) and stay within 15°C (27°F) of each other?**	**Yes** Fault not present at this time. Fault may have been set due to a past failure, incorrect use of the climate controlled seat system by repeated switching between heat and cool modes or due to excessive passenger compartment temperature. CLEAR the DTCs. REPEAT the self-test. **No** If the PCSHTEMP PID increases incrementally and is greater than 15°C (27°F) of the PBKTEMP PID, GO to AM6 . If the PCSHTEMP PID increases quickly (temperature "jumps" and does not increase incrementally) and is greater than 15°C (27°F) of the PBKTEMP PID, GO to AM16 .
• With the engine running, set both front seats to HIGH cool. • Note the airflow exhausting from the passenger seat cushion TED and compare it to the airflow exhausting from the driver seat cushion TED . • Carry out a wiggle test of the wire harnesses between the DCSM and the passenger seat cushion TED while monitoring blower operation of the TED . The blower should operate consistently and not change speeds • **Is the airflow exhausting from the passenger seat cushion TED comparable to the airflow exhausting from the driver seat cushion TED with no change in**	**Yes** GO to AM7 . **No** If the airflow exhausting from the passenger seat cushion TED is not comparable to the airflow exhausting from the driver seat cushion TED , GO to AM8 . If the passenger seat cushion TED blower operation changed while carrying out the wiggle test,



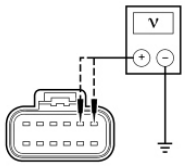
operation when carrying out the wiggle test?	IDENTIFY and REPAIR the wiring fault. CLEAR the DTCs. REPEAT the self-test.
AM7 COMPARE OPERATION OF THE DRIVER AND PASSENGER SEATS WHILE OCCUPIED	
• Note the airflow exhausting from the passenger seat cushion TED with the passenger seat occupied and compare it to the airflow exhausting from the driver seat cushion TED with the driver seat occupied. • **Is the airflow exhausting from the passenger seat cushion TED comparable to the airflow exhausting from the driver seat cushion TED ?**	**Yes** GO to AM16 . **No** INSTALL a new passenger seat cushion foam pad and/or climate controlled seat manifold. CLEAR the DTCs. REPEAT the self-test.
AM8 CHECK THE PASSENGER SEAT CUSHION BLOWER FOR AN OBSTRUCTION OR RESTRICTED FILTER	
• Ignition OFF. • Inspect the blower of the passenger seat cushion TED assembly for an obstruction or for a restricted filter. • **Is the blower obstructed or the filter restricted?**	**Yes** REMOVE the obstruction or INSTALL a new filter. CLEAR the DTCs. REPEAT the self-test. **No** GO to AM9 .
AM9 CHECK THE PASSENGER SEAT CUSHION BLOWER SPEED CONTROL CIRCUIT FOR AN OPEN	
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM 3305C. • Disconnect: Passenger Seat Cushion TED C3303. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the resistance between DCSM C3305C-3, circuit VHS23 (BN/BU), harness side and passenger seat cushion TED C3303-7, circuit VHS23 (BN/BU), harness side.	**Yes** GO to AM10 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

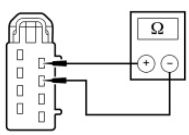
 N0044844 • **Is the resistance less than 5 ohms?**	
AM10 CHECK THE PASSENGER SEAT CUSHION BLOWER CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition ON. • Measure the voltage between DCSM C3305C-7, circuit RHS08 (VT/WH), harness side and ground.  N0044855 • **Is any voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AM11 .
AM11 CHECK THE PASSENGER SEAT CUSHION BLOWER CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between DCSM C3305C-8, circuit CHS08 (BN/YE), harness side and ground.  N0044848 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AM12 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AM12 CHECK THE PASSENGER SEAT CUSHION BLOWER CIRCUITS FOR AN OPEN	
• Measure the resistance between: ♦ DCSM C3305C-8, circuit CHS08 (BN/YE), harness side and passenger seat cushion TED C3303-2, circuit CHS08 (BN/YE), harness side. ♦ DCSM C3305C-7, circuit RHS08 (VT/WH), harness side and passenger seat cushion TED C3303-4, circuit RHS08 (VT/WH), harness side.	**Yes** GO to AM13 . **No** REPAIR the circuit(s). CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313.

 N0108811 • **Are the resistances less than 5 ohms?**	REPOWER the SRS . REFER to Section 501-20B .
AM13 CHECK THE PASSENGER SEAT CUSHION BLOWER RESISTANCE	
• ***NOTICE:*** **The ohmmeter must be connected with the positive lead to pin 2 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.** • Measure the resistance between passenger seat cushion TED C3303 pin 2 and pin 4, component side.  N0042881 • **Is the resistance between 4,000 ohms and 10,000 ohms?**	**Yes** GO to AM14 . **No** INSTALL a new passenger seat cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AM14 CHECK THE PASSENGER SEAT CUSHION BLOWER SPEED CONTROL RESISTANCE	
• ***NOTICE:*** **The ohmmeter must be connected with the positive lead to pin 7 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.** • Measure the resistance between passenger seat cushion TED C3303 pin 7 and pin 4, component side.  N0042893	**Yes** GO to AM15 . **No** INSTALL a new passenger seat cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .



• **Is the resistance between 240K ohms and 400K ohms?**	
AM15 CHECK THE PASSENGER SEAT CUSHION TED INSTALLATION AND FOR CRUSHED SEAT CUSHION	
• Ignition OFF. • Remove the passenger seat. Refer to Seat - Front in this section. • Remove the passenger seat cushion cover. Refer to Seat Cushion Cover - Front in this section. • Inspect the passenger seat cushion for the following: ♦ Is the passenger seat cushion TED correctly installed? ♦ Is the passenger seat cushion seat cushion foam pad crushed or restricted? ♦ Is the passenger seat cushion climate controlled seat manifold crushed or restricted? • **Is the passenger seat cushion TED correctly installed and are there no signs of damage to foam pad and manifold?**	**Yes** INSTALL the passenger seat cushion cover and seat and GO to AM18 . **No** CORRECTLY install the passenger seat cushion TED or INSTALL a new passenger seat cushion foam pad and/or climate controlled seat manifold. CONNECT the battery ground cable. REFER to Section 414-01 . CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AM16 CHECK THE PASSENGER SEAT CUSHION TED THERMISTOR AND WIRING	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305B. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the resistance between DCSM C3305B-2, circuit VHS27 (WH/OG), harness side and C3305B-3 circuit RHS10 (BU/OG), harness side. Note the ambient temperature and refer to the following table. **Temperature** / **Resistance** 0-10°C (32-50°F) / 2,782-1,663 ohms 10-20°C (50-68°F) / 1,837-1,140 ohms	**Yes** GO to AM18 . **No** GO to AM17 .





20-30°C (68-86°F)	1,260-806 ohms
30-40°C (86-104°F)	893-570 ohms
40-50°C (104-122°F)	630-428 ohms

N0100803

- **Is the resistance within the limits indicated?**

AM17 CHECK THE PASSENGER SEAT CUSHION TED THERMISTOR	
• Measure the resistance between passenger seat cushion TED C3303 pin 5 and pin 8, component side. Note the ambient temperature and refer to the following table. **Temperature / Resistance** 0-10°C (32-50°F): 2,782-1,663 ohms 10-20°C (50-68°F): 1,837-1,140 ohms 20-30°C (68-86°F): 1,260-806 ohms 30-40°C (86-104°F): 893-570 ohms 40-50°C (104-122°F): 630-428 ohms  N0042890 • **Is the resisin the limits indicated?**	**Yes** REPAIR circuit VHS27 (WH/OG) or RHS10 (BU/OG) for an open or high resistance. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new TED . REFER to Seat Cushion Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AM18 CHECK THE PASSENGER SEAT CUSHION TED HEATING/COOLING CIRCUITRY CURRENT DRAW	
• Connect: All DCSM , TED and Body Harness-to-Seat Harness Connectors. • ***NOTICE:*** **It may be necessary to open the seat wire harness conduit to allow placing the inductive current probe around the circuit as described in the following step. Care must be taken when opening up the wire harness so as not to damage any wiring or connectors. Do not damage any wiring or induce**	**Yes** GO to AM19 . **No** INSTALL a new passenger seat cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test.

stress on any wiring or connectors. Close up the wire harness once repairs to the seat are complete. • **NOTE:** Use a commercially available inductive current probe (such as Electronic Specialties Current Probe/Multimeter 685 or a Fluke I410 [used with a digital multimeter]) or the low current probe from the Vehicle Measurement Module available for use with Integrated Diagnostic System (IDS). If these are unavailable, the inductive current probe feature from a battery tester may be substituted. • Place an inductive current probe around circuit CHS07 (GY/BU) near DCSM C3305A-A and monitor the current draw. • Start the vehicle and set the passenger seat to HIGH heat. • **Is the current draw less than 11 amps?**	DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AM19 CHECK RESISTANCE OF THE PASSENGER SEAT CUSHION TED AND WIRING	
• Ignition OFF. • Disconnect: DCSM 3305A. • Measure the resistance between DCSM C3305A-A circuit CHS07 (GY/BU), harness side and C3305A-B, circuit RHS07 (BU), harness side.  N0042885 • **Is the resistance between 0.9 and 10 ohms?**	**Yes** GO to AM21 . **No** GO to AM20 .
AM20 CHECK THE RESISTANCE OF THE PASSENGER SEAT CUSHION TED	
• Disconnect: Passenger Seat Cushion TED C3303. • Measure the resistance between passenger seat cushion TED C3303 pin 1 and pin 3, component side.  N0042874 • **Is the resistance between 0.9 and 10 ohms?**	**Yes** REPAIR circuit CHS07 (GY/BU) or RHS07 (BU) for an open or high resistance. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new passenger seat cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section.

	CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AM21 CHECK FOR CORRECT DCSM OPERATION	
• Inspect the DCSM and passenger seat cushion TED harness and component side connectors and the body harness-to-seat harness connectors for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect: All DCSM , TED and Body Harness-to-Seat Harness Connectors. • Make sure the connectors are seated correctly. • Start the engine. • Set the passenger seat to OFF. • Enter the following diagnostic mode on the scan tool: Clear DTCs - DCSM . • Attempt to recreate the fault. With the engine still running set the passenger seat to HIGH heat for at least 15 minutes. • **Is the concern still present?**	**Yes** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. TEST the system for normal operation. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AN: DTC B272B

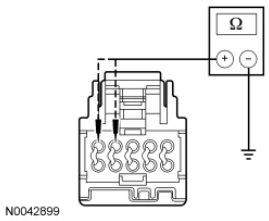
Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

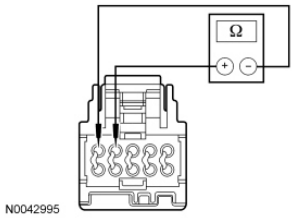
Normal Operation

The Dual Climate Controlled Seat Module (DCSM) monitors seat backrest temperature while it supplies voltage and ground to both blower motors. The DCSM also supplies a variable voltage signal to control the blower speed. Cabin air enters the blower through a filter attached to the Thermo-Electric Device (TED) housing. Conditioned air exits the TED and flows through a manifold attached to the foam pad.

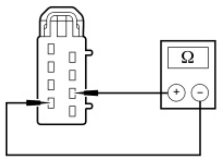
- DTC B272B (Passenger Back Over-Temp Detected) - In the cooling mode, if the passenger seat backrest TED temperature exceeds 70°C (158°F) for more than 34 seconds, the TED is disconnected or the duct is blocked, the DCSM will shut down the passenger seat system and set this DTC.

- DTC B272B (Passenger Back Over-Temp Detected) - In the heating mode, if the passenger seat backrest TED temperature exceeds 85°C (185°F) for more than 34 seconds, the TED is disconnected or the duct is blocked, the DCSM will shut down the passenger seat system and set this DTC. **This pinpoint test is intended to diagnose the following:**
- Wiring, terminals or connectors
- Restricted backrest TED filter
- Crushed or restricted climate controlled seat manifold
- Backrest TED assembly



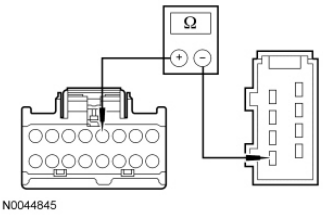


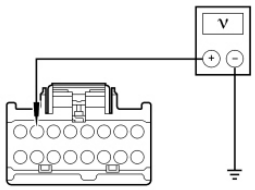
PINPOINT TEST AN: DTC B272B



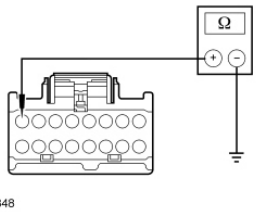
NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

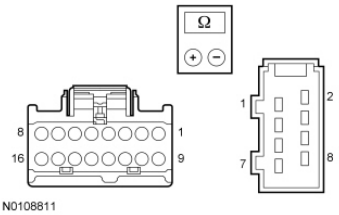
NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

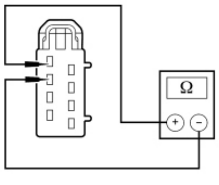




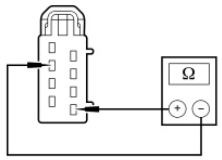
NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.





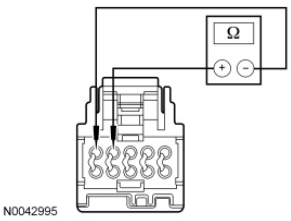


Test Step	Result / Action to Take
AN1 CHECK THE DCSM FOR ON-DEMAND DTCs	
• Start the vehicle and set the passenger seat to HIGH heat. • Enter the following diagnostic mode on the scan tool: Self Test - DCSM . • **Was DTC B272B retrieved on-demand during the self-test?**	**Yes** GO to AN2 . **No** GO to AN5 .
AN2 CHECK THE PASSENGER SEAT BACKREST TED THERMISTOR CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305B. • Disconnect: Passenger Seat Backrest TED C3311. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental**	**Yes** GO to AN3 . **No** REPAIR the circuit(s). CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .



deployment. • Connect the battery ground cable. Refer to Section 414-01 . • Measure the resistance between: ♦ DCSM C3305B-4, circuit VHS36 (YE/BU), harness side and ground. ♦ DCSM C3305B-5, circuit RHS20 (GN/BU), harness side and ground.  • **Are the resistances greater than 10,000 ohms?**	
AN3 CHECK THE PASSENGER SEAT BACKREST TED THERMISTOR AND WIRING	
• Connect: Passenger Seat Backrest TED C3311. • Measure the resistance between DCSM C3305B-4, circuit VHS36 (YE/BU), harness side and DCSM C3305B-5, circuit RHS20 (GN/BU), harness side. Note the ambient temperature and refer to the following table. **Temperature** / **Resistance** 0-10°C (32-50°F) / 2,782-1,663 ohms 10-20°C (50-68°F) / 1,837-1,140 ohms 20-30°C (68-86°F) / 1,260-806 ohms 30-40°C (86-104°F) / 893-570 ohms 40-50°C (104-122°F) / 630-428 ohms  • **Is the resistance within the limits indicated?**	**Yes** GO to AN18 . **No** GO to AN4 .
AN4 CHECK THE PASSENGER SEAT BACKREST TED THERMISTOR	

• Disconnect: Passenger Seat Backrest TED C3311. • Measure the resistance between passenger seat backrest TED C3311 pin 5 and pin 8, component side. Note the ambient temperature and refer to the following table. **Temperature / Resistance** 0-10°C (32-50°F) — 2,782-1,663 ohms 10-20°C (50-68°F) — 1,837-1,140 ohms 20-30°C (68-86°F) — 1,260-806 ohms 30-40°C (86-104°F) — 893-570 ohms 40-50°C (104-122°F) — 630-428 ohms  N0042890 • **Is the resistance within the limits indicated?**	**Yes** REPAIR circuit VHS36 (YE/BU) or RHS20 (GN/BU) for an open or high resistance. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new passenger seat backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AN5 CONFIRM THE FAULT WHILE MONITORING THE DCSM SEAT BACK THERMAL ELECTRIC DEVICE TEMPERATURE (PBKTEMP) AND SEAT CUSHION THERMAL ELECTRIC DEVICE TEMPERATURE (PCSHTEMP) PIDs	
• Set the passenger seat to OFF. • Enter the following diagnostic mode on the scan tool: Clear DTCs - DCSM . • Enter the following diagnostic mode on the scan tool: DataLogger - DCSM . • Monitor the DCSM PIDs PBKTEMP and PCSHTEMP. • **NOTE:** A crushed seat backrest foam pad or a crushed climate controlled seat manifold may be the cause of the fault making it necessary to occupy the seat to recreate and identify the fault. • Attempt to recreate the fault. Start the vehicle and set the passenger seat to HIGH heat for at least 15 minutes while occupying the seat. • **Do the PIDs increase incrementally (gradually) and stay within 15°C (27°F) of each other?**	**Yes** Fault not present at this time. Fault mahave been set due to a past failure, incorrect use of the climate controlled seat system by repeated switching between heat and cool modes or due to excessive passenger compartment temperature. CLEAR the DTCs. REPEAT the self-test. **No** If the PBKTEMP PID increases incrementally and is greater than 15°C (27°F) of the PCSHTEMP PID, GO to AN6 . If the PBKTEMP PID increases quickly (temperature "jumps" and does not increase incrementally) and is greater than 15°C (27°F) of the PCSHTEMP PID, GO to AN16 .
AN6 COMPARE OPERATION OF THE DRIVER AND PASSENGER SEATS	



• With the engine running, set both front seats to HIGH cool. • Note the airflow exhausting from the passenger seat backrest TED and compare it to the airflow exhausting from the driver seat backrest TED . • Carry out a wiggle test of the wire harnesses between the DCSM and the passenger seat backrest TED while monitoring blower operation of the TED . The blower should operate consistently and not change speeds • **Is the airflow exhausting from the passenger seat backrest TED comparable to the airflow exhausting from the driver seat backrest TED with no change in operation when carrying out the wiggle test?**	**Yes** GO to AN7 . **No** If the airflow exhausting from the passenger seat backrest TED is not comparable to the airflow exhausting from the driver seat backrest TED , GO to AN8 . If the passenger seat backrest TED blower operation changed while carrying out the wiggle test, IDENTIFY and REPAIR the wiring fault. CLEAR the DTCs. REPEAT the self-test.
AN7 COMPARE OPERATION OF THE DRIVER AND PASSENGER SEATS WHILE OCCUPIED	
• Note the airflow exhausting from the passenger seat backrest TED with the passenger seat occupied and compare it to the airflow exhausting from the driver seat backrest TED with the driver seat occupied. • **Is the airflow exhausting from the passenger seat backrest TED comparable to the airflow exhausting from the driver seat backrest TED ?**	**Yes** GO to AN16 . **No** INSTALL a new passenger seat backrest foam pad and/or climate controlled seat manifold. CLEAR the DTCs. REPEAT the self-test.
AN8 CHECK THE PASSENGER SEAT BACKREST BLOWER FOR AN OBSTRUCTION OR RESTRICTED FILTER	
• Ignition OFF. • Inspect the blower of the passenger seat backrest TED assembly for an obstruction or for a restricted filter. • **Is the blower obstructed or the filter restricted?**	**Yes** REMOVE the obstruction or INSTALL a new filter. CLEAR the DTCs. REPEAT the self-test. **No** GO to AN9 .
AN9 CHECK THE PASSENGER SEAT BACKREST BLOWER SPEED CONTROL CIRCUIT FOR AN OPEN	
• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305C. • Disconnect: Passenger Seat Backrest TED C3311. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal**	**Yes** GO to AN10 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

injury in the event of an accidental deployment. • Connect the battery ground cable. Refer to Section 414-01 . • Measure the resistance between DCSM C3305C-4, circuit VHS21 (BU/WH), harness side and passenger seat backrest TED C3311-7, circuit VHS21 (BU/WH), harness side.  N0044845 • **Is the resistance less than 5 ohms?**	
AN10 CHECK THE PASSENGER SEAT BACKREST BLOWER CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition ON. • Measure the voltage between DCSM C3305C-7, circuit RHS08 (VT/WH), harness side and ground.  N0044855 • **Is any voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AN11 .
AN11 CHECK THE PASSENGER SEAT BACKREST BLOWER CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between DCSM C3305C-8, circuit CHS08 (BN/YE), harness side and ground.	**Yes** GO to AN12 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

 N0044848 • **Is the resistance greater than 10,000 ohms?**	
AN12 CHECK THE PASSENGER SEAT BACKREST BLOWER CIRCUITS FOR AN OPEN	
• Measure the resistance between: ♦ DCSM C3305C-8, circuit CHS08 (BN/YE), harness side and passenger seat backrest TED C3311-2, circuit CHS08 (BN/YE), harness side. ♦ DCSM C3305C-7, circuit RHS08 (VT/WH), harness side and passenger seat backrest TED C3311-4, circuit RHS08 (VT/WH), harness side.  N0108811 • **Are the resistances less than 5 ohms?**	**Yes** GO to AN13 . **No** REPAIR the circuit(s). CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AN13 CHECK THE PASSENGER SEAT BACKREST BLOWER RESISTANCE	
• ***NOTICE:*** **The ohmmeter must be connected with the positive lead to pin 2 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.** • Measure the resistance between passenger seat backrest TED C3311 pin 2 and pin 4, component side.  N0042881 • **Is the resistance between 4,000 ohms and 10,000 ohms?**	**Yes** GO to AN14 . **No** INSTALL a new passenger seat backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

AN14 CHECK THE PASSENGER SEAT BACKREST BLOWER SPEED CONTROL RESISTANCE	
• ***NOTICE:*** **The ohmmeter must be connected with the positive lead to pin 7 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.** • Measure the resistance between passenger seat backrest TED C3311 pin 7 and pin 4, component side.  N0042893 • **Is the resistance between 240K ohms and 400K ohms?**	**Yes** GO to AN15 . **No** INSTALL a new passenger seat backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AN15 CHECK THE PASSENGER SEAT BACKREST TED INSTALLATION AND FOR CRUSHED SEAT BACKREST	
• Ignition OFF. • Remove the passenger seat. Refer to Seat - Front in this section. • Remove the passenger seat backrest cover. Refer to Seat Backrest Cover - Front in this section. • Inspect the passenger seat backrest for the following: ♦ Is the passenger seat backrest TED correctly installed? ♦ Is the passenger seat backrest foam pad crushed or restricted? ♦ Is the passenger seat backrest climate controlled seat manifold crushed or restricted? • **Is the passenger seat backrest TED correctly installed and are there no signs of damage to the foam pad and manifold?**	**Yes** INSTALL the passenger seat backrest cover and seat and GO to AN18 . **No** CORRECTLY install the passenger seat backrest TED or INSTALL a new passenger seat backrest foam pad and/or climate controlled seat manifold. CONNECT the battery nd cable. REFER to Section 414-01 . CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AN16 CHECK THE PASSENGER SEAT BACKREST TED THERMISTOR AND WIRING	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .	1,260-806 ohms

<table>
<tr><td>
• Disconnect: Passenger Seat Side Air Bag C313.
• Disconnect: DCSM C3305B.
• ⚠ WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.
• Connect the battery ground cable. Refer to Section 414-01 .
• Measure the resistance between DCSM C3305B-4, circuit VHS36 (YE/BU), harness side and C3305B-5 circuit RHS20 (GN/BU), harness side. Note the ambient temperature and refer to the following table.

No
GO to AN17 . **AN17 CHECK THE PASSENGER SEAT BACKREST TED THERMISTOR**

• Measure the resistance between passenger seat backrest TED C3315 and pin 8, component side. Note the ambient temperature and refer to the following table.

Temperature	Resistance
0-10°C (32-50°F)	2,782-1,663 ohms

10-20°C (50-68°F)	1,837-1,140 ohms
20-30°C (68-86°F)	1,260-806 ohms
30-40°C (86-104°F)	893-570 ohms
40-50°C (104-122°F)	630-428 ohms

N0042890

- **Is the resistance within the limits indicated?**

Yes
REPAIR circuit VHS36 (YE/BU) or RHS20 (GN/BU) for an open or high resistance. CLEAR the DTCs. REPEAT the self-test.

DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313.

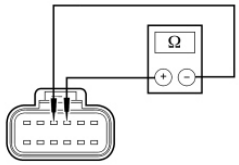
REPOWER the SRS . REFER to Section 501-20B .

No
INSTALL a new TED . REFER to Seat Backrest Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test.

DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313.

REPOWER the SRS . REFER to Section 501-20B . **AN18 CHECK THE PASSENGER SEAT BACKREST TED HEATING/COOLING CIRCUITRY CURRENT DRAW**

- Connect: All DCSM , TED and Body Harness-to-Seat Harness Connectors.
- ***NOTICE:*** **It may be necessary to open the seat wire harness conduit to allow placing the inductive current probe around the circuit as described in the following step. Care must be taken when opening up the wire harness so as not to damage any wiring or connectors. Do not damage any wiring or induce stress on any wiring or connectors. Close up the wire harness once repairs to the seat are complete.**
- **NOTE:** Use a commercially available inductive current probe (such as Electronic Specialties Current Probe/Multimeter 685 or a Fluke I410 [used with a digital multimeter]) or the low current probe from the Vehicle Measurement Module available for use with Integrated Diagnostic System (IDS). If these are unavailable, the inductive current probe feature from a battery tester may be substituted.
- Place an inductive current probe around circuit CHS06 (BU/BN) near DCSM C3305A-C and monitor the current draw.
- Start the vehicle and set the passenger seat to HIGH heat.
- **Is the current draw less than 11 amps?**



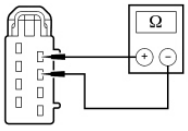
Yes
GO to AN19 .

No
INSTALL a new passenger seat backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test.

DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313.

REPOWER the SRS . REFER to Section 501-20B . **AN19 CHECK RESISTANCE OF THE PASSENGER SEAT BACKREST TED AND WIRING**

- Ignition OFF.
- Disconnect: DCSM C3305A.
- Measure the resistance between DCSM C3305A-C circuit CHS06 (BU/BN), harness side and C3305A-D, circuit RHS06 (WH), harness side.



N0042989

- **Is the resistance between 0.9 and 10 ohms?**

Yes
GO to AN21 .

No
GO to AN20 . **AN20 CHECK THE RESISTANCE OF THE PASSENGER SEAT BACKREST TED**

- Disconnect: Passenger Seat Backrest TED C3311.
- Measure the resistance between passenger seat backrest TED C3311 pin 1 and pin 3, component side.

N0042874

- **Is the resistance between 0.9 and 10 ohms?**

Yes
REPAIR circuit CHS06 (BU/BN) or RHS06 (WH) for an open or high resistance. CLEAR the DTCs. REPEAT the self-test.

DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313.

REPOWER the SRS . REFER to Section 501-20B .

No
INSTALL a new passenger seat backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test.

DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313.

REPOWER the SRS . REFER to Section 501-20B . **AN21 CHECK FOR CORRECT DCSM OPERATION**

- Inspect the DCSM and passenger seat backrest TED harness and component side connectors and the body harness-to-seat harness connectors for:
  - ♦ corrosion
  - ♦ damaged pins
  - ♦ pushed-out pins
- Connect: All DCSM , TED and Body Harness-to-Seat Harness Connectors.
- Make sure the connectors are seated correctly.
- Start the engine.
- Set the passenger seat to OFF.
- Enter the following diagnostic mode on the scan tool: Clear DTCs - DCSM .
- Attempt to recreate the fault. With the engine still running set the passenger seat to HIGH heat for at least 15 minutes.
- **Is the concern still present?**

Yes
INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. TEST the system for normal operation.

DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313.

REPOWER the SRS . REFER to Section 501-20B .

No
The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313.

REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AO: DTC B272C

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

The Dual Climate Controlled Seat Module (DCSM) is supplied voltage at all times, but the climate controlled seat system only operates with the engine running. The system can be operated with the ignition ON engine OFF by using a scan tool to bypass the climate controlled seat buttons on the touchscreen interface. When commanding a heat or cool mode operation in this manner, the climate controlled seat system only operates in 15-second intervals. Both voltage supply circuits are spliced together internal to the DCSM , so if one circuit becomes open, both seats can still be operated. However, if a fault occurs setting a DTC specific to either climate controlled seat, only the affected seat is disabled by the DCSM .

The seat cushion is equipped with a Thermo-Electric Device (TED) assembly that includes a seat blower (fan motor, serviced as an assembly with the TED). Similarly, the seat backrest is also equipped with its own TED assembly with blower. Cabin air is drawn through the blower and distributed to each of the TED modules located in the seat cushion and backrest. The TEDs then heat or cool the air. The air is then directed into the foam pad and manifold where it is distributed along the surface of the cushion and backrest of the seat. Once the system is activated, the DCSM uses a set of flexible algorithms to control the heating/cooling modes and the blower speed dependant on the HVAC module seat switch settings.

A differential fault occurs when the cushion and backrest TEDs on an affected seat are reporting very different temperatures to the DCSM . This may result from an airflow restriction or a circuit fault of either TED area. If a TED and manifold is clear of obstruction and is operational, the other TED and circuitry on the seat should be checked. It is important to note that a TED with a higher temperature may be operating correctly and not the area of concern. The other TED may be indicating a much lower temperature, causing the DTC to set.

- DTC B272C (Driver Differential Temperature Fault) - If there is a temperature differential between the driver backrest and cushion TED of 60°C (108°F) or more for more than 4 seconds, the TED is disconnected or the duct is blocked, this DTC will set. When this happens the first time in a key cycle, the DCSM puts the driver seat system into recovery mode (see principles of operation). If the system is able to recover, it will function nory. If the system is able to recover and it occurs a second time in the same key cycle, the DCSM will shut down the driver seat system.

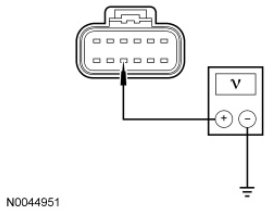
This pinpoint test is intended to diagnose the following:

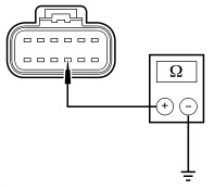
- Wiring, terminals or connectors
- Restricted cushion or backrest TED filter
- Crushed or restricted cushion or backrest foam pad
- Crushed or restricted cushion or backrest climate controlled seat manifold
- Cushion or backrest TED assembly
- DCSM

PINPOINT TEST AO: DTC B272C

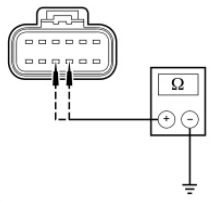
NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

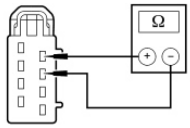
NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

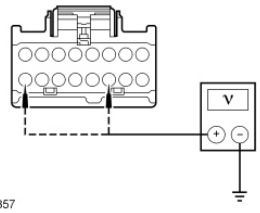




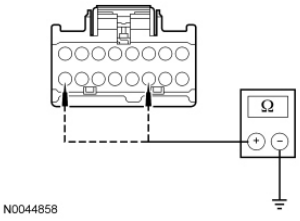
NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

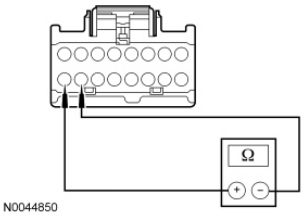




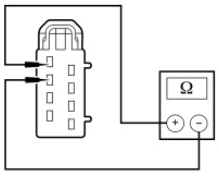


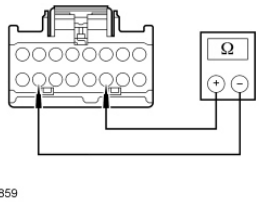
NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.



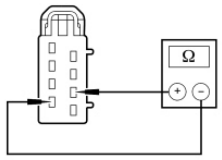


Test Step	Result / Action to Take
AO1 CHECK FOR DCSM DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test - DCSM . • **Was DTC B2729 or B2730 retrieved?**	**Yes** For DTC B2729, GO to Pinpoint Test AL . For DTC B2730, GO to Pinpoint Test AS . **No** GO to AO2 .
AO2 MONITOR THE TED TEMPERATURE PIDs	
• Enter the following diagnostic mode on the scan tool: DataLogger - DCSM - PIDs.	**Yes** GO to AO3 .

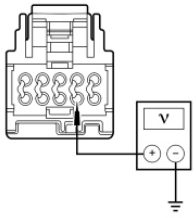


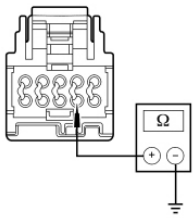


♦ Passenger Cushion Thermal Electric Device (TED) Temperature (PCSHTMP) ♦ Passenger Back TED Temperature (PBKTMP) ♦ Seat cushion thermal electric device temperature (CSHTEMP) ♦ Seat back thermal electric device temperature (BK_TEMP) • **NOTE:** Make sure the temperature of the climate controlled seats has stabilized before monitoring the PIDs. Not allowing stabilization can cause incorrect readings and lead to incorrect identification of components that are not faulty. • Monitor TED temperature PIDs with the climate controlled seats OFF. Compare the PID values of the driver seat to those of the front passenger seat, this can help identify if there is a concern with the driver seat cushir backrest PID value readings. • **Are both driver seat TED temperature PIDs within 10°C (18°F) of the ambient temperature?**	**No** If the driver seat cushion PID varies 10°C (18°F) or more from ambient temperature, GO to AO16 . If the driver seat backrest PID varies 10°C (18°F) or more from ambient temperature, GO to AO32 .
AO3 CONFIRM THE FAULT IS IN THE SEAT CUSHION OR THE BACKREST	
• Ignition OFF. • Ignition ON. • **NOTE:** A crushed seat cushion foam pad or a crushed climate controlled seat manifold may be the cause of the fault. It may be necessary to sit on the seat or place something of reasonable size and weight on the seat to recreate the fault. • **NOTE:** If at shuts down before a 15-minute heat cycle has timed-out, carry out the DCSM self-test and go to the Dual Climate Controlled Seat Module (DCSM) DTC Chart to continue diagnostics. • After cycling the ignition and with the engine running, set the driver seat to high heat (3 indicators illuminated on HVAC module). Allow the seat to heat for at least 15 minutes while monitoring the TED temperature PIDs of the driver seat. If necessary, when the seat times-out after 15 minutes, set the driver seat to high heat once again. • **Do the driver seat cushion TED and backrest TED PIDs vary more than 60°C (108°F) from each other?**	**Yes** If the driver seat cushion PID is 60°C (108°F) hotter than the backrest PID, GO to AO5 . If the driver seat backrest PID is 60°C (108°F) hotter than the cushion PID, GO to AO20 . **No** GO to AO4 .
AO4 CHECK THE TEDs COOLING PERFORMANCE	



• Check the TEDs cooling performance on the affected seat. Refer to Component Test - Thermo-Electric Device (TED) Cooling Performance in this section. • **Did the TEDs pass the component test?**	**Yes** The DTC may have been set by extreme cabin temperatures or excessive sunload on the seat causing the system to enter recovery mode. Occupant size and weight characteristics can also be a factor. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. If a concern cannot be found or duplicated, RETURN the vehicle to the customer. **No** CHECK the affected seat cushion or backrest for correct installation of the climate controlled seat components (TED , manifold, plenum, air ducts and foam pad). CHECK for airflow restrictions (TED inlets and outlets, TED -to-manifold or plenum connections, filters and ducts) and REPAIR as needed. CHECK for an intermittent wiring fault. REPAIR as needed. REPEAT the self-test. CLEAR the DTCs.
AO5 CHECK FOR CORRECT TED INSTALLATION AND FOR CRUSHED FOAM	
• Ignition OFF. • Remove the seat. Refer to Seat - Front in this section. • Remove the seat cushion trim cover. Refer to Seat Cushion Cover - Front in this section. • Inspect the seat cushion for the following: ♦ Is the cushion blower obstructed? ♦ Is the blower filter restricted or plugged? ♦ Is the TED correctly installed? • Is the seat cushion foam pad crushed or restricted? ♦ Is the climate controlled seat manifold crushed or restricted? • **Is the TED correctly installed and the foam pad and manifold OK?**	**Yes** GO to AO6 . **No** CORRECTLY install the cushion TED or INSTALL a new seat cushion foam pad and/or climate controlled seat manifold. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. REPOWER the SRS . REFER to Section 501-20B .
AO6 CHECK THE BACKREST TED GROUND CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Position the driver seat in the vehicle and connect the seat-to-floor connectors. • Disconnect: Driver Seat Side Air Bag Module C327. • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: DCSM C3305A.	**Yes** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .





• **⚠ WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between DCSM C3305A-K, circuit RHS01 (WH/VT), harness side and ground.  N0044951 • **Is any voltage present?**	**No** GO to AO7 .
AO7 CHECK THE BACKREST TED FEED CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between DCSM C3305A-J, circuit CHS01 (GY/VT), harness side and ground.  N0042910 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AO8 . **No** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AO8 CHECK THE RESISTANCE OF THE BACKREST TED AND WIRING	
• Measure the resistance between DCSM C3305A-J, circuit CHS01 (GY/VT), harness side and DCSM C3305A-K, circuit RHS01 (WH/VT), harness side.	**Yes** GO to AO10 . **No** GO to AO9 .

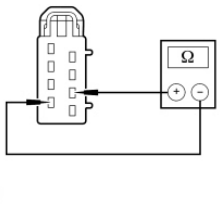
 N0042876 • **Is the resistance between 0.9 and 10 ohms?**	
AO9 CHECK THE RESISTANCE OF THE BACKREST TED	
• Disconnect: Backrest TED C3310. • Measure the resistance between backrest TED C3310 pin 1 and pin 3, component side.  N0042874 • **Is the resistance between 0.9 and 10 ohms?**	**Yes** REPAIR circuit CHS01 (GY/VT) or RHS01 (WH/VT) for an open. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AO10 CHECK THE BLOWER MOTOR FEED AND SPEED CONTROL CIRCUITS FOR A SHORT TO VOLTAGE	
• Disconnect: DCSM C3305C. • Ignition ON. • Measure the voltage between: ♦ DCSM C3305C-16, circuit CHS03 (GN/BN), harness side and ground. ♦ DCSM C3305C-11, circuit VHS18 (BN/GN), harness side and ground.  N0044857 • **Is voltage present on either circuit?**	**Yes** GO to AO11 . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

AO11 CHECK THE BLOWER MOTOR FEED AND SPEED CONTROL CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between: ♦ DCSM C3305C-16, circuit CHS03 (GN/BN), harness side and ground. ♦ DCSM C3305C-11, circuit VHS18 (BN/GN), harness side and ground.  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to AO12 . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AO12 CHECK THE BLOWER MOTOR AND WIRING	
• **NOTE:** The ohmmeter must be connected with the positive lead to DCSM C3305C-16, circuit CHS03 (GN/BN) and the negative lead to DCSM C3305C-15, circuit RHS03 (GY/OG) when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between DCSM C3305C-16, circuit CHS03 (GN/BN), harness side and DCSM C3305C-15, circuit RHS03 (GY/OG), harness side.  • **Is the resistance between 4,000 and 10,000 ohms?**	**Yes** GO to AO14 . **No** GO to AO13 .
AO13 CHECK THE BLOWER MOTOR RESISTANCE	

• Disconnect: Cushion TED C3300. • **NOTE:** The ohmmeter must be connected with the positive lead to pin 2 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between cushion TED C3300 pin 2 and pin 4, component side.  N0042881 • **Is the resistance between 4,000 and 10,000 ohms?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AO14 CHECK THE BLOWER MOTOR SPEED CONTROL AND CIRCUIT RESISTANCE	
• **NOTE:** The ohmmeter must be connected with the positive lead to C3305C-11, circuit VHS18 (BN/GN), harness side and the negative lead to C3305C-15, circuit RHS03 (GY/OG), harness side when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between DCSM C3305C-11, circuit VHS18 (BN/GN), harness side and DCSM C3305C-15, circuit RHS03 (GY/OG), harness side.  N0044859 • **Is the resistance between 240 kohms and 4 megohms?**	**Yes** GO to AO16 . **No** GO to AO15 .
AO15 CHECK THE BLOWER MOTOR SPEED CONTROL RESISTANCE	

• Disconnect: Cushion TED C3300. • **NOTE:** The ohmmeter must be connected with the positive lead to pin 7 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between cushion TED C3300 pin 7 and pin 4, component side.  N0042890 • **Is the resistance between 240 kohms and 4 megohms?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AO16 CHECK THE THERMISTOR FEED CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C327. • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: DCSM C3305B. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between DCSM C3305B-7, circuit VHS26 (VT), harness side and ground.	**Yes** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AO17 .

 N0042906 • **Is any voltage present?**	
AO17 CHECK THE THERMISTOR FEED CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between DCSM C3305B-7, circuit VHS26 (VT), harness side and ground.  N0042907 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AO18 . **No** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AO18 CHECK THE TED THERMISTOR AND WIRING RESISTANCE AT THE DCSM	
• Measure the resistance between DCSM C3305B-7, circuit VHS26 (VT), harness side and DCSM C3305B-8, circuit RHS05 (YE/VT), harness side. Note the ambient temperature and compare result to the following table: **Temperature** / **Resistance** 0-10°C (32-50°F) / 2,782-1,663 ohms 10-20°C (50-68°F) / 1,837-1,140 ohms 20-30°C (68-86°F) / 1,260-806 ohms 30-40°C (86-104°F) / 893-570 ohms 40-50°C (104-122°F) / 630-428 ohms	**Yes** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AO19 .



- **Is the resistance within the limits indicated?**

AO19 CHECK THE TED THERMISTOR RESISTANCE

- Disconnect: Cushion TED C3300.
- Measure the resistance between cushion TED pin 5 and pin 8, component side. Note the ambient temperature and compare result to the following table:

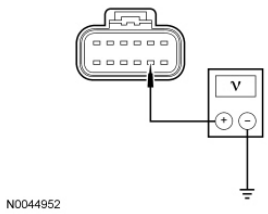
Temperature	Resistance
0-10°C (32-50°F)	2,782-1,663 ohms
10-20°C (50-68°F)	1,837-1,140 ohms
20-30°C (68-86°F)	1,260-806 ohms
30-40°C (86-104°F)	893-570 ohms
40-50°C (104-122°F)	630-428 ohms

- **Is the resistance within the limits indicated?**

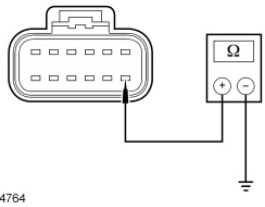
Yes
REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs.
SRS . REFER to Section 501-20B .

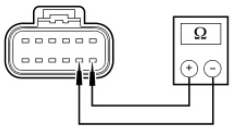
No
INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs.

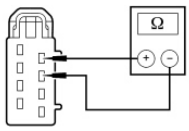
DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .



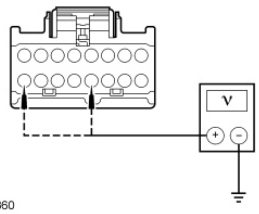
AO20 CHECK FOR CORRECT TED INSTALLATION AND FOR CRUSHED FOAM

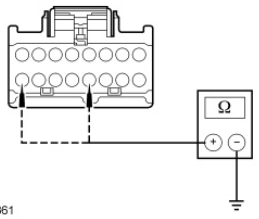




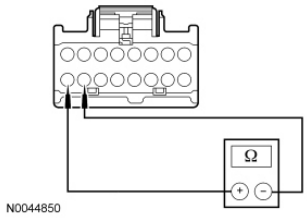


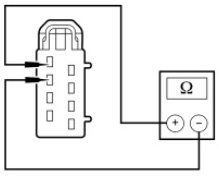
- Ignition OFF.
- Remove the seat. Refer to Seat - Front in this section.
- Remove the seat backrest trim cover. Refer to Seat Backrest - Front in this section.
- Inspect the seat backrest for the following:
  - Is the backrest blower obstructed?
  - Is the blower filter restricted or plugged?
  - Is the TED correctly installed?
  - Is the seat backrest foam pad crushed or restricted?



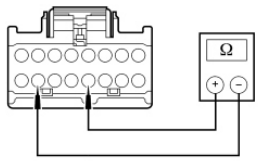


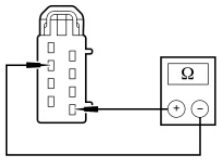
Yes
GO to AO21 .

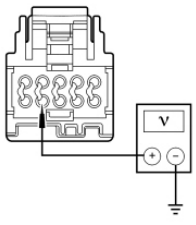




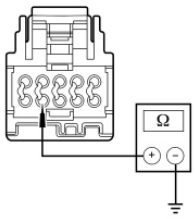
No
CORRECTLY install the backrest TED or INSTALL a new seat backrest foam pad and/or climate controlled seat manifold. REPEAT the self-test. CLEAR the DTCs.

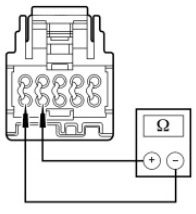






DISCONNECT the battery ground cable. REPOWER the SRS . REFER to Section 501-20B .





♦ Is the climate controlled seat manifold crushed or restricted? • **Is the TED correctly installed and the foam pad and manifold OK?**	
AO21 CHECK THE CUSHION TED GROUND CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Position the driver seat in the vehicle and connect the seat-to-floor connectors. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327. • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: DCSM C3305A. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between DCSM C3305A-H, circuit RHS02 (BU/OG), harness side and ground.  • **Is any voltage present?**	**Yes** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AO22 .
AO22 CHECK THE CUSHION TED FEED CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between DCSM C3305A-G, circuit CHS02 (YE/BU), harness side and ground.	**Yes** GO to AO23 . **No** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag

 N0044764 • **Is the resistance greater than 10,000 ohms?**	module C313. REPOWER the SRS . REFER to Section 501-20B .
AO23 CHECK THE RESISTANCE OF THE CUSHION TED AND WIRING	
• Measure the resistance between DCSM C3305A-G circuit CHS02 (YE/BU), harness side and DCSM C3305A-H, circuit RHS02 (BU/OG), harness side.  N0042194 • **Is the resistance between 0.9 and 10 ohms?**	**Yes** GO to AO25 . **No** GO to AO24 .
AO24 CHECK THE CUSHION TED RESISTANCE	
• Disconnect: Cushion TED C3300. • Measure the resistance between cushion TED C3300 pin 1 and pin 3, component side.  N0042874 • **Is the resistance between 0.9 and 10 ohms?**	**Yes** REPAIR circuit CHS02 (YE/BU) or RHS02 (BU/OG) for an open. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AO25 CHECK THE BLOWER MOTOR FEED AND SPEED CONTROL CIRCUITS FOR A SHORT TO VOLTAGE	

• Disconnect: DCSM C3305C. • Ignition ON. • Measure the voltage between: ♦ DCSM C3305C-16, circuit CHS03 (GN/BN), harness side and ground. ♦ DCSM C3305C-12, circuit VHS16 (BU/GN), harness side and ground.  N0044860 • **Is voltage present on either circuit?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AO26 .
AO26 CHECK THE BLOWER MOTOR AND SPEED CONTROL FEED CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between: ♦ DCSM C3305C-16, circuit CHS03 (GN/BN), harness side and ground. ♦ DCSM C3305C-12, circuit VHS16 (BU/GN), harness side and ground.  N0044861 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to AO27 . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AO27 CHECK THE BLOWER MOTOR AND WIRING RESISTANCE	
• **NOTE:** The ohmmeter must be connected with the positive lead to DCSM C3305C-16, circuit CHS03 (GN/BN) and the negative lead to DCSM C3305C-15, circuit RHS03 (GY/OG) when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between DCSM C3305C-16, circuit CHS03 (GN/BN), harness side and DCSM C3305C-15, circuit RHS03 (GY/OG), harness side.	**Yes** GO to AO29 . **No** GO to AO28 .

 N0044850 • **Is the resistance between 4,000 and 10,000 ohms?**	
AO28 CHECK THE BLOWER MOTOR RESISTANCE	
• Disconnect: Backrest TED C3310. • **NOTE:** The ohmmeter must be connected with the positive lead to pin 2 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between backrest TED C3310 pin 2 and pin 4, component side.  N0042881 • **Is the resistance between 4,000 and 10,000 ohms?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AO29 CHECK THE BLOWER MOTOR SPEED CONTROL AND CIRCUIT RESISTANCE	
• **NOTE:** The ohmmeter must be connected with the positive lead to C3305C-12, circuit VHS16 (BU/GN), harness side and the negative lead to C3305C-15, circuit RHS03 (GY/OG), harness side when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between DCSM C3305C-12, circuit VHS16 (BU/GN), harness side and DCSM C3305C-15, circuit RHS03 (GY/OG), harness side.	**Yes** GO to AO31 . **No** GO to AO30 .

 N0044862 • **Is the resistance between 240 kohms and 4 megohms?**	
AO30 CHECK THE BLOWER MOTOR SPEED CONTROL RESISTANCE	
• Disconnect: Backrest TED C3310. • **NOTE:** The ohmmeter must be connected with the positive lead to pin 7 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between backrest TED C3310 pin 7 and pin 4, component side.  N0042893 • **Is the resistance between 240 kohms and 4 megohms?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AO31 CHECK THE THERMISTOR FEED CIRCUIT FOR A SHORT TO VOLTAGE	
• Disconnect: DCSM C3305B. • Ignition ON. • Measure the voltage between DCSM C3305B-9, circuit VHS35 (VT/OG), harness side and ground.  N0042974 • **Is any voltage present?**	**Yes** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AO32 .
AO32 CHECK THE THERMISTOR FEED CIRCUIT FOR A SHORT TO GROUND	

• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag Module C327. • Disconnect: Passenger Seat Side Air Bag Module C313. • Disconnect: DCSM C3305B. • Measure the resistance between DCSM C3305B-9, circuit VHS35 (VT/OG), harness side and ground.  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AO33 . **No** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AO33 CHECK THE TED THERMISTOR AND WIRING RESISTANCE	
• Measure the resistance between DCSM C3305B-9, circuit VHS35 (VT/OG), harness side and DCSM C3305B-10, circuit RHS15 (GY/BN), harness side. Note the ambient temperature and compare result to the following table: **Temperature** / **Resistance** 0-10°C (32-50°F) — 2,782-1,663 ohms 10-20°C (50-68°F) — 1,837-1,140 ohms 20-30°C (68-86°F) — 1,260-806 ohms 30-40°C (86-104°F) — 893-570 ohms 40-50°C (104-122°F) — 630-428 ohms  	**Yes** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. CLEAR the DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AO34 .

• **Is the resistance within the limits indicated?**	
AO34 CHECK THE TED THERMISTOR RESISTANCE	
• Disconnect: Backrest TED C3310. • Measure the resistance between backrest TED pin 5 and pin 8, component side. Note the ambient temperature and compare result to the following table: **Temperature / Resistance** 0-10°C (32-50°F) — 2,782-1,663 ohms 10-20°C (50-68°F) — 1,837-1,140 ohms 20-30°C (68-86°F) — 1,260-806 ohms 30-40°C (86-104°F) — 893-570 ohms 40-50°C (104-122°F) — 630-428 ohms  N0042890 • **Is the resistance within the limits indicated?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new backrest TED . REFER to SRS . REFER to Section 501-20B .

Pinpoint Test AP: DTC B272D

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

The Dual Climate Controlled Seat Module (DCSM) is supplied voltage at all times, but the climate controlled seat system only operates with the engine running. The system can be operated with the ignition ON engine OFF by using a scan tool to bypass the climate controlled seat buttons on the touchscreen interface. When commanding a heat or cool mode operation in this manner, the climate controlled seat system only operates in 15-second intervals. Both voltage supply circuits are spliced together internal to the DCSM , so if one circuit becomes open, both seats can still be operated. However, if a fault occurs setting a DTC specific to either climate controlled seat, only the affected seat is disabled by the DCSM .

The seat cushion is equipped with a Thermo-Electric Device (TED) assembly that includes a seat blower (fan motor, serviced as an assembly with the TED). Similarly, the seat backrest is also equipped with its own TED assembly with blower. Cabin air is drawn through the blower and distributed to each of the TED modules located in the seat cushion and backrest. The TEDs then heat or cool the air. The air is then directed into the foam pad and manifold where it is distributed along the surface of the cushion and backrest of the seat. Once the system is activated, the DCSM uses a set of flexible algorithms to control the heating/cooling modes and

the blower speed dependant on the HVAC module seat switch settings.

A differential fault occurs when the cushion and backrest TEDs on an affected seat are reporting very different temperatures to the DCSM . This may result from an airflow restriction or a circuit fault of either TED area. If a TED and manifold is clear of obstruction and is operational, the other TED and circuitry on the seat should be checked. It is important to note that a TED with a higher temperature may be operating correctly and not the area of concern. The other TED may be indicating a much lower temperature, causing the DTC to set.

- DTC B272D (Passenger Differential Temperature Fault) - If there is a temperature differential between the passenger backrest and cushion TED of 60°C (108°F) or more for more than 4 seconds, the TED is disconnected or the duct is blocked, this DTC will set. When this happens the first time in a key cycle, the DCSM puts the passenger seat system into recovery mode (see Principles of Operation). If the system is able to recover, it will function normally. If the system is able to recover and it occurs a second time in the same key cycle, the DCSM will shut down the passenger seat system.

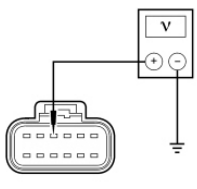
This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Restricted cushion or backrest TED filter
- Crushed or restricted cushion or backrest foam pad
- Crushed or restricted cushion or backrest climate controlled seat manifold
- Cushion or backrest TED assembly
- DCSM

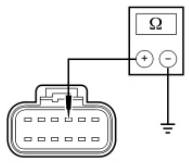
PINPOINT TEST AP: DTC B272D

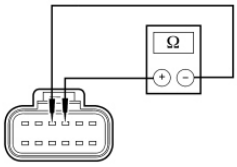
NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

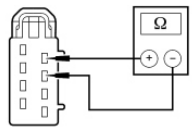


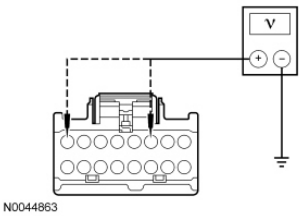
NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.



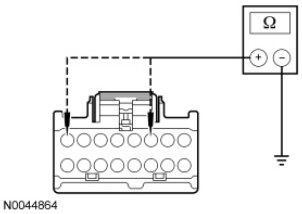


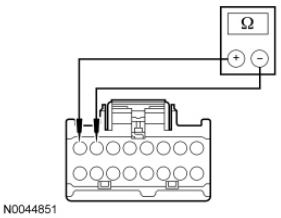
NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.



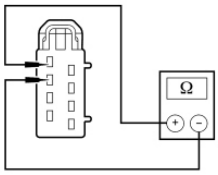


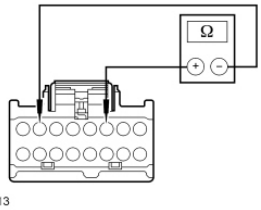
Test Step	Result / Action to Take
AP1 CHECK THE DCSM FOR DTCs	
• Enter the following diagnostic mode on the scan tool: Self Test - DCSM . • **Was DTC B272A or B272B retrieved?**	**Yes** For DTC B272A, GO to Pinpoint Test AM . For DTC B272B, GO to Pinpoint Test AN . **No** GO to AP2 .
AP2 MONITOR THE TED TEMPERATURE PIDs	



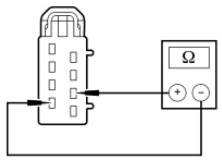


l> • Enter the following diagnostic mode on the scan tool: DataLogger - DCSM - PIDs. ♦ Passenger cushion thermal electric device (TED) temperature (PCSHTMP) ♦ Passenger back TED temperature (PBKTMP) ♦ Seat cushion thermal electric device temperature (CSHTEMP) ♦ Seat back thermal electric device temperature (BK_TEMP) • **NOTE:** Make sure the temperature of the climate controlled seats has stabilized before monitoring the PIDs. Not allowing stabilization can cause incorrect readings and lead to incorrect identification of components that are not faulty. • Monitor the TED temperature PIDs with the climate controlled seats OFF. Compare the PIDs of the front passenger seat to those of the driver seat, this can help identify if there is a concern with the front passenger seat cushion or backrest PID readings. • **Are both front passenger seat TED temperature PIDs within 10°C (18°F) of the ambient temperature?**	**Yes** GO to AP3 . **No** If the front passenger seat cushion PID varies 10°C (18°F) or more from ambient temperature, GO to AP16 . If the front passenger seat backrest PID varies 10°C (18°F) or more from ambient temperature, GO to AP32 .
AP3 CONFIRM THE FAULT IS IN THE SEAT CUSHION OR BACKREST TED	
• Ignition OFF. • Ignition ON. • **NOTE:** A crushed seat cushion foam pad or a crushed climate controlled seat manifold may be the cause of the fault. It may be necessary to sit on the seat or place something of reasonable size and weight on the seat to recreate the fault. • **NOTE:** If the seat shuts down before a 15-minute heat cycle has timed-out, carry out the DCSM self-test and go to the Dual Climate Controlled Seat Module (DCSM) DTC Chart to continue diagnostics.	**Yes** If the front passenger seat cushion PID is 60°C (108°F) hotter than the backrest PID, GO to AP5 . If the front passenger seat backrest PID is 60°C (108°F) hotter than the cushion PID, GO to AP20 . **No** GO to AP4 .

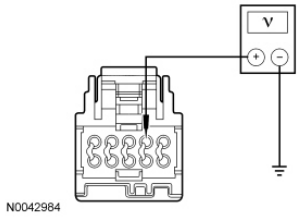


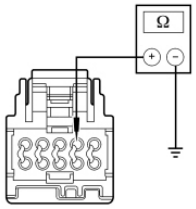


• After cycling the ignition and with the engine running, set the driver seat to high heat (3 indicators illuminated on HVAC module). Allow the seat to heat for at least 15 minutes while monitoring the TED temperature PIDs of the driver seat. If necessary, when the seat times-out after 15 minutes, set the driver seat to high heat once again. • **Do the driver seat cushion TED and backrest TED PIDs vary more than 60°C (108°F) from each other?**	
AP4 CHECK THE TEDs COOLING PERFORMANCE	
• Check TEDs cooling performance on the affected seat. Refer to Component Test - Thermo-Electric Device (TED) Cooling Performance in this section. • **Did the TEDs pass the component test?**	**Yes** The DTC may have been set by extreme cabin temperatures or excessive sunload on the seat causing the system to enter recovery mode. Occupant size and weight characteristics can also be a factor. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. If a concern cannot be found or duplicated, RETURN the vehicle to the customer. **No** CHECK the affected seat cushion or backrest for correct installation of the climate controlled seat components (TED , manifold, plenum, air ducts and foam pad). CHECK for airflow restrictions (TED inlets and outlets, TED -to-manifold or plenum connections, filters and ducts) and REPAIR as needed. CHECK for an intermittent wiring fault. REPAIR as needed. REPEAT the self-test. CLEAR the DTCs.
AP5 CHECK FOR CORRECT TED INSTALLATION AND FOR CRUSHED FOAM	
• Ignition OFF. • Remove the seat. Refer to Seat - Front in this section. • Remove the seat cushion trim cover. Refer to Seat Cushion Cover - Front in this section. • Inspect the seat cushion for the following: ♦ Is the cushion blower obstructed? ♦ Is the blower filter restricted or plugged? ♦ Is the TED correctly installed?	**Yes** GO to AP6 . **No** Correctly INSTALL the cushion TED or INSTALL a new seat cushion foam pad and/or climate controlled seat manifold. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. REPOWER the SRS . REFER to Section 501-20B .



♦ Is the seat cushion foam pad crushed or restricted? ♦ Is the climate controlled seat manifold crushed or restricted? • **Is the TED correctly installed and the foam pad and manifold OK?**	
AP6 CHECK THE BACKREST TED GROUND CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Position the front passenger seat in the vehicle and connect the seat-to-floor connectors. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305A. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between DCSM C3305A-D, circuit RHS06 (WH), harness side and ground.  N0044950 • **Is any voltage present?**	**Yes** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AP7 .





AP7 CHECK THE BACKREST TED FEED CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between DCSM C3305A-C, circuit CHS06 (BU/BN), harness side and ground.  N0042988 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AP8 . **No** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AP8 CHECK THE RESISTANCE OF THE BACKREST TED AND WIRING	
• Measure the resistance between DCSM C3305A-C, circuit CHS06 (BU/BN), harness side and DCSM C3305A-D, circuit RHS06 (WH), harness side.  N0042989 • **Is the resistance between 0.9 and 10 ohms?**	**Yes** GO to AP10 . **No** GO to AP9 .
AP9 CHECK THE RESISTANCE OF THE BACKREST TED	
• Disconnect: Backrest TED C3311. • Measure the resistance between backrest TED C3311 pin 1 and pin 3, component side.	**Yes** REPAIR circuit CHS06 (BU/BN) or RHS06 (WH) for an open. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new backrest TED . REFER to Seat Backrest

 N0042874 • **Is the resistance between 0.9 and 10 ohms?**	Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AP10 CHECK THE BLOWER MOTOR FEED AND SPEED CONTROL CIRCUITS FOR A SHORT TO VOLTAGE	
• Disconnect: DCSM C3305C. • Ignition ON. • Measure the voltage between: ♦ DCSM C3305C-8, circuit CHS08 (BN/YE), harness side and ground. ♦ DCSM C3305C-3, circuit VHS23 (BN/BU), harness side and ground.  N0044863 • **Is voltage present on either circuit?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AP11 .
AP11 CHECK THE BLOWER MOTOR FEED AND SPEED CONTROL CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between: ♦ DCSM C3305C-8, circuit CHS08 (BN/YE), harness side and ground. ♦ DCSM C3305C-3, circuit VHS23 (BN/BU), harness side and ground.	**Yes** GO to AP12 . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

 • **Are the resistances greater than 10,000 ohms?**	
AP12 CHECK THE BLOWER MOTOR AND WIRING RESISTANCE	
• **NOTE:** The ohmmeter must be connected with the positive lead to DCSM C3305C-8, circuit CHS08 (BN/YE) and the negative lead to DCSM C3305C-7, circuit RHS08 (VT/WH) when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between DCSM C3305C-8, circuit CHS08 (BN/YE), harness side and DCSM C3305C-7, circuit RHS08 (VT/WH), harness side.  • **Is the resistance between 4,000 and 10,000 ohms?**	**Yes** GO to AP14 . **No** GO to AP13 .
AP13 CHECK THE BLOWER MOTOR RESISTANCE	
• Disconnect: Cushion TED C3303. • **NOTE:** The ohmmeter must be connected with the positive lead to pin 2 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new cushion TED . REFER to Seat Cushion

identification of components that are not faulty. • Measure the resistance between cushion TED C3303 pin 2 and pin 4, component side.  N0042881 • **Is the resistance between 4,000 and 10,000 ohms?**	Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AP14 CHECK THE BLOWER MOTOR SPEED CONTROL AND CIRCUIT RESISTANCE	
• **NOTE:** The ohmmeter must be connected with the positive lead to C3305C-3, circuit VHS23 (BN/BU), harness side and the negative lead to C3305C-7, circuit RHS08 (VT/WH), harness side when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between DCSM C3305C-3, circuit VHS23 (BN/BU), harness side and DCSM C3305C-7, circuit RHS08 (VT/WH), harness side.  N0047113 • **Is the resistance between 240 kohms and 4 megohms?**	**Yes** GO to AP16 . **No** GO to AP15 .
AP15 CHECK THE BLOWER MOTOR SPEED CONTROL RESISTANCE	

• Disconnect: Cushion TED C3303. • **NOTE:** The ohmmeter must be connected with the positive lead to pin 7 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between cushion TED C3303 pin 7 and pin 4, component side.  N0042890 • **Is the resistance between 240 kohms and 4 megohms?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AP16 CHECK THE THERMISTOR FEED CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305B. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON.	**Yes** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AP17 .

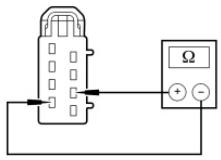
• Measure the voltage between DCSM C3305B-2, circuit VHS27 (WH/OG), harness side and ground.  N0042984 • **Is any voltage present?**	
AP17 CHECK THE THERMISTOR FEED CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between DCSM C3305B-2, circuit VHS27 (WH/OG), harness side and ground.  N0042985 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AP18 . **No** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AP18 CHECK THE THERMISTOR AND WIRING RESISTANCE	
• Measure the resistance between DCSM C3305B-2, circuit VHS27 (WH/OG), harness side and DCSM C3305B-3, circuit RHS10 (BU/OG), harness side. Note the ambient temperature and compare result to the following table: **Temperature** / **Resistance** 0-10°C (32-50°F) / 2,782-1,663 ohms	**Yes** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER theitle="Supplemental Restraint System" class="popup" onmouseover="this.className='popupnounderline';" onmouseout="this.className='popup';">SRS . REFER to Section 501-20B . **No** GO to AP19 .

10-20°C (50-68°F)	1,837-1,140 ohms
20-30°C (68-86°F)	1,260-806 ohms
30-40°C (86-104°F)	893-570 ohms
40-50°C (104-122°F)	630-428 ohms

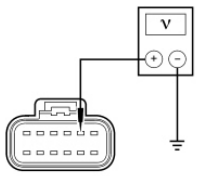
- **Is the resistance within the limits indicated?**

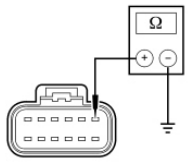
AP19 CHECK THE THERMISTOR RESISTANCE

- Disconnect: Cushion TED C3303.
- Measure the resistance between cushion TED pin 5 and pin 8, component side. Note the ambient temperature and compare result to the following table:

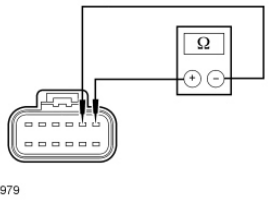


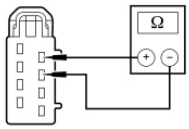
Temperature	Resistance
0-10°C (32-50°F)	2,782-1,663 ohms
10-20°C (50-68°F)	1,837-1,140 ohms
20-30°C (68-86°F)	1,260-806
30-40°C (86-104°F)	893-570 ohms
40-50°C (104-122°F)	630-428 ohms



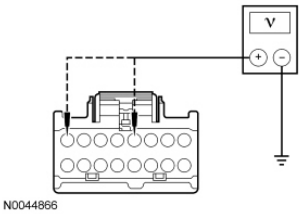


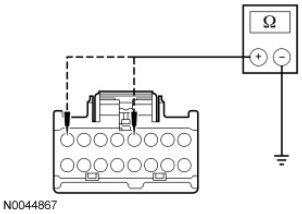
Yes
REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs.



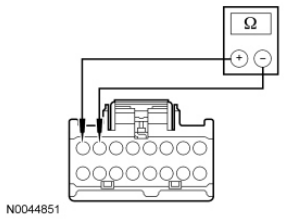


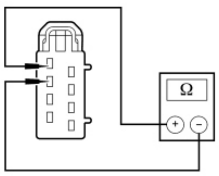
DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .





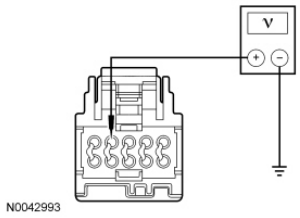
No
INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs.

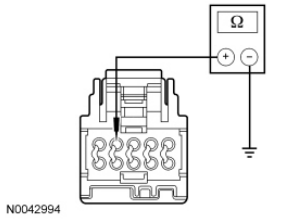




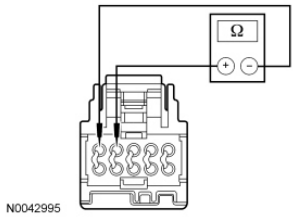
DISCONNthe battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

 N0042890 • **Is the resistance within the limits indicated?**	
AP20 CHECK FOR CORRECT TED INSTALLATION AND FOR CRUSHED FOAM	
• Ignition OFF. • Remove the seat. Refer to Seat - Front in this section. • Remove the seat backrest trim cover. Refer to Seat Backrest - Front in this section. • Inspect the seat backrest for the following: ♦ Is the backrest blower obstructed? ♦ Is the blower filter restricted or plugged? ♦ Is the TED correctly installed? ♦ Is the seat backrest foam pad crushed or restricted? ♦ Is the climate controlled seat manifold crushed or restricted? • **Is the TED correctly installed and the foam pad and manifold OK?**	**Yes** GO to AP21 . **No** Correctly INSTALL the backrest TED or INSTALL a new seat backrest foam pad and/or climate controlled seat manifold. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. REPOWER the SRS . REFER to Section 501-20B .
AP21 CHECK THE CUSHION TED GROUND CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Position the front passenger seat in the vehicle and connect the seat-to-floor connectors. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305A.	**Yes** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AP22 .



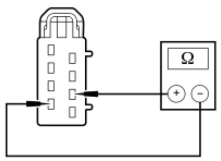


• **⚠ WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Ignition ON. • Measure the voltage between DCSM C3305A-B, circuit RHS07 (BU), harness side and ground.  N0044870 • **Is any voltage present?**	
AP22 CHECK THE CUSHION TED FEED CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between DCSM C3305A-A, circuit CHS07 (GY/BU), harness side and ground.  N0042978 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AP23 . **No** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AP23 CHECK THE CUSHION TED AND WIRING RESISTANCE	



• Measure the resistance between DCSM C3305A-A circuit CHS07 (GY/BU), harness side and DCSM C3305A-B, circuit RHS07 (BU), harness side.  N0042979 • **Is the resistance between 0.9 and 10 ohms?**	**Yes** GO to AP25 . **No** GO to AP24 .
AP24 CHECK THE CUSHION TED RESISTANCE	
• Disconnect: Cushion TED C3303. • Measure the resistance between cushion TED C3303 pin 1 and pin 3, component side.  N0042874 • **Is the resistance between 0.9 and 10 ohms?**	**Yes** REPAIR circuit CHS07 (GY/BU) or RHS07 (BU) for an open. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new cushion TED . REFER to Seat Cushion Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AP25 CHECK THE BLOWER MOTOR FEED AND SPEED CONTROL CIRCUITS FOR A SHORT TO VOLTAGE	
• Disconnect: DCSM C3305C. • Ignition ON. • Measure the voltage between: ♦ DCSM C3305C-8, circuit CHS08 (BN/YE), harness side and ground. ♦ DCSM C3305C-4, circuit VHS21 (BU/WH), harness side and ground.	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AP26 .

 N0044866 • **Is voltage present on either circuit?**	
AP26 CHECK THE BLOWER MOTOR FEED AND SPEED CONTROL CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between: ♦ DCSM C3305C-8, circuit CHS08 (BN/YE), harness side and ground. ♦ DCSM C3305C-4, circuit VHS21 (BU/WH), harness side and ground.  N0044867 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to AP27 . **No** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AP27 CHECK THE BLOWER MOTOR AND WIRING RESISTANCE	
• **NOTE:** The ohmmeter must be connected with the positive lead to DCSM C3305C-8, circuit CHS08 (BN/YE) and the negative lead to DCSM C3305C-7, circuit RHS08 (VT/WH) when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between DCSM C3305C-8, circuit CHS08 (BN/YE), harness side and DCSM C3305C-7, circuit	**Yes** GO to AP29 . **No** GO to AP28 .



RHS08 (VT/WH), harness side.  N0044851 • **Is the resistance between 4,000 and 10,000 ohms?**	
AP28 CHECK THE BLOWER MOTOR RESISTANCE	
• Disconnect: Backrest TED C3311. • **NOTE:** The ohmmeter must be connected with the positive lead to pin 2 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between backrest TED C3311 pin 2 and pin 4, component side.  N0042881 • **Is the resistance between 4,000 and 10,000 ohms?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AP29 CHECK THE BLOWER MOTOR GROUND CIRCUIT TO BLOWER MOTOR SPEED CONTROL CIRCUIT RESISTANCE	
• **NOTE:** The ohmmeter must be connected with the positive lead to C3305C-4, circuit VHS21 (BU/WH), harness side and the negative lead to C3305C-7, circuit RHS08 (VT/WH), harness side when measuring.	**Yes** GO to AP31 . **No** GO to AP30 .

Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between DCSM C3305C-4, circuit VHS21 (BU/WH), harness side and DCSM C3305C-7, circuit RHS08 (VT/WH), harness side.  N0044868 • **Is the resistance between 240 kohms and 4 megohms?**	
AP30 CHECK THE BLOWER MOTOR SPEED CONTROL RESISTANCE	
• Disconnect: Backrest TED C3311. • **NOTE:** The ohmmeter must be connected with the positive lead to pin 7 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected will result in false readings and lead to incorrect identification of components that are not faulty. • Measure the resistance between backrest TED C3311 pin 7 and pin 4, component side.  N0042893 • **Is the resistance between 240 kohms and 4 megohms?**	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AP31 CHECK THE THERMISTOR FEED CIRCUIT FOR A SHORT TO VOLTAGE	

• Disconnect: DCSM C3305B. • Ignition ON. • Measure the voltage between DCSM C3305B-4, circuit VHS36 (YE/BU), harness side and ground.  • **Is any voltage present?**	**Yes** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AP32 .
AP32 CHECK THE THERMISTOR FEED CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Passenger Seat Side Air Bag Module C313. • Measure the resistance between DCSM C3305B-4, circuit VHS36 (YE/BU), harness side and ground.  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AP33 . **No** REPAIR the circuit. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AP33 CHECK THE THERMISTOR AND WIRING RESISTANCE AT THE DCSM	

• Measure the resistance between DCSM C3305B-4, circuit VHS36 (YE/BU), harness side and DCSM C3305B-5, circuit RHS20 (GN/BU), harness side. Note the ambient temperature and compare result to the following table: **Temperature** / **Resistance** 0-10°C (32-50°F) / 2,782-1,663 ohms 10-20°C (50-68°F) / 1,837-1,140 ohms 20-30°C (68-86°F) / 1,260-806 ohms 30-40°C (86-104°F) / 893-570 ohms 40-50°C (104-122°F) / 630-428 ohms  • **Is the resistance within the limits indicated?**	**Yes** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AP34 .
AP34 CHECK THE TED THERMISTOR RESISTANCE	
• Disconnect: Backrest TED C3311. • Measure the resistance between backrest TED pin 5 and pin 8, component side. Note the ambient temperature and compare result to the following table: **Temperature** / **Resistance** 	**Yes** REPAIR the circuit(s). REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

0-10°C (32-50°F)	2,782-1,663 ohms		
10-20°C (50-68°F)	20-30°C (68-86°F)	1,260-806 ohms	
30-40°C (86-104°F)	893-570 ohms		
40-50°C (104-122°F)	630-428 ohms		

N0042890

- **Is the resistance within the limits indicated?**

Pinpoint Test AQ: DTC B272E

NOTE: This DTC sets for an open or short to voltage. See DTC setting description below.

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

Normal Operation

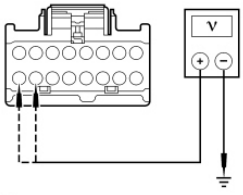
The driver climate controlled seat blowers are located within the backrest and cushion Thermo-Electric Devices (TEDs). The Dual Climate Controlled Seat Module (DCSM) supplies voltage and ground to both blowers. The blowers are independently controlled by separate speed control circuits from the DCSM .

- DTC B272E (Driver Ignition Run/Blower Circuit Short to Ground [this DTC sets for an open or short to voltage]) - If either the blower voltage supply or return circuits are open (to both cushion and backrest blowers) or shorted to voltage, the DTC is set and after 4-6 seconds the DCSM disables outputs to the driver seat. The DTC will also set if the blower voltage supply or return circuit is open to only one blower when DCSM supply voltage is less than 12 volts.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- HVAC module
- Backrest or cushion TED
- DCSM

PINPOINT TEST AQ: DTC B272E



NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the male connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in**

Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

REPEAT the self-test. CLEAR the DTCs. If backrest the TED resistance

	is **not** between 4,000 and 10,000 ohms, INSTALL a new backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. REPEAT the self-test. CLEAR the DTCs. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AR: DTC B272F

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

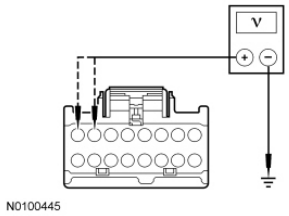
Normal Operation

The passenger climate controlled seat blowers are located within the backrest and cushion Thermo-Electric Devices (TEDs). The Dual Climate Controlled Seat Module (DCSM) supplies voltage to both blowers on circuit CHS08 (BN/YE) and ground to both blowers on circuit RHS08 (VT/WH). The blowers are independently controlled by separate speed control circuits from the DCSM .

- DTC B272F (Passenger Ignition Run/Blower Circuit Short to Ground [this DTC sets for an open or short to voltage]) - If either the blower voltage supply or return circuits are open (to both cushion and backrest blowers) or shorted to voltage, the DTC is set and after 4-6 seconds the DCSM disables outputs to the passenger seat. The DTC will also set if the blower voltage supply or return circuit is open to only one blower when DCSM supply voltage is less than 12 volts.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- HVAC module
- Backrest or cushion TED
- DCSM



PINPOINT TEST AR: DTC B272F

NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can causintermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

NOTE: If a seat equipped with a seat mounted side air bag is being serviced, the Supplemental Restraint System (SRS) must be depowered. Refer to Section 501-20B .

NOTE: The air bag warning lamp illuminates when the Restraints Control Module (RCM) fuse is removed and the ignition switch is ON. This is normal operation and does not indicate an SRS fault.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

DISCONNECT the battery

	ground cable. CONNECT passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AS: DTC B2730

Refer to Wiring Diagrams Cell 119 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Climate Controlled Seats for schematic and connector information.

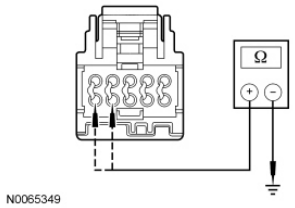
Normal Operation

The Dual Climate Controlled Seat Module (DCSM) monitors seat backrest temperature while it supplies voltage and ground to both blower motors. The DCSM also supplies a variable voltage signal to control the blower speed. Cabin air enters the blower through a filter attached to the Thermo-Electric Device (TED) housing. Conditioned air exits the TED and flows through a manifold attached to the foam pad.

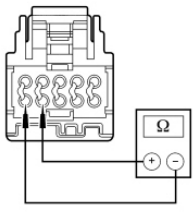
- DTC B2730 (Back Over-Temp Detected) - If the driver seat backrest TED temperature exceeds 85°C (185°F) in cool mode or 70°C (158°F) in heat mode for more than 34 seconds the DCSM will shut down the driver seat system and set.

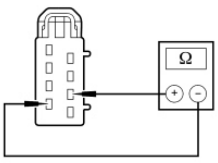
This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Restricted backrest TED filter
- Crushed or restricted climate controlled seat manifold
- Backrest TED assembly



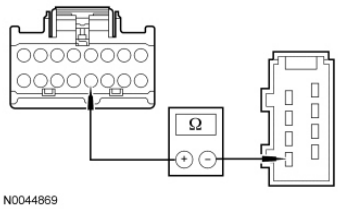
PINPOINT TEST AS: DTC B2730

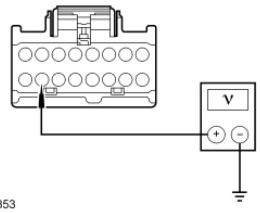




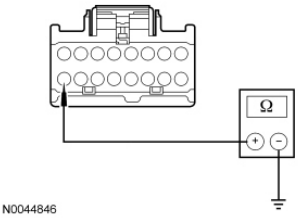
NOTICE: **When taking measurements at Dual Climate Controlled Seat Module (DCSM) harness connectors, do not insert the electrical probes into the female connector pins. Inserting the probes into connector pins can cause intermittent or open electrical connections after reassembly resulting in Diagnostic Trouble Codes (DTCs) and system failure. Touching the tip of these connector pins is recommended instead.**

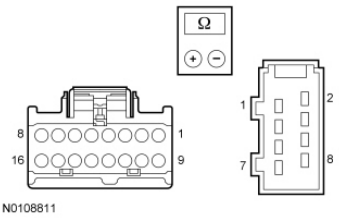
NOTE: The air bag warning indicator illuminates when the correct Restraintsol Module (RCM) fuse is removed and the ignition is ON.



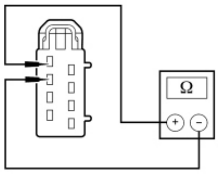


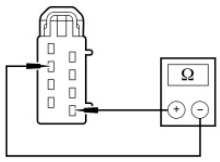
NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.





Test Step	Result / Action to Take
AS1 CHECK THE DCSM FOR ON-DEMAND DTCs	
• Start the vehicle and set the driver seat to HIGH heat. • Enter the following diagnostic mode on the scan tool: Self Test - DCSM . • **Was DTC B2730 retrieved on-demand during the self-test?**	**Yes** GO to AS2 . **No** GO to AS5 .

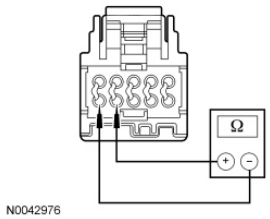




AS2 CHECK THE DRIVER SEAT BACKREST TED THERMISTOR CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327 and Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305B. • Disconnect: Driver Seat Backrest TED C3310. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the resistance between: ♦ DCSM C3305B-9, circuit VHS35 (VT/OG), harness side and ground. ♦ DCSM C3305B-10, circuit RHS15 (GY/BN), harness side and ground.  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to AS3 . **No** REPAIR the circuit(s). CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AS3 CHECK THE DRIVER SEAT BACKREST TED THERMISTOR AND WIRING	
• Connect: Driver Seat Backrest TED C3310. • Measure the resistance between DCSM C3305B-9, circuit VHS35 (VT/OG), harness side and DCSM C3305B-10, circuit RHS15 (GY/BN), harness side. Note the ambient temperature and refer to the following table. **Temperature** / **Resistance** 0-10°C (32-50°F) / 2,782-1,663 ohms 10-20°C (50-68°F) / 1,837-1,140 ohms 20-30°C (68-86°F) / 1,260-806 ohms 30-40°C (86-104°F) / 893-570 ohms 40-50°C (104-122°F) / 630-428 ohms	**Yes** GO to AS18 . **No** GO to AS4 .

 N0042976 • **Is the resistance within the limits indicated?**	
AS4 CHECK THE DRIVER SEAT BACKREST TED THERMISTOR	
• Disconnect: Driver Seat Backrest TED C3310. • Measure the resistance between driver seat backrest TED C3310 pin 5 and pin 8, component side. Note the ambient temperature and refer to the following table. **Temperature** / **Resistance** 0-10°C (32-50°F) / 2,782-1,663 ohms 10-20°C (50-68°F) / 1,837-1,140 ohms 20-30°C (68-86°F) / 1,260-806 ohms 30-40°C (86-104°F) / 893-570 ohms 40-50°C (104-122°F) / 630-428 ohms  N0042890 • **Is the resistance within the limits indicated?**	**Yes** REPAIR circuit VHS35 (VT/OG) or RHS15 (GY/BN) for an open or high resistance. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . INSTALL a new driver seat backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AS5 CONFIRM THE FAULT WHILE MONITORING THE DCSM SEAT BACK THERMAL ELECTRIC DEVICE TEMPERATURE (BK_TEMP) AND SEAT CUSHION THERMAL ELECTRIC DEVICE TEMPERATURE (CSHTEMP) PIDs	
• Set the driver seat to OFF. • Enter the following diagnostic mode on the scan tool: Clear DTCs - DCSM . • Enter the following diagnostic mode on the scan tool: DataLogger - DCSM . • Monitor the DCSM PIDs BK_TEMP and CSHTEMP. • **NOTE:** A crushed seat backrest foam pad or a crushed climate controlled seat manifold may be the cause of the	**Yes** Fault not present at this time. Fault may have been set due to a past failure, incorrect use of the climate controlled seat system by repeated switching between heat and cool modes or due to excessive driver compartment temperature. CLEAR the DTCs. REPEAT the self-test.

fault making it necessary to occupy the seat to recreate and identify the fault. • Attempt to recreate the fault. Start the vehicle and set the driver seat to HIGH heat for at least 15 minutes while occupying the seat. • **Do the PIDs increase incrementally (gradually) and stay within 15°C (27°F) of each other?**	**No** If the BK_TEMP PID increases incrementally and is greater than 15°C (27°F) of the CSHTEMP PID, GO to AS6 . If the BK_TEMP PID increases quickly (temperature "jumps" and does not increase incrementally) and is greater than 15°C (27°F) of the CSHTEMP PID, GO to AS16 .
AS6 COMPARE OPERATION OF THE DRIVER AND PASSENGER SEATS	
• With the engine running, set both front seats to HIGH cool. • Note the airflow exhausting from the driver seat backrest TED and compare it to the airflow exhausting from the passenger seat backrest TED . • Carry out a wiggle test of the wire harnesses between the DCSM and the driver seat backrest TED while monitoring blower operation of the TED . The blower should operate consistently and not change speeds • **Is the airflow exhausting from the driver seat backrest TED comparable to the airflow exhausting from the passenger seat backrest TED with no change in operation when carrying out the wiggle test?**	**Yes** GO to AS7 . **No** If the airflow exhausting from the driver seat backrest TED is not comparable to the airflow exhausting from the driver seat backrest TED , GO to AS8 . If the passenger seat backrest TED blower operation changed while carrying out the wiggle test, IDENTIFY and REPAIR the wiring fault. CLEAR the DTCs. REPEAT the self-test.
AS7 COMPARE OPERATION OF THE DRIVER AND PASSENGER SEATS WHILE OCCUPIED	
• Note the airflow exhausting from the passenger seat backrest TED with the driver seat occupied and compare it to the airflow exhausting from the passenger seat backrest TED with the passenger seat occupied. • **Is the airflow exhausting from the driver seat backrest TED comparable to the airflow exhausting from the passenger seat backrest TED ?**	**Yes** GO to AS16 . **No** INSTALL a new driver seat backrest foam pad and/or climate controlled seat manifold. CLEAR the DTCs. REPEAT the self-test.
AS8 CHECK THE DRIVER SEAT BACKREST BLOWER FOR AN OBSTRUCTION OR RESTRICTED FILTER	
• Ignition OFF. • Inspect the blower of the driver seat backrest TED assembly for an obstruction or for a restricted filter. • **Is the blower obstructed or the filter restricted?**	**Yes** REMOVE the obstruction or INSTALL a new filter. CLEAR the DTCs. REPEAT the self-test. **No** GO to AS9 .
AS9 CHECK THE DRIVER SEAT BACKREST BLOWER SPEED CONTROL CIRCUIT FOR AN OPEN	



• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327 and Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305C. • Disconnect: Driver Seat Backrest TED C3310. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the resistance between DCSM C3305C-12, circuit VHS16 (BU/GN), harness side and driver seat backrest TED C3310-7, circuit VHS16 (BU/GN), harness side.  N0044869 • **Is the resistance less than 5 ohms?**	**Yes** GO to AS10 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AS10 CHECK THE DRIVER SEAT BACKREST BLOWER CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition ON. • Measure the voltage between DCSM C3305C-15, circuit RHS03 (GY/OG), harness side and ground.  N0044853 • **Is any voltage present?**	**Yes** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** GO to AS11 .
AS11 CHECK THE DRIVER SEAT BACKREST BLOWER CIRCUIT FOR A SHORT TO GROUND	

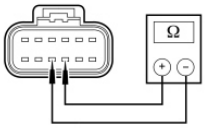
• Ignition OFF. • Measure the resistance between DCSM C3305C-16, circuit CHS03 (GN/BN), harness side and ground.  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to AS12 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AS12 CHECK THE DRIVER SEAT BACKREST BLOWER CIRCUITS FOR AN OPEN	
• Measure the resistance between: ♦ DCSM C3305C-16, circuit CHS03 (GN/BN), harness side and driver seat backrest TED C3310-2, circuit CHS03 (GN/BN), harness side. ♦ DCSM C3305C-15, circuit RHS03 (GY/OG), harness side and driver seat backrest TED C3310-4, circuit RHS03 (GY/OG), harness side.  • **Are the resistances less than 5 ohms?**	**Yes** GO to AS13 . **No** REPAIR the circuit(s). CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AS13 CHECK THE DRIVER SEAT BACKREST BLOWER RESISTANCE	
• ***NOTICE:*** **The ohmmeter must be connected with the positive lead to pin 2 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.** • Measure the resistance between driver seat backrest TED C3310 pin 2 and pin 4, component side.	**Yes** GO to AS14 . **No** INSTALL a new driver seat backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

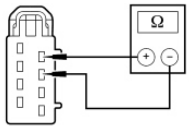
 N0042881 • **Is the resistance between 4,000 ohms and 10,000 ohms?**	
AS14 CHECK THE DRIVER SEAT BACKREST BLOWER SPEED CONTROL RESISTANCE	
• ***NOTICE:*** **The ohmmeter must be connected with the positive lead to pin 7 and the negative lead to pin 4 when measuring. Ohmmeter leads incorrectly connected results in false readings and leads to incorrect identification of components that are not damaged.** • Measure the resistance between driver seat backrest TED C3310 pin 7 and pin 4, component side.  N0042893 • **Is the resistance between 240K ohms and 400K ohms?**	**Yes** GO to AS15 . **No** INSTALL a new driver seat backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AS15 CHECK THE DRIVER SEAT BACKREST TED INSTALLATION AND FOR CRUSHED SEAT BACKREST	
• Ignition OFF. • Remove the driver seat. Refer to Seat - Front in this section. • Remove the driver seat backrest cover. Refer to Seat Backrest Cover - Front in this section. • Inspect the driver seat backrest for the following: ♦ Is the driver seat backrest TED correctly installed? ♦ Is the driver seat backresam pad crushed or restricted? ♦ Is the driver seat backrest climate controlled seat manifold crushed or restricted? • **Is the driver seat backrest TED correctly installed and are there no signs of damage to the foam pad and manifold?**	**Yes** INSTALL the driver seat backrest cover and seat and GO to AS18 . **No** CORRECTLY install the driver seat backrest TED or INSTALL a new driver seat backrest foam pad and/or climate controlled seat manifold. CONNECT the battery ground cable. REFER to Section 414-01 . CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to

	Section 501-20B .
AS16 CHECK THE DRIVER SEAT BACKREST TED THERMISTOR AND WIRING	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B . • Disconnect: Driver Seat Side Air Bag C327 and Passenger Seat Side Air Bag C313. • Disconnect: DCSM C3305B. • ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.** • Connect the battery ground cable. Refer to Section 414-01 . • Measure the resistance between DCSM C3305B-9, circuit VHS35 (VT/OG), harness side and C3305B-10 circuit RHS15 (GY/BN), harness side. Note the ambient temperature and refer to the following table. • **Is the resistance within the limits indicated?**	**Yes** GO to AS18 . **No** GO to AS17 .
AS17 CHECK THE DRIVER SEAT BACKREST TED THERMISTOR	
• Measure the resistance between driver seat backrest TED C3310 pin 5 and pin 8, component side. Note the ambient temperature and refer to the following table.	**Yes** REPAIR circuit VHS35 (VT/OG) or RHS15 (GY/BN) for an open or high resistance. CLEAR the DTCs. REPEAT the self-test.

Temperature	Resistance
0-10°C (32-50°F)	2,782-1,663 ohms
10-20°C (50-68°F)	1,837-1,140 ohms
20-30°C (68-86°F)	1,260-806 ohms
30-40°C (86-104°F)	893-570 ohms
40-50°C (104-122°F)	630-428 ohms

	DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new TED . REFER to Seat Backrest Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C7 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .





Temperature	Resistance
0-10°C (32-50°F)	2,782-1,663 ohms
10-20°C (50-68°F)	1,837-1,140 ohms
20-30°C (68-86°F)	1,260-806 ohms
30-40°C (86-104°F)	893-570 ohms
630-428 ohms	

N0042890

- **Is the resistance within the limits indicated?**

AS18 CHECK THE DRIVER SEAT BACKREST TED HEATING/COOLING CIRCUITRY CURRENT DRAW	
• Connect: All DCSM , TED and Body Harness-to-Seat Harness Connectors. • ***NOTICE:*** **It may be necessary to open the seat wire harness conduit to allow placing the inductive current probe around the circuit as described in the following step. Care must be taken when opening up the wire harness so as not to damage any wiring or connectors. Do not damage any wiring or induce stress on any wiring or connectors. Close up the wire harness once repairs to the seat are complete.** • **NOTE:** Use a commercially available inductive current probe (such as Electronic Specialties Current Probe/Multimeter 685 or a Fluke I410 [used with a digital multimeter]) or the low current probe from the Vehicle Measurement Module available for use with Integrated Diagnostic System (IDS). If these are unavailable, the inductive current probe feature from a battery tester may be substituted. • Place an inductive current probe around circuit CHS01 (GY/VT) near DCSM C3305A-J and monitor the current draw. • Start the vehicle and set the driver seat to HIGH heat. • **Is the current draw less than 11 amps?**	**Yes** GO to AS19 . **No** INSTALL a new driver seat backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AS19 CHECK RESISTANCE OF THE DRIVER SEAT BACKREST TED AND WIRING	

• Ignition OFF. • Disconnect: DCSM C3305A. • Measure the resistance between DCSM C3305A-J circuit CHS01 (GY/VT), harness side and C3305A-K, circuit RHS01 (WH/VT), harness side.  N0132223 • **Is the resistance between 0.9 and 10 ohms?**	**Yes** GO to AS21 . **No** GO to AS20 .
AS20 CHECK THE RESISTANCE OF THE DRIVER SEAT BACKREST TED	
• Disconnect: Driver Seat Backrest TED C3310. • Measure the resistance between driver seat backrest TED C3310 pin 1 and pin 3, component side.  N0042874 • **Is the resistance between 0.9 and 10 ohms?**	**Yes** REPAIR circuit CHS01 (GY/VT) or RHS01 (WH/VT) for an open or high resistance. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** INSTALL a new driver seat backrest TED . REFER to Seat Backrest Thermo-Electric Device in this section. CLEAR the DTCs. REPEAT the self-test. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .
AS21 CHECK FOR CORRECT DCSM OPERATION	
• Inspect the DCSM and driver seat backrest TED harness and component side connectors and the body harness-to-seat harness connectors for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins	**Yes** INSTALL a new DCSM . REFER to Dual Climate Controlled Seat Module (DCSM) in this section. REPEAT the self-test. TEST the system for normal operation.

• Connect: All DCSM , TED and Body Harness-to-Seat Harness Connectors. • Make sure the connectors are seated correctly. • Start the engine. • Set the driver seat to OFF. • Enter the following diagnostic mode on the scan tool: Clear DTCs - DCSM . • Attempt to recreate the fault. With the engine still running set the driver seat to HIGH heat for at least 15 minutes. • **Is the concern still present?**	DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C327 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B . **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. DISCONNECT the battery ground cable. CONNECT driver seat side air bag module C3051 and passenger seat side air bag module C313. REPOWER the SRS . REFER to Section 501-20B .

Pinpoint Test AT: DTC U0140

Refer to Wiring Diagrams Cell 14 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Module Communications Network for schematic and connector information.

Normal Operation

The Driver Seat Module (DSM) and the Smart Junction Box (SJB) communicate using the Medium Speed Controller Area Network (MS-CAN). Messages are exchanged between the modules on the MS-CAN for the purposes of determining what functions are being carried out.

- DTC U0140 (Lost Communication With Body Control Module (GEM)) - set by the DSM whenever it has lost communication to the SJB for 15 seconds or longer as long as the module voltage is between 10 and 15 volts.

This pinpoint test is intended to diagnose the following:

- Module communication
- DSM
- SJB

PINPOINT TEST AT: DTC U0140

Test Step	Result / Action to Take
AT1 VERIFY CUSTOMER CONCERN	
• Ignition ON. • Verify there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AT2 . **No**

	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AT2 CHECK THE COMMUNICATION NETWORK	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Network Test. • Carry out the network test. • **Does the SJB pass the network test?**	**Yes** GO to AT3 . **No** REFER to Section 418-00 .
AT3 RETRIEVE THE RECORDED DTCs FROM THE SELF-TEST	
• Check for recorded DSM DTCs from the self-test. • **Is DTC B1317 or DTC B1318 recorded?**	**Yes** GO to Pinpoint Test AK . **No** GO to AT4 .
AT4 RECHECK THE DSM DTCs	
NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during Programmable Module Installation (PMI) or the PMI may not have been carried out. • Clear the DTCs. Repeat the DSM self-test. • **Is DTC U0140 still present?**	**Yes** GO to AT5 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AT5 CHECK FOR DTC U0140/U0140:00 SET IN OTHER MODULES	
• Clear all DTCs. • Ignition OFF. • Ignition ON. • Wait 10 seconds. • Enter the following diagnostic mode on the scan tool: Self-Test. • Retrieve the continuous memory DTCs from all modules. • **Is DTC U0140/U0140:00 set in other modules?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . **No** INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section.

Pinpoint Test AU: DTC U0155

Refer to Wiring Diagrams Cell 14 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Module Communications Network for schematic and connector information.

Normal Operation

The Driver Seat Module (DSM) and the Instrument Panel Cluster (IPC) communicate using the Medium Speed Controller Area Network (MS-CAN). Messages are exchanged between the modules on the MS-CAN for the purposes of determining what functions are being carried out.

- DTC U0155 (Lost Communication with Instrument Panel Cluster (IC) Control Module) - set by the DSM if ignition status message is present, the DSM supply voltage is greater than 10.5 volts, the

ignition must be in the on position for a minimum of 5 seconds and if messages are missing for 15 seconds or longer from the IPC over the MS-CAN .

This pinpoint test is intended to diagnose the following:

- Module communication
- DSM
- IPC

PINPOINT TEST AU: DTC U0155

Test Step	Result / Action to Take
AU1 VERIFY CUSTOMER CONCERN	
• Ignition ON. • Verify there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AU2 . **No** The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AU2 CHECK THE COMMUNICATION NETWORK	
• Enter the following diagnostic mode on the scan tool: Network Test. • Carry out the network test. • **Does the IPC pass the network test?**	**Yes** GO to AU3 . **No** REFER to Section 418-00 .
AU3 RETRIEVE THE RECORDED DTCs FROM THE SELF-TEST	
• Check for recorded DSM DTCs from the self-test. • **Is DTC B1317 or B1318 recorded?**	**Yes** GO to Pinpoint Test AK . **No** GO to AU4 .
AU4 RECHECK THE DSM DTCs	
NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during Programmable Module Installation (PMI) or the PMI may not have been carried out. • Clear the DTCs. Repeat the DSM self-test. • **Is DTC U0155 still present?**	**Yes** GO to AU5 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AU5 CHECK FOR DTC U0155/U0155:00 SET IN OTHER MODULES	
• Clear all DTCs. • Ignition OFF.	**Yes** INSTALL a new IPC . REFER to Section 413-01 .

• Ignition ON. • Wait 10 seconds. • Enter the following diagnostic mode on the scan tool: Self-Test. • Retrieve the continuous memory DTCs from all modules. • **Is DTC U0155/U0155:00 set in other modules?**	**No** INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section.

Pinpoint Test AV: DTC B1317

Refer to Wiring Diagrams Cell 123 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Memory Seats for schematic and connector information.

Normal Operation

The Driver Seat Module (DSM) monitors the voltage from the battery to determine if it goes above or below specific thresholds.

- DTC B1317 (Battery Voltage High) - a continuous memory or on-demand DTC that sets when the DSM detects battery voltage above 15.5 volts on circuit SBB32.

This pinpoint test is intended to diagnose the following:

- Charging system concern
- DSM

PINPOINT TEST AV: DTC B1317

NOTE: DTC B1317 may be stored in the module memory due to previous battery charging or vehicle jump starting events.

Test Step	Result / Action to Take
AV1 CHECK FOR DTC B1317, B1676 OR P0563 SET IN OTHER MODULES	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Retrieve All CMDTCs Self-Test. • Retrieve the continuous memory DTCs from all modules. • **Is DTC B1317, B1676 or P0563 (PCM) set in more than one module?**	**Yes** REFER to Section 414-00 to diagnose an overcharging condition. **No** GO to AV2 .
AV2 CHECK THE BATTERY VOLTAGE	
• Turn off all interior/exterior lights and accessories. • Start and run the engine at approximately 2,000 rpm for 3	**Yes** REFER to Section 414-00 to diagnose an overcharging condition. **No**

minutes while monitoring the battery voltage. • **Does the battery voltage rise to 15.5 volts or higher?**	GO to AV3 .
AV3 RECHECK FOR DTC B1317	
• Turn the engine off. • Ignition ON. • Enter the following diagnostic mode on the scan tool: DSM Self-Test. • Clear the continuous memory DTCs. • Carry out the DSM self-test. • **Is DTC B1317 present?**	**Yes** INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section. TEST the system for normal operation. **No** The system is operating normally at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

Pinpoint Test AW: DTC B1318

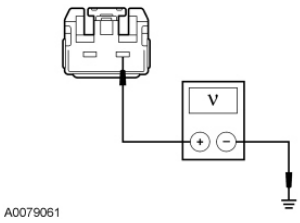
Refer to Wiring Diagrams Cell 13 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Distribution/SJB for schematic and connector information.

Normal Operation

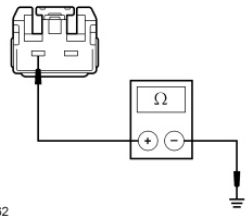
The Driver Seat Module (DSM) monitors the voltage from the battery to determine if it goes above or below specific thresholds.

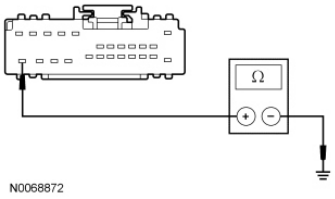
- DTC B1318 (Battery Voltage Low) - a continuous memory or on-demand DTC that sets when the DSM detects battery voltage below 10 volts on circuit SBB32.

This pinpoint test is intended to diagnose the following:



- Wiring, terminals or connectors
- High circuit resistance
- DSM





PINPOINT TEST AW: DTC B1318

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed will result in false resistce readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
AW1 RECHECK THE DSM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: DSM Self-Test. • Clear the DTCs. Repeat the DSM self-test. • **Is DTC B1318 still present?**	**Yes** GO to AW2 . **No** The system is operating normally at this time. The DTC may have been set previously during battery

	charging or while jump starting the vehicle.
AW2 CHECK FOR CHARGING SYSTEM DTCs IN THE PCM	
• Enter the following diagnostic mode on the scan tool: PCM Self-Test. • Retrieve the continuous memory DTCs from the PCM. • **Is DTC P0620, P0625, P0626 or P065B set in the PCM?**	**Yes** REFER to Section 414-00 . **No** GO to AW3 .
AW3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE	
• Ignition OFF. • Check the battery condition and verify the battery is fully charged. Refer to Section 414-01 . • **Is the battery OK and fully charged?**	**Yes** GO to AW4 . **No** REFER to Section 414-00 .
AW4 CHECK THE DSM VOLTAGE SUPPLY	
• Measure and record the voltage at the battery. • Disconnect: DSM C3299a. • Ignition ON. • Measure the voltage between the DSM C3299a-1, circuit SBB32 (VT/RD), harness side and ground.  • **Is the voltage within 0.2 volt of the recorded battery voltage?**	**Yes** GO to AW5 . **No** REPAIR the circuit for high resistance. CLEAR the DTCs. REPEAT the self-test.
AW5 CHECK THE DSM GROUND CIRCUITS	
• Ignition OFF. • Disconnect: Negative Battery Cable. • Disconnect: DSM C3299b. • Measure the resistance between the DSM C3299a-2, circuit GD126 (BK/WH), harness side and ground.	**Yes** CONNECT the negative battery cable. GO to AW6 . **No** REPAIR the circuit for high resistance. CONNECT the negative battery cable. TEST the system for normal operation.

 A0079062 • Measure the resistance between the DSM C3299b-24, circuit GD126 (BK/WH), harness side and ground.  N0068872 • **Are the resistances less than 5 ohms?**	
AW6 CHECK FOR CORRECT DSM OPERATION	
• Disconnect the DSM connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect the DSM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section. TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test AX: DTC U0140

Refer to Wiring Diagrams Cell 14 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Module Communications Network for schematic and connector information.

Normal Operation

The Driver Seat Module (DSM) and the Smart Junction Box (SJB) communicate using the Medium Speed Controller Area Network (MS-CAN). Messages are exchanged between the modules on the MS-CAN for the purposes of determining what functions are being carried out.

- DTC U0140 (Lost Communication With Body Control Module (GEM)) - set by the DSM whenever it has lost communication to the SJB for 15 seconds or longer as long as the module voltage is between 10 and 15 volts.

This pinpoint test is intended to diagnose the following:

- Module communication
- DSM

- SJB

PINPOINT TEST AX: DTC U0140

Test Step	Result / Action to Take
AX1 VERIFY CUSTOMER CONCERN	
• Ignition ON. • Verify there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AX2 . **No** The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AX2 CHECK THE COMMUNICATION NETWORK	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Network Test. • Carry out the network test. • **Does the SJB pass the network test?**	**Yes** GO to AX3 . **No** REFER to Section 418-00 .
AX3 RETRIEVE THE RECORDED DTCs FROM THE SELF-TEST	
• Check for recorded DSM DTCs from the self-test. • **Is DTC B1317 or DTC B1318 recorded?**	**Yes** For DTC B1317, GO to Pinpoint Test AV . For DTC B1318, GO to Pinpoint Test AW . **No** GO to AX4 .
AX4 RECHECK THE DSM DTCs	
NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during Programmable Module Installation (PMI) or the PMI may not have been carried out. • Clear the DTCs. Repeat the DSM self-test. • **Is DTC U0140 still present?**	**Yes** GO to AX5 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AX5 CHECK FOR DTC U0140/U0140:00 SET IN OTHER MODULES	
• Clear all DTCs. • Ignition OFF. • Ignition ON. • Wait 10 seconds.	**Yes** INSTALL a new SJB . REFER to Section 419-10 . **No**

• Enter the following diagnostic mode on the scan tool: Self-Test. • Retrieve the continuous memory DTCs from all modules. • **Is DTC U0140/U0140:00 set in other modules?**	INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section.

Pinpoint Test AY: DTC U0155

Refer to Wiring Diagrams Cell 14 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Module Communications Network for schematic and connector information.

Normal Operation

The Driver Seat Module (DSM) and the Instrument Panel Cluster (IPC) communicate using the Medium Speed Controller Area Network (MS-CAN). Messages are exchanged between the modules on the MS-CAN for the purposes of determining what functions are being carried out.

- DTC U0155 (Lost Communication with Instrument Panel Cluster (IC) Control Module) - set by the DSM if ignition status message is present, the DSM supply voltage is greater than 10.5 volts, the ignition must be in the on position for a minimum of 5 seconds and if messages are missing for 15 seconds or longer from the IPC over the MS-CAN .

This pinpoint test is intended to diagnose the following:

- Modu communication
- DSM
- IPC

PINPOINT TEST AY: DTC U0155

Test Step	Result / Action to Take
AY1 VERIFY CUSTOMER CONCERN	
• Ignition ON. • Verify there is an observable symptom present. • **Is an observable symptom present?**	**Yes** GO to AY2 . **No** The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AY2 CHECK THE COMMUNICATION NETWORK	
• Enter the following diagnostic mode on the scan tool: Network Test. • Carry out the network test. • **Does the IPC pass the network test?**	**Yes** GO to AY3 . **No** REFER to Section 418-00 .
AY3 RETRIEVE THE RECORDED DTCs FROM THE SELF-TEST	
• Check for recorded DSM DTCs from the self-test.	**Yes** For DTC B1317, GO to Pinpoint

• **Is DTC B1317 or B1318 recorded?**	Test AV . For DTC B1318, GO to Pinpoint Test AW . **No** GO to AY4 .
AY4 RECHECK THE DSM DTCs	
NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during Programmable Module Installation (PMI) or the PMI may not have been carried out. • Clear the DTCs. Repeat the DSM self-test. • **Is DTC U0155 still present?**	**Yes** GO to AY5 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AY5 CHECK FOR DTC U0155/U0155:00 SET IN OTHER MODULES	
• Clear all DTCs. • Ignition OFF. • Ignition ON. • Wait 10 seconds. • Enter the following diagnostic mode on the scan tool: Self-Test. • Retrieve the continuous memory DTCs from all modules. • **Is DTC U0155/U0155:00 set in other modules?**	**Yes** INSTALL a new IPC . REFER to Section 413-01 . **No** INSTALL a new DSM . REFER to Driver Seat Module (DSM) in this section.

Component Test

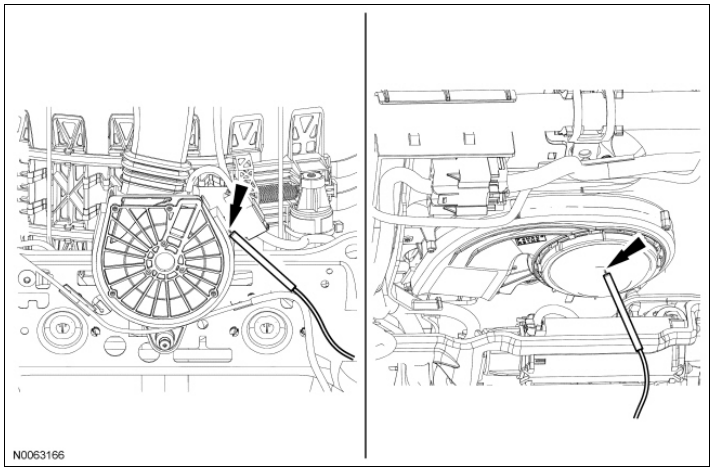
Component Testing - Thermo-Electric Device (TED) Cooling Performance

NOTE: This test is intended to check the cooling mode performance of an operational climate controlled seat backrest or cushion Thermo-Electric Device (TED) and verify it is cooling inlet air at the TED (ambient cabin air) between 6-8°C (10-14°F).

NOTE: Make sure the vehicle is out of direct sunlight and is in an area with a stable air temperature when testing the climate controlled seat system.

NOTE: For correct temperature measurements, the seat being tested should be occupied.

1. EntataLogger and monitor the following Dual Climate Controlled Seat Module (DCSM) PIDs:
   - CSHTEMP (Seat cushion thermal electric device temperature)
   - BK_TEMP (Seat back thermal electric device temperature)
   - PCSHTMP (Passenger Cushion Thermal Electric Device [TED] Temperature)
   - PBKTMP (Passenger Back TED Temperature)
   - DCCSMOD (Driver State Seat Mode)
   - PCCSMOD (Passenger State Seat Mode)



2. Any initial PID value of greater than 205°C (401°F) or less than 2°C (36°F) indicates a system hardware failure. Do not proceed with this test. GO to Symptom Chart or Dual Climate Controlled

Seat Module (DCSM) DTC Chart for diagnosis.

3. **NOTE:** Typical backrest and cushion TED shown, others similar.

   Gain access to the seat backrest and cushion TEDs and use a suitable thermo-couple temperature measuring device to monitor the air inlet temperature.

   - Access the backrest TED .
     - ♦ Release the backrest trim cover J-clips at the sides and bottom.
     - ♦ Pull out at the bottod detach the 2 lower hard back panel pin-type retainers.
     - ♦ Position the backrest trim cover aside.
   - Place the temperature probe near each TEDs air filter.

4. **NOTE:** The engine must be running to operate the climate controlled seat system and carry out this test.

   Operate system in high cool mode and measure the temperature at the cushion TED filter using the thermo-couple device.

   - Obtain and record the air inlet temperature at the TED .

5. Use a scan tool to measure the cushion TED PID temperature and record the value.
   - Monitor the MODE PID and verify the system is operating. If during testing the PID value changes to Blower Only state, the system has entered into recovery mode and voltage to the TEDs is disabled. If this occurs, the seat has failed the test. Do not continue. Return to the diagnostic routine.

6. Subtract the cushion TED PID temperature from the cushion air inlet temperature and record the temperature difference value.

7. Continue to operate the system in high cool mode and use the thermo-couple device to measure the temperature at the backrest TED filter.
   - Obtain and record the air inlet temperature at the TED .
     - ♦ Secure the temperature probe at the backrest TED air filter and close the backrest trim cover before measuring.

8. Use a scan tool to measure the backrest TED PID temperature and record the value.
   - Monitor the MODE PID and verify the system is operating. If during testing the PID value changes to Blower Only state, the system has entered into recovery mode and voltage to the TEDs is disabled. If this occurs, the seat has failed the test. Do not continue. Return to the

diagnostic routine.

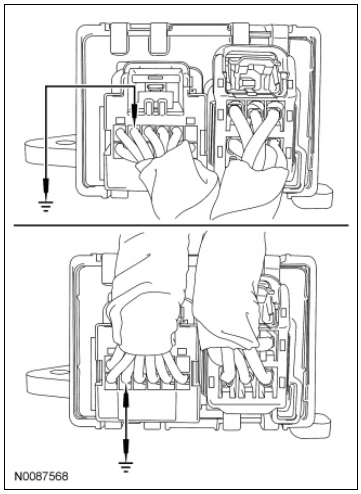
9. Subtract the backrest TED PID temperature from the backrest air inlet temperature and record the value.

10. Compare the cushion and backrest calculated temperature values. Both values should be between 6°-8°C (10.8°-14.4°F) and approximately equal (±1°C [±1.8°F]).

11. If the calculated temperature values are not within these specifications, check the climate controlled seat components for air duct or filter restrictions, blockages, duct or electrical disconnections and for incorrect assembly. Repair as needed. If OK, carry out the DCSM self-test and if any DTC is retrieved, go to Dual Climate Controlled Seat Module (DCSM) DTC Chart for diagnostic direction. Return to the diagnostic routine.

Heated Seat Module Reset

NOTE: This heated seat module is used on 2 different systems. These systems use 2 different on/off switches, the single momentary switch and the dual momentary switch. A new heated seat module is programmed to function for a single momentary switch.



The single momentary switch provides a ground signal to the heated seat module on one circuit. This cycles the system high, low and off.

The dual momentary switch provides a ground to the heated seat module on 2 different circuits. Toggling the dual momentary switch to one side cycles the system low and off. Toggling the switch to the other side cycles the system high and off.

When a new heated seat module is installed on a system with a dual momentary switch and the module receives a ground signal from the low circuit of that switch, the module is then programmed to function for a dual momentary switch. Now the heated seat module will expect to see ground signals on 2 different circuits to cycle the system high/off and low/off.

Once the heated seat module is programmed for use with dual momentary switches, the heated seat module cannot be used with a single momentary switch heated seat system until the following reset procedure is carried out.

1. Back probe and short both high switch inputs to ground.

2. Turn the ignition ON.

3. Wait for heated seat switch LEDs to start flashing.

4. Disconnect both grounds as soon as the heated seat switch LEDs start flashing.

5. The LEDs will flash a total of 5 times when the module is reset.
   - Wait for the LEDs to stop flashing and the system should work correctly.

6. If the system does not work correctly, carry out the Heated Seat Module Reset steps again. Otherwise, refer to the Symptom Chart in the Seats portion of this section.

Memory Position Programming

Programming Memory Positions

NOTE: Memory positions can be stored at any time.

NOTE: Verify good battery condition before diagnosing the memory seat system. Poor battery condition may interfere with memory seat operation, even if vehicle starting is possible.

1. Place the vehicle ignition to ON.
2. **NOTE:** To program the Remote Keyless Entry (RKE) transmitter, refer to Section 501-14 .

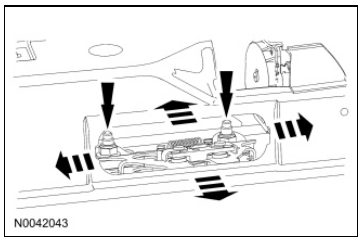
   To set memory position(s), move the memory driver seat, memory exterior mirrors (if equipped), memory adjustable pedals (if equipped) and memory steering column (if equipped) to the preferred position using the appropriate switch(es).
3. **NOTE:** Input from the driver seat control switch, exterior mirror control switch (if equipped), steering column control switch (if equipped) and adjustable pedal control switch (if equipped) during memory programming will abort the operation.

   NOTE: If other tones or chimes are being produced, the memory save tone will not be heard because it is one of the lowest priorities.

   Press and hold a memory button (1 or 2) until a tone is heard (1.5 seconds). When the tone is heard, the memory programming is complete.
4. Repeat the previous steps to program another memory position.

Recalling a Stored Memory Position

NOTE: A memory recall can be initiated only if the vehicle is in PARK or NEUTRAL gear and the ignition is not in START. A memory recall in progress will not be affected by placing the ignition in START or by moving the gearshift lever out of PARK or NEUTRAL.



NOTE: Input from the driver seat control switch, memory SET switch, adjustable pedal control switch (if equipped), exterior mirror control switch (if equipped) or steering column control switch (if equipped) during a memory recall will abort the memory recall.

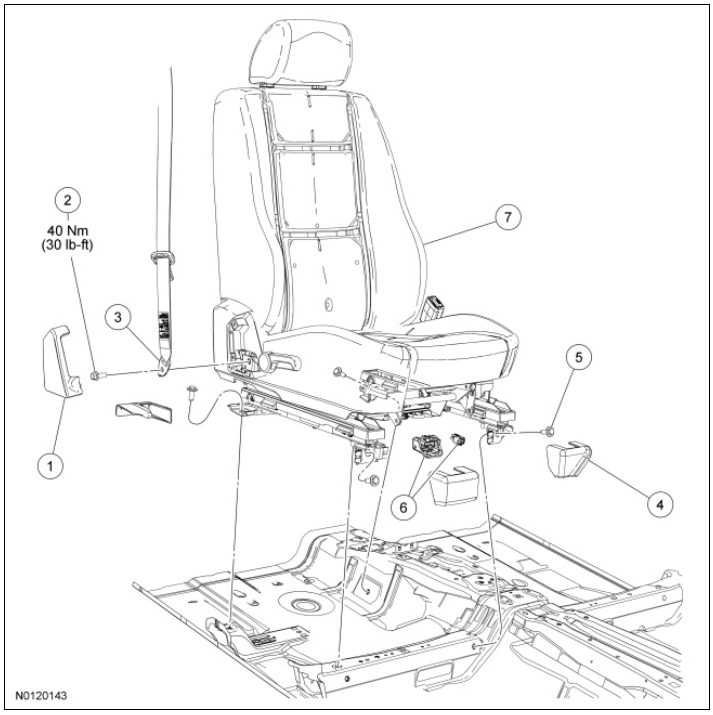
1. The driver can recall the desired memory driver seat, memory exterior mirror (if equipped), memory adjustable pedal (if equipped) and memory steering column (if equipped) positions by depressing either memory SET switch button 1 or 2. Depressing memory SET switch button 1 will initiate a recall of the positions stored for Memory 1. Depressing memory SET switch button 2 will initiate a recall of the positions stored for Memory 2.

Seat Latch Adjustment - Rear

1. Remove the parcel shelf. For additional information, refer to Section 501-05 .

2. Loosen the 2 rear seat backrest latch nuts. Adjust the latch position as necessary for good backrest fit and latch closure when upright.
   - Tighten to 48 Nm (35 lb-ft).

3. Install the parcel shelf. For additional information, refer to Section 501-05 .



Seat - Front

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

NOTE: Passenger seat shown, driver seat similar.

NOTE: The seat track-to-floor bolts must be tightened in the sequence described in this procedure.

Item	Part Number	Description
1	621A44	Safety belt retractor belt anchor bolt cover (part of 62184) (passenger only)
2	W505274	Safety belt retractor belt anchor bolt (passenger only)
3	-	Safety belt retractor belt anchor (part of 611B08) (passenger only)
4	61748 (passenger)/ 61749 (driver)	Seat-to-floor bolt cover (4 required)

5	W707858	Seat-to-floor bolt (4 required)
6	/td>	Electrical connectors (part of 14A698)
7	-	Front seat assembly

Removal

⚠ WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition switch is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

Passenger seat

1. Remove the safety belt retractor belt anchor bolt cover from the cushion side shield to access the safety belt anchor bolt.
   - If equipped with power seats, position the seat track downward to access the safety belt retractor anchor bolt.

2. Remove the bolt and separate the safety belt anchor from the seat.

All seats

3. Push the release buttons on the head restraint guides and remove the head restraint.

4. Position the seat to gain access to all 4 seat-to-floor bolts.
   - If equipped with power seats, fully raise the seat to aid seat service.

5. Depower the S . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .

6. Remove the 4 seat track-to-floor bolt covers and bolts.

7. Lift the seat to disengage 2 locator pins from the floor and tip the seat to access the electrical connectors.

8. **⚠ WARNING: Use care when handling the front passenger seat and track assembly. Dropping the assembly, placing excessive weight on or sitting on a front passenger seat that is not secured in the vehicle may result in damaged seat components. Failure to follow these instructions may result in incorrect operation of the occupant classification system (OCS) and increases the risk of serious personal injury or death in a crash.**

   Disconnect the seat harness electrical connectors and remove the seat.

   - Slide and disengage the side air bag module electrical connector locking clip, release the tab and disconnect the side air bag module electrical connector.
   - ***NOTICE:*** **Use care when disconnecting the seat harness electrical connector. Excessive force on the assurance lever can break the connector mounting.**

     Disconnect the seat harness electrical connector.

- Release the locking tab and rotate the assurance lever fully to disengage the seat harness electrical connector.
- Slightly tip the connector away and disconnect.

Installation

⚠ WARNING: Make sure the front passenger seat is correctly installed and fastened to the vehicle. Do not force the alignment to the floorpan mounting holes. If the seat does not align to the floorpan mounting holes, repair the seat or floorpan as needed. Failure to follow these instructions may result in incorrect operation of the occupant classification system (OCS) and increase the risk of serious personal injury or death in a crash.

⚠ WARNING: After any crash, inspect the front passenger seat-to-floorpan mounting area for deformation and restore to its original condition, if deformed. Correct alignment of the occupant classification system (OCS) sensor rails to the seat and floorpan is critical for correct OCS operation. Incorrect operation of the OCS increases the risk of serious personal injury or death in a crash.

Manual seats

1. Align both seat track rails to be flush with the rear edge of the seat track base to synchronize.

All seats

2. Position the seat in the vehicle.

3. Tip the seat and connect the electrical connectors.
   - Connect the seat harness electrical connector.
     - Make sure the electrical connector assurance lever is in the fully released position.
     - Tip the body harness connector into the seat connector and partially insert.
     - Rotate the assurance lever while pushing the connectors together until the handle is locked.
   - Connect the side air bag module electrical connector, then slide and engage the side air bag electrical connector locking clip.

4. Align the 2 forward seat mounting locators to the guide holes in the floor and position the seat in place.

5. **NOTE:** Make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   Install the seat-to-floor bolts by hand and tighten in the following sequence.

   1. Tighten to 47 Nm (35 lb-ft).
   2. Tighten to 47 Nm (35 lb-ft).
   3. Tighten to 47 Nm (35 lb-ft).
   4. Tighten to 47 Nm (35 lb-ft).

6. Install the 4 seat-to-floor bolt covers.

7. Repower the SRS . **If a passenger seat has been serviced, do not prove out the SRS at this time.** For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .

8. Install the head restraint.

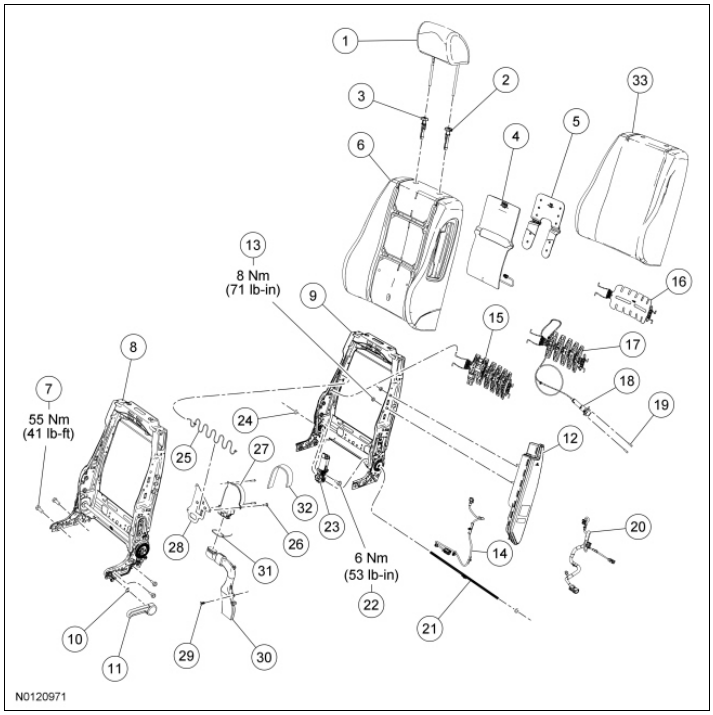
Passenger seat

9. **NOTE:** Make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   NOTE: If equipped with power seats, position the passenger seat track downward for safety belt retractor belt anchor and bolt installation.

   Position the safety belt retractor belt anchor to the seat and install the bolt.

   - Tighten to 40 Nm (30 lb-ft).



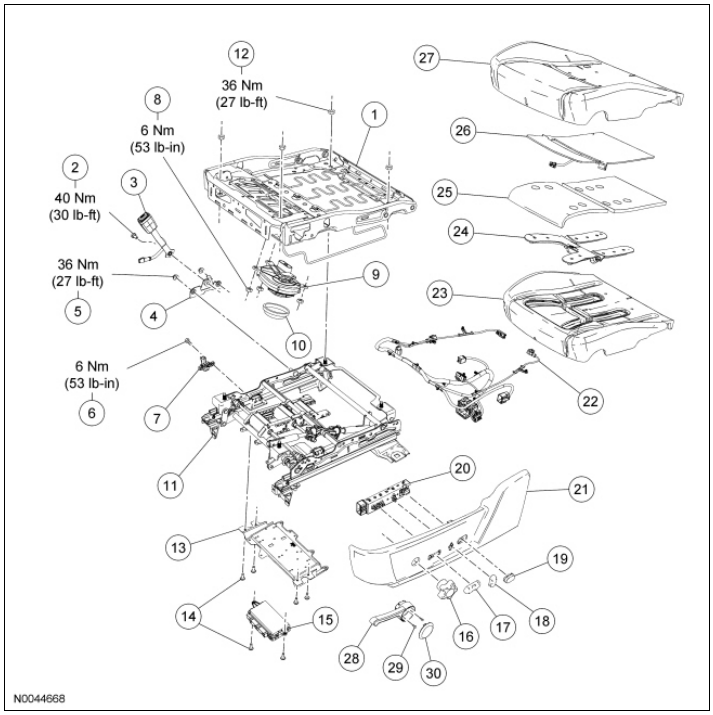
10. Install the safety belt retractor belt anchor bolt cover.

11. Carry out the Occupant Classification System (OCS) System Reset. For additional information, refer to the General Procedures portion of Section 501-20B .

Seat - Exploded View, Front

Front Seat Backrest

NOTE: Driver backrest shown, passenger backrest similar.



Item	Part Number	Description
1	611A08	Head restraint
2	610A16	Head restraint guide (master)
3	610A18	Head restraint guide (slave)
4	14D696	Backrest heater mat (if equipped)
5	19N550	Backrest manifold, climate controlled seat (if equipped)
6	64811	Backrest foam pad
7	W500632	Recliner-to-cushion frame bolt (4 required)

22	-	Cushion insert (part of 632A22) (if equipped)
23	14D698	Cushion heater mat (if equipped)
24	62900	Cushion trim cover

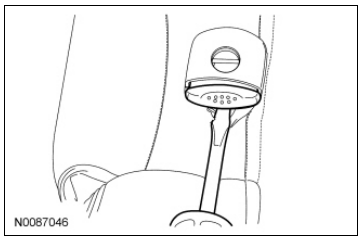
Power Seat Track - Passenger

Item	Description	
1	61710	Seat track
2	14A698	Passenger seat wire harness
3	W712479	Occupant Classification System (OCS) rail-to-seat track bolts (8 required)
4	61708	Outboard OCS weight sensor assembly
5	14A577	Outboard OCS wire harness
6	61912	Rear outboard seat riser
7	61912	Front outboard seat riser
8	61709	Inboard OCS weight sensor assembly

9	14A578	Inboard OCS wire harness
10	61913	Rear inboard seat riser
11	61913	Front inboard seat riser
12	W712479	Seat riser-to-seat track bolts (6 required)
13	610E34	Electrical bracket
14	31134/31147	Pop rivet (4 required)
15	14B422	Occupant Classification System Module (OCSM)
16	31134/31147	Pop rivets (quantity varies with seat option)
17	14C724	Heated seat module (if equipped)
18	14C724	Dual Climate Controlled Seat Module (DCSM) (if equipped)

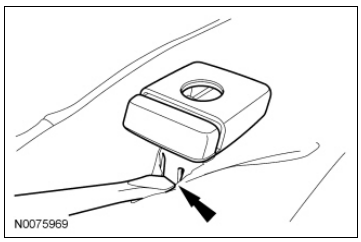
1. For additional information, refer to the procedures in this section.

Head Restraint Guide Sleeve



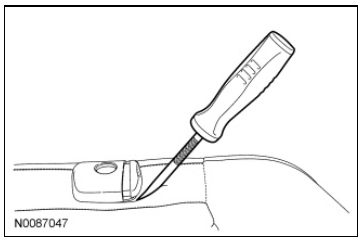
Removal

NOTE: Typical head restraint guide sleeve shown, others similar.



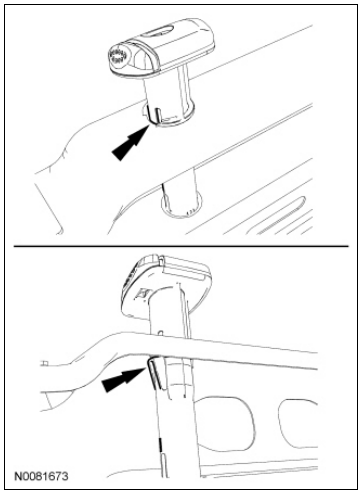
1. Push in on the 2 head restraint guide sleeve release buttons and remove the head restraint.

2. Obtain a flat-head screwdriver with a width of 4 mm (0.157 in) to 7 mm (0.275 in) and a thickness of approximately 1 mm (0.039 in).

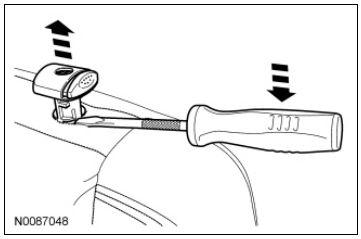


3. Align the screwdriver to the middle of the head restraint guide sleeve release button.

4. Position the screwdriver between the head restraint guide sleeve neck and backrest trim cover and foam pad.



5. Position the screwdriver at a 45-degree angle.



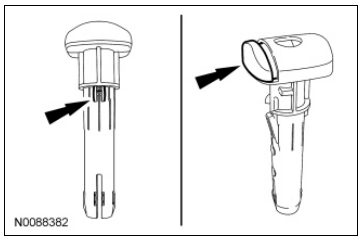
6. **NOTE:** For retainer clarity, backrest trim cover and foam pad are removed.

   Push the screwdriver in, bending the lock feature on the head restraint guide sleeve in.

7. While bending the lock feature in, push down on the screwdriver handle, prying the head restraint guide sleeve up and disengaging it from the backrest frame crossmember.

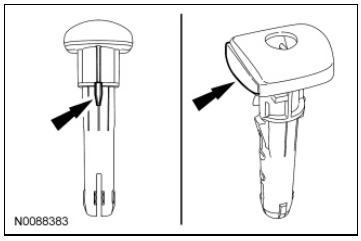
8. Remove the head restraint guide sleeve.
    - Discard the head restraint guide sleeve.

9. Repeat these steps for the head restraint guide sleeve on the opposite side.



Installation

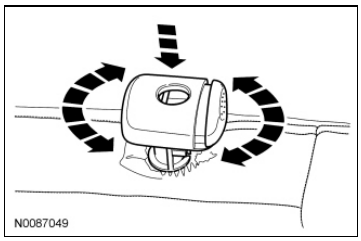
NOTICE: **Always install new head restraint guide sleeves. Difficult adjustment of the head restraint may occur. Failure to follow these instructions may result in component failure.**



NOTICE: **The head restraint guide sleeves are not interchangeable. Failure to install the correct head restraint guide sleeve at the correct position may result in component failure.**

1. Make sure the holes in the backrest foam pad and backrest trim cover are aligned to the holes in the backrest frame.

2. Install the head restraint guide sleeve with the large button and wide key on the LH side of the seat.



3. Install the head restraint guide sleeve with the small button and thin key on the RH side of the seat.

4. ***NOTICE:*** **Do not attempt to seat the head restraint guide sleeve by hand. This may result in excessive head restraint adjustment efforts and permanent damage to the head restraint guide sleeve.**

   To allow the head restraint guide sleeve to slide freely through the backrest foam pad and backrest trim cover, twist the head restraint guide sleeve while pushing it into the backrest frame hole as far as it will go with hand pressure.

5. ***NOTICE:*** **Striking effort should not result in any type of damage or distortion to the head restraint guide sleeve. If a head restraint guide sleeve is damaged, install a new one.**

   Using a non-marring mallet, strike the top of the head restraint guide sleeve with moderate force, seating it in the backrest frame.

   - Striking effort must be hard enough to snap the head restraint guide sleeve retainer in place in the backrest frame.

6. Inspect the head restraint guide sleeve.
   - Pull the head restraint guide sleeve out by hand, making sure it is locked in place. If the head restraint guide sleeve can be removed by hand, repeat the installation procedure. If the head restraint guide sleeve can be removed again after installing a second time, install a new head restraint guide sleeve.

7. Repeat these steps for the head restraint guide sleeve on the opposite side.

8. After installation of 2 new head restraint guide sleeves, install the head restraint in the following sequence.
   1. Position the head restraint rods to the head restraint guide sleeve holes.
   2. Push the head restraint down, guiding the rods into the head restraint guide sleeve holes.
   3. Make sure the head restraint adjusts without excessive effort and locks in place.

Seat Backrest - Front

Removal and Installation

⚠ WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTICE: **Do not reinstall the cushion side shield or side shield retainers after removal. These are one-time-use items that become damaged during removal and may not remain attached if reinstalled. Install a new side shield during seat assembly (includes new retainers attached).**

All seats

1. Remove the front seat. For additional information, refer to Seat - Front in this section.

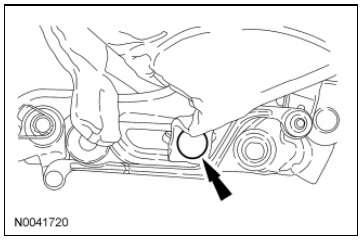
2. Remove the manual height adjust handle, if equipped.
   - Remove the height adjust handle cover.
   - Remove the 2 screws and height adjust handle.

3. Remove the spring clip and manual recliner handle, if equipped.

4. Remove the manual lumbar control knob, if equipped.
   - Adjust the manual lumbar to the full relaxed position.
   - Pull outward and remove the manual lumbar knob.

Seat Backrest Cover - Front

Removal and Installation



⚠ WARNING: Front seat backrest trim covers installed on seats equipped with seat side air bags cannot be repaired. A new trim cover must be installed. Cleaning is permissible. Failure to follow these instructions may result in the seat side air bag module deploying incorrectly and increase the risk of serious personal injury or death in a crash.

⚠ WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

1. Remove the front seat backrest. For additional information, refer to Seat Backrest - Front in this section.

2. Remove the 2 head restraint guide sleeves. For additional information, refer to Head Restraint Guide Sleeve in this section.

3. Detach the 2 pin-type retainers and trim cover flaps from the recliners.

4. Disengage the backrest cover lower J-strips.

5. ***NOTICE:*** **Use care when separating the backrest cover from the hook-and-loop strip, or the hook-and-loop strip can be torn from the backrest foam pad.**

   Invert the backrest cover up the backrest, remove all rows of hog rings (if equipped) from the front of the backrest trim cover and separate the hook-and-loop strips.

6. Remove the backrest cover rear upper hog rings.
   - To install, make sure the climate controlled seat backrest manifold is correctly aligned to the foam pad, if equipped.

7. Separate any remaining hook-and-loop strips, invert up and remove the backrest cover.

8. To install, reverse the removal procedure.

Seat Cushion Cover - Front

Removal and Installation

1. Remove the front seat backrest. For additional information, refer to Seat Backrest - Front in this section.

2. **NOTE:** Trim cover J-clip configurations vary with seat option.

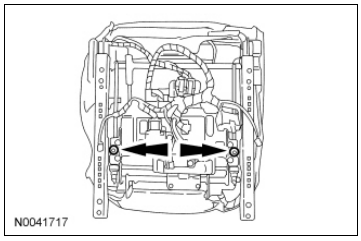
   Release all the remaining J-clips attaching the trim cover to the cushion frame.

3. ***NOTICE:*** **Use care when separating the seat cushion trim cover from the hook-and-loop strip, or the hook-and-loop strip can be torn from the cushion foam pad.**

   Release the hook-and-loop strips, remove the hog rings (if equipped), separate the cushion trim cover from the cushion foam pad and remove.

4. To install, reverse the removal procedure.

Seat Track



Removal and Installation

All seats

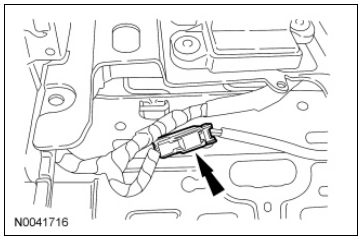
1. Remove the front seat backrest. For additional information, refer to Seat Backrest - Front in this section.

Passenger seat with failed horizontal motor

2. To remove the Occupant Classification System (OCS) weight sensor assemblies, remove the 2 seat track horizontal drive unit bolts. This will allow the power seat tracks to move manually for access to the 8 OCS weight sensor assembly bolts.

Passenger seat receiving a new seat track

3. Remove the inboard and outboard OCS weight sensor assemblies. For additional information, refer to Occupant Classification System (OCS) in Section 501-20B .



Power seat

4. If equipped, disconnect the seat control switch and remove the cushion side shield.

Heated seat

5. **NOTE:** Passenger seat shown, driver seat similar.

   Disconnect the cushion heater mat electrical connector.

All seats

6. Detach the hook-and-loop strips from around the safety belt buckle assembly.

7. Detach all wiring harness pin-type retainers from the cushion frame.

8. Release the cushion trim cover J-clips and remove the seat cushion foam pad and cushion trim cover.

Climate controlled seat

9. ***NOTICE:*** **Inspect the climate controlled seat cushion manifold and foam pad for crush or obstruction. Before installation, repair as needed.**

   NOTE: Covering the Thermo-Electric Device (TED) openings is recommended to prevent foreign material from entering the TED .

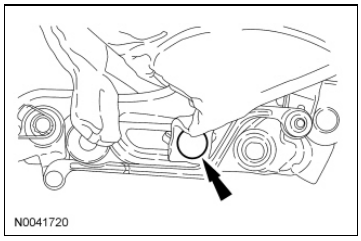
   Disconnect the TED assembly electrical connector.

All seats

10. Remove the 4 cushion frame-to-seat track nuts and separate the cushion frame and seat track.
    - To install, tighten to 36 Nm (27 lb-ft).

11. Detach any remaining wiring harness retainers attached to the cushion frame and remove the seat track.

12. To install, reverse the removal procedure.



Seat Recliner Motor

Removal

NOTE: The manual recliners and power recliners are serviced as part of the backrest frame.

1. Remove the front seat backrest. For additional information, refer to Seat Backrest - Front in this section.

2. Detach the 2 pin-type retainers and trim cover flaps from the recliners.

3. Disengage the backrest cover lower J-strips.

4. ***NOTICE:*** **Use care when separating the backrest cover from the hook-and-loop strip, or the hook-and-loop strip can be torn from the backrest foam pad.**

   Invert the backrest cover up the backrest, remove all rows of hog rings (if equipped) from the front of the backrest trim cover and separate the hook-and-loop strips.

5. Remove the one-way push clip on the RH side of the power recliner. Slide the recliner shaft out from the LH side of the seat enough to clear the RH recliner and power recline motor.

6. Disconnect the electrical connector, remove the screw and the power recline motor.

Installation

1. ***NOTICE:*** **Avoid rotating the recliner shaft until the recliner is fully installed or the recliners will not be synchronized.**

   Install the recliner motor in the following sequence:

   1. Position the recliner shaft through the recliner motor and RH recliner.
   2. Install a new one-way push clip onto the recliner shaft at the RH recliner.
   3. Slightly turn the recliner motor to align the bolt hole with the hole in the RH recliner and install the recliner motor bolt.
      - Tighten to 6 Nm (53 lb-in).
   4. Connect the recliner motor electrical connecto

2. Roll the backrest trim cover down, attach the hook-and-loop strips, install new hog rings (if equipped) and attach the backrest cover lower J-strips.

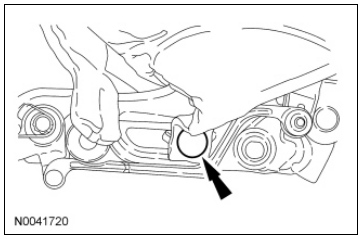
3. Attach the 2 pin-type retainers and trim cover flaps to the recliners.

4. Install the front seat backrest. For additional information, refer to Seat Backrest - Front in this section.

Lumbar Assembly

Removal and Installation

All vehicles



1. Remove the front seat backrest. For additional information, refer to Seat Backrest - Front in this section.

Vehicles with climate controlled seats

2. Remove the 2 head restraint guide sleeves. For additional information, refer to Head Restraint Guide Sleeve in this section.

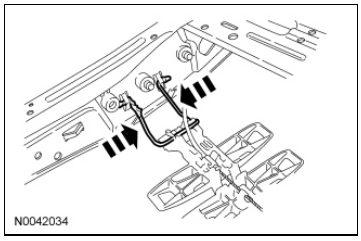
All vehicles

3. Detach the 2 pin-type retainers and trim cover flaps from the recliners.

4. Disengage the backrest cover lower J-strips.

5. ***NOTICE:*** **Use care when separating the backrest cover from the hook-and-loop strip, or the hook-and-loop strip can be torn from the backrest foam pad.**

   Invert the backrest cover up the backrest, remove all rows of hog rings (if equipped) from the front of the backrest trim cover and separate the hook-and-loop strips.



Vehicles with climate controlled seats

6. Remove the rear upper hog rings attaching the trim cover to the backrest frame and remove the trim cover.

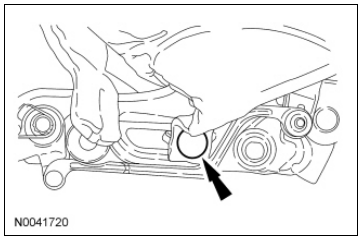
7. Remove the foam pad from the backrest frame.
   - If equipped with climate controlled seats, remove the hog rings from the upper support spring.
   - If equipped with heated seats, detach the pin-type retainer and backrest heater mat wiring harness from the backrest frame.

All vehicles

8. Release the 2 lumbar spring clips from the backrest frame and remove the lumbar.
   - Route out the manual lumbar cable, if equipped.
     - ♦ Note the routing of the lumbar cable for installation.
   - Disconnect the electrical connector from the power lumbar motor, if equipped.

9. To install, reverse the removal procedure.

Seat Backrest Thermo-Electric Device



Removal and Installation

NOTE: The backrest Thermo-Electric Device (TED) filter is detachable from the TED assembly housing and can be replaced without TED removal.

1. Remove the front seat backrest. For additional information, refer to Seat Backrest - Front in this section.

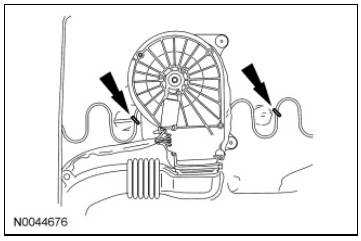
2. Remove the 2 head restraint guide sleeves. For additional information, refer to Head Restraint Guide Sleeve in this section.

3. Detach the 2 pin-type retainers and trim cover flaps from the recliners.

4. Disengage the backrest cover lower J-strips.

5. ***NOTICE:*** **Use care when separating the backrest cover from the hook-and-loop strip, or the hook-and-loop strip can be torn from the backrest foam pad.**

   Invert the backrest cover up the backrest, remove all rows of hog rings (if equipped) from the front of the backrest trim cover and separate the hook-and-loop strips.



6. Remove the rear upper hog rings and trim cover.

7. ***NOTICE:*** **Inspect the climate controlled seat backrest manifold for crush and obstruction before installation. If damaged, install a new backrest manifold.**

   If necessary, remove the climate controlled seat backrest manifold from the foam pad.

