    - Connect the USB adaptor (female type A 4-pin to female type Mini-B 5-pin) to the vehicle's USB cable.
      Use the General Equipment: SYNC USB 2.0 A Female to Mini B Female 5-Pin Adapter
    - Connect one end of the USB cable (male type A 4-pin to male type a 4-pin) to the diagnostic scan tool's USB port, and the other end to the USB adaptor.
      Use the General Equipment: SYNC USB 2.0 A Male to A Male Cable

16. **NOTE:** *Do **not** disconnect the VCM or USB cable during APIM programming unless directed by the diagnostic scan tool on-screen prompts.*

17. **NOTE:** *Diagnostic scan tools that have never been used to program SYNC® may encounter a Hardware Wizard pop-up requesting a "WMA SBOOT" driver installation. If this request is encountered, install the driver and select the diagnostic scan tool "Retry" button to continue programming.*

    NOTE: *This step may take 20 minutes or longer.*

    - Select the "Program SYNC" button to begin the APIM programming process.
    - When prompted by the diagnostic scan tool, disconnect the battery charger, start the engine, and select "OK." Once "OK" is selected, do not interrupt this step, which may take 20 minutes or longer.

18. **NOTE:** *This step may take 20 minutes or longer.*

    Connect the USB flash drive to the diagnostic scan tool and follow the on-screen instructions to download Service Pack and Application files onto the USB flash drive. (If the diagnostic scan tool does not have an available USB port, the USB cable that is connected to the vehicle's USB cable can be unplugged at this time to make room for the USB flash drive. Do **not** disconnect the VCM from the diagnostic scan tool).

    - Install the media hub if it was removed.
      Refer to: Steering Wheel and Column Electrical Components - System Operation and Component Description (211-05 Steering Column Switches, Description and Operation).
    - Reconnect the USB inline connector if it was accessed and disconnected.

20. **NOTE:** *This step may take 20 minutes or longer.*

    - When prompted by the diagnostic scan tool, remove the USB flash drive from the diagnostic scan tool and connect it to the media hub to install the Applications into the APIM.
    - The update should start automatically, and may take 20 minutes or longer.

- It is normal for the APIM to reset during this step.

21. **NOTE:** *Reinstalling the USB flash drive into the diagnostic scan tool initiates the remaining automated configuration steps. Failure to do so results in the loss of feature functionality such as navigation and SYNC® traffic, directions, and information services.*

    Once diagnostic scan tool programming and USB flash drive programming are complete, reinstall the flash drive into the diagnostic scan tool and select "OK" to report software installation to the Ford online database.

22. **NOTE:** *Calibrate the touchscreen.*

    Refer to: Touchscreen Calibration (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).

SYNC Module [APIM] Standard Programming

Special Tool(s) / General Equipment

SYNC USB 2.0 A Male to A Male Cable
SYNC USB 2.0 A Female to Mini B Female 5-Pin Adapter

Activation

1. **WARNING: Before beginning any service procedure in this section, refer to Health and Safety Precautions in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. **NOTE:** *Use this procedure to update the APIM and any installed Applications to the latest level. For additional information about choosing the correct APIM programming procedure, see Accessory Protocol Interface Module (APIM) Programming.*

   Refer to: Information and Entertainment System - Component Location (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

3. **NOTE:**

   - *To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.*
   - *A USB flash drive with a minimum storage size of 1 gigabyte (GB) may be required for this procedure.*
     - *Some programming files are large (greater than 2GB). It is important that the diagnostic scan tool has enough available hard drive space to accommodate the programming file download.*
     - *If a "Disk Space Error" is received, create additional free space on the hard drive.*
   - *The diagnostic scan tool is required.*
     - *Ensure that the IDS version and patch software levels are up to date.*
   - *During programming, the vehicle display may momentarily go blank.*

4. Connect a battery charger to the vehicle and select the low charge setting. The negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

5. Plug the diagnostic scan tool into a power supply due to the length of time the programming requires.

6. Connect the diagnostic scan tool to the VCM, and the VCM to the DLC.

7. Close the IDS software program.

8. Place the ignition in the ON/RUN position. For ON/RUN position information with Push Button Start vehicles, Refer to: Steering Wheel and Column Electrical Components - System Operation and Component Description (211-05 Steering Column Switches, Description and Operation).

9. **NOTE:**

   - *Using the diagnostic scan tool, open Internet Explorer and access the technician service publication website.*
   - *Run OASIS using "Read VIN & DTCs."*
     - *If the "Read VIN & DTCs" button is green with a red VCM icon, refer to the "SYNC - Software Programming" document under the "Service Tips" tab.*
     - *If the "Read VIN & DTCs" button is red with a grey VCM icon, ensure pop-ups are enabled, follow the Internet Explorer pop-ups, and then refer to the "SYNC - Software Programming" document under the "Service Tips" tab.*
   - *If the "SYNC - Software Programming" document is not followed, the programming may stop or encounter errors due to improperly configured Internet browser settings.*

10. **NOTE:** *This procedure clears all Continuous Memory Diagnostic Trouble Codes (CMDTCs). The Diagnostic Trouble Codes (DTCs) must be recorded now if other diagnoses are to be performed after this procedure.*

Select "Toolbox" from the technician service publications website to retrieve and record all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

11. From the OASIS tab, select the "SYNC" button. The Last Recorded State — Software is displayed.

    - Scroll to the bottom of the screen, select "Standard," and select the "Read SYNC" button. The current APIM assembly, Vehicle Interface Processor (VIP), Consumer Interface Processor (CIP), and Application software levels are compared to the last recorded state in the Ford online database, and the diagnostic scan tool automatically selects the latest software for programming.
    - Applications may require selection for installation. Applications with a green check mark next to them indicates the APIM already has the latest level installed (no reinstallation is required).
    - Depending on the software level required, the diagnostic scan tool automatically selects either the Service Pack or Full Flash programming method.
    - Although there may be an option available to override the Service Pack installation and perform a Full Flash/Force Consumer Interface Processor (CIP), choosing this option requires additional programming time and is not recommended unless directed by a TSB, FSA or specific pinpoint test.

13. **NOTE:** *Only Applications on a flash drive may be loaded into the APIM through the media hub.*

    NOTE: *If not performing a Full Flash/Force Consumer Interface Processor (CIP), go to step 16.*

    - Disconnect the vehicle's USB cable by removing the media hub.
      Refer to: Media Hub (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display) .
    - If the USB cable cannot be accessed by removing the media hub, access and disconnect the USB inline connector.

    - Connect the USB adaptor (female type A 4-pin to female type Mini-B 5-pin) to the vehicle's USB cable.
      Use the General Equipment: SYNC USB 2.0 A Female to Mini B Female 5-Pin Adapter
    - Connect one end of the USB cable (male type A 4-pin to male type a 4-pin) to the diagnostic scan tool's USB port, and the other end to the USB adaptor.
      Use the General Equipment: SYNC USB 2.0 A Male to A Male Cable

15. **NOTE:** *Do **not** disconnect the VCM or USB cable during APIM programming unless directed by the diagnostic scan tool on-screen prompts.*

16. **NOTE:** *Diagnostic scan tools that have never been used to program SYNC® may encounter a Hardware Wizard pop-up requesting a "WMA SBOOT" driver installation. If this request is encountered, install the driver and select the diagnostic scan tool "Retry" button to continue programming.*

    NOTE: *This step may take 20 minutes or longer.*

    - Select the "Program SYNC" button to begin the APIM programming process.
    - When prompted by the diagnostic scan tool, disconnect the battery charger, start the engine, and select "OK." Once "OK" is selected, do not interrupt this step, which may take 20 minutes or longer.

17. **NOTE:** *This step may take 20 minutes or longer.*

    Connect the USB flash drive to the diagnostic scan tool and follow the on-screen instructions to download Service Pack and Application files onto the USB flash drive. (If the diagnostic scan tool does not have an available USB port, the USB cable that is connected to the vehicle's USB cable can be unplugged at this time to make room for the USB flash drive. Do **not** disconnect the VCM from the diagnostic scan tool).

    - Install the media hub if it was removed.
      Refer to: Media Hub (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display) .
    - Reconnect the USB inline connector if it was accessed and disconnected.

19. **NOTE:** *This step may take 20 minutes or longer.*

    - When prompted by the diagnostic scan tool, remove the USB flash drive from the diagnostic scan tool and connect it to the media hub to install the Applications into the APIM.
    - The update should start automatically, and may take 20 minutes or longer.
    - It is normal for the APIM to reset during this step.

20. Once the diagnostic scan tool programming and USB flash drive programming are complete, reinstall the flash drive into the diagnostic scan tool and select "OK." This initiates the remaining automated configuration steps and reports the software installation to the Ford online database. Failure to do so results in the loss of features

such as navigation (if equipped) and SYNC® Services.

21. **NOTE:** *Calibrate the touchscreen.*

    Refer to: Touchscreen Calibration (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).

Touchscreen Calibration

Activation

1. **WARNING: Before beginning any service procedure in this section, refer to Health and Safety Precautions in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

NOTE: *Calibrate the touchscreen by following the diagnostic scan tool prompts, or the steps below.*

2. Make sure the vehicle battery is fully charged in order to avoid an inoperative touchscreen.
3. Turn the ACM on.
4. Operate the audio system in radio tuner AM/ FM mode.
5. Press and hold the eject button, and within 1 second, press and hold the seek up button until the speaker walk around test begins.
6. Press and hold the seek down button to enter the touchscreen calibration.
7. Touch and hold the touch points as they appear on the touchscreen (a stylus is not required).
8. If following message will be displayed -New calibration settings have been measured. Press the Enter key to accept the new settings.-, touch anywhere on the screen to accept the new settings.
9. Clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Audio Front Control Module (ACM)

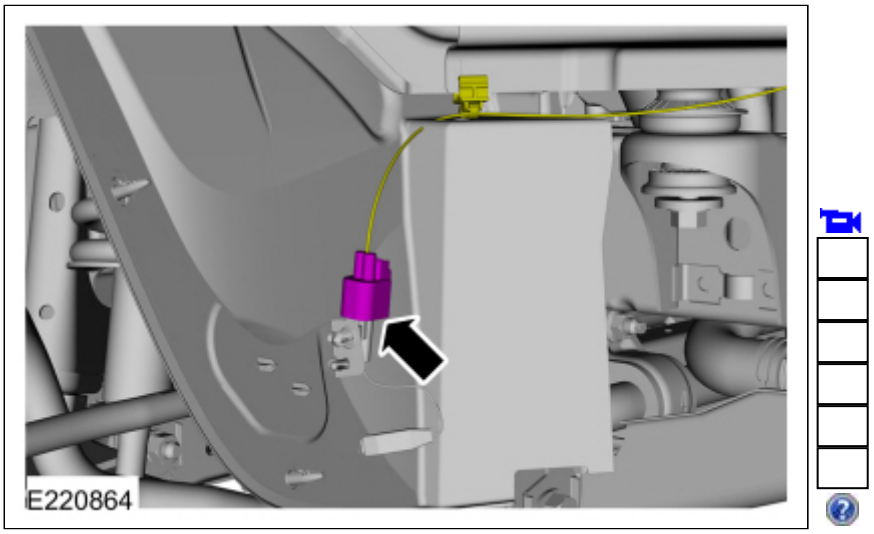
Removal

NOTE: *Eject any media from the ACM. If a disc fails to eject, do not forceably remove the disc from the ACM.*

NOTE: *Removal steps in this procedure may contain installation details.*

1. **NOTE:** *If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.*
2. Refer to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
3. *Torque*: 3 Nm

Installation



1. To install, reverse the removal procedure.
2. **NOTE:** *This step is only necessary if replacing the component.*

   Using a diagnostic scan tool, complete the PMI process for the ACM following the on-screen instructions.

Information and Entertainment System - Overview

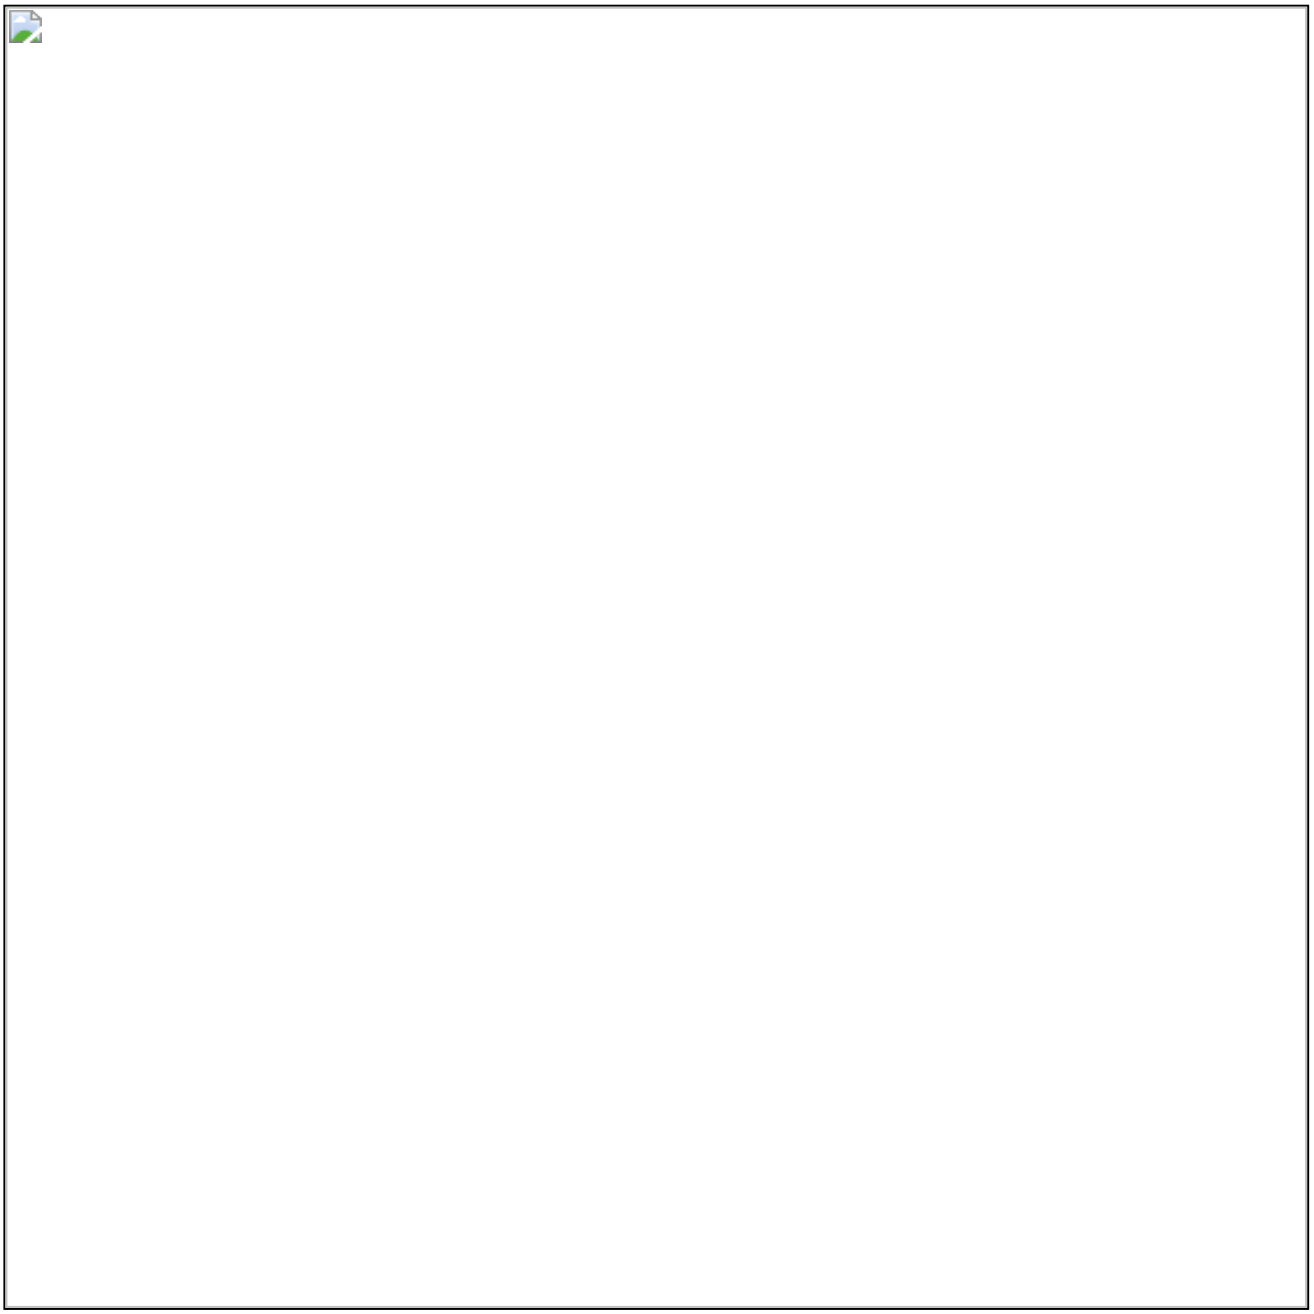
Overview

The audio system consists of the following:

Main Components

- 10 speakers
- 8-inch (203 mm) FDIM touchscreen
- ACM
- APIM
- FCIM
- Media hub
- Steering wheel switches

Main Features



- Audio extended play
- Battery load shed
- Compass
- MyKey®
- Navigation - If equipped
- Speed compensated volume
- SYNC®
- TMC (if applicable)
- DAB (if applicable)

Copyright © 2016 Ford Motor Company

Information and Entertainment System - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

A missing network message is indicated by a DTC (U-code) and can be the result of intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures such as module reprogramming can set these Diagnostic Trouble Codes (DTCs). When a missing message DTC (U-code) sets, it is important to look for symptoms present in the audio system and throughout the vehicle, and to review the complete message list to determine which other modules rely on the same message.
Refer to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

When the other modules have been identified, run the self-test for those modules. If the same message is missing from those modules, the identical, or similar lost communication Diagnostic Trouble Codes (DTCs) may be set in those modules. Confirmation of missing messages common to multiple modules can indicate that the originating

module is the source of the concern, or that the communication network may be at fault.

It is very important to understand the following:

- Where the input originates
- All of the information necessary for a feature to operate
- Which module(s) receive(s) the input or command message
- Which module controls the output of the feature
- If the module that receives the input controls the output of the feature, or whether it outputs a message over the CAN to another module.

NOTE: *Emergency Assistance may not be available in some countries. Visit the regional Ford website for latest details.*

Module Network Input Messages - ACM

Broadcast Message	Originating Module	Message Purpose
Audio settings	SCCM	The SCCM sends the commands to the ACM and the resulting status is displayed on the APIM. Used to set the radio listening source AM/ FM and DAB from the steering wheel switch.
Audio source select	IPC	Used to set the audio system listening source (AM/ FM/ DAB, CD, etc.) from the steering wheel switch through the IPC RH infotainment display.
Chime request	IPC	Used to control the priority, characteristics, volume and speaker output of the warning chime tones played through the audio system speakers.
Chime source	IPC	Used to set the audio system or IPC as the source for the chime tones.
Belt-Minder® audio mute	IPC	Used to mute speaker output so the Belt-Minder® tone can be more easily heard. This message only applies to vehicles with a MyKey® enabled and in use. The audio system is muted until the safety belt(s) are buckled.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for ACM operating modes and fault reporting.
Ignition key type	BCM	Used to determine if a MyKey® is enabled and in use.
Instrument panel cluster chime	IPC	Used to request a warning chime to be played through the audio system.
MyKey® volume limit status	IPC	Used to limit the maximum audio system volume when a MyKey® restricted key is in use.
Power mode	IPC	Used to disable the functionality of the ACM due to the load shedding feature.
Power up chime modules	IPC	Used to initiate the audio system as the chime source.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.
Voice recognition audio source request	IPC	Used to reduce the volume from the audio system so an IPC warning notification or parking aid chime can be more easily heard.

Module Network Input Messages - APIM

Broadcast Message	Originating Module	Message Purpose

Airbag deployment status	RCM	Used to monitor airbag deployment status for Emergency Assist.
Audio settings	IPC	Used to set the radio listening source AM/ FM and DAB from the steering wheel switch through the IPC RH infotainment display.
Day/night status	BCM	Used for day/night illumination status for the FDIM.
Display language selection	IPC	Used to display information on the FDIM in the selected language.
eCall notification	RCM	Used to notify of Emergency Assist status.
FCIM bezel diagnostic status	GWM	Used to display the requested bezel diagnostics operations in the centerstack infotainment display.
FCIM button state	FCIM	Used to indicate when a button is pressed on the FCIM so the audio system can make the desired setting change.
Selector lever position	GWM	Used to determine if reverse gear is active in order to switch to reverse camera screen on.
GPS compass direction	APIM	Used to display the compass direction on the FDIM.
GPS data	APIM	Used for vehicle positioning, heading, and direction for navigation and Emergency Assist.
Ignition key body info	BCM	Used to determine if a MyKey® is enabled and in use.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for APIM operating modes and fault reporting.
MyKey® volume limit status	IPC	Used to limit the maximum audio system volume when a MyKey® restricted key is in use.
Navigation rolling wheel count and direction	ABS module	Used to provide more accurate vehicle position tracking when the GPS signal is temporarily unavailable.
Steering wheel switch status	SCCM	Used to indicate the button press status of the steering wheel switches.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.
Vehicle speed	PCM	Used for navigation functionality.

Module Network Input Messages - FCIM

Broadcast Message	Originating Module	Message Purpose
Audio source selection	ACM	Used to indicate the selected audio system source.
Day/night status	BCM	Used for day/night illumination status for the FCIM.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for FCIM operating modes and fault reporting.
Power mode	IPC	Used to disable the functionality of the FCIM due to the load shedding feature.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.

Module Network Input Messages - IPC

Broadcast Message	Originating Module	Message Purpose

Audio source selection	ACM	Used to display the selected audio source on the IPC.
CD function status	ACM	Used to indicate the loading status of a CD.
Display language request	APIM	Used to display information on the IPC in the selected language.
Multimedia player total play time status	APIM	Used to indicate the total play time of the audio track being played.

Accessory Delay Feature

The accessory delay feature allows the audio system to be operated for a preset period of time after the ignition is turned off and a front door has not been opened.

AM/ FM1/ FM2/ DAB Radio With Diversity Antenna

The AM/ FM1/ DAB antennas receives analog radio waves and sends them through the antenna amplifier and AM/ FM1/ DAB antenna coaxial cable to the ACM. The FM2 antenna receives analog radio waves and sends them through the FM2 diversity antenna amplifier and FM2 antenna coaxial cable to the ACM. The radio waves are converted into fluctuating AC voltage and sent as left and right analog audio signals to the audio amplifier and all speakers.

AM/ FM1/ FM2 Radio Without Diversity Antenna

The AM/ FM1 antenna receives the AM/ FM radio signals. The antenna modules sends the radio signals to the ACM through a splitter which connects both antenna inputs of the ACM.

APIM Programming

The APIM requires specific programming procedures for correct operation when it is replaced, when upgrades are available and requested or when directed by a TSB (Technical Service Bulletin), FSA (Field Service Action), SSM (special service message) or Electronic Field Communication (EFC) to resolve SYNC® performance concerns.

Audio Extended Play

This feature allows the audio system to operate with the ignition OFF, regardless of door latch position. When the power button on the FCIM is pressed, audio system functionality is enabled and remains active for a period of 20-60 minutes, depending on configuration settings. Audio extended play will not function if the battery load shed is active. To turn the audio system off, press the FCIM power button.

Battery Load Shed

The BCM uses the battery current sensor to monitor the battery state of charge. The battery current sensor is attached to the battery ground cable. With the ignition in RUN, ACC, or OFF, a load shed message is sent over the CAN when the BCM determines that the battery state of charge is below 40%, 45 minutes have elapsed, or 10% of the charge has been drained. This message turns off the audio system to save the remaining battery charge. Under this condition, "Battery Saver - System Off" is displayed on the centerstack infotainment display to notify the driver that battery protection actions are active. To clear the load shed state, start the vehicle.

Bluetooth Mode

Bluetooth is a secure, short-range radio frequency that allows devices to communicate wirelessly through radio waves. The operating range of a Bluetooth signal is application specific, but will have a minimum range of 10 meters (33 feet).

The Bluetooth interface can accommodate both Bluetooth-enabled mobile phones and Bluetooth-enabled media devices. The SYNC® system allows interaction with several types of customer Bluetooth devices, including mobile phones and media devices. The APIM contains an on-board Bluetooth chipset, which enables certain wireless devices to interact with the system.

Any Bluetooth device used with the SYNC® system must first be paired with the APIM on-board Bluetooth chipset before it can become operational. Pairing a Bluetooth device is accomplished through the "Add Device" selection of the phone menu. When pairing a device, the SYNC® system generates a unique PIN that must be confirmed on the Bluetooth device in order for the pairing process to be successful. There are also some device-specific actions that must take place. For information on the pairing process, refer to the Owner's Literature.

Multiple Bluetooth phones and Bluetooth media devices can be paired to the APIM at the same time. The APIM supports an active connection with one Bluetooth phone and one Bluetooth media device at a time. If an additional device of either type is paired and made active, the APIM ends any active connection with an already-paired device, and establishes an active connection with the new device.

It is important to understand that while most Bluetooth devices can pair with the SYNC® system, not all Bluetooth devices have the same level of features available when interacting with the SYNC® system. To determine if a Bluetooth device or feature is supported, review the device compatibility list. Refer to www.syncmyride.com.

Chimes

Various vehicle systems send chime requests over the CAN to the IPC. The following are determined as the IPC processes these requests:

- Chime characteristics (tone, tone length, number of repetitions, time between tones, etc.)
- Chime output volume
- Priority of the chime request
- Which speakers (all, front, or rear) will play the specific chime

The IPC sends the processed requests over the CAN to the ACM. The ACM outputs the left and right analog chime tones to the appropriate audio system speakers as fluctuating AC voltage.

For additional information on chimes,
Refer to: Warning Chimes - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Compass

The GPS antenna is used to acquire the compass heading. The compass heading is sent through the GPS coaxial cable to the APIM. The APIM displays the compass heading on the FDIM.

MyKey® Audio Operation

- The following MyKey® features are always enabled when a MyKey® is in use, and are not configurable on/off with an administrator key:
  - Belt-Minder®: The audio system is muted, and “MyKey Buckle Up to Unmute Audio" is displayed in the information display until the safety belts are buckled.

- The following MyKey® features are configurable with an administrator key:
  - Emergency Assist: If the administrator has selected "Always On" in the MyKey® menu, Emergency Assist is enabled and cannot be disabled.
  - Do Not Disturb: If the administrator has selected "Always On" in the MyKey® menu, the Do Not Disturb feature is enabled and cannot be disabled.
  - Speed Compensated Volume: If the administrator has enabled the Volume Limiter feature, the speed compensated volume feature will be disabled.
  - Speed Limiter: If the administrator has enabled the Speed Limiter feature, the audio volume level is temporarily reduced so the top speed alert chime can be heard when the preselected top vehicle speed is reached.
  - Speed Minder: If the administrator has enabled the Speed Minder feature, the audio volume level is temporarily reduced so the speed alert chime can be heard when the preselected Speed Minder vehicle speed is exceeded.
  - Volume Limiter: If the administrator has enabled the Volume Limiter feature, the audio system volume is limited to 45%. In an attempt to exceed the limited volume, “MyKey® VOLUME LIMITED” is displayed in the information display.

Refer to the Owner's Literature for more information on MyKey®.

Navigation

The navigation system guides the customer to a pre-entered destination.

The GPS antenna receives GPS data and sends it through the GPS coaxial cable to the APIM. The APIM uses this GPS data in addition to transmission gear selection (used to detect vehicle direction) and vehicle speed CAN messages to calculate route information and provide accurate navigation tracking. The navigation display is shown on the FDIM.

The voice recognition system allows the user to interface with the system without using the FDIM. A microphone located overhead provides a direct input to the APIM.

For more information, refer to Navigation in the Owner's Literature.

Speed Compensated Volume

The ACM compensates for wind and road noise by adjusting the audio system volume based on the VSS signal and customer-defined setting.

When a MyKey® is in use and the MyKey® Volume Limiter is enabled, the speed compensated volume is disabled.

Steering Wheel Switch Functions

The multimedia steering wheel switches consist of an upper 5-way switch, and a lower 6-way switch. The upper 5-way steering wheel switch operates the IPC infotainment display. The lower 6-way steering wheel switch operates the volume +/-, seek +/end call, seek-/send call/receive call, voice, and mute functions.

SYNC® AppLink™

SYNC® AppLink™ allows Applications installed on the customer's device to be controlled using the steering wheel switches, FCIM and/or FDIM.

All devices must be paired with the SYNC® system via Bluetooth, and Apple® devices must also be connected to a USB port.

Data is transmitted back and forth between the customer's device and the APIM through Bluetooth or through the USB port with Apple® devices.

For more information, refer to Apps and AppLink in the Owner's Literature.

SYNC® System

The SYNC® system is a hands-free communication and entertainment system that supports many features. Not all features are not available with every phone.

The SYNC® system provides the following abilities:

- Connect media devices in order to play audio files
- Control the system using voice commands
- Initiate an emergency assistance call when the airbags deploy (for more information, refer to "Emergency Assistance" in the Owner's Literature).
- Play media files via a paired Bluetooth-enabled audio device
- Send and receive phone calls via a paired Bluetooth-enabled phone
- Control the climate system

Traffic Announcement

Many stations that broadcast on the FM waveband have a Traffic Program code to signify that they carry traffic program information. Before traffic announcements can be received, the TA or TRAFFIC button must be pressed. A TA icon will appear to show the feature is switched on. When traffic information is broadcast, normal radio or CD playback will be interrupted. The audio unit will return to normal operation at the end of each traffic announcement. TA is only supported in certain countries.

USB Mode

When a portable media device, such as an iPod® with its available cable or portable mass storage such as a USB thumb drive, is connected to the vehicle audio system through the USB ports, audio from the device can be played through the vehicle speakers. Functions such as volume, seek, fast forward, pause, etc. can be controlled by the vehicle audio controls.

When playing media files stored on a mass storage device such as a flash drive, the SYNC® system only plays files that do not have DRM protection.

In addition to audio information (track length, track number, etc.), metadata (information such as artist, album title, song title, and genre) may also be sent to the APIM from a device connected to the USB port. The APIM uses the metadata to create indexes that can be used to sort for particular music based on the customer's preferences. Not all USB devices can send metadata to the APIM. When a new media device is connected to the SYNC® system, the APIM automatically indexes the information. This may take several minutes depending on the amount of data on the device, and is considered normal operation. When a device that was previously connected to the SYNC® system is reconnected, the APIM updates the index rather than creating a new one. This reduces the time needed to index the device.

The USB port can be used to upload vehicle Application upgrades to the APIM from a mass storage device such as a flash drive.

Image files can be saved to the APIM from a USB device in order to be used as wallpaper backgrounds displayed on the FDIM.

Voice Recognition

Voice recognition allows certain phone, navigation system (if equipped), audio system, and climate control system

functions to be controlled with voice commands. This minimizes driver distraction by reducing or eliminating the need to interact with the centerstack infotainment display and/or device while driving.

When the voice steering wheel switch is pressed, an audible prompt originating at the APIM is heard from the speakers. Based on the customer's setting, audible prompts will either be a voice or a simple tone. When interaction mode is set to standard, detailed voice guidance is provided. When interaction mode is set to advanced, most prompts are tones only, and minimal voice guidance is provided. The microphone receives the voice commands and sends them to the APIM. Refer to the Owner's Literature for more information on voice recognition.

Component Description

ACM

The ACM can be operated with the ignition in RUN, ACC, or OFF.

The ACM receives radio waves containing audio from the antenna coaxial cables and converts them into fluctuating AC voltage. The ACM processes all inputs and depending on the input received, sends stereo or mono analog audio signals to the audio amplifier and door speakers.

Antenna

The AM/ FM radio uses the roof-mounted combination AM/ FM antenna to receive analog radio waves. The DAB radio waves are sent through the AM/ FM2 antenna coaxial cable to the ACM, where they are amplified. A second FM 2 foil antenna is mounted under the splash shield next to the bumper for diversity functionality.

APIM

The APIM can be operated with the ignition in RUN, ACC, or OFF.

The APIM receives stereo and mono inputs. Stereo inputs include audio from USB port and connected Bluetooth media device. Mono inputs include audio from the outside device during a phone call and inputs from the SYNC® microphone.

The APIM sends stereo and mono audio signals to the ACM as fluctuating AC voltage. Stereo outputs include audio from the USB port and connected Bluetooth media device, ringback tone, outside device during a phone call, and voice or tone prompts initiated from the steering wheel switches.

The APIM consists of 2 internal modules: the CIP and the VIP. The modules are not replaceable individually, but can be flashed independently if required.

The CIP interfaces with all of the customer inputs to the APIM. It contains an analog-to-digital-to-analog converter, as well as the Bluetooth chipset. Any Application upgrades that are available to the customer are loaded directly to the CIP through the USB port.

The VIP provides an interface between the CIP and the vehicle inputs. Its main functions are controlling the APIM power management and translating inbound and outbound CAN signals. In addition, the VIP queries the modules on the network to retrieve any DTCs.

The Touchscreen Calibration must be performed every time the APIM is separated from the FDIM.

The APIM receives GPS data through the GPS coaxial cable.

The APIM requires programming when it is replaced.

Built-In Antenna Amplifier

The audio unit antenna amplifier receives AM/ FM radio waves from the antenna. The antenna amplifier is powered by the ACM and amplifies AM/ FM audio signals to improve reception. The AM/ FM radio waves are sent through the AM/ FM antenna coaxial cable to the ACM.

FCIM

The FCIM can be operated with the ignition in RUN, ACC, or OFF.

The FCIM audio system buttons provide one of the methods with which the customer interacts with the infotainment system.

The FCIM is separate from the ACM.

The FCIM requires PMI when it is replaced.

FDIM

The FDIM can be operated with the ignition in RUN, ACC, or OFF.

The FDIM touchscreen provides one of the methods with which the customer interacts with the infotainment system.

The FDIM plugs directly into the APIM, and therefore does not communicate directly on any network, and no external circuits are connected.

The Touchscreen Calibration must be performed every time the FDIM is separated from the APIM.

LVDS Cable

The LVDS cable between the APIM and FDIM contains 4 shielded circuits that provide power and ground to the FDIM from the APIM and is also the means by which data is transmitted from the APIM to the FDIM and from the FDIM to the APIM.

TMC

The TMC is a specific application of the FM RDS and is used for data related to traffic flows, incidents, weather etc. and are gathered from traffic monitoring systems, emergency services, motorists' calls etc. and are collated at a central traffic information centre. They are then passed to the TMC traffic information service provider, who generates TMC messages according to the ALERT-C coding protocol.

Standard TMC user messages provide five basic items of broadcast information:

- event description, details of the weather situation or traffic problem and its severity
- location, the area, highway segment or point location affected
- direction and extent, identifying the adjacent segments or point locations affected, and the direction of traffic affected
- duration, how long the problem is expected to last
- diversion advice, whether or not drivers are advised to find an alternative route

The service provider sends the coded messages to the appropriate FM radio broadcaster for transmission as an RDS signal within normal FM radio transmissions. The TMC data is received by the vehicle radio and antenna, and decoded. It takes about 30 seconds from the first report of a traffic incident to the traffic information centre until the same information is available in the vehicle. The user can select the language used to present the traffic information by the TMC receiver, typically a navigation system or car radio. The user can also opt to filter messages, so only those concerning the immediate route is selected.

Media Hub

The media hub allows for various audio devices to play content through the vehicle speakers. The media hub contains:

- 2 USB ports
  - Data is sent from the USB ports to the APIM through the USB cable.
  - Although there are 2 USB ports, there is only 1 USB cable connecting the media hub to the APIM.
  - The USB port is powered through circuits from the vehicle harness and can be used to power and/or charge a device if the device supports this feature. If the device does not support this feature, an external power source is needed in order to power the device.

Noise Suppression Equipment

The radio frequency suppression equipment reduces interference transmitted through the speakers by the engine, ignition, and electrical systems. When installing any new radio suppression equipment components, make sure that a good contact is made at all connections.

Steering Wheel Switches

The upper and lower multimedia steering wheel switches contain series of resistors. Each steering wheel switch function corresponds with a specific resistance value within the switch.

The SCCM sends a 5-volt reference voltage to the upper and lower multimedia steering wheel switches on the input circuit. When a switch is pressed, the voltage is routed through the corresponding resistor(s), through the return circuit, and then to ground through the SCCM. The SCCM monitors the resultant voltage drop to determine which switch was pressed. The voltage drop varies depending upon the resistance of the specific switch pressed.

The upper steering wheel switch inputs are sent as network messages from the SCCM to the IPC to control the IPC infotainment display.

The lower steering wheel switch inputs are sent as network messages from the SCCM to the APIM to control

SYNC® functions, or to the ACM to control audio functions.

SYNC® Microphone

The SYNC® microphone receives SYNC® system voice commands and incoming audio during a phone call. The monitored sounds are converted into analog signals by the microphone and sent to the APIM.

U3000:09	Control Module: Component Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:09 is retrieved again, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
U3000:41	Control Module: General Checksum Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System,

		Removal and Installation).
U3000:88	Control Module: Bus Off	**NOTE:** *The module was unable to communicate on the network at a point in time. The fault is not currently present since the module had to communicate with the diagnostic scan tool to report this DTC.* **To avoid repeat network concerns:** • INSPECT for damaged or corroded wiring at the APIM. • CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the network test with the diagnostic scan tool.
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AM
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test AN

DTC Chart: DACMC

DTC	Description	Action
U0100:00	Lost Communication With ECM/PCM "A": No Sub Type Information	GO to Pinpoint Test AC
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test AE
U2024:00	Control Module Cal-Config Data: No Sub Type Information	• This DTC sets due to an incomplete or incorrect DACMC PMI. CHECK the vehicle service history for recent service actions related to the DACMC or ACM. – If there have been recent service actions with the DACMC or ACM, PERFORM the DACMC PMI procedure as directed by the diagnostic scan tool. REFER to: Programmable Module Installation (PMI) (418-01 Module Configuration) . – If there have been no recent service actions, the DACMC has failed to retain configuration data. INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U2100:00	Initial Configuration Not Complete: No Sub Type Information	• This DTC sets due to an incomplete or incorrect DACMC PMI. CHECK the vehicle service history for recent service actions related to the DACMC or ACM. – If there have been recent service actions with the DACMC or ACM, PERFORM the DACMC PMI procedure as directed by the diagnostic scan tool. REFER to: Programmable Module Installation (PMI) (418-01 Module Configuration) . – If there have been no recent service actions, the DACMC has failed to retain configuration data. INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	• This DTC sets due to an incomplete or incorrect DACMC PMI. CHECK the vehicle service history for recent service actions related to the DACMC or ACM. – If there have been recent service actions with the DACMC or ACM, PERFORM the DACMC PMI procedure as directed by the diagnostic scan tool. REFER to: Programmable Module Installation (PMI) (418-01

		Module Configuration) . – If there have been no recent service actions, the DACMC has failed to retain configuration data. INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3000:41	Control Module: General Checksum Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3000:42	Control Module: General Memory Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:42 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AM
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test AN

DTC Chart: FCIM

DTC	Description	Action
B00D5:01	Restraint System Passenger Disable Indicator: General Electrical Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC B00D5:01 is retrieved again, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .

U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	**NOTE:** *The FCIM has temporarily disabled a HVAC control output because an excessive current draw exists (such as a short to ground). The FCIM cannot enable the output until the cause of the short is corrected.* • ADDRESS all other FCIM Diagnostic Trouble Codes (DTCs) first. • After the cause of the concern is corrected, CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U1000:00 is retrieved again, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
U2100:00	Initial Configuration Not Complete: No Sub Type Information	• This DTC sets due to an incomplete or incorrect FCIM PMI. CHECK the vehicle service history for recent service actions related to the FCIM. − If there have been recent service actions with the FCIM, PERFORM the FCIM PMI procedure as directed by the diagnostic scan tool. REFER to: Programmable Module Installation (PMI) (418-01 Module Configuration) . − If there have been no recent service actions, the FCIM has failed to retain configuration data. INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
U3000:41	Control Module: General Checksum Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test.

		• If DTC U3000:41 is retrieved again, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
U3000:49	Control Module: Internal Electronic Failure	• ADDRESS all other FCIM Diagnostic Trouble Codes (DTCs) first. • After the cause of the concern is corrected, CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:49 is retrieved again, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AM
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test AN

DTC Chart: SCCM

DTC	Description	Action
B1380:09	Steering Wheel Right Switch Pack: Component Failure	• For a RH lower steering wheel switch concern, GO to Pinpoint Test W • For a RH upper steering wheel switch concern, GO to Pinpoint Test X
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	• For a RH lower steering wheel switch concern, GO to Pinpoint Test W • For a RH upper steering wheel switch concern, GO to Pinpoint Test X
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	• For a RH lower steering wheel switch concern, GO to Pinpoint Test W • For a RH upper steering wheel switch concern, GO to Pinpoint Test X
All other Diagnostic Trouble Codes (DTCs)	—	REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches) .

Symptom Charts

Symptom Chart: General Audio System

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals, or connectors • Module	REFER to: Communications Network (418-00 Module Communications Network) .
The multimedia lower steering wheel switches are	Refer to the Pinpoint Test	GO to Pinpoint Test W

inoperative or do not operate correctly		
The multimedia upper steering wheel switches are inoperative or do not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test X
The CD player is inoperative or does not operate correctly	Refer to the Pinpoint Test	INSPECT the CD for scratches, fingerprints, a loose paper label, incorrect format or damage. INSERT a known good CD and TEST the system. If the system operates correctly, the concern was caused by a damaged CD. If the system does not operate correctly, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
The speed compensated volume does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test B
The audio system does not operate correctly from the FCIM	Refer to the Pinpoint Test	GO to Pinpoint Test Y
The FCIM illumination is inoperative or does not dim	• Illumination system concern • FCIM	REFER to: Instrument Panel and Interior Switches Illumination (413-00 Instrument Panel and Interior Switches Illumination, Diagnosis and Testing).
The FDIM touchscreen is inoperative or does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test Z

Symptom Chart: Navigation

Condition	Possible Sources	Actions
Navigation application is inoperative or unresponsive	Refer to the Pinpoint Test	GO to Pinpoint Test AA
The compass is inoperative or does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test AA

Symptom Chart: Sound Quality

Condition	Possible Sources	Actions
Poor reception - AM/ FM	Refer to the Pinpoint Test	GO to Pinpoint Test A
Continuous seek or scan - AM/ FM	Refer to the Pinpoint Test	GO to Pinpoint Test A
A loud popping sound is heard when cycling the ignition	Refer to the Pinpoint Test	GO to Pinpoint Test C
Poor sound quality or distorted sound from one or more speakers (not all speakers)	Refer to the Pinpoint Test	GO to Pinpoint Test D
No sound from all speakers	Refer to the Pinpoint Test	GO to Pinpoint Test E
Reduced or no sound from subwoofer	Refer to the Pinpoint Test	GO to Pinpoint Test F
The LHF door speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test G

The LHF door tweeter speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test H
The center instrument panel speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test I
The RHF door speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test J
The RHF door tweeter speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test K
The RHR door speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test L
The RHR door tweeter speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test M
The LHR door speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test N
The LHR door tweeter speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test O

Symptom Chart: SYNC® System

Condition	Possible Sources	Actions
All SYNC® Services features are inoperative or inaccurate (traffic, directions, and information)	Refer to the Pinpoint Test	PERFORM the SYNC® Module Programming in General Procedures. REFER to: SYNC Module [APIM] Programming (415-00D Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System, General Procedures). An individual Bluetooth device feature is inoperative (text messaging, media playback or controls, phone book download, call history, or call waiting)	Customer's device compatibility	• PERFORM the SYNC® Module Programming in General Procedures. REFER to: SYNC Module [APIM] Programming (415-00D Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System, General Procedures). • INSTRUCT the customer to review the device compatibility list. REFER to www.support.ford.com. It is normal operation for unsupported or incompatible Bluetooth features to be unavailable through the SYNC® system. • If the inoperative feature is compatible, ADVISE the customer to check their device for firmware updates, and if required, reset their device following the manufacturer's instructions.
Emergency Assistance is inoperative or does not operate correctly	• APIM misconfiguration • RCM	• Verify country is supported by Emergency Assistance feature. • This error message appears due to

	misconfiguration • IPC misconfiguration • Country NOT supported	incomplete or incorrect PMI procedures. CHECK the vehicle service history for recent service actions related to the IPC or APIM. – If there have been recent service actions with the IPC or APIM, PERFORM the PMI procedure as directed by the diagnostic scan tool. REFER to: Programmable Module Installation (PMI) (418-01 Module Configuration) . – If there have been no recent service actions, the APIM has failed to retain configuration data. INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00D Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System, Removal and Installation).

Pinpoint Tests

Poor Reception Or Continuous Seek Or Scan - AM- FM

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Refer to Wiring Diagrams Cell 12 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

Possible Sources

- No channel found in the selected RDS category
- Noise suppression equipment
- Charging system
- Wiring, terminals, or connectors
- Ignition system
- Wiring, terminals, or connectors
- AM/ FM antenna coaxial cable
- FM2 diversity antenna amplifier
- AM/ FM/ DAB antenna
- FM2 antenna
- Mounting surface corrosion
- ACM

PINPOINT TEST A : POOR RECEPTION OR CONTINUOUS SEEK OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION)

A1 CHECK THE AUDIO SYSTEM RECEPTION WITH THE ENGINE RUNNING
• Operate the audio system in AM/ FM mode. • Check the reception with the engine running, and with the engine off. **Is poor reception only present with the engine running?** **Yes** GO to A2 **No** GO to A4

A2 CHECK THE GENERATOR

- Ignition OFF.
- Disconnect Generator B+ Cable C102C.**NOTICE: Do not allow the generator B+ cable terminal to make contact with a conductive surface. Failure to follow this instruction may result in personal injury or damage to the vehicle.**
- Start the engine.
- Operate the audio system in AM/ FM mode.

Is the audio reception acceptable?

Yes	INSTALL a new generator. REFER to: Generator - 2.5L Duratec-HE (122kW/165PS) - MI4, Vehicles Built Up To: 16-08-2015 (414-02 Generator and Regulator) . REFER to: Generator - 2.2L Duratorq-TDCi (Puma) Diesel, Vehicles Built Up To: 16-08-2015 (414-02 Generator and Regulator) . REFER to: Generator - 3.2L Duratorq-TDCi (Puma) Diesel, Vehicles Built Up To: 16-08-2015 (414-02 Generator and Regulator) .
No	GO to A3

A3 CHECK THE IGNITION CIRCUITS

- Ignition OFF.
- Connect Generator B+ Cable C102C.
- Inspect all the wiring harnesses and connectors for damaged insulation and loose or broken conditions.

Is the wiring harnesses and components in good condition?

Yes	USE a jumper cable to temporarily ground various parts of the vehicle (examples include: engine, fenders, quarter panels, body sheet metal) to the frame. When the noise is eliminated, PROVIDE a permanent ground where necessary.
No	REPAIR the wiring harness and components as necessary.

A4 CHECK THE ANTENNA ENABLE CIRCUIT FOR CORRECT VOLTAGE

- Ignition OFF.
- Disconnect Audio Unit Antenna Amplifier C4823.
- Ignition ON.
- Operate the audio system in AM/ FM mode.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4823-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to A7
No	GO to A5

A5 CHECK THE ANTENNA ENABLE CIRCUIT FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4823-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A6
No	REPAIR the circuit.

A6 CHECK THE ANTENNA ENABLE CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect ACM C4821A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4823-1	Ω	C4821A-2

Is the resistance less than 3 ohms?

Yes	GO to A16
No	REPAIR the circuit.

A7 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: AM/ FM antenna coaxial cable at the ACM. Refer to the appropriate section in Group 415 for the procedure.
- Disconnect: AM/ FM antenna coaxial cable at the Audio Unit Antenna Amplifier. Refer to the appropriate section in Group 415 for the procedure.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM		Ground
AM/ FM antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	INSTALL a new AM/ FM antenna coaxial cable.
No	GO to A8

A8 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A9
No	INSTALL a new AM/ FM antenna coaxial cable.

A9 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable core at the audio unit antenna amplifier
AM/ FM antenna coaxial cable shield at the ACM	Ω	AM/ FM antenna coaxial cable shield at the audio unit antenna amplifier

Are the resistances less than 1 ohm?

Yes	GO to A10
No	INSTALL a new AM/ FM antenna coaxial cable.

A10 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable shield at the ACM

Is the resistance greater than 10,000 ohms?

Yes	GO to A11
No	INSTALL a new AM/ FM antenna coaxial cable.

A11 CHECK THE AUDIO UNIT ANTENNA AMPLIFIER CORE AND SHIELD FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: AM/ FM antenna coaxial cable at the Audio Unit Antenna Amplifier.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM		Ground
AM/ FM antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	INSTALL a new audio unit antenna amplifier. REFER to: Audio Unit Antenna Amplifier (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
No	GO to A12

A12 CHECK THE AUDIO UNIT ANTENNA AMPLIFIER CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A13
No	INSTALL a new audio unit antenna amplifier. REFER to: Audio Unit Antenna Amplifier (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .

A13 CHECK THE AUDIO UNIT ANTENNA AMPLIFIER CORE AND SHIELD FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable core at the ACM	Ω	AM/ FM antenna coaxial cable shield at the ACM

Is the resistance greater than 10,000 ohms?

Yes	GO to A14
No	INSTALL a new audio unit antenna amplifier. REFER to: Audio Unit Antenna Amplifier (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .

A14 CHECK THE AUDIO UNIT ANTENNA AMPLIFIER SHIELD FOR CONTINUITY TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna coaxial cable shield at the ACM	Ω	Ground

Is the resistance less than 1 ohm?

Yes	GO to A16
No	GO to A15

A15 CHECK THE AUDIO UNIT ANTENNA AMPLIFIER SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

- Remove the audio unit antenna amplifier.
  REFER to: Audio Unit Antenna Amplifier (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM antenna shield at the audio unit antenna amplifier (component side)	Ω	Audio unit antenna amplifier base (unpainted surface on the mounting tab)

Is the resistance less than 1 ohm?

Yes	INSPECT and REPAIR any corrosion on the audio unit antenna amplifier and/or vehicle mounting surface. REINSTALL the audio unit antenna amplifier and ensure the proper torque value is achieved. REFER to: Audio Unit Antenna Amplifier (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
No	INSTALL a new AM/ FM antenna amplifier. REFER to: Audio Unit Antenna Amplifier (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .

A16 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Speed Compensated Volume Does Not Operate Correctly

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

Possible Sources

- Speed compensated volume setting
- ACM

PINPOINT TEST B : THE SPEED COMPENSATED VOLUME DOES NOT OPERATE CORRECTLY

B1 CHECK THE SPEEDOMETER OPERATION

- Drive the vehicle and observe the speedometer.

Does the speedometer operate correctly?

Yes	GO to B2
No	REFER to: Instrument Panel Cluster (IPC) (413-01 Instrument Panel Cluster (IPC)) .

B2 CHECK THE SPEED COMPENSATED VOLUME SETTING

- Turn the speed compensated volume off. Refer to the Owner's Literature.
- Operate the audio system in AM/ FM mode.
- Drive the vehicle at various speeds and observe the speaker volume.
- Set the speed compensated volume to maximum compensation. Refer to the Owner's Literature.
- Operate the audio system in AM/ FM mode.
- Drive the vehicle at various speeds and observe the speaker volume.

Does the volume remain constant with the speed compensated volume turned off, and increase and decrease with vehicle speed with the speed compensated volume set to maximum?

Yes	The system is operating correctly at this time. INSTRUCT the customer in the correct usage of the speed compensated volume feature.
No	GO to B3

B3 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155:00 retrieved in any audio system module?

Yes	GO to Pinpoint Test AG
No	GO to B4

B4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.

- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A Loud Popping Sound Is Heard When Cycling The Ignition

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Refer to Wiring Diagrams Cell 13 for schematic and connector information.

Normal Operation and Fault Conditions

The ACM receives voltage on a start signal circuit when the ignition is in the START position and mutes the audio signal output. This prevents voltage spikes from producing popping noises through the speakers. An open on this circuit between splice CS157 and the ACM could cause voltage spikes to produce popping noises through the speakers.

Possible Sources

- Wiring, terminals, or connectors
- ACM

PINPOINT TEST C : A LOUD POPPING SOUND IS HEARD WHEN CYCLING THE IGNITION

C1 CHECK THE PCM (POWERTRAIN CONTROL MODULE) FOR DTC (DIAGNOSTIC TROUBLE CODE) P0615, P0616 OR P0617

- Using a diagnostic scan tool, perform the PCM self-test.

Is DTC P0615, P0616 or P0617 set?

Yes	REFER to: Starting System (303-06 Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (303-06 Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) . REFER to: Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma (303-06 Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to C2

C2 CHECK THE START SENSE CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect ACM C4821A.
- Disconnect BCM C2280B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead

C4821A-3	Ω	C2280B-14

Are the resistances less than 3 ohms?

Yes	GO to C3
No	REPAIR the circuit.

C3 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Poor Sound Quality Or Distorted Sound From One Or More Speakers (Not All Speakers)

Normal Operation and Fault Conditions

The ACM sends audio signals to the speakers in the form of AC voltage, resulting in clear audio output.

Possible Sources

- Loose component fasteners
- Loose door handle, lock, and other trim panel components and fasteners
- Loose items in storage areas
- Loose speaker grilles
- Loose wire harnesses or wire harness fasteners
- Speaker(s)
- Water shield bonding and placement

Visual Inspection and Diagnostic Pre-checks

Visually inspect around the suspect area for any possible rattle conditions such as:

- Any storage compartments including cup holders (if equipped)
- Door map pockets for contents that can rattle (if equipped)
- Door pull cup attachments (if equipped)
- Door switch bezels (if equipped)
- Package tray (if equipped)
- Speaker grilles
- Trim panels and fasteners

PINPOINT TEST D : POOR SOUND QUALITY OR DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS)

D1 ISOLATE THE ZONE

- Download the diagnostic sound tracks to a suitable USB storage device, then install the USB storage device in a vehicle audio system USB port.
  REFER to: Speaker Audio Test (415-00D Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System, General Procedures).
- Operate the audio system in USB mode.
- Using the audio system fade and balance feature, adjust the audio sound to each of the four zones (LHF, RHF, LHR, and RHR) of the vehicle to isolate the poor sound quality. Allow each track to play for 10 seconds, then use the SEEK +/- audio system buttons to change to the next diagnostic sound track.
- Locate and apply pressure to the trim panel(s) around the poor sound quality area in question.

Does applying pressure to a trim panel reduce or eliminate the audible noise?

Yes	REPAIR or REPLACE the trim panel as needed.
No	GO to D2

D2 REMOVE AND INSPECT BEHIND/UNDERNEATH THE SUSPECT TRIM PANEL(S)

- Remove the trim panel to access the suspect speaker.
- Operate the audio system using digital media such as a CD or MP3.
- Validate where the poor sound quality area is located.
- Check:
  - Trim panel for loose components (e.g. speaker grille) around the speaker area.
  - Trim panel joining components for missing or broken pieces.
  - Lock and handle mechanical parts for correct attachment.
  - Wire harnesses for correct routing.
  - Wire harness fasteners for correct attachment.
  - Water shield for correct placement (speaker air path not blocked).
  - Water shield for correct bonding to sheet metal.
  - Storage areas for loose items.
  - All child safety belt anchors (if equipped).
  - All safety belt retractors.
  - All speaker bracket fasteners and other fasteners are secured and tightened to specified torque.

Was the source of the noise located?

Yes	REPAIR or REPLACE any loose or broken component or fastener as needed.
No	GO to D3

D3 CHECK THE SUSPECT SPEAKER FOR WATER INTRUSION

- Inspect for watermarks.
- Check the:
  - Cone
  - Magnet
  - Basket

Are any watermarks present on the speaker?

Yes	VERIFY the water shield is in the correct location, REPAIR or REPLACE any trim, door, or speaker seal as required. DRY the speaker in question and TEST the system for normal operation.
No	GO to D4

D4 ISOLATE SPEAKER TO VERIFY NOISE

- Remove the suspect speaker from its location and leave the speaker connected to the harness.
- Hold the speaker away from any trim panel(s) and ensure the speaker is isolated from contact.
- Operate the audio system using digital media such as a CD or MP3.

Is the noise still present in the suspect speaker?

Yes	INSTALL a new speaker for the one in question.
No	LOCATE the source of the noise and REPAIR as needed.

No Sound From All Speakers

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Refer to Wiring Diagrams Cell 13 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

To prevent voltage spikes from producing popping noises through the speakers when the ignition is in the START position, the BCM provides an ignition status CAN message and also applies voltage on the ACM start signal circuit. When the CAN message and/or voltage is received by the ACM, the audio signal output is muted. A short to voltage on this circuit causes the ACM output to be muted continuously, and will cause the warning chimes to only sound from the IPC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1142:27	Ignition Status 1: Signal Rate of Change Above Threshold	Set by the ACM when a short to voltage is detected on the start signal circuit.

Possible Sources

- Wiring, terminals, or connectors
- Fuse
- ACM

PINPOINT TEST E : NO SOUND FROM ALL SPEAKERS

E1 VERIFY THE ACM (AUDIO FRONT CONTROL MODULE) PASSES THE NETWORK TEST

- Using a diagnostic scan tool, perform the network test.

Did the ACM pass the network test?

Yes	GO to E2
No	REFER to: Communications Network (418-00 Module Communications Network) .

E2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) P0615, P0616 OR P0617

- Using a diagnostic scan tool, perform the PCM self-test.

Is DTC P0615, P0616 or P0617 set?

Yes	REFER to: Starting System (303-06 Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4) .

	REFER to: Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (303-06 Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) . REFER to: Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma (303-06 Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to E3

E3 CHECK THE START SENSE CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821A.
- Disconnect BCM C2280B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821A-3		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to E4

E4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Reduced Or No Sound From Subwoofer Speaker

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

If the audio unit amplifier detects an open, short to ground, or less than 4.5 volts on the enable circuit, the speaker output will be muted for the subwoofer speaker.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A05:02	Speaker #5: General Signal Failure	Set by the ACM when a failure is detected on the audio signal circuits to the audio unit amplifier or when a failure is detected on the audio unit amplifier enable circuit.

Possible Sources

- Fuse
- Wiring, terminals, or connectors
- ACM
- Subwoofer amplifier

PINPOINT TEST F : REDUCED OR NO SOUND FROM SUBWOOFER SPEAKER

F1 CHECK THE SUBWOOFER AMPLIFIER VOLTAGE SUPPLY

- Ignition OFF.
- Disconnect Subwoofer Amplifier C2982A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2982A-5		Ground

Is the voltage greater than 11 volts?

Yes	GO to F2
No	VERIFY the BCM fuse 18 (20A) is in good condition and not open. If the fuse is blown, REPAIR the circuit.

F2 CHECK THE SUBWOOFER AMPLIFIER GROUND CIRCUIT

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2982A-5		C2982A-2

Is the voltage greater than 11 volts?

Yes	GO to F3
No	REPAIR the circuit.

F3 CHECK THE SUBWOOFER AMPLIFIER ENABLE CIRCUIT FOR CORRECT VOLTAGE

NOTICE: This pinpoint test step directs testing circuits using a back-probe method. Use the special

NOTICE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

- Ignition OFF.
- Connect Subwoofer Amplifier C2982A.
- Ignition ON.
- Operate the audio system in AM/ FM mode.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2982A-1	V	Ground

Is the voltage between 3.5 and 5 volts?

Yes	GO to F7
No	GO to F4

F4 CHECK THE SUBWOOFER AMPLIFIER ENABLE CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Subwoofer Amplifier C2982A.
- Disconnect ACM C4821B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2982A-1	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to F5

F5 CHECK THE SUBWOOFER AMPLIFIER ENABLE CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2982A-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to F6
No	REPAIR the circuit.

F6 CHECK THE SUBWOOFER AMPLIFIER ENABLE CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2982A-1	Ω	C4821B-18

Is the resistance less than 3 ohms?

Yes	GO to F7
No	REPAIR the circuit.

F7 CHECK THE AUDIO SIGNAL TO THE SUBWOOFER AMPLIFIER

NOTICE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

- Ignition OFF.
- Connect Subwoofer Amplifier C2982A.
- Connect ACM C4821B.
- Ignition ON.
- Operate the audio system in AM/ FM mode.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2982A-7	~V	C2982A-8

Is a fluctuating AC voltage present?

Yes	GO to F13
No	GO to F8

F8 CHECK THE AUDIO CIRCUITS TO THE SUBWOOFER AMPLIFIER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Subwoofer Amplifier C2982A.
- Disconnect ACM C4821B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2982A-7	+ V −	Ground
C2982A-8	+ V −	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to F9

F9 CHECK THE AUDIO CIRCUITS TO THE SUBWOOFER AMPLIFIER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2982A-7	Ω	Ground
C2982A-8	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to F10
No	REPAIR the circuit in question.

F10 CHECK THE AUDIO CIRCUITS TO THE SUBWOOFER AMPLIFIER FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2982A-7	Ω	C4821B-4
C2982A-8	Ω	C4821B-17

Are the resistances less than 3 ohms?

Yes	GO to F11
No	REPAIR the circuit in question.

F11 CHECK THE AUDIO CIRCUITS TO THE SUBWOOFER AMPLIFIER FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2982A-7	Ω	C2982A-8

Is the resistance greater than 10,000 ohms?

Yes	GO to F12
No	REPAIR the circuit in question.

F12 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

F13 CHECK FOR CORRECT SUBWOOFER AMPLIFIER OPERATION

- Ignition OFF.
- Disconnect and inspect all the subwoofer amplifier connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect all the subwoofer amplifier connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new subwoofer amplifier.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The LHF Door Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

The LHF door speaker and LHF door tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A01:01	Speaker #1: General Electrical Failure	Set by the ACM when a failure is detected on the LHF door or LHF door tweeter speaker circuits.

B1A01:11	Speaker #1: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the LHF door or LHF door tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:12	Speaker #1: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the LHF door or LHF door tweeter speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.
B1A01:13	Speaker #1: Circuit Open	Set by the ACM when an open is detected on the LHF door speaker circuits.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

PINPOINT TEST G : THE LHF (LEFT-HAND FRONT) DOOR SPEAKER IS INOPERATIVE

G1 CHECK THE AUDIO SIGNAL TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER

- Ignition OFF.
- Disconnect LHF Door Speaker C5003LHD Vehicles .
- Disconnect LHF Door Speaker C5015RHD Vehicles .
- Operate the audio system in AM/ FM mode.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	V~	C5003-4

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	V~	C5015-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHF door speaker. REFER to: Front Door Speaker LH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to G2

G2 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821A.
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	V	Ground
C5003-4	V	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	V	Ground
C5015-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to G3

G3 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect LHF Door Tweeter Speaker C536LHD Vehicles .
- Disconnect LHF Door Tweeter Speaker C5012RHD Vehicles .
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	Ω	Ground
C5003-4	Ω	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	Ω	Ground
C5015-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to G4
No	REPAIR the circuit in question.

G4 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR AN OPEN

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	Ω	C4821A-22
C5003-4	Ω	C4821A-10

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	Ω	C4821A-22
C5015-4	Ω	C4821A-10

Are the resistances less than 3 ohms?

Yes	GO to G5
No	REPAIR the circuit in question.

G5 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR A SHORT TOGETHER

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	Ω	C5003-4

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	Ω	C5015-4

Is the resistance greater than 10,000 ohms?

Yes	GO to G6
No	REPAIR the circuit in question.

G6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:

- Corrosion (clean module pins or install new connectors or terminals)
- Damaged or bent pins (install new terminals or pins)
- Pushed-out pins (install new pins as necessary)

- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The LHF Door Tweeter Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

The LHF door speaker and LHF door tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A01:01	Speaker #1: General Electrical Failure	Set by the ACM when a failure is detected on the LHF door or LHF door tweeter speaker circuits.
B1A01:11	Speaker #1: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the LHF door or LHF door tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:12	Speaker #1: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the LHF door or LHF door tweeter speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.

Possible Sources

- Speaker

PINPOINT TEST H : THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER IS INOPERATIVE

H1 CHECK THE LHF (LEFT-HAND FRONT) DOOR SPEAKER

- Ignition OFF.
- Operate the audio system in AM/ FM mode.

Does the LHF door speaker operate correctly?

Yes	GO to H2
No	GO to Pinpoint Test G

	GO to Pinpoint Test C

H2 CHECK THE AUDIO SIGNAL TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER

- Ignition OFF.
- Disconnect LHF Door Tweeter Speaker C536LHD Vehicles .
- Disconnect LHF Door Tweeter Speaker C5012RHD Vehicles .
- Operate the audio system in AM/ FM mode.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C536-1	V~	C536-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5012-1	V~	C5012-3

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHF door tweeter speaker. REFER to: Front Door Tweeter Speaker (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
No	GO to H3

H3 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect LHF Door Speaker C5003LHD Vehicles .
- Disconnect LHF Door Speaker C5015RHD Vehicles .
- Ignition ON.
- Operate the audio system in AM/ FM mode.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C536-1	+ V̄ −	Ground
C536-3	+ V̄ −	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead

C5012-1	V	Ground
C5012-3	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to H4

H4 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C536-1	Ω	Ground
C536-3	Ω	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5012-1	Ω	Ground
C5012-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to H5
No	REPAIR the circuit in question.

H5 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR AN OPEN

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C536-1	Ω	C5003-2
C536-3	Ω	C5003-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5012-1	Ω	C5015-2
C5012-3	Ω	C5015-3

Are the resistances less than 3 ohms?

Yes	GO to H6
No	REPAIR the circuit in question.

H6 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TOGETHER

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C536-1	Ω	C536-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5012-1	Ω	C5012-3

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new LHF door speaker. REFER to: Front Door Speaker LH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	REPAIR the circuit in question.

The Center Instrument Panel Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions

B1A06:02	Speaker #6: General Signal Failure	Set by the ACM when a failure is detected on the center instrument panel speaker circuits.
B1A06:11	Speaker #6: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the center instrument panel speaker circuits.
B1A06:12	Speaker #6: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the center instrument panel speaker circuits.
B1A06:13	Speaker #6: Circuit Open	Set by the ACM when an open is detected on the center instrument panel speaker circuits.

Possible Sources

- Wiring, terminals, or connectors
- ACM

PINPOINT TEST I : THE CENTER INSTRUMENT PANEL SPEAKER IS INOPERATIVE

I1 CHECK THE AUDIO SIGNAL TO THE CENTER INSTRUMENT PANEL SPEAKER

- Ignition OFF.
- Disconnect Center Instrument Panel Speaker C2359.
- Operate the audio system in AM/ FM mode.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2359-1		C2359-2

Is a fluctuating AC voltage present?

Yes	INSTALL a new center instrument panel speaker.
No	GO to I2

I2 CHECK THE AUDIO CIRCUITS TO THE CENTER INSTRUMENT PANEL SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2359-1		Ground
C2359-2		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to I3

I3 CHECK THE AUDIO CIRCUITS TO THE CENTER INSTRUMENT PANEL SPEAKER FOR A SHORT

I3 CHECK THE AUDIO CIRCUITS TO THE CENTER INSTRUMENT PANEL SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2359-1	Ω	Ground
C2359-2	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to I4
No	REPAIR the circuit in question.

I4 CHECK THE AUDIO CIRCUITS TO THE CENTER INSTRUMENT PANEL SPEAKER FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2359-1	Ω	C4821A-20
C2359-2	Ω	C4821A-8

Are the resistances less than 3 ohms?

Yes	GO to I5
No	REPAIR the circuit in question.

I5 CHECK THE AUDIO CIRCUITS TO THE CENTER INSTRUMENT PANEL SPEAKER FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2359-1	Ω	C2359-2

Is the resistance greater than 10,000 ohms?

Yes	GO to I6
No	REPAIR the circuit in question.

I6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)

- Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The RHF Door Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

The RHF door speaker and RHF door tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A02:01	Speaker #2: General Electrical Failure	Set by the ACM when a failure is detected on the RHF door or RHF door tweeter speaker circuits.
B1A02:11	Speaker #2: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the RHF door or RHF door tweeter speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:12	Speaker #2: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the RHF door or RHF door tweeter speaker circuits. When DTC B1A02:12 is set, the speaker output is disabled.
B1A02:13	Speaker #2: Circuit Open	Set by the ACM when an open is detected on the RHF door speaker circuits.

PINPOINT TEST J : THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER IS INOPERATIVE

J1 CHECK THE AUDIO SIGNAL TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER

- Ignition OFF.
- Disconnect RHF Door Speaker C6015LHD Vehicles .
- Disconnect RHF Door Speaker C6003RHD Vehicles .
- Operate the audio system in AM/ FM mode.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1		C6015-4

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1		C6003-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new RHF door speaker. REFER to: Front Door Speaker RH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to J2

J2 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821A.
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1		Ground
C6015-4		Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1		Ground
C6003-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to J3

J3 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect RHF Door Tweeter Speaker C6012LHD Vehicles.
- Disconnect RHF Door Tweeter Speaker C613RHD Vehicles.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1	Ω	Ground
C6015-4	Ω	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	Ω	Ground
C6003-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to J4
No	REPAIR the circuit in question.

J4 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR AN OPEN

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1	Ω	C4821A-23
C6015-4	Ω	C4821A-11

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	Ω	C4821A-23
C6003-4	Ω	C4821A-11

Are the resistances less than 3 ohms?

Yes	GO to J5

No	REPAIR the circuit in question.

J5 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A SHORT TOGETHER

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1	Ω	C6015-4

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	Ω	C6003-4

Is the resistance greater than 10,000 ohms?

Yes	GO to J6
No	REPAIR the circuit in question.

J6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The RHF Door Tweeter Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

The RHF door speaker and RHF door tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A02:01	Speaker #2: General Electrical Failure	Set by the ACM when a failure is detected on the RHF door or RHF door tweeter speaker circuits.
B1A02:11	Speaker #2: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the RHF door or RHF door tweeter speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:12	Speaker #2: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the RHF door or RHF door tweeter speaker circuits. When DTC B1A02:12 is set, the speaker output is disabled.

No	REPAIR the circuit in question.

K6 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TOGETHER

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6012-1	Ω	C6012-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C613-1	Ω	C613-3

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new RHF door speaker. REFER to: Front Door Speaker RH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	REPAIR the circuit in question.

The RHR Door Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

The RHR door tweeter speaker and the RHR door speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A03:01	Speaker #3: General Electrical Failure	Set by the ACM when a failure is detected on the RHR door or RHR door tweeter speaker circuits.
B1A03:11	Speaker #3: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the RHR door or RHR door tweeter speaker circuits. When DTC B1A03:11 is set, the speaker output is disabled.
B1A03:12	Speaker #3: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the RHR door or RHR door tweeter speaker circuits. When DTC B1A03:12 is set, the speaker output is disabled.
B1A03:13	Speaker #3: Circuit Open	Set by the ACM when an open is detected on the RHR door speaker circuits.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

PINPOINT TEST L : THE RHR (RIGHT-HAND REAR) DOOR SPEAKER IS INOPERATIVE

L1 CHECK THE AUDIO SIGNAL TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER
• Ignition OFF. • Disconnect RHR Door Speaker C802. • Operate the audio system in AM/ FM mode.

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C802-1		C802-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new RHR door speaker. REFER to: Rear Door Speaker (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
No	GO to L2

L2 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C802-1		Ground
C802-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to L3

L3 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect RHR Door Tweeter Speaker C830.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C802-1	Ω	Ground
C802-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to L4
No	REPAIR the circuit in question.

L4 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER FOR AN

L4 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C802-1	Ω	C4821A-24
C802-4	Ω	C4821A-12

Are the resistances less than 3 ohms?

Yes	GO to L5
No	REPAIR the circuit in question.

L5 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C802-1	Ω	C802-4

Is the resistance greater than 10,000 ohms?

Yes	GO to L6
No	REPAIR the circuit in question.

L6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The RHR Door Tweeter Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

The RHR door tweeter speaker and the RHR door speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A03:01	Speaker #3: General Electrical Failure	Set by the ACM when a failure is detected on the RHR door or RHR door tweeter speaker circuits.
B1A03:11	Speaker #3: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the RHR door or RHR door tweeter speaker circuits. When DTC B1A03:11 is set, the speaker output is disabled.
B1A03:12	Speaker #3: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the RHR door or RHR door tweeter speaker circuits. When DTC B1A03:12 is set, the speaker output is disabled.

Possible Sources

- Speaker
- Wiring, terminals, or connectors

PINPOINT TEST M : THE RHR (RIGHT-HAND REAR) DOOR TWEETER SPEAKER IS INOPERATIVE

M1 CHECK THE RHR (RIGHT-HAND REAR) DOOR SPEAKER

- Ignition OFF.
- Operate the audio system in AM/ FM mode.

Does the RHR door speaker operate correctly?

Yes	GO to M2
No	GO to Pinpoint Test L

M2 CHECK THE AUDIO SIGNAL TO THE RHR (RIGHT-HAND REAR) DOOR TWEETER SPEAKER

- Ignition OFF.
- Disconnect RHR Door Tweeter Speaker C830.
- Operate the audio system in AM/ FM mode.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C830-1	$\tilde{V}$	C830-3

Is a fluctuating AC voltage present?

Yes	INSTALL a new RHR door tweeter speaker.
No	GO to M3

No	GO to M3

M3 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR TWEETER SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect RHR Door Speaker C802.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C830-1	V	Ground
C830-3	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to M4

M4 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR TWEETER SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C830-1	Ω	Ground
C830-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to M5
No	REPAIR the circuit in question.

M5 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR TWEETER SPEAKER FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C830-1	Ω	C802-3
C830-3	Ω	C802-2

Are the resistances less than 3 ohms?

Yes	GO to M6
No	REPAIR the circuit in question.

M6 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR TWEETER SPEAKER FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C830-1	Ω	C830-3

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new RHR door speaker. REFER to: Rear Door Speaker (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
No	REPAIR the circuit in question.

The LHR Door Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

The LHR door tweeter speaker and the LHR door speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A04:01	Speaker #4: General Electrical Failure	Set by the ACM when a failure is detected on the LHR door or LHR door tweeter speaker circuits.
B1A04:11	Speaker #4: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the LHR door or LHR door tweeter speaker circuits. When DTC B1A04:11 is set, the speaker output is disabled.
B1A04:12	Speaker #4: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the LHR door or LHR door tweeter speaker circuits. When DTC B1A04:12 is set, the speaker output is disabled.
B1A04:13	Speaker #4: Circuit Open	Set by the ACM when an open is detected on the LHR door speaker circuits.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

PINPOINT TEST N : THE LHR (LEFT-HAND REAR) DOOR SPEAKER IS INOPERATIVE

N1 CHECK THE AUDIO SIGNAL TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER

- Ignition OFF.
- Disconnect LHR Door Speaker C702.
- Operate the audio system in AM/ FM mode.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	V~	C702-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHR door speaker. REFER to: Rear Door Speaker (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
No	GO to N2

N2 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	+ V-	Ground
C702-4	+ V-	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to N3

N3 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect LHR Door Tweeter Speaker C730.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	Ω	Ground
C702-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to N4
No	REPAIR the circuit in question.

N4 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	Ω	C4821A-9
C702-4	Ω	C4821A-21

Are the resistances less than 3 ohms?

Yes	GO to N5
No	REPAIR the circuit in question.

N5 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	Ω	C702-4

Is the resistance greater than 10,000 ohms?

Yes	GO to N6
No	REPAIR the circuit in question.

N6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The LHR Door Tweeter Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

The LHR door tweeter speaker and the LHR door speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A04:01	Speaker #4: General Electrical Failure	Set by the ACM when a failure is detected on the LHR door or LHR door tweeter speaker circuits.
B1A04:11	Speaker #4: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the LHR door or LHR door tweeter speaker circuits. When DTC B1A04:11 is set, the speaker output is disabled.
B1A04:12	Speaker #4: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the LHR door or LHR door tweeter speaker circuits. When DTC B1A04:12 is set, the speaker output is disabled.

Possible Sources

- Speaker
- Wiring, terminals, or connectors

PINPOINT TEST O : THE LHR (LEFT-HAND REAR) DOOR TWEETER SPEAKER IS INOPERATIVE

O1 CHECK THE LHR (LEFT-HAND REAR) DOOR SPEAKER

- Ignition OFF.
- Operate the audio system in AM/ FM mode.

Does the LHR door speaker operate correctly?

Yes	GO to O2
No	GO to Pinpoint Test L

O2 CHECK THE AUDIO SIGNAL TO THE LHR (LEFT-HAND REAR) DOOR TWEETER SPEAKER

- Ignition OFF.
- Disconnect LHR Door Tweeter Speaker C730.
- Operate the audio system in AM/ FM mode.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C730-1		C730-3

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHR door tweeter speaker.
No	GO to O3

O3 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR TWEETER SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect LHR Door Speaker C702.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C730-1	V	Ground
C730-3	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to O4

O4 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR TWEETER SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C730-1	Ω	Ground
C730-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to O5
No	REPAIR the circuit in question.

O5 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR TWEETER SPEAKER FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C730-1	Ω	C702-3
C730-3	Ω	C702-2

Are the resistances less than 3 ohms?

Yes	GO to O6

No	REPAIR the circuit in question.

O6 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR TWEETER SPEAKER FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C730-1	Ω	C730-3

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new LHR door speaker. REFER to: Rear Door Speaker (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
No	REPAIR the circuit in question.

All SYNC® Services Features Are Inoperative Or Inaccurate (Traffic, Directions, And Information)

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

Possible Sources

- Unregistered Owner Account
- Unregistered, inactive, or expired subscription
- Unregistered mobile phone number
- Mobile phone being used not selected as "Active"
- Inadequate phone reception
- Obstructions in the GPS antenna's line of sight
- APIM

PINPOINT TEST P : ALL SYNC® SERVICES FEATURES ARE INOPERATIVE OR INACCURATE (TRAFFIC, DIRECTIONS, AND INFORMATION)

P1 VERIFY THE CUSTOMER'S PHONE CONNECTION TO SYNC® SERVICES WHILE AWAY FROM THE VEHICLE

NOTE: *Caller ID blocking must be disabled on the customer's mobile phone so the SYNC® Services server can recognize the registered and "Active" phone number.*

- Advise the customer to call SYNC® Services from their mobile phone.
- Verify the phone call is placed and that the phone connects to SYNC® Services.
- Observe whether the SYNC® Services subscription commercial plays, or if the system asks which service is wanted.

Does the SYNC® Services subscription commercial play?

Yes	GO to P2
No	GO to P4

P2 VERIFY THE CUSTOMER'S SYNC® OWNER ACCOUNT AND SYNC® SERVICES REGISTRATION

P2 VERIFY THE CUSTOMER'S SYNC® OWNER ACCOUNT AND SYNC® SERVICES REGISTRATION AND SUBSCRIPTION

- Verify the customer has a SYNC® Owner Account on www.syncmyride.com.
- Verify the customer has registered for SYNC® Services and has an active subscription.

Does the customer have a SYNC® Owner Account and an active SYNC® Services subscription?

Yes	GO to P3
No	• If the customer does not have a SYNC® Owner Account, INFORM the customer that an account must be created in order to sign up for SYNC® Services. REFER to www.syncmyride.com. • If the customer does not have an active SYNC® Services subscription, INFORM the customer that in order for SYNC® Services to function, the subscription needs to be activated. REFER to www.service.ford.com.

P3 VERIFY THE CUSTOMER'S REGISTERED PHONE NUMBER AND STATUS

NOTE: *Only one mobile phone number can be selected as "Active" at a time, and only the "Active" mobile phone number has access to SYNC® Services.*

- Verify the mobile phone being used has the correct mobile phone number registered with the SYNC® Owner Account on www.syncmyride.com.
- Verify the mobile phone being used is selected as "Active" on www.service.ford.com.

Is the customer using the registered and active mobile phone associated with the SYNC® Services account?

Yes	GO to P5
No	INFORM the customer that the correct mobile phone number must be registered on the SYNC® website and selected as "Active." REFER to www.service.ford.com.

P4 VERIFY THE CUSTOMER'S PHONE CONNECTION TO SYNC® SERVICES FROM INSIDE THE VEHICLE

- Ensure the registered and "Active" mobile phone is paired with the SYNC® system. For information on the pairing process, refer to the Owner's Literature. If necessary, review the device compatibility list found on support.ford.com/sync-technology/device-compatibility-sync.
- Ensure the customer's mobile phone has adequate reception.
- Ensure the vehicle is in an open location that is free from obstacles such as tall buildings or large trees.
- Start the vehicle.
- Connect to SYNC® Services from the vehicle controls.
- Verify the phone call is placed and that the phone is connected to SYNC® Services.
- When prompted, select "Directions," and follow the audible prompts to get directions to an address or Saved Point.

Did SYNC® Services indicate that the vehicle location was being obtained, the route was being sent, and that the route download from the server to the vehicle was complete?

Yes	SYNC® Services is operating correctly at this time.
No	• If SYNC® Services indicated the vehicle location was **not** able to be obtained, GO to P5 • If SYNC® Services indicated the vehicle location was being obtained, but did not indicate that the route was being sent, there is a potential SYNC® Services server issue. The problem does not reside in the vehicle's audio system. • If SYNC® Services did **not** indicate the vehicle location was being obtained, the route was being sent, and that the route download from the server to the vehicle was complete, there is a potential SYNC® Services server issue. The problem does not reside in the vehicle's audio system.

P5 CHECK FOR APIM (SYNC MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.

- Using a diagnostic scan tool, perform the APIM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded in the APIM?

Yes	REFER to the DTC Chart: APIM.
No	GO to P6

P6 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

All APIM Stereo Outputs Are Inoperative Or Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

Possible Sources

- Customer's device
- Wiring, terminals, or connectors
- APIM
- ACM

PINPOINT TEST Q : ALL APIM (SYNC MODULE) STEREO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

Q1 CHECK FOR AN AC (ALTERNATING CURRENT) VOLTAGE SIGNAL ON THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE)

NOTICE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

- Access Bezel Diagnostics.
  REFER to: Bezel Diagnostics (415-00D Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System, General Procedures).
- Back-probe the ACM C4821B and perform the Tones Test.
- Ignition ON.
- Measure:

Stereo Right

Positive Lead	Measurement / Action	Negative Lead
C4821B-13		C4821B-26

Stereo Left

Positive Lead	Measurement / Action	Negative Lead
C4821B-12		C4821B-25

Is the AC voltage between 2.8-4.6 volts when the Stereo Right and Stereo Left are being tested?

Yes	GO to Q7
No	GO to Q2

Q2 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821B.
- Disconnect APIM C3342.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-12		Ground
C4821B-13		Ground
C4821B-25		Ground
C4821B-26		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to Q3

Q3 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-12		Ground

C4821B-13	Ω	Ground
C4821B-25	Ω	Ground
C4821B-26	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to Q4
No	REPAIR the circuit in question.

Q4 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-12	Ω	C3342-23
C4821B-13	Ω	C3342-25
C4821B-25	Ω	C3342-24
C4821B-26	Ω	C3342-26

Are the resistances less than 3 ohms?

Yes	GO to Q5
No	REPAIR the circuit in question.

Q5 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-12	Ω	C4821B-13
C4821B-12	Ω	C4821B-25
C4821B-12	Ω	C4821B-26
C4821B-13	Ω	C4821B-25
C4821B-13	Ω	C4821B-26
C4821B-25	Ω	C4821B-26

Are the resistances greater than 10,000 ohms?

Yes	GO to Q6
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column, Removal and Installation).

Q6 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Q7 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

All APIM Mono Outputs Are Inoperative Or Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

Possible Sources

- Customer's setting
- Wiring, terminals, or connectors
- APIM
- ACM

PINPOINT TEST R : ALL APIM (SYNC MODULE) MONO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

R1 CHECK FOR AN AC (ALTERNATING CURRENT) VOLTAGE SIGNAL ON THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE)

NOTICE: This pinpoint test step directs testing circuits using a back-probe method. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

- Access Bezel Diagnostics.
  REFER to: Bezel Diagnostics (415-00D Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System, General Procedures).
- Ignition ON.
- Back-probe the ACM and perform the Tones Test.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-8		C4821B-21

Is the AC voltage momentarily between 2.8-4.6 volts when the Mono Alert 1 and Mono Alert 2 are being tested?

Yes	GO to R7
No	GO to R2

R2 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821B.
- Disconnect APIM C3342.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-8		Ground
C4821B-21		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to R3

R3 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-8	Ω	Ground
C4821B-21	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to R4
No	REPAIR the circuit in question.

R4 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-8	Ω	C3342-3
C4821B-21	Ω	C3342-4

Are the resistances less than 3 ohms?

Yes	GO to R5
No	REPAIR the circuit in question.

R5 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-8	$\tilde{V}$	C4821B-21

Is the resistance greater than 10,000 ohms?

Yes	GO to R6
No	REPAIR the circuit in question.

R6 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

R7 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Voice Recognition Is Inoperative Or Does Not Operate Correctly, Or During A Phone Call, Poor Quality Or No Outgoing Audio Is Heard On The Outside Device

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D79:11	Microphone Input: Circuit Short To Ground	Set by the APIM when a short to ground is detected on the microphone circuits.
B1D79:12	Microphone Input: Circuit Short To Battery	Set by the APIM when a short to battery voltage is detected on the microphone circuits.
B1D79:13	Microphone Input: Circuit Open	Set by the APIM when an open is detected on the microphone circuits.

Possible Sources

- Wiring, terminals, or connectors
- Microphone
- APIM

PINPOINT TEST S : VOICE RECOGNITION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY, OR DURING A PHONE CALL, POOR QUALITY OR NO OUTGOING AUDIO IS HEARD ON THE OUTSIDE DEVICE

S1 CHECK THE AUDIBLE PROMPT FUNCTIONALITY

- Operate the audio system in AM/ FM mode.
- Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt.

Does the SYNC® system produce an audible prompt correctly; indicating voice recognition mode has been entered?

Yes	GO to S3
No	GO to S2

S2 CHECK THE OPERATION OF THE LOWER STEERING WHEEL SWITCHES

- Operate the audio system in AM/ FM mode.
- Operate the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches.

Do the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches operate correctly?

Yes	GO to Pinpoint Test R
No	GO to Pinpoint Test W

S3 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect APIM C3342.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3342-12		Ground
C3342-13		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to S4

S4 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect Microphone C9221.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3342-12	Ω	Ground
C3342-13	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to S5
No	REPAIR the circuit in question.

S5 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3342-12	Ω	C9221-2
C3342-13	Ω	C9221-3

Are the resistances less than 3 ohms?

Yes	GO to S6
No	REPAIR the circuit in question.

S6 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3342-12	Ω	C3342-13

Is the resistance greater than 10,000 ohms?

Yes	GO to S7
No	REPAIR the circuit in question.

S7 ISOLATE THE MICROPHONE

- Connect APIM C3342.
- Install a new microphone.
  REFER to: Microphone (415-00D Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System, Removal and Installation).
- Operate the audio system in AM/ FM mode.
- Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt.
- Speak a command to test the voice recognition for normal operation.

Is the voice recognition functioning correctly?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative microphone.
No	GO to S8

S8 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure they seat and latch correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

All Media Hub Functions Are Inoperative Or Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

The media hub requires power and ground to operate. Loss of power or ground disables all media hub functionality.

Possible Sources

- Customer's device
- Media hub
- Wiring, terminals, or connectors
- APIM

PINPOINT TEST T : ALL MEDIA HUB FUNCTIONS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

T1 CHECK FOR APIM (SYNC MODULE) BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the APIM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded?

Yes	• For DTC U3003:16, GO to Pinpoint Test AM • For DTC U3003:17, GO to Pinpoint Test AN
No	GO to T2

T2 RESET THE APIM (SYNC MODULE)

- Remove any devices connected to the media hub.
- Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.
- Wait at least 2 minutes for the APIM to re-initialize.
- Test the system for normal operation.

Does the system operate correctly?

Yes	The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. If the customer's device still does not operate correctly, the fault is with the customer's device.
No	GO to T3

T3 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT

- Ignition OFF.
- Disconnect Media Hub C2809.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2809-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to T4
No	GO to T5

T4 CHECK THE MEDIA HUB GROUND CIRCUIT

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2809-1		C2809-4

Is the voltage greater than 11 volts?

Yes	INSTALL a new media hub. REFER to: Media Hub (415-00D Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System, Removal and Installation).
No	GO to T5

T5 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT AND GROUND CIRCUIT FOR A SHORT TOGETHER

- Ignition OFF.
- Disconnect APIM C3342.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2809-1	Ω	C2809-4

Is the resistance greater than 10,000 ohms?

Yes	GO to T6
No	Repair the circuit in question.

T6 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT AND GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2809-1	Ω	C3342-8
C2809-4	Ω	C3342-38

Are the resistances less than 3 ohms?

Yes	GO to T7
No	Repair the circuit in question.

T7 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2809-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to T8
No	REPAIR the circuit.

T8 CHECK THE MEDIA HUB GROUND CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2809-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to T9

T9 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The USB Port(s) Is/Are Inoperative Or Does/Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

The MIT 105-00120-GEN2 is powered by the USB port.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1252:11	USB Port: Circuit Short to Ground	Set by the APIM when a short to ground or over-current condition is detected on the USB cable. This can be caused by a fault on the USB cable, USB port, or by the customer's USB.
B1252:13	USB Port: Circuit Open	Set by the APIM when an open is detected on the USB cable.
B14FD:11	External Media Control Connectivity: Circuit Short To Ground	Set by the APIM when an short to ground is detected on the USB hub power circuit for more than one second during normal operation.

Possible Sources

- Media hub
- Customer's device
- USB cable
- USB cable connection

- APIM

PINPOINT TEST U : THE USB (UNIVERSAL SERIAL BUS) PORT(S) IS/ARE INOPERATIVE OR DOES/DO NOT OPERATE CORRECTLY

U1 CHECK THE USB (UNIVERSAL SERIAL BUS) PORTS FOR POWER

- Connect: MIT 105-00120-GEN2.

Does the Multi-Media Interface Tester 420-373 power on from both USB ports?

Yes	GO to U2
No	• If the MIT 105-00120-GEN2 powers on from one USB port, INSTALL a new media hub. REFER to: Media Hub (415-00D Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System, Removal and Installation). • If the MIT 105-00120-GEN2 does not power on from both USB ports, GO to Pinpoint Test T

U2 RESET THE APIM (SYNC MODULE)

- Remove all devices connected to the media hub.
- Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.
- Wait at least 2 minutes for the APIM to re-initialize.
- Connect: MIT 105-00120-GEN2.
- Using the MIT 105-00120-GEN2, attempt to play an audio file using each USB port.

Is the audio output working properly for each USB port?

Yes	The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. If the customer's device still does not operate correctly, the fault is with the customer's device.
No	• If the audio output is not working properly from one USB port, INSTALL a new media hub. REFER to: Media Hub (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation). • If the audio output is not working properly from both USB ports, GO to U3

U3 VERIFY THE OPERATION OF THE USB (UNIVERSAL SERIAL BUS) CABLE

- Insert a known good non-navigation USB containing music files.
- Operate the audio system attempt to play an audio file.

Is the audio output working properly?

Yes	INSTALL a new media hub. REFER to: Media Hub (415-00D Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System, Removal and Installation).
No	GO to U4

U4 CHECK THE APIM (SYNC MODULE) FOR DTC (DIAGNOSTIC TROUBLE CODE) B1252:11 OR B1252:13

- Using a diagnostic scan tool, clear the APIM Diagnostic Trouble Codes (DTCs).
- Perform the APIM self-test.

Is DTC B1252:11 or B1252:13 present?

Yes	GO to U5

No	GO to U7

U5 INSPECT THE USB (UNIVERSAL SERIAL BUS) CABLE, MEDIA HUB, AND APIM (SYNC MODULE)

- Ignition OFF.
- Disconnect: USB cable at the media hub.
- Disconnect: USB cable at the APIM.
- Inspect the USB cable, USB cable ends, media hub USB connector port, and APIM USB connector port for damage. Remove any debris.

Is any damage present?

Yes	• For the USB cable, INSTALL a new USB cable. • For the media hub, INSTALL a new media hub. REFER to: Media Hub (415-00D Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System, Removal and Installation). • For the APIM, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
No	GO to U6

U6 CHECK EACH USB (UNIVERSAL SERIAL BUS) PORT FOR FUNCTIONALITY

- Connect: USB cable at the media hub.
- Connect: USB cable at the APIM.
- Connect: MIT 105-00120-GEN2.
- Using the MIT 105-00120-GEN2, attempt to play an audio file using each USB port.

Is the audio output working properly for each USB port?

Yes	The system is operating correctly at this time. The concern was caused by the USB connector not being seated correctly.
No	GO to U7

U7 ISOLATE THE USB (UNIVERSAL SERIAL BUS) CABLE

- INSTALL a new USB cable.
- Connect: MIT 105-00120-GEN2.
- Using the MIT 105-00120-GEN2, attempt to play an audio file using each USB port.

Is the audio output working properly for each USB port?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative USB cable.
No	GO to U8

U8 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.

- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Unable To Pair Bluetooth Device

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

Possible Sources

- Incompatible Bluetooth device
- APIM

PINPOINT TEST V : UNABLE TO PAIR BLUETOOTH DEVICE

V1 CHECK THE BLUETOOTH CONNECTION

NOTE: *Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, erases navigation and address data, deletes any devices paired with the SYNC® system.*

- Connect: MIT 105-00120-GEN2.
- Using the MIT 105-00120-GEN2, connect to the SYNC® system using Bluetooth. Follow the tool instructions.
- Using a diagnostic scan tool, view the APIM Parameter Identifications (PIDs).
- Monitor the Bluetooth device paired PID (BT_PAIR) and the Bluetooth device connected PID (BT_CONN).

Do the Parameter Identifications (PIDs) both read "Yes"?

Yes	The SYNC® system is operating correctly at this time. PERFORM a Master Reset. REFER to the Owner's Literature. REVIEW the pairing process with the customer. If the customer's device still does not pair, the fault is with the customer's device.
No	GO to V2

V2 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for

	this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Multimedia Lower Steering Wheel Switches Are Inoperative Or Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1380:09	Steering Wheel Right Switch Pack: Component Failure	Set by the SCCM when the multimedia lower or multimedia upper steering wheel switch is stuck for more than 2 minutes during normal operation.
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	Set by the SCCM when a short to ground is detected on the multimedia lower or multimedia upper steering wheel switch circuits.
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	Set by the SCCM when a short to voltage is detected on the multimedia lower or multimedia upper steering wheel switch circuits.

Possible Sources

- Steering wheel switch
- Wiring, terminals, or connectors
- Clockspring
- SCCM

PINPOINT TEST W : THE MULTIMEDIA LOWER STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

W1 CHECK THE MULTIMEDIA LOWER STEERING WHEEL SWITCH PARAMETER IDENTIFICATIONS (PIDS)

- Ignition ON.
- Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).
- Monitor the steering wheel switch Parameter Identifications (PIDs) while pressing each multimedia lower steering wheel switch.
  - Voice (SW_VOICE)
  - Mute (SW_MUTE)
  - Volume + (SW_VOLUP)
  - Volume - (SW_VOLDOWN)
  - Seek-/Phone (SW_SEEKMINUS)/(SW_PHONE)
  - Seek+/End (SW_SEEKPLUS)/(SW_END)

Do the PID values agree with the switch positions?

Yes	GO to W10

No	• If one or more, but not all PID values are incorrect or always read one particular switch position, INSTALL a new multimedia lower steering wheel switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches) . • If all PID values are incorrect or always read one particular switch position, GO to W2

W2 CHECK FOR IPC (INSTRUMENT PANEL CLUSTER) DTC (DIAGNOSTIC TROUBLE CODE) U0212:00

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) from the IPC.
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U0212:00 present?

Yes	REFER to: Instrument Panel Cluster (IPC) (413-01 Instrument Panel Cluster (IPC)) .
No	GO to W3

W3 CHECK FOR VOLTAGE FROM THE SCCM (STEERING COLUMN CONTROL MODULE)

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

- Ignition OFF.
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect LH Lower Steering Wheel Switch C2490.
- Disconnect RH Lower Steering Wheel Switch C2491.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-3		C2490-5
C2490-4		C2490-5
C2490-6		C2490-5
C2490-7		C2490-5

Is approximately 5 volts present?

Yes	INSTALL a new multimedia lower steering wheel switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation).
No	GO to W4

W4 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect Clockspring C226B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-3	Ω	Ground
C2490-4	Ω	Ground
C2490-6	Ω	Ground
C2490-7	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to W5
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column, Removal and Installation).

W5 CHECK THE STEERING WHEEL HARNESS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-3	Ω	C226B-14
C2490-4	Ω	C226B-7
C2490-5	Ω	C226B-8
C2490-6	Ω	C226B-6
C2490-7	Ω	C226B-15

Are the resistances less than 3 ohms?

Yes	GO to W6
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column, Removal and Installation).

W6 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-3	Ω	C2490-4
C2490-3	Ω	C2490-5
C2490-3	Ω	C2490-6
C2490-3	Ω	C2490-7
C2490-4	Ω	C2490-5
C2490-4	Ω	C2490-6
C2490-4	Ω	C2490-7
C2490-5	Ω	C2490-6
C2490-5	Ω	C2490-7
C2490-6	Ω	C2490-7

Are the resistances greater than 10,000 ohms?

Yes	GO to W7
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column, Removal and Installation).

W7 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND

- Connect Clockspring C226B.
- Disconnect Clockspring C226C.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-3	Ω	Ground
C2490-4	Ω	Ground
C2490-6	Ω	Ground
C2490-7	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to W8
No	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

W8 CHECK THE CLOCKSPRING FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-3	Ω	C226C-14
C2490-4	Ω	C226C-7
C2490-5	Ω	C226C-8
C2490-6	Ω	C226C-6
C2490-7	Ω	C226C-15

Are the resistances less than 3 ohms?

Yes	GO to W9
No	INSTALL a new clockspring. REFER to: Clockspring - Vehicles Built Up To: 16-08-2015 (501-20 Supplemental Restraint System) .

W9 CHECK THE CLOCKSPRING FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-3	Ω	C2490-4
C2490-3	Ω	C2490-5
C2490-3	Ω	C2490-6
C2490-3	Ω	C2490-7
C2490-4	Ω	C2490-5
C2490-4	Ω	C2490-6
C2490-4	Ω	C2490-7
C2490-5	Ω	C2490-6
C2490-5	Ω	C2490-7
C2490-6	Ω	C2490-7

Are the resistances greater than 10,000 ohms?

Yes	GO to W10
No	INSTALL a new clockspring. REFER to: Clockspring - Vehicles Built Up To: 16-08-2015 (501-20 Supplemental Restraint System) .

W10 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the SCCM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the SCCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Multimedia Upper Steering Wheel Switches Are Inoperative Or Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1380:09	Steering Wheel Right Switch Pack: Component Failure	Set by the SCCM when the multimedia lower or multimedia upper steering wheel switch is stuck for more than 2 minutes during normal operation.
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	Set by the SCCM when a short to ground is detected on the multimedia lower or multimedia upper steering wheel switch circuits.
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	Set by the SCCM when a short to voltage is detected on the multimedia lower or multimedia upper steering wheel switch circuits.

Possible Sources

- Steering wheel switch
- Wiring, terminals, or connectors
- Clockspring
- SCCM

PINPOINT TEST X : THE MULTIMEDIA UPPER STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

X1 CHECK THE MULTIMEDIA UPPER STEERING WHEEL SWITCH PARAMETER IDENTIFICATIONS (PIDS)

- Ignition ON.
- Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).
- Monitor the steering wheel switch Parameter Identifications (PIDs) while pressing each multimedia upper steering wheel switch.
  - Up (R_CURS_UP)
  - Left (R_CURS_LFT)
  - Down (R_CURS_DWN)
  - Right (R_CURS_RGT)
  - Ok (R_CURS_OK)

Do the PID values agree with the switch positions?

Yes	GO to X13
No	• If one or more, but not all PID values are incorrect or always read one particular switch position, INSTALL a new MULTIMEDIA upper steering wheel switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches) . • If all PID values are incorrect or always read one particular switch position, GO to X2

X2 CHECK FOR IPC (INSTRUMENT PANEL CLUSTER) DTC (DIAGNOSTIC TROUBLE CODE) U0212:00

- Ignition ON.
- Using a diagnostic scan tool, clear the DTCs from the IPC.
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U0212:00 present?

Yes	REFER to: Instrument Panel Cluster (IPC) (413-01 Instrument Panel Cluster (IPC)) .
No	GO to X3

X3 CHECK FOR VOLTAGE FROM THE SCCM (STEERING COLUMN CONTROL MODULE)

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

- Ignition OFF.
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect RH Upper Steering Wheel Switch C2999.
- Disconnect LH Upper Steering Wheel Switch C2998.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	V	C2999-3

Is approximately 5 volts present?

Yes	INSTALL a new multimedia upper steering wheel switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches) .
No	GO to X4

X4 CHECK THE AIRBAG HARNESS FOR A SHORT TO GROUND

- Disconnect In-line C2606.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	Ground
C2999-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to X5
No	INSTALL a new driver airbag. REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).

X5 CHECK THE AIRBAG HARNESS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C2606-2
C2999-3	Ω	C2606-4

Are the resistances less than 3 ohms?

Yes	GO to X6
No	INSTALL a new driver airbag. REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).

X6 CHECK THE AIRBAG HARNESS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C2999-3

Is the resistance greater than 10,000 ohms?

Yes	GO to X7
No	INSTALL a new driver airbag. REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).

X7 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TO GROUND

- Connect In-line C2606.
- Disconnect Clockspring C218B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	Ground
C2999-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to X8
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column, Removal and Installation).

X8 CHECK THE STEERING WHEEL HARNESS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C218B-14
C2999-3	Ω	C218B-16

Are the resistances less than 3 ohms?

Yes	GO to X9
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column, Removal and Installation).

X9 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C2999-3

Is the resistance greater than 10,000 ohms?

Yes	GO to X10
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column, Removal and Installation).

X10 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND

- Connect Clockspring C218B.
- Disconnect Clockspring C218C.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	Ground
C2999-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to X11
No	INSTALL a new clockspring. REFER to: Clockspring - Vehicles Built Up To: 16-08-2015 (501-20 Supplemental Restraint System) .

X11 CHECK THE CLOCKSPRING FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C218C-6
C2999-3	Ω	C218C-10

Are the resistances less than 3 ohms?

Yes	GO to X12
No	INSTALL a new clockspring.

	REFER to: Clockspring - Vehicles Built Up To: 16-08-2015 (501-20 Supplemental Restraint System) .

X12 CHECK THE CLOCKSPRING FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2999-2	Ω	C2999-3

Is the resistance greater than 10,000 ohms?

Yes	GO to X13
No	INSTALL a new clockspring. REFER to: Clockspring - Vehicles Built Up To: 16-08-2015 (501-20 Supplemental Restraint System) .

X13 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the SCCM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the SCCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Audio System Does Not Operate Correctly From The FCIM

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

Possible Source

- FCIM

PINPOINT TEST Y : THE AUDIO SYSTEM DOES NOT OPERATE CORRECTLY FROM THE FCIM (FRONT CONTROLS INTERFACE MODULE)

Y1 CHECK THE FDIM (FRONT DISPLAY INTERFACE MODULE) OPERATION

- Verify the FDIM screen operation.

Does the FDIM operate correctly?

Yes	GO to Y2
No	GO to Pinpoint Test Z

Y2 VERIFY THE ACM (AUDIO FRONT CONTROL MODULE) , APIM (SYNC MODULE) AND FCIM (FRONT CONTROLS INTERFACE MODULE) PASS THE NETWORK TEST

- Using a diagnostic scan tool, perform the network test.

Did the ACM, APIM and FCIM pass the network test?

Yes	GO to Y3
No	REFER to: Communications Network (418-00 Module Communications Network) .

Y3 RESET THE AUDIO SYSTEM MODULES AND RECHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Disconnect the battery for 1 minute, then reconnect it.
- Turn the infotainment system on.
- Test the FCIM for normal operation.

Does the FCIM operate correctly?

Yes	The FCIM is operating correctly at this time. The concern was corrected by resetting the audio system modules.
No	GO to Y4

Y4 RETRIEVE THE ACM (AUDIO FRONT CONTROL MODULE) , APIM (SYNC MODULE) , FCIM (FRONT CONTROLS INTERFACE MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM
  - FCIM

Are any Diagnostic Trouble Codes (DTCs) present in the ACM, APIM and/or FCIM?

Yes	• For ACM Diagnostic Trouble Codes (DTCs), REFER to the DTC Chart: ACM. • For APIM Diagnostic Trouble Codes (DTCs), REFER to the DTC Chart: APIM. • For FCIM Diagnostic Trouble Codes (DTCs), REFER to the DTC Chart: FCIM.
No	GO to Y5

Y5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the FCIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the FCIM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for

	this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. Address the root cause of any connector or pin issues.

The FDIM Is Inoperative Or Does Not Operate Correctly

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B108E:01	Display: General Electrical Failure	Set by the APIM when an error is detected in the touch sensing ability of the FDIM.
B108E:63	Display: Circuit / Component Protection Time-Out	Set by the APIM when the FDIM detects a touch input for more than 2 minutes during normal operation.
U0162:00	Lost Communication With Navigation Display Module: No Sub Type Information	Set by the APIM when communication is missing from the FDIM for more than 1 second with the ignition in RUN.

Possible Sources

- Object pressed against the touchscreen
- FDIM
- APIM
- LVDS Cable

NOTE: *The FDIM touchscreen can only sense one touch command at a time. If any objects are pressed against the touchscreen (including wiring or components behind the trim panel surrounding the touchscreen), the FDIM can appear to be inoperative.*

PINPOINT TEST Z : THE FDIM (FRONT DISPLAY INTERFACE MODULE) IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Z1 VERIFY THE FDIM (FRONT DISPLAY INTERFACE MODULE) RESPONSE TO TOUCH COMMANDS

- Ignition ON.
- Turn the infotainment system on.
- **NOTE:** *The touchscreen is a capacitive touch panel. This means that an ungloved finger will result in a more responsive touch panel, due to the conductivity of the skin touching the panel. Touches on the panel made with an object that does not have a path to ground will not be registered.*

Perform various FDIM touch commands and observe the FDIM operation.

Does the FDIM respond correctly to each touch command?

Yes	VERIFY the customer's specific concern by duplicating the steps that were taken when the original concern was generated. If the concern is not duplicated, the system is operating correctly at this time. INSTRUCT the customer in the correct operation of the FDIM touchscreen.
No	• If the FDIM is inoperative but not blank, GO to Z7 • If the FDIM is blank, GO to Z2

Z2 VERIFY THE APIM (SYNC MODULE) IGNITION STATE PID

- Using a diagnostic scan tool, monitor the APIM PID: KEYPOS.
  REFER to: Touchscreen Calibration (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display) .
- Ignition OFF.
- Ignition ON.

Does the PID match the actual ignition switch positions?

Yes	GO to Z3
No	GO to Z4

Z3 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Ignition ON.
- Inspect the IPC for correct operation. For indicator prove-out information,
  REFER to: Instrument Panel Cluster (IPC) (413-01 Instrument Panel Cluster (IPC)) .

Does the IPC operate correctly?

Yes	REFER to: Communications Network (418-00 Module Communications Network) . See: The APIM Does Not Respond To The Diagnostic Scan Tool.
No	Diagnose the IPC. REFER to: Instrument Panel Cluster (IPC) (413-01 Instrument Panel Cluster (IPC)) .

Z4 VERIFY THAT THE HS-CAN3 MODULES PASS THE NETWORK TEST

- **NOTE:** *A concern with the HS-CAN3 will cause the FDIM touchscreen to be blank.*
  Using a diagnostic scan tool, perform the network test.

Did the APIM, ACM, and IPC pass the network test?

Yes	GO to Z5
No	REFER to: Communications Network (418-00 Module Communications Network) .

Z5 CHECK THE LVDS (LOW VOLTAGE DIFFERENTIAL SIGNALING) CABLE FOR AN OPEN

- Ignition OFF.
- Disconnect APIM C3342.
- Disconnect FDIM C2123.
- **NOTE:** *Use the male Flex Probe 300-08057 (.5mm) or equivalent to perform measurements at the LVDS cable connections.*
  Measure:

Positive Lead	Measurement / Action	Negative Lead
C3342-1	Ω	C2123-4
C3342-2	Ω	C2123-3
C3342-3	Ω	C2123-2
C3342-4	Ω	C2123-1
C3342-Shield	Ω	C2123-Shield

- Using a diagnostic scan tool, perform the APIM self-test.

Are the resistances less than 3 ohms?

Yes	GO to Z6
No	INSTALL a new LVDS Cable. REFER to: SYNC Module [APIM] to Front Display Interface Module (FDIM) Cable (415-00D Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System, Removal and Installation).

Z6 CHECK FOR CORRECT VOLTAGE OUTPUT FROM THE APIM (SYNC MODULE) TO THE FDIM (FRONT DISPLAY INTERFACE MODULE)

- Ignition OFF.
- Connect APIM C3342.
- Ignition ON.
- **NOTE:** *Use the male Flex Probe 300-08057 (.5mm) or equivalent to perform measurements at the LVDS cable connections.*

  Using the multimeter mVDC (voltage direct current) range setting, measure the following: (if necessary, refer to the multimeter's owner's manual for information on how to access the mV range)

Positive Lead	Measurement / Action	Negative Lead
C2123-3	Ω	Ground (ensure that the LVDS cable ground is not used for this measurement)

- Using a diagnostic scan tool, perform the APIM self-test.

Is the voltage between .5 and 10 millivolts?

Yes	INSTALL a new FDIM. REFER to: Front Control/Display Interface Module (FCDIM) (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
No	GO to Z9

Z7 TEMPORARILY REMOVE THE POWER FROM THE APIM (SYNC MODULE) AND RECHECK THE SYSTEM OPERATION

NOTE: *Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, erases navigation and address data, deletes any devices paired with the SYNC® system.*

- Ignition OFF.
- Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.
- Wait at least 2 minutes for the APIM to re-initialize.
- Ignition ON.
- Turn the infotainment system on.
- Perform various FDIM touch commands and observe the FDIM operation.

Does the touchscreen operate correctly?

Yes	The FDIM is operating correctly at this time. PERFORM a Master Reset. REFER to the Owner's Literature.
No	GO to Z8

Z8 REMOVE THE FCIM (FRONT CONTROLS INTERFACE MODULE) AND RECHECK THE SYSTEM OPERATION

NOTE: *The FDIM can only sense one touch command at a time. If any objects are pressed against the touchscreen (including wiring or components behind the trim panel surrounding the FDIM), the FDIM can appear to be inoperative.*

- Remove the FCIM, but do not disconnect any connectors.
  REFER to: Front Controls Interface Module (FCIM) (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
- Perform various FDIM touch commands and observe the FDIM operation.

Does the FDIM respond correctly to each touch command?

Yes	The FDIM is operating correctly at this time. REINSTALL the FCIM and ensure the FDIM opening is properly aligned with the FDIM and that no objects are in contact with the FDIM touchscreen.
No	GO to Z9

Z9 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The GPS Is Inoperative Or Does Not Operate Correctly - If Equipped With Navigation

Refer to Wiring Diagrams Cell 132 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B119F:01	GPS Antenna: General Electrical Failure	Set by the APIM when a short to ground or short to battery voltage is detected on the GPS coaxial cable for more than 250 milliseconds.
B119F:13	GPS Antenna: Circuit	Set by the APIM when an open is detected on the GPS coaxial cable for more

	Open	than 250 milliseconds.

Possible Sources

- Obstructions in the GPS antenna's line of sight
- Incorrectly matched ESN
- GPS coaxial cable
- Wiring, terminals, or connectors
- ACM
- APIM

PINPOINT TEST AA : GPS (GLOBAL POSITIONING SYSTEM) IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

AA1 CHECK THE GPS (GLOBAL POSITIONING SYSTEM) ANTENNA RECEPTION

- Ignition ON.
- Access Bezel Diagnostics.
  REFER to: Bezel Diagnostics (415-00D Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System, General Procedures).
- Monitor the "Number of Satellites" and "Fix Mode" in APIM Location Information.
- If the values read less than 3 for "Number of Satellites" or "No GPS Fix" for "Fix Mode," drive the vehicle to an outdoor location that is free from obstacles such as tall buildings or large trees until at least 3 satellites are listed for "Number of Satellites" **and** "3D" is listed for "Fix Mode."

Can 3 or more satellites and a 3D fix be obtained?

Yes	GO to AA2
No	GO to AA4

AA2 CHECK NAVIGATION FOR CORRECT OPERATION

- Operate various navigation features (including a short, guided route) and observe their functionality.

Does navigation operate correctly?

Yes	The system is operating correctly at this time. The concern was a result of obstructions in the antenna's line of sight for an extended period of time.
No	GO to AA3

AA3 CHECK FOR ABS (ANTI-LOCK BRAKE SYSTEM) MODULE TO APIM (SYNC MODULE) COMMUNICATION

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0121:00 set in the APIM?

Yes	GO to AA4
No	GO to AA10

AA4 CHECK THE APIM (SYNC MODULE) FOR DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC B119F:01 or B119F:13 set in the APIM?

Yes	GO to AA5
No	GO to AA10

AA5 CHECK FOR CORRECT APIM (SYNC MODULE) OUTPUT VOLTAGE FROM THE GPS (GLOBAL POSITIONING SYSTEM) COAXIAL CABLE CONNECTION

- Ignition OFF.
- Remove the GPS Coaxial Cable from the APIM.
- Ignition ON.
- **NOTE:** *Use female Flex Probe 300-08058 (.5mm x .5mm) or equivalent.*

Measure:

Positive Lead	Measurement / Action	Negative Lead
GPS coaxial cable core at the APIM**(component side)**	V	Ground

E231524

Is the voltage between 4.7 and 5.8 volts?

Yes	GO to AA6
No	GO to AA10

AA6 CHECK THE GPS (GLOBAL POSITIONING SYSTEM) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TO VOLTAGE

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
GPS antenna coaxial cable core at the APIM		Ground
GPS antenna coaxial cable shield at the APIM		Ground

Is any voltage present?

Yes	INSTALL a new GPS coaxial cable.
No	GO to AA7

AA7 CHECK THE GPS (GLOBAL POSITIONING SYSTEM) ANTENNA COAXIAL CABLE CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
GPS antenna coaxial cable core at the APIM	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to AA8
No	INSTALL a new GPS coaxial cable.

AA8 CHECK THE GPS (GLOBAL POSITIONING SYSTEM) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
GPS antenna coaxial cable core at the APIM	Ω	Front GPS antenna coaxial cable core at the in-line connection
GPS antenna coaxial cable shield at the APIM	Ω	Front GPS antenna coaxial cable shield at the in-line connection

Are the resistances less than 1 ohm?

Yes	GO to AA9
No	INSTALL a new GPS coaxial cable.

AA9 CHECK THE GPS (GLOBAL POSITIONING SYSTEM) ANTENNA COAXIAL CABLE CORE AND SHIELD FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
GPS antenna coaxial cable core at the APIM	Ω	GPS antenna coaxial cable shield at the APIM

Is the resistance greater than 10,000 ohms?

Yes	GO to AA10
No	INSTALL a new GPS coaxial cable.

AA10 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and all related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for

	this concern, follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00D Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Voice Recognition Does Not Operate Correctly To Voice Navigate To A Destination

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

Visual Inspection and Diagnostic Pre-checks

- Verify the ignition is ON.
- Run the vehicle for at least one minute before testing the system in order for the navigation and voice recognition application to load properly.
- Verify the media hub and microphone is functioning correctly before proceeding.

PINPOINT TEST AB : VOICE RECOGNITION DOES NOT OPERATE CORRECTLY TO VOICE NAVIGATE TO A DESTINATION

AB1 DETERMINE IF THE VEHICLE IS EQUIPPED WITH A FACTORY-INSTALLED NAVIGATION SYSTEM

- Make sure the correct VIN was entered on the technician service publication website.
- Hover the mouse cursor over or click on the OASIS tab toward the top left of the screen.
- Select "HVBoM (Historical Vehicle Bill of Material)."
- Locate the **Limit to Base:** text entry box toward the center of the screen.

Does the technician service publication website indicate the vehicle is equipped with a factory-installed navigation system?

Yes	GO to AB2
No	Ford Motor Company does not support the addition of a navigation system to vehicles not equipped with a factory-installed navigation system.

AB2 REPROGRAM THE APIM (SYNC MODULE)

- Perform the APIM Programming.
  REFER to: SYNC Module [APIM] Programming (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, General Procedures).
- Override the Service Pack installation and perform a Full Flash/Force CIP.
- Once the APIM programming is complete and the system has re-initialized, confirm that the navigation system operates correctly.

Does the navigation system operate correctly?

Yes	The navigation system is operating correctly at this time. The concern was resolved by reprogramming the APIM.
No	GO to AB3

AB3 VERIFY NO ROUTE PREFERENCE, NAVIGATION, TRAFFIC, OR AVOID AREA RESTRICTIONS ARE SELECTED

- Verify the Navigation Route Preferences are not set to avoid freeways, toll roads, ferries, and car trains.

Refer to the Owner's Literature.
- Verify Traffic Preferences are set properly. Refer to the Owner's Literature.
- Verify the destination being entered is not located within the boundaries of a “to avoid” area. Refer to the Owner's Literature.
- Change preferences as necessary, and operate the Voice Navigation system.

Does the Voice Navigation system operate as expected?

Yes	If the concern is not duplicated, the system is operating correctly at this time. INSTRUCT the customer in the correct operation of the route preference, navigation, traffic, and avoid area restrictions.
No	GO to AB4

AB4 CHECK THE AUDIBLE PROMPT FUNCTIONALITY

- Operate the audio system in AM/ FM mode.
- Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt.

Does the SYNC® system produce an audible prompt correctly; indicating voice recognition mode has been entered?

Yes	GO to AB5
No	GO to Pinpoint Test R

AB5 CHECK THE VOICE RECOGNITION OPERATION

- Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt.
- **NOTE:** *Make sure the interior of the vehicle is as quiet as possible. Excessive noise may prevent the system from correctly recognizing spoken commands.*

  Clearly speak the word "help."

Does the SYNC® system respond correctly to the "help" voice command?

Yes	The voice recognition of the navigation destination concern may have been caused by an insufficiently quiet vehicle or a destination not being present in the map database. GO to AB6
No	GO to Pinpoint Test S

AB6 CHECK OPERATION OF NAVIGATION SYSTEM WITH MANUAL DESTINATION ENTRY

NOTE: *Dragging your finger and pinching two fingers will not scroll to a location or zoom in or out as in other devices on the market. Holding your finger on a location off-center will cause the map to scroll to that location. Refer to the Owner's Literature for more information about navigating the map screen.*

- Using the map feature, touch the screen at the requested destination.
- Verify a road is present on the map at the requested location and verify the address of the destination is correct.

Does the navigation system properly navigate to the destination requested?

Yes	The system is operating correctly at this time. NOTIFY the customer that there may be an updated map upgrade available for purchase.
No	GO to Pinpoint Test AA

Lost Communication with ECM/PCM U0100:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication with ECM/PCM "A": No Sub Type Information	Set by the ACM when network messages are missing from the PCM for more than 5 seconds with the ignition in RUN.

Possible Source

- PCM

PINPOINT TEST AC : LOST COMMUNICATION WITH ECM/PCM U0100:00

AC1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AC2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AC2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0100:00 set in the ACM?

Yes	GO to AC3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AC3 CHECK THE PCM (POWERTRAIN CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the PCM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to AC4

AC4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the ACM.

Are low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AM • For DTC U3003:17, GO to Pinpoint Test AN
No	GO to AC5

AC5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0100:00 set in more than one module?

Yes	GO to AC6
No	• If there is an observable symptom, REFER to the Symptom Chart: General Audio System. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AC6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the PCM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the PCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Powertrain Control Module (PCM) - Vehicles Built Up To: 16-08-2015 (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) . REFER to: Powertrain Control Module (PCM) - Vehicles Built Up To: 16-08-2015 (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With ABS Control Module U0121:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0121:00	Lost Communication With Anti-Lock Brake System (ABS) Control Module: No Sub Type Information	Set by the APIM when network messages are missing from the ABS module for more than 5 seconds with the ignition in RUN.

Possible Source

- Communication network concern
- ABS Module
- APIM

PINPOINT TEST AD : LOST COMMUNICATION WITH ABS (ANTI-LOCK BRAKE SYSTEM) CONTROL MODULE U0121:00

AD1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AD2
No	CLEAR the DTC. The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AD2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test

Does the ABS module pass the network test?

Yes	GO to AD3
No	REFER to: Communications Network (418-00 Module Communications Network) .

AD3 PERFORM THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST

- Using a diagnostic scan tool, perform the ABS module self-test.

Are any non-network Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE all non-network Diagnostic Trouble Codes (DTCs). REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control) .
No	GO to AD4

AD4 PERFORM THE APIM (SYNC MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the APIM self-test.

Are any non-network Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE all non-network Diagnostic Trouble Codes (DTCs). REFER to the APIM DTC chart.
No	GO to AD5

AD5 RECHECK THE APIM (SYNC MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE

CODES (CMDTCS)

- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve the APIM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0121:00 still present?

Yes	GO to AD6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AD6 CHECK FOR OTHER CAUSES OF COMMUNICATION NETWORK CONCERN

- CHECK the vehicle service history for recent service actions related to the ABS module or APIM. If recent service history is found:
  - verify correct replacement module was installed
    - HVBOM may be used to verify correct part fitment
  - verify the configuration of replacement module was correct
    - re-configure module using as-built data if prior configuration is suspect
  - verify the module was not obtained from a like vehicle and installed into customer vehicle
    - return the swapped module to source vehicle and obtain new replacement module
- Operate the system and determine if the observable symptom is still present.

Is the observable symptom still present?

Yes	GO to AD7
No	The system is operating correctly at this time. The concern may have been due to incorrect parts replacement procedures or incorrect module configuration.

AD7 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect and inspect the ABS module and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the ABS module and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module - Vehicles With: Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With BCM U0140:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General

Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	Set by the ACM, APIM and FCIM when network messages are missing from the BCM for more than 5 seconds with the ignition in RUN.

Possible Source

- BCM

PINPOINT TEST AE : LOST COMMUNICATION WITH BCM (BODY CONTROL MODULE) U0140:00

AE1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AE2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AE2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0140:00 set in the ACM or the APIM, FCIM?

Yes	GO to AE3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AE3 CHECK THE BCM (BODY CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the BCM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	GO to AE4

AE4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:

- ACM
- APIM
- FCIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AM • For DTC U3003:17, GO to Pinpoint Test AN
No	GO to AE5

AE5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0140:00 set in more than one module?

Yes	GO to AE6
No	• If there is an observable symptom, REFER to the Symptom Chart: General Audio System. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AE6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the BCM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - Vehicles Built Up To: 16-08-2015 (419-10 Multifunction Electronic Modules) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With RCM U0151:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	Set by the APIM and FCIM when the airbag deployment notification message from the RCM is missing for more than 5 seconds with the ignition in RUN.

Possible Source

- RCM

PINPOINT TEST AF : LOST COMMUNICATION WITH RCM (RESTRAINTS CONTROL MODULE) U0151:00

AF1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AF2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AF2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0151:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0151:00 set in the APIM or FCIM?

Yes	GO to AF3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AF3 CHECK THE RCM (RESTRAINTS CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the RCM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Airbag Supplemental Restraint System (SRS) - LHD 4WD/LHD RWD/RHD 4WD/RHD RWD (501-20 Supplemental Restraint System) .
No	GO to AF4

AF4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - APIM
  - FCIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AM • For DTC U3003:17, GO to Pinpoint Test AN
No	GO to AF5

AF5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0151:00 SET IN MULTIPLE MODULES
• Review the recorded results from the self-test. **Is DTC U0151:00 set in both the APIM and FCIM?**

Yes	GO to AF6
No	• If there is an observable symptom, REFER to the Symptom Chart: General Audio System. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AF6 CHECK FOR CORRECT RCM (RESTRAINTS CONTROL MODULE) OPERATION

• Ignition OFF.
• Disconnect and inspect all the RCM and related in-line connectors.
• Repair:
  • Corrosion (clean module pins or install new connectors or terminals)
  • Damaged or bent pins (install new terminals or pins)
  • Pushed-out pins (install new pins as necessary)
• Reconnect the RCM and related in-line connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
 	
Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) - Vehicles Built Up To: 16-08-2015 (501-20 Supplemental Restraint System) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With IPC U0155:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0155:00	Lost Communication With IPC Control Module: No Sub Type Information	Set by the ACM, APIM, FCIM and (CD player) when network messages are missing from the IPC for more than 5 seconds with the ignition in RUN.

Possible Source

- IPC

PINPOINT TEST AG : LOST COMMUNICATION WITH IPC (INSTRUMENT PANEL CLUSTER) U0155:00

AG1 VERIFY THE CUSTOMER'S CONCERN
• Ignition ON. • Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AG2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AG2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155:00 set in the ACM, APIM, FCIM or the (CD player)?

Yes	GO to AG3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AG3 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the IPC self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Instrument Panel Cluster (IPC) (413-01 Instrument Panel Cluster (IPC)) .
No	GO to AG4

AG4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM
  - FCIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AM • For DTC U3003:17, GO to Pinpoint Test AN
No	GO to AG5

AG5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0155:00 set in more than one module?

Yes	GO to AG6
No	• If there is an observable symptom, REFER to the Symptom Chart: General Audio System, to diagnose the observed symptom. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AG6 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the IPC and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) (413-01 Instrument Panel Cluster (IPC)) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With PAM U0159:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

The PAM is integral to the BCM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0159:00	Lost Communication With Parking Assist Control Module "A": No Sub Type Information	Set by the APIM when network messages are missing from the PAM for more than 5 seconds with the ignition in RUN.

Possible Source

- PAM

PINPOINT TEST AH : LOST COMMUNICATION WITH PAM (PARKING ASSIST CONTROL MODULE) U0159:00

AH1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AH2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AH2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0159:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0159:00 set in the APIM?

Yes	GO to AH3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AH3 CHECK THE BCM (BODY CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the BCM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	GO to AH4

AH4 CHECK THE APIM (SYNC MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the APIM self-test.

Are low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AM • For DTC U3003:17, GO to Pinpoint Test AN
No	GO to AH5

AH5 CHECK FOR CORRECT PAM (PARKING ASSIST CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the BCM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - Vehicles Built Up To: 16-08-2015 (419-10 Multifunction Electronic Modules) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With Radio U0184:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0184:00	Lost Communication With Radio: No Sub Type Information	Set by the APIM when network messages are missing from the ACM for more than 5 seconds with the ignition in RUN.

Possible Source

PINPOINT TEST AI : LOST COMMUNICATION WITH RADIO U0184:00

AI1 VERIFY THE CUSTOMER'S CONCERN

- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AI2
No	The system is operating normally at this time. This DTC may have been set due to high network traffic or an intermittent fault condition.

AI2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0184:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0184:00 set in the APIM?

Yes	GO to AI3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AI3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AM • For DTC U3003:17, GO to Pinpoint Test AN

No	GO to AI4

AI4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With APIM U0253:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	Set by the ACM and the FCIM when network messages are missing from the APIM for more than 5 seconds with the ignition in RUN.

Possible Source

- APIM

PINPOINT TEST AJ : LOST COMMUNICATION WITH APIM (SYNC MODULE) U0253:00

AJ1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AJ2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AJ2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0253:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0253:00 set in the ACM, and/or the FCIM?

Yes	GO to AJ3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AJ3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM
  - FCIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AM • For DTC U3003:17, GO to Pinpoint Test AN
No	GO to AJ4

AJ4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0253:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0253:00 set in the ACM and/or the FCIM?

Yes	GO to AJ5
No	• If there is an observable symptom, REFER to the Symptom Chart: General Audio System. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AJ5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With FCIM U0256:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	Set by the ACM and APIM when network messages are missing from the FCIM for more than 5 seconds with the ignition in RUN.

Possible Source

- FCIM

PINPOINT TEST AK : LOST COMMUNICATION WITH FCIM (FRONT CONTROLS INTERFACE MODULE) U0256:00

AK1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AK2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AK2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0256:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0256:00 set in the ACM or APIM?

Yes	GO to AK3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AK3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:

- ACM
- APIM
- FCIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AM • For DTC U3003:17, GO to Pinpoint Test AN
No	GO to AK4

AK4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0256:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0256:00 set in both the ACM and the APIM?

Yes	GO to AK5
No	• If there is an observable symptom, REFER to the Symptom Chart: General Audio System, to diagnose the observed symptom. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AK5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition ON.
- Disconnect and inspect the FCIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the FCIM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00D Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. Address the root cause of any connector or pin issues.

Lost Communication With FDIM U0257:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/DAB/Touchscreen Display/Navigation System) .

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0257:00	Lost Communication With	**NOTE:** *The FDIM is a non-networked module attached to the APIM. The*

	Front Controls / Display Interface Module: No Sub Type Information	*APIM acts as the gateway module for messages sent over the Infotainment Controller Area Network (I-CAN) between the FDIM, ACM, and FCIM.* Set by the ACM when network messages are missing from the APIM for more than 5 seconds with the ignition in RUN. This DTC may be set in conjunction with DTC U0253:00.

Possible Source

- APIM

PINPOINT TEST AL : LOST COMMUNICATION WITH FDIM (FRONT DISPLAY INTERFACE MODULE) U0257:00

AL1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AL2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AL2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0257:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0257:00 set in the ACM?

Yes	GO to AL3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AL3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AM • For DTC U3003:17, GO to Pinpoint Test AN
No	GO to AL4

AL4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0257:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0257:00 set in the ACM?

Yes	INSTALL a new FDIM. CLEAR the DTCs. Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs). If DTC U0257:00 is still present, GO to AL5
No	• If there is an observable symptom, REFER to the Symptom Chart: General Audio System, to diagnose the observed symptom. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AL5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Battery Voltage Low U3003:16

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	Set by the ACM, APIM and FCIM when the supply voltage falls below 10 volts for at least 10 seconds during normal operation or for more than 250 milliseconds during the self-test.

Possible Sources

- Previous low battery voltage
- Wiring, terminals, or connectors
- ACM
- APIM

PINPOINT TEST AM : BATTERY VOLTAGE LOW U3003:16

AM1 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:16

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) for the module in question.
- Wait at least 15 seconds.

- Using a diagnostic scan tool, repeat the self-test for the module in question.

Is DTC U3003:16 still present?

Yes	GO to AM2
No	The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition.

AM2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the PCM self-test

Are any voltage-related DTC set in the PCM?

Yes	REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to AM3

AM3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

- Check the battery condition and verify the battery is fully charged.
  REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).

Is the battery fully charged and in good condition?

Yes	GO to AM4
No	REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).

AM4 CHECK THE MODULE VOLTAGE SUPPLY

- Ignition OFF.
- Measure and record the voltage at the battery.
- Disconnect the audio system module setting DTC U3003:16.
- Ignition ON.
- Measure the voltage between the module setting DTC U3003:16 and ground.
- For the ACM, measure:

Base 4 Speaker

Positive Lead	Measurement / Action	Negative Lead
C240A-1		Ground

Uplevel 10 Speaker

Positive Lead	Measurement / Action	Negative Lead
C4821A-1		Ground

- For the APIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C3342-1		Ground

Is the voltage within 0.2 volts of the recorded battery voltage?

Yes	GO to AM5
No	REPAIR the circuit for high resistance.

AM5 CHECK THE SUSPECT MODULE GROUND CIRCUIT FOR CONTINUITY

- Measure the voltage at the suspect module.
- For the ACM, measure:

Base 4 Speaker

Positive Lead	Measurement / Action	Negative Lead
C240A-1		C240A-13

Uplevel 10 Speaker

Positive Lead	Measurement / Action	Negative Lead
C4821A-1		C4821A-13

- For the APIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C3342-1		C3342-37

Is the suspect module voltage greater than 11 volts?

Yes	• For the ACM, GO to AM6 • For the APIM, GO to AM7
No	REPAIR the circuit for high resistance.

AM6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AM7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Battery Voltage High U3003:17

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	Set by the ACM, APIM and FCIM when the supply voltage is more than 15.8 volts for more than 250 milliseconds during normal operation or the self-test.

Possible Sources

- ACM
- APIM

PINPOINT TEST AN : BATTERY VOLTAGE HIGH U3003:17

AN1 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:17

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) for the module in question.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, perform the self-test for the module in question.

Is DTC U3003:17 present?

Yes	GO to AN2
No	The system is operating correctly at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

AN2 CHECK FOR HIGH VOLTAGE DIAGNOSTIC TROUBLE CODES (DTCS) SET IN MULTIPLE MODULES

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are high voltage Diagnostic Trouble Codes (DTCs) such as B1676, P0563, or U3003:17 set in more than one module?

Yes	REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to AN3

AN3 CHECK THE BATTERY VOLTAGE

- Turn off all interior lights, exterior lights, and accessories.
- Start and run the engine at approximately 2,000 RPM for 3 minutes while monitoring the battery voltage.

Does the battery voltage rise to 15.5 volts or higher?

Yes	REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
No	• For the ACM, GO to AN4 • For the APIM, GO to AN5

AN4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AN5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)

- Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Bezel Diagnostics

Check

1. **WARNING: Before beginning any service procedure in this section, refer to Health and Safety Precautions in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00) .

NOTE: *If there is a concern with one of the following components and Bezel Diagnostics cannot be accessed, obtain the module part number by referencing the label attached to the module.*

- *Inoperative (blank or does not power on) FDIM*
- *Inoperative FCIM*
- *Inoperative steering wheel switch (for vehicles without a CD player)*

Refer to appropriate section in Group 415 to diagnose the inoperative component.

2. Ignition ON.
3. Operate the audio system in AM/ FM mode.

• For vehicles **with** a CD player, press and hold the EJECT button, and within 1 second, press and hold the SEEK UP button. If supported, the Speaker Walk-Around Test will begin, and the display will indicate each speaker as it is tested.
• For vehicles **without** a CD player, simultaneously press and hold the steering wheel SEEK UP switch and FCIM TUNE UP button. If supported, the Speaker Walk-Around Test will begin, and the display will indicate each speaker as it is tested.

4. Once the Speaker Walk-Around Test (All Speaker Test) is complete, the following information is available:

Menu	Submenu
APIM Diagnostics	Part Numbers
	Software Versions
	Configuration Status
	Location Information
	Tones Test
	Touchscreen Activation Test
	Display Test Pattern
	RGB Pixel Test
	IVSU Versions
	Exit Diagnostics
AHU Diagnostics (AHU refers to the ACM)	AHU Part Numbers (also displays SIRIUS ESN)
	Radio Signal Strength
	Speaker Walk-Around Test Active (if **not** equipped with audio DSP module)

	Exit Diagnostics
DSP Diagnostics (if equipped)	DSP Part Numbers
	Speaker Walk-Around Test Active
	Exit Diagnostics
EFP Diagnostics - if equipped (EFP refers to the FCIM that communicates on the CAN)	EFP Part Numbers
	Exit Diagnostics

5. To exit the bezel diagnostics, press the FCIM on/off button or select "Exit Diagnostics."

Speaker Audio Test

Activation

NOTE: *The procedure used to download the audio files will be different depending on the web browser that you use. Instructions have been included on how to download the files using INTERNET EXPLORER, GOOGLE CHROME, and MOZILLA FIREFOX. The instructions were valid at the time this procedure was written and may vary with a different version of INTERNET EXPLORER, GOOGLE CHROME, or MOZILLA FIREFOX.*

1. **NOTE:** *To download the file in INTERNET EXPLORER, click on each link. When the link is clicked on an audio player will launch. After the player has launched select Switch to Library/Go to Library>File>Save As... and save the file to the USB drive.*

   NOTE: *To download the file in GOOGLE CHROME click on each link. When the link is clicked a new tab will open and the audio file will start playing. Right click on the screen and click Save As... and save the file to the USB drive.*

   NOTE: *To download the file in MOZILLA FIREFOX click on each link. When the link is clicked a new tab will open and the audio file will start playing. Right click on the play button and click Save Audio As... and save the file to the USB drive.*

   Download all of the diagnostic sound tracks to a suitable USB drive.

Click here to view a video version of this procedure.

SYNC Module [APIM] Programming

Activation

1. **WARNING: Before beginning any service procedure in this section, refer to Health and Safety Precautions in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information) .

2. If a new APIM is being installed, install the new APIM before carrying out the following procedure.
   Refer to: SYNC Module [APIM] (415-00A) .

3. **NOTE:**

   - *This programming procedure deletes any phones that were paired with the SYNC® system.*
   - *To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.*
   - *A file of approximately 80 megabytes (MB) needs to be downloaded from the online database for the programming. Allow extra time for the file to download.*
   - *The diagnostic scan tool is required.*
     - *Ensure that the IDS version and patch software levels are up to date.*

4. Connect a battery charger to the vehicle and select the low charge setting. The negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

5. Plug the diagnostic scan tool into a power supply due to the length of time the programming requires.

6. Connect the diagnostic scan tool to the VCM, and the VCM to the DLC.

7. Close the IDS software program.

8. Ignition ON.

9. **NOTE:**

   - *Using the diagnostic scan tool, open Internet Explorer and access the technician service publication website.*
   - *Run OASIS using "Read VIN & DTCs."*
     - *If the "Read VIN & DTCs" button is green with a red VCM icon, refer to the "SYNC - Software Programming" document under the "Service Tips" tab.*
     - *If the "Read VIN & DTCs" button is red with a grey VCM icon, ensure pop-ups are enabled, follow the Internet Explorer pop-ups, and then refer to the "SYNC - Software Programming" document under the "Service Tips" tab.*
   - *If the "SYNC - Software Programming" document is not followed, the programming may stop or encounter errors due to improperly configured Internet browser settings.*

10. From the OASIS tab, select the "SYNC" button. The Last Recorded State — Software is displayed.

11. **NOTE:** *There are 3 types of APIM programming available:*

    - *Standard — Used to update the APIM and any currently installed Applications to the latest software levels.*
    - *Custom — Used to show all the available software options (including Applications that may not have been installed previously) that can be programmed into the APIM. Use this selection when upgrades become available or as directed by a TSB or FSA.*
    - *Module Replacement — Used when the APIM has been replaced. This type of programming performs the required provisioning (restores software for newly installed hardware).*

12. Scroll to the bottom of the screen, select 1 of the 3 options (Standard, Custom, or Module Replacement), and select the "Read SYNC" button. The VIN, current APIM assembly, VIP, and CIP software levels are compared to the last recorded state in the Ford online database, and the available software is displayed.

13. **NOTE:** *Do **not** disconnect the VCM during APIM programming unless directed by the diagnostic scan tool on-screen prompts.*

    Select the "Program SYNC" button to begin the APIM programming process.

14. Follow the diagnostic scan tool on-screen directions.

15. When prompted, connect the USB flash drive to the diagnostic scan tool.

16. Ensure the USB flash drive being used is formatted correctly. To see the available drives, hold down the Windows icon keyboard key and press the E keyboard key. Right click on the USB flash drive, and select Properties. If “File system” under the General tab is not exFAT, the drive must be formatted. To format the USB flash drive, right click on the USB flash drive, select Format, select “exFAT” for the File system, and select “Default allocation size” for the Allocation unit size. De-selecting Quick Format is not necessary, and will result in a more lengthy operation.

17. Follow the on-screen instructions to download software onto the USB flash drive.

18. When prompted by the diagnostic scan tool, remove the USB flash drive from the diagnostic scan tool and connect it to the USB hub to install the software into the APIM. The update should start automatically, and may take 10 minutes or longer. It is normal for the APIM to reset during this step.

19. After programming is complete, the diagnostic scan tool displays "Programming has been successfully completed."

20. Reinstall the flash drive into the diagnostic scan tool and select "OK" to report the software installation to the Ford online database.

Audio Front Control Module (ACM)

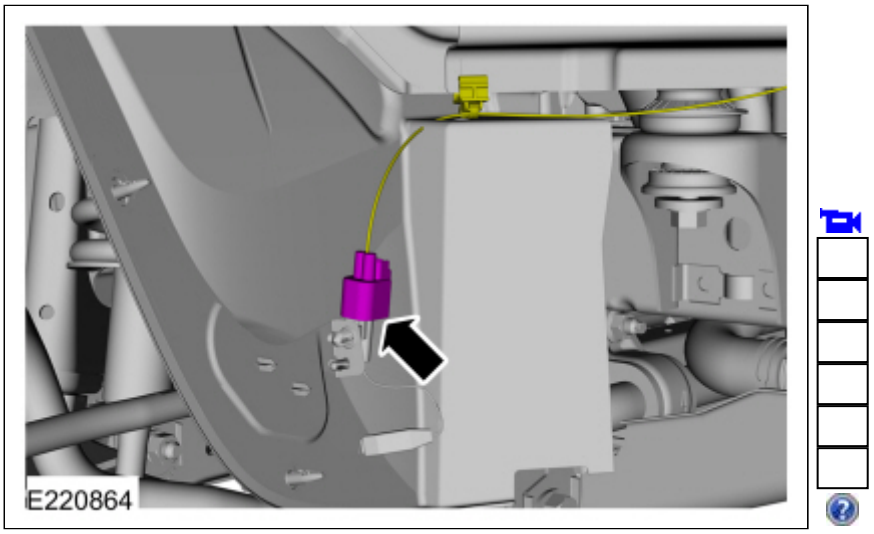
Removal

NOTE: *Eject any media from the ACM. If a disc fails to eject, do not forceably remove the disc from the ACM.*

NOTE: *Removal steps in this procedure may contain installation details.*

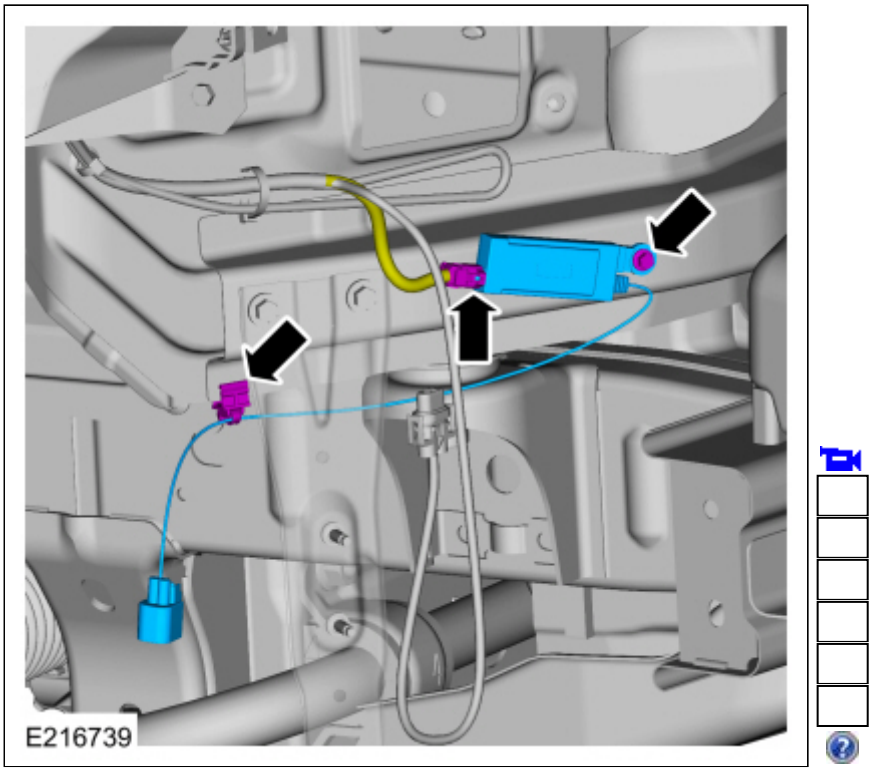
1. **NOTE:** *If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.*
2. Refer to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
3. *Torque*: 3 Nm

Installation



1. To install, reverse the removal procedure.
2. **NOTE:** *This step is only necessary if replacing the component.*

   Using a diagnostic scan tool, complete the PMI process for the ACM following the on-screen instructions.



Copyright © 2016 Ford Motor Company

Audio Unit Antenna Amplifier

Removal

1. Refer to: Front Bumper Cover (501-19 Bumpers, Removal and Installation).
2. 

3. *Torque*: 8 Nm

Installation

1. To install, reverse the removal procedure.

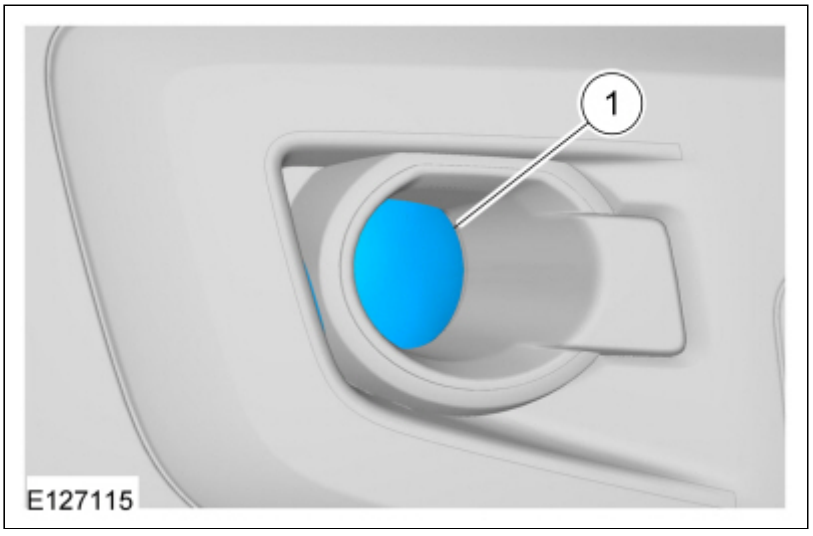
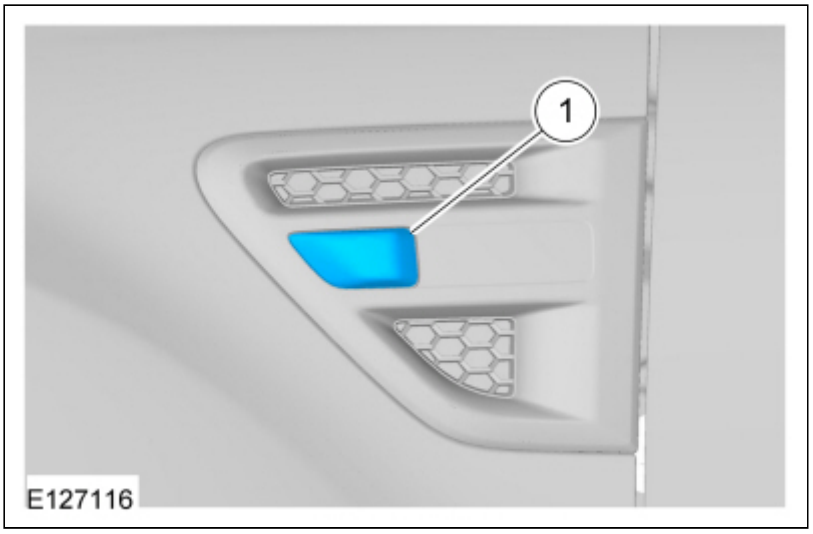
Exterior Lighting - Component Location



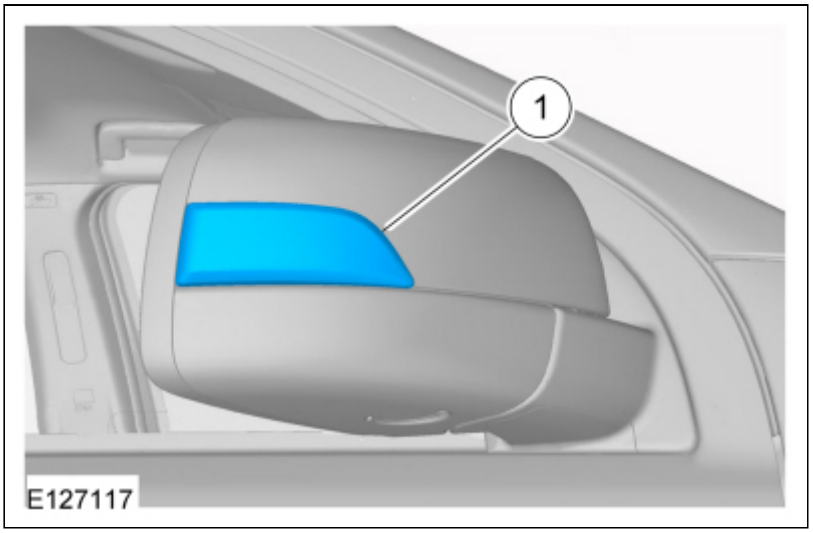
Front headlamps

Item	Part Number	Description
1	—	Front position lamp
2	—	Front direction indicator
3	—	High beam / day time running lamp
4	—	Low beam headlamp



The headlamps form a unit with the front turn signal lamps and the side lamps. They are made entirely of plastic and can be serviced individually.

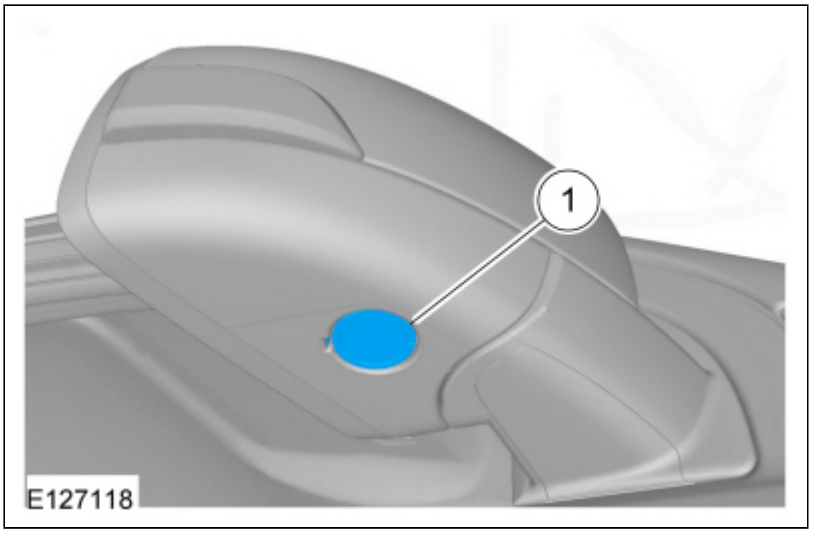
Front fog lamps



Item	Part Number	Description
1	—	Front fog lamp bulb

Side repeater / turn signal lamps

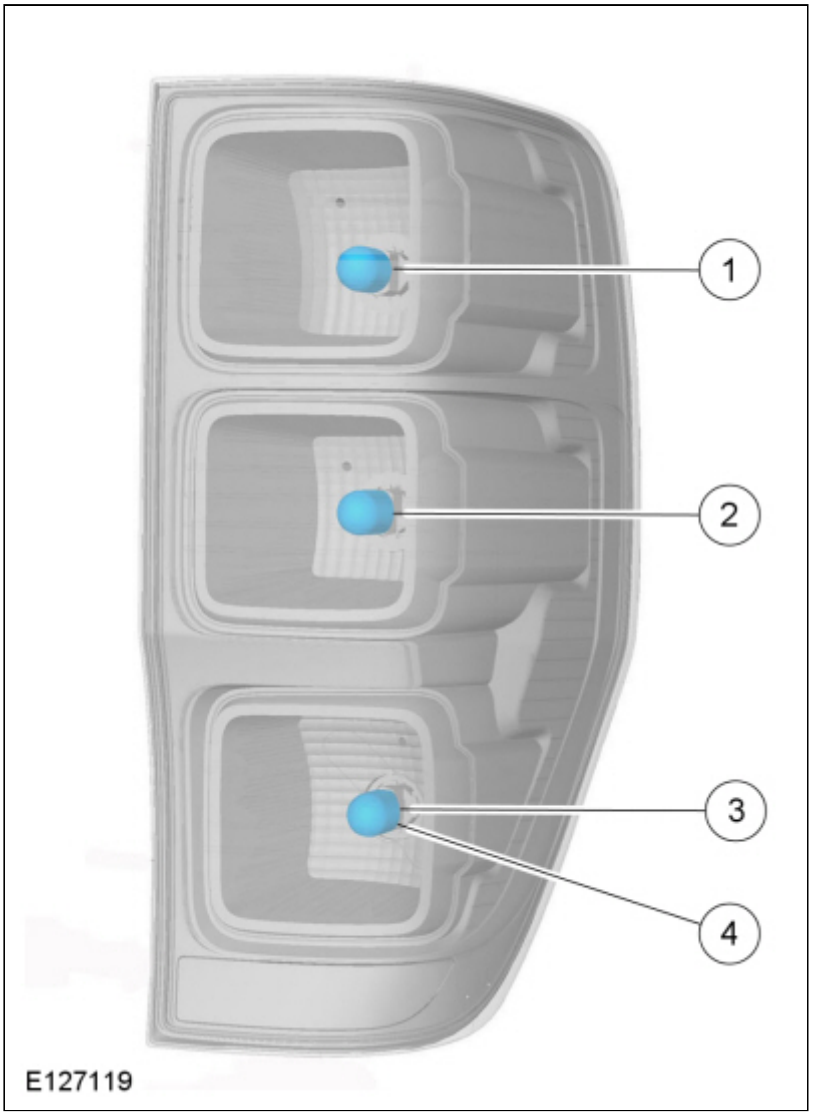
Item	Part Number	Description
1	—	Side repeater lamp



Item	Part Number	Description
1	—	Direction indicator lamp

The direction indicator lamps are used to indicate a turn signal and for the hazard warning lights.

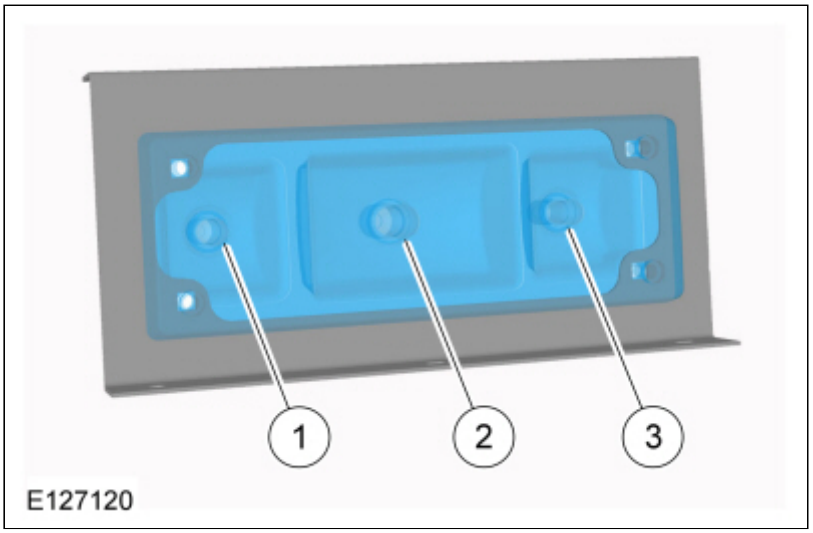
The sound generator for the acoustic turn signal check is integrated in the instrument cluster.



Puddle lamps

Item	Part Number	Description
1	—	Puddle lamp

This illuminates the area where a passenger is going to step when the door is opened.



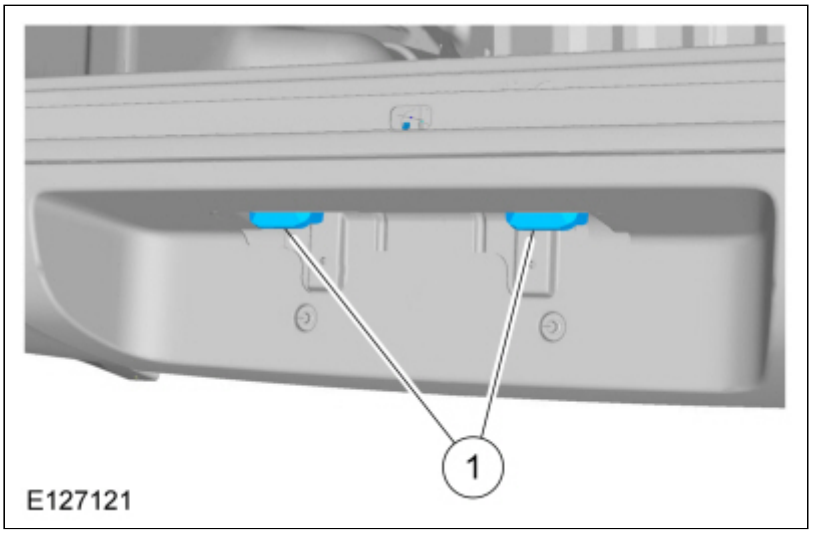
Rear combination lamps

Item	Part Number	Description
1	—	Side and brake lamp bulb

2	—	Direction indicator bulb
3	—	Reverse lamp bulb
4	—	Fog lamp bulb (Right for RHD)

Rear combination lamps (Chassis cab)

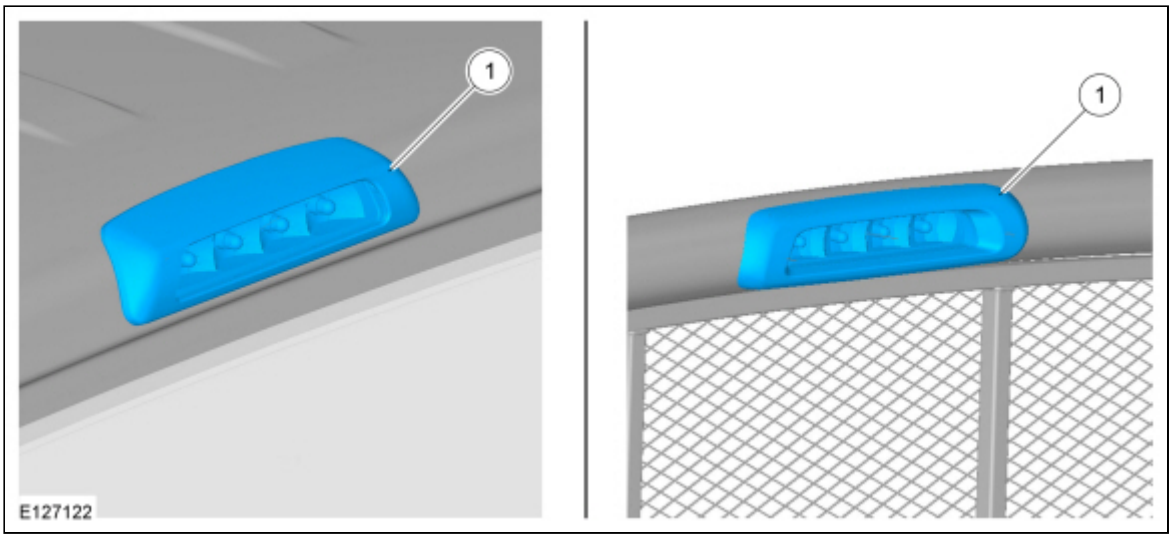
Item	Part Number	Description
1	—	Direction indicator bulb
2	—	Side and brake lamp bulb
3	—	Reverse lamp bulb



The rear lamp clusters incorporate all rearward facing lights with exception of the license plate lamp and the additional high-mounted stoplamp.

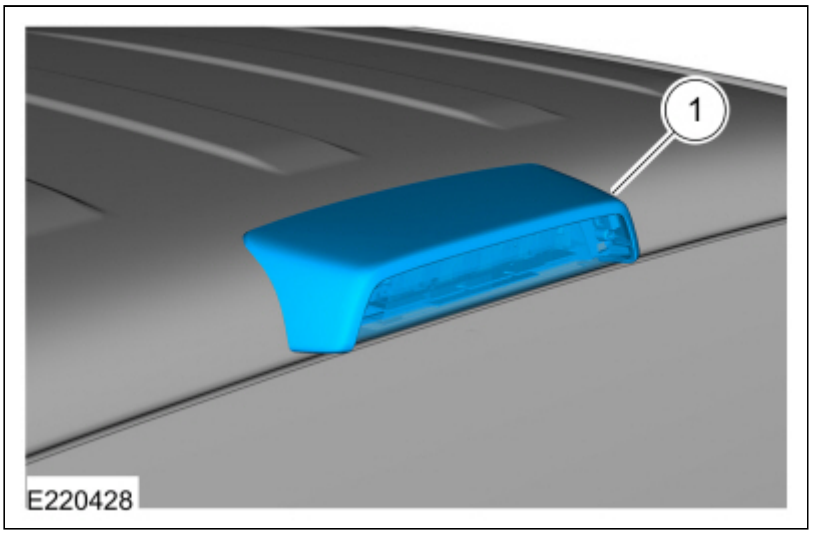
The rear lamps can only be replaced as a complete unit.

Brake lamp bulbs are illuminated when the driver applies the brake.



The reversing lamps (21W bulb) are used to illuminate the road when reversing the vehicle. The rear fog lamp is illuminated when the rear fog lamp switch is activated.

License plate lamp



Item	Part Number	Description
1	—	License plate lamp

Center high mounted stop lamp - Bulb

Item	Part Number	Description
1	—	Center high mounted stop lamp

Center high mounted stop lamp - LED

Item	Part Number	Description
1	—	Center high mounted stop lamp

Four W5W glass base bulbs are used.

The stoplamps (21/W5W bulb) are switched on by the stoplamp switch on the brake pedal as soon as the brake pedal is depressed.

Trailer Tow

Vehicles with a factory fitted tow bar also come with a trailer plug control module for lighting. In addition to providing the trailer plug functionality, the trailer plug control module protects the primary electrical circuits of the vehicle from any electrical concern or failure that the customer's trailer may experience.

For vehicles fitted without a tow bar as standard, a genuine Ford accessory trailer tow electrical kit has been developed to enable a tow bar to be installed. The kit comprises of the trailer plug control module, trailer plug, wiring and associated hardware components.

Once the kit is installed, the vehicle must then be configured using IDS.

All trailer tow electrical connections must use the genuine Ford accessory trailer tow kit. Installation of aftermarket

trailer tow electrical kits or directly splicing into the vehicle wiring in order to install trailer lamps or other electrical devices may overload the system and impact the operation of other vehicle systems.

Copyright © 2016 Ford Motor Company

Exterior Lighting - Overview

Headlamps

The headlamp system consists of:

- Headlamp assemblies
- Headlamp switch
- Steering column multifunction switch
- BCM
- SCCM
- IPMA

The headlamp system is a quad-beam pattern system. It consists of replaceable low and high beam bulbs in each headlamp assembly. The front turn/parking lamps are integrated into the headlamp assembly.

DRL

The DRL system consists of:

- H15 Twin filament bulb
- BCM

Autolamps

The autolamp system consists of:

- Light sensor
- Headlamp switch
- BCM

The autolamp system provides light sensitive automatic on/off control of the exterior lamps. The autolamp system keeps the exterior lamps on for a preselected period of time after the ignition is turned OFF (20 seconds is the factory default setting). The preselected time is adjustable up to approximately 3 minutes by using the message center controls.

Stoplamps

The stoplamp system consists of:

- Stoplamp switch
- Rear lamp assemblies
- High mounted stoplamp
- BCM

The stoplamp switch is located on the brake pedal assembly. Voltage is supplied to the rear lamps and high mounted stoplamp when the brake pedal is applied.

Turn Signal and Hazard Lamps

The turn lamp system consists of:

- Front turn lamps (part of the headlamp assembly)
- Rear lamp assemblies
- Outside rear view mirrors
- Steering column multifunction switch
- Hazard flasher lamp switch
- BCM
- SCCM

When the steering column multifunction switch is placed in the LH TURN or RH TURN position, the corresponding turn lamps flash on and off.

When the hazard function is active, all the turn lamps flash on and off.

Parking, Rear and License Plate Lamps

The parking, rear and license plate lamp system consists of:

- Front position lamps
- Rear lamp assemblies
- License plate lamps
- Headlamp switch
- BCM

Front Fog Lamps

The front fog lamp system consists of:

- Front fog lamps
- Front fog lamps switch (integrated into the headlamp switch)
- BCM

The front fog lamp can be turned on when the ignition is in RUN, the parking lamps are on, and the high beams are off.

Rear Fog Lamps

The rear fog lamp system consists of:

- Rear fog lamps
- Rear fog lamps switch (integrated into the headlamp switch)
- BCM

The rear fog lamp can be turned on when the ignition is in RUN, the parking lamps are on.

Reversing Lamps

The reverse lamp system consists of:

- Reverse lamps
- PCM
- BCM

When the transmission is placed in REVERSE, the reversing lamps are illuminated.

Trailer Lamps

The trailer tow system consists of the following components:

- Trailer tow connector
- TRM
- BJB
- BCM

The TRM supplies voltage to the trailer stop/turn lamps, parking lamps, reversing lamps, trailer fog lamps and trailer battery charging.

Exterior Lighting - System Operation and Component Description

System Operation

Headlamps

System Diagram

Network Message Chart

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Headlamp flash to pass status	GWM	Indicates to the BCM a request for the high beams or flash-to-pass.

GWM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Headlamp flash to pass status	SCCM	Indicates to the GWM a request for the high beams or flash-to-pass.
Auto high beam request	IPMA	Indicates to the GWM a request for the high beams based on the IPMA camera input.

Low Beams

The BCM monitors the headlamp switch position by sending voltage signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is switched to ground to indicate the headlamp switch position.

The BCM turns the parking lamps and headlamps on when the ignition is in RUN and the BCM detects a fault from the headlamp switch or wiring. This is normal behavior of the BCM when a fault has been detected with the inputs from the headlamp switch.

When the BCM receives a message requesting the headlamps on, it supplies voltage to the headlamp bulbs within each headlamp assembly.

The BCM also provides Field Effect Transistor (FET) protection of the exterior lamps switched voltage and low beam output circuits. When an excessive current draw is detected, the BCM disables the affected circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description (419-10 Multifunction Electronic Modules, Description and Operation).

High Beams

The SCCM monitors the steering column multifunction switch for a high beam request. When the steering column multifunction switch is in the HIGH BEAMS position, the SCCM sends a message over the HS-CAN2 to the GWM, then the GWM sends the message to the BCM over the HS-CAN1.

When the low beams are on and the BCM receives a request for high beams, the low beam bulbs remain powered on and the high beam bulbs are also illuminated. This changes the headlamp beam pattern to illuminate a greater distance.

The BCM also provides Field Effect Transistor (FET) protection of the exterior lamps switched voltage and high beam output circuits. When an excessive current draw is detected, the BCM disables the affected circuit driver.

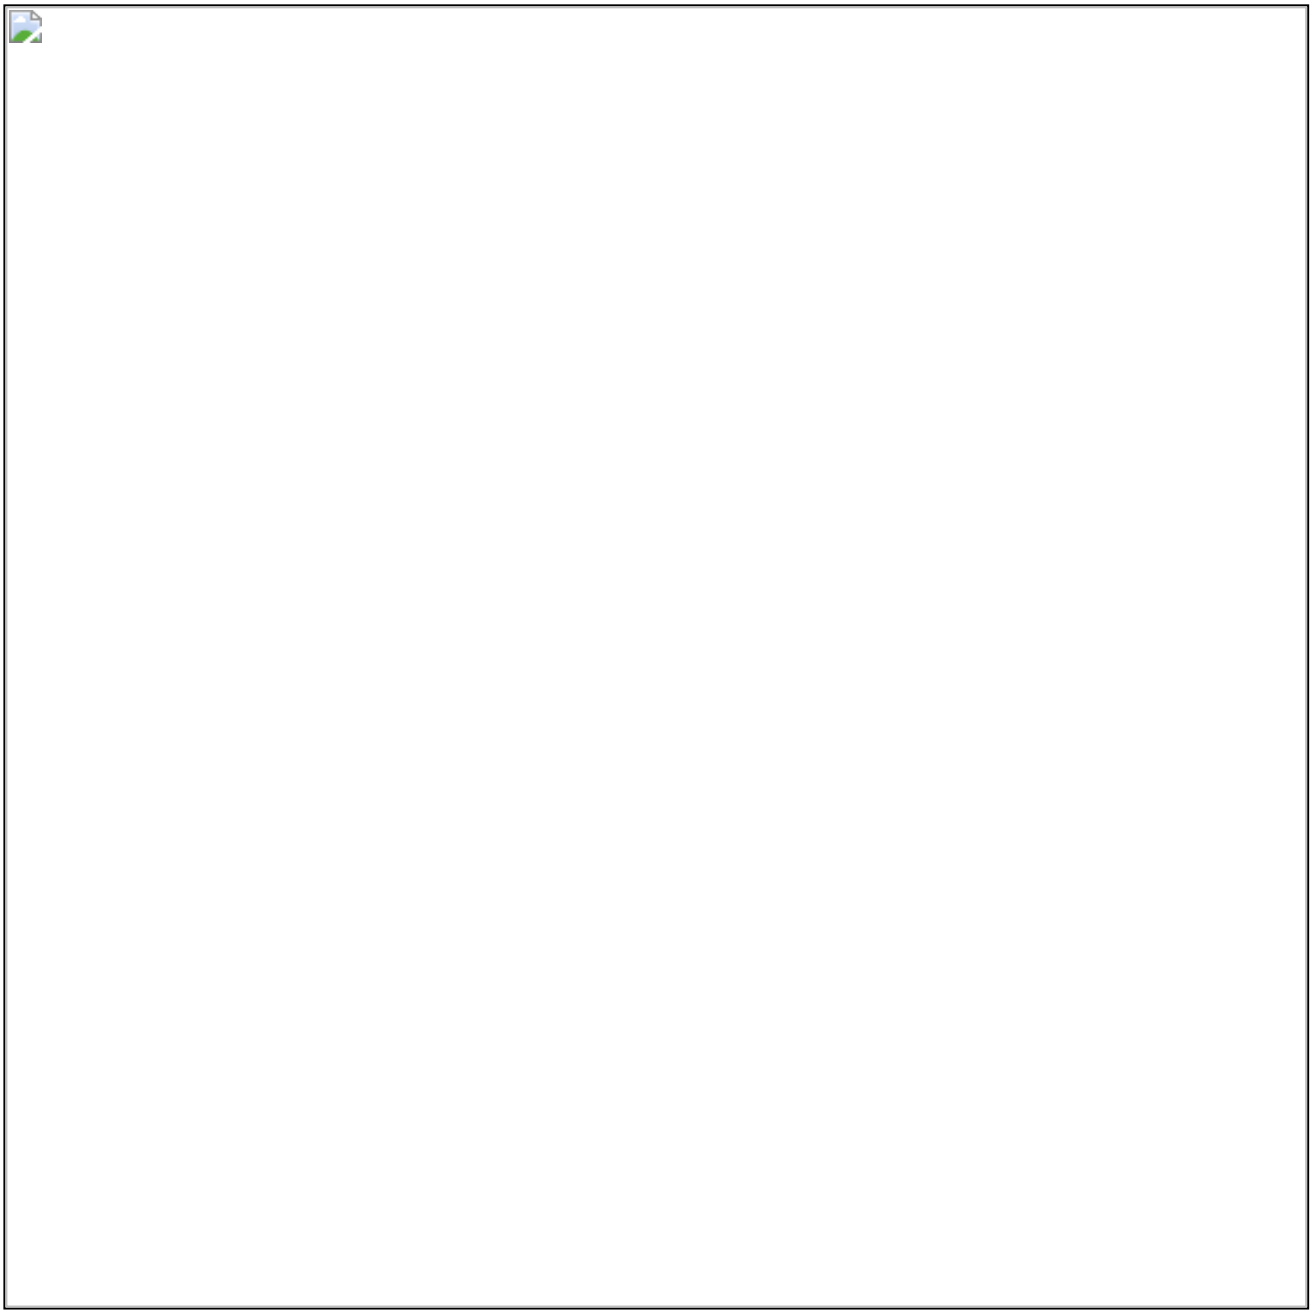
Refer to: Module Controlled Functions - System Operation and Component Description (419-10 Multifunction Electronic Modules, Description and Operation).

Flash-To-Pass

The SCCM monitors the steering column multifunction switch for a flash-to-pass request. When the steering column multifunction switch is in the FLASH-TO-PASS position, the SCCM sends a message over the HS-CAN2 to the GWM then the GWM sends the message to the BCM over the HS-CAN1.

When the ignition is in RUN and the flash-to-pass is requested, the high beams are activated as long as the steering column multifunction switch is held in the flash-to-pass position.

Headlamp Exit Delay



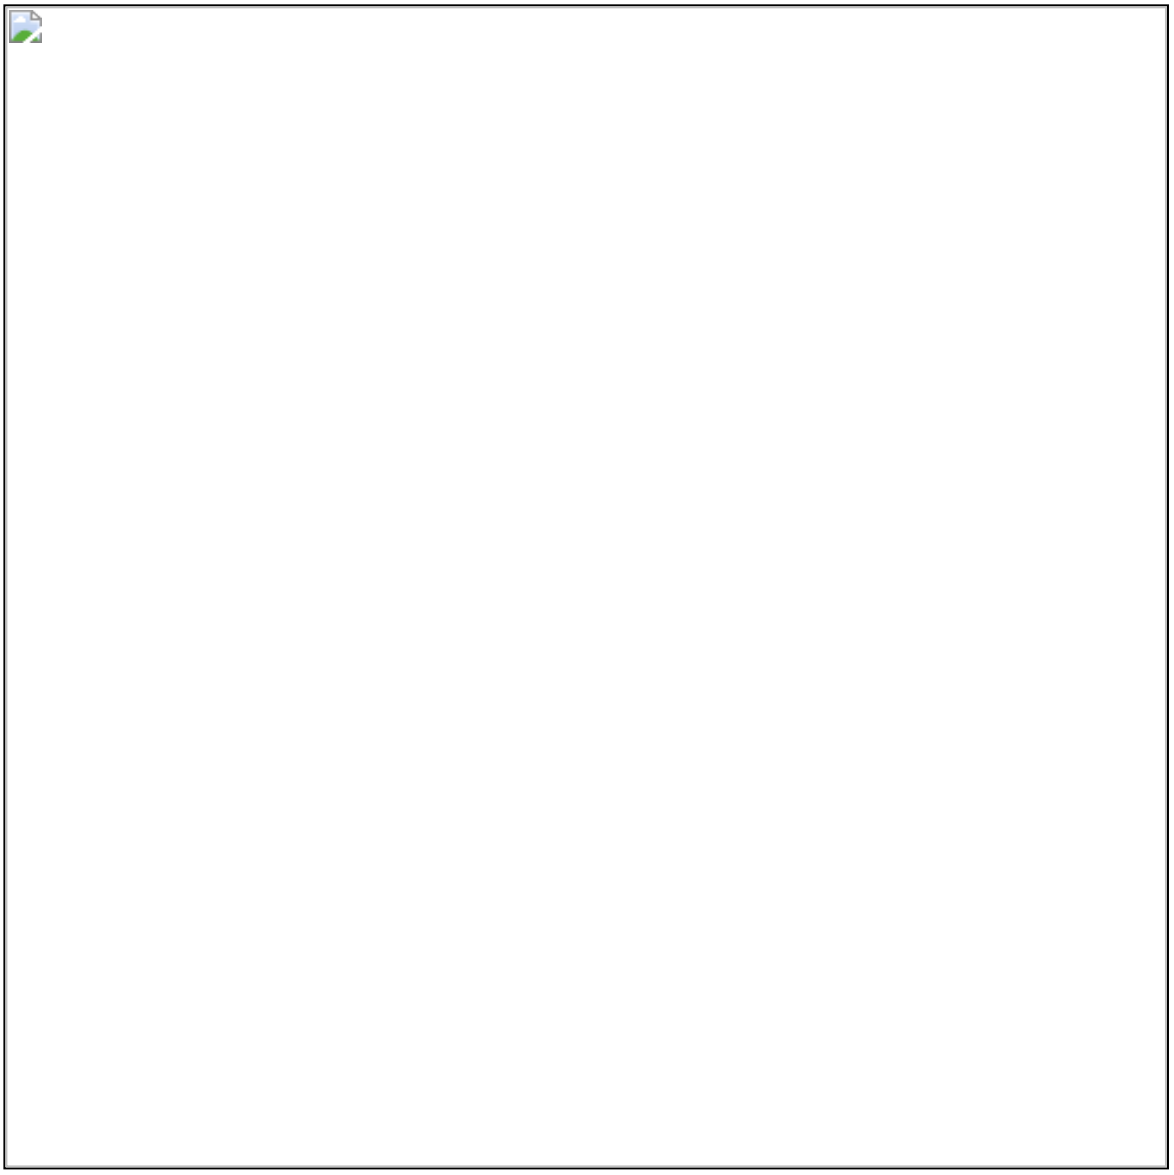
When the ignition is OFF and the steering column multifunction switch is placed in the FLASH-TO-PASS position and released, the parking lamps and low beams are illuminated. They remain illuminated until:

- 3 minutes have elapsed with a door open.
- 30 seconds have elapsed after all doors are closed.
- the steering column multifunction switch is placed in the flash-to-pass position again.
- the ignition switches to RUN.

Within the 30 second delay and all the doors closed, opening any door results in the 3 minute timer restarting.

Manual Headlamp Leveling

System Diagram



Manual Headlamp Leveling

By pressing the headlamp button and releasing it into the popped out position, the switch can be rotated into one of 4 headlamp level positions. This allows headlamp beam height to be adjusted according to vehicle load. Once the beam is adjusted, the button can be pressed again to lock in the headlamp beam height.

DRL

System Diagram

Network Message Chart

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Gear position	PCM	Indicates the GSM request to the BCM. When the gear shift has selected any position other than park, the BCM activates the DRL.

DRL

The BCM monitors the ignition status, the headlamp switch and autolamp status.

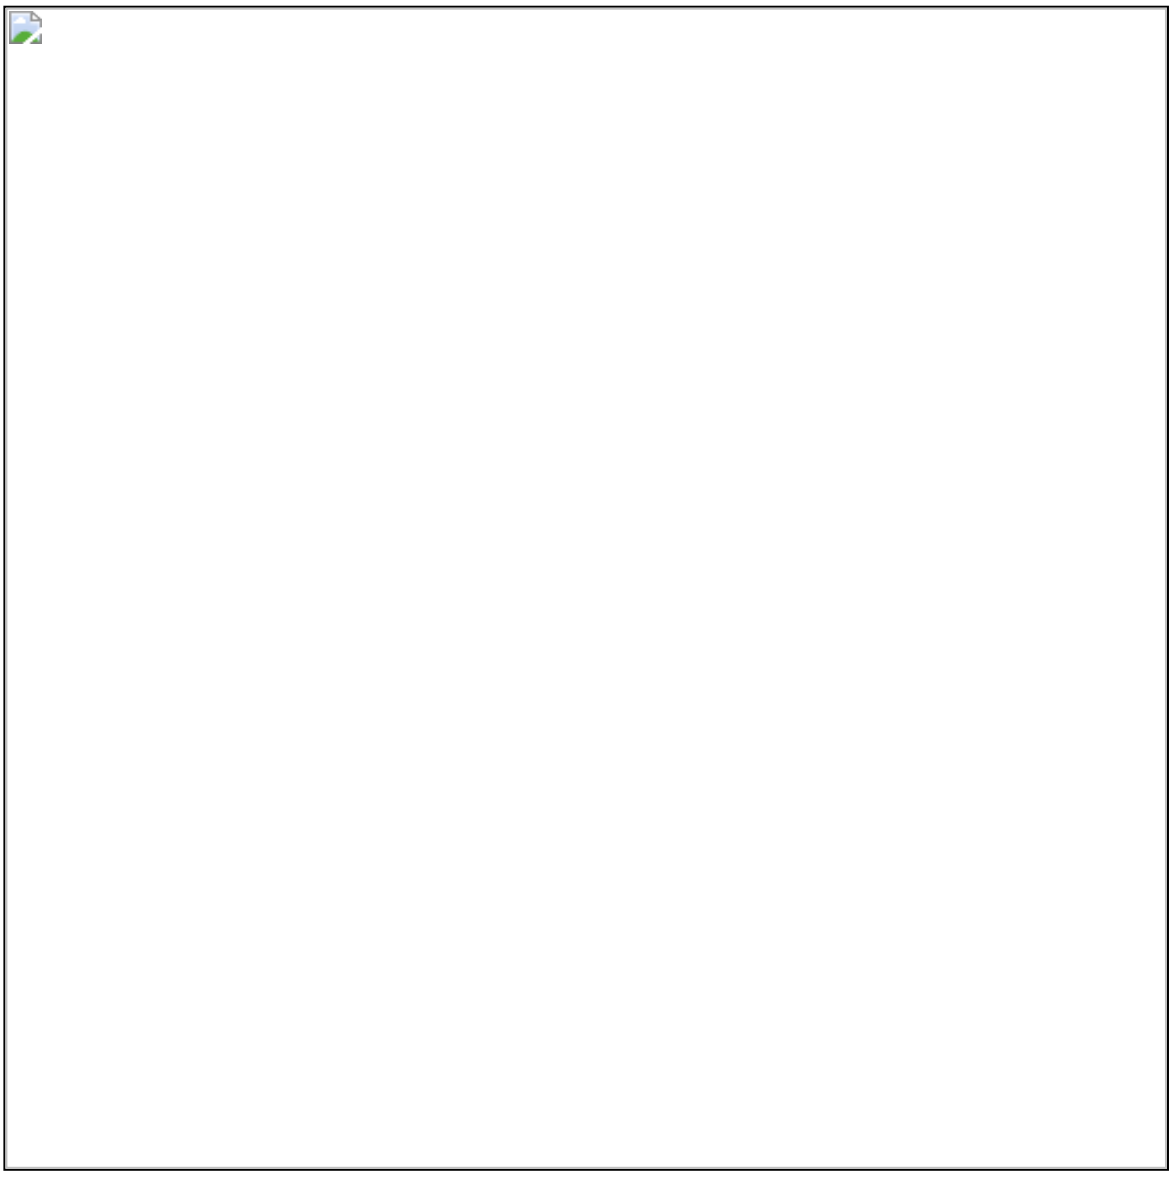
There are two types of DRL. Conventional (where it is required) and configurable.

When equipped with conventional DRL, the DRL are active in any headlamp switch position except the HEADLAMPS position.

When equipped with configurable DRL, the DRL may be enabled through the IPC message center. When enabled, the DRL are active only in the AUTOLAMPS headlamp position. When autolamps request the headlamps on, the DRL are de-activated.

The DRL are activated when the following conditions are met:

- the ignition is in run
- the headlamps have not been turned on by the autolamp system or the headlamp switch
- the transmission is not in park



When the transmission is in not in PARK, the PCM sends a message over the HS-CAN1 to the BCM indicating the transmission is not in PARK.

The BCM also provides Field Effect Transistor (FET) protection of the exterior lamps switched voltage and DRL output circuits. When an excessive current draw is detected, the BCM disables the affected circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description (419-10 Multifunction Electronic Modules, Description and Operation).

Autolamps

System Diagram

Network Message Chart

BCM Network Input Messages

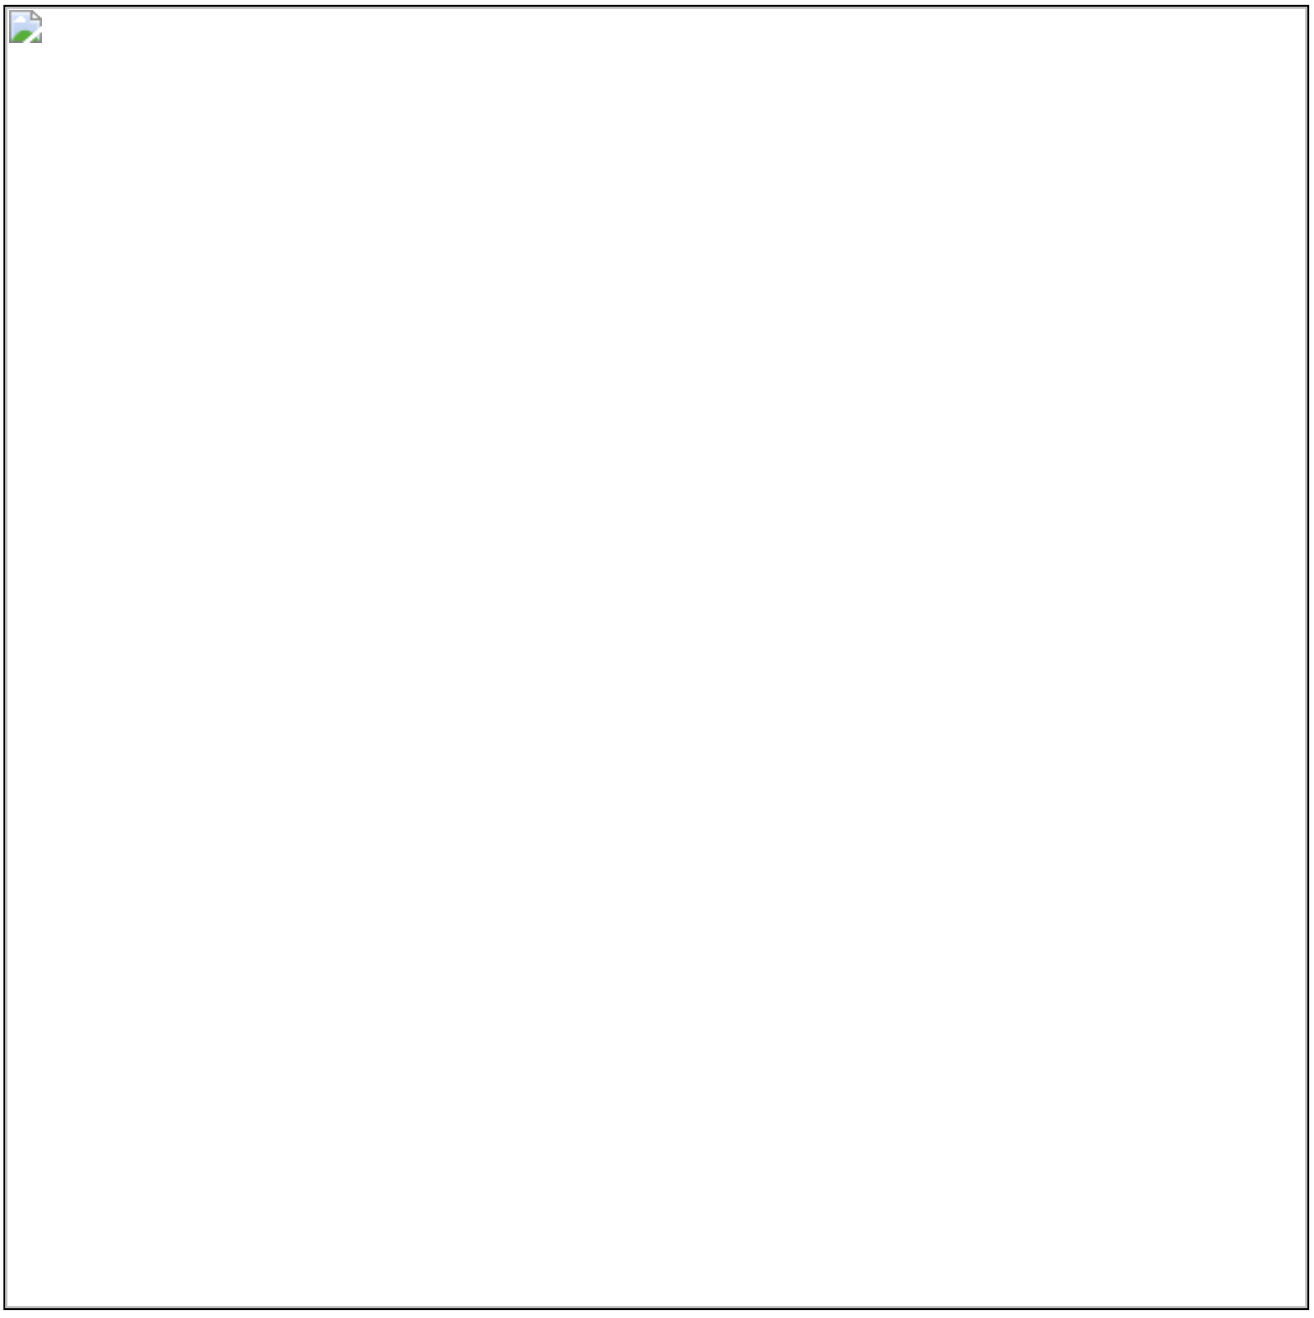
Broadcast Message	Originating Module	Message Purpose
Front wiper status	SCCM	The BCM uses the wiper status information for the operation of the wiper activated headlamps feature.

Autolamps

The BCM monitors the light sensor with a voltage signal. The light sensor input to the BCM varies with the ambient light conditions.

The BCM monitors the headlamp switch circuits to indicate the headlamp switch position.

When the BCM receives a headlamp switch status indicating a request for the autolamps, the BCM monitors the light sensor for the ambient light condition. If the BCM determines the ambient light level is dark, the BCM supplies voltage to the exterior lamps.



Headlamps On With Wipers On Function

When the headlamp switch is in the autolamps position, the exterior lamps turn on when the front wipers are in low or high. This feature does not activate the exterior lamps during a mist wipe, while the wipers are on to clear washer fluid during a wash condition or if the wipers are in automatic or intermittent modes.

The exterior lamps turn off when the ignition switches OFF or to ACC mode, the headlamp switch is placed in the off position, or the front wipers are turned off. The exception to this is when the exterior lights are on because of darkness determined by the autolamp system.

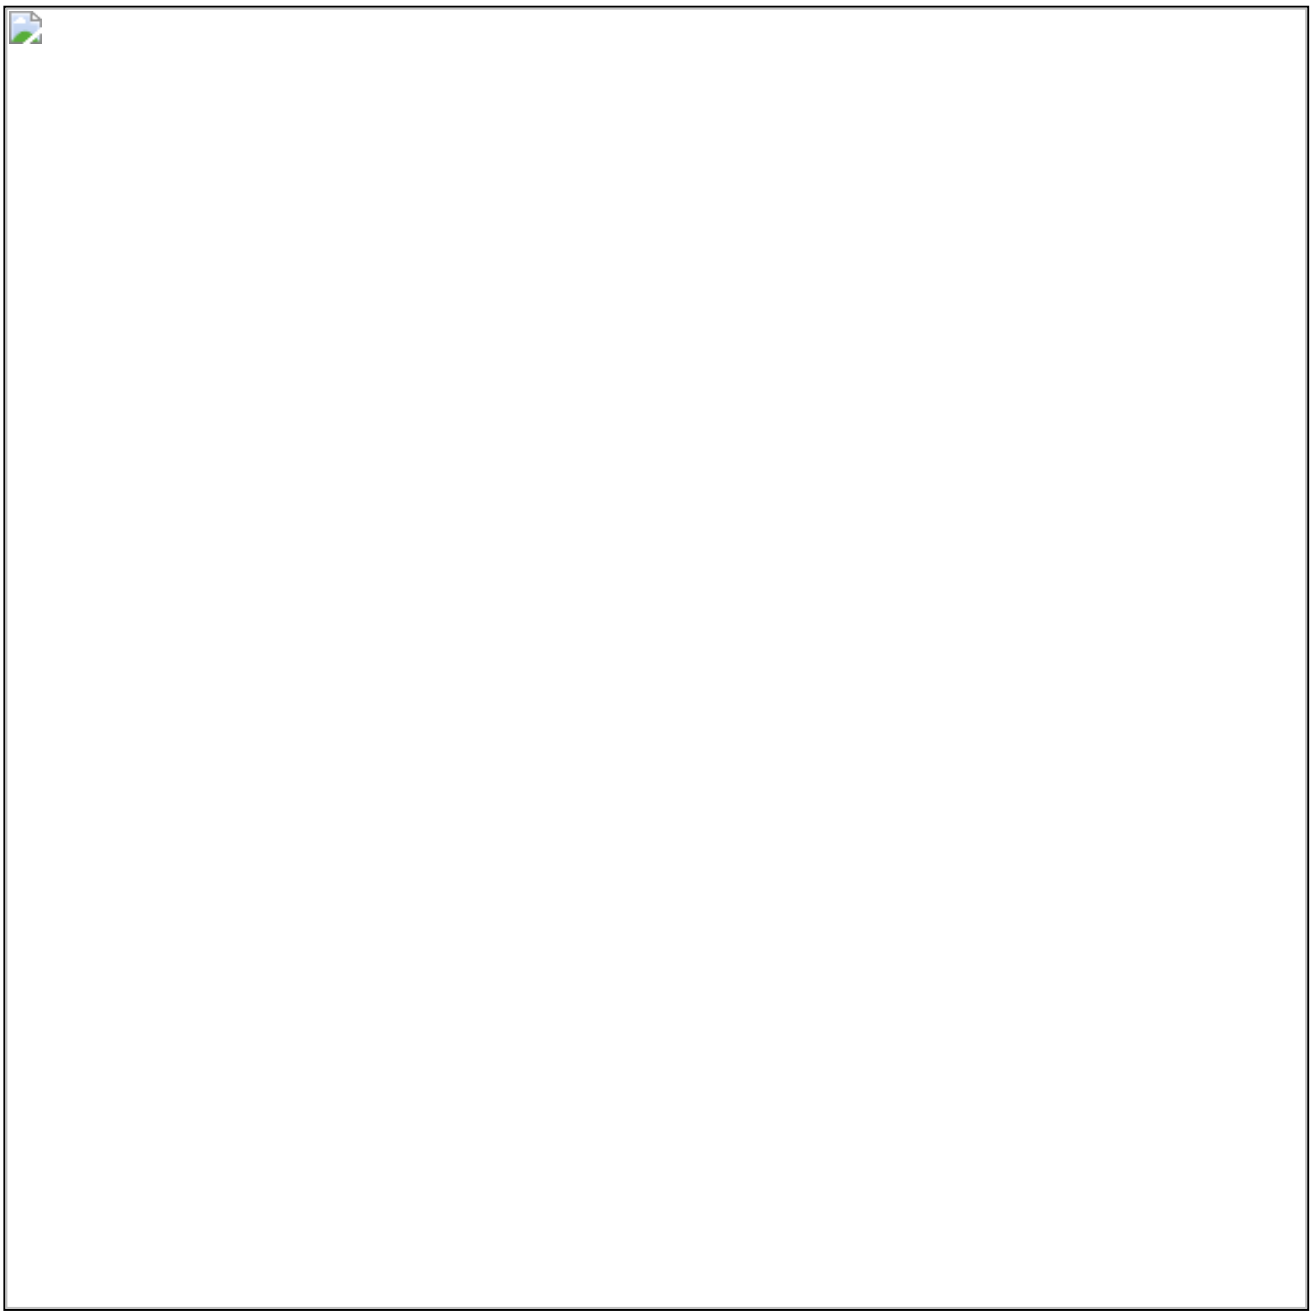
Stoplamps

System Diagram

Stoplamps

The BCM monitors the input from the stoplamp switch. When the brake pedal is applied, voltage is routed to the BCM, indicating a request for the stoplamps. The BCM then supplies voltage to the stoplamps.

The BCM does not activate the stoplamps when the ignition is in OFF or ACC.



The BCM uses 3 separate output circuits. The LH shared turn/stop lamp output circuit, RH shared turn/stop lamp output circuit and high-mounted stoplamp output circuit.

The BCM also provides Field Effect Transistor (FET) protection of the stoplamp output circuits. When an excessive current draw is detected, the BCM disables the affected stoplamp circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description (419-10 Multifunction Electronic Modules, Description and Operation).

Turn Signal and Hazard Lamps

System Diagram

Network Message Chart

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Turn signal switch status	GWM	Indicates the turn signal stalk position on the steering column multifunction switch (left/right lane change or turn signal on or off). The BCM activates the left/right turn signals based on this input.

GWM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Turn signal switch status	SCCM	Indicates the turn signal stalk position on the steering column multifunction switch (left/right lane change or turn signal on or off).
Turn indication request	BCM	A command to activate/deactivate the exterior mirror turn indicator.

Turn Signals

The SCCM monitors the steering column multifunction switch position. When the steering column multifunction switch is in the left or right turn position, the SCCM sends a message over the HS-CAN2 to the GWM then the GWM sends the message to the BCM over the HS-CAN1 indicating a request for the LH or RH turn signal.

When the BCM receives a request for a turn signal, the BCM supplies on/off voltage to the appropriate turn lamps. The BCM sends a turn indicator command message over the MS-CAN to the door modules for the exterior mirror turn lamps.

The timed on/off cycle for turn lamps is determined by the BCM and is set to flash approximately 70 times per minute if both the front and rear turn signal lamps operate correctly.

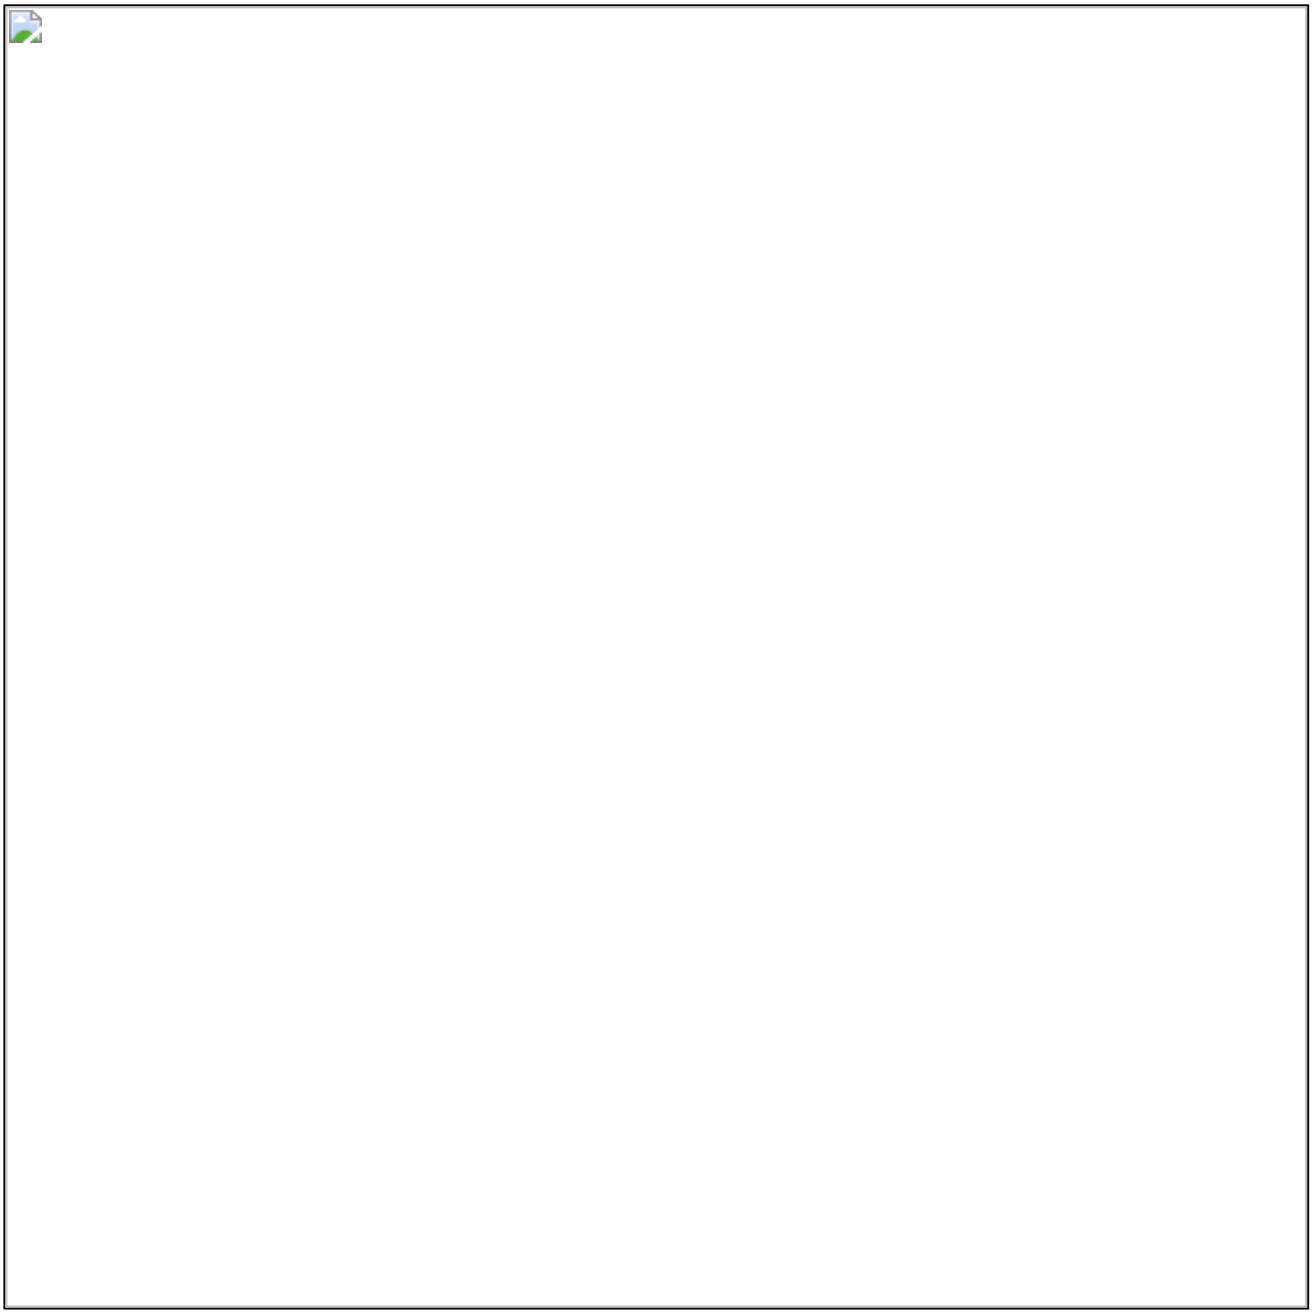
If a front or rear turn signal lamp is inoperative, the BCM fast flashes the remaining turn lamp(s) approximately 150 times per minute to indicate a bulb outage to the driver.

The steering column multifunction switch has 2 detents for the left turn position and 2 detents for the right turn position. When placed in the first detent and released, the corresponding turn signals flash 3 times and turn off. When the steering column multifunction switch is moved to the second detent, the turn signal flashes until the steering wheel is turned in the opposite direction.

The BCM also provides Field Effect Transistor (FET) protection of the turn lamp output circuits. When an excessive current draw is detected, the BCM disables the affected turn lamp circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description (419-10 Multifunction Electronic Modules, Description and Operation).

Hazard Lamps



The BCM sends a voltage signal to the hazard flasher lamp switch to monitor for a hazard lamp function request. When the hazard flasher lamp switch is pressed, the voltage signal is routed to ground, indicating a request to activate or deactivate the hazard lamp function.

When the BCM receives a request for the hazard lamps, the BCM supplies on/off voltage to all the turn lamps.

The timed on/off cycle for the hazard lamps is approximately 70 times per minute, regardless of bulb outage.

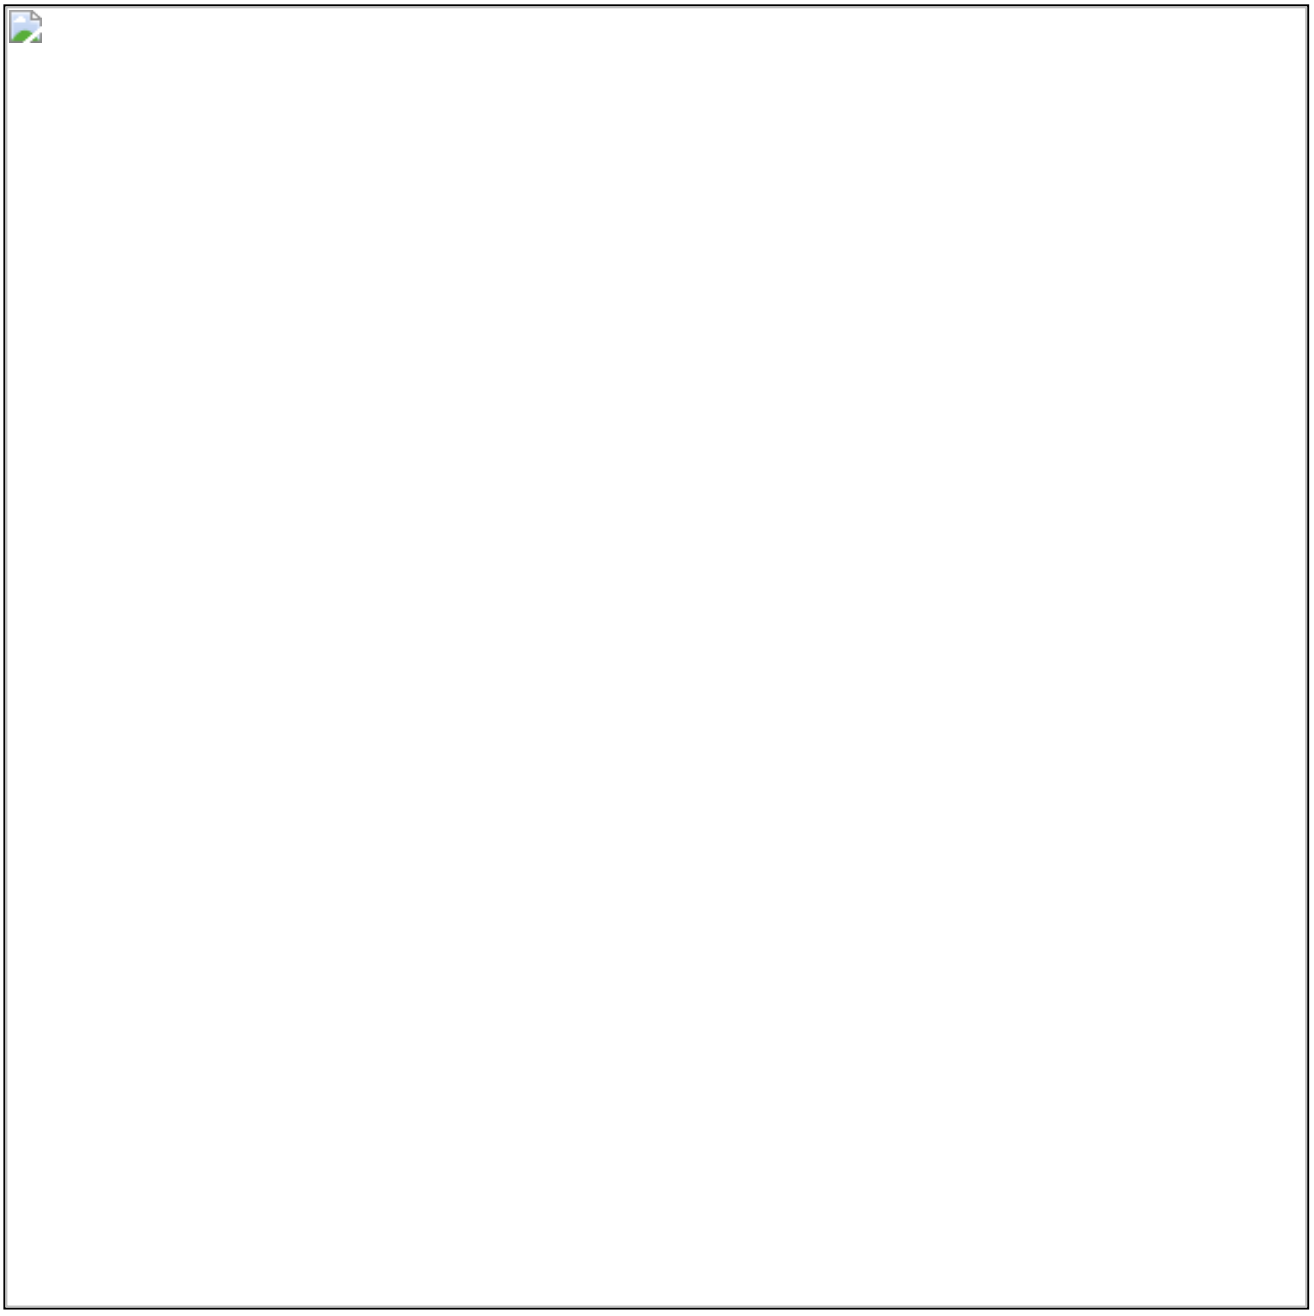
Parking, Rear, and License Plate Lamps

System Diagram

Parking Lamps

The BCM monitors the headlamp switch position by sending voltage signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is switched to ground to indicate the headlamp switch position.

If the BCM detects a fault from the headlamp switch or loses communication with the headlamp switch, the BCM turns the parking and headlamps on. This is normal behavior of the BCM when a fault has been detected with the inputs from the headlamp switch.



When the BCM receives an input requesting the parking lamps on, it provides voltage to the parking lamps.

The BCM also provides Field Effect Transistor (FET) protection of the parking lamps output circuits. When an excessive current draw is detected, the BCM disables the affected parking lamps circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description (419-10 Multifunction Electronic Modules, Description and Operation).

Fog Lamps

System Diagram

Front Fog Lamps

The BCM monitors the headlamp switch position by sending voltage signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is switched to ground to indicate the headlamp switch position.

When the BCM receives input from the headlamp switch indicating a request for the front fog lamps, the BCM provides voltage to the front fog lamps.

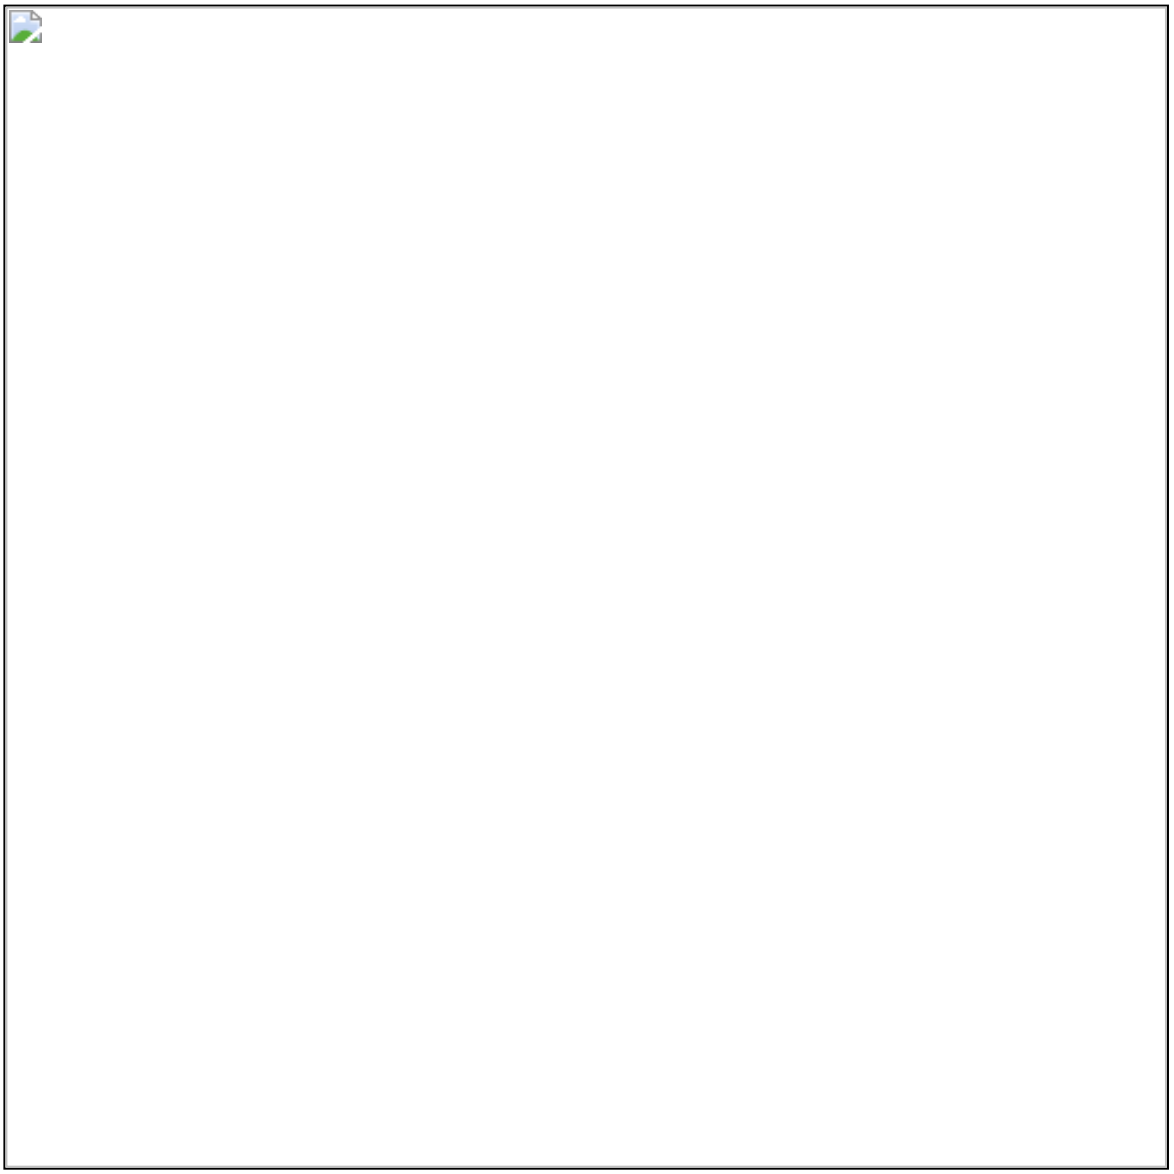
The BCM also provides Field Effect Transistor (FET) protection of the front fog lamp output circuit. When an excessive current draw is detected, the BCM disables the front fog lamp output circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description (419-10 Multifunction Electronic Modules, Description and Operation).

Rear Fog Lamps

The BCM monitors the headlamp switch position by sending voltage signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is switched to ground to indicate the headlamp switch position.

When the BCM receives input from the headlamp switch indicating a request for the rear fog lamps, the BCM provides voltage to the rear fog lamps.



The BCM also provides Field Effect Transistor (FET) protection of the rear fog lamp output circuit. When an

excessive current draw is detected, the BCM disables the rear fog lamp output circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description (419-10 Multifunction Electronic Modules, Description and Operation).

Reversing Lamps

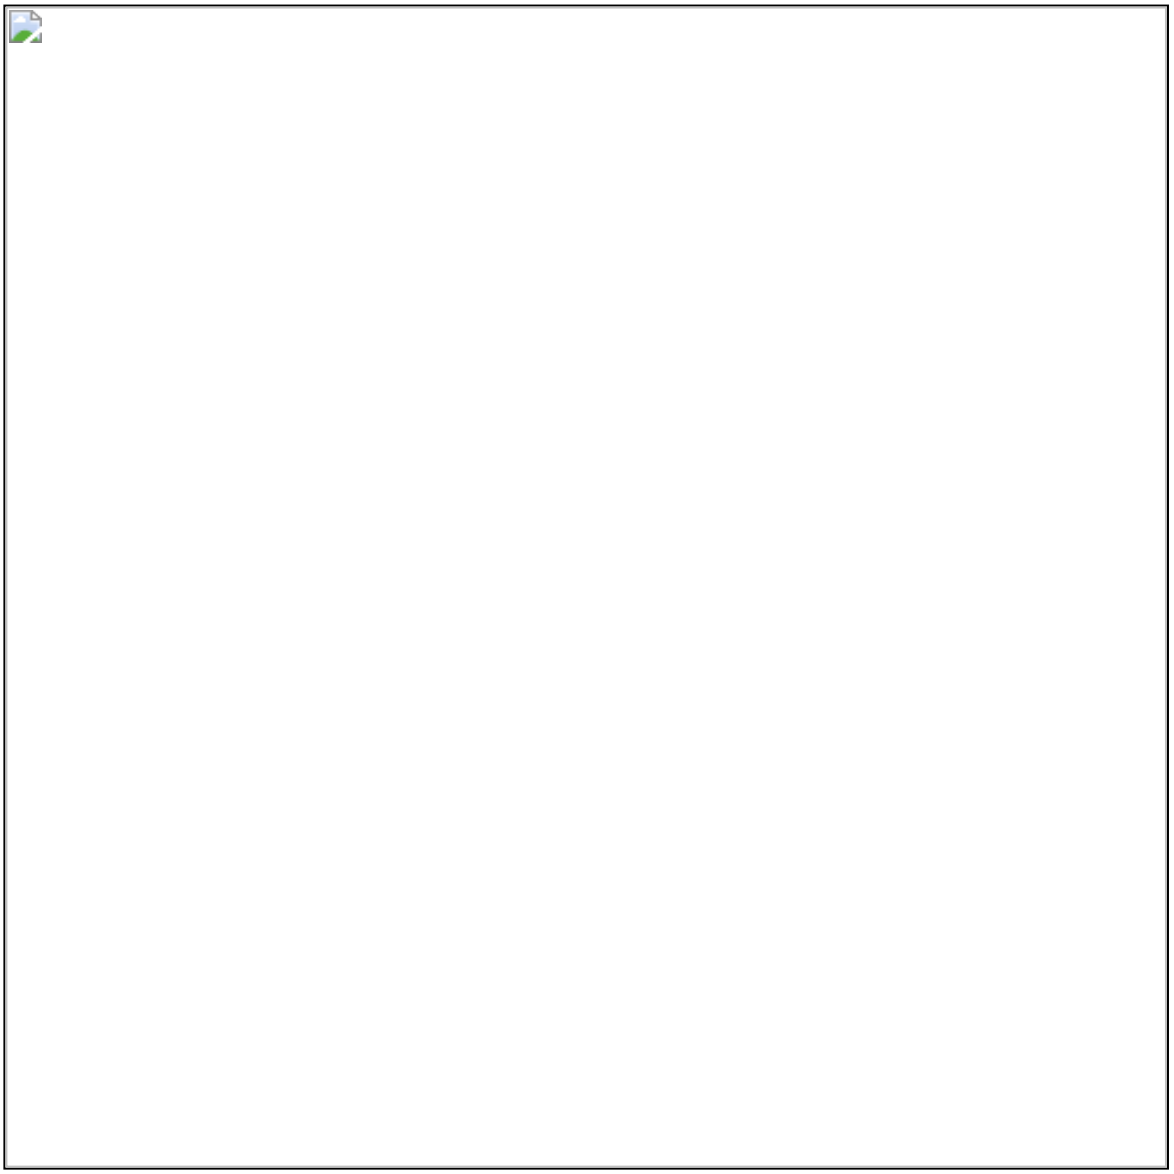
System Diagram

Network Message Chart

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Gear position	PCM	Indicates the transmission is in reverse gear to the BCM. When the transmission is in REVERSE and the ignition in RUN, the BCM provides voltage to the reversing lamps.

Reversing Lamps



When the transmission is in REVERSE, the PCM sends a message over the HS-CAN1 to the BCM indicating the transmission is in REVERSE. The BCM provides voltage to the reversing lamps when it receives the message that the transmission is in REVERSE and the ignition is in RUN.

The BCM also provides Field Effect Transistor (FET) protection of the reversing lamps output circuit. When an excessive current draw is detected, the BCM disables the affected reversing lamps circuit driver.

Refer to: Module Controlled Functions - System Operation and Component Description (419-10 Multifunction Electronic Modules, Description and Operation).

Trailer Lamps

System Diagram

Network Message Chart

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Gear position	PCM	Indicates the transmission is in reverse gear to the BCM. When the transmission is in REVERSE and the ignition in RUN, the BCM provides voltage to the reversing lamps.

GWM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Turn signal switch status	SCCM	Indicates the turn signal stalk position on the steering column multifunction switch (left/right lane change or turn signal on or off).

Turn indication request	BCM	A command to activate/deactivate the exterior mirror turn indicator.
Stop lamp brake request	BCM	A command to activate/deactivate the stop lamps output.

TRM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Turn indication request	BCM	A command to the TRM to activate/deactivate the turn indicator output to the trailer tow connector.
Stoplamp request	BCM	A command to the TRM to activate/deactivate the stop lamps output to the trailer tow connector.

Trailer Stop-Turn Lamps

The SCCM monitors the steering column multifunction switch position. When the steering column multifunction switch is in the left or right turn position, the SCCM sends a message over the HS-CAN2 to the GWM then the GWM sends the message to the BCM over the HS-CAN1 indicating a request for the LH or RH turn signal.

When the BCM receives a request for a turn signal, the BCM sends a turn indicator command message over the MS-CAN to the TRM to activate the requested stop/turn indicator output to the trailer tow connector.

When the BCM receives input from the stoplamp switch indicating that the brake pedal is being pressed, the TRM receives a stoplamp activation message over the MS-CANto activate the requested stop/turn indicator output to the trailer tow connector.

Trailer Fog Lamps

The BCM monitors the rear fog lamp switch position by sending voltage signals on multiple circuits to the rear fog lamp switch. At any given time, the signal circuits is switched to ground to indicate the rear fog lamp switch position.

When the rear fog lamps position is selected, the BCM sends a rear fog lamp command message over the MS-CAN to the TRM to activate rear fog lamp voltage to the trailer tow connector.

Trailer Parking Lamps

The BCM monitors the headlamp switch position by sending voltage signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is switched to ground to indicate the headlamp switch position.

When the parking lamps or headlamps position is selected, the BCM sends a parking lamp command message over the MS-CAN to the TRM to activate parking lamp voltage to the trailer tow connector.

Trailer Reversing Lamps

When the transmission is in REVERSE, the PCM sends a message over the HS-CAN1 to the BCM indicating the transmission is in REVERSE. The BCM sends a reversing lamp command message over the MS-CAN to the TRM to activate the reversing lamp voltage to the trailer tow connector.

Trailer Battery Charging

The TRM provides voltage to the trailer tow connector for trailer battery charging when the ignition switch is in the RUN position.

The TRM is supplied voltage for trailer battery charging from the BJB.

Field Effect Transistor (FET) Protection

The TRM utilizes a Field Effect Transistor (FET) protective circuit strategy for its lamp output circuits. Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down (turns off the voltage or ground provided by the module) when a fault event is detected.

A Field Effect Transistor (FET) is a type of transistor that the control module software uses to control and monitor current flow on module outputs. The Field Effect Transistor (FET) protection strategy prevents module damage in the event of excessive current flow.

Output loads (current level) are monitored for excessive current draw (typically short circuits). When a fault event is detected the Field Effect Transistor (FET) turns off and a short circuit DTC sets. The module resets the Field Effect Transistor (FET) protection and allows the circuit to function when the fault is corrected or the ignition state is cycled off and then back on.

When the excessive circuit load occurs often enough, the module shuts down the output until a repair procedure is carried out. Each Field Effect Transistor (FET) protected circuit has 3 predefined levels of short circuit tolerance based on a module lifetime level of fault events based upon the durability of the Field Effect Transistor (FET).

When each level is reached, the DTC associated with the short circuit sets along with DTC U1000:00. These Diagnostic Trouble Codes (DTCs) can be cleared using the module on-demand self-test, then the Clear DTC operation on the scan tool (if the on-demand test shows the fault corrected). The module never resets the fault event counter to zero and continues to advance the fault event counter as short circuit fault events occur.

If the number of short circuit fault events reach the third level, then Diagnostic Trouble Codes (DTCs) U1000:00 and U3000:49 set along with the associated short circuit DTC. DTC**U3000:49 cannot be cleared** and the module **must** be replaced after the repair.

Component Description

Headlamp Assembly

Exterior lamps are vented to accommodate normal changes in pressure. Condensation can be a natural by-product of this design. When moist air enters the lamp assembly through the vents, there is a possibility that condensation can occur if the temperature is cold. When normal condensation occurs, a thin mist forms on the interior of the lens. The thin mist eventually clears and exits through the vents during normal operation. The amount of time it takes to clear the lens of acceptable mist varies with ambient humidity and lamp types. Normal condensation clears from any lamp in 48 hours under dry conditions.

Do not replace a lamp assembly with acceptable levels of condensation such as:

- presence of thin mist (no streaks, drip marks or droplets are present)
- fine mist covers less than 50% of the lens

Examples of unacceptable moisture (usually caused by a lamp housing leak):

- water puddling inside the lamp
- large water droplets, drip marks or streaks present on the interior of the lens

Headlamp Switch

The BCM monitors the headlamp switch position by sending voltage signals on multiple circuits to the headlamp switch. There is one circuit for each headlamp switch position. At any given time, one of the signal circuits is switched to ground to indicate the headlamp switch position.

On vehicles equipped with an optional manual headlamp leveling system, the switch has a headlamp button that can be rotated into one of 4 headlamp level positions.

Light Sensor

The BCM sends a voltage signal to the light sensor. The light sensor provides resistance between the voltage signal and ground. The resistance varies depending on the amount of ambient light detected by the light sensor. The brighter the ambient light, the lower the resistance. By varying the resistance, the BCM can determine the amount of ambient light.

Stoplamp Switch

The stoplamp switch is a normally open switch and is provided voltage at all times. When the brake pedal is applied, the switch closes and routes voltage to the BCM.

TRM

The TRM receives inputs from the BCM to control voltage to the trailer tow connector for the LH stop/turn, RH stop/turn lamps and trailer battery charging.

DTC Chart: BCM

NOTE: *The BCM is also known as the CJB*

BCM DTC Chart

DTC	Description	Action
B1A85:11	Ambient Light Sensor: Circuit Short To Ground	GO to Pinpoint Test B
B1A85:13	Ambient Light Sensor: Circuit Open	GO to Pinpoint Test B

Symptom Chart: Autolamps

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals or connectors • Module	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
The autolamps are inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test A
The autolamps are on continuously	Refer to the Pinpoint Test	GO to Pinpoint Test B

Pinpoint Tests

The Autolamps Are Inoperative

Refer to Wiring Diagrams Section 417-01 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Overview (417-01 Exterior Lighting, Description and Operation).

Possible Sources

- Sunload sensor
- multifunction switch (headlamp switch)
- BCM

PINPOINT TEST A : THE AUTOLAMPS ARE INOPERATIVE

A1 CHECK THE MANUAL HEADLAMP OPERATION
• Place the headlamp switch in the HEADLAMPS and then OFF positions. **Do the headlamps operate correctly?** **Yes** GO to A2

No	REFER to: Headlamps (417-01 Exterior Lighting, Diagnosis and Testing).

A2 CHECK FOR VOLTAGE TO THE LIGHT SENSOR

- Ignition OFF.
- Disconnect Autolamp Sensor C287 (vehicles with EMTC)..
- Disconnect Sunload Sensor C286 (vehicles with DATC)..
- Ignition ON.
- Place the headlamp switch in the AUTOLAMPS position.
- Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2		Ground

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2		Ground

Is the voltage approximately 5 volts?

Yes	INSTALL a new sunload sensor.
No	GO to A3

A3 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Autolamps Are On Continuously

Refer to Wiring Diagrams Section 417-01 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Overview (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A85:11	Ambient Light Sensor: Circuit Short to Ground	Sets when the BCM detects a short to ground from the light sensor input circuit.
B1A85:13	Ambient Light Sensor: Circuit Open	Sets when the BCM detects an open or short to voltage from the light sensor input circuit.

Possible Sources

- Wiring, terminals or connectors
- Light sensor
- multifunction switch (headlamp switch)
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the multifunction switch (headlamp switch) for damage.
- Inspect the light sensor for damage.

PINPOINT TEST B : THE AUTOLAMPS ARE ON CONTINUOUSLY

B1 CHECK FOR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODE (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform the BCM self-test.

Is DTC B1A85:11 or B1A85:13 present?

Yes	For DTC B1A85:11, GO to B3 For DTC B1A85:13, GO to B5
No	GO to B2

B2 CHECK FOR VOLTAGE TO THE LIGHT SENSOR (NO DTC (DIAGNOSTIC TROUBLE CODE))

- Ignition OFF.
- Disconnect Autolamp Sensor C287 (vehicles with EMTC)..
- Disconnect Sunload Sensor C286 (vehicles with DATC)..
- Ignition ON.
- Place the headlamp switch in the AUTOLAMPS position.
- Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2		Ground

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2		Ground

Is the voltage approximately 5 volts?

Yes	INSTALL a new sunload sensor.
No	GO to B10

B3 CHECK FOR VOLTAGE TO THE LIGHT SENSOR (DTC (DIAGNOSTIC TROUBLE CODE) B1A85:11)

- Ignition OFF.
- Disconnect Autolamp Sensor C287 (vehicles with EMTC)..
- Disconnect Sunload Sensor C286 (vehicles with DATC)..
- Ignition ON.
- Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2		Ground

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2		Ground

Is the voltage approximately 5 volts?

Yes	INSTALL a new sunload sensor.
No	GO to B4

B4 CHECK THE LIGHT SENSOR INPUT CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect: BCM C2280G.
- Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2	Ω	Ground

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B10
No	REPAIR the circuit.

B5 CHECK FOR VOLTAGE TO THE LIGHT SENSOR (DTC (DIAGNOSTIC TROUBLE CODE) B1A85:13)

- Ignition OFF.
- Disconnect Autolamp Sensor C287 (vehicles with EMTC)..
- Disconnect Sunload Sensor C286 (vehicles with DATC)..
- Ignition ON.
- Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2	V	Ground

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2	V	Ground

Is the voltage approximately 5 volts?

Yes	GO to B6
No	GO to B7

B6 CHECK THE LIGHT SENSOR FOR GROUND

- Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2	V	C287-4

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead

C286-2		C286-4

Is the voltage approximately 5 volts?

Yes	INSTALL a new light sensor.
No	GO to B7

B7 CHECK THE LIGHT SENSOR GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect BCM C2280G..
- Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-4	Ω	C2280G-22

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-4	Ω	C2280G-22

Is the resistance less than 3 ohms?

Yes	GO to B10
No	REPAIR the circuit.

B8 CHECK THE LIGHT SENSOR INPUT CIRCUIT FOR A SHORT TO VOLTAGE

- Disconnect BCM C2280G..
- Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2		Ground

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to B9

B9 CHECK THE LIGHT SENSOR INPUT CIRCUIT FOR AN OPEN

- Measure:

Vehicles With EMTC

Positive Lead	Measurement / Action	Negative Lead
C287-2	Ω	C2280G-24

Vehicles With DATC

Positive Lead	Measurement / Action	Negative Lead
C286-2	Ω	C2280G-24

Is the resistance less than 3 ohms?

Yes	GO to B10
No	REPAIR the circuit.

B10 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Daytime Running Lamps (DRL)

Symptom Chart(s)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart: Daytime Running Lamps (DRL)

Symptom Chart

Condition	Possible Sources	Actions
A module does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • Module	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
The Daytime Running Lamps (DRL) are inoperative	Refer to the Diagnostic Routine	GO to Pinpoint Test A

Pinpoint Tests

The Daytime Running Lamps (DRL) Are Inoperative

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Overview (417-01 Exterior Lighting, Description and Operation).

Possible Sources

- Wiring, terminals or connectors
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the multifunction switch (headlamp switch) for damage.

PINPOINT TEST A : THE DAYTIME RUNNING LAMPS (DRL) ARE INOPERATIVE

A1 CHECK THAT THE DAYTIME RUNNING LAMPS (DRL) ARE ENABLED

- Ignition ON.
- Using a diagnostic scan tool, make sure the Daytime Running Lamps (DRL) are enabled.

Are the Daytime Running Lamps (DRL) enabled?

Yes	GO to A2
No	Enable the Daytime Running Lamps (DRL).

A2 CHECK THE OPERATION OF THE PARKING LAMPS AND HEADLAMPS (HALOGEN HEADLAMPS)

- Ignition OFF.

- Place the headlamp switch in the headlamps on position.

Do the parking lamps and headlamps (halogen headlamps) operate correctly?

Yes	GO to A3
No	For parking lamps inoperative, REFER to: Parking, Rear and License Plate Lamps (417-01 Exterior Lighting, Diagnosis and Testing). For halogen headlamps, diagnose the low beam headlamps. REFER to: Headlamps (417-01 Exterior Lighting, Diagnosis and Testing).

A3 CHECK THE IGNITION SWITCH PARAMETER IDENTIFICATION (PID)

- Ignition ON.
- Using a scan tool, view Body Control Module (BCM) Parameter Identifications (PIDs).
- Monitor the Body Control Module (BCM) IGN_SW_RUN Parameter Identification (PID) while cycling the ignition ON and OFF.

Does the ignition switch Parameter Identification (PID) value agree with the ignition state?

Yes	GO to A4
No	Replace the multifunction switch (headlamp switch). REFER to: Steering Column Multifunction Switch LH (211-05 Steering Column Switches, Removal and Installation). REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation).

A4 CHECK FOR CORRECT BODY CONTROL MODULE (BCM) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Fog Lamps

DTC Chart: BCM

NOTE: *The BCM is also known as the CJB*

BCM DTC Chart

DTC	Description	Action
B1046:11	Front Fog Lamp Control Switch: Circuit Short to Ground	GO to Pinpoint Test C
B1047:11	Rear Fog Lamp Control Switch: Circuit Short to Ground	GO to Pinpoint Test F
B1147:11	Left Front Fog Lamp: Circuit Short to Ground	GO to Pinpoint Test B
B1147:15	Left Front Fog Lamp: Circuit Short to Battery or Open	• If the fog lamp is on continuously, GO to Pinpoint Test C • If the fog lamp is inoperative, GO to Pinpoint Test B
B1148:11	Right Front Fog Lamp: Circuit Short to Ground	GO to Pinpoint Test B
B1148:15	Right Front Fog Lamp: Circuit Short to Battery or Open	• If the fog lamp is on continuously, GO to Pinpoint Test C • If the fogl lamp is inoperative, GO to Pinpoint Test B
B1A79:11	Rear Fog Lamp: Circuit Short to Ground	GO to Pinpoint Test D
B1A79:15	Rear Fog Lamp: Circuit Short to Battery or Open	GO to Pinpoint Test E

Symptom Chart: Fog Lamps

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals or connectors • Module	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
Both front fog lamps are inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test A
An individual front fog lamp is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test B
The front fog lamps are on continuously	Refer to the Pinpoint Test	GO to Pinpoint Test C
Both rear fog lamps are inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test D
An individual rear fog lamp is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test E
The rear fog lamps are on continuously	Refer to the Pinpoint Test	GO to Pinpoint Test F

Pinpoint Tests

Both Front Fog Lamps Are Inoperative

Refer to Wiring Diagrams Cell 86-1, for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Overview (417-01 Exterior Lighting, Description and Operation).