   - To install, align the backrest manifold and insert into the valleys of the foam pad.
     - ♦ Check for correct fit between the manifold, foam pad and TED assembly, to make sure there is no air flow obstruction or cushion crush.

8. Remove the hog rings from the upper support spring and remove the foam pad.

9. Disconnect the backrest TED assembly electrical connector and detach the wiring harness retainers.

10. Remove the TED exhaust duct.
    - Cut and remove the tie strap.
        - ♦ During installation, install a new tie strap.
    - Remove the pin-type retainer and separate the exhaust duct from the TED .

11. Disconnect the backrest upper support spring from the backrest frame and remove the spring support with the TED attached.

12. If necessary, detach the backrest TED filter from the TED .

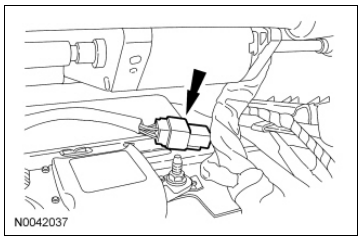
13. **NOTE:** Note the TED position on the support spring for installation.

    Separate the TED from the upper backrest support spring.

14. ***NOTICE:*** **Cover the Thermo-Electric Device (TED) openings before removing any rivets to prevent foreign material from entering the TED .**

    Remove the 3 rivets and bracket from the TED .

15. To install, reverse the removal procedure.



Seat Cushion Thermo-Electric Device

Removal and Installation

NOTE: The cushion Thermo-Electric Device (TED) filter is detachable from the TED assembly housing from underneath the seat cushion.

1. Remove the front seat. For additional information, refer to Seat - Front in this section.
   - Fully raise the seat before depowering the Supplemental Restraint System (SRS) to aid cushion TED assembly access.

2. Disconnect the TED electrical connector.

3. ***NOTICE:*** **Inspect the climate controlled seat cushion manifold and foam pad for crush or obstruction. Before installation, repair as needed. Failure to do so may cause the climate control to work inefficiently.**

   Remove the 3 nuts and TED assembly from the cushion frame.

   - To install, tighten to 6 Nm (53 lb-in).
   - To install, check for correct fit between the cushion manifold, foam pad and TED assembly, to make sure there is no airflow obstruction, cushion crush or foreign material.

4. To install, reverse the removal procedure.

Dual Climate Controlled Seat Module (DCSM)

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Removal

NOTE: When installing a new Dual Climate Controlled Seat Module (DCSM), it is necessary to carry out the Programmable Module Installation (PMI) procedure. For additional information, refer to Section 418-01 .

1. Before removing the DCSM , carry out the appropriate steps in the Programmable Module Installation (PMI) procedure. For additional information, refer to Section 418-01 .

2. Remove the front passenger seat. For additional information, refer to Seat - Front in this section.

3. Remove the DCSM from the cushion electrical bracket.
   - Release the locking wedges and disconnect the 3 DCSM electrical connectors.
   - Remove the 2 rivets and DCSM .

Installation

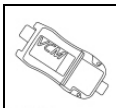
1. Install the DCSM to the seat.
   - Position the DCSM to the electrical bracket and install 2 new rivets.
   - Connect the 3 DCSM electrical connectors and locking wedges.

2. Install the front seat. For additional information, refer to Seat - Front in this section.

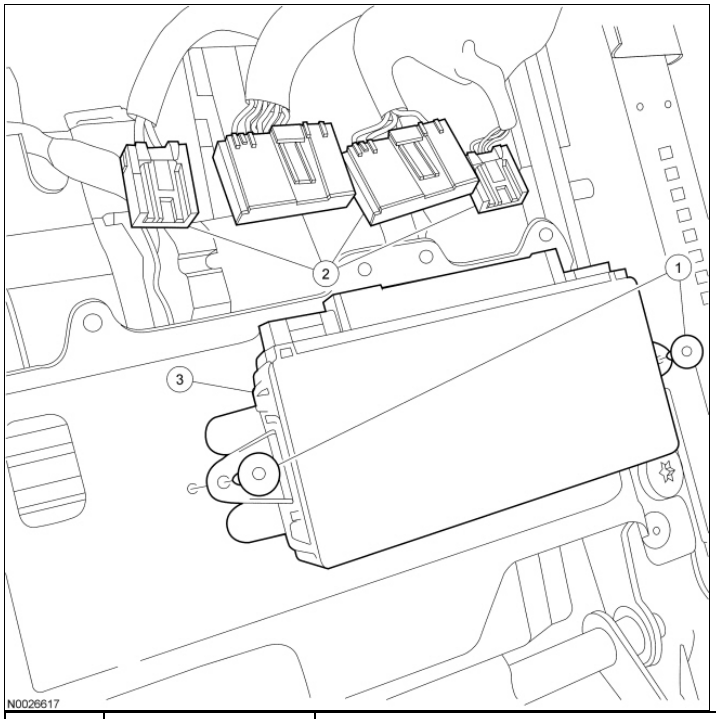
3. After installing the DCSM , carry out the appropriate steps in the Programmable Module Installation (PMI) procedure. For additional information, refer to Section 418-01 .

Heated Seat Module

Removal and Installation



1. Remove the front passenger seat. For additional information, refer to Seat - Front in this section.



2. Remove the heated seat module from the cushion electrical bracket.
   - Disconnect the 2 heated seat module electrical connectors.
   - Remove the rivet and heated seat module.

3. To install, reverse the removal procedure.

Driver Seat Module (DSM)

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Item	Part Number	Description
1	-	Driver Seat Module (DSM) rivets (2 required)
2	-	DSM electrical connectors (part of 14A699)
3	13C789	DSM

Removal and Installation

NOTICE: **Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage may result.**

NOTE: Prior to the removal of the module, it is necessary to upload the module configuration information to the appropriate scan tool. This information needs to be downloaded into the new module once installed. For additional information, refer to Section 418-01 .

1. **NOTE:** This step is necessary only if the Driver Seat Module (DSM) is being replaced.

   Upload the module configuration information from the DSM into the scan tool. For additional information, refer to Section 41 .

2. Remove the driver seat. For additional information, refer to Section 501-10 .

3. Drill out the 2 rivets.

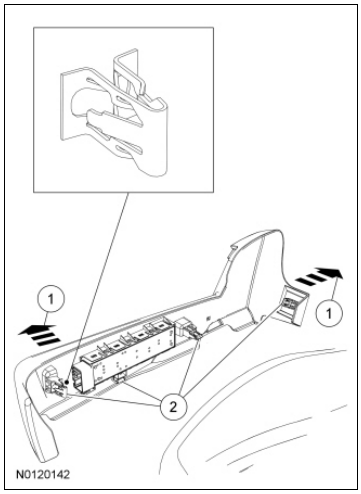
4. Disconnect the 4 electrical connectors and remove the DSM .

5. To install, reverse the removal procedure.
   - **NOTE:** If the DSM was not replaced, this substep is not necessary.

     Download the DSM configuration from the scan tool into the new DSM . For additional information, refer to Section 418-01 .

Seat Control Switch

Removal and Installation



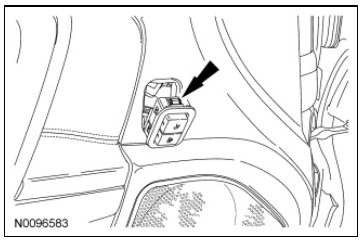
NOTICE: **Do not reinstall the cushion side shield or side shield retainers after removal. These are one-time-use items that become damaged during removal and may not remain attached if reinstalled. Install a new side shield during seat assembly (includes new retainers attached).**

1. Remove the front seat. For additional information, refer to Seat - Front in this section.

2. Remove the spring clip and manual recliner handle, if equipped.

3. Pull and remove the manual lumbar control knob and seat control switch button(s), if equipped.

4. Remove and discard the cushion side shield and one-time-use retainers.
    1. Pull out on the side and rear of the cushion side shield and release the retainers.
        - Separate the wire harness from the cushion side shield.
    2. Remove the side shield and any remaining side shield retainers from the seat and discard.
        - For installation, install a new cushion side shield (includes new retainers attached).



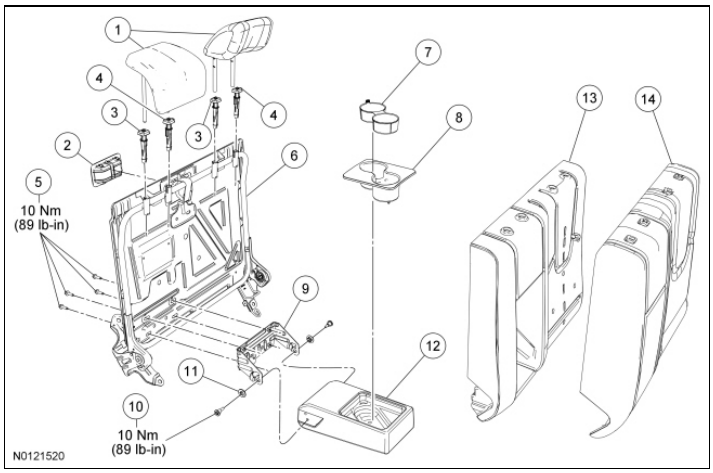
5. Disconnect the seat control switch, release the cushion side shield retainers and remove the seat control switch.

6. To install, reverse the removal procedure.

Memory Set Switch

Removal and Installation

1. Release the memory SET switch bezel tab at the top and separate from the door panel.



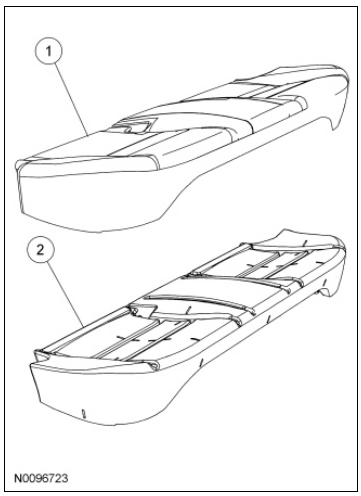
2. Disconnect the electrical connector, release the 4 tabs and remove the memory SET switch.

3. To install, reverse the removal procedure.

Seat - Exploded View, Rear

Rear Seat Backrest, 60 Percent

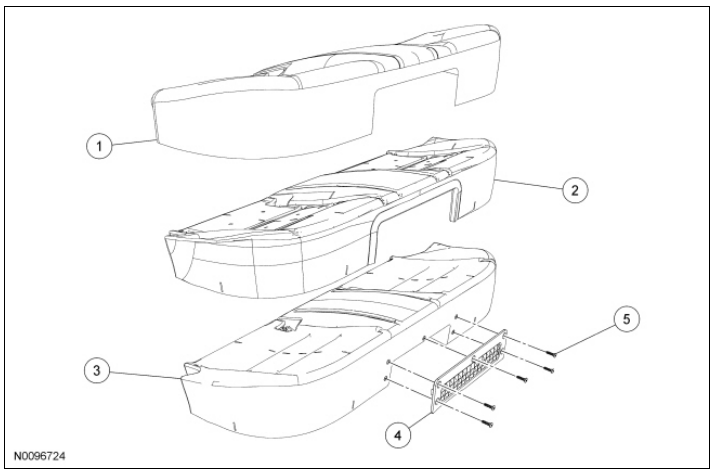
Item	Part Number	Description
1	611A08	Head restraints (1 each required)
2	66716	Striker cover
3	610A18	Head restraint guide sleeves (without button) (2 required)
4	610A16	Head restraint guide sleeves (with button) (2 required)
5	-	Armrest bracket-to-backrest bolts (4 required)
6	613A39	Backrest frame
7	047A74	Rubber insert, armrest cup holder
8	13562	Armrest cup holder
9	67210	Armrest bracket
10	W790023	Armrest pivot bolt (2 required)
11	613B44	Armrest pivot bushing (2 required)
12	67112	Armrest assembly
13	66801	Backrest foam pad
14	66601	Backrest trim cover



Rear Seat Backrest, 40 Percent

.

Item	Part Number	Description
1	611A08	Head restraint
2	66716	Striker cover
3	610A18	Head restraint guide sleeve (without button)

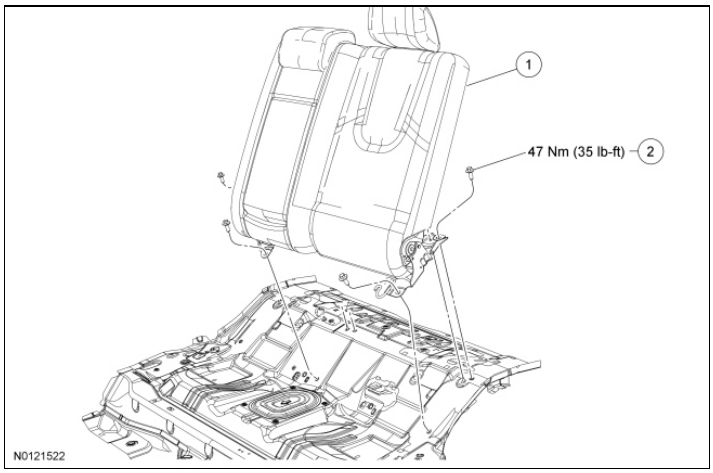


4	610A16	Head restraint guide sleeve (with button)
5	613A38	Backrest frame
6	66800	Backrest foam pad
7	66600	Backrest trim cover

Rear Seat Cushion, Non-Hybrid

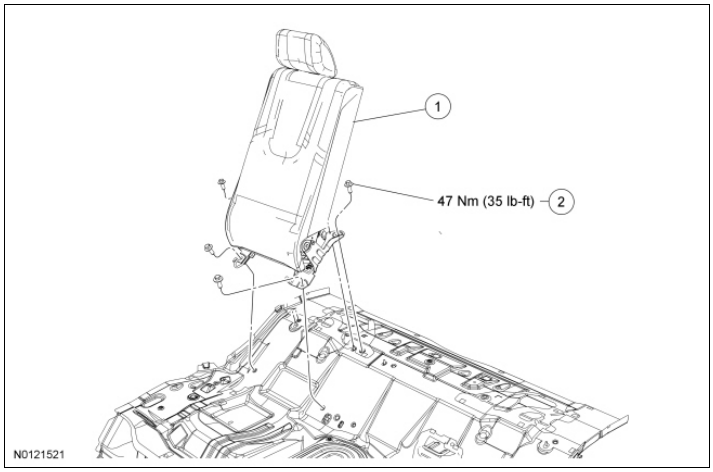
Item	Part Number	Description
1	63804	Cushion cover
2	600A88	Cushion foam pad

Rear Seat Cushion, Hybrid



Item	Part Number	Description
1	63804	Cushion cover
2	600A88	Cushion foam pad
3	63160	Hard foam
4	638A52	Grille
5	-	Screw (5 required) (part of 638A52)

1. For additional information, refer to the procedures in this section.



Seat Backrest - Rear

Rear Seat Backrest, 60 Percent

Item	Part Number	Description
1	-	Backrest assembly
2	W707858	Backrest-to-floor bolt (4 required)

Rear Seat Backrest, 40 Percent

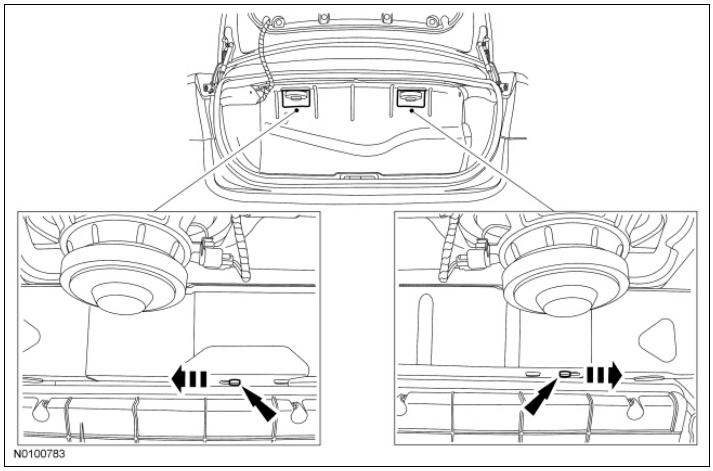
Item	Part Number	Description
1	-	Backrest assembly
2	W707858	Backrest-to-floor bolt (4 required)

Removal

NOTE: If the center safety belt retractor locks and the safety belt webbing prevents the 60 percent backrest from lowering, raise the backrest upward to release the safety belt retractor and belt webbing.

All vehicles

1. Remove the rear seat cushion. For additional information, refer to Seat Cushion - Rear in this section.



2. Remove the 2 forward backrest-to-floor bolts from the affected rear seat backrest.

Non-Hybrid vehicles

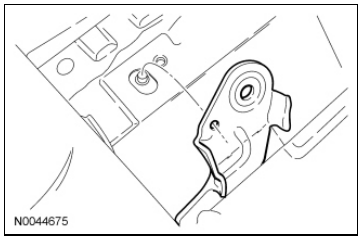
3. Open the trunk, pull the release handle under the quarter panel and fold the affected backrest down.

Hybrid vehicles

4. Fold the affected backrest down.
   - Between the High Voltage Traction Battery (HVTB) and the sheet metal, locate the seat backrest latch release lever.
   - Push the release lever toward the outboard side of the vehicle and fold the backrest down.

All vehicles

5. Remove the 2 rearward backrest-to-floor bolts from the affected rear seat backrest.
   - Position aside the floor trim cover behind the backrest to gain access to the rearward backrest-to-floor bolts.



6. Raise the rear seat backrest and hinge assembly above the 2 locator pins on the floor and remove the backrest.

Installation

1. **NOTE:** Make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   Position the rear seat backrest pivot assembly to the 2 locator pins on the floor.

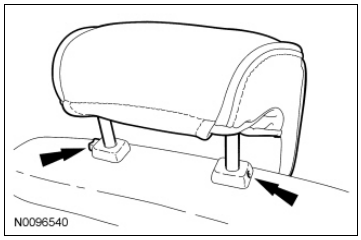
   - Make sure the rear seat safety belt webbing is positioned in front of the backst assembly for installation and is not positioned underneath the backrest pivot assembly.

2. Install the 2 rearward backrest-to-floor bolts.
    - Tighten to 47 Nm (35 lb-ft).

3. Position the backrest upright and install the 2 forward backrest-to-floor bolts.
    - Tighten to 47 Nm (35 lb-ft).

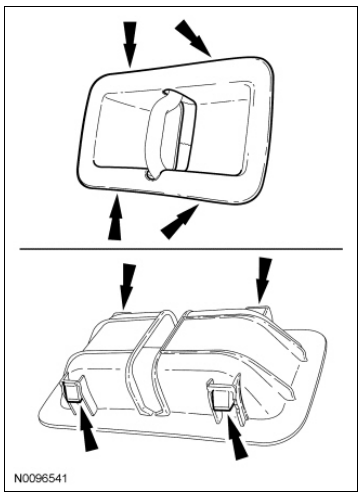
4. Check backrest latch and latch release operation.
    - Raise the backrest and check for good backrest fit and latch closure when upright.
    - If necessary, adjust the rear seat latch. For additional information, refer to Seat Latch Adjustment - Rear in the General Procedures portion of this section.

Seat Backrest Cover - Rear, 40 Percent



Removal and Installation

All vehicles



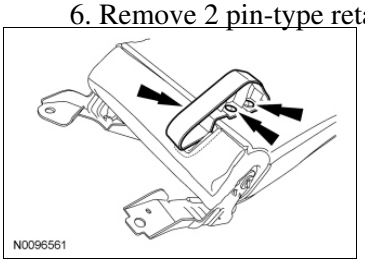
1. Remove the 40 percent rear seat backrest. For additional information, refer to Seat Backrest - Rear in this section.

2. **NOTE:** Typical head restraint shown.

   While lifting up on the head restraint, push in the hole, push in the button and remove the head restraint.

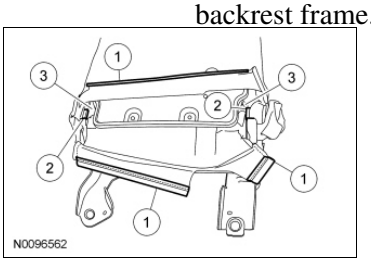
3. Release 4 tabs (2 shown) and remove the striker cover.

4. Release the backrest cover from around the striker opening.



- **NOTE:** The head restraint guide sleeves are keyed and will not interchange. Install the head restraint guide sleeve with the button on the LH side.

Squeeze the ends of the head restraint guide sleeves together and remove.



Hybrid vehicle

6. Remove 2 pin-type retainers and the duct end seal.

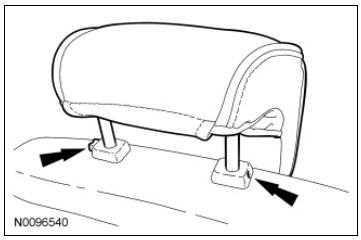
All vehicles

7. Separate the backrest cover.
    1. Disengage the lower J-strips.
        - Slide the heat deflector out from between the backrest frame and backrest cover, if equipped.
    2. Disengage the 2 J-clips.
    3. Disengage the backrest cover clip and unwrap the backrest cover from around the backrest frame.

8. ***NOTICE:*** **Use care when separating the backrest cover from the hook-and-loop strip, or the hook-and-loop strip can be torn from the backrest foam pad.**

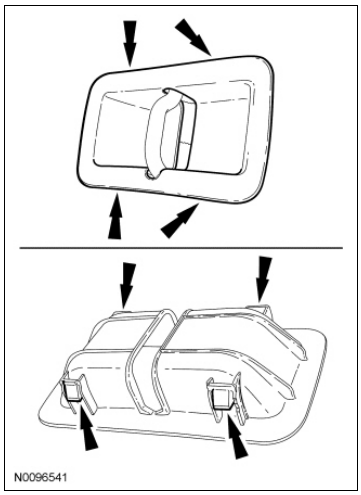
    Remove the backrest cover.

    - Invert the backrest cover, separate the hook-and-loop strips and remove all rows of hog rings working up the backrest.
9. To install, reverse the removal procedure.



Seat Backrest Cover - Rear, 60 Percent

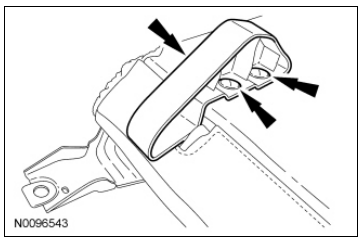
Removal and Installation



All vehicles

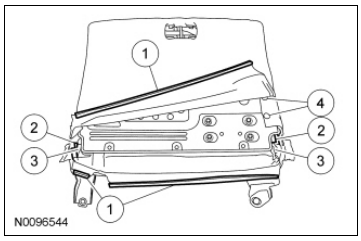
1. Remove the 60 percent rear seat backrest. For additional information, refer to Seat Backrest - Rear in this section.

2. While lifting up on the head restraint, push in the hole, push in the button and remove the head restraint.
    - Repeat for the other head restraint.



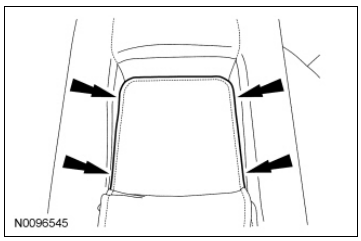
3. Release 4 tabs (2 shown) and remove the striker cover.

4. Release the backrest cover from around the striker opening.



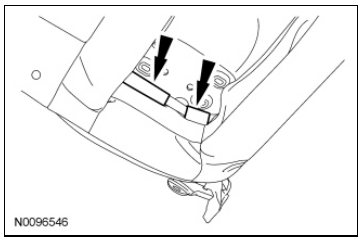
Hybrid vehicle

5. Remove 2 pin-type retainers and the duct end seal.



All vehicles

6. Separate the backrest cover.
    1. Disengage the lower J-strips.
        - ♦ Slide the heat deflector out from between the backrest frame and backrest cover, if equipped.
    2. Disengage the 2 J-clips.
    3. Disengage the backrest cover clip and unwrap the backrest cover from around the backrest frame.
    4. Remove 2 pin-type retainers.



7. Separate 4 pin-type retainers attaching the armrest pocket cover to the backrest frame.

8. Remove the 4 armrest-to-backrest bolts and armrest assembly.
    - For installation, adjust the armrest horizontally as needed for good fit.
    - To install, tighten to 10 Nm (89 lb-in).

9. Disengage 2 clips in the armrest pocket.

10. ***NOTICE:*** **Use care when separating the backrest cover from the hook-and-loop strip, or the hook-and-loop strip can be torn from the backrest foam pad.**

Invert the backrest cover up as far as it will go.

- Separate the hook-and-loop strips and remove all rows of hog rings working up the backrest.

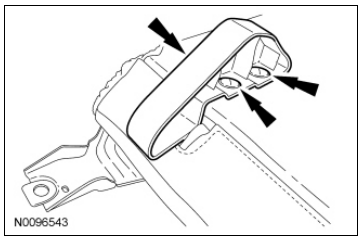
11. **NOTE:** The head restraint guide sleeves are keyed and will not interchange. Install the head restraint guide sleeve with the button on the LH side.

    Under the backrest foam pad, squeeze the ends of the head restraint guide sleeves together and remove.

12. Remove the backrest cover.

13. To install, reverse the removal procedure.

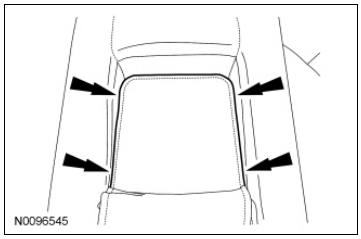
Seat Armrest - Rear



Removal and Installation

All vehicles

1. Remove the 60 percent rear seat backrest. For additional information, refer to Seat Backrest - Rear in this section.

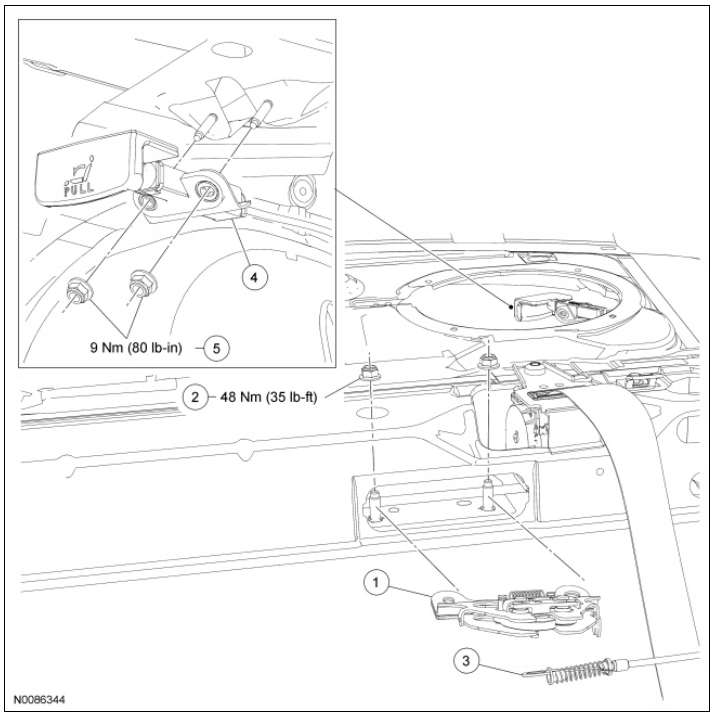


Hybrid vehicle

2. Remove the 2 pin-type retainers and the duct end seal.

All vehicles

3. Separate the 4 pin-type retainers attaching the armrest pocket cover to the backrest frame.



4. Remove the armrest assembly.
    1. Disengage the backrest cover lower J-strips.
    2. Remove the 4 armrest-to-backrest bolts and armrest assembly.
        - For installation, adjust the armrest horizontally as needed for good fit.
        - To install, tighten to 10 Nm (89 lb-in).

5. Disassemble the armrest assembly in the following sequence.
    1. Remove the cup holder rubber insert.
    2. Remove 2 pin-type retainers and the cup holder.
    3. Remove 2 armrest pivot bolts and armrest bracket.
        - To install, tighten to 10 Nm (89 lb-in).
    4. Release the armrest cover clip, invert and remove.

6. To install, reverse the removal procedure.

Seat Backrest Latch - Rear

NOTE: LH side shown, RH side similar.

Item	Part Number	Description
1	613D61	Backrest latch assembly
2	W520103	Backrest latch nut (2 required)
3	601L60	Latch release cable assembly
4	624A94	Latch release handle bracket (non-hybrid vehicles)
5	W520101	Latch release handle bracket nuts (2 required) (non-hybrid vehicles)

Removal

NOTE: LH side shown, RH side similar.

All vehicles

1. Remove the parcel shelf from the rear of the vehicle to access the rear backrest latch nuts. For additional information, refer to Section 501-05 .

2. **NOTE:** Make sure the affected backrest is released.

   Access the luggage compartment, detach the trim pin-type retainer and position the trim aside.

Non-hybrid vehicles

3. Re the 2 nuts and detach the latch release handle bracket.

4. Detach the 2 pin-type retainers and latch cable assembly.
    - Note the cable routing for installation.

5. Detach the release cable from the latch and remove.

All vehicles

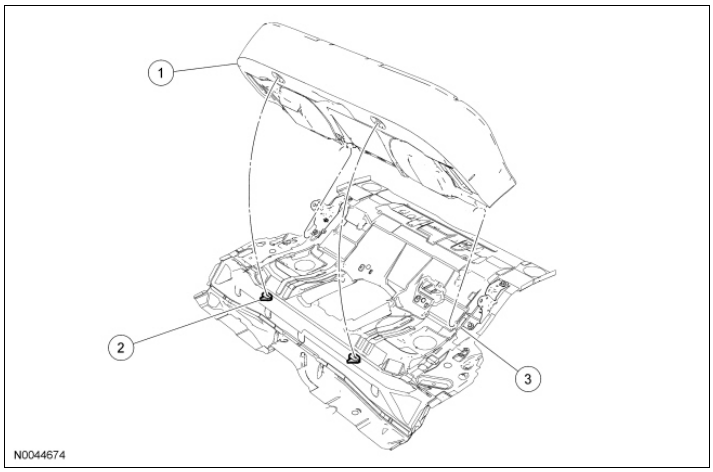
6. Remove the backrest latch.
    - Remove the 2 nuts and backrest latch.

Installation

Non-hybrid vehicles

1. Attach the release cable to the latch.

2. Route the release cable, position the release handle and bracket to the 2 studs and install the 2 nuts.
    - Tighten to 9 Nm (80 lb-in).
    - Install the 2 release cable pin-type retainers.
    - Position the trim and install the pin-type retainer.



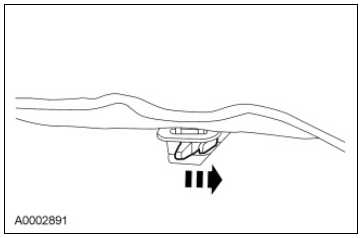
All vehicles

3. Position the latch and install the nuts.
    - Adjust the latch. For additional information, refer to Seat Latch Adjustment - Rear in the General Procedures portion of this section.
    - Tighten to 48 Nm (35 lb-ft).

4. Install the parcel shelf. For additional information, refer to Section 501- .

Seat Cushion - Rear

NOTE: Backrest pad and frame removed for clarity.



Item	Part Number	Description
1	-	Cushion assembly
2	624A14	Cushion latch (2 required)
3	-	Cushion rear retainer (2 required, part of rear seat backrest)

Removal and Installation

1. ***NOTICE:*** **Do not force the latches or cushion to release. Applying excessive force to release the rear seat cushion latches can damage them.**

   NOTICE: **Make sure the 2 rear cushion latches are fully disengaged before raising the seat cushion to avoid damaging the latches.**

   From under the front of the cushion assembly, push each of the 2 seat cushion latch release levers to the left of the vehicle. Lift up at the front and release the front of the cushion assembly.

2. ***NOTICE:*** **The Hybrid Electric Vehicle (HEV) seat cushion can be easily damaged if not removed correctly. Do not attempt to removet cushion without disengaging the wires in the hard foam from the backrest frame hooks. Failure to follow this instruction can pull the wires out of the hard foam.**

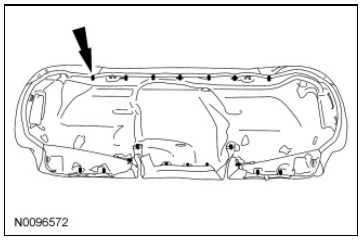
Release the rear of the seat cushion in the following sequence.

1. Push the cushion assembly back as far as possible.
2. Lift up at the rear outboard ends of the cushion assembly, disengaging the wires in the cushion from the wire retainer hooks of the backrest assembly.
3. Pull the cushion assembly forward and remove.

3. **NOTE:** Make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

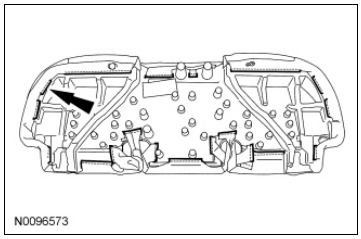
   To install, reverse the removal procedure.

   - Make sure the wires in the cushion are engaged to the wire retainer hooks of the backrest assembly on each side.



Seat Cushion Cover - Rear

Removal and Installation



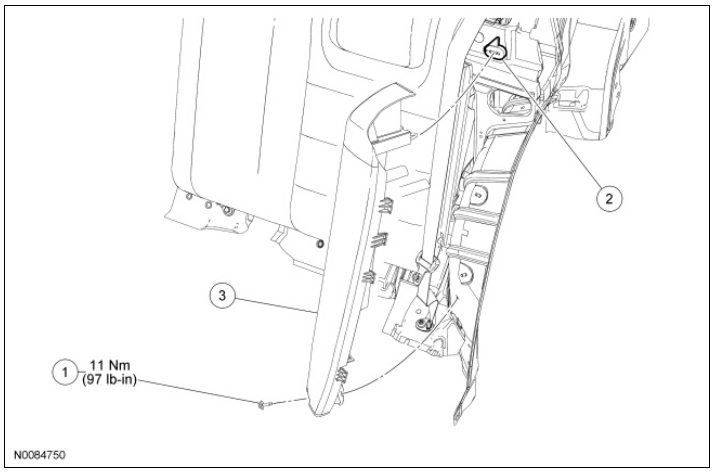
1. Remove the rear seat cushion. For additional information, refer to Seat Cushion - Rear in this section.

2. If equipped, remove 5 screws and the grille.

3. If equipped, remove the hog rings retaining the cushion cover wire to the cushion foam pad wire and the draw strings to the cover wires.

4. If equipped, separate the cushion cover retainers attached to the hard foam.

5. Invert the cushion cover.



6. ***NOTICE:*** **Use care when separating the cushion cover from the hook-and-loop strip, or the hook-and-loop strip can be torn from the cushion foam pad.**

   Remove the hog rings (if equipped), separate the hook-and-loop strips and remove the cushion cover.

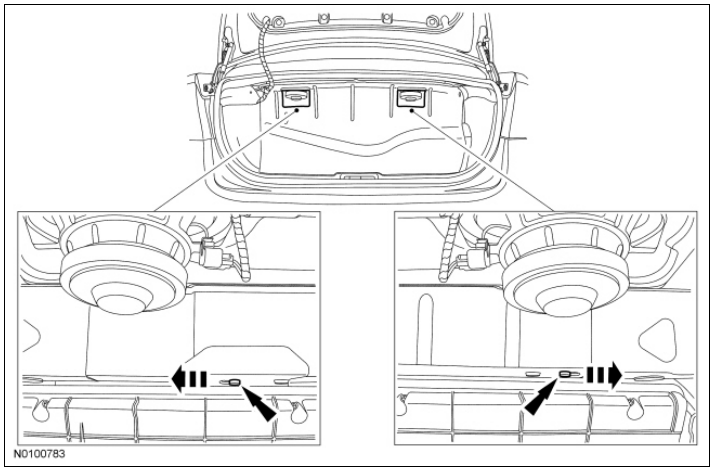
7. To install, reverse the removal proced

Seat Bolster - Rear

NOTE: LH side shown, RH side similar.

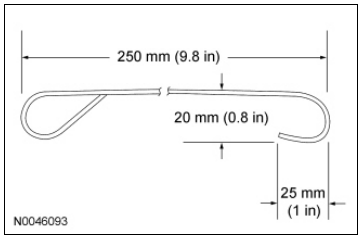
Item	Part Number	Description
1	W710330	Bolster bolt
2	-	Bolster latch
3	66893	Rear seat side bolster

Removal



NOTICE: **Do not apply excessive forward force to the side bolsters or damage may occur.**

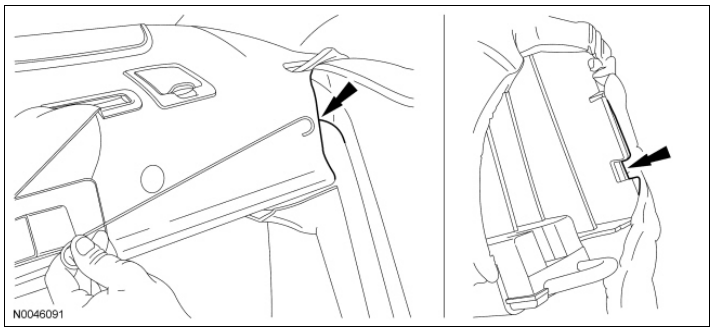
1. Remove the rear seat cushion. For additional information, refer to Seat Cushion - Rear in this section.



2. Remove the bolt from the affected side bolster.

3. For non-hybrid vehicles, open the trunk, pull the release handle under the quarter panel and fold the affected seat backrest down.

4. For hybrid vehicle, fold the affected backrest down.
   - Between the High Voltage Traction Battery (HVTB) and the sheet metal, locate the seat backrest latch release lever.
   - Push the release lever toward the outboard side of the vehicle and fold the backrest down



5. If removing the LH side bolster, fashion a tool for releasing the LH side bolster as shown.

6. **NOTE:** LH side shown, RH side similar.

   NOTE: The latch release tabs are accessible through a small service notch located on the rear inboard edge of each side bolster (behind the bolster trim cover sew seam).

   Locate the service notch behind the rear inboard edge of the affected side bolster to access the latch release tab.

7. ***NOTICE:*** **Do not force the latch or side bolster to release. Applying excessive force can damage the latch.**

   NOTE: Latch shown with bolster removed for clarity.

   To remove the LH side bolster, use a hooked pick or fashion a hooked tool to pull the latch release toward the RH side of the vehicle and release the side bolster.

8. *NOTICE:* **Do not force the latch or side bolster to release. Applying excessive force can damage the latch.**

   NOTE: Latch shown with bolster removed for clarity.

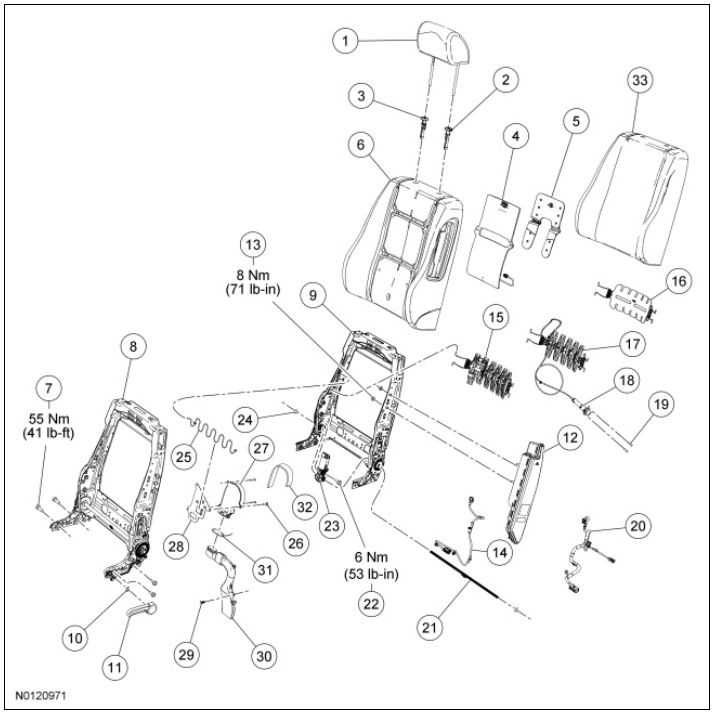
   To remove the RH side bolster, use a flat-blade screwdriver to push the latch release toward the RH side of the vehicle and release the side bolster.

9. With the affected bolster latch released, pull the side bolster forward and remove.

Installation

1. **NOTE:** Make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   Position the side bolster, align and insert to the latch.



2. Align the bolt holes and install the side bolster bolt.
   - Tighten to 11 Nm (97 lb-in).

3. Install the rear seat cushion. Refer to Seat Cushion - Rear in this section.

>

Seat Backrest - Front

NOTE: Driver backrest shown, passenger backrest similar.

Item	Part Number	Description
1	611A08	Head restraint
2	610A16	Head restraint guide (master)
3	610A18	Head restraint guide (slave)
4	14D696	Backrest heater mat (if equipped)
5	19N550	Backrest manifold, climate controlled seat (if equipped)
6	64811	Backrest foam pad
7	W500632	Recliner-to-cushion frame bolt (4 required)
8	61018	Backrest frame (with manual recliner) (if equipped)
9	608A15	Backrest frame (with power recliner) (if equipped)
10	-	Spring clip, recliner handle (part of 61199) (if equipped)
11	61199	Handle, recliner (if equipped)
12	611D11	Side air bag module (if equipped)
13	N620480	Nut, side air bag bracket (2 required) (if equipped)
14	14K155	Wiringss, side air bag (if equipped)
15	65500	Lumbar assembly, power (if equipped)
16	64842	Lumbar assembly, static (if equipped)
17	65500	Lumbar assembly, manual (if equipped)
18	610C01	Manual lumbar control (if equipped)

19	W715704	Rivet, manual lumbar control (2 required) (if equipped)
20	14C693	Wiring harness, power seat backrest (if equipped)
21	613A68	Recliner torque shaft
22	W790022	Bolt, recliner motor (if equipped)
23	14547	Recliner motor (if equipped)
24	-	Pal nut, recliner torque shaft (2 required)
25	64646	Upper support spring
26	W712476	Rivet, climate controlled seat Thermo-Electric Device (TED) (3 required) (if equipped)
27	19N550	TED assembly (if equipped)
28	18D583	Bracket, TED assembly (if equipped)
29	W790002	Pin-type retainer
30	18D507	Exhaust duct, climate controlled seat TED assembly (if equipped)
31	-	Tie strap
32	-	Filter, climate controlled seat TED assembly (part of 19N550) (if equipped)
33	64417	Backrest trim cover

Disassembly

⚠ WARNING: Always carry or place a live air bag module with the air bag and deployment door/trim cover/tear seam pointed away from the body. Do not set a live air bag module down with the deployment door/trim cover/tear seam face down. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.

⚠ WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

⚠ WARNING: If the seat side air bag cover has been damaged or separated from its mounting, or if the air bag material has been exposed, install a new seat side air bag module. Never try to repair the seat side air bag module. Failure to follow these instructions may result in the seat side air bag deploying incorrectly, which increases the risk of serious personal injury or death in a crash.

⚠ WARNING: Front seat backrest trim covers installed on seats equipped with seat side air bags cannot be repaired. A new trim cover must be installed. Cleaning is permissible. Failure to follow these instructions may result in the seat side air bag module deploying incorrectly and increase the risk of serious personal injury or death in a crash.

NOTE: If a side air bag deployment took place, a new seat backrest foam pad, backrest trim cover and side air bag module and nuts must be installed. A new seat backrest frame should be installed if necessary.

NOTE: The manual recliners and power recliners are serviced as part of the backrest frame.

All seats

1. Remove the front seat backrest. For additional information, refer to Seat Backrest - Front in this section.

2. Remove and discard th2 head restraint guide sleeves. For additional information, refer to Head Restraint Guide Sleeve in this section.

3. Detach the 2 pin-type retainers and trim cover flaps from the recliners, if equipped.

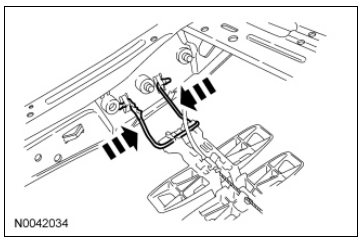
4. ***NOTICE:*** **Use care when separating the backrest cover from the hook-and-loop strip, or the hook-and-loop strip can be torn from the backrest foam pad.**

   Disengage the backrest cover lower J-strips, separate the hook-and-loop strips and invert the trim cover up as far as it will go.

5. If equipped, remove all rows of hog rings from the backrest trim cover and separate the hook-and-loop strips while inverting the trim cover up the backrest.

6. Remove the backrest cover rear upper hog rings.

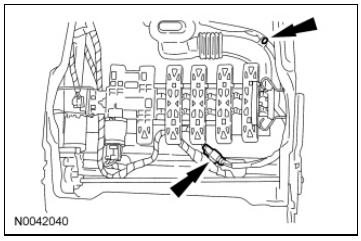
7. Remove the backrest cover.



8. If equipped, detach the pin-type retainer and backrest heater mat wiring harness from the backrest frame.

9. Separate the backrest foam pad from the backrest frame.
   - If equipped with climate controlled seats, remove the hog rings from the upper support spring.
   - Remove the backrest heater mat (if equipped) or the backrest climate controlled seat manifold (if equipped) from the foam pad.

10. Remove the backrest climate controlled seat manifold from the foam pad.



11. If a new heater mat is needed, carefully peel and remove the backrest heater mat from the backrest foam pad.
    - It is acceptable for a thin layer of foam to peel away with the old heater mat. The new heater mat will adhere to the foam pad, but if foam tearing occurs or if any pieces of foam are removed, install a new foam pad.

12. Release the 2 lumbar spring clips from the backrest frame and remove the lumbar assembly.
    - Route out the lumbar cable from the backrest frame, if equipped.
      - ♦ Note the routing of the lumbar cable for installation.
    - Disconnect the electrical connector from the power lumbar motor, if equipped.

Climate controlled seat

13. Disconnect the Thermo-Electric Device (TED) assembly electrical connector and detach the wiring harness retainers.

14. Remove the TED exhaust duct.
    - Cut and remove the tie strap.
    - Remove the retainer and separate the exhaust duct from the TED .

15. Disconnect the backrest upper support spring from the backrest frame and remove the spring support with the TED attached.
    - Use an appropriate tool and separate the TED from the upper backrest support spring.
        - ♦ Note the TED position on the support spring for installation.

Seat with power recliner

16. Remove the one-way push clip on the RH side of the power recliner. Slide the recliner shaft out from the LH side of the seat enough to clear the RH recliner and power recline motor.

17. Disconnect the electrical connector, remove the bolt and the power recline motor.

All seats

18. **NOTE:** Note the side air bag module wire harness routing for assembly.

    Release the side air bag module wire harness pin-type retainers and remove the side air bag module wiring harness from the backrest frame.

19. Remove and discard the 2 side air bag module nuts.
    - Pull outward on the side air bag module until the studs clear the backrest frame.

20. Detach any pin-type retainers, route out and remove the backrest wiring harness, if equipped.

Assembly

All seats

1. Route and install the backrest wiring harness, if removed.

2. ⚠ **WARNING: If the seat side air bag cover has been damaged or separated from its mounting, or if the air bag material has been exposed, install a new seat side air bag module. Never try to repair the seat side air bag module. Failure to follow these instructions may result in the seat side air bag deploying incorrectly, which increases the risk of serious personal injury or death in a crash.**

   ⚠ **WARNING: Inspect the seat side air bag module and mounting surfaces for any damage or foreign material before installing the seat side air bag module. If any damage is found, install new components. If any foreign material is found, remove it. Failure to follow these instructions may result in the seat side air bag module deploying incorrectly and increase the risk of serious personal injury or death in a crash.**

   Position the side air bag module to the backrest frame and install 2 new nuts.

- Tighten to 8 Nm (71 lb-in).

3. Install the side air bag wiring harness.
   - Route the side air bag wiring harness to the backrest frame as noted in disassembly and install the pushpin-type retainers.

4. Connect the side air bag module electrical connector and then slide and engage the side air bag electrical connector locking clip.

Seat with power recliner

5. **NOTE:** The recliners are synchronized. Do not rotate the recliner shaft until fully installed.

   Install the recliner motor in the following sequence.

   1. Position the recliner shaft through the recliner motor and RH recliner.
   2. Install a new one-way push clip onto the recliner shaft at the RH recliner.
   3. Slightly turn the recliner motor to align the bolt hole with the hole in the RH recliner and install the recliner motor bolt.
      - Tighten to 6 Nm (53 lb-in).
   4. Connect the recliner motor electrical connector.

Climate controlled seat

6. ***NOTICE:*** **Before assembly, inspect the climate controlled seat components for damage, crush, obstruction and foreign material and repair as needed.**

   Install the upper support spring and TED assembly to the backrest frame.

   - Attach the TED and bracket to the backrest upper support spring as noted in disassembly.

7. Connect the exhaust duct to the TED and install a new tie strap.

8. Connect the TED electrical connector.

All seats

9. Attach the lumbar assembly spring clips and install the lumbar assembly to the backrest frame.
   - If manual lumbar, route the lumbar cable to the backrest as noted in disassembly.
   - If power lumbar, connect the power lumbar motor electrical connector.

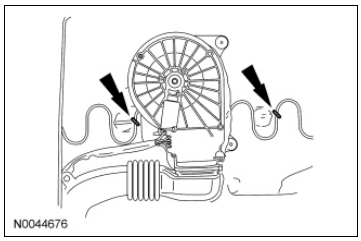
10. Position the backrest foam pad to the backrest frame.

11. ***NOTICE:*** **Do not install a used heater mat to any foam pad. It will not adhere correctly causing it to bunch up and may cause system failure.**

    If installing a new heater mat, attach the backrest heater mat to the backrest foam pad.

    - Remove the paper backing from the adhesive strips.
    - Align the heater mat to the foam pad and apply it to the foam making sure it lays flat, without wrinkles and is tucked into the valleys of the foam pad.

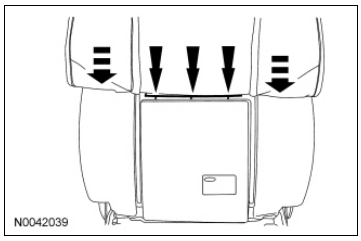
Climate controlled seat



12. ***NOTICE:*** **Before assembly, inspect the climate controlled seat components for damage, crush, obstruction and foreign material and repair as needed.**

    Align the backrest manifold and insert into the valleys of the foam pad.

    - Check for correct fit between the manifold, foam pad and TED assembly, to make sure there is no air flow obstruction or cushion crush.



13. Install new hog rings to the upper support spring and foam pad.

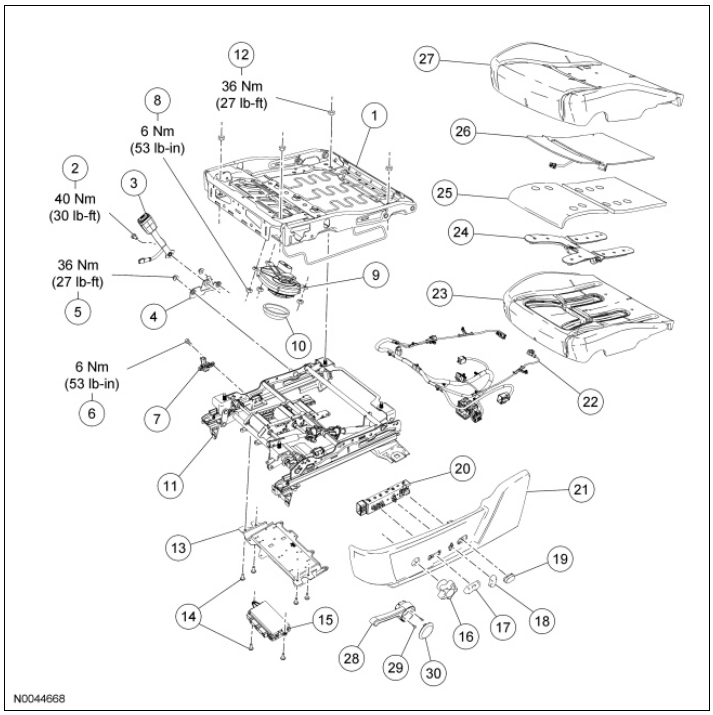
All seats

14. Position the backrest trim cover to the backrest frame and foam pad and install new rear upper hog rings to the backrest frame.

15. Roll the backrest trim cover downward and attach the hook-and-loop strips.
    - If removed, install new hog rings as noted during disassembly.

16. Attach the backrest cover lower J-strips.

17. Install 2 new head restraint guide sleeves. For additional information, refer to Head Restraint Guide Sleeve in this section.



18. Install the 2 pin-type retainers and trim cover flaps to the recliners, if equipped.

19. Install the front seat backrest. For additional information, refer to Seat Backrest - Front in this section.

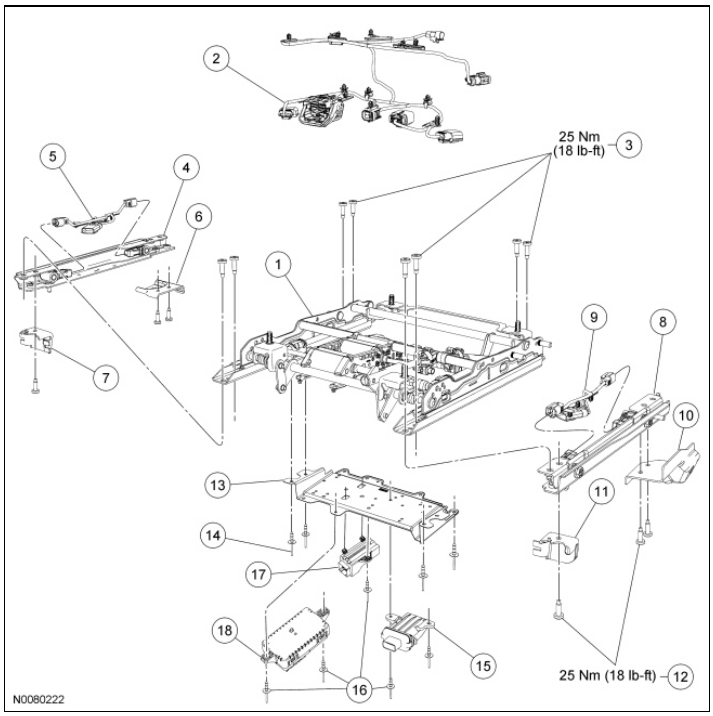
Seat Cushion - Front

Driver Seat Cushion

NOTE: Power seat track shown, manual seat track similar.

Item	Part Number	Description
1	63101	Cushion frame
2	-	Bolt, safety belt buckle (part of 61203)
3	61203	Safety belt buckle
4	610D09	Safety belt buckle bracket
5	W520113	Nut, safety belt buckle bracket-to-seat track (2 required)
6	W505256	Bolt, seat position sensor (part of 61203) (driver only)
7	14B416	Seat position sensor (driver only)
8	N620480	Nut, cushion Thermo-Electric Device (TED) (3 required) (if equipped)
9	19N550	Cushion TED , climate controlled seat (if equipped)
10	19E880	Cushion TED filter (if equipped)
11	61711	
12	W520113	Seat track-to-cushion frame nut (4 required)
13	610E34	Electrical bracket
14	-	Pop rivets (4 required)
15	14C708	Driver Seat Module (DSM) (if equipped)
16	62622	Manual lumbar control knob (if equipped)

17	14711	Seat control switch knob (if equipped)
18	14711	Power recline switch knob (if equipped)
19	14711	Power lumbar switch knob (if equipped)
20	14A701	Seat control switch (if equipped)
21	62187	Cushion side shield
22	14A699	Driver seat wire harness
23	632A23	Cushion foam pad
24	-	Cushion manifold, climate controlled seat (part of 632A23) (if equipped)
25	-	Cushion insert (part of 632A23) (if equipped)
26	14D696	Cushion heater mat (if equipped)
27	62900	Cushion trim cover
28	61753	Manual height adjust handle (if equipped)
29	W711217	Screw, manual height adjust handle (if equipped)
30	62768	Cover, manual height adjust handle (if equipped)



Passenger Seat Cushion

NOTE: Power seat track shown, manual seat track similar.

Item	Part Number	Description
1	63100	Cushion frame
2	61710	Seat track
3	W520113	Seat track-to-cushion frame nut (4 required)
4	62186	Cushion side shield
5	62622	Manual lumbar control knob (if equipped)
6	14711	Seat control switch knob (if equipped)
7	14711	Power recline switch knob (if equipped)
8	14711	Power lumbar switch knob (if equipped)
9	14A701	Seat control switch (if equipped)
10	610D08	Safety belt anchor bracket
11	W520113	Nut, safety belt anchor bracket (2 required)
12	19N550	Cushion Thermo-Electric Device (TED) (if equipped)
13	19E880	Cushion TED filter (if equipped)
14	N620480	Nut, cushion TED (3 required) (if equipped)
15	W790002	Scrivet
16	W520113	Nut, safety belt buckle bracket (2 required)
17	610D08	Safety belt buckle bracket
18	61202	Safety belt buckle
19	-	Bolt, safety belt buckle (part of 61202)
20	632A22	Cushion foam pad

21	-	Cushion manifold, climate controlled seat (part of 632A22) (if equipped)
22	-	Cushion insert (part of 632A22) (if equipped)
23	14D698	Cushion heater mat (if equipped)
24	62900	Cushion trim cover

Power Seat Track - Passenger

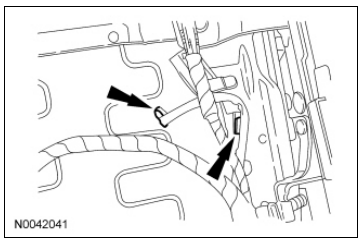
Item	Part Number	Description
1	61710	Seat track
2	14A698	Passenger seat wire harness
3	W712479	Occupant Classification System (OCS) rail-to-seat track bolts (8 required)
4	61708	Outboard OCS> weight sensor assembly
5	14A577	Outboard OCS wire harness
6	61912	Rear outboard seat riser
7	61912	Front outboard seat riser
8	61709	Inboard OCS weight sensor assembly
9	14A578	Inboard OCS wire harness
10	61913	Rear inboard seat riser
11	61913	Front inboard seat riser
12	W712479	Seat riser-to-seat track bolts (6 required)
13	610E34	Electrical bracket
14	31134/31147	Pop rivet (4 required)
15	14B422	Occupant Classification System Module (OCSM)
16	31134/31147	Pop rivets (quantity varies with seat option)

17	14C724	Heated seat module (if equipped)
18	14C724	Dual Climate Controlled Seat Module (DCSM) (if equipped)

Disassembly and Assembly

All seats

1. Remove the seat. For additional information, refer to Seat - Front in this section.



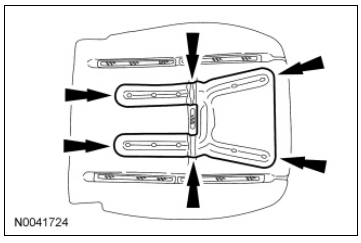
2. Remove the seat track. For additional information, refer to Seat Track in this section.

3. ***NOTICE:*** **Use care when separating the seat cushion trim cover from the hook-and-loop strip, or the hook-and-loop strip can be torn from the cushion foam pad.**

   Release the hook-and-loop strips, remove the hog rings, if equipped and separate the cushion trim cover from the cushion foam pad.

Heated seat

4. If a new heater mat is needed, carefully peel and remove the cushion heater mat from the cushion foam pad and route the wire harness through the cushion foam pad opening.
   - It is acceptable for a thin layer of foam to peel away with the old heater mat. The new heater mat will adhere to the foam pad, but if foam tearing occurs or if any pieces of foam are removed, install a new foam pad.
   - For installation, peel away the paper from the adhesive strips, align and apply the new heater mat to the cushion foam pad being sure to tuck the heater mat into the foam pad creases.
     - The heater mat must lay flat on the foam pad with no wrinkles.



Climate controlled seat

5. ***NOTICE:*** **Before assembly, inspect the climate controlled seat components for damage, crush, obstruction and foreign material. Repair as needed.**

   If necessary, remove the cushion manifold from the foam pad.

   - For installation, align the cushion manifold and insert into the valleys of the foam pad.
     - Check for correct fit between the manifold, foam pad and cushion Thermo-Electric Device (TED) assembly, to make sure there is no airflow obstruction or cushion crush.

6. **NOTE:** Covering the TED openings is recommended to prevent foreign material from entering the TED .

   Remove the 3 nuts and cushion TED assembly from the cushion frame.

   - To install, tighten to 6 Nm (53 lb-in).
   - For installation, check for correct fit between the cushion manifold, foam pad and cushion TED assembly, to make sure there is no air flow obstruction, cushion crush or foreign material.

All seats

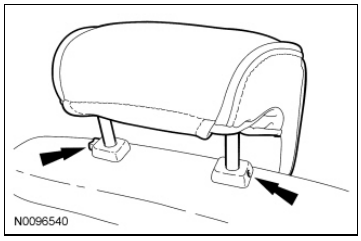
7. Remove the recliner cable, if equipped.

8. To assemble, reverse the disassembly procedure.

Seat Backrest - Rear, 60 Percent

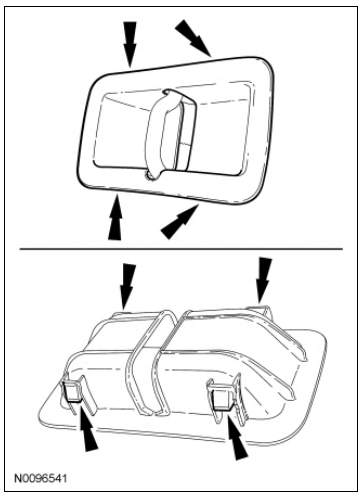
Item	Part Number	Description
1	611A08	Head restraints (1 each required)
2	66716	Striker cover
3	610A18	Head restraint guide sleeves (without button) (2 required)
4	610A16	Head restraint guide sleeves (with button) (2 required)
5	-	Armrest bracket-to-backrest bolts (4 required)
6	613A39	Backrest frame
7	047A74	Rubber insert, armrest cup holder
8	13562	Armrest cup holder
9	67210	Armrest bracket
10	W790023	Armrest pivot bolt (2 required)
11	613B44	Armrest pivot bushing (2 required)
12	67112	Armrest assembly
13	66801	Backrest foam pad
14	66601	Backrest trim cover

Disassembly and Assembly



All vehicles

1. Remove the 60 percent rear seat backrest. ditional information, refer to Seat Backrest - Rear in this section.

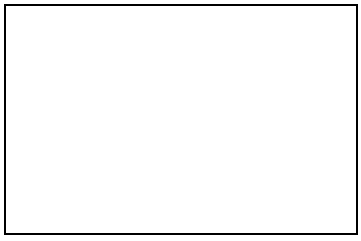


2. **NOTE:** Typical head restraint shown.

   While lifting up on the head restraint, push in the hole, push in the button and remove the head restraint.

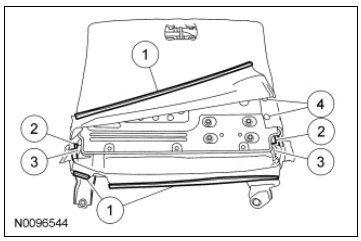
   - Repeat for the other head restraint.

3. Release the 4 tabs (2 shown) and remove the striker cover.

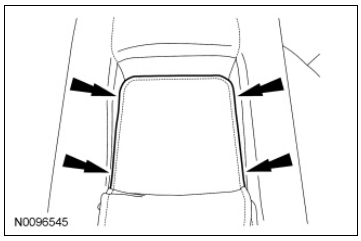


4. Release the backrest cover from around the striker opening.

Hybrid vehicle



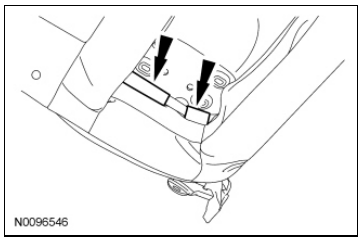
5. Remove 2 pin-type retainers and the duct end seal.



All vehicles

6. Separate the backrest cover.
    1. Disengage the lower J-strips.
        - Slide the heat deflector out from between the backrest frame and backrest cover, if equipped.
    2. Disengage the 2 J-clips.
    3. From in the opening, disengage the backrest cover clip and unwrap the backrest cover from around the backrest frame.

4. Remove the 2 pin-type retainers.



7. Separate the 4 pin-type retainers attaching the armrest pocket cover to the backrest frame.

8. Remove the 4 armrest-to-backrest bolts and armrest assembly.
    - For installation, adjust the armrest horizontally as needed for good fit.
    - To install, tighten to 10 Nm (89 lb-in).

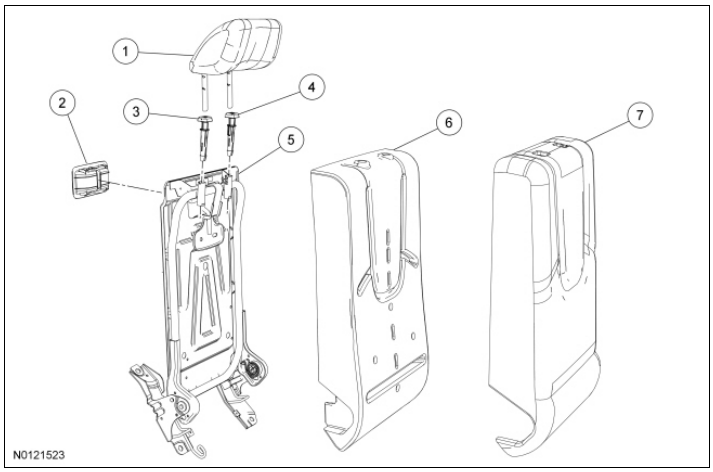
9. Disassemble the armrest assembly in the following sequence.
    1. Remove the cup holder rubber insert.
    2. Remove the 2 pin-type retainers and cup holder.
    3. Remove 2 armrest pivot bolts and armrest bracket.
        - To install, tighten to 10 Nm (89 lb-in).

10. Disengage 2 backrest cover clips in the armrest pocket.

11. ***NOTICE:*** **Use care when separating the backrest cover from the hook-and-loop strip, or the hook-and-loop strip can be torn from the backrest foam pad.**

    Invert the backrest cover up as far as it will go.

    - Separate the hook-and-loop strips and remove all rows of hog rings working up the backrest.



12. **NOTE:** The head restraint guide sleeves are keyed and will not interchange. To assemble, install the head restraint guide sleeve with the button on the LH side.

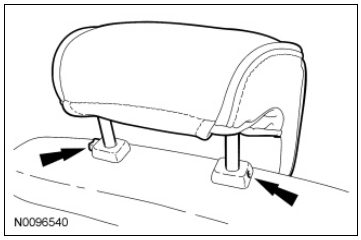
    Under the backrest foam pad, squeeze the ends of the head restraint guide sleeves together and remove.

13. Remove the backrest cover and foam pad from the backrest frame.

14. To assemble, reverse the disassembly procedure.

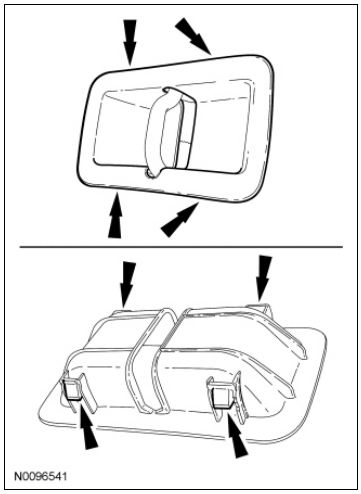
Seat Backrest - Rear, 40 Percent

Item	Part Number	Description
1	611A08	Head restraint
2	66716	Striker cover
3	610A18	Head restraint guide sleeve (without button)
4	610A16	Head restraint guide sleeve (with button)
5	613A38	Backrest frame
6	66800	Backrest foam pad
7	66600	Backrest trim cover



Disassembly and Assembly

All vehicles

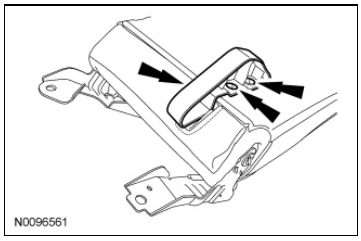


1. Remove the 40 percent rear seat backrest. For additional information, refer to Seat Backrest - Rear in this section.

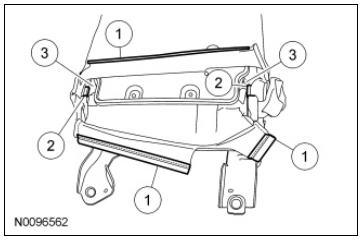
2. **NOTE:** Typical head restraint shown.

   While lifting up on the head restraint, push in the hole, push in the button and remove the head restraint.

3. Release the 4 tabs (2 shown) and remove the striker cover.



4. Release the backrest cover from around the striker opening.



Hybrid vehicle

5. Remove the 2 pin-type retainers and duct end seal.

All vehicles

6. Separate the backrest cover.
    1. Disengage the lower J-strips.
        - Slide the heat deflector out from between the backrest frame and backrest cover, if equipped.
    2. Disengage the 2 J-clips.
    3. From in the opening, disengage the backrest cover clip and unwrap the backrest cover from around the backrest frame.

7. **NOTE:** The head restraint guide sleeves are keyed and will not interchange. To assemble, install the head restraint guide sleeve with the button on the LH side.

   Squeeze the ends of the head restraint guide sleeves together and remove.

8. ***NOTICE:*** **Use care when separating the backrest cover from the hook-and-loop strip, or the hook-and-loop strip can be torn from the backrest foam pad.**

   Remove the backrest cover.

   - Invert the backrest cover, separate the hook-and-loop strips and remove all rows of hog rings working up the backrest.

9. Remove the foam pad from the backrest frame.

10. To assemble, reverse the disassembly procedure.

Glass, Frames and Mechanisms

NOTE: The Smart Junction Box (SJB) may also be identified as the Generic Electronic Module (GEM).

The glass, frames and mechanisms consist of:

- accessory delay relay.
- door window regulator motors.
- Front Controls Interface Module (FCIM).
- front door glass top run.
- front door window glass.
- HVAC module.
- rear door window glass.
- rear window defrost grid.
- rear window defrost relay.
- rear window glass.
- rear fixed window glass.
- rear window regulator and motor - run and brackets.
- SJB .
- window control switches.
- window regulators.
- windshield glass.

The glass, frames and mechanisms include:

- standard plastic and laminate safety glass.
- windshield glass which is bonded to the opening flange with a urethane adhesive.

NOTE: All vehicles are equipped with one-touch up/down feature on the LH front window. All MKZ and some Fusion vehicles are equipped with one-touch up/down feature for both LH and RH front windows.

The window regulator control switch:

- is located on each door trim panel.
- may be used to manually raise or lower all windows from the left front window control switch or the individual side window from the corresponding individual door switch.
- can lock out rear window control switches when the lock-out switch on the left front window control switch is turned on.

The accessory delay relay, located in the SJB , provides power for the operation of the power windows. The accessory delay feature is active when the ignition switch is in the RUN or the ACC position, or when the ignition switch is changed from RUN or ACC to the OFF/LOCK position and the LF and RF doors are closed.

Global Open (If Equipped)

NOTE: All MKZ and some Fusion are equipped with the global open feature. Only Fusion vehicles equipped with RH front one-touch up/down have the global open feature.

NOTE: The global open feature may be enabled/disabled via scan tool or in some cases modified by the customer following a procedure listed in the vehicle Oer's Literature. For a complete list of available programmable parameters, refer to the Module Configuration and Parameter Chart in Section 418-01 .

The SJB sends a signal on the global open circuit, to both front door window motors and the roof opening panel motor, to open or close the windows based on a signal received from the Remote Keyless Entry (RKE) transmitter. If the accessory delay relay is active, the global open feature will not operate.

Rear Window Defrost

For MKZ, the rear window defrost switch is integral to the FCIM . For Fusion, the rear window defrost switch is integral to the HVAC module or FCIM if equipped with navigation system. When the rear window defrost switch is pressed, the HVAC module will activate the rear window defrost relay. When the rear window defrost relay is activated, the rear window defrost grid will be energized.

Glass, Frames and Mechanisms

Special Tool(s)

 ST1138-A	Flex Probe Kit NUD105-R025D or equivalent
 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
 ST3094-A	Test Light SGT27000 or equivalent 250-300 mA incandescent bulb test lamp
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Principles of Operation

Front Power Window Control - One-Touch Up/Down

NOTE: All vehicles are equipped with one-touch up/down feature on the LH front window. All MKZ and some Fusion vehicles are equipped with one-touch up/down feature for both LH and RH front windows. LH and RH one-touch up/down functionality is identical.

NOTE: The front window motor must be de-initialized, then initialized whenever:

- the front window motor is removed from the window regulator drum housing.
- a new window regulator is installed.
- a new window glass is installed.
- a new top run is installed.
- grease or lubricants are applied to the window regulator or glass run.

Each door window motor is a 6-pin motor with integral electronics and must be initialized whenever a new window motor has been installed. Initialization is required to learn the full UP position and the profile of the glass as it travels through the glass channel. Once initialized, obstacle detection is enabled. When mechanical repairs have been carried out on the window regulator or glass run, the window motor must be de-initialized, and then initialized. The window control switch sends 2 separate signals to the window motor: up and down. When the window control switch is pressed to the first detent position, a 12-volt signal is sent to the window motor to request an up or down operation. When auto up or auto down is requested (switch pressed to the second detent position), the window control switch provides a 12-volt signal on both the up and down line simultaneously. During an auto up or auto down request, the window motor determines intended window direction by the signal first received. If the window control switch is pressed too quickly to the second detent position (less than 5 milliseconds of time between first detent signal and second detent signal), the window motor will not be able to determine the intended direction request and will not operate until the window control switch is relsed and pressed again. The up and down contacts are floating within the window control

switch when the switch is in the neutral position. The up and down feeds to the window motor are all low current.

When the window motor is operating in auto up or auto down mode, movement of the window can be stopped by pressing the switch to any position (up, down, auto up, auto down). The window control switch must be released before the window will move again.

If there is an open in the window control switch or the associated wiring, the related function will become inoperative. If the up contact of the switch or the associated wiring develops an open circuit, the window will only operate in the down direction. If the down contact of the switch or the associated wiring develops an open circuit, the window will only operate in the up direction.

A new window motor will not operate in one-touch up mode, and the bounce-back feature will be disabled prior to initialization. If the switch is actuated to the AUTO UP or AUTO DOWN position and released, window movement will stop when the up or down contact in the window control switch is released. If the window motor is removed from the window regulator drum housing, or if a new window motor is installed, it must be initialized. Refer to Window Motor Initialization in this section.

The window motor will automatically adjust to system changes throughout its life: changes in seal drag and slight changes in the full OPEN position will occur and will be automatically compensated for. Once initialized, the window motor will soft stall into the upper and lower positions contributing to extended durability of the system. If the window does not seal completely in the full UP position (very small gaps/non bounce-back events only), the window switch can be actuated to the UP position and the window will be energized for a fraction of a second to fully seal and this new position will be learned.

Passenger windows may be raised or lowered using the LH front window control switch or the corresponding passenger window control switch. Rear passenger window control switches receive power when the accessory delay relay is active and the LH front window lock switch is in the UNLOCK position. When the LH front window lock switch is in the LOCK position, the rear passenger windows will not operate.

Bounce-Back

The window motor has a bounce-back feature. If an obstacle has been detected in the window opening as the window glass is moving upward, the window motor will automatically reverse direction and move the glass toward the bounce-back position (in both up and one-touch up modes). If an obstruction occurs between 4 mm (0.15 in) and 200 mm (7.87 in) of window opening, the bounce-back position will be 250 mm (9.84 in) of window opening. If an obstruction occurs at a position greater than 200 mm (7.87 in) of window opening, the bounce-back position will be 50 mm (1.96 in) below where the obstruction occurred.

Security Override

To override a bounce-back condition (to overcome the resistance of ice on the window or seals for example), within 2 seconds after the window reaches the bounce-back position, pull and hold the window control switch. The window will travel up with no bounce-back or pinch protection. If the window control switch is released before the window is fully closed, the window will stop. If the ignition switch is turned to OFF or START (without delayed accessory power), the window motor will stop.

Global Open (if equipped)

NOTE: The global open feature may be enabled/disabled via scan tool or in some cases modified by the customer following a procedure listed in the vehicle Owner's Literature. For a complete list of available programmable parameters, refer to the Module Configuration and Parameter Chart in Section 418-01 .

NOTE: The Smart Junction Box (SJB) may also be identified as the Generic Electronic Module (GEM).

If equipped, when the unlock button of the Remote Keyless Entry (RKE) transmitter is held for 2 seconds, the global open feature activates. The SJB sends a signal to activate the one-touch down operation of both front windows. The global open feature does not operate if the delay accessory is active.

Delayed Accessory Power

The SJB activates the accessory delay relay whenever the ignition switch is in the RUN or the ACC position, or when the ignition switch is changed from RUN or ACC to the off/lock position and the LH and RH front doors are closed. When energized, the accessory delay relay supplies voltage to the power window system.

The SJB will deactivate the delayed accessory feature when:

- the LF door is ajar and the ignition switch is in the off/lock or key-out position.
- the RF door is ajar and the ignition switch is in the off/lock or key-out position.
- ten minutes have elapsed since the ignition switch was changed from ACC or RUN to the off/lock position.

Rear Window Defrost

For MKZ the rear window defrost switch is integral to the Front Controls Interface Module (FCIM). For Fusion, the rear window defrost switch is integral to the HVAC module or the FCIM if equipped with navigation system. When the rear window defrost switch is pressed, the HVAC module will activate the rear window defrost relay located in the Battery Junction Box (BJB). When the rear window defrost relay is active, the rear window defrost grid will be energized.

The HVAC module will deactivate the rear window defrost relay when one of the following conditions is met:

- The rear window defrost switch is pressed when the feature is active
- Ignition switch state is changed from RUN to OFF/LOCK
- The 10-minute timer completes

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Door window regulator and motor • Door glass run • Door window glass	• Loose, corroded connectors • Circuitry • Window control switch • Battery Junction Box (BJB) fuse 6 (40A) • Smart Junction Box (SJB) circuit breaker 47 (30A) • SJB fuse(s): ♦ 1 (30A) ♦ 4 (30A) ♦ 17 (20A) ♦ 41 (15A)

	♦ 45 (5A) • Accessory delay relay • Rear window defrost relay • Circuit breaker • Rear window defrost grid

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :

   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM .
   - refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition is in the ON position.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 to diagnose no response from the SJB or HVAC module.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record Continuous Memory Diagnostic Trouble Codes (CMDTCs).

8. Clear the CMDTCs and carry out the self-test diagnostics for the SJB .

9. If the DTCs retrieved are related to the concern, go to Smart Junction Box (SJB) DTC Chart or HVAC Module DTC Chart. For all other DTCs, refer to Section 419-10 .

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

DTC Charts

Smart Junction Box (SJB) DTC Chart

DTC	Description	Action
B1302	Accessory Delay Relay Coil Circuit Failure	If the accessory delay is always on, GO to Pinpoint Test Q . If the accessory delay is inoperative, GO to Pinpoint Test P .
B1304	Accessory Delay Relay Coil Circuit Short to Battery	GO to Pinpoint Test P .

B2947	Global Opening/Closing Circuit Open	GO to Pinpoint Test K .
B2949	Global Opening/Closing Circuit Short to Battery	GO to Pinpoint Test K .
All Other DTCs	-	REFER to the Master DTC Chart in Section 419-10 .

NOTE: This module utilizes a 5-character DTC followed by a 2-character failure type code. The failure type code provides information about specific fault conditions such as opens or shorts to ground. CMDTCs have an additional 2-character DTC status code suffix to assist in determining DTC history.

HVAC Module DTC Chart

DTC	Description	Action
B1C83:12	Rear Defog Relay: Circuit Short to Battery	For MKZ, GO to Pinpoint Test L . For Fusion, GO to Pinpoint Test N .
B1C83:14	Rear Defog Relay: Circuit Short to Ground or Open	If the rear window does not defrost, GO to Pinpoint Test L (MKZ) or GO to Pinpoint Test N (Fusion). If the rear window defrost does not turn off, GO to Pinpoint Test M (MKZ) or GO to Pinpoint Test O (Fusion).
All other DTCs	-	REFER to the Master DTC Chart in Section 412-00A or Section 412-00B .

• The defrost system is inoperative - Fusion	• Fuse(s) • Rear window defrost relay • Wiring, terminals or connectors • Rear window defrost grid • HVAC module • FCIM (if equipped with navigation system)	• GO to Pinpoint Test N .
• The defrost system will not shut off automatically - Fusion	• Rear window defrost relay • Wiring, terminals or connectors • HVAC module	• GO to Pinpoint Test O .
• The delayed accessory is inoperative	SJB	• GO to Pinpoint Test P .
• The delayed accessory does not turn off	• Accessory delay relay • Wiring, terminals or connectors • SJB	• GO to Pinpoint Test Q .

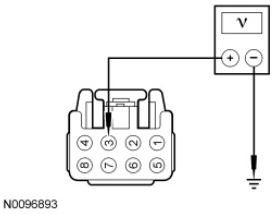
Pinpoint Tests

Pinpoint Test A: All Passenger Power Windows are Inoperative - MKZ, LH and RH Rear

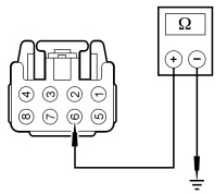
Refer to Wiring Diagrams Cell 100 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Windows for schematic and connector information.

Normal Operation

Under normal operation, the accessory delay relay supplies voltage to the master window control switch. When the master window lockout control switch is in the UNLOCK position, voltage is supplied to the LH and RH rear window control switches. The master window control switch supplies the ground circuit for passenger rear window operation.



This pinpoint test is intended to diagnose the following:



- Circuit breaker
- Wiring, terminals or connectors
- Window control switch

PINPOINT TEST A: ALL PASSENGER POWER WINDOWS ARE INOPERATIVE - MKZ, LH AND RH REAR

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Before performing this pinpoint test, make sure the master window lockout control switch is in the UNLOCK position.

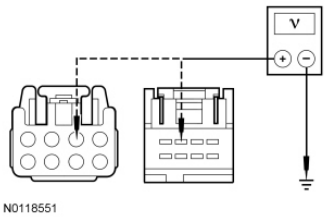
Test Step	Result / Action to Take
A1 CHECK FOR VOLTAGE TO MASTER WINDOW CONTROL SWITCH	
• Disconnect: Master Window Control Switch C535B. • Ignition ON. • Measurthe voltage between master window control switch C535B-3, circuit CBP47 (GN/BU), harness side and ground.  N0096893 • **Is the voltage greater than 10 volts?**	**Yes** GO to A2 . **No** VERIFY SJB circuit breaker 47 (30A) is OK. If OK, REPAIR the circuit. TEST the system for normal operation. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation.
A2 CHECK THE MASTER WINDOW CONTROL SWITCH GROUND CIRCUIT	

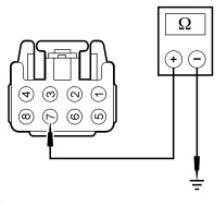
• Ignition OFF. • Measure the resistance between master window control switch C535B-6, circuit GD126 (BK/WH), harness side and ground.  N0096894 • **Is the resistance less than 5 ohms?**	**Yes** GO to A3 . **No** REPAIR the circuit. TEST the system for normal operation.
A3 CHECK THE MASTER WINDOW CONTROL SWITCH	
• Carry out the master window control switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did the master window control switch pass the component test?**	**Yes** REPAIR circuit CPW14 (VT/WH) for an open. TEST the system for normal operation. **No** INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation.

Pinpoint Test B: All Power Windows are Inoperative - Fusion

Refer to Wiring Diagrams Cell 100 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Windows for schematic and connector information.

Normal Operation





Under normal operation, the accessory delay relay supplies voltage to the master window control switch. The master window control switch supplies the ground circuit for passenger rear window operation. On vehicles not equipped with RH front window one-touch up/down feature, this ground circuit is shared with the LH front window motor.

This pinpoint test is intended to diagnose the following:

- Accessory lay relay
- Circuit breaker
- Wiring, terminals or connectors
- Window control switch

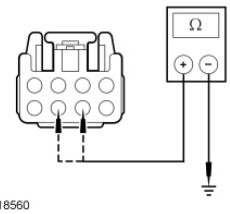
PINPOINT TEST B: ALL POWER WINDOWS ARE INOPERATIVE - FUSION

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
B1 CHECK FOR VOLTAGE TO MASTER WINDOW CONTROL SWITCH	
• Disconnect: Master Window Control Switch C535A (if RH front window is equipped with one-touch up/down) or C537A (if RH front window is not equipped with one-touch up/down). • Ignition ON. • Measure the voltage between master window control switch C535A-3 or C537A-2, circuit CBP47 (GN/BU), harness side and ground.  N0118551 • **Is the voltage greater than 10 volts?**	**Yes** For vehicles not equipped with RH front window one-touch up/down feature, GO to B2 . For vehicles equipped with RH front window one-touch up/down feature, INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** VERIFY SJB circuit breaker 47 (30A) is OK. If OK, GO to Pinpoint Test O to diagnose the accessory delay relay circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation.
B2 CHECK THE MASTER WINDOW CONTROL SWITCH GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Master Window Control Switch C537B. • Measure the resistance between master window control switch C537B-7, circuit GD126 (BK/WH), harness side and ground.  N0094076 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test C: All Passenger Power Windows are Inoperative - Fusion, LH and RH Rear

Refer to Wiring Diagrams Cell 100 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Windows for schematic and connector information.



Normal Operation

Under normal operation, the accessory delay relay supplies voltage to the master window control switch. When the master window lockout control switch is in the UNLOCK position, voltage is supplied to the LH and RH rear window control switches. The master window control switch supplies the ground circuit for passenger rear window operation.

l type="disc">**This pinpoint test is intended to diagnose the following:**
- Wiring, terminals or connectors
- Window control switch

PINPOINT TEST C: ALL PASSENGER POWER WINDOWS ARE INOPERATIVE - FUSION, LH AND RH REAR

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
C1 CHECK THE REAR PASSENGER WINDOW OPERATION FROM THE MASTER WINDOW CONTROL SWITCH	
• Ignition ON. • Attempt to operate the rear passenger windows from the master window control switch. • **Do the rear passenger windows operate from the master window control switch?**	**Yes** GO to C3 . **No** GO to C2 .
C2 CHECK THE MASTER WINDOW CONTROL SWITCH GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Master Window Control Switch C535B (if RH front window is equippedith one-touch up/down) or C537B (if RH front window is not equipped with one-touch up/down). • Measure the resistance between master window control switch C535B-6 or C537B-7, circuit GD126 (BK/WH), harness side and ground.  N0118560 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
C3 CHECK THE MASTER WINDOW CONTROL SWITCH	
	Yes REPAIR circuit CPW14 (VT/WH) for

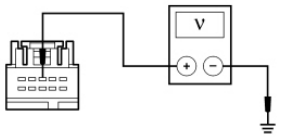
• Carry out the master window control switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did the master window control switch pass the component test?**	an open. TEST the system for normal operation. **No** INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation.

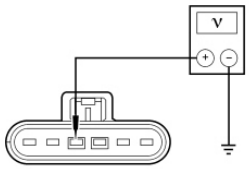
Pinpoint Test D: A Single Power Window is Inoperative - MKZ, LH Front

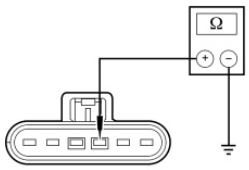
Refer to Wiring Diagrams Cell 100 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Windows for schematic and connector information.

NOTE: A new LH front power window motor will not operate in one-touch up mode until initialized. Refer to Window Motor Initialization in this section.

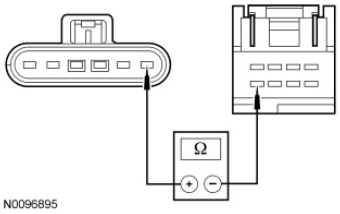
Normal Operation

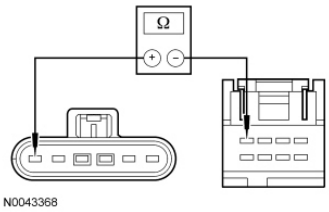






Under normal operation, voltage is supplied to the master window control switch from the accessory delay relay. The LH front power window motor has dedicated high current power and ground circuits. When the master window control switch is activated, a low current voltage signal is supplied to the LH front power window motor which causes the window to move upward or downward.





This pinpoint test is intended to diagnose the following:
- Fuse(s)
- Wiring, terminals or connectors
- Power window motor
- Window control switch

PINPOINT TEST D: A SINGLE POWER WINDOW IS INOPERATIVE - MKZ, LH FRONT

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
D1 CHECK THE POWER TO THE MASTER WINDOW CONTROL SWITCH	
• Disconnect: Master Window Control Switch C535A. • Igtion ON. • Measure the voltage between master window control switch C535A-3, circuit CBP41 (BU), harness side and ground.	**Yes** GO to D2 . **No** VERIFY Smart Junction Box (SJB) fuse 41 (15A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. DE-INITIALIZE then INITIALIZE the front window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

 N0012607 • **Is the voltage greater than 10 volts?**	
D2 CHECK THE VOLTAGE TO THE POWER WINDOW MOTOR	
• Ignition OFF. • Disconnect: LH Front Power Window Motor C540. • Measure the voltage between LH front power window motor C540-4, circuit SBP01 (RD), harness side and ground.  N0043364 • **Is the voltage greater than 10 volts?**	**Yes** GO to D3 . **No** VERIFY SJB fuse 1 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. DE-INITIALIZE, then INITIALIZE the LH front window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation.
D3 CHECK THE LH FRONT POWER WINDOW MOTOR GROUND CIRCUIT FOR AN OPEN	
• Measure the resistance between LH front power window motor C540-3, circuit GD126 (BK/WH), harness side and ground.  N0043365 • **Is the resistance less than 5 ohms?**	**Yes** GO to D4 . **No** REPAIR the circuit. DE-INITIALIZE then INITIALIZE the LH front window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation.
D4 CHECK THE MASTER WINDOW CONTROL SWITCH-TO-LH FRONT POWER WINDOW MOTOR CIRCUITS FOR AN OPEN	
• Measure the resistance between LH front power window motor C540-1, circuit CPW10 (YE/VT), harness side and master window control switch C535A-8, circuit CPW10 (YE/VT), harness side.	**Yes** GO to D5 . **No** REPAIR circuit CPW10 (YE/VT) or CPW11 (BU/GY) for an open. DE-INITIALIZE then INITIALIZE the LH front window motor.

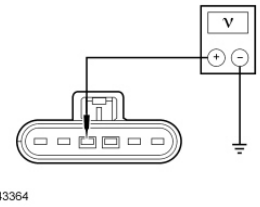
 • Measure the resistance between LH front power window motor C540-6, circuit CPW11 (BU/GY), harness side and master window control switch C535A-4, circuit CPW11 (BU/GY), harness side.  • **Are the resistances less than 5 ohms?**	REFER to Window Motor Initialization in this section. TEST the system for normal operation.
D5 CHECK THE MASTER WINDOW CONTROL SWITCH	
• Carry out the master window control switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did the master window control switch pass the component test?**	**Yes** INSTALL a new LH front power window motor. REFER to Window Regulator and Motor - Front Door in this section. INITIALIZE the LH front power window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation. **No** INSTALL a new master window control switch. REFER to Window Control Switch in this section. DE-INITIALIZE, then INITIALIZE the LH front power window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test E: A Single Power Window is Inoperative - Fusion, LH Front

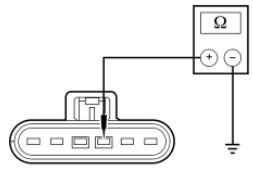
Refer to Wiring Diagrams Cell 100 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Windows for schematic and connector information.

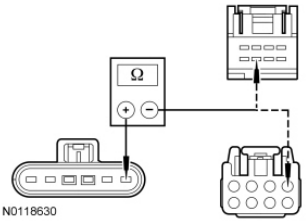
NOTE: A new LH front power window motor will not operate in one-touch up mode until initialized. Refer to Window Motor Initialization in this section.

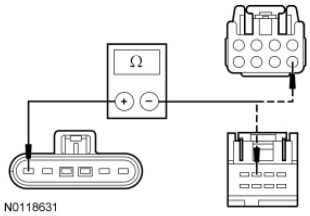
Normal Operation



Under normal operation, voltage is supied to the master window control switch from the accessory delay relay. The LH front power window motor has dedicated high current power and ground circuits. When the master window control switch is activated, a low current voltage signal is supplied to the LH front power window motor which causes the window to move upward or downward.







This pinpoint test is intended to diagnose the following:

- Fuse
- Wiring, terminals or connectors
- Power window motor
- Window control switch

PINPOINT TEST E: A SINGLE POWER WINDOW IS INOPERATIVE - FUSION, LH FRONT

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
E1 CHECK THE VOLTAGE TO THE POWER WINDOW MOTOR	
• Ignition OFF. • Disconnect: LH Front Power Window Motor C540. • Measure the voltage between LH front power window motor C540-4, circuit SBP01 (RD), harness side and ground.  N0043364 • **Is the voltage greater than 10 volts?**	**Yes** GO to E2 . **No** VERIFY Smart Junction Box (SJB) fuse 1 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. DE-INITIALIZE, then INITIALIZE the LH front window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation.
E2 CHECK THE LH FRONT POWER WINDOW MOTOR GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Measure the resistance between LH front power window motor C540-3, circuit GD126 (BK/WH), harness side and ground.	**Yes** GO to E3 . **No** REPAIR the circuit. DE-INITIALIZE then INITIALIZE the LH front window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

 N0043365 • **Is the resistance less than 5 ohms?**	
E3 CHECK THE MASTER WINDOW CONTROL SWITCH-TO-LH FRONT POWER WINDOW MOTOR CIRCUITS FOR AN OPEN	
• Disconnect: LH Front Window Control Switch C535A (if RH front window is equipped with one-touch up/down) or C537A (if RH front window is not equipped with one-touch up/down). • Measure the resistance between LH front power window motor C540-1, circuit CPW10 (YE/VT), harness side and master window control switch C535A-7 or C537A-1, circuit CPW10 (YE/VT), harness side.  N0118630 • Measure the resistance between LH front power window motor C540-6, circuit CPW11 (BU/GY), harness side and master window control switch C535A-3 or C537A-5, circuit CPW11 (BU/GY), harness side.  N0118631 • **Are the resistances less than 5 ohms?**	**Yes** GO to E4 . **No** REPAIR the circuit. DE-INITIALIZE then INITIALIZE the LH front power window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation.
E4 CHECK THE MASTER WINDOW CONTROL SWITCH	
• Carry out the master window control switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component	**Yes** INSTALL a new LH front power window motor. REFER to Window Regulator and Motor - Front Door in this section. INITIALIZE the LH front power window motor. REFER to Window Motor

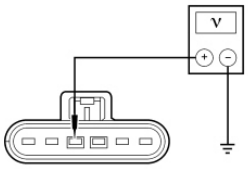
testing. • **Did the master window control switch pass the component test?**	Initialization in this section. TEST the system for normal operation. **No** INSTALL a new master window control switch. REFER to Window Control Switch in this section. DE-INITIALIZE, then INITIALIZE the LH front power window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

Pinpoint Test F: A Single Power Window is Inoperative - MKZ, RH Front

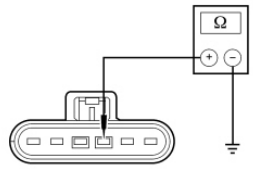
Refer to Wiring Diagrams Cell 100 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Windows for schematic and connector information.

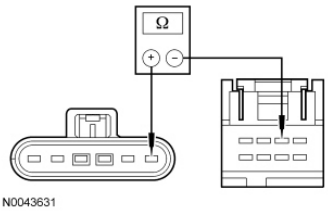
NOTE: A new RH front power window motor will not operate in one-touch up mode until initialized. Refer to Window Motor Initialization in this section.

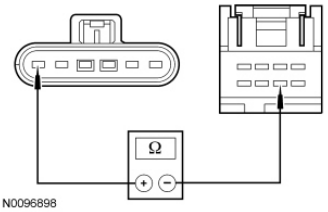
Normal Operation



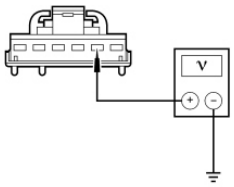
Under normal operation, the accessory delay relay supplies voltage to the master window control switch and the RH front window control switch. The RH front power window motor has dedicated high current power and ground circuits. When the master window control switch or RH front window control switch is activated, a low current voltage signal is supplied to the RH front power window motor which causes the window to move upward or downward.

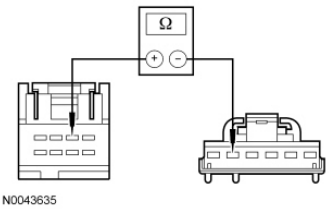




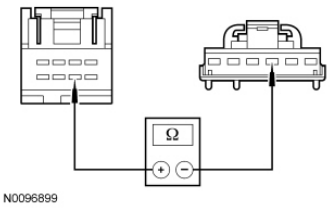


This pinpoint test is intended to diagnose the following:
- Fuse(s)
- Wiring, terminals or connectors
- Power window motor
- Window control switch





PINPOINT TEST F: A SINGLE POWER WINDOW IS INOPERATIVE - MKZ, RH FRONT



NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
F1 CHECK THE RH FRONT POWER WINDOW OPERATION FROM THE MASTER WINDOW CONTROL SWITCH	
• Attempt to operate the RH front window using the master window control switch. • **Does the RH window operate when using the master window control switch?**	**Yes** GO to F7 . **No** GO to F2 .
F2 CHECK THE POWER TO THE MASTER WINDOW CONTROL SWITCH	

• Disconnect: Master Window Control Switch C535A. • Ignition ON. • Measure the voltage between master window control switch C535A-3, circuit CBP41 (BU), harness side and ground. • **Is the voltage greater than 10 volts?**	**Yes** GO to F3 . **No** VERIFY Smart Junction Box (SJB) fuse 41 (15A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. DE-INITIALIZE, then INITIALIZE the front power window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation.
F3 CHECK THE VOLTAGE TO THE POWER WINDOW MOTOR	
• Ignition OFF. • Disconnect: RH Front Power Window Motor C623. • Measure the voltage between RH front power window motor C623-4, circuit SBP04 (GN/RD), harness side and ground.  N0043364 • **Is the voltage greater than 10 volts?**	**Yes** GO to F4 . **No** VERIFY SJB fuse 4 (30A) is OK. If OK, REPAIR the circuit. DE-INITIALIZE then INITIALIZE the RH front power window motor. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. REFER to Window Motor Initialization in this section. TEST the system for normal operation.
F4 CHECK THE RH FRONT POWER WINDOW MOTOR GROUND CIRCUIT FOR AN OPEN	
• Measure the resistance between RH front power window motor C623-3, circuit GD139 (BK/YE), harness side and ground.	**Yes** GO to F5 . **No** REPAIR the circuit. DE-INITIALIZE then INITIALIZE the RH front power window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

 N0043365 • **Is the resistance less than 5 ohms?**	
F5 CHECK THE MASTER WINDOW CONTROL SWITCH-TO-RH FRONT POWER WINDOW MOTOR CIRCUITS FOR AN OPEN	
• Measure the resistance between RH front window power window motor C623-1, circuit CPW12 (GN/OG), harness side and master window control switch C535A-2, circuit CPW12 (GN/OG), harness side.  N0043631 • Measure the resistance between RH front power window motor C623-6, circuit CPW13 (BN/YE), harness side and master window control switch C535A-6, circuit CPW13 (BN/YE), harness side.  N0096898 • **Are the resistances less than 5 ohms?**	**Yes** GO to F6 . **No** REPAIR the circuit. DE-INITIALIZE then INITIALIZE the RH front power window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation.
F6 CHECK THE MASTER WINDOW CONTROL SWITCH	
• Carry out the master window control switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing.	**Yes** INSTALL a new RH front power window motor. REFER to Window Regulator and Motor - Front Door in this section. INITIALIZE the RH front power window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

• **Did the master window control switch pass the component test?**	**No** INSTALL a new master window control switch. REFER to Window Control Switch in this section. INITIALIZE the RH front power window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation.
F7 CHECK FOR VOLTAGE TO THE RH FRONT WINDOW CONTROL SWITCH	
• Disconnect: RH Front Window Control Switch C624. • Ignition ON. • Measure the voltage between RH front window control switch C624-2, circuit CBP41 (BU), harness side and ground.  N0043634 • **Is the voltage greater than 10 volts?**	**Yes** GO to F8 . **No** REPAIR the circuit. TEST the system for normal operation.
F8 CHECK THE MASTER WINDOW CONTROL SWITCH-TO-RH FRONT WINDOW CONTROL SWITCH CIRCUITS FOR AN OPEN	
• Ignition OFF. • Disconnect: Master Window Control Switch C535A. • Measure the resistance between master window control switch C535A-2, circuit CPW12 (GN/OG), harness side and RH front window control switch C624-5, circuit CPW12 (GN/OG), harness side.  N0043635 • Measure the resistance between master window control switch C535A-6, circuit CPW13 (BN/YE), harness side and RH front window control switch C624-3,	**Yes** INSTALL a new RH front window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

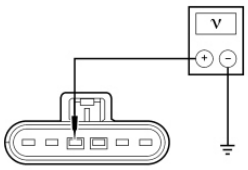
circuit CPW13 (BN/YE), harness side.  • **Are the resistances less than 5 ohms?**	

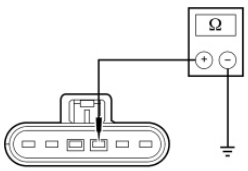
Pinpoint Test G: A Single Power Window is Inoperative - Fusion, RH Front (RH Front Window is Equipped With One-Touch Up/Down)

Refer to Wiring Diagrams Cell 100 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Windows for schematic and connector information.

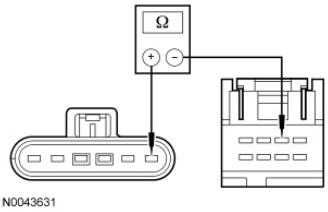
NOTE: A new RH front power window motor will not operate in one-touch up mode until initialized. Refer to Window Motor Initialization in this section.

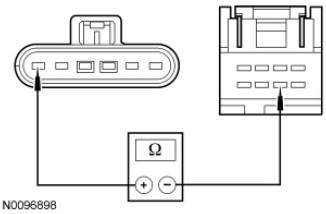
Normal Operation



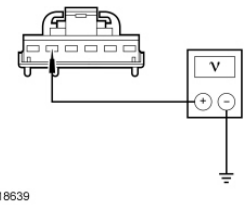


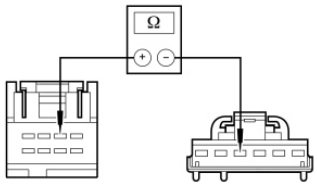
Under normal operation, the accessory delay relay supplies voltage to the master window control switch and the RH front window control switch. The RH front power window motor has dedicated high current power and ground circuits. When the master window control switch or RH front window control switch is activated, a low current voltage signal is supplied to the RH front power window motor which causes the window to move upward or downward.

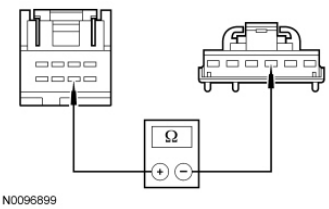




This pinpoint test is intended to diagnose the following:
- Fuse(s)
- Wiring, terminals or connectors
- Power window motor
- Window control switch







PINPOINT TEST G: A SINGLE POWER WINDOW IS INOPERATIVE - FUSION, RH FRONT (RH FRONT WINDOW IS EQUIPPED WITH ONE-TOUCH UP/DOWN)

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage e connector.**

Test Step	Result / Action to Take
G1 CHECK THE RH FRONT POWER WINDOW OPERATION FROM THE MASTER WINDOW CONTROL SWITCH	
• Attempt to operate the RH front window using the master window control switch. • **Does the RH window operate when using the master window control switch?**	**Yes** GO to G6 . **No** GO to G2 .

G2 CHECK THE VOLTAGE TO THE POWER WINDOW MOTOR	
• Ignition OFF. • Disconnect: RH Front Power Window Motor C623. • Measure the voltage between RH front power window motor C623-4, circuit SBP04 (GN/RD), harness side and ground.  N0043364 • **Is the voltage greater than 10 volts?**	**Yes** GO to G3 . **No** VERIFY SJB fuse 4 (30A) is OK. If OK, REPAIR the circuit. DE-INITIALIZE then INITIALIZE the RH front power window motor. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. REFER to Window Motor Initialization in this section. TEST the system for normal operation.
G3 CHECK THE RH FRONT POWER WINDOW MOTOR GROUND CIRCUIT FOR AN OPEN	
• Measure the resistance between RH front power window motor C623-3, circuit GD139 (BK/YE), harness side and ground.  N0043365 • **Is the resistance less than 5 ohms?**	**Yes** GO to G4 . **No** REPAIR the circuit. DE-INITIALIZE then INITIALIZE the RH front power window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation.
G4 CHECK THE MASTER WINDOW CONTROL SWITCH-TO-RH FRONT POWER WINDOW MOTOR CIRCUITS FOR AN OPEN	
• Disconnect: Master Window Control Switch C535A. • Measure the resistance between RH front window power window motor C623-1, circuit CPW12 (GN/OG), harness side and master window control switch C535A-2, circuit CPW12 (GN/OG), harness side.	**Yes** GO to G5 . **No** REPAIR the circuit. DE-INITIALIZE then INITIALIZE the RH front power window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation.

 N0043631 • Measure the resistance between RH front power window motor C623-6, circuit CPW13 (BN/YE), harness side and master window control switch C535A-6, circuit CPW13 (BN/YE), harness side.  N0096898 • **Are the resistances less than 5 ohms?**	
G5 CHECK THE MASTER WINDOW CONTROL SWITCH	
• Carry out the master window control switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did the master window control switch pass the component test?**	**Yes** INSTALL a new RH front power window motor. REFER to Window Regulator and Motor - Front Door in this section. INITIALIZE the RH front power window motor. REFER to Window Motor Initialization in this section. TEST the system for normal operation. **No** INSTALL a new master window control switch. REFER to Window Control Switch in this section. INITIALIZE the RH front power window motor. REFER to Window Motor Initialization in this section. TEST the system for normal opation.
G6 CHECK FOR VOLTAGE TO THE RH FRONT WINDOW CONTROL SWITCH	
• Disconnect: RH Front Window Control Switch C624. • Ignition ON. • Measure the voltage between RH front window control switch C624-5, circuit CBP41 (BU), harness side and ground.	**Yes** GO to G7 . **No** VERIFY Smart Junction Box (SJB) fuse 41 (15A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. DE-INITIALIZE, then INITIALIZE the front power window motor. REFER to Window Motor Initialization in this section. TEST

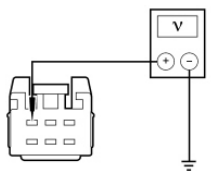
 N0118639 • **Is the voltage greater than 10 volts?**	the system for normal operation.
G7 CHECK THE MASTER WINDOW CONTROL SWITCH-TO-RH FRONT WINDOW CONTROL SWITCH CIRCUITS FOR AN OPEN	
• Ignition OFF. • Disconnect: Master Window Control Switch C535A. • Measure the resistance between master window control switch C535A-2, circuit CPW12 (GN/OG), harness side and RH front window control switch C624-4, circuit CPW12 (GN/OG), harness side.  N0118640 • Measure the resistance between master window control switch C535A-6, circuit CPW13 (BN/YE), harness side and RH front window control switch C624-3, circuit CPW13 (BN/YE), harness side.  N0096899 • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new RH front window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

Pinpoint Test H: A Single Power Window is Inoperative - MKZ, LH or RH Rear

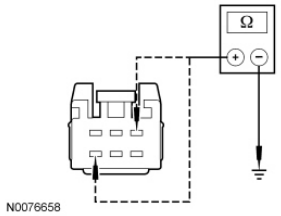
Refer to Wiring Diagrams Cell 100 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Windows for schematic and connector information.

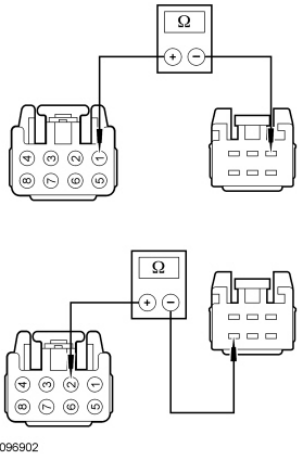
Normal Operation

The LH and RH rear window control switches receive voltage from the master window control switch when the window lockout switch is set to the UNLOCK position. Ground is also provided to the LH and RH rear window control switches from the master window control switch. The LH and RH rear window control switches transfer power and ground to their respective rear window motors. Window direction is controlled by reversing polarity of the voltage and ground circuits being supplied to the window motor.

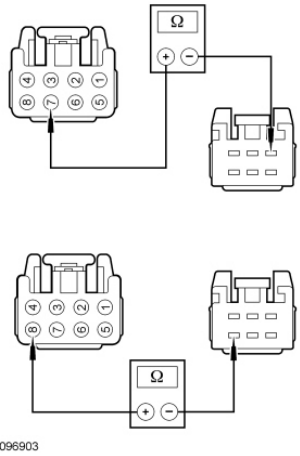


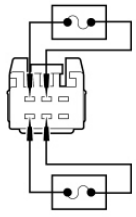
When operating the LH or RH rear window from the master window control switch, voltage and ground is sent from the LH front window control switch through the normally closed contacts within the LH or RH rear window control switch to operate the LH or RH rear window. Window direction is controlled by reversing polarity of the voltage and ground circuits being supplied to the window motor.



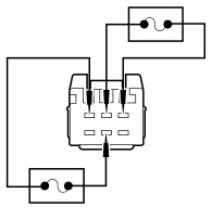


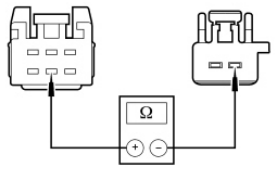
This pinpoint test is intended to diagnose the following:



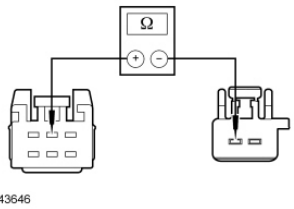


- Wiring, terminals or connectors
- Window control switch
- Power window motor





PINPOINT TEST H: A SINGLE POWER WINDOW IS INOPERATIVE - MKZ, LH OR RH REAR



NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
H1 CHECK THE VOLTAGE TO THE LH OR RH REAR WINDOW CONTROL SWITCH	
• Disconnect: Inoperative Rear Window Control Switch C701 (LH) or C819 (RH). • Ignition ON. • **NOTE:** Set the master window control lockout switch to the UNLOCK position. • Measure the voltage between the inoperative rear window connector and ground: ♦ for the RH rear window control switch, measure the voltage between RH rear window control switch C819-3, circuit CPW14 (VT/WH), harness side and ground. ♦ for the LH rear window control switch, measure the voltage between C701-3, circuit CPW14 (VT/WH), harness side and ground.  N0043638 • **Is the voltage greater than 10 volts?**	**Yes** GO to H2 . **No** REPAIR the circuit. TEST the system for normal operation.
H2 CHECK THE GROUNDS TO THE INOPERATIVE REAR WINDOW CONTROL SWITCH	

• Ignition OFF. • Measure the resistance between the inoperative window control switch and ground: ♦ for the RH rear window control switch, measure the resistance between RH rear window control switch C819-1, circuit CPW17 (BN/GN), harness side and ground; and between RH rear window control switch C819-6, circuit CPW18 (GY/VT), harness side and ground. ♦ for the LH rear window control switch, measure the resistance between LH rear window control switch C701-1, circuit CPW15 (YE), harness side and ground; and between LH rear window control switch C701-6, circuit CPW16 (BU/OG), harness side and ground.  N0076658 • **Are the resistances less than 5 ohms?**	**Yes** GO to H4 . **No** GO to H3 .
H3 CHECK THE CIRCUITS TO THE INOPERATIVE REAR WINDOW CONTROL SWITCH FOR AN OPEN	
• Ignition OFF. • Disconnect: LH Front Window Control Switch C535B. • For an inoperative LH rear power window, measure the resistance between master window control switch C535B-1, circuit CPW15 (YE) and LH rear window control switch C701-1, circuit CPW15 (YE), harness side; and between master window control switch C535B-2, circuit CPW16 (BU/OG) and LH rear window control switch C701-6, circuit CPW16 (BU/OG), harness side.  N0096902 • For an inoperative RH rear power window, measure the resistance between master window control switch C535B-7, circuit CPW17 (BN/GN) and RH window control switch C819-1, circuit CPW17 (BN/GN), harness side; and between master window control switch	**Yes** INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit(s) for an open. TEST the system for normal operation.

C535B-8, circuit CPW18 (GY/VT) and RH rear window control switch C819-6, circuit CPW18 (GY/VT), harness side.  N0096903 • **Are the resistances less than 5 ohms?**	
H4 CHECK THE INOPERATIVE WINDOW CONTROL SWITCH	
• Connect: Master Window Control Switch C535B. • Ignition ON. • For an inoperative LH rear window, connect a fused jumper wire between LH rear window control switch C701-2, circuit CPW21 (BN), harness side and LH rear window control switch C701-3, circuit CPW14 (VT/WH), harness side; and between LH rear window control switch C701-5, circuit CPW22 (GN/VT), harness side and LH rear window control switch C701-6, circuit CPW16 (BU/OG), harness side. The LH rear window should operate in the downward direction. • For an inoperative RH rear window, connect a fused jumper wire between RH rear window control switch C819-2, circuit CPW23 (GY), harness side and RH rear window control switch C819-3, circuit CPW14 (VT/WH), harness side; and between RH rear window control switch C819-5, circuit CPW24 (WH/VT), harness side and RH rear window control switch C819-6, circuit CPW18 (GY/VT), harness side. The RH rear window should operate in the downward direction.  N0043644 • For an inoperative LH rear window, connect a fused jumper wire between LH rear window control switch C701-2, circuit CPW21 (BN), harness side and LH rear window control switch C701-1, circuit CPW15 (YE), harness side; and between LH rear window control switch C701-5, circuit CPW22 (GN/VT), harness side and	**Yes** INSTALL a new master window control switch or RH rear window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** GO to H5 .

LH rear window control switch C701-3, circuit CPW14 (VT/WH), harness side. The LH rear window should operate in the upward direction. • For an inoperative RH rear window, connect a fused jumper wire between RH rear window control switch C819-2, circuit CPW23 (GY), harness side and RH rear window control switch C819-1, circuit CPW17 (BN/GN), harness side; and between RH rear window control switch C819-5, circuit CPW24 (WH/VT), harness side and RH rear window control switch C819-3, circuit CPW14 (VT/WH), harness side. The RH rear window should operate in the upward direction.  N0043645 • **Did the inoperative window operate correctly?**	
H5 CHECK THE POWER WINDOW MOTOR CIRCUITS	
• Ignition OFF. • Disconnect: Inoperative Rear Window Motor C703 (LH) or C803 (RH). • For an inoperative LH rear window, measure the resistance between LH rear window control switch C701-5, circuit CPW22 (GN/VT), harness side and LH rear window motor C703-1, circuit CPW22 (GN/VT), harness side. • For an inoperative RH rear window, measure the resistance between RH rear window control switch C819-5, circuit CPW24 (WH/VT), harness side and RH rear window motor C803-1, circuit CPW24 (WH/VT), harness side.  N0043647 • For an inoperative LH rear window, measure the resistance between LH rear window control switch C701-2, circuit CPW21 (BN), harness side and LH rear window motor C703-2, circuit CPW21 (BN), harness side. • For an inoperative RH rear window, measure the resistance between RH rear window control switch C819-2, circuit CPW23 (GY), harness side and RH rear window motor C803-2, circuit CPW23 (GY), harness side.	**Yes** INSTALL a new LH or RH rear window motor. REFER to Window Regulator Motor in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

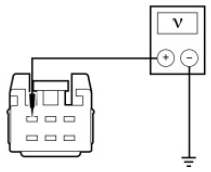
 N0043646 • **Is the resistance less than 5 ohms?**	

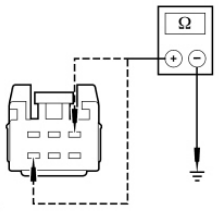
Pinpoint Test I: A Single Power Window is Inoperative - Fusion, RH Front, LH or RH Rear

NOTE: To diagnose an inoperative RH front window that is equipped with one-touch up/down feature, GO to Pinpoint Test G .

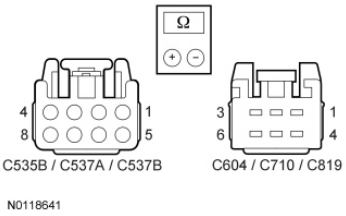
Refer to Wiring Diagrams Cell 100 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid),ower Windows for schematic and connector information.

Normal Operation





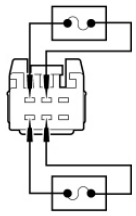
The RH front window control switch receives voltage from the accessory delay relay. The LH and RH rear window control switches receive voltage from the LH front window control switch when the window lock switch is set to the UNLOCK position. Ground is provided to the RH front, LH rear and RH rear window control switches from the LH front window control switch. Each window control switch transfers voltage and ground to their respective window motors. Window direction is controlled by reversing polarity of the voltage and ground circuits being supplied to the window motor.



This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- Window control switch
- Power window motor

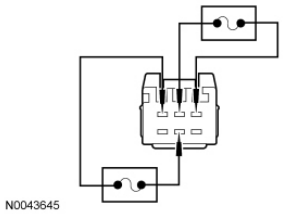
PINPOINT TEST I: A SINGLE POWER WINDOW IS INOPERATIVE - FUSION, RH FRONT, LH OR RH REAR

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**



Test Step	Result / Action to Take
I1 CHECK THE VOLTAGE TO THE RH FRONT, LH REAR OR RH REAR WINDOW CONTROL SWITCH	
• Disconnect: Inoperative Rear Window Control Switch C604 (RH front), C701 (LH rear) or C819 (RH rear). • Ignition ON. • **NOTE:** Set the master window control lockout switch to the UNLOCK position. • Measure the voltage between the inoperative window connector and ground: ♦ for the RH front window control switch, measure the voltage between RH front window control switch C604-3, circuit	**Yes** GO to I2 . **No** For RH front window, REPAIR circuit CBP47 (GN/BU) for an open. TEST the system for normal operation.

CBP47 (GN/BU), harness side and ground. ♦ for t RH rear window control switch, measure the voltage between RH rear window control switch C819-3, circuit CPW14 (VT/WH), harness side and ground. ♦ for the LH rear window control switch, measure the voltage between C701-3, circuit CPW14 (VT/WH), harness side and ground.  N0043638 • **Is the voltage greater than 10 volts?**	For LH or RH rear window, REPAIR circuit CPW14 (VT/WH) for an open. TEST the system for normal operation.
I2 CHECK THE GROUNDS TO THE INOPERATIVE REAR WINDOW CONTROL SWITCH	
• Ignition OFF. • Measure the resistance between the inoperative window control switch and ground: ♦ for the RH front window control switch, measure the resistance between RH front window control switch C604-1, circuit CPW12 (GN/OG), harness side and ground; and between RH front window control switch C604-6, circuit CPW13 (GY/RD), harness side and ground. ♦ for the RH rear window control switch, measure the resistance between RH rear window control switch C819-1, circuit CPW17 (BN/GN), harness side and ground; and between RH rear window control switch C819-6, circuit CPW18 (GY/VT), harness side and ground. ♦ for the LH rear window control switch, measure the resistance between LH rear window control switch C701-1, circuit CPW15 (YE), harness side and ground; and between LH rear window control switch C701-6, circuit CPW16 (BU/OG), harness side and ground.  N0076658 • **Are the resistances less than 5 ohms?**	**Yes** GO to I4 . **No** GO to I3 .
I3 CHECK THE CIRCUITS TO THE INOPERATIVE REAR WINDOW CONTROL SWITCH FOR AN OPEN	

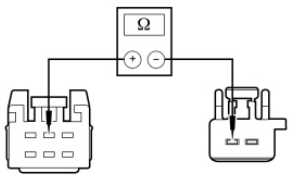


• Ignition OFF. • Disconnect: LH Front Window Control Switch C537A, C535B (if RH front window is equipped with one-touch up/down) or C537B (if RH front window is not equipped with one-touch up/down). • Measure the resistance between the master window control switch and the inoperative window control switch: ♦ For an inoperative RH front power window, measure the resistance between master window control switch C537A-4, circuit CPW12 (GN/OG) and RH front window control switch C604-1, circuit CPW12 (GN/OG), harness side; and between master window control switch C537A-8, circuit CPW13 (GY/RD) and RH front window control switch C604-6, circuit CPW13 (GY/RD), harness side. ♦ For an inoperative LH rear power window, measure the resistance between master window control switch C535B-1 or C537B-1, circuit CPW15 (YE) and LH rear window control switch C701-1, circuit CPW15 (YE), harness side; and between master window control switch C535B-2 or C537B-5, circuit CPW16 (BU/OG) and LH rear window control switch C701-6, circuit CPW16 (BU/OG), harness side. ♦ For an inoperative RH rear power window, measure the resistance between master window control switch C535B-7 or C537B-4, circuit CPW17 (BN/GN) and RH window control switch C819-1, circuit CPW17 (BN/GN), harness side; and between master window control switch C535B-8 or C537B-8, circuit CPW18 (GY/VT) and RH rear window control switch C819-6, circuit CPW18 (GY/VT), harness side.  • **Are the resistances less than 5 ohms?**	**Yes** INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** REPAIR the circuit(s) for an open. TEST the system for normal operation.
I4 CHECK THE INOPERATIVE WINDOW CONTROL SWITCH	
• Ignition ON. • For an inoperative RH front window, connect a fused jumper wire between RH front window control switch C604-2, circuit CPW19 (VT), harness side and RH front window control switch C604-3, circuit CBP47 (GN/BU), harness side; and between RH front window control switch C604-5, circuit CPW20 (YE/BK), harness side and RH front window control switch C604-6, circuit CPW13 (GY/RD), harness side. The RH front window should operate in the downward direction. • For an inoperative LH rear window, connect a fused jumper wire between LH rear window control switch C701-2, circuit CPW21 (BN), harness side and LH rear window control switch C701-3, circuit CPW14 (VT/WH), harness side; and between LH rear	**Yes** INSTALL a new RH front, LH or RH rear window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation. **No** GO to I5 .

window control switch C701-5, circuit CPW22 (GN/VT), harness side and LH rear window control switch C701-6, circuit CPW16 (BU/OG), harness side. The LH rear window should operate in the downward direction.

- For an inoperative RH rear window, connect a fused jumper wire between RH rear window control switch C819-2, circuit CPW23 (GY), harness side and RH rear window control switch C819-3, circuit CPW14 (VT/WH), harness side; and between RH rear window control switch C819-5, circuit CPW24 (WH/VT), harness side and RH rear window control switch C819-6, circuit CPW18 (GY/VT), harness side. The RH rear window should operate in the downward direction.

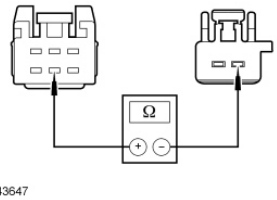
N0043644



- For an inoperative RH front window, connect a fused jumper wire between RH front window control switch C604-2, circuit CPW19 (VT), harness side and RH front window control switch C604-1, circuit CPW12 (GN/OG), harness side; and between RH front window control switch C604-5, circuit CPW20 (YE/BK), harness side and RH front window control switch C604-3, circuit CBP47 (GN/BU), harness side. The RH front window should operate in the upward direction.
- For an inoperative LH rear window, connect a fused jumper wire between LH rear window control switch C701-2, circuit CPW21 (BN), harness side and LH rear window control switch C701-1, circuit CPW15 (YE), harness side; and between LH rear window control switch C701-5, circuit CPW22 (GN/VT), harness side and LH rear window control switch C701-3, circuit CPW14 (VT/WH), harness side. The LH rear window should operate in the upward direction.
- For an inoperative RH rear window, connect a fused jumper wire between RH rear window control switch C819-2, circuit CPW23 (GY), harness side and RH rear window control switch C819-1, circuit CPW17 (BN/GN), harness side; and between RH rear window control switch C819-5, circuit CPW24 (WH/VT), harness side and RH rear window control switch C819-3, circuit CPW14 (VT/WH), harness side. The RH rear window should operate in the upward direction.

- **Did the inoperative window operate correctly?**

I5 CHECK THE POWER WINDOW MOTOR CIRCUITS



- Ignition OFF.
- Disconnect: Inoperative Power Window Motor C608 (RH front), C703 (LH rear) or C803 (RH rear).
- For an inoperative RH front window, measure the resistance between RH front window control switch C604-2, circuit CPW19 (VT), harness side and RH front power window motor C608-2, circuit CPW19 (VT), harness side.
- For an inoperative LH rear window, measure the resistance between LH rear window control switch C701-2, circuit CPW21 (BN), harness side and LH rear power window motor C703-2, circuit CPW21 (BN), harness side.
- For an inoperative RH rear window, measure the resistance between RH rear window control switch C819-2, circuit CPW23 (GY), harness side and RH rear power window motor C803-2, circuit CPW23 (GY), harness side.

- For an inoperative RH front window, measure the resistance between RH front window control switch C604-5, circuit CPW20 (YE/BK), harness side and RH front power window motor C608-1, circuit CPW20 (YE/BK), harness side.
- For an inoperative LH rear window, measure the resistance between LH rear window control switch C701-5, circuit CPW22 (GN/VT), harness side and LH rear power window motor C703-1, circuit CPW22 (GN/VT), harness side.
- For an inoperative RH rear window, measure the resistance between RH rear window control switch C819-5, circuit CPW24 (WH/VT), harness side and RH rear power window motor C803-2, circuit CPW24 (WH/VT), harness side.

Yes
INSTALL a new RH front, LH or RH rear power window motor. REFER to Window Regulator Motor in this section. TEST the system for normal operation.

No
REPAIR the circuit. TEST the system for normal operation.

 • **Are the resistances less than 5 ohms?**	

Pinpoint Test J: The One-Touch Up/Down Feature is Inoperative

Refer to Wiring Diagrams Cell 100 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Windows for schematic and connector information.

NOTE: All vehicles are equipped with one-touch up/down feature on the LH front window. All MKZ and some Fusion vehicles are equipped with one-touch up/down feature for both LH and RH front windows.

NOTE: A new LH or RH front power window motor will not operate in one-touch up or one-touch down mode until initialized. Refer to Window Motor Initialization in this section.

Normal Operation

During normal operation, when the window control switch is pressed to the second detent position to request an auto up or auto down operation, the window control switch provides a 12-volt signal on both the up and down line simultaneously. During an auto up or auto down request, the window motor determines intended window direction by the signal first received (first detent position). If the window control switch is pressed too quickly to the second detent position (less than 5 milliseconds of time between first detent signal and second detent signal), the window motor will not be able to determine the intended direction request and will not operate until the window control switch is released and pressed again.

This pinpoint test is intended to diagnose the following:
- B(+) power lost during LH or RH front window operation
- Power window motor not initialized
- Power window motor
- Window control switch

PINPOINT TEST J: THE ONE-TOUCH UP/DOWN FEATURE IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
J1 CHECK FOR POWER (B+) LOSS DURING LH OR RH FRONT POWER WINDOW OPERATION	
• Verify if power (B+) was lost during LH or RH front window operation. • **Was power (B+) lost while the LH or RH front window was in operation?**	**Yes** RAISE the LH or RH front window to the fully CLOSED position. VERIFY the window glass stalls into the upper header seal. The front window should function normally. TEST the system for normal operation.

	No GO to J2 .
J2 DE-INITIALIZE, THEN INITIALIZE THE FRONT POWER WINDOW MOTOR	
• De-initialize the front power window motor, then carry out the front power window motor initialization procedure. Refer to Window Motor Initialization in this section. • **Is the one-touch up/down feature operating correctly?**	**Yes** The system is operating normally at this time. The front power window motor lost initialization. **No** For LH window, GO to J3 . For RH window, GO to J4 .
J3 CHECK THE MASTER WINDOW CONTROL SWITCH	
• Ignition OFF. • Disconnect: Master Window Control Switch C535A and C535B (MKZ or Fusion if RH front window is equipped with one-touch up/down) or C537A and C537B (Fusion if RH front window is not equipped with one-touch up/down). • Carry out the master window control switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did the master window switch pass the component test?**	**Yes** INSTALL a new LH front power window motor. REFER to Window Regulator Motor in this section. TEST the system for normal operation. **No** INSTALL a new master window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation.
J4 CHECK THE LH AND RH FRONT WINDOW CONTROL SWITCH	
• Ignition OFF. • Disconnect: Master Window Control Switch C535A and C535B. • Disconnect: RH Front Window Control Switch C624. • Carry out the master window control switch component test and the RH front window control switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did both the master window control switch and RH front window switch pass the component tests?**	**Yes** INSTALL a new RH front power window motor. REFER to Window Regulator Motor in this section. TEST the system for normal operation. **No** INSTALL a new master window control switch or RH front window control switch. REFER to Window Control Switch in this section. TEST the system for normal operation.

Pinpoint Test K: The Global Open Function is Inoperative/Does Not Operate Correctly - If Equipped

Refer to Wiring Diagrams Cell 100 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Windows for schematic and connector information.

NOTE: The global open feature may be enabled/disabled via scan tool or in some cases modified by the customer following a procedure listed in the vehicle Owner's Literature. For a complete list of available programmable parameters, refer to the Module Configuration and Parameter Chart in Section 418-01 .

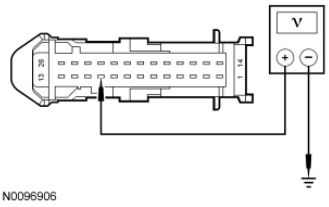
Normal Operation

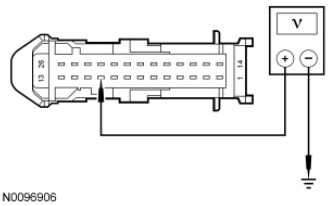
When the unlock button of the Remote Keyless Entry (RKE) transmitter is held for 2 seconds, the global open activates. The Smart Junction Box (SJB) sends a signal to the LH and RH front power window motors to activate the one-touch down operation of both front windows.

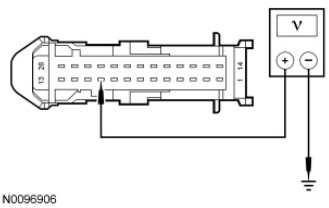
The global open feature does not operate if the accessory delay relay is active.

- DTC B2947 (Global Opening/Closing Circuit Open) - sets when the SJB detects the global open circuit is open or shorted to ground.
- DTC B2949 (Global Opening/Closing Circuit Short to Battery) - sets when the SJB detects the global open circuit is shorted to voltage.

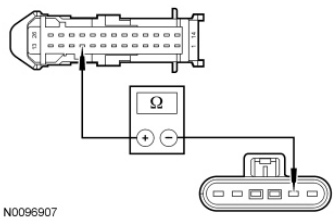
This pinpoint test is intended to diagnose the following:

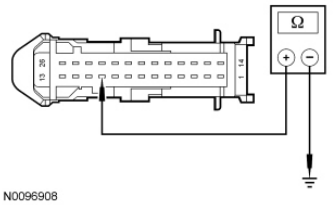






- RKE transmitters
- Wiring, terminals or connectors
- SJB
- Power window motors not initialized





PINPOINT TEST K: THE GLOBAL OPEN FUNCTION IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - IF EQUIPPED

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failuuse the correct probe adapter(s) may damage the connector.**

NOTE: The global open feature must be enabled and one-touch up/down must be operational for the global open function to operate correctly. Make sure the global open feature is enabled and one-touch up/down is operational before proceeding with this diagnostic.

Test Step	Result / Action to Take
K1 CHECK THE DTCs	
• Refer to the results from the previous SJB self-test. • **Was DTC B2947 or B2949 retrieved?**	**Yes** For B2949, GO to K2 . For B2947, GO to K5 . **No** GO to K7 .
K2 CHECK THE GLOBAL OPEN CIRCUIT FOR A SHORT TO VOLTAGE	

• Ignition OFF. • Disconnect: SJB C2280C. • Ignition ON. • Measure the voltage between SJB C2280C-10, circuit CPW01 (BN/BU), harness side and ground.  N0096906 • **Is the voltage greater than 10 volts?**	**Yes** GO to K3 . **No** GO to K9 .
K3 CHECK THE GLOBAL OPEN CIRCUIT FOR A SHORT TO VOLTAGE	
• Disconnect: LH Front Power Window Motor C540. • Measure the voltage between SJB C2280C-10, circuit CPW01 (BN/BU), harness side and ground.  N0096906 • **Is the voltage greater than 10 volts?**	**Yes** GO to K4 . **No** INSTALL a new LH front power window motor. REFER to Window Regulator and Motor - Front Door in this section. INITIALIZE the LH front power window motor. REFER to Window Motor Initialization in this section. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.
K4 CHECK THE GLOBAL OPEN CIRCUIT FOR A SHORT TO VOLTAGE	
• Disconnect: RH Front Power Window Motor C62 • Measure the voltage between SJB C2280C-10, circuit CPW01 (BN/BU), harness side and ground.  N0096906 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR the circuit. DE-INITIALIZE then INITIALIZE the LH and RH front window motors. REFER to Window Motor Initialization in this section. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation. **No** INSTALL a new RH front power window motor. REFER to Window Regulator and Motor - Front Door in this section. INITIALIZE the RH front power window motor. REFER to Window Motor Initializaon in this section. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal

	operation.
K5 CHECK THE GLOBAL OPEN CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: SJB C2280C. • Disconnect: LH Front Power Window Motor C540. • Disconnect: RH Front Power Window Motor C623. • Measure the resistance between SJB C2280C-10, circuit CPW01 (BN/BU), harness side and LH front power window motor C540-2, circuit CPW01 (BN/BU), harness side; and between SJB C2280C-10, circuit CPW01 (BN/BU), harness side and RH front power window motor C623-2, circuit CPW01 (BN/BU), harness side.  N0096907 • **Are the resistances less than 5 ohms?**	**Yes** GO to K6 . **No** REPAIR the circuit. DE-INITIALIZE then INITIALIZE the LH and RH front power window motors. REFER to Window Motor Initialization in this section. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.
K6 CHECK THE GLOBAL OPEN CIRCUIT FOR A SHORT TO GROUND	
• Measure the resistance between SJB C2280C-10, circuit CPW01 (BN/BU), harness side and ground.  N0096908 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to K9 . **No** REPAIR the circuit. DE-INITIALIZE then INITIALIZE the LH and RH front power window motors. REFER to Window Motor Initialization in this section. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.
K7 CHECK THE RKE TRANSMITTER OPERATION	
• Operate the RKE lock/unlock function using all of the RKE transmitters. • **Does the RKE lock/unlock function operate correctly with at least one of the RKE transmitters?**	**Yes** GO to K8 . **No** REFER to Section 501-14 to continue diagnosis of the RKE system. CLEAR the DTCs. REPEAT the self-test. TEST the

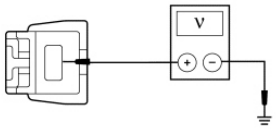
	system for normal operation.
K8 CHECK THE RKE TRANSMITTERS GLOBAL OPEN OPERATION	
• Operate the global open function using all of the RKE transmitters. • **Does the global open function operate correctly with at least one of the RKE transmitters?**	**Yes** PROVIDE new RKE transmitters. REFER to Section 501-14 . TEST the system for normal operation. **No** GO to K9 .
K9 CHECK THE SJB FOR CORRECT OPERATION	
• Disconnect all of the SJB connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all of the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . REPEAT the self-test. TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

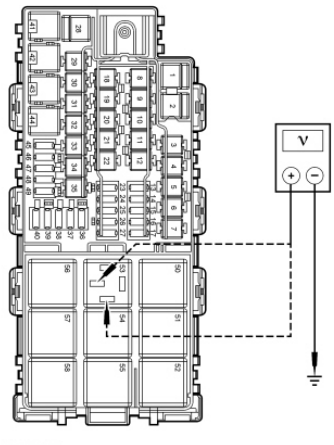
Pinpoint Test L: The Defrost System is Inoperative - MKZ

Refer to Wiring Diagrams Cell 56 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Heated Window for schematic and connector information.

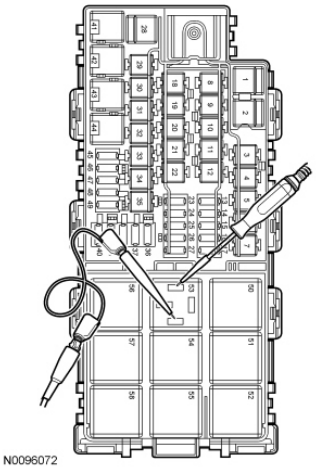
Normal Operation

When the engine is running and the defrost switch (integral to the Front Controls Interface Module (FCIM)) is pressed, the FCIM sends the defrost request message to the HVAC module over the Controller Area Network (CAN). When the request is received, the HVAC module activates the rear window defrost relay which supplies voltage through the antenna module to the rear window defrost grid.

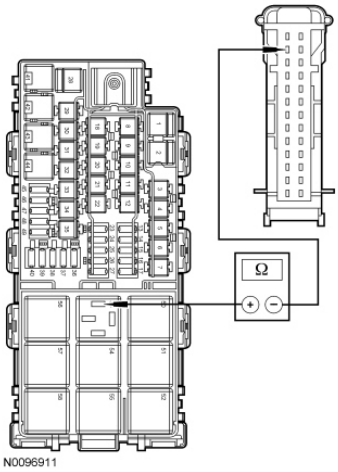




- DTC B1C83:12 (Rear Defog Relay: Circuit Short to Battery) - sets when the HVAC module detects a short to voltage on the rear window defrost relay control circuit.
- DTC B1C83:14 (Rear Defog Relay: Circuit Short to Ground or Open) - sets when the HVAC module detects an open or short to ground on the rear window defrost relay control circuit.



This pinpoint test is intended to diagnose the following:



- Fuse(s)
- Rear wi defrost relay
- Wiring, terminals or connectors
- HVAC module
- FCIM
- Antenna module
- Rear window defrost grid

PINPOINT TEST L: THE DEFROST SYSTEM IS INOPERATIVE - MKZ

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
L1 CHECK FOR VOLTAGE TO THE REAR WINDOW DEFROST GRID	
• Disconnect: Antenna Module C4194B. • Start the engine. • Activate the rear defrost switch and measure the voltage between antenna module C4194B-1, circuit CRD06 (BN/YE), harness side and ground.  A0010641 • **Is the voltage greater than 10 volts?**	**Yes** INSPECT antenna module jumper harness and rear window defrost grid ground circuit for damage and REPAIR as necessary. If jumper harness and defrost grid ground wire are OK, INSTALL a new antenna module. TEST the system for normal operation. **No** GO to L2 .
L2 CHECK FOR VOLTAGE TO THE REAR WINDOW DEFROST RELAY	
• Ignition OFF. • Disconnect: Rear Window Defrost Relay. • Ignition ON. • Measure the voltage between rear window defrost relay socket pin 86 and ground; and between rear window defrost relay socket pin 30 and ground.  N0096910 • **Is the voltage greater than 10 volts for both measurements?**	**Yes** GO to L3 . **No** VERIFY Battery Junction Box (BJB) fuse 6 (40A) and Smart Junction Box (SJB) fuse 45 (5A) are OK. If OK, REPAIR the circuit. TEST the system for normal operation. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. REPAIR the circuit. TEST the system for normal operation.
L3 CHECK THE HVAC MODULE	

NOTICE: **The following step uses a test light to simulate normal circuit loads. Use only the test light recommended in the Special Tools table at the beginning of this section or equivalent. To avoid connector terminal damage, use the Flex Probe Kit for the test light probe connection to the vehicle. Do not use the test light probe directly on any connector.** • Start the engine. • Activate the rear window defrost switch. • Connect a 12-volt incandescent test light between rear window defrost relay socket pin 85, circuit CH122 (WH/OG) and rear window defrost relay socket pin 86.  N0096072 • **Does the test light illuminate?**	**Yes** GO to L4 . **No** GO to L5 .
L4 CHECK THE REAR WINDOW DEFROST RELAY	
• Carry out the rear window defrost relay component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did the rear window defrost relay pass the component test?**	**Yes** REPAIR open in circuit CRD06 (BN/YE). CLEAR the DTCs. TEST the system for normal operation. **No** INSTALL a new rear window defrost relay. CLEAR the DTCs. TEST the system for normal operation.
L5 CHECK THE REAR WINDOW DEFROST SWITCH (CC_SW_R_DEF) PID	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger - FCIM . • Monitor the FCIM CC_SW_R_DEF PID while pressing and releasing the rear window defrost switch. • **Does the PID agree with the rear window defrost switch status?**	**Yes** GO to L6 . **No** INSTALL a new FCIM . REFER to Section 415-00 . CLEAR the DTCs. TEST the system for normal operation.

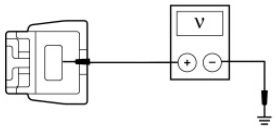
L6 CHECK THE REAR WINDOW DEFROST RELAY CONTROL CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: HVAC Module C2356A. • Measure the resistance between rear window defrost relay socket pin 85, circuit CH122 (WH/OG), harness side and HVAC module C2356A-12, circuit CH122 (WH/OG), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to L7 . **No** REPAIR the circuit. TEST the system for normal operation.
L7 CHECK FOR CORRECT HVAC MODULE OPERATION	
• Disconnect all HVAC module electrical connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all HVAC module electrical connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new HVAC module. REFER to Section 412-01 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test M: The Defrost System Will Not Shut Off Automatically - MKZ

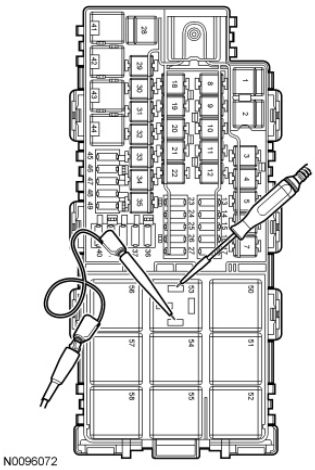
Refer to Wiring Diagrams Cell 56 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Heated Window for schematic and connector information.

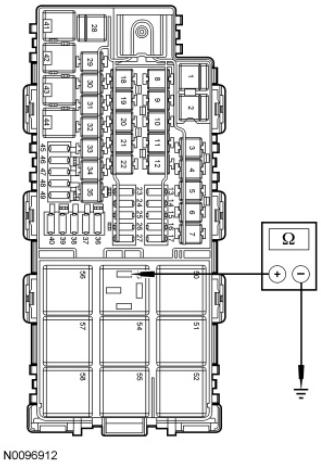
Normal Operation

When the engine is running and the defrost switch (integral to the Front Controls Interface Module (FCIM)) is pressed, the FCIM sends the defrost request message to the HVAC module over the Controller Area Network (CAN). When the request is received, the HVAC module activates the rear window defrost relay which supplies voltage through the antenna module to the rear window defrost grid.



- DTC B1C83:14 (Rear Defog Relay: Circuit Short to Ground or Open) - sets when the HVAC module detects an open or short to ground on the rear window defrost relay control circuit.





This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Rear window defrost relay
- HVAC module

PINPOINT TEST M: THE DEFROST SYSTEM WILL NOT SHUT OFF AUTOMATICALLY - MKZ

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
M1 CHECK THE REAR WINDOW DEFROST GRID POWER CIRCUIT FOR A SHORT TO VOLTA	
• Disconnect: Rear Window Defrost Relay. • Disconnect: Antenna Module C4194B. • Ignition ON. • Measure the voltage between antenna module C4194B-1, circuit CRD06 (BN/YE), harness side and ground.  A0010641 • **Is any voltage present?**	**Yes** REPAIR circuit CRD06 (BN/YE) for a short to voltage. TEST the system for normal operation. **No** GO to M2 .
M2 CHECK THE HVAC MODULE OUTPUT	
• Start the engine. • ***NOTICE:*** **The following step uses a test light to simulate normal circuit loads. Use only the test light recommended in the Special Tools table at the beginning of this section or equivalent. To avoid connector terminal damage, use the Flex Probe Kit for the test light probe connection to the vehicle. Do not use the test light probe directly on any connector.** • Connect a 12-volt incandescent test light between rear window defrost relay socket pin 85, circuit CH122 (WH/OG) and rear window defrost relay socket pin 86.	**Yes** GO to M3 . **No** INSTALL a new rear window defrost relay. TEST the system for normal operation.

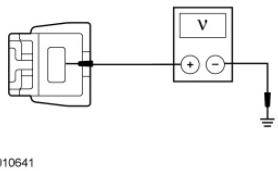
 N0096072 • **Does the test light illuminate?**	
M3 CHECK THE REAR WINDOW DEFROST RELAY CONTROL CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Disconnect: HVAC Module C2356A. • Measure the resistance between rear window defrost relay socket pin 85, circuit CH122 (WH/OG) and ground.  N0096912 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to M4 . **No** REPAIR short to ground in circuit CH122 (WH/OG). TEST the system for normal operation.
M4 CHECK FOR CORRECT HVAC MODULE OPERATION	
• Disconnect all HVAC module connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all HVAC module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new HVAC module. REFER to Section 412-01 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test N: The Defrost System is Inoperative - Fusion

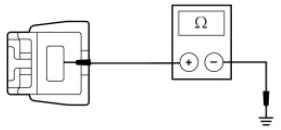
Refer to Wiring Diagrams Cell 56 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Heated Window for schematic and connector information.

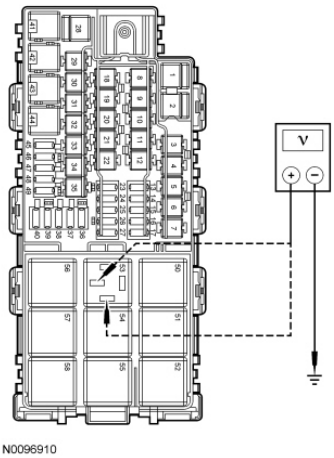
Normal Operation

When the engine is running and the defrost switch (integral to the HVAC module or Front Controls Interface Module (FCIM), if equipped with navigation system) is pressed, the HVAC module activates the rear window defrost relay by grounding the relay coil. For vehicles equipped with navigation system, the FCIM sends the defrost request message to the HVAC module over the Controller Area Network (CAN). When the defrost relay is activated, voltage is supplied from the relay to the rear window defrost grid.

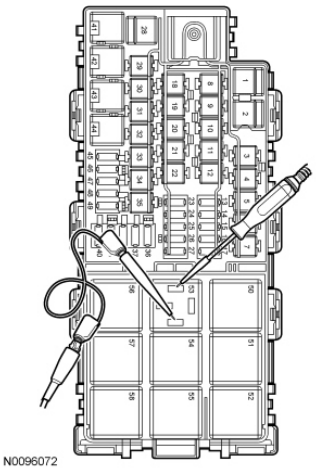


- DTC B1C83:12 (Rear Defog Relay: Circuit Short to Battery) - sets when the HVAC module detects a short to voltage on the rear window defrost relay control circuit.
- DTC B1C83:14 (Rear Defog Relay: Circuit Short to Ground or Open) - sets when the HVAC module detects an open or short to ground on the rear window defrost relay control circuit.

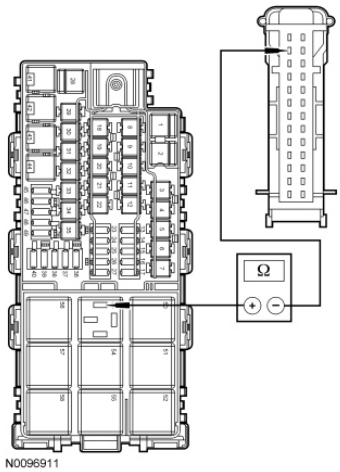




This pinpoint test is intended to diagnose the following:



- Fuse
- Rear window defrost relay
- Wiring, terminals or connectors
- HVAC module
- FCIM
- Rear window defrost grid



PINPOINT TEST N: THE DEFROST SYSTEM IS INOPERATIVE - FUSION

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. F to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
N1 CHECK FOR VOLTAGE TO THE REAR WINDOW DEFROST GRID	
• Disconnect: Rear Window Defrost Grid Power. • Start the engine. • Activate the rear defrost switch and measure the voltage between rear window defrost grid power C402A-1, circuit CRD06 (BN/YE), harness side and ground.  A0010641 • **Is the voltage greater than 10 volts?**	**Yes** GO to N2 . **No** GO to N3 .

N2 CHECK THE REAR WINDOW DEFROST GRID GROUND	
• Ignition OFF. • Disconnect: Rear Window Defrost Grid Ground C402B. • Measure the resistance between rear window defrost grid ground C402B-1, circuit GD147 (BK/VT) and ground.  A0010644 • **Is the resistance less than 5 ohms?**	**Yes** CARRY OUT the Grid Wire Test in this section. REPAIR the rear window defrost grid or INSTALL a new rear window glass. REFER to Window Grid Wire Repair in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
N3 CHECK THE VOLTAGE SUPPLY TO THE REAR WINDOW DEFROST RELAY	
• Ignition OFF. • Disconnect: Rear Window Defrost Relay. • Ignition ON. • Measure the voltage between rear window defrost relay socket pin 86 and ground; and between rear window defrost relay socket pin 30 and ground.  N0096910 • **Is the voltage greater than 10 volts for both measurements?**	**Yes** GO to N4 . **No** VERIFY Battery Junction Box (BJB) fuse 6 (40A) and Smart Junction Box (SJB) fuse 45 (5A) are OK. If OK, REPAIR the circuit. TEST the system for normal operation. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. REPAIR the circuit. TEST the system for normal operation.
N4 CHECK THE HVAC MODULE	
NOTICE: **The following step uses a test light to simulate normal circuit loads. Use only the test light recommended in the Special Tools table at the beginning of this section or equivalent. To avoid connector terminal damage, use the Flex Probe Kit for the test light probe connection to the vehicle. Do not use the test light probe directly on any connector.** • Start the engine.	**Yes** GO to N5 . **No** If equipped with navigation system, GO to N6 . If not equipped with navigation system, GO to N7 .

• Activate the rear window defrost switch. • Connect a 12-volt incandescent test light between rear window defrost relay socket pin 85, circuit CH122 (WH/OG) and rear window defrost relay socket pin 86.  N0096072 • **Does the test light illuminate?**	
N5 CHECK THE REAR WINDOW DEFROST RELAY	
• Carry out the rear window defrost relay component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did the rear window defrost relay pass the component test?**	**Yes** REPAIR open in circuit CRD06 (BN/YE). CLEAR the DTCs. TEST the system for normal operation. **No** INSTALL a new rear window defrost relay. CLEAR the DTCs. TEST the system for normal operation.
N6 CHECK THE REAR WINDOW DEFROST SWITCH (CC_SW_R_DEF) PID	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: DataLogger - FCIM . • Monitor the FCIM CC_SW_R_DEF PID while pressing and releasing the rear window defrost switch. • **Does the PID agree with the rear window defrost switch status?**	**Yes** GO to N7 . **No** INSTALL a new FCIM . REFER to Section 415-00 . CLEAR the DTCs. TEST the system for normal operation.
N7 CHECK THE REAR WINDOW DEFROST RELAY CONTROL CIRCUIT FOR AN OPEN	

• Ignition OFF. • Disconnect: HVAC Module - Electronic Manual Temperature Control (EMTC) C2357A or HVAC Module - Dual Automatic Temperature Control (DATC) C2356A. • Measure the resistance between rear window defrost relay socket pin 85, circuit CH122 (WH/OG), harness side and HVAC module - EMTC C2357A-12 or HVAC Module - DATC C2356A-12, circuit CH122 (WH/OG), harness side.  N0096911 • **Is the resistance less than 5 ohms?**	**Yes** GO to N8 . **No** REPAIR the circuit. TEST the system for normal operation.
• Disconnect all HVAC module electrical connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all HVAC module electrical connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new HVAC module. REFER to Section 412-01 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

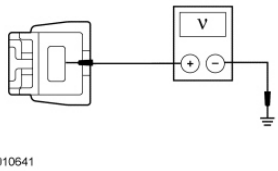
Pinpoint Test O: The Defrost System Will Not Shut Off Automatically - Fusion

Refer to Wiring Diagrams Cell 56 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Heated Window for schematic and connector information.

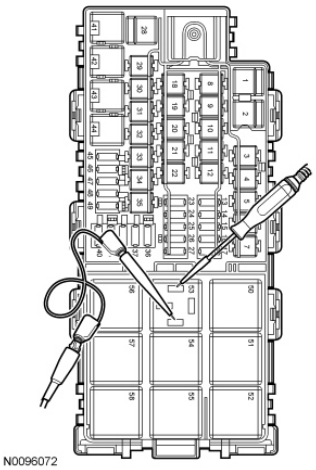
Normal Operation

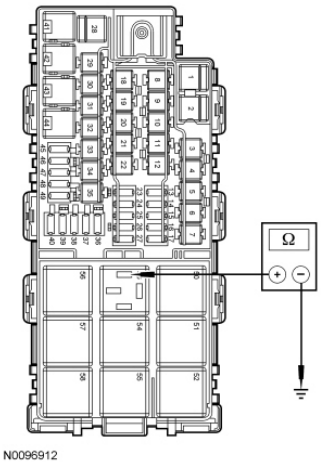
When the engine is running and the defrost switch (integral to the HVAC module or Front Controls Interface Module (FCIM), if equipped with navigation system) is pressed, the HVAC module activates the rear window defrost relay by grounding the relay coil. For vehicles equipped with navigation system, the FCIM sends the defrost request message to the HVAC module over the Controller Area Network (CAN). When the defrost

relay is activated, voltage is supplied from the relay to the rear window defrost grid.



- DTC B1C83:14 (Rear Defog Relay: Circuit Short to Ground or Open) - sets when the HVAC module detects an open or short to ground on the rear window defrost relay control circuit.





This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Rear window defrost relay
- HVAC module

PINPOINT TEST O: THE DEFROST SYSTEM WILL NOT SHUT OFF AUTOMATICALLY - FUSION

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
O1 CHECK THE REAR WINDOW DEFROST GRID POWER CIRCUIT FOR A SHORT TO VOLTAGE	
• Disconnect: Rear Window Defrost Relay. • Disconnect: Rear Window Defrost Grid Power C402A. • Ignition ON. • Measure the voltage between rear window defrost grid power C402A-1, circuit CRD06 (BN/YE), harness side and ground.  A0010641 • **Is any voltage present?**	**Yes** REPAIR circuit CRD06 (BN/YE) for a short to voltage. TEST the system for normal operation. **No** GO to O2 .
O2 CHECK THE REAR WINDOW DEFROST RELAY	
• Start the engine. • ***NOTICE:*** **The following step uses a test light to simulate normal circuit loads. Use only the test light recommended in the Special Tools table at the beginning of this section or equivalent. To avoid connector terminal damage, use the Flex Probe Kit for the test light probe connection to the vehicle. Do not use the test light probe directly on any connector.** • Connect a 12-volt incandescent test light between rear window defrost relay socket pin 85, circuit CH122 (WH/OG) and rear window defrost relay socket pin 86.	**Yes** GO to O3 . **No** INSTALL a new rear window defrost relay. TEST the system for normal operation.

 N0096072 • **Does the test light illuminate?**	
O3 CHECK THE REAR WINDOW DEFROST RELAY CONTROL CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Disconnect: HVAC Module - Electronic Manual Temperature Control (EMTC) C2357A or HVAC Module - Dual Automatic Temperature Control (DATC) C2356A. • Start the engine. • Measure the resistance between rear window defrost relay socket pin 85, circuit CH122 (WH/OG), harness side and ground.  N0096912 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to O4 . **No** REPAIR short to ground in circuit CH122 (WH/OG). TEST the system for normal operation.
O4 CHECK FOR CORRECT HVAC MODULE OPERATION	
• Disconnect all HVAC module connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all HVAC module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new HVAC module. REFER to Section 412-01 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been

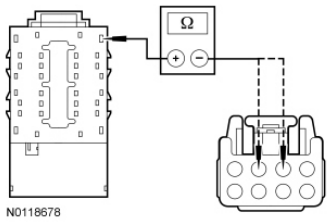
	caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test P: The Delayed Accessory is Inoperative

Refer to Wiring Diagrams Cell 100 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Windows for schematic and connector information.

Normal Operation

The accessory delay relay is located in the Smart Junction Box (SJB). When the ignition is turned ON, the SJB activates the accessory delay relay, which provides power to the master window control switch. The delayed accessory feature remains active for 10 minutes after the ignition is turned OFF or until either front door is opened.



- DTC B1302 (Accessory Delay Relay Coil Circuit Failure) - sets when the SJB detects an open or short to ground on the accessory delay relay control circuit.
- DTC B1304 (Accessory Delay Relay Coil Circuit Short to Battery) - Sets when the SJB detects a short to voltage on the accessory delay relay control circuit.

This pinpoint test is intended to diagnose the following:
- Circuit breaker
- Accessory delay relay
- Wiring, terminals or connectors
- SJB

PINPOINT TEST P: THE DELAYED ASORY IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
P1 CHECK THE DOOR AJAR SWITCH OPERATION	
• Open and close the front doors. Verify the interior lights turn on when the doors are open, and off when the doors are closed. • **Do the interior lights operate normally?**	**Yes** GO to P2 . **No** REFER to Section 417-02 to diagnose the interior lighting and door ajar switches.
P2 CHECK THE ACCESSORY DELAY RELAY	
• Disconnect: Accessory Delay Relay. • Carry out the accessory delay relay component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did the delayed accessory relay pass the component test?**	**Yes** VERIFY SJB fuse 41 (15A) (MKZ only) and circuit breaker 47 (30A) are OK. If OK, GO to P3 . If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. REPAIR the

	circuit. TEST the system for normal operation. **No** INSTALL a new accessory delay relay. TEST the system for normal operation.
P3 CHECK THE MASTER WINDOW CONTROL SWITCH POWER CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: SJB C2280D. • Disconnect: Master Window Control Switch C537A (Fusion, if RH front window is not equipped with one-touch up/down) or C535B (MKZ and/or Fusion if RH front window is equipped with one-touch up/down). • Measure the resistance between master window control switch C537A-2 or C535B-3 , circuit CBP47 (GN/BU), harness side and SJB C2280D-32, circuit CBP47 (GN/BU), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to P4 . **No** REPAIR the circuit. TEST the system for normal operation.
P4 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all SJB connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

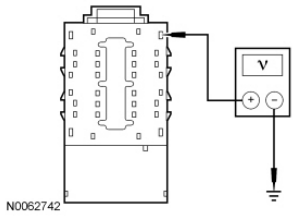
Pinpoint Test Q: The Delayed Accessory Does Not Turn Off

Refer to Wiring Diagrams Cell 100 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Windows for schematic and connector information.

Normal Operation

The accessory delay relay is located in the Smart Junction Box (SJB). When the ignition is turned ON, the SJB activates the accessory delay relay, which provides power to the master window control switch. The

delayed accessory feature remains active for 10 minutes after the ignition is turned OFF or until either front door is opened.



- DTC B1302 (Accessory Delay Relay Coil Circuit Failure) - sets when the SJB detects an open or short to ground on the accessory delay relay control circuit.

This pinpoint test is intended to diagnose the following:
- Accessory delay relay
- Wiring, terminals or connections
- SJB

PINPOINT TEST Q: THE DELAYED ACCESSORY DOES NOT TURN OFF

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take	
Q1 CHECK FOR STUCK/STICKING ACCESSORY DELAY RELAY		• Disconnect: Delayed Accessory Relay. • **Do the power windows still operate?** **Yes** GO to Q3 . **No** GO to Q2 .
Q2 CHECK THE ACCESSORY DELAY RELAY		
• Carry out the accessory delay relay component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did the accessory delay relay pass the component test?**	**Yes** GO to Q4 . **No** INSTALL a new accessory delay relay. TEST the system for normal operation.	
Q3 CHECK THE MASTER WINDOW CONTROL SWITCH POWER CIRCUIT FOR A SHORT TO VOLTAGE		
• Ignition OFF. • Disconnect: SJB C2280D. • Ignition ON. • Measure the voltage between C2280D-32, circuit CBP47 (GN/BU), harness side and ground.	**Yes** REPAIR circuit CBP47 (GN/BU) for a short to voltage. TEST the system for normal operation. **No** GO to Q4 .	

 • **Is any voltage present?**	
Q4 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all SJB connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test. TEST the system for normal operation.

Component Test

Grid Wire Test

1. Using a bright lamp inside the vehicle, inspect the wire grid from the outside. A broken grid wire appears as a brown spot.

2. Run the engine at idle. Set the rear window defrost switch to ON. The indicator light should illuminate.

3. Working inside the vehicle with a voltmeter, contact the broad, red-brown stripes of the back glass window grid (positive lead to B+ side and negative lead to ground side). The meter should read 10-13 volts. A lower voltage reading may indicate a loose grid connection.

4. Contact a good ground point with the negative lead of the meter. The voltage reading should not change. If the voltage increases, this indicates a loose ground connection. A voltage reading of less than 10 volts indicates a loose B+ side connection.

5. With the negative lead of the meter grounded, touch each grid line of the rear window defrost glass at its midpoint with the positive lead. A reading of approximately 6 volts indicates the line is good. A reading of 0 volt indicates the line is broken between the midpoint and the B+ side of the grid line. A reading of 12 volts indicates the circuit is broken between the midpoint of the grid line and ground.

6. Pinpointing the exact position of the break can be accomplished (if the voltmeter reads 0 volt when the midpoint of the grid line is touched with the positive lead of the voltmeter) by moving the positive lead of the voltmeter toward the B+ side of the grid line and touching the grid line until the voltmeter reads 12 volts. If the voltmeter reads 12 volts when the midpoint of the grid line is touched with the positive lead of the voltmeter, simply move the positive lead of the voltmeter toward the ground connection of the grid line and touch the grid line until the voltmeter reads 0 volt.

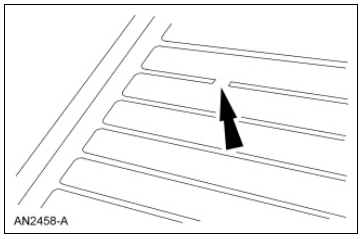
Window Grid Wire Repair

General Equipment

Polypropylene Film Fine Line Tape (Commercially available)

Material

Item	Specification
Motorcraft® Lacquer Touch-Up Paint (match color to exterior grid wire) PMP-19500-XXXXX	ESR-M2P100-C
Permatex® Quick GridTM Rear Window Defogger Repair Kit 15067	-
Motorcraft® Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A



NOTE: The grid line material is not embedded into the glass, but is baked to the glass surface and consequently can be scraped off. An undamaged grid line will have small ridges that project above the surface of the glass and can easily be felt when running a fingernail across them. Grid lines that have been "razor bladed" will feel smooth when a fingernail is dragged across the affected area. Inoperative lines may appear to the eye to be undamaged due to residue remaining on the glass and will require diagnosis with a voltmeter or 12V test lamp. For additional information, refer to Diagnosis and Testing in this section.

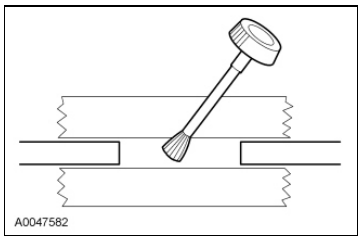
1. Bring the vehicle up to a room temperature of at least 16°C (60°F) or above.

2. ***NOTICE:*** **Do not use scrapers, sharp instruments or abrasive window cleaners on the interior surface of the rear window glass as this may cause damage to the grid lines.**

   Clean the entire grid line repair area with glass cleaner and 0000 steel wool to remove all dirt, wax, grease, oil or other foreign material.

3. Mark the location of the grid break on the exterior of the rear window glass.

4. Using a polypropylene film fine line tape, mask the area directly above and below the grid break extending the tape 26 mm (1.02 in) beyond the concern area in both directions. The break area should



be at the cef the mask.

5. **NOTE:** If the brown layer is not broken or missing, apply only the silver grid repair compound to the break. If both the brown and silver layers of the grid are broken or missing, apply a coating of the lacquer touch up paint across the break in the grid line prior to applying the rear window defroster repair compound. Do not overlap the silver grid line with the paint. Several applications may be necessary to achieve a color match.

   NOTE: Allow at least 5 minutes of drying time between applications for the touch up paint or the silver repair coating. Applying fewer coats or not allowing adequate drying time between coats will produce repaired resistance that is greater than OEM resistance, resulting in poor defrost performance and excessive localized heating.

   Apply the repair coating to the grid break area in several smooth, continuous strokes. Extend the silver repair coating at least 6.35 mm (0.25 in) on both sides of the break area.
   Apply a minimum of 6 applications of the grid repair compound.

6. **NOTE:** The repair coating air-dries in approximately one minute and can be energized after 5 minutes. Optimum adhesion occurs after approximately 24 hours.

   Allow the repair area to dry completely and remove the mask.

7. ***NOTICE:*** **Be careful not to damage the grid line with the razor blade. If this occurs, additional repair may be necessary.**

   Remove any excess repair compound above or below the grid line with a razor blade.

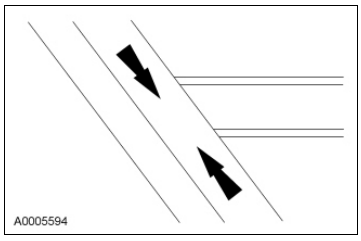
8. **NOTE:** The interior side of the grid lines are not painted, but due to the silver tarnishing will tend to change the grid to a gold or brown color. The repair area will be bright silver and will also tarnish over time to match the rest of the grid.

   Test the system for normal operation.

Lead Terminal Repair

General Equipment

Terminal Kit - Back Glass 4F1Z-14421-AA



Material

Item	Specification
Motorcraft® Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A

1. Bring the vehicle up to room temperature of at least 16°C (60°F) or above.

2. **NOTE:** The new terminal will cover the original terminal location, but it must be placed so that the terminal conductive areas will be placed on a good conductive base.

   Clean the bus bar in the area to be repaired with steel wool (000 to 0000 grade), and then with glass cleaner to remove all dirt, wax, grease, oil or other foreign material.

3. ***NOTICE:*** **Do not use any type of flame torch or flame-heated soldering gun for this procedure. Use of these tools provide inadequate heat generation at the tip and the exhaust heat can cause damage to plastic trim parts in the area. Use only an electric soldering gun with 100 watts or more of power. Before using the soldering gun, be sure to melt a small amount of rosin core solder to the tip. The solder will assist in achieving better heat transfer from the soldering gun tip to the new terminal.**

   NOTE: Depending on the original terminal location, and whether the terminal is covered by pillar trim, will determine where to locate the new terminal. Some grid line bus bars may only allow the placement of the terminal above or below the original tab location due to space limitations. Fst vehicle applications, the replacement tab location will cover the original tab location, but still allow the replacement tab to attach to the bus bar on good conductive material.

   Place the replacement terminal type A over the original tab location, making sure the conductive areas of the terminal will be on a good conductive area. Do not place the terminal tab foot on the original location, which does not have conductive material.

4. Hold the terminal in place with an item such as a regular lead pencil at a 90 degree angle from the terminal. (Holding at other than a 90 degree angle may allow the terminal to slip when the solder

liquefies.)

5. **NOTE:** The new terminal has pre-applied solder, flux and temperature-sensitive paint. The paint provides a visual indication when the terminal has reached the correct temperature to melt solder on the terminal. When the correct temperature is achieved, the temperature paint will liquefy and change color.

   Place the soldering gun tip on the top of the terminal, but not on the painted areas of the tab. Energize the soldering gun and watch for the painted area of the terminal to liquefy and change color. The paint should liquefy in approximately 25-45 seconds after heating. As soon as the paint color completely changes on either side of the terminal, de-energize the soldering gun and continue to hold the terminal in place with the soldering gun and pencil for an additional 30 seconds.

6. Remove the soldering gun and pencil from the terminal. The terminal should be allowed to cool for another 2 minutes before the wiring lead is attached to the terminal.

7. Attach the electrical lead connection to this terminal, turn on the heated rear window and verify the operation.

Window Motor Initialization

NOTE: Initialization is required to learn both the full UP and full DOWN positions of the glass as it travels through the glass channel. Once initialized, obstacle detection is enabled.

NOTE: The front window motor must be de-initialized, then initialized whenever:

- the front window motor is removed from the window regulator drum housing.
- a new window regulator is installed.
- a new window glass is installed.
- a new top run is installed.
- grease or lubricants are applied to the window regulator or glass run.

NOTE: Install and tighten all window components to specification before carrying out the initialization procedure.

NOTE: A new (original factory setting) or de-initialized window motor will not operate in one-touch up mode until initialized. If a new front window motor has been installed, proceed to the initialization procedure.

NOTE: Excessive bounce-back (window reverses direction with no obstructions present) may indicate that a de-initialization procedure may need to be performed.

De-Initialization procedure

1. Turn the ignition key ON.

2. Operate the window control switch in one-touch up mode and remove power from the window motor **while the window is moving** by one of the following methods:
    1. Disconnect the vehicle battery cable **while the window is moving** .
    2. Disconnect the window motor connector **while the window is moving** .
    3. Remove the LH or RH front window motor fuse **while the window is moving** .

3. This will de-initialize the window motor and reset the window motor to its original factory settings.

4. Reconnect the battery cable, window motor connector or window motor fuse before proceeding to the initialization procedure.

Initialization procedure

⚠ WARNING: Keep objects and body parts clear of the glass panel when carrying out the initialization procedure. During the initialization procedure, the glass panel closes with high force and cannot detect objects in its path. Failure to follow this instruction may result in serious personal injury.

NOTE: The front window must be in the full OPEN position for this procedure to operate correctly.

NOTE: If the initialization procedure is only partially completed, the front window motor will remain de-initialized and will not operate in one-touch up mode.

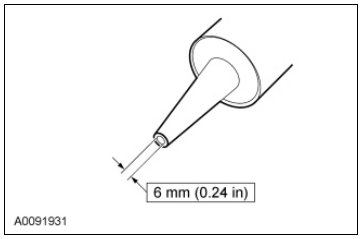
5. Turn the ignition key ON.

6. Press and hold the window control switch until the window glass stalls for 2 seconds into the glass top run and release the switch.

7. Pull and hold the window control switch until the window glass stalls for 2 seconds at the bottom of its travel and release the switch.

8. Test for correct window operation by carrying out the one-touch up feature. If the window does not operate correctly, carefully repeat this procedure.

Glass Reseal - Windshield



Material

Item	Specification
Dow Urethane Adhesive BetasealTM Express	-
Sika Urethane Adhesive Sika Tack ASAP	-
Motorcraft® Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A

1. Remove the cowl panel grille. For additional information, refer to Section 501-02 .
2. Remove the LH and RH A-pillar trim panels. For additional information, refer to Section 501-05 .
3. Remove the LH and RH sun visors.
4. If equipped, remove the overhead console.
5. If equipped, disconnect the automatic-dimming rear view mirror electrical connector.
6. If equipped, disconnect the rain sensor electrical connector.
7. Remove the LH and RH assist handles.
8. Lower the front portion of the headliner and block with a suitable material.

- Clean the edge formed by the existing urethane adhesive and the glass on the inside at the top and sides and outside on the bottom of the windshield with glass cleaner.

10. Cut the urethane adhesive applicator tip to specification.

11. **NOTE:** Use either a high-ratio, electric or battery-operated caulk gun that will apply the urethane adhesive with less effort and a continuous bead.

    NOTE: Make sure there are no gaps in the urethane adhesive bead.

    Apply urethane adhesive over the top of the existing urethane adhesive.

- Apply the urethane adhesive to the top and sides of the windshield from the interior of the vehicle.
- Apply the urethane adhesive to the bottom of the windshield from the exterior of the vehicle.

12. **NOTE:** The urethane adhesive must cure for a minimum of one hour before testing for air or water leaks.

    After the urethane adhesive has cured, check the windshield seal for air or water leaks through the urethane adhesive bead and add urethane adhesive as necessary.

13. Position the front portion of the headliner.

14. Install the LH and RH assist handles.

15. If equipped, connect the rain sensor electrical connector.

16. If equipped, connect the automatic-dimming rear view mirror electrical connector.

17. If equipped, install the overhead console.

18. Install the LH and RH sun visors.

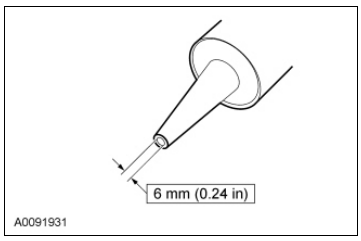
19. Install the LH and RH A-pillar trim panels. For additional information, refer to Section 501-05 .

20. Install the cowl panel grille. For additional information, refer to Section 501-02 .

21. Clean the interior and exterior windshield glass with glass cleaner.

Glass Reseal - Rear

Material



Item	Specification
Dow Urethane Adhesive BetasealTM Express	-
Sika Urethane Adhesive Sika Tack ASAP	-
Motorcraft® Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A

1. Remove the C-pillar trim panel and parcel shelf, and lower the headliner. For additional information, refer to Section 501-05 .

2. Disconnect the rear window glass electrical connectors.

3. Clean the interior and exterior of the windshield glass surface with glass cleaner.

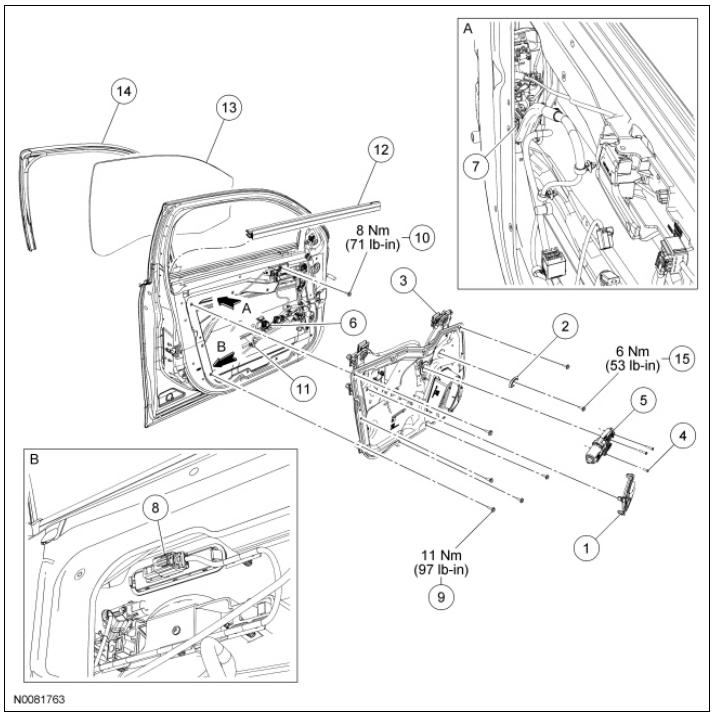
4. Cut the urethane adhesive applicator tip to specification.

5. **NOTE:** Use either a high ratio, electric or battery-operated caulk gun that applies the urethane adhesive with less effort and continuous bead.

   NOTE: Make sure there are no gaps in the urethane adhesive bead.

   Apply the urethane adhesive over the top of the existing uresive.

   - Apply the urethane adhesive to the top and sides of the rear glass from the interior of the vehicle.
   - Apply the urethane adhesive to the bottom of the rear glass from the exterior of the vehicle.



6. **NOTE:** The urethane adhesive must cure for a minimum of one hour before testing for air or water leaks.

   After the urethane adhesive cures, check the rear glass seal for air or water leaks through the urethane adhesive bead and add urethane adhesive as necessary.

7. Connect the rear window glass electrical connectors.

8. Install the headliner, parcel shelf and C-pillar trim panels. For additional information, refer to Section 501-05 .

Glass, Frames and Mechanisms - Exploded View, Front Door

Item	Part Number	Description

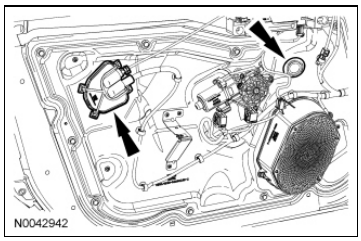
1. For additional information, refer to the procedures in this section.

Window Glass - Front Door

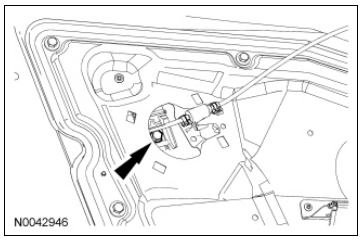


Removal and Installation

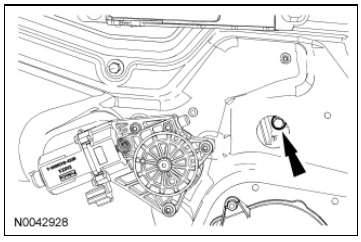
NOTE: All vehicles are equipped with a one-touch up/down feature for the LH front window. All MKZ and some Fusion vehicles are equipped with a one-touch up/down feature for the LH and RH front windows. The LH and RH one-touch up/down functionality is identical.

NOTE: The front window motor must be de-initialized, then initialized whenever the LH front or RH front (if equipped with one-touch up/down functionality) window motor is removed from the window regulator drum housing, a new window regulator is installed, a new window glass is installed, a new top run is installed or for any operation in which grease or lubricants are applied to the window regulator or glass run.

1. Remove the front door trim panel. For additional information, refer to Section 501-05 .



2. Remove the wiring harness cover plate and the access hole plug.



3. **NOTE:** If the window regulator motor is inoperative, remove it. For additional information, refer to Window Regulator Motor in this section.

   Lower the window until the glass clamp bolts can be accessed through the access holes.

4. Loosen the B-pillar front door window glass clamp bolt.
   - To install, tighten to 6 Nm (53 lb-in).

5. Loosen the A-pillar front door window glass clamp bolt.
   - To install, tighten to 6 Nm (53 lb-in).

6. Tape the window in position, then lower the window regulator downward until it reaches the stops at the bottom of the regulator tracks.

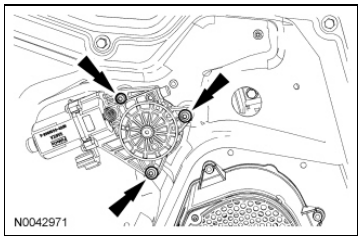
7. Lift the window glass out of the door.

8. To install, reverse the removal procedure.
    - If equipped with one-touch up/down functionality, initialize the window motor. For additional information, refer to Window Motor Initialization in this section.

Window Regulator Motor

Removal and Installation

NOTE: All vehicles are equipped with a one-touch up/down feature for the LH front window. All MKZ and some Fusion vehicles are equipped with a one-touch up/down feature for the LH and RH front windows. The LH and RH one-touch up/down functionality is identical.



NOTE: The front window motor must be de-initialized, then initialized whenever the LH front or RH front (if equipped with one-touch up/down functionality) window motor is removed from the window regulator drum housing, a new window regulator is installed, a new window glass is installed, a new top run is installed or for any operation in which grease or lubricants are applied to the window regulator or glass run.

1. Remove the door trim panel. For additional information, refer to Section 501-05 .

2. Disconnect the window motor electrical connector.

3. Secure the glass in position with tape.

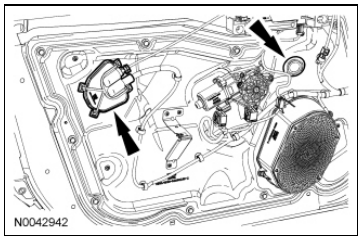
4. Remove the 3 window motor screws.

5. Remove the window motor.

6. To install, reverse the removal procedure.
    - If equipped with one-touch up/down functionality, initialize the window motor. For additional information, refer to Window Motor Initialization in this section.

Window Regulator and Motor - Front Door

Removal and Installation

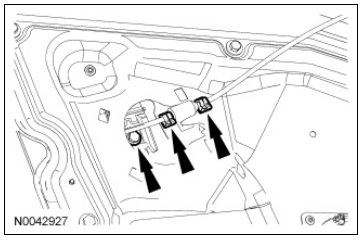


NOTE: All vehicles are equipped with a one-touch up/down feature for the LH front window. All MKZ and some Fusion vehicles are equipped with a one-touch up/down feature for the LH and RH front windows. The LH and RH one-touch up/down functionality is identical.

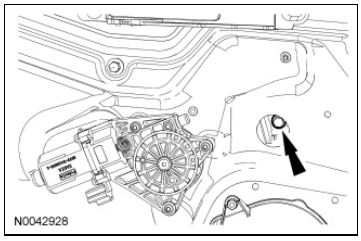
NOTE: The front window motor must be de-initialized, then initialized whenever the LH front or RH front (if equipped with one-touch up/down functionality) window motor is removed from the window regulator drum housing, a new window regulator is installed, a new window glass is installed, a new top run is installed or for any operation in which grease or lubricants are applied to the window regulator or glass run.

1. **NOTE:** If installing the original front window motor (if equipped with one-touch up/down functionality), it must be de-initialized. For additional information, refer to Window Motor Initialization in this section.

   Remove the door trim panel. For additional information, refer to Section 501-05 .



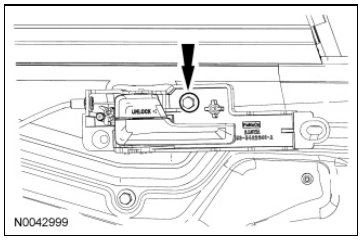
2. Remove the wiring harness cover plate and the access hole plug.



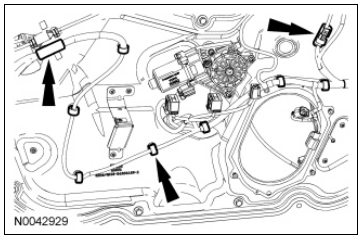
3. **NOTE:** If the window regulator motor is inoperative, remove it. For additional information, refer to Window Regulator Motor in this section.

   Lower the window enough to access the window glass clamp bolts through the access holes.

4. Loosen the B-pillar window glass clamp bolt and disconnect the door latch cable retainers.
   - To install, tighten to 6 Nm (53 lb-in).

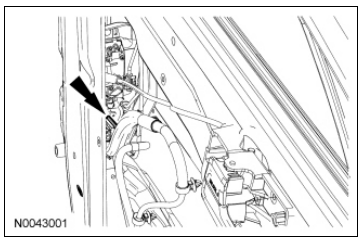


5. Loosen the A-pillar window glass clamp bolt.
   - To install, tighten to 6 Nm (53 lb-in).

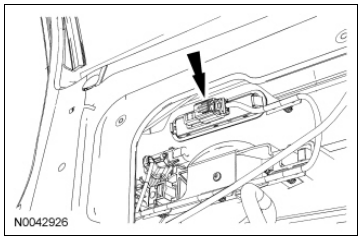


6. Tape the window in position, then lower the window regulator until it is approximately 55 mm (2.165 in) above the bottom of the regulator tracks.

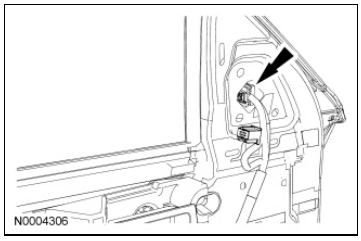
7. Remove the front door speaker. For additional information, refer to Section 415-00 .



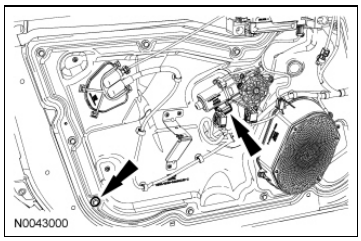
8. Remove the interior door handle bolt and position the door handle aside.



9. Disconnect the wiring harness retainers.



10. Disconnect the door latch electrical connector.



11. If equipped, disconnect the keyless entry keypad and door lock electrical connector and release from the bracket.

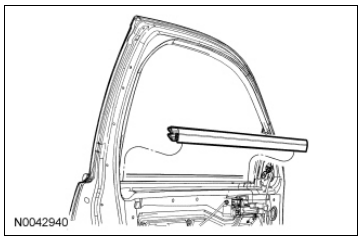
12. If equipped, disconnect the power mirror electrical connector.

13. Remove the 10 door module bolts and the window regulator motor electrical connector.
    - To install, tighten to 11 Nm (97 lb-in).

14. Remove the front door module. If installing a new door module, transfer parts as necessary.

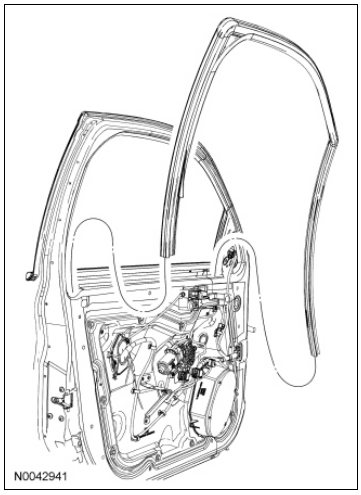
15. To install, reverse the removal procedure.
    - If equipped with one-touch up/down functionality, initialize the window motor. For additional information, refer to Window Motor Initialization in this section.

Door Glass Top Run - Front



Removal and Installation

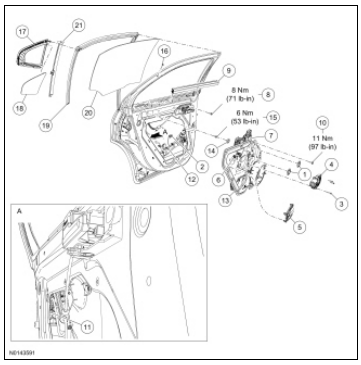
NOTE: All vehicles are equipped with a one-touch up/down feature for the LH front window. All MKZ and some Fusion vehicles are equipped with a one-touch up/down feature for the LH and RH front windows. The LH and RH one-touch up/down functionality is identical.



NOTE: The front window motor must be de-initialized, then initialized whenever the LH front or RH front (if equipped with one-touch up/down functionality) window motor is removed from the window regulator drum housing, a new window regulator is installed, a new window glass is installed, a new top run is installed or for any operation in which grease or lubricants are applied to the window regulator or glass run.

1. Remove the front door window glass. For additional information, refer to Window Glass - Front Door in this section.

2. Remove the front door window glass inner weatherstrip.



3. Remove the front door glass top run.

4. To install, reverse the removal procedure.
    - If equipped with one-touch up/down functionality, initialize the window motor. For additional information, refer to Window Motor Initialization in this section.

Glass, Frames and Mechanisms - Exploded View, Rear Door

Item	Part Number	Description
1	378377	Access hole plugs
2	14489	Electrical connector
3	W505966-S	Screw (3 required)
4	5423395 LH/ 5423394 RH	Window regulator motor
5	5402010	Wiring harness cover plate
6	-	Clip
7	5427001 LH/ 5427000 RH	Window regulator
8	-	Interior door handle bolt

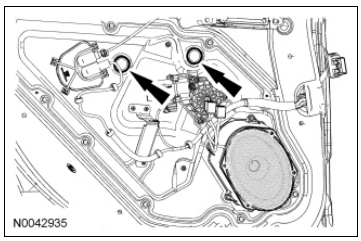
14	W651013-S	Access hole plug
15	W506410-S	Window regulator glass clamp bolt (2 required)
	N811106-S	Upper C-pillar rear glass run bolt
17	5429905 LH/ 5429904 RH	Rear door fixed glass weatherstrip
18	5426871 LH/ 5426870 RH	Rear door fixed glass
19	5425767 LH/ 5425766 RH	Rear door glass top run
20	5425713 LH/ 5425712 RH	Rear door window glass
21	5425796	Rear door quarter glass window guide

1. For additional information, refer to the procedures in this section.

Window Glass - Rear Door

Removal and Installation

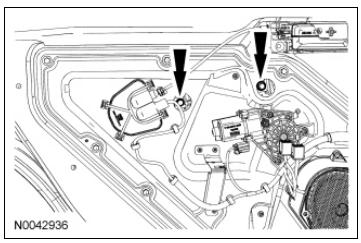


1. Remove the rear door fixed window glass. For additional information, refer to Window Glass - Rear Door, Fixed in this section.
2. Remove the top run.
3. Remove the rear window glass.
4. To install, reverse the removal procedure.

Window Regulator and Motor - Rear Door

Removal and Installation

1. Remove the rear door trim panel. For additional information, refer to Section 501-05 .

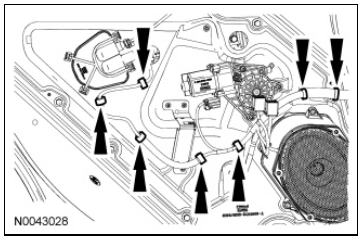


2. Remove the access hole plugs.

3. **NOTE:** If the door window regulator motor is inoperative, remove it. For additional information, refer to Window Regulator Motor in this section.

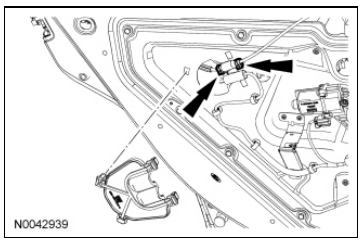
   Lower the window until the glass clamp bolts are accessible through the access hole plugs, then loosen the glass clamp bolts.

   - To install, tighten to 6 Nm (53 lb-in).

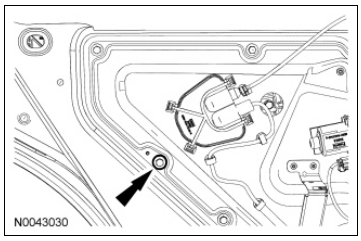


4. Tape the window in position, then lower the window regulator downward until it reaches the stops at the bottom of the regulator tracks.

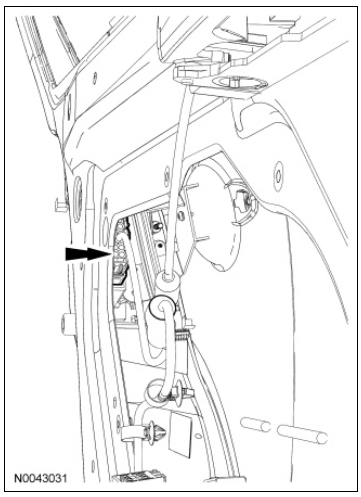
5. Remove the door speaker. For additional information, refer to Section 415-00 .



6. Remove the interior door handle screw and position the door handle aside.



7. Disconnect the wiring harness retainers.



8. Remove the wiring harness cover plate and disconnect the 2 door latch cable retainers.

9. Remove the 10 door module bolts.
    - To install, tighten to 11 Nm (97 lb-in).

10. Disconnect the door latch electrical connector.

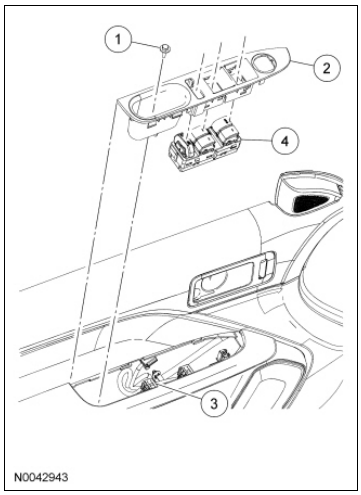
11. Remove the rear door module assembly. If installing a new door module, transfer parts as necessary.

12. To install, reverse the removal procedure.

Door Glass Run and Bracket - Rear

Removal and Installation

1. Remove the rear door fixed window glass. For additional information, refer to Window Glass - Rear Door, Fixed in this section.

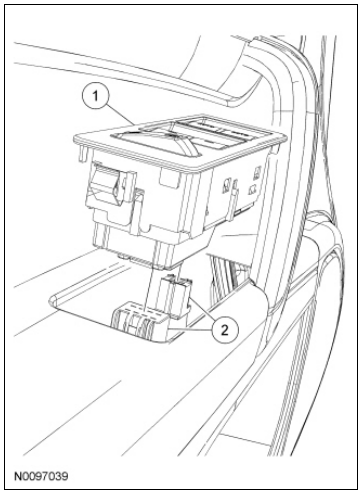


2. Carefully position the glass aside, then remove the rear door glass top run.

3. To install, reverse the removal procedure.

Window Control Switch

Fusion

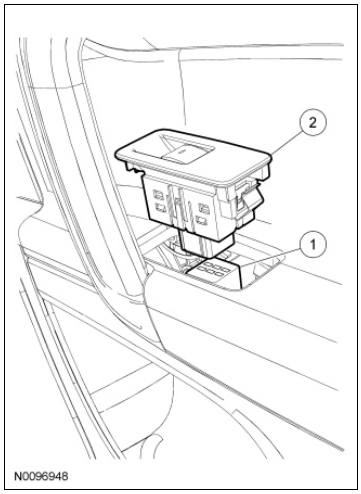


NOTE: LH front shown, all others similar.

Item	Part Number	Description
1	W703268	Screw
2	54266	Window control switch bezel
3	-	Electrical connector (3 required)
4	14529	Window control switch

MKZ - Front Door

NOTE: LH front shown.

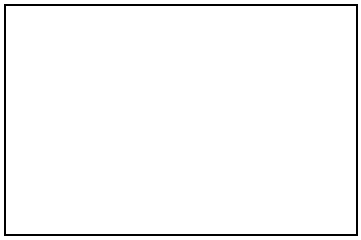


Item	Part Number	Description

1	14529	Window control switch
2	-	Electrical connectors (2 required)

MKZ - Rear Door

NOTE: RH rear shown.



Item	Part Number	Description
1	-	Electrical connector
2	14529	Window control switch

Removal and Installation

Fusion

1. Remove the access cover and the screw.

2. Using an appropriate non-marring trim tool, pry the rear of the switch bezel upward and then shift the switch assembly rearward to disengage the front locking tab.

MKZ

3. **NOTE:** For LH front window control switch assembly only, the rear retaining clip is located off-center towards the outside of the vehicle.

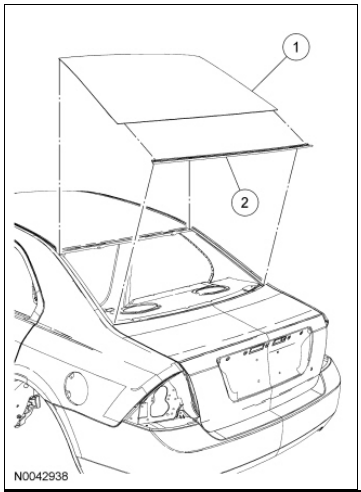
   Using an appropriate non-marring trim tool, pry the rear of the switch bezel upward to disengage the retaining clip, then shift the switch assembly rearward to disengage the front locking tab.

All Vehicles

4. Disconnect the electrical connector(s).

5. Remove the window control switch.

6. To install, reverse the removal procedure.



Window Glass - Rear

Special Tool(s)

 ST1320-A	Deluxe Windshield Removal Tool 164-R2450 or equivalent
 ST2085-A	The Pumper 164-R2459 or equivalent

Material

Item	Specification
Dow Urethane Adhesive BetasealTM Express	-
Dow Urethane One Step Glass Primer BetaprimeTM 5500 / 5500A / 5500SA	-
Sika Urethane Adhesive Sika Tack ASAP	-
Sika Urethane Metal and Glass Primer Sika 206 G+P	-
Motorcraft® Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A

Item	Part Number	Description
1	5442006	Rear window glass
2	-	Moulding

Removal

NOTE: If the rear window glass is being removed to repair a dust/water leak, remove and reinstall the existing rear window glass.

1. Remove the C-pillar trim panel and parcel shelf, and lower the headliner. For additional information, refer to Section 501-05 .

2. Disconnect the 2 rear window defrost electrical connectors.

3. Before cutting the urethane adhesive, remove dirt and other foreign material from the rear window pinchweld area.
   - Use a clean shop towel or oil-free, compressed air.

4. Lubricate the urethane adhesive with water to aid the Deluxe Windshield Removal Tool when cutting.

5. ⚠ **WARNING: Always wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.**

   WARNING: Wear protective gloves when handling components or parts that have pointed or sharp edges. Failure to follow this instruction may result in serious personal injury.

   NOTICE: **To avoid rust formation, use extreme care not to scratch the paint or primer or otherwise damage the pinchweld during glass removal.**

   NOTE: Insert the blade into the Deluxe Windshield Removal Tool so that the flat side is against the glass. This will leave the entire urethane adhesive bead on the pinchweld and allow a dry fit of the replacement rear window glass.

   NOTE: Support the rear window glass to prevent the glass from dropping while cutting the urethane adhesive.

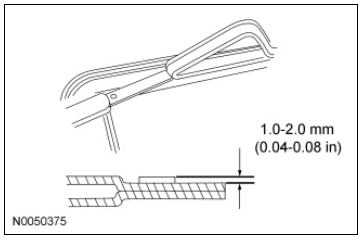
   Insert the Deluxe Windshield Removal Tool at the upper center of the rear window glass and work toward the bottom corners.

6. Using The Pumper, distance the rear window glass from the body.

7. Insert the Deluxe Windshield Removal Tool into the bottom of the urethane adhesive and cut from corner to corner.

8. Carefully remove the rear window glass from the vehicle and place on a stable work surface.

Installation



1. Dry-fit the rear window glass on the existing urethane adhesive bead on the pinch weld.
   - Position the glass on the pinch weld.
   - Center the glass in the opening.
   - Make alignment marks with tape or non-staining grease pencil on the rear window glass and the body.

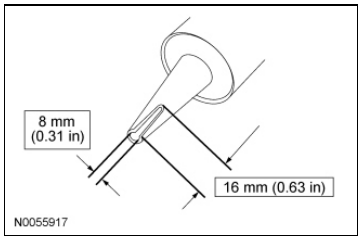
2. After the dry-fit alignment, remove the glass from the body opening and place on a stable work surface with the interior side of the glass facing upward.

3. ⚠ **WARNING: Repair any corrosion found on the pinch weld. The pinch weld is a structural component of the vehicle. Corrosion left unrepaired may reduce the structural integrity of the vehicle. Failure to follow this instruction may result in serious injury to vehicle occupant(s).**

   NOTE: Avoid scratching the pinch weld. Repair all minor scratches or exposed metal on the pinch weld following manufacturer's instructions. Use the same brand pinch weld primer, glass primer and urethane adhesive.

   Using an appropriate tool, trim the urethane adhesive leaving a 1-2 mm (0.04-0.08 in) base of original equipment urethane adhesive on the pinchweld.

4. Using a clean shop towel, brush or oil-free, compressed air, clean the pinch weld area around the existing urethane adhesive. Remove any foreign material or water that may have entered during glass removal.

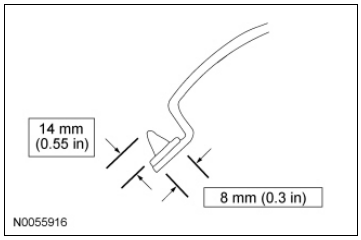


5. If reinstalling the same rear window glass, remove the remaining urethane adhesive from the glass leaving a thin layer to bond with the new urethane adhesive bead.

6. Clean the inside of the new rear window glass surface with glass cleaner.

7. **NOTE:** Be sure to use the same brand and cure-rate products for the urethane adhesive and glass primer. Do not mix different brands of urethane adhesive and glass primer. Refer to the Material Chart in this procedure.

   If installing a new rear window glass, apply glass primer according to manufacturer's instructions. Allow at least 6 minutes to dry.



8. Cut the urethane adhesive applicator tip to specification.

9. **NOTE:** Use either a high-ratio, electric or battery-operated caulk gun that will apply the urethane adhesive with less effort and continuous bead.

   NOTE: The rear window glass must be positioned within 10 minutes of applying the urethane adhesive.

   Apply urethane adhesive on top of the existing trimmed urethane adhesive bead on the pinch weld, starting and ending at the bottom of the rear window glass near the center, making sure there are no gaps in the bead.

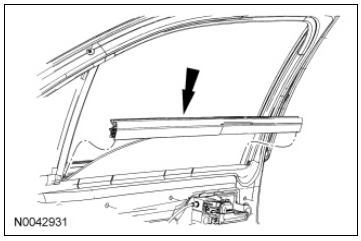
10. **WARNING: Do not drive vehicle until the urethane adhesive seal has cured. Follow urethane adhesive manufacturer's curing directions. Inadequate or incorrect curing of the urethane adhesive seal will adversely affect glass retention. Failure to follow these instructions may result in serious injury to vehicle occupant(s).**

    NOTICE: **Before positioning the rear window glass, open vehicle windows to prevent the air pressure of closing doors from affecting the urethane adhesive bond.**

    Using the alignment marks made previously, position the rear window glass on the pinch weld.

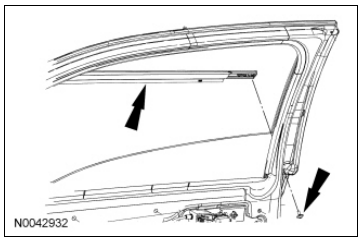
11. **NOTE:** The urethane adhesive must cure for a minimum of one hour before testing for air or water leaks.

    After the urethane adhesive has cured, check the rear window glass seal for air or water leaks through the urethane adhesive bead and add urethane adhesive as necessary.



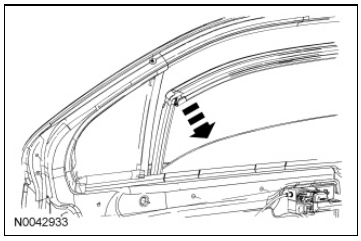
12. Install the headliner, parcel shelf and C-pillar trim panels. For additional information, refer to Section 501-05 .

13. Connect the LH and RH heated rear window electrical connector.

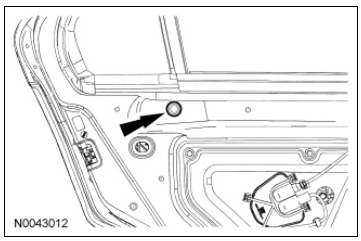


Window Glass - Rear Door, Fixed

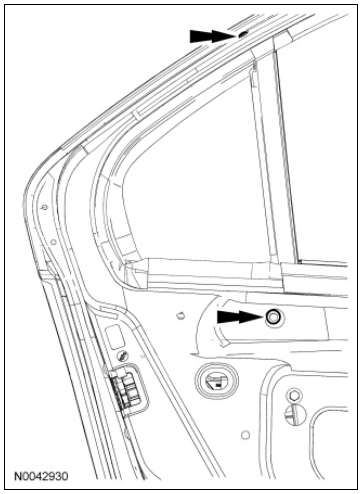
Removal and Installation



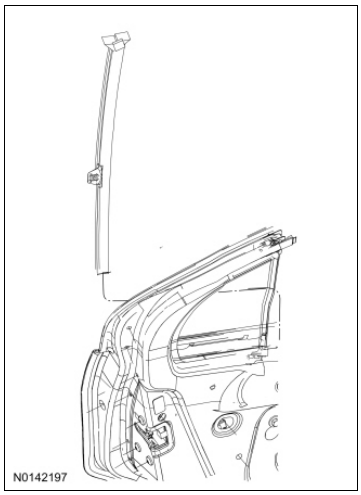
1. Lower the rear window.
2. Remove the rear door inner trim panel. Refer to Section 501-05 .
3. Remove the inner beltline weatherstrip.



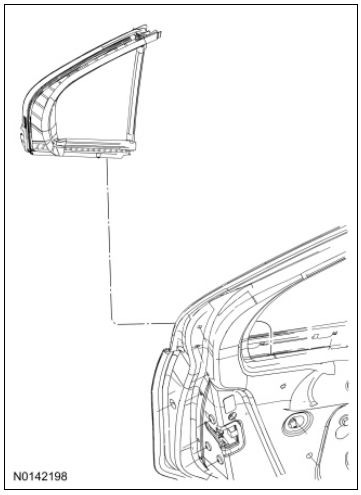
4. Remove the screw and the outer beltline weatherstrip.



5. Position the rear window glass run aside.



6. Remove the access hole plug.

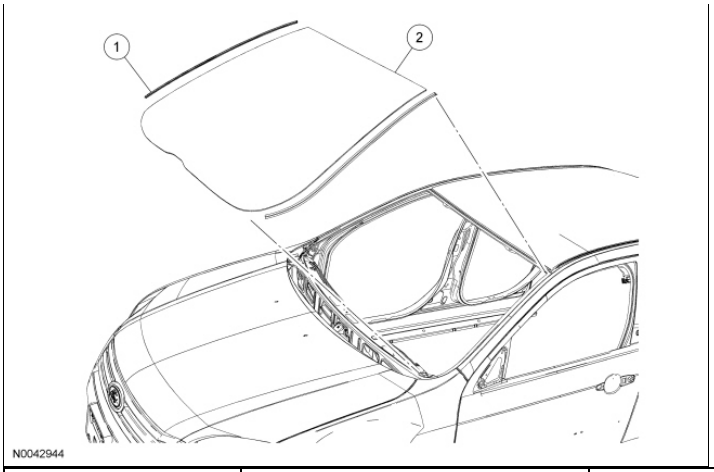


7. Remove the rear quarter glass window guide bolt and screw.

8. Remove the rear quarter glass window guide.

9. Remove the rear door fixed window glass.

10. To install, reverse the removal procedure.



Windshield Glass

Special Tool(s)

 ST1320-A	Deluxe Windshield Removal Tool 164-R2450 or equivalent
 ST2085-A	The Pumper 164-R2459 or equivalent

Material

Item	Specification
Dow Urethane Adhesive BetasealTM Express	-
Dow Urethane One Step Glass Primer BetaprimeTM 5500 / 5500A / 5500SA	-
Sika Urethane Adhesive Sika Tack ASAP	-

Motorcraft® Ultra-Clear Spray Glass Cleaner ZC-23	ESR-M14P5-A

Item	Part Number	Description
1	-	Moulding
2	5403100	Windshield

Removal

NOTE: If the windshield glass is being removed to repair a dust/water leak, remove and reinstall the existing windshield glass.

1. Remove the A-pillar trim panels. For additional information, refer to Section 501-05 .

2. Remove the sun visors.

3. Remove the interior mirror. For additional information, refer to Section 501-09 .

4. If equipped, remove the rain sensor. For additional information, refer to Section 501-16 .

5. Partially lower the front portion of the headliner near the windshield header and block with suitable material. For additional information, refer to Section 501-05 .

6. Remove the cowl panel grille. For additional information, refer to Section 501-02 .

7. Before cutting the urethane adhesive, remove dirt and other foreign material from the windshield pinchweld area.
   - Use a clean shop towel or oil-free, compressed air.

8. **NOTE:** Refer to manufacturer's instructions before using the Deluxe Windshield Removal Tool.

   Lubricate the urethane adhesive with water to aid the Deluxe Windshield Removal Tool when cutting.

9. ⚠ **WARNING: Always wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.**

   ⚠ **WARNING: Wear protective gloves when handling components or parts that have pointed or sharp edges. Failure to follow this instruction may result in serious personal injury.**

   NOTICE: **To avoid rust formation, use extreme care not to scratch the paint or primer or otherwise damage the pinchweld during glass removal.**

   NOTE: Insert the blade into the Deluxe Windshield Removal Tool so that the flat side is against the glass. This will leave the entire urethane adhesive bead on the pinchweld and allow a dry fit of the replacement windshield glass.

   NOTE: Support the windshield glass to prevent the glass from dropping while cutting the urethane adhesive.

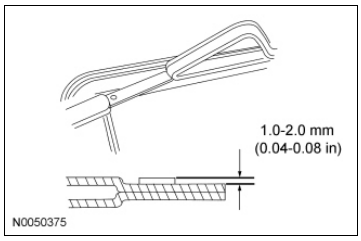
   Insert the Deluxe Windshield Removal Tool at the upper center of the windshield glass and work toward the bottom corners.

10. Using The Pumper, distance the windshield glass from the body.

11. Insert the Deluxe Windshield Removal Tool into the bottom of the urethane adhesive and cut from corner to corner.

12. Carefully remove the windshield glass from the vehicle and place on a stable work surface.

Installation



1. Dry-fit the windshield glass on the existing urethane adhesive bead on the pinch weld.
    - Position the windshield glass on the pinch weld.
    - Center the glass in the opening.
    - Adjust the windshield glass stop blocks (if equipped) as needed for best fit.
    - Make alignment marks with tape or non-staining grease pencil (preferably at the windshield glass stop blocks) on the windshield glass and the body.

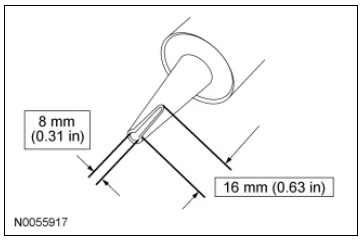
2. After the dry-fit alignment, remove the glass from the body opening and place on a stable work surface with the interior side of the glass facing upward.

3. ⚠ **WARNING: Repair any corrosion found on the pinch weld. The pinch weld is a structural component of the vehicle. Corrosion left unrepaired may reduce the structural integrity of the vehicle. Failure to follow this instruction may result in serious injury to vehicle occupant(s).**

   NOTE: Avoid scratching the pinch weld. Repair all minor scratches or exposed metal on the pinch weld following manufacturer's instructions. Use the same brand pinch weld primer, glass primer and urethane adhesive.

   Using an appropriate tool, trim the urethane adhesive leaving a 1-2 mm (0.04-0.08 in) base of original equipment urethane adhesive on the pinchweld.

4. Using a clean shop towel, brush or oil-free, compressed air, clean the pinch weld area around the existing urethane adhesive. Remove any foreign material or water that may have entered during glass removal.

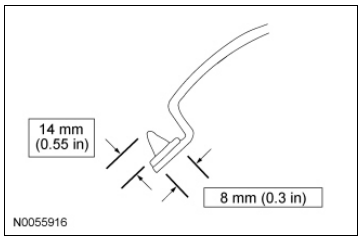


5. If reinstalling the same windshield glass, remove the remaining urethane adhesive from the glass leaving a thin layer to bond with the new urethane adhesive bead.

6. Clean the inside of the windshield glass surface with glass cleaner.
    - Make sure to thoroughly clean the surface of the blackened border area where the urethane adhesive will be applied.

7. **NOTE:** Be sure to use the same brand and cure-rate products for the urethane adhesive and glass primer. Do not mix different brands of urethane adhesive and glass primer. Refer to the Material Chart in this procedure.

   If installing a new windshield glass, apply glass primer according to manufacturer's instructions. Allow at least 6 minutes to dry.



8. Cut the urethane adhesive applicator tip to specification.

9. **NOTE:** Use either a high-ratio, electric or battery-operated caulk gun that will apply the urethane adhesive with less effort and continuous bead.

   NOTE: The windshield glass must be positioned within 10 minutes of applying the urethane adhesive.

   Apply a uniform bead of urethane adhesive on top of the existing trimmed urethane adhesive bead on the pinch weld, starting and ending at the bottom of the windshield glass near the center, making sure there are no gaps in the bead.

10. ⚠ **WARNING: Do not drive vehicle until the urethane adhesive seal has cured. Follow urethane adhesive manufacturer's curing directions. Inadequate or incorrect curing of the urethane adhesive seal will adversely affect glass retention. Failure to follow these instructions may result in serious injury to vehicle occupant(s).**

    NOTICE: **Before positioning the windshield glass, open vehicle windows to prevent the air pressure of closing doors from affecting the urethane adhesive bond.**

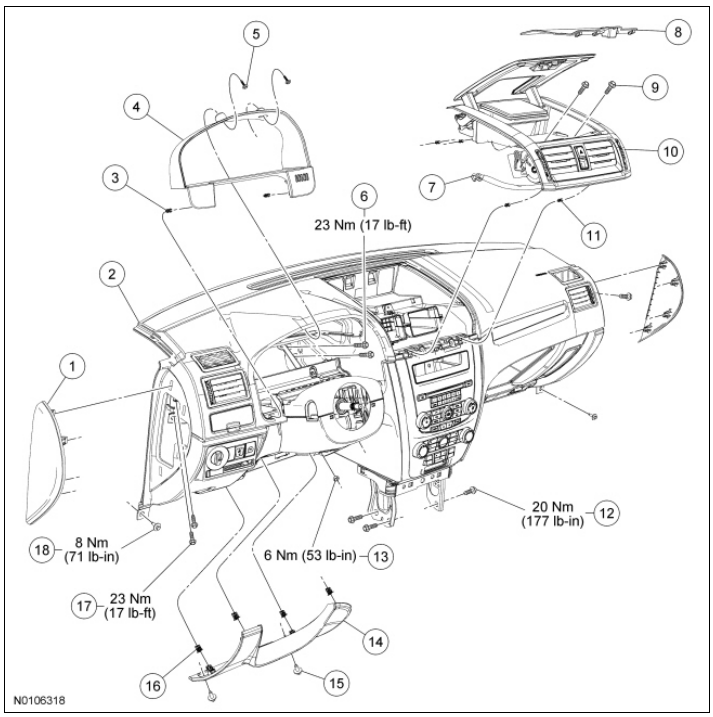
    Using the alignment marks made previously, position the windshield glass on the pinch weld.

11. **NOTE:** The urethane adhesive must cure for a minimum of one hour before testing for air or water leaks.

    After the urethane adhesive has cured, check the windshield glass seal for air or water leaks through the urethane adhesive bead and add urethane adhesive as necessary.

12. Install the cowl panel grille. For additional information, refer to Section 501-02 .

13. Install the headliner. For additional information, refer to Section 501-05 .



14. If equipped, install the rain sensor. For additional information, refer to Section 501-16 .
15. Install the interior mirror. For additional information, refer to Section 501-09 .
16. Install the sun visors.
17. Install the A-pillar trim panels. For additional information, refer to Section 501-05 .

Torque Specifications

Description	Nm	lb-ft	lb-in
Center instrument panel finish panel screws	3	-	27
Glove compartment dampener screws	2	-	18
Hood release handle screws	3	-	27

Glove Compartment

Item	Part Number	Description
060T10	Glove compartment	
2	-	Glove compartment damper clip (part of 06102)
3	06010	Glove compartment mini-bin (Fusion only)
4	N804693	Glove compartment damper screw (2 required)
5	06102	Glove compartment damper

1. For additional information, refer to the procedures in this section.

Instrument Panel

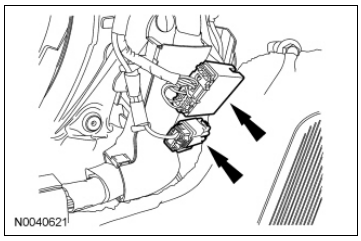
Removal and Installation

1. Remove the steering wheel. For additional information, refer to Section 211-04 .

2. Remove the floor console. For additional information, refer to Console - Floor, Fusion or Console - Floor, MKZ in this section.

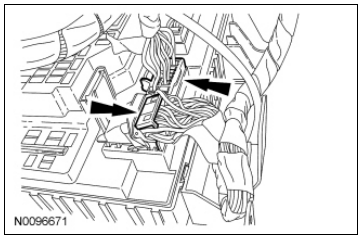
3. Remove the selector lever or the gearshift lever. For additional information, refer to Section 307-05A or Section 307-05B .

4. Remove the LH and RH instrument panel side finish panels.
   - Pull the sides of the instrument panel side finish panels away from the instrument panel to release the retaining tabs.



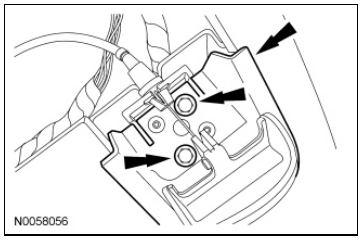
5. Remove the LH and RH weatherstrips from the front door openings near the instrument panel.

6. Remove the LH and RH A-pillar trim panels. For additional information, refer to Section 501-05 .

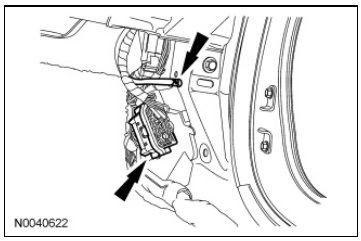


Remove the LH and RH lower cowl panels. For additional information, refer to Interior Trim - Exploded View in Section 501-05 .

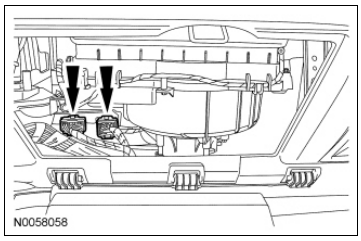
8. If equipped, remove the RH lower instrument panel insulator.



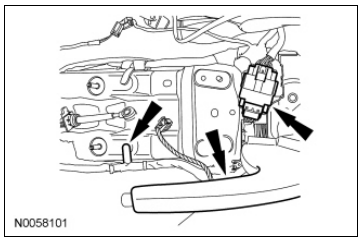
9. Disconnect the 2 electrical connectors located at the LH lower cowl.



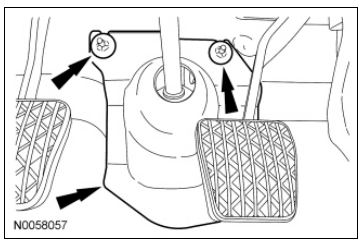
10. Disconnect the small gray and the black electrical connectors from the Smart Junction Box (SJB).



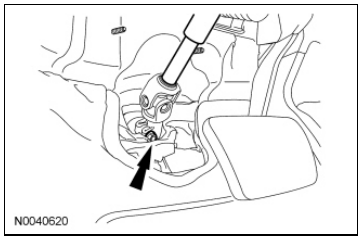
11. Remove the 2 screws and position the hood release handle aside.



12. Disconnect the bulkhead electrical connector and the antenna cable located at the RH lor cowl. If equipped, disconnect the satellite antenna.

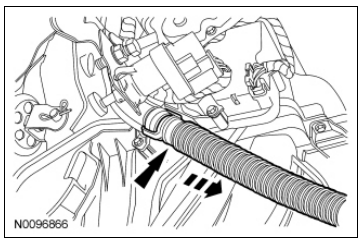


13. Fully lower the glove compartment door and disconnect the 2 A/C electrical connectors.



14. Disconnect the electrical connector and the 2 wire harness retainers located on the floor between the front seats.

15. Remove the 2 nuts and position the steering column pinch bolt cover aside.



16. Remove and discard the steering column shaft bolt.
    - To install, use a new steering column shaft bolt and tighten to 20 Nm (177 lb-in).

17. **NOTE:** Index-mark the steering column shaft position to the steering gear for reference during installation.

    Detach the upper steering column shaft from the steering column.

18. Disconnect the in-vehicle temperature sensor aspirator hose from the heater core and evaporator core housing, if equipped, in the following sequence.
    1. Separate the aspirator hose retaining clips away from the heater core and evaporator core housing.
    2. Pull the aspirator hose away from the heater core and evaporator core housing.

19. Remove the Instrument Cluster (IC). For additional information, refer to Section 413-01 .

20. Through the IC opening, remove the 2 IC opening bolts.
    - To install, tighten to 23 Nm (17 lb-ft).

21. Remove the 3 instrument panel center support bolts.
    - To install, tighten to 20 Nm (177 lb-in).

22. Remove the LH and RH instrument panel lower bolts from the outer sides of the instrument panel.
    - To install, tighten to 8 Nm (71 lb-in).

23. ***NOTICE:*** **To avoid damaging the instrument panel, the aid of an assistant is required to carry out this step.**

    NOTICE: **Make sure that all electrical connectors and wiring are not hindered before removing the instrument panel or damage to the components may occur.**

    Remove the instrument panel.

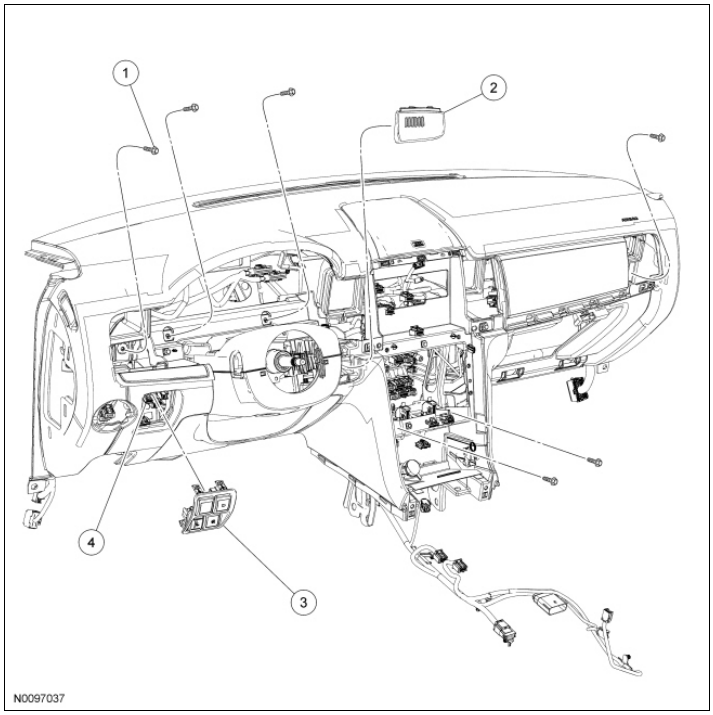
    - Through the instrument panel side finish panel openings, remove the 3 instrument panel side bolts.
    - To install, tighten to 23 Nm (17 lb-ft).

24. ***NOTICE:*** **To avoid damaging the instrument panel, the aid of an assistant is required when positioning the instrument panel to the vehicle.**

    NOTICE: **Make sure that all electrical connectors and wiring are correctly routed when installing the instrument panel or damage to the components may occur.**

To install, reverse the removal procedure.

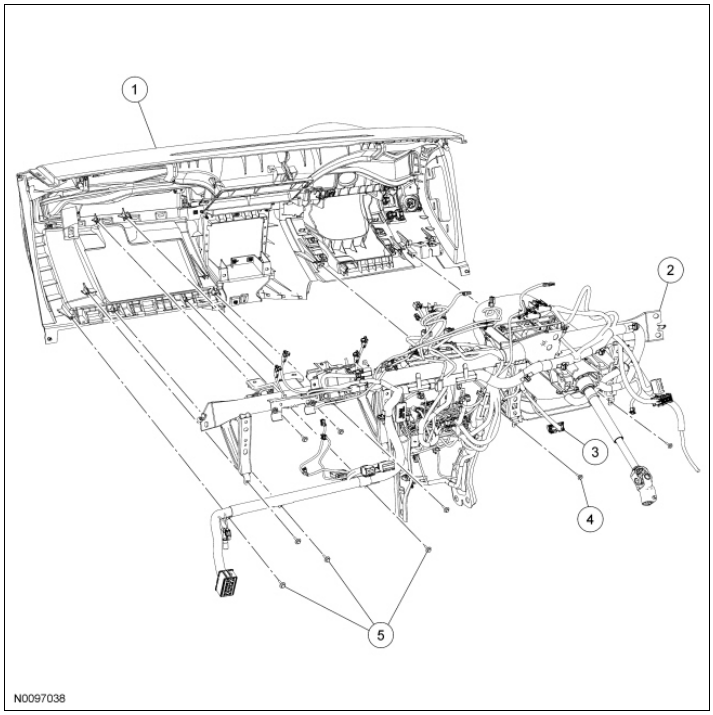
Instrument Panel Upper Section



Removal and Installation

Fusion - Front View

Item	Part Number	Description
1	W505253	Instrument panel front screw (3 required)
2	14401	Center instrument panel finish panel electrical connector(s)
3	-	Center instrument panel finish panel retaining clip (part of 011201) (6 required)
4	011201	Center instrument panel finish panel
5	W707628	Center instrument panel finish panel screw (2 required)
6	W505253	LH duct support screw



MKZ - Front View

Item	Part Number	Description
1	W505253	Instrument panel front screw (6 required)
2	046A76	In-vehicle temperature sensor
3	04338	LH switch assembly
14401	LH switch assembly electrical connector	

Rear View

NOTE: MKZ shown, Fusion similar.

Item	Part Number	Description
1	04320	Instrument panel upper section
2	04545	In-vehicle cross beam
3	14401	Data Link Connector (DLC)
4	W707607	Instrument panel rear screw (6 required)
5	W707607	Wire harness screws (3 required)

All vehicles

1. Remove the center instrument panel finish panel. For additional information, refer to Instrument Panel Finish Panel - Center in this section.

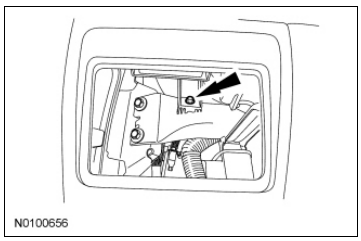
2. ***NOTICE:*** **To avoid damaging the in-vehicle cross beam or the instrument panel upper section, spread a suitable covering over the bench on which to place the instrument panel when removed from the vehicle.**

   NOTE: Place the instrument panel on the bench upside-down.

   Remove the instrument panel. For additional infortion, refer to Instrument Panel in this section.

3. Remove the passenger air bag. For additional information, refer to Section 501-20B .

4. Remove the audio unit. For additional information, refer to Section 415-00 .



5. Remove the Front Display Interface Module (FDIM), if equipped. For additional information, refer to Section 415-00 .

6. Disconnect the Data Link Connector (DLC) from the lower LH instrument panel.
   - Press the retainer clip toward the center of the connector and push the connector towards the back of the instrument panel.

7. Remove the headlamp switch. For additional information, refer to Section 417-01 .

Fusion

8. Through the headlamp switch opening, remove the LH duct support screw.

9. Through the Instrument Cluster (IC) opening, remove the 2 instrument panel front screws.
10. Remove the HVAC module, if equipped. For additional information, refer to Section 412-01 .
11. Through the audio unit opening, remove the instrument panel front screw.

MKZ

12. Remove LH switch assembly in the following sequence.
    1. Press the 4 switch retainer clips toward the center of the switch and push the switch forward toward the front of the instrument panel upper section.
    2. Disconnect the electrical connectors and remove the switch assembly.
13. Remove the RH register. For additional information, refer to Section 412-01 .
14. Through the LH and RH register openings, remove the 2 instrument panel front screws.
15. Through the IC opening, remove the 2 instrument panel front screws.
16. Through the audio unit opening, remove the 2 instrument panel front screws.
17. Remove the in-vehicle temperature sensor. For additional information, refer to Section 412-01 .

All vehicles

18. Remove the 6 instrument panel rear screws.
19. Remove the 3 wire harness screws from the rear of the instrument panel upper section and disconnect wire harness retainers as necessary.
20. **NOTE:** Position the instrument panel upper section away from the in-vehicle cross beam to access the instrument panel speaker electrical connector.

    If equipped, disconnect the instrument panel speaker.
21. ***NOTICE:*** **To avoid damaging the instrument panel upper section, the aid of an assistant is required to carry out this step.**

    Remove the in-vehicle cross beam from the instrument panel upper section.
22. To install, reverse the removal procedure.
    - Transfer parts from the instrument panel upper section as necessary.

Instrument Cluster Finish Panel - Fusion

Removal and Installation

1. Remove the 2 instrument cluster finish panel screws.

2. Remove the instrument cluster finish panel.
   - Pull the instrument cluster finish panel toward the rear of the vehicle to release the retaining clips.
   - Detach the in-vehicle temperature sensor, if equipped.

3. To install, reverse the removal procedure.

Instrument Cluster Finish Panel - MKZ

Removal and Installation

1. Release the 2 instrument cluster finish panel screws covers and remove the 2 instrument cluster finish panel screws.

2. Remove the steering wheel. For additional information, refer to Section 211-04 .

3. Remove the multifunction switch. For additional information, refer to Section 211-05 .

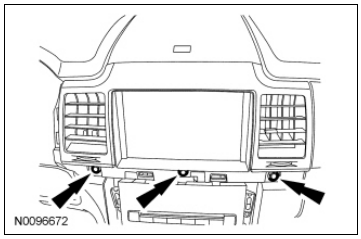
4. Remove the LH instrument panel finish panel.
   - Pull the LH instrument panel finish panel toward the rear of the vehicle to release the retaining clips.

5. Remove the instrument cluster finish panel.
   - Pull the instrument cluster finish panel toward the rear of the vehicle to release the retaining clips.

6. To install, reverse the removal procedure.
   - If replacing the instrument cluster finish panel, remove the 2 register screws and transfer the register.
   - Make sure to align the LH instrument panel finish panel retaining clips to the retaining clip holes in the instrument panel.

Instrument Panel Finish Panel - Center

Removal and Installation



MKZ

1. Remove the instrument cluster finish panel. For additional information, refer to Instrument Cluster Finish Panel - MKZ in this section.

2. Remove the instrument panel finish moulding in the following sequence.
    1. Remove the 4 instrument panel finish moulding screws.
    2. Pull the instrument panel finish moulding toward the rear of the vehicle to release the retaining clips.

3. **NOTE:** Center instrument panel finish panel with navigation shown, center instrument panel finish panel without navigation similar.

   Remove the 3 center instrument panel finish panel screws.

4. Remove the center instrument panel finish panel.
    - Pull the center instrument panel finish panel toward the rear of the vehicle to release the retaining clips.

Fusion

NOTICE: **When prying on a component, a non-marring tool must be used or damage to the component may occur.**

5. Pull the parking brake handle upward.

6. If equipped with anatic transmission, place the selector lever in the NEUTRAL position and remove the selector lever trim ring.
    - Using a non-marring tool, pry upward to release the retaining clips.

7. Remove the floor console finish panel in the following sequence.
    1. Using a non-marring tool, pry upward to release the retaining clips.
    2. Disconnect the electrical connectors, if equipped.

8. Remove the utility tray in the following sequence.
    1. Using a non-marring tool, pry upward to release the retaining clips.
    2. Disconnect the electrical connector.
    3. Disconnect the audio jack connector, if equipped.

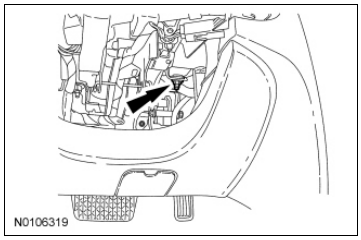
9. Remove the upper storage compartment. For additional information, refer to Storage Compartment - Upper in this section.

10. Remove the 2 center instrument panel finish panel screws.

11. Remove the center instrument panel finish panel.
    - Pull the center instrument panel finish panel toward the rear of the vehicle to release the retaining clips.
    - Disconnect the electrical connector(s).

All vehicles

12. To install, reverse the removal procedure.



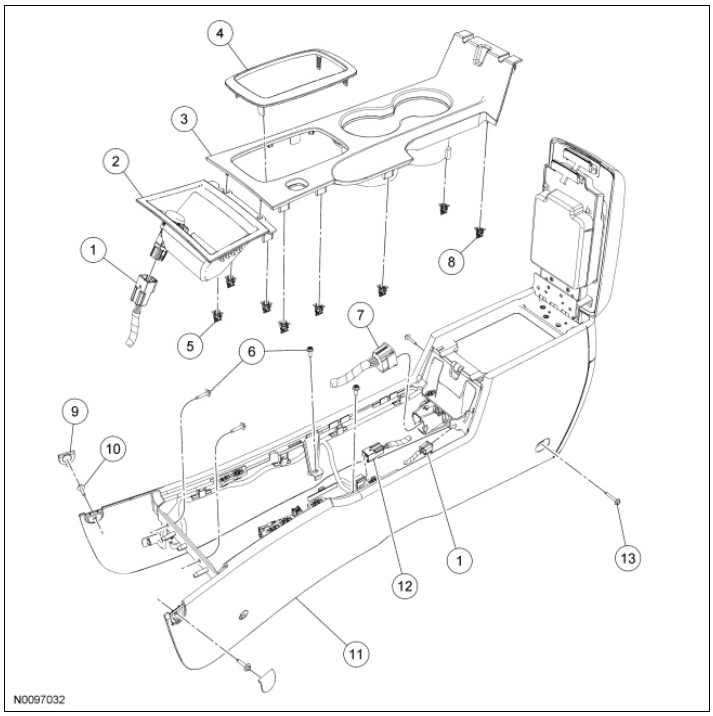
Storage Compartment - Upper

Removal and Installation

1. **NOTE:** Steering column shroud removed to show clarity.

   Remove the upper storage compartment tether nut.

   - To install, tighten to 6 Nm (53 lb-in).



2. Remove the upper storage compartment mat and the 2 upper storage compartment screws.

3. Remove the upper storage compartment in the following sequence.
   1. Pull the upper storage compartment toward the rear of the vehicle to release the 5 retaining clips.
   2. Disconnect the electrical connector, if equipped.

4. To install, reverse the removal procedure.

Console - Floor, Fusion

Item	Part Number	Description
1	14401	Power point connectors
2	-	Utility tray (part of 011202)
3	045A76	Floor console finish panel
4	061A16	Selector lever trim ring
5	-	Utility tray retaining clip (part of 045A76) (2 required)
6	W709955	Floor console screws (4 required)
7	14401	Bulkhead electrical connector
8	-	Floor console finish panel retaining clip (part of 045A76) (6 required)
9	672A40	Floor console screw cover (2 required)
10	W711401	Floor console front screw (2 required)
11	011202	Floor console
12	14401	Ambient light electrical connector
13	W711401	Floor console rear screw (2 required)

Removal and Installation

NOTICE: **When prying on a component, a non-marring tool must be used or damage to the component may occur.**

2. Position the front seats rearward.

3. Pull the parking brake handle upward.

4. If equipped with an automatic transmission, remove the selector lever trim ring.
    - Using a non-marring tool, pry upward to release the retaining clips.

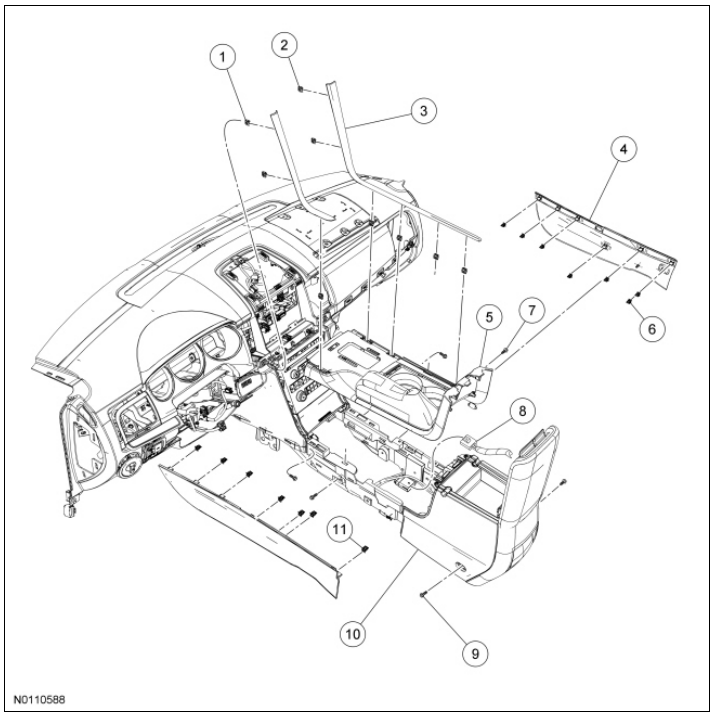
5. If equipped with a manual transmission, remove the gearshift knob by turning in a counterclockwise direction.

6. Open the storage compartment door and remove the floor console finish panel.
    - Using a non-marring tool, pry upward to release the retaining clips.
    - Disconnect the electrical connectors, if equipped.

7. Remove the utility tray.
    - Using a non-marring tool, pry upward to release the retaining clips.
    - Disconnect the electrical connector.
    - Disconnect the audio jack connector, if equipped.

8. Remove the 2 floor console screw covers.

9. Remove the 2 floor console front screws.



10. Disconnect the power point and bulkhead electrical connectors. Detach the electrical connector pin-type retainer.

11. ***NOTICE:*** **To prevent damage to the instrument panel, place the selector lever in NEUTRAL and pull the console towards the rear of the vehicle when removing the console.**

    Remove the 4 floor console screws, place the selector lever in NEUTRAL, pull the console towards the rear of the vehicle and remove the floor console.

12. To install, reverse the removal procedure.

Console - Floor, MKZ

Item	Part Number	Description
1	-	LH floor console finish moulding retaining clip (part of 061A16) (3 required)
2	-	RH floor console finish moulding retaining clip (part of 061A16) (6 required)
3	061A16	Floor console finish moulding
4	1181081	Floor console lower trim panel
5	045A76	Floor console finish panel
6	-	RH floor console lower trim panel retaining clip (part of 1181081) (7 required)
7	W709955	Floor console front screw (4 required)
8	14401	Bulkhead electrical connector
9	W711401	Floor console rear screw (2 required)
10	04620	Floor console
11	-	LH floor console lower trim panel retaining clip (part of 1181081) (7 required)

Removal and Installation

1. Apply the parking brake.

2. Place the selector lever in the NEUTRAL position.

3. Position the front seats to the full rearward and downwa.

4. Pull the middle and rear of the LH and RH floor console lower trim panels outward to release the retaining clips.

5. ***NOTICE:*** **Damage to the floor console upper trim panels may occur if cardboard is not used to remove the floor console lower trim panels.**

   Position a piece of cardboard between the LH and RH floor console lower trim panels and the floor console.

6. Remove the LH floor console lower trim panel and cardboard simultaneously.

7. Remove the RH floor console lower trim panel and cardboard simultaneously.

8. Position the front seats forward.

9. Remove the 2 floor console rear screws.

10. Position the front seats rearward.

11. Open the storage compartment lid, remove the LH and RH floor console finish mouldings.
    - Lift upward on the floor console finish mouldings to release the retaining clips.

12. Remove the selector lever knob. For additional information, refer to Section 307-05A .

13. ***NOTICE:*** **Use a non-marring tool to pry on the component. Failure to will cause damage to the component.**

    Remove the floor console finish panel in the following sequence:

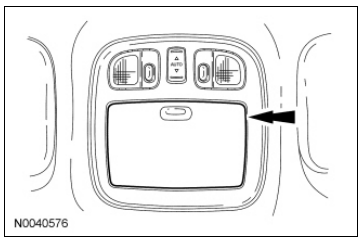
    1. With a non-marring tool, pry upward on the right rear portion of the floor console finish panel to release the 2 retaining clips.
    2. With a non-marring tool, pry upward on the front sides of the floor console finish panel to release the 4 retaining clips.
    3. If equipped, disconnect the electrical connectors.
    4. Slide the park brake handle boot away from the park brake handle.

14. Remove the 4 floor console front screws.

15. Disconnect the floor console bulkhead and front in-line electrical connectors.

16. Disconnect the floor console power point connector and detach the 2 wire harness pin-type retainers.

17. Remove the floor console.



18. To install, reverse the removal procedure.

Console - Overhead

Removal and Installation

NOTE: Fusion shown, MKZ similar.

1. Open the overhead console compartment door.

2. From inside the compartment, remove the 2 screws.

3. Remove the overhead console.
   - Disconnect the electrical connectors.

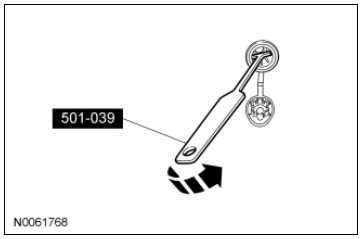
4. To install, reverse the removal procedure.

Power Point

Special Tool(s)

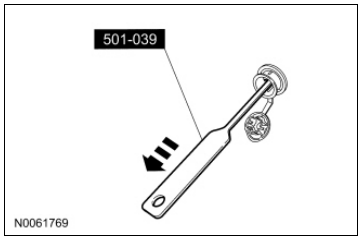
 ST3024-A	Remover, Power Point Socket 501-039 or equivalent

Removal



NOTE: Power point cover may differ depending on location.

1. Open the power point cover.



2. Install the Power Point Socket Remover in one of the power point socket slots.

3. Position the Power Point Socket Remover so that it engages in the adjacent slot.

4. Using the Power Point Socket Remover, pull the power point socket out of the retainer.

5. Disconnect the electrical connector.

Installation

1. Connect the electrical connector.

2. Slide the power point socket into the retainer.

Material

Item	Specification	Fill Capacity
Multi-Purpose Grease XG-4 and/or XL-5	ESB-M1C93-B	-
Penetrating and Lock Lubricant (US); Penetrating Fluid (Canada) XL-1 (US); CXC-51-A (Canada)	-	-

Torque Specifications

Description	Nm	lb-ft	lb-in
Door latch bolts	8	-	71
Door latch striker bolts	25	18	-
Exterior door handle reinforcement bolt	6	53	-
Hood latch bolts	12	-	106
Hood latch striker bolts	12	-	106
Interior door handle bolt	11	-	97
Luggage compartment lid latch nuts	9	-	80
Luggage compartment lid striker bolts	12	- 106	
Secondary hood latch release handle bolt	12	-	106

Handles, Locks, Latches and Entry Systems

NOTE: The Smart Junction Box (SJB) is also known as the Generic Electronic Module (GEM).

Hood Latch

The hood latch consists of the following components:

- Hood latch release handle and cable
- Hood latch
- Secondary hood latch release handle and cable (MKZ)

Front Door

The front door consists of the following components:

- Door ajar switch (part of the front door latch)
- Door lock cylinder (driver door only)
- Exterior front door handle
- Exterior front door handle reinforcement
- Front door latch
- Front door lock actuator (part of the front door latch)
- Interior door handle actuating cable
- Interior door handle
- Keyless entry keypad (if equipped)

Rear Door

The rear door consists of the following components:

- Door ajar switch (part of the rear door latch)
- Exterior rear door handle
- Exterior rear door handle reinforcement
- Interior door handle actuating cable (part of the rear door latch)
- Interior door handle
- Rear door latch
- Rear door lock actuator (part of the rear door latch)

Luggage Compartment Lid

The luggage compartment lid consists of the following components:

- Luggage compartment lid latch
- Luggage compartment lid lock cylinder
- Luggage compartment lid release switch (next to headlamp switch)
- Lock cylinder actuating cable (part of the luggage compartment lid latch)
- Mechanical emergency release cable and handle (part of the luggage compartment lid latch)

Power Lock/Unlock

The power lock/unlock feature requests all of the vehicle doors locked or unlocked upon a customer request from either door lock control switch in the vehicle. The power door locking system functions independently of ignition status or vehicle speed.

Autolock

NOTE: The autolock feature is not available on vehicles equipped with a manual transaxle.

The autolock feature locks all the doors when the following conditions are met:

- All the doors are closed
- The ignition switch is in the ON position
- The vehicle is shifted into any gear, putting the vehicle in motion
- The vehicle attains a speed greater than 20 km/h (12 mph)

The autolock feature repeats when:

- any door is opened then closed with the ignition in the ON position.
- the vehicle speed is 15 km/h (9 mph) or slower.
- the vehicle attains a speed greater than 20 km/h (12 mph).

The autolock feature can be enabled/disabled, refer to Autolock and Auto-Unlock Programming in this section for programming information.

Auto-Unlock

NOTE: The doors will not auto-unlock if the vehicle has been electronically locked before the driver door is opened.

NOTE: The auto-unlock feature comes disabled from the factory on vehicles equipped with a manual transaxle, but can be enabled.

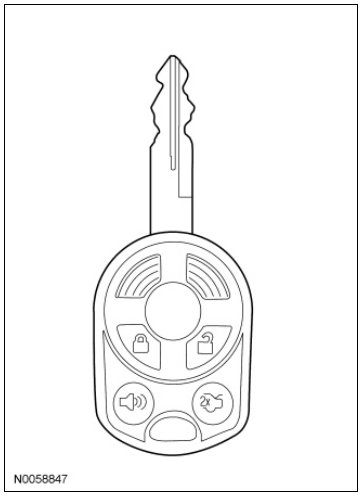
The auto-unlock feature unlocks all the doors when the following conditions are met:

- The ignition is in the ON position
- All the doors are closed
- The vehicle has been in motion at a speed greater than 20 km/h (12 mph)
- The vehicle then comes to a stop
- The ignition is switched to the OFF or ACC position
- And the driver door is opened within 10 minutes of the ignition being switched to the LOCK or ACC position

The auto-unlock feature can be enabled/disabled independently of autolock. Refer to Autolock and Auto-Unlock Programming in this section for programming information.

Smart Unlock

The smart unlock feature prevents the doors from locking with the key in the ignition lock cylinder. When the SJB receives a lock command from a door lock control switch (only), and the key is in the ignition lock cylinder with one of the front doors open, the SJB commands the doors to unlock.



The vehicle can still be locked with the ignition key in the ignition cylinder by locking the doors with the push button rods, the door lock cylinder or a Remote Keyless Entry (RKE) command from an Integrated Keyhead Transmitter (IKT) or the keyless entry keypad (if equipped).

Remote Keyless Entry (RKE)

The RKE system uses an Integrated Keyhead Transmitter (IKT). The IKT incorporates both the Passive Anti-Theft System (PATS) functions and the RKE transmitter functions in a single device.

The RKE transmitter is programmed automatically during PATS key programming. During PATS key programming, the Instrument Panel Cluster (IPC) obtains the Transmitter Identification Code (TIC) from the IKT and sends the TIC data over the Medium Speed Controller Area Network (MS-CAN) to the SJB .

The SJB accepts programming of up to 4 IKTs . In addition to the IKTs , 4 conventional keyfobs can also be programmed to the vehicle if requested by the customer. For information on programming the IKTs , refer to Key Programming Using Two Programmed Keys or Integrated Keyhead Transmitter (IKT) Key Programming Using Diagnostic Equipment in Section 419-01B or Section 419-01C . For information on programming the conventional keyfobs, refer to Remote Keyless Entry (RKE) Transmitter Programming in this section.

The IKT carries out the following functions:

- Unlocks the driver door
- Unlocks all doors
- Locks all doors
- Releases the luggage compartment lid latch
- Arms/disarms the perimeter alarm
- Activates/deactivates the panic alarm
- Commands the interior lamps on (when unlocking) and off (when locking)
- Provides a long flash of the turn signals when UNLOCK is pressed (late vehicles only)
- Recalls the memory seat position associated with a particular remote entry device (when enabled) (MKZ)
- Sounds the horn once when LOCK is pressed twice within 3 seconds, and the doors are closed
- Sounds the horn twice when LOCK is pressed twice within 3 seconds, and any door is ajar

The IKT has a normal operating range of 10 m (33 ft).

Remote Keyless Entry (RKE) Lock/Unlock Control - Unlock

The RKE feature provides lock/unlock functions independently of key position, vehicle speed, or transmission position. The RKE feature provides a stepped (if enabled) process for unlocking the doors. Upon receipt of the first request for unlocking the doors, the RKE control feature requests the SJB to unlock the driver door only. If another unlock request is received within 3 seconds of the first, the RKE feature requests the SJB to unlock all the doors. This feature can be configured to one-step unlock, so that all the doors unlock on the first press of the unlock button. Refer to Stepped Unlock Programming in this section for programming information.

Remote Keyless Entry (RKE) Lock/Unlock Control - Lock

The RKE feature requests that all the doors be locked when the lock button is pressed. On any press of the lock button with all doors closed, the SJB provides one flash of the turn signals. If any door is ajar, no flash occurs. As soon as the last door is closed, the SJB provides the flash of the turn signals. If 2 presses of the lock button are received within 3 seconds, the horn chirps once and the turn signals flash twice to indicate that all the doors are closed and locked. If any door is ajar when the second lock request is received within 3 seconds of the first, the RKE transmitter feature requests the SJB chirp the horn twice without flashing the turn signals to indicate it locked all the doors but one or more doors are ajar. When the key is in the ON or START position, the turn signal flashes and horn chirp confirmations do not occur.

Remote Keyless Entry (RKE) Luggage Compartment Lid Release

The RKE feature provides luggage compartment lid release function independently of key position. The luggage compartment lid release button must be pressed twice within 3 seconds for the luggage compartment lid to release.

Panic Alarm

The panic alarm feature provides audible and visual alarms which are evident from the exterior of the vehicle. The panic alarm feature requests that the turn signals are flashed and the horn sounds until deactivation. The flashing of the outputs occurs simultaneously. Activation of the panic alarm is accomplished by pressing the panic button on an Integrated Keyhead Transmitter (IKT) whenever the key is in the OFF position. At all other times this feature is disabled. Deactivation of an active PANIC alarm is accomplished by any of the following actions:

- a second press of the IKT panic button
- the key is switched out of the OFF position
- a period of 2 minutes and 45 seconds has elapsed since the initial activation

Keyless Entry Keypad

The keyless entry keypad carries out the following functions:

- Unlocks the driver door
- Unlocks all the doors
- Locks all doors
- Enables/disables auto-unlocking
- Enables/disables autolocking
- Arms/disarms the perimeter alarm
- Recalls the memory seat position associated with a particular customer key code (when enabled)
- Releases the luggage compartment lid latch
- Programs/erases the customer key code(s)
- Illuminates the keyless entry keypad lamp and issues illuminated entry on/off requests

The keypad feature operates independently of key position status, vehicle speed, or transmission position. When a keypad button is pressed, the keypad buttons illuminate to provide better visibility. If the lock all doors command is entered or 5 seconds have elapsed since the last button press, the illumination is turned off.

Each vehicle equipped with a keypad is programmed with a 5-digit factory set entry code. This code is provided to the customer through a wallet card in the Owner's Literature. In addition, this code is available through a scan tool and is also printed on the SJB label. When entering codes each digit must be entered within 5 seconds of the previous button press. In addition to the factory set code, 3 personal codes can also be programmed. For additional information on programming the personal keypad codes, refer to Keyless Entry

Keypad Code Programming in this section.

Locking the Doors with the Keyless Entry Keypad System

It is not necessary to enter the factory set or personal code prior to locking all doors. To lock all doors, press the 7/8 and 9/0 controls at the same time.

Unlocking the Doors with the Keyless Entry Keypad System

To unlock the driver door (if stepped unlock is disabled), enter either the factory set code or a personal code; each digit must be pressed within 5 seconds of the prior digit. The interior lamps illuminate.

To unlock all doors, enter either the factory set code or a personal code (driver door unlocks) and press the 3/4 button within 5 seconds. This feature can be changed to 1-step unlock, so that all the doors unlock on receipt of the factory set or personal code. Refer to Stepped Unlock Programming in this section for programming information.

To open the luggage compartment, enter the factory set code or a personal code (driver door unlocks) and press the 5/6 button within 5 seconds.

Anti-Scan Feature

To provide added security, the keypad is disabled for 1 minute after 35 button presses without a valid entry code being entered. The keypad flashes during this 1-minute mode with all functionality disabled except for 7/8 and 9/0 still being allowed to lock the vehicle.

Anti-Scan is turned off after 1 minute of keypad inactivity.

Handles, Locks, Latches and Entry Systems

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool
 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
 ST2574-A	Flex Probe Kit NUD105-R025D

Material

Item	Specification
Multi-Purpose Grease XG-4 and/or XL-5	ESB-M1C93-B
Penetrating and Lock Lubricant (US); Penetrating Fluid (Canada) XL-1 (US); CXC-51-A (Canada)	-

Principles of Operation

NOTE: The Smart Junction Box (SJB) is also known as the Generic Electronic Module (GEM).

The SJB receives inputs and delivers outputs to many of the electronically controlled features of the vehicle. The SJB constantly monitors the system under its control and reports a concern in the form of a DTC.

Power Door Locks - Fusion

Regardless of the key position, the SJB is supplied voltage at all times. When the SJB receives a signal from the Remote Keyless Entry (RKE) transmitter, the keyless entry keypad, or the door lock control switches, the SJB supplies a ground signal to the appropriate lock or unlock relay. The ground signal closes the relay which supplies voltage to the door lock actuators. The door lock actuators then actuate to a lock or unlock position.

Power Door Locks - MKZ

The SJB controls all of the passenger door lock actuators and receives input from the passenger door lock control switch. The Driver Door Module (DDM) controls only the driver door lock actuatoreceives input from the driver door lock control switch. The 2 modules communicate the lock or unlock commands through the Medium Speed Controller Area Network (MS-CAN).

The SJB and the DDM are supplied voltage at all times. When the SJB receives a signal from the Remote Keyless Entry (RKE) transmitter, the keyless entry keypad, or the RH door lock control switch, the SJB sends

a command to the DDM through the MS-CAN , and a ground signal to the lock and unlock relays. When the LH door lock control switch is pressed, the DDM receives the lock or unlock signal. The DDM sends a request through the MS-CAN to the SJB to lock or unlock the passenger doors. The SJB then responds to the DDM request, authorizing a lock or unlock of the driver door by the DDM . The DDM then supplies voltage and ground to the driver door lock actuator based on the lock or unlock request. The ground signal in the SJB closes the relay which supplies voltage to the remaining door lock actuators. The remaining door lock actuators then actuate to a lock or unlock position determined by the relay.

Luggage Compartment Lid Release

NOTE: When using the Integrated Keyhead Transmitter (IKT), 2 presses (within 3 seconds) of the luggage compartment lid release button are required to release the luggage compartment lid.

The luggage compartment lid release system is inhibited when the vehicle speed exceeds 8 km/h (5 mph). The luggage compartment lid latch releases the luggage compartment lid when the customer requests it be opened using either the IKT , the keyless entry keypad, or the luggage compartment lid release switch. When the SJB receives a signal to release the luggage compartment lid, the SJB supplies voltage to the luggage compartment lid latch. The luggage compartment lid latch then actuates to release the luggage compartment lid.

Remote Keyless Entry (RKE)

The SJB interprets radio frequency signals from the Remote Keyless Entry (RKE) transmitters. The SJB requests the illuminated entry feature to turn the interior lamps on when an unlock command is received. If a lock command is received, the illuminated entry feature turns off.

The RKE transmitter supplies a signal to the SJB when any button is pressed. The SJB then supplies voltage to the appropriate door lock actuator(s) to lock or unlock the doors. The RKE transmitter can also be used to release the luggage compartment lid or activate the panic alarm. On MKZ, the RKE transmitter also causes the SJB to send an MS-CAN message to the Driver Seat Module (DSM) to activate all memory features to the positions associated with the RKE transmitter being used.

Keyless Entry Keypad

The keyless entry keypad is hardwired to the SJB . The SJB interprets the inputs from the keyless entry keypad and then controls the associated operation. The keyless entry keypad is illuminated for 5 seconds when any button is pressed. The SJB requests the illuminated entry feature to turn the interior lamps on when a valid entry code is received. If a lock all doors code is entered, the illuminated entry feature turns off.

NOTE: The keyless entry keypad does not lock the doors if the driver door is ajar.

The keyless entry keypad supplies a signal to the SJB when the buttons are pressed. The SJB then supplies voltage to the appropriate door lock actuator(s) to lock or unlock the doors. The keyless entry keypad can also be used to release the luggage compartment lid. On MKZ, the keyless entry keypad also causes the SJB to send an MS-CAN message to the Driver Seat Module (DSM) to activate all memory features to the positions associated with the personal entry code entered on the keypad.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Binding latch mechanisms • Door handles • Door striker adjustment • Hood latch • Luggage compartment lid latch • Misaligned door	• Smart Junction Box (SJB) fuse(s) ♦ 5 (10A) ♦ 17 (20A) • Wiring, terminals or connectors • Door lock control switch • Luggage compartment lid release switch • Keyless entry keypad • Remote Keyless Entry (RKE) transmitter • SJB

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :

   - Check the VCM connection to the vehicle.
   - Check the scan tool connection to the VCM .
   - Refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - Verify the ignition key is in the ON position.
   - Verify the scan tool operation with a known good vehicle.
   - Refer to Section 418-00 to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record the continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the SJB , Driver Door Module (DDM) and the Instrument Panel Cluster (IPC).

9. If the DTCs retrieved are related to the concern, go to DTC Charts. For all other DTCs, refer to the Diagnostic Trouble Code (DTC) Chart in Section 419-10 .

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart - Electrical .

DTC Charts

Driver Door Module (DDM) DTC Chart

DTC	Description	Action
B106E	Solid State Driver Disabled Due to Short Circuit	GO to Pinpoint Test AA .
B106F	Module Disabled Due to External Fault	GO to Pinpoint Test AA .
B1317	Battery Voltage High	GO to Pinpoint Test AB .
B1318	Battery Voltage Low	GO to Pinpoint Test AC .
B1342	ECU is Faulted	CLEAR the DTCs. REPEAT the self-test. If DTC B1342 is retrieved again, INSTALL a new Driver Door Module (DDM). REFER to Driver Door Module (DDM) in this section. TEST the system for normal operation.

Symptom Chart - Mechanical

Pinpoint Tests

Pinpoint Test A: All Door Locks Are Inoperative

Refer to Wiring Diagrams Cell 110 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Door Locks for schematic and connector information.

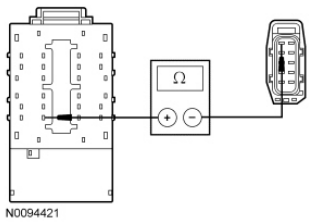
Normal Operation - MKZ

The Smart Junction Box (SJB) supplies voltage and ground to all the passenger door lock actuators by controlling the lock all and unlock all relays. The Driver Door Module (DDM) supplies voltage and ground only to the driver door lock actuator. The SJB receives inputs from the RH door lock control switch, keyless entry keypad, and the Remote Keyless Entry (RKE) transmitter. The DDM only receives input from the LH door lock control switch. Both modules share the information obtained from the inputs over the Medium Speed Controller Area Network (MS-CAN). Upon a lock request, the SJB supplies voltage on the passenger door lock circuit and ground on the passenger door unlock circuit, and the DDM supplies voltage on the driver door lock circuit and ground on the driver door unlock circuit. Upon an unlock request, the voltage and ground are reversed on the previously listed circuits. When the door lock and unlock relays are not energized they are connected to ground. A dedicated SJB ground circuit is provided only for the lock and unlock relays.

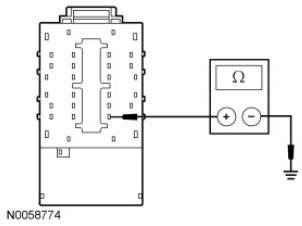
Fusion

The SJB supplies voltage to the lock all relay, the unlock driver door relay or unlock all relay based upon input from the door lock control switches, the RKE transmitter, or the keyless entry keypad. Upon a lock request, the SJB supplies voltage on the all door lock circuit and ground on the driver and passenger door lock circuits. Upon an unlock request, the voltage and ground are reversed on the previously listed circuits. When the door lock and unlock relays are not energized they are connected to ground. A dedicated SJB ground circuit is provided only for the lock and unlock relays.

This pinpoint test is intended to diagnose the following:



- Fuse
- Wiring, terminals, or connectors
- Luggage compartment lid release solenoid (part of the luggage compartment lid latch)



- SJB

PINPOINT TEST A: ALL DOOR LOCKS ARE INOPERATIVE

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed will result in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
A1 VERIFY THE OPERATION OF BOTH DOOR LOCK CONTROL SWITCHES	
• Press the lock and unlock button on both door lock control switches while observing the door lock operation. • **Are the door locks inoperative from both switches?**	**Yes** For MKZ, multiple failures exist if all locks are inoperative. CHECK the symptom(s) and GO to Symptom Chart - Electrical . For Fusion and Milan, GO to A2 . **No** GO to Pinpoint Test D .
A2 VERIFY ALL DOOR LOCKS ARE INOPERATIVE	
• Press the lock and unlock buttons from a door lock control switch while observing the door locks. • **Are all the door locks inoperative from both switch positions (lock and unlock)?**	**Yes** VERIFY the SJB fuse 17 (20A) is OK. If OK, GO to A3 . If not OK, GO to A5 . **No** GO to Symptom Chart - Electrical .
A3 CHECK THE ALL LOCK CIRCUIT FOR AN OPEN	
• Disconnect: LH Front Door Latch C525 . • Disconnect: SJB C228d . • Measure the resistance between the SJB C2280d-6, circuit CPL11 (GY/BN), harness side and the LH front door latch C525-2, circuit CPL11 (GY/BN), harness side.  	**Yes** GO to A4 . **No** REPAIR circuit CPL11 (GY/BN) for an open. TEST the system for normal operation.

• **Is the resistance less than 5 ohms?**	
A4 CHECK THE POWER DOOR LOCK RELAY GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the SJB C2280d-7, circuit GD126 (BK/WH), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to A8 . **No** REPAIR circuit GD126 (BK/WH) for an open. TEST the system for normal operation.
A5 CHECK THE LUGGAGE COMPARTMENT LID RELEASE OUTPUT CIRCUIT FOR A SHORT TO GROUND	
• Install a new SJB fuse 17 (20A). • Operate the luggage compartment lid release by pressing the luggage compartment lid release switch. • **Is the SJB fuse 17 (20A) OK?**	**Yes** GO to A7 . **No** GO to A6 .
A6 CHECK THE LUGGAGE COMPARTMENT LID RELEASE SOLENOID	
• Install a new SJB fuse 17 (20A). • Disconnect: Luggage Compartment Lid Release Solenoid C429 . • Operate the luggage compartment lid release by pressing the luggage compartment lid release switch. • **Is the SJB fuse 17 (20A) OK?**	**Yes** INSTALL a new luggage compartment lid latch. REFER to Luggage Compartment Lid Latch in this section. **No** REPAIR circuit CPL59 (BN/BU) for a short to ground. TEST the system for normal operation.
A7 CHECK THE ALL LOCK CIRCUIT FOR A SHORT TO GROUND	
• Operate the door lock actuators by pressing LOCK on the door lock control switch. • **Is the SJB fuse 17 (20A) OK?**	**Yes** REPAIR circuit CPL51 (BU/GN) or CPL52 (VT/GY) for a short to ground. TEST the system for normal operation. **No** REPAIR circuit CPL11 (GY/BN) for a short to ground. TEST the system for normal operation.
A8 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors.	**Yes** INSTALL a new SJB . REFER to

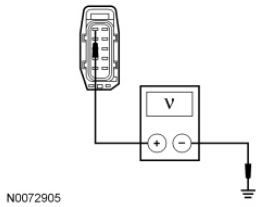
• Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test B: A Single/More Than One Door Lock Is Inoperative - Fusion

Refer to Wiring Diagrams Cell 110 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Door Locks for schematic and connector information.

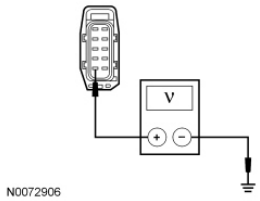
Normal Operation

The SJB supplies voltage to the lock all relay, the unlock driver door relay or unlock all relay based upon input from the door lock control switches, the RKE transmitter, or the keyless entry keypad. Upon a lock request, the SJB supplies voltage on the all door lock circuit and ground on the driver and passenger door lock circuits. Upon an unlock request, the voltage and ground are reversed on the previously listed circuits. When the door lock and unlock relays are not energized they are connected to ground. A dedicated SJB ground circuit is provided only for the lock and unlock relays.



This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Door lock actuator (part of the door latch)
- SJB



PINPOINT TEST B: A SINGLE/MORE THAN ONE DOOR LOCK IS INOPERATIVE - FUSION

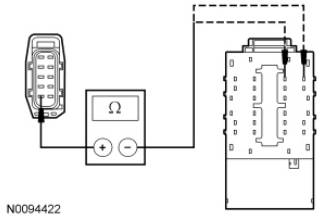
NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
B1 CHECK THE OPERATION FROM THE INTERIOR DOOR HANDLE	
• Open the door using the interior door handle. • **Does the interior door handle operate normally?**	**Yes** GO to B2 . **No** GO to Pinpoint Test U .
B2 CHECK THE LOCK LEVER OPERATION	
• Operate the door lock lever while observing for any binding. • **Is the door lock lever binding?**	**Yes** INSPECT the interior door handle and door latch for binding. REPAIR as necessary. TEST thsystem for normal operation.

	No GO to B3 .
B3 CHECK THE ALL LOCK CIRCUIT FOR VOLTAGE	
• Ignition OFF. • Disconnect: Inoperative Door Lock Actuator . • **NOTE:** The SJB only supplies voltage to the actuator momentarily. It is important to monitor the meter while pressing the door lock control switch. • While pressing the door lock control switch in the LOCK position, measure the voltage between the inoperative door lock actuator, harness side and ground as follows: **Inoperative Door Lock Actuator** / **Connector-Pin** / **Circuit** LH front / C525-2 / CPL11 (GY/BN) RH front / C603-2 / CPL11 (GY/BN) LH rear / C704-2 / CPL11 (GY/BN) RH rear / C804-2 / CPL11 (GY/BN)  • **Is the voltage momentarily greater than 10 volts?**	**Yes** GO to B4 . **No** REPAIR circuit CPL11 (GY/BN) for an open. TEST the system for normal operation.
B4 CHECK THE UNLOCK CIRCUITS FOR VOLTAGE	
• **NOTE:** The SJB only supplies voltage to the actuator momentarily. It is important to monitor the meter while pressing the door lock control switch. • While pressing the door lock control switch in the UNLOCK position, measure the voltage between the inoperative door lock actuator, harness side and ground as follows: **Connector-Pin** / **Circuit**	**Yes** INSTALL a new door latch for the door lock actuator in question. REFER to Front Door Latch or Rear Door Latch in this section. TEST the system for normal operation. **No** GO to B5 .

Inoperative Door Lock Actuator		
LH front	C525-10	CPL51 (BU/GN)
RH front	C603-10	CPL52 (VT/GY)
LH rear	C704-10	CPL52 (VT/GY)
RH rear	C804-10	CPL52 (VT/GY)

- **Is the voltage momentarily greater than 10 volts?**



B5 CHECK THE UNLOCK CIRCUITS FOR AN OPEN

- Disconnect: SJB C2280d .
- Measure the resistance between the inoperative door lock actuator, harness side and the SJB , harness side as follows:

Yes
GO to B6 .

No
REPAIR the circuit in question for an open. TEST the system for normal operation.

Inoperative Door Lock Actuator Connector-Pin	SJB Connector-Pin	Circuit
LH front C525-10	C2280d-28	CPL51 (BU/GN)
RH front C603-10	C2280d-27	CPL52 (VT/GY)
LH rear C704-10	C2280d-27	CPL52 (VT/GY)
RH rear C804-10	C2280d-27	CPL52 (VT/GY)

• **Is the resistance less than 5 ohms?**	
B6 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

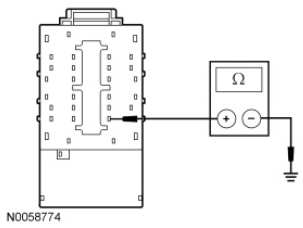
Pinpoint Test C: A Single/More Than One Door Lock Is Inoperative - MKZ

Refer to Wiring Diagrams Cell 110 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Door Locks for schematic and connector information.

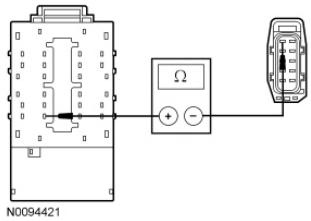
Normal Operation

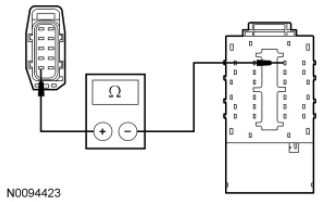
The Smart Junction Box (SJB) supplies voltage and ground to all the passenger door lock actuators by controlling the lock all and unlock all relays. The Driver Door Module (DDM) supplies voltage and ground only to the driver door lock actuator. The SJB receives inputs from the RH door lock control switch, keyless entry keypad, and the Remote Keyless Entry (RKE) transmitter. The DDM only receives input from the LH door lock control switch. Both modules share the information obtained from the inputs over the Medium Speed Controller Area Network (MS-CAN). Up a lock request, the SJB supplies voltage on the passenger door lock circuit and ground on the passenger door unlock circuit, and the DDM supplies voltage on the driver door lock circuit and ground on the driver door unlock circuit. Upon an unlock request, the voltage and ground are reversed on the previously listed circuits. When the door lock and unlock relays are not energized they are connected to ground. A dedicated SJB ground circuit is provided only for the lock and unlock relays.

This pinpoint test is intended to diagnose the following:

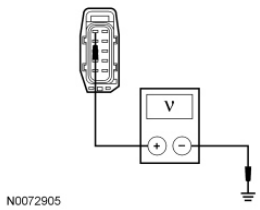


- Fuse
- Wiring, terminals or connectors
- Door lock actuator (part of the door latch)
- Luggage compartment lid release solenoid (part of the luggage compartment latch)
- DDM
- SJB

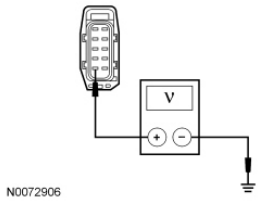


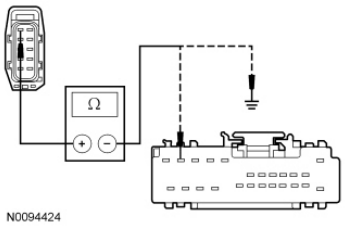


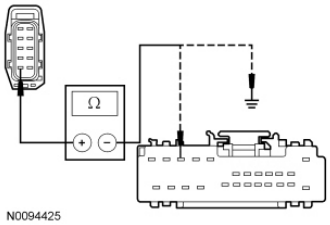
PINPOINT TEST C: A SINGLE/MORE THAN ONE DOOR LOCK IS INOPERATIVE - MKZ



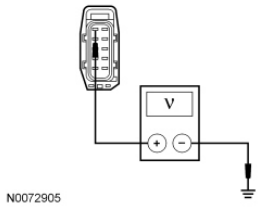
NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**



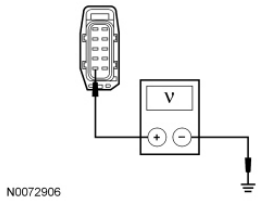




NOTE: Failure to disconnect the battery when instructed will result in false resistance readings. Refer to Section 414-01 .



Test Step	Result / Action to Take
C1 CHECK THE OPERATION FROM THE INTERIOR DOOR HANDLE	



• Open the door using the interior door handle. • **Does the interior door handle operate normally?**	**Yes** GO to C2 . **No** GO to Pinpoint Test U .
C2 CHECK THE LOCK LEVER OPERATION	
• Operate the door lock lever while observing for any binding. • **Is the door lock lever binding?**	**Yes** INSPECT the interior door handle and door latch for binding. REPAIR as necessary. TEST the system for normal operation. **No** GO to C3 .
C3 CHECK FOR COMMUNICATION WITH THE DDM AND SJB	
• Enter the following diagnostic mode on the scan tool: Network Test . • **Does the SJB or DDM fail the network test?**	**Yes** REFER to Section 418-00 . **No** GO to C4 .
C4 CHECK THE PASSENGER DOOR LOCKS	
• Ignition OFF. • Operate the door locks from the passenger door lock control switch. • **Are all of the passenger door locks inoperative?**	**Yes** VERIFY the SJB fuse 17 (20A) is OK. If OK, GO to C5 . If not OK, GO to C8 . **No** GO to C11 .
C5 CHECK THE POWER DOOR LOCK RELAY GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Disconnect: SJB C2280d . • Measure the resistance between the SJB C2280d-7, circuit GD126 (BK/WH), harness side and ground.  • **Is the resistance less than 5 ohms?**	**Yes** GO to C6 . **No** REPAIR circuit GD126 (BK/WH) for an open. TEST the system for normal operation.
C6 CHECK THE LOCK CIRCUIT FOR AN OPEN	

• Disconnect: RH Front Door Latch C603 . • Measure the resistance between the RH front door latch C603-2, circuit CPL11 (GY/BN), harness side and the SJB C2280d-6, circuit CPL11 (GY/BN), harness side.  N0094421 • **Is the resistance less than 5 ohms?**	**Yes** GO to C7 . **No** REPAIR circuit CPL11 (GY/BN) for an open. TEST the system for normal operation.
C7 CHECK THE UNLOCK CIRCUIT FOR AN OPEN	
• Measure the resistance between the RH front door latch C603-10, circuit CPL52 (VT/GY), harness side and the SJB C2280d-27, circuit CPL52 (VT/GY), harness side.  N0094423 • **Is the resistance less than 5 ohms?**	**Yes** GO to C19 . **No** REPAIR circuit CPL52 (VT/GY) for an open. TEST the system for normal operation.
C8 CHECK THE LUGGAGE COMPARTMENT LID RELEASE OUTPUT CIRCUIT FOR A SHORT TO GROUND	
• Install a new SJB fuse 17 (20A). • Operate the luggage compartment lid release by pressing the luggage compartment lid release switch. • **Is the SJB fuse 17 (20A) OK?**	**Yes** GO to C10 . **No** GO to C9 .
C9 CHECK THE LUGGAGE COMPARTMENT LID RELEASE SOLENOID	
• Install a new SJB fuse 17 (20A). • Disconnect: Luggage Compartment Lid Release Solenoid C429 . • Operate the luggage compartment lid release by pressing the luggage compartment lid release switch. • **Is the SJB fuse 17 (20A) OK?**	**Yes** INSTALL a new luggage compartment lid latch. REFER to Luggage Compartment Lid Latch in this section. **No** REPAIR circuit CPL59 (BN/BU) for a short to ground. TEST the system for normal operation.
C10 CHECK THE LOCK CIRCUIT FOR A SHORT TO GROUND	

• Operate the door lock actuators by pressing LOCK on the passenger door lock control switch. • **Is the SJB fuse 17 (20A) OK?**	**Yes** REPAIR circuit CPL52 (VT/GY) for a short to ground. TEST the system for normal operation. **No** REPAIR circuit CPL11 (GY/BN) for a short to ground. TEST the system for normal operation.
C11 CHECK THE DRIVER DOOR LOCK	
• Check to see if the driver door lock is the inoperative lock. • **Is the driver door lock inoperative?**	**Yes** GO to C12 . **No** GO to C16 .
C12 CHECK THE DRIVER DOOR LOCK CIRCUIT FOR VOLTAGE	
• Disconnect: LH Front Door Latch C525 . • **NOTE:** The DDM only supplies voltage to the actuator momentarily. It is important to monitor the meter while pressing the door lock control switch. • While pressing the door lock control switch in the LOCK position, measure the voltage between the LH front door latch C525-2, circuit CPL02 (VT/GN), harness side and ground.  • **Is the voltage momentarily greater than 10 volts?**	**Yes** GO to C13 . **No** GO to C14 .
C13 CHECK THE DRIVER UNLOCK CIRCUIT FOR VOLTAGE	
• **NOTE:** The DDM only supplies voltage to the actuator momentarily. It is important to monitor the meter while pressing the door lock control switch. • While pressing the door lock control switch in the UNLOCK position, measure the voltage between the LH front door latch C525-10, circuit CPL51 (BU/GN), harness side and ground.	**Yes** INSTALL a new driver door latch. REFER to Front Door Latch in this section. TEST the system for normal operation. **No** GO to C15 .

 N0072906 • **Is the voltage momentarily greater than 10 volts?**	
C14 CHECK THE DRIVER LOCK CIRCUIT FOR AN OPEN OR A SHORT TO GROUND	
• Disconnect: DDM C568b . • Measure the resistance between the LH front door latch C525-2, circuit CPL02 (VT/GN), harness side and the DDM C568b-11, circuit CPL02 (VT/GN), harness side; and between the LH front door latch C525-2, circuit CPL02 (VT/GN), harness side and ground.  N0094424 • **Is the resistance less than 5 ohms between the LH front door latch and the DDM , and greater than 10,000 ohms between the LH front door latch and ground?**	**Yes** GO to C15 . **No** REPAIR circuit CPL02 (VT/GN). TEST the system for normal operation.
C15 CHECK THE DRIVER UNLOCK CIRCUIT FOR AN OPEN OR A SHORT TO GROUND	
• Disconnect: DDM C568b . • Measure the resistance between the LH front door latch C525-10, circuit CPL51 (BU/GN), harness side and the DDM C568b-10, circuit CPL51 (BU/GN), harness side; and between the LH front door latch C525-10, circuit CPL51 (BU/GN), harness side and ground.  N0094425 • **Is the resistance less than 5 ohms between the LH front door latch and the DDM , and greater than 10,000 ohms between the LH front door latch and ground?**	**Yes** GO to C18 . **No** REPAIR circuit CPL51 (BU/GN). TEST the system for normal operation.
C16 CHECK THE PASSENGER LOCK CIRCUIT FOR VOLTAGE	

• Disconnect: Suspect Door Latch . • **NOTE:** The SJB only supplies voltage to the actuator momentarily. It is important to monitor the meter while pressing the door lock control switch. • While pressing the door lock control switch in the LOCK position, measure the voltage between the suspect door latch and ground as follows: **Door Latch Connector-Pin** / **Circuit** C603-2 (RH front) — CPL11 (GY/BN) C704-2 (LH rear) — CPL11 (GY/BN) C804-2 (RH rear) — CPL11 (GY/BN)  • **Is the voltage momentarily greater than 10 volts?**	**Yes** GO to C17 . **No** REPAIR circuit CPL11 (GY/BN) for an open. TEST the system for normal operation.
C17 CHECK THE PASSENGER UNLOCK CIRCUIT FOR VOLTAGE	
• **NOTE:** The SJB only supplies voltage to the actuator momentarily. It is important to monitor the meter while pressing the door lock control switch. • While pressing the door lock control switch in the UNLOCK position, measure the voltage between the suspect door latch and ground as follows: **Door Latch Connector-Pin** / **Circuit** C603-10 (RH front) — CPL52 (VT/GY) C704-10 (LH rear) — CPL52 (VT/GY) C804-10 (RH rear) — CPL52 (VT/GY)	**Yes** INSTALL a new door latch for the door lock actuator in question. REFER to Front Door Latch or Rear Door Latch in this section. TEST the system for normal operation. **No** REPAIR circuit CPL52 (VT/GY) for an open. TEST the system for normal operation.

 • **Is the voltage momentarily greater than 10 volts?**	
C18 CHECK FOR CORRECT DDM OPERATION	
• Disconnect all the DDM connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the DDM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new DDM . REFER to Driver Door Module (DDM) in this section. TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.
C19 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test D: All Door Locks Are Inoperative From One Switch - Fusion

Refer to Wiring Diagrams Cell 110 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Door Locks for schematic and connector information.

Normal Operation

The Smart Junction Box (SJB) sends voltage signals to the door lock control switches through the lock and unlock input circuits. When the lock or unlock switch is pressed, the corresponding voltage signal is routed to ground, signalling the SJB to lock or unlock the doors. The door lock control switches have a dedicated ground circuit.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Door lock control switch

PINPOINT TEST D: ALL DOOR LOCKS ARE INOPERATIVE FROM ONE SWITCH - FUSION

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
D1 CHECK THE DOOR LOCK CONTROL SWITCH	
• Disconnect: Inoperative Door Lock Control Switch . • Carry out the door lock control switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Is the door lock control switch OK?**	**Yes** REPAIR circuit GD126 (BK/WH) or GD139 (BK/YE) for an open. TEST the system for normal operation. **No** INSTALL a new door lock control switch. REFER to Door Lock Control Switch . TEST the system for normal operation.

Pinpoint Test E: All Door Locks Are Inoperative From One Switch - MKZ

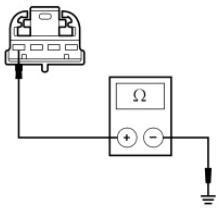
Refer to Wiring Diagrams Cell 110 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Door Locks for schematic and connector information.

Normal Operation

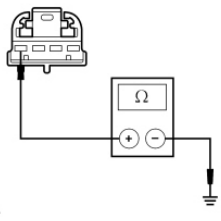
The Smart Junction Box (SJB) sends voltage signals to the passenger door lock control switch through the lock and unlock input circuits. When the lock or unlock switch is pressed, the corresponding voltage signal is routed to ground, signalling the SJB to lock or unlock the passenger doors and send a lock or unlock command to the Driver Door Module (DDM) over the Medium Speed Controller Area Network (MS-CAN).

The DDM sends voltage signals to the driver door lock control switch through the lock and unlock input circuits. When the lock or unlock switch is pressed, the corresponding voltage signal is routed to ground, signalling the DDM to lock or unlock the driver door and send a lock or unlock command to the SJB over the MS-CAN .

The door lock control switches have a dedicated ground circuit.



This pinpoint test is intended to diagnose the following:



- Wiring, terminals or connectors
- Door lock control switch
- DDM
- SJB

PINPOINT TEST E: ALL DOOR LOCKS ARE INOPERATIVE FROM ONE SWITCH - MKZ

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed will result in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
E1 CHECK THE RECORDED SJB AND DDM DTCsROM THE SELF-TEST	
• Check the recorded results from the SJB and DDM self-test. • **Are any DTCs present?**	**Yes** REFER to DTC Charts in this section. **No** GO to E2 .
E2 CHECK THE DRIVER DOOR LOCK CONTROL SWITCH	
• Check to see if the driver door lock control switch is the inoperative switch. • **Is the driver door lock control switch inoperative?**	**Yes** GO to E3 . **No** GO to E4 .
E3 CHECK THE DRIVER DOOR SWITCH GROUND CIRCUIT FOR AN OPEN	
• Disconnect: Negative Battery Cable . • Disconnect: Driver Door Lock Control Switch C505 . • Measure the resistance between the driver door lock control switch C505-4, circuit GD126 (BK/WH), harness side and ground.  N0026458 • **Is the resistance less than 5 ohms?**	**Yes** GO to E5 . **No** REPAIR circuit GD126 (BK/WH) for an open. TEST the system for normal operation.
E4 CHECK THE PASSENGER SWITCH GROUND CIRCUIT FOR AN OPEN	
• Disconnect: Negative Battery Cable . • Disconnect: Passenger Door Lock Control Switch C605 . • Measure the resistance between the passenger door lock control switch C605-4, circuit GD139 (BK/YE), harness side and ground.	**Yes** GO to E5 . **No** REPAIR circuit GD139 (BK/YE) for an open. TEST the system for normal operation.

 N0026458 • **Is the resistance less than 5 ohms?**	
E5 CHECK THE SUSPECT DOOR LOCK CONTROL SWITCH FOR CORRECT OPERATION	
• Carry out the door lock control switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Is the door lock control switch OK?**	**Yes** For an inoperative driver door lock control switch, GO to E6 . For an inoperative passenger door lock control switch, GO to E7 . **No** INSTALL a new door lock control switch. REFER to Door Lock Control Switch in this section. TEST the system for normal operation.
E6 CHECK THE DDM FOR CORRECT OPERATION	
• Disconnect all the DDM connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the DDM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new DDM . REFER to Driver Door Module (DDM) in this section. TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. TEST the system for normal operation.
E7 CHECK THE SJB FOR CORRECT OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

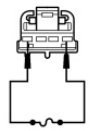
Pinpoint Test F: The Door Lock Switches Operate Only One Way - Fusion

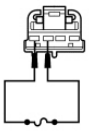
Refer to Wiring Diagrams Cell 110 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Door Locks for

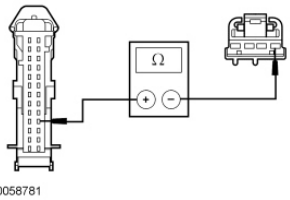
schematic and connector information.

Normal Operation

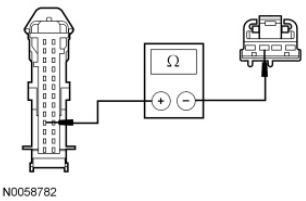
The Smart Junction Box (SJB) sends voltage signals to the door lock control switches through the lock and unlock input circuits. When the lock or unlock switch is pressed, the corresponding voltage signal is routed to ground, signalling the SJB to lock or unlock the doors. The door lock control switches have a dedicated ground circuit.







This pinpoint test is intended to diagnose the following:



- Wiring, terminals or connectors
- Door lock control switch
- SJB

PINPOINT TEST F: THE DOOR LOCK SWITCHES OPERATE ONLY ONE WAY - FUSION

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
F1 RETRIEVE THE RECORDED SJB DTCs FROM THE SELF-TEST	
• Check for recorded SJB DTCs from the self-test. • **Are any DTCs recorded?**	**Yes** For DTC B2A25, GO to Pinpoint Test H . For all other SJB DTCs, REFER to DTC Charts in this section. **No** GO to F2 .
F2 VERIFY THE OPERATION OF BOTH DOOR LOCK CONTROL SWITCHES	
• Ignition OFF. • Press the lock and unlock button of both door lock control switches while observing the door lock operation. • **Do the door locks operate only one way from both switches?**	**Yes** GO to F4 . **No** GO to F3 .
F3 CHECK THE LOCK INPUT OR UNLOCK INPUT CIRCUIT FOR AN OPEN (SINGLE SWITCH INOPERATIVE)	
• Disconnect: Suspect Door Lock Control Switch . • Unlock the doors from the working door lock control switch. • Observe the door locks while connecting a fused jumper wire between the LH door lock control switch C505-1, circuit CPK19 (BU/GN), harness side and the LH door lock control switch C505-4, circuit GD126 (BK/WH), harness side; or between the RH door lock control switch C605-1, circuit CPK19 (BU/GN), harness side and the RH door lock control switch C605-4, circuit GD139 (BK/YE),	**Yes** INSTALL a new door lock control switch. REFER to Door Lock Control Switch in this section. TEST the system for normal operation. **No**

harness side.  N0062349 • Remove the jumper wire. • Observe the door locks while connecting a fused jumper wire between the LH door lock control switch C505-3, circuit CPK23 (YE/VT), harness side and the LH door lock control switch C505-4, circuit GD126 (BK/WH), harness side; or between the RH door lock control switch C605-3, circuit CPK23 (YE/VT), harness side and the RH door lock control switch C605-4, circuit GD139 (BK/YE), harness side.  N0072908 • **Do the doors lock and unlock with the jumper wire?**	REPAIR the input circuit in question. TEST the system for normal operation.
F4 CHECK THE LOCK INPUT OR THE UNLOCK INPUT CIRCUIT FOR AN OPEN (BOTH SWITCHES INOPERATIVE)	
• Disconnect: LH Door Lock Control Switch C505 . • Disconnect: SJB C2280c . • If the doors do not lock, measure the resistance between the SJB C2280c-17, circuit CPK19 (BU/GN), harness side and the LH door lock control switch C505-1, circuit CPK19 (BU/GN), harness side.  N0058781 • If the doors do not unlock, measure the resistance between the SJB C2280c-4, circuit CPK23 (YE/VT), harness side and the LH door lock control switch C505-3, circuit CPK23 (YE/VT), harness side.	**Yes** GO to F5 . **No** REPAIR the circuit in question. TEST the system for normal operation.

 • **Is the resistance less than 5 ohms?**	
F5 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

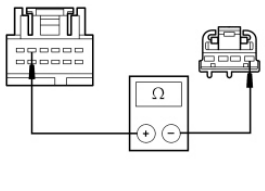
Pinpoint Test G: The Door Lock Switches Operate Only One Way - MKZ

Refer to Wiring Diagrams Cell 110 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Door Locks for schematic and connector information.

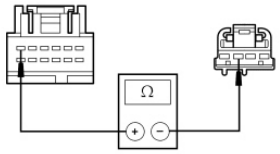
Normal Operation

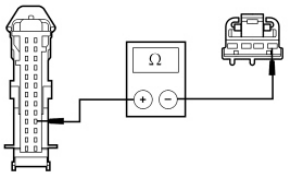
The Smart Junction Box (SJB) sends voltage signals to the passenger door lock control switch through the lock and unlock input circuits. When the lock or unlock switch is pressed, the corresponding voltage signal is routed to ground, signalling the SJB to lock or unlock the passenger doors and send a lock or unlock command to the Driver Door Module (DDM) over the Medium Speed Controller Area Network (MS-CAN).

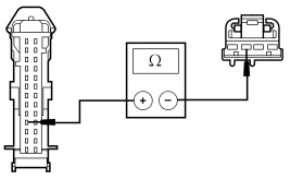
The DDM sends voltage signals to the driver door lockontrol switch through the lock and unlock input circuits. When the lock or unlock switch is pressed, the corresponding voltage signal is routed to ground, signalling the DDM to lock or unlock the driver door and send a lock or unlock command to the SJB over the MS-CAN .



The door lock control switches have a dedicated ground circuit.