Possible Sources

- Fuse
- Wiring, terminals or connectors
- Headlamp switch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the fog lamp bulbs and make sure they are OK.
- Inspect the BCM fuse(s).
- Inspect the headlamp switch for damage.

PINPOINT TEST A : BOTH FRONT FOG LAMPS ARE INOPERATIVE

A1 CHECK THE BCM (BODY CONTROL MODULE) HEADLAMP SWITCH INPUT

- Ignition OFF.
- Disconnect BCM C2280G.
- Place the front fog lamp switch in the ON position.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-20	V	Battery Positive

Is the voltage greater than 11 volts?

Yes	VERIFY the BCM fuse(s) are OK. If OK, GO to A3 If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.
No	GO to A2

A2 CHECK THE HEADLAMP SWITCH HEADLAMPS ON CIRCUIT FOR AN OPEN

- Disconnect Headlamp Switch C205.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-14	Ω	C2280G-20

Is the resistance less than 3 ohms?

Yes	INSTALL a new headlamp switch.
No	REPAIR the circuit.

A3 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

An Individual Front Fog Lamp Is Inoperative

Refer to Wiring Diagrams Cell 86-1, for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Overview (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1147:11	Left Front Fog Lamp: Circuit Short to Ground	Sets when the BCM detects the left front fog lamp supply circuit is grounded during an on-demand self-test.
B1147:15	Left Front Fog Lamp: Circuit Short to Battery or Open	Sets when the BCM detects the left front fog lamp control circuit is open or shorted to voltage during an on-demand self-test.
B1148:11	Right Front Fog Lamp: Circuit Short to Ground	Sets when the BCM detects the right front fog lamp supply circuit is grounded during an on-demand self-test.
B1148:15	Right Front Fog Lamp: Circuit Short to Battery or Open	Sets when the BCM detects the right front fog lamp control circuit is open or shorted to voltage during an on-demand self-test.

Possible Sources

- Bulb
- Wiring, terminals or connectors

Visual Inspection and Diagnostic Pre-check

- Inspect the fog lamp bulb and make sure it is OK.

PINPOINT TEST B : AN INDIVIDUAL FRONT FOG LAMP IS INOPERATIVE

B1 CHECK FOR VOLTAGE TO THE INOPERATIVE FOG LAMP

- Ignition OFF.

- Disconnect Inoperative LH Fog Lamp C152 or RH Fog Lamp C162.
- Ignition ON.
- Place the headlamp switch in the HEADLAMPS ON / LOW BEAM position.
- Place the front fog lamp switch in the FOG LAMPS ON position.
- Measure:

LH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C152-A		Ground

RH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C162-A		Ground

Is the voltage greater than 11 volts?

Yes	GO to B2
No	GO to B3

B2 CHECK FOG LAMP GROUND CIRCUIT FOR AN OPEN

- Measure:

LH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C152-A		C152-B

RH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C162-A		C162-B

Is the voltage greater than 11 volts?

Yes	INSTALL a new fog lamp bulb.
No	REPAIR the circuit.

B3 CHECK THE FOG LAMP SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Place the headlamp switch in the HEADLAMPS OFF position.
- Place the front fog lamp switch in the FOG LAMPS OFF position.

- Disconnect: BCM C2280B.
- Measure:

LH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C152-A	Ω	C2280B-12

RH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C162-A	Ω	C2280B-5

Is the resistance less than 3 ohms?

Yes	GO to B4
No	REPAIR the circuit.

B4 CHECK THE FOG LAMP SUPPLY CIRCUIT FOR A SHORT TO GROUND

- Measure:

LH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C152-A	Ω	Ground

RH Fog Lamp

Positive Lead	Measurement / Action	Negative Lead
C162-A	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B5
No	REPAIR the circuit.

B5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.

- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Front Fog Lamps Are On Continuously

Refer to Wiring Diagrams Cell 86-1, for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Overview (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1046:11	Front Fog Lamp Control Switch: Circuit Short to Ground	Sets when the BCM detects the fog lamp switch circuit is grounded during an on-demand self-test.
B1147:15	Left Front Fog Lamp: Circuit Short to Battery or Open	Sets when the BCM detects the left front fog lamp control circuit is open or shorted to voltage during an on-demand self-test.
B1148:15	Right Front Fog Lamp: Circuit Short to Battery or Open	Sets when the BCM detects the right front fog lamp control circuit is open or shorted to voltage during an on-demand self-test.

Possible Sources

- Wiring, terminals or connectors
- Headlamp switch
- BCM

Visual Inspection and Diagnostic Pre-check

- Inspect the headlamp switch for damage.

PINPOINT TEST C : THE FRONT FOG LAMPS ARE ON CONTINUOUSLY

C1 CHECK BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Place the headlamp switch in the HEADLAMPS OFF position.
- Place the front fog lamp switch in the FOG LAMPS OFF position.
- Using a diagnostic scan tool, perform the BCM self-test.

Is DTC B1046:11 present?

Yes	GO to C2
No	GO to C4

C2 CHECK THE BCM (BODY CONTROL MODULE) HEADLAMP SWITCH INPUT

- Ignition OFF.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-20	V	Battery Positive

Is any voltage present?

Yes	GO to C3
No	GO to C5

C3 CHECK THE FOG LAMP SWITCH CIRCUIT FOR A SHORT TO GROUND

- Disconnect Headlamp Switch C205.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-20	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new headlamp switch.
No	REPAIR the circuit.

C4 CHECK THE FOG LAMP VOLTAGE SUPPLY CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280D.
- Disconnect LH Fog Lamp C152 and RH Fog Lamp C162.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280D-12	V	Ground
C2280D-5	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to C5

C5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Both Rear Fog Lamps Are Inoperative

Refer to Wiring Diagrams Cell 86-1, for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Overview (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A79:11	Rear Fog Lamp: Circuit Short to Ground	Sets when the BCM detects the fog lamp supply circuit is grounded during an on-demand self-test.

Possible Sources

- Fuse
- Wiring, terminals or connectors
- Headlamp switch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the fog lamp bulbs and make sure they are OK.
- Inspect the BCM fuse(s).
- Inspect the headlamp switch for damage.

PINPOINT TEST D : BOTH REAR FOG LAMPS ARE INOPERATIVE

D1 CHECK THE BCM (BODY CONTROL MODULE) REAR FOG LAMP SWITCH INPUT

- Ignition OFF.
- Disconnect BCM C2280G.
- Place the rear fog lamp switch in the ON position.
- Measure:

Positive Lead	Measurement / Action	Negative Lead

C2280G-8		Battery Positive

Is the voltage greater than 11 volts?

Yes	VERIFY the BCM fuse(s) are OK. If OK, GO to D3 If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.
No	GO to D2

D2 CHECK THE HEADLAMP SWITCH REAR FOG LAMP ON CIRCUIT FOR AN OPEN

- Disconnect Headlamp Switch C205.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-2	Ω	C2280G-8

Is the resistance less than 3 ohms?

Yes	INSTALL a new headlamp switch.
No	REPAIR the circuit.

D3 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

An Individual Rear Fog Lamp Is Inoperative

Refer to Wiring Diagrams Cell 86-1, for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Overview (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A79:15	Rear Fog Lamp: Circuit Short to Battery or Open	Sets when the BCM detects the fog lamp supply circuit is shorted to Battery or Open during an on-demand self-test.

Possible Sources

- Bulb
- Wiring, terminals or connectors

Visual Inspection and Diagnostic Pre-check

- Inspect the fog lamp bulb and make sure it is OK.

PINPOINT TEST E : AN INDIVIDUAL REAR FOG LAMP IS INOPERATIVE

E1 CHECK FOR VOLTAGE TO THE INOPERATIVE FOG LAMP

- Ignition OFF.
- Disconnect Inoperative LH Rear Lamp Assembly C412 or RH Rear Lamp Assembly C415 (Ranger).
- Disconnect Inoperative LH Rear Fog Lamp C437 or RH Rear Fog Lamp C436 (Everest).
- Ignition ON.
- Place the headlamp switch in the HEADLAMPS ON / LOW BEAM position.
- Place the rear fog lamp switch in the FOG LAMPS ON position.
- Measure:

LH Rear Lamp Assembly (Ranger)

Positive Lead	Measurement / Action	Negative Lead
C412-3		Ground

RH Rear Lamp Assembly (Ranger)

Positive Lead	Measurement / Action	Negative Lead
C415-3		Ground

LH Rear Fog Lamp (Everest)

Positive Lead	Measurement / Action	Negative Lead
C437-1		Ground

RH Rear Fog Lamp (Everest)

Positive Lead	Measurement / Action	Negative Lead
C436-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to E2
No	GO to E3

E2 CHECK FOG LAMP GROUND CIRCUIT FOR AN OPEN

- Measure:

LH Rear Lamp Assembly (Ranger)

Positive Lead	Measurement / Action	Negative Lead
C412-3		C412-6

RH Rear Lamp Assembly (Ranger)

Positive Lead	Measurement / Action	Negative Lead
C415-3		C415-6

LH Rear Fog Lamp (Everest)

Positive Lead	Measurement / Action	Negative Lead
C437-1		C437-2

RH Rear Fog Lamp (Everest)

Positive Lead	Measurement / Action	Negative Lead
C436-1		C436-2

Is the voltage greater than 11 volts?

Yes	INSTALL a new fog lamp bulb.
No	REPAIR the circuit.

E3 CHECK THE FOG LAMP SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Place the headlamp switch in the HEADLAMPS OFF position.
- Place the rear fog lamp switch in the FOG LAMPS OFF position.
- Disconnect: BCM C2280F.
- Measure:

LH Rear Lamp Assembly (Ranger)

Positive Lead	Measurement / Action	Negative Lead
C412-3	Ω	C2280F-25

RH Rear Lamp Assembly (Ranger)

Positive Lead	Measurement / Action	Negative Lead
C415-3	Ω	C2280F-25

LH Rear Fog Lamp (Everest)

Positive Lead	Measurement / Action	Negative Lead
C437-1	Ω	C2280F-25

RH Rear Fog Lamp (Everest)

Positive Lead	Measurement / Action	Negative Lead
C436-1	Ω	C2280F-25

Is the resistance less than 3 ohms?

Yes	GO to E4
No	REPAIR the circuit.

E4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Rear Fog Lamps Are On Continuously

Refer to Wiring Diagrams Cell 86-1, for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Overview (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1047:11	Rear Fog Lamp Control Switch: Circuit Short to Ground	Sets when the BCM detects the fog lamp switch circuit is grounded during an on-demand self-test.

Possible Sources

- Wiring, terminals or connectors
- Headlamp switch
- BCM

Visual Inspection and Diagnostic Pre-check

- Inspect the headlamp switch for damage.

PINPOINT TEST F : THE REAR FOG LAMPS ARE ON CONTINUOUSLY

F1 CHECK BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Place the multifunction switch (headlamp switch) in the HEADLAMPS OFF position.
- Place the multifunction switch (fog lamp switch) in the FOG LAMPS OFF position.
- Using a diagnostic scan tool, perform the BCM self-test.

Is DTC B1047:11 present?

Yes	GO to F2
No	GO to F4

F2 CHECK THE BCM (BODY CONTROL MODULE) REAR FOG LAMP SWITCH INPUT

- Ignition OFF.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-8		Battery Positive

Is any voltage present?

Yes	GO to F3
No	GO to F5

F3 CHECK THE FOG LAMP SWITCH CIRCUIT FOR A SHORT TO GROUND

- Disconnect Headlamp Switch C205.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-8	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new headlamp switch.
No	REPAIR the circuit.

F4 CHECK THE FOG LAMP VOLTAGE SUPPLY CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280F.
- Disconnect Inoperative LH Rear Lamp Assembly C412 and RH Rear Lamp Assembly C415 (Ranger).
- Disconnect Inoperative LH Rear Fog Lamp C437 and RH Rear Fog Lamp C436 (Everest).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280F-25	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to F5

F5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DTC	Description	Action
B143B:11	Autolamp On Input: Circuit Short to Ground	GO to Pinpoint Test C
B143C:11	Headlamp Off Input: Circuit Short to Ground	GO to Pinpoint Test C
B143D:11	Headlamp On Input: Circuit Short to Ground	GO to Pinpoint Test C
B143E:11	Headlamp Switch Input: Circuit Short to Ground	GO to Pinpoint Test C
B1447:11	Parklamp On Switch Input: Circuit Short to Ground	GO to Pinpoint Test C
B1D00:11	Left Low Beam: Circuit Short to Ground	GO to Pinpoint Test A
B1D00:15	Left Low Beam: Circuit Short to Battery or Open	• If the low beam is inoperative, GO to Pinpoint Test A • If the low beam is always on, GO to Pinpoint Test C
B1D01:11	Right Low Beam: Circuit Short to Ground	GO to Pinpoint Test A
B1D01:15	Right Low Beam: Circuit Short to Battery or Open	• If the low beam is inoperative, GO to Pinpoint Test A • If the low beam is always on, GO to Pinpoint Test C
B1D02:11	Left High Beam: Circuit Short to Ground	GO to Pinpoint Test B
B1D02:15	Left High Beam: Circuit Short to Battery or Open	• If the high beam is inoperative, GO to Pinpoint Test B • If the high beam is always on, GO to Pinpoint Test D
B1D03:11	Right High Beam: Circuit Short to Ground	GO to Pinpoint Test B
B1D03:15	Right High Beam: Circuit Short to Battery or Open	• If the high beam is inoperative, GO to Pinpoint Test B • If the high beam is always on, GO to Pinpoint Test D
U1000:00	Solid State Driver Protection Active -Driver Disabled: No	The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected. ADDRESS all other DTCs first. After the cause of the concern is corrected, CLEAR the DTCs. REPEAT the self-test.

	Sub Type Information	
U3000:49	Control Module: Internal Electronic Failure	The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. The cause of the excessive current draw MUST be corrected before a new BCM is installed. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
For other BCM DTCs	-	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .

DTC Chart: SCCM

DTC	Description	Fault Trigger Conditions
B1007:09	High-Beam Headlamp Switch: Component Failure	**NOTE:** *Check vehicle option. The headlamp system may have a LH or RH steering column multifunction switch to control Headlamp and High-Beam/Low-Beam operation.* • INSTALL a new steering column multifunction switch. If the concern still exists, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
B1D36:09	Turn Indicator Switch: Component Failure	**NOTE:** *Check vehicle option. The headlamp system may have a LH or RH steering column multifunction switch to control Headlamp and High-Beam/Low-Beam operation.* • INSTALL a new steering column multifunction switch. If the concern still exists, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
All other SCCM DTCs	-	REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches, Diagnosis and Testing).

Pinpoint Tests

One Or Both Low Beams is Inoperative

Refer to Wiring Diagrams Cell 85 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D00:11	Left Low Beam: Circuit Short To Ground	Sets when the BCM detects a short to ground from the left low beam output circuit.
B1D00:15	Left Low Beam: Circuit Short To Battery Or Open	Sets when the BCM detects an open or short to voltage from the left low beam output circuit.
B1D01:11	Right Low Beam: Circuit Short To Ground	Sets when the BCM detects a short to ground from the right low beam output circuit.
B1D01:15	Right Low Beam: Circuit Short To Battery Or Open	Sets when the BCM detects an open or short to voltage from the right low beam output circuit.

Possible Sources

- Bulb
- Wiring, terminals or connectors
- Headlamp switch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the bulbs and make sure they are OK.
- Inspect the headlamp assembly for damage.

NOTE: *Check vehicle option. The headlamp system may have a LH or RH steering column multifunction switch to control Headlamp and High-Beam Low-Beam operation.*

PINPOINT TEST A : ONE OR BOTH LOW BEAMS IS INOPERATIVE

A1 DETERMINE IF ONE OR BOTH LOW BEAMS ARE INOPERATIVE

- Ignition ON.
- Place the headlamp switch in the HEADLAMPS ON position.

Are both low beams inoperative?

Yes	GO to A6
No	GO to A2

A2 CHECK FOR VOLTAGE TO THE HEADLAMP

- Ignition OFF.
- Place the headlamp switch in the OFF position.
- Disconnect Inoperative LH Headlamp C1021 or RH Headlamp C1285.
- Ignition ON.
- Place the headlamp switch in the HEADLAMPS ON position.
- Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-2	V	Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1285-2	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to A3
No	GO to A4

A3 CHECK THE HEADLAMP GROUND CIRCUIT FOR AN OPEN

- Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-2	V	C1021-1

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1285-2		C1285-1

Is the voltage greater than 11 volts?

Yes	INSTALL a new bulb.
No	REPAIR the circuit.

A4 CHECK THE LOW BEAM SUPPLY CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Place the headlamp switch in the OFF position.
- Disconnect BCM C2280B.
- Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-2	Ω	Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1285-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A5
No	REPAIR the circuit.

A5 CHECK THE LOW BEAM SUPPLY CIRCUIT FOR AN OPEN

- Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-2	Ω	C2280B-4

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1285-2	Ω	C2280B-2

Is the resistance less than 3 ohms?

Yes	GO to A9
No	REPAIR the circuit.

A6 CHECK THE BCM (BODY CONTROL MODULE) HEADLAMP SWITCH INPUT

- Ignition OFF.
- Place the headlamp switch in the OFF position.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-15		Battery Positive

- Place the headlamp switch in the HEADLAMPS ON position.

Is the voltage greater than 11 volts?

Yes	GO to A9
No	GO to A7

A7 CHECK THE HEADLAMP SWITCH HEADLAMPS ON CIRCUIT FOR AN OPEN

- Disconnect Headlamp Switch C205.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-12	Ω	C2280G-15

Is the resistance less than 3 ohms?

Yes	GO to A8
No	REPAIR the circuit.

A8 CHECK THE HEADLAMP SWITCH GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-4	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new headlamp switch.
No	REPAIR the circuit.

No	REPAIR the circuit.

A9 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect the BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

One Or Both High Beams Is Inoperative

Refer to Wiring Diagrams Cell 85 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D02:11	Left High Beam: Circuit Short To Ground	Sets when the BCM detects a short to ground from the left high beam output circuit.
B1D02:15	Left High Beam: Circuit Short To Battery Or Open	Sets when the BCM detects an open or short to voltage from the left high beam output circuit.
B1D03:11	Right High Beam: Circuit Short To Ground	Sets when the BCM detects a short to ground from the right high beam output circuit.
B1D03:15	Right High Beam: Circuit Short To Battery Or Open	Sets when the BCM detects an open or short to voltage from the right high beam output circuit.

Possible Sources

- Fuse
- Bulb
- Wiring, terminals or connectors
- Headlamp switch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the BCM fuse(s).

NOTE: *Check vehicle option. The headlamp system may have a LH or RH steering column multifunction switch to control Headlamp and High-Beam Low-Beam operation.*

PINPOINT TEST B : ONE OR BOTH HIGH BEAMS IS INOPERATIVE

B1 CHECK THE LOW BEAM OPERATION

- Ignition ON.
- Place the headlamp switch in the HEADLAMPS ON position and observe the headlamps.
- Place the steering column multifunction switch in the HIGH BEAMS position and observe the headlamps.
- Place the steering column multifunction switch in the LOW BEAMS position and observe the headlamps.

Do the low beams illuminate?

Yes	If an individual high beam is inoperative, GO to B3 If both high beams are inoperative, GO to B2
No	GO to Pinpoint Test A

B2 CHECK THE MULTIFUNCTION SWITCH INPUT

- Ignition OFF.
- Using a diagnostic scan tool, view SCCM Parameter Identifications (PIDs).
- Monitor the SCCM High Beam Switch (HIGH_BEAM_SW) PID while placing the steering column multifunction switch in the HIGH BEAM and LOW BEAM positions.

Do the PID values agree with the steering column multifunction switch position?

Yes	GO to B8
No	INSTALL a new steering column multifunction switch. If the concern still exists, GO to B7 REFER to: Steering Column Multifunction Switch LH (211-05 Steering Column Switches, Removal and Installation). REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation).

B3 CHECK FOR VOLTAGE FROM THE HEADLAMP HIGH BEAM CIRCUIT

- Ignition OFF.
- Place the headlamp switch in the OFF position.
- Disconnect LH Headlamp C1021 or RH Headlamp C1285.
- Ignition ON.
- Place the headlamp switch in the HEADLAMPS ON position and the steering column multifunction switch in the HIGH BEAM position.
- Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-4		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1285-4		Ground

Is the voltage greater than 11 volts?

Yes	GO to B6
No	GO to B4

B4 CHECK THE HIGH BEAM CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Place the headlamp switch in the OFF position.
- Disconnect BCM C2280B.
- Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-4	Ω	Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1285-4	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B5
No	REPAIR the circuit.

B5 CHECK THE HIGH BEAM SUPPLY CIRCUIT FOR AN OPEN

- Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-4	Ω	C2280B-11

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1285-4	Ω	C2280B-6

Is the resistance less than 3 ohms?

Yes	GO to B8
No	REPAIR the circuit.

B6 CHECK THE HEADLAMP GROUND CIRCUIT FOR AN OPEN

- Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-4		C1021-3

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1285-4		C1285-3

Is the voltage greater than 11 volts?

Yes	INSTALL a new bulb.
No	REPAIR the high beam ground circuit for an open.

B7 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Disconnect and inspect all SCCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the SCCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

B8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins

- pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

One or Both Low Beams Are On Continuously

Refer to Wiring Diagrams Cell 85 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B143B:11	Autolamp On Input: Circuit Short to Ground	Sets when the BCM detects a short to ground on the autolamp on input circuit.
B143C:11	Headlamp Off Input: Circuit Short to Ground	Sets when the BCM detects a short to ground on the headlamp off input circuit.
B143D:11	Headlamp On Input: Circuit Short to Ground	Sets when the BCM detects a short to ground on the headlamp on input circuit.
B143E:11	Headlamp Switch Input: Circuit Short to Ground	Sets when the BCM detects a short to ground on the headlamp switch input circuits.
B1447:11	Parklamp On Switch Input: Circuit Short to Ground	Sets when the BCM detects a short to ground on the parklamps on input circuit.
B1D00:15	Left Low Beam: Circuit Short to Battery or Open	Sets when the BCM detects an open or short to voltage from the left low beam output circuit.
B1D01:15	Right Low Beam: Circuit Short to Battery or Open	Sets when the BCM detects an open or short to voltage from the right low beam output circuit.

Possible Sources

- Wiring, terminals or connectors
- Headlamp switch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the headlamp switch for damage.

NOTE: *Check vehicle option. The headlamp system may have a LH or RH steering column multifunction switch to control Headlamp and High-Beam Low-Beam operation.*

PINPOINT TEST C : ONE OR BOTH LOW BEAMS ARE ON CONTINUOUSLY

C1 DETERMINE IF ONE OR BOTH LOW BEAMS ARE ALWAYS ON

- Ignition ON.
- Place the headlamp switch in the OFF position.
- Observe the operation of the low beam headlamps.

Do both low beams illuminate?

Yes	GO to C2
No	GO to C7

C2 CHECK THE HEADLAMP SWITCH

- Ignition OFF.
- Disconnect Headlamp Switch C205.
- Carry out the headlamp switch component test.
  Refer to Wiring Diagrams Cell 149 for schematic and connector information.

Does the headlamp switch pass the component test?

Yes	GO to C3
No	INSTALL a new headlamp switch.

C3 CHECK THE HEADLAMP SWITCH GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-4	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to C4
No	REPAIR the circuit.

C4 CHECK THE HEADLAMP SWITCH CIRCUITS FOR A SHORT TO VOLTAGE

- Disconnect BCM C2280G.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-10	V	C205-4
C205-11	V	C205-4
C205-12	V	C205-4
C205-13	V	C205-4

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to C5

C5 CHECK THE HEADLAMP SWITCH CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-10	Ω	Ground
C205-11	Ω	Ground
C205-12	Ω	Ground
C205-13	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to C6
No	REPAIR the circuit in question

C6 CHECK THE HEADLAMP SWITCH CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-10	Ω	C2280G-16
C205-11	Ω	C2280G-2
C205-12	Ω	C2280G-15
C205-13	Ω	C2280G-21

Are the resistances less than 3 ohms?

Yes	GO to C8
No	REPAIR the circuit in question

C7 CHECK THE LOW BEAM VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280B.
- Disconnect LH Headlamp C1021 or RH Headlamp C1285.
- Ignition ON.
- Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-2		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1285-2		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to C8

C8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

One or Both High Beams Are On Continuously

Refer to Wiring Diagrams Cell 85 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D02:15	Left High Beam: Circuit Short To Battery Or Open	Sets when the BCM detects an open or short to voltage from the left high beam output circuit.
B1D03:15	Right High Beam: Circuit Short To Battery Or Open	Sets when the BCM detects an open or short to voltage from the right high beam output circuit.

Possible Sources

- Wiring, terminals or connectors
- Headlamp switch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the headlamp switch for damage.

NOTE: *Check vehicle option. The headlamp system may have a LH or RH steering column multifunction switch to control Headlamp and High-Beam Low-Beam operation.*

PINPOINT TEST D : ONE OR BOTH HIGH BEAMS ARE ON CONTINUOUSLY

D1 DETERMINE IF ONE OR BOTH HIGH BEAMS ARE ALWAYS ON

- Ignition ON.
- Place the headlamp switch in the HEADLAMPS ON position.
- Place the steering column multifunction switch in the HIGH BEAMS position and observe the headlamps.
- Place the steering column multifunction switch in the LOW BEAMS position and observe the headlamps.

Do both high beams illuminate continuously?

Yes	GO to D2
No	GO to D3

D2 CHECK THE MULTIFUNCTION SWITCH INPUT

- Using a diagnostic scan tool, view SCCM Parameter Identifications (PIDs).
- Monitor the SCCM High Beam Switch (HIGH_BEAM_SW) PID while placing the steering column multifunction switch in the HIGH BEAM and LOW BEAM positions. Place the headlamp switch in the OFF position.

Do the PID values agree with the steering column multifunction switch position?

Yes	GO to D5
No	INSTALL a new steering column multifunction switch. If the concern still exists, GO to D4 REFER to: Steering Column Multifunction Switch LH (211-05 Steering Column Switches, Removal and Installation). REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation).

D3 CHECK THE HIGH BEAM SUPPLY CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280B.
- Disconnect LH Headlamp C1021 or RH Headlamp C1285.
- Ignition ON.
- Measure:

LH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1021-4		Ground

RH Headlamp

Positive Lead	Measurement / Action	Negative Lead
C1285-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to D5

D4 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Disconnect and inspect all SCCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the SCCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

D5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).

	REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Flash-To-Pass Function Is Inoperative

Refer to Wiring Diagrams Cell 85 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description (417-01 Exterior Lighting, Description and Operation).

Possible Sources

- Wiring, terminals or connectors
- Steering column multifunction switch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the steering column multifunction switch for damage.

NOTE: *Check vehicle option. The headlamp system may have a LH or RH steering column multifunction switch to control Headlamp and High-Beam Low-Beam operation.*

PINPOINT TEST E : THE FLASH-TO-PASS FUNCTION IS INOPERATIVE

E1 CHECK THE HIGH BEAM OPERATION

- Ignition ON.
- Place the headlamp switch in the HEADLAMPS ON position and observe the headlamps.
- Activate and deactivate the high beams using the high beam function of the steering column multifunction switch.

Do the high beams operate correctly?

Yes	GO to E2
No	If one or both high beams are inoperative, GO to Pinpoint Test B If one or both high beams are always on, GO to Pinpoint Test D

E2 CHECK THE MULTIFUNCTION SWITCH INPUT

- Using a diagnostic scan tool, view SCCM Parameter Identifications (PIDs).
- Monitor the SCCM Flash to Pass Switch (FLASH-to-PASS) PID while placing the steering column multifunction switch in the FLASH-TO-PASS position.

Does the PID value agree with the steering column multifunction switch position?

Yes	GO to E4
No	INSTALL a new steering column multifunction switch. If the concern still exists, GO to E3 REFER to: Steering Column Multifunction Switch LH (211-05 Steering Column Switches, Removal and Installation). REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation).

E3 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Disconnect and inspect all SCCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the SCCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

E4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Automatic High Beam Feature Is Inoperative

Refer to Wiring Diagrams Cell 85 for schematic and connector information.

Normal Operation and Fault Conditions

The IPMA controls the automatic high beam feature when active.

The IPMA turns the high beam headlamps on when the following conditions are met:

- The feature has been enabled using the message center
- The headlamp switch is in the AUTOLAMPS position and the autolamps feature has turned the exterior lamps on

- The vehicle speed is greater than 40 km/h
- The IPMA determines the ambient lighting conditions are dark enough
- The IPMA does not detect any light source that can be interpreted as an illuminated vehicle lamp

The IPMA turns the high beams off if any of the following occur:

- The IPMA detects any light source that can be interpreted as an illuminated vehicle lamp
- The IPMA determines the ambient lighting conditions are not dark enough
- The vehicle speed falls below 30 km/h
- The autolamps are turned off
- The IPMA determines the view is blocked

REFER to: Exterior Lighting - System Operation and Component Description (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B11C7:46	High Beam Sensor: Calibration / Parameter Memory Failure	A continuous memory DTC that sets when the IPMA detects a software problem with the calibrations.
B11C7:97	High Beam Sensor: Component or System Operation Obstructed or Blocked	A continuous memory and on-demand DTC that sets when the IPMA detects a blockage in front of the high beam sensor.

Possible Sources

- Windshield debris
- IPMA (part of the interior rear view mirror)

PINPOINT TEST F : THE AUTOMATIC HIGH BEAM FEATURE IS INOPERATIVE

NOTE: *In cold weather conditions (4°C [40°F] or less), the auto high beams are inhibited for 10 minutes to allow the camera windshield defrost heater to clear the windshield in front of the auto high beam camera.*

NOTE: *Check vehicle option. The headlamp system may have a LH or RH steering column multifunction switch to control Headlamp and High-Beam Low-Beam operation.*

F1 VERIFY THE HIGH BEAM HEADLAMP OPERATION

- Place the headlamp switch in the HEADLAMPS ON position.
- Place the steering column multifunction switch in the HIGH BEAM position while observing the headlamps.

Do the high beam headlamps illuminate?

Yes	GO to F2
No	GO to Pinpoint Test B

F2 CHECK FOR IPMA (IMAGE PROCESSING MODULE A) DIAGNOSTIC TROUBLE CODE (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform the IPMA self-test.

Is DTC B11C7:97 present?

Yes	GO to F4
No	If no Diagnostic Trouble Code (DTCs) are present or only DTC B11C7:46 is present, GO to F3 If any IPMA Diagnostic Trouble Code (DTCs) are present, REFER to: Lane Keeping System (419-07 Lane Keeping System, Diagnosis and Testing).

F3 IPMA (IMAGE PROCESSING MODULE A) PMI (PROGRAMMABLE MODULE INSTALLATION)

- Carry out the IPMA PMI.
  REFER to: Programmable Module Installation (PMI) (418-01 Module Configuration) .
- Clear the Diagnostic Trouble Codes (DTCs). Repeat the self-test.

Is the concern still present?

Yes	INSTALL a new interior rear view mirror. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a temporary sensor obstruction.

F4 VERIFY THE AUTOMATIC HIGH BEAM SENSOR IS NOT BLOCKED

- Visually verify the automatic high beam sensor is not blocked. Sources of blockage can include:
  - stickers, window decals or tags.
  - non-OEM window tinting.

Was the automatic high beam sensor blocked?

Yes	If possible, REMOVE the blockage. If the blockage cannot be removed, REVIEW the operation of the automatic high beams with the customer.
No	INSTALL a new interior rear view mirror. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).

The Manual Headlamp Leveling Is Inoperative/Does Not Operate Correctly

Refer to Wiring Diagrams Cell 85 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - System Operation and Component Description (417-01 Exterior Lighting, Description and Operation).

Possible Sources

- Fuse
- Wiring, terminals or connectors
- Headlamp assembly

PINPOINT TEST G : THE MANUAL HEADLAMP LEVELING IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

G1 CHECK HEADLAMP LEVELING OPERATION

- Ignition ON.
- Place the headlamp switch in the ON position.
- While observing both headlamps,
  - Press and release the headlamp leveling switch.
  - Adjust the headlamp leveling setting to 4.
  - Press the headlamp leveling switch until it locks down.

Does either headlamp beam change?

Yes	GO to G3
No	GO to G2

No	GO to G2

G2 CHECK FOR VOLTAGE TO THE HEADLAMP SWITCH

- Ignition OFF.
- Place the headlamp switch in the OFF position.
- Disconnect Headlamp switch C205.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-9		Ground

Is the voltage greater than 11 volts?

Yes	GO to G5
No	Repair the circuit.

G3 CHECK THE INOPERATIVE HEADLAMP LEVELING MOTOR VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect LH Motor C1024.
- Disconnect RH Motor C1044.
- Ignition ON.
- Measure:

LH Motor

Positive Lead	Measurement / Action	Negative Lead
C1024-3		Ground

RH Motor

Positive Lead	Measurement / Action	Negative Lead
C1044-3		Ground

Is the voltage greater than 11 volts?

Yes	GO to G4
No	Repair the circuit.

G4 CHECK THE INOPERATIVE HEADLAMP LEVELING MOTOR GROUND CIRCUIT FOR AN OPEN

- Measure:

LH Motor

Positive Lead	Measurement / Action	Negative Lead
C1024-1	V	C1024-3

RH Motor

Positive Lead	Measurement / Action	Negative Lead
C1044-1	V	C1044-3

Is the voltage greater than 11 volts?

Yes	GO to G5
No	REPAIR the circuit.

G5 CHECK THE HEADLAMP LEVELING CIRCUIT TO THE HEADLAMP LEVELING MOTOR FOR AN OPEN

- Disconnect Headlamp switch C205.
- Disconnect LH Motor C1024 and RH Motor C1044 (both inoperative).
- Disconnect LH Motor C1024 (LH only inoperative).
- Disconnect RH Motor C1044 (RH only inoperative).
- Measure:

Both or LH only inoperative

Positive Lead	Measurement / Action	Negative Lead
C1024-2	Ω	C205-1

RH only inoperative

Positive Lead	Measurement / Action	Negative Lead
C1044-2	Ω	C205-1

Is the resistance less than 3 ohms?

Yes	If the only the LH or RH is inoperative, INSTALL a new headlamp assembly. REFER to: Headlamp Assembly (417-01 Exterior Lighting, Removal and Installation). If both are inoperative, GO to G6
No	REPAIR the circuit.

G6 CHECK THE HEADLAMP LEVELING CIRCUIT TO THE HEADLAMP LEVELING MOTOR FOR A SHORT TO VOLTAGE

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-1		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to G7

G7 CHECK THE HEADLAMP LEVELING CIRCUIT TO THE HEADLAMP LEVELING MOTOR FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new headlamp switch.
No	REPAIR the circuit.

Parking, Rear and License Plate Lamps

DTC Chart: BCM

BCM DTC Chart

DTC	Description	Action
B10F3:11	Left Front Position Light: Circuit Short to Ground	GO to Pinpoint Test A
B10F3:15	Left Front Position Light: Circuit Short to Battery or Open	• If the lamp is inoperative, GO to Pinpoint Test A • If the lamp is always on, GO to Pinpoint Test B
B10F4:11	Right Front Position Light: Circuit Short to Ground	GO to Pinpoint Test A
B10F4:15	Right Front Position Light: Circuit Short to Battery or Open	• If the lamp is inoperative, GO to Pinpoint Test A • If the lamp is always on, GO to Pinpoint Test B
B1445:11	Rear Park Lamps Output: Circuit Short to Ground	GO to Pinpoint Test A
B1445:15	Rear Park Lamps Output: Circuit Short to Battery or Open	• If the lamp is inoperative, GO to Pinpoint Test A • If the lamp is always on, GO to Pinpoint Test B
B1446:11	Front Park Lamps Output: Circuit Short To Ground	GO to Pinpoint Test A
B1446:15	Front Park Lamps Output: Circuit Short To Battery or Open	• If the lamp is inoperative, GO to Pinpoint Test A • If the lamp is always on, GO to Pinpoint Test B
B1447:11	Parklamp On Switch Input: Circuit Short To Ground	REFER to: Headlamps (417-01 Exterior Lighting, Diagnosis and Testing).

Symptom Chart: Parking, Rear, and License Plate Lamps

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals or connectors • Module	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
One or more parking, rear or license plate lamps are inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test A
The parking, rear and/or license plate lamps are on continuously	Refer to the Pinpoint Test	GO to Pinpoint Test B

Pinpoint Tests

One Or More Parking, Rear, Or License Plate Lamps Are Inoperative

Refer to Wiring Diagrams Section 417-01 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10F3:11	Left Front Position Light: Circuit Short to Ground	Sets when the BCM detects a short to ground from the LH front parking lamps output circuit.
B10F3:15	Left Front Position Light: Circuit Short to Battery or Open	Sets when the BCM detects an open or a short to voltage from the LH front parking lamps output circuit.
B10F4:11	Right Front Position Light: Circuit Short to Ground	Sets when the BCM detects a short to ground from the RH front parking lamps output circuit.
B10F4:15	Right Front Position Light: Circuit Short to Battery or Open	Sets when the BCM detects an open or a short to voltage from the RH front parking lamps output circuit.
B1445:11	Rear Park Lamps Output: Circuit Short to Ground	Sets when the BCM detects a short to ground from the rear parking lamps output circuit.
B1445:15	Rear Park Lamps Output: Circuit Short to Battery or Open	Sets when the BCM detects an open or a short to voltage from the rear parking lamps output circuit.
B1446:11	Front Park Lamps Output: Circuit Short To Ground	Sets when the BCM detects a short to ground from the front parking lamp output circuit.
B1446:15	Front Park Lamps Output: Circuit Short To Battery or Open	Sets when the BCM detects an open or a short to voltage from the front parking lamp output circuit.

Possible Sources

- Wiring, terminals or connectors
- Bulb
- Headlamp switch
- BCM

Visual Inspection and Diagnostic Pre-check

- Inspect the bulbs and make sure they are OK.

PINPOINT TEST A : ONE OR MORE PARKING, REAR, OR LICENSE PLATE LAMPS ARE INOPERATIVE

A1 DETERMINE IF ALL THE PARKING LAMPS ARE INOPERATIVE

- Ignition ON.
- Place the headlamp switch in the PARKING LAMPS ON position.

Are all the parking lamps inoperative?

Yes	GO to A2
No	GO to A5

A2 CHECK THE BCM (BODY CONTROL MODULE) HEADLAMP SWITCH INPUT

- Ignition OFF.
- Place the headlamp switch in the OFF position.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead

C2280G-2	V	Battery Positive

- Place the headlamp switch in the PARKING LAMPS ON position.

Is the voltage greater than 11 volts?

Yes	GO to A9
No	GO to A3

A3 CHECK THE HEADLAMP SWITCH PARKING LAMPS ON CIRCUIT FOR AN OPEN

- Disconnect Headlamp Switch C205.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-11	Ω	C2280G-2

Is the resistance less than 3 ohms?

Yes	GO to A4
No	REPAIR the circuit. TEST the system for normal operation.

A4 CHECK THE HEADLAMP SWITCH GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-4	Ω	Ground
C205-5	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new headlamp switch.
No	REPAIR the circuit. TEST the system for normal operation.

A5 CHECK FOR VOLTAGE TO THE PARKING LAMP

- Ignition OFF.
- Place the headlamp switch in the OFF position.
- Disconnect Inoperative Lamp.
- Ignition ON.
- Place the headlamp switch in the PARKING LAMPS ON position.
- For a front parking lamp, measure:

LH Daytime Running Lamp

Positive Lead	Measurement / Action	Negative Lead
C1021-7	V	Ground

RH Daytime Running Lamp

Positive Lead	Measurement / Action	Negative Lead
C1285-7		Ground

LH Front Park Lamp

Positive Lead	Measurement / Action	Negative Lead
C1021-6		Ground

RH Front Park Lamp

Positive Lead	Measurement / Action	Negative Lead
C1285-6		Ground

- For a rear parking lamp, measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-5		Ground

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-5		Ground

- For a license plate lamp, measure:

LH License Plate Lamp

Positive Lead	Measurement / Action	Negative Lead
C452-1		Ground

RH License Plate Lamp

Positive Lead	Measurement / Action	Negative Lead
C462-1		Ground

C462-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to A6
No	GO to A7

A6 CHECK THE PARKING LAMP GROUND CIRCUIT FOR AN OPEN

- For a front parking lamp, measure:

LH Daytime Running Lamps

Positive Lead	Measurement / Action	Negative Lead
C1021-7		C1021-5

RH Daytime Running Lamps

Positive Lead	Measurement / Action	Negative Lead
C1285-7		C1285-5

LH Front Park Lamp

Positive Lead	Measurement / Action	Negative Lead
C1021-6		C1021-5

RH Front Park Lamp

Positive Lead	Measurement / Action	Negative Lead
C1285-6		C1285-5

- For a rear parking lamp, measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-5		C412-6

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead

C415-5		C415-6

- For a license plate lamp, measure:

LH License Plate Lamp

Positive Lead	Measurement / Action	Negative Lead
C452-1		C452-2

RH License Plate Lamp

Positive Lead	Measurement / Action	Negative Lead
C462-1		C462-2

Is the voltage greater than 11 volts?

Yes	INSTALL a new bulb.
No	REPAIR the circuit. TEST the system for normal operation.

A7 CHECK THE PARKING LAMP SUPPLY CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Place the multifunction switch (headlamp switch) in the OFF position.
- Disconnect BCM C2280C (parking lamp and daytime running lamp).
- Disconnect BCM C2280B (license plate lamp).
- For a front parking lamp, measure:

LH Daytime Running Lamp

Positive Lead	Measurement / Action	Negative Lead
C1021-7	Ω	Ground

RH Daytime Running Lamp

Positive Lead	Measurement / Action	Negative Lead
C1285-7	Ω	Ground

LH Front Park Lamp

Positive Lead	Measurement / Action	Negative Lead
C1021-6	Ω	Ground

RH Front Park Lamp

Positive Lead	Measurement / Action	Negative Lead
C1285-6	Ω	Ground

- For a rear parking lamp, measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-5	Ω	Ground

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-5	Ω	Ground

- For a license plate lamp, measure:

LH License Plate Lamp

Positive Lead	Measurement / Action	Negative Lead
C452-1	Ω	Ground

RH License Plate Lamp

Positive Lead	Measurement / Action	Negative Lead
C462-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A8
No	REPAIR the circuit. TEST the system for normal operation.

A8 CHECK THE PARKING LAMP SUPPLY CIRCUIT FOR AN OPEN

- For a front parking lamp, measure:

LH Daytime Running Lamp

Positive Lead	Measurement / Action	Negative Lead
C1021-7	Ω	C2280C-40

RH Daytime Running Lamp

Positive Lead	Measurement / Action	Negative Lead
C1285-7	Ω	C2280C-36

LH Front Park Lamp

Positive Lead	Measurement / Action	Negative Lead
C1021-6	Ω	C2280C-30

RH Front Park Lamp

Positive Lead	Measurement / Action	Negative Lead
C1285-6	Ω	C2280C-37

- For a rear parking lamp, measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-5	Ω	C2280C-30

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-5	Ω	C2280C-37

- For a license plate lamp, measure:

LH License Plate Lamp

Positive Lead	Measurement / Action	Negative Lead
C452-1	Ω	C2280B-3

RH License Plate Lamp

Positive Lead	Measurement / Action	Negative Lead
C462-1	Ω	C2280B-3

Is the resistance less than 3 ohms?

Yes	GO to A9
No	REPAIR the circuit. TEST the system for normal operation.

A9 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

The Parking, Rear And/Or License Plate Lamps Are On Continuously

Refer to Wiring Diagrams Section 417-01 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10F3:15	Left Front Position Light: Circuit Short to Battery or Open	Sets when the BCM detects an open or a short to voltage from the LH front parking lamps output circuit.
B10F4:15	Right Front Position Light: Circuit Short to Battery or Open	Sets when the BCM detects an open or a short to voltage from the RH front parking lamps output circuit.
B1445:15	Rear Park Lamps Output: Circuit Short to Battery or Open	Sets when the BCM detects an open or a short to voltage from the rear parking lamps output circuit.
B1446:15	Front Park Lamps Output: Circuit Short To Battery or Open	Sets when the BCM detects an open or a short to voltage from the front parking lamp output circuit.

Possible Sources

- Wiring, terminals or connectors
- Headlamp switch
- BCM

PINPOINT TEST B : THE PARKING, REAR AND/OR LICENSE PLATE LAMPS ARE ON CONTINUOUSLY

B1 CHECK THE BCM (BODY CONTROL MODULE) PARKING LAMP OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Place the headlamp switch in the OFF position.
- Disconnect BCM C2280C (parking lamp and daytime running lamp).
- Disconnect BCM C2280B (license plate lamp).
- Ignition ON.

Do the parking lamps continue to illuminate?

Yes	REPAIR the affected parking lamp output circuit.
No	GO to B2

B2 CHECK THE BCM (BODY CONTROL MODULE) HEADLAMP SWITCH INPUT

- Ignition OFF.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-2		Battery Positive

Is any voltage present?

Yes	GO to B3
No	GO to B4

B3 CHECK THE HEADLAMP SWITCH PARKING LAMPS ON CIRCUIT FOR A SHORT TO GROUND

- Disconnect Headlamp Switch C205.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-2	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	INSTALL a new headlamp switch.
No	REPAIR the circuit. TEST the system for normal operation.

B4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)

- damaged or bent pins – install new terminals/pins
- pushed-out pins – install new pins as necessary

- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

Reversing Lamps

DTC Chart: Powertrain Control Module (PCM)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

PCM DTC Chart

DTC	Description	Fault Trigger Conditions
P0812:00 (with Manual Transmission)	Reverse Input Circuit: No Sub Type Information	• If the reversing lamps are inoperative, GO to Pinpoint Test A • If the reversing lamps are always on, GO to Pinpoint Test C

Symptom Chart: Reversing Lamps

NOTE: *The BCM is also known as the CJB*

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals or connectors • Module	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
All the reversing lamps are inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test A
An individual reversing lamp is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test B
The reversing lamps are on continuously	Refer to the Pinpoint Test	GO to Pinpoint Test C

Pinpoint Tests

All the Reversing Lamps Are Inoperative

Refer to Wiring Diagrams Section 417-01 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0812:00 (with Manual Transmission)	Reverse Input Circuit: No Sub Type Information	A DTC that sets in the PCM if a failure is detected on the reverse input circuit.

Possible Sources

- Fuse
- Wiring, terminals or connectors
- Reversing lamp switch (manual transmission)
- BCM
- PCM (vehicles with manual transmissions)

Visual Inspection and Diagnostic Pre-check

- Inspect BCM fuse(s).

PINPOINT TEST A : ALL THE REVERSING LAMPS ARE INOPERATIVE

NOTE: *Diagnose any TCM Diagnostic Trouble Codes (DTCs) before continuing this test.*

A1 CHECK THE REVERSING LAMP VOLTAGE CIRCUIT FOR AN OPEN

- Place the gear selector lever in PARK or NEUTRAL.
- Ignition OFF.
- Disconnect LH Rear Lamp Assembly C412 and RH Rear Lamp Assembly C415.
- Disconnect BCM C2280F.
- Measure:

LH Reversing Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-2	Ω	C2280F-11

Is the resistance less than 3 ohms?

Yes	GO to A2
No	REPAIR the circuit. TEST the system for normal operation.

A2 CHECK THE REVERSING LAMP VOLTAGE CIRCUIT FOR A SHORT TO GROUND

- Measure:

LH Reversing Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A3
No	REPAIR the circuit. TEST the system for normal operation.

A3 DETERMINE THE TRANSMISSION TYPE

- Connect LH Rear Lamp Assembly C412 and RH Rear Lamp Assembly C415

- Connect LH Rear Lamp Assembly C412 and RH Rear Lamp Assembly C410.
- Connect BCM C2280F.
- Check the vehicle for a manual transmission.

Is the vehicle equipped with a manual transmission?

Yes	GO to A4
No	GO to A8

A4 CHECK FOR VOLTAGE TO THE REVERSING LAMP SWITCH

- Ignition OFF.
- Disconnect Reversing Lamp Switch C169.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C169-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to A6
No	GO to A5

A5 CHECK THE REVERSING LAMP SWITCH VOLTAGE CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect PCM C175B (2.5L Duratec-HE).
- Disconnect PCM C1232B (2.2L Duratorq-TDCi or 3.2L Duratorq-TDCi).
- Ignition ON.
- Measure:

2.5L Duratec-HE

Positive Lead	Measurement / Action	Negative Lead
C169-1	Ω	C175B-5

2.2L Duratorq-TDCi or 3.2L Duratorq-TDCi

Positive Lead	Measurement / Action	Negative Lead
C169-1	Ω	C1232B-52

Is the resistance less than 3 ohms?

Yes	GO to A9
No	REPAIR the circuit. TEST the system for normal operation.

A6 CHECK THE REVERSING LAMP SWITCH GROUND CIRCUIT

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C169-1		C169-2

Is the voltage greater than 11 volts?

Yes	GO to A7
No	REPAIR the circuit. TEST the system for normal operation.

A7 BYPASS THE REVERSING LAMP SWITCH

- Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C169-1		C169-2

Do the reversing lamps illuminate?

Yes	INSTALL a new reversing lamp switch.
No	GO to A9

A8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A9 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.

- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

An Individual Reversing Lamp Is Inoperative

Refer to Wiring Diagrams Section 417-01 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

Possible Sources

- Bulb
- Wiring, terminals or connectors
- BCM

Visual Inspection and Diagnostic Pre-check

- Verify AJB fuse is OK (mining option).

PINPOINT TEST B : AN INDIVIDUAL REVERSING LAMP IS INOPERATIVE

B1 CHECK FOR VOLTAGE TO THE REVERSING LAMP

- Ignition OFF.
- Apply the parking brake.
- Disconnect Inoperative LH Rear Lamp Assembly C412 or RH Rear Lamp Assembly C415.
- Ignition ON.
- Place the gear selector lever in REVERSE.
- Measure:

LH Reversing Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-2		Ground

RH Reversing Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-2		Ground

Is the voltage greater than 11 volts?

Yes	GO to B3
No	GO to B2

B2 CHECK THE REVERSING LAMP VOLTAGE CIRCUIT FOR AN OPEN

- Place the gear selector lever in PARK or NEUTRAL.
- Ignition OFF.
- Disconnect BCM C2280F.
- Ignition ON.
- Measure:

LH Reversing Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-2	Ω	C2280F-11

RH Reversing Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-2	Ω	C2280F-11

Is the resistance less than 3 ohms?

Yes	GO to B4
No	REPAIR the circuit. TEST the system for normal operation.

B3 CHECK THE REVERSING LAMP GROUND CIRCUIT FOR AN OPEN

- Measure:

LH Reversing Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-2	V	C412-6

RH Reversing Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-2	V	C415-6

Is the voltage greater than 11 volts?

Yes	INSTALL a new bulb.
No	REPAIR the circuit. TEST the system for normal operation.

B4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Reversing Lamps Are On Continuously

Refer to Wiring Diagrams Section 417-01 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0812:00 (with Manual Transmission)	Reverse Input Circuit: No Sub Type Information	A DTC that sets in the PCM if a failure is detected on the reverse input circuit.

Possible Sources

- Wiring, terminals or connectors
- Reversing lamp switch (manual transmission)
- BCM

PINPOINT TEST C : THE REVERSING LAMP IS ON CONTINUOUSLY

NOTE: *Diagnose any TCM Diagnostic Trouble Codes (DTCs) before continuing this test.*

C1 DETERMINE THE TRANSMISSION TYPE

- Check the vehicle for a manual transmission.

Is the vehicle equipped with a manual transmission?

Yes	GO to C2
No	GO to C4

C2 CHECK THE REVERSING LAMP SWITCH

- Ignition OFF.
- Disconnect Reversing Lamp Switch C169.
- Ignition ON.

Are the reversing lamps off?

Yes	INSTALL a new reversing lamp switch.
No	GO to C3

C3 CHECK THE REVERSING LAMP SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect PCM C175B (2.5L Duratec-HE).
- Disconnect PCM C1232B (2.2L Duratorq-TDCi or 3.2L Duratorq-TDCi).
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C169-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to C4
No	REPAIR the circuit. TEST the system for normal operation.

C4 CHECK THE REVERSING LAMP SUPPLY CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280E.
- Disconnect Inoperative LH Rear Lamp Assembly C412 or RH Rear Lamp Assembly C415.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280F-11	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to C5

C5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)

- damaged or bent pins – install new terminals/pins
- pushed-out pins – install new pins as necessary

- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Stoplamps

DTC Chart: Body Control Module (BCM)

NOTE: *The BCM is also known as the CJB*

BCM DTC Chart

DTC	Description	Action
B1115:11	High Mounted Stop Lamp Control: Circuit Short to Ground	GO to Pinpoint Test B
B1115:15	High Mounted Stop Lamp Control: Circuit Short to Battery or Open	• If the lamp is inoperative, GO to Pinpoint Test B • If the lamp is always on, GO to Pinpoint Test C
B1444:11	Left Rear Stop/Position Lamp Output: Circuit Short to Ground	GO to Pinpoint Test B
B1444:15	Left Rear Stop/Position Lamp Output: Circuit Short to Battery or Open	• If the lamp is inoperative, GO to Pinpoint Test B • If the lamp is always on, GO to Pinpoint Test C
B1448:11	Right Rear Stop/Position Lamp Output: Circuit Short to Ground	GO to Pinpoint Test B
B1448:15	Right Rear Stop/Position Lamp Output: Circuit Short to Battery or Open	• If the lamp is inoperative, GO to Pinpoint Test B • If the lamp is always on, GO to Pinpoint Test C
C0040:12	Brake Pedal Switch A: Circuit Short to Battery	GO to Pinpoint Test C

Symptom Chart: Stoplamps

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals or connectors • Module	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
All the stoplamps are inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test A
One or more stoplamps are inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test B
The stoplamps are on continuously	Refer to the Pinpoint Test	GO to Pinpoint Test C

Pinpoint Tests

All The Stoplamps Are Inoperative

Refer to Wiring Diagrams Section 417-01 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

Possible Sources

- Fuse
- Wiring, terminals or connectors
- Brake Pedal Position (BPP) Switch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the bulbs and make sure they are OK.
- Verify BCM fuse(s) is OK.

PINPOINT TEST A : ALL THE STOPLAMPS ARE INOPERATIVE

A1 CHECK THE BRAKE PEDAL POSITION (BPP) SWITCH VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect Brake Pedal Position (BPP) Switch C278.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C278-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to A2
No	VERIFY the CJB fuse(s) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagram manual to identify the possible causes of the circuit short.

A2 BYPASS THE BRAKE PEDAL POSITION (BPP) SWITCH

- Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C278-4		C278-1

- Ignition ON.

Do the stoplamps illuminate?

Yes	REMOVE the fused jumper wire. INSTALL a new Brake Pedal Position (BPP) Switch.
No	LEAVE the fused jumper wire connected. GO to A3

A3 CHECK THE BRAKE PEDAL POSITION (BPP) SWITCH INPUT CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect BCM C2280H.

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-1		Ground

Is the voltage greater than 11 volts?

Yes	REMOVE the fused jumper wire. GO to A4
No	REMOVE the fused jumper wire. REPAIR the circuit

A4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

One Or More Stoplamps Are Inoperative

Refer to Wiring Diagrams Section 417-01 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1115:11	High Mounted Stop Lamp Control: Circuit Short To Ground	Sets when the BCM detects a short to ground from the high mounted stoplamp voltage supply circuit.
B1115:15	High Mounted Stop Lamp Control: Circuit Short To Battery Or Open	Sets when the BCM detects an open or short to voltage from the high mounted stoplamp voltage supply circuit.
B1444:11	Left Rear Stop/Position Lamp Output: Circuit Short to Ground	Sets when the BCM detects a short to ground from the LH rear stoplamp voltage supply circuit.
B1444:15	Left Rear Stop/Position Lamp Output:	Sets when the BCM detects an open or short to voltage from

	Circuit Short to Battery or Open	the LH rear stoplamp voltage supply circuit.
B1448:11	Right Rear Stop/Position Lamp Output: Circuit Short to Ground	Sets when the BCM detects an short to ground from the RH rear stoplamp voltage supply circuit.
B1448:15	Right Rear Stop/Position Lamp Output: Circuit Short to Battery or Open	Sets when the BCM detects an open or short to voltage from the brake pedal switch voltage supply circuit.

Possible Sources

- Wiring, terminals or connectors
- Bulb
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the bulbs and make sure they are OK.

PINPOINT TEST B : ONE OR MORE STOPLAMPS ARE INOPERATIVE

B1 IDENTIFY THE INOPERATIVE STOPLAMP

- Ignition ON.
- Apply the brake pedal and observe the stoplamps.

Are all the stoplamps inoperative?

Yes	GO to Pinpoint Test A
No	For the high mounted stoplamp, GO to B2 For a rear stoplamp, GO to B10

B2 CHECK FOR VOLTAGE TO THE HIGH MOUNTED STOPLAMP

- Ignition OFF.
- Disconnect High Mounted Stoplamp C475 (without sport bar).
- Disconnect High Mounted Stoplamp C904 (with sport bar).
- Ignition ON.
- While applying the brake pedal, measure:

Without Sport Bar

Positive Lead	Measurement / Action	Negative Lead
C475-1		Ground

With Sport Bar

Positive Lead	Measurement / Action	Negative Lead
C904-2		Ground

Is the voltage greater than 11 volts?

Yes	GO to B3
No	GO to B4

B3 CHECK THE HIGH MOUNTED STOPLAMP GROUND CIRCUIT FOR AN OPEN

- While applying the brake pedal, measure:

Without Sport Bar

Positive Lead	Measurement / Action	Negative Lead
C475-1	V	C475-2

With Sport Bar

Positive Lead	Measurement / Action	Negative Lead
C904-2	V	C904-4

Is the voltage greater than 11 volts?

Yes	INSTALL a new bulb.
No	REPAIR the circuit. TEST the system for normal operation.

B4 CHECK THE HIGH MOUNTED STOPLAMP SUPPLY CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect Stop Light Relay in BJB.
- Measure:

Without Sport Bar

Positive Lead	Measurement / Action	Negative Lead
C475-1	Ω	Ground

With Sport Bar

Positive Lead	Measurement / Action	Negative Lead
C904-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B5
No	VERIFY the BJB fuse(s) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagram manual to identify the possible causes of the circuit short.

B5 CHECK THE HIGH MOUNTED STOPLAMP SUPPLY CIRCUIT FOR AN OPEN

- Measure:

Without Sport Bar

Positive Lead	Measurement / Action	Negative Lead
C475-1	Ω	Stop Light Relay, Component Side

With Sport Bar

Positive Lead	Measurement / Action	Negative Lead
C904-2	Ω	Stop Light Relay, Component Side

Is the resistance less than 3 ohms?

Yes	GO to B6
No	REPAIR the circuit. TEST the system for normal operation.

B6 CHECK THE STOP LIGHT RELAY

- Carry out the Relay component test. Refer to Wiring Diagrams Cell 149 for component testing.

Did the Stop Light Relay pass the component test?

Yes	GO to B7
No	INSTALL a new Stop Light Relay. TEST the system for normal operation.

B7 CHECK THE HIGH MOUNTED STOPLAMP SUPPLY CIRCUIT FOR AN OPEN

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
Stop Light Relay, Component Side	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to B8
No	VERIFY the BJB fuse(s) is OK. If OK, REPAIR the circuit. TEST the system for normal operation.

B8 CHECK THE STOP LIGHT RELAY GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead

Stop Light Relay, Component Side, Pin 1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to B9
No	REPAIR the circuit. TEST the system for normal operation.

B9 CHECK THE STOP LIGHT RELAY CONTROL CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect BCM C2280D.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
Stop Light Relay, Component Side, Pin 2	Ω	C2280D-13

Is the resistance less than 3 ohms?

Yes	GO to B14
No	REPAIR the circuit. TEST the system for normal operation.

B10 CHECK FOR VOLTAGE TO THE REAR LAMP ASSEMBLY

- Ignition OFF.
- Disconnect Inoperative LH Rear Lamp C412 or RH Rear Lamp C415.
- Ignition ON.
- While applying the brake pedal, measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-4	V	Ground

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-4	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to B11
No	GO to B12

B11 CHECK THE REAR STOPLAMP GROUND CIRCUIT FOR AN OPEN

- While applying the brake pedal, measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-4	V	C412-6

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-4	V	C415-6

Is the voltage greater than 11 volts?

Yes	INSTALL a new bulb.
No	REPAIR the circuit. TEST the system for normal operation.

B12 CHECK THE REAR STOPLAMP SUPPLY CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect BCM C2280F.
- Measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-4	Ω	Ground

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-4	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B13
No	REPAIR the circuit. TEST the system for normal operation.

B13 CHECK THE REAR STOPLAMP SUPPLY CIRCUIT FOR AN OPEN

- Measure:

LH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-4	Ω	C2280F-12

RH Rear Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-4	Ω	C2280F-12

Is the resistance less than 3 ohms?

Yes	GO to B14
No	REPAIR the circuit. TEST the system for normal operation.

B14 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Stoplamps Are On Continuously

Refer to Wiring Diagrams Section 417-01 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1115:15	High Mounted Stop Lamp Control:	Sets when the BCM detects an open or short to voltage from

	Circuit Short To Battery Or Open	the high mounted stoplamp voltage supply circuit.
B1444:15	Left Rear Stop/Position Lamp Output: Circuit Short to Battery or Open	Sets when the BCM detects an open or short to voltage from the LH rear stoplamp voltage supply circuit.
B1448:15	Right Rear Stop/Position Lamp Output: Circuit Short to Battery or Open	Sets when the BCM detects an open or short to voltage from the RH rear stoplamp voltage supply circuit.
C0040:12	Brake Pedal Switch A: Circuit Short to Battery	Sets when the BCM detects a short to voltage from the RH rear stoplamp voltage supply circuit.

Possible Sources

- Wiring, terminals or connectors
- Brake Pedal Position (BPP) Switch
- BCM

PINPOINT TEST C : THE STOPLAMPS ARE ON CONTINUOUSLY

C1 IDENTIFY THE CONTINUOUSLY ILLUMINATED STOPLAMPS

- Ignition ON.
- Observe the stoplamps.

Are all the stoplamps illuminated?

Yes	GO to C6
No	For the high mounted stoplamp, GO to C2 For a rear stoplamp, GO to C5

C2 CHECK THE HIGH MOUNT STOPLAMP OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Stop Light Relay in BJB.
- Ignition ON.

Is the high mounted stoplamp illuminated?

Yes	REPAIR the affected circuit. TEST the system for normal operation.
No	GO to C3

C3 CHECK THE STOP LIGHT RELAY

- Carry out the Relay component test. Refer to Wiring Diagrams Cell 149 for component testing.

Did the Stop Light Relay pass the component test?

Yes	GO to C4
No	INSTALL a new Stop Light Relay. TEST the system for normal operation.

C4 CHECK THE STOP LIGHT RELAY CONTROL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect BCM C2280D.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280D-13	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to C8
No	REPAIR the circuit. TEST the system for normal operation.

C5 CHECK THE BCM (BODY CONTROL MODULE) STOPLAMP OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280F.
- Ignition ON.

Do the stoplamps continue to illuminate?

Yes	REPAIR the affected circuit. TEST the system for normal operation.
No	GO to C8

C6 CHECK THE BRAKE PEDAL POSITION (BPP) SWITCH

- Ignition OFF.
- Disconnect Brake Pedal Position (BPP) Switch C278.
- Ignition ON.

Do the stoplamps continue to illuminate?

Yes	GO to C7
No	INSTALL a new Brake Pedal Position (BPP) Switch.

C7 CHECK THE BRAKE PEDAL POSITION (BPP) SWITCH INPUT CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280H.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C278-4		Ground

Is any voltage present?

Yes	REPAIR the circuit. TEST the system for normal operation.
No	GO to C8

C8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins

- pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected, CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test.
U3000:49	Control Module: Internal Electronic Failure	The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. The cause of the excessive current draw MUST be corrected before a new BCM is installed. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). B1449:11	Trailer Tow Park/Tail Lamp Output: Circuit Short To Ground	GO to Pinpoint Test C
B1449:12	Trailer Tow Park/Tail Lamp Output: Circuit Short To Battery	GO to Pinpoint Test C
B1D08:11	Left Trailer Direction Indicator: Circuit Short To Ground	GO to Pinpoint Test B
B1D08:12	Left Trailer Direction Indicator: Circuit Short To Battery	GO to Pinpoint Test B
B1D09:11	Right Trailer Direction Indicator: Circuit Short To Ground	GO to Pinpoint Test B

B1D09:12	Right Trailer Direction Indicator: Circuit Short To Battery	GO to Pinpoint Test B
U0146:00	Lost Communication with Gateway A: No Sub Type Information	This DTC sets when data is invalid from the BCM. CLEAR the DTC. REPEAT the self-test. If DTC returns, RETRIEVE and REPAIR all Diagnostic Trouble Codes (DTCs) set in the BCM. REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The TRM cannot enable the output until the cause of the short is corrected. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected, CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test.
U3000:49	Control Module: Internal Electronic Failure	The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the TRM can withstand. The cause of the excessive current draw MUST be corrected before a new TRM is installed. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected, INSTALL a new TRM. REFER to: Trailer Module (TRM) (417-01 Exterior Lighting, Removal and Installation).

Symptom Chart

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals or connectors • Module	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
All the trailer lamps are inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test A
One or more trailer stop/turn lamps are inoperative or always on	Refer to the Pinpoint Test	GO to Pinpoint Test B
The trailer parking lamps are inoperative or always on	Refer to the Pinpoint Test	GO to Pinpoint Test C
The trailer reversing lamps are inoperative or always on	Refer to the Pinpoint Test	GO to Pinpoint Test D
The trailer fog lamps are inoperative or always on	Refer to the Pinpoint Test	GO to Pinpoint Test D
The trailer battery charging is inoperative/does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test E

Pinpoint Tests

All The Trailer Lamps Are Inoperative

Refer to Wiring Diagrams Cell 95 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

Possible Sources

- Wiring, terminals or connectors
- Trailer tow connector
- Trailer concern

Visual Inspection and Diagnostic Pre-checks

- Inspect the trailer tow connector for signs of corrosion or damage. Repair or install a new trailer tow connector as required.

PINPOINT TEST A : ALL THE TRAILER LIGHTS ARE INOPERATIVE

A1 CHECK THE TRAILER TOW GROUND CIRCUIT FOR CONTINUITY TO GROUND

- Ignition OFF.
- Disconnect Trailer from Trailer Tow Connector C439 (13-pin connector) or C473 (7-pin connector).
- Disconnect Negative Battery Cable.
- Measure:

7-Pin Connector

Positive Lead	Measurement / Action	Negative Lead
C473-3	Ω	Ground

13-pin Connector

Positive Lead	Measurement / Action	Negative Lead
C439-3	Ω	Ground
C439-10	Ω	Ground

Is the resistance less than 3 ohms?

Yes	The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility.
No	REPAIR the circuit.

One Or More Trailer Stop/Turn Lamps Are Inoperative Or Always On

Refer to Wiring Diagrams Cell 95 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1102:11	Trailer Stop Lamp: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the TRM detects a short to ground from the trailer stoplamp signal output circuit.
B1102:12	Trailer Stop Lamp: Circuit Short To Battery	A continuous memory and on-demand DTC that sets when the TRM detects a short to voltage from the trailer stoplamp signal output circuit.
B1D08:11	Left Trailer Direction Indicator: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the TRM detects a short to ground from the LH trailer stoplamp/turn signal output circuit.
B1D08:12	Left Trailer Direction Indicator: Circuit Short To Battery	A continuous memory and on-demand DTC that sets when the TRM detects a short to voltage from the LH trailer stoplamp/turn signal output circuit.
B1D09:11	Right Trailer Direction Indicator: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the TRM detects a short to ground from the RH trailer stoplamp/turn signal output circuit.
B1D09:12	Right Trailer Direction Indicator: Circuit Short To Battery	A continuous memory and on-demand DTC that sets when the TRM detects a short to voltage from the RH trailer stoplamp/turn signal output circuit.
B132B:12	Left Stop/Turn Lamp: Circuit Short To Battery	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the LH trailer stoplamp/turn signal output circuit.
B132B:14	Left Stop/Turn Lamp: Circuit Short To Ground or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to ground from the LH trailer stoplamp/turn signal output circuit.
B132C:12	Right Stop/Turn Lamp: Circuit Short To Battery	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the RH trailer stoplamp/turn signal output circuit.
B132C:14	Right Stop/Turn Lamp: Circuit Short To Ground or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to ground from the RH trailer stoplamp/turn signal output circuit.

Possible Sources

- Fuse
- Wiring, terminals or connectors
- Trailer concern
- Trailer tow connector
- TRM

Visual Inspection and Diagnostic Pre-checks

- Verify the BJB fuse is OK.
- Inspect the trailer tow connector for signs of corrosion or damage. Repair or install a new trailer tow connector as required.

PINPOINT TEST B : ONE OR MORE TRAILER STOP/TURN LAMPS ARE INOPERATIVE OR ALWAYS ON

B1 CHECK FOR STOP LAMP CIRCUIT VOLTAGE THROUGH THE TRAILER TOW CONNECTOR

- Ignition OFF.
- Disconnect Trailer from Trailer Tow Connector C439 (13 pin connector) or C473 (7 pin connector).
- Ignition ON.
- If equipped with a 7-pin connector, while applying and releasing the brake pedal, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-6		Ground

- If equipped with a 13-pin connector, while applying and releasing the brake pedal, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-6		Ground

Is the voltage greater than 11 volts when the brake pedal is pressed and 0 volts when the brake pedal is released?

Yes	GO to B2
No	If both stop lamps are inoperative, GO to B3 If only one stop lamp is inoperative, GO to B5 If one/both stop lamp is on all the time, GO to B7

B2 CHECK FOR TURN LAMP CIRCUIT VOLTAGE THROUGH THE TRAILER TOW CONNECTOR

- If equipped with a 7-pin connector, while turning the turn signal switch on and off, measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C473-1		Ground

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C473-4		Ground

- If equipped with a 13-pin connector, while turning the turn signal switch on and off, measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C439-1		Ground

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C439-4		Ground

Does the voltage alternate from 0 to greater than 11 volts?

Yes	The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility.
No	If both turn lamps are inoperative, GO to B3 If only one turn lamp is inoperative, GO to B8 If one/both turn lamp is on all the time, GO to B10

B3 CHECK FOR VOLTAGE TO THE TRM (TRAILER MODULE)

- Ignition OFF.
- Disconnect TRM C4397A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4397A-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to B4
No	VERIFY the BJB fuse is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

B4 CHECK THE TRM (TRAILER MODULE) GROUND CIRCUIT

- Ignition OFF.
- Disconnect TRM C4397B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4397A-1	V	C4397B-1

Is the voltage greater than 11 volts?

Yes	GO to B11
No	REPAIR the circuit.

B5 CHECK TRAILER STOP LAMP CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect TRM C4397C.
- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-6	Ω	C4397C-7

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-6	Ω	C4397C-7

Is the resistance less than 3 ohms?

Yes	GO to B6
No	REPAIR the circuit.

B6 CHECK TRAILER STOP LAMP CIRCUITS FOR A SHORT TO GROUND

- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-6	Ω	Ground

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-6	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B11
No	REPAIR the circuit.

B7 CHECK TRAILER STOP LAMP CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect TRM C4397C.
- Ignition ON.
- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-6	V	Ground

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-6	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to B11

B8 CHECK TRAILER TURN LAMP CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect TRM C4397C.

- If equipped with a 7-pin connector, measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C473-1	Ω	C4397C-1

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C473-4	Ω	C4397C-2

- If equipped with a 13-pin connector, measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C439-1	Ω	C4397C-1

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C439-4	Ω	C4397C-2

Is the resistance less than 3 ohms?

Yes	GO to B9
No	REPAIR the circuit.

B9 CHECK TRAILER TURN LAMP CIRCUITS FOR A SHORT TO GROUND

- If equipped with a 7-pin connector, measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C473-1	Ω	Ground

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C473-4	Ω	Ground

- If equipped with a 13-pin connector, measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C439-1	Ω	Ground

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C439-4	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B11
No	REPAIR the circuit.

B10 CHECK TRAILER TURN LAMP CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect TRM C4397C..
- Ignition ON.
- If equipped with a 7-pin connector, measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C473-1	V	Ground

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C473-4	V	Ground

- If equipped with a 13-pin connector, measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C439-1	V	Ground

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C439-4		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to B11

B11 CHECK FOR CORRECT TRM (TRAILER MODULE) OPERATION

- Disconnect and inspect all TRM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the TRM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new TRM. REFER to: Trailer Module (TRM) (417-01 Exterior Lighting, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Trailer Parking Lamps Are Inoperative Or Always On

Refer to Wiring Diagrams Cell 95 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1449:11	Trailer Tow Park/Tail Lamp Output: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the trailer parking lamps relay enable circuit.
B1449:12	Trailer Tow Park/Tail Lamp Output: Circuit Short To Battery	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the trailer parking lamps relay enable circuit.
B1449:14	Trailer Tow Park/Tail Lamp Output: Circuit Short To Ground or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to ground from the trailer parking lamps relay enable circuit.

Possible Sources

- Fuse(s)
- Wiring, terminals or connectors
- Trailer tow connector
- Trailer concern
- TRM

Visual Inspection and Diagnostic Pre-checks

- Verify the BJB fuse is OK.
- Inspect the trailer tow connector for signs of corrosion or damage. Repair or install a new trailer tow connector as required.

PINPOINT TEST C : THE TRAILER PARKING LAMPS ARE INOPERATIVE OR ALWAYS ON

C1 CHECK FOR VOLTAGE THROUGH THE TRAILER TOW CONNECTOR

- Ignition OFF.
- Disconnect Trailer from Trailer Tow Connector C439 (13-pin connector) or C473 (7-pin connector).
- Ignition ON.
- Place the headlamp switch in the PARKING LAMPS position.
- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-7	V	Ground
C473-5	V	Ground

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-7	V	Ground

- Place the headlamp switch in the OFF position.
- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-7	V	Ground
C473-5	V	Ground

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-7	V	Ground

Is the voltage greater than 11 volts when the headlamp switch in the PARKING LAMPS position and 0 volts when the headlamp switch in the OFF position?

Yes	The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility.
No	If the trailer parking lamp(s) is inoperative, GO to C2 If the trailer parking lamps are always on, GO to C4

C2 CHECK TRAILER PARKING LAMP CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect TRM C4397C.
- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-7	Ω	C4397C-3
C473-5	Ω	C4397C-3

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-7	Ω	C4397C-3

Is the resistance less than 3 ohms?

Yes	GO to C3
No	REPAIR the circuit.

C3 CHECK TRAILER PARKING LAMP CIRCUITS FOR A SHORT TO GROUND

- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-7	Ω	Ground
C473-5	Ω	Ground

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-7	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to C5
No	REPAIR the circuit.

C4 CHECK TRAILER PARKING LAMP CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect TRM C4397C.
- Ignition ON.
- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead

C473-5		Ground

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-7		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to C5

C5 CHECK FOR VOLTAGE TO THE TRM (TRAILER MODULE)

- Ignition OFF.
- Disconnect TRM C4397A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4397A-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to C6
No	VERIFY the BJB fuse is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

C6 CHECK THE TRM (TRAILER MODULE) GROUND CIRCUIT

- Ignition OFF.
- Disconnect TRM C4397B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4397A-1		C4397B-1

Is the voltage greater than 11 volts?

Yes	GO to C7
No	REPAIR the circuit.

C7 CHECK FOR CORRECT TRM (TRAILER MODULE) OPERATION

- Disconnect and inspect all TRM connectors.

- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the TRM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new TRM. REFER to: Trailer Module (TRM) (417-01 Exterior Lighting, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Trailer Reversing Or Rear Fog Lamps Are Inoperative Or Always On

Refer to Wiring Diagrams Cell 95 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1277:11	Reverse Lamp: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the trailer reverse lamp enable circuit.
B1277:12	Reverse Lamp: Circuit Short To Battery	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the trailer reverse lamp enable circuit.
B12EF:11	Trailer Fog Lamp: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the trailer fog lamps circuit.
B12EF:12	Trailer Fog Lamp: Circuit Short To Battery	A continuous memory and on-demand DTC that sets when the BCM detects a short to voltage from the trailer fog lamps circuit.

Possible Sources

- Fuse(s)
- Wiring, terminals or connectors
- Trailer tow connector
- Trailer concern
- TRM

Visual Inspection and Diagnostic Pre-checks

- Verify the BJB fuse is OK.
- Inspect the trailer tow connector for signs of corrosion or damage. Repair or install a new trailer tow connector as required.

PINPOINT TEST D : THE TRAILER REVERSING OR REAR FOG LAMPS ARE INOPERATIVE OR ALWAYS ON

D1 CHECK FOR REVERSING LAMP CIRCUIT VOLTAGE THROUGH THE TRAILER TOW CONNECTOR

- Ignition OFF.
- Disconnect Trailer from Trailer Tow Connector C439 (13-pin connector) or C473 (7-pin connector).
- Ignition ON.
- Place the gear selector lever in REVERSE.
- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-2		Ground

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-2		Ground

- Place the gear selector lever in PARK.
- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-2		Ground

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-2		Ground

Is the voltage greater than 11 volts when the gear selector lever is in REVERSE and 0 volts when the gear selector lever is in PARK?

Yes	GO to D2
No	If the trailer reversing lamps are inoperative, GO to D3 If the trailer reversing lamps are always on, GO to D5

D2 CHECK FOR REAR FOG LAMP CIRCUIT VOLTAGE THROUGH THE TRAILER TOW CONNECTOR

- Place the rear fog lamp switch in the ON position.
- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-2		Ground

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-11		Ground

- Place the rear fog lamp switch in the OFF position.
- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-2		Ground

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-11		Ground

Is the voltage greater than 11 volts when the rear fog lamps are ON and 0 volts when the rear fog lamps are OFF?

Yes	The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility.
No	If the trailer rear fog lamps are inoperative, GO to D6 If the trailer rear fog lamps are always on, GO to D8

D3 CHECK TRAILER REVERSING LAMP CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect TRM C4397C.
- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-2	Ω	C4397C-5

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-2	Ω	C4397C-5

Is the resistance less than 3 ohms?

Yes	GO to D4
No	REPAIR the circuit.

D4 CHECK TRAILER REVERSING LAMP CIRCUITS FOR A SHORT TO GROUND

- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-2	Ω	Ground

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to D9
No	REPAIR the circuit.

D5 CHECK TRAILER REVERSING LAMP CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect TRM C4397C.
- Ignition ON.
- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-2	V	Ground

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-2	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to D9

D6 CHECK TRAILER REAR FOG LAMP CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect TRM C4397C.
- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-2	Ω	C4397C-8

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-11	Ω	C4397C-8

Is the resistance less than 3 ohms?

Yes	GO to D7
No	REPAIR the circuit.

D7 CHECK TRAILER REAR FOG LAMP CIRCUITS FOR A SHORT TO GROUND

- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-2	Ω	Ground

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-11	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to D9
No	REPAIR the circuit.

D8 CHECK TRAILER REAR FOG LAMP CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect TRM C4397C.
- Ignition ON.
- If equipped with a 7-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C473-2	V	Ground

- If equipped with a 13-pin connector, measure:

Positive Lead	Measurement / Action	Negative Lead
C439-11	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to D9

D9 CHECK FOR VOLTAGE TO THE TRM (TRAILER MODULE)

- Ignition OFF.

- Disconnect TRM C4397A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4397A-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to D10
No	VERIFY the BJB fuse is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

D10 CHECK THE TRM (TRAILER MODULE) GROUND CIRCUIT

- Ignition OFF.
- Disconnect TRM C4397B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4397A-1		C4397B-1

Is the voltage greater than 11 volts?

Yes	GO to D11
No	REPAIR the circuit.

D11 CHECK FOR CORRECT TRM (TRAILER MODULE) OPERATION

- Disconnect and inspect all TRM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the TRM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new TRM. REFER to: Trailer Module (TRM) (417-01 Exterior Lighting, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Trailer Battery Charging Is Inoperative/Does Not Operate Correctly

Refer to Wiring Diagrams Cell 95 for schematic and connector information.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10E8:11	Secondary Battery Relay A: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground on the secondary battery relay circuit.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

Possible Sources

- Fuse
- Wiring, terminals or connectors
- Trailer tow connector
- TRM
- Trailer concern

Visual Inspection and Diagnostic Pre-checks

- Verify the BJB fuse is OK.
- Inspect the trailer tow connector for signs of corrosion or damage. Repair or install a new trailer tow connector as required.

PINPOINT TEST E : THE TRAILER BATTERY CHARGING IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

E1 CHECK FOR CHARGING VOLTAGE THROUGH THE TRAILER TOW CONNECTOR

- Ignition OFF.
- Disconnect Trailer from Trailer Tow Connector C439 (13-pin connector).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C439-8	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to E2
No	GO to E3

E2 CHECK FOR BATTERY FEED VOLTAGE THROUGH THE TRAILER TOW CONNECTOR

- Ignition OFF.
- Disconnect Trailer from Trailer Tow Connector C439 (13-pin connector).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C439-8	V	Ground

Is the voltage greater than 11 volts?

Yes	The vehicle is operating correctly. SEND the trailer to an authorized camper/trailer repair facility.
No	VERIFY the BJB fuse is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

E3 CHECK FOR CHARGING VOLTAGE SUPPLY TO THE TRM (TRAILER MODULE)

- Ignition OFF.
- Disconnect: TRM C4397A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4397A-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to E4
No	VERIFY the BJB fuse is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

E4 CHECK THE TRAILER TOW BATTERY CHARGE CIRCUIT FOR AN OPEN

- Disconnect: TRM C4397C.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4397C-6	Ω	C439-8

Is the resistance less than 3 ohms?

Yes	GO to E5
No	REPAIR the circuit.

E5 CHECK THE TRAILER TOW BATTERY CHARGE CIRCUIT FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4397C-6	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to E6
No	REPAIR the circuit.

No	REPAIR the circuit.

E6 CHECK FOR CORRECT TRM (TRAILER MODULE) OPERATION

- Disconnect and inspect all TRM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the TRM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new TRM. REFER to: Trailer Module (TRM) (417-01 Exterior Lighting, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Turn Signal and Hazard Lamps

DTC Chart: BCM

BCM DTC Chart

DTC	Description	Action
B123A:11	Left Front Turn Indicator: Circuit Short To Ground	GO to Pinpoint Test B
B123A:15	Left Front Turn Indicator: Circuit Short To Battery Or Open	GO to Pinpoint Test B
B123B:11	Right Front Turn Indicator: Circuit Short To Ground	GO to Pinpoint Test B
B123B:15	Right Front Turn Indicator: Circuit Short To Battery Or Open	GO to Pinpoint Test B
B1247:11	Left Rear Turn Indicator: Circuit Short To Ground	GO to Pinpoint Test B
B1247:15	Left Rear Turn Indicator: Circuit Short To Battery Or Open	GO to Pinpoint Test B
B1248:11	Right Rear Turn Indicator: Circuit Short To Ground	GO to Pinpoint Test B
B1248:15	Right Rear Turn Indicator: Circuit Short To Battery Or Open	GO to Pinpoint Test B
B1D35:11	Hazard Switch: Circuit Short to Ground	GO to Pinpoint Test C
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected. ADDRESS all other DTCs first. After the cause of the concern is corrected, CLEAR the DTCs. REPEAT the self-test.
U3000:49	Control Module: Internal Electronic Failure	The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. The cause of the excessive current draw MUST be corrected before a new BCM is installed. ADDRESS all other DTCs first. After the cause of the concern is corrected, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
For other BCM DTCs	-	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).

DTC Chart: DDM

DTC Chart: SCCM

SCCM DTC Chart

DTC	Description	Action
B1D36:09	Turn Indicator Switch: Component Failure	INSTALL a new steering column function switch. REFER to: Steering Column Multifunction Switch LH (211-05 Steering Column Switches, Removal and Installation). REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation). TEST the system for normal operation. If the concern still exists, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
For other SCCM DTCs	-	REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches, Diagnosis and Testing).

Symptom Chart: Turn Signal and Hazard Lamps

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals or connectors • Module	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

The turn signal function is inoperative or always on	Refer to the Pinpoint test	GO to Pinpoint Test A
One or more turn signal lamps are inoperative or always on	Refer to the Pinpoint test	GO to Pinpoint Test B
The hazard lamp function is inoperative or always on	Refer to the Pinpoint test	GO to Pinpoint Test C

Pinpoint Tests

The Turn Signal Function Is Inoperative Or Always On

Refer to Wiring Diagrams Section 417-01 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

Possible Sources

- steering column multifunction switch (headlamp switch)
- SCCM
- BCM

PINPOINT TEST A : THE TURN SIGNAL FUNCTION IS INOPERATIVE OR ALWAYS ON

A1 CHECK THE SCCM (STEERING COLUMN CONTROL MODULE) TURN SIGNAL PARAMETER IDENTIFICATIONS (PIDS)

- Ignition ON.
- Using a diagnostic scan tool, view SCCM Parameter Identifications (PIDs).
- Monitor the Turn Signal Left Switch Input Status (TRN_SIG_SW_L) and Turn Signal Right Switch Input Status (TRN_SIG_SW_R) while placing the steering column multifunction switch in the left and right turn positions.

Do the Parameter Identifications (PIDs) match the steering column multifunction switch position?

Yes	GO to A2
No	INSTALL a new steering column multifunction switch (headlamp switch). REFER to: Steering Column Multifunction Switch LH (211-05 Steering Column Switches, Removal and Installation). REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to A3

A2 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).

	REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A3 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Disconnect and inspect all SCCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the SCCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

One Or More Turn Signal Lamps Are Inoperative Or Always On

Refer to Wiring Diagrams Section 417-01 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B123A:11	Left Front Turn Indicator: Circuit Short To Ground	Sets when the BCM detects a short to ground from the LH front turn lamp voltage supply circuit.
B123A:15	Left Front Turn Indicator: Circuit Short To Battery Or Open	Sets when the BCM detects an open or short to voltage from the LH front turn lamp voltage supply circuit.
B123B:11	Right Front Turn Indicator: Circuit Short To Ground	Sets when the BCM detects a short to ground from the RH front turn lamp voltage supply circuit.
B123B:15	Right Front Turn Indicator: Circuit Short To Battery Or Open	Sets when the BCM detects an open or short to voltage from the RH front turn lamp voltage supply circuit.
B1247:11	Left Rear Turn Indicator: Circuit Short To Ground	Sets when the BCM detects a short to ground from the LH rear turn lamp voltage supply circuit.
B1247:15	Left Rear Turn Indicator: Circuit Short To Battery Or Open	Sets when the BCM detects an open or short to voltage from the LH rear turn lamp voltage supply circuit.
B1248:11	Right Rear Turn Indicator: Circuit Short To Ground	Sets when the BCM detects a short to ground from the RH rear turn lamp voltage supply circuit.
B1248:15	Right Rear Turn Indicator: Circuit Short To Battery Or Open	Sets when the BCM detects an open or short to voltage from the RH rear turn lamp voltage supply circuit.

B1D06:11	Left Turn Indicator: Circuit Short To Ground	Sets when the BCM detects a short to ground from the RH turn lamp voltage supply circuit.
B1D07:11	Right Turn Indicator: Circuit Short To Ground	Sets when the BCM detects a short to ground from the RH turn lamp voltage supply circuit.

Possible Sources

- Bulb
- Wiring, terminals or connectors
- Exterior mirror
- BCM

PINPOINT TEST B : ONE OR MORE TURN SIGNAL LAMPS ARE INOPERATIVE OR ALWAYS ON

B1 DETERMINE IF A TURN LAMP IS ALWAYS ON

- Ignition ON.
- Activate the hazard lamp function.
- Observe the front and the rear turn lamps.

Are any turn lamps always on?

Yes	GO to B2
No	Deactivate the hazard lamp function. For a front turn signal or side repeater lamp, GO to B3 For an exterior mirror turn lamp, GO to B5 For a rear turn signal lamp, GO to B9

B2 CHECK THE TURN LAMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280C (front lamps and side repeater lamps).
- Disconnect BCM C2280D (rear lamps and exterior mirror lamps).
- Ignition ON.

Does the turn lamp in question continue to illuminate?

Yes	REPAIR the circuit in question.
No	GO to B13

B3 CHECK FOR VOLTAGE TO THE FRONT TURN LAMP

- Ignition OFF.
- Disconnect Inoperative LH Turn Signal Lamp C156 or RH Turn Signal Lamp C166.
- Disconnect Inoperative LH Side Repeater Lamp C1127 or RH Side Repeater Lamp C1126.
- Ignition ON.
- Activate the hazard flasher lamp function.
- Measure:

LH Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-1		Ground

RH Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead
C166-1		Ground

LH Side Repeater Lamp

Positive Lead	Measurement / Action	Negative Lead
C1127-1		Ground

RH Side Repeater Lamp

Positive Lead	Measurement / Action	Negative Lead
C1126-1		Ground

Does the voltage alternate from 0 to greater than 11 volts?

Yes	GO to B4
No	GO to B7

B4 CHECK THE GROUND CIRCUIT FOR AN OPEN

- Measure:

LH Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead
C156-1		C156-2

RH Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead
C166-1		C166-2

LH Side Repeater Lamp

Positive Lead	Measurement / Action	Negative Lead
C1127-1		C1127-2

RH Side Repeater Lamp

Positive Lead	Measurement / Action	Negative Lead
C1126-1		C1126-2

Does the voltage alternate from 0 to greater than 11 volts?

Yes	INSTALL a new bulb.
No	REPAIR the circuit.

B5 CHECK FOR VOLTAGE TO THE EXTERIOR MIRROR TURN LAMP

- Ignition OFF.
- Disconnect LH Exterior Mirror C520 LHD or C5201 RHD.
- Disconnect RH Exterior Mirror C6262 LHD or C626 RHD.
- Ignition ON.
- Activate the hazard flasher lamp function.
- Measure:

LH Exterior Mirror

Positive Lead	Measurement / Action	Negative Lead
C520-3		Ground
C5201-3		Ground

RH Exterior Mirror

Positive Lead	Measurement / Action	Negative Lead
C6262-3		Ground
C626-3		Ground

Does the voltage alternate from 0 to greater than 11 volts?

Yes	GO to B6
No	GO to B11

B6 CHECK THE EXTERIOR MIRROR GROUND CIRCUIT FOR AN OPEN

- Measure:

LH Exterior Mirror

Positive Lead	Measurement / Action	Negative Lead
C520-3		C520-1
C5201-3		C5201-1

RH Exterior Mirror

Positive Lead	Measurement / Action	Negative Lead
C6262-3	V	C6262-1
C626-3	V	C626-1

Does the voltage alternate from 0 to greater than 11 volts?

Yes	CHECK the exterior mirror harness for open or shorted circuits and damaged or pushed-out pins. If the harness is OK, INSTALL a new bulb. If the harness is not OK, REPAIR the harness. If the harness cannot be repaired, INSTALL a new exterior mirror. REFER to: Exterior Mirror (501-09 Rear View Mirrors) .
No	REPAIR the circuit.

B7 CHECK THE FRONT TURN SIGNAL AND SIDE REPEATER VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Deactivate the hazard flasher lamp function.
- Disconnect BCM C2280C.
- Disconnect LH Turn Signal Lamp C156 and LH Side Repeater Lamp C1127.
- Disconnect RH Turn Signal Lamp C166 and RH Side Repeater Lamp C1126).
- Measure:

LH Turn Signal and Side Repeater

Positive Lead	Measurement / Action	Negative Lead
C2280C-39	Ω	Ground

RH Turn Signal and Side Repeater

Positive Lead	Measurement / Action	Negative Lead
C2280C-38	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B8
No	REPAIR the circuit.

B8 CHECK THE FRONT TURN SIGNAL AND SIDE REPEATER VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Measure:

LH Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead

C156-1	Ω	C2280C-39

RH Turn Signal Lamp

Positive Lead	Measurement / Action	Negative Lead
C166-1	Ω	C2280C-38

LH Side Repeater Lamp

Positive Lead	Measurement / Action	Negative Lead
C1127-1	Ω	C2280C-39

RH Side Repeater Lamp

Positive Lead	Measurement / Action	Negative Lead
C1126-1	Ω	C2280C-38

Is the resistance less than 3 ohms?

Yes	GO to B13
No	REPAIR the circuit.

B9 CHECK FOR VOLTAGE TO THE REAR TURN LAMP

- Ignition OFF.
- Disconnect Inoperative LH Rear Lamp C412 and RH Rear Lamp C415.
- Ignition ON.
- Activate the hazard flasher lamp function.
- Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-1	V	Ground

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-1	V	Ground

Does the voltage alternate from 0 to greater than 11 volts?

Yes	GO to B10
No	GO to B11

B10 CHECK THE REAR LAMP GROUND CIRCUIT FOR AN OPEN

- Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-1		C412-6

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-1		C415-6

Does the voltage alternate from 0 to greater than 11 volts?

Yes	INSTALL a new bulb.
No	REPAIR the circuit.

B11 CHECK THE REAR TURN LAMP AND EXTERIOR MIRROR LAMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Deactivate the hazard flasher lamp function.
- Disconnect BCM C2280D.
- Measure:

LH Turn Lamp and Exterior Mirror Lamp

Positive Lead	Measurement / Action	Negative Lead
C2280D-26	Ω	Ground

RH Turn Lamp and Exterior Mirror Lamp

Positive Lead	Measurement / Action	Negative Lead
C2280D-52	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B12
No	REPAIR the circuit.

B12 CHECK THE REAR TURN LAMP AND EXTERIOR MIRROR LAMP VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Measure:

LH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C412-1	Ω	C2280D-26

RH Turn Lamp

Positive Lead	Measurement / Action	Negative Lead
C415-1	Ω	C2280D-52

LH Exterior Mirror Lamp

Positive Lead	Measurement / Action	Negative Lead
C520-3	Ω	C2280D-26
C5201-3	Ω	C2280D-26

RH Exterior Mirror Lamp

Positive Lead	Measurement / Action	Negative Lead
C6262-3	Ω	C2280D-52
C626-3	Ω	C2280D-52

Is the resistance less than 3 ohms?

Yes	GO to B13
No	REPAIR the circuit.

B13 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Hazard Lamp Function Is Inoperative Or Always On

Refer to Wiring Diagrams Section 417-01 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D35:11	Hazard Switch: Circuit Short to Ground	Sets when the BCM detects a short to ground from the hazard lamp function input circuit during an on-demand self-test.

Possible Sources

- Wiring, terminals or connectors
- Hazard switch
- FCIM
- BCM

PINPOINT TEST C : THE HAZARD LAMP FUNCTION IS INOPERATIVE OR ALWAYS ON

C1 CHECK FOR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform the BCM self-test.

Is DTC B1D35:11 present?

Yes	GO to C2
No	GO to C4

C2 ISOLATE THE HAZARD FLASHER LAMP SWITCH

- Ignition OFF.
- Disconnect FCIM C2402B.
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the BCM self-test.

Is DTC B1D35:11 retrieved again?

Yes	GO to C3
No	INSTALL a new FCIM.

C3 CHECK THE HAZARD FLASHER SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-19	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to C7
No	REPAIR the circuit.

C4 BYPASS THE HAZARD FLASHER SWITCH

- Ignition OFF.
- Disconnect FCIM C2402B.
- Ignition ON.
- Using a scan tool, monitor the BCM Hazard Switch Signal (HAZARD_LP_SW) PID.
- Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C2402B-20		Ground

Does the PID indicate the hazard switch is active?

Yes	REMOVE the fused jumper wire. GO to C6
No	REMOVE the fused jumper wire. GO to C5

C5 CHECK THE HAZARD FLASHER SWITCH INPUT CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402B-20	Ω	C2280G-19

Is the resistance less than 3 ohms?

Yes	GO to C7
No	REPAIR the circuit.

No	REPAIR the circuit.

C6 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Disconnect and inspect the FCIM connector.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the FCIM connector. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

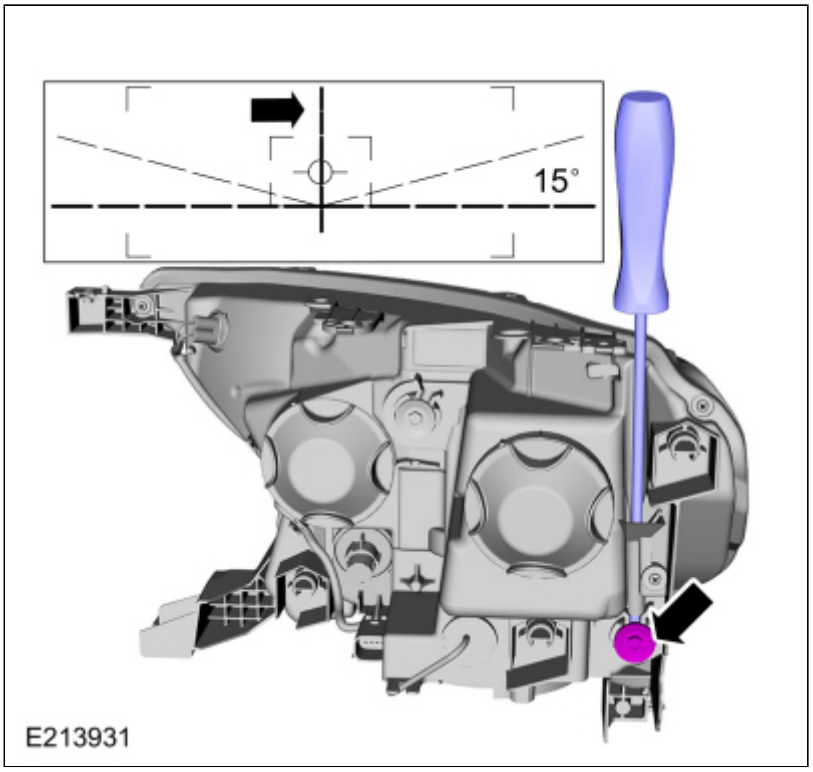
Headlamp Adjustment

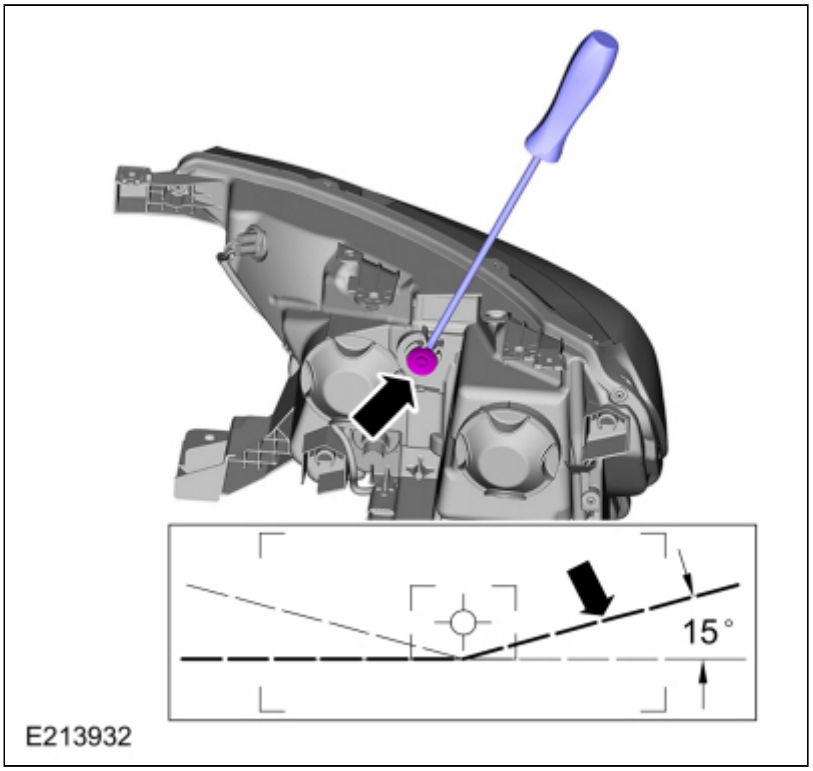
Special Tool(s) / General Equipment

Headlamp Beam Setter



Adjustment

1. Adjust the tire pressure to the specification.
2. Fill the tank with fuel.
3. Position the unloaded vehicle on a flat, level surface.
4. Leave the gear selector lever in neutral position and hand brakes off.
5. Seat one person in the driver's seat.
6. Position the vehicle straight ahead and perpendicular to the white screen.
7. Repeatedly operate the headlamp leveling switch and then set it to "0" (if fitted).
8. Set the measuring screen of the beam setting equipment to the correct headlamp adjustment setting. Use the General Equipment: Headlamp Beam Setter
9. **X:** 3 m [9.8 ft], **Y:** 30mm [1.2 inch] (1.0% of X).

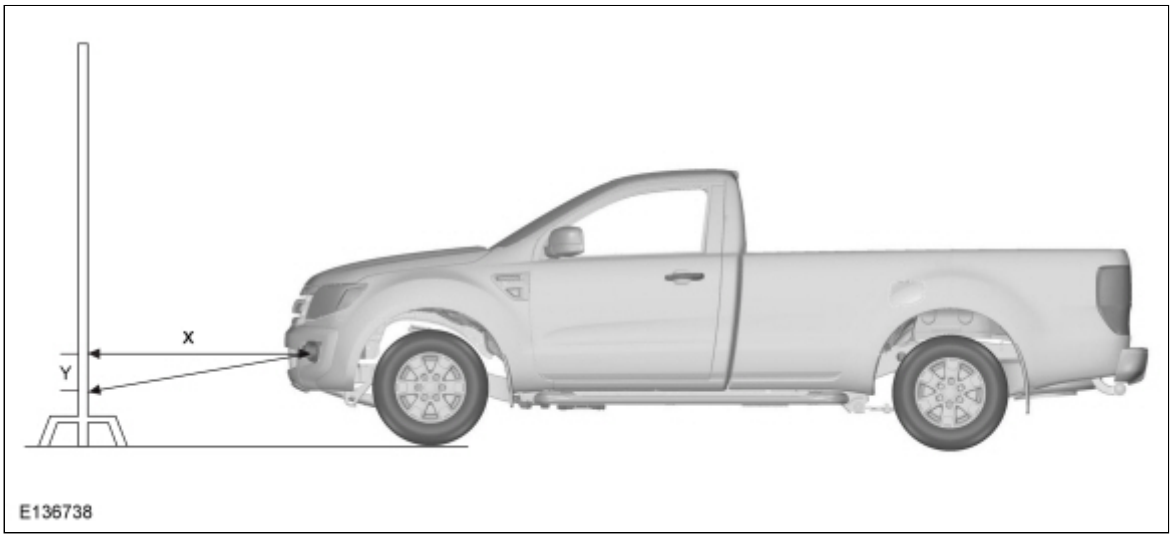


10. Place an object in front of the headlight not being adjusted to block its light beam.
11. Start the engine so that the battery remains charged.
12. Turn on the headlamp.
13. **NOTE:** *LHD shown, reverse for RHD.*

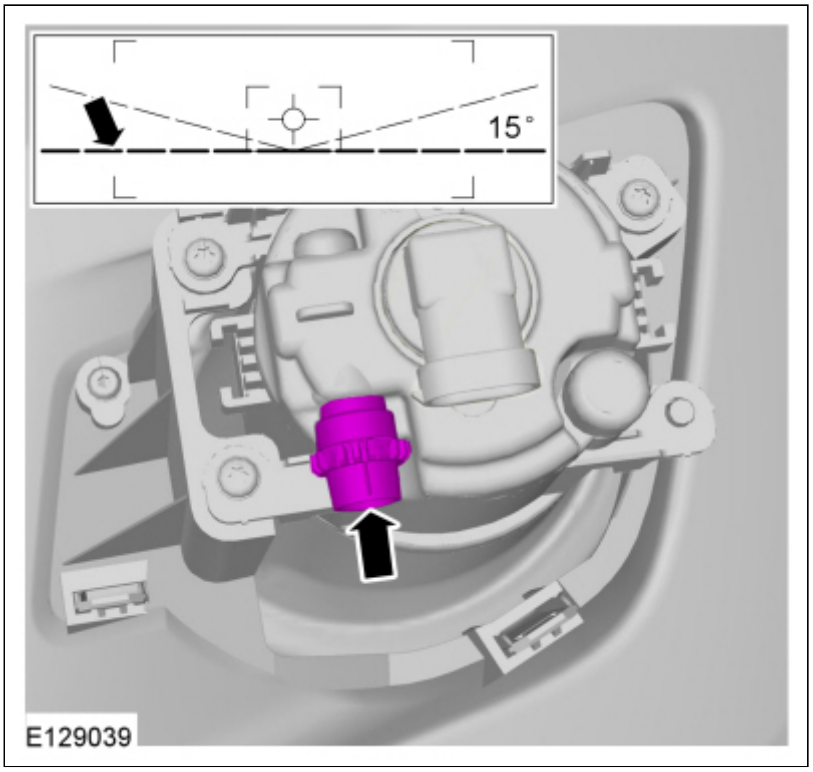
    Adjust the horizontal aim of the headlamp using the adjusting screw shown in the picture.

14. **NOTE:** *LHD shown, reverse for RHD.*

    Adjust the vertical aim of the headlamp using the adjusting screw shown in the figure below.



Copyright © 2016 Ford Motor Company



Front Fog Lamp Adjustment

Adjustment

1. Make an adjustment screen using double-weight, white paper.
2. Fill the tank with fuel.
3. Adjust the tire pressure to the specification.
4. Leave the gear selector lever in neutral position and hand brakes off.
5. Position the unloaded vehicle on a flat, level surface.
6. Seat one person in the driver's seat.
7. **X:** 3 m [9.8 ft], **Y:** 60 mm [2.4 inch] (2.0% of X).

8. Place an object in front of the fog light not being adjusted to block its light beam.
9. Start the engine so that the battery remains charged.
10. Turn the front fog lights on.
11. Adjust the fog lamp so that the cut-off line touches the horizontal line.

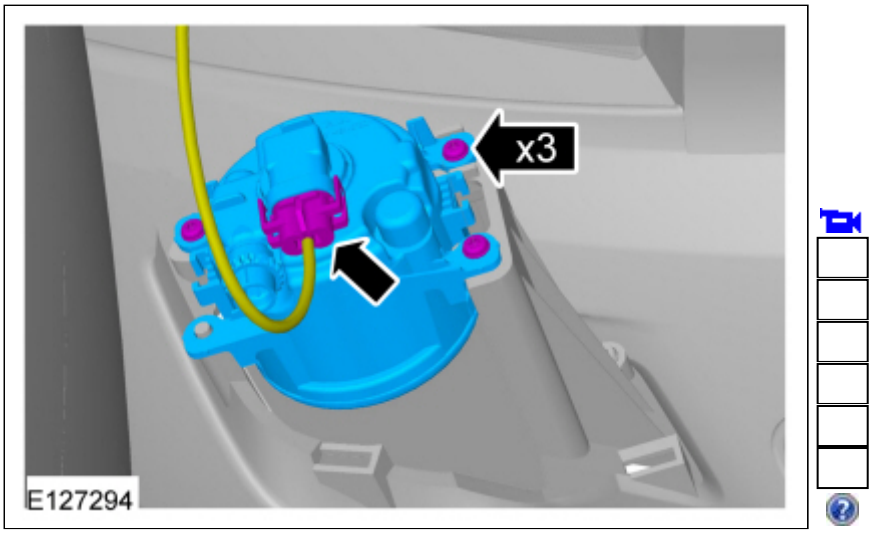
Front Fog Lamp



Removal

NOTE: *Removal steps in this procedure may contain installation details.*

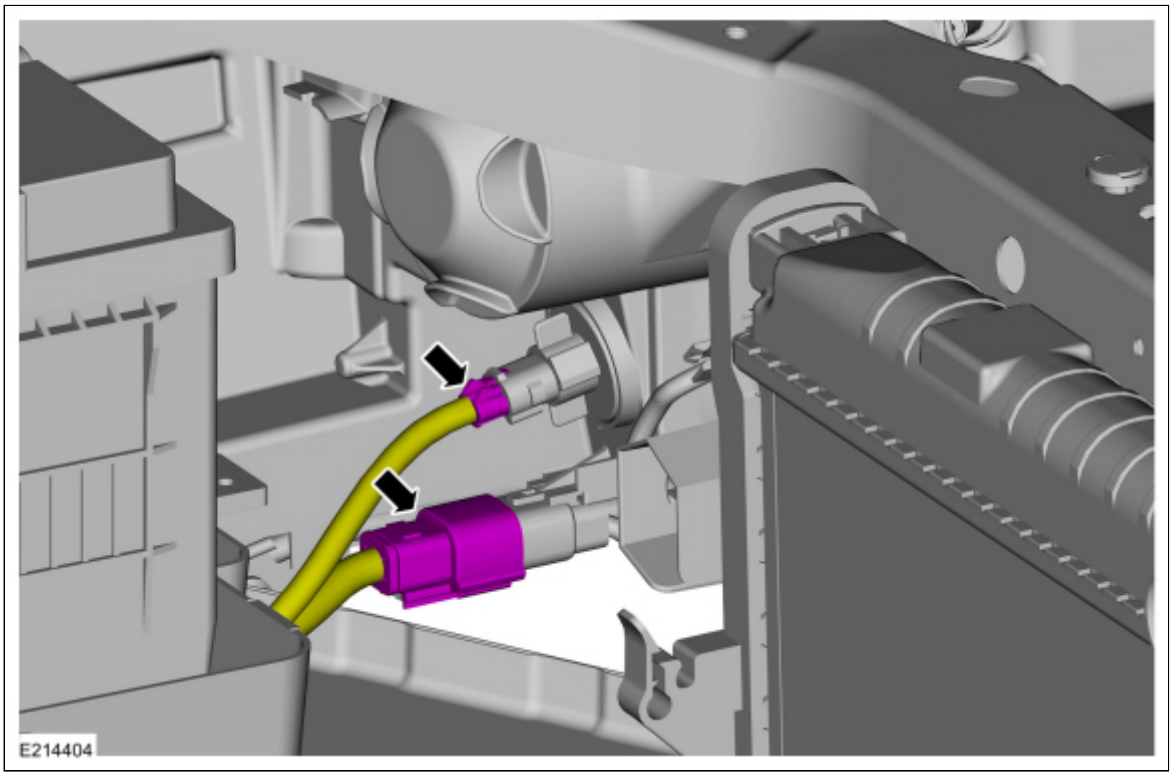
1. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
2. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
3. **NOTE:** *On both sides.*

4. **NOTE:** *On both sides.*

Installation

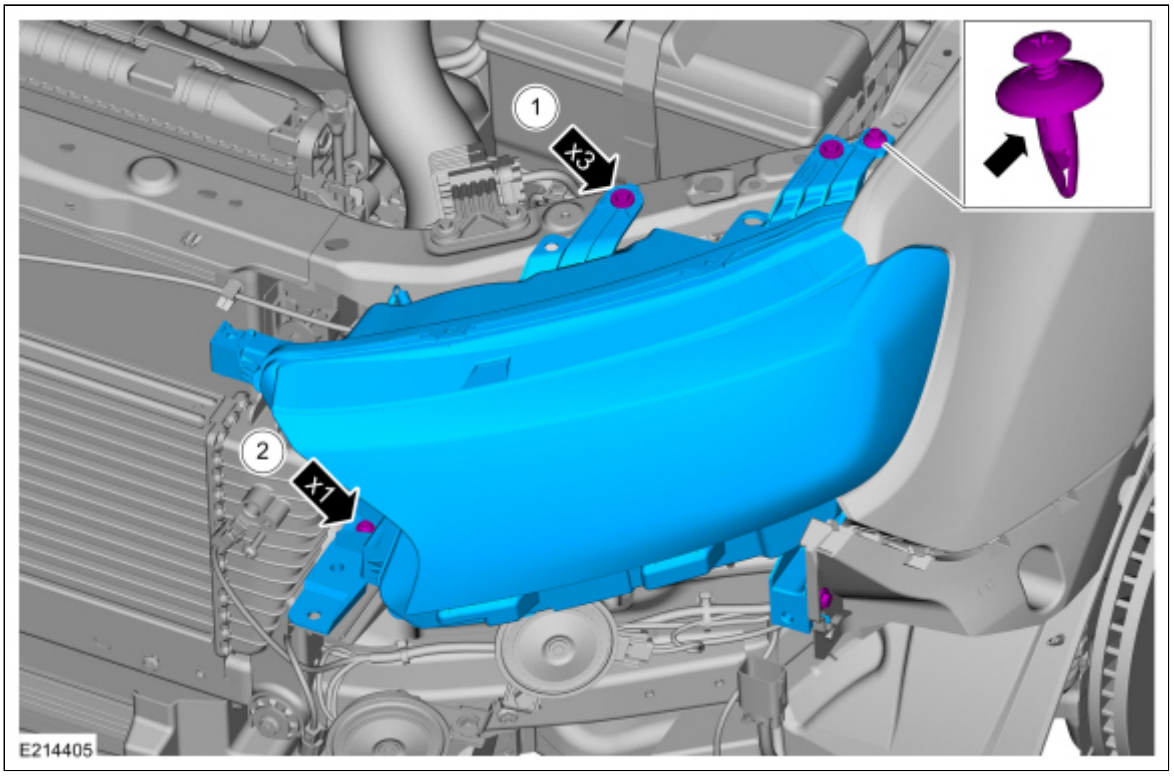
1. To install, reverse the removal procedure.
2. Refer to: Front Fog Lamp Adjustment (417-01 Exterior Lighting, General Procedures).

Copyright © 2016 Ford Motor Company



Headlamp Assembly

Base Part Number: 13005



Removal

NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
2. Refer to: Front Bumper Cover (501-19 Bumpers, Removal and Installation).
3. On both sides.

4. On both sides.
   Torque:
   1.: 5 Nm
   2.: 1 Nm

Installation

1. To install, reverse the removal procedure.
2. Refer to: Headlamp Adjustment (417-01 Exterior Lighting, General Procedures).

Interior Lighting - Overview

Overview

The interior lighting system consists of:

- Courtesy lamps
- Demand lamps
- Ambient lighting

The courtesy lamps subsystem consists of:

- Interior lamps
- Puddle lamps
- Door ajar switches (integrated into the door latches)
- Courtesy lamp switch (integrated into the front interior lamp)
- Cargo lamps
- DDM
- PDM
- BCM

The courtesy lamps provide illumination to the vehicle interior and below the exterior mirrors when entering or exiting the vehicle or when requested using the courtesy lamp switch located on the front interior lamp assembly.

The demand lamps subsystem consists of:

- Interior lamps (map lamps)
- Vanity mirror lamps
- Cargo lamps
- Cargo lamp switch
- BCM

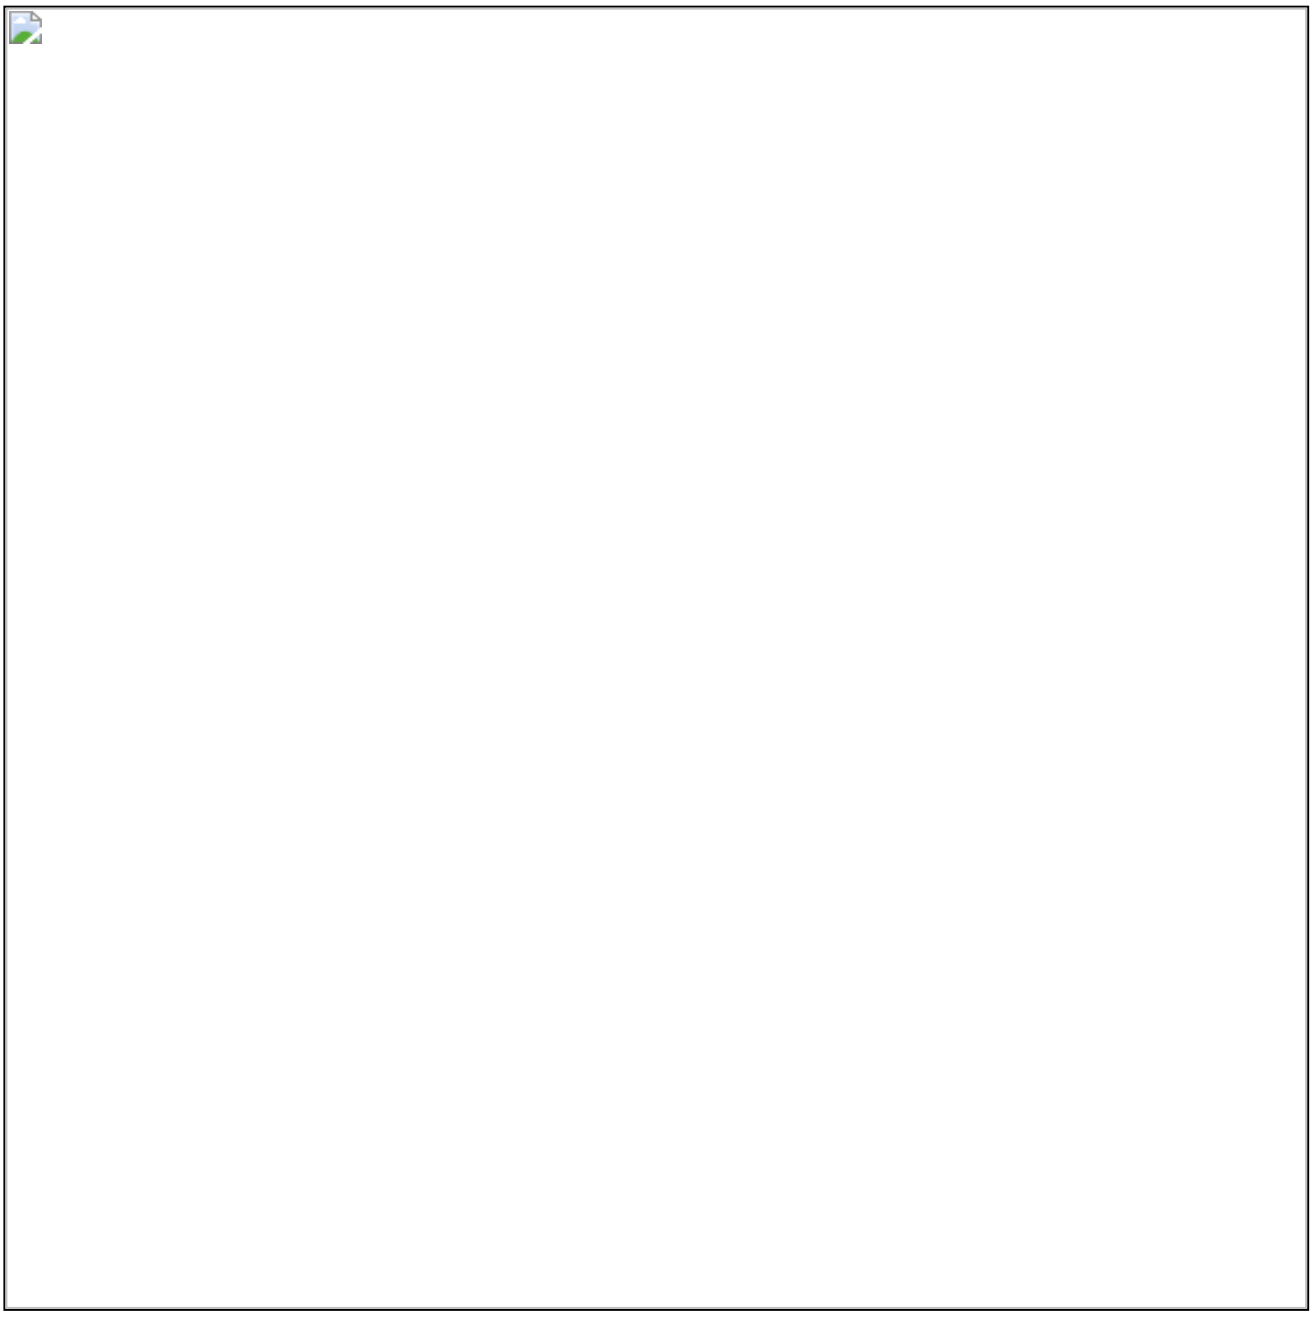
The demand lamps provide illumination to specific areas within the vehicle when needed.

The BCM energizes the demand lamp relay to supply voltage to the demand lamps when the battery saver feature is not active.

The ambient lighting subsystem consists of:

- Ambient lighting Light Emitting Diodes (LEDs)
- FDIM (touchscreen)
- BCM

The ambient lighting is controlled using the FDIM (touchscreen) controls. The ambient lighting provides aesthetically colored illumination to the following locations for illuminated entry or when the ignition is in RUN with the parking lamps on:



- Front door release handles
- Front footwells
- Front door map pockets
- Media hub

Interior Lighting - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

GWM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Ambient light color/intensity request	APIM	Indicates the color and brightness setting selected from the display interface. This commands the ambient color and brightness setting as requested by the operator.

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Ambient light color/intensity request	GWM	Indicates the color and brightness setting selected from the display interface. This commands the ambient color and brightness setting as requested by the operator.

Battery Saver

NOTE: *Time-out is 10 seconds if the vehicle is in factory mode or 1 minute if the vehicle is in transport mode.*

The BCM provides automatic shut-off of the courtesy and demand lamps after a time-out period when the ignition is OFF. A timer in the BCM starts when:

- the ignition transitions to OFF.
- the front or rear interior lamp was switched ON.
- any door becomes ajar.
- any button of a RKE transmitter is pressed.
- a door is unlocked using the passive entry feature.
- a valid code was entered on the keyless entry keypad.

When 10 minutes (30 minutes for demand lamps) have elapsed, the BCM automatically shuts off voltage to the lamps. The timer restarts (voltage is restored if the BCM is in battery saver mode) when:

- the ignition transitions out of OFF.
- the front or rear interior lamp was switched ON.
- any door becomes ajar.
- any button of a RKE transmitter is pressed.
- a door is unlocked using the passive entry feature.

Courtesy Lamps

The BCM controls the courtesy lighting functions and timing by monitoring inputs from the following:

- Ignition state
- Courtesy lamp switch (integrated into the front interior lamp assembly)
- Door ajar switches
- RKE system

The BCM sends a voltage signal to each door ajar switch. When the doors are closed, the circuit is switched to ground and the voltage is pulled low, indicating closed doors.

The BCM monitors the ignition state and inputs from the RKE system to determine when to energize the interior light relay. When the interior light relay is energized, voltage is provided to the interior lamps. The BCM controls the voltage side of the courtesy lamps for the illuminated entry and exit features.

For keyless entry, the BCM monitors input from the RKE transmitter (directly from the integrated keyhead transmitters (IKTs) to determine when to activate/deactivate the illuminated entry and exit functions.

When the puddle lamps are requested, the BCM provides voltage to the left and right puddle lamps.

The interior courtesy lamps can also be activated from the courtesy lamp switch mounted on the front interior lamp. The front interior lamp controls the courtesy lamp function of the rear interior lamps. When the courtesy lamp button is pressed on the front interior lamp, the courtesy lamp function for all the lamps is turned on/off. If any door is open, the BCM command overrides the function of the front courtesy lamp switch and activates the courtesy lamps.

There are three control switches on the front row lamp:

- Global On
- Global Off
- Door Defeat

The global on and off buttons activate or de-activate the courtesy lamps while the doors are closed.

The door defeat button deactivates the courtesy lamps so when the doors are opened the courtesy lamps remain off.

When the door defeat function is activated, the door defeat button illuminates amber in color and when de-activated, the button illuminates blue and the courtesy lamps return to normal operation.

If any door is open and the door defeat function is activated, the global on and off buttons will continue to function and activate or de-activate the courtesy lamps.

Illuminated Entry and Exit

The illuminated entry and exit features provide temporary illumination of the parking lamps, the dimmable backlighting, the ambient backlighting and the courtesy lamps. Refer to the table for additional information.

NOTE: *An arbitrator (software programming) within the BCM determines which actions take precedence over others (for example, an open door keeps the courtesy lamps on even when a command to lock the doors is received).*

Action	Parking Lamps	Courtesy Lamps	Dimmable Backlighting	Ambient Lighting
RKE transmitter or mechanical unlocking of the doors	On for 25 seconds	On for 25 seconds	On for 25 seconds	Off
RKE transmitter or mechanical locking of the doors	Off	Off	Off	Off 3 seconds after courtesy lamps turned off
Open a closed door after previously unlocking (no ignition state change since unlock)	Off (on for remaining time if unlocked from transmitter or mechanical unlocking of the doors)	On	Off	On
Close all doors	Off	On for 25 seconds	On for 25 seconds	On for 25 seconds
Ignition changed to ON	Off	On for 25 seconds	Off	On
Ignition changed out of ON	Off	On for 25 seconds	On for 25 seconds	On for 25 seconds
Open a door after the ignition is changed to OFF	Off	On	Off	On (color is red on the open door)
Ignition is OFF and doors are unlocked from the door lock switch	Off	On for 25 seconds	Off	Off
Ignition is OFF and doors are locked from the door lock switch	Off	Off	Off	Off

Demand Lamps

When the BCM is in not in battery saver mode, the interior light output is energized to provide voltage to the demand lamps.

The cargo lamps illuminate with the courtesy lamps. They can also be illuminated by using the cargo lamp switch.

Ambient Lighting

The ambient lighting subsystem consists of the BCM, and the Light Emitting Diodes (LEDs) located within the front door panels, media hub and front footwell areas. The ambient lighting is operational when the ignition is in any state other than OFF (the exception is when it is used in conjunction with the illuminated entry/exit features), the headlamps are on and the outside ambient light level is low. The BCM provides the voltage to the ambient lighting system, while the touchscreen (FDIM) is used to cycle through the different color variations or turn the ambient lighting feature on or off. A LIN circuit is routed from the BCM to all of the Light Emitting Diodes (LEDs). There are 3 Light Emitting Diodes (LEDs) (red, blue and green) housed within each LED assembly. By illuminating various color combinations, the Light Emitting Diodes (LEDs) are able to produce different colors of ambient light.

The APIM uses software to monitor the user interface from the touchscreen. Based on the ambient lighting system

selections made using the touchscreen, the APIM sends ambient light color request and ambient light intensity request messages over the communication network for color and brightness settings. The BCM retains the last color and brightness setting between uses.

Dark Car Feature

The dark car feature disables activation of courtesy lamps due to a door unlock, door ajar or removing the key from the ignition cylinder. The courtesy lamps may still be activated by the dome lamp switch, post crash alert, and perimeter and panic alarms.

The dark car feature is enabled/disabled through programmable parameters in the BCM.

Component Description

Door Ajar Switch

The door ajar switches (ground switches) each receive a voltage signal from the BCM on independent circuits. When the door is closed, the door ajar switch is closed, routing the signal to ground. When the door is opened, the door ajar switch opens.

Interior Lamp

All of the interior demand lamps receive voltage from the demand lamp relay (integrated into the BCM) when the battery saver feature is not active. This is used by each interior lamp to power the demand LED within it.

All of the interior courtesy lamps receive voltage from the interior lighting output of the BCM. This is used by each interior lamp to power the courtesy LED within it.

For vehicles without an overhead console, the front interior lamp provides ground to the rear lamp to activate/deactivate the rear lamp.

For vehicles with an overhead console, the front interior lamp sends a message to the rear lamps to activate/deactivate them through a LIN circuit.

Interior Lighting

DTC Chart: Body Control Module (BCM)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

BCM DTC Chart

DTC	Description	Action
B1175:01	Driver Door Ajar Switch: General Electrical Failure	• If the courtesy lamps are always on, GO to Pinpoint Test C • If the courtesy lamps are inoperative, GO to Pinpoint Test A
B1176:01	Passenger Door Ajar Switch: General Electrical Failure	• If the courtesy lamps are always on, GO to Pinpoint Test C • If the courtesy lamps are inoperative, GO to Pinpoint Test A
B11C0:01	Driver Side Rear Door Ajar Switch: General Electrical Failure	• If the courtesy lamps are always on, GO to Pinpoint Test C • If the courtesy lamps are inoperative, GO to Pinpoint Test A
B11C1:01	Passenger Side Rear Door Ajar Switch: General Electrical Failure	• If the courtesy lamps are always on, GO to Pinpoint Test C • If the courtesy lamps are inoperative, GO to Pinpoint Test A
B12C2:11	Puddle Lamp: Circuit Short To Ground	GO to Pinpoint Test J
B12C2:15	Puddle Lamp: Circuit Short To Battery or Open	GO to Pinpoint Test J
B1313:11	Interior Lighting Output: Circuit Short To Ground	GO to Pinpoint Test B
B1313:15	Interior Lighting Output: Circuit Short To Battery or Open	• If the interior courtesy lamps are always on, GO to Pinpoint Test D • If the interior courtesy lamps are inoperative, GO to Pinpoint Test B
B145C:11	Ambient Lighting Power Supply Output: Circuit Short To Ground	GO to Pinpoint Test H
B145C:15	Ambient Lighting Power Supply Output: Circuit Short To Battery or Open	GO to Pinpoint Test H
B1465:00	Ambient Lighting Bus 1: No Sub Type	• If all the ambient lighting is inoperative, always on or does not change color/intensity, GO to Pinpoint Test H • If one or more of the ambient lighting Light Emitting Diodes (LEDs) are

	Information	inoperative or do not change color/intensity, GO to Pinpoint Test I
B1466:00	Ambient Lighting Bus 2: No Sub Type Information	• If all the ambient lighting is inoperative, always on or does not change color/intensity, GO to Pinpoint Test H • If one or more of the ambient lighting Light Emitting Diodes (LEDs) are inoperative or do not change color/intensity, GO to Pinpoint Test I
B1467:00	Ambient Lighting Bus 3: No Sub Type Information	• If all the ambient lighting is inoperative, always on or does not change color/intensity, GO to Pinpoint Test H • If one or more of the ambient lighting Light Emitting Diodes (LEDs) are inoperative or do not change color/intensity, GO to Pinpoint Test I
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected, CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test.
U3000:49	Control Module: Internal Electronic Failure	The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. The cause of the excessive current draw MUST be corrected before a new BCM is installed. ADDRESS all other Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
For other BCM Diagnostic Trouble Codes (DTCs)	-	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).

Pinpoint Tests

The Courtesy Lamps Do Not Illuminate With a Door Open

Refer to Wiring Diagrams Cell 117 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - Overview (417-02 Interior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1175:01	Driver Door Ajar Switch: General Electrical Failure	An on-demand DTC that sets when the BCM detects a fault on the LH front door ajar circuit.
B1176:01	Passenger Door Ajar Switch: General Electrical Failure	An on-demand DTC that sets when the BCM detects a fault on the RH front door ajar circuit.
B11C0:01	Driver Side Rear Door Ajar Switch: General Electrical Failure	An on-demand DTC that sets when the BCM detects a fault on the LH rear door ajar circuit.
B11C1:01	Passenger Side Rear Door Ajar Switch: General Electrical Failure	An on-demand DTC that sets when the BCM detects a fault on the RH rear door ajar circuit.

Possible Sources

- Wiring, terminals or connectors
- Door latch
- BCM

PINPOINT TEST A : THE COURTESY LAMPS DO NOT ILLUMINATE WITH A DOOR OPEN

NOTE: *Make sure the dark car feature is not enabled in the BCM. The dark car feature disables activation of courtesy lamps due to a door unlock, door ajar or removing the key from the ignition cylinder. The feature can be disabled using a scan tool.*
A1 CHECK THE OPERATION OF THE COURTESY LAMP FUNCTION FROM THE FRONT/DRIVER INTERIOR LAMP
• Ignition OFF. • Use the courtesy lamp switch on the front interior lamp to activate the overhead courtesy lamps. **Do the overhead courtesy lamps illuminate?**

Yes	GO to A2
No	GO to Pinpoint Test B

A2 CHECK THE DOOR AJAR SWITCH OPERATION

- Deactivate the overhead courtesy lamps from the front interior lamp.
- Disconnect suspect door latch.

Do the courtesy lamps illuminate?

Yes	For a front door, INSTALL a new front door latch. REFER to: Front Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). For a rear door, INSTALL a new rear door latch. REFER to: Rear Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch - Double Cab (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).
No	GO to A3

A3 CHECK THE DOOR AJAR SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND

- Disconnect BCM C2280D.
- Measure:

LH Front Door Ajar Switch - LHD

Positive Lead	Measurement / Action	Negative Lead
C5005-3	Ω	Ground

LH Front Door Ajar Switch - RHD

Positive Lead	Measurement / Action	Negative Lead
C6005-3	Ω	Ground

RH Front Door Ajar Switch - LHD

Positive Lead	Measurement / Action	Negative Lead
C6011-6	Ω	Ground

RH Front Door Ajar Switch - RHD

Positive Lead	Measurement / Action	Negative Lead
C5011-6	Ω	Ground

LH Rear Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C705-3	Ω	Ground

RH Rear Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C805-6	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A4
No	REPAIR the circuit.

A4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

One Or More Interior Courtesy Lamps Are Inoperative

Refer to Wiring Diagrams Cell 89 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - Overview (417-02 Interior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1313:11	Interior Lighting Output: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the interior lighting output circuit.
B1313:15	Interior Lighting Output: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the interior lighting output circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.
U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM.

Possible Sources

- Wiring, terminals or connectors
- Interior lamp
- BCM

PINPOINT TEST B : ONE OR MORE INTERIOR COURTESY LAMPS ARE INOPERATIVE

B1 CHECK THE OPERATION OF ALL THE INTERIOR COURTESY LAMPS

- Open a door and observe the interior courtesy lamps.

Are all the interior lamps inoperative?

Yes	GO to B2
No	If only the overhead console lamp is inoperative, GO to B2 If only the rear interior lamp is inoperative, GO to B7

B2 CHECK FOR VOLTAGE TO THE OVERHEAD CONSOLE LAMP

- Close the door.
- Disconnect Overhead Console C930.
- Ignition ON.
- Open a door.
- Measure:

Overhead Console

Positive Lead	Measurement / Action	Negative Lead
C930-2		Ground

Is the voltage greater than 11 volts?

Yes	GO to B6
No	GO to B3

B3 REPEAT THE ON DEMAND SELF TEST AND CHECK FOR VOLTAGE TO THE OVERHEAD

B3 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE OVERHEAD CONSOLE LAMP

- Using a diagnostic scan tool, perform the BCM self-test.
- Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).
- Measure:

Overhead Console

Positive Lead	Measurement / Action	Negative Lead
C930-2		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new overhead console. REFER to: Overhead Console (501-12 Instrument Panel and Console, Removal and Installation).
No	GO to B4

B4 CHECK THE BCM (BODY CONTROL MODULE) COURTESY LAMP OUTPUT CIRCUIT FOR A SHORT TO GROUND

- Disconnect: BCM C2280F.
- Measure:

Overhead Console

Positive Lead	Measurement / Action	Negative Lead
C930-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B5
No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).

B5 CHECK THE BCM (BODY CONTROL MODULE) COURTESY LAMP OUTPUT CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C930-2	Ω	C2280F-14

Is the resistance less than 3 ohms?

Yes	GO to B9
No	REPAIR the circuit.

B6 CHECK THE OVERHEAD CONSOLE LAMP GROUND CIRCUIT

- Measure:

Overhead Console

Positive Lead	Measurement / Action	Negative Lead
C930-2		C930-1

Is the voltage greater than 11 volts?

Yes	INSTALL a new overhead console. REFER to: Overhead Console (501-12 Instrument Panel and Console, Removal and Installation).
No	REPAIR the circuit.

B7 CHECK FOR VOLTAGE TO THE REAR INTERIOR LAMP

- Close the door.
- Disconnect: Rear Interior Lamp C901A and C901B.
- Ignition ON.
- Open the door.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C901B-2		Ground

Is the voltage greater than 11 volts?

Yes	GO to B8
No	REPAIR the open circuit.

B8 CHECK THE REAR INTERIOR LAMP GROUND CIRCUIT

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C901A-1		C901B-2

Is the voltage greater than 11 volts?

Yes	INSTALL a new rear interior lamp.
No	REPAIR the circuit.

B9 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

All The Courtesy Lamps Stay On Continuously

Refer to Wiring Diagrams Cell 117 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - Overview (417-02 Interior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1175:01	Driver Door Ajar Switch: General Electrical Failure	An on-demand DTC that sets when the BCM detects a fault on the LH front door ajar circuit.
B1176:01	Passenger Door Ajar Switch: General Electrical Failure	An on-demand DTC that sets when the BCM detects a fault on the RH front door ajar circuit.
B11C0:01	Driver Side Rear Door Ajar Switch: General Electrical Failure	An on-demand DTC that sets when the BCM detects a fault on the LH rear door ajar circuit.
B11C1:01	Passenger Side Rear Door Ajar Switch: General Electrical Failure	An on-demand DTC that sets when the BCM detects a fault on the RH rear door ajar circuit.

Possible Sources

- Wiring, terminals or connectors
- Ajar switch
- BCM

PINPOINT TEST C : ALL THE COURTESY LAMPS STAY ON CONTINUOUSLY

C1 CHECK THE DOOR AJAR SWITCH PARAMETER IDENTIFICATIONS (PIDS)

- Ignition ON.
- Using a diagnostic scan tool, view BCM Parameter Identifications (PIDs).
- Monitor the BCM DOOR_SW_DRVR, DOOR_SW_PSGR, DOOR_SW_LR and DOOR_SW_RR Parameter Identifications (PIDs) while opening and closing all the doors.

Do all the door ajar switch PID values agree with the door positions?

Yes	For the interior courtesy lamps, GO to Pinpoint Test D For the puddle lamps, GO to Pinpoint Test G
No	GO to C2

C2 BYPASS THE SUSPECT DOOR LATCH

- Disconnect suspect door latch.
- Connect a fused jumper wire:

LH Front Door Ajar Switch - LHD

Positive Lead	Measurement / Action	Negative Lead
C5005-3		C5005-5

LH Front Door Ajar Switch - RHD

Positive Lead	Measurement / Action	Negative Lead
C6005-3		C6005-5

RH Front Door Ajar Switch - LHD

Positive Lead	Measurement / Action	Negative Lead
C6011-6		C6011-4

RH Front Door Ajar Switch - RHD

Positive Lead	Measurement / Action	Negative Lead
C5011-6		C5011-4

LH Rear Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C705-3		C705-5

RH Rear Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C805-6		C805-4

- Using a diagnostic scan tool, view BCM Parameter Identifications (PIDs).
- Monitor the BCM DOOR_SW_DRVR, DOOR_SW_PSGR, DOOR_SW_LR and DOOR_SW_RR Parameter Identifications (PIDs).

Does the PID indicate the door in question is closed?

Yes	REMOVE the fused jumper wire. For a front door, INSTALL a new front door latch. REFER to: Front Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). For a rear door, INSTALL a new rear door latch. REFER to: Rear Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch - Double Cab (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).
No	REMOVE the fused jumper wire. GO to C3

C3 BYPASS THE DOOR LATCH GROUND CIRCUIT

- Connect a fused jumper wire:

LH Front Door Ajar Switch - LHD

Positive Lead	Measurement / Action	Negative Lead
C5005-3		Ground

LH Front Door Ajar Switch - RHD

Positive Lead	Measurement / Action	Negative Lead
C6005-3		Ground

RH Front Door Ajar Switch - LHD

Positive Lead	Measurement / Action	Negative Lead
C6011-6		Ground

RH Front Door Ajar Switch - RHD

Positive Lead	Measurement / Action	Negative Lead

Positive Lead	Measurement / Action	Negative Lead
C5011-6		Ground

LH Rear Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C705-3		Ground

RH Rear Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C805-6		Ground

- Monitor the BCM DOOR_SW_DRVR, DOOR_SW_PSGR, DOOR_SW_LR and DOOR_SW_RR Parameter Identifications (PIDs).

Does the PID indicate the door in question is closed?

Yes	REMOVE the fused jumper wire. REPAIR the ground circuit for an open.
No	REMOVE the fused jumper wire. GO to C4

C4 CHECK THE SUSPECT DOOR AJAR SWITCH INPUT CIRCUIT FOR AN OPEN

- Disconnect BCM C2280D.
- Measure:

LH Front Door Ajar Switch - LHD

Positive Lead	Measurement / Action	Negative Lead
C5005-3	Ω	C2280D-33

LH Front Door Ajar Switch - RHD

Positive Lead	Measurement / Action	Negative Lead
C6005-3	Ω	C2280D-33

RH Front Door Ajar Switch - LHD

Positive Lead	Measurement / Action	Negative Lead
C6011-6	Ω	C2280D-21

RH Front Door Ajar Switch - RHD

Positive Lead	Measurement / Action	Negative Lead
C5011-6	Ω	C2280D-21

LH Rear Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C705-3	Ω	C2280D-46

RH Rear Door Ajar Switch

Positive Lead	Measurement / Action	Negative Lead
C805-6	Ω	C2280D-19

Is the resistance less than 3 ohms?

Yes	GO to C5
No	REPAIR the door ajar input circuit in question.

C5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

The Interior Courtesy Lamps Stay On Continuously

Refer to Wiring Diagrams Cell 89 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - Overview (417-02 Interior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1313:15	Interior Lighting Output: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the interior lighting output circuit.

Possible Sources

- Wiring, terminals or connectors
- Interior lamp
- BCM

PINPOINT TEST D : THE INTERIOR COURTESY LAMPS STAY ON CONTINUOUSLY

D1 CHECK THE OPERATION OF ALL THE INTERIOR COURTESY LAMPS

- Close all doors and observe the courtesy lamps.

Are the interior courtesy lamp(s) always on?

Yes	GO to D2
No	The system is operating correctly at this time.

D2 ISOLATE THE BCM (BODY CONTROL MODULE)

- Ignition OFF.
- Disconnect: BCM C2280F.
- Ignition ON.

Do the interior courtesy lamps continue to illuminate?

Yes	GO to D3
No	GO to D4

D3 CHECK THE BCM (BODY CONTROL MODULE) COURTESY LAMP OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect For vehicles with overhead console, Overhead Console C930.
- Disconnect For vehicles without overhead console, Rear Interior Lamps C901A and C901B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280F-13		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	For vehicles without an overhead console, INSTALL a new rear interior lamp. For vehicles with an overhead console, INSTALL a new overhead console. REFER to: Overhead Console (501-12 Instrument Panel and Console, Removal and Installation).

D4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

One Or More Demand Lamps Are Inoperative

Refer to Wiring Diagrams Cell 89 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - Overview (417-02 Interior Lighting, Description and Operation).

Possible Sources

- Wiring, terminals or connectors
- Demand lamp
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the interior lamps for damage.

PINPOINT TEST E : ONE OR MORE DEMAND LAMPS ARE INOPERATIVE

E1 CHECK THE DEMAND LAMP OPERATION

- Ignition ON.
- Check the operation of the LH vanity mirror, RH vanity mirror and overhead lamps.

Do any of the LH vanity mirror, RH vanity mirror, rear interior lamp or overhead map lamps illuminate?

Yes	If a vanity mirror lamp is inoperative, GO to E3 If an overhead map lamp is inoperative, GO to E5

No	VERIFY BCM fuse(s) is OK. If OK, GO to E2 If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

E2 CHECK THE DEMAND LAMP VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect BCM C2280F.
- Disconnect LH Vanity Mirror Lamp C907.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C907-1	Ω	C2280F-14

Is the resistance less than 3 ohms?

Yes	GO to E7
No	REPAIR the circuit.

E3 CHECK THE VANITY MIRROR VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect Inoperative LH Vanity Mirror Lamp C907 or RH Vanity Mirror Lamp C906.
- Ignition ON.
- Measure:

LH Vanity Mirror Lamp

Positive Lead	Measurement / Action	Negative Lead
C907-1	V	Ground

RH Vanity Mirror Lamp

Positive Lead	Measurement / Action	Negative Lead
C906-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to E4
No	REPAIR the circuit.

E4 CHECK THE VANITY MIRROR GROUND CIRCUIT FOR AN OPEN

- Measure:

LH Vanity Mirror Lamp

Positive Lead	Measurement / Action	Negative Lead

C907-1		C907-2

RH Vanity Mirror Lamp

Positive Lead	Measurement / Action	Negative Lead
C906-1		C906-2

Is the voltage greater than 11 volts?

Yes	INSTALL a new sun visor for the lamp in question.
No	REPAIR the circuit.

E5 CHECK THE OVERHEAD INTERIOR LAMP VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect Overhead Console C930.
- Ignition ON.
- Measure:

Overhead Console

Positive Lead	Measurement / Action	Negative Lead
C930-2		Ground

Is the voltage greater than 11 volts?

Yes	GO to E6
No	REPAIR the circuit.

E6 CHECK THE OVERHEAD INTERIOR LAMP GROUND CIRCUIT FOR AN OPEN

- Measure:

Overhead Console

Positive Lead	Measurement / Action	Negative Lead
C930-2		C930-1

Is the voltage greater than 11 volts?

Yes	INSTALL a new overhead console. REFER to: Overhead Console (501-12 Instrument Panel and Console, Removal and Installation).
No	REPAIR the circuit.

E7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

The Battery Saver Does Not Deactivate After Time-out

Refer to Wiring Diagrams Cell 89 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - Overview (417-02 Interior Lighting, Description and Operation).

Possible Sources

- Wiring, terminals or connectors
- BCM

PINPOINT TEST F : THE BATTERY SAVER DOES NOT DEACTIVATE AFTER TIME-OUT

F1 CHECK THE DEMAND LAMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: BCM C2280F.
- Turn any demand (map or vanity mirror) lamp on.

Does the demand lamp turn on?

Yes	REPAIR the circuit.
No	GO to F2

F2 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

A Puddle Lamp Is Inoperative Or Always On

Refer to Wiring Diagrams Cell 89 for schematic and connector information.

Refer to Wiring Diagrams Cell 124 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - Overview (417-02 Interior Lighting, Description and Operation).

Possible Sources

- Wiring, terminals or connectors
- Puddle lamp
- Exterior mirror

Visual Inspection and Diagnostic Pre-checks

- Inspect the exterior mirror for damage.

PINPOINT TEST G : A PUDDLE LAMP IS INOPERATIVE OR ALWAYS ON

G1 CHECK THE OPERATION OF THE INTERIOR COURTESY LAMPS

- Ignition ON.
- Ignition OFF.
- Open and close a door.
- Observe the interior courtesy lamp operation for 30 seconds.

Do the interior courtesy lamps operate correctly?

Yes	If a puddle lamp is always on, GO to G2 If a puddle lamp is inoperative, GO to G3
No	REFER to the Interior Lamps Symptom Chart in this section and diagnose the interior courtesy lamps.

G2 CHECK THE PUDDLE LAMP POWER SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

- Disconnect BCM C2280F.
- Ignition ON.

Do the puddle lamps continue to illuminate?

Yes	REPAIR the circuit.
No	GO to G8

G3 CHECK THE MIRROR OPERATION

- Ignition ON.
- Using the exterior mirror control switch, operate the exterior power mirrors.

Do the exterior power mirrors operate?

Yes	GO to G4
No	REFER to: Exterior Rear View Mirrors (501-09A Exterior Rear View Mirrors, Diagnosis and Testing).

G4 CHECK FOR VOLTAGE TO THE PUDDLE LAMP

- Ignition OFF.
- Disconnect Inoperative LH Exterior Mirror C520 or RH Exterior Mirror C6262 (LHD).
- Disconnect Inoperative LH Exterior Mirror C626 or RH Exterior Mirror C5201 (RHD).
- Ignition ON.
- Open any door.
- Measure:

LH Exterior Mirror (LHD)

Positive Lead	Measurement / Action	Negative Lead
C520-2		Ground

LH Exterior Mirror (RHD)

Positive Lead	Measurement / Action	Negative Lead
C626-2		Ground

RH Exterior Mirror (LHD)

Positive Lead	Measurement / Action	Negative Lead
C6262-2		Ground

RH Exterior Mirror (RHD)

Positive Lead	Measurement / Action	Negative Lead
C5201-2		Ground

Is the voltage greater than 11 volts?

Yes	GO to G7
No	GO to G5

G5 CHECK THE PUDDLE LAMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect BCM C2280F.
- Measure:

LH Exterior Mirror (LHD)

Positive Lead	Measurement / Action	Negative Lead
C520-2	Ω	Ground

LH Exterior Mirror (RHD)

Positive Lead	Measurement / Action	Negative Lead
C626-2	Ω	Ground

RH Exterior Mirror (LHD)

Positive Lead	Measurement / Action	Negative Lead
C6262-2	Ω	Ground

RH Exterior Mirror (RHD)

Positive Lead	Measurement / Action	Negative Lead
C5201-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to G6
No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).

G6 CHECK THE PUDDLE LAMP VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Measure:

LH Exterior Mirror (LHD)

Positive Lead	Measurement / Action	Negative Lead
C520-2	Ω	C2280F-26

LH Exterior Mirror (RHD)

Positive Lead	Measurement / Action	Negative Lead
C626-2	Ω	C2280F-26

RH Exterior Mirror (LHD)

Positive Lead	Measurement / Action	Negative Lead
C6262-2	Ω	C2280F-26

RH Exterior Mirror (RHD)

Positive Lead	Measurement / Action	Negative Lead
C5201-2	Ω	C2280F-26

Is the resistance less than 3 ohms?

Yes	GO to G8
No	REPAIR the circuit.

G7 CHECK THE EXTERIOR MIRROR GROUND CIRCUIT FOR AN OPEN

- Measure:

LH Exterior Mirror (LHD)

Positive Lead	Measurement / Action	Negative Lead
C520-2	+ V −	C520-10

LH Exterior Mirror (RHD)

Positive Lead	Measurement / Action	Negative Lead
C626-2	+ V −	C626-10

RH Exterior Mirror (LHD)

Positive Lead	Measurement / Action	Negative Lead
C6262-2		C6262-10

RH Exterior Mirror (RHD)

Positive Lead	Measurement / Action	Negative Lead
C5201-2		C5201-10

Is the voltage greater than 11 volts?

Yes	CHECK the exterior mirror jumper harness between the vehicle harness and the puddle lamp for open circuits and damaged or pushed-out pins. If the jumper harness is OK, INSTALL a new puddle lamp. If the jumper harness is not OK, REPAIR the jumper harness.
No	REPAIR the circuit.

G8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

The Ambient Lighting Is Inoperative Or Always On

Refer to Wiring Diagrams Cell 89 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - Overview (417-02 Interior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B145C:11	Ambient Lighting Power Supply Output: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the ambient light module conditioned power supply output circuit.
B145C:15	Ambient Lighting Power Supply Output: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the ambient light module conditioned power supply output circuit.
B1465:00	Ambient Lighting Bus 1: No Sub Type Information	A continuous memory DTC that sets when the BCM detects a fault on an ambient lighting LIN circuit.
B1467:00	Ambient Lighting Bus 3: No Sub Type Information	A continuous memory DTC that sets when the BCM detects a fault on an ambient lighting LIN circuit.
U1000:00	Solid State Driver Protection Active -Driver Disabled: No Sub Type Information	This DTC sets when the BCM has temporarily shut down the output driver. The module has temporarily disabled an output because an excessive current draw exists (such as a short to ground). The BCM cannot enable the output until the cause of the short is corrected, the Diagnostic Trouble Codes (DTCs) have been cleared and a successful self-test is run.
U3000:49	Control Module: Internal Electronic Failure	This DTC sets when the BCM has permanently shut down the output driver. The module has permanently disabled an output because an excessive current draw fault (such as a short to ground) has exceeded the limits that the BCM can withstand. CORRECT the cause of the excessive current draw before installing a new BCM.

Possible Sources

- Wiring, terminals or connectors
- FDIM
- BCM

PINPOINT TEST H : THE AMBIENT LIGHTING IS INOPERATIVE OR ALWAYS ON

H1 CHECK THE FDIM (FRONT DISPLAY INTERFACE MODULE) AUDIO CONTROLS

- Ignition ON.
- Check the operation of the audio system using the FDIM (touchscreen) controls.

Does the audio system operate correctly from the touchscreen controls?

Yes	GO to H2
No	REFER to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing). REFER to: Information and Entertainment System (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Diagnosis and Testing).

H2 CHECK FOR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the BCM self-test.

Is DTC B1465:00, B1467:00, B145C:11 or B145C:15 present?

Yes	For DTC B1465:00 or B1467:00, GO to H3 For DTC B145C:11, GO to H6 For DTC B145C:15, GO to H7
No	GO to H9

H3 CHECK THE AMBIENT LIGHTING LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280F.
- Ignition ON.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-13	V	Ground

Is voltage present?

Yes	REPAIR the circuit.
No	GO to H4

H4 CHECK THE AMBIENT LIGHTING LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect LH Footwell Lamp C209.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-13	Ω	C209-2

Is the resistance less than 3 ohms?

Yes	GO to H5
No	REPAIR the circuit.

H5 CHECK THE AMBIENT LIGHTING LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO GROUND

- Disconnect RH Footwell Lamp C266.
- Disconnect Driver Interior Front Door Handle Ambient Lighting Lamp C506 LHD / C606 RHD.
- Disconnect Passenger Interior Front Door Handle Ambient Lighting Lamp C6016 LHD / C5016 RHD.
- Disconnect Driver Door Map Pocket Ambient Lighting Lamp C5172 LHD / C6150 RHD.
- Disconnect Passenger Door Map Pocket Ambient Lighting Lamp C650 LHD / C572 RHD.
- Disconnect Media Hub Illumination C3510.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-13	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to H9
No	REPAIR the circuit.

H6 CHECK THE AMBIENT LIGHTING VOLTAGE CIRCUIT FOR A SHORT TO GROUND

- Disconnect BCM C2280F.
- Disconnect LH Footwell Lamp C209.
- Disconnect RH Footwell Lamp C266.
- Disconnect Driver Interior Front Door Handle Ambient Lighting Lamp C506 LHD / C606 RHD.
- Disconnect Passenger Interior Front Door Handle Ambient Lighting Lamp C6016 LHD / C5016 RHD.
- Disconnect Driver Door Map Pocket Ambient Lighting Lamp C5172 LHD / C6150 RHD.
- Disconnect Passenger Door Map Pocket Ambient Lighting Lamp C650 LHD / C572 RHD.
- Disconnect Media Hub Illumination C3510.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280F-4	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to H9
No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).

H7 CHECK THE AMBIENT LIGHTING VOLTAGE CIRCUIT FOR AN OPEN

- Disconnect BCM C2280F.
- Disconnect LH Front Footwell Lamp C209.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280F-4	Ω	C209-1

Is the resistance greater than 10,000 ohms?

Yes	GO to H8
No	REPAIR the circuit.

H8 CHECK THE AMBIENT LIGHTING VOLTAGE CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280F-4		Ground

Is voltage present?

Yes	REPAIR the circuit.
No	GO to H9

H9 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

One Or More Of The Ambient Lighting LEDs Are Inoperative Or Do Not Change Color/Intensity

Refer to Wiring Diagrams Cell 89 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - Overview (417-02 Interior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1465:00	Ambient Lighting Bus 1: No Sub Type Information	Sets when the BCM detects a fault in the LIN circuit to the door ambient lighting Light Emitting Diodes (LEDs).
B1467:00	Ambient Lighting Bus 3: No Sub Type Information	Sets when the BCM detects a fault in the LIN circuit to the footwell and center console ambient lighting Light Emitting Diodes (LEDs).

Possible Sources

- Wiring, terminals or connectors
- Ambient lighting LED

- BCM

PINPOINT TEST I : ONE OR MORE OF THE AMBIENT LIGHTING LIGHT EMITTING DIODES (LEDS) ARE INOPERATIVE OR DO NOT CHANGE COLOR/INTENSITY

I1 CHECK THE AMBIENT LIGHTING LIGHT EMITTING DIODES (LEDS)

- Ignition ON.
- Place the headlamp switch in the PARKING LAMPS ON position.
- Observe the operation of all the ambient lighting Light Emitting Diodes (LEDs).

Are all the ambient lighting Light Emitting Diodes (LEDs) inoperative?

Yes	GO to Pinpoint Test H
No	GO to I2

I2 CHECK FOR VOLTAGE TO THE LED (LIGHT EMITTING DIODE)

- Ignition OFF.
- Disconnect Inoperative ambient lighting LED.
- Place the headlamp switch in the PARKLAMPS position.
- Measure:

Media Hub Illumination

Positive Lead	Measurement / Action	Negative Lead
C3510-1	V	Ground

LH Footwell Lamp

Positive Lead	Measurement / Action	Negative Lead
C209-1	V	Ground

RH Footwell Lamp

Positive Lead	Measurement / Action	Negative Lead
C266-1	V	Ground

Driver Interior Front Door Handle Ambient Lighting Lamp - LHD

Positive Lead	Measurement / Action	Negative Lead
C506-1	V	Ground

Driver Interior Front Door Handle Ambient Lighting Lamp - RHD

Positive Lead	Measurement / Action	Negative Lead

C606-1		Ground

Passenger Interior Front Door Handle Ambient Lighting Lamp - LHD

Positive Lead	Measurement / Action	Negative Lead
C6016-1		Ground

Passenger Interior Front Door Handle Ambient Lighting Lamp - RHD

Positive Lead	Measurement / Action	Negative Lead
C5016-1		Ground

Driver Door Map Pocket Ambient Lighting Lamp - LHD

Positive Lead	Measurement / Action	Negative Lead
C5172-1		Ground

Driver Door Map Pocket Ambient Lighting Lamp - RHD

Positive Lead	Measurement / Action	Negative Lead
C6150-1		Ground

Passenger Door Map Pocket Ambient Lighting Lamp - LHD

Positive Lead	Measurement / Action	Negative Lead
C650-1		Ground

Passenger Door Map Pocket Ambient Lighting Lamp - RHD

Positive Lead	Measurement / Action	Negative Lead
C572-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to I3

No	REPAIR the LED voltage supply circuit in question.

I3 CHECK THE LED (LIGHT EMITTING DIODE) GROUND CIRCUIT FOR AN OPEN

- Measure:

Media Hub Illumination

Positive Lead	Measurement / Action	Negative Lead
C3510-1		C3510-3

LH Footwell Lamp

Positive Lead	Measurement / Action	Negative Lead
C209-1		C209-3

RH Footwell Lamp

Positive Lead	Measurement / Action	Negative Lead
C266-1		C266-3

Driver Interior Front Door Handle Ambient Lighting Lamp - LHD

Positive Lead	Measurement / Action	Negative Lead
C506-1		C506-3

Driver Interior Front Door Handle Ambient Lighting Lamp - RHD

Positive Lead	Measurement / Action	Negative Lead
C606-1		C606-3

Passenger Interior Front Door Handle Ambient Lighting Lamp - LHD

Positive Lead	Measurement / Action	Negative Lead
C6016-1		C6016-3

Passenger Interior Front Door Handle Ambient Lighting Lamp - RHD

Positive Lead	Measurement / Action	Negative Lead
C5016-1		C5016-3

Driver Door Map Pocket Ambient Lighting Lamp - LHD

Positive Lead	Measurement / Action	Negative Lead
C5172-1		C5172-3

Driver Door Map Pocket Ambient Lighting Lamp - RHD

Positive Lead	Measurement / Action	Negative Lead
C6150-1		C6150-3

Passenger Door Map Pocket Ambient Lighting Lamp - LHD

Positive Lead	Measurement / Action	Negative Lead
C650-1		C650-3

Passenger Door Map Pocket Ambient Lighting Lamp - RHD

Positive Lead	Measurement / Action	Negative Lead
C572-1		C572-3

Is the voltage greater than 11 volts?

Yes	GO to I4
No	REPAIR the ground circuit in question.

I4 CHECK THE AMBIENT LIGHTING LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

- Ignition OFF.
- Place the headlamp switch in the OFF position.
- Disconnect BCM C2280G.
- Measure:

Media Hub Illumination

Positive Lead	Measurement / Action	Negative Lead
C2510-2		C2280G-13

C3510-2	Ω	C2280G-13

LH Footwell Lamp

Positive Lead	Measurement / Action	Negative Lead
C209-2	Ω	C2280G-13

RH Footwell Lamp

Positive Lead	Measurement / Action	Negative Lead
C266-2	Ω	C2280G-13

Driver Interior Front Door Handle Ambient Lighting Lamp - LHD

Positive Lead	Measurement / Action	Negative Lead
C506-2	Ω	C2280G-13

Driver Interior Front Door Handle Ambient Lighting Lamp - RHD

Passenger Interior Front Door Handle Ambient Lighting Lamp - RHD

Positive Lead	Measurement / Action	Negative Lead
C5016-2	Ω	C2280G-13

Driver Door Map Pocket Ambient Lighting Lamp - LHD

Positive Lead	Measurement / Action	Negative Lead

C5172-2	Ω	C2280G-13

Driver Door Map Pocket Ambient Lighting Lamp - RHD

Positive Lead	Measurement / Action	Negative Lead
C6150-2	Ω	C2280G-13

Passenger Door Map Pocket Ambient Lighting Lamp - LHD

Positive Lead	Measurement / Action	Negative Lead
C650-2	Ω	C2280G-13

Passenger Door Map Pocket Ambient Lighting Lamp - RHD

Positive Lead	Measurement / Action	Negative Lead
C572-2	Ω	C2280G-13

Is the resistance less than 3 ohms?

Yes	INSTALL a new ambient lighting LED in question.
No	REPAIR the circuit.

The Cargo Lamp Is Inoperative Or Always On

Refer to Wiring Diagrams Cell 89 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Interior Lighting - Overview (417-02 Interior Lighting, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B12C2:11	Puddle Lamp: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the BCM detects a short to ground from the cargo and trailer assist lamps output circuit.
B12C2:15	Puddle Lamp: Circuit Short To Battery or Open	A continuous memory and on-demand DTC that sets when the BCM detects an open or short to voltage from the cargo and trailer assist lamps output circuit.

Possible Sources

- Wiring, terminals or connectors
- Cargo lamp bulb
- Cargo lamp (integrated into the high mounted stoplamp)
- Cargo lamp switch
- BCM

PINPOINT TEST J : THE CARGO LAMP IS INOPERATIVE OR ALWAYS ON

J1 CHECK THE OPERATION OF THE CARGO AND PUDDLE LAMPS

- Close all the doors and observe the cargo and puddle lamps.
- Observe the cargo and puddle lamp operation for 30 seconds.

Do the lamps stay on after 30 seconds?

Yes	GO to J2
No	If only the cargo lamp is inoperative, refer to GO to J6 If all cargo and puddle lamps are inoperative, GO to Pinpoint Test G

J2 CHECK THE CARGO LAMP SWITCH INPUT CIRCUIT FOR GROUND

- Ignition OFF.
- Disconnect BCM C2280D.
- Make sure the truck bed lamp switch is OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280D-8	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to J5
No	GO to J3

J3 ISOLATE THE CARGO LAMP SWITCH

- Disconnect Truck Bed Lamp Switch C221.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280D-8	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to J4
No	REPAIR the circuit.

J4 CHECK THE CARGO LAMP SWITCH GROUND CIRCUIT FOR AN OPEN

- Measure:

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C221-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new truck bed lamp switch.
No	REPAIR the circuit.

J5 CHECK THE BCM (BODY CONTROL MODULE) CARGO/PUDDLE LAMP OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280F.
- Ignition ON.

Are the lamps still illuminated?

Yes	REPAIR the circuit.
No	GO to J11

J6 CHECK FOR VOLTAGE TO THE CARGO LAMP

- Disconnect High Mounted Stoplamp C475 W/O Sports Bar.
- Disconnect High Mounted Stoplamp C904 With Sports Bar.
- Ignition ON.
- Open a door.
- Measure:

W/O Sports Bar

Positive Lead	Measurement / Action	Negative Lead
C475-3	V	Ground

With Sports Bar

Positive Lead	Measurement / Action	Negative Lead
C904-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to J10
No	GO to J7

J7 REPEAT THE ON-DEMAND SELF-TEST AND CHECK FOR VOLTAGE TO THE CARGO LAMP

- Using a diagnostic scan tool, perform the BCM self-test.

- Clear the Diagnostic Trouble Codes (DTCs) and repeat the self-test (required to enable the lamp output driver if DTC U1000:00 is present).
- Measure:

W/O Sports Bar

Positive Lead	Measurement / Action	Negative Lead
C475-3		Ground

With Sports Bar

Positive Lead	Measurement / Action	Negative Lead
C904-1		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new high mounted stoplamp. REFER to: High Mounted Stoplamp (417-01 Exterior Lighting, Removal and Installation).
No	GO to J8

J8 CHECK THE BCM (BODY CONTROL MODULE) CARGO LAMP OUTPUT CIRCUIT FOR A SHORT TO GROUND

- Disconnect BCM C2280F.
- Measure:

W/O Sports Bar

Positive Lead	Measurement / Action	Negative Lead
C475-3	Ω	Ground

With Sports Bar

Positive Lead	Measurement / Action	Negative Lead
C904-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to J9
No	REPAIR the circuit. After the repair: If no Diagnostic Trouble Codes (DTCs) are present, TEST the system for normal operation. If DTC U1000:00 is present, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the lamp output driver if DTC U1000:00 is present). If DTC U3000:49 is present, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules,

	Removal and Installation).

J9 CHECK THE BCM (BODY CONTROL MODULE) CARGO LAMP OUTPUT CIRCUIT FOR AN OPEN

- Measure:

Halogen High Mounted Stoplamp

Positive Lead	Measurement / Action	Negative Lead
C475-3	Ω	C2280F-26

LED High Mounted Stoplamp

Positive Lead	Measurement / Action	Negative Lead
C904-1	Ω	C2280F-26

Is the resistance less than 3 ohms?

Yes	GO to J11
No	REPAIR the circuit.

J10 CHECK THE CARGO LAMP GROUND CIRCUIT

- Measure:

W/O Sports Bar

Positive Lead	Measurement / Action	Negative Lead
C475-3	V	C475-2

With Sports Bar

Positive Lead	Measurement / Action	Negative Lead
C904-1	V	C904-3

Is the voltage greater than 11 volts?

Yes	INSTALL a new high mounted stoplamp. REFER to: High Mounted Stoplamp (417-01 Exterior Lighting, Removal and Installation).
No	REPAIR the circuit.

J11 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors and related in-line connectors.
- Repair:

- corrosion (install new connector or terminals – clean module pins)
- damaged or bent pins – install new terminals/pins
- pushed-out pins – install new pins as necessary

- Reconnect the BCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. CLEAR the Diagnostic Trouble Codes (DTCs).

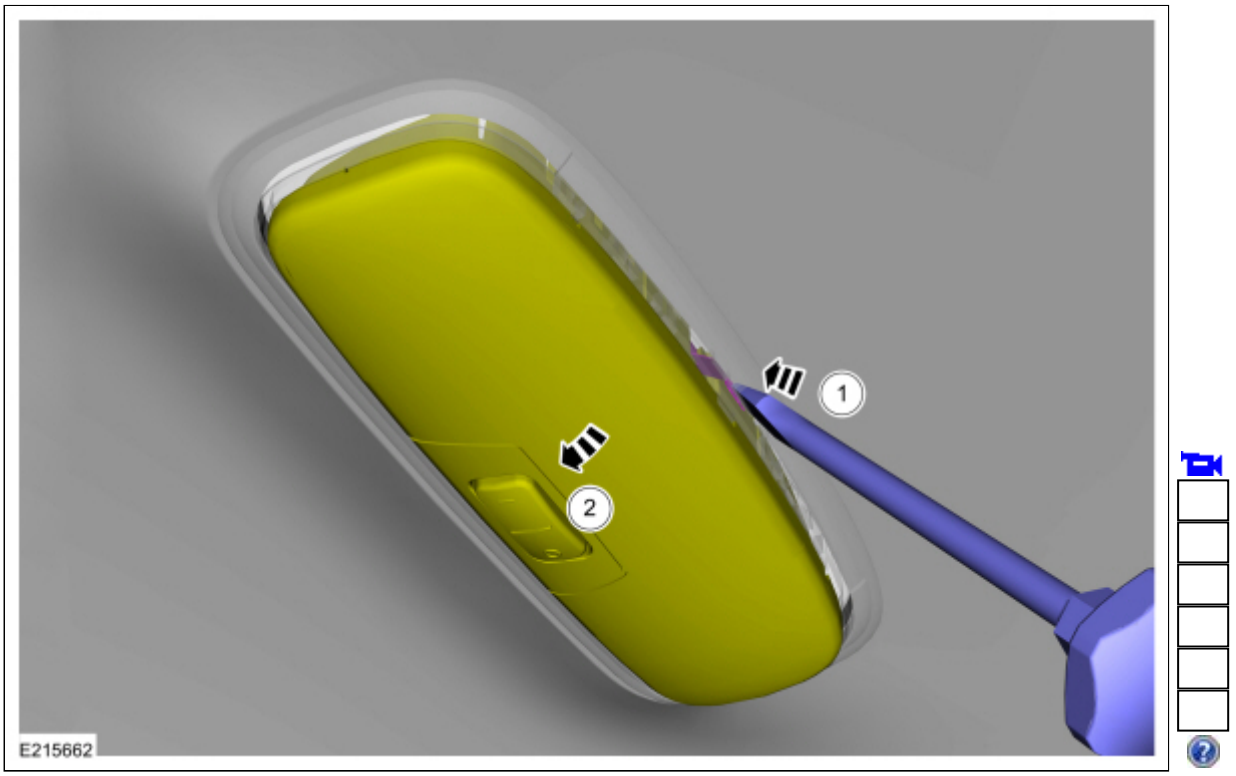
Center Interior Lamp

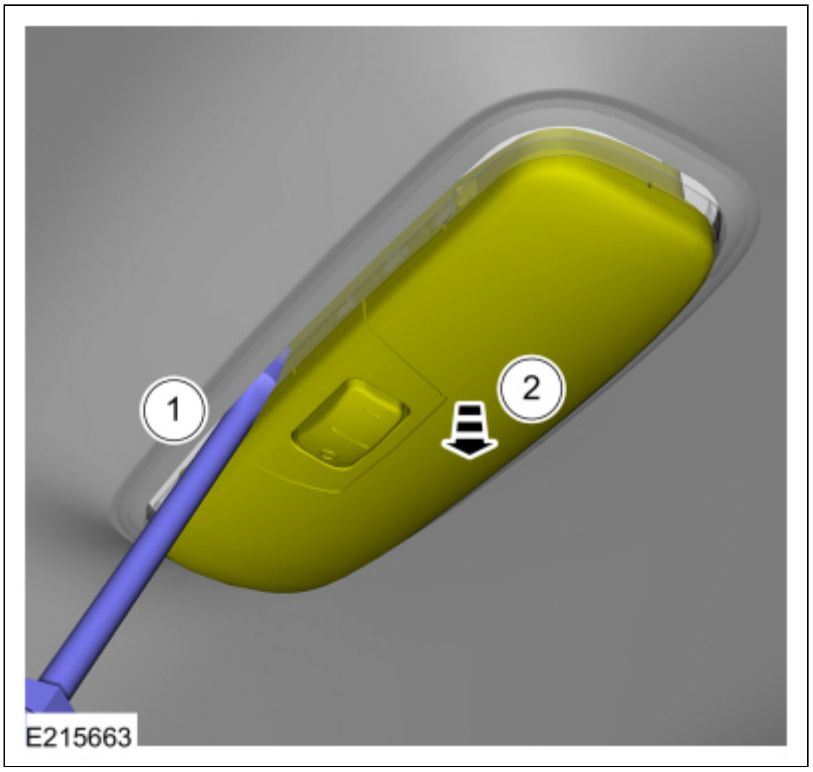
Special Tool(s) / General Equipment

Flat-Bladed Screwdriver



Removal

NOTE: *Removal steps in this procedure may contain installation details.*



1. **NOTICE: Take extra care when handling the component.**

   NOTICE: Take extra care not to scratch the Interiorlamp lens.

   Use the General Equipment: Flat-Bladed Screwdriver

2. Use the General Equipment: Flat-Bladed Screwdriver

3. **NOTE:** *Before remove the connectors, pull plastic housing of the connector to prevent damage.*

Installation

1. To install, reverse the removal procedure.

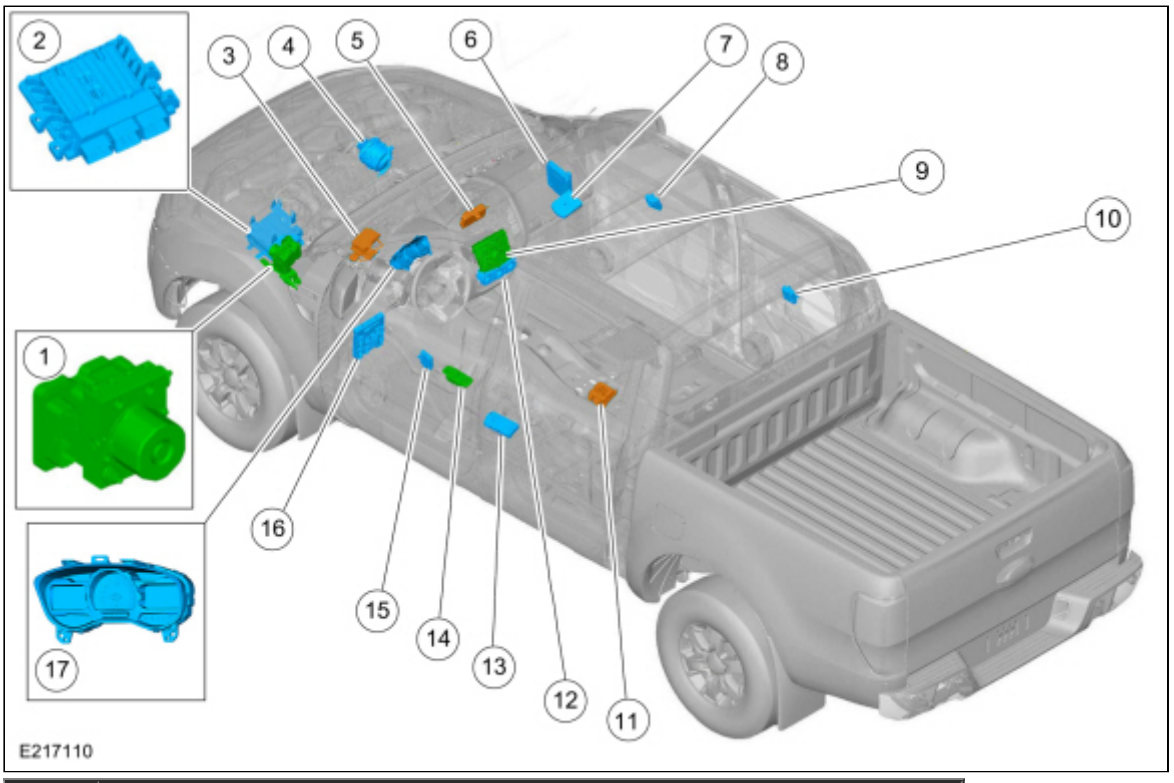
Daytime Running Lamps (DRL)



In areas in which daytime running lamps (DRL) are required by law, the body control module (BCM) switches on the DRL when the ignition is switched on.

The configuration in the BCM can be changed using the Integrated Diagnostic System (IDS). This makes aftermarket configuration of vehicles fitted with DRL possible (e.g. on customer request or in response to changes in the law).

Vehicles with DRL can be combined with autolamps.

Communications Network - Overview

Overview

Multiplexing allows 2 or more electronic modules (nodes) to communicate over a twisted wire pair [data (+) and data (-)] network. The information or messages that can be communicated on these wires consists of commands, status or data. Multiplexing reduces the weight of the vehicle by reducing the number of redundant components and electrical wiring.

The vehicle has 2 module communication networks connected to the DLC, located under the instrument panel. The communication networks are:

- HS-CAN1
- HS-CAN2

The vehicle has 2 module communication networks that communicate on the network, but do not communicate directly with the diagnostic scan tool. The GWM translates the messages on these 2 networks, and transfers the signals to the HS-CAN2 to communicate with the diagnostic scan tool. The communication networks are:

- HS-CAN3
- MS-CAN)

Communications Network

DTC Chart: Gateway Module (GWM)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

DTC	Description	Action
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK the vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. INSTALL As-Built data from Professional Technician Society (PTS) following diagnostic scan tool instructions under Module Programming>As-Built.
U3000:44	RAM Error During Normal Operation: Data Memory Failure	RETRIEVE all Continuous Memory Diagnostic Trouble Codes (CMDTCs). If DTC U3000:44 is retrieved, INSTALL a new GWM. REFER to: Gateway Module A (GWM) (418-00 Module Communications Network, Removal and Installation). If DTC U3000:44 is not retrieved, the module is operating correctly at this time. The concern may have been caused by an intermittent concern.
U3000:45	RAM Error During Normal Operation: Program Memory Failure	RETRIEVE all Continuous Memory Diagnostic Trouble Codes (CMDTCs). If DTC U3000:45 is retrieved, INSTALL a new GWM. REFER to: Gateway Module A (GWM) (418-00 Module Communications Network, Removal and Installation). If DTC U3000:45 is not retrieved, the module is operating correctly at this time. The concern may have been caused by an intermittent concern.
U3000:49	RAM Error During Normal Operation: Internal Electronic Failure	RETRIEVE all Continuous Memory Diagnostic Trouble Codes (CMDTCs). If DTC U3000:49 is retrieved, INSTALL a new GWM. REFER to: Gateway Module A (GWM) (418-00 Module Communications Network, Removal and Installation). If DTC U3000:49 is not retrieved, the module is operating correctly at this time. The concern may have been caused by an intermittent concern.

Symptom Chart(s)

Symptom Chart: Communication Network

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
The vehicle does not start with the diagnostic scan tool connected to the DLC and/or multiple malfunction indicators are only on when the diagnostic scan tool is connected to the DLC	Refer to the Pinpoint Test	GO to Pinpoint Test Z
No HS-CAN1 communication, all modules are not responding	Refer to the Pinpoint Test	GO to Pinpoint Test V
No HS-CAN2 communication, all modules are not responding	Refer to the Pinpoint Test	GO to Pinpoint Test W

No HS-CAN3 communication, all modules are not responding	Refer to the Pinpoint Test	GO to Pinpoint Test X
No MS-CAN communication, all modules are not responding	Refer to the Pinpoint Test	GO to Pinpoint Test Y
The PCM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test A
The ABS module does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test B
The RCM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test C
The SCCM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test D
The IPC does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test E
The BCM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test F
The FCIM module does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test G
The ACM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test H
The FCDIM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test I
The IPMA does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test J
The GPSM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test K
The APIM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test L
The DACMC does not respond to the diagnostic scan tool (integrated with the ACM)	Refer to the Pinpoint Test	GO to Pinpoint Test H
The RTM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test M
The PSCM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test N
The DDM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test O
The PDM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test P
The CCM does not respond to the diagnostic scan tool	Refer to the Pinpoint	GO to Pinpoint

	Test	Test Q
The HUD module does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test R
The TRM does not respond the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test S
The SCCM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test T
The GWM does not respond to the diagnostic scan tool	Refer to the Pinpoint Test	GO to Pinpoint Test U
No power to the DLC	Refer to the Pinpoint Test	GO to Pinpoint Test Z

Pinpoint Tests

The Powertrain Control Module (PCM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 23 for schematic and connector information.

Refer to Wiring Diagrams Cell 24 for schematic and connector information.

Refer to Wiring Diagrams Cell 25 for schematic and connector information.

Normal Operation and Fault Conditions

The PCM communicates with the diagnostic scan tool through the HS-CAN1. An IDS session cannot be established if the PCM communication fails when attempting to identify the vehicle.

Possible Sources

- Fuse
- Wiring, terminals and connectors
- PCM

PINPOINT TEST A : THE POWERTRAIN CONTROL MODULE (PCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

A1 VERIFY WHETHER OTHER HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) MODULES PASS THE NETWORK TEST

- Using a diagnostic scan tool, perform the network test.

Is the text "pass" or a DTC listed next to any of the following modules (if equipped): APIM, BCM, or PCM?

Yes	If "pass" or a DTC was listed next to the PCM, a network fault is not currently present. If "pass" or a DTC was listed next to one or more modules other than the PCM, GO to A2
No	No modules are currently communicating on the HS-CAN1. GO to Pinpoint Test V

A2 PC/ED (POWERTRAIN CONTROL/EMISSIONS DIAGNOSIS) MANUAL PINPOINT TEST QA VERIFICATION CHECK

- Verify PC/ED manual pinpoint test QA has been performed.

Has pinpoint test QA been performed?

Yes	GO to A3
No	Refer to PC/ED manual.

A3 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) TERMINATION RESISTANCE

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

Is the resistance between 54 and 66 ohms?

Yes	GO to A5
No	GO to A4

A4 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) CIRCUITS BETWEEN THE PCM (POWERTRAIN CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

- Disconnect PCM C1232A (2.2L & 3.2L Duratorq) or C175B (2.5L Duratec).
- Measure:

2.2L & 3.2L Duratorq Diesel

Positive Lead	Measurement / Action	Negative Lead
C1232A-10	Ω	C251-6
C1232A-11	Ω	C251-14

2.5L Duratec

Positive Lead	Measurement / Action	Negative Lead
C175B-10	Ω	C251-6
C175B-11	Ω	C251-14

Are the resistances less than 3 ohms?

Yes	GO to A5
No	REPAIR the circuit in question.

A5 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.

- Disconnect and inspect all the PCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Anti-Lock Brake System (ABS) Module Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 42 for schematic and connector information.

Normal Operation and Fault Conditions

The ABS module communicates with the diagnostic scan tool through the HS-CAN2.

Possible Sources

- Fuse
- Wiring, terminals and connectors
- ABS module

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuses 25 (10A), 69 (30A) and 82 (60A) are OK.

PINPOINT TEST B : THE ANTI-LOCK BRAKE SYSTEM (ABS) MODULE DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

B1 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect: ABS module C135
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-1		Ground
C135-25		Ground
C135-28		Ground

Are the voltages greater than 11 volts?

Yes	GO to B2
No	VERIFY BJB fuses 25 (10A), 69 (30A) and 82 (60A) are OK. If OK, REPAIR the circuit in question. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

B2 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-13	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to B3
No	REPAIR the circuit.

B3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-26	Ω	C251-3
C135-14	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to B4
No	REPAIR the circuit in question.

B4 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect and inspect the ABS module connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the ABS module connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for

	this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module - Vehicles With: Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control) . REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Restraints Control Module (RCM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

Normal Operation and Fault Conditions

The RCM communicates with the diagnostic scan tool through the HS-CAN2.

Possible Causes

- Fuse
- Wiring, terminals and connectors
- RCM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 35 (5A) is OK.

PINPOINT TEST C : THE RESTRAINTS CONTROL MODULE (RCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

WARNING: Never probe the electrical connectors on airbag, Safety Canopy® or side air curtain assemblies. Failure to follow this instruction may result in the accidental deployment of these assemblies, which increases the risk of serious personal injury or death.

WARNING: Never disassemble or tamper with seat belt deployable components, including pretensioners, load limiters and inflators. Never back probe deployable device electrical connectors. Tampering or back probing may cause an accidental deployment and result in personal injury or death.

NOTE: *The Supplemental Restraint System (SRS) must be fully operational and free of faults before releasing the vehicle to the customer.*

C1 CHECK THE RCM (RESTRAINTS CONTROL MODULE) CONNECTION

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect: RCM C310A and C310B.

Are RCM C310A pin 19 and C310B pins 47 and 48 OK?

Yes	GO to C2
No	INSTALL a new wiring harness. REPOWER the Supplemental Restraint System (SRS). REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).

C2 CHECK THE RCM (RESTRAINTS CONTROL MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Repower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C310A-19		Ground

Is the voltage greater than 11 volts?

Yes	GO to C3
No	VERIFY the BCM fuse 35 (5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

C3 CHECK THE RCM (RESTRAINTS CONTROL MODULE) CASE GROUND

- Ignition OFF.
- Measure the resistance between the RCM case and a good chassis ground.

Is the resistance less than 3 ohms?

Yes	GO to C4
No	REPAIR the RCM case ground as necessary.

C4 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE RCM (RESTRAINTS CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

- Depower the SRS.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C310B-48	Ω	C251-3
C310B-47	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to C5
No	REPAIR the circuit in question.

C5 CHECK FOR CORRECT RCM (RESTRAINTS CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the RCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the RCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Repower the Supplemental Restraint System (SRS).

- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Steering Column Control Module (SCCM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

The SCCM communicates with the diagnostic scan tool through the HS-CAN2.

Possible Causes

- Fuse
- Wiring, terminals and connector
- SCCM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 13 (7.5A) is OK.

PINPOINT TEST D : THE STEERING COLUMN CONTROL MODULE (SCCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

D1 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) TERMINATION RESISTANCE

- Ignition OFF.
- Disconnect the diagnostic scan tool cable from the DLC.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	C251-11

Is the resistance between 54 and 66 ohms?

Yes	GO to D3
No	GO to D2

D2 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE SCCM (STEERING COLUMN CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

- Disconnect SCCM C226A
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C226A-3	Ω	C251-3
C226A-4	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to D5
No	REPAIR the circuit in question.

D3 CHECK THE SCCM (STEERING COLUMN CONTROL MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C226A-7	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to D4
No	VERIFY the BCM fuse 13 (7.5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

D4 CHECK THE SCCM (STEERING COLUMN CONTROL MODULE) GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C226A-5	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to D5
No	REPAIR the circuit.

D5 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the SCCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary

- Reconnect the SCCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. Without active front steering, REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Instrument Panel Cluster (IPC) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 60 for schematic and connector information.

Normal Operation and Fault Conditions

The IPC communicates on the HS-CAN3, and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and translated through the GWM to the HS-CAN3.

Possible Sources

- Fuse
- Wiring, terminals and connector
- IPC

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 13 (7.5A) is OK.

PINPOINT TEST E : THE INSTRUMENT PANEL CLUSTER (IPC) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

E1 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) TERMINATION RESISTANCE

- Ignition OFF.
- Disconnect negative battery cable.
- Disconnect the diagnostic scan tool cable from the DLC.
- Disconnect GWM C2431
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-16	Ω	C2803-15

Is the resistance between 108 and 132 ohms?

Yes	GO to E3
No	GO to E2

E2 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) CIRCUITS BETWEEN THE IPC (INSTRUMENT PANEL CLUSTER) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

- Disconnect IPC C220
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-25	Ω	C2803-16
C220-26	Ω	C2803-15

Are the resistances less than 3 ohms?

Yes	GO to E5
No	REPAIR the circuit in question.

E3 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) VOLTAGE SUPPLY CIRCUIT

- Disconnect: IPC C220.
- Connect negative battery cable.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-21		Ground

Is the voltage greater than 11 volts?

Yes	GO to E4
No	VERIFY the BCM fuse 13 (7.5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

E4 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) GROUND CIRCUIT

- Ignition OFF.
- Disconnect negative battery cable.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-5	Ω	Ground

Is the resistance less than 3 ohms?

Yes	CONNECT negative battery cable. GO to E5
No	REPAIR the circuit.

E5 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPC connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Body Control Module (BCM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 13 for schematic and connector information.

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The BCM communicates with the diagnostic scan tool through the HS-CAN1.

Possible Causes

- Fuse
- Wiring, terminals and connector
- BCM

Visual Inspection and Diagnostic Pre-checks

Verify High Current BJB fuse 2 (125A) is OK.

PINPOINT TEST F : THE BODY CONTROL MODULE (BCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

F1 CHECK THE BCM (BODY CONTROL MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect BCM C2280A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280A-1		Ground

Is the voltage greater than 11 volts?

Yes	Connect BCM C2280A. GO to F2
No	VERIFY the High Current BJB fuse 2 (125A) is OK. If OK, repair the circuit in question. If not

No	VERIFY the High Current BUD fuse 2 (125A) is OK. If OK, repair the circuit in question. If not OK, REFER to the Wiring Diagrams Manual to identify the possible causes of the circuit short.

F2 CHECK THE BCM (BODY CONTROL MODULE) GROUND CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect BCM C2280F.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C C2280F-6	Ω	Ground
C C2280F-7	Ω	Ground
C C2280F-10	Ω	Ground

Are the resistances less than 3 ohms?

Yes	GO to F3
No	REPAIR the circuit in question.

F3 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) CIRCUITS BETWEEN THE BCM (BODY CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

- Disconnect: BCM C2280B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C C2280B-10	Ω	C251-6
C C2280B-9	Ω	C251-14

Are the resistances less than 3 ohms?

Yes	GO to F4
No	REPAIR the circuit in question.

F4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect the BCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules,

	Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Front Controls Interface Module (FCIM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 54 for schematic and connector information.

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

The FCIM communicates on the MS-CAN, and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and translated through the GWM to the MS-CAN.

Possible Sources

- Fuse
- Wiring, terminals and connector
- FCIM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 12 (7.5A) is OK.

PINPOINT TEST G : THE FRONT CONTROLS INTERFACE MODULE (FCIM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

G1 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) TERMINATION RESISTANCE

- Ignition OFF.
- Disconnect negative battery cable.
- Disconnect the diagnostic scan tool cable from the DLC.
- Disconnect: GWM C2803.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-23	Ω	C2803-22

Is the resistance between 108 and 132 ohms?

Yes	GO to G3
No	GO to G2

G2 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE FCIM (FRONT CONTROLS INTERFACE MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

- Disconnect FCIM C2402A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-17	Ω	C2803-23
C2402A-18	Ω	C2803-22

Are the resistances less than 3 ohms?

Yes	GO to G5
No	REPAIR the circuit in question.

G3 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Connect negative battery cable.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-26	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to G4
No	VERIFY the BCM fuse 12 (7.5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

G4 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect negative battery cable.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	CONNECT negative battery cable. GO to G5
No	REPAIR the circuit.

G5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the FCIM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins

- pushed-out pins - install new pins as necessary
- Reconnect the FCIM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Audio Control Module (ACM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Refer to Wiring Diagrams Cell 131 for schematic and connector information.

Refer to Wiring Diagrams Cell 132 for schematic and connector information.

Normal Operation and Fault Conditions

The ACM communicates on the HS-CAN3, and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and translated through the GWM to the HS-CAN3.

Possible Sources

- Fuse
- Wiring, terminals and connector
- ACM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 33 (20A) is OK.

PINPOINT TEST H : THE AUDIO CONTROL MODULE (ACM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

H1 CHECK THE ACM (AUDIO FRONT CONTROL MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect: ACM C240A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to H2
No	VERIFY the BCM fuse 33 (20A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the

No	VERIFY the BCM fuse 35 (20A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

H2 CHECK THE ACM (AUDIO FRONT CONTROL MODULE) GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-13	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to H3
No	REPAIR the circuit.

H3 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) CIRCUITS BETWEEN THE ACM (AUDIO FRONT CONTROL MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

- Disconnect GWM C2431.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-14	Ω	C2803-16
C240A-15	Ω	C2803-15

Are the resistances less than 3 ohms?

Yes	GO to H4
No	REPAIR the circuit in question.

H4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the ACM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Front Control/Display Interface Module (FCDIM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

The FCDIM communicates on the HS-CAN3, and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and translated through the GWM to the HS-CAN3.

Possible Sources

- Fuse
- Wiring, terminals and connector
- FCDIM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 32 (10A) is OK.

PINPOINT TEST I : THE FRONT CONTROL/DISPLAY INTERFACE MODULE (FCDIM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

I1 CHECK THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect: FCDIM C2123.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2123-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to I2
No	VERIFY the BCM fuse 32 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

I2 CHECK THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2123-9	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to I3

No	REPAIR the circuit.

I3 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) CIRCUITS BETWEEN THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

- Disconnect GWM C2803.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2123-4	Ω	C2803-16
C2123-5	Ω	C2803-15

Are the resistances less than 3 ohms?

Yes	GO to I4
No	REPAIR the circuit in question.

I4 CHECK FOR CORRECT FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the FCDIM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the FCDIM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/Navigation System) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Image Processing Module A (IPMA) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 124 for schematic and connector information.

Normal Operation and Fault Conditions

The IPMA communicates with the diagnostic scan tool through the HS-CAN2.

Possible Sources

- Fuse

- Wiring, terminals and connector
- IPMA

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 36 (15A) is OK.

PINPOINT TEST J : THE IMAGE PROCESSING MODULE A (IPMA) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

J1 CHECK THE IPMA (IMAGE PROCESSING MODULE A) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect: IPMA C9012.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9012-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to J2
No	VERIFY the BCM fuse 36 (15A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

J2 CHECK THE IPMA (IMAGE PROCESSING MODULE A) GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9012-7	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to J3
No	REPAIR the circuit.

J3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE IPMA (IMAGE PROCESSING MODULE A) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9012-12	Ω	C251-3
C9012-13	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to J4
No	REPAIR the circuit in question.

J4 CHECK FOR CORRECT IPMA (IMAGE PROCESSING MODULE A) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPMA connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPMA connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPMA. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Global Positioning System Module (GPSM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Refer to Wiring Diagrams Cell 131 for schematic and connector information.

Refer to Wiring Diagrams Cell 132 for schematic and connector information.

Normal Operation and Fault Conditions

The GPSM communicates on the MS-CAN, and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and translated through the GWM to the MS-CAN.

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 32 (10A) is OK.

PINPOINT TEST K : THE GLOBAL POSITIONING SYSTEM MODULE (GPSM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

K1 CHECK THE GPSM (GLOBAL POSITIONING SYSTEM MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect: GPSM C9050.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead

C9050-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to K2
No	VERIFY BCM fuse 32 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

K2 CHECK THE GPSM (GLOBAL POSITIONING SYSTEM MODULE) GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9050-6	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to K3
No	REPAIR the circuit.

K3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE GPSM (GLOBAL POSITIONING SYSTEM MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

- Disconnect: GWM C2803.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9050-2	Ω	C2803-23
C9050-3	Ω	C2803-22

Are the resistances less than 3 ohms?

Yes	GO to K4
No	REPAIR the circuit in question.

K4 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the GPSM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the GPSM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Accessory Protocol Interface Module (APIM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Refer to Wiring Diagrams Cell 131 for schematic and connector information.

Refer to Wiring Diagrams Cell 132 for schematic and connector information.

Normal Operation and Fault Conditions

The APIM communicates with the diagnostic scan tool through the HS-CAN1 and communicates with other modules through the HS-CAN3 and the MS-CAN (8-inch touchscreen). Diagnostic messages to modules on the HS-CAN3 and MS-CAN are sent/received between the DLC and the diagnostic scan tool through the HS-CAN2 circuits at the DLC, and translated through the GWM.

Possible Sources

- Fuse
- Wiring, terminals and connector
- APIM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 32 (10A) is OK.

PINPOINT TEST L : THE ACCESSORY PROTOCOL INTERFACE MODULE (APIM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

L1 CHECK THE APIM (SYNC MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect: APIM C2383 (4.2-inch display) or C2389 (8-inch touchscreen).
- Ignition ON.
- Measure:

4.2-inch display

Positive Lead	Measurement / Action	Negative Lead
C2383-1		Ground

8-inch touchscreen

Positive Lead	Measurement / Action	Negative Lead
C2389-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to L2
No	VERIFY the BCM fuse 32 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

L2 CHECK THE APIM (SYNC MODULE) GROUND CIRCUITS FOR AN OPEN

- Ignition OFF.
- Measure:

4.2-inch display

Positive Lead	Measurement / Action	Negative Lead
C2383-37	Ω	Ground
C2383-38	Ω	Ground

8-inch touchscreen

Positive Lead	Measurement / Action	Negative Lead
C2389-37	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to L3
No	REPAIR the circuit.

L3 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) CIRCUITS BETWEEN THE APIM (SYNC MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

- Measure:

4.2-inch display

Positive Lead	Measurement / Action	Negative Lead
C2383-53	Ω	C251-6
C2383-54	Ω	C251-14

8-inch touchscreen

Positive Lead	Measurement / Action	Negative Lead
C2389-53	Ω	C251-6
C2389-54	Ω	C251-14

Are the resistances less than 3 ohms?

Yes	GO to L4
No	REPAIR the circuit in question.

L4 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) CIRCUITS BETWEEN THE APIM (SYNC MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

- Disconnect GWM C2803
- Measure:

4.2-inch display

Positive Lead	Measurement / Action	Negative Lead
C2383-16	Ω	C2803-16
C2383-17	Ω	C2803-15

8-inch touchscreen

Positive Lead	Measurement / Action	Negative Lead
C2389-19	Ω	C2803-16
C2389-20	Ω	C2803-15

Are the resistances less than 3 ohms?

Yes	If equipped with touchscreen, GO to L5 If not equipped with touchscreen, GO to L6
No	REPAIR the circuit in question.

L5 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE APIM (SYNC MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2389-16	Ω	C2803-23
C2389-17	Ω	C2803-22

Are the resistances less than 3 ohms?

Yes	GO to L6
No	REPAIR the circuit in question.

L6 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the APIM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,   Click here to access Guided Routine (APIM).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Radio Transceiver Module (RTM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 117 for schematic and connector information.

Normal Operation and Fault Conditions

The RTM communicates on the MS-CAN and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and are translated through the GWM to the MS-CAN.

Possible Sources

- Fuse
- Wiring, terminals and connector
- RTM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 32 (10A) is OK.

PINPOINT TEST M : THE RADIO TRANSCEIVER MODULE (RTM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

M1 CHECK THE RTM (RADIO TRANSCEIVER MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect: RTM C9026.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9026-6		Ground

Is the voltage greater than 11 volts?

Yes	GO to M2

No	VERIFY the BCM fuse 32 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

M2 CHECK THE RTM (RADIO TRANSCEIVER MODULE) GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9026-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to M3
No	REPAIR the circuit.

M3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE RTM (RADIO TRANSCEIVER MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

- Disconnect: GWM C2803.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9026-4	Ω	C2803-23
C9026-3	Ω	C2803-22

Are the resistances less than 3 ohms?

Yes	GO to M4
No	REPAIR the circuit in question.

M4 CHECK FOR CORRECT RTM (RADIO TRANSCEIVER MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the RTM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the RTM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RTM. REFER to: Radio Transceiver Module (RTM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Power Steering Control Module (PSCM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 43 for schematic and connector information.

Normal Operation and Fault Conditions

The PSCM communicates with the diagnostic scan tool through the HS-CAN2.

Possible Sources

- Fuse
- Wiring, terminals and connector
- PSCM

Visual Inspection and Diagnostic Pre-checks

Verify high current BJB fuse (125A) and BJB fuse 19 (10A) are OK.

PINPOINT TEST N : THE POWER STEERING CONTROL MODULE (PSCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

N1 CHECK THE PSCM (POWER STEERING CONTROL MODULE) VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect: PSCM C1463A and C1463B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1463A-1	V	Ground

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1463B-2	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to N2
No	VERIFY high current BJB fuse (125A) or BJB fuse 19 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

N2 CHECK THE PSCM (POWER STEERING CONTROL MODULE) GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1463B-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to N3
No	REPAIR the circuit.

N3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE PSCM (POWER STEERING CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1463A-2	Ω	C251-3
C1463A-3	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to N4
No	REPAIR the circuit in question.

N4 CHECK FOR CORRECT PSCM (POWER STEERING CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the PSCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PSCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, REFER to the EPAS Symptom Chart.   Click here to access Guided Routine (EPAS).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Driver Door Module (DDM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 124 for schematic and connector information.

Normal Operation and Fault Conditions

The DDM communicates on the MS-CAN and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and are translated through the GWM to the MS-CAN.

Possible Sources

- Fuse
- Wiring, terminals and connector
- DDM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 25 (30A) is OK.

PINPOINT TEST O : THE DRIVER DOOR MODULE (DDM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

O1 CHECK THE DDM (DRIVER DOOR MODULE) VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect: DDM LHD C501A or RHD C601A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C501A-1	V	Ground
RHD C653A-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to O2
No	VERIFY the BCM fuse 25 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

O2 CHECK THE DDM (DRIVER DOOR MODULE) GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C501A-2	Ω	Ground
RHD C653A-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to O3
No	REPAIR the circuit.

O3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE DDM (DRIVER DOOR MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

- Disconnect: GWM C2803.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C501A-7	Ω	C2803-23
LHD C501A-6	Ω	C2803-22
RHD C653A-7	Ω	C2803-23
RHD C653A-6	Ω	C2803-22

Are the resistances less than 3 ohms?

Yes	GO to O4
No	REPAIR the circuit in question.

O4 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the DDM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the DDM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Passenger Door Module (PDM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 100 for schematic and connector information.

Normal Operation and Fault Conditions

The PDM communicates on the MS-CAN and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and are translated through the GWM to the MS-CAN.

Possible Sources

- Fuse
- Wiring, terminals and connector
- PDM

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 26 (30A) is OK.

PINPOINT TEST P : THE PASSENGER DOOR MODULE (PDM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

P1 CHECK THE PDM (PASSENGER DOOR MODULE) VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect: PDM LHD C652A or RHD C590A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C652A-1	V	Ground
RHD C590A-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to P2
No	VERIFY the BCM fuse 26 (30A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

P2 CHECK THE PDM (PASSENGER DOOR MODULE) GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C652A-2	Ω	Ground
RHD C590A-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to P3
No	REPAIR the circuit.

P3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE PDM (PASSENGER DOOR MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

- Disconnect: GWM C2803.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C652A-7	Ω	C2803-23
LHD C652A-6	Ω	C2803-22
RHD C590A-7	Ω	C2803-23
RHD C590A-6	Ω	C2803-22

Are the resistances less than 3 ohms?

Yes	GO to P4
No	REPAIR the circuit in question.

P4 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the PDM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PDM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Cruise Control Module (CCM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

The CCM communicates with the diagnostic scan tool through the HS-CAN2.

Possible Sources

- Fuse
- Wiring, terminals and connector
- CCM

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuse 23 (15A) is OK.

PINPOINT TEST Q : THE CRUISE CONTROL MODULE (CCM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

Q1 CHECK THE CCM (CRUISE CONTROL MODULE) VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect: CCM C1582.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1582-10		Ground

Is the voltage greater than 11 volts?

Yes	GO to Q2
No	VERIFY the BJB fuse 23 (15A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

Q2 CHECK THE CCM (CRUISE CONTROL MODULE) GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1582-4	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to Q3
No	REPAIR the circuit.

Q3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE CCM (CRUISE CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1582-8	Ω	C251-3
C1582-7	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to Q4
No	REPAIR the circuit in question.

Q4 CHECK FOR CORRECT CCM (CRUISE CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the CCM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the CCM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Head Up Display (HUD) Module Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 146 for schematic and connector information.

Normal Operation and Fault Conditions

The HUD module communicates with the diagnostic scan tool through the HS-CAN2.

Possible Sources

- Fuse
- Wiring, terminals and connector
- HUD module

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuse 23 (15A) is OK.

PINPOINT TEST R : THE HEAD UP DISPLAY (HUD) MODULE DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

R1 CHECK THE HUD (HEAD UP DISPLAY) MODULE VOLTAGE SUPPLY CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect: HUD Module C2395.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2395-4	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to R2
No	VERIFY the BJB fuse 23 (15A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

R2 CHECK THE HUD (HEAD UP DISPLAY) MODULE GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2395-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to R3

No	REPAIR the circuit.

R3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE HUD (HEAD UP DISPLAY) MODULE AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2395-3	Ω	C251-3
C2395-2	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to R4
No	REPAIR the circuit in question.

R4 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) MODULE OPERATION

- Ignition OFF.
- Disconnect and inspect the HUD module connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the HUD module connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module - LHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation). REFER to: Head Up Display (HUD) Module - RHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Trailer Module (TRM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 95 for schematic and connector information.

Normal Operation and Fault Conditions

The TRM communicates on the MS-CAN and communicates with the diagnostic scan tool through the HS-CAN2. Diagnostic messages are sent/received through the HS-CAN2 circuits at the DLC, and translated through the GWM to the MS-CAN.

Visual Inspection and Diagnostic Pre-checks

Verify BJB fuse 87 (40A) is OK.

PINPOINT TEST S : THE TRM (TRAILER MODULE) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

S1 CHECK THE TRM (TRAILER MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect: TRM C2498.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2498A-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to S2
No	VERIFY BJB fuse 87 (40A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

S2 CHECK THE TRM (TRAILER MODULE) GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect: TRM C4397B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2498B-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to S3
No	REPAIR the circuit.

S3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE TRM (TRAILER MODULE) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

- Disconnect: GWM C2803.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2498B-3	Ω	C2803-23
C2498B-2	Ω	C2803-22

Are the resistances less than 3 ohms?

Yes	GO to S4
No	REPAIR the circuit in question.

S4 CHECK FOR CORRECT TRM (TRAILER MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the TRM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the TRM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new TRM. REFER to: Trailer Module (TRM) (417-01 Exterior Lighting, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The SCCM Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 43 for schematic and connector information.

Normal Operation and Fault Conditions

The SCCM communicates on the HS-CAN2.

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 13 (7.5A) is OK.

PINPOINT TEST T : THE SCCM (STEERING COLUMN CONTROL MODULE) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

T1 CHECK THE SCCM (STEERING COLUMN CONTROL MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect: SCCM C226.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C226A-7		Ground

Is the voltage greater than 11 volts?

Yes	GO to T2
No	VERIFY BCM fuse 13 (7.5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

T2 CHECK THE SCCM (STEERING COLUMN CONTROL MODULE) GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C226A-5	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to T3
No	REPAIR the circuit.

T3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE SCCM (STEERING COLUMN CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C226A-3	Ω	C251-3
C226A-4	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to T4
No	REPAIR the circuit in question.

T4 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the SCCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the SCCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM/clockspring assembly. REFER to: Clockspring (501-20 Supplemental Restraint System) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Gateway Module (GWM) Does Not Respond To The Diagnostic Scan Tool

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The GWM communicates with the diagnostic scan tool through the HS-CAN1 and HS-CAN2. The GWM operates as a gateway for communication between the modules on HS-CAN1, HS-CAN2, HS-CAN3 and MS-CAN.

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuses 13 (7.5A) and fuse 15 (10A) is OK.

PINPOINT TEST U : THE GATEWAY MODULE (GWM) DOES NOT RESPOND TO THE DIAGNOSTIC SCAN TOOL

U1 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) TERMINATION RESISTANCE

- Ignition OFF.
- Disconnect negative battery cable.
- Disconnect the diagnostic scan tool cable from the DLC.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

Is the resistance between 54 and 66 ohms?

Yes	GO to U3
No	GO to U2

U2 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) CIRCUITS BETWEEN THE GWM (GATEWAY MODULE A) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

- Disconnect GWM C2803.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-20 (component side)	Ω	C251-6
C2803-19 (component side)	Ω	C251-14

Are the resistances less than 3 ohms?

Yes	GO to U3
No	GO to U9

U3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) TERMINATION RESISTANCE

- Measure:

Positive Lead	Measurement / Action	Negative Lead

C251-3	Ω	C251-11

Is the resistance between 54 and 66 ohms?

Yes	GO to U5
No	GO to U4

U4 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE GWM (GATEWAY MODULE A) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-18 (component side)	Ω	C251-3
C2803-17 (component side)	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to U5
No	GO to U9

U5 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) TERMINATION RESISTANCE, COMPONENT SIDE

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-23 (component side)	Ω	C2803-22 (component side)

Is the resistance between 108 and 132 ohms?

Yes	GO to U6
No	GO to U9

U6 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) TERMINATION RESISTANCE, COMPONENT SIDE

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-16 (component side)	Ω	C2803-15 (component side)

Is the resistance between 108 and 132 ohms?

Yes	GO to U7

No	GO to U9

U7 CHECK THE GWM (GATEWAY MODULE A) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Connect negative battery cable.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-13		Ground
C2803-24		Ground

Is the voltage greater than 11 volts?

Yes	GO to U8
No	VERIFY BCM fuse 13 (7.5A) and fuse 15 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

U8 CHECK THE GWM (GATEWAY MODULE A) GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-1	Ω	Ground
C2803-14	Ω	Ground

Are the resistances less than 3 ohms?

Yes	GO to U9
No	REPAIR the circuit in question.

U9 CHECK FOR CORRECT GWM (GATEWAY MODULE A) OPERATION

- Ignition OFF.
- Disconnect and inspect all GWM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the GWM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GWM. REFER to: Gateway Module A (GWM) (418-00 Module Communications Network, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by

	module connections. ADDRESS the root cause of any connector or pin issues.

No High Speed Controller Area Network 1 (HS-CAN1) Communication, All Modules Are Not Responding

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The HS-CAN1 modules communicate with the diagnostic scan tool directly through the DLC circuits.
REFER to: Communications Network (418-00 Module Communications Network) .

Possible Sources

- Fuse
- Wiring, terminals or connectors
- APIM
- BCM
- GWM
- PCM

PINPOINT TEST V : NO HIGH SPEED CONTROLLER AREA NETWORK 1 (HS-CAN1) COMMUNICATION, ALL MODULES ARE NOT RESPONDING

NOTE: *Various modules set network DTCs during this test procedure. Clear DTCs from all modules after completing the diagnostic procedure.*

V1 CHECK THE DLC (DATA LINK CONNECTOR) PINS FOR DAMAGE

- Ignition OFF.
- Disconnect the diagnostic scan tool cable from the DLC.
- Inspect the DLC pins 6 and 14 for damage.

Are DLC pins 6 and 14 OK?

Yes	GO to V2
No	REPAIR the DLC as necessary.

V2 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) TERMINATION RESISTANCE

- Disconnect the negative battery cable.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

Is the resistance between 54 and 66 ohms?

Yes	GO to V3
No	GO to V5

V3 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (+) AND HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (-) CIRCUITS FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	Ground
C251-14	Ω	Ground

Are the resistances greater than 1,000 ohms?

Yes	GO to V4
No	GO to V11

V4 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (+) AND HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (-) CIRCUITS FOR A SHORT TO VOLTAGE

- Connect the negative battery cable.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	V	Ground
C251-14	V	Ground

Is the voltage greater than 6 volts on either circuit?

Yes	REPAIR the circuit in question.
No	GO to V12

V5 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) TERMINATION RESISTOR

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

Is the resistance between 108 and 132 ohms?

Yes	GO to V6
No	GO to V8

V6 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) TERMINATION RESISTOR WITH THE PCM (POWERTRAIN CONTROL MODULE) DISCONNECTED

- Disconnect PCM C1232A (2.2L & 3.2L Duratorq).
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

C251-6	Ω	C251-14

Is the resistance between 108 and 132 ohms?

Yes	GO to V7
No	GO to V16

V7 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) CIRCUITS BETWEEN THE PCM (POWERTRAIN CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

- Measure:

2.2L and 3.2L Duratorq

Positive Lead	Measurement / Action	Negative Lead
C1232A-10	Ω	C251-6
C1232A-11	Ω	C251-14

2.5L Duratec

Positive Lead	Measurement / Action	Negative Lead
C175A-10	Ω	C251-6
C175A-11	Ω	C251-14

Are the resistances less than 3 ohms?

Yes	GO to V12
No	REPAIR the circuit in question.

V8 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (+) AND HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (-) CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

Is the resistance less than 3 ohms?

Yes	GO to V10
No	GO to V9

V9 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (+) AND HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (-) CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

Is the resistance greater than 10,000 ohms?

Yes	REPAIR the DLC or REPAIR the circuit in question.
No	A capacitor internal to a module can still be draining, causing irregular resistance readings. WAIT 5 minutes. REPEAT the pinpoint test. If the concern is still present, REPAIR the circuit.

V10 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (+) AND HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (-) CIRCUITS FOR A SHORT TOGETHER WITH THE MODULES DISCONNECTED

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	C251-14

- Disconnect modules one at a time until the resistance is greater than 3 ohms.
  - APIM C2383 (4.2-inch display) or C2389 (8-inch touchscreen)
  - BCM C2280
  - PCM C1232A (2.2L & 3.2L Duratorq) or C175 (2.5L Duratec)

Did the resistance change to greater than 3 ohms with one of the modules disconnected?

Yes	For the APIM, GO to V19 For the BCM, GO to V18 For the PCM, GO to V17
No	REPAIR the circuit in question. CONNECT all modules.

V11 CHECK THE HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (+) AND HS-CAN1 (HIGH SPEED-CONTROLLER AREA NETWORK 1) (-) CIRCUITS FOR A SHORT TO GROUND WITH THE MODULES DISCONNECTED

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-6	Ω	Ground
C251-14	Ω	Ground

- Disconnect modules one at a time until the resistance to ground is greater than 1,000 ohms.
  - APIM C2383 (4.2-inch display) or C2389 (8-inch touchscreen)
  - BCM C2280B
  - PCM C1232A (2.2L & 3.2L Duratorq) or C175 (2.5L Duratec)

Did the resistance change to greater than 1,000 ohms with one of the modules disconnected?

Yes	For the APIM, GO to V19

	For the BCM, GO to V18 For the PCM, GO to V17
No	REPAIR the circuit in question. CONNECT all modules.

V12 CHECK FOR RESTORED COMMUNICATION WITH THE PCM (POWERTRAIN CONTROL MODULE) DISABLED

NOTE: *Establish an IDS session prior to disabling the PCM in this test step. If the PCM has failed communication during multiple attempts to identify the vehicle, first identify the vehicle manually by entering a PCM part number, calibration number or tear tag when prompted by IDS. When a vehicle is manually identified by a PCM part number, calibration number or tear tag, the IDS does not automatically run a network test. Manually select and run the network test. When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: BJB fuses 7 (20A) and 26 (10A).
- Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test A
No	INSTALL the removed fuse. GO to V13

V13 CHECK FOR RESTORED COMMUNICATION WITH THE GWM (GATEWAY MODULE A) DISABLED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: BCM fuse 13 (7.5A) and fuse 15 (10A).
- Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test U
No	INSTALL the removed fuse. GO to V14

V14 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE BCM (BODY CONTROL MODULE) DISABLED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: High current BJB fuse 2 (125A) to disable the BCM.
- Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN1 modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test F
No	INSTALL the removed fuse. GO to V15

V15 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE APIM (SYNC MODULE) DISABLED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: BCM fuse 32 (10A) to disable the APIM.
- Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN1 modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test L
No	INSTALL the removed fuse. GO to V16

V16 CHECK FOR CORRECT GWM (GATEWAY MODULE A) OPERATION

- Ignition OFF.
- Disconnect and inspect the GWM connector and related in-line connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the GWM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GWM. REFER to: Gateway Module A (GWM) (418-00 Module Communications Network, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

V17 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the PCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

V18 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the BCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors and related in-line connectors. Make sure they seat and latch correctly.

- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM module. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

V19 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the APIM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,   Click here to access Guided Routine (APIM).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

No High Speed Controller Area Network 2 (HS-CAN2) Communication, All Modules Are Not Responding

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The HS-CAN2 modules communicate with the diagnostic scan tool directly through the DLC circuits.
REFER to: Communications Network (418-00 Module Communications Network) .

Possible Sources

- Fuse
- Wiring, terminals or connectors
- ABS module
- CCM (if equipped)
- GWM
- HUD module (if equipped)
- IPMA (if equipped)
- PSCM
- SCCM (connected to the clockspring assembly)
- RCM

PINPOINT TEST W : NO HIGH SPEED CONTROLLER AREA NETWORK 2 (HS-CAN2) COMMUNICATION, ALL MODULES ARE NOT RESPONDING

NOTE: *Various modules set network DTCs during this test procedure. Clear DTCs from all modules after completing the diagnostic procedure.*

completing the diagnostic procedure.

W1 CHECK THE DLC (DATA LINK CONNECTOR) PINS FOR DAMAGE

- Ignition OFF.
- Disconnect the diagnostic scan tool cable from the DLC.
- Inspect the DLC pins 3 and 11 for damage.

Are DLC pins 3 and 11 OK?

Yes	GO to W2
No	REPAIR the DLC as necessary.

W2 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) TERMINATION RESISTANCE

- Disconnect negative battery cable.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	C251-11

Is the resistance between 54 and 66 ohms?

Yes	GO to W3
No	GO to W5

W3 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (+) AND HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (-) CIRCUITS FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	Ground
C251-11	Ω	Ground

Are the resistances greater than 1,000 ohms?

Yes	GO to W4
No	GO to W11

W4 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (+) AND HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (-) CIRCUITS FOR A SHORT TO VOLTAGE

- Connect negative battery cable.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3		Ground
C251-11		Ground

C251-11	V	Ground

Is the voltage greater than 6 volts on either circuit?

Yes	REPAIR the circuit in question.
No	GO to W12

W5 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) TERMINATION RESISTOR

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	C251-11

Is the resistance between 108 and 132 ohms?

Yes	GO to W6
No	GO to W8

W6 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) TERMINATION RESISTOR WITH THE GWM (GATEWAY MODULE A) DISCONNECTED

- Disconnect: GWM C2803.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	C251-11

Is the resistance between 108 and 132 ohms?

Yes	GO to W7
No	GO to W25

W7 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) CIRCUITS BETWEEN THE SCCM (STEERING COLUMN CONTROL MODULE) AND THE DLC (DATA LINK CONNECTOR) FOR AN OPEN

- Disconnect: SCCM C226A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C226A-3	Ω	C251-3
C226A-4	Ω	C251-11

Are the resistances less than 3 ohms?

Yes	GO to W32
No	REPAIR the circuit in question.

W8 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (+) AND HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (-) CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	C251-11

Is the resistance less than 3 ohms?

Yes	GO to W10
No	GO to W9

W9 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (+) AND HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (-) CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	C251-11

Is the resistance greater than 10,000 ohms?

Yes	REPAIR the DLC or REPAIR the circuit in question.
No	A capacitor internal to a module can still be draining, causing irregular resistance readings. WAIT 5 minutes. REPEAT the pinpoint test. If the concern is still present, REPAIR the circuit.

W10 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (+) AND HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (-) CIRCUITS FOR A SHORT TOGETHER WITH THE MODULES DISCONNECTED

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	C251-11

- Disconnect modules one at a time until the resistance is greater than 3 ohms.
  - ABS module C135
  - CCM C1582 (if equipped)
  - HUD module C2395 (if equipped)
  - IPMA C9012 (if equipped)
  - PSCM C1463
  - RCM C310B
  - SASM C226 (if equipped)

- SCCM C226

Did the resistance change to greater than 3 ohms with one of the modules disconnected?

Yes	For the ABS module, GO to W24 For the CCM, GO to W26 For the HUD module, GO to W27 For the IPMA, GO to W28 For the PSCM, GO to W29 For the RCM, GO to W30 For the SASM, GO to W31 For the SCCM, GO to W32
No	REPAIR the circuits.

W11 CHECK THE HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (+) AND HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) (-) CIRCUITS FOR A SHORT TO GROUND WITH THE MODULES DISCONNECTED

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-3	Ω	Ground
C251-11	Ω	Ground

- Disconnect modules one at a time until the resistance to ground is greater than 1,000 ohms.
  - ABS module C135
  - CCM C1582 (if equipped)
  - HUD module C2395 (if equipped)
  - IPMA C9012 (if equipped)
  - PSCM C1463
  - RCM C310
  - SASM C226 (if equipped)
  - SCCM C226

Did the resistance change to greater than 1,000 ohms with one of the modules disconnected?

Yes	For the ABS module, GO to W24 For the CCM, GO to W26 For the HUD module, GO to W27 For the IPMA, GO to W28 For the PSCM, GO to W29 For the RCM, GO to W30 For the SASM, GO to W31 For the SCCM, GO to W32
No	REPAIR the circuit in question. CONNECT all modules.

W12 CHECK FOR RESTORED COMMUNICATION WITH THE GWM (GATEWAY MODULE A) AND THE SCCM (STEERING COLUMN CONTROL MODULE) DISABLED

- **NOTE:** *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

  Disconnect: BCM fuse 13 (7.5A).
- Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	INSTALL the removed fuse. GO to W13
No	INSTALL the removed fuse. GO to W14

W13 CHECK FOR RESTORED COMMUNICATION WITH THE SCCM (STEERING COLUMN CONTROL MODULE) DISCONNECTED

- **NOTE:** *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

  Disconnect: SCCM C226.
- Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	CONNECT the SCCM. GO to Pinpoint Test D
No	CONNECT the SCCM. GO to Pinpoint Test U

W14 CHECK FOR RESTORED COMMUNICATION WITH THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DISABLED

- **NOTE:** *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

  Disconnect: BJB fuses 25 (10A), 69 (30A) and 82 (60A).
- Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	INSTALL the removed fuses. GO to Pinpoint Test B
No	INSTALL the removed fuses. GO to W15

W15 VERIFY VEHICLE EQUIPMENT - ADAPTIVE CRUISE CONTROL OR SPLIT VIEW CAMERA

- Inspect the vehicle for an adaptive cruise control system or a split view camera.

Is the vehicle equipped with adaptive cruise control or a split view camera?

Yes	GO to W16
No	GO to W18

W16 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE CCM (CRUISE CONTROL MODULE) , HUD (HEAD UP DISPLAY) MODULE AND IPMB (IMAGE PROCESSING MODULE B) THE DISABLED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: BJB fuse 23 (15A) to disable the HUD module, CCM and IPMB (if equipped).
- Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN2 modules pass the network test?

Yes	INSTALL the removed fuse. GO to W17
No	INSTALL the removed fuse. GO to W18

W17 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE HUD (HEAD UP DISPLAY) MODULE AND CCM (CRUISE CONTROL MODULE) DISCONNECTED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: HUD module C2395 (if equipped).
- Using a diagnostic scan tool, perform the network test.

- Disconnect: HUD module C2395 (if equipped).
- Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN2 modules pass the network test with each module disconnected?

Yes	CONNECT the modules. For restored communication with the HUD module disconnected, GO to Pinpoint Test R For restored communication with the CCM disconnected, GO to Pinpoint Test Q
No	CONNECT the modules. GO to W18

W18 VERIFY VEHICLE EQUIPMENT - IPMA (IMAGE PROCESSING MODULE A)

- Inspect the vehicle for an IPMA.

Is the vehicle equipped with an IPMA?

Yes	GO to W19
No	GO to W20

W19 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE IPMA (IMAGE PROCESSING MODULE A) DISABLED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: BCM fuse 36 (15A) to disable the IPMA (if equipped)
- Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN2 modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test J
No	INSTALL the removed fuse. GO to W20

W20 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE SASM (STEERING ANGLE SENSOR MODULE)

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: BCM fuse 13 (7.5A) to disable the SASM.
- Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN2 modules pass the network test?

Yes	INSTALL the removed fuse. GO to W21
No	INSTALL the removed fuse. GO to W22

W21 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE SASM (STEERING ANGLE SENSOR MODULE) DISCONNECTED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: SASM C226.
- Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN2 modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test T

No	INSTALL the removed fuse. GO to W22

W22 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE PSCM (POWER STEERING CONTROL MODULE) DISABLED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: High Current BJB (125A) and BJB fuse 19 (10A) to disable the PSCM.
- Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN2 modules pass the network test?

Yes	INSTALL the removed fuses. GO to Pinpoint Test N
No	INSTALL the removed fuses. GO to W23

W23 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE RCM (RESTRAINTS CONTROL MODULE) DISABLED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: BCM fuse 19 (5A) to disable the RCM.
- Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test C
No	INSTALL the removed fuse. GO to W24

W24 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect and inspect the ABS module connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the ABS module connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module - Vehicles With: Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control) . REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

W25 CHECK FOR CORRECT GWM (GATEWAY MODULE A) OPERATION

- Ignition OFF.
- Disconnect and inspect the GWM connector and related in-line connectors.
- Repair:

- corrosion (install new connector or terminals - clean module pins)
- damaged or bent pins - install new terminals/pins
- pushed-out pins - install new pins as necessary

- Reconnect the GWM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GWM. REFER to: Gateway Module A (GWM) (418-00 Module Communications Network, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

W26 CHECK FOR CORRECT CCM (CRUISE CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the CCM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the CCM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

W27 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) MODULE OPERATION

- Ignition OFF.
- Disconnect and inspect the HUD module connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the HUD module connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module - LHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation). REFER to: Head Up Display (HUD) Module - RHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

W28 CHECK FOR CORRECT IPMA (IMAGE PROCESSING MODULE A) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPMA connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPMA module connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPMA. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

W29 CHECK FOR CORRECT PSCM (POWER STEERING CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the PSCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PSCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, REFER to the EPAS Symptom Chart.   Click here to access Guided Routine (EPAS).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

W30 CHECK FOR CORRECT RCM (RESTRAINTS CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the RCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the RCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

W31 CHECK FOR CORRECT SASM (STEERING ANGLE SENSOR MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the SASM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the SASM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new clockspring assembly. REFER to: Clockspring (501-20 Supplemental Restraint System) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

W32 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the SCCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the SCCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

No High Speed Controller Area Network 3 (HS-CAN3) Communication, All Modules Are Not Responding

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

Diagnostic messages sent/received between the diagnostic scan tool and the HS-CAN3 modules are accessed through the HS-CAN2 circuits on the DLC.
REFER to: Communications Network (418-00 Module Communications Network) .

Possible Sources

- Fuse
- Wiring, terminals or connectors
- ACM
- APIM

- DSP (if equipped)
- FCDIM (if equipped)
- IPC
- GWM

PINPOINT TEST X : NO HIGH SPEED CONTROLLER AREA NETWORK 3 (HS-CAN3) COMMUNICATION, ALL MODULES ARE NOT RESPONDING

NOTE: *Various modules set network DTCs during this test procedure. Clear DTCs from all modules after completing the diagnostic procedure.*

X1 CHECK THE DLC (DATA LINK CONNECTOR) PINS FOR DAMAGE

- Ignition OFF.
- Disconnect the diagnostic scan tool cable from the DLC.
- Inspect the DLC pins 3 and 11 for damage.

Are DLC pins 3 and 11 OK?

Yes	GO to X2
No	REPAIR the DLC as necessary.

X2 CHECK FOR HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) COMMUNICATION

- Using a diagnostic scan tool, perform a network test.

Does the RCM pass the network test?

Yes	GO to X3
No	GO to Pinpoint Test W

X3 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) TERMINATION RESISTANCE

- Disconnect: GWM C2803.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-16	Ω	C2803-15

Is the resistance between 108 and 132 ohms?

Yes	GO to X4
No	GO to X6

X4 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (+) AND HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (-) CIRCUITS FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-16	Ω	Ground
C2803-15	Ω	Ground

Are the resistances greater than 1,000 ohms?

Yes	GO to X5
No	GO to X11

X5 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (+) AND HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (-) CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-16		Ground
C2803-15		Ground

Are the voltages greater than 6 volts?

Yes	REPAIR the circuit in question.
No	GO to X12

X6 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) TERMINATION RESISTOR, COMPONENT SIDE

- Disconnect: GWM C2803.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-16 (component side)	Ω	C2803-15 (component side)

Is the resistance between 108 and 132 ohms?

Yes	GO to X8
No	GO to X7

X7 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) TERMINATION RESISTOR, HARNESS SIDE

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-16	Ω	C2803-15

Is the resistance between 108 and 132 ohms?

Yes	GO to X9
No	GO to X21

No	GO to X21

X8 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) CIRCUITS BETWEEN THE IPC (INSTRUMENT PANEL CLUSTER) AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

- Disconnect: IPC C220.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-25	Ω	C2803-16
C220-26	Ω	C2803-15

Are the resistances less than 3 ohms?

Yes	GO to X20
No	REPAIR the circuit in question.

X9 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (+) AND HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (-) CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-16	Ω	C2803-15

Is the resistance less than 3 ohms?

Yes	GO to X10
No	GO to X12

X10 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (+) AND HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (-) CIRCUITS FOR A SHORT TOGETHER WITH THE MODULES DISCONNECTED

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-16	Ω	C2803-15

- Disconnect modules one at a time until the resistance is greater than 3 ohms.
  - APIM C2383 (4.2-inch display) or C2389 (8-inch touchscreen)
  - ACM C240A
  - FCDIM C2123 (if equipped)
  - IPC C220

Did the resistance change to greater than 3 ohms with one of the modules disconnected?

Yes	For the APIM, GO to X17 For the ACM, GO to X18 For the FCDIM, GO to X19

	For the IPC, GO to X20
No	REPAIR the circuits in question.

X11 CHECK THE HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (+) AND HS-CAN3 (HIGH SPEED-CONTROLLER AREA NETWORK 3) (-) CIRCUITS FOR A SHORT TO GROUND WITH THE MODULES DISCONNECTED

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-16	Ω	Ground
C2803-15	Ω	Ground

- Disconnect modules one at a time until the resistance to ground is greater than 1,000 ohms.
  - APIM C2383 (4.2-inch display) or C2389 (8-inch touchscreen)
  - ACM C240A
  - FCDIM C2123 (if equipped)
  - IPC C220

Are the resistances greater than 1,000 ohms?

Yes	For the APIM, GO to X17 For the ACM, GO to X18 For the FCDIM, GO to X19 For the IPC, GO to X20
No	REPAIR the circuit in question. CONNECT all modules.

X12 CHECK FOR RESTORED COMMUNICATION WITH THE GWM (GATEWAY MODULE A) AND IPC (INSTRUMENT PANEL CLUSTER) DISABLED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: BCM fuse 13 (7.5A) to disable the IPC and GWM.
- Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN3 modules pass the network test?

Yes	INSTALL the fuse. GO to X13
No	INSTALL the fuse. GO to X16

X13 CHECK FOR RESTORED COMMUNICATION WITH THE IPC (INSTRUMENT PANEL CLUSTER) DISCONNECTED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: IPC C220.
- Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN3 modules pass the network test?

Yes	CONNECT the IPC. GO to Pinpoint Test E
No	CONNECT the IPC. GO to Pinpoint Test U

X14 CHECK FOR RESTORED COMMUNICATION WITH THE APIM (SYNC MODULE) AND FCDIM

X14 CHECK FOR RESTORED COMMUNICATION WITH THE APIM (SYNC MODULE) AND FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) DISABLED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: BCM fuse 32 (10A) to disable the APIM and FCDIM (if equipped).
- Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN3 modules pass the network test?

Yes	INSTALL the removed fuse. If equipped with a FCDIM, GO to X15 If not equipped with a FCDIM, GO to Pinpoint Test L
No	INSTALL the removed fuse. GO to X16

X15 CHECK FOR RESTORED COMMUNICATION WITH THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) DISCONNECTED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: FCDIM C2123.
- Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN3 modules pass the network test?

Yes	CONNECT the FCDIM. GO to Pinpoint Test I
No	CONNECT the FCDIM. GO to Pinpoint Test L

X16 CHECK FOR RESTORED COMMUNICATION WITH THE ACM (AUDIO FRONT CONTROL MODULE) DISABLED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: BCM fuse 33 (20A).
- Using a diagnostic scan tool, perform the network test.

Do all other HS-CAN3 modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test H
No	INSTALL the removed fuse. GO to X17

X17 CHECK THE APIM (SYNC MODULE) FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the APIM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,   Click here to access Guided Routine (APIM).
No	The system is operating correctly at this time. The concern may have been caused by

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

X18 CHECK THE ACM (AUDIO FRONT CONTROL MODULE) FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the ACM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

X19 CHECK THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect and inspect the FCDIM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the FCDIM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

X20 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPC connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center

	and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

X21 CHECK THE GWM (GATEWAY MODULE A) FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect and inspect the GWM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the GWM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GWM. REFER to: Gateway Module A (GWM) (418-00 Module Communications Network, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

No Medium Speed Controller Area Network (MS-CAN) Communication, All Modules Are Not Responding

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

Diagnostic messages sent/received between the diagnostic scan tool and the MS-CAN modules are accessed through the HS-CAN2 circuits on the DLC.
REFER to: Communications Network (418-00 Module Communications Network) .

Possible Sources

- Fuse
- Wiring, terminals or connectors
- APIM (if equipped with 8-inch touchscreen)
- DDM
- FCIM
- GPSM
- GWM
- HSWM (if equipped)
- PDM
- RGTM (if equipped)
- RTM
- SCME (if equipped)
- SODL (if equipped)
- SODR (if equipped)
- TRM (if equipped)

PINPOINT TEST Y : NO MEDIUM SPEED CONTROLLER AREA NETWORK (MS-CAN) COMMUNICATION, ALL MODULES ARE NOT RESPONDING

NOTE: *Various modules set network DTCs during this test procedure. Clear DTCs from all modules after completing the diagnostic procedure.*

Y1 CHECK THE DLC (DATA LINK CONNECTOR) PINS FOR DAMAGE

Y1 CHECK THE DLC (DATA LINK CONNECTOR) PINS FOR DAMAGE

- Ignition OFF.
- Disconnect the diagnostic scan tool cable from the DLC.
- Inspect the DLC pins 3 and 11 for damage.

Are DLC pins 3 and 11 OK?

Yes	GO to Y2
No	REPAIR the DLC as necessary.

Y2 CHECK FOR HS-CAN2 (HIGH SPEED-CONTROLLER AREA NETWORK 2) COMMUNICATION

- Using a diagnostic scan tool, perform a network test.

Does the RCM pass the network test?

Yes	GO to Y3
No	GO to Pinpoint Test W

Y3 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) TERMINATION RESISTANCE

- Disconnect: GWM C2803.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-23	Ω	C2803-22

Is the resistance between 108 and 132 ohms?

Yes	GO to Y4
No	GO to Y6

Y4 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (+) AND MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (-) CIRCUITS FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-23	Ω	Ground
C2803-22	Ω	Ground

Are the resistances greater than 1,000 ohms?

Yes	GO to Y5
No	GO to Y11

Y5 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (+) AND MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (-) CIRCUITS FOR A SHORT TO VOLTAGE

- Connect the negative battery cable.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-23		Ground
C2803-22		Ground

Are the voltages greater than 6 volts?

Yes	REPAIR the circuit in question.
No	GO to Y12

Y6 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) TERMINATION RESISTOR, COMPONENT SIDE

- Disconnect: GWM C2803.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-23 (component side)	Ω	C2803-22 (component side)

Is the resistance between 108 and 132 ohms?