This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Door lock control switch
- DDM
- SJB

PINPOINT TEST G: THE DOOR LOCK SWITCHES OPERATE ONLY ONE WAY - MKZ

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
G1 RETRIEVE THE RECORDED DDM AND SJB DTCs FROM BH THE SELF-TESTS	
• Check for recorded DDM and SJB DTCs from the self-tests. • **Are any DTCs recorded?**	**Yes** For DDM DTC B2574 or B2575 and SJB DTC B2A25, GO to Pinpoint Test H . For all other DTCs, REFER to DTC Charts in this section. **No** GO to G2 .
G2 CHECK THE SUSPECT DOOR LOCK CONTROL SWITCH FOR CORRECT OPERATION	
• Disconnect: Inoperative Door Lock Control Switch . • Carry out the door lock control switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Is the door lock control switch OK?**	**Yes** If the driver door lock control switch was the switch tested, GO to G3 . If the passenger door lock control switch was the switch tested, GO to G4 . **No** INSTALL a new door lock control switch. REFER to Door Lock Control Switch in this section. TEST the system for normal operation.
G3 CHECK THE DRIVER LOCK AND UNLOCK INPUT CIRCUITS FOR AN OPEN AT THE DDM	
• Ignition OFF. • Disconnect: DDM C568a . • If the doors do not lock, measure the resistance between the DDM C568a-5, circuit CPL42 (GY/YE), harness side and the LH door lock control switch C505-1, circuit CPL42 (GY/YE), harness side.  N0094426 • If the doors do not unlock, measure the resistance	**Yes** GO to G5 . **No** REPAIR the circuit in question for an open. TEST the system for normal operation.

between the DDM C568a-6, circuit CPL43 (VT/GY), harness side and the LH door lock control switch C505-3, circuit CPL43 (VT/GY), harness side.  N0094427 • **Are the resistances less than 5 ohms?**	
G4 CHECK THE PASSENGER LOCK AND UNLOCK INPUT CIRCUITS FOR AN OPEN AT THE SJB	
• Ignition OFF. • Disconnect: SJB C2280c . • If the doors do not lock, measure the resistance between the SJB C2280c-17, circuit CPK19 (BU/GN), harness side and the RH door lock control switch C605-1, circuit CPK19 (BU/GN), harness side.  N0058781 • If the doors do not unlock, measure the resistance between the SJB C2280c-4, circuit CPK23 (YE/VT), harness side and the RH door lock control switch C605-3, circuit CPK23 (YE/VT), harness side.  N0058782 • **Are the resistances less than 5 ohms?**	**Yes** GO to G6 . **No** REPAIR the circuit in question. TEST the system for normal operation.
G5 CHECK FOR CORRECT DDM OPERATION	
• Disconnect all the DDM connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins	**Yes** INSTALL a new DDM . REFER to Driver Door Module (DDM) in this section. TEST the system for normal operation.

• Connect all the DDM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.
G6 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test H: DTC B2A25, B2574, Or B2575

Refer to Wiring Diagrams Cell 110 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Power Door Locks for schematic and connector information.

Normal Operation - MKZ

The Smart Junction Box (SJB) sends voltage signals to the passenger door lock control switch through the lock and unlock input circuits. When the lock or unlock switch is pressed, the corresponding voltage signal is routed to ground, signalling the SJB to lock or unlock the passenger doors and send a lock or unlock command to the Driver Door Module (DDM) over the Medium Speed Controller Area Network (MS-CAN).

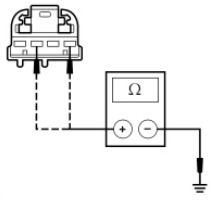
The DDM sends voltage signals to the driver door lock control switch through the lock and unlock input circuits. When the lock or unlock switch is pressed, the corresponding voltage signal is routed to ground, signalling the DDM to lock or unlock the driver door and send a lock or unlock command to the SJB over the MS-CAN .

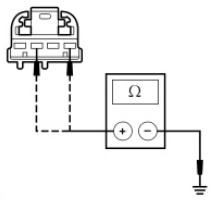
The door lock control switches have a dedicated ground circuit.

Fusion

The SJB sends voltage signals to both door lock control switches through the lock and unlock input circuits. When the lock or unlock switch is pressed, the corresponding voltage signal is routed to ground, signalling the SJB to lock or unlock the doors. The door lock control switches have a dedicated ground circuit.

- DTC B2574 (Drivers Door LOCK Switch Short to Ground) - a continuous and on-demand DTC that sets when the DDM detects a short to ground on the lock input circuit. This code will also set if the driver door lock control switch is pressed for longer than 2 minutes.
- DTC B2575 (Drivers Door UNLOCK Switch Short to Ground) - a continuous and on-demand DTC that sets when the DDM detects a short to ground on the unlock circuit. This code will also set if the driver door lock control switch is pressed for longer than 2 minutes.
- DTC B2A25 (Trim Panel Lock Switch Circuit Failure) - an on-demand DTC that sets when the SJB detects a short to ground from the lock or unlock request input circuits. This DTC may also set if either of the door lock control switches are pressed for longer than 2 minutes.





This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Door lock control switch
- DDM
- SJB

PINPOINT TEST H: DTC B2A25, B2574, OR B2575

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
H1 CHECK THE RECORDED SJB DTCs FROM THE SELST	
• Check the recorded results from the SJB self-test. • **Is DTC B2A25 present?**	**Yes** GO to H2 . **No** For DTCs B2574 or B2575, GO to H5 .
H2 CHECK THE RH DOOR LOCK CONTROL SWITCH	
• Disconnect: RH Door Lock Control Switch C605 . • Repeat the SJB self-test. • **Is DTC B2A25 retrieved again?**	**Yes** For Fusion and Milan, LEAVE the switch disconnected. GO to H3 . For MKZ, LEAVE the switch disconnected. GO to H4 . **No** INSTALL a new RH door lock control switch. REFER to Door Lock Control Switch in this section. TEST the system for normal operation.
H3 CHECK THE LH DOOR LOCK CONTROL SWITCH - FUSION	
• Disconnect: LH Door Lock Control Switch C505 . • Repeat the SJB self-test. • **Is DTC B2A25 retrieved again?**	**Yes** LEAVE the switch disconnected. GO to H4 . **No** INSTALL a new LH door lock control switch. REFER to Door Lock Control Switch in this section.EST the system for normal operation.
H4 CHECK THE SJB LOCK INPUT CIRCUIT OR THE UNLOCK INPUT CIRCUIT FOR A SHORT TO GROUND	

• Ignition OFF. • Disconnect: SJB C2280c . • Measure the resistance between the RH door lock control switch C605-1, circuit CPK19 (BU/GN), harness side and ground; and between the RH door lock control switch C605-3, circuit CPK23 (YE/VT), harness side and ground.  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to H8 . **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.
H5 CHECK THE LH DOOR LOCK CONTROL SWITCH - MKZ	
• Disconnect: LH Door Lock Control Switch C505 . • Repeat the DDM self-test. • **Is DTC B2574 or B2575 retrieved?**	**Yes** LEAVE the switch disconnected. GO to H6 . **No** INSTALL a new LH door lock control switch. REFER to Door Lock Control Switch in this section. TEST the system for normal operation.
H6 CHECK THE DDM LOCK INPUT CIRCUIT OR THE UNLOCK INPUT CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Disconnect: DDM C568a . • Measure the resistance between the LH door lock control switch C505-1, circuit CPL42 (GY/YE), harness side and ground; and between the LH door lock control switch C505-3, circuit CPL43 (VT/GY), harness side and ground.  • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to H7 . **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.
H7 CHECK FOR CORRECT DDM OPERATION	
• Disconnect all the DDM connectors. • Check for:	**Yes** INSTALL a new DDM . REFER to Driver Door Module (DDM) in this

♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the DDM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	section. TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.
H8 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test I: The Luggage Compartment Lid Release Is Inoperative/Does Not Operate Correctly

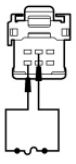
Refer to Wiring Diagrams Cell 113 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Luggage Compartment Lid Release for schematic and connector information.

Normal Operation

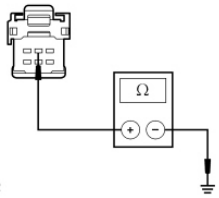
When the Smart Junction Box (SJB) receives an open request from the luggage compartment lid switch, a Remote Keyless Entry (RKE) transmitter or the keyless entry keypad (if equipped), the SJB supplies voltage to the luggage compartment lid latch which releases the latch. The luggage compartment lid latch has a dedicated ground circuit.

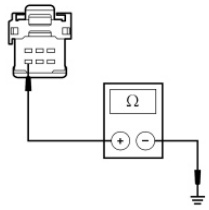
The SJB sends a voltage signal to the luggage compartment lid release switch through the input circuit. When the luggage compartment lid release switch is pressed, the voltage signal is routed to ground, signalling the SJB to release the luggage compartment lid. The luggage compartment lid release switch has a dedicated ground circuit.

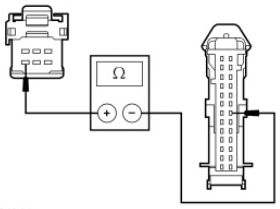
- DTC B2667 (Liftglass Release Switch Circuit Failure) - an on-demand DTC that sets if the SJB detects a short to ground on the luggage compartment lid release switch input circuit. This code also sets if the luggage compartment lid release request is detected for longer than 2 minutes.



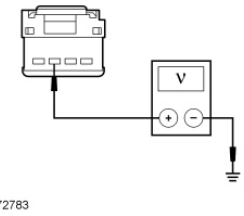
This pinpoint test is intended to diagnose the following:

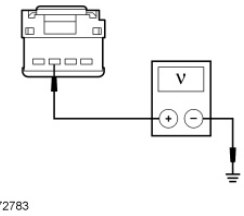




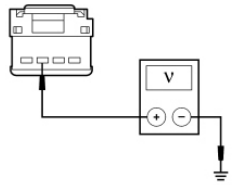


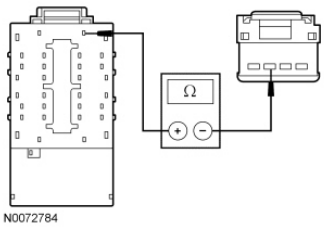
- Wiring, terminals or connectors
- Luggage compartment lid release switch
- Luggage compartment lid latch
- SJB

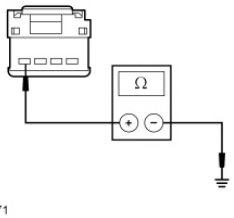




PINPOINT TEST I: THE LUGGAGE COMPARTMENT LID RELEASE IS INOPERATIVE/DOES NOT OPERATE CORRECTLY







NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed will result in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
I1 CHECK THE DOOR LOCK OPERATION	
• Lock and unlock the doors using a door lock control switch. • **Do the passenger door locks operate?**	**Yes** GO to I2 . **No** For Fusion, GO to Pinpoint Test A . For MKZ, GO to Pinpoint Test C .
I2 CARRY OUT THE SJB LUGGAGE COMPARTMENT LID RELEASE ACTIVE COMMAND USING THE SCAN TOOL	
• Enter the following diagnostic mode on the scan tool: SJB DataLogger . • Select the SJB PID (LIFTGLASS_R) and active command the luggage compartment lid to release. • **Does the luggage compartment lid release?**	**Yes** GO to I3 . **No** GO to I7 .
I3 CHECK THE LUGGAGE COMPARTMENT LID RELEASE SWITCH	
• Disconnect: Luggage Compartment Lid Release Switch C2269 . • Connect a fused jumper wire between the luggage compartment lid release switch C2269-6, circuit CPL60 (BN/YE), harness side and the luggage compartment lid release switch C2269-2, circuit GD116 (BK/VT), harness side.  N0084043 • **Does the luggage compartment lid release?**	**Yes** INSTALL a new luggage compartment lid release switch. REFER to Luggage Compartment Lid Release Switch in this section. TEST the system for normal operation. **No** GO to I4 .
I4 CHECK THE LUGGAGE COMPARTMENT LID RELEASE GROUND CIRCUIT FOR AN OPEN	

• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the luggage compartment lid release switch C2269-2, circuit GD116 (BK/VT), harness side and ground.  N0084042 • **Is the resistance less than 5 ohms?**	**Yes** GO to I5 . **No** REPAIR circuit GD116 (BK/VT) for an open. TEST the system for normal operation.
I5 CHECK THE LUGGAGE COMPARTMENT LID RELEASE SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND	
• Disconnect: SJB C2280c . • Measure the resistance between the luggage compartment lid release switch C2269-6, circuit CPL60 (BN/YE), harness side and ground.  N0084041 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I6 . **No** REPAIR circuit CPL60 (BN/YE) for a short to ground. CLEAR the DTCs. REPEAT the self-test.
I6 CHECK THE LUGGAGE COMPARTMENT LID RELEASE INPUT CIRCUIT FOR AN OPEN	
• Measure the resistance between the luggage compartment lid switch C2269-6, circuit CPL60 (BN/YE), harness side and the SJB C2280c-20, circuit CPL60 (BN/YE), harness side.  N0084044 • **Is the resistance less than 5 ohms?**	**Yes** GO to I12 . **No** REPAIR circuit CPL60 (BN/YE) for an open. TEST the system for normal operation.
I7 CHECK THE LUGGAGE COMPARTMENT LID RELEASE OUTPUT CIRCUIT FOR VOLTAGE	

• Disconnect: Luggage Compartment Lid Latch C429 . • Ignition ON. • **NOTE:** Do not operate the luggage compartment lid release while carrying out this test. • Measure the voltage between the luggage compartment lid latch C429-3, circuit CPL59 (BN/BU), harness side and ground.  N0072783 • **Is any voltage present?**	**Yes** GO to I8 . **No** GO to I9 .
I8 CHECK THE LUGGAGE COMPARTMENT LID RELEASE OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: SJB C2280d . • Ignition ON. • Measure the voltage between the luggage compartment lid latch C429-3, circuit CPL59 (BN/BU), harness side and ground.  N0072783 • **Is any voltage present?**	**Yes** REPAIR circuit CPL59 (BN/BU) for a short to voltage. TEST the system for normal operation. **No** GO to I12 .
I9 CHECK FOR VOLTAGE TO THE LUGGAGE COMPARTMENT LID RELEASE SOLENOID	
• Unlock the doors with a door lock control switch. • **NOTE:** The SJB only supplies voltage to the luggage compartment lid release solenoid momentarily. It is important to monitor the meter while pressing the luggage compartment lid release switch. • While pressing the luggage compartment lid release switch, measure the voltage between the luggage compartment lid latch C429-3, circuit CPL59 (BN/BU), harness side and ground.	**Yes** GO to I11 . **No** GO to I10 .

 N0072783 • **Is the voltage greater than 10 volts?**	
I10 CHECK THE LUGGAGE COMPARTMENT LID RELEASE OUTPUT CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: SJB C2280d . • Measure the resistance between the SJB C2280d-31, circuit CPL59 (BN/BU), harness side and the luggage compartment lid latch C429-3, circuit CPL59 (BN/BU), harness side.  N0072784 • **Is the resistance less than 5 ohms?**	**Yes** GO to I12 . **No** REPAIR circuit CPL59 (BN/BU) for an open. TEST the system for normal operation.
I11 CHECK THE LUGGAGE COMPARTMENT LID LATCH GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Measure the resistance between the luggage compartment lid latch C429-4, circuit GD171 (BK/GY), harness side and ground.  N0068971 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new luggage compartment lid latch. REFER to Luggage Compartment Lid Latch in this section. TEST the system for normal operation. **No** REPAIR circuit GD171 (BK/GY) for an open. TEST the system for normal operation.
I12 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly

• Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test J: The Doors Do Not Lock/Unlock Using The Keyless Entry Keypad

Refer to Wiring Diagrams Cell 117 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Remote Keyless Entry and Alarm for schematic and connector information.

Normal Operation

The Smart Junction Box (SJB) monitors for a ground signal on the keyless entry keypad signal input circuits. When an individual keypad button is pressed, an individual or combination of the input circuits is routed to ground. The SJB then determines which button was pressed based on which circuit(s) are grounded. The keypad has a dedicated ground circuit. Once the SJB determines that the 5-digit personal entry code, or the factory set 5-digit entry code has been entered on the keypad, the SJB then energizes the driver door unlock relay to unlock the driver door.

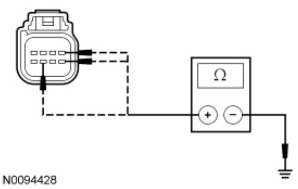
To unlock all the doors, the 3/4 button must be pressed within 5 seconds of the 5-digit code being entered.

To release the luggage compartment lid, the 5/6 button must be pressed within 5 seconds of the 5-digit code being entered.

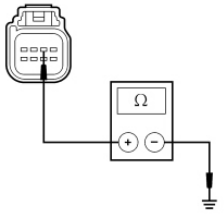
To lock all the doors, the 5-digit code does not need to be entered. Press the 7/8 and 9/0 buttons at the same time.

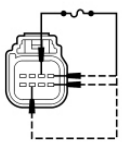
- DTC B2A26 (Keypad Switch Circuit Failure) - an on-demand DTC that sets when the SJB detects a short to ground on any of the keyless entry keypad input circuits.

This pinpoint test is intended to diagnose the following:



- Wiring, terminals or connectors
- Keyless entry keypad
- SJB



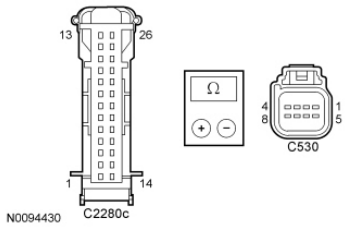


PINPOINT TEST J: THE DOORS DO NOT LOCK/UNLOCK USING THE KEYLESS ENTRY KEYPAD

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed will result in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
J1 CHECK THE SJB KEYCODE PID	
• Enter the following diagnostic mode on the scan tool: SJB DataLogger . • Observe the SJB PID (KEYCODE). Read and record the 5-digit factory set entry code.	**Yes** The system is operating as designed. INFORM the customer of the correct system operation.



• Enter the 5-digit factory set entry code on the keyless entry keypad, then press the 3/4 button. • **Do the doors unlock?**	**No** GO to J2 .
J2 RETRIEVE THE RECORDED SJB DTCs FROM THE SELF-TEST	
• Check for recorded SJB DTCs from the self-test. • **Is DTC B2A26 recorded?**	**Yes** GO to J3 . **No** GO to J5 .
J3 REPEAT THE SJB SELF-TEST	
• Disconnect: Keyless Entry Keypad C530 . • Clear the DTCs, then repeat the SJB self-test. • **Is DTC B2A26 recorded?**	**Yes** GO to J4 . **No** INSTALL a new keyless entry keypad. REFER to Keyless Entry Keypad in this section. CLEAR the DTCs. REPEAT the self-test.
J4 CHECK THE KEYPAD INPUT CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Disconnect: SJB C2280c . • Measure the resistance between the keypad, harness side and ground as follows: **Keypad Connector-Pin** / **Circuit** C530-7 — CPK29 (GY/BU) C530-5 — CPK30 (VT/GN) C530-1 — CPK31 (YE/GN)  N0094428 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to J10 . **No** REPAIR the circuit in question. CLEAR the DTCs. REPEAT the self-test.
J5 CHECK THE SJB KEY_PAD PID	
• Enter the following diagnostic mode on the scan tool: SJB DataLogger . • Press each keyless entry keypad button while observing the SJB PID (KEY_PAD). • **Does the PID display the correct values?**	**Yes** GO to J10 . **No** GO to J6 .

J6 CHECK THE KEYPAD GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Negative Battery Cable . • Disconnect: Keyless Entry Keypad C530 . • Measure the resistance between the keyless entry keypad C530-2, circuit GD126 (BK/WH), harness side and ground.  N0026472 • **Is the resistance less than 5 ohms?**	**Yes** GO to J7 . **No** REPAIR the circuit. TEST the system for normal operation.
J7 CHECK THE KEYLESS ENTRY KEYPAD	
• Connect: Negative Battery Cable . • Connect a fused jumper wire between the keyless entry keypad harness side, while monitoring the SJB PID (KEY_PAD) as follows: **Keyless Entry Keypad Connector-Pin/ Circuit** / **Keyless Entry Keypad Connector-Pin/ Circuit** / **SJB PID (KEY_PAD) Value** C530-7 CPK29 (GY/BU) / C530-2 GD126 (BK/WH) / 1/2 C530-5 CPK30 (VT/GN) / C530-2 GD126 (BK/WH) / 7/8 C530-1 CPK31 (YE/GN) / C530-2 GD126 (BK/WH) / 9/0  N0094429 • **Does the PID display the correct values?**	**Yes** INSTALL a new keyless entry keypad. REFER to Keyless Entry Keypad in this section. **No** GO to J8 .

J8 CHECK THE KEYPAD INPUT CIRCUITS FOR AN OPEN

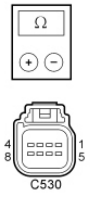
- Disconnect: SJB C2280c .
- Measure the resistance between the SJB , harness side and the keyless entry keypad, harness side as follows:

SJB Connector-Pin	Circuit	Keyless Entry Keypad Connector-Pin
C2280c-5	CPK29 (GY/BU)	C530-7
C2280c-18	CPK30 (VT/GN)	C530-5
C2280c-6	CPK31 (YE/GN)	C530-1

- **Are the resistances less than 5 ohms?**

Yes
GO to J9 .

No
REPAIR the circuit in question for an open. TEST the system for normal operation.



J9 CHECK THE KEYPAD INPUT CIRCUITS FOR A SHORT TO EACH OTHER

- Measure the resistance between the keypad, harness side as follows:

Keypad Connector-Pin	Circuits	Keypad Connector-Pin
C530-7	CPK29 (GY/BU) and CPK30 (VT/GN)	C530-5
C530-7	CPK29 (GY/BU) and CPK31 (YE/GN)	C530-1
C530-5	CPK30 (VT/GN) and CPK31 (YE/GN)	C530-1

Yes
GO to J10 .

No
REPAIR the circuit in question. TEST the system for normal operation.

 • **Are the resistances greater than 10,000 ohms?**	
J10 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

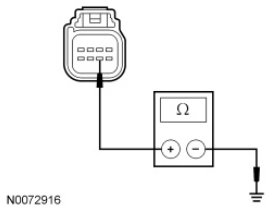
Pinpoint Test K: The Keyless Entry Keypad Illumination Is Inoperative/Does Not Operate Correctly

Refer to Wiring Diagrams Cell 117 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Remote Keyless Entry and Alarm for schematic and connector information.

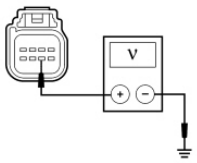
Normal Operation

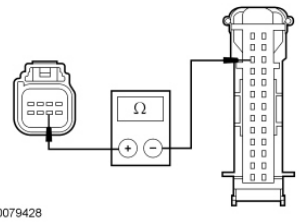
When any keypad button is pressed the Smart Junction Box (SJB) sends voltage to the keyless entry keypad LEDs on the illumination circuit to assist the driver in entering an access code at night. The keyless entry keypad has a separate ground circuit for the LEDs.

- DTC B1624 (Lamp Keypad Output Open Circuit) - a continuous and on-demand DTC that sets when the SJB detects the keyless entry keypad illumination output or ground circuit is open, or the illumination output circuit is shorted to voltage.
- DTC B1626 (Lamp Keypad Output Short Circuit To Ground) - an on-demand DTC that sets when the SJB detects the keyless entry keypad illumination output circuit is shorted to ground.

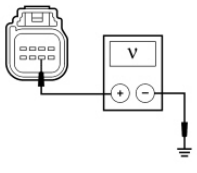


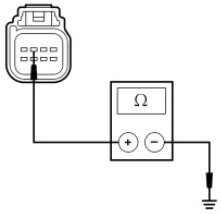
This pinpoint test is intended to diagnose the following:





- Wiring, terminals or connectors
- Keyless entry keypad
- SJB





PINPOINT TEST K: THE KEYLESS ENTRY KEYPAD ILLUMINATION IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

NOTICE: **Use the correct probapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed will result in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take
K1 CHECK THE KEYLESS ENTRY KEYPAD OPERATION	
• Press the 7/8 and 9/0 buttons simultaneously on the keyless entry keypad. • **Do all of the doors lock?**	**Yes** GO to K2 . **No** GO to Pinpoint Test J .
K2 CHECK THE RECORDED SJB DTCs FROM THE SELF-TEST	
• Check the recorded results from the SJB self-test. • **Is DTC B1626 present?**	**Yes** GO to K3 . **No** GO to K5 .
K3 CHECK THE KEYLESS ENTRY KEYPAD FOR A SHORT TO GROUND	
• Disconnect: Keyless Entry Keypad C530 . • Clear the DTCs, then repeat the SJB self-test. • **Is DTC B1626 recorded?**	**Yes** GO to K4 . **No** INSTALL a new keyless entry keypad. REFER to Keyless Entry Keypad in this section. TEST the system for normal operation.
K4 CHECK THE KEYPAD ILLUMINATION OUTPUT CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Disconnect: SJB C2280c . • Measure the resistance between the keyless entry keypad C530-6, circuit CPK28 (WH/GN), harness side and ground.  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to K11 . **No** REPAIR circuit CPK28 (WH/GN) for a short to ground. CLEAR the DTCs. REPEAT the self-test.
K5 CHECK THE KEYLESS ENTRY KEYPAD ILLUMINATION	
• Ignition OFF. • Check the keyless entry keypad illumination. • **Is the keyless entry keypad illumination always on?**	**Yes** GO to K6 . **No** GO to K7 .

K6 CHECK THE KEYPAD ILLUMINATION OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE	
• Disconnect: SJB C2280c . • Ignition ON. • Observe the keypad illumination. • **Is the keypad still illuminated?**	**Yes** REPAIR circuit CPK28 (WH/GN) for a short to voltage. TEST the system for normal operation. **No** GO to K11 .
K7 CHECK THE KEYPAD ILLUMINATION OUTPUT CIRCUIT FOR REFERENCE VOLTAGE	
NOTE: The SJB sends out a constant reference voltage on circuit CPK28 (WH/GN) for its own circuit diagnostics. This voltage is 10 volts +/- 1 volt. • Disconnect: Keyless Entry Keypad C530 . • Measure the voltage between the keyless entry keypad C530-6, circuit CPK28 (WH/GN), harness side and ground.  N0062274 • **Are 10 volts (+/- 1 volt) present?**	**Yes** GO to K9 . **No** GO to K8 .
K8 CHECK THE KEYPAD ILLUMINATION OUTPUT CIRCUIT FOR AN OPEN	
• Disconnect: SJB C2280c . • Measure the resistance between the keyless entry keypad C530-6, circuit CPK28 (WH/GN), harness side and the SJB C2280c-11, circuit CPK28 (WH/GN), harness side.  N0079428 • **Is the resistance less than 5 ohms?**	**Yes** GO to K11 . **No** REPAIR circuit CPK28 (WH/GN) for an open. TEST the system for normal operation.
K9 CHECK FOR SJB OUTPUT	

• Measure the voltage between the keyless entry keypad C530-6, circuit CPK28 (WH/GN), harness side and ground while active commanding the SJB PID (KY_PAD_LMP) ON.  N0062274 • **Is the voltage greater than 11 volts?**	**Yes** GO to K10 . **No** GO to K11 .
K10 CHECK THE KEYPAD ILLUMINATION GROUND CIRCUIT FOR AN OPEN	
• Disconnect: Negative Battery Cable . • Measure the resistance between the keyless entry keypad C530-3, circuit GD126 (BK/WH), harness side and ground.  N0026471 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new keyless entry keypad. REFER to Keyless Entry Keypad in this section. TEST the system for normal operation. **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.
K11 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test L: The Remote Keyless Entry (RKE) Transmitter Is Inoperative

Normal Operation

Remote locking and unlocking of the doors, releasing the luggage compartment lid, and activating the panic alarm is accomplished by the Smart Junction Box (SJB) receiving a command message from the RKE Integrated Keyhead Transmitter (IKT). The IKTs and SJB also utilize a rolling code to prevent the code from being "captured" by a code grabber. The system advances the counter in the RKE transmitter and SJB every

time an IKT button is pressed.

- DTC B1139 (Invalid Transmitter Identification Code) - a continuous DTC that sets when the SJB detects an invalid Transmitter Identification Code (TIC) from an IKT .
- DTC B2425 (Remote Keyless Entry Out of Synchronization) - a continuous DTC that sets when the SJB detects the rolling counter received from an RKE transmitter is 1,024 times greater than the rolling counter stored in the module.
- B109E:86 (Remote Keyless Entry: Signal Invalid) - a continuous DTC that sets when the Instrument Panel Cluster (IPC) detects an invalid TIC from an IKT .

This pinpoint test is intended to diagnose the following:

- IKT
- IKT battery
- IKT button pressed a substantial amount of times while outside the range of the vehicle
- IKT programming
- SJB

PINPOINT TEST L: THE RKE TRANSMITTER IS INOPERATIVE

NOTE: All IKT transmitters mu be present to begin diagnosis of the RKE system.

NOTE: Aftermarket or dealer-installed systems may adversely affect the RKE system operation. These systems should be disconnected before diagnosing any RKE concerns.

Test Step	Result / Action to Take
L1 CHECK FOR THE CORRECT RKE TRANSMITTERS	
• **NOTE:** Make sure the IKTs are those provided with the OEM system and not from an aftermarket system, or a dealer-installed system that may have been installed on the vehicle. • Check that the correct IKTs are used with the vehicle. Compare the IKTs with the one shown in the Description and Operation portion of this section. • **Are all the correct IKTs present?**	**Yes** GO to L2 . **No** The system cannot be tested without the correct IKTs . INFORM the customer that all the correct IKTs must be present to proceed with diagnosis of the system.
L2 CHECK THE RECORDED SJB AND IPC DTCs FROM THE SELF-TEST	
• Check the recorded results from the SJB and IPC self-test. • **Is DTC B2425 or DTC B109E:86 recorded?**	**Yes** For DTC B2425, GO to L3 . For DTC B109E:86, GO to Pinpoint Test R . **No** GO to L4 .
L3 RESYNCHRONIZE THE INOPERATIVE IKT	

• Ignition OFF. • Ignition ON. • Leave the IKT key in the ON position for a minimum of 6 seconds. • Ignition OFF. • Press any button on the IKT . • **Does the IKT operate?**	**Yes** The system is OK. CLEAR the DTCs. REPEAT the self-test. **No** GO to L4 .
L4 MAKE SURE THE RKE TRANSMITTER SIGNAL IS BEING RECEIVED	
• Enter the following diagnostic mode on the scan tool: SJB DataLogger . • Press lock and unlock on the IKT while observing the SJB PIDs (TIC_LAST) and (TNSMT_CMD). • **Does the TIC and RKE command show up on the scan tool screen when a button is pressed?**	**Yes** GO to L5 . **No** GO to L6 .
L5 CHECK IF THE RKE TRANSMITTERS ARE PROGRAMMED	
• Enter the following diagnostic mode on the scan tool: SJB DataLogger . • Press a button on the IKT and compare the SJB PID (TIC_LAST) with the PIDs (TIC_1, 2, 3, 4, 7, 8, 9, or 10). • **Does the TIC displayed match any of the TICs stored in memory?**	**Yes** GO to L8 . **No** PROGRAM the inoperative IKT individually or PROGRAM all the IKTs . REFER to Section 419-01B for the programming procedures. If all the IKTs are to be programmed, INFORM the customer that any IKTs not present need to be programmed. TEST the system for normal operation.
L6 CHECK THE IKT BATTERY	
• Using a thin coin, open the IKT . • Do not clean off any grease from the battery terminals on the back surface of the circuit board. • Verify the correct battery is used (CR2032). • Remove the IKT battery and measure the voltage. • **Is the voltage greater than 2.5 volts?**	**Yes** GO to L7 . **No** INSTALL a new battery (make sure the battery is seated correctly). DO NOT reprogram the IKT (weak or dead batteries do not erase TICs from memory). TEST the system for normal operation.
L7 CHECK FOR NORMAL OPERATION WITH A KNOWN GOOD IKT	
• Enter the following diagnostic mode on the scan tool: SJB DataLogger . • Use the customer's second IKT , or a known good RKE transmitter that is correct for the vehicle, press a button on the IKT while observing the SJB PID (TIC_LAST). • **Does the TIC show up on the scan tool when a button is pressed?**	**Yes** REPLACE the inoperative IKT and PROGRAM the inoperative IKT individually or PROGRAM all the IKTs . REFER to Section 419-01B for the programming procedures. If all the IKTs are to be programmed, INFORM the customer that any IKTs not present need to be programmed. TEST the system for normal operation.

	No GO to L8 .
L8 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test M: An Individual Button/Feature Is Inoperative From The Remote Keyless Entry (RKE) Transmitter

Normal Operation

When any Integrated Keyhead Transmitter (IKT) button is pressed, the SJB receives and processes the command to provide the appropriate output.

This pinpoint test is intended to diagnose the following:

- Door locks
- Horn system
- Luggage compartment lid release
- Turn signal system
- IKT

PINPOINT TEST M: AN INDIVIDUAL BUTTON/FEATURE IS INOPERATIVE FROM THE RKE TRANSMITTER

NOTE: The panic feature will only operate when the key is in the OFF or LOCK positions.

Test Step	Result / Action to Take
M1 VERIFY THE DOOR LOCK OPERATION	
• Press the lock and unlock button on the driver door lock control switch while observing the door lock operation. • **Do the door locks operate correctly?**	**Yes** GO to M2 . **No** GO to Symptom Chart - Electrical .
M2 VERIFY THE HORN OPERATION	

• Enter the following diagnostic mode on the scan tool: SJB DataLogger . • Select the SJB PID (HORN) and active command the horn on. • **Does the horn sound when commanded on?**	**Yes** GO to M3 . **No** REFER to Section 413-06 .
M3 VERIFY THE HAZARD LAMP OPERATION	
• Place the hazard switch in the ON position. • **Do the hazard lamps operate correctly?**	**Yes** GO to M4 . **No** REFER to Section 417-01 .
M4 VERIFY THE LUGGAGE COMPARTMENT LID RELEASE OPERATION	
• Press the luggage compartment lid release button, located next to the headlamp switch. • **Does the luggage compartment lid release?**	**Yes** REPLACE the inoperative IKT and PROGRAM the IKT individually or PROGRAM all the IKTs . REFER to Section 419-01B for the programming procedures. If all the IKTs are to be programmed, INFORM the customer that any IKTs not present need to be programmed. TEST the system for normal operation. **No** GO to Symptom Chart - Electrical .

Pinpoint Test N: The Remote Keyless Entry (RKE) Transmitter Has Poor Range Performance

Normal Operation

The RKE transmitter sends a radio signal to the Smart Junction Box (SJB) based on the user selected RKE transmitter button. The SJB then carries out the selected action.

This pinpoint test is intended to diagnose the following:

- IKT
- IKT battery
- Aftermarket systems
- High power devices
- TV/radio transmission towers
- SJB

PINPOINT TEST N: THE RKE TRANSMITTER HAS POOR RANGE PERFORMANCE

NOTE: All RKE transmitters must be present to begin diagnosis of the RKE system.

NOTE: Aftermarket or dealer-installed systems may adversely affect RKE system operation. These systems should be disconnected before diagnosing any RKE concerns.

Test Step	Result / Action to Take
N1 CHECK FOR THE CORRECT RKE TRANSMITTERS	
• **NOTE:** Make sure the RKE transmitters are those provided with the OEM system and not from an aftermarket system or a dealer-installed system. • Check that the correct RKE transmitters are used with the vehicle. • **Are all the correct RKE transmitters present?**	**Yes** GO to N2 . **No** The system cannot be tested without the correct RKE transmitters. INFORM the customer that all the correct RKE transmitters must be present to proceed with diagnosis of the system.
N2 CHECK ALL THE RKE TRANSMITTERS FOR POOR RANGE PERFORMANCE	
NOTE: The 10 m (33 ft) measurement of range is not the standard but is a guideline that clearly indicates a vehicle is experiencing normal range performance. • Check all the RKE transmitters for poor range performance (less than 10 m [33 ft]). • **Do all RKE transmitters experience poor range?**	**Yes** GO to N4 . **No** GO to N3 .
N3 CHECK THE IKT BATTERY	
• Using a thin coin, open the IKT . • Do not clean off any grease from the battery terminals on the back surface of the circuit board. • Verify the correct battery is used (CR2032). • Remove the IKT battery and measure the voltage. • **Is the voltage greater than 2.5 volts?**	**Yes** REPLACE the inoperative IKT and PROGRAM the IKT individually or PROGRAM all the IKTs . REFER to Section 419-01B for the programming procedures. If all the IKTs are to be programmed, INFORM the customer that any IKTs not present need to be programmed. TEST the system for normal operation. **No** INSTALL a new battery (make sure the battery is seated correctly). DO NOT reprogram the IKT (weak or dead batteries do not erase Transmitter Identification Codes (TICs) from memory). TEST the system for normal operation.
N4 CHECK THE LOCATION OF THE VEHICLE AND THE APPROACH ANGLES AROUND THE VEHICLE	
• Make sure the poor performance is consistent in nature and is not from one approaching angle. • The RKE transmitter range performance may be degraded in certain locations. For	**Yes** GO to N5 . **No** The system is operating correctly at this time. TEST the system for normal operation.

example, if the vehicle is within 0.8 km (0.5 miles) of high-power devices or radio/TV towers, the operating distance of the RKE transmitters may be reduced. • **Is the poor range performance consistent around the vehicle?**	
N5 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test O: The Autolock Does Not Operate Correctly

Normal Operation

The Smart Junction Box (SJB) energizes the lock relay based upon input from the ajar switches, the Transmission Range (TR) sensor, and the vehicle speed signal. The SJB locks the doors when the following conditions are met:

- All the doors are closed
- The ignition switch is in the ON position
- The vehicle is shifted into any gear putting the vehicle in motion
- The vehicle attains a speed greater than 20 km/h (12 mph)

NOTE: The autolock feature is not available on vehicles equipped with a manual transaxle.

This pinpoint test is intended to diagnose the following:

- Ignition switch
- Door ajar switches
- Vehicle speed signal
- TR sensor
- SJB

PINPOINT TEST O: THE AUTOLOCK DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
O1 CHECK THE AUTOLOCKS CONFIGURATION	
• Check to see if the autolocks are enabled. Refer	**Yes** GO to O2 .

to Autolock and Auto-Unlock Programming in this section. • **Are the autolocks enabled?**	**No** ENABLE the autolocks. REFER to Autolock and Auto-Unlock Programming in this section. TEST the system for normal operation.
O2 CHECK THE COURTESY LAMP OPERATION	
• Open and close each door while observing the courtesy lamp operation. • **Do the courtesy lamps operate correctly?**	**Yes** GO to O3 . **No** REFER to Section 417-02 .
O3 CHECK THE SJB IGNITION STATUS PID	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: SJB DataLogger . • Monitor the SJB PID (IGN_R_ECU). • **Does the ignition status PID indicate ON?**	**Yes** GO to O4 . **No** REFER to Section 211-05 to continue diagnosis of the ignition switch.
O4 CHECK THE VEHICLE SPEED OPERATION	
• Check the operation of the speedometer. • **Does the speedometer operate correctly?**	**Yes** GO to O5 . **No** REFER to Section 413-01 .
O5 RETRIEVE THE RECORDED SJB DTCs FROM THE CONTINUOUS SELF-TESTS	
• Check for recorded SJB DTCs from the continuous self-tests. • **Is DTC U0155 recorded?**	**Yes** REFER to Section 418-00 . **No** GO to O6 .
O6 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test P: The Auto-Unlock Does Not Operate Correctly

Normal Operation

The Smart Junction Box (SJB) energizes the unlock relay based upon input from the ajar switches and the vehicle speed signal. The SJB unlocks the doors when the following conditions are met:

- The vehicle speed has exceeded 20 km/h (12 mph) then dropped to 0 km/h (0 mph) (vehicle stopped).
- The key is turned to the OFF or ACCY position.
- The LH front door is opened within 10 minutes of the key being turned to the OFF or ACCY position.

This pinpoint test is intended to diagnose the following:

- Door ajar switches
- Ignition switch
- Vehicle speed signal
- SJB

PINPOINT TEST P: THE AUTO-UNLOCK DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
P1 CHECK THE AUTO-UNLOCK CONFIGURATION	
• Check if the auto-unlock is enabled. Refer to Autolock and Auto-Unlock Programming in this section. • **Is auto-unlock enabled?**	**Yes** GO to P2 . **No** ENABLE auto-unlock. REFER to Autolock and Auto-Unlock Programming in this section. TEST the system for normal operation.
P2 CHECK THE COURTESY LAMP OPERATION	
• Open and close each door while observing the courtesy lamp operation. • **Do the courtesy lamps operate correctly?**	**Yes** GO to P3 . **No** REFER to Section 417-02 .
P3 CHECK THE SJB IGNITION STATUS PID	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: SJB DataLogger . • Monitor the SJB PID (IGN_R_ECU). • **Does the ignition status PID indicate ON?**	**Yes** GO to P4 . **No** REFER to Section 211-05 to continue diagnosis of the ignition switch.
P4 CHECK THE VEHICLE SPEED OPERATION	
• Check the operation of the speedometer. • **Does the speedometer operate correctly?**	**Yes** GO to P5 . **No** REFER to Section 413-01 .

P5 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test Q: The Smart Unlock Does Not Operate Correctly

Normal Operation

The Smart Junction Box (SJB) commands all doors to unlock based on input from the key-in-ignition switch and door ajar signal. The feature helps prevent the keys from being locked in the vehicle by unlocking the doors if the key is in the ignition and either front door is ajar.

The vehicle can still be locked with the key in the ignition, by using the manual lock rod, a key in the door lock cylinder, keyless entry keypad, or the LOCK button on an Integrated Keyhead Transmitter (IKT).

This pinpoint test is intended to diagnose the following:

- LH front door ajar switch
- RH front door ajar switch
- Key-in-ignition switch
- SJB

PINPOINT TEST Q: THE SMART UNLOCK DOES NOT OPERATE CORRECTLY

Test Step	Result / Action to Take
Q1 CHECK THE COURTESY LAMP OPERATION	
• Open and close each door while checking the courtesy lamp operation. • **Do the courtesy lamps operate correctly?**	**Yes** GO to Q2 . **No** REFER to Section 417-02 .
Q2 CHECK THE KEY-IN-IGNITION CHIME	
• Insert the key in the ignition switch. • Open the driver door. • **Does the key-in-ignition chime operate correctly?**	**Yes** GO to Q3 . **No** REFER to Section 413-01 .

Q3 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test R: B109E:51

Normal Operation

When an Integrated Keyhead Transmitter (IKT) key is programmed, the Remote Keyless Entry (RKE) Transmitter Identification Code (TIC) data from the key is received by the Instrument Panel Cluster (IPC). The IPC then sends the TIC data to the Smart Junction Box (SJB) over the Medium Speed Controller Area Network (MS-CAN). The SJB stores the TIC data in memory and sends an acknowledgement back to the IPC that the TIC data was successfully programmed.

- DTC B109E:51 (Remote Keyless Entry: Not Programmed) - a continuous DTC that sets when the IPC sends the RKE TIC data to the SJB over the MS-CAN , and it does not receive a response from the SJB that the TIC data has been stored.

This pinpoint test is intended to diagnose the following:

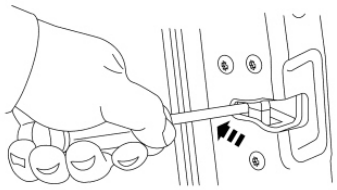
- IKT programming
- MS-CAN
- SJB

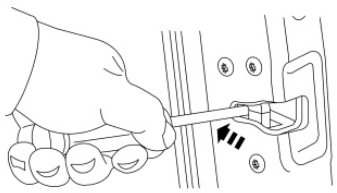
PINPOINT TEST R: DTC B109E:51

Test Step	Result / Action to Take
R1 CHECK FOR THE CORRECT RKE TRANSMITTERS	
• **NOTE:** Make sure the IKTs are those provided with the OEM system and not from an aftermarket system, or a dealer-installed system that may have been installed on the vehicle. • Check that the correct IKTs are used with the vehicle. • **Are all the correct IKTs present?**	**Yes** GO to R2 . **No** The system cannot be tested without the correct IKTs . INFORM the customer that all the correct IKTs must be present to proceed with diagnosis of the system.
R2 CHECK FOR COMMUNICATION WITH THE IPC AND SJB	

• Enter the following diagnostic mode on the scan tool: Network Test . • **Does the IPC or SJB fail the network test?**	**Yes** REFER to Section 418-00 . **No** GO to R3 .
R3 REPROGRAM THE IKT KEYS	
• Erase and program all of the IKT keys using the scan tool method. Refer to Section 419-01B . • Erase all IPC DTCs. • Enter the following diagnostic mode on the scan tool: IPC Self-Test . • **Is DTC B109E:51 retrieved again?**	**Yes** GO to R5 . **No** GO to R4 .
R4 CHECK THE OPERATION OF THE RKE TRANSMITTER	
• Press any button on the suspect IKT key. • **Does the RKE transmitter operate?**	**Yes** The system is operating normally. The concern may have been caused by an improperly programmed IKT key. **No** GO to Pinpoint Test L .
R5 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test S: Hard To Open/Close Door From Either Door Handle





Normal Operation

The door latch can be actuated from the interior or exterior door handle. When actuated, the door latch releases and allows the door to open. If the door latch or the door hinges have insufficient lubrication or if the striker or door are misaligned, it causes extra force to be used when opening or closing the door.

This pinpoint test is intended to diagnose the following:

- Door alignment
- Door hinges
- Striker adjustment
- Door latch

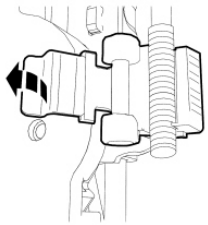
PINPOINT TEST S: HARD TO OPEN/CLOSE DOOR FROM EITHER DOOR HANDLE

Test Step	Result / Action to Take
S1 CHECK THE LATCH OPERATION FROM BOTH DOOR HANDLES	
• Open and close the door using both the interior and exterior door handles. • **Does the door open normally from one of the door handles?**	**Yes** If the door is difficult/does not open from the exterior door handle, GO to Pinpoint Test T . If the door is difficult/does not open from the interior door handle, GO to Pinpoint Test U . **No** If the door does not operate correctly from both door handles, GO to S2 .
S2 CHECK THE LATCH OPERATION	
• Open the door. • Using a screwdriver, fully close the latch (2 clicks).  N0094195 • Verify that the latch releases easily while pulling on the interior/exterior door handle. • **Does the latch release easily?**	**Yes** GO to S4 . **No** GO to S3 .
S3 CHECK THE LATCH OPERATION AFTER LUBRICATION	
• Lubricate the door latch. Refer to Latch Lubrication in this section. • Using a screwdriver, fully close the latch (2 clicks).  N0094195 • Verify that the latch releases easily while pulling on the interior/exterior door handle.	**Yes** The concern was caused by an insufficiently lubricated door latch. **No** INSTALL a new door latch. REFER to Front Door Latch or Rear Door Latch in this section. TEST the system for normal operation.

• **Does the latch release easily?**	
S4 CHECK THE STRIKER ADJUSTMENT	
• Check the adjustment of the striker. Refer to Section 501-03 . • **Is the striker adjusted correctly?**	**Yes** GO to S5 . **No** ADJUST the striker as necessary. TEST the system for normal operation.
S5 CHECK THE DOOR ALIGNMENT	
• Check the alignment of the door. Refer to Section 501-03 . • **Is the door aligned correctly?**	**Yes** LUBRICATE the door hinges. TEST the system for normal operation. **No** ADJUST the door as necessary. TEST the system for normal operation.

Pinpoint Test T: A Door Is Difficult/Does Not Open From The Exterior Door Handle

Normal Operation



The exterior door handle is connected to the door latch with an actuating rod. When the exterior door handle is pulled it causes the actuating rod to push down on the latch lever. When the latch lever is moved, the door latch releases, allowing the door to open.

This pinpoint test is intended to diagnose the following:

- Broken or binding linkage
- Exterior door handle reinforcement
- Door latch

PINPOINT TEST T: A DOOR IS DIFFICULT/DOES NOT OPEN FROM THE EXTERIOR DOOR HANDLE

Test Step	Result / Action to Take
T1 CHECK THE LATCH OPERATION FROM BOTH DOOR HANDLES	
• Open and close the door using both the interior and exterior door handles. • **Does the door open normally from one of the door handles?**	**Yes** If the door is difficult/does not open from only the exterior door handle, GO to T2 . **No** If the door does not operate correctly from both door handles, GO to Pinpoint Test S .
T2 CHECK THE EXTERIOR DOOR HANDLE REINFORCEMENT	

• Remove the door window regulator and motor assembly. Refer to Section 501-11 . • Open the clip and disconnect the exterior door handle actuating rod.  N0088081 • Pull and release the exterior door handle • **Does the exterior door handle operate correctly?**	**Yes** GO to T3 . **No** INSTALL a new exterior door handle reinforcement. REFER to Door Handle Reinforcement - Exterior, Front or Door Handle Reinforcement - Exterior, Rear in this section. TEST the systor normal operation.
T3 CHECK THE EXTERIOR DOOR HANDLE AND LINKAGE OPERATION	
• Operate the exterior door handle while observing the linkage. • **Are any of the exterior door handle components or linkages binding or broken?**	**Yes** REPAIR as necessary. TEST the system for normal operation. **No** INSTALL a new door latch. REFER to Front Door Latch or Rear Door Latch in this section. TEST the system for normal operation.

Pinpoint Test U: A Door Is Difficult/Does Not Open From The Interior Door Handle

Normal Operation

The interior door handle is connected to the door latch by an actuating cable. When the interior door handle is pulled it causes the cable to pull on the latch lever. When the latch lever is moved, the door latch releases, allowing the door to open.

This pinpoint test is intended to diagnose the following:

- Broken or binding cable/linkage
- Door latch

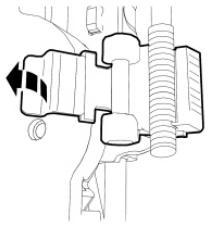
PINPOINT TEST U: A DOOR IS DIFFICULT/DOES NOT OPEN FROM THE INTERIOR DOOR HANDLE

Test Step	Result / Action to Take
U1 CHECK THE LATCH OPERATION FROM BOTH DOOR HANDLES	
	Yes If the door is difficult/does not open from only the

• For the rear doors, make sure the child lock is in the unlock position. • Open and close the door using both the interior and exterior door handles. • **Does the door open normally from one of the door handles?**	interior door handle, GO to U2 . **No** If the door does not operate correctly from both door handles, GO to Pinpoint Test S .
U2 CHECK THE INTERIOR DOOR HANDLE AND CABLE/LINKAGE OPERATION	
• Remove the door trim panel. Refer to Section 501-05 . • Operate the interior door handle while observing the cable/linkage. • **Are any of the interior door handle components or cable/linkages binding or broken?**	**Yes** REPAIR as necessary. TEST the system for normal operation. **No** INSTALL a new door latch. REFER to Front Door Latch or Rear Door Latch in this section. TEST the system for normal operation.

Pinpoint Test V: Exterior Door Release Handle Sticks

Normal Operation



The exterior door handle is connected to the door latch with an actuating rod. When the exterior door handle is pulled it causes the actuating rod to push down on the latch lever. When the latch lever is moved, the door latch releases, allowing the door to open. The handle has a return spring to make sure the handle returns to a closed position.

This pinpoint test is intended to diagnose the following:

- Binding linkage
- Broken handle return spring
- Door latch

PINPOINT TEST V: EXTERIOR DOOR RELEASE HANDLE STICKS

Test Step	Result / Action to Take
V1 CHECK FOR A BROKEN RETURN SPRING	
• Remove the door window regulator and motor assembly. Refer to Section 501-11 . • Open the clip and disconnect the exterior door handle actuating rod.	**Yes** GO to V2 . **No** INSTALL a new exterior door handle reinforcement. REFER to Door Handle Reinforcement - Exterior, Front or Door Handle Reinforcement - Extr, Rear in this section. TEST the system for normal operation.

 N0088081 • Pull and release the exterior door handle • **Does the exterior door handle return to a closed position once released?**	
V2 CHECK THE EXTERIOR DOOR HANDLE AND LINKAGE OPERATION	
• Operate the exterior door handle while observing the linkage. • **Are any of the exterior door handle components or linkages binding?**	**Yes** REPAIR as necessary. TEST the system for normal operation. **No** INSTALL a new door latch. REFER to Front Door Latch or Rear Door Latch in this section. TEST the system for normal operation.

Pinpoint Test W: Interior Door Release Handle Sticks

Normal Operation

The interior door handle is connected to the door latch by an actuating cable. When the interior door handle is pulled it causes the cable to pull on the latch lever. When the latch lever is moved, the door latch releases, allowing the door to open. The handle has a return spring to make sure the handle returns to a closed position.

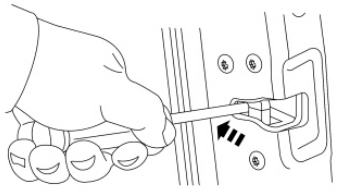
This pinpoint test is intended to diagnose the following:

- Binding cable
- Broken handle return spring
- Door latch

PINPOINT TEST W: INTERIOR DOOR RELEASE HANDLE STICKS

Test Step	Result / Action to Take
W1 CHECK FOR A BROKEN RETURN SPRING	
• Remove the interior door handle. Refer to Interior Door Handle in this section. • Pull and release the interior door handle • **Does the interior door handle return to a closed position once released?**	**Yes** GO to W2 . **No** INSTALL a new interior door handle. REFER to Interior Door Handle in this section. TEST the system for normal operation.

W2 CHECK THE INTERIOR DOOR HANDLE CABLE OPERATION	
• Remove the door latch release cable. Refer to Door Latch Release Cable in this section. • Observe the door latch release cable for any damage or binding. • **Is the door latch release cable OK?**	**Yes** INSTALL a new door latch. REFER to Front Door Latch or Rear Door Latch in this section. TEST the system for normal operation. **No** REPAIR as necessary. TEST the system for normal operation.



Pinpoint Test X: Squeak/Rattle/Chucking Noise From Door

This pinpoint test is intended to diagnose the following:

- Door alignment
- Striker adjustment
- Door latch

PINPOINT TEST X: SQUEAK/RATTLE/CHUCKING NOISE FROM DOOR

Test Step	Result / Action to Take
X1 CHECK FOR ANY LOOSE COMPONENTS	
• Remove the door trim panel. Refer to Section 501-05 . • Inspect inside the door for any loose components. • **Are there any loose components inside the door?**	**Yes** REPAIR as necessary. TEST the system for normal operation. **No** GO to X2 .
X2 CHECK THE STRIKER ADJUSTMENT	
• Check the adjustment of the striker. Refer to Section 501-03 . • **Is the striker adjusted correctly?**	**Yes** GO to X3 . **No** ADJUST the striker as necessary. TEST the system for normal operation.
X3 CHECK THE DOOR ALIGNMENT	
• Check the alignment of the door. Refer to Section 501-03 . • **Is the door aligned correctly?**	**Yes** GO to X4 . **No** ADJUST the door as necessary. TEST the system for normal operation.
X4 CHECK THE LATCH OPERATION AFTER LUBRICATION	

• Lubricate the door latch. Refer to Latch Lubrication in this section. • Using a screwdriver, fully close the latch (2 clicks).  N0094195 • Operate the door latch and listen for the noise. • **Is the original noise still present after the latch is lubricated?**	**Yes** INSTALL a new door latch. REFER to Front Door Latch or Rear Door Latch in this section. TEST the system for normal operation. **No** The concern was caused by an insufficiently lubricated door latch.

Pinpoint Test Y: Manual Door Lock Cylinder Inoperative

Normal Operation

The door lock cylinder is connected to the door latch via a lock rod and can be used to manually lock/unlock a door.

This pinpoint test is intended to diagnose the following:

- Bent or binding lock rod and lever
- Door lock cylinder
- Door latch

PINPOINT TEST Y: MANUAL DOOR LOCK CYLINDER INOPERATIVE

Test Step	Result / Action to Take
Y1 CHECK THE LOCK CYLINDER OPERATION AFTER LUBRICATION	
• Spray a lock lubricant such as Motorcraft XL-1 into the lock cylinder opening for a couple seconds. • Operate the door lock cylinder with the key. • **Does the door lock and unlock using the door lock cylinder?**	**Yes** The concern was caused by an insufficiently lubricated lock cylinder. Spray a multi-purpose grease such as Motorcraft XL-5 into the lock cylinder for a couple seconds to provide long term lubrication. **No** GO to Y2 .
Y2 CHECK THE DOOR LOCK CYLINDER	

• Remove the door lock cylinder. Refer to Door Lock Cylinder in this section. • Operate the door lock cylinder with the key. • **Does the door lock cylinder rotate freely to both lock and unlock positions?**	**Yes** GO to Y3 . **No** INSTALL a new door lock cylinder. REFER to Door Lock Cylinder in this section. TEST the system for normal operation.
Y3 CHECK THE DOOR LOCK CYLINDER LINKAGE	
• Operate the door lock cylinder while observing the rod and lever. • **Is the door lock cylinder rod and lever bent or binding?**	**Yes** REPAIR as necessary. TEST the system for normal operation. **No** INSTALL a new door latch. REFER to Front Door Latch in this section. TEST the system for normal operation.

Pinpoint Test Z: Ignition Key Cannot Be Returned To OFF Position

Refer to Wiring Diagrams Cell 37 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Shift Interlock for schematic and connector information.

Normal Operation

The ignition switch contains a key removal inhibit solenoid. The solenoid prevents the ignition lock cylinder from being turned to lock and the key removed any time the transmission selector lever is in any position except park (automatic transaxle only). The inhibit solenoid receives voltage at all times from the Smart Junction Box (SJB) fuse 27 (20A). When the transmission selector lever is in any gear except park, the selector switch closes, which supplies ground to the solenoid.

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Transmission selector lever
- Binding steering column components
- Ignition lock cylinder
- Ignition switch

PINPOINT TEST Z: IGNITION KEY CANNOT BE RETURNED TO OFF POSITION

Test Step	Result / Action to Take
Z1 CHECK FOR AN ENERGIZED KEY REMOVAL INHIBIT SOLENOID	
• Remove the SJB fuse 27 (20A). • Attempt to turn the ignition key to the run position and then back to the lock position and remove the key. • **Does the ignition lock cylinder turn to the lock position and can the key be removed?**	**Yes** REFER to Section 211-05 to continue diagnosis of the key removal inhibit solenoid system. **No** GO to Z2 .

Z2 CHECK THE IGNITION LOCK CYLINDER FOR BINDING	
• Remove the ignition lock cylinder. Refer to Ignition Lock Cylinder in this section. • Rotate the ignition lock cylinder through all positions using the key. • **Does the ignition lock cylinder freely rotate through all positions and can the key be removed from the lock cylinder?**	**Yes** REFER to Section 211-05 to continue diagnosis of the steering column for any binding steering column components or ignition switch. **No** INSTALL a new ignition lock cylinder. REFER to Ignition Lock Cylinder in this section. TEST the system for normal operation.

Pinpoint Test AA: DTCs B106E, B106F

Normal Operation

When a repetitive fault causing a circuit overload is detected on certain output circuits, the Driver Door Module (DDM) disables the circuit by removing voltage, or ground, to the affected circuit. The circuit remains disabled until the fault is corrected and an on-demand self-test is run. When the on-demand self-test has been run after all faults have been corrected, any DTCs related to the fault are cleared.

- DTC B106E (Solid State Driver Disabled Due to Short Circuit) - a continuous DTC that sets when the DDM has disabled a circuit due to a repetitive fault causing a circuit overload. For a complete list of corresponding DTCs, refer to Principles of Operation in this section.
- DTC B106F (Module Disabled Due to External Fault) - a continuous DTC that sets when one or more output functions are permanently disabled due to a repetitive circuit overload fault. DTC B106F is set with DTC B106E. When DTC B106F is present, the DDM must be replaced after the fault condition has been corrected.

This pinpoint test is intended to diagnose the following:

- Output circuit short to ground or voltage
- DDM

PINPOINT TEST AA: DTCs B106E, B106F

NOTICE: **If DTC B106F is present and the DDM is to be replaced, the fault condition must be corrected first. Failure to correct the fault condition first may cause damage to the new DDM , resulting in a repeat repair.**

Test Step	Result / Action to Take
AA1 REVIEW THE DTCs	
• Review the DTCs from the DDM self-test. • **Is only DTC B106F present?**	**Yes** INSTALL a new DDM . REFER to Driver Door Module (DDM) in this section. TEST the system for normal operation. **No** CORRECT any DTCs present other than DTC B106E (DTC B106F may

	also be present). REFER to DTC Charts in this section. After the repair, GO to AA2 .
AA2 CARRY OUT THE DDM SELF-TEST	
• Carry out the DDM self-test. • **Is only DTC B106F present?**	**Yes** INSTALL a new DDM . REFER to Driver Door Module (DDM) in this section. TEST the system for normal operation. **No** The system is operating correctly at this time. The concern was caused by a fault in one of the output circuits, which is no longer present.

Pinpoint Test AB: DTC B1317

Refer to Wiring Diagrams Cell 123 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Memory Seats for schematic and connector information.

Normal Operation

The Driver Door Module (DDM) monitors the voltage from the battery to determine if it goes above or below specific thresholds and sets DTC B1317 in continuous memory and on-demand if the DDM detects high battery voltage above 15.5 volts on circuit SBP12.

- DTC B1317 (Battery Voltage High) - a continuous memory or on-demand DTC that sets when the DDM detects battery voltage above 15.5 volts on circuit SBP12.

This pinpoint test is intended to diagnose the following:

- Charging system concern
- DDM

PINPOINT TEST AB: DTC B1317

NOTE: DTC B1317 may be stored in the module memory due to previous battery charging or vehicle jump starting events.

Test Step	Result / Action to Take
AB1 CHECK FOR DTC B1317, B1676 OR P0563 SET IN OTHER MODULES	
• Ignition ON. • Enter the following diagnostic me on the scan tool: (All CMDTCs) Self-Test. • Retrieve the continuous memory DTCs from all modules. • **Is DTC B1317, B1676 or P0563 (PCM) set in more than one module?**	**Yes** REFER to Section 414-00 to diagnose an overcharging condition. **No** GO to AB2 .

AB2 CHECK THE BATTERY VOLTAGE	
• Turn off all interior/exterior lights and accessories. • Start and run the engine at approximately 2,000 rpm for 3 minutes while monitoring the battery voltage. • **Does the battery voltage rise to 15.5 volts or higher?**	**Yes** REFER to Section 414-00 to diagnose an overcharging condition. **No** GO to AB3 .
AB3 RECHECK FOR DTC B1317	
• Turn the engine off. • Ignition ON. • Enter the following diagnostic mode on the scan tool: DDM Self-Test. • Clear the continuous memory DTCs. • Carry out the DDM self-test. • **Is DTC B1317 present?**	**Yes** INSTALL a new DDM . REFER to Driver Door Module (DDM) in this section. TEST the system for normal operation. **No** The system is operating normally at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

Pinpoint Test AC: DTC B1318

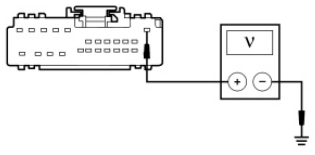
Refer to Wiring Diagrams Cell 123 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Memory Seats for schematic and connector information.

Normal Operation

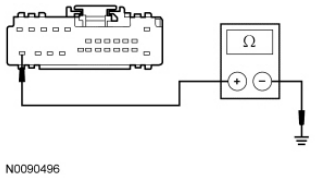
The Driver Door Module (DDM) monitors the voltage from the battery to determine if it goes above or below specific thresholds.

- DTC B1318 (Battery Voltage Low) - a continuous memory or on-demand DTC that sets when the DDM detects battery voltage below 10 volts on circuit SBP12.

This pinpoint test is intended to diagnose the following:



- Wiring, terminals or connectors
- High circuit resistance
- DDM



PINPOINT TEST AC: DTC B1318

NOTICE: **Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

NOTE: Failure to disconnect the battery when instructed will result in false resistance readings. Refer to Section 414-01 .

Test Step	Result / Action to Take

AC1 RECHECK THE DDM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: DDM Self-Test. • Clear the DTCs. Repeat the DDM self-test. • **Is DTC B1318 still present?**	**Yes** GO to AC2 . **No** The system is operating normally at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.
AC2 CHECK FOR CHARGING SYSTEM DTCs IN THE PCM	
• Enter the following diagnostic mode on the scan tool: PCM Self-Test. • Retrieve the continuous memory DTCs from the PCM. • **Is DTC P0620, P0625, P0626 or P065B set in the PCM?**	**Yes** REFER to Section 414-00 . **No** GO to AC3 .
AC3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE	
• Ignition OFF. • Check the battery condition and verify the battery is fully charged. Refer to Section 414-01 . • **Is the battery OK and fully charged?**	**Yes** GO to AC4 . **No** REFER to Section 414-00 .
AC4 CHECK THE DDM VOLTAGE SUPPLY	
• Measure and record the voltage at the battery. • Disconnect: DDM C568b. • Ignition ON. • Measure the voltage between the DDM C568b-1, circuit SBP12 (GN/RD), harness side and ground.  N0090495 • **Is the voltage within 0.2 volt of the recorded battery voltage?**	**Yes** GO to AC5 . **No** REPAIR the circuit for high resistance. CLEAR the DTCs. REPEAT the self-test.
AC5 CHECK THE DDM GROUND CIRCUIT	
• Ignition OFF. • Disconnect: Negative Battery Cable. • Measure the resistance between the DDM C568b-24, circuit GD126 (BK/WH), harness side and ground.	**Yes** GO to AC6 . **No** REPAIR the circuit for high resistance. TEST the system for normal operation.

 • **Is the resistance less than 5 ohms?**	
AC6 CHECK FOR CORRECT DDM OPERATION	
• Connect: Negative Battery Cable. • Disconnect the DDM connectors. • Check for: ♦ corrosion ♦ damaged pins ♦ pushed-out pins • Connect the DDM connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new DDM . REFER to Driver Door Module (DDM) in this section. TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

Pinpoint Test AD: DTC U0140

Refer to Wiring Diagrams Cell 14 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Module Communications Network for schematic and connector information.

Normal Operation

The Driver Door Module (DDM) and the Smart Junction Box (SJB) communicate using the Medium Speed Controller Area Network (MS-CAN). Messages are exchanged between the modules on the MS-CAN for the purposes of determining what functions are being carried out.

- DTC U0140 (Lost Communication With Body Control Module (GEM)) - set by the DDM whenever it has lost communication to the SJB for 15 seconds or longer as long as the module voltage is between 10 and 15 volts.

This pinpoint test is intended to diagnose the following:

- Module communication
- DDM
- SJB

PINPOINT TEST AD: DTC U0140

Test Step	Result / Action to Take
AD1 VERIFY CUSTOMER CONCERN	
• Ignition ON.	**Yes** GO to AD2 .

• rify there is an observable symptom present. • **Is an observable symptom present?**	**No** The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AD2 CHECK THE COMMUNICATION NETWORK	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Network Test. • Carry out the network test. • **Does the SJB pass the network test?**	**Yes** GO to AD3 . **No** REFER to Section 418-00 .
AD3 RETRIEVE THE RECORDED DTCs FROM THE SELF-TEST	
• Check for recorded DDM DTCs from the self-test. • **Is DTC B1317 or DTC B1318 recorded?**	**Yes** For DTC B1317, GO to Pinpoint Test AB . For DTC B1318, GO to Pinpoint Test AC . **No** GO to AD4 .
AD4 RECHECK THE DDM DTCs	
NOTE: If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during Programmable Module Installation (PMI) or the PMI may not have been carried out. • Clear the DTCs. Repeat the DDM self-test. • **Is DTC U0140 still present?**	**Yes** GO to AD5 . **No** The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
AD5 CHECK FOR DTC U0140/U0140:00 SET IN OTHER MODULES	
• Clear all DTCs. • Ignition OFF. • Ignition ON. • Wait 10 seconds. • Enter the following diagnostic mode on the scan tool: Self-Test. • Retrieve the continuous memory DTCs from all modules. • **Is DTC U0140/U0140:00 set in other modules?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . **No** INSTALL a new DDM . REFER to Driver Door Module (DDM) in this section.

Remote Keyless Entry (RKE) Transmitter Programming

NOTE: This procedure is for programming conventional keyfobs only. The Remote Keyless Entry (RKE) transmitter of the Integrated Keyhead Transmitter (IKT) is programmed automatically during the Passive Anti-Theft System (PATS) programming. For additional information, refer to Key Programming Using Two Programmed Keys or Integrated Keyhead Transmitter (IKT) Key Programming Using Diagnostic Equipment in Section 419-01B to program the IKT .

NOTE: All RKE transmitters must be programmed at the same time.

NOTE: Do not apply the brake pedal during this sequencing, as doing so ends the sequence and the transmitters will not be programmed.

1. Electronically unlock the door locks using the door lock control switch.

2. Cycle the ignition switch from the OFF to the RUN position 8 times in rapid succession (within 10 seconds), with the eighth turn ending in RUN. If the module successfully enters program mode, it locks and then unlocks all the doors.

3. **NOTE:** If no action is taken within 20 seconds after a transmitter has been programmed, the programming sequence ends (the doors lock and unlock to confirm that programming is complete).

   Within 20 seconds, press any button on the RKE transmitter to be programmed. The doors lock and then unlock to confirm that each RKE transmitter is programmed. Repeat this step for each RKE transmitter.

4. Exiting the programming mode is accomplished if one of the following occurs:
   - The key transitions to the OFF position.
   - 20 seconds have passed since entering programming mode or since the last RKE transmitter was programmed.
   - The maximum number (4) of RKE transmitters have been programmed.

5. Check the operation of the RKE transmitter. If the door locks do not respond for the programmed RKE transmitter(s), wait several seconds and press the button again. If the door locks still fail to respond, refer to Handles, Locks, Latches and Entry Systems in this section. (Make sure that no more than the maximum number of RKE transmitters are attempted to be programmed.)

Keyless Entry Keypad Code Programming

Programming a Personal Entry Code and Keypad Association to Memory Features (If Equipped)

NOTE: The system allows 3 personal codes to be programmed.

NOTE: Multiple personal codes can be programmed in one step. When programming multiple codes in one step, each code must be programmed by entering each button within 5 seconds of each other. If 5 seconds elapse between any button press, programming mode is exited.

NOTE: If only a single personal code is desired or unable to program multiple codes in one step, each personal code can be programmed individually by repeating Steps 1-5 for each code desired.

1. Enter the factory set 5-digit keyless entry keypad code.

2. Within 5 seconds, press the 1/2 button on the keypad to activate the programming mode.

3. Enter the new personal 5-digit keyless entry keypad code. Each number must be entered within 5 seconds of each other.

4. After entering the new personal code, press a 6th button to program each new code.
   - Pressing 1/2 stores the first personal code (if equipped with memory, this code is associated with driver 1 settings).
   - Pressing 3/4 stores the second personal code (if equipped with memory, this code is associated with driver 2 settings).
   - Pressing 5/6, 7/8 or 9/0 stores the third personal code, but does not associate the code with a memory setting.

5. The door locks lock and unlock to confirm the new code is programmed.

Erasing a Personal Entry Code

1. Enter the factory set 5-digit keyless entry keypad code.

2. Within 5 seconds, press the 1/2 button on the keypad and release.

3. Within 5 seconds, press and hold the 1/2 button for 2 seconds.

4. All personal codes are now erased and only the factory set 5-digit code works.

Remote Memory Activation

1. Position the driver seat and exterior mirror(s) to the desired positions.
2. Press and hold either memory button (1 or 2) for 5 seconds. A tone will be heard after 1-1/2 seconds when the memory store is done. Continue to hold until a second tone is heard after 5 seconds.
3. Within 3 seconds, press the LOCK button on the Remote Keyless Entry (RKE) transmitter.
4. If a second memory setting is desired, repeat the procedure with the second RKE transmitter.

Remote Memory Deactivation

1. Press and hold either memory button (1 or 2) for 5 seconds. A tone will be heard after 1-1/2 seconds when the memory store is done. Continue to hold until a second tone is heard after 5 seconds.

2. Within 3 seconds, press the UNLOCK button on the Remote Keyless Entry (RKE) transmitter.

3. If a second memory setting is desired to be deactivated, repeat the procedure with the second RKE transmitter.

Autolock and Auto-Unlock Programming

Programming the Autolock Feature Using the Door Lock Control Switch

NOTE: The autolock feature is not available on vehicles equipped with a manual transaxle.

NOTE: The autolock feature can be enabled or disabled independently of the auto-unlock feature.

NOTE: Make sure that the vehicle's perimeter alarm is not armed, the key is in the OFF position and the doors are closed.

NOTE: The following steps must be carried out within 30 seconds or the procedure will need to be repeated. If the procedure needs to be repeated, wait 30 seconds between programming sessions.

1. Turn the ignition key from the OFF to the RUN position.
2. Press the unlock button on the door lock control switch 3 times.
3. Turn the ignition key from the RUN to the OFF position.
4. Press the unlock button on the door lock control switch 3 times.
5. Turn the ignition key to the RUN position. The horn chirps one time to indicate that programming mode is entered.
6. To enable/disable the autolock feature, press the unlock button on the door lock control switch then the lock button. The horn chirps once if the autolocks are disabled or twice (one short chirp followed by a long chirp) if the autolocks are enabled.
7. Turn the ignition key to the OFF position. The horn chirps once to signal that the programming is complete.

Programming the Autolock Feature Using the Keyless Entry Keypad

NOTE: The autolock feature is not available on vehicles equipped with a manual transaxle.

NOTE: The autolock feature can be enabled or disabled independently of the auto-unlock feature.

NOTE: Make sure that the vehicle's perimeter alarm is not armed, the key is in the OFF position and the doors are closed.

NOTE: The following steps must be carried out within 30 seconds or the procedure will need to be repeated. If the procedure needs to be repeated, wait 30 seconds between programming sessions.

1. Turn the ignition key to the OFF position.
2. Close all of the doors.
3. Enter the factory set 5 digit entry code.

4. Press and hold the 3/4 button. While holding the 3/4 button, press the 7/8 button.
5. Release the 7/8 button.
6. Release the 3/4 button. The horn chirps once if the autolocks are disabled, or chirps once followed by a honk if the autolocks are enabled.

Programming the Auto-Unlock Feature Using the Door Lock Control Switch

NOTE: The auto-unlock feature is disabled from the factory on vehicles equipped with a manual transaxle, but can be enabled.

NOTE: The auto-unlock feature can be enabled or disabled independently of the autolock feature.

NOTE: Make sure that the vehicle's perimeter alarm is not armed, the key is in the OFF position and the doors are closed.

NOTE: The following steps must be carried out within 30 seconds or the procedure will need to be repeated. If the procedure needs to be repeated, wait 30 seconds between programming sessions.

1. Turn the ignition key from the OFF to the RUN position.
2. Press the unlock button on the door unlock control switch 3 times.
3. Turn the ignition key from the RUN to the OFF position.
4. Press the unlock button on the door lock control switch 3 times.
5. Turn the ignition key to the RUN position. The horn chirps one time to indicate that programming mode is entered.
6. To enable/disable the auto-unlock feature, press the lock button on the door lock control switch then the unlock button. The horn chirps once if auto-unlock is disabled or twice (one short chirp followed by a long chirp) if auto-unlock is enabled.
7. Turn the ignition key to the OFF position. The horn chirps once to signal that the programming is complete.

Programming the Auto-Unlock Feature Using the Keyless Entry Keypad

NOTE: The auto-unlock feature is disabled from the factory on vehicles equipped with a manual transaxle, but can be enabled.

NOTE: The auto-unlock feature can be enabled or disabled independently of the autolock feature.

NOTE: Make sure that the vehicle's perimeter alarm is not armed, the key is in the OFF position and the doors are closed.

NOTE: The following steps must be carried out within 30 seconds or the procedure will need to be repeated. If the procedure needs to be repeated, wait 30 seconds between programming sessions.

1. Turn the ignition key to the OFF position.
2. Close all of the doors.

3. Enter the factory set 5 digit entry code.

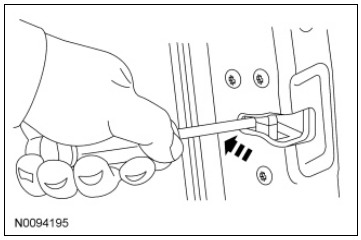
4. Press and hold the 3/4 button. While holding the 3/4 button, press and release the 7/8 button. While still holding the 3/4 button, press and release the 7/8 button a second time.

5. Release the 3/4 button. The horn chirps once if auto-unlock is disabled, or chirps once followed by a honk if auto-unlock is enabled.

Stepped Unlock Programming

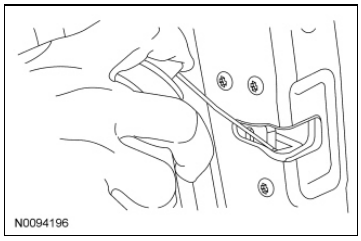
1. With the ignition switch in the OFF position, press the LOCK and UNLOCK buttons on the Remote Keyless Entry (RKE) transmitter simultaneously for 4 seconds.
    - The turn signals flash twice to indicate the mode change.

2. Repeat Step 1 to enable/disable the stepped unlocking feature.



Latch Lubrication

Material

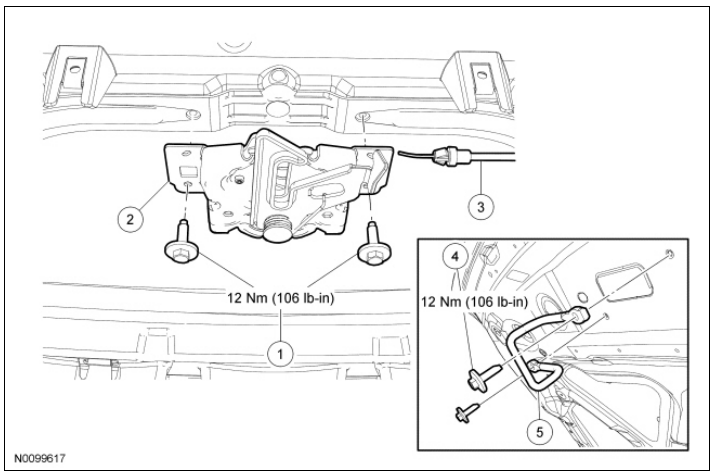


Item	Specification
Multi-Purpose Grease XG-4 and/or XL-5	ESB-M1C93-B

1. Open the door.

2. Using a screwdriver, fully close the latch (2 clicks).

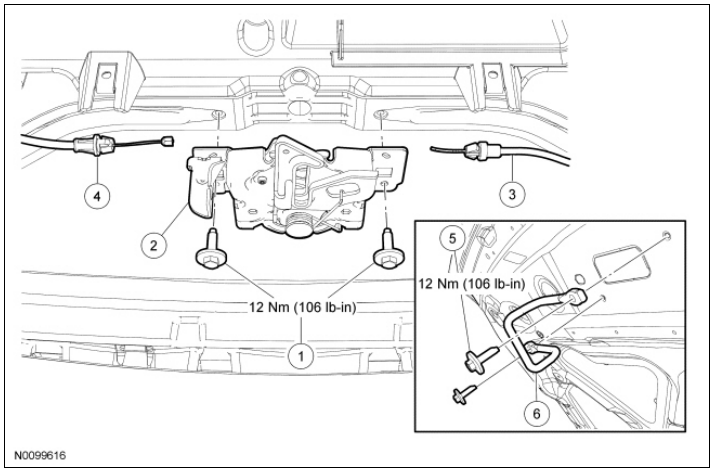
3. Spray the multi-purpose grease into the opening on the door latch for approximately 5 seconds.



4. Open the latch using either the interior or exterior door handle.

5. Open and close the door several times to circulate the lubricant inside the latch.

6. Wipe off any excess grease.



Hood Latch

Fusion

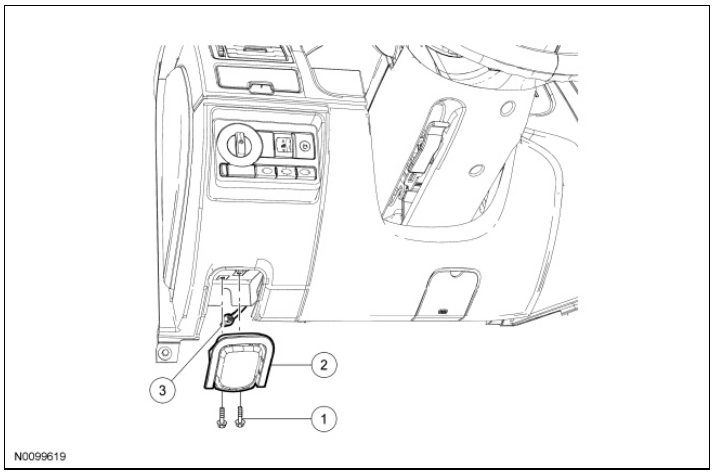
Item	Part Number	Description
1	N808727-S307	Hood latch bolts (2 required)
2	16700	Hood latch
3	16916	Hood latch release cable
4	N807658-S307	Hood latch striker bolts (2 required)
5	16K689	Hood latch striker

MKZ

Item	Part Number	Description
1	N808727-S307	Hood latch bolts (2 required)
2	16700	Hood latch
3	16916	Hood latch release cable

4	16916	Secondary hood latch release cable
5	N807658-S307	Hood latch striker bolts (2 required)
6	16K689	Hood latch striker

Removal and Installation



1. Remove the 6 (Fusion)/2 (MKZ) radiator grille pin-type retainers and the 4 radiator grille bolts.
2. For MKZ, disconnect the secondary hood latch release cable from the hood latch.
3. **NOTE:** Pull up on the radiator grille to gain access to the hood latch.

   NOTE: Mark the hood latch position prior to removal of the hood latch bolts.

   Remove the 2 hood latch bolts and position the hood latch aside.

   - To install, tighten to 12 Nm (106 lb-in).
4. Disconnect the hood latch release cable and remove the hood latch.
5. To install, reverse the removal procedure.

Hood Latch Release Handle

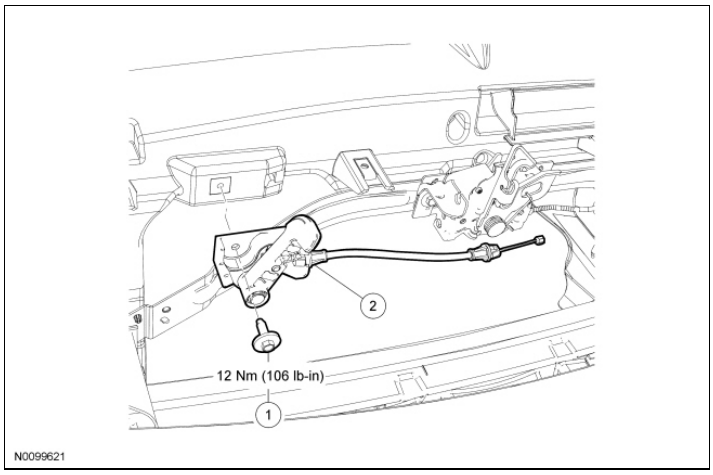
Item	Part Number	Description
1	-	Hood latch release handle bolts (2 required)
2	16916	Hood latch release handle
3	16916	Hood latch release cable

Hood Latch Release Cable Routing

Removal and Installation

1. Remove the hood latch. For additional information, refer to Hood Latch in this section.
2. Remove the LH fender splash shield. For additional information, refer to Section 501-02 .
3. Release the 2 hood latch release cable locators from the radiator grille opening panel reinforcement.
4. Disconnect the hood latch release cable from the LH fender opening, open the 2 hood latch release cable locators and position the cable aside.

5. Release the hood latch release cable locator from the wiring harness.



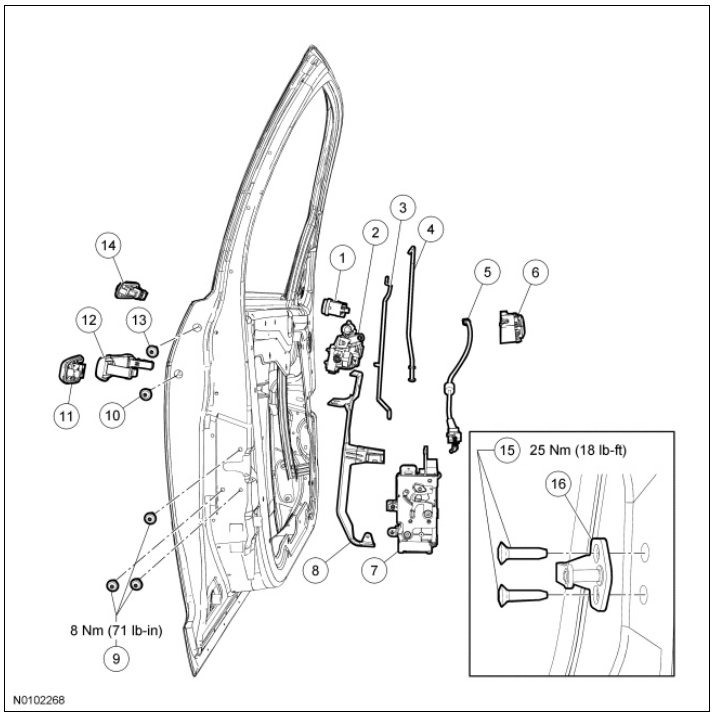
6. Remove the Smart Junction Box (SJB). For additionalnformation, refer to Section 419-10 .

7. Remove the 2 hood latch release handle bolts.

8. Remove the hood latch release handle and cable assembly.

9. To install, reverse the removal procedure.

Hood Latch Release Handle - Secondary

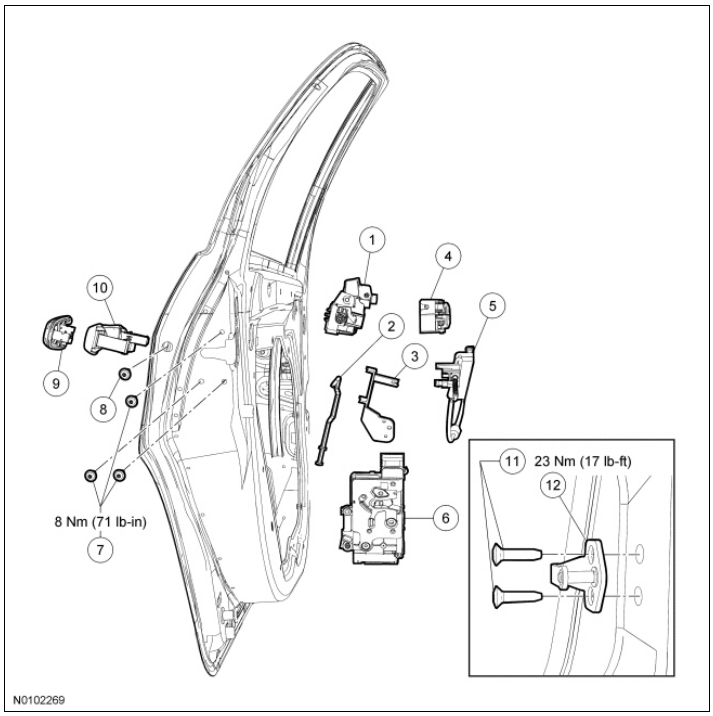


Item	Part Number	Description
1	N808727-S307	Secondary hood latch release handle bolt
2	16916	Secondary hood latch release handle and cable

Removal and Installation

1. Remove the 2 radiator grille pin-type retainers and the 4 radiator grille bolts.
2. **NOTE:** Pull up on the radiator grille to gain access to the hood latch.

   Disconnect the secondary hood latch release cable from the hood latch.
3. Remove the secondary hood latch release handle bolt.
   - To install, tighten to 12 Nm (106 lb-in).
4. To install, reverse the removal procedure.

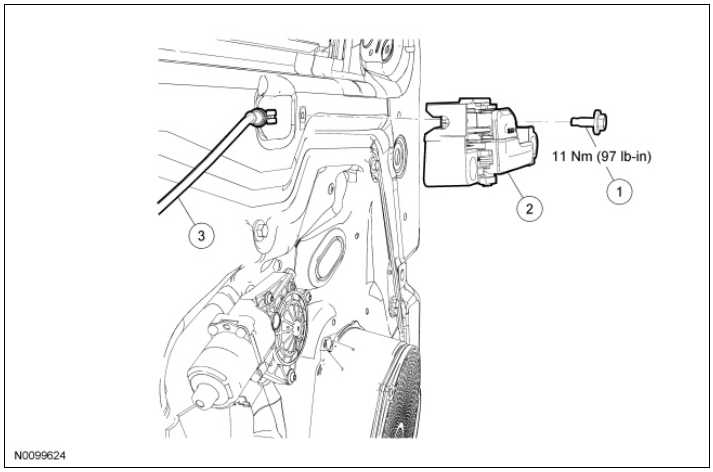


Front Door Handles, Locks and Latches - Exploded View

Item	Part Number	Description
1	5421991	Door lock cylinder (driver door only)
2	5426685/ 5426684	Exterior front door handle reinforcement (LH/RH)
3	5422135	Front door lock cylinder actuating rod (driver door only)
4	5422153/ 5422152	Exterior door handle actuating rod (LH/RH)
5	54221A00	Interior door handle actuating cable
6	5422601/ 5422600	Interior door handle (LH/RH)
7	5421813/ 5421812	Front door latch (LH/RH)
8	-	Door latch carrier (LH/RH)
9	W705830-S901	Front door latch bolts (3 required)
10	-	Grommet
11	54218A14/ 5422088	Exterior door handle bezel (LH/RH)
12	5422404	Exterior front door handle
13	-	Grommet
14	14A626	Keyless entry keypad
15	W711379-S900	Striker bolts d)
16	5422008	Striker

1. For additional information, refer to the procedures in this section.

Rear Door Handles, Locks and Latches - Exploded View



Item	Part Number	Description
1	5426685/ 5426684	Exterior rear door handle reinforcement (LH/RH)
2	5426597/ 5426596	Exterior door handle actuating rod (LH/RH)
3	-	Door latch carrier
4	5422601/ 5422600	Interior rear door handle (LH/RH)
5	54221A01/ 54221A00	Door latch release cable (LH/RH)
6	5426413/ 5426412	Rear door latch (LH/RH)
7	W705830-S901	Door latch bolts (3 required)
8	-	Grommet
9	5422088	Exterior door handle bezel
10	5422404	Exterior door handle
11	W710881-S900	Striker bolts (2 required)
12	5422008	Striker

1. For additional information, refer to the procedures in this section.

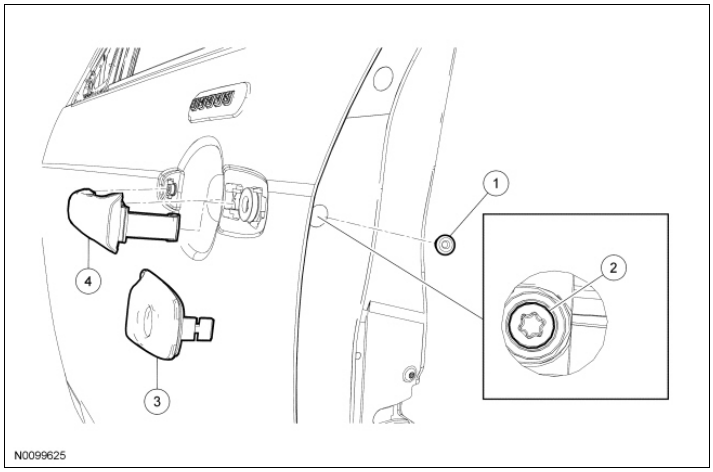
Interior Door Handle

NOTE: LH front door shown, other doors similar.

Item	Part Number	Description
1	W709494-S438	Interior door handle bolt
2	5422601/ 5422600	Interior door handle (LH/RH)
3	54221A00	Interior door handle release cable

Removal and Installation

1. Remove the door trim panel. For additional information, refer to Section 501-05 .



2. Remove the interior door handle bolt.
   - To install, tighten to 11 Nm (97 lb-in).

3. Disconnect the interior door handle release cable and remove the interior door handle.

4. To install, reverse the removal procedure.

Exterior Door Handle

NOTE: LH front door shown, other doors similar.

Item	Part Number	Description
1	-	Grommet
2	-	Exterior door handle bezel retaining screw
3	54218A14/ 5422088	Exterior door handle bezel (with key hole/without key hole)
4	5422404	Exterior door handle

Removal and Installation

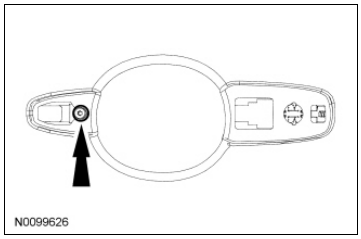
1. Remove the grommet from the rear of the door.

2. Loosen, but do not remove the exterior door handle bezel retaining screw and remove the exterior door handle bezel.

3. **NOTE:** Pull the exterior door handle outward and to the rear to release it from the exterior door handle reinforcement.

   Remove the exterior door handle.

4. To install, reverse the removal procedure.



Front Door Latch

Removal and Installation

1. Remove the front door window regulator and motor. For additional information, refer to Section 501-11 .

2. Remove the exterior door handle. For additional information, refer to Exterior Door Handle in this section.

3. Loosen the exterior door handle reinforcement bolt.
   - To install, tighten to 6 Nm (53 lb-in)

4. Slide the exterior front door handle reinforcement to the front of the vehicle and push inside the door.

5. Remove the 3 front door latch bolts.
   - To install, tighten to 8 Nm (71 lb-in).

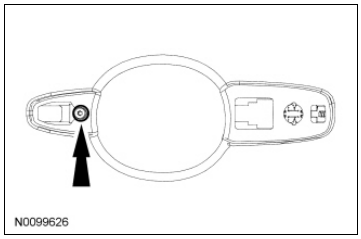
6. Remove the complete latch, carrier, and handle reinforcement assembly from the door.

7. Open the clip and disconnect the exterior front door handle actuating rod.

8. If required, disconnect the front door lock cylinder actuating rod.

9. Remove the 2 screws and remove the front door latch from the carrier.

10. To install, reverse the removal procedure.



Door Handle Reinforcement - Exterior, Front

Removal and Installation

1. Remove the front door window regulator and motor. For additional information, refer to Section 501-11 .

2. Remove the exterior door handle. For additional information, refer to Exterior Door Handle in this section.

3. Loosen the exterior door handle reinforcement bolt.
   - To install, tighten to 6 Nm (53 lb-in)

4. Slide the exterior front door handle reinforcement to the front of the vehicle and push inside the door.

5. Remove the 3 front door latch bolts.
   - To install, tighten to 8 Nm (71 lb-in).

6. Remove the complete latch, carrier, and handle reinforcement assembly from the door.

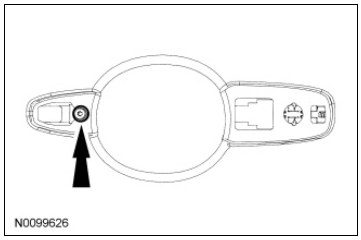
7. Open the clip and disconnect the exterior front doondle actuating rod.

8. If required, disconnect the front door lock cylinder actuating rod.

9. Remove the screw and remove the front exterior door handle reinforcement from the carrier.

10. To install, reverse the removal procedure.

Rear Door Latch



Removal and Installation

1. Remove the rear door window regulator and motor. For additional information, refer to Section 501-11 .

2. Remove the exterior door handle. For additional information, refer to Exterior Door Handle in this section.

3. Position the rear door window glass at the top of the door.

4. Loosen the exterior door handle reinforcement bolt.
    - To install, tighten to 6 Nm (53 lb-in).

5. Slide the exterior rear door handle reinforcement to the front of the vehicle and push inside the door.

6. Remove the 3 rear door latch bolts.
    - To install, tighten to 8 Nm (71 lb-in).

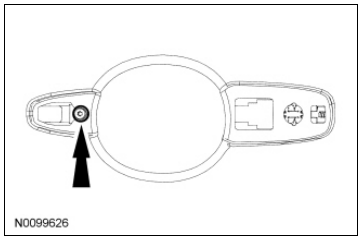
7. Remove the complete latch, carrier, and handle reinforcement assembly from the door.

8. Open the clip and disconnect the exterior rear door handle actuating rod.

9. Remove the 2 screws and remove the rear door latch from the carrier.

10. To install, reverse the removal procedure.

Door Handle Reinforcement - Exterior, Rear



Removal and Installation

1. Remove the rear door window regulator and motor. For additional information, refer to Section 501-11 .

2. Remove the exterior door handle. For additional information, refer to Exterior Door Handle in this section.

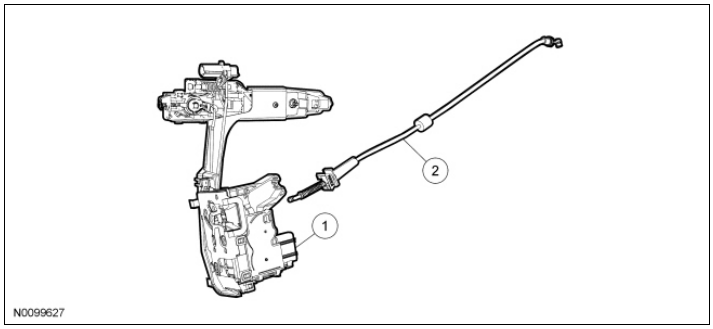
3. Position the rear door window glass at the top of the door.

4. Loosen the exterior door handle reinforcement bolt.
   - To install, tighten to 6 Nm (53 lb-in).

5. Slide the exterior rear door handle reinforcement to the front of the vehicle and push inside the door.

6. Remove the 3 rear door latch bolts.
   - To install, tighten to 8 Nm (71 lb-in).

7. Remove the complete latch, carrier, and handle reinforcement assembly from the d



8. Open the clip and disconnect the exterior rear door handle actuating rod.

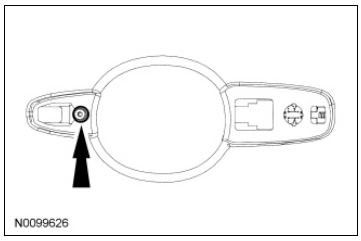
9. Remove the screw and remove the rear exterior door handle reinforcement from the carrier.

10. To install, reverse the removal procedure.

Door Latch Release Cable

NOTE: LH front shown, other doors similar.

Item	Part Number	Description
1	-	Door latch, carrier, and exterior door handle reinforcement assembly
2	54221A00	Door latch release cable



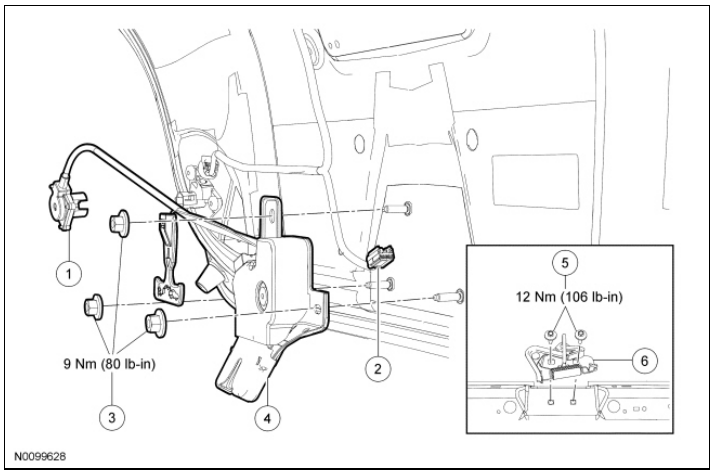
Removal and Installation

1. Remove the door window regulator and motor. For additional information, refer to Section 501-11 .

2. Remove the exterior door handle. For additional information, refer to Exterior Door Handle in this section.

3. On the rear doors, position the door window glass at the top of the door.

4. Loosen the exterior door handle reinforcement bolt.
   - To install, tighten to 6 Nm (53 lb-in).



5. Slide the exterior door handle reinforcement to the front of the vehicle and push inside the door.

6. Remove the 3 door latch bolts.
   - To install, tighten to 8 Nm (71 lb-in).

8. Remove the release cable from the latch.
   - Slide the cable housing off the latch.
   - Unhook the cable from the latch lever.

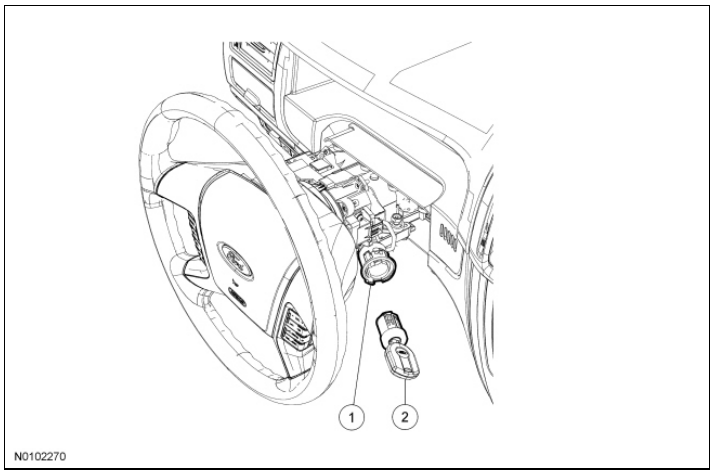
9. To install, reverse the removal procedure.

Luggage Compartment Lid Latch

Item	Part Number	Description
1	-	Luggage compartment lid lock cylinder actuating cable (part of 5443200)
2	-	Luggage compartment lid latch electrical connector (part of 13A412)
3	W705760-S424	Luggage compartment lid latch nuts (3 required)
4	5443200	Luggage compartment lid latch
5	-	Luggage compartment striker bolts (2 required)
6	5443252	Luggage compartment striker

Removal and Installation

1. Remove the 10 pin-type retainers and the luggage compartment lid trim panel.



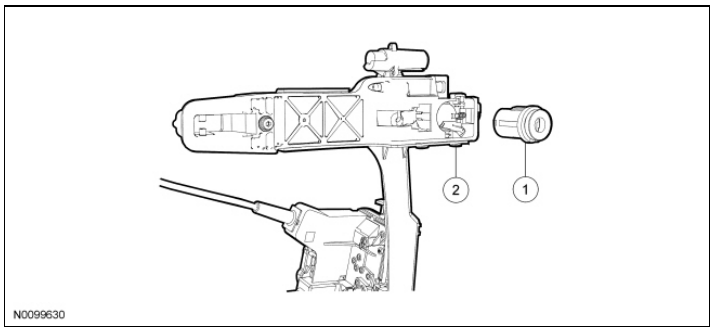
2. Disconnect the luggage compartment lid lock cylinder actuating cable from the luggage compartment lid lock cylinder.

3. Disconnect the electrical connector from the luggage compartment lid latch.

4. Remove the 3 nuts and the luggage compartment lid latch.
   - To install, tighten to 9 Nm (80 lb-in).

5. To install, reverse the removal procedure.

Ignition Lock Cylinder



Item	Part Number	Description
1	3511	Steering column lock module
2	11582	Ignition lock cylinder

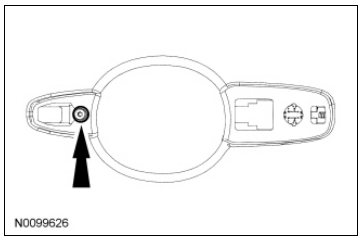
Removal and Installation

NOTE: For non-functional ignition lock cylinders, the steering column lock module has to be replaced. For additional information, refer to Section 211-05 .

1. Remove the Passive Anti-Theft System (PATS) transceiver. For additional information, refer to Section 419-01B or Section 419-01C .
2. Turn the ignition key to the ACC position.
3. Using a suitable tool, press the ignition lock cylinder release button and remove the ignition lock cylinder.
4. If a new lock cylinder with keys is replaced, the new PATS keys must be programmed. For additional information, refer to Integrated Keyhead Transmitter (IKT) Key Programming Using Diagnostic Equipment in Section 419-01B or Section 419-01C .
5. To install, reverse the removal procedure.

Door Lock Cylinder

Item	Part Number	Description
1	5421991	Door lock cylinder
2	5426685	Exterior door handle reinforcement



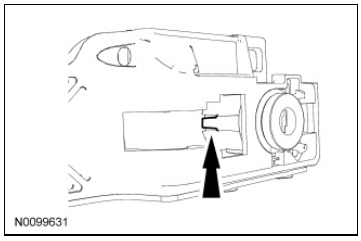
Removal and Installation

NOTE: Individual lock cylinders are repaired by discarding the inoperative cylinder and building a new lock cylinder using the appropriate lock repair package. The lock repair package includes a detailed instruction sheet to build the new lock cylinder to the current key code of the vehicle.

1. Remove the front door window regulator and motor. For additional information, refer to Section 501-11 .

2. Remove the exterior door handle. For additional information, refer to Exterior Door Handle in this section.

3. Loosen the exterior door handle reinforcement bolt.
   - To install, tighten to 6 Nm (53 lb-in).

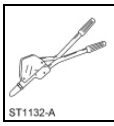


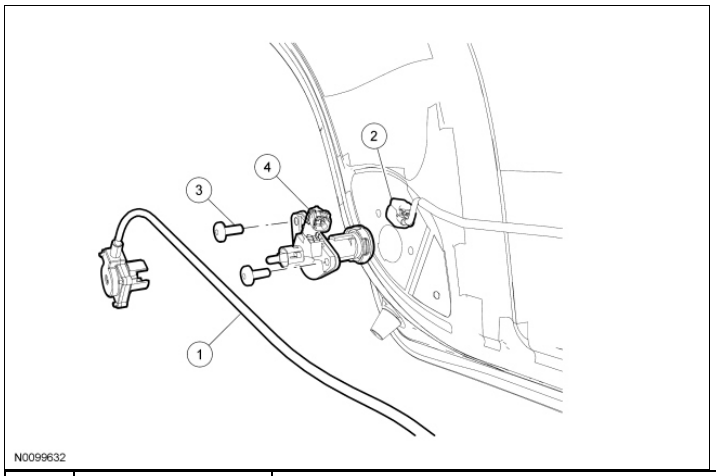
4. Slide the exterior front door handle reinforcement to the front of the vehicle and push inside the door.

5. Remove the 3 front door latch bolts.
   - To install, tighten to 8 Nm (71 lb-in).

6. Remove the complete latch, carrier, and handle reinforcement assembly from the door.

7. Release the tab and remove the door lock cylinder.





8. **NOTE:** Upon installation, make sure that the d-slot in the lock cylinder lines up with the d-slot in the lock cylinder lever.

   To install, reverse the removal procedure.

Luggage Compartment Lid Lock Cylinder

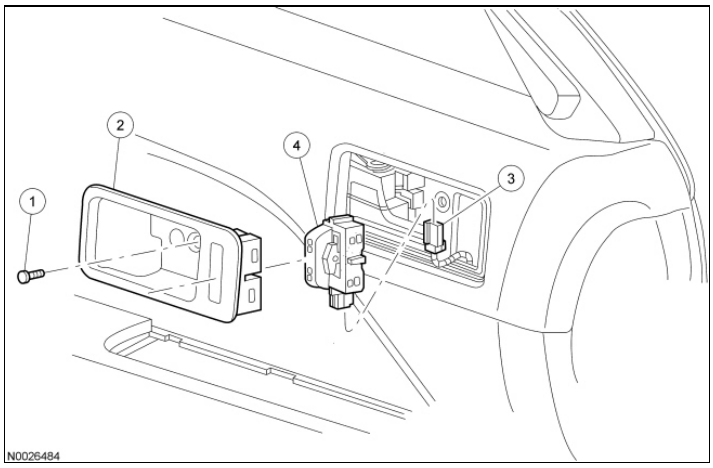
Special Tool(s)

 ST1132-A	Heavy Duty Riveter 501-D011 (D80L-23200-A) or equivalent

Item	Part Number	Description
1	-	Luggage compartment lid lock cylinder actuating cable (part of 5443200)
2	-	Luggage compartment lid lock cylinder electrical connector (part of 13A412) (if equipped)
3	W525174-S300	Luggage compartment lid lock cylinder rivets (2 required)
4	5443262	Luggage compartment lid lock cylinder

Removal and Installation

1. Remove the 10 pin-type retainers and the luggage compartment lid trim panel.



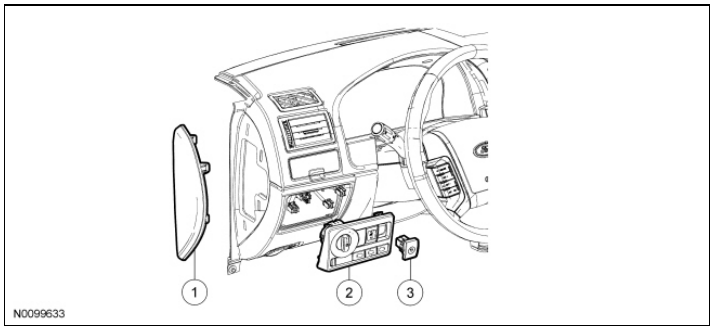
2. Disconnect the luggage compartment lid lock cylinder actuating cable from the luggage compartment lid lock cylinder.

3. If equipped, disconnect the electrical connector from the luggage compartment anti-theft inhibit switch.

4. Remove the 2 rivets and the luggage compartment lid lock cylinder.

5. To install, reverse the removal procedure.
   - Use the special tool to install new rivets.

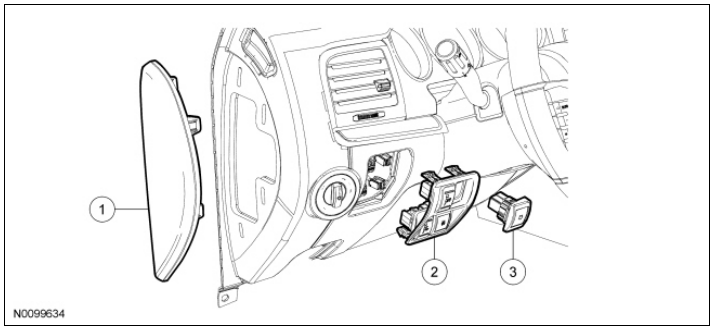
Door Lock Control Switch



Item	Part Number	Description
1	-	Interior front door handle finish panel screw
2	5422620/ 5422621	Interior front door handle finish panel (RH/LH)
3	-	Door lock control switch electrical connector (part of 14630/14631)
4	14028	Door lock control switch

Removal and Installation

1. Open the cover, remove the screw and position the interior front door handle finish panel aside.
2. Disconnect the door lock control switch electrical connector.
3. Release the locking clips and remove the door lock control switch.
4. To install, reverse the removal procedure.



Luggage Compartment Lid Release Switch

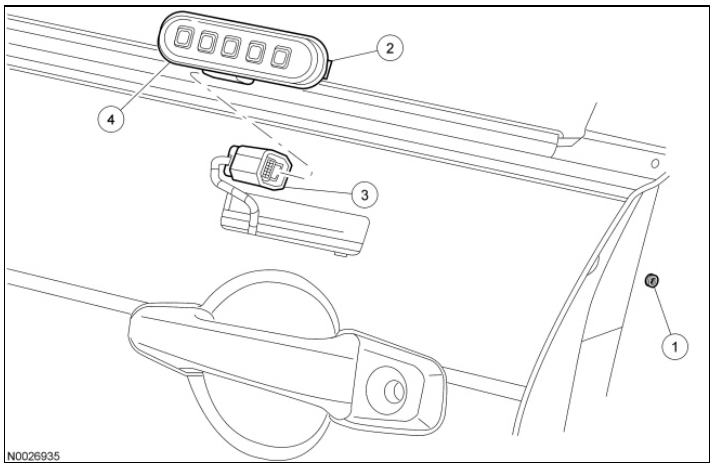
Fusion

Item	Part Number	Description
1	5404481	Instrument panel side finish panel
2	5404338	Switch bezel
3	54432A38	Luggage compartment lid release switch

MKZ

Item	Part Number	Description
1	5404481	Instrument panel side finish panel
2	5404338	Switch bezel
3	54432A38	Luggage compartment lid release switch

Removal and Installation



1. Remove the instrument panel side finish panel.
2. **NOTE:** The switch bezel is removed by pushing from behind.

   Remove the switch bezel.

   - Disconnect the electrical connectors.
3. Release the tabs and remove the luggage compartment lid release switch.

4. To install, reverse the removal procedure.

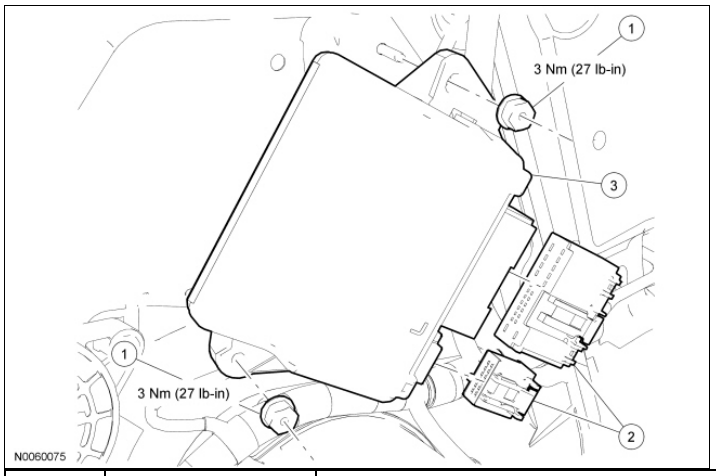
Keyless Entry Keypad

Item	Part Number	Description
1	-	Grommet
2	-	Keyless entry keypad retaining clip (2 required) (part of 14A626)
3	-	Keyless entry keypad electrical connector (part of 14631)
4	14A626	Keyless entry keypad

Removal and Installation

1. Remove the grommet.

2. Using a suitable tool, release the rear keyless entry keypad retaining clip and position the keyless entry keypad aside.



3. Remove the keyless entry keypad.
   - Disconnect the electrical connector.

4. To install, reverse the removal procedure.

Driver Door Module (DDM)

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Item	Part Number	Description
1	-	Driver Door Module (DDM) nuts (2 required)
2	-	DDM electrical connectors (part of 14631)
3	13C791	DDM

Removal and Installation

NOTICE: **Electronic modules are sensitive to static electrical charges. If exposed to these charges, damage may result.**

NOTE: Prior to the removal of the module, it is necessary to upload the module configuration information to the appropriate scan tool. This information needs to be downloaded into the new module once installed. For additional information, refer to Section 418-01 .

1. **NOTE:** This step is necessary only if the Driver Door Module (DDM) is being replaced.

   Upload the module configuration information from the DDM into the scan tool. For additional information, refer to Section 418-.

2. Remove the driver door trim panel. For additional information, refer to Section 501-05 .

3. Remove the 2 nuts.
   - To install, tighten to 3 Nm (27 lb-in).

4. Disconnect the 2 electrical connectors and remove the DDM .

5. To install, reverse the removal procedure.
    - **NOTE:** If the DDM was not replaced, this substep is not necessary.

      Download the DDM configuration from the scan tool into the new DDM . For additional information, refer to Section 418-01 .

Material

Item	Specification	Fill Capacity
Motorcraft® Premium Quality Windshield Washer Fluid (Canada) CXC-37-(A, B, D, and F) (Canada)	-	-
Motorcraft® Premium Windshield Washer Concentrate (US) ZC-32-A or B (US)	WSB-M8B16-A2	-

Torque Specifications

Description	Nm	lb-in
Windshield washer reservoir bolts	7	62
Windshield washer reservoir nut	7	62
Windshield wiper mounting arm and pivot shaft assembly bolts	5	44
Wiper motor-to-wiper mounting arm bolts	8	71
Wiper pivot arm nuts	20	177

Wipers and Washers

NOTE: The Smart Junction Box (SJB) may also be identified as the Generic Electronic Module (GEM).

The windshield wiper and washer system consists of the following:

- Windshield wiper pivot arm
- Windshield wiper mounting arm and pivot shaft
- Windshield wiper motor
- Windshield washer reservoir
- Windshield washer pump
- Multifunction switch
- Wiper/washer module
- SJB
- Rain sensor (if equipped)
- Rain sensor bracket (if equipped)

Wipers

The wiper system is activated by the multifunction switch. The multifunction switch provides input to the wiper/washer module to activate wash, low, high and intermittent modes.

Washer

The washer system consists of the washer reservoir and washer pump. When the multifunction switch is placed into the wash mode, the wiper/washer module integral electronics activate the washer pump to direct washer fluid to the windshield.

Wiper Activated Headlamps (If Equipped with Autolamp System)

When the headlamp control switch is in the AUTOLAMP position and the wipers are on for greater than 3 seconds, the SJB will activate the headlamps. When the SJB detects that the wipers have been turned off, the SJB will turn off the headlamps after 30 seconds.

Speed Sensitive Wipers

When the wiper control is set on any intermittent setting except INT 1, the speed dependant wipers will automatically adjust with the vehicle speed. This feature decreases the time between wipes when the vehicle speed increases.

Rain Sensitive Wipers (if equipped)

When equipped, the rain sensitive wipers feature replaces the standard intermittent wiper feature. The multifunction switch must be positioned to any of the 5 auto/intermittent settings to activate the rain sensitive wipers. The lowest setting (closest to OFF) is the least sensitive to moisture. The highest setting is the most sensitive to moisture. The windshield wipers cycle when the multifunction switch is placed into or changing between the auto/intermittent settings. When the rain sensitive wiper feature is active, the system adjusts the wiper speed automatically when moisture is detected on the windshield.

A lens/bracket service kit is available to repair/replace a detached bracket or a damaged/contaminated gel-type lens. The rain sensor gel-type lens cannot be reused on a rain sensor of this type. When reinstalling a rain

sensor, a new lens from the lens/bracket service kit must be installed to the rain sensor. Refer to Rain Sensor .

Wipers and Washers

Special Tool(s)

 ST2574-A	Flex Probe Kit 300-NUD105-R025DE or equivalent
 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Principles of Operation

Windshield Wiper Operation

The multifunction switch supplies ground inputs to the wiper/washer module (located behind the Smart Junction Box (SJB) to determine the wiper speed, including low, high and intermittent. The wiper/washer module also receives feedback from the wiper motor to determine the park position. The wiper/washer module sends power to the wiper motor through the high and low circuits.

Wiper Activated Headlamps (If Equipped with Autolamp System)

The SJB sends a voltage signal to the wiper/washer module in order to monitor the status of the wipers. When the wipers are turned on, the wiper/washer module will pull the voltage down. Once the SJB detects a drop in voltage it will turn on the headlamps after 3 seconds. When the SJB detects the voltage raising, it will determine that the wipers have been turned off and the SJB will turn off the headlamps after 30 seconds.

Rain Sensitive Wipers (if equipped)

The rain sensitive feature replaces the intermittent wiper feature. When the rain sensitive wiper system is active, the rain sensor sends data to the wiper/washer module. The wipers activate based on the amount of moisture detected on the windshield and the setting on the multifunction switch.

The rain sensor optically senses water on the windshield. An infrared beam lights a section of the windshield. The intensity of the reflected beam is measured and compared to the intensity of the transmitted beam. If there is water on the surface of the windshield, the beam distorts, reducing the intensity of the beam. If the beam is not reflected completely, it is interpreted as rain on the windshield and the windshield wipers are activated.

If a fault is detected with the rain sensor input by the wiper/washer module, the wiper/washer module to a default intermittent mode. The timing of the wipers correspond to a standard intermittent setting based on the selection on the multifunction switch.

A gel-type lens is used as the interface between the rain sensor and the windshield. If the lens is missing or damaged, the rain sensing wipers may be inoperative. If the rain sensitive wipers are inoperative and do not default to the intermittent mode, inspect the rain sensor and confirm that the gel-type lens over the rain sensor is undamaged.

Speed Sensitive Wipers

When the wiper control is set on any intermittent setting except INT 1, the speed dependant wipers will automatically adjust with the vehicle speed. Vehicle speed is supplied to the wiper/washer module from the PCM. The wiper/washer module is hardwired to the PCM. This feature decreases the time between wipes when the vehicle speed increases.

Inspection and Verification

1. Verify the customer concern.

2. Visually inspect for obvious signs of mechanical and electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Wiper linkage • Washer nozzles • Washer pump hoses • Washer reservoir • Wiper pivot shaft mounting • Wiper blades	• Battery Junction Box (BJB) fuse 9 (20A) • Smart Junction Box (SJB) fuse 45 (5A) • Multifunction switch • Wiper motor • Washer pump • Rain sensor • Wiper/washer module • Loose or corroded connections • Wiring harness

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** The wiper/washer module does not communicate on the network.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :

   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM .
   - refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition key is in the ON position.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 to diagnose no response from the SJB .

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record Continuous Memory Diagnostic Trouble Codes (CMDTCs).

8. Clear the CMDTCs and carry out the self-test diagnostics for the SJB .

9. If the DTCs retrieved are related to the concern, go to Smart Junction Box (SJB) DTC Chart. For all other DTCs, refer to Section 419-10 .

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

DTC Chart

Smart Junction Box (SJB) DTC Chart

DTC	Description	Action
B2008	Wipers On Signal Circuit Short to Ground	GO to Pinpoint Test G .
All other DTCs	-	REFER to the Master DTC Chart in Section 419-10 .

Symptom Chart

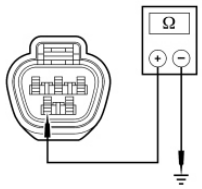
Symptom Chart

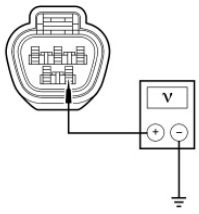
Pinpoint Tests

Pinpoint Test A: The Wipers are Inoperative

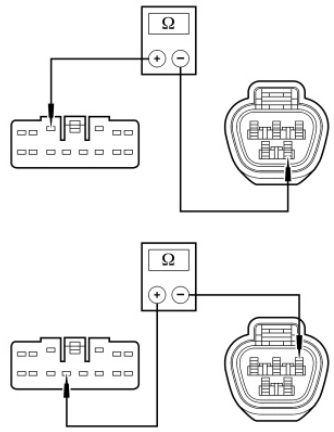
Refer to Wiring Diagrams Cell 81 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Wipers and Washers for schematic and connector information.

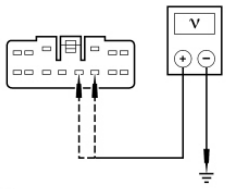
Normal Operation



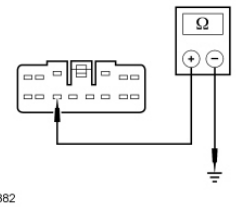


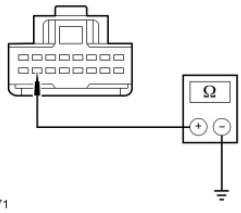
The wiper/washer module is hot at all times through circuit SBB09 (RD). When the ignition switch is in the RUN or ACCESSORY position, voltage is supplied to the wiper/washer module through circuit CBP45 (YE). The wiper/washer module and wiper motor are grounded through circuit GD121 (BK/YE). The multifunction switch is grounded through circuit GD116 (BK/VT). The multifunction switch sends open and ground input signals to the wiper/washer module through circuits CRW17 (GN/VT), CRW18 (VT/WH), CRW19 (BU/OG) and CRW08 (VT/OG) in order to activate the wiper motor to the requested modes. The wiper/washer module supplies voltage to the wiper motor through circuits CRW16 [(GY/BN) low] and CRW15 [(BN/WH) high].





This pinpoint test is intended to diagnose the following:





- Fuse(s)
- Wiring, terminals or connectors
- Multifunction switch
- Wiper motor
- Wiper/washer module

PINPOINT TEST A: THE WIPERS ARE INOPERATIVE

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

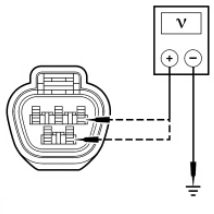
Test Step	Result / Action to Take
A1 CHECK WIPER MOTOR GROUND	
• Ignition OFF. • Disconnect: Wiper Motor C125. • Measure the resistance between front wiper motor C125-4, circuit GD121 (BK/YE), harness side and ground.  N0097813 • **Is the resistance less than 5 ohms?**	**Yes** GO to A2 . **No** REPAIR the circuit. TEST the system for normal operation.
A2 CHECK WIPER MOTOR FOR VOLTAGE	
• Ignition ON. • With the multifunction switch in the low position, measure the voltage between wiper motor C125-5, circuit CRW16 (GY/BN), harness side and ground.  N0042116 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new wiper motor. REFER to Wiper Motor in this section. TEST the system for normal operation. **No** GO to A3 .
A3 CHECK WIPER MOTOR HIGH/LOW CIRCUITS FOR AN OPEN	

• Ignition OFF. • Disconnect: Wiper/Washer Module C2157. • Measure the resistance between wiper/washer module C2157-4, circuit CRW16 (GY/BN), harness side and wiper motor C125-5, circuit CRW16 (GY/BN), harness side; and between wiper/washer module C2157-11, circuit CRW15 (BN/WH), harness side and wiper motor C125-3, circuit CRW15 (BN/WH), harness side.  N0102828 • **Are the resistances less than 5 ohms?**	**Yes** GO to A4 . **No** REPAIR the circuit(s). TEST the system for normal operation
A4 CHECK WIPER/WASHER MODULE FOR VOLTAGE	
• Ignition ON. • Measure the voltage between wiper/washer module C2157-9, circuit SBB09 (RD), harness side and ground; and between wiper/washer module C2157-10, circuit CBP45 (YE), harness side and ground.  N0097811 • **Is the voltage greater than 10 volts?**	**Yes** GO to A5 . **No** VERIFY Battery Junction Box (BJB) fuse 9 (20A) and Smart Junction Box (SJB) fuse 45 (5A) are OK. If OK, REPAIR the circuit. TEST the system for normal operation. If not OK, REFER to the Wiring Diagrams manual to identify possible causes of the circuit short. REPAIR the circuit. TEST the system for normal operation.
A5 CHECK WIPER/WASHER MODULE FOR GROUND	
• Ignition OFF. • Measure the resistance between wiper/washer module C2157-12, circuit GD121 (BK/YE), harness side and ground.	**Yes** GO to A6 . **No** REPAIR the circuit. TEST the system for normal operation.

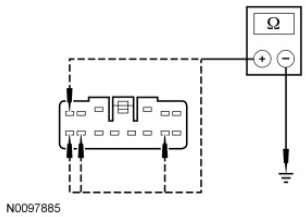
 N0097882 • **Is the resistance less than 5 ohms?**	
A6 CHECK THE MULTIFUNCTION SWITCH	
• Disconnect: Multifunction Switch C202. • Carry out the Multifunction Switch Component Test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did the multifunction switch pass the component test?**	**Yes** GO to A7 . **No** INSTALL a new multifunction switch. REFER to Section 211-05 .
A7 CHECK MULTIFUNCTION SWITCH FOR GROUND	
• Measure the resistance between multifunction switch C202-15, circuit GD116 (BK/VT), harness side and ground.  N0037071 • **Is the resistance less than 5 ohms?**	**Yes** GO to A8 . **No** REPAIR the circuit. TEST the system for normal operation.
A8 CHECK THE WIPER/WASHER MODULE FOR PROPER OPERATION	
• Check for: ♦ corrosion. ♦ pushed-out pins. • Connect the wiper/washer module connector and make sure it is seated correctly, and reconnect the related wiper components. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new wiper/washer module. REFER to Wiper/Washer Module in this section. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test B: The Wipers Stay On Continuously

Refer to Wiring Diagrams Cell 81 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Wipers and Washers for schematic and connector information.



Normal Operation



Under normal operation, the wiper motor receives open and ground inputs from the multifunction switch through circuits CRW08 (VT/OG), CRW17 (GN/VT), CRW18 (VT/WH) and CRW19 (BU/OG) to activate the wipers to the appropriate speeds. The wiper/washer module supplies voltage to the wiper motor through circuits CRW16 ([GY/BN] low) and CRW15 ([BN/WH] high).

This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- Multifunction switch
- Wiper/washer module

PINPOINT TEST B: THE WIPERS STAY ON CONTINUOUSLY

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
B1 CHECK WIPER MOTOR FOR SHORT TO VOLTAGE	
• Ignition OFF. • Disconnect: Wiper Motor C125. • Disconnect: Wiper/Washer Module C2157. • Ignition ON. • With the wipers in the OFF position, measure the voltage between wiper motor C125-3, circuit CRW15 (BN/WH), harness side and ground; and between wiper motor C125-5, circuit CRW16 (GY/BN), harness side and ground.  N0097812 • **Is the voltage greater than 10 volts?**	**Yes** REPAIR the circuit(s) for a short to voltage. TEST the system for normal operation. **No** GO to B2 .
B2 CHECK THE MULTIFUNCTION SWITCH	
• Disconnect: Multifunction Switch C202. • Carry out the Multifunction Switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did the multifunction switch pass the component test?**	**Yes** GO to B3 . **No** INSTALL a new multifunction switch. REFER to Section 211-05 .
B3 CHECK FOR A SHORT TO GROUND IN THE MULTIFUNCTION SWITCH HARNESS	

• Measure the resistance between ground and wiper/washer module: ♦ C2157-8, circuit CRW08 (VT/OG), harness side. ♦ C2157-13, circuit CRW17 (GN/VT), harness side. ♦ C2157-14, circuit CRW19 (BU/OG), harness side. ♦ C2157-6, circuit CRW18 (VT/WH), harness side.  N0097885 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to B4 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.
B4 CHECK FOR CORRECT WIPER/WASHER MODULE OPERATION	
• Disconnect all wiper/washer module connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all wiper/washer module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new wiper/washer module. REFER to Wiper/Washer Module in this section. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test C: The High/Low Wiper Speeds Do Not Operate Correctly

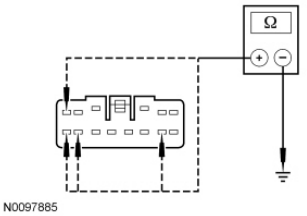
Refer to Wiring Diagrams Cell 81 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Wipers and Washers for schematic and connector information.

Normal Operation

Under normal operation, the wiper/washer module receives open and ground inputs from the multifunction switch through circuits CRW08 (VT/OG), CRW17 (GN/VT), CRW18 (VT/WH) and CRW19 (BU/OG) to activate the wiper motor in the high and low speeds. The wiper/washer module supplies voltage to the wiper motor through circuits CRW16 ([GY/BN] low) and CRW15 ([BN/WH] high).

This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Wiper motor
- Multifunction switch
- Wiper/washer module



PINPOINT TEST C: THE HIGH/LOW WIPER SPEEDS DO NOT OPERATE CORRECTLY

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

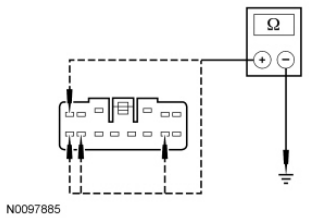
C5 CHECK WIPER MOTOR LOW SPEED FOR VOLTAGE	
• Connect: Wiper/Washer Module C2157. • Connect: Multifunction Switch C202. • Ignition ON. • With the multifunction switch in the low position, measure the voltage between wiper motor C125-5, circuit CRW16 (GY/BN), harness side and ground.  • **Is the voltage greater than 10 volts?**	**Yes** GO to C7 . **No** GO to C6 .
C6 CHECK WIPER MOTOR LOW SPEED FOR AN OPEN	
• Ignition OFF. • Measure the resistance between wiper motor C125-5, circuit CRW16 (GY/BN), harness side and wiper/washer module C2157-4, circuit CRW16 (GY/BN), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** GO to C9 . **No** REPAIR the circuit. TEST the system for normal operation.
C7 CHECK WIPER MOTOR HIGH SPEED FOR VOLTAGE	
• With the multifunction switch in the high position, measure the voltage between wiper motor C125-3, circuit CRW15 (BN/WH), harness side and ground.	**Yes** INSTALL a new wiper motor. REFER to Wiper Motor in this section. TEST the system for normal operation. **No**

 N0042123 • **Is the voltage greater than 10 volts?**	GO to C8 .
C8 CHECK WIPER MOTOR HIGH SPEED FOR AN OPEN	
• Ignition OFF. • Measure the resistance between wiper motor C125-3, circuit CRW15 (BN/WH), harness side and wiper/washer module C2157-11, circuit CRW15 (BN/WH), harness side.  N0097895 • **Is the resistance less than 5 ohms?**	**Yes** GO to C9 . **No** REPAIR the circuit. TEST the system for normal operation.
C9 CHECK FOR CORRECT WIPER/WASHER MODULE OPERATION	
• Disconnect all wiper/washer module connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all wiper/washer module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new wiper/washer module. REFER to Wiper/Washer Module in this section. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

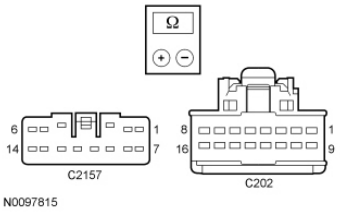
Pinpoint Test D: The Intermittent Wiper Speed Does Not Operate Correctly (High/Low Speeds OK)

Refer to Wiring Diagrams Cell 81 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Wipers and Washers for schematic and connector information.

Normal Operation

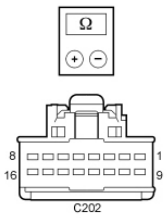


Under normal operation, the wiper/washer module receives open and ground inputs from the multifunction switch through circuits CRW08 (VT/OG), CRW17 (GN/VT), CRW18 (VT/WH) and CRW19 (BU/OG) to activate the wiper motor in the high, low and intermittent speeds.



This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Multifunction switch
- Wiper/washer module



PINPOINT TEST D: THE INTERMITTENT WIPER SPEED DOES NOT OPERATE CORRECTLY (HIGH/LOW SPEEDS OK)

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
D1 VERIFY IF THE VEHICLE IS EQUIPPED WITH RAIN SENSITIVE WIPERS	
NOTE: If sent here from Pinpoint Test E, GO to D2. • Inspect the vehicle for rain sensitive wipers. • **Is the vehicle equipped with rain sensitive wipers?**	**Yes** GO to Pinpoint Test E . **No** GO to D2 .
D2 CHECK THE MULTIFUNCTION SWITCH	
• Ignition OFF. • Disconnect: Multifunction Switch C202. • Carry out the Multifunction Switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Did the multifunction switch pass the component test?**	**Yes** GO to D3 . **No** INSTALL a new multifunction switch. REFER to Section 211-05 . TEST the system for normal operation.
D3 CHECK FOR A SHORT TO GROUND IN THE MULTIFUNCTION SWITCH HARNESS	
• Disconnect: Wiper/Washer Module C2157. • Measure the resistance between ground and wiper/washer module: ♦ C2157-8, circuit CRW08 (VT/OG), harness side. ♦ C2157-13, circuit CRW17 (GN/VT), harness side. ♦ C2157-14, circuit CRW19 (BU/OG), harness side. ♦ C2157-6, circuit CRW18 (VT/WH), harness side.  • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to D4 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.

D4 CHECK FOR AN OPEN IN THE MULTIFUNCTION SWITCH HARNESS	
• Measure the resistance between multifunction switch C202, harness side and wiper/washer module C2157, harness side using the following chart: **Multifunction Switch / Circuit / Wiper/Washer Module** C202-16 / CRW19 (BU/OG) / C2157-14 C202-9 / CRW08 (VT/OG) / C2157-8 C202-12 / CRW17 (GN/VT) / C2157-13 C202-11 / CRW18 (VT/WH) / C2157-6  N0097815 • **Is the resistance less than 5 ohms?**	**Yes** GO to D5 . **No** REPAIR the circuit(s) in question. TEST the system for normal operation.
D5 CHECK FOR A SHORT IN THE WIPER/WASHER MODULE HARNESS	
• Measure the resistance between multifunction switch C202, harness side, using the following chart: **Multifunction Switch / Circuitry / Multifunction Switch** C202-16 / CRW19 (BU/OG)/ CRW18 (VT/WH) / C202-11 C202-16 / CRW19 (BU/OG)/ CRW08 (VT/OG) / C202-9	**Yes** GO to D6 . **No** REPAIR the circuit(s). TEST the system for normal operation.

C202-16	CRW19 (BU/OG)/ CRW17 (GN/VT)	C202-12
C202-11	CRW18 (VT/WH)/ CRW08 (VT/OG)	C202-9
C202-11	CRW18 (VT/WH)/ CRW17 (GN/VT)	C202-12
C202-9	CRW08 (VT/OG)/ CRW17 (GN/VT)	C202-12

- **Is the resistance greater than 10,000 ohms for all measurements?**

D6 CHECK FOR CORRECT WIPER/WASHER MODULE OPERATION	
• Disconnect all wiper/washer module connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all wiper/washer module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new wiper/washer module. REFER to Wiper/Washer Module in this section. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test E: The Rain Sensitive Wipers Are Inoperative

Refer to Wiring Diagrams Cell 81 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Wipers and Washers for schematic and connector information.

Normal Operation

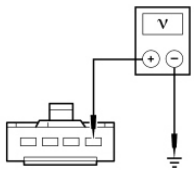
Voltage is supplied to the rain sensor when the ignition is ON. The rain sensor sends data to the wiper/washer module on a dedicated circuit. When the multifunction switch is in one of the 5 auto/intermittent settings, the rain sensitive wipers activate.

The rain sensor optically senses water on the windshield. An infrared beam lights a section of the windshield. The intensity of the reflected beam is measured and compared to the intensity of the transmitted beam. When there is water on the surface of the windshield, the beam distorts, reducing the intensity of the beam. When the beam is not reflected completely, it is interpreted as rain on the windshield and the windshield wipers activate based on the sensitivity setting.

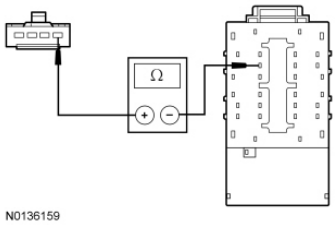
If a fault is detected with the rain sensor input by the wiper/washer module, the wiper/washer module switches to a default intermittent mode. The timing of the wipers correspond to a standard intermittent setting based on the selection on the multifunction switch.

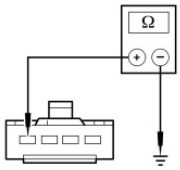
A gel-type lens is used as the interface between the rain sensor and the windshield. If the lens is missing or damaged, the rain sensing wipers may be inoperative. If the rain sensitive wipers are inoperative and do not default to the intermittent mode, inspect the rain sensor and confirm that the gel-type lens over the rain sensor is undamaged.

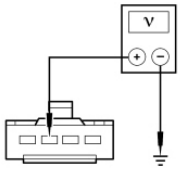
This pinpoint test is intended to diagnose the following:



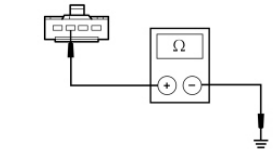
- Fuse
- Wiring, terminals or connectors
- Wiper blades
- Rain sensor mounting bracket not secured to the windshield
- Rain sensor gel-type lens
- Rain sensor
- Foreign material on windshield, such as dirt, dust or bugs
- Damaged windshield
- Wiper motor
- Wiper/washer module
- SJB

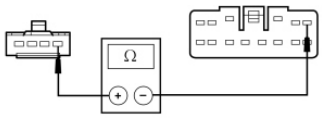






PINPOINT TEST E: THE RAIN SENSITIVE WIPERS ARE INOPERATIVE





NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
E1 CHECK THE INPUT FROM THE MULTIFUNCTION SWITCH	
• Ignition ON. • Cycle the multifunction switch from off through each of the auto/intermittent settings, waiting 10 seconds between cycling the switch to the next setting. • Set the multifunction switch to the wipers off setting. • **Do the wipers cycle when the switch is changed to each setting?**	**Yes** GO to E2 . **No** GO to Pinpoint Test D .
E2 CHECK THE RAIN SENSITIVE WIPERS FOR DEFAULT INTERMITTENT MODE	

• **NOTE:** Make sure the windshield is dry when carrying out this step. • **NOTE:** The windshield wipers activate when the multifunction switch is cycled through the auto/intermittent settings. The initial wiper activation after changing the setting should not be considered part of an intermittent wiper operation. • Cycle the multifunction switch to auto/intermittent setting 5, the most sensitive to moisture. • **Do the wipers default to a standard intermittent setting?**	**Yes** GO to E9 . **No** GO to E3 .
E3 CHECK THE WINDSHIELD FOR DAMAGE	
• Ignition OFF. • Inspect the windshield glass for any cracks, pits or other visible damage around the area of the rain sensor. • **Is any windshield damage present near the area of the rain sensor?**	**Yes** INSTALL a new windshield. REFER to Section 501-11 . TEST the system for normal operation. **No** GO to E4 .
E4 CHECK THE WINDSHIELD GLASS FOR STREAKING	
• Ignition ON. • Turn the multifunction switch to the low speed wiper setting and while applying water to the windshield surface. Observe the wipe quality, especially around the area or the rain sensor. • **Is any streaking present on the windshield around the area of the rain sensor?**	**Yes** GO to E5 . **No** GO to E7 .
E5 CHECK THE WINDSHIELD WIPER BLADES FOR STREAKING	
• Ignition OFF. • Clean the windshield glass with glass cleaner. • Clean the wiper blades with isopropyl alcohol swabs. Wipe the entire length of the wiper blades. • Ignition ON. • Turn the multifunction switch to the low speed wiper setting and while applying water to the windshield surface. Observe the wipe quality, especially around the area or the rain sensor. • **Was there noticeable improvement in the wipe quality after cleaning the glass and the wiper blades?**	**Yes** GO to E6 . **No** INSTALL new wiper blades. GO to E6 .
E6 RECHECK THE RAIN SENSITIVE WIPERS OPERATION	
• Turn the multifunction switch to the auto/intermittent 5 setting (most sensitive to moisture) while applying water on the windshield above the rain sensor. • **Do the wipers operate when water is applied to the windshield surface?**	**Yes** The system is operating correctly at this time. The concern may have been caused by poor wipe quality on the windshield around the rain sensor.

	No GO to E7 .
E7 CHECK FOR THE PRESENCE OF THE LENS GEL	
• Ignition OFF. • Lightly press the rain sensor against the windshield and release the rain sensor clips. • **Does the rain sensor remain adhered to the windshield?**	**Yes** ATTACH the retaining clips. GO to E8 . **No** The sensor lens is missing or damaged. INSTALL a new gel-type lens using the rain sensor bracket service kit. TEST the system for normal operation.
E8 INSPECT THE RAIN SENSOR MOUNTING AREA	
NOTE: The rain sensor gel-type lens can be damaged or contaminated during rain sensor removal, rain sensor bracket separation or incorrect installation. • From the outside of the vehicle, inspect the area of the windshield glass where the rain sensor is mounted. The rain sensor contact area should appear black, with no bubbles, air pockets or contaminants between the windshield glass and the rain sensor. • **Does the rain sensor contact area appear black, with no bubbles, air pockets or contaminants between the windshield glass and the rain sensor?**	**Yes** GO to E9 . **No** REMOVE the gel-type lens. INSTALL a new gel-type lens using the rain sensor bracket service kit. TEST the system for normal operation. If the concern is still present, GO to E9 .
E9 CHECK FOR VOLTAGE TO THE RAIN SENSOR	
• Ignition OFF. • Disconnect: Rain Sensor C914. • Ignition ON. • Measure the voltage between the rain sensor C914-4, circuit CBP43 (GY), harness side and ground.  N0092556 • **Is the voltage greater than 10 volts?**	**Yes** GO to E11 . **No** VERIFY SJB fuse 43 (10A) is OK. If OK, GO to E10 . If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.
E10 CHECK THE RAIN SENSOR VOLTAGE SUPPLY CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: SJB C2280D. • Measure the resistance between the rain sensor C914-4, circuit CBP43 (GY), harness side and the SJB C2280D-22, circuit CBP43 (GY), harness side.	**Yes** GO to E16 . **No** REPAIR the circuit. TEST the system for normal operation.

 N0136159 • **Is the resistance less than 5 ohms?**	
E11 CHECK THE RAIN SENSOR GROUND CIRCUIT FOR AN OPEN	
• Ignition OFF. • Measure the resistance between the rain sensor C914-1, circuit GD139 (BK/YE), harness side and ground.  N0092557 • **Is the resistance less than 5 ohms?**	**Yes** GO to E12 . **No** REPAIR the circuit. TEST the system for normal operation.
E12 CHECK THE RAIN SENSOR SIGNAL CIRCUIT FOR A SHORT TO VOLTAGE	
• Disconnect: Wiper/Washer Module C2157. • Ignition ON. • Measure the voltage between the rain sensor C914-2, circuit VMC05 (VT/OG), harness side and ground.  N0092558 • **Is any voltage present?**	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to E13 .
E13 CHECK THE RAIN SENSOR SIGNAL CIRCUIT FOR A SHORT TO GROUND	
• Ignition OFF. • Measure the resistance between the rain sensor C914-2, circuit VMC05 (VT/OG), harness side and ground.	**Yes** GO to E14 . **No** REPAIR the circuit. TEST the system for normal operation.

 N0136160 • **Is the resistance greater than 10,000 ohms?**	
E14 CHECK THE RAIN SENSOR SIGNAL CIRCUIT FOR AN OPEN	
• Measure the resistance between the rain sensor C914-2, circuit VMC05 (VT/OG), harness side and the wiper/washer module C2157-1, circuit VMC05 (VT/OG), harness side.  N0138459 • **Is the resistance less than 5 ohms?**	**Yes** GO to E15 . **No** REPAIR the circuit. TEST the system for normal operation.
E15 CHECK FOR CORRECT RAIN SENSOR OPERATION	
• Check for: ♦ corrosion. ♦ pushed-out pins. • Connect the rain sensor connector and make it seats correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new rain sensor. REFER to Rain Sensor . TEST the system for normal operation. If the concern is still present, GO to E17 . **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.
E16 CHECK FOR CORRECT SJB OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all the SJB connectors and make sure they seat correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.
E17 CHECK FOR CORRECT WIPER/WASHER MODULE OPERATION	

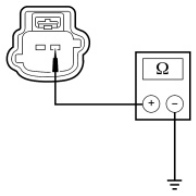
• Check for: ♦ corrosion. ♦ pushed-out pins. • Connect the wiper/washer module connector and make it seats correctly. • Operate the system and determine if the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new wiper/washer module. REFER to Wiper/Washer Module in this section. TEST the system for normal operation. **No** The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

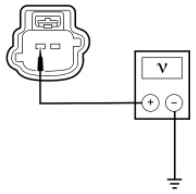
Pinpoint Test F: The Washer Pump is Inoperative

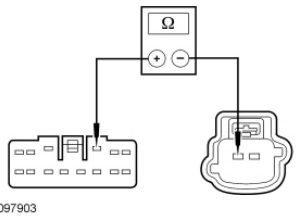
Refer to Wiring Diagrams Cell 81 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Wipers and Washers for schematic and connector information.

Normal Operation

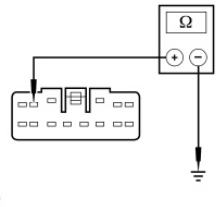
The multifunction switch provides a ground signal to the wiper/washer module through circuit CRW07 (GY/BN) when the wash function is selected on the multifunction switch. When the wiper/washer module detects this input, the wiper/washer module activates an internal washer relay that provides voltage to the washer pump through circuit CRW14 (BU/WH). The washer pump is grounded through circuit GD123 (BK/GY).

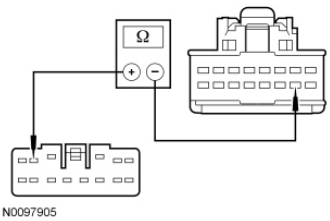






This pinpoint test is intended to diagnose the following:





- Wiring, terminals or connectors
- Blocked washer hose/washer jet
- Multifunction switch
- Washer pump motor
- Wiper/washer module

PINPOINT TEST F: THE WASHER PUMP IS INOPERATIVE

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
F1 CHECK WASHER PUMP MOTOR FOR GROUND	
• Disconnect: Washer Pump Motor C137. • Ignition OFF. • Measure the resistance between washer pump motor C137-2, circuit GD123 (BK/GY) harness side and ground.	**Yes** GO to F2 . **No** REPAIR the circuit. TEST the system for normal operation.

 N0042127 • **Is the resistance less than 5 ohms?**	
F2 CHECK WASHER PUMP MOTOR FOR VOLTAGE	
• Ignition ON. • Measure the voltage between washer pump motor C137-1, circuit CRW14 (BU/WH), harness side and ground while depressing the multifunction switch to the WASH position.  N0042128 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new washer pump. REFER to Washer Pump in this section. **No** GO to F3 .
F3 CHECK WASHER PUMP MOTOR VOLTAGE CIRCUIT FOR AN OPEN	
• Ignition OFF. • Disconnect: Wiper/Washer Module C2157. • Measure the resistance between wiper/washer module C2157-3, circuit CRW14 (BU/WH), harness side and washer pump motor C137-1, circuit CRW14 (BU/WH), harness side.  N0097903 • **Is the resistance less than 5 ohms?**	**Yes** GO to F4 . **No** REPAIR the circuit. TEST the system for normal operation.
F4 CHECK MULTIFUNCTION SWITCH WASHER OUTPUT CIRCUIT	
• Measure the resistance between wiper/washer module C2157-5, circuit CRW07 (GY/BN) harness side and ground while depressing the multifunction switch to the WASH position.	**Yes** GO to F6 . **No** GO to F5 .

 N0097904 • **Is the resistance less than 5 ohms?**	
F5 CHECK MULTIFUNCTION SWITCH OUTPUT CIRCUIT FOR AN OPEN	
• Disconnect: Multifunction Switch C202. • Measure the resistance between wiper/washer module C2157-5, circuit CRW07 (GY/BN), harness side and multifunction switch C202-10, circuit CRW07 (GY/BN), harness side.  N0097905 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new multifunction switch. REFER to Section 211-05 . TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.
F6 CHECK FOR CORRECT WIPER/WASHER MODULE OPERATION	
• Disconnect all wiper/washer module connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all wiper/washer module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new wiper/washer module. REFER to Wiper/Washer Module in this section. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

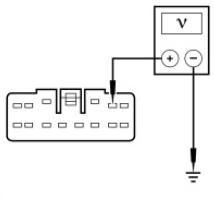
Pinpoint Test G: The Headlamps Do Not Illuminate When the Wipers are On

Refer to Wiring Diagrams Cell 81 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Front Wipers and Washers for schematic and connector information.

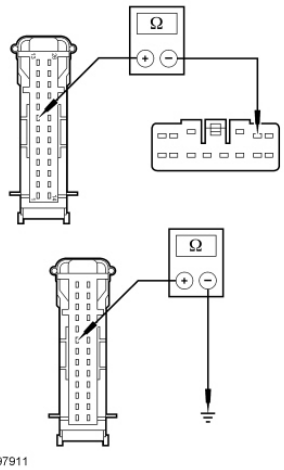
Normal Operation

The Smart Junction Box (SJB) sends a 12 volt reference signal on circuit CRW01 (WH) to the wiper motor module in order to monitor the status of the wipers. When the headlamp control switch is in the AUTOLAMP position and the wipers are on, the wiper motor module will pull the voltage reference signal low. After 3

seconds, the SJB will activate the headlamps.



- DTC B2008 (Wipers On Signal Circuit Short to Ground) - Sets when a short to ground is detected on the wiper motor status input circuit.



This pinpoint test is intended to diagnose the following:

- Wiring, terminals or connectors
- Wiper/washerodule
- SJB

PINPOINT TEST G: THE HEADLAMPS DO NOT ILLUMINATE WHEN THE WIPERS ARE ON

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
G1 CHECK WIPER ON SIGNAL FOR VOLTAGE	
• Disconnect: Wiper/Washer Module C2157. • Ignition ON. • Measure the voltage between wiper/washer module C2157-2, circuit CRW01 (WH), harness side and ground.  N0097910 • **Is the voltage greater than 10 volts?**	**Yes** INSTALL a new wiper/washer module. REFER to Wiper/Washer Module in this section. CLEAR the DTCs. REPEAT the self-test. **No** GO to G2 .
G2 CHECK WIPER ON SIGNAL FOR AN OPEN OR SHORT TO GROUND	
• Ignition OFF. • Disconnect: SJB C2280F. • Measure the resistance between SJB C2280F-8, circuit CRW01 (WH), harness side and wiper/washer module C2157-2, circuit CRW01 (WH); and between SJB C2280F-8, circuit CRW01 (WH), harness side and ground.	**Yes** GO to G3 . **No** REPAIR the circuit. CLEAR the DTCs. REPEAT the self-test.

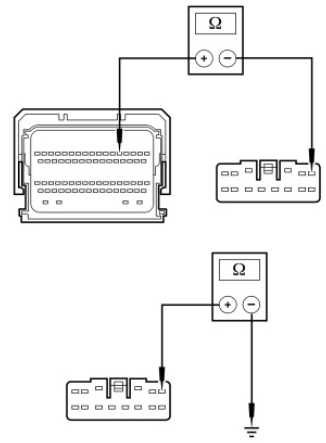
 • **Is the resistance less than 5 ohms between the SJB and wiper/washer module and greater than 10,000 ohms between the SJB and ground?**	
G3 CHECK FOR CORRECT MODULE OPERATION	
• Disconnect all the SJB connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all the SJB connectors and make sure they are seated correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new SJB . REFER to Section 419-10 . CLEAR the DTCs. REPEAT the self-test. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. CLEAR the DTCs. REPEAT the self-test.

Pinpoint Test H: The Speed Dependent Interval Mode Does Not Operate Correctly

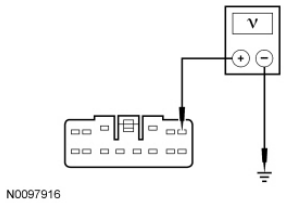
Refer to Wiring Diagrams Cell 81 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Front Wipers and Washers for schematic and connector information.

Normal Operation

Under normal operation, the windshield wiper/washer module receives vehicle speed information from the PCM through circuit VMC05 (VT/OG). The windshield wiper/washer module then determines the speed of the windshield wiper motor. The speed dependant wipers function in all INT modes except INT 1.



This pinpoint test is intended to diagnose the following:



- Wiring, terminals or connectors
- Wiper/washer module

PINPOINT TEST H: THE SPEED DEPENDENT INTERVAL MODE DOES NOT OPERATE CORRECTLY

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take

H1 CHECK PCM FOR DTCs	
• Review the DTCs from the PCM self-test. • **Are any Vehicle Speed Sensor (VSS) related DTCs present?**	**Yes** REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual to diagnose the VSS . **No** GO to H2 .
H2 CHECK THE VEHICLE SPEED CIRCUIT FOR AN OPEN OR SHORT TO GROUND	
• Ignition OFF. • Disconnect: Wiper/Washer Module C2157. • Disconnect: PCM C175B. • Measure the resistance between wiper/washer module C2157-1, circuit VMC05 (VT/OG), harness side and PCM C175B-5, circuit VMC05 (VT/OG), harness side; and between wiper/washer module C2157-1, circuit VMC05 (VT/OG), harness side and ground.  N0097915 • **Is the resistance less than 5 ohms between wiper/washer module and PCM; and greater than 10,000 ohms between wiper/washer module and ground?**	**Yes** GO to H3 . **No** REPAIR the circuit. TEST the system for normal operation.
H3 CHECK THE VEHICLE SPEED CIRCUIT FOR A SHORT TO VOLTAGE	
• Ignition ON. • Measure the voltage between wiper/washer module C2157-1, circuit VMC05 (VT/OG), harness side and ground.	**Yes** REPAIR the circuit. TEST the system for normal operation. **No** GO to H4 .

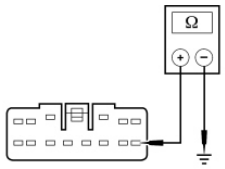
 N0097916 • **Is any voltage present?**	
H4 CHECK FOR CORRECT WIPER/WASHER MODULE OPERATION	
• Disconnect all wiper/washer module connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all wiper/washer module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new wiper/washer module. REFER to Wiper/Washer Module in this section. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test I: The Wipers Will Not Park at the Correct Position

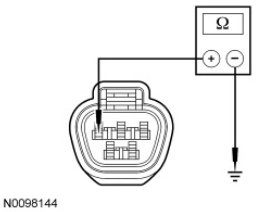
Refer to Wiring Diagrams Cell 81 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Front Wipers and Washers for schematic and connector information.

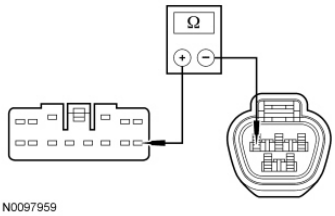
Normal Operation

Under normal operation, the wiper motor sends a ground signal through circuit CRW09 (BN/BU) to the wiper/washer module when the wipers are in the park position. If there is a open or short in circuit CRW09 (BN/BU) the wipers will not park and will stop in the position the wipers are currently in when the wipers are turned off.



This pinpoint test is intended to diagnose the following:



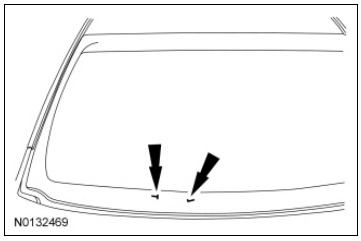


- Damaged wiper mounting arm and pivot shaft
- Pivot arm adjustment
- Wiring, terminals or connectors
- Wiper motor
- Wiper/washer module

PINPOINT TEST I: THE WIPERS WILL NOT PARK AT THE CORRECT POSITION

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when making measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Test Step	Result / Action to Take
I1 CHECK FOR WIPER MOUNTING ARM AND PIVOT SHAFT DAMAGE	

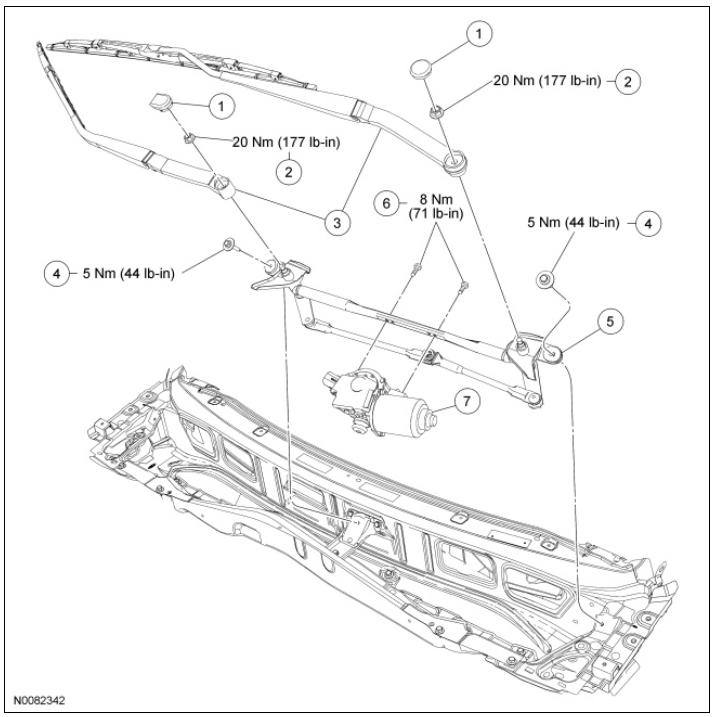


• Check the wiper mounting arm and pivot shaft for damage. • **Is there damage to wiper mounting arm or pivot shaft?**	**Yes** If there is damage to mounting arm or pivot shaft, INSTALL a new wiper mounting arm or INSTALL a new pivot shaft. REFER to Wiper Mounting Arm and Pivot Shaft or Wiper Pivot Arm in this section. **No** GO to I2 .
I2 CHECK WIPER PIVOT ARM ALIGNMENT	
• Check the wiper pivot arm adjustment. • **Is the wiper pivot arm correctly adjusted?**	**Yes** GO to I3 . **No** ADJUST the wiper blade and pivot arm. REFER to Wiper Blade and Pivot Arm Adjustment in this section. TEST the system for normal operation.
I3 CHECK WIPER MOTOR FOR A INTERNAL SHORT TO GROUND	
• Ignition ON. • Operate the wipers until the wipers are no longer in the PARK position and turn off the wipers. • Ignition OFF. • Disconnect: Wiper/Washer Module C2157. • Measure the resistance between wiper/washer module C2157-7, circuit CRW09 (BN/BU), harness side and ground.  N0098199 • **Is the resistance greater than 10,000 ohms?**	**Yes** GO to I5 . **No** GO to I4 .
I4 CHECK WIPER PARK SIGNAL FOR A SHORT TO GROUND	
• Disconnect: Wiper Motor C125. • Measure the resistance between wiper motor C125-1, circuit CRW09 (BN/BU), harness side and ground.	**Yes** INSTALL a new wiper motor. REFER to Wiper Motor in this section. TEST the system for normal operation. **No** REPAIR the circuit. TEST the system for normal operation.

 N0098144 • **Is the resistance greater than 10,000 ohms?**	
I5 CHECK WIPER PARK SIGNAL FOR AN OPEN	
• Measure the resistance between wiper/washer module C2157-7, circuit CRW09 (BN/BU), harness side and wiper motor C125-1, circuit CRW09 (BN/BU), harness side.  N0097959 • **Is the resistance less than 5 ohms?**	**Yes** GO to I6 . **No** REPAIR the circuit. TEST the system for normal operation.
I6 CHECK FOR CORRECT WIPER/WASHER MODULE OPERATION	
• Disconnect all wiper/washer module connectors. • Check for: ♦ corrosion. ♦ pushed-out pins. • Connect all wiper/washer module connectors and make sure they seat correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new wiper/washer module. REFER to Wiper/Washer Module in this section. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

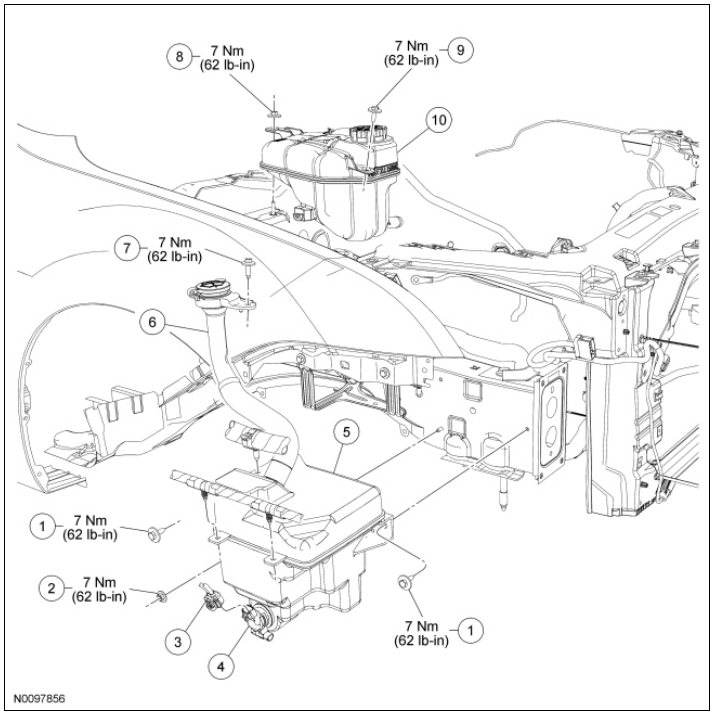
Wiper Blade and Pivot Arm Adjustment

1. Cycle and park the windshield wipers.



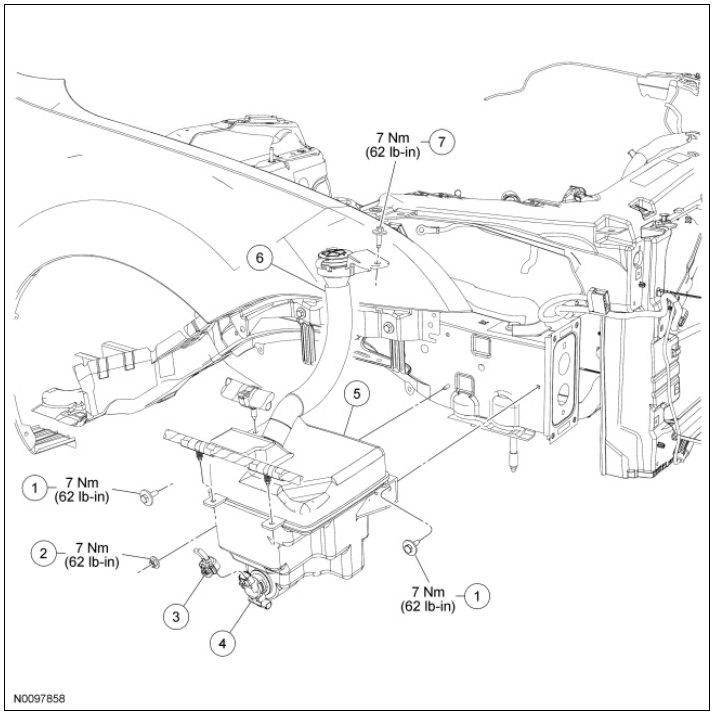
2. Verify that the RH and LH wiper blades are located at the alignment marks on the glass.

3. If necessary, remove the nuts and the windshield wiper pivot arms and reposition them to the correct locations.
    - To install, tighten to 20 Nm (177 lb-in).



Wiper and Washer System - Exploded View

Windshield Wipers

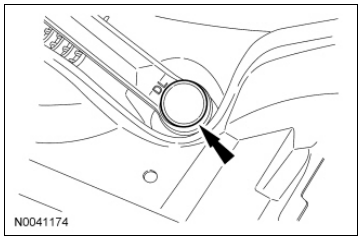


Item	Part Number	Description
1	17C526	Wiper pivot arm caps (2 required)
2	W520403	Wiper pivot arm nuts (2 required)
3	17526	Wiper pivot arm assembly
4	W701121	Windshield wiper mounting arm and pivot shaft assembly bolts (2 required)
5	17566	Windshield wiper mounting arm and pivot shaft assembly
6	-	Wiper motor-to-wiper mounting arm bolts (part of 17508) (2 required)
7	17508	Wiper motor assembly

Washer Pump and Reservoir - Hybrid

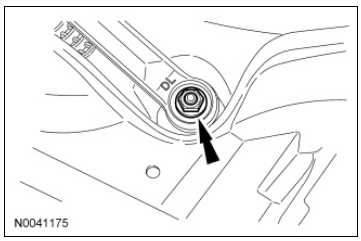
Item	Part Number	Description
1	W707399	Windshield washer reservoir bolts (2 required)
2	W702751	Windshield washer reservoir nut
3	14A005	Windshield washer pump electrical connector
4	17664	Windshield washer pump
5	17618	Windshield washer reservoir
6	17618	Windshield washer reservoir filler neck
7	W500214	Windshield washer reservoir filler neck retaining bolt
8	W702751	Coolant reservoir nut
9	W505252	Coolant reservoir bolt
10	8A080	Coolant reservoir

Washer Pump and Reservoir - Non-Hybrid



Item	Part Number	Description
1	W707399	Windshield washer reservoir bolts (2 required)
2	W702751	Windshield washer reservoir nut
3	14A005	Windshield washer pump electrical connector
4	17664	Windshield washer pump
5	17618	Windshield washer reservoir
6	17618	Windshield washer reservoir filler neck
7	W500214	Windshie washer reservoir filler neck retaining bolt

1. For additional information, refer to the procedures in this section.



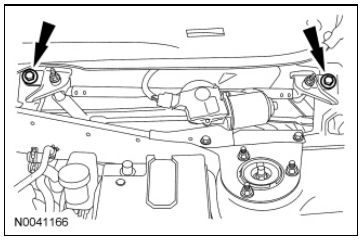
Wiper Pivot Arm

Removal and Installation

1. Remove the wiper pivot arm cap.

2. Remove the wiper pivot arm retaining nut and the wiper pivot arm.
   - To install, tighten to 20 Nm (177 lb-in).

3. To install, reverse the removal procedure.



Wiper Mounting Arm and Pivot Shaft

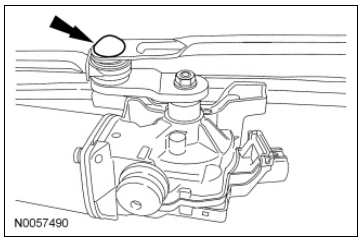
Removal and Installation

1. Remove the upper cowl panel grille. For additional information, refer to Section 501-02 .

2. Disconnect the windshield wiper motor electrical connector.

3. Remove the 2 windshield wiper mounting arm and pivot shaft assembly bolts and the windshield wiper mounting arm and pivot shaft assembly.
    - To install, tighten to 5 Nm (44 lb-in).

4. To install, reverse the removal procedure.



Wiper Motor

Removal and Installation

1. Remove the wiper pivot arms. For additional information, refer to Wiper Pivot Arm in this section.

2. Remove the windshield wiper mounting arm and pivot shaft. For additional information, refer to Wiper Mounting Arm and Pivot Shaft in this section.

3. Separate the wiper motor linkage arm from the wiper mounting arm and pivot shaft assembly.

4. Remove the 2 wiper motor-to-wiper mounting arm bolts and the wiper motor.
    - To install, tighten to 8 Nm (71 lb-in).

5. To install, reverse the removal procedure.

Washer Pump

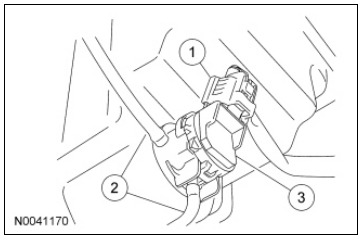
Material

Item	Specification
Motorcraft® Premium Quality Windshield Washer Fluid (Canada) CXC-37-(A, B, D, and F) (Canada)	-
Motorcraft® Premium Windshield Washer Concentrate (US) ZC-32-A or B (US)	WSB-M8B16-A2

Removal and Installation

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Remove the RH front fender splash shield. For additional information, refer to Section 501-02 .



3. ⚠ **WARNING: Carefully read cautionary information on product label. For EMERGENCY MEDICAL INFORMATION seek medical advice. In the USA or Canada on Ford/Motorcraft products call: 1-800-959-3673. For additional information, consult the product Material Safety Data Sheet (MSDS) if available. Failure to follow these instructions may result in serious personal injury.**

   NOTICE: **When installing the windshield washer pump, be careful not to damage the rubber grommet.**

   NOTE: To prevent spilling windshield washer fluid, dn the windshield washer reservoir before washer pump removal.

   Remove the windshield washer pump.

   1. Disconnect the electrical connector.
   2. Disconnect the hoses.
   3. Remove the windshield washer pump.

4. ***NOTICE:*** **Do not operate the windshield washer pump prior to filling the windshield washer reservoir. Failure to follow these instructions may result in premature pump failure.**

   To install, reverse the removal procedure.

- Fill the windshield washer reservoir with windshield washer fluid.

Washer Reservoir

Material

Item	Specification
Motorcraft® Premium Quality Windshield Washer Fluid (Canada) CXC-37-(A, B, D, and F) (Canada)	-
Motorcraft® Premium Windshield Washer Concentrate (US) ZC-32-A or B (US)	WSB-M8B16-A2

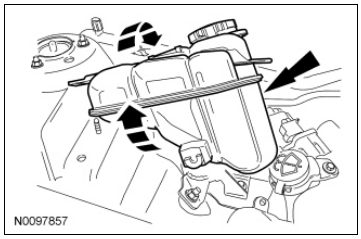
Removal and Installation

All vehicles

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Remove the RH front fender splash shield. For additional information, refer to Section 501-02 .

3. Disconnect the windshield washer pump electrical connector.

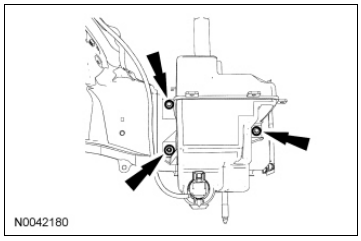


4. ⚠ **WARNING: Carefully read cautionary information on product label. For EMERGENCY MEDICAL INFORMATION seek medical advice. In the USA or Canada on Ford/Motorcraft products call: 1-800-959-3673. For additional information, consult the product Material Safety Data Sheet (MSDS) if available. Failure to follow these instructions may result in serious personal injury.**

   NOTE: To prevent spilling windshield washer fluid,ain the windshield washer reservoir before removal.

   Disconnect the washer pump hose.

Hybrid vehicles

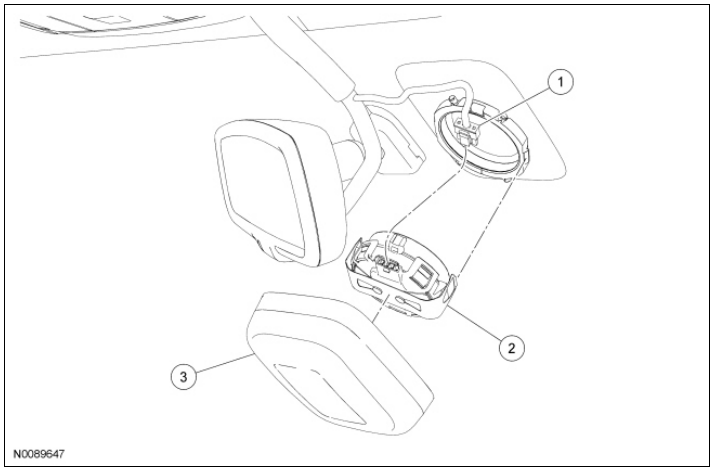


5. Remove the coolant reservoir bolt and nut and position the reservoir aside in order to gain access to the washer reservoir filler neck.
   - To install, tighten to 7 Nm (62 lb-in).

All vehicles

6. Remove the bolt and the windshield washer reservoir filler neck.
    - To install, tighten to 7 Nm (62 lb-in).

7. Remove the windshield washer reservoir fasteners and the windshield washer reservoir.
    - To install, tighten to 7 Nm (62 lb-in).



8. ***NOTICE:*** **Do not operate the windshield washer pump prior to filling the windshield washer reservoir. Failure to follow these instructions may result in premature pump failure.**

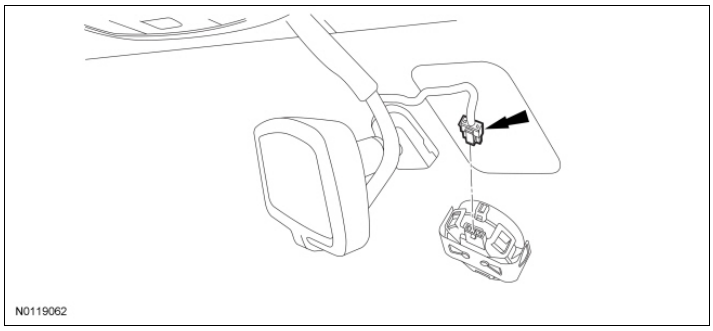
    To install, reverse the removal procedure.

    - Fill the windshield washer reservoir with windshield washer fluid.

Rain Sensor

NOTE: Vehicle without Headlamp Control Module 2 (HCM-2) shown, vehicle with HCM-2 similar.

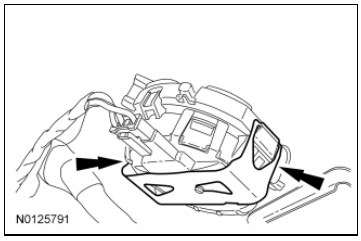
Item	Part Number	Description
1	-	Electrical connector (part of 17C712)
2	17D547	Rain sensor
3	17D550	Rain sensor cover



Removal

NOTE: If reinstalling the original rain sensor, a new lens/bracket service kit (19G382) must be acquired prior to performing this procedure.

1. On vehicles equipped with a Headlamp Control Module 2 (HCM-2), remove the HCM-2 . For additional information, refer to Section 417-01 .

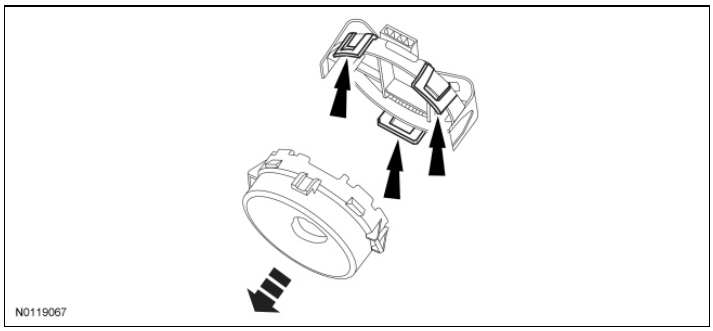


2. On vehicles equipped with only a rain sensor, remove the rain sensor cover.

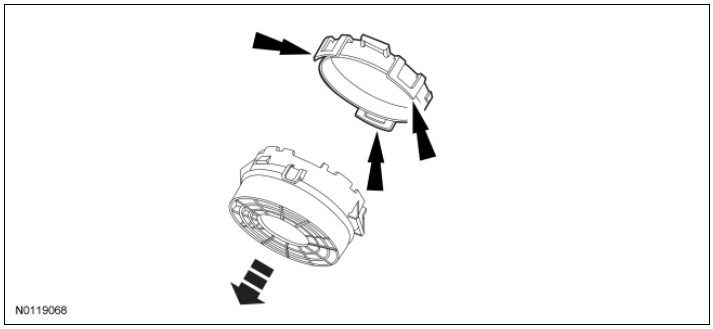
3. Disconnect the rain sensor electrical connector.

4. **NOTE:** Lightly press the rain sensor against the windshield to relieve the clip tension.

   Release the 2 rain sensor retaining clips and remove the rain sensor.



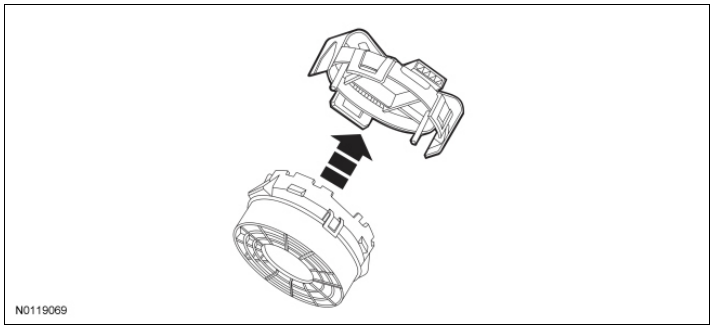
Installation



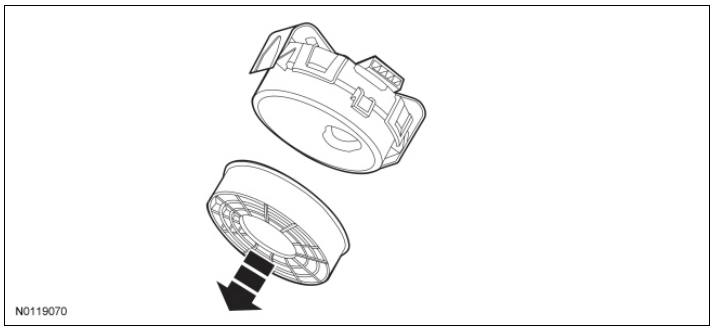
Reinstalling the original rain sensor

NOTICE: **Do not touch the rain sensor lens-to-windshield contact area or allow it to become contaminated with dust or debris. Touching or contaminating the rain sensor lens will result in the rain sensitive wiper feature being inoperative or working incorrectly.**

1. Disengage the 3 rain sensor plastic clips and separate the electronics backing plate from the rain sensor lens.
    - Discard the rain sensor lens.

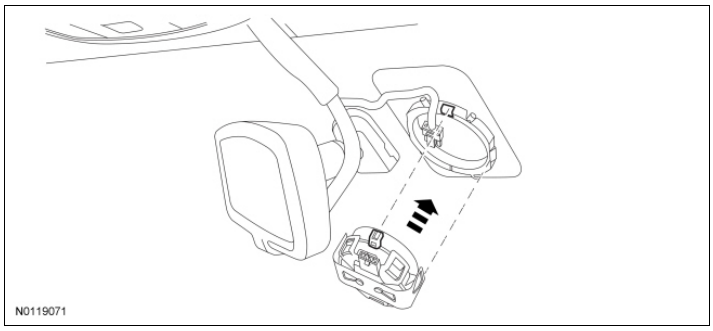


2. Disengage the 3 rain sensor plastic clips on the rain sensor lens protective backing and separate the rain sensor protective backing from the new rain sensor lens.



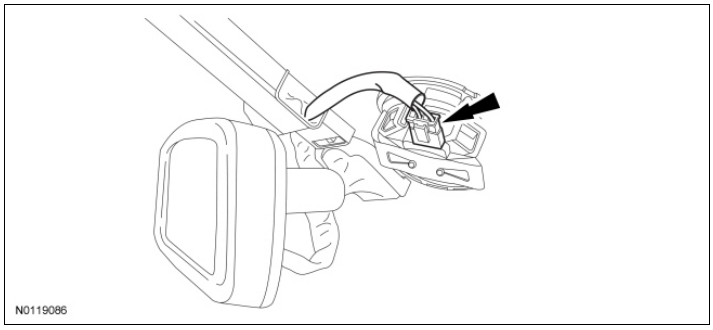
3. **NOTE:** Do not remove the white rain sensor lens protective cover at this time.

   Install the rain sensor lens onto the electronics backing plate.



All rain sensors

4. Remove the white rain sensor lens protective cover from the rain sensor lens.

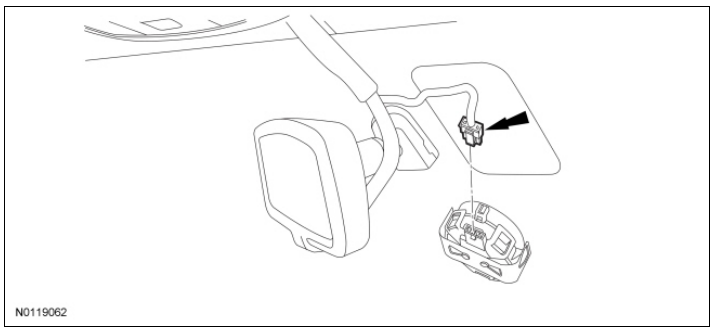


5. Clean any residual rain sensor lens material from the rain sensor viewing window.

6. Install the rain sensor onto the rain sensor mounting bracket, making sure that the alignment tab on the rain sensor is aligned with the notch on the mounting bracket.
    - Press the metal rain sensor mounting bracket clips to engage the clips onto the mounting bracket.

7. Connect the rain sensor electrical connector.

8. On vehicles equipped with only a rain sensor, install the rain sensor cover.



9. On vehicles equipped with a Headlamp Control Module 2 (HCM-2), install the HCM-2 . For additional information, refer to Section 417-01 .

Rain Sensor Bracket

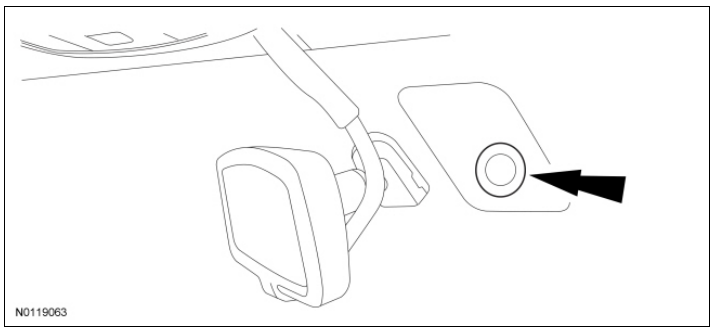
NOTE: The rain sensor bracket primer and adhesive are not included in service kit (part number 19G382) and will have to be ordered separately. The rain sensor bracket primer and adhesive part numbers and ordering instructions are available in the parts ordering system.

NOTE: The rain sensor bracket adhesive will take at least 6 hours to dry.

1. Disconnect the rain sensor electrical connector.

2. ***NOTICE:*** **Make sure not to scratch the windshield glass.**

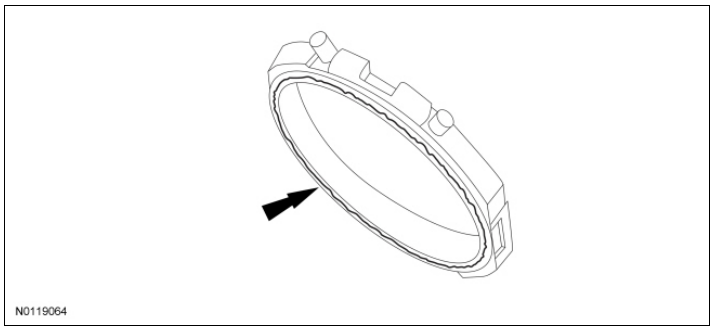
   Using a razor blade, carefully remove any residual glue from the windshield glass.



3. Using a clean cloth, wipe the windshield glass to remove any loose glue particles and any residual rain sensor lens material.

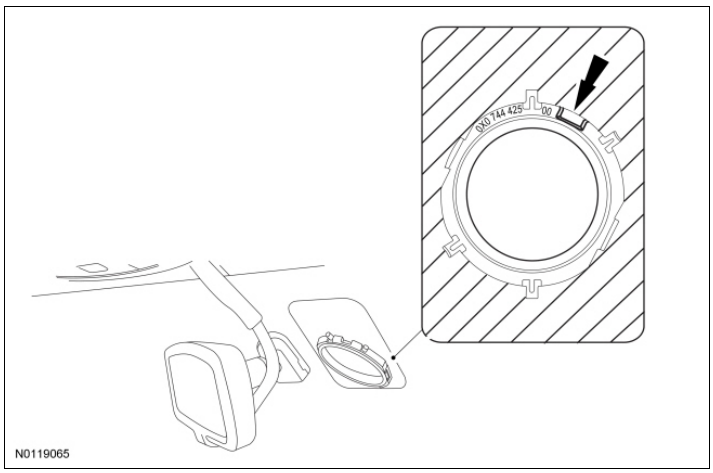
4. Apply specified primer onto a clean cloth.

5. Insert a cotton swab, or equivalent, onto the wet area of the cloth.



6. ***NOTICE:*** **Do not apply primer to the rain sensor view window area.**

   Using the cotton swab, or equivalent, apply the primer onto the contact area of the rain sensor mounting bracket area of the windshield glass.

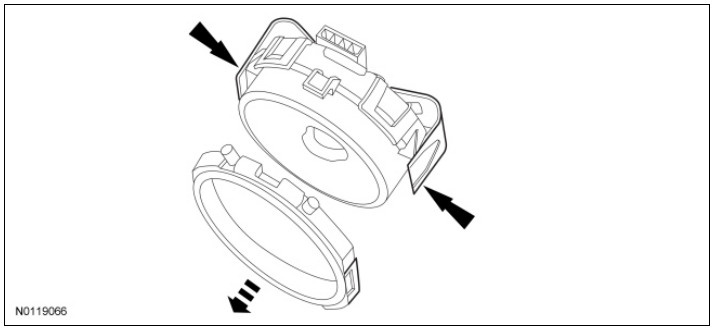


7. **NOTE:** Apply the adhesive to the side of the rain sensor bracket that is opposite of the notch and that does not contain numbers and letters.

Using a 3M® EPX Plus II applicator or equivalent, apply a 2 to 3 mm (0.078 in to 0.118 in) bead of specified adhesive to the rain sensor mounting bracket.

8. **NOTE:** If the rain sensor mounting bracket is not mounted in the correct location on the windshield glass, the rain sensor trim cover will not install correctly.

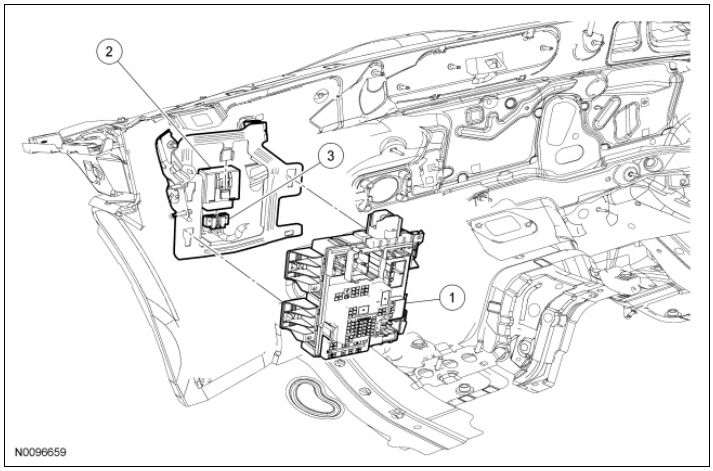
   Apply the rain sensor mounting bracket onto the windshield making sure that the notch on the bracket is in the 1 o'clock position and that the bracket is centered around the rain sensor view window area.



9. **NOTE:** Do not apply masking tape onto the rain sensor view window area.

   Apply masking tape onto the rain sensor mounting bracket and the windshield glass in order to hold the bracket onto the windshield.

10. Allow the adhesive to dry for at least 6 hours.



11. Disengage the metal rain sensor mounting clips from the old rain sensor bracket and separate the old rain sensor bracket from the rain sensor.
    - Discard the old rain sensor bracket, it is not to be reused.

12. Install the rain sensor. For additional information, refer to Rain Sensor in this section.

Wiper/Washer Module

NOTE: Instrument panel removed for clarity.

Item	Part Number	Description
1	15605	Smart Junction Box (SJB)
2	14B205	Wiper/washer module
3	14401	Wiper/washer module electrical connector

Removal and Installation

1. Position the Smart Junction Box (SJB) aside by pushing upward then pulling outward to release it from the SJB bracket.
2. Disconnect the wiper/washer module connector.
3. Pull down on the wiper/washer module to release it from the SJB bracket.
4. To install, reverse the removal procedure.

General Specifications

Item	Specification
Front edge of roof panel-to-roof opening panel	-1.5 to 0 mm (-0.059 to 0 in)
Rear edge of roof panel-to-roof opening panel	0 to 1.5 mm (0 to 0.059 in)

Torque Specifications

Description	Nm	lb-in
Roof opening panel air deflector screws	1	9
Roof opening panel frame bolts	12	106
Roof opening panel glass screws	6	53
Roof opening panel motor screws	4	35

Roof Opening Panel

The roof opening panel consists of the following:

- Concertina blinds
- Air deflector
- Trough assembly
- Roof opening panel glass
- Roof opening panel motor/module
- Roof opening panel shield
- Roof opening panel switch
- Roof opening panel drain hoses

The roof opening panel is an electronically operated panel that can be opened or closed by pressing a switch located on the overhead console. It also has one-touch open, one-touch close, one-touch vent open and one-touch vent close features.

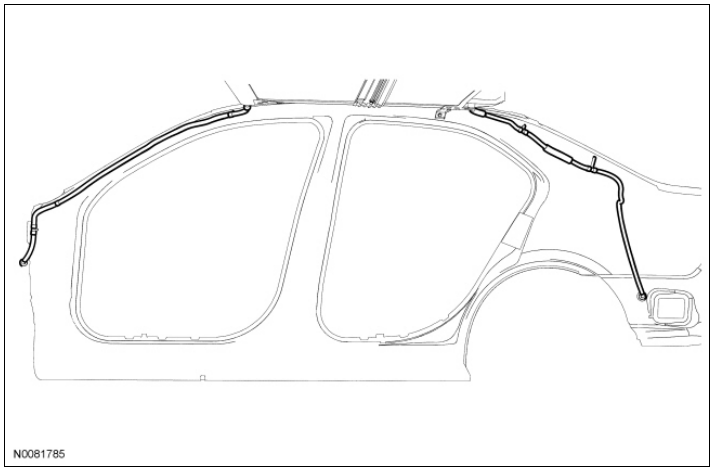
When the roof opening panel is in the fully CLOSED position, pressing the roof opening panel control switch rearward to the second detent and then releasing it will activate the one-touch open feature. Pressing the roof opening panel control switch in either direction with the roof opening panel moving will cancel the one-touch open operation.

With the roof opening panel glass in any OPEN position except VENT, rocking the roof opening panel control switch forward and then releasing it will activate the one-touch close feature. Pressing the roof opening panel control switch in either direction with the roof opening panel moving will cancel the one-touch close operation and the motion will immediately stop. Near the end of the forward travel, the rear portion of the roof opening panel glass moves upward on 2 lifter arms. This allows a weather-tight seal when the roof opening panel glass is closed.

If an obstacle contacts the leading edge of the roof opening panel glass during one-touch close operation, the roof opening panel glass will reverse direction and open to approximately the mid position and stop. The operator cannot stop this open motion once it has begun.

If an obstacle contacts the rear edge of the roof opening panel glass during one-touch vent close operation, the roof opening panel glass will reverse direction to the vent OPEN position.

When the roof opening panel glass is in the fully CLOSED position, pressing the roof opening panel control switch forward and then releasing it will activate the one-touch vent feature. Pressing the roof opening panel control switch in either direction with the roof opening panel moving will cancel the one-touch vent operation. There is a one-touch vent close feature.



Global Open

NOTE: The global open feature may be enabled/disabled via scan tool or in some cases modified by the customer following a procedure listed in the vehicle Owner's Literature. For a complete list of available programmable parameters, refer to the Module Configuration and Parameter Chart in Section 418-01 .

NOTE: The Smart Junction Box (SJB) may also be identified as the Generic Electronic Module (GEM).

When the unlock button of the Remote Keyless Entry (RKE) is held for 2 seconds, the SJB sends a signal on the global open circuit, to both front door window motors and the roof opening panel motor, to open the windows. If the accessory delay relay is active, the global open feature will not operate.

Roof Opening Panel Drain Hose Routing

Special Tool(s)

 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent
 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent

Principles of Operation

Roof Opening Panel

The roof opening panel assembly uses an integrated motor and module to operate the roof opening panel. The roof opening panel motor and module are installed new as an assembly. The roof opening panel is an electronically operated glass panel that can be opened, closed or tilted by the roof opening panel switch. Actuating the switch in either a forward or rearward motion supplies a ground to the roof opening panel motor/module. The roof opening panel has one-touch open and one-touch close features that are activated when the switch is momentarily pressed to the double detent OPEN or CLOSE position. These functions are controlled by the roof opening panel motor/module.

The roof opening panel motor must be initialized whenever the roof opening panel motor has been removed from the roof opening panel system, the roof opening panel assembly has been removed from the vehicle, a new roof opening panel motor has been installed or a new roof opening panel assembly has been installed.

Global Open

NOTE: The global open feature may be enabled/disabled via scan tool or in some cases modified by the customer following a procedure listed in the vehicle Owner's Literature. For a complete list of available programmable parameters, refer to the Module Configuration and Parameter Chart in Section 418-01 .

NOTE: The Smart Junction Box (SJB) may also be identified as the Generic Electronic Module (GEM).

When the unlock button of the Remote Keyless Entry (RKE) transmitter is held for 2 seconds, the global open activates. The SJB sends a signal to activate the one-touch vent operation of the roof opening panel. The global open feature does not operate if the delay accessory is active.

Inspection and Verification

1. Verify the customer concern by operating the system.

2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Roof opening panel • Roof opening panel frame • Roof opening panel drain hoses • Roof opening panel lifter assemblies • Roof opening panel trough • Roof opening panel air deflector assembly • Roof opening panel seal • Roof opening panel shield	• Battery Junction Box (BJB) fuse 33 (20A) • Smart Junction Box (SJB) fuse 41 (15A) • Circuitry • Accessory delay relay • Roof opening panel motor and module assembly • Roof opening panel switch

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the concern is not visually evident, determine the symptom. GO to Symptom Chart - Roof Opening Panel or GO to Symptom Chart - NVH .

Symptom Chart - Roof Opening Panel

Symptom Chart - Roof Opening Panel

Symptom Chart - NVH

Symptom Chart - NVH
NOTE: NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04 . Since it is possible any one of multiple systems may be the cause of a symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to Section 100-04 for the next likely system and continue diagnosis.

ConditionPossible SourcesAction

- The roof opening panel has excessive wind noise

- Incorrect adjustment
- Roof opening panel weatherstrip/seals
- Mechanism mistimed

- GO to Pinpoint Test A .

- The roof opening panel rattles

- Roof opening panel
- Roof opening panel tracks
- Roof opening panel air deflector assembly
- Roof opening panel trough
- Roof opening panel lifter assemblies
- Roof opening panel water trough guide
- Headliner
- Motor pad
- Rear side brackets

- GO to Pinpoint Test C .

- The roof opening panel is noisy during operation

- Roof opening panel
- Roof opening panel tracks
- Roof opening panel lifter assemblies
- Roof opening panel adjustment
- Roof opening panel motor/module assembly

- GO to Pinpoint Test D .

Pinpoint Tests

Pinpoint Test A: The Roof Opening Panel Has Excessive Wind Noise

Normal Operation

When the roof opening panel glass is completely closed, it is flush with the roof panel.

This pinpoint test is intended to diagnose the following:
- Incorrect roof opening panel alignment
- Poorly fitting roof opening panel seal/weatherstrip
- Incorrect installation of the roof opening panel and motor/module
- Incorrect curvature of the air deflector

PINPOINT TEST A: THE ROOF OPENING PANEL HAS EXCESSIVE WIND NOISE

Test Step	Result / Action to Take
A1 VERIFY ROOF OPENING PANEL NOISE	
• Road test the vehicle with the roof opening panel in the CLOSED and OPEN positions. • **Is the wind noise present only in the OPEN position?**	**Yes** GO to A4 . **No** GO to A2 .
A2 CHECK THE ROOF OPENING PANEL WEATHERSTRIP	

NOTE: Make sure the weatherstrip is secured to the glass, not cut, cracked, pinched, loose or obstructed in CLOSED, VENT and OPEN positions. • Check the roof opening panel weatherstrip. • **Is the roof opening panel weatherstrip OK?**	**Yes** GO to A3 . **No** INSTALL a new roof opening panel weatherstrip. REFER to Roof Opening Panel - Exploded View in this section. TEST the system for normal operation.
A3 CHECK ROOF OPENING PANEL ALIGNMENT	
• Check the roof opening panel alignment. • **Is the alignment OK?**	**Yes** CHECK for correct installation of the roof opening panel and motor/module. REFER to Roof Opening Panel - Exploded View , Roof Opening Panel Frame and Roof Opening Panel Motor in this section. TEST the system for normal operation. **No** ALIGN the roof opening panel. REFER to Roof Opening Panel Alignment in this section. TEST the system for normal operation.
A4 CHECK THE AIR DEFLECTOR	
• Make sure the air deflector is securely attached. • **Is the air deflector OK?**	**Yes** PARTIALLY CLOSE the roof opening panel until the noise is eliminated. If the noise is eliminated, INFORM the customer that changing glass location will eliminate the wind noise. If the wind noise is not eliminated, INSTALL a new air deflector. TEST the system for normal operation. **No** INSTALL new air deflector assembly. REFER to Roof Opening Panel - Exploded View and Air Deflector in this section. TEST the system for normal operation.

Pinpoint Test B: The Roof Opening Panel Leaks

Normal Operation

When the roof opening panel glass is completely closed, it is flush with the roof panel.

NOTE: Water may accumulate on both outside front corners of the glass panel after rain or after a car wash. If the glass panel is opened with water in the front corners, this water will fall into the channel for the glass panel track (which is not sealed) and down into the headliner. If the source of a suspected leak cannot be determined, this situation may be the source. This is a normal condition, do not replace any part of the roof opening panel system due to this condition.

This pinpoint test is intended to diagnose the following:
- Incorrect roof opening panel adjustments
- Damaged roof opening panel drain hoses
- Damaged roof opening panel seal/weatherstrip
- Damaged roof opening panel frame

- Incorrect position of the roof opening panel glass

PINPOINT TEST B: THE ROOF OPENING PANEL LEAKS

Test Step	Result / Action to Take
B1 CHECK THE ALIGNMENT OF THE ROOF OPENING PANEL	
• **NOTE:** Make sure the roof opening panel weatherstrip is not cracked or loose. • Check the roof opening panel weatherstrip. • **Does the roof opening panel seal correctly?**	**Yes** GO to B2 . **No** ALIGN the roof opening panel. REFER to Roof Opening Panel Alignment in this section. TEST the system for normal operation.
B2 CHECK THE ROOF OPENING PANEL DRAIN HOSES	
• **NOTE:** Make sure the roof opening panel drain hoses are not cracked, slit, pinched or obstructed. • Check the 4 roof opening panel drain hoses for correct operation. • **Are the roof opening panel drain hoses OK?**	**Yes** GO to B3 . **No** REPAIR or INSTALL a new roof opening panel drain hose(s). TEST the system for normal operation.
B3 CHECK THE ROOF OPENING PANEL DRAIN HOSE ATTACHMENT POINTS	
• **NOTE:** Make sure the roof opening panel drain hose attachment points are not damaged or obstructed. • Check the roof opening panel drain hose attachment points for correct attachment. • **Are the roof opening panel drain hose attachment points OK?**	**Yes** GO to B4 . **No** REPAIR or INSTALL a new roof opening panel frame. REFER to Roof Opening Panel - Exploded View and Roof Opening Panel Frame in this section. TEST the system for normal operation.
B4 CHECK THE ROOF OPENING PANEL REAR TROUGH CONDITION	
• Check the roof opening panel rear trough for damage. • **Is the roof opening panel trough OK?**	**Yes** GO to B5 . **No** REPAIR or INSTALL a new roof opening panel rear trough. REFER to Roof Opening Panel - Exploded View , Roof Opening Panel Frame and Trough Assembly in this section.

	TEST the system for normal operation.
B5 CHECK THE CONDITION OF THE ROOF OPENING PANEL FRAME	
• Check the roof opening panel frame for damage that may cause the roof opening panel glass seal to seat incorrectly. • **Is the roof opening panel frame OK?**	**Yes** INSTALL a new roof opening panel glass. REFER to Roof Opening Panel - Exploded View and Roof Opening Panel Glass in this section. TEST the system for normal operation. **No** REPAIR or INSTALL a new roof opening panel frame. REFER to Roof Opening Panel - Exploded View and Roof Opening Panel Frame in this section. TEST the system for normal operation.

Pinpoint Test C: The Roof Opening Panel Rattles

Normal Operation

When the roof opening panel glass is completely closed, it is flush with the roof panel. All components should be secured correctly.

This pinpoint test is intended to diagnose the following:

- Roof opening panel
- Roof opening panel air deflector assembly
- Roof opening panel trough
- Roof opening panel lifter assemblies
- Headliner
- Roof opening panel motor/module pad
- Roof opening panel frame

PINPOINT TEST C: THE ROOF OPENING PANEL RATTLES

Test Step	Result / Action to Take
C1 CHECK THE ROOF OPENING PANEL WEATHERSTRIP	
• **NOTE:** Make sure the weatherstrip is secured to the glass, not cut, cracked, pinched, loose or obstruct in CLOSED, VENT and OPEN positions. • Check the roof opening panel weatherstrip. • **Is the roof opening panel weatherstrip OK?**	**Yes** GO to C2 . **No** INSTALL a new roof opening panel weatherstrip. REFER to Roof Opening Panel - Exploded View in this section. TEST the system for normal operation.
C2 CHECK THE ROOF OPENING PANEL TIGHTNESS	
• Manually push up and fore/aft. • **Is the roof opening panel loose?**	**Yes** ALIGN the roof opening panel. REFER to Roof Opening Panel Alignment in this section. TEST

	the system for normal operation. **No** GO to C3 .
C3 CHECK THE ROOF OPENING PANEL TRACKS	
• Open the roof opening panel. • Check the roof opening panel tracks for obstructions and damage. • **Are the roof opening panel tracks OK?**	**Yes** GO to C4 . **No** REMOVE all the roof opening panel track obstructions and REPAIR the roof opening panel tracks. If the roof opening panel tracks cannot be repaired, INSTALL a new roof opening panel frame. REFER to Roof Opening Panel - Exploded View and Roof Opening Panel Frame in this section. TEST the system for normal operation.
C4 CHECK THE ROOF OPENING PANEL TROUGH AND TROUGH GUIDES	
• Check the water roof opening panel trough and trough guides for any loose obstructions. • **Are the roof opening panel tugh and trough guides installed securely and free from obstructions?**	**Yes** GO to C5 . **No** REMOVE all obstructions from the roof opening panel trough guides and INSTALL securely. INSTALL a new roof opening panel frame if the trough guides are damaged. REFER to Roof Opening Panel - Exploded View and Roof Opening Panel Frame in this section. TEST the system for normal operation.
C5 CHECK THE ROOF OPENING PANEL SHIELD (SUNSHADE)	
• Check the roof opening panel shield for correct installation. • **Is the roof opening panel shield installed correctly?**	**Yes** GO to C6 . **No** INSTALL the roof opening panel shield correctly. REFER to Roof Opening Panel Shield in this section. TEST the system for normal operation.
C6 CHECK THE ROOF OPENING PANEL AIR DEFLECTOR ASSEMBLY	
• Check the roof opening panel air deflector assembly for obstructions and damage. • **Is the roof opening panel air deflector assembly OK?**	**Yes** GO to C7 . **No** REMOVE all obstructions and REPAIR or INSTALL a new roof opening panel air deflector assembly. REFER to Roof Opening Panel - Exploded View and Roof Opening Panel Frame in this secti. TEST the system for normal operation.
C7 CHECK THE ROOF OPENING PANEL GLASS	

• Verify the roof opening panel glass is free from obstructions and damage, and is securely fastened. • **Is the roof opening panel glass OK?**	**Yes** GO to C8 . **No** REPAIR or INSTALL a new roof opening panel glass. REFER to Roof Opening Panel - Exploded View and Roof Opening Panel Glass in this section. TEST the system for normal operation.
C8 CHECK THE ROOF OPENING PANEL LIFTER ASSEMBLIES	
• Verify the roof opening panel lifter assemblies are free from obstructions and damage. • **Are the roof opening panel lifter assemblies OK?**	**Yes** GO to C9 . **No** REMOVE all obstructions from the roof opening panel lifter assemblies and REPAIR any damage. If the roof opening panel lifter assemblies cannot be repaired, INSTALL a new roof opening panel frame. REFER to Roof Opening Panel - Exploded View and Roof Opening Panel Frame in this section. TEST the system for normal operation.
C9 CHECK ROOF OPENING PANEL FRAME INSTALLATION	
• Check all roof opening fasteners for correct torque and verify correct installation of the roof opening panel frame. Refer to Roof Opening Panel - Exploded View and Roof Opening Panel Frame in this section. • **Is the roof opening panel correctly installed and tightened to specification?**	**Yes** GO to C10 . **No** TIGHTEN the loose fasteners or REINSTALL the roof opening panel frame. REFER to Roof Opening Panel - Exploded View and Roof Opening Panel Frame in this section. TEST the system for normal operation.
C10 CHECK THE ROOF OPENING PANEL FRAME FOR RATTLES	
• Check the roof opening panel frame assembly for any loose parts or for any condition that will cause rattles. • **Is there a condition that will cause rattles?**	**Yes** INSTALL a suitable sound damper material to correct the condition. If the rattle still persists, INSTALL a new roof opening panel frame. REFER to Roof Opening Panel - Exploded View and Roof Opening Panel Frame in this section. TEST the system for normal operation. **No** INSTALL a new roof opening panel frame. REFER to Roof Opening Panel - Exploded View and Roof Opening Panel Frame in this section. TEST the system for normal operation.

Pinpoint Test D: The Roof Opening Panel is Noisy During Operation

Normal Operation

The roof opening panel operates smoothly while opening and closing.

This pinpoint test is intended to diagnose the following:

- Obstructed or damaged roof opening panel
- Obstructed or damaged roof opening panel lifter assemblies
- Incorrect roof opening panel adjustment
- Noisy roof openinnel motor/module assembly

PINPOINT TEST D: THE ROOF OPENING PANEL IS NOISY DURING OPERATION

Test Step	Result / Action to Take
D1 CHECK THE ROOF OPENING PANEL FOR OBSTRUCTIONS OR DAMAGE	
• Check the roof opening panel for any obstructions and damage. • **Are there any obstructions and/or damage?**	**Yes** REMOVE all obstructions. REPAIR any damage. If the damage cannot be repaired, INSTALL a new roof opening panel frame. REFER to Roof Opening Panel - Exploded View and Roof Opening Panel Frame in this section. TEST the system for normal operation. **No** GO to D2 .
D2 CHECK THE ROOF OPENING PANEL OPERATION	
• Check the roof opening panel durinoperation. • **Is the roof opening panel loose or incorrectly aligned?**	**Yes** ALIGN the roof opening panel. REFER to Roof Opening Panel Alignment in this section. TEST the system for normal operation. **No** GO to D3 .
D3 CHECK THE ROOF OPENING PANEL TRACKS	
• Open the roof. • Check the roof opening panel tracks for obstructions and damage. • **Are the roof opening panel tracks OK?**	**Yes** GO to D4 . **No** REMOVE all obstructions and REPAIR any damage. If the roof opening panel tracks cannot be repaired, INSTALL a new roof opening panel frame. REFER to Roof Opening Panel - Exploded View and Roof Opening Panel Frame in this section. TEST the system for normal operation.
D4 CHECK THE ROOF OPENING PANEL SHIELD	
• Check the roof opening panel shield for correct movement.	**Yes** GO to D5 . **No**

• **Is the roof opening panel shield moving correctly?**	REMOVE and REINSTALL the roof opening panel shield. REFER to Roof Opening Panel Shield in this section. TEST the system for normal operation.
D5 CHECK THE ROOF OPENING PANEL LIFTER ASSEMBLIES	
• Check the roof opening panel lifter assemblies for obstructions and damage. • **Are the roof opening panel lifter assemblies OK?**	**Yes** GO to D6 . **No** REMOVE all obstructions and REPAIR any damage. If the roof opening panel lifter assemblies cannot be repaired, INSTALL a new roof opening panel frame. REFER to Roof Opening Panel - Exploded View and Roof Opening Panel Frame in this section. TEST the system for normal operation.
D6 CHECK THE ROOF OPENING PANEL MOTOR/MODULE	
• Remove the roof opening panel motor/module and leave the electrical connector connected. • Operate the roof opening panel to the full OPEN and CLOSED position. • **Does the motor/module make excessive noise?**	**Yes** INSTALL a new roof opening panel motor/module. REFER to Roof Openg Panel - Exploded View and Roof Opening Panel Motor in this section. TEST the system for normal operation. **No** REINSTALL the roof opening panel motor/module. TEST the system for normal operation. If the roof opening panel is still noisy, INSTALL a new roof opening panel frame. REFER to Roof Opening Panel - Exploded View and Roof Opening Panel Frame in this section. If the roof opening panel is no longer noisy, the system is operating correctly. The concern may have been caused by an incorrectly installed roof opening panel motor.

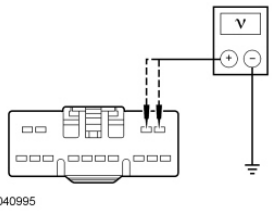
Pinpoint Test E: The Roof Opening Panel Does Not Open or Close

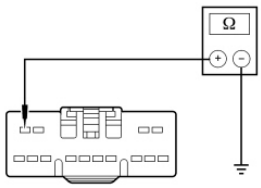
Refer to Wiring Diagrams Cell 101 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Roof Opening Panel for schematic and connector information.

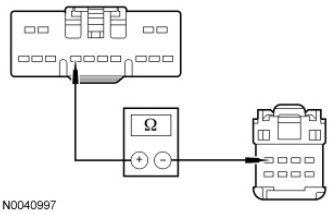
The roof opening panel motor must be initialized whenever the roof opening panel motor has been removed from the roof opening panel system, the roof opening panel assembly has been removed from the vehicle, a new roof opening panel motor has been installed or a new roof opening panel assembly has been installed. Refer to Roof Opening Panel Motor Initialization in this section.

Normal Operation

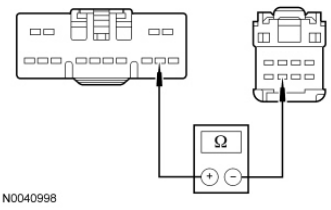
The roof opening panel motor/module receives voltage from the accessory delay relay when the ignition is in the ACC or RUN position. The overhead console switch supplies ground signals to the roof opening panel motor/module to operate the roof opening panel.

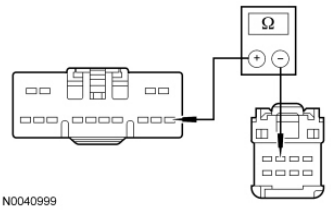




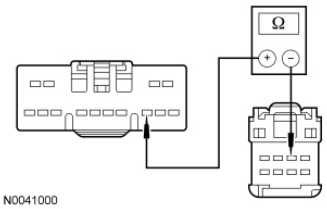


This pinpoint test is intended to diagnose the following:





- Fuse(s)



- Wiring, terminals or connectors
- Roof opening panel switch
- Roof opening panel motor/module assembly
- Accessory delay relay
- Roof opening panel motor not initialized

PINPOINT TEST E: THE ROOF OPENING PANEL DOES NOT OPEN OR CLOSE

Test Step	Result / Action to Take
E1 CHECK THE ROOF OPENING PANEL OPERATION	
• Ignition ON. • Attempt to operate the roof opening panel to the VENT position. • **Does the roof opening panel operate to the VENT position?**	**Yes** GO to E2 . **No** GO to E3 .
E2 CHECK THE MOTOR/MODULE FOR INITIALIZATION	
• Carry out the roof opening panel motor initialization procedure. Refer to Roof Opening Panel Motor Initialization in this section. • **Is the concern still present?**	**Yes** GO to E3 . **No** The system is operating normally at this time. The roof opening panel motor was not initialized.
E3 CHECK THE POWER WINDOWS	
• Ignition ON. • Verify the power windows operate. • **Do the power windows operate?**	**Yes** GO to E4 . **No** REFER to Section 501-11 to diagnose the accessory delay relay circuit.
E4 CHECK THE ROOF OPENING PANEL SWITCH	
• Ignition OFF. • Disconnect: Roof Opening Panel Switch C912. • Carry out the Roof Opening Panel Switch component test. Refer to Wiring Diagrams Cell 149 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for component testing. • **Is the roof opening panel switch OK?**	**Yes** GO to E5 . **No** INSTALL a new roof opening panel switch. REFER to Roof Opening Panel Control Switch in this section. TEST the system for normal operation.
E5 CHECK VOLTAGE TO THE ROOF OPENING PANEL MOTOR/MODULE	

• Ignition OFF. • Disconnect: Roof Opening Panel Motor/Module C921. • Ignition ON. • Measure the voltage between roof opening panel motor/module C921-2, circuit CBP41 (BU) and C921-1, circuit SBB33 (RD), harness side and ground.  N0040995 • **Is the voltage greater than 10 volts?**	**Yes** GO to E6 . **No** VERIFY Smart Junction Box (SJB) fuse 41 (15A) and Battery Junction Box (BJB) fuse 33 (20A) are OK. If OK, REPAIR the circuit. TEST the system for normal operation. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. TEST the system for normal operation.
E6 CHECK THE ROOF OPENING PANEL GROUND	
• Ignition OFF. • Measure the resistance between roof opening panel motor/module C921-4, circuit GD139 (BK/YE), harness side and ground.  N0040996 • **Is the resistance less than 5 ohms?**	**Yes** GO to E7 . **No** REPAIR the circuit. TEST the system for normal operation.
E7 CHECK SWITCH COMMON CIRCUIT FOR AN OPEN	
• Measure the resistance between overhead console C912-4, circuit CPR39 (VT/WH) and roof opening panel motor/module C921-11, circuit CPR39 (VT/WH), harness side.  N0040997	**Yes** CHECK the overhead console jumper harness for loose pins, an open or a short in circuit CPR39 (VT/WH) between the roof opening panel switch socket and overhead console C912-4. If the overhead console jumper harness is not OK, INSTALL a new overhead console jumper harness and TEST the system for normal operation. If the overhead console jumper harness is OK, GO to E8 . **No** REPAIR the circuit. TEST the system for normal operation.

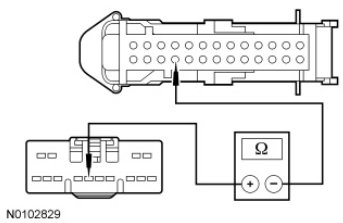
• **Is the resistance less than 5 ohms?**	
E8 CHECK SWITCH CLOSE CIRCUIT FOR AN OPEN	
• Measure the resistance between overhead console C912-7, circuit CPR40 (YE/OG) and roof opening panel motor/module C921-6, circuit CPR40 (YE/OG), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** CHECK the overhead console jumper harness for loose pins, an open or a short in circuit CPR40 (YE/OG) between the roof opening panel switch socket and overhead console C912-7. If the overhead console jumper harness is not OK, INSTALL a new overhead console jumper harness and TEST the system for normal operation. If the overhead console jumper harness is OK, GO to E9 . **No** REPAIR the circuit. TEST the system for normal operation.
E9 CHECK SWITCH OPEN CIRCUIT FOR AN OPEN	
• Measure the resistance between overhead console C912-3, circuit CPR31 (VT/BN) and roof opening panel motor/module C921-5, circuit CPR31 (VT/BN), harness side.  • **Is the resistance less than 5 ohms?**	**Yes** CHECK the overhead console jumper harness for loose pins, an open or a short in circuit CPR31 (VT/BN) between the roof opening panel switch socket and overhead console C912-3. If the overhead console jumper harness is not OK, INSTALL a new overhead console jumper harness, and TEST the system for normal operation. If the overhead console jumper harness is OK, GO to E10 . **No** REPAIR the circuit. TEST the system for normal operation.
E10 CHECK SWITCH AUTO CIRCUIT FOR AN OPEN	
• Measure the resistance between overhead console C912-2, circuit CPR38 (WH/BU) and roof opening panel motor/module C921-7, circuit CPR38 (WH/BU), harness side.	**Yes** CHECK the overhead console jumper harness for loose pins, an open or a short in circuit CPR38 (WH/BU) between the roof opening panel switch socket and overhead console C912-2. If the overhead console jumper harness is not OK, INSTALL a new overhead console jumper harness and TEST the system for normal operation. If the overhead console jumper harness is OK, GO to E11 . **No** REPAIR the circuit. TEST the system for normal operation.

 • **Is the resistance less than 5 ohms?**	
E11 CHECK THE ROOF OPENING PANEL MOTOR/MODULE FOR CORRECT OPERATION	
• Disconnect the roof opening panel motor/module connector. • Check for: ♦ corrosion. ♦ bent or pushed-out pins. • Connect the roof opening panel motor/module connector and make sure it seats correctly. • Operate the system and verify the concern is still present. • **Is the concern still present?**	**Yes** INSTALL a new roof opening panel motor/module. REFER to Roof Opening Panel Motor in this section. TEST the system for normal operation. **No** The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. TEST the system for normal operation.

Pinpoint Test F: The Global Open Function is Inoperative/Does Not Operate Correctly

NOTE: The global open feature may be enabled/disabled via scan tool or in some cases modified by the customer following a procedure listed in the vehicle Owner's Literature. For a complete list of available programmable parameters, refer to the Module Configuration and Parameter Chart in Section 418-01 .

Refer to Wiring Diagrams Cell 101 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Roof Opening Panel for schematic and connector information.

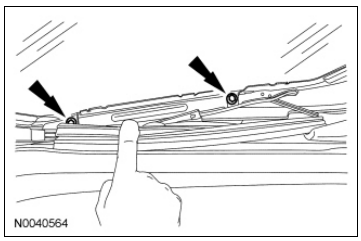


Normal Operation

When the global open feature is activated, the Smart Junction Box (SJB) sends a signal to the roof opening panel motor to place the roof opening panel in the VENT position. The global open feature does not function when the delayed accessory is active. Any interference in the circuit or the window motor may cause the global open feature to not operate correctly.

This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- Roof opening panel motor
- SJB
- Remote Keyless Entry (RKE) transmitters
- Roof opening panel not initialized
- Door window motor

PINPOINT TEST F: THE GLOBAL OPEN FUNCTION IS INOPERATIVE/DOES NOT OPERATE CORRECTLY



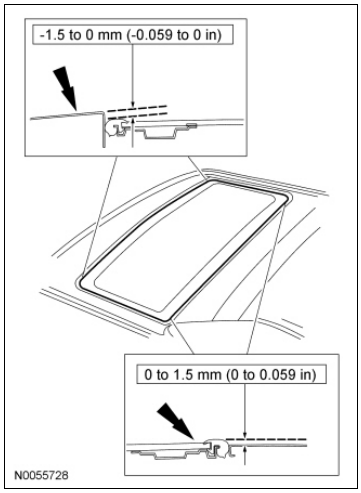
NOTE: One-touch open must be operational for the global open function to operate correctly. Make sure the one-touch open is operational before proceeding with this diagnostic.

Test Step	Result / Action to Take
F1 VERIFY THE POWER WINDOWS ARE OPERATIONAL	
• Operate the power windows using the global open procedure. • **Do the power windows operate correctly?**	**Yes** GO to F2 . **No** REFER to Section 501-11 to diagnose the inoperative windows.
F2 CHECK LF DRIVER WINDOW MOTOR	
• Remove LF driver door window motor SJB fuse 1 (30A). • Operate the power windows using the global open procedure. • **Does the roof opening panel operate correctly?**	**Yes** INSTALL a new LF driver window motor. REFER to Section 501-11 . TEST the system for normal operation. **No** REINSTALL SJB fuse 1 (30A). GO to F3 .
F3 CHECK RF PASSENGER WINDOW MOTOR	
• Remove RF passenger door window motor SJB fuse 4 (30A). • Operate the power windows using the global open procedure. • **Does the roof opening panel operate correctly?**	**Yes** INSTALL a new RF passenger window motor. REFER to Section 501-11 . TEST the system for normal operation. **No** REINSTALL SJB fuse 4 (30A). GO to F4 .
F4 CHECK GLOBAL OPEN CIRCUIT FOR AN OPEN	
• Disconnect: Roof Opening Panel Motor C921. • Disconnect: SJB C2280C. • Measure the resistance between roof opening panel motor C921-10, circuit CPW01 (BN/BU), harness side and the C2280C-10, circuit CPW01 (BN/BU), harness side.  N0102829 • **Is the resistance less than 5 ohms?**	**Yes** INSTALL a new roof opening panel motor. REFER to Roof Opening Panel Motor in this section. INITIALIZE the roof opening panel motor. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation. **No** REPAIR the circuit. INITIALIZE the roof opening panel motor. REFER to Roof Opening Panel Motor Initialization in this section. TEST the system for normal operation.

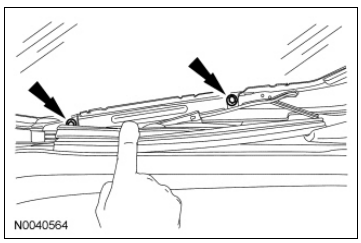
Roof Opening Panel Alignment

1. Open the roof opening panel to the VENT position.

2. Loosen the 4 roof opening panel glass screws.
   - To access the glass screws, unclip the top portion of the concertina blind and position aside as shown.



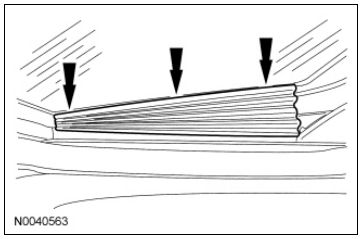
3. Close the roof opening panel glass.



4. **NOTE:** The correct position of the roof opening panel glass to the roof panel should be -1.50 mm to 0 mm (-0.059 to 0 in) at the front edge and 0 mm to 1.5 mm (0 to 0.059 in) at the rear edge of the roof panel.

   Make sure the roof opening panel is centered in the roof opening.

   Adjust the roof opening panel glass.



5. Tighten the 4 roof opening panel glass screws to 6 Nm (53 lb-in).

6. Open roof opening panel to the VENT position.

7. Reattach the concertina blind making sure that it is fully seated on the 3 clips in the roof panel glass.

Roof Opening Panel Motor Initialization

⚠ WARNING: Keep objects and body parts clear of the glass panel when carrying out the initialization procedure. During the initialization procedure, the glass panel closes with high force and cannot detect objects in its path. Failure to follow this instruction may result in serious personal injury.

NOTE: A new roof opening panel motor must be initialized after installation. It will only move toward the VENT position until initialized.

NOTE: The roof opening panel motor initialization procedure must be done when repairs are carried out on any part of the roof opening panel system, including: any time the roof opening panel motor has been removed from the roof opening panel assembly, a new roof opening panel motor has been installed or when a new roof opening panel assembly has been installed.

1. Turn the ignition to the RUN position.

2. For a new roof opening panel motor, press and hold the roof opening panel control switch forward until the roof opening panel glass moves to the full VENT position.

3. **NOTE:** Make sure the front door is open during this step.

   Cycle the ignition from ON to OFF and then back to ON.

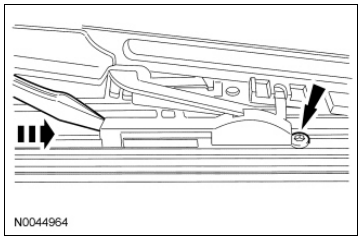
4. Within 5 seconds:
   - press and release the roof opening panel control switch forward.
   - press and hold the roof opening panel control switch forward.

5. Continue holding the roof opening panel control switch forward for 5 seconds after the roof opening panel motor stops moving to confirm this position to the roof opening panel motor.

6. **NOTE:** Only complete open and close motions count towards the cycle count. If the roof opening panel reverses during closing operations, perform the cycles with the roof opening panel control switch continuously held during the closing motions.

   Release the roof opening panel switch and test the system for normal operation by checking the one-touch open, one-touch close, one-touch vent and close operations. Five complete cycles must be carried out for the roof opening panel motor to be correctly initialized.

   - If the roof opening panel does not operate correctly, repeat Steps 2 through 6.



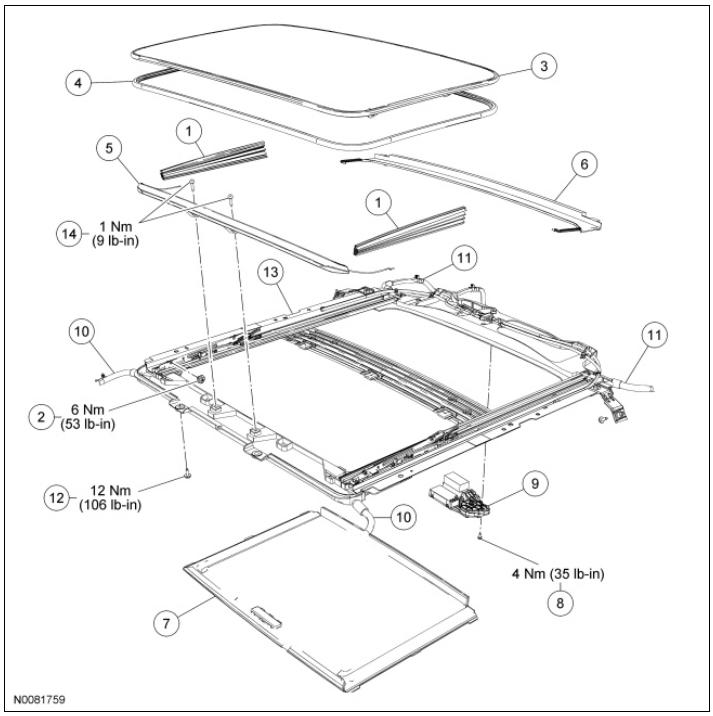
Timing Adjustment

NOTE: Anytime a roof opening panel motor is removed, the cables/mechanisms can experience free-play movement. It is important that the cables do not move. They are timed to be parallel with each other. If one or both are moved in either direction, they must be re-timed.

1. Remove the roof opening panel glass. For additional information, refer to Roof Opening Panel Glass in this section.

2. Remove the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor in this section.

3. Using a flat-blade screwdriver, push on the back of the drive slide until it contacts the timing screw. Repeat on other side.



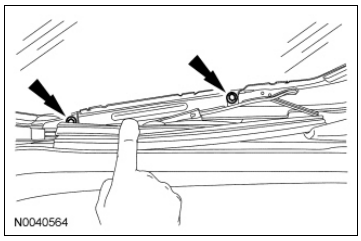
4. Reinstall the roof opening panel motor, but do not carry out the roof opening panel motor initialization. For additional information, refer to Roof Opening Panel Motor in this section.

5. Reinstall the roof opening panel glass. For additional information, refer to Roof Opening Panel Glass in this section.

6. Operate the roof opening panel to the full VENT position and hold for 6 seconds.

7. Initialize the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

Roof Opening Panel - Exploded View



Item	Part Number	Description
1	500A66	Concertina blinds (2 required)
2	-	Roof opening panel glass screw (4 required) (part of roof opening panel glass)
3	54500A18	Roof opening panel glass
4	5451884	Roof opening panel glass seal
5	54500A26	Roof opening panel air deflector
6	7854022	Roof opening panel trough
7	54519A02	Roof opening panel shield
8	-	Roof opening panel motor screw (3 required) (part of roof opening panel motor)
9	15B689	Roof opening panel motor
10	502C52A	Front drain hoses
11	502C52B	Rear drain hoses
12	W302325	Roof opening panel frame bolt (8 required)
13	54502C22	Roof opening panel frame
14	-	Air deflector screws (part of roof opening panel air deflector)

1. For additional informatioo the individual procedures in this section.

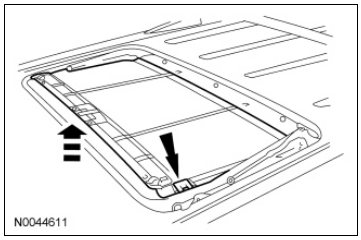
Roof Opening Panel Glass

1. Open the roof opening panel to the VENT position.

2. Remove the 4 roof opening panel glass screws.
   - To access the glass screws, unclip the top portion of the concertina blind and position aside as shown.
   - To install, tighten to 6 Nm (53 lb-in).

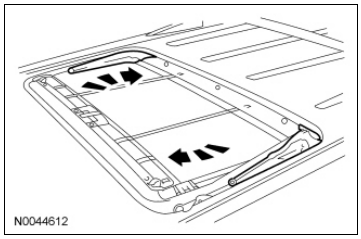
3. To install, reverse the removal procedure.
   - Verify that the roof opening panel glass is centered and aligned before tightening the roof opening panel glass screws. For additional information, refer to Roof Opening Panel Alignment in this section.
   - Initialize the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

Roof Opening Panel Shield



Removal and Installation

1. Remove the roof opening panel glass. For additional information, refer to Roof Opening Panel Glass in this section.

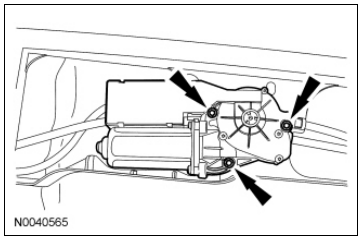


2. Remove the trough assembly. For additional information, refer to Trough Assembly in this section.

3. Slide the roof opening panel shield forward halfway.

4. Disengage the roof opening panel shield guide feet.
    - Lift the front portion of the roof opening panel shield upward at center until able to disengage one of the front guide feet.

5. With one of the guide feet released, carefully rotate the roof opening panel in a clockwise manner to disengage the remaining guide feet.



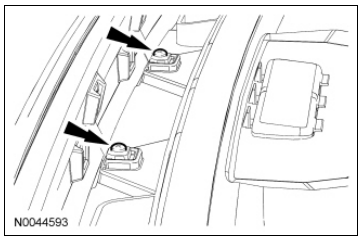
6. To install, reverse the removal procedure.
    - Verify that the roof opening panel glass is centered and aligned before tightening the roof opening panel glass screws. For additional information, refer to Roof Opening Panel Alignment in this section.
    - Initialize the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

Roof Opening Panel Motor

Removal and Installation

NOTE: Anytime a roof opening panel motor is removed, the cables/mechanisms can experience free-play movement. It is important that the cables do not move. They are timed to be parallel with each other. If one or both are moved in either direction, they must be re-timed.

1. Close the roof opening panel glass.
2. Remove the 4 passenger assist handles.
3. Remove the A-pillar trim panels. For additional information, refer to Section 501-05 .
4. Remove the B-pillar trim panels. For additional information, refer to Section 501-05 .
5. Remove the C-pillar trim panels. For additional information, refer to Section 501-05 .
6. Remove the overhead console.
   - Disconnect the electrical connector.
7. If equipped, disconnect the automatic-dimming rear view mirror electrical connector.
8. If equipped, disconnect the windshield rain sensor electrical connector.
9. Remove the sun visors and the sun visor clips.
   - If equipped, disconnect the electrical connectors.
10. Remove the 2 headliner pushpins at the rear.
11. Remove the interior lamp.
    - Disconnect the electrical connector.
12. Position the headliner forward to gain access to the roof opening panel motor.
13. Remove the 3 roof opening panel motor screws and the roof opening panel motor.
    - Disconnect the electrical connector.
    - To install, tighten to 4 Nm (35 lb-in).



14. To install, reverse the removal procedure.
    - Initialize the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

Air Deflector

Removal and Installation

1. Position the roof opening panel glass to the full OPEN position.

2. Disengage the front portion of the roof opening panel air deflector. Remove the 2 screws.
   - To install, tighten to 1 Nm (9 lb-in).

3. Lift upward and pull to unlock the spring on each side to remove the air deflector assembly.

4. To install, reverse the removal procedure.
   - Initialize the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

Roof Opening Panel Frame

Removal and Installation

NOTE: If installing a new roof opening panel frame, the following components will need to be transferred from the original assembly: concertina blinds, roof opening panel glass, roof opening panel air deflector, roof opening panel trough, roof opening panel shield, roof opening panel motor, front and rear drain hoses.

1. Remove the roof opening panel glass. Refer to Roof Opening Panel Glass .

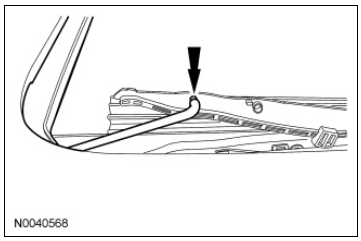
2. If installing a new roof opening panel frame, transfer all components from the original assembly to be installed on the new opening panel frame. Refer to Roof Opening Panel - Exploded View .

3. Remove the headliner. For additional information, refer to Section 501-05 .

4. Disconnect the 4 roof opening panel drain hoses.

5. Disconnect the electrical connector.

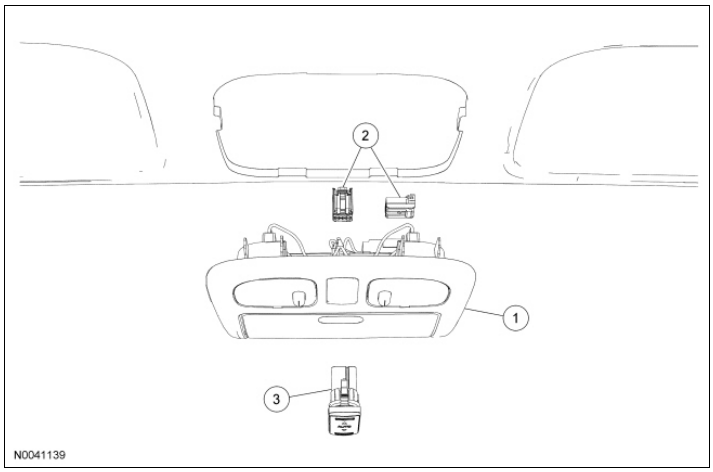
6. Remove the 8 roof opening panel frame bolts and remove the roof opening panel frame.
   - To install tighten to 12 Nm (106 lb-in).



7. To install, reverse the removal procedure.
   - Initialize the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.

Trough Assembly

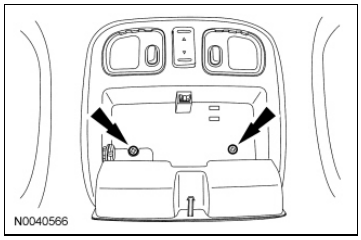
Removal and Installation



1. Remove the roof opening panel glass. For additional information, refer to Roof Opening Panel Glass in this section.

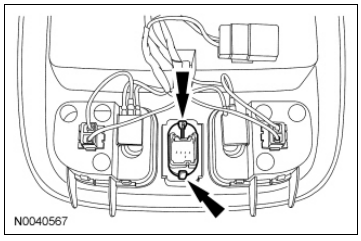
2. Remove the trough assembly.
    - Pull the trough assembly arms outward to release the trough assembly guide arm pins from the roof opening panel frame to remove.

3. To install, reverse the removal procedure.
    - Verify that the roof opening panel glass is centered and aligned before tightening the roof opening panel glass screws. For additional information, refer to Roof Opening Panel Alignment in this section.
    - Initialize the roof opening panel motor. For additional information, refer to Roof Opening Panel Motor Initialization in this section.



Roof Opening Panel Control Switch

Item	Part Number	Description
1	54519A70	Overhead console
2	-	Overhead console electrical connectors
3	15B69	Roof opening panel control switch

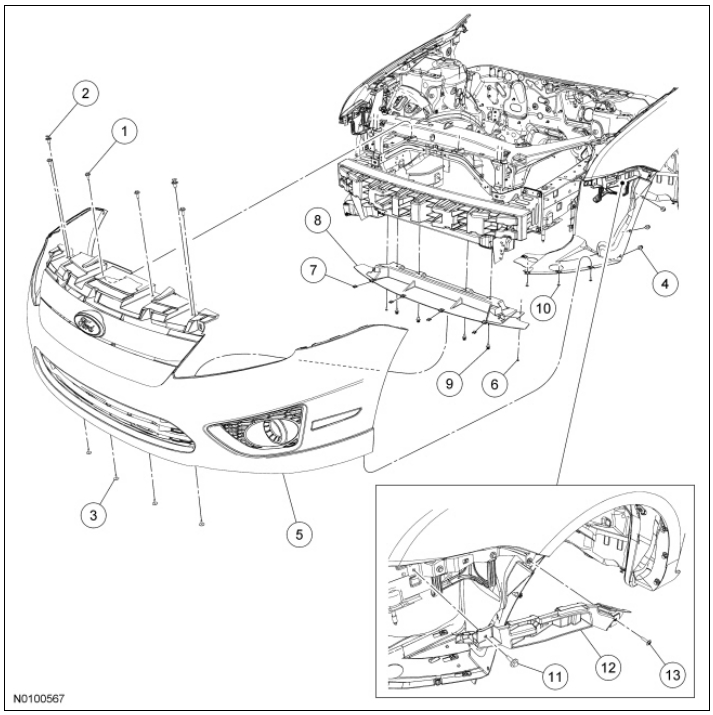


Removal and Installation

1. Open the storage compartment cover and remove the 2 screws.

2. Disconnect the overhead console electrical connectors.

3. Disengage the clips and remove the switch from the overhead console.



4. To install, reverse the removal procedure.

Torque Specifications

Description	Nm	lb-ft	lb-in

1. For additional information, refer to the procedures in this section.

Bumper Cover - Front

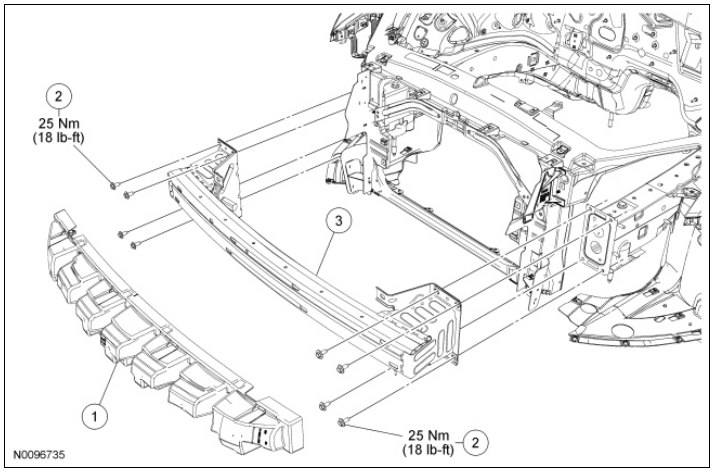
All vehicles

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Remove the 6 pin-type retainers (3 each side).
3. Remove the 6 fender splash shield screws (3 each side).
4. Remove the 4 lower air deflector screws.

5. If equipped, disconnect the fog lamp electrical connectors.
6. Remove the 2 bolts and the 2 pin-type retainers from the top of the radiator grille.

Fusion only

7. Remove the 4 bolts and 2 pin-type retainers from the top of the radiator grille.



All vehicles

8. **NOTE:** The rearward upper portion of the bumper cover must be pulled outward to unclip it from the bumper cover mounting bracket.

   Remove the front bumper cover.

9. To install, reverse the removal procedure.

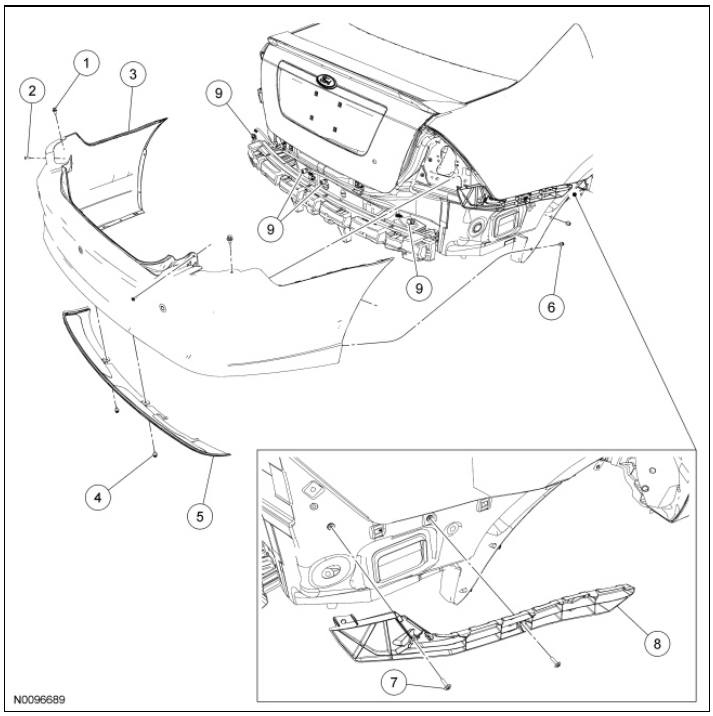
Bumper - Front

Item	Part Number	Description
1	17C882	Front bumper isolator
2	N811479	Front bumper mounting bolts (8 required)
3	17757	Front bumper

Removal and Installation

1. Remove the front bumper cover. For additional information, refer to Bumper Cover - Front in this section.

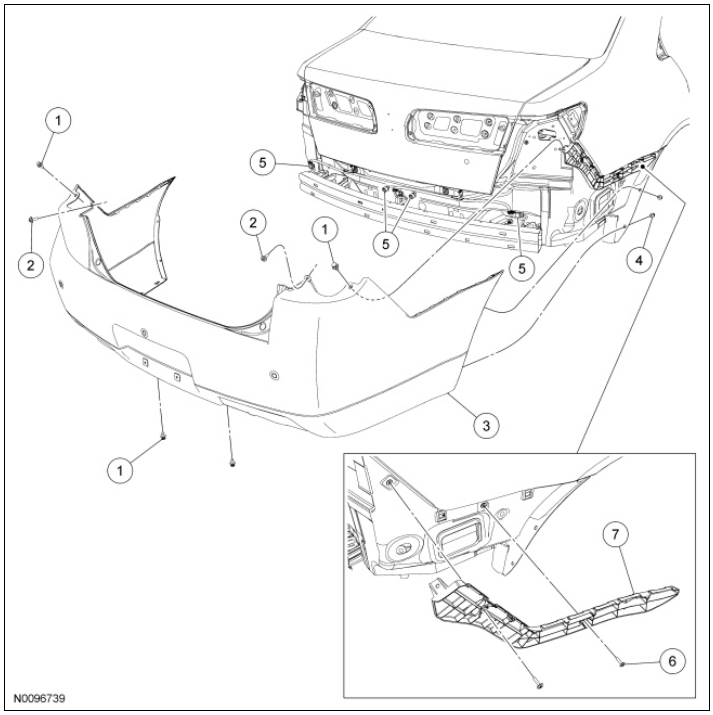
2. Remove the front bumper isolator from the front bumper.
   - Pull the isolator rearward while releasing the retainers.



3. Remove the 8 front bumper bolts (4 each side).
   - To install, tighten to 25 Nm (18 lb-ft).

4. Remove the front bumper.

5. To install, reverse the removal procedure.

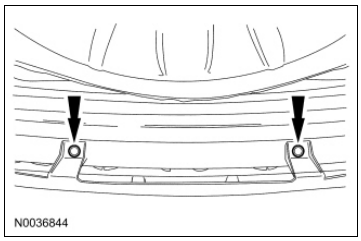


Bumper - Exploded View, Rear

Fusion

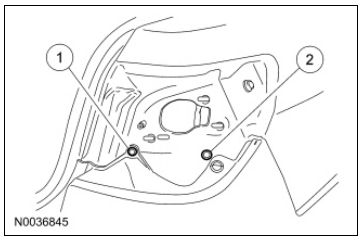
Item	Part Number	Description
1	N807389	Rear bumper cover pin-type retainer (2 required)
2	N806034	Rear bumper cover screw (2 required)
3	17K835	Rear bumper cover
4	N807389	Rear bumper cover valence pin-type retainer (2 required)
5	17808	Rear bumper cover valence
6	N807389	Fender splash shield pin-type retainer (4 required)
7	N806034	Rear bumper cover bracket screw (4 required)
8	17D948 LH/ 17D949 RH	Rear bumper cover bracket
9	-	Rear parking assist electrical connectors (part of 14N139)

MKZ



Item	Part Number	Description
1	N807389	Rear bumper cover pin-type retainers (4 required)
2	N806034	Rear bumper cover screws (2 required)
3	17K835	Rear bumper cover
4	N807389	Fender splash shield pin-type retainer (4 required)
5	-	Rear parking assist electrical connectors (part of 14N139)
6	N806034	Rear bumper cover bracket screw (4 required)
7	17D948 LH/ 17D949 RH	Rear bumper cover bracket

1. For additional information, refer to the procedures in this section.

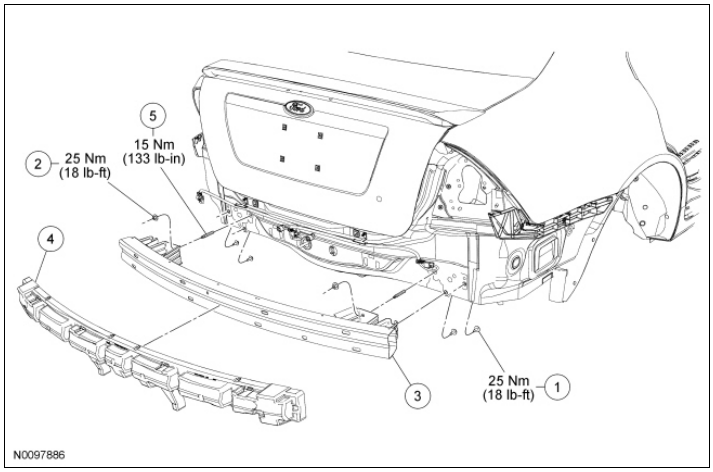


Bumper Cover - Rear

Removal and Installation

1. Remove the rear lamp assemblies. For additional information, refer to Section 417-01 .
2. Remove the 6 pin-type retainers (3 each side) from the rear splash shield.
3. Remove the 2 pin-type retainers from the lower rear bumper cover.

4. Remove the 2 bolts and 2 pin-type retainers from the top of the rear bumper cover.
    1. Remove the 2 bolts (1 shown).
    2. Remove the 2 pin-type retainers (1 shown).



5. Remove the 2 upper bumper cover screws (1 each side).
6. If equipped, disconnect the license plate lamp electrical connector.
7. **NOTE:** The forward upper portion of the bumper cover must be pulled outward to unclip it from theper cover mounting bracket.

   Reposition the bumper cover.

   - Pull outward on both sides of the bumper cover.

8. If equipped, disconnect the parking aid system electrical connector.
9. Route the wiring harness out of the body.
10. Remove the rear bumper cover.
11. To install, reverse the removal procedure.

Bumper - Rear

Item	Part Number	Description
1	N811479	Rear bumper bolt (4 required)
2	W709361	Rear bumper nut (2 required)
3	17906	Rear bumper
4	17787	Rear bumper isolator
5	N808889	Rear bumper stud (2 required)

Removal and Installation

1. Remove the rear bumper cover. For additional information, refer to Bumper Cover - Rear in this section.

2. Remove the rear bumper isolator from the rear bumper.
   - Pull the isolator rearward to remove it from the retaining pins.

3. Remove the 2 rear bumper nuts.
   - To install, tighten to 25 Nm (18 lb-ft).

4. Remove the 4 rear bumper bolts.
   - To install, tighten to 25 Nm (18 lb-ft).

5. Remove the rear bumper.

6. tall, reverse the removal procedure.

Safety Belt System

⚠ WARNING: After a crash, the following safety belt components and attaching hardware must be inspected and tested to verify correct function:

- Retractors
- Buckles
- Child safety seat tether bracket assemblies
- Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)
- Belt tension sensor (BTS) (if equipped)
- Front safety belt buckle support assemblies (slide bar) (if equipped)
- Safety belt shoulder belt height adjusters (if equipped)

Components that do not operate correctly or pass all Functional Tests in the Component Tests of this section must be replaced with new components.

Safety belt assembly attaching areas must be inspected. Damaged or distorted attaching areas must be restored to their original structural integrity and a new safety belt assembly with new attaching hardware must be installed.

After deployment of the front safety belt pretensioners, a new safety belt system (including retractors, buckles and height adjusters) must be installed.

Failure to follow this instruction may result in incorrect operation of the safety belt system and increases the risk of serious personal injury or death in a crash.

When installing any new active occupant restraint components, use only Ford specified service parts.

The active restraint system consists of the following serviceable items:

- Front safety belt shoulder height adjusters
- Front row safety belt buckles attached to the inboard side of the seats
- Front row safety belt retractors and pretensioners located behind the lower B-pillar trim panels
- Rear center safety belt retractor, attached to the parcel shelf sheet metal and LH safety belt buckle assembly, attached to the floor pan under the rear seat cushion
- Rear dual safety belt buckle assembly, attached to the floor pan under the seat cushion
- Child safety seat tether anchors attached to the parcel shelf sheet metal at all 3 rear seating positions
- Lower anchors and tethers for children serviced with the rear seat backrest pivot assemblies

The lower anchors and tethers for children at the inboard side of the LH rear seat position is welded to the floor pan below the rear seat cushion and is not serviceable.

Safety Belt Retractors

The safety belt retractors consist of the following features:

- Safety belt pretensioner (front only)
- Dual locking mode
    - Emergency Locking Retractor (ELR)

- ♦ Automatic Locking Retractor (ALR) (all except driver seat)

Safety Belt Retractor and Pretensioner

The pretensioner is a pyrotechnic device that deploys when activated by the Restraints Control Module (RCM) to remove excess safety belt webbing from the shoulder and lap safety belt in the event of an impact. If a deployment of the safety belt retractor and pretensioners occurs, a new assembly must be installed. Refer to Safety Belt Retractor and Pretensioner in this section.

For safety belt retractor and pretensioner diagnostic and disposal information, refer to Section 501-20B .

Emergency Locking Retractor (ELR)

The ELR is a vehicle sensitive feature designed to activate and lock the safety belt webbing when braking hard, cornering hard or in an impact of approximately 8 km/h (15 mph). The ELR feature helps to reduce the forward movement of the driver and passengers. For testing, refer to the appropriate Functional Test procedure in Safety Belt System in this section.

Automatic Locking Retractor (ALR)

The ALR mode is used when locking a child seat in an outboard seating position. The ALR mode is automatically activated when the safety belt webbing is fully extracted from the retractor and then allowed to retract. As the safety belt webbing is retracted back onto the spool, an audible clicking sound is made indicating the safety belt retractor is in ALR mode and the safety belt webbing will not pull back out of the safety belt retractor. To disengage the ALR mode, allow the safety belt webbing to fully retract back onto the spool. The ALR mode is disengaged when the webbing is free to extract and retract back into the retractor. For testing, refer to the appropriate Functional Test procedure in Safety Belt System in this section.

Safety Belt Buckles

The front seat safety belt buckles are attached to the front seat tracks.

The rear dual seat safety belt buckles are attached to the floor pan behind the rear seat cushion.

Child Safety Seat Restraints

The child safety seat restraints include the following items:

- Child safety seat tether anchors located at each second row seating position attached to the parcel shelf.
- Non-serviceable lower anchors and tethers for children system located at the outboard seating positions and is a structural member of the seat frame and floor pan beneath the rear seat cushion.

If a child safety seat was in use during a collision, inspect the child safety seat component mounting areas and repair any damage and restore the vehicle to the original production configuration.

Safety Belt System

Principles of Operation

⚠ WARNING: After a crash, the following safety belt components and attaching hardware must be inspected and tested to verify correct function:

- Retractors
- Buckles
- Child safety seat tether bracket assemblies
- Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)
- Belt tension sensor (BTS) (if equipped)
- Front safety belt buckle support assemblies (slide bar) (if equipped)
- Safety belt shoulder belt height adjusters (if equipped)

Components that do not operate correctly or pass all Functional Tests in the Component Tests of this section must be replaced with new components.

Safety belt assembly attaching areas must be inspected. Damaged or distorted attaching areas must be restored to their original structural integrity and a new safety belt assembly with new attaching hardware must be installed.

After deployment of the front safety belt pretensioners, a new safety belt system (including retractors, buckles and height adjusters) must be installed.

Failure to follow this instruction may result in incorrect operation of the safety belt system and increases the risk of serious personal injury or death in a crash.

Safety Belt Warning System

The safety belt warning indicator illuminates and a chime sounds to remind the occupants to fasten their safety belts.

The conditions of operation for the safety belt warning indicator and chime are as follows:

- If the driver and/or front passenger safety belt is not buckled before the ignition switch is turned to ON, the safety belt warning indicator illuminates for 1 to 2 minutes and the warning chime sounds for 4 to 8 seconds.
- If the driver and/or front passenger safety belt is buckled while the warning indicator is illuminated and the warning chime is sounding, the safety belt warning indicator and warning chime turn off.
- If the driver and/or front passenger safety belt is buckled before the ignition switch is turned to ON, the safety belt warning indicator and warning chime remain off.

Belt-Minder®

The Belt-Minder® feature is a supplemental warning to the safety belt warning function. This feature provides additional reminders to the driver that the driver and/or front passenger safety belt is unbuckled by

intermittently sounding a chime and illuminating the safety belt warning indicator in the Instrument Panel Cluster (IPC).

Either the driver or front passenger safety belt systems may activate the Belt-Minder®. If the Belt-Minder® warnings have expired (warnings for approximately 5 minutes) for one occupant (driver or front passenger), the other occupant can still activate the Belt-Minder® feature.

When a MyKey ™ is in the ignition, deactivation of the Belt-Minder® will be ignored. The Belt-Minder® feature can be activated or deactivated by the administrator key. Using a MyKey ™ (non-administrator key) will override the 5-minute Belt-Minder® timer and the deactivation of the Belt-Minder® feature. Refer to Section 419-01B or the Owner's Literature for further information on MyKey ™ functionality.

The passenger Belt-Minder® feature is activated only when the Occupant Classification Sensor (OCS) system detects a passenger front seat and the passenger weight exceeds a programmed limit. For information on the OCS system, refer to Section 501-20B .

To activate or deactivate the Belt-Minder® feature, refer to Section 413-01 .

If...	Then...
the driver and/or front passenger safety belt is buckled before the ignition switch is turned to the ON position or less than 1-2 minutes have elapsed since the ignition switch has been turned ON...	the Belt-Minder® feature will not activate.
the driver and/or front passenger safety belt is not buckled before the vehicle has reached at least 5 km/h (3 mph) and 1-2 minutes have elapsed since the ignition switch has been turned to ON...	the Belt-Minder® feature is activated - the safety belt warning indicator illuminates and the warning chime sounds for 6 seconds every 30 seconds, repeating for approximately 5 minutes or until the safety belt(s) is buckled.
the driver or front passenger safety belt becomes unbuckled for approximately 1 minute while the vehicle is traveling at least 5 km/h (3 mph) and more than 1-2 minutes have elapsed since the ignition switch has been turned to ON...	the Belt-Minder® feature is activated - the safety belt warning indicator illuminates and the warning chime sounds for 6 seconds every 30 seconds, repeating for approximately 5 minutes or until the safety belt(s) is buckled.

Inspection and Verification

1. Verify the customer concern by operating the active restraint system to duplicate the condition.

2. Inspect to determine if any of the following mechanical or electrical concerns apply:

Visual Inspection Chart

Mechanical	Electrical
• Cut, frayed or incorrectly routed safety belt webbing	• Wiring, terminals or connectors

• Safety belt buckle and tongue assembly • Safety belt retractor	• Safety belt warning indicator burned out or broken • High Speed Controller Area Network (HS-CAN) network concern

3. If the inspection reveals an obvious concern(s) that can be readily identified, service as required. With the exception of removing a twist from the safety belt webbing, do not attempt to repair a component of the safety belt system; new componenst be installed.

4. If the concern remains after the inspection, determine the symptom. GO to Symptom Chart .

5. To check the active restraint system for correct operation, carry out the appropriate Functional Test(s).

Symptom Chart

Symptom Chart

Component Test

⚠ WARNING: After a crash, the following safety belt components and attaching hardware must be inspected and tested to verify correct function:

- ♦ Retractors
- ♦ Buckles
- ♦ Child safety seat tether bracket assemblies
- ♦ Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)
- ♦ Belt tension sensor (BTS) (if equipped)
- ♦ Front safety belt buckle support assemblies (slide bar) (if equipped)
- ♦ Safety belt shoulder belt height adjusters (if equipped)

Components that do not operate correctly or pass all Functional Tests in the Component Tests of this section must be replaced with new components.

Safety belt assembly attaching areas must be inspected. Damaged or distorted attaching areas must be restored to their original structural integrity and a new safety belt assembly with new attaching hardware must be installed.

After deployment of the front safety belt pretensioners, a new safety belt system (including retractors, buckles and height adjusters) must be installed.

Failure to follow this instruction may result in incorrect operation of the safety belt system and increases the risk of serious personal injury or death in a crash.

Carry out the appropriate Functional Test(s) as determined in Inspection and Verification.

Functional Test - Buckle and Tongue

The safety belt buckle and tonguessembly must operate freely during the latching and unlatching function. Fasten the safety belt by inserting the tongue (male portion) into the buckle (female portion).

1. Verify the following during the latching sequence:
    - Tongue insertion is not hindered by excessive effort.
    - A click is heard when the safety belt buckle latches the tongue.

2. Verify the system integrity by forcefully pulling on the safety belt webbing.

3. Unlatch the safety belt by fully depressing the safety belt buckle release button and allowing the safety belt to release and retract.

4. Verify the following during the unlatching process:
    - Push-button depression does not require excessive effort.
    - The tongue can be removed easily from the buckle.

5. Repeat the above steps 3 times.

6. If the functional test reveals a concern(s), install a new safety belt buckle or safety belt retractor as required.

Functional Test - Safety Belt Retractor

The safety belt retractor must be freely operational for extraction and retraction of the safety belt webbing between full extension and in-vehicle stowed positions.

1. Extract and retract the safety belt between the full extension and stowed positions.

2. Verify the safety belt retractor operates without excessive effort or binding.

3. Install a new safety belt retractor if any concern is found or the complaint has been verified.

Functional Test - Safety Belt Retractor, Automatic Locking Retractor (ALR) Mode

1. Position the seat backrest fully upright (if adjustable).

3. Fasten the safety belt.

4. Pull out the safety belt webbing until the ALR feature is activated.

5. Allow the safety belt webbing to retract until it stops.

6. Pull on the safety belt webbing to check that the safety belt retractor has remained in the ALR mode. If the safety belt retractor is not locked, install a new safety belt retractor.

7. Unfasten the safety belt and allow the safety belt webbing to retract to its stowed position.

8. Pull out and retract the safety belt webbing to verify the safety belt retractor has converted automatically out of ALR mode. If the safety belt retractor remains locked in the ALR mode, install a new safety belt retractor.

Functional Test - Safety Belt Retractor, Road Test Inspection

⚠ WARNING: The driver and passenger must be prepared brace themselves in the event the safety

belt retractor does not lock. Failure to follow this instruction may result in serious personal injury.

NOTE: Make sure there is no excessive slack in the safety belt webbing across the torso during testing.

NOTE: Do not jerk on the safety belt webbing when carrying out this test.

1. Test the safety belts in the following sequence:
    1. Fasten the safety belts and proceed to a safe area.
    2. Attain a speed of 24 km/h (15 mph).
    3. ⚠ **WARNING: Apply maximum brake force only on dry concrete or equivalent hard surface, NEVER on wet pavement or gravel. Failure to follow this instruction may result in serious personal injury.**

       Grasp the shoulder harness, lean forward and apply the brakes, making a maximum braking application without a skid.
    4. The safety belts should lock up with minimum webbing extension.
    5. If there is a lockup of all safety belt retractors being tested, the safety belt retractors are functioning correctly. If any safety belt retractor fails to lock up, install a new safety belt retractor(s).

Safety Belt Cleaning

1. ⚠ **WARNING: Do not bleach or re-dye the safety belt webbing, as the webbing may weaken. Failure to follow this instruction may increase the risk of serious personal injury or death in a crash.**

   Clean the safety belt webbing only with a mild soap solution recommended for cleaning upholstery or carpets. Follow the instructions provided with the soap.

Safety Belt Maintenance

⚠ WARNING: After a crash, the following safety belt components and attaching hardware must be inspected and tested to verify correct function:

- Retractors
- Buckles
- Child safety seat tether bracket assemblies
- Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)
- Belt tension sensor (BTS) (if equipped)
- Front safety belt buckle support assemblies (slide bar) (if equipped)
- Safety belt shoulder belt height adjusters (if equipped)

Components that do not operate correctly or pass all Functional Tests in the Component Tests of this section must be replaced with new components.

Safety belt assembly attaching areas must be inspected. Damaged or distorted attaching areas must be restored to their original structural integrity and a new safety belt assembly with new attaching hardware must be installed.

After deployment of the front safety belt pretensioners, a new safety belt system (including retractors, buckles and height adjusters) must be installed.

Failure to follow this instruction may result in incorrect operation of the safety belt system and increases the risk of serious personal injury or death in a crash.

1. The safety belt assemblies should be periodically inspected to make sure that they have not become damaged and that they remain in correct operating condition, particularly if they have been subjected to severe stress.

2. Before installing the new safety belt assembly, the safety belt retaining areas must be inspected for damage and distortion. If the retaining points are damaged and distorted, the sheet metal must be reworked back to its original shape and structural integrity.

3. Install the new safety belt(s) using the appropriate instructions. Carry out the appropriate Functional Test Procedure. For additional information, refer to the appropriate Functional Test procedure in Safety Belt System , Component Test, in this section.

Safety Belt Procedure After a Collision

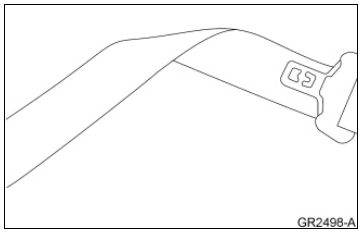
⚠ WARNING: After a crash, the following safety belt components and attaching hardware must be inspected and tested to verify correct function:

- Retractors
- Buckles
- Child safety seat tether bracket assemblies
- Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)
- Belt tension sensor (BTS) (if equipped)
- Front safety belt buckle support assemblies (slide bar) (if equipped)
- Safety belt shoulder belt height adjusters (if equipped)

Components that do not operate correctly or pass all Functional Tests in the Component Tests of this section must be replaced with new components.

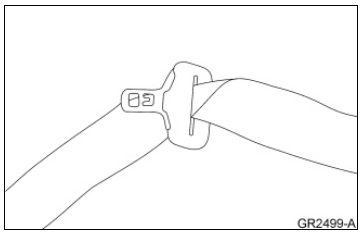
Safety belt assembly attaching areas must be inspected. Damaged or distorted attaching areas must be restored to their original structural integrity and a new safety belt assembly with new attaching hardware must be installed.

After deployment of the front safety belt pretensioners, a new safety belt system (including retractors, buckles and height adjusters) must be installed.



Failure to follow this instruction may result in incorrect operation of the safety belt system and increases the risk of serious personal injury or death in a crash.

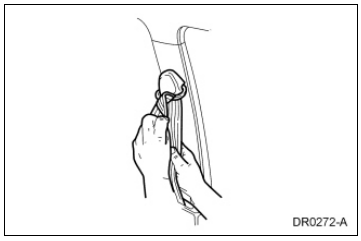
1. Before installing a new safety belt assembly, the safety belt attaching areas must be inspected for damage and distortion. If the attaching points are damaged and distorted, the sheet metal must be worked back to its original shape and structural integrity.



2. Install the new safety belt(s). For additional information, refer to the appropriate procedure in this section. Carry out all applicable Functional Tests for the component(s). For additional information, refer to the appropriate Functional Test procedure in Safety Belt System in this section.

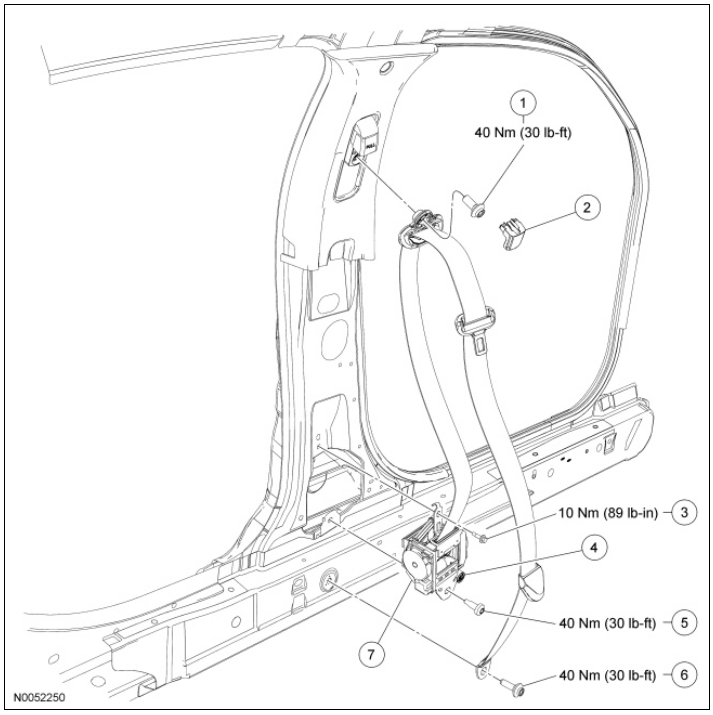
Safety Belt Tongue Rotated on Belt

1. Fold the safety belt as indicated.



2. Pull the safety belt tongue over the fold in the safety belt.

Safety Belt Twisted at the Safety Belt Guide



NOTE: Typical D-ring shown, others similar.

1. Grasp the belt webbing at the shoulder belt guide (D-ring).
2. Rotate and fold the belt webbing over itself to remove the twist.
3. Feed the folded portion of the belt through the safety belt guide (D-ring).

Safety Belt Retractor and Pretensioner

NOTE: LH shown, RH similar.

Item	Part Number	Description
1	-	Bolt, D-ring (part of 611B09 LH/ 611B08 RH)
2	60262	Cover, D-ring
3	W505253	Bolt, safety belt retractor (upper)
4	-	Electrical connector
5	W700883	Bolt, safety belt retractor and pretensioner (lower)
6	-	Bolt, safety belt retractor anchor (part of 611B08 RH/ 611B09 LH)
7	611B08 RH/ 611B09 LH	Safety belt retractor and pretensioner

Removal and Installation

⚠ WARNING: After a crash, the following safety belt components and attaching hardware must be inspected and tested to verify correct function:

- Retractors
- Buckles
- Child safety seat tether bracket assemblies
- Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)
- Belt tension sensor (BTS) (if equipped)
- Front safety belt buckle support assemblies (slide bar) (if equipped)
- Safety belt shoulder belt height adjusters (if equipped)

Components that do not operate correctly or pass all Functional Tests in the Component Tests of this section must be replaced with new components.

Safety belt assembly attaching areas must be inspected. Damaged or distorted attaching areas must be restored to their original structural integrity and a new safety belt assembly with new attaching hardware must be installed.

After deployment of the front safet pretensioners, a new safety belt system (including retractors, buckles and height adjusters) must be installed.

Failure to follow this instruction may result in incorrect operation of the safety belt system and increases the risk of serious personal injury or death in a crash.

⚠ WARNING: Never disassemble or tamper with safety belt buckle/retractor pretensioners, adaptive load limiting retractors, safety belt inflators, or probe the electrical connectors. Failure to follow this instruction may result in the accidental deployment of the safety belt pretensioners, adaptive load limiting retractors, or safety belt inflators, which increases the risk of serious personal injury or death.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .

2. **NOTE:** Inspect the D-ring cover for damage. If the cover is damaged or does not remain attached, install a new D-ring cover.

   Remove the D-ring cover.

3. Remove the bolt and D-ring.
   - To install, tighten to 40 Nm (30 lb-ft).

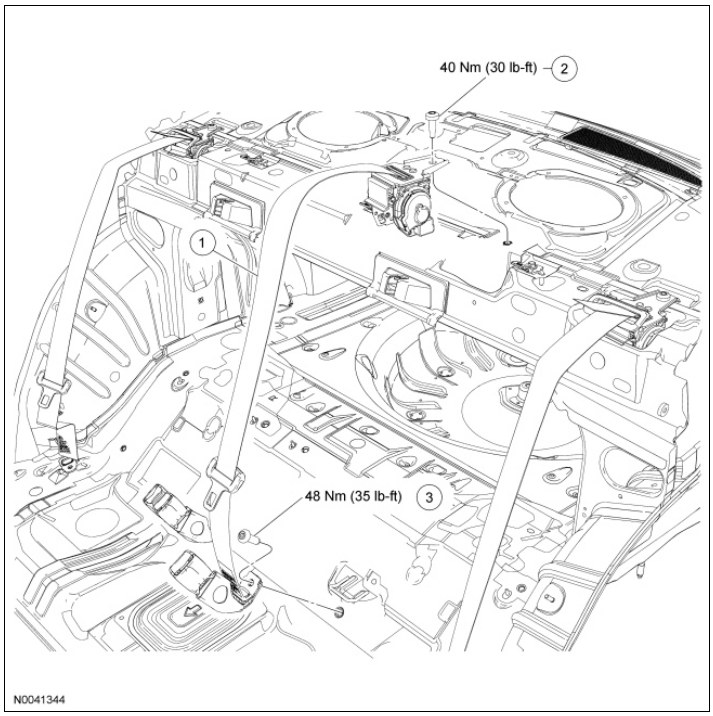
4. Remove the lower B-pillar trim panel. For additional information, refer to Section 501-05 .

5. Remove the safety belt retractor anchor.
   - For passenger seat, remove the seat side shield cover.
   - Remove the bolt and safety belt retractor anchor.
     - ♦ To install, tighten to 40 Nm (30 lb-ft).

6. Disconnect the electrical connector.

7. Remove the upper bolt.
   - To install, tighten to 10 Nm (89 lb-in).

8. Remove the lower bolt and safety belt retractor and pretensioner.
   - To install, tighten to 40 Nm (30 lb-ft).



9. **NOTE:** Before installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   To install, reverse the removal procedure.

10. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of Section 501-20B .

11. Check the active restraint system for correct operation. For additional information, refer to the appropriate Functional Test procedure in Safety Belt System in this section.

Safety Belt Retractor - Rear, Center

Item	Part Number	Description
1	611B66	Rear center safety belt retractor
2	-	Bolt, safety belt retractor (part of 611B66)
3	-	Bolt, safety belt anchor (part of 611B66)

Removal and Installation

⚠ WARNING: After a crash, the following safety belt components and attaching hardware must be inspected and tested to verify correct function:

- Retractors
- Buckles
- Child safety seat tether bracket assemblies
- Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)
- Belt tension sensor (BTS) (if equipped)
- Front safety belt buckle support assemblies (slide bar) (if equipped)
- Safety belt shoulder belt height adjusters (if equipped)

Components that do not operate correctly or pass all Functional Tests in the Component Tests of this section must be replaced with new components.

Safety belt assembly attaching areas mustected. Damaged or distorted attaching areas must be restored to their original structural integrity and a new safety belt assembly with new attaching hardware must be installed.

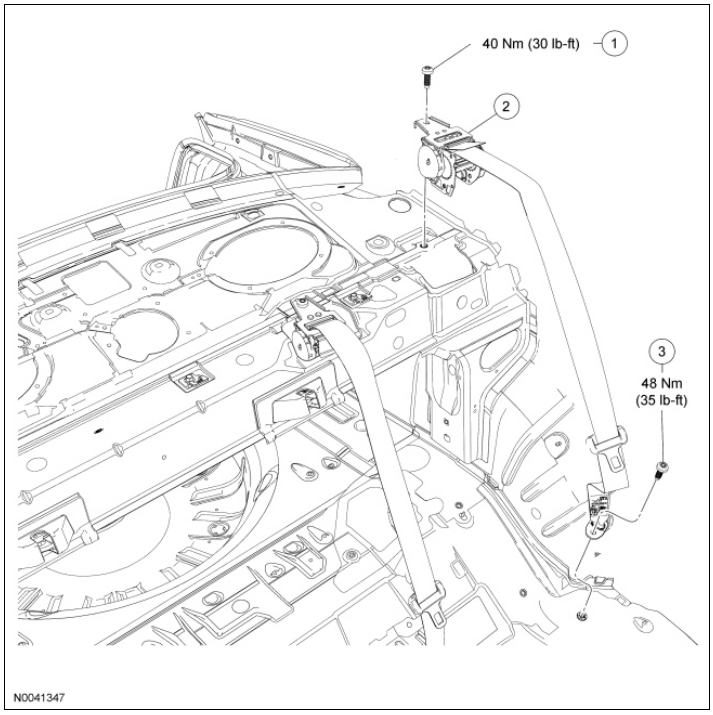
After deployment of the front safety belt pretensioners, a new safety belt system (including retractors, buckles and height adjusters) must be installed.

Failure to follow this instruction may result in incorrect operation of the safety belt system and increases the risk of serious personal injury or death in a crash.

1. Remove the parcel shelf. For additional information, refer to Section 501-05 .

2. Remove the bolt and safety belt retractor anchor.
   - To install, tighten to 48 Nm (35 lb-ft).

3. Remove the bolt and center safety belt retractor.
   - To install, tighten to 40 Nm (30 lb-ft).



4. **NOTE:** Before installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   To install, reverse the removal procedure.

5. Check the active restraint system for correct operation. For additional information, refer to the appropriate Functional Test procedure in Safety Belt System in this section.

Safety Belt Retractor - Rear, Outboard

NOTE: LH shown, RH similar.

Item	Part Number	Description
1	-	Bolt, safety belt retractor (part of 611B68)
2	611B68	Safety belt retractor assembly
3	-	Bolt, safety belt anchor (part of 611B68)

Removal and Installation

⚠ WARNING: After a crash, the following safety belt components and attaching hardware must be inspected and tested to verify correct function:

- Retractors
- Buckles
- Child safety seat tether bracket assemblies
- Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)
- Belt tension sensor (BTS) (if equipped)
- Front safety belt buckle support assemblies (slide bar) (if equipped)
- Safety belt shoulder belt height adjusters (if equipped)

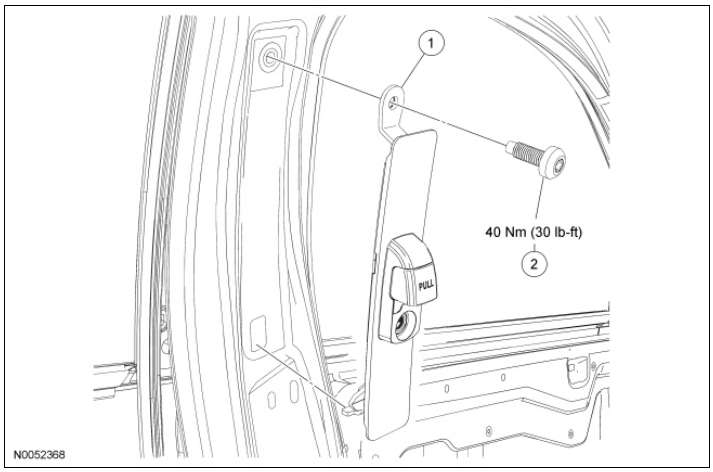
Components that do not operate correctly or pass all Functional Tests in the Component Tests of this section must be replaced with new components. r>Safety belt assembly attaching areas must be inspected. Damaged or distorted attaching areas must be restored to their original structural integrity and a new safety belt assembly with new attaching hardware must be installed.

After deployment of the front safety belt pretensioners, a new safety belt system (including retractors, buckles and height adjusters) must be installed.

Failure to follow this instruction may result in incorrect operation of the safety belt system and increases the risk of serious personal injury or death in a crash.

1. Remove the parcel shelf. For additional information, refer to Section 501-05 .

2. Remove the bolt and safety belt retractor anchor.
   - To install, tighten to 48 Nm (35 lb-ft).



3. Remove the bolt and safety belt retractor.
   - To install, tighten to 40 Nm (30 lb-ft).

4. **NOTE:** Before installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   To install, reverse the removal procedure.

5. Check the active restraint system for correct operation. For additional information, refer to the appropriate Functional Test procedure in Safety Belt System in this section.

Safety Belt Shoulder Height Adjuster

Item	Part Number	Description
1	602B82	Safety belt shoulder height adjuster
2	-	Bolt (part of 602B82)

Removal and Installation

⚠ WARNING: After a crash, the following safety belt components and attaching hardware must be inspected and tested to verify correct function:

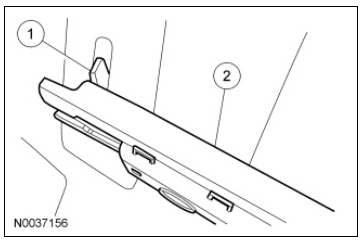
- Retractors
- Buckles
- Child safety seat tether bracket assemblies
- Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)
- Belt tension sensor (BTS) (if equipped)
- Front safety belt buckle support assemblies (slide bar) (if equipped)
- Safety belt shoulder belt height adjusters (if equipped)

Components that do not operate correctly or pass all Functional Tests in the Component Tests of this section must be replaced with new components.

Safety belt assembly attaching areas must be inspected. Damaged or distorted attaching areas must be restored to their original structural integrity and a new safety belt assembly with new attaching hardware must be installed.

After deployment of the front safety belt pretensioners, a new safety belt system (including retractors, buckles and height adjusters) must be installed.

Failure to follow this instruction may result in incorrect operation of the safety belt system and increases the risk of serious personal injury or death in a crash.



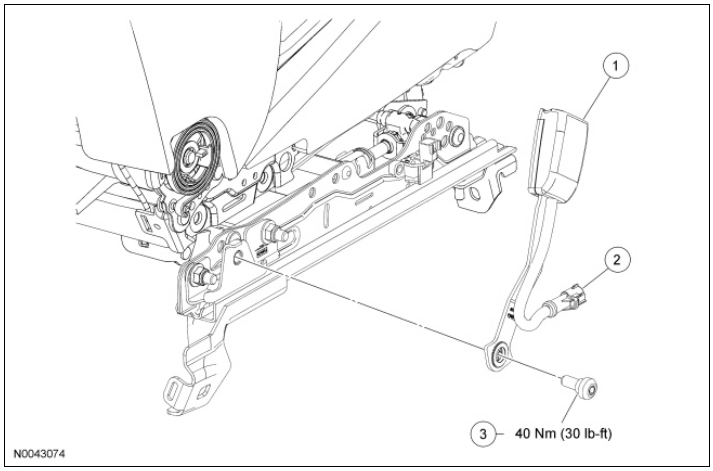
1. Remove the upper B-pillar trim panel. For additional information, refer to Section 501-05 .

2. Position the safety belt shoulder height adjuster down and remove the bolt.
   - To install, tighten to 40 Nm (30 lb-ft).

3. **NOTE:** When installing the safety belt shoulder height adjuster, the lower T-tab must be engaged into the body prior to installing the bolt.

   Remove the safety belt shoulder height adjuster.

   1. Rotate the safety belt shoulder height adjuster downward to release the lower tab.
   2. Remove the safety belt shoulder height adjuster.



4. **NOTE:** Before installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   To install, reverse the removal procedure.

5. Check the active restraint system for correct operation. For additional information, refer to the appropriate Functional Test procedure in Safety Belt System in this section.

Safety Belt Buckle - Front

NOTE: LH shown, RH similar.

Item	Part Number	Description
1	61203 LH/ 61202 RH	Safety belt buckle
2	-	Electrical connector
3	-	Bolt (part of 61203 LH/ 61202 RH)

Removal and Installation

⚠ WARNING: After a crash, the following safety belt components and attaching hardware must be inspected and tested to verify correct function:

- Retractors
- Buckles
- Child safety seat tether bracket assemblies
- Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)
- Belt tension sensor (BTS) (if equipped)
- Front safety belt buckle support assemblies (slide bar) (if equipped)
- Safety belt shoulder belt height adjusters (if equipped)

Components that do not operate correctly or pass all Functional Tests in the Component Tests of this section must be replaced with new components.

Safety belt assembly attaching areas must cted. Damaged or distorted attaching areas must be restored to their original structural integrity and a new safety belt assembly with new attaching hardware must be installed.

After deployment of the front safety belt pretensioners, a new safety belt system (including retractors, buckles and height adjusters) must be installed.

Failure to follow this instruction may result in incorrect operation of the safety belt system and increases the risk of serious personal injury or death in a crash.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

All seats

1. Remove the seat. For additional information, refer to Section 501-10 .

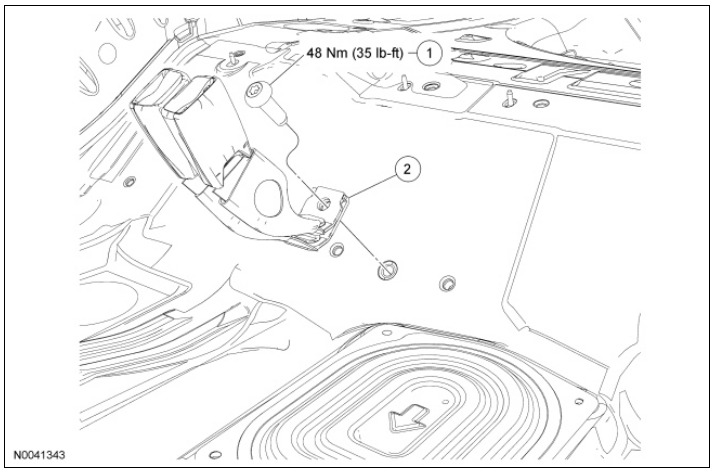
2. Disconnect the electrical connector.
   - Release the retainer on the side of the seat cushion cover to remove the wire for the safety belt buckle switch.

3. Remove the bolt.
   - To install, tighten to 40 Nm (30 lb-ft).

4. Remove the safety belt buckle through the opening in the seat cushion cover.

5. To install, reverse the removal procedure.
   - For correct installation, make sure the safety belt buckle is routed through the seat cushion cover.

6. Install the seat. **If the passenger seat has been serviced, do not prove out the SRS at this time.** For additional information, refer to Section 501-10 .



Passenger seat

7. Carry out the Occupant Classification Sensor (OCS) System Reset. For additional information, refer to General Procedures in Section 501-20B .

All seats

8. Check the active restraint system for correct operation. For additional information, refer to the appropriate Functional Test procedure in Safety Belt System in this section.

Safety Belt Buckle - Rear

Item	Part Number	Description
1	-	Bolt (part of 60044)
2	60044	RH and center safety belt buckle assembly

Removal and Installation

⚠ WARNING: After a crash, the following safety belt components and attaching hardware must be inspected and tested to verify correct function:

- Retractors
- Buckles
- Child safety seat tether bracket assemblies
- Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)
- Belt tension sensor (BTS) (if equipped)
- Front safety belt buckle support assemblies (slide bar) (if equipped)
- Safety belt shoulder belt height adjusters (if equipped)

Components that do not operate correctly or pass all Functional Tests in the Component Tests of this section must be replaced with new components.

Safety belt assembly attaching areas must be inspected. Damaged or distorted attaching areas must be restored to their original structural integrity and a new safety belt assembl new attaching hardware must be installed.

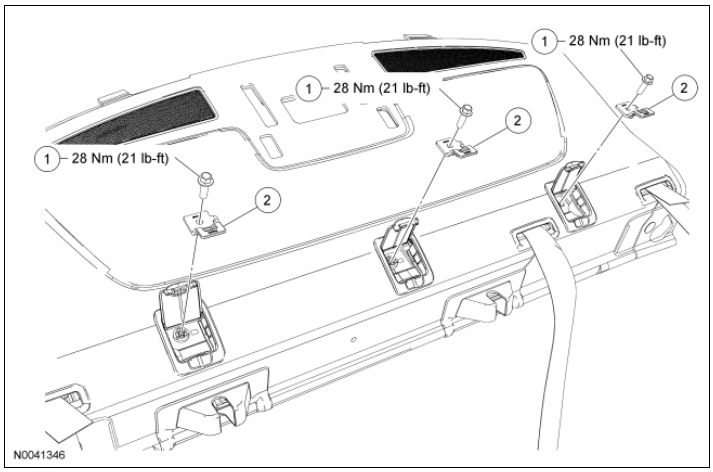
After deployment of the front safety belt pretensioners, a new safety belt system (including retractors, buckles and height adjusters) must be installed.

Failure to follow this instruction may result in incorrect operation of the safety belt system and increases the risk of serious personal injury or death in a crash.

NOTE: The LH safety belt buckle is a part of the center safety belt retractor assembly and is not serviced separately. To remove the LH safety belt buckle, refer to Safety Belt Retractor - Rear, Center in this section.

1. Remove the rear seat cushion. For additional information, refer to Section 501-10 .

2. Remove the bolt and dual safety belt buckle assembly.
    - To install, tighten to 48 Nm (35 lb-ft).



3. **NOTE:** Before installation, make sure the safety belt webbing is not twisted and the safety belts and buckles are accessible to the occupants.

   NOTE: The anti-rotation tab of the safety belt anchor buckle assembly must be correctly aligned before tightening fastener for correct installation.

   To install, reverse the removal procedure.

4. Check the active restraint system for correct operation. For addition information, refer to the appropriate Functional Test procedure in Safety Belt System in this section.

Child Safety Seat Tether Anchor

Item	Part Number	Description
1	-	Bolts (part of 613D26)
2	613D26	Safety seat tether anchors

Removal and Installation

⚠ WARNING: After a crash, the following safety belt components and attaching hardware must be inspected and tested to verify correct function:

- Retractors
- Buckles
- Child safety seat tether bracket assemblies
- Automatic locking retractor (ALR) feature for child safety seats (passenger seating positions only)
- Belt tension sensor (BTS) (if equipped)
- Front safety belt buckle support assemblies (slide bar) (if equipped)
- Safety belt shoulder belt height adjusters (if equipped)

Components that do not operate correctly or pass all Functional Tests in the Component Tests of this section must be replaced with new components.

Safety belt assembly attaching areas must be inspected. Damaged or distorted attaching areas must be restored to their original structural integrity and a new safety belt assembly with new attaching hardware must be installed.

After deployment of the front safety belt pretensioners, a new safety belt system (including retractors, buckles and height adjusters) must be installed.

Failure to follow this instruction may result in incorrect operation of the safety belt system and increases the risk of serious personal injury or death in a crash.

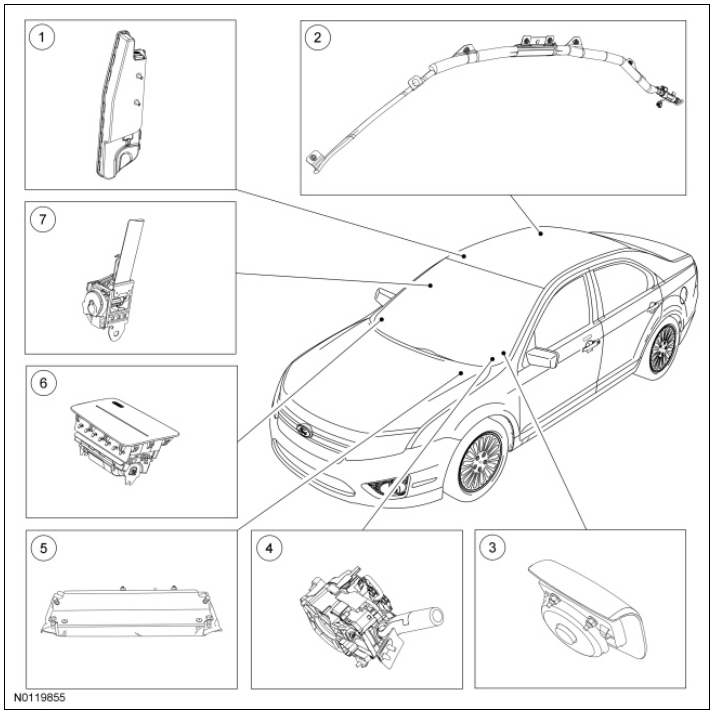
1. Open the cover and remove the bolt and child safety seat tether anchor.
   - To install, tighten to 28 Nm (21 lb-ft).

2. **WARNING: Always tighten the child safety seat tether anchor/bolt to specification. Failure to follow this instruction may result in the child's safety seat being incorrectly secured, which increases the risk of serious personal injury or death to the child in a sudden stop or crash.**

   To install, reverse the removal procedure.

3. Check the active restraint system for correct operation. For additional information, refer to the appropriate Functional Test procedure in Safety Belt System in this section.