Yes	GO to Y8
No	GO to Y7

Y7 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) TERMINATION RESISTOR, HARNESS SIDE

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-23	Ω	C2803-22

Is the resistance between 108 and 132 ohms?

Yes	GO to Y9
No	GO to Y21

Y8 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) CIRCUITS BETWEEN THE FCIM AND THE GWM (GATEWAY MODULE A) FOR AN OPEN

- Disconnect: FCIM C2402A
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-17	Ω	C2803-23
C2402A-18	Ω	C2803-22

Are the resistances less than 3 ohms?

Yes	GO to Y20
No	REPAIR the circuit in question.

Y9 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (+) AND MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (-) CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-23	Ω	C2803-22

Is the resistance less than 3 ohms?

Yes	GO to Y10
No	GO to Y12

Y10 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (+) AND MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (-) CIRCUITS FOR A SHORT TOGETHER WITH MODULES DISCONNECTED

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2803-23	Ω	C2803-22

- Disconnect modules one at a time until the resistance is greater than 3 ohms.
  - APIM C2389 (if equipped)
  - DDM C501ALHD or C653ARHD
  - FCIM C2402A
  - GPSM C9050
  - PDM C652ALHD or C590ARHD
  - RGTM C4174 (if equipped)
  - RTM C9026
  - TRM C4297 (if equipped)

Did the resistance change to greater than 3 ohms with one of the modules disconnected?

Yes	For the APIM, GO to Y19 For the DDM, GO to Y22 For the GPSM, GO to Y23 For the FCIM, GO to Y20 For the PDM, GO to Y24 For the RTM, GO to Y26 For the RGTM, GO to Y25 For the TRM, GO to Y27
No	REPAIR the circuits

No	REPAIR the circuits.

Y11 CHECK THE MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (+) AND MS-CAN (MEDIUM SPEED-CONTROLLER AREA NETWORK) (-) CIRCUITS FOR A SHORT TO GROUND WITH THE MODULES DISCONNECTED

- Measure

Positive Lead	Measurement / Action	Negative Lead
C2803-23	Ω	Ground
C2803-22	Ω	Ground

- Disconnect modules one at a time until the resistance to ground is greater than 1,000 ohms.
  - APIM C2389 (if equipped)
  - DDM C501ALHD or C653ARHD
  - FCIM C2402A
  - GPSM C9050
  - PDM C652ALHD or C590ARHD
  - RGTM C4174 (if equipped)
  - RTM C9026
  - TRM C4297 (if equipped)

Did the resistance change to greater than 1,000 ohms with one of the modules disconnected?

Yes	For the APIM, GO to Y19 For the DDM, GO to Y22 For the GPSM, GO to Y23 For the FCIM, GO to Y20 For the PDM, GO to Y24 For the RGTM, GO to Y25 For the RTM, GO to Y26 For the TRM, GO to Y27
No	REPAIR the circuit in question.

Y12 CHECK FOR RESTORED COMMUNICATION WITH THE GWM (GATEWAY MODULE A) DISABLED

- **NOTE:** *When re-running the network test, close the Network Test application first or the screen display reverts back to the prior run Network Test results.*

  Disconnect BCM fuse 13 (7.5A).
- Using a diagnostic scan tool, perform the network test.

Do all other MS-CAN modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test U
No	INSTALL the removed fuse. GO to Y13

Y13 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE FCIM (FRONT CONTROLS INTERFACE MODULE) DISABLED

- Disconnect: BCM fuse 12 (7.5A) to disable the FCIM.
- Using a diagnostic scan tool, perform the network test.

Do all other MS-CAN modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test G
No	INSTALL the removed fuse. GO to Y14

	GO to Y14

Y14 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE DDM (DRIVER DOOR MODULE) AND PDM (PASSENGER DOOR MODULE) DISABLED

- **NOTE:** *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

  Disable modules one at a time until other MS-CAN modules pass the network test. Skip to the end once network operation is restored.
- Disconnect: BCM fuse 25 (30A) to disable the DDM.
- Using a diagnostic scan tool, perform a network test.
- Disconnect:BCM fuse 26 (30A) to disable the PDM.
- Using a diagnostic scan tool, perform a network test.

Do all other MS-CAN modules pass the network test?

Yes	INSTALL the removed fuses. For restored communication with the DDM disabled, GO to Pinpoint Test O For restored communication with the PDM disabled, GO to Pinpoint Test P
No	INSTALL the removed fuses. GO to Y15

Y15 CHECK FOR RESTORED COMMUNICATION WITH THE GPSM (GLOBAL POSITIONING SYSTEM MODULE) , APIM (SYNC MODULE) AND RTM (RADIO TRANSCEIVER MODULE) DISABLED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: BCM fuse 32 (10A) to disable the GPSM, APIM (if equipped with touchscreen) and RTM (if equipped).
- Using a diagnostic scan tool, perform the network test.

Do all other MS-CAN modules pass the network test?

Yes	INSTALL the removed fuse. GO to Y16
No	INSTALL the removed fuse. GO to Y16

Y16 CHECK FOR RESTORED COMMUNICATION WITH THE GPSM (GLOBAL POSITIONING SYSTEM MODULE) AND RTM (RADIO TRANSCEIVER MODULE) DISCONNECTED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: GPSM C2398.
- Using a diagnostic scan tool, perform the network test.
- Disconnect: RTM C9026 (if equipped).
- Using a diagnostic scan tool, perform the network test.

Do all other MS-CAN modules pass the network test?

Yes	CONNECT the module. For a communication failure with the GPSM, GO to Pinpoint Test K For a communication failure with the RTM, GO to Pinpoint Test M
No	CONNECT the module. If equipped with a touchscreen, GO to Pinpoint Test L If not equipped with a touchscreen, the system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Y17 VERIFY VEHICLE EQUIPMENT - TRM (TRAILER MODULE)

- Inspect the vehicle for a TRM.

Is the vehicle equipped with a TRM?

Yes	GO to Y18
No	GO to Y19

Y18 CHECK FOR RESTORED NETWORK COMMUNICATION WITH THE TRM (TRAILER MODULE) DISABLED

NOTE: *When re-running the network test, close the network test application first or the screen display reverts back to the prior network test results.*

- Disconnect: BJB fuse 87 (40A) to disable the TRM (if equipped).
- Using a diagnostic scan tool, perform the network test.

Do all other modules pass the network test?

Yes	INSTALL the removed fuse. GO to Pinpoint Test S
No	GO to Y19

Y19 CHECK THE APIM (SYNC MODULE) FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the APIM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,   Click here to access Guided Routine (APIM).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Y20 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect and inspect all the FCIM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the FCIM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS or any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Y21 CHECK THE GWM (GATEWAY MODULE A) FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect and inspect the GWM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the GWM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GWM. REFER to: Gateway Module A (GWM) (418-00 Module Communications Network, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Y22 CHECK THE DDM (DRIVER DOOR MODULE) FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect and inspect all the DDM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the DDM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Y23 CHECK THE GPSM (GLOBAL POSITIONING SYSTEM MODULE) FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect and inspect the GPSM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the GPSM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Y24 CHECK THE PDM (PASSENGER DOOR MODULE) FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect and inspect the PDM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PDM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Y25 CHECK THE RGTM (REAR GATE TRUNK MODULE) FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect and inspect the RGTM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the RGTM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RGTM.Refer to the appropriate section in Group 501 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Y26 CHECK THE RTM (RADIO TRANSCEIVER MODULE) FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect and inspect the RTM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the RTM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RTM. REFER to: Radio Transceiver Module (RTM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Y27 CHECK THE TRM (TRAILER MODULE) FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect and inspect the TRM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the TRM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new TRM. REFER to: Trailer Module (TRM) (417-01 Exterior Lighting, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

No Power To The Data Link Connector (DLC)

Normal Operation and Fault Conditions

The diagnostic scan tool is connected to the DLC to communicate with the HS-CAN1 and HS-CAN2. The GWM translates diagnostic messages for the HS-CAN3 and the MS-CAN from the HS-CAN2. A loss of ground or poor ground at the DLC can result in network faults while the diagnostic scan tool is connected.

A DLC is fitted to the GWM. For diagnostic scan tool access, a DLC is mounted under the instrument panel, with a harness connected to the DLC at the GWM.

Possible Sources

- Fuse
- Wiring, terminals or connector
- DLC
- Diagnostic scan tool

Visual Inspection and Diagnostic Pre-checks

Verify BCM fuse 15 (10A) are OK.

PINPOINT TEST Z : NO POWER TO THE DATA LINK CONNECTOR (DLC)

Z1 CHECK THE DLC (DATA LINK CONNECTOR) PINS FOR DAMAGE

- Ignition OFF.
- Disconnect the diagnostic scan tool cable from the DLC.
- Inspect DLC pins 4, 5 and 16 for damage.

Are DLC pins 4, 5 and 16 OK?

Yes	GO to Z2
No	REPAIR the DLC as necessary.

Z2 CHECK THE DLC (DATA LINK CONNECTOR) VOLTAGE SUPPLY FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-16		Ground

Is the voltage greater than 11 volts?

Yes	GO to Z3
No	VERIFY BCM fuse 15 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

Z3 CHECK THE DLC (DATA LINK CONNECTOR) GROUND CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C251-4	Ω	Ground
C251-5	Ω	Ground

Are the resistances less than 3 ohms?

Yes	REPAIR the diagnostic scan tool.
No	REPAIR the circuit in question.

No Communication Between the Integrated Diagnostic System (IDS) and the Vehicle

Configuration

1. **WARNING: Before beginning any service procedure in this section, REFER to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. Establish a scan tool session.

3. Turn ignition to RUN.

4. The scan tool first attempts to communicate with the PCM. After establishing communication with the PCM, the scan tool then attempts to communicate with all other modules on the vehicle.

5. If an IDS session cannot be established with the vehicle, IDS may state "No communication can be established with the Powertrain Control Module (PCM)."

6. Choose "NO" when the scan tool prompts whether or not to retry communication.

7. Enter a PCM part number, tear tag or calibration number to identify the vehicle and start a session. The PCM part number and 4-character tear tag number are printed on the PCM label. If the PCM part number or tear tag number cannot be found, double-click on the Vehicle Identification Number (VIN) in the top LH corner of the PTS screen. The tear tag number is listed on the Detailed Vehicle Specification.

8. If the scan tool cannot communicate with the vehicle after manually entering the PCM part number, diagnose the PCM does not respond to the scan tool.
   Refer to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

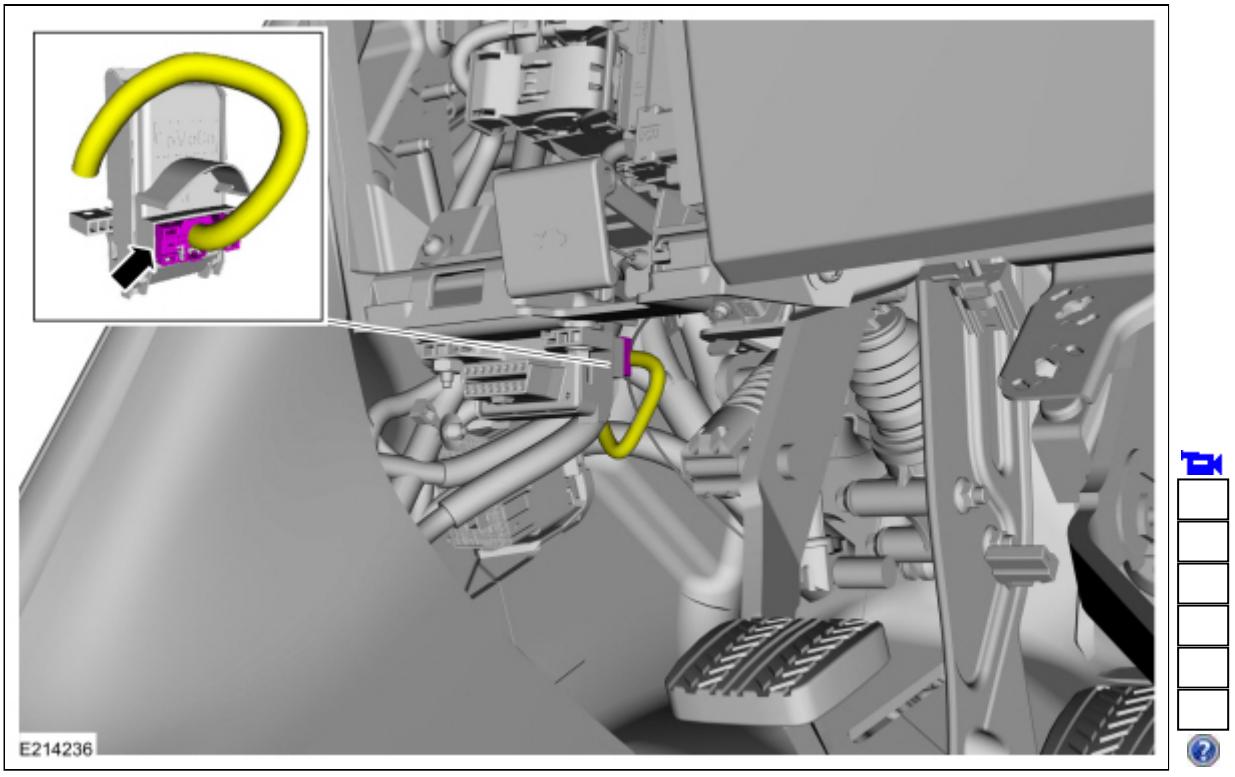
Gateway Module A (GWM)

Removal



NOTE: *Removal steps in this procedure may contain installation details.*

1. **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. **NOTE:** *If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.*

   Upload the GWM configuration to the scan tool by following the scan tool on-screen instructions.

3. 

4. *Torque*: 4 Nm

Installation

1. To install, reverse the removal procedure.
2. Download the GWM configuration information from the scan tool to the new GWM following the scan tool on-screen instructions.

Copyright © 2016 Ford Motor Company

Module Configuration - System Operation and Component Description

System Operation

Programmable Module Installation (PMI)

Programmable Module Installation (PMI) is a scan tool process which configures settings in a new module. Data used for the Programmable Module Installation (PMI) process is automatically downloaded from the original module and stored when a scan tool session is started. If this data cannot be retrieved from the module being replaced, the scan tool may prompt for As-Built data entry or display a list of parameter values that need to be manually selected. Some modules are reprogrammed during Programmable Module Installation (PMI) when a strategy/calibration update is available.

It is important that the scan tool identifies the vehicle and obtains configuration data prior to removing any modules. The new module must be able to communicate with the scan tool in order to carry out Programmable Module Installation (PMI).

Module Programming

Module reprogramming (also referred to as "flashing") is a scan tool process which updates the strategy/calibration in a module. Reprogramming a module with the same level of software does not improve module operation or repair a hardware failure. Module reprogramming is automatically carried out during Programmable Module Installation (PMI) when a later strategy/calibration is available.

Limit module reprogramming to circumstances where a published TSB procedure recommends doing so.

A module cannot communicate with other modules on the communication network while being reprogrammed. After the reprogramming process, clear any network communication Diagnostic Trouble Codes (DTCs) which may have been set in other modules.

Some modules are reprogrammed in coordination with other modules. Follow the IDS key cycling instructions carefully to avoid reprogramming errors, including failure of programming one or more of the modules.

Programmable Parameters

Programmable parameters are customer preference items that may be modified by the dealer via the scan tool or in some cases, modified by the customer following a procedure listed in the Owner's Literature. While many configuration options may exist for a module, only a few of these options are programmable parameters. Some parameters must be changed in multiple modules at the same time.

Adaptive Learning and Calibration

Some modules require a separate learning procedure be carried out if replaced as part of a repair procedure. For adaptive learning and calibration instructions, refer to the specific module removal and installation procedures.

Vehicle Identification (VID) Block

Vehicle identification block commonly stores powertrain configuration items such as VIN, tire size, axle ratio, and whether or not the vehicle is equipped with cruise control.

As-Built Data

As-Built data is a VIN-specific module configuration record. During vehicle build, the configuration from all modules is downloaded and stored in the As-Built database. As-Built data does not reflect customer preference items that have been changed from the default state. These items need to be changed using programmable parameters after the module is configured.

It is not necessary to obtain As-Built data unless directed to do so by the scan tool. This data may be accessed from the technician service publication web site.

Module Configuration and Parameter Chart

The chart describes specific module configuration information:

Module Name	Programmable Module Installation (PMI) Available	Reprogram/Flash Capable	Requires Adaptive Learning or Calibration	Available Progammable Parameters
APIM	Yes	Yes	No	None
ABS module	Yes	Yes	• IVD initialization	None
ACM	Yes	Yes	No	None
BCM	Yes	Yes	LIN slave device configuration	None
CCM	Yes	Yes	Radar horizontal and vertical alignment calibration	None
DC/ DC Converter Control Module (Voltage Quality Module)	Yes	Yes	No	None

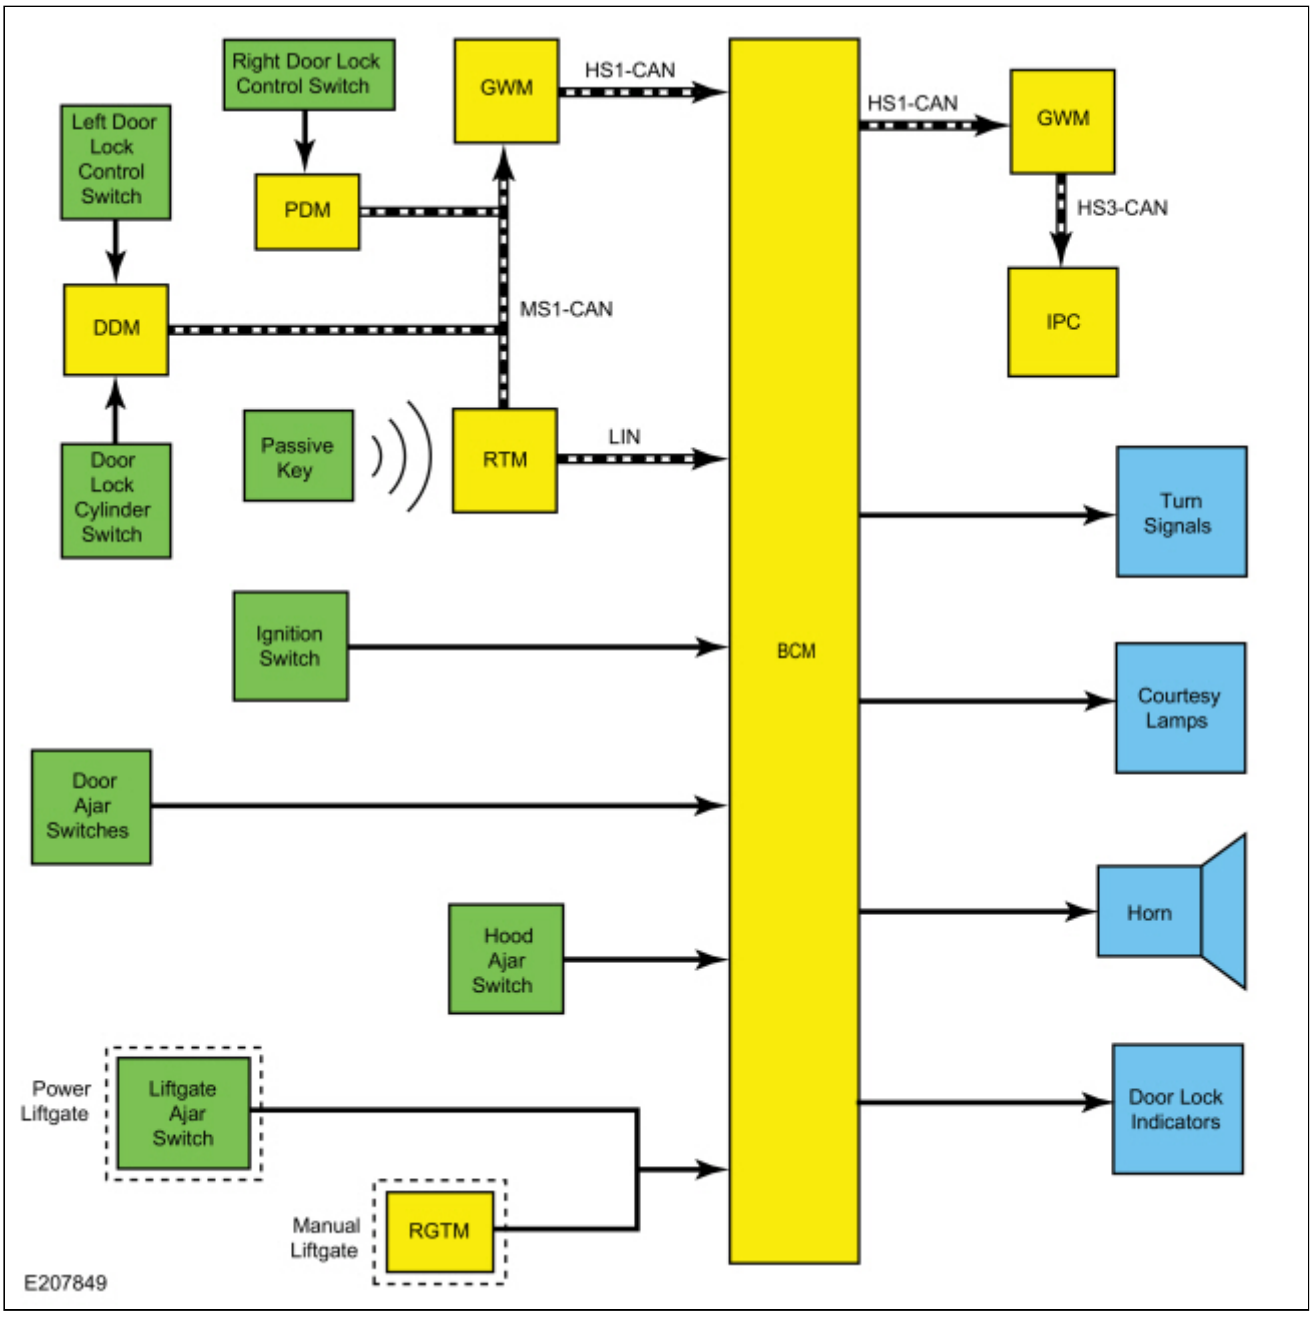
Perimeter Anti-Theft Alarm - Overview

Overview

The perimeter alarm system deters unauthorized entry into the vehicle by sounding the horn and flashing all the turn signals and interior courtesy lamps. When an unauthorized entry occurs, the horn and lamps activate for 30 seconds. After 30 seconds, the horn stops sounding, but the lamps continue to flash for up to 5 minutes.



The panic alarm is fitted on selected markets only and operates similarily to the perimeter alarm, but only activates using the panic button on the RKE transmitter. The panic alarm feature only operates when the ignition mode is off.

Copyright © 2016 Ford Motor Company

Perimeter Anti-Theft Alarm - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

IPC Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Perimeter alarm chime request	BCM	Used by the IPC to sound the perimeter alarm chime during the 12-second delay.

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
RKE data	RTM	Used by the BCM to arm/disarm the perimeter alarm or to activate/deactivate the panic alarm.
Driver door lock switch status	DDM	Used by the BCM to arm the perimeter alarm.
Passenger door lock switch status	PDM	Used by the BCM to arm the perimeter alarm.

Perimeter Alarm

The BCM controls the operation of the perimeter alarm. It monitors inputs from the RKE system, the passive entry system, the power door lock system, the door ajar status and the PATS to determine when to arm the perimeter alarm.

The BCM monitors all of the door ajar inputs, the liftgate ajar input and the hood ajar input to determine when to activate the perimeter alarm. When the BCM detects an input indicating an unauthorized entry into the vehicle, the BCM activates the perimeter alarm by sounding the horn and flashing all the turn signals and interior courtesy lamps at regular intervals.

The BCM monitors the RKE system, the passive entry system, and the PATS to determine when to disarm the perimeter alarm.

A switch inhibit feature temporarily disables the door lock control switches and the liftgate release switch 20 seconds after the vehicle is electronically locked. For detailed information of the switch inhibit feature,
Refer to: Handles, Locks, Latches and Entry Systems - Component Location (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

Additionally, there is a door lock LED indicator located on each door window sill. The indicators provide lock/unlock indication for each door. They illuminate when the door is locked and are off when the door is unlocked. For detailed information of the door lock LED indicators,
Refer to: Handles, Locks, Latches and Entry Systems - Component Location (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

Visual and audible feedback is also provided when locking or unlocking the vehicle. For detailed information of the vehicle locking and unlocking feedback,
Refer to: Handles, Locks, Latches and Entry Systems - Component Location (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

Arming The Perimeter Alarm

The perimeter alarm is ready to arm any time the ignition is off. The perimeter alarm pre-arms when any of the following actions are carried out:

- Pressing the lock button on a RKE transmitter
- Pressing the door lock control switch to the lock position with a front door open, and then closing the door
- Touching the 7/8 and 9/0 buttons simultaneously on the keyless entry keypad
- Locking the vehicle with the passive entry feature

Once the system is pre-armed, there is a 20-second countdown before the perimeter alarm is armed. Each entry point to the vehicle (hood, door and liftgate) is armed separately and must be closed before that entry point begins the 20-second countdown to become armed. If all entry points are closed, the turn signals flash upon locking to indicate all entry points are entering the 20-second countdown.

Perimeter Alarm Activation

The perimeter alarm has a 12-second delay when the driver front door is opened without using a valid programmed RKE transmitter, the keyless entry keypad or a passive key to unlock the vehicle. During the delay, a chime sounds. If the perimeter alarm is not disarmed within the 12-second delay, the alarm activates.

The perimeter alarm activates when any of the following actions are carried out:

- The driver front door is opened without first receiving an unlock command from the passive entry feature, the keyless entry keypad or a valid programmed RKE transmitter, and the 12-second delay has expired.

- Any other door, the liftgate or the hood is opened without first receiving an electronic unlock command from the passive entry feature, the keyless entry keypad or a valid programmed RKE transmitter.

The perimeter alarm only activates 10 times per arming cycle. After that, the alarm does not activate. To enable the perimeter alarm again, disarm the perimeter alarm and then arm it again.

Disarming The Perimeter Alarm

The perimeter alarm disarms when any of the following actions are carried out:

- Pressing the unlock button on a door lock control switch within the 20-second pre-arm
- The smart unlock feature activates within the initial 20-second pre-arm
- Pressing the unlock button on a valid programmed RKE transmitter
- Pressing the liftgate release button on a programmed RKE transmitter (this only disarms the liftgate entry point with the rest of the vehicle remaining armed)
- Using a valid programmed key to change the ignition to RUN
- Entering the correct vehicle unlock code on the keyless entry keypad
- Unlocking a front door or opening the liftgate using the passive entry feature

Component Description

Door Latch

The door ajar switch, the lock/unlock solenoid, door lock cylinder lock/unlock switches, and the lock/unlock status input switch are part of the door latch and not serviceable separately.

The door ajar switch is monitored by the BCM and the primary function is for the courtesy lamps system.
Refer to: Interior Lighting - System Operation and Component Description (417-02 Interior Lighting, Description and Operation).

The lock/unlock solenoid is controlled by the BCM for locking and unlocking the door.
Refer to: Handles, Locks, Latches and Entry Systems - Component Location (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

The lock/unlock status input switch is used to illuminate the door lock status indicator.
Refer to: Handles, Locks, Latches and Entry Systems - Component Location (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

Hood Latch

The hood ajar switch is part of the hood latch and not serviceable separately.

BCM

The BCM controls the perimeter alarm.

The BCM requires PMI when replaced. Additionally, at least 2 keys must be programmed and the parameter reset procedure carried out.

Perimeter Anti-Theft Alarm

BCM DTC Chart

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

BCM DTC Chart

DTC	Description	Action
B1305:01	Hood Switch: General Electrical Failure	GO to Pinpoint Test C
All other Diagnostic Trouble Codes (DTCs)	-	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).

Symptom Chart

Symptom Chart: Anti-Theft - Perimeter

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
The alarm system does not activate from an unauthorized entry at the hood	• Refer to the Pinpoint Test	GO to Pinpoint Test A
The alarm system does not activate from an unauthorized entry at a door	• Door ajar input	DIAGNOSE the courtesy lamps not illuminating when a door is open. REFER to: Interior Lighting (417-02) .
The alarm system does not activate from an unauthorized entry at the liftgate	• Liftgate ajar input	DIAGNOSE the courtesy lamps not illuminating when a liftgate is open. REFER to: Interior Lighting (417-02) .
The alarm system does not arm or no turn signals flash confirmation	• Refer to the Pinpoint Test	GO to Pinpoint Test B
No horn output during alarm activation	• Horn output concern	REFER to: Horn (413-06 Horn, Diagnosis and Testing).
False alarm activation	• Door ajar input • Hood switch input • Liftgate ajar input • Panic button pressed on a RKE transmitter • A valid PATS key read was NOT received when the ignition	• An intermittent fault exists. MONITOR the BCM alarm event Parameter Identifications (PIDs) to identify and isolate the cause of the last alarm activation. – Most Recent Alarm Trigger Event (ALARM_EVT_1) – 2nd Most Recent Alarm Trigger Event (ALARM_EVT_2)

	transitioned to RUN	– 3rd Most Recent Alarm Trigger Event (ALARM_EVT_3) – 4th Most Recent Alarm Trigger Event (ALARM_EVT_4)

Pinpoint Tests

The Alarm System Does Not Activate from an Unauthorized Entry at the Hood

Refer to Wiring Diagrams Cell 117 for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Perimeter Anti-Theft Alarm - System Operation and Component Description (419-01A Perimeter Anti-Theft Alarm, Description and Operation).

Possible Causes

- Wiring, terminals or connectors
- Hood latch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the hood latch for damage

PINPOINT TEST A : THE ALARM SYSTEM DOES NOT ACTIVATE FROM AN UNAUTHORIZED ENTRY AT THE HOOD

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

A1 MONITOR THE BCM (BODY CONTROL MODULE) HOOD AJAR SWITCH (HOOD_SW) PID (PARAMETER IDENTIFICATION)

- Ignition ON.
- Using a diagnostic scan tool, view the BCM Parameter Identifications (PIDs).
- Using a diagnostic scan tool, monitor the BCM HOOD_SW PID.
- Disconnect Hood Ajar Switch C127.

Does the PID read AJAR when the switch is disconnected?

Yes	INSTALL a new hood latch. REFER to: Hood Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).
No	GO to A2

A2 CHECK THE HOOD AJAR SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect BCM C2280H.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C127-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A3
No	REPAIR the circuit.

A3 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable TSB. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Alarm System Does Not Arm or No Turn Signals Flash Confirmation

Normal Operations and Fault Conditions

REFER to: Perimeter Anti-Theft Alarm - System Operation and Component Description (419-01A Perimeter Anti-Theft Alarm, Description and Operation).

Possible Causes

- Door ajar input
- Hood switch input
- Liftgate ajar input
- Turn signal output
- RKE transmitter concern
- BCM

PINPOINT TEST B : THE ALARM SYSTEM DOES NOT ARM OR NO TURN SIGNALS FLASH CONFIRMATION

B1 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

NOTE: *DTC B1305:01 sets if the hood is open. Make sure the hood is closed prior to running the self-test.*

- Ignition ON.
- Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC B1305:01 present?

Yes	GO to Pinpoint Test C
No	GO to B2

B2 CHECK THE DOOR AJAR SWITCH INPUT

- Close all the doors.

- Observe the IPC.

Does the IPC indicate a door is ajar?

Yes	DIAGNOSE the courtesy lamps staying on continuously. REFER to: Interior Lighting (417-02) .
No	GO to B3

B3 MONITOR THE LIFTGATE AJAR SWITCH INPUT

- Close the liftgate.
- Observe the IPC.

Does the IPC indicate the liftgate is ajar?

Yes	DIAGNOSE the courtesy lamps staying on continuously. REFER to: Interior Lighting (417-02) .
No	GO to B4

B4 VERIFY THE HAZARD FLASHER LAMP OPERATION

- Ignition OFF.
- Activate the hazard flasher lamp function and observe the turn signals.

Do all the turn signals flash on and off?

Yes	GO to B5
No	DIAGNOSE the inoperative turn signals. REFER to: Turn Signal and Hazard Lamps (417-01 Exterior Lighting, Diagnosis and Testing).

B5 CHECK THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER FUNCTION

- Using the RKE transmitter, lock and unlock the doors.

Do the doors lock and unlock?

Yes	GO to B6
No	DIAGNOSE the inoperative RKE transmitter. REFER to: Locks, Latches and Entry Systems (501-14 Handles, Locks, Latches and Entry Systems, Diagnosis and Testing).

B6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all the BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable TSB. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).

	REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

B1305:01

Refer to Wiring Diagrams Cell 117 for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Perimeter Anti-Theft Alarm - System Operation and Component Description (419-01A Perimeter Anti-Theft Alarm, Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1305:01	Hood Switch: General Electrical Failure	Sets when the BCM detects an open from the hood ajar switch input during a self-test.

Possible Causes

- Wiring, terminals or connectors
- Hood latch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the hood latch for damage

PINPOINT TEST C : B1305:01

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

C1 CHECK THE HOOD AJAR SWITCH

- Disconnect Hood Ajar Switch C127.
- Ignition ON.
- Connect:

Positive Lead	Measurement / Action	Negative Lead
C127-1		C127-2

- Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC B1305:01 still present?

Yes	REMOVE the fused jumper wire. GO to C2
No	REMOVE the fused jumper wire. INSTALL a new hood latch. REFER to: Hood Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

C2 CHECK THE HOOD AJAR SWITCH GROUND CIRCUIT FOR AN OPEN

- Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C127-2		Ground

- Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC B1305:01 still present?

Yes	REMOVE the fused jumper wire. GO to C3
No	REMOVE the fused jumper wire. REPAIR the hood ajar switch ground circuit.

C3 CHECK THE HOOD AJAR SWITCH INPUT CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect BCM C2280H.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C127-2	Ω	C2280H-14

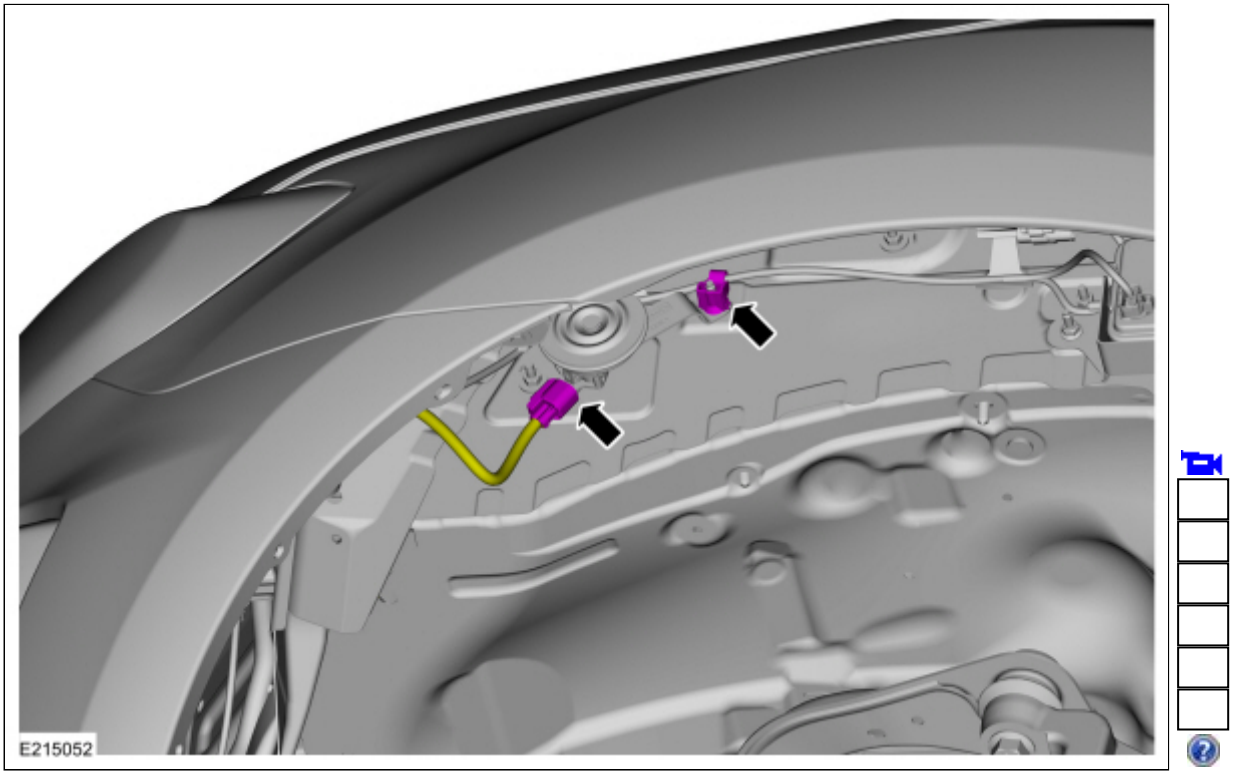
Is the resistance less than 3 ohms?

Yes	GO to C4
No	REPAIR the circuit.

C4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all the BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?



Yes	CHECK OASIS for any applicable TSB. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

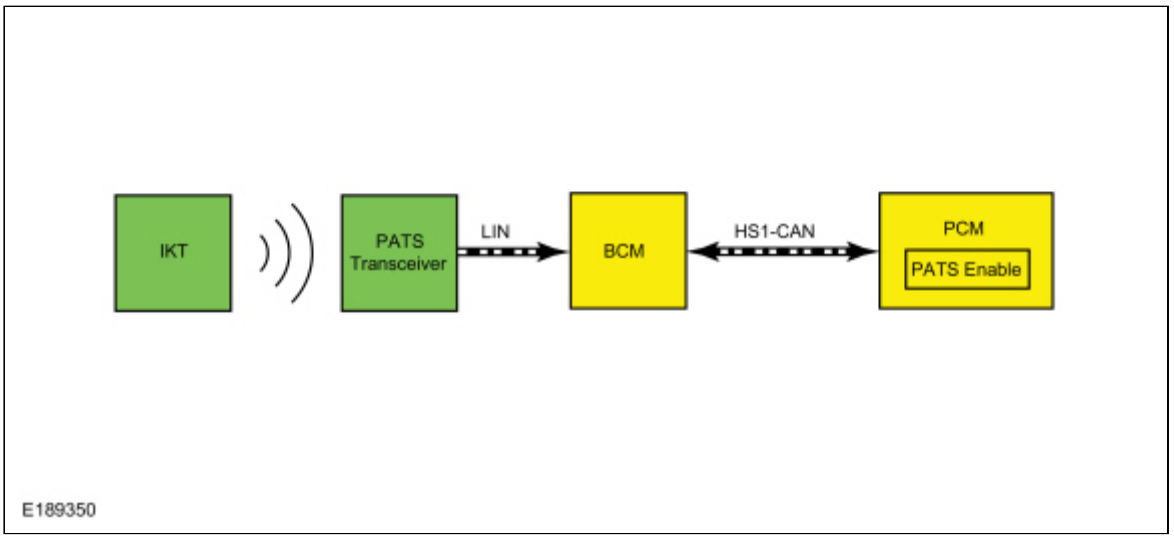
Passive Anti-Theft System (PATS) - Overview

Overview

The PATS deters the vehicle from theft by preventing the vehicle from starting unless a programmed PATS key is in the ignition lock cylinder.



The PATS does not disable an already running vehicle.

Copyright © 2016 Ford Motor Company

Passive Anti-Theft System (PATS) - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
PATS target data	PCM	The PCM sends the BCM a challenge request for a valid ID.

PCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
PATS control command	BCM	The response from the BCM supplying the PCM challenge ID. If the BCM ID response is incorrect, then PATS prevents the vehicle from starting.

PATS

The PATS function is controlled by the BCM and the PCM. There are 2 main checks the PATS carries out before allowing the vehicle to start. These 2 checks are:

- The BCM verifying a programmed key when it is inserted into the ignition lock cylinder.
- The PCM verifying the BCM identification to make sure it matches the identification stored in memory when the ignition state changes to RUN or START.

If either of these checks fail, the PATS does not allow the vehicle to start.

When the BCM detects a key inserted into the ignition lock cylinder, it generates a challenge message. It sends the challenge message to the PATS transceiver over a LIN-based circuit. The transceiver reads the key and generates a response message to the BCM. If the message received from the PATS transceiver does not match a key stored in the BCM memory, the BCM does not respond to the PCM challenge request when the ignition transitions out of off.

The BCM activates the wake-up control circuit when a key is inserted into the ignition lock cylinder or a remote start

request is received (if equipped with factory remote start). or driver door opend.

The BCM wakes up the PCM by supplying voltage on the wake-up control circuit.

Once the PCM is awake, the PCM sends the BCM a second challenge message over the HS-CAN. When the BCM receives the challenge message, it generates a response and sends it back to the PCM. If the response from the BCM does not match the data in the PCM memory, this check fails and the vehicle does not start.

If both the PCM identification and key verification pass, the PATS allows the vehicle to start. The PATS cannot disable or stall a vehicle that is already running.

PATS Parameter Identifications (PIDs)

In conjunction with Diagnostic Trouble Codes (DTCs), the PATS Parameter Identifications (PIDs) are a useful tool when diagnosing PATS concerns.

BCM PID Chart

Acronym	Name	Description
KEYS_PROGMD	PATS number of ignition key codes supported	Displays the number of keys currently programmed into the BCM (if unlimited key mode is enabled, this PID only reads 2 regardless of how many keys are programmed).
MIN_KEYS_RQD	Minimum number of keys required	Minimum number of programmed keys required. This PID always reads 2.
SPAREKEY	Spare Key Programming State	Displays the customer spare key programming mode (Enabled/Disabled). When disabled, keys cannot be programmed using 2 programmed keys.
UNL_KEY_MODE	PATS Unlimited Key Mode	Displays the status of unlimited key mode (Enable/Disable). When disabled, a maximum of 8 keys can be programmed.

PCM PID Chart

Acronym	Name	Description
PATSENABL	Vehicle enable status	Indicates if PATS allows the vehicle to be driven. Must read enabled for the vehicle to be driven.

Component Description

IKT

The IKT incorporates both the PATS functions and the RKE transmitter functions in a single device.

During key programming procedures, the PATS and the RKE transmitter of an IKT are programmed into the BCM. Conventional PATS keys can also be programmed to the vehicle if requested by the customer.

A minimum of 2 and a maximum of 8 keys can be programmed (unless in unlimited key mode).

PATS Transceiver

The PATS transceiver reads any key placed in the ignition lock cylinder. When the ignition changes to RUN or START, the BCM activates the PATS transceiver. Once the PATS transceiver activates, it activates the key in the ignition lock cylinder and receives the key data. Once the PATS transceiver receives the key data, it sends the data to the BCM.

BCM

When the BCM is replaced, program at least 2 keys and carry out the parameter reset procedure.

The BCM requires PMI when replaced.

PCM

When the PCM is replaced, carry out the parameter reset procedure. There is no need to program keys if the PCM is replaced.

The PCM requires PMI when replaced.

Passive Anti-Theft System (PATS)

DTC Charts

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

BCM DTC Chart

DTC	Description	Action
B10D5:13	PATS Antenna: Circuit Open	INSTALL a new PATS transceiver. REFER to: Passive Anti-Theft System (PATS) Transceiver (419-01B Passive Anti-Theft System (PATS), Removal and Installation).
B10D7:05	PATS Key: System Programming Failure	GO to Pinpoint Test B
B10D7:51	PATS Key: Not Programmed	PROGRAM the PATS key in question. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).
B10D7:55	PATS Key: Not Configured	The CEI Lock Configuration within the BODY>SERVICE FUNCTIONS tab was not completed during the PMI procedure. CARRY OUT the CEI Lock Configuration as part of the PMI procedure.
B10D7:87	PATS Key: Missing Message	GO to Pinpoint Test D
B10D7:8F	PATS Key: Erratic	GO to Pinpoint Test C
B10D8:00	PATS Key Less Than Minimum Programmed: No Sub Type Information	Less than 2 keys are programmed (minimum of 2 keys must be programmed). CYCLE the customer's second key in the ignition key cylinder to program (when less than 2 keys are programmed, the BCM automatically programs the first 2 keys that are cycled in the ignition key cylinder).
B10D9:87	PATS Transponder: Missing Message	GO to Pinpoint Test E
B10DA:51	PATS Target Identifier: Not Programmed	There is no PCM ID stored in the BCM memory. CARRY OUT the parameter reset procedure. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).
C113A:11	Wakeup Control: Circuit Short To Ground	GO to Pinpoint Test F
C113A:15	Wakeup Control: Circuit Short To Battery or Open	GO to Pinpoint Test F
All other Diagnostic Trouble Codes (DTCs)	-	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

PCM DTC Chart

DTC	Description	Action
P161A	Incorrect Response from Immobilizer Control Module	The BCM ID received by the PCM does not match the ID stored in the PCM memory. CARRY OUT the parameter reset procedure. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).
All other Diagnostic Trouble Codes (DTCs)	-	Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Symptom Chart

Symptom Chart: PATS

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Condition	Possible Sources	Actions
The vehicle does not start	• Refer to the Pinpoint Test	• GO to Pinpoint Test A
Unable to program keys using two programmed keys	• Spare key programming disabled	• ENABLE the spare key programming. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).
Unable to program keys using a diagnostic scan tool	• Base PATS concern • PATS transceiver	• CARRY OUT the BCM self-test. – If any Diagnostic Trouble Codes (DTCs) are present, REFER to the BCM DTC Chart in this section. – If no Diagnostic Trouble Codes (DTCs) are present, INSTALL a new PATS transceiver. REFER to: Passive Anti-Theft System (PATS) Transceiver (419-01B Passive Anti-Theft System (PATS), Removal and Installation).

Pinpoint Tests

The Vehicle Does Not Start

Normal Operation and Fault Conditions

REFER to: Passive Anti-Theft System (PATS) - System Operation and Component Description (419-01B Passive Anti-Theft System (PATS), Description and Operation).

Possible Causes

- Communication system concern
- Key not programmed
- PATS concern
- Starting system concern
- Powertrain system concern

PINPOINT TEST A : THE VEHICLE DOES NOT START

NOTE: *This pinpoint test requires a second programmed PATS key. If only one key is available, obtain a*

second programmed PATS key.

A1 CHECK THE OPERATION OF THE SECOND PROGRAMMED KEY

- Using the second programmed PATS key, attempt to start the vehicle.

Does the second programmed key start the vehicle?

Yes	REPROGRAM the first PATS key. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures). TEST the system for normal operation. If the concern is still present, DISCARD the PATS key in question and program a new PATS key. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).
No	GO to A2

A2 CHECK FOR COMMUNICATION WITH THE PCM (POWERTRAIN CONTROL MODULE) AND THE BCM (BODY CONTROL MODULE)

- Ignition ON.
- Using a diagnostic scan tool, carry out the network test.

Does the PCM and the BCM pass the network test?

Yes	GO to A3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

A3 CHECK IF THE ENGINE CRANKS

- Attempt to start the engine.

Does the engine crank?

Yes	The no-start condition is not PATS-related. Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
No	GO to A4

A4 CHECK FOR PCM (POWERTRAIN CONTROL MODULE) AND BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, carry out the PCM and the BCM self-tests.

Are any PCM or BCM Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the PCM DTC Chart or the BCM DTC Chart in this section.
No	DIAGNOSE the starting system. Refer to the appropriate section in Group 303 for the procedure.

B10D7:05

Normal Operation and Fault Conditions

When the BCM enters a key programming state, it activates the PATS transceiver to read the key in the ignition lock cylinder. If a valid PATS key is used and there are no concerns with PATS, the key is programmed into the BCM

memory.

REFER to: Passive Anti-Theft System (PATS) - System Operation and Component Description (419-01B Passive Anti-Theft System (PATS), Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10D7:05	PATS Key: System Programming Failure	Sets when a PATS key is not successfully programmed into the BCM.

Possible Causes

- PATS key not programmed

Visual Inspection and Diagnostic Pre-checks

- Inspect the PATS key for damage.
- Verify the correct key is used.

PINPOINT TEST B : B10D7:05

B1 CHECK THE BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE SELF-TEST

- Review the Diagnostic Trouble Codes (DTCs) from the BCM self-test.

Is DTC B10D5:13, B10D7:87, B10D9:87, C113A:11 or C113A:15 present?

Yes	For DTC B10D5:13, INSTALL a new PATS transceiver. REFER to: Passive Anti-Theft System (PATS) Transceiver (419-01B Passive Anti-Theft System (PATS), Removal and Installation). For DTC B10D7:87, GO to Pinpoint Test D For DTC B10D9:87, GO to Pinpoint Test E For DTC C113A:11 or C113A:15, GO to Pinpoint Test F
No	GO to B2

B2 CHECK THE PATS (PASSIVE ANTI-THEFT SYSTEM) KEY

- Verify the correct PATS keys are used with the vehicle. Refer to the PATS Job Aid in the Service Tips tab on the Professional Technician Society (PTS) web page or the parts catalog.

Are the correct PATS keys used?

Yes	PROGRAM the key again. If key programming fails, DISCARD the suspect key and PROGRAM a new key. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).
No	OBTAIN the correct key for the vehicle. PROGRAM the new key. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).

B10D7:8F

Normal Operation and Fault Conditions

When the ignition transitions to RUN or START, the BCM activates the PATS transceiver to read the key in the ignition lock cylinder. If the BCM does not receive a PATS key code or if the code is invalid, the PATS prevents the vehicle from starting.

REFER to: Passive Anti-Theft System (PATS) - System Operation and Component Description (419-01B Passive Anti-Theft System (PATS), Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10D7:8F	PATS Key: Erratic	Sets when the BCM reads a partial or corrupt PATS key read.

Possible Causes

- Radio Frequency (RF) interference
- PATS key
- PATS transceiver

Visual Inspection and Diagnostic Pre-checks

- Inspect the PATS key for damage.
- Verify the correct key is used.

PINPOINT TEST C : B10D7:8F

NOTE: *This pinpoint test requires a second programmed PATS key. If only one key is available, obtain a second programmed PATS key.*

C1 CHECK THE PATS (PASSIVE ANTI-THEFT SYSTEM) KEY

- Verify the correct PATS keys are used with the vehicle. Refer to the PATS Job Aid in the Service Tips tab on the Professional Technician Society (PTS) web page or the parts catalog.

Are the correct PATS keys used?

Yes	GO to C2
No	OBTAIN the correct key(s) for the vehicle. PROGRAM the new key(s). REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).

C2 CHECK FOR RADIO FREQUENCY (RF) INTERFERENCE

- Check for metallic objects or other electronic devices on the same key ring, such as a second PATS key for another vehicle or other transponder type of device.

Are any items identified on the key ring that may cause Radio Frequency (RF) interference?

Yes	REMOVE the programmed key from the key ring. TEST the system for normal operation. If the concern is still present, GO to C3 If the concern is no longer present, INFORM the customer of the cause of the concern.
No	GO to C3

C3 ISOLATE THE PATS (PASSIVE ANTI-THEFT SYSTEM) KEYS

- Place the first PATS key in the ignition lock cylinder.
- Ignition ON.
- Using a diagnostic scan tool, clear the BCM Diagnostic Trouble Codes (DTCs).
- Ignition OFF.

- Ignition ON.
- Using a diagnostic scan tool, carry out the BCM self-test. Record the results.
- Record the results from the BCM self-test.
- Using a diagnostic scan tool, clear the BCM Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Insert the customer's second key.
- Ignition ON.
- Using a diagnostic scan tool, carry out the BCM self-test. Record the results.
- Record the results from the BCM self-test.

Is DTC B10D7:8F retrieved for both keys?

Yes	INSTALL a new PATS transceiver. REFER to: Passive Anti-Theft System (PATS) Transceiver (419-01B Passive Anti-Theft System (PATS), Removal and Installation).
No	DISCARD the key in question and PROGRAM a new key. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).

B10D7:87

Normal Operation and Fault Conditions

REFER to: Passive Anti-Theft System (PATS) - System Operation and Component Description (419-01B Passive Anti-Theft System (PATS), Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10D7:87	PATS Key: Missing Message	Sets when the BCM does not receive a key read from the PATS transceiver when communication is present.

Possible Causes

- Radio Frequency (RF) interference
- PATS key
- PATS transceiver

PINPOINT TEST D : B10D7:87

NOTE: *This pinpoint test requires a second programmed PATS key. If only one key is available, obtain a second programmed PATS key.*

D1 CHECK FOR RADIO FREQUENCY (RF) INTERFERENCE

- Check for metallic objects or other electronic devices on the same key ring, such as a second PATS key for another vehicle or other transponder type of device.

Are any items identified on the key ring that may cause Radio Frequency (RF) interference?

Yes	REMOVE the programmed key from the key ring. TEST the system for normal operation. If the concern is still present, GO to D2 If the concern is no longer present, INFORM the customer of the cause of the concern.
No	GO to D2

D2 CHECK IF THE CONCERN IS PRESENT FOR BOTH PROGRAMMED KEYS
• Place the first PATS key in the ignition lock cylinder. • Ignition ON. • Using a diagnostic scan tool, clear the BCM Diagnostic Trouble Codes (DTCs). • Ignition OFF. • Ignition ON. • Using a diagnostic scan tool, carry out the BCM self-test. • Record the results from the BCM self-test. • Using a diagnostic scan tool, clear the BCM Diagnostic Trouble Codes (DTCs). • Ignition OFF. • Insert the customer's second key. • Ignition ON. • Using a diagnostic scan tool, carry out the BCM self-test. • Record the results from the BCM self-test. **Is DTC B10D7:87 present for both keys?**

Yes	INSTALL a new PATS transceiver. REFER to: Passive Anti-Theft System (PATS) Transceiver (419-01B Passive Anti-Theft System (PATS), Removal and Installation).
No	DISCARD the key in question and PROGRAM a new key. DISCARD the key in question and PROGRAM a new key. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).

B10D9:87

Refer to Wiring Diagrams Cell 112 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Passive Anti-Theft System (PATS) - System Operation and Component Description (419-01B Passive Anti-Theft System (PATS), Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10D9:87	PATS Transponder: Missing Message	Sets when the BCM loses communication with the PATS transceiver.

Possible Causes

- Wiring, terminals or connectors
- PATS transceiver
- BCM

PINPOINT TEST E : B10D9:87

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.
E1 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) C113A:11 OR C113A:15
• Review the results from the BCM self-test. **Is DTC C113A:11 or C113A:15 present?**

Yes	GO to Pinpoint Test F
No	GO to E2

E2 CHECK FOR VOLTAGE TO THE PATS (PASSIVE ANTI-THEFT SYSTEM) TRANSCEIVER

- Ignition OFF.
- Disconnect PATS Transceiver C252.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C252-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to E4
No	GO to E3

E3 CHECK THE PATS (PASSIVE ANTI-THEFT SYSTEM) TRANSCEIVER VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C252-1	Ω	C2280G-47

Is the resistance less than 3 ohms?

Yes	GO to E8
No	REPAIR the circuit.

E4 CHECK THE PATS (PASSIVE ANTI-THEFT SYSTEM) TRANSCEIVER GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C252-1	V	C252-4

Is the voltage greater than 11 volts?

Yes	GO to E5
No	REPAIR the circuit.

E5 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition ON.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C252-3		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to E6

E6 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO GROUND

- Connect BCM C2280G.
- Ignition OFF.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C252-3	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to E7
No	REPAIR the circuit.

E7 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C252-3	Ω	C2280G-52

Is the resistance less than 3 ohms?

Yes	INSTALL a new PATS transceiver. REFER to: Passive Anti-Theft System (PATS) Transceiver (419-01B Passive Anti-Theft System (PATS), Removal and Installation). CLEAR the Diagnostic Trouble Codes (DTCs) and repeat the BCM self-test. If DTC B10D9:87 is retrieved again, GO to E8
No	REPAIR the circuit.

E8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

• Disconnect and inspect all of the BCM connectors.
• Repair:
  • corrosion (install new connectors or terminals, clean module pins)
  • damaged or bent pins - install new terminals/pins
  • pushed-out pins - install new pins as necessary
• Reconnect all the BCM connectors and make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
 	
Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. Address the root cause of any connector or pin issues.

C113A:11 or C113A:15

Refer to Wiring Diagrams Cell 112 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Passive Anti-Theft System (PATS) - System Operation and Component Description (419-01B Passive Anti-Theft System (PATS), Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C113A:11	Wakeup Control: Circuit Short To Ground	Sets when the BCM detects a short to ground from the wakeup control output circuit.
C113A:15	Wakeup Control: Circuit Short To Battery or Open	Sets when the BCM detects an open short to voltage from the wakeup control output circuit.

Possible Causes

- Wiring, terminals or connectors
- PATS transceiver
- BCM
- PCM

PINPOINT TEST F : C113A:11 OR C113A:15

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.
F1 REVIEW THE BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE SELF-TEST
• Review the Diagnostic Trouble Codes (DTCs) from the BCM self-test.: **Is DTC C113A:11 present?**

Yes	GO to F2
No	GO to F5

F2 ISOLATE THE PCM (POWERTRAIN CONTROL MODULE) AS THE CAUSE FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect PCM C1232C (3.2L).
- Disconnect PCM C1232C (2.2L).
- Disconnect PCM C175C (2.5L).
- Ignition ON.
- Using a diagnostic scan tool, clear the BCM Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC C113A:11 still present?

Yes	GO to F3
No	GO to F9

F3 ISOLATE THE PATS (PASSIVE ANTI-THEFT SYSTEM) TRANSCEIVER AS THE CAUSE FOR A SHORT TO GROUND

- Using a diagnostic scan tool, clear the BCM Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Disconnect PATS Transceiver C252.
- Ignition ON.
- Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC C113A:11 still present?

Yes	GO to F4
No	INSTALL a new PATS transceiver. REFER to: Passive Anti-Theft System (PATS) Transceiver (419-01B Passive Anti-Theft System (PATS), Removal and Installation).

F4 CHECK THE WAKEUP CONTROL OUTPUT CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-47	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to F10
No	REPAIR the circuit in question.

F5 CHECK THE WAKEUP CONTROL CIRCUIT FOR AN OPEN OR SHORT TO VOLTAGE

- Attempt to start the vehicle.

Does the vehicle start?

Yes	GO to F7
No	GO to F6

F6 CHECK THE WAKEUP CONTROL CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect PATS Transceiver C252.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C252-1	Ω	C2280G-47

Is the resistance less than 3 ohms?

Yes	GO to F10
No	REPAIR the circuit.

F7 ISOLATE THE PCM (POWERTRAIN CONTROL MODULE) AS THE CAUSE FOR A SHORT TO VOLTAGE

- Ignition ON.
- Using a diagnostic scan tool, clear the BCM Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Disconnect PCM C1232C (3.2L).
- Disconnect PCM C1232C (2.2L).
- Disconnect PCM C175C (2.5L).
- Ignition ON.
- Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC C113A:15 still present?

Yes	GO to F8
No	GO to F9

F8 CHECK THE PATS (PASSIVE ANTI-THEFT SYSTEM) TRANSCEIVER WAKEUP CONTROL CIRCUIT AS THE CAUSE FOR A SHORT TO VOLTAGE

- Disconnect BCM C2280G.
- Disconnect PATS Transceiver C252.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-47		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to F10

F9 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all of the PCM connectors.
- Repair:
  - corrosion (install new connectors or terminals, clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect all the PCM connectors and make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. Refer to the appropriate section in Group 303 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by module connections. Address the root cause of any connector or pin issues.

F10 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all of the BCM connectors.
- Repair:
  - corrosion (install new connectors or terminals, clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect all the BCM connectors and make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. Address the root cause of any connector or pin issues.

Anti-Theft Security Access

Programming

NOTE: *In order to gain module security access, the diagnostic scan tool **must** have an active connection to the internet. A hardwired internet connection is strongly recommended.*

NOTE: *When programming keys, the RKE transmitter and the PATS portion of the key are programmed at the same time.*

NOTE: *Common anti-theft security access choices are:*

- ***Program Additional Key***
- ***Erase and Program Keys***
- ***Parameter Reset***
- ***Customer Spare Key Programming Enable/Disable***
- ***Unlimited Key Mode ON/OFF (vehicles with Integrated Keyhead Transmitter (IKT) only)***
- ***Program Unlimited Key Code (vehicles with Integrated Keyhead Transmitter (IKT) only)***

1. **NOTE:** *If no valid programmed keys are available and the perimeter alarm activates when the scan tool is connected, carry out the following steps.*
    - *Wait 10 minutes after triggering the alarm. A single horn chirp sounds to indicate a 1 minute data link access time period begins.*
    - *Connect the scan tool to the DLC and begin a scan tool session.*
    - *Access the PATS Functions to gain security access. Once security access is obtained, the 1 minute data link access time period extends indefinitely.*
    - *Follow the procedure to erase and program keys.*

    Follow the procedure to establish a session with the vehicle.
    Refer to: Diagnostic Methods (100-00 General Information, Description and Operation).
2. From the diagnostic scan tool, enter TOOLBOX. Select Body>Security> PATS Functions.
3. Select Yes when Gaining Security Access displays.
4. Select either Dealer or Aftermarket and enter a valid username and password when prompted.
5. Return to the diagnostic scan tool window.
6. **NOTE:** *If programming a passive key, refer to the Owner's Literature for the backup starting passive key location. The passive key must be placed in this location for the passive key to successfully program.*

    Select the appropriate procedure and follow the on-screen instructions.

Copyright © 2016 Ford Motor Company

Erasing All Key Codes Using Diagnostic Equipment

General Equipment

Worldwide Diagnostic System (WDS) (418-F224)

NOTE: *This procedure is used when a customer needs ignition keys programmed into the system. This procedure is also useful when programmed ignition key(s) have been lost or when the ignition lock cylinder has been replaced or when it is necessary to erase a key(s) from the passive anti-theft alarm system (PATS) memory.*

NOTE: *During this procedure it will be necessary to utilize the Anti-Theft System (PATS) Security Access Procedure. PATS security access must be granted to erase or program ignition keys. The anti-theft security access procedure requires access to the GSEVIN database in order to obtain the coded security access.*

NOTE: *This procedure will erase all programmed ignition keys from the passive anti-theft alarm system (PATS) memory and the engine will not start until two keys have been reprogrammed to the system.*
For additional information, refer to: Key Programming Using Diagnostic Equipment - .

NOTE: *Two PATS encoded keys with the correct mechanical cut must be available to carry out this procedure. One or both of them may be the original keys.*

NOTE: *If the remaining keys are with the customer and are not available with the vehicle, instruct the customer that the remaining keys are no longer valid to start the vehicle. If the customer wants to have these keys to be valid for the vehicle, the keys must be programmed using WDS.*
For additional information, refer to: Key Programming Using Diagnostic Equipment - .

1. Turn the ignition lock cylinder from the 0 position to the II position.
2. From the diagnostic tool menu Select: **Body/Security/PATS Functions** from the menu. Follow the instructions on the screen.
3. From the diagnostic tool menu Select: **Ignition Key Erase**. Follow the instructions on the screen.
4. From the diagnostic tool menu Select: **Ignition Key Programming**. Follow the instructions on the screen.

Copyright © 2016 Ford Motor Company

Key Programming Using Two Programmed Keys

NOTE: *A maximum of 8 ignition keys can be programmed to a vehicle equipped with a passive anti-theft system (PATS).*

1. **NOTE:** *This procedure works only if 2 or more programmed keys are available.*

   For additional information, refer to: Key and Remote Transmitter Programming Using Diagnostic Equipment (419-01B Passive Anti-Theft System (PATS), General Procedures).

2. **NOTE:** *This procedure only works if the customer spare key programming is enabled.*

   For additional information, refer to: Key and Remote Transmitter Programming Using Diagnostic Equipment (419-01B Passive Anti-Theft System (PATS), General Procedures).

3. Insert the first programmed passive anti-theft system (PATS) key into the ignition and turn the key from the OFF position to the ON position (maintain the key in the ON position for approximately 3 seconds).
4. Turn the first key to the OFF position and remove the key from the ignition.
5. Within 10 seconds of turning the key to the OFF position, insert a second programmed passive anti-theft system (PATS) key into the ignition and turn the key from the OFF position to the ON position (maintain the key in the ON position for approximately 3 seconds).
6. Turn the second key to the OFF position and remove the key from the ignition.
7. Within 10 seconds of turning the second key to the OFF position, insert the new, unprogrammed passive anti-theft system (PATS) key into the ignition and turn the key from the OFF position to the ON position (maintain the key in the ON position for approximately 6 seconds).
8. Turn the new key to the OFF position and remove the key from the ignition.
9. If it is desired to program additional keys, repeat steps 3 - 9 for each additional key.

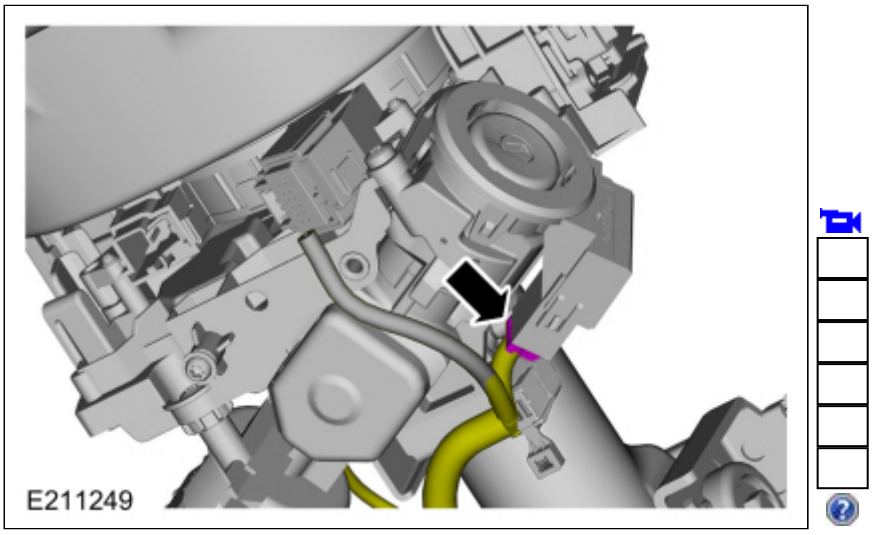
Special Tool(s) / General Equipment

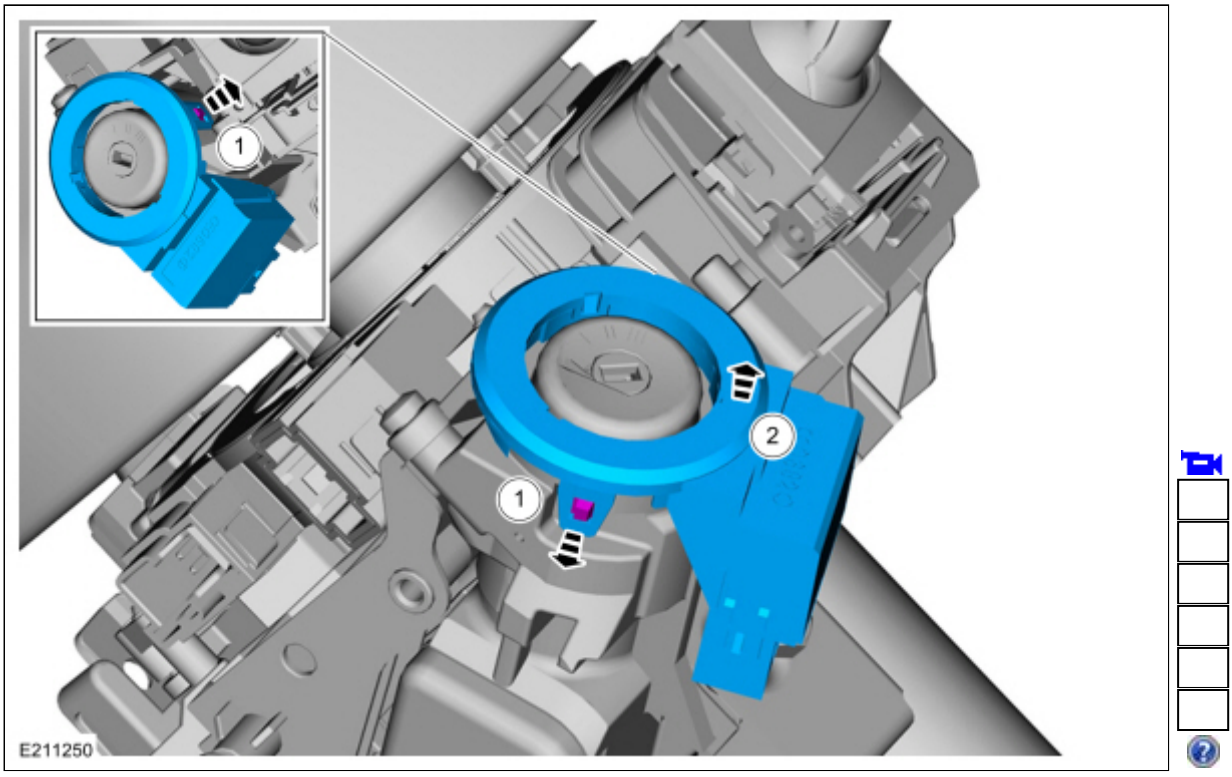
Ford Diagnostic Equipment

NOTE: *This procedure requires access to the Global Secure Vehicle Information System (GSEVIN) database in order to obtain the coded security access.*

NOTE: *This procedure will not erase programmed ignition keys from the passive anti-theft system (PATS).*



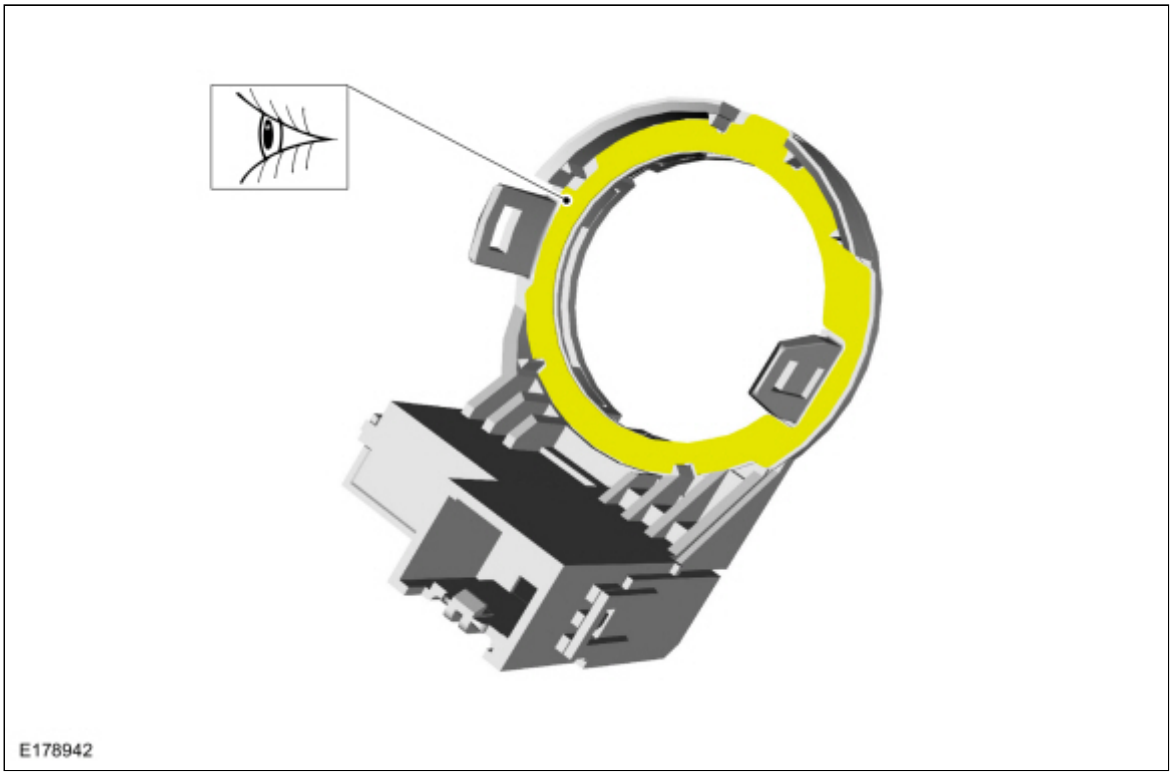
NOTE: *A maximum of 8 ignition keys can be programmed to a vehicle equipped with a passive anti-theft system (PATS).*



1. From the diagnostic tool menu Select: Body/Security/PATS Functions. Follow the instructions on the screen. Use the General Equipment: Ford Diagnostic Equipment
2. From the diagnostic tool menu Select: Ignition Key Programming. Follow the instructions on the screen.

Copyright © 2016 Ford Motor Company

Passive Anti-Theft System (PATS) Transceiver



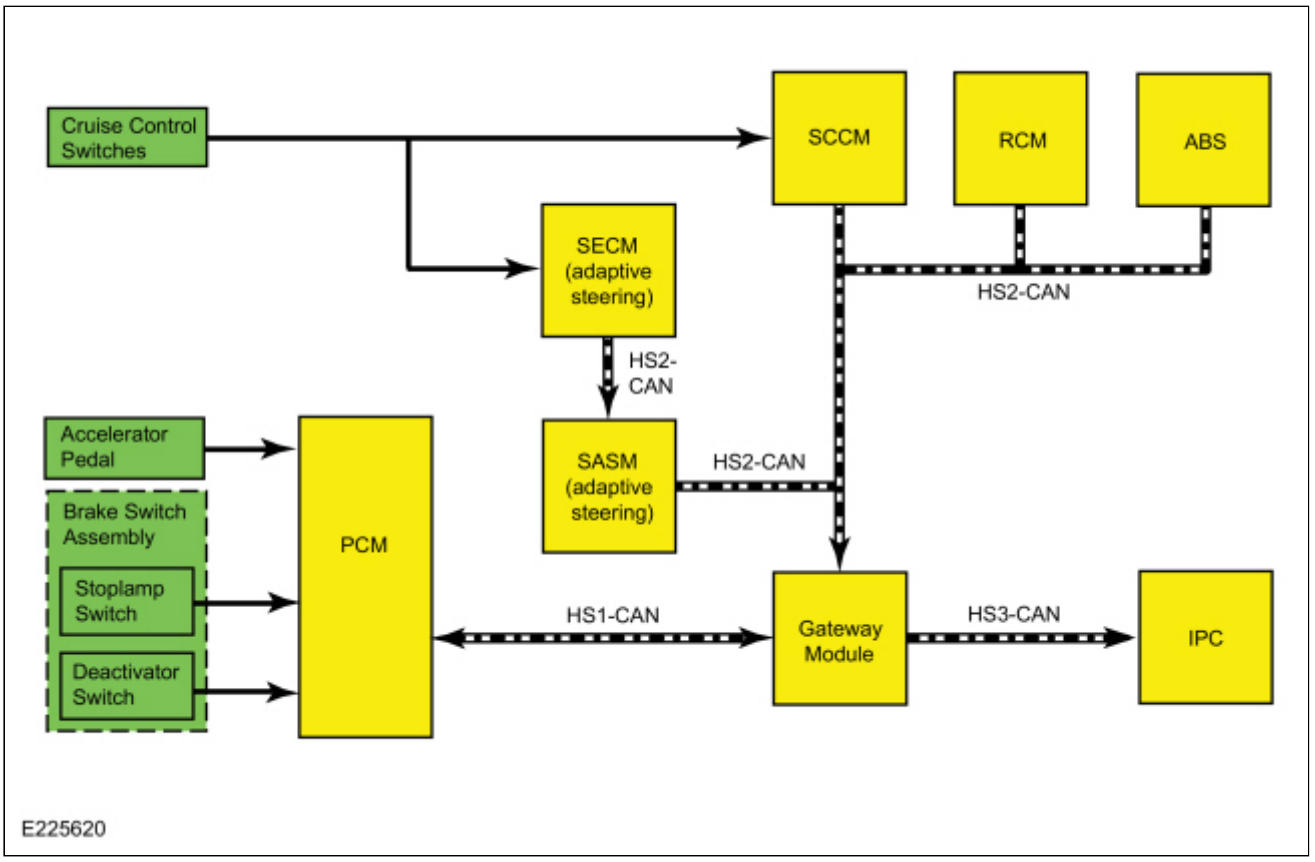
Removal

1. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
2. Refer to: Steering Column Shrouds (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. 

4. 

Installation

1. Visually inspect to verify the ring is installed on the PATS transceiver.



2. To install, reverse the removal procedure.

Cruise Control - System Operation and Component Description

System Operation

Non-Adaptive Cruise Control

Network Message Chart

Network Input Messages - IPC

Broadcast Message	Originating Module	Message Purpose
Cruise control override	PCM	Driver overriding cruise control with accelerator pedal.
Cruise control status	PCM	Data used for speed control indicator status.
Cruise control set speed	PCM	Data used to display the driver selected vehicle speed

Network Input Messages - PCM

Broadcast Message	Originating Module	Message Purpose
Steering wheel switch speed control	SCCM	Used for cruise control enable/disable and operating mode request.
Stability control event in progress	ABS module	Deactivates speed control when requested.
Traction control event in progress		

Vehicle lateral acceleration	RCM	Deactivates speed control when requested.
Vehicle longitudinal acceleration		
Vehicle yaw rate		

Network Input Messages - SCCM (Adaptive Steering)

Broadcast Message	Originating Module	Message Purpose
Cruise control switch commands	SASM	Used for cruise control switch enable/disable and operating mode commands on vehicles equipped with adaptive steering.

Cruise Control Operation

The cruise control functions include:

- turning on the cruise control system.
- setting and maintaining the desired vehicle speed.
- accelerating the vehicle speed.
- coasting down to a lower speed.
- resuming the prior vehicle speed.
- turning off the cruise control system.

The cruise control system maintains a selected vehicle speed within a range between 32 km/h (20 mph), or 30 km/h (18 mph) if equipped with a metric cluster, and the maximum limited vehicle speed. When a MyKey® restricted key is in use, the vehicle speed will not exceed the MyKey® maximum limited speed. During normal driving conditions, the vehicle speed can fluctuate slightly from the selected set speed due to road conditions. The vehicle speed can fluctuate more noticably when driving up and down steep hills.

Certain conditions cause the cruise control system to deactivate:

- Application of the parking brake
- Transmission gear selector is placed into a position other than D or OD
- Cruise control set speed is overridden with the accelerator pedal for a period longer than 5 minutes
- Cruise control switch is pressed or stuck longer than 2 minutes
- Vehicle speed decreases more than 16 km/h (10 mph) below the set speed
- ABS fault

The BPP switch assembly (contains the stoplamp switch and cruise control deactivator switch) and APP sensor are hardwired inputs to the PCM.

Electronic Throttle Body (ETB) command is a hardwired output of the PCM.

The vehicle speed is controlled by the PCM through the Electronic Throttle Control (ETC) subsystem.

The cruise control system provides self-diagnostics. Cruise control is disabled anytime an error is detected in the system. No IPC indicator or message center messages are displayed when faults occur. Fault codes are logged by the PCM or SCCM.

An Electronic Throttle Control (ETC) system fault also causes the cruise control system to be disabled. In this case, an Electronic Throttle Control (ETC) system powertrain malfunction (wrench) warning indicator is displayed.

Cruise Control Indicator

The cruise control indicator, located in the IPC, illuminates to indicate the cruise control system is active.

Steering Wheel Switch Function

Cruise control switch inputs are received by the SCCM and sent to the PCM through the GWM to the HS-CAN1.

Pressing (ON) and releasing the ON/OFF switch turns the cruise control system on. Pressing (SET+) or (SET-) on the SET switch while the vehicle is traveling at the desired speed activates the cruise control system.

Pressing up or down on the SET switch while in the active mode increases or decreases the maintained vehicle

speed by 2 kmh per press when displayed units are "kmh" and 1 mph per press when displayed units are "mph". If the respective switch is pressed and held, the vehicle speed continues to accelerate or decelerate until the switch is released.

Pressing down (OFF) and releasing the ON/OFF switch, or turning the ignition switch to the OFF position, turns the cruise control system off. While the cruise control system is active, applying the brake pedal or pressing the CNCL (CANCEL) switch puts the cruise control system into standby mode. Pressing the RES (RESUME) switch when the cruise control system is in standby mode causes the vehicle to accelerate to the last speed. Resume does not function if the OFF switch is pressed, the ignition switch is cycled OFF, or if the current vehicle speed is below the minimum operational speed.

Steering Wheel Switches

The cruise control steering wheel mounted switches are momentary contact switches that toggle up and down for the switch state. On vehicles without adaptive steering, the switches are an input to the SCCM. On vehicles with adaptive steering, the switches are an input to the SECM. The SECM sends switch data to the SASM (part of the clockspring assembly), and the SASM sends the switch data to the SCCM over the HS-CAN2.

Brake Switch

When the brake pedal is applied, the cruise control deactivator switch, integrated in the BPP switch, opens and removes the ground signal from the PCM input circuit releasing the throttle, immediately deactivating the cruise control system.

		and Testing).

Symptom Chart(s)

Symptom Chart: Cruise Control

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
The cruise control is inoperative - without active front steering	Refer to the Pinpoint Test	GO to Pinpoint Test A
The cruise control switch is inoperative/does not operate correctly - without active front steering	Refer to the Pinpoint Test	GO to Pinpoint Test A
The cruise control does not disengage when clutch pedal is applied	Refer to the Pinpoint Test	GO to Pinpoint Test C
The cruise control indicator lamp is never/always on	• Wiring, terminals and connectors • PCM • IPC	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
The cruise control cannot set above 105 kmh (65 mph), 113 kmh (70 mph), 121 kmh (75 mph), or 129 kmh (80 mph)	A MyKey® restricted key is in use and MyKey® max speed limiter is turned on	VERIFY whether a MyKey® restricted key is in use. With an admin key, VERIFY if MyKey® max speed limiter is turned on. REFER to the Owner's Literature. If necessary, VERIFY cruise control normal operation with an admin key.

Pinpoint Tests

The Cruise Control Is Inoperative - Without Active Front Steering

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Steering Wheel and Column Electrical Components - System Operation and Component Description (211-05 Steering Column Switches, Description and Operation).

REFER to: Cruise Control - System Operation and Component Description (419-03A Cruise Control, Description and Operation).

DTC Fault Trigger Conditions - SCCM

DTC	Description	Action
B137F:09	Steering Wheel Left Switch Pack: Component Failure	A continuous and on-demand DTC that sets when one or more of the cruise control switches are stuck.

B137F:11	Steering Wheel Left Switch Pack: Circuit Short to Ground	A continuous and on-demand DTC that sets when the cruise control switch circuits are shorted to ground.
B137F:17	Steering Wheel Left Switch Pack: Circuit Voltage Above Threshold	A continuous and on-demand DTC that sets when the cruise control switch circuits are shorted to voltage.

Possible Sources

- Wiring, terminals or connectors
- Cruise control switch
- Digital TR sensor
- PCM
- SCCM
- BPP switch

PINPOINT TEST A : THE CRUISE CONTROL IS INOPERATIVE - WITHOUT ACTIVE FRONT STEERING

A1 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the PCM self-test.
- Using a diagnostic scan tool, perform the SCCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	If PCM Diagnostic Trouble Codes (DTCs) were retrieved, REFER to the PCM DTC Chart in this section. If SCCM DTC B137F:09, B137F:11 or B137F:17 was retrieved, GO to A3 For other SCCM Diagnostic Trouble Codes (DTCs), REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches, Diagnosis and Testing).
No	GO to A2

A2 CHECK THE STOPLAMP SWITCH (BOO1) AND CRUISE CONTROL DEACTIVATOR SWITCH (BOO2) PARAMETER IDENTIFICATIONS (PIDS)

- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Using the table, monitor the Parameter Identifications (PIDs) BOO1 (stoplamp switch) and BOO2 (cruise control deactivator switch) while applying and releasing the brake pedal.

Brake Pedal Position	BOO1 PID	BOO2 PID
Released	Off	Off
Applied	On	On

Do the PID values agree with the brake pedal position?

Yes	GO to A3
No	GO to Pinpoint Test B

A3 CHECK THE CRUISE CONTROL SWITCH PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view SCCM Parameter Identifications (PIDs).
- Using the table, press each cruise control switch while monitoring the cruise control switch PID.

Cruise Control Switch	PID Value
Cruise On (pressed/released)	On/Off
Cruise Off (pressed/released)	On/Off

Cruise Off (pressed/released)	On/Off
Resume (pressed/released)	On/Off
Cancel (pressed/released)	On/Off
SET + (pressed/released)	On/Off
SET - (pressed/released)	On/Off

Does the PID value agree with the switch position?

Yes	GO to A4
No	If only one switch does not display the correct PID value, INSTALL a new LH steering wheel switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation). If multiple switches do not display the correct PID value, GO to A5

A4 MONITOR THE PCM (POWERTRAIN CONTROL MODULE) TR (TRANSMISSION RANGE) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Monitor the PCM PID TR.
- Select DRIVE.

Does the PID value agree with the TR selector lever position?

Yes	GO to A9
No	REFER to: External Controls (307-05 Automatic Transmission External Controls, Diagnosis and Testing).

A5 CHECK FOR VOLTAGE TO THE CRUISE CONTROL SWITCHES

- Ignition OFF.
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect LH Steering Wheel Switch C2998.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2998-4	V	C2998-5
C2998-6	V	C2998-5
C2998-7	V	C2998-5

Is the voltage approximately 5 volts?

Yes	TURN the ignition off and WAIT one minute. INSTALL a new LH steering wheel switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation). INSTALL the driver airbag. REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
No	GO to A6

No	GO to A6

A6 CHECK THE STEERING WHEEL SWITCH HARNESS FOR AN OPEN

- Ignition OFF.
- Disconnect Clockspring C218B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2998-4	Ω	C218B-15
C2998-5	Ω	C218B-8
C2998-6	Ω	C218B-6
C2998-7	Ω	C218B-7

Are the resistances less than 3 ohms?

Yes	GO to A7
No	Install a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column) .

A7 CHECK THE STEERING WHEEL SWITCH CIRCUITS THROUGH THE CLOCKSPRING FOR AN OPEN

- Disconnect Clockspring C218G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C218B-6 (component side)	Ω	C218G-5 (component side)
C218B-7 (component side)	Ω	C218G-7 (component side)
C218B-15 (component side)	Ω	C218G-8 (component side)

Are the resistances less than 3 ohms?

Yes	GO to A8
No	Install a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

A8 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all SCCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the SCCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A9 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

P0504, P0572, P0573 OR P1703

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description (419-03A Cruise Control, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0504	Brake Switch A / B Correlation	A DTC that sets when the PCM does not sense the correct sequence of the brake pedal input signal from both the cruise control deactivator and stoplamp switches when the brake pedal is pressed and released.
P0572	Brake Switch "A" Circuit Low	A DTC that sets when the PCM detects an open in the stoplamp switch signal. The PCM monitors the vehicle speed, the engine speed, the engine torque and the stoplamp input during start and stop driving cycles. If the stoplamp switch input to the PCM is always off during start and stop driving cycles, this DTC sets in continuous memory.

P0573	Brake Switch "A" Circuit High	A DTC that sets when the PCM detects a short to voltage on the stoplamp switch signal. The PCM monitors the vehicle speed, the engine speed, the engine torque and the stoplamp switch input during start and stop driving cycles. If the stoplamp lamp switch input to the PCM is always on during start and stop driving cycles, this DTC sets in continuous memory.
P1703	Brake Switch Out Of Self - Test Range	A DTC that sets in the PCM during the self-test when the stoplamp switch input signal is high or does not cycle high and low.

Possible Sources

- Wiring, terminals or connectors
- Stoplamp switch
- PCM

PINPOINT TEST B : P0504, P0572, P0573 OR P1703

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

B1 CHECK THE OPERATION OF THE STOPLAMPS

- Ignition ON.
- Operate the stoplamps.

Do the stoplamps and high mounted stoplamp operate correctly?

Yes	GO to B2
No	REFER to: Stoplamps (417-01 Exterior Lighting, Diagnosis and Testing).

B2 CHECK THE STOPLAMP SWITCH (BOO1) AND CRUISE CONTROL DEACTIVATOR SWITCH (BOO2) PARAMETER IDENTIFICATIONS (PIDS)

- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Using the table, monitor the Parameter Identifications (PIDs) BOO1 (stoplamp switch) and BOO2 (cruise control deactivator switch) while applying and releasing the brake pedal.

Brake Pedal Position	BOO1 PID	BOO2 PID
Released	Off	Off
Applied lightly	On	Off
Applied firmly	On	On

Do the PID values agree with the brake pedal position?

Yes	GO to B8
No	For an incorrect BOO1 PID value, GO to B3 For an incorrect BOO2 PID value, GO to B4

B3 CHECK THE STOPLAMP SWITCH CIRCUIT

- Ignition OFF.
- Disconnect: PCM C175B (2.5L), C1232A (2.2L Diesel) or (3.2L Diesel).
- Ignition ON.
- While applying and releasing the brake pedal, measure:

2.5L

Positive Lead	Measurement / Action	Negative Lead
C175B-2		Ground

2.2L or 3.2L Diesel

Positive Lead	Measurement / Action	Negative Lead
C1232A-46		Ground

Is the voltage greater than 11 volts with the brake pedal applied and no voltage with the brake pedal released?

Yes	GO to B8
No	REPAIR the circuit.

B4 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect: PCM C175B (2.5L), C1232A (2.2L Diesel) or (3.2L Diesel).
- While firmly applying and releasing the brake pedal, measure:

2.5L

Positive Lead	Measurement / Action	Negative Lead
C175B-2	Ω	Ground

2.2L or 3.2L Diesel

Positive Lead	Measurement / Action	Negative Lead
C1232A-46	Ω	Ground

Is the resistance less than 3 ohms with the brake pedal released, and greater than 10,000 ohms with the brake pedal firmly applied?

Yes	GO to B8
No	GO to B5

B5 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH GROUND CIRCUIT FOR AN OPEN

- Disconnect: BPP switch C280.
- Measure:

Positive Lead	Measurement / Action	Negative Lead

C280-3	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to B6
No	REPAIR the circuit.

B6 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C280-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B7
No	REPAIR the circuit.

B7 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH SIGNAL CIRCUIT FOR AN OPEN

- Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C277-2		C277-3

- Measure:

2.5L

Positive Lead	Measurement / Action	Negative Lead
C175B-66	Ω	Ground

2.2L Diesel or 3.2L Diesel

Positive Lead	Measurement / Action	Negative Lead
C1232A-46	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new BPP switch.
No	REPAIR the signal circuit for an open.

B8 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Cruise Control Does Not Disengage When The Clutch Pedal Is Pressed

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description (419-03A Cruise Control, Description and Operation).

Possible Sources

- CPP switch
- PCM
- Wiring, terminals and connectors

PINPOINT TEST C : THE CRUISE CONTROL DOES NOT DISENGAGE WHEN THE CLUTCH PEDAL IS PRESSED

C1 CHECK THE CPP (CLUTCH PEDAL POSITION) SWITCH (CPP_TOP) PARAMETER IDENTIFICATION (PID)

- Ignition ON.
- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Monitor the PCM Parameter Identification (PID) CPP_TOP while pressing and releasing the clutch pedal.

Does the Parameter Identification (PID) value read "YES" with the clutch pedal pressed?

Yes	GO to C5
No	GO to C2

C2 CHECK THE CPP (CLUTCH PEDAL POSITION) SWITCH

- Ignition OFF.

- Disconnect the CPP switch connector C277.
- Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C277-2		C277-1

- Ignition ON.
- Using a diagnostic scan tool, monitor the PCM Parameter Identification (PID) CPP_TOP.

Does the Parameter Identification (PID) value read YES?

Yes	INSTALL a new CPP switch.
No	GO to C3

C3 CHECK THE CPP (CLUTCH PEDAL POSITION) SWITCH GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect CPP switch connector C277.
- Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C277-2		Ground

- Ignition ON.
- Using a diagnostic scan tool, monitor the PCM Parameter Identification (PID) CPP_TOP.

Does the Parameter Identification (PID) value read YES?

Yes	REPAIR the ground circuit.
No	GO to C4

C4 CHECK THE CPP (CLUTCH PEDAL POSITION) SWITCH SIGNAL CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect:
  - On vehicles equipped with a 2.5L engine disconnect PCM connector C175B
  - On vehicles equipped with a 2.2L Diesel or 3.2L Diesel engine disconnect PCM connector. C1232A
- Measure:

2.5L:

Positive Lead	Measurement / Action	Negative Lead
C277-2	Ω	C175B-3

- Measure

2.2L or 3.2L Diesel:

Positive Lead	Measurement / Action	Negative Lead
C277-2	Ω	C1232A-12

Is the resistance less than 3 ohms?

Yes	GO to C5
No	REPAIR the circuit.

C5 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM and related in-line connectors.
- REPAIR:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new PCM. For vehicles equipped with a 2.5L engine: REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). For vehicles equipped with a 2.2L Duratorq engine:REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For vehicles equipped with a 3.2L Duratorq engine: REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

P0833

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description (419-03A Cruise Control, Description and Operation).

NOTE: *Jump (push) starting the engine will cause an engine RPM correlation error when the engine rotates without a starter motor crank command. Incorrectly installed or aftermarket alarm systems may induce this fault, also.*

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0833	Clutch Pedal Switch "B" Circuit	A DTC that sets when the PCM receives the vehicle speed input, indicating movement and does not detect the switching input signal from the CPP switch. This condition disables cruise control

Possible Sources

- Wiring, terminals and connectors
- CPP switch
- PCM

PINPOINT TEST D : CPP (CLUTCH PEDAL POSITION) SWITCH "B" CIRCUIT DIAGNOSIS

D1 CHECK THE CPP (CLUTCH PEDAL POSITION) SWITCH (CPP_TOP) PARAMETER IDENTIFICATION (PID)

- Ignition ON.
- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Monitor the PCM PID CPP_TOP while pressing and releasing the clutch pedal.

Does the Parameter Identification (PID) value read "YES" with the clutch pedal pressed, and "NO' with the clutch pedal released?

Yes	GO to D4
No	For Parameter Identification (PID) always reads "NO", GO to Pinpoint Test For Parameter Identification (PID) always reads "YES", GO to D2

D2 CHECK THE CPP (CLUTCH PEDAL POSITION) SWITCH SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect:
  - 2.5L Engine: PCM Connector C175B
  - 2.2L or 3.2L Dieselt: PCM Connector C1232A
- Measure:

2.5L Engine:

Positive Lead	Measurement / Action	Negative Lead
C175B-3	Ω	Ground

- Measure

2.2L or 3.2L Diesel:

Positive Lead	Measurement / Action	Negative Lead
C1232A-12	Ω	Ground

Is the resistance value greater than 10,000 ohms?

Yes	GO to D4
No	GO to D3

D3 CHECK THE CPP (CLUTCH PEDAL POSITION) SWITCH SIGNAL CIRCUIT FOR A SHORT TO GROUND WITH THE CPP (CLUTCH PEDAL POSITION) SWITCH DISCONNECTED

- Disconnect the -CPP switch connector C277
- Disconnect:
  - 2.5L Engine: PCM connector C175B
  - 2.2L or 3.2L Diesel: PCM connector C1232A
- Measure:

2.5L Engine:

Positive Lead	Measurement / Action	Negative Lead
C175B-3	Ω	Ground

- Measure

2.2L or 3.2L Diesel:

Positive Lead	Measurement / Action	Negative Lead
C1232A-12	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	Install a new CPP switch
No	Repair the circuit short to ground

D4 RECHECK THE PCM (POWERTRAIN CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Reconnect all connectors.
- Using a scan-tool clear the PCM Diagnostic Trouble Codes (DTCs).
- Repeat the PCM self-test.

Are any PCM Diagnostic Trouble Codes(DTCs) recorded?

Yes	INSTALL a new PCM. For vehicles equipped with a 2.5L engine: REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). For vehicles equipped with a 2.2L Diesel:REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For vehicles equipped with a 3.2L Diesel: REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	GO to D5

D5 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new PCM. For vehicles equipped with a 2.5L engine: REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). For vehicles equipped with a 2.2L Diesel:REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

	For vehicles equipped with a 3.2L Diesel: REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

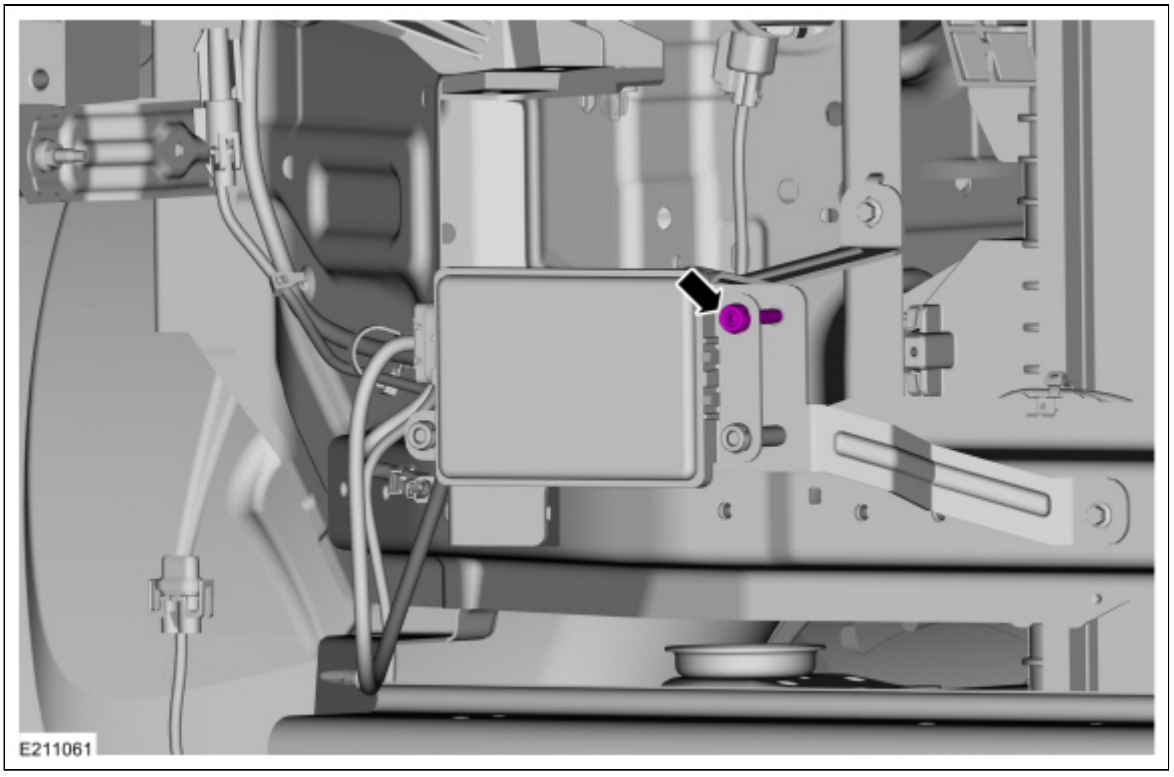
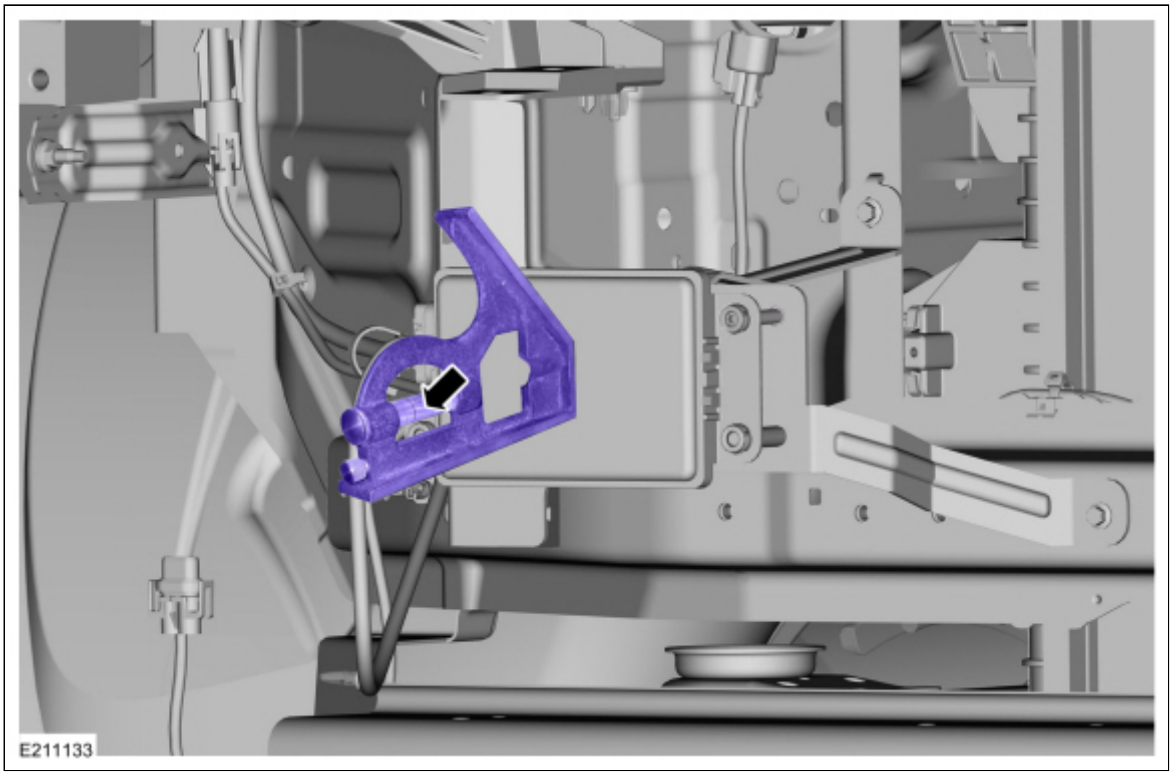
Cruise Control Radar Alignment



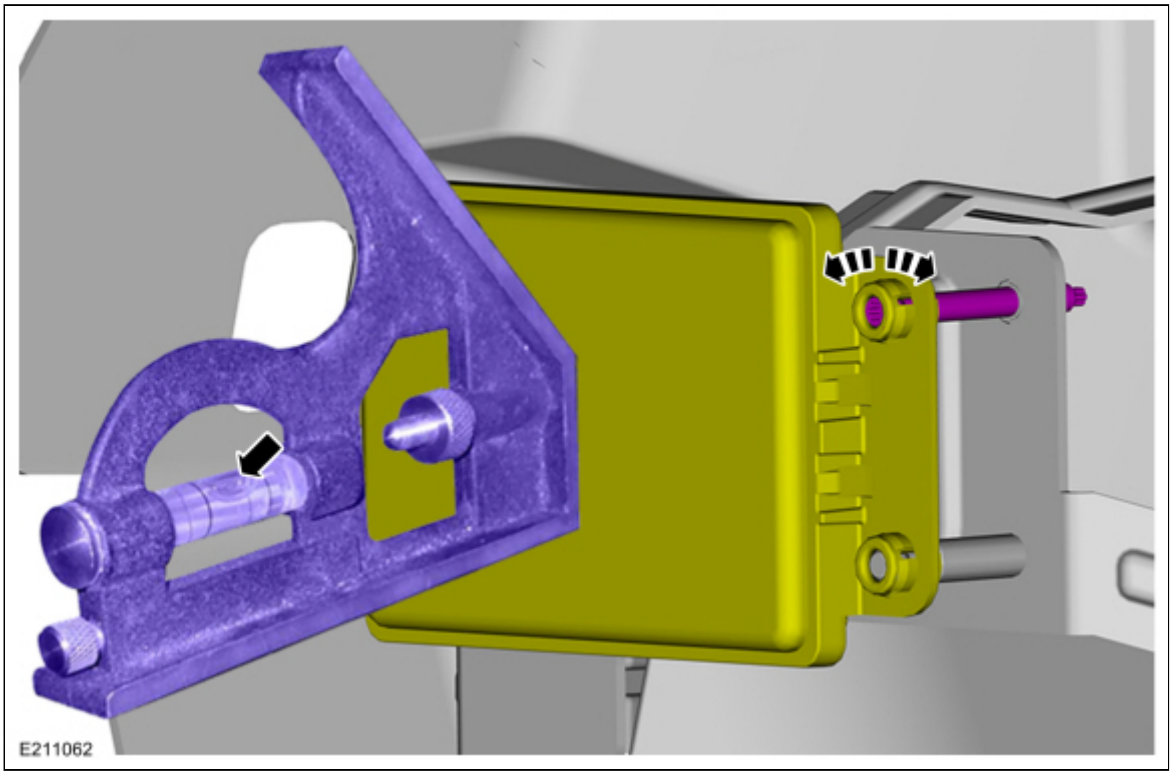
Activation

Vertical Alignment



NOTE: *In order to align the CCM, the front bumper cover must be removed to access the sensor and the vehicle must be in a wheel alignment bay station so that the vehicle is level.*

NOTE: *Damage to the CCM bracket may affect correct alignment. When aligning the CCM, inspect the CCM bracket for damage and repair as necessary before carrying out the alignment procedure.*



1. Remove the front bumper cover.
   Refer to: Front Bumper Cover (501-19 Bumpers, Removal and Installation).
2. Place the vehicle on a wheel alignment bay station.
3. Locate the CCM alignment screw.

4. Place a combination square level on the face of the CCM and check the alignment.

5. Keeping the combination square level on the face of the CCM, adjust the pitch by using an E20 Torx® bit to adjust the screw until the CCM is vertical and level.

6. **NOTE:** *Prior to installing the front bumper cover, clean and remove any debris on the front or back of the cover.*

   Install the front bumper cover.

Horizontal Alignment

NOTE: *The horizontal alignment for the CCM is a software calibration. No manual adjustment is needed for this procedure. The scan tool calibrates the CCM through the CCM procedure in programmable parameters.*

7. **NOTICE: The vehicle's engine must be running during the horizontal alignment procedure. Failure to leave the engine running throughout the entire procedure results in the cancellation of the alignment procedure and the system remains non-functional.**

Start the engine.

8. Follow the scan tool on-screen instructions to carry-out the CCM calibration procedure.

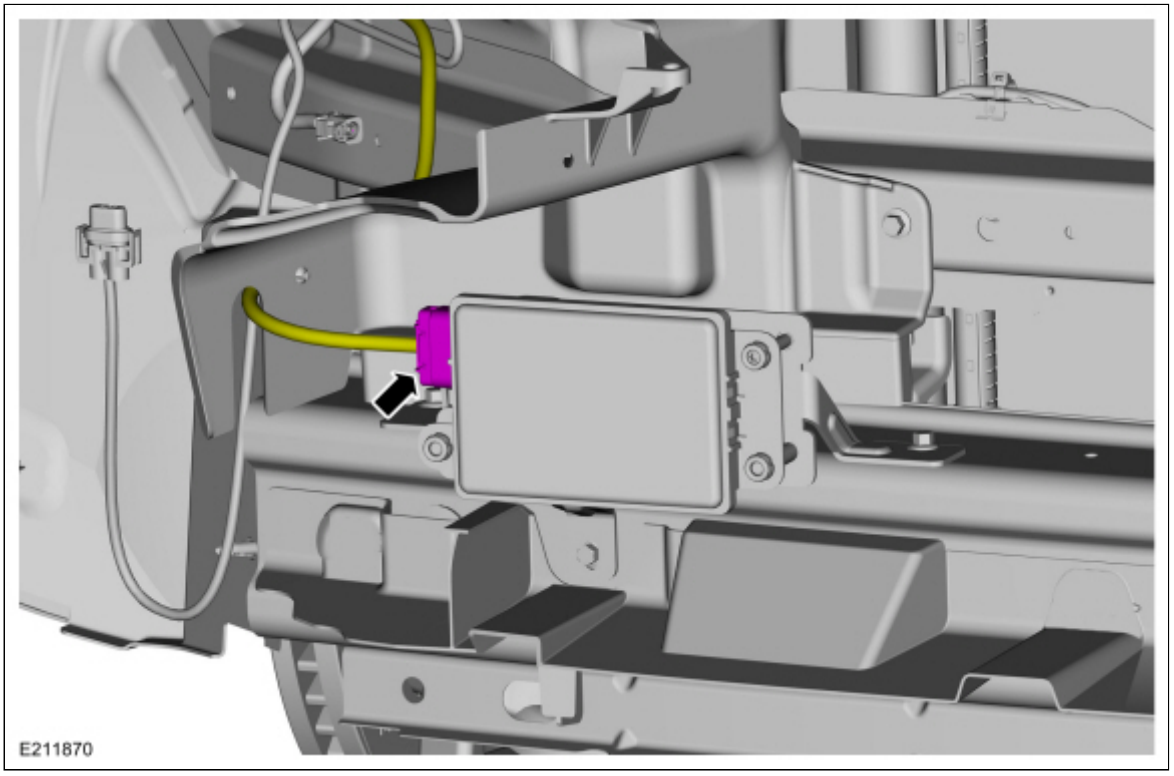
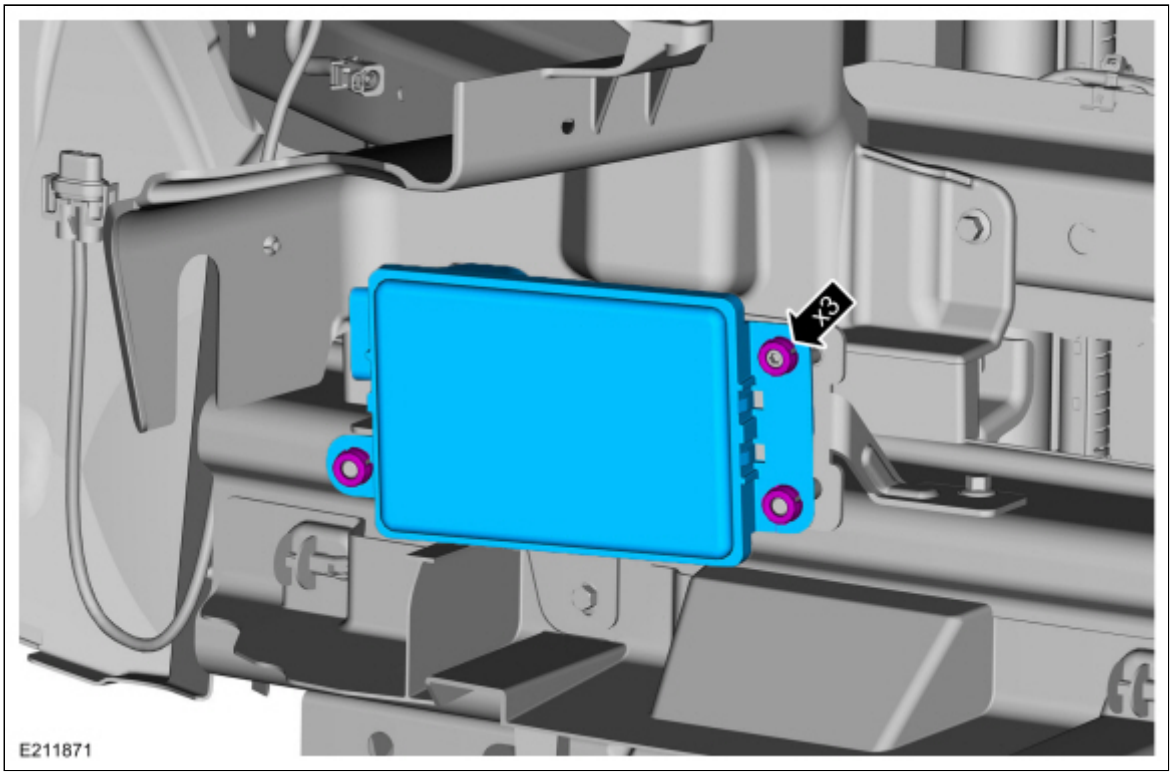
Cruise Control Module (CCM)



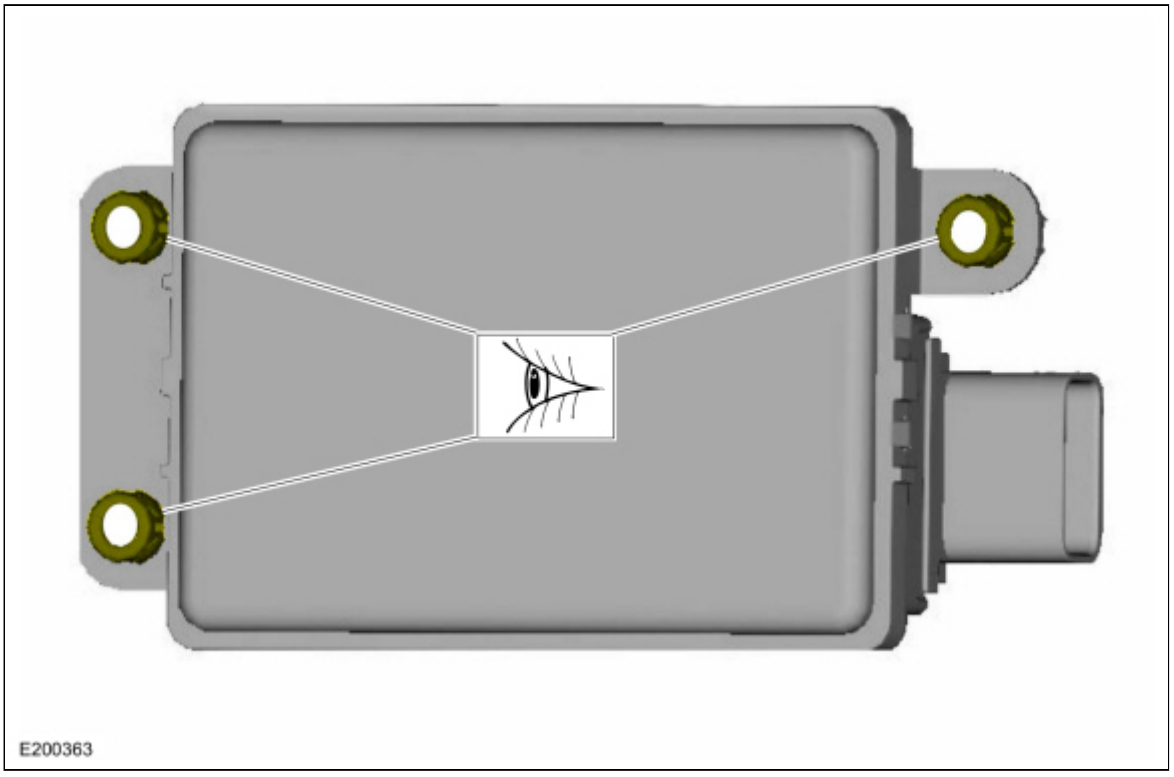
Removal

NOTE: *Removal steps in this procedure may contain installation details.*



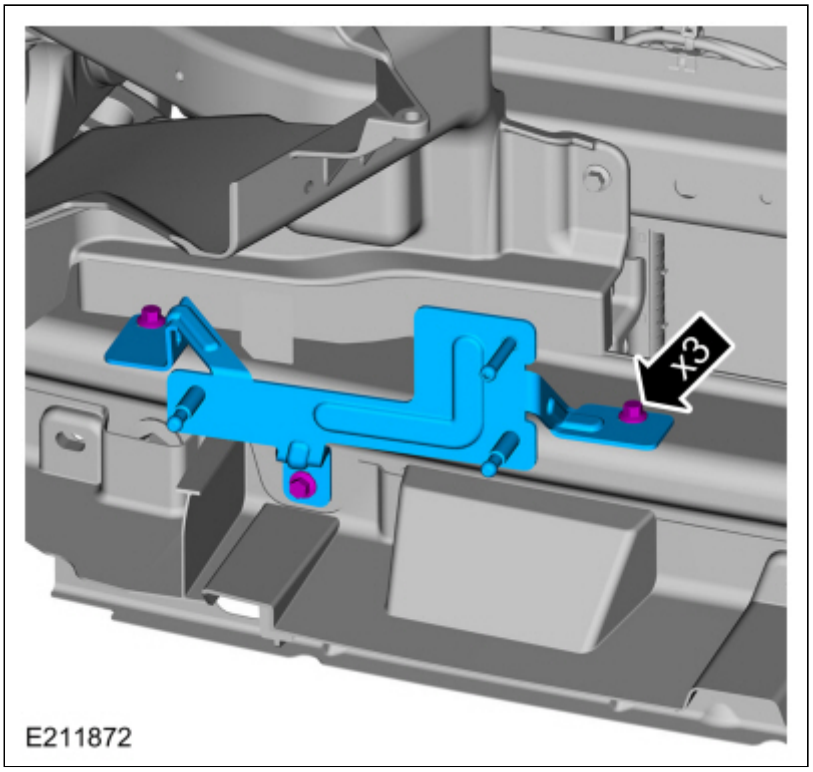
Cruise control module (CCM)

1. Remove the front bumper cover.
   Refer to: Front Bumper Cover (501-19 Bumpers, Removal and Installation).



2. Disconnect the CCM electrical connector.

3. Separate the CCM grommets and remove the CCM.

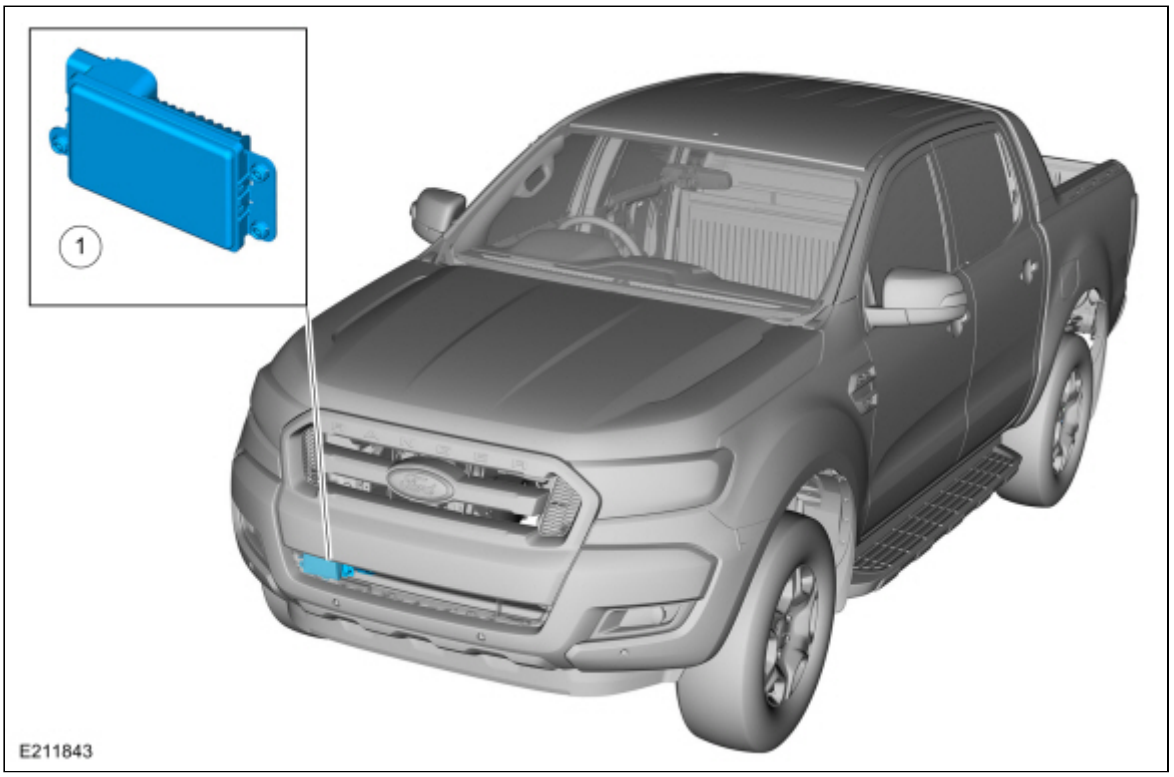


4. Inspect the grommets for damage. If damaged, install new grommets.

Cruise control module (CCM) bracket

5. Remove the CCM.

1. Remove the CCM bracket.
   Torque: 12 Nm



Installation

1. To install, reverse the removal procedure.
2. Align the CCM.
   Refer to: Cruise Control Radar Alignment (419-03A Cruise Control, General Procedures).

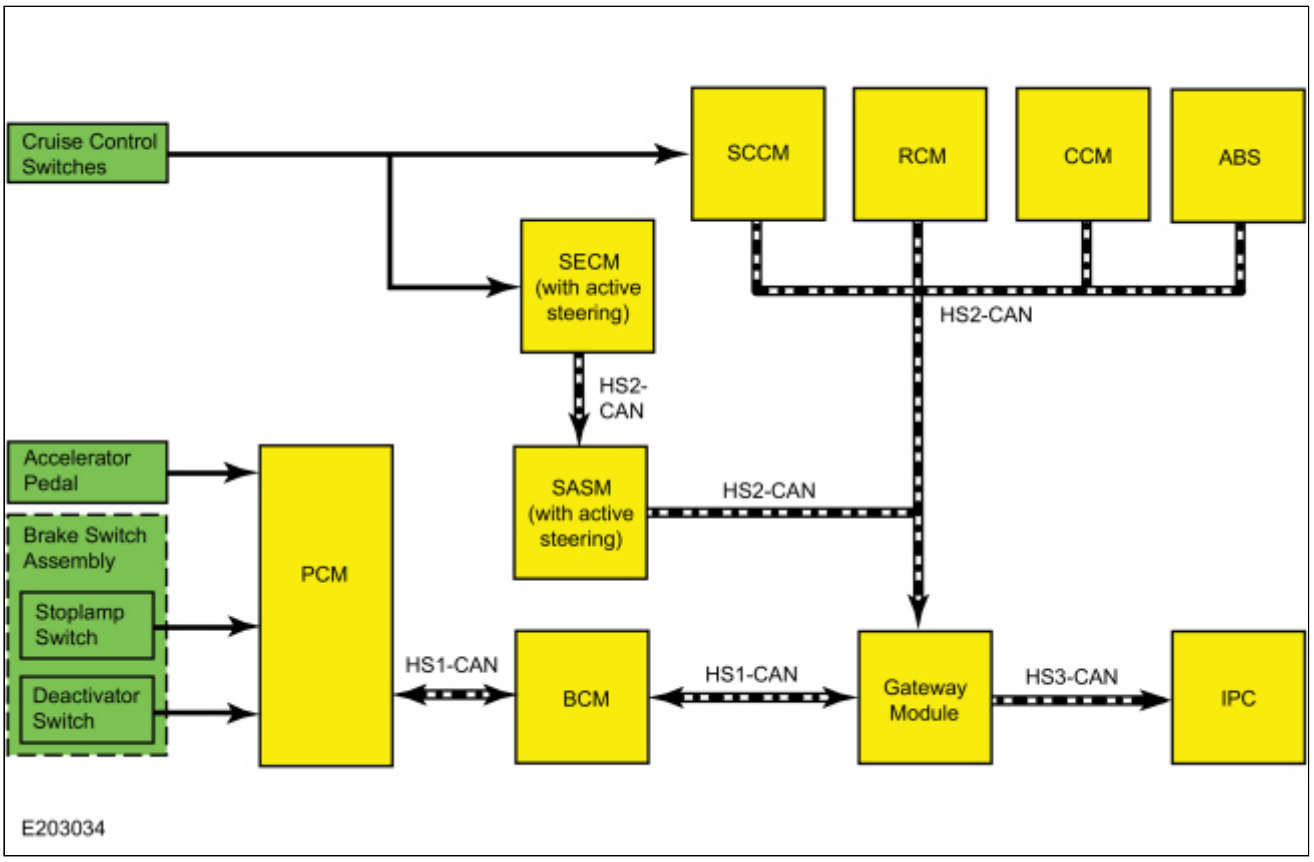
Cruise Control - Overview

Overview

The cruise control system is controlled by the PCM.

The cruise control modes are selected from the steering wheel mounted switches (ON/OFF, SET+, SET-, GAP+, GAP- and CAN/RES), which are integrated into the LH steering wheel switch.

The cruise control system maintains a selected vehicle speed between 29 km/h (18 mph) and 160 km/h (99 mph). When a MyKey® restricted key is in use and max speed limiter is turned on, vehicle speed is limited to 129 km/h (80 mph).



During normal driving, the vehicle speed can vary slightly from the set speed due to road conditions. The vehicle speed can fluctuate when driving up and down a steep hill.

Cruise Control - System Operation and Component Description

System Operation

Adaptive Cruise Control

Network Message Chart

Network Input Messages - ABS Module

Broadcast Message	Originating Module	Message Purpose
Adaptive cruise control brake deceleration request	CCM	Used for cruise control automatic braking.
Brake pedal applied	PCM	Used for brake switch input.
Vehicle lateral acceleration	RCM	Deactivates cruise control when requested.
Vehicle longitudinal acceleration		

Network Input Messages - CCM

Broadcast Message	Originating Module	Message Purpose
Accelerator pedal position	PCM	Used for accelerator pedal status.
Brake pedal applied	PCM	Used for brake switch input.
Cruise control override	PCM	Driver overriding cruise control with accelerator pedal.

Ignition status	BCM	Used for ignition switch position input.
Stability control event in progress	ABS module	Deactivates cruise control when requested.
Traction control event in progress		
Vehicle yaw rate		
Vehicle lateral acceleration	RCM	Deactivates cruise control when requested.
Vehicle longitudinal acceleration		
Vehicle configuration data	BCM	Used for comparison checking adaptive cruise control configuration.

Network Input Messages - IPC

Broadcast Message	Originating Module	Message Purpose
Adaptive cruise control gap distance display	CCM	Data used to generate message center display indicating adaptive cruise control gap setting.
Cruise control mode	PCM	Toggles between speed control and adaptive cruise control.
Cruise control override	PCM	Driver overriding cruise control with accelerator pedal.
Cruise control status	PCM	Data used for speed control indicator status.
Cruise control set speed	PCM	Data used to display the driver selected vehicle speed.

Network Input Messages - PCM

Broadcast Message	Originating Module	Message Purpose
Adaptive cruise control commands	CCM	Used for cruise control enable/disable and operating mode request.
Stability control event in progress	ABS module	Deactivates speed control when requested.
Traction control event in progress		
Vehicle lateral acceleration	RCM	Deactivates speed control when requested.
Vehicle longitudinal acceleration		
Vehicle yaw rate		

Network Input Messages - SCCM (Active Front Steering)

Broadcast Message	Originating Module	Message Purpose
Cruise control switch commands	SASM	Used for cruise control switch enable/disable and operating mode commands on vehicles equipped with active front steering.

Cruise Control Operation

NOTE: *For a complete illustration of the adaptive cruise control indicators and graphic displays, refer to the Owner's Literature.*

The adaptive cruise control system functions much like a standard cruise control system. The adaptive cruise control system automatically adjusts the vehicle speed to maintain a set distance gap from the front of the vehicle and the vehicle in the same path of travel. When the adaptive cruise control system is on and is following a vehicle or a vehicle enters the same driving lane, a follow vehicle graphic is displayed in the message center.

The adaptive cruise control system does not function if the vehicle speed is below 20 km/h (12 mph). As the vehicle slows down during automatic braking, the adaptive cruise control system discontinues braking at 20 km/h (12 mph). At that speed, an audible alarm sounds and the automatic braking from the ABS module is released. The driver must take over the vehicle braking control.

The cruise control deactivator switch (which is integral to the BPP switch) is an additional safety feature. When the brake pedal is pressed, an electrical signal is sent from the BPP switch to the PCM deactivating the cruise control system. Under increased brake pedal effort, the cruise control system deactivator switch opens and removes the ground signal from the PCM input circuit, releasing the throttle and immediately deactivating the system.

The CCM monitors the yaw rate signal from the ABS module and compares it to the wheel speed and steering wheel angle signals. If the ABS module determines the yaw rate is invalid, the CCM disables the adaptive cruise control. The message center displays the message COLLISION WARNING MALFUNCTION and/or ADAPTIVE CRUISE MALFUNCTION.

The CCM monitors the environment in front of the vehicle while active. If the radar beam is obstructed by a buildup of snow, ice, rain or other debris, or the vehicle is driven in a desert environment with no other traffic for extended periods of time, the sensor will trigger a "Radar Blocked" message and will disable the adaptive cruise control. The adaptive cruise control will resume once the obstruction is cleared and the radar is able to detect targets, or upon a key cycle.

The ABS module estimates brake temperature by monitoring applied brake pressure over a period of time and sends a message to the CCM when the estimated temperature is above a given threshold. An alarm sounds and the adaptive cruise control system is deactivated until the estimated brake temperature returns to cooler operating conditions. This condition can happen in a hilly or mountainous driving terrain.

Cruise Control Indicator

The adaptive cruise control indicator located in the IPC illuminates gray and the previous gap setting and SET graphic is displayed indicating the system is in standby mode. This notifies the driver the system is ready and the vehicle can be accelerated to the desired speed.

Steering Wheel Switch Function

The adaptive cruise control steering wheel mounted switches are momentary contact switches that toggle up and down for the cruise control switch state. Pressing and releasing the steering wheel cruise control ON/OFF switch turns the cruise control system on. Pressing up and releasing the SET+ switch sets the vehicle's speed and stores the set speed in memory. The adaptive cruise control indicator illuminates and the message center displays the set speed and gap setting graphic.

There are 2 ways to change the set speed. The first way is to accelerate or brake to the desired speed and press and release the SET cruise control switch until the desired set speed is shown on the message center. The second way is by tapping the SET+ or the SET- switch while in the set mode, increasing or decreasing the displayed set speed by 2 km/h (1 mph) in (Australia and New Zeland) and 5 km/h (3 mph) everywhere else per tap. If the respective button is pressed and held, the displayed set speed continues to increase or decrease until the button is released. The adaptive cruise control system may apply the brakes to slow the vehicle down to the new set speed. The set speed displays continuously in the message center while the adaptive cruise control system is active.

Pressing and releasing the OFF switch, or switching the ignition to OFF, turns the adaptive cruise control system off. The adaptive cruise control set speed memory is erased.

Pressing the brake pedal or pressing the CNCL switch puts the adaptive cruise control system in standby mode and the last set speed is displayed in the message center with a strike through. Pressing the RES button when the adaptive cruise control system is in standby mode causes the vehicle to accelerate to the last set speed. The set speed continuously displays in the message center while the adaptive cruise control system is active. The RES button does not function if the OFF button is pressed, the ignition is cycled OFF, or if the current vehicle speed is below the minimum operational speed.

The adaptive cruise control system has the capability for the driver to change from adaptive cruise control to standard cruise control. The LH 5-way steering wheel switch is used to switch from the adaptive cruise control system to standard cruise control system within the message center. For information on selecting the standard cruise control in

the message center, refer to Owner's Literature. Once the driver has selected the standard cruise control in the message center, the adaptive cruise control indicator is replaced by the standard cruise control indicator. The vehicle no longer responds to lead vehicles or automatic braking. Upon the next vehicle ignition cycle, the vehicle defaults back to the adaptive cruise control system.

Gap Setting

When a vehicle ahead enters the same lane or a slower vehicle is ahead in the same lane, the vehicle speed adjusts automatically to maintain a preset distance gap. A bar graph graphic with 4 preset distance gap settings are displayed in the message center. Pressing up (decrease) or down (increase) on the steering wheel cruise control gap switch increases or decreases the distance from the vehicle ahead. If all of the bars are illuminated, this is the longest gap setting. If only one bar is illuminated, that is the shortest gap setting.

The vehicle maintains the distance gap to the vehicle ahead until:

- the vehicle ahead accelerates to a speed above the set speed.
- the vehicle ahead moves out of the lane or out of view.
- the vehicle speed falls below 20 km/h (12 mph).
- a new gap distance is set.

After each ignition cycle, the previous gap setting is remembered and the system is set to that gap setting.

The distance gap can be overridden by pressing the accelerator pedal. The follow vehicle graphic is not displayed in the message center and the green indicator illuminates. When the accelerator pedal is released, the adaptive cruise control system returns to normal operation and the vehicle speed decreases to the set speed or a lower speed if following a vehicle ahead.

Deceleration Control

The CCM commands the ABS module, which controls the brakes, to automatically apply the brakes to slow the vehicle to maintain a safe distance to the vehicle in front.

Steering Wheel Switches

The cruise control steering wheel mounted switches are momentary contact switches that toggle up and down for the switch state. On vehicles without active front steering, the switches are an input to the SCCM. On vehicles with active front steering, the switches are an input to the SECM. The SECM sends switch data to the SASM (part of the clockspring assembly), and the SASM sends switch data to the SCCM over the HS-CAN2.

Brake Switch

When the brake pedal is applied, the cruise control deactivator switch, integrated in the BPP switch, opens and removes the ground signal from the PCM input circuit releasing the throttle, immediately deactivating the system.

Cruise Control Module (C-CM)

The CCM contains a radar sensing unit which measures the relative speed and the distance between the front of the vehicle and the vehicle being followed. The CCM is responsible for requesting the PCM to increase vehicle speed and the ABS module to brake, when necessary.

U0212:00	Lost Communication With Steering Column Control Module: No Sub Type Information	GO to Pinpoint Test N
U0265:00	Lost Communication With Image Processing Module Sensor A: No Sub Type Information	GO to Pinpoint Test O
U0401:86	Invalid Data Received From ECM/PCM "A": Signal Invalid	RETRIEVE and FOLLOW non-network Diagnostic Trouble Codes (DTCs) from the PCM. Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual. If no Diagnostic Trouble Codes (DTCs) are present in the PCM, DIAGNOSE the observable symptom.
U0418:86	Invalid Data Received From Brake System Control Module: Signal Invalid	RETRIEVE and FOLLOW non-network Diagnostic Trouble Codes (DTCs) from the ABS module. REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing). If no Diagnostic Trouble Codes (DTCs) are present in the ABS module, DIAGNOSE the observable symptom.
U0423:82	Invalid Data Recevied From Instrument Panel Cluster Control Module: Alive/Sequence Counter Incorrect/ Not Updated	GO to Pinpoint Test S
U0429:86	Invalid Data Received From Steering Column Control Module: Signal Invalid	RETRIEVE and FOLLOW non-network Diagnostic Trouble Codes (DTCs) from the SCCM. REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches, Diagnosis and Testing). If no Diagnostic Trouble Codes (DTCs) are present in the SCCM, DIAGNOSE the observable symptom.
U0452:86	Invalid Data Received From Restraints Control Module: Signal Invalid	RETRIEVE and FOLLOW non-network Diagnostic Trouble Codes (DTCs) from the RCM. If no Diagnostic Trouble Codes (DTCs) are present in the RCM, DIAGNOSE the observable symptom.
U053B:64	Invalid Data Received From Image Processing Module A: Signal Plausibility Failure	RETRIEVE and FOLLOW non-network Diagnostic Trouble Codes (DTCs) from the IPMA. REFER to: Lane Keeping System (419-07 Lane Keeping System, Diagnosis and Testing). If no Diagnostic Trouble Codes (DTCs) are present in the IPMA, DIAGNOSE the observable symptom.
U053B:83	Invalid Data Received From Image Processing Module A: Value of Signal Protection Calculation Incorrect	RETRIEVE and FOLLOW non-network Diagnostic Trouble Codes (DTCs) from the IPMA. REFER to: Lane Keeping System (419-07 Lane Keeping System, Diagnosis and Testing). If no Diagnostic Trouble Codes (DTCs) are present in the IPMA, DIAGNOSE the observable symptom.
U2018:51	Control Module Software #3: Not Programmed	This DTC sets when the CCM configuration has not been completed. CARRY OUT the PMI (when the original module is not available) for the module in question as directed by the diagnostic scan tool.

		REFER to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation).
U2100:00	Initial Configuration Not Complete: No Sub Type Information	This DTC sets when the CCM configuration has not been completed. CARRY OUT the PMI (when the original module is not available) for the module in question as directed by the diagnostic scan tool. REFER to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation).
U2300:55	Central Configuration: Not Configured	This DTC sets when the CCM detects the BCM is not configured correctly. CARRY OUT the PMI procedure (when the original module is not available) for the module in question as directed by the diagnostic scan tool. REFER to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation).
U2300:64	Central Configuration: Signal Plausibility Failure	This DTC sets when the CCM detects the BCM is not configured correctly. CARRY OUT the PMI procedure (when the original module is not available) for the module in question as directed by the diagnostic scan tool. REFER to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation).
U3000:41	Control Module: General Checksum Failure	CLEAR the Diagnostic Trouble Codes (DTCs). RETEST the adaptive cruise control system. REPEAT the self-test. If DTC U3000:41 is retrieved again, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).
U3000:42	Control Module: General Memory Failure	CLEAR the Diagnostic Trouble Codes (DTCs). RETEST the adaptive cruise control system. REPEAT the self-test. If DTC U3000:42 is retrieved again, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).
U3000:44	Control Module: Data Memory Failure	CLEAR the Diagnostic Trouble Codes (DTCs). RETEST the adaptive cruise control system. REPEAT the self-test. If DTC U3000:44 is retrieved again, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).
U3000:49	Control Module: Internal Electronic Failure	If DTC U3000:49 is retrieved again, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).
U3000:63	Control Module: Circuit/Component Protection Time-Out	GO to Pinpoint Test P
U3002:62	Vehicle Identification Number: Signal Compare Failure	This DTC sets when the stored VIN in the CCM does not match the VIN defined in the BCM. This may indicate that the original CCM is not installed in the vehicle, and has not been configured correctly. CARRY OUT the PMI (when the original module is not available) for the module in question as directed by the diagnostic scan tool.
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test Q
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test R

DTC Chart: Anti-Lock Brake System (ABS) Module

ABS Module DTC Chart

DTC	Description	Action
U0405:41	Invalid Data Received From Cruise Control Module: General Checksum Failure	This DTC sets when the ABS module receives invalid network data from the CCM. RETRIEVE and REPAIR all non network diagnostic trouble codes (DTCs) in the CCM.
U0405:82	Invalid Data	This DTC sets when the ABS module receives invalid network data from the

	Received From Cruise Control Module: Alive/Sequence Counter Incorrect/Not Updated	CCM. RETRIEVE and REPAIR all non-network diagnostic trouble codes (DTCs) in the CCM.
U0405:86	Invalid Data Received From Cruise Control Module: Signal Invalid	This DTC sets when the ABS module receives invalid network data from the CCM. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the CCM and other modules on the network.
U2107:00	Collision Mitigation By Braking: No Sub Type Information	This DTC sets in the ABS module due to long and too frequent collision mitigation brake requests from the CCM RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the CCM and other modules on the network.
U2107:68	Collision Mitigation By Braking: Event Information	This DTC is set in the ABS module due to a high acceleration value detected that differs from request, which can be caused by an abrupt vehicle stop or module failure. RETRIEVE and REPAIR all Diagnostic Trouble Codes (DTCs) in the CCM and ABS module.
U2108:68	Adaptive Cruise Control: Event Information	This DTC is set in the ABS module when the module detects over-braking during automated vehicle deceleration. If the vehicle deceleration exceeds the 3.2 m/s^2 threshold, the DTC is stored and the adaptive cruise control is deactivated until the next ignition cycle. RETRIEVE and REPAIR all Diagnostic Trouble Codes (DTCs) in the CCM and ABS module.
All other Diagnostic Trouble Codes (DTCs)	–	REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).

Symptom Chart(s)

Symptom Chart: Adaptive Cruise Control

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
The adaptive cruise control is inoperative - without active front steering	Refer to the Pinpoint Test	GO to Pinpoint Test A
The adaptive cruise control is inoperative - with active front steering	Refer to the Pinpoint Test	GO to Pinpoint Test B
The cruise control switch is inoperative/does not operate correctly - without active front steering	Refer to the Pinpoint Test	GO to Pinpoint Test A
The cruise control switch is inoperative/does not operate correctly - with active front steering	Refer to the Pinpoint Test	GO to Pinpoint Test B

The adaptive cruise control does not function in rain or snow conditions	Refer to the Pinpoint Test	GO to Pinpoint Test H
ADAPTIVE CRUISE NOT AVAILABLE SENSOR BLOCKED SEE MANUAL message in the IPC message center	Refer to the Pinpoint Test	GO to Pinpoint Test H
The adaptive cruise control indicator lamp is never/ always on	• Wiring, terminals and connectors • PCM • IPC	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
Unexpected adaptive cruise control braking	• CCM • Front bumper cover	The adaptive cruise control system can occasionally detect and respond to out-of path vehicles, especially on curves, entry/exit ramps or when changing lanes. CHECK the CCM and front bumper cover for damage. RETEST the adaptive cruise control system.
Lack of adaptive cruise control braking	• CCM • Front bumper cover	The adaptive cruise control system may not detect and respond to vehicles performing close cut-ins or on tight curves (especially for vehicles on the passenger side) due to limited CCM field of view. CHECK the CCM and front bumper cover for damage. If no damage is observed, RETEST the adaptive cruise control system.
Noise during adaptive cruise control braking	• Low speeds • Brake concern	The driver can detect some noise at low speeds when adaptive cruise control braking occurs. If braking noise continues, REFER to: Brake System (206-00 Brake System - General Information, Diagnosis and Testing).
The cruise control cannot set above 105 kmh (65 mph), 113 kmh (70 mph), 121 kmh (75 mph), or 129 kmh (80 mph)	A MyKey® restricted key is in use and MyKey® max speed limiter is turned on	VERIFY whether a MyKey® restricted key is in use. With an admin key, VERIFY if MyKey® max speed limiter is turned on. REFER to the Owner's Literature. If necessary, VERIFY cruise control normal operation with an admin key.

Pinpoint Tests

The Adaptive Cruise Control Is Inoperative

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Steering Wheel and Column Electrical Components - Overview (211-05 Steering Column Switches, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Action
B137F:09	Steering Wheel Left Switch Pack:	A continuous and on-demand DTC that sets when one or more

	Component Failure	of the cruise control switches are stuck.
B137F:11	Steering Wheel Left Switch Pack: Circuit Short to Ground	A continuous and on-demand DTC that sets when the cruise control switch circuits are shorted to ground.
B137F:17	Steering Wheel Left Switch Pack: Circuit Voltage Above Threshold	A continuous and on-demand DTC that sets when the cruise control switch circuits are shorted to voltage.

Possible Sources

- Wiring, terminals or connectors
- Cruise control switch
- BPP switch
- Digital TR sensor
- Stoplamp switch
- Vehicle speed signal
- PCM
- ABS module
- BCM
- CCM
- SCCM

PINPOINT TEST A : THE ADAPTIVE CRUISE CONTROL IS INOPERATIVE

A1 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform PCM self-test.
- Using a diagnostic scan tool, perform SCCM self-test.
- Using a diagnostic scan tool, perform CCM self-test.
- Using a diagnostic scan tool, perform ABS module self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	For PCM, CCM and ABS module Diagnostic Trouble Codes (DTCs), REFER to the DTC Charts in this section. For SCCM DTC B137F:09, B137F:11 or B137F:17, GO to A4 For all other SCCM Diagnostic Trouble Codes (DTCs), REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches, Diagnosis and Testing).
No	GO to A2

A2 CHECK FOR LOST COMMUNICATION DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Clear Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds. Retrieve Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Are any lost communication Diagnostic Trouble Codes (DTCs) set in the CCM?

Yes	REFER to the DTC Chart in this section.
No	GO to A3

A3 CHECK THE STOPLAMP SWITCH (BOO1) AND CRUISE CONTROL DEACTIVATOR SWITCH (BOO2) PARAMETER IDENTIFICATIONS (PIDS)

- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Using the table, monitor the Parameter Identifications (PIDs) BOO1 (stoplamp switch) and BOO2 (cruise control deactivator switch) while applying and releasing the brake pedal.

Brake Pedal Position	BOO1 PID	BOO2 PID
Released	On	On
Applied lightly	On	Off
Applied firmly	Off	Off

Do the PID values agree with the brake pedal position?

Yes	GO to A4
No	GO to Pinpoint Test C

A4 CHECK THE CRUISE CONTROL SWITCH PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view SCCM Parameter Identifications (PIDs).
- Using the table, press each cruise control switch while monitoring the cruise control switch PID.

Cruise Control Switch	PID Value
Cruise On/Off (pressed/released)	On/Off
Cruise Cancel/Resume (pressed/released)	On/Off
SET + (pressed/released)	On/Off
SET - (pressed/released)	On/Off
GAP + (pressed/released)	On/Off
GAP - (pressed/released)	On/Off

Does the PID value agree with the switch position?

Yes	GO to A5
No	If only one switch does not display the correct PID value, INSTALL a new LH steering wheel switch. REFER to: Steering Column Multifunction Switch LH (211-05 Steering Column Switches, Removal and Installation). If multiple switches do not display the correct PID value, GO to A6

A5 MONITOR THE PCM (POWERTRAIN CONTROL MODULE) TR (TRANSMISSION RANGE) PID

- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Monitor the PCM TR PID.
- Select DRIVE.

Does the PID value agree with the TR selector lever position?

Yes	GO to A10
No	REFER to: External Controls (307-05 Automatic Transmission External Controls, Diagnosis and Testing).

A6 CHECK FOR VOLTAGE TO THE CRUISE CONTROL SWITCHES

- Ignition OFF.

- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect LH Steering Wheel Switch C2998.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2998-4	V	C2998-5
C2998-6	V	C2998-5
C2998-7	V	C2998-5

Is the voltage approximately 5 volts?

Yes	TURN the ignition off and WAIT one minute. INSTALL a new LH steering wheel switch. INSTALL the driver airbag. REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
No	GO to A7

A7 CHECK THE STEERING WHEEL SWITCH HARNESS FOR AN OPEN

- Ignition OFF.
- Disconnect Clockspring C218B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2998-4	Ω	C218B-15
C2998-5	Ω	C218B-8
C2998-6	Ω	C218B-6
C2998-7	Ω	C218B-7

Are the resistances less than 3 ohms?

Yes	GO to A8
No	Install a new steering wheel. REFER to: Steering Wheel (211-04) .

A8 CHECK THE STEERING WHEEL SWITCH CIRCUITS THROUGH THE CLOCKSPRING FOR AN OPEN

- Disconnect Clockspring C218G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C218B-6 (component side)	Ω	C218G-5 (component side)
C218B-7 (component side)	Ω	C218G-7 (component side)
C218B-15 (component side)	Ω	C218G-8 (component side)

Are the resistances less than 3 ohms?

Yes	GO to A9
No	Install a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

A9 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all SCCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the SCCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable TSBs. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no TSBs address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A10 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.2L, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2L, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Cruise Control Is Inoperative - With Active Front Steering

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Steering Wheel and Column Electrical Components - Overview (211-05 Steering Column Switches, Description and Operation).

REFER to: Cruise Control - System Operation and Component Description (419-03A Cruise Control, Description and Operation).

DTC Fault Trigger Conditions - Steering Effort Control Module (SECM)

DTC	Description	Action
B137F:11	Steering Wheel Left Switch Pack: Circuit Short to Ground	A continuous memory DTC that sets when the cruise control switch circuits are shorted to ground.
B137F:17	Steering Wheel Left Switch Pack: Circuit Voltage Above Threshold	A continuous memory DTC that sets when the cruise control switch circuits are shorted to voltage.
B137F:2A	Steering Wheel Left Switch Pack: Signal Stuck in Range	A continuous memory DTC that sets when a cruise control switch is stuck in position.
B137F:4A	Steering Wheel Left Switch Pack: Incorrect Component Installed	A continuous memory DTC that sets when the SECM detects a switch is installed that does not correspond with the switch configuration in the module.

Possible Sources

- Wiring, terminals or connectors
- Cruise control switch
- Digital TR sensor
- PCM
- SCCM
- SASM
- SECM
- BPP switch

PINPOINT TEST B : THE CRUISE CONTROL IS INOPERATIVE - WITH ACTIVE FRONT STEERING

B1 PERFORM A NETWORK TEST

- Using a diagnostic scan tool, perform the a network test.

Does the SECM, SASM or SCCM communicate on the network?

Yes	GO to B2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

B2 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the PCM self-test.
- Using a diagnostic scan tool, perform the SECM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	If PCM Diagnostic Trouble Codes (DTCs) were retrieved, REFER to the PCM DTC Chart in this section. If SECM DTC B137F:11, B137F:17, B137F:2A or B237F:4A was retrieved, GO to B4 If other SECM Diagnostic Trouble Codes (DTCs) were retrieved,

No	GO to B3

B3 CHECK THE STOPLAMP SWITCH (BOO1) AND CRUISE CONTROL DEACTIVATOR SWITCH (BOO2) PARAMETER IDENTIFICATIONS (PIDS)

- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Using the table, monitor the Parameter Identifications (PIDs) BOO1 (stoplamp switch) and BOO2 (cruise control deactivator switch) while applying and releasing the brake pedal.

Brake Pedal Position	BOO1 PID	BOO2 PID
Released	Off	Off
Applied	On	On

Do the PID values agree with the brake pedal position?

Yes	GO to B4
No	GO to Pinpoint Test C

B4 CHECK THE CRUISE CONTROL SWITCH PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view Steering Effort Control Module (SECM) Parameter Identifications (PIDs).
- Using the table, press each cruise control switch while monitoring the cruise control switch PID.

Cruise Control Switch	PID Value
ON/OFF (pressed/released)	On/Off
RES/CNCL (pressed/released)	On/Off
GAP + (pressed/released)	On/Off
GAP - (pressed/released)	On/Off
SET + (pressed/released)	On/Off
SET - (pressed/released)	On/Off

Does the PID value agree with the switch position?

Yes	GO to B5
No	If only one switch does not display the correct PID value, INSTALL a new LH steering wheel switch. REFER to: Steering Column Multifunction Switch LH (211-05 Steering Column Switches, Removal and Installation). If multiple switches do not display the correct PID value, GO to B6

B5 MONITOR THE PCM (POWERTRAIN CONTROL MODULE) TR (TRANSMISSION RANGE) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Monitor the PCM PID TR.
- Select DRIVE.

Does the PID value agree with the TR selector lever position?

Yes	GO to B7
No	REFER to: External Controls (307-05 Automatic Transmission External Controls, Diagnosis and Testing).

B6 CHECK THE LH STEERING WHEEL CRUISE CONTROL SWITCHES

- Disconnect the LH steering wheel switch.
  REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation).
- While pressing the cruise control ON/OFF and RES/CNCL switches, measure:

Positive Lead	Measurement / Action	Negative Lead
LH steering wheel switch C2998 pin 4, component side	Ω	LH steering wheel switch C2998 pin 5, component side

Resistance Specification

Button Pressed	Resistance Range
Button not pressed	488-540 ohms
ON/OFF	57-63 ohms
RES/CNCL	175-193 ohms

- While pressing the cruise control GAP+/GAP- switch, measure:

Positive Lead	Measurement / Action	Negative Lead
LH steering wheel switch C2998 pin 7, component side	Ω	LH steering wheel switch C2998 pin 5, component side

Resistance Specification

Button Pressed	Resistance Range
Button not pressed	488-540 ohms
GAP-	57-63 ohms
GAP+	175-193 ohms

- While pressing the cruise control SET+ and SET- switch, measure:

Positive Lead	Measurement / Action	Negative Lead
LH steering wheel switch C2998 pin 6, component side	Ω	LH steering wheel switch C2998 pin 5, component side

Resistance Specification

Button Pressed	Resistance Range
Button not pressed	488-540 ohms
SET+	175-193 ohms
SET-	57-63 ohms

Do the resistances fall between the specified ranges?

Yes	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04) .
No	INSTALL a new LH steering wheel switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation).

B7 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.2L, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2L, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

P0504, P0572, P0573 OR P1703

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0504	Brake	A DTC that sets when the PCM does not sense the correct sequence of the brake pedal input

	Switch A / B Correlation	signal from both the cruise control deactivator and stoplamp switches when the brake pedal is pressed and released.
P0572	Brake Switch A Circuit Low	A DTC that sets when the PCM detects an open in the stoplamp switch signal. The PCM monitors the vehicle speed, the engine speed, the engine torque and the stoplamp input during start and stop driving cycles. If the stoplamp switch input to the PCM is always off during start and stop driving cycles, this DTC sets in continuous memory.
P0573	Brake Switch A Circuit High	A DTC that sets when the PCM detects a short to voltage on the stoplamp switch signal. The PCM monitors the vehicle speed, the engine speed, the engine torque and the stoplamp switch input during start and stop driving cycles. If the stoplamp lamp switch input to the PCM is always on during start and stop driving cycles, this DTC sets in continuous memory.
P1703	Brake Switch Out Of Self - Test Range	A DTC that sets in the PCM during the self-test when the stoplamp switch input signal is high or does not cycle high and low.

Possible Sources

- Wiring, terminals or connectors
- Stoplamp switch
- PCM

PINPOINT TEST C : P0504, P0572, P0573 OR P1703

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

C1 CHECK THE OPERATION OF THE STOPLAMPS

- Ignition ON.
- Operate the stoplamps.

Do the stoplamps and high mounted stoplamp operate correctly?

Yes	GO to C2
No	REFER to: Stoplamps (417-01 Exterior Lighting, Diagnosis and Testing).

C2 CHECK THE STOPLAMP SWITCH (BOO1) AND CRUISE CONTROL DEACTIVATOR SWITCH (BOO2) PARAMETER IDENTIFICATIONS (PIDS)

- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Using the table, monitor the Parameter Identifications (PIDs) BOO1 (stoplamp switch) and BOO2 (cruise control deactivator switch) while applying and releasing the brake pedal.

Brake Pedal Position	BOO1 PID	BOO2 PID
Released	Off	Off
Applied lightly	On	Off
Applied firmly	On	On

Do the PID values agree with the brake pedal position?

Yes	GO to C8
No	For an incorrect BOO1 PID value, GO to C3 For an incorrect BOO2 PID value, GO to C4

C3 CHECK THE STOPLAMP SWITCH CIRCUIT

- Ignition OFF.
- Disconnect: PCM C1232A (2.2L or 3.2L Diesel).
- Ignition ON.
- While applying and releasing the brake pedal, measure:

2.2L or 3.2L Diesel

Positive Lead	Measurement / Action	Negative Lead
C1232A-12		Ground

Is the voltage greater than 11 volts with the brake pedal applied and no voltage with the brake pedal released?

Yes	GO to C8
No	REPAIR the circuit.

C4 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH FOR CORRECT OPERATION

- Ignition OFF.
- Disconnect: PCM C1232A (2.2L or 3.2L Diesel).
- While firmly applying and releasing the brake pedal, measure:

2.2L or 3.2L Diesel

Positive Lead	Measurement / Action	Negative Lead
C1232A-46	Ω	Ground

Is the resistance less than 3 ohms with the brake pedal released, and greater than 10,000 ohms with the brake pedal firmly applied?

Yes	GO to C8
No	GO to C5

C5 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH GROUND CIRCUIT FOR AN OPEN

- Disconnect: BPP switch C277.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C277-3	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to C6
No	REPAIR the circuit.

C6 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH SIGNAL CIRCUIT FOR A SHORT TO

GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C277-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to C7
No	REPAIR the circuit.

C7 CHECK THE CRUISE CONTROL DEACTIVATOR SWITCH SIGNAL CIRCUIT FOR AN OPEN

- Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C277-2		C277-3

- Measure:

2.2L or 3.2L Diesel

Positive Lead	Measurement / Action	Negative Lead
C1232A-46	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new BPP switch.
No	REPAIR the signal circuit for an open.

C8 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.2L, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0121:00 Or U0121

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description (419-03A Cruise Control, Description and Operation).

DTC Fault Trigger Condition-CCM

DTC	Description	Fault Trigger Conditions
U0121:00	Lost Communication with Anti-Lock Brake System (ABS) Control Module: No Sub-Type Information	Sets in the CCM if data messages received from the ABS module over the HS-CAN2 are missing.

DTC Fault Trigger Condition-PCM

DTC	Description	Fault Trigger Conditions
U0121	Lost Communication With Anti-Lock Brake System (ABS) Control Module	Sets in the PCM if data messages received from the ABS module over the HS-CAN2 or from the GWM over the HS-CAN1 are missing.

Possible Sources

- ABS module
- CCM
- GWM
- PCM

PINPOINT TEST D : U0121:00 OR U1021

D1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to D2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

D2 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, perform a network test.

Does the ABS module pass the network test?

Yes	GO to D3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

D3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE CCM (CRUISE CONTROL MODULE) , ABS (ANTI-LOCK BRAKE SYSTEM) MODULE AND PCM (POWERTRAIN CONTROL MODULE) SELF-TESTS

- Using a diagnostic scan tool, perform a CCM self-test.
- Using a diagnostic scan tool, perform a ABS module self-test
- Using a diagnostic scan tool, perform a PCM self-test

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded?

Yes	For CCM DTC U3003:16, GO to Pinpoint Test Q For CCM DTC U3003:17, GO to Pinpoint Test R For all others, REFER to the PCM DTC Chart or the ABS Module DTC Chart in this section.
No	GO to D4

D4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, retrieve the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to D5

D5 RECHECK THE CCM (CRUISE CONTROL MODULE) AND PCM (POWERTRAIN CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration can be incorrectly set during the Programable Module Installation (PMI) or the Programable Module Installation (PMI) may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs). Repeat the CCM and PCM self-tests.

Is CCM DTC U0121:00 or PCM DTC U0121 still present?

Yes	GO to D6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

D6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0121:00 OR U0121 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, perform a self-test.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Does the CCM set DTC U0121:00 and the PCM set DTC U0121?

Yes	INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	If the CCM sets DTC U0121:00, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation). If the PCM sets U0121, INSTALL a new PCM. For 2.2L, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

U0104

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Cruise Control - System Operation and Component Description (419-03A Cruise Control, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0104	Lost Communication With Cruise Control Module	Sets in the PCM if data messages received from the CCM over the HS-CAN2 or from the GWM over the HS-CAN1 are missing for greater than 5 seconds.

Possible Sources

- CCM
- PCM
- GWM

PINPOINT TEST E : U0104

E1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to E2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

E2 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, perform a network test.

Does the CCM pass the network test?

Yes	GO to E3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

E3 CHECK THE CCM (CRUISE CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the CCM self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	For DTC U3003:16, GO to Pinpoint Test Q For DTC U3003:17, GO to Pinpoint Test R
No	GO to E4

E4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, retrieve the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to E5

E5 RECHECK THE PCM (POWERTRAIN CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, perform the PCM self-test.

Is DTC U0104 still present?

Yes	GO to E6
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

E6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0104 SET IN OTHER MODULES

- Clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve the continuous memory Diagnostic Trouble Codes (DTCs) from all modules.

Does DTC U0104 set in other modules?

Yes	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).
No	INSTALL a new PCM. For 2.2L, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

B142E:78 or B1433:54

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B142E:78	Forward Looking Sensor Horizontal Alignment: Alignment or Adjustment Incorrect	Set by the CCM as a continuous memory and on-demand DTC if the CCM detects a misalignment of the radar due to the horizontal alignment angle being out of range.
B1433:54	Forward Looking Sensor Horizontal Alignment: Missing Calibration	Set by the CCM as a continuous memory and on-demand DTC if the CCM detects a misalignment of the radar due to the alignment angle being out of range.

Possible Sources

- CCM alignment
- CCM bracket
- CCM

PINPOINT TEST F : B142E:78 OR B1433:54

F1 INSPECT THE CCM (CRUISE CONTROL MODULE) BRACKET

- With the vehicle in NEUTRAL, position it on a hoist.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- Remove the front bumper cover.
- Inspect for damage to the CCM bracket.

Is the CCM bracket damaged?

Yes	REPAIR or INSTALL a new CCM bracket as necessary. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).
No	GO to F2

F2 PERFORM THE VERTICAL AND HORIZONTAL ALIGNMENT

NOTE: *Remove the front bumper cover to carry-out the vertical alignment procedure.*

- Perform the alignment procedures for the CCM.

Does the CCM align correctly?

Yes	The system is operating correctly at this time. The concern was caused by a misaligned sensor.
No	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).

C1A67:96

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C1A67:96	Forward Looking Sensor: Component Internal Failure	Sets when the CCM detects an internal failure or invalid radar data with the radar sensor.

Possible Sources

- CCM

PINPOINT TEST G : C1A67:96

G1 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM BOTH THE CONTINUOUS AND ON-DEMAND CCM (CRUISE CONTROL MODULE) SELF-TESTS

- Igntion ON.
- Clear Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, perform the CCM self-test.
- Check the CCM Diagnostic Trouble Codes (DTCs) from the continuous and on-demand self-tests.

Is DTC C1A67:96 recorded?

Yes	GO to G2
No	The system is operating correctly at this time. The DTC may have been set due to an intermittent fault condition. CHECK the CCM connector and the HS-CAN2 bus wires for corrosion.

G2 CHECK FOR CORRECT CCM (CRUISE CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all CCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the CCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Adaptive Cruise Control Does Not Function In Rain Or Snow Conditions

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C1A67:97	Forward Looking Sensor: Component Or System Operation Obstructed Or Blocked	Set by the CCM as a continuous memory and on-demand DTC if the CCM detects an obstruction or if the sensor is blocked. This DTC may also set when the CCM does not see a vehicle or object on the road for an extended period.

Possible Sources

- Front bumper cover
- Blockage or obstruction
- CCM mounting bracket
- CCM alignment
- CCM

PINPOINT TEST H : THE ADAPTIVE CRUISE CONTROL DOES NOT FUNCTION IN RAIN OR SNOW CONDITIONS

H1 INSPECT THE FRONT BUMPER COVER FOR DAMAGE

- With the vehicle in NEUTRAL, position it on a hoist.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- Inspect for damage on the front and back of the front bumper cover.

Is the front bumper cover damaged?

Yes	REPAIR or INSTALL a new front bumper cover as necessary. If installing a new front bumper cover, REFER to: Front Bumper Cover (501-19 Bumpers, Removal and Installation).
No	GO to H2

H2 INSPECT THE CCM (CRUISE CONTROL MODULE) AND FRONT BUMPER COVER FOR DEBRIS, MOISTURE, SNOW OR ICE

- Inspect for debris, moisture, snow or ice on the front and back of the front bumper cover and radar sensor.

Is the CCM obstructed or blocked?

Yes	CLEAN the front bumper cover and radar sensor portion as necessary.
No	GO to H3

H3 INSPECT THE CCM (CRUISE CONTROL MODULE) BRACKET FOR CORRECT MOUNTING

- Inspect the CCM bracket for a loose connection or damage at the connection points.

Is the CCM bracket loose, bent or damaged?

Yes	Correctly INSTALL the bracket or INSTALL new grommets as necessary. ALIGN the sensor. REFER to: Cruise Control Radar Alignment (419-03A Cruise Control, General Procedures).
No	GO to H4

H4 INSPECT THE CCM (CRUISE CONTROL MODULE) FOR EXTREME VERTICAL MISALIGNMENT

- Visually inspect the CCM for extreme vertical misalignment. The CCM plastic face should be perpendicular to the ground.

Is the CCM visually misaligned vertically?

Yes	PERFORM vertical alignment and horizontal alignment test procedures. REFER to: Cruise Control Radar Alignment (419-03A Cruise Control, General Procedures).
No	GO to H5

H5 PERFORM HORIZONTAL AIM

- Using a diagnostic scan tool, perform the horizontal aim procedure.
- Using a diagnostic scan tool, perform the CCM self-test.

Does horizontal aim procedure finish successfully without setting DTC C1A67:97?

Yes	The system is operating normally at this time. This condition may have been cause by previous snow or water build up or driving on very sparse rural roads.
No	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).

U0100:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication With ECM/PCM "A": No Sub Type Information	Sets in continuous memory if data messages received from the PCM over the HS-CAN1 or from the GWM over the HS-CAN2 to the CCM are missing for more than 5 seconds.

Possible Sources

- CCM
- PCM
- GWM

PINPOINT TEST I : U0100:00

I1 VERIFY THAT THE DIAGNOSTIC SCAN TOOL COMMUNICATES WITH THE PCM (POWERTRAIN CONTROL MODULE)

- Using a diagnostic scan tool, verify a vehicle session can be established.

Can a vehicle session be established?

Yes	GO to I2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

I2 CHECK THE CCM (CRUISE CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Clear Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, perform the CCM self-test.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from the CCM.

Is DTC U0100:00 retrieved again?

Yes	GO to I3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

I3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, retrieve the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to I4

I4 CHECK FOR CONTINOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS) FROM THE PCM (POWERTRAIN CONTROL MODULE) KOEO (KEY ON, ENGINE OFF) SELF-TEST

- Using a diagnostic scan tool, perform a PCM KOEO self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the PCM DTC Chart in this section.
No	GO to I5

I5 CHECK THE CCM (CRUISE CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DTCS
• Using a diagnostic scan tool, perform a CCM self-test? **Is DTC U3003:16 or DTC U3003:17 recorded?**

Yes	For DTC U3003:16, GO to Pinpoint Test Q For DTC U3003:17, GO to Pinpoint Test R
No	GO to I6

I6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00 SET IN OTHER MODULES
• Ignition ON. • Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules. **Is DTC U0100:00 set in multiple modules?**

Yes	INSTALL a new PCM. For 2.2L, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2L, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).

U0140:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	Sets in the CCM if data messages received from the BCM over the HS-CAN1 or from the GWM over the HS-CAN2 are missing.

Possible Sources

- BCM
- CCM
- GWM

PINPOINT TEST J : U0140:00

J1 VERIFY THE CUSTOMER CONCERN
• Ignition ON.

- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to J2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

J2 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, perform the network test.

Does the BCM pass the network test?

Yes	GO to J3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

J3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, retrieve the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to J4

J4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE CCM (CRUISE CONTROL MODULE) AND BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the CCM and BCM self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	For CCM, DTC U3003:16: GO to Pinpoint Test Q For CCM, DTC U3003:17: GO to Pinpoint Test R For the BCM, REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	GO to J5

J5 RECHECK THE CCM (CRUISE CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration can be incorrectly set during the Programmable Module Installation (PMI) or the Programmable Module Installation (PMI) may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs). Repeat the CCM self-test.

Is DTC U0140:00 still present?

Yes	GO to J6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

J6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140:00 SET IN OTHER MODULES

- Clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0140:00 set in other modules?

Yes	INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).

U0151:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0151:00	Lost Communication With Restraints Control Module: Missing Message	The yaw rate sensor is integral to the RCM. This DTC sets in the CCM if yaw rate sensor data messages received from the RCM over the HS-CAN2 are missing.

Possible Sources

- CCM
- RCM

PINPOINT TEST K : U0151:00

K1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to K2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

K2 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, perform the network test.

Does the RCM pass the network test?

Yes	GO to K3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

K3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE CCM (CRUISE CONTROL MODULE) AND THE RCM (RESTRAINTS CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the CCM and RCM self-tests.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	For CCM, DTC U3003:16: GO to Pinpoint Test Q For CCM DTC U3003:17: GO to Pinpoint Test R For the RCM, REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	GO to K4

K4 RECHECK THE CCM (CRUISE CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration can be incorrectly set during the Programmable Module Installation (PMI) or the Programmable Module Installation (PMI) may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs). Repeat the CCM self-test.

Is DTC U0151:00 still present?

Yes	GO to K5
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

K5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0151:00 SET IN OTHER MODULES

- Clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0151:00 set in other modules?

Yes	INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
No	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).

U0155:00

Possible Sources

- CCM
- IPMA

PINPOINT TEST O : U0265:00

O1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to O2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

O2 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, perform the network test.

Does the IPMA pass the network test?

Yes	GO to O3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

O3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE CCM (CRUISE CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the CCM self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	For DTC U3003:16, GO to Pinpoint Test Q For DTC U3003:17, GO to Pinpoint Test R
No	GO to O4

O4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE IPMA (IMAGE PROCESSING MODULE A) SELF-TEST

NOTE: *If new modules were installed prior to the DTC being set, the module configuration can be incorrectly set during the Programmable Module Installation (PMI) or the Programmable Module Installation (PMI) may not have been carried out.*

- Using a diagnostic scan tool, perform the IPMA self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Lane Keeping System (419-07 Lane Keeping System, Diagnosis and Testing).
No	GO to O5

O5 RECHECK THE CCM (CRUISE CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration can be incorrectly set during the Programmable Module Installation (PMI) or the Programmable Module Installation (PMI) may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs). Repeat the CCM self-test.

Is DTC U0265:00 still present?

Yes	GO to O6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

O6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0265:00 SET IN OTHER MODULES

- Clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0265:00 set in other modules?

Yes	INSTALL a new IPMA. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
No	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).

U3000:63

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3000:63	Control Module: Circuit/Component Protection Time-Out	Set by the CCM as a continuous memory and on-demand DTC if the CCM detects too many collision mitigation by braking activation requests.

Possible Sources

- Front bumper cover
- CCM mounting bracket
- CCM

PINPOINT TEST P : U3000:63

P1 INSPECT THE CCM (CRUISE CONTROL MODULE) , BRACKET AND FRONT BUMPER COVER	
• Inspect for damage to the CCM, bracket and front bumper cover. **Is the CCM, bracket or front bumper cover damaged?**	
Yes	REPAIR or REPLACE the CCM, bracket or front bumper cover as necessary. For the CCM or bracket, REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation). For the front bumper cover, REFER to: Front Bumper Cover (501-19 Bumpers, Removal and Installation).
No	If a software update is available, update the CCM to the latest software level. PERFORM the module programming. REFER to direction provided by the diagnostic scan tool. If a software update is not available, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).

U3003:16

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	Set by the CCM as a continuous memory and on-demand DTC if the CCM detects low battery voltage below 9.5 volts for more than 500 ms.

Possible Sources

- Wiring, terminals and connectors
- Battery
- Generator
- CCM
- PCM

PINPOINT TEST Q : U3003:16

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

NOTE: *Failure to disconnect the battery when instructed results in false resistance readings. Refer to Section 414-01.*

Q1 RECHECK THE CCM (CRUISE CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform the self-test.

Is DTC U3003:16 still present?

Yes	GO to Q2
No	The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition.

Q2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) IN THE PCM (POWERTRAIN CONTROL MODULE)

- Using a diagnostic scan tool, perform the PCM self-test.

Are any charging system Diagnostic Trouble Codes (DTCs) present in the PCM?

Yes	For 2.2L Diesel, REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing). .
No	GO to Q3

Q3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

- Check the battery condition and verify the battery is fully charged.
  REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).

Is the battery OK and fully charged?

Yes	GO to Q4
No	INSTALL a new battery. REFER to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation).

Q4 CHECK THE CCM (CRUISE CONTROL MODULE) VOLTAGE SUPPLY

- Ignition OFF.
- Disconnect CCM C9224.
- Ignition ON.
- Measure and record the voltage at the battery.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9224-10		Ground

Is the voltage within 0.2 volt of the recorded battery voltage?

Yes	GO to Q5

No	REPAIR the circuit for high resistance.

Q5 CHECK THE CCM (CRUISE CONTROL MODULE) GROUND CIRCUIT

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9224-4	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to Q6
No	REPAIR the circuit for high resistance.

Q6 CHECK FOR CORRECT CCM (CRUISE CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the CCM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the CCM connector and related in-line connector. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U3003:17

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	Sets as a continuous memory and on-demand DTC if the CCM detects high battery voltage above 16.5 volts for 500 ms.

Possible Sources

- Generator
- CCM
- PCM

PINPOINT TEST R : U3003:17

NOTE: *DTC U3003:17 may be stored in the module memory due to past battery charging or vehicle jump starting events.*

R1 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:17, P0563 OR P0626 SET IN OTHER MODULES

- Ignition ON.
- Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U3003:17, P0563 (PCM) or P0626 (PCM) set in more than one module?

Yes	For 2.2L or 3.2L Diesel, REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing). .
No	GO to R2

R2 CHECK THE BATTERY VOLTAGE

- Turn off all the interior/exterior lights and accessories.
- Start and run the engine at approximately 2,000 rpm for 3 minutes while monitoring the battery voltage.

Does the battery voltage rise to 15.5 volts or higher?

Yes	For 2.2L or 3.2L Diesel, REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing). .
No	GO to R3

R3 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:17

- Turn the engine off.
- Ignition ON.
- Using a diagnostic scan tool, clear the DTC Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Using a diagnostic scan tool, perform the CCM self-test.

Is DTC U3003:17 still present?

Yes	INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).
No	The system is operating normally at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

U0423:82

Refer to Wiring Diagrams Cell 31 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0423:82	Invalid Data Received From Instrument Panel Cluster Control Module: Alive/Sequence Counter Incorrect/Not Updated	Sets in continuous memory in the CCM if adaptive cruise control data received from the GWM over the HS-CAN2 or from the IPC over the HS-CAN3 is missing for 5 seconds or longer.

Possible Sources

- CCM
- IPC
- GWM

PINPOINT TEST S : U0423:82

S1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to S2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

S2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Does the IPC pass the network test?

Yes	GO to S3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

S3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, retrieve the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to S4

S4 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation,

	Message Center and Warning Chimes, Diagnosis and Testing).
No	GO to S5

S5 PERFORM THE CCM (CRUISE CONTROL MODULE) SELF-TEST

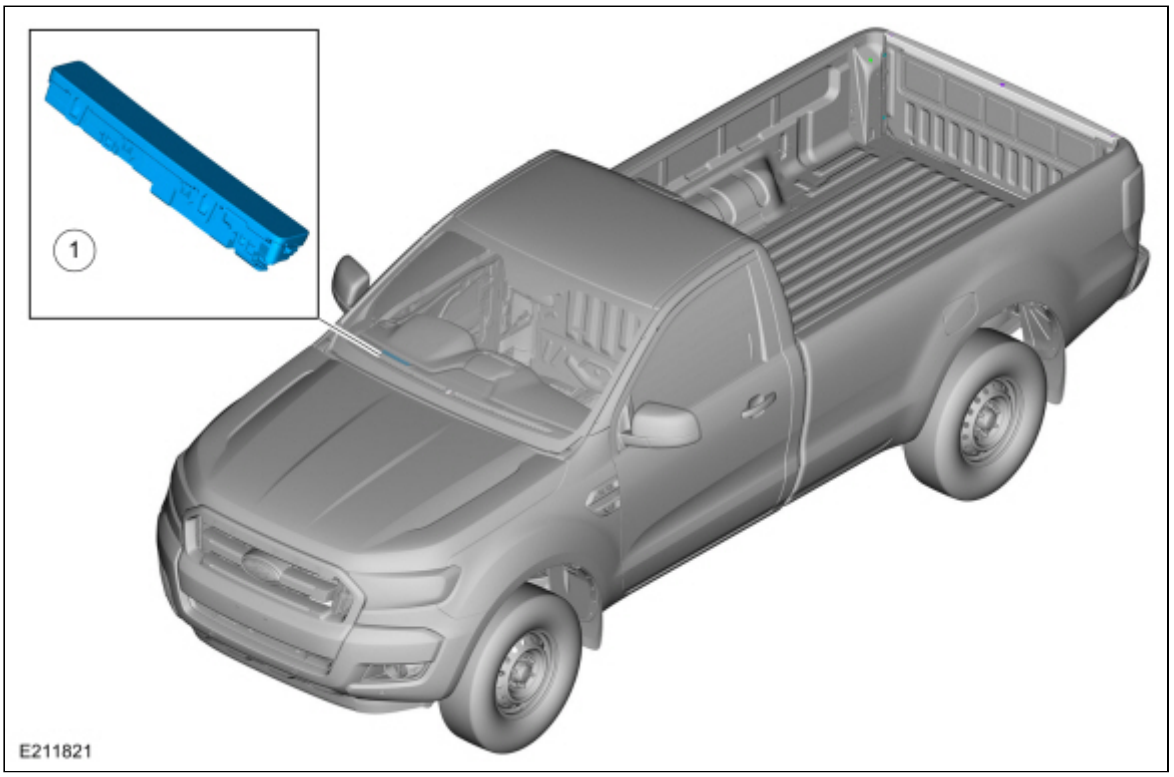
- Using a diagnostic scan tool, perform the CCM self-test.

Are any Diagnostic Trouble Codes (DTCs) other than U0423:82 recorded?

Yes	REFER to CCM DTC Chart in this section.
No	GO to S6

S6 RECHECK THE CCM (CRUISE CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the Programmable Module Installation (PMI), or the Programmable Module Installation (PMI) may not have been carried out.*



- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the CCM self-test.

Is DTC U0423:82 still present?

Yes	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

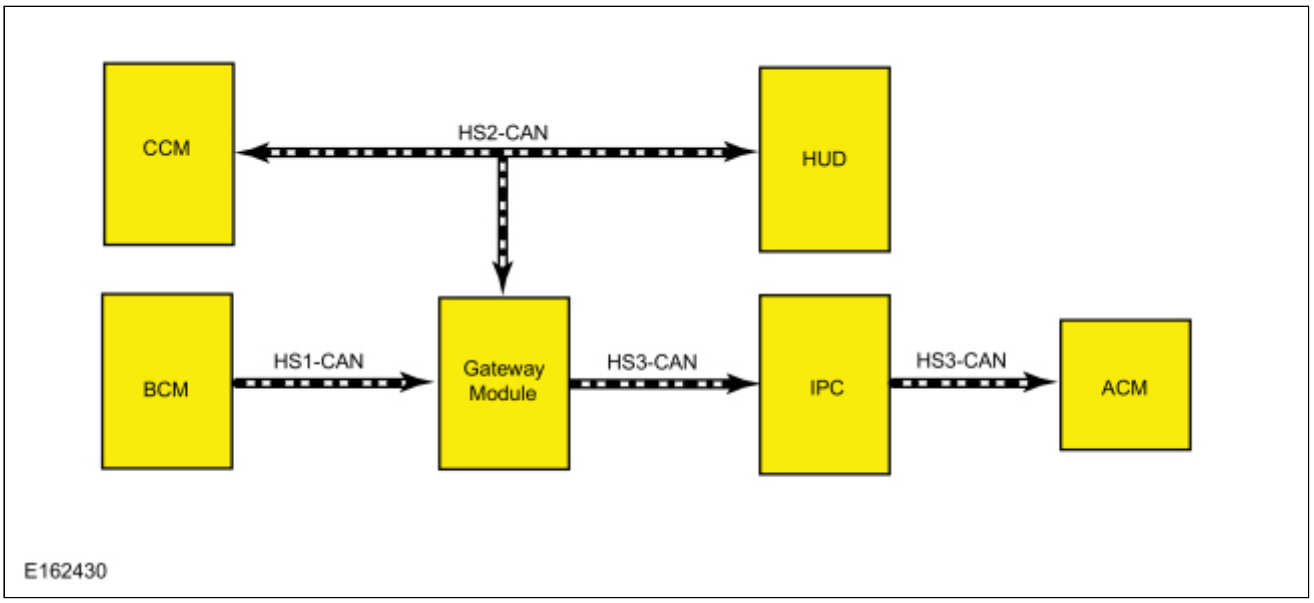
Collision Warning and Collision Avoidance System - Overview

Overview



The forward collision warning system alerts the driver of a collision risk with a red warning LED indicator bar (which is part of the HUD module) located above the instrument panel and an audible warning chime from the IPC.

Collision Warning and Collision Avoidance System - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

Network Input Messages - ACM

Broadcast Message	Originating Module	Message Purpose
Instrument panel cluster chime	IPC	Data used to command a warning chime during possible collision event and audio mute so that the warning chime can be heard.

Network Input Messages - CCM

Broadcast Message	Originating Module	Message Purpose
HUD data	HUD module	Used for HUD module active, available and fault status.

Network Input Messages - HUD

Broadcast Message	Originating Module	Message Purpose
HUD flash command	CCM	Flashes the HUD module LED array when commanded.
Ignition status	BCM	Used for ignition switch position input.

Network Input Messages - IPC

Broadcast Message	Originating Module	Message Purpose
Forward collision chime request	CCM	Data used to command warning chime during possible collision event. When this message is received, the IPC sends the audio mute message to the ACM.
Forward collision warning message request	CCM	Data used to command warning chime and messages during possible collision event.

Forward Collision Warning System Operation

The forward collision warning system works in conjunction with the adaptive cruise control system. During a possible collision event, the CCM commands:

- the HUD to flash red warning Light Emitting Diodes (LEDs).
- the IPC to activate a chime and commands.
- the ACM to mute audio volume.

The forward collision warning system is activated when the vehicle is moving forward at a speed greater than 8 kmh (5 mph). The CCM determines the distance and relative speed of the vehicle that is in the path of travel, utilizing a radar sensor (integral to the CCM) to detect other vehicles that are moving in the same direction. If the CCM determines that a collision is possible, the CCM commands the HUD module Light Emitting Diodes (LEDs) to flash and the IPC to chime.

The forward collision warning system and audible warning chime can be enabled and disabled through the message center display in the IPC. The system reverts to ON each ignition cycle. The HUD module and/or chime activates briefly to confirm the last setting.

The forward collision system has three levels of sensitivity detection (HIGH, NORMAL and LOW) that are changed in the message center display.

If a MyKey® restricted key is in use, the MyKey® turns on the forward collision warning and will not allow the MyKey® user to disable the audio or visual forward collision warning system. However, the MyKey® user is able to adjust the forward collision warning sensitivity.

When a system fault is detected with the forward collision warning system, the message COLLISION WARNING NOT AVAILABLE, COLLISION WARNING NOT AVAILABLE SENSOR BLOCKED SEE MANUAL, or COLLISION WARNING MALFUNCTION is displayed in the IPC message center.

Component Description

CCM

The CCM contains a radar sensor unit that determines the distance and relative speed of the vehicle that is in the path of travel.

HUD

The HUD contains the red Light Emitting Diodes (LEDs) that warn the driver of a possible collision event when commanded by the CCM.

There are certain situations when the warning Light Emitting Diodes (LEDs) cannot be seen, such as strong sunlight or when wearing sunglasses. The HUD module has a temperature sensor circuit that is integral to the module that senses the temperature of the Light Emitting Diodes (LEDs) internal to the module. When a high passenger compartment temperature such as strong sunlight is sensed by the temperature sensor, the warning Light Emitting Diodes (LEDs) can be temporarily disengaged. If this occurs, only the audible warning chime is used.

Warnings may not appear if there is little distance to the vehicle ahead or abrupt steering wheel and pedal movements are made.

Symptom Chart

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
Module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals or connectors • HUD module	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
The forward collision warning system is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test A
The HUD module is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test B
COLLISION WARN NOT AVAILABLE SENSOR BLOCKED SEE MANUAL message in the IPC message center	CCM	REFER to: Cruise Control (419-03B Cruise Control - Vehicles With: Adaptive Cruise Control, Diagnosis and Testing).
The forward collision warning system cannot be deactivated	A MyKey® restricted key is in use	VERIFY whether a MyKey® restricted key is in use. With an admin key, VERIFY forward collision warning system normal operation.
Too many forward collision warning events occur	• A MyKey® restricted key is in use • Forward collision warning sensitivity is set to the most sensitive value	• VERIFY whether a MyKey® restricted key is in use. With an admin key, VERIFY forward collision warning system normal operation. • CHECK the forward collision warning sensitivity setting in the message center menu.

Pinpoint Tests

The Forward Collision Warning System Is Inoperative

Refer to Wiring Diagrams Cell 146 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Collision Warning and Collision Avoidance System - System Operation and Component Description (419-03C Collision Warning and Collision Avoidance System, Description and Operation).

Possible Sources

- Wiring, terminals or connectors
- CCM
- HUD module
- IPC

PINPOINT TEST A : THE FORWARD COLLISION WARNING SYSTEM IS INOPERATIVE

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.
A1 VERIFY THE CCM (CRUISE CONTROL MODULE) AND HUD (HEAD UP DISPLAY) MODULE PASS THE NETWORK TEST
• Using a diagnostic scan tool, perform the network test.

- Using a diagnostic scan tool, perform the network test.

Do both the CCM and the HUD module pass the network test?

Yes	GO to A2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

A2 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE CONTINUOUS AND ON-DEMAND HUD (HEAD UP DISPLAY) MODULE SELF-TESTS

- Using a diagnostic scan tool, perform the HUD module self-test.

Are any HUD module Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to HUD Module DTC Chart in this section.
No	GO to A3

A3 CHECK THE CCM (CRUISE CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the CCM self-tests.

Are any CCM Diagnostic Trouble Codes (DTCs) recorded?

Yes	REPAIR all CCM Diagnostic Trouble Codes (DTCs). REFER to: Cruise Control (419-03B Cruise Control - Vehicles With: Adaptive Cruise Control, Diagnosis and Testing).
No	GO to A4

A4 CHECK THE MESSAGE CENTER FOR CORRECT OPERATION

- Check the IPC message center for correct operation.

Does the message center operate correctly?

Yes	GO to A5
No	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).

A5 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) OPERATION

- Ignition OFF.
- Disconnect and inspect HUD module connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the HUD module connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module - LHD (419-03C Collision Warning and Collision

	Avoidance System, Removal and Installation). REFER to: Head Up Display (HUD) Module - RHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Head Up Display (HUD) Module Is Inoperative

Refer to Wiring Diagrams Cell 146 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Collision Warning and Collision Avoidance System - System Operation and Component Description (419-03C Collision Warning and Collision Avoidance System, Description and Operation).

Possible Sources

- CCM
- HUD module

PINPOINT TEST B : THE HEAD UP DISPLAY (HUD) MODULE IS INOPERATIVE

B1 CHECK FOR HUD (HEAD UP DISPLAY) MODULE LED PROVE OUT TEST

NOTE: *Remove the vehicle from the extreme heat source or sunload condition prior to testing the vehicle.*

- Ignition ON.
- While placing the ignition switch in RUN, observe the HUD module Light Emitting Diodes (LEDs).

Do the HUD module Light Emitting Diodes (LEDs) illuminate?

Yes	The HUD module Light Emitting Diodes (LEDs) are operating correctly at this time. The concern may have been caused by extreme temperatures.
No	GO to B2

B2 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, perform the network test.

Does the HUD module pass the network test?

Yes	GO to B3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

B3 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE HUD (HEAD UP DISPLAY) MODULE SELF-TEST

- Using a diagnostic scan tool, perform a HUD module self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the HUD Module DTC Chart in this section.
No	GO to B4

B4 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE CCM (CRUISE CONTROL MODULE) SELF-TEST
• Using a diagnostic scan tool, perform a CCM self-test. **Are any Diagnostic Trouble Codes (DTCs) recorded?**

Yes	REFER to: Cruise Control (419-03B Cruise Control - Vehicles With: Adaptive Cruise Control, Diagnosis and Testing).
No	GO to B5

B5 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) OPERATION

• Ignition OFF.
• Disconnect and inspect HUD module connector and related in-line connectors.
• Repair:
  • corrosion (install new connector or terminals - clean module pins)
  • damaged or bent pins - install new terminals/pins
  • pushed-out pins - install new pins as necessary
• Reconnect the HUD module connector and related in-line connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
 	
Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module - LHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation). REFER to: Head Up Display (HUD) Module - RHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0104:00

Refer to Wiring Diagrams Cell 146 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Collision Warning and Collision Avoidance System - System Operation and Component Description (419-03C Collision Warning and Collision Avoidance System, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0104:00	Lost Communication With Cruise Control Module: No Sub Type Information	Sets in the HUD module if data messages received from the CCM over the HS-CAN2 are missing.

Possible Sources

- CCM

- HUD module

PINPOINT TEST C : U0104:00

C1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to C2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

C2 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, perform the network test.

Does the CCM pass the network test?

Yes	GO to C3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

C3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE CCM (CRUISE CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform a CCM self-test.

Is DTC C1132:4B recorded?

Yes	If DTC C1132:4B is recorded, GO to Pinpoint Test E For any other Diagnostic Trouble Codes (DTCs), REFER to: Cruise Control (419-03B Cruise Control - Vehicles With: Adaptive Cruise Control, Diagnosis and Testing).
No	GO to C4

C4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE HUD (HEAD UP DISPLAY) MODULE SELF-TEST

- Using a diagnostic scan tool, perform a HUD module self-test.

Is DTC U3003:16 or U3003:1C recorded?

Yes	For DTC U3003:16, GO to Pinpoint Test G For DTC U3003:1C, GO to Pinpoint Test H
No	GO to C5

C5 RECHECK THE HUD (HEAD UP DISPLAY) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the Programmable Module Installation (PMI), or the Programmable Module Installation (PMI) may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs). Wait 10 seconds. Repeat the HUD module self-test.

Is DTC U0104:00 still present?

Yes	GO to C6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

C6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140:00 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, perform the continuous memory self-test.
- Retrieve the Continous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0104:00 set in other modules on the network?

Yes	GO to C7
No	GO to C8

C7 CHECK FOR CORRECT CCM (CRUISE CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect CCM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the CCM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C8 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) OPERATION

- Ignition OFF.
- Disconnect and inspect HUD module connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the HUD module connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module - LHD (419-03C Collision Warning and Collision

	Avoidance System, Removal and Installation). REFER to: Head Up Display (HUD) Module - RHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Possible Sources

- HUD module
- GWM

PINPOINT TEST D : U0146:00

D1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable concern.

Is an observable symptom present?

Yes	GO to D2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

D2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Does the GWM pass the network test?

Yes	GO to D3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

D3 CHECK GWM (GATEWAY MODULE A) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, retrieve GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Continuous Memory Diagnostic Trouble Codes (CMDTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to D4

D4 PERFORM THE HUD (HEAD UP DISPLAY) MODULE SELF-TEST

- Using a diagnostic scan tool, perform a HUD module self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the HUD Module DTC Chart in this section.
No	GO to D5

D5 RECHECK THE HUD (HEAD UP DISPLAY) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the Programmable Module Installation (PMI), or the Programmable Module Installation (PMI) may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the HUD module self-test.

Is DTC U0146:00 still present?

Yes	GO to D6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

D6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0146:00 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, perform the continuous memory self-test.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0146:00 set in other modules?

Yes	GO to D7
No	GO to D8

D7 CHECK FOR CORRECT GWM (GATEWAY MODULE A) OPERATION

- Ignition OFF.
- Disconnect and inspect GWM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the GWM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GWM. REFER to: Gateway Module A (GWM) (418-00 Module Communications Network, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

D8 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) OPERATION

- Ignition OFF.
- Disconnect and inspect HUD module connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the HUD module connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module - LHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation). REFER to: Head Up Display (HUD) Module - RHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C1132:4B

Refer to Wiring Diagrams Cell 146 for schematic and connector information.

Normal Operation and Fault Conditions

The HUD module is designed with a temperature sensor internal to the module. Due to extremely hot weather conditions, the temperature sensor circuit allows the HUD module to disable under high temperature conditions, which could damage the HUD module Light Emitting Diodes (LEDs). The HUD module is designed with a LED prove-out test. Upon each ignition cycle when the ignition switch is in RUN, the Light Emitting Diodes (LEDs) illuminate for a period of time indicating the HUD module is functional.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C1132:4B	Head Up Display: Over Temperature	Sets as a continuous memory and on-demand DTC in the CCM if the HUD module is over-temperature.

Possible Sources

- HUD module

PINPOINT TEST E : C1132:4B

E1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, perform the network test.

Does the HUD module pass the network test?

Yes	GO to E2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

E2 CHECK FOR HUD (HEAD UP DISPLAY) MODULE LED (LIGHT EMITTING DIODE) PROVE-OUT TEST

NOTE: *Remove the vehicle from the extreme heat source or sunload condition prior to testing the vehicle.*

- Ignition ON.
- While placing the ignition switch in RUN, observe the HUD module Light Emitting Diodes (LEDs).

Do the HUD module light emitting diodes (LEDs) illuminate?

Yes	The HUD module Light Emitting Diodes (LEDs) are operating correctly at this time. The concern may have been caused by extreme temperatures.
No	GO to E3

E3 CHECK THE DTCS FROM THE HUD (HEAD UP DISPLAY) MODULE SELF-TEST

- Using a diagnostic scan tool, perform the HUD module self-test.

Are any HUD module Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the HUD Module DTC Chart in this section.
No	GO to E4

E4 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) OPERATION

- Ignition OFF.
- Disconnect and inspect HUD module connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the HUD module connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module - LHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation). REFER to: Head Up Display (HUD) Module - RHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by

	module connections. ADDRESS the root cause of any connector or pin issues.

U210A:16 Or U210A:17

Refer to Wiring Diagrams Cell 146 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U210A:16	Temperature Sensor: Circuit Voltage Below Threshold	Sets in continuous memory in the HUD module when the internal temperature sensor circuit is below the lowest valid temperature value.
U210A:17	Temperature Sensor: Circuit Voltage Above Threshold	Sets in continuous memory in the HUD module when the internal temperature sensor circuit is above the highest valid temperature value.

Possible Sources

- HUD module

PINPOINT TEST F : U210A:16 OR U210A:17

F1 CHECK FOR HUD (HEAD UP DISPLAY) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

- Engine OFF.
- Ignition ON.
- Using a diagnostic scan tool, clear the HUD module Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Retrieve Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U210A:16 or U210A:17 recorded?

Yes	GO to F2
No	The system is operating normally at this time. The DTC may have been set previously due to an internal intermittent fault with the temperature sensor circuit.

F2 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) OPERATION

- Ignition OFF.
- Disconnect and inspect HUD module connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the HUD module connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new HUD. REFER to: Head Up Display (HUD) Module - LHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation).

	REFER to: Head Up Display (HUD) Module - RHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U3003:16

Refer to Wiring Diagrams Cell 146 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	Set by the HUD module in continuous memory if the HUD module detects low battery voltage below 7 volts for more than 500 ms.

Possible Sources

- Wiring, terminals or connectors
- Battery
- Generator
- PCM
- HUD module

PINPOINT TEST G : U3003:16

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

G1 CHECK THE HUD (HEAD UP DISPLAY) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs). Repeat the HUD module self-test.

Is DTC U3003:16 still present?

Yes	GO to G2
No	The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition.

G2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) IN THE PCM (POWERTRAIN CONTROL MODULE)

- Using a diagnostic scan tool, perform the PCM KOEO self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	For 2.2L, REFER to: Electronic Engine Controls (303-14B) . For 3.2L, REFER to: Electronic Engine Controls (303-14C) .
No	GO to G3

G3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

- Check the battery condition and verify the battery is fully charged.
  REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).

Is the battery OK and fully charged?

Yes	GO to G4
No	REFER to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation).

G4 CHECK THE HUD (HEAD UP DISPLAY) MODULE VOLTAGE SUPPLY

- Ignition OFF.
- Disconnect HUD module C2395.
- Ignition ON.
- Measure and record the voltage at the battery.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2395-4		Ground

Is the voltage within 0.2 volt of the recorded battery voltage?

Yes	GO to G5
No	REPAIR the circuit.

G5 CHECK THE HUD (HEAD UP DISPLAY) MODULE GROUND CIRCUIT

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2395-4		C2395-1

Is the voltage within 0.2 volt of the recorded battery voltage?

Yes	GO to G6
No	REPAIR the circuit.

G6 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) OPERATION

- Ignition OFF.
- Disconnect and inspect HUD module connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the HUD module connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module - LHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation). REFER to: Head Up Display (HUD) Module - RHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U3003:1C

Refer to Wiring Diagrams Cell 146 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:1C	Battery Voltage: Circuit Voltage Out of Range	Sets in continuous memory if the HUD module detects battery voltage outside the valid range.

Possible Sources

- Wiring, terminals or connectors
- Battery
- Generator
- HUD module

PINPOINT TEST H : U3003:1C

NOTE: *DTC U3003:1C may be stored in the module memory due to past battery charging or vehicle jump starting events.*

H1 CHECK FOR BATTERY VOLTAGE DTCS SET IN OTHER MODULES

- Ignition ON.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Do any charging system Diagnostic Trouble Codes (DTCs) set in more than one module?

Yes	For 2.2L or 3.2L, REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to H2

H2 CHECK THE BATTERY VOLTAGE

- Turn off all the interior/exterior lights and accessories.
- Start and run the engine at approximately 2,000 rpm for 3 minutes while monitoring the battery voltage.

Does the battery voltage rise to 15.5 volts or higher?

Yes	For 2.2L or 3.2L, REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and

	Testing).
No	GO to H3

H3 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:1C

- Engine OFF.
- Ignition ON.
- Clear the HUD module Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Using a diagnostic scan tool, perform the HUD module self-test.

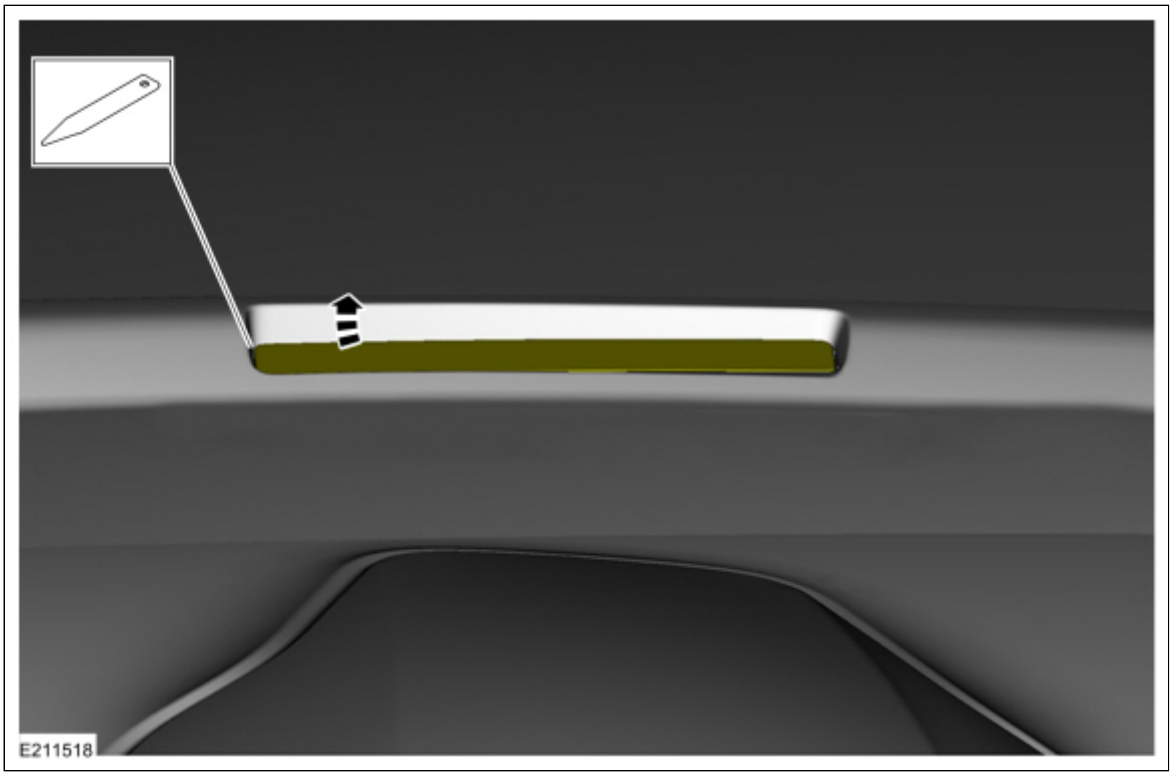
Is DTC U3003:1C present?

Yes	GO to H4
No	The system is operating normally at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

H4 CHECK FOR CORRECT HUD (HEAD UP DISPLAY) OPERATION

- Ignition OFF.
- Disconnect and inspect HUD module connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the HUD module connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?



Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new HUD module. REFER to: Head Up Display (HUD) Module - RHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation). REFER to: Head Up Display (HUD) Module - LHD (419-03C Collision Warning and Collision Avoidance System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

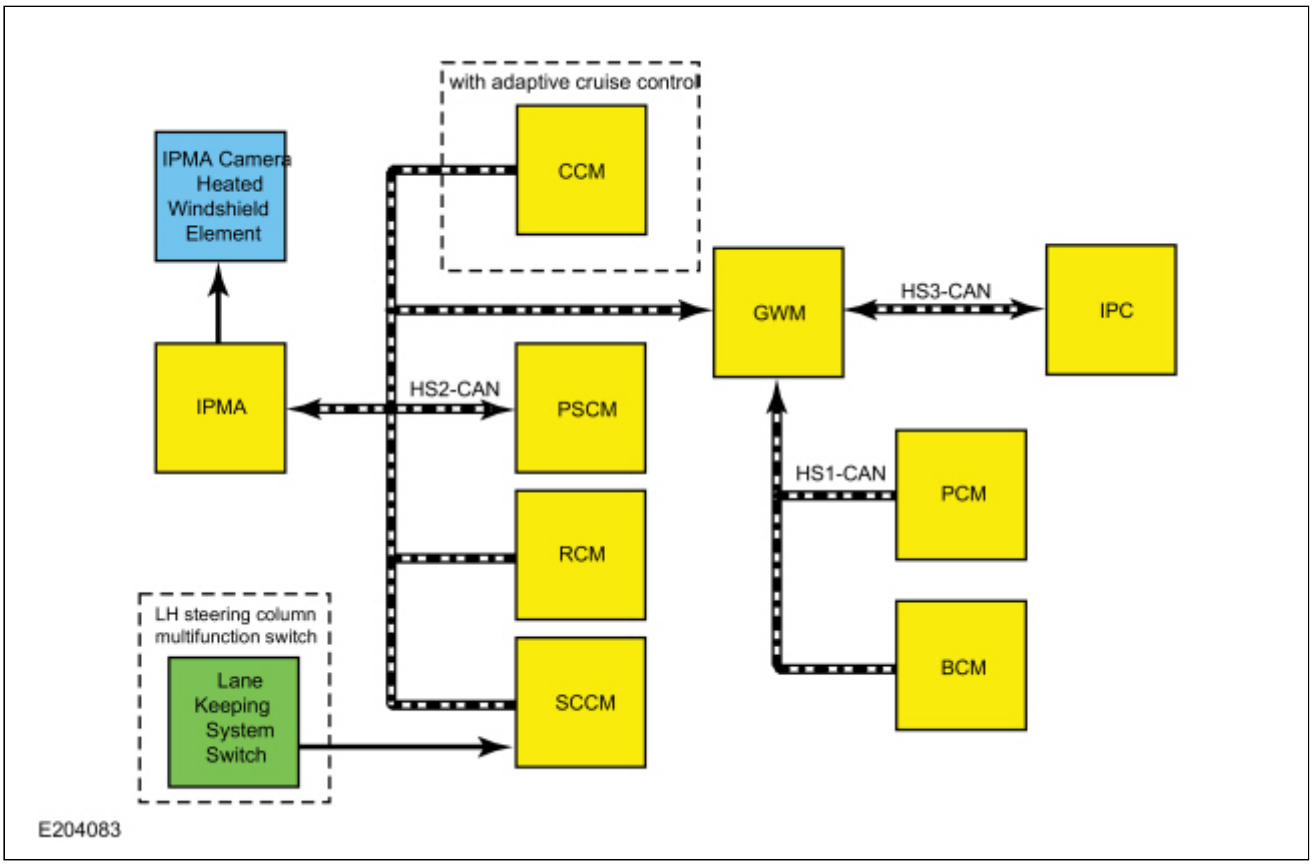
Lane Keeping System - Component Location

Item	Description
1	IPMA (integral to the interior rear view mirror)
2	Lane Keeping System (LKS) switch (integral to the LH steering column multifunction switch)

Copyright © 2016 Ford Motor Company

Lane Keeping System - Overview

Overview



The Lane Keeping System (LKS) has 2 functions, lane keeping aid and lane keeping alert. The Lane Keeping System (LKS) utilizes the camera located in the IPMA to detect and track the road lane markings. The lane keeping alert detects unintentional drifting toward the outside of the lane and alerts the driver through steering wheel vibrations and a visual alert in the IPC message center. The lane keeping aid assists the driver by automatically providing steering torque to help the driver keep the vehicle in the lane.

Lane Keeping System - System Operation and Component Description

System Operation

Lane Keeping Alert and Lane Keeping Aid

Network Message Chart

Module Network Input Messages - IPMA

Broadcast Message	Originating Module	Message Purpose
Ambient air temperature	PCM	Used to control the IPMA camera heated windshield element operation. The IPMA may turn the heated windshield element on when the ambient temperature is below 5°C (41°F).
Hands off status	PSCM	Used to determine if a driver's hands are on the steering wheel when the lane keeping aid system is active. If a hands off condition is detected, the driver is alerted via the message center.
Head up display flash rate	CCM	Disables the lane keeping system in the event of a collision warning
Ignition key type	BCM	Prevents the lane keeping system from being disabled when a MyKey® is in use.
Ignition status	BCM	Enables and disables the IPMA based on the ignition switch position.
Lane keeping system suppression	PSCM	Disables the lane keeping system in the event of an evasive steering maneuver by the driver.
Lane keeping system switch status	SCCM	Used to communicate the lane keeping switch state to the IPMA

Personalization mode	IPC	Used to configure the personalized options for the lane keeping system (mode and intensity).
Restraint impact event status	RCM	Disables the lane keeping system when a SRS event occurs.
Turn signal status	SCCM	When the turn signal is activated, this message is used to suppress the lane keeping on the side of the vehicle corresponding with the turn signal direction.
Vehicle yaw rate	RCM	Used for the lane tracking and feedback calculation.
Vehicle lateral acceleration	RCM	Used to temporary disable the lane keeping system in the event that the lateral acceleration of the vehicle exceeds a predetermined threshold.
Vehicle longitudinal acceleration	RCM	Used to temporary disable the lane keeping system in the event that the longitudinal acceleration of the vehicle exceeds a predetermined threshold.
Vehicle speed	PCM	The lane keeping system is only active when the vehicle speed is above 64 km/h (40 mph).

Module Network Input Messages - PSCM

Broadcast Message	Originating Module	Message Purpose
Calculated steering angle	IPMA	Provides a reference steering angle for PSCM intervention
Lane keeping alert request	IPMA	Request to provide haptic feedback (vibration) through the steering wheel to alert the driver of a lane departure.
Lane keeping aid request	IPMA	Request for steering torque when a lane departure is detected and the lane keeping aid is on.
Road curvature data	IPMA	Provides road curvature as detected by the camera. Used to calculate required steering torque for lane keeping aid interventions.

Module Network Input Messages - IPC

Broadcast Message	Originating Module	Message Purpose
Camera status	IPMA	Used to display camera status messages.
Hands off warning	IPMA	Used to display a hands off warning message and sounds a chime through the audio system
Lane keeping aid status	IPMA	Used to display the lane keeping system status (suppressed, available and active states).
Lane keeping aid switch status display	IPMA	Turns the lane keeping aid system display on and off

Lane Keeping System Operation

The lane keeping system is turned on and off using the lane keeping system switch on the LH steering column multifunction switch. The last known on/off setting for the lane keeping system is recalled every time the ignition is turned on. When a MyKey® is in use, the system defaults the lane keeping alert mode to on and cannot be turned off but the driver can add the aid mode. When the system is on, it is active only when the vehicle speed is above 64 km/h (40 mph) and at least one lane marking can be detected by the camera. The system can be turned off at any time by pressing the lane keeping system switch. When a MyKey® is in use, if the lane keeping system switch is pressed, the IPC message center displays 'Lane Keeping Alert On MyKey Setting' and the feature cannot be turned

off.

The system can be temporarily suppressed at any time by the following:

- Rapid braking or acceleration
- Evasive steering maneuver
- Using the turn signal indicator

Lane Keeping Alert

The lane keeping alert generates vibration through the steering wheel when an unintended lane departure is detected by the IPMA. When commanded by the IPMA, the PSCM rapidly oscillates the power steering left to right, simulating the vehicle driving on a rumble strip. The intensity of the steering wheel vibration can be adjusted using the Driver Assist options in the message center. The system also provides a visual alert in the message center when a lane departure is detected.

Lane Keeping Aid

The lane keeping aid provides steering torque to help the driver keep the vehicle in the lane when an unintended lane departure is detected. The IPMA sends the road curvature and calculated steering angle messages to the PSCM. The PSCM uses these messages to calculate and generate the intervention torque.

Hands-Off Warning

When the lane keeping aid is active, the PSCM continuously monitors the torque sensor in the EPAS system to determine if a hand is on the steering wheel and sends the data to the IPMA. If the IPMA detects that the driver's hands are off the wheel for more than a few seconds, the hands-off warning is generated.

The hands-off warning is generated in 2 levels. The first level is a message center warning only and is triggered after 3 seconds of hands-off driving is detected. The second level warning consists of a message center warning and an audio chime and is generated after 6 seconds of hands-off driving.

NOTE: *Due to certain road conditions and the driver's individual grip/touch on the steering wheel, the system may generate a hands-off warning when hand(s) are still on the steering wheel.*

IPMA Camera Heated Windshield Element

The IPMA camera heated windshield element keeps the windshield in front of the IPMA clear of condensation, frost and ice. The IPMA uses input from the IPMA camera and the ambient air temperature to turn the IPMA camera heated windshield element on and off. Voltage and ground is supplied to the heated windshield element by the IPMA. The IPMA camera heated windshield element may be commanded on if the ambient temperature is below 5°C (41°F).

System Display

When the lane keeping system is turned on, an overhead graphic of a vehicle and lane markings is displayed in the LH IPC display. If the lane keeping aid mode is selected when the system is on, a separate icon also appear in the IPC. When the system is off, the lane marking graphics are not displayed. The overhead vehicle graphic may still be displayed if adaptive cruise control is enabled. While the system is on, the color of the lane markings change to indicate the system status.

Gray: Indicates the system is temporarily unable to provide a lane keeping aid or alert activation on the indicated side(s). This may be caused by:

- The vehicle speed is under the activation limit
- High sunload on the IPMA camera lens
- Too close to lane markings
- Lane markings are too narrow or wide
- Road has no or poor lane markings in the camera field-of-view
- Following vehicle in front too closely
- IPMA camera blocked
- Windshield dirty or damaged
- Standing water on road
- Environmental conditions (significant sun angles, shadows, snow, heavy rain or fog)
- Turn signal is active
- Vehicle is in a dynamic maneuver
- Tight curves on the road

Green: Indicates the system is available or ready to provide a lane keeping aid or alert activation on the indicated side(s).

Yellow: Indicates the system is providing or has just provided a lane keeping aid activation.

Red: Indicates the system is providing or has just provided a lane keeping alert activation.

Message Center Settings

The system has 2 optional setting menus available through the Driver Assist menu in the message center. The last-known selection for each setting is stored by the IPMA and does not need to be set again after the key is cycled.

The **Mode** setting allows the driver to select which of the system features is enabled and turned on when the button is pressed. The 3 options in this menu are:

- Lane Keeping Alert only - provides a steering wheel vibration when an unintended lane departure is detected.
- Lane Keeping Aid only - provides steering input toward the center of the lane when an unintended lane departure is detected.
- Lane Keeping Alert and Lane Keeping Aid - provides both a warning and steering input towards the center of the lane.

The **Intensity** setting allows the driver to select the intensity of the steering wheel vibration used in lane keeping alert mode. This setting does not impact the lane keeping aid mode. The 3 options in this menu are:

- Low
- Normal
- High

Camera Alignment

Camera alignment is required for the lane keeping alert and lane keeping aid to function correctly. The procedure is initiated using the scan tool and requires about 10 minutes of driving above 64 km/h (40 mph) to complete. If the alignment is unsuccessful, check the interior mirror for proper installation. The IPMA camera alignment procedure should be performed when any of the following occur:

- Windshield replacement
- Change in tire size
- Suspension repair, alignment or modifications
- Front air bag deployment
- Interior mirror replacement

Component Description

IPMA

The IPMA is integral to the interior rear view mirror. The IPMA contains a forward-looking camera that is used to detect the position of the vehicle within the lane.

IPMA Camera Heated Windshield Element

The IPMA camera heated windshield element is a resistive-type heater grid that is adhered to the inside of the windshield directly in front of the IPMA camera.

The IPMA camera heated windshield element uses a jumper harness between the component and the vehicle harness. Before replacing the IPMA camera heated windshield element or the IPMA for an IPMA camera heated windshield element concern, verify the integrity of the wiring, connectors and terminals on the jumper harness.

Lane Keeping System Switch

The lane keeping system switch is a momentary contact switch located on the LH steering column multifunction switch. The lane keeping system switch inputs directly to the SCCM, which provides a switch state message to the IPMA.

Lane Keeping System

DTC Chart(s)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

IPMA DTC Chart

DTC	Description	Action
B11C7:46	High Beam Sensor: Calibration/Parameter Memory Failure	DIAGNOSE the automatic high beam feature. REFER to: Headlamps (417-01 Exterior Lighting, Diagnosis and Testing).
B11C7:97	High Beam Sensor: Component or System Operation Obstructed or Blocked	DIAGNOSE the automatic high beam feature. REFER to: Headlamps (417-01 Exterior Lighting, Diagnosis and Testing).
B1286:14	Interior Mirror: Circuit Short To Ground or Open	REFER to: Interior Rear View Mirrors (501-09B Interior Rear View Mirrors, Diagnosis and Testing).
B12D8:11	Mirror Heater Output: Circuit Short To Ground	GO to Pinpoint Test C
B12D8:13	Mirror Heater Output: Circuit Open	GO to Pinpoint Test C
C1001:78	Vision System Camera: Alignment or Adjustment Incorrect	This continuous memory DTC sets when a new IPMA has been installed without performing the camera alignment. PERFORM the camera alignment using a diagnostic scan tool.
U0100:87	Lost Communication With ECM/PCM "A": Missing Message	GO to Pinpoint Test E
U0131:87	Lost Communication With Power Steering Control Module: Missing Message	GO to Pinpoint Test F
U0140:87	Lost Communication With Body Control Module: Missing Message	GO to Pinpoint Test G
U0151:87	Lost Communication With Restraints Control Module: Missing Message	GO to Pinpoint Test H
U0155:87	Lost Communication With Instrument Panel Cluster (IPC): Missing Message	GO to Pinpoint Test I
U0212:87	Lost Communication With Steering Column Control Module: Missing Message	GO to Pinpoint Test J

U0401:00	Invalid Data Received From ECM/PCM A: No Sub Type Information	This continuous memory DTC can set due to a fault in the PCM or an input to the PCM. RETRIEVE and FOLLOW non-network Diagnostic Trouble Codes (DTCs) from the PCM. Refer to the appropriate section in Group 303 for the procedure. If no Diagnostic Trouble Codes (DTCs) are present in the PCM, DIAGNOSE the observable symptom.
U0422:00	Invalid Data Received From Body Control Module: No Sub Type Information	This continuous memory DTC can set due to a fault in the BCM or an input to the BCM. RETRIEVE and FOLLOW non-network Diagnostic Trouble Codes (DTCs) from the BCM. REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing). If no Diagnostic Trouble Codes (DTCs) are present in the BCM, DIAGNOSE the observable symptom.
U0423:00	Invalid Data Received From Instrument Panel Cluster Control Module: No Sub Type Information	This continuous memory DTC can set due to a fault in the IPC or an input to the IPC. RETRIEVE and FOLLOW non-network Diagnostic Trouble Codes (DTCs) from the IPC. REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing). If no Diagnostic Trouble Codes (DTCs) are present in the IPC, DIAGNOSE the observable symptom.
U0429:00	Invalid Data Received From Steering Column Control Module: No Sub Type Information	This continuous memory DTC can set due to a fault in the SCCM or an input to the SCCM. RETRIEVE and FOLLOW non-network Diagnostic Trouble Codes (DTCs) from the SCCM. REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches, Diagnosis and Testing). If no Diagnostic Trouble Codes (DTCs) are present in the SCCM, DIAGNOSE the observable symptom.
U0452:00	Invalid Data Received From Restraints Control Module: No Sub Type Information	This continuous memory DTC can set due to a fault in the RCM or an input to the RCM. RETRIEVE and FOLLOW non-network Diagnostic Trouble Codes (DTCs) from the RCM. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing). If no Diagnostic Trouble Codes (DTCs) are present in the RCM, DIAGNOSE the observable symptom.
U1000:11	Solid State Driver Protection Activated: Circuit Short To Ground	A continuous memory DTC that set in the IPMA when the IPMA has temporarily disabled the IPMA camera heated windshield element output because an excessive current draw exists (such as a short to ground). The IPMA cannot enable the output driver until the short is corrected. ADDRESS all other IPMA Diagnostic Trouble Codes (DTCs) first. After the cause of the concern is corrected, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the IPMA self-test to enable the output driver.
U201A:54	Control Module Main Calibration Data: Missing Calibration	CHECK the vehicle service history for recent service actions related to this module. This continuous memory DTC can set due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, INSTALL As-Built data from Professional Technician Society (PTS), following the diagnostic scan tool instructions under Module Programming>As-Built. REFER to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation). If there have been no recent service actions, INSTALL a new module to correct the failure to retain configuration data. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK the vehicle service history for recent service actions related to this module. This continuous memory DTC can set due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, INSTALL As-Built data from Professional Technician Society (PTS), following the diagnostic scan tool instructions under Module Programming>As-Built. REFER to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation). If there have been no recent service actions, INSTALL a new module to correct the failure to retain configuration data. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	CHECK the vehicle service history for recent service actions related to this module. This continuous memory DTC can set due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, INSTALL As-Built data from Professional Technician Society (PTS), following the

		diagnostic scan tool instructions under Module Programming>As-Built. REFER to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation). If there have been no recent service actions, INSTALL a new module to correct the failure to retain configuration data. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
U2200:00	Control Module Configuration Memory Corrupt: No Sub Type Information	CHECK the vehicle service history for recent service actions related to this module. This continuous memory DTC can set due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, INSTALL As-Built data from Professional Technician Society (PTS), following the diagnostic scan tool instructions under Module Programming>As-Built. REFER to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation). If there have been no recent service actions, INSTALL a new module to correct the failure to retain configuration data. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
U3000:42	Control Module: General Memory Failure	ADDRESS all other IPMA Diagnostic Trouble Codes (DTCs) first. If this continuous memory DTC is still present after all other Diagnostic Trouble Codes (DTCs) have been addressed, INSTALL a new interior mirror. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
U3000:49	Control Module: Internal Electronic Failure	The IPMA has permanently disabled the IPMA camera heated windshield element output because an excessive current draw has occurred more times than the module can withstand. ADDRESS all other IPMA Diagnostic Trouble Codes (DTCs). If this continuous memory DTC is still present after all other IPMA Diagnostic Trouble Codes (DTCs) have been addressed, INSTALL a new interior mirror. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
U3000:93	Control Module: No Operation	ADDRESS all other IPMA Diagnostic Trouble Codes (DTCs). If this DTC is still present on-demand or in continuous memory after all other IPMA Diagnostic Trouble Codes (DTCs) have been addressed, INSTALL a new interior mirror. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
U3000:96	Control Module: Component Internal Failure	ADDRESS all other IPMA Diagnostic Trouble Codes (DTCs). After all other IPMA Diagnostic Trouble Codes (DTCs) have been addressed, INSTALL a new interior mirror. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

SCCM DTC Chart

DTC	Description	Action
B13A6:09	Lane Departure Warning (LDW) Switch Input: Component Failure	• INSTALL a new LH steering column multifunction switch. REFER to: Steering Column Multifunction Switch LH (211-05 Steering Column Switches, Removal and Installation). • CLEAR the DTC and repeat the self-test. If DTC B13A6:09 is retrieved again, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).

Symptom Chart(s)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.

REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Condition	Possible Sources	Action
A module does not communicate with the diagnostic scan tool	• Fuse • Wiring, terminals or connectors • Module	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
The lane keeping aid or lane keeping alert does not turn on or activate	Refer to the Pinpoint Test	GO to Pinpoint Test A
The lane keeping aid or lane keeping alert does not provide driver feedback once activated	Refer to the Pinpoint Test	GO to Pinpoint Test B
The display lines in the IPC do not turn green after the Lane Keeping System (LKS) is turned on	Road conditions	**NOTE:** *The display lines are gray when the IPMA cannot detect lane marking(s) on the road in front of the vehicle.* VERIFY the road conditions described under System Display. REFER to: Lane Keeping System - System Operation and Component Description (419-07 Lane Keeping System, Description and Operation).
The lane keeping aid or lane keeping alert provides early feedback on one side of the lane and late feedback on the other side of the lane	Dirty or cracked windshield	CLEAN and INSPECT the windshield in front of the camera.
	Loose or incorrectly installed interior rear view mirror	INSPECT the interior rear view mirror for proper installation. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
	Camera alignment	Using a diagnostic scan tool, PERFORM the front camera alignment.
Degraded performance from the lane keeping aid or lane keeping alert system	Dirty or cracked windshield	CLEAN and INSPECT the windshield in front of the camera.
	Camera alignment	Using a diagnostic scan tool, PERFORM the front camera alignment.
LANE KEEPING SYSTEM MALFUNCTION - SERVICE REQUIRED message in the IPC	PSCM concern	RETRIEVE and REPAIR all PSCM Diagnostic Trouble Codes (DTCs). REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing).
FRONT CAMERA TEMPORARILY NOT AVAILABLE message in the IPC	Temporary temperature related condition	ALLOW the vehicle to warm up or REMOVE the vehicle from direct sunlight. RECHECK after 10 minutes.
FRONT CAMERA LOW VISIBILITY - CLEAN SCREEN message in the IPC	Dirty or cracked windshield	CLEAN and INSPECT the windshield in front of the camera. REPAIR or REPLACE the windshield as necessary if damage is found.
	Dirt or debris in between the camera and the windshield	CLEAN the area between the front camera and the windshield.
	IPMA camera heated windshield element	INSPECT the IPMA camera heated windshield element for damage and DIAGNOSE any IPMA heater Diagnostic Trouble Codes (DTCs) that are present.
FRONT CAMERA MALFUNCTION - SERVICE REQUIRED message in the IPC	Refer to the Pinpoint Test	GO to Pinpoint Test D
The lane keeping aid and lane keeping alert	MyKey® in use	Normal operation.

will not turn off		

Pinpoint Tests

The Lane Keeping System Does Not Turn On Or Activate

Refer to Wiring Diagrams Cell 124 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Lane Keeping System - System Operation and Component Description (419-07 Lane Keeping System, Description and Operation).

Possible Causes

- Communication network concern
- Dirty, scratched or obstructed windshield and/or camera
- IPMA overheating condition
- Lane keeping system switch (integral to the LH steering column multifunction switch)
- IPMA concern
- PSCM concern
- SCCM concern
- BCM concern
- PCM concern
- RCM concern
- IPC concern
- CCM concern

Visual Inspection and Diagnostic Pre-Chacks

- Certain lane keeping system concerns can be caused by the IPMA being to cold or overheating due to heavy sunload. Prior to diagnosing a lane keeping system concern, allow the vehicle to warm up or remove the vehicle from direct sunlight. RECHECK after 10 minutes.

PINPOINT TEST A : THE LANE KEEPING SYSTEM DOES NOT TURN ON OR ACTIVATE

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector. Use only Rotunda Flex Probes (NUD105-R025D)

A1 VERIFY THE CONCERN

- Verify the operation of the lane keeping aid and lane keeping alert.

Does the lane keeping aid and lane keeping alert operate correctly?

Yes	The system is operating correctly at this time. The concern may have been caused by high network traffic or the driver's perception of how the lane keeping systems operate. REFER to the Owner's Literature.
No	GO to A2

A2 PERFORM A NETWORK TEST

- Ignition ON.
- Using a diagnostic scan tool, perform a network test.

Do the PSCM, SCCM, IPMA, BCM, PCM, RCM, IPC and CCM pass the network test?

Yes	GO to A3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

A3 CHECK THE IPMA (IMAGE PROCESSING MODULE A) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, check the IPMA Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the IPMA DTC chart in this section.
No	GO to A4

A4 CHECK THE PSCM (POWER STEERING CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, check the PSCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE the PSCM Diagnostic Trouble Codes (DTCs). REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing).
No	GO to A5

A5 CHECK THE SCCM (STEERING COLUMN CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, check the SCCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE the SCCM Diagnostic Trouble Codes (DTCs). REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches, Diagnosis and Testing).
No	GO to A6

A6 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE the BCM Diagnostic Trouble Codes (DTCs). REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	GO to A7

A7 CHECK THE CCM (CRUISE CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, check the CCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE the CCM Diagnostic Trouble Codes (DTCs). REFER to: Cruise Control (419-03B Cruise Control - Vehicles With: Adaptive Cruise Control,

	Diagnosis and Testing).
No	GO to A8

A8 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, check the IPC Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE the IPC Diagnostic Trouble Codes (DTCs). REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	GO to A9

A9 CHECK THE RCM (RESTRAINTS CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, check the RCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE the RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	GO to A10

A10 CHECK THE PCM (POWERTRAIN CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the PCM KOEO self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE the PCM Diagnostic Trouble Codes (DTCs). Refer to the appropriate section in Group 303 for the procedure.
No	GO to A11

A11 VERIFY THE IPMA (IMAGE PROCESSING MODULE A) LANE KEEPING SYSTEM SWITCH PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view the IPMA lane keeping system switch PID (LKS_SW_ST).
- While monitoring the Parameter Identification (PID), press and release the lane keeping system switch several times.

Does the Parameter Identification (PID) consistently match the switch position?

Yes	GO to A13
No	GO to A12

A12 VERIFY THE SCCM (STEERING COLUMN CONTROL MODULE) LANE KEEPING SYSTEM SWITCH PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view the SCCM lane keeping system switch PID (LANE_ASSISTSW).
- While monitoring the Parameter Identification (PID), press and release the lane keeping system switch several times.

Does the Parameter Identification (PID) consistently match the switch position?

Yes	GO to A13
No	INSTALL a new LH steering column multifunction switch. REFER to: Steering Column Multifunction Switch LH (211-05 Steering Column Switches, Removal and Installation). If the concern is still present after the repair, GO to A14

A13 CHECK FOR CORRECT IPMA (IMAGE PROCESSING MODULE A) OPERATION

- Disconnect and inspect all IPMA connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPMA connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPMA (integral to the interior rear view mirror). REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A14 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the SCCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect theSCCM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The Lane Keeping System Does Not Provide Feedback When Activated

Normal Operation and Fault Conditions

REFER to: Lane Keeping System - System Operation and Component Description (419-07 Lane Keeping System, Description and Operation).

Possible Causes

- Communication network concern
- Lane keeping system settings
- PSCM (integral to the steering gear)
- IPMA (integral to the interior rear view mirror)

Visual Inspection and Diagnostic Pre-Checks

- Verify the lane keeping system turns on and the display lines in the IPC turn green when the system is active and available. If the lines do NOT turn green, GO to Pinpoint Test A

PINPOINT TEST B : THE LANE KEEPING SYSTEM DOES NOT PROVIDE FEEDBACK WHEN ACTIVATED

B1 CHECK THE PSCM (POWER STEERING CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Ignition ON.
- Using a diagnostic scan tool, check the PSCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE the PSCM Diagnostic Trouble Codes (DTCs). REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing).
No	GO to B2

B2 CHECK THE IPMA (IMAGE PROCESSING MODULE A) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, check the IPMA Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the IPMA DTC chart in this section.
No	GO to B3

B3 CHECK THE STEERING WHEEL VIBRATION

- Change the intensity setting in the lane keeping system message center menu.

Does the steering wheel perform a test vibration after the intensity setting is changed?

Yes	GO to B5
No	GO to B4

B4 CHECK FOR CORRECT PSCM (POWER STEERING CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the PSCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PSCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B5 CHECK FOR CORRECT IPMA (IMAGE PROCESSING MODULE A) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPMA connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPMA connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPMA (integral to the interior rear view mirror). REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DTC B12D8:11, DTC B12D8:13

Refer to Wiring Diagrams Cell 124 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Lane Keeping System - System Operation and Component Description (419-07 Lane Keeping System, Description and Operation).

Possible Causes

- Wiring, terminals or connectors
- IPMA camera heated windshield element
- IPMA (integral to the interior rear view mirror)

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B12D8:11	Mirror Heater Output: Circuit Short To Ground	An on-demand and continuous memory DTC that sets in the IPMA if an excessive current draw is detected on the IPMA camera heated windshield element output circuit.
B12D8:13	Mirror Heater Output: Circuit	An on-demand and continuous memory DTC that sets in the IPMA if a lower than expected current draw is detected on the IPMA camera heated windshield element

	Open	output circuit.

Visual Inspection and Diagnostic Pre-Checks

Inspect the integrity of the wiring, terminals and connectors on the jumper harness between the vehicle harness and the IPMA camera heated windshield element.

PINPOINT TEST C : DTC (DIAGNOSTIC TROUBLE CODE) B12D8:11, DTC (DIAGNOSTIC TROUBLE CODE) B12D8:13

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector. Use only Rotunda Flex Probes (NUD105-R025D)

NOTE: *Before replacing the IPMA camera heated windshield element or the IPMA for an IPMA camera heated windshield element concern, verify the integrity of the wiring, connectors and terminals on the IPMA camera heated windshield element jumper harness.*

C1 CHECK FOR RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE IPMA (IMAGE PROCESSING MODULE A) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the IPMA self-test.

Is DTC B12D8:11 or DTC B12D8:13 present?

Yes	For DTC B12D8:11, GO to C2 For DTC B12D8:13, GO to C5
No	The system is operating correctly at this time. INSPECT the connectors, wiring and the IPMA camera heated windshield element for damage or poor connections.

C2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) B12D8:11 WITH THE IPMA (IMAGE PROCESSING MODULE A) CAMERA HEATED WINDSHIELD ELEMENT DISCONNECTED

- Ignition OFF.
- Disconnect Inline C9805.
- Ignition ON.
- Using a diagnostic scan tool, clear the IPMA Diagnostic Trouble Codes (DTCs).
- Perform the IPMA self-test.

Is DTC B12D8:11 present?

Yes	GO to C3
No	INSTALL a new IPMA camera heated windshield element.

C3 CHECK THE IPMA (IMAGE PROCESSING MODULE A) CAMERA HEATED WINDSHIELD ELEMENT OUTPUT CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect Interior Rear View Mirror C9012.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9012-11	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to C4
No	REPAIR the circuit.

C4 CHECK THE IPMA (IMAGE PROCESSING MODULE A) CAMERA HEATED WINDSHIELD ELEMENT CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9012-11	Ω	C9012-14

Is the resistance greater than 10,000 ohms?

Yes	GO to C7
No	REPAIR the circuits.

C5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) B12D8:11 WITH THE IPMA (IMAGE PROCESSING MODULE A) CAMERA HEATED WINDSHIELD ELEMENT CIRCUITS JUMPERED TOGETHER

- Ignition OFF.
- Disconnect Inline C9805.
- Connect:

Lead 1	Measurement / Action	Lead 2
C9805-1 (Male side)		C9805-3 (Male side)

- Ignition ON.
- Using a diagnostic scan tool, clear the IPMA Diagnostic Trouble Codes (DTCs).
- Perform the IPMA self-test.

Is DTC B12D8:11 present?

Yes	REMOVE the fused jumper wire. INSTALL a new IPMA camera heated windshield element.
No	REMOVE the fused jumper wire. GO to C6

C6 CHECK THE IPMA (IMAGE PROCESSING MODULE A) CAMERA HEATED WINDSHIELD ELEMENT CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect Interior Rear View Mirror C9012.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9012-11	Ω	C9805-3 (Male side)
C9012-14	Ω	C9805-1 (Male side)

Are the resistances less than 3 ohms?

Yes	GO to C7
No	REPAIR the affected circuit

No	REPAIR the affected circuit.

C7 CHECK FOR CORRECT IPMA (IMAGE PROCESSING MODULE A) OPERATION

- Disconnect and inspect all IPMA connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPMA connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPMA (integral to the interior rear view mirror). REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Message Center Displays A FRONT CAMERA MALFUNCTION SERVICE REQUIRED Message

Normal Operation and Fault Conditions

In addition to certain fault conditions, the FRONT CAMERA MALFUNCTION SERVICE REQUIRED message is displayed in the message center when the IPMA camera alignment has been initiated, but is incomplete.

Possible Causes

- Communication network concern
- IPMA camera alignment incomplete
- IPMA (integral to the interior rear view mirror)

Visual Inspection and Diagnostic Pre-Checks

Verify the IPMA camera alignment is complete using a diagnostic scan tool.

PINPOINT TEST D : THE MESSAGE CENTER DISPLAYS A 'FRONT CAMERA MALFUNCTION SERVICE REQUIRED' MESSAGE

D1 PERFORM A NETWORK TEST

- Ignition ON.
- Using a diagnostic scan tool, perform a network test.

Does the IPMA pass the network test?

Yes	GO to D2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

D2 CHECK THE IPMA (IMAGE PROCESSING MODULE A) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, check the IPMA Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the IPMA DTC chart in this section.
No	GO to D3

D3 CHECK FOR CORRECT IPMA (IMAGE PROCESSING MODULE A) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPMA connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPMA connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPMA (integral to the interior rear view mirror). REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DTC U0100:87

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The IPMA communicates with the PCM through the GWM.

Possible Causes

- Communication network concern
- PCM
- GWM concern
- IPMA (integral to the interior rear view mirror)

DTC	Description	Fault Trigger Conditions
U0100:87	Lost Communication With ECM/PCM "A": Missing Message	A continuous memory DTC that sets in the IPMA if messages received from the PCM over the HS-CAN1 through the GWM are missing for 0.5 second or more.

PINPOINT TEST E : DTC (DIAGNOSTIC TROUBLE CODE) U0100:87

E1 VERIFY THAT THE DIAGNOSTIC SCAN TOOL COMMUNICATES WITH THE PCM (POWERTRAIN CONTROL MODULE)

- Ignition ON.
- Connect the diagnostic scan tool.
- Check that a vehicle session can be established using the diagnostic scan tool.

Can a vehicle session be established?

Yes	GO to E2
No	REFER to: No Communication Between the Integrated Diagnostic System (IDS) and the Vehicle (418-00 Module Communications Network, General Procedures).

E2 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PCM (POWERTRAIN CONTROL MODULE) KOEO (KEY ON, ENGINE OFF) SELF-TEST

- Using a diagnostic scan tool, perform the PCM KOEO self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	DIAGNOSE any PCM Diagnostic Trouble Codes (DTCs). Refer to the appropriate section in Group 303 for the procedure.
No	GO to E3

E3 CHECK THE GWM (GATEWAY MODULE A) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, retrieve the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to E4

E4 RECHECK THE IPMA (IMAGE PROCESSING MODULE A) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the IPMA Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Retrieve the IPMA Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0100:87 retrieved again?

Yes	GO to E5
No	The system is operating correctly at this time. This DTC may have been set due to high network traffic or an intermittent fault condition.

E5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100 SET IN OTHER MODULES

- Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0100 set in any other module?

Yes	GO to E6
No	GO to E7

E6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. Refer to the appropriate section in Group 303 for the procedure.
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

E7 CHECK FOR CORRECT IPMA (IMAGE PROCESSING MODULE A) OPERATION

- Disconnect and inspect all IPMA connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPMA connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPMA (integral to the interior rear view mirror). REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DTC U0131:87

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The IPMA communicates with the PSCM through the HS-CAN2.

Possible Causes

- Communication network concern
- PSCM (integral to the steering gear)
- IPMA (integral to the interior rear view mirror)

DTC	Description	Fault Trigger Conditions
U0131:87	Lost Communication With Power	A continuous memory DTC that sets in the IPMA if messages

	Steering Control Module: Missing Message	received from the PSCM over the HS-CAN2 are missing for 0.5 second or more.

PINPOINT TEST F : DTC (DIAGNOSTIC TROUBLE CODE) U0131:87

F1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is there an observable symptom present?

Yes	GO to F2
No	CLEAR the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

F2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the PSCM pass the network test?

Yes	GO to F3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

F3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PSCM (POWER STEERING CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PSCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE the PSCM Diagnostic Trouble Codes (DTCs). REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing).
No	GO to F4

F4 RECHECK THE IPMA (IMAGE PROCESSING MODULE A) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the IPMA Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait 10 seconds.
- Ignition ON.
- Wait 10 seconds.
- Retrieve the IPMA Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0131:87 still present?

Yes	GO to F5
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

F5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0131 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0131 set in any other module?

Yes	GO to F6
No	GO to F7

F6 CHECK FOR CORRECT PSCM (POWER STEERING CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PSCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PSCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

F7 CHECK FOR CORRECT IPMA (IMAGE PROCESSING MODULE A) OPERATION

- Disconnect and inspect all IPMA connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPMA connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPMA (integral to the interior rear view mirror). REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DTC U0140:87

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The IPMA communicates with the BCM through the GWM.

Possible Causes

- Communication network concern
- GWM concern
- BCM
- IPMA (integral to the interior rear view mirror)

DTC	Description	Fault Trigger Conditions
U0140:87	Lost Communication With Body Control Module: Missing Message	A continuous memory DTC that sets in the IPMA if messages received from the BCM over the HS-CAN1 through the GWM are missing for 10 seconds or more.

PINPOINT TEST G : DTC (DIAGNOSTIC TROUBLE CODE) U0140:87

G1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify that there is an observable symptom present.

Is there an observable symptom present?

Yes	GO to G2
No	CLEAR the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

G2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Do the BCM and the GWM pass the network test?

Yes	GO to G3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

G3 CHECK FOR RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	DIAGNOSE the BCM Diagnostic Trouble Codes (DTCs). REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	GO to G4

G4 CHECK THE GWM (GATEWAY MODULE A) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, retrieve the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to G5

G5 RECHECK THE IPMA (IMAGE PROCESSING MODULE A) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the IPMA Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait 10 seconds.
- Ignition ON.
- Wait 10 seconds.
- Retrieve the IPMA Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0140:87 still present?

Yes	GO to G6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

G6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0140 set in any other module?

Yes	GO to G7
No	GO to G8

G7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

G8 CHECK FOR CORRECT IPMA (IMAGE PROCESSING MODULE A) OPERATION

- Disconnect and inspect all IPMA connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPMA connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPMA (integral to the interior rear view mirror). REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DTC U0151:87

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The IPMA communicates with the RCM through the HS-CAN2.

Possible Causes

- Communication network concern
- RCM
- IPMA (integral to the interior rear view mirror)

DTC	Description	Fault Trigger Conditions
U0151:87	Lost Communication With Restraints Control Module: Missing Message	A continuous memory DTC that sets in the IPMA if messages received from the RCM over the HS-CAN2 are missing for 0.5 second or more.

PINPOINT TEST H : DTC (DIAGNOSTIC TROUBLE CODE) U0151:87

H1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify that there is an observable symptom present.

Is there an observable symptom present?

Yes	GO to H2
No	CLEAR the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

H2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the RCM pass the network test?

Yes	GO to H3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

H3 CHECK FOR RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE RCM (RESTRAINTS CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the RCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	DIAGNOSE the RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	GO to H4

H4 RECHECK THE IPMA (IMAGE PROCESSING MODULE A) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the IPMA Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait 10 seconds.
- Ignition ON.
- Wait 10 seconds.
- Retrieve the IPMA Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0151:87 still present?

Yes	GO to H5
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

H5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0151 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0151 set in any other module?

Yes	GO to H6
No	GO to H7

H6 CHECK FOR CORRECT RCM (RESTRAINTS CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all RCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins

- pushed-out pins – install new pins as necessary
- Reconnect the RCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

H7 CHECK FOR CORRECT IPMA (IMAGE PROCESSING MODULE A) OPERATION

- Disconnect and inspect all IPMA connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPMA connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPMA (integral to the interior rear view mirror). REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DTC U0155:87

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The IPMA communicates with the IPC through the GWM.

Possible Causes

- Communication network concern
- GWM concern
- IPC
- IPMA (integral to the interior rear view mirror)

DTC	Description	Fault Trigger Conditions
U0155:87	Lost Communication With Instrument Panel Cluster (IPC) Control Module: Missing Message	A continuous memory DTC that sets in the IPMA if messages received from the IPC over the HS-CAN3 through the GWM are missing for 10 seconds or more.

PINPOINT TEST I : DTC (DIAGNOSTIC TROUBLE CODE) U0155:87

I1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is there an observable symptom present?

Yes	GO to I2
No	CLEAR the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

I2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Do the IPC and the GWM pass the network test?

Yes	GO to I3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

I3 CHECK FOR RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	DIAGNOSE the IPC Diagnostic Trouble Codes (DTCs). REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	GO to I4

I4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, retrieve the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to I5

I5 RECHECK THE IPMA (IMAGE PROCESSING MODULE A) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the IPMA Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait 10 seconds.
- Ignition ON.
- Wait 10 seconds.
- Retrieve the IPMA Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155:87 still present?

Yes	GO to I6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

I6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0155 set in any other module?

Yes	GO to I7
No	GO to I8

I7 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

I8 CHECK FOR CORRECT IPMA (IMAGE PROCESSING MODULE A) OPERATION

- Disconnect and inspect all IPMA connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPMA connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPMA (integral to the interior rear view mirror).

	REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

DTC U0212:87

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The IPMA communicates with the SCCM through the HS-CAN2.

Possible Causes

- Communication network concern
- SCCM
- IPMA (integral to the interior rear view mirror)

DTC	Description	Fault Trigger Conditions
U0212:87	Lost Communication With Steering Column Control Module: Missing Message	A continuous memory DTC that sets in the IPMA if messages received from the SCCM over the HS-CAN2 are missing for 10 seconds or more.

PINPOINT TEST J : DTC (DIAGNOSTIC TROUBLE CODE) U0212:87

J1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is there an observable symptom present?

Yes	GO to J2
No	CLEAR the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

J2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the SCCM pass the network test?

Yes	GO to J3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

J3 CHECK FOR RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE SCCM (STEERING COLUMN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the SCCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	DIAGNOSE the SCCM Diagnostic Trouble Codes (DTCs). REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches, Diagnosis and Testing).
No	GO to J4

J4 RECHECK THE IPMA (IMAGE PROCESSING MODULE A) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the IPMA Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 15 seconds.
- Retrieve the IPMA Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0212:87 still present?

Yes	GO to J5
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

J5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0212 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0212 set in any other module?

Yes	GO to J6
No	GO to J7

J6 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the SCCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the SCCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

J7 CHECK FOR CORRECT IPMA (IMAGE PROCESSING MODULE A) OPERATION

- Disconnect and inspect all IPMA connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPMA connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPMA (integral to the interior rear view mirror). REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

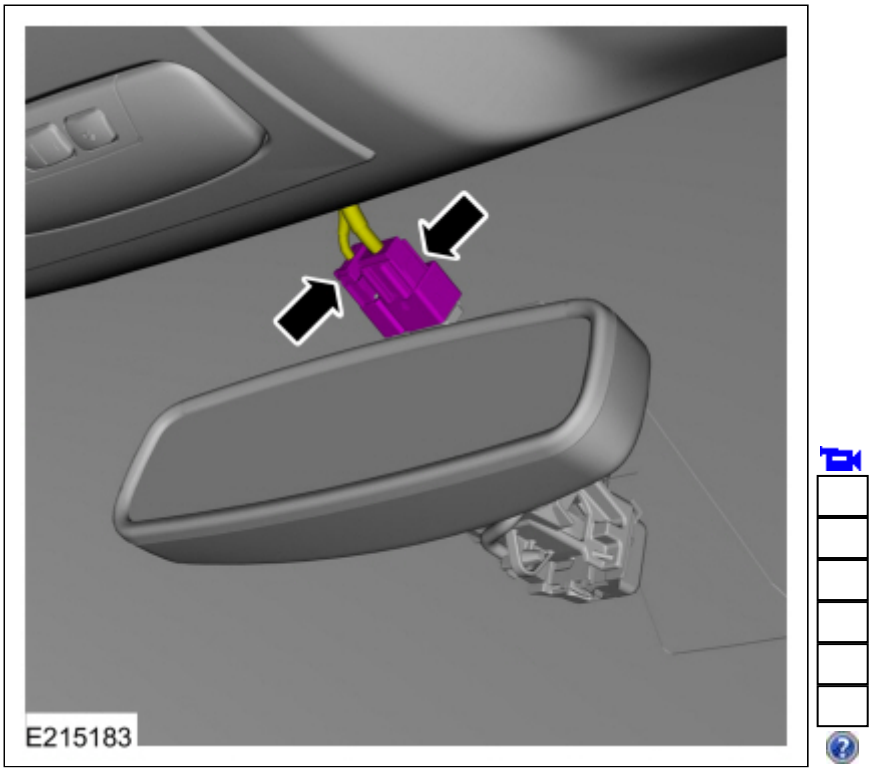
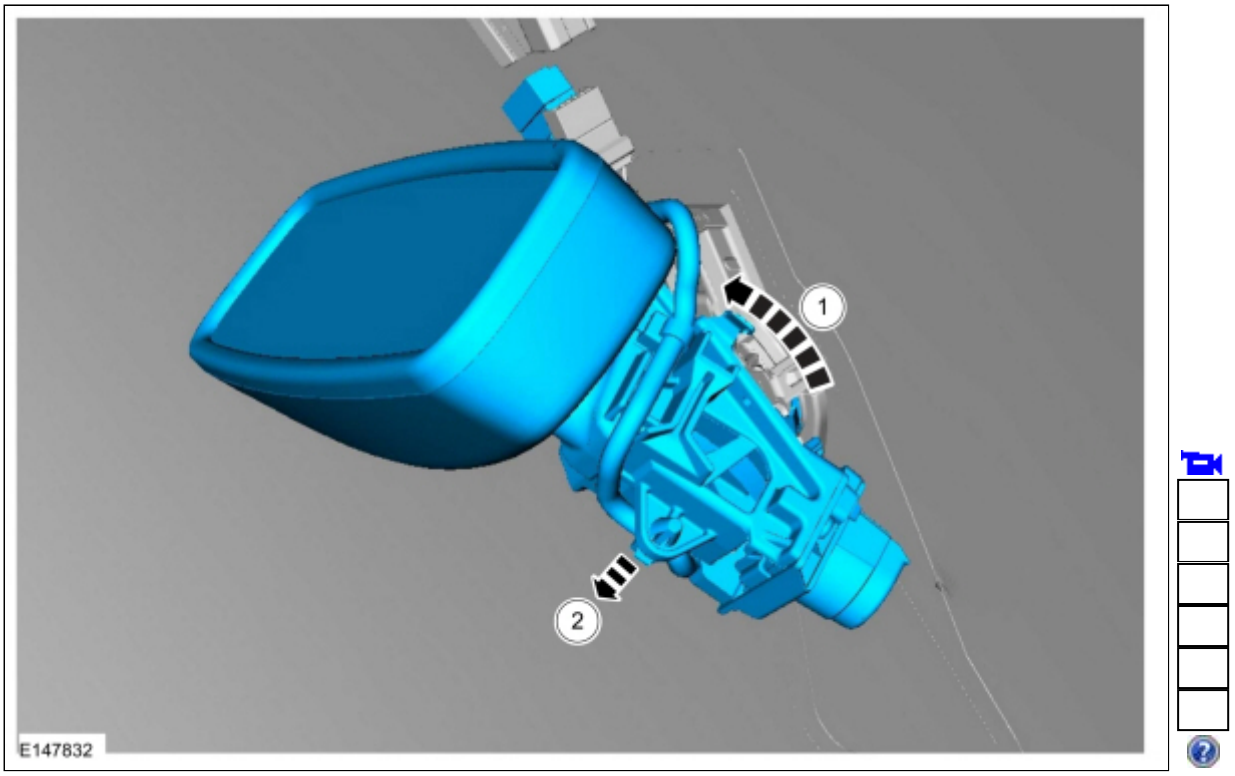
Image Processing Module A (IPMA)



Removal

NOTE: *Removal steps in this procedure may contain installation details.*

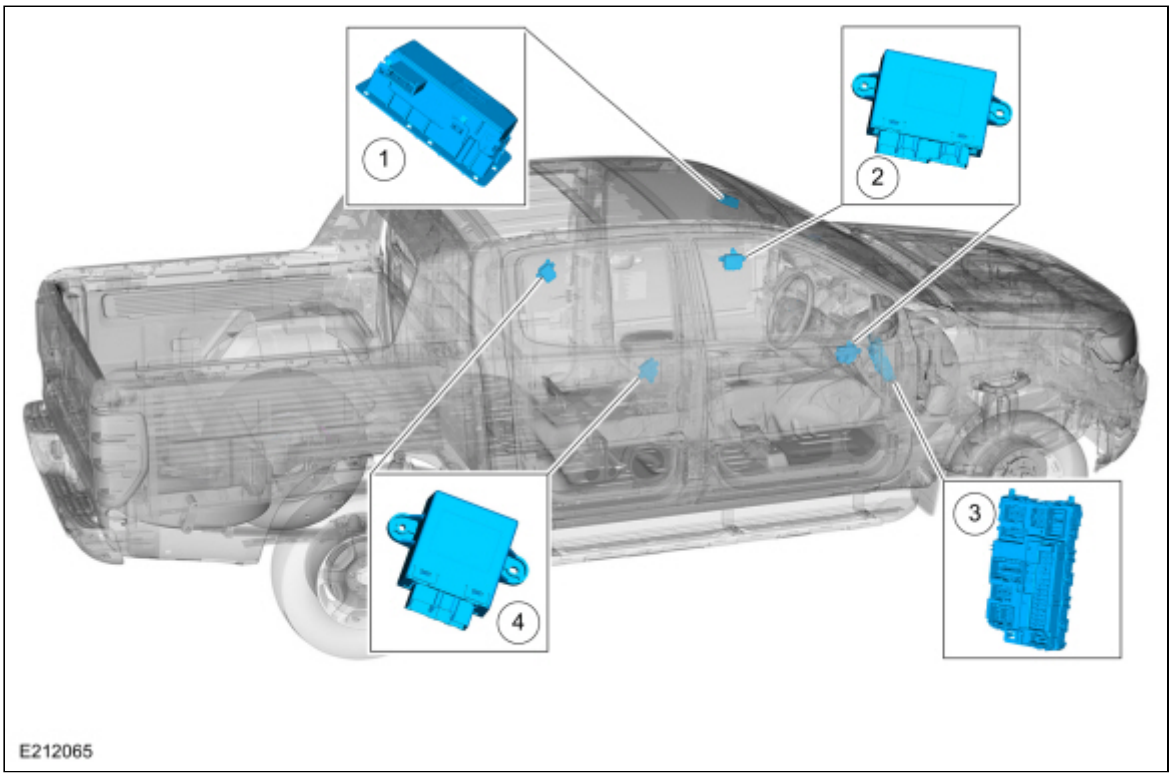
1. Remove the rain sensor covers.



2. Disconnect the interior mirror electrical connector.

Remove the interior mirror.

1. Turn the interior mirror assembly counter clock-wise.
2. Remove the interior mirror off the mirror mount.



Installation

1. If a new mirror is being installed, use a diagnostic scan tool, begin the PMI process for the IPMAfollowing the on-screen instructions.
2. To install, reverse the removal procedure.

Module Controlled Functions - Overview

Body Control Module (BCM)

The BCM controls the following:

- Battery load shed function
- Battery saver function
- Brake shift interlock
- Delayed accessory function
- Dimmable backlighting
- Exterior lighting
- Heated rear windows
- Heated exterior mirrors
- Horn
- Ignition state messaging
- Interior lighting
- Keyless entry keypad
- PATS
- Perimeter alarm
- Post crash alert function
- Power door locks
- Push-button start function (if equipped)
- RKE system
- TPMS
- Transport mode function
- Wipers and washers

Copyright © 2016 Ford Motor Company

Module Controlled Functions - System Operation and Component Description

System Operation

Body Control Module (BCM)

The BCM controls various systems by monitoring inputs from switches, sensors and network messages from other modules on the HS-CAN1 and from the GWM. Based on the inputs received, the BCM activates outputs. For example, the BCM monitors the headlamp switch position. Based on this input, the BCM may provide voltage to the exterior lamps.

Battery Saver

The battery saver feature is used to conserve battery voltage. The BCM provides automatic shut-off of the interior lamps after a time-out period when the ignition is off.

Refer to: Interior Lighting - Overview (417-02 Interior Lighting, Description and Operation).

Battery Load Shed

The BCM monitors the battery state of charge and when necessary will shut off accessories in order to save the remaining battery charge.

Refer to: Auxiliary Battery System (414-00 Charging System - General Information, Description and Operation).

Field Effect Transistor (FET) Protection

The BCM utilizes an Field Effect Transistor (FET) protective circuit strategy for many of its outputs, for example, lamp output circuits. Output loads (current level) are monitored for excessive current (typically short circuits) and are shut down (turns off the voltage or ground provided by the module) when a fault event is detected.

A Field Effect Transistor (FET) is a type of transistor that the control module software uses to control and monitor current flow on module outputs. The Field Effect Transistor (FET) protection strategy prevents module damage in the event of excessive current flow.

Output loads (current level) are monitored for excessive current draw (typically short circuits). When a fault event is detected the Field Effect Transistor (FET) turns off and a short circuit DTC sets. The module resets the Field Effect Transistor (FET) protection and allows the circuit to function when the fault is corrected or the ignition state is cycled off and then back on.

When the excessive circuit load occurs often enough, the module shuts down the output until a repair procedure is carried out. Each Field Effect Transistor (FET) protected circuit has 3 predefined levels of short circuit tolerance based on a module lifetime level of fault events based upon the durability of the Field Effect Transistor (FET). If the total tolerance level is determined to be 600 fault events, the 3 predefined levels would be 200, 400 and 600 fault events.

When each level is reached, the DTC associated with the short circuit sets along with DTC U1000:00. These Diagnostic Trouble Codes (DTCs) can be cleared using the module on-demand self-test, then the Clear DTC operation on the scan tool (if the on-demand test shows the fault corrected). The module never resets the fault event counter to zero and continues to advance the fault event counter as short circuit fault events occur.

If the number of short circuit fault events reach the third level, then Diagnostic Trouble Codes (DTCs) U1000:00 and U3000:49 set along with the associated short circuit DTC. DTC**U3000:49 cannot be cleared** and the module **must** be replaced after the repair.

Post Crash Alert Function

The post crash alert is a function controlled by the BCM. If the RCM determines an impact of enough severity has occurred (the airbags may or may not be deployed), the post crash alert function activates.

The post crash alert function:

- sounds the horn.

- turns on the hazard lights.
- turns on the interior lights.
- unlocks the doors.

The post crash alert function can be turned off by:

- pressing the hazard flasher lamp switch (which may need to be pressed twice).
- pressing the transmitter unlock button.
- pressing the RKE transmitter PANIC button.
- cycling the ignition switch (RUN-OFF-RUN-OFF-RUN).
- opening the driver door.

Factory-Transport Mode

During vehicle build, some modules (such as the IPC and the BCM) are set to factory mode. When the vehicle build is complete, the vehicle is set to transport mode.

Transport mode is used to reduce the drain on the battery during longer periods when the vehicle is not used. Various system functions can be altered or disabled when in the transport mode. While in transport mode, the IPC displays TRANSPORT MODE in the message center. Transport mode can be disabled and placed into normal operation mode. Refer to: Transport and Factory Mode Deactivation (419-10 Multifunction Electronic Modules, General Procedures).

Car Configuration Parameters

The parameters are set in the BCM. The parameters are also set in the IPC as backup data for service, in case online As-Built data is not available. For more information,
Refer to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation).

Component Description

BCM

The BCM is a multifunction module that requires a PMI when replaced.

Refer to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation).

DDM

The DDM receives power window commands from the driver door window control switch through a LIN. The DDM supplies voltage and ground to operate the driver door window regulator motor. The DDM also communicates driver door window control switch requests to the PDM through the MS-CAN.

For the power mirror functions, the DDM controls the LH exterior mirror glass position by supplying voltage and ground to the LH exterior mirror motors based on inputs from the master window control switch. When the RH exterior mirror is selected, the DDM forwards the movement requests to the PDM through the MS-CAN. To control the heated mirror function, the DDM supplies voltage and ground to the LH exterior mirror glass heating element based on messages received from the FCIM. For the memory mirror function, the DDM supplies voltage and ground to the LH mirror motor potentiometers. The DDM monitors the feedback from these potentiometers to determine the mirror glass position. Memory mirror positions are stored in the DDM memory. For more information:

- Refer to: Handles, Locks, Latches and Entry Systems - Overview (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).
- Refer to: Glass, Frames and Mechanisms - System Operation and Component Description (501-11 Glass, Frames and Mechanisms, Description and Operation).
-

The DDM requires PMI when replaced.

Refer to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation).

PDM

For the power window function, the PDM receives power window commands from the passenger door window control switch or from the DDM through the MS-CAN.

For the power mirror function, the PDM controls the RH exterior mirror glass position by supplying voltage and ground to the RH exterior mirror motors based on messages received from the DDM. To control the heated mirror function, the PDM supplies voltage and ground to the RH exterior mirror glass heating element based on messages received from the FCIM. For the memory mirror function, the PDM supplies voltage and ground to the RH mirror motor potentiometers. The PDM monitors the feedback from these potentiometers to determine the mirror glass position. Passenger mirror positions are stored in the PDM memory. For more information:

- Refer to: Handles, Locks, Latches and Entry Systems - Overview (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).
- Refer to: Glass, Frames and Mechanisms - System Operation and Component Description (501-11 Glass, Frames and Mechanisms, Description and Operation).

The PDM requires PMI when replaced.

Refer to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation).

RTM

The RTM communicates all RKE and passive key information to the BCM over a LIN circuit and (when the network is awake) the CAN. The RTM is an antenna that receives the high frequency signals from passive keys.

- Refer to: Handles, Locks, Latches and Entry Systems - Overview (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).
- Refer to: Tire Pressure Monitoring System (TPMS) (204-04B Tire Pressure Monitoring System (TPMS), Description and Operation).

The RTM requires PMI when replaced.

Refer to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation).

Body Control Module (BCM)

DTC Chart: Body Control Module (BCM)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

NOTE: *Diagnostic Trouble Codes (DTCs) which are not listed in the DTC charts are often retrieved as a result of incorrect repair procedures. Before attempting any repairs for unlisted Diagnostic Trouble Codes (DTCs):*

- *repair all other Diagnostic Trouble Codes (DTCs).*
- *if no other Diagnostic Trouble Codes (DTCs) are retrieved, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test.*
- *if the unlisted Diagnostic Trouble Codes (DTCs) return, VERIFY that the correct part number module is installed for the vehicle and if correct, install As-Built data from Professional Technician Society (PTS) following the diagnostic scan tool instructions under Module Programming > As-Built.*

BCM DTC Chart

DTC	Description	Action
B1046:11	Front Fog Lamp Control Switch: Circuit Short To Ground	REFER to: Fog Lamps (417-01 Exterior Lighting, Diagnosis and Testing).
B1047:11	Rear Fog Lamp Control Switch: Circuit Short To Ground	REFER to: Fog Lamps (417-01 Exterior Lighting, Diagnosis and Testing).

U0258:87	Lost Communication With Radio Transceiver: Missing Message	REFER to: Locks, Latches and Entry Systems (501-14 Handles, Locks, Latches and Entry Systems, Diagnosis and Testing).
U1000:00	Solid State Driver Protection Active: Driver Disabled: No Sub Type Information	GO to Pinpoint Test R
U1007:31	Lost Communication With Battery Monitoring Sensor A: No Signal	REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). REFER to: Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma (414-00 Charging System - General Information, Diagnosis and Testing).
U1A4C:55	Build / End of Line mode Active: Not Configured	• If the IPC message center indicates the vehicle has entered factory mode, REFER to: Transport and Factory Mode Deactivation (419-10 Multifunction Electronic Modules, General Procedures). • If the IPC message center does not indicate the vehicle has entered factory mode, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test. If the DTC is retrieved again, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).

U2005:85	Vehicle Speed: Signal Above Allowable Range	Make sure the vehicle is stationary and the BCM entry level requirements (found on the diagnostic scan tool self-test screen) are met prior to performing the self-test. A speed signal is detected during the self-test. DIAGNOSE any observable symptoms that are present. CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the BCM self-test. If the DTC returns, diagnose any PCM or ABS Diagnostic Trouble Codes (DTCs) causing a false vehicle speed signal.
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK the vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. INSTALL As-Built data from Professional Technician Society (PTS) following diagnostic scan tool instructions under Module Programming>As-Built.
U2200:00	Control Module Configuration Memory Corrupt: No Sub Type Information	INSTALL As-Built data from Professional Technician Society (PTS) following diagnostic scan tool instructions under Module Programming>As-Built. CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. If BCM U2200:00 is retrieved again, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
U3000:49	Control Module: Internal Electronic Failure	ADDRESS all other Diagnostic Trouble Codes (DTCs) first. CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. If no BCM Diagnostic Trouble Codes (DTCs) are retrieved, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
U3006:16	Control Module Input Power "A": Circuit Voltage Below Threshold	GO to Pinpoint Test K
U3006:17	Control Module Input Power "A": Circuit Voltage Above Threshold	GO to Pinpoint Test L
U3006:1C	Control Module Input Power "A": Circuit Voltage Out of Range	GO to Pinpoint Test S
U3007:16	Control Module Input Power "B": Circuit Voltage Below Threshold	GO to Pinpoint Test K
U3007:17	Control Module Input Power "B": Circuit Voltage Above Threshold	GO to Pinpoint Test L
U300A:01	Ignition Switch: General Electrical Failure	REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches, Diagnosis and Testing).
U3013:16	Control Module Input Power "C": Circuit Voltage Below Threshold	GO to Pinpoint Test K
U3013:17	Control Module Input Power "C": Circuit Voltage Above Threshold	GO to Pinpoint Test L
U3014:16	Control Module Input Power "D": Circuit Voltage Below Threshold	GO to Pinpoint Test K
U3014:17	Control Module Input Power "D": Circuit Voltage Above Threshold	GO to Pinpoint Test L

Symptom Chart

Symptom Chart: Multifunction Electronic Modules

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Condition	Possible Sources	Action
A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals or connectors • Module	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

Pinpoint Tests

U0100:87

Normal Operation and Fault Conditions

REFER to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:87	Lost Communication With ECM/PCM "A": Missing Message	A continuous memory DTC that sets in the BCM if powertrain data messages from the PCM over the HS-CAN are missing.

Possible Sources

- Communication network concern
- Charging system concern
- PCM
- BCM

PINPOINT TEST A : U0100:87

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.*

A1 VERIFY THE DIAGNOSTIC SCAN TOOL COMMUNICATES WITH THE PCM (POWERTRAIN CONTROL MODULE)

- Ignition ON.
- Connect the diagnostic scan tool.
- Check that a vehicle session can be established using the diagnostic scan tool.

Can a vehicle session be established?

Yes	GO to A2
No	DIAGNOSE the PCM not communicating with the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

A2 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0100:87 or U0101:87 retrieved again?

Yes	GO to A3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

A3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PCM (POWERTRAIN CONTROL MODULE) KOEO (KEY ON, ENGINE OFF) SELF-TEST

- Using a diagnostic scan tool, perform the PCM KOEO self-test.

Are any voltage system related Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to A4

A4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the BCM DTC Chart in this section.
No	GO to A5

A5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0100 set in any other module?

Yes	GO to A6
No	GO to A7

A6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)

- damaged or bent pins - install new terminals/pins
- pushed-out pins - install new pins as necessary

- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0101:87

Normal Operation and Fault Conditions

REFER to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0101:87	Lost Communication With TCM: Missing Message	A continuous memory DTC that sets in the BCM if powertrain data messages from the TCM over the HS-CAN are missing.

Possible Sources

- Communication network concern
- Charging system concern
- PCM
- BCM

PINPOINT TEST B : U0101:87

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.*

B1 VERIFY THE DIAGNOSTIC SCAN TOOL COMMUNICATES WITH THE PCM (POWERTRAIN CONTROL MODULE)

- Ignition ON.
- Connect the diagnostic scan tool.
- Check that a vehicle session can be established using the diagnostic scan tool.

Can a vehicle session be established?

Yes	GO to B2
No	DIAGNOSE the PCM not communicating with the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

B2 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.

- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0100:87 or U0101:87 retrieved again?

Yes	GO to B3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

B3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PCM (POWERTRAIN CONTROL MODULE) KOEO (KEY ON, ENGINE OFF) SELF-TEST

- Using a diagnostic scan tool, perform the PCM KOEO self-test.

Are any voltage system related Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to B4

B4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the BCM DTC Chart in this section.
No	GO to B5

B5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0100 set in any other module?

Yes	GO to B6
No	GO to B7

B6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

B7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0121:87

Normal Operation and Fault Conditions

REFER to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0121:87	Lost Communication With Anti-Lock Brake System (ABS) Control Module: Missing Message	A continuous memory DTC that sets in the BCM if messages from the ABS module through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- ABS module
- BCM

PINPOINT TEST C : U0121:87

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.*

C1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to C2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

C2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the ABS module pass the network test?

Yes	GO to C3
No	DIAGNOSE no communication with the ABS module. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

C3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L
No	GO to C4

C4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST

- Using a diagnostic scan tool, perform the ABS module self-test.

Are any voltage system related Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).

No	GO to C5

C5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0121:87 still present?

Yes	GO to C6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

C6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0121 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0121 set in any other module?

Yes	GO to C7
No	GO to C8

C7 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Disconnect and inspect the ABS module connector.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the ABS module connector. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0131:87

Normal Operation and Fault Conditions

REFER to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions

U0131:87	Lost Communication With Power Steering Control Module: Missing Message	A continuous memory DTC that sets in the BCM if messages from the PSCM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- PSCM
- BCM

PINPOINT TEST D : U0131:87

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.*

D1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to D2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

D2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the PSCM pass the network test?

Yes	GO to D3
No	DIAGNOSE no communication with the PSCM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

D3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L
No	GO to D4

D4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PSCM (POWER STEERING CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PSCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Power Steering (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Diagnosis and Testing).
No	GO to D5

D5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0131:87 still present?

Yes	GO to D6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

D6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0131 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.

- Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0131 set in any other module?

Yes	GO to D7
No	GO to D8

D7 CHECK FOR CORRECT PSCM (POWER STEERING CONTROL MODULE) OPERATION

- Disconnect and inspect the PSCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PSCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PSCM. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

D8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0151:87

Normal Operation and Fault Conditions

REFER to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0151:87	Lost Communication With Restraints Control Module: Missing Message	A continuous memory DTC that sets in the BCM if SRS messages from the RCM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- RCM
- BCM

PINPOINT TEST E : U0151:87

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.*

E1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to E2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

E2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the RCM pass the network test?

Yes	GO to E3
No	DIAGNOSE no communication with the RCM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

E3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L
No	GO to E4

E4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE RCM (RESTRAINTS CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the RCM self-test.

Are any voltage system related Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	GO to E5

E5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0151:87 still present?

Yes	GO to E6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

E6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0151 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0151 set in any other module?

Yes	GO to E7
No	GO to E8

E7 CHECK FOR CORRECT RCM (RESTRAINTS CONTROL MODULE) OPERATION

- Disconnect and inspect the RCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the RCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

E8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0155:87

Normal Operation and Fault Conditions

REFER to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0155:87	Lost Communication With Instrument Panel Cluster (IPC) Control Module: Missing Message	A continuous memory DTC that sets in the BCM if messages from the IPC through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- IPC
- BCM

PINPOINT TEST F : U0155:87

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.*

F1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to F2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

F2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the IPC pass the network test?

Yes	GO to F3
No	DIAGNOSE no communication with the IPC. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

F3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L
No	GO to F4

F4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any voltage system related Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	GO to F5

F5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155:87 still present?

Yes	GO to F6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

F6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155 set in any other module?

Yes	GO to F7
No	GO to F8

F7 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Disconnect and inspect the IPC connector.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPC connector. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

F8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0184:87

Normal Operation and Fault Conditions

REFER to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0184:87	Lost Communication With Radio: Missing Message	A continuous memory DTC that sets in the BCM if messages from the ACM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- GWM concern
- ACM
- BCM

PINPOINT TEST G : U0184:87

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.*

G1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to G2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

G2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the ACM pass the network test?

Yes	GO to G3
No	DIAGNOSE no communication with the ACM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

G3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L
No	GO to G4

G4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ACM (AUDIO FRONT CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the ACM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD) . REFER to: Information and Entertainment System (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Diagnosis and Testing).
No	GO to G5

G5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0184:87 still present?

Yes	GO to G6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

G6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0184 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0184 set in any other module?

Yes	GO to G7
No	GO to G8

G7 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Disconnect and inspect the ACM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the ACM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation). REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

G8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0199:87

Normal Operation and Fault Conditions

REFER to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0199:87	Lost Communication With "Door Control Module A": Missing Message	A continuous memory DTC that sets in the BCM if messages from the DDM over the MS-CAN through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- GWM concern
- DDM
- BCM

PINPOINT TEST H : U0199:87

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.*

H1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to H2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

H2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the DDM pass the network test?

Yes	GO to H3
No	DIAGNOSE no communication with the DDM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

H3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L
No	GO to H4

H4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE DDM (DRIVER DOOR MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the DDM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Locks, Latches and Entry Systems (501-14 Handles, Locks, Latches and Entry Systems, Diagnosis and Testing).
No	GO to H5

H5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0199:87 still present?

Yes	GO to H6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

H6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0199 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0199 set in any other module?

Yes	GO to H7
No	GO to H8

H7 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

- Disconnect and inspect the DDM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the DDM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

H8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0200:87

Normal Operation and Fault Conditions

REFER to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0200:87	Lost Communication With "Door Control Module B": Missing Message	A continuous memory DTC that sets in the BCM if messages from the PDM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- GWM concern
- PDM
- BCM

PINPOINT TEST I : U0200:87

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.*

I1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to I2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

I2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the PDM pass the network test?

Yes	GO to I3
No	DIAGNOSE no communication with the PDM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

I3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L
No	GO to I4

I4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PDM (PASSENGER DOOR MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PDM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Locks, Latches and Entry Systems (501-14 Handles, Locks, Latches and Entry Systems, Diagnosis and Testing).
No	GO to I5

I5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0200:87 still present?

Yes	GO to I6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

I6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0200 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0200 set in any other module?

Yes	GO to I7
No	GO to I8

I7 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

- Disconnect and inspect the PDM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PDM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

I8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

P0230:14

Refer to Wiring Diagrams Cell 23 for schematic and connector information.

Normal Operation and Fault Conditions

The BCM provides a ground to the coil side of the BJB fuel pump relay.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0230:14	Fuel Pump Primary Circuit: Circuit Short To Ground or Open	A continuous and on-demand DTC that sets when the BCM detects a short to ground or open from the fuel pump relay coil circuit.

Possible Sources

- Fuse
- Wiring, terminals or connectors
- Fuel pump relay
- BCM

Visual Inspection and Diagnostic Pre-Checks

Inspect BJB fuse(s).

PINPOINT TEST J : P0230:14

J1 CHECK THE FUEL PUMP RELAY

- Ignition OFF.
- Swap the fuel pump relay with a known good relay.
- Ignition ON.
- Using a diagnostic scan tool, clear the BCM Diagnostic Trouble Codes (DTCs).
- Perform the BCM self-test.

Is DTC P0230:14 still present?

Yes	GO to J1
No	INSTALL a new the fuel pump relay.

J2 CHECK FOR VOLTAGE AT THE BCM (BODY CONTROL MODULE)

- Ignition OFF.
- Disconnect: BCM C2280C.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280C-12		Ground

Is the voltage greater than 11 volts?

Yes	GO to J3
No	VERIFY BJB fuse(s) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagram manual to identify the possible causes for the short circuit.

J3 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BCM Input Power Voltage Below Threshold

Vehicle Ground Information

Refer to Wiring Diagrams Cell 10 for schematic and connector information.

Vehicle Power Information

Refer to Wiring Diagrams Cell 13 for schematic and connector information.

Normal Operation and Fault Conditions

The BCM receives voltage at all times from the BJB.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3006:16	Control Module Input Power “A”: Circuit Voltage Below Threshold	A continuous and on-demand DTC that sets in the BCM if the BCM detects lower than expected battery voltage on the voltage supply input circuit.
U3007:16	Control Module Input Power "B": Circuit Voltage Below Threshold	A continuous DTC that sets in the BCM if the BCM detects lower than expected battery voltage on the voltage supply input circuit.
U3013:16	Control Module Input Power "C": Circuit Voltage Below Threshold	A continuous DTC that sets in the BCM if the BCM detects lower than expected battery voltage on the voltage supply input circuit.
U3014:16	Control Module Input Power "D": Circuit Voltage Below Threshold	A continuous DTC that sets in the BCM if the BCM detects lower than expected battery voltage on the voltage supply input circuit.

Possible Sources

- Wiring, terminals or connectors
- Charging system concern
- Battery concern
- BJB
- BCM

PINPOINT TEST K : BCM (BODY CONTROL MODULE) INPUT POWER VOLTAGE BELOW THRESHOLD

K1 RECHECK THE BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, perform the BCM self-test.

Is DTC U3006:16, U3007:16, U3013:16 or U3014:16 still present?

Yes	GO to K2
No	The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition. CLEAR the DTC.

K2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) SET IN OTHER MODULES

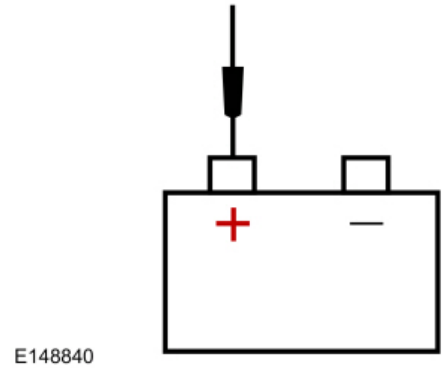
- Using a diagnostic scan tool, retrieve all Diagnostic Trouble Codes (DTCs).

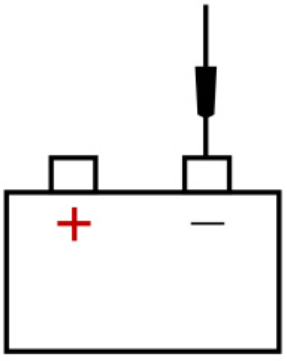
Are any charging system Diagnostic Trouble Codes (DTCs) recorded?

Yes	DIAGNOSE the charging system concern.

	REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). REFER to: Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to K3

K3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE





- Check the battery condition and verify the battery is fully charged.
  REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).

Is the battery OK and fully charged?

Yes	GO to K4
No	If the battery is discharged, DIAGNOSE the cause of the low battery condition. REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). REFER to: Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma (414-00 Charging System - General Information, Diagnosis and Testing). If the battery condition fails, INSTALL a new battery. REFER to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation).

K4 COMPARE THE BCM (BODY CONTROL MODULE) BATTERY VOLTAGE (V_BATT_BCM) PID (PARAMETER IDENTIFICATION) WITH THE ACTUAL BATTERY VOLTAGE

- Start the engine.
- Turn on accessories (climate control blower on high speed, exterior lights).
- With the engine running at idle, measure and record battery voltage:

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841

- Using a diagnostic scan tool, view the BCM PID V_BATT_BCM.

Is the recorded battery voltage within 0.2 volt of the PID?

Yes	TURN the engine off, GO to K7
No	GO to K5

K5 CHECK THE BCM (BODY CONTROL MODULE) VOLTAGE SUPPLY CIRCUITS

- Ignition OFF.
- Disconnect BCM C2280A.
- Disconnect BCM C2280D.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280GD-17		Ground
C2280D-21		Ground
C2280D-22		Ground

Positive Lead	Measurement / Action	Negative Lead

C2280A-1		Ground

Are the voltages within 0.2 volt of the recorded battery voltage?

Yes	GO to K6
No	REPAIR the circuit in question for high resistance.

K6 CHECK THE BCM (BODY CONTROL MODULE) PROCESSOR GROUNDS

- Ignition OFF.
- Disconnect BCM C2280F.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280F-6	Ω	Ground
C2280F-7	Ω	Ground
C2280F-10	Ω	Ground

Are the resistances less than 3 ohms?

Yes	GO to K7
No	REPAIR the circuit in question for high resistance.

K7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect all BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BCM Input Power Voltage Above Threshold

Vehicle Ground Information

Refer to Wiring Diagrams Cell 10 for schematic and connector information.

Vehicle Power Information

Refer to Wiring Diagrams Cell 13 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3006:17	Control Module Input Power “A”: Circuit Voltage Above Threshold	A continuous and on-demand DTC that sets in the BCM if the BCM detects higher than expected battery voltage on the voltage supply input circuit.
U3007:17	Control Module Input Power "B": Circuit Voltage Above Threshold	A continuous DTC that sets in the BCM if the BCM detects higher than expected battery voltage on the voltage supply input circuit.
U3013:17	Control Module Input Power "C": Circuit Voltage Above Threshold	A continuous DTC that sets in the BCM if the BCM detects higher than expected battery voltage on the voltage supply input circuit.
U3014:17	Control Module Input Power "D": Circuit Voltage Above Threshold	A continuous DTC that sets in the BCM if the BCM detects higher than expected battery voltage on the voltage supply input circuit.

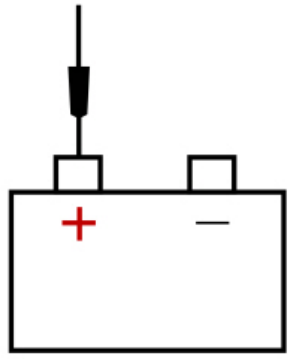
Possible Sources

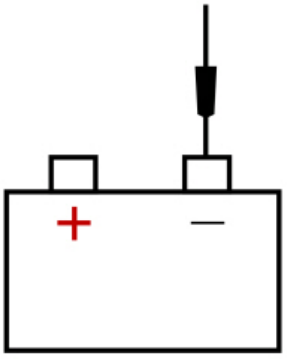
- Charging system concern
- BCM

PINPOINT TEST L : BCM (BODY CONTROL MODULE) INPUT POWER VOLTAGE ABOVE THRESHOLD

NOTE: *U3006:17, U3007:17, U3013:17 or U3014:17 may be stored in the module memory due to previous battery charging or vehicle jump starting events.*

L1 CHECK FOR OVERCHARGING DIAGNOSTIC TROUBLE CODES (DTCS) SET IN OTHER MODULES





- Ignition ON.
- Using a diagnostic scan tool, retrieve **all** Diagnostic Trouble Codes (DTCs).

Are any charging system Diagnostic Trouble Codes (DTCs) recorded?

Yes	DIAGNOSE the charging system concern. REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). REFER to: Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to L2

L2 CHECK THE BATTERY VOLTAGE

- Turn off all interior/exterior lights and accessories.
- Start and run the engine at approximately 2,000 rpm for 3 minutes while monitoring the battery voltage.

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841

Does the battery voltage rise to 16 volts or higher?

Yes	DIAGNOSE the over-charging system concern. REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). REFER to: Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to L3

L3 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:17, U3007:17, U3013:17 or U3014:17 present?

Yes	GO to L4
No	The system is operating correctly at this time. The DTC may have been caused by module connections or may have been set previously during battery charging or while jump starting the vehicle. ADDRESS the root cause of any connector or pin issues.

L4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0208:87

Refer to Wiring Diagrams Cell 120 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0208:87	Lost Communication With "Seat Control Module A": Missing Message	A continuous memory DTC that sets in the BCM if messages from the DSM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- GWM concern
- DSM
- BCM

PINPOINT TEST M : U0208:87

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI or the PMI may not have been carried out.*

M1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to M2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

M2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the DSM pass the network test?

Yes	GO to M3
No	DIAGNOSE no communication with the DSM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

M3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L
No	GO to M4

M4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE DSM (DRIVER FRONT SEAT MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the DSM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Seats (501-10A Seating, Diagnosis and Testing).
No	GO to M5

M5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0208:87 still present?

Yes	GO to M6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

M6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0208 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0208 set in any other module?

Yes	GO to M7
No	GO to M8

M7 CHECK FOR CORRECT DSM (DRIVER FRONT SEAT MODULE) OPERATION

- Disconnect and inspect the DSM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the DSM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DSM.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

M8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

B143A:11

Refer to Wiring Diagrams Cell 13 for schematic and connector information.

Normal Operation and Fault Conditions

The BCM transmits an event notification signal which communicates crash status and SRS deployment status to the PCM. When the PCM receives an event notification signal which indicates a crash, it initiates fuel cut-off.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B143A:11	Crash Event Detection Output: Circuit Short To Ground	A continuous memory and on-demand DTC that sets in the BCM if the BCM senses a short to ground on the event notification signal circuit to the PCM.

Possible Sources

- Wiring, terminals or connectors
- PCM
- BCM

PINPOINT TEST N : B143A:11

N1 CONFIRM THAT THE DTC (DIAGNOSTIC TROUBLE CODE) RESETS

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, perform the BCM self-test.

Is DTC B143A:11 still present?

Yes	GO to N2
No	The system is operating correctly at this time. The DTC may have been falsely set by a BCM self-test, causing the signal to momentarily stop and set the DTC.

N2 CHECK THE PCM (POWERTRAIN CONTROL MODULE) FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect PCM C1232A (Diesel).
- Disconnect PCM C175B (2.5L Petrol).
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, perform the BCM self-test.

Is DTC B143A:11 still present?

Yes	GO to N3
No	GO to N4

N3 CHECK THE EVENT NOTIFICATION SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect BCM C2280H.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-29	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to N5
No	REPAIR the circuit.

N4 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

N5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0212:87

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0212:87	Lost Communication With Steering Column Control Module: Missing Message	A continuous memory DTC that sets in the BCM if messages from the SCCM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- GWM concern
- SCCM
- BCM

PINPOINT TEST O : U0212:87

O1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to O2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

O2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the SCCM pass the network test?

Yes	GO to O3
No	DIAGNOSE no communication with the SCCM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

O3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L
No	GO to O4

O4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE SCCM (STEERING COLUMN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the SCCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches, Diagnosis and Testing).
No	GO to O5

O5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0212:87 still present?

Yes	GO to O6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

O6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0212 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0212 set in any other module?

Yes	GO to O7
No	GO to O8

O7 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Disconnect and inspect the SCCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the SCCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

O8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0253:87

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0253:87	Lost Communication With Accessory Protocol Interface Module: Missing Message	A continuous memory DTC that sets in the BCM if messages from the APIM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- GWM concern
- APIM
- BCM

PINPOINT TEST P : U0253:87

P1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to P2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

P2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the APIM pass the network test?

Yes	GO to P3
No	DIAGNOSE no communication with the APIM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

P3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L
No	GO to P4

P4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE APIM (SYNC MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the APIM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD) . REFER to: Information and Entertainment System (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Diagnosis and Testing).
No	GO to P4

P5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.

- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0253:87 still present?

Yes	GO to P6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

P6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0253 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0253 set in any other module?

Yes	GO to P7
No	GO to P8

P7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Disconnect and inspect the APIM connector.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the APIM connector. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

P8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0256:87

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0256:87	Lost Communication With Front Controls Interface Module "A" : Missing Message	A continuous memory DTC that sets in the BCM if messages from the FCIM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- GWM concern
- FCIM
- BCM

PINPOINT TEST Q : U0256:87

Q1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to Q2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

Q2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the FCIM pass the network test?

Yes	GO to Q3
No	DIAGNOSE no communication with the FCIM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

Q3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L
No	GO to Q4

Q4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE FCIM (FRONT CONTROLS INTERFACE MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the FCIM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Information and Entertainment System (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD) . REFER to: Information and Entertainment System (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Diagnosis and Testing).
No	GO to Q5

Q5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0256:87 still present?

Yes	GO to Q6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

Q6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0256 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0256 set in any other module?

Yes	GO to Q7
No	GO to Q8

Q7 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Disconnect and inspect the FCIM connector.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the FCIM connector. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation). REFER to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Q8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U1000:00

REFER to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

Normal Operation and Fault Conditions

The BCM uses solid state drivers (Field Effect Transistors (FET)) to control the output of several vehicle systems. When an overload occurs on any of these drivers, the BCM disables the output and tracks the number of repetitive faults on each of these circuits. The module compares this number of overloads to 3 progressive thresholds established for each circuit. At each threshold, DTC U1000:00 sets along with the DTC associated with the affected circuit.
REFER to: Module Controlled Functions - System Operation and Component Description (419-10 Multifunction Electronic Modules, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U1000:00	Solid State Driver Protection Active: Driver Disabled: No Sub Type Information	A continuous memory DTC that sets when the BCM has disabled a circuit due to a repetitive circuit overload and a progressive threshold is met.

Possible Sources

- BCM output circuit short
- BCM

PINPOINT TEST R : U1000:00

R1 REVIEW THE DIAGNOSTIC TROUBLE CODES (DTCS)

- Review the Diagnostic Trouble Codes (DTCs) from the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present besides U1000:00?

Yes	CORRECT the Diagnostic Trouble Codes (DTCs). REFER to the BCM DTC Chart in this section.
No	GO to R2

R2 REPEAT THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the BCM self-test.

Is DTC U1000:00 still present?

Yes	INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The circuit short has been repaired.

U3006:1C

Vehicle Ground Information

Refer to Wiring Diagrams Cell 10 for schematic and connector information.

Vehicle Power Information

Refer to Wiring Diagrams Cell 13 for schematic and connector information.

Normal Operation and Fault Conditions

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3006:1C	Control Module Input Power "A": Circuit Voltage Out of Range	A continuous memory DTC that sets in the BCM if the BCM detects out of range voltage on the voltage supply input circuits.

Possible Sources

- Wiring, terminals or connectors
- Charging system concern
- Battery concern
- BJB
- BCM

PINPOINT TEST S : U3006:1C

S1 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) IN THE BCM (BODY CONTROL MODULE)

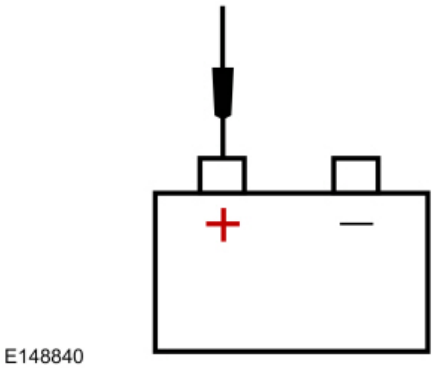
- Using a diagnostic scan tool, perform the BCM self-test.

Are any charging system Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the BCM DTC Chart in this section.
No	GO to S2

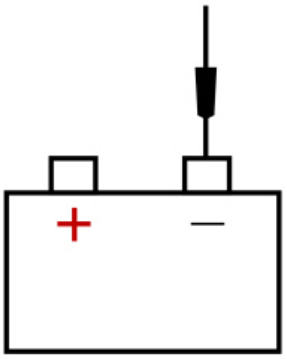
S2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) SET IN OTHER MODULES

- Ignition ON.
- Using a diagnostic scan tool, retrieve all Diagnostic Trouble Codes (DTCs).



Are any charging system Diagnostic Trouble Codes (DTCs) recorded?

Yes	DIAGNOSE the charging system concern. REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). REFER to: Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to S3



S3 CHECK THE BATTERY VOLTAGE

- Turn off all interior/exterior lights and accessories.
- Start and run the engine at approximately 2,000 rpm for 3 minutes while monitoring the battery voltage.

Positive Lead	Measurement / Action	Negative Lead
		

E148840

E148841

Does the battery voltage rise to 16 volts or higher?

Yes	DIAGNOSE the over-charging system concern. REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). REFER to: Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to S4

S4 RECHECK THE BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition OFF.
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Diagnostic Trouble Codes (DTCs).

Is DTC U3006:1C present?

Yes	GO to S5
No	The system is operating correctly at this time. The DTC may have been caused by module connections or may have been set previously during battery charging or while jump starting the vehicle. ADDRESS the root cause of any connector or pin issues.

S5 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

- Check the battery condition and verify the battery is fully charged.
  REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).

Is the battery OK and fully charged?

Yes	GO to S6
No	If the battery is discharged, DIAGNOSE the cause of the low battery condition. REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). REFER to: Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma (414-00 Charging System - General Information, Diagnosis and Testing). If the battery condition fails, INSTALL a new battery. REFER to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation).

S6 COMPARE THE BCM (BODY CONTROL MODULE) BATTERY VOLTAGE (V_BATT_BCM) PID (PARAMETER IDENTIFICATION) WITH THE ACTUAL BATTERY VOLTAGE

- Start the engine.
- Turn on accessories (climate control blower on high speed, exterior lights).
- With the engine running at idle, measure and record battery voltage:

Positive Lead	Measurement / Action	Negative Lead
		

- Using a diagnostic scan tool, view the BCM PID V_BATT_BCM.

Is the recorded battery voltage within 0.2 volt of the PID?

Yes	TURN the engine off, GO to S9
No	GO to S7

S7 CHECK THE BCM (BODY CONTROL MODULE) VOLTAGE SUPPLY CIRCUIT

- Ignition OFF.
- Disconnect BCM C2280A.
- Disconnect BCM C2280D.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280D-17		Ground
C2280D-21		Ground
C2280D-22		Ground

Positive Lead	Measurement / Action	Negative Lead
C2280A-1		Ground

Is the voltage within 0.2 volt of the recorded battery voltage?

Yes	GO to S8
No	REPAIR the circuit for high resistance.

S8 CHECK THE BCM (BODY CONTROL MODULE) PROCESSOR GROUNDS

- Ignition OFF.
- Disconnect BCM C2280F.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280F-6	Ω	Ground
C2280F-7	Ω	Ground
C2280F-10	Ω	Ground

Are the resistances less than 3 ohms?

Yes	GO to S9
No	REPAIR the circuit in question for high resistance.

S9 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Power Point Is Never / Always Powered

Refer to Wiring Diagrams Cell 44 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Module Controlled Functions - System Operation and Component Description (419-10 Multifunction Electronic Modules, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1430:12	Power Point Relay Reset Output: Circuit Short To Battery	A continuous and on-demand DTC that sets when the BCM detects a short to voltage from the power point relay coil circuit.
B1430:14	Power Point Relay Reset Output: Circuit Short To Ground or Open	A continuous and on-demand DTC that sets when the BCM detects a short to ground or open from the power point relay coil circuit.
B1435:12	Power Point Relay Set Output: Circuit Short To Battery	A continuous and on-demand DTC that sets when the BCM detects a short to voltage from the power point relay coil circuit.
B1435:14	Power Point Relay Set Output: Circuit Short To Ground or Open	A continuous and on-demand DTC that sets when the BCM detects a short to ground or open from the power point relay coil circuit.

Possible Sources

- Wiring, terminals or connectors
- Power point
- BCM
- BJB

Visual Inspection and Diagnostic Pre-Checks

Inspect BJB fuse(s).

PINPOINT TEST T : THE POWER POINT IS NEVER / ALWAYS POWERED

T1 VERIFY BATTERY

- Perform battery test.
  REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).

Did battery pass test?

Yes	GO to T2
No	REPLACE battery. REFER to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation).

T2 CHECK BJB (BATTERY JUNCTION BOX) FUSES

- Check BJB fuse(s).

Are the fuses OK?

Yes	GO to T4
No	REPLACE fuses as necessary. GO to T3

T3 RECHECK BJB (BATTERY JUNCTION BOX) FUSES

- Check BJB fuse(s).

Are the fuses OK?

Yes	GO to T4
No	REPAIR the circuit short.

T4 CHECK THE POWER POINT WITH KEY OFF

- Ignition OFF.
- Connect a known good device to each power point.

Are all power points off?

Yes	GO to T5
No	GO to T6

T5 CHECK THE POWER POINT OPERATION WITH KEY ON

- Ignition ON.
- Connect a known good device to each power point and verify the device works.

Are all the power points operational?

Yes	GO to T6
No	If no power points are operational, GO to T6 If some, but not all, power points are operational, REFER to wiring diagram manual and correct open circuit as necessary.

T6 CHECK FOR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the BCM self-test.

Is BCM DTC B1430:12 , B1430:14, B1435:12, or B1435:14 present?

Yes	For BCM DTC B1430:12 or B1435:12, GO to T7 For BCM DTC B1430:14 or B1435:14, GO to T9
No	For all other BCM Diagnostic Trouble Codes (DTCs) BCM DTC Chart in this section. If no BCM Diagnostic Trouble Codes (DTCs) are found, the system is operating correctly at this time.

T7 CHECK THE BJB (BATTERY JUNCTION BOX) FOR INTERNAL SHORT

- Ignition OFF.
- Disconnect BJB C1035A.
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the BCM self-test.

Is DTC B1430:12 or DTC B1435:12 still present?

Yes	GO to T8
No	INSTALL a new BJB.

T8 CHECK THE POWER POINT CONTROL CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280H.
- Using the Terminal Release Kit, release and temporarily remove BCM C2280H-23 and C2280H-33.
- Connect BCM C2280H.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-23		Ground
C2280H-33		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	Turn ignition off. INSTALL C2280H-23 and C2280H-33. INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).

T9 CHECK THE POWER POINT CONTROL CIRCUITS

- Ignition OFF.
- Disconnect BCM C2280C.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-23		Ground
C2280H-33		Ground

Are voltages greater than 11.0V?

Yes	REPLACE the BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	GO to T10

T10 CHECK THE POWER POINT CONTROL CIRCUITS FOR SHORT TO GROUND

- Disconnect BJB C1035A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-23	Ω	Ground
C2280H-33	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to T11
No	REPAIR the circuit.

T11 CHECK THE POWER POINT CONTROL CIRCUITS FOR OPENS

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-23	Ω	C1035A-21
C2280H-33	Ω	C1035A-30

Are the resistances less than 3 ohms?

Yes	REPLACE the BJB.
No	Repair the circuit.

U0137:87

Normal Operation and Fault Conditions

REFER to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0137:87	Lost Communication With Trailer Brake Control Module: Missing Message	A continuous memory DTC that sets in the BCM if messages from the TRM through the GWM are missing.

Possible Sources

- Communication network concern
- Battery voltage concern
- TRM
- BCM

PINPOINT TEST U : U0137:87

U1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to U2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition. CLEAR the DTC.

U2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the TRM pass the network test?

Yes	GO to U3
No	DIAGNOSE no communication with the TRM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

U3 CHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3006:16, U3006:17, U3007:16, U3007:17, U3013:16, U3013:17, U3014:16 or U3014:17 recorded?

Yes	For DTC U3006:16, U3007:16, U3013:16 or U3014:16, GO to Pinpoint Test K For DTC U3006:17, U3007:17, U3013:17 or U3014:17, GO to Pinpoint Test L
No	GO to U4

U4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE TRM (TRAILER MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the TRM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Trailer Lamps (417-01 Exterior Lighting, Diagnosis and Testing).
No	GO to U5

U5 RECHECK THE BCM (BODY CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0137:87 still present?

Yes	GO to U6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

U6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0137:87 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve **all** Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0137:87 set in any other module?

Yes	GO to U7
No	GO to U8

U7 CHECK FOR CORRECT TRM (TRAILER MODULE) OPERATION

- Disconnect and inspect the TRM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the TRM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new TRM. REFER to: Trailer Module (TRM) (417-01 Exterior Lighting, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Transport and Factory Mode Deactivation

Deactivation

1. Verify the battery is fully charged.
   Refer to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).
2. Place the ignition in the ON position.
3. **NOTE:** *Steps 3 and 4 must be carried out within 10 seconds.*

   Press and release the brake pedal 5 times.
4. Press and release the hazard switch 3 times.
5. Place the ignition in the OFF position.

Body - Overview

Insulation

Insulation is used as a sound-deadener to reduce exterior road and powertrain noises from the interior of the vehicle. Mastic insulators are also used as insulation. Insulation is installed:

- under the roof.
- above and below the instrument panel.
- at the cowl side panels.
- over the front and rear floorpans.
- inside the B-, C- and D-pillar sections.
- on the wheelhouse/quarter panel.
- behind the rear quarter trim panel.

Other forms of insulation include:

- front tunnel stiffening pad.
- dash panel stiffener.
- rear wheelhouse mastic pads.

It has heat-bonded mastic deadeners for improved NVH characteristics.

It also has sound dampeners located inside the D-pillar and plug holes in the inner rear quarter.

Body Sealer Types and Applications

Seam Sealer

- heavy-bodied, non-sag adhesive/sealer used on standing cosmetic seams, truck bed seams, tooled door skin seams and floorpans.
- can be used on water leaks and noise concerns.

Silicone Gasket and Sealant

- form-in-place gasket and multi-purpose adhesive/sealant.
- room temperature curing silicone rubber.

Silicone Spray Lubricant

- keeps the door and window weatherstrip pliable and soft.
- makes the door easier to close.
- retards weatherstrip squeaks.
- retards weatherstrip wear.
- helps retain door window alignment by reducing friction between the glass frame and the rubber weatherstrip.
- should not be used prior to painting.

Trim and Weatherstrip Adhesive

- quick drying, strong adhesive designed to hold weatherstripping onto all body panels and surrounding metal.

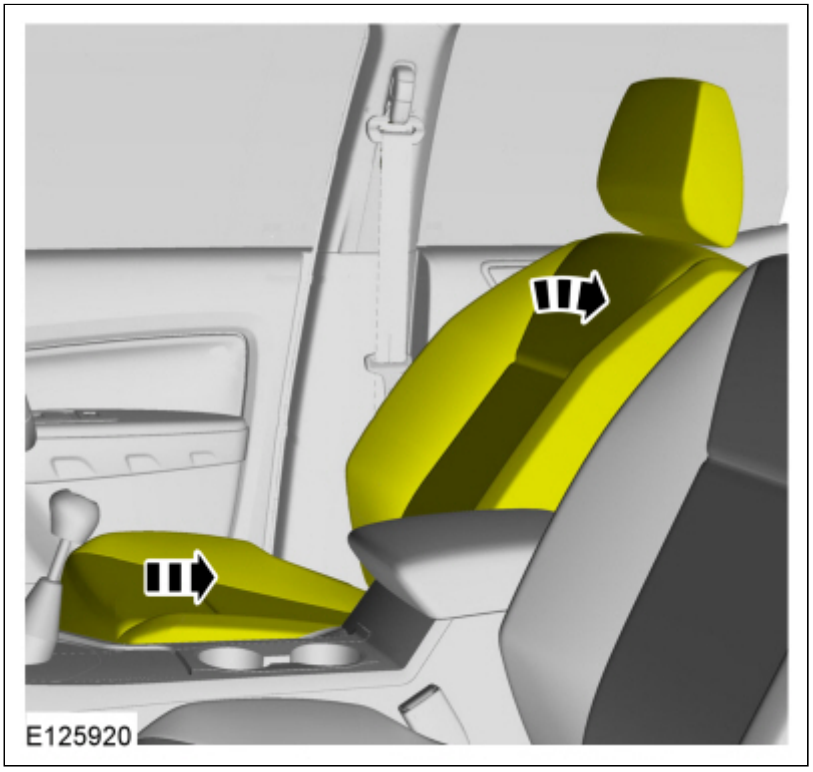
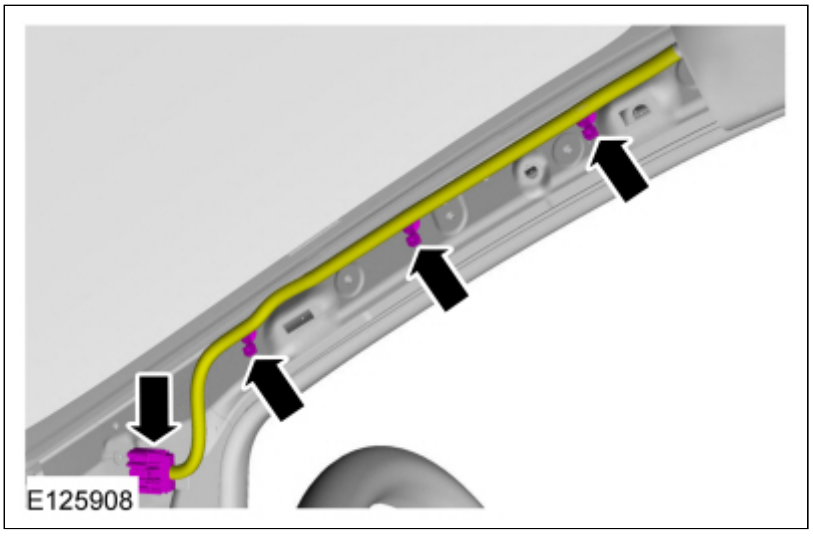
Headliner



Base Part Number: 5451916

Removal

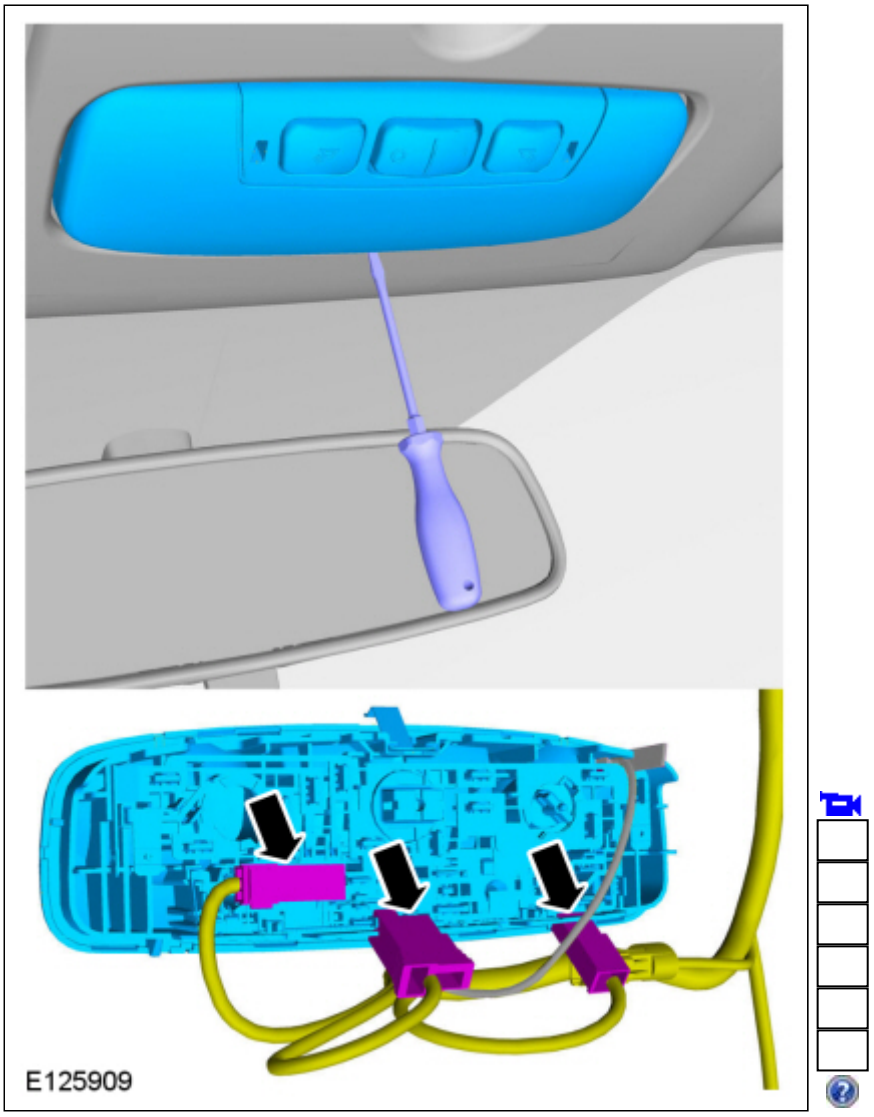


NOTE: *Removal steps in this procedure may contain installation details.*

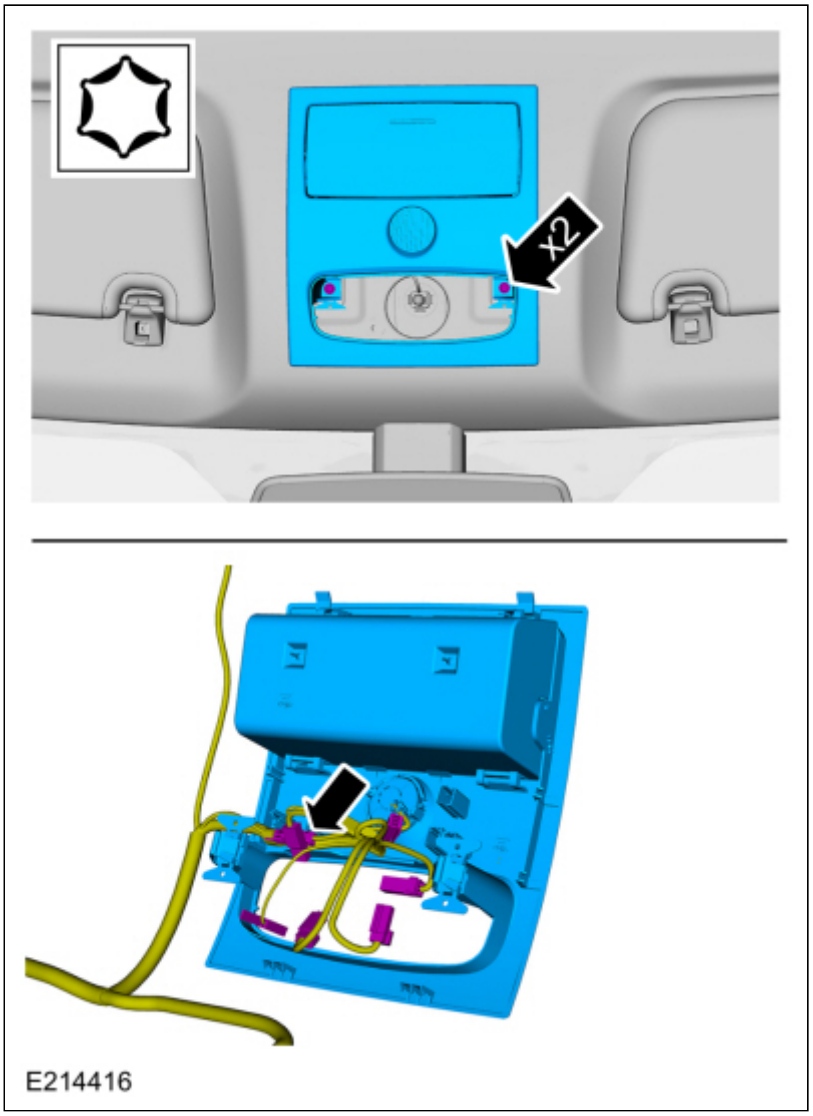
1. On both the sides.
   Refer to: A-Pillar Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).

2. On both the sides.

3.

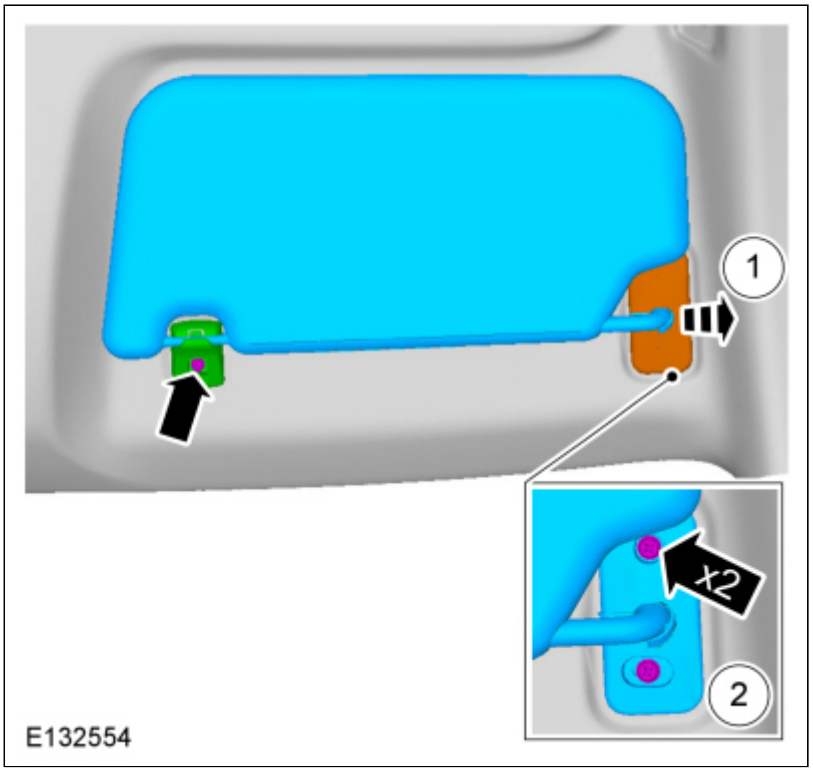


4. On both the sides.
   Refer to: B-Pillar Upper Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).

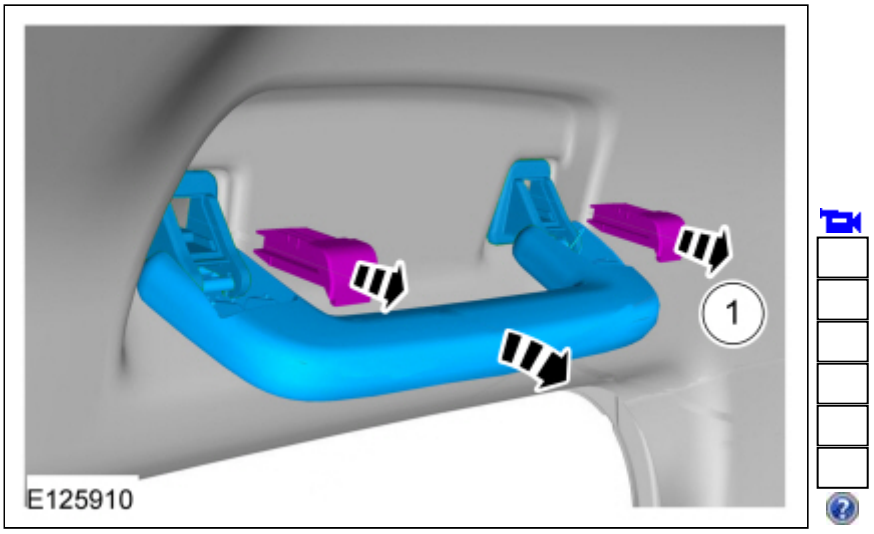


5. On both the sides.

Refer to: C-Pillar Upper Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).
Refer to: C-Pillar Lower Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).



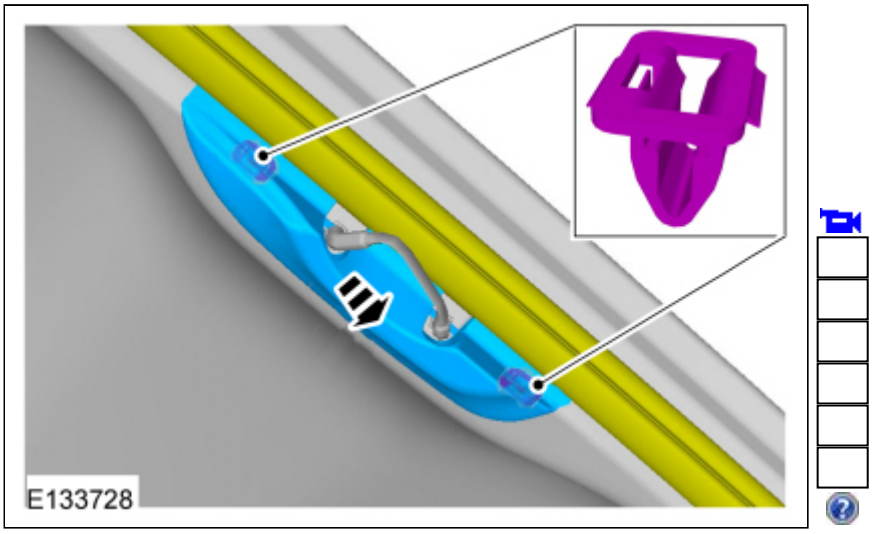
6.



7. **NOTE:** *This step is not necessary when installing a new component.*

8. On both the side

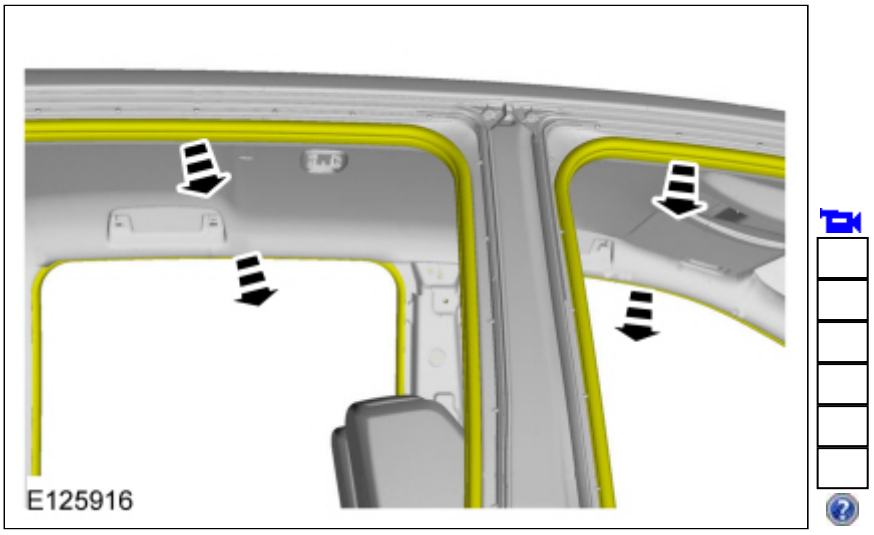
9.



10. Refer to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).

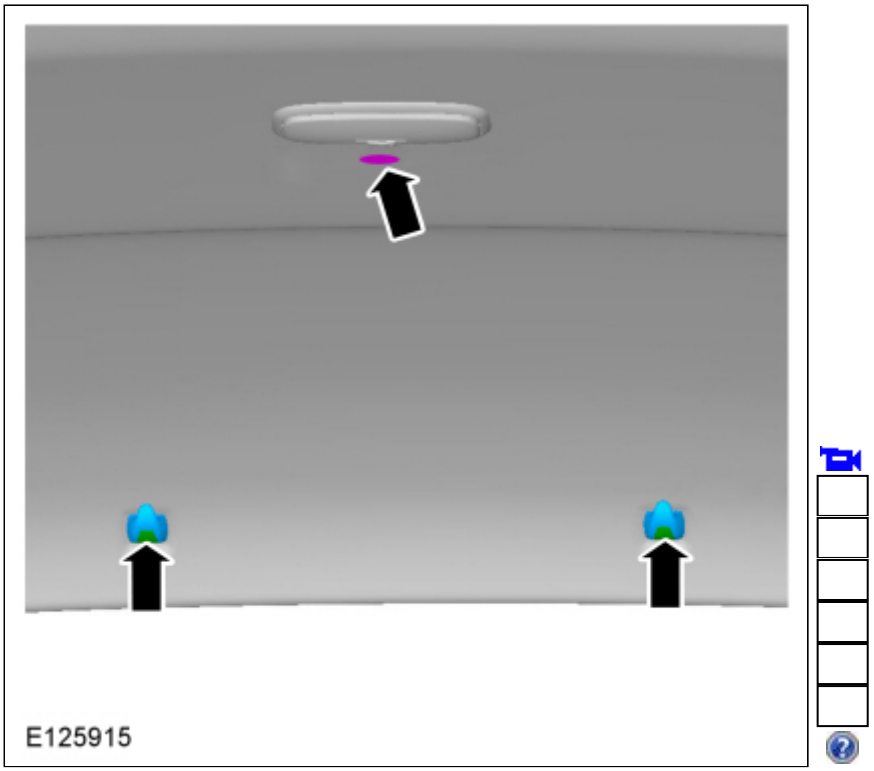
Stretch cab or Double cab

11. Refer to: Center Interior Lamp (417-02 Interior Lighting, Removal and Installation).



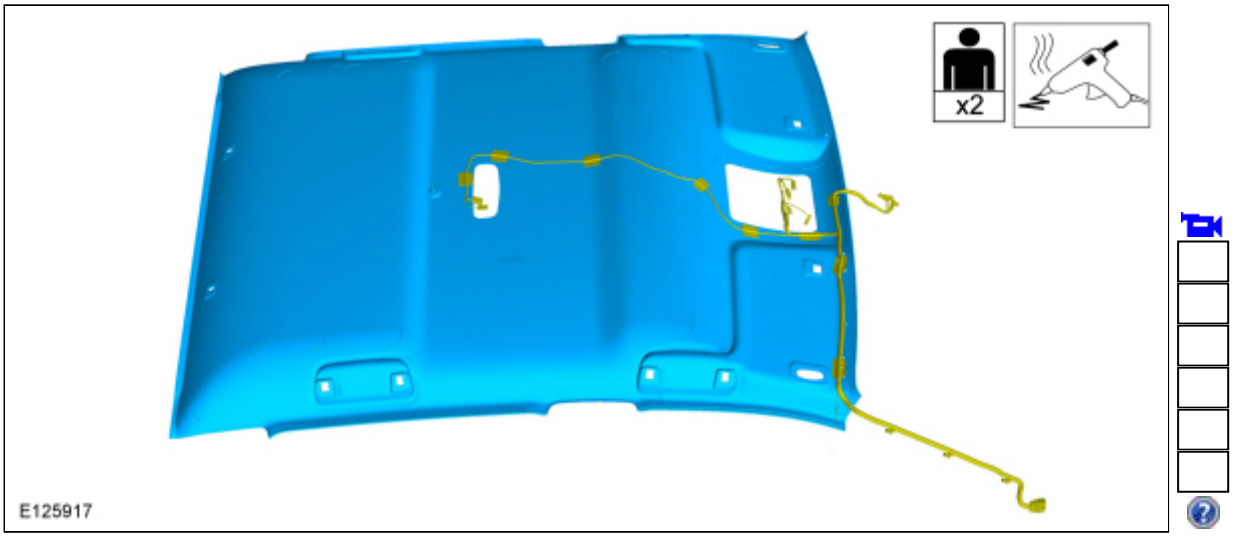
Stretch cab

12.



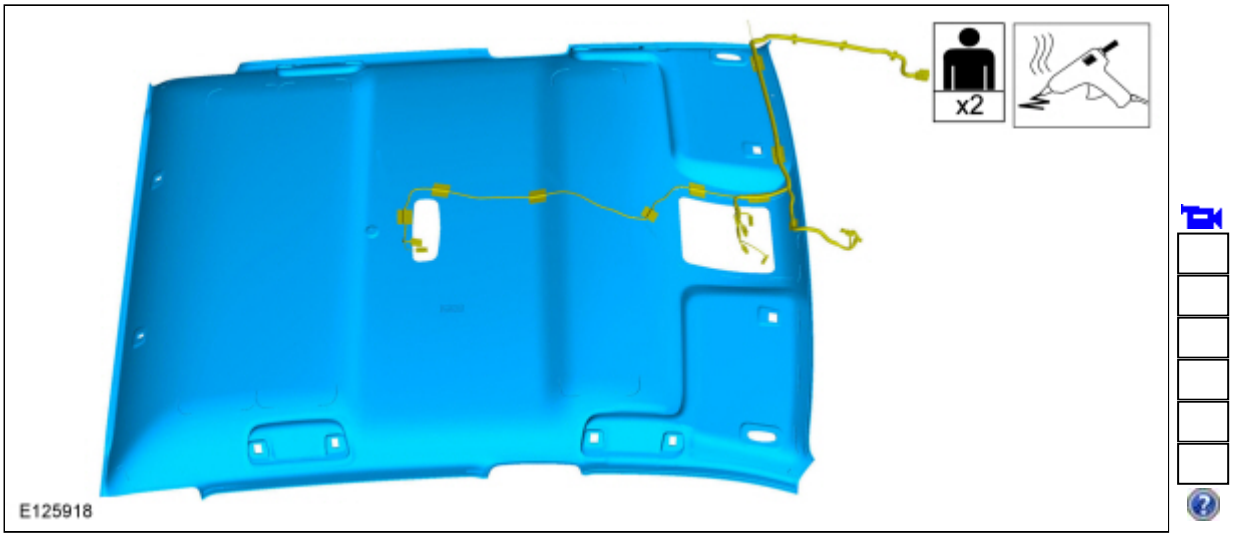
Double cab

13. Support the headliner.



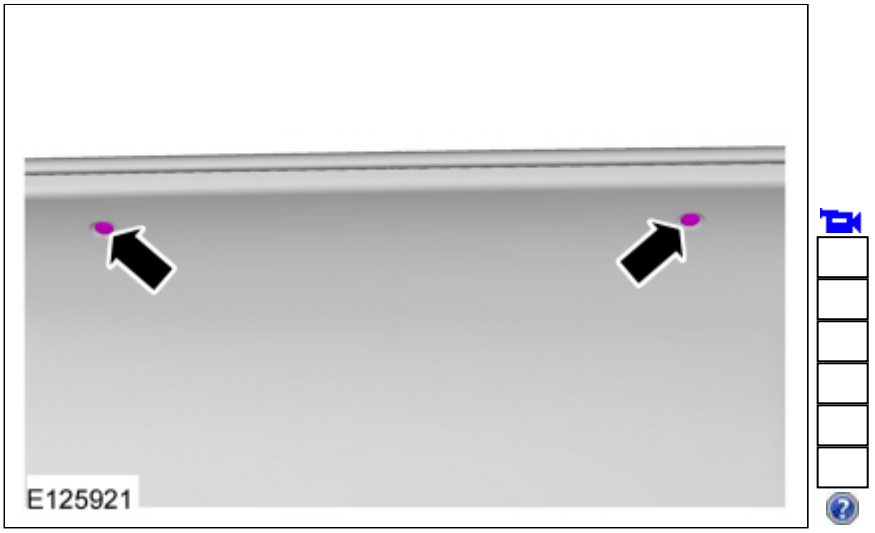
Stretch cab or Double cab

14.



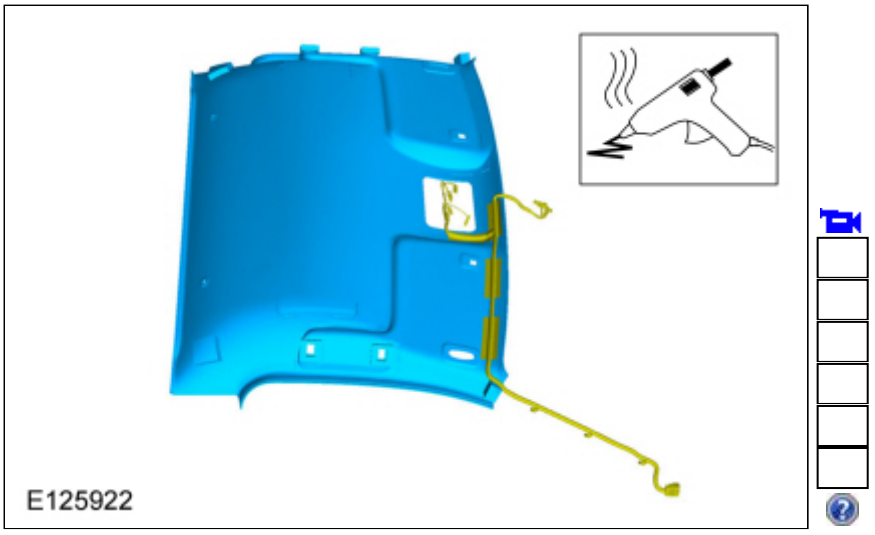
15. **NOTE:** *Right-hand drive vehicle.*

    NOTE: *Note the position of each component before removal.*



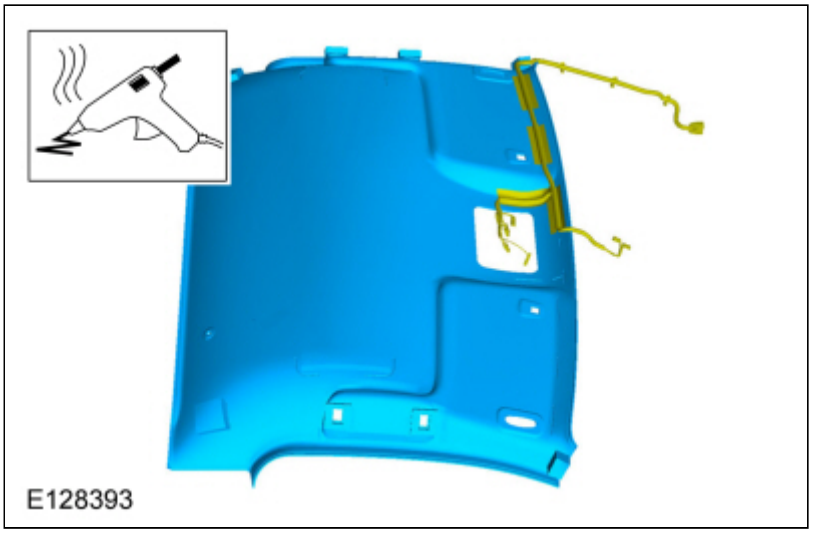
16. **NOTE:** *Left-hand drive vehicles.*

    NOTE: *Note the position of each component before removal.*



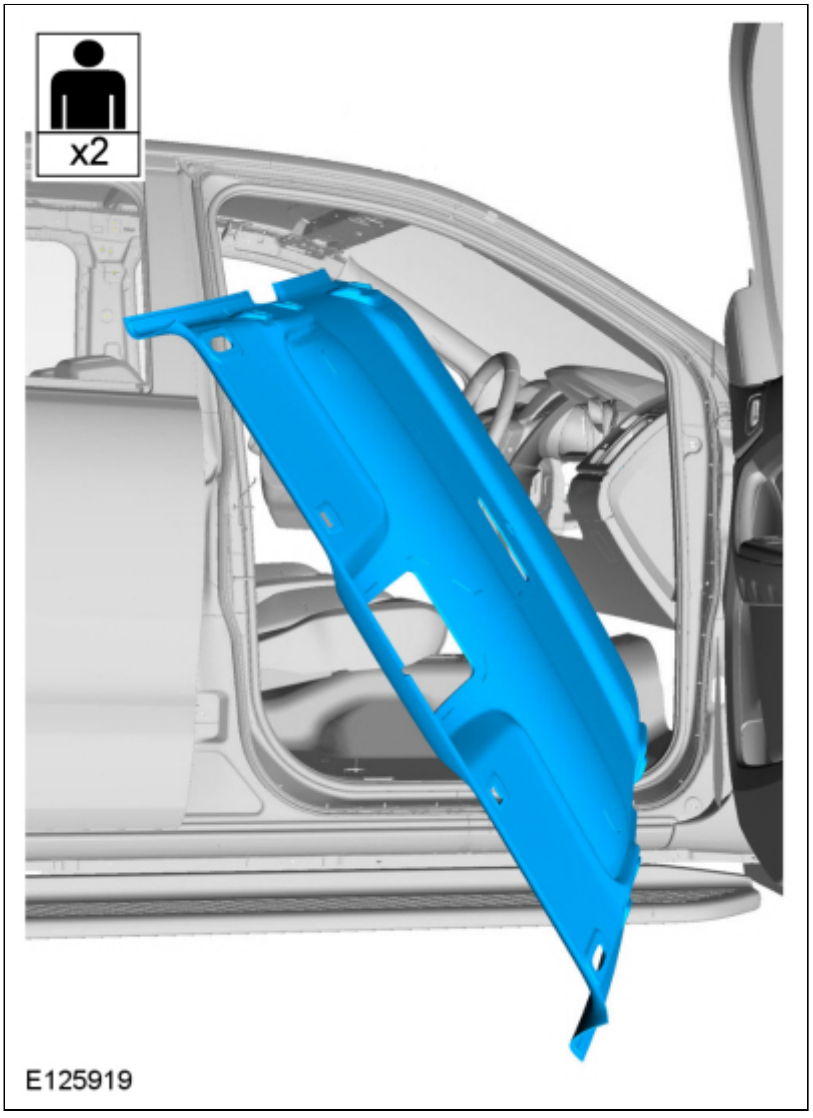
Single cab

17.



18. **NOTE:** *Right-hand drive vehicles.*

    NOTE: *Note the position of each component before removal.*



19. **NOTE:** *Left-hand drive vehicles.*

    NOTE: *Note the position of each component before removal.*

All vehicles

20. **NOTICE: Take extra care not to crease the headliner.**

Installation

1. **NOTE:** *Make sure that this component is installed to the noted removal position.*

   Using a suitable adhesive, bond the roof wiring harness to the headliner.

2. To install, reverse the removal procedure.

Exterior Rear View Mirrors - Overview

Overview

Exterior, Manual

This vehicle may be equipped with LH and RH manual mirrors. The manual mirror system allows the exterior mirrors and exterior mirror glass to be positioned manually

Exterior, Power

This vehicle may be equipped with LH and RH power mirrors. The power mirror system allows the exterior mirror glass to be positioned electronically.

Exterior, Heated

This vehicle may be equipped with LH and RH heated mirror glass and with a LH and RH heated spotter glass. The heated mirror glass feature heats the mirror glass to remove frost, snow, ice and condensation.

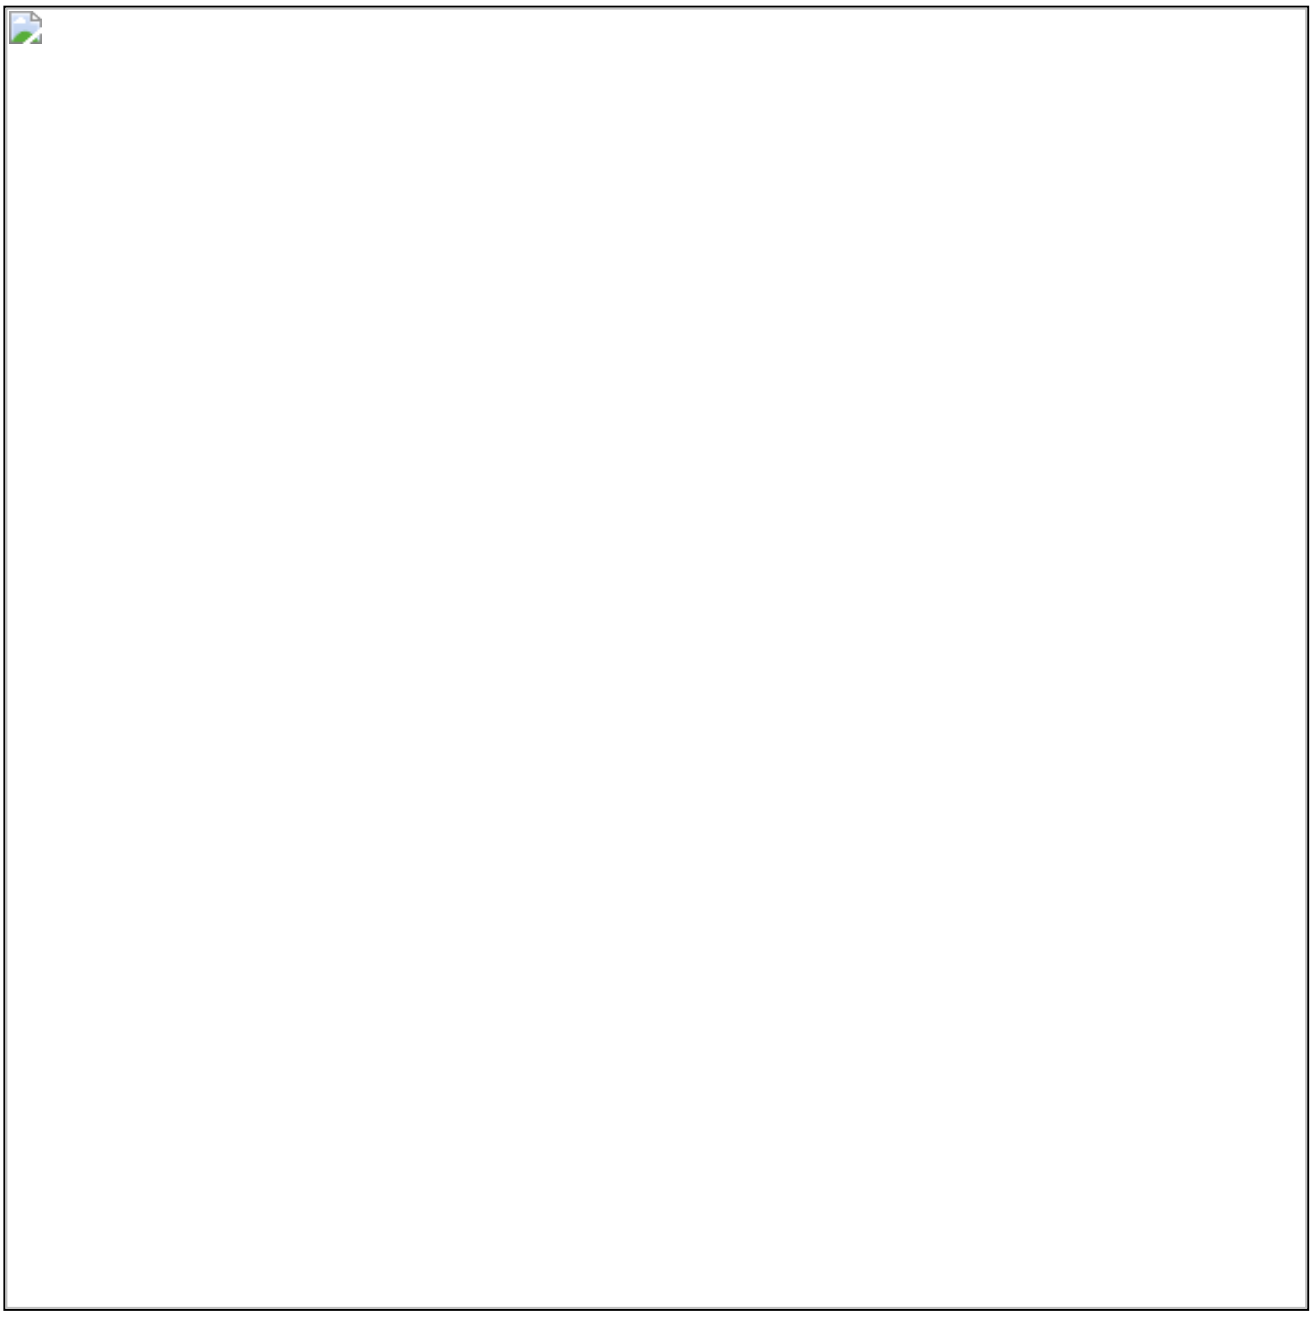
Exterior, Power Folding

This vehicle may be equipped with LHand RH power folding mirrors. The power folding mirror feature allows the exterior mirrors to be electronically folded and unfolded.

Exterior, Turn Signals

The LH and RH exterior mirrors may be equipped with a mirror-mounted turn signal assembly. For repair procedures and information on the mirror-mounted turn signals,
Refer to: Turn Signal and Hazard Lamps (417-01 Exterior Lighting, Diagnosis and Testing).

Exterior, Puddle Lamps



The LH and RH exterior mirrors may be equipped with a puddle lamp. For repair procedures and information on the mirror-mounted puddle lamps,
Refer to: Interior Lighting (417-02 Interior Lighting, Diagnosis and Testing).

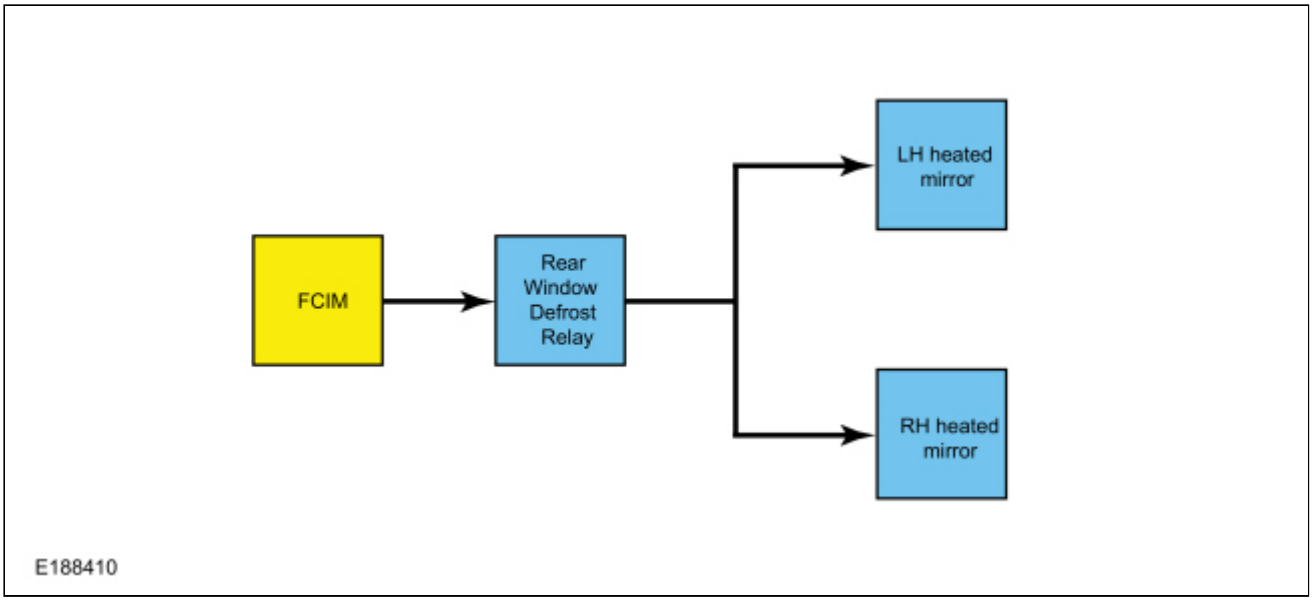
Exterior Rear View Mirrors - System Operation and Component Description

System Operation

System Diagram - Exterior, Power



System Operation - Exterior, Power

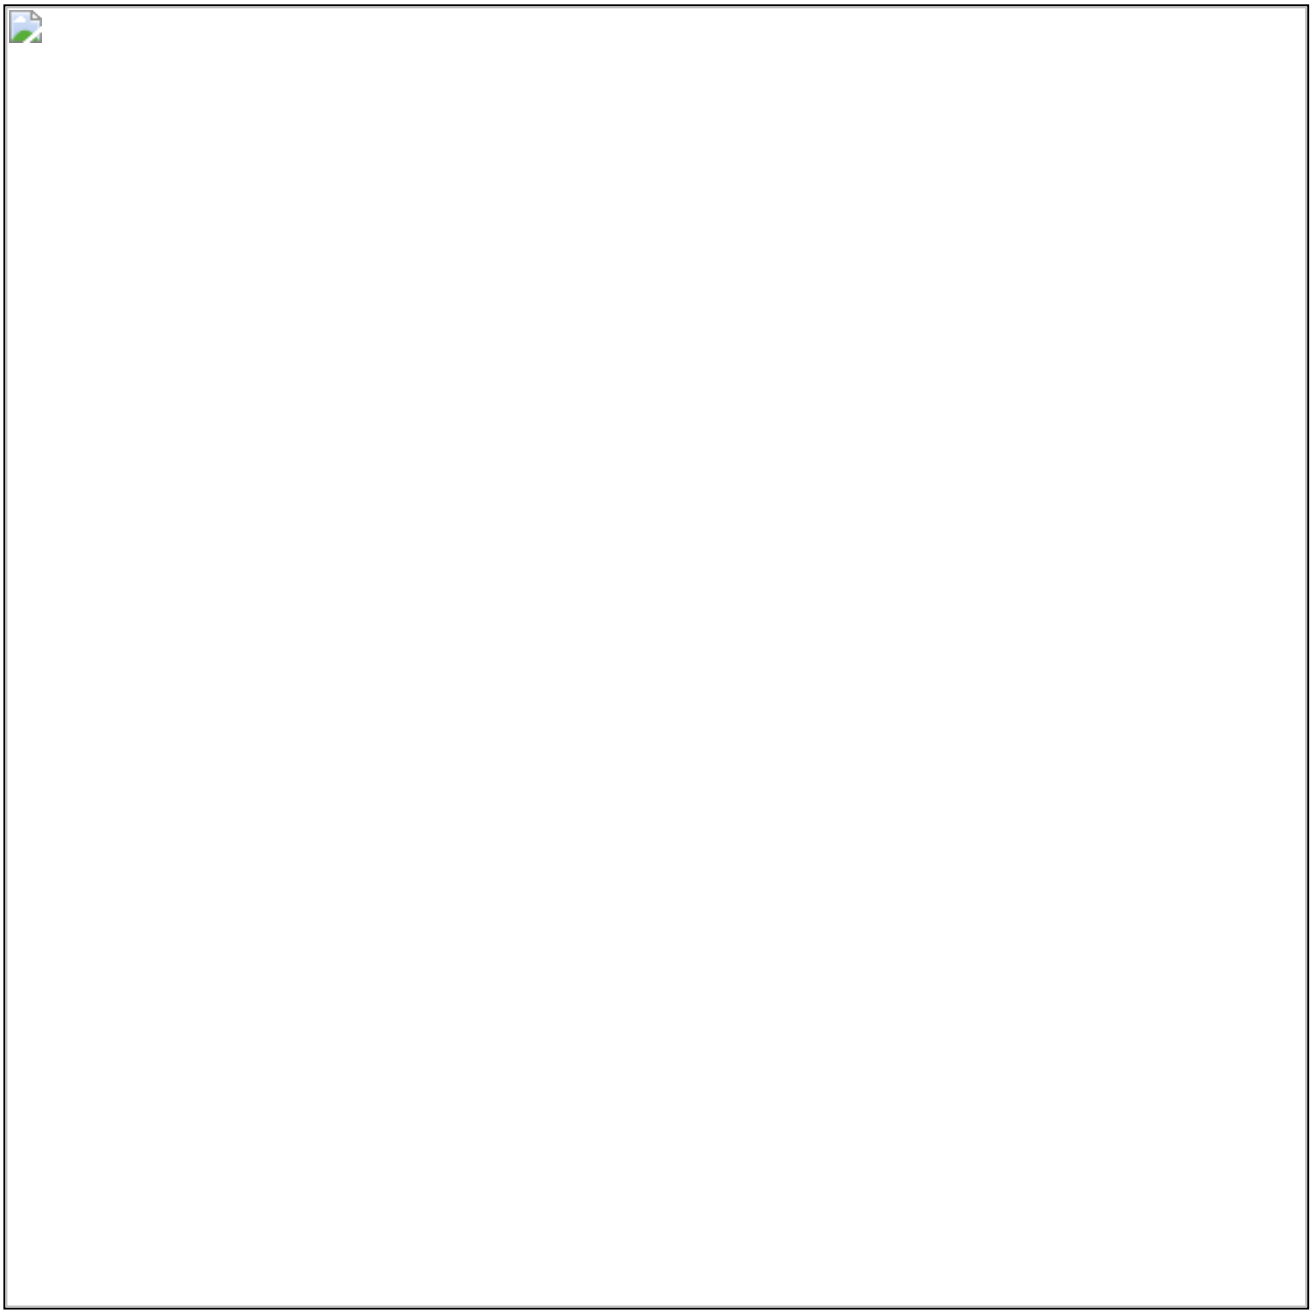
All functions of the power mirror feature are integrated into one switch module. The left and right side selection button selects which side is active and a directional pad is used for directional control. Neutral is achieved by placing the selection button in the center position.

When the exterior mirror directional pad switch is pressed left, right, up or down with the LH or RH exterior mirror selected, the switch then supplies voltage and ground to the appropriate exterior mirror motor. The switch controls the glass movements by reversing polarity of the voltage and ground circuits being supplied to each motor.

System Diagram - Exterior, Heated

System Operation - Exterior, Heated

On vehicles equipped with rear window defrost, the heated exterior mirror glass operates when the rear defrost system is activated.



The heated mirrors are heated for a period of 10 minutes when the engine is running and the defrost system is activated.

The LH and RH heated exterior mirror glass voltage is supplied by the rear window defrost relay through BJB.

If equipped, the rear window defrost can also be commanded on and off by touching the rear window defrost button located on the touchscreen interface (FDIM). For additional information on voice or touchscreen commanded features, refer to the Owner's Literature.

For additional information on the rear window defrost system,
Refer to: Glass, Frames and Mechanisms - System Operation and Component Description (501-11 Glass, Frames and Mechanisms, Description and Operation).

System Diagram - Exterior, Power Fold

System Operation - Exterior, Power Fold

NOTE: *The power folding mirrors must be synchronized anytime the LH, RH or both power folding mirrors are folded or unfolded without using the power folding mirror control switch, or if a new power folding mirror has been installed. Refer to Power Folding Mirrors Synchronization in this section.*

The power folding exterior mirror feature allows both power exterior rear view mirrors to be folded or unfolded using the exterior mirror fold switch (integral to the mirror control switch). The LH and RH power folding mirrors fold or unfold at the same time and cannot be controlled independently.

Pushing the power fold button activates the fold function with no additional action required. The power folding mirror mode must be deactivated before going to the LH or RH exterior mirror glass adjust mode. When a left or right mirror adjust mode is active, pressing the folding mirror switch overrides the mirror adjust mode and goes directly to folding mode.

The power folding mirror motors are not replacable. If a power folding mirror motor is found to be inoperative, a new power folding exterior rear view mirror assembly must be installed.

Component Description

Exterior Mirror Control Switch

The exterior mirror control switch is a momentary contact switch. Adjusting the exterior mirror control switch to the LH or RH position determines which exterior mirror motor to control.

Exterior Mirror

Each exterior mirror has 2 bi-directional motors that are used to control the position of the exterior mirror glass. Adjusting the exterior mirror control switch to the LH or RH position determines which exterior mirror motor to control.

If equipped with heated exterior mirrors, heated exterior mirrors use heating elements that are integral to the exterior mirror glass. The exterior mirrors use a jumper harness between the vehicle wiring harness and the exterior mirror motors and the heated mirror glass. The exterior mirror jumper harness is integral to the exterior mirror. Before replacing an exterior mirror or motor, inspect the jumper harness for opens, shorted circuits or damaged and pushed-out pins. If a concern with the exterior mirror jumper harness exists, attempt to repair the jumper harness.

The exterior mirrors may include turn signals indicators. For additional information on the mirror-mounted turn signals indicators,
Refer to: Turn Signal and Hazard Lamps (417-01 Exterior Lighting, Diagnosis and Testing).

The exterior mirrors may include puddle lamps. For additional information on the mirror-mounted puddle lamps,
Refer to: Interior Lighting (417-02 Interior Lighting, Diagnosis and Testing).

Copyright © 2016 Ford Motor Company

Exterior Rear View Mirrors

Refer to Wiring Diagrams Section 501-09 for schematic and connector information.

Principles of Operation

Driver and passenger exterior mirror glass movement is controlled by the exterior mirror control switch and the exterior mirror motors. Adjusting the exterior mirror control switch to the LH or RH position determines which exterior mirror motor to control.

If equipped with power folding mirrors, the center position of the exterior mirror control switch controls the power folding mirrors.

The exterior mirrors use a jumper harness between the vehicle wire harness connector and the exterior mirror motor. The exterior mirror jumper harness is integral to the exterior mirror. Before replacing an exterior mirror or mirror motor, inspect the jumper harness for open and shorted circuits or damaged and pushed-out pins. If a concern with the exterior mirror jumper harness exists, an attempt to repair the jumper harness should be made.

Power Exterior Mirrors

The exterior mirror control switch logic is the selected movement request from the exterior mirror control switch. When the exterior mirror control switch is adjusted to the left, right, up or down position, the exterior mirror control switch supplies voltage and ground to the selected exterior mirror motor to move the exterior mirror glass to the desired position.

Heated Exterior Mirrors

The exterior mirror control switch controls the operation of the heated exterior rear view mirror glass. Voltage is supplied to the driver and passenger heated exterior mirrors by the rear window defrost relay located in the Battery Junction Box (BJB) . The heated mirrors are heated for a period of 10 minutes when the engine is running.

Power Folding Mirrors

The power folding mirror feature allows the driver and passenger power exterior rear view mirrors to be folded or unfolded from the exterior mirror control switch. The power folding mirrors are controlled by the power mirror fold relay. When the exterior mirror control switch is set to the center position and pressed rearward to the FOLD/UNFOLD position, the mirrors fold inward towards the door if they are folded out, or unfold outward if they are folded in. The driver and passenger power folding mirrors fold and unfold at the same time and cannot be controlled independently. The power folding mirrors contain a drive motor which is not replaceable. If a power folding mirror motor is found to be inoperative, a new power folding exterior rear view mirror assembly must be installed.

Inspection and Verification

1. Verify the customer concern by operating the power exterior mirrors or memory mirrors.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Exterior mirror • Exterior mirror control switch • Exterior mirror glass	• Fuse(s) • Exterior mirror control switch • Exterior mirror glass motor (part of the exterior mirror) • Exterior mirror power folding motor (part of the exterior mirror) • Exterior mirror glass • Loose or corroded connections • Wiring harness

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Sources	Action
• The mirrors are inoperative	• Exterior mirror control switch. • Wiring, terminals or connectors.	• GO to Pinpoint Test A
• A single mirror is inoperative	• Exterior mirror control switch. • Wiring, terminals or connectors. • Exterior mirror motor.	• GO to Pinpoint Test B
• A single mirror does not operate correctly in all directions	• Exterior mirror control switch. • Wiring, terminals or connectors • Exterior mirror motor.	• GO to Pinpoint Test C
• The power folding mirrors do not operate or operate correctly	• Exterior mirror(s). • Exterior mirror control switch. • Wiring, terminals or connectors.	• GO to Pinpoint Test D
• The heated exterior mirror is inoperative	• Fuse. • Wiring, terminals or connectors. • Rear window defrost relay. • Exterior mirror glass.	• GO to Pinpoint Test E
• The mirror turn indicator is inoperative or always on	• Fuse. • Wiring, terminals or connectors. • Exterior mirror.	• REFER to: Turn Signal and Hazard Lamps (417-01 Exterior Lighting, Diagnosis and Testing).
• The mirror puddle lamp is inoperative or always on	• Fuse. • Wiring, terminals or connectors. • Exterior mirror.	• REFER to: Interior Lighting (417-02 Interior Lighting, Diagnosis and Testing).

Pinpoint Tests

PINPOINT TEST A : THE MIRRORS ARE INOPERATIVE

A1 CHECK THE VOLTAGE TO THE EXTERIOR MIRROR CONTROL SWITCH CIRCUIT
• Disconnect Exterior Rear View Mirror Switch C2124. • Ignition ON. • Measure:

Positive Lead	Measurement / Action	Negative Lead
C2124-7	V	Ground

Is the voltage greater than 10 volts?

Yes	GO to A2
No	VERIFY that circuit fuse(s) is OK. If OK, REPAIR the circuit for an open. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

A2 CHECK FOR GROUND TO THE EXTERIOR MIRROR CONTROL SWITCH

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2124-6	Ω	Ground

Is the resistance less than 5 ohms?

Yes	GO to A3
No	REPAIR the circuit for an open. TEST the system for normal operation.

A3 CHECK THE MIRROR COMMON CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2124-8	V	Ground
C2124-9	V	Ground

Is any voltage present?

Yes	REPAIR the circuit. TEST the system for normal operation.
No	GO to A4

A4 CHECK THE MIRROR COMMON CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2124-8	Ω	Ground
C2124-9	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A5
No	REPAIR the circuit. TEST the system for normal operation.

A5 CHECK THE MIRROR COMMON CIRCUIT FOR AN OPEN

- Disconnect Driver Exterior Mirror C520 LHD / C626 RHD.
- Disconnect Passenger Exterior Mirror C6262 LHD / C5201 RHD.
- Measure:

Driver Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C2124-8	Ω	C520-6

Driver Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C2124-8	Ω	C626-6

Passenger Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C2124-9	Ω	C6262-6

Passenger Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C2124-9	Ω	C5201-6

Is the resistance less than 5 ohms?

Yes	INSTALL a new exterior rear view mirror switch. TEST the system for normal operation.
No	REPAIR circuit. TEST the system for normal operation.

PINPOINT TEST B : A SINGLE MIRROR IS INOPERATIVE

B1 CHECK THE EXTERIOR MIRROR CONTROL SWITCH

- Ignition OFF.
- Disconnect Exterior Rear View Mirror Switch C2124.
- Carry out the Exterior Mirror Control Switch component test. Refer to Wiring Diagrams Cell 149 for

component testing.

Did the exterior mirror control switch pass the component test?

Yes	If the driver exterior mirror is inoperative, GO to B2 If the passenger exterior mirror is inoperative, GO to B3
No	INSTALL a new exterior rear view mirror switch. TEST the system for normal operation.

B2 CHECK THE DRIVER MIRROR COMMON CIRCUIT FOR AN OPEN

- Disconnect Driver Exterior Mirror C520 LHD / C626 RHD.
- Measure:

Driver Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C2124-8	Ω	C520-6

Driver Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C2124-8	Ω	C626-6

Is the resistance less than 5 ohms?

Yes	CHECK the inoperative exterior mirror jumper harness between the vehicle harness and the exterior mirror for open circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness is OK, INSTALL a new driver side exterior mirror motor. REFER to: Exterior Mirror Motor (501-09A Exterior Rear View Mirrors, Removal and Installation).
No	REPAIR circuit. TEST the system for normal operation.

B3 CHECK THE PASSENGER MIRROR COMMON CIRCUIT FOR AN OPEN

- Disconnect Passenger Exterior Mirror C6262 LHD / C5201 RHD.
- Measure:

Passenger Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C2124-9	Ω	C6262-6

Passenger Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C2124-9	Ω	C5201-6

Is the resistance less than 5 ohms?

Yes	CHECK the inoperative exterior mirror jumper harness between the vehicle harness and the exterior mirror for open circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness is OK, INSTALL a new passenger side exterior mirror motor. REFER to: Exterior Mirror Motor (501-09A Exterior Rear View Mirrors, Removal and Installation).
No	REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST C : A SINGLE MIRROR DOES NOT OPERATE CORRECTLY IN ALL DIRECTIONS

C1 CHECK THE MIRROR MOVEMENT

- Ignition ON.
- Operate the driver exterior mirror in the up, down, left and right directions.
- Operate the passenger exterior mirror in the up, down, left and right directions.

Do the mirrors operate in any direction?

Yes	If the driver exterior mirror does not operate correctly, GO to C2 If the passenger exterior mirror does not operate correctly, GO to C5
No	GO to Pinpoint Test B

C2 CHECK THE DRIVER EXTERIOR MIRROR CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Driver Exterior Mirror C520 LHD / C626 RHD.
- Ignition ON.
- Measure:

Driver Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C520-5	V	Ground
C520-6	V	Ground
C520-7	V	Ground

Driver Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C626-5	V	Ground
C626-6	V	Ground
C626-7	V	Ground

Is any voltage present?

Yes	REPAIR the affected circuit. TEST the system for normal operation.

No	GO to C3

C3 CHECK THE VOLTAGE TO THE DRIVER EXTERIOR MIRROR CIRCUITS

- Select the driver exterior mirror with the exterior mirror selection switch.
- While pressing the exterior mirror control switch in the right direction, measure:

Driver Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C520-5		C520-6

Driver Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C626-5		C626-6

- Release the exterior mirror control switch.
- While pressing the exterior mirror control switch in the up direction, measure:

Driver Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C520-7		C520-6

Driver Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C626-7		C626-6

Are the voltages greater than 11 volts when the switch is pressed in the right and up direction?

Yes	CHECK the harness between the exterior mirror control switch and the exterior mirror for open circuits and damaged or pushed-out pins. If the harness is OK, INSTALL a new driver exterior mirror motor. REFER to: Exterior Mirror Motor (501-09A Exterior Rear View Mirrors, Removal and Installation).
No	GO to C4

C4 CHECK THE DRIVER MIRROR CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect Exterior Rear View Mirror Switch C2124.
- Measure:

Driver Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C2124-10	Ω	C520-5
C2124-9	Ω	C520-6
C2124-3	Ω	C520-7

Driver Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C2124-10	Ω	C626-5
C2124-9	Ω	C626-6
C2124-3	Ω	C626-7

Are the resistances less than 3 ohms?

Yes	INSTALL a new exterior rear view mirror switch. TEST the system for normal operation.
No	REPAIR the circuit. TEST the system for normal operation.

C5 CHECK THE PASSENGER EXTERIOR MIRROR CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Passenger Exterior Mirror C6262 LHD / C5201 RHD.
- Ignition ON.
- Measure:

Passenger Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C6262-5	V	Ground
C6262-6	V	Ground
C6262-7	V	Ground

Passenger Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C5201-5	V	Ground
C5201-6	V	Ground
C5201-7	V	Ground

Is any voltage present?

Yes	REPAIR the affected circuit. TEST the system for normal operation.
No	GO to C6

C6 CHECK THE VOLTAGE TO THE PASSENGER EXTERIOR MIRROR CIRCUITS

- Select the passenger exterior mirror with the exterior mirror selection switch.
- While pressing the exterior mirror control switch in the right direction, measure:

Passenger Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C6262-5		C6262-6

Passenger Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C5201-5		C5201-6

- Release the exterior mirror control switch.
- While pressing the exterior mirror control switch in the up direction, measure:

Passenger Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C6262-7		C6262-6

Passenger Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C5201-7		C5201-6

Are the voltages greater than 11 volts when the switch is pressed in the right and up direction?

Yes	CHECK the harness between the exterior mirror control switch and the exterior mirror for open circuits and damaged or pushed-out pins. If the harness is OK, INSTALL a new passenger exterior mirror motor. REFER to: Exterior Mirror Motor (501-09A Exterior Rear View Mirrors, Removal and Installation).
No	GO to C7

C7 CHECK THE PASSENGER MIRROR CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect Exterior Rear View Mirror Switch C2124.
- Measure:

Passenger Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C2124-10	Ω	C6262-5
C2124-9	Ω	C6262-6
C2124-3	Ω	C6262-7

Passenger Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C2124-10	Ω	C5201-5
C2124-9	Ω	C5201-6
C2124-3	Ω	C5201-7

Are the resistances less than 3 ohms?

Yes	INSTALL a new exterior rear view mirror switch. TEST the system for normal operation.
No	REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST D : THE POWER FOLDING MIRRORS DO NOT OPERATE

D1 CHECK POWER FOLDING MIRROR OPERATION

- Press the exterior mirror control switch to the FOLD/UNFOLD position to activate the power folding mirrors.

Do the exterior mirror(s) fold/unfold properly?

Yes	The system is operating correctly at this time.
No	GO to D2

D2 CHECK THE EXTERIOR MIRROR CONTROL SWITCH

- Ignition OFF.
- Disconnect Exterior Rear View Mirror Switch C2124.
- Carry out the Exterior Rear View Mirror Switch component test. Refer to Wiring Diagrams Cell 149 for component testing.

Did the exterior mirror control switch pass the component test?

Yes	If the driver exterior mirror does not operate correctly, GO to D3 If the passenger exterior mirror does not operate correctly, GO to D6
No	INSTALL a new exterior mirror control switch. TEST the system for normal operation.

D3 CHECK FOR VOLTAGE TO THE DRIVER EXTERIOR MIRROR CIRCUITS

- Ignition OFF.
- Connect Exterior Rear View Mirror Switch C2124.
- Disconnect Driver Exterior Mirror C520 LHD / C626 RHD.
- Ignition ON.
- While pressing the exterior mirror control switch, measure:

Driver Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C520-8		C520-9

Driver Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C626-8		C626-9

Is the voltage greater than 10 volts when the exterior mirror control switch is operated and is the polarity reversed when the exterior mirror control switch is operated again?

Yes	CHECK the harness between the exterior mirror control switch and the exterior mirror for open and damaged circuits or pushed-out pins. If the harness is OK, INSTALL a new driver exterior mirror. REFER to: Exterior Mirror (501-09A Exterior Rear View Mirrors, Removal and Installation).
No	GO to D4

D4 CHECK THE DRIVER EXTERIOR MIRROR CIRCUITS FOR A SHORT TO VOLTAGE

- Measure:

Driver Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C520-8		Ground
C520-9		Ground

Driver Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C626-8		Ground
C626-9		Ground

Is any voltage present?

Yes	REPAIR the affected circuit. TEST the system for normal operation.
No	GO to D5

D5 CHECK FOR CONTINUITY BETWEEN THE EXTERIOR MIRROR CONTROL SWITCH AND THE DRIVER EXTERIOR MIRROR

- Ignition OFF.

- Disconnect Exterior Rear View Mirror Switch C2124.
- Measure:

Driver Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C2124-5	Ω	C520-8
C2124-1	Ω	C520-9

Driver Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C2124-5	Ω	C626-8
C2124-1	Ω	C626-9

Is the resistance less than 3 ohms?

Yes	CHECK the harness between the exterior mirror control switch and the driver exterior mirror for open and damaged circuits or pushed-out pins. If the harness is OK, REFER to the Wiring Diagrams manual to identify the possible causes of a circuit short. TEST the system for normal operation.
No	REPAIR the circuit. TEST the system for normal operation.

D6 CHECK FOR VOLTAGE TO THE PASSENGER EXTERIOR MIRROR CIRCUITS

- Ignition OFF.
- Connect Exterior Rear View Mirror Switch C2124.
- Disconnect Passenger Exterior Mirror C5201 LHD / C6262 RHD.
- Ignition ON.
- While pressing the exterior mirror control switch, measure:

Passenger Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C5201-8	V	C5201-9

Passenger Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C6262-8	V	C6262-9

Is the voltage greater than 10 volts when the exterior mirror control switch is operated and is the polarity reversed when the exterior mirror control switch is operated again?

Yes	CHECK the harness between the exterior mirror control switch and the exterior mirror for open and damaged circuits or pushed-out pins. If the harness is OK, INSTALL a new driver exterior mirror.

	REFER to: Exterior Mirror (501-09A Exterior Rear View Mirrors, Removal and Installation).
No	GO to D7

D7 CHECK THE PASSENGER EXTERIOR MIRROR CIRCUITS FOR A SHORT TO VOLTAGE

- Measure:

Passenger Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C5201-8	V	Ground
C5201-9	V	Ground

Passenger Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C6262-8	V	Ground
C6262-9	V	Ground

Is any voltage present?

Yes	REPAIR the affected circuit. TEST the system for normal operation.
No	GO to D8

D8 CHECK FOR CONTINUITY BETWEEN THE EXTERIOR MIRROR CONTROL SWITCH AND THE PASSENGER EXTERIOR MIRROR

- Ignition OFF.
- Disconnect Exterior Rear View Mirror Switch C2124.
- Measure:

Passenger Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C2124-5	Ω	C5201-8
C2124-1	Ω	C5201-9

Passenger Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C2124-5	Ω	C6262-8
C2124-1	Ω	C6262-9

Is the resistance less than 3 ohms?

Yes	CHECK the harness between the exterior mirror control switch and the passenger exterior mirror for open and damaged circuits or pushed-out pins. If the harness is OK, REFER to the Wiring Diagrams manual to identify the possible causes of a circuit short. TEST the system for normal operation.
No	REPAIR the circuit. TEST the system for normal operation.

PINPOINT TEST E : THE HEATED EXTERIOR MIRROR IS INOPERATIVE

E1 CHECK THE OPERATION OF THE REAR WINDOW DEFROST SYSTEM

- Start the engine.
- With the engine running, activate the rear window defroster.
- Using an infrared temperature gun or equivalent, measure the temperature of the rear window glass for approximately 30 seconds noting changes in temperature.

Does the temperature of the rear window glass rise?

Yes	GO to E2
No	DIAGNOSE the rear window defrost system. REFER to: Glass, Frames and Mechanisms (501-11 Glass, Frames and Mechanisms, Diagnosis and Testing).

E2 CHECK THE OPERATION OF THE HEATED EXTERIOR MIRRORS

- With the rear window defrost ON, using an infrared temperature gun or equivalent, measure the temperature of the driver and passenger exterior mirror glass for approximately 30 seconds, noting changes in temperature.

Does at least one heated mirror operate correctly?

Yes	For inoperative driver heater mirror, GO to E3 For inoperative passenger heater mirror, GO to E5
No	VERIFY that fuse(s) is OK. If OK, REPAIR circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of a circuit short.

E3 CHECK THE VOLTAGE TO THE DRIVER HEATED EXTERIOR MIRROR

- Ignition OFF.
- Disconnect Driver Exterior Mirror C520 LHD / C626 RHD.
- Start the engine.
- Activate the rear window defrost.
- Measure:

Driver Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C520-4		Ground

Driver Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C626-4		Ground

Is the voltage greater than 11 volts?

Yes	GO to E4
No	REPAIR the circuit for an open. TEST the system for normal operation.

E4 CHECK THE DRIVER EXTERIOR MIRROR GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Driver Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C520-1	Ω	Ground

Driver Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C626-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	CHECK the inoperative exterior mirror jumper harness between the vehicle harness and the exterior mirror for open circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness is OK, INSTALL a new driver side exterior mirror glass. REFER to: Exterior Mirror Glass (501-09A Exterior Rear View Mirrors, Removal and Installation).
No	REPAIR the circuit. TEST the system for normal operation.

E5 CHECK THE VOLTAGE TO THE PASSENGER HEATED EXTERIOR MIRROR

- Ignition OFF.
- Disconnect Passenger Exterior Mirror C6262 LHD / C5201 RHD.
- Start the engine.
- Activate the rear window defrost.
- Measure:

Passenger Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C6262-4	V	Ground

Passenger Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead

C5201-4	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to E6
No	REPAIR the circuit for an open. TEST the system for normal operation.

E6 CHECK THE PASSENGER EXTERIOR MIRROR GROUND CIRCUIT FOR AN OPEN

- Measure:

Passenger Exterior Mirror - LHD

Positive Lead	Measurement / Action	Negative Lead
C6262-1	Ω	Ground

Passenger Exterior Mirror - RHD

Positive Lead	Measurement / Action	Negative Lead
C5201-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	CHECK the inoperative exterior mirror jumper harness between the vehicle harness and the exterior mirror for open circuits and damaged or pushed-out pins. If the jumper harness is not OK, REPAIR the jumper harness. If the jumper harness is OK, INSTALL a new passenger exterior mirror glass. REFER to: Exterior Mirror Glass (501-09A Exterior Rear View Mirrors, Removal and Installation).
No	REPAIR the circuit. TEST the system for normal operation.

Interior Rear View Mirrors - Overview

Overview

This vehicle may be equipped with a manual or auto-dimming interior rear view mirror. The manual dimming interior mirror has a lever at the bottom of the mirror assembly that must be pushed forward or pulled rearward to change the reflectance of the interior mirror glass. During nighttime conditions, the auto-dimming interior mirror automatically darkens the mirror glass when headlamps are detected from behind the vehicle to reduce unwanted glare.

Copyright © 2016 Ford Motor Company

Interior Rear View Mirrors - System Operation and Component Description

System Operation

System Operation- Interior Manual-Dimming

The manual interior rear view mirror can be adjusted from a day position to a night position to reduce unwanted glare caused by headlamps from behind the vehicle. Adjusting the interior mirror is accomplished by using the day/night tab, located on the bottom of the interior mirror. Pulling the tab rearward, towards the driver, adjusts the mirror to the night position. Pushing the tap forward, away from the driver, adjusts the mirror to the day position.

System Operation- Interior Auto-Dimming

The auto-dimming feature is active any time the ignition is ON. The interior auto-dimming mirror uses 2 integral photoelectric sensors to detect exterior lighting conditions. When the forward facing sensor detects daytime conditions, the rearward facing sensor is inactive and the mirror glass stays in a high reflectance mode. When the forward facing sensor detects nighttime conditions, the rearward facing sensor is active. When bright lights (glare) are detected by the rearward facing sensor, the mirror glass is electronically darkened. To provide increased visibility when backing up, the interior rear view mirror automatically returns to a high reflectance mode any time reverse gear is selected, regardless of exterior lighting conditions.

Component Description

Interior Rear View Mirror - Manual-Dimming

The manual dimming interior rear view mirror has a lever at the back of the mirror that must be pulled forward or pushed rearward by the driver to activate the manual dimming function. Manual dimming is completely controlled by the driver.

Interior Rear View Mirror - Auto-Dimming

The auto-dimming rear view mirror has 2 photoelectric sensors, one on the front of the mirror (facing the windshield) and one on the rear of the mirror (at the top of the mirror glass). Based on inputs from these sensors, the automatic dimming feature adjusts the reflectance level of the interior rear view mirror glass to eliminate unwanted glare. The reflectance level of the mirror glass is variable and depends on the amount of rear glare in relation to ambient light conditions in front of the interior mirror.

Copyright © 2016 Ford Motor Company

Interior Rear View Mirrors

Refer to Wiring Diagrams Section 501-09 for schematic and connector information.

Principles of Operation

The interior auto-dimming rear view mirror automatically reduces the glare caused by headlamps reflecting in the interior rear view mirror. The auto-dimming feature is disabled when the vehicle is in REVERSE. Power is supplied to the interior auto-dimming mirror when the ignition is in the RUN position or the accessory delay is active.

Interior Auto-Dimming Rear View Mirror

The interior auto-dimming rear view mirror has 2 photoelectric sensors that detect forward and rearward light conditions. Based on these inputs, the automatic dimming feature adjusts the reflectance level of the interior rear view mirror glass to eliminate unwanted glare. The reflectance level of the mirror glass is variable and depends on the amount of rearward glare in relation to ambient light conditions in front of the interior mirror.

When the forward sensor detects daytime conditions, the rearward sensor is inactive and the interior rear view mirror stays in a high reflectance mode. When the forward sensor detects nighttime conditions, the rearward sensor is active and detects glare from the headlights of vehicles approaching from the rear or other glare-producing light sources. To provide increased visibility when backing up, the interior rear view mirror automatically returns to a high reflectance mode whenever the vehicle is in REVERSE.

If the forward or rearward sensors are blocked, the automatic dimming interior mirror might not work correctly.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Interior mirror	• Fuse • Relay • Loose or corroded connections • Wiring harness • Interior mirror

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Sources	Action
• The interior mirror is blemished	• Interior mirror glass/housing is dirty • The interior mirror is damaged	• **NOTE:** *Do not clean the housing or glass of any mirror with harsh abrasives, fuel or other petroleum-based cleaning products.* • CLEAN the affected interior mirror surface. INSPECT the interior mirror damage. If needed, INSTALL a new interior rear view mirror.
• The auto-dimming mirror does not operate correctly	• Fuse • Wiring, terminals or connectors	• GO to Pinpoint Test A

correctly	or connectors. • Auto-dimming interior mirror	

• The auto-dimming mirror does not operate correctly - obstruction	• Obstructed rearward-facing sensor
	  • Stickers, window decals, tags
	  • Non-Original Equipment Manufacturer (OEM) window tinting
	• Obstructed forward-facing sensor
	  • Stickers, window decals, tags
	  • Non-Original Equipment Manufacturer (OEM) window tinting
		• If possible, remove the obstruction. If the obstruction cannot be removed, GO to Pinpoint Test A to TEST the interior rear view auto-dimming mirror for correct function.

• The auto-dimming mirror does not operate correctly - light source or vehicle location	• Light source near or inside of vehicle • Vehicle inside garage or tunnel	• The system is operating correctly. Any light source the rearward-facing sensor is exposed to can be considered glare. • The system is operating correctly. Ambient light conditions are similar to nighttime.

Pinpoint Tests

The Interior Auto-Dimming Mirror Does Not Operate Correctly

Refer to Wiring Diagrams Cell 124 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Exterior Rear View Mirrors - System Operation and Component Description (501-09A Exterior Rear View Mirrors, Description and Operation).

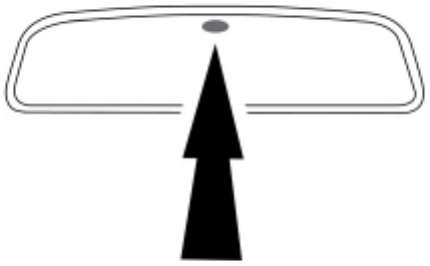
Possible Causes

- Fuse
- Wiring, terminals or connectors
- TR data concern
- Reverse lamp concern
- Interior auto-dimming mirror
- IPMA (integral to the interior auto-dimming mirror) if equipped

Visual Inspection and Diagnostic Pre-Checks

- Inspect BCM fuse(s).

PINPOINT TEST A : THE INTERIOR AUTO-DIMMING MIRROR DOES NOT OPERATE CORRECTLY



A1 VERIFY THE OPERATION OF THE REVERSE LAMPS
• Ignition ON. • **NOTE:** *If the TR sensor is malfunctioning and the reverse lamps are inoperative or always on, the interior auto-dimming mirror will not function properly.* Move the selector lever through the entire range while monitoring the reverse lamps. • Select PARK.

Do the reverse lamps illuminate ONLY in REVERSE?

Yes	GO to A2
No	DIAGNOSE the reversing lamps. REFER to: Reversing Lamps (417-01 Exterior Lighting, Diagnosis and Testing).

A2 INSPECT THE MIRROR FOR PROPER INSTALLATION

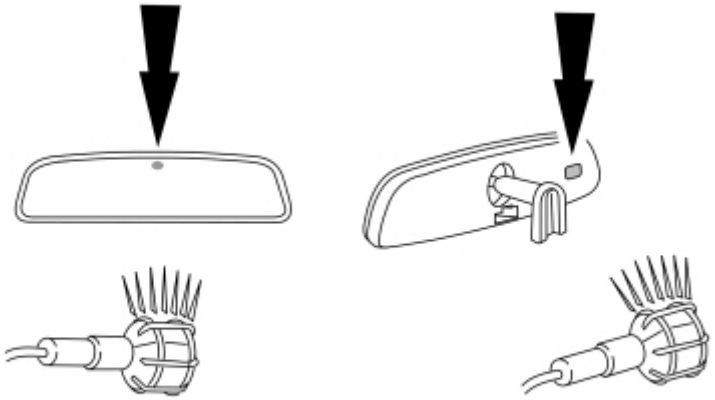
- Inspect the interior auto-dimming mirror to make sure the rearward facing sensor is at the top of the mirror glass.

E149165

Is the rearward facing sensor at the top of the interior auto-dimming mirror glass?

Yes	GO to A3
No	INSTALL the interior auto-dimming mirror with the rearward facing sensor at the top of the mirror glass. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).

A3 VERIFY THE FORWARD AND REARWARD FACING SENSORS ARE NOT BLOCKED



- Visually verify the forward and rearward facing sensors are not blocked or obstructed. Sources of obstruction can include:
  - Stickers, window decals or tags.
  - Toll road or parking passes.
  - Fold-down screens for TVs or DVD players.
  - Non-OEM window tinting.
  - Dirt and debris.
  - Camper shells.
  - Decorative objects hung from mirror.

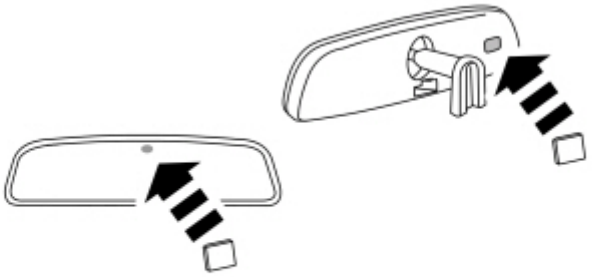
Are either of the sensors blocked?

Yes	If possible, REMOVE the obstruction. If it is not possible to remove the obstruction, ADVISE the customer the blockage will affect the operation of the auto-dimming mirror.
No	GO to A4

A4 VERIFY THE OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR - DAYLIGHT CONDITIONS

- **NOTE:** *Base electrochromatic mirror shown. IPMA mirror is similar.*
  Use a bright lamp to illuminate the forward facing sensor and the rearward facing sensor. The mirror should adjust to a high reflectance state (mirror will be clear).

E149159



Did the mirror adjust to a high reflectance (clear) state?

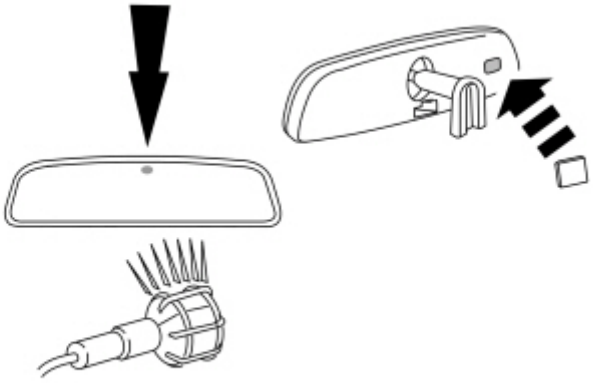
Yes	GO to A5
No	INSTALL a new interior auto-dimming mirror. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).

A5 VERIFY THE OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR - NIGHTTIME CONDITIONS

- **NOTE:** *Covering the sensor(s) with a finger or hand is not adequate for this step.*

  Cover the forward and rearward facing sensors with black electrical tape or other dark material. The mirror should adjust to a high reflectance state (mirror will be clear).

E149155



Did the mirror adjust to a high reflectance (clear) state?

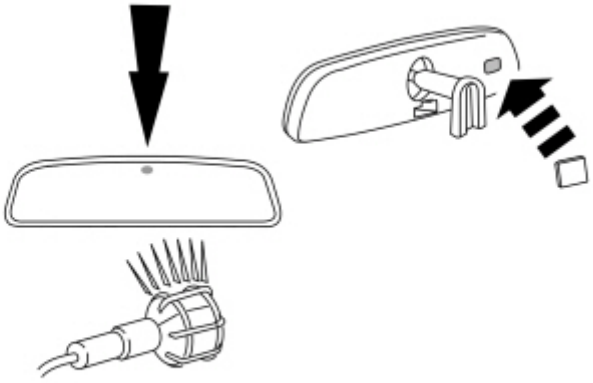
Yes	GO to A6
No	INSTALL a new interior auto-dimming mirror. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).

A6 VERIFY THE OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR - NIGHTTIME CONDITIONS WITH GLARE

- **NOTE:** *Covering the sensor(s) with a finger or hand is not adequate for this step.*

  Remove the black electrical tape or other dark material from the rearward facing sensor.

E149156



- Use a bright light to illuminate the rearward facing sensor. The mirror should adjust to a lower reflectance state (mirror will be dark).

Did the mirror adjust to a low reflectance (dark) state?

Yes	GO to A7
No	GO to A8

A7 VERIFY THE OPERATION OF THE INTERIOR AUTO-DIMMING MIRROR - VEHICLE IN REVERSE AND NIGHTTIME CONDITIONS WITH GLARE

- **NOTE:** *Covering the sensor(s) with a finger or hand is not adequate for this step.*
  Continue to illuminate the rearward facing sensor with the forward facing sensor covered.

E149156

- Select REVERSE.

Did the mirror adjust to a high reflectance (clear) state after reverse was selected?

Yes	Select PARK. The system is operating correctly at this time. REVIEW the operation of the interior auto-dimming mirror feature with the customer.
No	If the vehicle is equipped with an IPMA, GO to A11 If the vehicle is not equipped with an IPMA, GO to A10

A8 CHECK FOR VOLTAGE TO THE INTERIOR AUTO-DIMMING MIRROR

- Ignition OFF.
- Disconnect: Interior Auto-Dimming Mirror C911 (without IPMA) or Interior Auto-Dimming Mirror C9012 (with

IPMA).
- Ignition ON.
- Measure:

Without IPMA

Positive Lead	Measurement / Action	Negative Lead
C911-1	V	Ground

With IPMA

Positive Lead	Measurement / Action	Negative Lead
C9012-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to A9
No	VERIFY that BCM fuse(s) is OK. If the fuse is OK, REPAIR the circuit. If the fuse is not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

A9 CHECK FOR GROUND AT THE INTERIOR AUTO-DIMMING MIRROR

- Ignition OFF.
- Measure:

Without IPMA

Positive Lead	Measurement / Action	Negative Lead
C911-2	Ω	Ground

With IPMA

Positive Lead	Measurement / Action	Negative Lead
C9012-7	Ω	Ground

Is the resistance less than 3 ohms?

Yes	Vehicles with an IPMA, GO to A12 Vehicles without an IPMA, GO to A10
No	REPAIR the circuit.

A10 CHECK THE REVERSE INHIBIT CIRCUIT FOR VOLTAGE AT THE INTERIOR AUTO-DIMMING MIRROR WITH THE VEHICLE IN REVERSE

- Ignition ON.
- Select REVERSE.

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C911-3		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new interior auto-dimming mirror. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).
No	REPAIR the circuit.

A11 PERFORM A NETWORK TEST

- Select PARK.
- Using a diagnostic scan tool, perform a network test.

Do the PCM, GWM and IPMA pass the network test?

Yes	GO to A12
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

A12 CHECK FOR IPMA (IMAGE PROCESSING MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Select REVERSE.
- Wait 15 seconds.
- Select PARK.
- Using a diagnostic scan tool, check the IPMA Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Lane Keeping System (419-07 Lane Keeping System, Diagnosis and Testing).
No	GO to A13

A13 CHECK FOR CORRECT IPMA (IMAGE PROCESSING MODULE A) OPERATION

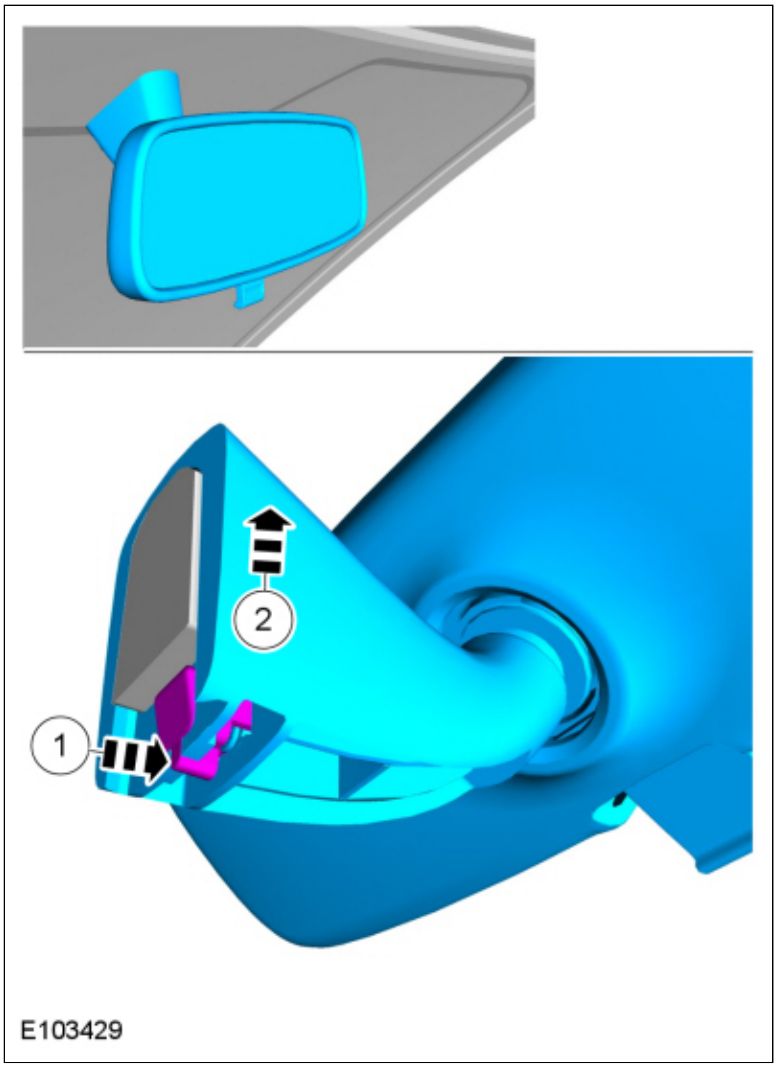
- Disconnect and inspect all IPMA connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPMA connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPMA (integral to the interior auto-dimming mirror). REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation).

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

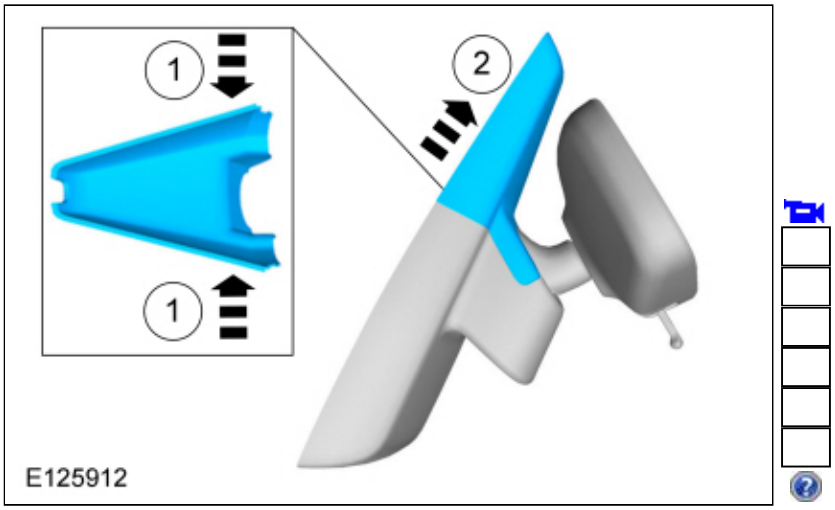
Copyright © 2016 Ford Motor Company



Interior Rear View Mirror

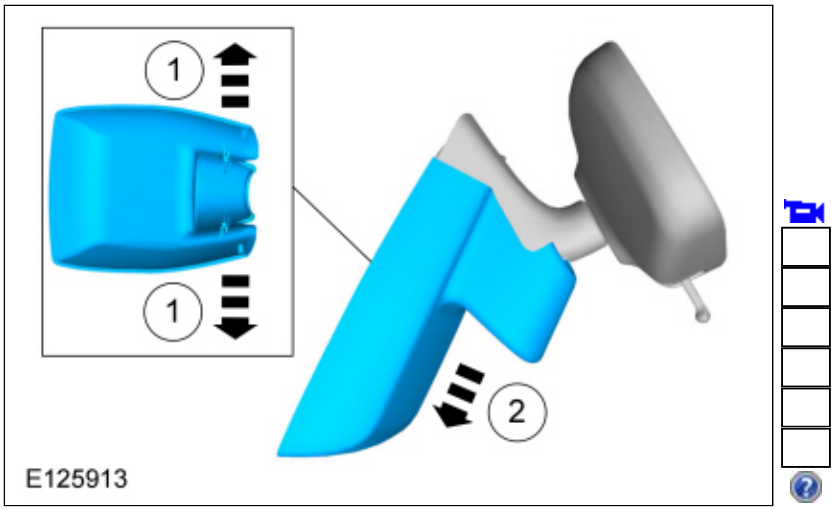
Removal

NOTE: *Removal steps in this procedure may contain installation details.*

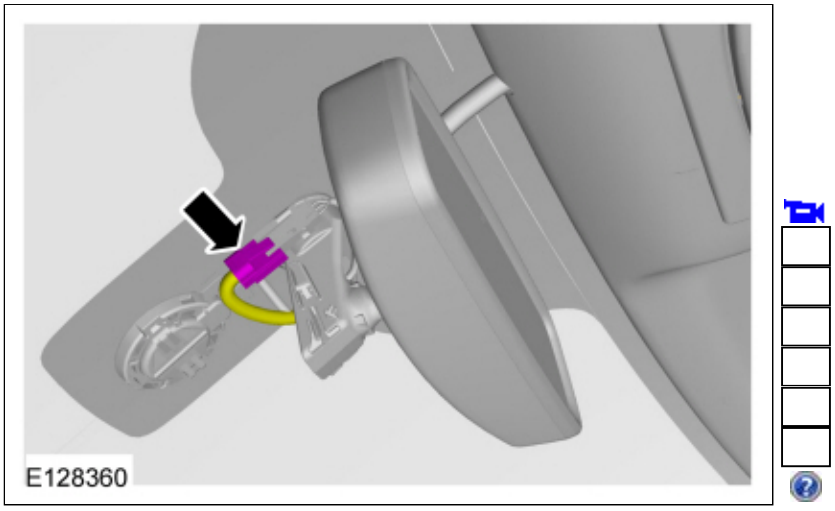


Mirror type 1

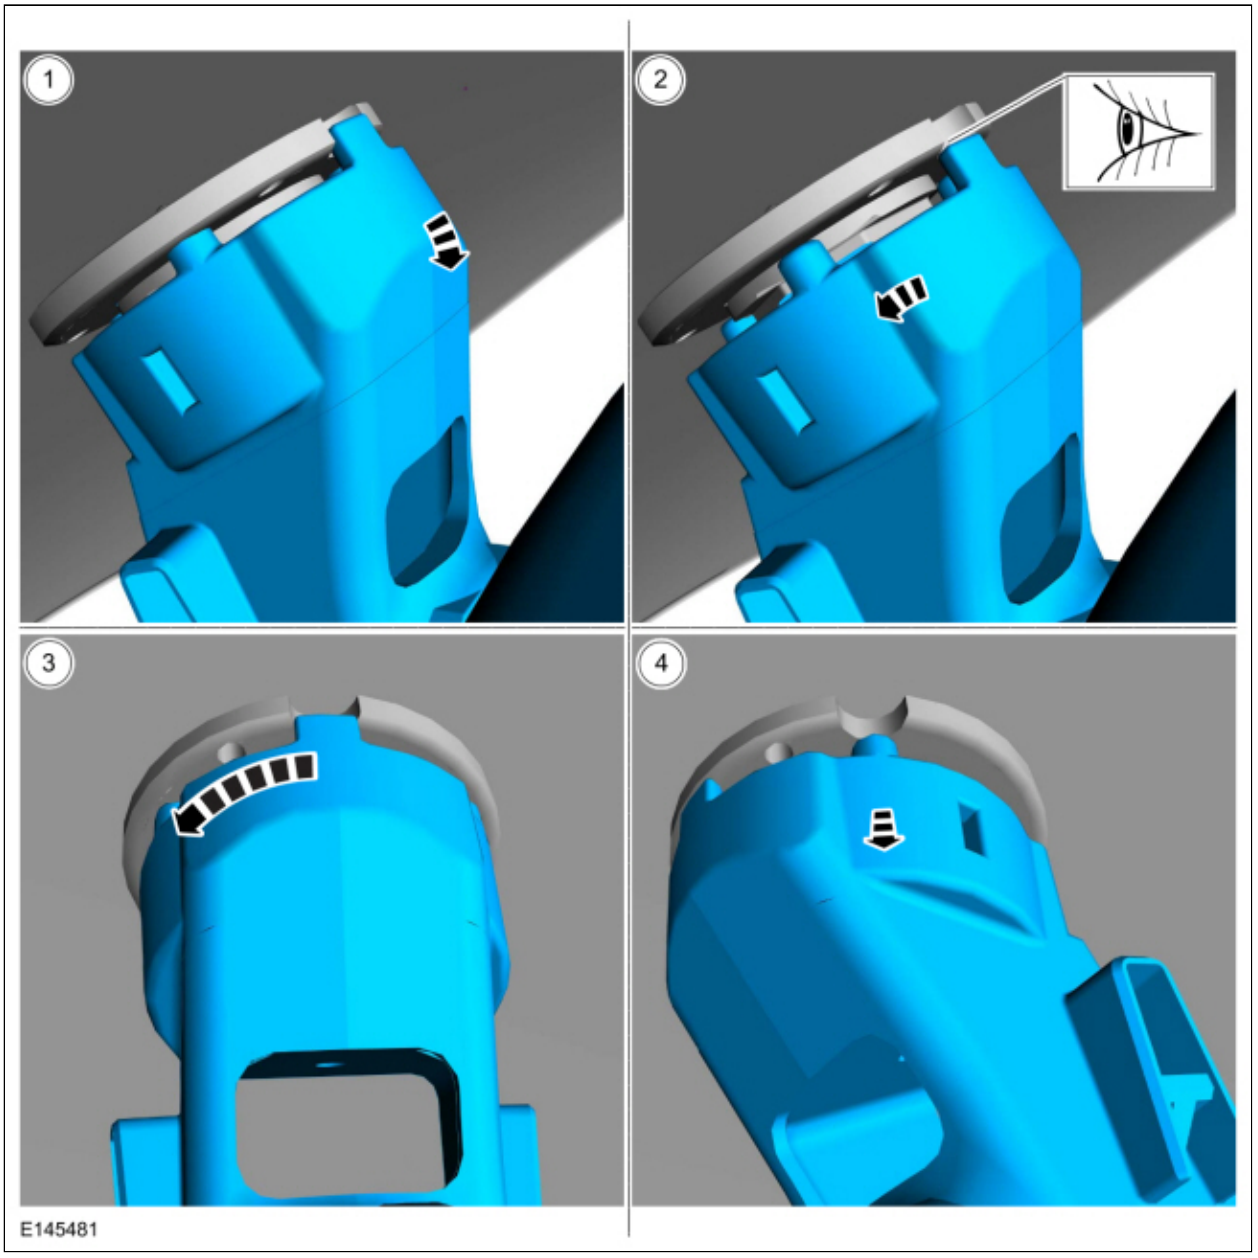
1. Remove the interior mirror.
    1. Release the locking tab.
    2. Slide the interior mirror off the mirror mount.



Mirror type 2

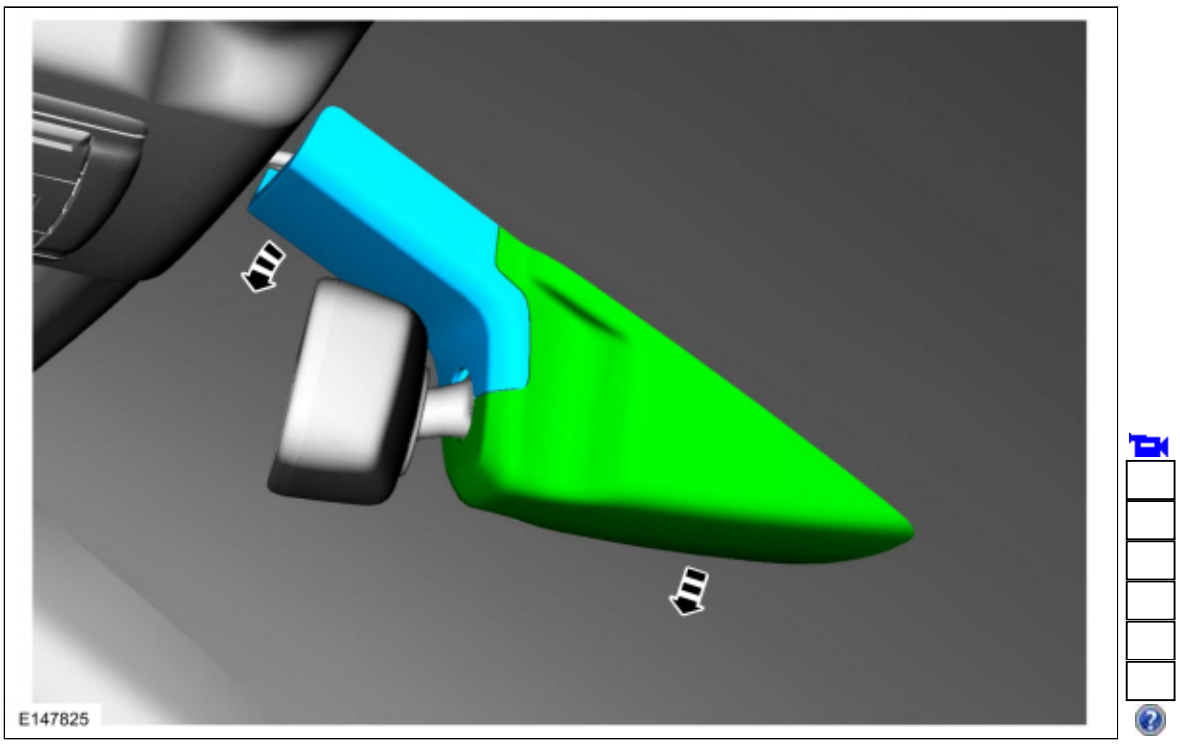


2. Remove the rain sensor covers.

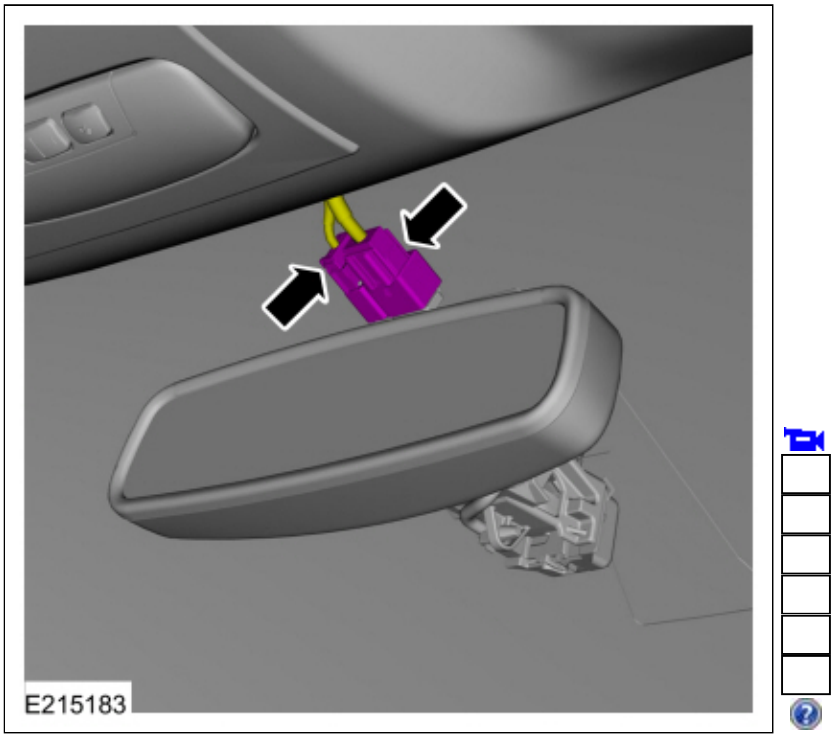


3. Remove the rain sensor covers.

4.



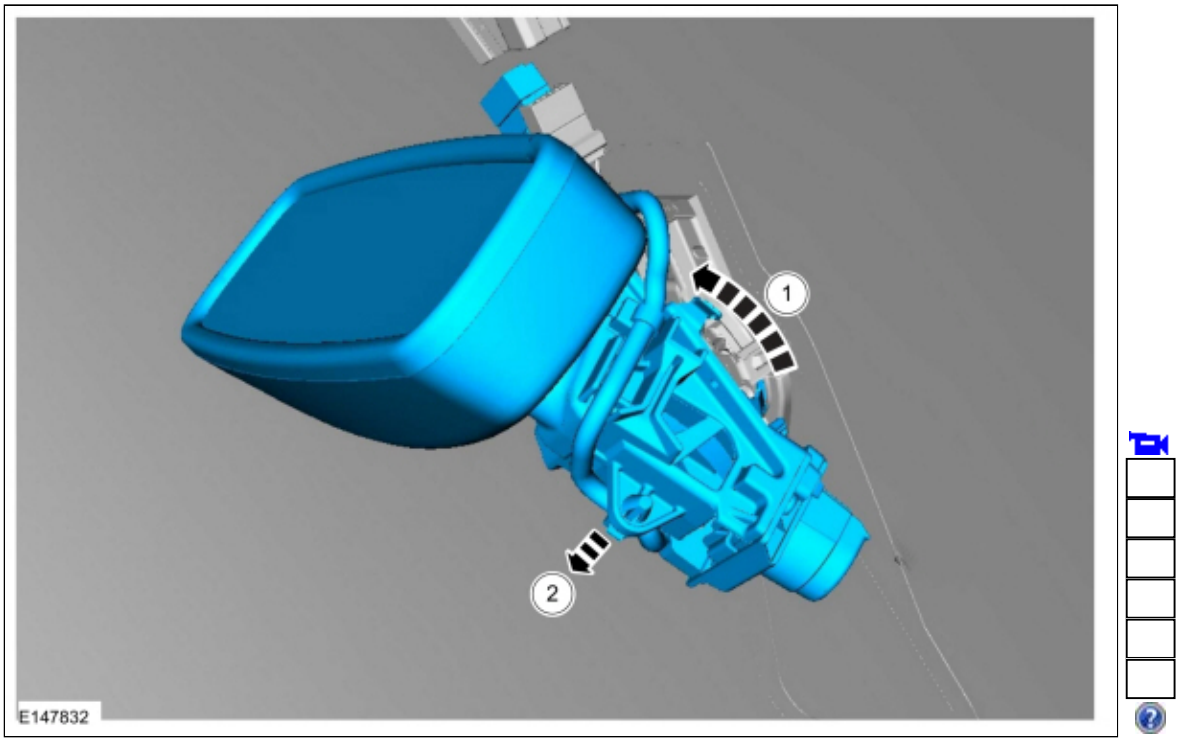
5. Remove the interior mirror.
    1. Position the interior mirror assembly to release the indexing tab.
    2. Inspect the indexing tab and turn the interior mirror slightly counter clock-wise.
    3. Turn the interior mirror 45 degrees counter clock-wise.
    4. Pull the interior mirror off the mirror mount.



Mirror type 3

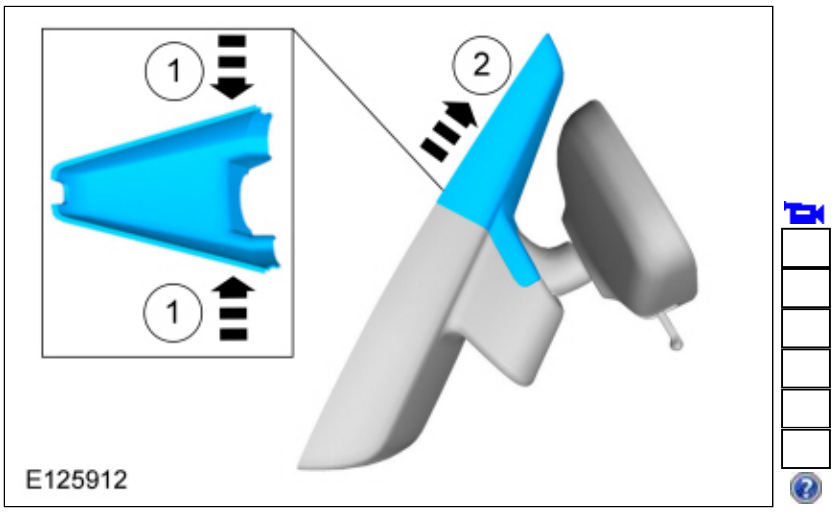
6. If a new mirror is being installed, use a diagnostic scan tool, begin the PMI process for the IPMAfollowing the on-screen instructions.

7. Remove the rain sensor covers.



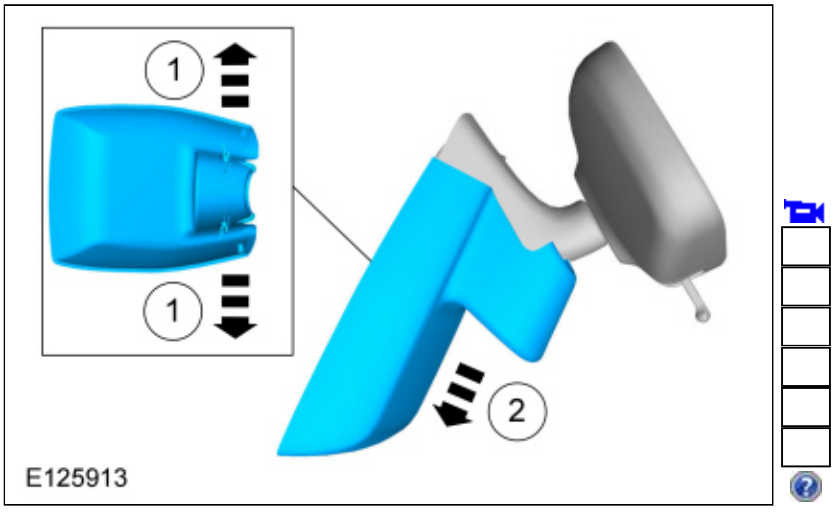
8. Disconnect the interior mirror electrical connector.

9. **NOTICE: Only turn at the base of the mirror.**



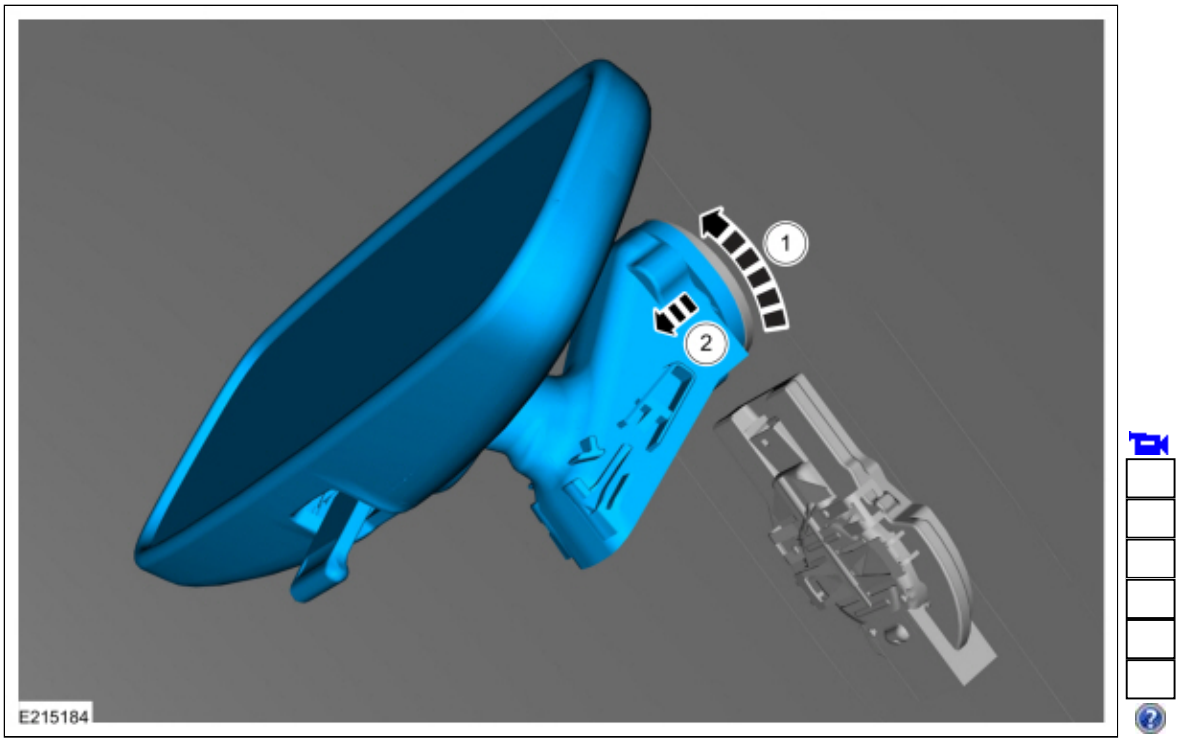
Remove the interior mirror.

1. Turn the interior mirror assembly counter clock-wise.
2. Remove the interior mirror off the mirror mount.



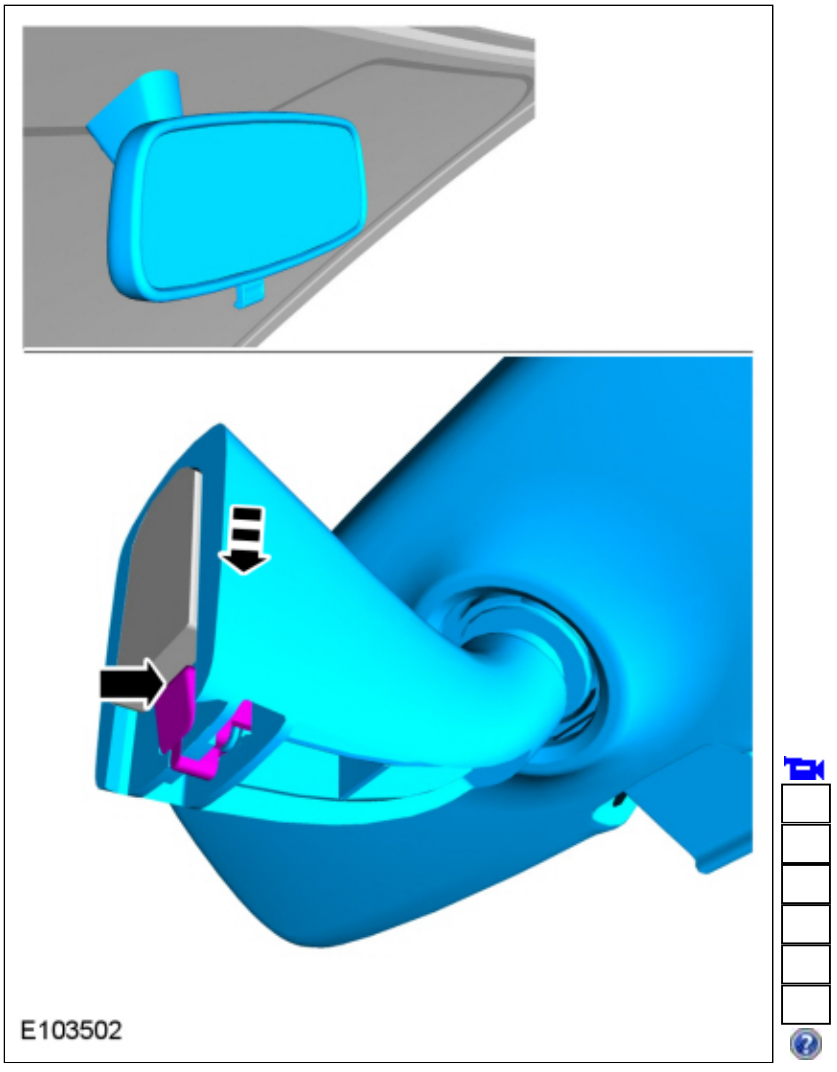
Mirror type 4

10. Remove the rain sensor covers.



11. Remove the rain sensor covers.

12. Remove the interior mirror.
    1. Turn the interior mirror counter clock-wise.



2. Pull the interior mirror off the mirror mount.

Installation

Mirror type 1

1. Slide the interior mirror onto the mirror mount until the locking tab is engaged.

Mirror type 2

2. To install, reverse the removal procedure.

Mirror type 3

3. To install, reverse the removal procedure.

- If a new mirror has been installed, use diagnostic scan tool, complete the PMI process for the IPMA following the on-screen instructions.
- If a new mirror has been installed, carry out the camera alignment using a scan tool.

Mirror type 4

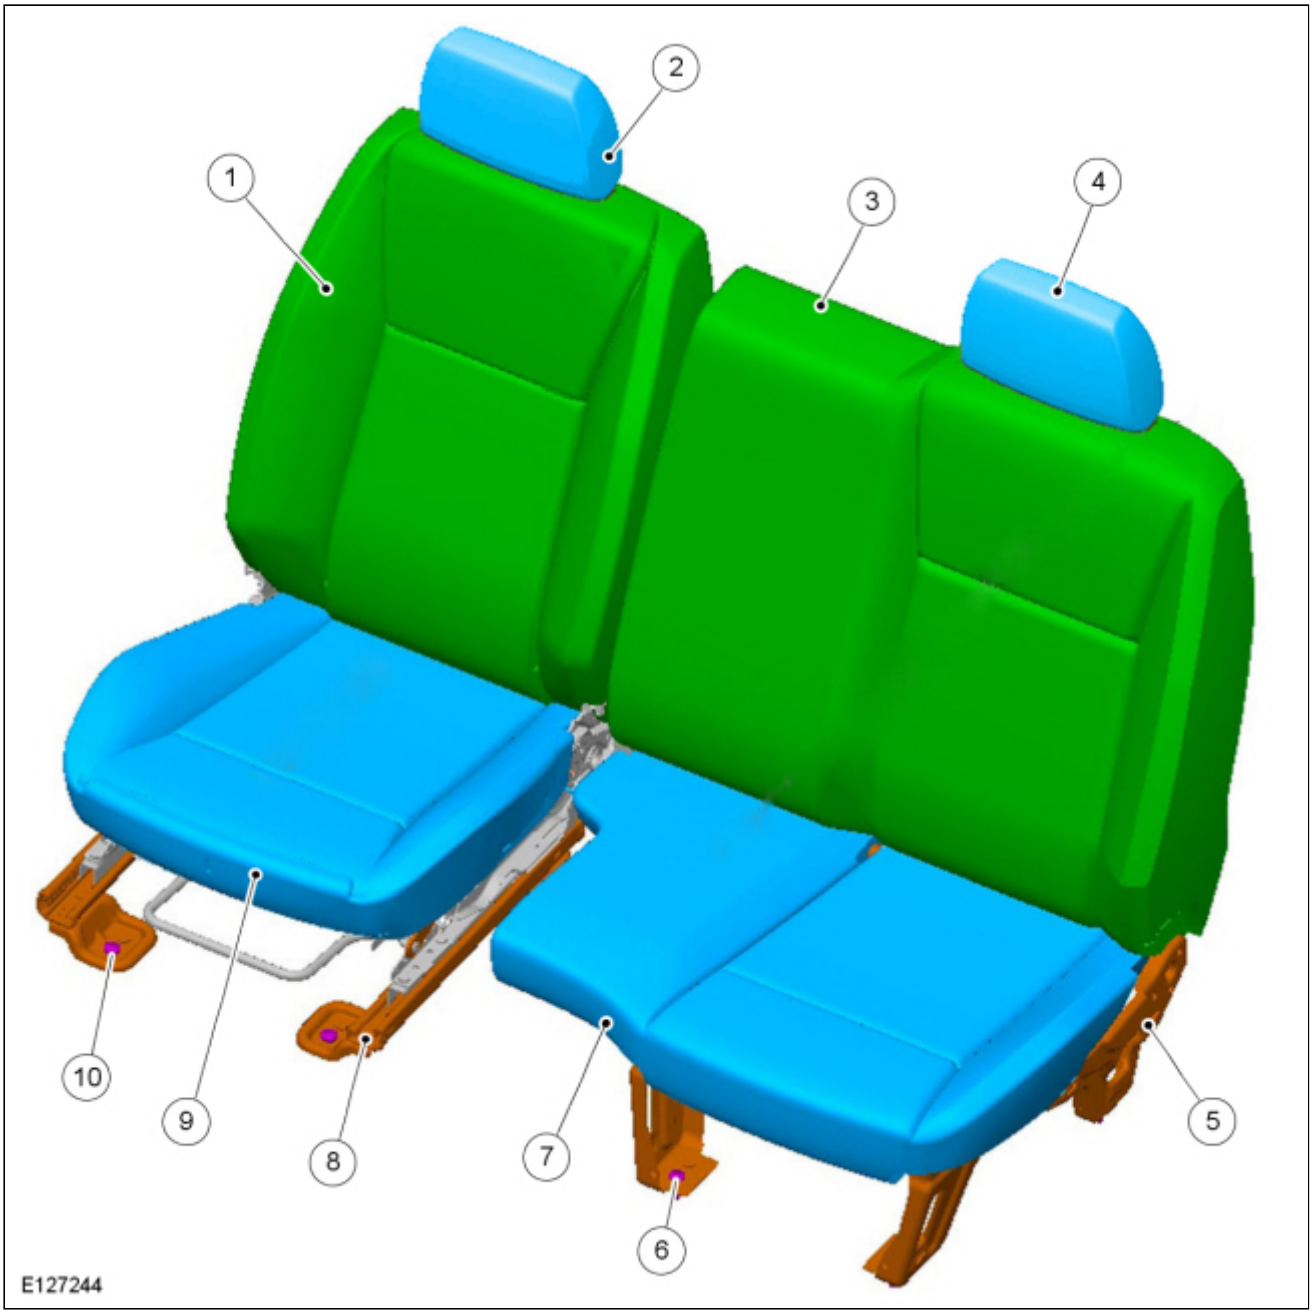
5. To install, reverse the removal procedure.

Copyright © 2016 Ford Motor Company

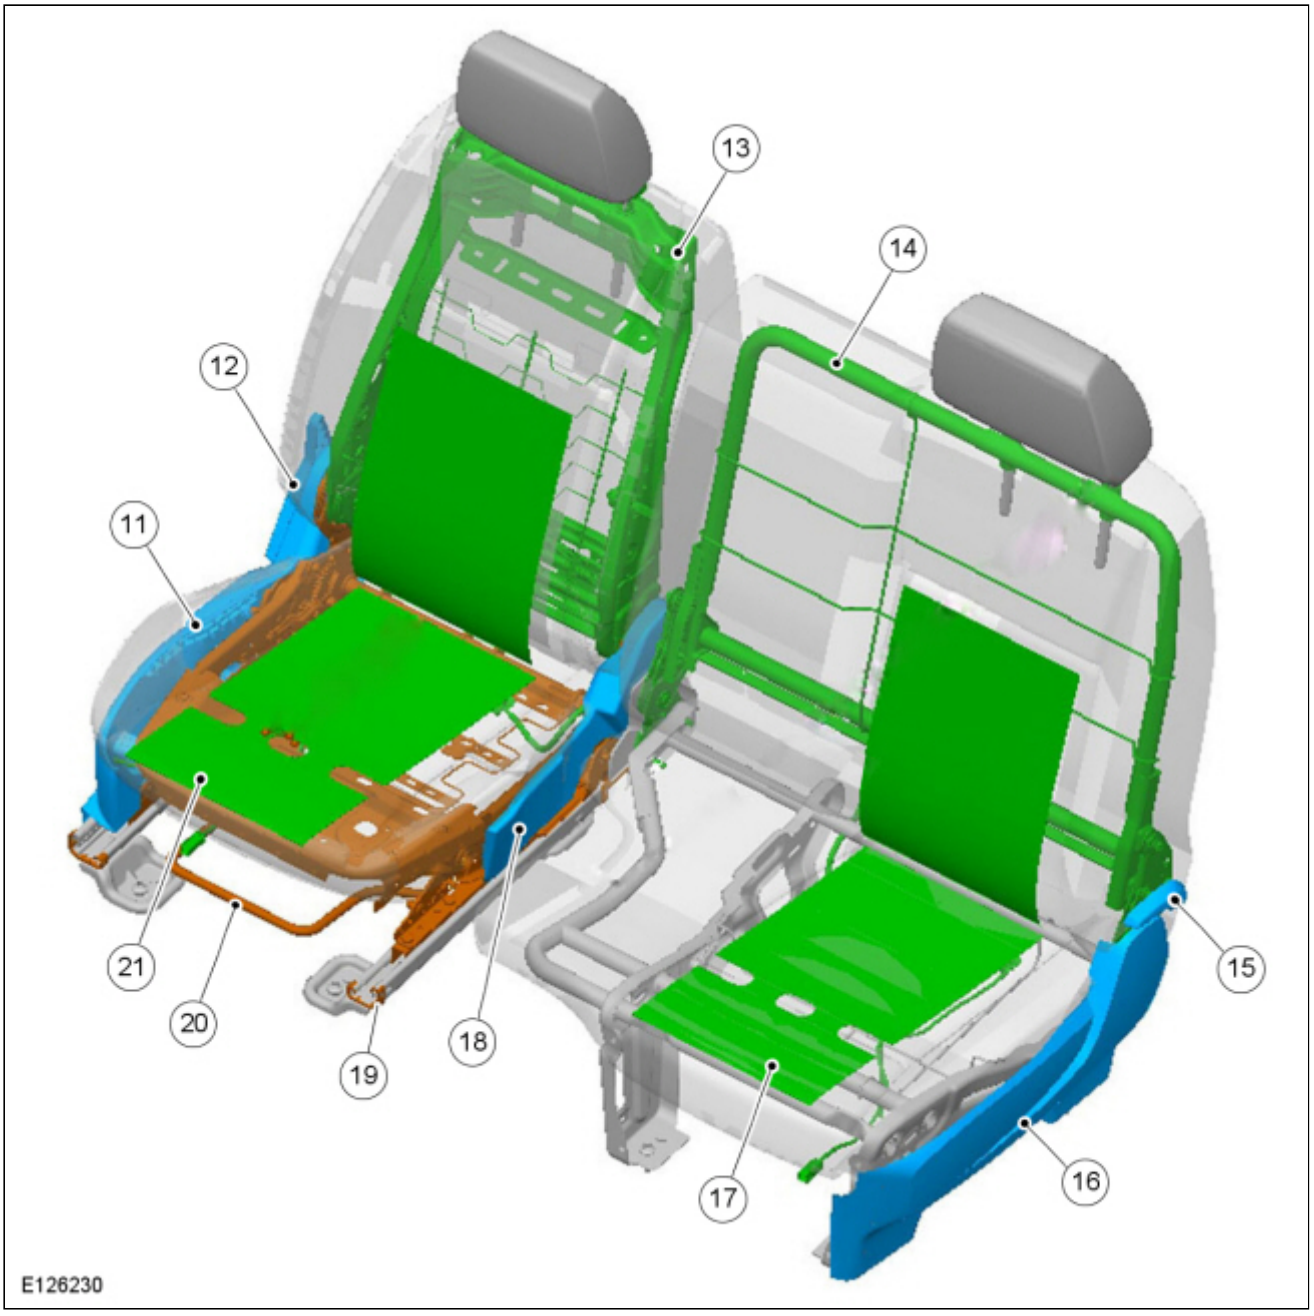
Seats

Base Part Number: 63100

General

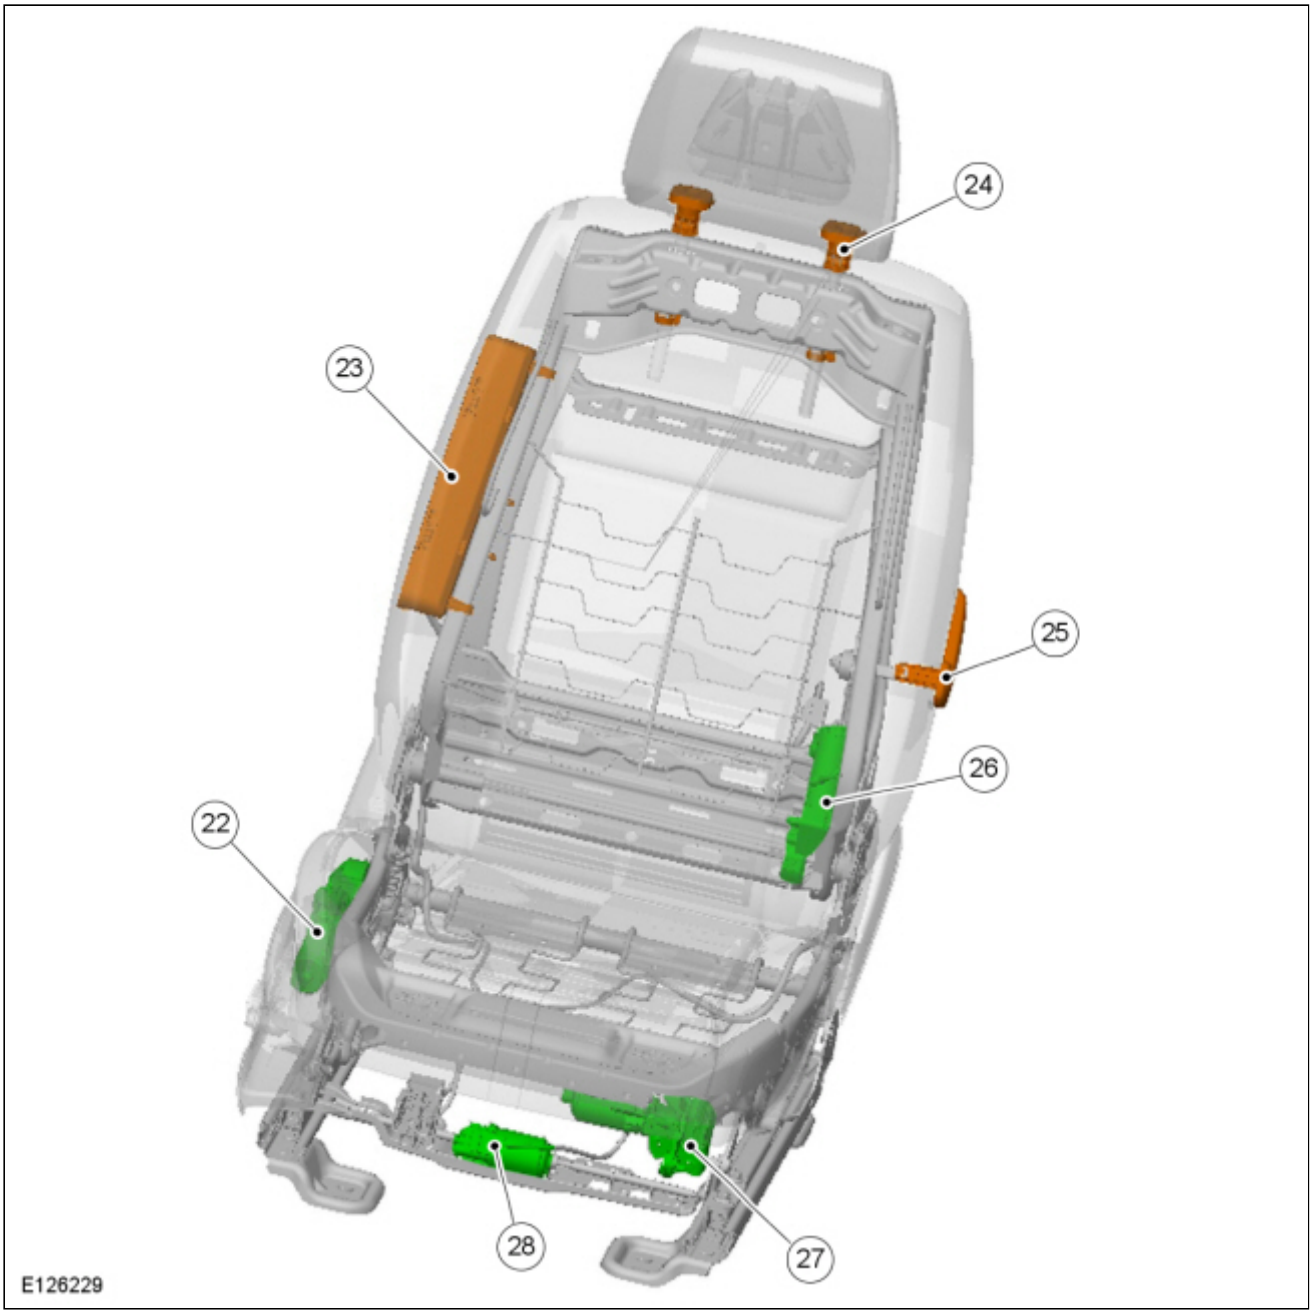


Side airbags and height adjustable head restraints are installed as standard equipment. Depending on the vehicle specification, either 2-way, 4-way or 8-way adjustable head restraints are installed as an option.



Depending on the vehicle specification, the front seats may be equipped with any one or combination of the following:

- Manual or power seat height adjustment
- Seat rails, forward and rearward motion
- Backrest recline
- Manually adjustable lumbar mat
- Heated cushion and backrest



Always move the head restraints to the raised position if the rear seat is occupied by a passenger or is used for a child restraint system. The rear head restraints must be lowered to allow the seat to be folded down.

Pinpoint Tests

The Power Seat is Inoperative

Normal Operation

The seat control switch is supplied battery voltage from the PDB. The seat control switch then supplies voltage and ground to the appropriate circuits to operate the seat motors.

Possible Sources

- Fuse
- Wiring, terminals or connectors
- Seat control switch
- BCM

PINPOINT TEST A : THE POWER SEAT IS INOPERATIVE

A1 CHECK VOLTAGE TO THE SEAT CONTROL SWITCH

- Ignition OFF.
- Depower the Supplemental Restraint System (SRS).
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Seat C313.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C313-9	V	Ground

Is voltage greater than 10 volts?

Yes	GO to A2
No	VERIFY BJB fuse is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. GO to A3

A2 CHECK FOR AN OPEN GROUND CIRCUIT TO THE SEAT CONTROL SWITCH

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C313-10	Ω	Ground

Is the resistance less than 5 ohms?

Yes	INSTALL a new seat control switch. TEST the system for normal operation. GO to A3
No	REPAIR the circuit. TEST the system for normal operation. GO to A3

A3 VERIFY THE SRS (SUPPLEMENTAL RESTRAINT SYSTEM) PROVES OUT SUCCESSFULLY

- Depower the Supplemental Restraint System (SRS).

REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Connect Passenger Seat C314.
- Connect all previously disconnected connectors.
- Repower the Supplemental Restraint System (SRS).
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.
No	REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).

The Power Seat Moves But is Noisy

Normal Operation

The power seat should move quietly during operation. Some noise is acceptable.

Possible Sources

- Seat track alignment
- Seat track obstruction
- Seat track

PINPOINT TEST B : THE POWER SEAT MOVES BUT IS NOISY

B1 CHECK SEAT TRACK ALIGNMENT

- Check the alignment of the track to the floor and the track to the seat.

Is the seat track alignment OK?

Yes	GO to B2
No	ALIGN the track. TEST the system for normal operation.

B2 CHECK THE SEAT TRACK INTEGRITY

- Operate the seat and inspect the seat track for binding and/or damage.

Does the seat track appear to be free from damage/binding?

Yes	GO to B3
No	INSTALL a new front seat track assembly. TEST the system for normal operation.

B3 CHECK THE SEAT MOTOR INTEGRITY

- Operate the seat and listen for excessive seat motor noise. Compare the noise to a similar vehicle for reference.

Is the seat motor noise excessive?

Yes	INSTALL a new front seat track assembly. TEST the system for normal operation.
No	Allow the customer to compare a similar vehicle for product motor noise characteristics. TEST the system for normal operation.

The Power Seat Moves But is Loose

Normal Operation

The power seat movement should be smooth and the seat cushion should not rock during or after operation.

Possible Sources

- Seat track fastening hardware
- Seat track

PINPOINT TEST C : THE POWER SEAT MOVES BUT IS LOOSE

C1 CHECK FOR LOOSE FASTENING HARDWARE
• Inspect for loose fastening hardware on the seat. **Is the fastening hardware tight?**

Yes	IDENTIFY the cause and REPAIR as necessary. TEST the system for normal operation.
No	TIGHTEN all fastening hardware to specification. TEST the system for normal operation.

The Power Seat Does Not Make Full Travel

Normal Operation

The power seat should travel fully horizontal (forward/rearward) and vertical (front up/down and rear up/down).

Possible Sources

- Seat track obstruction
- Seat track

PINPOINT TEST D : THE POWER SEAT DOES NOT MAKE FULL TRAVEL

D1 CHECK FOR AN OBSTRUCTION IN THE SEAT TRACK
• Remove the driver seat. REFER to: Front Seat (501-10A Seating, Removal and Installation). • Check for obstruction in the seat track. **Is the seat track free from obstruction?**

Yes	IDENTIFY the cause and REPAIR as necessary. INSTALL the driver seat. REFER to: Front Seat (501-10A Seating, Removal and Installation). TEST the system for normal operation.
No	REMOVE the obstruction(s). INSTALL the driver seat. REFER to: Front Seat (501-10A Seating, Removal and Installation). TEST the system for normal operation.

The Power Seat Does Not Move Horizontally/Vertically

Normal Operation

The seat control switch is supplied battery voltage from the PDB. The seat control switch then supplies voltage and ground to the appropriate circuits to operate the seat motors.

Possible Sources

- Wiring, terminals or connectors
- Seat control switch
- Seat track motor

PINPOINT TEST E : THE POWER SEAT DOES NOT MOVE HORIZONTALLY/VERTICALLY

E1 CHECK THE HORIZONTAL MOTOR FOR CORRECT OPERATION

- Ignition ON.
- Operate the seat control switch in the forward and rearward positions.

Does the seat move horizontally?

Yes	GO to E2
No	GO to E4

E2 DETERMINE SEAT HEIGHT ADJUST FAILURE

- Operate the seat control switch in the front up/down and rear up/down positions.

Does the seat front or rear height adjust up and down?

Yes	If only the front height adjust operates, GO to E6 If only the rear height adjust operates, GO to E8 If both the front height adjust and rear height adjust operate, GO to E3
No	INSTALL a new seat control switch. TEST the system for normal operation.

E3 DETERMINE SEAT TILT ADJUST FAILURE

- Operate the seat control switch in the tilt up/down positions.

Does the seat tilt adjust up and down?

Yes	GO to E10
No	The system is operating correctly at this time.

E4 CHECK VOLTAGE TO THE SEAT TRACK MOTOR

- Ignition OFF.
- Depower the Supplemental Restraint System (SRS).
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Seat Track Motor.
- Ignition ON.
- While operating the seat control switch forward and rearward, measure the voltage between both pins on the seat track motor harness connector.

Is voltage greater than 10 volts when the seat control switch is toggled in both directions and 0 volt in the rest position?

Yes	INSTALL a new seat track. GO to E12
No	GO to E5

E5 CHECK SEAT TRACK MOTOR CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect Seat Control Switch.
- Measure the resistance on both circuits between the seat track motor harness connector and the seat control

switch harness connector.

Is resistance less than 5 ohms for both circuits?

Yes	INSTALL a new seat control switch. GO to E12
No	REPAIR the circuit. GO to E12

E6 CHECK VOLTAGE TO THE SEAT RECLINER MOTOR

- Ignition OFF.
- Depower the Supplemental Restraint System (SRS).
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Seat Recliner Motor.
- Ignition ON.
- While operating the seat control switch rear height adjust up and down, measure the voltage between both pins on the seat recliner motor harness connector.

Is voltage greater than 10 volts when the seat control switch is toggled in both directions and 0 volt in the rest position?

Yes	INSTALL a new seat track. GO to E12
No	GO to E7

E7 CHECK SEAT RECLINER MOTOR CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect Seat Control Switch.
- Measure the resistance on both circuits between the seat recliner harness connector and the seat control switch harness connector.

Is resistance less than 5 ohms for both circuits?

Yes	INSTALL a new seat control switch. GO to E12
No	REPAIR the circuit. GO to E12

E8 CHECK VOLTAGE TO THE SEAT HEIGHT ADJUSTMENT MOTOR

- Ignition OFF.
- Depower the Supplemental Restraint System (SRS).
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Seat Height Adjustment Motor.
- Ignition ON.
- While operating the seat control switch front height adjust up and down, measure the voltage between both pins on the seat height adjustment motor harness connector.

Is voltage greater than 10 volts when the seat control switch is toggled in both directions and 0 volt in the rest position?

Yes	INSTALL a new seat track. GO to E12
No	GO to E9

E9 CHECK SEAT HEIGHT ADJUSTMENT MOTOR CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect Seat Control Switch.
- Measure the resistance on both circuits between the seat height adjustment motor harness connector and

the seat control switch harness connector.

Is resistance less than 5 ohms for both circuits?

Yes	INSTALL a new seat control switch. GO to E12
No	REPAIR the circuit. GO to E12

E10 CHECK VOLTAGE TO THE SEAT TILT MOTOR

- Ignition OFF.
- Disconnect Seat Tilt Motor.
- Ignition ON.
- While operating the seat control switch tilt adjust up and down, measure the voltage between both pins on the seat tilt motor harness connector.

Is voltage greater than 10 volts when the seat control switch is toggled in both directions and 0 volt in the rest position?

Yes	INSTALL a new seat track. GO to E12
No	GO to E11

E11 CHECK SEAT TILT MOTOR CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect Seat Control Switch.
- Measure the resistance on both circuits between the seat tilt motor harness connector and the seat control switch harness connector.

Is resistance less than 5 ohms for both circuits?

Yes	INSTALL a new seat control switch. GO to E12
No	REPAIR the circuit. GO to E12

E12 VERIFY THE SRS (SUPPLEMENTAL RESTRAINT SYSTEM) PROVES OUT SUCCESSFULLY

- Depower the Supplemental Restraint System (SRS).
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Connect Passenger Seat C314.
- Connect all previously disconnected connectors.
- Repower the Supplemental Restraint System (SRS).
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.
No	REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).

The Heated Seats are Inoperative — Driver and Passenger

Refer to Wiring Diagrams Cell 119 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Seats (501-10A Seating, Description and Operation).

Possible Causes

- Fuse
- Wiring, terminals or connectors
- FCIM
- Touchscreen not operating correctly

Visual Inspection and Diagnostic Pre-checks

- Verify the BJB fuse(s) is OK.

PINPOINT TEST F : THE HEATED SEATS ARE INOPERATIVE — DRIVER AND PASSENGER

F1 CHECK FOR FCIM (FRONT CONTROLS INTERFACE MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform FCIM self-test.

Are any FCIM Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the FCIM DTC Chart.
No	GO to F2

F2 CHECK THE TOUCHSCREEN OPERATION

- Start the engine.
- Select each audio and climate control function using the touchscreen controls.

Do all touchscreen controls operate?

Yes	GO to F3
No	Refer to the appropriate section in Group 415 for the procedure.

F3 CHECK THE HEATED SEAT VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect: FCIM C2402B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402B-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to F4
No	VERIFY BJB fuse(s) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

F4 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF

- Ignition OFF.
- Disconnect and inspect all of the FCIM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins as necessary
  - pushed-out pins - install new pins as necessary
- Reconnect the FCIM connectors. Make sure they seat and latch correctly.
- Reconnect all previously disconnected connectors.
- Ignition ON.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Heated Seat is Inoperative/Does Not Operate Correctly — Driver

Refer to Wiring Diagrams Cell 119 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Seats (501-10A Seating, Description and Operation).

DTC Fault Trigger Conditions - LHD

DTC	Description	Fault Trigger Conditions
B1034:11	Left Front Seat Heater Element: Circuit Short To Ground	Sets when the FCIM senses the left front heater element current draw has exceeded a specified threshold. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.
B1034:12	Left Front Seat Heater Element: Circuit Short To Battery	Sets when the FCIM senses the left front heater circuit voltage is above a specified threshold when the driver is active. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.
B1034:13	Left Front Seat Heater Element: Circuit Open	Sets when the FCIM senses the left front heater element current draw is less than a specified threshold. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.
B1038:11	Left Front Seat Heater Sensor: Circuit Short To Ground	Sets when the FCIM senses the left front heater sensor voltage is out-of-range low. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.
B1038:15	Left Front Seat Heater Sensor: Circuit Short To Battery or Open	Sets when the FCIM senses the left front heater sensor voltage is out-of-range high. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.

DTC Fault Trigger Conditions - RHD

DTC	Description	Fault Trigger Conditions
B1036:11	Right Front Seat Heater Element: Circuit Short	Sets when the FCIM senses the right front heater element current draw has exceeded a specified threshold. When this DTC sets, the FCIM disables the

	To Ground	circuit until the ignition is cycled.
B1036:12	Right Front Seat Heater Element: Circuit Short To Battery	Sets when the FCIM senses the right front heater circuit voltage is above a specified threshold when the driver is active. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.
B1036:13	Right Front Seat Heater Element: Circuit Open	Sets when the FCIM senses the right front heater element current draw is less than a specified threshold. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.
B103A:11	Right Front Seat Heater Sensor: Circuit Short To Ground	Sets when the FCIM senses the right front heater sensor voltage is out-of-range low. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.
B103A:15	Right Front Seat Heater Sensor: Circuit Short To Battery or Open	Sets when the FCIM senses the right front heater sensor voltage is out-of-range high. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.

Possible Causes

- Wiring, terminals or connectors
- Heater mat
- FCIM
- Touchscreen not operating correctly

PINPOINT TEST G : THE HEATED SEAT IS INOPERATIVE/DOES NOT OPERATE CORRECTLY — DRIVER

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

G1 CHECK FOR FCIM (FRONT CONTROLS INTERFACE MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform FCIM self-test.

Are any FCIM Diagnostic Trouble Codes (DTCs) present?

Yes	For DTC B1034:11, B1034:12, B1034:13, B1036:11, B1036:12 or B1036:13, GO to G4 For DTC B1038:11, B1038:15, B103A:11 or B103A:15, GO to G6 For all other Diagnostic Trouble Codes (DTCs), REFER to the FCIM DTC Chart.
No	GO to G2

G2 CHECK THE TOUCHSCREEN OPERATION

- Start the engine.
- Select each audio and climate control function using the touchscreen controls.

Do all touchscreen controls operate?

Yes	GO to G3
No	Refer to the appropriate section in Group 415 for the procedure.

G3 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) DRIVER HEATED SEAT CONTROL SWITCH (CC_SW_D_HSEATS) PID (PARAMETER IDENTIFICATION)

- Ignition OFF.
- Ignition ON.
- Using a diagnostic scan tool, monitor the FCIM CC_SW_D_HSEATS PID while operating the driver heated seat switch.

Does the PID state change when the driver heated seat switch is pressed and released?

Yes	GO to G4
No	INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.

G4 CHECK THE HEATED SEAT VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect FCIM C2402B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402B-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to G5
No	REPAIR the circuit.

G5 CHECK THE HEATER ELEMENT POWER CIRCUIT FOR AN OPEN OR SHORT TO GROUND

- Depower the Supplemental Restraint System (SRS).
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Seat C313.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C313-7	Ω	Ground

- Measure:

Left Hand Drive (LHD)

Positive Lead	Measurement / Action	Negative Lead
C313-7	Ω	C2402B-16

Right Hand Drive (RHD)

Positive Lead	Measurement / Action	Negative Lead
C313-7	Ω	C2402B-17

Is the resistance greater than 10,000 ohms between the driver seat cushion heater mat and ground; and less than 3 ohms between the driver seat cushion heater mat and the FCIM?

Yes	GO to G9

No	REPAIR the circuit. GO to G13

G6 CHECK THE HEATED SEAT TEMPERATURE SENSOR CIRCUIT FOR AN OPEN OR SHORT TO GROUND

- Depower the Supplemental Restraint System (SRS).
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect FCIM C2402B.
- Disconnect Driver Seat C313.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C313-3	Ω	Ground

- Measure:

Left Hand Drive (LHD)

Positive Lead	Measurement / Action	Negative Lead
C313-3	Ω	C2402B-30

Right Hand Drive (RHD)

Positive Lead	Measurement / Action	Negative Lead
C313-3	Ω	C2402B-15

Is the resistance greater than 10,000 ohms between the driver seat cushion heater mat and ground; and less than 3 ohms between the driver seat cushion heater mat and the FCIM?

Yes	GO to G7
No	REPAIR the circuit. GO to G13

G7 CHECK THE HEATED SEAT TEMPERATURE SENSOR RETURN CIRCUIT FOR AN OPEN OR SHORT TO GROUND

- Disconnect FCIM C2402A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C313-4	Ω	Ground

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C313-4	Ω	C2402A-2

Is the resistance greater than 10,000 ohms between the driver seat cushion heater mat and ground; and less than 3 ohms between the driver seat cushion heater mat and the FCIM?

Yes	GO to G8
No	REPAIR the circuit. GO to G13

G8 CHECK THE HEATED SEAT TEMPERATURE SENSOR CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C313-3	V	Ground

Is any voltage present?

Yes	REPAIR the circuit. GO to G13
No	GO to G11

G9 CHECK THE HEATER ELEMENT GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C313-8	Ω	Ground

Is the resistance less than 0.5 ohm?

Yes	GO to G10
No	REPAIR the circuit. GO to G13

G10 CHECK THE HEATED SEAT MAT FOR AN OPEN OR SHORT TO GROUND

- Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
C313-7, Component Side	Ω	C313-8, Component Side
C313-7, Component Side	Ω	Ground

Is the resistance between 0.6 and 2 ohms between pins 7 and 8; and greater than 10,000 ohms between pin 7 and ground?

Yes	GO to G12
No	INSTALL a new driver seat heater mat. GO to G13

No	INSTALL a new driver seat heater mat. GO to G13

G11 CHECK THE HEATED SEAT TEMPERATURE SENSOR FOR AN OPEN OR SHORT TO GROUND

- Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
C313-3, Component Side	Ω	C313-4, Component Side
C313-3, Component Side	Ω	Ground

Is the resistance between 300 and 300,000 ohms between pins 3 and 4; and greater than 10,000 ohms between pin 3 and ground?

Yes	GO to G12
No	INSTALL a new driver seat heater mat. GO to G13

G12 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all of the FCIM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins as necessary
  - pushed-out pins - install new pins as necessary
- Reconnect the FCIM connectors. Make sure they seat and latch correctly.
- Reconnect all previously disconnected connectors.
- Ignition ON.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.GO to G13
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to G13

G13 VERIFY THE SRS (SUPPLEMENTAL RESTRAINT SYSTEM) PROVES OUT SUCCESSFULLY

- Depower the Supplemental Restraint System (SRS).
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Connect Driver Seat C313.
- Connect all previously disconnected connectors.
- Repower the Supplemental Restraint System (SRS).
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.
No	REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).

The Heated Seat is Inoperative/Does Not Operate Correctly — Passenger

Refer to Wiring Diagrams Cell 119 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Seats (501-10A Seating, Description and Operation).

DTC Fault Trigger Conditions - LHD

DTC	Description	Fault Trigger Conditions
B1036:11	Right Front Seat Heater Element: Circuit Short To Ground	Sets when the FCIM senses the right front heater element current draw has exceeded a specified threshold. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.
B1036:12	Right Front Seat Heater Element: Circuit Short To Battery	Sets when the FCIM senses the right front heater circuit voltage is above a specified threshold when the driver is active. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.
B1036:13	Right Front Seat Heater Element: Circuit Open	Sets when the FCIM senses the right front heater element current draw is less than a specified threshold. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.
B103A:11	Right Front Seat Heater Sensor: Circuit Short To Ground	Sets when the FCIM senses the right front heater sensor voltage is out-of-range low. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.
B103A:15	Right Front Seat Heater Sensor: Circuit Short To Battery or Open	Sets when the FCIM senses the right front heater sensor voltage is out-of-range high. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.

DTC Fault Trigger Conditions - RHD

DTC	Description	Fault Trigger Conditions
B1034:11	Left Front Seat Heater Element: Circuit Short To Ground	Sets when the FCIM senses the left front heater element current draw has exceeded a specified threshold. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.
B1034:12	Left Front Seat Heater Element: Circuit Short To Battery	Sets when the FCIM senses the left front heater circuit voltage is above a specified threshold when the driver is active. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.
B1034:13	Left Front Seat Heater Element: Circuit Open	Sets when the FCIM senses the left front heater element current draw is less than a specified threshold. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.
B1038:11	Left Front Seat Heater Sensor: Circuit Short To Ground	Sets when the FCIM senses the left front heater sensor voltage is out-of-range low. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.
B1038:15	Left Front Seat Heater Sensor: Circuit Short To Battery or Open	Sets when the FCIM senses the left front heater sensor voltage is out-of-range high. When this DTC sets, the FCIM disables the circuit until the ignition is cycled.

Possible Causes

- Wiring, terminals or connectors

- Heater mat
- FCIM
- Touchscreen not operating correctly

PINPOINT TEST H : THE HEATED SEAT IS INOPERATIVE/DOES NOT OPERATE CORRECTLY — PASSENGER

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

H1 CHECK FOR FCIM (FRONT CONTROLS INTERFACE MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform FCIM self-test.

Are any FCIM Diagnostic Trouble Codes (DTCs) present?

Yes	For DTC B1034:11, B1034:12, B1034:13, B1036:11, B1036:12 or B1036:13, GO to H4 For DTC B1038:11, B1038:15, B103A:11 or B103A:15, GO to H6 For all other Diagnostic Trouble Codes (DTCs), REFER to the FCIM DTC Chart.
No	GO to H2

H2 CHECK THE TOUCHSCREEN OPERATION

- Start the engine.
- Select each audio and climate control function using the touchscreen controls.

Do all touchscreen controls operate?

Yes	GO to H3
No	Refer to the appropriate section in Group 415 for the procedure.

H3 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) PASSENGER HEATED SEAT CONTROL SWITCH (CC_SW_P_HSEATS) PID (PARAMETER IDENTIFICATION)

- Ignition OFF.
- Ignition ON.
- Using a diagnostic scan tool, monitor the FCIM CC_SW_P_HSEATS PID while operating the passenger heated seat switch.

Does the PID state change when the passenger heated seat switch is pressed and released?

Yes	GO to H4
No	INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.

H4 CHECK THE HEATED SEAT VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect FCIM C2402B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402B-2		Ground

Is the voltage greater than 11 volts?

Yes	GO to H5
No	REPAIR the circuit.

H5 CHECK THE HEATER ELEMENT POWER CIRCUIT FOR AN OPEN OR SHORT TO GROUND

- Depower the Supplemental Restraint System (SRS).
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Seat C314.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C314-7	Ω	Ground

- Measure:

Left Hand Drive (LHD)

Positive Lead	Measurement / Action	Negative Lead
C314-7	Ω	C2402B-17

Right Hand Drive (RHD)

Positive Lead	Measurement / Action	Negative Lead
C314-7	Ω	C2402B-16

Is the resistance greater than 10,000 ohms between the passenger seat cushion heater mat and ground; and less than 3 ohms between the passenger seat cushion heater mat and the FCIM?

Yes	GO to H9
No	REPAIR the circuit. GO to H13

H6 CHECK THE HEATED SEAT TEMPERATURE SENSOR CIRCUIT FOR AN OPEN OR SHORT TO GROUND

- Depower the Supplemental Restraint System (SRS).
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect FCIM C2402B.
- Disconnect Passenger Seat C314.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C314-3	Ω	Ground

- Measure:

Left Hand Drive (LHD)

Positive Lead	Measurement / Action	Negative Lead
C314-3	Ω	C2402B-15

Right Hand Drive (RHD)

Positive Lead	Measurement / Action	Negative Lead
C314-3	Ω	C2402B-30

Is the resistance greater than 10,000 ohms between the passenger seat cushion heater mat and ground; and less than 3 ohms between the passenger seat cushion heater mat and the FCIM?

Yes	GO to H7
No	REPAIR the circuit. GO to H13

H7 CHECK THE HEATED SEAT TEMPERATURE SENSOR RETURN CIRCUIT FOR AN OPEN OR SHORT TO GROUND

- Disconnect: FCIM C2402A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C314-4	Ω	Ground

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C314-4	Ω	C2402A-2

Is the resistance greater than 10,000 ohms between the passenger seat cushion heater mat and ground; and less than 3 ohms between the passenger seat cushion heater mat and the FCIM?

Yes	GO to H8
No	REPAIR the circuit. GO to H13

H8 CHECK THE HEATED SEAT TEMPERATURE SENSOR CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C314-3	V	Ground

Is any voltage present?

Yes	REPAIR the circuit. GO to H13
No	GO to H11

H9 CHECK THE HEATER ELEMENT GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C314-8	Ω	Ground

Is the resistance less than 0.5 ohm?

Yes	GO to H10
No	REPAIR the circuit. GO to H13

H10 CHECK HEATED SEAT MAT FOR AN OPEN OR SHORT TO GROUND

- Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
C314-7, Component Side	Ω	C314-8, Component Side
C314-7, Component Side	Ω	Ground

Is the resistance between 0.6 and 2 ohms between pins 7 and 8; and greater than 10,000 ohms between pin 7 and ground?

Yes	GO to H12
No	INSTALL a new passenger seat heater mat. GO to H13

H11 CHECK THE HEATED SEAT TEMPERATURE SENSOR FOR AN OPEN OR SHORT TO GROUND

- Measure the **component side resistance** between:

Positive Lead	Measurement / Action	Negative Lead
C314-4, Component Side	Ω	C314-4, Component Side
C314-4, Component Side	Ω	Ground

Is the resistance between 300 and 300,000 ohms between pins 3 and 4; and greater than 10,000 ohms between pin 3 and ground?

Yes	GO to H12
No	INSTALL a new driver seat heater mat. GO to H13

No	INSTALL a new driver seat heater mat. GO to H13

H12 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all of the FCIM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins as necessary
  - pushed-out pins - install new pins as necessary
- Reconnect the FCIM connectors. Make sure they seat and latch correctly.
- Reconnect all previously disconnected connectors.
- Ignition ON.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.GO to H13
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues. GO to H13

H13 VERIFY THE SRS (SUPPLEMENTAL RESTRAINT SYSTEM) PROVES OUT SUCCESSFULLY

- Depower the Supplemental Restraint System (SRS).
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Connect Passenger Seat C314.
- Connect all previously disconnected connectors.
- Repower the Supplemental Restraint System (SRS).
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).

Did the SRS prove out successfully?

Yes	Repair is complete. RETURN the vehicle to the customer.
No	REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).

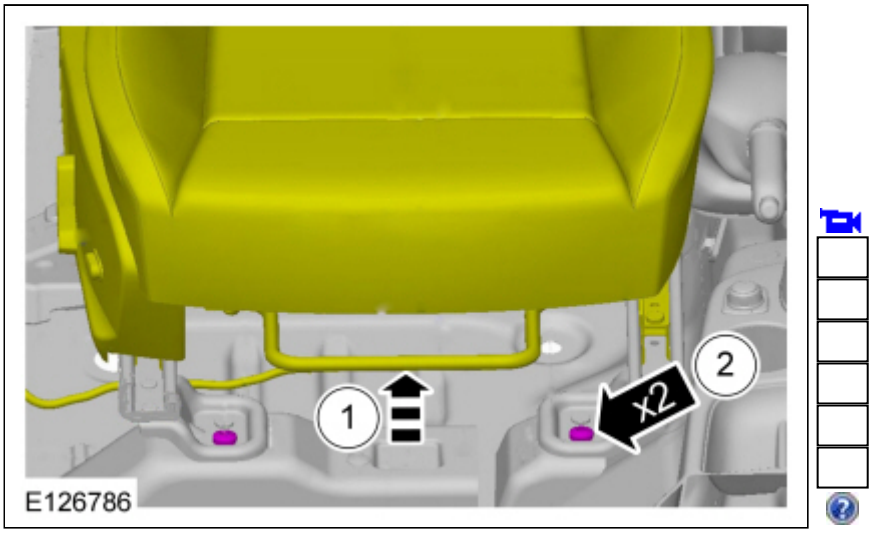
Removal

NOTE: *Removal steps in this procedure may contain installation details.*

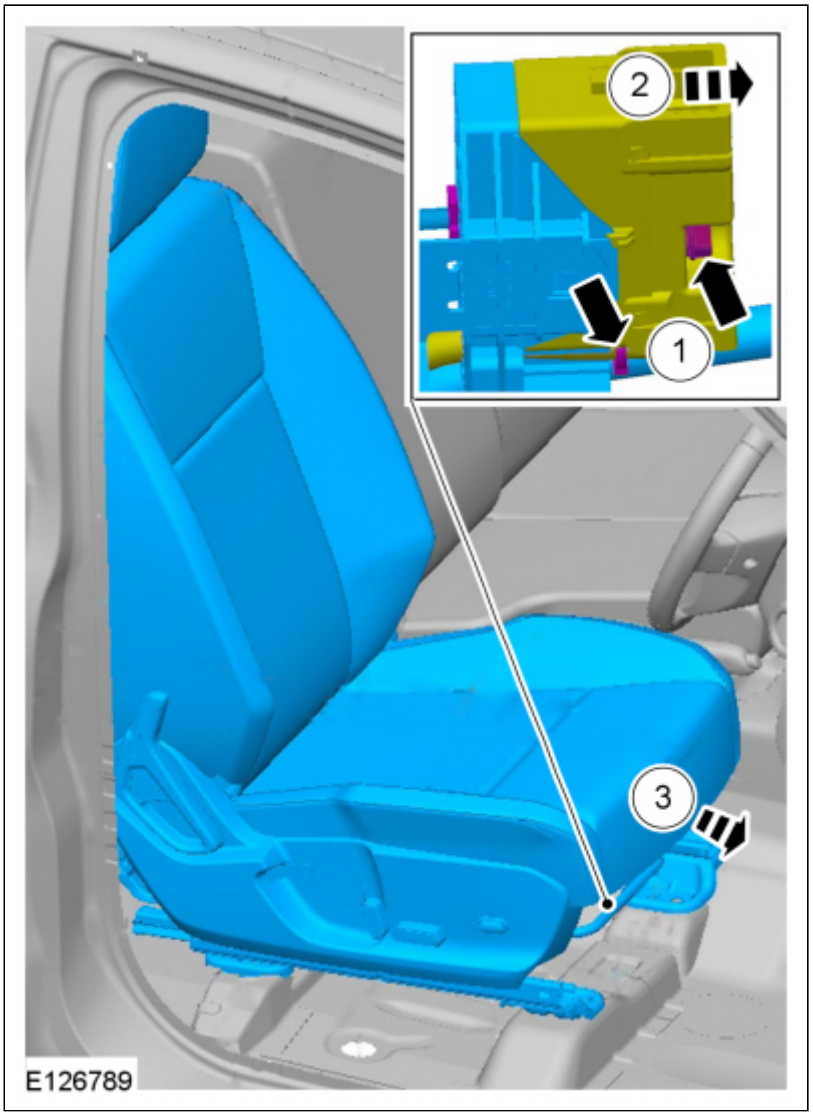


1. **WARNING: The supplemental restraint system (SRS) is active for a certain length of time after the power supply has been disconnected. Wait for a minimum of 3 minutes before disconnecting or removing any SRS components.**

   WARNING: Make sure that the vehicle electrical system is fully depowered and no other power source is connected.

   Refer to: Pyrotechnic Device Health and Safety Precautions (100-00 General Information, Description and Operation).

2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).



3. *Torque*: 48 Nm

4. *Torque*: 30 Nm

5. Disconnect the heated seat and side air bag module electrical connectors (if equipped).

Glass, Frames and Mechanisms - Overview

Overview

Power Windows

Standard front door power window features include one-touch up and one-touch down operation.

The window control switch:

- can be used to manually or automatically raise/lower all windows from the driver door window control switch or the individual passenger window from the corresponding door switch.
- has a rear passenger window lock-out feature (located on the driver door window control switch).

Rear Window Defrost

When the rear window defrost button (integral to the FCIM) is pressed, the FCIM activates the rear window defrost relay (integral to the BJB). When the rear window defrost relay is active, the rear window defrost grid is energized.

If equipped, the rear window defrost feature can also be activated/deactivated by using a touchscreen interface or voice commands.

Remote Start - Rear Window Defrost Operation (if equipped)

The customer can select different climate control modes/preferences when the vehicle is started using the remote start feature. This can be accessed through the message center. For additional information on setting the remote start preferences, refer to the Owner's Literature. When the rear window defrost is set to AUTO mode, the rear window defrost activates when the outside temperature is less than 0° C (32° F) and the vehicle is started using the remote start feature. No climate control adjustments are recognized during remote start operation. Once the ignition is cycled to the ON position, the climate control system returns to the previous settings (last ignition ON cycle) and adjustments can be made normally. If the previous setting was off, the climate control system turns off.

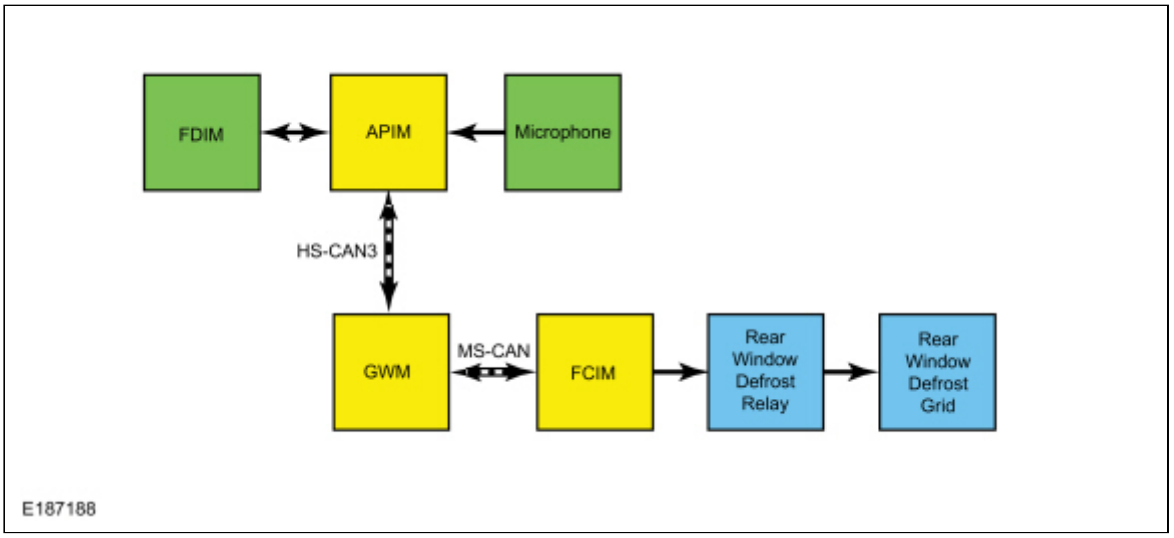
Glass, Frames and Mechanisms - System Operation and Component Description

System Operation

System Diagram - Power Windows

Front Power Windows



Network Message Chart - Front Power Windows

Passenger Door Module (PDM) Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Passenger window command	DDM	When activating the front passenger window from the master window control switch, the passenger window command is sent from the DDM to the PDM.

System Diagram - Rear Window Defrost

Network Message Chart - Rear Window Defrost

Front Controls Interface Module (FCIM) Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Climate control requests	APIM (if equipped with touchscreen)	The climate control requests message contains the rear window defrost request information. When the rear window defrost function is requested using voice command or the button is selected on the touchscreen, this input activates the rear window defrost system.

Power Window Operation - Front

NOTE: *If the vehicle battery is disconnected while the window is moving, the one-touch up and one-touch down feature (and obstacle detection) is disabled prior to initialization.*

Refer to: Door Window Motor Initialization (501-11 Glass, Frames and Mechanisms, General Procedures).

The power windows operate when the delayed accessory relay is active. The delayed accessory relay (non-serviceable) is located in the BCM. Both front windows are equipped with obstacle detection and one-touch up and one-touch down functionality. If an obstacle has been detected as the window glass is moving upward, the window motor automatically reverses direction and moves the glass downward.

Driver Door Window Operation

The master window control switch communicates to the DDM through a LIN. When commanded by the master window control switch, the DDM supplies power and ground to operate the driver door window regulator motor in the desired direction. The DDM monitors the window glass position through feedback from 2 Hall-effect sensors (integral to the driver door window regulator motor). If there is an issue with the Hall-effect sensor circuit(s), the DDM only moves the window in 500 ms intervals (the master window control switch must be released and activated again to move the window).

Passenger Door Window Operation

The master window control switch communicates to the DDM through a LIN. The DDM communicates to the PDM through the MS-CAN.

When commanded by the master window control switch or the passenger door window control switch, the PDM supplies power and ground to operate the passenger door window regulator motor in the desired direction. The PDM monitors window glass position through feedback from 2 Hall-effect sensors (integral to the passenger door window regulator motor). If there is an issue with the Hall-effect sensor circuit(s), the PDM only moves the window in 500 ms intervals (the passenger or master window control switch must be released and activated again to move the window).

Rear Door Window Operation

The rear window control switches contain 2 relays, which when at rest (inactive), provide a ground path to their respective power window motor circuit(s). The rear window control switches receive voltage (high current circuit) from the delayed accessory relay whenever it is active. When the rear window control switches receive a voltage signal from the master window control switch and/or when the rear door window control switch is activated, the rear door window control switch supplies high current voltage (and ground) to operate the power window motor in the desired direction.

Passenger Windows Lock-Out

When the lock-out switch (part of the master window control switch) is in the LOCK position, the rear passenger power windows only operate from the master window control switch.

Global Open

NOTE: *The global open feature may be enabled/disabled by the customer following a procedure listed in the Owner's Literature.*

The global open feature only activates when the ignition is off and the delayed accessory feature is not active. When the unlock button on the RKE transmitter is pressed and held, the windows begin opening.

Rear Window Defrost

When the rear window defrost switch (integral to the FCIM) is activated, the FCIM activates the rear window defrost relay (integral to the BJB).

If equipped, the rear window defrost can also be commanded on and off using voice commands or by touching the rear window defrost button located on the touchscreen interface (FDIM). For additional information on voice or touchscreen commanded features, refer to the Owner's Literature.

The FCIM deactivates the rear window defrost relay when one of these conditions is met:

- The rear window defrost switch is pressed when the feature is active.
- If equipped, the rear window defrost is commanded off using voice command or the touchscreen interface when the feature is active.
- Ignition state is changed from ON to OFF.
- A predetermined timer completes.
- Battery voltage has dropped below a specified threshold (load management strategy).

Component Description

Master Window Control Switch

The master window control switch receives voltage whenever the delayed accessory relay is active. The master window control switch is grounded through the DDM. The master window control switch communicates to the DDM through a LIN.

The master window control switch supplies low current voltage signal through momentary contacts to activate the internal relays within each of the rear passenger window control switches to operate the rear windows.

Passenger Door Window Control Switch

The passenger door window control switch contains momentary contacts (one for each window switch direction). The PDM provides a return (ground) for the passenger door window control switch. When the control switch is activated, a ground signal is supplied to the PDM to operate the passenger door window regulator motor in the desired direction.

Rear Door Window Control Switch

The rear window control switches receive voltage (high current circuit) from the delayed accessory relay whenever it is active. The rear window control switches receive voltage (low current circuit) from the master window control switch when the lock-out switch is in the UNLOCK position. The rear window control switches each have a dedicated ground circuit. The rear window control switches contain 2 relays, which when at rest (inactive), provide a ground path to their respective power window motor circuit(s).

When a rear window control switch is activated, the corresponding relay located within the rear window control switch is energized which supplies voltage (high current) to operate the power window motor in the desired direction.

Front Door Window Regulator Motor

The door window regulator motor is bi-directional. Window direction is determined by the polarity of the voltage being supplied to the motor from the associated door module. The door window regulator motor contains 2 Hall-effect sensors. The Hall-effect sensor power supply and return circuits are provided by the associated door module.

Rear Door Window Regulator Motor

The rear door window regulator motor is bi-directional. Window direction is determined by the polarity of the voltage and ground being supplied to the motor from the window control switch.

Front Controls Interface Module (FCIM)

The FCIM contains the rear window defrost button and also controls the rear window defrost relay. PMI is required if installing a new module.

Front Display Interface Module (FDIM)

The FDIM contains a redundant rear window defrost button on the touchscreen display. The FDIM plugs directly into the APIM, and does not communicate directly on any network.

Driver Door Module (DDM)

The DDM receives power window commands from the master window control switch through a LIN. The DDM supplies voltage and ground to operate the driver door window regulator motor.

The DDM also communicates master window control switch requests to the PDM through the Medium Speed Controller Area Network (MS-CAN) to operate the passenger door window regulator motor. PMI is required if installing a new module.

Passenger Door Module (PDM)

The PDM receives power window commands from the passenger door window control switch or from the DDM through the Medium Speed Controller Area Network (MS-CAN). The PDM supplies voltage and ground to operate the passenger door window regulator motor. PMI is required if installing a new module.

Symptom Chart

Condition	Possible Sources	Actions
Both front door power windows are inoperative from the master window control switch	• Wiring, terminals or connectors • Master window control switch • DDM	• DIAGNOSE any related DDM Diagnostic Trouble Codes (DTCs) first. REFER to the DDM DTC Chart in this section. • If there are no related Diagnostic Trouble Codes (DTCs) present, INSTALL a new driver door window control switch. REFER to: Driver Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).
Both rear passenger power windows are inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test H
A single power window is inoperative/does not operate correctly - LH front	• Refer to the Pinpoint Test	• GO to Pinpoint Test C
A single power window is inoperative/does not operate correctly - RH front	• Refer to the Pinpoint Test	• GO to Pinpoint Test D
A single power window is inoperative/does not operate correctly - LH rear	• Refer to the Pinpoint Test	• GO to Pinpoint Test F
A single power window is inoperative/does not operate correctly - RH rear	• Refer to the Pinpoint Test	• GO to Pinpoint Test G
The one-touch up feature is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test E
The global open function is inoperative	• Global open not enabled in the message	• VERIFY the global open feature (Remote Open) is enabled in the message center. REFER to the Owner's Literature. • VERIFY the RKE lock/unlock function operates correctly using all of the RKE transmitters. REFER to: Locks, Latches and Entry Systems (501-14 Handles,

	• center • RKE transmitter • Door window regulator motor not initialized	Locks, Latches and Entry Systems, Diagnosis and Testing). to diagnose any inoperative RKE transmitter(s). • INITIALIZE the inoperative door window regulator motor(s). REFER to: Door Window Motor Initialization (501-11 Glass, Frames and Mechanisms, General Procedures).
The defrost system is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test A
The defrost system does not shut off automatically	• Refer to the Pinpoint Test	• GO to Pinpoint Test B
The defrost system does not respond to voice command only	• Refer to the Pinpoint Test	• VERIFY the rear window defrost operation using the instrument panel rear window defrost switch. If the rear window defrost is still inoperative, GO to Pinpoint Test A If the rear window defrost operates, DIAGNOSE the inoperative voice command system. Refer to the appropriate section in Group 415 for the procedure.
The defrost system does not respond to touchscreen command only	• Refer to the Pinpoint Test	• VERIFY the rear window defrost operation using the instrument panel rear window defrost switch. If the rear window defrost is still inoperative, GO to Pinpoint Test A If the rear window defrost operates, DIAGNOSE the inoperative touchscreen system. Refer to the appropriate section in Group 415 for the procedure.