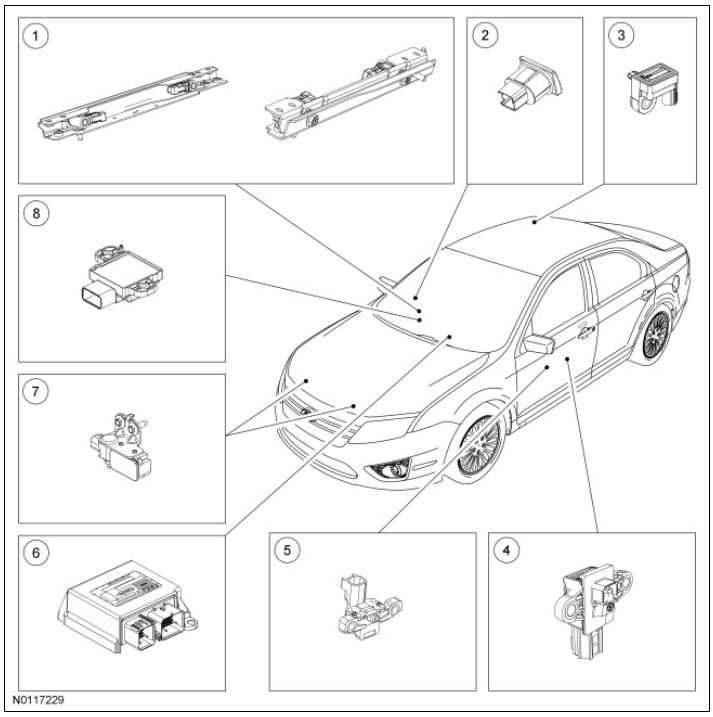
Torque Specifications



Description	Nm	lb-ft	lb-in
Front impact severity sensor bolts	12	-	106
Knee air bag module bolts - driver (Hybrid)	9	-	80
Occupant Classification System (OCS) weight sensor assembly bolts	25	18	-
Passenger air bag module-to-deployment chute bolts	9	-	80
Passenger air bag module bolts (to cross-car beam bracket)	9	-	80
Passenger air bag module deployment chute nuts	10	-	89
Restraints Control Module (RCM) bolts	12	-	106
Seat position sensor bolt	6	-	53
Seat risers-to- OCS weight sensor assembly bolts	25	18	-
Seat track-to-floor bolts	47 35	-	
Side air bag module nuts	8	-	71
Side air curtain module bolts	8	-	71
Side impact sensor (front door) bolt	2	-	18
Side impact sensor (C-pillar) bolt	12	-	106
Steering column opening cover reinforcement	3	-	27

Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS)

The Supplemental Restraint System (SRS) is designed to provide increased crash protection for front seat and second row outboard occupants, in addition to that provided by the 3-point safety belt system. Safety belt use is necessary to obtain the best occupant protection and to receive the full advantage of the SRS .



The serviceable air bag and safety belt pretensioner SRS components are shown in the following illustrations.

Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) Components (1 of 2)

Item	Part Number	Description
1	611D10 RH/ 611D11 LH	Seat side air bag module
2	042D94 RH/ 042D95 LH	Side air curtain modules
3	043B13	Driver air bag module
4	14A664	Clockspring
5	045J77	Driver knee air bag module (hybrid vehicles only)
6	044A74	Passenger air bag module assembly
7	611B08 RH/ 611B09 LH	Safety belt retractor pretensioner

Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) Components (2 of 2)

Item	Part Number	Description
1	61708 RH/ 61709 LH	Occupant Classification System (OCS) weight sensor assembly (2 required)
2	10A936	Passenger Air Bag Deactivation (PAD) indicator (Fusion)
3	14B345	Side impact sensor (C-pillar)
4	14B345	Side impact sensor (front door) (pressure sensor)
5	14B416	Driver seat track position sensor
6	14B321	Restraints Control Module (RCM)
7	14B345	Front impact severity sensor (2 required)
8	14B056	Occupant Classification System Module (OCSM)

Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS)

Refer to Wiring Diagrams Cell 46 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid) for schematic and connector information.

Special Tool(s)

 ST2574-A	Flex Probe Kit NUD105-R025D or equivalent
 ST3093-A	Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Principles of Operation

The Restraints Control Module (RCM) continuously receives/monitors all inputs from the following Supplemental Restraint System (SRS) components.

- LH and RH front impact severity sensor
- Driver and Passenger front door side impact sensor
- Driver and Passenger C-pillar side impact sensor
- Safety belt buckle switches (driver and passenger)
- Driver seat track position sensor
- Occupant Classification System Module (OCSM)

If the RCM detects sudden vehicle deceleration and/or lateral deceleration based on all the information received from all sensors and switches and determines that deployment is required, the RCM sends voltage and current to deploy the appropriate SRS components.

During a frontal or side crash, the RCM may deploy the following SRS components, based on crash severity and sensor input.

- Safety belt retractor pretensioner(s)
- Seat side air bag(s)
- Side air curtain(s)
- Driver/passenger dual-stage air bag (one or both stages)

The fact that the safety belt retractor pretensioners, side air curtains and side air bags did not activate for both front seat occupants in a crash does not mean that something is wrong with the system.

The RCM performs a self-test of the SRS during each startup. If a SRS fault exists, the air bag warning indicator will illuminate and remain illuminated for the rest of the ignition cycle. In addition to the self-test at

start up, the RCM continuously monitors all of its SRS components and circuitry for correct operation.

Air Bag Warning Indicator

The air bag warning indicator:

- located in the Instrument Panel Cluster (IPC) will prove out by lighting for 6 seconds then turn off.
- will flash and/or illuminate based on the message the IPC receives from the RCM .
- will illuminate if the IPC does not receive a message from the RCM .

Air Bag Module Second Stage Deployment Check

Because the driver and passenger front air bags each have 2 deployment stages, it is possible that stage 1 has deployed and stage 2 has not.

If a front air bag module has deployed, it is **mandatory** that the front air bag module be remotely deployed using the appropriate air bag disposal procedure.

- For information on driver air bag module and/or passenger air bag module remote deployment, refer to Pyrotechnic Device Disposal in this section.

Clockspring

The clockspring allows for continuous electrical connections between the driver air bag module and the RCM when the steering wheel is turned.

Driver Air Bag Module

The driver air bag module is a dual-stage air bag, deploying at 1 of 2 different rates depending upon impact severity and sensor input.

High Speed Controller Area Network (HS-CAN)

This vehicle utilizes a communication system called a High Speed Controller Area Network (HS-CAN). The RCM communicates with various modules for required information about the vehicle. Refer to Section 418-00 for additional information about the HS-CAN .

Impact Sensors

For these vehicles, the SRS employs 7 impact sensors. One of the sensors is integral to the RCM and is not separately serviceable. The RCM is mounted on the center tunnel between the front seats. There are 2 front impact severity sensors located in the front-center of the vehicle, behind the grille. In addition, there are 4 side impact sensors. The first row side impact sensors are pressure sensors mounted to each front door behind the trim panel. The second row side sensors are located on or near the base of the C-pillar. Mounting orientation is critical for correct operation of all impact sensors.

The side impact sensors are **not** interchangeable.

Occupant Classification System (OCS) System

The Occupant Classification System (OCS) system is found only on the front passenger seat. The OCS system classified the size of the front passenger seat occupant and provides this information to the Restraints Control Module (RCM). The RCM uses this information (and other inputs) in determining the deployment strategy of the passenger air bag module and pretensioner. The front passenger OCS system is comprised of the following: 4 OCS weight sensor bolts that are mounted to each corner of the seat track and an OCSM which is mounted to the electrical bracket underneath the seat cushion pan. The weight of any occupant or object on the front passenger seat is electronically communicated to the OCSM . The OCS weight sensor bolts are serviced as an assembly (2 weight sensor bolts and mounting bracket per side), the OCSM is serviced separately.

The OCS system is also used for operation of the passenger Belt-Minder®. For information on the passenger Belt-Minder® feature, refer to Section 501-20A . To deactivate or reactivate the passenger Belt-Minder® feature, refer to Section 413-01 or the Owner's Literature.

Passenger Air Bag Deactivation (PAD) Indicator

The RCM controls the state of the Passenger Air Bag Deactivation (PAD) indicator, based on information provided by the OCS system. The PAD indicator is lit to indicate the front passenger air bag module is disabled. An exception to this is when the front passenger seat is determined to be empty, and therefore indication of a deactivated passenger air bag module is not necessary. In all cases, the PAD indicator is off when the passenger air bag module is enabled.

The RCM briefly activates the PAD indicator to prove-out the indicator function and verify to the front occupants correct functional operation of the PAD indicator.

The following table indicates the passenger air bag status and the PAD indicator status based on the size of the front passenger occupant.

Passenger Air Bag and PAD Indicator Status

Occupant Size	Passenger Safety Belt Buckle Status	Pass. Air Bag Status	PAD Ind. Status
Empty	Unbuckled	Disabled	Unlit
Empty	Buckled	Disabled	Lit
Infant or Small Child	Buckled/ Unbuckled	Disabled	Lit
Adult Sized	Buckled/ Unbuckled	Enabled	Unlit

Passenger Air Bag Module

The passenger air bag module is a dual-stage air bag, deploying at 1 of 2 different rates depending upon impact severity, sensor input, safety belt usage and passenger seat occupant classification.

Restraints Control Module (RCM)

⚠ WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to

the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may result in serious personal injury or death in a crash.

NOTE: This vehicle is equipped with the SYNC® feature which contains the 911 assist option. Refer to the Owner's Literature.

The RCM carries out the following functions:

- Deploys the air bag(s)/side air curtain(s) in the event of a deployable collision
- Activates the safety belt retractor pretensioner to control tension on the safety belt in the event of a deployable collision
- Monitors the SRS for faults
- Sends a message to the IPC to flash/illuminate the air bag warning indicator if a fault is detected
- Communicates through the DLC the current or historical DTCs

The RCM monitors the SRS for possible faults. If a SRS fault exists, the RCM sends a message to the span title="Instrument Panel Cluster" class="popup" onmouseover="this.className='popupnounderline';" onmouseout="this.className='popup';">IPC to illuminate the air bag warning indicator.

When the ignition is cycled (OFF and then ON), the IPC will prove out the air bag warning indicator by lighting for 6 seconds and then turn off. If a fault is detected, the RCM requests illumination of the air bag warning indicator and will remain illuminated for the rest of the ignition cycle. If the RCM requests illumination of the air bag warning indicator and the air bag warning indicator does not function, the IPC will automatically activate an audible chime.

The RCM includes a backup power supply. This feature provides sufficient backup power to deploy the air bags in the event that the ignition circuit is lost or damaged during impact. The backup power supply will deplete its stored energy approximately one minute after power and/or ground has been removed from the RCM .

Event Notification Signal

The purpose of the deployment event notification feature is to provide other vehicle subsystems with information pertaining to restraint system deployment or fuel cutoff status. Signal communication between the RCM and fuel pump control module allows the PCM to initiate fuel cut-off to disable the fuel system in the event of a crash.

The RCM does not monitor for any circuit faults and will not set a DTC if a fault occurs.

Safety Belt Retractor Pretensioners

The safety belt retractor pretensioners remove excess slack from the safety belt webbing. The pretensioners are activated by the RCM when the module detects a crash event force exceeding a programmed limit.

Safety Belt Buckle Switches

Safety belt buckle switches indicate to the RCM whether the safety belts are buckled or unbuckled. The RCM uses this information in determining the deployment of the dual-stage driver and passenger air bag modules.

Seat Track Position Sensor

The seat track position sensor indicates to the RCM the position of the driver seat, forward or rearward. The RCM uses this information in determining the deployment of the dual-stage driver air bag module.

Secondary Air Bag Warning (Chime)

The secondary air bag warning chime, is an audible chime controlled by the IPC . If the IPC has detected a fault with the air bag warning indicator, a DTC will be stored in the memory of the IPC . Upon receiving the message from the RCM that a SRS fault has been detected, the IPC will sound the secondary air bag warning chime in a pattern of 5 sets of 5 beeps.

Seat Side Air Bag Module

The seat side air bag module:

- will deploy upon receiving a flow of current from the RCM , initiated by the side impact sensor and internal RCM circuitry.
- is mounted in the seat backrest.
- is used in conjunction with a side air curtain module.

Side Air Curtain Module

⚠ WARNING: Anytime the Safety Canopy® or side air curtain module has deployed, a new headliner and new A-, B- and C-pillar upper trim panels and attaching hardware must be installed. Remove any other damaged components and hardware and install new components and hardware as needed. Failure to follow these instructions may result in the Safety Canopy® or side air curtain module deploying incorrectly and increases the risk of serious personal injury or death in a crash.

The side air curtain module:

- is mounted above the headliner.
- attaches from the A-pillar frame to the C-pillar frame.

Driver Knee Bolster Air Bag Module (Hybrid Vehicles Only)

The driver knee bolster air bag module is mounted behind the steering column opening trim panel and deploys upon receiving a flow of current from the RCM .

Inspection and Verification

1. Verify the customer concern by checking the air bag warning indicator in the IPC . Refer to Prove Out the System in this section.

2. Visually inspect for obvious signs of mechanical or electrical damage. Do not disconnect electrical connectors until directed to do so within the pinpoint test.

Visual Inspection Chart

Mechanical	Electrical
• Damaged Restraints Control Module (RCM) or loose mounting • Damaged front impact severity sensor(s) or loose mounting • Damaged side impact sensor(s) or loose mounting • Damaged or disconnected Passenger Air Bag Deactivation (PAD) indicator • Damaged or disconnected Occupant Classification System Module (OCSM) or loose mounting	• Open Smart Junction Box (SJB) fuse 32 (10A) (RCM) or fuse 46 (7.5A) (OCSM and PAD indicator) • Damaged wiring harness • Loose, damaged or corroded connectors • Circuitry open/shorted • Damaged shorting bars • Loose, damaged or pinched passenger seat wire harness

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the DLC .

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :

   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM .
   - refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition is ON.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record on-demand and CMDTCs from the RCM and OCSM .

8. If the DTCs retrieved are related to the concern, go to the DTC Charts. For all other DTCs, refer to Section 419-10 .

9. If no DTCs related to the concern are retrieved, GO to Symptom Chart .

DTC Charts

The DTCs can be retrieved from the RCM and the OCSM with a scan tool via the DLC .

Restraints Control Module (RCM) DTC Chart

NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Master Parts Catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: This module utilizes a 5-character DTC followed by a 2-character failure type code. The failure type code provides information about specific fault conditions such as opens or shorts to ground. Continuous Memory Diagnostic Trouble Codes (CMDTCs) have an additional 2-character DTC status code suffix to assist in determining DTC history.

DTC [a]	Description	Action To Take
Continuous lamp	The Air Bag Indicator is Illuminated Continuously	GO to Pinpoint Test A .
B0001:11	Driver Frontal Stage 1 Deployment Control: Circuit Short to Ground	GO to Pinpoint Test B .
B0001:12	Driver Frontal Stage 1 Deployment Control: Circuit Short to Battery	GO to Pinpoint Test B .
B0001:13	Driver Frontal Stage 1 Deployment Control: Circuit Open	GO to Pinpoint Test B .
B0001:1A	Driver Frontal Stage 1 Deployment Control: Circuit Resistance Below Threshold	GO to Pinpoint Test B .
B0001:2B	Driver Frontal Stage 1 Deployment Control: Signal Cross Coupled	GO to Pinpoint Test AC .
B0001:4A	Driver Frontal Stage 1 Deployment Control: Incorrect Component Installed	GO to Pinpoint Test AD .
B0002:11	Driver Frontal Stage 2 Deployment Control: Circuit Short to Ground	GO to Pinpoint Test C .
B0002:12	Driver Frontal Stage 2 Deployment Control: Circuit Short to Battery	GO to Pinpoint Test C .
B0002:13	Driver Frontal Stage 2 Deployment Control: Circuit Open	GO to Pinpoint Test C .
B0002:1A	Driver Frontal Stage 2 Deployment Control: Circuit Resistance Below Threshold	GO to Pinpoint Test C .
B0002:2B	Driver Frontal Stage 2 Deployment Control: Signal	GO to Pinpoint Test AC .

	Cross Coupled	
B0002:4A	Driver Frontal Stage 2 Deployment Control: Incorrect Component Installed	GO to Pinpoint Test AD .
B0004:11	Driver Knee Bolster Deployment Control: Circuit Short to Ground	GO to Pinpoint Test D .
B0004:12	Driver Knee Bolster Deployment Control: Circuit Short to Battery	GO to Pinpoint Test D .
B0004:13	Driver Knee Bolster Deployment Control: Circuit Open	GO to Pinpoint Test D .
B0004:1A	Driver Knee Bolster Deployment Control: Circuit Resistance Below Threshold	GO to Pinpoint Test D .
B0004:2B	Driver Knee Bolster Deployment Control: Signal Cross Coupled	GO to Pinpoint Test AC .
B0004:4A	Driver Knee Bolster Deployment Control: Incorrect Component Installed	GO to Pinpoint Test AD .
B0010:11	Passenger Frontal Stage 1 Deployment Control: Circuit Short to Ground	GO to Pinpoint Test E .
B0010:12	Passenger Frontal Stage 1 Deployment Control: Circuit Short to Battery	GO to Pinpoint Test E .
B0010:13	Passenger Frontal Stage 1 Deployment Control: Circuit Open	GO to Pinpoint Test E .
B0010:1A	Passenger Frontal Stage 1 Deployment Control: Circuit Resistance Below Threshold	GO to Pinpoint Test E .
B0010:2B	Passenger Frontal Stage 1 Deployment Control: Signal Cross Coupled	GO to Pinpoint Test AC .
B0010:4A	Passenger Frontal Stage 1 Deployment Control: Incorrect Component Installed	GO to Pinpoint Test AD .
B0011:11	Passenger Frontal Stage 2 Deployment Control: Circuit Short to Ground	GO to Pinpoint Test F .
B0011:12	Passenger Frontal Stage 2 Deployment Control: Circuit Short to Battery	GO to Pinpoint Test F .
B0011:13		GO to Pinpoint Test F .

	Passenger Frontal Stage 2 Deployment Control: Circuit Open	
B0011:1A	Passenger Frontal Stage 2 Deployment Control: Circuit Resistance Below Threshold	GO to Pinpoint Test F .
B0011:2B	Passenger Frontal Stage 2 Deployment Control: Signal Cross Coupled	GO to Pinpoint Test AC .
B0011:4A	Passenger Frontal Stage 2 Deployment Control: Incorrect Component Installed	GO to Pinpoint Test AD .
B0020:11	Left Side Airbag Deployment Control: Circuit Short to Ground	GO to Pinpoint Test G .
B0020:12	Left Side Airbag Deployment Control: Circuit Short to Battery	GO to Pinpoint Test G .
B0020:13	Left Side Airbag Deployment Control: Circuit Open	GO to Pinpoint Test G .
B0020:1A	Left Side Airbag Deployment Control: Circuit Resistance Below Threshold	GO to Pinpoint Test G .
B0020:2B	Left Side Airbag Deployment Control: Signal Cross Coupled	GO to Pinpoint Test AC .
B0020:4A	Left Side Airbag Deployment Control: Incorrect Component Installed	GO to Pinpoint Test AD .
B0021:11	Left Curtain Deployment Control 1: Circuit Short to Ground	GO to Pinpoint Test H .
B0021:12	Left Curtain Deployment Control 1: Circuit Short to Battery	GO to Pinpoint Test H .
B0021:13	Left Curtain Deployment Control 1: Circuit Open	GO to Pinpoint Test H .
B0021:1A	Left Curtain Deployment Control 1: Circuit Resistance Below Threshold	GO to Pinpoint Test H .
B0021:2B	Left Curtain Deployment Control 1: Signal Cross Coupled	GO to Pinpoint Test AC .
B0021:4A	Left Curtain Deployment Control: Incorrect Component Installed	GO to Pinpoint Test AD .
B0028:11	Right Side Airbag Deployment Control: Circuit Short to Ground	GO to Pinpoint Test I .

B0028:12	Right Side Airbag Deployment Control: Circuit Short to Battery	GO to Pinpoint Test I .
B0028:13	Right Side Airbag Deployment Control: Circuit Open	GO to Pinpoint Test I .
B0028:1A	Right Side Airbag Deployment Control 1: Circuit Resistance Below Threshold	GO to Pinpoint Test I .
B0028:2B	Right Side Airbag Deployment Control: Signal Cross Coupled	GO to Pinpoint Test AC .
B0028:4A	Right Side Airbag Deployment Control: Incorrect Component Installed	GO to Pinpoint Test AD .
B0029:11	Right Curtain Deployment Control 1: Circuit Short to Ground	GO to Pinpoint Test J .
B0029:12	Right Curtain Deployment Control 1: Circuit Short to Battery	GO to Pinpoint Test J .
B0029:13	Right Curtain Deployment Control 1: Circuit Open	GO to Pinpoint Test J .
B0029:1A	Right Curtain Deployment Control 1: Circuit Resistance Below Threshold	GO to Pinpoint Test J .
B0029:2B	Right Curtain Deployment Control 1: Signal Cross Coupled	GO to Pinpoint Test AC .
B0029:4A	Right Curtain Deployment Control 1: Incorrect Component Installed	GO to Pinpoint Test AD .
B0050:11	Driver Seatbelt Sensor: Circuit Short to Ground	GO to Pinpoint Test K .
B0050:12	Driver Seatbelt Sensor: Circuit Short to Battery	GO to Pinpoint Test K .
B0050:13	Driver Seatbelt Sensor: Circuit Open	GO to Pinpoint Test K .
B0050:1D	Driver Seatbelt Sensor: Circuit Current Out of Range	GO to Pinpoint Test K .
B0050:2B	Driver Seatbelt Sensor: Signal Cross Coupled	GO to Pinpoint Test AC .
B0050:4A	Driver Seatbelt Sensor: Incorrect Component Installed	GO to Pinpoint Test AD .
B0052:11	Passenger Seatbelt Sensor: Circuit Short to Ground	GO to Pinpoint Test L .
B0052:12		GO to Pinpoint Test L .

	Passenger Seatbelt Sensor: Circuit Short to Battery	
B0052:13	Passenger Seatbelt Sensor: Circuit Open	GO to Pinpoint Test L .
B0052:1D	Passenger Seatbelt Sensor: Circuit Current Out of Range	GO to Pinpoint Test L .
B0052:2B	Passenger Seatbelt Sensor: Signal Cross Coupled	GO to Pinpoint Test AC .
B0052:4A	Passenger Seatbelt Sensor: Incorrect Component Installed	GO to Pinpoint Test AD .
B0090:11	Left Frontal Restraints Sensor: Circuit Short to Ground	GO to Pinpoint Test M .
B0090:4A	Left Frontal Restraints Sensor: Incorrect Component Installed	GO to Pinpoint Test AD .
B0090:81	Left Frontal Restraints Sensor: Invalid Serial Data Received	INSTALL a new LH front impact severity sensor. REFER to Front Impact Severity Sensor in this section.
B0090:93	Left Frontal Restraints Sensor: No Operation	GO to Pinpoint Test M .
B0090:96	Left Frontal Restraints Sensor: Component Internal Failure	INSTALL a new LH front impact severity sensor. REFER to Front Impact Severity Sensor in this section.
B0091:11	Left Side Restraints Sensor 1: Circuit Short to Ground	GO to Pinpoint Test N .
B0091:4A	Left Side Restraints Sensor 1: Incorrect Component Installed	GO to Pinpoint Test AD .
B0091:81	Left Side Restraints Sensor 1: Invalid Serial Data Received	INSTALL a new driver front door side impact sensor. REFER to Side Impact Sensor - Front Door in this section.
B0091:93	Left Side Restraints Sensor 1: No Operation	GO to Pinpoint Test N .
B0091:96	Left Side Restraints Sensor 1: Component Internal Failure	INSTALL a new driver front door side impact sensor. REFER to Side Impact Sensor - Front Door in this section.
B0092:11	Left Side Restraints Sensor 2: Circuit Short to Ground	GO to Pinpoint Test O .
B0092:4A	Left Side Restraints Sensor 2: Incorrect Component Installed	GO to Pinpoint Test AD .
B0092:81	Left Side Restraints Sensor 2: Invalid Serial Data Received	INSTALL a new driver C-pillar side impact sensor. REFER to Side Impact Sensor - C-Pillar in this section.
B0092:93	Left Side Restraints Sensor 2: No Operation	GO to Pinpoint Test O .
B0092:96	Left Side Restraints Sensor 2: Component Internal Failure	INSTALL a new driver C-pillar side impact sensor. REFER to Side Impact Sensor - C-Pillar in this section.
B0095:11	Right Frontal Restraints Sensor: Circuit Short to	GO to Pinpoint Test P .

	Ground	
B0095:4A	Right Frontal Restraints Sensor: Incorrect Component Installed	GO to Pinpoint Test AD .
B0095:81	Right Frontal Restraints Sensor: Invalid Serial Data Received	INSTALL a new RH front impact severity sensor. REFER to Front Impact Severity Sensor in this section.
B0095:93	Right Frontal Restraints Sensor: No Operation	GO to Pinpoint Test P .
B0095:96	Right Frontal Restraints Sensor: Component Internal Failure	INSTALL a new RH front impact severity sensor. REFER to Front Impact Severity Sensor in this section.
B0096:11	Right Side Restraints Sensor 1: Circuit Short to Ground	GO to Pinpoint Test O .
B0096:4A	Right Side Restraints Sensor 1: Incorrect Component Installed	GO to Pinpoint Test AD .
B0096:81	Right Side Restraints Sensor 1: Invalid Serial Data Received	INSTALL a new passenger front door side impact sensor. REFER to Side Impact Sensor - Front Door in this section.
B0096:93	Right Side Restraints Sensor 1: No Operation	GO to Pinpoint Test O .
B0096:96	Right Side Restraints Sensor 1: Component Internal Failure	INSTALL a new passenger front door side impact sensor. REFER to Side Impact Sensor - Front Door in this section.
B0097:11	Right Side Restraints Sensor 2: Circuit Short to Ground	GO to Pinpoint Test N .
B0097:4A	Right Side Restraints Sensor 2: Incorrect Component Installed	GO to Pinpoint Test AD .
B0097:81	Right Side Restraints Sensor 2: Invalid Serial Data Received	INSTALL a new passenger C-pillar side impact sensor. REFER to Side Impact Sensor - C-Pillar in this section.
B0097:93	Right Side Restraints Sensor 2: No Operation	GO to Pinpoint Test N .
B0097:96	Right Side Restraints Sensor 2: Component Internal Failure	INSTALL a new passenger C-pillar side impact sensor. REFER to Side Impact Sensor - C-Pillar in this section.
B00A0:09	Occupant Classification System: Component Failure	GO to Pinpoint Test S .
B00A0:4A	Occupant Classification System: Incorrect Component Installed	GO to Pinpoint Test S .
B00A0:63	Occupant Classification System: Circuit / Component Protection Time-Out	GO to Pinpoint Test S .
B00A0:64	Occupant Classification System: Signal Plausibility Failure	GO to Pinpoint Test S .
B00A0:68		GO to Pinpoint Test S .

	Occupant Classification System: Event Information	
B00B5:11	Driver Seat Track Position Restraints Sensor: Circuit Short to Ground	GO to Pinpoint Test Y .
B00B5:12	Driver Seat Track Position Restraints Sensor: Circuit Short to Battery	GO to Pinpoint Test Y .
B00B5:13	Driver Seat Track Position Restraints Sensor: Circuit Open	GO to Pinpoint Test Y .
B00B5:1D	Driver Seat Track Position Restraints Sensor: Circuit Current Out of Range	GO to Pinpoint Test Y .
B00B5:2B	Driver Seat Track Position Restraints Sensor: Signal Cross Coupled	GO to Pinpoint Test AC .
B00B5:4A	Driver Seat Track Position Restraints Sensor: Incorrect Component Installed	GO to Pinpoint Test AD .
B00D5:11	Restraint System Passenger Disable Indicator: Circuit Short to Ground	GO to Pinpoint Test Z .
B00D5:12	Restraint System Passenger Disable Indicator: Circuit Short to Battery	GO to Pinpoint Test Z .
B00D5:13	Restraint System Passenger Disable Indicator: Circuit Open	GO to Pinpoint Test Z .
B00D5:4A	Restraint System Passenger Disable Indicator: Incorrect Component Installed	GO to Pinpoint Test AD .
B1193:00	Crash Event Storage Full and Locked: No Sub Type Information	This DTC indicates the vehicle has been involved in a collision. INSTALL a new RCM and impact sensors. REFER to Inspection and Repair After a Supplemental Restraint System (SRS) Deployment in this section.
B1211:11	Driver Seatbelt Retractor Pretensioner Deployment Control: Circuit Short to Ground	GO to Pinpoint Test AA .
B1211:12	Driver Seatbelt Retractor Pretensioner Deployment Control: Circuit Short to Battery	GO to Pinpoint Test AA .
B1211:13	Driver Seatbelt Retractor Pretensioner Deployment Control: Circuit Open	GO to Pinpoint Test AA .
B1211:1A	Driver Seatbelt Retractor Pretensioner Deployment Control: Circuit Resistance Below Threshold	GO to Pinpoint Test AA .

B1211:2B	Driver Seatbelt Retractor Pretensioner Deployment Control: Signal Cross Coupled	GO to Pinpoint Test AC .
B1211:4A	Driver Seatbelt Retractor Pretensioner Deployment Control: Incorrect Component Installed	GO to Pinpoint Test AD .
B1214:11	Passenger Seatbelt Retractor Pretensioner Deployment Control: Circuit Short to Ground	GO to Pinpoint Test AB .
B1214:12	Passenger Seatbelt Retractor Pretensioner Deployment Control: Circuit Short to Battery	GO to Pinpoint Test AB .
B1214:13	Passenger Seatbelt Retractor Pretensioner Deployment Control: Circuit Open	GO to Pinpoint Test AB .
B1214:1A	Passenger Seatbelt Retractor Pretensioner Deployment Control: Circuit Resistance Below Threshold	GO to Pinpoint Test AB .
B1214:2B	Passenger Seatbelt Retractor Pretensioner Deployment Control: Signal Cross Coupled	GO to Pinpoint Test AC .
B1214:4A	Passenger Seatbelt Retractor Pretensioner Deployment Control: Incorrect Component Installed	GO to Pinpoint Test AD .
U0028:08	Vehicle Communication Bus A: Bus Signal / Message Failure	GO to Pinpoint Test AG .
U0028:88	Vehicle Communication Bus A: Bus Off	GO to Pinpoint Test AG .
U0154:00	Lost Communication With Restraints Occupant Classification System Module: No Sub Type Information	**NOTE:** The DTC will set in a module that is reporting a communication fault from another module on the data bus. The module that reports the fault is not the problem module. Do not install a new RCM as part of repair. REFER to Section 418-00 to diagnose the no communication with the Occupant Classification System Module (OCSM).
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	**NOTE:** The DTC will set in a module that is reporting a communication fault from another module on the data bus. The module that reports the fault is not the problem module. Do not install a new RCM as part of repair. REFER to Section 418-00 to diagnose the no communication with the Instrument Panel Cluster (IPC).
U0253:00		

	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	**NOTE:** This DTC will set in the RCM if a message is not received from the Accessory Protocol Interface Module (APIM). Check for additional RCM and APIM DTCs. REFER to the appropriate section to diagnose DTCs concern. If no other DTCs are present, REFER to APIM Software Level Check in the General Procedures portion of Section 415-00 .
U0300:00	Internal Control Module Software Incompatibility: No Sub Type Information	CARRY OUT Programmable Module Installation (PMI). RETRIEVE RCM DTCs. If RCM DTC U0300:00 is retrieved on-demand during self-test, INSTALL a new RCM . REFER to Restraints Control Module (RCM) in this section.
U0554:00	Invalid Data Received From Accessory Protocol Interface Module: No Sub Type Information	CHECK for additional RCM and APIM DTCs. REFER to the appropriate section to diagnose the DTCs. If no other DTCs are present, REFER to Accessory Protocol Interface Module (APIM) Software Level Check in the General Procedures portion of Section 415-00 .
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CARRY OUT PMI . RETRIEVE RCM DTCs. If RCM DTC U2100:00 is retrieved on-demand, INSTALL a new RCM . REFER to Restraints Control Module (RCM) in this section.
U2200:00	Control Module Configuration Memory Corrupt: No Sub Type Information	INSTALL a new RCM and CARRY OUT Programmable Module Installation (PMI). Use as-built data when CARRYING out PMI for this DTC. REFER to Restraints Control Module (RCM) in this section.
U3000:46	Control Module: Calibration / Parameter Memory Failure	INSTALL a new RCM . REFER to Restraints Control Module (RCM) in this section.
U3000:49	Control Module: Internal Electronic Failure	INSTALL a new RCM and CARRY OUT Programmable Module Installation (PMI). If DTC U2200:00 is also present, use as-built data when CARRYING out PMI . REFER to Restraints Control Module (RCM) in this section.
U3000:4A	Control Module: Incorrect Component Installed	GO to Pinpoint Test AD .
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AI .
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test AI .

Occupant Classification System Module (OCSM) DTC Chart

NOTE: This module utilizes a 5-character DTC followed by a 2-character failure type code. The failure type code provides information about specific fault conditions such as opens or shorts to ground. Continuous Memory Diagnostic Trouble Codes (CMDTCs) have an additional 2-character DTC status code suffix to assist in determining DTC history.

DTC [a]	Description	Action To Take
B00A0:54	Occupant Classification System: Missing Calibration	GO to Pinpoint Test AE .
B00A0:67	Occupant Classification System: Signal Incorrect After Event	CARRY OUT the OCS System Reset. REFER to Occupant Classification Sensor (OCS) System Reset in this section.
B00A0:76	Occupant Classification System: Wrong Mounting Position	GO to Pinpoint Test AE .
B00A0:97	Occupant Classification System: Component or System Operation Obstructed or Blocked	GO to Pinpoint Test T .
B00C0:12	Passenger Seat Occupant Classification Sensor "A": Circuit Short To Battery	GO to Pinpoint Test U .
B00C0:13	Passenger Seat Occupant Classification Sensor "A": Circuit Open	GO to Pinpoint Test U .
B00C0:1A	Passenger Seat Occupant Classification Sensor "A": Circuit Resistance Below Threshold	GO to Pinpoint Test U .
B00C0:49	Passenger Seat Occupant Classification Sensor "A": Internal Electronic Failure	GO to Pinpoint Test AE .
B00C0:81	Passenger Seat Occupant Classification Sensor "A": Invalid Serial Data	CARRY out the Occupant Classification System (OCS) System Reset. REFER to Occupant Classification Sensor (OCS) System Reset in this section.
B00C1:12	Passenger Seat Occupant Classification Sensor "B": Circuit Short To Battery	GO to Pinpoint Test V .
B00C1:13	Passenger Seat Occupant Classification Sensor "B": Circuit Open	GO to Pinpoint Test V .
B00C1:1A	Passenger Seat Occupant Classification Sensor "B": Circuit Resistance Blow Threshold	GO to Pinpoint Test V .
B00C1:49	Passenger Seat Occupant Classification Sensor "B": Internal Electronic Failure	GO to Pinpoint Test AE .
B00C1:81	Passenger Seat Occupant Classification Sensor "B": Invalid Serial Data	CARRY out the Occupant Classification System (OCS) System Reset. REFER to Occupant Classification Sensor (OCS) System Reset in this section.
B00C2:12	Passenger Seat Occupant Classification Sensor "C": Circuit Short To Battery	GO to Pinpoint Test W .
B00C2:13	Passenger Seat Occupant Classification Sensor "C":	GO to Pinpoint Test W .

	Circuit Open	
B00C2:1A	Passenger Seat Occupant Classification Sensor "C": Circuit Resistance Blow Threshold	GO to Pinpoint Test W .
B00C2:49	Passenger Seat Occupant Classification Sensor "C": Internal Electronic Failure	GO to Pinpoint Test AE .
B00C2:81	Passenger Seat Occupant Classification Sensor "C": Invalid Serial Data	CARRY out the Occupant Classification System (OCS) System Reset. REFER to Occupant Classification Sensor (OCS) System Reset in this section.
B00C3:12	Passenger Seat Occupant Classification Sensor "D": Circuit Short To Battery	GO to Pinpoint Test X .
B00C3:13	Passenger Seat Occupant Classification Sensor "D": Circuit Open	GO to Pinpoint Test X .
B00C3:1A	Passenger Seat Occupant Classification Sensor "D": Circuit Resistance Blow Threshold	GO to Pinpoint Test X .
B00C3:49	Passenger Seat Occupant Classification Sensor "D": Internal Electronic Failure	GO to Pinpoint Test AE .
B00C3:81	Passenger Seat Occupant Classification Sensor "D": Invalid Serial Data	CARRY out the Occupant Classification System (OCS) System Reset. REFER to Occupant Classification Sensor (OCS) System Reset in this section.
B1193:00	Crash Event Storage Full and Locked: No Sub Type Information	INSTALL new OCS left and right weight sensor assemblies. REFER to Inspection and Repair After a Supplemental Restraint System (SRS) Deployment in this section.
B1A59:01	Sensor 5 Volt Supply: General Electrical Failure	GO to Pinpoint Test AF .
B1A59:11	Sensor 5 Volt Supply: Circuit Short to Ground	GO to Pinpoint Test AF .
U0100:00	Lost Communication With ECM/PCM "A": No Sub Type Information	U0100:00 will set in a module that is reporting a communication fault from another module on the data bus. The module that reports the fault is not the problem module. Do not install a new OCSM as part of repair for DTC U0100:00. REFER to Section 418-00 to diagnose lost communication with the PCM.
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	U0151:00 will set in a module that is reporting a communication fault from another module on the data bus. The module that reports the fault is not the problem module. Do not install a new OCSM as part of repair for DTC U0151:00. REFER to Section 418-00 to diagnose lost communication with the Restraints Control Module (RCM).
U0401:00	Invalid Data Received From ECM/PCM "A": No Sub Type Information	U0401:00 will set in a module that is reporting a communication fault from another module on the data bus. The module that reports the fault is not the problem module. Do not install a new

		OCSM as part of repair for DTC U0401:00. CARRY OUT PCM Self Test. REPAIR any speed-related DTCs. REFER to DTC chart in Powertrain Control/Emissions Diagnosis (PC/ED) manual.
U200D:12	Control Module Output Power A: Circuit Short To Battery	GO to Pinpoint Test AH .
U3000:49	Control Module: Internal Electronic Failure	INSTALL a new OCSM . REFER to Occupant Classification System Module (OCSM) in this section.
U3000:53	Control Module: Deactivated	INSTALL a new OCSM . REFER to Occupant Classification System Module (OCSM) in this section.
U3000:54	Control Module: Missing Calibration	CARRY out the Occupant Classification System (OCS) System Reset. REFER to Occupant Classification Sensor (OCS) System Reset in this section.
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AI .
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test AI .

[a] DTC: Retrieved using scan tool.

Symptom Chart

Symptom Chart

Pinpoint Test - Supplemental Restraint System (SRS)

Pinpoint Test A: The Air Bag Warning Indicator is Illuminated Continuously

Refer to Wiring Diagrams Cell 46 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Supplemental Restraint System for schematic and connector information.

Normal Operation

During normal operation, the Instrument Panel Cluster (IPC) will illuminate the air bag warning indicator continuously for 6 seconds. If the Supplemental Restraint System (SRS) is fault free, the air bag warning indicator will turn off and remain off. If a fault is detected in the SRS , the air bag warning inditor will illuminate and remain illuminated for the rest of the ignition cycle until the fault is no longer detected. The Restraints Control Module (RCM) communicates to the IPC via the High Speed Controller Area Network (HS-CAN). The IPC will illuminate the air bag warning indicator based on messaging from the RCM or if there is no communication between the RCM and IPC .

This pinpoint test is intended to diagnose the following:

- IPC
- RCM

PINPOINT TEST A: THE AIR BAG WARNING INDICATOR IS ILLUMINATED CONTINUOUSLY

⚠ **WARNING: Always tighten the fasteners of the restraints control module (RCM) and impact sensor (if equipped) to the specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.**

NOTE: Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.

NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog AdvantageTM to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

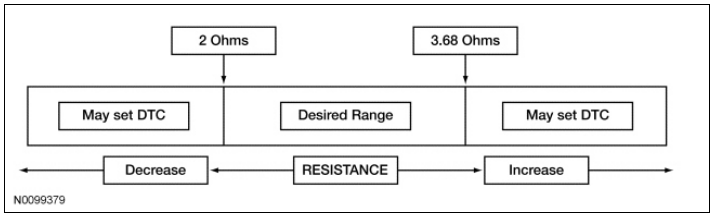
Test Step	Result / Action to Take
A1 RETRIEVE RCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **Were any DTCs retrieved on-demand dug self-test?**	**Yes** GO to the DTC Charts in this section for diagnostic direction. Do not clear any DTCs until all DTCs have been resolved. **No** If the RCM **does communicate** with the scan tool, REFER to Section 413-01 to diagnose the IPC concern. Do not clear any DTCs until all DTCs have been resolved.

Pinpoint Test B: DTCs B0001:11, B0001:12, B0001:13 and B0001:1A

Refer to Wiring Diagrams Cell 46 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Supplemental Restraint System for schematic and connector information.

Normal Operation

The Restraints Control Module (RCM) continuously monitors the driver air bag module stage 1 and circuits for the following faults:



- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted driver air bag module

If a fault is detected, the RCM will store DTC B0001:11, B0001:12, B0001:13 or B0001:1A in memory and send a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM analyzes the deployment loop resistance and uses this measurement in combination with an age correction factor to determine if a fault exists. The value displayed in the PID is the deployment loop resistance as measured by the RCM . If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. The RCM fault trigger threshold may vary as the vehicle ages. Small

variations in resistance can occur due to the effect of road vibrations on terminal fit and/or temperature changes. These variables can result in an intermittent fault. For this reason, the test will require the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at time of diagnosis. Following this direction will help make sure that minor changes in resistance do not create a repeat concern. This test will use a process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Clockspring
- Driver air bag module
- RCM

DTC Description	Fault Trigger Condition
• B0001:11 - Driver Frontal Stage 1 Deployment Control: Circuit Short to Ground	When the RCM senses a short to ground on either driver air bag stage 1 circuit, a fault will be indicated.
• B0001:12 - Driver Frontal Stage 1 Deployment Control: Circuit Short to Battery	When the RCM senses a short to voltage on either driver air bag stage 1 circuit, a fault will be indicated.
• B0001:13 - Driver Frontal Stage 1 Deployment Control: Circuit Open	When the RCM measures greater than the desired range between driver air bag stage 1 circuits, a fault will be indicated.
• B0001:1A - Driver Frontal Stage 1 Deployment Control: Circuit Resistance Below Threshold	When the RCM measures less than the desired range between driver air bag stage 1 circuits, a fault will be indicated.

This pinpoint test is intended to diagnose the following:

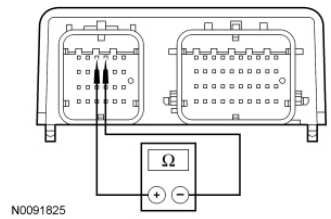
- Wiring, terminals or connectors
- Clockspring
- Driver air bag module
- RCM

PINPOINT TEST B: DTCs B0001:11, B0001:12, B0001:13 AND B0001:1A

⚠ WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failureollow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

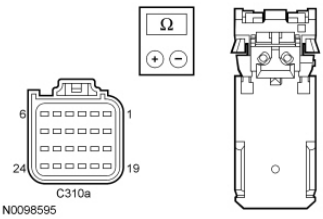
NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.



NOTE: Supplemental Restraint System (SRS) components should only be disconnected or reconnected when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog AdvantageTM to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.



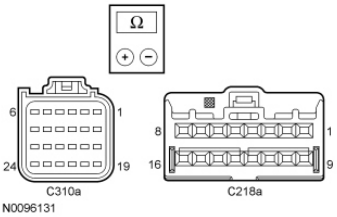
NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
B1 RETRIEVE RCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **Was DTC B0001:11, B0001:12, B0001:13 or B0001:1A retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B0001:13 or B0001:1A, GO to B2 . For DTC B0001:11, GO to B11 . For DTC B0001:12, GO to B14 . **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code (CMDTC) only. For DTC B0001:13 or B0001:1A, GO to B19 . For DTC B0001:11, GO to B20 . For DTC B0001:12, GO to B21 .
B2 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_00_R) PID	
• Enter the following diagnostic mode on the scan tool: DataLogger - RCM . ♦ DEPLOY_00_R PID • **Does the PID value read between 2 and 3.68 ohms?**	**Yes** GO to B18 . **No** GO to B3 .
B3 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_00_R) PID WHILE CARRYING OUT THE	

HARNESS TEST	
• Remove the lower steering column shroud to access the clockspring connectors. • While monitoring the DEPLOY_00_R PID, carry out the harness test of the driver air bag circuits and accessible connectors (including any in-line connectors) by wiggling and flexing the wire harness, connectors, tilting and rotating the steering wheel frequently. • **Does the PID value read between 2 and 3.68 ohms while carrying out the harness test?**	**Yes** DEPOWER the SRS and REPAIR the connector, terminals or wire harness or INSTALL a new clockspring as needed. REFER to Clockspring in this section. Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. GO to B23 . **No** For PID value less than 2 ohms, GO to B4 . For PID value greater than 3.68 ohms, GO to B7 .
B4 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)	
NOTE: This pinpoint test step will attempt to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module disconnected, open circuit faults would normally be retrieved on stage 1 and 2. • **Did the on-demand DTC change from B0001:1A to B0001:13?**	**Yes** GO to B16 . **No** GO to B5 .
B5 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED) (CLOCKSPRING DISCONNECTED)	
	Yes GO to B17 .

NOTE: This pinpoint test step will attempt to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Disconnect: Clockspring C218A. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module / clockspring disconnected, open circuit faults would normally be retrieved on stage 1 and 2. • **Did the on-demand DTC change from B0001:1A to B0001:13?**	**No** GO to B6 .
B6 CHECK THE RCM FOR LOW RESISTANCE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between RCM C310A pins 3 and 4, component side.  • **Is the resistance greater than 10,000 ohms?**	**Yes** REPAIR circuits CR101 (VT/BN) and RR101 (YE/GN). Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. GO to B23 . **No** GO to B18 .
B7 CHECK THE DRIVER AIR BAG STAGE 1 CIRCUITS FOR AN OPEN	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between RCM C310A, harness side and driver air bag module stage 1 electrical connector, harness side, using the following chart.	**Yes** GO to B9 . **No** GO to B8 .

RCM	Circuit	Driver Air Bag Module Stage 1 Electrical Connector
C310A-4	CR101 (VT/BN)	Driver Air Bag Module Stage 1 electrical connector
C310A-3	RR101 (YE/GN)	Driver Air Bag Module Stage 1 electrical connector



- **Are the resistances less than 1 ohm?**

B8 CHECK THE DRIVER AIR BAG STAGE 1 CIRCUITS FOR AN OPEN (CLOCKSPRING DISCONNECTED)

- Disconnect: Clockspring C218A.
- Measure the resistance between RCM C310A, harness side and clockspring C218A, harness side using the following chart.

RCM	Circuit	Clockspring
C310A-4	CR101 (VT/BN)	C218A-1
C310A-3	RR101 (YE/GN)	C218A-9

- **Are the resistances less than 0.5 ohm?**

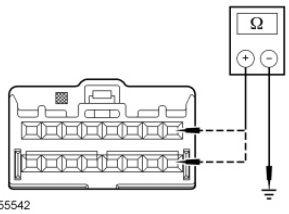
Yes
GO to B17 .

No
REPAIR circuit CR101 (VT/BN) or RR101 (YE/GN).

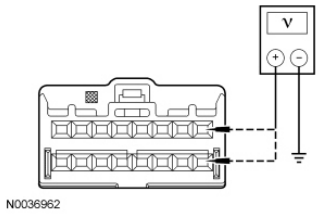
Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information.

GO to B23 .

B9 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)



NOTE: This pinpoint test step will attempt to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault.



Yes
GO to B16 .

No
GO to B10 .

• Connect: RCM C310A and C310B. • Connect a fused jumper wire between driver air bag module stage 1 electrical connector pins 1 and 2, harness side. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag stage 1 circuits shorted together, a low resistance fault would normally be retrieved on stage 1. Stage 2 will show an open circuit fault due to the driver air bag being disconnected. • **Was DTC B0001:1A retrieved on-demand during self-test?**	
B10 CHECK THE DRIVER AIR BAG STAGE 1 CIRCUITS FOR AN OPEN (CLOCKSPRING DISCONNECTED)	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: Clockspring C218A. • Connect a fused jumper wire between clockspring electrical connector C218A pins 1 and 9, harness side. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the clockspring stage 1 circuits shorted together, a low resistance fault would normally be retrieved on stage 1. Stage 2 will show an open circuit fault due to the driver air bag being disconnected. • **Was DTC B0001:1A retrieved on-demand during self-test?**	**Yes** GO to B17 . **No** GO to B18 .
B11 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step will attempt to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF.	**Yes** GO to B16 . **No** GO to B12 .

• Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module disconnected, open circuit faults would normally be retrieved on stage 1 and 2. • **Did the on-demand DTC change from B0001:11 to B0001:13?**	
B12 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED) (CLOCKSPRING DISCONNECTED)	
NOTE: This pinpoint test step will attempt to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Disconnect: Clockspring C218A. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the clockspring disconnected, open circuit faults would normally be retrieved on driver air bag stage 1 and 2. • **Did the on-demand DTC change from B0001:11 to B0001:13?**	**Yes** GO to B17 . **No** GO to B13 .
B13 CHECK THE DRIVER AIR BAG STAGE 1 CIRCUITS FOR A SHORT TO GROUND	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between clockspring: ♦ C218A-1, circuit CR101 (VT/BN), harness side and ground. ♦ C218A-9, circuit RR101 (YE/GN), harness side and ground.	**Yes** GO to B18 . **No** Due to the shorting bar feature in the RCM electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit CR101 (VT/BN) or RR101 (YE/GN). Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ

 • **Are the resistances greater than 10,000 ohms?**	Hybrid), Connector Repair Procedures for schematic and connector information. GO to B23 .
B14 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO BATTERY INDICATED) (CLOCKSPRING DISCONNECTED)	
NOTE: This pinpoint test step will attempt to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Disconnect: Clockspring C218A. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module/clockspring disconnected, open circuit faults would normally be retrieved on driver air bag stage 1 and 2. • **Did the on-demand DTC change from B0001:12 to B0001:13?**	**Yes** GO to B17 . **No** GO to B15 .
B15 CHECK THE DRIVER AIR BAG STAGE 1 CIRCUITS FOR A SHORT TO VOLTAGE	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Measure the voltage between clockspring: ♦ C218A-1, circuit CR101 (VT/BN), harness side and ground.	**Yes** Due to the shorting bar feature in the RCM electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR circuit CR101 (VT/BN) or RR101 (YE/GN). Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information.

♦ C218A-9, circuit RR101 (YE/GN), harness side and ground.  • **Is voltage present on either circuit?**	GO to B23 . **No** GO to B18 .
B16 CONFIRM THE DRIVER AIR BAG MODULE FAULT	
NOTE: Make sure all restraint system components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • If installed previously, remove the fused jumper wire from the air bag electrical connector. • Install the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new driver air bag module. REFER to Driver Air Bag Module in this section. GO to B23 . **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. SRS components should only be installed when directed to do so in the pinpoint test.** For DTC B0001:13 or B0001:1A, GO to B19 . For DTC B0001:11, GO to B20 . For DTC B0001:12, GO to B21 .
B17 CONFIRM THE CLOCKSPRING FAULT	
NOTE: Make sure all restraint system components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Connect: Clockspring C218A. • Install the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON.	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to B23 . **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. SRS components should only be installed when directed to do so in the pinpoint test.** For DTC B0001:13 or B0001:1A, GO to B19 . For DTC B0001:11, GO to B20 .

• Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **Was the original DTC retrieved on-demand during self-test?**	For DTC B0001:12, GO to B21 .
B18 CONFIRM THE RCM FAULT	
NOTE: Make sure all restraint system components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • If installed previously, remove the fused jumper wire from the air bag electrical connector. • Prior to reconnecting any previously disconnected SRS component: ♦ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ♦ inspect wire harness for any damaged, pinched, cut or pierced wires. ♦ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ♦ repair any concerns found. Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. • If previously removed, install the driver air bag module. Refer to Driver Air Bag Module in this section. • Connect: Clockspring C218A (if previously disconnected). • Connect: RCM C310A and C310B (if previously disconnected). • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new RCM . REFER to Restraints Control Module (RCM) in this section. GO to B23 . **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. SRS components should only be installed when directed to do so in the pinpoint test.** For DTC B0001:13 or B0001:1A, GO to B19 . For DTC B0001:11, GO to B20 . For DTC B0001:12, GO to B21 .
B19 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_00_R) PID FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT	

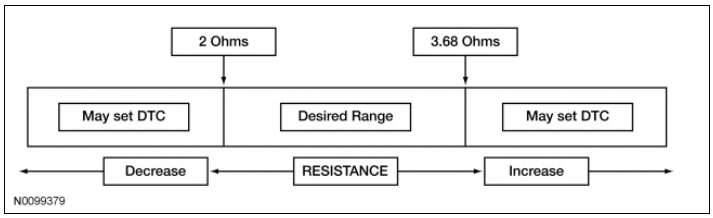
• Enter the following diagnostic mode on the scan tool: DataLogger - RCM . ♦ DEPLOY_00_R PID • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently. • **Does the PID value read between 2 and 3.68 ohms?**	**Yes** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. SRS components should only be installed when directed to do so in the pinpoint test.** GO to B22 . **No** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. GO to B23 .
B20 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO GROUND FAULT	
• Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **Was DTC B0001:11 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. GO to B23 . **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. SRS components should only be installed when directed to do so in the pinpoint test.** GO to B22 .
B21 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO BATTERY FAULT	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON.	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. GO to B23 .

• Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **Was DTC B0001:12 retrieved on-demand during self-test?**	**No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. SRS components should only be installed when directed to do so in the pinpoint test.** GO to B22 .
B22 CHECK THE HARNESS AND CONNECTORS	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module: ♦ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals. ♦ inspect wire harness for any damage, pinched, cut or pierced wires. • Inspect RCM C310A and C310B CPA lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. • **Were any concerns found?**	**Yes** REPAIR as necessary. Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. GO to B23 . **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. SRS components should only be installed when directed to do so in the pinpoint test.** GO to B23 .
B23 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF. • ⚠ **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS , repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - Restraints. • **NOTE:** When selecting Restraints from the Self Test menu, DTCs will be retrieved from the RCM and OCSM . • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs . PROVE OUT the SRS . Repair is complete. RETURN the vehicle to the customer.

Pinpoint Test C: DTCs B0002:11, B0002:12, B0002:13 and B0002:1A

Refer to Wiring Diagrams Cell 46 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Supplemental Restraint System for schematic and connector information.

Normal Operation



The Restraints Control Module (RCM) continuously monitors the driver air bag module stage 2 and circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted driver air bag module

If a fault is detected, the RCM will store DTC B0002:11, B0002:12, B0002:13 or B0002:1A in memory and send a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM analyzes the deployment loop resistance and uses this measurement in combination with an age correction factor to determine if a fault exists. The value displayed in the PID is the deployment loop resistance as measured by the RCM . If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. The RCM fault trigger threshold may vary as the vehicle ages. Small variations in resistance can occur due to the effect of road vibrations on terminal fit and/or temperature changes. These variables can result in an intermittent fault. For this reason, the test will require the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at time of diagnosis. Following this direction will help make sure that minor changes in resistance do not create a repeat concern. This test will use a process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Clockspring
- Driver air bag module
- RCM

DTC Description	Fault Trigger Condition
• B0002:11 - Driver Frontal Stage 2 Deployment Control: Circuit Short to Ground	When the RCM senses a short to ground on either driver air bag stage 2 circuit, a fault will be indicated.
• B0002:12 - Driver Frontal Stage 2 Deployment Control: Circuit Short to Battery	When the RCM senses a short to voltage on either driver air bag stage 2 circuit, a fault will be indicated.
• B0002:13 - Driver Frontal Stage 2 Deployment Control: Circuit Open	When the RCM measures greater than the desired range between driver air bag stage 2 circuits, a fault will be indicated.

• B0002:1A - Driver Frontal Stage 2 Deployment Control: Circuit Resistance Below Threshold	When the RCM measures less than the desired range between driver air bag stage 2 circuits, a fault will be indicated.

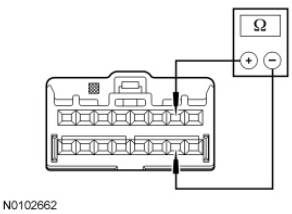
This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- Clockspring
- Driver air bag module
- RCM

PINPOINT TEST C: DTCs B0002:11, B0002:12, B0002:13 AND B0002:1A

⚠ WARNING: Never probe the electrical connectors on aig, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

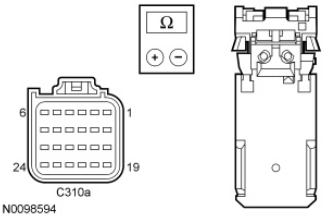
Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.



NOTE: Supplemental Restraint System (SRS) components should only be disconnected or reconnected when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

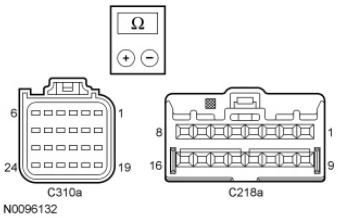
NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog AdvantageTM to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.



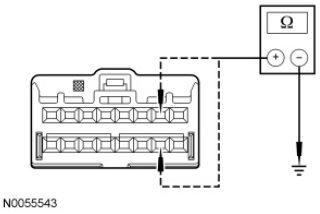
Test Step	Result / Action to Take
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **Was DTC B0002:11, B0002:12, B0002:13 or B0002:1A retrieved on-demand during self-test?**	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. For DTC B0002:13 or B0002:1A, GO to C2 . For DTC B0002:11, GO to C11 . For DTC B0002:12, GO to C14 . **No** This is an intermittent fault when present as a Continuous Memory Diagnostic Trouble Code

	(CMDTC) only. For DTC B0002:13 or B0001A, GO to C19 . For DTC B0002:11, GO to C20 . For DTC B0002:12, GO to C21 .
C2 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_01_R) PID	
• Enter the following diagnostic mode on the scan tool: DataLogger - RCM . ♦ DEPLOY_01_R PID • **Does the PID value read between 2 and 3.68 ohms?**	**Yes** GO to C18 . **No** GO to C3 .
C3 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_01_R) PID WHILE CARRYING OUT THE HARNESS TEST	
• Remove the lower steering column shroud to access the clockspring connector. • While monitoring the DEPLOY_01_R PID, carry out the harness test of the driver air bag circuits and accessible connectors (including any in-line connectors), by wiggling and flexing the wire harness, connectors, tilting and rotating the steering wheel frequently. • **Does the PID value read between 2 and 3.68 ohms while carrying out the harness test?**	**Yes** DEPOWER the SRS and REPAIR the connector, terminals or wire harness or INSTALL a new clockspring as needed. REFER to Clockspring in this section. Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. GO to C23 . **No** For PID value less than 2 ohms, GO to C4 . For PID value greater than 3.68 ohms, GO to C7 .
C4 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)	
NOTE: This pinpoint test step will attempt to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.	**Yes** GO to C16 . **No** GO to C5 .

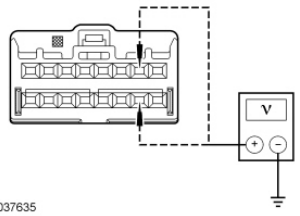


• Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module disconnected, open circuit faults would normally be retrieved on stage 1 and 2. • **Did the on-demand DTC change from B0002:1A to B0002:13?**	
C5 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED) (CLOCKSPRING DISCONNECTED)	
NOTE: This pinpoint test step will attempt to change the fault reported by the RCM by inducing a different fault condition. the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Disconnect: Clockspring C218A. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module/clockspring disconnected, open circuit faults would normally be retrieved on stage 1 and 2. • **Did the on-demand DTC change from B0002:1A to B0002:13?**	**Yes** GO to C17 . **No** GO to C6 .
C6 CHECK FOR A SHORT BETWEEN DRIVER AIR BAG STAGE 2 CIRCUITS	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between C218A-2, circuit CR102 (BU), harness side and C218A-10, circuit RR102 (WH), harness side.  N0102662	**Yes** GO to C18 . **No** REPAIR circuits CR102 (BU) and RR102 (WH). Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. GO to C23 .

• **Is the resistance greater than 10,000 ohms?**	
C7 CHECK THE DRIVER AIR BAG STAGE 2 CIRCUITS FOR AN OPEN	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between RCM C310A, harness side and driver air bag module stage 2 electrical connector, harness side using the following chart. • **Are the resistances less than 1 ohm?**	**Yes** GO to C9 . **No** GO to C8 .
C8 CHECK THE DRIVER AIR BAG STAGE 2 CIRCUITS FOR AN OPEN (CLOCKSPRING DISCONNECTED)	
• Disconnect: Clockspring C218A. • Measure the resistance between RCM C310A, harness side and clockspring C218A, harness side using the following chart.	**Yes** GO to C17 . **No** REPAIR circuit CR102 (BU) or RR102 (WH). Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. GO to C23 .



RCM	Circuit	Driver Air Bag Module Stage 2 Electrical Connector
C310A-7	CR102 (BU)	Driver Air Bag Module Stage 2 electrical connector
C310A-8	RR102 (WH)	Driver Air Bag Module Stage 2 electrical connector



RCM	Circuit	Clockspring
C310A-7	CR102 (BU)	C218A-2
C310A-8	RR102 (WH)	C218A-10

 • **Are the resistances less than 0.5 ohm?**	
C9 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (OPEN INDICATED)	
NOTE: This pinpoint test step will attempt to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Connect: RCM C310A and C310B. • Connect a fused jumper wire between driver air bag module stage 2 electrical connector pins 1 and 2, harness side. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with driver air bag module stage 2 circuits shorted together, a low resistance fault would normally be rrieved on stage 2. Stage 1 will show an open circuit fault due to the driver air bag being disconnected. • **Was DTC B0002:1A retrieved on-demand during self-test?**	**Yes** GO to C16 . **No** GO to C10 .
C10 CHECK THE DRIVER AIR BAG STAGE 2 CIRCUITS FOR AN OPEN (CLOCKSPRING DISCONNECTED)	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the fused jumper wire from the driver air bag module stage 2 electrical connector. • Disconnect: Clockspring C218A. • Connect a fused jumper wire between clockspring electrical connector C218A pins 2 and 10, harness side. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the clockspring stage 2 circuits shorted together, a low resistance fault would normally be retrieved on stage 2.	**Yes** GO to C17 . **No** GO to C18 .

Stage 1 will show an open circuit fault due to the driver air bag being disconnected. • **Was DTC B0002:1A retrieved on-demand during self-test?**	
C11 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)	
NOTE: This pinpoint test step will attempt to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module disconnected, open circuit faults would normally be retrieved on stage 1 and 2. • **Did the on-demand DTC change from B0002:11 to B0002:13?**	**Yes** GO to C16 . **No** GO to C12 .
C12 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED) (CLOCKSPRING DISCONNECTED)	
NE: This pinpoint test step will attempt to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Disconnect: Clockspring C218A. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module/clockspring disconnected, open circuit faults would normally be retrieved on stage 1 and 2. • **Did the on-demand DTC change from B0002:11 to B0002:13?**	**Yes** GO to C17 . **No** GO to C13 .
C13 CHECK THE DRIVER AIR BAG STAGE 2 CIRCUITS FOR A SHORT TO GROUND	

Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Measure the resistance between clockspring: ♦ C218A-2, circuit CR102 (BU), harness side and ground. ♦ C218A-10, circuit RR102 (WH), harness side and ground.  N0055543 • **Are the resistances greater than 10,000 ohms?**	**Yes** GO to C18 . **No** REPAIR circuit CR102 (BU) or RR102 (WH). Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. GO to C23 .
C14 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL DTC FOR A FAULT STATUS CHANGE (SHORT TO BATTERY INDICATED) (CLOCKSPRING DISCONNECTED)	
NOTE: This pinpoint test step will attempt to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Disconnect: Clockspring C218A. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **DIAGNOSTIC TIP:** When viewing DTCs with the driver air bag module/clockspring disconnected, open circuit faults would normally be retrieved on stage 1 and 2. • **Did the on-demand DTC change from B0002:12 to B0002:13?**	**Yes** GO to C17 . **No** GO to C15 .
C15 CHECK THE DRIVER AIR BAG STAGE 2 CIRCUITS FOR A SHORT TO VOLTAGE	

• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Disconnect: RCM C310A and C310B. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Measure the voltage between clockspring: ♦ C218A-2, circuit CR102 (BU), harness side and ground. ♦ C218A-10, circuit RR102 (WH), harness side and ground.  • **Is voltage present on either circuit?**	**Yes** REPAIR circuit CR102 (BU) or RR102 (WH). Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. GO to C23 . **No** GO to C18 .
C16 CONFIRM THE DRIVER AIR BAG MODULE FAULT	
NOTE: Make sure all restraint system components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • If installed previously, remove the fused jumper wire from the driver air bag electrical connector. • Install the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **Was the original DTC retrieved on-demand during self-test?**	**Yes** INSTALL a new driver air bag module. REFER to Driver Air Bag Module in this section. GO to C23 . **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. SRS components should only be installed when directed to do so in the pinpoint test.** For DTC B0002:13 or B0002:1A, GO to C19 . For DTC B0002:11, GO to C20 . For DTC B0002:12, GO to C21 .
C17 CONFIRM THE CLOCKSPRING FAULT	
NOTE: Make sure all restraint system components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.	**Yes** INSTALL a new clockspring. REFER to Clockspring in this section. GO to C23 . **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install**

• If installed previously, remove the fused jumper wire from the clockspring electrical connector C218A. • Connect: Clockspring C218A. • Install the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **Was the original DTC retrieved on-demand during self-test?**	**any new SRS components at this time. SRS components should only be installed when directed to do so in the pinpoint test.** For DTC B0002:13 or B0002:1A, GO to C19 . For DTC B0002:11, GO to C20 . For DTC B0002:12, GO to C21 .
C18 CONFIRM THE RCM FAULT	
NOTE: Make sure all restraint system components and the RCM electrical connectors are connected before carrying out the self-test. If not, DTCs will be recorded. • Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • If installed previously, remove the fused jumper wire from the clockspring electrical connector C218A. • Prior to reconnecting any previously disconnected SRS component: ♦ inspect connector(s) (including any in-line connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals. ♦ inspect wire harness for any damage, pinched, cut or pierced wires. ♦ inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. ♦ repair any concerns found. Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. • If previously removed, install the driver air bag module. Refer to Driver Air Bag Module in this section. • Connect: Clockspring C218A (if previously disconnected). • Connect: RCM C310A and C310B (if previously disconnected). • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM .	**Yes** INSTALL a new RCM . REFER to Restraints Control Module (RCM) in this section. GO to C23 . **No** In the process of diagnosing the fault, the fault condition has become intermittent. **Do not install any new SRS components at this time. SRS components shod only be installed when directed to do so in the pinpoint test.** For DTC B0002:13 or B0002:1A, GO to C19 . For DTC B0002:11, GO to C20 . For DTC B0002:12, GO to C21 .

• **Was the original DTC retrieved on-demand during self-test?**	
C19 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_01_R) PID FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT	
• Enter the following diagnostic mode on the scan tool: DataLogger - RCM . ♦ DEPLOY_01_R PID • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently. • **Does the PID value read between 2 and 3.68 ohms?**	**Yes** The fault is not present and cannot be recreated this time. **Do not install any new SRS components at this time. SRS components should only be installed when directed to do so in the pinpoint test.** GO to C22 . **No** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. GO to C23 .
C20 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO GROUND FAULT	
• Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **Was DTC B0002:11 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. GO to C23 . **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. SRS components should only be installed when directed to do so in the pinpoint test.** GO to C22 .
C21 CHECK THE DRIVER FRONTAL STAGE 2 DEPLOYMENT CONTROL FOR AN INTERMITTENT SHORT TO BATTERY FAULT	

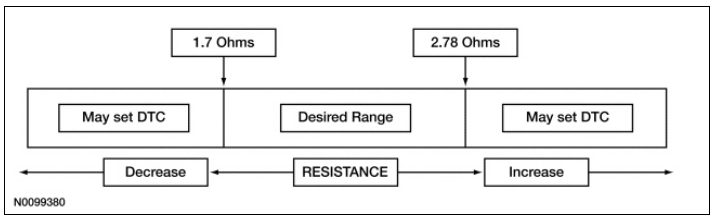
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. Refer to Driver Air Bag Module in this section. • Repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON. • Attempt to recreate the fault by wiggling connectors (including any in-line connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently. • Enter the following diagnostic mode on the scan tool: Self Test - RCM . • **Was DTC B0002:12 retrieved on-demand during self-test?**	**Yes** DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. GO to C23 . **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. SRS components should only be installed when directed to do so in the pinpoint test.** GO to C22 .
C22 CHECK HARNESS AND CONNECTORS	
• Ignition OFF. • Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Remove the driver air bag module. ♦ inspect connector(s) (including any in-line connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals. ♦ inspect wire harness for any damage, pinched, cut or pierced wires. • Inspect RCM C310A and C310B CPA lever/lock for correct operation. Refer to Restraints Control Module (RCM) in this section. • **Were any concerns found?**	**Yes** REPAIR as necessary. Refer to Wiring Diagrams Cell 5 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Connector Repair Procedures for schematic and connector information. GO to C23 . **No** The fault is not present and cannot be recreated at this time. **Do not install any new SRS components at this time. SRS components should only be installed when directed to do so in the pinpoint test.** GO to C23 .
C23 CHECK FOR ADDITIONAL SRS DTCs	
• Ignition OFF. • ⚠ **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.** • Reconnect all SRS components (if previously disconnected). • If previously directed to depower the SRS , repower the SRS . **Do not** prove out the SRS at this time. Refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section. • Ignition ON.	**Yes** Do not clear any DTCs until all DTCs have been resolved. GO to the DTC Charts in this section for pinpoint test direction. **No** CLEAR all RCM and OCSM CMDTCs . PROVE OUT the SRS . Repair is complete. RETURN the vehicle to the customer.

• Enter the following diagnostic mode on the scan tool: Self Test - Restraints. • **NOTE:** When selecting Restraints from the Self Test menu, DTCs will be retrieved from the RCM and OCSM . • **Are any RCM and/or OCSM DTCs retrieved on-demand during self-test?**	

Pinpoint Test D: DTCs B0004:11, B0004:12, B0004:13 and B0004:1A

Refer to Wiring Diagrams Cell 46 (Fusion/MKZ , Fusion Hybrid/MKZ Hybrid), Supplemental Restraint System for schematic and connector information.

Normal Operation



The Restraints Control Module (RCM) continuously monitors the driver knee bolster air bag module and circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted driver knee bolster air bag module

If a fault is detected, the RCM will store DTC B0004:11, B0004:12, B0004:13 or B0004:1A in memory and send a message to the Instrument Panel Cluster (IPC) to illuminate the air bag warning indicator.

The RCM analyzes the deployment loop resistance and uses this measurement in combination with an age correction factor to determine if a fault exists. The value displayed in the PID is the deployment loop resistance as measured by the RCM . If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. The RCM fault trigger threshold may vary as the vehicle ages. Small variations in resistance can occur due to the effect of road vibrations on terminal fit and/or temperature changes. These variables can result in an intermittent fault. For this reason, the test will require the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at time of diagnosis. Following this direction will help make sure that minor changes in resistance do not create a repeat concern. This test will use a process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Driver knee bolster air bag module
- RCM

DTC Description	Fault Trigger Condition
	When the RCM senses a short to ground on either driver knee bolster air bag module circuit, a fault will be indicated.

• B0004:11 - Driver Knee Bolster Deployment Control: Circuit Short to Ground	
• B0004:12 - Driver Knee Bolster Deployment Control: Circuit Short to Battery	When the RCM senses a short to voltage on either driver knee bolster air bag module circuit, a fault will be indicated.
• B0004:13 - Driver Knee Bolster Deployment Control: Circuit Open	When the RCM measures greater than the desired resistance range between driver knee bolster air bag module circuits, a fault will be indicated.
• B0004:1A - Driver Knee Bolster Deployment Control: Circuit Resistance Below Threshold	When the RCM measures less than the desired resistance range between driver knee bolster air bag module circuits, a fault will be indicated.

This pinpoint test is intended to diagnose the following:
- Wiring, terminals or connectors
- Driver knee bolster air bag module
- RCM

PINPOINT TEST D: DTCs B0004:11, B0004:12, B0004:13 AND B0004:1A

⚠ WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTICE: **Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.**

Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test. <

NOTE: Supplemental Restraint System (SRS) components should only be disconnected or reconnected when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS .

NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford Catalog AdvantageTM to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

Test Step	Result / Action to Take
D1 RETRIEVE RCM DTCs	
• Ignition ON. • Enter the following diagnostic mode on the scan tool: Self Test - RCM .	**Yes** This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test.

• **Was DB0004:11, B0004:12, B0004:13 or B0004:1A retrieved on-demand during self-test?**	For DTC B0004:13 or B0004:1A, GO to D2 . For DTC B0004:11, GO to D8 . For DTC B0004:12, GO to D10 . **No** This is an intermittent fault when present as a CMDTC only. For DTC B0004:13 or B0004:1A, GO to D13 . For DTC B0004:11, GO to D14 . For DTC B0004:12, GO to D15 .
D2 CHECK THE DRIVER KNEE BOLSTER DEPLOYMENT CONTROL RESISTANCE (DEPLOY_02_R) PID	
• Enter the following diagnostic mode on the scan tool: DataLogger - RCM . ♦ DEPLOY_02_R PID • **Does the PID value read between 1.7 and 2.78 ohms?**	**Yes** GO to D12 . **No** GO to D3 .
D3 CHECK THE DRIVER KNEE BOLSTER DEPLOYMENT CONTROL RESISTANCE (DEPLOY_02_R) PID WHILE CARRYING OUT THE HARNESS TEST	

Supplemental Restraint System (SRS) Depowering and Repowering

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Depowering Procedure

⚠ WARNING: Always wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

⚠ WARNING: To rduce the risk of accidental deployment, do not use any memory saver devices. Failure to follow this instruction may result in serious personal injury or death.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Turn all vehicle accessories OFF.

2. Turn the ignition to OFF.

3. At the Smart Junction Box (SJB), located below the LH side of the instrument panel, remove the cover and the RCM fuse 32 (10A) from the SJB . For additional information, refer to the Wiring Diagrams manual.

4. Turn the ignition ON and monitor the air bag indicator for at least 30 seconds. The air bag warning indicator will remain lit continuously (no flashing) if the correct RCM fuse has been removed. If the air bag warning indicator does not remain lit continuously, remove the correct RCM fuse before proceeding.

5. Turn the ignition OFF.

6. **⚠ WARNING: Always deplete the backup power supply before repairing or installing any new front or side air bag supplemental restraint system (SRS) component and before servicing, removing, installing, adjusting or striking components near the front or side impact sensors or the restraints control module (RCM). Nearby components include doors, instrument panel, console, door latches, strikers, seats and hood latches. Refer to the Description and Operation portion of Section 501-20B for location of the RCM and impact sensor(s). To deplete the backup**

power supply energy, disconnect the battery ground cable and wait at least 1 minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped). Failure to follow these instructions may result in serious personal injury or death in the event of an accidental deployment.

Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-01 .

Repowering Procedure

1. Turn the ignition from OFF to ON.

2. Install RCM fuse 32 (10A) in the SJB and close the cover.

3. ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.**

   Connect the battery ground cable.

4. Prove out the SRS as follows:
   Turn the ignition from ON to OFF. Wait 10 seconds, then turn the ignition ON and monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator will light continuously for approximately 6 seconds and then turn off. If an air bag SRS fault is detected, the air bag warning indicator will:
   - fail to light.
   - remain lit continuously.
   - flash.

   The flashing might not occur until approximately 30 seconds after the ignition has been turned from the OFF to the ON position. This is the time required for the RCM to complete the testing of the SRS . If the air bag warning indicator is inoperative and a SRS fault exists, a chime will sound in a pattern of 5 sets of 5 beeps. If this occurs, the air bag warning indicator and any SRS fault discovered must be diagnosed and repaired.
   Clear all RCM and OCSM CMDTCs .

Supplemental Restraint System (SRS) Deactivation and Reactivation

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Deactivation

⚠ WARNING: Always wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.

⚠ WARNING: To reduce the risk of accidental deployment, do not use any memory saver devices. Failure to follow this instruction may result in serious personal injury or death.

⚠ WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental eployment of these modules, which increases the risk of serious personal injury or death.

⚠ WARNING: Never disassemble or tamper with seat belt deployable components, including pretensioners, load limiters and inflators. Never back probe deployable device electrical connectors. Tampering or back probing may cause an accidental deployment and result in personal injury or death.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

All vehicles

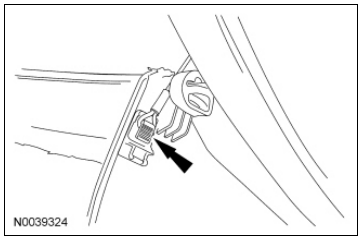
1. Turn all vehicle accessories OFF.
2. Turn the ignition OFF.
3. At the Smart Junction Box (SJB), located below the LH side of the instrument panel, remove the cover and the RCM fuse 32 (10A) from the SJB . For additional information, refer to the Wiring Diagrams manual.
4. Turn the ignition ON and monitor the air bag warning indicator for at least 30 seconds. The air bag warning indicator will remain lit continuously (no flashing) if the correct RCM fuse has been removed. If the air bag warning indicator does not remain lit continuously, remove the correct RCM fuse before proceeding.
5. Turn the ignition OFF.

6. ⚠ **WARNING: Always deplete the backup power supply before repairing or installing any new front or side air bag supplemental restraint system (SRS) component and before servicing, removing, installing, adjusting or striking components near the front or side impact sensors or the restraints control module (RCM). Nearby components include doors, instrument panel, console, door latches, strikers, seats and hood latches. Refer to the Description and Operation portion of Section 501-20B for location of the RCM and impact sensor(s). To deplete the backup power supply energy, disconnect the battery ground cable and wait at least 1 minute. Be sure to disconnect auxiliary batteries and power supplies (if equipped). Failure to follow these instructions may result in serious personal injury or death in the event of an accidental deployment.**

   Disconnect the battery ground cable and wait at least one minute. For additional information, refer to Section 414-01 .

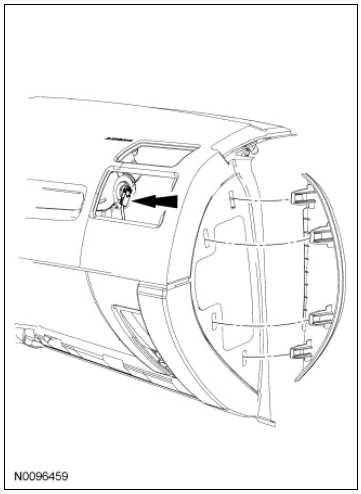
7. Remove the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.

Hybrid vehicles



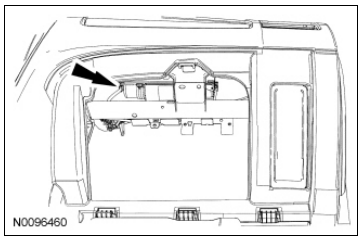
8. Remove the steering column opening trim panel.
   - Remove the 2 screws.
   - Pull downward to release the retainers and remove the steering column opening panel.

9. Disconnect the knee air bag module electrical connector.



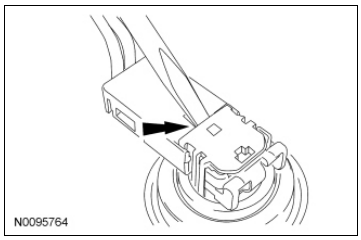
All vehicles

10. Disconnect the glove compartment damper and lower the glove compartment.

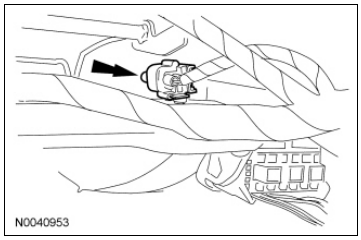


11. **NOTE:** RH HVAC register omitted for clarity.

    Remove the RH instrument panel side finish panel to access the RH passenger air bag module electrical connector.

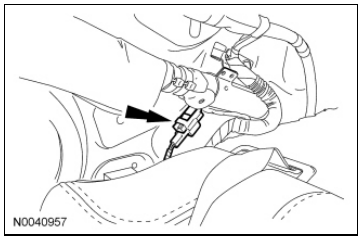


12. Through the glove compartment opening, access the LH passenger air bag electrical connector.



13. ***NOTICE:*** **Do not pull the electrical connectors out by the Connector Position Assurance (CPA) clip. Damage to the clip can occur.**

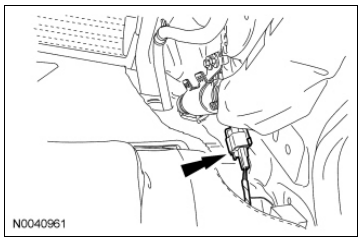
    Using an appropriate tool, lift up and release the Connector Position Assurance (CPA) clips and disconnect the 2 electrical connectors.



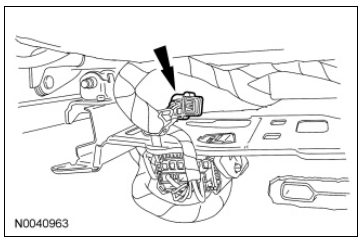
14. From under the rear of the passenger seat, slide and disengage the passenger seat side air bag module electrical connector locking clip, and then release the tab and disconnect the passenger seat side air bag module electrical connector.

15. Remove the RH C-pillar trim cover retainer cap.

16. Remove the retainer and RH C-pillar trim cover.



17. Disconnect the RH side air curtain module electrical connector.



18. Remove the LH C-pillar trim cover retainer cap.

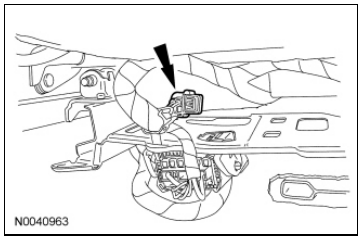
19. Remove the retainer and LH C-pillar trim cover.

20. Disconnect the LH side air curtain module electrical connector.

21. From under the rear of the driver seat, slide and disengage the driver seat side air bag module electrical connector locking clip, and then release the tab and disconnect the driver seat side air bag module electrical connector.

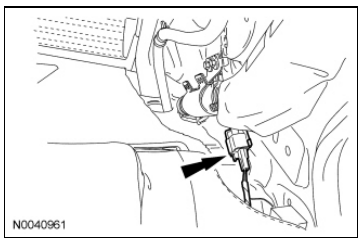
22. Install RCM fuse 32 (10A) in the SJB .

23. Connect the battery ground cable. For additional information, refer to Section 414-01 .



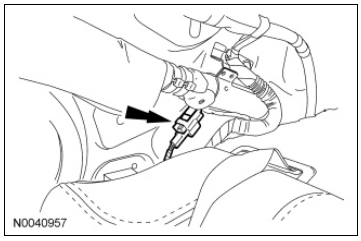
Reactivation

All vehicles

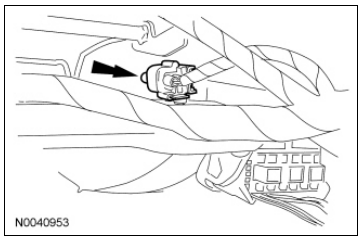


1. Remove RCM fuse 32 (10A) from the SJB .

2. Disconnect the battery ground cable and wait at least one minute.

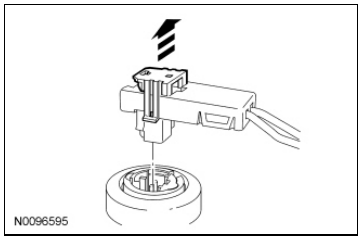


3. Connect the driver seat side air bag module electrical connector and then slide and engage the seat side air bag electrical connector locking clip.

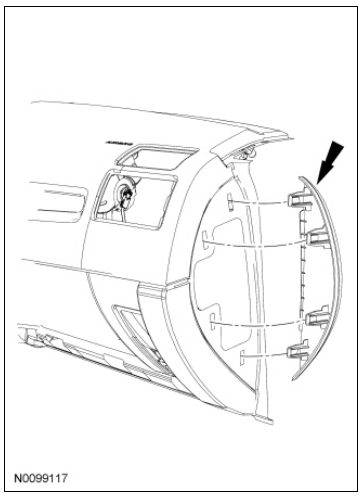


4. Connect the LH side air curtain module electrical connector.

5. Install the LH C-pillar trim cover and retainer.
6. Install the LH C-pillar trim cover retainer cap.
7. Connect the RH side air curtain module electrical connector.



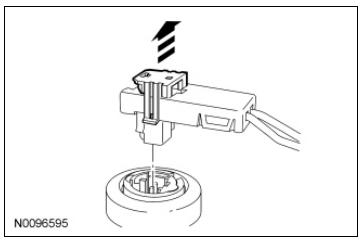
8. Install the RH C-pillar trim cover and retainer.
9. Install the RH C-pillar trim cover retainer cap.
10. Connect the passenger seat side air bag module electrical connector and slide and engage the seat side air bag electrical connector locking clip.



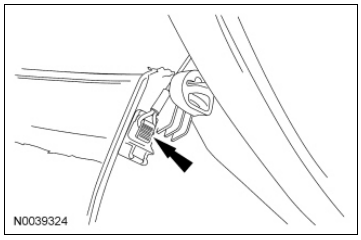
11. ***NOTICE:*** **The Connector Position Assurance (CPA) clip must be in the released position before installing the electrical connector. Failure to have the CPA clip in the released position may break the tabs on the clip causing DTCs to set in the Restraints Control Module (RCM).**

    Through the RH instrument panel side finish panel opening, connect the RH passenger air bag module electrical connector and push in to seat the CPA clip.

    - Verify that the clip is fully seated.



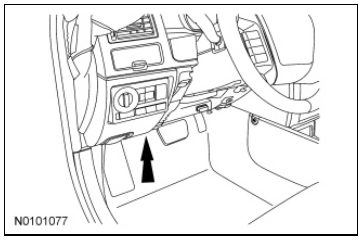
12. Install the RH instrument panel side finish panel.



13. ***NOTICE:*** **The Connector Position Assurance (CPA) clip must be in the released position before installing the electrical connector. Failure to have the CPA clip in the released position may break the tabs on the clip causing DTCs to set in the Restraints Control Module (RCM).**

    Through the glove compartment opening, connect the LH passenger air bag electrical connector and push in to seat the CPA clip.

    - Verify that the clip is fully seated.



14. Attach the glove compartment damper cable.

Hybrid vehicles

15. Connect the knee air bag module electrical connector.

16. Install the steering column opening trim panel and 2 screws.

All vehicles

17. Install the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.

18. Turn the ignition from OFF to ON.

19. Install RCM fuse 32 (10A) in the SJB and close the cover.

20. ⚠ **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any air bag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.**

    Connect the battery ground cable.

21. Prove out the SRS as follows:
    Turn the ignition from ON to OFF. Wait 10 seconds, then turn the ignition ON and monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator will light continuously for approximately 6 seconds and then turn off. If an air bag SRS fault is detected, the air bag warning indicator will:
    - fail to light.
    - remain lit continuously.
    - flash.

    The flashing might not occur until approximately 30 seconds after the ignition has been turned from the OFF to the ON position. This is the time required to complete testing of the SRS . If the air bag warning indicator is inoperative and a SRS fault exists, a chime will sound in a pattern of 5 sets of 5 beeps. If this occurs, the air bag warning indicator and any SRS fault discovered must be diagnosed and repaired.
    Clear all RCM and OCSM CMDTCs .

Inspection and Repair After a Supplemental Restraint System (SRS) Deployment

⚠ **WARNING: Remove restraint system diagnostic tools from the vehicle prior to road testing. If tools are not removed, the supplemental restraint system (SRS) device may not deploy in a crash. Failure to follow this instruction may result in serious personal injury or death in a crash and possibly violate vehicle safety standards.**

NOTE: After diagnosing or repairing a SRS , the restraint system diagnostic tools (if required) must be removed before operating the vehicle over the road.

NOTE: Deployable devices (such as air bag modules, pretensioners) may deploy alone or in various combinations depending on the impact event.

NOTE: Always refer to the appropriate workshop manual procedures prior to carrying out vehicle repairs affecting the SRS and safety belt system.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.

All vehicles

1. **NOTE:** Refer to the correct removal and installation procedure for all SRS components being installed.

   When any deployable device or combination of devices have deployed and/or the RCM has DTC B1231/B1193:00 (Event Threshold Exceeded) in memory, the repair of the vehicle SRS is to include the removal of all deployed devices and the installation of new deployable devices, the removal and installation of new impact sensors and the removal and installation of a new RCM . DTCs must be cleared from all required modules after repairs are carried out.

Vehicles with an OCS

2. **NOTE:** After installation of new OCS components, carry out the OCS Reset procedure as instructed in the workshop manual. Refer to the appropriate workshop manual for OCS removal and installation procedure.

   When a vehicle has been involved in a collision and the OCSM has DTC B1231/B1193:00 stored in memory, the repair of the OCS is to include the following procedures for the specified system:

   - For rail-type OCS , inspect the passenger side floorpan for damage and repair as necessary. Install new OCS rails. Do not install a new OCSM unless DTC B1231 cannot be cleared.
   - For weight sensor bolt-type OCS , inspect the passenger side floorpan for damage and repair as necessary. Install a new seat track with OCS weight sensor bolts. DTC must be cleared from the OCSM before carrying out OCS Reset. Do not install a new OCSM unless DTC B1231/B1193:00 cannot be cleared.
   - For bladder-type OCS , inspect for damage and repair as necessary. If installation of an OCS component is required, an OCS service kit must be installed.

All vehicles

3. When any damage to the impact sensor mounting points or mounting hardware has occurred, repair or install new mounting points and mounting hardware as needed.

4. When the driver air bag module has deployed, a new clockspring must be installed.

5. New driver and/or front passenger safety belt systems (including retractors, buckles, anchors and height adjusters) must be installed if the vehicle is involved in a collision that results in deployment of the driver and/or front passenger safety belt pretensioners. For additional information, refer to Section 501-20A .

6. Inspect the entire vehicle for damage, including the following components:
    - Steering column (deployable column if equipped)
    - Instrument panel knee bolsters and mounting points
    - Instrument panel braces and brackets
    - Instrument panel and mounting points
    - Seats and seat mounting points
    - Safety belts, safety belt buckles, safety belt retractors and safety belt anchors. For additional information, refer to Section 501-20A .
    - SRS wiring, wiring harnesses and connectors

7. After carrying out the review and inspection of the entire vehicle for damage, repair or install new components as needed.

Occupant Classification Sensor (OCS) System Reset

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

⚠ WARNING: The following precautions must be taken before carrying out the following procedure on the front passenger seat:

- Park the vehicle on level ground.
- Make sure the occupant classification system (OCS) is stabilized at a temperature in the range of 5ï¿½C to 48ï¿½C (41ï¿½F to 118ï¿½F) and is not exposed to temperatures outside that range.
- Make sure the front passenger seat is empty and dry.
- Make sure the front passenger seat repair is complete and all attached components (head restraint, seat side shield) are correctly installed.
- Make sure nothing is placed in the map pockets (if equipped) of the front passenger seat.
- Make sure nothing is underneath the front passenger seat.
- Make sure no non-factory installed items (seat covers, DVD screens) are on or contacting the front passenger seat. If any non-factory items were installed to the seat, remove the item(s) and communicate to the customer that any alteration/modification to the front passenger seat may affect performance of the OCS. Refer to the Owner's Literature.
- Make sure the seat is correctly installed in the vehicle.

Failure to follow these instructions may result in incorrect operation of the OCS and increases the risk of serious personal injury or death in a crash.

NOTE: After installation of new OCS system component(s) and the completion of Inspection and Repair After a Supplemental Restraint System (SRS) Deployment , the OCSM will have DTC B1193:00 stored in memory. In the event of a crash, DTC B1193:00 must be cleared before carrying out the Occupant Classification System (OCS) System Reset.

1. If a SRS deployment has occurred, carry out the following steps:
   - Verify that all steps have been carried out as outlined in the Inspection and Repair After a Supplemental Restraint System (SRS) Deployment procedure in this section.
   - **NOTE:** A new RCM must be installed before clearing OCSM DTC B1193:00, if a new RCM is not installed first, the OCSM DTC B1193:00 will not clear.

     Clear OCSM DTC B1193:00.
   - **Proceed to Step 4 to carry out the System Reset** .
2. If SRS deployment has **NOT** occurred, if the front passenger seat has been removed and/or serviced or new OCS components have been installed, **proceed to Step 3 to carry out the System Reset** .

NOTE: After installation of new OCS system component(s), (seat track assembly or OCSM), the OCSM will have DTC B00A0:54 stored in memory. This DTC will clear after a successful System Reset.

3. Carry out the RCM self-test. If DTC B00A0:09 is retrieved on-demand, retrieve OCSM DTCs.
   - If OCSM DTCs are retrieved on-demand and **NO** new components have been installed, refer to the OCSM DTC Chart for diagnostic direction.
   - If no OCSM DTCs are retrieved on-demand, CLEAR the DTC from the RCM and **proceed to step 4 to carry out the System Reset**

4. Turn the ignition to the OFF position.

5. Prepare the passenger seat for a System Reset and make sure:
   - the OCS weight sensor bolt harness connections are correct for each sensor at the correct locations. Refer to Wiring Diagrams cell 46 for schematic and connector information. Refer to the illustration for correct sensor location on the seat.
   - the seat wiring harnesses are routed and secured correctly and are not twisted, pinched, pulling down or pushing up on any seat component.
   - all seat fasteners have been tightened to specification as identified in the Workshop Manual. Refer to Section 501-10 .
   - make sure the seat track and backrest frame are not bent, twisted or damaged.
   - move the seat and backrest to all seating positions. Make sure the seat track does not bind or have any resistance when moved to all seating positions. Make sure that there are no obstructions contacting any seat component when the seat is moved to all seating positions.
   - the seat is correctly installed in the vehicle.
   - the passenger safety belt buckle is **unbuckled** .
   - the front passenger seat is empty and there is nothing underneath the seat. Remove any items that were not factory components installed and make sure that the seat is correctly installed in the vehicle
   - the seat backrest is in a normal seating (vertical) position.
   - the seat is at the mid-point of seat track travel.
   - the hysteresis has been removed from the front passenger seat by firmly hitting the seat backrest 3 times.
   - the vehicle electrical system voltage is **below 18 volts and above 11.5 volts** before continuing with the OCS System Reset.

NOTE: Typical seat track shown, others similar.

6. Turn the ignition ON, wait 8 seconds.

7. Carry out the OCSM System Reset.
   - If the System Reset was successful, carry out the OCS Zero Seat Weight Test. For additional information, refer to Occupant Classification Sensor (OCS) System Zero Seat Weight Test in this section.
   - If the System Reset was unsuccessful, **proceed to step 8** .

8. **NOTE:** Do not install any new OCS system components at this time. OCS system components should only be installed when directed to do so.

   Retrieve OCSM DTCs.

- If DTC B00A0:54 is retrieved on-demand, refer to the DTC Charts for diagnostic direction of this DTC.
- If any other DTCs are retrieved on-demand from the OCSM , **proceed to Step 9** .

9. Inspect all the items listed in **Step 5** for causes of a unsuccessful System Reset, repair as necessary. **Retest the system.**

10. If the System Reset was successful, carry out the Occupant Classification Sensor (OCS) System Zero Seat Weight Test in this section.
    If the System Reset was unsuccessful, install OCS weight sensor assemblies, refer to Occupant Classification Sensor .

Occupant Classification Sensor (OCS) System Zero Seat Weight Test

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

⚠ **WARNING: The following precautions must be taken before carrying out the following procedure on the front passenger seat:**

- Park the vehicle on level ground.
- Make sure the occupant classification system (OCS) is stabilized at a temperature in the range of 5ï¿½C to 48ï¿½C (41ï¿½F to 118ï¿½F) and is not exposed to temperatures outside that range.
- Make sure the front passenger seat is empty and dry.
- Make sure the front passenger seat repair is complete and all attached components (head restraint, seat side shield) are correctly installed.
- Make sure nothing is placed in the map pockets (if equipped) of the front passenger seat.
- Make sure nothing is underneath the front passenger seat.
- Make sure no non-factory installed items (seat covers, DVD screens) are on or contacting the front passenger seat. If any non-factory items were installed to the seat, remove the item(s) and communicate to the customer that any alteration/modification to the front passenger seat may affect performance of the OCS. Refer to the Owner's Literature.
- Make sure the seat is correctly installed in the vehicle.

Failure to follow these instructions may result in incorrect operation of the OCS and increases the risk of serious personal injury or death in a crash.

NOTICE: **Make sure the Occupant Classification System (OCS) weight sensor bolt protection brackets are correctly installed to the seat track and that it does not contact the cushion side shield, wire harness or any other surrounding parts. Failure to follow this instruction may result in the incorrect operation of the OCS system.**

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

NOTE: The Zero Seat Weight Test is done with the passenger seat positioned in 2 different positions to make sure that there is nothing to affect the performance and operation of the Occupant Classification System (OCS) system.

NOTE: The Zero Seat Weight Test verifies the OCS system measures zero weight for an empty seat. It is necessary to carry out the Zero Seat Weight Test procedure after a successful System Reset or as directed to do so in the workshop manual procedures.

NOTE: If the Occupant Classification System Module (OCSM) has any on-demand DTCs present, the fault condition(s) must be repaired and the DTCs cleared before carrying out the Zero Seat Weight Test on the front passenger seat. Failure to follow this instruction will result in an unsuccessful Zero Seat Weight Test and the incorrect operation of the OCS system.

1. ⚠ **WARNING: The following precautions must be taken before carrying out the following procedure on the front passenger seat:**

    - ♦ Park the vehicle on level ground.
    - ♦ Make sure the occupant classification system (OCS) is stabilized at a temperature in the range of 5ï¿½C to 48ï¿½C (41ï¿½F to 118ï¿½F) and is not exposed to temperatures outside that range.
    - ♦ Make sure the front passenger seat is empty and dry.
    - ♦ Make sure the front passenger seat repair is complete and all attached components (head restraint, seat side shield) are correctly installed.
    - ♦ Make sure nothing is placed in the map pockets (if equipped) of the front passenger seat.
    - ♦ Make sure nothing is underneath the front passenger seat.
    - ♦ Make sure no non-factory installed items (seat covers, DVD screens) are on or contacting the front passenger seat. If any non-factory items were installed to the seat, remove the item(s) and communicate to the customer that any alteration/modification to the front passenger seat may affect performance of the OCS. Refer to the Owner's Literature.
    - ♦ Make sure the seat is correctly installed in the vehicle.

    Failure to follow these instructions may result in incorrect operation of the OCS and increases the risk of serious personal injury or death in a crash.Make sure the front passenger seat is empty and there is nothing underneath the seat. Remove any items from the seat that were not factory installed and make sure that the seat is correctly installed in the vehicle. For additional information, refer to Occupant Classification System (OCS) System in Air Bag and Safety Belt Pretensioner Supplemental Restraint System (SRS) in this section.
    Make sure the passenger safety belt buckle is unbuckled.
    Make sure the vehicles electrical system voltage is **below 18 volts and above 11.5 volts** before continuing.

2. Position the front passenger seat in the first position.
    - Position the seat backrest in the upright position.
    - Position the seat in the full forward position of seat track travel.
    - Position the seat height to its highest position (power seat only).

3. ⚠ **WARNING: Remove binding or resistance between all components of the front passenger seat as directed in the following procedure. Failure to follow this instruction may result in incorrect operation of the occupant classification system (OCS) and increases the risk of serious personal injury or death in a crash.**

    Remove hysteresis from the front passenger seat by firmly hitting the seat backrest 3 times.

4. Turn the ignition to the OFF position.

5. ⚠ **WARNING: Make sure nothing is placed on the front passenger seat during the following procedure. Do not press, touch or lay anything on the front passenger seat until the following procedure has been completed. Failure to follow these instructions may result in incorrect operation of the occupant classification system (OCS) and increase the risk of serious personal injury or death in a crash.**

    Turn the ignition ON.

6. **NOTE:** Make sure a minimum 8-second time period has passed after cycling the ignition ON before carrying out the Zero Seat Weight Test active command.

    Carry out the Zero Seat Weight Test using the scan tool.

- If the system passed, **proceed to Step 7.**
- If the system did not pass (DTC B00A0:67 Occupant Classification System: Signal Incorrect After Event retrieved on-demand), **proceed to Step 9.**

7. Position the front passenger seat to the second position.
   - Position the seat in the full rearward position of seat track travel.
   - Position the seat height to its lowest position (power seat only).

8. Carry out the Zero Seat Weight Test using the scan tool.
   - If the system passed, repair is complete, **Proceed to Step 10.**
   - If the system did not pass (DTC B00A0:67 Occupant Classification System: Signal Incorrect After Event retrieved on-demand), **proceed to Step 9.**

9. **NOTE:** Check the repair history of the vehicle for any previous repair that required the removal or service of the passenger seat. The repair history may lead to an area of concern.

   Inspect the following for causes of an unsuccessful Zero Seat Weight Test.

   - Make sure the front passenger seat is empty and there is nothing underneath the seat. Remove any items from the seat that were not factory installed and make sure that the seat is correctly installed in the vehicle.
   - Make sure the passenger safety belt buckle is unbuckled.
   - Make sure the seat wiring harnesses are routed and secured correctly and are not twisted, pinched, pulling down or pushing up on any seat component.
   - Make sure the OCS weight sensor bolt protection brackets are correctly installed to the seat track and are not contacting the cushion side shield, wire harness or any other surrounding parts.
   - Make sure the seat track and backrest frame are not bent, twisted or damaged.
   - Move the seat and backrest to all seating positions. Make sure the seat track does not bind or have any resistance when moved to all seating positions. Make sure that there are no obstructions contacting any seat component when the seat is moved to all seating positions.
   - Make sure the vehicles electrical system voltage is **below 18 volts and above 11.5 volts** .
   - Make sure the seat is assembled correctly and all fasteners are tightened to specifications.
     - ♦ If a concern was found, repair as necessary, **proceed to Step 1.**
     - ♦ If no concern was found, install new OCS weight sensor assemblies. Refer to Occupant Classification Sensor in this section.

10. Prove out the SRS as follows:
    Turn the ignition from ON to OFF. Wait 10 seconds, then turn the ignition back to ON and visually monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator will light continuously for approximately 6 seconds and then turn off. If an air bag SRS fault is present, the air bag warning indicator will:
    â fail to light.
    â remain lit continuously.
    â flash at a 5 Hz rate (RCM not configured).
    The air bag warning indicator might not light until approximately 30 seconds after the ignition has been turned from the OFF to the ON position. This is the time required for the RCM to complete the testing of the SRS . If the air bag warning indicator is inoperative and a SRS fault exists, a chime will sound in a pattern of 5 sets of 5 beeps. If this occurs, the air bag warning indicator and any SRS fault discovered must be diagnosed and repaired.
    Repair any unresolved DTCs.
    Clear all continuous DTCs from the RCM and OCSM using a scan tool.

Pyrotechnic Device Disposal

Disposal of Deployable Devices and Pyrotechnic Devices That are Undeployed/Inoperative

NOTE: All inoperative air bag modules and safety belt pretensioners have been placed on the Mandatory Return List. All discolored or damaged air bag modules must be treated the same as any inoperative live air bag being returned.

1. Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

2. Remove the undeployed/inoperative device. Refer to the appropriate procedure in this section or Section 501-20A .

3. **NOTE:** When installing a new air bag module or inflatable safety belt inflator, a prepaid return postcard is provided with the replacement air bag module. The serial number for the new part and the VIN must be recorded and sent to Ford Motor Company.

   If installing a new air bag module or inflatable safety belt inflator, record the necessary information and return the inoperative air bag module to Ford Motor Company.

Disposal of Deployable Devices and Pyrotechnic Devices That Are Deployed

1. Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

2. Remove the deployed device. Refer to the appropriate procedure in this section or Section 501-20A .

3. **NOTE:** If a dual stage driver or passenger air bag module has deployed due to a crash event, the air bag module requires manual deployment to make sure both stages and the active canister vent have deployed before scrapping the vehicle or disposing of the air bag module. To determine if a vehicle is equipped with dual stage driver or passenger air bag modules, refer to the Description and Operation portion of this section.

   Dispose of the deployed device in the same manner as any other part to be scrapped.

Disposal of Deployable Devices and Pyrotechnic Devices That Require Manual Deployment

1. Safety and environmental concerns require consideration and treatment of restraints system deployable and pyrotechnic devices when disposing of vehicles, deployable devices or pyrotechnic devices. Deploying deployable and pyrotechnic devices before scrapping a vehicle or the device eliminates the potential for hazardous exposures or reactions during processing. If special handling procedures are followed, deployable and pyrotechnic devices can be deployed safely and recycled with the vehicle, shipped separately to a recycling facility or disposed of safely.

   NOTE: To determine the deployable devices a vehicle is equipped with, refer to the Description and Operation portion of this section.

A vehicle equipped with any of the following deployable devices requires manual deployment of the devices before scrapping the vehicle or component. Refer to the appropriate portion of this procedure.

- Driver air bag module
- Inflatable safety belt inflators
- Knee air bag module
- Passenger air bag module
- Seat side air bag modules
- Safety Canopy® modules
- Side air curtain modules

2. **NOTE:** To determine the pyrotechnic devices a vehicle is equipped with, refer to the Description and Operation portion of this section.

   A vehicle equipped with any of the following pyrotechnic devices requires manual deployment of the devices before scrapping the vehicle or component. Refer to the appropriate portion of this procedure.

   - Safety belt buckle pretensioners
   - Safety belt retractor pretensioners
   - Safety belt anchor pretensioners
   - Adaptive load-limiting retractors
   - Deployable steering column

3. **NOTE:** To determine if a vehicle is equipped with dual stage driver or passenger air bag modules, refer to the Description and Operation portion of this section.

   If a dual stage driver or passenger air bag module has deployed due to a crash event, the air bag module requires manual deployment to make sure both stages and the active canister vent have deployed before scrapping the vehicle or disposing of the air bag module. Refer to Driver Air Bag Module, Passenger Air Bag Module, Knee Air Bag Module and Seat Side Air Bag Module - Remote Deployment in this procedure.

Driver Air Bag Module, Passenger Air Bag Module, Knee Air Bag Module and Seat Side Air Bag Module - Remote Deployment

⚠ WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

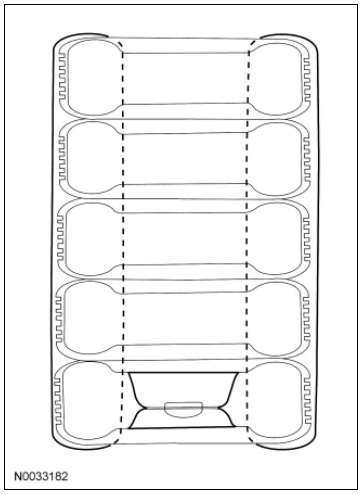
⚠ WARNING: Always carry or place a live air bag module with the air bag and deployment door/trim cover/tear seam pointed away from the body. Do not set a live air bag module down with the deployment door/trim cover/tear seam face down. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.

⚠ WARNING: Always carry or place a live Safety Canopy®, or side air curtain module, with the module and tear seam pointed away from your body. Failure to follow this instruction may result in serious personal injury or in the event of an accidental deployment.

⚠ WARNING: Deploy all supplemental restraint system (SRS) devices (air bags, pretensioners, load limiters, etc.) outdoors with all personnel at least 9 meters (30 feet) away to make sure of personal safety. Due to the loud report which occurs when an SRS device is deployed, hearing protection is required. Failure to follow these instructions may result in serious personal injury.

NOTE: For air bag modules with multiple loops, deploy all of the loops on the air bag module.

NOTE: Some driver and passenger front air bags have 2 deployment stages and an active canister vent. After a collision it is possible that Stage 1 has deployed and Stage 2 and the active canister vent have not.



If a front air bag module has deployed, it is **mandatory** that the front air bag module be remotely deployed using the appropriate air bag disposal procedure.

NOTE: A typical air bag disposal is shown that is similar for all vehicles.

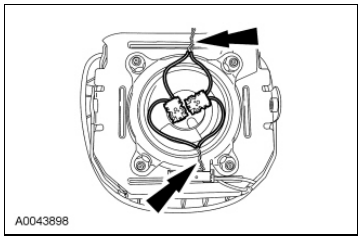
All driver, passenger, knee and seat side air bag modules

1. Make a container to house the air bag module for deployment.
   - **NOTE:** The tires must be of sufficient size to accommodate the air bag module.

     Obtain a tire and wheel assembly and an additional 4 tires (without wheels) of the same size.
   - With the tire and wheel assembly on the bottom, stack the tires.
   - Securely tie all of the tires together.

2. Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

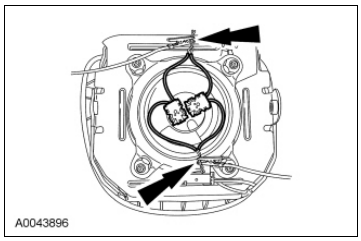
3. Remove the air bag module. Refer to the appropriate procedure in this section.



4. **NOTE:** If the air bag module does not have a hard-wired pigtail, cut the wires and connector(s) from the vehicle wire harness and reconnect to the air bag module.

   Cut each of the air bag module wires near the electrical connector that connects to the vehicle wire harness.

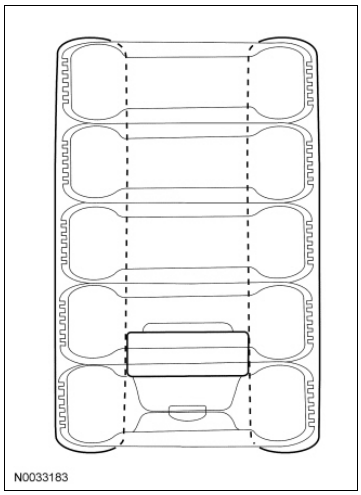
5. Remove any sheathing (if present) and strip the insulation from the ends of the cut wires.



6. **NOTE:** Typical driver air bag module with 2 loops shown, other air bag modules with multiple loops or multiple features (canister vent, active tether) similar.

   For air bag modules with multiple loops, twist together a wire from each loop then repeat for the remaining wires from each loop.

7. Make a jumper harness to deploy the air bag module.
    - Obtain 2 wires (20 gauge minimum) at least 9.14 m (30 ft) long and strip both ends of each wire.
    - At one end of the jumper harness, connect the wires together.

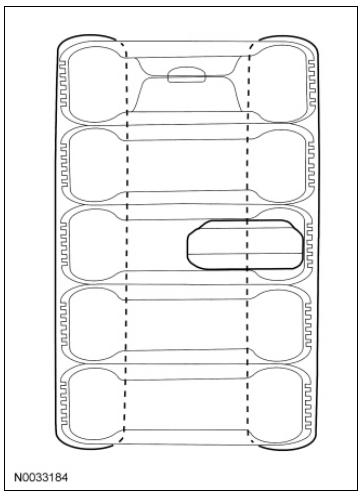


8. Using the end of the jumper harness where the wires are not connected together, attach each wire of the jumper harness to each wire of the air bag module or to the twisted-together wires if multiple loops. Use tape or other insulating material to make sure that the leads do not make contact with each other.

Driver air bag modules

9. **NOTE:** Make sure the air bag connections are maintained.

    For driver air bag modules, with the stack of tires upright and the wheel on the bottom, carefully place the driver air bag module, with the trim cover facing up, on the wheel.



Passenger, knee and seat side air bag modules

10. **NOTE:** Make sure the air bag connections are maintained.

    Tip the stack of tires on its side and place the air bag module inside the center tire, making sure that there are 2 tires beneath the tire containing the air bag module and 2 tires (including the tire and wheel assembly) above the tire containing the air bag module.

11. Place the tire stack upright, with the wheel on top.

All driver, passenger, knee and seat side air bag modules

12. Remain at least 9.14 m (30 ft) away from the air bag module.

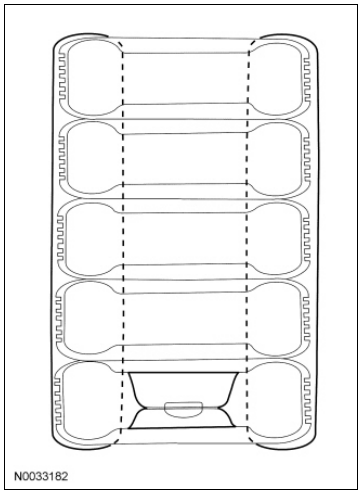
13. From the end of the jumper harness that is not connected to the air bag module, disconnect the 2 wires of the jumper harness from each other.

14. Deploy the air bag module by touching the ends of the 2 wires of the jumper harness to the terminals of a 12-volt battery.

15. To allow for cooling, wait at least 10 minutes before approaching the deployed air bag module.

16. Dispose of the deployed air bag module in the same manner as any other part to be scrapped.

Safety Belt Anchor Pretensioners, Safety Belt Buckle Pretensioners, Safety Belt Retractor Pretensioners, Adaptive Load Limiting Safety Belt Retractors and Safety Belt Inflators - Remote Deployment



⚠ WARNING: Never disassemble or tamper with seat belt deployable components, including pretensioners, load limiters and inflators. Ner back probe deployable device electrical connectors. Tampering or back probing may cause an accidental deployment and result in personal injury or death.

⚠ WARNING: Deploy all supplemental restraint system (SRS) devices (air bags, pretensioners, load limiters, etc.) outdoors with all personnel at least 9 meters (30 feet) away to make sure of personal safety. Due to the loud report which occurs when an SRS device is deployed, hearing protection is required. Failure to follow these instructions may result in serious personal injury.

NOTE: A typical safety belt buckle, retractor and inflator disposal is shown that is similar for all vehicles.

1. Make a container to house the safety belt buckle or retractor for deployment.
   - **NOTE:** The tires must be of sufficient size to accommodate the safety belt buckle, retractor or inflator.

     Obtain a tire and wheel assembly and 4 additional tires (without wheels) of the same size.
   - With the tire and wheel assembly on the bottom, stack the tires.
   - Securely tie all of the tires together.

2. Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

3. Remove the safety belt buckle, retractor or inflator. Refer to the appropriate procedure in Section 501-20A .
    - When deploying a safety belt buckle pretensioner, install a nut and bolt of sufficient length and of the same diameter as was used to retain it to the seat.

4. **NOTE:** If the safety belt anchor, buckle, retractor or inflator does not have a hard-wired pigtail, it will be necessary to cut the wires and connector(s) from the vehicle wire harness and reconnect to the safety belt buckle, retractor or inflator.

   Cut each of the safety belt anchor, buckle, retractor or inflator wires near the electrical connector that connects to the vehicle wire harness.

5. Remove any sheathing (if present) and strip the insulation from the ends of the cut wires.

6. Make a jumper harness to deploy the safety belt buckle, retractor or inflator.
    - Obtain 2 wires (20 gauge minimum) at least 9.14 m (30 ft) long and strip both ends of each wire.
    - At one end of the jumper harness, connect the wires together.

7. **NOTE:** Typical safety belt retractor pretensioner shown, other safety belt anchor pretensioners, buckle pretensioners, load-limiting retractors and safety belt inflators similar.

   Using the end of the jumper harness that the wires are not connected together, attach each wire of the jumper harness to each wire of the safety belt anchor, buckle, retractor or inflator. Use tape or other insulating material to make sure that the leads do not make contact with each other.

8. **NOTE:** Make sure the safety belt anchor, buckle, retractor or inflator connections are maintained.

Tip the stack of tires on its side and place the safety belt anchor, buckle, retractor or inflator inside the center tire, making sure that there are 2 tires beneath the tire containing the safety belt anchor, buckle, retractor or inflator and 2 tires (including the tire and wheel assembly) above the tire containing the safety belt anchor, buckle, retractor or inflator.

9. Place the tire stack upright, with the wheel on top.

10. Remain at least 9.14 m (30 ft) away from the safety belt anchor, buckle, retractor or inflator.

11. From the end of the jumper harness that is not connected to the safety belt anchor, buckle, retractor or inflator, disconnect the 2 wires of the jumper harness from each other.

12. Deploy the safety belt anchor pretensioner, buckle pretensioner, retractor pretensioner or inflator by touching the ends of the 2 wires of the jumper harness to the terminals of a 12-volt battery.

13. To allow for cooling, wait at least 10 minutes before approaching the deployed safety belt anchor pretensioner, buckle pretensioner, retractor pretensioner or inflator.

14. Dispose of the deployed safety belt anchor, buckle, retractor or inflator in the same manner as any other part to be scrapped.

Safety Belt Anchor Pretensioners, Safety Belt Buckle Pretensioners, Safety Belt Retractor Pretensioners and Load Limiting Safety Belt Retractors - In-Vehicle Deployment

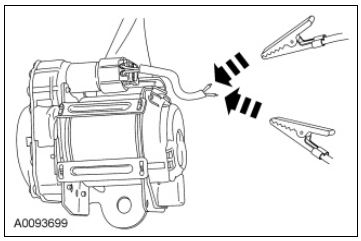
⚠ WARNING: Never disassemble or tamper with seat belt deployable components, including pretensioners, load limiters and inflators. Never back probe deployable device electrical connectors. Tampering or back probing may cause an accidental deployment and result in personal injury or death.

⚠ WARNING: Deploy all supplemental restraint system (SRS) devices (air bags, pretensioners, load limiters, etc.) outdoors with all personnel at least 9 meters (30 feet) ay to make sure of personal safety. Due to the loud report which occurs when an SRS device is deployed, hearing protection is required. Failure to follow these instructions may result in serious personal injury.

NOTE: A typical safety belt buckle and retractor disposal is shown that is similar for all vehicles.

1. Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

2. Access the safety belt anchor, buckle or retractor electrical connectors. For additional information, refer to Section 501-20A .



3. Cut each of the safety belt anchor, buckle or retractor wires, leaving at least 101.6 mm (4 in) to work with.

4. Remove any sheathing (if present) and strip the insulation from the ends of the cut wires.

5. Make a jumper harness to deploy the safety belt anchor, buckle or retractor.
   - Obtain 2 wires (20 gauge minimum) at least 9.14 m (30 ft) long and strip both ends of each wire.
   - At one end of the jumper harness, connect the wires together.

6. **NOTE:** Typical safety belt retractor pretensioner shown, other safety belt anchor pretensioners, buckle pretensioners and load-limiting retractors are similar.

   Using the end of the jumper harness that the wires are not connected together, attach each wire of the jumper harness to each wire of the safety belt anchor, buckle or retractor. Use tape or other insulating material to make sure that the leads do not make contact with each other.

7. Remain at least 9.14 m (30 ft) away from the safety belt anchor, buckle or retractor.

8. From the end of the jumper harness that is not connected to the safety belt anchor, buckle or retractor, disconnect the 2 wires of the jumper harness from each other.

9. Deploy the safety belt anchor pretensioner, buckle pretensioner or retractor pretensioner by touching the ends of the 2 wires of the jumper harness to the terminals of a 12-volt battery.

10. To allow for cooling, wait at least 10 minutes before approaching the deployed safety belt anchor pretensioner, buckle pretensioner or retractor pretensioner.

11. Dispose of the deployed safety belt anchor, buckle or retractor in the same manner as any other part to be scrapped.

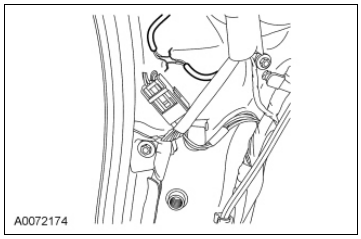
Safety Canopy® Modules and Side Air Curtain Modules - In-Vehicle Deployment

⚠ WARNING: Deploy all supplemental restraint system (SRS) devices (air bags, pretensioners, load limiters, etc.) outdoors with all personnel at least 9 meters (30 feet) away to make sure of personal safety. Due to the loud report which occurs when an SRS device is deployed, hearing protection is required. Failure to follow these instructions may result in serious personal injury.

NOTE: The Safety Canopy® module deployment for a scrapped vehicle will occur in its installed position in the vehicle.

NOTE: A typical Safety Canopy® module disposal is shown that is similar for all vehicles.

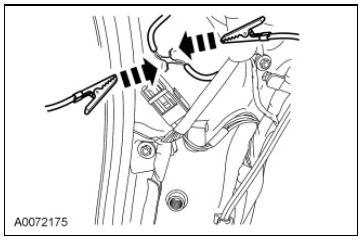
1. Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.



2. Access the Safety Canopy®/side air curtain module electrical connectors. For additional information, refer to the appropriate procedure in this section.

3. Cut each of the Safety Canopy®/side air curtain module wires leaving at least 101.6 mm (4 in) to work with.

4. Remove any sheathing (if present) and strip the insulation from the ends of the cut wires.



5. **NOTE:** Typical Safety Canopy®/side air curtain module with 2 loops shown, other Safety Canopy®/side air curtain modules wioops are similar.

   For Safety Canopy®/side air curtain modules with multiple loops, twist together a wire from each loop then repeat for the remaining wires from each loop.

6. Make a jumper harness to deploy the Safety Canopy®/side air curtain module.
   - Obtain 2 wires (20 gauge minimum) at least 9.14 m (30 ft) long and strip both ends of each wire.
   - At one end of the jumper harness, connect the wires together.

7. Using the end of the jumper harness where the wires are not connected together, attach each wire of the jumper harness to each wire of the Safety Canopy®/side air curtain module or to the twisted-together wires if multiple loops. Use tape or other insulating material to make sure that the leads do not make contact with each other.

8. From the end of the jumper harness that is not connected to the Safety Canopy®/side air curtain module, disconnect the 2 wires of the jumper harness from each other.

9. Deploy the Safety Canopy®/side air curtain module by touching the ends of the 2 wires of the jumper harness to the terminals of a 12-volt battery.

10. To allow for cooling, wait at least 10 minutes before apping the deployed Safety Canopy®/side air curtain module.

11. Dispose of the deployed Safety Canopy®/side air curtain module in the same manner as any other part to be scrapped.

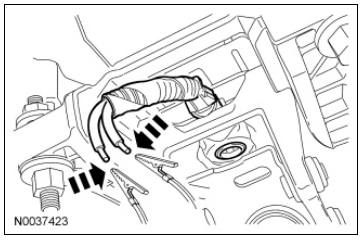
Deployable Steering Column - In-Vehicle Deployment

⚠ WARNING: Deploy all supplemental restraint system (SRS) devices (air bags, pretensioners, load limiters, etc.) outdoors with all personnel at least 9 meters (30 feet) away to make sure of personal safety. Due to the loud report which occurs when an SRS device is deployed, hearing protection is required. Failure to follow these instructions may result in serious personal injury.

1. Depower the SRS . Refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

2. **NOTE:** It may be necessary to lower or remove the deployable steering column from the instrument panel to access the deployable steering column electrical connector.

   Access the deployable steering column electrical connector.



3. **NOTE:** If the deployable steering column does not ha hard-wired pigtail, it will be necessary to cut the wires and connector(s) from the vehicle wire harness and reconnect to the deployable steering column.

   Cut each of the deployable steering column wires, leaving at least 101.6 mm (4 in) to work with.

4. Remove any sheathing (if present) and strip the insulation from the ends of the cut wires.

5. Make a jumper harness to deploy the deployable steering column.
   - Obtain 2 wires (20 gauge minimum) at least 9.14 m (30 ft) long and strip both ends of each wire.
   - At one end of the jumper harness, connect the wires together.

6. Using the end of the jumper harness where the wires are not connected together, attach each wire of the jumper harness to each wire of the deployable steering column. Use tape or other insulating material to make sure that the leads do not make contact with each other.

7. Remain at least 9.14 m (30 ft) away from the deployable steering column.

8. From the end of the jumper harness that is not connected to the deployable steering column, disconnect the 2 wires of the jumper harness from each other.

9. Deploy the deployable steering column by touching the ends of the 2 wires of the jumper harness to the terminals of a 12-volt battery.

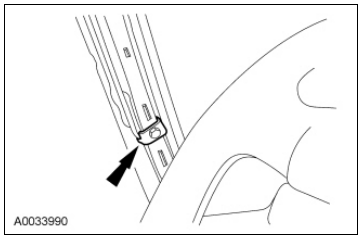
10. To allow for cooling, wait at least 10 minutes before approaching the deployed steering column.

11. Dispose of the deployed steering column in the same manner as any other part to be scrapped.

Rivet Nut Replacement

⚠ WARNING: Always wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.

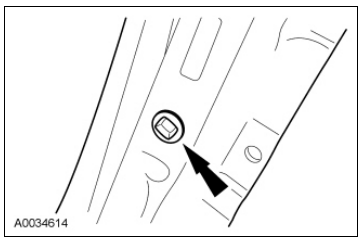
NOTICE: **If the Safety Canopy®/side air curtain module has deployed, the tether cord rivet nut must be inspected and replaced if damagd before installing a new Safety Canopy®.**



NOTE: A typical rivet nut replacement is shown that is similar for all vehicles.

NOTE: LH shown, RH similar.

1. Depower the Supplemental Restraint System (SRS). For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.



2. Remove the necessary trim panel(s). For additional information, refer to Section 501-05 .

3. Remove the bolt and bracket for the tether cord (if present).

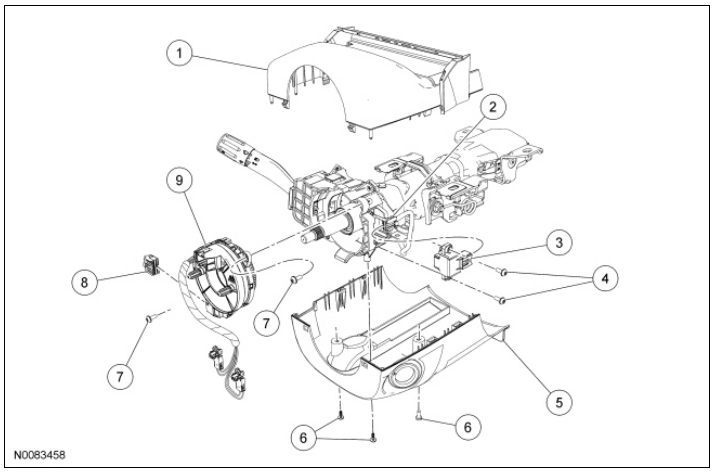
4. If needed, position and secure the Safety Canopy®/side air curtain tether cord and bracket assembly aside.

5. Using the appropriate service tool, sand the rivet nut shoulder until the shoulder surface is removed.

6. Punch the remaining portion of the rivet nut through the rivet nut hole.

7. **NOTE:** Use only Ford Motor Company factory-authorized replacement parts for rivet nut repair procedure.

   Obtain the correct square shank rivet nut for the vehicle application from the Ford Catalog AdvantageTM or equivalent and insert it into the rivet nut hole.



8. Using a suitable rivet nut installing tool, install the rivet nut. For additional information, refer to the tool manufacturer's operating instructions.

9. If present, position the tether cord. Install the bolt. See the appropriate component removal and installation procedure or Specifications for the correct torque specification.

10. **NOTE:** The tether cord must be positioned correctly in place before installing the A-pillar trim panel.

    Install the necessary trim panel(s). For additional information, refer to Section 501-05 .

Clockspring

Item	Part Number	Description
1	3530	Upper steering column shroud
2	-	Steering wheel rotation sensor electrical connector (part of 14401)
3	3F818	Steering wheel rotation sensor
4	W506942	Steering wheel rotation sensor screws (2 required)
5	3K512	Lower steering column shroud
6	-	Lower steering column shroud screws (3 required) (part of 3K512)
7	W506942	Clockspring screws (2 required)
8	-	Clockspring electrical connector (part of 14401)
9	14A664	Clockspring

Removal

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Remove the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.

2. *NOTICE:* **Make sure the road wheels are in the straight-ahead position. Damage to the clockspring may occur.**

   Remove the steering wheel. For additional information, refer to steering wheel Removal and Installation in Section 211-04 .

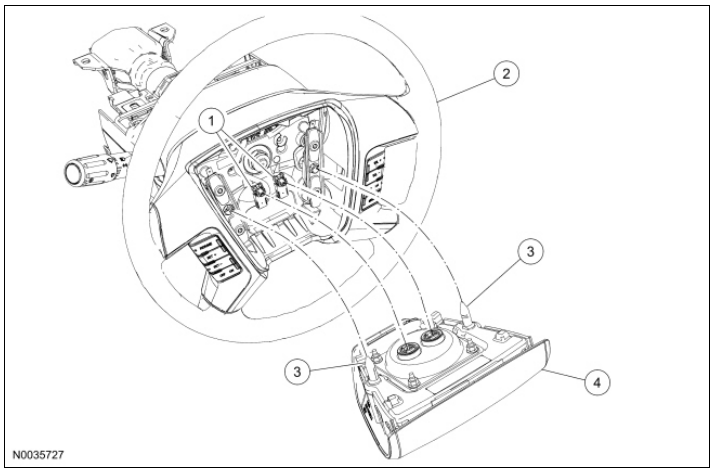
3. Release the upper steering column shroud by pressing inward on the sides, lift upwards and remove.
4. Remove the 3 screws and lower steering column shroud.
5. Remove the steering wheel rotation sensor.
   - Disconnect the electrical connector.

- Remove the 2 screws and sensor.

6. Remove the clockspring.
   - Disconnect the electrical connector.
   - Remove the 2 screws.
   - Remove the clockspring.

Installation

⚠ **WARNING: If the clockspring is not correctly centralized, it may fail prematurely. If in doubt, repeat the centralizing procedure. Failure to follow these instructions may increase the risk of serious personal injury or death in a crash.**



NOTICE: **Do not over-rotate the clockspring inner rotor. The internal ribbon wire is connected to the clockspring rotor. The internal ribbon wire acts as a stop and can be broken from its internal connection. Failure to follow this instruction may result in component damage and/or system failure.**

NOTICE: **If installing a new clockspring, do not remove the clockspring anti-rotation key until the steering wheel is installed. If the anti-rotation key has been removed before installing the steering wheel, the clockspring must be centered. Failure to follow this instruction may result in component damage and/or system failure.**

1. Install the clockspring and 2 screws.
2. Connect the clockspring electrical connector.
3. Install the steering wheel rotation sensor and 2 screws.
4. If a new clockspring was installed and the anti-rotation key has not been removed, **proceed to Step 8** , otherwise **proceed to Step 6** .
5. If a new clockspring was installed and the anti-rotation key has been removed before the steering wheel is installed or the same clockspring is being installed, rotate the clockspring inner rotor **counterclockwise** and carefully feel for the ribbon wire to run out of length with slight resistance. Stop rotating the clockspring inner rotor at this point.
6. Starting with the clockspring inner rotor in the 12 o'clock position, rotate the inner rotor **clockwise** through approximately 2.25 turns to center the clockspring.
   - The clockspring inner rotor must be in the 12 o'clock position to be correctly centered.
7. *NOTICE:* **To prevent damage to the clockspring, make sure the road wheels are in the straight-ahead position.**

   Install the steering wheel. For additional information, refer to Section 211-04 .
8. If a new clockspring was installed, remove the anti-rotation key.
9. Install the driver air bag module. For additional information, refer to Driver Air Bag Module in this section.
10. Install the upper and lower steering column shrouds.
    - Clip the lower steering column shroud to the upper steering column shroud.
    - Install the 3 screws.
11. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in this section.

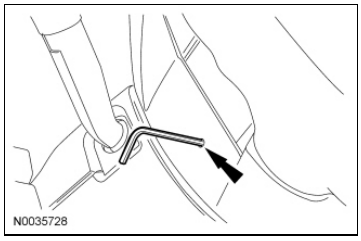
Driver Air Bag Module

Item	Part Number	Description
1	-	Driver air bag module electrical connectors (part of 14A664)
2	3600	Steering wheel
3	-	Driver air bag module locking pins (part of 43B13)
4	43B13	Driver air bag module

Removal

⚠ WARNING: Always carry or place a live air bag module with the air bag and deployment door/trim cover/tear seam pointed away from the body. Do not set a live air bag module down with the deployment door/trim cover/tear seam face down. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.

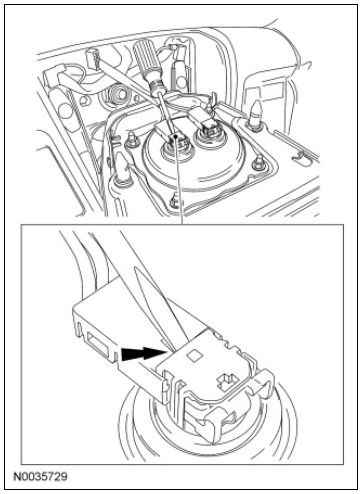
⚠ WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.



NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition switch is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.



2. **NOTE:** Repeat this step for both locking pins.

   Using a 3-mm Allen wrench or a suitable tool through the access hole on the backside of the steering wheel, position the tool against the spring clip and push in, disengaging the clip from the locking pin. With the spring clip disengaged from the locking pin, gently pull back on that side of the driver air bag module to release it from the steering wheel.

3. ***NOTICE:*** **Do not pull the driver air bag module electrical connectors out by the locking buttons. Damage to the locking buttons can occur.**

   Using a small screwdriver as shown, lift up and release the locking buttons on the driver air bag module electrical connectors. With the locking buttons released, remove the electrical connectors and the driver air bag module.

Installation

1. ***NOTICE:*** **The driver air bag module electrical connector locking buttons must be in the released position when connected. Do not install the driver air bag module electrical connectors by the locking buttons. Failure to follow these instructions may cause connector damage.**

   With the locking buttons released, install the driver air bag module electrical connectors fully into the driver air bag module and seat the locking buttons.

2. Align the driver air bag module locking pins to the steering wheel and, while pushing inward, seat the 2 driver air bag module locking pins to the steering wheel wire clips.

3. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Front Impact Severity Sensor

Item	Part Number	Description
1	-	Front impact severity sensor electrical connectors (part of 14290)
2	14B006	RH front impact severity sensor
3	W505256	Front impact severity sensor bolts
4	14B006	LH front impact severity sensor

Removal and Installation

⚠ WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may result in serious personal injury or death in a crash.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

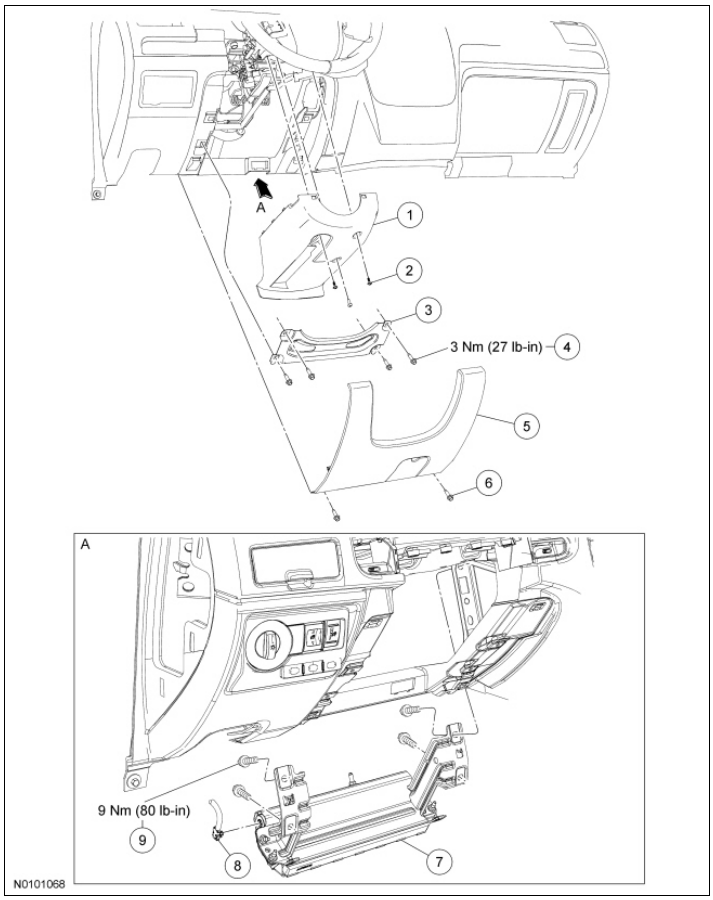
NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Depower the SRS . For additional information, refer to Supplemental Restraint Sysm (SRS) Depowering and Repowering in the General Procedures portion of this section.

2. Remove the front bumper cover. For additional information, refer to Section 501-19 .

3. Disconnect the front impact severity sensor electrical connector.

4. Remove the bolt and front impact severity sensor.
    - To install, tighten to 12 Nm (106 lb-in).



5. ⚠ **WARNING: Always tighten the fasteners of the restraints control module (RCM) and impact sensor (if equipped) to the specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.**

   NOTE: Make sure the radiator support and front impact severity sensor and bracket assembly mating surfaces are clean and free of foreign material.

   To install, reverse the removal procedure.

6. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Knee Air Bag Module

Item	Part Number	Description
1	3K512	Lower steering column shroud
2	W707658	Lower steering column shroud screw (3 required)
3	017A28	Steering column opening cover reinforcement
4	W505422	Steering column opening cover reinforcement bolt (4 required)
5	04459	Steering column opening trim panel
6	-	Steering column opening trim panel screw (2 required)
7	045J77	Knee air bag module
8	-	Electrical connector (part of 14401)
9	W503924	Bolt (4 required)

Removal

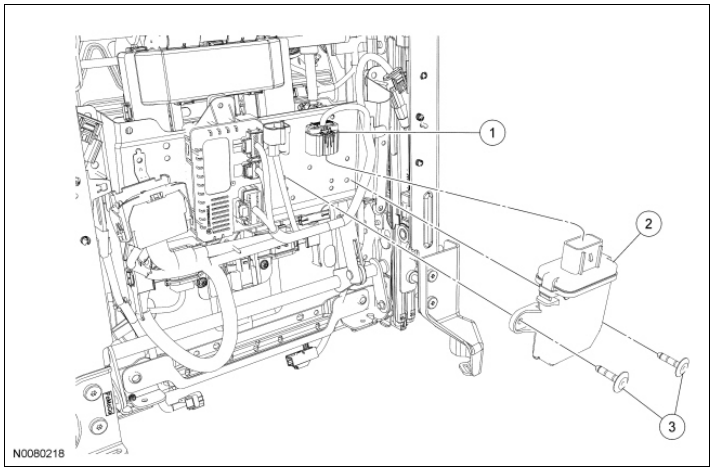
⚠ WARNING: Always carry or place a live air bag module with the air bag and deployment door/trim cover/tear seam pointed away from the body. Do not set a live air bag module down with the deployment door/trim cover/tear seam face down. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.

⚠ WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTE: Always make sure the correct Supplemental Restraint System (SRS) component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Master Parts Catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The SRS must be fully operational and free of faults before releasing the vehicle to the customer.



1. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.
2. Remove the 2 screws and steering column opening trim panel.
3. Remove the three screws and lower steering column shroud.
4. Remove the 4 bolts and steering column opening cover reinforcement.
5. Disconnect the knee air bag module electrical connector.
6. Remove the wiring harness from the knee air bag module bracket.
7. From the back side of the instrument panel bracket, remove the 4 knee air bag module bolts.
8. Remove the knee air bag module.
9. Remove and discard the 4 J-nuts.

Installation

1. Install 4 new J-nuts.
2. Install the knee air bag module and 4 bolts.
    - Tighten to 9 Nm (80 lb-in).
3. Connect the knee air bag module electrical connector.
4. Attach the wiring harness to the knee air bag module bracket.
5. Install the lower steering column shroud.
6. Install the steering column opening cover reinforcement and 4 bolts.
    - Tighten to 3 Nm (27 lb-in).
7. Install the steering column opening trim panel and 2 screws.
8. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

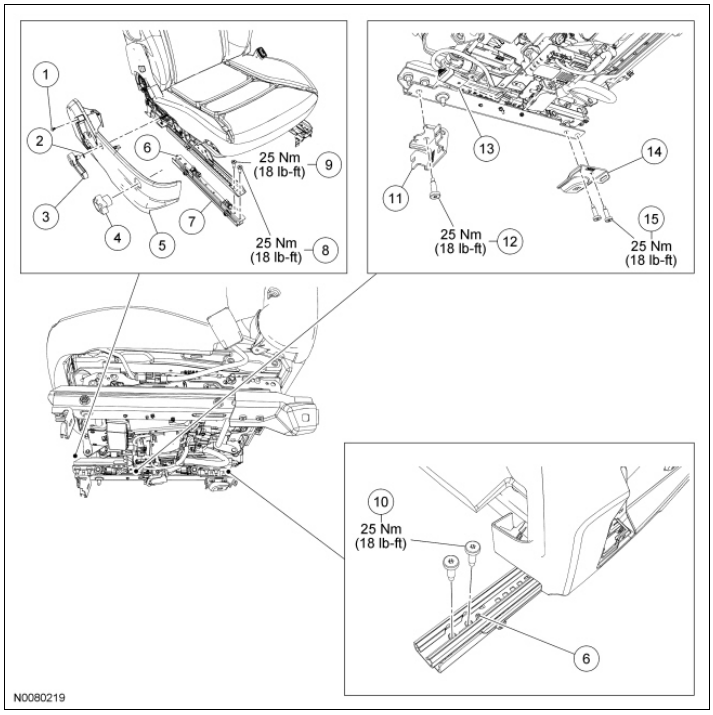
Occupant Classification System Module (OCSM)

NOTE: Power seat shown, manual seat similar.

Item	Part Number	Description
1	-	Occupant Classification System Module (OCSM) electrical connector (part of 14A698)
2	14B422	OCSM
3	-	OCSM rivets (2 required)

Removal and Installation

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition switch is ON.



NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Remove the passenger seat. For additional information, refer to Section 501-10 .
2. Disconnect the electrical connector.
3. *NOTICE:* **Make sure to remove all metal chips from the Occupant Classification System Module (OCSM) and the surrounding areas after drilling out the rivets. Failure to follow this instruction may result in component damage and/or system failure.**

   Drill out the 2 rivets and remove the Occupant Classification System Module (OCSM).
4. To install, reverse the removal procedure.
5. If installing a new OCSM , carry out the system reset procedure. For additional information, refer to Occupant Classification Sensor (OCS) System Reset in the General Procedures portion of this section.

Occupant Classification Sensor

NOTE: Outboard shown, inboard similar.

Item	Part Number	Description
1	-	Cushion side shield scrivet (if equipped)
2	-	Manual recliner handle spring clip (part of 61198) (if equipped)
3	61198	Manual recliner handle (if equipped)
4	62622	Manual lumbar control knob (if equipped)
5	62186	Cushion side shield
6	-	Occupant Classification System (OCS) weight sensor assembly locating pin (part of 61708)
7	61708	OCS weight sensor assembly
8	-	OCS weight sensor assembly front mounting position front bolt (part of 61708)
9	-	OCS weight sensor assembly front mounting position rear bolt (part of 61708)
10	-	OCS weight sensor assembly rear bolt (part of 61708) (2 required)
11	61913	Forward seat riser
12	-	Forward seat riser bolt
13	-	OCS weight sensor assembly electrical connector (part of 14A698)

14	61913	Rearward seat riser
15	-	Rearward seat riser bolt (2 required)

Removal

⚠ **WARNING: Use care when handling the front passenger seat and track assembly. Dropping the assembly, placing excessive weight on or sitting on a front passenger seat that is not secured in the vehicle may result in damaged seat components. Failure to follow these instructions may result in incorrect operation of the occupant classification system (OCS) and increases the risk of serious personal injury or death in a crash.**

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition switch is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

All Occupant Classification System (OCS) weight sensor assemblies

1. Remove the passenger seat. For additional information, refer to Section 501-10 .

Outboard OCS weight sensor assembly

2. If equipped, remove the manual lumbar control knob.

3. If equipped, remove the spring clip and the manual recliner handle.

4. *NOTICE:* **Do not reinstall the cushion side shield or side shield retainers after removal. These are one-time-use items that become damaged during removal and may not remain attached if reinstalled. Install a new side shield (includes new retainers attached).**

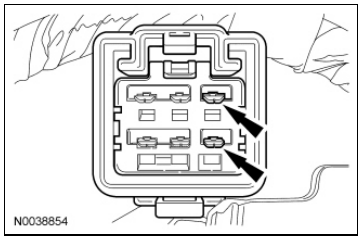
   Remove and discard the cushion side shield.

   - If equipped, remove the scrivet.
   - Pull out on the side and rear of the cushion side shield and release the retainers.
     - Separate the wire harness from the cushion side shield.
   - Remove the side shield and any remaining side shield retainers from the seat and discard.

Seat receiving a new OCS weight sensor assembly

5. Remove the bolt and the forward seat riser from the affected side OCS weight sensor assembly.

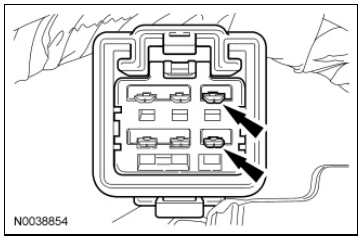
6. Remove the 2 bolts and the rearward seat riser from the affected side OCS weight sensor assembly.