Pinpoint Test(s)

The Defrost System is Inoperative

Refer to Wiring Diagrams Cell 56 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - Overview (501-11 Glass, Frames and Mechanisms, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1C83:12	Rear Defog Relay: Circuit Short to Battery	This DTC sets when the FCIM detects a short to voltage on the rear window defrost relay control circuit.
B1C83:13	Rear Defog Relay: Circuit Open	This DTC sets when the FCIM detects an open on the rear window defrost relay control circuit.

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Rear window defrost grid
- Rear window glass
- BJB

- FCIM

Visual Inspection and Diagnostic Pre-checks

- Verify BJB fuse 68 (40A) is OK.
- Inspect the rear window defrost grid and electrical connectors for damage.

PINPOINT TEST A : THE DEFROST SYSTEM IS INOPERATIVE

A1 CHECK THE REAR WINDOW DEFROST FUSE

- Ignition OFF.
- Inspect the BJB fuse 68 (40A).

Is the fuse OK?

Yes	GO to A2
No	REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

A2 CHECK THE REAR WINDOW DEFROST GRID VOLTAGE

- Ignition OFF.
- Disconnect: Heated Rear Window Element C402A.
- Start the engine.
- Activate the rear window defrost switch.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C402A-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to A3
No	GO to A4

A3 CHECK THE REAR WINDOW DEFROST GRID GROUND

- Ignition OFF.
- Disconnect: Heated Rear Window Element C402B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C402B-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	CARRY OUT the Grid Wire Test. REFER to Grid Wire Test. REPAIR the rear window defrost grid or INSTALL a new rear window glass. REFER to: Rear Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	REPAIR the circuit.

A4 CHECK THE REAR WINDOW DEFROST RELAY CONTROL CIRCUIT FOR VOLTAGE

A4 CHECK THE REAR WINDOW DEFROST RELAY CONTROL CIRCUIT FOR VOLTAGE

- Ignition OFF.
- Disconnect: FCIM C2402A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-7	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to A6
No	GO to A5

A5 CHECK THE REAR WINDOW DEFROST RELAY CONTROL CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect: BJB C1035A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-7	Ω	C1035A-32

Is the resistance less than 3 ohms?

Yes	INSTALL a new BJB.
No	REPAIR the circuit.

A6 CHECK THE REAR WINDOW DEFROST RELAY OPERATION

- **NOTE:** *If the jumper wire fuse fails when it is connected, refer to the Wiring Diagrams manual to identify the possible causes of the circuit short to voltage.*

  Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C2402A-7		Ground

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C402A-1	V	Ground

Is the voltage greater than 11 volts?

Yes	REMOVE the fused jumper wire. GO to A8
No	REMOVE the fused jumper wire. GO to A7

A7 CHECK THE REAR WINDOW DEFROST RELAY OUTPUT CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect: BJB C1035A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1035A-4	Ω	C402A-1

Is the resistance less than 3 ohms?

Yes	INSTALL a new BJB.
No	REPAIR the circuit.

A8 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the FCIM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins as necessary
  - pushed-out pins - install new pins as necessary
- Reconnect the FCIM connectors and all previously disconnected rear window defrost system connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Defrost System Does Not Shut Off Automatically

Refer to Wiring Diagrams Cell 56 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - Overview (501-11 Glass, Frames and Mechanisms, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1C83:13	Rear Defog Relay: Circuit Open	This DTC sets when the FCIM detects an open on the rear window defrost relay control circuit.

Possible Causes

- Wiring, terminals or connectors
- BJB
- FCIM

PINPOINT TEST B : THE DEFROST SYSTEM DOES NOT SHUT OFF AUTOMATICALLY

B1 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect: Heated Rear Window Element C402A.
- Disconnect: FCIM C2402A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C402A-1		Ground

Is any voltage present?

Yes	GO to B2
No	GO to B4

B2 CHECK THE REAR WINDOW DEFROST RELAY CONTROL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect: BJB C1035A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1035A-32	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B3
No	REPAIR the circuit.

B3 CHECK THE REAR WINDOW DEFROST RELAY CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1035A-4		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	INSTALL a new BJB.

B4 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the FCIM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins as necessary
  - pushed-out pins - install new pins as necessary
- Reconnect the FCIM connectors and all previously disconnected rear window defrost system connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A Single Power Window Is Inoperative/Does Not Operate Correctly - LH Front

Refer to Wiring Diagrams Cell 100 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - Overview (501-11 Glass, Frames and Mechanisms, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1088:83	LIN Bus "B": Value of Signal Protection Calculation Incorrect	This DTC sets when the DDM has received invalid data from the driver door window control switch.
B1088:87	LIN Bus "B": Missing Message	This DTC sets when the DDM has lost communication from the driver door window control switch.
B1189:29	Front Window Position Sensor: Signal Invalid	This DTC sets when the DDM detects a difference with one or both of the Hall-effect sensor circuits. When this DTC is present, the front window only operates in short steps.
B12C5:71	Front Window Lifter Motor Up Relay: Actuator Stuck	This DTC sets when the DDM detects the UP relay (integral to the DDM) is stuck or a short to voltage is present in the UP window motor circuit. When this DTC is present, the front window does not operate.
B12C8:71	Front Window Lifter Motor Down Relay: Actuator Stuck	This DTC sets when the DDM detects the DOWN relay (integral to the DDM) is stuck or a short to voltage is present in the DOWN window motor circuit. When this DTC is present, the front window does not operate.
C1B14:11	Sensor Supply Voltage A: Circuit Short To Ground	This DTC sets when the DDM detects a short to ground in the Hall-effect sensor power supply circuit. When this DTC is present, the front window only operates in short steps.

C1B14:15	Sensor Supply Voltage A: Circuit Short To Battery or Open	This DTC sets when the DDM detects a short to voltage or open in the Hall-effect sensor power supply circuit. When this DTC is present, the front window only operates in short steps.

Possible Causes

- Wiring, terminals or connectors
- Master window control switch
- Driver door window regulator motor
- DDM

Visual Inspection and Diagnostic Pre-checks

- Verify BCM fuse 23 (10A) is OK.

PINPOINT TEST C : A SINGLE POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY-LH FRONT

C1 CHECK FOR DDM (DRIVER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform DDM self-test.

Are any DDM Diagnostic Trouble Codes (DTCs) present?

Yes	For DTC C1B14:11, GO to C9 For DTC B1189:29 or C1B14:15, GO to C7 For DTC B12C5:71 or B12C8:71, GO to C3 For DTC B1088:83 and B1088:87, GO to C14 For all other Diagnostic Trouble Codes (DTCs), REFER to: Locks, Latches and Entry Systems (501-14 Handles, Locks, Latches and Entry Systems, Diagnosis and Testing).
No	GO to C2

C2 CHECK THE FRONT LEFT DOOR WINDOW SWITCH (FL_WDW) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view DDM Parameter Identifications (PIDs).
- Monitor the DDM PID FL_WDW while pressing and releasing the driver door window control switch in the up and down positions.

Does the PID status agree with the driver door window control switch as it is pressed and released?

Yes	GO to C3
No	INSTALL a new master window control switch. REFER to: Driver Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).

C3 CHECK FOR A SHORT TO VOLTAGE IN THE WINDOW UP/DOWN CIRCUITS

- Ignition OFF.
- Disconnect: Driver Door Window Regulator Motor C518LHD or C636RHD.
- Disconnect: DDM C501ALHD or C653ARHD.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C518-1		Ground
LHD C518-4		Ground

RHD C636-1		Ground
RHD C636-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to C4

C4 CHECK FOR A SHORT TO GROUND IN THE WINDOW UP/DOWN CIRCUITS

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C518-1	Ω	Ground
LHD C518-4	Ω	Ground
RHD C636-1	Ω	Ground
RHD C636-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to C5
No	REPAIR the circuit in question.

C5 CHECK FOR AN OPEN IN THE WINDOW UP/DOWN CIRCUITS

- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C518-1	Ω	C501A-13
LHD C518-4	Ω	C501A-14
RHD C636-1	Ω	C653A-13
RHD C636-4	Ω	C653A-14

Are the resistances less than 3 ohms?

Yes	GO to C6
No	REPAIR the circuit in question.

C6 CHECK THE DDM (DRIVER DOOR MODULE) OUTPUT

NOTICE: The following step uses a test light to simulate normal circuit loads. To avoid connector terminal damage, use the Flex Probe Kit for the test light probe connection to the vehicle. Do not use the test light probe directly on any connector.

NOTE: *Because the power window motor electrical connector (Hall-effect sensor input) is disconnected, the*

DDM only activates the window output for approximately 500 ms then turns off.

- Connect: DDM C501ALHD or C653ARHD.
- Ignition ON.
- Activate the driver door window control switch in the up and down positions while observing the test light.
- Connect:

Positive Lead	Measurement / Action	Negative Lead
LHD C518-1		C518-4
RHD C636-1		C636-4

Does the test light momentarily illuminate when the driver door window control switch is activated in both up and down positions?

Yes	INSTALL a new driver door window regulator motor. REFER to: Front Door Window Regulator Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	GO to C20

C7 CHECK THE HALL-EFFECT POWER AND RETURN CIRCUITS

NOTICE: The following step uses a test light to simulate normal circuit loads. To avoid connector terminal damage, use the Flex Probe Kit for the test light probe connection to the vehicle. Do not use the test light probe directly on any connector.

- Ignition OFF.
- Disconnect: Driver Door Window Regulator Motor C518LHD or C636RHD.
- Ignition ON.
- Connect:

Positive Lead	Measurement / Action	Negative Lead
LHD C518-3		C518-6
RHD C636-3		C636-6

Does the test light illuminate?

Yes	GO to C11
No	GO to C8

C8 CHECK FOR AN OPEN IN THE HALL-EFFECT POWER AND RETURN CIRCUITS

- Ignition OFF.
- Disconnect: DDM C501ALHD or C653ARHD.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C518-3	Ω	C501A-16
LHD C518-6	Ω	C501A-22
RHD C636-3	Ω	C653A-16
RHD C636-6	Ω	C653A-22

Are the resistances less than 3 ohms?

Yes	GO to C20
No	REPAIR the circuit in question.

C9 CHECK THE HALL-EFFECT POWER CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect: DDM C501ALHD or C653ARHD.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C501A-16	Ω	Ground
RHD C653A-16	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to C20
No	GO to C10

C10 CHECK THE HALL-EFFECT POWER CIRCUIT FOR A SHORT TO GROUND WITH THE POWER WINDOW MOTOR DISCONNECTED

- Disconnect: Driver Door Window Regulator Motor C518LHD or C636RHD.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C501A-16	Ω	Ground
RHD C653A-16	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new driver door window regulator motor. REFER to: Front Door Window Regulator Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	REPAIR the circuit.

C11 CHECK FOR A SHORT TO VOLTAGE IN THE HALL-EFFECT SIGNAL CIRCUITS

- Ignition OFF.
- Disconnect: DDM C501ALHD or C653ARHD.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C518-2		Ground

LHD C518-5	V	Ground
RHD C636-2	V	Ground
RHD C636-5	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to C12

C12 CHECK FOR A SHORT TO GROUND IN THE HALL-EFFECT SIGNAL CIRCUITS

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C518-2	Ω	Ground
LHD C518-5	Ω	Ground
RHD C636-2	Ω	Ground
RHD C636-5	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to C13
No	REPAIR the circuit in question.

C13 CHECK FOR AN OPEN IN THE HALL-EFFECT SIGNAL CIRCUITS

- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C518-2	Ω	C501A-21
LHD C518-5	Ω	C501A-11
RHD C636-2	Ω	C653A-21
RHD C636-5	Ω	C653A-11

Are the resistances less than 3 ohms?

Yes	INSTALL a new driver door window regulator motor. REFER to: Front Door Window Regulator Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to C20
No	REPAIR the circuit in question.

C14 CHECK FOR VOLTAGE TO THE MASTER WINDOW CONTROL SWITCH

- Ignition OFF.
- Disconnect: Master Window Control Switch C504LHD or C604RHD.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C504-1		Ground
RHD C604-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to C15
No	VERIFY BCM fuse 23 (10A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

C15 CHECK THE MASTER WINDOW CONTROL SWITCH GROUND CIRCUIT

NOTICE: The following step uses a test light to simulate normal circuit loads. To avoid connector terminal damage, use the Flex Probe Kit for the test light probe connection to the vehicle. Do not use the test light probe directly on any connector.

- Ignition ON.
- Connect:

Positive Lead	Measurement / Action	Negative Lead
LHD C504-1		C504-3
RHD C604-1		C604-3

Does the test light illuminate?

Yes	GO to C17
No	GO to C16

C16 CHECK THE MASTER WINDOW CONTROL SWITCH GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect: DDM C501ALHD or C653ARHD.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C504-4	Ω	C501A-17
RHD C604-4	Ω	C653A-17

Is the resistance less than 3 ohms?

Yes	GO to C20
No	REPAIR the circuit.

C17 CHECK THE MASTER WINDOW CONTROL SWITCH LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: DDM C501ALHD or C653ARHD.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C504-1	V	Ground
RHD C604-1	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to C18

C18 CHECK THE MASTER WINDOW CONTROL SWITCH LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C504-3	Ω	Ground
RHD C604-3	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to C19
No	REPAIR the circuit.

C19 CHECK THE MASTER WINDOW CONTROL SWITCH LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C504-3	Ω	C501A-5
RHD C604-3	Ω	C653A-5

Is the resistance less than 3 ohms?

Yes	INSTALL a new master window control switch. REFER to: Driver Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).

	CLEAR the Diagnostic Trouble Codes (DTCs). TEST the system for normal operation. If the concern is still present, GO to C20
No	REPAIR the circuit.

C20 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the DDM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins as necessary
  - pushed-out pins - install new pins as necessary
- Reconnect the DDM connectors. Make sure they seat and latch correctly.
- Reconnect all previously disconnected connectors.
- Ignition ON.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A Single Power Window Is Inoperative/Does Not Operate Correctly - RH Front

Refer to Wiring Diagrams Cell 100 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - Overview (501-11 Glass, Frames and Mechanisms, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1189:29	Front Window Position Sensor: Signal Invalid	This DTC sets when the PDM detects a difference with one or both of the Hall-effect sensor circuits. When this DTC is present, the front window only operates in short steps.
B12C5:71	Front Window Lifter Motor Up Relay: Actuator Stuck	This DTC sets when the PDM detects the UP relay (integral to the PDM) is stuck or a short to voltage is present in the UP window motor circuit. When this DTC is present, the front window does not operate.
B12C8:71	Front Window Lifter Motor Down Relay: Actuator Stuck	This DTC sets when the PDM detects the DOWN relay (integral to the PDM) is stuck or a short to voltage is present in the DOWN window motor circuit. When this DTC is present, the front window does not operate.
C1B14:11	Sensor Supply Voltage A: Circuit Short To Ground	This DTC sets when the PDM detects a short to ground in the Hall-effect sensor power supply circuit. When this DTC is present, the front window only operates in short steps.
C1B14:15	Sensor Supply Voltage A: Circuit Short To Battery or	This DTC sets when the PDM detects an open or short to voltage in the Hall-effect sensor power supply circuit. When this DTC is present, the front window only operates in short steps.

	Open	
U2002:24	Switch: Signal Stuck High	This DTC sets when the PDM detects the window control switch is stuck in the UP or DOWN position or a short to ground is present on the input circuit for greater than 10 seconds.

Possible Causes

- Wiring, terminals or connectors
- Master window control switch
- Passenger door window control switch
- Passenger door window regulator motor
- PDM

PINPOINT TEST D : A SINGLE POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - RH FRONT

D1 CHECK FOR PDM (PASSENGER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform PDM self-test.

Are any PDM Diagnostic Trouble Codes (DTCs) present?

Yes	For DTC C1B14:11, GO to D15 For DTC B1189:29 or C1B14:15, GO to D13 For DTC B12C5:71 or B12C8:71, GO to D9 For DTC U2002:24, GO to D6 For all other Diagnostic Trouble Codes (DTCs), REFER to: Locks, Latches and Entry Systems (501-14 Handles, Locks, Latches and Entry Systems, Diagnosis and Testing).
No	GO to D2

D2 CHECK THE WINDOW OPERATION FROM THE PASSENGER DOOR WINDOW CONTROL SWITCH

- Attempt to operate the RH door window from the passenger door window control switch.

Does the RH door window operate correctly from the passenger door window control switch?

Yes	INSTALL a new master window control switch. REFER to: Driver Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	GO to D3

D3 CHECK THE PASSENGER DOOR WINDOW CONTROL SWITCH

- Ignition OFF.
- Disconnect: Passenger Door Window Control Switch C624LHD or C592RHD.
- Carry out the passenger door window control switch component test.
  Refer to Wiring Diagrams Cell 149 for schematic and connector information.

Did the passenger door window control switch pass the component test?

Yes	GO to D4
No	INSTALL a new passenger door window control switch. REFER to: Passenger Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).

D4 CHECK THE WINDOW CONTROL SWITCH UP/DOWN CIRCUITS

- Ignition ON.
- Connect a fused jumper wire temporarily while observing the window operation:

Positive Lead	Measurement / Action	Negative Lead
LHD C624-3 (DOWN)		Ground
LHD C624-2 (UP)		Ground
RHD C592-3 (DOWN)		Ground
RHD C592-2 (UP)		Ground

Does the window operate upward and downward when the fused jumper wire is in place?

Yes	GO to D5
No	GO to D8

D5 CHECK THE WINDOW CONTROL SWITCH RETURN CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect: PDM C652ALHD or C590ARHD.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C624-1	Ω	C652A-17
RHD C592-1	Ω	C590A-17

Is the resistance less than 3 ohms?

Yes	GO to D20
No	REPAIR the circuit.

D6 CHECK THE WINDOW CONTROL SWITCH CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect: PDM C652ALHD or C590ARHD.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C652A-8	Ω	Ground
LHD C652A-9	Ω	Ground
RHD C590A-8	Ω	Ground
RHD C590A-9	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to D20

No	GO to D7

D7 CHECK THE WINDOW CONTROL SWITCH CIRCUITS FOR A SHORT TO GROUND WITH THE WINDOW CONTROL SWITCH DISCONNECTED

- Disconnect: Passenger Door Window Control Switch C624LHD or C592RHD.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C652A-8	Ω	Ground
LHD C652A-9	Ω	Ground
RHD C590A-8	Ω	Ground
RHD C590A-9	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	INSTALL a new passenger door window control switch. REFER to: Passenger Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	REPAIR the circuit in question.

D8 CHECK THE WINDOW CONTROL SWITCH CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect: PDM C652ALHD or C590ARHD.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C624-2	Ω	C652A-8
LHD C624-3	Ω	C652A-9
RHD C592-2	Ω	C590A-8
RHD C592-3	Ω	C590A-9

Are the resistances less than 3 ohms?

Yes	GO to D9
No	REPAIR the circuit in question.

D9 CHECK FOR A SHORT TO VOLTAGE IN THE WINDOW UP/DOWN CIRCUITS

- Ignition OFF.
- Disconnect: PDM C652ALHD or C590ARHD (if not previously disconnected).
- Disconnect: Passenger Door Window Regulator Motor C6013LHD or C5013RHD.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C6013-1		Ground

LHD C6013-4		Ground
RHD C5013-1		Ground
RHD C5013-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to D10

D10 CHECK FOR A SHORT TO GROUND IN THE WINDOW UP/DOWN CIRCUITS

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C6013-1	Ω	Ground
LHD C6013-4	Ω	Ground
RHD C5013-1	Ω	Ground
RHD C5013-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to D11
No	REPAIR the circuit in question.

D11 CHECK FOR AN OPEN IN THE WINDOW UP/DOWN CIRCUITS

- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C6013-1	Ω	C652A-13
LHD C6013-4	Ω	C652A-14
RHD C5013-1	Ω	C590A-13
RHD C5013-4	Ω	C590A-14

Are the resistances less than 3 ohms?

Yes	GO to D12
No	REPAIR the circuit in question.

D12 CHECK THE PDM (PASSENGER DOOR MODULE) OUTPUT

NOTICE: The following step uses a test light to simulate normal circuit loads. To avoid connector terminal damage, use the Flex Probe Kit for the test light probe connection to the vehicle. Do not use

the test light probe directly on any connector.

NOTE: *Because the power window motor electrical connector (Hall-effect sensor input) is disconnected, the PDM only activates the window output for approximately 500 ms then turns off.*

- Ignition OFF.
- Connect: PDM C652ALHD or C590ARHD.
- Connect: Passenger Door Window Control Switch C624LHD or C592RHD (if previously disconnected).
- Ignition ON.
- Activate the passenger door window control switch in the up and down positions while observing the test light.
- Connect:

Positive Lead	Measurement / Action	Negative Lead
LHD C6013-1		C6013-4
RHD C5013-1		C5013-4

Does the test light momentarily illuminate when the window control switch is activated in both up and down positions?

Yes	INSTALL a new passenger door window regulator motor. REFER to: Front Door Window Regulator Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	GO to D20

D13 CHECK THE HALL-EFFECT POWER AND RETURN CIRCUITS

NOTICE: The following step uses a test light to simulate normal circuit loads. To avoid connector terminal damage, use the Flex Probe Kit for the test light probe connection to the vehicle. Do not use the test light probe directly on any connector.

- Ignition OFF.
- Disconnect: Passenger Door Window Regulator Motor C6013LHD or C5013RHD.
- Connect: Passenger Door Window Control Switch C624LHD or C592RHD (if previously disconnected).
- Ignition ON.
- Connect:

Positive Lead	Measurement / Action	Negative Lead
LHD C6013-3		C6013-6
RHD C5013-3		C5013-6

Does the test light illuminate?

Yes	GO to D17
No	GO to D14

D14 CHECK FOR AN OPEN IN THE HALL-EFFECT POWER AND RETURN CIRCUITS

- Ignition OFF.
- Disconnect: PDM C652ALHD or C590ARHD.
- Connect:

Positive Lead	Measurement / Action	Negative Lead

LHD C6013-3	Ω	C652A-16
LHD C6013-6	Ω	C652A-22
RHD C5013-3	Ω	C590A-16
RHD C5013-6	Ω	C590A-22

Are the resistances less than 3 ohms?

Yes	GO to D20
No	REPAIR the circuit in question.

D15 CHECK THE HALL-EFFECT POWER CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect: PDM C652ALHD or C590ARHD.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C652A-16	Ω	Ground
RHD C590A-16	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to D20
No	GO to D16

D16 CHECK THE HALL-EFFECT POWER CIRCUIT FOR A SHORT TO GROUND WITH THE PASSENGER DOOR WINDOW REGULATOR MOTOR DISCONNECTED

- Disconnect: Passenger Door Window Regulator Motor C6013LHD or C5013RHD.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C652A-16	Ω	Ground
RHD C590A-16	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new passenger door window regulator motor. REFER to: Front Door Window Regulator Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	REPAIR the circuit.

D17 CHECK FOR A SHORT TO VOLTAGE IN THE HALL-EFFECT SIGNAL CIRCUITS

- Ignition OFF.
- Disconnect: PDM C652ALHD or C590ARHD.
- Ignition ON.

- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C6013-2	V	Ground
LHD C6013-5	V	Ground
RHD C5013-2	V	Ground
RHD C5013-5	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to D18

D18 CHECK FOR A SHORT TO GROUND IN THE HALL-EFFECT SIGNAL CIRCUITS

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C6013-2	Ω	Ground
LHD C6013-5	Ω	Ground
RHD C5013-2	Ω	Ground
RHD C5013-5	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to D19
No	REPAIR the circuit in question.

D19 CHECK FOR AN OPEN IN THE HALL-EFFECT SIGNAL CIRCUITS

- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C6013-2	Ω	C652A-11
LHD C6013-5	Ω	C652A-21
RHD C5013-2	Ω	C590A-11
RHD C5013-5	Ω	C590A-21

Are the resistances less than 3 ohms?

Yes	INSTALL a new passenger door window regulator motor. REFER to: Front Door Window Regulator Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to D20

No	REPAIR the circuit in question.

D20 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the PDM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins as necessary
  - pushed-out pins - install new pins as necessary
- Reconnect the PDM connectors. Make sure they seat and latch correctly.
- Reconnect all previously disconnected connectors.
- Ignition ON.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The One-Touch Up/Down Feature Is Inoperative

Refer to Wiring Diagrams Cell 100 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - Overview (501-11 Glass, Frames and Mechanisms, Description and Operation).

Possible Causes

- Window regulator motor not initialized
- Window control switch
- DDM
- PDM

PINPOINT TEST E : THE ONE-TOUCH UP/DOWN FEATURE IS INOPERATIVE

E1 INITIALIZE THE SUSPECT POWER WINDOW

- Carry out the initialization procedure on the suspect power window.
  REFER to: Door Window Motor Initialization (501-11 Glass, Frames and Mechanisms, General Procedures).

Is the one-touch up feature operating correctly?

Yes	The system is operating normally at this time. The window lost initialization.
No	If the one-touch up/down feature is inoperative for the LH front window, INSTALL a new master window control switch. REFER to: Driver Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation). TEST the system for normal operation. If the concern is still present, INSTALL a new DDM. REFER to: Driver Door Module (DDM) (419-10 Multifunction Electronic Modules, Removal and Installation).

	If the one-touch up/down feature is inoperative for the Passenger front window, INSTALL a new window control switch. REFER to: Passenger Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation). TEST the system for normal operation. If the concern is still present, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) (419-10 Multifunction Electronic Modules, Removal and Installation).

A Single Power Window Is Inoperative/Does Not Operate Correctly - LH Rear

Refer to Wiring Diagrams Cell 100 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - Overview (501-11 Glass, Frames and Mechanisms, Description and Operation).

Possible Causes

- Wiring, terminals or connectors
- Master window control switch
- LH rear door window control switch
- LH rear door window regulator motor

Visual Inspection and Diagnostic Pre-checks

- Verify the lock-out switch is in the UNLOCK position.

PINPOINT TEST F : A SINGLE POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - LH REAR

F1 CHECK THE LH (LEFT-HAND) REAR DOOR WINDOW OPERATION FROM THE MASTER WINDOW CONTROL SWITCH

- Ignition ON.
- Attempt to operate the LH rear door window from the master window control switch.

Does the LH rear door window operate correctly from the master window control switch?

Yes	GO to F2
No	GO to F3

F2 CHECK THE LH (LEFT-HAND) REAR DOOR WINDOW CONTROL SWITCH LOCK-OUT CIRCUIT FEED FOR VOLTAGE

- Ignition OFF.
- Disconnect: LH Rear Door Window Control Switch C701.
- Ignition ON.
- Make sure the window lock-out switch is in the UNLOCK position.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C701-3		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new LH rear door window control switch.

	REFER to: Rear Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	REPAIR the circuit.

F3 CHECK THE LH (LEFT-HAND) REAR DOOR WINDOW OPERATION FROM LH (LEFT-HAND) REAR DOOR WINDOW CONTROL SWITCH

- Make sure the window lock-out switch is in the UNLOCK position.
- Attempt to operate the LH rear door window from the LH rear door window control switch.

Does the LH rear door window operate when using the LH rear door window control switch?

Yes	GO to F4
No	GO to F6

F4 CHECK THE WINDOW CONTROL SWITCH UP/DOWN CIRCUITS

- Ignition OFF.
- Disconnect: Master Window Control Switch C504LHD or C604RHD.
- Ignition ON.
- Connect a fused jumper wire temporarily while observing the window operation:

Lead	Measurement / Action	Lead
LHD C504-17 (DOWN)		C504-4
LHD C504-18 (UP)		C504-4
RHD C604-17 (DOWN)		C604-4
RHD C604-18 (UP)		C604-4

Does the window operate upward and downward when the fused jumper wire is in place?

Yes	REMOVE the jumper wire. INSTALL a new master window control switch. REFER to: Driver Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	REMOVE the jumper wire. GO to F5

F5 CHECK THE WINDOW CONTROL CIRCUITS FOR AN OPEN BETWEEN THE LH (LEFT-HAND) REAR DOOR WINDOW CONTROL SWITCH AND THE MASTER WINDOW CONTROL SWITCH

- Ignition OFF.
- Disconnect: LH Rear Door Window Control Switch C701.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C701-1	Ω	C504-18
LHD C701-4	Ω	C504-17
RHD C701-1	Ω	C604-18
RHD C701-4	Ω	C604-17

Are the resistances less than 3 ohms?

Yes	INSTALL a new master window control switch. REFER to: Driver Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	REPAIR the circuit in question.

F6 CHECK FOR POWER TO THE LH (LEFT-HAND) REAR DOOR WINDOW CONTROL SWITCH FOR AN OPEN

- Ignition OFF.
- Disconnect: LH Rear Door Window Control Switch C701.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C701-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to F7
No	REPAIR the circuit.

F7 CHECK THE GROUND TO THE LH (LEFT-HAND) REAR DOOR WINDOW CONTROL SWITCH FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C701-4	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to F8
No	REPAIR the circuit.

F8 CHECK THE LH (LEFT-HAND) REAR DOOR WINDOW CONTROL SWITCH

- Carry out the LH rear door window control switch component test.
  Refer to Wiring Diagrams Cell 149 for schematic and connector information.

Did the LH rear door window control switch pass the component test?

Yes	GO to F9
No	INSTALL a new LH rear door window control switch. REFER to: Rear Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).

F9 CHECK FOR AN OPEN BETWEEN THE LH (LEFT-HAND) REAR DOOR WINDOW CONTROL

SWITCH AND THE WINDOW MOTOR

- Disconnect: LH Rear Door Window Regulator Motor C703.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C701-7	Ω	C703-1
C701-6	Ω	C703-2

Are the resistances less than 3 ohms?

Yes	INSTALL a new LH rear door window regulator motor. REFER to: Rear Door Window Regulator Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	REPAIR the circuit in question.

A Single Power Window Is Inoperative/Does Not Operate Correctly - RH Rear

Refer to Wiring Diagrams Cell 100 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - Overview (501-11 Glass, Frames and Mechanisms, Description and Operation).

Possible Causes

- Wiring, terminals or connectors
- Master window control switch
- RH rear door window control switch
- RH rear door window regulator motor

Visual Inspection and Diagnostic Pre-checks

- Verify the lock-out switch is in the UNLOCK position.

PINPOINT TEST G : A SINGLE POWER WINDOW IS INOPERATIVE/DOES NOT OPERATE CORRECTLY - RH REAR

G1 CHECK THE RH (RIGHT-HAND) REAR DOOR WINDOW OPERATION FROM THE MASTER WINDOW CONTROL SWITCH

- Ignition ON.
- Attempt to operate the RH rear door window from the master window control switch.

Does the RH rear door window operate correctly from the master window control switch?

Yes	GO to G2
No	GO to G3

G2 CHECK THE RH (RIGHT-HAND) REAR DOOR WINDOW CONTROL SWITCH LOCK-OUT CIRCUIT FEED FOR VOLTAGE

- Ignition OFF.
- Disconnect: RH Rear Door Window Control Switch C801.
- Ignition ON.

- Make sure the window lock-out switch is in the UNLOCK position.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C801-1		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new RH rear door window control switch. REFER to: Rear Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	REPAIR the circuit.

G3 CHECK THE RH (RIGHT-HAND) REAR DOOR WINDOW OPERATION FROM RH (RIGHT-HAND) REAR DOOR WINDOW CONTROL SWITCH

- Make sure the window lock-out switch is in the UNLOCK position.
- Attempt to operate the RH rear door window from the RH rear door window control switch.

Does the RH rear door window operate when using the RH rear door window control switch?

Yes	GO to G4
No	GO to G6

G4 CHECK THE WINDOW CONTROL SWITCH UP/DOWN CIRCUITS

- Ignition OFF.
- Disconnect: Master Window Control Switch C504LHD or C604RHD.
- Ignition ON.
- Connect a fused jumper wire temporarily while observing the window operation:

Lead	Measurement / Action	Lead
LHD C504-14 (DOWN)		C504-1
LHD C504-13 (UP)		C504-1
RHD C604-14 (DOWN)		C504-1
RHD C604-13 (UP)		C504-1

Does the window operate upward and downward when the fused jumper wire is in place?

Yes	REMOVE the jumper wire. INSTALL a new master window control switch. REFER to: Driver Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	REMOVE the jumper wire. GO to G5

G5 CHECK THE WINDOW CONTROL CIRCUITS FOR AN OPEN BETWEEN THE RH (RIGHT-HAND) REAR DOOR WINDOW CONTROL SWITCH AND THE MASTER WINDOW CONTROL SWITCH

- Ignition OFF.
- Disconnect: RH Rear Door Window Control Switch C801.

- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C801-1	Ω	C504-13
LHD C801-4	Ω	C504-14
RHD C801-1	Ω	C604-13
RHD C801-4	Ω	C604-14

Are the resistances less than 3 ohms?

Yes	INSTALL a new master window control switch. REFER to: Driver Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	REPAIR the circuit in question.

G6 CHECK FOR POWER TO THE RH (RIGHT-HAND) REAR DOOR WINDOW CONTROL SWITCH FOR AN OPEN

- Ignition OFF.
- Disconnect: RH Rear Door Window Control Switch C801.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C801-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to G7
No	REPAIR the circuit.

G7 CHECK THE GROUND TO THE RH (RIGHT-HAND) REAR DOOR WINDOW CONTROL SWITCH FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C801-4	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to G8
No	REPAIR the circuit.

G8 CHECK THE RH (RIGHT-HAND) REAR DOOR WINDOW CONTROL SWITCH

- Carry out the RH rear door window control switch component test.
  Refer to Wiring Diagrams Cell 149 for schematic and connector information.

Did the RH rear door window control switch pass the component test?

Yes	GO to G9
No	INSTALL a new RH rear door window control switch. REFER to: Rear Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).

G9 CHECK FOR AN OPEN BETWEEN THE RH (RIGHT-HAND) REAR DOOR WINDOW CONTROL SWITCH AND THE WINDOW MOTOR

- Disconnect: RH Rear Door Window Regulator Motor C828.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C801-7	Ω	C828-3
C801-6	Ω	C828-6

Are the resistances less than 3 ohms?

Yes	INSTALL a new RH rear door window regulator motor. REFER to: Rear Door Window Regulator Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	REPAIR the circuit in question.

Both Rear Passenger Power Windows Are Inoperative

Refer to Wiring Diagrams Cell 100 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Glass, Frames and Mechanisms - Overview (501-11 Glass, Frames and Mechanisms, Description and Operation).

Possible Causes

- Circuit breaker
- Wiring, terminals or connectors
- Master window control switch

Visual Inspection and Diagnostic Pre-checks

- Verify the lock-out switch is in the UNLOCK position.

PINPOINT TEST H : BOTH REAR PASSENGER POWER WINDOWS ARE INOPERATIVE

H1 CHECK FOR POWER TO THE LH (LEFT-HAND) REAR DOOR WINDOW CONTROL SWITCH

- Ignition OFF.
- Disconnect: LH Rear Door Window Control Switch C701.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C701-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to H3
No	GO to H2

H2 CHECK FOR A SHORT TO GROUND IN THE HIGH CURRENT POWER CIRCUIT TO THE LH (LEFT-HAND) REAR DOOR WINDOW CONTROL SWITCH

- Ignition OFF.
- Disconnect: BCM Circuit Breaker 38 (30A).
- Install a fused jumper wire in place of BCM Circuit Breaker 38 (30A).
- Connect: LH Rear Door Window Control Switch C701.
- Ignition ON.
- Attempt to operate each individual rear door power window in both directions from each of the rear passenger door switches.

Did the jumper wire fuse open during the test?

Yes	REMOVE the fused jumper wire. REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.
No	If the rear power windows operated correctly with the fused jumper wire in place, INSTALL a new circuit breaker. If the rear power windows did not operate with the fused jumper wire in place, REPAIR the circuit.

H3 CHECK THE LOW CURRENT POWER CIRCUIT TO THE LH (LEFT-HAND) REAR DOOR WINDOW CONTROL SWITCH FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect: Master Window Control Switch C504LHD or C604RHD.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C701-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to H4
No	REPAIR the circuit.

H4 CHECK THE LOW CURRENT POWER CIRCUIT TO THE LH (LEFT-HAND) REAR DOOR WINDOW CONTROL SWITCH FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C701-1	Ω	C504-1

RHD C701-1	Ω	C604-1

Is the resistance less than 3 ohms?

Yes	INSTALL a new master window control switch. REFER to: Driver Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).
No	REPAIR the circuit.

Component Test- Grid Wire Test

1. Using a bright lamp in the vehicle, inspect the grid wire from the exterior. A broken grid wire appears as a brown spot.
2. Run the engine at idle. Activate the rear window defrost switch. The indicator light should come on.
3. Working in the vehicle with a voltmeter, contact the broad red-brown stripes of the rear glass window (positive lead to B+ side and the negative lead to ground side). The meter should read 10-13 volts. A lower voltage reading indicates a loose ground connection.
4. Contact a good ground point with the negative lead of the meter. The voltage reading should not change.
5. With the negative lead of the meter grounded, touch each grid line of the heated rear window glass at its midpoint with the positive lead. A reading of approximately 6 volts indicates the line is good. A reading of 0 volt indicates the line is broken between the midpoint and the B+ side of the grid line. A reading of 12 volts indicates the circuit is broken between the midpoint of the grid line and ground.
6. Pinpointing the exact position of the break can be accomplished (if the voltmeter reads 0 volt when the midpoint of the grid line is touched with the positive lead of the voltmeter) by moving the positive lead of the voltmeter toward the B+ side of the grid line and touching the grid line until the voltmeter reads 12 volts. If the voltmeter reads 12 volts when the midpoint of the grid line is touched with the positive lead of the voltmeter, simply move the positive lead of the voltmeter toward the ground connection of the grid line and touch the grid line until the voltmeter reads 0 volt.

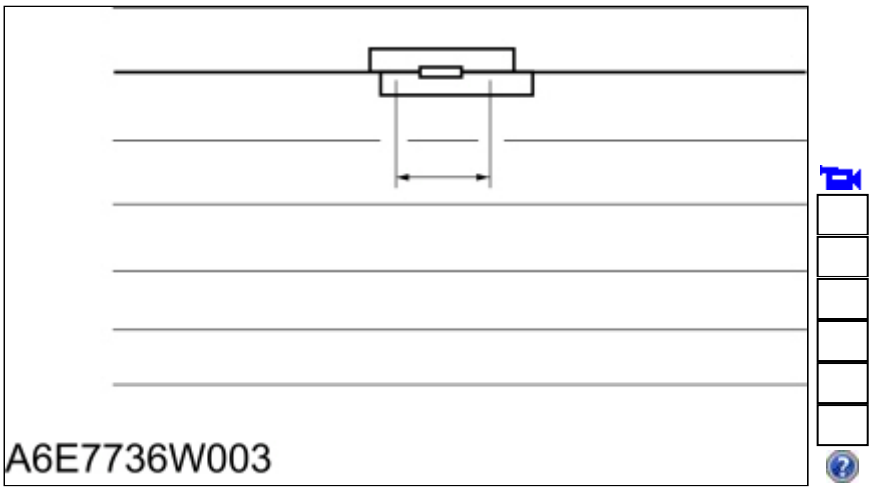
Door Window Motor Initialization

NOTE: *Make sure that the window runs are correctly installed and free of foreign material.*

NOTE: *If the power to a power window switch has been disconnected, that window regulator motor must be initialized.*

NOTE: *Wait for a minimum of 1 minute before connecting the battery, fuse or electrical connector.*



1. Switch on the ignition to operate the electric windows.
2. From an open position lift the switch using the second detent position until the window is fully closed. Hold the switch for two more seconds and release.
3. Open the window using the first detent position and try to close it automatically using the second detent position.
4. Repeat the procedure if the window does not open/close automatically when the switch is actuated to the open/close second detent positions.

Heated Window Grid Wire Repair

Base Part Number: 42006

1. Clean the filament using isopropyl alcohol.
2. Attach tape to both sides of the filament.

3. Using a small brush or marking pen, apply silver paint.
4. **NOTICE: Do not operate the rear window defroster until the paint is completely dry. It may cause other malfunctions if it is used before the paint is dry.**

   After 2—3 min, carefully remove the tape without damaging the applied area.

5. Dry the repaired part according to the following procedure.
   - When the room temperature is 25 °C {77 °F}, leave to dry for 24 h.
   - When a hot air blower is used, dry with air at a temperature of 150 °C {302 °F} or 30 min.

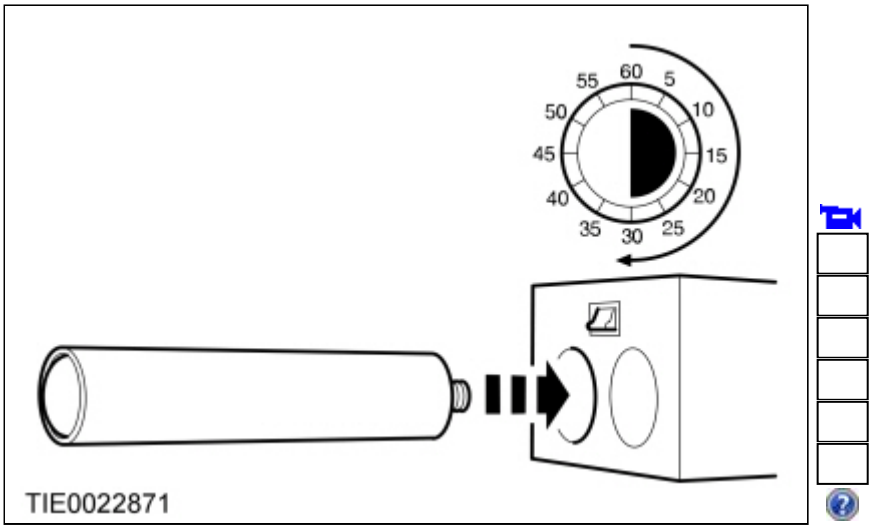
Windshield Glass

Base Part Number: S03100

Special Tool(s) / General Equipment

Direct Glazing Removal/Replacement Equipment
Knife
Adhesive Tape

Materials



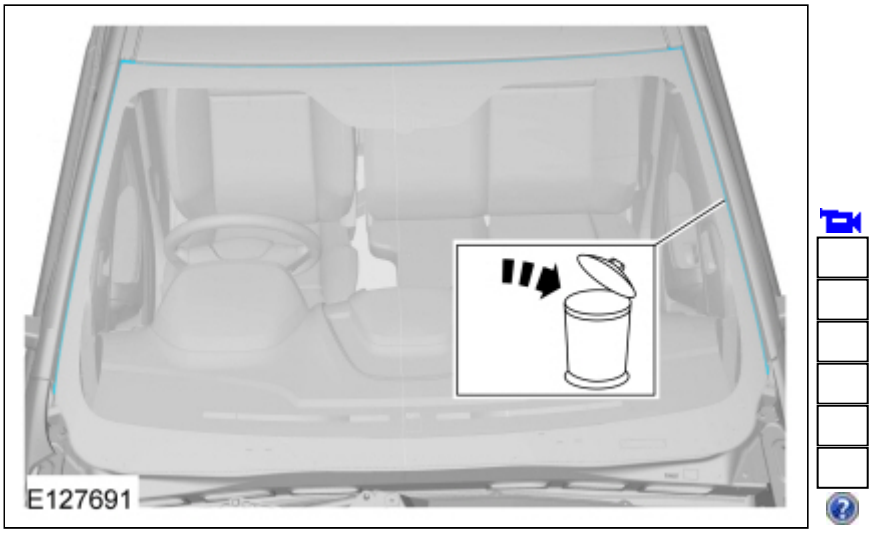
Name	Specification
Adhesive	WSK-M11P57-A3
Adhesive	WSS-M11P57-A5

Removal

NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

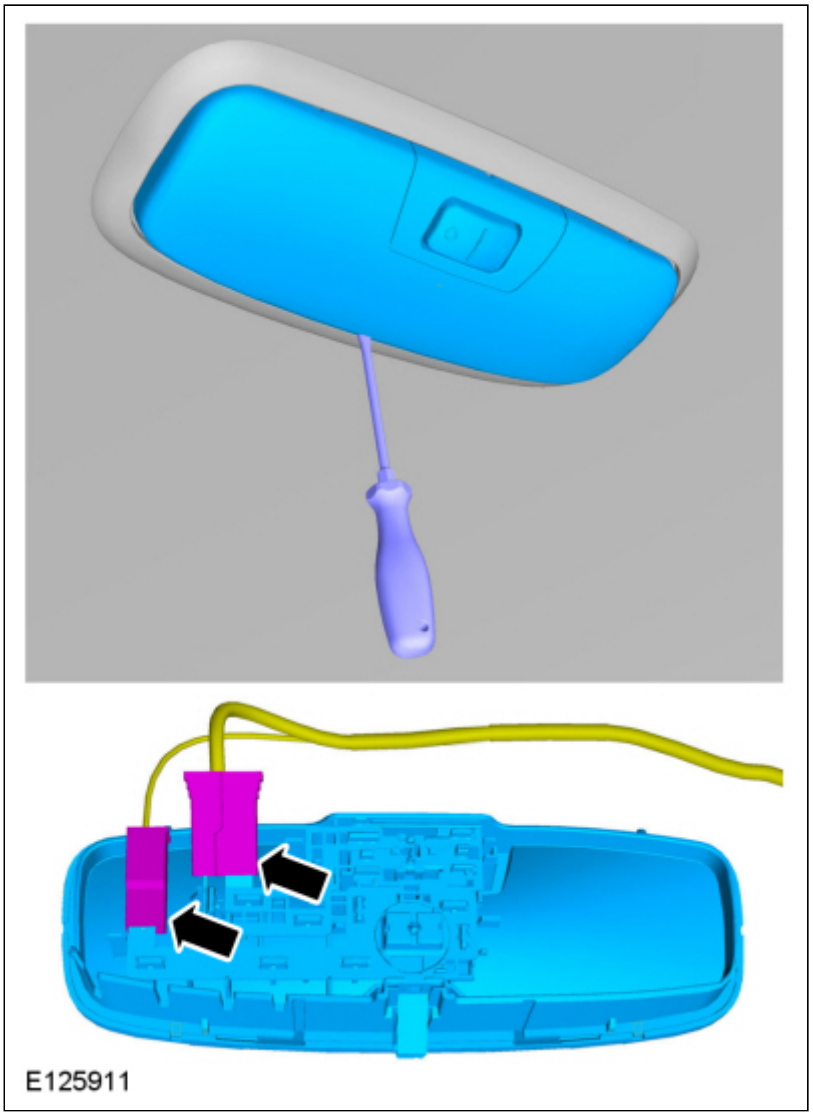
   - *Material*: Adhesive (WSK-M11P57-A3)
   - Remove the polyurethane (PU) adhesive cap and heat the 2K-PU adhesive for a minimum of 30 minutes.
     Use the General Equipment: Direct Glazing Removal/Replacement Equipment
   - Repairs under warranty:
     Material: Adhesive (WSS-M11P57-A5)



3. **NOTICE: Make sure that the motor is in the park position.**

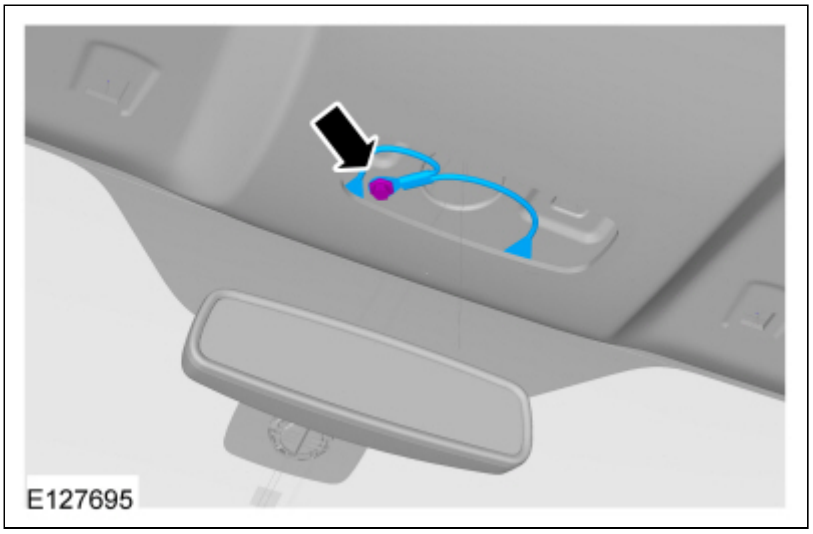
   Refer to: Wiper Linkage Assembly (501-16 Wipers and Washers, Removal and Installation).

4. Refer to: Cowl Panel Grille (501-02 Front End Body Panels, Removal and Installation).

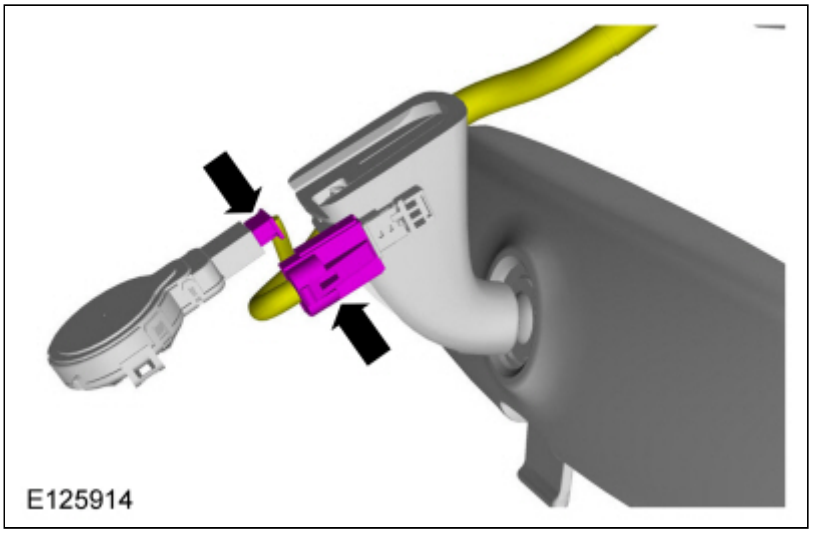


5.

6. **NOTE:** *Vehicles with heated windsheild only.*

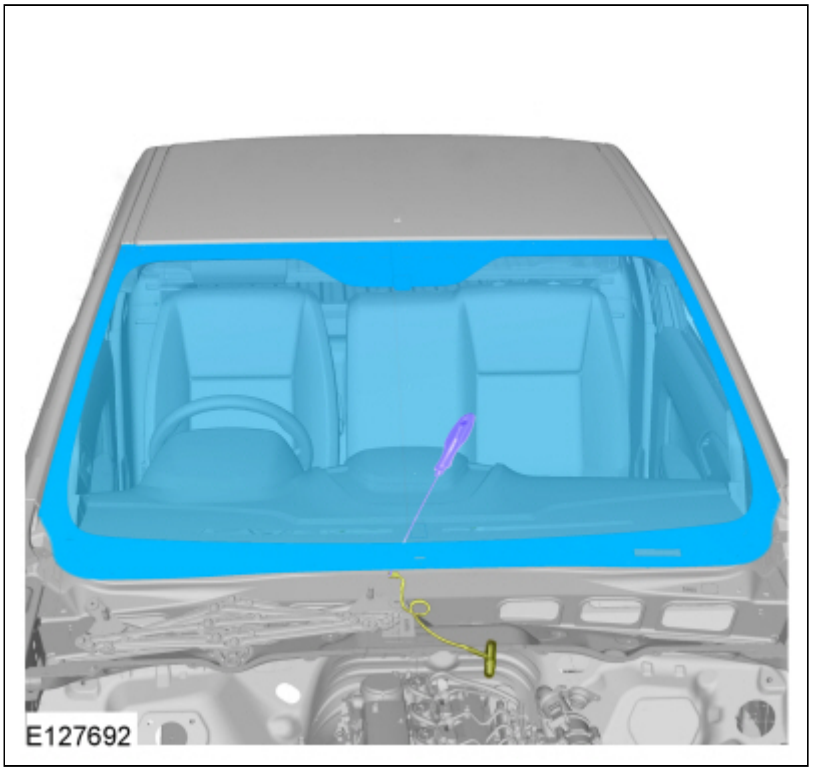


7. **NOTE:** *Vehicles with heated windsheild only.*



8. **NOTE:** *Vehicles with heated windsheild only.*

   Torque: 10 Nm

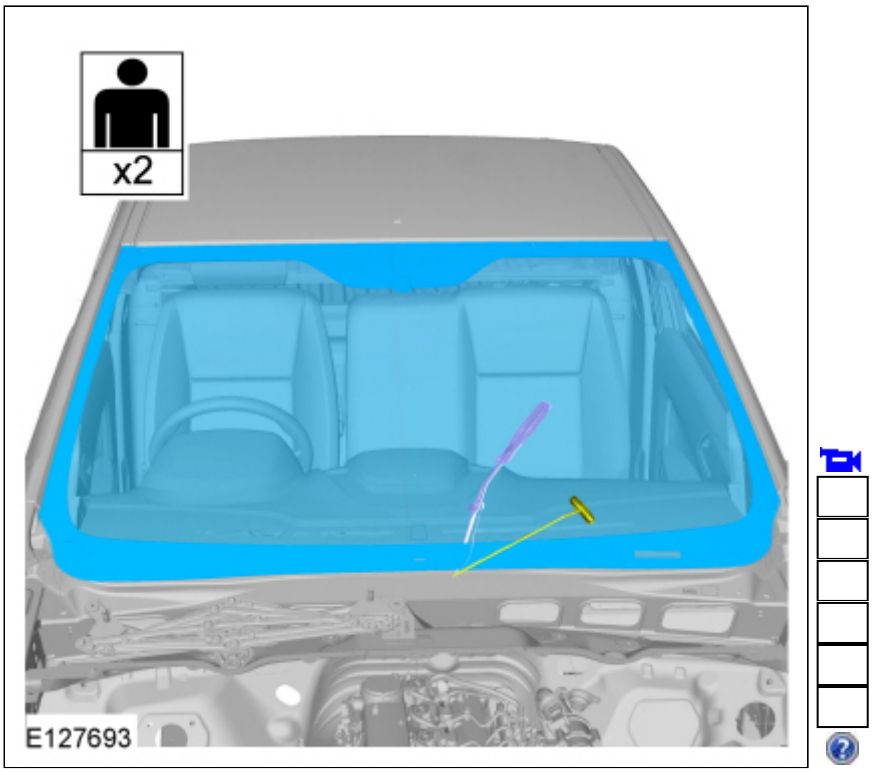


9. **NOTE:** *Vehicles with auto-dimming interior mirror and rain sensor only.*

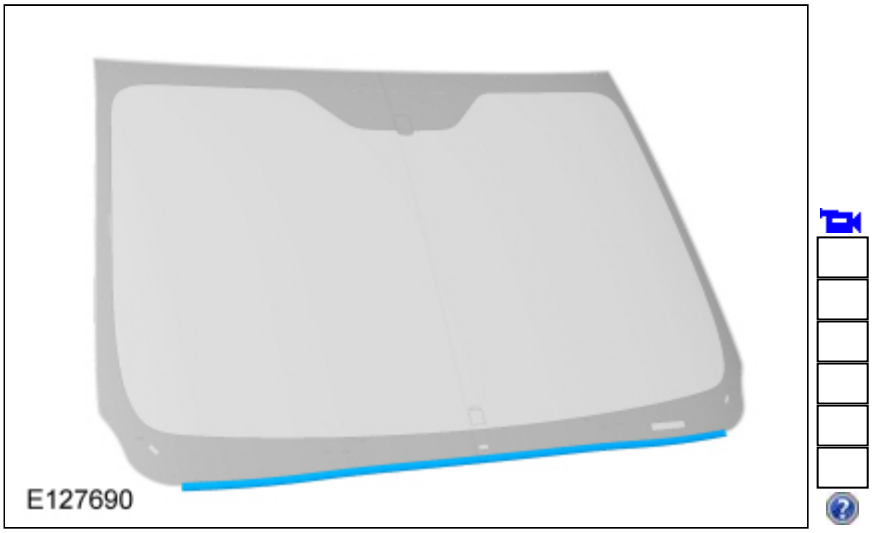
10. Refer to interior rear view mirror removal

11. 

Use a suitable awl to thread the cutting wire.
Use the General Equipment: Direct Glazing Removal/Replacement Equipment



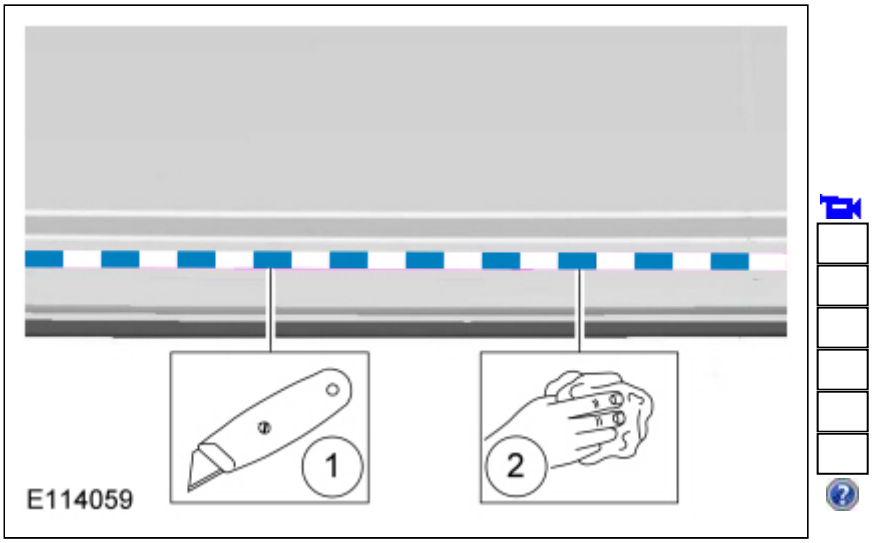
12. 



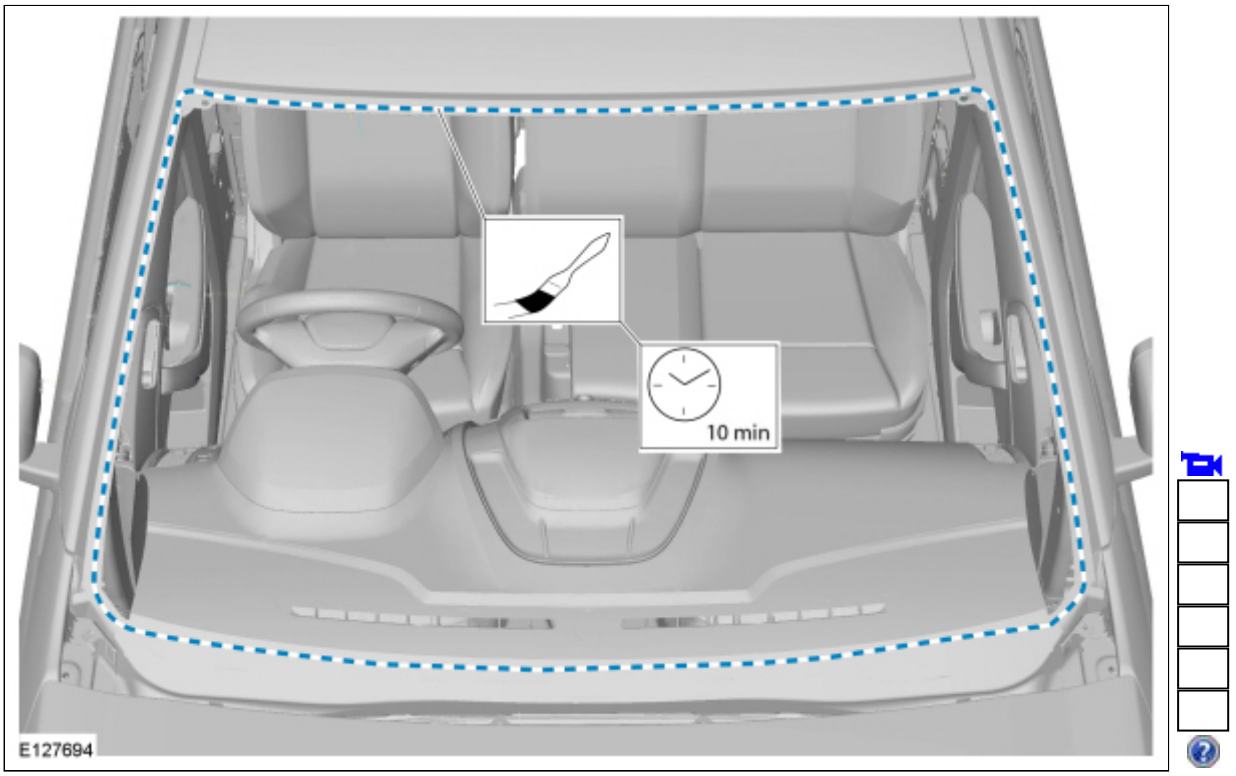
NOTICE: If the original window glass is to be installed, take care not to damage the electrical connectors and the weatherstrip (if equipped).

Use a suitable brace to prevent trim damages.

Use the General Equipment: Direct Glazing Removal/Replacement Equipment

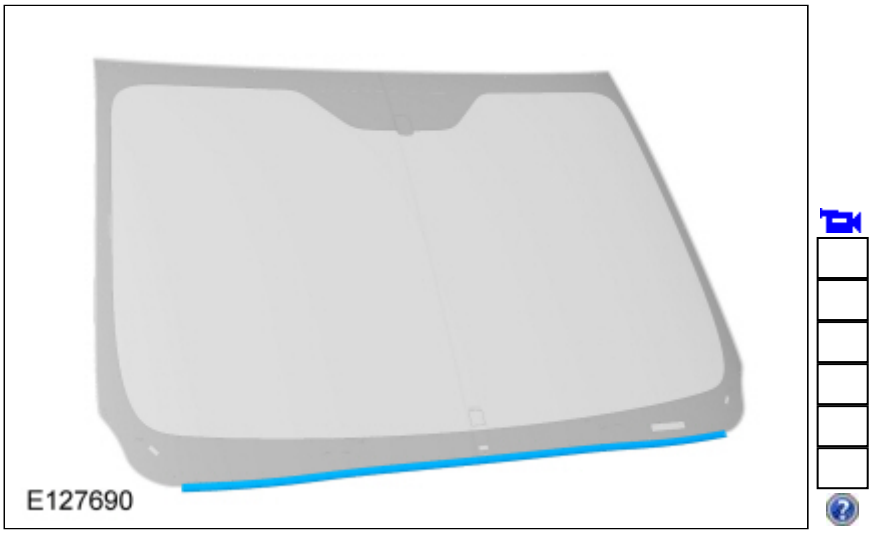


13.

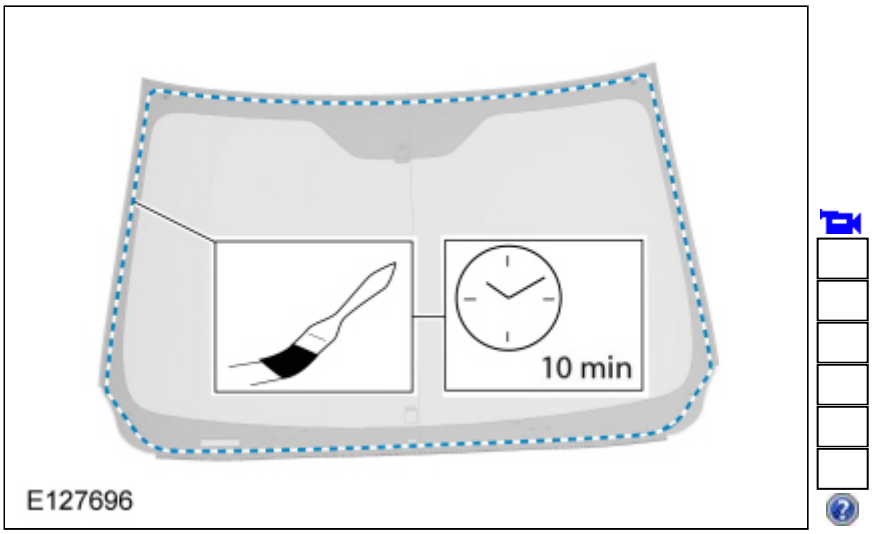


Installation

1. **NOTE:** *Minimum 1 mm bead thickness.*
    - Use the General Equipment: Knife
    - **NOTE:** *Make sure that the mating faces are clean and free of foreign material.*
    - **NOTE:** *Touching the adhesive surface will impair rebonding.*
    - Prepare the windshield glass, windshield glass flange and trimmed PU adhesive in accordance with the instructions supplied with the glass adhesive kit.

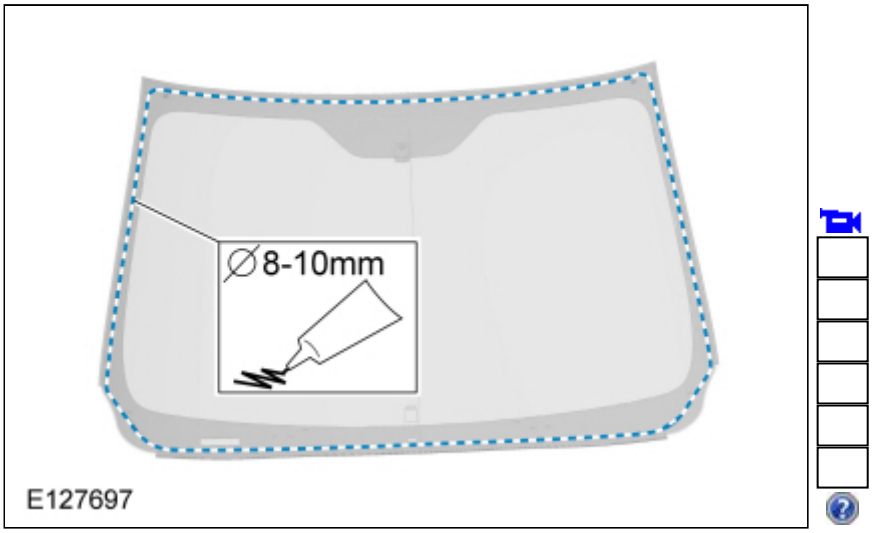


2. Apply the activator/primer in accordance with the instructions supplied with the glass adhesive kit.



3. **NOTE:** *Touching the adhesive surface will impair rebonding.*

   NOTE: *Make sure that the mating faces are clean and free of foreign material.*



4. Apply the activator/primer in accordance with the instructions supplied with the glass adhesive kit.

5. **NOTE:** *Discard the first 100 mm of adhesive as this may have a reduced working time.*

   NOTE: *Make sure that any breakage in the continuous bead of adhesive is overlapped by 20 mm.*

   Use the General Equipment: Direct Glazing Removal/Replacement Equipment
   Material: Adhesive (WSK-M11P57-A3)
   Material: Adhesive (WSS-M11P57-A5)

6. **NOTICE: Make sure that equal pressure is applied to the full length of the component.**

   NOTICE: During the curing time of the polyurethane (PU) adhesive, the door windows must be left open.

   Using tape, secure the Windshield glass in the correct position until the PU adhesive has cured.
   Use the General Equipment: Adhesive Tape

7. To install, reverse the removal procedure.

Copyright © 2016 Ford Motor Company

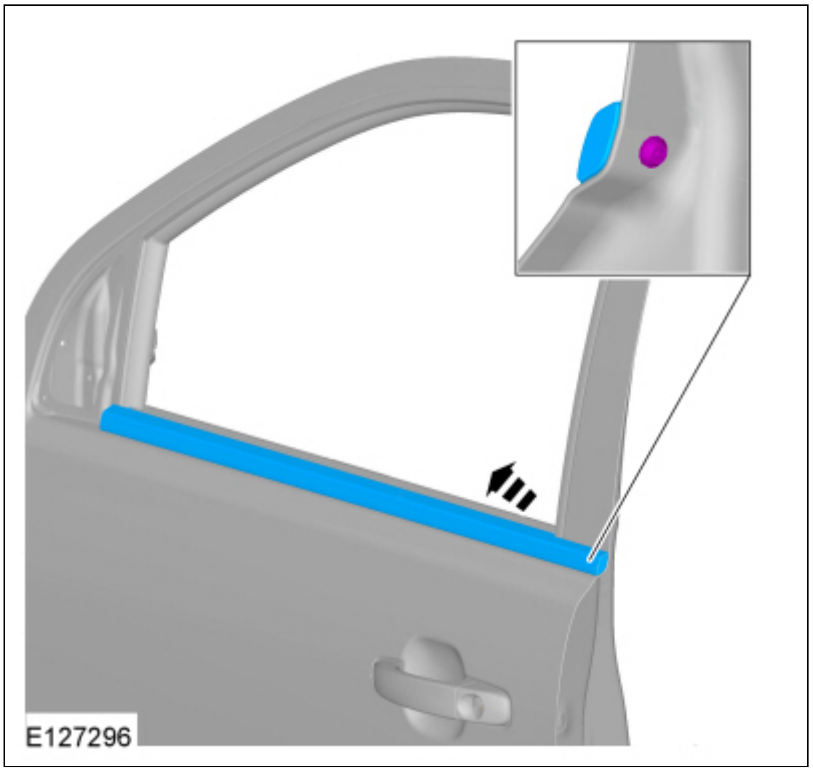
Front Door Window Glass

Base Part Number: 21410

Special Tool(s) / General Equipment

	501-114 Release Lever, Door Glass

Removal

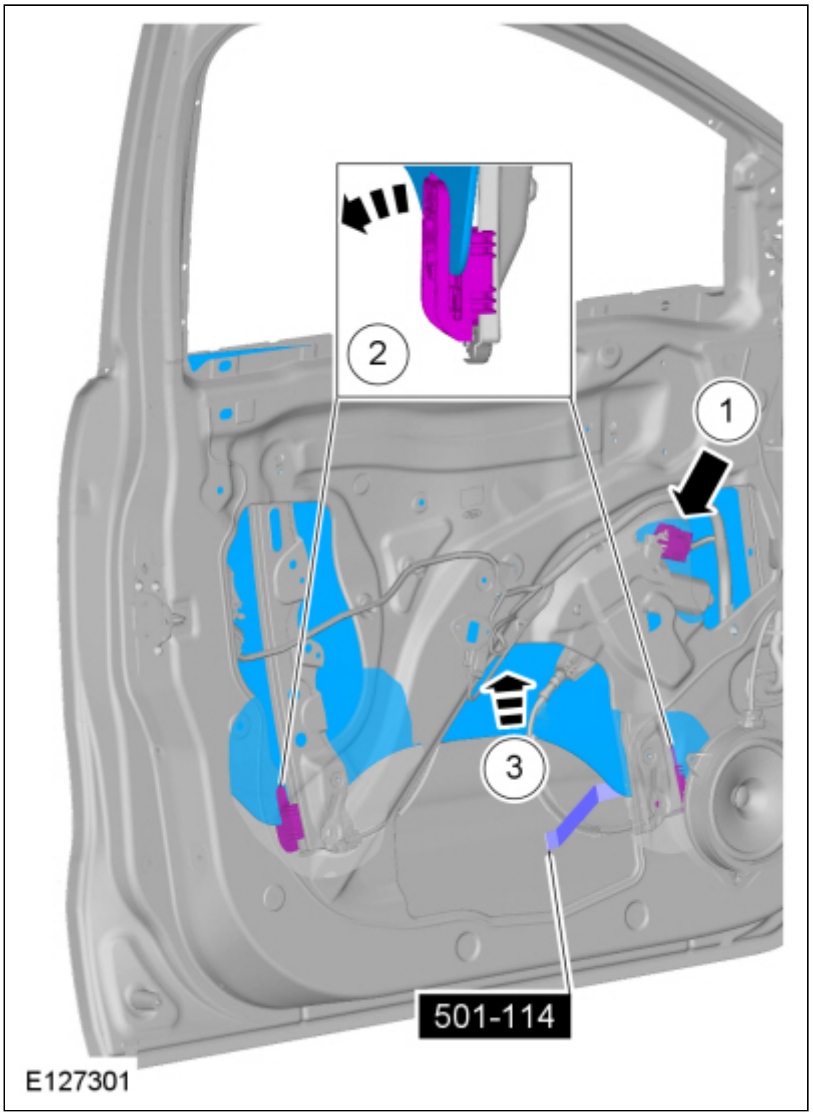


NOTE: *Removal steps in this procedure may contain installation details.*

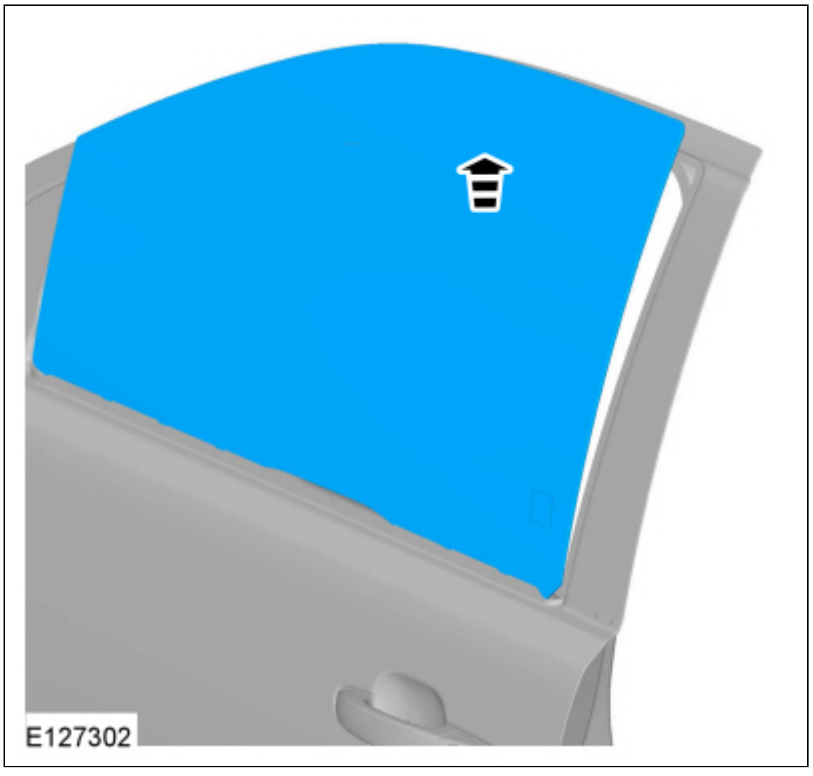
1. **NOTE:** *Ensure that the front door window glass is in the lowered position.*

   Refer to: Front Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).

2. 



3.

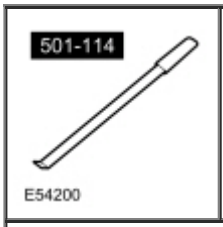


4. **NOTICE: Do not touch the adhesive surface as re-bonding will be impaired.**

5. Use Special Service Tool: 501-114 Release Lever, Door Glass.

6.

Installation

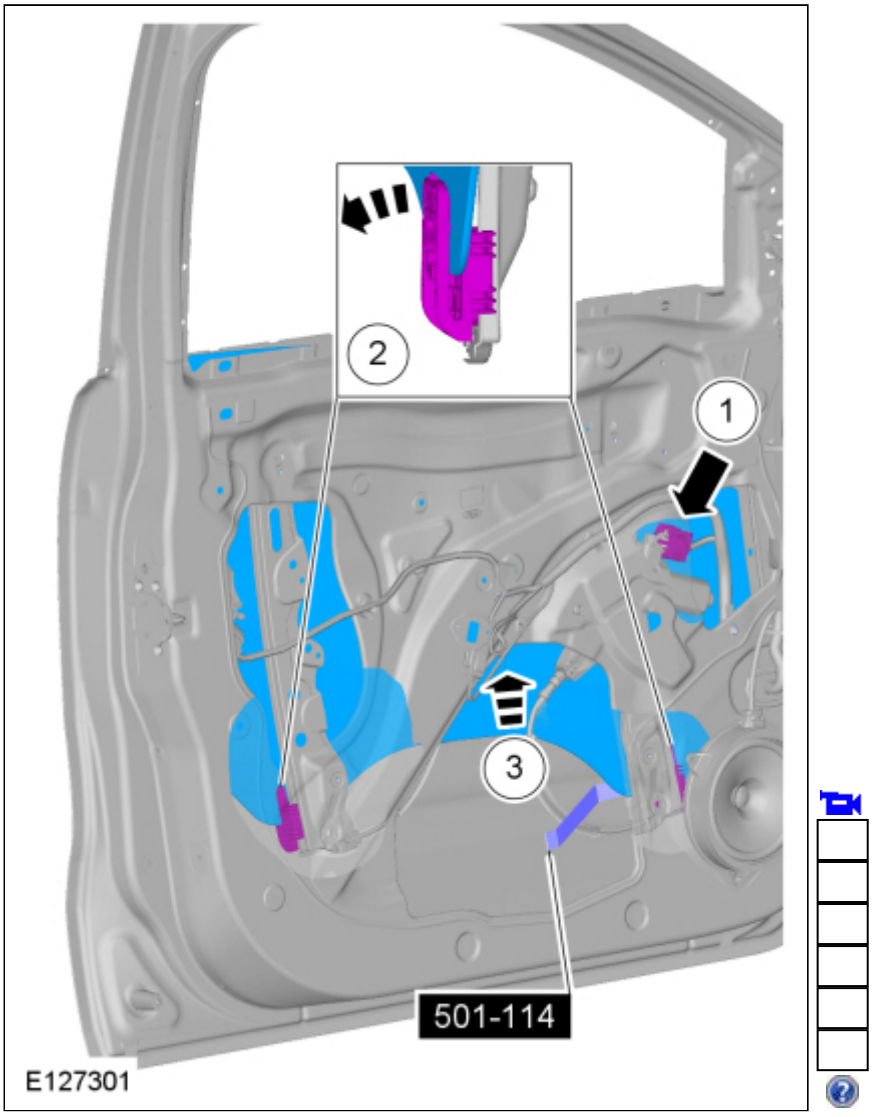


1. To install, reverse the removal procedure.

Copyright © 2016 Ford Motor Company

Front Door Window Regulator

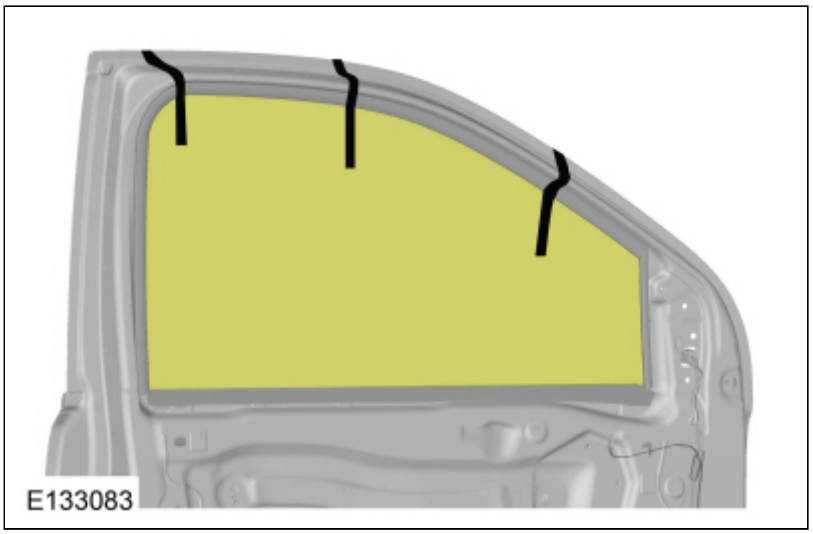
Base Part Number: 1523200



Special Tool(s) / General Equipment

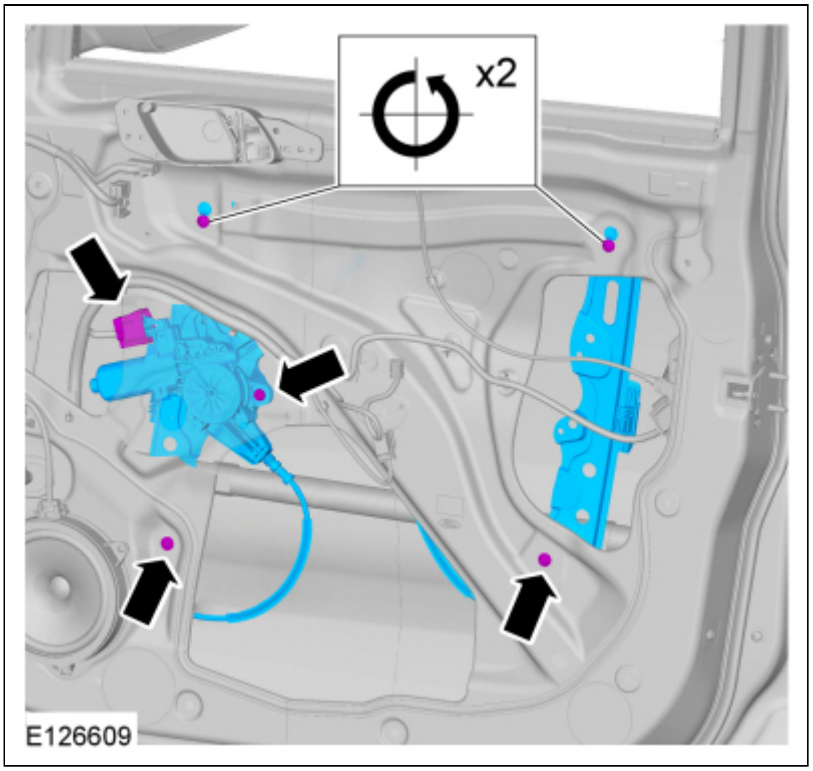
	501-114 Release Lever, Door Glass
Adhesive Tape	

Removal



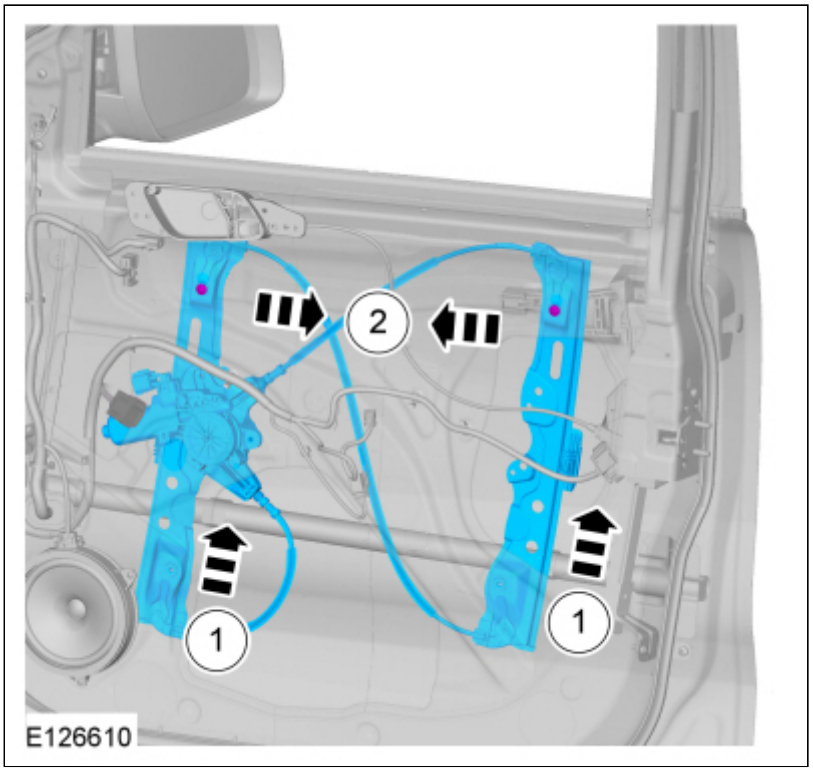
NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
2. Refer to: Front Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Use Special Service Tool: 501-114 Release Lever, Door Glass.

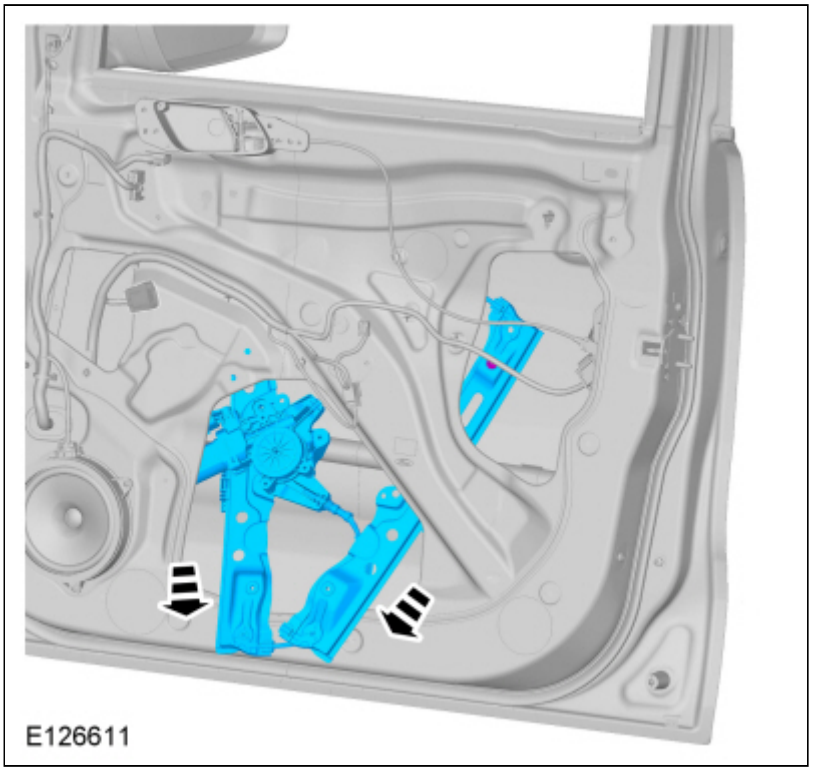


4. Using tape, secure the window glass.

Use the General Equipment: Adhesive Tape

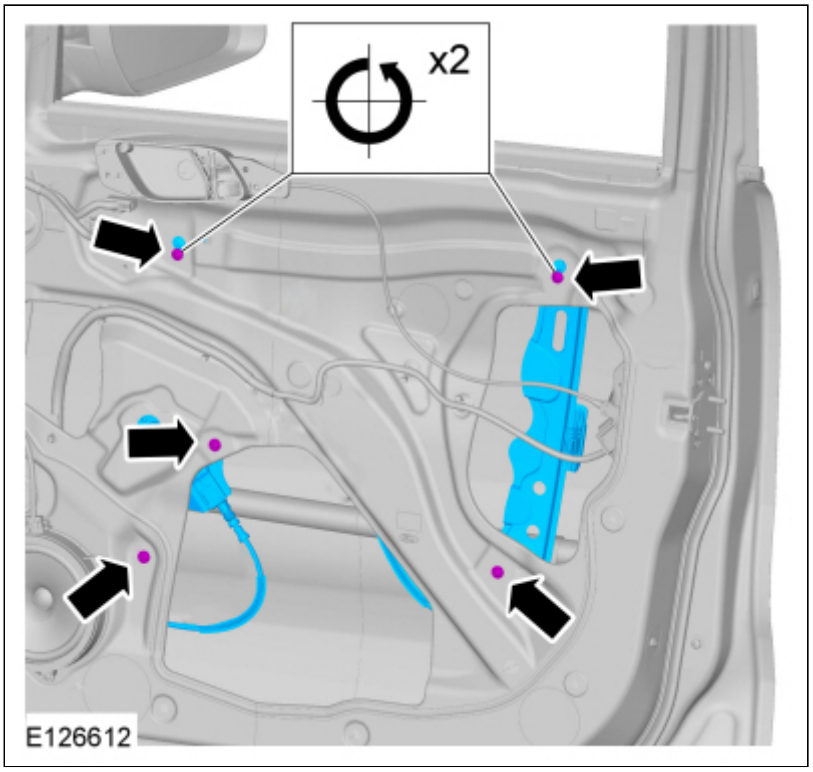


Vehicles with power windows

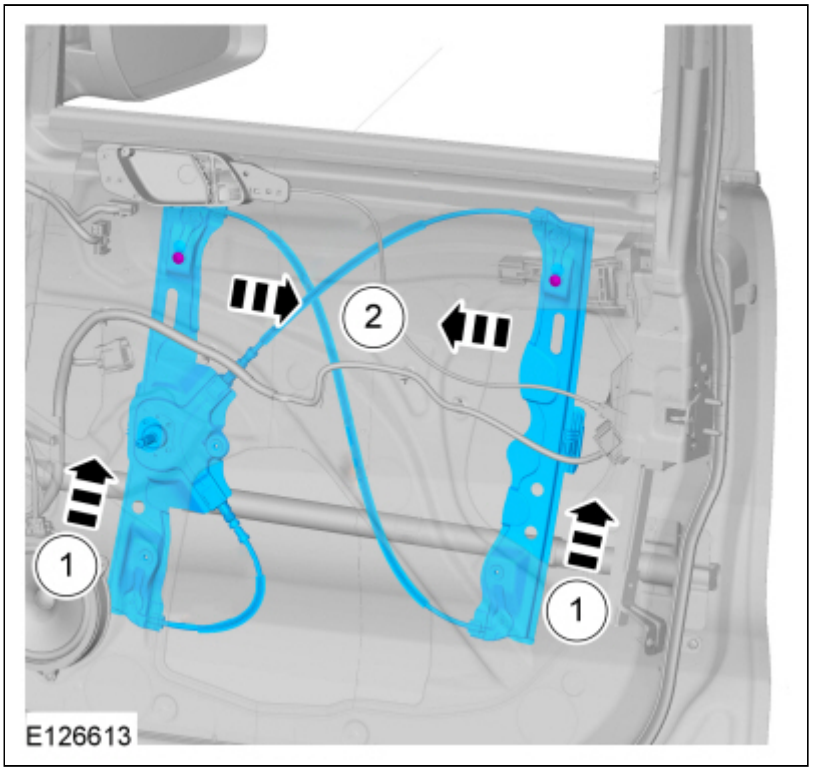


5.

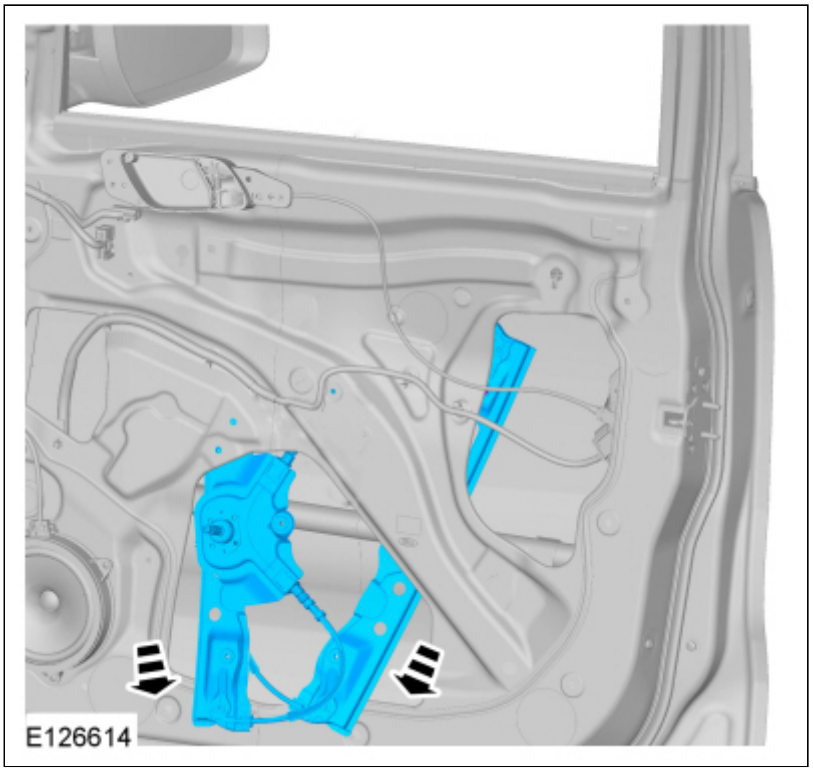
6.



7.



Vehicles with manual windows



8. Remove the 3 front door window regulator retaining bolts.

9.

10.

Installation

1. To install, reverse the removal procedure.

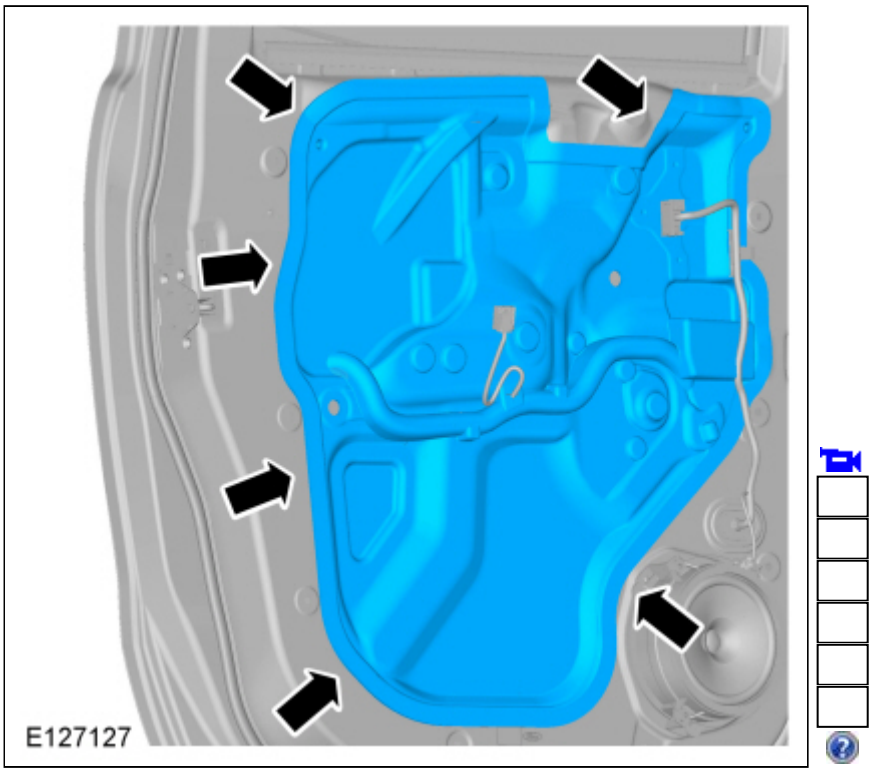
Rear Door Window Glass

Base Part Number: 25712

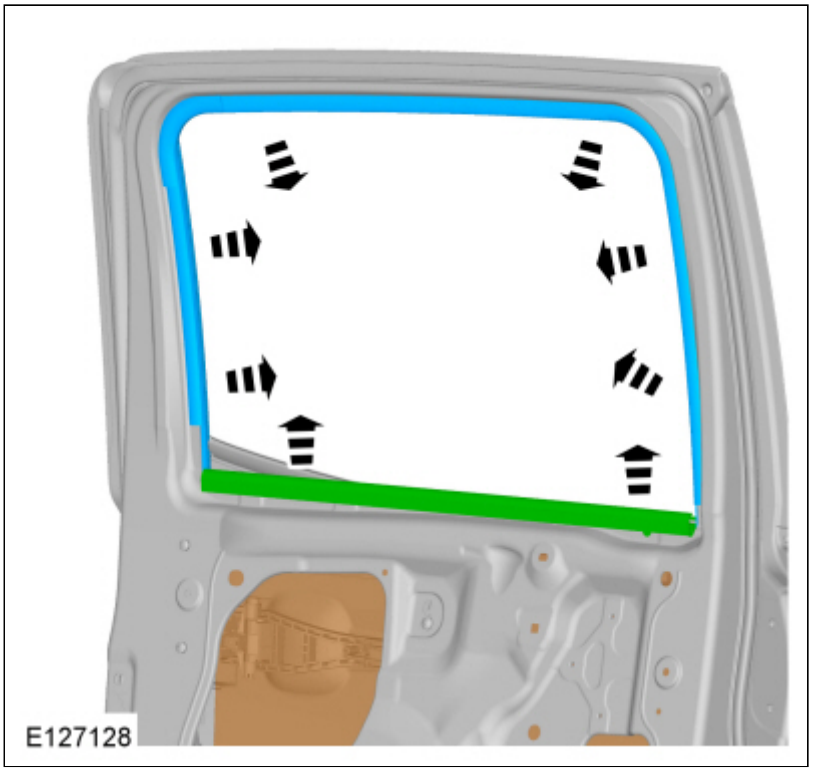
Special Tool(s) / General Equipment

	501-114 Release Lever, Door Glass



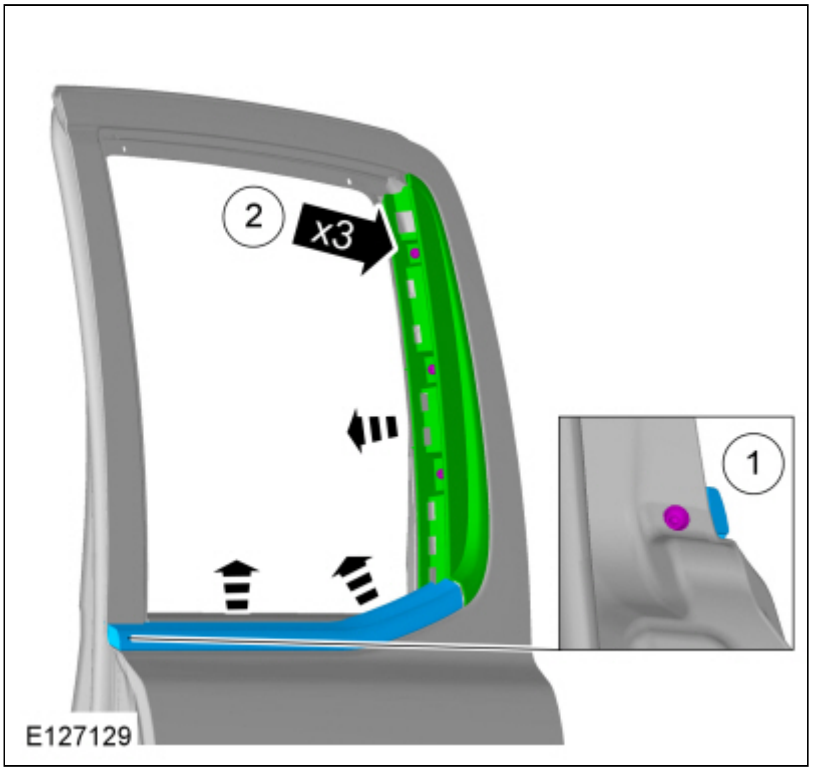
Removal

NOTE: *Removal steps in this procedure may contain installation details.*



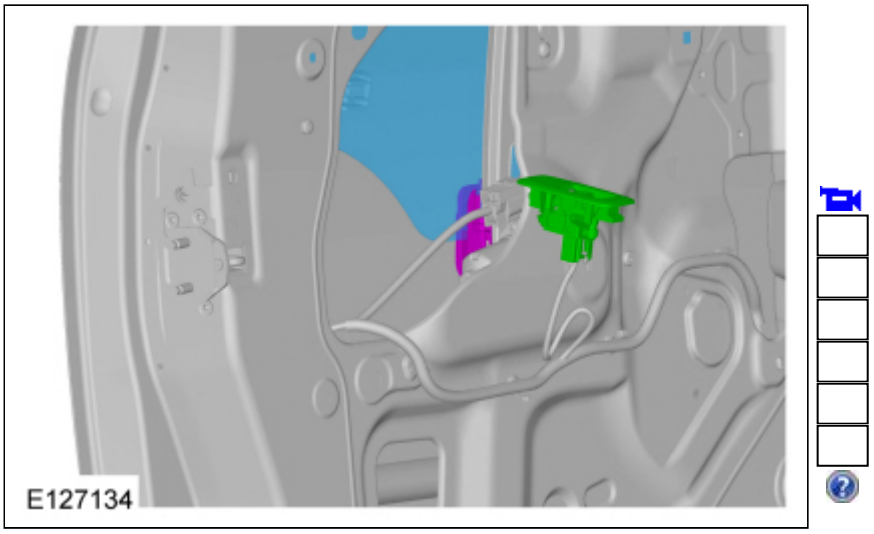
1. **NOTE:** *Ensure that the rear door window glass is in the lowered position.*

   Refer to: Rear Door Trim Panel - Double Cab (501-05 Interior Trim and Ornamentation, Removal and Installation).

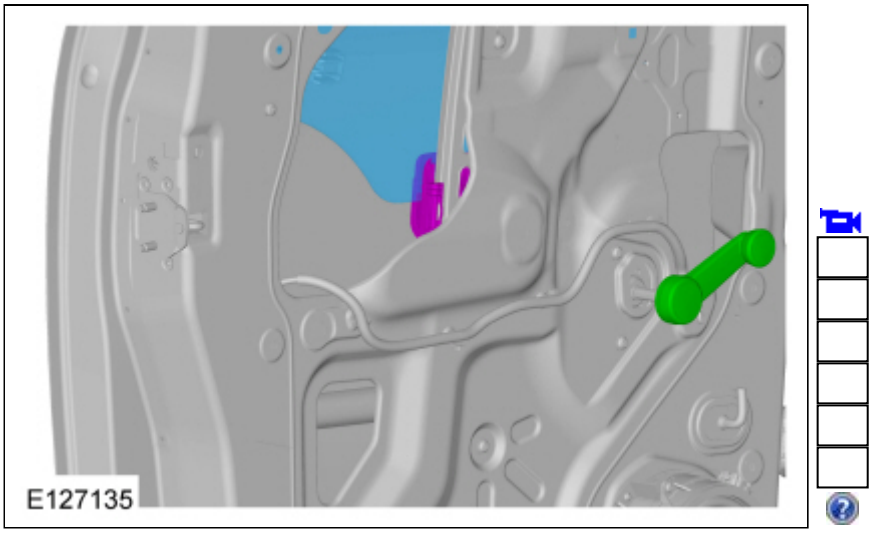


2. **NOTICE: Do not touch the adhesive surface as re-bonding will be impaired.**

3.

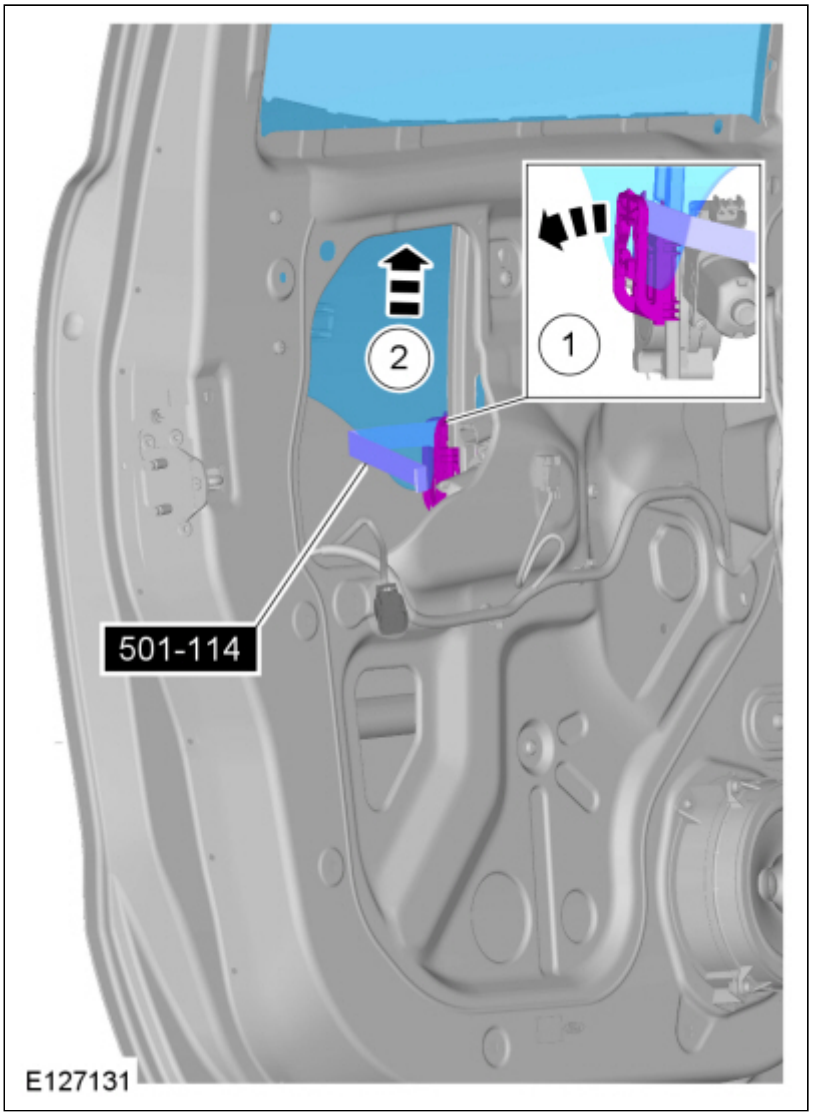


4.

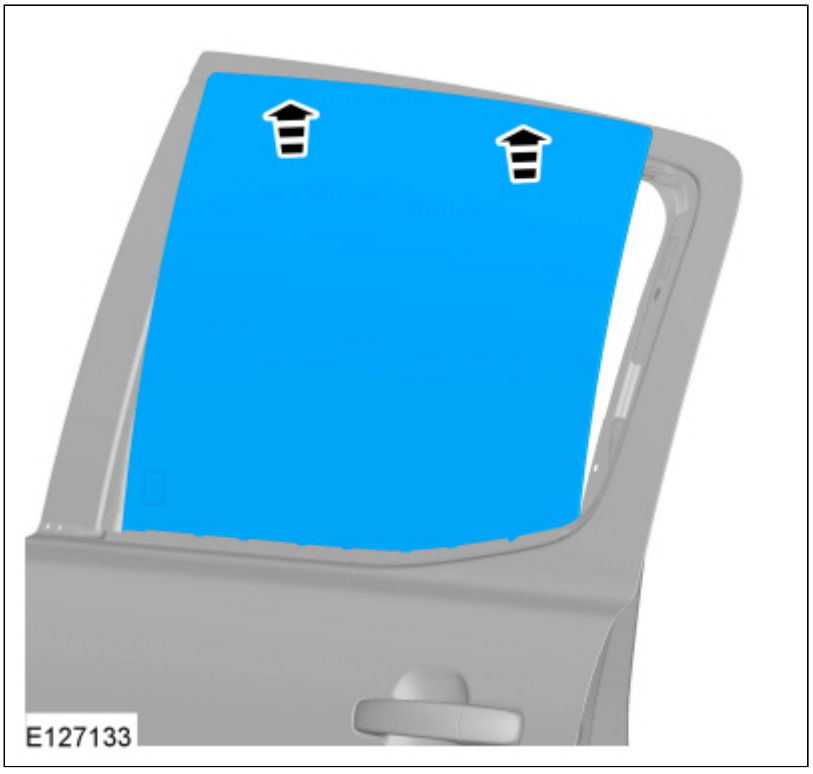


5. **NOTE:** *Vehicle with power windows only*

- Connect the rear door window regulator motor switch.
- Raise the rear door window glass upto the access hole
- Disconnect the rear door window regulator motor switch.



6. **NOTE:** *Vehicle with manual windows only*

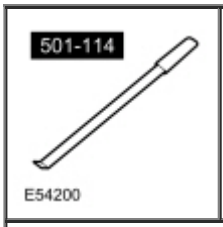


- Install the rear door window regulator crank handle.
- Raise the rear door window glass upto the access hole
- Remove the rear door window regulator crank handle.

7. Use Special Service Tool: 501-114 Release Lever, Door Glass.

8.

Installation



1. To install, reverse the removal procedure.

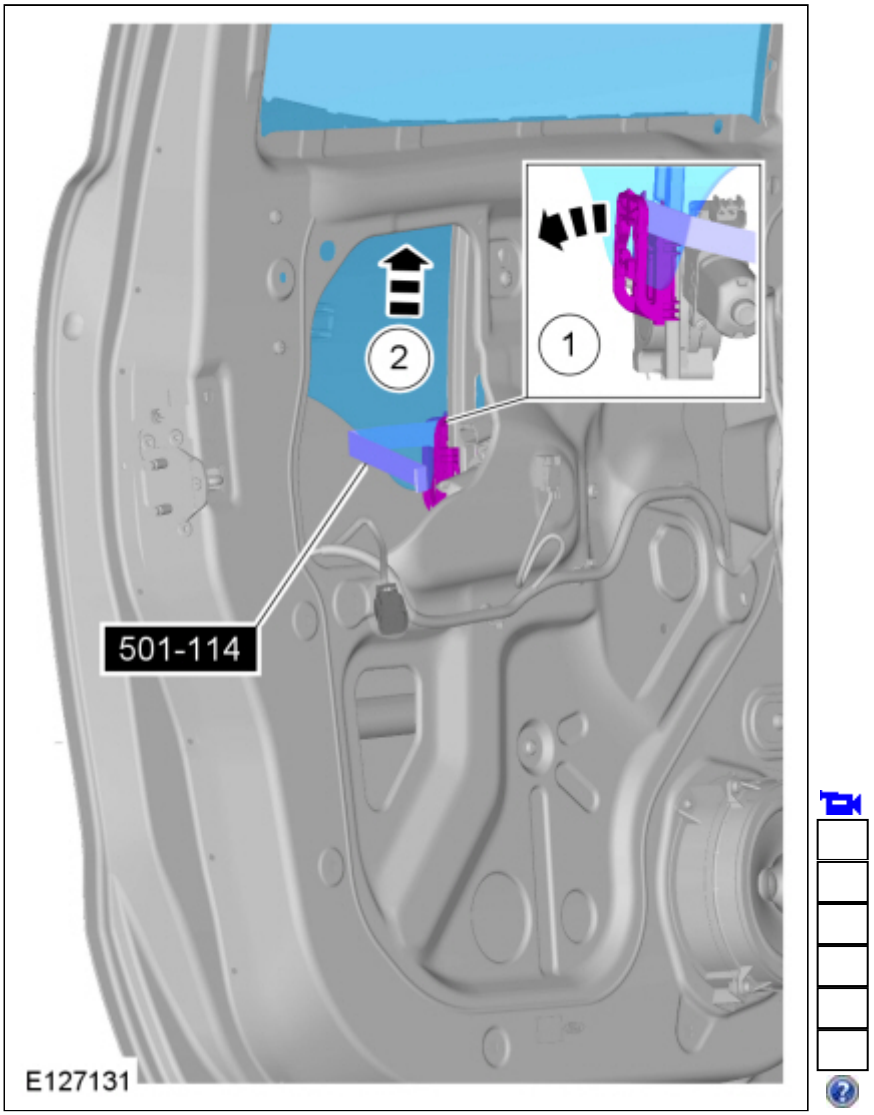
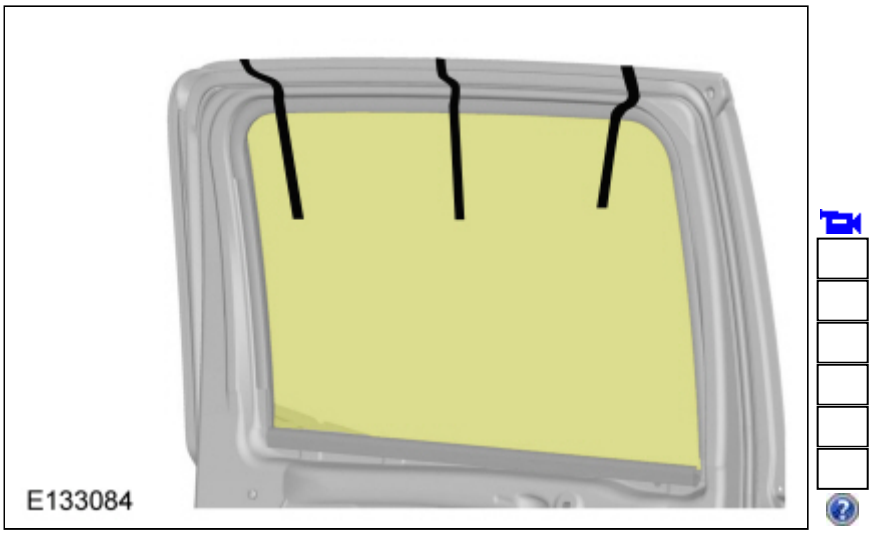
Rear Door Window Regulator



Base Part Number: R27144

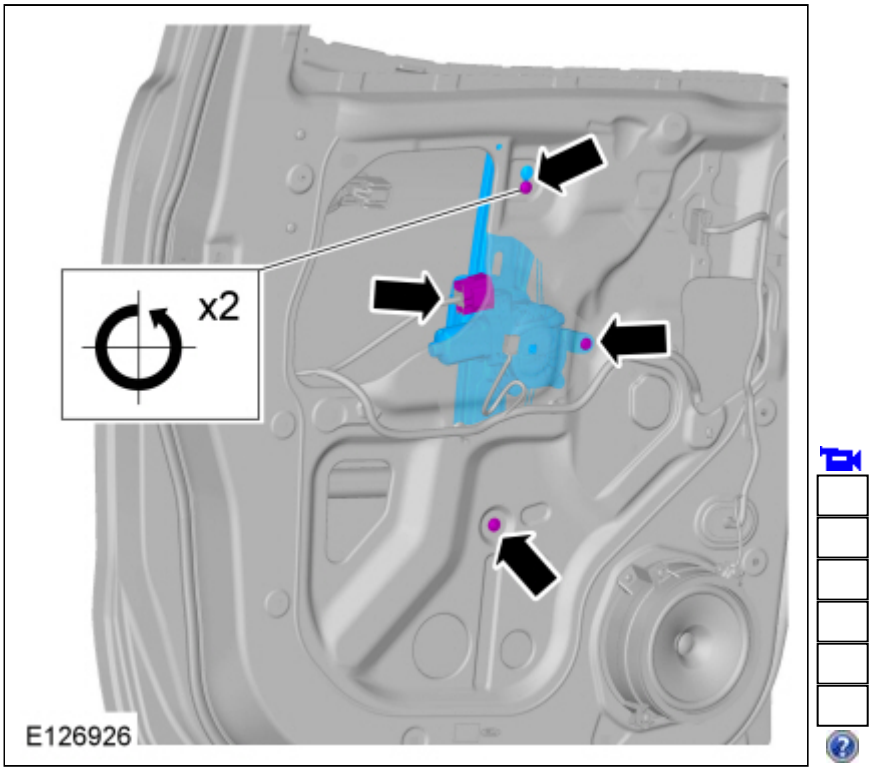
Special Tool(s) / General Equipment

	501-114 Release Lever, Door Glass
Adhesive Tape	



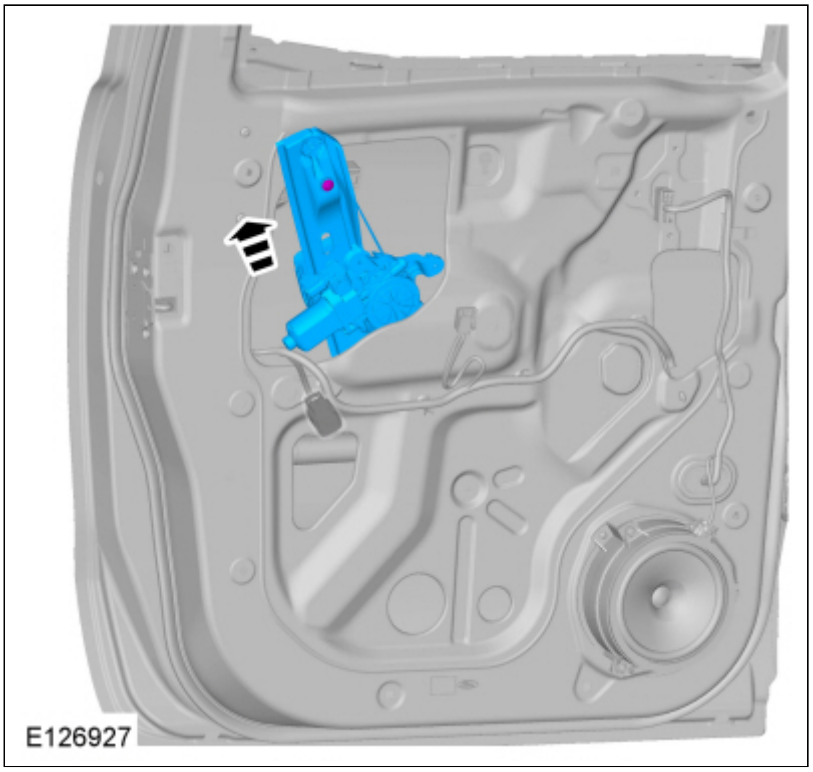
Removal

1. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
2. Refer to: Rear Door Trim Panel - Double Cab (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Use Special Service Tool: 501-114 Release Lever, Door Glass.



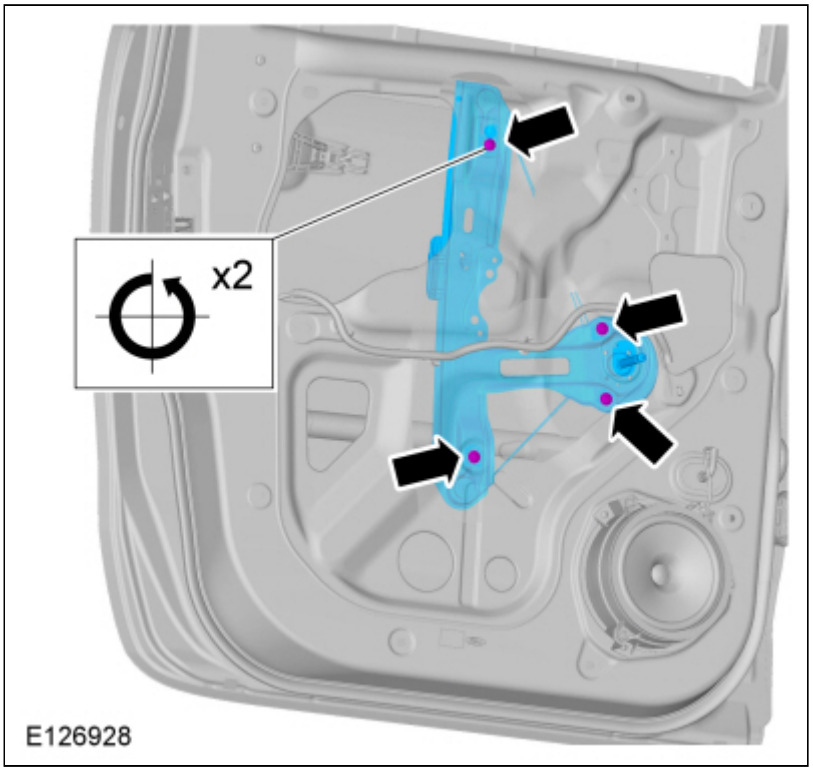
4. Using tape, secure the window glass.

Use the General Equipment: Adhesive Tape

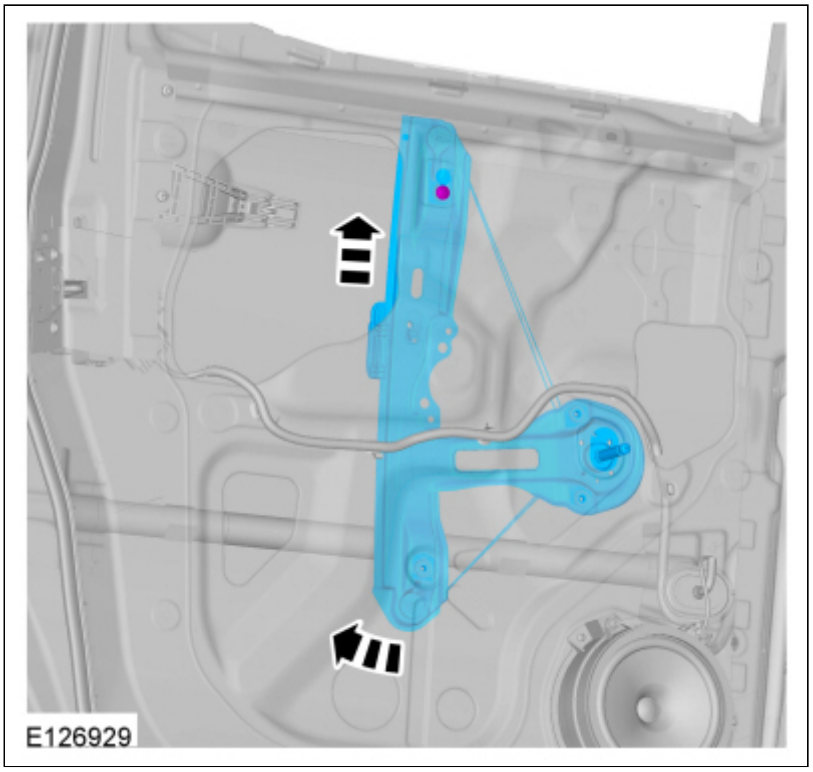


Vehicles with power windows

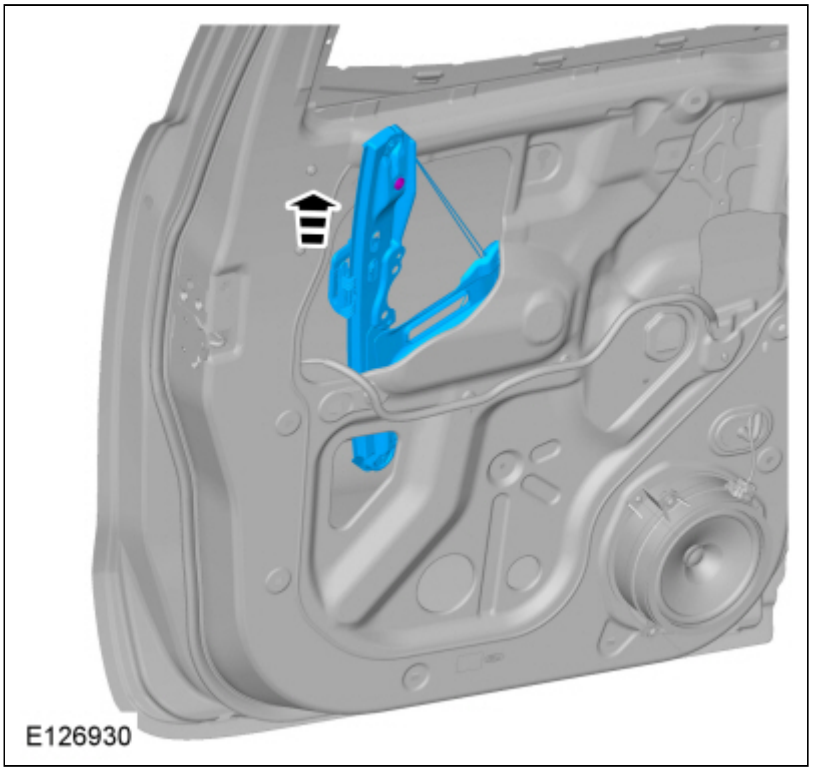
- Disconnect the front door window regulator motor electrical connector.
- Remove the 2 rear door window regulator retaining bolts.



6.



Vehicles with manual windows



7. Remove the 3 rear door window regulator retaining bolts.

8.

9.

Installation

1. To install, reverse the removal procedure.

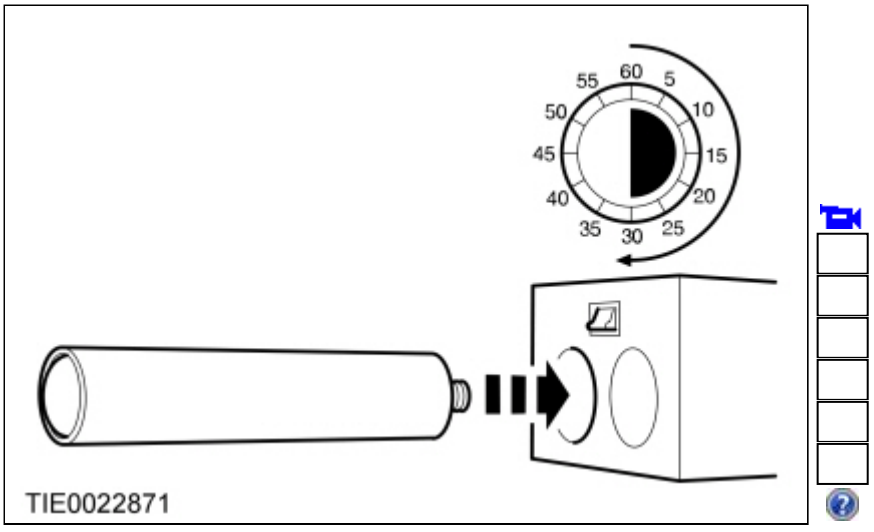
Rear Window Glass

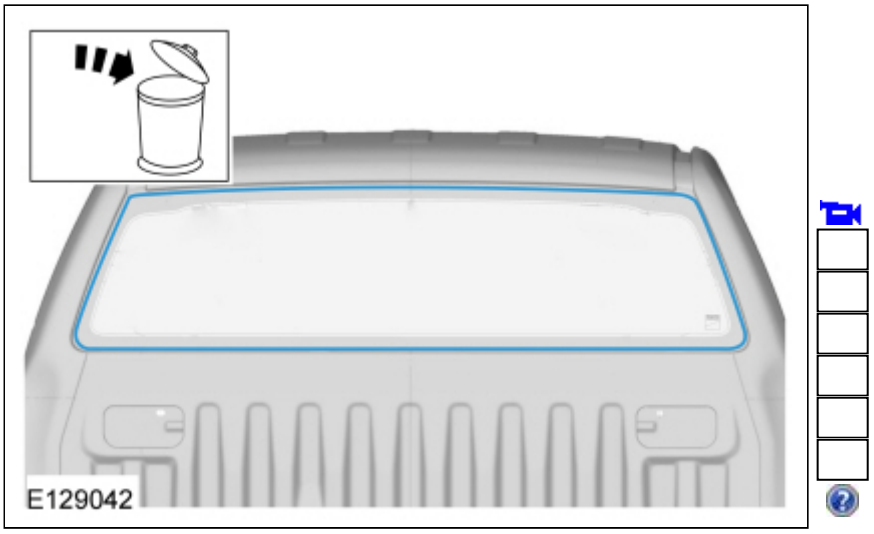
Special Tool(s) / General Equipment

Direct Glazing Removal/Replacement Equipment
Knife
Adhesive Tape



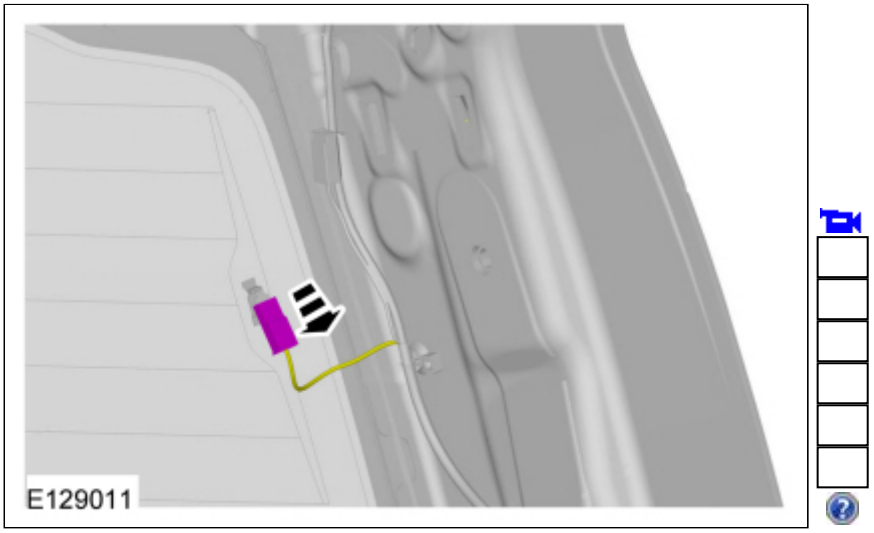
Materials

Name	Specification
Adhesive	WSK-M11P57-A3
Adhesive	WSS-M11P57-A5



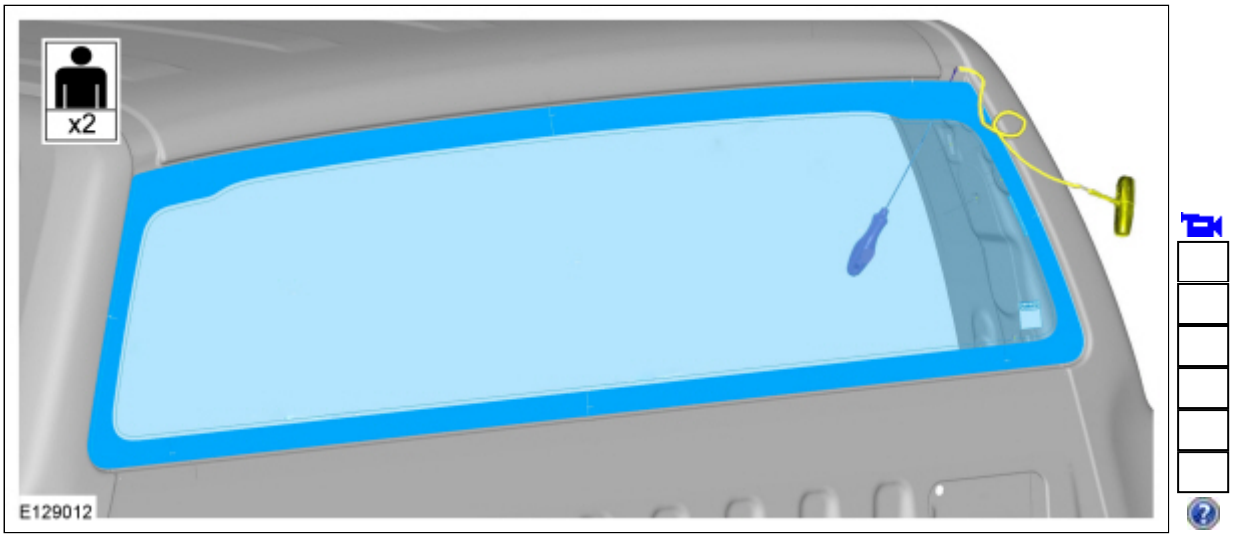
Removal

1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: C-Pillar Upper Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).
3. Refer to: Headliner (501-05 Interior Trim and Ornamentation, Removal and Installation).
4. Refer to: Rear Seat (501-10A Seating, Removal and Installation).



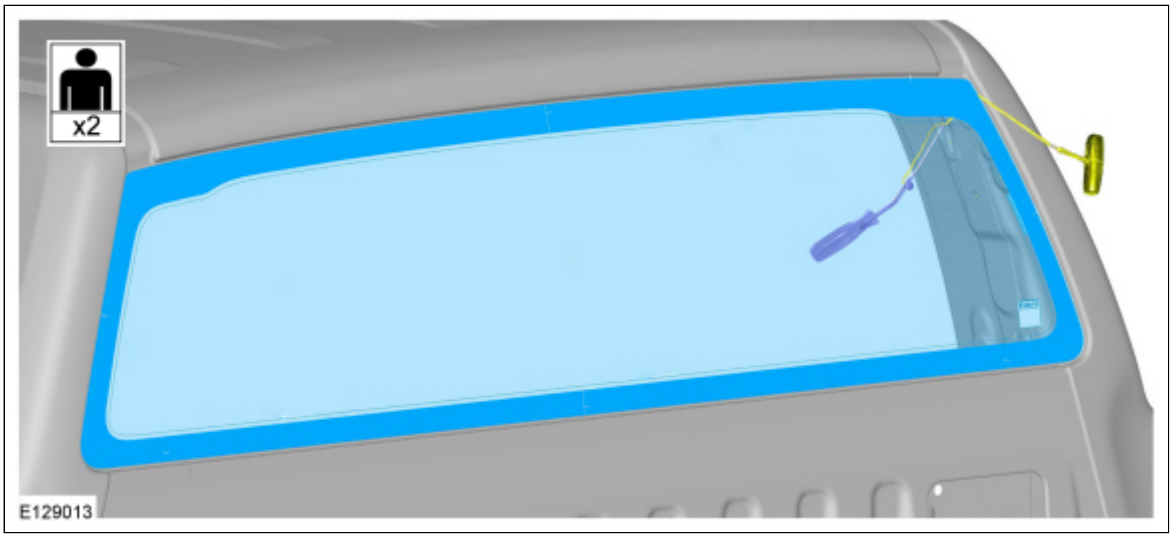
- *Material*: Adhesive (WSK-M11P57-A3)
- Remove the polyurethane (PU) adhesive cap and heat the 2K-PU adhesive for a minimum of 30 minutes.
  Use the General Equipment: Direct Glazing Removal/Replacement Equipment
- Repairs under warranty:
  Material: Adhesive (WSS-M11P57-A5)

6.

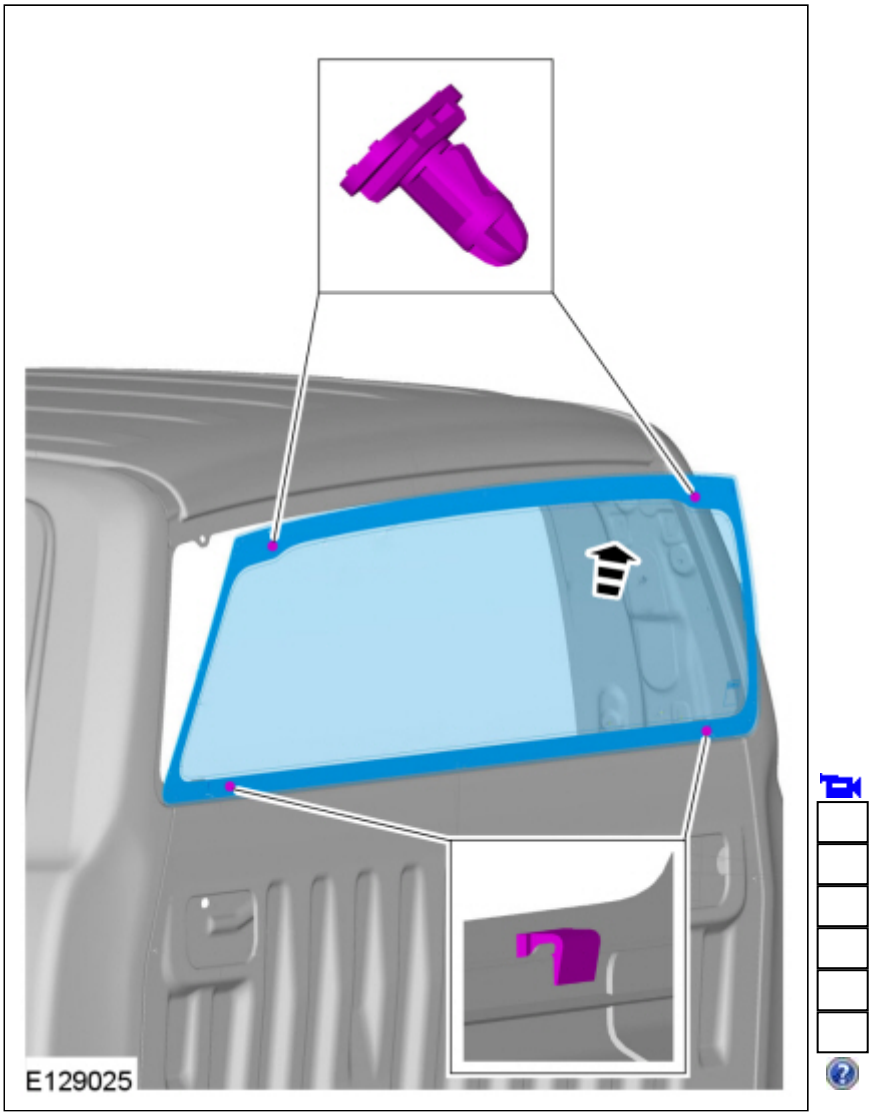


7. **NOTE:** *Vehicles with heated windsheild only.*

8. 



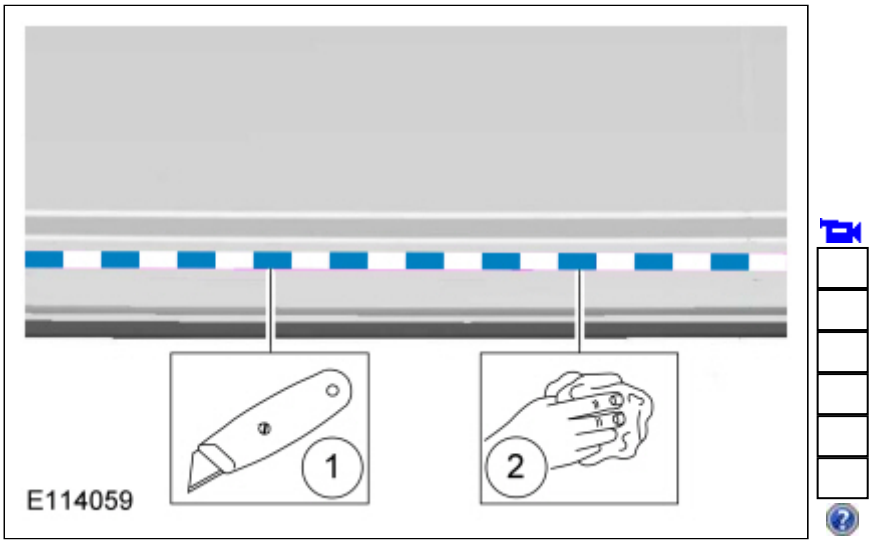
Use a suitable awl to thread the cutting wire.
Use the General Equipment: Direct Glazing Removal/Replacement Equipment



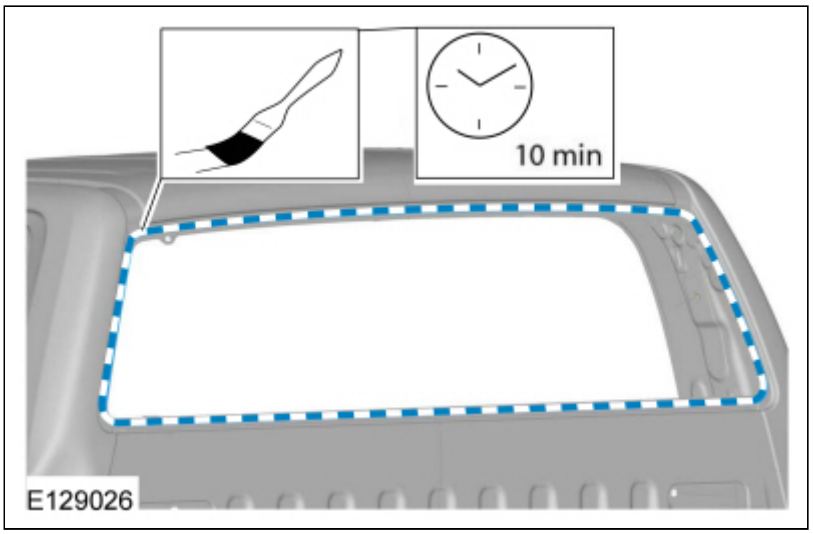
9. 

NOTICE: If the original window glass is to be installed, take care not to damage the electrical connectors and the weatherstrip (if equipped).

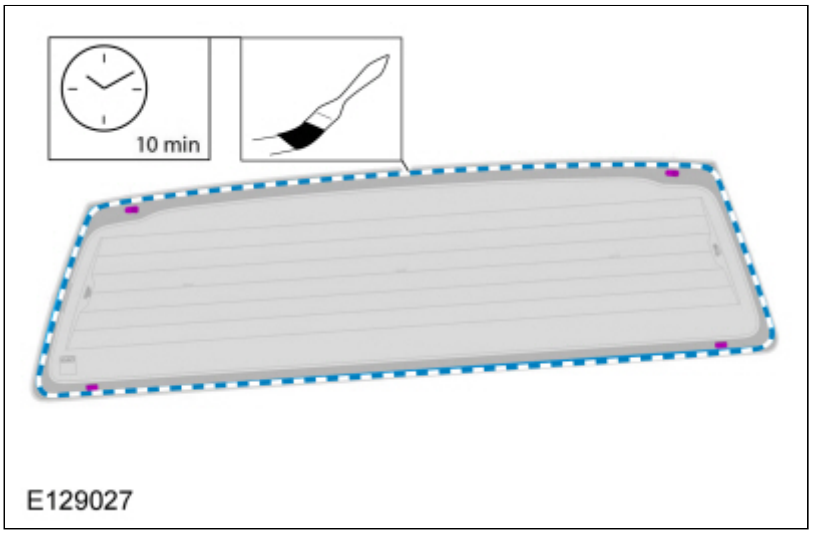
Use a suitable brace to prevent trim damages.
Use the General Equipment: Direct Glazing Removal/Replacement Equipment



10.

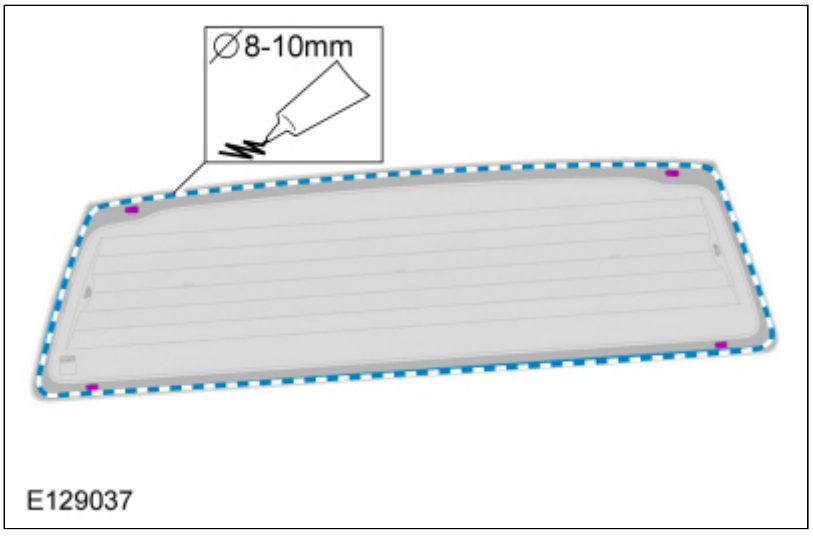


Installation



1. **NOTE:** *Minimum 1 mm bead thickness.*
    - Use the General Equipment: Knife
    - **NOTE:** *Make sure that the mating faces are clean and free of foreign material.*
    - **NOTE:** *Touching the adhesive surface will impair rebonding.*
    - Prepare the windshield glass, windshield glass flange and trimmed PU adhesive in accordance with the instructions supplied with the glass adhesive kit.

2. Apply the activator/primer in accordance with the instructions supplied with the glass adhesive kit.



3. Apply the activator/primer in accordance with the instructions supplied with the glass adhesive kit.

4. **NOTE:** *Discard the first 100 mm of adhesive as this may have a reduced working time.*

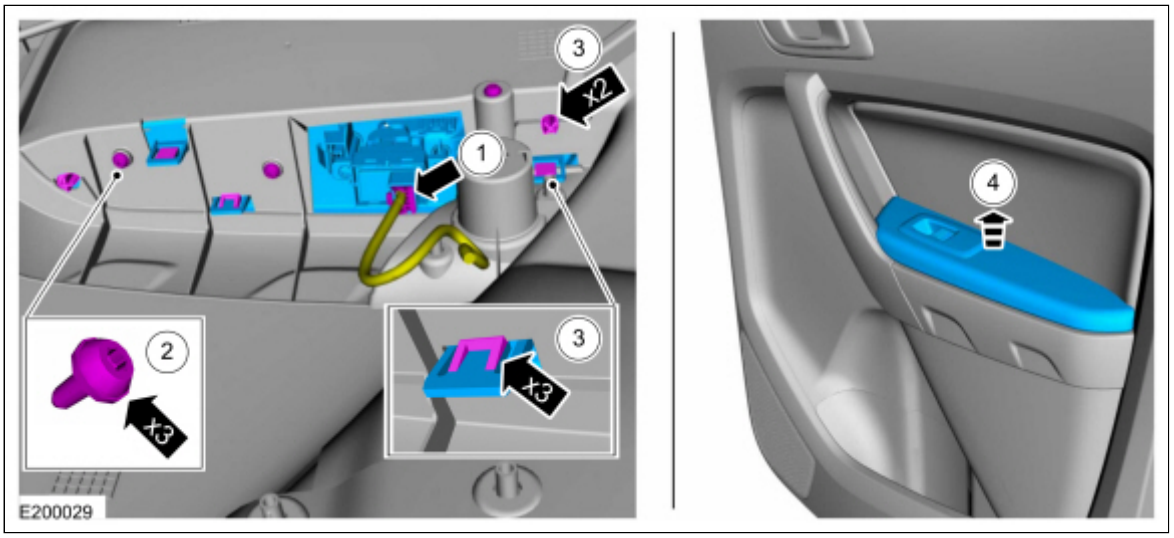
   NOTE: *Make sure that any breakage in the continuous bead of adhesive is overlapped by 20 mm.*

   Use the General Equipment: Direct Glazing Removal/Replacement Equipment
   Material: Adhesive (WSK-M11P57-A3)
   Material: Adhesive (WSS-M11P57-A5)

5. **NOTICE: Make sure that equal pressure is applied to the full length of the component.**

NOTICE: During the curing time of the polyurethane (PU) adhesive, the door windows must be left open.

Using tape, secure the windshield glass in the correct position until the PU adhesive has cured.Adhesive tape
Use the General Equipment: Adhesive Tape



6. To install reverse the removal procedure.

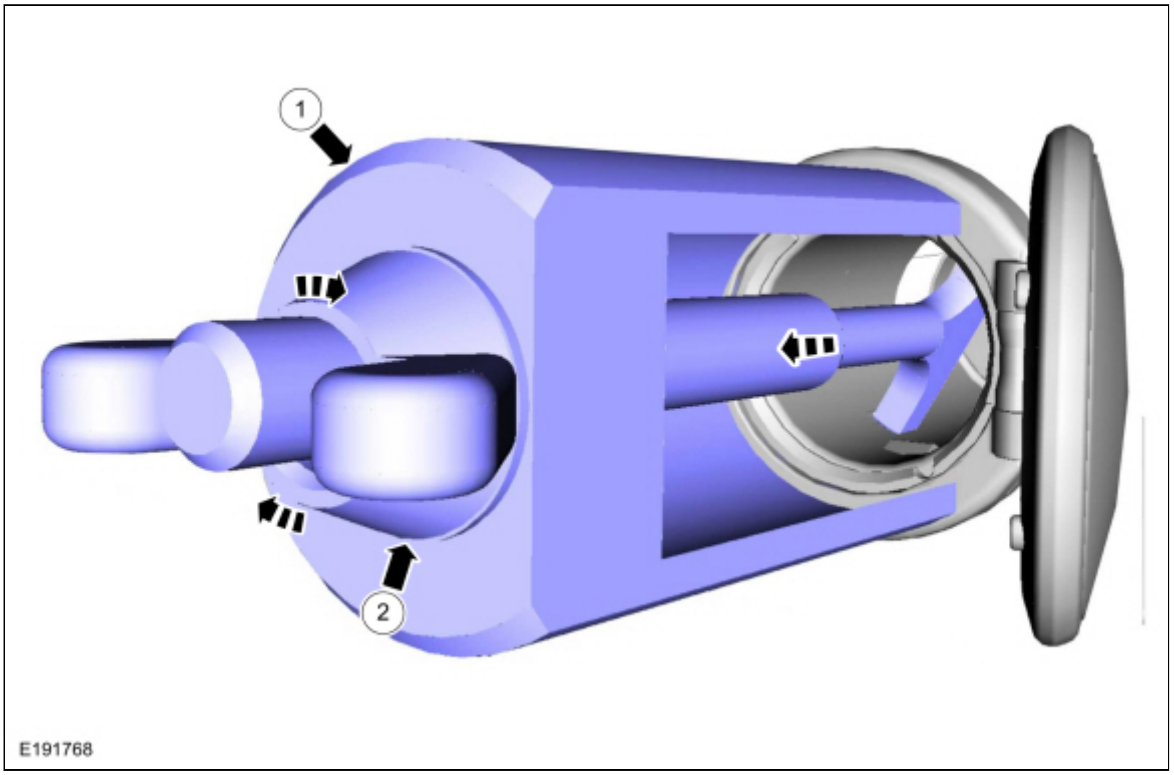
Auxiliary Power Point

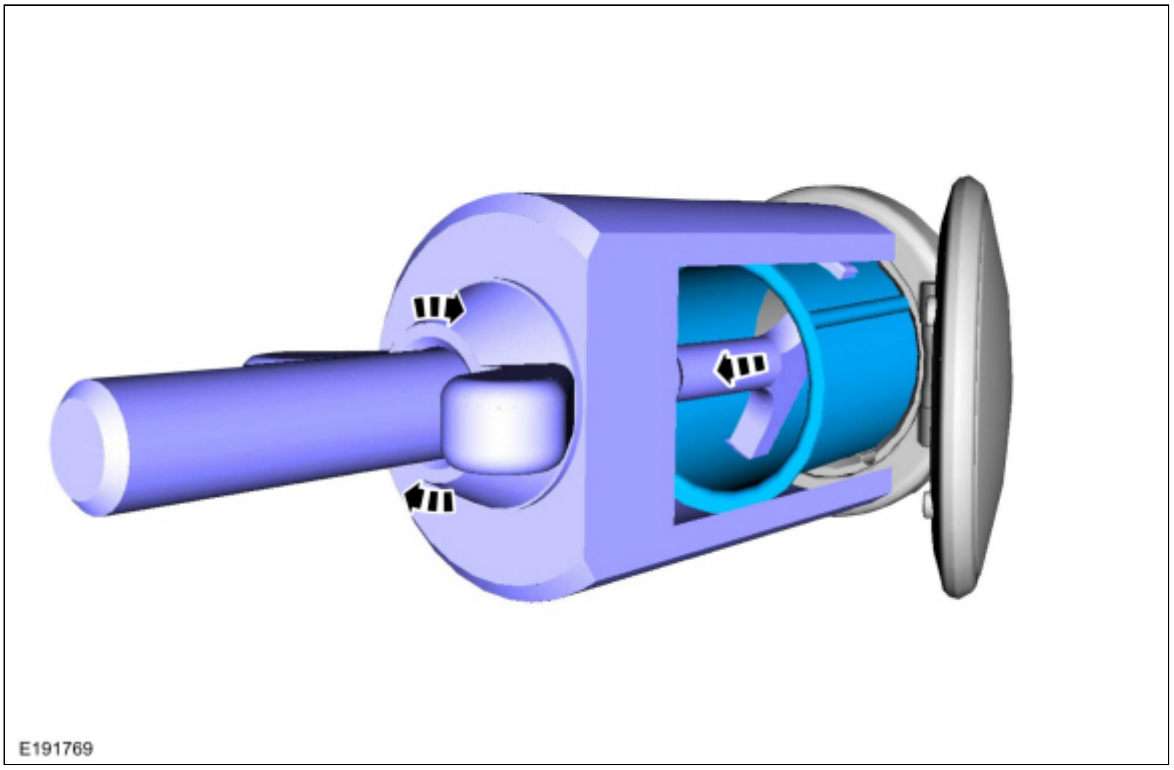
Special Tool(s) / General Equipment

 E188627	501-194 Remover, Power Point

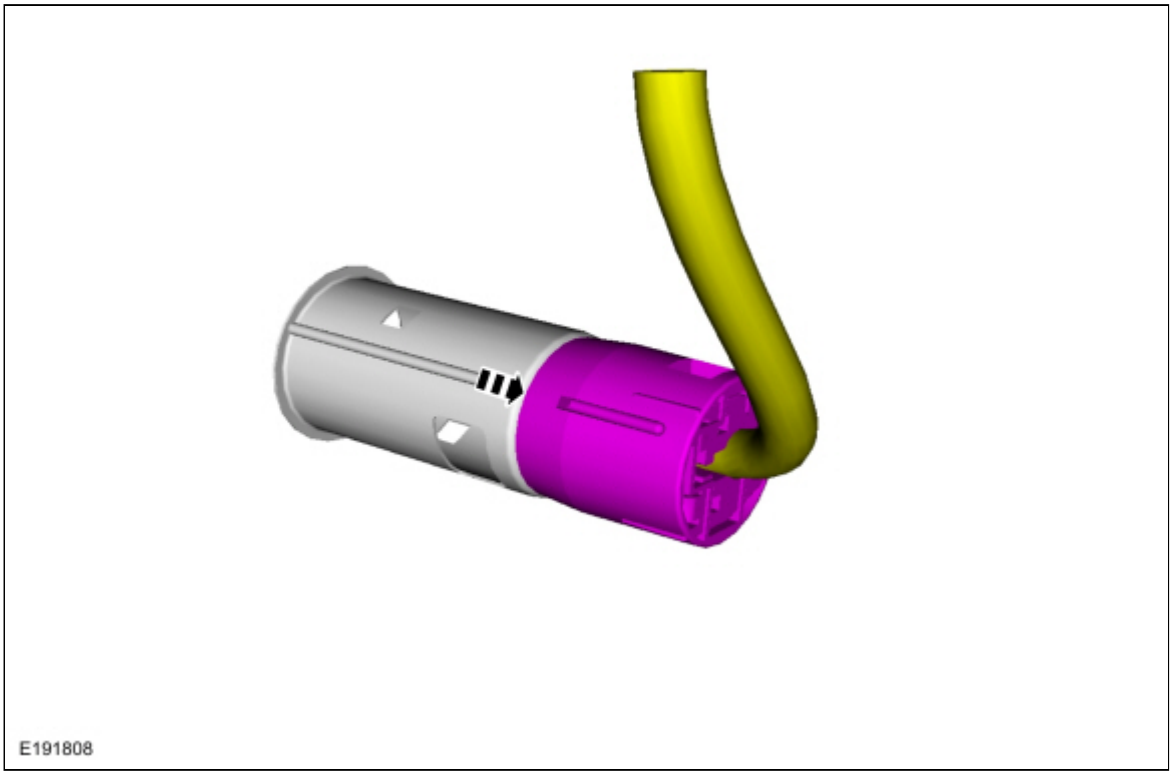
Removal



1. Open the power point cover



2. Position the power point extractor so that it engages in the adjacent slots in the power point socket. Use Special Service Tool: 501-194 Remover, Power Point.



1. Install the receiver cup
2. Install and tighten the wing nut.
   Use Special Service Tool: 501-194 Remover, Power Point.

4. Tighten the wing nut to pull the power point socket out of the retainer.

5. Disconnect the electrical connector.

Installation

1. Connect the electrical connector and push the new power point socket into the retainer.

2	—	Hood latch release handle
3	—	Steering column ignition cylinder
4	—	Door lock cylinder
5	—	Front exterior door handle
6	—	Tailgate handle
7	—	Tailgate release handle
8	—	RTM (radio transceiver module) (if equipped)
9	—	Tailgate latch
10	—	Rear door upper latch

11	—	Rear interior door handle
12	—	Rear door lower latch
13	—	Front door latch
14	—	Front interior door handle
15	—	Flip key

General

When one of the buttons on the remote control is pressed, a coded HF radio signal is sent from the transmitter in the mechanical key. This signal is received by the RTM or RF receiver located in the BCM (body control module), which decodes the signal. If the coded signal is valid, the BCM will operate the latches.

Unlocking is confirmed by one long flash of the turn signal lamps, when the unlocking is completed.

There are various circumstances in which remote unlocking is not possible:

- The radio transmitter or receiver is overloaded because of radio interference.
- The key (electronics) is damaged.
- The battery in the key is discharged.
- The overload protection of the door latches is active (after too many operations).

As well as remote keyless entry, the vehicle can be locked and unlocked using the lock cylinder in the driver's door. If RKE is not fitted, the vehicle can also been unlocked using the lock cylinder in the passenger's door. The lock cylinder is mechanically connected to a switch, which is linked to the BCM.

Double Locking

The double locking system has the same functionality of central locking but also prevents the doors from being opened from inside using the interior door handles.

The double locking function is actuated if one of the following conditions is satisfied:

- A key is inserted into a door cylinder lock and turned to the "locking" position twice within 3 seconds.
- The locking button on the remote transmitter is pressed twice within 3 seconds.

Confirmation that the vehicle is double locked is also given by two short flashes of the turn signal lamps, when the double locking process is completed. The ordinary central locking in this case will be signaled by a single short flash of the turn signal lamps.

Door latch for single cab

The front door entry system contains a latch that is fastened to the inside of the door frame and is controlled by the exterior and interior door handles. The latch contains the door ajar switch and door lock actuator. The front doors are locked/unlocked by the Remote Keyless Entry (RKE) transmitter, lock/unlock button inside the vehicle or the driver door lock cylinder.

The door latches have electric motors to operate the locking and double locking function. The electric motors are actuated directly by the BCM.

When the door latch is locked, the exterior door handle is disengaged from the door latch.

A control switch is incorporated in the door latch in the driver's door. This control switch monitors the position of the door latch and reports the information to the BCM. This information is sent to the BCM for use in warning systems, locking functions and anti-theft alarm systems.

Door latch for double cab

The front door entry system contains a latch that is fastened to the inside of the door frame and is controlled by the exterior and interior door handles. The latch contains the door ajar switch and door lock actuator. The front doors are locked/unlocked by the Remote Keyless Entry (RKE) transmitter, lock/unlock button inside the vehicle or the driver door lock cylinder.

The rear door entry system contains a latch that is fastened to the inside of the door frame and is controlled by the exterior and interior door handles. The latch contains the door ajar switch and door lock actuator. The rear doors can

be locked/unlocked by the RKE transmitter, lock/unlock button inside the vehicle. The rear doors have a child safety lock feature, which is a manual lock on the inside of the rear door frame. When the child safety feature is on, the rear doors cannot be opened from the interior door handle.

The door latches have electric motors to operate the locking and double locking function. The electric motors are actuated directly by the BCM.

When the door latch is locked, the exterior door handle is disengaged from the door latch.

A control switch is incorporated in the driver's door latch. This control switch monitors the position of the door latch and reports the information to the BCM. This information is sent to the BCM for use in warning systems, locking functions and anti-theft alarm systems.

Door latch for super cab

The front door entry system contains a latch that is fastened to the inside of the door frame and is controlled by the exterior and interior door handles. The latch contains the door ajar switch and door lock actuator. The front doors are locked/unlocked by the Remote Keyless Entry (RKE) transmitter, lock/unlock button inside the vehicle or the driver door lock cylinder.

The front door latches have electric motors to operate the locking and double locking function. The electric motors are actuated directly by the BCM.

When the front door latch is locked, the exterior door handle is disengaged from the door latch.

A control switch is incorporated in the driver's door latch. This control switch monitors the position of the door latch and reports the information to the BCM. This information is sent to the BCM for use in warning systems, locking functions and anti-theft alarm systems.

The rear door entry system contains a latch that is fastened to the inside of the door frame and is controlled by the exterior and interior door handles. The latch contains the door ajar switch . No lock actuators or mechanisms are fitted to the rear doors, as the front door must be open in order to access the rear door latch.

Tailgate latch

The lock cylinder is optional. If equipped, the tailgate release handle is integrated with a lock cylinder. The tailgate is not linked to the central locking system.

Hood Latch

The hood latch system contains a latch fastened to the body and a hood latch striker attached to the hood. The latch is controlled by the hood latch release handle and cable.

Handles, Locks, Latches and Entry Systems - Overview

Overview

The power lock/unlock feature locks or unlocks the doors upon a customer request from a door lock control switch, the keyless entry keypad (if equipped) , the passive entry system (if equipped) or a RKE transmitter. Each door can also be locked manually using the mechanical access opening just above the door latch.

If equipped, the passive entry feature automatically locks or unlocks the doors, or releases the liftgate latch (manual liftgate) or power opens the liftgate (power liftgate).

If the DTC returns, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
U3000:04	Control Module: System Internal Failure	CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test. If the DTC returns, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) (419-10 Multifunction Electronic Modules, Removal and Installation).

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

PCM DTC Chart

DTC	Description	Action

P1594	Forced Engine Shutdown - Remote Start System Fault, No Unattended Vehicle Timeout	GO to Pinpoint Test X
P1595	Forced Engine Shutdown - Remote Start System Fault, Transmission Range Not In Park Position	GO to Pinpoint Test X
All other Diagnostic Trouble Codes (DTCs)	-	REFER to the PCM DTC Chart in the appropriate 303-14 section.

Symptom Charts

Symptom Chart: Handles, Locks, Latches and Entry Systems - Mechanical

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Condition	Possible Sources	Actions
Hard to open or close a door from either door handle	• Refer to the Pinpoint Test	• GO to Pinpoint Test A
A door is difficult or does not open from the exterior door handle	• Refer to the Pinpoint Test	• GO to Pinpoint Test B
A door is difficult or does not open from the interior door handle	• Refer to the Pinpoint Test	• GO to Pinpoint Test C
The exterior door release handle sticks	• Refer to the Pinpoint Test	• GO to Pinpoint Test D
The interior door release handle sticks	• Refer to the Pinpoint Test	• GO to Pinpoint Test E
Squeak-rattle-chucking noise from door	• Refer to the Pinpoint Test	• GO to Pinpoint Test F
The manual door lock cylinder is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test G

Symptom Chart: Handles, Locks, Latches and Entry Systems - Electrical

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Condition	Possible Sources	Actions
All door locks are inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test H
A single or more than one door lock is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test I
The door locks operate only one way	• Refer to the Pinpoint Test	• GO to Pinpoint Test J
All door locks are inoperative from one door lock control switch	• Refer to the Pinpoint Test	• GO to Pinpoint Test K
The doors unlock by swiping the keyless entry keypad 2 times	• Unintentional sequential codes programmed	• ERASE all personal codes, and program new codes. PROGRAM any unused slots with the factory code. REFER to the Owner's Literature.
The doors do not lock or unlock using the keyless entry keypad	• Refer to the Pinpoint Test	• GO to Pinpoint Test L
The keyless entry keypad illumination is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test M
The keyless entry keypad illumination is always on	• Refer to the Pinpoint Test	• GO to Pinpoint Test N
The RKE transmitter is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test O
An individual button/feature is inoperative from the RKE transmitter	• Refer to the Pinpoint Test	• GO to Pinpoint Test P
The RKE transmitter has poor range performance	• Refer to the Pinpoint Test	• GO to Pinpoint Test Q
The remote start feature is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test R

The remote start feature operates, but the remote start feedback LED (light emitting diode) is inoperative	• Passive key	• DISCARD the suspect passive key. PROGRAM a new passive key. REFER to: Passive Anti-Theft System (PATS) (419-01B Passive Anti-Theft System (PATS), Diagnosis and Testing).
The memory seat does not operate using the RKE transmitter	• RKE transmitter not programmed to the memory seat	• Program the RKE transmitter to the desired memory button. REFER to the Memory Function in the Owner's Literature.
The smart unlock is inoperative	• Refer to the Pinpoint Test	• For vehicles not equipped with push button start, DIAGNOSE the key-in-ignition warning chime. REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing). • For vehicles equipped with push button start, DIAGNOSE the passive key not starting the vehicle from various areas within the interior of the vehicle. REFER to: Passive Anti-Theft System (PATS) (419-01B Passive Anti-Theft System (PATS), Diagnosis and Testing).
The 2-stage door unlocking does not operate correctly	• The 2-stage door unlocking is disabled	• ENABLE the 2-step door unlocking. REFER to: Remote Keyless Entry (RKE) Transmitter Programming (501-14 Handles, Locks, Latches and Entry Systems, General Procedures).
A door passive entry feature is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test S

Pinpoint Tests

Hard To Open Or Close a Door From Either Door Handle

Normal Operations and Fault Conditions

The door latch can be actuated from the interior or exterior door handle. When actuated, the door latch releases and allows the door to open. If the door latch or the door hinges have insufficient lubrication or if the striker or door are misaligned, it causes extra force to be used when opening or closing the door.

Possible Causes

- Door alignment
- Door hinges
- Striker adjustment
- Door latch

PINPOINT TEST A : HARD TO OPEN OR CLOSE A DOOR FROM EITHER DOOR HANDLE

A1 CHECK THE LATCH OPERATION FROM BOTH DOOR HANDLES

- Open the door using both the interior and exterior door handles.

Does the door open normally from one of the door handles?

Yes	If the door is difficult/does not open from the exterior door handle, GO to Pinpoint Test B If the door is difficult/does not open from the interior door handle, GO to Pinpoint Test C
No	GO to A2

A2 CHECK THE LATCH OPERATION

- Open the door.
- Using a screwdriver, fully close the latch (2 clicks).
- Verify the latch releases easily while pulling on the interior/exterior door handle.

Does the latch release easily?

Yes	GO to A4
No	GO to A3

A3 CHECK THE LATCH OPERATION AFTER LUBRICATION

- Lubricate the door latch.
- Using a screwdriver, fully close the latch (2 clicks).
- Verify the latch releases easily while pulling on the interior/exterior door handle.

Does the latch release easily?

Yes	The concern was caused by an insufficiently lubricated door latch.
No	INSTALL a new door latch. REFER to: Front Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch - Double Cab (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

A4 CHECK THE STRIKER ADJUSTMENT

- Check the adjustment of the striker.

Is the striker adjusted correctly?

Yes	GO to A5
No	ADJUST the striker as necessary.

A5 CHECK THE DOOR ALIGNMENT

- Check the alignment of the door.

Is the door aligned correctly?

Yes	LUBRICATE the door hinges.
No	ADJUST the door as necessary. REFER to: Front Door Alignment - Double Cab (501-03 Body Closures, General Procedures). REFER to: Front Door Alignment - Super Cab (501-03 Body Closures, General Procedures). REFER to: Rear Door Alignment - Double Cab (501-03 Body Closures, General Procedures). REFER to: Rear Door Alignment - Super Cab (501-03 Body Closures, General Procedures).

A Door Is Difficult Or Does Not Open From The Exterior Door Handle

Normal Operations and Fault Conditions

The exterior door handle is connected to the door latch with an actuating cable. When the exterior door handle is pulled, the actuating cable pulls on the latch lever. When the latch lever moves, the door latch releases, allowing the door to open.

Possible Causes

- Broken or binding linkage
- Exterior door handle reinforcement
- Door latch

PINPOINT TEST B : A DOOR IS DIFFICULT OR DOES NOT OPEN FROM THE EXTERIOR DOOR HANDLE

B1 CHECK THE LATCH OPERATION FROM BOTH DOOR HANDLES

- Open and close the door using both the interior and exterior door handles.

Does the door open normally from one of the door handles?

Yes	If the door is difficult/does not open from only the exterior door handle, GO to B2 If the door is difficult/does not open from only the interior door handle, GO to Pinpoint Test C
No	GO to Pinpoint Test A

B2 CHECK THE EXTERIOR DOOR HANDLE AND CABLE OPERATION

- Disconnect the exterior door handle actuating cable from the door latch.
- Operate the exterior door handle while observing the linkage and cable.

Are any of the exterior door handle components or linkages binding or broken?

Yes	GO to B3
No	INSTALL a new door latch. REFER to: Front Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch - Double Cab (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

B3 CHECK THE EXTERIOR DOOR HANDLE REINFORCEMENT

- Disconnect the exterior door handle actuating cable from the exterior door handle reinforcement.
- Pull and release the exterior door handle.

Does the exterior door handle operate correctly?

Yes	INSTALL a new exterior door handle cable.
No	INSTALL a new exterior door handle reinforcement. REFER to: Exterior Front Door Handle (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Exterior Rear Door Handle (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

A Door Is Difficult Or Does Not Open From The Interior Door Handle

Normal Operations and Fault Conditions

The interior door handle is connected to the door latch by an actuating cable. When the interior door handle is pulled, the cable pulls on the latch lever. When the latch lever moves, the door latch releases, allowing the door to open.

Possible Causes

- Broken or binding cable/linkage
- Door latch

Visual Inspection and Diagnostic Pre-checks

- For the rear doors, make sure the child safety lock is in the unlock position.

PINPOINT TEST C : A DOOR IS DIFFICULT OR DOES NOT OPEN FROM THE INTERIOR DOOR HANDLE

C1 CHECK THE LATCH OPERATION FROM BOTH DOOR HANDLES

NOTE: *Make sure the child safety lock is in the unlock position for the rear doors.*

- **NOTE:** *The rear door interior door handle must be pulled twice to unlock and unlatch.*

  Open the door using both the interior and exterior door handles.

Does the door open normally from one of the door handles?

Yes	If the door is difficult/does not open from only the interior door handle, GO to C2 If the door is difficult/does not open from only the exterior door handle, GO to Pinpoint Test B
No	GO to Pinpoint Test A

C2 CHECK THE INTERIOR DOOR HANDLE AND CABLE/LINKAGE OPERATION

- Remove the door trim panel.
- Install the interior door handle back onto the release cable.
- Operate the interior door handle while observing the cable/linkage.

Are any of the interior door handle components or cable/linkages binding or broken?

Yes	REPAIR as necessary.
No	INSTALL a new door latch. REFER to: Front Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch - Double Cab (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

The Exterior Door Release Handle Sticks

Normal Operations and Fault Conditions

The exterior door handle is connected to the door latch with an actuating cable. When the exterior door handle is pulled, the actuating cable pulls on the latch lever. When the latch lever moves, the door latch releases, allowing the door to open. The handle has a return spring to make sure the handle returns to a closed position.

Possible Causes

- Binding linkage
- Broken handle return spring
- Door latch

PINPOINT TEST D : THE EXTERIOR DOOR RELEASE HANDLE STICKS

D1 CHECK FOR A BROKEN RETURN SPRING

- Remove the window regulator and motor.
  REFER to: Front Door Window Regulator (501-11 Glass, Frames and Mechanisms, Removal and Installation).
  REFER to: Rear Door Window Regulator Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation).
  REFER to: Rear Door Window Regulator (501-11 Glass, Frames and Mechanisms, Removal and Installation).
  REFER to: Rear Door Window Regulator Motor (501-11 Glass, Frames and Mechanisms, Removal and Installation).
- Install the exterior door handle strap back onto the exterior door handle reinforcement.
- Disconnect the exterior door handle actuating rod from the door latch.
- Pull and release the exterior door handle

Does the exterior door handle return to a closed position once released?

Yes	GO to D2
No	INSTALL a new exterior door handle reinforcement. REFER to: Exterior Front Door Handle (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Exterior Rear Door Handle (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

D2 CHECK THE EXTERIOR DOOR HANDLE AND LINKAGE OPERATION

- Operate the exterior door handle while observing the linkage.

Are any of the exterior door handle components or linkages binding?

Yes	REPAIR as necessary.
No	INSTALL a new door latch. REFER to: Front Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch - Double Cab (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

The Interior Door Release Handle Sticks

Normal Operations and Fault Conditions

The interior door handle is connected to the door latch by an actuating cable. When the interior door handle is pulled, the cable pulls on the latch lever. When the latch lever is moved, the door latch releases, allowing the door to open. The handle has a return spring to make sure the handle returns to a closed position.

Possible Causes

- Binding cable
- Broken handle return spring
- Door latch

PINPOINT TEST E : THE INTERIOR DOOR RELEASE HANDLE STICKS

E1 CHECK FOR A BROKEN RETURN SPRING

- Remove the interior door handle.
  REFER to: Interior Front Door Handle (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).
  REFER to: Interior Rear Door Handle (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).
- Pull and release the interior door handle.

Does the interior door handle return to a closed position once released?

Yes	GO to E2
No	INSTALL a new interior door handle. REFER to: Interior Front Door Handle (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Interior Rear Door Handle (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

E2 CHECK THE INTERIOR DOOR HANDLE CABLE OPERATION

- Remove the interior door latch release cable.
- Observe the door latch release cable for any damage or binding.

Is the door latch release cable OK?

Yes	INSTALL a new door latch. REFER to: Front Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch - Double Cab (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).
No	INSTALL a new interior door handle cable.

Squeak-Rattle-Chucking Noise From Door

Possible Causes

- Door alignment
- Striker adjustment
- Door latch

PINPOINT TEST F : SQUEAK-RATTLE-CHUCKING NOISE FROM DOOR

F1 CHECK FOR ANY LOOSE COMPONENTS

- Remove the door trim panel.
  REFER to: Front Door Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).
  REFER to: Rear Door Trim Panel - Super Cab (501-05 Interior Trim and Ornamentation, Removal and Installation).
- Inspect inside the door for any loose components.

Are there any loose components inside the door?

Yes	REPAIR as necessary.
No	GO to F2

F2 CHECK THE STRIKER ADJUSTMENT

- Check the adjustment of the striker.

Is the striker adjusted correctly?

Yes	GO to F3
No	ADJUST the striker as necessary.

F3 CHECK THE DOOR ALIGNMENT

- Check the alignment of the door.

Is the door aligned correctly?

Yes	GO to F4
No	ADJUST the door as necessary. REFER to: Front Door Alignment - Double Cab (501-03 Body Closures, General Procedures). REFER to: Front Door Alignment - Super Cab (501-03 Body Closures, General Procedures). REFER to: Rear Door Alignment - Double Cab (501-03 Body Closures, General Procedures). REFER to: Rear Door Alignment - Super Cab (501-03 Body Closures, General Procedures).

F4 CHECK THE LATCH OPERATION AFTER LUBRICATION

- Lubricate the door latch.
- Using a screwdriver, fully close the latch (2 clicks).
- Operate the door latch and listen for the noise.

Is the original noise still present after the latch is lubricated?

Yes	INSTALL a new door latch. REFER to: Front Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch - Double Cab (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).
No	The concern was caused by an insufficiently lubricated door latch.

The Manual Door Lock Cylinder Inoperative

Normal Operations and Fault Conditions

The door lock cylinder is connected to the door latch via a lock rod and can be used to manually lock/unlock the door.

Possible Causes

- Bent or binding lock rod and lever
- Door lock cylinder
- Door latch

PINPOINT TEST G : THE MANUAL DOOR LOCK CYLINDER INOPERATIVE

G1 CHECK THE LOCK AND UNLOCK OPERATION

- Insert a key into the lock cylinder and rotate the lock cylinder to the lock and unlock positions.

Does the door lock cylinder freely rotate without locking and unlocking the door?

Yes	GO to G2
No	GO to G4

G2 CHECK THE DOOR LOCK CYLINDER (FREE-SPIN)

- Remove the door lock cylinder.
  REFER to: Door Lock Cylinder (501-14 Handles, Locks, Latches and Entry Systems, Disassembly and Assembly).
- Operate the door lock cylinder with the key while holding the lever on the lock cylinder.

Does the key in the door lock cylinder rotate freely while the lever is stationary?

Yes	INSTALL a new door lock cylinder. REFER to: Door Lock Cylinder (501-14 Handles, Locks, Latches and Entry Systems, Disassembly and Assembly).
No	GO to G3

G3 CHECK THE DOOR LOCK CYLINDER LINKAGE CONNECTION

- Inspect the door lock cylinder linkage.

Is the door lock cylinder rod and lever disconnected?

Yes	CONNECT the door lock cylinder rod and lever.
No	INSTALL a new door latch. REFER to: Front Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch - Double Cab (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

G4 CHECK THE LOCK CYLINDER OPERATION AFTER LUBRICATION

- Spray a lock lubricant (such as Motorcraft® XL-1) into the lock cylinder opening for a couple of seconds.
- Operate the door lock cylinder with the key.

Does the door lock and unlock using the door lock cylinder?

Yes	The concern was caused by an insufficiently lubricated lock cylinder. SPRAY a multi-purpose grease (such as Motorcraft® XL-5) into the lock cylinder for a couple seconds to provide long term lubrication.

No	GO to G5

G5 CHECK THE DOOR LOCK CYLINDER FOR BINDING

- Remove the door lock cylinder.
  REFER to: Door Lock Cylinder (501-14 Handles, Locks, Latches and Entry Systems, Disassembly and Assembly).
- Operate the door lock cylinder with the key.

Does the door lock cylinder rotate freely?

Yes	GO to G6
No	INSTALL a new door lock cylinder. REFER to: Door Lock Cylinder (501-14 Handles, Locks, Latches and Entry Systems, Disassembly and Assembly).

G6 CHECK THE DOOR LOCK CYLINDER LINKAGE

- Operate the door lock using the door lock cylinder linkage.
- Operate the door lock cylinder with the key.

Is the door lock cylinder rod and lever binding, damaged or disconnected?

Yes	REPAIR as necessary.
No	INSTALL a new door latch. REFER to: Front Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch - Double Cab (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

All Door Locks Are Inoperative

Refer to Wiring Diagrams Cell 117 for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - Overview (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

Possible Causes

- Wiring, terminals or connectors
- BCM

PINPOINT TEST H : ALL DOOR LOCKS ARE INOPERATIVE

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

H1 CHECK FOR BCM (BODY CONTROL MODULE) , DDM (DRIVER DOOR MODULE) AND PDM (PASSENGER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, carry out the BCM self-test.
- Using a diagnostic scan tool, carry out the DDM self-test.
- Using a diagnostic scan tool, carry out the PDM self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the BCM DTC Chart, the DDM DTC Chart or the PDM DTC Chart in this section.
No	GO to H2

H2 VERIFY THE OPERATION OF BOTH DOOR LOCK CONTROL SWITCHES

- Press the lock and unlock buttons on both door lock control switches while observing the door lock operation.

Does any door lock operate?

Yes	GO to H3
No	GO to H4

H3 CHECK IF THE LOCKS OPERATE IN ONLY ONE DIRECTION

- Press the lock and unlock buttons from the driver door lock control switch and then the passenger door lock control switch while observing the door locks.

Are all the door locks inoperative from both switch positions (lock and unlock) of either door lock control switch?

Yes	GO to Pinpoint Test K
No	GO to Pinpoint Test J

H4 CHECK THE BCM (BODY CONTROL MODULE) DOOR LOCK GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect BCM C2280F.
- Measure

Positive Lead	Measurement / Action	Negative Lead
C2280F-10	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to H5
No	REPAIR the circuit.

H5 CHECK THE ALL DOOR LOCK CIRCUIT FOR AN OPEN

- Disconnect Left Front Door Latch LHD C5005 or RHD C6005.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280F-35	Ω	LHD C5005-7
C2280F-35	Ω	RHD C6005-7

Is the resistance less than 3 ohms?

Yes	GO to H6
No	REPAIR the circuit.

H6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all the BCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors and make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A Single or More Than One Door Lock Is Inoperative

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - Overview (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Door latch
- BCM

PINPOINT TEST I : A SINGLE OR MORE THAN ONE DOOR LOCK IS INOPERATIVE

I1 CHECK THE DOOR LATCH FOR BINDING

- Lock and unlock the inoperative door lock using the manual door lock located just above the door latch opening.

Does the door lock and unlock?

Yes	GO to I2
No	INSTALL a new door latch. REFER to: Front Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch - Double Cab (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

I2 CHECK THE BCM (BODY CONTROL MODULE) ALL LOCK OUTPUT CIRCUIT FOR AN OPEN

NOTICE: The following step uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250-300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

- Ignition OFF.
- Disconnect suspect door latch.
- For the suspect door latch, connect:

Left Front Door Latch

Positive Lead	Measurement / Action	Negative Lead
LHD C5005-7		Ground
RHD C6005-7		Ground

Right Front Door Latch

Positive Lead	Measurement / Action	Negative Lead
LHD C6011-2		Ground
RHD C5011-2		Ground

Left Rear Door Latch

Positive Lead	Measurement / Action	Negative Lead
C705-7		Ground

Right Rear Door Latch

Positive Lead	Measurement / Action	Negative Lead
C805-2		Ground

- **NOTE:** *The BCM only supplies voltage to the actuator momentarily. It is important to monitor the test lamp while pressing the door lock control switch.*

  While pressing the door lock control switch in the lock position, monitor the test lamp.

Does the test lamp momentarily illuminate?

Yes	GO to I3
No	REPAIR the circuit.

I3 CHECK THE BCM (BODY CONTROL MODULE) UNLOCK OUTPUT CIRCUIT FOR AN OPEN

NOTICE: The following step uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250-300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

- For the suspect door latch, connect:

Left Front Door Latch

Positive Lead	Measurement / Action	Negative Lead
LHD C5005-8		Ground
RHD C6005-8		Ground

Right Front Door Latch

Positive Lead	Measurement / Action	Negative Lead
LHD C6011-1		Ground

RHD C5011-1		Ground

Left Rear Door Latch

Positive Lead	Measurement / Action	Negative Lead
C705-8		Ground

Right Rear Door Latch

Positive Lead	Measurement / Action	Negative Lead
C805-1		Ground

- **NOTE:** *The BCM only supplies voltage to the actuator momentarily. It is important to monitor the test lamp while pressing the door lock control switch.*

  While pressing the door lock control switch in the unlock position, monitor the test lamp.

Does the test lamp momentarily illuminate?

Yes	INSTALL a new door latch. REFER to: Front Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch - Double Cab (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation). REFER to: Rear Door Latch (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).
No	REPAIR the circuit.

The Door Locks Operate Only One Way

Refer to Wiring Diagrams Cell 117 for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - Overview (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B126A:01	Drivers Door Interior Lock Switch: General Electrical Failure	Sets during an on-demand self-test if the BCM is receiving a lock or unlock request.

DDM/ PDM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B108F:23	Cabin Lock/Unlock Switch: Signal Stuck Low	Sets when the DDM/ PDM detects a short to ground from one of the door lock control switch input circuits.

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Door lock control switch
- PDM
- DDM

Visual Inspection and Diagnostic Pre-checks

- Check the BCM fuses 3 (20A) and 24 (30A) and make sure they are OK.

PINPOINT TEST J : THE DOOR LOCKS OPERATE ONLY ONE WAY

J1 CHECK FOR DDM (DRIVER DOOR MODULE) / PDM (PASSENGER DOOR MODULE) DTC (DIAGNOSTIC TROUBLE CODE) B108F:23

- Ignition ON.
- Using a diagnostic scan tool, carry out the DDM and the PDM self-tests.

Is DTC B108F:23 present?

Yes	GO to J2
No	VERIFY the BCM fuses 3 (20A) and 24 (30A) are OK. If OK, GO to J4 If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

J2 ISOLATE THE DOOR LOCK CONTROL SWITCH

- Ignition OFF.
- Disconnect Driver Door Lock Control Switch LHD C505 or RHD C605 (DTC set in DDM).
- Disconnect Passenger Door Lock Control Switch LHD C605 or RHD C541 (DTC set in PDM).
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the DDM or the PDM self-test.

Is DTC B108F:23 still present?

Yes	GO to J3
No	INSTALL a new front door lock control switch.

J3 CHECK THE DOOR LOCK CONTROL SWITCH INPUT CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect DDM LHD C501A or RHD C653A (DTC set in DDM).
- Disconnect PDM LHD C652A or RHD C590A (DTC set in PDM).
- If the DTC set in the DDM, measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C501A-10	Ω	Ground
LHD C501A-20	Ω	Ground
RHD C653A-10	Ω	Ground
RHD C653A-20	Ω	Ground

- If the DTC set in the PDM, measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C652A-10	Ω	Ground
LHD C652A-20	Ω	Ground
RHD C590A-10	Ω	Ground
RHD C590A-20	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	For the PDM, GO to J8 For the DDM, GO to J9
No	REPAIR the circuit in question.

J4 CHECK THE LOCK REQUEST INPUT CIRCUIT

- Ignition OFF.
- Disconnect suspect door lock control switch.
- For the driver door lock control switch, connect:

Lead 1	Measurement / Action	Lead 2
LHD C505-2		C505-5
RHD C605-4		C605-1

- For the passenger door lock control switch, connect:

Lead 1	Measurement / Action	Lead 2
LHD C605-4		C605-1
RHD C541-2		C541-5

- Remove the fused jumper wire

Do the doors lock?

Yes	GO to J6

No	GO to J5

J5 CHECK THE LOCK REQUEST INPUT CIRCUIT FOR AN OPEN

- Disconnect DDM LHD C501A or RHD C653A (driver door lock control switch).
- Disconnect PDM LHD C652A or RHD C590A (passenger door lock control switch).
- For the driver door lock control switch, measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C505-2	Ω	C501A-20
RHD C605-4	Ω	C653A-20

- For the passenger door lock control switch, measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C605-4	Ω	C652A-20
RHD C541-2	Ω	C590A-20

Is the resistance less than 3 ohms?

Yes	For the concern with the passenger door lock control switch, GO to J8 For the concern with the driver door lock control switch, GO to J9
No	REPAIR the circuit.

J6 CHECK THE UNLOCK REQUEST INPUT CIRCUIT

- For the driver door lock control switch, connect:

Lead 1	Measurement / Action	Lead 2
LHD C505-4		C505-5
RHD C605-2		C605-1

- For the passenger door lock control switch, connect:

Lead 1	Measurement / Action	Lead 2
LHD C605-2		C605-1
RHD C541-4		C541-5

- Remove the fused jumper wire

Do the doors unlock?

Yes	INSTALL a new front door lock control switch.
No	GO to J7

J7 CHECK THE UNLOCK REQUEST INPUT CIRCUIT FOR AN OPEN

- Disconnect DDM LHD C501A or RHD C653A (driver door lock control switch).
- Disconnect PDM LHD C652A or RHD C590A (passenger door lock control switch).
- For the driver door lock control switch, measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C505-2	Ω	C501A-10
RHD C605-2	Ω	C653A-10

- For the passenger door lock control switch, measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C605-2	Ω	C652A-10
RHD C541-4	Ω	C590A-10

Is the resistance less than 3 ohms?

Yes	For the concern with the passenger door lock control switch, GO to J8 For the concern with the driver door lock control switch, GO to J9
No	REPAIR the circuit.

J8 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

- Disconnect and inspect all the PDM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PDM connectors and make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

J9 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

- Disconnect and inspect all the DDM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals pins
  - pushed-out pins - install new pins as necessary
- Reconnect the DDM connectors and make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

All Door Locks Are Inoperative From One Door Lock Control Switch

Refer to Wiring Diagrams Cell 117 for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - Overview (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

Possible Causes

- Wiring, terminals or connectors
- Door lock control switch
- PDM
- DDM

Visual Inspection and Diagnostic Pre-checks

- Check the door lock control switch for damage.

PINPOINT TEST K : ALL DOOR LOCKS ARE INOPERATIVE FROM ONE DOOR LOCK CONTROL SWITCH

K1 CHECK FOR COMMUNICATION TO THE DDM (DRIVER DOOR MODULE) AND PDM (PASSENGER DOOR MODULE)

- Ignition ON.
- Using a diagnostic scan tool, carry out the network test.

Does the DDM and the PDM pass the network test?

Yes	GO to K2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

K2 BYPASS THE DOOR LOCK CONTROL SWITCH

- Ignition OFF.

- Disconnect suspect door lock control switch.
- For the driver door lock control switch, connect:

Lead 1	Measurement / Action	Lead 2
LHD C505-2		C505-5
RHD C605-4		C605-1

- For the passenger door lock control switch, measure:

Lead 1	Measurement / Action	Lead 2
LHD C605-4		C605-1
RHD C541-2		C541-5

- Remove the fused jumper wire.
- For the driver door lock control switch, connect:

Lead 1	Measurement / Action	Lead 2
LHD C505-4		C505-5
RHD C605-2		C605-1

- For the passenger door lock control switch, measure:

Lead 1	Measurement / Action	Lead 2
LHD C605-2		C605-1
RHD C541-4		C541-5

- Remove the fused jumper wire.

Do the doors lock and unlock?

Yes	INSTALL a new front door lock control switch.
No	GO to K3

K3 CHECK THE DOOR LOCK CONTROL SWITCH GROUND CIRCUIT FOR AN OPEN

- Disconnect DDM LHD C501A or RHD C653A (driver door lock control switch).
- Disconnect PDM LHD C652A or RHD C590A (passenger door lock control switch).
- For the driver door lock control switch, measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C505-5	Ω	C501A-17
RHD C605-1	Ω	C653A-17

- For the passenger door lock control switch, measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C605-1	Ω	C652A-17
RHD C541-5	Ω	C590A-17

Is the resistance less than 3 ohms?

Yes	For the concern with the driver door lock control switch, GO to K5 For the concern with the passenger door lock control switch, GO to K4
No	REPAIR the circuit.

K4 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

- Disconnect and inspect all the PDM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals pins
  - pushed-out pins - install new pins as necessary

- Reconnect the PDM connectors and make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

K5 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

- Disconnect and inspect all the DDM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals pins
  - pushed-out pins - install new pins as necessary
- Reconnect the DDM connectors and make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Doors Do Not Lock Or Unlock Using The Keyless Entry Keypad

Refer to Wiring Diagrams Cell 117 for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - Overview (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B121B:01	Keypad Input Switch: General Electrical Failure	Sets when the BCM detects a short to ground from any of the keyless entry keypad input circuits.

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Keyless entry keypad
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the front door window moulding for damage.
- Check the BCM fuse 10 (5A) and make sure it is OK.

PINPOINT TEST L : THE DOORS DO NOT LOCK OR UNLOCK USING THE KEYLESS ENTRY KEYPAD

L1 CHECK POWER LOCK OPERATION FROM THE DOOR LOCK CONTROL SWITCH

- Press the lock and unlock button on the door lock control switch.

Do the doors lock and unlock?

Yes	GO to L2
No	REFER to the Symptom Chart: Handles, Locks, Latches and Entry Systems - Electrical in this section.

L2 CHECK THE KEYLESS ENTRY KEYPAD ILLUMINATION

- Touch the keyless entry keypad in several places.

Do the keypad numbers illuminate?

Yes	GO to L7
No	GO to L3

L3 CHECK THE KEYLESS ENTRY KEYPAD INDICATOR

- **NOTE:** *The round indicator above the numbers illuminates when the sensors detect a button is being touched.*

  Touch the keyless entry keypad in several places.

Does the round indicator on the top of the keypad illuminate?

Yes	GO to Pinpoint Test M
No	GO to L4

L4 CHECK THE KEYLESS ENTRY KEYPAD VOLTAGE SUPPLY CIRCUIT FOR VOLTAGE

- Ignition OFF.
- Disconnect Keyless Entry Keypad C500.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C500-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to L6
No	VERIFY the BCM fuse 10 (5A) is OK. If OK, GO to L5 If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

L5 CHECK THE KEYLESS ENTRY KEYPAD VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect BCM C2280F.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C500-1	Ω	C2280F-16

Is the resistance less than 3 ohms?

Yes	GO to L15
No	REPAIR the circuit.

L6 CHECK THE KEYLESS ENTRY KEYPAD GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C500-1		C500-6

Is the voltage greater than 11 volts?

Yes	INSTALL a new front door moulding. REFER to: Front Door Upper Moulding - Double Cab (501-08 Exterior Trim and Ornamentation, Removal and Installation).
No	REPAIR the circuit.

L7 CARRY OUT THE BCM (BODY CONTROL MODULE) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC B121B:01 present?

Yes	GO to L8
No	GO to L10

L8 ISOLATE THE KEYLESS ENTRY KEYPAD

- Ignition OFF.
- Disconnect Keyless Entry Keypad C500.

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the BCM self-test.

Is DTC B121B:01 still present?

Yes	GO to L9
No	INSTALL a new front door moulding. REFER to: Front Door Upper Moulding - Double Cab (501-08 Exterior Trim and Ornamentation, Removal and Installation).

L9 CHECK THE KEYLESS ENTRY KEYPAD INPUT CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect BCM C2280D.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C500-3	Ω	Ground
C500-4	Ω	Ground
C500-5	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to L15
No	REPAIR the circuit in question.

L10 CHECK THE BCM (BODY CONTROL MODULE) KEYPAD BUTTON PARAMETER IDENTIFICATIONS (PIDS)

- Using a diagnostic scan tool, view the BCM Parameter Identifications (PIDs).
- **NOTE:** *When monitoring the capacitive sensor Parameter Identifications (PIDs), it is best to select a graph view. When a sensor is touched, the PID state rapidly switches between ON and OFF.*

  Press each keyless entry keypad button while observing the BCM keypad button Parameter Identifications (PIDs) (KYPD_BTN_1/2, KYPD_BTN_3/4, KYPD_BTN_5/6, KYPD_BTN_7/8 and KYPD_BTN_9/0).

Do the Parameter Identifications (PIDs) indicate the buttons operate correctly?

Yes	GO to L11
No	GO to L12

L11 CHECK THE BCM (BODY CONTROL MODULE) KEYPAD CODE

- Using a diagnostic scan tool, view the factory keyless entry code.
- Enter the 5-digit factory set entry code on the keyless entry keypad, then touch the 3/4 button.
- Simultaneously touch the 7/8 and 9/0 buttons for 3 seconds.

Do the doors unlock when the factory code is entered and lock when the 7/8 and 9/0 buttons are touched for 3 seconds?

Yes	The system is operating as designed. INFORM the customer of the correct system operation.
No	GO to L15

L12 CHECK THE KEYLESS ENTRY KEYPAD INPUT CIRCUITS USING THE BCM (BODY CONTROL MODULE) KEYPAD BUTTON PARAMETER IDENTIFICATIONS (PIDS)

- Ignition OFF.
- Disconnect Keyless Entry Keypad C500.
- Ignition ON.
- **NOTE:** *When monitoring the capacitive sensor Parameter Identifications (PIDs), it is best to select a graph view. When a sensor is touched, the PID state rapidly switches between ON and OFF.*

  Using a diagnostic scan tool, monitor the BCM keypad button Parameter Identifications (PIDs) (KYPD_BTN_1/2, KYPD_BTN_7/8 and KYPD_BTN_9/0).
- Connect:

1/2 Button

Lead 1	Measurement / Action	Lead 2
C500-3		C597-6

- Remove the fused jumper wire.
- Connect:

7/8 Button

Lead 1	Measurement / Action	Lead 2

C500-4		C597-6

- Remove the fused jumper wire.
- Connect:

9/0 Button

Lead 1	Measurement / Action	Lead 2
C500-5		C597-6

- Remove the fused jumper wire.

Do the Parameter Identifications (PIDs) correctly indicate Active with the fused jumper wire connected?

Yes	INSTALL a new front door moulding. REFER to: Front Door Upper Moulding - Double Cab (501-08 Exterior Trim and Ornamentation, Removal and Installation).
No	GO to L13

L13 CHECK THE KEYLESS ENTRY KEYPAD INPUT CIRCUITS FOR A SHORT TO EACH OTHER

- Ignition OFF.
- Disconnect BCM C2280D.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C500-3	Ω	C500-4
C500-3	Ω	C500-5
C500-4	Ω	C500-5

Are the resistances greater than 10,000 ohms?

Yes	GO to L14
No	REPAIR the circuits in question.

L14 CHECK THE KEYLESS ENTRY KEYPAD INPUT CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C500-3	Ω	C2280D-28
C500-4	Ω	C2280D-2
C500-5	Ω	C2280D-15

Are the resistances less than 3 ohms?

Yes	GO to L15
No	REPAIR the circuit in question.

L15 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all the BCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors and make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Keyless Entry Keypad Illumination Is Inoperative

Refer to Wiring Diagrams Cell 117 for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - Overview (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B121A:11	Keypad Illumination Output: Circuit Short To Ground	Sets when the BCM detects a short to ground from the keyless entry keypad illumination output circuit.
B121A:15	Keypad Illumination Output: Circuit Short To Battery Or Open	Sets when the BCM detects an open from the keyless entry keypad illumination output circuit.

Possible Causes

- Wiring, terminals or connectors
- Keyless entry keypad
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the front door window moulding for damage.

PINPOINT TEST M : THE KEYLESS ENTRY KEYPAD ILLUMINATION IS INOPERATIVE

M1 CHECK THE KEYLESS ENTRY KEYPAD OPERATION

- Press the 7/8 and 9/0 buttons simultaneously on the keyless entry keypad.

Do the doors lock using the keyless entry keypad?

Yes	GO to M2
No	GO to Pinpoint Test L

M2 CHECK FOR BCM (BODY CONTROL MODULE) DTC (DIAGNOSTIC TROUBLE CODE) B121A:11

- Ignition ON.
- Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC B121A:11 present?

Yes	GO to M3
No	GO to M5

M3 CHECK THE KEYLESS ENTRY KEYPAD FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect Keyless Entry Keypad C500.
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC B121A:11 still present?

Yes	GO to M4
No	INSTALL a new front door moulding. REFER to: Front Door Upper Moulding - Double Cab (501-08 Exterior Trim and Ornamentation, Removal and Installation).

M4 CHECK THE KEYPAD ILLUMINATION OUTPUT CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect BCM C2280D.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C500-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to M7
No	REPAIR the circuit.

M5 CHECK THE BCM (BODY CONTROL MODULE) OUTPUT USING THE KEYPAD LAMP OUTPUT STATUS (KEY_PAD_LMP) PID (PARAMETER IDENTIFICATION)

- Ignition OFF.
- Disconnect Keyless Entry Keypad C500.
- Ignition ON.
- Using a diagnostic scan tool, command the BCM KEY_PAD_LMP PID on.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C500-2		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new front door moulding. REFER to: Front Door Upper Moulding - Double Cab (501-08 Exterior Trim and Ornamentation, Removal and Installation).
No	GO to M6

M6 CHECK THE BCM (BODY CONTROL MODULE) KEYPAD ILLUMINATION OUTPUT CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect BCM C2280D.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C500-2	Ω	C2280D-35

Is the resistance less than 3 ohms?

Yes	GO to M7
No	REPAIR the circuit.

M7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all the BCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors and make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Keyless Entry Keypad Illumination Is Always On

Refer to Wiring Diagrams Cell 117 for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - Overview (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions

B121A:15	Keypad Illumination Output: Circuit Short To Battery Or Open	Sets when the BCM detects a short to voltage from the keyless entry keypad illumination output circuit.

Possible Causes

- Wiring, terminals or connectors
- Keyless entry keypad
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the front door window moulding for damage.

PINPOINT TEST N : THE KEYLESS ENTRY KEYPAD ILLUMINATION IS ALWAYS ON

N1 CHECK THE KEYLESS ENTRY KEYPAD ILLUMINATION

NOTE: *It is normal operation for the keypad to illuminate when the illuminated entry/exit feature is active. Make sure all the doors are closed and the feature times out.*

- Ignition ON.
- Wait 45 seconds and observe the keyless entry keypad illumination.

Is the keyless entry keypad illumination always on?

Yes	GO to N2
No	The system is operating correctly. INFORM the customer of the normal keypad illumination operation.

N2 ISOLATE THE BCM (BODY CONTROL MODULE)

- Ignition OFF.
- Disconnect BCM C2280D.
- Ignition ON.

Does the keypad continue illuminate?

Yes	GO to N3
No	GO to N4

N3 CHECK THE BCM (BODY CONTROL MODULE) KEYPAD ILLUMINATION OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Keyless Entry Keypad C500.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C500-2		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	INSTALL a new front door moulding. REFER to: Front Door Upper Moulding - Double Cab (501-08 Exterior Trim and Ornamentation, Removal and Installation).

N4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all the BCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors and make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The RKE Transmitter Is Inoperative

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - Overview (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10AB:00	Remote Keyless Entry Synchronization: No Sub Type Information	Sets when the BCM detects the rolling counter received from a RKE transmitter is out of synchronization with the rolling counter stored in the module.
B1218:00	Transmitter Identification Code: No Sub Type Information	Sets when the BCM detects and invalid Transmitter Identification Code (TIC).

Possible Causes

- Key batteries
- Key
- Key button pressed a substantial amount of times while outside the range of the vehicle
- Key programming
- Network concern

Visual Inspection and Diagnostic Pre-checks

- Inspect the key for damage.
- Check for aftermarket keys.

PINPOINT TEST O : THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER IS INOPERATIVE

NOTE: *All customer keys need to be present when diagnosing the RKE system.*

O1 CHECK FOR THE CORRECT KEYS

- Verify all keys present are the correct type for the vehicle. Refer to the PATS Job Aid in the Service Tips tab on the Professional Technician Society (PTS) web page or the parts catalog.

Are the correct keys present?

Yes	GO to O2
No	The system cannot be tested without the correct keys. INFORM the customer that all of the correct keys must be present to proceed with diagnosis of the system.

O2 CHECK FOR REDUCED RANGE

NOTE: *Make sure the vehicle is in an open area with no other large metal objects near, such as other vehicles or steel buildings.*

- Check all keys for normal range performance (approximately 30m (100 ft) for passive key).

Do the keys experience poor range?

Yes	GO to Pinpoint Test Q
No	GO to O3

O3 CHECK THE RKE (REMOTE KEYLESS ENTRY) FUNCTIONALITY OF THE KEYS

- Press each RKE button on a key. Repeat this step on a second key.

Are all the RKE functions inoperative from both keys?

Yes	GO to O11
No	GO to O4

O4 CHECK THE RKE (REMOTE KEYLESS ENTRY) FUNCTIONALITY OF THE SUSPECT KEY

- Press each RKE button (twice for the liftgate latch release) on the suspect key.

Does any RKE function operate?

Yes	GO to Pinpoint Test P
No	GO to O5

O5 CHECK THE NO (TIC) OUT OF SYNC (TIC-NONE_OOS) PID (PARAMETER IDENTIFICATION)

- Ignition ON.
- Using a diagnostic scan tool, view the BCM Parameter Identifications (PIDs).
- Using a diagnostic scan tool, monitor the BCM PID TIC-NONE_OOS.

Does the PID indicate On?

Yes	GO to O8
No	GO to O6

O6 RESYNCHRONIZE THE INOPERATIVE PASSIVE KEY

- Ignition OFF.
- Place the suspect key in the backup starting location.
  REFER to: Passive Anti-Theft System (PATS) - Overview (419-01B Passive Anti-Theft System (PATS), Description and Operation).
- Ignition ON.
- Wait 10 seconds.
- Ignition OFF.
- Within 30 seconds, press any button on the suspect key 4 times consecutively.

Does the suspect key operate correctly now?

Yes	The system is OK. The concern was caused by a key out of synchronization.
No	GO to O7

O7 RESYNCHRONIZE THE INOPERATIVE KEY USING THE SECOND KEY

- Press any button on the operational key.
- Within 30 seconds and then press any button on the suspect key.
- Check the suspect key for correct operation.

Does the suspect key operate correctly now?

Yes	The system is OK. The concern was caused by a key out of synchronization.
No	GO to O10

O8 CHECK THE (RKE) REMOTE BATTERY LOW (RKE_BATT_LOW) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view the BCM Parameter Identifications (PIDs).
- Using a diagnostic scan tool, monitor the BCM PID RKE_BATT_LOW.

Does the PID indicate Off?

Yes	GO to O10
No	GO to O9

O9 CHECK THE PASSIVE KEY BATTERIES

NOTE: *Do not clean off any grease from the battery terminals on the back surface of the circuit board.*

- Remove the passive key batteries. Refer to the Owner Guide for battery removal instructions.
- Verify the correct batteries are used (CR2025).
- Remove both key batteries and measure the voltage.

Are the voltages greater than 2.5 volts?

Yes	REPLACE the suspect key. PROGRAM a new passive key. REFER to: Passive Anti-Theft System (PATS) - Overview (419-01B Passive Anti-Theft System (PATS), Description and Operation).
No	REPLACE both key batteries (make sure the batteries are seated correctly). DO NOT reprogram the key (damaged or dead batteries do not erase keys from memory).

O10 PROGRAM THE SUSPECT KEY

- Program the suspect key.
  REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).
- Check the RKE functionality of the suspect key.

Does the RKE functionality operate?

Yes	The system is OK. The concern was caused by an unprogrammed key.
No	REPLACE the suspect key. PROGRAM the new key. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).

O11 CHECK FOR COMMUNICATION WITH THE BCM (BODY CONTROL MODULE) AND THE RTM (RADIO TRANSCEIVER MODULE)

- Ignition ON.
- Using a diagnostic scan tool, carry out a network test.

Does the BCM and the RTM pass the network test?

Yes	GO to O12
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

O12 CHECK FOR RTM (RADIO TRANSCEIVER MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, carry out the RTM module self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the RTM DTC Chart in this section.
No	GO to O13

O13 CHECK FOR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, carry out a BCM module self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the BCM DTC Chart in this section.
No	GO to Pinpoint Test U

An Individual Button/Feature Is Inoperative From The RKE Transmitter

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - Overview (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

Possible Causes

- Door lock system concern
- Liftgate latch release system concern
- Power liftgate system concern
- Horn system concern
- Turn signal system concern
- Remote start system concern
- Key

Visual Inspection and Diagnostic Pre-checks

- Inspect the key for damage.

PINPOINT TEST P : AN INDIVIDUAL BUTTON/FEATURE IS INOPERATIVE FROM THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER

P1 VERIFY THE DOOR LOCK OPERATION

- Press the lock and unlock button on the door lock control switch while observing the door lock operation.

Do the door locks operate?

Yes	GO to P2
No	REFER to the Symptom Chart: Handles, Locks, Latches and Entry Systems - Electrical in this section.

P2 VERIFY THE HORN OPERATION USING THE BCM (BODY CONTROL MODULE) PID (PARAMETER IDENTIFICATION) (HORN_RELAY)

- Ignition ON.
- Using a diagnostic scan tool, view the BCM Parameter Identifications (PIDs).
- Select the BCM horn PID (HORN_RELAY) and active command the horn on then off.

Does the horn sound when commanded on?

Yes	GO to P3
No	REFER to: Horn (413-06 Horn, Diagnosis and Testing).

P3 VERIFY THE HAZARD LAMP OPERATION

- Activate the hazard lamp function.

Do the hazard lamps operate correctly?

Yes	GO to P4
No	REFER to: Turn Signal and Hazard Lamps (417-01 Exterior Lighting, Diagnosis and Testing).

P4 CHECK THE LOCK AND UNLOCK BUTTONS

- Ignition OFF.
- Press the lock and then unlock button on the suspect key.

Do the doors lock and unlock?

Yes	GO to P5
No	REPLACE the suspect key. PROGRAM the new key. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).

P5 CHECK THE LIFTGATE RELEASE BUTTON

- Press the liftgate release button twice on the suspect key.

Does the liftgate latch release (manual liftgate) or the power open (power liftgate)?

Yes	If not equipped with factory remote start, REPLACE the suspect key. PROGRAM the new key. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures). If equipped with factory remote start, GO to P6
No	REPLACE the suspect key. PROGRAM the new key. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).

P6 VERIFY THE REMOTE START OPERATION

- Close all the doors, the hood and the liftgate.
- **NOTE:** *Each button press must be done within 3 seconds of each other.*

  From outside the vehicle using the key:
  - Press the door lock button.
  - Press the remote start button twice.

Does the vehicle remotely start?

Yes	The RKE transmitter is operating correctly. INFORM the customer of the RKE transmitter operation.
No	REPLACE the suspect key. PROGRAM the new key. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).

The RKE Transmitter Has Poor Range Performance

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - Overview (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

Possible Causes

- Key
- Key batteries
- Aftermarket system
- Consumer electronic device
- High power devices
- TV/radio transmission towers
- RTM

Visual Inspection and Diagnostic Pre-checks

- Inspect the key for damage.
- Inspect the key batteries.
- Inspect for aftermarket RKE systems.

PINPOINT TEST Q : THE RKE (REMOTE KEYLESS ENTRY) TRANSMITTER HAS POOR RANGE PERFORMANCE

NOTE: *At least 2 programmed keys must be present to begin diagnosis of the RKE system.*

Q1 CHECK FOR THE CORRECT KEYS

- Check that the correct keys are used with the vehicle. Refer to the PATS Job Aid in the Service Tips tab on the Professional Technician Society (PTS) web page or the parts catalog.

Are the correct keys present?

Yes	GO to Q2
No	The system cannot be tested without the correct keys. INFORM the customer the correct keys must be present to proceed with diagnosis of the system.

Q2 CHECK ALL KEYS FOR POOR RANGE PERFORMANCE

NOTE: *Make sure the vehicle is in an open area with no other large metal objects near, such as other vehicles or steel buildings.*

- Check all keys for normal range performance (approximately 30m (100 ft) for a passive key).

Do all keys experience poor range?

Yes	GO to Q4
No	For a passive key, GO to Q3

Q3 CHECK THE PASSIVE KEY BATTERIES

NOTE: *Do not clean off any grease from the battery terminals on the back surface of the circuit board.*

- Remove the passive key batteries. Refer to the Owner Guide for battery removal instructions.
- Verify the correct batteries are used (CR2025).
- Measure the key batteries voltage.

Are the voltages greater than 2.5 volts?

Yes	REPLACE the suspect key. PROGRAM the new key. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).
No	REPLACE both key batteries (make sure the batteries are seated correctly). DO NOT reprogram the key (weak or dead batteries do not erase keys from memory).

Q4 CHECK THE LOCATION OF THE VEHICLE AND THE APPROACH ANGLES AROUND THE VEHICLE

- Make sure the poor performance is consistent in nature and is not from one approaching angle.
- The RKE transmitter range performance may be degraded in certain locations. For example, if the vehicle or RKE transmitter is within range of high-power devices, radio/TV towers, 2-way radios, cell phone charger or other radio communication device, the operating distance of the keys may be reduced.

Is the poor range performance consistent around the vehicle?

Yes	INSTALL a new RTM. REFER to: Radio Transceiver Module (RTM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The range may have been affected by environmental interference such as high-power devices or other radio communication device.

The Remote Start Feature Is Inoperative

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - Overview (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

Possible Causes

- Remote start feature not enabled
- Key
- Hood ajar switch input concern
- Door ajar switch input concern
- TR input concern
- Powertrain concern

Visual Inspection and Diagnostic Pre-checks

- Inspect the passive key for damage.

PINPOINT TEST R : THE REMOTE START FEATURE IS INOPERATIVE

NOTE: *This pinpoint test does not diagnose dealer installed remote start systems.*

R1 CHECK THE REMOTE START FEATURE ENABLE/DISABLE SETTING

- Ignition ON.
- Using the steering wheel control switch, check the remote start feature setting in the message center.

Is the remote start feature enabled?

Yes	GO to R2
No	ENABLE the remote start feature.

R2 CHECK FOR POWERTRAIN DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, carry out the PCM KOEO and KOER self-tests.

Are any PCM Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the PCM DTC chart in this section.
No	GO to R3

R3 CHECK FOR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, carry out the BCM self-test.

Are any BCM Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the BCM DTC chart in this section.

No	GO to R4

R4 CHECK THE RKE (REMOTE KEYLESS ENTRY) FUNCTIONALITY

- Ignition OFF.
- Using the RKE function of the passive key, press the liftgate release button twice, the lock button and then the unlock button.

Do all the functions tested of the RKE transmitter operate (lock, unlock and liftgate latch release or power liftgate open)?

Yes	GO to R5
No	If all of the functions are inoperative, GO to Pinpoint Test O If an individual function is inoperative, GO to Pinpoint Test P

R5 VERIFY THE REMOTE START FUNCTION IS INOPERATIVE

- Close all the doors, the hood and the liftgate.
- Using the key:
  - Press the door lock button.
  - Press the remote start button twice.

Does the vehicle remotely start?

Yes	The system is operating correctly. INFORM the customer of the correct vehicle remote start operation.
No	REPLACE the suspect key. PROGRAM the new key. REFER to: Anti-Theft Security Access (419-01B Passive Anti-Theft System (PATS), General Procedures).

A Door Passive Entry Feature Is Inoperative

Refer to Wiring Diagrams Cell 117 for schematic and connector information.

Normal Operations and Fault Conditions

REFER to: Handles, Locks, Latches and Entry Systems - Overview (501-14 Handles, Locks, Latches and Entry Systems, Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B11C6:01	Passenger Door External Antenna: General Electrical Failure	Sets when the BCM detects a fault from one of the circuits to the passenger side keyless entry antenna (internal to the front passenger exterior door handle).
B11CA:01	Driver Door External Antenna: General Electrical Failure	Sets when the BCM detects a fault from one of the circuits to the driver side keyless entry antenna (internal to the front driver exterior door handle).
B1381:11	Left Front Door Handle Proximity Sensor: Circuit Short To Ground	Sets when the BCM detects a fault from one of the circuits to the left front exterior door handle.
B1381:15	Left Front Door Handle Proximity Sensor: Circuit Short To Battery or Open	Sets when the BCM detects a fault from one of the circuits to the left front exterior door handle.
B1381:29	Left Front Door Handle Proximity Sensor: Signal Invalid	Set when the BCM detects an activated touch sensor for more than 5 minutes.
B1382:11	Right Front Door Handle Proximity Sensor: Circuit Short To Ground	Sets when the BCM detects a fault from one of the circuits to the right exterior door handle.
B1382:15	Right Front Door Handle Proximity Sensor: Circuit Short To Battery or Open	Sets when the BCM detects a fault from one of the circuits to the right exterior door handle.
B1382:29	Right Front Door Handle Proximity Sensor: Signal Invalid	Set when the BCM detects an activated touch sensor for more than 5 minutes.

Possible Causes

- Wiring, terminals or connectors
- Door lock system concern
- RKE system concern
- Exterior door handle
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the exterior door handles for damage.

PINPOINT TEST S : A DOOR PASSIVE ENTRY FEATURE IS INOPERATIVE

S1 CHECK THE DOOR LOCK OPERATION

- Lock and unlock the doors using a door lock control switch.

Do the doors lock and unlock?

Yes	GO to S2
No	REFER to the Symptom Chart: Handles, Locks, Latches and Entry Systems - Electrical in this section.

S2 CHECK THE RKE (REMOTE KEYLESS ENTRY) OPERATION

- Press the lock and unlock buttons on a key.

Do the doors lock and unlock?

Yes	GO to S3
No	GO to Pinpoint Test O

S3 CHECK THE PASSIVE ENTRY OPERATION FROM BOTH FRONT DOORS

- Operate the passive entry feature from the left and right doors.

Is the passive entry feature inoperative from both front doors?

Yes	GO to S4
No	GO to S7

S4 CHECK THE EXTERIOR DOOR HANDLE GROUND CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280E.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280E-20		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to S5

S5 CHECK THE EXTERIOR DOOR HANDLE GROUND CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280E-20	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to S6
No	REPAIR the circuit.

S6 CHECK THE EXTERIOR DOOR HANDLE GROUND CIRCUIT FOR AN OPEN (BOTH FRONT DOORS PASSIVE ENTRY INOPERATIVE)

- Disconnect Left Front Exterior Door Handle C543.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C543-4	Ω	C2280E-20

Is the resistance less than 3 ohms?

Yes	GO to S16
No	REPAIR the circuit.

S7 CHECK FOR VOLTAGE TO THE EXTERIOR DOOR HANDLE

- Ignition OFF.

- Disconnect suspect exterior door handle.
- Measure:

Left Front

Positive Lead	Measurement / Action	Negative Lead
C543-1	V	Ground

Right Front

Positive Lead	Measurement / Action	Negative Lead
C634-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to S10
No	GO to S8

S8 CHECK THE EXTERIOR DOOR HANDLE VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

- Disconnect BCM C2280E.
- Measure:

Left Front

Positive Lead	Measurement / Action	Negative Lead
C543-1	Ω	Ground

Right Front

Positive Lead	Measurement / Action	Negative Lead
C634-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to S9
No	REPAIR the circuit.

S9 CHECK THE EXTERIOR DOOR HANDLE VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Measure:

Left Front

Positive Lead	Measurement / Action	Negative Lead
C543-1	Ω	C2280E-21

Right Front

Positive Lead	Measurement / Action	Negative Lead
C634-1	Ω	C2280E-5

Is the resistance less than 3 ohms?

Yes	GO to S16
No	REPAIR the circuit.

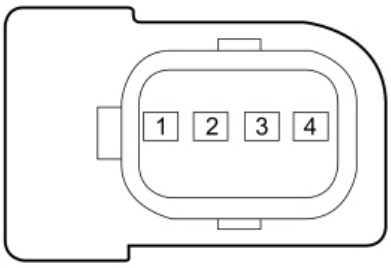
S10 CHECK THE EXTERIOR DOOR HANDLE GROUND CIRCUIT FOR AN OPEN

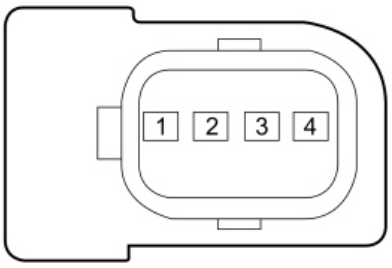
- Disconnect BCM C2280E.
- Measure:

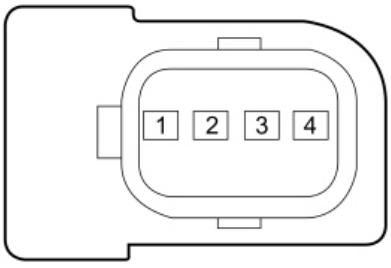
Left Front

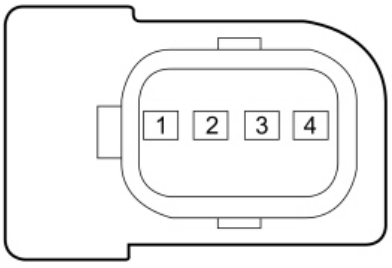
Positive Lead	Measurement / Action	Negative Lead
C543-4	Ω	C2280E-20

Right Front









Positive Lead	Measurement / Action	Negative Lead
C634-4	Ω	C2280E-20

Is the resistance less than 3 ohms?

Yes	GO to S11
No	REPAIR the circuit.

S11 CHECK THE EXTERIOR DOOR HANDLE INTERNAL ANTENNA

- Measure:

Positive Lead	Measurement / Action	Negative Lead
 E158730 C543, pin 2, component side	Ω	 E158730 C543, pin 3, component side
 E158730 C634, pin 2, component side	Ω	 E158730 C634, pin 3, component side

Is the resistance between 1 and 3 ohms?

Yes	GO to S12
No	INSTALL a new front exterior handle. REFER to: Exterior Front Door Handle (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

S12 CHECK THE EXTERIOR DOOR HANDLE

- Remove the opposite side exterior door handle.
  REFER to: Exterior Front Door Handle (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).
- Transfer the exterior door handle from the opposite side of the vehicle to the suspect exterior door. For example, if the left front exterior door handle is suspect, transfer the right front exterior door handle to the left front door.

- Connect BCM C2280E.
- Operate the keyless entry feature from the suspect door.

Does the keyless entry feature operate from the suspect door?

Yes	INSTALL a new exterior handle. REFER to: Exterior Front Door Handle (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).
No	GO to S13

S13 CHECK THE EXTERIOR DOOR HANDLE ANTENNA CIRCUITS FOR A SHORT TO VOLTAGE

- Disconnect BCM C2280E.
- Ignition ON.
- Measure:

Left Front

Positive Lead	Measurement / Action	Negative Lead
C543-2	V	Ground
C543-3	V	Ground

Right Front

Positive Lead	Measurement / Action	Negative Lead
C634-2	V	Ground
C634-3	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to S14

S14 CHECK THE EXTERIOR DOOR HANDLE ANTENNA CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Left Front

Positive Lead	Measurement / Action	Negative Lead
C543-2	Ω	Ground
C543-3	Ω	Ground

Right Front

Positive Lead	Measurement / Action	Negative Lead
C634-2	Ω	Ground
C634-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to S15
No	REPAIR the circuit in question.

S15 CHECK THE EXTERIOR DOOR HANDLE ANTENNA CIRCUITS FOR AN OPEN

- Measure:

Left Front

Positive Lead	Measurement / Action	Negative Lead
C543-2	Ω	C2280E-13

C543-3	Ω	C2280E-28

Right Front

Positive Lead	Measurement / Action	Negative Lead
C634-2	Ω	C2280E-12
C634-3	Ω	C2280E-29

Are the resistances less than 3 ohms?

Yes	GO to S16
No	REPAIR the circuit in question.

S16 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all the BCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors and make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0146:00

Normal Operations and Fault Conditions

The RTM communicates with the GWM over the CAN. If the RTM does not receive messages from the GWM, features such as the passive entry can be inoperative.

RTM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0146:00	Lost Communication With Gateway "A": No Sub Type Information	Sets when the RTM detects data messages are missing from the GWM over the CAN.

Possible Causes

- Network communication concern
- RTM
- GWM

PINPOINT TEST T : U0146:00

T1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to T2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

T2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, carry out a network test.

Does the GWM pass the network test?

Yes	GO to T3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

T3 CHECK FOR CHARGING SYSTEM RELATED DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any battery voltage or charging system related Diagnostic Trouble Codes (DTCs) retrieved?

Yes	DIAGNOSE the charging system. REFER to the appropriate 303-14 section.
No	GO to T4

T4 RECHECK THE RTM (RADIO TRANSCEIVER MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during PMI or the PMI may not have been performed.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the RTM self-test.

Is DTC U0146:00 still present?

Yes	GO to T5
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

T5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0146 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 30 seconds.
- Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0146 set in other modules?

Yes	INSTALL a new GWM. REFER to: Gateway Module A (GWM) (418-00 Module Communications Network, Removal and Installation).
No	INSTALL a new RTM. REFER to: Radio Transceiver Module (RTM) (419-10 Multifunction Electronic Modules, Removal and Installation).

U0258:87 or U1A00:00

Refer to Wiring Diagrams Cell 117 for schematic and connector information.

Normal Operation and Fault Conditions

The RTM communicates with the BCM over a LIN-based circuit and, when the network is awake, over the CAN.

RTM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U1A00:00	Private Communication Network: No Sub Type Information	Sets when the RTM detects a fault with the LIN-based circuit to the BCM.

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0258:87	Lost Communication With Radio Transceiver: Missing Message	Sets when the BCM detects a communication fault with the RTM over the LIN-based circuit.

Possible Causes

- Wiring, terminals or connectors
- RTM
- BCM

PINPOINT TEST U : U0258:87 OR U1A00:00

U1 CHECK IF THE RTM (RADIO TRANSCEIVER MODULE) AND THE BCM (BODY CONTROL MODULE) PASS THE NETWORK TEST

- Ignition ON

- Ignition ON.
- Using a diagnostic tool, carry out the network test.

Does the RTM and the BCM pass the network test?

Yes	GO to U2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

U2 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO VOLTAGE

- Disconnect RTM C9026.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9026-2	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to U3

U3 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO GROUND

- Connect BCM C2280G.
- Ignition OFF.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9026-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to U4
No	REPAIR the circuit.

U4 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9026-2	Ω	C2280G-26

Is the resistance less than 3 ohms?

Yes	GO to U5
No	REPAIR the circuit.

U5 CHECK FOR CORRECT RTM (RADIO TRANSCEIVER MODULE) OPERATION

- Disconnect and inspect the RTM connector.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals pins
  - pushed-out pins - install new pins as necessary
- Reconnect the RTM connector and make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RTM. REFER to: Radio Transceiver Module (RTM) (419-10 Multifunction Electronic Modules, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to U6
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all the BCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors and make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0140:00

Normal Operation and Fault Conditions

The DDM/ PDM communicates with the BCM over the CAN. If the DDM/ PDM does not receive messages from the BCM, features such as the puddle lamps, exterior mirror turn signal and door switch illumination can be inoperative.

DDM/ PDM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication With Body Control Module: No Sub-Type Information	Sets when the DDM/ PDM detects data messages are missing from the BCM.

Possible Causes

- Network communication concern
- DDM/ PDM
- BCM

PINPOINT TEST V : U0140:00

V1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to V2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

V2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, carry out a network test.

Does the BCM pass the network test?

Yes	GO to V3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

V3 CHECK FOR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, carry out the BCM self-test.

Are any voltage related Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	GO to V4

V4 RECHECK THE DDM (DRIVER DOOR MODULE) OR PDM (PASSENGER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during PMI or the PMI may not have been performed.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the DDM/ PDM self-test.

Is DTC U0140:00 still present?

Yes	GO to V5
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

V5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 30 seconds.
- Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0140 set in other modules?

Yes	INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	INSTALL a new DDM or PDM. REFER to: Driver Door Module (DDM) (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Passenger Door Module (PDM) (419-10 Multifunction Electronic Modules, Removal and Installation).

U0208:00

Normal Operation and Fault Conditions

The DDM/ PDM communicate with the DSM over the CAN. If the DDM/ PDM does not receive messages from the DSM, features such as the memory mirror position can be inoperative.

DDM/ PDM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0208:00	Lost Communication With "Seat Control Module A": No Sub-Type Information	Sets when the DDM/ PDM detects data messages are missing from the DSM.

Possible Causes

- Network communication concern
- DDM/ PDM
- DSM

PINPOINT TEST W : U0208:00

W1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to W2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

W2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, carry out a network test.

Does the DSM pass the network test?

Yes	GO to W3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

W3 RECHECK THE DDM (DRIVER DOOR MODULE) OR PDM (PASSENGER DOOR MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during PMI or the PMI may not have been performed.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the DDM/ PDM self-test.

Is DTC U0208:00 still present?

Yes	GO to W4
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

W4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0208 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 30 seconds.
- Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0208 set in other modules?

Yes	INSTALL a new DSM.
No	INSTALL a new DDM or PDM. REFER to: Driver Door Module (DDM) (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Passenger Door Module (PDM) (419-10 Multifunction Electronic Modules, Removal and Installation).

P1594 OR P1595

Normal Operation and Fault Conditions

When the BCM receives a request to remote start the vehicle, it first checks to make sure conditions exist to allow it to start (for example, the hood and doors closed, vehicle in PARK, no powertrain concerns). If the required conditions are correct, the BCM starts the vehicle and allows it to run for a predetermined amount of time, determined by the setting selected from the message center.

PCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P1594	Forced Engine Shutdown - Remote Start System Fault, No Unattended Vehicle Timeout	Sets when the PCM detects the remote start has been active for more than 30 minutes continuously.
P1595	Forced Engine Shutdown - Remote Start System Fault, Transmission Range Not In Park Position	Sets when the PCM detects the remote start is active with the transmission not in PARK.

Possible Causes

- Network communication concern
- Powertrain concern
- BCM

PINPOINT TEST X : P1594 OR P1595

X1 CHECK FOR OTHER PCM (POWERTRAIN CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Review the results from the PCM self-test.

Are any other PCM Diagnostic Trouble Codes (DTCs) present?

Yes	DIAGNOSE all other PCM Diagnostic Trouble Codes (DTCs) first. REFER to the PCM DTC Chart in the appropriate 303-14 section.
No	GO to X2

X2 CHECK FOR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, carry out the BCM self-test.

Are any BCM Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the BCM DTC Chart in this section.
No	GO to X4

X3 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all the BCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors and make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

X4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all the BCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors and make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Remote Keyless Entry (RKE) Transmitter Programming

Programming

NOTE: *You can program a maximum of eight remote controls to your vehicle. This includes any that were supplied with your vehicle. The remote controls must remain inside your vehicle during the programming procedure. Fasten the front safety belts and close all doors to make sure that conflicting chimes do not sound during programming.*

1. Turn the ignition key from position 0 to position II four times within six seconds.
2. Turn the ignition to position 0. A tone sounds to indicate that it is now possible to program a remote control.
3. Press any button on a new remote control within 10 seconds. A tone will sound as confirmation.
4. Repeat step three within 10 seconds for each new remote control. Do not remove the key from the ignition when pressing the button on the remote control.
5. Switch the ignition back on (position II) or wait for 10 seconds without programming another remote control to end the key programming. Only the remote controls which you have just programmed are now able to lock and unlock your vehicle.

Copyright © 2016 Ford Motor Company

Remote Transmitter Programming

1. **NOTE:** *You can program a maximum of eight remote controls to your vehicle. Programming must be done at the same time for all the transmitters.*

   NOTE: *To enter programming mode, first make sure that the vehicle battery is fully charged and the anti-theft system is not armed or triggered (if equipped).*

   Close all doors to make sure conflicting chimes do not sound during programming.
2. Turn the ignition key from position 0 to position II four times within six seconds.
3. Turn the ignition to position 0. A tone sounds to indicate that it is now possible to program a remote control.
4. Press any button on a new remote control within 10 seconds. A tone will sound as confirmation.
5. Repeat step four within 10 seconds for each new remote control. Do not remove the key from the ignition when pressing the button on the remote control.
6. After each successful programming, another 10 second learning mode is automatically entered, up to a maximum of eight times.
7. To program additional remote transmitters, repeat step 5.
8. The system will leave the learning mode after the ignition switch is turned to position III, or if no new transmitter is programmed during the 10 seconds, or if eight remote transmitters have been programmed.
9. **NOTE:** *An incorrect programming procedure does not affect the stored codes.*

   After successful programming, only the new programmed transmitters will be accepted.
10. Test all the programmed transmitters, by activating and deactivating the locking/unlocking functions.

Wipers and Washers

NOTICE: The automatic windshield wipers must be switched off before the vehicle is driven into a car wash.

NOTE: *The rain sensor is an optical measuring instrument. Contamination such as oil, grease or dust impair its correct operation. Before switching on the automatic windshield wipers, the windshield must be clean in the area of the rain sensor.*

Item	Part Number	Description
1	—	Windshield washer motor
2	—	Windshield washer tank
3	—	Windshield wiper motor
4	—	Windshield wiper linkage assembly
5	—	Windshield washer hose
6	—	Rain sensor
7	—	Windshield wiper and washer switch
8	—	Windshield wiper pivot arm and blade
9	—	Windshield washer nozzle

There is a mechanical linkage called the windshield wiper linkage assembly (4) between the windshield wiper motor (3) and the windshield wiper pivot arms and blades (8).

The rain sensor (6) is integrated in a housing which is mounted behind the rear view mirror on the windshield.

The rain sensor comprises an opto-electronic measuring and evaluation circuit. A gel-type lens is used as the interface between the rain sensor and the windshield. Depending on the type of rain sensor the gel-type lens can be replaced separately. The sensor can calculate the amount of precipitation falling on the windshield and request that the windshield wipers are switched on.

On the basis of the information provided by the rain sensor, the windshield wipers are then set to the required wipe speed.

The windshield wash/wipe system will only operate if the ignition switch is in the position "I" or "II".

Five wash functions are available: "Off", "Flick-wipe", "Speed 1", "Speed 2" and "Intermittent" or "Automatic wipe" (depending on the vehicle specification).

In "Speed 1" or "Speed 2" mode, the wipers are operating continuously at either normal speed or fast speed.

When the intermittent wipe mode is switched on the windshield wipers operate at normal speed with the following wiper delays:

- Wiper delay 1: 1 second
- Wiper delay 2: 3.5 seconds
- Wiper delay 3: 6 seconds
- Wiper delay 4: 9,5 seconds
- Wiper delay 5: 15.5 seconds
- Wiper delay 6: 22 seconds

NOTE: *In the event of a failure, or if the control resistor is not connected the default time for the wiper delay is 8 seconds.*

The windshield wiper motor contains a 2-speed motor and a wiper run/park circuit. The BCM controls the windshield wiper motor by activating the windshield wiper on/off and low/high speed relays located within the EJB when the ignition is on.

The BCM monitors the windshield wiper run/park circuit. Based on the input, the BCM deactivates the windshield wiper on/off relay to park the wipers on the lower portion of the windshield.

The windshield washer pump is controlled by the BCM. The washer pump delivers washer fluid to the windshield when the BCM activates the front washer relay located within the BCM, which provides voltage to the washer pump. Ground for the washer pump is isolated and located in the fender.

When the windshield washer switch is operated washer fluid is sprayed onto the windshield. After a short delay designed to protect the wiper blades the wipers perform 2 or 3 wipes at low speed.

If when the windshield washer switch is activated the windshield wipers are switched off, then a single wipe is performed 4 seconds after the wipers have returned to the home position after performing the 2 or 3 wipes.

If when the windshield washer switch is activated the wipers are in intermittent mode, and if the selected wiper delay time is longer than 6 seconds, then a single wipe is performed 6 seconds after the wipers have returned to the home position after performing the 2 or 3 wipes. If the selected delay time is less than 6 seconds then no post wipe is required.

The post wipe function on the windshield ensures that any water remaining on the windshield after washing is wiped away. It is only required if the wipers are switched off or they are set to intermittent mode.

Wipers and Washers

DTC Chart: BCM

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

BCM DTC Chart

DTC	Description	Action
B130F:12	Run Accessory Control: Circuit Short To Battery	GO to Pinpoint Test A
B130F:14	Run Accessory Control: Circuit Short To Ground or Open	• If the windshield wipers are inoperative, GO to Pinpoint Test A • If the windshield wipers operate with the ignition off, GO to Pinpoint Test D
B10AD:9A	Rain Sensor: Component or System Operating Conditions	DIAGNOSE the symptom present with the wiper/washer system. REFER to the Symptom Chart in this section.
All other Diagnostic Trouble Codes (DTCs)	-	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).

DTC Chart: SCCM

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

SCCM DTC Chart

DTC	Description	Action
B1008:09	Wiper Mode Switch: Component Failure	• If the windshield wipers are inoperative, INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation). CLEAR the DTC and repeat the self-test. If DTC B1008:09 is retrieved again, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation). • If the windshield wipers are on continuously, GO to Pinpoint Test D
B10AD:02	Rain Sensor: General Signal Failure	GO to Pinpoint Test F
B10AD:08	Rain Sensor: Bus Signal / Message Failure	GO to Pinpoint Test F
B10AD:49	Rain Sensor: Internal Electronic Failure	INSTALL a new rain sensor. REFER to: Rain Sensor (501-16 Wipers and Washers, Removal and Installation).

B10AD:55	Rain Sensor: Not Configured	CARRY OUT the Programmable Module Installation (PMI) for the SCCM using as built data.
B1131:01	Wiper motor module: General Electrical Failure	GO to Pinpoint Test B
B1131:02	Wiper motor module: General Signal Failure	GO to Pinpoint Test B
B1131:08	Wiper motor module: Bus Signal / Message Failure	GO to Pinpoint Test B
B1131:9A	Wiper motor module: Component or System Operating Conditions	DIAGNOSE the symptom present with the wiper/washer system. REFER to the Symptom Chart in this section.
B1131:11	Wiper motor module: Circuit Short To Ground	GO to Pinpoint Test B
B1131:49	Wiper motor module: Internal Electronic Failure	If the wiper motor is inoperative, INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor (501-16 Wipers and Washers, Removal and Installation).
B1131:55	Wiper motor module: Not Configured	CARRY OUT the Programmable Module Installation (PMI) for the SCCM using as built data.
B12F7:09	Single Wipe Switch: Component Failure	• INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation). • CLEAR the DTC and repeat the self-test. If DTC B12F7:09 is retrieved again, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
All other Diagnostic Trouble Codes (DTCs)	-	REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches, Diagnosis and Testing).

Symptom Chart

Symptom Chart: Wiper and Washer

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
All windshield wiper modes are inoperative from windshield wiper motor	• Refer to the Pinpoint Test	• GO to Pinpoint Test A
The intermittent and/or low speed windshield wipers are inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test B
The high speed windshield wipers are inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test C
The windshield wipers stay on continuously	• Refer to the Pinpoint Test	• GO to Pinpoint Test D
The windshield wipers do not operate correctly in the	• Refer to the Pinpoint Test	• GO to Pinpoint Test E

intermittent mode		
The rain sensitive wiper feature is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test F
The rain sensitive wipers have erratic/inconsistent operation	• Refer to the Pinpoint Test	• GO to Pinpoint Test F
The rain sensitive wipers are too sensitive/not sensitive enough to moisture	• Refer to the Pinpoint Test	• GO to Pinpoint Test F
The windshield wipers do not park at the correct position	• Refer to the Pinpoint Test	• GO to Pinpoint Test G
The windshield washer is inoperative	• Refer to the Pinpoint Test	• GO to Pinpoint Test H
The windshield washer is always on	• Refer to the Pinpoint Test	• GO to Pinpoint Test I

Pinpoint Tests

All Windshield Wiper Modes Are Inoperative

Refer to Wiring Diagrams Cell 81 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Wipers and Washers (501-16 Wipers and Washers, Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B130F:12	Run Accessory Control: Circuit Short To Battery	Sets when the BCM detects a short to voltage from the wiper relay control circuit.
B130F:14	Run Accessory Control: Circuit Short To Ground or Open	Sets when the BCM detects an open from the wiper relay control circuit.

Possible Sources

- Fuse
- Wiring, terminals or connectors
- BJB
- Windshield wiper motor
- SCCM
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect BJB fuses 83 (25A) and 3 (15A) make sure they are OK.

PINPOINT TEST A : ALL WINDSHIELD WIPER MODES ARE INOPERATIVE

A1 CHECK THE WINDSHIELD WIPER MOTOR OPERATION
• Ignition ON.

- Cycle the wiper/washer switch from off through to the low speed setting, and then back to off.

Does the driver side windshield wiper motor operate?

Yes	Check the BJB for an intermittent. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. GO to A2
No	VERIFY the BJB fuse 83 (25A) is OK. If OK, GO to A5 If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. GO to A2

A2 CHECK FOR VOLTAGE TO THE WINDSHIELD WIPER MOTOR

- Ignition OFF.
- Disconnect Windshield Wiper Motor C1656.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-8		Ground

Is the voltage greater than 11 volts?

Yes	GO to A4
No	GO to A3

A3 CHECK THE WINDSHIELD WIPER MOTOR VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect BJB C1035A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-8	Ω	C1035A-1

Is the resistance less than 3 ohms?

Yes	INSTALL a new BJB.
No	REPAIR the circuit.

A4 CHECK THE WINDSHIELD WIPER MOTOR GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-6	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to A5
No	REPAIR the circuit.

A5 CHECK FOR BCM (BODY CONTROL MODULE) DTC (DIAGNOSTIC TROUBLE CODE) B130F:12 OR B130F:14

- Using a diagnostic scan tool, perform the BCM self-test.

Is DTC B130F:12 or B130F:14 present?

Yes	For DTC B130F:12, GO to A6 For DTC B130F:14, GO to A7
No	GO to A9

A6 CHECK THE WIPER RELAY CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280C.
- Disconnect BJB C1035A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1035A-34		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	INSTALL a new BJB. CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test. If DTC B130F:12 is retrieved again, GO to A15

A7 CHECK FOR WIPER RELAY CONTROL CIRCUIT VOLTAGE TO THE BCM (BODY CONTROL MODULE)

- Ignition OFF.
- Disconnect BCM C2280C.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280C-24		Ground

Is the voltage greater than 11 volts?

Yes	GO to A15
No	GO to A8

A8 CHECK THE WIPER RELAY CONTROL CIRCUIT FOR AN OPEN

- Disconnect BJB C1035A

- Disconnect BJB C1035A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280C-24	Ω	C1035A-34

Is the resistance less than 3 ohms?

Yes	INSTALL a new BJB.
No	REPAIR the circuit.

A9 CHECK THE INPUT TO THE SCCM (STEERING COLUMN CONTROL MODULE)

- Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).
- Using a diagnostic scan tool, view the following SCCM wiper/washer switch Parameter Identifications (PIDs):
  - WIPE_SINGLE
  - F_WASH_SW
  - F_WIP_INT_D1
  - F_WIP_INT_D2
  - F_WIP_INT_D3
  - F_WIP_INT_D4
  - F_WIP_INT_D5
  - F_WIP_INT_D6
  - F_WIP_SLO_SW
  - F_WIPE_FAST_SW
- Cycle the wiper/washer switch from off to the high speed setting and then back to off.

Do the Parameter Identifications (PIDs) correspond correctly with each setting selection?

Yes	GO to A10
No	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation). TEST the system for normal operation. If the concern is still present, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).

A10 CHECK FOR VOLTAGE TO THE WINDSHIELD WIPER MOTOR

- Ignition OFF.
- Disconnect Windshield Wiper Motor C1656.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-8	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to A11
No	GO to A12

A11 CHECK THE WINDSHIELD WIPER MOTOR GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-6	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to A12
No	REPAIR the circuit.

A12 CHECK THE FAIL-SAFE HIGH SPEED WIPER GROUND CIRCUIT CONTROL

NOTICE: The following Pinpoint Test uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250-300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

- Connect:

Positive Lead	Measurement / Action	Negative Lead
C1656-1		C1656-8

- Ignition ON.
- Place the wiper/washer switch to the high speed setting.

Does the test lamp illuminate?

Yes	INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor (501-16 Wipers and Washers, Removal and Installation).
No	GO to A13

A13 CHECK THE FAIL-SAFE HIGH SPEED WIPER GROUND CIRCUIT FOR AN OPEN

NOTE: *If steps A1-A17 did not identify the cause of the concern, a double fault is present. After the fail-safe ground is diagnosed and repaired, it is necessary check all operation modes and diagnose any symptom still present.*

- Ignition OFF.
- Disconnect SCCM C226A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-1	Ω	C226A-2

Is the resistance less than 3 ohms?

Yes	INSTALL a new wiper/washer switch.

	REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to A14
No	REPAIR the circuit.

A14 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Disconnect and inspect all the SCCM and related in-line connectors:
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the SCCM connectors. Make sure they seat and latch correctly.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A15 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all the BCM and related in-line connectors:
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. LHD refer to REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). RHD refer to REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Intermittent And/Or Low Speed Windshield Wipers Are Inoperative

Refer to Wiring Diagrams Cell 81 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Wipers and Washers (501-16 Wipers and Washers, Description and Operation).

SCCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1131:02	Wiper motor module: General Signal Failure	Sets when the SCCM detects a communication fault with the windshield wiper motor over the LIN.
B1131:08	Wiper motor module: Bus Signal / Message Failure	Sets when the SCCM detects a communication fault with the windshield wiper motor over the LIN.
B1131:11	Wiper motor module: Circuit Short to Ground	Sets when the SCCM detects a short to ground from the windshield wiper motor LIN.

Possible Sources

- Wiring, terminals or connectors
- Wiper/washer switch
- windshield wiper motor
- Rain sensor
- SCCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the wiper/washer switch for damage.

PINPOINT TEST B : THE INTERMITTENT AND/OR LOW SPEED WINDSHIELD WIPERS ARE INOPERATIVE

NOTE: *It may be necessary to disconnect and then reconnect the battery after the repair to enable the wiper operation.*

B1 CHECK THE HIGH SPEED WIPER OPERATION

- Ignition ON.
- Place the wiper/washer switch to the high speed setting and observe the windshield wipers. Place the wiper/washer switch to the off setting.

Do the windshield wipers operate with the wiper/washer switch in the high speed setting?

Yes	GO to B2
No	GO to Pinpoint Test A

B2 CHECK THE LOW SPEED WIPER OPERATION

- Place the wiper/washer switch to the low speed setting and observe the windshield wipers. Place the wiper/washer switch to the off setting.

Do the windshield wipers operate with the wiper/washer switch in the low speed setting?

Yes	If not equipped with a rain sensor, GO to Pinpoint Test E If equipped with a rain sensor, GO to Pinpoint Test F
No	GO to B3

B3 CHECK THE INPUT TO THE SCCM (STEERING COLUMN CONTROL MODULE)

- Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).
- Using a diagnostic scan tool, view the following SCCM F_WIP_SLO_SW PID.
- Place the wiper/washer switch to the low speed setting.

Does the PID indicate the wiper/washer switch is in the low speed setting?

Yes	If equipped with a rain sensor, GO to B4 If not equipped with a rain sensor, GO to B5
No	INSTALL a new wiper/washer switch.

	REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation). TEST the system for normal operation. If the concern is still present, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).

B4 ISOLATE THE RAIN SENSOR

- Ignition OFF.
- Disconnect Rain Sensor For Lane Keeping Assist (LKA) refer to C9805, Without LKA refer toC914.
- Ignition ON.
- Place the wiper/washer switch to the low speed setting and observe the windshield wipers. Place the wiper/washer switch to the off setting.

Do the windshield wipers operate with the wiper/washer switch in the low speed setting?

Yes	INSTALL a new rain sensor. REFER to: Rain Sensor (501-16 Wipers and Washers, Removal and Installation).
No	GO to B5

B5 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Driver Side Windshield Wiper Motor C1656..
- Disconnect SCCM C226A..
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-4		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to B6

B6 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-4	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B7
No	REPAIR the circuit.

B7 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-4	Ω	C226A-8

Is the resistance less than 3 ohms?

Yes	INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor (501-16 Wipers and Washers, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to B8
No	REPAIR the circuit.

B8 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Disconnect and inspect all the SCCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminal - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the SCCM connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The High Speed Windshield Wipers Are Inoperative

Normal Operation and Fault Conditions

REFER to: Wipers and Washers (501-16 Wipers and Washers, Description and Operation).

Possible Sources

- Driver side windshield wiper motor
- Wiper/washer switch
- SCCM

PINPOINT TEST C : THE HIGH SPEED WINDSHIELD WIPERS ARE INOPERATIVE

C1 CHECK THE INPUT TO THE SCCM (STEERING COLUMN CONTROL MODULE)

- Ignition ON.
- Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).
- Using a diagnostic scan tool, view the SCCM F_WIPE_FAST_SW PID.
- Place the wiper/washer switch to the high speed setting.

Does the PID indicate the wiper/washer switch is in the high speed setting?

Yes	INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor (501-16 Wipers and Washers, Removal and Installation).
No	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation). TEST the system for normal operation. If the concern is still present, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).

The Windshield Wipers Stay On Continuously

Refer to Wiring Diagrams Cell 81 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Wipers and Washers (501-16 Wipers and Washers, Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B130F:14	Run Accessory Control: Circuit Short To Ground or Open	Sets when the BCM detects a short to ground from the wiper relay control circuit.

Possible Sources

- Wiring, terminals or connectors
- Wiper/washer switch
- BJB
- windshield wiper motor
- SCCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the wiper/washer switch for damage.

PINPOINT TEST D : THE WINDSHIELD WIPERS STAY ON CONTINUOUSLY

D1 CHECK THE WINDSHIELD WIPER OPERATION WITH THE IGNITION OFF

- Ignition OFF.
- Observe the windshield wiper operation.

Do the windshield wipers operate with the ignition off?

Yes	GO to D5
No	GO to D3

D2 CHECK THE WINDSHIELD WIPER OPERATION WITH THE SCCM (STEERING COLUMN CONTROL MODULE) DISCONNECTED

- Ignition ON.
- Disconnect SCCM C226A.

- Ignition ON.
- Observe the windshield wiper operation.

Do the windshield wipers continue to operate?

Yes	GO to D3
No	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to D9

D3 CHECK THE HIGH SPEED FAIL-SAFE CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect Driver Side Windshield Wiper Motor C1656.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor (501-16 Wipers and Washers, Removal and Installation).
No	REPAIR the circuit.

D4 CHECK FOR BCM (BODY CONTROL MODULE) DTC (DIAGNOSTIC TROUBLE CODE) B130F:14

- Ignition ON.
- Using a diagnostic scan tool, perform the BCM self-test.

Is DTC B130F:14 present?

Yes	GO to D5
No	If equipped with a rain sensor, GO to D7 If not equipped with a rain sensor,GO to D8

D5 ISOLATE THE BCM (BODY CONTROL MODULE)

- Ignition OFF.
- Disconnect BCM C2280C.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280C-24	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to D10
No	GO to D6

D6 CHECK THE WIPER RELAY CONTROL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect BJB C1035B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280C-24	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new BJB.
No	REPAIR the circuit.

D7 CHECK THE RAIN SENSOR VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Rain Sensor without Lane Keeping Assistance (LKA) C914.
- Disconnect Rain Sensor with Lane Keeping Assistance (LKA) C9805.
- Measure:

Rain Sensor without LKA

Positive Lead	Measurement / Action	Negative Lead
C914-1	V	Ground

Rain Sensor with LKA

Positive Lead	Measurement / Action	Negative Lead
C9805-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to D8

D8 CHECK THE WINDSHIELD WIPER MOTOR VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1656-8	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	INSTALL a new BJB.

D9 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Disconnect and inspect all the SCCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminal - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the SCCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

D10 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all the BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminal - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. For RHD: REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). For LHD: REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The Windshield Wipers Do Not Operate Correctly In The Intermittent Mode

Normal Operation and Fault Conditions

REFER to: Wipers and Washers (501-16 Wipers and Washers, Description and Operation).

Possible Sources

- Wiper/washer switch
- windshield wiper motor
- SCCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the wiper/washer switch for damage.

PINPOINT TEST E : THE WINDSHIELD WIPERS DO NOT OPERATE CORRECTLY IN THE INTERMITTENT MODE

E1 VERIFY IF THE VEHICLE IS EQUIPPED WITH A RAIN SENSOR

- Inspect the vehicle for a rain sensor.

Is the vehicle equipped with a rain sensor?

Yes	GO to E2
No	GO to E3

E2 VERIFY THE RAIN SENSITIVE WIPER FEATURE IS DISABLED IN THE VEHICLE MESSAGE CENTER

- Ignition ON.
- Access the vehicle settings in the message center using the steering wheel controls and check the rain sensitive feature setting.

Is the rain sensitive feature enabled?

Yes	GO to Pinpoint Test F
No	GO to E3

E3 CHECK THE LOW SPEED WIPER OPERATION

- Ignition ON.
- Place the wiper/washer switch to the low speed setting and observe the windshield wipers. Place the wiper/washer switch to the off setting.

Do the low speed wipers operate when the low speed setting is selected?

Yes	GO to E4
No	GO to Pinpoint Test B

E4 CHECK THE INPUT FROM THE WIPER/ WASHER SWITCH

- Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).
- Using a diagnostic scan tool, view the following SCCM wiper/washer switch Parameter Identifications (PIDs):
  - F_WIP_INT_D1
  - F_WIP_INT_D2
  - F_WIP_INT_D3
  - F_WIP_INT_D4
  - F_WIP_INT_D5
  - F_WIP_INT_D6
- Cycle the wiper/washer switch from off through each of the intermittent settings.

Do the PIDs correspond correctly with each setting selection?

Yes	INSTALL a new windshield wiper motor. REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation).
No	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation).

	TEST the system for normal operation. If the concern is still present, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).

The Rain Sensitive Wiper Feature Is Inoperative/Does Not Operate Correctly

Refer to Wiring Diagrams Cell 81 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Wipers and Washers (501-16 Wipers and Washers, Description and Operation).

SCCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10AD:02	Rain Sensor: General Signal Failure	Sets when the SCCM detects a communication fault with the rain sensor.
B10AD:08	Rain Sensor: Bus Signal / Message Failure	Sets when the SCCM detects a communication fault with the rain sensor.

Possible Sources

- Fuse
- Wiring, terminals or connectors
- Rain sensitive feature not enabled
- Foreign material on windshield, such as dirt, dust or bugs
- Wiper blades
- Windshield glass
- Wiper/washer switch
- Windshield wiper motor
- Rain sensor gel-type lens
- Rain sensor
- SCCM

Visual Inspection and Diagnostic Pre-checks

- Inspect BJB fuse 3 (15A) and make sure it is OK.
- Inspect the windshield for damage.
- Inspect the rain sensor mounting for damage.

PINPOINT TEST F : THE RAIN SENSITIVE WIPER FEATURE IS INOPERATIVE/DOES NOT OPERATE CORRECTLY

F1 CHECK THE LOW SPEED WIPER OPERATION

- Ignition ON.
- Place the wiper/washer switch to the low speed setting and observe the windshield wipers. Place the wiper/washer switch to the off setting.

Do the low speed wipers operate when the low speed setting is selected?

Yes	GO to F2
No	GO to Pinpoint Test B

F2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) B10AD:02 OR B10AD:08

- Using a diagnostic scan tool, perform the SCCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	For DTC B10AD:02 or B10AD:08, GO to F11 For all other Diagnostic Trouble Codes (DTCs), REFER to the SCCM DTC Chart in this section.
No	GO to F3

F3 VERIFY THE RAIN SENSITIVE WIPER FEATURE IS ENABLED IN THE VEHICLE MESSAGE CENTER

- Access the vehicle settings in the message center using the steering wheel controls. Make sure the rain sensitive feature is enabled.

Is the rain sensitive feature enabled?

Yes	GO to F4
No	ENABLE the rain sensitive feature. INFORM the customer how to enable/disable the rain sensitive feature.

F4 CHECK THE INPUT FROM THE WIPER/WASHER SWITCH

- Using a diagnostic scan tool, monitor the following SCCM wiper/washer switch PIDs:
  - F_WIP_INT_D1
  - F_WIP_INT_D2
  - F_WIP_INT_D3
  - F_WIP_INT_D4
  - F_WIP_INT_D5
  - F_WIP_INT_D6
- Cycle the wiper/washer switch from off through each of the auto/intermittent sensitivity settings.

Do the Parameter Identifications (PIDs) correspond correctly with each setting selection?

Yes	GO to F5
No	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation). TEST the system for normal operation. If the concern is still present, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).

F5 CHECK THE WINDSHIELD FOR DAMAGE

- Ignition OFF.
- Inspect the windshield glass for any cracks, pits or other visible damage around the area of the rain sensor.

Is any windshield damage present near the area of the rain sensor?

Yes	INSTALL a new windshield. REFER to: Windshield Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation). .
No	GO to F6

F6 CHECK THE WINDSHIELD GLASS FOR STREAKING

- Ignition ON.

- Turn the wiper/washer switch to the low speed wiper setting and while applying water to the windshield surface. Observe the wipe quality, especially around the area of the rain sensor.

Is any streaking present on the windshield around the area of the rain sensor?

Yes	GO to F7
No	GO to F9

F7 CHECK THE WINDSHIELD WIPER BLADES FOR STREAKING

- Ignition OFF.
- Clean the windshield glass with glass cleaner.
- Clean the wiper blades with isopropyl alcohol swabs. Wipe the entire length of the wiper blades.
- Ignition ON.
- Place the wiper/washer switch to the low speed wiper setting and while applying water to the windshield surface. Observe the wipe quality, especially around the area of the rain sensor.

Was there noticeable improvement in the wipe quality after cleaning the glass and the wiper blades?

Yes	GO to F8
No	INSTALL new wiper blades. GO to F8

F8 RECHECK THE RAIN SENSITIVE WIPERS OPERATION

- Place the wiper/washer switch to the auto/intermittent 5 setting (most sensitive to moisture) while applying water on the windshield above the rain sensor.

Do the wipers operate when water is applied to the windshield surface?

Yes	The system is operating correctly at this time. The concern may have been caused by poor wipe quality on the windshield around the rain sensor.
No	GO to F9

F9 CHECK FOR THE PRESENCE OF THE LENS GEL

- Ignition OFF.
- Lightly press the rain sensor against the windshield and release the rain sensor clips.

Does the rain sensor remain adhered to the windshield?

Yes	ATTACH the retaining clips. GO to F10
No	The sensor gel-type lens is missing or damaged. INSTALL a new rain sensor. REFER to: Rain Sensor (501-16 Wipers and Washers, Removal and Installation).

F10 INSPECT THE RAIN SENSOR MOUNTING AREA

NOTE: *The rain sensor gel-type lens can be damaged or contaminated during rain sensor removal, rain sensor bracket separation or incorrect installation.*

- From the outside of the vehicle, inspect the area of the windshield glass where the rain sensor is mounted. The rain sensor contact area should appear black, with no bubbles, air pockets or contaminants between the windshield glass and the rain sensor.

Does the rain sensor contact area appear black, with no bubbles, air pockets or contaminants between the windshield glass and the rain sensor?

Yes	GO to F11
No	REMOVE and INSTALL the rain sensor correctly.

	REFER to: Rain Sensor (501-16 Wipers and Washers, Removal and Installation). TEST the system for normal operation. If the concern is still present, INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor (501-16 Wipers and Washers, Removal and Installation).

F11 CHECK FOR VOLTAGE TO THE RAIN SENSOR

- Ignition OFF.
- Disconnect Rain Sensor with Lane Keeping Assist (LKA) C9805, Rain Sensor without Lane Keeping Assist (LKA) C914.
- Ignition ON.
- Measure:

Rain Sensor without LKA

Positive Lead	Measurement / Action	Negative Lead
C914-1	V	Ground

Rain Sensor with LKA

Positive Lead	Measurement / Action	Negative Lead
C9805-4	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to F13
No	VERIFY BJB fuse 3 (15A) is OK. If OK, GO to F12 If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

F12 CHECK THE RAIN SENSOR VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect BJB C1035B.
- Measure:

Rain Sensor without LKA

Positive Lead	Measurement / Action	Negative Lead
C914-1	Ω	C1035B-12

Rain Sensor with LKA

Positive Lead	Measurement / Action	Negative Lead
C9805-4	Ω	C1035B-12

Is the resistance less than 3 ohms?

Yes	INSTALL a new BJB.
No	REPAIR the circuit.

F13 CHECK THE RAIN SENSOR GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Rain Sensor without LKA

Positive Lead	Measurement / Action	Negative Lead
C914-3	Ω	Ground

Rain Sensor with LKA

Positive Lead	Measurement / Action	Negative Lead
C9805-6	Ω	Ground

Rain Sensor with LKA at mirror flylead of harness

Positive Lead	Measurement / Action	Negative Lead
C9805-3	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to F14
No	REPAIR the circuit.

F14 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

- Disconnect SCCM C226A.
- Measure:

Rain Sensor without LKA

Positive Lead	Measurement / Action	Negative Lead
C914-2	Ω	C226A-8

Rain Sensor with LKA

Positive Lead	Measurement / Action	Negative Lead

C9805-5	Ω	C226A-8

Rain Sensor with LKA at mirror flylead of harness

Positive Lead	Measurement / Action	Negative Lead
C9805-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to F15
No	REPAIR the circuit.

F15 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Disconnect and inspect all the SCCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminal - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect all the SCCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The Windshield Wipers Do Not Park At The Correct Position

Normal Operation and Fault Conditions

REFER to: Wipers and Washers (501-16 Wipers and Washers, Description and Operation).

Possible Sources

- Wiper mounting arm and pivot shaft
- Windshield wiper motor

Visual Inspection and Diagnostic Pre-checks

- Inspect the mounting arm and pivot shaft for damage.

PINPOINT TEST G : THE WINDSHIELD WIPERS DO NOT PARK AT THE CORRECT POSITION

G1 CHECK THE WIPER MOUNTING ARM AND PIVOT SHAFT FOR DAMAGE

- Ignition OFF.
- Inspect the wiper mounting arm and pivot shaft for damage.

Is the wiper mounting arm and pivot shaft OK?

Yes	GO to G2
No	INSTALL a wiper mounting arm and pivot shaft. REFER to: Windshield Wiper Pivot Arm (501-16 Wipers and Washers, Removal and Installation).

G2 CHECK THE WINDSHIELD WIPER PARK RELAY OPERATION

- Ignition ON.
- Place the wiper/washer switch to the low speed setting. When the wiper blades are in the middle of a wipe, place the wiper/washer switch off.

Do the windshield wipers immediately stop when the wiper/washer switch is turned off?

Yes	INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor (501-16 Wipers and Washers, Removal and Installation).
No	ADJUST the pivot arms. REFER to: Windshield Wiper Blade and Pivot Arm Adjustment (501-16 Wipers and Washers, General Procedures).

The Windshield Washer Is Inoperative

Refer to Wiring Diagrams Cell 81 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Wipers and Washers (501-16 Wipers and Washers, Description and Operation).

Possible Sources

- Wiring, terminals or connectors
- Washer pump
- Wiper/washer switch
- Windshield wiper motor
- SCCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the wiper/washer switch for damage.

PINPOINT TEST H : THE WINDSHIELD WASHER IS INOPERATIVE

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

H1 CHECK THE AMBIENT AIR TEMPERATURE

- Check the ambient air temperature.

Is the ambient air temperature below freezing?

Yes	GO to H2
No	GO to H4

H2 CHECK THE WASHER SOLVENT

- Check the washer solvent and make sure it is of the correct type to use for the temperature conditions present.

Is the correct type of washer solvent present?

Yes	GO to H3
No	ALLOW the vehicle to warm to room temperature. DRAIN and REFILL the windshield washer reservoir with the correct washer solvent type. INFORM the customer of the correct type of washer solvent to use for the temperature conditions present.

H3 CHECK FOR WASHER SOLVENT TO THE WASHER JETS

- Disconnect the washer hoses from the windshield washer jets and place them in a container to capture fluid.
- Ignition ON.
- Momentarily activate the windshield washer function.

Is washer fluid emitted at the washer hoses?

Yes	INSTALL a new washer jet in question.
No	GO to H4

H4 CHECK FOR WASHER PUMP ACTIVATION

- Ignition ON.
- Momentarily activate the windshield washer function. While listening for washer pump activation near the right front of the vehicle, have an assistant activate the windshield washer function.

Does the washer pump activate?

Yes	GO to H5
No	GO to H6

H5 CHECK FOR DAMAGED WASHER HOSES

- Inspect the washer hoses for kinks or damage.

Are the washer hoses OK?

Yes	INSTALL a new washer pump. REFER to: Windshield Washer Pump (501-16 Wipers and Washers, Removal and Installation).
No	REPAIR the washer hoses as necessary.

H6 CHECK THE WIPER/WASHER SWITCH INPUT

- Ignition ON.
- Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).
- Using a diagnostic scan tool, view the SCCM F_WASH_SW PID.
- Activate and release the wash function on the wiper/washer switch.

Does the PID indicate correctly when the switch is activated and released?

Yes	GO to H7
No	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation). TEST the system for normal operation. If the concern is still present, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).

H7 CHECK FOR VOLTAGE TO THE WASHER PUMP

NOTICE: The following Pinpoint Test uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250-300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

- Ignition OFF.
- Disconnect Washer Pump C137.
- Connect:

Positive Lead	Measurement / Action	Negative Lead
C137-1		Ground

- Ignition ON.
- Use the wiper/washer switch to activate the washer pump.

Does the test lamp illuminate when the washer is activated?

Yes	GO to H8
No	GO to H9

H8 CHECK THE WASHER PUMP GROUND CIRCUIT FOR AN OPEN

NOTICE: The following Pinpoint Test uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250-300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.

- Connect:

Positive Lead	Measurement / Action	Negative Lead
C137-1		C137-2

- Ignition ON.
- Use the wiper/washer switch to activate the washer pump.

Does the test lamp illuminate when the washer is activated?

Yes	INSTALL a new washer pump. REFER to: Windshield Washer Pump (501-16 Wipers and Washers, Removal and Installation).
No	REPAIR the circuit.

H9 CHECK THE WASHER PUMP VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect Windshield Wiper Motor C1656.
- Connect:

Positive Lead	Measurement / Action	Negative Lead
C1656-8	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to H10
No	REPAIR the circuit.

H10 CHECK THE WASHER PUMP VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Connect:

Positive Lead	Measurement / Action	Negative Lead
C1656-7	Ω	C137-1

Is the resistance less than 3 ohms?

Yes	GO to H11
No	REPAIR the circuit.

H11 CHECK FOR CORRECT WINDSHIELD WIPER MOTOR OPERATION

- Disconnect and inspect the windshield wiper motor and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminal - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the windshield wiper motor connector. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new windshield wiper motor. REFER to: Windshield Wiper Motor (501-16 Wipers and Washers, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The Windshield Washer Is Always On

Refer to Wiring Diagrams Cell 81 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Wipers and Washers (501-16 Wipers and Washers, Description and Operation).

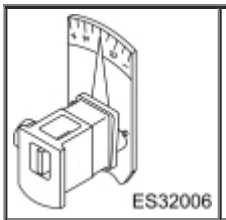
Possible Sources

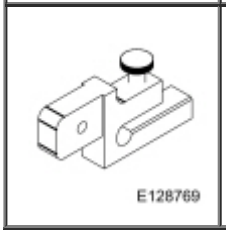
- Wiper/washer switch
- Windshield wiper motor
- SCCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the wiper/washer switch for damage.

PINPOINT TEST I : THE WASHER PUMP IS ALWAYS ON





I1 CHECK THE WIPER/WASHER SWITCH INPUT
• Ignition ON. • Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs). • Using a diagnostic scan tool, view the SCCM F_WASH_SW PID. **Does the PID indicate correctly when the switch is activated and released?**

Yes	INSTALL a new wiper/washer switch. REFER to: Steering Column Multifunction Switch RH (211-05 Steering Column Switches, Removal and Installation). TEST the system for normal operation. If the concern is still present, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).

Windshield Wiper Blade and Pivot Arm Adjustment

Special Tool(s) / General Equipment

	501-027 Aligner, Wiper Arm
	501-027-02 Adapter for 501-027

Adjustment

1. **NOTICE: Make sure that the wiper motor is in the park position.**

   Remove the wiper blade.

2. **NOTE:** *The angle of the wiper on the scale must point from the zero centre line to the centre of the windshield/rear window. The alignment tool shows negative (-) for LHD and positive (+) for RHD.*

3. **NOTE:** *LHD shown, reverse for RHD.*

   NOTE: *Make sure that the 3 marked points of the special tool are in contact with the glass.*

   Using the special tool, read off the angle between the wiper arm and the glass.
   Use Special Service Tool: 501-027 Aligner, Wiper Arm.

4. **NOTICE: Make sure that the special tool is lifted off the glass when adjusting the angle.**

   Driver side : 4.8° ± 3° ; Passenger side 3.8° ± 3°
   Use Special Service Tool: 501-027 Aligner, Wiper Arm. , 501-027-02 Adapter for 501-027.

Seatbelt Systems

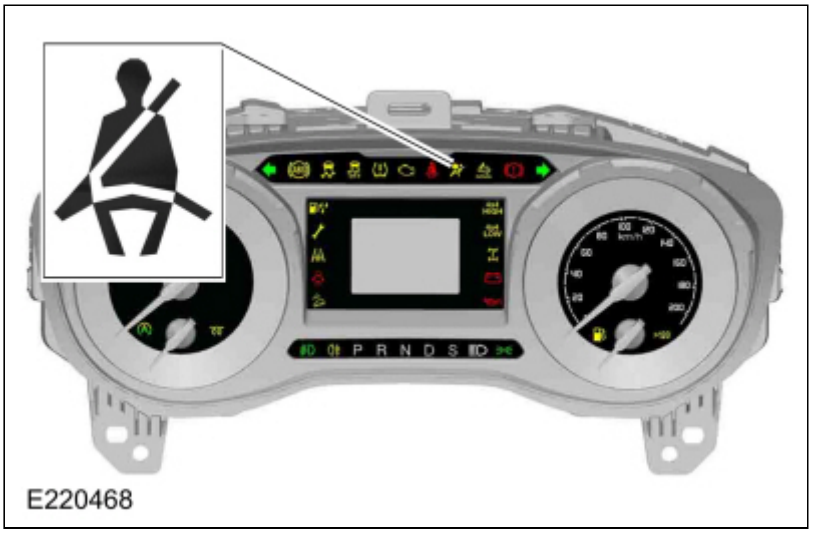
System Overview

WARNING: All safety belt assemblies (including retractors, buckles, shoulder belt height adjusters [if equipped], child safety seat tether attachments and attaching hardware) should be inspected after any collision. All new belt assemblies should be installed unless a qualified technician finds the assemblies show no damage and operate correctly. Belt assemblies not in use during a collision should also be inspected and new assemblies installed if either damage or incorrect operation is noted. Failure to install a new belt and retractor assembly could increase the risk of injury in collisions.

WARNING: The safety belt retractor pretensioner is a pyrotechnic device. Always wear safety glasses when repairing an air bag equipped vehicle and when handling a safety belt buckle pretensioner or safety belt retractor pretensioner. Never probe a pretensioner electrical connector. Doing so could result in pretensioner or air bag deployment and could result in personal injury.

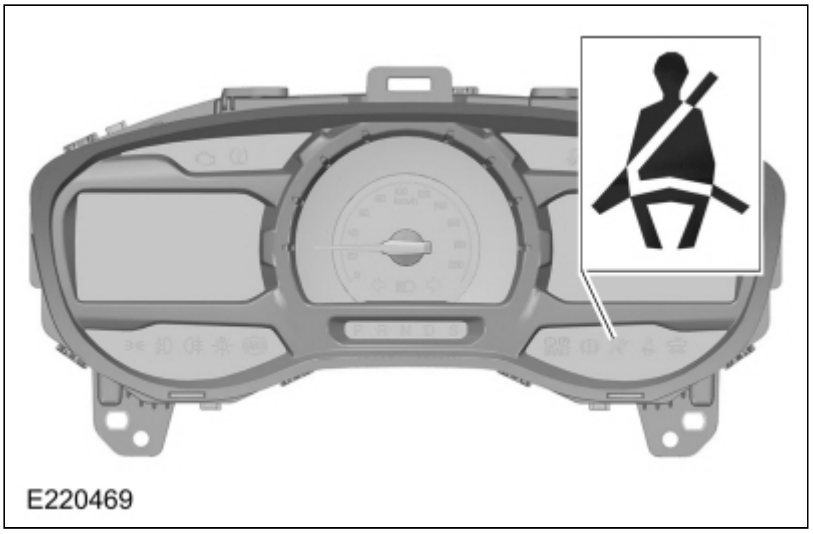
NOTICE: Do not attempt to repair or lubricate the retractor / buckle mechanisms or modify the belts.

The safety belt system utilizes three-point lap and diagonal safety belts in all outboard seat positions and two point lap or three-point safety belts in the centre positions.



The front safety belt retractors incorporate a load limiting device, which allows progressive payout of additional safety belt webbing when the force exerted exceeds a predetermined limit.

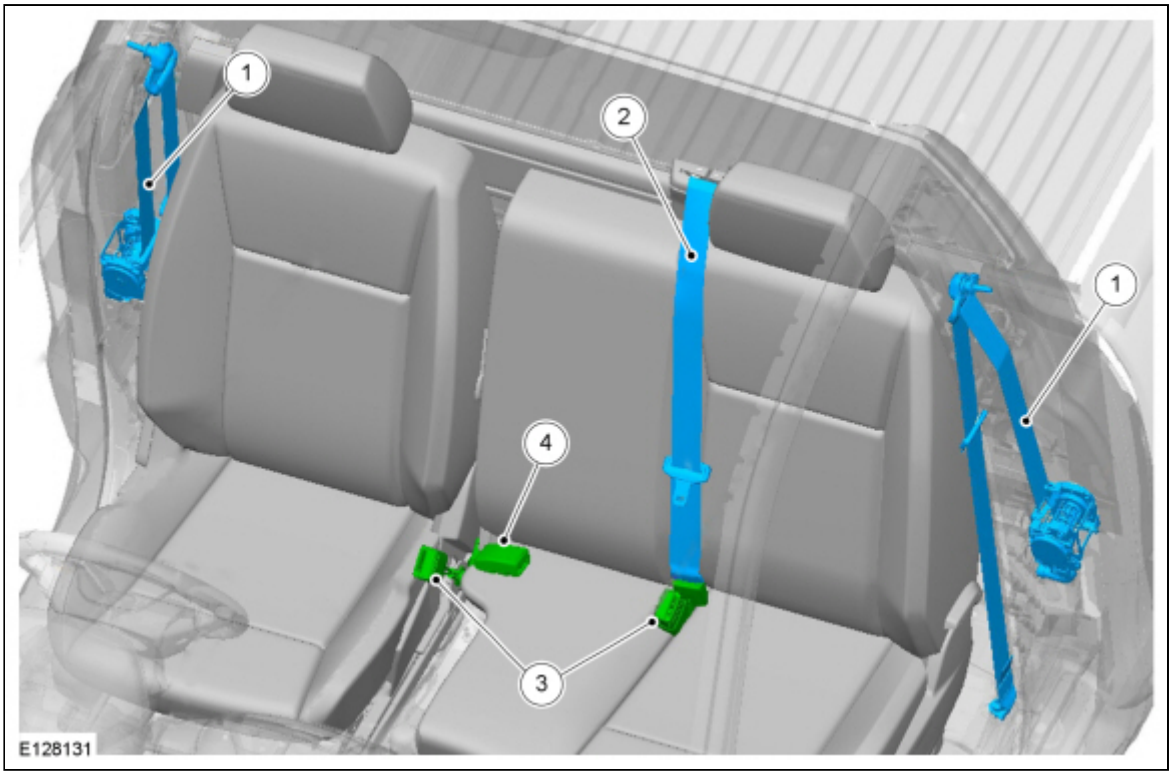
The front safety belt upper anchors are connected to safety belt shoulder height adjusters mounted in the B-pillar (DBL cab only).



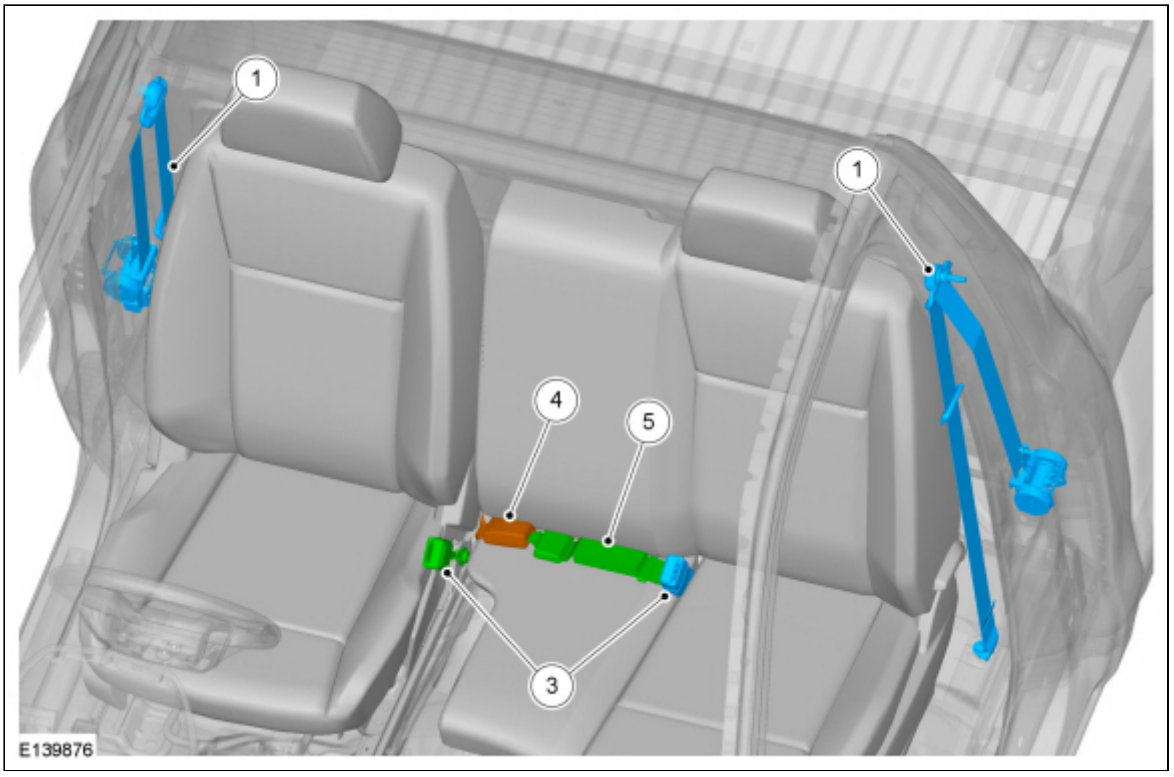
A beltminder function is fitted to some vehicles. If the driver's seatbelt is not fastened, the belt warning lamp will illuminate at key on for 6 seconds, or until the seatbelt is fastened, whichever is the first. The beltminder warning is triggered when the vehicle speed is at 25 km/h (15 mph), or greater, and the driver and/or passenger safety belt(s) are not fastened. The warning will continue for 5 minutes or until the safety belt(s) are fastened, whichever is the first.

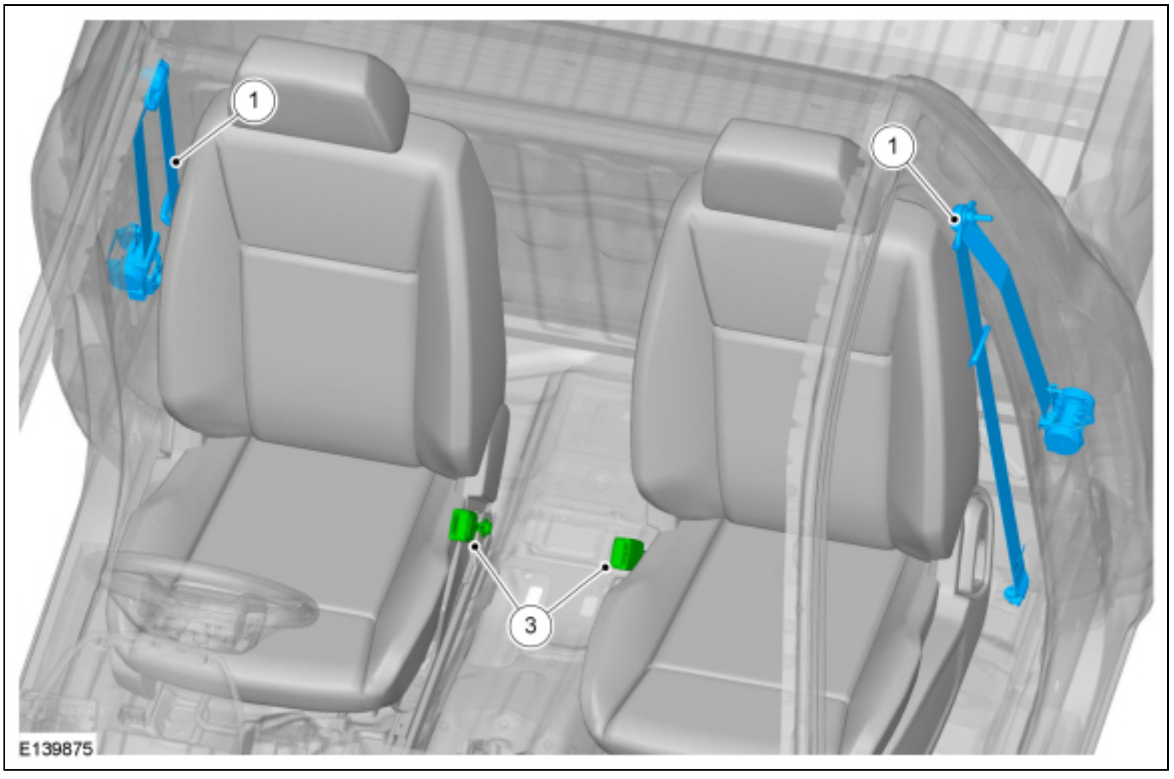
The safety belt minder feature can be disabled.

Base instrument panel cluster



High-Level instrument panel cluster

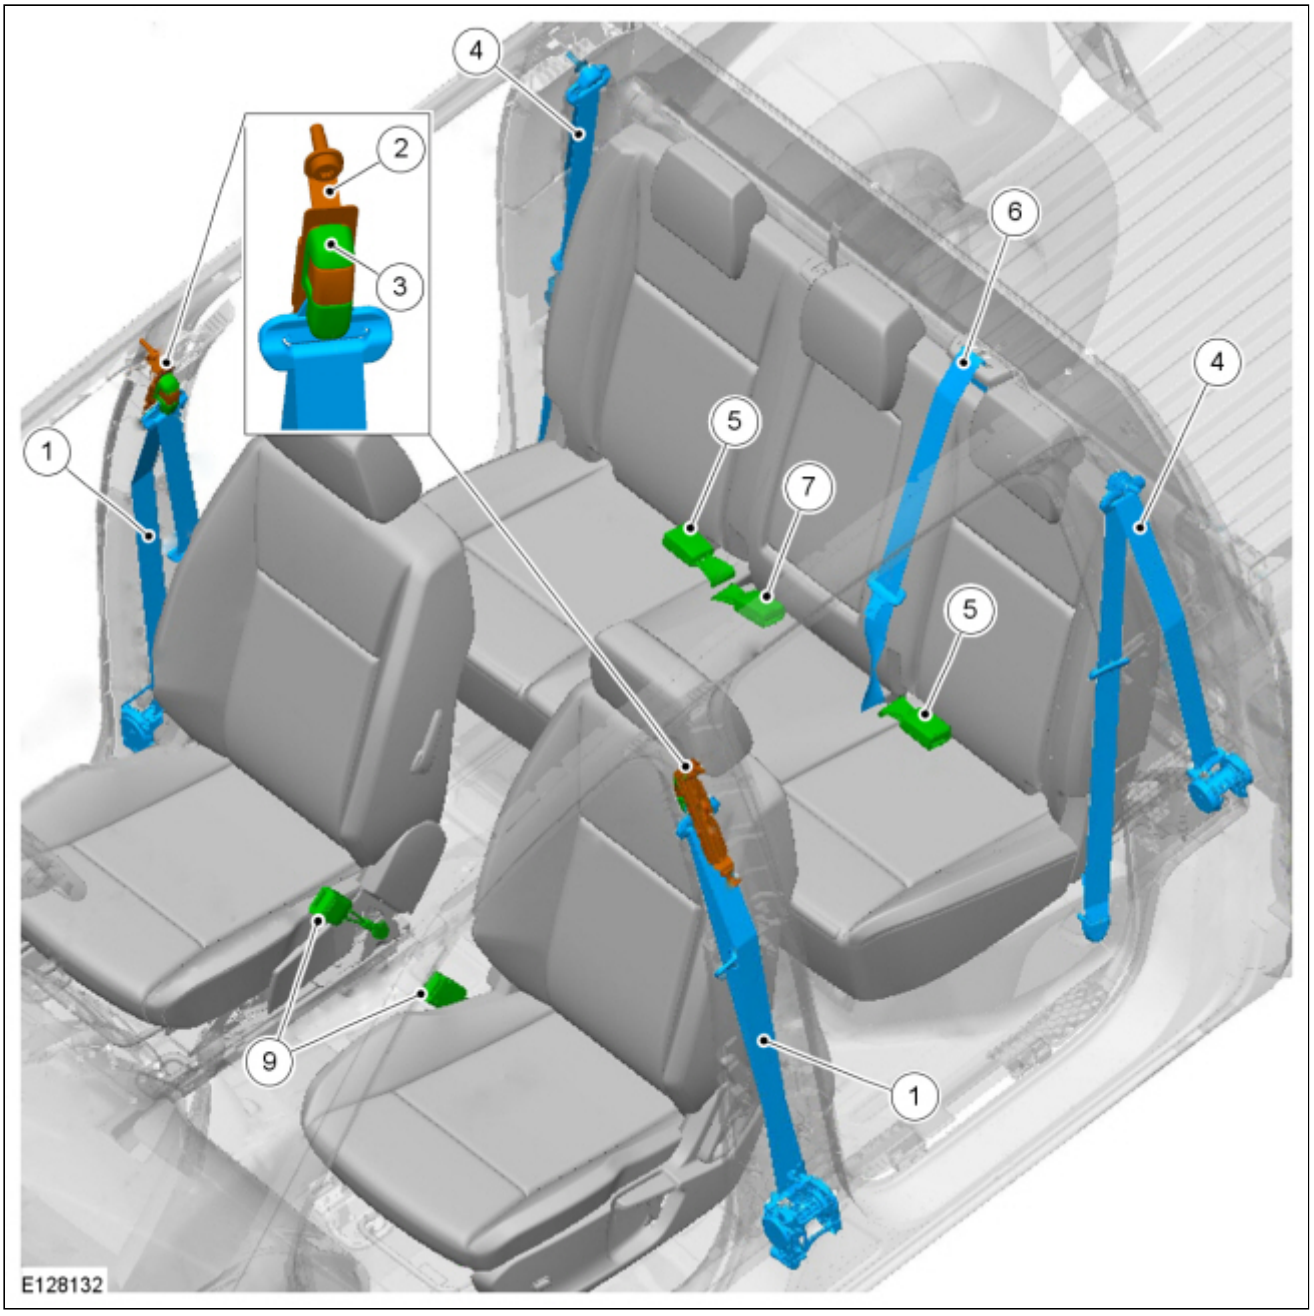


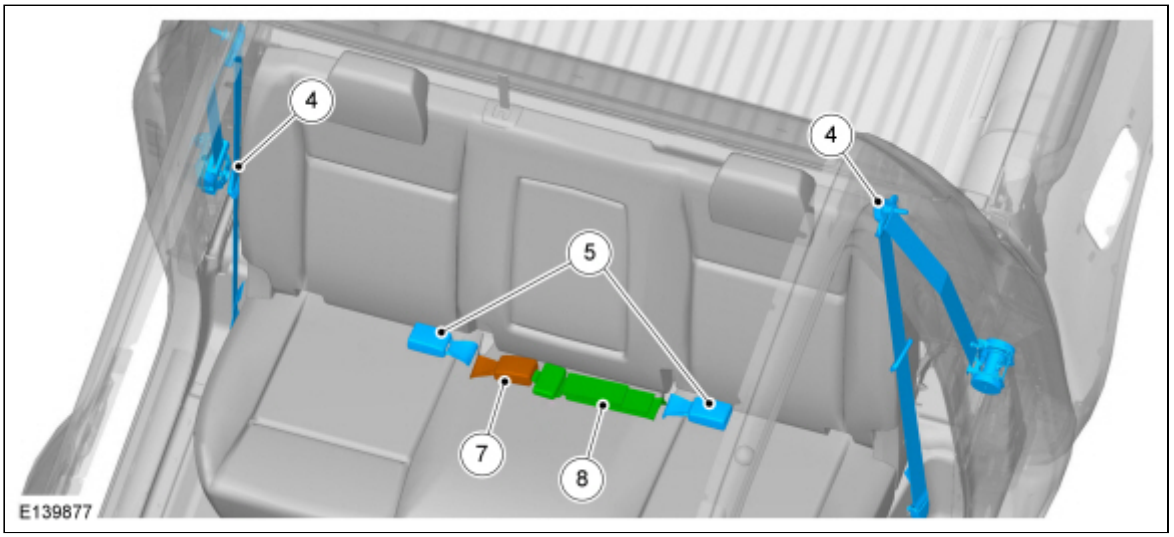


The safety belt retractor pretensioners have a lower deployment threshold than that required by the air bags. Hence it is possible that during a minor collision, which exceeds the deployment threshold, only the safety belt retractor pretensioners will deploy. The safety belt retractor pretensioners will also deploy when the side airbags are deployed but not deploy in a rear collision.

Rear seat safety belt retractors and buckles are of the conventional type.

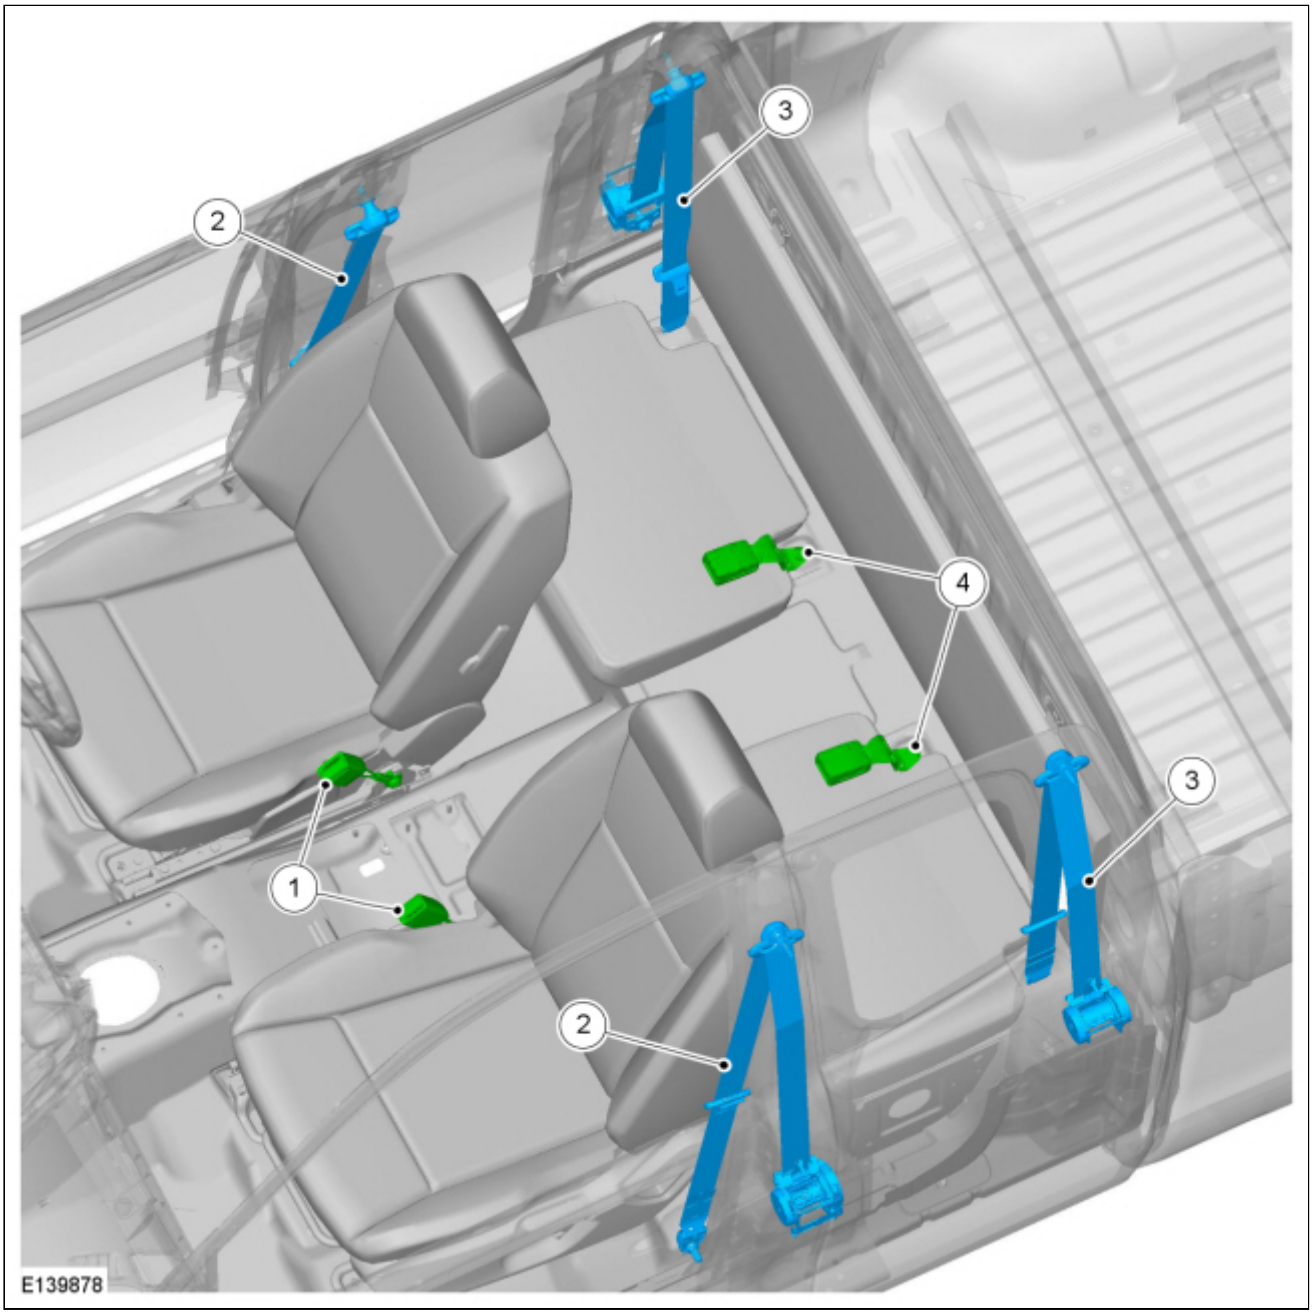
Single cab





Item	Part Number	Description
1	—	Front safety belt retractor
2	—	Front three point center safety belt retractor
3	—	Front safety belt buckle
4	—	Front center safety belt buckle
5	—	Front two point center safety belt

Double cab



Item	Part Number	Description
1	—	Front safety belt retractor
2	—	Safety belt shoulder height adjuster

3	—	Safety belt shoulder height adjusting cover
4	—	Rear safety belt retractor
5	—	Rear safety belt buckle
6	—	Rear three point center safety belt retractor
7	—	Rear center safety belt buckle
8	—	Rear two point center safety belt
9	—	Front safety belt buckle

Super cab

Item	Part Number	Description
1	—	Front safety belt buckle
2	—	Front safety belt retractor
3	—	Rear safety belt retractor
4	—	Rear safety belt buckle

Seatbelt Systems

Symptom Chart(s)

Preliminary Inspection

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Before diagnosing or repairing the safety belt system, inspect the following items:

- Safety belt webbing integrity (torn, frayed, cut or stretched)
- Safety belt buckle and tongue assembly

Symptom Chart: Safety Belt System

Symptom Chart

Condition	Possible Sources	Actions
The safety belt warning indicator does not operate	• Burned-out indicator • Wiring, terminals or connectors • IPC • RCM	If the airbag warning indicator is illuminated, REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing). If the airbag warning indicator is not illuminated, REFER to: Instrument Panel and Interior Switches Illumination (413-00 Instrument Panel and Interior Switches Illumination, Diagnosis and Testing).
The safety belt warning chime does not operate	• Wiring, terminals or connectors • Safety belt switch • IPC • RCM	If the airbag warning indicator is illuminated, REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing). If the airbag warning indicator is not illuminated, REFER to: Instrument Panel and Interior Switches Illumination (413-00 Instrument Panel and Interior Switches Illumination, Diagnosis and Testing).
The safety belt retractor webbing does not extract at the rear outboard positions	• Safety belt retractor is in web sensing mode	
The safety belt retractor webbing does not extract or exhibits excessive pressure on the occupant during use	• Safety belt retractor binding internally	CARRY OUT the appropriate component test. REFER to Functional Test - Safety Belt Retractor, Road Test Inspection in this section as appropriate. INSTALL new components as directed.
The safety belt retractor webbing does not retract or has excessive slack during use	• Twisted or incorrectly routed safety belt webbing • Safety belt retractor binding internally • The safety belt webbing is dirty or soiled and/or there has been dirt build up on the D-ring and/or around the tongue webbing slot	CORRECT the twisted safety belt webbing. REFER to: Seatbelt Tongue Rotated On Belt (501-20A Seatbelt Systems, General Procedures). REFER to: Seatbelt Twisted at the Seatbelt Guide (501-20A Seatbelt Systems, General Procedures). CARRY OUT the appropriate component test. REFER to Functional Test - Safety Belt Retractor in this section, or REFER to Functional Test - Safety Belt Retractor, Road Test Inspection as appropriate. REFER to: Seatbelt Cleaning (501-20A Seatbelt Systems, General Procedures).
The Belt-Minder® feature is inoperative	• Belt-Minder® feature is deactivated • Wiring, terminals or	To activate the Belt-Minder® feature, REFER to the Seating and Safety Restraints section of the Owner's Literature or REFER to: Seatbelt Minder Deactivating/Activating (413-09

	connectors	Warning Chimes, General Procedures).
The safety belt tongue is rotated at the webbing	Twisted or incorrectly routed safety belt webbing	REFER to: Seatbelt Tongue Rotated On Belt (501-20A Seatbelt Systems, General Procedures).
The safety belt webbing is dirty or soiled	Dirty or soiled safety belt webbing	REFER to: Seatbelt Cleaning (501-20A Seatbelt Systems, General Procedures).

Functional Test - Safety Belt Buckle and Tongue

WARNING: All safety belt components must be inspected and corrected as part of any collision repair. Inspect all safety belt components as prescribed by Safety Belt Inspection and Repair After a Collision found in Section 501-20A General Procedures of this manual. Failure to follow this instruction may result in incorrect operation of the safety belt system and increase the risk of serious personal injury or death in a crash.

NOTE: *The safety belt buckle and tongue assembly must operate freely during the latching and unlatching function. Fasten the safety belt by inserting the tongue (male portion) into the buckle (female portion).*

1. Verify the following during the latching sequence:

- Tongue insertion does not require excessive effort.
- A click is heard when the safety belt buckle latches the tongue.

2. Verify the system integrity by forcefully pulling on the safety belt webbing.

3. Unlatch the safety belt by fully pressing the safety belt buckle release button and allowing the safety belt to release and retract.

4. Verify the following during the unlatching process:

- Pressing the push button does not require excessive effort.
- The tongue can be removed easily from the buckle.

5. Repeat the above steps 3 times.

6. If the functional test reveals a concern(s), install a new safety belt buckle or safety belt retractor as required.

Functional Test - Safety Belt Retractor

WARNING: All safety belt components must be inspected and corrected as part of any collision repair. Inspect all safety belt components as prescribed by Safety Belt Inspection and Repair After a Collision found in Section 501-20A General Procedures of this manual. Failure to follow this instruction may result in incorrect operation of the safety belt system and increase the risk of serious personal injury or death in a crash.

NOTE: *The safety belt retractor must operate freely for extraction and retraction of the safety belt webbing between full extension and in-vehicle stowed positions.*

1. Extract and retract the safety belt between the full extension and stowed positions.

2. Verify the safety belt retractor operates without excessive effort or binding.

3. Install a new safety belt retractor if any concern is found or the complaint has been verified.

Functional Test - Safety Belt Retractor, Road Test Inspection

WARNING: All safety belt components must be inspected and corrected as part of any collision repair. Inspect all safety belt components as prescribed by Safety Belt Inspection and Repair After a Collision found in Section 501-20A General Procedures of this manual. Failure to follow this instruction may result in incorrect operation of the safety belt system and increase the risk of serious personal injury or death in a crash.

NOTE: *Make sure there is no excessive slack in the safety belt webbing across the torso during testing.*

NOTE: *Do not jerk on the safety belt webbing when carrying out this test.*

1. Fasten the safety belts and proceed to a safe area.
2. Reach a speed of 24 km/h (14.9 mph).

WARNING: Apply maximum brake force only on dry concrete or equivalent hard surface, never on wet pavement or gravel. Failure to follow this instruction may result in serious personal injury.

3. Grasp the shoulder harness, lean forward and apply the brakes, making a maximum braking application without a skid.
4. The safety belts should lock up with minimum webbing extension.
5. If there is a lockup of all safety belt retractors being tested, the safety belt retractors are functioning correctly. If any safety belt retractor fails to lock up, install a new safety belt retractor(s).

Seatbelt Cleaning

Cleaning

WARNING: Do not bleach or re-dye the safety belt webbing, as the webbing may weaken. Failure to follow this instruction may increase the risk of serious personal injury or death in a crash.

1. Clean the safety belt webbing, D-ring and tongue with a mild soap solution recommended for cleaning upholstery or carpets. Follow the manufacturer's instructions provided with the soap.

Seatbelt Maintenance

Inspection

WARNING: All safety belt components must be inspected and corrected as part of any collision repair. Inspect all safety belt components as prescribed by Safety Belt Inspection and Repair After a Collision found in Section 501-20A General Procedures of this manual. Failure to follow this instruction may result in incorrect operation of the safety belt system and increase the risk of serious personal injury or death in a crash.

1. Periodically inspect the safety belt assemblies for damage and that they remain in correct operating condition, particularly if they have been subjected to severe stress.
2. Before installing the new safety belt assembly, inspect the safety belt retaining areas for damage and distortion. If the retaining points are damaged and distorted, work the sheet metal back to its original shape and structural integrity.
3. Install the new safety belt(s) using the appropriate instructions. Carry out the appropriate Functional Test procedure for all seating positions.
   Refer to: Seatbelt Systems (501-20A Seatbelt Systems, Diagnosis and Testing).

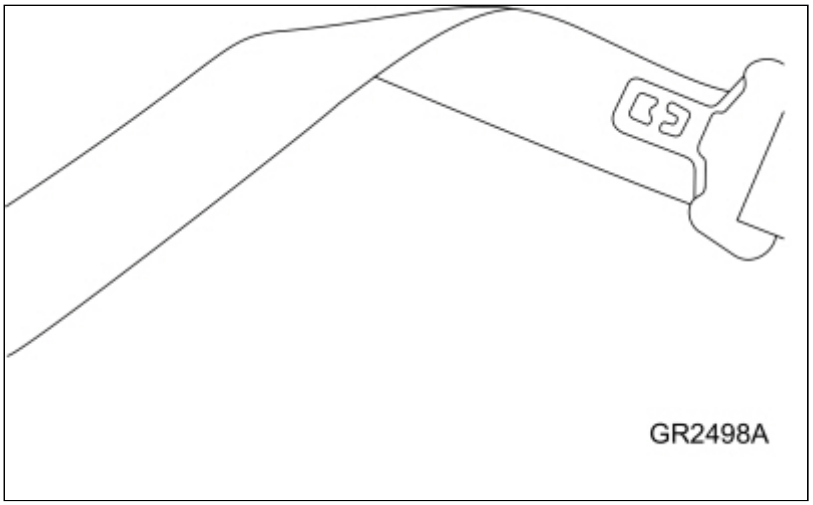
Seatbelt Procedure After a Collision

Inspection

WARNING: All safety belt components must be inspected and corrected as part of any collision repair. Inspect all safety belt components as prescribed by Safety Belt Inspection and Repair After a Collision found in Section 501-20A General Procedures of this manual. Failure to follow this instruction may result in incorrect operation of the safety belt system and increase the risk of serious personal injury or death in a crash.

1. Before installing the new safety belt assembly, inspect the safety belt attaching areas for damage and distortion. If the attaching points are damaged and distorted, work the sheet metal back to its original shape and structural integrity.



2. Install new safety belt(s) at any seating position(s) where deployment has occurred and the safety belt(s) were used. Carry out the appropriate Functional Test procedure for all seating positions.
   Refer to: Seatbelt Systems (501-20A Seatbelt Systems, Diagnosis and Testing).

Seatbelt Tongue Rotated On Belt

Adjustment

1. Fold the safety belt as indicated.

2. Pull the safety belt tongue over the fold in the safety belt.

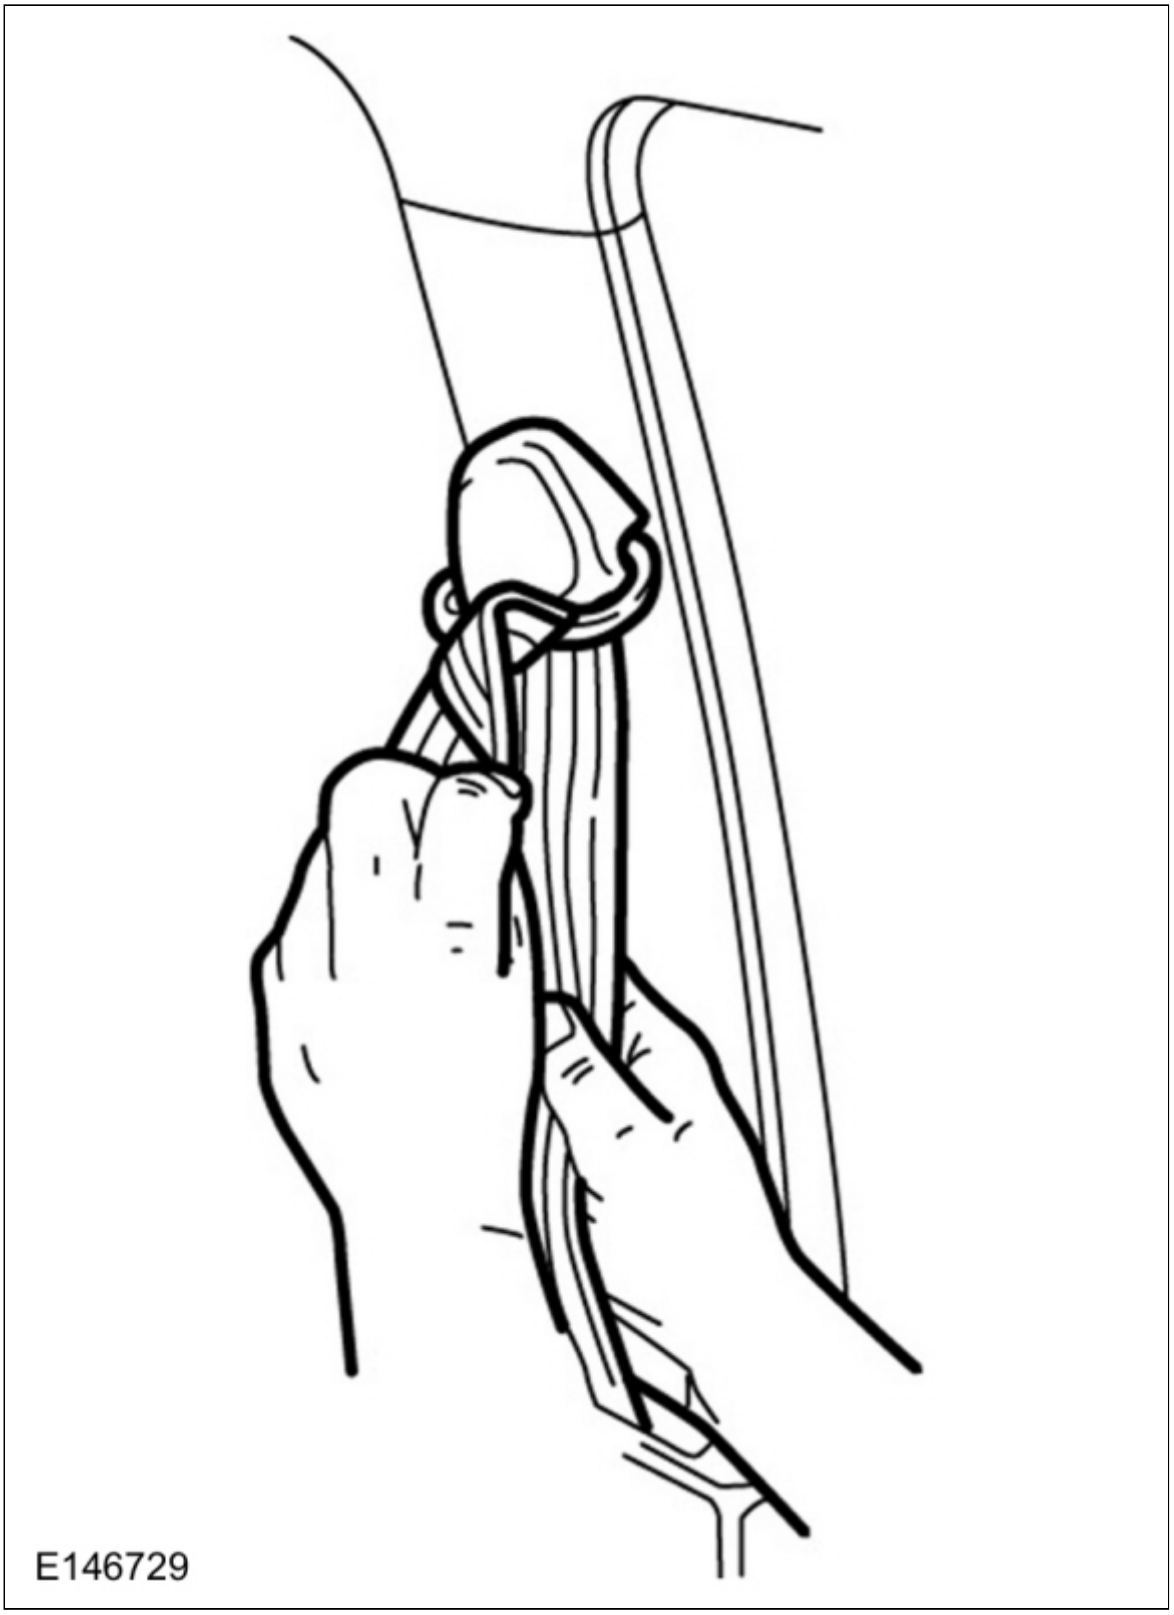
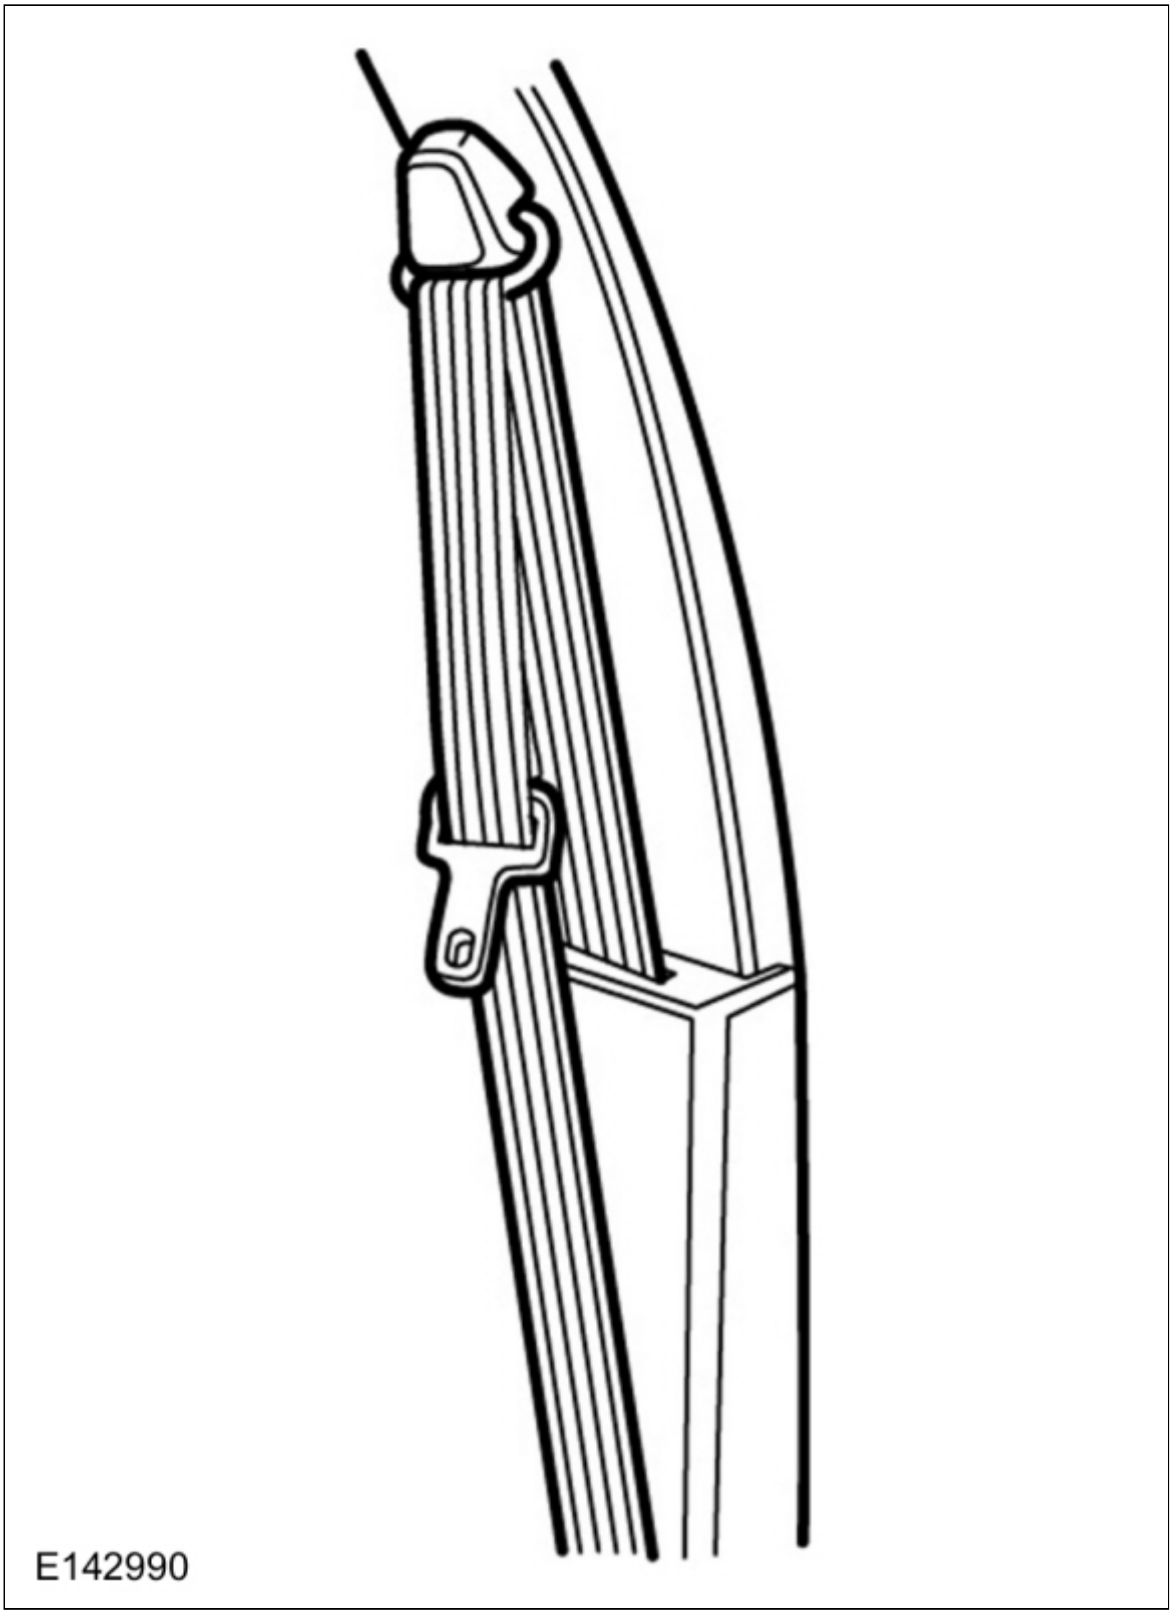
Seatbelt Twisted at the Seatbelt Guide

Adjustment



1. **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).



2. If necessary, remove the B-pillar trim panel.
   Refer to: B-Pillar Upper Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).

3. **NOTE:** *Typical D-ring shown, others similar.*

   Grasp the safety belt webbing at the D-ring and fold the twisted portion of the safety belt webbing over itself.

4. Feed the folded portion of the safety belt webbing through the D-ring to remove the twist from the safety belt webbing.

Front Seatbelt Retractor - Single Cab, Vehicles With: Double Passenger Seat

Base Part Number: 611B08

Removal

NOTE: *Removal steps in this procedure may contain installation details.*

1. **WARNING: The supplemental restraint system (SRS) is active for a certain length of time after the power supply has been disconnected. Wait for a minimum of 3 minutes before disconnecting or removing any SRS components.**

   WARNING: Handling the seat belt (pre-tensioner seat belt) improperly can accidentally deploy the pre-tensioner seat belt, which may seriously injure you. Read the service warnings and cautions before handling the seat belt (pre-tensioner seat belt).

   WARNING: Make sure that the vehicle electrical system is fully depowered and no other power source is connected.

   NOTICE: The ELR (emergency locking retractor) has a spring that will unwind if the retractor cover is removed. The spring cannot be rewound by hand. If this occurs, the ELR will not work properly. Therefore, do not disassemble the retractor.

   Refer to: Pyrotechnic Device Health and Safety Precautions (100-00 General Information, Description and Operation).

2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).

3. **NOTE:** *Note the position of the component before removal.*

4. *Torque*: 48 Nm

Installation

1. **NOTE:** *Make sure that this component is installed to the noted removal position.*

   To install, reverse the removal procedure.

Front Seatbelt Retractor - Double Cab

Base Part Number: 611B08

Removal

NOTE: *Removal steps in this procedure may contain installation details.*

1. **WARNING: The supplemental restraint system (SRS) is active for a certain length of time after the power supply has been disconnected. Wait for a minimum of 3 minutes before disconnecting or removing any SRS components.**

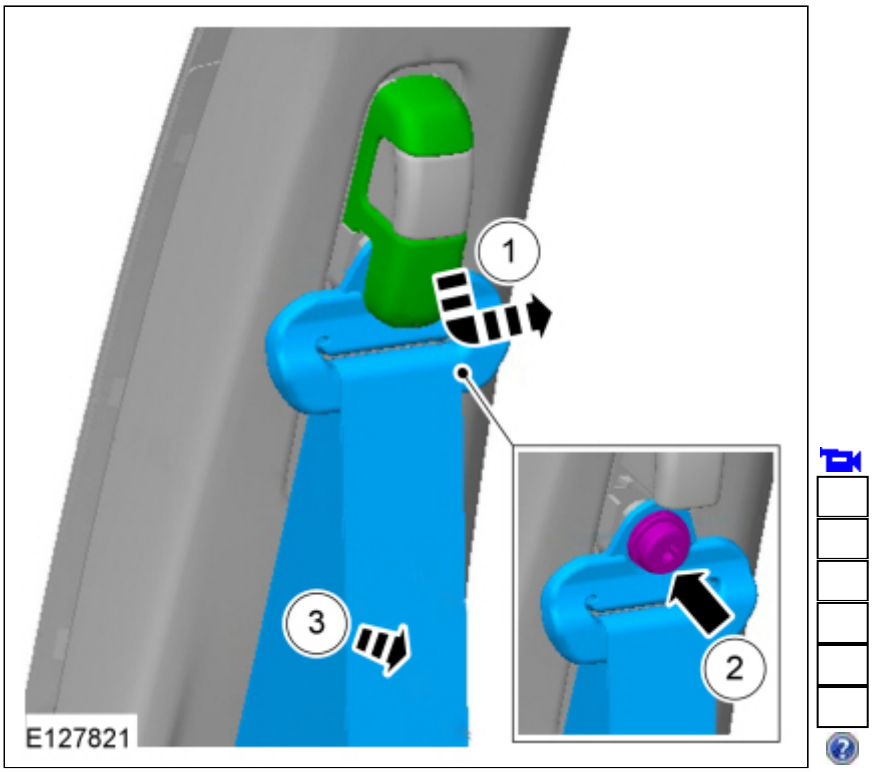
   WARNING: Handling the seat belt (pre-tensioner seat belt) improperly can accidentally deploy the pre-tensioner seat belt, which may seriously injure you. Read the service warnings and cautions before handling the seat belt (pre-tensioner seat belt).

   WARNING: Make sure that the vehicle electrical system is fully depowered and no other power source is connected.

   NOTICE: The ELR (emergency locking retractor) has a spring that will unwind if the retractor cover is removed. The spring cannot be rewound by hand. If this occurs, the ELR will not work properly. Therefore, do not disassemble the retractor.

   Refer to: Pyrotechnic Device Health and Safety Precautions (100-00 General Information, Description and Operation).

2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).



3. Refer to: B-Pillar Lower Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).

4. **NOTE:** *Note the position of the component before removal.*

   3. *Torque*: 48 Nm
   4. *Torque*: 11 Nm
   5. *Torque*: 48 Nm

5. *Torque*: 48 Nm

Installation

1. **NOTE:** *Make sure that this component is installed to the noted removal position.*

   To install, reverse the removal procedure.

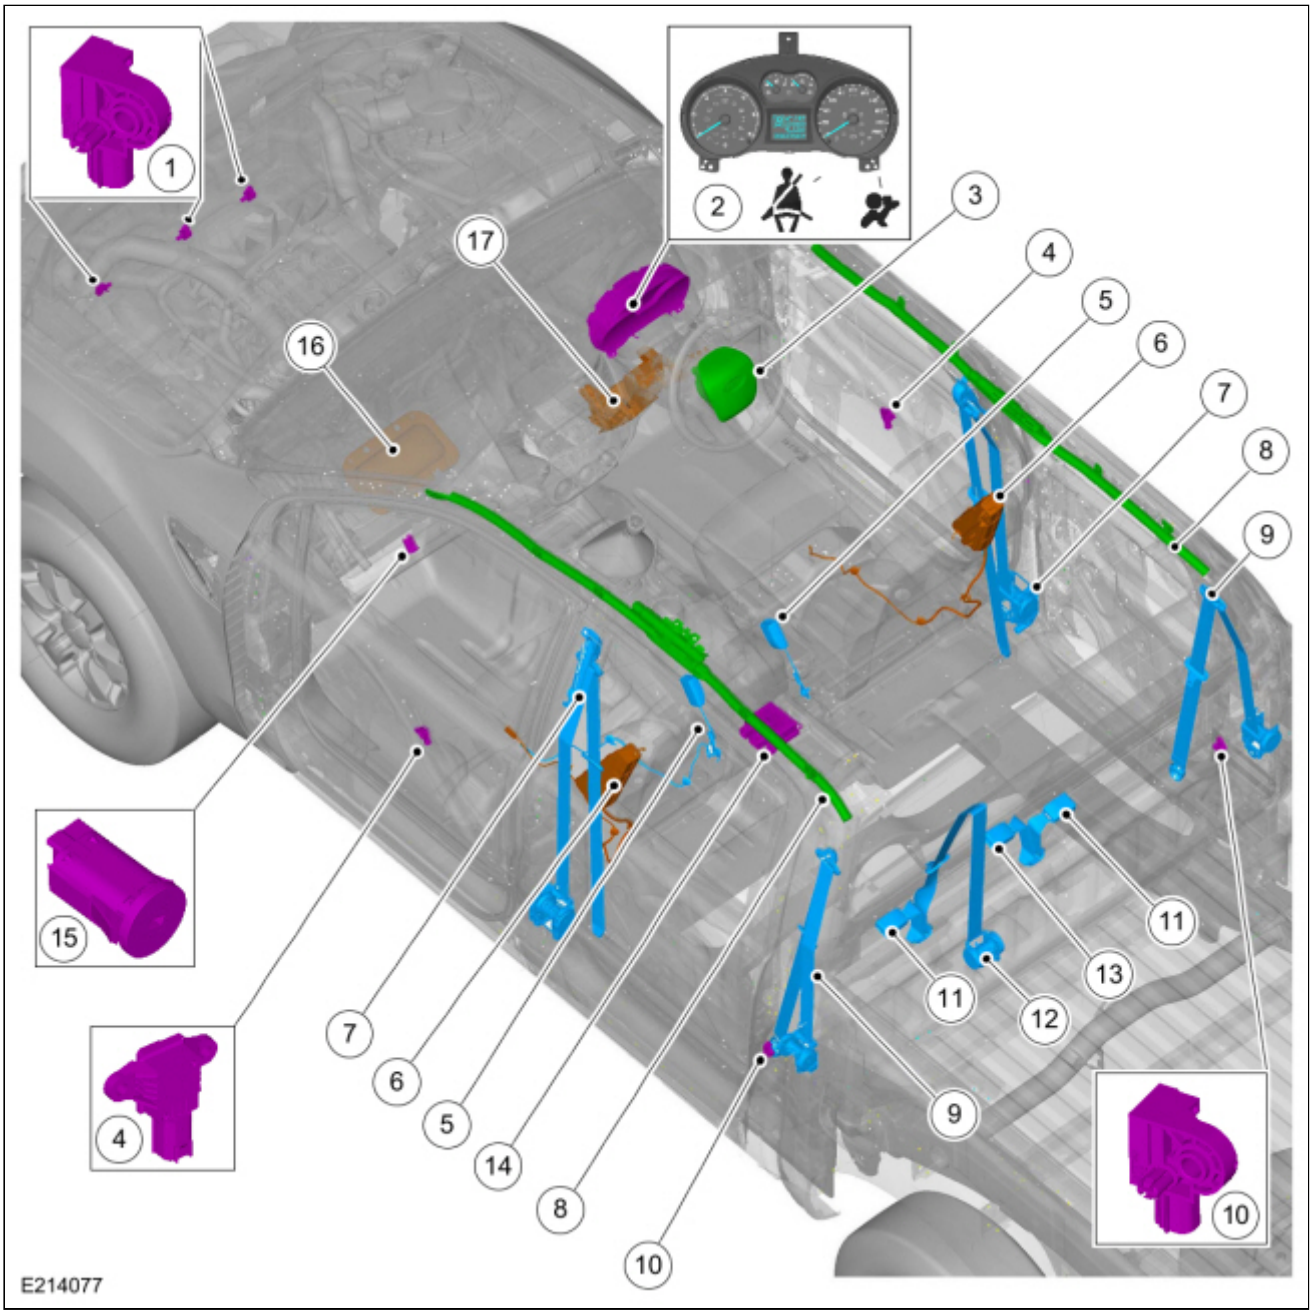
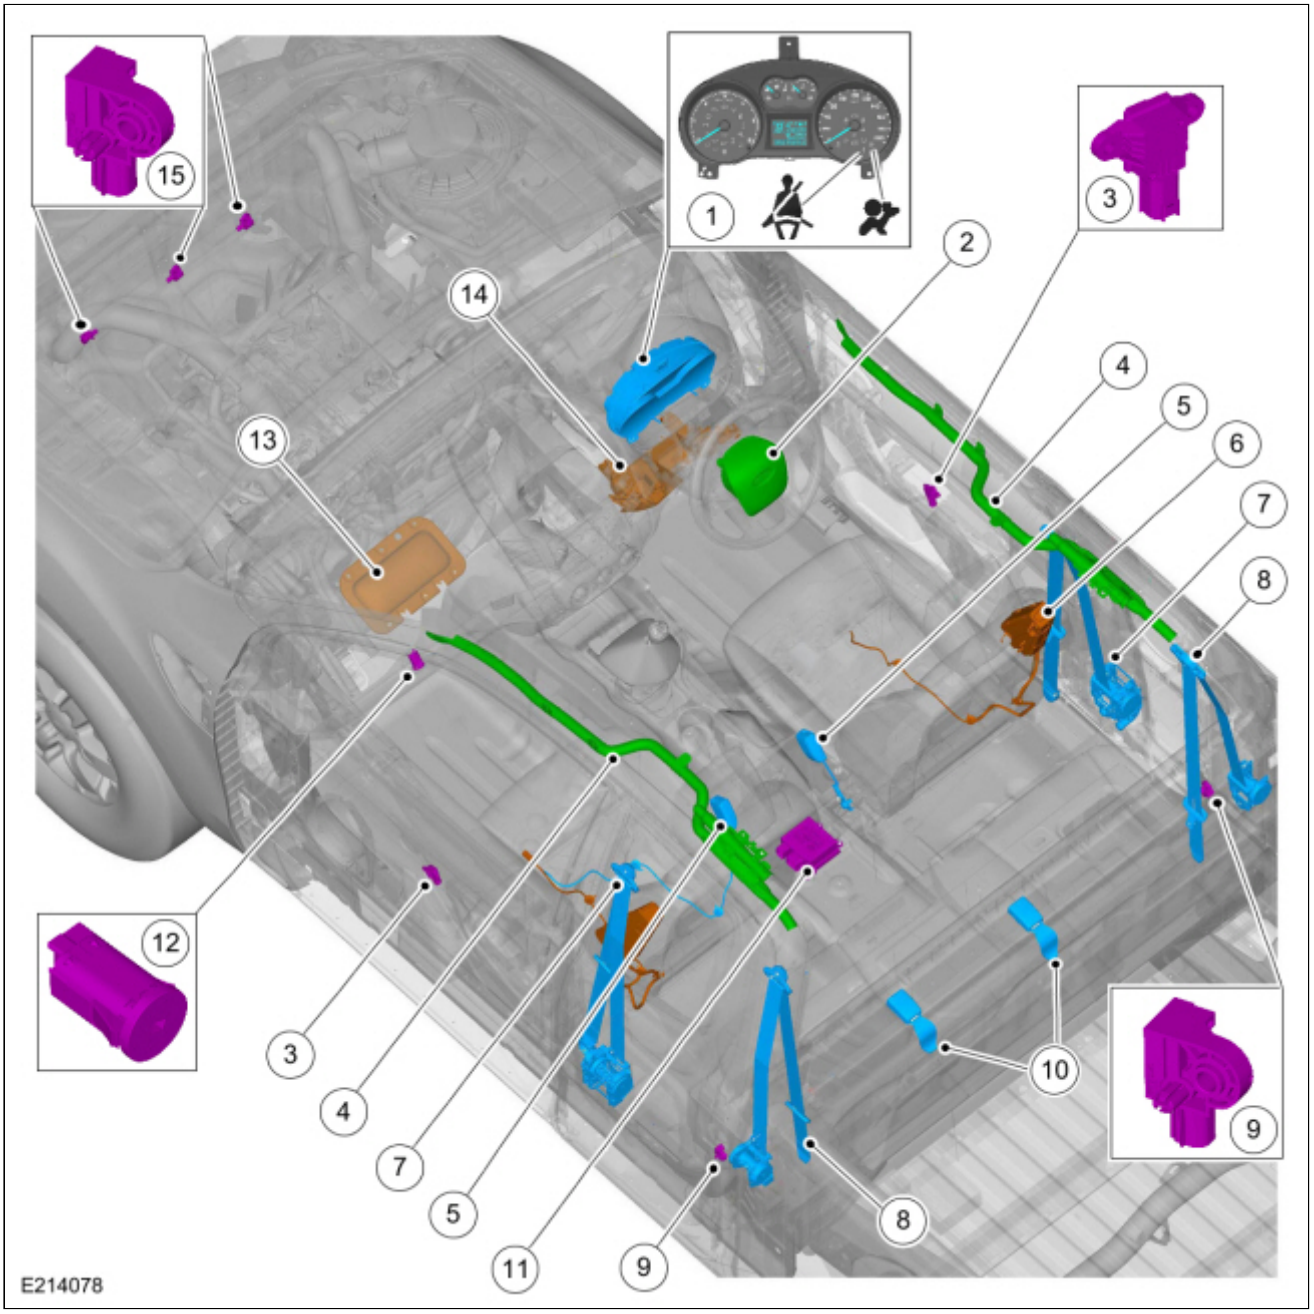
Airbag and Seatbelt Pretensioner Supplemental Restraint System (SRS) - Component Location



Single cab

Item	Description
1	Instrument cluster with air bag indicator light and safety belt warning light
2	Driver air bag module
3	Side air curtain module
4	Side impact sensor
5	Front safety belt retractor
6	Side air bag module
7	Front safety belt buckle
8	Restraints control module (RCM)
9	Front center safety belt retractor

10	Front center safety belt buckle
11	Passenger airbag deactivation (PAD) switch
12	Passenger air bag module
13	Driver lower air bag module
14	Front impact severity sensor

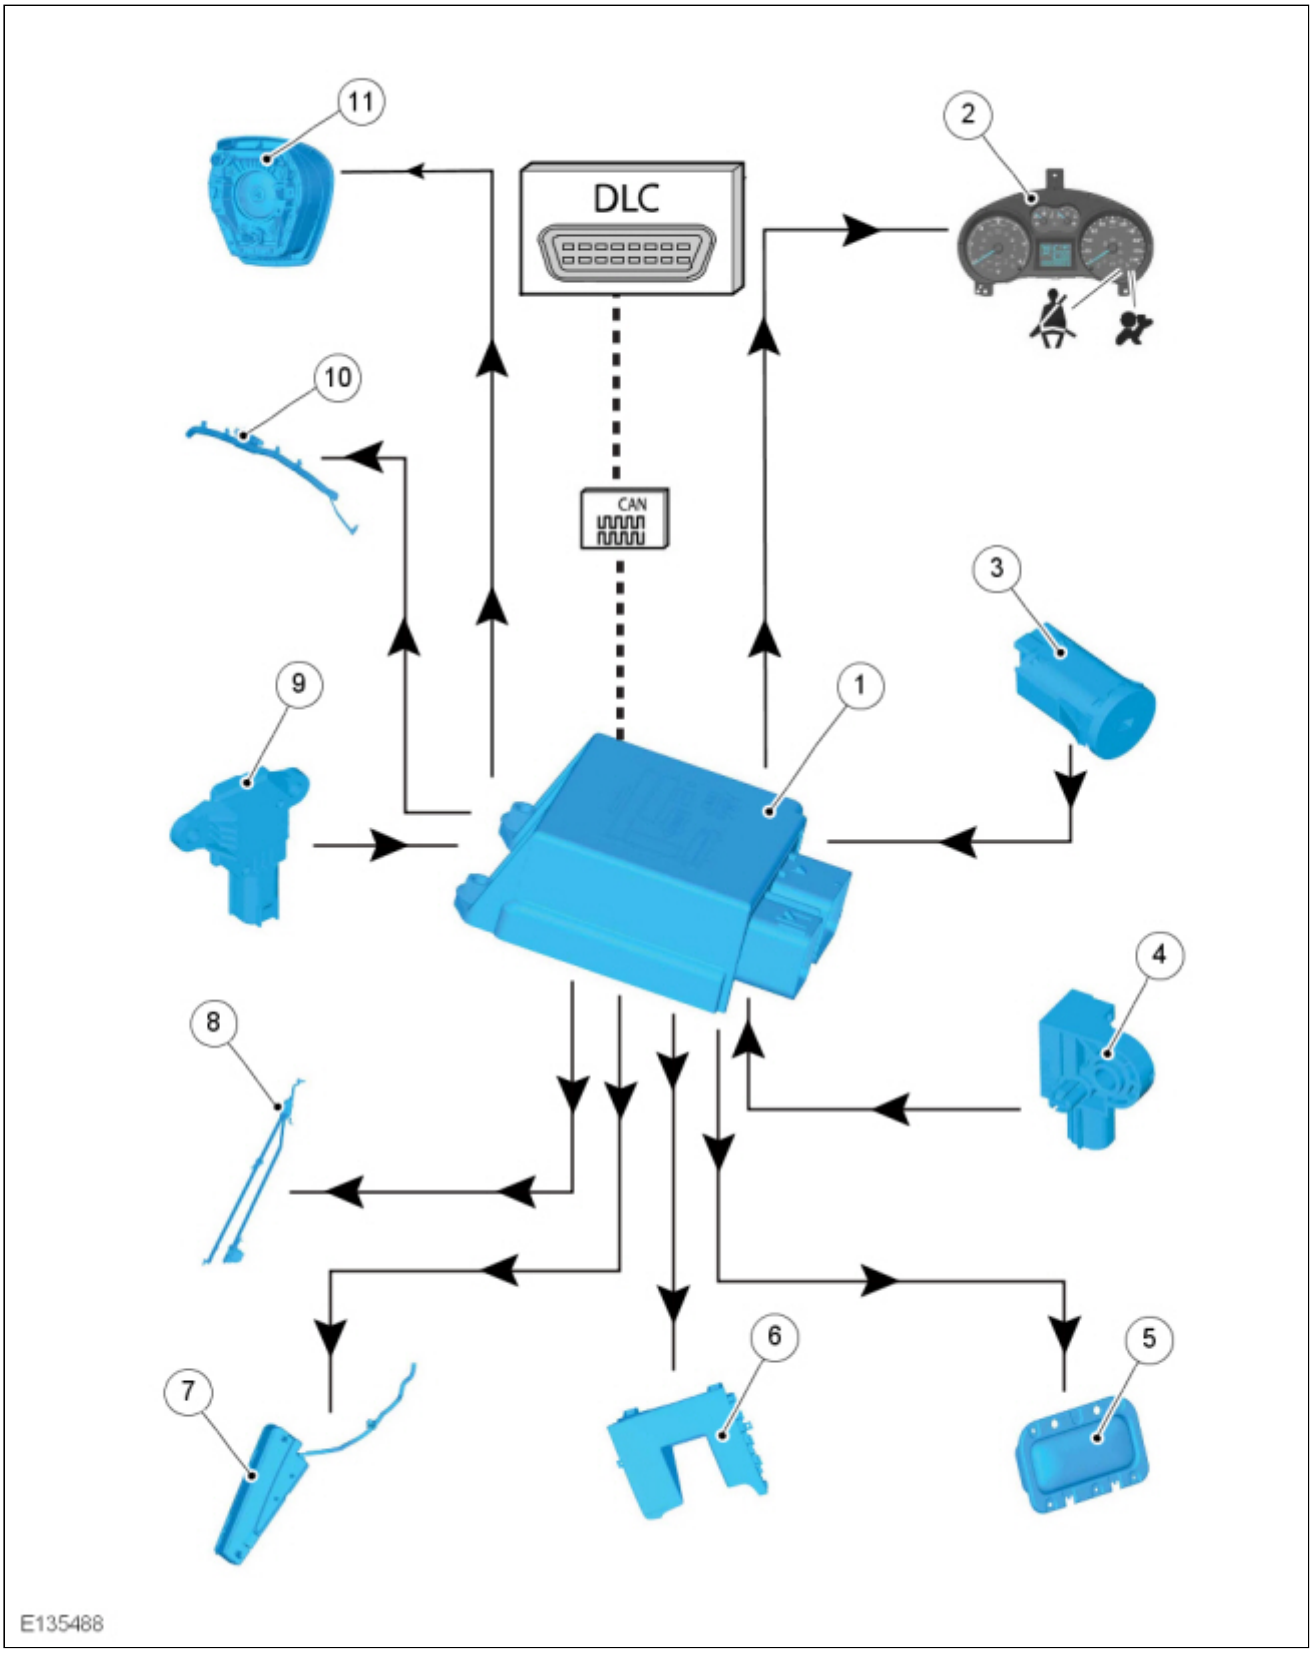


Double cab

Item	Description
1	Front impact severity sensor
2	Instrument cluster with air bag indicator light and safety belt warning light
3	Driver air bag module
4	Side impact sensor
5	Front safety belt buckle
6	Side air bag module
7	Front safety belt retractor

8	Side air curtain module
9	Rear safety belt retractor
10	Side impact sensor (rear)
11	Rear safety belt buckle
12	Rear center safety belt retractor
13	Rear center safety belt buckle
14	Restraints control module (RCM)
15	Passenger airbag deactivation (PAD) switch
16	Passenger air bag module
17	Driver lower air bag module

Stretch cab



Item	Description
1	Instrument cluster with air bag indicator light and safety belt warning light
2	Driver air bag module

3	Side impact sensor
4	Side air curtain module
5	Front safety belt buckle
6	Side air bag module
7	Front safety belt retractor
8	Rear safety belt retractor
9	Side impact sensor (rear)
10	Rear safety belt buckle
11	Restraints control module (RCM)
12	Passenger airbag deactivation (PAD) switch
13	Passenger air bag module
14	Driver lower airbag module
15	Front impact severity sensor

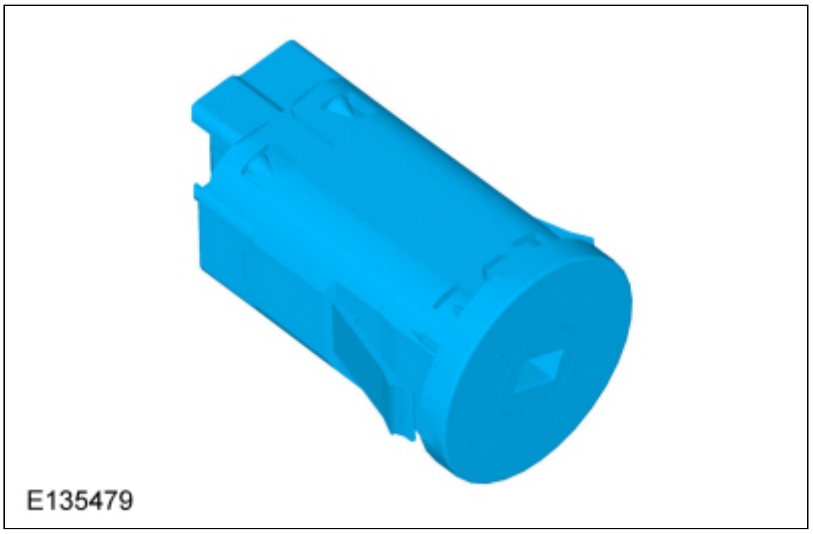
Airbag and Seatbelt Pretensioner Supplemental Restraint System (SRS) - Overview

System overview

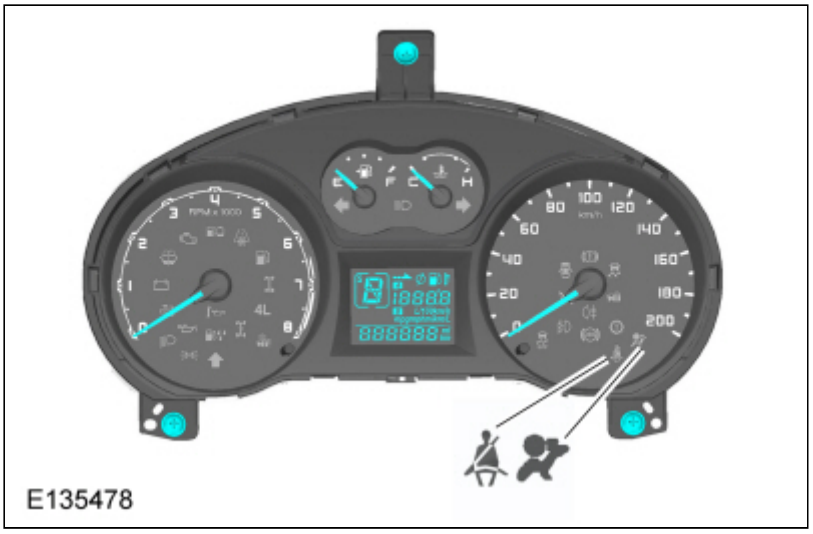
Item	Part Number	Description
1	—	RCM (Restraint Control Module)

2	—	Air bag warning indicator
3	—	Passenger airbag deactivation (PAD) switch
4	—	Front impact severity sensor
5	—	Passenger air bag module
6	—	Driver lower airbag module
7	—	Side airbag module
8	—	Safety belt retractor and pretensioner
9	—	Side impact sensor
10	—	Side air curtain module
11	—	Driver airbag module



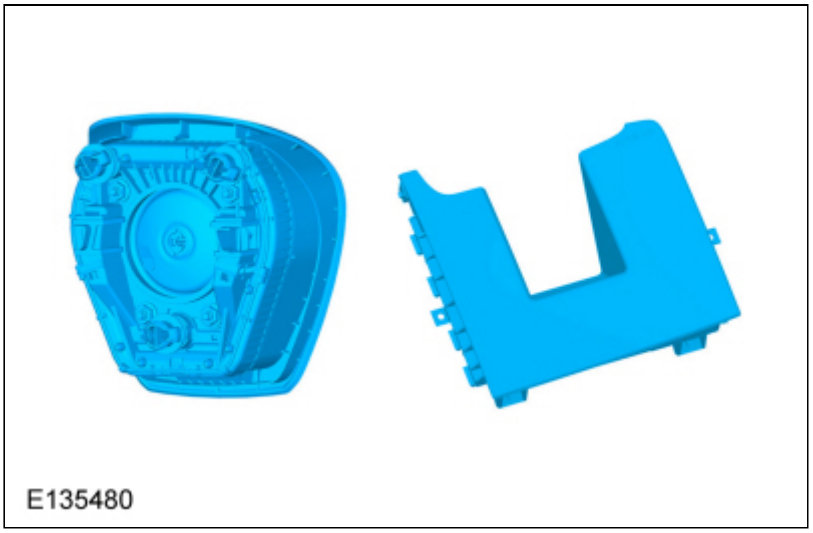
RCM (Restraint Control Module)

Electronic sensors are incorporated into the RCM; these measure the vehicle acceleration / deceleration in the event of a collision. The calculated value is evaluated by the RCM to determine the severity of the impact.



The RCM compares the values it receives from the crash sensor, side impact sensors and the internal electronic sensors. If the deceleration, due to a frontal or side impact, exceeds the stored value the RCM will trigger the air bag modules and the safety belt pretensioners as required. The RCM can be used again after a collision, provided the RCM is not physically damaged and it passes a self-test.

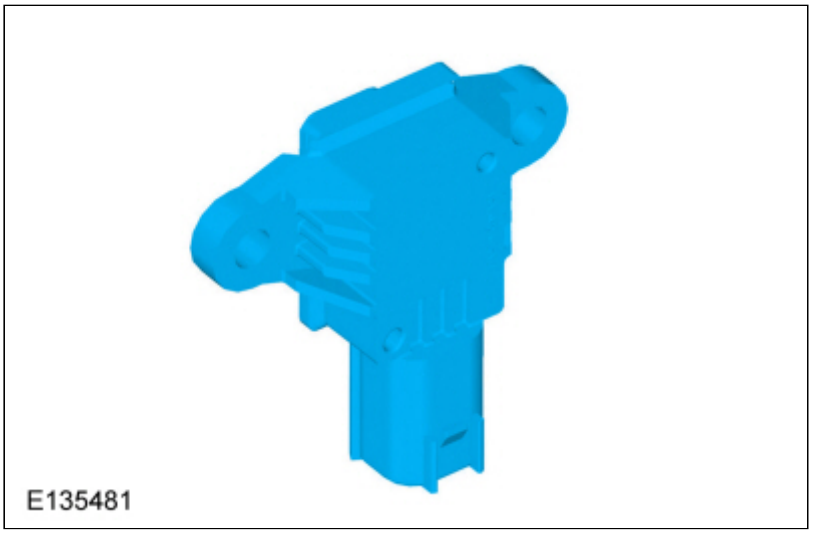
Passenger air bag deactivation switch



When the ignition is switched on, a warning lamp in the instrument panel indicates that the passenger air bag module has been deactivated.

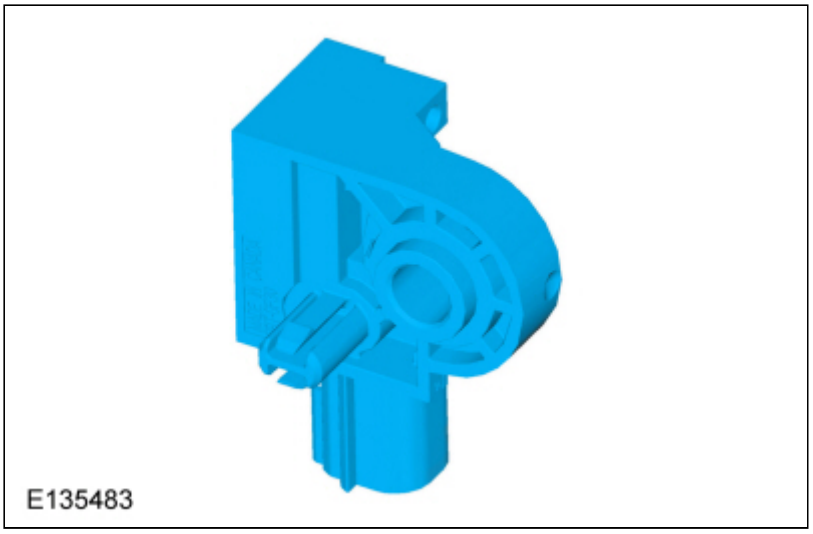
Air bag warning indicator

The airbag warning indicator is active when an airbag system Fault has occurred or the airbag module is disconnected. The indicator will have a predetermined bulb prove- out following ignition being turned to 'Run' configurable with restraints system.



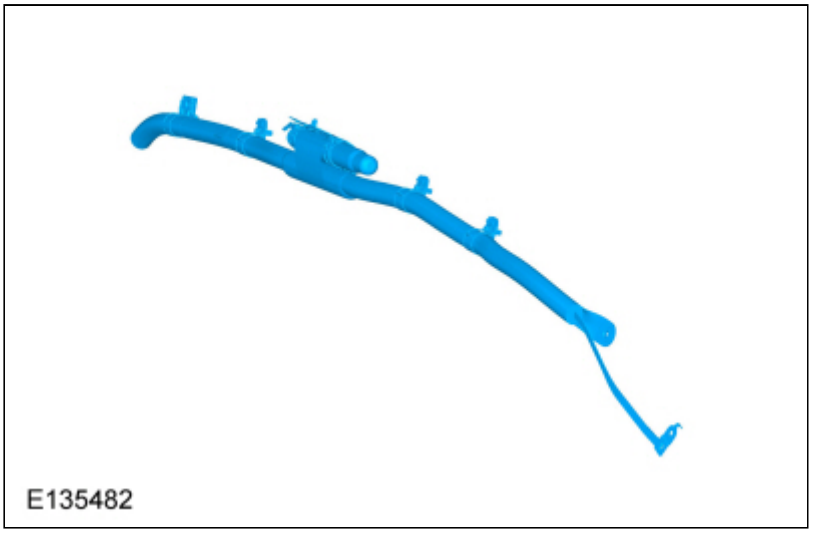
Driver air bag and driver lower air bag

This vehicle line is available with a steering wheel mounted driver air bag and a driver lower air bag (knee air bag).



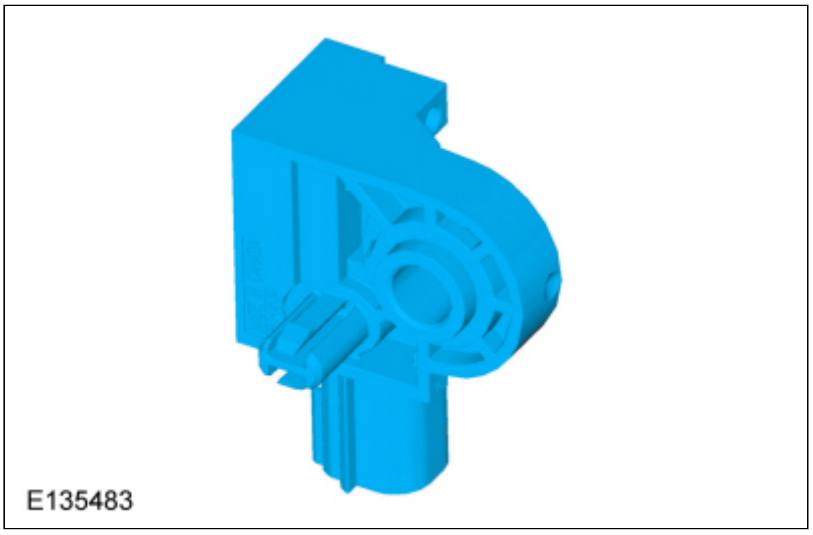
Side impact sensors

1. Side impact sensor (Front doors)



There are two side impact sensors located in the front driver and passenger doors. The sensors transmit digitally encoded pressure information to the RCM, where it is evaluated to assess the severity of a side impact. Power is supplied to the sensor by the RCM. If the sensor fails, the RCM stores a diagnostic trouble code (DTC).

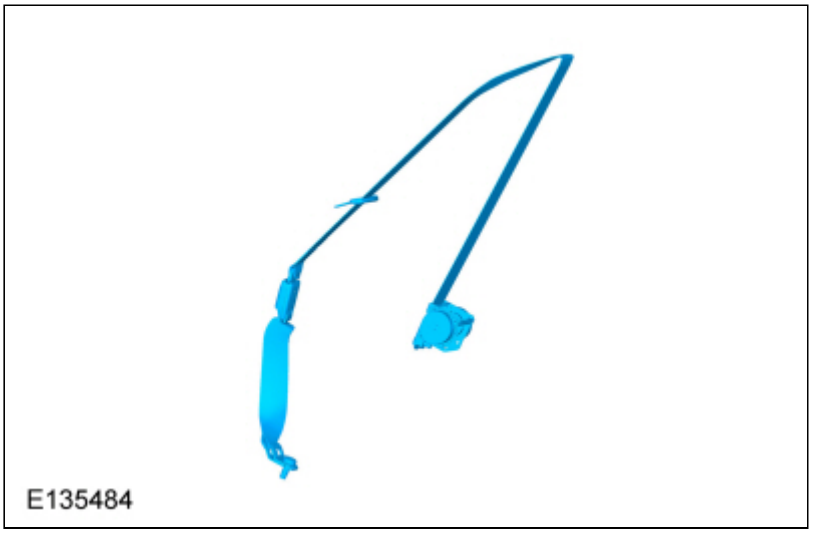
2. Side impact sensor (Rear side)



There are two side impact sensors located at the bottom of the C-pillars in stretch cab and double cab variants. The sensors transmit digitally encoded acceleration information to the RCM, where it is evaluated to assess the severity of a side impact. Power is supplied to the side impact sensor by the RCM. If the senor fails, the RCM stores a diagnostic trouble code (DTC).

Side air curtain

In the event of a side impact, the side air curtains (curtain air bags) deploy from the headliner, protecting the first and second row outboard occupants during a side impact.

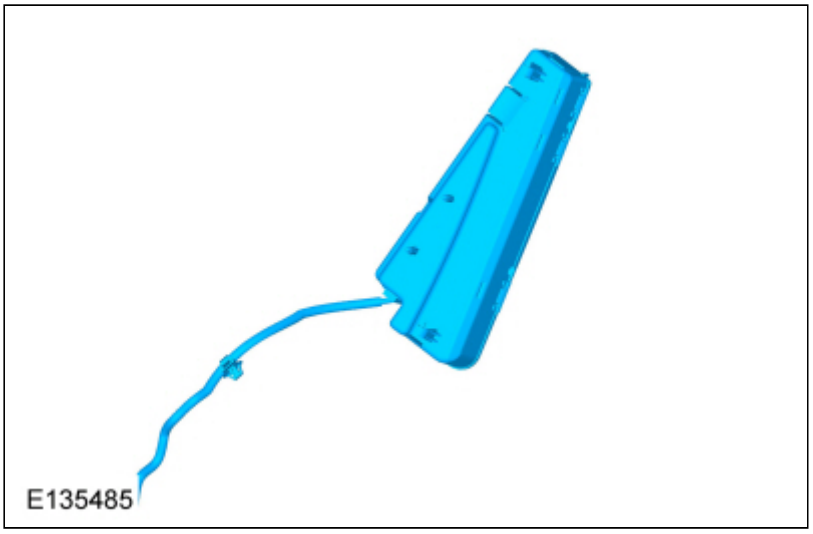


Front impact severity sensor

There are two front impact severity sensors located at the front of the vehicle, behind the radiator grille. The sensors

transmit digitally encoded acceleration information to the RCM, where it is evaluated to assess the severity of a front impact. Power is supplied to the sensor by the RCM. If the sensor fails, the RCM stores a diagnostic trouble code (DTC).

Safety belt retractor and pretensioners

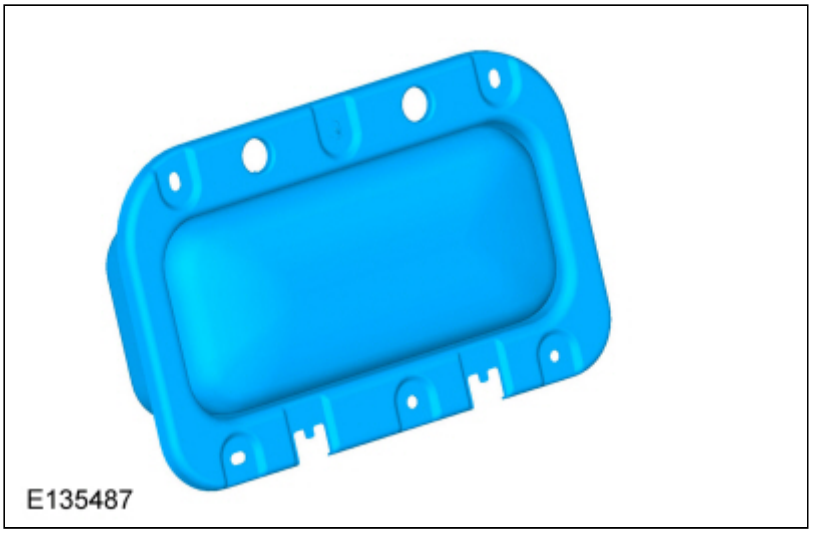


The front outboard seat belts are available equipped with a retractor pretensioner and load limiter. In the event of a collision, the safety belt pretensioner deploy in one of two ways:

• On their own.

• Simultaneously with the front air bag module(s).

Safety belt use is necessary to obtain the best occupant protection and to receive the full advantage of the SRS.



Side air bag

The side air bags are incorporated in the front seat backrests and side air bag modules deploy from the outboard of front seat backrest upon a side impact.

When a side air bag is deployed, the seam of the seat cover tears open enabling the side air bag to inflate unhindered from the front seat backrest.

Passenger air bag

The passenger air bag is designed to provide increased collision protection for front seat passengers.

Airbag Supplemental Restraint System (SRS)

DTC Chart: Restraint Control Module (RCM)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

NOTE: *Unlisted Diagnostic Trouble Codes (DTCs) are often retrieved as a result of incorrect repair procedures. Before attempting any repairs for unlisted Diagnostic Trouble Codes (DTCs), check the vehicle service history for recent repairs. For RCM Diagnostic Trouble Codes (DTCs) not listed in this chart,*

- Repair all other RCM Diagnostic Trouble Codes (DTCs) before attempting to repair any Diagnostic Trouble Codes (DTCs) not listed in this chart.
- If no other RCM Diagnostic Trouble Codes (DTCs) are retrieved, CLEAR the RCM Diagnostic Trouble Codes (DTCs) and REPEAT the self-test. If the RCM Diagnostic Trouble Codes (DTCs) return, VERIFY that the RCM is the correct part number for the vehicle application, and INSTALL As-Built data following scan tool instructions under Module Programming > As-Built.
- Inspect the RCM and RCM connectors for any damaged pins or connections.

RCM DTC Chart

DTC	Description	Action
B0001:11	Driver Frontal Stage 1 Deployment Control: Circuit Short to Ground	REFER to: Pinpoint Test - DTC: A (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0001:12	Driver Frontal Stage 1 Deployment Control: Circuit Short to Battery	REFER to: Pinpoint Test - DTC: A (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0001:13	Driver Frontal Stage 1 Deployment Control: Circuit Open	REFER to: Pinpoint Test - DTC: A (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0001:1A	Driver Frontal Stage 1 Deployment Control: Circuit Resistance Below Threshold	REFER to: Pinpoint Test - DTC: A (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0001:2B	Driver Frontal Stage 1 Deployment Control: Signal Cross Coupled	REFER to: Pinpoint Test - DTC: AE (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0001:4A	Driver Frontal Stage 1 Deployment Control: Incorrect Component Installed	REFER to: Pinpoint Test - DTC: AF (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0004:11	Driver Knee Bolster Deployment Control: Circuit Short to Ground	
B0004:12	Driver Knee Bolster Deployment Control: Circuit Short to Battery	
B0004:13	Driver Knee Bolster Deployment Control: Circuit Open	
B0004:1A	Driver Knee Bolster Deployment Control: Circuit Resistance Below Threshold	

B0004:2B	Driver Knee Bolster Deployment Control: Signal Cross Coupled	REFER to: Pinpoint Test - DTC: AE (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0004:4A	Driver Knee Bolster Deployment Control: Incorrect Component Installed	REFER to: Pinpoint Test - DTC: AF (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0010:11	Passenger Frontal Stage 1 Deployment Control: Circuit Short to Ground	REFER to: Pinpoint Test - DTC: D (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0010:12	Passenger Frontal Stage 1 Deployment Control: Circuit Short to Battery	REFER to: Pinpoint Test - DTC: D (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0010:13	Passenger Frontal Stage 1 Deployment Control: Circuit Open	REFER to: Pinpoint Test - DTC: D (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0010:1A	Passenger Frontal Stage 1 Deployment Control: Circuit Resistance Below Threshold	REFER to: Pinpoint Test - DTC: D (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0010:2B	Passenger Frontal Stage 1 Deployment Control: Signal Cross Coupled	REFER to: Pinpoint Test - DTC: AE (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0010:4A	Passenger Frontal Stage 1 Deployment Control: Incorrect Component Installed	REFER to: Pinpoint Test - DTC: AF (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0070:11	Driver Seatbelt Pretensioner "A" Deployment Control: Circuit Short to Ground	REFER to: Pinpoint Test - DTC: I (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0070:12	Driver Seatbelt Pretensioner "A" Deployment Control: Circuit Short to Battery	REFER to: Pinpoint Test - DTC: I (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0070:13	Driver Seatbelt Pretensioner "A" Deployment Control: Circuit Open	REFER to: Pinpoint Test - DTC: I (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0070:1A	Driver Seatbelt Pretensioner "A" Deployment Control: Circuit Resistance Below Threshold	REFER to: Pinpoint Test - DTC: I (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0070:2B	Driver Seatbelt Pretensioner "A" Deployment Control: Signal Cross Coupled	REFER to: Pinpoint Test - DTC: AE (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0070:4A	Driver Seatbelt Pretensioner "A" Deployment Control: Incorrect Component Installed	REFER to: Pinpoint Test - DTC: AF (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0072:11	Passenger Seatbelt Pretensioner "A" Deployment Control: Circuit Short to Ground	REFER to: Pinpoint Test - DTC: J (501-20B Supplemental Restraint System, Diagnosis and Testing).

B0072:12	Passenger Seatbelt Pretensioner "A" Deployment Control: Circuit Short to Battery	REFER to: Pinpoint Test - DTC: J (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0072:13	Passenger Seatbelt Pretensioner "A" Deployment Control: Circuit Open	REFER to: Pinpoint Test - DTC: J (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0072:1A	Passenger Seatbelt Pretensioner "A" Deployment Control: Circuit Resistance Below Threshold	REFER to: Pinpoint Test - DTC: J (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0072:2B	Passenger Seatbelt Pretensioner "A" Deployment Control: Signal Cross Coupled	REFER to: Pinpoint Test - DTC: AE (501-20B Supplemental Restraint System, Diagnosis and Testing).
B0072:4A	Passenger Seatbelt Pretensioner "A" Deployment Control: Incorrect Component Installed	REFER to: Pinpoint Test - DTC: AF (501-20B Supplemental Restraint System, Diagnosis and Testing).
B1193:00	Crash Event Storage Full and Locked: No Sub Type Information	This DTC indicates the vehicle has been in a crash. INSTALL a new RCM and impact sensors. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
B11D8:12	Restraint Event Notification: Circuit Short to Battery	REFER to: Pinpoint Test - DTC: R (501-20B Supplemental Restraint System, Diagnosis and Testing).
B11D8:14	Restraint Event Notification: Circuit Short to Ground or Open	REFER to: Pinpoint Test - DTC: R (501-20B Supplemental Restraint System, Diagnosis and Testing).
B1202:01	Restraint System Passenger Enable Indicator: General Electrical Failure	The RCM has received a fault message from the Front Controls Interface Module-B (FCIM-B) indicating a fault in the PAD indicator. CARRY OUT a self-test of the Front Controls Interface Module-B (FCIM-B) and REPAIR any Diagnostic Trouble Codes (DTCs). Refer to the appropriate section in Group 415 for the procedure.
B1202:4A	Restraint System Passenger Enable Indicator: Incorrect Component Installed	REFER to: Pinpoint Test - DTC: AF (501-20B Supplemental Restraint System, Diagnosis and Testing).
B1404:11	Driver Side Airbag Deployment Control: Circuit Short to Ground	REFER to: Pinpoint Test - DTC: S (501-20B Supplemental Restraint System, Diagnosis and Testing).
B1404:12	Driver Side Airbag Deployment Control: Circuit Short to Battery	REFER to: Pinpoint Test - DTC: S (501-20B Supplemental Restraint System, Diagnosis and Testing).
B1404:13	Driver Side Airbag Deployment Control: Circuit Open	REFER to: Pinpoint Test - DTC: S (501-20B Supplemental Restraint System, Diagnosis and Testing).
B1404:1A	Driver Side Airbag Deployment Control: Circuit Resistance Below Threshold	REFER to: Pinpoint Test - DTC: S (501-20B Supplemental Restraint System, Diagnosis and Testing).
B1404:2B	Driver Side Airbag Deployment Control: Signal Cross Coupled	REFER to: Pinpoint Test - DTC: AE (501-20B Supplemental Restraint System, Diagnosis and Testing).
B1404:4A	Driver Side Airbag Deployment Control:	REFER to: Pinpoint Test - DTC: AF (501-20B Supplemental Restraint System,

	Incorrect Component Installed	Diagnosis and Testing).
B1405:11	Driver Side Curtain Deployment Control 1: Circuit Short to Ground	REFER to: Pinpoint Test - DTC: T (501-20B Supplemental Restraint System, Diagnosis and Testing).
B1405:12	Driver Side Curtain Deployment Control 1: Circuit Short to Battery	REFER to: Pinpoint Test - DTC: T (501-20B Supplemental Restraint System, Diagnosis and Testing).
B1405:13	Driver Side Curtain Deployment Control 1: Circuit Open	REFER to: Pinpoint Test - DTC: T (501-20B Supplemental Restraint System, Diagnosis and Testing).

U0300:00	Internal Control Module Software Incompatibility: No Sub Type Information	CARRY OUT PMI. RETRIEVE RCM Diagnostic Trouble Codes (DTCs). If RCM DTC U0300:00 is retrieved on-demand during self-test, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
U0401:00	Invalid Data Received From ECM/PCM A: No Sub Type Information	**NOTE:** *This DTC sets in a module that is reporting a missing or invalid message from another module on the data bus. The module that reports the fault is not the problem module. Do not install a new RCM as part of the repair unless directed to do so in a pinpoint test.* CHECK for additional RCM and PCM Diagnostic Trouble Codes (DTCs). DIAGNOSE and REPAIR any Diagnostic Trouble Codes (DTCs) that are retrieved. For RCM Diagnostic Trouble Codes (DTCs), REFER to the RCM DTC Chart. To diagnose PCM Diagnostic Trouble Codes (DTCs), Refer to the appropriate section in Group 303 for the procedure.
U0422:00	Invalid Data Received From Body Control Module: No Sub Type Information	**NOTE:** *This DTC sets in a module that is reporting a missing or invalid message from another module on the data bus. The module that reports the fault is not the problem module. Do not install a new RCM as part of the repair unless directed to do so in a pinpoint test.* CHECK for additional RCM and BCM Diagnostic Trouble Codes (DTCs). DIAGNOSE and REPAIR any Diagnostic Trouble Codes (DTCs) that are retrieved. For RCM Diagnostic Trouble Codes (DTCs), REFER to the RCM DTC Chart. For BCM Diagnostic Trouble Codes (DTCs), REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
U0422:81	Invalid Data Received From Body Control Module: Invalid Serial Data Received	**NOTE:** *This DTC sets in a module that is reporting a missing or invalid message from another module on the data bus. The module that reports the fault is not the problem module. Do not install a new RCM as part of the repair unless directed to do so in a pinpoint test.* CHECK for additional RCM and BCM Diagnostic Trouble Codes (DTCs). DIAGNOSE and REPAIR any Diagnostic Trouble Codes (DTCs) that are retrieved. For RCM Diagnostic Trouble Codes (DTCs), REFER to the RCM DTC Chart. For BCM Diagnostic Trouble Codes (DTCs), REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
U0554:00	Invalid Data Received From Accessory Protocol Interface Module: No Sub Type Information	CHECK for additional RCM and APIM Diagnostic Trouble Codes (DTCs). For RCM Diagnostic Trouble Codes (DTCs), REFER to the RCM DTC Chart. For APIM Diagnostic Trouble Codes (DTCs), Refer to the appropriate section in Group 415 for the procedure.
U0557:82	Invalid Data Received From Front Controls	CHECK for additional RCM and FCIM Diagnostic Trouble Codes (DTCs). For RCM Diagnostic Trouble Codes (DTCs), RETURN to the beginning of this

	Interface Module "A": No Sub Type Information	chart. For FCIM Diagnostic Trouble Codes (DTCs), Refer to the appropriate section in Group 415 for the procedure.
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK vehicle history for recent service actions related to this module. This DTC sets due to incomplete or improper PMI procedures. If there have been recent service actions with this module, REPEAT the PMI procedure as directed by the diagnostic scan tool using As-Built data.
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	CARRY OUT PMI using As-Built data. RETRIEVE RCM Diagnostic Trouble Codes (DTCs). If RCM DTC U2101:00 is retrieved on-demand, INSTALL a new RCM. Use As-Built data when carrying out PMI for this DTC. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
U2200:00	Control Module Configuration Memory Corrupt: No Sub Type Information	INSTALL a new RCM. Use As-Built data when CARRYING OUT PMI during the RCM installation. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
U2300:55	Central Configuration: Not Configured	REFER to: Pinpoint Test - DTC: AM (501-20B Supplemental Restraint System, Diagnosis and Testing).
U2300:64	Central Configuration: Signal Plausibility Failure	REFER to: Pinpoint Test - DTC: AM (501-20B Supplemental Restraint System, Diagnosis and Testing).
U3000:46	Control Module: Calibration / Parameter Memory Failure	INSTALL a new RCM. Use As-Built data when CARRYING OUT PMI during the RCM installation. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
U3000:49	Control Module: Internal Electronic Failure	INSTALL a new RCM. Using a diagnostic scan tool, CARRY OUT RCM PMI. If DTC U2200:00 is also present, USE As-Built data when CARRYING OUT PMI during the RCM installation. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing).
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing).

Symptom Chart(s)

Symptom Chart: Supplemental Restraint System

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	• Fuse • Diagnostic scan tool • DLC • Wiring, terminals or connectors • Module	• REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
An audible tone sounds within 60	• SRS fault or airbag	• CARRY OUT the RCM and IPC self-tests. For RCM Diagnostic Trouble Codes (DTCs), REFER to DTC Chart:

seconds of ignition ON	warning indicator fault	RCM. For IPC Diagnostic Trouble Codes (DTCs), REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
The airbag indicator is flashing	• SRS fault	• CARRY OUT the RCM self tests. REFER to DTC Chart: RCM.
The airbag warning indicator is illuminated continuously	• Fuse • Wiring, terminals or connectors • IPC • RCM	• CARRY OUT the RCM self tests. REFER to DTC Chart: RCM. • If no Diagnostic Trouble Codes (DTCs) were retrieved from the RCM , REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing). • If the RCM does not respond to the diagnostic scan tool, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

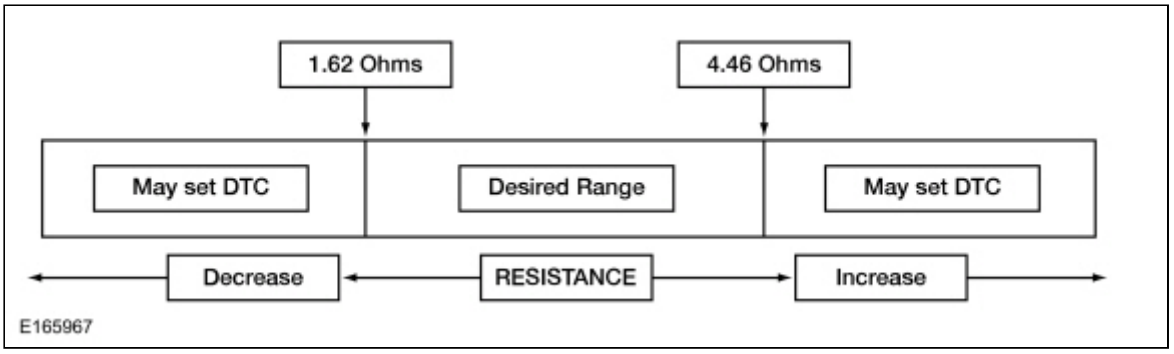
Pinpoint Test - DTC: A

B0001:11, B0001:12, B0001:13 and B0001:1A

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

Normal Operation and Fault Conditions



The RCM continuously monitors the driver airbag stage 1 circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted driver airbag

If a fault is detected, the RCM stores DTC B0001:11, B0001:12, B0001:13 or B0001:1A in memory and sends a message to the IPC to illuminate the airbag warning indicator.

The RCM analyzes the deployment loop resistance to determine if a fault exists. The value displayed in the PID is the deployment loop resistance measured by the RCM. If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. Small variations in resistance can occur due to the effect of road vibrations on terminal fit. Crimps and terminals can be affected by stress and harness movement and can cause an increase in resistance due to wire strain. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at the time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Clockspring
- Driver airbag
- RCM

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B0001:11	Driver Frontal Stage 1 Deployment Control: Circuit Short to Ground	A fault is indicated when the RCM senses a short to ground on either driver airbag stage 1 circuit for more than 6 seconds.
B0001:12	Driver Frontal Stage 1 Deployment Control: Circuit Short to Battery	A fault is indicated when the RCM senses a short to voltage on either driver airbag stage 1 circuit for more than 6 seconds.
B0001:13	Driver Frontal Stage 1 Deployment Control: Circuit Open	A fault is indicated when the RCM measures more than the desired resistance range between driver airbag stage 1 circuits for more than 6 seconds.
B0001:1A	Driver Frontal Stage 1 Deployment Control: Circuit Resistance Below Threshold	A fault is indicated when the RCM measures less than the desired resistance range between driver airbag stage 1 circuits for more than 6 seconds.

Possible Sources

- Wiring, terminals or connectors
- Clockspring
- Driver airbag
- RCM

PINPOINT TEST A : B0001:11, B0001:12, B0001:13 AND B0001:1A

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*

NOTE: *Only disconnect or reconnect SRS components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*

NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog or equivalent to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

A1 RETRIEVE RCM (RESTRAINTS CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B0001:11, B0001:12, B0001:13 or B0001:1A retrieved on-demand during self-test?

Yes	This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. If DTC U3003:16 or U3003:17 is retrieved on-demand, DIAGNOSE those Diagnostic Trouble Codes (DTCs) first. REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the driver airbag Diagnostic Trouble Codes (DTCs). For DTC B0001:13 or B0001:1A, GO to A2 For DTC B0001:11, GO to A12 For DTC B0001:12, GO to A15
No	This is an intermittent fault when present as a CMDTC only. If DTC U3003:16 or U3003:17 is retrieved on-demand, DIAGNOSE those Diagnostic Trouble Codes (DTCs) first. REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the driver airbag Continuous Memory Diagnostic Trouble Codes (CMDTCs). For DTC B0001:13 or B0001:1A, GO to A20 For DTC B0001:11, GO to A21 For DTC B0001:12, GO to A22

A2 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL RESISTANCE

(DEPLOY_00_R) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- Monitor and record the resistance value displayed by the DEPLOY_00_R PID.

Does the PID value read between 1.62 and 4.46 ohms?

Yes	GO to A19
No	GO to A3

A3 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_00_R) PID (PARAMETER IDENTIFICATION) WHILE CARRYING OUT THE HARNESS TEST

- Remove the steering column shrouds to access the clockspring connectors.
  REFER to: Steering Column Shrouds (501-05 Interior Trim and Ornamentation, Removal and Installation).
- While monitoring the DEPLOY_00_R PID, carry out the harness test of the driver airbag circuits and accessible connectors (including any inline connectors) by wiggling and flexing the wire harness, connectors, tilting and rotating the steering wheel frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.62 and 4.46 ohms while carrying out the harness test?

Yes	DEPOWER the SRS. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). REPAIR the connector, terminals or wire harness or INSTALL a new clockspring as needed. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A24
No	For PID value less than 1.62 ohms, GO to A4 For PID value greater than 4.46 ohms, GO to A8

A4 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the driver airbag disconnected, open circuit faults are normally retrieved on stage 1.

Did the on-demand DTC change from B0001:1A to B0001:13?

Yes	GO to A17
No	GO to A5

A5 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED) (CLOCKSPRING

DISCONNECTED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect the SCCM C226B.
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the SCCM/clockspring disconnected, open circuit faults are normally retrieved on stage 1.

Did the on-demand DTC change from B0001:1A to B0001:13?

Yes	GO to A18
No	GO to A6

A6 CHECK FOR A SHORT BETWEEN DRIVER AIRBAG STAGE 1 CIRCUITS

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C226B-11	Ω	C226B-12

Is the resistance greater than 10,000 ohms?

Yes	GO to A19
No	GO to A7

A7 CHECK THE RCM (RESTRAINTS CONTROL MODULE) FOR LOW RESISTANCE

- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C310A, pin 29, component side	Ω	C310A, pin 30, component side

Is the resistance greater than 10,000 ohms?

Yes	REPAIR the driver airbag stage 1 circuit(s) for a short together. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A24
No	GO to A19

A8 CHECK THE DRIVER AIRBAG STAGE 1 CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C310A-29	Ω	C216A-1
C310A-30	Ω	C216A-2

Are the resistances less than 1 ohm?

Yes	GO to A10
No	GO to A9

A9 CHECK THE DRIVER AIRBAG STAGE 1 CIRCUITS FOR AN OPEN (CLOCKSPRING DISCONNECTED)

- Disconnect SCCM C226B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C310A-29	Ω	C226B-12
C310A-30	Ω	C226B-11

Are the resistances less than 0.5 ohm?

Yes	GO to A18
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A24

A10 CHECK THE DRIVER AIRBAG STAGE 1 DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Connect RCM C310A and C310B.
- Connect a fused jumper wire:

Lead 1	Measurement / Action	Lead 2
C216A-1		C216A-2

- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the driver airbag stage 1 circuits shorted together, a low resistance fault is normally retrieved on stage 1.

Was DTC B0001:1A retrieved on-demand during self-test?

Yes	REMOVE the fused jumper wire and GO to A17
No	REMOVE the fused jumper wire and GO to A11

A11 CHECK THE DRIVER AIRBAG STAGE 1 DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (OPEN INDICATED)

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect SCCM C226B.
- Connect a fused jumper wire:

Lead 1	Measurement / Action	Lead 2
C226B-11		C226B-12

- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the driver airbag stage 1 circuits shorted together, a low resistance fault is normally retrieved on stage 1.

Was DTC B0001:1A retrieved on-demand during self-test?

Yes	REMOVE the fused jumper wire and GO to A18
No	REMOVE the fused jumper wire and GO to A19

A12 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the driver airbag disconnected,

open circuit faults are normally retrieved on stage 1.

Did the on-demand DTC change from B0001:11 to B0001:13?

Yes	GO to A17
No	GO to A13

A13 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED) (SCCM/CLOCKSPRING DISCONNECTED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Disconnect SCCM C226B.
  - Remove the steering column shrouds to access the SCCM connectors.
    REFER to: Steering Column Shrouds (501-05 Interior Trim and Ornamentation, Removal and Installation).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the SCCM/clockspring disconnected, open circuit faults are normally retrieved on stage 1.

Did the on-demand DTC change from B0001:11 to B0001:13?

Yes	GO to A18
No	GO to A14

A14 CHECK THE DRIVER AIRBAG STAGE 1 CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C226B-11	Ω	Ground
C226B-12	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A19
No	Due to the shorting bar feature in the RCM electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A24

A15 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (SHORT TO BATTERY INDICATED) (SCCM/CLOCKSPRING DISCONNECTED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault*

condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect SCCM C226B.
  - Remove the steering column shrouds to access the SCCM/clockspring connectors.
    REFER to: Steering Column Shrouds (501-05 Interior Trim and Ornamentation, Removal and Installation).
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the SCCM/clockspring disconnected, open circuit faults are normally retrieved on stage 1.

Did the on-demand DTC change from B0001:12 to B0001:13?

Yes	GO to A18
No	GO to A16

A16 CHECK THE DRIVER AIRBAG STAGE 1 CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C226B-11		Ground
C226B-12		Ground

Is any voltage present?

Yes	Due to the shorting bar feature in the RCM electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A24
No	GO to A19

A17 CONFIRM THE DRIVER AIRBAG FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.

REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - inspect wire harness for any damaged, pinched, cut or pierced wires.
  - inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - inspect Driver Airbag C216A and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.
  - repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Install the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	INSTALL a new driver airbag. REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation). GO to A24
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B0001:13 or B0001:1A, GO to A20 For DTC B0001:11, GO to A21 For DTC B0001:12, GO to A22

A18 CONFIRM THE SCCM/CLOCKSPRING FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - inspect wire harness for any damaged, pinched, cut or pierced wires.
  - inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect the SCCM C226B.
- Install the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Connect RCM C310A and C310B (if previously disconnected).
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation). GO to A24
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not

	install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B0001:13 or B0001:1A, GO to A20 For DTC B0001:11, GO to A21 For DTC B0001:12, GO to A22

A19 CONFIRM THE RCM (RESTRAINTS CONTROL MODULE) FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - inspect wire harness for any damaged, pinched, cut or pierced wires.
  - inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Install the driver airbag (if previously removed).
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Connect the SCCM C226B (if previously disconnected).
- Connect RCM C310A and C310B (if previously disconnected).
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A24
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B0001:13 or B0001:1A, GO to A20 For DTC B0001:11, GO to A21 For DTC B0001:12, GO to A22

A20 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_00_R) PID (PARAMETER IDENTIFICATION) FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT

- Ignition OFF.
- Remove the steering column shrouds to access the SCCM/clockspring connectors.
  REFER to: Steering Column Shrouds (501-05 Interior Trim and Ornamentation, Removal and Installation).
- Ignition ON.
- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- While monitoring the DEPLOY_00_R PID, attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.62 and 4.46 ohms?

Yes	The fault is not present and cannot be recreated at this time. Do not install any new SRS

	components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A23
No	If the driver airbag PID indicates incorrect resistance only when the steering wheel is rotated, INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation). For all other faults, DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A24

A21 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO GROUND FAULT

- Ignition OFF.
- Remove the steering column shrouds to access the SCCM/clockspring connectors.
  REFER to: Steering Column Shrouds (501-05 Interior Trim and Ornamentation, Removal and Installation).
- Ignition ON.
- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B0001:11 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A24
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A23

A22 CHECK THE DRIVER FRONTAL STAGE 1 DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO BATTERY FAULT

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Remove the steering column shrouds to access the SCCM/clockspring connectors.
  REFER to: Steering Column Shrouds (501-05 Interior Trim and Ornamentation, Removal and Installation).
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness, tilting and rotating the steering wheel frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B0001:12 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information.

	GO to A24
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A23

A23 CHECK THE HARNESS AND CONNECTORS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
  - Inspect connector(s) (including any inline connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damage, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Inspect Driver Airbag C216A Connector Position Assurance (CPA) tab to verify that it is correctly seated and free of damage.

Were any concerns found?

Yes	REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A24
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A24

A24 CHECK FOR ADDITIONAL SRS (SUPPLEMENTAL RESTRAINT SYSTEM) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition OFF.
- Reconnect all SRS components (if previously disconnected).
- If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- **NOTE:** *When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM.*

  Using a diagnostic scan tool, perform **Restraints** self-test.

Are any RCM Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	Do not clear any Diagnostic Trouble Codes (DTCs) until all Diagnostic Trouble Codes (DTCs) have been resolved. DIAGNOSE and REPAIR the RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	The repair is complete. RETURN the vehicle to the customer.

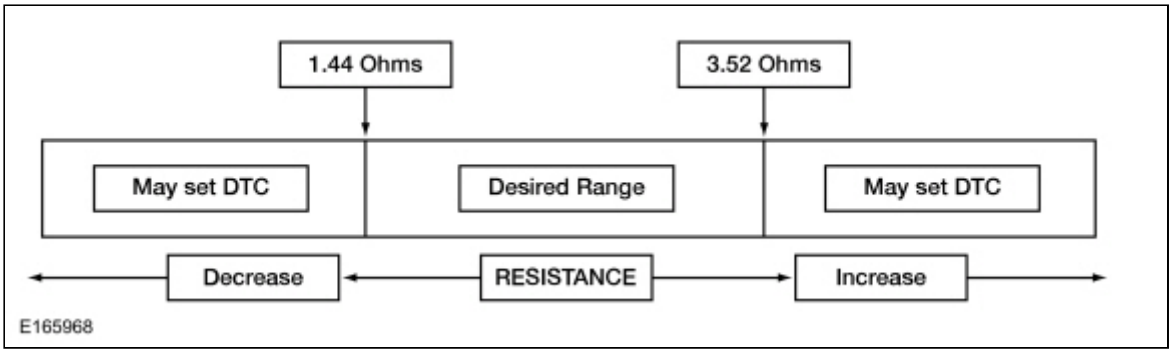
Copyright © 2016 Ford Motor Company

Pinpoint Test - DTC: D

B0010:11, B0010:12, B0010:13 and B0010:1A

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

Normal Operation and Fault Conditions



The RCM continuously monitors the passenger airbag stage 1 circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted passenger airbag

If a fault is detected, the RCM stores DTC B0010:11, B0010:12, B0010:13 or B0010:1A in memory and sends a message to the IPC to illuminate the airbag warning indicator.

The RCM analyzes the deployment loop resistance to determine if a fault exists. The value displayed in the PID is the deployment loop resistance measured by the RCM. If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. Small variations in resistance can occur due to the effect of road vibrations on terminal fit. Crimps and terminals can be affected by stress and harness movement and can cause an increase in resistance due to wire strain. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at the time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Passenger airbag
- RCM

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B0010:11	Passenger Frontal Stage 1 Deployment Control: Circuit Short to Ground	A fault is indicated when the RCM senses a short to ground on either passenger airbag stage 1 circuit for more than 6 seconds.
B0010:12	Passenger Frontal Stage 1 Deployment Control: Circuit Short to Battery	A fault is indicated when the RCM senses a short to voltage on either passenger airbag stage 1 circuit for more than 6 seconds.
B0010:13	Passenger Frontal Stage 1 Deployment Control: Circuit Open	A fault is indicated when the RCM measures more than the desired resistance range between the passenger airbag stage 1 circuits for more than 6 seconds.
B0010:1A	Passenger Frontal Stage 1 Deployment Control: Circuit	A fault is indicated when the RCM measures less than the desired resistance range between the passenger airbag stage 1 circuits for

	Resistance Below Threshold	more than 6 seconds.

Possible Sources

- Wiring, terminals or connectors
- Passenger airbag
- RCM

Visual Inspection and Diagnostic Pre-checks

- Inspect for damaged wiring harness(es).
- Inspect for loose or damaged connectors.

PINPOINT TEST A : B0010:11, B0010:12, B0010:13 AND B0010:1A

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*

NOTE: *Only disconnect or reconnect SRS components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*

NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

A1 RETRIEVE RCM (RESTRAINTS CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

  REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B0010:11, B0010:12, B0010:13 or B0010:1A retrieved on-demand during self-test?

Yes	This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. If DTC U3003:16 or U3003:17 is retrieved on-demand, DIAGNOSE those Diagnostic Trouble Codes (DTCs) first. REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the passenger airbag Diagnostic Trouble Codes (DTCs). For DTC B0010:13 or B0010:1A, GO to A2 For DTC B0010:11, GO to A9 For DTC B0010:12, GO to A11
No	This is an intermittent fault when present as a CMDTC only. If DTC U3003:16 or U3003:17 is retrieved on-demand, DIAGNOSE those Diagnostic Trouble Codes (DTCs) first. REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the passenger airbag Continuous Memory Diagnostic Trouble Codes (CMDTCs). For DTC B0010:13 or B0010:1A, GO to A14

	For DTC B0010:11, GO to A15 For DTC B0010:12, GO to A16

A2 CHECK THE PASSENGER FRONTAL STAGE 1 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_05_R) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- Monitor and record the resistance value displayed by the DEPLOY_05_R PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	GO to A13
No	GO to A3

A3 CHECK THE PASSENGER FRONTAL STAGE 1 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_05_R) PID (PARAMETER IDENTIFICATION) WHILE CARRYING OUT THE HARNESS TEST

- Remove the glove compartment.
  REFER to: Glove Compartment - LHD (501-12 Instrument Panel and Console, Removal and Installation).
  REFER to: Glove Compartment - RHD (501-12 Instrument Panel and Console, Removal and Installation).
- While monitoring the DEPLOY_05_R PID, carry out the harness test of the passenger airbag circuits and accessible connectors (including any inline connectors) by wiggling and flexing the wire harness and connectors frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms while carrying out the harness test?

Yes	DEPOWER the SRS and REPAIR the connector, terminals or wire harness. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A18
No	For PID value less than 1.44 ohms, GO to A4 For PID value greater than 3.52 ohms, GO to A7

A4 CHECK THE PASSENGER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Airbag C337.
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the passenger airbag disconnected, open circuit faults are normally retrieved on passenger airbag stage 1.

Did the on-demand DTC change from B0010:1A to B0010:13?

Yes	GO to A12
No	GO to A5

A5 CHECK FOR A SHORT BETWEEN PASSENGER AIRBAG STAGE 1 CIRCUITS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C337-1	Ω	C337-2

Is the resistance greater than 10,000 ohms?

Yes	GO to A13
No	GO to A6

A6 CHECK THE RCM (RESTRAINTS CONTROL MODULE) FOR LOW RESISTANCE

- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C310A-28 component side	Ω	C310A-27 component side

Is the resistance greater than 10,000 ohms?

Yes	REPAIR the passenger airbag stage 1 circuits for a short together. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A18
No	GO to A13

A7 CHECK THE PASSENGER AIRBAG STAGE 1 CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Airbag C337.
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C310A-27	Ω	C337-2
C310A-28	Ω	C337-1

Are the resistances less than 0.5 ohm?

Yes	GO to A8
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information.

	GO to A18

A8 CHECK THE PASSENGER AIRBAG STAGE 1 DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Connect RCM C310A and C310B.
- Connect a fused jumper wire:

Lead 1	Measurement / Action	Lead 2
C337-1		C337-2

- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the passenger airbag stage 1 circuits shorted together, a low resistance fault is normally retrieved on stage 1.

Did the on-demand DTC change from B0010:13 to B0010:1A?

Yes	REMOVE the fused jumper wire and GO to A12
No	REMOVE the fused jumper wire and GO to A13

A9 CHECK THE PASSENGER FRONTAL STAGE 1 DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Airbag C337.
  - Remove the glove compartment.
    REFER to: Glove Compartment - LHD (501-12 Instrument Panel and Console, Removal and Installation).
    REFER to: Glove Compartment - RHD (501-12 Instrument Panel and Console, Removal and Installation).
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the passenger airbag disconnected, open circuit faults are normally retrieved on passenger airbag stages 1.

Did the on-demand DTC change from B0010:11 to B0010:13?

Yes	GO to A12
No	GO to A10

A10 CHECK THE PASSENGER AIRBAG STAGE 1 CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C337-1	Ω	Ground
C337-2	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A13
No	Due to the shorting bar feature in the RCM electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A18

A11 CHECK THE PASSENGER AIRBAG STAGE 1 CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Airbag C337.
  - Remove the glove compartment.
    REFER to: Glove Compartment - LHD (501-12 Instrument Panel and Console, Removal and Installation).
    REFER to: Glove Compartment - RHD (501-12 Instrument Panel and Console, Removal and Installation).
- Disconnect RCM C310A and C310B.
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C337-1	V	Ground
C337-2	V	Ground

Is any voltage present?

Yes	Due to the shorting bar feature in the RCM electrical connector, the fault can exist in either circuit. Do not remove or defeat the shorting bar. REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A18
No	GO to A13

A12 CONFIRM THE PASSENGER AIRBAG FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - inspect wire harness for any damaged, pinched, cut or pierced wires.
  - inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - inspect Passenger Airbag C337 and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.
  - repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect Passenger Airbag C337 (if previously disconnected).
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	INSTALL a new passenger airbag. REFER to: Passenger Airbag (501-20B Supplemental Restraint System, Removal and Installation). GO to A18
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B0010:13 or B0010:1A, GO to A14 For DTC B0010:11, GO to A15 For DTC B0010:12, GO to A16

A13 CONFIRM THE RCM (RESTRAINTS CONTROL MODULE) FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - inspect wire harness for any damaged, pinched, cut or pierced wires.
  - inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect Passenger Airbag C337 (if previously disconnected).
- Connect RCM C310A and C310B (if previously disconnected).
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for

	this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A18
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B0010:13 or B0010:1A, GO to A14 For DTC B0010:11, GO to A15 For DTC B0010:12, GO to A16

A14 CHECK THE PASSENGER FRONTAL STAGE 1 DEPLOYMENT CONTROL RESISTANCE (DEPLOY_05_R) PID (PARAMETER IDENTIFICATION) FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT

- Remove the glove compartment.
  REFER to: Glove Compartment - LHD (501-12 Instrument Panel and Console, Removal and Installation).
  REFER to: Glove Compartment - RHD (501-12 Instrument Panel and Console, Removal and Installation).
- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- While monitoring the DEPLOY_05_R PID, attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A17
No	DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A18

A15 CHECK THE PASSENGER FRONTAL STAGE 1 DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO GROUND FAULT

- Remove the glove compartment.
  REFER to: Glove Compartment - LHD (501-12 Instrument Panel and Console, Removal and Installation).
  REFER to: Glove Compartment - RHD (501-12 Instrument Panel and Console, Removal and Installation).
- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B0010:11 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A18
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A17

A16 CHECK THE PASSENGER FRONTAL STAGE 1 DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO BATTERY FAULT

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).

- Disconnect Passenger Airbag C337.
  - Remove the glove compartment.
    REFER to: Glove Compartment - LHD (501-12 Instrument Panel and Console, Removal and Installation).
    REFER to: Glove Compartment - RHD (501-12 Instrument Panel and Console, Removal and Installation).
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B0010:12 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A18
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A17

A17 CHECK THE HARNESS AND CONNECTORS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Airbag C337.
  - Inspect connector(s) (including any inline connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damage, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Inspect Passenger Airbag C337 and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.

Were any concerns found?

Yes	REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A18
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A18

A18 CHECK FOR ADDITIONAL SRS (SUPPLEMENTAL RESTRAINT SYSTEM) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition OFF.
- Reconnect all SRS components (if previously disconnected).
- If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- **NOTE:** *When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM.*

  Using a diagnostic scan tool, perform **Restraints** self-test.

Are any RCM Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	Do not clear any Diagnostic Trouble Codes (DTCs) until all Diagnostic Trouble Codes (DTCs) have been resolved. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	The repair is complete. RETURN the vehicle to the customer.

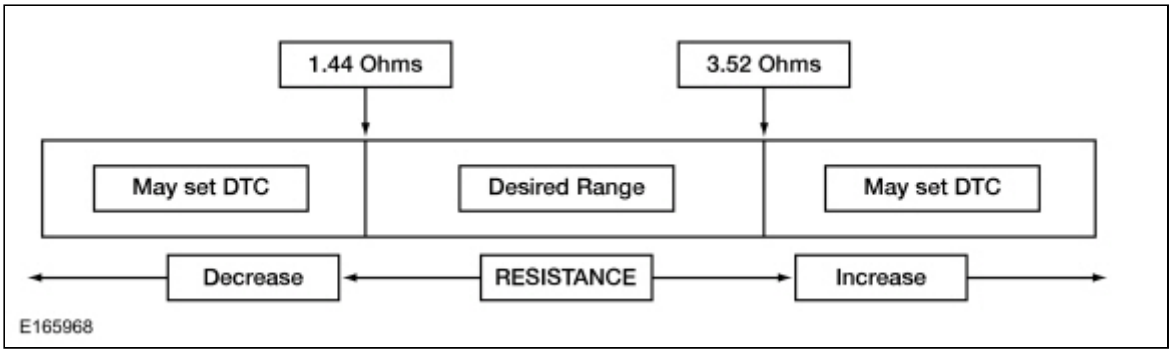
Copyright © 2016 Ford Motor Company

Pinpoint Test - DTC: I

B0070:11, B0070:12, B0070:13, B0070:1A

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

Normal Operation and Fault Conditions



The RCM continuously monitors the driver safety belt anchor pretensioner circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted driver safety belt anchor pretensioner

If a fault is detected, the RCM stores DTC B0070:11, B0070:12, B0070:13 or B0070:1A in memory and sends a message to the IPC to illuminate the airbag warning indicator.

The RCM analyzes the deployment loop resistance to determine if a fault exists. The value displayed in the PID is the deployment loop resistance measured by the RCM. If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. Small variations in resistance can occur due to the effect of road vibrations on terminal fit. Crimps and terminals can be affected by stress and harness movement and can cause an increase in resistance due to wire strain. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at the time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Driver safety belt anchor pretensioner
- RCM

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B0070:11	Driver Seatbelt Pretensioner "A" Deployment Control: Circuit Short to Ground	A fault is indicated when the RCM senses a short to ground on either driver safety belt anchor pretensioner circuit for more than 6 seconds.
B0070:12	Driver Seatbelt Pretensioner "A" Deployment Control: Circuit Short to Battery	A fault is indicated when the RCM senses a short to voltage on either driver safety belt anchor pretensioner circuit for more than 6 seconds.
B0070:13	Driver Seatbelt Pretensioner "A" Deployment Control: Circuit Open	A fault is indicated when the RCM measures more than the desired resistance between the driver safety belt anchor pretensioner circuits for more than 6 seconds.
B0070:1A	Driver Seatbelt Pretensioner "A" Deployment Control: Circuit	A fault is indicated when the RCM measures less than the desired resistance between the driver safety belt anchor pretensioner

	Resistance Below Threshold	circuits for more than 6 seconds.

Possible Sources

- Wiring, terminals or connectors
- Driver safety belt anchor pretensioner
- RCM

PINPOINT TEST A : B0070:11, B0070:12, B0070:13 AND B0070:1A

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*

NOTE: *Only disconnect or reconnect SRS components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*

NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

A1 RETRIEVE RCM (RESTRAINTS CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

  REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B0070:11, B0070:12, B0070:13 and B0070:1A retrieved on-demand during self-test?

Yes	This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. If DTC U3003:16 or U3003:17 is also retrieved on-demand, REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the driver safety belt anchor pretensioner Diagnostic Trouble Codes (DTCs). For DTC B0070:13 or B0070:1A, GO to A2 For DTC B0070:11, GO to A8 For DTC B0070:12, GO to A10
No	This is an intermittent fault when present as a CMDTC only. If DTC U3003:16 or U3003:17 is also retrieved on-demand, REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the driver safety belt anchor pretensioner Continuous Memory Diagnostic Trouble Codes (CMDTCs). For DTC B0070:13 or B0070:1A, GO to A13 For DTC B0070:11, GO to A14 For DTC B0070:12, GO to A15

A2 CHECK THE DRIVER SEATBELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL

A2 CHECK THE DRIVER SEATBELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL (DEPLOY_29_RES) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- Monitor and record the resistance value displayed by the DEPLOY_29_RES PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	GO to A12
No	GO to A3

A3 CHECK THE DRIVER SEATBELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL (DEPLOY_29_RES) PID (PARAMETER IDENTIFICATION) WHILE CARRYING OUT THE HARNESS TEST

- While monitoring the DEPLOY_29_RES PID, carry out the harness test of the driver safety belt anchor pretensioner circuits and accessible connectors (including any inline connectors) by wiggling and flexing the wire harness and connectors frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms while carrying out the harness test?

Yes	DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	For PID value less than 1.44 ohms, GO to A4 For PID value greater than 3.52 ohms, GO to A6

A4 CHECK THE DRIVER SAFETY BELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Safety Belt Anchor Pretensioner C3065.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the driver safety belt anchor pretensioner disconnected, an open circuit fault is normally retrieved.

Did the on-demand DTC change from B0070:1A to B0070:13?

Yes	GO to A11
No	GO to A5

A5 CHECK FOR A SHORT BETWEEN THE DRIVER SAFETY BELT ANCHOR PRETENSIONER CIRCUITS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3065-2	Ω	C3065-1

Is the resistance greater than 10,000 ohms?

Yes	GO to A12
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A6 CHECK THE DRIVER SAFETY BELT ANCHOR PRETENSIONER CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Safety Belt Anchor Pretensioner C3065.
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C310B-51	Ω	C3065-2
C310B-52	Ω	C3065-1

Are the resistances less than 0.5 ohm?

Yes	GO to A7
No	REPAIR the circuits. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A7 CHECK THE DRIVER SAFETY BELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Connect RCM C310A and C310B.
- Connect a fused jumper wire:

Lead 1	Measurement / Action	Lead 2
C3065-2		C3065-1

- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the driver safety belt anchor pretensioner circuits shorted together, a low resistance fault is normally retrieved.

Did the on-demand DTC change from B0070:13 to B0070:1A?

Yes	REMOVE the fused jumper wire and GO to A11
No	REMOVE the fused jumper wire and GO to A12

A8 CHECK THE DRIVER SAFETY BELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Safety Belt Anchor Pretensioner C3065.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the driver safety belt anchor pretensioner disconnected, an open circuit fault is normally retrieved.

Did the on-demand DTC change from B0070:11 to B0070:13?

Yes	GO to A11
No	GO to A9

A9 CHECK THE DRIVER SAFETY BELT ANCHOR PRETENSIONER CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3065-2	Ω	Ground
C3065-1	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A12
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A10 CHECK THE DRIVER SAFETY BELT ANCHOR PRETENSIONER CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.

- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Safety Belt Anchor Pretensioner C3065.
- Disconnect RCM C310A and C310B.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3065-2		Ground
C3065-1		Ground

Is any voltage present?

Yes	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	GO to A12

A11 CONFIRM THE DRIVER SAFETY BELT ANCHOR PRETENSIONER FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damaged, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Inspect Driver Safety Belt Anchor Pretensioner C3065 and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect Driver Safety Belt Anchor Pretensioner C3065.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	INSTALL a new driver safety belt anchor pretensioner. GO to A17
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B0070:13 or B0070:1A, GO to A13 For DTC B0070:11, GO to A14 For DTC B0070:12, GO to A15

A12 CONFIRM THE RCM (RESTRAINTS CONTROL MODULE) FAULT

A12 CONFIRM THE RCM (RESTRAINTS CONTROL MODULE) FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damaged, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect Driver Safety Belt Anchor Pretensioner C3065 (if previously disconnected).
- Connect RCM C310A and C310B (if previously disconnected).
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A17
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B0070:13 or B0070:1A, GO to A13 For DTC B0070:11, GO to A14 For DTC B0070:12, GO to A15

A13 CHECK THE DRIVER SEATBELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL (DEPLOY_29_RES) PID (PARAMETER IDENTIFICATION) FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- While monitoring the DEPLOY_29_RES PID, attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16
No	DEPOWER the SRS. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A14 CHECK THE DRIVER SAFETY BELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO GROUND FAULT

- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire

harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B0070:11 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16

A15 CHECK THE DRIVER SAFETY BELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO BATTERY FAULT

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Safety Belt Anchor Pretensioner C3065.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B0070:12 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16

A16 CHECK THE HARNESS AND CONNECTORS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Safety Belt Anchor Pretensioner C3065.
  - Inspect connector(s) (including any inline connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damage, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Inspect Driver Safety Belt Anchor Pretensioner C3065 and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.

Were any concerns found?

Yes	REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint

	test. GO to A17

A17 CHECK FOR ADDITIONAL SRS (SUPPLEMENTAL RESTRAINT SYSTEM) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition OFF.
- Reconnect all SRS components (if previously disconnected).
- If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- **NOTE:** *When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM.*

Using a diagnostic scan tool, perform **Restraints** self-test.

Are any RCM Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	Do not clear any Diagnostic Trouble Codes (DTCs) until all Diagnostic Trouble Codes (DTCs) have been resolved. DIAGNOSE and REPAIR the RCM. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	The repair is complete. RETURN the vehicle to the customer.

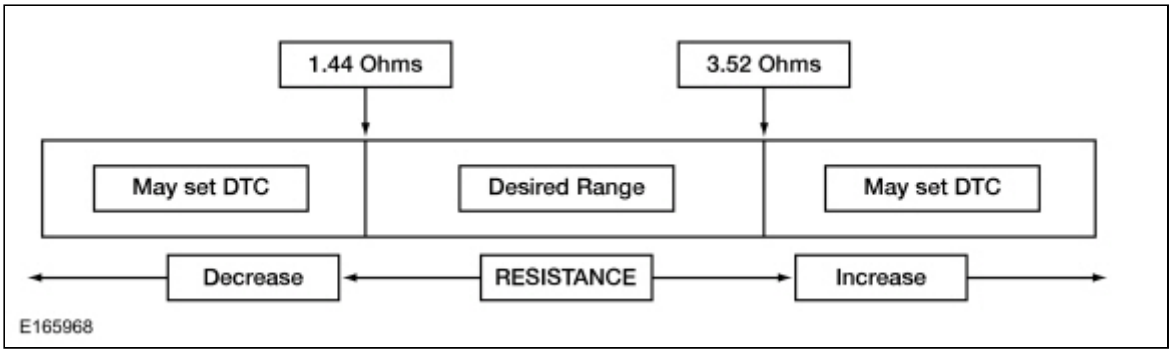
Pinpoint Test - DTC: J

B0072:11, B0072:12, B0072:13, B0072:1A

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

Normal Operation and Fault Conditions



The RCM continuously monitors the passenger safety belt anchor pretensioner circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted passenger safety belt anchor pretensioner

If a fault is detected, the RCM stores DTC B0072:11, B0072:12, B0072:13 or B0072:1A in memory and sends a message to the IPC to illuminate the airbag warning indicator.

The RCM analyzes the deployment loop resistance to determine if a fault exists. The value displayed in the PID is the deployment loop resistance measured by the RCM. If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. Small variations in resistance can occur due to the effect of road vibrations on terminal fit. Crimps and terminals can be affected by stress and harness movement and can cause an increase in resistance due to wire strain. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at the time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Passenger safety belt anchor pretensioner
- RCM

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B0072:11	Passenger Seatbelt Pretensioner "A" Deployment Control: Circuit Short to Ground	A fault is indicated when the RCM senses a short to ground on either passenger safety belt anchor pretensioner circuit for more than 6 seconds.
B0072:12	Passenger Seatbelt Pretensioner "A" Deployment Control: Circuit Short to Battery	A fault is indicated when the RCM senses a short to voltage on either passenger safety belt anchor pretensioner circuit for more than 6 seconds.
B0072:13	Passenger Seatbelt Pretensioner "A" Deployment Control: Circuit Open	A fault is indicated when the RCM measures more than the desired resistance between the passenger safety belt anchor pretensioner circuits for more than 6 seconds.
B0072:1A	Passenger Seatbelt Pretensioner "A" Deployment Control: Circuit	A fault is indicated when the RCM measures less than the desired resistance between the passenger safety belt anchor pretensioner

	Resistance Below Threshold	circuits for more than 6 seconds.

Possible Sources

- Wiring, terminals or connectors
- Passenger safety belt anchor pretensioner
- RCM

PINPOINT TEST A : B0072:11, B0072:12, B0072:13 AND B0072:1A

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*

NOTE: *Only disconnect or reconnect SRS components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*

NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

A1 RETRIEVE RCM (RESTRAINTS CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

  REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B0072:11, B0072:12, B0072:13 and B0072:1A retrieved on-demand during self-test?

Yes	This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. If DTC U3003:16 or U3003:17 is also retrieved on-demand, REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the passenger safety belt anchor pretensioner Diagnostic Trouble Codes (DTCs). For DTC B0072:13 or B0072:1A, GO to A2 For DTC B0072:11, GO to A8 For DTC B0072:12, GO to A10
No	This is an intermittent fault when present as a CMDTC only. If DTC U3003:16 or U3003:17 is also retrieved on-demand, REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the passenger safety belt anchor pretensioner Continuous Memory Diagnostic Trouble Codes (CMDTCs). For DTC B0072:13 or B0072:1A, GO to A13 For DTC B0072:11, GO to A14 For DTC B0072:12, GO to A15

A2 CHECK THE PASSENGER SEATBELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL

A2 CHECK THE PASSENGER SEATBELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL (DEPLOY_30_RES) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- Monitor and record the resistance value displayed by the DEPLOY_30_RES PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	GO to A12
No	GO to A3

A3 CHECK THE PASSENGER SEATBELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL (DEPLOY_30_RES) PID (PARAMETER IDENTIFICATION) WHILE CARRYING OUT THE HARNESS TEST

- While monitoring the DEPLOY_30_RES PID, carry out the harness test of the passenger safety belt anchor pretensioner circuits and accessible connectors (including any inline connectors) by wiggling and flexing the wire harness and connectors frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms while carrying out the harness test?

Yes	DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	For PID value less than 1.44 ohms, GO to A4 For PID value greater than 3.52 ohms, GO to A6

A4 CHECK THE PASSENGER SAFETY BELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Safety Belt Anchor Pretensioner C3066.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the passenger safety belt anchor pretensioner disconnected, an open circuit fault is normally retrieved.

Did the on-demand DTC change from B0072:1A to B0072:13?

Yes	GO to A11
No	GO to A5

A5 CHECK FOR A SHORT BETWEEN THE PASSENGER SAFETY BELT ANCHOR PRETENSIONER CIRCUITS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3066-1	Ω	C3066-2

Is the resistance greater than 10,000 ohms?

Yes	GO to A12
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A6 CHECK THE PASSENGER SAFETY BELT ANCHOR PRETENSIONER CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Safety Belt Anchor Pretensioner C3066.
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C310B-49	Ω	C3066-1
C310B-50	Ω	C3066-2

Are the resistances less than 0.5 ohm?

Yes	GO to A7
No	REPAIR the circuits. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A7 CHECK THE PASSENGER SAFETY BELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Connect RCM C310A and C310B.
- Connect a fused jumper wire:

Lead 1	Measurement / Action	Lead 2
C3066-1		C3066-2

- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the passenger safety belt anchor

pretensioner circuits shorted together, a low resistance fault is normally retrieved.

Did the on-demand DTC change from B0072:13 to B0072:1A?

Yes	REMOVE the fused jumper wire and GO to A11
No	REMOVE the fused jumper wire and GO to A12

A8 CHECK THE PASSENGER SAFETY BELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Safety Belt Anchor Pretensioner C3066.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the passenger safety belt anchor pretensioner disconnected, an open circuit fault is normally retrieved.

Did the on-demand DTC change from B0072:11 to B0072:13?

Yes	GO to A11
No	GO to A9

A9 CHECK THE PASSENGER SAFETY BELT ANCHOR PRETENSIONER CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3066-1	Ω	Ground
C3066-2	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A12
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A10 CHECK THE PASSENGER SAFETY BELT ANCHOR PRETENSIONER CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Safety Belt Anchor Pretensioner C3066.
- Disconnect RCM C310A and C310B.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3066-1		Ground
C3066-2		Ground

Is any voltage present?

Yes	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	GO to A12

A11 CONFIRM THE PASSENGER SAFETY BELT ANCHOR PRETENSIONER FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damaged, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Inspect Passenger Safety Belt Anchor Pretensioner C3066 and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect Passenger Safety Belt Anchor Pretensioner C3066.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	INSTALL a new passenger safety belt anchor pretensioner. GO to A17
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B0072:13 or B0072:1A, GO to A13 For DTC B0072:11, GO to A14 For DTC B0072:12, GO to A15

A12 CONFIRM THE RCM (RESTRAINTS CONTROL MODULE) FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damaged, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect Passenger Safety Belt Anchor Pretensioner C3066 (if previously disconnected).
- Connect RCM C310A and C310B (if previously disconnected).
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A17
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B0072:13 or B0072:1A, GO to A13 For DTC B0072:11, GO to A14 For DTC B0072:12, GO to A15

A13 CHECK THE PASSENGER SEATBELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL (DEPLOY_30_RES) PID (PARAMETER IDENTIFICATION) FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- While monitoring the DEPLOY_30_RES PID, attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16
No	DEPOWER the SRS. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A14 CHECK THE PASSENGER SAFETY BELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL

CIRCUITS FOR AN INTERMITTENT SHORT TO GROUND FAULT

- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B0072:11 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16

A15 CHECK THE PASSENGER SAFETY BELT ANCHOR PRETENSIONER DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO BATTERY FAULT

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Safety Belt Anchor Pretensioner C3066.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B0072:12 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16

A16 CHECK THE HARNESS AND CONNECTORS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Safety Belt Anchor Pretensioner C3066.
  - Inspect connector(s) (including any inline connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damage, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Inspect Passenger Safety Belt Anchor Pretensioner C3066 and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.

Were any concerns found?

Yes	REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A17

A17 CHECK FOR ADDITIONAL SRS (SUPPLEMENTAL RESTRAINT SYSTEM) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition OFF.
- Reconnect all SRS components (if previously disconnected).
- If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- **NOTE:** *When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM.*

  Using a diagnostic scan tool, perform **Restraints** self-test.

Are any RCM Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	Do not clear any Diagnostic Trouble Codes (DTCs) until all Diagnostic Trouble Codes (DTCs) have been resolved. DIAGNOSE and REPAIR the RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	The repair is complete. RETURN the vehicle to the customer.

Copyright © 2016 Ford Motor Company

Pinpoint Test - DTC: R

B11D8:12 and B11D8:14

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

Normal Operation and Fault Conditions

The RCM transmits an event notification signal which communicates crash status and SRS deployment status to the BCM. When the BCM receives an event notification signal which indicates a crash, it initiates fuel cut-off.

The RCM monitors the event notification signal circuit for the following faults:

- Short to voltage
- Short to ground
- Open circuit

If a fault is detected, the RCM stores DTC B11D8:12 or B11D8:14 in memory. The airbag warning indicator does not illuminate if B11D8:12 or B11D8:14 is set.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B11D8:12	Restraint Event Notification: Circuit Short to Battery	A fault is indicated when the RCM senses a short to voltage on the event notification signal circuit for more than 15 seconds.
B11D8:14	Restraint Event Notification: Circuit Short to Ground or Open	A fault is indicated when the RCM senses a short to ground or an open on the event notification signal circuit for more than 15 seconds.

Possible Sources

- Wiring, terminals or connectors
- BCM
- RCM

PINPOINT TEST A : B11D8:12 AND B11D8:14

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.
NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.
NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*
NOTE: *Only disconnect or reconnect SRS components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*
NOTE: *Install new components only when directed to do so in the pinpoint test.*
NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*
NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*
A1 RETRIEVE RCM (RESTRAINTS CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.

- REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
- Ignition ON.
- Using a diagnostic scan tool, perform the RCM self-test to retrieve Diagnostic Trouble Codes (DTCs).

Was DTC B11D8:12 or B11D8:14 retrieved on-demand during self-test?

Yes	This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during the self-test. For DTC B11D8:14, GO to A2 For DTC B11D8:12, GO to A5
No	This is an intermittent fault when present as a CMDTC only. GO to A8

A2 CHECK THE EVENT NOTIFICATION SIGNAL CIRCUIT FOR AN OPEN

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Disconnect BCM C2280E.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C310B-42	Ω	C2280E-49

Is the resistance less than 3 ohms?

Yes	GO to A3
No	REPAIR the circuit. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A9

A3 CHECK THE EVENT NOTIFICATION SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280E-49	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A4
No	REPAIR the circuit. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A9

A4 CONFIRM THE BCM (BODY CONTROL MODULE) OR RCM (RESTRAINTS CONTROL MODULE) FAULT

NOTE: *Make sure all SRS electrical connectors and the BCM electrical connector are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damage, pinched, cut or pierced wires.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect BCM C2280E.
- Connect RCM C310A and C310B.
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform the RCM self-test to retrieve Diagnostic Trouble Codes (DTCs).

Was DTC B11D8:14 retrieved on-demand during self-test?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). CLEAR the RCM Diagnostic Trouble Codes (DTCs) and REPEAT the RCM self-test. If DTC B11D8:14 returns, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A9 If DTC B11D8:14 does not return, GO to A9
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. SRS components should only be installed when directed to do so in the pinpoint test. GO to A8

A5 CHECK THE EVENT NOTIFICATION SIGNAL CIRCUIT DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the fault reported changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Disconnect BCM C2280E.
- Using a diagnostic scan tool, perform the RCM self-test to retrieve Diagnostic Trouble Codes (DTCs).

Was DTC B11D8:12 retrieved on-demand during self-test?

Yes	GO to A6
No	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). GO to A9

A6 CHECK THE EVENT NOTIFICATION SIGNAL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280E-49		Ground

Is any voltage present?

Yes	REPAIR the circuit. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A9
No	GO to A7

A7 CONFIRM THE RCM (RESTRAINTS CONTROL MODULE) FAULT

NOTE: *Make sure all SRS electrical connectors and the BCM electrical connector are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - inspect wire harness for any damage, pinched, cut or pierced wires.
  - repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect BCM C2280E.
- Connect RCM C310A and C310B.
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform the RCM self-test to retrieve Diagnostic Trouble Codes (DTCs).

Was the original DTC retrieved on-demand during self-test?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A9
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. SRS components should only be installed when directed to do so in the pinpoint test. GO to A8

A8 CHECK FOR AN INTERMITTENT FAULT

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect BCM C2280E.
- Disconnect RCM C310A and C310B.
  - inspect connector(s) (including any inline connectors) for loose or spread terminals and loose or frayed wire connections at terminals.
  - inspect wire harness for any damage, pinched, cut or pierced wires.
  - repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect BCM C2280E.
- Connect RCM C310A and C310B.
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform the RCM self-test to retrieve Diagnostic Trouble Codes (DTCs).

Was DTC B11D8:12 or B11D8:14 retrieved on-demand during self-test?

Yes	The fault condition is now present. This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during the self-test. For DTC B11D8:14, GO to A2 For DTC B11D8:12, GO to A5
No	CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition frequently. ACTIVATE other systems in the same wire harness. Do not install any new SRS components at this time. Only install SRS components when directed to do so in the pinpoint test. REPAIR any intermittent concerns found. GO to A9

A9 CHECK FOR ADDITIONAL SRS (SUPPLEMENTAL RESTRAINT SYSTEM) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition OFF.
- Reconnect all connectors (if previously disconnected).
- If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- **NOTE:** *When selecting Restraints from the Self Test menu, Diagnostic Trouble Codes (DTCs) are retrieved from the RCM.*

  Using a diagnostic scan tool, perform the **Restraints** self-test.

Are any RCM Diagnostic Trouble Codes (DTCs) retrieved?

Yes	Do not clear any Diagnostic Trouble Codes (DTCs) until all Diagnostic Trouble Codes (DTCs) have been resolved. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	The repair is complete. RETURN the vehicle to the customer.

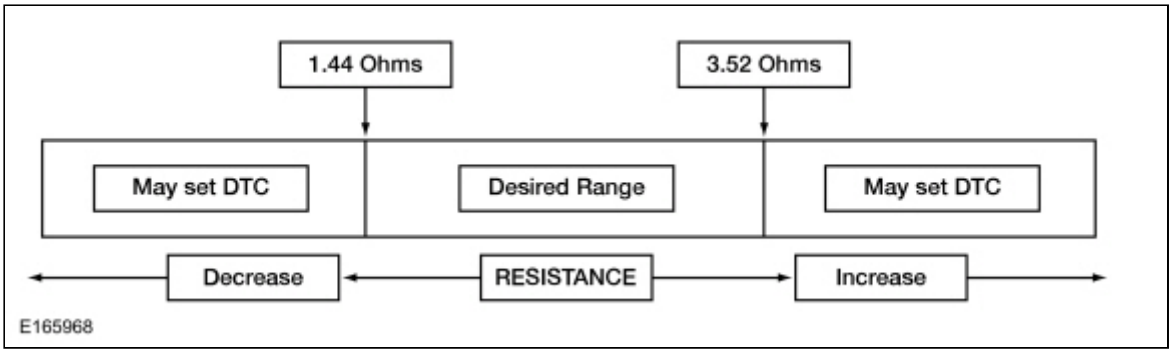
Copyright © 2016 Ford Motor Company

Pinpoint Test - DTC: S

B1404:11, B1404:12, B1404:13, B1404:1A

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

Normal Operation and Fault Conditions



The RCM continuously monitors the driver side airbag circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted driver side airbag

If a fault is detected, the RCM stores DTC B1404:11, B1404:12, B1404:13 or B1404:1A in memory and sends a message to the IPC to illuminate the airbag warning indicator.

The RCM analyzes the deployment loop resistance to determine if a fault exists. The value displayed in the PID is the deployment loop resistance measured by the RCM. If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. Small variations in resistance can occur due to the effect of road vibrations on terminal fit. Crimps and terminals can be affected by stress and harness movement and can cause an increase in resistance due to wire strain. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at the time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Driver side airbag
- RCM

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1404:11	Driver Side Airbag Deployment Control: Circuit Short to Ground	A fault is indicated when the RCM senses a short to ground on either driver side airbag circuit for more than 6 seconds.
B1404:12	Driver Side Airbag Deployment Control: Circuit Short to Battery	A fault is indicated when the RCM senses a short to voltage on either driver side airbag circuit for more than 6 seconds.
B1404:13	Driver Side Airbag Deployment Control: Circuit Open	A fault is indicated when the RCM measures more than the desired resistance between the driver side airbag circuits for more than 6 seconds.
B1404:1A	Driver Side Airbag Deployment Control: Circuit Resistance Below Threshold	A fault is indicated when the RCM measures less than the desired resistance between the driver side airbag circuits for more than 6 seconds.

Possible Sources

- Wiring, terminals or connectors
- Driver side airbag
- RCM

PINPOINT TEST A : B1404:11, B1404:12, B1404:13 AND B1404:1A

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*

NOTE: *Only disconnect or reconnect SRS components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*

NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

A1 RETRIEVE RCM (RESTRAINTS CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

  REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B1404:11, B1404:12, B1404:13 and B1404:1A retrieved on-demand during self-test?

Yes	This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. If DTC U3003:16 or U3003:17 is also retrieved on-demand, REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the driver side airbag Diagnostic Trouble Codes (DTCs). For DTC B1404:13 or B1404:1A, GO to A2 For DTC B1404:11, GO to A8 For DTC B1404:12, GO to A10
No	This is an intermittent fault when present as a CMDTC only. If DTC U3003:16 or U3003:17 is also retrieved on-demand, REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the driver side airbag Continuous Memory Diagnostic Trouble Codes (CMDTCs). For DTC B1404:13 or B1404:1A, GO to A13 For DTC B1404:11, GO to A14 For DTC B1404:12, GO to A15

A2 CHECK THE LEFT SIDE AIRBAG DEPLOYMENT CONTROL RESISTANCE (DEPLOY_10_R) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- Monitor and record the resistance value displayed by the DEPLOY_10_R PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	GO to A12
No	GO to A3

A3 CHECK THE LEFT SIDE AIRBAG DEPLOYMENT CONTROL RESISTANCE (DEPLOY_10_R) PID (PARAMETER IDENTIFICATION) WHILE CARRYING OUT THE HARNESS TEST

- While monitoring the DEPLOY_10_R PID, carry out the harness test of the driver side airbag circuits and accessible connectors (including any inline connectors) by wiggling and flexing the wire harness and connectors frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms while carrying out the harness test?

Yes	DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	For PID value less than 1.44 ohms, GO to A4 For PID value greater than 3.52 ohms, GO to A6

A4 CHECK THE DRIVER SIDE AIRBAG DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Side Airbag (Inline seat connector) C313.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the driver side airbag disconnected, an open circuit fault is normally retrieved.

Did the on-demand DTC change from B1404:1A to B1404:13?

Yes	GO to A11
No	GO to A5

A5 CHECK FOR A SHORT BETWEEN THE DRIVER SIDE AIRBAG CIRCUITS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C313-1	Ω	C313-2

Is the resistance greater than 10,000 ohms?

Yes	GO to A12
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A6 CHECK THE DRIVER SIDE AIRBAG CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Side Airbag (Inline seat connector) C313.
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C310B-25	Ω	C313-1
C310B-26	Ω	C313-2

Are the resistances less than 0.5 ohm?

Yes	GO to A7
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A7 CHECK THE DRIVER SIDE AIRBAG DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Connect RCM C310A and C310B.
- Connect a fused jumper wire:

Lead 1	Measurement / Action	Lead 2
C313-1		C313-2

- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the driver side airbag circuits shorted together, a low resistance fault is normally retrieved.

Did the on-demand DTC change from B1404:13 to B1404:1A?

Yes	REMOVE the fused jumper wire and GO to A11
No	REMOVE the fused jumper wire and GO to A12

A8 CHECK THE DRIVER SIDE AIRBAG DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Side Airbag (Inline seat connector) C313.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the driver side airbag disconnected, an open circuit fault is normally retrieved.

Did the on-demand DTC change from B1404:11 to B1404:13?

Yes	GO to A11
No	GO to A9

A9 CHECK THE DRIVER SIDE AIRBAG CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C313-1	Ω	Ground
C313-2	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A12
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A10 CHECK THE DRIVER SIDE AIRBAG CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Depower the SRS.

  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental

Restraint System, General Procedures).
- Disconnect Driver Side Airbag (Inline seat connector) C313.
- Disconnect RCM C310A and C310B.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C313-1		Ground
C313-2		Ground

Is any voltage present?

Yes	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	GO to A12

A11 CONFIRM THE DRIVER SIDE AIRBAG FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damaged, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect Driver Side Airbag (Inline seat connector) C313.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	REMOVE and INSPECT the driver seat backrest harness for damage. REFER to: Side Airbag (501-20B Supplemental Restraint System, Removal and Installation). If a concern is found, REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17 If a concern is not found, INSTALL a new driver side airbag. REFER to: Side Airbag (501-20B Supplemental Restraint System, Removal and Installation). GO to A17
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B1404:13 or B1404:1A, GO to A13 For DTC B1404:11, GO to A14

	For DTC B1404:12, GO to A15

A12 CONFIRM THE RCM (RESTRAINTS CONTROL MODULE) FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damaged, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect Driver Side Airbag (Inline seat connector) C313 (if previously disconnected).
- Connect RCM C310A and C310B (if previously disconnected).
- Repower the SRS. **Do not** prove out the SRS at this time. For vehicles equipped with the police package, REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A17
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B1404:13 or B1404:1A, GO to A13 For DTC B1404:11, GO to A14 For DTC B1404:12, GO to A15

A13 CHECK THE DRIVER SIDE AIRBAG DEPLOYMENT CONTROL RESISTANCE (DEPLOY_10_R) PID (PARAMETER IDENTIFICATION) FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- While monitoring the DEPLOY_10_R PID, attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16
No	DEPOWER the SRS. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A14 CHECK THE DRIVER SIDE AIRBAG DEPLOYMENT CONTROL CIRCUITS FOR AN

A14 CHECK THE DRIVER SIDE AIRBAG DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO GROUND FAULT

- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B1404:11 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16

A15 CHECK THE DRIVER SIDE AIRBAG DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO BATTERY FAULT

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Side Airbag (Inline seat connector) C313.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B1404:12 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16

A16 CHECK THE HARNESS AND CONNECTORS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Side Airbag (Inline seat connector) C313.
  - Inspect connector(s) (including any inline connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damage, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Inspect Driver Side Airbag C313 and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.

Were any concerns found?

Yes	REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A17

A17 CHECK FOR ADDITIONAL SRS (SUPPLEMENTAL RESTRAINT SYSTEM) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition OFF.
- Reconnect all SRS components (if previously disconnected).
- If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- **NOTE:** *When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM.*

Using a diagnostic scan tool, perform **Restraints** self-test.

Are any RCM Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	Do not clear any Diagnostic Trouble Codes (DTCs) until all Diagnostic Trouble Codes (DTCs) have been resolved. DIAGNOSE and REPAIR the RCM. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	The repair is complete. RETURN the vehicle to the customer.

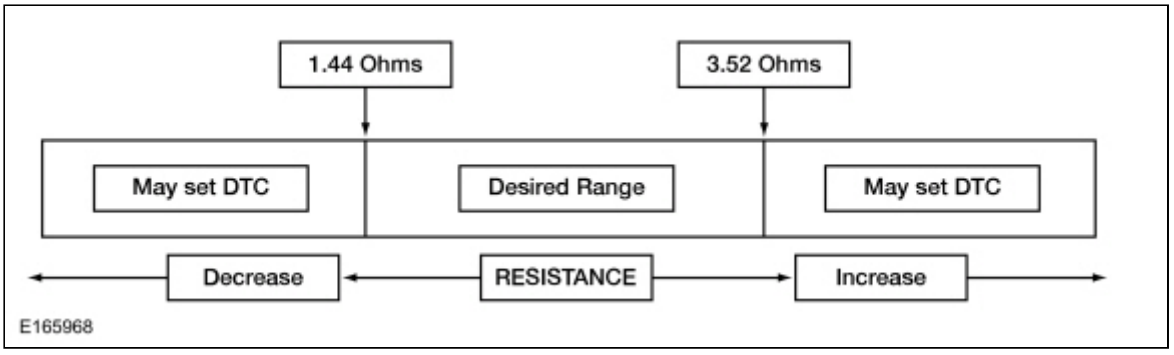
Pinpoint Test - DTC: U

B1407:11, B1407:12, B1407:13, B1407:1A

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

Normal Operation and Fault Conditions



The RCM continuously monitors the passenger side airbag circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted passenger side airbag

If a fault is detected, the RCM stores DTC B1407:11, B1407:12, B1407:13 or B1407:1A in memory and sends a message to the IPC to illuminate the airbag warning indicator.

The RCM analyzes the deployment loop resistance to determine if a fault exists. The value displayed in the PID is the deployment loop resistance measured by the RCM. If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. Small variations in resistance can occur due to the effect of road vibrations on terminal fit. Crimps and terminals can be affected by stress and harness movement and can cause an increase in resistance due to wire strain. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at the time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Passenger side airbag
- RCM

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1407:11	Passenger Side Airbag Deployment Control: Circuit Short to Ground	A fault is indicated when the RCM senses a short to ground on either passenger side airbag circuit for more than 6 seconds.
B1407:12	Passenger Side Airbag Deployment Control: Circuit Short to Battery	A fault is indicated when the RCM senses a short to voltage on either passenger side airbag circuit for more than 6 seconds.
B1407:13	Passenger Side Airbag Deployment Control: Circuit Open	A fault is indicated when the RCM measures more than the desired resistance between the passenger side airbag circuits for more than 6 seconds.
B1407:1A	Passenger Side Airbag Deployment Control: Circuit Resistance Below Threshold	A fault is indicated when the RCM measures less than the desired resistance between the passenger side airbag circuits for more than 6 seconds.

Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

A1 RETRIEVE RCM (RESTRAINTS CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

  REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B1407:11, B1407:12, B1407:13 and B1407:1A retrieved on-demand during self-test?

Yes	This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. If DTC U3003:16 or U3003:17 is also retrieved on-demand, REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the passenger side airbag Diagnostic Trouble Codes (DTCs). For DTC B1407:13 or B1407:1A, GO to A2 For DTC B1407:11, GO to A8 For DTC B1407:12, GO to A10
No	This is an intermittent fault when present as a CMDTC only. If DTC U3003:16 or U3003:17 is also retrieved on-demand, REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the passenger side airbag Continuous Memory Diagnostic Trouble Codes (CMDTCs). For DTC B1407:13 or B1407:1A, GO to A13 For DTC B1407:11, GO to A14 For DTC B1407:12, GO to A15

A2 CHECK THE PASSENGER SIDE AIRBAG DEPLOYMENT CONTROL RESISTANCE (DEPLOY_13_R) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- Monitor and record the resistance value displayed by the DEPLOY_13_R PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	GO to A12
No	GO to A3

A3 CHECK THE PASSENGER SIDE AIRBAG DEPLOYMENT CONTROL RESISTANCE (DEPLOY_13_R) PID (PARAMETER IDENTIFICATION) WHILE CARRYING OUT THE HARNESS TEST

- While monitoring the DEPLOY_13_R PID, carry out the harness test of the passenger side airbag circuits and accessible connectors (including any inline connectors) by wiggling and flexing the wire harness and connectors frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms while carrying out the harness test?

Yes	DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	For PID value less than 1.44 ohms, GO to A4 For PID value greater than 3.52 ohms, GO to A6

A4 CHECK THE PASSENGER SIDE AIRBAG DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Side Airbag (Inline seat connector) C314.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the passenger side airbag disconnected, an open circuit fault is normally retrieved.

Did the on-demand DTC change from B1407:1A to B1407:13?

Yes	GO to A11
No	GO to A5

A5 CHECK FOR A SHORT BETWEEN THE PASSENGER SIDE AIRBAG CIRCUITS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C314-1	Ω	C314-2

Is the resistance greater than 10,000 ohms?

Yes	GO to A12
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A6 CHECK THE PASSENGER SIDE AIRBAG CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Side Airbag (Inline seat connector) C314.
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C310A-28	Ω	C314-1
C310A-27	Ω	C314-2

Are the resistances less than 0.5 ohm?

Yes	GO to A7
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A7 CHECK THE PASSENGER SIDE AIRBAG DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Connect RCM C310A and C310B.
- Connect a fused jumper wire:

Lead 1	Measurement / Action	Lead 2
C314-1		C314-2

- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the passenger side airbag circuits shorted together, a low resistance fault is normally retrieved.

Did the on-demand DTC change from B1407:13 to B1407:1A?

Yes	REMOVE the fused jumper wire and GO to A11
No	REMOVE the fused jumper wire and GO to A12

A8 CHECK THE PASSENGER SIDE AIRBAG DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Side Airbag (Inline seat connector) C314.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the passenger side airbag disconnected, an open circuit fault is normally retrieved.

Did the on-demand DTC change from B1407:11 to B1407:13?

Yes	GO to A11
No	GO to A9

A9 CHECK THE PASSENGER SIDE AIRBAG CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C314-1	Ω	Ground
C314-2	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A12
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A10 CHECK THE PASSENGER SIDE AIRBAG CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Depower the SRS.

  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental

Restraint System, General Procedures).
- Disconnect Passenger Side Airbag (Inline seat connector) C314.
- Disconnect RCM C310A and C310B.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C314-1		Ground
C314-2		Ground

Is any voltage present?

Yes	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	GO to A12

A11 CONFIRM THE PASSENGER SIDE AIRBAG FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damaged, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Inspect Passenger Side Airbag C314 and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect Passenger Side Airbag (Inline seat connector) C314.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	REMOVE and INSPECT the driver seat backrest harness for damage. REFER to: Side Airbag (501-20B Supplemental Restraint System, Removal and Installation). If a concern is found, REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17 If a concern is not found, INSTALL a new driver side airbag. REFER to: Side Airbag (501-20B Supplemental Restraint System, Removal and Installation). GO to A17
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.

	For DTC B1407:13 or B1407:1A, GO to A13 For DTC B1407:11, GO to A14 For DTC B1407:12, GO to A15

A12 CONFIRM THE RCM (RESTRAINTS CONTROL MODULE) FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damaged, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect Passenger Side Airbag (Inline seat connector) C314.
- Connect RCM C310A and C310B (if previously disconnected).
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A17
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B1407:13 or B1407:1A, GO to A13 For DTC B1407:11, GO to A14 For DTC B1407:12, GO to A15

A13 CHECK THE PASSENGER SIDE AIRBAG DEPLOYMENT CONTROL RESISTANCE (DEPLOY_13_R) PID (PARAMETER IDENTIFICATION) FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- While monitoring the DEPLOY_13_R PID, attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16
No	DEPOWER the SRS. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A14 CHECK THE PASSENGER SIDE AIRBAG DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO GROUND FAULT

- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B1407:11 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16

A15 CHECK THE PASSENGER SIDE AIRBAG DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO BATTERY FAULT

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Side Airbag (Inline seat connector) C314.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B1407:12 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16

A16 CHECK THE HARNESS AND CONNECTORS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Side Airbag (Inline seat connector) C314.
  - Inspect connector(s) (including any inline connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damage, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Inspect Passenger Side Airbag C314 and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.

Were any concerns found?

Yes	REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A17

A17 CHECK FOR ADDITIONAL SRS (SUPPLEMENTAL RESTRAINT SYSTEM) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition OFF.
- Reconnect all SRS components (if previously disconnected).
- If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- **NOTE:** *When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM.*

  Using a diagnostic scan tool, perform **Restraints** self-test.

Are any RCM Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	Do not clear any Diagnostic Trouble Codes (DTCs) until all Diagnostic Trouble Codes (DTCs) have been resolved. DIAGNOSE and REPAIR the RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	The repair is complete. RETURN the vehicle to the customer.

Pinpoint Test - DTC: AF

BXXXX:4A (any BXXXX DTC with a 4A failure type) Incorrect Component Installed

Normal Operation and Fault Conditions

The RCM monitors all SRS device connections. If the RCM detects a connection or device connected that is not stored in memory or is not configured for the component, the RCM sets a DTC and sends a message to the IPC to illuminate the airbag warning indicator.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B0001:4A	Driver Frontal Stage 1 Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
B0004:4A	Driver Knee Bolster Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
B0010:4A	Passenger Frontal Stage 1 Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
B0070:4A	Driver Seatbelt Pretensioner "A" Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
B0072:4A	Passenger Seatbelt Pretensioner "A" Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
B1202:4A	Restraint System Passenger Enable Indicator: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
B1404:4A	Driver Side Airbag Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
B1405:4A	Driver Curtain Deployment Control 1: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
B1407:4A	Passenger Side Airbag Deployment Control: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.
B1408:4A	Passenger Curtain Deployment Control 1: Incorrect Component Installed	This DTC sets if the RCM detects the device but it is not configured for this component.

Possible Sources

- RCM not configured or configured incorrectly
- Incorrect RCM installed
- Incorrect impact sensor installed

Visual Inspection and Diagnostic Pre-checks

- Review recent service history to identify repairs where an incorrect component may have been installed.

PINPOINT TEST A : BXXXX:4A (ANY BXXXX DTC (DIAGNOSTIC TROUBLE CODE) WITH A 4A FAILURE TYPE) INCORRECT COMPONENT INSTALLED

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*

NOTE: *Only disconnect or reconnect SRS components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*

NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

A1 RETRIEVE RCM (RESTRAINTS CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

  REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Were any incorrect component installed Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during self-test. If DTC U3003:16 or U3003:17 is retrieved on-demand as well, DIAGNOSE those Diagnostic Trouble Codes (DTCs) first. REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). For all other incorrect component installed Diagnostic Trouble Codes (DTCs), GO to A2
No	If DTC U3003:16 or U3003:17 is retrieved on-demand as well, DIAGNOSE those Diagnostic Trouble Codes (DTCs) first. REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 are not retrieved on-demand, DIAGNOSE the Continuous Memory Diagnostic Trouble Codes (CMDTCs). This is an intermittent fault when present as a CMDTC only. GO to A5

A2 CHECK THE RCM (RESTRAINTS CONTROL MODULE) PART NUMBER

- Ignition ON.
- Check the vehicle repair history. Using the Log Viewer function of the diagnostic scan tool, retrieve and record the RCM part number.
- Check the part number recorded against the number listed in the Ford parts catalog and verify the correct RCM is installed in the vehicle.

Is the correct RCM installed?

Yes	GO to A3
No	INSTALL the correct RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A6

A3 VERIFY THE RCM (RESTRAINTS CONTROL MODULE) CONFIGURATION

- Carry out PMI for the RCM. Use As-Built data when carrying out PMI. Refer to the scan tool instructions to carry out PMI.
- Using a diagnostic scan tool, perform RCM self-test.

Were any incorrect component installed Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	For DTC B1413:4A, B1414:4A, B1415:4A, B1417:4A, B1418:4A or B1419:4A, GO to A4 For all other incorrect component installed Diagnostic Trouble Codes (DTCs), CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A6
No	The fault is corrected. GO to A6

A4 VERIFY THE SUSPECT IMPACT SENSOR PART NUMBER

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Gain access to the suspect impact sensor(s) for which incorrect component installed Diagnostic Trouble Codes (DTCs) were retrieved. Refer to the table for the appropriate procedure(s).

DTC	Component	Procedure
B1413:4A	LH front impact severity sensor	REFER to: Front Impact Severity Sensor (501-20B Supplemental Restraint System, Removal and Installation).
B1414:4A	Driver front door side impact sensor	REFER to: Front Impact Severity Sensor (501-20B Supplemental Restraint System, Removal and Installation).
B1415:4A	LH C-pillar side impact sensor	
B1417:4A	RH front impact severity sensor	REFER to: Front Impact Severity Sensor (501-20B Supplemental Restraint System, Removal and Installation).
B1418:4A	Passenger front door side impact sensor	REFER to: Front Impact Severity Sensor (501-20B Supplemental Restraint System, Removal and Installation).
B1419:4A	RH C-pillar side impact sensor	

- Record the part number from each suspect impact sensor.
- Check the part number(s) recorded against the number listed in the Ford parts catalog and verify that each suspect impact sensor installed in the vehicle is correct.

Do the part numbers of all suspect impact sensors match the part numbers listed in the Ford parts catalog?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A6
No	INSTALL the correct impact sensor(s) as necessary. For DTC B1413:4A or B1417:4A, REFER to: Front Impact Severity Sensor (501-20B Supplemental Restraint System, Removal and Installation). For DTC B1414:4A or B1418:4A, REFER to: Front Impact Severity Sensor (501-20B Supplemental Restraint System, Removal and Installation). For vehicles with DTC B1415:4A or B1419:4A, GO to A6

A5 CHECK FOR AN INTERMITTENT FAULT

- Using a diagnostic scan tool, clear RCM Diagnostic Trouble Codes (DTCs).
- Using a diagnostic scan tool, perform RCM self-test to retrieve Diagnostic Trouble Codes (DTCs).

Were any incorrect component installed Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A6
No	Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A6

A6 CHECK FOR ADDITIONAL SRS (SUPPLEMENTAL RESTRAINT SYSTEM) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition OFF.
- If previously directed to depower the SRS, repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- **NOTE:** *When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM.*

  Using a diagnostic scan tool, perform **Restraints** self-test.

Are any RCM Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	Do not clear any Diagnostic Trouble Codes (DTCs) until all Diagnostic Trouble Codes (DTCs) have been resolved. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	CLEAR all RCM Continuous Memory Diagnostic Trouble Codes (CMDTCs). PROVE OUT the SRS. The repair is complete. RETURN the vehicle to the customer.

Pinpoint Test - DTC: AI

U0140:00

Normal Operation and Fault Conditions

The RCM uses information contained in messages from the BCM sent on the HS-CAN2.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication with Body Control Module: No Sub Type Information	This DTC sets if the RCM does not receive an expected message from the BCM.

Possible Sources

- Network traffic
- BCM
- RCM

PINPOINT TEST A : U0140:00

WARNING: Do not handle, move or change the original horizontal mounting position of the Restraints Control Module (RCM) while the Restraints Control Module (RCM) is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*

NOTE: *SRS components should only be disconnected or reconnected when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*

NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

A1 CHECK THE COMMUNICATION NETWORK

- **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**
- Ignition ON.
- Using a diagnostic scan tool, carry out a network test.

Does the BCM pass the network test?

Yes	GO to A2
No	To diagnose no communication with the BCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

A2 CHECK THE RCM (RESTRAINTS CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC

TROUBLE CODES (CMDTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- Using a diagnostic scan tool, clear RCM Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, perform RCM self-test.

Is DTC U0140:00 retrieved again?

Yes	GO to A3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

A3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE RCM (RESTRAINTS CONTROL MODULE) SELF-TEST

- Check the recorded Diagnostic Trouble Codes (DTCs) from the RCM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	GO to A4

A4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform BCM self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs) from the BCM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	GO to A5

A5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140:00 SET IN OTHER MODULES

- Ignition ON.
- Using a diagnostic scan tool, perform self-test for all modules.

Is DTC U0140:00 set in the ABS Module or in the IPC?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,   Click here to access Guided Routine (BCM).
No	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).

Copyright © 2016 Ford Motor Company

Pinpoint Test - DTC: AK

U0155:00

Normal Operation and Fault Conditions

The RCM uses information contained in messages from the IPC sent on the HS-CAN.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0155:00	Lost Communication with Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	This DTC sets if the RCM does not receive an expected message from the IPC for 6 seconds.

Possible Causes

- Network traffic
- IPC
- RCM

PINPOINT TEST A : U0155:00

NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*

NOTE: *Only disconnect or reconnect SRS components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*

NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

A1 CHECK THE COMMUNICATION NETWORK

- **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

  REFER to: Pyrotechnic Device Health and Safety Precautions (100-00 General Information, Description and Operation).
- Ignition ON.
- Using a diagnostic scan tool, carry out a network test.

Does the IPC pass the network test?

Yes	GO to A2
No	To diagnose no communication with the IPC, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

A2 CHECK THE RCM (RESTRAINTS CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, perform RCM self-test.
- Using a diagnostic scan tool, clear RCM Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, perform RCM self-test.

Is DTC U0155:00 retrieved again?

Yes	GO to A3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

A3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE RCM (RESTRAINTS CONTROL MODULE) SELF-TEST

- Check the recorded Diagnostic Trouble Codes (DTCs) from the RCM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	REFER to: Pinpoint Test - DTC: AK (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	GO to A4

A4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform IPC self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs) from the IPC self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	GO to A5

A5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00 SET IN OTHER MODULES

- Using a diagnostic scan tool, perform self-test for all modules.

Is DTC U0155:00 set in the BCM, ACM, or APIM (if equipped)?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,   Click here to access Guided Routine (IPC).
No	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).

Pinpoint Test - DTC: AL

U0253:00

Normal Operation and Fault Conditions

The RCM uses information contained in messages from the APIM sent on the High Speed Controller Area Network 2 (HS2-CAN).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0253:00	Lost Communication with Accessory Protocol Interface Module: No Sub Type Information	This DTC sets if the RCM does not receive an expected message from the APIM.

Possible Sources

- Network traffic
- APIM
- RCM

PINPOINT TEST A : U0253:00

WARNING: Do not handle, move or change the original horizontal mounting position of the Restraints Control Module (RCM) while the Restraints Control Module (RCM) is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.

NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*

NOTE: *SRS components should only be disconnected or reconnected when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*

NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

A1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out a network test.

Does the APIM pass the network test?

Yes	GO to A2
No	To diagnose no communication with the APIM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

A2 CHECK THE RCM (RESTRAINTS CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Ignition ON.

- Using a diagnostic scan tool, perform RCM self-test.
- Using a diagnostic scan tool, clear RCM Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, perform RCM self-test.

Is DTC U0253:00 retrieved again?

Yes	GO to A3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

A3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE RCM (RESTRAINTS CONTROL MODULE) SELF-TEST

- Check for recorded Diagnostic Trouble Codes (DTCs) from the RCM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	GO to A4

A4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE APIM (SYNC MODULE) SELF-TEST

- Using a diagnostic scan tool, perform APIM self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs) from the APIM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	REFER to the appropriate section to DIAGNOSE the battery voltage Diagnostic Trouble Codes (DTCs). Refer to the appropriate section in Group 415 for the procedure.
No	GO to A5

A5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0253:00 SET IN OTHER MODULES

- Ignition ON.
- Using a diagnostic scan tool, perform self-test for all modules.

Is DTC U0253:00 set in the ACM?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. Refer to the appropriate section in Group 415 for the procedure.
No	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).

Copyright © 2016 Ford Motor Company

Pinpoint Test - DTC: AM

U2300:55, U2300:64

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

NOTE: *DTC U2300:55 is set in every new RCM that has not previously been installed or that has previously been installed but has not yet successfully received configuration data messages from the BCM. DO NOT replace any components for this DTC unless directed to do so by the following pinpoint test.*

Normal Operation and Fault Conditions

The RCM receives a configuration data message from the BCM when the RCM proves out during the very first ignition cycle after it is installed. During prove-out at the beginning of each subsequent ignition cycle, the BCM sends configuration data to the RCM and the RCM compares the message to the message that was received during the very first ignition cycle.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U2300:55	Central Configuration: Not Configured	This DTC is present in every new RCM. Once the new RCM is installed and it successfully receives a configuration data message from the BCM, this DTC reports as a Continuous Memory Diagnostic Trouble Code (CMDTC). If the RCM reports this DTC on-demand, it means that the configuration data message has not been received from the BCM.
U2300:64	Central Configuration: Signal Plausibility Failure	If the RCM receives a configuration data message that does not match the configuration data that was previously received and stored, it sets this DTC. This DTC can set on-demand during the RCM prove-out, but change to a Continuous Memory Diagnostic Trouble Code (CMDTC) later on in the ignition cycle if the correct message is eventually received. If PMI has not been carried out for the BCM, this DTC sets.

Possible Sources

- RCM or BCM configuration
- BCM
- RCM

PINPOINT TEST A : U2300:55, U2300:64

WARNING: Do not handle, move or change the original horizontal mounting position of the Restraints Control Module (RCM) while the Restraints Control Module (RCM) is connected and the ignition switch is ON. Failure to follow this instruction may result in the accidental deployment of the Safety Canopy® and cause serious personal injury or death.
NOTE: *SRS components should only be disconnected or reconnected when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*
NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*
NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*
A1 RETRIEVE RCM (RESTRAINTS CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)
WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal

injury.

- REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- Record the RCM Diagnostic Trouble Codes (DTCs) that were retrieved during the self-test.

Is DTC U2300:55 or U2300:64 retrieved on-demand?

Yes	GO to A2
No	If DTC U2300:55 or U2300:64 is retrieved as a Continuous Memory Diagnostic Trouble Code (CMDTC), CLEAR the RCM Diagnostic Trouble Codes (DTCs) and REPEAT the self-test. If DTC U2300:55 or U2300:64 does not return, RELEASE the vehicle to the customer. If DTC U2300:55 or U2300:64 returns on-demand, GO to A2

A2 CHECK FOR THE CORRECT BCM (BODY CONTROL MODULE)

- Using the Log Viewer function of the diagnostic scan tool, retrieve and record the BCM part number.
- Check the recorded part number against the number listed in the Ford parts catalog.

Does the recorded part number match the number listed in the Ford parts catalog?

Yes	GO to A3
No	INSTALL the correct BCM and USE As-Built data when carrying out PMI. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). GO to A4

A3 CHECK FOR THE CORRECT RCM (RESTRAINTS CONTROL MODULE)

- Using the Log Viewer function of the diagnostic scan tool, retrieve and record the RCM part number.
- Check the recorded part number against the number listed in the Ford parts catalog.

Does the recorded part number match the number listed in the Ford parts catalog?

Yes	CARRY OUT PMI for the BCM using As-Built data. CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the RCM self-test. If DTC U2300:55 or U2300:64 are retrieved, CARRY OUT PMI for the RCM using As-Built data. GO to A4
No	INSTALL the correct RCM and use As-Built data when carrying out PMI. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A4

A4 CHECK FOR ADDITIONAL RCM (RESTRAINTS CONTROL MODULE) OR BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- Using a diagnostic scan tool, perform BCM self-test.

Were any Diagnostic Trouble Codes (DTCs) retrieved from the RCM or BCM during self-test?

Yes	If RCM Diagnostic Trouble Codes (DTCs) were retrieved, do not clear any Diagnostic Trouble Codes (DTCs) until all Diagnostic Trouble Codes (DTCs) have been resolved. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint

	System, Diagnosis and Testing). If BCM Diagnostic Trouble Codes (DTCs) were retrieved, diagnose the BCM. REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	CLEAR all Continuous Memory Diagnostic Trouble Codes (CMDTCs). PROVE OUT the SRS. The repair is complete. RETURN the vehicle to the customer.

Copyright © 2016 Ford Motor Company

Pinpoint Test - DTC: AN

U3003:16 and U3003:17

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

NOTE: *Diagnostic Trouble Codes (DTCs) U3003:16 and U3003:17 can be set if the vehicle has been recently jump started, the battery has been recently charged or the battery has been discharged. The battery may become discharged due to excessive load(s) on the charging system from aftermarket accessories or if the battery has been left unattended with the accessories on.*

Normal Operation - RCM

The RCM continuously monitors the input voltage for correct operation. If the RCM detects input voltage below 9.0 volts while a fault is present, or below 6.0 volts, whether or not a fault is present, it stores DTC U3003:16 in memory. If the RCM detects input voltage above 16 volts while a fault is present, or above 18 volts, regardless of fault status, it stores DTC U3003:17 in memory. If the RCM sets DTC U3003:16 or U3003:17, it sends a message to the IPC to illuminate the airbag warning indicator.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	This DTC sets if the RCM detects voltage below 9 volts with certain SRS faults present or below 6 volts, whether or not a SRS fault exists.
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	This DTC sets if the RCM detects voltage above 16 volts with certain SRS faults present or above 18 volts without a SRS fault.

Possible Sources

- Wiring, terminals or connectors
- RCM

Visual Inspection and Diagnostic Pre-checks

- Inspect for damaged wiring harness(es).
- Inspect for loose or damaged connectors.

PINPOINT TEST A : U3003:16 AND U3003:17

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.
NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.
NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*
NOTE: *Only disconnect or reconnect SRS components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*
NOTE: *Install new components only when directed to do so in the pinpoint test.*
NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

A1 RETRIEVE ALL CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS) IN ALL MODULES

WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.

- REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
- Ignition ON.
- Using a diagnostic scan tool, retrieve ALL Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC B1317, B1318, B1676, U3003:16 or U3003:17 present in one or more modules AND are any charging system Diagnostic Trouble Codes (DTCs) present in the PCM?

Yes	DIAGNOSE the charging system. Refer to the appropriate section in Group 414 for the procedure.
No	GO to A2

A2 TEST BATTERY CONDITION

- Ignition OFF.
- Carry out the Battery Condition Test.
  REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).

Did the battery pass the condition test?

Yes	If the battery passed the condition test but required a recharge, DIAGNOSE the charging system. Refer to the appropriate section in Group 414 for the procedure. CLEAR all Continuous Memory Diagnostic Trouble Codes (CMDTCs). If the battery passed the condition test and did not require a recharge, GO to A3
No	INSTALL a new battery. REFER to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation). CLEAR all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

A3 CHECK THE CHARGING SYSTEM VOLTAGE

- Start the engine.
- Measure the voltage of the battery.
- For DTC U3003:17, turn off all accessories while measuring the battery voltage.
- For DTC U3003:16, turn on headlights and HVAC fan on high while measuring the battery voltage.

Is the voltage between 13 and 15.2 volts?

Yes	For DTC U3003:16, GO to A4 For DTC U3003:17, GO to A6
No	DIAGNOSE the charging system. Refer to the appropriate section in Group 414 for the procedure. CLEAR all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

A4 CHECK FOR HIGH RESISTANCE ON THE IGNITION CIRCUIT TO THE MODULE

- Ignition OFF.
- Depower the SRS. Refer to
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect the module with the concern:
  - For the RCM, disconnect C310A and C310B.
- For the RCM, disconnect BCM C2280A.
- For the RCM, measure:

Positive Lead	Measurement / Action	Negative Lead
C310A-19	Ω	C2280A-4

Is the resistance less than 1 ohm?

Yes	GO to A5
No	REPAIR the circuit as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. CLEAR all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

A5 CHECK FOR HIGH RESISTANCE ON THE MODULE GROUND

- For the RCM, measure:

Positive Lead	Measurement / Action	Negative Lead
RCM mounting bracket	Ω	Ground

Is the resistance less than 1 ohm?

Yes	GO to A6
No	For the RCM, VERIFY there is no corrosion between the RCM and the mounting surface. VERIFY the fasteners are clean and tightened to specification with no corrosion. REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information.

A6 CHECK FOR MODULE OPERATION

- Ignition OFF.
- If not previously directed to do so, depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect the module with the concern:
  - For the RCM, disconnect C310A and C310B (if not previously disconnected).
- Check for the following:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Connect the module with the concern:
  - For the RCM, connect C310A and C310B. Make sure the connector seats correctly and engages the Connector Position Assurance (CPA) lever/lock.
- Repower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, clear all RCM Diagnostic Trouble Codes (DTCs).
- **NOTE:** *When selecting Restraints from the Self Test menu, Diagnostic Trouble Codes (DTCs) are retrieved from the RCM.*

  Using a diagnostic scan tool, perform **Restraints** self-test.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions.

	If no Technical Service Bulletins (TSBs) address this concern and DTC U3003:16 or U3003:17 was present in the RCM, INSTALL a new RCM. REFER to REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector.

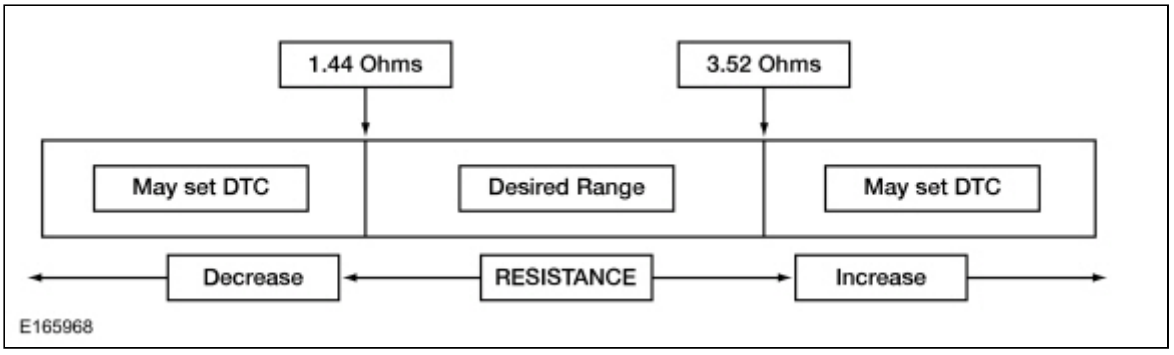
Copyright © 2016 Ford Motor Company

Pinpoint Test - DTC: F

B0004:11, B0004:12, B0004:13, B0004:1A

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

Normal Operation and Fault Conditions



The RCM continuously monitors the driver knee airbag circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted driver knee airbag

If a fault is detected, the RCM stores DTC B0004:11, B0004:12, B0004:13 or B0004:1A in memory and sends a message to the IPC to illuminate the airbag warning indicator.

The RCM analyzes the deployment loop resistance to determine if a fault exists. The value displayed in the PID is the deployment loop resistance measured by the RCM. If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. Small variations in resistance can occur due to the effect of road vibrations on terminal fit. Crimps and terminals can be affected by stress and harness movement and can cause an increase in resistance due to wire strain. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at the time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Driver knee airbag
- RCM

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B0004:11	Driver Knee Bolster Deployment Control: Circuit Short to Ground	A fault is indicated when the RCM senses a short to ground on either driver knee airbag circuit for more than 6 seconds.
B0004:12	Driver Knee Bolster Deployment Control: Circuit Short to Battery	A fault is indicated when the RCM senses a short to voltage on either driver knee airbag circuit for more than 6 seconds.
B0004:13	Driver Knee Bolster Deployment Control: Circuit Open	A fault is indicated when the RCM measures more than the desired resistance between the driver knee airbag circuits for more than 6 seconds.
B0004:1A	Driver Knee Bolster Deployment Control: Circuit Resistance Below Threshold	A fault is indicated when the RCM measures less than the desired resistance between the driver knee airbag circuits for more than 6 seconds.

Possible Sources

- Wiring, terminals or connectors
- Driver knee airbag
- RCM

PINPOINT TEST A : B0004:11, B0004:12, B0004:13 AND B0004:1A

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*

NOTE: *Only disconnect or reconnect SRS components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*

NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

A1 RETRIEVE RCM (RESTRAINTS CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

  REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B0004:11, B0004:12, B0004:13 and B0004:1A retrieved on-demand during self-test?

Yes	This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. If DTC U3003:16 or U3003:17 is also retrieved on-demand, REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the driver knee airbag Diagnostic Trouble Codes (DTCs). For DTC B0004:13 or B0004:1A, GO to A2 For DTC B0004:11, GO to A8 For DTC B0004:12, GO to A10
No	This is an intermittent fault when present as a CMDTC only. If DTC U3003:16 or U3003:17 is also retrieved on-demand, REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the driver knee airbag Continuous Memory Diagnostic Trouble Codes (CMDTCs). For DTC B0004:13 or B0004:1A, GO to A13 For DTC B0004:11, GO to A14 For DTC B0004:12, GO to A15

A2 CHECK THE DRIVER KNEE BOLSTER DEPLOYMENT CONTROL (DEPLOY_02_R) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- Monitor and record the resistance value displayed by the DEPLOY_02_R PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	GO to A12
No	GO to A3

A3 CHECK THE DRIVER KNEE BOLSTER DEPLOYMENT CONTROL (DEPLOY_02_R) PID (PARAMETER IDENTIFICATION) WHILE CARRYING OUT THE HARNESS TEST

- While monitoring the DEPLOY_02_R PID, carry out the harness test of the driver knee airbag circuits and accessible connectors (including any inline connectors) by wiggling and flexing the wire harness and connectors frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms while carrying out the harness test?

Yes	DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	For PID value less than 1.44 ohms, GO to A4 For PID value greater than 3.52 ohms, GO to A6

A4 CHECK THE DRIVER KNEE AIRBAG DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Remove the driver knee airbag.
  REFER to: Driver Knee Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the driver knee airbag disconnected, an open circuit fault is normally retrieved.

Did the on-demand DTC change from B0004:1A to B0004:13?

Yes	GO to A11
No	GO to A5

A5 CHECK FOR A SHORT BETWEEN THE DRIVER KNEE AIRBAG CIRCUITS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2432-1	Ω	C2432-2

Is the resistance greater than 10,000 ohms?

Yes	GO to A12
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A6 CHECK THE DRIVER KNEE AIRBAG CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Remove the driver knee airbag.
  REFER to: Driver Knee Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C310A-21	Ω	C2432-1
C310A-22	Ω	C2432-2

Are the resistances less than 0.5 ohm?

Yes	GO to A7
No	REPAIR the circuits. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A7 CHECK THE DRIVER KNEE AIRBAG DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Connect RCM C310A and C310B.
- Connect a fused jumper wire:

Lead 1	Measurement / Action	Lead 2
C2432-1		C2432-2

- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the driver knee airbag circuits shorted together, a low resistance fault is normally retrieved.

Did the on-demand DTC change from B0004:13 to B0004:1A?

Yes	REMOVE the fused jumper wire and GO to A11
No	REMOVE the fused jumper wire and GO to A12

A8 CHECK THE DRIVER KNEE AIRBAG DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Remove the driver knee airbag.
  REFER to: Driver Knee Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the driver knee airbag disconnected, an open circuit fault is normally retrieved.

Did the on-demand DTC change from B0004:11 to B0004:13?

Yes	GO to A11
No	GO to A9

A9 CHECK THE DRIVER KNEE AIRBAG CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2432-1	Ω	Ground
C2432-2	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A12
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A10 CHECK THE DRIVER KNEE AIRBAG CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.

- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Remove the driver knee airbag.
  REFER to: Driver Knee Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect RCM C310A and C310B.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2432-1		Ground
C2432-2		Ground

Is any voltage present?

Yes	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	GO to A12

A11 CONFIRM THE DRIVER KNEE AIRBAG FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damaged, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Inspect Driver Knee Airbag C2432 and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Install the driver knee airbag.
  REFER to: Driver Knee Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	INSTALL a new driver knee airbag. REFER to: Driver Knee Airbag (501-20B Supplemental Restraint System, Removal and Installation). GO to A17
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test.

	For DTC B0004:13 or B0004:1A, GO to A13 For DTC B0004:11, GO to A14 For DTC B0004:12, GO to A15

A12 CONFIRM THE RCM (RESTRAINTS CONTROL MODULE) FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damaged, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Install the driver knee airbag (if previously removed).
  REFER to: Driver Knee Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Connect RCM C310A and C310B (if previously disconnected).
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A17
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B0004:13 or B0004:1A, GO to A13 For DTC B0004:11, GO to A14 For DTC B0004:12, GO to A15

A13 CHECK THE DRIVER KNEE BOLSTER DEPLOYMENT CONTROL (DEPLOY_02_R) PID (PARAMETER IDENTIFICATION) FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- While monitoring the DEPLOY_02_R PID, attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16
No	DEPOWER the SRS. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A14 CHECK THE DRIVER KNEE AIRBAG DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO GROUND FAULT

- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B0004:11 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16

A15 CHECK THE DRIVER KNEE AIRBAG DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO BATTERY FAULT

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Remove the driver knee airbag.
  REFER to: Driver Knee Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B0004:12 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16

A16 CHECK THE HARNESS AND CONNECTORS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Remove the driver knee airbag.
  REFER to: Driver Knee Airbag (501-20B Supplemental Restraint System, Removal and Installation).
  - Inspect connector(s) (including any inline connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damage, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.

- Inspect Driver Knee Airbag C2607 and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.

Were any concerns found?

Yes	REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A17

A17 CHECK FOR ADDITIONAL SRS (SUPPLEMENTAL RESTRAINT SYSTEM) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition OFF.
- Reconnect all SRS components (if previously disconnected).
- Install the driver knee airbag (if previously removed).
  REFER to: Driver Knee Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- **NOTE:** *When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM.*

  Using a diagnostic scan tool, perform **Restraints** self-test.

Are any RCM Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	Do not clear any Diagnostic Trouble Codes (DTCs) until all Diagnostic Trouble Codes (DTCs) have been resolved. DIAGNOSE and REPAIR the RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	The repair is complete. RETURN the vehicle to the customer.

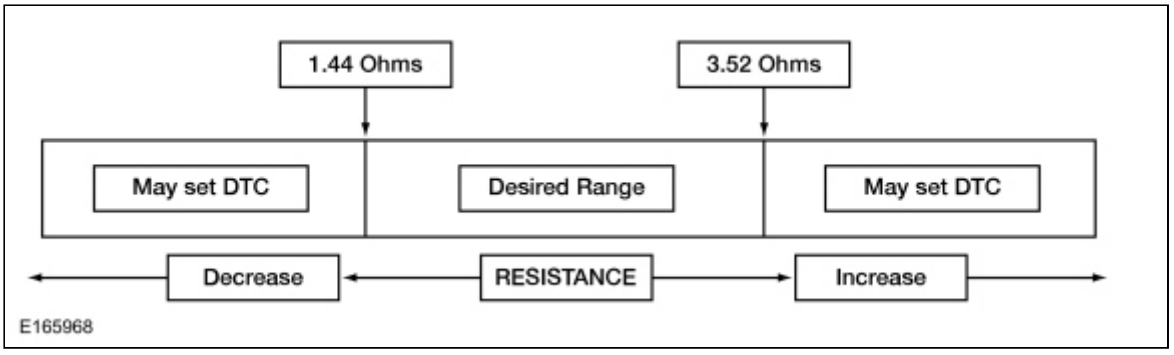
Copyright © 2016 Ford Motor Company

Pinpoint Test - DTC: T

B1405:11, B1405:12, B1405:13, B1405:1A

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

Normal Operation and Fault Conditions



The RCM continuously monitors the Driver side air curtain circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted Driver side air curtain

If a fault is detected, the RCM stores DTC B1405:11, B1405:12, B1405:13 or B1405:1A in memory and sends a message to the IPC to illuminate the airbag warning indicator.

The RCM analyzes the deployment loop resistance to determine if a fault exists. The value displayed in the PID is the deployment loop resistance measured by the RCM. If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. Small variations in resistance can occur due to the effect of road vibrations on terminal fit. Crimps and terminals can be affected by stress and harness movement and can cause an increase in resistance due to wire strain. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at the time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Driver side air curtain
- RCM

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1405:11	Driver Side Curtain Deployment Control 1: Circuit Short to Ground	A fault is indicated when the RCM senses a short to ground on either Driver side air curtain circuit for more than 6 seconds.
B1405:12	Driver Side Curtain Deployment Control 1: Circuit Short to Battery	A fault is indicated when the RCM senses a short to voltage on either Driver side air curtain circuit for more than 6 seconds.
B1405:13	Driver Side Curtain Deployment Control 1: Circuit Open	A fault is indicated when the RCM measures more than the desired resistance between the Driver side air curtain circuits for more than 6 seconds.
B1405:1A	Driver Side Curtain Deployment Control 1: Circuit Resistance Below Threshold	A fault is indicated when the RCM measures less than the desired resistance between the Driver side air curtain circuits for more than 6 seconds.

Possible Sources

- Wiring, terminals or connectors
- Driver side air curtain
- RCM

PINPOINT TEST A : B1405:11, B1405:12, B1405:13 AND B1405:1A

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*

NOTE: *Only disconnect or reconnect SRS components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*

NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

A1 RETRIEVE RCM (RESTRAINTS CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

  REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B1405:11, B1405:12, B1405:13 and B1405:1A retrieved on-demand during self-test?

Yes	This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. If DTC U3003:16 or U3003:17 is also retrieved on-demand, REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the Driver side air curtain Diagnostic Trouble Codes (DTCs). For DTC B1405:13 or B1405:1A, GO to A2 For DTC B1405:11, GO to A8 For DTC B1405:12, GO to A10
No	This is an intermittent fault when present as a CMDTC only. If DTC U3003:16 or U3003:17 is also retrieved on-demand, REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the Driver side air curtain Continuous Memory Diagnostic Trouble Codes (CMDTCs). For DTC B1405:13 or B1405:1A, GO to A13 For DTC B1405:11, GO to A14 For DTC B1405:12, GO to A15

A2 CHECK THE DRIVER SIDE CURTAIN DEPLOYMENT CONTROL 1 RESISTANCE (DEPLOY_11_R) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- Monitor and record the resistance value displayed by the DEPLOY_11_R PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	GO to A12
No	GO to A3

A3 CHECK THE DRIVER SIDE CURTAIN DEPLOYMENT CONTROL 1 RESISTANCE (DEPLOY_11_R) PID (PARAMETER IDENTIFICATION) WHILE CARRYING OUT THE HARNESS TEST

- While monitoring the DEPLOY_11_R PID, carry out the harness test of the Driver side air curtain circuits and accessible connectors (including any inline connectors) by wiggling and flexing the wire harness and connectors frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms while carrying out the harness test?

Yes	DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	For PID value less than 1.44 ohms, GO to A4 For PID value greater than 3.52 ohms, GO to A6

A4 CHECK THE DRIVER SIDE AIR CURTAIN DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Side Air Curtain LHD C3321 or RHD C3329.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the Driver side air curtain disconnected, an open circuit fault is normally retrieved.