All OCS weight sensor assemblies

7. **NOTE:** Note the position and the routing of the OCS system electrical wiring and connector for installation.

   On the affected side, disconnect the OCS weight sensor assembly electrical connector.



8. If equipped, disconnect the power seat track motor electrical connector.

9. Move the seat to the forward most position.
   - If equipped with a power seat track, apply power and ground to the pins shown.

10. Remove the 2 rear bolts from the affected OCS weight sensor assembly.

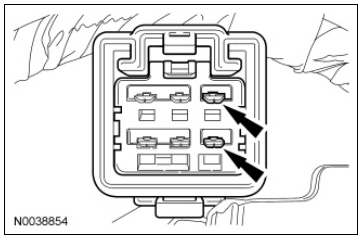
11. Move the seat to the rearward most position.
    - If equipped with a power seat track, apply power and ground to the pins shown.

12. Remove the 2 front bolts and the OCS weight sensor assembly.

Installation

All Occupant Classification System (OCS) weight sensor assemblies

NOTE: If installing a new seat track, position it so the seat will be in the rearward most position before installing the OCS weight sensor assembly.

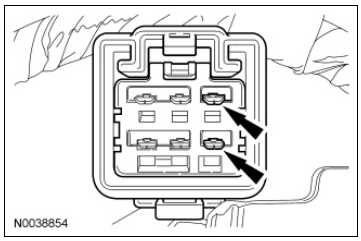


1. **NOTE:** To make sure of correct installation, the OCS weight sensor assembly bolts must be installed in the sequence shown.

   While holding the OCS weight sensor assembly firmly in position, install the OCS weight sensor assembly front mounting position rear bolt.

   - Tighten to 25 Nm (18 lb-ft).

2. While still holding the OCS weight sensor assembly firmly in position, install the OCS weight sensor assembly front mounting position front bolt.
   - Tighten to 25 Nm (18 lb-ft).



3. Move the seat to the forward most position.
   - If equipped with a power seat track, apply power and ground to the pins shown.

4. Install the 2 rear OCS weight sensor assembly bolts.
   - Tighten to 25 Nm (18 lb-ft).

5. Connect the OCS weight sensor assembly electrical connector.

6. Center the seat track to the seat cushion pan.
   - If equipped with a power seat track, apply power and ground to the pins shown.

7. If equipped, connect the power seat track motor electrical connector.

Seat receiving a new OCS weight sensor assembly

8. Install the rearward seat riser and the 2 bolts.
   - Tighten to 25 Nm (18 lb-ft).

9. Install the forward seat riser and bolt.
   - Tighten to 25 Nm (18 lb-ft).

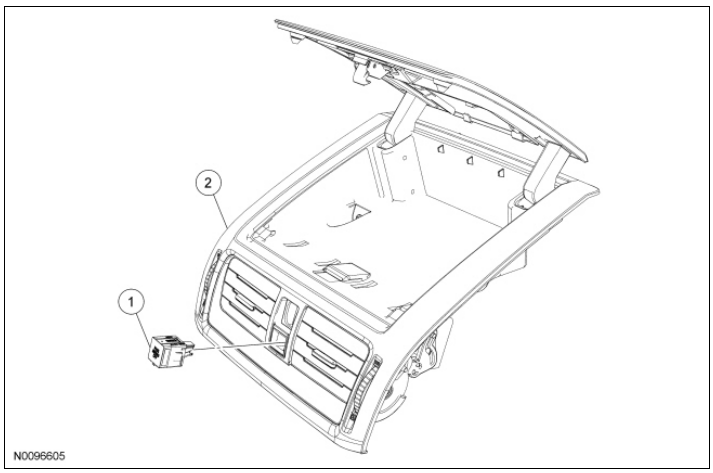
Outboard OCS weight sensor assembly

10. ***NOTICE:*** **Do not reinstall the cushion side shield or side shield retainers after removal. These are one-time-use items that become damaged during removal and may not remain attached if reinstalled. Install a new side shield (includes new retainers attached).**

    Install a new cushion side shield.

11. If equipped, install the spring clip and the manual recliner handle.

12. If equipped, install the manual lumbar control knob.



All OCS weight sensor assemblies

13. Install the passenger seat. **Do not prove out the SRS at this time.** For additional information, refer to Section 501-10 .

14. Carry out the Occupant Classification System (OCS) System Reset procedure and prove out the SRS . For additional information, refer to Occupant Classification Sensor (OCS) System Reset in this section.

Passenger Air Bag Deactivation (PAD) Indicator

Fusion

Item	Part Number	Description
1	10A936	Passenger Air Bag Deactivation (PAD) indicator
2	13594	Upper storage compartment

NOTE: The MKZ Passenger Air Bag Deactivation (PAD) indicator is part of the Front Controls Interface Module (FCIM) and is not serviceable separately. For additional information, refer to Section 412-01 .

NOTE: A DTC will set in the Restraints Control Module (RCM) if the PAD electrical connector is disconnected with the ignition ON. The RCM memory must be cleared before releasing the vehicle.

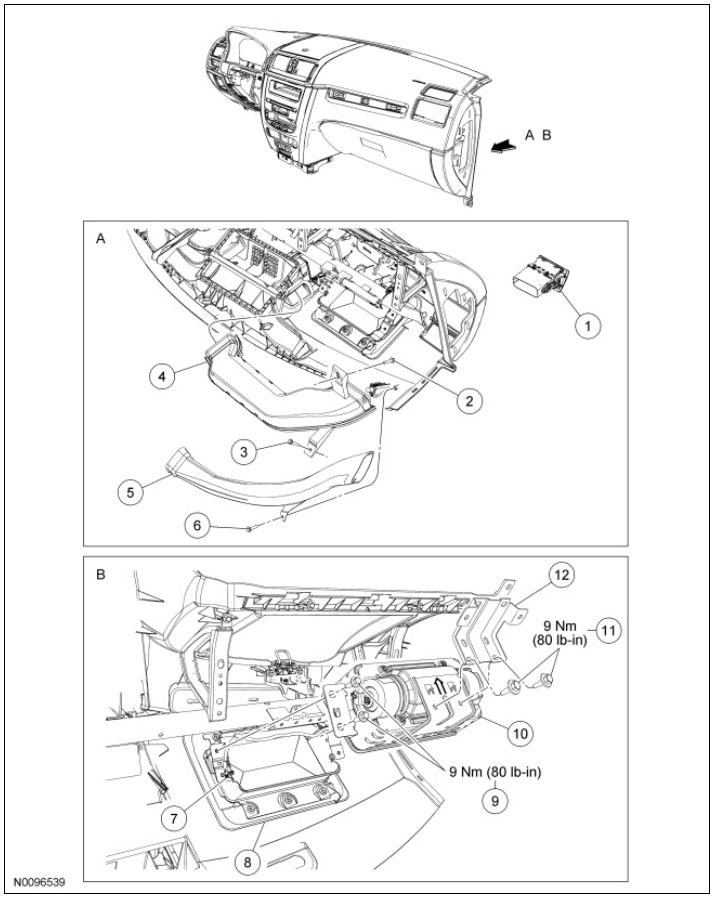
1. ⚠ **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.**

   Turn the ignition OFF and wait one minute.

2. Remove the upper storage compartment. For additional information, refer to Section 501-12 .

3. Release the tab and remove the PAD indicator.

4. To install, reverse the removal procedure.



5. Prove out the Supplemental Restraint System (SRS) as follows:
   Turn the ignition from ON to OFF. Wait 10 seconds, then turn the ignition ON and monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator will light continuously for approximately 6 seconds and then turn off. If an air bag SRS fault is detected, the air bag warning indicator will:
   - fail to light.
   - remain lit continuously.
   - flash.
   The flashing might not occur until approximately 30 seconds after the ignition has been turned from the OFF to the ON position. This is the time required to complete testing of the SRS . If the air bag

warning indicator is inoperative and a SRS fault exists, a chime will sound in a pattern of 5 sets of 5 beeps. If this occurs, the air bag warning indicator and any SRS fault discovered must be diagnosed and repaired.

Clear all RCM and Occupant Classification System Module (OCSM) Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Passenger Air Bag Module

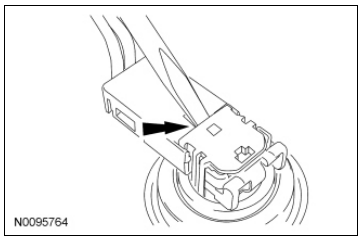
NOTE: Fusion shown, MKZ similar.

Item	Part Number	Description
1	19893	RH instrument panel register
2	-	Screw
3	-	Screw
4	19B680	Ventilation duct
5	19B680	Defroster duct
6	-	Screw
7	-	Passenger air bag module electrical connector (part of 14401) (2 required)
8	-	Passenger air bag module deployment chute (part of instrument panel)
9	W505253	Passenger air bag module-to-deployment chute bolts (4 required)
10	044A74	Passenger air bag module
11	W505253	Passenger air bag module bracket bolts (2 required)
12	-	

		Passenger air bag module bracket (part of 044A74)

Removal

⚠ WARNING: Always carry or place a live air bag module with the air bag and deployment door/trim cover/tear seam pointed away from the body. Do not set a live air bag module down with the deployment door/trim cover/tear seam face down. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.



⚠ WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

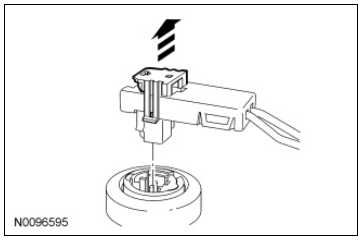
NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Remove the instrument panel. For additional information, refer to Section 501-12 .
2. Remove the RH instrument panel register.
3. Remove the screw and RH ventilation duct.
4. Remove the screw and RH defroster duct.
5. ***NOTICE:*** **Do not pull the electrical connectors out by the Connector Position Assurance (CPA) clip. DTCs can be set in the Restraints Control Module (RCM).**

   Using an appropriate tool, lift up and release the Connector Position Assurance (CPA) clips and disconnect the passenger air bag module electrical connectors.

6. Remove the 4 passenger air bag module-to-deployent chute bolts.
7. Remove the passenger air bag module from the deployment chute.
8. Remove the 2 bolts and passenger air bag module bracket.

Installation



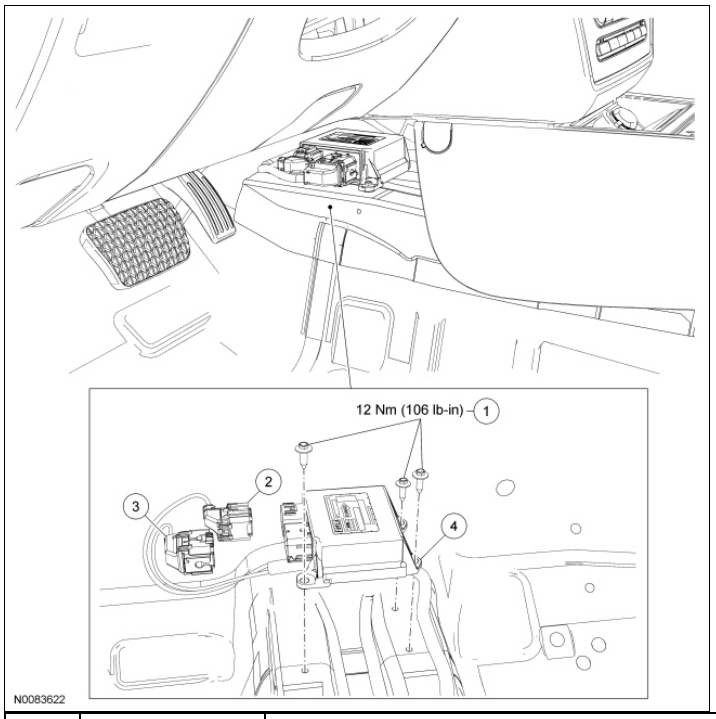
1. Install the passenger air bag module in the instrument panel.
2. Install the 4 passenger air bag module-to-deployment chute bolts.
   - Tighten to 9 Nm (80 lb-in).
3. Install the passenger air bag module bracket and 2 bolts.

- Tighten to 9 Nm (80 lb-in).

4. ***NOTICE:*** **The Connector Position Assurance (CPA) clip must be in the released position before installing the connector. Failure to have the CPA clip in the released position may break the tabs causing Diagnostic Trouble Codes (DTCs) to set in the Restraints Control Module (RCM).**

   Connect the passenger air bag module electrical connectors.

   - Lift up the CPA clip and install the electrical connector fully and lock the clip.



5. Install the RH instrument panel register.
6. Install the RH defroster duct and screw.
7. Install the RH ventilation duct and screw.
8. Install the instrument panel. For additional information, refer to Section 501-12 .

Restraints Control Module (RCM)

Special Tool(s)

 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Item	Part Number	Description
1	W707722	Restraints Control Module (RCM) bolts (3 required)
2	-	RCM small connector (part of 14A005)
3	-	RCM large connector (part of 14A005)
4	14B321	RCM

Removal

⚠ WARNING: Do not handle, move or change the original horizontal mounting position of the restraints control module (RCM) while the RCM is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

⚠ WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may resulserious personal injury or death in a crash.

NOTICE: **When installing a new Restraints Control Module (RCM), it is necessary to carry out Programmable Module Installation (PMI). System failure may occur if PMI is not performed. For additional information, refer to Section 418-01 .**

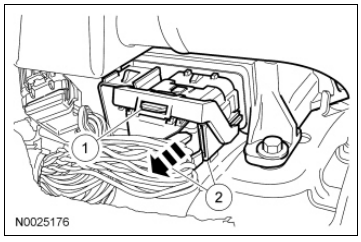
NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: When installing a new RCM always make sure the correct RCM is being installed. If an incorrect RCM is installed, DTCs will be set.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

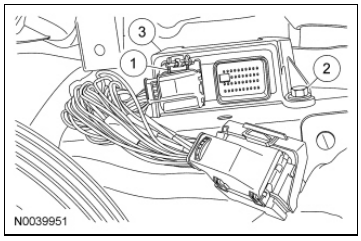
NOTE: Carrying out Programmable Module Installation (PMI) will not enable the 911 assist option that is disabled. The RCM and Accessory Protocol Interface Module (APIM) must be configured correctly to fully support 911 assist functionality.

NOTE: This vehicle is equipped with the SYNC® V2 feature which contains the 911 assist option. Refer to the Owners' Literature.



NOTE: Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Master Parts Catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, DTCs may set.

1. If installing a new RCM , carry out the steps necessary to prepare for Programmable Module Installation (PMI). For additional information, refer to Section 418-01 .



2. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

3. Remove the 2 RH RCM bolts.
   - Position the carpet back at the RH side of the center tunnel area under the instrument panel and remove the 2 bolts.

4. Disconnect the large RCM connector.
   1. Pinch the thumb tab and pivot the Connector Position Assurance (CPA) lever back.
   2. Disconnect the RCM connector.

5. Remove the RCM .
   1. Disconnect the small RCM connector.
   2. Remove the LH bolt.
   3. Remove the RCM .

Installation

1. ⚠ **WARNING: Always tighten the fasteners of the restraints control module (RCM) and impact sensor (if equipped) to the specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.**

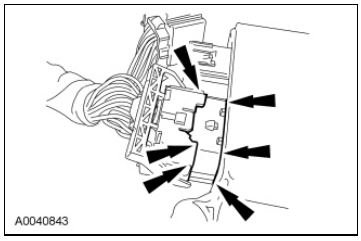
   Position the RCM .

   - Install the 2 RH RCM bolts.
     - ♦ Tighten to 12 Nm (106 lb-in).
   - Position the carpet back at the RH side of the center tunnel area under the instrument panel.

2. Install the RCM .
   - Install the LH RCM bolt.
     - ♦ Tighten to 12 Nm (106 lb-in).

3. Connect the small RCM connector.

4. Verify that the CPA lever is positioned back completely (as shown) before connecting the large RCM connector.



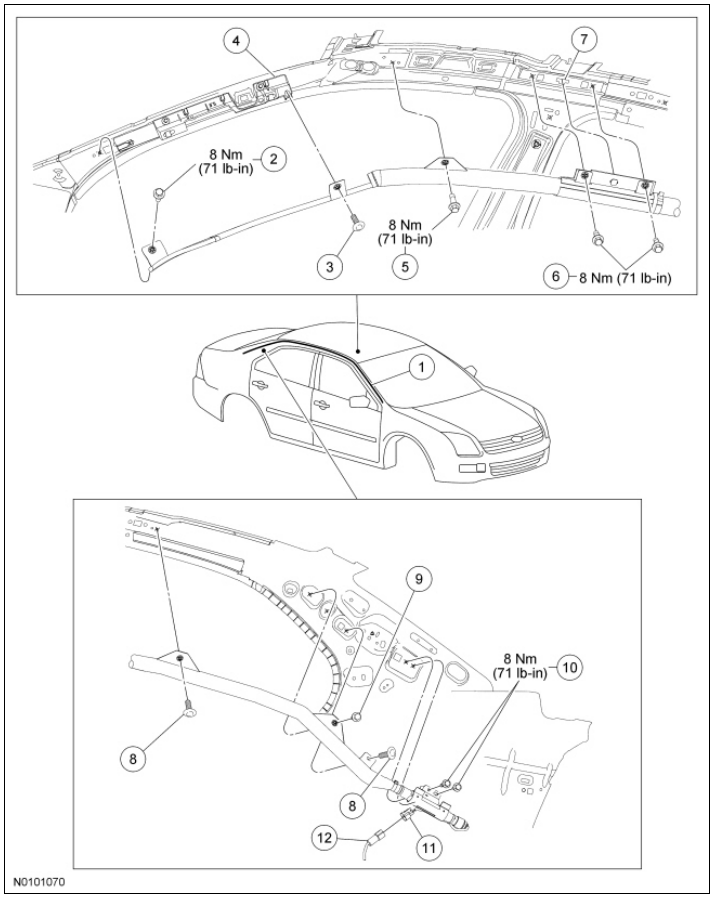
5. ***NOTICE:*** **Placing the large Restraints Control Module (RCM) electrical wiring connector into the RCM on an angle can cause bad electrical connections and damaged components.**

   Position the large RCM electrical connector into the RCM .

   - ***NOTICE:*** **Do not push the connector such that the Connector Position Assurance (CPA) lever pivots and seats. Use light force to insert the connector into the Restraints Control Module (RCM) before using the CPA lever to lock the connector. Damage to the connector or component may occur.**

     With the large RCM electrical connector uniformly aligned to the RCM , push in until a slight resistance is felt.

6. Connect the large RCM connector.
    - Insert the connector into the RCM .
        - ♦ Push to lock the CPA lever thumb tab to the RCM .



7. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

8. If a new RCM was installed, carry out the appropriate steps necessary to complete PMI . For additional information, refer to Section 418-01 .

Side Air Curtain Module

NOTE: RH shown, LH similar.

Item	Part Number	Description
1	042D94 RH/ 042D95 LH	Side air curtain module
2	W713437	Side air curtain module front tether bracket bolt
3	W709453	Pin-type retainer (to garnish moulding bracket) (part of 042D94 RH/ 042D95 LH)
4	026A52 RH/ 026A53 LH	Garnish moulding bracket
5	W713437	Side air curtain module bolt (rear of A-pillar)
6	W713437	Side air curtain module center guide bolts
7	-	Side air curtain center guide hook sheet metal slot
8	-	Pin-type retainers (part of 042D94 RH/ 042D95 LH)
9	W713437	Side air curtain module middle rear bolt
10	W713437	Side air curtain module rear bracket bolts
11	-	Side air curtain module electrical connector (part of 042D94 RH/ 042D95 LH)

12	-	Rear body wire harness (part of 14A005)

Removal and Installation

⚠ WARNING: Always carry or place a live Safety Canopy®, or side air curtain module, with the module and tear seam pointed away from your body. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

⚠ WARNING: Anytime the Safety Canopy® or side air curtain module has deployed, a new headliner and new A-, B- and C-pillar upper trim panels and attaching hardware must be installed. Remove any other damaged components and hardware and install new components and hardware as needed. Failure to follow these instructions may result in the Safety Canopy® or side air curtain module deploying incorrectly and increases the risk of serious pury or death in a crash.

⚠ WARNING: Do not obstruct or place objects in the deployment path of the Safety Canopy® or side air curtain module. Failure to follow this instruction may result in the Safety Canopy® or side air curtain module deploying incorrectly and increases the risk of serious personal injury or death in a crash.

⚠ WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Remove the headliner. For additional information, refer to Section 501-05 .

2. Depower the ~~SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.~~

3. Disconnect the side air curtain module electrical connector and detach the pin-type retainer from the C-pillar sheet metal.

4. Remove the bolt and side air curtain module front tether.
   - To install, tighten to 8 Nm (71 lb-in).

5. Detach the pin-type retainer from the garnish moulding bracket.

6. Remove the side air curtain module bolt, located to the rear of the A-pillar.
   - To install, tighten to 8 Nm (71 lb-in).

7. Remove the 2 side air curtain module middle rear bolts.
   - To install, tighten to 8 Nm (71 lb-in).

8. **NOTE:** Note the position of the side air curtain module rear bracket hook for installation.

   Remove the side air curtain module 2 rear bracket bolts.

   - To install, tighten to 8 Nm (71 lb-in).

9. **NOTE:** Note the position of the side air curtain module center guide hook retainer for installation.

Remove the side air curtain module 2 center guide bolts. Detach the side air curtain module center guide hook retainer from the vehicle sheet metal.

- To install, tighten to 8 Nm (71 lb-in).

10. Remove the side air curtain module.
    - Move the side air curtain module toward the front of the vehicle to release the rear bracket hook from the C-pillar sheet metal.

11. **⚠ WARNING: When installing a new headliner on a vehicle equipped with Safety Canopy® or side air curtain modules, make sure the headliner has the word AIRBAG on the headliner where it meets each B-pillar trim panel. Otherwise, you have the wrong headliner. Failure to follow this instruction may result in the Safety Canopy® or side air curtain module not deploying or deploying incorrectly, increasing the risk of personal injury or death in a crash.**

    ⚠ WARNING: Before installing a Safety Canopy® or side air curtain module, inspect the roofline for any damage. If necessary, the sheet metal must be reworked to its original condition and structural integrity. Install new fasteners if damaged and remove foreign material. Failure to follow these instructions may result in the Safety Canopy® or siir curtain deploying incorrectly, which increases the risk of serious personal injury or death in a crash.

    ⚠ WARNING: Inspect a Safety Canopy® or side air curtain module before installation. If the module is damaged, the cover has separated or the Safety Canopy® or side air curtain material has been exposed, install a new module. Do not attempt to repair the module. Failure to follow these instructions may result in the Safety Canopy® or side air curtain deploying incorrectly, which increases the risk of serious personal injury or death in a crash.

    ⚠ WARNING: Never put any type of fastener or tie strap around any part of a Safety Canopy® module, side air curtain module or interior trim panel. This will prevent the Safety Canopy® or side air curtain module from deploying correctly. Failure to follow this instruction may increase the risk of serious personal injury or death in a crash.

    NOTE: Make sure all side air curtain module bolt holes line up with each sheet metal hole.

    To install, reverse the removal procedure.

12. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Seat Position Sensor

Item	Part Number	Description
1	-	Seat position sensor electrical connector (part of 14A699)
2	14B416	Seat position sensor
3	W505256	Seat position sensor bolt

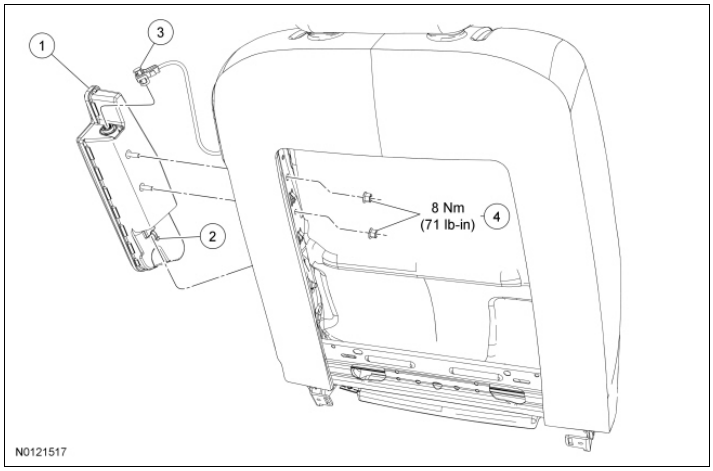
NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition switch is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Remove the driver seat. For additional information, refer to Section 501-10 .

2. Disconnect the seat position sensor electrical connector.

3. Remove the bolt and seat position sensor.
   - To install, tighten to 6 Nm (53 lb-in).



4. ⚠ **WARNING: Always tighten the seat position sensor retaining bolt to specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.**

   To install, reverse the removal procedure.

5. Install the driver seat. For additional information, refer to Section 501-10 .

Side Air Bag Module

NOTE: Drivers seat shown, passenger seat similar.

Item	Part Number	Description
1	611D10	Side air bag module
2	-	Side air bag module locator hook (part of 611D10)
3	-	Side air bag module electrical connector (part of 14K155)
4	N620480	Side air bag module nuts (2 required)

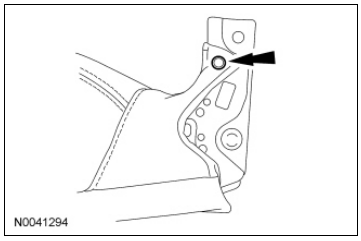
Removal

⚠ WARNING: Always carry or place a live air bag module with the air bag and deployment door/trim cover/tear seam pointed away from the body. Do not set a live air bag module down with the deployment door/trim cover/tear seam face down. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.

⚠ WARNING: Never probe the electrical connectors on air bag, Safety Canopy® or side air curtain modules. Failure to follow this instruction may result in the accidental deployment of these modules, which increases the risk of serious personal injury or death.

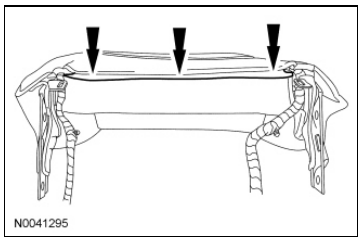
⚠ WARNING: Front seat backrest trim covers installed on seats equipped with seat side air bags cannot be repaired. A new trier must be installed. Cleaning is permissible. Failure to follow these instructions may result in the seat side air bag module deploying incorrectly and increase the risk of serious personal injury or death in a crash.

NOTE: If a side air bag deployment took place, a new seat backrest foam pad, backrest cover, side air bag module and nuts must be installed. The seat backrest frame should be replaced if necessary. For additional information, refer to the front seat backrest disassembly and assembly procedure in Section 501-10 .



NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

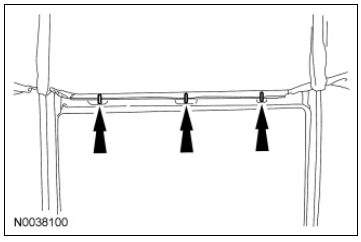


1. Remove the seat backrest. For additional information, refer to Section 501-10 .

2. **NOTE:** RH shown, LH similar.

   Separate the seat backrest cover from the inboard and outboard recliners on the seat backrest frame.

3. Release the seat backrest cover J-clip.

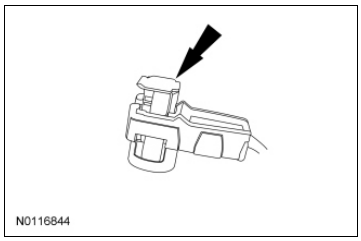


4. ⚠ **WARNING: Front seat backrest trim covers installed on seats equipped with seat side air bags cannot be repaired. A new trim cover must be installed. Cleaning is permissible. Failure to follow these instructions may result in the seat side air bag module deploying incorrectly and increase the risk of serious personal injury or death in a crash.**

   NOTICE: **Use care when separating the seat backrest cover from the hook-and-loop strips, or the hook-and-loop strip can be torn from the seat backrest foam pad.**

   Place a hand between the seat backrest cover and foam pad and carefully separate the hook-and-loop strips, then carefully roll up the seat backrest cover in an inside out fashion to the row of hog rings in the front.

5. Remove and discard the 3 hog rings.



6. Detach the hook-and-loop strips and invert the seat backrest cover up enough to expose the side air bag.

7. Remove and discard the 2 side air bag module nuts.
   - Pull outward on the side air bag module until the studs clear the backrest frame and then lift upwards to detach the locator hook from the frame.

8. ***NOTICE:*** **Do not pull the side air bag electrical connector out by the locking button. Damage to the locking button can occur.**

Using a small screwdriver, lift up and release the locking button and disconnect the electrical connector.

- Remove the side air bag module.

Installation

1. With the locking button released, install the electrical connector fully into the side air bag module and seat the locking button.

2. **⚠ WARNING: If the seat side air bag cover has been damaged or separated from its mounting, or if the air bag material has been exposed, install a new seat side air bag module. Never try to repair the seat side air bag module. Failure to follow these instructions may result in the seat side air bag deploying incorrectly, which increases the risk of serious personal injury or death in a crash.**

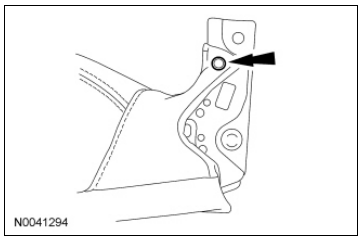
   ⚠ WARNING: Inspect the seat side air bag module and mounting surfaces for any damage or foreign material before installing the seat side air bag module. If any damage is found, install new components. If any foreign material is found, remove it. Failure to follow these instructions may result in the seat side air bag module deploying incorrectly and increase the risk of serious personal injury or death in a crash.

   NOTICE: **Make sure that the side air bag module locator hook is correctly positioned into the backrest frame before tightening the nuts or damage to the side air bag module can occur.**

   Position the side air bag module to the seat backrest frame and install 2 new nuts.

   - Tighten to 8 Nm (71 lb-in).

3. Roll the seat backrest cover down, attaching the hook-and-loop strips and install the 3 hog rings.



4. Roll the seat backrest cover down attaching the remaining hook-and-loop strips and attach the seat backrest cover J-clip.

5. **NOTE:** RH shown, LH similar.

   Attach the backrest cover to the inboard and outboard recliners on the seat backrest frame.

6. Install the seat backrest. For additional information, refer to Section 501-10 .

Side Impact Sensor - Front Door

NOTE: RH shown, LH similar.

Item	Part Number	Description
1	W705314	Side impact sensor bolts (2 required)
2	-	Side impact sensor electrical connector (part of 14630)
3	14B345	Side impact sensor
4	W713617	Side impact sensor pushnuts (2 required)

Removal and Installation

⚠ WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may result in serious personal injury or death in a crash.

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Res System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Remove the front door trim panel. For additional information, refer to Section 501-05 .

2. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

3. Slide the locking wedge back and disconnect the side impact sensor electrical connector.

4. Remove the 2 bolts and the side impact sensor.
   - To install, tighten to 2 Nm (18 lb-in).

5. ⚠ **WARNING: Always tighten the fasteners of the restraints control module (RCM) and impact sensor (if equipped) to the specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.**

   NOTE: Make sure the door sheet metal and side impact sensor mating surfaces are clean.

   To install, reverse the removal procedure.

6. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Side Impact Sensor - C-Pillar

NOTE: RH shown, LH similar.

Item	Part Number	Description
1	14B006	Side impact sensor
2	W505256	Side impact sensor bolt
3	-	Side impact sensor electrical connector (part of 14A005)

NOTE: The air bag warning indicator illuminates when the correct Restraints Control Module (RCM) fuse is removed and the ignition is ON.

NOTE: The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.

1. Depower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

2. Remove the rear seat bolster. For additional information, refer to Section 501-10 .

3. Disconnect the side impact sensor electrical connector.

4. Remove the bolt and side impact sensor.
   - To install, tighten to 12 Nm (106 lb-in).

5. ⚠ **WARNING: Always tighten the fasteners of the restraints control module (RCM) and impact sensor (if equipped) to the specified torque. Failure to do so may result in incorrect restraint system operation, which increases the risk of personal injury or death in a crash.**

   NOTE: Make sure the C-pillar and side impact sensor mating surfaces are clean.

   To install, reverse the removal procedure.

6. Repower the SRS . For additional information, refer to Supplemental Restraint System (SRS) Depowering and Repowering in the General Procedures portion of this section.

Descriptions of Ford Steel Families

Grade	Alloy Content	Heat Treatment	Typical Applications	Comments
Mild Steel, Bake Hardened, Solid Solution Strengthened	Low	Fully annealed/dead soft	Body panels (closures, floor pan, dash panel)	-
High-Strength Low Alloy (HSLA)	Low	Fully annealed/dead soft	Rails, structural members	Strengthened with fine particles and small grain size
Dual Phase	MediumManganese Silicon, Molybdenum Chromium)	Fully annealed/partially hardened	Rails, structural members	15-50% of structure is hard martensite
Ultra High Strength Steel (UHSS) (Martensitic, Boron)	Low	Fully hardened	Rocker reinforcements, door beams, bumper beams	100% of structure is hard martensite
Transformation Induced Plasticity Steel	High (Manganese, Phosophorus, Silicon, Aluminum)	Fully annealed/ partially hardened	To be determined	Complex microstructure for high strength and ductility

Ford Recommended Steel Repairability Matrix

Grade	Trade Descrip-tions	Welding Method			Cold Repairs	Use of Heat for Repair	Temp-erature Range	Max-imum Heat
		Metal Inert Gas (MIG)	Squeeze-Type Resist-ance Spot Welding (STRW)	MIG Braze				
Mild Steel	Mild	Yes	Yes	NA	Yes [a]	Yes	Up to 650°C (1,200°F)	90 sec. x 2
Laminate Steel	Quiet Steel	No	Yes	No	Yes [a]	NA	NA	NA
Bake Hardened	BH 180, BH210, BH 250, BH 280	Yes	Yes	Yes [b]	Yes [a]	Yes	Up to 650°C (1,200°F)	90 sec. x 2
Solid Solution Strength- ened	-	Yes	Yes	Yes [b]	Yes [a]	Yes	Up to 650° C (1,200°F)	90 sec. x 2
High- Strength Low Alloy (HSLA)	HSLA 250, HSLA 350, HSLA 550	Yes	Yes	Yes [b]	Yes [a]	Yes	Up to 650°C (1,200°F)	90 sec. x 2
Dual Phase = 600 MPa Ultimate Tensile Strength	DP 500, DP 600	Yes	Yes	Yes [b]	Yes [a]	No	NA	NA
Dual Phase = 600 MPa Ultimate Tensile Strength	DP 700, DP 780, DP 900	Yes [d]	Yes	Yes [b]	No	No	NA	NA

particular to 780 and 980 grades) [c]								
Ultra High Strength Steel (UHSS) (Martens-itic, Boron) [e]	Boron	Yes [a]	Yes	Yes [b]	No	No	NA	NA
Trans- formation Induced Plasticity Steel (TRIP) Steel	TRIP 590, TRIP 780, TRIP 980	NA	NA	NA	NA	NA	NA	NA

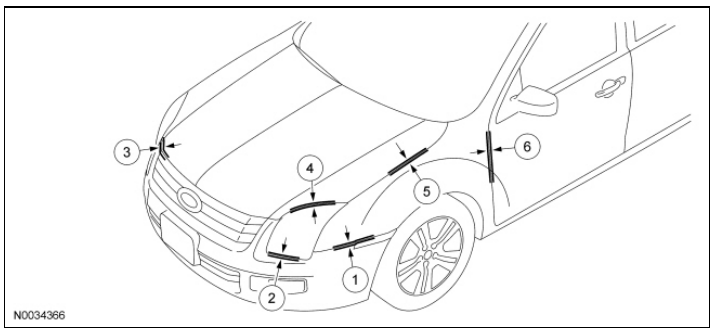
[a] Cold repairs can be performed if damage excludes kinks. May section only if approved procedure in workshop manual.
[b] MIG braze allowed for non-structural applications only.
[c] Dual phase steels DP 700, DP 780 and DP 980 must be replaced at factory joints, no sectioning unless approved procedure in workshop manual.
[d] For DP 980, use MIG plug welding only, no stitch welding.
[e] Boron components must be replaced at factory joints, no sectioning allowed.

Body

NOTICE: **The High Voltage Traction Battery (HVTB) in a Hybrid Electric Vehicle (HEV) can be affected and damaged by excessively high temperatures. The temperature in some body shop paint booths can exceed 60°C (140°F). Therefore, during refinishing operations, the paint booth temperature must set at or belo60°C (140°F) with a bake time of 45 minutes or less. Temperatures in excess of 60°C (140°F) or bake durations longer than 45 minutes will require the HVTB be removed from the vehicle prior to placing in the paint booth. For information, refer to Section 414-03 .**

NOTE: For information regarding vehicles equipped with High Voltage Traction Battery (HVTB) systems, refer to Section 414-03 .

The body consists of the following:



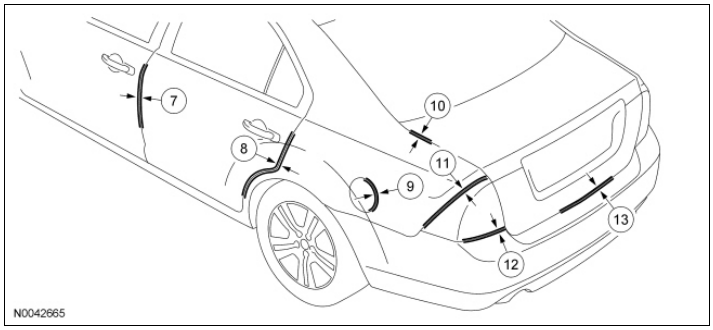
- Unibody construction
- Radiator support bolster constructed of glass fiber polypropylene material and is non-repairable
- High-Strength Low Alloy (HSLA) and mild steels
- Dual Phase Steel (DP) steel in select body structure components
- Bolted, removable steel front fenders, hinged doors and hood
- Underhood and body side door opening dimensions common between Ford Fusion and Lincoln MKZ
- Steel doors incorporating serviceable outer panels
- Steel luggage compartment lid
- Rear body openings unique for each model
- Bolt-on front and rear bumper beams constructed of Ultra High Strength Steel (UHSS), martensitic grade steel
- Front and rear subframe assembliessing suspension and steering components
- Underbody common between Ford Fusion and Lincoln MKZ
- Tailor-welded blanks used in underbody (front floor rails and rear frame rails)

For dimensional information, refer to the following illustrations:

NOTE: The following dimensional illustrations apply to the Ford Fusion and Lincoln MKZ unless otherwise indicated.

Body Margins

NOTE: Dimensions apply to right and left side.

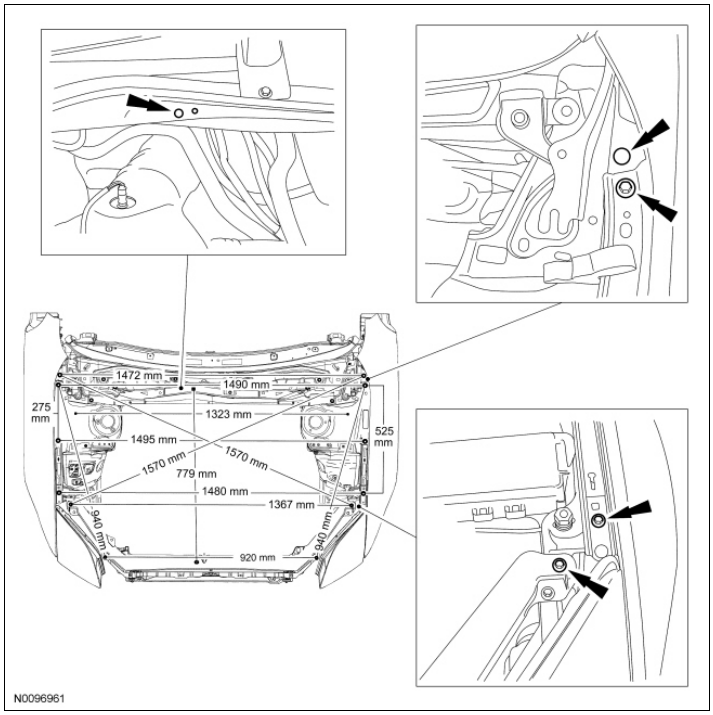


Item	Description	Specification	Flushness Specification

1	Fender to side marker lamp	1.0 mm (0.039 in) ± 1.0 mm (0.039 in)	-
2	Headlamp assembly to fascia	2.0 mm (0.078 in) ± 1.7 mm (0.039 in)	-
3	Hood to fascia	5.0 mm (0.196 in) ± 3.0 mm (0.118 in)	-
4	Hood to headlamp	5.0 mm (0.196 in) ± 3.0 mm (0.118 in) (overslam clearance of 9.0 mm [0.35 in])	-
5	Hood to fender	3.0 mm (0.118 in) ± 1.5 mm (0.059 in)	0.0 mm (in) ± 1.5 mm (0.059 in)
6	Fender to door	4.0 mm (0.157 in) ± 1.5 mm (0.059 in)	0.5 mm (0.019 in) ± 1.5 mm (0.059 in)

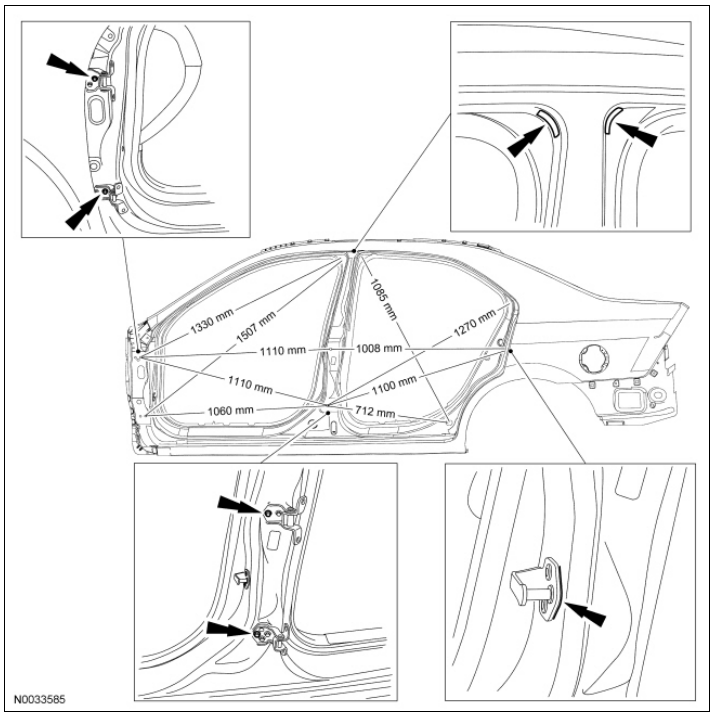
Body Margins

NOTE: Dimensions apply to the right and left side.



Item	Description	Specification	Flushness Specification
7	Front dr	4.0 mm (0.157 in) ± 1.5 mm (0.059 in)	0.0 mm (in) ± 1.5 mm (0.059 in)
8	Rear door to quarter panel	4.0 mm (0.157 in) ± 1.5 mm (0.059 in)	0.0 mm (in) ± 1.5 mm (0.059 in)
9	Fuel door to quarter panel	3.0 mm (0.118 in) ± 1.0 mm (0.039 in)	1.0 mm (0.039 in) ± 1.25 mm (0.049 in)
10	Quarter panel to luggage compartment lid	3.0 mm (0.118 in) ± 1.5 mm (0.059 in)	0.0 mm (in) ± 1.5 mm (0.059 in)
11	Lamp assembly to quarter panel	1.2 mm (0.047 in) + 1.2 mm (0.047 in) / - 0.0 mm (in)	1.0 mm (0.039 in) ± 1.0 mm (0.039 in)
12	Lamp assembly to fascia	2.0 mm (0.078 in) ± 1.7 mm (0.066 in)	-
13	Luggage compartment lid to fascia	6.0 mm (0.236 in) ± 2.5 mm (0.098 in)	-

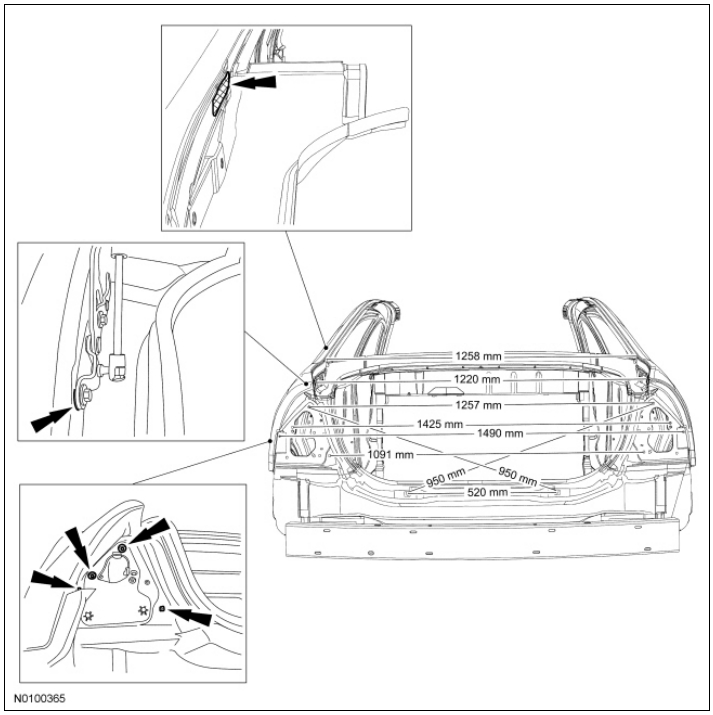
Underhood Dimensions



NOTICE: **The radiator bolster is glass fiber polypropylene material. If damage occurs to the radiator support component, it should not be repaired. A new component should be installed. Refer to Section 303-03A .**

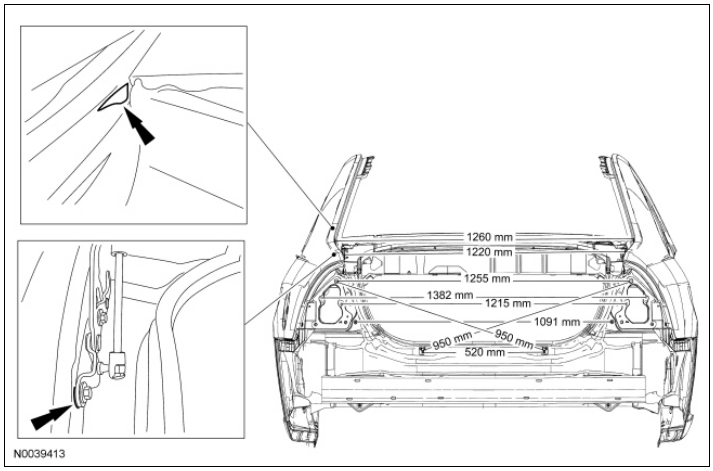
NOTE: Measurements are obtained on center, unless otherwise indicated.

Body Side Closure Dimensions



NOTE: Measurements are obtained on center, unless otherwise indicated.

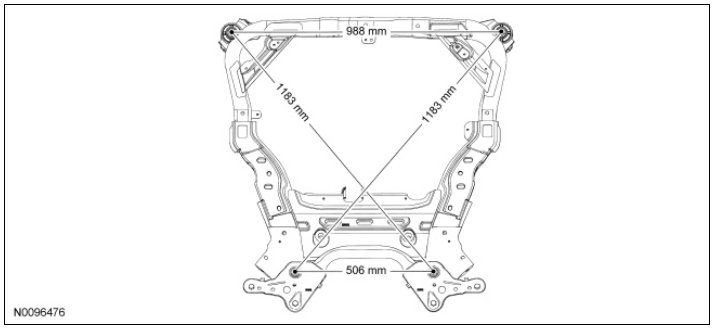
Rear Opening Dimensions



Ford Fusion

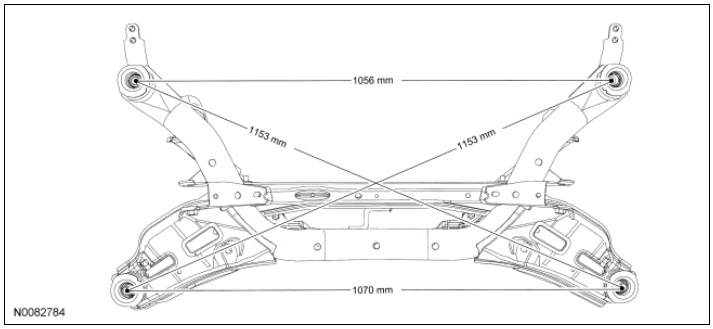
NOTE: Measurements are obtained on center, unless otherwise indicated.

Lincoln MKZ



NOTE: Measurements are obtained on center, unless otherwise indicated.

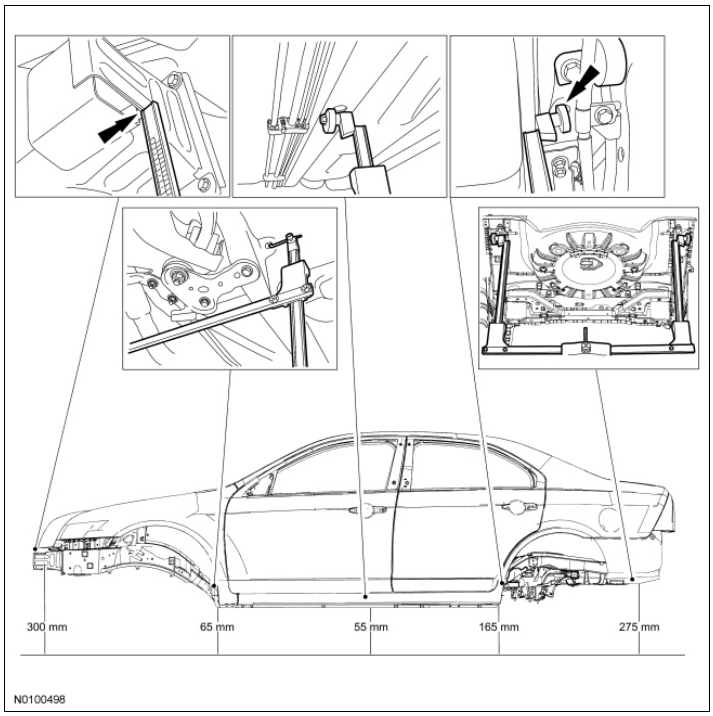
Underbody Dimensions



Front Subframe

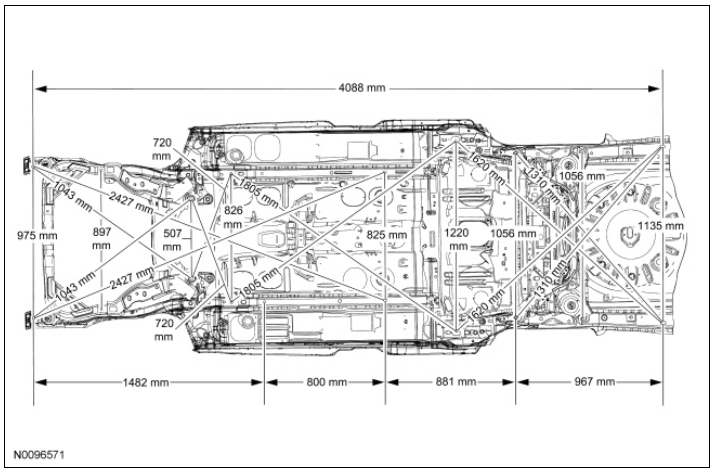
NOTE: Measurements are obtained on center, unless otherwise indicated.

Rear Subframe



NOTE: Front Wheel Drive (FWD) shown, All-Wheel Drive (AWD) common dimensionally. Measurements are obtained on center, unless otherwise indicated.

NOTICE: **A structural frame rail or unibody service sectioning kit is available for this vehicle. For information regarding frame rail sectioning, refer to Frame Members - Front or Frame Members - Rear in this section.**



Frame Datum Height

NOTE: Datum height determined measuring from holes and slots on center, unless otherwise indicated.

Underbody Dimensions

NOTE: Measurements are obtained on center, unless otherwise indicated.

Welding Precautions - Steel

General Equipment
3 Phase Inverter Spot Welder 254-00002
Compuspot 700F Welder 190-50080
I4 Inverter Spot Welder 254-00014
Inverter Welder with MIG Welder 254-00015

Weld Nugget Chart

Test Thickness of Metal (mm)	Nugget Size
0.7 + 0.7	4.3 mm (0.16 in)
0.7 + 0.7 + 0.7	4.3 mm (0.16 in)
0.9 + 0.9	4.7 mm (0.18 in)
0.9 + 0.9 + 0.9	4.7 mm (0.18 in)
1.0 + 1.0	5.2 mm (0.2 in)

3.0 + 1.0 + 2.0	7.1 mm (0.27 in)
0.9 + 0.7 + 0.9	4.3 mm (0.16 in)

General Specifications

Item	Specification
Plug weld hole	8 mm (0.31 in)
Weld wire ER70S-3 or equivalent	0.9-1.1 mm (0.035-0.045 in)

⚠ WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

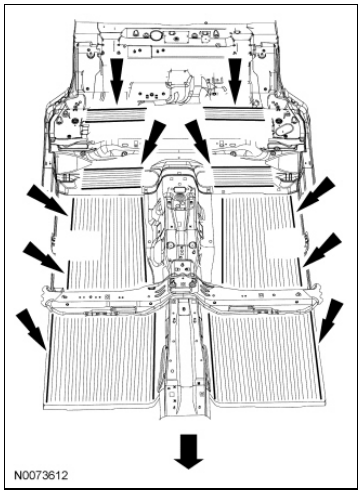
NOTICE: **Hybrid vehicles contain a High Voltage Traction Battery (HVTB). Before welding near the HVTB , the HVTB must be removed to avoid heat damage. For information, refer to Section 414-03 .**

The correct equipment and settings must be used when welding mild or high-strength steel. Metal Inert Gas (MIG) and Squeeze-Type Resistance Spot Welding (STRW) are the preferred methods. Surfaces must be clean and free of foreign materials.

- Correct eye protection must be worn.
- The correct protective clothing should always be worn.
- Adequate ventilation must be provided to avoid accumulation of poisonous gases.
- Refer to the Ford Recommended Steel Repairability Matrix in the Specifications portion of this section for specific information regarding steel descriptions.
- A test weld should always be carried out on a test sample.
- Use cleaning brushes and abrasive grinding wheels dedicated to the type of materials being welded.
- Follow equipment manufacturer's prescribed procedures and equipment settings for the type of welder being used. ER70S-3 or ER70S-6 wire are typically used for MIG welding steel.
- On non-hybrid vehicles, disconnect the battery ground cable. Refer to Section 414-01 .
- Disconnect on-vehicle modules and protect them from possible heat damage and electrical currents when welding.
- Corrosion protection must be restored whenever bare metal repairs are made. Refer to Restoring Corrosion Protection Following Repair in this section.
- Weld through primer is recommended when welding overlapping surfaces or substrates.
- Components made of high-strength steel should not be heated should not be heated to straighten or repair. If components are severely bent or kinked, new components should be installed.
- Adequate power supply needs to be used to make sure of correct equipment performance.
- Factory spot welds may be substituted with either STRW or MIG plug welds. Spot/plug welds should equal factory welds in both location and quantity. Do not place a new spot weld directly over an original weld location. Plug weld hole should equal 8 mm (0.31 in) diameter.
- Vehicles equipped with optional safety canopy require removal of these components prior to any welding procedures being carried out in the roof-line or body side areas of the vehicle. Refer to Section 501-20B .

Sound Deadeners and Insulators

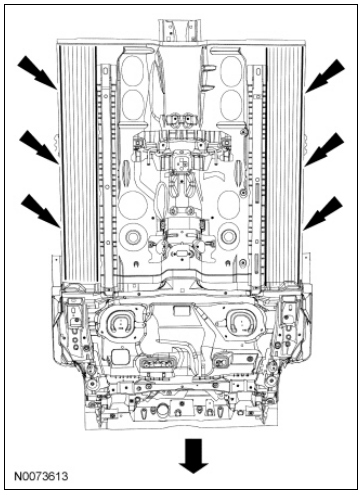
NOTICE: **Mastic is made of a combustible material and should be removed prior to carrying out welding procedures to the area. Heat zones from welding near the mastic may cause the mastic material to burn.**



NOTICE: **Corrosion protection must be restored to the area AFTER the mastic material is applied. Corrosion protection products contain wax and loss of adhesion may occur.**

NOTE: To restore the vehicle to design intent, missing or damaged sound deadeners and insulators should be installed with the correct service replacement component.

NOTE: The following illustrations serve as a reference to indicate mastic sound deadener locations. Sound deadener material is applied from the factory in a pumpable form. Additional insulators and sound deadeners are used beyond those indicated in the illustration.

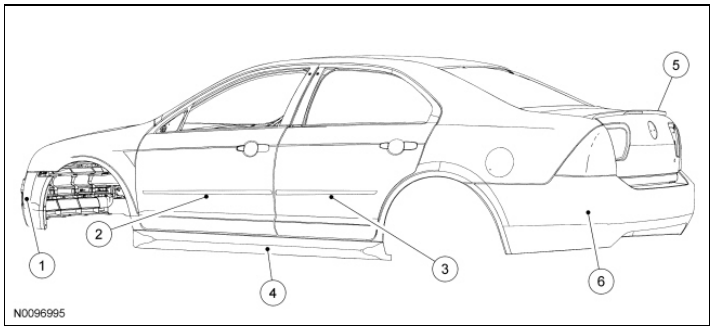


Interior Floor Pan

NOTE: Arrow indicates rear of vehicle.

Exterior Floor Pan

NOTE: Arrow indicates rear of vehicle.



1. Whenever replacement of an existing mastic insulator is carried out, the surface must be thoroughly cleaned to make sure correct adhesion will occur. The surface should be 10°C (50°F) or greater before applying the mastic. The use of a heat gun to warm the metal surface will aid in adhesion.

Plastic Components

Exterior Plastic Components - Painted

NOTE: Ford Fusion shown, Lincoln MKZ similar.

NOTE: The following illustration(s) are not all-inclusive of trim levels available. The actual trim level of the vehicle will determine the viability of carrying out a plastic repair.

Item	Part Number	Description
1	17C831	Bumper cover (front) - Thermoplastic Olefin (TPO)
2	25557 LH/ 25556 RH	Door moulding (front) - TPO
3	20879 LH/ 20878 RH	Door moulding (rear) - TPO
4	10155 LH/ 10154 RH	Rocker moulding - TPO
5	40602	Spoiler - Acrylonitrile Butadiene Styrene (ABS)
6	17K835	Bumper cover (rear) - TPO

Several considerations will detty of plastic repair procedure(s):

- Is the damage cosmetic or structural?
- Can the repair be carried out on the vehicle?
- Is the part readily available?
- Is component repair the most cost effective method?
- Can the component be economically restored to original strength and appearance?
- Will the repair provide for the fastest, highest quality repair?

Several types of plastic are in use for automotive application. However, all plastics will fall into 2 primary categories of thermoplastic or thermosetting plastic.

Thermosetting Plastic

Generally, thermosetting plastics are made with 2-part thermosetting resins. When mixed together, heat is generated, producing a cure that is irreversible. Because of this, thermosetting plastics will require the use of a 2-part adhesive for repair.

Sheet-Molded Composite

Sheet-Molded Composite (SMC) is a type of thermosetting plastic that uses glass fibers or nylon fibers in combination with thermosetting polyester resins. When fully cured, SMC is strong and rigid.

SMC is similar to, but not identical to fiberglass. Ford Motor Company uses SMC in components such as fenders, hoods and liftgates.

Thermoplastic Compounds

Thermoplastic compounds are manufactured by a process that is reversible. Thermoplastics can be remolded repeatedly by reheating. This characteristic of thermoplastics makes plastic welding a possible repair alternative. A repair of thermoplastic compounds is still possible through the use of 2-part adhesive and filler repair materials and reinforcements as needed. Thermoplastics are widely used in interior trim components, wheel flares, body side cladding and bumper covers.

Polyolefin

Polyolefins fall into the family of thermoplastics with one unique characteristic: An oily or waxy feel to the material when sanded or ground. Polyolefin lends itself very well to remolding through the use of heat. Because of this, components made of this material lend themselves well to the possibility of plastic welding. Most adhesive repair materials and paint will not bond to surface of a polyolefin unless an adhesion promoter specially formulated for plastic is first applied to the exposed raw surface. Otherwise, polyolefins are repaired like most other thermoplastics. Some typical uses of polyolefins are:

- bumper covers.
- fan shrouds.
- wheel housings.

Proper identification of the various types of plastic is necessary to select the appropriate repair method(s) to carry out high quality plastic repairs. For information, refer to Plastics Identification in this section.

Sealers

⚠ WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

The correct sealing of joints is essential to repairing the vehicle correctly. Sealers are used to prevent wind noise, water leaks, exhaust fumes and dust from entering the vehicle. They also provide anti-corrosion barriers. Sealers are applied to areas such as door and rear compartment hem flanges, wheelhouse, quarter outer, floor, cowl, roof and other panel-to-panel attaching points. The following joint sealers are recommended for use depending upon the application:

- Brushable Seam Sealer - A sealer intended to restore the original brushed seam appearance. It is used to seal lap joints in sheet metal that are spot welded (for example, floorpans and cowls). Use a product obtained locally.
- Roof Ditch Sealer - A self-leveling sealer used for drip rails, roof seams, quarter panels to rear deck and for water leaks.
- Seam Sealer - Heavy-bodied, non-sag adhesive/sealer for use on standing cosmetic seams, truck bed seams, tooled door skin seams and floor pans. Also used for water leaks and noise concerns.

Sealers should remain flexible after curing and must be paintable. Follow the manufacturer's directions for correct application of these materials.

Any damage to originally sealed joints should be repaired by resealing. Along with attaching points of new panels, open joints that require bridging of sealer to close a gap should be sealed using a heavy-bodied sealer.

Adhesives

Material

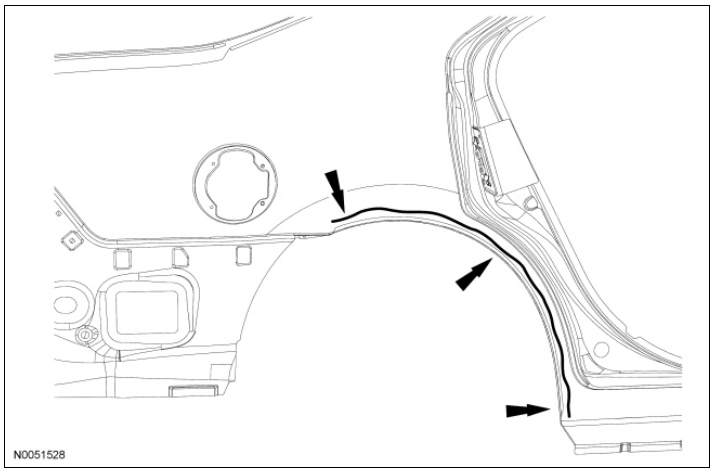
Item	Specification
Clear Silicone Rubber TA-32	ESB-M4G92-A
Metal Bonding Adhesive TA-1	-
Plastic Bonding Adhesive TA-9	-
Seam Sealer TA-2	-
Trim and Weatherstrip Adhesive TA-14-A	-

NOTICE: **The High Voltage Traction Battery (HVTB) in a Hybrid Electric Vehicle (HEV) can be affected and damaged by excessively high temperatures. The temperature in some body shop paint booths can exceed 60°C (140°F). Therefore, during refinishing operations, the paint booth temperature must set at or below 60°C (140°F) with a bake time of 45 minutes or less. Temperatures in excess of 60°C (140°F) or bake durations longer than 45 minutes will require the HVTB be removed from the vehicle prior to placing in the paint booth. For information, refer to Section 414-03 .**

1. Depower the High Voltage Traction Battery (HVTB) before carrying out any removal or installation procedures affecting the high-voltage battery system. Refer to Section 414-03 for the correct procedure to depower the HVTB system on hybrid-equipped vehicles.

NOTE: When it is necessary to carry out weld-bonding procedures, refer to Weld-Bonding in this section.

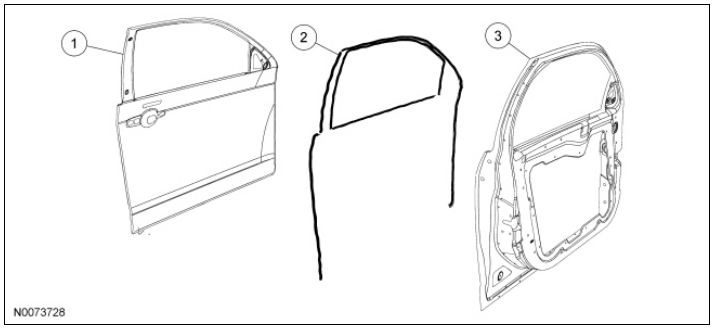
Adhesives are used in a variety of applications. Typical uses for adhesives include roof panels, door skins and quarter panels. Trim applications include body side mouldings, emblems, stationary glass and weatherstripping. Combination sealer/adhesives are also used. Surface preparation is critical to a high quality repair. Following the label instructions for the product is essential.



Work in a well-ventilated area and protect adjacent surfaces when working with adhesives. The use of eye protection and protective clothing is also recommended when working with adhesives. Carry out a trial fit, mark and align the surfaces before bonding the materials together.

Seam sealers and corrosion protection may be necessary once the adhesive(s) has cured, depending on the application. The following is a list of adhesives recommended for certain types of applications:

- Metal Bonding Adhesive - For bonding cold-rolled steel, galvanized steel, aluminum and correctly prepared E-coat. It is used for door skin and roof panel replacement and OEM structural adhesive replacement.
- Plastic Bonding Adhesive - For bonding a variety of plastics to plastics and plastics to primed, painted or E-coated metals. Also for general purpose bonding of trim components.
- Seam Sealer - Heavy-bodied, non-sag adhesive/sealer for use on: standing cosmetic seams, truck bed seams, tooled doo seams and floor pans.
- Trim and Weatherstrip Adhesive - For use on body side moulding, emblems, trim, bumper impact strips and carpeting.
- Clear Silicone Rubber - Used for sealing water leaks, noise concerns, remounting trim and repairing torn weatherstripping.



NOTE: The following illustration identifies structural adhesive location(s).

Rear Bodyside Outer to Inner

Door Panel

NOTE: Front door shown, rear door similar.

Item	Part Number	Description
1	20201 LH/ 20200 RH	Door panel outer
2	TA-1	Metal bonding adhesive
3	20125 LH/ 20124 RH	Door shell assembly

Rust Inhibitor ValuGardTM VG104, VG104A (aerosol)	-
Seam Sealer TA-2	-

⚠ WARNING: Collision damage repair must conform to the instructions contained in this workshop manual. Replacement components must be new, genuine Ford Motor Company parts. Recycled, salvaged, aftermarket or reconditioned parts (including body parts, wheels or safety restraint components) are not authorized by Ford.

Departure from the instructions provided in this manual, including alternate repair methods or the use of substitute components, risks compromising crash safety. Failure to follow these instructions may adversely affect structural integrity and crash safety performance, which could result in serious personal injury to vehicle occupants in a crash.

⚠ WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommendesons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

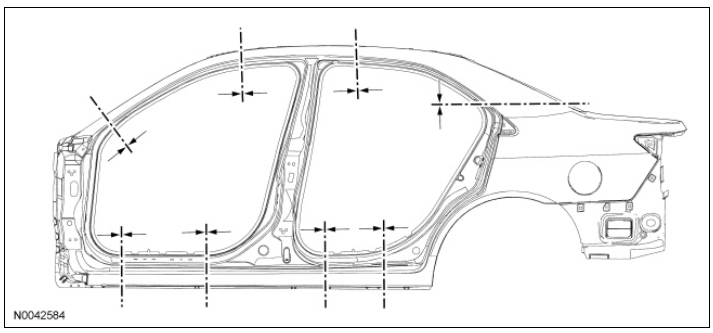
⚠ WARNING: On vehicles equipped with Safety Canopy® options, prior to carrying out any sectioning repairs near the roof line or sail panel areas of the vehicle, remove the Safety Canopy® module and related components. Failure to comply may result in accidental deployment or damage to the Safety Canopy®. Refer to Section 501-20B . Failure to follow these instructions may result in serious injury to technician or vehicle occupant(s).

⚠ WARNING: Do not cut or grind body side components within 50 mm (1.96 in) of restraint anchoring points. Welding within 50 mm (1.96 in) of restraint anchoring points may result in incorrect operation of restraint devices. For additional restraints anchoring location information, refer to Section 501-20A and Section 501-20B . Failure to follow these instructions may result in serious injury to vehicle occupant(s).

⚠ WARNING: Do not carry out body side sectioning repairs in areas of laser welds. Factory laser welds cannot be duplicated with conventional welding equipment and structural integrity may be compromised. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

⚠ WARNING: Do not carry out body side sectioning repairs in areas of door hinge or striker anchoring points. Welding within 50 mm (1.96 in) of door hinge or striker locations may compromise structural integrity during a collision. Failure to follow these instructions may result in serious injury to vehicle occupant(s).

NOTE: Factory spot welds may be substituted with either Squeeze-Type Resistance Spot Welding (STRW) or Metal Inert Gas (MIG) plug welds. Spot/plug welds should equal factory welds in both location and quantity. Do not place a new spot weld directly over an original location. Plug weld hole should equal 8 mm (0.31 in) diameter.



NOTE: The design of the front and rear doors incorporates a new precision weatherstrip seal retainer flange above the belt line. Dimensions of this flange are critical to maintain correct sealing from water leaks or wind noise. If these upper channels are damaged in a collision, the entire door shell should be replaced. The door assembly also incorporates:

- an open bottom hem flange for improved corrosion protection.
- flat modified front and rear door hem flanges, below the belt lines. After hemming the production doors, a secondary operation adds a taper to the inside surface of the hem that reduces the variability of the door dimensions. This allows for smaller factory margins between the doors, fenders and quarter panels.

NOTE: Illustration applicable to Ford Fusion and Lincoln MKZ. Cut lines shown in illustration are approximate.

NOTE: When it is necessary to carry out weld-bonding procedures, refer to Weld-Bonding in this section.

1. Corrosion protection needs to be restored whenever it is necessary to sand or grind through painted surfaces or E-coat, or when bare metal repairs are carried out. For additional information, refer to Restoring Corrosion Protection Following Repair in this section.

2. ***NOTICE:*** **Electronic modules and related wiring may be damaged when exposed to heat from welding procedures. Carefully disconnect and remove, or position away from heat affected areas. For additional information, refer to Welding Precautions - Steel in this section.**

Where possible, create a backer piece using a portion of the old panel. This will create a stronger joint.

3. ***NOTICE:*** **Hybrid vehicles contain a High Voltage Traction Battery (HVTB). Before welding near the HVTB , the HVTB must be removed to avoid heat damage. For additional information, refer to Section 414-03 .**

   When welding overlapping surfaces or substrates, apply a weld through primer or similar anti-corrosion material between the surfaces prior to welding. When the repair area has been welded and refinished, apply rust inhibitor to the exterior surfaces or substrates.

   - Make sure horizontal joints and flanges are correctly sealed with seam sealer to prevent moisture intrusion. Water and moisture migrate to horizontal joints and corrosion tends to occur more rapidly in these areas. Surfaces must be clean and dry before applying seam sealer.

4. ***NOTICE:*** **The High Voltage Traction Battery (HVTB) in a Hybrid Electric Vehicle (HEV) can be affected and damaged by excessively high temperatures. The temperature in some body shop paint booths can exceed 60°C (140°F). Therefore, during refinishing operations, the paint booth temperature must set at or below 60°C (140°F) with a bake time of 45 minutes or less. Temperatures in excess of 60°C (140°F) or bake durations longer than 45 minutes will require the HVTB be removed from the vehicle prior to placing in the paint booth. For additional information, refer to Section 414-03 .**

   Proceed with refinish procedures following Ford-approved paint guidelines.

Restoring Corrosion Protection Following Repair

Special Tool(s)

 ST3049-A	Rust Inhibitor Installation Kit 286-00002
 ST3048-A	Undercoating Spray Gun 286-00001

Material

Item	Specification
Motorcraft® Metal Surface Prep ZC-31-A	-
Premium Undercoating ValuGardTM VG101, VG101A (aerosol)	-
Rust Inhibitor ValuGardTM VG104, VG104A (aerosol)	-

⚠ WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

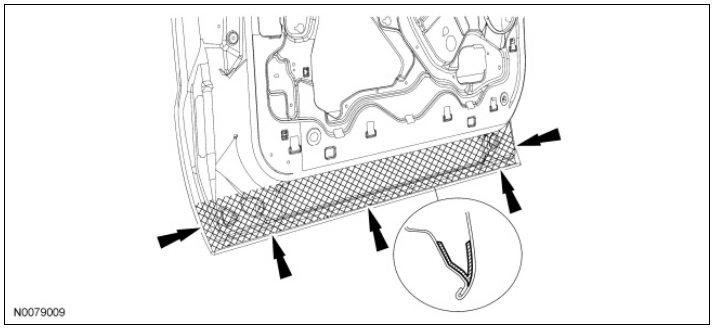
⚠ WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

NOTICE: **Drilling access holes in body panels is not recommended. Drilling holes will break the original paint finish and promote corrosion.**

NOTE: Corrosion protection needs to be restored whenever it is necessary to sand or grind through painted surfaces or E-coat, or when bare metal repairs are made.

NOTE: Refer to product label for preparation and handling instructions.

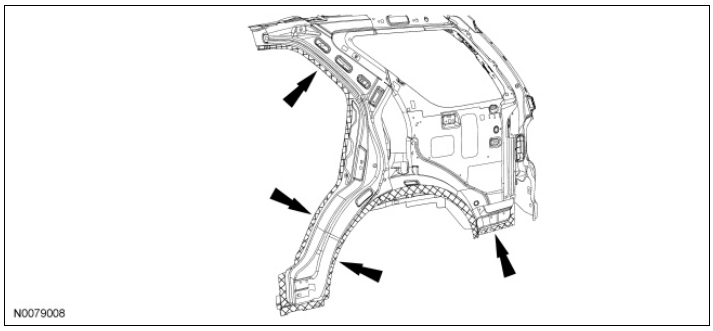
1. The surfaces must be free of oil, dirt and other foreign material. Carry out the process in the following sequence.
    1. Thoroughly clean and deetal surfaces using metal surface prep to remove wax and grease.
    2. For best results, the vehicle should be at room temperature. Attach the rust inhibitor canister to the Rust Inhibitor Installation Kit 286-00002.
    3. Rust inhibitor should be applied after the welding and refinishing process. Product cannot be welded through.
    4. Air pressure setting for applicator gun is 448-517 kPa (65-75 psi).
        - Use the long wand when spraying enclosed areas. The spray nozzle provides a 360-degree spray pattern. Insert the wand as far as possible into the access hole, pull



the trigger and wait 2-3 seconds and slowly pull the wand out of the access hole.
- The short, hook-shaped wand sprays in one direction and must be rotated to provide complete coverage.
- Apply the material in light mist coats.
- Material displaces moisture.

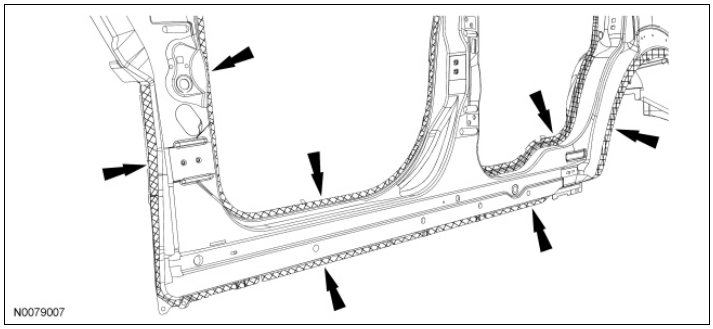
5. Clean up any overspray with a mild solvent such as mineral spirits or bug and tar remover.

NOTE: The following illustrations provide typical applications of body seams and spot welded flanges and are not vehicle specific.



2. **NOTE:** Door assembly lower view.

   Apply rust inhibitor as shown to the inside of the door shell on all the interior metal surfaces using the most suitable applicator wand. Apply material to the exposed edges after carrying out the welding process. Make sure horizontal surfaces are well protected as they are more susceptible to corrosion. Keep door drain holes clear to prevent moisture buildup.



3. **NOTE:** Quarter panel inner view.

   Apply rust inhibitor to the closed channel portion of the spot weld flange areas using the short, hook-shaped wand. Apply material to the exposed edges after carrying out the welding process. Make sure horizontal surfaces are well protected as they are more susceptible to corrosion.

4. **NOTE:** Door frame opening view.

   Apply rust inhibitor to the closed channel portion of the spot weld flange areas using the short, hook-shaped wand. Make sure horizontal surfaces are well protected as they are more susceptible to corrosion.

Body and Frame Undercoating

1. **⚠ WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.**

   ⚠ WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

   NOTICE: **Do not allow undercoating on powertrain components. Failure to follow these instructions may result in incorrect operation of these components.**

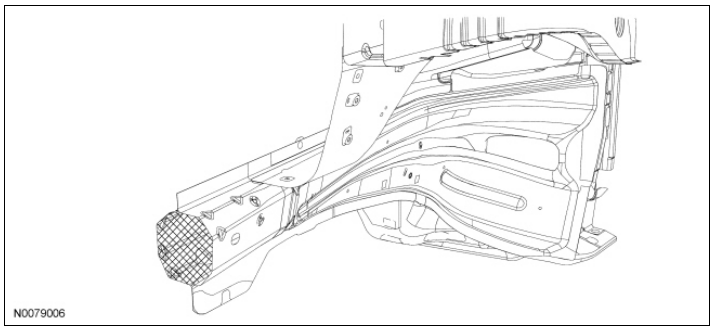
   NOTE: Refer to product label for preparation and handling instructions.

   NOTE: Avoid high-pressure water spray cleaning to treated underbody area for 24 hours.

   Wire brush the area and make sure the surfaces are free of oil, dirt and other foreign material. Carry out the undercoating process in the following sequence.

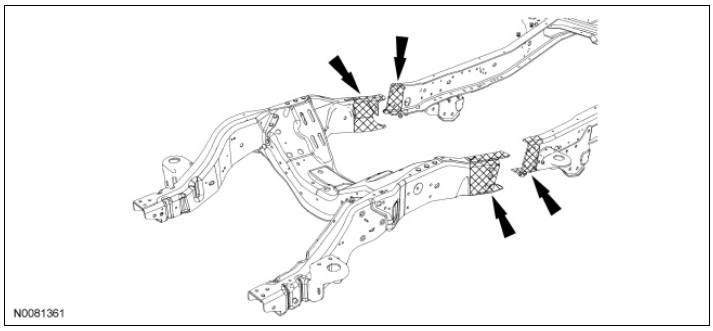
   1. Thoroughly clean and degrease metal surfaces using metal surface prep to remove wax and grease.
   2. For best results, the vehicle should be at room temperature.
      - ♦ Canister attaches directly to the dispensing gun. Attach the undercoating canister to the Undercoating Spray Gun 286-00001.
   3. Undercoat should be applied after the welding and refinishing process. Product cannot be welded through.
   4. Air pressure setting for applicator gun is 552-621 kPa (80-90 psi).
      - ♦ Apply light mist coats, applicator sprays in fogging pattern.
      - ♦ Material displaces moisture.
   5. Clean up any overspray with a mild solvent such as mineral spirits or bug and tar remover.

NOTE: The following illustrations provide typical applications to frame rails and are not vehicle specific.



2. **NOTE:** Frame rail exterior spot-weld flange view.

   Apply undercoat material to the exterior exposed edges after carrying out the welding and refinishing process.



3. **NOTE:** Cross section view of typical unibody frame rail shown.

   Apply rust inhibitor to the inner surfaces of the rail after carrying out welding process. Use the long wand and insert as far as possible, depress trigger and wait 2-3 seconds and slowly pull the wand to make sure the area is completely fogged.

4. **NOTE:** Full frame vehicle, front rail-to-mid rail section repair shown.

   Apply undercoat material to the exposed surfaces after carrying out the welding process. Make sure to completely cover any bare metal areas.

Refinishing - Environmental Damage

Material

Item	Specification
Motorcraft® Acid Neutralizer ZC-1-A	-
Motorcraft® Alkaline Neutralizer ZC-2-A	-
3MTM Perfect-ItTM Show Car Liquid Wax 39026	-
Motorcraft® Detail Wash ZC-3-A	-

Iron Oxide (Rail Dust) or Acid Rain Decontamination

NOTICE: **In extreme cases of contamination, the vehicle may require refinishing. To avoid paint failure, follow the appropriate decontamination procedure prior to carrying out any panel refinishing procedure.**

NOTE: Iron oxide contamination appears as tiny rust spots on horizontal surfaces and in severe cases can be felt. This damage is typically caused from rail shipment, storage near railroad tracks or fallout from industrial manufacturing facilities.

NOTE: Acid rain contamination can be identified as water spotting and in severe cases staining within the water spots.

1. ***NOTICE:*** **Never paint over iron particles as rust spots will reoccur. Use only the recommended decontamination procedure detailed below.**

   Rinse any dust, dirt and foreign material from the vehicle body with cold water. Flush liberally.

2. Prepare the acid neutralizer by mixing 8 parts of water to 1 part neutralizer in a bucket.

3. ***NOTICE:*** **To avoid paint failure, do not allow the product to dry on the vehicle.**

   NOTE: Use a separate wash mitt for eac to the vehicle.

   Working quickly and beginning at the top of the vehicle and working to the sides, apply the acid neutralizer mix to the entire vehicle. Keep the vehicle wet with the solution and lightly agitate for 5 to 7 minutes. Continue around the vehicle 4 to 5 times. For severe conditions, work the product for up to 8 minutes.

4. Rinse the vehicle completely with cold water to remove the product.

5. Dry only the horizontal surfaces of the vehicle, do not dry the glass at this time.

6. *NOTICE:* **Do not apply the alkaline neutralizer directly to the vehicle plastic trim as the plastic can be damaged.**

   NOTE: Use a separate wash mitt for each product applied to the vehicle.

   NOTE: Alkaline neutralizer is a ready-to-use product. Do not mix with water.

   Pour the alkaline neutralizer into a squirt bottle and apply the solution to a clean wash mitt.

7. *NOTICE:* **To avoid paint failure, do not allow the alkaline neutralizer to dry on the vehicle.**

   Apply the product to the vehicle keeping the solution wet and lightly agitate for 5 to 7 minutes. For severe conditions, work the product for up to 8 minutes.

8. Rinse the vehicle completely with cold water to remove the product.

9. Prepare the detail wash by mixing 29.5 ml (1 oz) with 3.78L (1 gal) of water.

10. Using a clean wash mitt, shampoo the entire vehicle and rinse with cold water. Dry the vehicle completely.

11. Visually inspect the paint surface for any remaining evidence of ferrous metal particles. Repeat procedure as necessary.

12. *NOTICE:* **The High Voltage Traction Battery (HVTB) in a Hybrid Electric Vehicle (HEV) can be affected and damaged by excessively high temperatures. The temperature in some body shop paint booths can exceed 60°C (140°F). Therefore, during refinishing operations, the paint booth temperature must set at or below 60°C (140°F) with a bake time of 45 minutes or less. Temperatures in excess of 60°C (140°F) or bake durations longer than 45 minutes will require the HVTB be removed from the vehicle prior to placing in the paint booth. For additional information, refer to Section 414-03 .**

    If required, proceed with the refinish process following paint manufacturer's guidelines.

Surface Finishing Following Decontamination

1. *NOTICE:* **When attempting to affect a repair by buffing, polishing or color sanding, do not remove an excess of 0.3 MIL of paint film or refinishing will be required.**

   NOTE: Acid rain discoloring or etching may require color sanding in addition to buffing and polishing. In extreme cases, refinishing may be required if the following procedure does not restore the vehicle finish.

   NOTE: Do not intermix buffing products. Use only one manufacturer's product.

   NOTE: Always follow the manufacturer's product usage sequence. Use the appropriate buffing or polishing pad at the recommended buffing speed as specified by the product manufacturer.

   Apply rubbing compound to the vehicle surface as recommended by the product manufacturer.

2. Apply machine glaze to the vehicle surface ammended by the product manufacturer.

3. Use an alcohol and water mixture (1 to 1) to clean the buffed and polished areas. Verify removal of

scratches and swirls before the application of the final polish.

4. Apply a final clear coat polish material by hand, with a dual-action sander and foam pad, or with an orbital polisher and appropriate polishing bonnet.

5. Wash and dry the vehicle.

Refinishing - Manufacturing Damage

Material

Item	Specification
Motorcraft® Detail Wash ZC-3-A	-
Rust Inhibitor ValuGardTM VG104, VG104A (aerosol)	-

⚠ **WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.**

NOTICE: **Protect adjacent areas/substrates when preparing for and during refinishing to avoid overspray damage.**

NOTE: Peeling/delamination concerns can be described as lack of adhesion, either between the substrate and topcoats or between individual coats of paint.

1. Wash the repair area with pH-neutral soap and water.

2. Remove any trim, emblems and hardware from the area to be repaired.

3. **NOTE:** All delamination must be removed.

   Sand or media blast the damaged surface, keeping the repair area as minimal as possible.

4. Treat any bare metal surface to prevent flash corrosion, and prime and block sand as necessary prior to refinishing.

5. Mask the adjacent panels to protect from overspray.

6. ***NOTICE:*** **The High Voltage Traction Battery (HVTB) in a Hybrid Elecle (HEV) can be affected and damaged by excessively high temperatures. The temperature in some body shop paint booths can exceed 60°C (140°F). Therefore, during refinishing operations, the paint booth temperature must set at or below 60°C (140°F) with a bake time of 45 minutes or less. Temperatures in excess of 60°C (140°F) or bake durations longer than 45 minutes will require the HVTB be removed from the vehicle prior to placing in the paint booth. For additional information, refer to Section 414-03 .**

   Spot repair the base coat as necessary, following the paint manufacturer's prescribed procedures.

7. Following paint manufacturer's guidelines, apply clear coat to the entire panel.

Weld-Bonding - Squeeze-Type Resistance Spot Welding (STRW) Method

⚠ WARNING: Collision damage repair must conform to the instructions contained in this workshop manual. Replacement components must be new, genuine Ford Motor Company parts. Recycled, salvaged, aftermarket or reconditioned parts (including body parts, wheels or safety restraint components) are not authorized by Ford.

Departure from the instructions provided in this manual, including alternate repair methods or the use of substitute components, risks compromising crash safety. Failure to follow these instructions may adversely affect structural integrity and crash safety performance, which could result in serious personal injury to vehicle occupants in a crash.

⚠ WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protectioner's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

⚠ **WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.**

NOTE: Corrosion protection needs to be restored whenever it is necessary to grind through painted surfaces or E-coat, or when bare metal repairs are made. For additional information, refer to Restoring Corrosion Protection Following Repair in this section.

NOTE: Weld-bonding is a method used to join metals using Squeeze-Type Resistance Spot Welding (STRW) or Metal Inert Gas (MIG) and structural adhesive. The steps listed in this procedure apply to both types of welding. STRW is the preferred method. MIG welding should only be used when areas to be welded cannot be accessed using STRW -type machinery.

NOTE: Factory spot welds should be substituted with either resistance spot welds or MIG plug welds. Spot/plug welds should equal factory welds in both location and quantity. Do not place a new spot weld directly over an original weld location. Plug weld hole should equal 8 mm (0.31 in) diameter.

1. Verify the vehicle is dimensionally correct on a frame machine. Straighten if necessary.

2. Depower the High Voltage Traction Battery (HVTB) before carrying out any removal or installation procedures affecting the high-voltage battery system. Refer to Section 414-03 for the correct procedure to depower the HVTB system on hybrid-equipped vehicles.

3. Remove damaged panels with an air saw or air chisel. Remove only large portions of the damaged panel. Avoid cutting into mating flanges or adjacent parts.

4. Drill out the spot welds using an appropriate spot-weld cutter and remove the remaining portions of the panel to be replaced.

5. Prepare any damaged flanges on the vehicle using hammer and dolly.

6. Grind the mating surface of the original flanges not greater than 25 mm (0.98 in) where the metal bonding adhesive will be applied.
   - Be sure to remove galvanizing on metal. Metal should have a shiny appearance.
   - Be careful not to damage the corners or thin the metal. The E-coat should also be removed on the opposite side of the flange only where the spot welds are to be placed.

7. Dry-fit and clamp the replacement service parts to verify a correct fit.
   - Remove the service part after verifying correct fit and alignment.

8. **NOTE:** The ends of welding clamps should be insulated on the ends using tape or similar material when welding is carried out.

   Follow manufacturer's prescribed welding procedures and settings. For additional information, refer to Welding Precautions - Steel in this section.

-34. ***NOTICE:*** **Hybrid vehicles contain a High Voltage Traction Battery (HVTB). Before welding near the HVTB , the HVTB must be removed to avoid heat damage. For additional information, refer to Section 414-03 .**

   NOTE: Welding can be carried out anytime during the adhesive curing process, or after the adhesive is fully cured. Welder settings will vary when welding through wet adhesive versus welding through fully cured adhesive. Refer to welder manufacturer's recommended settings for welding through fully cured adhesive. It is recommended to place a shunt weld in an area with no adhesive to make sure of

conductivity, particularly when welding through fully cured adhesive.

Create a test sample.

1. Prepare the metal and adhesive as described. Apply a 6-9 mm (0.23-0.35 in) bead of adhesive and weld the sample.
2. Place the welded sample in a vise and perform destructive weld tests by peeling the scrap metal apart using large lock-type pliers. Measure the weld nugget to determine that the nugget meets Ford weld nugget requirements. If the weld nugget does not meet required size, adjust welder settings until the correct weld nugget size is achieved.
3. When the correct weld nugget size is achieved, the service part can be weld-bonded.

Weld Nugget Chart

Test Thickness of Metal (in millimeters)	Nugget Size
0.7 + 0.7	4.3 mm (0.16 in)
0.7 + 0.7 + 0.7	4.3 mm (0.16 in)
0.9 + 0.9	4.7 mm (0.18 in)
0.9 + 0.9 + 0.9	4.7 mm (0.18 in)
1.0 + 1.0	5.2 mm (0.2 in)
1.0 + 1.0 + 1.0	5.2 mm (0.2 in)
2.0 + 2.0	7.1 mm (0.27 in)
2.0 + 2.0 + 2.0	7.1 mm (0.27 in)
3.0 + 3.0	8.7 mm (0.34 in)
3.0 + 3.0 + 3.0	8.7 mm (0.34 in)
3.0 + 0.7	4.3 mm (0.16 in)
0.7 + 3.0 + 1.0	5.2 mm (0.2 in)
2.0 + 2.0 + 0.7	4.3 mm (0.16 in)
0.9 + 0.9 + 2.0	4.7 mm (0.18 in)
2.0 + 0.9 + 1.0	5.2 mm (0.2 in)
1.0 + 3.0 + 1.0	5.2 mm (0.2 in)
3.0 + 1.0 + 2.0	7.1 mm (0.27 in)
0.9 + 0.7 + 0.9	4.3 mm (0.16 in)

11. **NOTE:** Refer to the product label for preparation and handling instructions.

    Apply a 6-9 mm (0.23-0.35 in) bead of metal bonding adhesive to the vehicle prepared flange surface.

12. Place the service part(s) in the correct position on the vehicle.
    - When positioned, do not pull the component away from the vehicle. If repositioning is necessary, slide the service part(s). This will make sure of correct contact between the components and adhesive.

13. Clamp evenly and tightly. The adhesive contains glass beads which will prevent over-clamping the component.

14. **NOTE:** If welding will not be carried out immediately, allow a minimum of 1.5 to 2 hours of adhesive cure time at 21°C (70°F) before removing clamps. Cure time at lower temperatures should

be increased. Clamps may be removed immediately after the component is welded.

Wipe excess adhesive from the panel before it cures.

15. Finish any cosmetic section seams with fiber-filled body filler. Rough sand the filler, after the adhesive cures, apply conventional body filler and block-sand the area.

16. Use seam sealer wherever a cosmetic seam sealer is required.

17. Mix and apply primer surfacer per Ford-approved paint recommdations.

18. ***NOTICE:*** **The High Voltage Traction Battery (HVTB) in a Hybrid Electric Vehicle (HEV) can be affected and damaged by excessively high temperatures. The temperature in some body shop paint booths can exceed 60°C (140°F). Therefore, during refinishing operations, the paint booth temperature must set at or below 60°C (140°F) with a bake time of 45 minutes or less. Temperatures in excess of 60°C (140°F) or bake durations longer than 45 minutes will require the HVTB be removed from the vehicle prior to placing in the paint booth. For additional information, refer to Section 414-03 .**

    Mix and apply basecoat per paint manufacturer's recommendations.

19. Mix and apply clearcoat per paint manufacturer's recommendations. Refinishing materials may be force-dried following paint manufacturer's recommendations.

20. Apply rust inhibitor or undercoating as required to provide corrosion protection to the repair area.

Weld-Bonding - Metal Inert Gas (MIG) Welding Method

⚠ WARNING: Invisible ultraviolet and infrared rays emitted ng can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

NOTE: Metal Inert Gas (MIG) weld-bonding can be substituted as an alternative to Squeeze-Type Resistance Spot Welding (STRW). It may only be used to weld areas that are inaccessible to STRW machinery. However, when accessible, STRW is the preferred method.

NOTE: Corrosion protection needs to be restored whenever it is necessary to grind through painted surfaces or E-coat, or when bare metal repairs are made. For additional information, refer to Restoring Corrosion Protection Following Repair in this section.

NOTE: Factory spot welds should be substituted with either resistance spot welds or MIG plug welds. Spot/plug welds should equal factory welds in both location and quantity. Do not place a new spot weld

directly over an original weld location. Plug weld hole should equal 8 mm (0.31 in) diameter.

1. Verify the vehicle is dimensionally correct on a frame machine. Straighten if necessary.

2. Depower the High Voltage Traction Battery (HVTB) before carrying out any removal or installation procedures affecting the high-voltage battery system. Refer to Section 414-03 for the correct procedure to depower the HVTB system on hybrid-equipped vehicles.

3. Remove damaged panels with an air saw or air chisel. Remove only large portions of the damaged panel. Avoid cutting into mating flanges or adjacent parts.
    - Drill out the spot welds using an appropriate spot-weld cutter and remove the remaining portions of the panel to be replaced.

4. After removing the damaged sheet metal panel(s), repair any damaged flanges on the vehicle using a hammer and dolly.

5. Using an appropriate grinder, carefully grind around the entire receiving flange area following the original welds. Be sure to remove all E-coat, paint or galvanized coating from the mating surfaces of the joint.
    - Be sure to remove galvanizing on metal. Metal should have a shiny appearance.
    - Be careful not to damage the corners or thin the metal. The E-coat should also be removed on the opposite side of the flange only where the spot welds are to be placed.

6. Repeat the procedure from Step 3 on the mating surface of the replacement service part(s).

7. Prepare the new service panel for plug welds.
    - Using the original panel as a reference, drill or punch 8 mm (0.31 in) diameter holes in the exact number as the original spot welds. The holes should be positioned as close as possible to the original spot weld locations, without lining up exactly on top of an original spot weld site.
    - To make sure of correct weld performance, grind the immediate perimeter of plug weld hole. Grind only in the area of the plug weld, this will keep corrosion to a minimum.

8. Dry-fit and clamp the replacement service parts to verify a correct fit and alignment.
    - Remove the service part after verifying correct fit and alignment.

9. The vehicle prepared flange areas where plug welds will be located must be kept free of adhesive. Apply 25 mm (0.98 in) tape to the plug weld areas to prevent contamination from the adhesive.

10. Prepare the adhesive. Dispense a small amount of metal bonding adhesive from the cartridge to make sure of an even flow of both components. Attach the mixing tip and dispense a mixing tip length of adhesive to make sure of correct mix ratio.

11. **NOTE:** Refer to the product label for preparation and handling instructions.

    Apply a 6-9 mm (0.23-0.35 in) bead of adhesive to the vehicle prepared flange surface. Remove the tape from the plug weld areas.

12. Place the service part(s) in the correct position on the vehicle.
    - When positioned, do not pull the component away from the vehicle. If repositioning is necessary, slide the service part(s). This will make sure of correct contact between the components and adhesive.

13. Clamp evenly and tightly. The adhesive contains glass beads which will prevent over-clamping the

component.

14. **NOTE:** Welding can be carried out anytime during the adhesive curing process, or after the adhesive is fully cured.

    NOTE: If welding will not be carried out immediately, allow a minimum of 1.5 to 2 hours of adhesive cure time at 21°C (70°F) before removing clamps. Cure time at lower temperatures should be increased. Clamps may be removed immediately after the component is welded.

    Wipe excess adhesive from the panel before it cures.

15. Finish any cosmetic section seams with fiber-filled body filler. Rough sand the filler, apply conventional body filler after the adhesive cures and block-sand the area.

16. Usseam sealer wherever a cosmetic seam sealer is required.

17. Mix and apply primer surfacer per Ford-approved paint recommendations.

18. ***NOTICE:*** **The High Voltage Traction Battery (HVTB) in a Hybrid Electric Vehicle (HEV) can be affected and damaged by excessively high temperatures. The temperature in some body shop paint booths can exceed 60°C (140°F). Therefore, during refinishing operations, the paint booth temperature must set at or below 60°C (140°F) with a bake time of 45 minutes or less. Temperatures in excess of 60°C (140°F) or bake durations longer than 45 minutes will require the HVTB be removed from the vehicle prior to placing in the paint booth. For additional information, refer to Section 414-03 .**

    Mix and apply basecoat per Ford-approved paint recommendations.

19. Mix and apply clearcoat per Ford-approved paint recommendations. Refinishing materials may be force-dried following paint manufacturer's recommendations.

20. Apply rust inhibitor or undercoating as required to provide corrosion protection to the repair area.

Plastics Identification

⚠ WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

NOTE: Identification of the various plastic types is necessary to select the appropriate repair methods to make high quality plastic repairs. Plastics can generally be broken down into 2 categories, thermoplastics and thermosetting plastics. Thermoplastics can be remolded by heating. This makes plastic welding a possible repair alternative.

1. **NOTE:** In some instances, a code or material designation is stamped indicating the plastic type.

   Thermoplastics are solvent reactive. Types of thermoplastics include Thermoplastic Olefin (TPO), Polyvinyl Chloride (PVC) and Acrylonitrile Butadiene Styrene (ABS). Polyolefins have an oily or waxy appearance. Examples include some bumper covers, stone shields, fender aprons and fan shrouds. Polyolefins require an adhesion promoter prior to carrying out any refinish procedure.

   - To determine if the part is a polyolefin, grind the damaged area in an out-of-sight area. Grinding a polyolefin will melt and smear the plastic and leave a ragged edge. If the part is non-polyolefin, the area will grind or sand smoothly, producing a powdery dust.

Rigid Plastic Parts

Code	Family Name	Common Trade Name	Typical Application
ABS	Acrylonitrile Butadiene Styrene	ABS, Cycolac, Lustran, Kralistic	A-Pillars, Consoles, Grilles
SMC	Sheet Molded Composite	SMC	Body Panels

Flexible Plastic Parts

Code	Family Name	Common Trade Name	Typical Application
RRIM	Reinforced Reaction Injection-Mold Material PUR	RRIM	Fascias, Body Panels, Body Trims
TPO	Thermoplastic Polyolefin	Polytrope, Renflex, Santropren Telcar, Vistaflex, ETA, Apex, TPO	Bumpers, End Caps, Rubber Strips, Sight Shields, Claddings, Interior B-Post

2. Polyolefin plastic can also be identified by placing a small sliver in a container of water, if the sample floats, it is a polyolefin plastic. A non-polyolefin will sink when placed in a container of water.

3. Generally, thermosetting plastics are rigid or semi-rigid. Sheet-Molded Composite (SMC) is reinforced with glass and other fibers and are strong and rigid. SMC is used for large panels such as hoods, liftgates, fenders and quarter panels.
    - A burn test can be a reliable method to determine if a plastic is a thermosetting plastic. Extreme care must be exercised when using this method.
        - ***NOTICE:*** **The component must be isolated away from the vehicle and all combustible materials to perform this test.**

          Apply an open flame to the corner of the damaged component. If the material crystallizes and becomes hard, it is a thermosetting plastic.

Plastics Refinishing

All Components

⚠ WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Do not paint any air bag module trim covers or deployment doors. Paint may cause the air bag to deploy incorrectly. Failure to follow this instruction may increase the risk of serious personal injury or death in a crash.

NOTE: When using any Ford-approved refinishing product, it is recommended to stay within the same paint system throughout the process. For example, do not use one manufacturer's primers and another manufacturer's topcoats.

1. **NOTE:** Care must be used if applying heat to parts. Thermoplastics soften and tend to lose their shape when heated.

   The first step for any repair or refinish procedure is to identify the type of plastic. Is it thermosetting or thermoplastic, grained or smooth? This will determine how it should be cleaned and prepared for refinishing. For additional information, refer to Plastics Identification in this section.

   - It is essential that the correct cleaner is used, depending on which painting system is employed, solvent-based or water-based.
   - Clean part with warm water/mild detergent, then with plastic cleaner to remove wax, silicone and other contaminants. Do not allow parts to remain wet for extended periods.
   - As a general rule, if water beads on the part, it requires additional cleaning as all the manufacturing release agents have not been removed.

2. New parts may require baking in a spray booth or heating with heat lamps to release trapped solvents or mold release agents used in the manufacturing processes.

Non-grained components

3. After cleaning, lightly sand with 600-grit or finer sandpaper. Remove sanding residue with plastic cleaner and wipe dry.

Grained components

4. After cleaning, light use of a gray scuff pad is permissible providing the graining not be flattened. Remove sanding residue with plastic cleaner and wipe dry.

All components

5. Apply a plastics adhesion promoter to any bare plastic part following manufacturer's recommendation. Throughout the refinish procedure, any time bare plastic is exposed for any reason, it is essential that adhesion promoter be reapplied to that area.

6. A sealer may be required to prevent wrinkling and lifting of the topcoat prior to carrying out the refinish procedure.

7. Flexible and non-flexible components should be refinished separately as a flex additive may be required when refinishing flexible parts (refer to the paint manufacturer's recommendation).

8. It is recommended to carry out refinishing of exterior components on-vehicle (after cut-in) to control color match and blending to adjacent panels.

9. Proceed with the refinish process and follow the Ford-approved paint system procedures. Steps may vary between paint manufacturers.

Plastics Repair

Material

Item	Specification
Plastic Bonding Adhesive TA-9	-

⚠ WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

1. In deciding whether to repair or install a new component, follow these guidelines.
   - Is a part readily available?
   - Can the damaged part be economically returned to its original strength and appearance, or will the labor cost exceed the cost of a new component?
   - Will repair provide for the fastest, highest quality repair?

2. ***NOTICE:*** **Never apply solvents such as lacquer thinner or reducer at any stage of plastic repair. Solvents, cleaners and water are absorbed by many types of plastics and by the glass fibers used for reinforcements. If this occurs, the plastic may swell in the area of repair and cause the repair to fail. Remove cleaners and water quickly and use air and heat to speed up dryg.**

   NOTICE: **During the repair of many plastics and particularly polyolefin plastics, an adhesion promoter must be applied to the substrate to allow repair materials and paint to bond correctly. Reapplication is required when grinding or sanding through the sealer or primered layers.**

   NOTE: When possible, it is recommended to carry out as much of the plastic repair as possible on the vehicle. Parts mounted on the vehicle are held in correct alignment throughout the repair. Attempting to repair the part off the vehicle may cause misalignment. This could lead to failure of the repair.

   Select the correct repair method by identifying the type of plastic being repaired. For additional information, refer to Plastics Identification in this section to determine the type of plastic being repaired.

3. **NOTE:** Always refer to the manufacturer's label directions for the type of repair materials, fillers and bonding agents being used as they are material specific.

   Determine whether a reinforcement piece is needed as a backer on large repairs.

   - Construct a reinforcement piece from a scrap piece of the type of plastic being repaired and follow manufacturer's label directions for the type of system being used.
   - When repairing Sheet-Molded Composite (SMC), a reinforcement piece can be constructed using several layers of glass cloth saturated with resin or structural adhesive. The weave of the cloth or screening should be loose enough to allow the resin to thoroughly penetrate. Reinforcement should cover the entire area of damage and extend outward beyond the

damage or joint area.

Sheet-Molded Composite (SMC) Panel Repair

NOTE: The following procedure applies to repair of structural cracks and large gouges. If damage is cosmetic, use of reinforcing cloth may not be necessary.

1. Panels to be repaired should be dry and at room temperature 18°C (65°F) to 24°C (75°F) prior to carrying out any repairs. Both sides of the panel must be thoroughly cleaned before sanding or grinding.

2. Cover the break in the SMC (front and back) with masking tape. This protects the damaged area from absorbing the prep cleaner and eliminates wicking of the cleaner through the fibers into the SMC .

3. Remove all waxes, silicones, dirt and road oils from the area surrounding both sides of the damaged area with a plastics wax and grease remover.
    - Remove the tape and sand the back of the repair area with an angle grinder, Dual Action (D/A) sander or by hand using 80-grit sandpaper. Remove all dust with a vacuum and tack cloth.

4. Create a reinforcing patch using a piece of scrap SMC that conforms well to the back of the damaged area or form a patch from fiberglass cloth.
    - Cut a section of cloth large enough to cover the repair, plus 25.4 mm (1 in) around the repair area.
    - Cut a section of plastic film backing approximately 25.4 mm (1 in) larger than the cloth. Lay the plastic smooth, flat surface where it will be used to create a pyramid patch.

5. Follow manufacturer's directions and apply plastic repair adhesive to the plastic film backing and smooth with plastic spreader to recommended thickness. Place the pre-cut fiberglass cloth on the adhesive-coated plastic film. Cover the cloth with a coat of repair adhesive and spread to the recommended thickness.

6. Apply the prepared patch to the backside of the panel and compress. Follow manufacturer's instructions for adhesive cure. Remove plastic film after adhesive cures and sand as necessary to remove roughness.

7. Remove masking tape from the front side of damaged area and grind down to the backing patch. Use an angle grinder with a 30- to 40-grit wheel. Make a gradual taper in the area, this will prevent bull's-eyes or read-through in the finished repair. Sand prepared area with a D/A sander or hand-sand with 80-grit sandpaper.

8. Build a pyramid patch using fiberglass cloth or equivalent and plastic repair adhesive. Following manufacturer's directions, apply patch to damaged area.

9. Rough-grind area to remove excess adhesive. Sand repair area with 80-grit sandpaper, making sure to cut slightly below the SMC finished surface. This will allow for a finish coat of plastic body repair material.

10. Apply a finish coat of plastic repair filler material per manufacturer's directions.

11. Finish-sand, prime and topcoat using Ford-approved paint systems.

Thermoplastic Compounds

1. In deciding whether to repair or install a new component, follow these guidelines.
   - Is a part readily available?
   - Can the damaged part be economically returned to its original strength and appearance, or will the labor cost exceed the cost of a new component?
   - Will repair provide for the fastest, highest quality repair?

2. **NOTE:** The following steps are to be used as a guideline. Depending on what brand of adhesives or patch materials are used, procedures may vary slightly.

   Thoroughly clean the damaged area with wax and grease remover formulated for use with plastics.

3. Hand sand the repair area with 80-grit sandpaper and remove any foreign material with compressed air.

4. Apply a plastics adhesion promoter per label directions to the repair area.

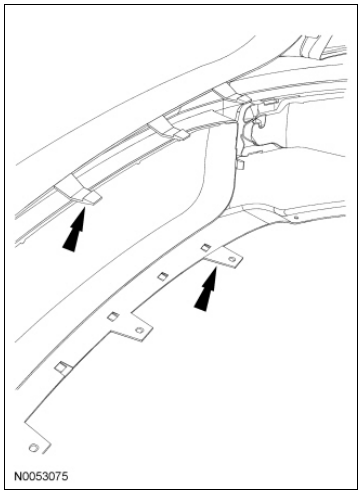
5. For small repairs, a plastic adhesive filler can be applied to the damaged area. Follow manufacturer's directions and build layers to form a thickness above the damaged area. This will allow the area to be sanded smooth.

6. To repair large holes or cracks, measure and cut a piece of fiberglass cloth or equivalent 25.4 mm (1 in) larger than the crack or hole.
   - Apply plastic repair adhesive to the damaged area and immediately apply fiberglass cloth into plastic adhesive for reinforcement. Apply additional plastic repair adhesive for strength and shape as required.

7. Contour and shape the repair as necessary with a D/A sander. Avoid sanding through the repair.

8. Finish-sand the area and carry out any required paint operations using Ford-approved paint systems.

Tab Repair - Bumper



1. **NOTE:** Inspect the bumper cover to determine if part of it can be repaired to an acceptable level of quality of appearance, fit and durability. Will labor and material cost of the repair meet or exceed the cost of a new replacement bumper cover? If the bumper cover is determined to be repairable, proceed to the following steps.

   NOTE: The following steps are to be used as a guideline. Depending on what brand of adhesives or patch materials are used, procedures may vary slightly.

   Remove the affected bumper. For additional information, refer to Section 501-19 .

NOTE: Illustration is not vehicle specific.

2. Clean the broken tab(s) with a plastics wax and grease remover.

3. Hand sand the repair area with 80-grit sandpaper and remove any foreign material with compressed air.

4. Apply a plastics adhesion promoter per label directions to the repair area.

5. Measure and cut a patch of fiberglass cloth or equivalent large enough to form the front of the tab, then slope back in a wedge shape approximately 51 mm (2 in) from original tab.

Inner Body Reinforcing Panels

⚠ WARNING: Collision damage repair must conform to the instructions contained in this workshop manual. Replacement components must be new, genuine Ford Motor Company parts. Recycled, salvaged, aftermarket or reconditioned parts (including body parts, wheels or safety restraint components) are not authorized by Ford.

Departure from the instructions provided in this manual, including alternate repair methods or the use of substitute components, risks compromising crash safety. Failure to follow these instructions may adversely affect structural integrity and crash safety performance, which could result in serious personal injury to vehicle occupants in a crash.

⚠ WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: On vehicles equipped with Safety Canopy® options, prior to carrying out any sectioning repairs near the roof line or sail panel areas of the vehicle, remove the Safety Canopy® module and related components. Failure to comply may result in accidental deployment or damage to

the Safety Canopy®. Refer to Section 501-20B . Failure to follow these instructions may result in serious injury to technician or vehicle occupant(s).

⚠ WARNING: Do not cut or grind body side components within 50 mm (1.96 in) of restraint anchoring points. Welding within 50 mm (1.96 in) of restraint anchoring points may result in incorrect operation of restraint devices. For additional restraints anchoring location information, refer to Section 501-20A and Section 501-20B . Failure to follow these instructions may result in serious injury to vehicle occupant(s).

⚠ WARNING: Do not carry out body side sectioning repairs in areas of laser welds. Factory laser welds cannot be duplicated with conventional welding equipment and structural integrity may be compromised. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

⚠ WARNING: Do not carry out body side sectioning repairs in areas of door hinge or striker anchoring points. Welding within 50 mm (1.96 in) of door hinge or striker locations may compromise structural integrity during a collision. Failure to follow these instructions may result in serious injury to vehicle occupant(s).

NOTE: Factory spot welds may be substituted with either Squeeze-Type Resistance Spot Welding (STRW) or Metal Inert Gas (MIG) plug welds. Spot/plug welds should equal factory welds in both location and quantity. Do not place a new spot weld directly over an original weld location. Plug weld hole should equal 8 mm (0.31 in) diameter.

1. ***NOTICE:*** **Hybrid vehicles contain a High Voltage Traction Battery (HVTB). Before welding near the HVTB , the HVTB must be removed to avoid heat damage. For additional information, refer to Section 414-03 .**

   NOTICE: **Electronic modules and related wiring may be damaged when exposed to heat from welding procedures. Carefully disconnect and remove, or position away from heat-affected areas. For additional information, refer to Welding Precautions - Steel in this section.**

   Detrim the vehicle and remove the outer body sheet metal from the affected area, prior to performing any reinforcing panel replacement. For additional information, refer to Sectioning Guidelines in this section.

2. Where possible, create a backer piece using a portion of the old panel. This will create a stronger joint.

3. When welding overlapping surfaces or substrates, apply a weld-through primer between the surfaces prior to welding.
   - Make sure horizontal joints and flanges are correctly sealed with seam sealer to prevent moisture intrusion. Water and moisture migrate to horizontal joints and corrosion tends to occur more rapidly in these areas. Metal surfaces must be clean and dry before applying seam sealer.

4. ***NOTICE:*** **The High Voltage Traction Battery (HVTB) in a Hybrid Electric Vehicle (HEV) can be affected and damaged by excessively high temperatures. The temperature in some body shop paint booths can exceed 60°C (140°F). Therefore, during refinishing operations, the paint booth temperature must set at or below 60°C (140°F) with a bake time of 45 minutes or less. Temperatures in excess of 60°C (140°F) or bake durations longer than 45 minutes will require the HVTB be removed from the vehicle prior to placing in the paint booth. For additional information, refer to Section 414-03 .**

   Refinish the repair area as required, per Ford-apppaint guidelines. apply corrosion protection to the

repair area as required.

Roof Panel

Seam Sealer TA-2	-

Roof Assembly

NOTE: Windshield header damper assembly, part No. 034A08, is used on Ford models only and is provided as a separate service component.

Item	Part Number	Description
1	50202	Roof panel - mild steel

2	42220	Rear window frame - High-Strength Low Alloy (HSLA) 350 steel
3	51269	Roof bow - HSLA 350 steel
4	034A08	Damper - mild steel
5	03410	Windshield header - HSLA 350 steel

Removal

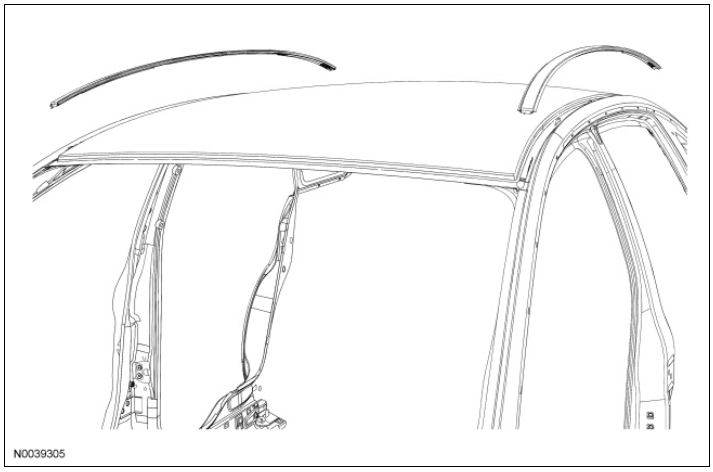
⚠ W damage repair must conform to the instructions contained in this workshop manual. Replacement components must be new, genuine Ford Motor Company parts. Recycled, salvaged, aftermarket or reconditioned parts (including body parts, wheels or safety restraint components) are not authorized by Ford.

Departure from the instructions provided in this manual, including alternate repair methods or the use of substitute components, risks compromising crash safety. Failure to follow these instructions may adversely affect structural integrity and crash safety performance, which could result in serious personal injury to vehicle occupants in a crash.

⚠ WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

NOTICE: **Be sure to adequately protect all glass, exterior finish and interior trim to avoid damage during the repair procedure.**

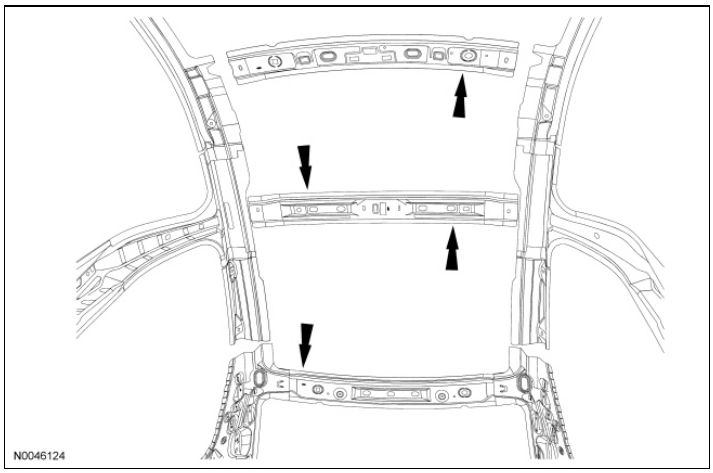


NOTE: The roof panel is affixed using a process not previously employed on a Ford Motor Company vehicle. The driver and passenger sides of the roof panel are laser skip-welded. Installation of a new roof panel will employ a weld-bonding technique. The use of mechanical welding and chemical bonding are both part of the installation technique.

1. Depower the High Voltage Traction Battery (HVTB) before carrying out any removal or installation procedures affecting the high-voltage battery system. Refer to Section 414-03 for the correct procedure to depower the HVTB system on hybrid-equipped vehicles.

2. Remove the windshield and rear window glass. For additional information, refer to Section 501-05 .

3. Remove the headliner. For additional information, refer to Section 501-05 .



4. Remove the roof ditch mouldings.

5. **NOTE:** For installation purpose, particular attention must be paid to the depth (thickness) of the sealer removed.

   Using a Heat Gun and a narrow scraper, remove the sealant along the entire length of the roof sides. Remove sealer as completely as possible.

6. From inside the vehicle, leaving as much of the foam as possible intact, separate the NVH foam along the roof bows from the roof panel using a flexible and sharp broad scraper or knife.

7. Remove (drill out) all the roof panel spot welds from the windshield and rear window glass openings.

8. Using a cut-off wheel, plasma cutter or an air hammer equipped with a panel cutter bit, carefully separate the panel from the vehicle by cutting the entire length along the inner portion of the roof ditch seam on each side of the roof panel.

9. **NOTE:** If the windshield header is damaged and requires service, Ford and Mercury models use a damper which is welded to the header and is serviced as a separate component. The damper can be transferred to the replacement header if it is not damaged.

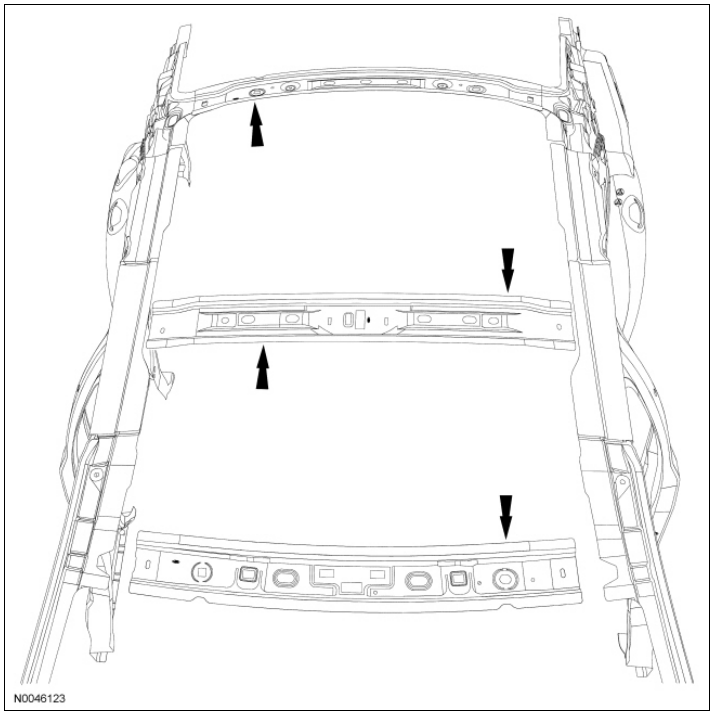
   With the help of an assistant, remove the roof panel from the vehicle.

10. Using an air hammer equipped with a flat chisel, remove the remaining portion of the roof panel from the roof ditch area.

Installation

NOTICE: **The High Voltage Traction Battery (HVTB) in a Hybrid Electric Vehicle (HEV) can be affected and damaged by excessively high temperatures. The temperature in some body shop paint booths can exceed 60°C (140°F). Therefore, during refinishing operations, the paint booth temperature must set at or below 60°C (140°F) with a bake time of 45 minutes or less. Temperatures in excess of 60°C (140°F) or bake durations longer than 45 minutes will require the HVTB be removed from the vehicle prior to placing in the paint booth. For additional information, refer to Section 414-03 .**

NOTICE: **Be sure to adequately protect all glass, exterior finish and interior trim to avoid damage during the repair procedure.**



1. Using a hammer any, straighten any damage caused to flange areas during removal.

2. Using a grinder, carefully prepare the roof ditch area for the new roof panel.

3. With the help of an assistant, position the new roof panel on the vehicle.

4. Properly align and index-mark the positioning of the panel-to-vehicle and remove the panel.

5. Apply a 13 mm (0.51 in) tall bead of seam sealer TA-2 directly to the NVH foam remaining on the roof bows and immediately reinstall the roof panel aligning it to the index marks made during the test fitting.
   - If necessary, application of flexible foam repair (locally obtained), may be used with the seam sealer.

6. Make sure good contact is made with the sealer and carefully clamp the roof panel on all sides.

7. Using the resistance spot welder, weld the roof panel to the vehicle in the windshield and rear window glass areas. Spot welds should match factory welds in both location and quantity.

8. Using the Metal Inert Gas (MIG) welder, seam-weld the roof panel sides with 10 mm (0.39 in) long weld beads spaced 40 mm (1.57 in) apart. Each corner must have a 10 mm (0.39 in) weld bead applied.

9. Prepare the repair area for refinish material application following the paint manufacturer's recommendations.

10. Apply a quality primer-sealer following the paint manufacturer's recommendation for both compatibility and application.

11. **NOTE:** Always use refinishing materials from a single paint manufacturer. Combining products from more than one manufacturer may result in refinishing material incompatibility issues and potential void of warranty for each product applied.

    If required, follow up with a quality primer-surfacer following the paint manufacturer's recommendations. Block sand to level using the recommended grit sandpaper.

12. ***NOTICE:*** **Failure to purge air bubbles from the roof ditch sealer may result in air trapped in the roof ditch which may cause refinishing materials to pop.**

    Stand the roof ditch sealer vertically (nose up) for a minimum of 30 minutes prior to application to permit trapped air to rise to the top so it may be purged.

13. Position the vehicle so it is level front-to-rear.

14. Using masking tape, form a dam at each end of the roof ditch (both sides) to prevent roof ditch sealer run-off.

15. Apply the roof ditch sealer following product directions to a depth equal to the sealer noted during removal.

16. Allow the material to cure 40-60 minutes at room temperature before refinishing. If roof ditch sealer has been allowed to cure in excess of 2 hours, scuff the surface using a red scuff pad.

17. Refinish the roof and repair area following Ford-approved paint system recommendations.

18. Allow refinishing materials sufficient cure time to permit safe handling (refer to paint manufacturer's specification) and install the roof ditch moulding.

19. Install the headliner. For additional information, refer to Section 501-05 .

20. Install the windshield and rear window glass. For additional information, refer to Section 501-11 .

Door Outer Panel

Special Tool(s)

 ST1073-A	Heat Gun 107-R0300
 ST2956-A	Pro 230 MIG Welder 208-00030

Material

Item	Specification
Metal Bonding Adhesive TA-1	-
Rust Inhibitor ValuGardTM VG104, VG104A (aerosol)	-

Door Assembly

NOTE: Front door shown, rear door similar.

Item	Part Number	Description
1	20205 LH/ 20204 RH	Door outer panel - mild steel
2	-	Upper belt reinforcement (part of door assembly) - mild steel
3	20125 LH/ 20124 RH	Door assembly - mild and High-Strength Steel (HSS)

⚠ WARNING: Collision damage repair must conform to the instructions contained in this workshop manual. Replacement components must be new, genuine Ford Motor Company parts. Recycled, salvaged, aftermarket or reconditioned parts (including body parts, wheels or safety restraint

components) are not authorized by Ford.

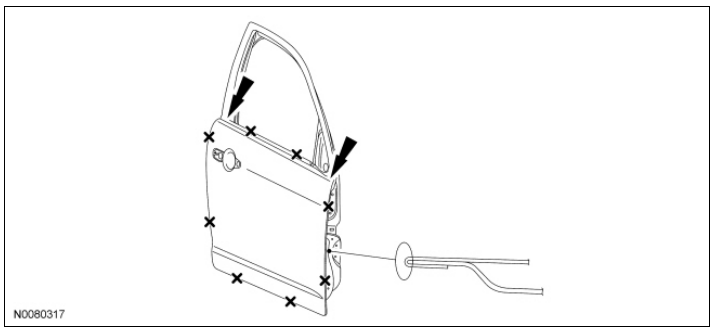
Departure from the instructions provided in this manual, including alternate repair methods or the use of substitute components, risks compromising crash safety. Failure to follow these instructions may adversely affect structural integrity and crash safety performance, which could result rsonal injury to vehicle occupants in a crash.

⚠ WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

1. Remove the door trim panel from the affected door and window glass. For additional information, refer to Section 501-11 .

2. Remove the outside door handle and mirror assembly. For additional information, refer to Section 501-09 .



3. Remove door trim including mouldings and weatherstrips.

4. Remove the door assembly and secure on a workstand.

5. ***NOTICE:*** **Use extreme care to avoid cutting the door shell or inner panel.**

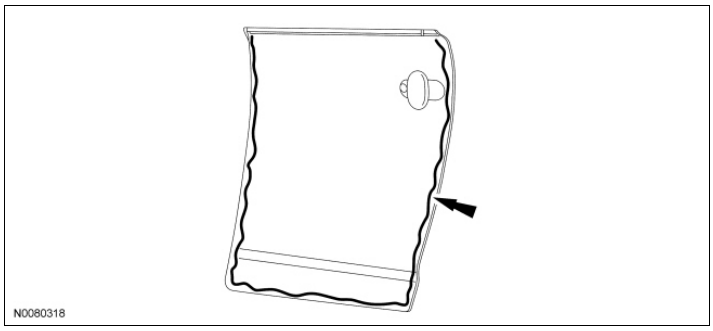
   Using a high-speed cut off wheel, make cuts to the beltline portion of the outer panel in the areas indicated by the arrows.

   - Using a grinder, grind along the perimeter of the outer door panel hem to separate the hem edges as indicated in the illustration.

6. **NOTE:** The use of a heat gun may be required to soften door panel adhesive.

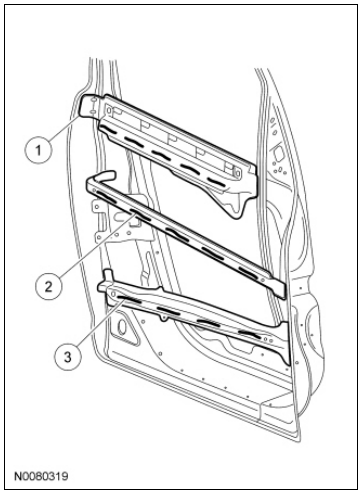
   Prior to removing the outer panel, use a sharp knife to cut the adhesive between the door outer panel, flutter beam, beltline reinforcement and intrusion beam.

   - Using a flat-blade chisel or equivalent, remove the original panel.
   - Using a sharp knife or broad edge scraper, remove the remaining portion of the hem flange from the door shell.



- Remove any remaining adhesive from the door shell flange.

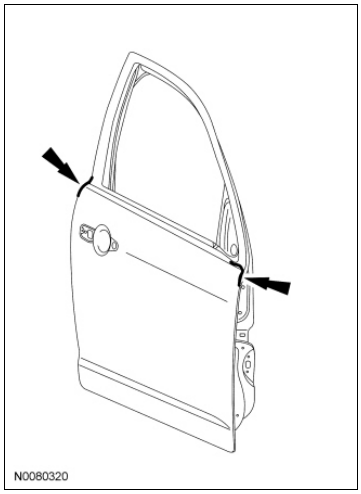
7. Trial fit the service replacement panel to the door shell assembly and carefully mark the cut lines on the panel to match the cut lines on the original panel.



8. Cut the service replacement panel and recheck the fit to make sure of proper alignment.

9. Temporarily secure the outer panel to the door assembly and install on the vehicle to verify correct alignment and fit.

10. Prepare the service replacement panel joint areas by grinding clean all mating surfaces.



11. Prepare the door shell assembly by grinding all the mating surfaces including:
    1. the inner hem and outer belt reinforcement.
    2. the flutter beam.
    3. the intrusion beam.

12. Apply metal bonding adhesive to the following areas: service replacement hem flange, intrusion beam-to-outer panel, flutter beam-to-outer panel, and outer belt reinforcement-to-outer panel.

13. Position and align the new door skin to the door shell assembly, carefully turn the assembly over and begin the hemming process.
    - Using a door panel installation tool or the hammer and dolly method, close the perimeter door hem and smooth any residual adhesive in the joints.

14. Turn the door over and Metal Inert Gas (MIG) weld the upper beltline joint. Finish grind and trial fit the upper beltline moulding and mirror.

15. Prime and paint the door using Ford approved paint system.

16. Apply rust inhibitor inside the door to all hem areas and upper beltline area. For additional information, refer to Restoring Corrosion Protection Following Repair in this section.

17. Reassemble and install door and align. For additional information regarding door fitment specifications, refer to Body in this section.

5	17B750 LH/ 17B749 RH	Bumper bracket - mild steel
6	-	Subframe nut

⚠ WARNING: Collision damage repair must conform to the instructions contained in this workshop manual. Replacement components must be new, genuine Ford Motor Company parts. Recycled, salvaged, aftermarket or reconditioned parts (including body parts, wheels or safety restraint components) are not authorized by Ford.

Departure from the instructions provided in this manual, including alternate repair methods or the use of substitute components, risks compromising crash safety. Failure to follow these instructions may adversely affect structural integrity and crash safety performancesult in serious personal injury to vehicle occupants in a crash.

⚠ WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Frame rail crush zones absorb crash energy during a collision and must be replaced if damaged. Prior to replacement of frame rail crush zones, straighten damaged frame rails to correct frame dimensions. Failure to follow these instructions may adversely affect frame rail crush zone performance and may result in serious personal injury to vehicle occupants in a crash.

⚠ WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

NOTE: Corrosion protection needs to be restored whenever it is necessary to sand or grind through painted surfaces or E-coat, or when bare metal repairs are made. For additional information, refer to Restoring Corrosion Protection Following Repair in this section.

NOTE: Observe prescribed welding procedures when carrying out repairs to the frame assembly. For additional information, refer to Welding Precautions - Steel in this section.

NOTE: The following repair procedure illustrates the sectioning of the lower front apron rail inner and outer assemblies. Damage extending beyond this area requires the entire frame rail be replaced at the original factory seams.

All vehicles

1. Position the vehicle on a frame repair rack following the manufacturer's recommendations. Measure the vehicle to determine if the body requires straightening and alignment. If necessary, rough pull the vehicle to restore the vehicle to manufactured dimensions. For dimensional information, refer to Body in this section.
    - Remove the front bumper. For additional information, refer to Section 501-19 .
2. On non-hybrid vehicles remove the battery. For additional information, refer to Section 414-01 .
3. Remove the fender(s) from the affected side(s). For additional information, refer to Section 501-02 .

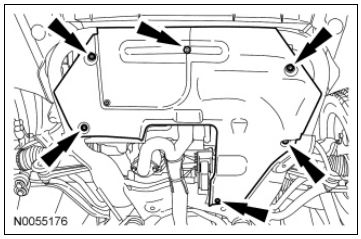
Hybrid vehicles

4. Depower the High Voltage Traction Battery (HVTB) before carrying out any removal or installation procedures affecting the high-voltage battery system. Refer to Section 414-03 for the correct procedure to depower the HVTB system.

Left hand side

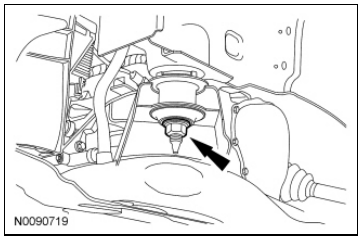
5. Remove the Air Cleaner (ACL), intake air resonator and bracket. For additional information, refer to the appropriate 303-12 section.

Right hand side



6. Remove the windshield washer reservoir. For additional information, refer to Section 501-16 .

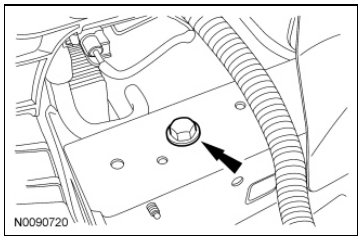
All vehicles



7. **NOTE:** MKZ shown, Fusion similar.

   Remove the bolts and the underbody shield, if equipped.

    - To install, tighten to 7 Nm (62 lb-in).



8. Remove the subframe nut from the affected side.
    - To install, tighten to 150 Nm (111 lb-ft).

9. **NOTE:** The original subframe bolt is welded to the frame rail.

   Remove the subframe bolt.

   - Grind off the head of the bolt.
   - Drive the bolt out and discard.

10. ***NOTICE:*** **The frame rail must not be cut or welded at the factory locator line.**

    Mark and measure the outer rail.

    - Identify the locator line on the frame outer rail.
    - Measure 30 mm (1.181 in) forward of locator line and scribe.

11. ***NOTICE:*** **The frame rail must not be cut or welded at the factory locator line.**

    Mark and measure the inner frame rail.

    - Identify the locator line on the frame inner rail.
    - Measure 50 mm (1.968 in) rearward of the locator line and scribe.

12. **NOTE:** Factory spot welds may be substituted with either resistance spot welds or Metal Inert Gas (MIG) plug welds. Spot/plug welds should equal factory welds in both location and quantity. Do not place a new spot weld directly over an original weld location. Plug weld hole should equal 8 mm

(0.31 in) diameter.

Drill out all the spot welds forward of the scribe line made on the inner frame rail.

13. Using a die-grinder, plasma cutter or reciprocating saw, carefully cut the OUTER RAIL ONLY along the scribe line and remove the outer frame rail.

14. Using a die-grinder, plasma cutter or reciprocating saw, carefully cut the INNER RAIL ONLY along the scribe line and remove the inner frame rail. Clean surfaces with metal surface prep or equivalent.

Installation

All vehicles

1. Measure mark and cut 50 mm (1.968 in) rearward of the locator line on the replacement INNER frame rail.

2. Prepare all the mating surfaces for MIG welding.
    1. Chamfer the mating surfaces of the inner frame rail on the vehicle and the replacement rail from the inside to improve butt weld condition. Clean metal surfaces with metal surface prep or equivalent.
    2. Remove E-coat from the immediate weld area on the vehicle frame rail and the replacement rail section.
    3. Apply a commercially available weld-through primer to the immediate weld area on both mating surfaces.

3. Install and clamp the replacement inner frame rail in position. Verify correct dimensions. For additional information, refer to Body in this section.

4. Seam weld along the inside of the section joint using a MIG welder and ER70S-3 wire 0.9 mm (0.035 in) to 1.1 mm (0.043 in) diameter.

5. Use a dye penetrant to determine if any cracks or voids exist in the weld joint. If cracks or other defects exist, grind out the defect and repair until the weld is free of defects.

6. Measure mark and cut 30 mm (1.181 in) forward of the locator line on the replacement outer frame rail.

7. Prepare all the mating surfaces for MIG welding.
    1. Chamfer the mating surfaces of the outer frame rail on the vehicle and the replacement rail from the inside, to improve butt weld condition.
    2. Remove E-coat from the immediate weld area on the vehicle frame rail and the replacement rail section.
    3. Apply a commercially available weld-through primer to the immediate weld area on both mating surfaces.

8. If Squeeze-Type Resistance Spot Welding (STRW) is to be replaced with MIG plug welds, drill 8 mm (0.314 in) plug weld holes in the replacement outer frame rail mating flange. These must equal factory spot welds in both location and quantity.
    1. Remove E-coat from the immediate weld area of both inner and outer frame rail mating surfaces.
    2. Apply a commercially available weld-through primer to the immediate weld area only on the mating surfaces.
        - If resistance spot welds are to be used on the frame rail flange surfaces, E-coat

preparation is not necessary.

9. Position and clamp the replacement outer frame rail to the inner frame rail. All mating surfaces must make full contact.
    - Verify correct dimensions. For additional information, refer to Body in this section.

10. Seam weld the butt joint using a MIG welder and ER70S-3 wire 0.9 mm (0.035 in) to 1.1 mm (0.043 in) diameter.

11. Using a MIG welder or STRW welder, plug or spot weld the inner and outer frame rail flange mating surfaces.
    - Restore corrosion protection to the inner and outer surface of the repair area. For additional information, refer to Restoring Corrosion Protection Following Repair in this section.

12. Install new subframe bolt and position the subframe in place.
    - Install the subframe washer and nut. Tighten to 150 Nm (111 lb-ft).

13. Remove E-coat from the immediate weld area of the frame rail and bumper mounting bracket.
    - Apply a commercially available weld-through primer to the immediate weld area only on both mating surfaces.

14. Clamp the replacement bumper bracket to the vehicle, install the steel bumper and verify correct dimensions and alignment. Remove the bumper.

15. Seam weld the butt joint using a MIG welder and ER70S-3 wire 0.9 mm (0.035 in) to 1.1 mm (0.043 in) diameter.

16. Restore corrosion protection to the inner and outer surface of the repair area. For additional information, refer to Restoring Corrosion Protection Following Repair in this section.

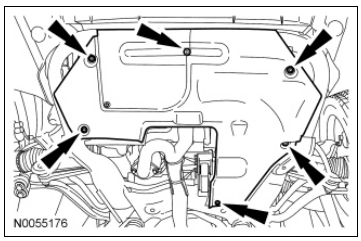
17. Refinish the outer portion of the repair following Ford-approved paint recommendations.

18. ***NOTICE:*** **The High Voltage Traction Battery (HVTB) in a Hybrid Electric Vehicle (HEV) can be affected and damaged by excessively high temperatures. The temperature in some body shop paint booths can exceed 60°C (140°F). Therefore, during refinishing operations, the paint booth temperature must set at or below 60°C (140°F) with a bake time o minutes or less. Temperatures in excess of 60°C (140°F) or bake durations longer than 45 minutes will require the HVTB be removed from the vehicle prior to placing in the paint booth. For additional information, refer to Section 414-03 .**

    Refinish the outer portion of the repair following Ford-approved paint recommendations.

Right hand side

19. Install the windshield washer reservoir. For additional information, refer to Section 501-16 .



Left hand side

20. Install the ACL bracket, ACL and intake resonator. For additional information, refer to the appropriate 303-12 section.

All vehicles

21. Install the underbody shield and bolts, if equipped.

- To install, tighten to 7 Nm (62 lb-in).

22. Install the fender(s) on the affected side(s). For additional information, refer to Section 501-02 .

23. Install the bumper. For additional information, refer to Section 501-19 .
    - On hybrid vehicles, repower the HVTB . For additional information, refer to Section 414-03 .

24. On non-hybrid vehicles, install the battery. For additional information, refer to Section 414-01 .

4	17787	Rear bumper brackets - HSLA 300 steel

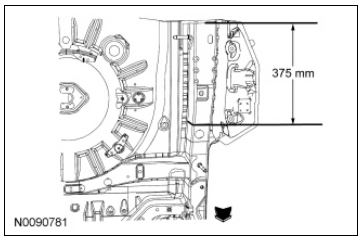
⚠ WARNING: Collision damage repair must conform to the instructions contained in this workshop manual. Replacement components must be new, genuine Ford Motor Company parts. Recycled, salvaged, aftermarket or reconditioned parts (including body parts, wheels or safety restraint components) are not authorized by Ford.

Departure from the instructions provided in this manual, including alternate repair methods or the use of substitute components, risks compromising crash safety. Failure to follow these instructions may adversely affect structural integrity and crash safety performance, which could result in serious personal injury to vehicle occupants in a crash.

⚠ WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

⚠ WARNING: Frame rail crush zones absorb crash energy during a collision and must be replaced if damaged. Prior to replacement of frame rail crush zones, straighten damaged frame rails to correct frame dimensions. Failure to follow these instructions may adversely affect frame rail crush zone performance and may result in serious personal injury to vehicle occupants in a crash.

⚠ WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.



NOTE: Corrosion protection needs to be restored whenever it is necessary to sand or grind through painted surfaces or E-coat, or when bare metal repairs are made. For additional information, refer to Restoring Corrosion Protection Following Repair in this section.

NOTE: Observe prescribed welding procedures when carrying out repairs to the frame assembly. For additional information, refer to Welding Precautions - Steel in this section.

NOTE: The following repair procedure illustrates the sectioning of the rear frame rail assembly. Damage extending beyond this area requires the entire frame rail be replaced at the original factory seams.

1. Position the vehicle on a frame repair rack following the manufacturer's recommendations. Measure the vehicle to determine if the body requires straightening and alignment. For additional dimensional information, refer to Body in this section.
    - Remove the rear bumper. For additional information, refer to Section 501-19 .
2. Depower the High Voltage Traction Battery (HVTB) before carrying out any removal or installation procedures affecting the high-voltage battery system. Refer to Section 414-03 for the correct procedure to depower the HVTB system on hybrid-equipped vehicles.
3. Position aside the exhaust system (if required).
4. Drill out the spot welds and remove the bumper bracket.

5. Measure and mark 375 mm (14.763 in) forward of the bumper bracket attachment flange on the frame rail of the affected side.

6. ***NOTICE:*** **If equipped, the frame rail must not be cut or welded at the factory locator line.**

   Using a die-grinder, plasma cutter or reciprocating saw, carefully cut the rear frame rail at the mark.

7. ***NOTICE:*** **Do not drill pilot holes in an attempt to aid in spot weld removal.**

   Drill out the spot welds using a spot weld cutter or equivalent rearward of the rail mark and remove the rail section.

Installation

1. Measure and mark 375 mm (14.763 in) forward of the bumper bracket attachment flange on the replacement frame rail.

2. ***NOTICE:*** **Hybrid vehicles contain a High Voltage Traction Battery (HVTB). Before welding near the HVTB , the HVTB must be removed to avoid heat damage. For additional information, refer to Section 414-03 .**

   NOTE: Factory spot welds may be substituted with either resistance spot welds or Metal Inert Gas (MIG) plug welds. Spot/plug welds should equal factory welds in both location and quantity. Do not place a new spot weld directly over an original weld location. Plug weld hole should equal 8 mm (0.31 in) diameter.

   Prepare all mating surfaces for MIG welding.

   1. Grind smooth all spot weld nuggets on the vehicle floor pan.
   2. Drill or punch plug weld holes in the replacement frame rail.
   3. Chamfer the mating surfaces of the inner frame rail and the replacement rail section.
   4. Remove the E-coat from the immediate weld area on the vehicle frame rail and the replacement rail section. Clean the surfaces with metal surface prep or equivalent.

5. Apply a commercially available weld-through primer to the immediate weld area only, on all mating surfaces.

3. Install and clamp the replacement frame rail to the vehicle. Verify correct dimensions and alignment. For additional information, refer to Body in this section.

4. Seam weld the section joint using a MIG welder and ER70S-3 wire 0.9 mm (0.035 in) to 1.1 mm (0.043 in) diameter.

5. Plug weld the replacement rail to the floor pan using a MIG welder and ER70S-3 wire 0.9 mm (0.035 in) to 1.1 mm (0.043 in) diameter.

6. Use a dye penetrant to determine if any cracks or large voids exist in the weld joint. If cracks or other defects exist, grind out the defect and repair until the weld is defect free.

7. Position and install the bumper bracket.

8. ***NOTICE:*** **The High Voltage Traction Battery (HVTB) in a Hybrid Electric Vehicle (HEV) can be affected and damaged by excessively high temperatures. The temperature in some body shop paint booths can exceed 60°C (140°F). Therefore, during refinishing operations, the paint booth temperature must set at or below 60°C (140°F) with a bake time of 45 minutes or less. Temperatures in excess of 60°C (140°F) or bake durations longer than 45 minutes will require the HVTB be removed from the vehicle prior to placing in the paint booth. For additional information, refer to Section 414-03 .**

   Apply rust inhibitor to the inner surface of the repair area. Refinish the exterior following Ford-approved paint procedures.

9. Apply undercoating to the exterior surface of the frame rail.

10. Reinstall the exhaust components as required.

11. Reinstall the bumper assembly. For additional information, refer to Section 501-19 .

Torque Specifications

Description	Nm	lb-ft	lb-in

[a] Refer to the procedure in this section.