Did the on-demand DTC change from B1405:1A to B1405:13?

Yes	GO to A11
No	GO to A5

A5 CHECK FOR A SHORT BETWEEN THE DRIVER SIDE AIR CURTAIN CIRCUITS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C3321-1	Ω	C3321-2
RHD C3329-1	Ω	C3329-2

Is the resistance greater than 10,000 ohms?

Yes	GO to A12
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A6 CHECK THE DRIVER SIDE AIR CURTAIN CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Side Air Curtain LHD C3321 or RHD C3329.
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C310B-40	Ω	C3321-1
LHD C310B-39	Ω	C3321-2
RHD C310B-37	Ω	C3329-1
RHD C310B-38	Ω	C3329-2

Are the resistances less than 0.5 ohm?

Yes	GO to A7
No	REPAIR the circuits. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A7 CHECK THE DRIVER SIDE AIR CURTAIN DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Connect RCM C310A and C310B.
- Connect a fused jumper wire:

Lead 1	Measurement / Action	Lead 2
C3321-1		C3321-2
C3329-1		C3329-2

- Repower the SRS. **Do not** prove out the SRS at this time.

REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the Driver side air curtain circuits shorted together, a low resistance fault is normally retrieved.

Did the on-demand DTC change from B1405:13 to B1405:1A?

Yes	REMOVE the fused jumper wire and GO to A11
No	REMOVE the fused jumper wire and GO to A12

A8 CHECK THE DRIVER SIDE AIR CURTAIN DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Side Air Curtain LHD C3321 or RHD C3329.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the Driver side air curtain disconnected, an open circuit fault is normally retrieved.

Did the on-demand DTC change from B1405:11 to B1405:13?

Yes	GO to A11
No	GO to A9

A9 CHECK THE DRIVER SIDE AIR CURTAIN CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C3321-1	Ω	Ground
LHD C3321-2	Ω	Ground
RHD C3329-1	Ω	Ground
RHD C3329-2	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A12
No	REPAIR the circuit(s).

	Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A10 CHECK THE DRIVER SIDE AIR CURTAIN CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Side Air Curtain LHD C3321 or RHD C3329.
- Disconnect RCM C310A and C310B.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C3321-1		Ground
LHD C3321-2		Ground
RHD C3329-1		Ground
RHD C3329-2		Ground

Is any voltage present?

Yes	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	GO to A12

A11 CONFIRM THE DRIVER SIDE AIR CURTAIN FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damaged, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Inspect Driver Side Air Curtain LHD C3321 or RHD C3329 and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect Driver Side Air Curtain LHD C3321 or RHD C3329.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	INSTALL a new Driver side air curtain. REFER to: Side Curtain Airbag (501-20B Supplemental Restraint System, Removal and Installation). GO to A17
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B1405:13 or B1405:1A, GO to A13 For DTC B1405:11, GO to A14 For DTC B1405:12, GO to A15

A12 CONFIRM THE RCM (RESTRAINTS CONTROL MODULE) FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damaged, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect Driver Side Air Curtain LHD C3321 or RHD C3329.
- Connect RCM C310A and C310B (if previously disconnected).
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A17
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B1405:13 or B1405:1A, GO to A13 For DTC B1405:11, GO to A14 For DTC B1405:12, GO to A15

A13 CHECK THE DRIVER CURTAIN DEPLOYMENT CONTROL 1 RESISTANCE (DEPLOY_11_R) PID (PARAMETER IDENTIFICATION) FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- While monitoring the DEPLOY_11_R PID, attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint

	test. GO to A16
No	DEPOWER the SRS. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A14 CHECK THE DRIVER SIDE AIR CURTAIN DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO GROUND FAULT

- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B1405:11 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16

A15 CHECK THE DRIVER SIDE AIR CURTAIN DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO BATTERY FAULT

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Driver Side Air Curtain LHD C3321 or RHD C3329.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B1405:12 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16

A16 CHECK THE HARNESS AND CONNECTORS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental

Restraint System, General Procedures).

- Disconnect Driver Side Air Curtain LHD C3321 or RHD C3329.
  - Inspect connector(s) (including any inline connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damage, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Inspect Driver Side Air Curtain LHD C3321 or RHD C3329 and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.

Were any concerns found?

Yes	REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A17

A17 CHECK FOR ADDITIONAL SRS (SUPPLEMENTAL RESTRAINT SYSTEM) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition OFF.
- Reconnect all SRS components (if previously disconnected).
- If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- **NOTE:** *When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM.*

  Using a diagnostic scan tool, perform **Restraints** self-test.

Are any RCM Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	Do not clear any Diagnostic Trouble Codes (DTCs) until all Diagnostic Trouble Codes (DTCs) have been resolved. DIAGNOSE and REPAIR the RCM. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	The repair is complete. RETURN the vehicle to the customer.

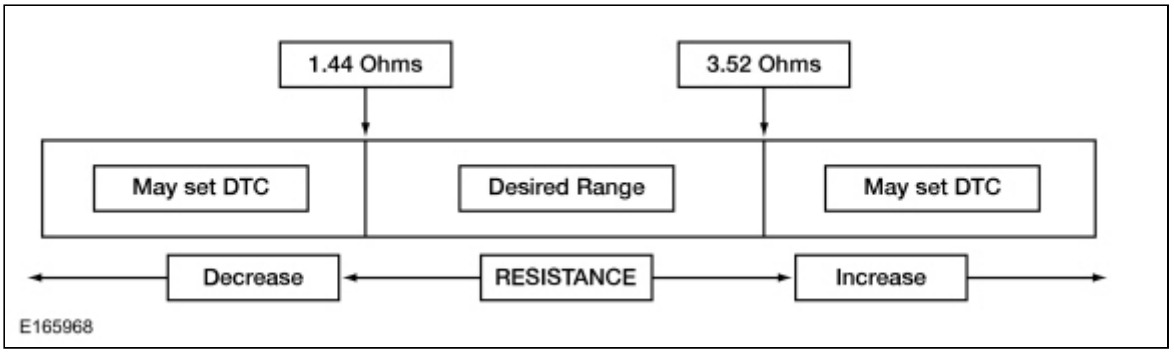
Copyright © 2016 Ford Motor Company

Pinpoint Test - DTC: V

B1408:11, B1408:12, B1408:13, B1408:1A

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

Normal Operation and Fault Conditions



The RCM continuously monitors the Passenger side air curtain circuits for the following faults:

- Resistance out of range
- Unexpected voltage
- Short to ground
- Faulted Passenger side air curtain

If a fault is detected, the RCM stores DTC B1408:11, B1408:12, B1408:13 or B1408:1A in memory and sends a message to the IPC to illuminate the airbag warning indicator.

The RCM analyzes the deployment loop resistance to determine if a fault exists. The value displayed in the PID is the deployment loop resistance measured by the RCM. If the value displayed is lower or higher than the desired range (refer to diagram below), the RCM can set a DTC. As the deployment loop resistance drifts farther outside the desired range, the chance for a DTC increases. Small variations in resistance can occur due to the effect of road vibrations on terminal fit. Crimps and terminals can be affected by stress and harness movement and can cause an increase in resistance due to wire strain. These variables can result in an intermittent fault. For this reason, the test requires the PID value to be within the desired range before the fault is considered repaired, regardless if the module is reporting an on-demand DTC at the time of diagnosis. Following this direction helps make sure that minor changes in resistance do not create a repeat concern. This test uses process of elimination to diagnose each part of the deployment loop circuit including:

- Wiring
- Connections
- Passenger side air curtain
- RCM

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1408:11	Passenger Side Curtain Deployment Control 1: Circuit Short to Ground	A fault is indicated when the RCM senses a short to ground on either Passenger side air curtain circuit for more than 6 seconds.
B1408:12	Passenger Side Curtain Deployment Control 1: Circuit Short to Battery	A fault is indicated when the RCM senses a short to voltage on either Passenger side air curtain circuit for more than 6 seconds.
B1408:13	Passenger Side Curtain Deployment Control 1: Circuit Open	A fault is indicated when the RCM measures more than the desired resistance between the Passenger side air curtain circuits for more than 6 seconds.
B1408:1A	Passenger Side Curtain Deployment Control 1: Circuit Resistance Below Threshold	A fault is indicated when the RCM measures less than the desired resistance between the Passenger side air curtain circuits for more than 6 seconds.

Possible Sources

- Wiring, terminals or connectors
- Passenger side air curtain
- RCM

PINPOINT TEST A : B1408:11, B1408:12, B1408:13 AND B1408:1A

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*

NOTE: *Only disconnect or reconnect SRS components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*

NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

A1 RETRIEVE RCM (RESTRAINTS CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

  REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B1408:11, B1408:12, B1408:13 and B1408:1A retrieved on-demand during self-test?

Yes	This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. If DTC U3003:16 or U3003:17 is also retrieved on-demand, REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the RH side air curtain Diagnostic Trouble Codes (DTCs). For DTC B1408:13 or B1408:1A, GO to A2 For DTC B1408:11, GO to A8 For DTC B1408:12, GO to A10
No	This is an intermittent fault when present as a CMDTC only. If DTC U3003:16 or U3003:17 is also retrieved on-demand, REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 is not retrieved on-demand during self-test, DIAGNOSE the Passenger side air curtain Continuous Memory Diagnostic Trouble Codes (CMDTCs). For DTC B1408:13 or B1408:1A, GO to A13 For DTC B1408:11, GO to A14 For DTC B1408:12, GO to A15

A2 CHECK THE PASSENGER SIDE CURTAIN DEPLOYMENT CONTROL 1 RESISTANCE (DEPLOY_14_R) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- Monitor and record the resistance value displayed by the DEPLOY_14_R PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	GO to A12
No	GO to A3

A3 CHECK THE PASSENGER SIDE CURTAIN DEPLOYMENT CONTROL 1 RESISTANCE (DEPLOY_14_R) PID (PARAMETER IDENTIFICATION) WHILE CARRYING OUT THE HARNESS TEST

- While monitoring the DEPLOY_14_R PID, carry out the harness test of the Passenger side air curtain circuits and accessible connectors (including any inline connectors) by wiggling and flexing the wire harness and connectors frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms while carrying out the harness test?

Yes	DEPOWER the SRS and REPAIR the connector, terminals or wire harness as needed. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	For PID value less than 1.44 ohms, GO to A4 For PID value greater than 3.52 ohms, GO to A6

A4 CHECK THE PASSENGER SIDE AIR CURTAIN DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (LOW RESISTANCE INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Side Air Curtain LHD C3329 or RHD C3321.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the Passenger side air curtain disconnected, an open circuit fault is normally retrieved.

Did the on-demand DTC change from B1408:1A to B1408:13?

Yes	GO to A11
No	GO to A5

A5 CHECK FOR A SHORT BETWEEN THE PASSENGER SIDE AIR CURTAIN CIRCUITS

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C3329-1	Ω	C3329-2
RHD C3321-1	Ω	C3321-2

Is the resistance greater than 10,000 ohms?

Yes	GO to A12
No	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A6 CHECK THE PASSENGER SIDE AIR CURTAIN CIRCUITS FOR AN OPEN

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Side Air Curtain LHD C3329 or RHD C3321.
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C310B-37	Ω	C3329-1
LHD C310B-38	Ω	C3329-2
RHD C310B-40	Ω	C3321-1
RHD C310B-39	Ω	C3321-2

Are the resistances less than 0.5 ohm?

Yes	GO to A7
No	REPAIR the circuits. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A7 CHECK THE PASSENGER SIDE AIR CURTAIN DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (OPEN INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Connect RCM C310A and C310B.
- Connect a fused jumper wire:

Lead 1	Measurement / Action	Lead 2
LHD C3329-1		C3329-2
RHD C3321-1		C3321-2

- Repower the SRS. **Do not** prove out the SRS at this time.

REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the Passenger side air curtain circuits shorted together, a low resistance fault is normally retrieved.

Did the on-demand DTC change from B1408:13 to B1408:1A?

Yes	REMOVE the fused jumper wire and GO to A11
No	REMOVE the fused jumper wire and GO to A12

A8 CHECK THE PASSENGER SIDE AIR CURTAIN DEPLOYMENT CONTROL DTC (DIAGNOSTIC TROUBLE CODE) FOR A FAULT STATUS CHANGE (SHORT TO GROUND INDICATED)

NOTE: *This pinpoint test step attempts to change the fault reported by the RCM by inducing a different fault condition. If the reported fault changes, this indicates the RCM is functioning correctly and is not the source of the fault.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Side Air Curtain LHD C3329 or RHD C3321.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.
- **DIAGNOSTIC TIP:** When viewing Diagnostic Trouble Codes (DTCs) with the Passenger side air curtain disconnected, an open circuit fault is normally retrieved.

Did the on-demand DTC change from B1408:11 to B1408:13?

Yes	GO to A11
No	GO to A9

A9 CHECK THE PASSENGER SIDE AIR CURTAIN CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C3329-1	Ω	Ground
LHD C3329-2	Ω	Ground
RHD C3321-1	Ω	Ground
RHD C3321-2	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A12
No	REPAIR the circuit(s).

	Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A10 CHECK THE PASSENGER SIDE AIR CURTAIN CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Side Air Curtain LHD C3329 or RHD C3321.
- Disconnect RCM C310A and C310B.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
LHD C3329-1		Ground
LHD C3329-2		Ground
RHD C3321-1		Ground
RHD C3321-2		Ground

Is any voltage present?

Yes	REPAIR the circuit(s). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	GO to A12

A11 CONFIRM THE PASSENGER SIDE AIR CURTAIN FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damaged, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Inspect Passenger Side Air Curtain LHD C3329 or RHD C3321and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect Passenger Side Air Curtain LHD C3329 or RHD C3321.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	INSTALL a new Passenger side air curtain. REFER to: Side Curtain Airbag (501-20B Supplemental Restraint System, Removal and Installation). GO to A17
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B1408:13 or B1408:1A, GO to A13 For DTC B1408:11, GO to A14 For DTC B1408:12, GO to A15

A12 CONFIRM THE RCM (RESTRAINTS CONTROL MODULE) FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damaged, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect Passenger Side Air Curtain LHD C3329 or RHD C3321.
- Connect RCM C310A and C310B (if previously disconnected).
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Was the original DTC retrieved on-demand during self-test?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A17
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. For DTC B1408:13 or B1408:1A, GO to A13 For DTC B1408:11, GO to A14 For DTC B1408:12, GO to A15

A13 CHECK THE PASSENGER SIDE CURTAIN DEPLOYMENT CONTROL 1 RESISTANCE (DEPLOY_14_R) PID (PARAMETER IDENTIFICATION) FOR AN INTERMITTENT LOW RESISTANCE OR OPEN CIRCUIT FAULT

- Using a diagnostic scan tool, view RCM Parameter Identifications (PIDs).
- While monitoring the DEPLOY_14_R PID, attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently. Record the resistance value indicated by the PID.

Does the PID value read between 1.44 and 3.52 ohms?

Yes	The fault is not present and cannot be recreated at this time. Do not install any new SRS

	components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16
No	DEPOWER the SRS. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17

A14 CHECK THE PASSENGER SIDE AIR CURTAIN DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO GROUND FAULT

- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B1408:11 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16

A15 CHECK THE PASSENGER SIDE AIR CURTAIN DEPLOYMENT CONTROL CIRCUITS FOR AN INTERMITTENT SHORT TO BATTERY FAULT

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect Passenger Side Air Curtain LHD C3329 or RHD C3321.
- Repower the SRS. **Do not** prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Attempt to recreate the fault by wiggling connectors (including any inline connectors) and flexing the wire harness frequently.
- Using a diagnostic scan tool, perform RCM self-test.

Was DTC B1408:12 retrieved on-demand during self-test?

Yes	DEPOWER the SRS and REPAIR as necessary. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures). Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A16

A16 CHECK THE HARNESS AND CONNECTORS

- Ignition OFF.
- Depower the SRS.

REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental

Restraint System, General Procedures).
- Disconnect Passenger Side Air Curtain LHD C3329 or RHD C3321.
  - Inspect connector(s) (including any inline connectors) for corrosion, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damage, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Inspect Passenger Side Air Curtain LHD C3329 or RHD C3321 and make sure the Connector Position Assurance (CPA) tabs are not broken and the clip is not damaged.

Were any concerns found?

Yes	REPAIR as necessary. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A17
No	The fault is not present and cannot be recreated at this time. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A17

A17 CHECK FOR ADDITIONAL SRS (SUPPLEMENTAL RESTRAINT SYSTEM) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition OFF.
- Reconnect all SRS components (if previously disconnected).
- If previously directed to depower the SRS, repower the SRS. **Do not** prove out the SRS at this time. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- **NOTE:** *When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM.*

  Using a diagnostic scan tool, perform **Restraints** self-test.

Are any RCM Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	Do not clear any Diagnostic Trouble Codes (DTCs) until all Diagnostic Trouble Codes (DTCs) have been resolved. DIAGNOSE and REPAIR the RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	The repair is complete. RETURN the vehicle to the customer.

Copyright © 2016 Ford Motor Company

Pinpoint Test - DTC: AE

BXXXX:2B (any BXXXX DTC with a 2B failure type) Signal Cross Coupled

Refer to Wiring Diagrams Cell 46 for schematic and connector information.

Normal Operation and Fault Conditions

The RCM monitors all deployable device and sensor circuits for a signal cross coupled (short) between components. Signal cross coupled Diagnostic Trouble Codes (DTCs) are present when one or both circuits of a component are shorted to one or both circuits of another component. Signal cross coupled Diagnostic Trouble Codes (DTCs) do not set when the circuits of a single device are shorted together, a different DTC is present (for example, a DTC for circuit resistance below threshold). The RCM sends a message to the IPC to illuminate the airbag warning indicator. When a normal loop fault is present (one loop is either shorted to battery/ground, open circuit or low resistance), then signal cross coupled diagnostics are not active. Once the normal loop fault is repaired, the signal cross coupled diagnostics resume.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B0001:2B	Driver Frontal Stage 1 Deployment Control: Signal Cross Coupled	If the RCM detects a short between the driver airbag stage 1 circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
B0004:2B	Driver Knee Bolster Deployment Control: Signal Cross Coupled	If the RCM detects a short between the driver knee airbag circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
B0010:2B	Passenger Frontal Stage 1 Deployment Control: Signal Cross Coupled	If the RCM detects a short between the passenger airbag stage 1 circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
B0070:2B	Driver Seatbelt Pretensioner "A" Deployment Control: Signal Cross Coupled	If the RCM detects a short between the driver safety belt anchor pretensioner circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
B0072:2B	Passenger Seatbelt Pretensioner "A" Deployment Control: Signal Cross Coupled	If the RCM detects a short between the passenger safety belt anchor pretensioner circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
B1404:2B	Driver Side Airbag Deployment Control: Signal Cross Coupled	If the RCM detects a short between the driver side airbag circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
B1405:2B	Driver Curtain Deployment Control 1: Signal Cross Coupled	If the RCM detects a short between the LH side air curtain circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
B1407:2B	Passenger Side Airbag Deployment Control: Signal Cross Coupled	If the RCM detects a short between the passenger side airbag circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.
B1408:2B	Passenger Curtain Deployment Control 1: Signal Cross Coupled	If the RCM detects a short between the RH side air curtain circuits and the circuits of another SRS component, it sets this DTC and the DTC of the corresponding SRS component.

Possible Sources

- Wiring, terminals or connectors
- RCM

Visual Inspection and Diagnostic Pre-Checks

- Inspect the affected wiring harness(es) for damage, if accessible.

PINPOINT TEST A : BXXXX:2B (ANY BXXXX DTC (DIAGNOSTIC TROUBLE CODE) WITH A 2B FAILURE TYPE) SIGNAL CROSS COUPLED

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*

NOTE: *Only disconnect or reconnect SRS components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*

NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

A1 RETRIEVE RCM (RESTRAINTS CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

  REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Were any signal cross coupled Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	This fault cannot be cleared until it is corrected and the DTC is no longer retrieved during the on-demand self test. If DTC U3003:16 or U3003:17 is also retrieved on-demand, DIAGNOSE those Diagnostic Trouble Codes (DTCs) first. REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 are not retrieved on-demand, GO to A2
No	If DTC U3003:16 or U3003:17 is retrieved on-demand as well, DIAGNOSE those Diagnostic Trouble Codes (DTCs) first. REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing). If DTC U3003:16 or U3003:17 are not retrieved on-demand, DIAGNOSE the signal cross-coupled Continuous Memory Diagnostic Trouble Codes (CMDTCs). This is an intermittent fault when present as a CMDTC only. GO to A4

A2 CHECK THE AFFECTED CIRCUITS FOR A SIGNAL CROSS COUPLED FAULT

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect RCM C310A and C310B.
- Using the signal cross coupled Diagnostic Trouble Codes (DTCs) present on-demand, identify the affected SRS devices.
- **NOTE:** *Most signal cross coupled faults are due to connector and/or wiring harness damage. Carry out a thorough inspection of connector(s) and/or wiring harness for damage.*

  Disconnect all of the affected SRS devices.

- Using the following table, measure the resistance between the circuits of one affected SRS device to the other affected SRS device.
  - Example: If Diagnostic Trouble Codes (DTCs) B0001:2B and B0002:2B are being diagnosed, measure the resistance between circuit CR101 to circuits CR102 and RR102. Then measure the resistance between circuit RR101 to circuits CR102 and RR102.

Device/Loop (DTC)	Connector
Driver airbag stage 1 (B0001:2B)	• LHD C216A-1 • LHD C216A-2 • RHD C256A-1 • RHD C256A-2
Driver knee airbag (B0004:2B)	• C2432-1 • C2432-2
Passenger airbag stage 1 (B0010:2B)	• LHD C256A-1 • LHD C256A-2 • RHD C216A-1 • RHD C216A-2
Driver safety belt buckle (B0050:2B)	• LHD C313-13 • LHD C313-14 • RHD C314-13 • RHD C314-14
Passenger safety belt buckle (B0052:2B)	• LHD C314-13 • LHD C314-14 • RHD C313-13 • RHD C313-14
Driver safety belt anchor pretensioner (B0070:2B)	• LHD C3065-1 • LHD C3065-2 • RHD C3066-1 • RHD C3066-2
Passenger safety belt anchor pretensioner (B0072:2B)	• LHD C3066-1 • LHD C3066-2 • RHD C3065-1 • RHD C3065-2
Driver side airbag (B1404:2B)	• LHD C313-1 • LHD C313-2 • RHD C314-1 • RHD C314-2
Driver side air curtain (B1405:2B)	• LHD C3321-1 • LHD C3321-2 • RHD C3329-1 • RHD C3329-2
Passenger side airbag (B1407:2B)	• LHD C314-1 • LHD C314-2 • RHD C313-1 • RHD C313-2
Passenger side air curtain (B1408:2B)	• LHD C3329-1 • LHD C3329-2 • RHD C3321-1 • RHD C3321-2

Are the resistances greater than 10,000 ohms between the affected circuits?

Yes	GO to A3
No	REPAIR the affected circuits. Refer to Wiring Diagrams Cell 46 for schematic and connector information. GO to A5

A3 CONFIRM THE RCM (RESTRAINTS CONTROL MODULE) FAULT

NOTE: *Make sure all SRS components and the RCM electrical connectors are connected before carrying out the self-test. If not, Diagnostic Trouble Codes (DTCs) will be recorded.*

- Prior to reconnecting any previously disconnected SRS component:
  - Inspect connector(s) (including any inline connectors) for pushed-out, loose or spread terminals and loose or frayed wire connections at terminals.
  - Inspect wire harness for any damage, pinched, cut or pierced wires.
  - Inspect RCM C310A and C310B Connector Position Assurance (CPA) lever/lock for correct operation.
  - Repair any concerns found.
    Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Connect all previously disconnected restraint system component(s).
- Connect RCM C310A and C310B.
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Were any signal cross coupled Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation). GO to A5
No	In the process of diagnosing the fault, the fault condition has become intermittent. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A4

A4 CHECK FOR AN INTERMITTENT FAULT

NOTE: *Most cross link faults are due to connector and/or wiring harness damage. Carry out a thorough inspection of connector(s) and/or wiring harness for damage.*

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Disconnect all of the affected SRS devices.
  Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Inspect the wiring harness(es) for any type of damage. If damage is found, repair as necessary.
  Refer to Wiring Diagrams Cell 46 for schematic and connector information.
- Repower the SRS. Do not prove out the SRS at this time.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- Using a diagnostic scan tool, perform RCM self-test.

Were any signal cross coupled Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	This fault cannot be cleared until it is corrected and the DTC is no longer retrieved on-demand during self-test. GO to A2
No	The fault is not present and cannot be recreated at this time. CHECK for causes of the intermittent fault. ATTEMPT to recreate the hard fault by flexing the wire harness and cycling the ignition frequently. Do not install any new SRS components at this time. Install SRS components only when directed to do so in the pinpoint test. GO to A5

A5 CHECK FOR ADDITIONAL SRS (SUPPLEMENTAL RESTRAINT SYSTEM) DIAGNOSTIC

TROUBLE CODES (DTCS)

- Ignition OFF.
- Reconnect all SRS components (if previously disconnected).
- If previously directed to depower the SRS, repower the SRS. Do not prove out the SRS at this time. REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Ignition ON.
- **NOTE:** *When selecting Restraints from the Self Test menu, DTCs are retrieved from the RCM.*

  Using a diagnostic scan tool, perform **Restraints** self-test.

Are any RCM Diagnostic Trouble Codes (DTCs) retrieved on-demand during self-test?

Yes	Do not clear any Diagnostic Trouble Codes (DTCs) until all Diagnostic Trouble Codes (DTCs) have been resolved. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	The repair is complete. RETURN the vehicle to the customer.

Pinpoint Test - DTC: AH

U0100:00

Normal Operation and Fault Conditions

The RCM uses information contained in messages from the PCM sent on the HS-CAN.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication with ECM/PCM "A": No Sub Type Information	This DTC sets if the RCM does not receive an expected message from the PCM.

Possible Causes

- Network traffic
- PCM
- RCM

PINPOINT TEST A : U0100:00

NOTE: *Most faults are due to connector and/or wiring concerns. Carry out a thorough inspection and verification before proceeding with the pinpoint test.*

NOTE: *Only disconnect or reconnect SRS components when instructed to do so within a pinpoint test step. Failure to follow this instruction may result in incorrect diagnosis of the SRS.*

NOTE: *Always make sure the correct SRS component is being installed. Parts released for other vehicles may not be compatible even if they appear physically similar. Check the part number listed in the Ford parts catalog to make sure the correct component is being installed. If an incorrect SRS component is installed, Diagnostic Trouble Codes (DTCs) may set.*

A1 VERIFY DIAGNOSTIC SCAN TOOL COMMUNICATION WITH THE PCM (POWERTRAIN CONTROL MODULE)

WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.

- REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
- Ignition ON.
- Connect the diagnostic scan tool.
- Check that a vehicle session can be established using the diagnostic scan tool.

Can a vehicle session be established?

Yes	If DTC U0100:00 was retrieved from the RCM, GO to A2
No	To diagnose no communication with the PCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

A2 CHECK THE RCM (RESTRAINTS CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, perform RCM self-test.
- Using a diagnostic scan tool, clear RCM Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, perform RCM self-test.

Is DTC U0100:00 retrieved again?

Yes	GO to A3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

A3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PCM (POWERTRAIN CONTROL MODULE) KOEO (KEY ON, ENGINE OFF) SELF-TEST

- Using a diagnostic scan tool, perform PCM self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs) from the PCM KOEO self-test.

Is DTC P0562 or P0563 recorded?

Yes	DIAGNOSE the PCM Diagnostic Trouble Codes (DTCs). Refer to the appropriate section in Group 303 for the procedure.
No	If DTC U0100:00 was originally retrieved from the RCM, GO to A4

A4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE RCM (RESTRAINTS CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform RCM self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs) from the RCM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	REFER to: Pinpoint Test - DTC: AN (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	GO to A5

A5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00 SET IN OTHER MODULES OTHER THAN THE RCM (RESTRAINTS CONTROL MODULE)

- Using a diagnostic scan tool, perform self-test for all modules.

Is DTC U0100:00 set in the ABS module?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. Refer to the appropriate section in Group 303 for the procedure.
No	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).

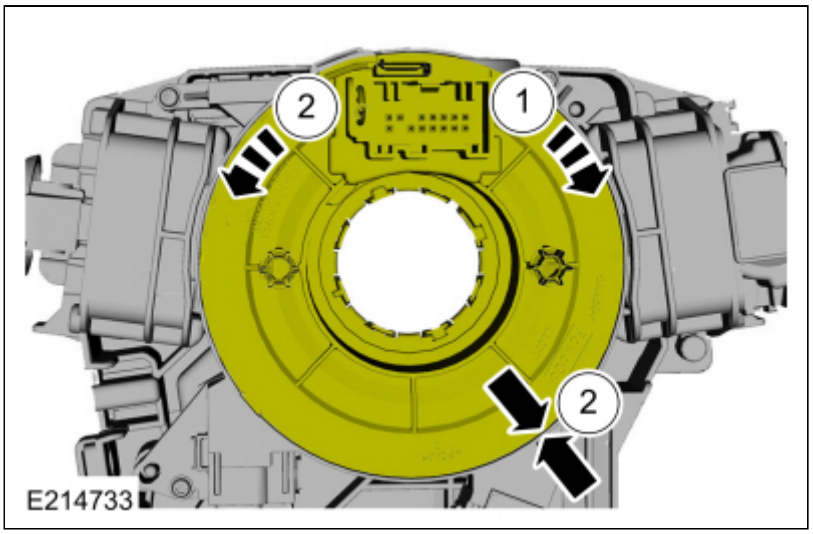
Clockspring Adjustment

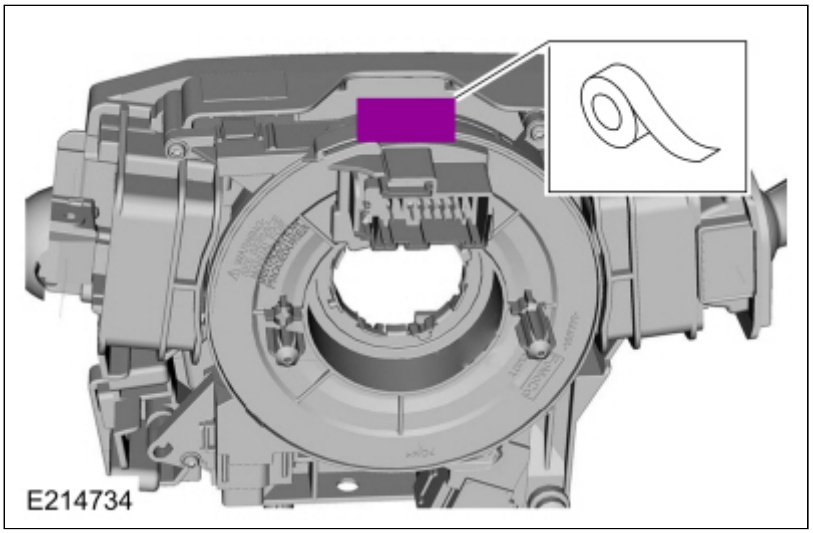
Special Tool(s) / General Equipment



Adhesive Tape

WARNING: If there is a break between installing the clockspring and steering wheel rotation sensor assembly and installing the steering wheel, the centralizing of the clockspring must be repeated.

WARNING: If the centralization of the clockspring is in doubt, the centralizing of the clockspring must be repeated.



NOTE: *Make sure that the road wheels are in the straight ahead position.*

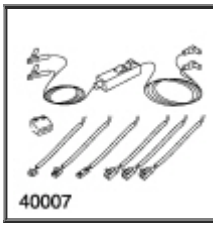
1. Turn the clockspring in a clockwise direction until a resistance is felt.
2. Turn the clockspring in a counterclockwise direction 2.5 revolutions, until the arrow marked on the rotor of the clockspring aligns with the raised 'V' section on the outer cover of the clockspring.

2. **NOTICE: Make sure that the clockspring rotor does not rotate.**

   Use the General Equipment: Adhesive Tape

Copyright © 2016 Ford Motor Company

Deployed Airbag Disposal



WARNING: After deployment, the air bag module surface may contain deposits of sodium hydroxide, a product of the gas generate combustion, that is irritating to the skin. Use protective gloves when handling any deployed air bag module. Failure to follow this instruction may result in personal injury.

1. Remove the deployed air bag module(s). For additional information, refer to the relevant procedure in this section.
2. Seal the deployed air bag module(s) in the packaging from the new air bag module(s) or a suitable polythene bag, and then dispose of in accordance with local contaminated waste regulations.

Scrapped Vehicle Airbag and Seatbelt Pretensioner Disposal - In-Vehicle Disposal

Special Tool(s) / General Equipment

 40007	418-S055C Test and Deployment Lead, Air Bag/Pyrotechnic Safety Belt

Disposal

WARNING: To avoid accidental deployment, the restraints control module (RCM) backup power supply must be depleted. Wait at least one minute after disconnecting the battery ground cable(s) before commencing any repair or adjustment to the supplemental restraint system (SRS), or any component(s) adjacent to the SRS sensors. Failure to follow these instructions may result in personal injury.

WARNING: To minimize the possibility of premature deployment, do not use radio key code savers when working on the SRS. Failure to follow this instruction may result in personal injury.

WARNING: Before deploying the air bag module or safety belt pretensioner pyrotechnic make sure that all personnel in the vicinity are aware that a loud noise (bang) is about to occur. Do not let anybody approach closer than 6 meters. Failure to follow this instruction may result in personal injury.

WARNING: The air bag module or the safety belt pretensioner should not be handled immediately following deployment as the air bag module will be very hot. Failure to follow this instruction may result in personal injury.

WARNING: After deployment, the inflator(s) becomes inert, direct contact to the skin or eyes of any free pyrotechnic residues should be avoided. Failure to follow this instruction may result in personal injury.

WARNING: Always wear gloves and safety glasses when handling deployed air bag modules and safety belt pretensioners, Failure to follow this instruction may result in personal injury.

WARNING: If the air bag module or safety belt pretensioner pyrotechnic residue should contact the eyes, wash the eyes with clean water and seek medical assistance. Failure to follow this instruction may result in personal injury.

WARNING: If a large amount of air bag or safety belt pretensioner pyrotechnic residue is inhaled, seek medical assistance. Failure to follow this instruction may result in personal injury.

1. Refer to: Pyrotechnic Device Health and Safety Precautions (100-00 General Information, Description and Operation).
   Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).

Double cab

2. Refer to: Floor Console - Double Cab (501-12 Instrument Panel and Console, Removal and Installation).

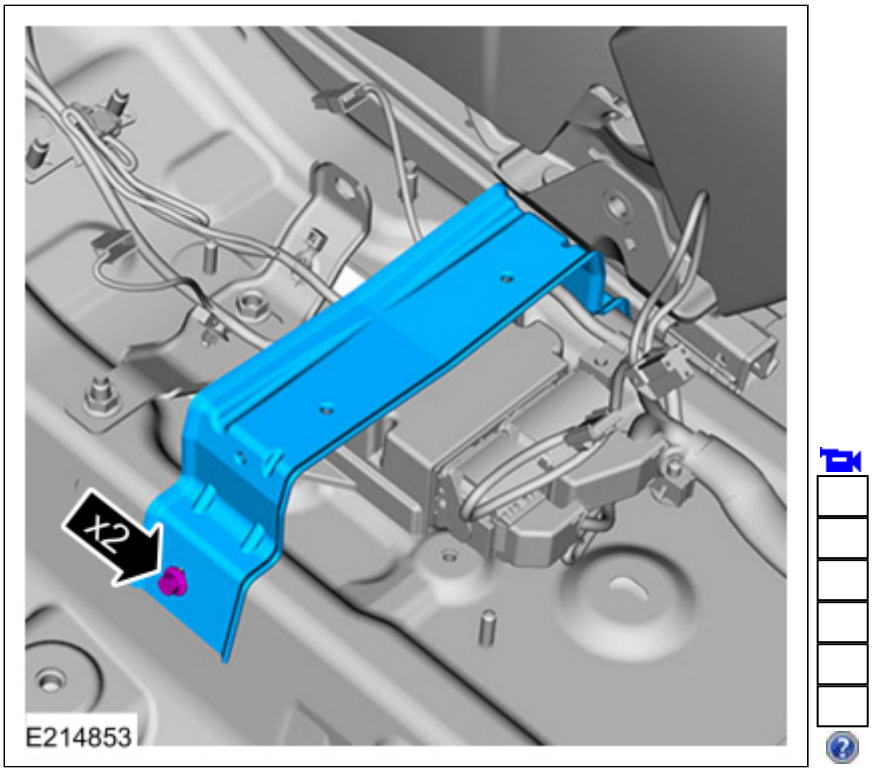
Stretch cab

3. Refer to: Floor Console - Double Cab (501-12 Instrument Panel and Console, Removal and Installation).

Single cab

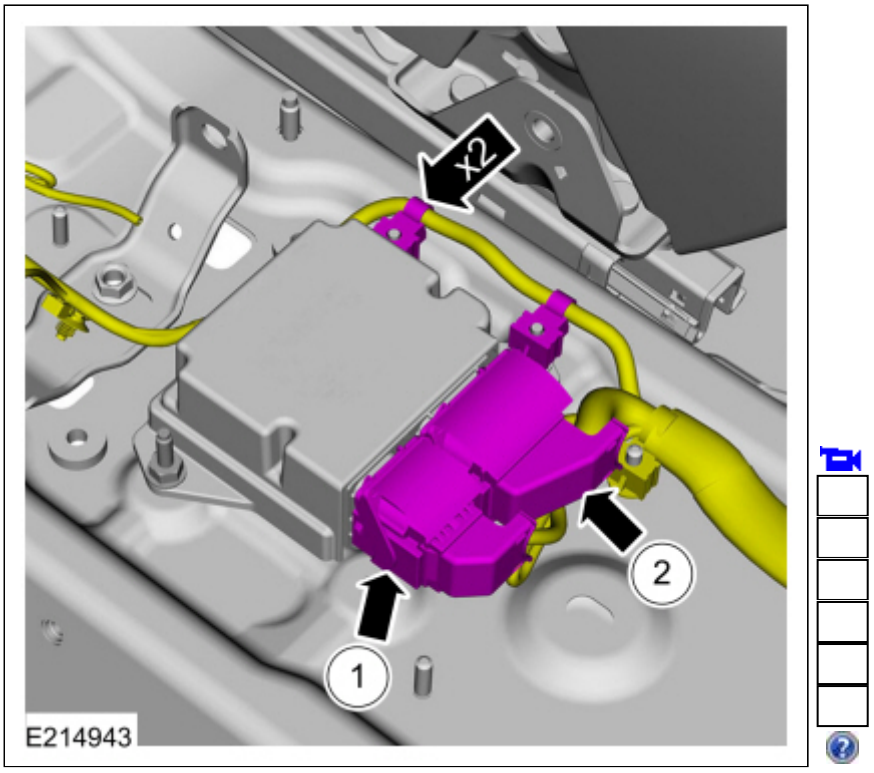
4. Refer to: Floor Console - Single Cab (501-12 Instrument Panel and Console, Removal and Installation).

Vehicles with front bench seat



5. **NOTE:** *Remove front bench seat only.*

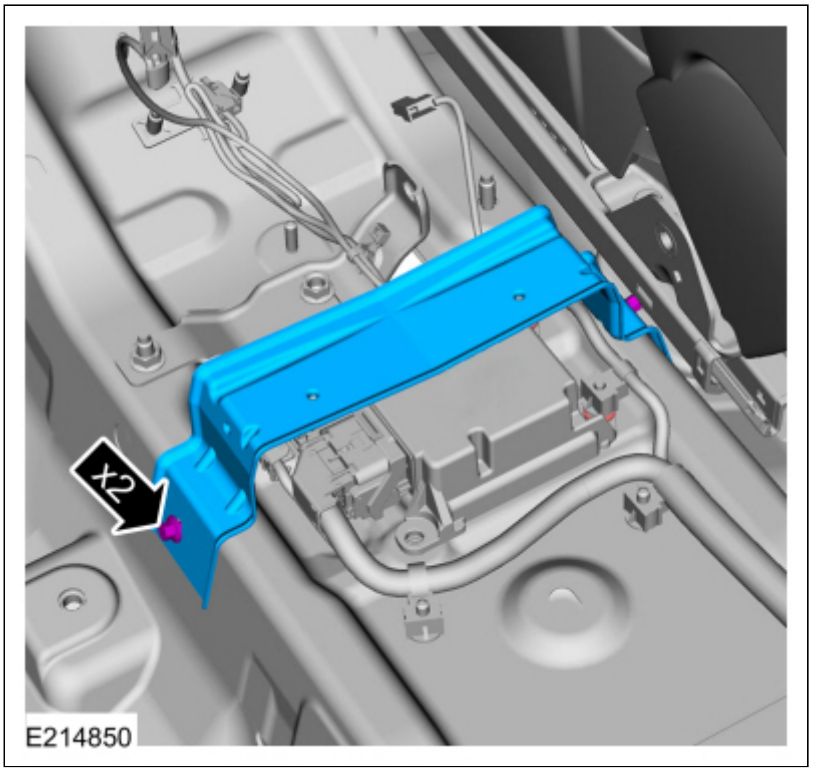
   Refer to: Front Seat (501-10A Seating, Removal and Installation).



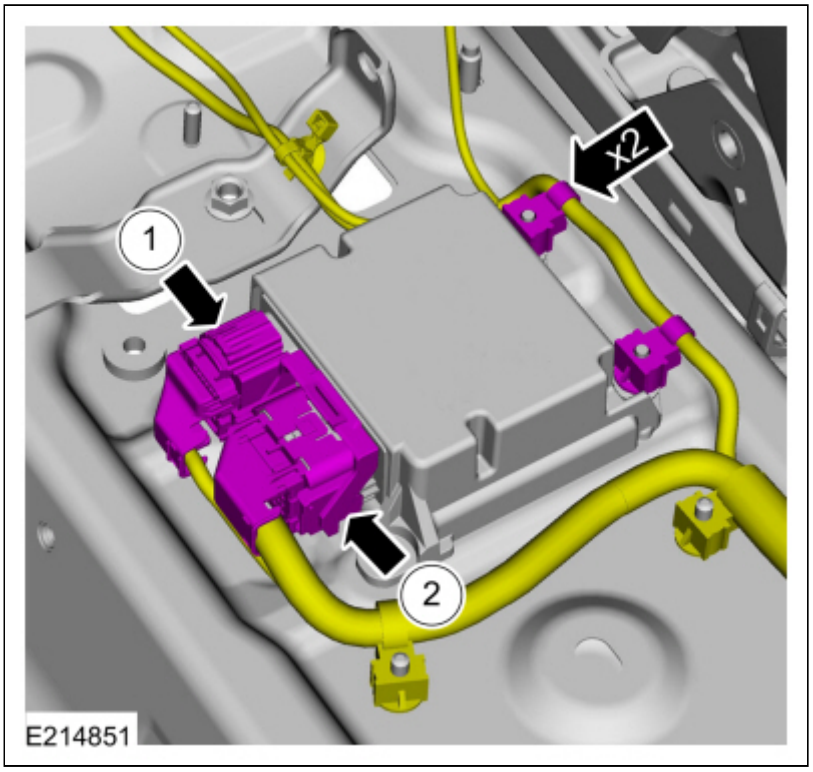
All vehicles

6. **NOTE:** *Both seats must be move forward before removing the RCM module.*

   On both sides.
   Torque: 11 Nm



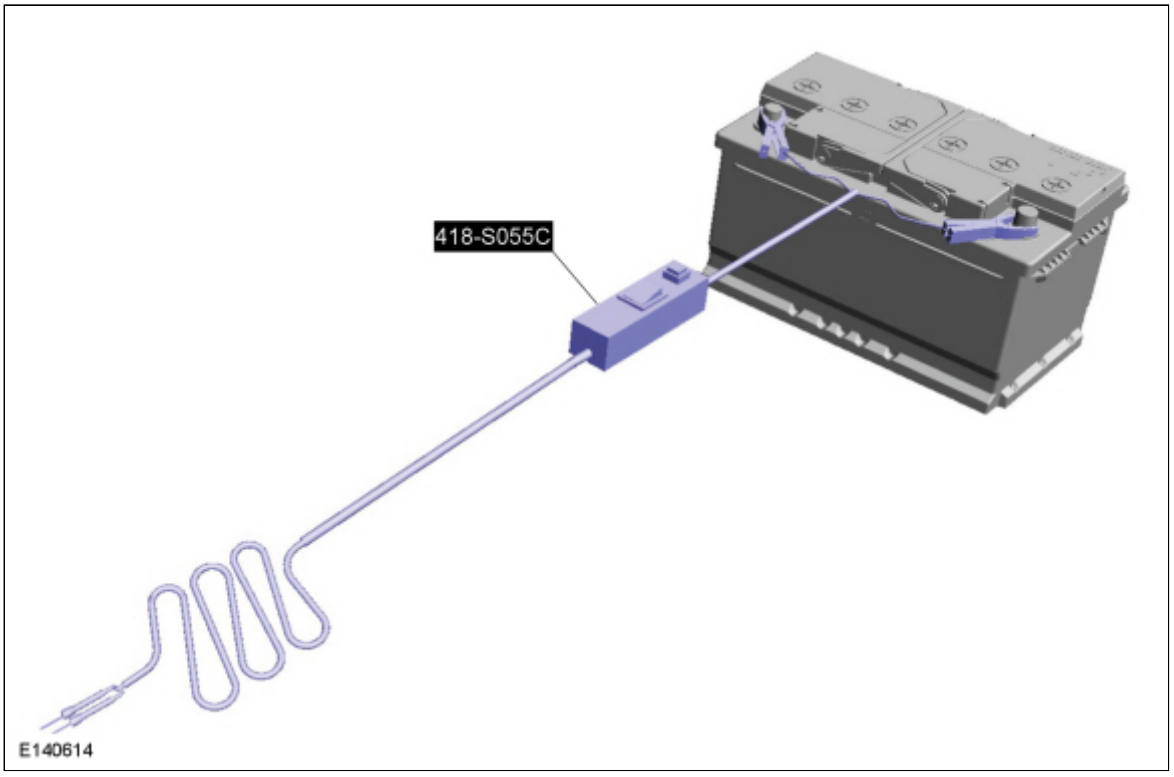
7.



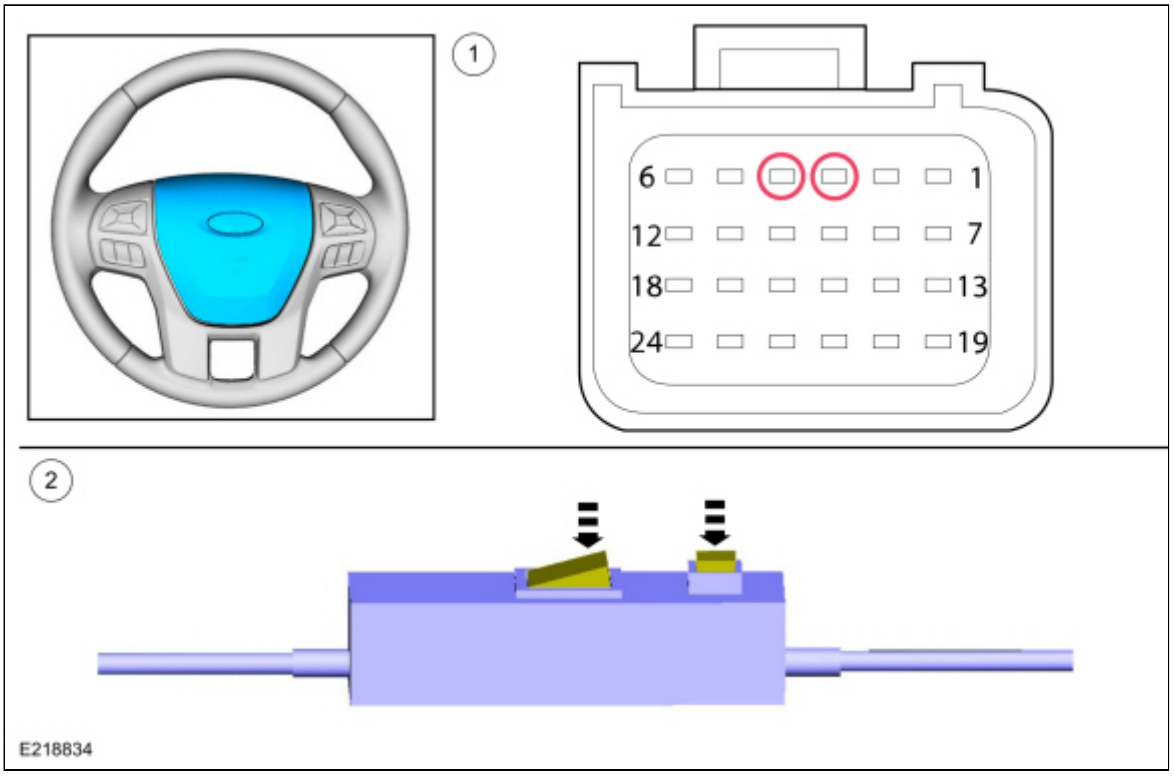
8. **NOTE:** *Only heavy duty vehicle*

   NOTE: *Both seats must be move forward before removing the RCM module.*

On both sides.
Torque: 11 Nm

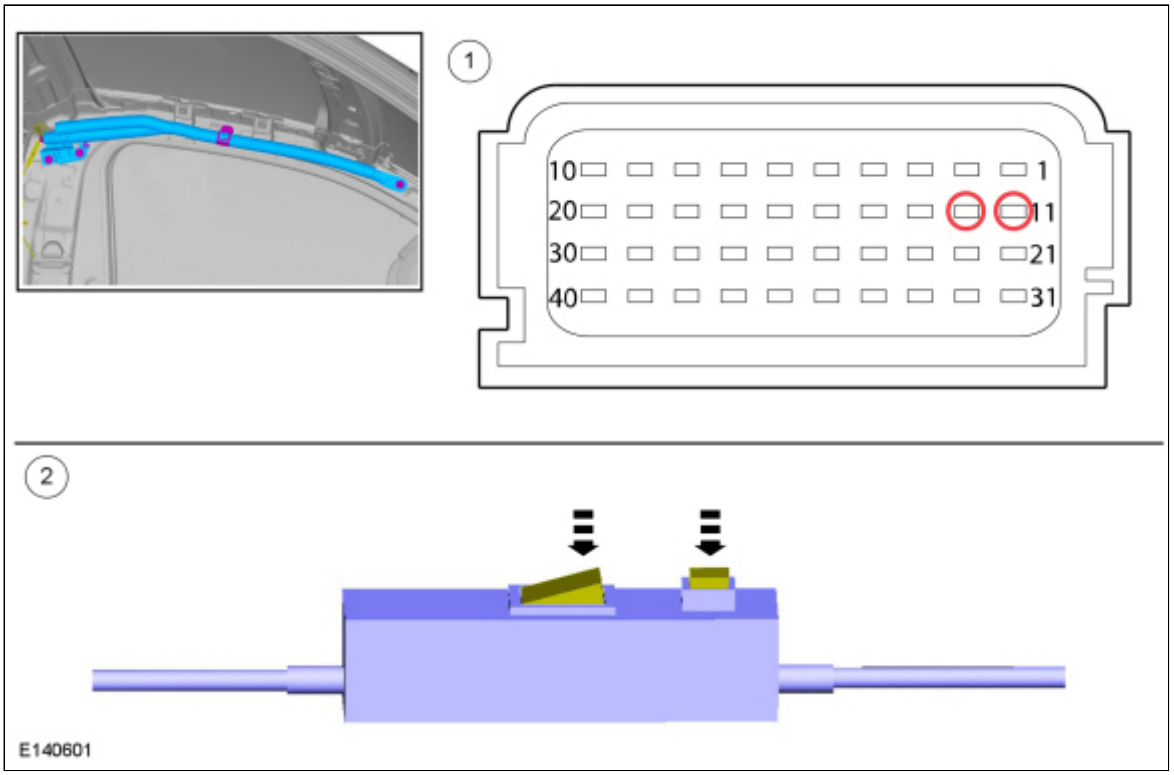


9. **NOTE:** *Only heavy duty vehicle*



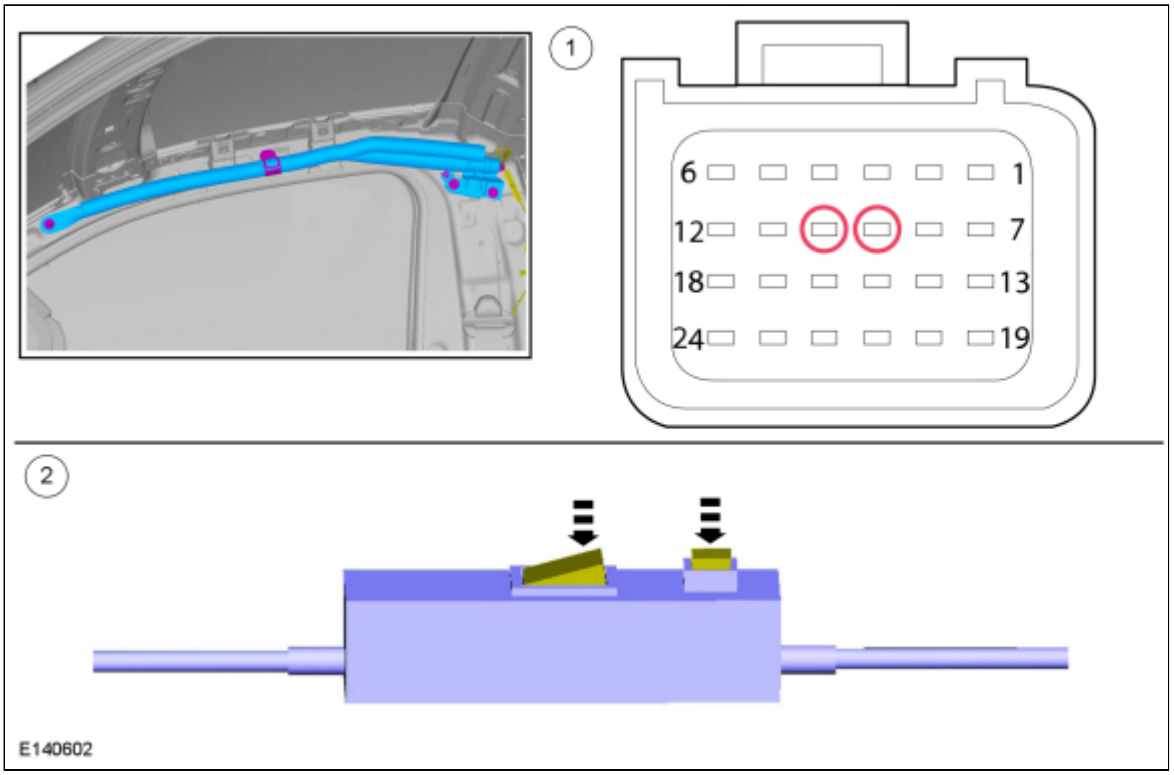
All vehicles

1. 12 volt battery.
   Use Special Service Tool: 418-S055C Test and Deployment Lead, Air Bag/Pyrotechnic Safety Belt.



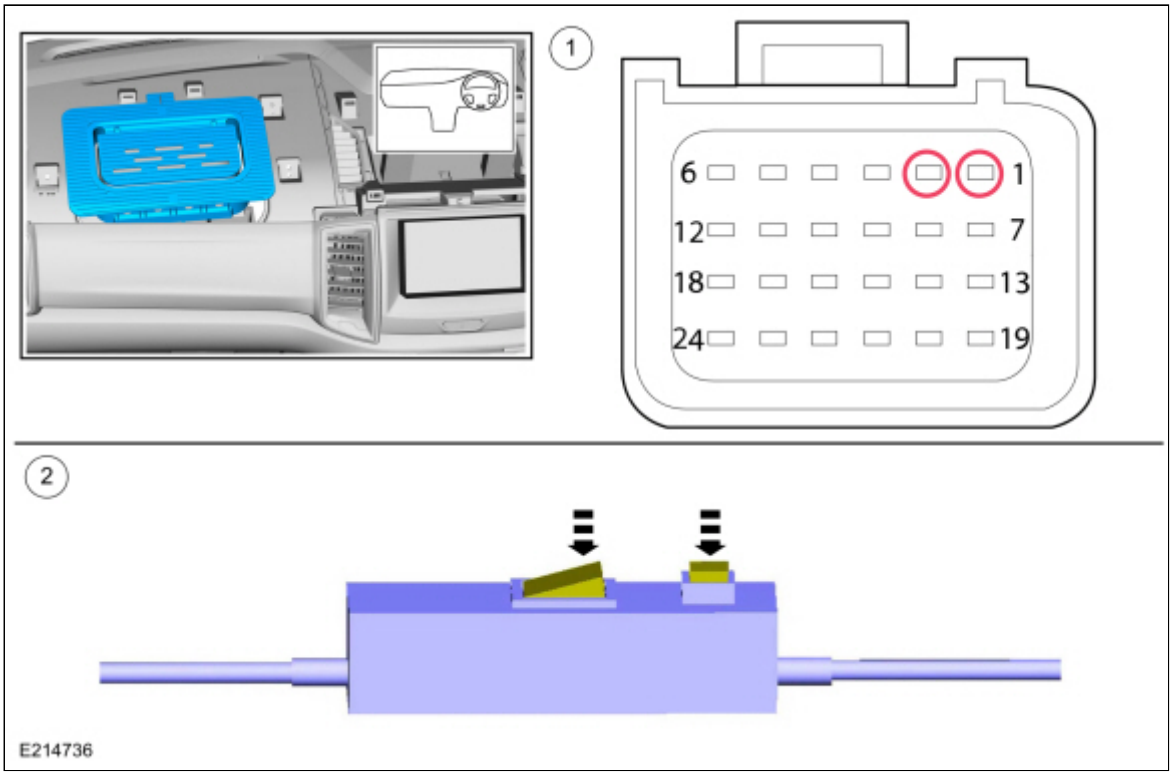
1. Driver air bag.

2. **WARNING: Make sure to be a minimum distance of 6 meters from pyrotechnic components during deployment. If possible stand behind a wall.**

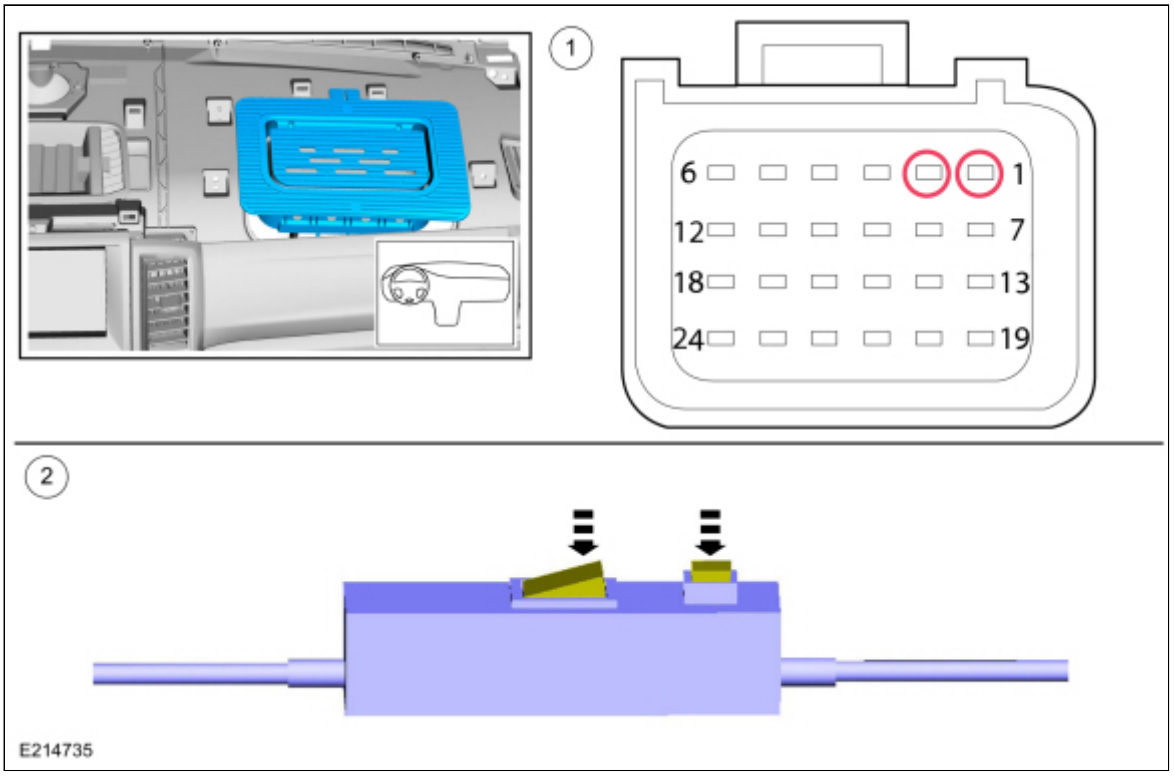


1. Single Cab shown, Double cab and Super cab is similar.

2. **WARNING: Make sure to be a minimum distance of 6 meters from pyrotechnic components during deployment. If possible stand behind a wall.**



1. Single Cab shown, Double cab and Super cab is similar.
2. **WARNING: Make sure to be a minimum distance of 6 meters from pyrotechnic components during deployment. If possible stand behind a wall.**



RHD

1. Passenger air bag.
2. **WARNING: Make sure to be a minimum distance of 6 meters from pyrotechnic components during deployment. If possible stand behind a wall.**

Supplemental Restraint System (SRS) Depowering and Repowering

Special Tool(s) / General Equipment

Ford Diagnostic Equipment

Depower

1. **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   WARNING: Never probe the electrical connectors on Side Airbag or Side Curtain assemblies. Failure to follow this instruction may result in the accidental deployment of these assemblies, which increases the risk of serious personal injury or death.

   WARNING: Never disassemble or tamper with seat belt deployable components. Never back probe deployable device electrical connectors. Tampering or back probing may cause an accidental deployment and result in personal injury or death.

   WARNING: To reduce the risk of accidental deployment, do not use any memory saver devices. Failure to follow this instruction may result in serious personal injury or death.

   NOTE: *The airbag warning indicator illuminates when the correct RCM fuse is removed and the ignition is ON.*

   NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. Turn all vehicle accessories OFF.

3. Turn the ignition OFF.

4. At the CEM (Central Electronics Module), located on the drivers side lower instrument panel, remove the fuse panel cover and fuse 86 (10A) from the CEM (Central Electronics Module). Refer to Wiring Diagram Section 501-20B, for Schematic and Connector information.

5. Turn the ignition ON and monitor the airbag warning indicator for at least 30 seconds. The airbag warning indicator remains lit continuously (no flashing) if the correct RCM fuse is removed. If the airbag warning indicator is not lit continuously, remove the correct RCM fuse before proceeding.

6. Turn the ignition OFF.

7. **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.**

   Disconnect the battery.
   Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).

8. Wait at least one minute before continuing vehicle service.

Repower

1. **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   WARNING: To reduce the risk of accidental deployment, do not use any memory saver devices. Failure to follow this instruction may result in serious personal injury or death.

NOTE: *The airbag warning indicator illuminates when the correct RCM fuse is removed and the ignition is ON.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

Vehicles with Intelligent Access (IA)

2. Install RCM fuse 86 (10A) in the CEM (Central Electronics Module).

3. **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any airbag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.**

   Connect the battery.
   Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).

4. Prove out the RCM as follows: Turn the ignition from ON to OFF. Wait 1O seconds, then turn the ignition back to ON and visually monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator will illuminate continuously for approximately 6 seconds and then turn OFF. If an air bag SRS fault is present, the air bag warning indicator will: **fail to light**, **remain illuminated**, **flash.** The air bag warning indicator might not illuminate until approximately 3O seconds after the ignition has been turned from the OFF to the ON position. This is the time required for the RCM to complete the testing of the SRS. If the air bag warning indicator is inoperative and a SRS fault exists, a chime sounds in a pattern of 5 sets of 5 beeps. If this occurs, diagnose and repair the air bag warning indicator and any SRS faults discovered.

5. Clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from the RCM using
   Use the General Equipment: Ford Diagnostic Equipment

Supplemental Restraint System (SRS) Depowering and Repowering

Special Tool(s) / General Equipment

Ford Diagnostic Equipment

Depower

1. **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   WARNING: Never probe the electrical connectors on Side Airbag or Side Curtain assemblies. Failure to follow this instruction may result in the accidental deployment of these assemblies, which increases the risk of serious personal injury or death.

   WARNING: Never disassemble or tamper with seat belt deployable components. Never back probe deployable device electrical connectors. Tampering or back probing may cause an accidental deployment and result in personal injury or death.

   WARNING: To reduce the risk of accidental deployment, do not use any memory saver devices. Failure to follow this instruction may result in serious personal injury or death.

   NOTE: *The airbag warning indicator illuminates when the correct RCM fuse is removed and the ignition is ON.*

   NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. Turn all vehicle accessories OFF.
3. Turn the ignition OFF.
4. At the CEM (Central Electronics Module), located on the drivers side lower instrument panel, remove the fuse panel cover and fuse 35 (5A) from the CEM (Central Electronics Module). Refer to Wiring Diagram Section 501-20B, for Schematic and Connector information.
5. Turn the ignition ON and monitor the airbag warning indicator for at least 30 seconds. The airbag warning indicator remains lit continuously (no flashing) if the correct RCM fuse is removed. If the airbag warning indicator is not lit continuously, remove the correct RCM fuse before proceeding.
6. Turn the ignition OFF.
7. **WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.**

   Disconnect the battery.
   Refer to: Battery Disconnect and Connect - Vehicles Built Up To: 16-08-2015 (414-01 Battery, Mounting and Cables) .
8. Wait at least one minute before continuing vehicle service.

Repower

1. **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   WARNING: To reduce the risk of accidental deployment, do not use any memory saver devices. Failure to follow this instruction may result in serious personal injury or death.

NOTE: *The airbag warning indicator illuminates when the correct RCM fuse is removed and the ignition is ON.*

NOTE: *The SRS must be fully operational and free of faults before releasing the vehicle to the customer.*

Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

Vehicles With: Keyless Entry

2. Install RCM fuse 35 (5A) in the CEM (Central Electronics Module).

3. **WARNING: Make sure no one is in the vehicle and there is nothing blocking or placed in front of any airbag module when the battery is connected. Failure to follow these instructions may result in serious personal injury in the event of an accidental deployment.**

   Connect the battery.
   Refer to: Battery Disconnect and Connect - Vehicles Built Up To: 16-08-2015 (414-01 Battery, Mounting and Cables) .

4. Prove out the RCM as follows: Turn the ignition from ON to OFF. Wait 1O seconds, then turn the ignition back to ON and visually monitor the air bag warning indicator with the air bag modules installed. The air bag warning indicator will illuminate continuously for approximately 6 seconds and then turn OFF. If an air bag SRS fault is present, the air bag warning indicator will: **fail to light**, **remain illuminated**, **flash.** The air bag warning indicator might not illuminate until approximately 3O seconds after the ignition has been turned from the OFF to the ON position. This is the time required for the RCM to complete the testing of the SRS. If the air bag warning indicator is inoperative and a SRS fault exists, a chime sounds in a pattern of 5 sets of 5 beeps. If this occurs, diagnose and repair the air bag warning indicator and any SRS faults discovered.

5. Clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from the RCM using
   Use the General Equipment: Ford Diagnostic Equipment

Unserviceable Airbag Disposal

1. **WARNING: To minimize the possibility of injury in the event of premature deployment, always carry a live air bag module with the bag and trim cover pointed away from the body. Failure to follow this instruction may result in personal injury.**

   WARNING: To prevent premature deployment, live air bag modules must only be placed on work benches which have been ground bonded. Failure to follow this instruction may result in personal injury.

   NOTE: *All unserviceable air bag modules have been placed on the Mandatory Return List. All discolored or damaged air bag modules should be treated the same as any unserviceable live air bag module being returned.*

   Remove the unserviceable air bag module. For additional information, refer to the relevant procedure in this section.

2. **WARNING: Under no circumstances is an unserviceable air bag module(s) to be returned through the local mailing system. Failure to follow this instruction may result in personal injury.**

   Seal the unserviceable air bag module(s) in the packaging from the new air bag module(s) and address to the appropriate manufacturer. The package should then be forwarded to the Exchange Plan Center (as appointed through the national sales company) who will arrange forwarding to the manufacturer.

3. **NOTE:** *Autoliv passenger air bag modules, side air bag modules, side air curtain modules and driver lower air bag modules.*

   Autoliv Southern Africa, 19 Fransen Street, Chamdor, South Africa.

4. **NOTE:** *TRW driver air bag modules.*

   TRW Steering & Suspension Co. Ltd. , 64/2 Moo 4 Eastern Seaboard Industrial Estate, Tumbol Pluakdaeng, Amphur Pluakdaeng, Rayong 21140, Thailand.

5. **NOTE:** *Ashimori seatbelt pretensioners*

   Ashimori (Thailand) Company Ltd. , Quality Assurance Dept, 89 Moo 9, Wellgrow Industrial Estate Bangna-Trad Rd, K.M.36, Tambol Bangwua Bangpakong District, Chachoengsao 24180, Thailand.

Description and Usage of Body Repair Literature

The purpose of this document is to give the vehicle body specialist a general overview of possible repair techniques for body repair on Ford vehicles. Likewise, information about materials and tools to be used is given.

No model-specific information is given. Such information is saved in the respective Ford Etis workshop manual. Supplementary or updated information can be found in the Technical Service Information.

Information on repair techniques, materials or tools, which are not necessary for body repair on Ford vehicles or which are not considered as conventionally in use, are not listed in this document.

Layout:

The general section is divided into the following subject areas:

- How to use the document, with information on the symbols used
- Health and safety information on using materials and tools
- Information on bodywork construction and materials used
- Workshop equipment and use of tools
- Damage Assessment and determining the extent of the repair area
- Explanation of possible repair techniques for body repair
- Possibilities of the repair or remedying leaks, noises

Training:

The Ford Service Organization offers basic and more in-depth training on much of the content of this document. You can obtain an overview of the entire training offering from the Ford Service Organisation or on the Internet at www.ford-training.de.

Copyright © 2016 Ford Motor Company

Symbols

Warnings and hazard notices

Warnings and hazard notices are shown in this literature by WARNING, CAUTION and NOTE indicators. These notices are always shown before a job step which can be associated with an immediate personal or material danger.

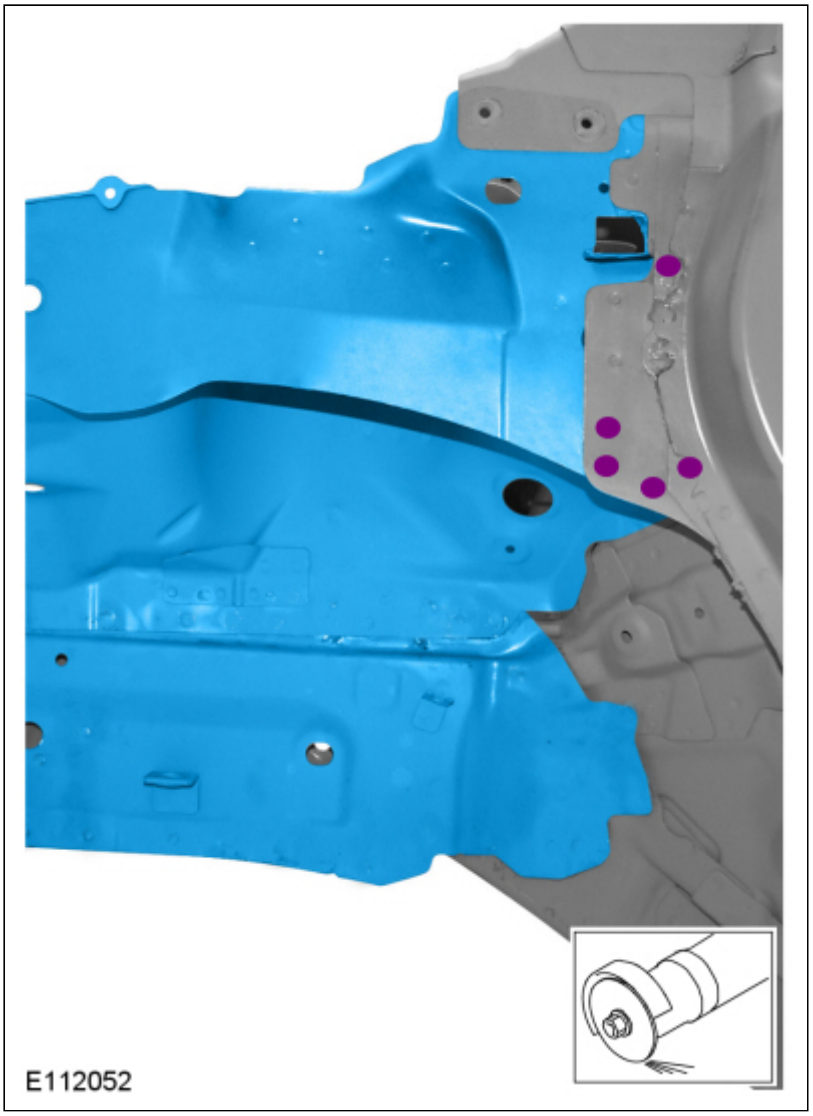
WARNING: This notice is used when failure to exactly follow the instructions given in this literature or failure to follow them at all may result in a hazard to persons and/or in persons being injured.

NOTICE: This notice is used when failure to exactly follow the instructions or test procedures given in this literature or failure to follow them at all may result in damage to the vehicle or to components.

NOTE: *This notice is used when the operator should be made aware of special or extra information.*

Symbols used

Symbols are used to graphically represent additional information about the operation, tool or materials. This information will not be shown separately again as text.



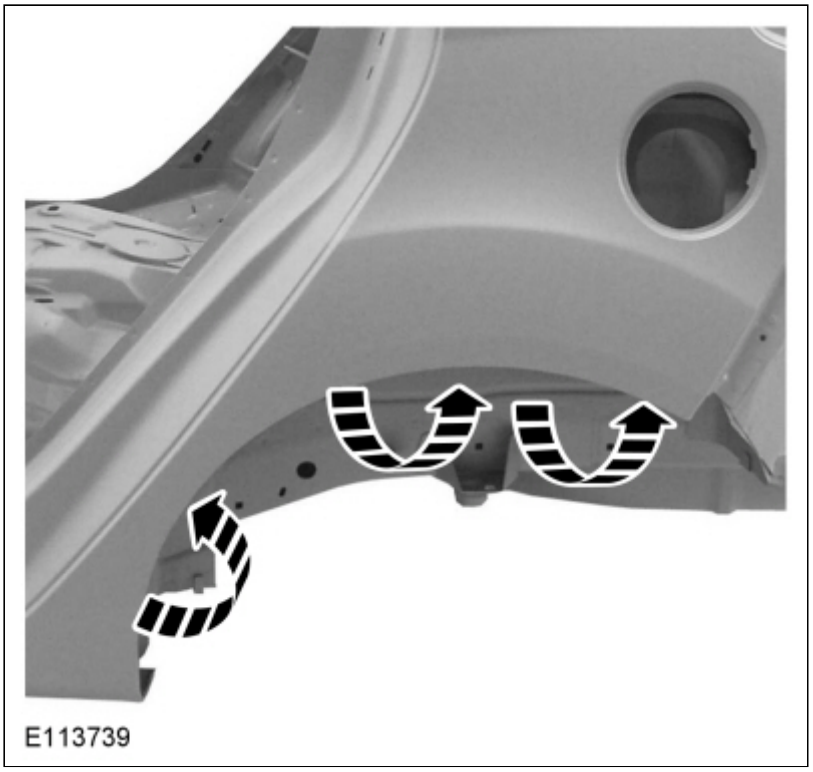
The symbols used in this and other body repair manuals may be used alone as well as in combination in a diagram.

All the symbols used in these documents can be found in the General Information section.

For additional information, refer to: Symbols Glossary (100-00 General Information, Description and Operation).

Color coding

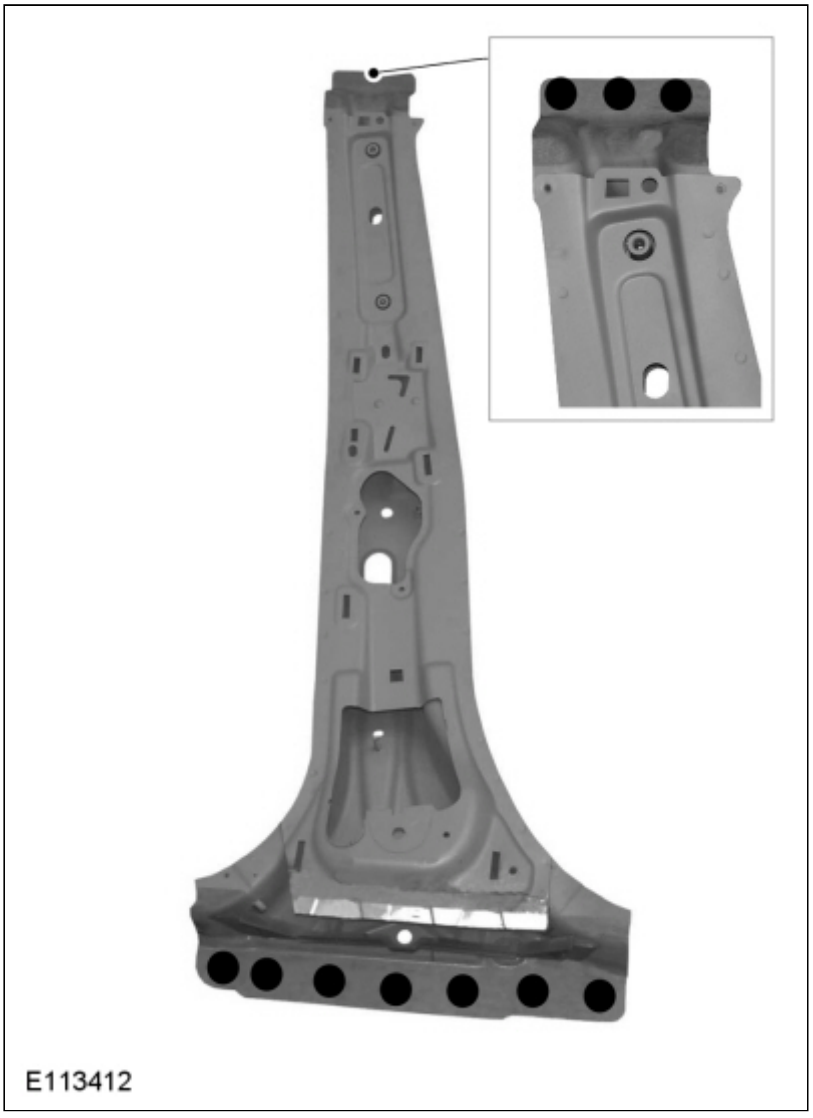
Different colors or shading can be used to depict special areas and components.



- Blue: Main component which will be removed or installed. Only actual movements will be shown in blue in the diagram.
- Magenta: Materials or fixings, e.g. bolts, clips, spot welds or adhesives.
- Yellow: Component which is being cleaned or loosened, moved or fastened, but remains in the vehicle.
- Light blue: Color for special tools and color for equipment.

In an assembly operation, the colors show the sequence of removal steps.

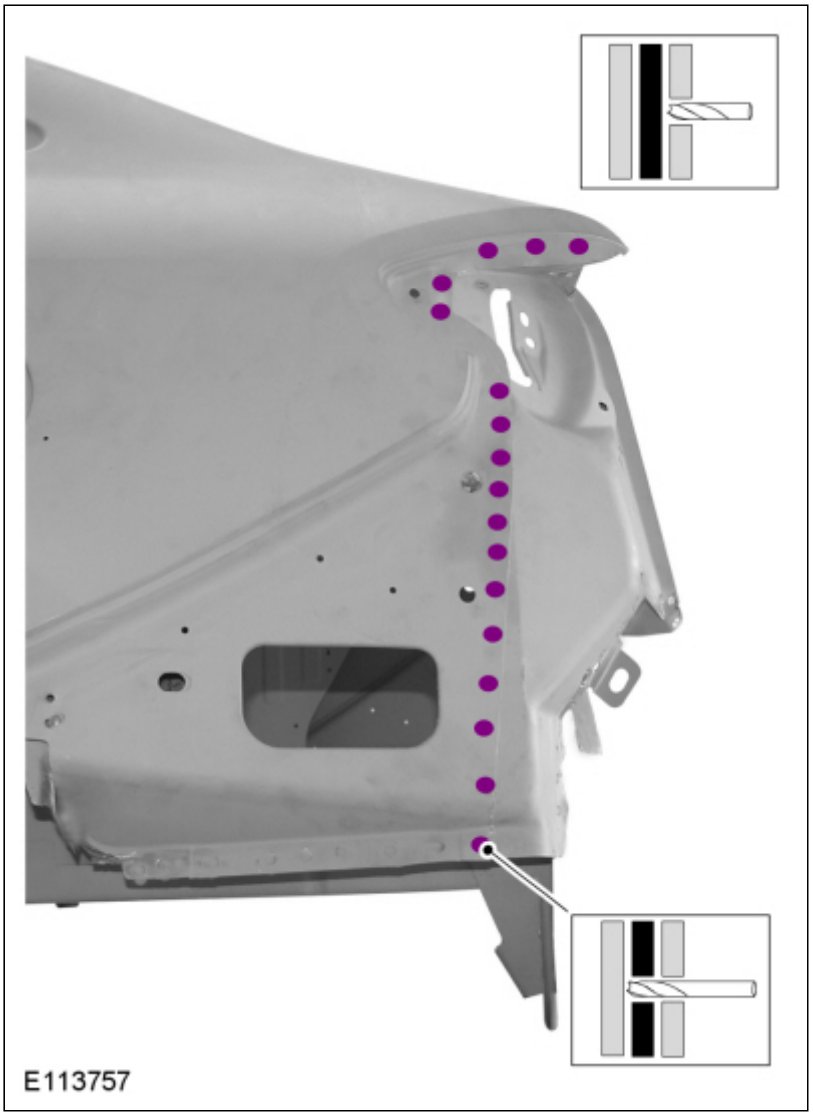
- Blue: Main component which is being installed, removed, taken away or added.
- Green: Component which, in addition to the main component (blue) is being installed, removed, taken away or added.
- Brown: Component which, in addition to the main component (blue) and the additional component (green) is being installed, removed, taken away or added.



Movement arrows

Necessary work such as clinching flanges or moving lugs etc. will be represented by broken arrows.

E113739



Magnified and detailed views

If a detail cannot be clearly seen in the illustration because of its size or location, it is shown enlarged in a separate window.

E113412

Position lines within a diagram

A position line is used to indicate a special position or a component. A spot weld which must be drilled out through two panel thicknesses is indicated here, different to all the others.

Copyright © 2016 Ford Motor Company

Health and Safety Precautions

General

Appropriate repair methods and their correct implementation are very important for both vehicle operating safety and personal safety.

WARNING: There is danger of injury through:

- **High voltage when electrical welding.**
  - **Do not perform welding work in a damp environment or on a wet substrate. Use suitable insulation underneath.**
- **Flammable substances in the welding area.**
  - **Remove flammable substances from the danger area. Remove the fuel tank and, where required, those components which supply fuel.**
  - **Completely remove the battery before carrying out any welding in that area.**
- **Welding fumes, which are harmful to health.**
  - **Always ventilate the workplace well and use an extraction system.**
- **Welding spatter and UV radiation.**
  - **Wear protective clothing, gloves and welding mask or welding goggles.**
- **Pyrotechnic components.**
  - **Disconnect the battery negative clamp and cover the battery terminal. Remove any airbag components.**

All the regulations governing Health and Safety at Work must be complied with during body repairs.

Personal protection

Welding gases and grinding dusts can be harmful to the health. For this reason, make sure that rooms are well ventilated and work using the welding fumes extraction system. Sealants, underbody protection and paint residues must not be burnt down with an unshielded flame, as this will produce gases which are damaging to health. A dedicated extraction system must always be used when welding or brazing.

When working with substances containing solvents, good ventilation must be provided, respiratory protection must be worn and an extraction system must be used.

Do not weld in damp areas, if necessary use an insulation mat. Welding and grinding work near the battery presents the danger of explosion. For this reason, it must be removed before the work is started.

Cutting, grinding and alignment work on metal panels can cause a noise level of 85 to 90 dB (A) or even more. For this reason, you must always wear ear defenders.

The various body areas are subject to very high forces during realignment work. Should any component suddenly become detached during this process, there is a very great danger of injury. For this reason, pulling chains and pulling shackles must be secured with arrester cables.

NOTE: *Work on airbag systems may only be performed by persons who have a relevant certificate of competence.*

Some special instructions must be followed when working on airbag systems:

- Always stand to the side of it when removing or installing an airbag.
- Always store an airbag or an airbag/steering wheel with the airbag side pointing upwards and in a safe place.
- Only install the airbag again when the vehicle is fully repaired and the complete electrical systems has been tested.
- Take into account the location of air curtains and shoulder airbags.

Protection of the vehicle

Protect affected areas from weld spatter and dust during all welding and grinding work on the vehicle. If metallic dust stays on the vehicle for some time, there is the likelihood of film rust formation. Grinding or sanding work produce tiny spots of damage to the paint surface, which may cause corrosion.

For this reason, make sure to:

- Use carbon fibre blankets to protect the vehicle body.

- Use covering film to protect the vehicle body from sanding dust and metal dust.
- Take appropriate measures to protect the interior equipment of the vehicle during any repair work.

In addition, take into account:

- Remove fuel supply components as necessary.
- Protect working areas which are in danger of catching fire with a fireproof blanket.
- The welding must not cause components of the air conditioning system to become heated.
- Removal of any attached components in the space adjoining the repair area.
- Use covering paper to protect the interior from grinding dust.
- Create a definite barrier between the work area and the interior by using a carbon fibre blanket.

Protective equipment

The following protective equipment must always be used:

- Protective helmet or welding mask.
- Ear defenders and breathing protection.
- Protective gloves and safety boots.
- Welding fume extraction.

Electronic components

Increased use of comfort and safety electronics in modern motor vehicles also requires the greatest attention to be paid during body work. Overvoltages produced during welding and in alignment work during bodyshell rectification may cause electronic systems to be damaged. In particular, the safety instructions for performing welding work on vehicles with airbag systems must be adhered to.

NOTE: *After disconnecting the power supply and before performing further work, a wait time of up to 15 minutes must be maintained, depending on the vehicle. Work on airbag systems may only be performed by persons who have a relevant certificate of competence.*

Pay attention to the following points:

- Disconnect the battery negative clamp and cover the battery terminal.
- Disconnect the electrical connector at the airbag control module.
- If welding is to be performed directly near a control module, it must be removed beforehand.
- Never connect the negative cable of the welder near an airbag or a control module.
- Connect the negative cable of the welder close to the location of the weld.

For additional information, see: **501-20B Supplemental Restraint System**

Liquefied gas vehicles

Alternative fuel vehicles often require special handling in the workshop area. Above all, assembly operations to some extent require particular knowledge when dealing with the special technology and the safety regulations.

NOTE: *Only fully trained personnel are permitted to work on alternative fuel vehicles.*

These special requirements must be understood and taken into account in the body shop as well.

NOTICE: Danger of fire and explosion. The safety instructions must always be followed when performing service work on fuel/gas systems. Failure to observe this instruction can lead to injury.

If the smell of liquefied petroleum gas (LPG) or compressed natural gas (CNG) is noticed in the workshop, instruct everyone present as follows:

- No smoking and extinguish all naked flames.
- Shut off all electrical and air powered equipment.
- Evacuate the area.
- Ventilate the area.
- Contact the fire control authorities.
- Move the vehicle to a dedicated, well ventilated area.

Alternative fuels require special handling:

- Handle them in a specially dedicated, well ventilated area, which is only accessible to authorized persons.
- Identify the designated area with new warning notices.
- If possible close the main shut-off valve and run the vehicle on alternative fuel until it switches automatically to petrol operation. Only then is it allowed to drive the vehicle into the workshop or service area.
- If possible do not allow any liquefied gas (LPG) to escape.

- The ambient temperatures must not exceed 40°C. For this reason the LPG and CNG fuel tanks must be removed on vehicles with LPG or CNG operation before using a drying oven to dry the paint where the temperature exceeds 40°C.

Avoid situations in which fuel from an LPG or CNG fuel tank can escape. These situations include:

- Extremely hot ambient temperatures.
- Parking near a heating device.
- Raising the vehicle near a ceiling heater.

Refrigerated conversion vehicles

Apart from the special materials used in building the structure of the refrigerated compartment, such vehicles have special energy and refrigeration systems which require special handling during repair.

NOTICE: Danger of injury. Work on the 230 volt system of the refrigeration equipment must only be carried out by trained specialist personnel.

NOTICE: The refrigeration system is filled with refrigerant R134a. This can cause frostbite if it contacts the skin. Pay attention to the corresponding warning notices and instructions in the chapter Air Conditioning Systems.

NOTE: *Work on the refrigerant circuit may only be performed by persons who have a relevant certificate of competence.*

Vehicles with a refrigerated compartment are often used to transport foodstuffs. For this reason, additional hygiene regulations must be complied with during repair work.

Aluminum and plastic are used to construct the two different types of compartment found on refrigerated vehicles.

The aluminum conversion is a very stable and technically perfect variant. However, against this the relatively high production costs and a lower payload must be taken into account, because of the weight of the aluminum conversion itself.

NOTE: *Basic and in-depth training is offered on the following topics. You will find an overview of the complete range listed in the Training brochure published by the Ford Service Organization.*

The plastic conversion has developed into a light, clean and economical alternative because of constant further development of materials and working techniques.

NOTE: *The material combinations, the workmanship and the working methods must comply with the current food hygiene regulations. For this reason, service and repair work on the refrigerated conversion may only be performed by authorized and specially trained technicians.*

Refrigerated compartment constructions are often made using both materials. The floor pan is made of structured, slip-proof aluminum panels and the wall and ceiling cladding is made of smooth surfaced plastic elements.

NOTICE: PUR hard foam is flammable. If PUR hard foam is overheated, it will burn on its own with a brilliant yellowish flame. It produces unpleasant choking and toxic fumes. Special measures must be taken when welding the vehicle body.

Polyurethane wall and ceiling elements are manufactured using a sandwich principle. An insulating polyurethane core is coated with food grade ABS plastic on one side.

PUR hard foam does not decompose, is rot resistant and is odorless. These properties make it suitable for use as insulation.

Because of its closed cell structure, water uptake by PUR hard foam is for the most part only a problem at edges. Cut edges or other mechanically worked surfaces must however be sealed with the greatest care.

The conversion to a refrigerated vehicle is performed as made-to-order production. The large surfaces of the wall and ceiling cladding can be changed and are particularly easy to repair.

If access to the back of a body panel section is needed because of body straightening work, in some circumstances it is cheaper to perform a cut-out repair instead of removing an element.

The repair process is fully described in the Student Information booklet Refrigeration System Technology, Transit 2000.5 Freshline.

Environmental Regulations

Orderly and responsible waste management is not only very important for the protection of health and the environment, but it also has great importance where saving natural resources is concerned.

In body repair shops, since the introduction of the EU directives on the avoidance of vehicle waste and the promotion of return, re-use and recycling of vehicles and their components (2000/53/EU), more rigorous attention than before is also paid to avoidance and recycling of waste materials.

NOTE: *The organization of disposal in the operation must comply with the country specific waste regulations:*

In this respect, body repair shops must take into account and comply with the following requirements:

- Separate waste according to its recycling and disposal methods.
- Produce evidence for the correct transport and disposal of waste.

NOTE: *The organization of disposal in the plant must comply with the requirements of the Waste Avoidance and Management Act.*

The avoidance and recycling of waste must always take priority. However, despite all measures which may be taken, waste cannot be completely avoided.

NOTE: *Useable waste which is not allowed in household rubbish, must be disposed of as special waste*

All remaining waste must be treated as commercial waste and disposed of according to the local requirements.

Only applies to the EU:

The vehicle manufacturer is also under a legal obligation since the older vehicle legislation came into force throughout Europe in 2002.

This law covers the surrender, withdrawal and environmentally friendly disposal of older vehicles through the manufacturer.

The older vehicle legislation contains all the necessary information for the environmentally compatible disposal of older vehicles, starting with preliminary handling involving the removal of all operating fluids, deactivation of pyrotechnic components, elimination of pollutants and then further handling by dismantling components for re-use and recycling.

Body Construction

General

Under bodywork construction, a general distinction is made between monocoque and non-monocoque bodywork. The safety of the occupants is the main consideration for all types of bodywork construction. The front and rear sections are designed so that they absorb the energy of the impact via crumple zones. The use of modern design and manufacturing methods and the use of newly developed body panels (relating to their deformation and strength properties) mean that, despite the continuous weight-savings, all safety-related requirements made of the construction can be met.

Integral body-frame

In this method of construction, coverings, reinforcements, retaining panels and profiles are permanently joined together using a variety of joining techniques (gluing, spot welding, laser welding, soft soldering or brazing). The load-bearing function of the structure must always be achieved in each case.

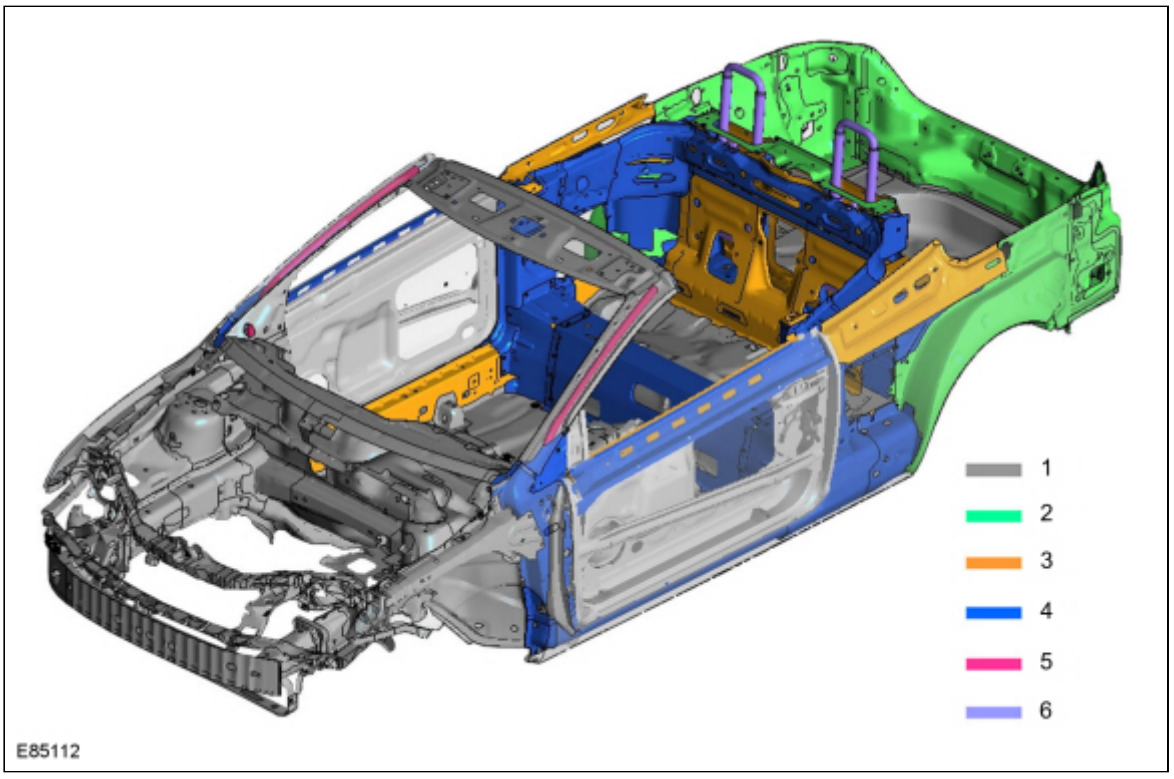
There is no distinction made between components which are purely subject to bending/torsion or thrust loads and parts which perform sealing/covering functions (as in non-monocoque bodywork for example). In modern passenger vehicles, monocoque bodywork is very widespread and offers the advantages of a lightweight and low-cost construction.

E59084

The rigidity of the bodywork is achieved by a panel skin and panel cross-section with the largest possible profile and therefore the largest resisting torque (such as for instance the rocker panel). Swage lines in the outer area of the bodywork increase the stiffness and the natural vibration frequency, to prevent possible drumming noises. The mounting points for ancillary components such as doors and wings are permanently built into the monocoque bodywork.

High rigidity of the bodywork is vitally important to keep the elastic deformations low at the joins to the ancillary components and to prevent noise when driving. Small gap dimensions are therefore only possible on vehicles with very stiff bodywork. With high bodywork stiffness, the construction can exert an influence on the handling of the vehicle (e.g. on poor road surfaces).

Advantages of monocoque bodywork:



- Weight reduction.
- Economical manufacturing technology.
- High torsional rigidity and high flexural strength.

- Defined deformation behavior at the front and rear.
- Maximum passive safety due to the strong passenger compartment

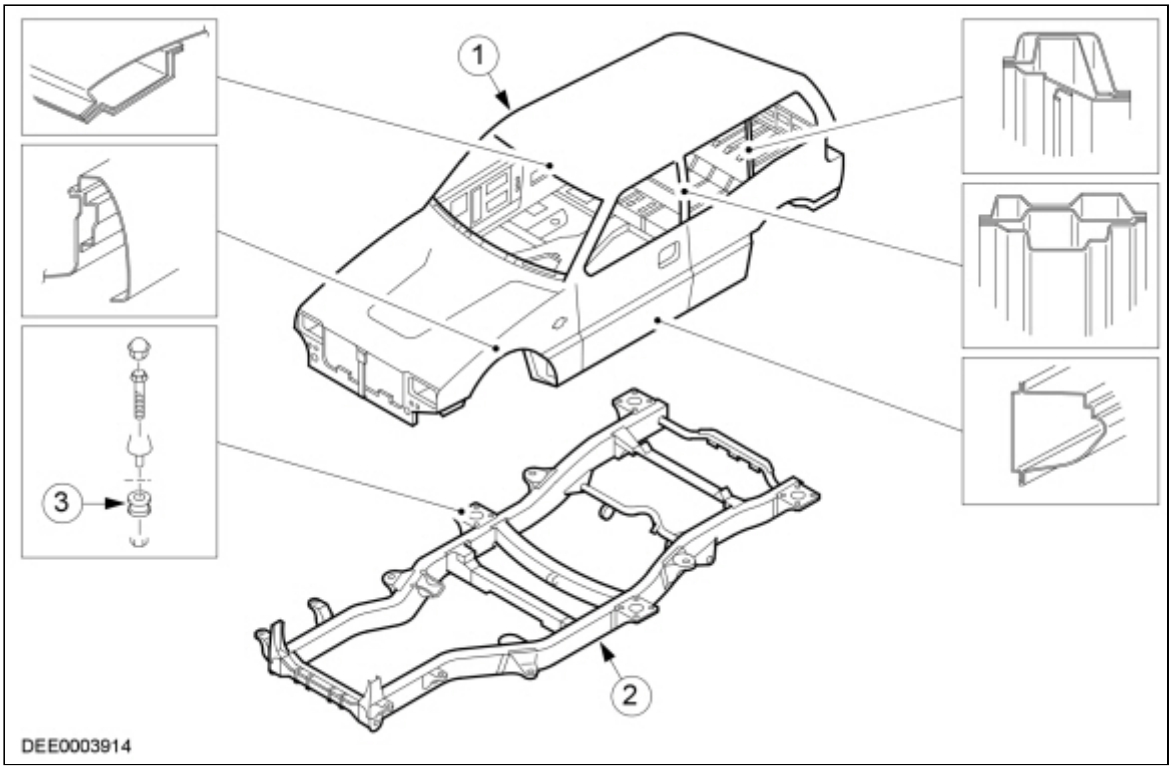
The protected passenger compartment with strong pillars, rocker panels and doors with integral side impact protection increase occupant protection. Opening of the doors is ensured, even if there is extreme deformation.

NOTE: *Repair work must always be performed according to the established workshop literature. All the safety requirements must be guaranteed after any repair work has been performed !*

Convertible

Description	Description
1	Body components adopted from the Focus 2004.75 (07/2004-)
2	Conventional bodywork construction steel
3	High-strength sheet steel
4	Super-high strength sheet steel
5	Maximum-strength sheet steel
6	Aluminium, can be subjected to high stresses

The body of a convertible differs from the principle of the integral body-frame of a saloon due to the lack of a roof construction. The body has a high degree of torsional stiffness. This is achieved by using high, super-high and maximum-strength sheet steel and body reinforcements in specifically-targeted areas.



These reinforcements can be installed in the area of the doors (diagonal braces etc.) or on the underfloor. In contrast to the saloon (or other non-convertibles) with square-section side members (closed profile), these reinforcements have a profile which is open on the underside (U-section).

Special constructional changes within the bodywork structure:

- Reinforcing or increase in the thickness of the sheet steel in the pillar area.
- Reinforcing or increase in the thickness of the sheet steel in the floor pan structure (rocker panel area).
- Use of heavily structured reinforcing panels in the rocker panel and pillar area.
- In the area of the windshield frame and A-pillars, thick-walled reinforcing tubes are used (roll-over protection).
- Because there is no roof, the bridge construction principle cannot be used as it is on the saloon for example. Flexural and torsional rigidity must be ensured by other components.

Non-monocoque bodywork

Non-monocoque bodywork is built onto a frame or a chassis. Frames used for this have various construction forms, e.g. the ladder frame or tube frame. Non-monocoque bodywork is the original way of constructing vehicles.

Description	Description
1	Vehicle body.
2	Frame Assembly
3	Bolted connection

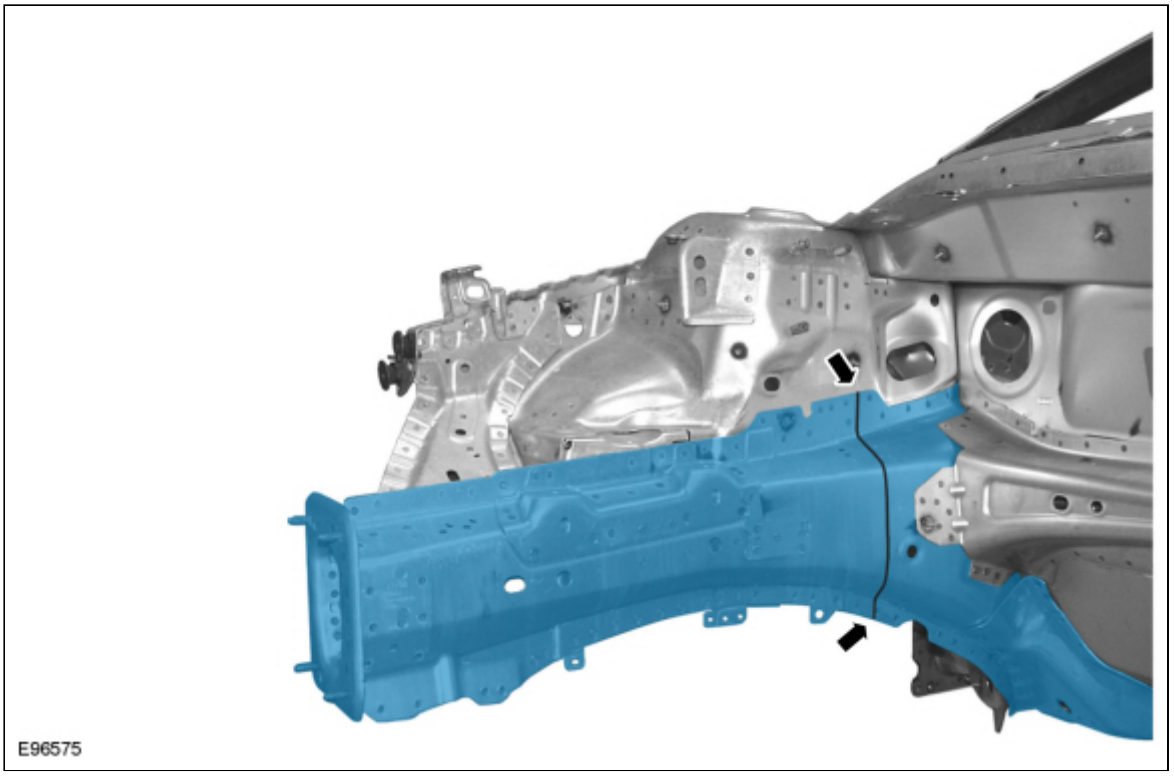
The ladder frame is still commonly used today for truck and off-road vehicles. The bodywork is placed on the frame or chassis. The total load which occurs while driving is transferred to the chassis.

More sporting vehicles can be built with non-monocoque bodywork, mostly using a lattice tube frame. Limitations in the design are accepted for the benefit of low weight. The outer skin here is usually made of plastic or alloy. This type of construction is also common in touring car racing for instance.

Special features of non-monocoque bodywork construction:

- Partly large surface panels and high volume shaped parts.
- Thicker materials and greater reinforcements in the frame area.
- Floor pan as frame structure with high torsional rigidity and flexural strength.
- Side panels only make a small contribution to the overall stability of the body.

Instructions for repair:



A different repair technique is necessary during repairs. A deformed frame structure requires high suction power during straightening repairs. Frequently, the body also has to be detached from the frame structure in order to carry out separate repair.

Due to the very stable frame structure, please note that the straightening behavior is completely different to that of a passenger vehicle. The frame and the attached body must be repaired independently of each other.

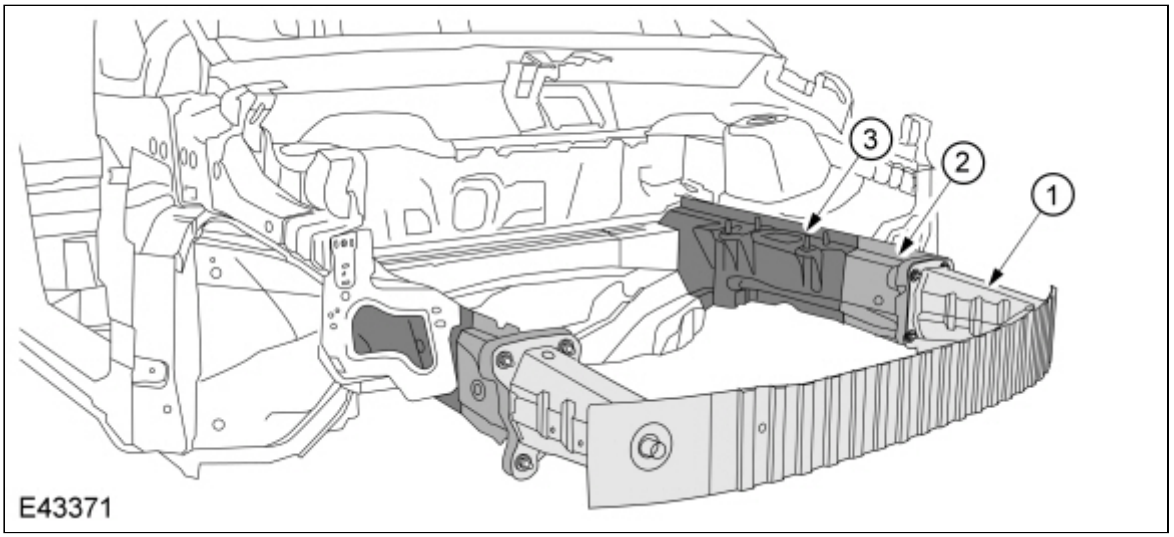
Further information can be found in the respective body repair manual.

Special points:

Tailored blanks

Blue: Tailored blank

Arrows: Laser weld seam



The term "tailored blanks" describes the connection of two different panel thicknesses and/or strengths in the bodywork carcass. This connection is done using laser weld seams. Cut locations exactly on the laser weld seams are not permitted, as at present no joining techniques are approved for use in repair procedures that would re-create joins of the same quality.

NOTE: *No cutting, no welding and therefore no sectional repairs are permitted in the immediate area of the laser weld seams. The model specific requirements are documented in the respective Body Repair Manuals.*

Typical application areas are:

- Side member
- Door inner reinforcement/door frames
- Wheelhouses
- Rocker panel inner reinforcement
- Roof rail inner reinforcement

Deformation behavior

Description	Description

1	Bolted crash element
2	Front side member
3	Rear side member

Different materials and design features lead to staged deformation of the front and rear of the vehicle in an accident.

Crash element:

At the front of the vehicle there is a crash element which is connected to the side member by threaded connections. This crash element can absorb light impacts of up to about 15 km/hr. Because of the threaded connections, the crash element can be changed very quickly.

NOTE: *Deformed crash elements must not be straightened or repaired.*

Heavier impacts which can no longer be absorbed by the crash element must be absorbed by the side members or the floor pan structure. Depending on the extent of the damage, a part or complete replacement can be performed on the side member.

The rear of the vehicle, like the front of the vehicle, has structures which protect the passenger cell through staged deformation in the event of an accident. The design layouts, however, are adapted to the requirements of the rear area.

Tools and Equipment for Body Repairs

Alignment systems

NOTE: *All the equipment for body work and painting work can be ordered online via the Wielander & Schill service portal http://fo.oem.wielanderschill.com.*

Straightening and alignment repairs are often required to restore a vehicle body to its original shape after accident damage.

Universal aligning and measuring systems and universal alignment angle systems are suitable for this work.

Description	Description
1	Universal aligning and measuring system
2	Universal alignment angle system

Basically, the aligning and measuring system must satisfy the following requirements:

- Universally applicable to all types of passenger car. Can also be used on light commercial and off-road vehicles.
- Accepts the forces involved during straightening.
- High stability and mobility.
- Can accept all or part of the weight of the vehicle.
- Quick to set up.
- Simple to use.
  - Stationary design with drive-on ramp.
  - Height-adjustable aligning platform.
  - Universal gauge extensions with fast anchoring ability around the whole circumference of the aligning platform.
- Facility to test individual body measurement points, with or without aggregates being removed.

Alignment angle devices survey the vehicle at several points on the body. These are usually points which are also used in production. In addition, a recording over the rocker panels is possible. A measuring system is not needed,

because the necessary body points are specified with gauges. For this purpose, vehicle specific or universal gauges are available.

Universal alignment systems consist of a vehicle mounting (universal clamps at the rocker panels) and a pulling device. In addition, a measuring system is required.

NOTE: *Because universal clamps are used, the rocker panel area must be reworked for optical and corrosion protection reasons after the repair is completed.*

Pay attention to the following points:

- Clean the attachment areas.
- Anchor the vehicle free of stress on the relevant system.
- Support the aggregates to take strain off the body.

Measuring systems

In order to exactly diagnose a damaged vehicle body, measuring systems are required. Depending on the measuring method, the systems vary in having mechanical, optical, acoustic and electronic measuring devices. In some cases, hybrid versions of particular systems are found.

NOTE: *When working with each measuring system, the manufacturer's instructions provided in the description of the measuring equipment must be followed.*

Basically, the measuring systems must meet the following requirements:

- Universally applicable to all types of passenger car. Also can be used on light commercial and off-road vehicles.
- Suitable for all accident damage.
- Fast capture of body measurement points in the underfloor and external areas.
- Data catalog to record all measurement points (length, width and height) both with and without the aggregates being installed.

NOTE: *Basic and in-depth training is offered on the following topics. You will find an overview of the complete range of training offered in the Ford Service Organization training brochure.*

Beam compass

The beam compass is a very practical and straightforward aid for measuring bodywork and especially floor assemblies. The beam compass can be used to detect dimensional variations across the length and the width by means of comparison measurements and diagonal measurements.

As a basic principal, body reference points should be chosen which are shown in the body frame measurement data sheet.

NOTE: *To be able to determine difference in measurements, the same reference points must always be chosen on both sides. For this purpose the beam compass must be positioned symmetrically.*

Comparison measurements can also be made on the outside of the body. Depending on the damage, left/right measurements (symmetry measurements) and diagonal measurements can be made using the beam compass, telescopic rod or a measuring tape.

Laser measuring systems

These systems use laser beams which are projected in one or more planes.

E59220

By the use of two parallel laser heads which can be turned, symmetrical points of a vehicle body can be tested and compared. Using the linear scales which are attached to the measuring points, the measurement data is read off with the aid of the projected laser beams.

The integral inclination gauge also allows differences in height to be quickly checked.

Mechanical measuring system

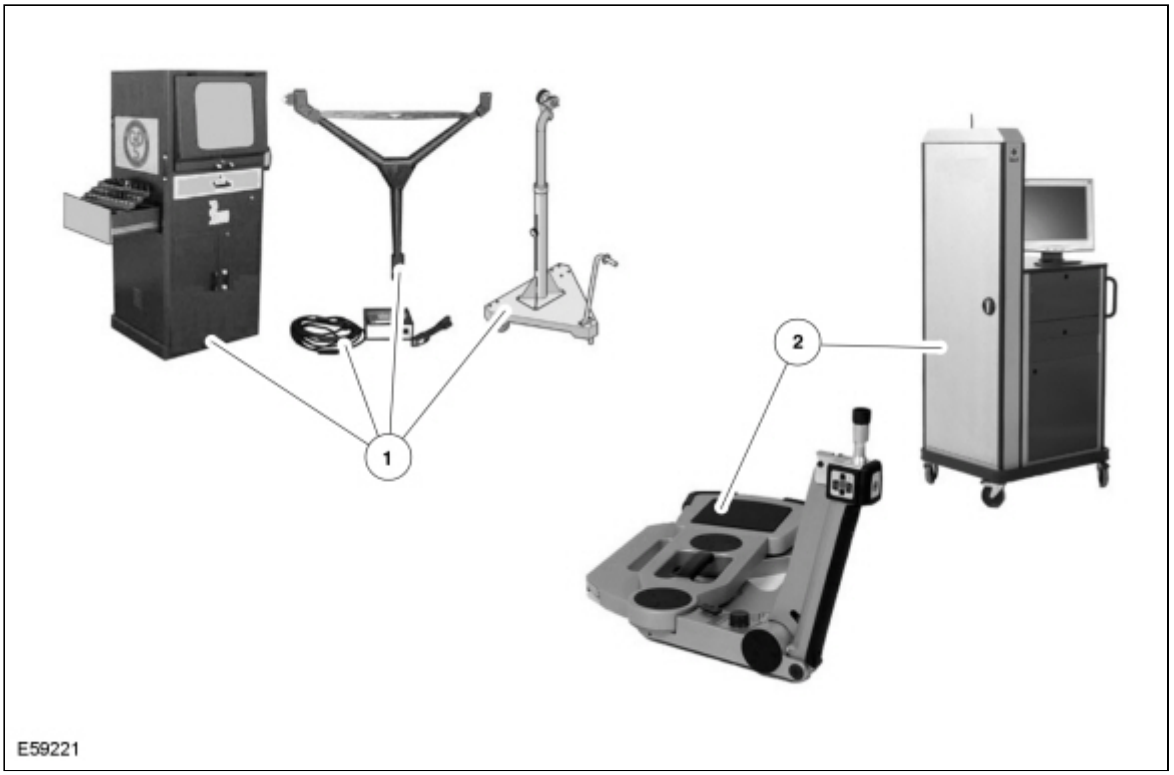
The use of mechanical measuring equipment is an easy and effective way to check a vehicle frame and chassis assembly quickly, exactly and reliably.

In many cases an assessment of the damage can be made with the help of this system, without the need for elaborate setting up.

E59888

Because of its self-centering mount, measurement can be carried out by one person.

Further advantages:



- Fast deployment.
- Simple to use.
- Can be extended using adapters, measuring probes and measuring tubes.

Measuring systems which are firmly mounted on an aligning platform require more work in setting them up. They are used to constantly check measurements during alignment work.

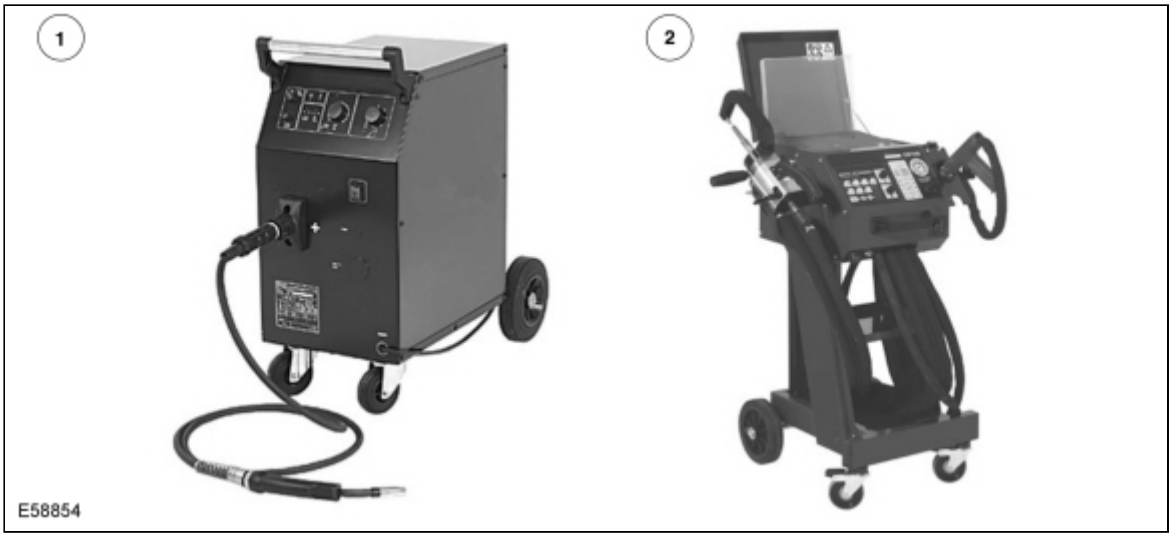
This type of mechanical measuring system has measuring scales and measuring slides in three measuring axes. So that the body can be measured, the vehicle is secured on the aligning platform base frame using four universal chassis clamps. The exact fixing points are given in each respective data sheet.

Ultrasonic and mechanical-electronic measuring systems

These measuring systems can be combined with all current aligning platforms. In addition these measuring systems can be used independently of an aligning platform by using a vehicle lift or suitable support stands.

Description	Description
1	Ultrasound measuring instrument
2	Mechanical-electronic measuring system

Acoustic or ultrasonic measuring systems use ultrasonic emitters and sensors to survey a body.



To do this, ultrasonic emitters are mounted on the vehicle using special attachments. During the measuring process the ultrasonic emitters constantly send out signals which are received by sensors (microphones) and then passed to a computer. The measurements are displayed on the computer screen and are compared with the required values supplied by the vehicle manufacturer.

The ways in which mechanical-electronic measuring systems can be used are similar to those of the acoustic measuring systems. They can also be set up on a suitable understructure, without an alignment jig. After this system has been arranged under the vehicle floor and adjusted to three undamaged vehicle measuring points, the measuring arm is brought up to the required measuring points and the readings compared with the reference values. The data is transmitted to a computer where it is evaluated and the results displayed on a screen.

Welding gear

As in the past, the dominant process in body construction is **resistance welding**, in particular spot welding. Depending on body type, up to 5000 spot welds are applied, either by welding robots or in the multi-point welding machine.

Resistance spot welding permits very high energy to be concentrated on a relatively small area of the workpiece in the shortest possible time and when high pressure is applied, a permanent joint is formed. During repairs the resistance spot welds used in production must be re-created accordingly.

Description	Description
1	MIG welding machine
2	Resistance spot welding machine

NOTE: *If a suitably powerful welding machine is not available and multi-layer panel joints with a total thickness of over 3 mm need to be made, puddle welding must be used.*

Although in principle, high and ultra-high-strength panels are adequately or well suited to resistance spot welding, considerable problems may arise because of low welding power, especially where thicker panels or triple or multi-layer panels have to be welded together in the workshop. In particular, older welding equipment does not have the latest welding technology nor welding power and therefore cannot reliably join panel thicknesses greater than 3 mm.

NOTE: *When installing body components made of ultra-high strength steel (e.g. boron), only* ***inverter welding equipment*** *certified by Ford may be used.*

Equipment with inverter technology allows better spot weld quality because of a constant high welding current. In addition the high welding current makes shorter welding times possible and the electrodes therefore have a longer working life. Inverter welding is a further development of electrode welding. In addition, a much higher electrode force (contact pressure of welding tongs) can be achieved with modern equipment.

Further advantages of the new inverter welding equipment are:

- good welding performance with constant quality, even with high switch-on times
- recognition of and compensation for disruptive factors: e.g. primer, adhesive, rust-prevention paint
- own and pre-set welding programs which can be saved and called up
- quality confirmation through logging of all important welding data
- fast changing of spot welding clamps or spot welding guns as required

The following functions can be controlled and monitored by programming the welding equipment:

- Control of the start conditions by resistance measurement (dirt, paint, bodywork adhesive, shunt circuit through the next spot weld).
- Ensuring the optimum welded connection.
- Checking the energy balance, resistance and quality.

In the case of resistance spot welded connections, faults in the weld are difficult to see from the outside. It is therefore absolutely vital to know the particular properties of the welding machine being used. A test weld with subsequent peeling test will provide information on the quality of the weld. The spot weld itself must not separate, it must tear away leaving a hole unless the sheets are two equal gauge high strength steel panels or large gauges.

In the production of vehicle bodies, **MIG welding** plays a minor role as a joining technique. It is used for components subject to high demands, such as threaded plates for axle mountings, or at locations which cannot be spot welded for access reasons.

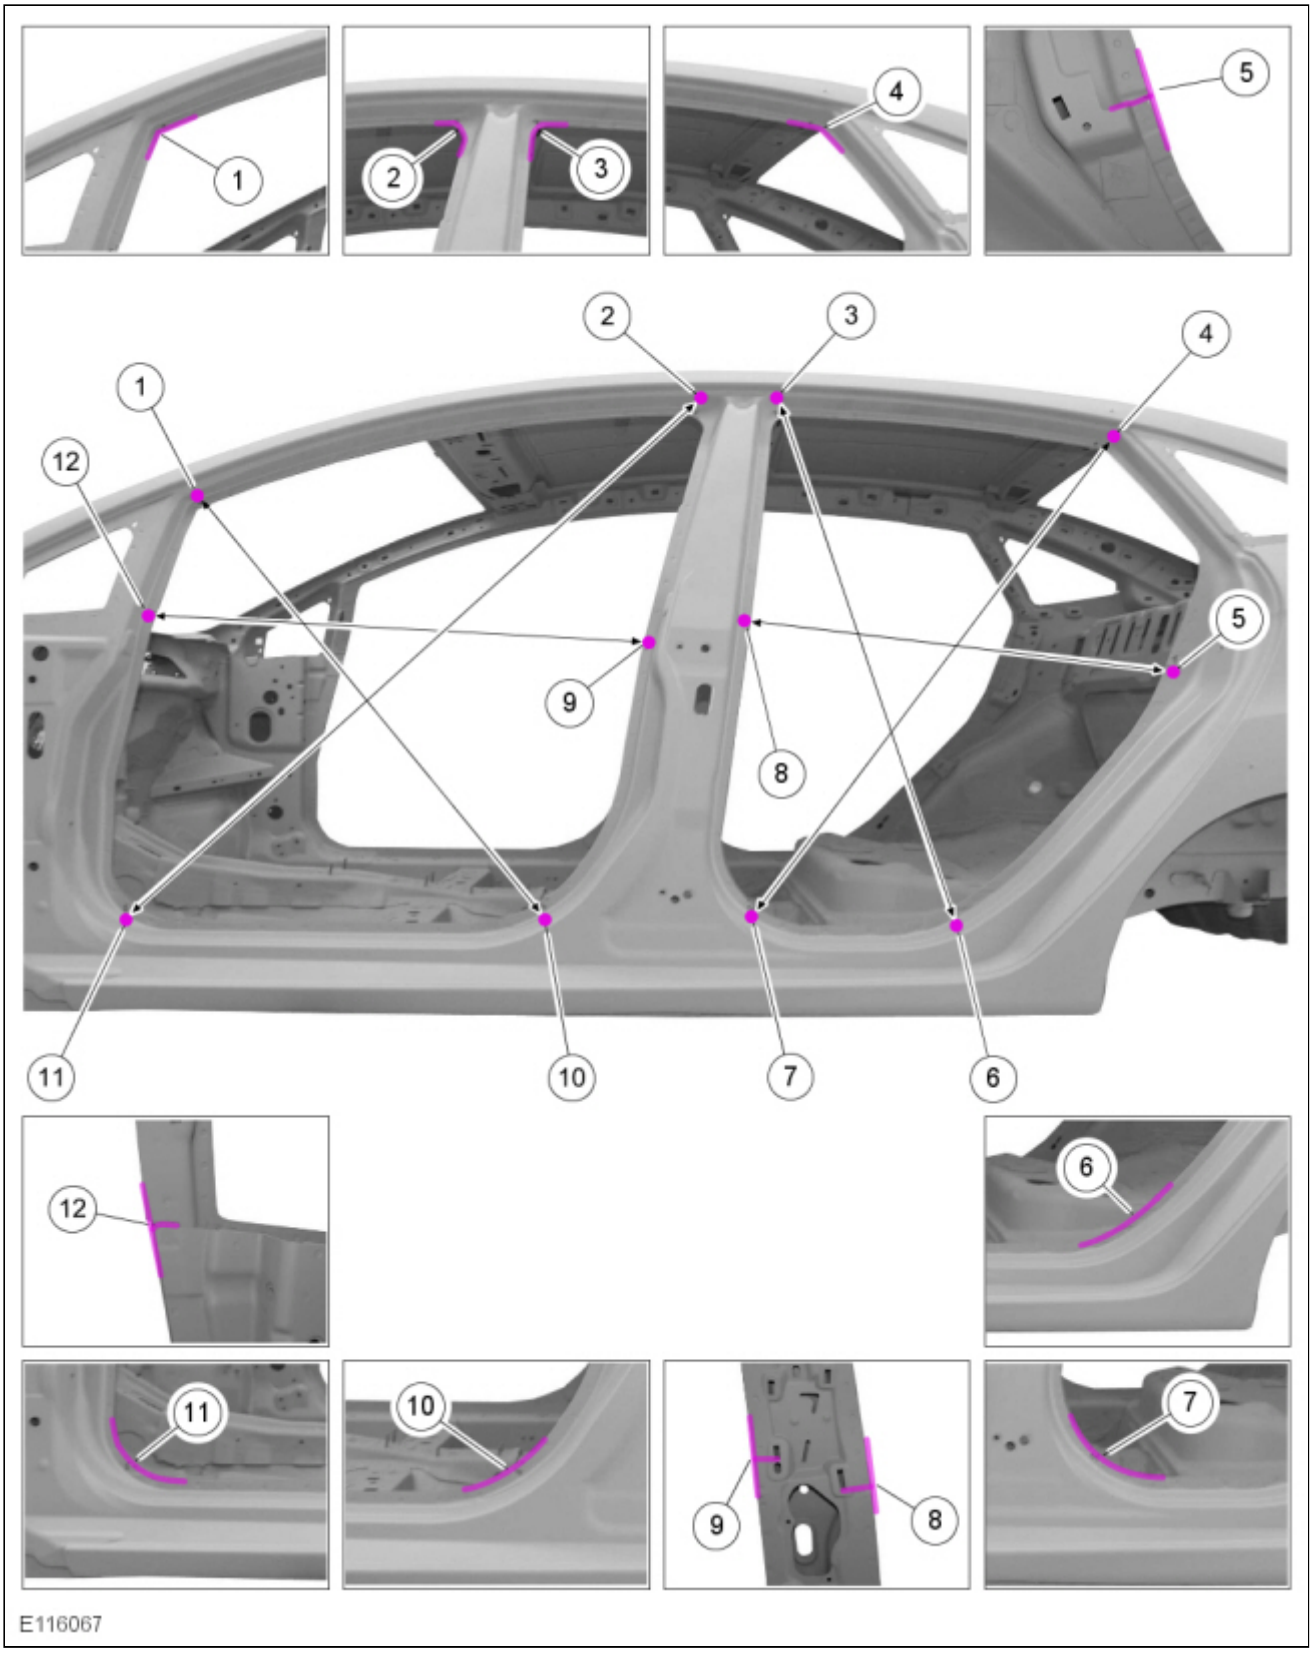
Alignment Check

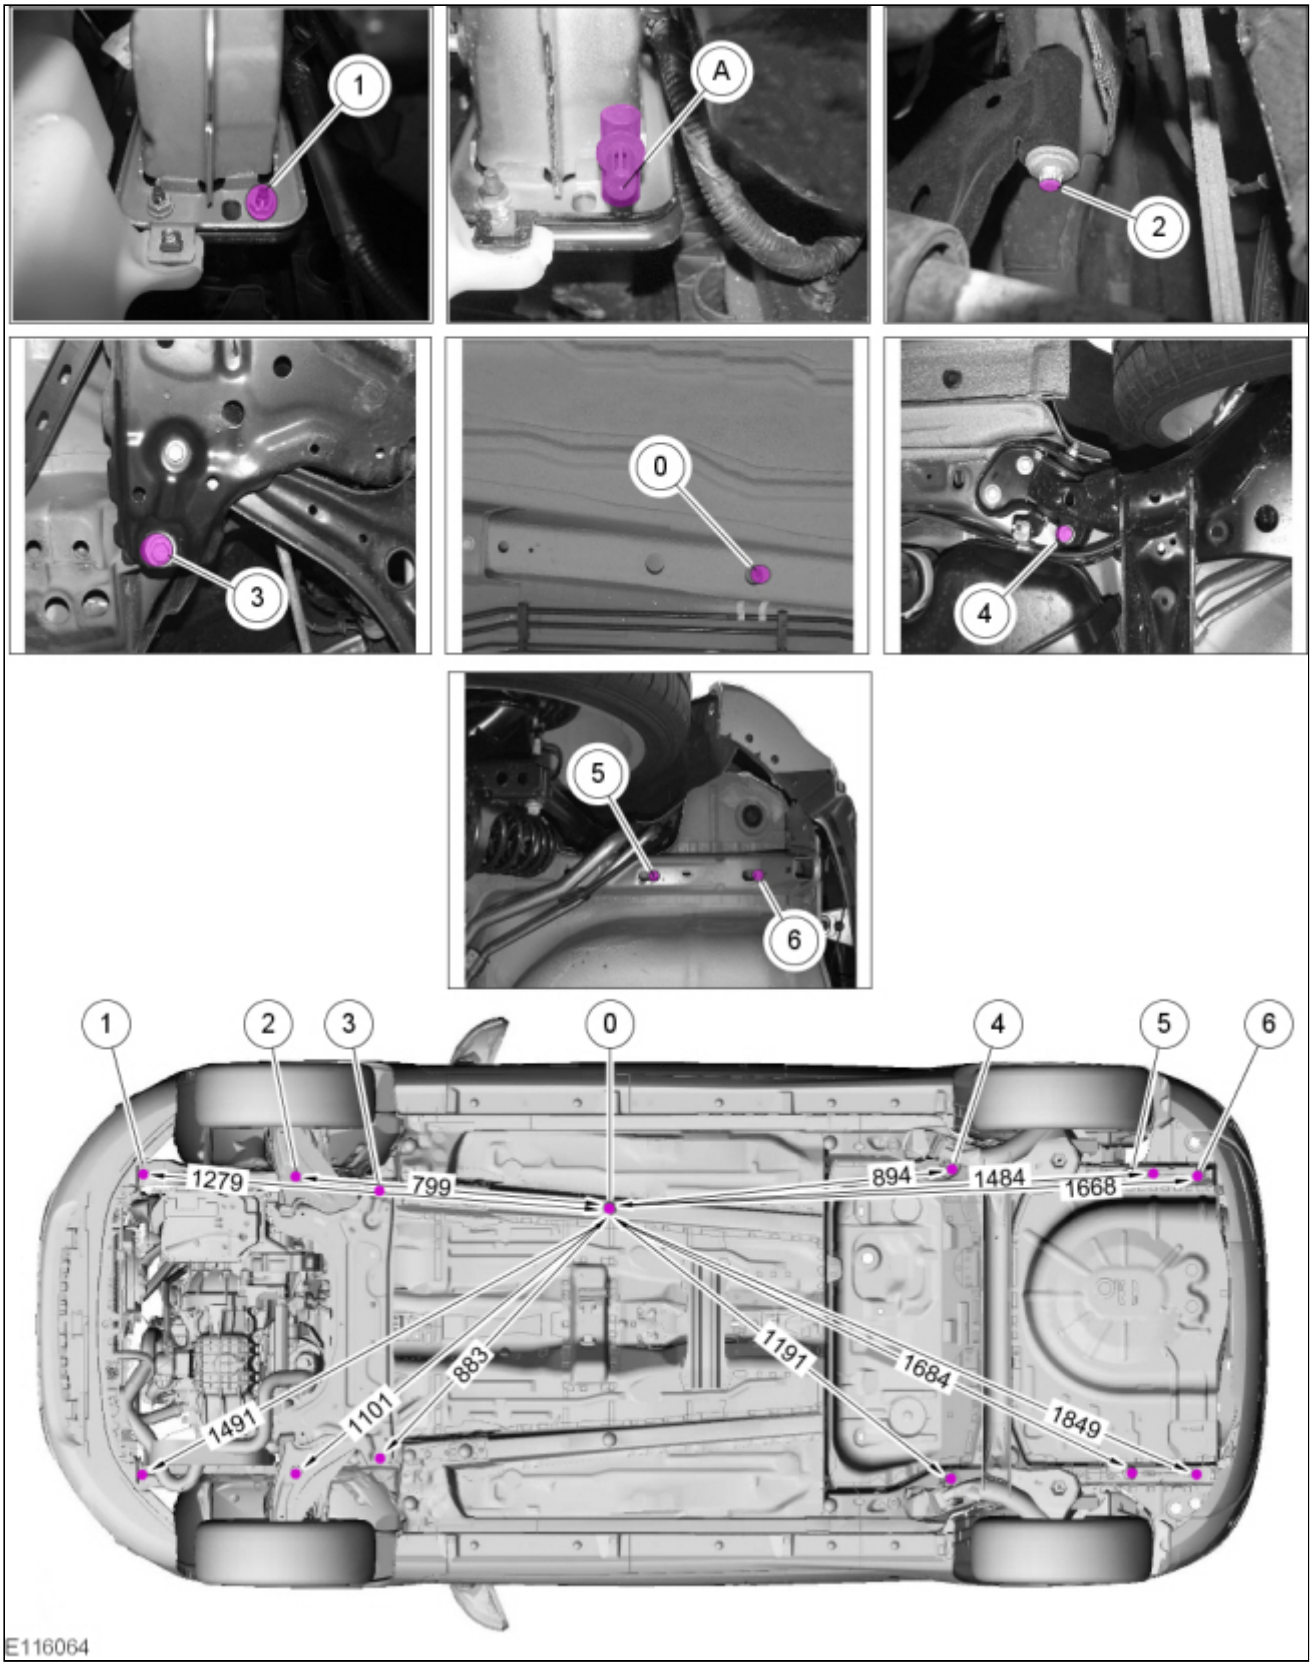
General

If there is concern that the body has been deformed, the body must be measured. Several measuring procedures and tools can be used for this purpose.



With simple measuring systems, it is possible in most cases to draw a conclusion about the extent of the damage through a quick measurement without time-consuming assembly work (straightening jig).

NOTE: *For the floor pan and the exterior of the vehicle, measuring data is contained in the vehicle-specific repair instructions for each vehicle. Manufacturers of measuring and straightening jigs create data sheets for this purpose for each vehicle.*



Data sheets with the body frame dimensions for body measurement are specified in the model-specific repair instructions in each case. Pay attention to the position of the measuring probes for each of the measurements given. A tolerance of ± 3 mm applies to all specified dimensions.

Measuring points that are specified in a curve are to be measured so that the greatest distance from the opposite measuring point is reflected. For exact determination of the measuring points, enlarged sections are shown.

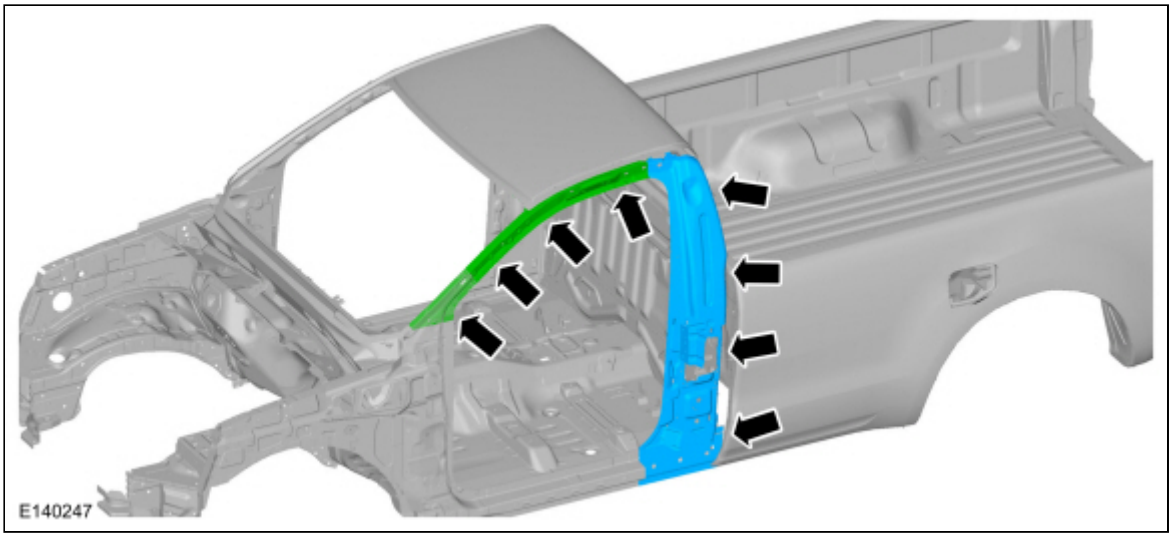
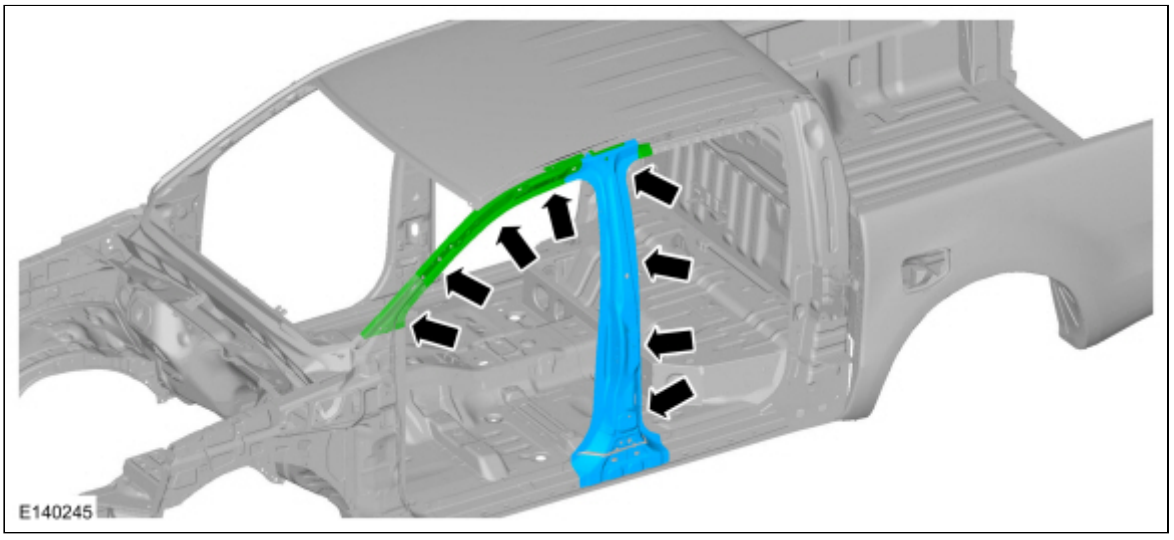
Body and Frame - Overview

Introduction

With the 2011.25 model year, the Ford Ranger is superseded by a completely new vehicle. The T6 is based on the U1 platform which has been developed in co-operation with Mazda. 2-door and 4-door body versions are offered. Within the company the model designation is P375. Overall the vehicle weighs less than its predecessor. However, it offers increased occupant safety through the use of high-strength and super-high-strength steels. The high-strength and super-high-strength steels used make extra demands on the tools to be employed for some body repairs.

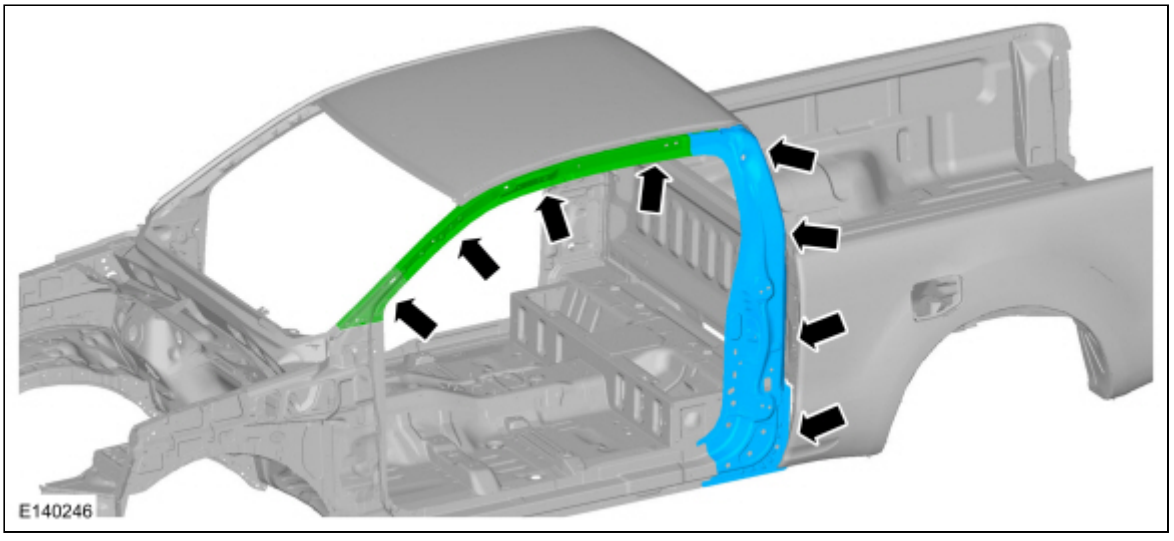


High-strength and super-high-strength steels



Item	Description
1 UHSS (> 800 MPa)	
2 EHSS (380 - 800 MPa)	
3 VHSS (280 - 380 MPa)	
4 HSS (180 - 280 MPa)	
5 MS (< 180 MPa)	

Usibor steel



Single cab

Double cab

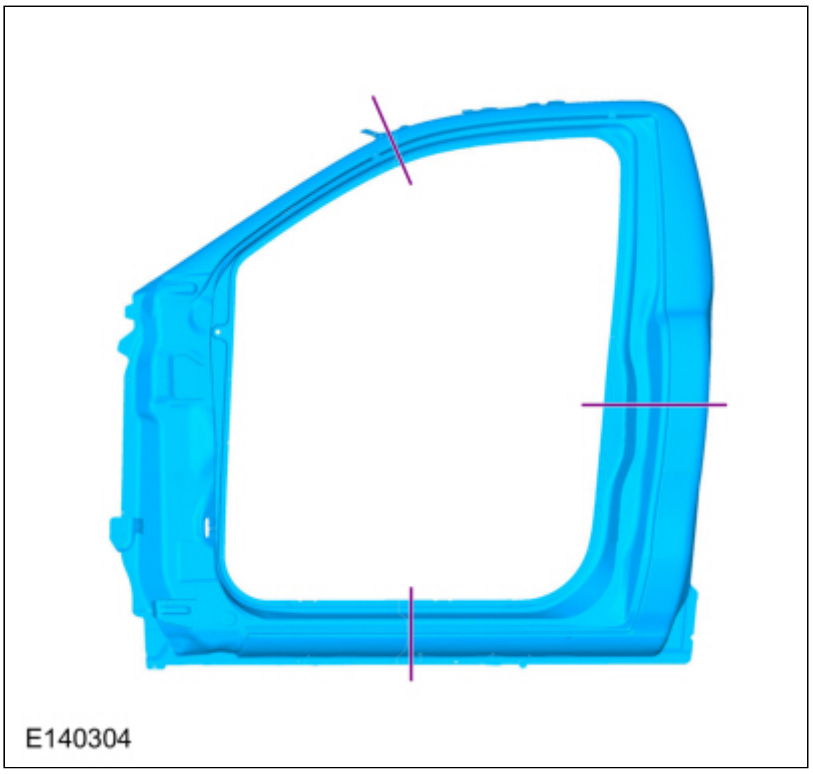
Super cab

The reinforcements at the A- and B- pillars are made of Usibor steel. This material has a yield strength of 1300 MPa.

Sectional repairs must NOT be performed on components made of Usibor !

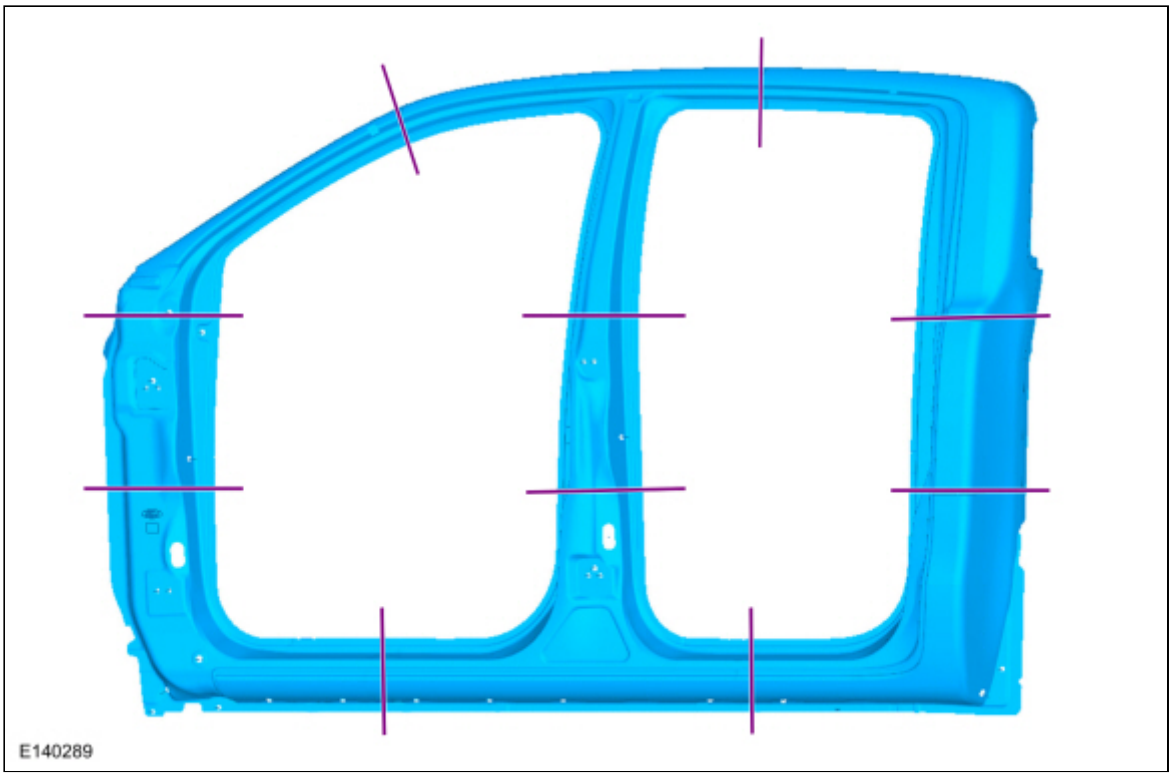
The required continuous MIG weld seam in the cut area would cause structural changes in the steel and lead to a significant loss in strength.

In the event of damage, the complete component must therefore always be renewed.



Also, because of the strength of these components, it is not always possible to work them with conventional body

repair tools.



or welding work (resistance spot welding and inert gas puddle welding), additional preparation work and/or special welding equipment are required.

Sheet metal parts for quarter panel partial replacement

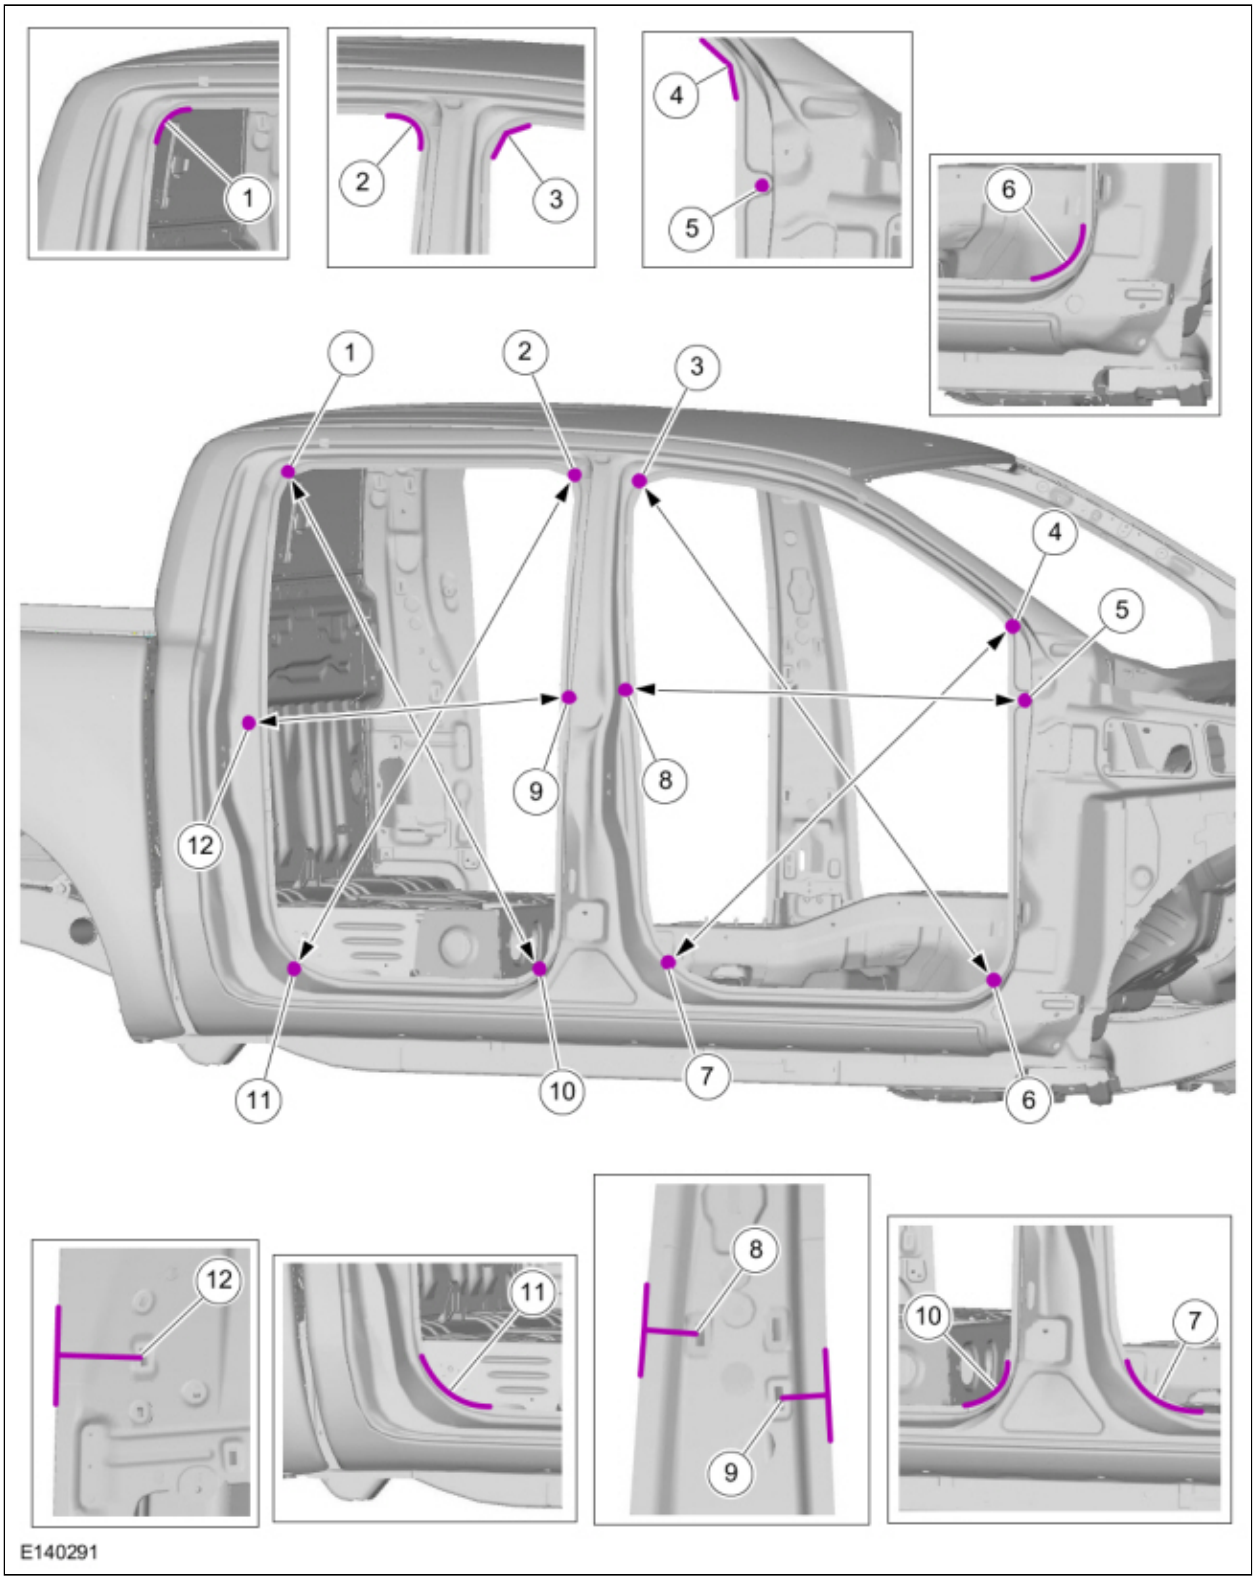
Body Tolerance Check

1. Front end body dimensions, all vehicles
   - All dimensions with tolerance ± 3 mm. All dimensions were determined starting from the centre of each hole or panel edge using a symmetrically adjusted measuring gauge.

Measuring points and dimensions

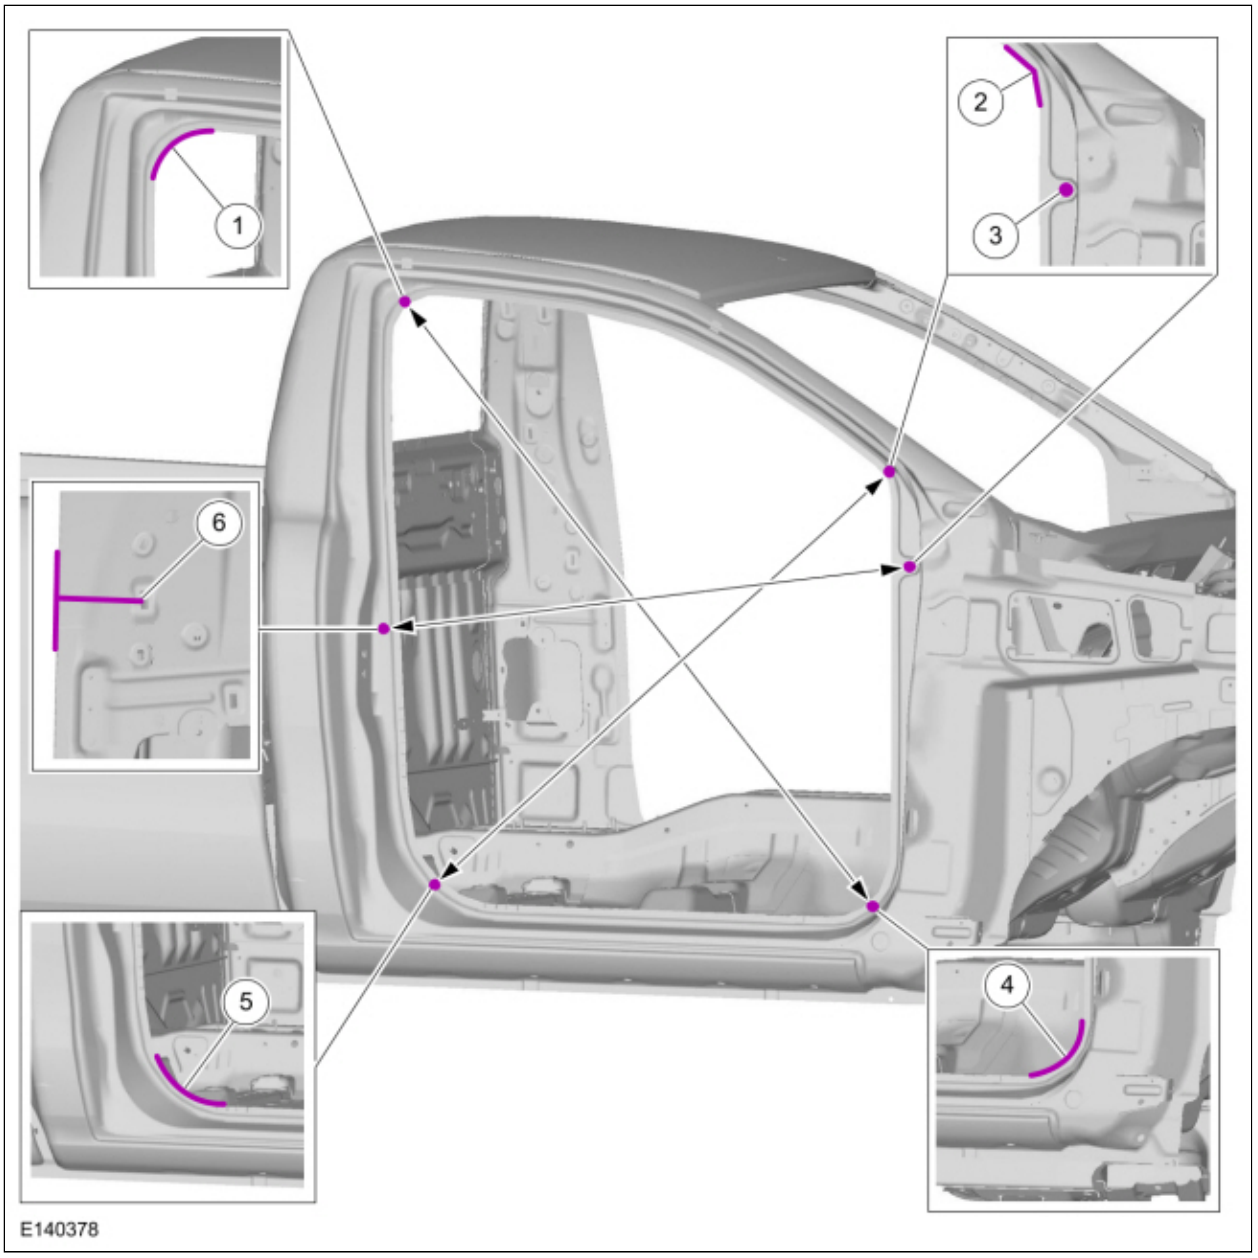
1 - 5 = 1258 mm	4 - 6 = 1282 mm
1 - 9 = 1527 mm	5 - 8 = 1064 mm
2 - 5 = 1062 mm	5 - 9 = 1264 mm
2 - 7= 1553 mm	5 - 10 = 845 mm
3 - 8 = 1553 mm	



2. Body dimensions, side view double cab

- All dimensions with tolerance ± 3 mm. All dimensions were determined starting from the edge of the steel panel using a symmetrically adjusted measuring gauge.
- Measuring points 1, 2, 3, 4, 6, 7, 10 and 11 are measured in the curve and represent the greatest distance to the measuring point opposite.
- The detailed views of measuring points 8, 9 and 12 are shown looking from the vehicle interior outwards.
- The detailed view of measuring point 5 is measured in the hole and represent the greatest distance to the measuring point opposite.

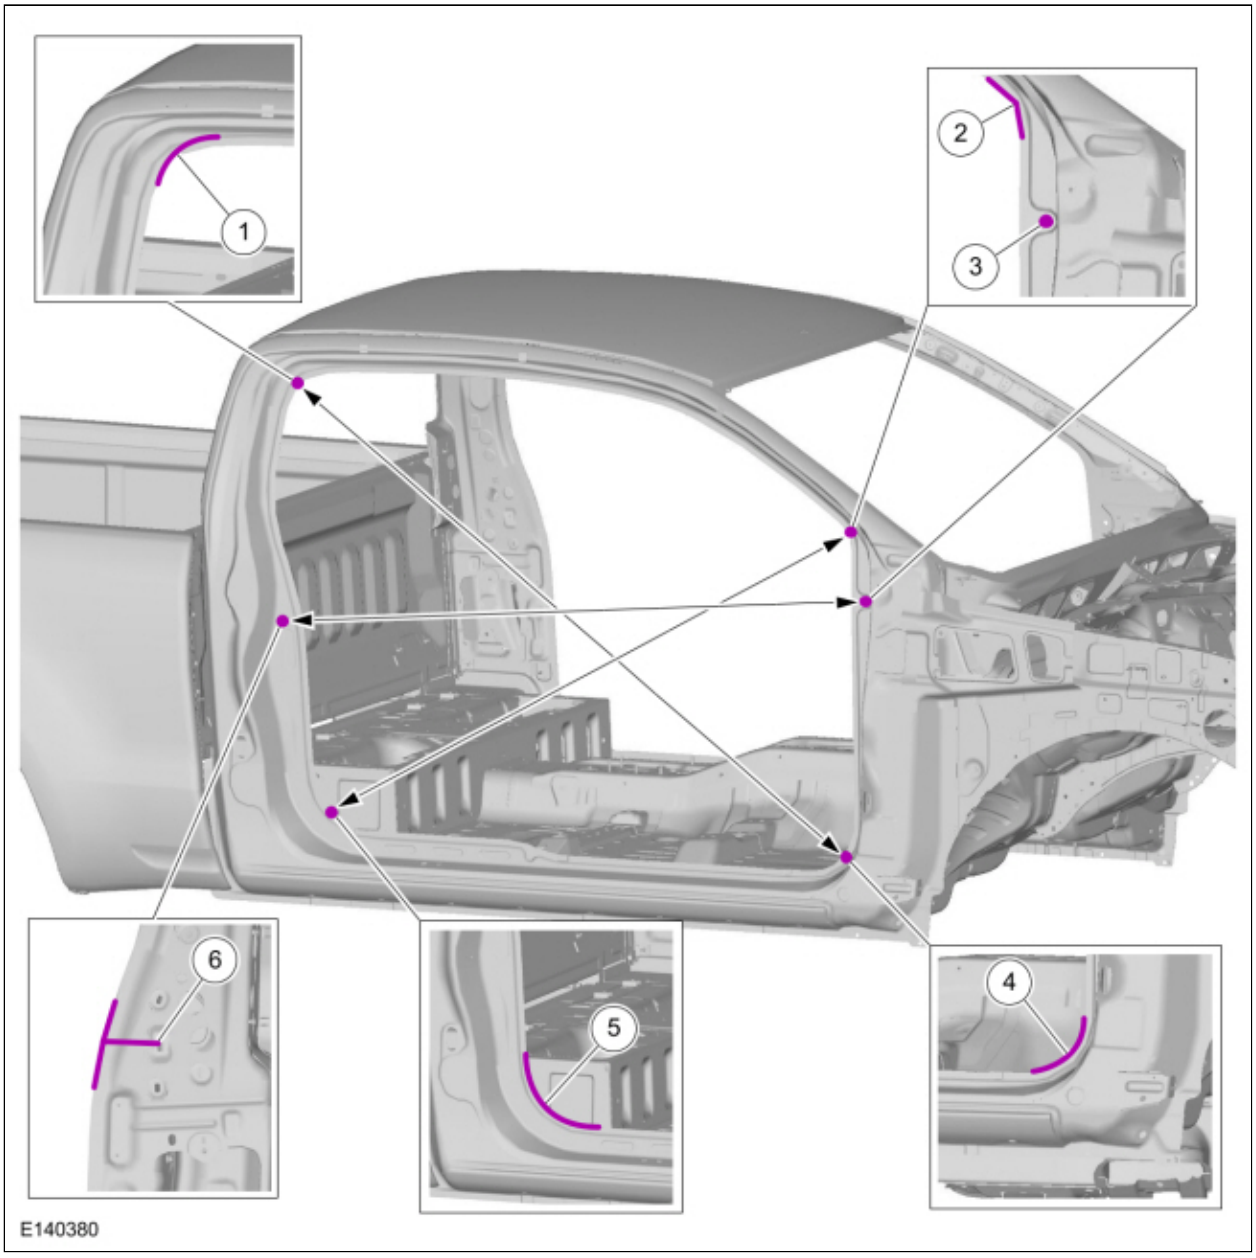
Measuring points and dimensions



1 - 10 = 1243 mm	4 - 7 = 1054 mm
2 - 11 = 1280 mm	5 - 8 = 1116 mm
3 - 6 = 1380 mm	9 - 12 = 812 mm

3. Body dimensions, side view single cab
   - All dimensions with tolerance ± 3 mm. All dimensions were determined starting from the edge of the steel panel using a symmetrically adjusted measuring gauge.
   - Measuring points 1, 2, 4 and 5 are measured in the curve and represent the greatest distance to the measuring point opposite.
   - The detailed view of measuring point 3 is measured in the hole and represent the greatest distance to the measuring point opposite.
   - The detailed view of measuring point 6 is shown looking from the vehicle interior outwards.

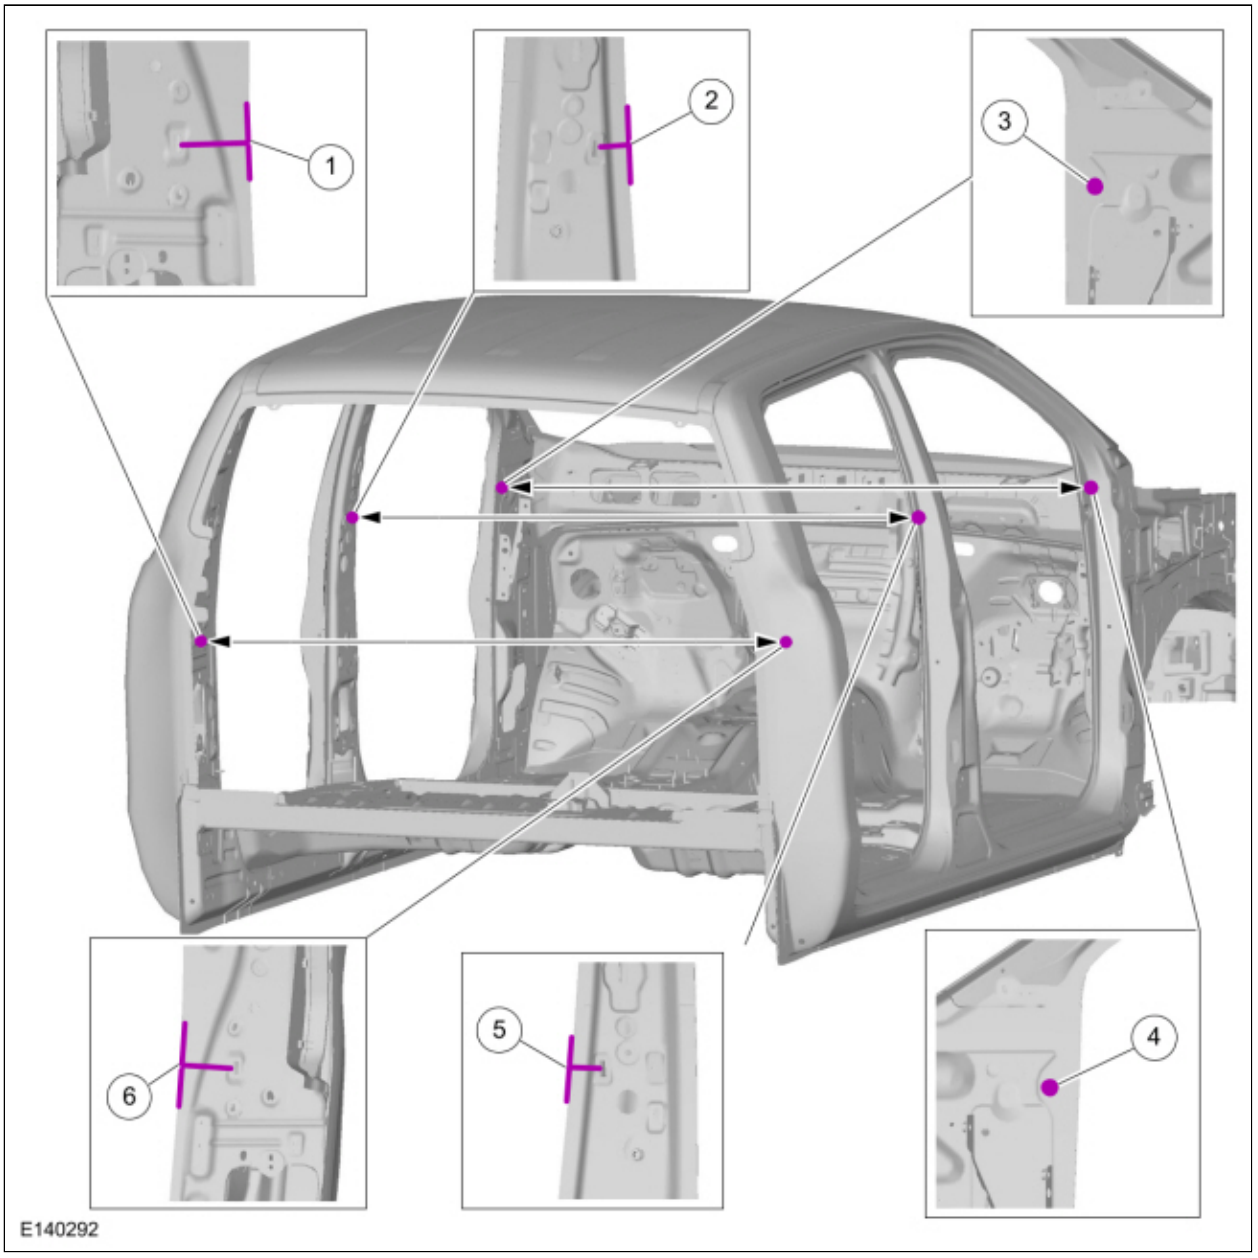
Measuring points and dimensions



1 - 4 = 1323 mm	3 - 6 = 1323 mm
2 - 5 = 949 mm	

4. Body dimensions, side view stretch cab
   - All dimensions with tolerance ± 3 mm. All dimensions were determined starting from the edge of the steel panel using a symmetrically adjusted measuring gauge.
   - Measuring points 1, 2, 4 and 5 are measured in the curve and represent the greatest distance to the measuring point opposite.
   - The detailed view of measuring point 3 is measured in the hole and represent the greatest distance to the measuring point opposite.
   - The detailed view of measuring point 6 is shown looking from the vehicle interior outwards.

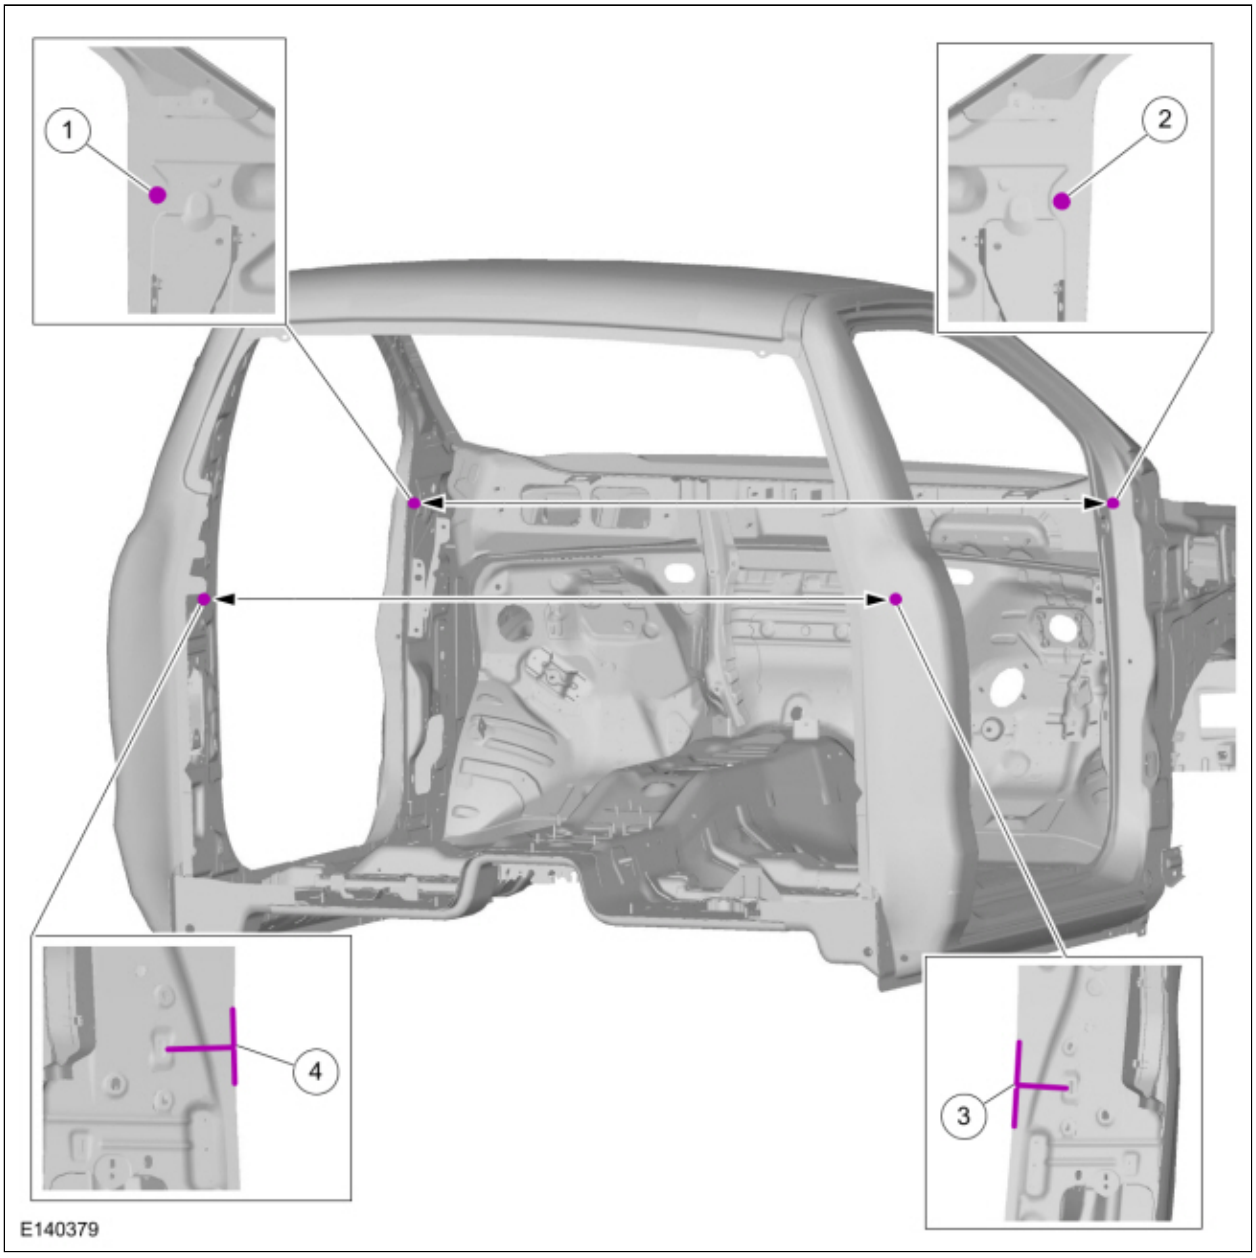
Measuring points and dimensions



1 - 4 = 1799 mm	3 - 6 = 1543 mm
2 - 5 = 1516 mm	

5. Body dimensions, interior double cab
   - All dimensions with tolerance ± 3 mm. All dimensions were determined starting from the center of the welded flange using a symmetrically adjusted measuring gauge.
   - Measuring points 3 and 4are measured in the hole and represent the greatest distance to the measuring point opposite.
   - The detailed views of measuring points 1, 2, 5 and 6 are shown looking from the vehicle interior outwards.

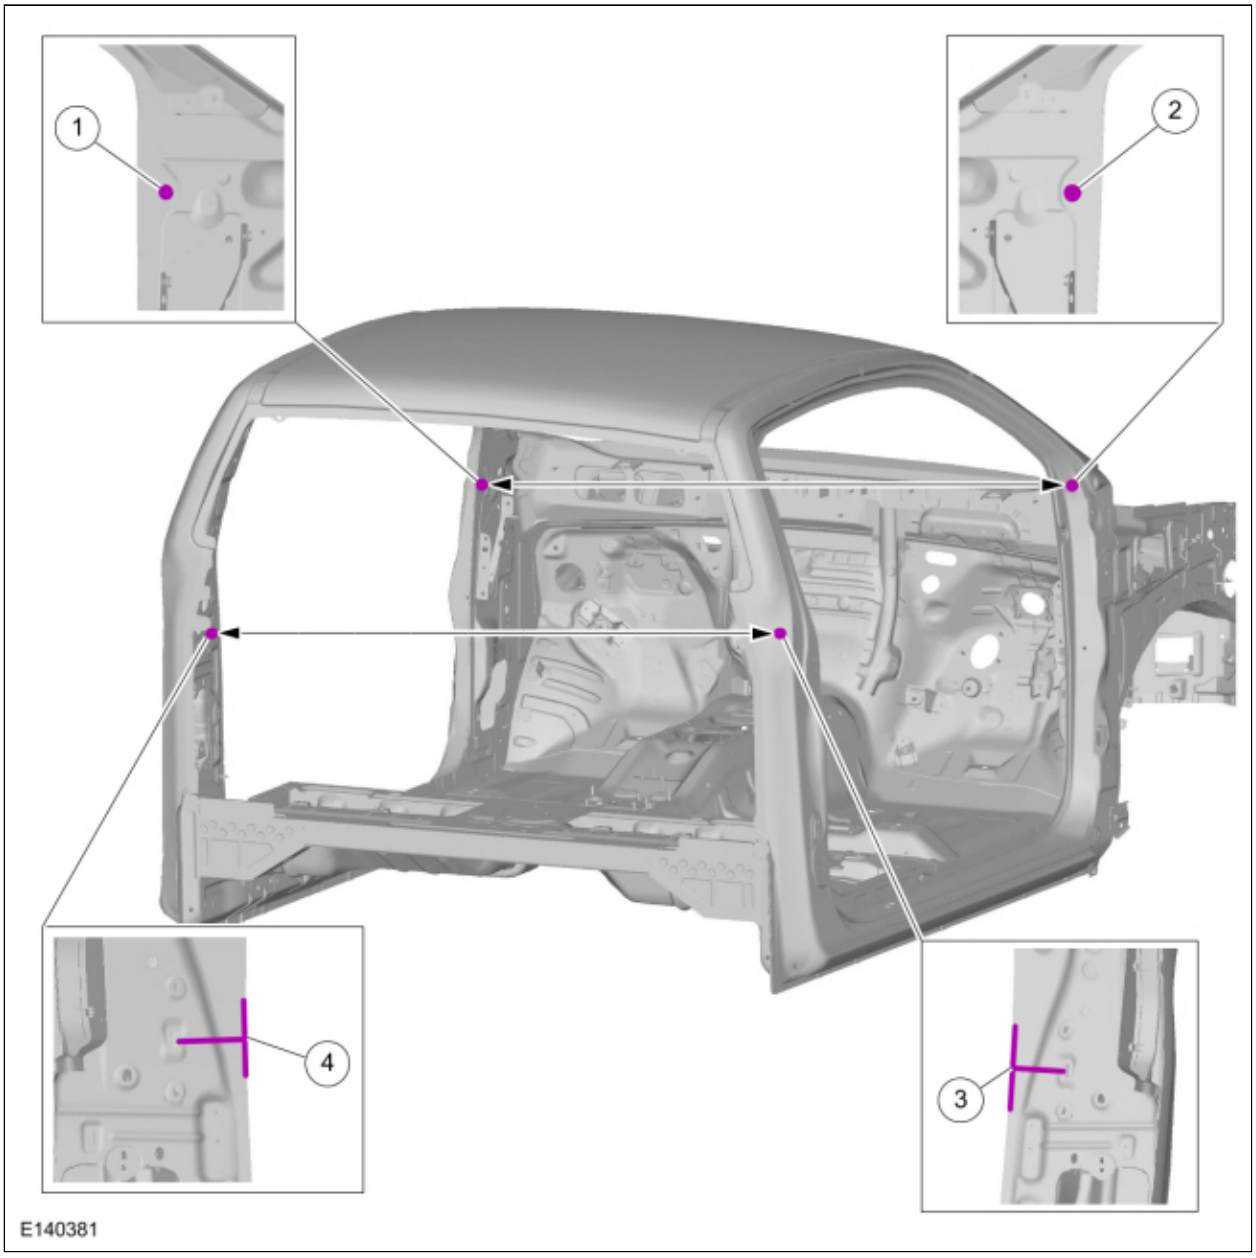
Measuring points and dimensions



1 - 6 = 1513 mm	3 - 4 = 1459 mm
2 - 5 = 1478 mm	

6. Body dimensions, interior single cab
   - All dimensions with tolerance ± 3 mm. All dimensions were determined starting from the center of the welded flange using a symmetrically adjusted measuring gauge.
   - Measuring points 1 and 2 are measured in the hole and represent the greatest distance to the measuring point opposite.
   - The detailed views of measuring points 3 and 4 are shown looking from the vehicle interior outwards.

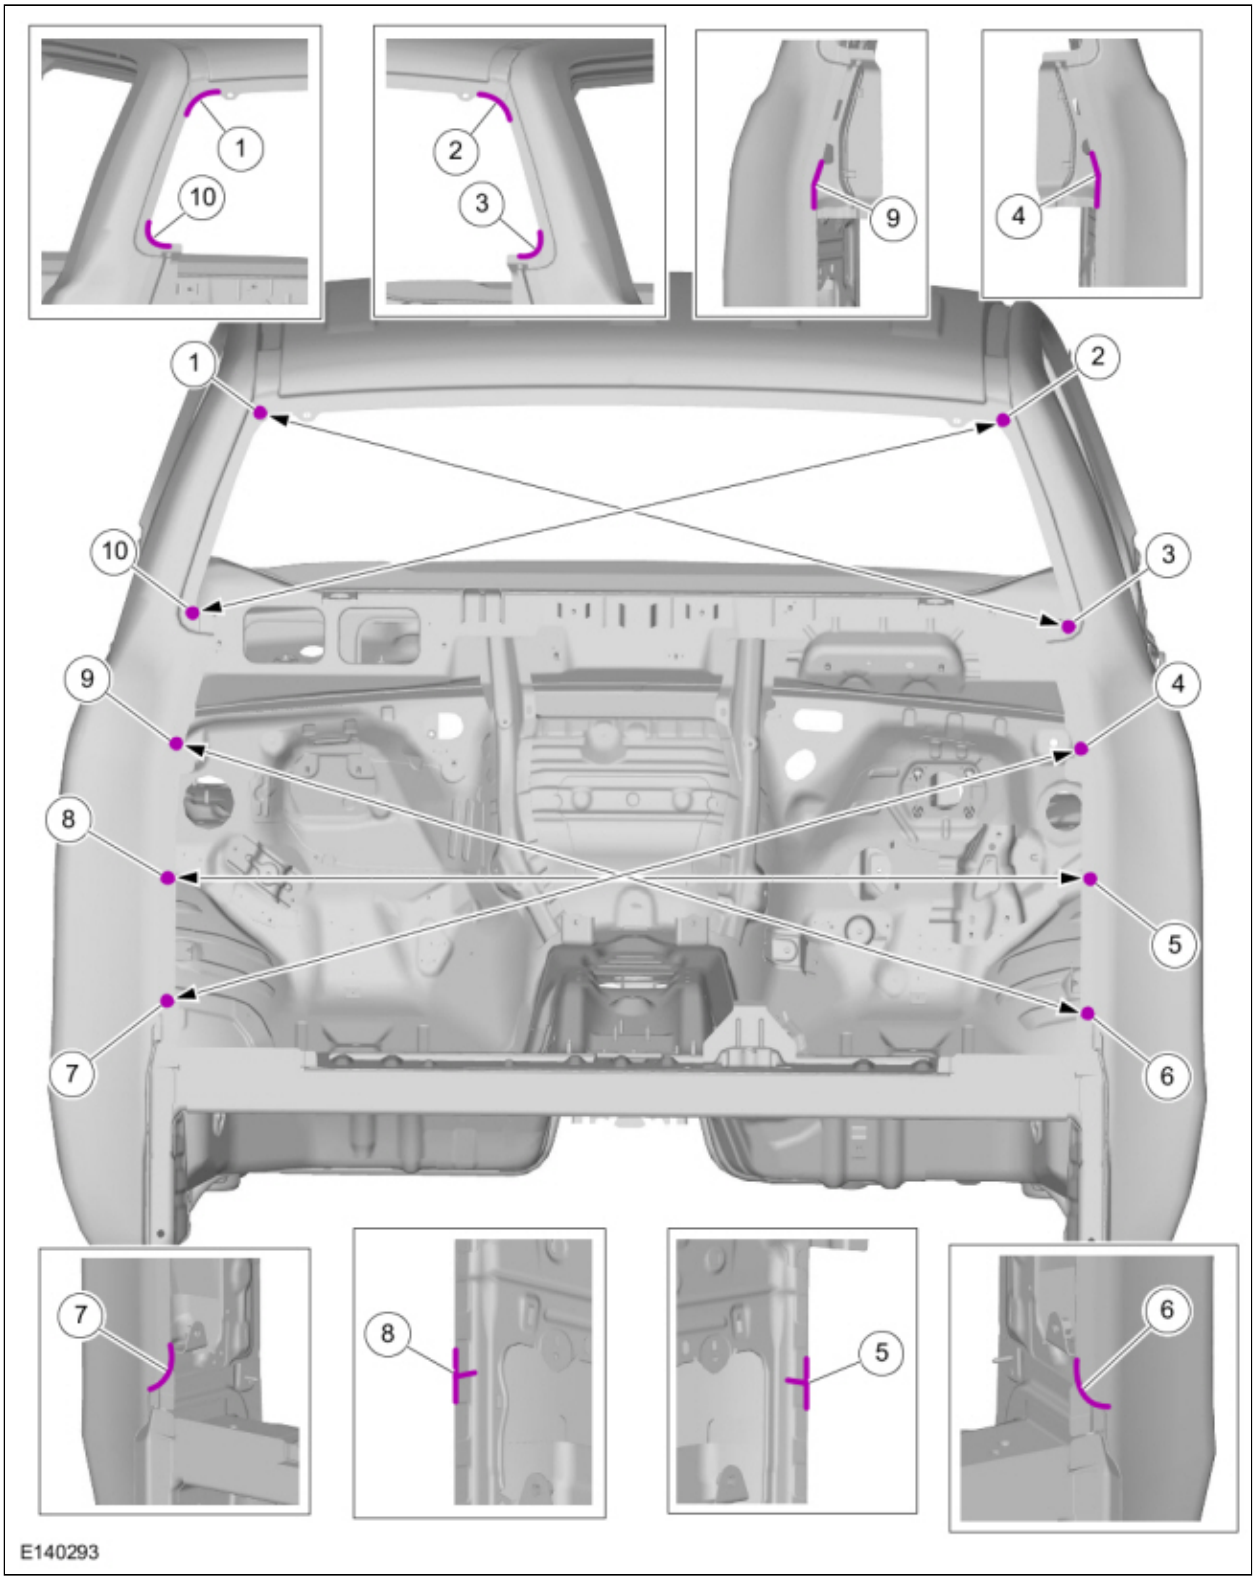
Measuring points and dimensions



1 - 2 = 1489 mm	3 - 4 = 1460 mm

7. Body dimensions, interior strecth cab
   - All dimensions with tolerance ± 3 mm. All dimensions were determined starting from the center of the welded flange using a symmetrically adjusted measuring gauge.
   - Measuring points 1 and 2 are measured in the hole and represent the greatest distance to the measuring point opposite.
   - The detailed views of measuring points 3 and 4 are shown looking from the vehicle interior outwards.

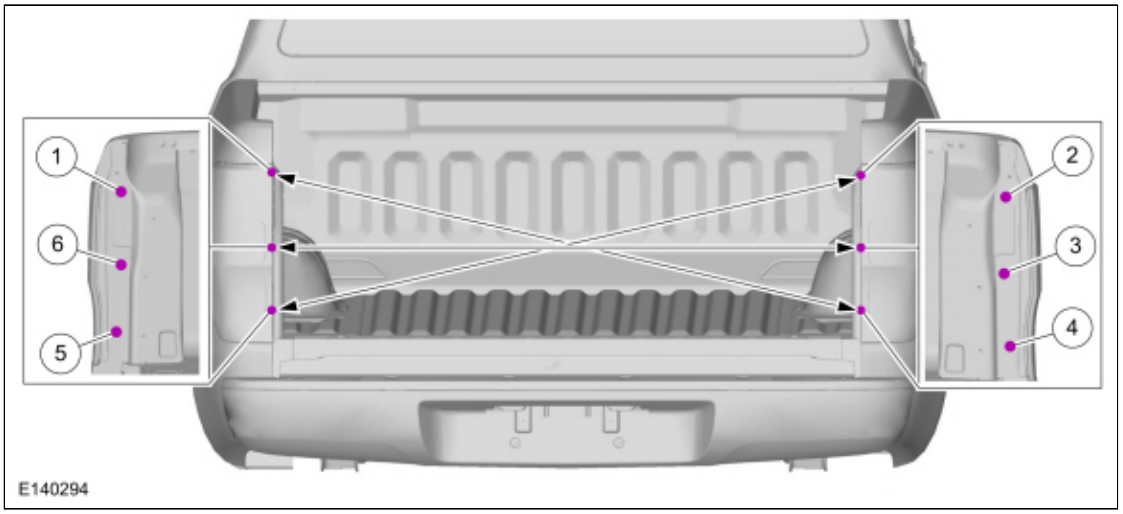
Measuring points and dimensions



1 - 2 = 1460 mm	3 - 4 = 1472 mm

8. Body dimensions, rear all vechicles
   - All dimensions with tolerance ± 3 mm. All dimensions were determined starting from the center of the welded flange using a symmetrically adjusted measuring gauge.
   - Measuring points 1, 2, 3, 4, 6, 9, and 10 are measured in the curve and represent the greatest distance to the measuring point opposite.
   - The detailed views of measuring points 5 and 8 are shown looking from the vehicle interior outwards.

Measuring points and dimensions



1 - 3 = 1292 mm	4 - 7 = 1455 mm
2 - 10 = 1292 mm	5 - 8 = 1412 mm
6 - 9 = 1453 mm	

9. Tailgate opening dimensions, all vechicles
    - All dimensions with tolerance ± 3 mm. All dimensions were determined starting from the center of the welded flange using a symmetrically adjusted measuring gauge.

Measuring points and dimensions

1 - 4 = 1456 mm	5 - 2 = 1456 mm
6 - 3 = 1409 mm

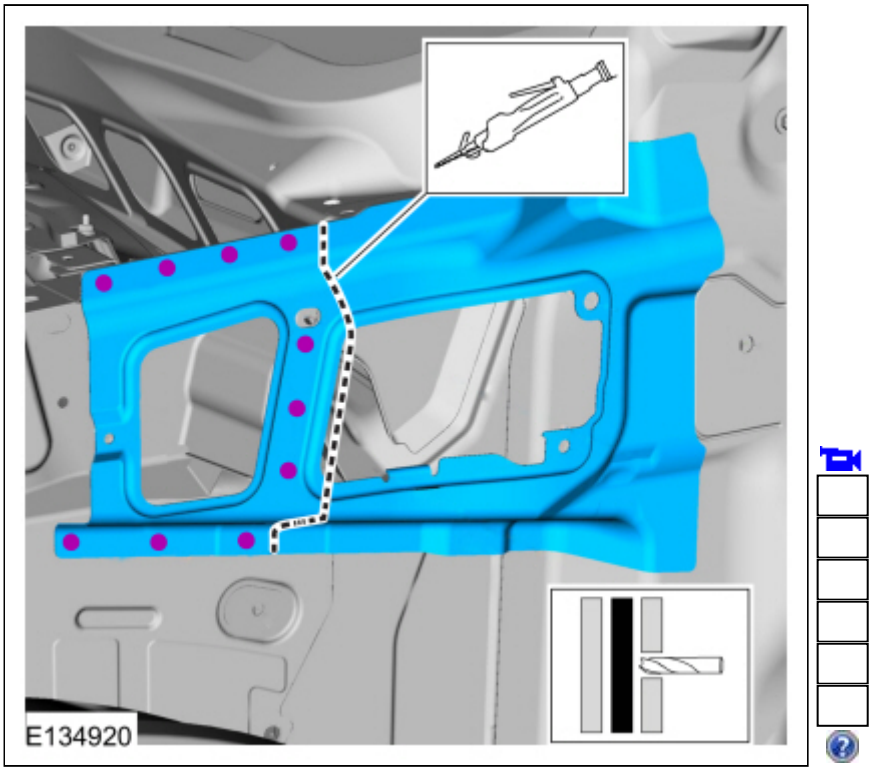
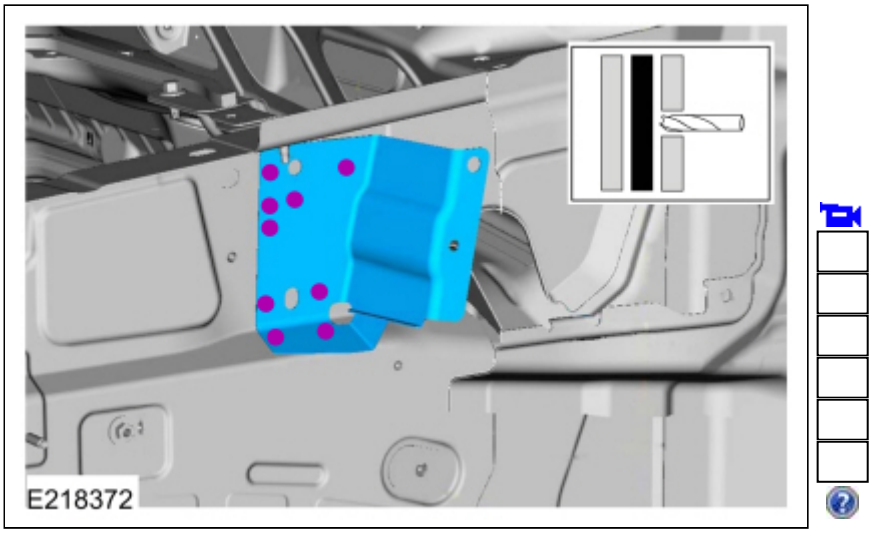
Fender Apron Panel Reinforcement

Special Tool(s) / General Equipment



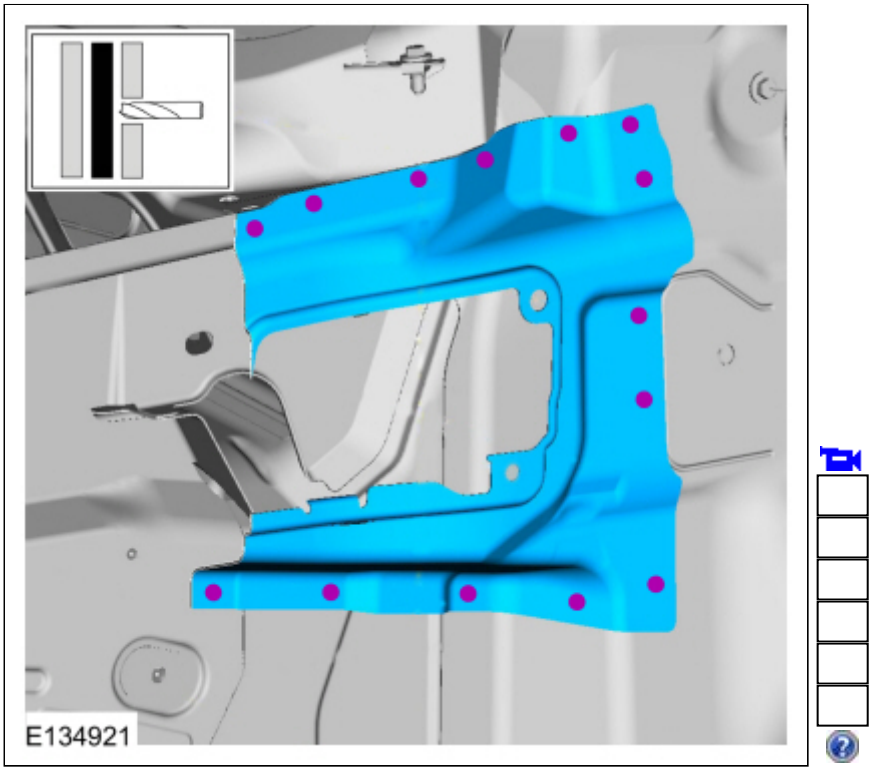
Air Body Saw
Spot Weld Drill Bit

Removal



NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
2. Refer to: Fender (501-02 Front End Body Panels, Removal and Installation).

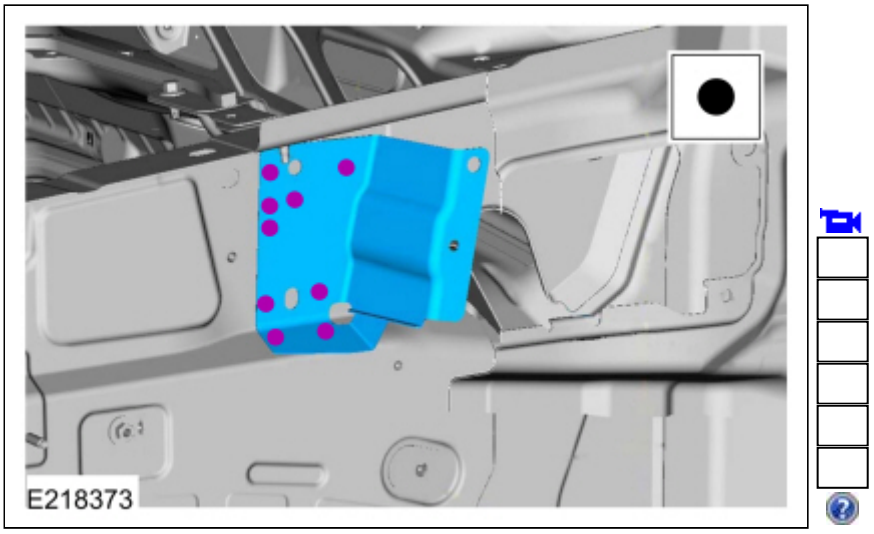


- **Partial Replacement**
- Possible cut line.
  Use the General Equipment: Air Body Saw
- Mill out the spot welds.
  Use the General Equipment: Spot Weld Drill Bit

- Mill out the spot welds.
  Use the General Equipment: Spot Weld Drill Bit

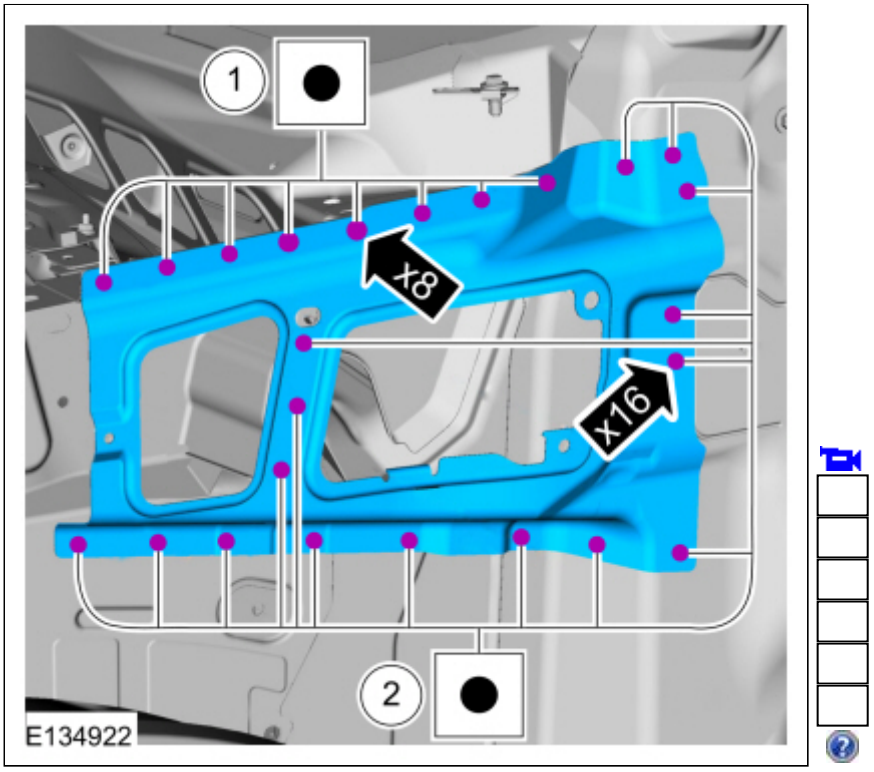
- Mill out the spot welds.
  Use the General Equipment: Spot Weld Drill Bit

Installation



1. **NOTE:** *Before resistance spot welding of body panels with a total panel thickness of 3 mm and greater, the manufacturer's welding equipment instructions and sub-section 501-25 must be followed.*

   Refer to: Tools and Equipment for Body Repairs (501-25 Body Repairs - General Information, Description and Operation).



2. **NOTE:** *Sealer or adhesive must not be applied in welding zones. Areas which were bonded or sealed needs to be thoroughly sealed afterwards.*

   Refer to: Sealer, Underbody Protection Material and Adhesives (501-25 Body Repairs - General Information) .

   - Resistance plug weld - Panel thickness 3 mm and greater.

1. Resistance spot weld - Panel thickness 3 mm and greater.
2. Resistance plug weld - Panel thickness 3 mm and greater.

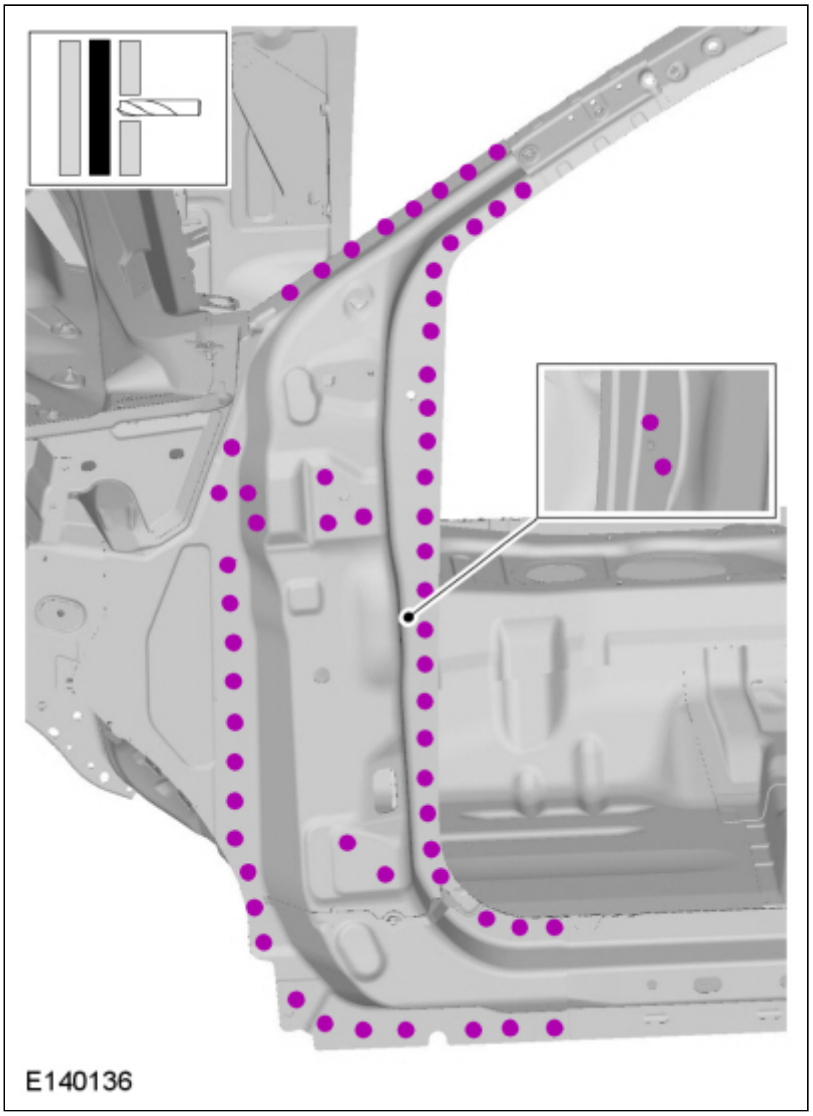
Spot Weld Drill Bit

Materials



Name	Specification
Adhesive	WSK-M11P57-A3

Removal

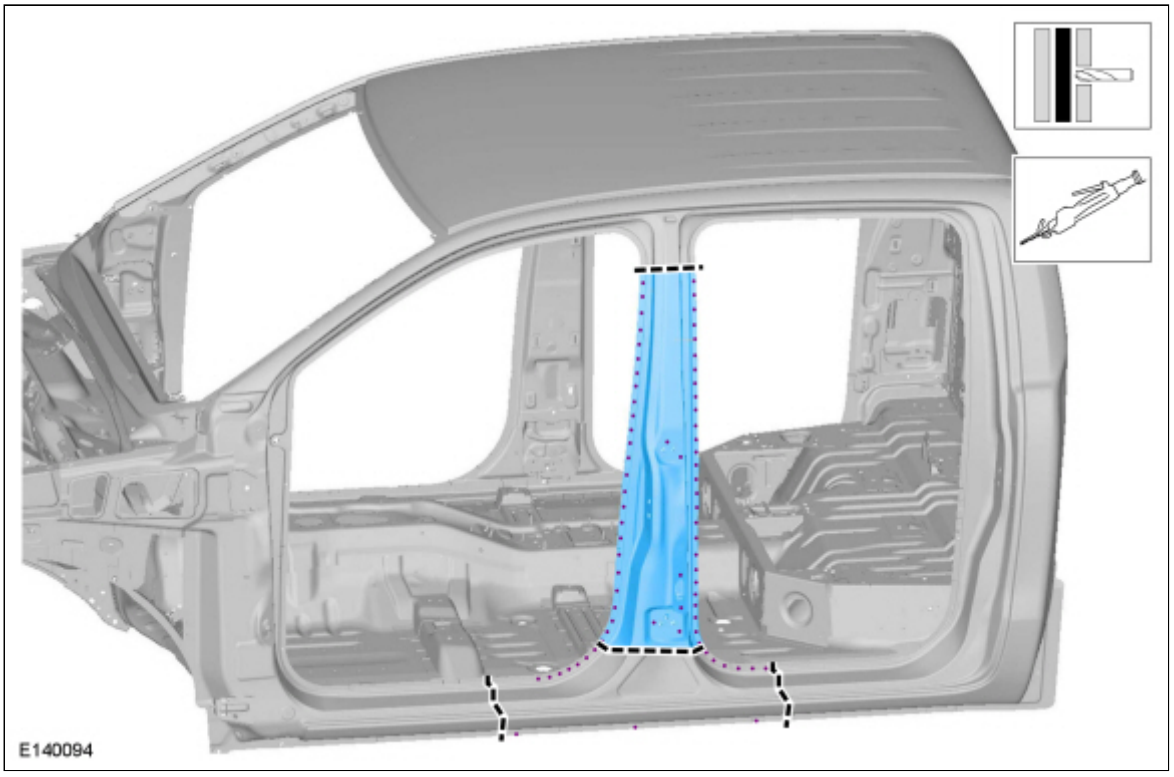
NOTE: *Equipment:*

Measurement and alignment angle system



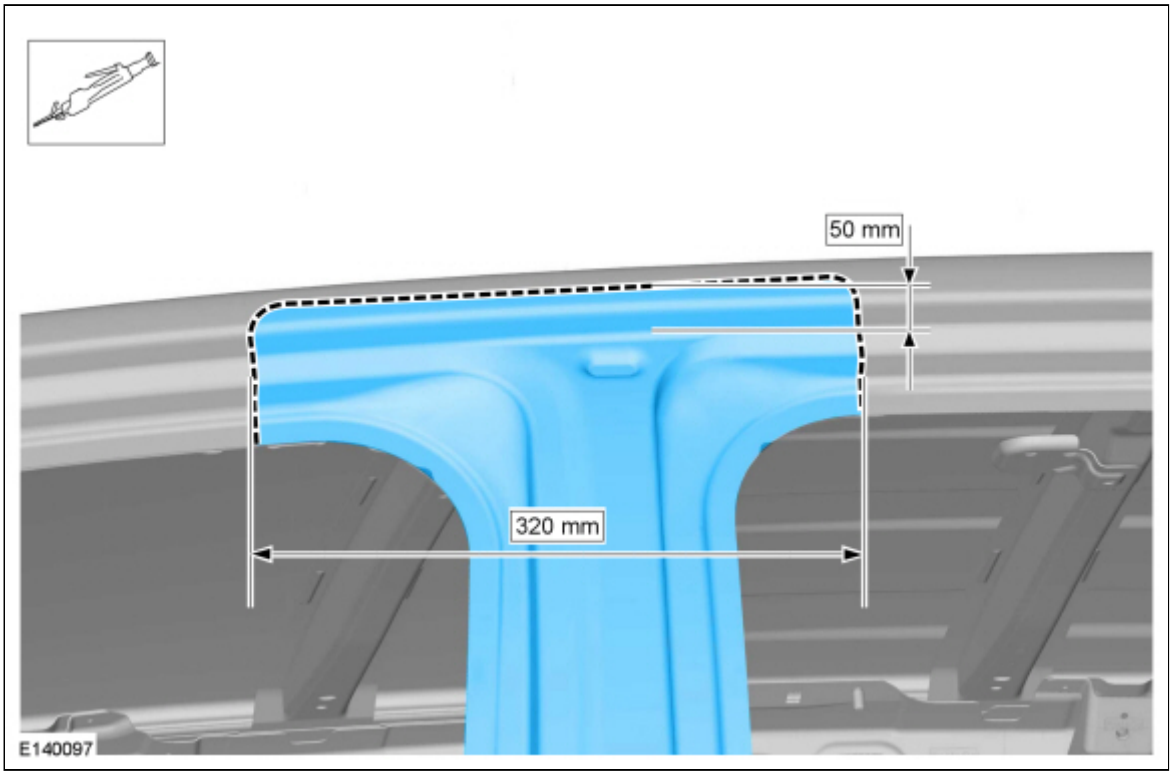
1. **WARNING: High-strength steel (Usibor 1500)**

   - **A suitably powerful resistance spot welding device with inverter technology must be used for this repair. Observe the manufacturer's welding equipment instructions and sub-section 501-25.**
   - **The B-pillar reinforcement is made of high-strength steel plate (Usibor 1500).**
   - **A partial replacement of the B-pillar reinforcement is not permissible. The required continuous MIG weld seam in the area of the cut causes structural changes which result in significant loss of strength in the B-pillar reinforcement.**
   - **Due to its strength, the B-pillar reinforcement can not always be worked on with conventional body tools.**
   - **Additional preparations are required for MIG puddle welding.**

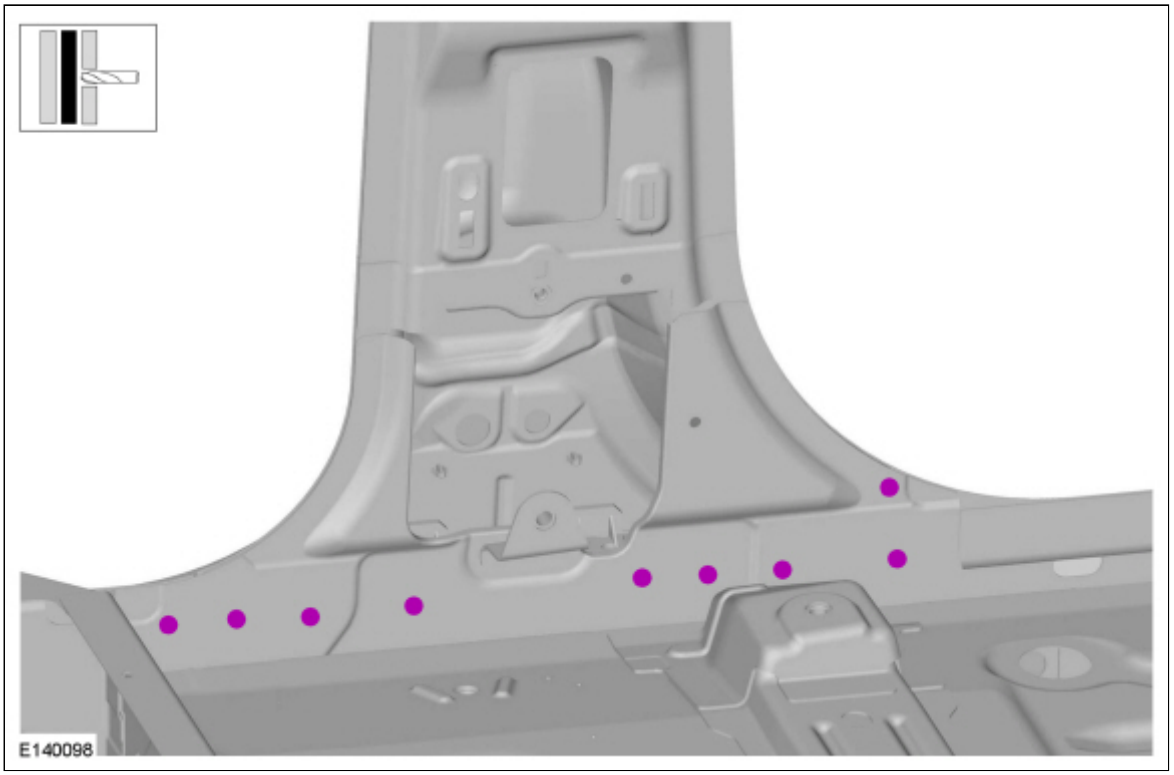
   Refer to: Tools and Equipment for Body Repairs (501-25 Body Repairs - General Information, Description and Operation).

   - Rocker Panel Trim
     Refer to: Front Seat (501-10A Seating, Removal and Installation).
     Refer to: Rear Seat Cushion (501-10A Seating, Disassembly and Assembly).
     Refer to: Rear Seat Backrest (501-10A Seating, Disassembly and Assembly).
     Refer to: B-Pillar Upper Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).
     Refer to: B-Pillar Lower Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).
     Refer to: Headliner (501-05 Interior Trim and Ornamentation, Removal and Installation).
   - Front and Rear Door
   - Reposition the carpeting and the wiring harness away from the working area.

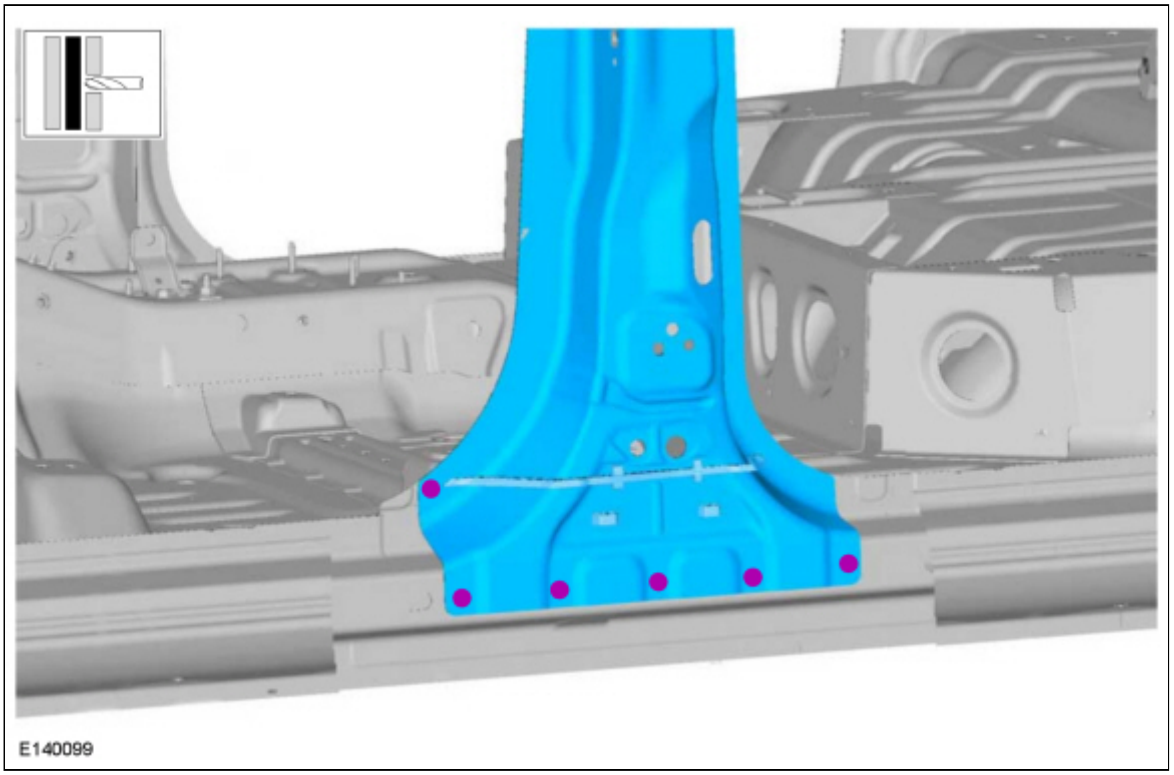
   - Use the General Equipment: Air Body Saw
     Use the General Equipment: Spot Weld Drill Bit



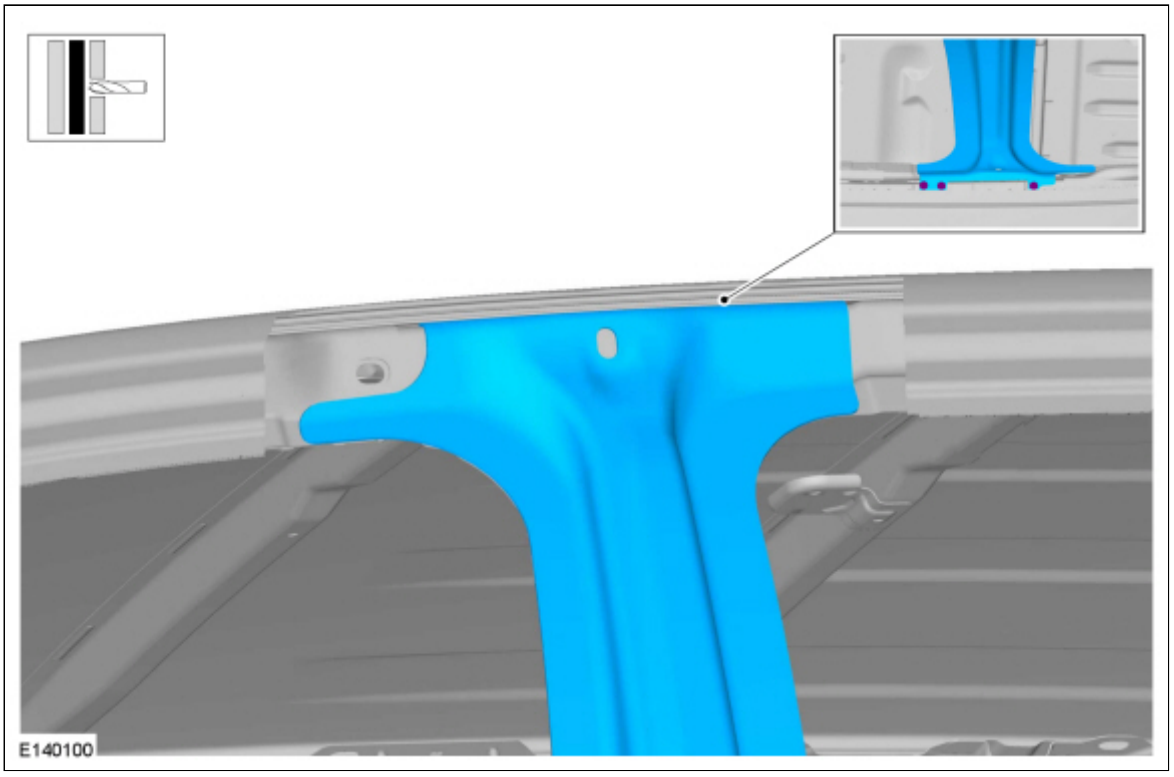
- Use the General Equipment: Hot Air Gun



- Use the General Equipment: Spot Weld Drill Bit



- Use the General Equipment: Air Body Saw



- Use the General Equipment: Air Body Saw
  Use the General Equipment: Spot Weld Drill Bit

- Use the General Equipment: Spot Weld Drill Bit

- Use the General Equipment: Spot Weld Drill Bit

Installation

1. **NOTE:** *Before resistance spot welding of body panels with a total panel thickness of 3 mm and greater, the manufacturer's welding equipment instructions and sub-section 501-25 must be followed.*

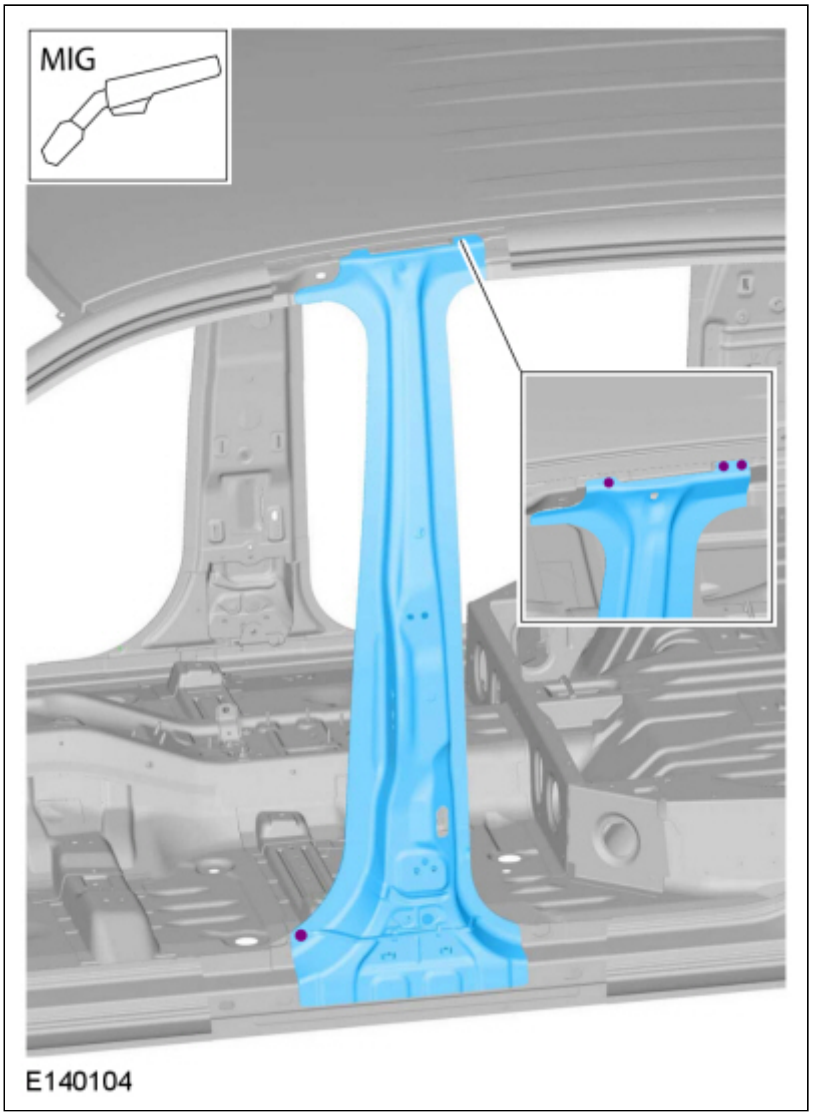
   Refer to: Tools and Equipment for Body Repairs (501-25 Body Repairs - General Information, Description and Operation).

2. **NOTE:** *Sealer or adhesive must not be applied in welding zones. Areas which were bonded or sealed needs to be thoroughly sealed afterwards.*

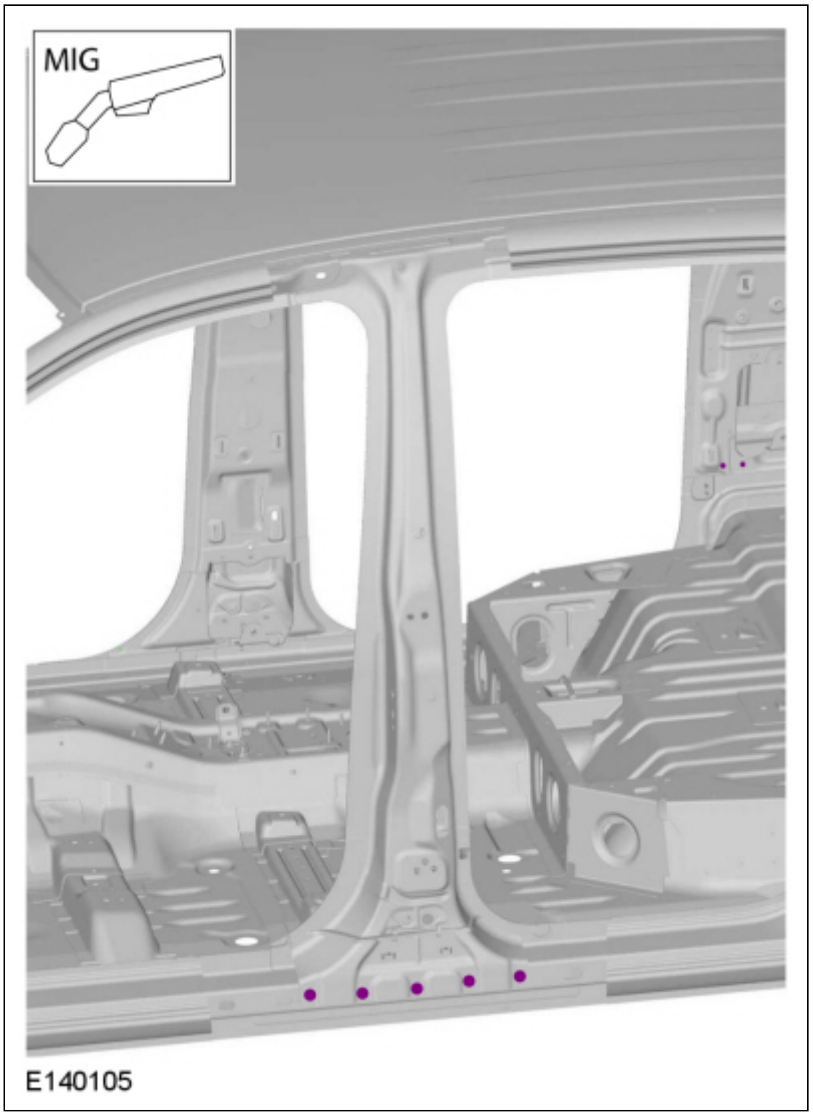
   Refer to: Sealer, Underbody Protection Material and Adhesives (501-25 Body Repairs - General Information) .

   - **NOTE:**
     - *The holes need to be pre-milled with a spherical cutter with a small diameter. Afterwards these holes are then milled out to the required diameter with a spindle milling cutter. This method is essential in order to ensure that the material in the edge area of the milled holes is not weakened.*

   Equipment: Spherical cutter
   - Equipment: spindle milling cutter



- **WARNING: The B-pillar reinforcement is covered with a hot-dip aluminized coating on its entire surface. This coating needs to be fully ground off on the welding flanges on the front and rear using a fibre grinding disc. Any contamination due to parts of the coating in the welding bath will weaken the welded joint.**



- **WARNING: The A-pillar reinforcement is covered with a hot-dip aluminized coating on its entire surface. This coating needs to be fully ground off on the welding flanges on the front using a fibre grinding disc. Any contamination due to parts of the coating in the welding bath will weaken the welded joint.**

     Refer to: Front Seat (501-10A Seating, Removal and Installation).
   - Rocker Panel Trim
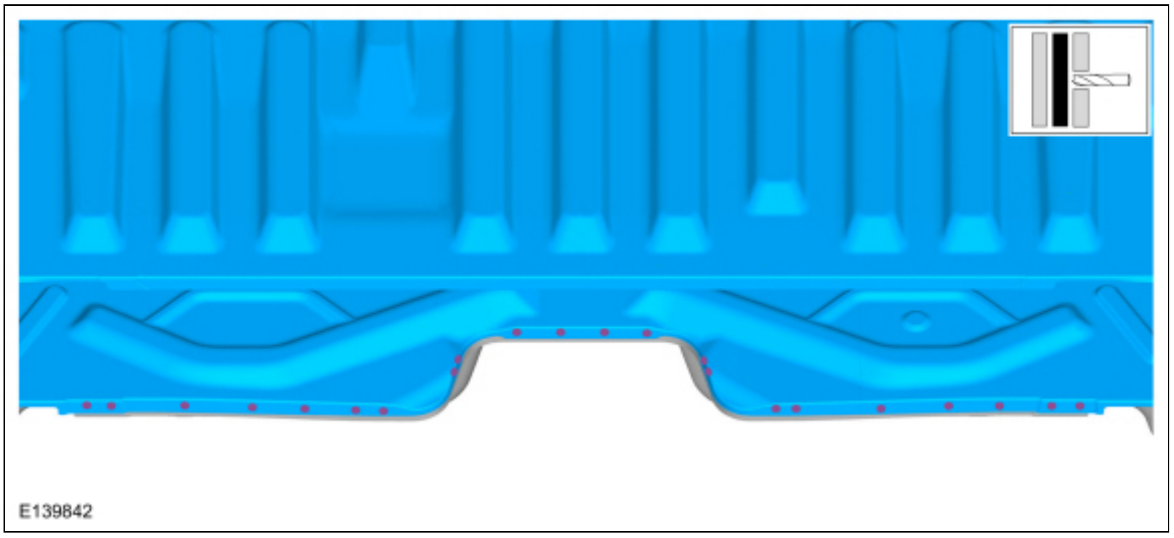
   - Remove the load body.
   - Reposition the carpeting and the wiring harness away from the working area.