Subframe and Mounting Systems

Front Subframe

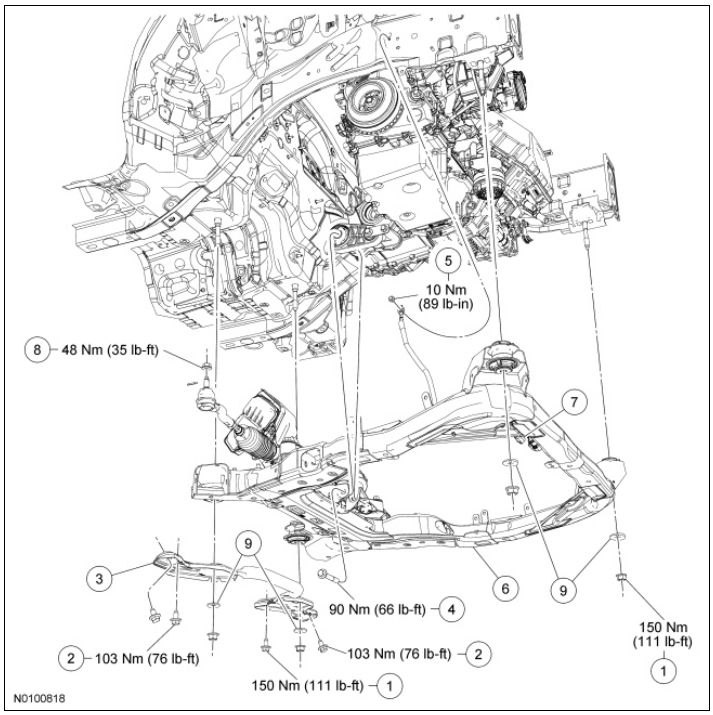
The front subframe is bolted to the body and is used to:

- aid in structural support.
- provide mounting surfaces for the front suspension control arms.
- provide a mounting point for the engine isolators.
- provide the mounting surface for the steering gear.
- provide the mounting surface for the sway bar.

Rear Subframe

The rear subframe is bolted to the body and is used to:

- aid in structural support.
- provide the mounting surface for the rear suspension upper control arms, rear suspension lower control arms and (if equipped) a mounting location for the rear differential.



Underbody misalignment can affect front and rear wheel alignment, the operation of the suspension parts and drivetrain operation. Door and window opening concerns and air or water leaks at the doors are often caused by incorrectly tightened bolts and body misalignment. For information on underbody dimensions, refer to Section 501-35 .

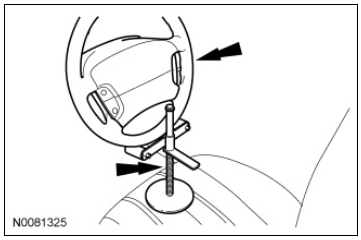
Removal



All vehicles

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

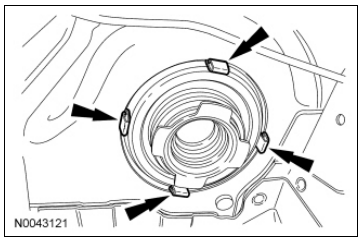
Vehicles equipped with Electronic Power Assist Steering (EPAS)

2. **NOTE:** Use a steering wheel holding device (such as Hunter® 28-75-1 or equivalent).

   Using a suitable holding device, hold the steering wheel in the straight-ahead position.

3. Remove the 2 lower steering column shaft joint cover nuts and the cover.

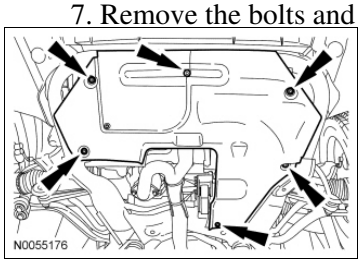
4. ***NOTICE:*** **Do not allow the steering column to rotate while the steering column shaft is disconnected from the steering gear or damage to the clockspring may occur. If there is**



evidence that the steering column has rotated, the clockspring must be removed and recentered. For additional information, refer to Section 501-20B .

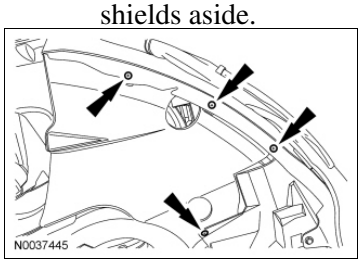
Remove the bolt and disconnect the steering column shaft from the steering gear.

- Discard the bolt.



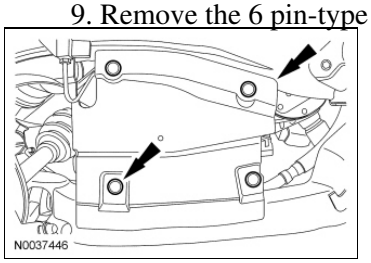
5. *NOTICE:* **Remove the steering gear/dash seal or damage to the seal may occur.**

   Remove the steering gear/dash seal.



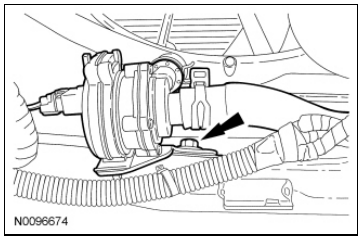
All vehicles

6. Remove the wheels and tires. For additional information, refer to Section 204-04 .
7. Remove the bolts and the underbody shield, if equipped.

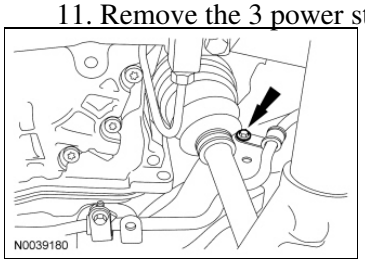


8. **NOTE:** RH side shown, LH side similar.

   Remove the 4 screws from each side and position the RH and LH fender splash shields aside.

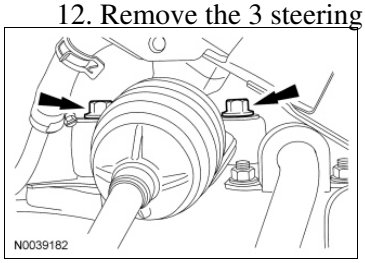


9. Remove the 6 pin-type retainers (4 shown) from the LH and RH splash shields.



2.5L Hybrid

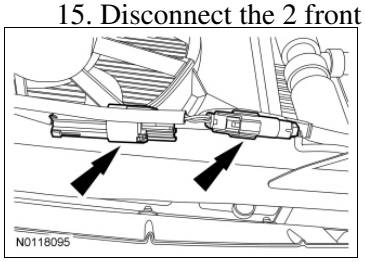
10. Remove the Motor Electronics Cooling System (MECS) bolt and position the MECS aside.



Vehicles equipped with Hydraulic Power Assist Steering (HPAS)

11. Remove the 3 power steering return line bolts.

12. Remove the 3 steering gear mounting bolts.

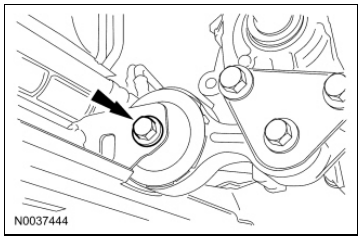


13. **NOTE:** The steering gear is not removed with the front subframe and must be positioned aside.

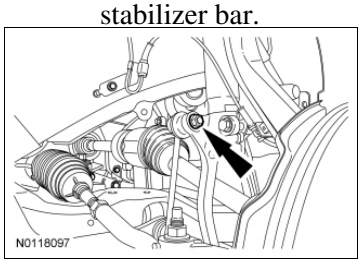
    Position the steering gear aside using mechanic's wire.

Vehicles equipped with EPAS

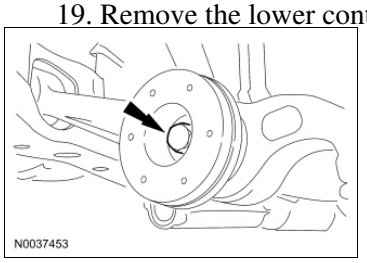
14. Remove the exhaust flexible pipe. For additional information, refer to Section 309-00 .
15. Disconnect the 2 front EPAS in-line electrical connectors and the 4 wiring retainers.



16. Remove the EPAS ground wire bolt.
    - To install, tighten to 10 Nm (89 lb-in).

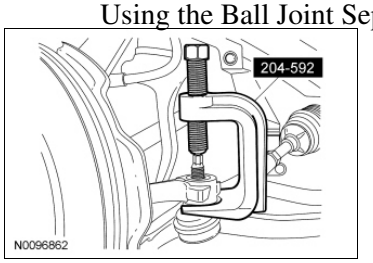


All vehicles



17. Remove the bolt from the roll restrictor.

18. Remove the 2 upper stabilizer bar link nuts (one each side) and separate from the stabilizer bar.



19. Remove the lower control arm-to-strut through bolts and flagnuts.

20. Remove the 2 outer tie-rod end cotter pins and nuts.
    - Discard the cotter pins.
21. ***NOTICE:*** **Do not use a hammer to separate the outer tie-rod end from the wheel knuckle or damage to the wheel knuckle may result.**

    Using the Ball Joint Separator, separate the outer tie-rod ends from the knuckle.

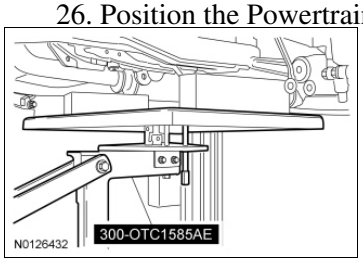
22. **NOTE:** Left side shown.

    Remove the front lower arm-to-subframe bolts.

    - Discard the bolts.

23. **NOTE:** Left side shown.

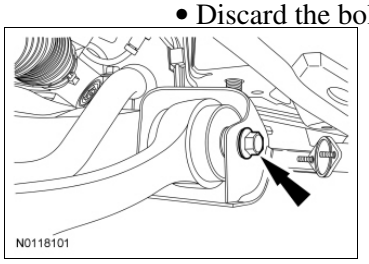
    Remove the brake flexible hose bracket-to wheel knuckle bolts and position the hose and brackets aside.



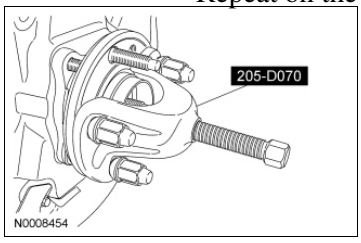
24. **NOTE:** Left side shown.

    NOTE: Apply the brake to keep the halfshaft from rotating.

    Remove and discard the wheel hub nuts.



25. Using a wax pencil (or equivalent) apply witness marks to the vehicle and subframe to aid in installation.
26. Position the Powertrain Lift under the subframe.

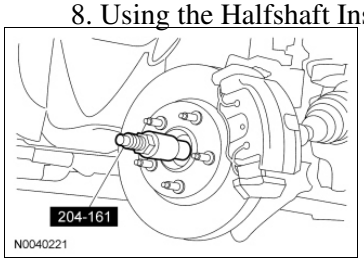


27. Remove the 4 front subframe support bracket bolts.
28. Remove and discard the 4 front subframe nuts.
29. Partially lower the subframe.
30. **NOTE:** Left side shown.

    Remove the rear lower arm-to subframe bolts.

    - Discard the bolt and washer.

31. Using the Front Hub Remover, separate the halfshaft from the wheel hub.
    - Using mechanics wire or equivalent, support the halfshaft.
    - Repeat on the opposite side.

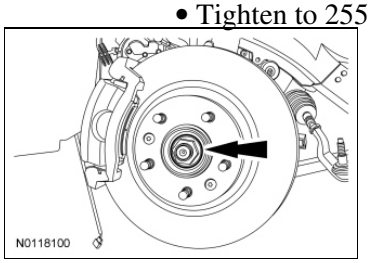


32. Position aside the lower control arms.
33. Lower the subframe from the vehicle.

Installation

All vehicles

1. Partially raise the subframe.
2. Position the halfshafts to the wheel hubs.
3. Position the lower control arms to the subframe.
    - Loosely install new rear lower arm-to-subframe bolts.
4. Raise the subframe and align to the witness marks made during removal.
5. Install the 4 new front subframe nuts.
    - Tighten to 150 Nm (111 lb-ft).
6. Install the 4 front subframe bracket bolts.
    - Tighten to 103 Nm 76 lb-ft).
7. Remove the Powertrain Lift.
8. Using the Halfshaft Installer, in the halfshafts Into the wheel hubs.

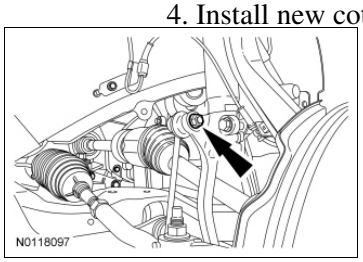


9. ***NOTICE:*** **Do not tighten the halfshaft nuts with the vehicle on the ground. The nuts must be tightened to specification before the vehicle Is lowered onto the wheels. Wheel bearing damage will occur If the wheel bearing Is loaded with the weight of the vehicle applied.**

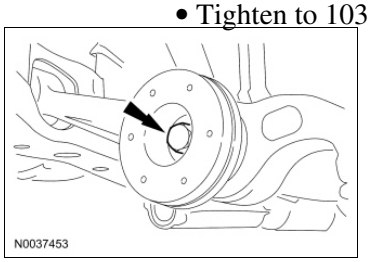
    NOTE: Apply the brake to keep the halfshaft from rotating.

    Install the wheel hub nuts.

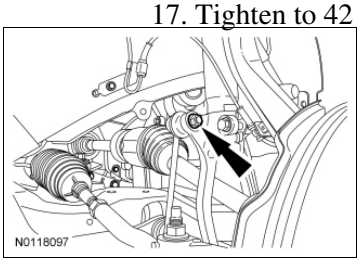
    - Tighten to 255 Nm (189 lb-ft).



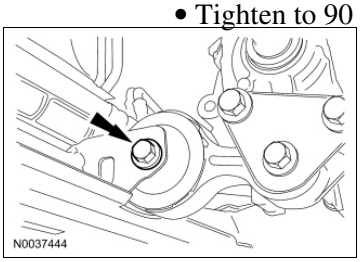
10. Position the brake flexible hose and brackets and install the bolts.
    - Tighten to 23 Nm (17 lb-ft).



11. Before tightening any suspension busing fasteners, the suspension must be at 402 mm (15.826 in) between the center of the hub and the lip of the fender. This will prevent incorrect clamp load and bushing damage.
    - Use a suitable jack to raise the suspension to specification.

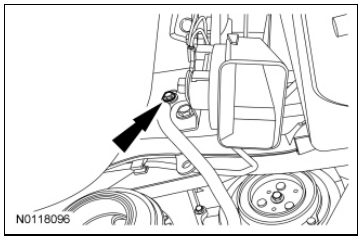


12. Tighten the front lower arm-to-subframe bolts.
    1. Tighten to 110 Nm (81 lb-ft).
    2. Tighten an additional 90° with the suspension at the bushing fastener tightening position.
13. Tighten the rear lower arm-to-subframe bolts to 110 Nm (81 lb-ft).
14. Install the outer tie-rod ends to the control arms.
    1. Position to the wheel hubs.
    2. Install the nuts.
    3. Tighten to 48 Nm (35 lb-ft).
    4. Install new cotter pins.

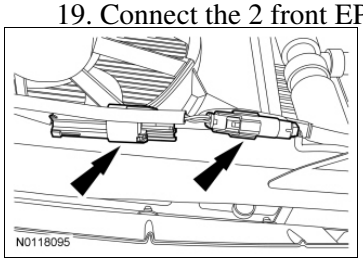


15. Install the lower control arm-to-strut through bolts and flagnuts.
    - Tighten to 103 Nm (76 lb-ft).

16. Position the stabilizer bar links and install the nuts.
17. Tighten to 42 Nm (31 lb-ft).

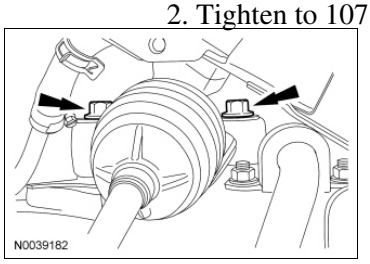


17. Install the roll restrictor bolt.
    - Tighten to 90 Nm (66 lb-ft).

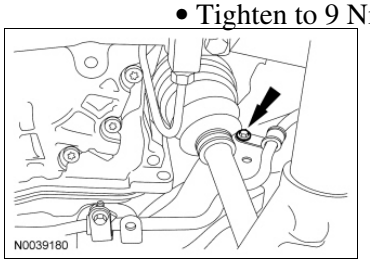


Vehicles equipped with EPAS

18. Install the EPAS ground wire and bolt.
    - Tighten to 10 Nm (89 lb-in).



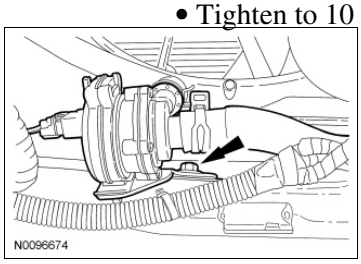
19. Connect the 2 front EPAS in-line electrical connectors and the 4 wiring retainers.



20. Install the exhaust flexible pipe. For additional Information, refer to Section 309-00 .

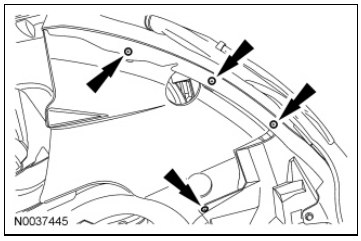
Vehicles equipped with HPAS

21. Position the steering gear.
    1. Install the 3 steering gear mounting bolts.
    2. Tighten to 107 Nm (79 lb-ft).

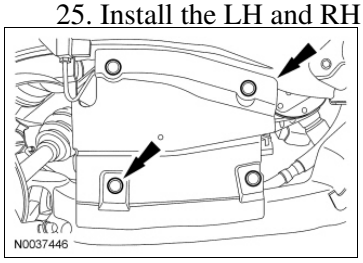


22. Install the 3 power steering return line bolts.
    - Tighten to 9 Nm (80 lb-in).

2.5L Hybrid



23. Install the MECS and bolt.
    - Tighten to 10 Nm (89 lb-in).



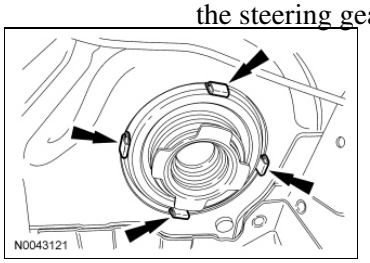
All vehicles

24. **NOTE:** RH side shown, LH side similar.

    Position the LH and RH fender splash shields and Install the screws.

25. Install the LH and RH splash shields and pin-type retainers 6 each side, 4 shown).

26. Install the underbody shield and bolts (if equipped).
    - Tighten to 7 Nm (62 lb-in).



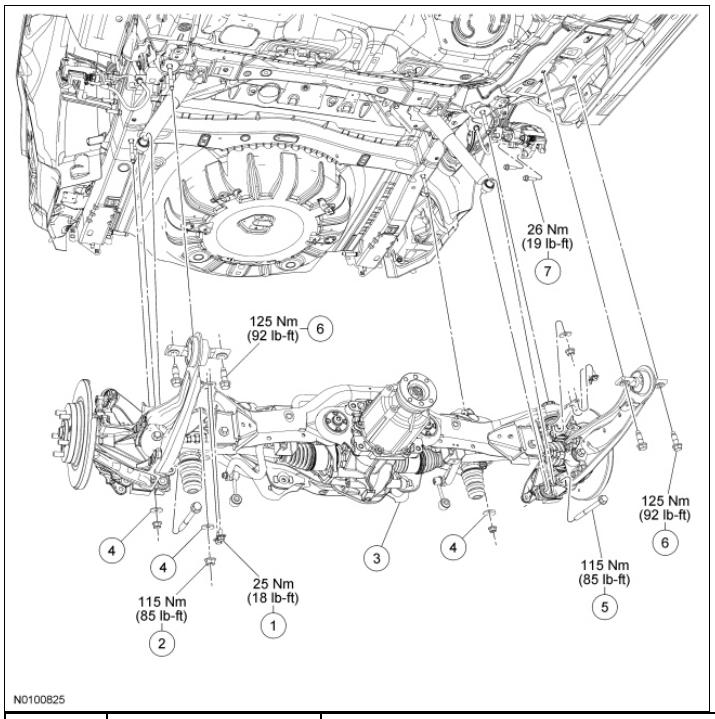
27. Install the wheels and tires. For additional information, refer to Section 204-04 .

Vehicles equipped with EPAS

28. ***NOTICE:*** **The steering gear/dash seal must be fully seated In the steering valve tower groove before the retaining clips are fully engaged Into the body. If the steering gear/dash seal Is not seated to the steering gear valve tower groove and the clips are not fully engaged to the body, water and foreign material may enter the passenger compartment and damage the vehicle Interior.**

    Install the steering gear/dash seal.

    - To install, apply hand force to the center of the seal, install the steering gear/dash seal onto the steering gear valve tower until fully seated In the valve tower groove. Install the steering gear/dash seal until the clips are fully engaged Into the body.

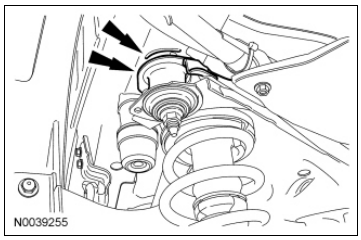


29. Position the steering column shaft to the steering gear.
    - Install a new steering column shaft bolt.
    - Tighten to 20 Nm (15 lb-ft).
30. Install the steering column shaft joint cover and nuts.
31. Remove the steering wheel holding device.

Subframe - Rear

Special Tool(s)

 ST1682-A	Powertrain Lift 300-OTC1585AE or equivalent



Item	Part Number	Description
1	W712755	Front bushing brace-to-body bolt (4 required)
2	W520515	Rear subframe nut (4 required)
3	5K067	Rear subframe
4	5E028	Rear subframe washers
5	W704586	Shock absorber lower bolt
6	W711493	Trailer arm-to-frame bolts (4 required)
7	-	Brake caliper anchor plate bolts (4 required)

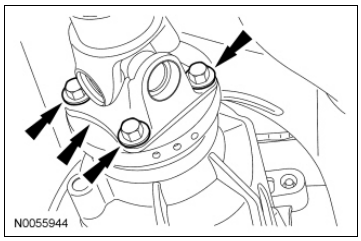
NOTICE: **Suspension fasteners are critical parts because they affect performance of vital parts and systems and their failure can result in major service expense. A new part with the same part number must be installed if installation bec necessary. Do not use a replacement part of lesser quality or substitute design. Torque values must be used as specified during reassembly to make sure of correct retention of these parts.**

All vehicles

1. Remove the rear wheels. For additional information, refer to Section 204-04 .

2. With a wax pencil, mark the relationship alignment of the rear subframe to the underbody at the mounting locations.

3. Remove the LH and RH rear lower arms. For additional information, refer to Section 204-02 .



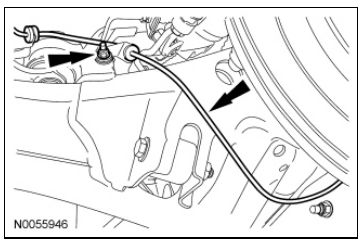
4. Remove the catalytic converter, muffler and tailpipe as an assembly.

All-Wheel Drive (AWD) only

5. **NOTE:** Index-mark the rear axle pinion flange and the driveshaft yoke.

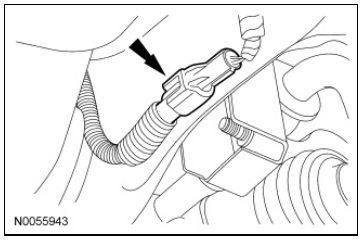
   Remove the 4 driveshaft bolts.

   - To install, tighten to 83 Nm (61 lb-ft).

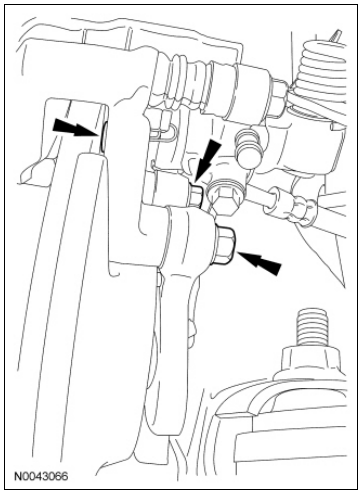


All vehicles

6. Remove the bolt from the LH and RH wheel speed sensors.

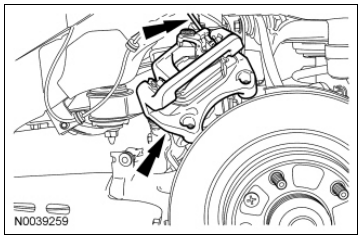


7. Remove the RH and LH wheel speed sensor nuts from the stud and position aside.

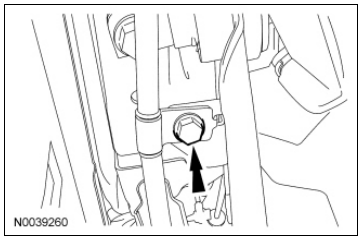


AWD only

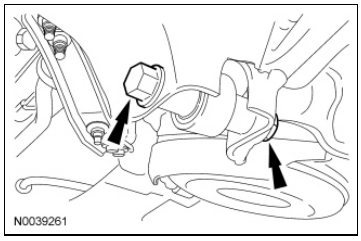
8. Disconnect the differential electrical connector on the LH side of the subframe.



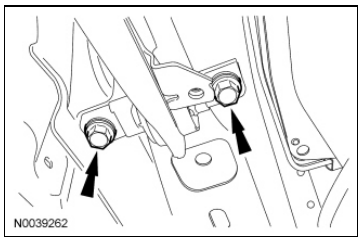
All vehicles



9. Remove the 4 bolts (2 each side) from the rear hub spindle-to-brake caliper.
    - To install, tighten to 59 Nm (44 lb-ft).

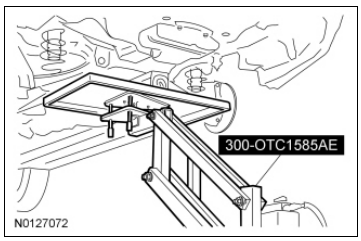


10. Position the brake calipers aside using mechanic's wire. It is not necessary to disconnect the hydraulic brake lines.

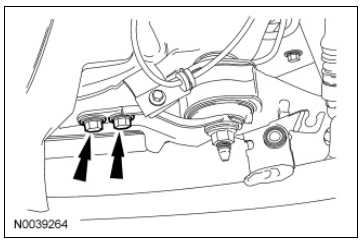


11. Remove the bolts from the parking brake cable-to-trailing link bracket.
    - To install, tighten to 22 Nm (16 lb-ft).

12. Remove and discard the rear shock-to-trailing link lower bolts and flagnuts.
    - To install, tighten to 115 Nm (85 lb-ft) with the suspension at the bushing fastener tightening position.

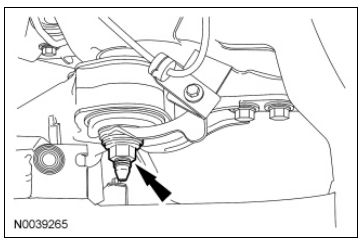


13. Remove the 4 bolts and cone washers (2 each side) from the trailing links-to-vehicle body.
    - To install, tighten to 103 Nm (76 lb-ft).



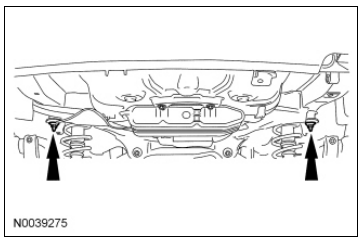
NOTICE: **The rear subframe must be secured to the lifting table. The rear subframe can become unstable and fall from the lifting table.**

NOTE: For All-Wheel Drive (AWD) vehicles, the rear differential is removed with the rear subframe.



14. Position the Powertrain Lift under the rear subframe.

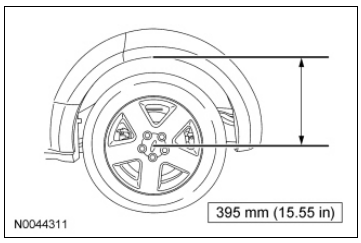
15. Remove the 4 front (2 each side) bushing brace-to-body bolts.
    - To install, tighten to 25 Nm (18 lb-ft).



16. Remove the 2 front (1 each side) mounting nuts and washers.
    - To install, tighten to 115 Nm (85 lb-ft).

17. Remove the 2 rear mounting nuts.

- To install, tighten to 115 Nm (85 lb-ft).



18. Remove the rear subframe.

19. Transfer the components as necessary.

20. **NOTE:** Make sure the vehicle is at the correct vehicle ride height. For additional information, refer to Section 204-00 .

    To install, reverse the removal procedure.

Material

Item	Specification	Fill Capacity
Dye-Lite® Gasoline Engine Oil Leak Detection Dye 164-R3700 (Rotunda)	-	29.6 ml (1 oz)

Threadlock 262 TA-26	WSK-M2G351-A6	-

Engine

NOTICE: **When repairing engines, all parts must be contamination free. If contamination/foreign material is present when repairing an engine, premature engine failure may occur.**

NOTE: Specifications show the expected minimum or maximum condition. Refer to the appropriate section in Group 303 for the procedure.

NOTE: If a component fails to meet the specifications, it is necessary to refinish it or install a new component. Wear limits are provided as an aid to determine if the component can be refinished. A new component must be installed when any component fails to meet specifications and cannot be refinied.

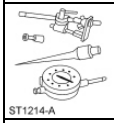
NOTE: This section contains information, steps and procedures that may not be specific to this engine.

This section covers general procedures and diagnosis and testing of the engine system, except for exhaust emission control devices, which are covered in the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

The engine incorporates the following features: Refer to the appropriate section in Group 303 for the procedure.

- Crankcase ventilation or breather system
- Exhaust emission control system
- Evaporative Emission (EVAP) control system

Some engines incorporate a fail-safe cooling system. Refer to the appropriate section in Group 303 for the procedure.



The engine, fuel system, ignition system, emissions system and exhaust system all affect exhaust emission levels and must be maintained according to the maintenance schedule. Refer to the scheduled Maintenance Guide.

Correct engine identification is required to order parts. Refer to the appropriate section in Group 303 for the procedure.

For complete vehicle and engine identification codes, refer to Section 100-01 .

Material

Item	Specification
Dye-Lite® Gasoline Engine Oil Leak Detection Dye 164-R3700 (Rotunda)	-
Motorcraft® SAE 5W-20 Premium Synthetic Blend Motor Oil (US); Motorcraft® SAE 5W-20 Super Premium Motor Oil (Canada) XO-5W20-QSP (US); CXO-5W20-LSP12 (Canada)	WSS-M2C945-A

There are 2 diagnostic paths that can be followed depending on the type of engine concern. Carry out Inspection and Verification - Engine Performance or Inspection and Verification - NVH.

Inspection and Verification - Engine Performance

1. Verify the customer concern by operating the engine to duplicate the condition.

2. Visually inspect for obvious signs of mechanical damage. Refer to the following chart.

Visual Insrt

Mechanical
• Engine coolant leaks • Engine oil leaks • Fuel leaks • Damaged or severely worn parts • Loose mounting bolts, studs and nuts

3. If the inspection reveals obvious concerns that can be readily identified, repair as necessary.

4. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

5. **NOTE:** The Vehicle Communication Module (VCM) LED prove out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :

   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM .
   - refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

6. If the scan tool does not communicate with the vehicle:
   - verify the ignition key is in the ON position.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 to diagnose no response from the PCM.

7. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .
   - If the network test passes, retrieve and record continuous memory DTCs.

8. Clear the continuous DTCs and carry out the self-test diagnostics for the Battery Control Module - High Voltage Traction Battery (BCM-HVTB) and PCM.

9. If the DTCs retrieved are related to the concern, go to the Battery Control Module - High Voltage Traction Battery (BCM-HVTB) DTC Chart, refer to Section 414-03 . For all other DTCs, refer to Section 419-10 .

10. If no DTCs related to the concern are retrieved, GO to Symptom Chart - Engine Performance .

Inspection and Verification - NVH

1. NVH symptoms should be identified using the diagnostic tools and techniques that are available. For a list of these techniques, tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04 .

2. Verify the customer concern by operating the engine to duplicate the condition.

3. Check the engine oil level and check the oil for contamination. Low engine oil level or contaminated oil are a common cause of engine noise. If the oil is contaminated, the source of the contamination must be identified and repaired as necessary.

4. Visually inspect for obvious signs of mechanical damage. Refer to the following chart.

Visual Inspection Chart

Mechanical
• Loose mounting bolts, studs and nuts • Damaged or leaking powertrain mounts • Damaged or disconnected vacuum hoses • Obstruction of cooling fan • Obstruction of Front End Accessory Drive (FEAD) • Obstruction of Rear End Accessory Drive (READ), if equipped • Damaged or disconnected air intake components

5. If the inspection reveals obvious concerns that can be readily identified, repair as necessary.

6. **NOTE:** Make sure to use the latest scan tool software release.

   If the cause is not visually evident, connect the scan tool to the DLC .

7. **NOTE:** The VCM LED prove out confirms power and ground from the DLC are provided to the VCM .

   If the scan tool does not communicate with the VCM :

   - check the VCM connection to the vehicle.
   - check the scan tool connection to the VCM .
   - refer to Section 418-00 , No Power To The Scan Tool, to diagnose no power to the scan tool.

8. If the scan tool does not communicate with the vehicle:
   - verify the ignition key is in the ON position.
   - verify the scan tool operation with a known good vehicle.
   - refer to Section 418-00 to diagnose no response from the PCM.

9. Carry out the network test.
   - If the scan tool responds with no communication for one or more modules, refer to Section 418-00 .

- If the network test passes, retrieve and record continuous memory DTCs.

10. Clear the continuous DTCs and carry out the self-test diagnostics for the BCM-HVTB and PCM.

11. If the DTCs retrieved are related to the concern, go to the Battery Control Module - High Voltage Traction Battery (BCM-HVTB) DTC Chart, refer to Section 414-03 . For all other DTCs, refer to Section 419-10 .

12. If no DTCs related to the concern are retrieved, continue the inspection and verification if a noise concern is related to the engine. For vibration concerns and noise concerns, such as powertrain mounts, air intake system and starter, GO to Symptom Chart - NVH .

In some cases, a noise may be a normal characteristic of that engine type. In other cases the noise may require further investigation. Comparing the noise to a similar year/model vehicle equipped with the same engine will aid in determining if the noise is normal or abnormal.

Once a customer concern has been identified as an abnormal engine noise, it is critical to determine the location of the specific noise. Use the EngineEAR/ChassisEAR or stethoscope to isolate the location of the noise to one of the following areas.

- Fuel injector(s)
- Upper end of engine
- Lower end of engine
- Front of engine
- Rear of engine

Fuel injector noise

A common source of an engine ticking noise can be related to the fuel injector(s). This is normal engine noise that can be verified by listening to another vehicle. If the injector noise is excessive or irregular, use the EngineEAR/ChassisEAR or stethoscope to isolate the noise to a specific fuel injector.

Upper end engine noise

A common source of upper end engine noise (ticking, knocking or rattle) includes the camshaft(s) and valve train. Upper end engine noise can be determined using the EngineEAR/ChassisEAR or stethoscope on the valve cover bolts. If the noise is loudest from the valve cover bolts, then the noise is upper end. The EngineEAR/ChassisEAR or stethoscope can be used to further isolate the noise to the specific cylinder bank and cylinder. Removal of the valve covers will be required to pinpoint the source of the noise.

Lower end engine noise

A common source of lower end engine noise (ticking or knocking) includes the crankshaft, connecting rod(s) and bearings. Lower end noises can be determined by using the oil pan or lower cylinder block. If the noise is loudest from these areas, then the noise is lower end. If an engine noise is isolated to the lower end, some disassembly of the engine may be required to inspect for damage or wear.

Front of engine noise

A common source of noise from the front of the engine (squeal, chirp, whine or hoot) is the Front End Accessory Drive (FEAD) components. To isolate FEAD noise, carry out the Engine Accessory Test, refer to Section 100-04 .

Some other noises from the front of the engine (ticking, tapping or rattle) may be internal to the engine. Use the EngineEAR/ChassisEAR or stethoscope on the engine front cover to determine if the noise is internal to

the engine. Removal of the engine front cover may be necessary to inspect internal engine components.

Rear of engine noise

A common source of noise from the rear of the engine (knocking) is the flywheel/flexplate. Inspection of the flywheel/flexplate will be necessary.

Some engines have timing drive components at the rear of the engine and may be the source of noise (ticking, knocking or rattle). Use the EngineEAR/ChassisEAR or stethoscope on the rear of the engine if it is suspected that the noise is internal to the engine. Some disassembly of the engine may be required to inspect for damage or wear.

If equipped, the Rear End Accessory Drive (READ) can also be a source of noise from the rear of the engine (squeal or chirp). The READ consists of the coolant pump and belt.

13. After localizing the noise, note the characteristics of the noise, including type of noise, frequency and conditions when the noise occurs and GO to Symptom Chart - NVH .

Symptom Chart - Engine Performance

Symptom Chart - Engine Performance

Symptom Chart - NVH

Symptom Chart - NVH
NOTE: NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04 . Since it is possible that any one of multiple systems may be the cause of the symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to Section 100-04 for the next likelstem and continue diagnosis.

ConditionPossible SourcesAction

- Drone type noise
- Powertrain mount(s)
- CARRY OUT the Powertrain/Drivetrain Mount Neutralizing procedure in this section. TEST the system for normal operation after the repair.
- Drumming noise - occurs inside the vehicle during idle or high idle, hot or cold. Very low-frequency drumming is very rpm dependent
- Engine vibration excites the body resonances inducing interior noise
- CARRY OUT the Powertrain/Drivetrain Mount Neutralizing procedure in this section. TEST the system for normal operation after the repair.
- Engine drumming noise - accompanied by vibration

- Powertrain mount(s)

- CARRY OUT the Powertrain/Drivetrain Mount Neutralizing procedure in this section. TEST the system for normal operation after the repair.

- Rattle - occurs at idle or at light acceleration from a stop

- Powertrain mount(s)

- CHECK the powertrain mounts for damage. INSTALL new mounts as necessary. For engine, Refer to the appropriate section in Group 303 for the procedure. For automatic transmission, Refer to the appropriate section in Group 307 for the procedure. For manual transmission, REFER to Section 308-03 . TEST the system for normal operation after the repair.

- Whine/moan type noise - pitch increases or changes with vehicle speed

- Powertrain mount(s)

- CHECK the porain mounts for damage. INSTALL new mounts as necessary. For engine, Refer to the appropriate section in Group 303 for the procedure. For automatic transmission, Refer to the appropriate section in Group 307 for the procedure. For manual transmission, REFER to Section 308-03 . TEST the system for normal operation after the repair.

- Clunk - occurs when shifting from PARK or between REVERSE and DRIVE

- Powertrain mounts

- CHECK the powertrain/drivetrain mounts for damage. INSTALL new mounts as necessary. For engine, Refer to the appropriate section in Group 303 fothe procedure. For automatic transmission, Refer to the appropriate section in Group 307 for the procedure. For manual transmission, REFER to Section 308-03 . TEST the system for normal operation after the repair.

- Idle speed is too high

- CHECK for the correct idle speed. TEST the system for normal operation after the repair.

- Accessory drive bearing hoot - occurs at idle or high idle in cold temperatures of approximately 4°C (40°F) or colder at the first start of the day

- Accessory drive idler or tensioner pulley bearing is experiencing stick/slip between ball bearings and the bearing race

- CARRY OUT the engine cold soak procedure. REFER to Section 100-04 .
- PLACE the EngineEAR probe directly on the idler/tensioner center post or bolt to verify h bearing is making the noise. INSTALL new parts as necessary. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.

- Accessory drive belt noise, squeal or chirping

- Defective/worn or incorrect accessory drive belt
- Misaligned pulley(s)
- Pulley runout
- Damaged or worn accessory drive component or idler
- Fluid contamination of the accessory drive belt or pulleys

- Damaged or worn accessory drive belt tensioner
- Damaged pulley grooves

- CARRY OUT the Engine Accessory Test. REFER to Section 100-04 . INSPECT components and INSTALL new parts as necessary. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.

- Clunking noise

- Coolant pump has excessive end play or imbalance

- CHECK the coolant pump for excessive end play. INSPECT the coolant pump for imbalance with the drive belt off. INSTALL a new coolant pump as necessary. REFER to Section 303-03A or Section 303-03B for Hybrid. TEST the system for normal operation after the repair.

- Whine or moaning noise

- Air intake system

- CHECK the air cleaner and ducts for correct fit. INSPECT the air intake system for leaks or damage. REPAIR as necessary. TEST the system for normal operation after the repair.

- Whistling noise - normally accompanied with poor idle condition

- Air intake system

- CHECK the air intake ducts, air cleaner, Throttle Body (TB) and vacuum hoses for leaks and correct fit. REPAIR or ADJUST as necessary. TEST the system for normal operation after the repair.

- Hissing noise - occurs during idle or high idle that is apparent with the hood open

type="disc">
- Vacuum leak

- USE the EngineEAR/ChassisEAR to locate the source. SCAN the air intake system from the inlet to each cylinder intake port. DISCARD the leaking parts, and INSTALL a new component. TEST the system for normal operation after the repair.

- Vehicles with a plastic intake manifold

- Acceptable condition. Some plastic intake manifolds exhibit this noise, which is the effect of the plastic manifold.

- Grinding noise - occurs during engine cranking

- Incorrect starter motor mounting

- INSPECT the starter motor for correct mounting. REPAIR as necessary. REFER to Section 303-06 . TEST the system for normal operation after the repair.

- Starter motor

- CHECK the starter motor. INSTALL a new starter motor as necessary. REFER to Section 303-06 . TEST the system for normal operation after the repair.

- Incorrect starter mor drive engagement

- INSPECT the starter motor drive for wear or damage. INSTALL a new starter motor as necessary. REFER to Section 303-06 . TEST the system for normal operation after the repair.
- INSPECT the flywheel/flexplate for wear or damage. INSTALL a new flywheel/flexplate as necessary. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.

- Engine noise, front of engine - knocking noise from lower front of engine

- Damaged or separated crankshaft pulley/damper

- CHECK for obvious signs of damage or wobble during operation. INSTALL new as necessary. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.

- Engine noise, front ofngine - ticking, tapping or rattling noise from the front of the engine

- Timing drive components

- REMOVE the accessory drive belt. Refer to the appropriate section in Group 303 for the procedure.
- USE the EngineEAR to isolate the noise to the engine front cover.
- REMOVE the engine front cover and INSPECT the timing drive components. INSTALL new parts as necessary. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.

- Engine noise, upper end - ticking noise near the fuel rail and intake manifold

- Fuel rail clip

- CHECK for loose or damaged fuel rail clip(s). REPAIR as necessary.

- Fuel injector

- USE the EngineEAR to isolate the noisy injector(s). INSTALL a new injector(s) as necessary. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.

- Engine noise, upper end - ticking, knocking or rattle noise that occurs during idle or high idle during the first cold start of the day and may disappear as the engine warms

- Valve train noise (bled down lash adjuster)

- CARRY OUT the Valve Train Analysis Component Test in this section. INSTALL new parts as necessary. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.

- Engine noise, upper end - occurs mostly with a warm engine at light/medium acceleration

- Worn or damaged spark plugs

- REMOVE the spark plugs. INSPECT and INSTALL new as necessary. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.

- Carbon accumulation in combon chamber
- Bore scope the cylinder. ELIMINATE carbon buildup. TEST the system for normal operation after the repair.
- Engine noise, upper end - rattling noise from the valve train. Worse when the engine is cold
- Low oil level
- CHECK the oil level. FILL as necessary.
- Thin or diluted oil
- INSPECT the oil for contamination. If the oil is contaminated, CHECK for the source. REPAIR as necessary. CHANGE the oil and filter.
- Low oil pressure
- CARRY OUT an oil pressure test. If not within specifications, REMOVE the engine oil pan. Refer to the appropriate section in Group 303 for the procedure. INSPECT for a blocked oil pick up tube.
- Worn valve train components
- CARRY OUT the Valve Train Analysis Component Test in this section. INSTALL new parts as necessary. TEST the system for normal operation after the repair.
- Worn valve guides
- CARRY OUT the Valve Guide Inner Diameter procedure in this section.
- Excessive runout of the valve seats on the valve face
- CARRY OUT the Valve Seat Inspection procedure in this section.
- Engine noise, upper end - pinging noise
- Gasoline octane too low
- VERIFY with customer the type of gasoline used. CORRECT as necessary. TEST the system for normal operation after the repair.
- Knock Sensor (KS) operation
- CHECK the KS . INSTALL a new KS as necessary. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repr.
- Incorrect spark timing
- CHECK the spark timing. REPAIR as necessary. TEST the system for normal operation after the repair.
- High operating temperature
- INSPECT the cooling system for leaks. CHECK the coolant level. REFILL as necessary. CHECK the

coolant for the correct mix ratio. DRAIN and REFILL as needed. VERIFY the engine operating temperature is within specifications. REPAIR as necessary. TEST the system for normal operation after the repair.

- Spark plug
- CHECK the spark plugs. REPAIR or INSTALL new spark plugs as necessary. TEST the system for normal operation after the repair.
- Catalytic converter
- COMPARE with a similar vehicle for what is acceptable noise.
- Engine noise, lower end - ticking or knocking noise near the oil filter adapter
- Oil pump
- USE the EngineEAR to verify the oil pump as the source of the noise at low rpm. REPAIR as necessary. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.
- Engine noise, lower end - light knocking noise, also described as piston slap. Noise is most noticeable when the engine is cold with light to medium acceleration. The noise disappears as the engine warms
- Excessive clearance between the piston and the cylinder wall
- CARRY OUT the Piston To Cylinder Bore Clearance procedure in this section. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.
- Engine noise, lower end - light double knock or sharp rap sound. Occurs mostly with a warm engine at idle or low speeds in drive. Increases in relation to engine load. Associated with a poor lubrication history
- Excessive clearance between the piston and the piston pin
- CARRY OUT the Piston Pin Bore Diameter and Piston Pin Diameter procedures in this section.
- Engine noise, lower end - light knocking noise. The noise is most noticeable when the engine is warm. The noise tends to decrease when the vehicle is coasting or in NEUTRAL
- Excessive clearance between the connecting rod bearings and the crankshaft
- CARRY OUT the Connecting Rod Bearing Journal-to-Bearing Clearance procedure in this section.
- Engine noise, lower end - Deep knocking noise. The noise is most noticeable when the engine is warm, at lower rpm and under a light load and then at float
- Worn or damaged crankshaft main bearings
- CARRY OUT the Crankshaft Main Bearing Journal-to-Bearing Clearance procedure in this section.
- Engine noise, rear of engine - knocking noise at rear of engine

maged flywheel/flexplate

- CARRY OUT the Flywheel Inspection or the Flexplate Inspection procedure in this section.
- Engine vibration - vibration felt at all times
- Excessive engine pulley runout
- CARRY OUT the Engine Accessory Test. REFER to Section 100-04 . INSTALL a new engine pulley as necessary. TEST the system for normal operation after the repair.
- Damaged or worn accessory component
- CARRY OUT the Engine Accessory Test. REFER to Section 100-04 /a>. REPAIR or INSTALL a new component as necessary. TEST the system for normal operation after the repair.
- Engine vibration - at idle, a low-frequency vibration (5-20 Hz) or mild shake that is felt through the seat/floorpan
- Cylinder misfire
- Using the scan tool, CARRY OUT the cylinder power balance and the relative compression test. REPAIR as necessary. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.
- Engine or torque converter out of balance
- VERIFY the torque converter to crankshaft pilot clearance is correct. REPAIR as necessary. RE-INDEX the torque converter on the flexplate by 180 degrees for a 4-bolt converter. Refer to the appropriate section in Group 307 for the procedure. TEST the system for normal operation after the repair.
- Engine vibration - is felt with increases and decreases in engine rpm
- Powertrain mount(s)
- CHECK the powertrain ts for damage. INSTALL new mounts as necessary. For engine, Refer to the appropriate section in Group 303 for the procedure. For automatic transmission, Refer to the appropriate section in Group 307 for the procedure. For manual transmission, REFER to Section 308-03 . TEST the system for normal operation after the repair.
- Engine or transmission grounded to chassis
- INSPECT the powertrain/drivetrain for correct clearances. REPAIR as necessary. TEST the system for normal operation after the repair.
- Engine vibration - increases intensity as the engine rpm is increased
- Engine out-of-balance
- CARRY OUT the Neutral Engine Run-Up (NERU) Test. REFER to Section 100-04 . ROTATE the torque converter 180 degrees for 4-bolt. INSPECT the torque converter pilot outer diameter-to-crankshaft pilot inner diameter. REPAIR as necessary. Refer to the appropriate section in Group 307 for the procedure. TEST the system for normal operation after the repair.

- Engine vibration - mostly at coast/neutral coast. Condition improves with vehicle acceleration
- Combustion instability
- CHECK the ignition system. INSTALL new components as necessary. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.
- Engine vibration or shudder - occurs with light to medium acceleration above 56 km/h (35 mph)
- Worn or damaged spark plugs
- INSPECT the spark plugs for cracks, high resistance or broken insulators. INSTALL a new spark plug(s) as necessary. Referthe appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.
- Plugged fuel injector
- REPAIR or INSTALL a new injector as necessary. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation after the repair.
- Contaminated fuel
- INSPECT the fuel for contamination. DRAIN the fuel system and refill. TEST the system for normal operation after the repair.

Component Tests

The following component tests are used to diagnose engine concerns.

Engine Oil Leaks

NOTE: If an overnight drive is done, the fan air or road air blast can cause erroneous readings.

NOTE: When diagnosing engine oil leaks, the source and location of the leak must be positively identified prior to repair.

Prior to carrying out this procedure, clean the cylinder block, cylinder heads, valve covers, oil pan and flywheel with a suitable solvent to remove all traces of oil.

Engine Oil Leaks - Fluorescent Oil Additive Method

Use the 12 Volt Master UV Diagnostic Inspection Kit to carry out the following procedure for oil leak diagnosis.

1. Add 29.6 ml (1 oz) of gasoline engine oil leak detection dye to a minimum of 0.47L (1/2 qt) and a maximum of 0.95L (1 qt) engine oil and fill through the engine oil fill. Thoroughly premix the gasoline engine oil dye or it will not have enough time to reach the crankcase, oil galleries and seal surfaces during this particular 15 minute test. The additive must be mixed well with oil and added through the oil fill. Check the level on the oil level indicator to determine what amount of oil to premix. If it is in the middle of the crosshatch area or below the full mark, use 0.95L (1 qt). If it is at the full mark, use 0.47L (1/2 qt).

2. Run the engine for 15 minutes. Stop the engine and inspect all seal and gasket areas for leaks using the UV Leak Detector Kit. A clear bright yellow or orange area will identify the leak. For extremely small leaks, several hours may be required for the leak to appear.

3. At the end of the test, make sure the oil level is within the upper and lower oil indicator marks. Remove oil as necessary if it registers above the full mark.

Leakage Points - Underhood

Examine the following areas for oil leakage:

- Valve cover gaskets
- Cylinder head gaskets
- Oil cooler, if equipped
- Oil filter adapter
- Engine front cover
- Oil filter adapter and filter body
- Oil level indicator tube connection
- Oil pressure sensor

Leakage Points - Under Engine, With Vehicle on Hoist

Examine the following areas for oil leakage:

- Oil pan gaskets
- Oil pan sealer
- Engine front cover gasket
- Crankshaft front seal
- Crankshaft rear oil seal
- Oil filter adapter and filter body
- Oil cooler, if equipped

Leakage Points - With Transmission and Flywheel Removed

Examine the following areas for oil leakage:

- Crankshaft rear oil seal
- Rear main bearing cap parting line
- Flexplate mounting bolt holes (with flexplate installed)
- Pipe plugs at the end of oil passages

Oil leaks at crimped seams in sheet metal parts and cracks in cast or stamped parts can be detected when using the dye method.

Compression Test - Hybrid

The compression test requires cranking the engine a minimum of 5 compression strokes with the throttle plate in the wide-open position for each cylinder. The engine cranking diagnostic mode must be used to crank the engine and the brake/accelerator pedals must be used to position the throttle plate during the compression test. The engine cranking diagnostic mode is a PCM strategy which is separate from the normal operating strategy. It allows the engine to crank in a similar fashion as a conventional vehicle with the fuel disabled. When in this mode, the PCM commands the Transmission Control Module (TCM) to spin the generator, which cranks the engine with the speed between 900 and 1,200 rpm. The engine will crank as long as the traction battery state

of charge stays greater than 35%.

1. Make sure the oil in the crankcase is of the correct viscosity and at the correct level. Operate the vehicle until the engine is at normal operating temperature.

2. Using the Vehicle Communication Module (VCM), access the Battery Control Module - High Voltage Traction Battery (BCM-HVTB) and monitor the traction battery state of charge PID. If the monitored PID displays the state of charge below 45%, start and idle the engine with full A/C ON. When the traction battery state of charge exceeds 45%, the engine cranking diagnostic mode c be activated.

3. Turn the ignition switch to the OFF position, then remove all the spark plugs.

4. Install a compression gauge such as the Quick Disconnect Compression Tester in the No. 1 cylinder.

5. Activate the cranking diagnostic mode as follows:
   - Apply the parking brake.
   - Place the gear selector in the PARK position.
   - Verify the key is in the OFF position.
   - **NOTE:** Do not crank the engine.

     Turn the key to the ON position with the engine OFF.
   - Within 5 seconds of the key in the ON position, fully apply the accelerator pedal and hold for 10 seconds.
   - Within 5 seconds release the accelerator pedal, shift the gear selector to the NEUTRAL position and fully apply the accelerator pedal.
   - Hold the accelerator pedal fully applied for 10 seconds.
   - Release the accelerator pedal and shift the gear selector to the PARK position.
     - ♦ If the sequence is correctly executed, the Instrument Cluster (IC) hazard indicator (red triangle) flashes once per second when the gear selector is shifted to the PARK position. The PCM exits the engine cranking diagnostic mode when the traction battery state of charge drops below 35%, the gear selector is shifted to any gear other than PARK or when the ignition key is turned to the OFF or ACC position.

6. **NOTE:** If the ignition key stays in the START position for 15 seconds or longer, the PCM may set DTC P2535.

   NOTE: If the brake pedal is not depressed and held prior to depressing the accelerator pedal, the throttle plate will fail to open.

   Crank the engine as follows:

   - Depress and hold the brake pedal.
   - Fully depress and hold the accelerator pedal.
   - Turn the key to the START position and crank the engine a minimum of 5 compression strokes and record the highest reading. Return the key to the ON position.
   - Release the accelerator pedal.
   - Release the brake pedal.

7. Repeat the test on each cylinder, cranking the engine approximately the same number of compression strokes.

8. Position the key to the OFF position to deactivate the cranking diagnostic mode.

9. Clear all DTCs.

Compression Test - All Vehicles Except Hybrid

1. Make sure the oil in the crankcase is of the correct viscosity and at the correct level and that the battery is correctly charged. Operate the vehicle until the engine is at normal operating temperature. Turn the ignition switch to the OFF position, then remove all the spark plugs.

2. Set the throttle plates in the wide-open position.

3. Install a compression gauge such as the Quick Disconnect Compression Tester in the No. 1 cylinder.

4. Install an auxiliary starter switch in the starting circuit. With the ignition switch in the OFF position, and using the auxiliary starter switch, crank the engine a minimum of 5 compression strokes and record the highest reading. Note the approximate number of compression strokes necessary to obtain the highest reading.

5. Repeat the test on each cylinder, cranking the engine approximately the same number of compression strokes.

Compression Test - Test Results

The indicated compression pressures are considered within specification if the lowest reading cylinder is at least 75% of the highest reading. Refer to the Compression Pressure Limit Chart.

Compressioessure Limit Chart

Maximum Recorded Cylinder Pressure	Minimum Recorded Cylinder Pressure	Maximum Recorded Cylinder Pressure	Minimum Recorded Cylinder Pressure	Maximum Recorded Cylinder Pressure	Minimum Recorded Cylinder Pressure	Maximum Recorded Cylinder Pressure	Minimum Recorded Cylinder Pressure
924 kPa (134 psi)	696 kPa (101 psi)	1,131 kPa (164 psi)	848 kPa (123 psi)	1,338 kPa (194 psi)	1,000 kPa (145 psi)	1,544 kPa (224 psi)	1,158 kPa (168 psi)

N0096835

If one or more cylinders reads low, squirt approximately one tablespoon of engine oil meeting Ford specification on top of the pistons in the low-reading cylinders. Repeat the compression pressure check on these cylinders.

Compression Test - Interpreting Compression Readings

1. If compression improves considerably, piston rings are worn or damaged.

2. If compression does not improve, valves are sticking or not seating correctly.

3. If 2 adjacent cylinders indicate low compression pressures and squirting oil on each piston does not increase compression, the head gasket may be leaking between cylinders. Engine oil or coolant in cylinders could result from this condition.
   Use the Compression Pressure Limit Chart when checking cylinder compression so that the lowest reading is within 75% of the highest reading.

Cylinder Leakage Detection

When a cylinder produces a low reading, use of the Engine Cylinder Leak Detection/Air Pressurization Kit will be helpful in pinpointing the exact cause.

The leakage detector is inserted in the spark plug hole, the piston is brought up to Top Dead Center (TDC) on the compression stroke, and compressed air is admitted.

Once the combustion chamber is pressurized, a special gauge included in the kit will read the percentage of leakage. Leakage exceeding 20% is excessive.

While the air pressure is retained in the cylinder, listen for the hiss of escaping air. A leak at the intake valve will be heard in the Throttle Body (TB). A leak at t exhaust valve can be heard at the tailpipe. Leakage past the piston rings will be audible at the PCV connection. If air is passing through a blown head gasket to an adjacent cylinder, the noise will be evident at the spark plug hole of the cylinder into which the air is leaking. Cracks in the cylinder block or gasket leakage into the cooling system may be detected by a stream of bubbles in the radiator.

Excessive Engine Oil Consumption

Nearly all engines consume oil, which is essential for normal lubrication of the cylinder bore walls and pistons and rings. Determining the level of oil consumption may require testing by recording how much oil is being added over a given set of miles.

Customer driving habits greatly influence oil consumption. Mileage accumulated during towing or heavy loading generates extra heat. Frequent short trips, stop-and-go type traffic or extensive idling, prevent the engine from reaching normal operating temperature. This prevents component clearances from reaching specified operating ranges.

The following diagnostic procedure may be utilized to determine internal oil consumption. Make sure that the concern is related to internal oil consumption, and not external leakage, which also consumes oil. Verify there are no leaks before carrying out the test. Once verified, the rate of internal oil consumption can be tested.

A new engine may require extra oil in the early stages of operation. Internal piston-to-bore clearances and sealing characteristics improve as the engine breaks in. Engines are designed for close tolerances and do not require break-in oils or additives. Use the oil specified in the Owner's Literature. Ambient temperatures may determine the oil viscosity specification. Verify that the correct oil is being used for the vehicle in the geographic region in which it is driven.

Basic Pre-checks

1. For persistent complaints of oil consumption, interview the customer to determine the oil

consumption characteristics. If possible, determine the brand and grade of oil currently in the oil pan. Look at the oil filter or oil-change station tags to determine if Ford-recommended maintenance schedules have been followed. Make sure that the oil has been changed at the specified mileage intervals. If vehicle mileage is past the first recommended drain interval, the OEM production filter should have been changed.

2. Ask how the most current mileage was accumulated. That is, determine whether the vehicle was driven under the following conditions:
    - Extended idling or curbside engine operation
    - Stop-and-go traffic or taxi operation
    - Towing a trailer or vehicle loaded heavily
    - Frequent short trips (engine not up to normal operating temperature)
    - Excessive throttling or high engine-rpm driving

3. Verify that there are no external leaks. If necessary, review the diagnostic procedure under Engine Oil Leaks in the Diagnosis and Testing portion of this section.

4. Inspect the crankcase ventilation system for:
    - disconnected hoses at the valve cover or TB .
    - loose or missing valve cover fill cap.
    - missing or incorrectly seated engine oil level indicator.
    - incorrect or dirty PCV valve.
    - a PCV valve grommet unseated in the valve cover (if so equipped).

5. Inspect for signs of sludge. Sludge affects PCV performance and can plug or restrict cylinder head drainback wells. It can also increase oil pressure by restricting passages and reducing the drainback capability of piston oil control rings. Sludge can result from either excessive water ingestion in the crankcase or operation at extremely high crankcase temperatures.

6. Inspect the air filter for dirt, sludge or damage. A hole in the filter element will allow unfiltered air to bypass into the air induction system. This can cause premature internal wear (engine dusting), allowing oil to escape past rings, pistons, valves and guides.

7. If the engine is hot or was recently shut down, wait at least 5 minutes to allow the oil to drain back. Ask the customer if this requirement has been followed. Adding oil without this wait period can cause an overfill condition, leading to excessive oil consumption and foaming which may cause engine damage.

8. Make sure the oil level indicator (dipstick) is correctly and fully seated in the indicator tube. Remove the oil level indicator and record the oil level.

Detailed Pre-checks

1. Check the thermostat opening temperature to make sure that the cooling system is operating at the specified temperature. If it is low, internal engine parts are not running at specified internal operating clearances.

2. Verify the spark plugs are not oil saturated. Oil leaking into one or more cylinders will appear as an oil soaked condition on the plug. If a plug is saturated, a compression check may be necessary at the conclusion of the oil consumption test.

Oil Consumption Test

Once all of the previous conditions are met, carry out an oil consumption test.

1. Drain the engine oil and remove the oil filter. Install a new manufacturer-specified oil filter. Make sure the vehicle is positioned on a level surface. Refill the oil pan to a level **one liter (quart) less** than the specified fill level, using manufacturer-specified oil.

2. Run the engine for 3 minutes (if hot) or 10 minutes (if cold). Allow for a minimum 5-minute drainback period and then record the oil level shown on the oil level indicator. Place a mark on the backside of the oil level indicator noting the oil level location.

3. Add the final one liter (quart) to complete the normal oil fill. Restart the engine and allow it to idle for 2 minutes. Shut the engine down.

4. After a 5-minute drainback period, record the location of the oil level again. Mark the oil level indicator with the new oil level location. (Note: Both marks should be very close to the MIN-MAX upper and lower limits or the upper and lower holes on the oil level indicator. These marks will exactly measure the engine's use of oil, with a one liter (quart) differential between the new marks.) Demonstrate to the customer that the factory-calibrated marks on the oil level indicator are where the oil should fall after an oil change with the specified fill amount. Explain however, that this may vary slightly between MIN-MAX or the upper and lower holes on the oil level indicator.

5. Record the vehicle mileage.

6. Advise the customer that oil level indicator readings must be taken every 320 km (200 mi) or weekly, using the revised marks as drawn. Remind the customer that the engine needs a minimum 5-minute drainback for an accurate reading and that the oil level indicator must be firmly seated in the tube prior to taking the reading.

7. When the subsequent indicator readings demonstrate a full liter (quart) has been used, record the vehicle mileage. The mileage driven between the 2 readings should not be less than 4,800 km (3,000 miles). The drive cycle the vehicle has been operated under must be considered when making this calculation. It may be necessary to have the customer bring the vehicle in for a periodic oil level indicator reading to closely monitor oil usage.

Post Checks, Evaluation and Corrective Action

1. If test results indicate excessive oil consumption, carry out a cylinder compression test. The cylinder compression test should be carried out with a fully charged battery and all spark plugs removed. See the Compression Test Chart in this section for pressure range limits.

2. Compression should be consistent across all cylinders. Refer to the Compression Testing portion of this section. If compression tested within the specifications found in this section, the excessive oil consumption may be due to wear on the valve guides, valves or valve seals.

3. A cylinder leak detection test can be carried out using an Engine Cylinder Leak Detection/Air Pressurization Kit. This can help identify valves, piston rings, or worn valve guides/valve stems, inoperative valve stem seals or other related areas as the source of oil consumption.

NOTE: An oil-soaked appearance on the porcelain tips of the spark plugs also indicates excessive oil use. A typical engine with normal oil consumption will exhibit a light tan to brown appearance. See Spark Plug Analysis in this section for details. A single or adjoining, multiple cylinder leak can be traced by viewing the tips.

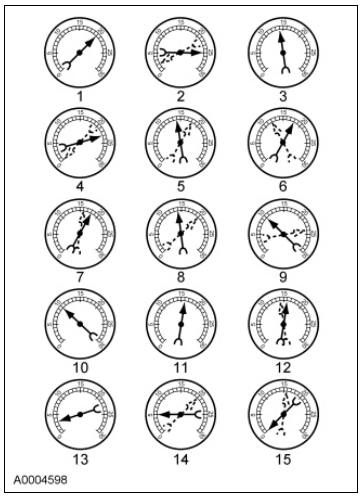
4. If an internal engine part is isolated as the root cause, determine if the repair will exceed cost limits and proceed with a repair strategy as required.

5. Once corrective action to engine is complete and verifying that all pre-check items were eliminated in the original diagnosis, repeat the Oil Consumption Test as described above and verify consumption results.

Intake Manifold Vacuum Test

Bring the engine to normal operating temperature. Connect the Vacuum/Pressure Tester to the intake manifold. Run the engine at the specified idle speed.

The vacuum gauge should read between 51-74 kPa (15-22 in-Hg) depending upon the engine condition and the altitude at which the test is conducted. Subtract 4.0193 kPa (1 in-Hg) from the specified reading for every 304.8 m (1,000 ft) of elevation above sea level.



The reading should be steady. If necessary, adjust the gauge damper control (where used) if the needle is fluttering rapidly. Adjust the damper until the needle moves easily without excessive flutter.

Intake Manifold Vacuum Test - Interpreting Vacuum Gauge Readings

A careful study of the vacuum gauge reading while the engine is idling will help pinpoint trouble areas. Always conduct other appropriate tests before arriving at a final diagnostic decision. Vacuum gauge readings, although helpful, must be interpreted carefully.

Most vacuum gauges have a normal band indicated on the gauge face.

The following are potential gauge readings. Some are normal; others should be investigated further.

1. NORMAL READING: Needle between 51-74 kPa (15-22 in-Hg) and holding steady.

2. NORMAL READING DURING RAPID ACCELERATION AND DECELERATION: When the engine is rapidly accelerated (dotted needle), the needle will drop to a low reading (not to zero). When the throttle is suddenly released, the needle will snap back up to a higher than normal figure.

3. NORMAL FOR HIGH-LIFT CAMSHAFT WITH LARGE OVERLAP: The needle will register as low as 51 kPa (15 in-Hg) but will be relatively steady. Some oscillation is normal.

4. WORN RINGS OR DILUTED OIL: When the engine is accelerated (dotted needle), the needle drops to 0 kPa (0 in-Hg). Upon decelerationthe needle runs slightly above 74 kPa (22 in-Hg).

5. STICKING VALVES: When the needle (dotted) remains steady at a normal vacuum but occasionally flicks (sharp, fast movement) down and back about 13 kPa (4 in-Hg), one or more valves may be sticking.

6. BURNED OR WARPED VALVES: A regular, evenly-spaced, downscale flicking of the needle indicates one or more burned or warped valves. Insufficient valve clearance will also cause this reaction.

7. POOR VALVE SEATING: A small but regular downscale flicking can mean one or more valves are not seating.

8. WORN VALVE GUIDES: When the needle oscillates over about a 13 kPa (4 in-Hg) range at idle speed, the valve guides could be worn. As engine speed increases, the needle will become steady if guides are responsible.

9. WEAK VALVE SPRINGS: When the needle oscillation becomes more violent as engine rpm is increased, weak valve springs are indicated. The reading at idle could be relatively steady.

10. LATE VALVE TIMING: A steady but low reading could be caused by late valve timing.

11. IGNITION TIMING RETARDING: Retarded ignition timing will produce a steady but somewhat low reading.

12. INSUFFICIENT SPARK PLUG GAP: When spark plugs are gapped too close, a regular, small pulsation of the needle can occur.

13. INTAKE LEAK: A low, steady reading can be caused by an intake manifold or Throttle Body (TB) gasket leak.

14. BLOWN HEAD GASKET: A regular drop of fair magnitude can be caused by a blown head gasket or warped cylinder head-to-cylinder block surface.

15. RESTRICTED EXHAUST SYSTEM: When the engine is first started and is idled, the reading may be normal, but as the engine rpm is increased, the back pressure caused by a clogged muffler, kinked tailpipe or other concerns will cause the needle to slowly drop to 0 kPa (0 in-Hg). The needle then may slowly rise. Excessive exhaust clogging will cause the needle to drop to a low point even if the engine is only idling.

16. When vacuum leaks are indicated, search out and correct the cause. Excess air leaking into the system will upset the fuel mixture and cause concerns such as rough idle, missing on acceleration or burned valves. If the leak exists in an accessory unit such as the power brake booster, the unit will not function correctly. Always fix vacuum leaks.

Oil Pressure Test

1. Disconnect and remove the Engine Oil Pressure (EOP) switch from the engine.

2. Connect the engine Oil Pressure Gauge to the oil pressure sender oil galley port.

3. Run the engine until normal operating temperature is reached.

4. Run the engine at the specified rpm and record the gauge reading.

5. The oil pressure should be within specifications; for additional information, refer to the specification chart in the appropriate engine section.

6. If the pressure is not within specification, check the following possible sources:
    - Insufficient oil
    - Oil leakage
    - Worn or damaged oil pump
    - Oil pump screen cover and tube
    - Excessive main bearing clearance
    - Excessive connecting rod bearing clearance
    - Chain tensioner leak

Valve Train Analysis

The following component tests are used to diagnose valve train concerns.

Valve Train Analysis - Engine Off, Valve Cover Removed

Check for damaged or severely worn parts and correct assembly. Maksure correct parts are used with the static engine analysis as follows.

Valve Train Analysis - Camshafts

- Check for broken or damaged parts.
- Check for loose mounting bolts on camshaft caps.

Valve Train Analysis - Camshaft Roller Followers and Hydraulic Lash Adjusters - 3.0L Engine

- Check for broken or damaged parts.
- Check for incorrectly installed roller followers.
- Check for collapsed hydraulic lash adjusters.

Valve Train Analysis - Valve Tappet - 2.5L and 3.5L Engines

- Check for valve tappet face wear.
- Check for excessive valve tappet clearance. Refer to Valve Clearance Check. For the 2.5L engine, refer to Section 303-01A . For the 3.5L engine, refer to Section 303-01C . For 2.5L Hybrid engine, refer to Section 303-01D .

Valve Train Analysis - Valve Springs, Valve Spring Retainers and Valve Spring Retainer Keys

NOTE: Valve tap removed on 2.5L and 3.5L engines.

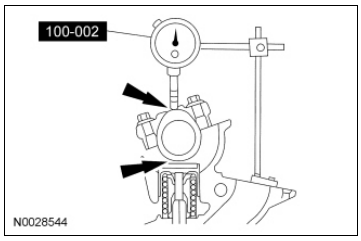
- Check for broken or damaged parts.
- Check for correct seating of the valve spring retainer key on the valve stem and in valve spring retainer.
- Check for correct seating on the valve stem.

Valve Train Analysis - Valves and Cylinder Head

NOTE: Valve tappets must be removed on 2.5L and 3.5L engines.

- Check for plugged oil drain back holes.

- Check for worn or damaged valve tips.
- Check for missing or damaged guide-mounted valve stem seal.
- Check for missing or worn valve spring seats.
- Check for plugged oil metering orifice in cylinder head oil reservoir (if equipped).



Valve Train Analysis - Camshaft Lobe Lift

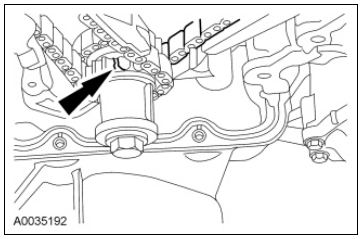
Check the lift of each camshaft lobe in consecutive order and make a note of the readings.

1. Remove the spark plugs. Refer to the appropriate 303-07 section.

2. Install the Dial Indicator Gauge with Holding Fixture so the rounded tip of the Dial Indicator Gauge is on top of the camshaft lobe and on the same plane as the valve tappet (2.5L and 3.5L) or hydraulic lash adjuster (3.0L).

3. Rotate the crankshaft using a breaker bar and socket attached to the crankshaft pulley retainer bolt. Rotate the crankshaft until the base circle of the camshaft lobe is reached.

4. Zero the Dial Indicator Gauge. Continue to rotate the crankshaft until the high-lift point of the camshaft lobe is in the fully-raised position (highest indicator reading).

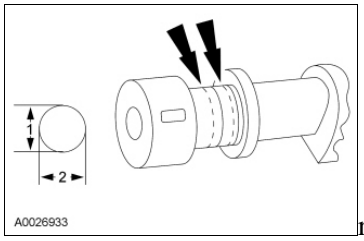


5. To check the accu of the original indicator reading, continue to rotate crankshaft until the base circle is reached. The Dial Indicator Gauge reading should be zero. If zero reading is not obtained, repeat Steps 1 through 6.

6. If the lift on any lobe is below specified service limits, install a new camshaft and camshaft roller followers or valve tappets.

7. Install the spark plugs. Refer to the appropriate 303-07 section.

Sprockets



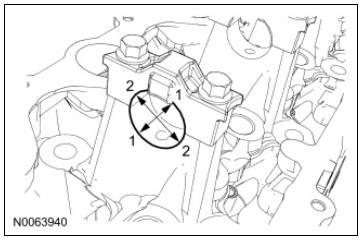
1. Inspect the sprockets for cracks and worn or chipped teeth.

Camshaft Bearing Journal Diameter

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Measure each camshaft journal diameter in 2 directions.

r>



Camshaft Journal to Bearing Clearance - OHC Engines

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. **NOTE:** The camshaft journals must meet specifications before checking camshaft journal clearance.

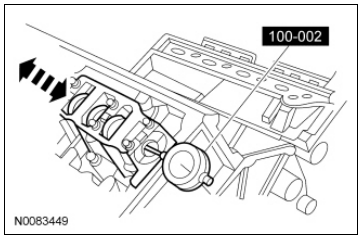
   Measure each camshaft bearing in 2 directions.

   - Subtract the camshaft journal diameter from the camshaft bearing diameter.
   -

Camshaft End Play - OHC Engines

Special Tool(s)

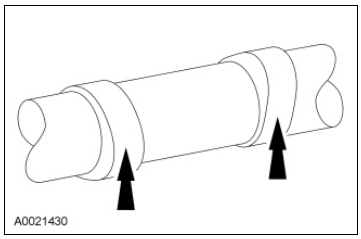
 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent



NOTE: Refer to the appropriate Section 303-01 for the specification.

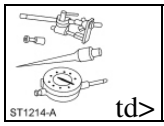
1. Using the Dial Indicator Gauge with Holding Fixture, measure the camshaft end play.

tart="2">
- Position the camshaft to the rear of the cylinder head.



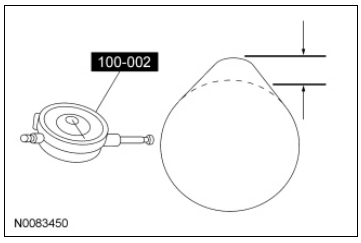
3. Zero the Dial Indicator Gauge.

4. Move the camshaft to the front of the cylinder head. Note and record the camshaft end play.
   - If camshaft end play exceeds specifications, install a new camshaft and recheck end play.
   - If camshaft end play exceeds specification after camshaft installation, install a new cylinder head.



Camshaft Surface Inspection

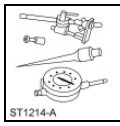
1. Inspect camshaft lobes for pitting or damage in the contact area. Minor pitting is acceptable outside the contact area.



Camshaft Lobe Lift

Special Tool(s)

 td>	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent



NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Use the Dial Indicator Gauge with Holding Fixture to measure camshaft intake/exhaust lobe lift.
   - Rotate the camshaft and subtract the lowest Dial Indicator Gauge reading from the highest Dial Indicator Gauge reading to figure the camshaft lobe lift.

Camshaft Runout

Special Tool(s)

 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.

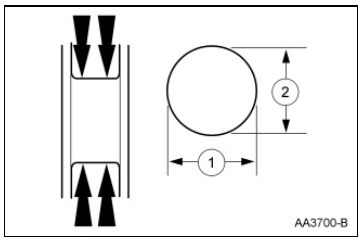
1. **NOTE:** Camshaft journals must be within specifications before checking runout.

   Using the Dial Indicator Gauge with Holding Fixture, measure the camshaft runout.

   - Camshaft must be supported on the first and last camshaft bearing journal.
   - Rotate the camshaft and subtract the lowest Dial Indicator Gauge reading from the highest Dial Indicator Gauge reading.

Crankshaft Main Bearing Journal Diameter

NOTE: Refer to the appropriate Section 303-01 for the specification.

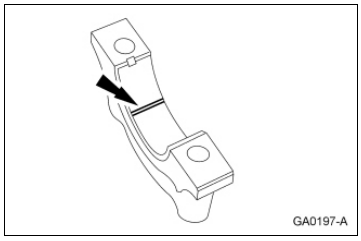


1. Measure each of the crankshaft main bearing journal diameters in at least 2 directions.

Crankshaft Main Bearing Journal Taper and Out-of-Round

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Measure each of the crankshaft main bearing journal diameters in at least 2 directions at each end of the main bearing journal.

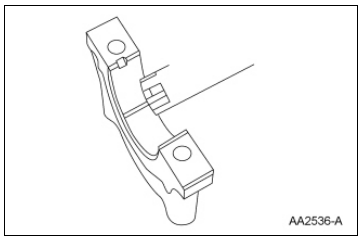


Crankshaft Main Bearing Journal-to-Bearing Clearance

NOTE: Refer to the appropriate Section 303-01 for the specification.

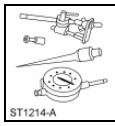
NOTE: Crankshaft main bearing journals must be within specifications before checking journal clearance.

1. Remove the crankshaft main bearing caps and crankshaft main bearing.



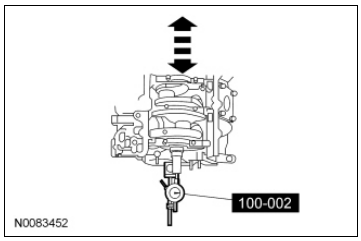
2. Lay a piece of Plastigage across the face of each crankshaft main bearing surface.

- **NOTE:** Do not turn the crankshaft while carrying out this procedure.



Install and remove the crankshaft main bearing cap.

4. Verify the crankshaft journal clearance.

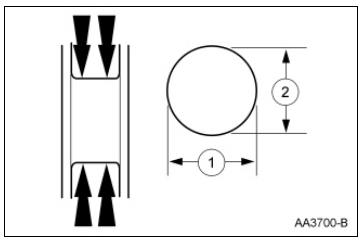


Crankshaft End Play

Special Tool(s)

 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

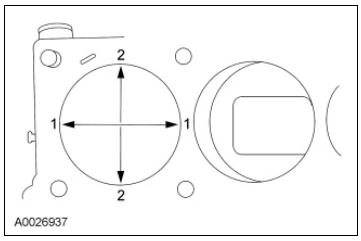
>NOTE: Refer to the appropriate Section 303-01 for the specification.



1. Install the Dial Indicator Gauge with Holding Fixture.
2. Position the crankshaft to the rear of the cylinder block.
3. Zero the Dial Indicator Gauge.
4. Move the crankshaft to the front of the cylinder block. Note and record the crankshaft end play.

Connecting Rod Bearing Journal Taper and Out-of-Round

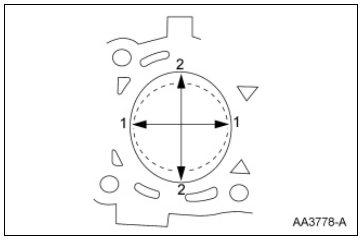
NOTE: Refer to the appropriate Section 303-01 for the specification.



1. Measure the crankshaft connecting rod journal diameters in 2 directions perpendicular to one another at each end of the connecting rod journal. The difference in the measurements from one end to the other is the taper. Verify measurement is within the wear limit.

Cylinder Bore Taper

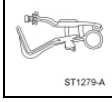
NOTE: Refer to the appropriate Section 303-01 for the specification.



1. Measure the cylinder bore at the top, middle and bottom of piston ring travel in 2 directions as indicated. Verify the cylinder bore is within the wear limit. The difference indicates the cylinder bore taper. If the cylinder bore taper does not meet specification, bore the cylinder to the next oversize limit.

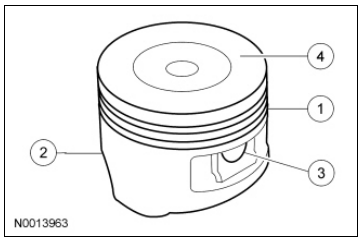
Cylinder Bore Out-of-Round

NOTE: Refer to the appropriate Section 303-01 for the specification.



1. Measure the cylinder bore in 2 directions. The difference is the out-of-round.

&np;



Piston Inspection

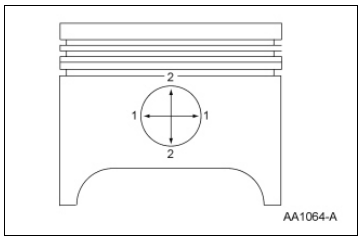
Special Tool(s)

 ST1279-A	Scraper, Piston Ring Groove 303-D033 (D81L-6002-D) or equivalent

NOTICE: **Do not use a caustic cleaning solution or a wire brush to clean the pistons or damage can occur.**

1. Clean and inspect the (1) ring lands, (2) skirts, (3) pin bosses and the (4) tops of the pistons. If wear marks, scores or glazing is found on the piston skirt, check for a bent or twisted connecting rod.

2. Use the Piston Ring Groove Scraper to clean the piston ring grooves.
   - Make sure the oil ring holes are clean.

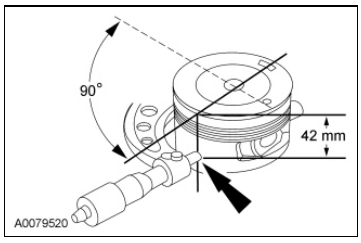


Piston Pin Bore Diameter

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. **NOTE:** Piston and piston pins are a matched set and should not be interchanged.

   Measure the piston pin bore diameter in 2 directions on each side. Verify the diameter is within specification.



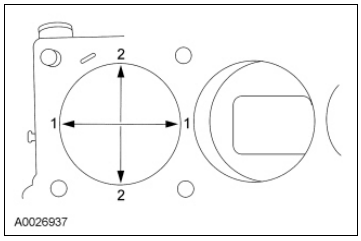
bsp;

Piston Diameter

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Measure the piston diameter 90 degrees from the piston pin and 42 mm (1.65 in) down from the top of the piston at the point indicated.

Piston To Cylinder Bore Clearance

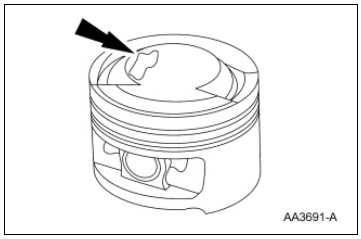


NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Subtract the piston diameter from the cylinder bore diameter to find the piston-to-cylinder bore clearance.

Piston Selection

NOTE: The cylinder bore must be within the specifications for taper and out-of-round before fitting a piston.



1. Select a piston size based on the cylinder bore.

2. **NOTE:** For precision fit, new pistons are divided into 3 categories within each size rangbased on their relative position within the range. A paint spot or specific size grade on a new piston indicates the position within the size range.

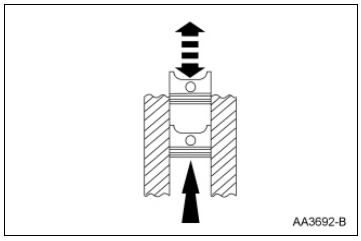
   Choose the piston with the correct paint color or specific size grade.

   - Refer to the appropriate section in Group 303 for the procedure.

Piston Ring End Gap

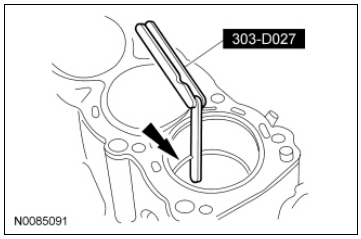
Special Tool(s)

 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent



NOTICE: **Use care when fitting piston rings to avoid posble damage to the piston ring or the cylinder bore.**

NOTE: Piston rings should not be transferred from one piston to another.

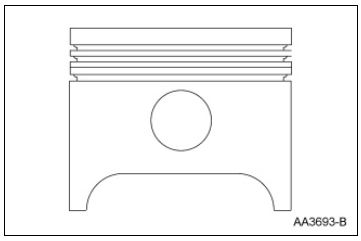


NOTE: Refer to the appropriate Section 303-01 for the specification.

NOTE: The cylinder bore must be within specification for taper and out-of-round.

1. Use a piston without rings to push a piston ring in a cylinder to the bottom of ring travel.

2. Use the Feeler Gauge Set to measure the top piston ring end gap and the second piston ring end gap.



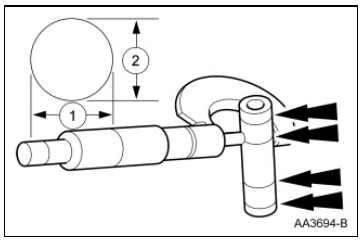
Piston Ring-to-Groove Clearance

Special Tool(s)

 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent

NOTE: Refer to the appropriate Secon 303-01 for the specification.

1. Inspect the piston for ring land damage or accelerated wear.

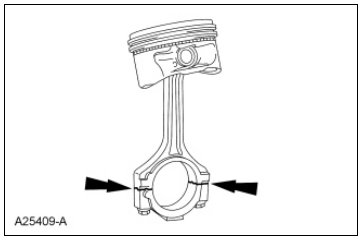


2. Using the Feeler Gauge Set, measure the piston ring-to-groove clearance.

Piston Pin Diameter

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Measure the piston pin diameter in 2 directions at the points shown. Verify the diameter is within specification.



&np;

Connecting Rod Cleaning

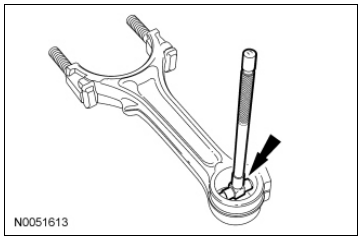
NOTICE: **Do not use a caustic cleaning solution or damage to connecting rods can occur.**

1. **NOTE:** The connecting rod large end is a matched set. The connecting rod cap must be installed on the original connecting rod in the original position. Do not reverse the cap. Parts are not interchangeable.

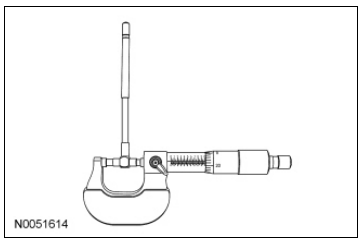
   Mark and separate the parts and clean with solvent. Clean the oil passages.

Connecting Rod Large End Bore

NOTE: Refer to the appropriate Section 303-01 for the specification.



1. Tighten the bolts to specification, then measure the bore in 2 directions. The difference is the connecting rod bore out-of-round. Verify the out-of-round is within specification.

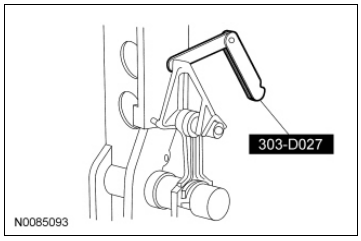


Connecting Rod Bushing Diameter

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Use a telescoping gauge to determine the ID of the connecting rod buing, if equipped.

2. Measure the telescoping gauge with a micrometer. Verify the diameter is within specification.



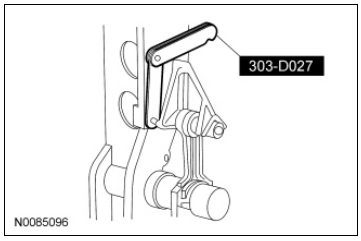
Connecting Rod Bend

Special Tool(s)

 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specication.

1. Using the Feeler Gauge Set, measure the connecting rod bend on a suitable alignment fixture. Follow the instructions of the fixture manufacturer. Verify the bend measurement is within specification.



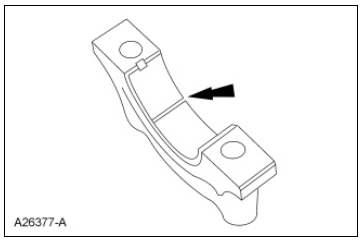
Connecting Rod Twist

Special Tool(s)

 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the spification.

1. Using the Feeler Gauge Set, measure the connecting rod twist on a suitable alignment fixture. Follow the instructions of the fixture manufacturer. Verify the measurement is within specification.

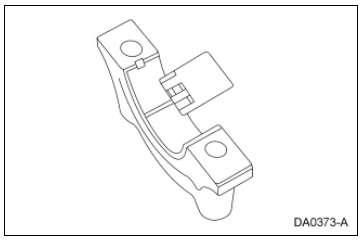


Connecting Rod Bearing Journal-to-Bearing Clearance

NOTE: Refer to the appropriate Section 303-01 for the specification.

NOTE: The crankshaft connecting rod journals must be within specifications to check the connecting rod bearing journal clearance.

1. Remove the connecting rod bearing cap.

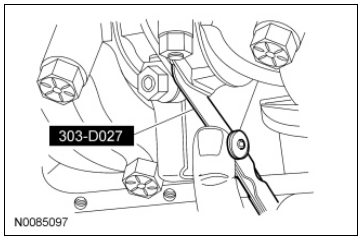


2. Position a piece of Plastigage across the bearing surface.

3. **NOTE:** Do not turn the crankshaft during this step.

   Install and tighten to specifications, then remove the connecting rod bearing cap.

4. Measure the Plastigage to get the connecting rod bearing journal clearance. The Plastigage should be smooth and flat. A changing width indicates a tapered or damaged connecting rod or connecting rod bearing.

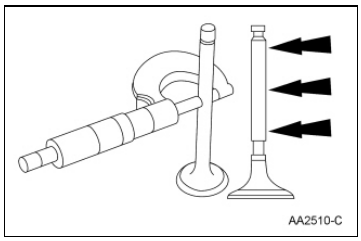


Connecting Rod to Crankshaft Side Clearance

Special Tool(s)

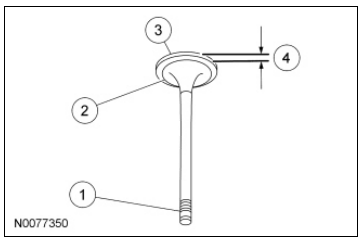
 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.



1. Using the Feeler Gauge Set, measure the clearance between the connecting rod and the crankshaft. Verify the measurement is within specification.

Valve Stem Diameter

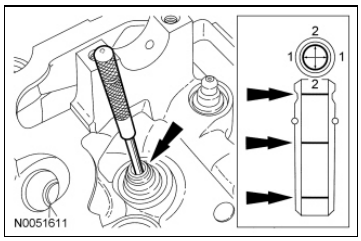


NOTE: Refer to the appropriate Section 303-01 for the specification.

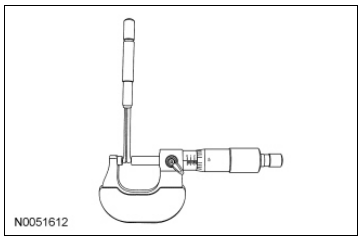
1. Measure the diameter of each intake and exhaust valve stem at the points shown. Verify the diameter is within specification.

Valve Inspection

1. Inspect the following valve areas:
    1. The end of the stem for grooves or scoring.
    2. The valve face and the edge for pits, grooves or scores.
    3. The valve head for signs of burning, erosion, warpage and cracking.
    4. The valve margin for wear.



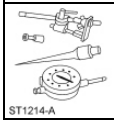
Valve Guide Inner Diameter



NOTE: Refer to the appropriate Section 303-01 for the specification.

1. **NOTE:** Valve guides tend to wear in an hourglass pattern. The ball gauge can be inserted into the combustion chamber side of the valve guide, if necessary.

   Use a ball gauge to determine the inside diameter of the valve guides in 2 directions at the top, middle and bottom of the valve guide.



2. Measure the ball gauge with a micrometer.

3. If the valve guide is not within specifications, install a new cylinder head assembly.

Valve Stem to Valve Guide Clearance

Special Tool(s)

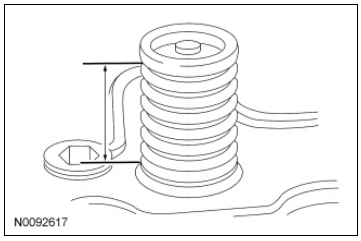
	Clearance Gauge, Valve Guide 303-004 (TOOL-6505-E) or equivalent
 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.

NOTE: The valve stem diameter must be within specifications before checking valve stem-to-valve guide clearance.

1. **NOTE:** If necessary, use a magnetic base.

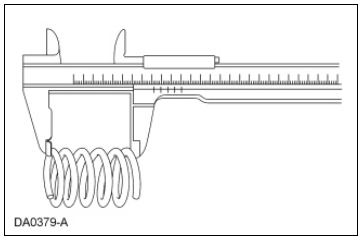
   Install a Valve Guide Clearance Gauge on the valve stem and install a Dial Indicator Gauge with Holding Fixture. Lower the valve until the clearance gauge contacts the upper surface of the valve guide.



2. Move the Valve Guide Clearance Gauge toward the Dial Indicator Gauge with Holding Fixture and zero the Dial Indicator Gauge. Move the Valve Guide Clearance Gauge away from the Dial Indicator Gauge with Holding Fixture and note the reading. The reading will be DOUBLE the valve stem-to-valve guide clearance.

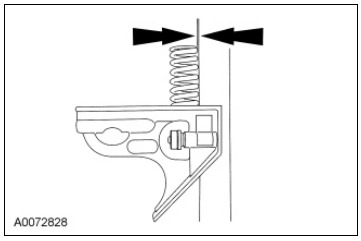
Valve Spring Installed Length

NOTE: Refer to the appropriate Section 303-01 for the specification.



1. Measure the installed length of each valve spring.

Valve Spring Free Length

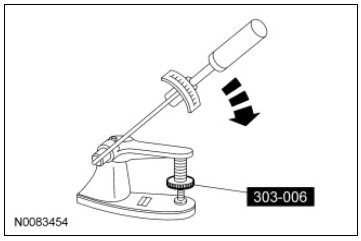


NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Measure the free length of each valve spring.

Valve Spring Squareness

- Measure the out-of-square on each valve spring.
    - Turn the valve spring and observe the space between the top of the valve spring and the square.



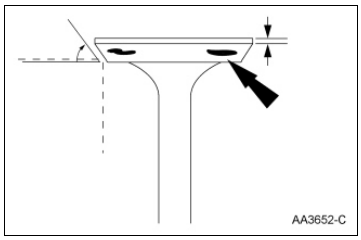
Valve Spring Strength

Special Tool(s)

 ST1278-A	Pressure Gauge, Valve/Clutch Spring 303-006 (TOOL-6513-DD) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. Use the Valve/Clutch Spring Pressure Gauge to check the valve spring for correct strength at the specified valve spring length.



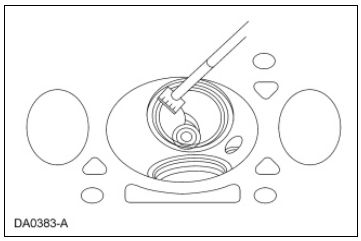
Valve Seat Inspection

Valve and Seat Refacing Measurements

NOTE: Refer to the appropriate Section 303-01 for the specification.

NOTE: After grinding valves or valve seats, check valve clearance.

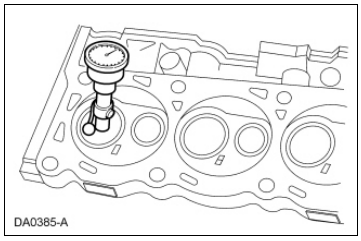
1. Check the valve head and seat.
   - Check valve angles.
   - Check margin width.
   - Be sure margin width is within specification.



2. Inspect for abnormalities on the valve face and seat. Install a new cylinder head assembly if abnormalities are found.

Valve Seat Width

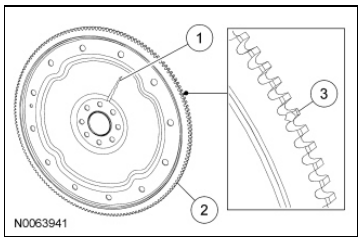
NOTE: Refer to the appropriate Section 303-01 for the specification.



1. Measure the valve seat width. If necessary, grind the valve seat to specification.
    - Measure the intake valve seat width.
    - Measure the exhaust valve seat width.
    - Recheck the valve spring installed length after the seats have been ground, and shim the valve springs as necessary to achieve the correct installed spring length.
    - Dependi on the engine, check the valve lash. Refer to General Procedures in Section 303-01.

Valve Seat Runout

NOTE: Refer to the appropriate Section 303-01 for the specification.

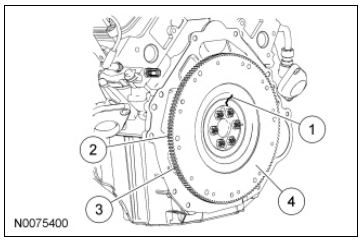


1. Use a valve seat runout gauge to check valve seat runout.

bsp;

Flexplate Inspection

1. Inspect the flexplate for:
    1. any cracks.
    2. worn ring gear teeth.
    3. chipped or cracked ring gear teeth.



Flywheel Inspection

1. **NOTE:** The flywheel cannot be resurfaced, it must be replaced.

   Inspect the flywheel for:

   1. any cracks.
   2. worn ring gear teeth.
   3. chipped or cracked ring gear teeth.
   4. scratches, nicks and discoloration.

Cylinder Head Distortion

Special Tool(s)

	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent

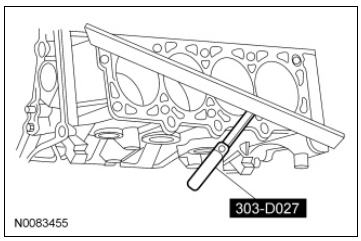
NOTE: Refer to the appropriate Section 303-01 for the specification.

1. **NOTE:** Make sure all cylinder head surfaces are clear of any gasket material, silicone sealant, oil and coolant. The cylinder head surface must be clean and dry before running a flatness check.

   NOTE: Use a Straightedge that is calibrated by the manufacturer to be flat within 0.005 mm (0.0002 in) per running foot of length, such as Snap-On® GA438A or equivalent. For example, if the Straightedge is 61 cm (24 in) long, the machined edge must be flat within 0.010 mm (0.0004 in) from end to end.

   Using a Straightedge and a Feeler Gauge Set, inspect the cylinder head for flatness in the sequence shown.

Cylinder Block Distortion



Special Tool(s)

 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent

NOTE: Refer to the appropriate Section 303-01 for the specification.

1. **NOTE:** Use a Straightedge that is calibrated by the manufacturer to be flat within 0.005 mm (0.0002 in) per running foot of length, such as Snap-On® GA438A or equivalent. For example, if the Straightedge is 61 cm (24 in) long, the machined edge must be flat within 0.010 mm (0.0004 in) from end to end.

   Use a Straightedge and a Feeler Gauge Set to inspect the cylinder block for flatness.

Cylinder Bore Cleaning

Material

Item	Specification
Motorcraft® SAE 5W-20 Premium Synthetic Blend Motor Oil (US); Motorcraft® SAE 5W-20 Super Premium Motor Oil (Canada) XO-5W20-QSP (US); CXO-5W20-LSP12 (Canada)	WSS-M2C945-A

1. ***NOTICE:*** **If these procedures are not followed, rusting of the cylinder bores may occur.**

   Clean the cylinder bores with soap or detergent and water.

2. Thoroughly rinse with clean water and wipe dry with a clean, lint-free cloth.

3. Use aan, lint-free cloth and lubricate the cylinder bores.
   - Use clean engine oil meeting Ford specification.

Bearing Inspection

1. Inspect bearings for the following defects:
    1. Cratering - fatigue failure
    2. Spot polishing - incorrect seating
    3. Imbedded dirty engine oil
    4. Scratching - dirty engine oil
    5. Base exposed - poor lubrication
    6. Both edges worn - journal damaged
    7. One edge worn - journal tapered or bearing not seated

Exhaust Manifold Cleaning and Inspection

Special Tool(s)

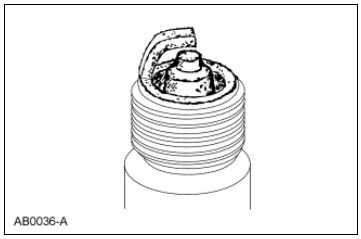
 ST1271-A	Feeler Gauge Set 303-D027 (D81L-4201-A) or equivalent

1. Clean the exhaust manifold using a suitable solvent. Use a plastic scraping tool to clean the gasket sealing surfaces.

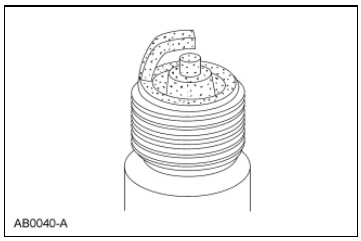
2. **NOTE:** New exhaust manifold gaskets, studs, nuts and/or bolts must be installed when an exhaust manifold is serviced.

   NOTE: Use a Straightedge that is calibrated by the manufacturer to be flat within 0.005 mm (0.0002 in) per running foot of length, such as Snap-On® GA438A or equivalent. For example, if the Straightedge is 61 cm (24 in) long, the machined edge must be flat within 0.010 mm (0.0004 in) from end to end.

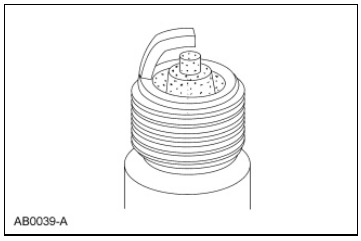
   Using the Straightedge and a Feeler Gauge Set, check the exhaust manifold sealing surface for warpage. If the warpage is greater than 0.76 mm (0.0299 in), install a new exhaust manifold.



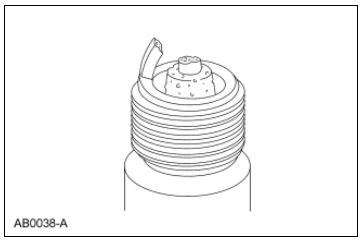
Spark Plug Inspection



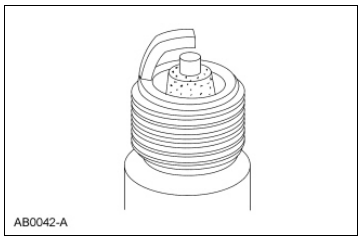
1. Inspect the spark plug for a bridged gap.
    - Check for deposit build-up closing the gap between the electrodes. Deposits are caused by oil or carbon fouling.
    - Install a new spark plug.



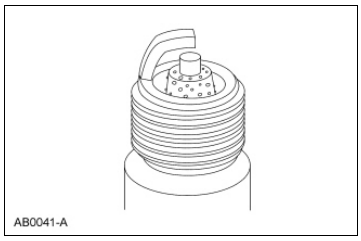
2. Check for oil fouling.
    - Check for wet, black deposits on the insulator shell bore electrodes, caused by excessive oil entering the combustion chamber through worn rings and pistons, excessive valve-to-guide clearance or worn or loose bearings.
    - Correct the oil leak concern.
    - Install a new spark plug.



3. Inspect for carbon fouling. Look for black, dry, fluffy carbon deposits on the insulator tips, exposed shell surfaces and electrodes, caused by a spark plug with an incorrect heat range, dirty air cleaner, too rich a fuel mixture or excessive idling.
    - Install new spark plugs.

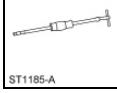


4. Inspect for normal burning.
    - Check for light tan or gray deposits on the firing tip.



5. Inspect for pre-ignition, identified by melted electrodes and a possibly damaged insulator. Metallic deposits on the insulator indicate engine damage. This may be caused by incorrect ignition timing, wrong type of fuel or the unauthorized installation of a heli-coil insert in place of the spark plug threads.
    - Install a new spark plug.

6. Inspect for overheating, identified by white or light gray spots and a bluish-burnt appearance of electrodes. This is caused by engine overheating, wrong type of fuel, loose spark plugs, spark plugs with an incorrect heat range, low fuel pump pressure or incorrect ignition timing.
    - Install a new spark plug.

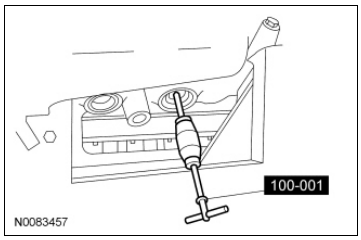


7. Inspect for fused deposits, identified by melted or spotty deposits resembling bubbles or blisters. These are caused by sudden acceleration.
    - Install new spark plugs.

Core Plug Replacement

Special Tool(s)

 ST1185-A	Slide Hammer 100-001 (T50T-100-A)



Material

Item	Specification
Threadlock 262 TA-26	WSK-M2G351-A6

All core plugs

1. **NOTE:** Cylinder block core plug shown, cylinder head core plug similar.

   Use the Slide Hammer and a freeze plug remover to remove the core plug.

2. **NOTE:** Oversize plugs are identified by the OS stamped in the flat located on the cup side of the plug.

   Inspect the core plug bore for any damage that would interfere with the correct sealing of the plug. If the core plug bore is damaged, bore for the next oversize plug.

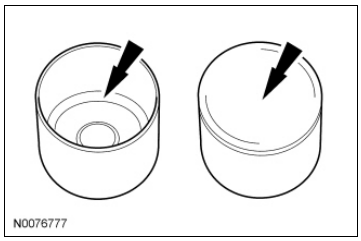
Cup-type

3. ***NOTICE:*** **Use care during this procedure so as not to disturb or distort the cup sealing surface.**

   NOTE: When installed, the flanged edge must be below the chamfered edge of the bore to effectively seal the bore.

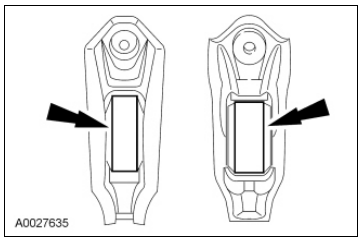
   Coat the cup-type core plug and bore lightly with sealant and install the core plug using a freeze plug installer.

Expansion-type



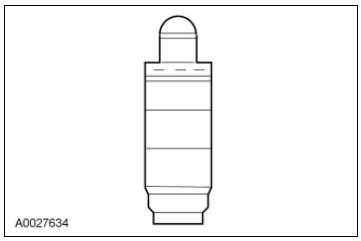
4. ***NOTICE:*** **Do not contact the crown when installing an expansion-type core plug. This could expand the plug before seating and result in leakage.**

   Coat the expansion-type core plug and bore lightly with sealant and install the core plug using a freeze plug installer.



Valve Tappet Inspection

1. Inspect the valve tappet for damage, especially in the indicated areas. If any damage is evident, inspect the camshaft lobes and valves for damage. Install new components as necessary.



Roller Follower Inspection

1. Inspect the roller follower for flat spots or scoring. If any damage is found, inspect the camshaft lobes and hydraulic lash adjuster for damage.

Hydraulic Lash Adjuster Inspection

1. Inspect the hydraulic lash adjuster and roller follower for damage. If any damage is found, inspect the camshaft lobes and valves for damage.

Powertrain/Drivetrain Mount Neutralizing

NOTE: Refer to the appropriate section and procedure for special instructions on loosening and tightening mount fasteners.

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .
2. Loosen, but do not remove, the powertrain/drivetrain mount fasteners.
3. Lower the vehicle.
4. ***NOTICE:*** **Do not twist or stra the powertrain/drivetrain mounts or damage to the mounts may occur.**

   Start the vehicle and move it in forward 0.6-1.2 m (2-4 ft). Then move the vehicle in reverse the same distance.
5. Raise and support the vehicle.
6. Tighten the powertrain/drivetrain mount fasteners.
7. Lower the vehicle.
8. Test the system for normal operation.

Material

[a] Early build vehicle cooling systems are filled with Motorcraft® Specialty Green Engine Coolant and late build vehicle cooling systems are filled with Motorcraft® Specialty Orange Engine Coolant. Use the same type of coolant that was originally used to fill the cooling system. Do not mix coolant types. Mixing coolant types degrades the coolant corrosion protection and may damage the engine or cooling system.

General Specifications

Item	Specification
Displacement	2.5L
No. of cylinders	4
Bore/stroke	89.0/100.0
Firing order	1-3-4-2
Oil pressure (normal operating temperature @ 2,000 rpm)	200-450 kPa (29-65 psi)
Compression ratio	9.7:1
Engine weight (without accessory drive components and flexplate or flywheel)	115.8 kg (255.3 lb)
Engine and transaweight (without accessory drive components)	203.8 kg (449.3 lb)
Cylinder Block	
Cylinder bore diameter	89.0-89.03 mm (3.503-3.505 in)
Cylinder bore maximum out-of-round	0.008 mm (0.0003 in)
Main bearing bore diameter	57.018-57.040 mm (2.244-2.245 in)
Head gasket surface flatness	0.1 mm/general 0.05 mm/200 x 200 (0.004 in/general) (0.0019 in/7.87 x 7.87)
Piston	
Diameter (1)	88.965-88.975 mm (3.5025-3.5029 in)
Diameter (2)	88.975-88.985 mm (3.5029-3.5033 in)
Diameter (3)	88.985-88.995 mm (3.5033-3.5037 in)
Piston-to-bore clearance	0.025-0.045 mm (0.0009-0.0017 in)
Ring groove width - top	1.203-1.205 mm (0.0473-0.0474 in)
Ring groove width - 2nd	1.202-1.204 mm

	(0.0473-0.0474 in)
Ring groove width - oil	2.501-2.503 mm (0.0984-0.0985 in)
Piston skirt coatingness	0.008-0.016 mm (0.0003-0.0007 in)
Piston Pin	
Diameter	19.995-20.0 mm (0.8265-0.8267 in)
Length	54.7-55.0 mm (2.1535-2.1653 in)
Cylinder Head	
Cylinder head flatness	0.08 (0.0031 in) maximum overall, a maximum of 0.05 mm (0.0019 in) within 150 mm (5.9 in)
Valve lift @ zero lash (exhaust)	7.7 mm (0.30 in)
Valve lift @ zero lash (intake)	8.8 mm (0.35 in)
Valve guide inner diameter	5.509-5.539 mm (0.216-0.218 in)
Valve seat width - intake/exhaust	0.99-1.84 mm (0.038-0.072 in)
Valve seat angle	45 degrees
Valve seat runout	0.075 mm (0.0029 in)
Valve lash adjuster bore diameter	31.00-31.03 mm (1.220-1.221 in)
Cam bore diameter	25.015-25.040 mm (0.984-0.985 in)
Valve	
Valve head diameter - intake	34.85-35.15 mm (1.37283 in)
Valve head diameter - exhaust	29.85-30.15 mm (1.175-1.187 in)
Valve stem diameter - intake	5.470-5.485 mm (0.2153-0.2159 in)
Valve stem diameter - exhaust	5.465-5.480 mm (0.2151-0.2157 in)
Valve stem-to-guide clearance - intake	0.0027 mm (0.00010 in)
Valve stem-to-guide clearance - exhaust	0.0029 mm (0.00011 in)

Valve face runout	0.05 mm (0.0019 in)
Valve face angle	45 degrees
Valve Spring - Compression Pressure	
Intake and exhaust (installed)	17.5 kg (38.667 lb)
Intake (valve open) 8.9 mm (0.35 in) of lift	44 kg (97.032 lb)
Exhaust (valve open) 7.4 mm (0.29 in) of lift	42 kg (93.338 lb)
Free length	44.92 mm (1.768 in)
Assembled height	37.9 mm (1.492 in)
Crankshaft	
Main bearing journal diameter	51.978-52.002 mm (2.046-2.047 in)
	51.730-51.750 mm (2.036-2.037 in)
Main bearing clearance	0.016-0.047 mm (0.0006-0.0015 in)
Connecting rod journal diameter	51.978-52.002 mm ((2.046-2.047 in)
Production repair	51.730-51.750 mm (2.036-2.037 in)
End play	0.22-0.450 mm (0.008-0.018 in)
Rings	
Width - top	1.17-1.19 mm (0.0460-0.0468 in)
Width - 2nd	1.17-1.19 mm (0.0460-0.0468 in)
Width - oil	2.38-2.45 mm (0.093-0.096 in)
Piston ring end gap - compression (top, gauge diameter)	0.16-0.26 mm (0.006-0.0102 in)
Piston ring end gap - compression (bottom, gauge diameter)	0.31-0.46 mm (0.012-0.018 in)
Piston ring end gap - oil ring (steel rail, gauge diameter)	0.15-0.40 mm (0.01575-0.0591 in)
Valve Tappet	
Diameter	

	30.97-30.98 mm (1.2192-1.2196 in)	
Tappet-to-valve clearance - intake		
Tappet-to-valve clearance - exhaust	0.27-0.33 mm (0.010-0.013 in)	
Tappet-to-bore clearance	0.02-0.06 mm (0.0007-0.0023 in)	
Camshaft		
Lobe lift - intake	8.24999 mm (0.324 in)	
Lobe lift - exhaust	7.80007 mm (0.307 in)	
Runout (1) [a]	0.03 mm (0.001 in)	
Thrust clearance	0.09-0.24 mm (0.003-0.009 in)	
Journal diameter	24.96-24.98 mm (0.982-0.983 in)	
Journal-to-bore clearance	0.035-0.080 mm (0.001-0.003 in)	
Connecting Rod		
Bearing clearance	0.027-0.052 mm (0.001-0.002 in)	
Bearing thickness	1.496-1.520 mm (0.058-0.059 in)	
Crank bore diameter	55.025-55.045 mm (2.166-2.167 in)	
Pin bore diameter	20.010-20.021 mm (0.7878-0.7882 in)	
Length (center-to-center)	151.8 mm (5.976 in)	0.14-0.36 mm (0.005-0.014 in)

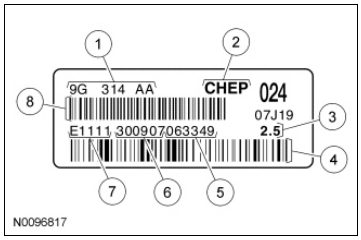
[b] Lubricate the engine oil filter gasket with clean engine oil. Tighten the oil filter three-fourths turn after the oil filter gasket makes contact with the oil filter adapter.

Engine

The 2.5L (153 CID) 4-cylinder engine has the following features:

- DOHC
- Four valves per cylinder
- Sequential Multi-Port Fuel Injection (SFI)
- Aluminum cylinder head
- Aluminum cylinder block
- Electronic ignition system with 4 coil-on-plug ignition coils

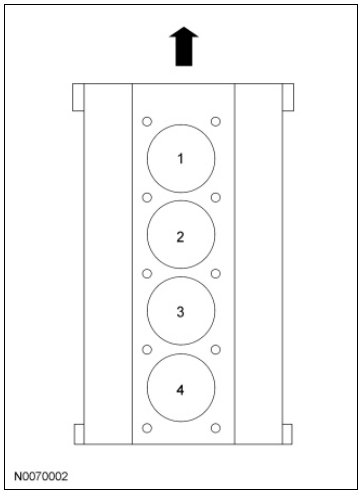


The 2.5L engine is a 4 valve-per-cylinder, dual overhead camshaft engine. The engine uses a coil-on-plug ignition system. The cylinder block is made of aluminum and the bearing caps are integrated into the ladder assembly. An aluminum oil pan bolts to the bottom of the lower cylinder block and to the transmission to provide greater strength. The camshafts are mounted in the cylinder heads and act against valve tappets to open and close the valves. The camshafts are driven off the front of the cylinder head by one timing chain. The chain is driven by a sprocket that is located on the crankshaft. The piston assembly is an aluminum piston with a cast iron connecting rod. The oil pump is driven by the crankshaft via a dedicated chain that is driven by the same sprocket that drives the timing chain.

Engine Identification

Always refer to these labels when installation of new parts is necessary or when checking engine calibrations. The engine parts often differ within a CID family. Verification of the identification codes will make sure that the correct parts are obtained. These codes contain all the pertinent information relating to the dates, optional equipment and revisions. The Ford Master Parts Catalog contains a complete listing of the codes and their applications.

Engine Code Information Label



The engine code information label, located on the front side of the valve cover, contains the following:

Item	Description
1	Engine part number
2	Chihuahua engine plant
3	Engine displacement
4	Bar code
5	Running number

6	Engine build date (DDMMYY)
7	Plant shift line
8	Bar code

Engine Cylinder Identification

Exhaust Emission Control System

Operation and necessary maintenance of the exhaust emission control devices used on this engine are covered in the Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Induction System

The SFI provides the fuel/air mixture needed for combustion in the cylinders. The 4 solenoid-operated fuel injectors:

- are mounted in the intake manifold.
- meter fuel into the air intake stream in accordance with engine demand.
- are positioned so that their tips direct fuel just ahead of the engine intake valves.
- are connected in series with the fuel pressure sensor.
- supply fuel from the fuel tank with a fuel pump mounted in the fuel tank.

A constant fuel pressure is maintained across the fuel injectors by the fuel pressure sensor. The fuel pressure sensor is positioned upstream from the fuel injectors on the fuel injection supply manifold.

PCV System

All engines are equipped with a closed-type PCV system recycling the crankcase vapors to the intake manifold.

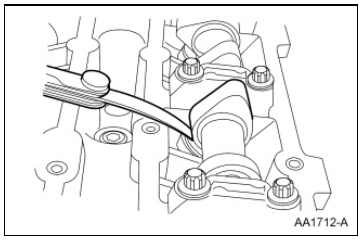
Lubrication System

The engine lubrication system operates as follows:

- Oil is drawn into the oil pump through the oil pump screen cover and tube in the sump of the oil pan.
- Oil is pumped through the oil filter on the left front side of the cylinder block.
- Oil enters the main gallery where it is distributed to the crankshaft main journals and to the cylinder head.
- From the main journals, the oil is routed through cross-drilled passages in the crankshaft to lubricate the connecting rod bearings. Controlled leakage through the crankshaft main bearings and connecting rod bearings is slung radially outward to cool and lubricate the cylinder walls as well as the entire connecting rod, piston and piston ring assembly.

Engine

For basic engine mechanical concerns, refer to Section 303-00 . For driveability concerns, refer to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.



Valve Clearance Check

1. Remove the valve cover. For additional information, refer to Valve Cover in this section.

2. **NOTE:** Turn the engine clockwise only, and only use the crankshaft bolt.

   NOTE: Before removing the camshafts, measure the clearance of each valve at base circle, with the lobe pointed away from the tappet. Failure to measure all clearances prior to removing the camshafts will necessitate repeated removal and installation and wasted labor time.

   Use a feeler gauge to measure the clearanf each valve and record its location.

3. **NOTE:** The number on the valve tappet only reflects the digits that follow the decimal. For example, a tappet with the number 0.650 has the thickness of 3.650 mm.

   NOTE: The nominal clearance is:

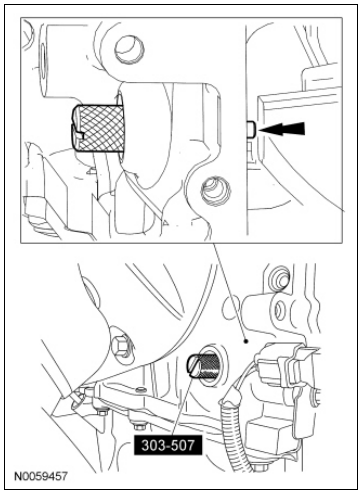
   - intake: 0.25 mm (0.0095 in).
   - exhaust: 0.30 mm (0.0115 in).

   NOTE: The acceptable clearances after being fully installed are:

   - intake: 0.22-0.28 mm (0.008-0.011 in).
   - exhaust: 0.27-0.33 mm (0.010-0.013 in).

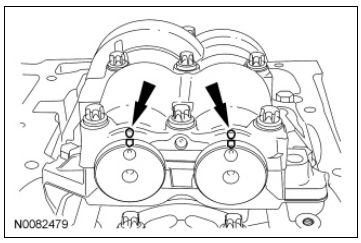
   Select tappets using this formula: ideal tappet thickness = measured clearance + the existing tappet thickness - nominal clearance.
   Select the closest tappet size to the ideal tappet thickness available and mark the installation location.

4. If any tappets do not measure within specifications, install new tappets in these locations. For additional information, refer to Valve Train Components - Exploded View and Valve Tappets in this sectn.



2012 Fusion, MKZ, Fusion Hybrid, MKZ Hybrid Workshop Manual

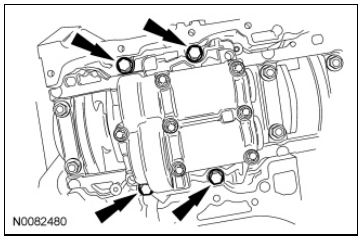
Balance Shaft Backlash



Special Tool(s)

 ST1214-A	Dial Indicator Gauge with Holding Fixture 100-002 (TOOL-4201-C)
 ST2638-A	Timing Peg, Crankshaft TDC 303-507

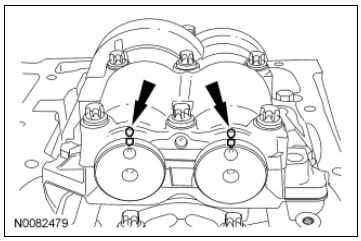
1. Install the Crankshaft TDC Timing Peg and rotate the crankshaft slowly clockwise until the crankshaft balance weight is up against the Crankshaft TDC Timing Peg. The engine is now at Top Dead Center (TDC).



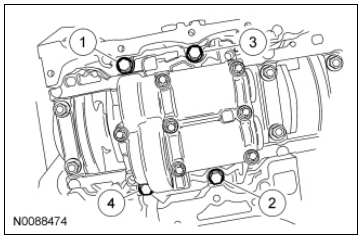
2. Mark the balancer unit and shafts on the top for reference that the balancer unit is at TDC .

3. **NOTE:** Due to the precision interior construction of the balancer unit, it should not be disassembled.

   Remove the 4 bolts and the balancer unit.

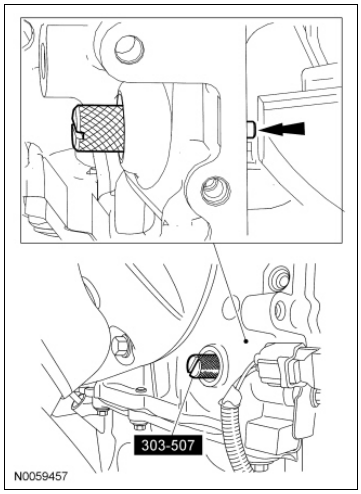


4. Remove the adjustment shims from the seat faces of the balancer unit.

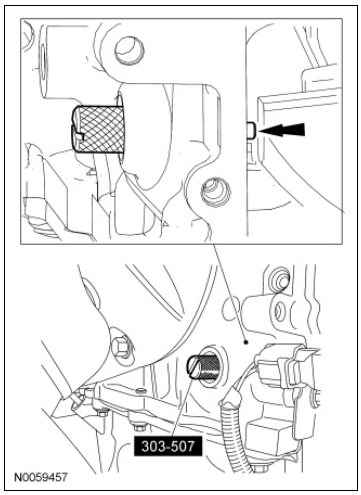


5. ***NOTICE:*** **Visually inspect the balancer unit gear for damage and verify that the shaft turns smoothly. If there is any damage or malfunction, replace the balancer unit.**

   Install the master adjustment shims (No. 50) on the seat faces of the balancer unit.



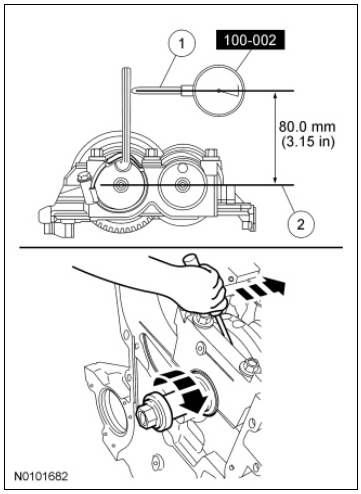
6. With the balancer unit shaft marks at the TDC position, slowly install the balancer unit to the cylinder block to avoid interference between the crankshaft drive gear and the balancer unit driven gear.



7. Install the balancer unit bolts.
   - Tighten in the sequence shown in 2 stages.
     - ♦ Stage 1: Tighten to 25 Nm (18 lb-ft).
     - ♦ Stage 2: Tighten to 42 Nm (31 lb-ft).

8. Remove the Crankshaft TDC Timing Peg.
   - Rotate the crankshaft to confirm that there are no meshing problems between the balancer unit gear and the crankshaft gear.

9. Install the Crankshaft TDC Timing Peg and rotate the crankshaft slowly clockwise until the crankshaft balance weight is up against the Crankshaft TDC Timing Peg.
    - Remove the Crankshaft TDC Timing Peg.



10. **NOTE:** Measure the backlash and verify that it is within specified range at all of the following 6 positions: 10 degrees, 30 degrees, 100 degrees, 190 degrees, 210 degrees and 280 degrees. It will be necessary to reset the measuring equipment between measurements.

    NOTE: The measurement must be taken with the Dial Indicator Gauge with Holding Fixture, a 5-mm Allen wrench and worm clamp set up as shown. Mark the Allen wrench with a file 80 mm (3.149 in) above the driven gear shaft center. Make sure the worm clamp and Allen wrench are not touching the balance shaft housing.

    NOTE: For an accurate measurement while measuring the gear backlash, insert a screwdriver as shown into the crankshaft No. 1 crankweight area and set both the rotation and the thrust direction with the screwdriver, using a prying action as shown.

    Position the Dial Indicator Gauge with Holding Fixture as shown. Measure the gear backlash.

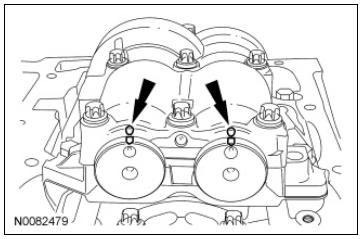
    - Position the Dial Indicator Gauge with Holding Fixture (1) on the Allen wrench 80 mm (3.149 in) above the driven gear shaft center (2) on the balancer unit.
    - Rotate the crankshaft clockwise and measure the backlash at all of the following 6 positions: 10 degrees, 30 degrees, 100 degrees, 190 degrees, 210 degrees and 280 degrees.

11. **NOTE:** If maximum backlash exceeds 0.101 mm (0.003 in), install a new balancer unit.

    Using the backlash measurement, select the proper shims from the Adjustment Shim Selection Table.

    - Remove the balancer unit from the cylinder block.
    - Install the selected adjustment shims on the seat faces of the balancer unit.

ADJUSTMENT SHIM SELECTION TABLE



Backlash mm (in)	Selection shim (No.)	Shim thicness mm (in)	Backlash mm (in)	Selection shim (No.)	Shim thicness mm (in)

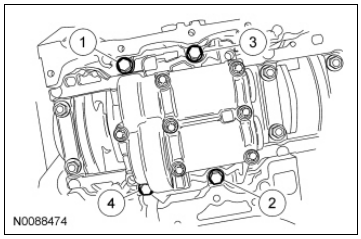
N0101731



12. Install the Crankshaft TDC Timing Peg and rotate the crankshaft slowly clockwise until the crankshaft balance weight is up against the Crankshaft TDC Timing Peg. The engine is now at TDC .

13. With the balancer unit shaft marks in the TDC position, slowly install the balancer unit to the cylinder block to avoid interference between the crankshaft drive gear and the balancer unit driven gear.

14. Install the balancer unit bolts.
    - Tighten in the sequence shown in 2 stages.
        - ♦ Stage 1: Tighten to 25 Nm (18 lb-ft).
        - ♦ Stage 2: Tighten to 42 Nm (31 lb-ft).

15. **NOTE:** Remeasure the backlash and verify that it is within specified range at all of the following 6 positions: 10 degrees, 30 degrees, 100 degrees, 190 degrees, 210 degrees and 280 degrees. It will be necessary to reset the measuring equipment between measurements.

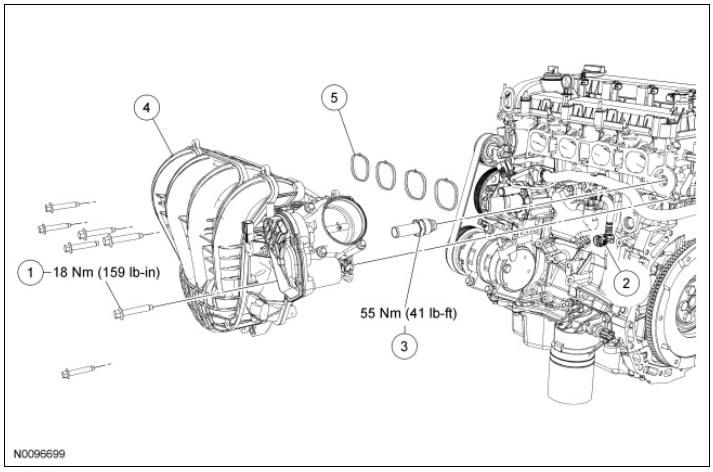
    NOTE: The measurement must be taken with the Dial Indicator Gauge with Holding Fixture, a 5-mm Allen wrench and worm clamp set up as shown. Mark the Allen wrench with a file 80 mm (3.149 in) above the driven gear shaft center. Make sure the worm clamp and Allen wrench are not touching the balance shaft housing.

    NOTE: For an accurate measurement while measuring the gear backlash, insert a screwdriver as shown into the crankshaft No. 1 crankweight area and set both the rotation and the thrust direction with the screwdriver, using a prying action as shown.

    Position the Dial Indicator Gauge with Holding Fixture as shown. Measure the gear backlash.

    - Position the Dial Indicator Gauge with Holding Fixture (1) on the Allen wrench 80 mm (3.149 in) above the driven gear shaft center (2) on the balancer unit.

- Rotate the crankshaft clockwise and measure the backlash at all of the following 6 positions: 10 degrees, 30 degrees, 100 degrees, 190 degrees, 210 degrees and 280 degrees.
- If the backlash exceeds the specified range of 0.005 to 0.101 mm (0.00019 to 0.0039 in), install a new balancer unit and repeat the procedure.

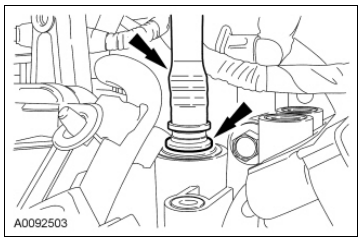


Intake Manifold

Intake Manifold (View 1 of 2)

Item	Part Number	Description
1	19D848	Vacuum supply hose
2	9D289	Fuel vapor return hose
3	14A464	Manifold Absolute Pressure (MAP) sensor electrical connector (part of 12C508)
4	14A464	Knock Sensor (KS) electrical connector (part of 12C508)
5	14A624	KS wire har pin-type retainer (part of 12C508)
6	14A464	Evaporative Emission (EVAP) canister purge valve electrical connector (part of 12C508)
7	14A464	Electronic throttle control electrical connector (part of 12C508)
8	18K580	Heater hose pin-type retainer
9	13A506	A/C compressor wiring harness retainer (part of 14B060)
10	13A506	Wire harness pin-type retainer
11	14197	Wire harness pin-type retainer

Intake Manifold (View 2 of 2)



Item	Part Number	Description
1	W500311	Intake manifold bolt (7 required)
2	6A785	Crankcase vent oil separator tube (part of 6A785)
3	9E470	EGR tube
4	9424	Intake manifold
5	9461	Intake manifold gasket

Removal and Installation

1. With vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Remove the Air Cleaner (ACL) outlet pipe. For additional information, refer to Section 303-12A .

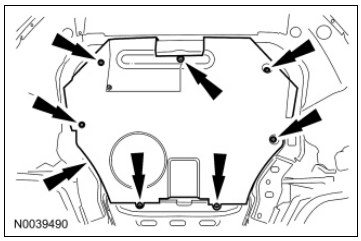
3. Disconnect the vacuum supply hose.
   - Depress the quick connect locking ring.
   - Pull the vacuum hose out of the quick connect fitting.

4. Disconnect the fuel vapor return hose from the intake manifold.

5. Disconnect the Manifold Absolute Pressure (MAP) electrical connector.

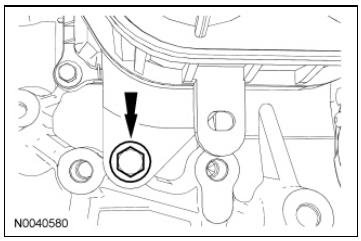
6. Disconnect the Evaporative Emission (EVAP) canister purge valve electrical connector.

7. Disconnect the electronic throttle control electrical connector.



8. Disconnect the Knock Sensor (KS) electrical connector.
   - Detach the wire harness pin-type retainer.

9. Detach the heater hose pin-type retainer.



10. Detach the A/C compressor wiring harness retainer.

11. Detach the 2 wiring harness pin-type retainers from the intake manifold and position the wiring harness aside.

12. If equipped, remove the 7 screws and the underbody cover.

13. Remove the intake manifold lower bolt.
    - To install, tighten to 18 Nm (159 lb-in).

14. Remove the 6 bolts and position the intake manifold aside to access the crankcase vent oil separator tube and the EGR tube.
    - To install, tighten to 18 Nm (159 lb-in).

15. Remove the EGR tube.
    - To install, tighten to 55 Nm (41 lb-ft).

16. Squeeze the 2 crankcase vent oil separator tube tabs and disconnect the tube from the intake manifold.
    - Remove the intake manifold.

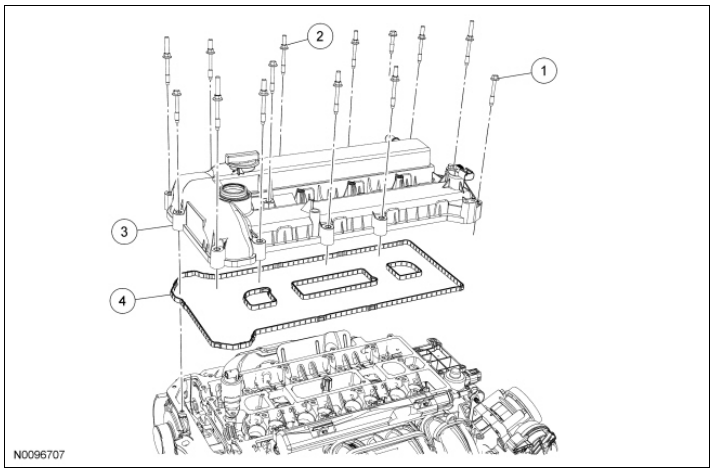
17. ***NOTICE:*** **If the engine is repaired or replaced because of upper engine failure, typically including valve or piston damage, check the intake manifold for metal debris. If metal debris is found, install a new intake manifold. Failure to follow these instructions can result in engine damage.**

    To install, reverse the removal procedure.

    - Inspect and install new intake manifold gaskets if necessary.

Valve Cover

Material



Item	Specification
Motorcraft® Metal Surface Prep ZC-31-A	-
Silicone Gasket and Sealant TA-30	WSE-M4G323-A4

Valve Cover (View 1 of 2)

Item	Part Number	Description
1	6750	Oil level indicator
2	6853	Crankcase vent hose
3	14A464	Cylinder Head Temperature (CHTr electrical connector (part of 12B637)
4	14A464	Camshaft Position (CMP) sensor electrical connector (part of 12B637)
5	14A464	Wire harness retainer (part of 12C508)
6	13A506	Wire harness retainer (part of 12C508)
7	14A464	Radio capacitor electrical connector (part of 12C508)
8	14A163	Variable Camshaft Timing (VCT) oil control solenoid electrical connector (part of 12C508)
9	14A163	Wire harness retainer (part of 14290)
10	14A163	Wire harness retainer (part of 12C508)

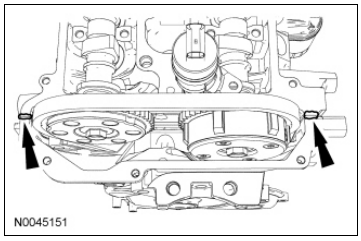
Valve Cover (View 2 of 2)

Item	Part Number	Description
1	6C291	Valve cover retainer (10 required)
2	6C291	Valve cover retainer (4 required)
3	6M293	Valve cover
4	6K260	Valve cover gasket

Removal

NOTICE: **During engine repair procedures, cleanliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan can cause engine failure.**

1. Remove the oil level indicator.
2. Remove the ignition coil-on-plugs. For additional information, refer to Section 303-07A .
3. Disconnect the crankcase vent hose.
4. Disconnect the Cylinder Head Temperature (CHT) sensor electrical connector.
5. Disconnect the Camshaft Position (CMP) sensor electrical connector.
6. Disconnect the radio capacitor electrical connector.
7. Disconnect the Variable Camshaft Timing (VCT) solenoid electrical connector.
8. Detach all of the wiring harness retainers from the valve cover studs and position the harness aside.
9. Remove the 14 valve cover retainers and the valve cover.
    - Discard the gasket.



Installation

1. ***NOTICE:*** **Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges which make leak paths.**

   Clean and inspect the sealing surfaces.

2. **NOTE:** The valve cover must be secured within 4 minutes of silicone gasket application. If the valve cover is not secured within 4 minutes, the sealant must be removed and the sealing area cleaned with metal surface prep.

   Apply silicone gasket and sealant to the locations shown.

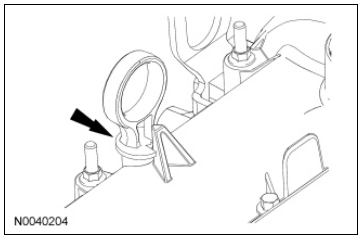
3. Install the valve cover, new gasket and retainers.
   - Tighten in the sequence shown to 10 Nm (89 lb-in).

4. Position the wiring harness and attach all of the wiring harness retainers to the valve cover studs.

5. Connect the VCT solenoid electrical connector.

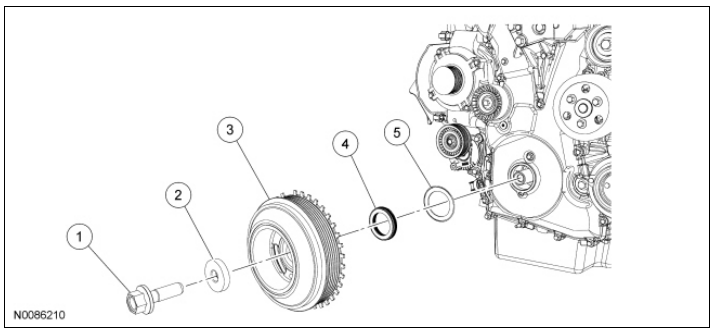
6. Connect the radio capacitor electrical connector.

7. Connect the CMP sensor electrical connector.



8. Connect the CHT sensor electrical connector.

9. Connect the crankcase vent hose.

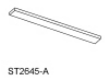


10. Install the ignition coil-on-plugs. For additional information, refer to Section 303-07A .

11. **NOTE:** Make sure the notch on the oil level indicator is aligned with the V-shaped boss on the valve cover and fully engaged into the valve cover.

    Install the oil level indicator.

Crankshaft Pulley and Crankshaft Front Seal - Exploded View



Item	Part Number	Description
1	6K340	Crankshaft pulley bolt
2	-	Crankshaft pulley washer (part of 6K340)
3	6316	Crankshaft pulley
4	6700	Crankshaft front seal
5	6378	Diamond washer

1. ***NOTICE:*** **Do not loosen or remove the crankshaft pulley bolt without first installing the special tools as instructed in this procedure. The crankshaft pulley and the timing sprocket are not keyed to the crankshaft. The crankshaft, the crankshaft sprocket and the pulley are fitted together by friction, using diamond washers between the flange faces on each part. For that reason, the crankshaft sprocket is also unfastened if the pulley bolt is loosened. Before any repair requiring loosening or removal of the crankshaft pulley bolt, the crankshaft and camshafts must be locked in place by the special service tools, otherwise severe engine damage can occur.**

   For additional information, refer to the procedures in this section.

Crankshaft Pulley

Special Tool(s)

 ST2645-A	Alignment Plate, Camshaft 303-465 (T94P-6256-CH)
 ST3054-A	Holding Tool, Crankshaft Damper 303-1416
 ST2638-A	Timing Peg, Crankshaft TDC 303-507
 ST2834-A	Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

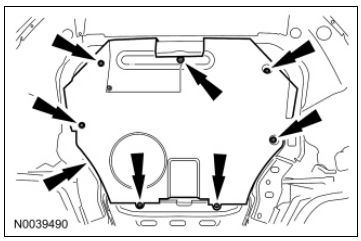
General Equipment

6 mm x 18 mm bolt

Material

Item	Specification
Motorcraft® SAE 5W-20 Premium Synthetic Blend Motor Oil (US); Motorcraft® SAE 5W-20 Super Premium Motor Oil (Canada) XO-5W20-QSP (US); CXO-5W20-LSP12 (Canada)	WSS-M2C945-A

Removal



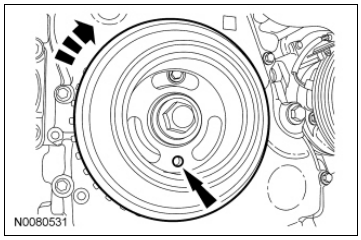
NOTICE: **Do not loosen or remove the crankshaft pulley bolt without first installing the special tools as instructed in this procedure. The crankshaft pulley and the crankshaft timing sprocket are not keyed to the crankshaft. The crankshaft, the crankshaft sprocket and the pulley are fitted together by friction, using diamond washers between the flange faces on each part. For that reason, the crankshaft sprocket is also unfastened if the pulley bolt is loosened. Before any repair requiring loosening or removal of the crankshaft pulley bolt, the crankshaft and camshafts must be locked in place by the special service tools, otherwise severe engine damage can occur.**

NOTICE: **During engine repair procedures, cleliness is extremely important. Any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan can cause engine failure.**

1. With the vehicle in NEUTRAL, position it on a hoist. For additional information, refer to Section 100-02 .

2. Remove the front RH wheel and tire. For additional information, refer to Section 204-04 .

3. If equipped, remove the 7 screws and the underbody cover.



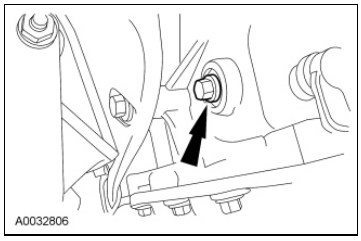
4. Remove the accessory drive belt. For additional information, refer to Section 303-05A in this section.

5. Remove the valve cover. For additional information, refer to Valve Cover in this section.

6. ***NOTICE:*** **Failure to position the No. 1 piston at Top Dead Center (TDC) can result in damage to the engine. Turn the engine in the normal direction of rotation only.**

   Using the crankshaft pulley bolt, turn the crankshaft clockwise to position the No. 1 piston at Top Dead Center (TDC).

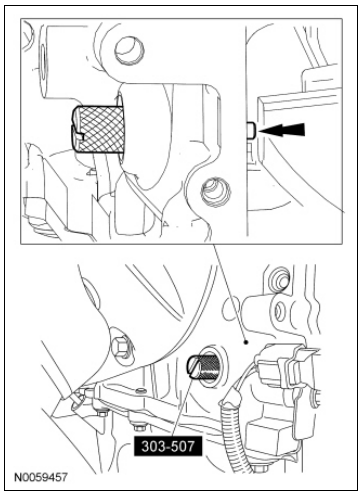
   - The hole in the crankshaft pulley should be in the 6 o'clock position.



7. ***NOTICE:*** **The Camshaft Alignment Plate is for camshaft alignment only. Using this tool to prevent engine rotation can result in engine damage.**

   NOTE: The camshaft timing slots are offset. If the Camshaft Alignment Plate cannot be installed, rotate the crankshaft one complete revolution clockwise to correctly position the camshafts.

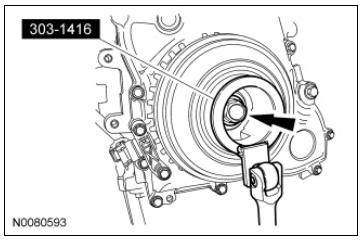
   Install the Camshaft Alignment Plate in the slots on the rear of both camshafts.



8. Remove the engine plug bolt.

9. **NOTE:** The Crankshaft TDC Timing Peg will contact the crankshaft and prevent it from turning past TDC . However, the crankshaft can still be rotated in the counterclockwise direction. The crankshaft must remain at the TDC position during the crankshaft pulley removal and installation.

   Install the Crankshaft TDC Timing Peg.



10. ***NOTICE:*** **The crankshaft must remain in the Top Dead Center (TDC) position during removal of the pulley bolt or damage to the engine can occur. Therefore, the crankshaft pulley must be held in place with the Crankshaft Damper Holding Tool and the bolt should be removed using an air impact wrench (1/2-in drive minimum).**