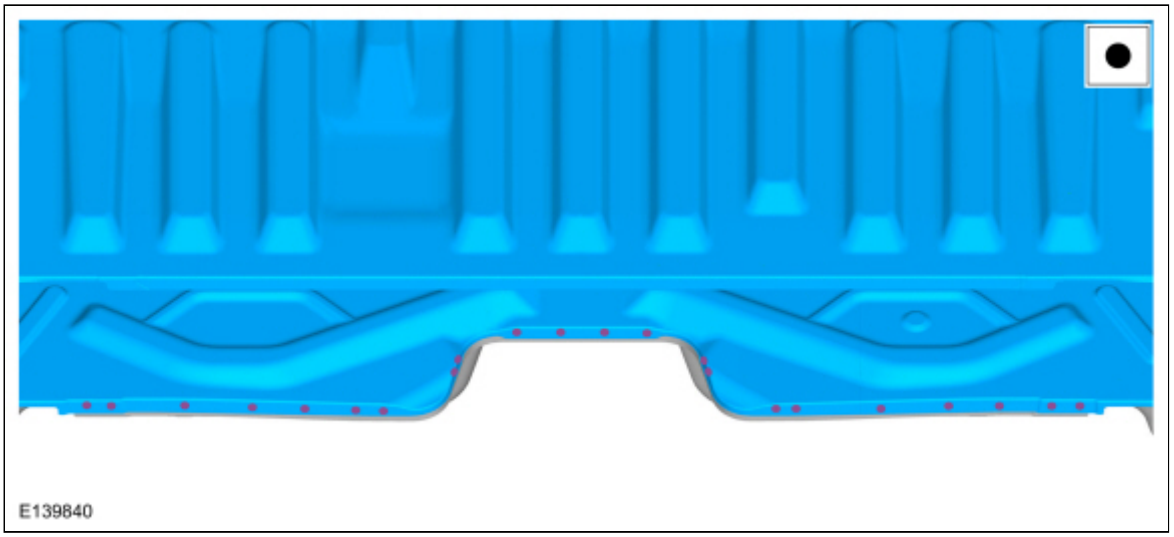


3. Mill out the spot welds.
   Use the General Equipment: Spot Weld Drill Bit

4. Use the General Equipment: Hot Air Gun

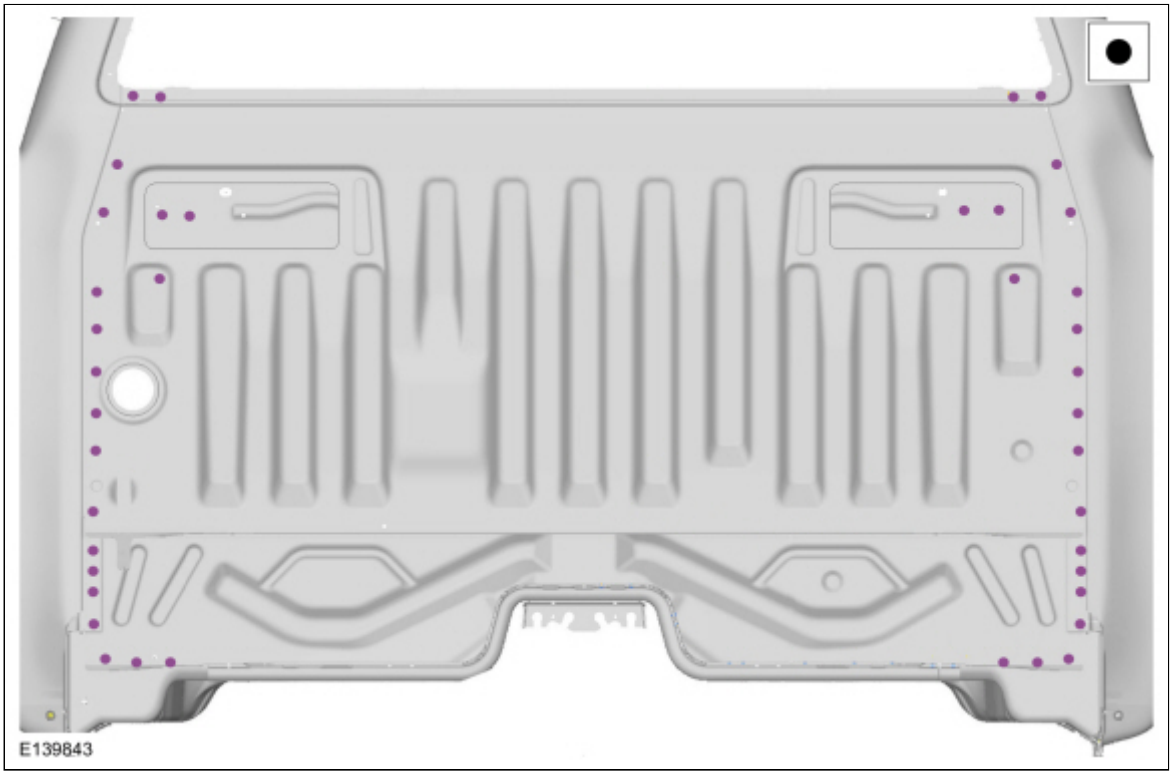
5. Mill out the spot welds.
   Use the General Equipment: Spot Weld Drill Bit

Installation



1. **NOTE:** *Before resistance spot welding of body panels with a total panel thickness of 3 mm and greater, the manufacturer's welding equipment instructions and sub-section 501-25 must be followed.*

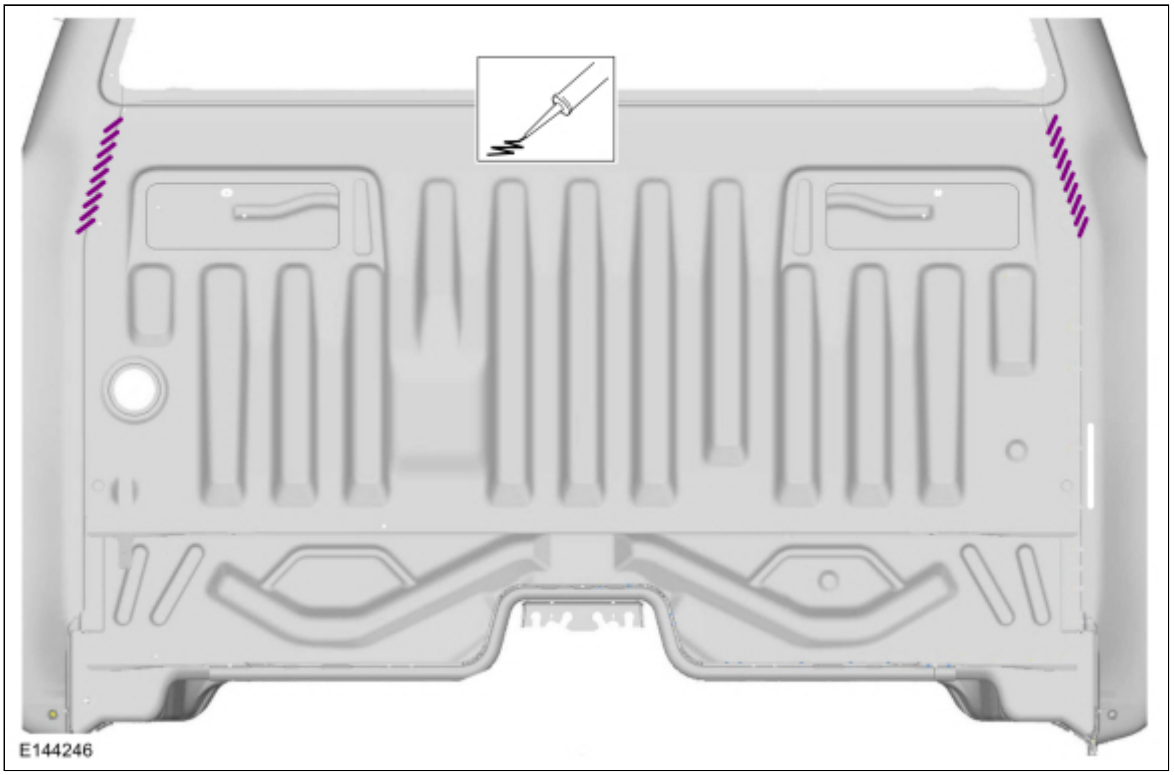
   Refer to: Tools and Equipment for Body Repairs (501-25 Body Repairs - General Information, Description and Operation).



2. **NOTE:** *Sealer or adhesive must not be applied in welding zones. Areas which were bonded or sealed needs to be thoroughly sealed afterwards.*

   Refer to: Sealer, Underbody Protection Material and Adhesives (501-25) .

   - Resistance spot weld - Panel thickness 3 mm and greater.



- Resistance spot weld - Panel thickness 3 mm and greater.

5. **NOTE:** *Apply the sealant to the back panel cavity via the vent holes in the back panel.*

   Material: Adhesive (WSK-M11P57-A3)

- C-Pillar Trim
  Refer to: C-Pillar Upper Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).
  Refer to: C-Pillar Lower Trim Panel (501-05 Interior Trim and Ornamentation, Removal and Installation).
- Rear Windshield
  Refer to: Rear Window Glass (501-11 Glass, Frames and Mechanisms, Removal and Installation).
- Driver or passenger seat
  Refer to: Front Seat (501-10A Seating, Removal and Installation).
- Rocker Panel Trim

7. Install the load body.

Description and Usage of Paint Literature

Vehicle paints are subject to severe demands caused by external influences. Moisture, air-borne deposits in the form of various chemicals and UV light constantly affect a paint surface. Furthermore, mechanical damage occurs through grit, stones and sand. Bird droppings, insect residues, pollen and tree sap also attack the paint surface.

The present literature not only informs the specialist about current repair painting techniques, but also provides tips and instructions on modern and economical repair processes.

High quality bodywork paints require the use of the most modern technologies and regular updating of the technician's knowledge of painting techniques, because of the constantly new developments in paint technology.

Information about different materials is listed under Specification.

Furthermore, information on the fundamental principles of repair painting and paint materials is provided in several chapters. The safety instructions indicate the possible health hazards and other sources of danger. There are also notes about tools and materials as well as on basic painting methods.

In the model specific repair instructions, only the most important repair steps or special features are referred to. Detailed information on the generally applicable painting procedures is given in this paint manual.

Direct supply of repair paints by Ford has been discontinued. There is however an agreement with many paint manufacturers, which ensures fast and problem-free supply to the dealer undertakings.

Paint suppliers:

- DuPont
- Glasurit
- PPG
- Sikkens
- Spies Hecker
- Standox

When using painting materials, it should be taken into account that the manufacturers have exactly matched their products between each other. In order to avoid quality defects, difficulties in working and losses in corrosion protection, these may not be substituted with other products.

NOTE: *The Ford Service Organization organizes basic and more in-depth training on much of the content of this paint manual. As well as the practical part of the training, a further component is the Student Information document, which offers supplementary information in the form of a brochure.*

During all work it must always be ensured that personal safety and the operational capability of the vehicle are not threatened by the choice of methods, tools and components.

The information given in the diagrams in the chapter "Paint Damage" is provided by the repair paint manufacturer.

Symbols

General

Various symbols, signs, instructions and illustrations are used in this literature. Warnings and cautions have different meanings and require different ways of proceeding. Diagrammatic representations are provided with instructional signs for improved clarity. These are briefly explained below:

WARNING: This caption is used when failure to follow instructions exactly or failure to follow them at all may result in a hazard to persons or in persons being injured.

NOTICE: This caption is used when incorrectly following the test procedures or instructions or failure to follow them at all could lead to damage to the vehicle or components.

NOTE: *This caption is used when attention needs to be drawn to special or extra information.*

When reading this handbook, you will come across the points WARNING, CAUTION AND NOTE. These instructions are always given immediately before the corresponding job steps.

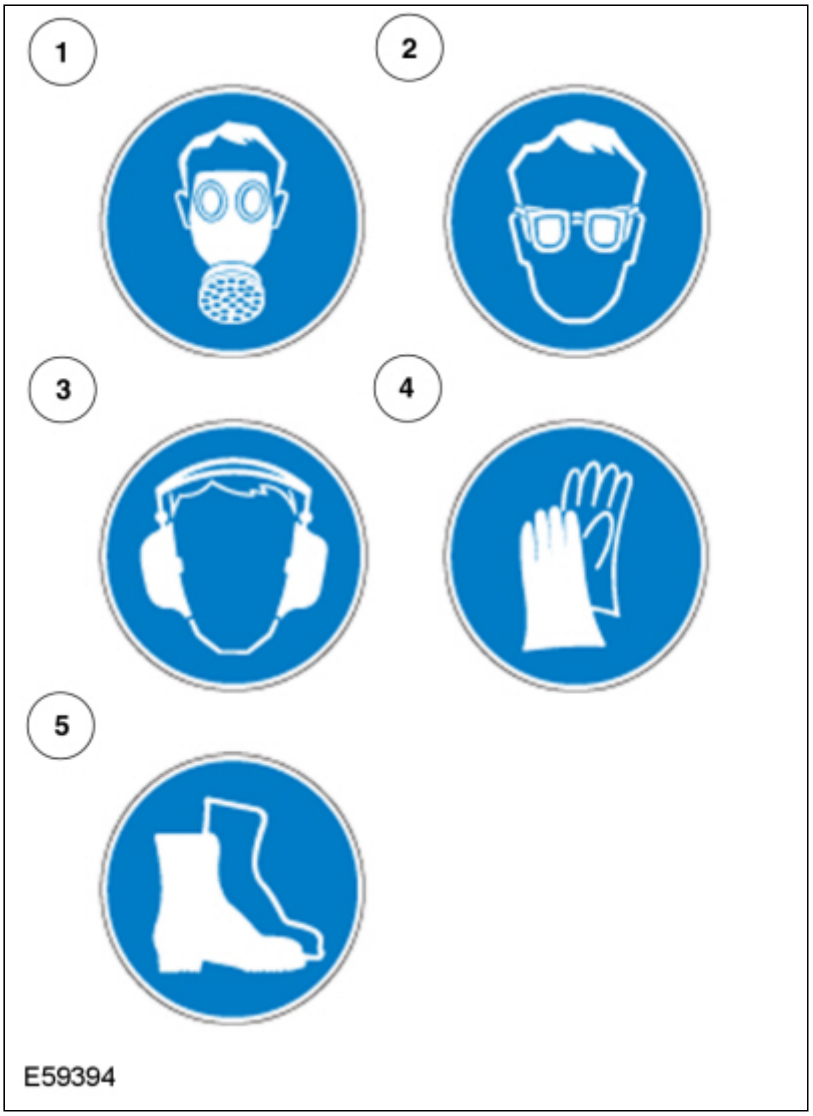
Hazardous materials designations

Many accidents occur because of ignorance. In the area of personal health protection, it is particularly important to clearly emphasize sources of danger and their effects on human organs.

Only with knowledge of hazardous material designations can it be certain that the necessary precautions are taken when handling substances which are harmful to health.

NOTE: *Pay attention to the manufacturer's data on the containers and given in the Safety Data Sheet.*

Hazardous material symbols



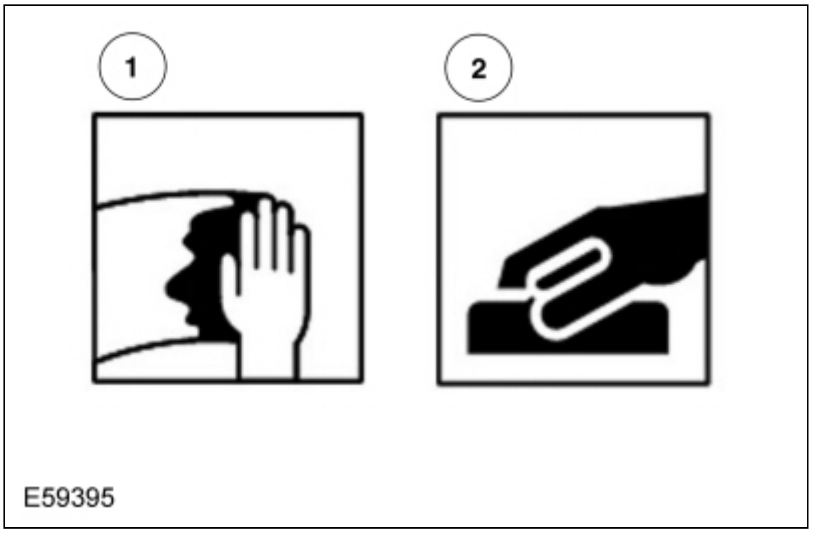
Item	Part Number	Description
1	—	Very poisonous, T+ (extremely toxic), small quantities can be fatal.
2	—	Poisonous, T (toxic), causes serious damage to health
3	—	Corrosive, C (corrosive), destroys living tissue.
4	—	Harmful to health, Xn (noxious).
5	—	Irritant, Xi (irritant), can cause inflammation.
6	—	Explosive
7	—	Highly flammable, F+ (extremely flammable), already flammable at temperatures below 0° C.
8	—	Flammable, F (flammable), forms a flammable mixture with air.
9	—	Oxidizing, O (oxidizing), reacts with combustible substances.

As well as the danger symbols, there is more comprehensive manufacturer's information to be found on the containers and in the Safety Data Sheets, and you must pay attention to this information.

Instructions on measures to be taken for personal protection.

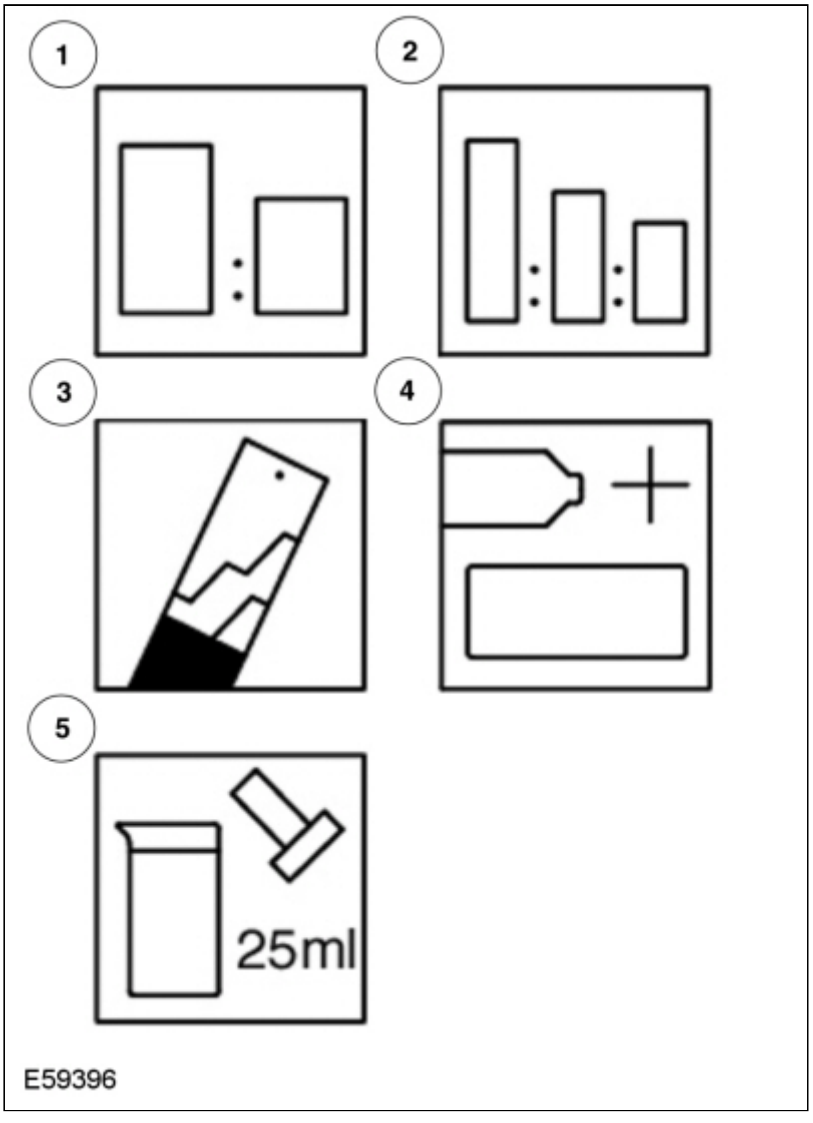
As well as the information about sources of danger, there are mandatory instructions which draw your attention to the personal protection measures to be taken.

Mandatory symbol



Item	Part Number	Description
1	—	Breathing protection must be worn
2	—	Eye protection must be worn
3	—	Ear protection must be worn
4	—	Protective gloves must be worn
5	—	Protective footwear must be worn

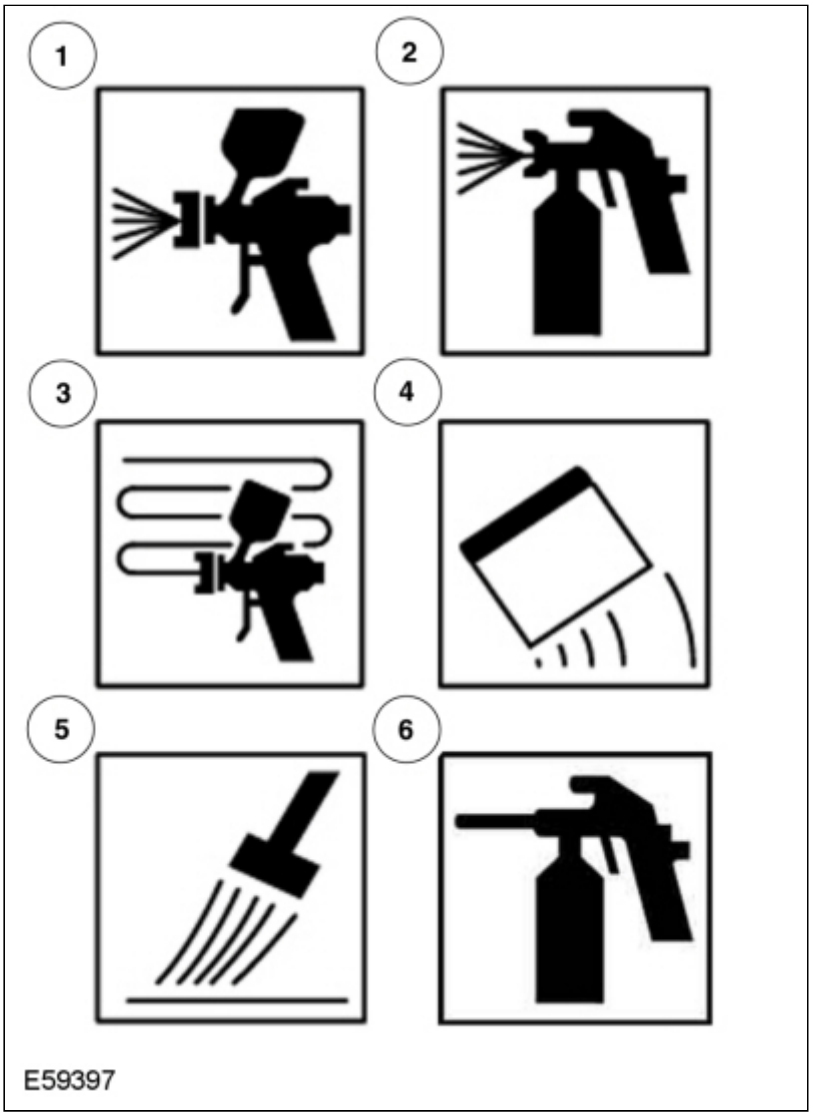
Icons



So that the necessary information for optimal handling is clear, unambiguous and can be quickly understood, the leading paint manufacturers have agreed a standard symbolic language. Language independent representations in the form of icons provide handling instructions which are supplemented with quantity or time information.

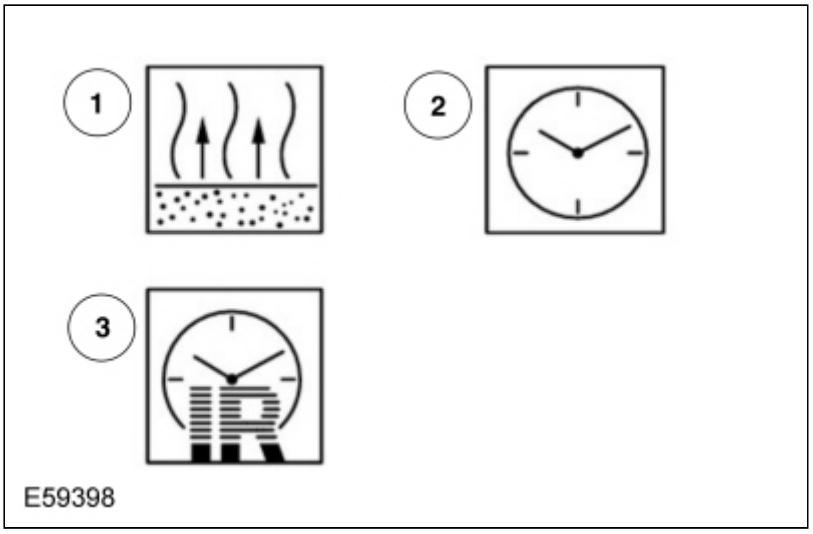
Pretreatment

Item	Part Number	Description
1	—	Clean
2	—	Sand



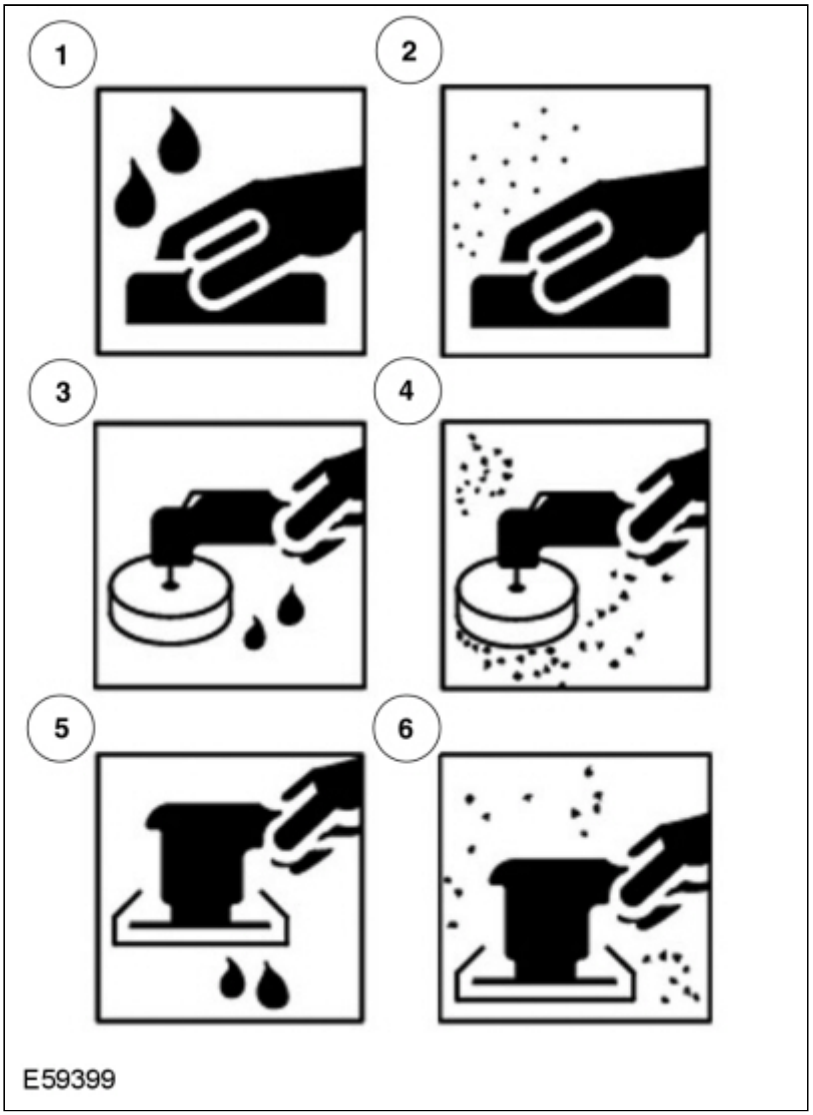
Mix

Item	Part Number	Description



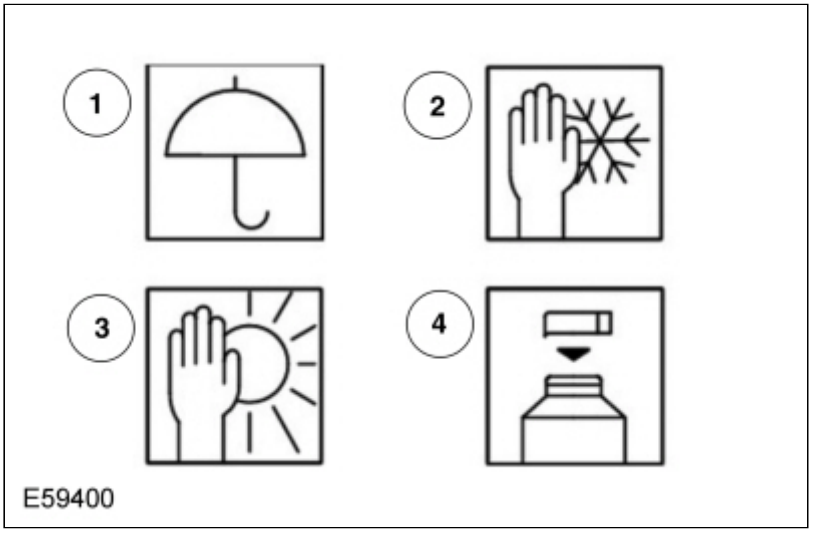
1	—	2 component mixture
2	—	3 component mixture
3	—	Use a measuring rod
4	—	Addition of hardener
5	—	Addition of additives

Process



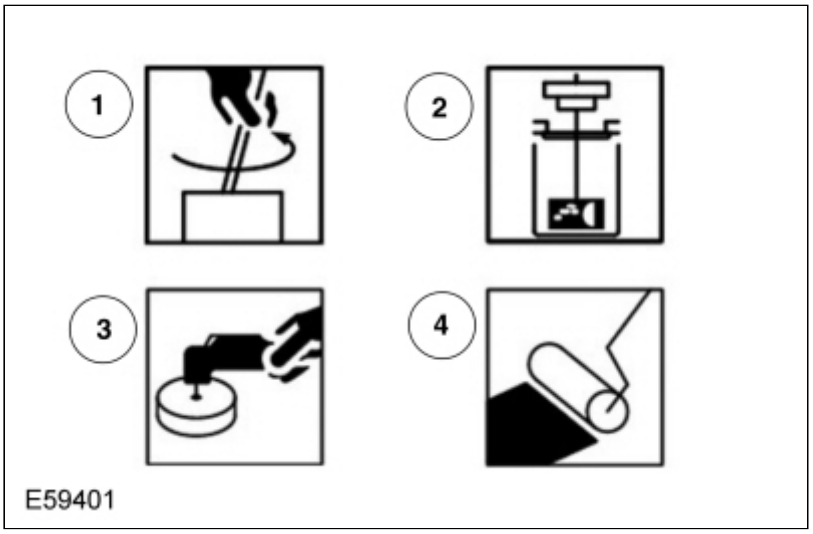
Item	Part Number	Description
1	—	Flow-beaker spray gun
2	—	Suction-beaker spray gun
3	—	Spray passes
4	—	Filler
5	—	Coat
6	—	Underbody protection spray gun

Dry



Item	Part Number	Description
1	—	Ventilate
2	—	Drying time
3	—	Drying time with infra-red dryer

Further processing



Item	Part Number	Description
1	—	Hand abrade (wet)
2	—	Hand abrade (dry)
3	—	Eccentric sander (wet)
4	—	Eccentric sander (dry)
5	—	Oscillating sander (wet)
6	—	Oscillating sander (dry)

Store

Item	Part Number	Description
1	—	Protect from moisture
2	—	Store in a frost-free environment
3	—	Store in a cool place
4	—	Close the container

Other

Item	Part Number	Description

1	—	Stir by hand
2	—	Stir using a mixing machine
3	—	Polish
4	—	Roll

Health and Safety Precautions

General instructions for the paint shop and handling paint materials

Hazardous areas in repair paint shops:

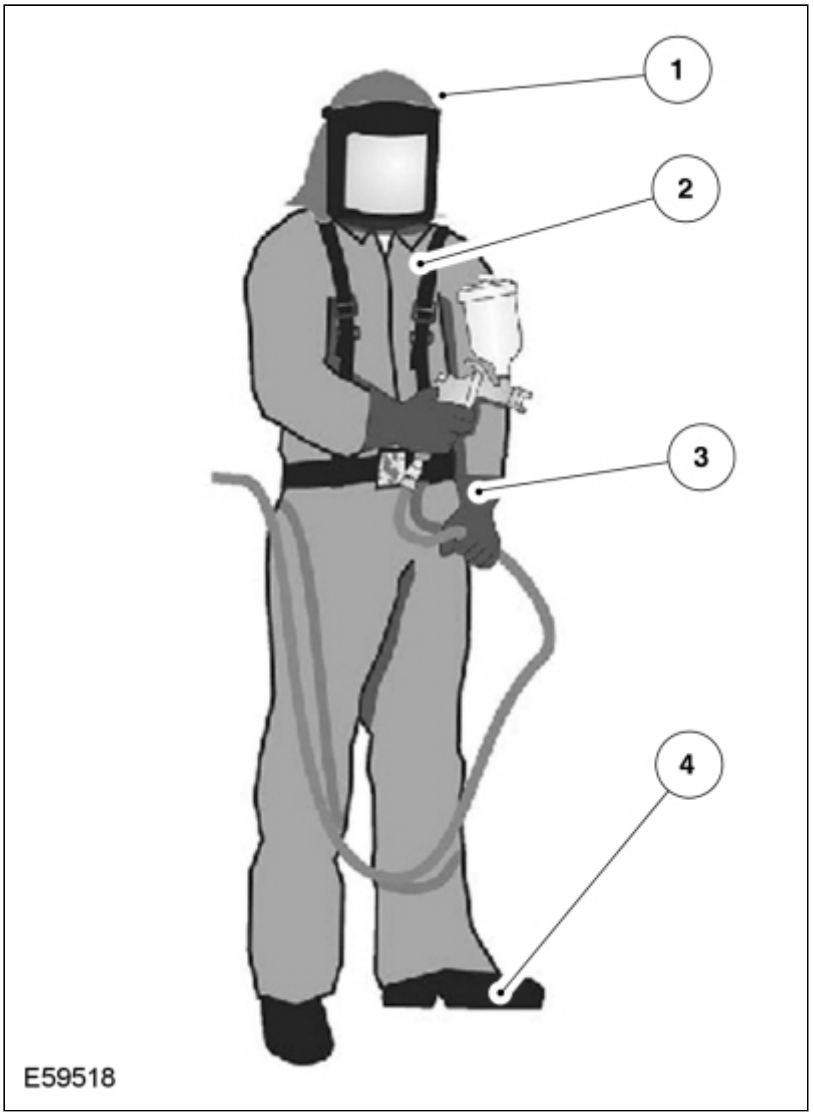
- Danger from fires, explosions and hot surfaces.
- Dangers to health and safety from the effects of harmful substances because of their absorption through the skin and/or inhalation.
- Dangers caused by electricity, compressed air, power tools and noise.

WARNING: During painting work there is an increased danger of fire or explosion. Prevent any sparks being created. Fire, naked lights and smoking are forbidden.

Measures:

- Wear protective footwear made from anti-static material.
- Only use tools made of wood, brass or copper to clean stands and extraction ducts. Do not use tools made of steel.

Only fill or decant paint materials in a specially marked area.



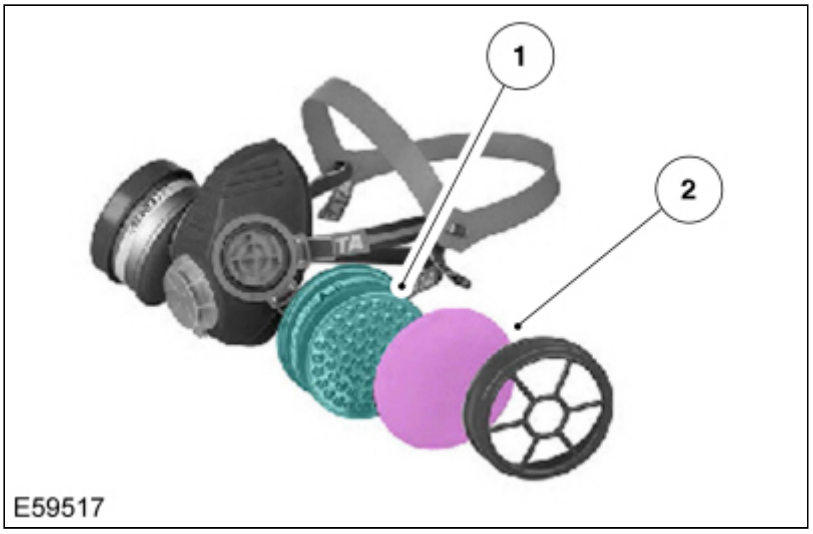
As well as these general instructions on the dangers in repair paint shops, all national and international regulations must be observed:

- Health and Safety at Work Act
- Ordinance on Hazardous Substances
- Technical Rules for Hazardous Substances
- Regulations for the Prevention of Industrial Accidents
- EU Directive on Hazardous Substances, 98/24/EU
- EU Directive on Noise, 2003/10/EU
- EU Directive on Volatile Organic Compounds (VOC), 1999/13/EU, 2001/81/EU, 2004/42/EU
- Safety instructions of equipment and tool manufacturers

Personal protection

Besides the body and limbs, several organs vital to life are in very particular danger. Because damage is mostly irreparable, special attention and comprehensive protection are necessary.

WARNING: Solvents cause damage to the health through inhalation. Splashes in the eyes or on the skin can cause bodily harm. When working with solvents, always use suitable means of protection.



Item	Part Number	Description
1	—	Protective hood with fresh air supply
2	—	Protective clothing
3	—	Protective gloves
4	—	Protective footwear

Breathing protection

During painting work and in the preparations for painting, gases, vapors, mists or dusts can appear in dangerous concentrations in the areas where fellow employees breath.

For short periods of work or minimal concentrations of hazardous substances, breathing protection devices with a combination filter are suitable as breathing protection equipment.

Item	Part Number	Description
1	—	Activated charcoal filter
2	—	Coarse filter

For higher concentrations of harmful substances, breathing protection devices which are independent of the local atmosphere are suitable.

In these types of isolation systems, a compressed air hose carries natural air from the compressor line into the protective mask. During supply, the air undergoes pressure reduction, water removal, fine filtration and usually warming to natural breath temperature.

WARNING: Vapor or spray mist containing isocyanate as a paint base or hardener can cause toxic respiratory disease (conditions similar to asthma) leading to permanent damage, even when inhaled in the lowest concentrations.

Filter masks with wadding, sponge or colloid filters and also paper masks are all unsuitable for working with coating materials because they do not stop solvent vapors.

The instructions for use provided by the manufacturer must be observed when working with breathing protection equipment.

Skin protection

Spray painters who are subject to considerable exposure to coating materials must wear suitable protective work clothing (flame-proof and anti-static).

NOTE: *Also, when working with water based materials, comprehensive skin protection must be worn, because these materials are very easily absorbed through the skin.*

The protective clothing must be changed at the proper intervals. Items of clothing which are contaminated with coating materials can easily catch fire.

When selecting protective clothing, it must be taken into account that cloth containing a high proportion of easily melted plastic thread considerably increases the degree of burns injury (melted plastic on the skin!). This must also be taken into account in the choice of underwear.

For areas of skin which are not covered by protective clothing, suitable skin protection, skin cleaning and skin care agents must be used.

Eye protection

Working with portable hand sanding machines on which the tools move unguarded, at speed and with power is fundamentally dangerous.

Goggles must be worn not only when sanding, but also when working with paints and their additives. These contain substances which are harmful to the eyes. Damage ranging from irritation of the cornea to incurable illnesses are possible.

The protective goggles must be inert toward splashes of solvent, and fully enclose the areas at the side of the eyes

on both sides. The best protection during spray painting is offered by full mask respirators or helmet respirators with a built-in visor.

Ear protection

Noise disturbance in repair paint shops caused by various sources is particularly high. Sanding and compressed air machines, paint cabin extractor fans (compressors) and extractor ducts in the work rooms are the causes of the high levels of noise.

WARNING: Avoid damage to your hearing! Wear ear protection.

Suitable ear protection is offered by ear plugs or ear defenders.

Copyright © 2016 Ford Motor Company

Environmental Regulations

Waste disposal in the repair paint shop

More than ever before, since the introduction of EU directives, rigorous attention is paid to the avoidance of waste materials and to recycling in repair paint shops. In this respect, repair paint shops must take into account and comply with the following requirements:

- Separate waste according to its recycling and disposal methods.
- Produce evidence for the correct transport and disposal of waste.

NOTE: *The organization of disposal in the plant must comply with the requirements of the Waste Avoidance and Management Act: The avoidance and recycling of waste must always take priority.*

However, despite all measures which may be taken, waste cannot be completely avoided.

NOTE: *Waste which is not allowed in household rubbish, and which can no longer be utilized, must be disposed of as special waste.*

Paint residues containing solvent, application residues, sanding dust, waste containing peroxides, solvents, soiled cleaning cloths and paint slurry all count as special waste. Each of these must be collected in a separate, sealed and suitably labeled metal container and properly disposed of using a specialist company.

Careful separation allows some waste to be usefully re-used.

- Empty metal containers can be sent for scrap instead of being disposed of as waste.
- Contaminated cleaning thinners can be separated by distillation.
- Packing material and masking paper can be added to the recycled paper collection.

Residues which cannot be used must be correctly disposed of.

All remaining waste must be treated as commercial waste and disposed of according to the local regulations.

The new VOC (Volatile Organic Compounds) solvent regulation

Keeping the air clean protects the environment and the population from the heath-damaging effects of air pollutants.

In certain atmospheric conditions, volatile organic compounds contribute to summer smog.

NOTE: *For comprehensive information, please refer to the European VOC Directive, 1999/13/EU. Furthermore, the effective national regulations must be complied with.*

The European VOC (Volatile Organic Compounds) Directive has controlled the limits for such compounds since August 2001. It applies to production coating companies and those which undertake repair painting of private and commercial vehicles.

Not least because of the VOC legislation, modern, low solvent and solvent-free lacquers and paints are finding greatly increased distribution across industry and the trade. Up to the year 2007, emissions from painting work will drop by at least 40%.

At the same time, the paint manufacturers guarantee for example that they will produce a ready-to-spray product consisting of base paint + hardener + thinners, with a permitted VOC level.

A company in business today can conform with the stipulated requirements by introducing water-based paints and using the other necessary products from the relevant paint manufacturers.

For more detailed information, please refer to the EU VOC Directive.

Factory Paint Application

General fundamentals of paint technology

Paint is a pigment-containing liquid which undergoes chemical and/or physical processes after it has been applied to a surface, so changing into a solid film covering.

Repair paint consists of binder, pigments, filler and solvent.

NOTE: *Organic solvent is being replaced by solvent based on water.*

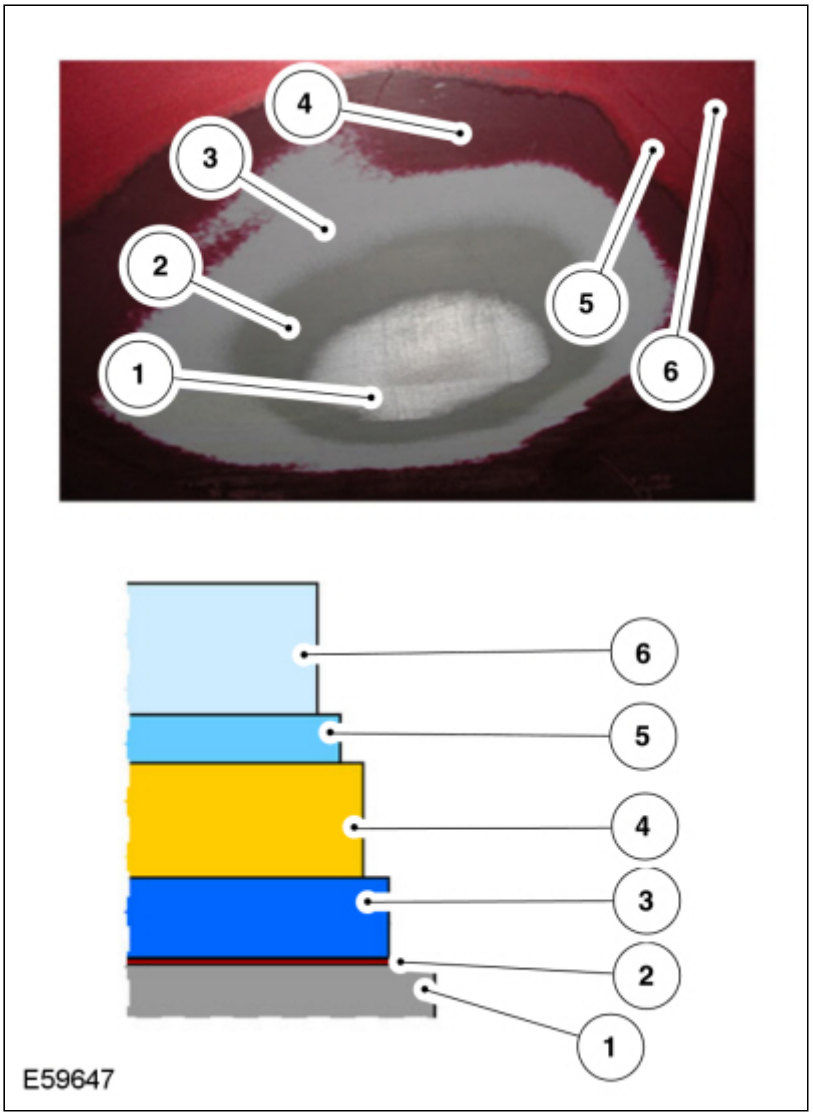
Constituents of paint

- Binder
  - Mostly semi-fluid resins which bind together the other components of the paint when it dries.
  - Makes the paint durable.
  - Ensures good surface coverage.
- Pigments
  - Fine, colored powders, which give color to the paint.
  - Cover the components below (covering power).
- Additives
  - Additives give the paint special properties.
  - e.g. flow improver, softener, drying accelerator, thickener.
- Solvent
  - Thins the paint and allows it to flow more freely.
  - Evaporates during drying.

Painting process and corrosion protection.

In production, painting consists of individual steps which are optimally matched to each other.

Bodywork consists almost entirely of steel panels which have been pre-coated with zinc. The zinc layer is between 5-10 µm thick and acts as the first corrosion protection layer of the steel panel.



Production sequence:

- Clean and de-grease
  - In the first step, the bare bodywork is initially dipped in a cleaning bath and cleaned with a degreasing solution.
- Phosphatising
  - The cleaned bodywork is dipped in a bath containing various phosphate salt solutions. This creates a crystalline metal-phosphate layer which offers the optimal prepared surface and also corrosion protection.
- CDP base
  - The cataphoretic dip paint (CDP) base acts as a further corrosion protection layer.
  - In this process the bodywork is completely immersed in a bath consisting of a paint and electrolyte solution.
  - By application of an electric voltage, an electric field is created.
  - Positively charged paint particles settle on the negatively charged bodywork and form a protective layer up to 20 µm thick.
  - Next the bodywork is placed in a dryer, where the CDP base is hardened at 180°C.
- Sealing, stone-chip protection
  - Edges, seams and but joints are sealer with a sealing compound.
  - Vulnerable areas are coated with stone-chip protection.
- Filler
  - Filler protects the body panels from stone impacts. Furthermore, any unevenness of the metal surface is flattened out, in order to create the most homogenous and fault-free undersurface possible.
  - Once the filler is dry, it serves as the base on which paint is applied.
- Top coat
  - The top coat is applied as a single layer or two layers of paint.
  - When working with two layer paint, in the first job step the initial colored base paint is applied. In the second job step, a clear lacquer is applied, giving the base paint shine and hardness.

The structure of an original paint finish

During construction of the original paint, a total surface thickness of between 120 and 130 µm is achieved. The thicknesses of the layers may vary however, because they are greater for horizontal surfaces than vertical ones.

Paint layers

Item	Part Number	Description
1	—	Steel panel
2	—	Phosphate layer 2.9 g/m², corresponding to 2 µm.
3	—	Cathodic dip paint 30-35 µm
4	—	Filler 30-35 µm
5	—	Base paint 15-20 µm
6	—	Clear varnish 55 µm

Colored fillers applied in production

Filler which gives color is used in production. Its use makes the base paint and clear varnish unnecessary on certain vehicle interior surfaces (engine, doors).

Not every exterior paint has its own matching filler. It is more that the tones of the filler are color compatible, i.e. they have similar intensity to the top coat.

During repair painting the filler color tones must be used according to the manufacturer's instructions.

Copyright © 2016 Ford Motor Company

Paintwork Defects and Damage

Diagnosis and Damage Assessment

Paint concerns, regardless of their causes, are part of the everyday work in the paint shop. Correct damage assessment and determination of the cause are preconditions for a professional resolution of a paint concern.

Paint concerns can still occur through a variety of causes, despite improved paint materials and new spray methods.

NOTE: *A first appraisal of the paint damage should be done before cleaning. External factors such as rust, droppings, incorrect or insufficient paint care can then be more easily detected.*

Diagnosis is best done in daylight but not in direct sunlight. Exact evaluation can also be done under artificial light from special luminescent lamps.

Paint damage guide

The most important paint damage concerns which make a paint repair necessary are:

- Damage from biological paint contamination such as bird or insect droppings, tree resin and aphids.
- Chemical paint damage caused by industrial contaminants such as smoke, fuel, acids, oils.
- Mechanical damage caused by stone impact during operation, scratches in the car wash and parking.
- Damage caused by faults in treatment. Application defects such as paint runs or orange peel.
- Dirt inclusions in the paint layer, e.g. caused by dust in top coat or textile lint.
- Damage due to corrosion.

Before repair of such paint concerns, exact diagnosis must be performed to determine the cause exactly. On the spot diagnoses using simple aids and processes are often enough.

Diagnosis without disturbing the paint is done by:

- Optical inspection without visual aids, under suitable light conditions from a suitable angle and correct distance.
- Optical inspection with the help of a magnifying glass.
- pH paper.
- Measurement of the thickness using FE / NFE coating thickness meters for ferrous (FE) and non-ferrous metals and non-magnetic steel (NFE) - magnetic process on steel panels, eddy current process on non-metals.

A test method where the traces of testing can be easily removed again is the finger nail test. With suitable experience the existing hardness of the paint can be determined.

Test methods where the paint is partially destroyed are:

- Pencil hardness test.
- Adhesion test using adhesive tape.
- Lattice cut test process to check the strength of adhesion.

Under certain circumstances these test methods are not enough for a certain diagnosis. In this case, paint diagnosis under laboratory conditions must be performed.

Measuring and testing equipment for painted surfaces

Coating thickness measuring devices

Magnifying glass

pH paper (together with water)

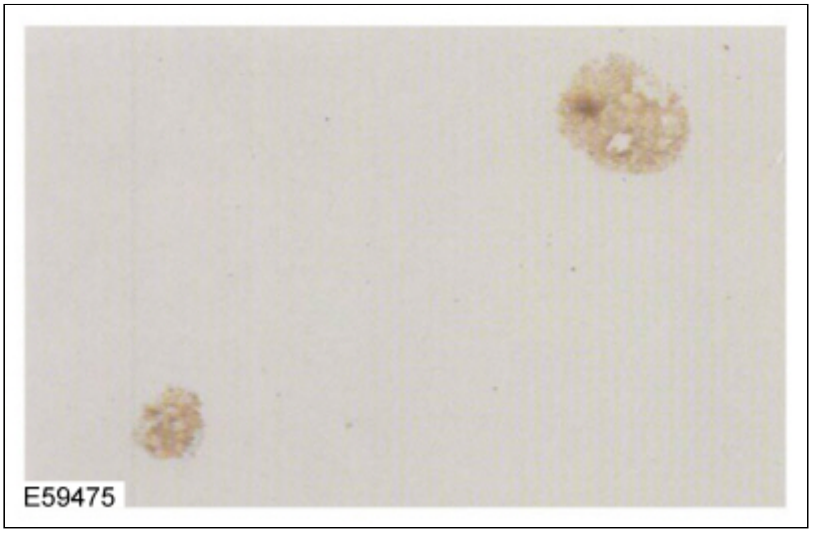
Suitable photographic equipment with macro lens

Shine measuring equipment

Paint damage caused by environmental factors

- Bee droppings
- Bird droppings

- Insects
- Tree resin and sap
- Aphid secretions
- Tar spots
- Cement, plaster and slaked lime
- Rust film/deposits from industrial fallout
- Battery acid
- Brake fluid



In all the cases of paint damage described below, if the damage is irreversible a new paint finish must be applied.

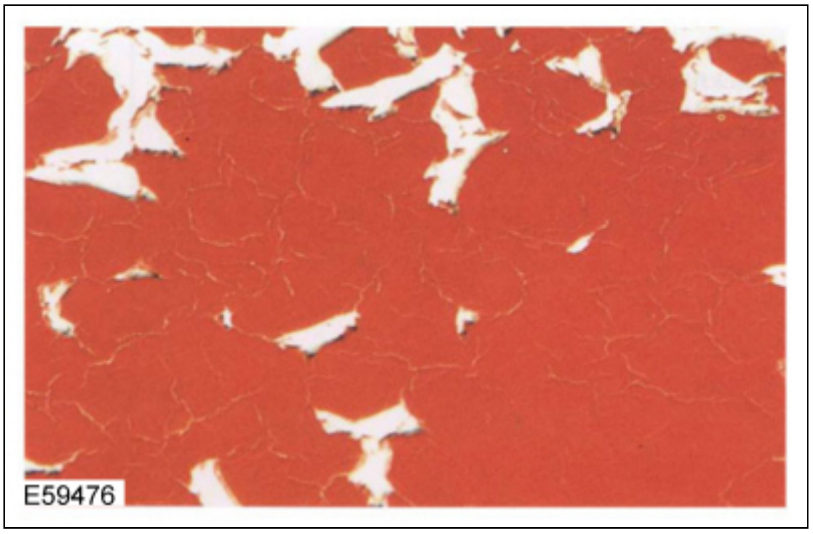
Paint damage cause by bee droppings

Bee droppings can be recognized on a paint surface through its yellow or brown color and sausage or drop-like shape with a diameter of 3-4 mm.

Cause/damage pattern:

- In combination with heat and high air humidity, bee droppings leave discolorations and cause paint decomposition.
- The paint can be destroyed down to the filler.

Repair of damage:



- If the damage is light, perform a polishing repair.

Paint damage caused by bird droppings

Bird dropping damage appears most often as matt, etched topcoat areas of various sizes. If left on the vehicle for a long time, crack formation and etching down to the filler will occur.

Cause/damage pattern:

- Bird droppings are particularly harmful in combination with heat and moisture. The urea (white part) has a very high salt content and is very aggressive.
- The intensity of the damage varies depending on the type, quantity, contact time and extent.
- Cracks, etching, marks up to dissolution of the top coat are the results.

Repair of damage:

- If the damage is light, perform a polishing repair.

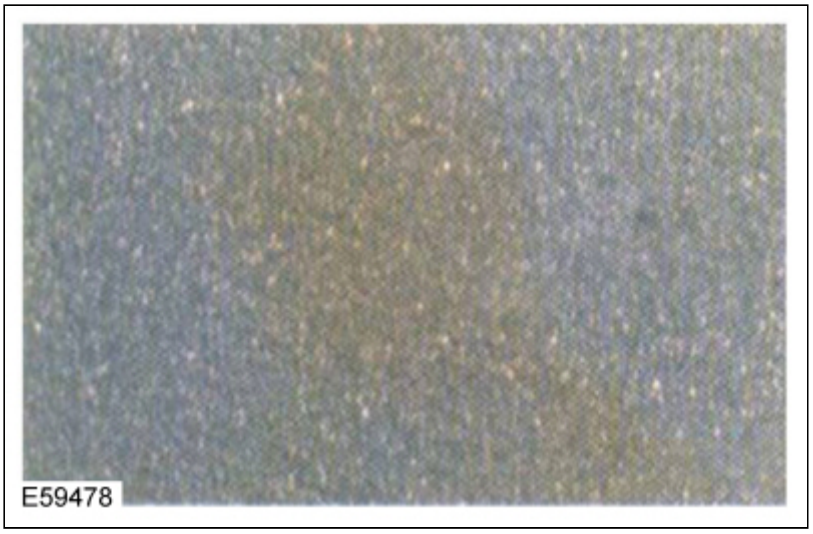
Paint damage caused by insects

At insect impact locations on the hood, roof and bumper, small etched or etched through paint marks with partially visible spots of filler.

Cause/damage pattern:

- The top coat layer is destroyed in a short time by surface swelling and etching.
- Colliding insects stick to the paint surface. In combination with moisture and heat, because of the resulting acids the insect bodies sink into the paint top coat.
- The corrosion is G, C, U or O shaped and is only a few millimeters thick.

Repair of damage:



- Wash the vehicle, treat the affected area with insect remover. Clean the paint surface several times.
- Protect with hard wax.

Paint damage caused by tree resin or sap

Small yellow-brown marks or drops on the horizontal parts of the vehicle. The drops melt in sunlight. Resin damage only occurs in the warm summer months.

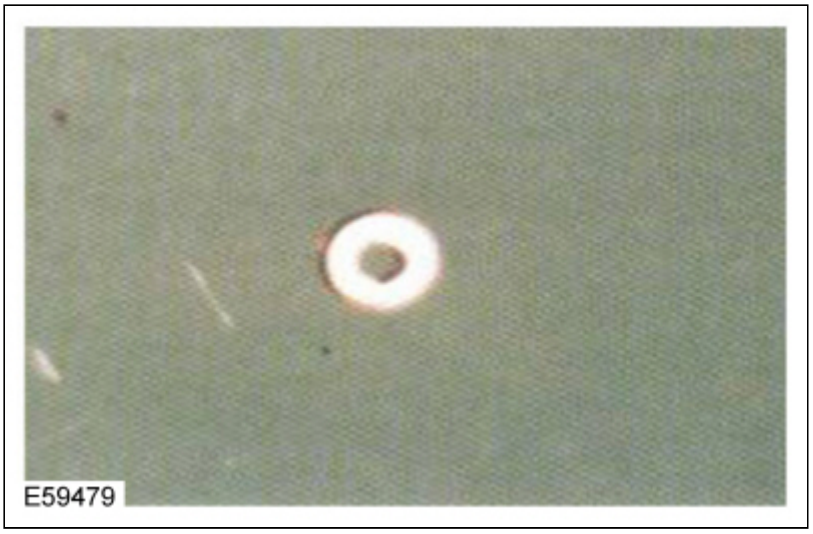
Cause/damage pattern:

- Because of their chemical composition, tree resins combine with or adhere very well to paint top coats and cause them to swell. The higher the temperature, the more intensive is the chemical bonding between the resin and the paint topcoat surface.

Repair of damage:

- Soak several times using a cloth saturated with a petrol & paraffin mixture.

NOTE: *After successful cleaning the top coat must be preserved.*



- Swellings can be removed by warming.

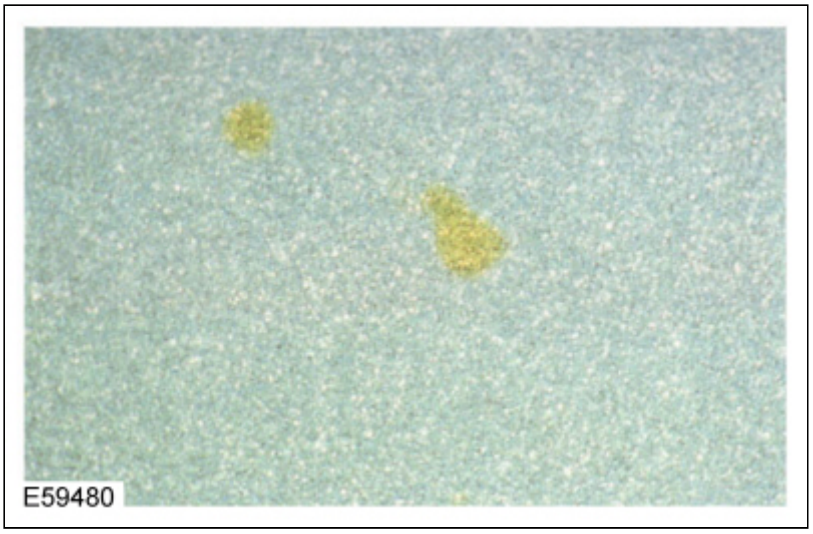
Paint damage from aphid secretions

Small, round, matt marks about 1 mm diameter and etching with small islands down to the filler. Fresh aphid excrement looks like small drops of honey.

Cause/damage pattern:

- Aphids produce a mixture of starch, leaf acid and sugar from sap in leaves. Under the effects of warming and moisture this can turn into alcohol.
- The round shape of the damage and the island of intact paint are typical.

Repair of damage:



- Remove the excrement as soon as possible.
- Small single matt locations without etching can be repaired using a polishing repair.

Paint damage caused by tar spots

Yellow or dark marks.

Cause/damage pattern:

- Firmly stuck spots of tar which lead to discoloration of the surface. In some cases penetration through the clear lacquer into the top coat.

Repair of damage:

- Clean the paint surface with tar remover and polish.

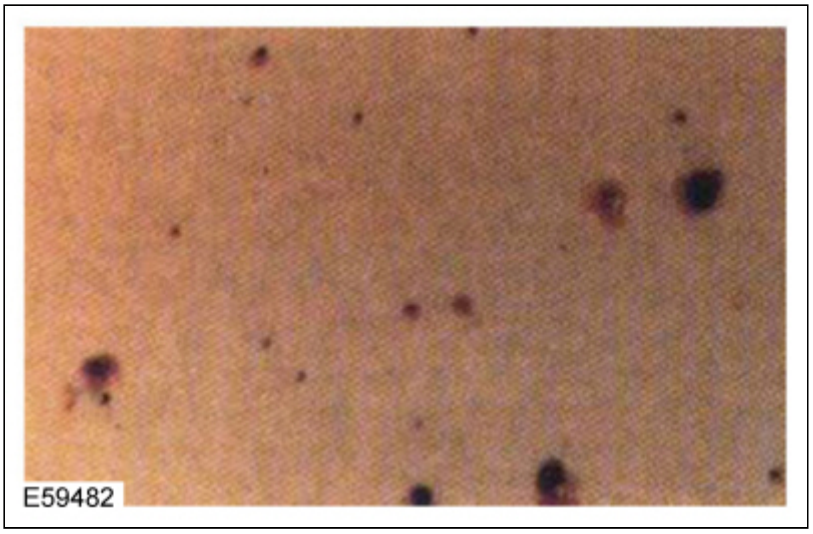
Paint damage caused by cement, plaster and slaked lime

Damage appears as whitish matt marks on the top coat.

Cause/damage pattern:

- Corrosive alkaline compounds interacting with moisture.

Repair of damage:



- Wash immediately if the contamination is fresh.
- If the contamination has dried on, dissolve and neutralise it with vinegar, then thoroughly wash off with water and rinse.
- Rectify mild damage using a polishing repair.

Rust film/deposits from industrial fallout

Small round marks, about 1 mm in size, in all shades from black, grey, blue to reddish, on the horizontal surfaces of the vehicle.

Cause/damage pattern:

- Deposits from oil fired systems and industrial plant, especially at high humidities and inversion weather conditions, cause damage to the paint top coat.
- As the activity time increases so called rust halos form. They spread as long as the deposits corrode.
- Industrial fallout containing iron will no longer be removable after a few days!

Repair of damage:

- Remove the dust using an industrial fallout remover and thoroughly wash.
- Polish the paint surface.

NOTE: *Never try to remove the particles of industrial fallout by polishing or rubbing!*

- Use cleaning dough.

Damage caused by battery acid.

Splashes of battery acid caused by carelessly topping up the battery.

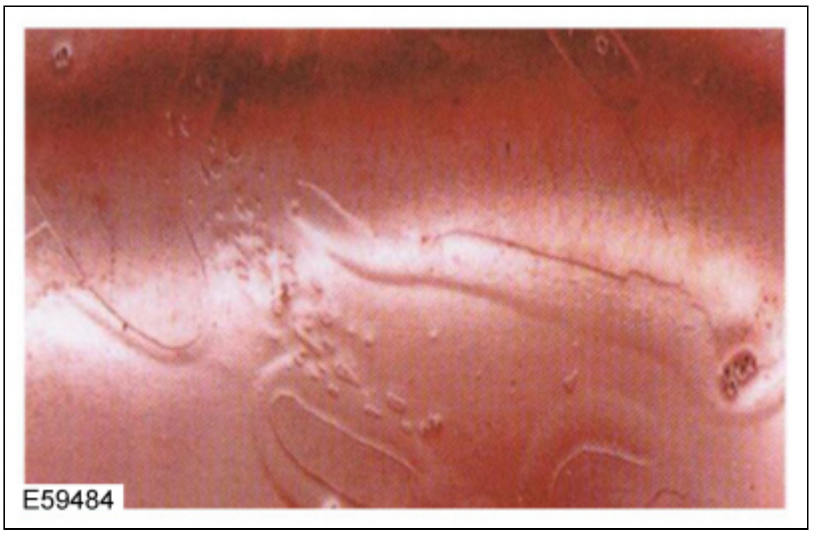
WARNING: Batteries contain sulphuric acid. When working near the battery, or where there is battery acid on the vehicle body, protect the skin and eyes from contact with the acid. If battery acid contacts the skin or enters the eyes, flush the affected area immediately with water (flush for at least 15 minutes) and call a doctor without delay. If acid is swallowed, call a doctor immediately. Failure to follow these instructions may result in personal injury.

NOTE: *High temperatures accelerate the attack on the top coat. At 50°C the top coat layer breaks down after about 15 minutes!*

Cause/damage pattern:

- Etching of the paint layer to decomposition of the paint finish.

Repair of damage:



- Flush the acid splashes with plenty of water and neutralize with car washing liquid.
- If the contact time of the acid was short, perform a polishing repair.

Paint damage caused by brake fluid.

Careless handling of brake fluid. The glycols contained in the fluid cause swellings.

Cause/damage pattern:

- The temperature and contact time are critical. Splashes lead to loss of shine and lightening of color.

Repair of damage:

- Flush immediately with plenty of water.
- The swellings can often be made to recede completely by treatment with the radiant heater or in the paint drying oven at max. 60°C for about 1 hour.

Mechanical damage

Stone impact damage or mechanical damage

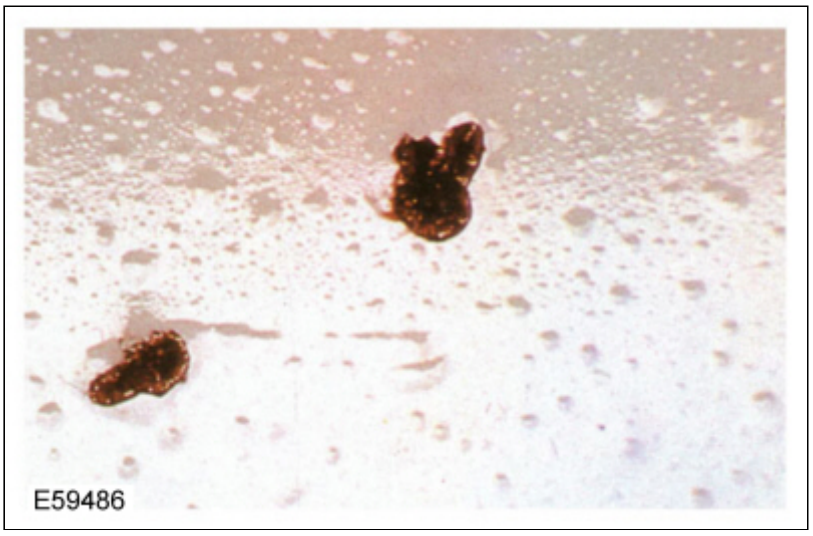
Mechanical damage caused by impact of stones or other hard objects and extending down to the metal panel lead very quickly to corrosion and rusting under the paint on the adjoining surface.

Cause/damage pattern:

- Paint damage caused from the outside, down to filler, primer or metal panel.

Repair of damage:

- Sand or blast out.
- Use anti-corrosion primer.
- Apply top coat.



Damage due to corrosion

Blistering/rusting below

Air or water filled blister-shaped raised areas in the paint film.

Cause/damage pattern:

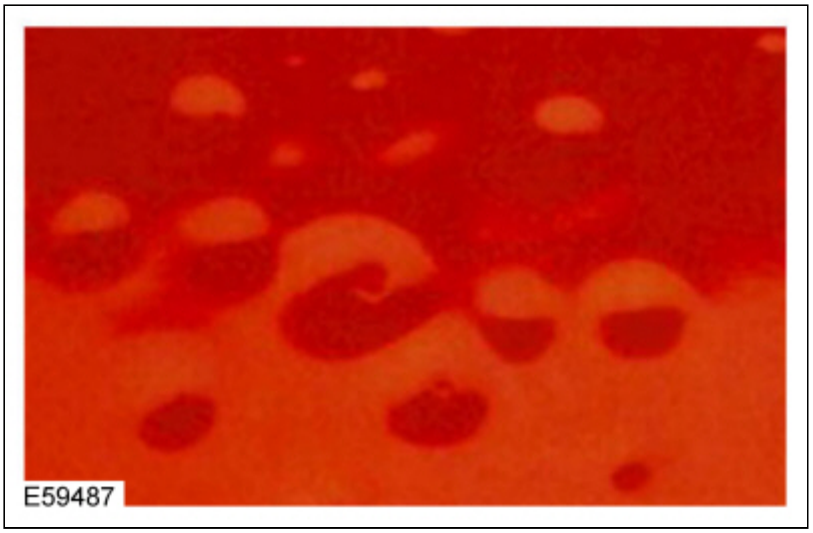
- Overpainting corroded steel panel.
- Condensation in the spray air.
- Sanding water not dried out or salt crystal residues.
- Road chippings and road winter grit containing salt.

Repair of damage:

- Sand the affected area of damage or the body component and re-create the paint finish.
- More severe and larger areas of rusting below must be repaired using the corresponding repair painting, Repair Level III or IV.

Damage caused by faults in treatment

- Craters
- Paint boils
- Adhesion defects
- Adhesion defects - clear lacquer
- Sanding scores
- Formation of stripes
- Peeling/blistering on plastic parts
- Blistering on polyester material
- Peroxide marks in metallic paints
- Crack formation
- Shrinking back/zone edge marks
- Blistering
- Etching
- Paint wrinkles/puckering
- Cloud formation
- Spots/metallics
- Metamerism/color deviations
- Washing out
- Loss of gloss
- Covering ability/areas of thin paint
- Flow problems/orange peel
- Dirt embedded in metallic base paint
- Dirt embedded in top coat
- Water marks
- Paint runs
- Swirl marks



Craters

Crater-like single or extensively occurring depressions with raised edges, in top coat or the intermediate layers.

Cause/damage pattern:

- Substrate not adequately cleaned with silicone remover.
- Spray air contaminated by oil residues and water accumulations.
- Filter ceiling not adequate for requirements.
- Use of polishes, cleaning agents or sprays (e.g. interior sprays) containing silicone.

- Oil, wax, grease, silicone containing residues.
- Working clothes contaminated by materials containing silicone.

Repair of damage:

- Sand paint surface, clean with silicone remover and apply one thin spray pass. Let it begin to dry well, then apply several thin and dry sprayed passes.

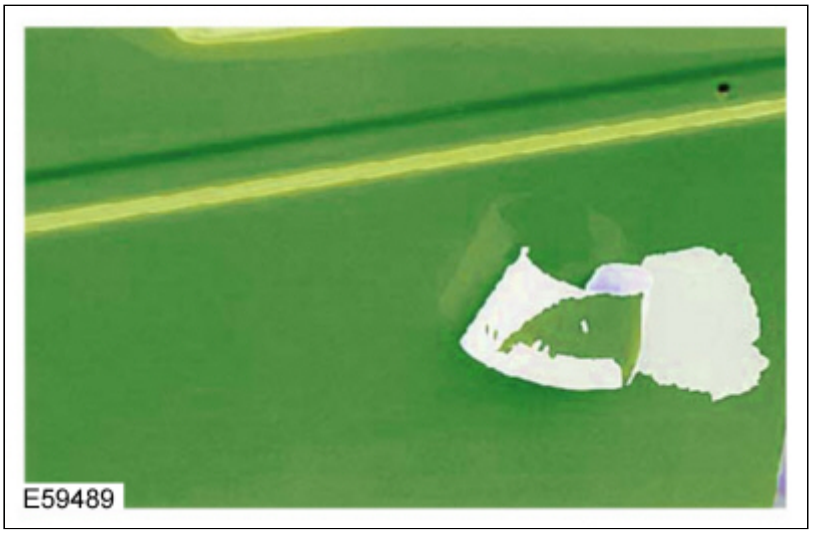
Paint boils

Small, hard, closed or burst blisters in the paint top coat. They appear locally in groups or spread individually across the whole surface. Sanding opens up a larger cavity, under which the primer can often be seen.

Cause/damage pattern:

- Paint applied in layers which were too thick.
- Specified flash-off and drying times between coats were not adhered to.
- Specified working viscosity and spray pressure were not adhered to.
- Use of unsuitable hardener and thinner materials. (Solvent combinations in paint system not optimally matched).
- Poor booth conditions.

Repair of damage:



- Single boil blisters can be removed using polishing.
- After thorough drying, sand the top coat at the affected areas, clean with silicone remover and re-paint. Fill any fine pores still present with 2-component acrylic filler.
- On larger areas of damaged topcoat, sand completely away and apply new paint finish.

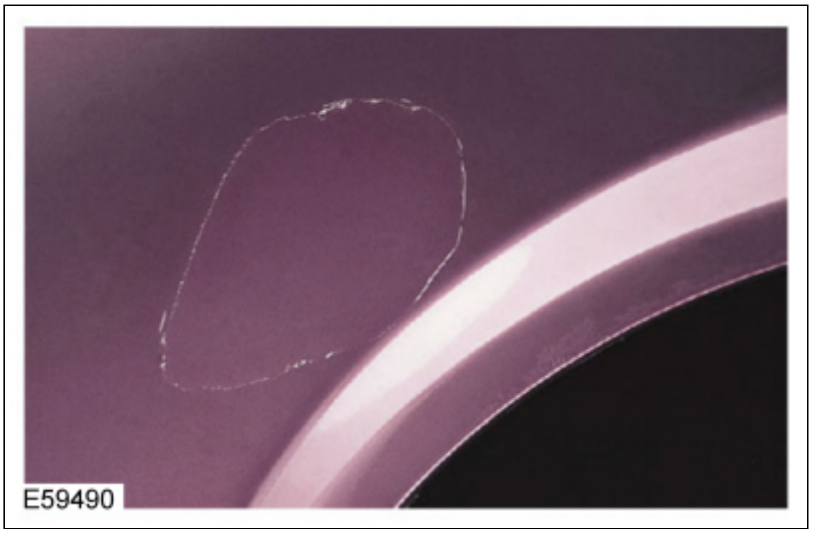
Adhesion defects

Whole coating detached from substrate or individual layers one from another. Sometimes adhesion defects can only be noticed after an external influence such as stone impact.

Cause/damage pattern:

- Substrate not adequately prepared (rust, grease, moisture, sanding, cleaning).
- Unsuitable material used.
- Drying times, flash-off times too short.
- Base paint not sprayed wet-in-wet, instead the intermediate drying times were too long.
- Failure to intermediate sand.
- Condensation formed because of temperature fluctuations.
- Unprofessional preparation (especially on plastics).
- Overheated CDP/intermediate filler.

Repair of damage:



- Sand out the damage and recreate the paint finish. Create the paint finish strictly in accordance with the general technical information.

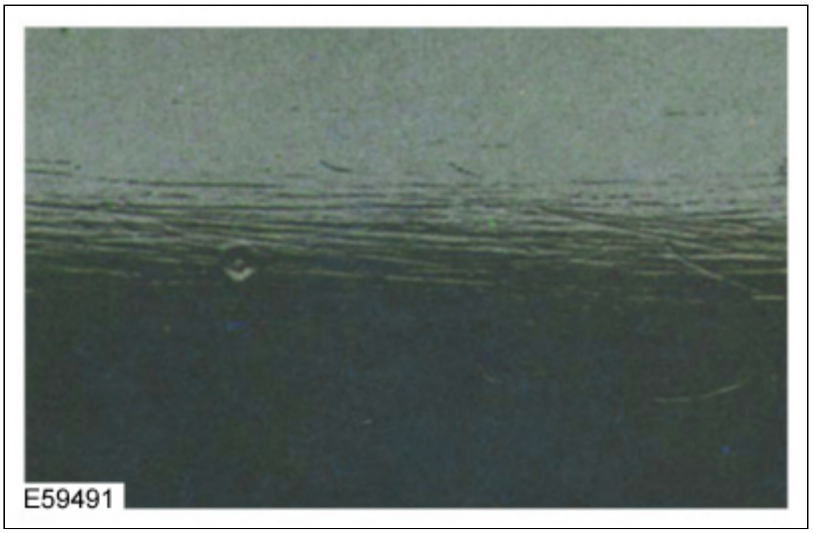
Adhesion defects in clear lacquer.

Clear lacquer detched from base paint.

Cause/damage pattern:

- Base paint layer too thick.
- Intermediate and final flash-off times of base paint too long.
- Incorrect mixture ratio clear lacquer/hardner.

Repair of damage:



- Refinish sanding and recreate the paint finish.

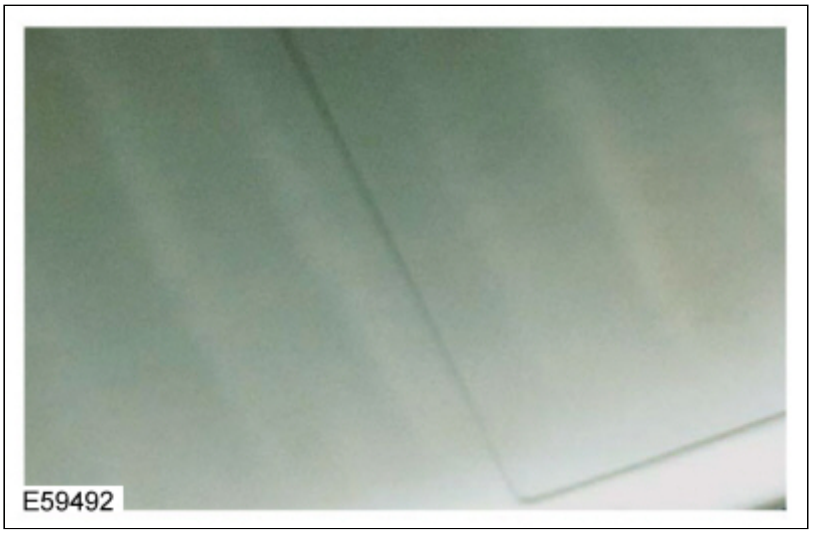
Sanding scores

Single or wide area clusters of scoring or sanding marks, often with raised edges. Noticeable on metallic paints as light-dark stripes.

Cause/damage pattern:

- Stopper sanded too coarsely.
- Filler sanded too coarsely.
- Filler not thoroughly dried bfore sanding.
- Old paint sanded too coarsely.
- Soft elastic substrates, e.g. TPA base, treated with thinners which was too aggressive and therefore etched.
- Top coat applied too thinly.

Repair of damage:



- If the damage pattern is minimal, after the top coat has dried fine sand the paint surface and refurbish by polishing.
- If the damage is great or on metallic paints, sand the paint surface or substrates and if necessary remove them, then cover the bare metal and re-paint.

Formation of stripes

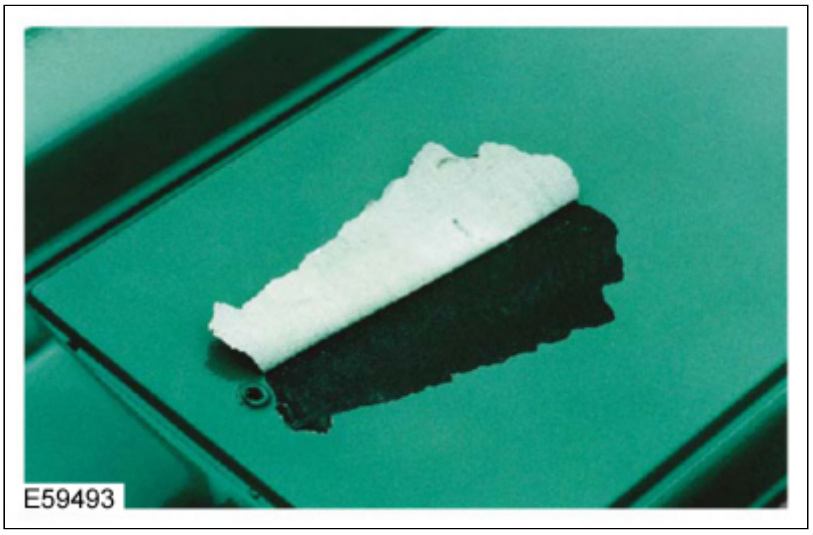
Differing, stripe shaped color/effect formations in dark/light areas of a metallic paint finish.

Cause/damage pattern:

- Spray gun (nozzle) not perfect.
- Incorrect spray pressure.
- Thinners not suitable.
- Incorrect spray viscosity.
- Flash-off time too short.
- Unsuitable working temperature.

Repair of damage:

- Apply base paint evenly.
- Repair spray gun.



- After clear lacquer has thoroughly dried, sand surface and paint again.

Peeling/blistering on plastic parts

Paint adhesion insufficient between top coat and filler and/or primer layer. It often happens that the whole of the paint finish detaches from the plastic.

Cause/damage pattern:

- Plastic item not cleaned sufficiently, not or inadequately tempered.
- Unsuitable cleaning agent used.
- Unsuitable materials used.
- Moisture.
- Paint finish underbaked or overbaked.
- Poor or lack of intermediate sanding.

Repair of damage:

- Sand away faulty paint coats and re-apply paint finish.
- In extreme cases use a new part.

Blistering on polyester material

Color shade differences or marks in paintwork subsequently applied to previously unpainted plastic material.

Cause/damage pattern:

- Plastic material is not suitable for painting.
- Incorrect bonding agent.
- Paint used not solvent resistant.

Repair of damage:

- Repaint using suitable materials.
- Install unpainted new part (after consulting customer).

Peroxide marks in metallic paints

After longer period of drying, abnormal marks where the color shade varies.

Cause/damage pattern:

- Too much hardener added to polyester stopper (over 3% can cause this damage pattern).
- Polyester stopper not well enough mixed.

Repair of damage:

- Sand, fill with polyester or epoxide filler and re-paint.

Crack formation

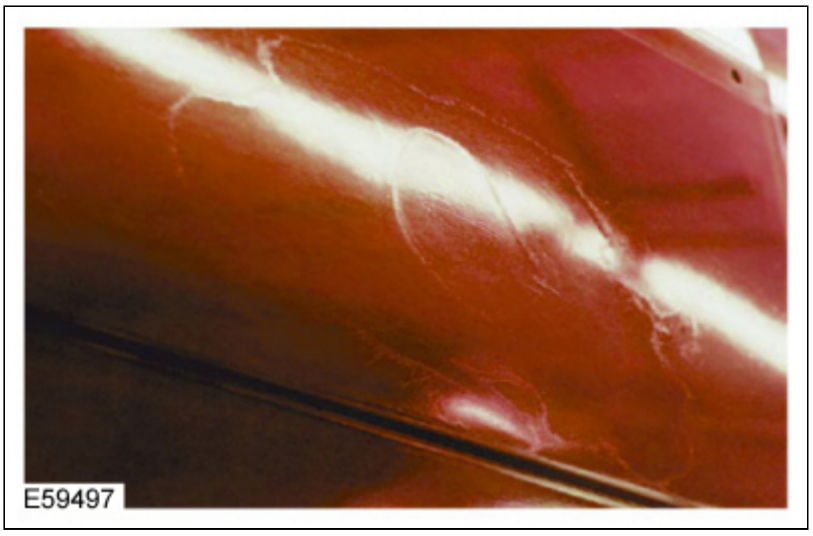
Cracks of different lengths and depths running in all directions.

Cause/damage pattern:

- Layers too thick.
- Painted several times.
- Temperature fluctuations.
- Mechanical effects e.g. distortions.
- Substrate not thoroughly hardened.
- Old paint not completely dried out.
- No or insufficient hardener added.
- 2-component materials used on nitro or TPA.

Repair of damage:

- Sand away layers until sound substrate is reached and create new paint finish (prime, fill, apply topcoat).



Shrinking back/zone edge marks

Lifting or dropping in of edge zones (edges which accentuate themselves in the top coat), flow problems and loss of shine in top coat.

Cause/damage pattern:

- Old paintwork not rubbed down to a seamless transition.
- Stopper and filler on a viscoplastic base primer.
- Filler sanded and overpainted when not thoroughly hard.
- Previous materials overworked too early, substrate not sufficiently hardened.

- Primer applied in layers which were too thick, and not dried for long enough.
- Sanding paper too coarse.
- Top coat thinned too much.

Repair of damage:

- After hardening off the top coat, fine sand the surface and polish up, apply filler if necessary and paint once more.

Blistering

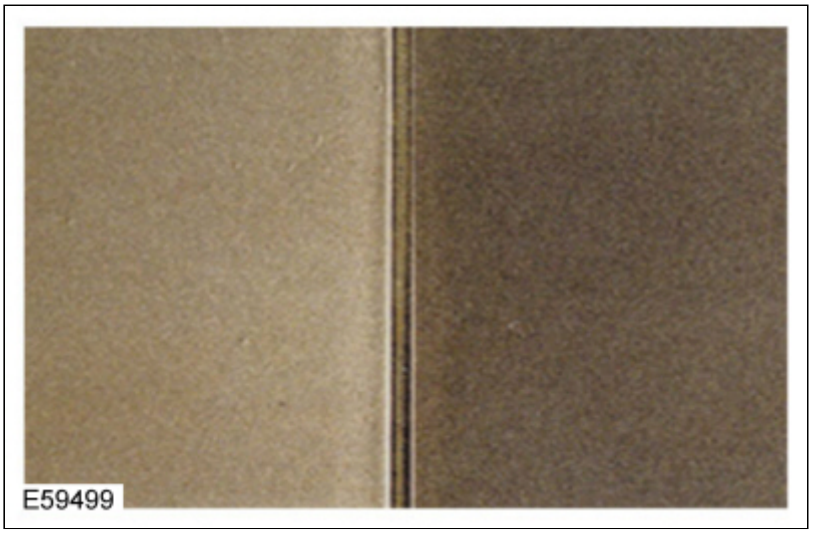
Small, spot-like, air-filled or water-filled blister shaped high-spots in the paint construction. Their dimensions can range from pin-head to pin-point size in a closed paint film. Arrangement and accumulation very variable. In the advanced stages, circular flaking of the paint from the substrate. These are neither boils nor corrosion.

Cause/damage pattern:

- Moisture absorption by substrate.
- Insufficient drying of the substrate after wet sanding (especially on polyester material).
- Humidity too high before painting; condensation formation because of temperature fluctuations.
- Pores/sink holes in substrate not sanded out.
- Polyester material not covered.
- Sweat from hands.
- Salts and minerals in sanding water.
- Spray air contaminated.

Repair of damage:

- Sand away damage, matt sand remainder of surface, clean with silicone remover, fill and re-paint.



Etching

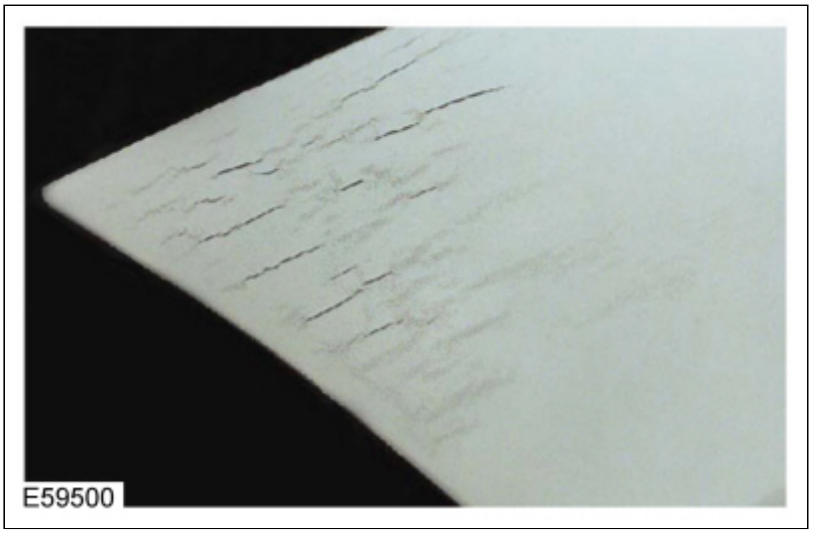
The base paint is etched by the clear lacquer. This causes the aluminum pigments to change their alignments. The color of the etched base paint seems more grey than that of normal base paint. Result is that the surface structure of

the clear lacquer becomes increasingly more matt.

Cause/damage pattern:

- Base painted too wet.
- No intermediate flash-off time.
- Layers too thick.

Repair of damage:



- Sand and re-paint.

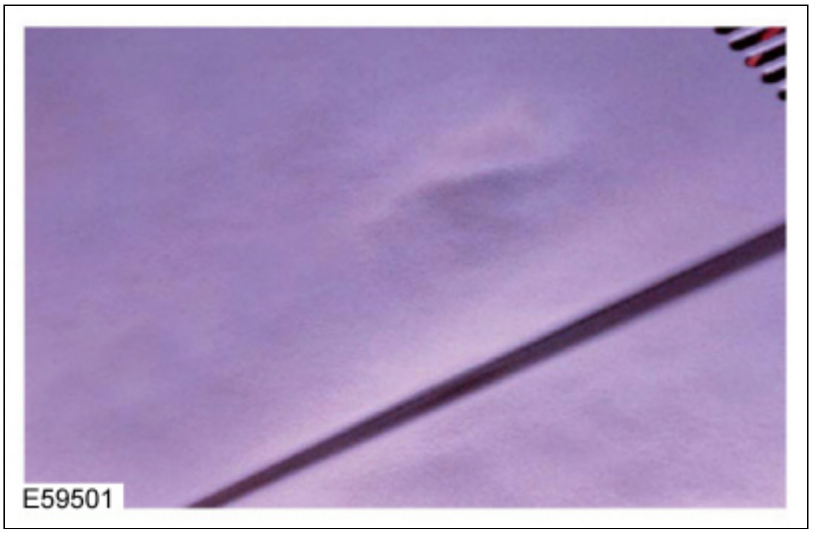
Paint wrinkles/puckering

Lifting/puckering of the paint surface.

Cause/damage pattern:

- First paint not hardened through or can be etched.
- Areas of clear lacquer which were sanded through to base paint have not been not isolated with filler, or with unsuitable filler.
- Unsuitable substrate (e.g. spray can painting with TPA or nitro).
- Use of unsuitable primer, paint and thinner materials.
- Paint systems not matched to each other.
- In wet-in-wet process, specified flash-off times not adhered to.
- Synthetic resin top coat (alkyd resin) worked over too soon.

Repair of damage:



- After thorough drying, completely remove the top coat together with the attacked substrate at the affected areas and re-create a new paint finish.
- Before applying top coat, rub down the complete surface.

Cloud formation

Differing, blotchy color/effect formations in dark/light areas of a metallic paint finish.

Cause/damage pattern:

- Spray gun, spray nozzle, spray pressure not perfect.
- Varying spray viscosity, spraying method, flash-off times, spray booth temperature.
- Thinners not suitable.

Repair of damage:

- Droplet method before clear lacquer application.
- After clear lacquer has thoroughly dried, sand surface and re-paint.

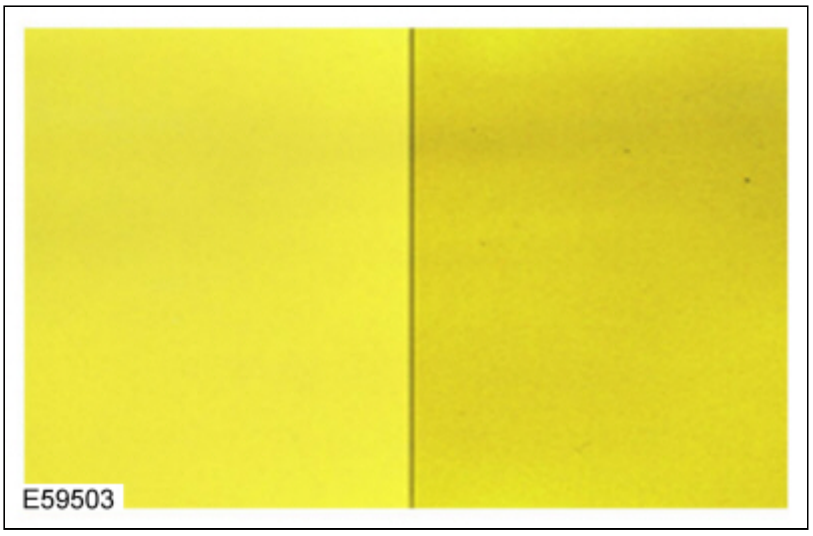
Spots

Points rising up from the paint film.

Cause/damage pattern:

- Metallic base paint sprayed too dry, so that the metal particles could not incorporate into the paint. The clear lacquer could not cover these vertical standing particles because the spray air was too hot or the booth temperature was too high.

Repair of damage:



- After the paint surface has dried, lightly sand it with grade P800 sanding paper, clean with silicone remover and re-apply clear lacquer.

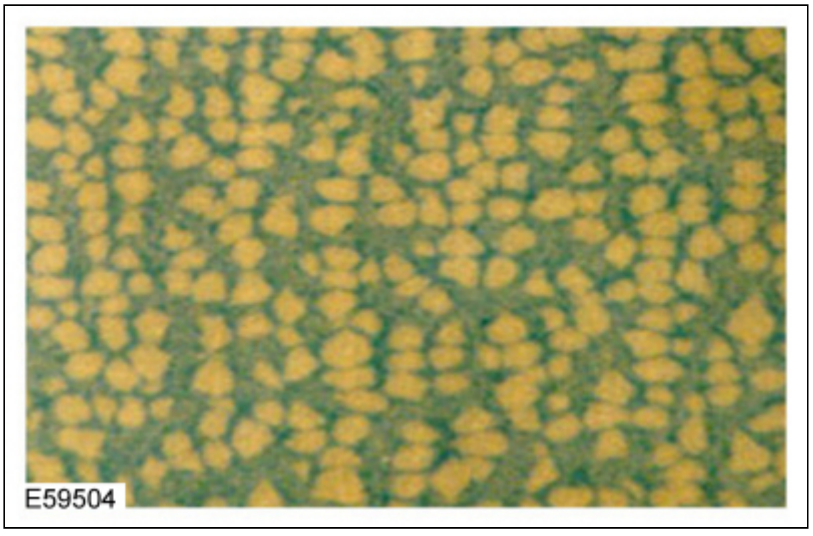
Metamerism/color deviations

Noticeable when identical color shades undergo a change of hue as the light source changes (daylight/artificial light). Different pigment composition between original and repair paint.

Cause/damage pattern:

- Use of paints with pigmentation which was not compatible with the standard, e.g. a green can be formulated from yellow and blue, or directly from green.
- Use of an unsuitable mixed or ready made paint to re-tone.

Repair of damage:



- Repaint using the correct paint.

Washing out

On paint which has been newly applied but not yet dried, the interaction of surface tension and very different specific gravities of the different pigments can lead to swirl-like turbulence which results in separation of the pigments.

Cause/damage pattern:

- Layer too thick, paint not stirred enough.

Repair of damage:

- Sand and re-paint.

Loss of gloss

Milky, dreary tarnishing of the paint with more or less even loss of gloss.

Cause/damage pattern:

- Cold with low air humidity.
- Heat with high air humidity.
- Substrate can be etched.
- Hardener fault or wrong hardener used.
- Paint thinned too much.
- Proportion of pigment too high because of poor stirring.
- Not optimum drying.

Repair of damage:

- After drying, remove the matt effect by polishing. If unsuccessful, rub down complete area and paint again.

Covering ability/areas of thin paint

Different color shades in the surface. The minimum layer thickness is not achieved here. The effects range from local minor shade variations through mottled spray zones to completely missing top coat.

Cause/damage pattern:

- No correct, uniform substrate (effect paint).
- On three-layer systems, wrong filler.
- Insufficient top coat application.

Repair of damage:

- Sand surface and recreate the paint finish.

Flow problems/orange peel

Surface structure bumpy, grained. The surface is similar to the peel of an orange.

Cause/damage pattern:

- Paint viscosity too high.
- Use of fast evaporating, highly volatile thinners.
- Booth temperature too high.
- Spray gun distance too great, too little material applied.
- Nozzle too large.
- Incorrect spray pressure.

Repair of damage:

- Small surfaces: fine sand and polish.
- Sand out the surface and recreate the paint finish.

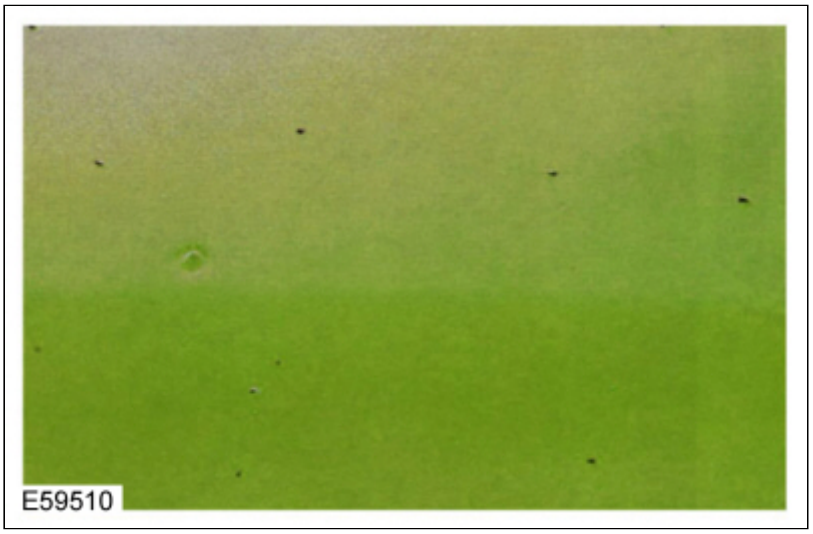
Dirt embedded in metallic base paint.

Inclusions of contamination in metallic base paint, of different sizes and shapes (grains or lint).

Cause/damage pattern:

- Dust was not properly removed from the surface to be painted.
- Paint material not sieved.
- Function of the painting facilities not optimum.
- Filter contaminated.
- Wearing unsuitable clothing.

Repair of damage:



- Sand and repaint.

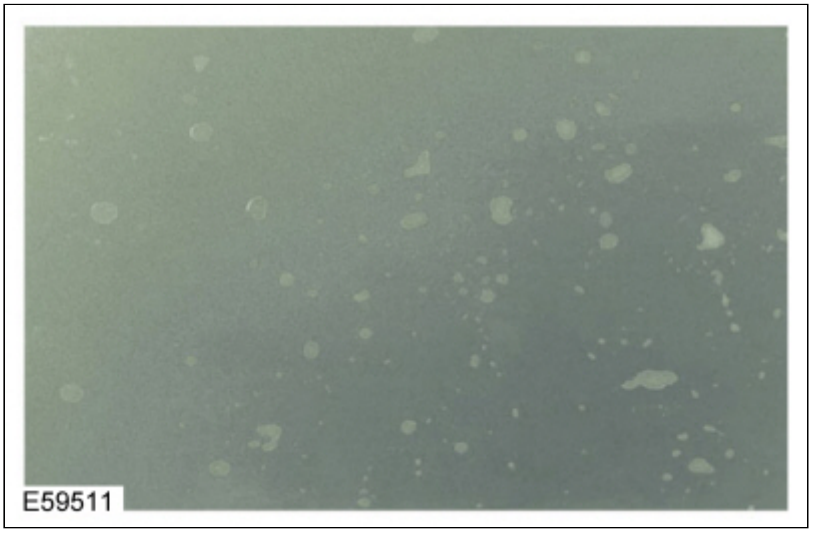
Dirt embedded in top coat

Inclusions of contamination in top coat or under paint layers, of different sizes and shapes (grains or lint). Optical adverse effect.

Cause/damage pattern:

- Dust was not properly removed from the surface to be painted.
- Paint material not sieved.
- Function of the painting facilities not optimum.
- Filter contaminated.
- Wearing unsuitable clothing.

Repair of damage:



- Single inclusions: after thorough hardening, sand out using 1200 - 1500 grade paper and repolish using a suitable silicone-free sanding or painting paste.
- Large area contamination: sand and repaint.

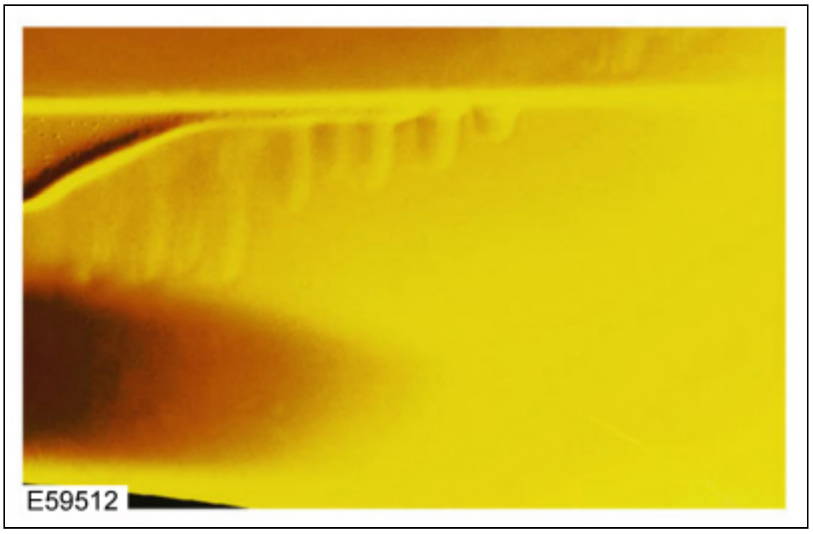
Water marks

Ring shaped marks appearing on the paint surface.

Cause/damage pattern:

- Evaporation of water droplets on freshly painted and not yet fully hardened paint finishes (mostly only found on horizontal surfaces).
- Layer too thick.
- Drying time too short.
- Hardening faults or hardener no longer useable.
- Use of unsuitable thinners.

Repair of damage:



- Rub down only slight marks with sanding paper grade P1000 - P1200 and then polish.
- For heavy marking, sand the surface matt, clean with silicone remover and repaint.

Paint runs

Wave-like paint run tracks in top coat or in an intermediate layer on vertical surfaces. Mostly in the area of swage lines, seams or openings (there they are paint runs, otherwise curtains).

Cause/damage pattern:

- Uneven paint application.
- The specified viscosity was not complied with.
- Use of unsuitable thinner materials.
- Air, material or room temperature too low.
- Layers too thick.
- Spray gun (nozzle) not perfect.

Repair of damage:

- After thorough drying, sand unevenness flat, if necessary leave to dry afterwards.
- Small areas of damage can be equalised using the paint plane, then sand, polish or repaint.

Swirl marks

Three dimensional appearance in the paint surface in the form of smears or blotches. This effect is intensified in direct sunlight.

Cause/damage pattern:

- Polishing using polishing machine on paint which has not yet hardened throughout.
- Polishing intervals too long or none at all.
- Pressure too high while polishing.
- Incorrect polishing material or polishing tool.

Repair of damage:

- Allow the paint to harden completely and then polish.
- If the damage is irreversible, rub down and apply new clear lacquer.

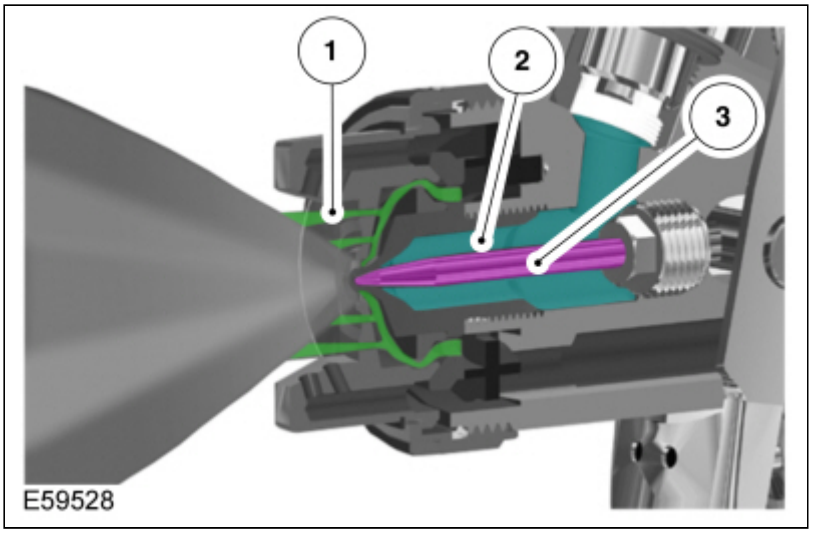
Tools and Equipment for Paint Repairs

General work equipment

In the repair paint shop there is a range of painting tools which make the work of the painter easier and improve the quality of the repair paintwork.

Among these are small tools which are used for the following work:



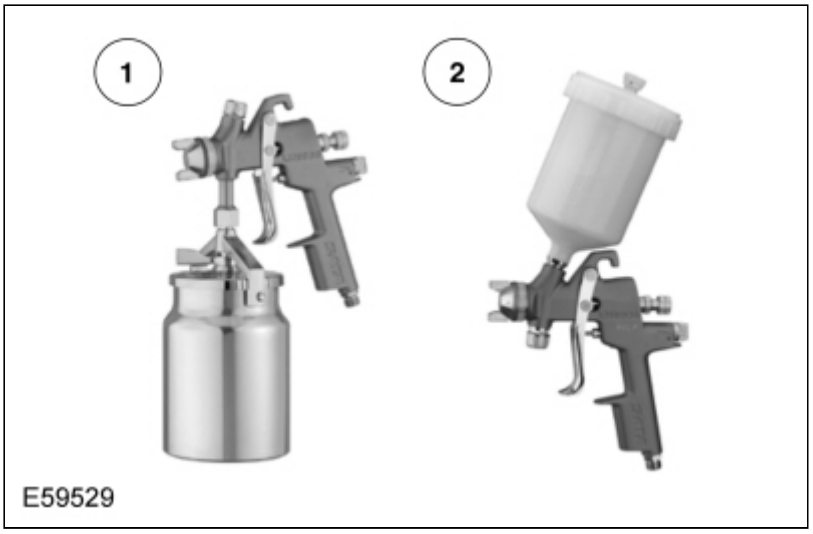
- **Measuring beakers** to measure and mix various paint materials.
- **Measuring rods** with which the required combination amounts of paint and primer filler are gauged and mixed.
- **Viscosity measuring beaker** with a calibrated opening of 4mm, used to set the correct paint viscosity.
- **Paint filter/paint sieve** for filtering foreign bodies out of mixed paint or primer. Care must be taken that the correct filter is used for each paint.
- **Color sample plates** onto which the mixed paint is applied, and the shade is then compared to that of the vehicle. Other aids which should help the painter to find the correct shade are **color sample cards** and **color panels**, which are offered by many paint manufacturers.
- **Dust bonding cloths** which are impregnated with a tacky resin and which pick up dust particles particularly well. A surface to be painted must be cleaned with a dust binding cloth immediately before paint is applied.
- **Compressed air guns** are used to remove sanding residues and to dry sanded surfaces.

Filler and spray guns

NOTE: *Regular maintenance, cleaning after use and careful handling of all individual parts of the spray gun are essential for a high-quality paint finish.*

The spray gun is the most important implement in the paint shop. Application of paint using the spray gun can produce a layer with absolutely constant thickness and a smooth paint surface.

Principle of operation



Item	Part Number	Description
1	—	Air supply
2	—	Paint supply
3	—	Nozzle needle

Because of the construction design and with the aid of compressed air, a spray-ready paint mixture is dragged out of the container to the nozzle by the venturi effect, and is applied to the surface being worked.

When the trigger of the spray gun is pressed to the first pressure point, only the compressed air passage opens. If the trigger is pressed further, the nozzle needle displaces and the air stream drags paint with it at high speed. This produces a spray mist consisting of micro-droplets of paint.

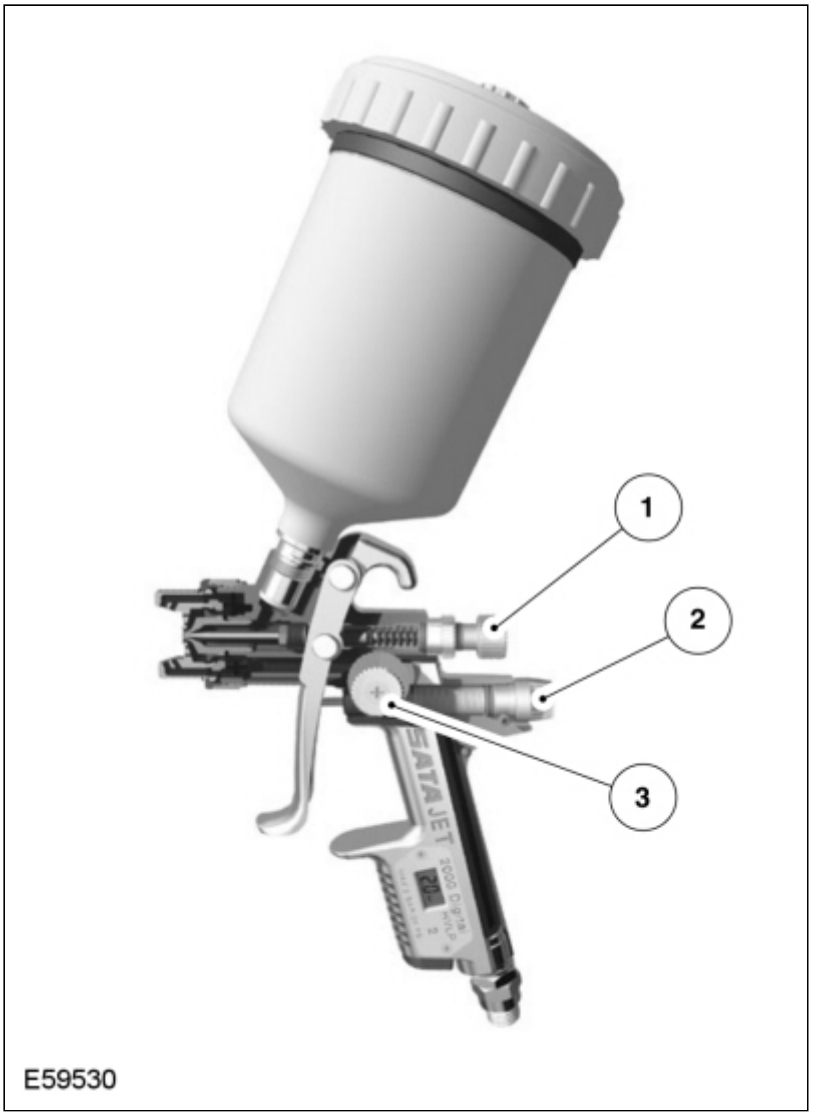
Types of spray gun

Item	Part Number	Description
1	—	Suction-beaker spray gun
2	—	Flow-beaker spray gun

In the flow-beaker spray gun, the paint container is mounted above the spray gun. On the suction-beaker spray gun, it is below.

Furthermore, spray guns are categorized by their air pressure requirement into high and low pressure guns.

High pressure guns have the disadvantage that they exhibit high consumption of energy and materials. The spray pressure they require is between 1 - 6 bar.



Because of the high air pressure and the large amount of air needed, the result is a powerful paint mist formation (paint transfer rate approx. 35%).

Current practice is mainly to work with reduced mist spray systems (RP and HVLP systems).

Reduced pressure (RP) guns are optimized high pressure guns which have an input pressure at the gun of approx. 2.5 bar and an atomization pressure at the air cap of 1 - 2 bar. In practice this spray technology is preferred for spraying clear lacquer because of the finer atomization.

Low pressure guns have the advantage that they exhibit minimal paint mist formation and because of this the paint transfer rate rises to approx. 65%. The spray pressure required in this case is between 1 - 5 bar. Nozzle sizes from 1 - 2.2 mm can be used.

HVLP spray guns

Item	Part Number	Description
1	—	Quantity control
2	—	Working pressure control
3	—	Spray pattern control

The high volume low pressure (HVLP) spray gun is a high performance spray gun which forms a soft, fine and homogenous spray pattern. The atomization pressure at the air cap is 0.7 bar when the input pressure at the gun is 2.0 bar.

The low atomization pressure of 0.7 bar together with greatly reduced spray mist provide high material ejection. The low nozzle internal pressure minimizes rebound of the paint droplets from the object and thus the proportion of overspray.

This spray technology has a very high application efficiency. By matching the size of the nozzle, the HVLP spray gun can be used for all repair painting materials.

HVLP spray guns are often used in practice for the application of water based paints.

Mini spray guns are often used for small, localized touching-up work. Use of HVLP spray technology and nozzle sizes of 0.3 - 1.2 mm permits very fine work, so that the area of the repair can be kept as small as possible.

In order to ensure that a spray gun operates efficiently for a long time, careful cleaning is absolutely vital after use.

NOTE: *During cleaning you must distinguish between water based and solvent based materials.*

Cleaning by hand:

- Empty the paint beaker immediately after use.
- Flush the gun with cleaner.

- Clean it inside and outside with a brush.
- Dismantle the gun to clean it thoroughly.
- Clean the air cap using a suitable brush.
- Use nozzle cleaning needles to clean bores and nozzles.

A spray gun washing machine is recommended if the painting work is highly intensive.

New types of paint processing systems are replacing the conventional mixing beaker, filter and spray gun flow beaker. This reduces the amount of solvent required for cleaning and the amount of routine waste which remains.

Paint preparation system (PPS)

Item	Part Number	Description
1	—	Beaker
2	—	Color bag

With this system, which is suitable for both suction and flow beaker spray guns, only one beaker is required for mixing and painting.

A bag is inserted in the beaker, in which paint can be mixed, processed and stored after use or completely disposed of.

The small quantity of paint remaining in the gun is removed using a minimum quantity of solvent from the pipette bottle.

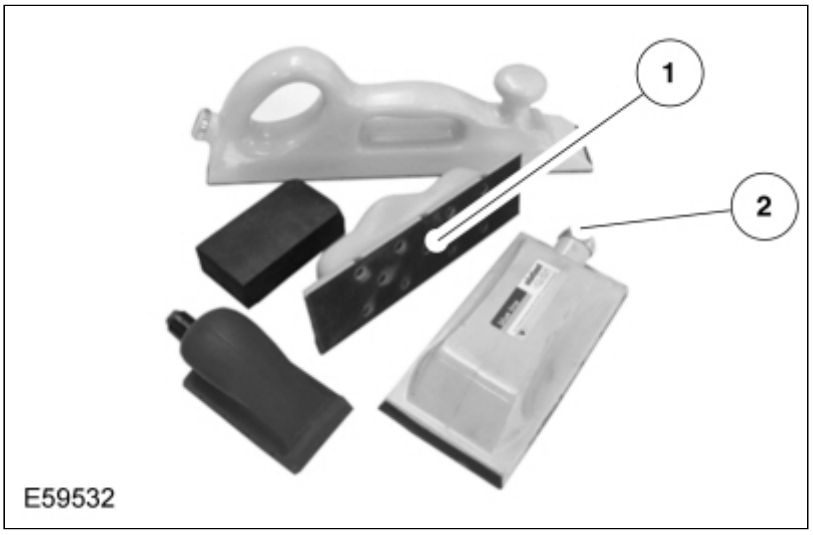
The amount of cleaner used is reduced because only the spray gun needs to be cleaned.

Hand and machine sanding tools

Sanding is used to prepare a surface for application of a paint layer, enabling it to adhere well. Sanding materials have a great influence on the quality of a repair paint finish. The correct sanding medium must therefore be chosen for every material.

During sanding, material is mechanically removed from a surface.

In the paint shop, carborundum or silicon carbide abrasive on a substrate of paper or cloth are the most common sanding materials used.



Carborundum is a very hard mineral consisting mostly of aluminum oxide. During use carborundum becomes blunt and wears away.

Silicon carbide has a very high degree of hardness, but is more brittle than carborundum. When silicon carbide is used, the mineral grains break. New long and pointed profiles are formed.

Use of the correct sanding paper depends on the application, the substrates and the tools used. The following table can be used as a guideline, but the recommendations of the supplier of the auxiliary materials and additive materials must be followed.

Application	Working area	Grade	Sanding system
Body work, corrosion damage	Equalizing paint system transition	to P150	Orbital sander, dry
			Hand sanding, dry
Stopper	Rough sand	P80 - P150	Orbital sander, dry
	Fine sand	P240 - P320	Orbital sander, dry
			Hand sanding, dry
Spray stopper	Rough sand	P120 - P180	Orbital sander, dry
	Fine sand	P240 - P320	Orbital sander, dry
			Hand sanding, dry
Filler sanding work	Filler fine sand	P400 - P500	Orbital sander, dry
		P800 - P1200	Hand sand, wet
Top coat	Old paint	P400 - P500	Orbital sand, dry
		P800 - P1200	Hand sand, wet
	Touch-up paint surfaces	P1000 - P2000	Hand sand, wet
Paint damage	Sanding out faults	P2000 - P3000	Hand sand, wet

Soft Pads are recommended for manual refinishing of contours, curves and difficult to reach areas. On a Soft Pad the abrasive is found on a coarse structured fleece. Because of this, it is very flexible, does not kink and does not slip in the hand. This enables a fine and even finish to be achieved.

Item	Part Number	Description
1	—	Extraction bores
2	—	Connection for extraction equipment

Notes on working with sanding tools:

- Tools with a rigid backing pad do not adjust to fit the surface. They are used for flat surfaces.
- Tools with a flexible backing pad are used for fine sanding of a surface because they adjust to the shape of the surface.
- Build up an even working pressure over the sanding surface.
- Keep the sanding paper tight on the tool (use self-gripping systems).
- Align the extraction holes in the sanding paper with the holes in the tool.
- Guide the tool flat over the surface to be worked. Do not tilt it.

Hand sanding can be carried out dry but also wet. Wet and dry paper with particle size P 80 to P 1200 is used for this in the paint field.

Ways of sanding

Sanding tools are driven either by electricity or compressed air.

Item	Part Number	Description
1	—	Sanding machine
2	—	Polishing machine
3	—	Orbital sander

The disadvantage of electrically driven machines is that their own weight is high compared with pneumatic systems. They also become warm during work. They do not however need any special operating equipment for their energy supply.

Sanding machines are categorized by their type of sanding movement.

Rotational sanders

On these machines the sanding paper turns.

- Advantage:
  - Ideal for heavy sanding work.
  - Fast and aggressive sanding possible.
- Disadvantage:
  - Large amount of heat developed.
  - Difficulty sanding flat surfaces.
- Application:
  - Removal of old paint layers.
  - Preparation of panel for stopper.

- Removal of rust.

Oscillating sander

On these machines the sanding paper oscillates. The backing pad is rectangular.

- Advantage:
  - Large sanding surface.
  - Ideal for large and flat surfaces.
- Disadvantage:
  - Hardly useable on rounded surfaces.
  - Flexible backing pad not possible.
  - Vibrations because of the poor support of the backing pad.
- Application:
  - Sanding of polyester stopper.
  - Sanding processes on flat surfaces.

Orbital sander

On these machines the sanding paper turns and oscillates.

- Advantage:
  - Easy to handle and good sanding power.
  - Minimal heat development.
- Disadvantage:
  - Not suitable for sanding stopper on flat surfaces.
  - Smooth guidance important, otherwise sanding marks will occur.
- Application:
  - Sanding of paint layers.
  - Well suited for final preparation of a primer.

NOTE: *Comply with the manufacturer's recommendations when setting the orbital sander.*

On the orbital sander, stroke settings of approx. 3 mm for fine sanding work and approx. 5 - 7 mm for coarse sanding work have been established.

Polishing and finishing tools

The term polishing in the context of paint repairs means the elimination of paint flaws and high shine polishing of neighboring parts.

During polishing the fine sanded surface is returned to a high shine using a special abrasive polish.

Before the actual polishing, all flaws in the paint surface must be removed and the following working procedures must be adhered to:

- Thoroughly clean the vehicle.
- Remove spray mist from all surfaces.
- Sand out and polish particle inclusions.
- Sand down paint runs and polish them out.
- Examine the exactness of the color match in daylight.
- Remove masking edges.
- Remove sanding water, sanding dust and polish residues.

After the polishing process the results must be tested using a special test spray.

Infrared drying technology

The drying process in a painting/drying cabin occurs through heat conductance (convection). When an infrared dryer is used, the drying process is through heat radiation.

The infrared rays penetrate the air and the paint layer without warming them. Because the infrared rays are reflected from the steel panel, the paint coat is warmed from the inside outwards.

Advantages of infrared drying:

- The drying process occurs from the inside to the outside.
- The drying time is shorter than for warm air systems.
- Because the infrared dryer consists of several cassettes which can be switched on independently, the drying area can be optimally controlled.

Independent of the manufacturer's instructions, pay attention to the following:

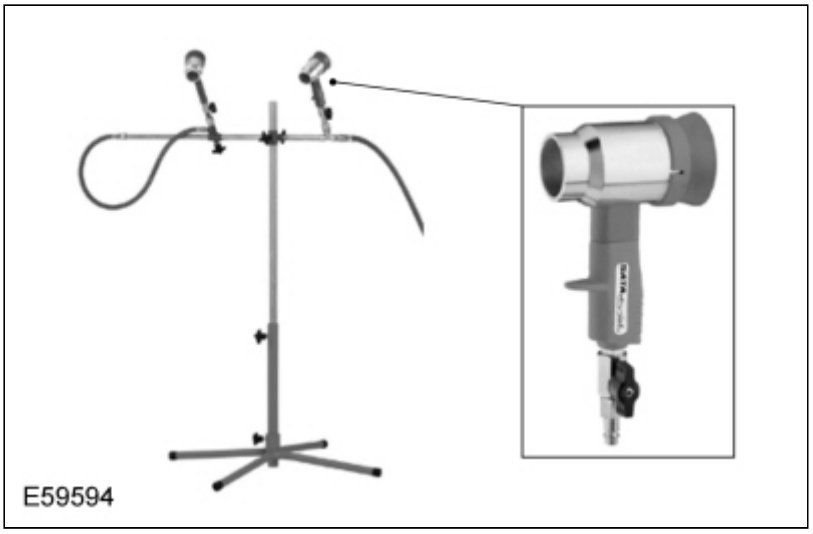
- Flash-off time of the paint before switching on the infrared dryer.
- Distance between the infrared dryer and the surface.
- Duration of the irradiation.

The most common use of the infrared dryer is to dry stopper and primers. The wait time between the job steps is shortened without having to use the painting/drying cabin.

The painting/drying cabin can then be used exclusively for application and drying of topcoat.

There are two types of infrared dryer:

- Infrared dryer with short wavelength radiation.
- Infrared dryer with medium wavelength radiation.



As an indication, the following drying times are listed for some materials (at 80 cm distance):

NOTE: *Observe the material manufacturer's and supplier's specifications.*

- Polyester stopper 2 minutes.
- Spray stopper 2 to 7 minutes.
- Water based primer-filler 7 to 9 minutes.
- Primer 3 to 8 minutes.
- Top coat 7 to 10 minutes.

Air dryers

The air dryer is suitable in places where drying needs to be done, but without great outlay (painting/drying cabin or infrared dryer).

NOTE: *Air from the compressor is often too cold for effective drying.*

Air dryers use the venturi effect to blow the warm ambient air over the paint surface in a gentle air flow.

Paint mixing system

Because of the many different color variants, it is now seldom possible to store all color shades as ready-made mixtures.

For this reason, vehicle manufacturers make the mixture proportions of their paints available as color codes. The required color shade can be obtained from the paint mixing system using this color code.

All the color components are combined according to their proportions by weight using a precise computer scales to produce a finished color shade.

Painting cabin

The air requirement in a painting cabin is large. The outside air which is drawn in must be passed through filtering and warming equipment. This particularly applies during colder times of the year and especially for combined types of building where the painting cabin is also used as a drying cabin.

It is primarily used to keep the air free of dust. At the same time, explosive solvent-air mixture concentrations are prevented

NOTE: *Vacuum will lead to contamination of the newly applied paint. The outside air flows through door gaps, wall joints and other openings and as it does so, brings dust deposits with it.*

The air supply quantity depends on the size of the painting space and the quantity of extracted air. Enough air must be supplied to cause positive pressure in the painting space. An air extraction : air supply ratio of about 1 : 1.05 is sufficient.

The filters should have a dust-removal grade of not less than 99.8% and must always be kept clean.

It is especially important that the air supply does not cause strong air currents in the painting cabin. If not, the following problems could occur:

- Paint contamination cause by paint mist, which persists in air eddies and gradually falls on the fresh paintwork.
- Flow problems in the paint because of the high speed of the air, causing the paint to thicken very quickly on the surface.
- Loss of gloss and wrinkle formation because the surface dries too fast.
- Painter disturbance while working.

In modern paint cabins the air supply is provided from the complete surface of the ceiling. The air speed should be 0.3 m/sec (measured in the unrestricted cross-section of the spray cabin). At the same time, the air in the cabin should change about 350 times per hour.

Air extraction is best achieved through extraction channels in the floor of the painting cabin.

NOTE: *Refer to the manufacturer's specifications for the operating instructions, safety instructions and notes on the maintenance of a paint cabin.*

Smooth walls in the paint cabin should prevent dust deposits. Regular cleaning is necessary however.

Special easily washed adhesive-bonding paint can be applied to the walls to protect the cabin from paint mist.

Refinishing Materials

The manufacturer's instructions must always be followed when dealing with all materials! The information given in the following text is data which is independent of the manufacturer, and it should only be used as an indication.

Stopper materials

- 1-component nitro-combination stopper
- 2-component polyester stopper
- 2-component plastic stopper

Use suitable primer to protect from corrosion areas which have been sanded bare before applying stopper.

1-component nitro-combination stopper

Nitro-combination stopper has mostly been superseded by 2-component polyester stopper.

Fast drying fine stopper for the smoothing of irregularities.

The working properties of 1-component nitro-combination stopper can be improved by the addition of nitro thinners.

Drying time increases with thickness of the layer.

Application	1-component nitro-combination stopper
Layer thickness	Max. 80 µm
Drying time	up to 2 hours at 20°C
Sand	P240 - P400

2-component polyester general stopper

NOTICE: Do not exceed the quantity of hardener specified by the manufacturer, excess peroxide can cause staining of the paint top coat.

NOTICE: Mix the stopper base and the hardener well to avoid a marble-like effect.

Check that the manufacturer permits use on the substrate to which it will be applied.

2-component polyester stopper is available in coarse and fine grades. The coarse stopper can be used for very uneven areas and surfaces and fine stopper or spray stopper should be applied afterwards.

Application	2-component polyester coarse stopper
Use	Rough equalization of unevenness
Hardener quantity	approx. 3 - 5%
Working time	approx. 4 - 6 minutes
Drying	20°C approx. 12 minutes
	Short wavelength infrared approx. 4 minutes
	Medium wavelength infrared approx. 5 - 10 minutes
Sanding tool	Eccentric, sanding disk by hand
Grade	P80 - P150

Application	2-component polyester fine stopper
Use	Equalization of unevenness
Hardener quantity	approx. 3 - 5%
Working time	approx. 4 - 6 minutes
Drying	20°C approx. 12 minutes
	Short wavelength infrared approx. 4 minutes
	Medium wavelength infrared approx. 5 - 10 minutes
Sanding tool	Eccentric, sanding disk by hand
Grade	P80 - P240

Application	2-component polyester glass fiber stopper
Use	Equalization of unevenness; blending in of vehicle extensions; repair of GRP components
Hardener quantity	approx. 3 - 5%
Working time	approx. 4 - 6 minutes
Drying	20°C approx. 12 minutes
	Short wavelength infrared approx. 4 minutes
	Medium wavelength infrared approx. 5 - 10 minutes
Sanding tool	Eccentric, sanding disk by hand
Grade	P80 - P150

2-component polyester fine stopper should always be applied after 2-component polyester glass fiber stopper.

Application	2-component polyester spray stopper
Use	Equalization of unevenness
Hardener quantity	approx. 3 - 5%
Working time	approx. 25 - 30 minutes
Layer thickness	200 µm or 4 - 8 spray passes
Drying	20°C approx. 3 hours
	Short wavelength infrared approx. 10 minutes
	Medium wavelength infrared approx. 15 - 20 minutes
Sanding tool	Eccentric, sanding disk by hand
Grade	P80 - P150; fine sand - P280

Application	2-component plastic stopper for flexible thermoplastic
Use	Equalization of scratches or unevenness
Hardener quantity	approx. 3 - 5%

Working time	approx. 25 - 30 minutes
Drying	20°C approx. 15 - 30 minutes
	60°C approx. 15 min
	(Short wavelength infrared approx. 8 minutes)*
	(Medium wavelength infrared approx. 8-10 minutes)*
Sanding tool	Eccentric, sanding disk by hand
Grade	P80 - P150; fine sand - P280

***Infrared drying may adversely affect adhesion, therefore check the manufacturer's instructions.**

Plastic stopper has a very great tendency to shrink back, so that the edge of the stopper repair becomes visible.

Plastic stoppers are flexible and universally applicable on all types of plastic (except for pure PE and PP, these are plastics which cannot be painted). The manufacturer's instructions must be very exactly followed in order that no adhesion problems occur. A special plastic etch primer is specified for some materials.

Primers

Application	1-component primer
Use	Isolation of bare sanded areas.
Spray gun	HVLP 1.3 mm
Spray pressure	2.0 bar
Drying	20°C approx. 15 - 20 minutes
	60°C approx. 10 min
Coat application	Wet on wet, no intermediate sanding

Application	2-component primer
Use	Corrosion protection and bonding agent (steel sheet, zinc coated steel sheet, aluminum)
Spray gun	HVLP 1.3 mm
Spray pressure	2.0 bar
Drying	20°C approx. 15 - 20 minutes
	60°C approx. 10 min
Coat application	Wet on wet, no intermediate sanding

HS primer filler and HS tinted filler

Note:

- Primer filler is available as 1-component and 2-component water based and solvent based forms.
- 1-component products are only suitable for isolation of sanded through bare areas and new painting.
- Water based products are also used for the skinning of thermoplastics and substrates which are sensitive to solvents.
- Tinted fillers can be individually matched to the top coat color and therefore find uses in effect paints and paints with poor covering power.
- Use dry sand or wet sand filler according to application in order to avoid unnecessary sanding work.
- On critical substrates the use of epoxy resin base filler is recommended in order to avoid adhesion problems.

Application	HS primer filler and HS tinted filler
Use	Equalization of unevenness, edge zones, sanding scores
Spray gun	HVLP 1.6 - 1.9 mm
Spray pressure	2.0 bar
Layer thickness	50 - 70 µm to 150 µm possible
Drying	20°C approx. 2.5 hours
	(60°C approx. 25 min)*
	(Short wavelength infrared approx. 8 minutes)*
	(Medium wavelength infrared approx. 10-15 minutes)*
Coat application	Wet on wet, no intermediate sanding

***In order to avoid boiling out, drying should be performed slowly.**

Paint

The base and the clear lacquer must be matched to one another.

Application	Water based paint
Use	Two layer metallic effect paint and Uni-paint finishes
Spray viscosity	At 20°C 18 - 20 s
Spray gun	HVLP 1.2 - 1.3 mm
Spray pressure	2.0 bar
Layer thickness	15 - 20 µm
Drying	20°C approx. 2.5 hours
	60°C approx. 25 min
	Short wavelength infrared approx. 8 minutes
	Medium wavelength infrared approx. 10 - 15 minutes
Coat application	Wet on wet
Ventilation time	approx. 5 minutes

The base paint must be dried matt before the clear lacquer is applied.

Application	2-component HS clear lacquer
Use	Gloss providing protective coat for base coat substrate
Spray viscosity	At 20°C 18 - 20 s
Spray gun	HVLP 1.2 - 1.3 mm
Spray pressure	2.0 bar
Layer thickness	50 - 70 µm
Drying	20°C approx. 10 hours
	60°C approx. 30 min
	Short wavelength infrared approx. 8 minutes

	Medium wavelength infrared approx. 10 - 15 minutes

Application	2K HS Uni top coat
Use	Color and gloss providing paint layer
Spray viscosity	At 20°C 20 - 22 s
Spray gun	HVLP 1.2 - 1.3 mm
Spray pressure	2.0 bar - 3.0 bar
Layer thickness	50 - 70 µm
Drying	20°C approx. 8 hours
	60°C approx. 30 min
	Short wavelength infrared approx. 8 minutes
	Medium wavelength infrared approx. 10 -15 minutes

Copyright © 2016 Ford Motor Company

Additional Materials

The manufacturer's instructions must always be followed when dealing with any materials! The information given in the following text is data which is independent of the manufacturer, and it should only used as an indication.

Adhesive sealants

Adhesive sealants are permanently elastic, long-lived, can be painted and accept filler.

Application: Sealing of visible and normal seams.

Can be over-painted with 2-component paint, primer and fillers after having dried throughout.

Contamination can be removed using cleaner and thinner.

1-component PUR adhesive sealant

Note:

- Hardens using oxygen from the air. For that reason, it must only be stripped after it has completely dried through.

2-component MS polymer adhesive sealant

2-component MS polymer adhesive sealant is free of isocyanate, solvent and silicones and can be spot-welded.

MS polymer adhesive sealant

Can be over painted with water-based paints.

Suitable for spraying and brushing to obtain a composition true to the original.

MS polymer adhesive sealant is free of isocyanate, solvent and silicones and can be spot-welded.

Underbody protection

Underbody protection products are immune to abrasion, permanently elastic, adhere well and are suitable for a true to original texture.

Underbody protection based on solvent

Application:

- Underbody protection for visible areas.

Properties:

- Can be over-painted, also with 2-component paint.
- Can be colored with a proportion of up to 40% paint.

Note:

- Contamination can be removed using cleaner and thinner.

Water based underbody protection

Can be over-painted with water based paint.

Can be colored with water based paint.

Contamination can be removed using water.

Application	Water based underbody protection

Use	**Underbody protection** for visible areas
Spray viscosity	ready to use
Spray gun	Suction beaker HVLP gun 3 - 4 mm
Spray pressure	4 - 6 bar
Layer thickness	500 - 1000 µm
Drying	approx. 6 hours at 20°C
	approx. 45 - 60 minutes at 60°C
	Short wavelength infrared approx. 8 minutes
	Medium wavelength infrared approx. 10 - 15 minutes

Application	Water based underbody protection
Use	**Isolation primer** for peroxide marks, bloomed old paintwork and thermoplastics.
Spray viscosity	Thin as necessary with distilled water
Spray gun	HVLP gun 1.9 mm
Spray pressure	2.0 - 3.0 bar
Layer thickness	40 - 50 µm
Drying	approx. 2 hours at 20°C
	approx. 30 minutes at 60°C
	Short wavelength infrared approx. 8 minutes
	Medium wavelength infrared approx. 10 - 15 minutes

Paint additives

Application	Sanding test color
Use	To test sanding results
Spray gun	HVLP 1.7 - 1.9 mm
Spray pressure	2.0 bar
Layer thickness	Spray drifted

Application	Fixer additive
Use	Converts solid top coat into two layer solid; multicolor painting
Spray viscosity	18 - 20 secs at 20°C
Spray gun	HVLP 1.2 - 1.3 mm
Spray pressure	2.0 - 3.0 bar
Layer thickness	max. 30 µm
Coat application	Wet on wet
Ventilation time	approx. 15 - 30 minutes

Maintain maximum layer thickness without fail.

Must always next be overpainted with clear lacquer.

Application	Drying accelerator
Use	Accelerates drying with only minimal reduction in working life
Working life	approx. 5 hours at 20°C
Spray gun	HVLP 1.2 - 1.3 mm
Spray pressure	2.0 bar
Layer thickness	50 - 70 µm
Drying	approx. 6 hours at 20°C
	approx. 25 minutes at 60°C
	Short wavelength infrared approx. 8 minutes
	Medium wavelength infrared approx. 10 - 15 minutes

Cannot be used in all paints, read the manufacturer's instructions.

Particularly suitable for partial painting.

Application	Elastifier additive in primer material
Use	Elastifies the complete paint structure on plastics.
Addition	Up to 25%
Spray gun	HVLP 1.7 - 1.9 mm
Spray pressure	2.0 - 3.0 bar
Layer thickness	50 µm
Drying	approx. 4 hours at 20°C
	approx. 40 minutes at 60°C
	Short wavelength infrared approx. 8 minutes
	Medium wavelength infrared approx. 10 - 15 minutes

Application	Elastifier additive in top coat
Use	Elastifies the complete paint structure on plastics.
Addition	Up to 25%
Spray gun	HVLP 1.7 - 1.9 mm
Spray pressure	2.0 - 3.0 bar
Layer thickness	50 - 60 µm
Drying	approx. 16 hours at 20°C
	approx. 45 minutes at 60°C
	Short wavelength infrared approx. 8 minutes
	Medium wavelength infrared approx. 10 - 15 minutes

Application	Matting additive in solid paint
Use	Elastifies the complete paint structure on plastics.
Semi-gloss addition	Up to 25% in the paint without hardener and thinner
Silk gloss addition	Up to 35% in the paint without hardener and thinner
Silk matt addition	Up to 45% in the paint without hardener and thinner
Spray gun	HVLP 1.2 - 1.3 mm
Spray pressure	2.0 - 3.0 bar
Layer thickness	50 - 70 µm
Drying	approx. 8 hours at 20°C
	approx. 30 minutes at 60°C
	Short wavelength infrared approx. 8 minutes
	Medium wavelength infrared approx. 10 - 15 minutes

NOTICE: Do not dry using infrared.

Application	Matting additive in clear lacquer
Use	Elastifies the complete paint structure on plastics.
Semi-gloss addition	Up to 25% in the paint without hardener and thinner
Silk gloss addition	Up to 35% in the paint without hardener and thinner
Silk matt addition	Up to 45% in the paint without hardener and thinner
Spray gun	HVLP 1.2 - 1.3 mm
Spray pressure	2.0 - 3.0 bar
Layer thickness	50 - 70 µm
Drying	approx. 8 hours at 20°C
	approx. 30 minutes at 60°C

Note:

- When mixing, first put in the matting additive, then the hardener and thinners.
- Stir immediately after adding the matting additive.
- Do not store after addition of the matting additive, storage will change the degree of gloss.
- Also suitable for use on plastics without addition of elastifier additive.

Application	Matting paste
Use	Matts, elasticizes and gives structure to solid paint and clear lacquer during painting of bumpers or hard plastic.
Addition	1:1 or 2:1 depending on manufacturer in solid paint without hardener or thinners.
Spray gun	HVLP 1.2 - 1.3 mm
Spray pressure	2.0 - 3.0 bar

Layer thickness	50 - 70 µm
Drying	approx. 6 - 10 hours at 20°C
	approx. 30 minutes at 60°C
	Short wavelength infrared approx. 8 minutes
	Medium wavelength infrared approx. 10 - 15 minutes

Note:

- **The paint must not be filtered.**

Application	Anti-silicone additive
Use	Prevents silicone craters
Addition	2% to maximum 5%

Note:

- Only add away from the paint cabin and immediately remove contaminated cloths.
- If anti-silicone additive is used in the first coat, then it must be used in the following coats, and in at least the same proportions.

Additive materials

Variety of adhesive tapes

For profile, fine and large area masking work.

Properties:

- Withstands heat.
- Withstands water-based paint.
- Accepts paint.
- Easily removed without leaving adhesive residues.

Masking film.

For masking of large areas on vehicles.

Properties:

- Accepts 2-component and water-based paints.
- Withstands heat.
- Withstands water spray and condensation.
- Withstands solvent.
- Easily cut.
- Environmentally friendly and can be recycled.

Polishing materials.

Polishing means microfine sanding. For this reason, polishes must only contain abrasives, and no silicones.

During polishing repair, a good shine is achieved through the step-by-step use of polishes, starting with a highly abrasive polish and ending with a polish having very slight abrasive action.

Polishes are available in graduations from coarse to fine.

Abrasives

Please refer to the "Tools" chapter for information on abrasives.

Copyright © 2016 Ford Motor Company

Paint Repairs

General information

There is a great difference between painting in production and repair painting.

In production, only the bodyshell is painted, it has no trim, upholstery or assemblies. Because of this, other paints, tools and processing techniques can be used.

In contrast to that used in production, paint used in the workshop must dry at low temperatures. Plastics and the vehicle electronics must not be subjected to temperatures greater than 70°C.

The painting process in the case of repair work consists of two phases:

- Pre-treatment of the surface for corrosion protection and the smoothing of irregularities.
- Top coat application.

The precondition for a professional paint finish on a vehicle is the permanently maintained cleanliness of work spaces, tools and equipment,

Original materials must be worked according to the manufacturer's instructions, so that no problems arise in the processing nor during drying.

The room temperature must be 20 - 25°C and the humidity must be low. Temperatures which are too low or too high can lead to porosity, poor flow and boiling. High humidity leads to paint damage such as tarnishing of the paint film (matt film), adhesion problems and craters.

Pre-treatment of the surface

Perfect preparation of the subsurface is the precondition for a brilliant paintwork result. Faults in the preliminary stages delay completion and cause unnecessary extra work. The working steps described here demonstrate how important it is to follow these instructions step by step.

NOTE: *Thorough cleaning of the vehicle and especially of the area being repaired is particularly important because of the danger of contamination of the paint.*

Clean the area of the damage

Clean the damaged surface thoroughly, to allow the extent of the damage to be seen. Use silicone remover to produce a grease-free surface.

NOTE: *The treated surface must be rubbed with a clean dry cloth before the solvent evaporates, otherwise there will be no cleaning effect.*

Effective de-greasing is important not only before the application of paint, but also before all sanding stages, for two reasons:

- During sanding of grease contaminated surfaces, globules may form with the sanding dust. Sanding marks will occur and the sanding medium quickly becomes unuseable.
- Oil and grease are embedded by the action of the abrasive particles, and are then very difficult to remove.

Establish the area of damage and the repair stages. In doing so, establish how much disassembly work must be undertaken. Perform a color test at this stage.

Mask off the area of the repair ready for preparatory work.

Sand out the damage location

When sanding, produce smooth transitions from the painted area to the bare metal.

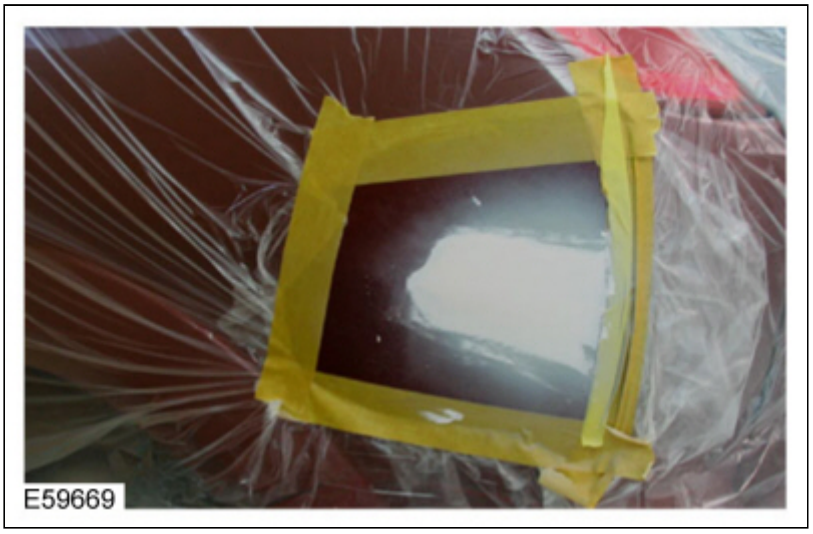
Use an eccentric sander and P80 or P120 abrasive sheets. Finish off sanding with P150 or P180. The remaining adhering sanding dust must be completely removed.

Cleaning, de-greasing

Use silicone remover to thoroughly clean the surface in order to remove grease residues, sweat from the hands and other contamination.

NOTE: *Use a solvent test to establish whether the old paint can be etched. Apply 2-component thinners to the damaged area using a clean cloth and rub lightly for about 1 minute. If the subsurfaces can be etched away, special pre-treatment is necessary. See "Tips and Tricks"*

Apply primer filler



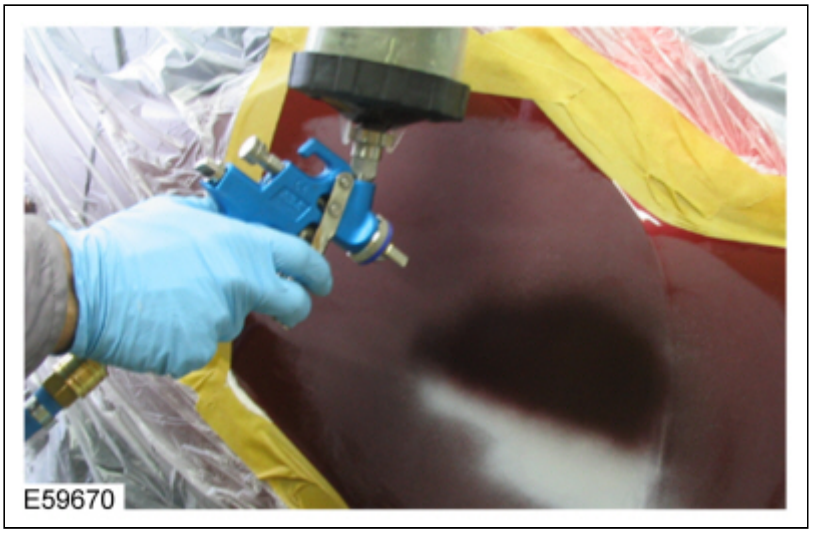
Before applying stopper, apply primer to the sanded and bare surface.

Allow the primer to dry and then lightly sand by hand using P220 - P400 dry.

NOTE: *Most stopper can be applied directly to bare metal. But application of a primer filler provides better corrosion protection.*

NOTE: *Avoid sanding through to the bare metal. Points which are sanded through must be retreated with primer filler.*

Stopper application



Pre-sand the hardened stopper using an eccentric sander and P80 dry, then final-sand using P120 - P140 dry. Clean the sanded surface using silicone remover.

Apply 2-component stopper to the filled surface. The stopper compound must only be applied thinly.

NOTE: *Use of a testing powder is recommended so that the sanding process can be more easily checked.*

Apply filler

Filler can now be applied to the dried repair area. Choose the correctly toned filler according to the manufacturer's instructions.

NOTE: *Alternatively, filler with the correct tone can be mixed with the aid of colour matching cards.*

Sand the filler.

The working area is expanded by applying new masking. This makes it possible to even out the transition from the damage area to the vehicle paintwork.

NOTE: *The primer filler must be carefully sanded. Faults in the primer filler layer will be visible in the top coat.*

The sanding process consists of two stages. Coarse sanding levels out the surface of the filler primer. Fine sanding ensures the necessary surface structure which allows the top coat to adhere well and cover sanding marks.

Sand the filler using the eccentric sander and P400 - P500 used dry. Clean the sanded filler finished surface using silicone remover.

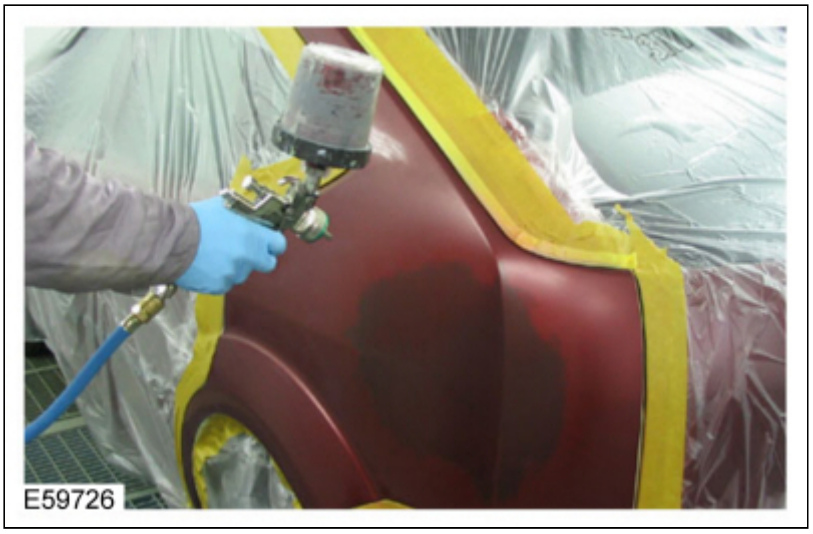
The painted area is matted using a fine matting sponge, and then thoroughly cleaned.

Surface ready for paint

The surface which has been repaired and then prepared according to the manufacturer's instructions is now ready for basic paint application.

Top coat application

It is important for a good paint result that the recommended process data is adhered to, i.e. mixture proportions, layer thickness, viscosity, drying time etc.



First of all the work area is carefully masked ready for paint application. The correct adhesive materials and techniques must be used so that no hard transitions and edges are created during painting.

NOTE: *The chapter "Tips and Tricks" gives in-depth information on masking work.*

Thoroughly check the surface once more and rub-off with a dust-bonding cloth.

NOTE: *Once more check the paint material and that the spray gun is correctly adjusted before applying the paint.*

Paint application

The base paint is applied in two or three steps. First of all only the repair area is painted with the first paint application.

Flash off

Allow the paint application to flash off until the surface has a matt appearance. So that the transition to the original paint is optimally created, the next paint application is applied to a wider area.

After the base paint has dried for the specified time, the clear lacquer is applied. Next the transitions to the original paintwork are treated with fade-out remover. This removes the spray mist and forms an ideal paint surface.

Repair stages for repair painting

The required time and material data is divided into four painting levels for calculations concerning repair painting. Proceed according to these divisions for every calculation.

Level 1 - Painting of new components

On new components, all inner surfaces, seams and edges which will no longer be seen after assembly must be primed and pre-painted.

NOTE: *The cathodic dip primer must not be sanded away. Cleaning with silicone remover or light sanding of the primer is all that is required.*

Job steps:

- Wash off, prime and pre-paint inner surfaces, seams and edges which cannot be reached at all or only partly after the component is installed.
- Sand new component with P280 - P320 or a fine sanding pad.
- Clean subsurface with silicone remover.
- Carry out masking work (when painting an installed component).
- Apply one spray run of filler, dry.
- Sand the filler. P1200 wet or P500 dry.
- Clean filler application with silicone remover.

Then the prepared surface can be painted with solid or 2-component paint.

If the new part has mild transport damage, this must be rectified beforehand.

To do so, add the following steps:

- Grind out the scratch.
- Finely sand the surrounding surfaces.
- Use a steel cleaning agent to thoroughly clean and then rub dry.
- Apply corrosion protection primer to the bare areas.

Level II - Top surface painting (color tone matching)

Complete bodywork surfaces which are to be painted without the need to apply stopper belong to this group. In addition, surfaces with faults in the top coat surface which cannot be removed by polishing.

The following faults are included:

- Loss of gloss.
- Sanding scores.
- Heavy paint runs.
- Large dust and dirt inclusions.

The scope of the work is as follows:

- Sand the surface.
- Sand out paint damage and faults.
- Treatment of small areas which have been sanded through.
- Masking work (when painting an installed component).
- Apply top coat according to the painting process (one or several coat process).
- Dry the top coat and perform finishing work.

Level III - Repair painting with stopper applied to up to 50% of the surface.

If in addition to painting, work with stopper application must be performed, then the repair levels III or IV must be used.

In repair level III, apart from painting the complete bodywork surface, partial stopper work is carried out on up to 50% of the surface to be painted. The necessary primer and filler work are also included.

The following damage must be rectified in this level:

- Slight panel unevenness.
- Damage due to corrosion.
- Dented body surfaces.
- Weld locations.
- Deep scores or scratches.

The scope of the work is as follows:

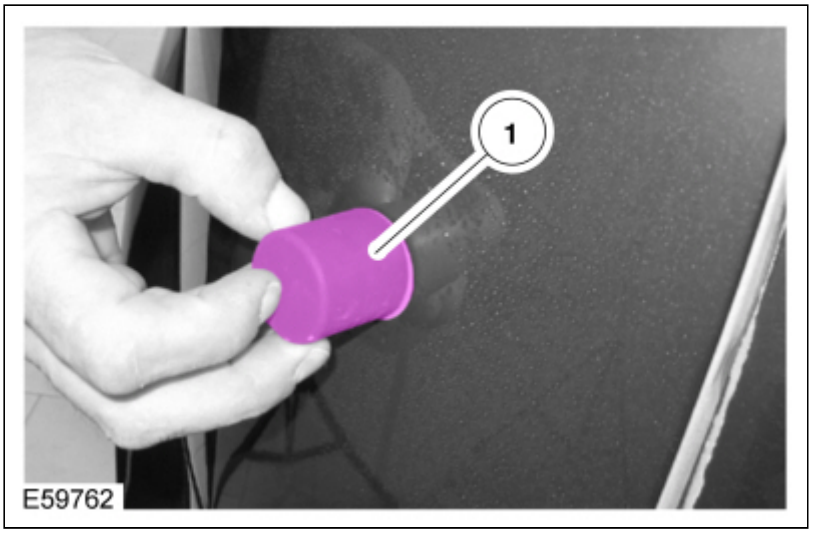
- Fine sand pre-treated bodywork surfaces (e.g. lead-loaded areas).
- Sand out existing damage.
- Perform all necessary masking operations on the vehicle.
- Apply primer.
- Partial stopper application on up to 50% of the surface to be painted (two to a maximum of three stopper applications).
- Fill the repair area.
- Apply stone chip protection (when present in production).
- Apply top coat according to the painting process (one or several coat process).
- Dry the top coat and perform finishing work.

Level IV - Repair painting with stopper applied to more than 50% of the surface.

In repair level IV, apart from painting the complete bodywork surface, partial stopper work is carried out on more than 50% of the surface to be painted. The necessary primer and filler work are also included.

The following damage must be rectified in this level:

- Damage due to hail.
- More extensive stone chip damage.
- Extensively dented body panels.
- Sectional repairs with large weld seams.
- Surfaces with severe corrosion damage.



The scope of the work is different to level III because of the partial application of stopper to more than 50% of the area to be painted. In addition, more extensive sanding work is usually required.

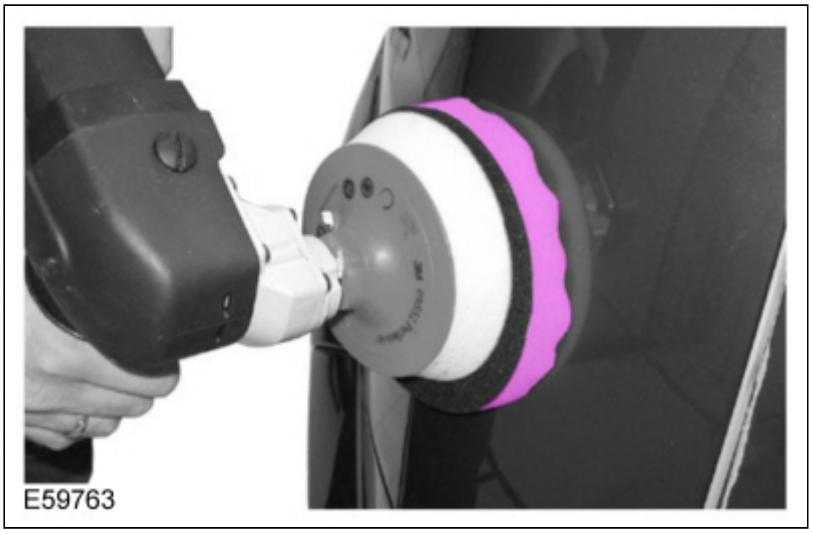
Polish

In order to achieve faultless quality, it is sometimes necessary afterwards to polish a newly painted surface.

Even after the most careful painting, it sometimes happens that dirt inclusions and paint runs occur in work with top coat or clear lacquer. Before polishing, such paint faults must be removed with the sanding cylinder ("Finiball") and hand sanding or eccentric sander in a wet sanding process.

Sanding cylinder

The special sanding compound **-1-** (sanding bloom) for the sanding cylinder is self-adhering and available in grades from P1000 to P2500.



- P1000 - P1500 for pre-sanding of runs and large imperfections in the paint.
- P1500 - P3000 for subsequent sanding of runs and sanding out of dust inclusions.

A small eccentric sander can be used for more extensive working areas. When doing so, first of all put the eccentric sander in place and then switch it on, so that the danger of sanding through on edge is reduced.

Finally polish the sanded area to a high gloss with suitable polish. To this end the various manufacturers recommend materials and process techniques which are specially suited to their products.

NOTE: *The polishing is to be done in the same way as that used to remove swirl marks.*

Polish

NOTE: *Before using the nap sponge for the first time and after any long pauses in working, dampen the nap sponge with polish.*

Job steps:

- Clean and degrease the area to be polished using silicone remover.
- Apply the polish to the polishing disc and spread it.
- Place the polishing machine down flat on the area to be polished and before switching it on, gently distribute the polish over the underlying surface.
- Polish out the location for 10 - 15 seconds with the edge, working with a criss-cross motion.
- Subsequently polish the location for about 10 seconds with the machine laid down flat.
- Wash off and clean the polished location using the professional polishing cloth and then clean the polished surface.
- It is absolutely vital to carry out a visual check after finishing the polishing procedure. If any swirl marks are not completely removed by the first polishing procedure, then process must be repeated.

Aids

Cleaning putty

Cleaning putty allows deposits on the paint surface to be removed easily and gently. The following paint faults can be removed using cleaning putty:

- Metal deposits and iron dust.
- Paint or color mist.
- Tree resin and tar.
- Insect residues.

The surface to be worked must be thoroughly cleaned before the cleaning putty can be applied. Then the surface is sprayed with soapy water. Now the cleaning putty can be slid over the surface until all unevenness is removed.

Painting Plastic Parts

General

Although these days plastics can be produced in all colors and with a matt or gloss surface, painting is often necessary.

NOTE: *Manufacturer's limitations concerning the feasibility of painting certain components must always be observed.*

Reasons in favor of applying paint to plastic are:

- Individual coloring, matching the body paint.
- More gloss and color brilliance through painting.
- Removal of production imperfections.
- Protection from atmospheric exposure.

Nowadays painting plastic presents no problems because the materials are known and matched to the paint. In order that the painter can use the correct painting materials, the type of plastic must first be correctly determined.

To allow this, plastics are marked on the rear in accordance with the recommendations of the Association of Vehicle Manufacturers.

Once the type of plastic is determined it is an easy matter to assign special paint recommendations, matched to that particular plastic. Unmarked plastics require knowledge of materials so that a correct choice of paint materials can be made and the component can be reliably painted.

Plastic groups

Thermoplastics

When warmed these undergo a reversible transformation into a plastic deformable state and once cooled they maintain their shape. They consist of string-like (linear) or only slightly branched molecular chains.

Thermosets

Thermosets are hard and have the form of a close-meshed network in all directions. They do not undergo plastic deformation, are especially resistant to chemicals, are difficult to swell and are insoluble. At normal temperatures they are hard to brittle. At first the material does not undergo any change when heated, but when it reaches a critical point, the thermoset is totally destroyed.

Elastomers

Elastomers are characterized by high elasticity over a wide temperature range. They have properties like rubber or a sponge and after compression or distension they return to their original state.

Types of plastic

The plastics used in the automotive area:

- ABS - Acrylonitrile butadiene styrene (polymer)
- PA - Polyamide
- PC - Polycarbonate
- PE - Polyethylene
- PP - Polypropylene
- PP/EPDM - Polypropylene/ethylene propylene diene copolymer
- PC/PBT - Polycarbonate/Polybutylene terephthalate
- PBT/PC - Polybutylene terephthalate/Polycarbonate
- PUR - Polyurethane
- GRP - Glass reinforced plastic

NOTE: *PE and PP are plastics which cannot be painted, or can only be painted using special techniques.*

As well as the pure plastics, so-called 'blends' are also used. This means combinations of different plastics. If we were dealing with metals they would be called alloys.

Plastic identification

Normally the identifier is marked on the plastic components used in vehicle construction.

One method to determine the plastic group is the sanding test. In this a place is chosen which will not be visible later, and the finger belt sander is used to sand the plastic.

The plastic group can be determined using the pattern left by the sanding and the dust:

- Thermosets produce a white dust.
- Thermoplastics smear and do not produce dust.

The plastic group can be determined by a sound test:

- Degree of hardness - the higher-pitched the sound, the harder the plastic.
- Elasticity - the more muffled the sound, the higher the elasticity of the plastic.

Cleaning plastic

Plastic components are manufactured using complicated moulds and presses or other highly engineered tools, mostly using an injection moulding process or reactive injection moulding process.

In order to be able to remove the component from a particular tool, a separating agent is used, which in some cases adheres very strongly to the plastic.

This separating agent on the plastic components must be completely removed before any surface coating is applied.

Warm storage (tempering) before actual cleaning brings the following advantages:

- The separating agent sweats out of the plastic.
- Tensions in the plastic are released.
- Air inclusions can be recognized and removed.

Intensively clean the item several times using a pad and fresh cleaning agent.

NOTE: *A single wipe, even with cleaning agent, is not usually sufficient in most cases. Clean textured components with the aid of a soft brush.*

After cleaning, it is absolutely vital that cleaning agent absorbed by the plastic should be expelled by tempering again. If the ventilation is good and the room temperature is about 20°C the solvent can be evaporated away by overnight storage.

Painting new components

It is absolutely vital that the substrate of an unpainted new component is free of separating agent. Paint can only be applied directly to very few plastics. The plastic must first be identified exactly and then worked with a repair system which is matched to the type of plastic. In most cases a plastic etch primer must be applied as adhesion base to all plastics which can be painted.

NOTE: *Plastics have a tendency to become electrostatically charged. This can easily cause contamination during painting. Special antistatic cleaning cloths prevent electrostatic charging.*

Work process for thermoplastics:

- Thoroughly clean the surface.
- Temper the plastic.
- Afterwards clean with antistatic cleaner or antistatic cloths.
- Apply the bonding agent.
- Apply elastic filler. After it has dried, sand and clean.
- Apply one coat Uni-paint with elasticizer additive. For two layer painting the elasticizer additive is in the clear lacquer.

NOTE: *Follow the paint manufacturer's guidelines during all work.*

Work process for thermosets:

- As a rule, thermosets can be handled in the same way as normal body components.

Work process for PUR soft foam:

- The work process is the same as for thermoplastic.
- Instead of using bonding agent, a filler wash is applied to close the pores of the PUR soft foam.

The primer which has been applied to a primed new component can vary greatly. If no manufacturer's data is

available, the composition and suitability for further working must be tested.

Painted components with an already ascertained and intact paint coat present no problems for possible repainting. After sanding and careful cleaning with plastic cleaner or thinners, painting can be done directly.

Unknown primer

When dealing with unknown substrates it is important to carry out an adhesion test on the existing paint before any repainting is attempted. First of all a mechanical test must be carried out, for instance using a lattice cut and tear-off band. If the adhesion of the old paint is not acceptable, it must be mechanically removed and new paint finish applied.

If the adhesion is acceptable, then an etch test is performed using 2-component thinners. If no etching can be detected in this test, application of the the paint finish can be started directly. Otherwise the old paint must be removed and a new paint finish created.

With the help of universal or special plastic primers and with only a few materials complementary to those previously present anyway, the painter can now apply a long-lasting paint finish to all popular vehicle attachments made of plastic.

Paint faults on plastic substrates

NOTE: *Paint faults are fully described in the chapter Paint Defects and Damage.*

The most common paint faults which can occur when painting plastic components and the methods of repair are briefly described.

Discoloration

Cause/damage pattern:

- Plastic material is not suitable for painting.
- Incorrect bonding agent.
- Paint used not solvent resistant.

Repair of damage:

- Repaint using suitable materials.
- Install a new unpainted component.

Softening

Cause/damage pattern:

- Substrate not carefully cleaned.
- Air humidity too high or working temperature too low.
- Drying time incorrect (too short).
- Materials for substrate not correctly matched to each other or not mixed correctly.

Repair of damage:

- Dry out, sand, re-isolate and paint.
- Sand away faulty paint coats and re-apply paint finish.

Paint damage caused by detachment, poor adhesion

Cause/damage pattern:

- Insufficient paint adhesion between top coat and filler. The whole of the paint finish detaches from the plastic.
- Plastic not cleaned sufficiently, not or inadequately tempered.
- Unsuitable cleaning agent or materials used.
- Poor or lack of intermediate sanding.
- Paint finish underbaked or overbaked.

Repair of damage:

- Sand away faulty paint coats and re-apply paint finish.

Paint damage caused by blisters, craters, sink holes

Cause/damage pattern:

- Painting on PUR plastic which was not painted in production.

- Surface of the plastic material too porous.
- Flash-off time not adhered to.
- Drying temperature too high.
- Moisture in plastic material.
- Layers too thick.

Repair of damage:

- Clean the damaged area, sand, re-isolate and paint.
- Remove the paint layers and re-paint.

Crack formation

Cause/damage pattern:

- Overexpansion of painted PUR plastic components.
- Use of unsuitable paint materials.
- Paint materials not suited to each other or incorrect mixture ratio.

Repair of damage:

- It is not possible to repair overexpanded PUR plastic components.
- On other plastics, sand away damaged layers, isolate and repaint.

Spot Repairs

General

In general, partial surface painting at a point is called a spot repair. Using this technique, minor paint damage can be resolved economically and to time.

Advantage of this method

Because this application remains confined to the area of the damage, it is often unnecessary to remove components or color match against neighboring components. The material used is very much reduced because only a part of the repair area is coated.

Practical application areas

Only occasionally can satisfactory results be achieved in the centre of larger surfaces and/or on difficult colors. In addition, unprofessional application may cause tear-off edges to appear in clear lacquer. Only certain application areas are recommended.

NOTE: *The final decision on whether to spot repair or paint the component must be made by an expert.*

Application areas:

- 2-layer paint.
- Depending on the damage zone, paint damage up to a diameter of 3.5 cm or a length of 10 cm.
- Scratches.
- Clear lacquer application up to an area of DIN A4 max.
- Smaller areas which are optically broken up by other components such as trim strip, tail lights, swage lines and edges.
- Boundary zones and edge areas of larger components.

The best application areas have proven to be optical break lines such as corners, narrow surfaces, fenders and wheel arches.

Because of their locations, the violet colored areas are the most suitable for spot repair painting. The turquoise areas are only marginally suitable and the rest of the areas are not suitable for spot repairs.

Repair process

Perfect preparation of the subsurface is the precondition for a brilliant paintwork result. Faults in the preliminary stages delay completion and cause unnecessary extra work. The working steps described here demonstrate how important it is to follow these instructions step by step.

Illustration of damage

A typical case for spot repair is a small stone chip on the fender.

Cleaning

First of all the component is thoroughly cleaned using silicone remover and refurbished using abrading and polishing paste. This re-creates the original degree of shine and ensures exact color matching on the touch-up surface.

Sand out

Sand out the damaged location using P180 - P320. Only small sanding blocks and small sanding machines must be used, so that the area of the repair remains as small as possible.

Sanding is completed by rubbing down the surrounding surface with a fine sanding pad or P1000 paper. Remove sanding residues and clean the repair area with silicone remover. The peripheral zone must then be masked for application of the filler.

NOTE: *The size of the repair area must be kept as small as possible (maximum size DIN A4).*

Filling

The filler layer is applied in stages. First of all, filler is only applied to the location which has been sanded away. After a wait time for flashing off, the second coat is applied so that it spreads over onto the existing paintwork.

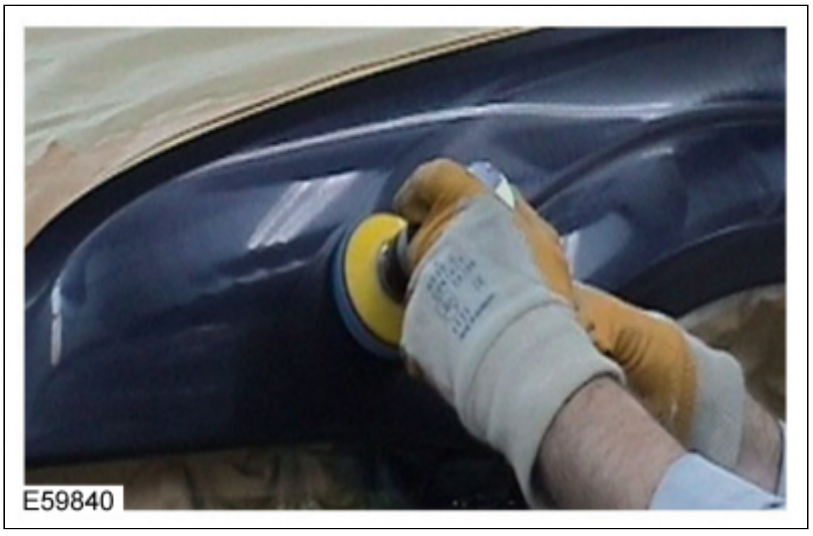
The filler must be dried according to the instructions of the material supplier.

Rubbing down

The repair location is now rubbed down with P400 - P500 and the bordering surface with P2000 - P4000. Remove sanding residues and clean the repair area with silicone remover.

Paint

Before painting, clean the area for the final time using a dust-bonding cloth. Then apply the basic paint in thin layers using a spray gun until enough coverage is achieved.



After drying, apply clear lacquer in 1 or 2 coats (depending on product). In doing so, spray so that only the newly applied basic paint is completely covered. Finally a touch-up thinners is sprayed over the edge of the clear lacquer to dissolve the clear lacquer spray mist.

Dry

Now dry the clear lacquer according to the manufacturer's instructions using an infrared gun.

Polish

Polish the component using a polisher and polish and check the polished area for any swirl marks which may be present. Polish away any swirl marks which are present.

Dirt inclusions

Sand out

Minor damage can be removed with a small sanding machine or preferably with an eccentric sander with P1500 - P2000. Very fine spray mist can be removed using P2000 - P4000 paper and a larger eccentric sander.

Corrosion Prevention

General

Although corrosion protection measures and painting processes in production have reached a very high technical standard and will be continuously developed further, in the long term corrosion on a vehicle cannot be totally avoided. Further demands are therefore made of the paint specialist besides his knowledge of normal repainting of vehicles which have been repaired after an accident, in addition specialist knowledge is required for assessing and rectifying damage due to corrosion.

During repair painting, take care over the maintenance and re-creation of the corrosion protection applied in production, in view of the long-term warranty on Ford vehicles. Only those repair materials which are approved by Ford may be used for body repair work and repair painting.

For detailed information on corrosion protection measures during body repairs, please refer to chapter 501-25.

Furthermore, information on corrosion protection measures is repeated in individual chapters of the paint manual.

In particular, pay attention that the layer thicknesses specified in production are maintained. The complete system of solid one-layer on galvanized steel panels must equal at least 90 µm and the total system of two-layer on galvanized steel panels must equal at least 105 µm.

It is important that sealing operations, as far as they are necessary, should be undertaken after the application of the paint to specification, in order to ensure the best corrosion protection. All components which form hollow cavities such as pillars, rails, side components etc. must be provided with a coating of cavity protection wax.

Causes of corrosion

Corrosion of steel is an electrochemical process during which the steel combines with oxygen. The following factors lead to corrosion:

- Acidic compounds contained in the air, such as carbonic acid and sulphur dioxide, combined with oxygen from the air and/or water. Salts such as sodium chloride used as road salt accelerate the corrosion process.
- Mechanical damage such as stone chips and scratches which penetrate through to the steel panel.
- Lack of care by the vehicle owner of the painted and corrosion proofed surfaces or areas on the vehicle.
- Unfavorable weather or environmental conditions, as may occur in areas with high humidity, high salt content in the air or serious air pollution due to aggressive gases and dusts.

In the case of mechanical damage, formation of rust can often be seen, beginning to spread into the painted surface from a point (stone chip) or from a line (scratch). If these faults are not professionally rectified in good time, the result is rusting through from the outside to the inside. Rusting penetration from the inside to the outside occurs when for instance the cavity protection was inadequate.

Operations after painting

NOTE: *The manufacturer's instructions must be followed when working with the various corrosion protection materials.*

- After painting, treat all cavities in the repair area with cavity protection wax. In doing so, pay particular attention to the weld seams. In dead-end applications with a panel insert, the cavity protection wax must be applied so that it also reaches the area of the panel insert.
- Seals which were applied in production and not over painted must be reapplied. Seals protect vulnerable parts of the bodywork, keep moisture away, reduce wind and road noise and dampen vibrations.
- Apply transparent wax.

Definition of the degree of rust

In workshop practice, in order to be able to carry out a consistent and objective evaluation of the scope of the damage, a degree of rust on the scale of 1 to 5 is determined by the DIN 53 210 standard. The main criterion here is the extent to which rust exists under the paint structure. It is determined in millimeters (mm).

Underlying rust grade: R1 < 1 mm

Corrosion starting with up to 1 mm of rust underlying (in the form of a spot or a line).

The damage can be rectified by cleaning the defective location and mechanically removing the underlying rust. For a

small extent, apply a primer using a brush and allow it to dry. Touch-up the location with a paint pen or provide a new paint coating.

Underlying rust grade R2 < 1 - 2 mm

Advanced corrosion with up to 2 mm underlying rust.

Rectifying the damage:

- Clean the defective location.
- Remove the underlying rust mechanically down to the paintwork carrier.
- Apply 1-component filler and then 2-component "Vario" filler.
- Provide the damage location with new paint coat on visible outer surfaces. Only locally touch-up areas which are not optically conspicuous.

Underlying rust grade R3 < 2 - 4 mm

More advanced corrosion with up to 4 mm underlying rust. The damage must be rectified in the same way as for R2. A permanent cure of this type of damage pattern is still just possible

Underlying rust grade R4 < 4 - 5 mm

Notably advanced corrosion with up to 5 mm underlying rust. The damage must be rectified in the same way as for R2. If it is found that for whole areas this is only possible with a great deal of work, or is not possible at all, then a new component must be used.

Underlying rust grade R5 > 5 mm

Extreme corrosion, with more than 5mm underlying rust (panels, flanges or load-bearing components partially rusted or rusted through).

Such damage can no longer be repaired because in many cases the constructional strength of the component can no longer be produced. The risk in making a repair is too great. Install a new component and paint it.

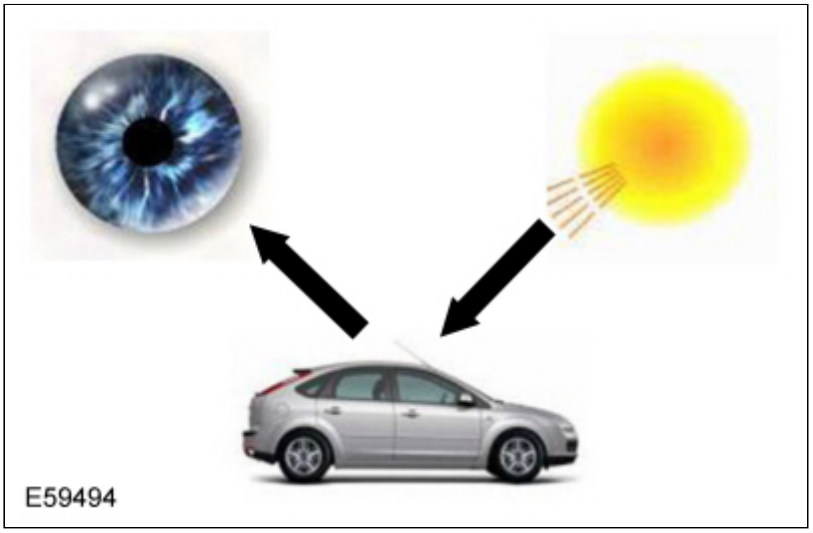
Color Identification and Chromatics

Basic color theory

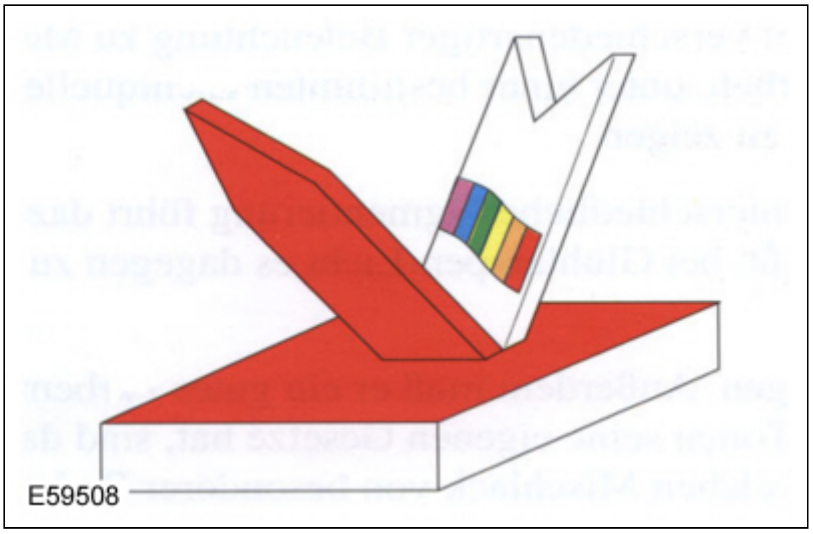


In order to achieve optically perfect painting results it is vital to understand the physical principles of the origin of color impression.

Color

Color itself is a sensory perception.

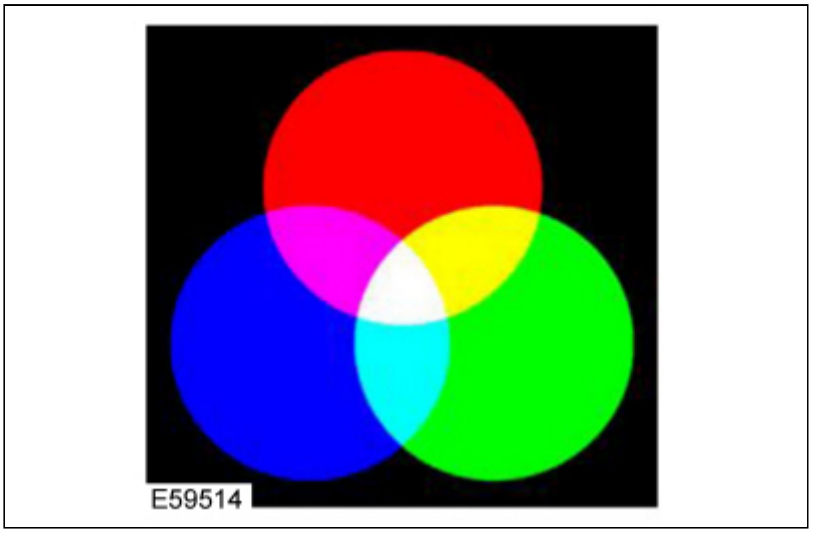
This perception arises through the combined effect of the following components:



- Light (sunlight or artificial light irradiates the object).
- Surface of the object (reflection from the object of certain constituent parts of the light).
- Eye (perception of the reflections from the object).

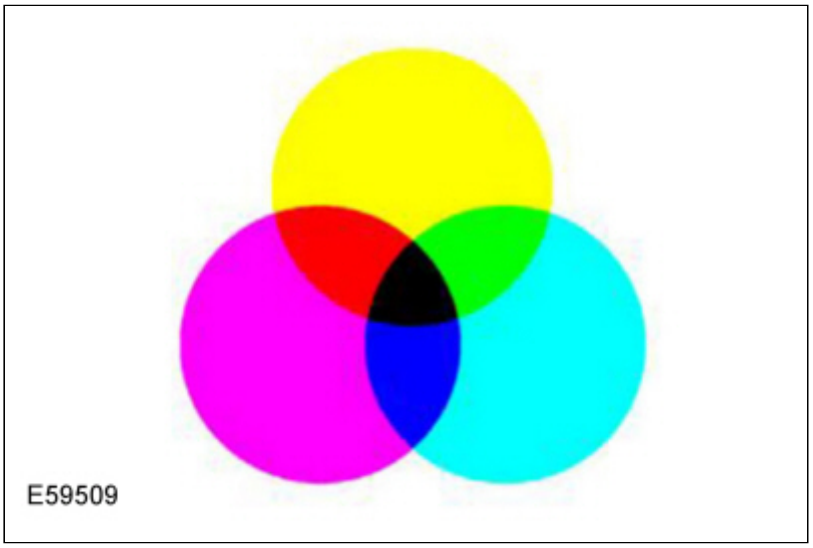
Because the sensory impression of color is produced by all three of these components, it is dependent on the type, quality and function of the individual components. Practical examples make this clear:

- If a particular article is subjected to artificial light, then it gives a different impression of color to that which it gives in sunlight.
- An object with uniform color but different surface textures appears to have different colors (grained or ungrained dashboard).
- A person with perception disorder (colorblindness) cannot recognize certain colors or distinguish between them e.g. red-green weakness).



In turn the type of color is determined by the light absorption ability of an object. Light shines with all color components (spectral colors) onto an object, certain components of the light are absorbed (taken in) and other components are reflected (sent on). The components which are reflected produce the specific color impression.

The colors as we see them are the result of a combination of reflected colors from the spectrum. Physically speaking, these are electromagnetic waves with different wavelengths (and frequencies). The healthy human eye can recognize wavelengths between 0.36 µm (violet) and 0.78 µm (red).



If all the perceptible wavelengths of the spectrum impinge on the human eye at the same time, the impression of white light is produced.

Additive and subtractive color mixing

Additive color mixing is the combination of light from different sources to give white. Different intensities of the additive primary colors red, green and blue allow millions of different colors to be represented (RGB colors).

Additive color mixing is always therefore used when light should enter the eye directly (without reflection off an object). Such as in the case of computer monitors or overhead beamers.

Subtractive color mixing means mixing the primary colors cyan, magenta and yellow to form a desired color (CMY colors).

Subtractive color mixing is used when light should enter the eye of an observer after reflection from an object. Such as happens with painting or in printing.

Oswald color circle

The Oswald color circle is based on subtractive color mixing, and enables the behavior of paints when they are mixed together to be represented.

Colors lying opposite each other are complementary colors and should not be mixed together as this will produce a dull (i.e. grey) shade. If green is added to red, the red becomes greyer, not greener.

Color shades which are side by side are partner colors and produce a mixed color shade. For instance, mixing red and blue produces a pure violet.

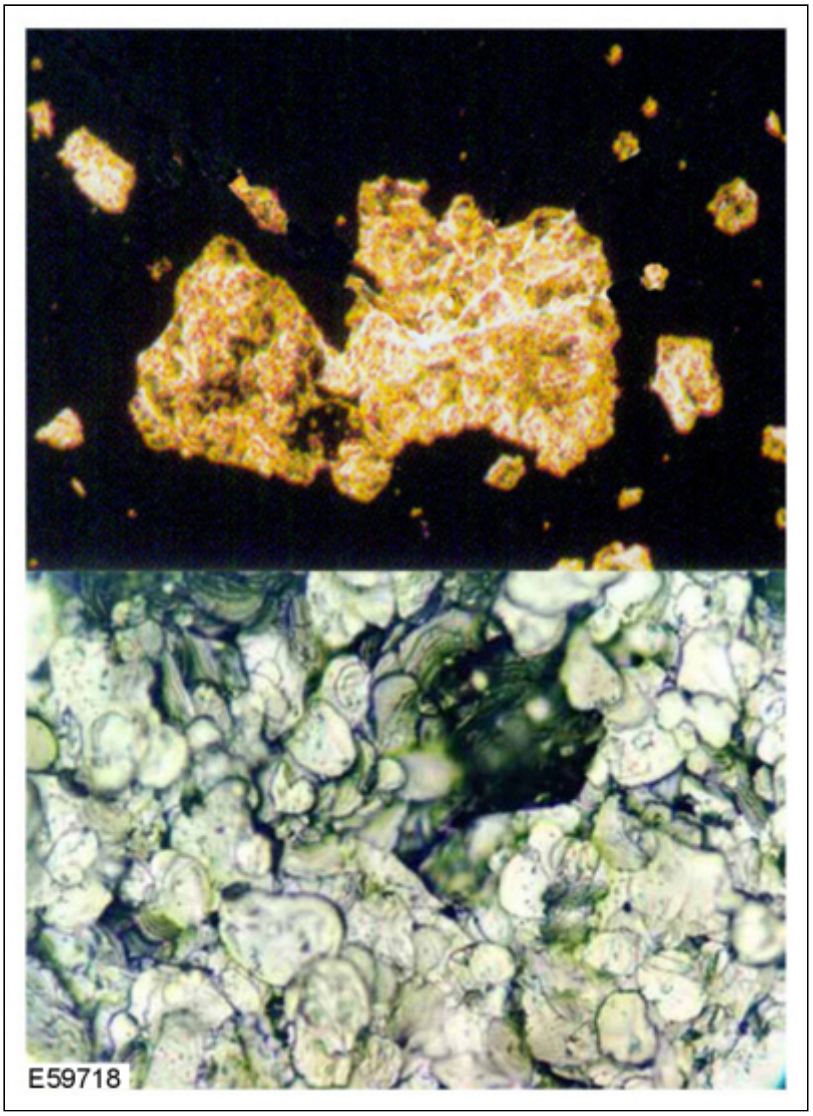
In addition, black and/or white may be necessary to produce a particular color shade.

- White makes the color shade lighter.
- Black makes the color shade darker.
- With black and white the color shade becomes more dreary or greyer.

Metamerism

Metamerism is the name of the effect which occurs when two colors appear identical in a particular light (e.g. artificial light), but the colors appear different under another light source (e.g. daylight).

The cause is the fact that the human brain, aided by the eyes, does not evaluate the wavelength, instead it evaluates the spectral intensity of the reflected light.



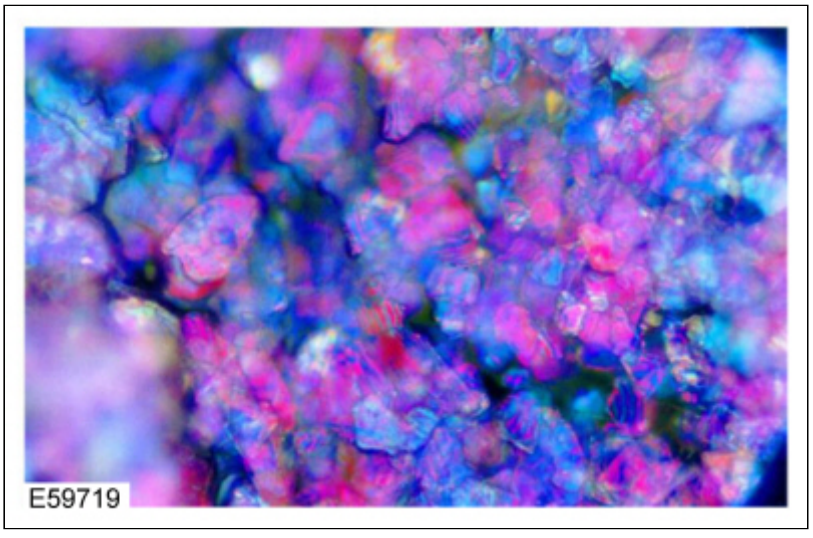
It is for this reason that color matching in practice must only ever be performed in daylight, or under special artificial light which is based on daylight.

Metallic and pearl pigments

Colored paints achieve their color effect by the addition of pigments. Pigments are colored, solid, very fine organic and inorganic particles which are insoluble in the binding material.

Metallic pigments

Aluminum platelets are added as pigment to form metallic paint.



Depending on the size and shape of the aluminum platelets, different metallic effects can be achieved:

- Cornflake aluminum (1) causes very strong dispersion because of rough edges, low brilliance, very low flop and produces grey-silver shades.
- Dollar aluminum (2) causes hardly any dispersion because of the smooth surface, high brilliance, produces very light, almost white silver shades.

With metallic paints however, only a light-dark light reflection effect occurs.

Colored metallic paints are produced by the extra addition of color pigments to the metallic paint.

Pearl pigments

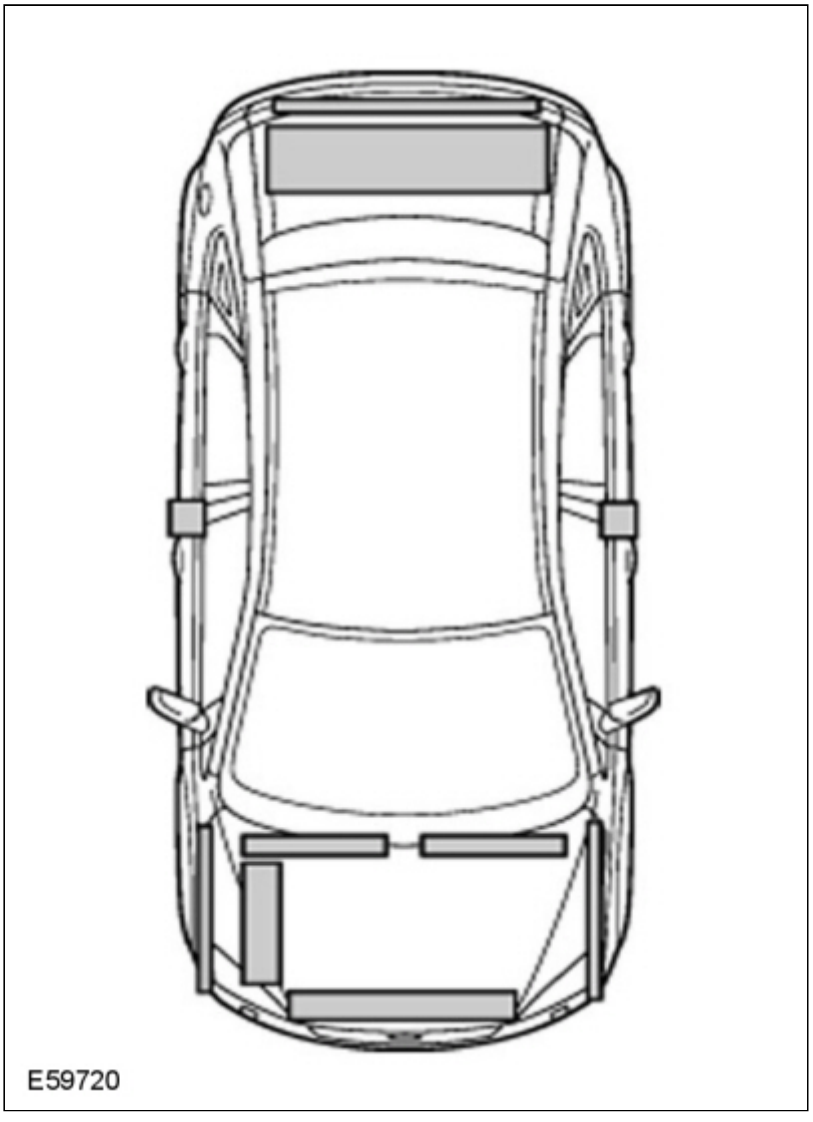
The basis of pearl pigments is formed by mica, which is metallized with a silver or gold layer.

Depending on the angles of light and observation, the mica platelets reflect different proportions of light. Because of this, the color of the paint appears to the observer to change.

Pearl pigments produce a colored and light-dark reflected light effect.

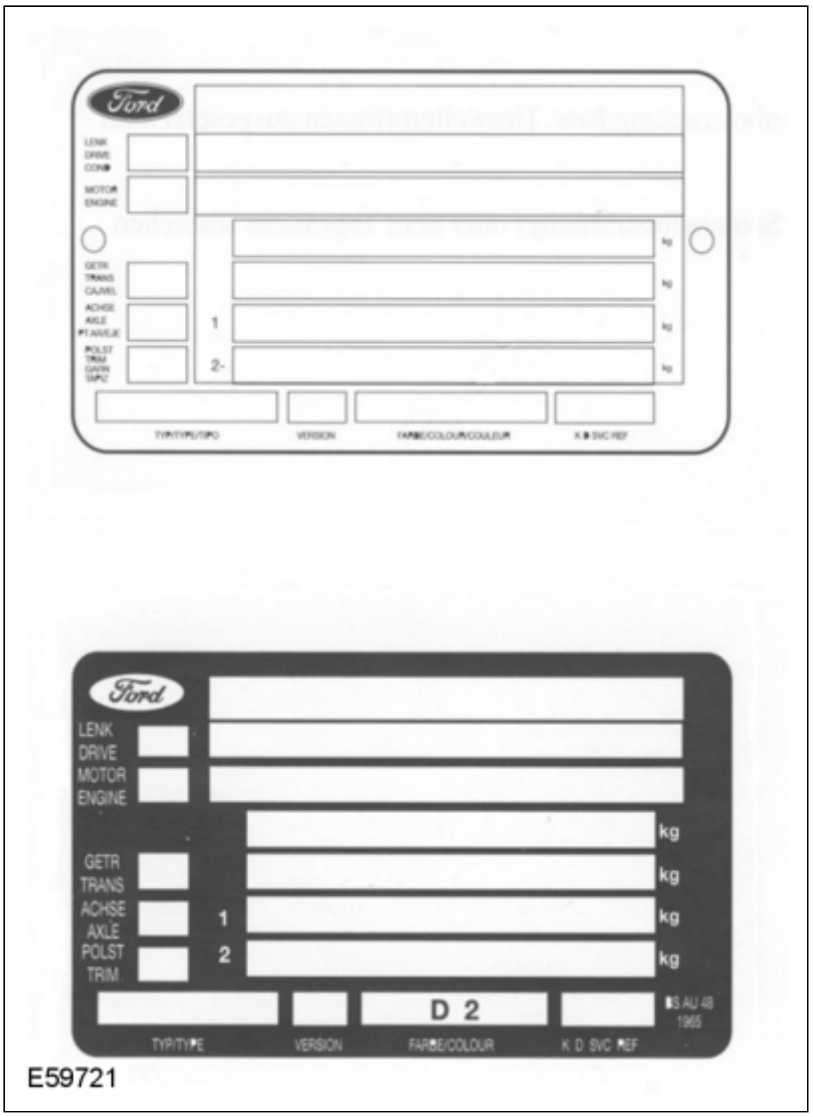
Color codes and their determination on Ford vehicles

It is necessary to determine the correct color shade of the original paintwork in order to perform a professional and perfect paint repair.



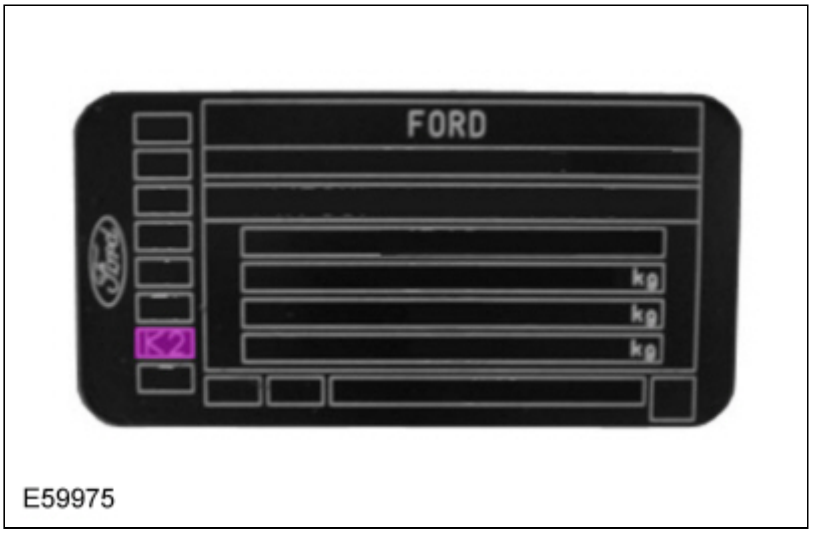
The original paint color shade can be found by:

- Inspection of the vehicle type plate with the color code stamped on it.
  - Later design
  - Earlier design
- Color shade catalog or color shade system of the manufacturer.
- The bare bodyshell plate with color designation.



Type plate

Type plate - location on Ford vehicles:



- Right-hand B-pillar - door rebate
- Left-hand B-pillar - door rebate
- Hood lock panel
- Left-hand vertical edge of inner front wing
- Right-hand vertical edge of inner front wing
- Right-hand engine compartment side member
- Left-hand bulkhead
- Right-hand bulkhead
- Luggage compartment interior
- Inner rear panel - luggage compartment

The type plate gives the color code in the last row.

On the newer type plates, the color code is given in the left-hand column, at the penultimate position.

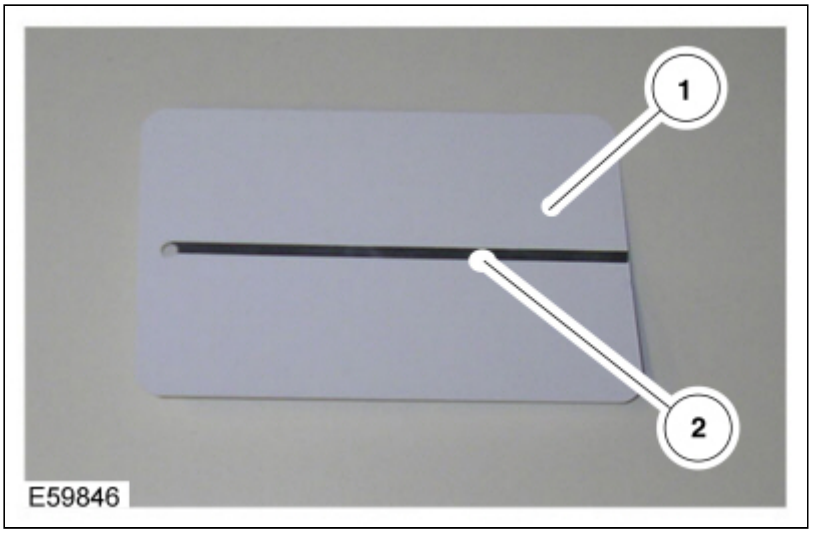
Color shade catalog or color shade system of the repair paint manufacturer.

The repair paint manufacturers offer a variety of possible systems for the determining the production color shade of motor vehicles. There are electronic systems, color card systems and manuals for the determination of color shades.

Most repair paint manufacturers use the following systems:

- A tabular system based on the following parameters:
  - Color code
  - Make

  - Model
  - Build year
  - Color or color name
  - Ancillary codes
- A system with color cards based on the following parameters:
  - Make
  - Color shade
  - Build year



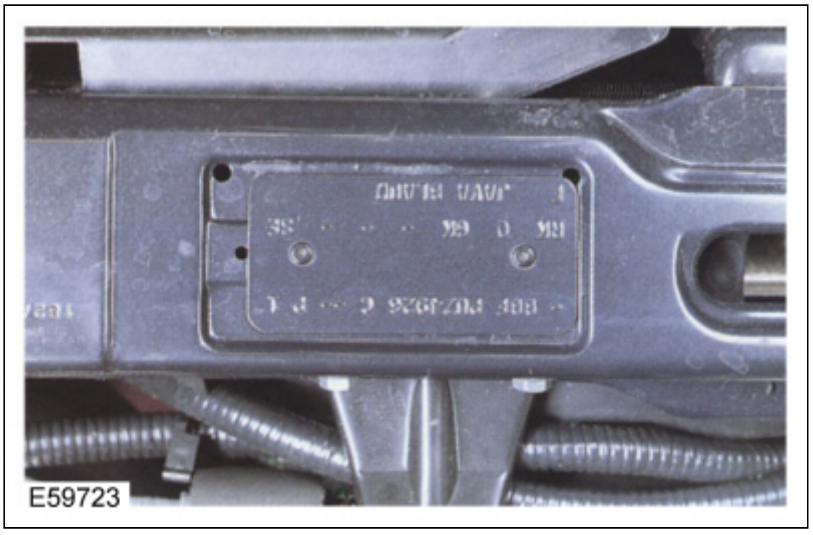
Because of the many parameters used, in a tabular system the color shade can also be determined by the lack of a parameter.

When using the color cards, emphasis is placed on matching of the original color shade with the color shade samples. For this reason this method is very helpful when the other parameters are not available.

Comparison of the results of both methods increases the certainty of using the correct original color shade and its formulation.

Additional certainty can be achieved during color shade determination by making a color sample plate. Here it is however important to apply the complete paint structure with base paint and clear lacquer onto a sample plate (1) in order to carry out a color shade and color coverage test.

The color shade comparison is done by comparing the vehicle paintwork with the sample plate (1). The color coverage test is possible by using the black test stripe (2): If the test stripe (2) is still visible after test painting of the sample plate (1), the coverage is not good enough.



By using this determination of the original color shade, the formulation and information on any very slight fine adjustments which may be necessary can be established.

Bare bodyshell plate

The bare bodyshell plate is located:

- On the hood lock panel.
- Near the type plate.

The color name is stamped on in the last row.

Matching tinted filler to the color code

NOTE: *Color samples must always be made from the same materials as the subsequent repair painting. Perform color shade matching in the fully hardened state, in natural light or under suitable artificial light.*

Various tinted fillers are used during factory painting. In order to achieve the exact color shade of the factory applied paint, attention should be paid that the correctly matched fillers are used.

The repair paint manufacturers offer suitable precolored primers. The use of filler color cards allows the matching color shade to be determined.

Copyright © 2016 Ford Motor Company

Tips and Tricks

Comparing paint structures

It may happen that an area remains visible, especially when the area of the repair is small. The reason for this is the structural variation in the paint surface at the repair location compared with the original paint finish. The original paint finish has a slight orange peel effect while the repair areas is extremely smooth.

This effect can be reduced by fine sanding using P3000 of the area around the repair location and then polishing.

Etching substrate

If the substrate can be etched during the solvent test, suitable preparation must be done.

Job steps:

NOTE: *Follow the manufacturer specific instructions.*

- Sand the damaged area extensively using an eccentric sander and P80 or P120 abrasive sheets. Finish off sanding with P150 or P180.
- Remove the sanding dust and clean the area of the damage using silicone remover.
- Apply polyester stopper to the bare panel and to the damaged area.
- Sand the dried polyester stopper to an even surface using P80 - P150. Finish sanding using P180 - P240. If required apply more stopper, again only on the bare panel.
- Wet sand the residual old paint finish using P600 - P800. Transitions with P400 - P600. Clean with silicone remover.
- Prime bare metal areas with acid primer.
- After the acid primer has been left exposed to the air for the correct evaporation time, apply 2-component primer filler in thin layers over the complete repair area, leaving enough air exposure time in between coats.
- After the filler has dried, sand wet with P800 or sand dry with P400. Sanded through areas must be covered again with 2-component Nonstop filler primer.

Another possible method of preventing etching of the substrate is to use waterbased primer and filler materials.

Masking the vehicle

Masking and covering work are among the most important preparations required to achieve a high quality paint finish. Paint application onto neighboring components, paint mist and sharp paint transitions are quality faults. For this reason it is extremely important to take special care and to use suitable masking materials.

NOTE: *When water based paints are used, all materials must be stable towards water.*

Plan the masking work:

- Determine the sequence of masking work. Sometimes after masking film has been applied, it is difficult or impossible to reach certain areas.
- Prepare the masking material.
- Start with small difficult areas.

Pay special attention to the areas of profiled seals, edges, openings and paint transitions.

Masking tape

Masking tape is available in various widths for special application areas. In practice however, a wide tape has proved best for almost all areas, also taking into account the time required for masking work.

NOTE: *Use of differing masking materials is often much more time-consuming.*

Advantages

- Good coverage. Narrower tapes must often be applied in several layers.
- More resistant to tearing.
- Wide tapes can be applied deep into joints and therefore protect from paint mist and contamination.
- Removal is often easier.

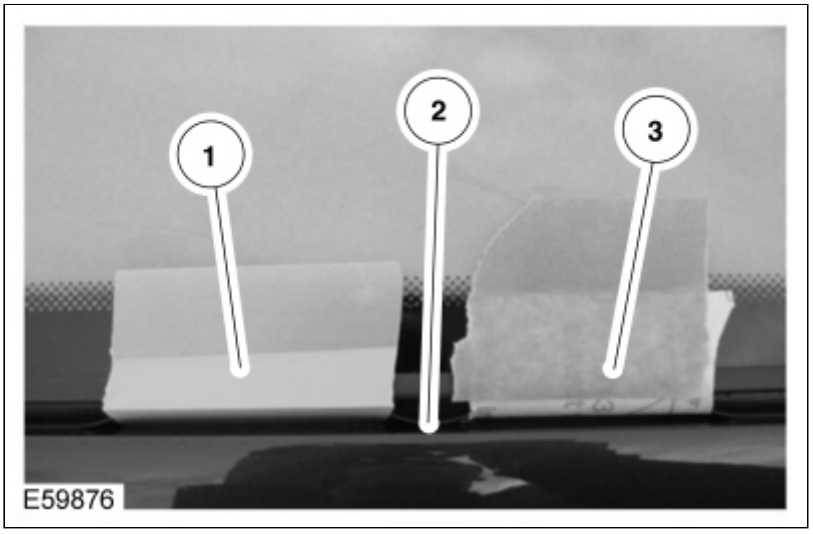
Masking film

Transparent plastic film has become accepted as a practical method to mask large areas of a whole vehicle. It can quickly and easily be applied to the vehicle from the roll.

NOTE: *Only mask the vehicle when it is dry. Moisture under the film can lead to matt paint in the drying process.*

Using masking film

- Clean the vehicle before masking it.
- Pull the film over the vehicle. Because of the static charge, the film lies on the vehicle like a second skin.
- Cut out the repair area using the film knife and then mask it.



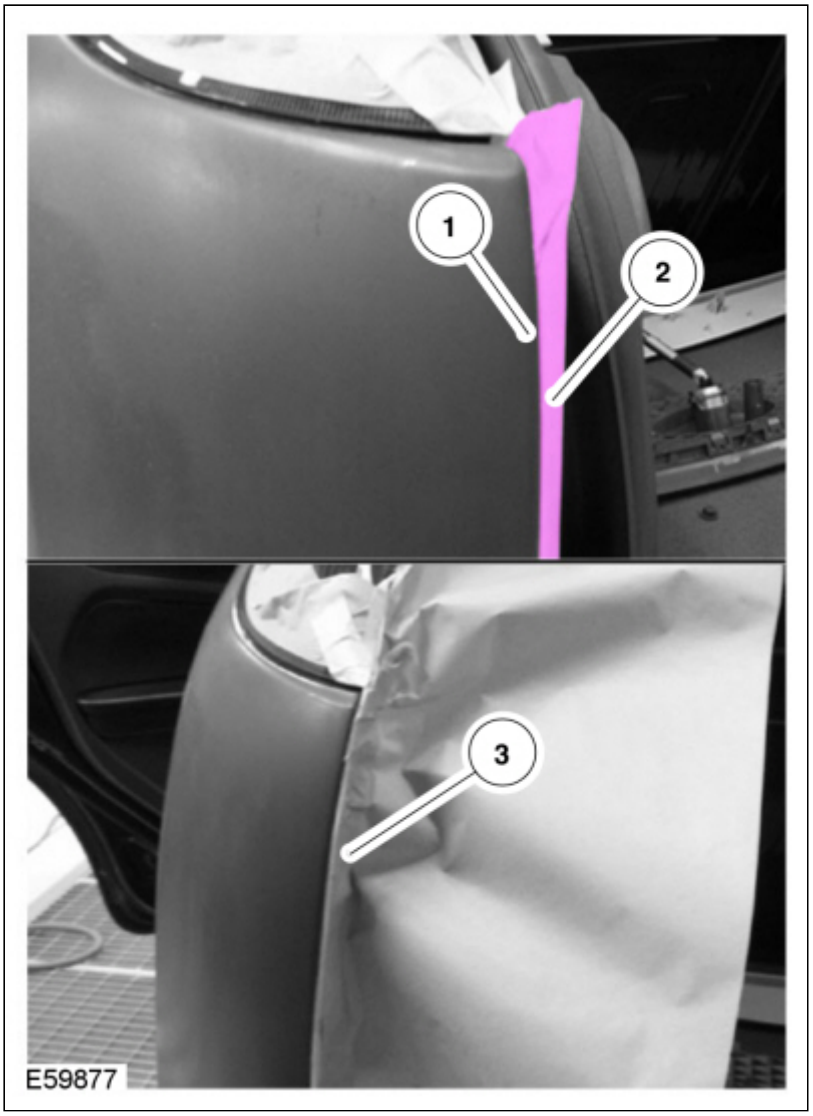
Other ways of masking a vehicle are:

- Masking using masking paper.
- Painting cloth (mostly used during filling work).

Profiled seals

If it is not possible to remove a profiled seal, then it must be masked in such a way that no edges can form due to paint accumulation.

To do this, the seal is lifted slightly and masked. The following techniques are possible:



Item	Part Number	Description
1	—	Masking tape with plastic strips
2	—	Sealing lip
3	—	Sandpaper with masking tape

- Laying a string or cord under the seal. Suitable for soft and elastic seal lips.
- Special masking tape with plastic strips for hard seal lips.
- Instead of using plastic strips, fine sandpaper cut into strips can be inserted and secured using normal masking tape.
- If the seal can be easily displaced, normal masking tape can also be used.

Edges/openings

Smooth paint transitions can be produced by positioning adhesive tapes.

NOTE: *Pull the adhesive tapes away immediately after the paint has been applied and check the paint transitions.*

Item	Part Number	Description
1	—	Vehicle edge
2	—	Adhesive surface
3	—	Masking paper

Possible variations

- At edges apply one strip of masking tape half on the area not to be painted and mask using a second strip.
- On surfaces, two masking strips can be attached, each affixed by half their adhesive surface. The adhesive strip which arises is then applied with one half on the edge of the area to be painted. The other half is aligned and fixed in addition in the curves.
- Affix masking paper on one side over the area to be painted. Double back the masking paper and secure it.
- Affix round profiled foam at the edge of the area to be painted using masking tape.

Foam strips are suitable for affixing to openings such as door gaps.

NOTE: *Choose a suitable profile diameter. A profile which is too thick will protrude from the opening, one which is too thin will leave a gap.*

Clean the door opening well and affix the matching shape.

Color shade problems

If a vehicle color shade is taken from a vehicle on a hot summer day and the mixed color applied, this may cause color shade problems. Some colors change so much at higher temperatures that it can lead to an incorrect result. Red color shades are particularly prone to this shade behavior.

This means that color determination should always be done on the bodywork when it is at about the same temperature as the later working temperature will be. The best temperature of the item is between 15° and 25° C.

Isopropanol and water

Painted surfaces are very easily cleaned using a mixture of 70% water and 30% isopropanol (can be obtained through a laboratory supplies specialist or a pharmacist).

Temperature reduction spray

If finishing work must be performed on touched-up surfaces and newly painted plastic parts, problems may arise. The paint and the transitions are not yet fully hardened.

NOTE: *When working with the polishing machine, make certain that each operating run lasts no longer than about 5 - 10 seconds, in order to prevent the paint becoming warm.*

Even so, in order to be able to polish over transitions, temperature reduction spray must be applied to the surface. The transition area is then alternately sprayed and polished until a perfect transition surface is achieved.

Paint faults on soft plastic components where elasticizer additive has been used in painting must be wet sanded using grade P2000 - P2500 paper.

In doing this the sanding location and the surroundings are sprayed with temperature reduction spray and the paint faults sanded out by hand. Afterwards the location is polished as described above.

Paint plane

Dirt inclusions and paint runs can be removed with the sanding cylinder ("Finiball") and hand sanding or eccentric sander in a wet sanding process.

Another practical tool for removal of paint faults which lie proud of the surface is the paint plane.

NOTE: *Guide the tool carefully with the minimum of force. It must not tilt, otherwise more serious damage may easily be caused.*

This tool allows paint faults to be carefully removed in shavings. Afterwards the surface must be polished using suitable materials.

Shading

Even when all the rules, steps and corresponding instructions have been followed concerning possible shades, it may happen that the mixed color shade does not exactly match the vehicle color.

In these cases, shading must be done. Because there is no fixed formula for this, experience and a trained eye are important. Some rules must be followed for shading.

NOTE: *Self-made color sample plates of the current colors are very helpful for determining the color shade. Refer to the chapter Color Determination and Color Theory.*

- When shading, if possible only use the paint mixture that is also allotted in the color shade formula.
- Observe the rules concerning contrary colors (complementary colors) and partner colors according to the Oswald color circle.
- Complementary colors are not recommended during shading because they mutually inhibit and lead to muddy mixtures.

Sanding marks

In certain circumstances, the recommended sanding methods up to now are no longer suitable for light metallic color shades. Wet sanding with grade P1200 paper or a grey sanding pad can cause sanding scratches which can become very visible under certain lights.

In order to achieve an excellent paint result on difficult color shades, follow these working rules:

- Sand filler as before, rub down area to be painted with 3M ultra fine matting sponge and 3M matting gel.
- Sand filler as before, rub down area to be painted with soaked 3M wet sand paper P1500 - P2000.
- Sand filler as before, rub down area to be painted with 3M 260 L P1000 eccentric (Interface Pad).

Improving touch-up work

During application of special effect base paints, the effect particles align themselves exactly parallel to the surface in the paint layer while it is still liquid. This means a particular thickness of the paint layer is required.

Because during painting the layer thickness in the transition zones reduces from normal to zero, the effect particles can no longer align themselves. This leads to lighter, darker or cloudy zones.

If 1-component clear lacquer is sprayed before the base coat, this effect is prevented. An optically perfect transition will result.

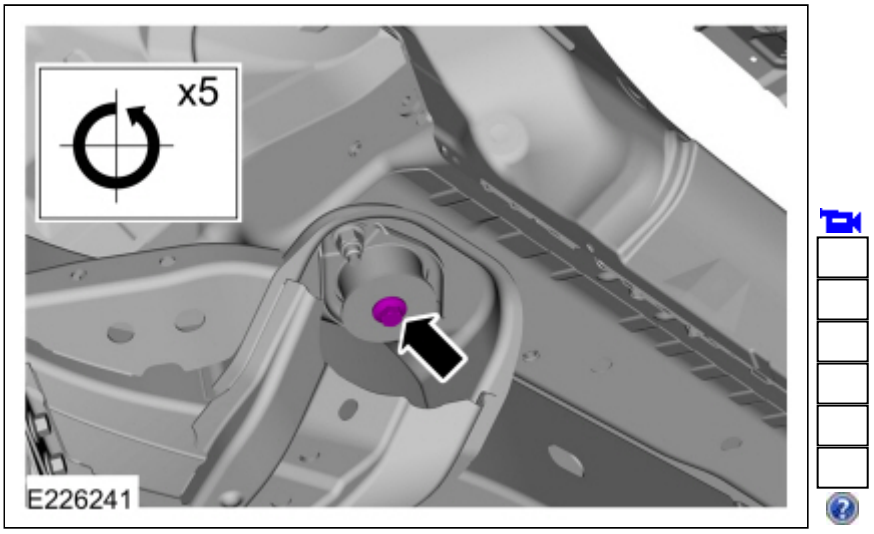
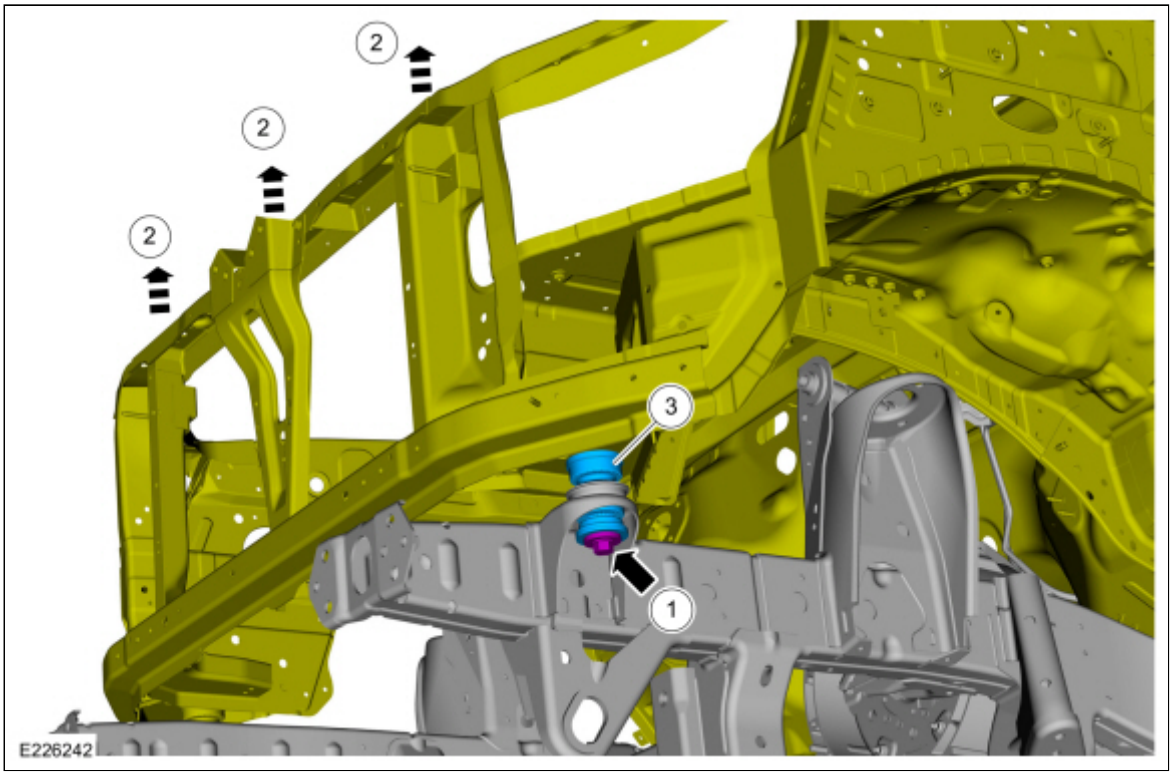
Removal

WARNING: Frame rail crush zones absorb crash energy during a collision and must be replaced if damaged. Prior to replacement of frame rail crush zones, straighten damaged frame rails to correct frame dimensions. Failure to follow these instructions may adversely affect frame rail crush zone performance and may result in serious personal injury to vehicle occupants in a crash.

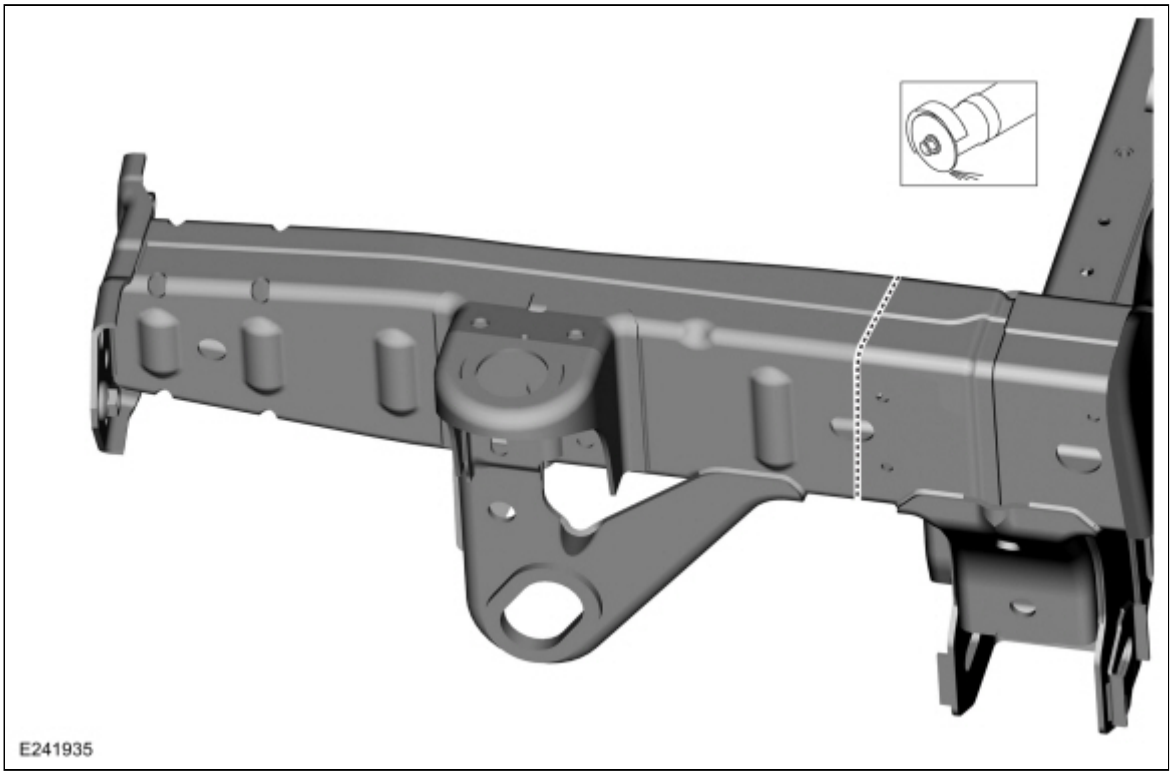


1. Refer to: Health and Safety Precautions (501-25 Body Repairs - General Information, Description and Operation).
2. Refer to: Tools and Equipment for Body Repairs (501-25 Body Repairs - General Information, Description and Operation).
3. Remove the following items:
    1. Refer to: Front Bumper (501-19 Bumpers, Removal and Installation).
    2. Refer to: Fender (501-02 Front End Body Panels, Removal and Installation).
    3. Refer to: Engine - 6-Speed Automatic Transmission - 6R80 (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal).
    Refer to: Engine - 6-Speed Automatic Transmission - 6R80 (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal).
    Refer to: Engine - 5-Speed Manual Transmission - MT75 (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal).
    Refer to: Engine - 5-Speed Manual Transmission - MT75 (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Installation).
    Refer to: Engine - 6-Speed Manual Transmission - MT82 (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal).
    Refer to: Engine - 6-Speed Manual Transmission - MT82 (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal).
    4. Refer to: Radiator (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
    Refer to: Radiator (303-03B Engine Cooling - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
    Refer to: Radiator (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
    5. Refer to: Front Stabilizer Bar (204-01 Front Suspension, Removal and Installation).

    1. Use the General Equipment: Flat Headed Screw Driver

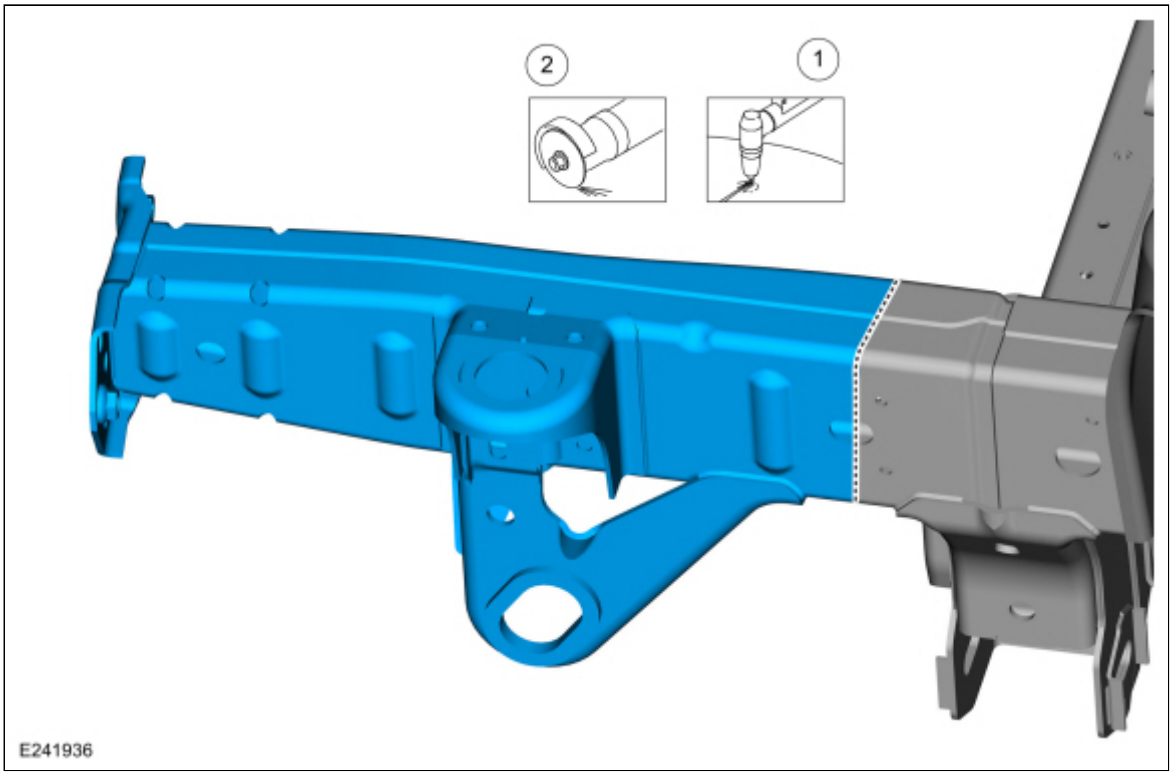


5. Anchor the vehicle to a frame rack.

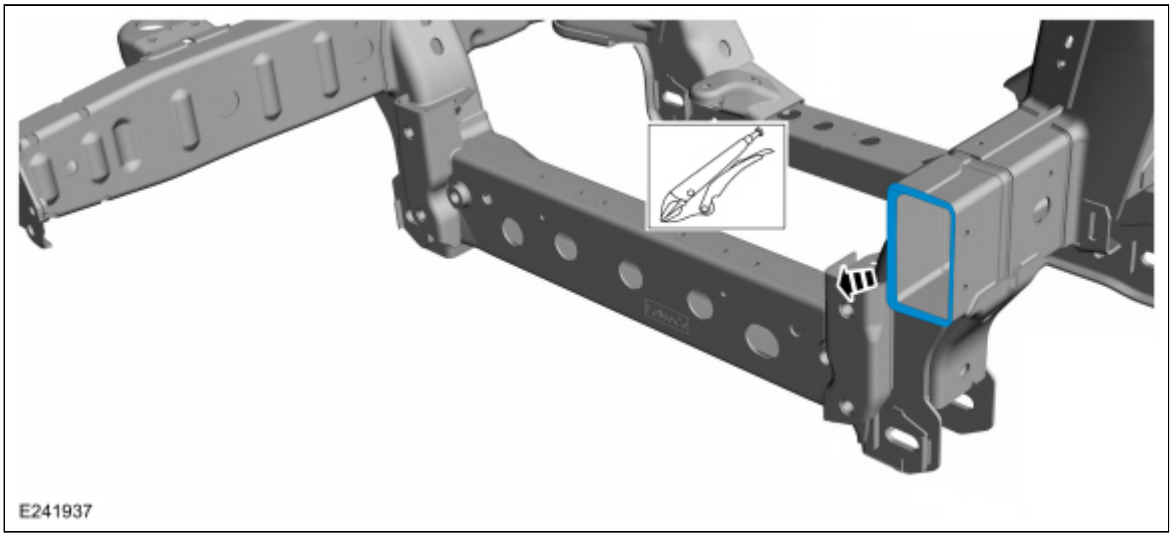


6. On both sides.
   Loosen: 5 turn(s)

1. On both sides, remove the mounting bolts.
2. Using the frame rack towers and light tension, support the front radiator support of the vehicle by raising it slightly above the frame rail mounts.
3. Remove the body-frame mounting bushes.

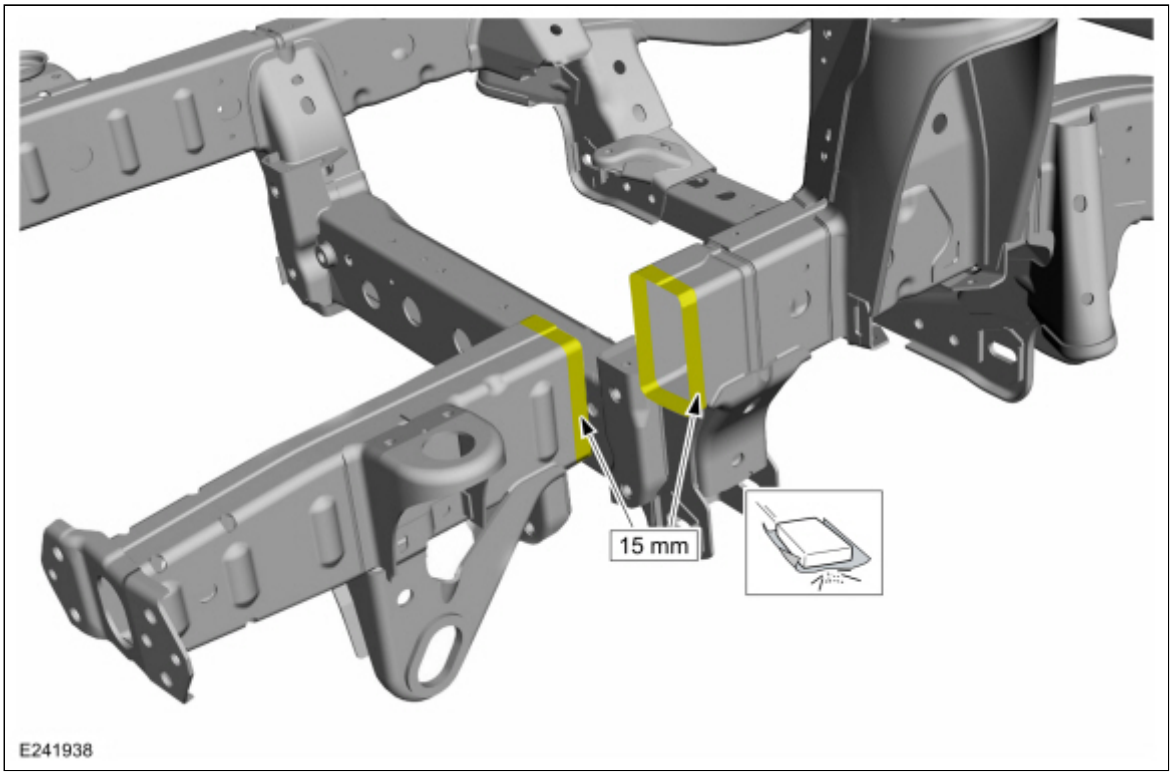


8. Locate the vertical weld line of the front frame horn to front rail.
   Use the General Equipment: Grinder



9. **NOTE:** *Do not cut directly along the center of the weld line. Leave enough material on the front side of the weld centerline to allow the remaining weld and frame material to be ground back to the front edge of the front mid rail. This is necessary to make sure of correct fit between the frame and the replacement frame section.*

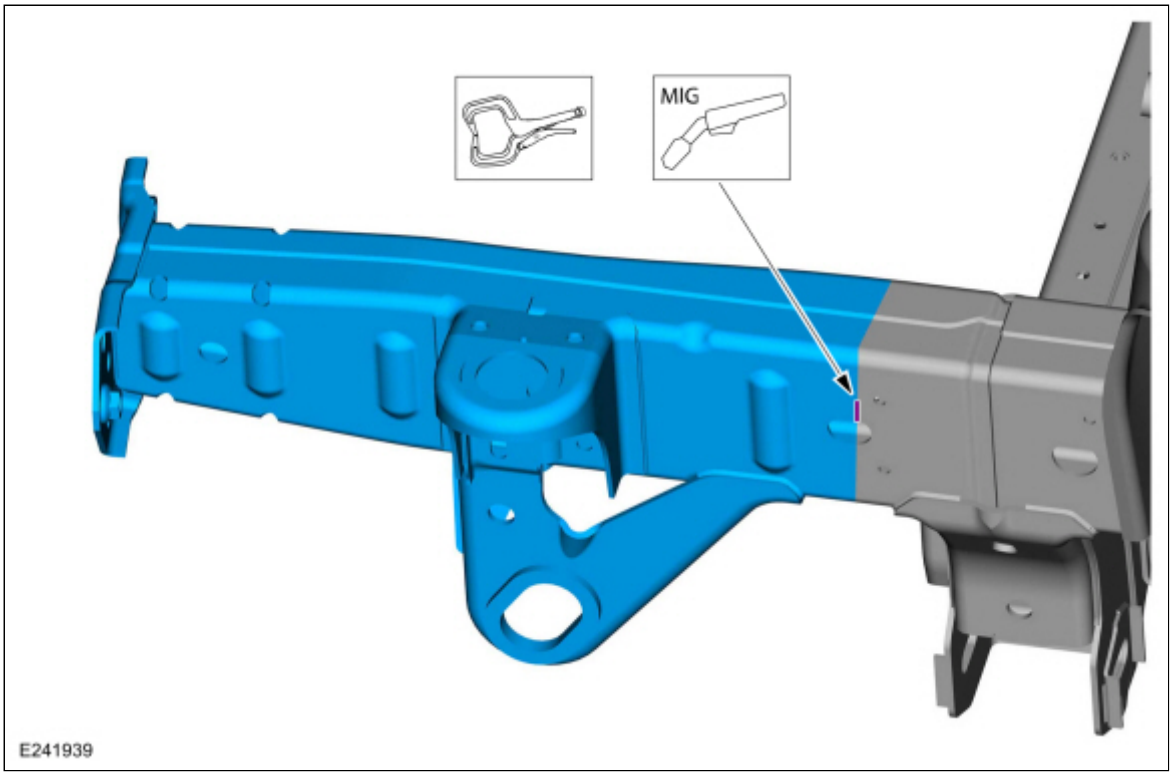
    1. Using a plasma cutter, reciprocating saw or cut-off wheel, remove the damaged front frame horn section.
       Use the General Equipment: Plasma Cutter
    2. Grind off the excess welding material that remains around the perimeter of the front edge of the front frame rail of the frame assembly.
       Use the General Equipment: Grinder



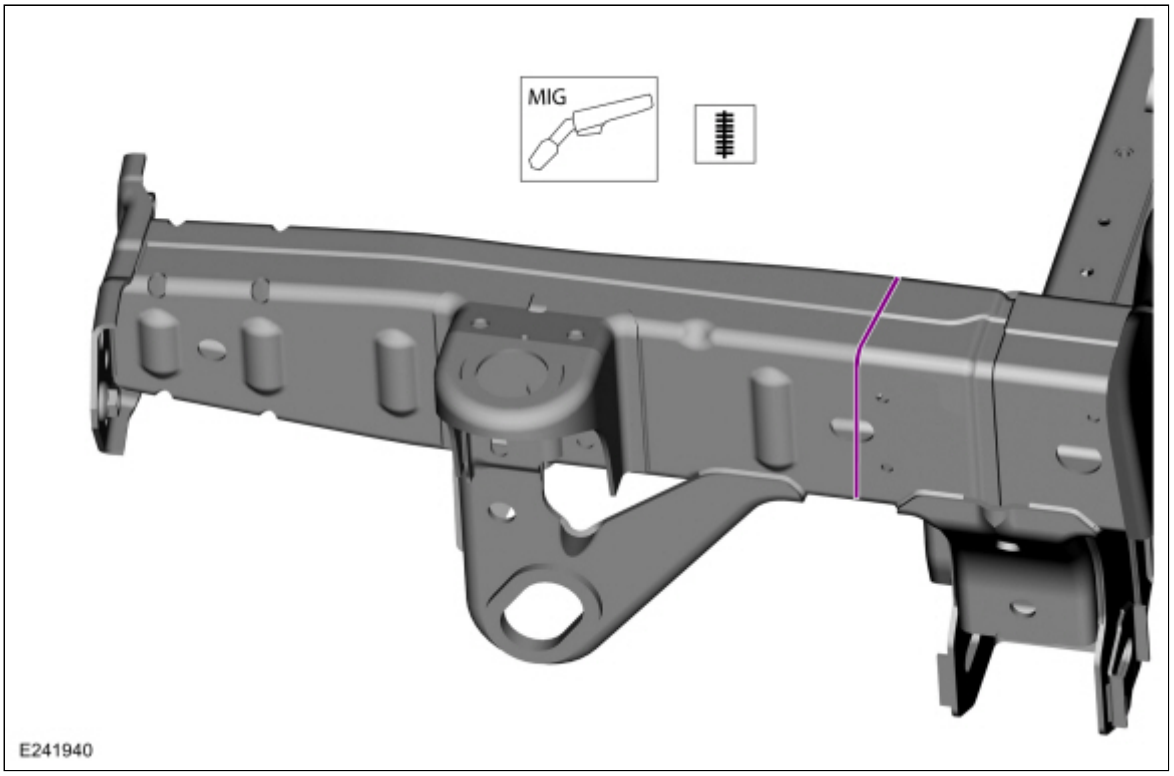
10. Remove the remaining portion of the frame section from inside the frame rail.
    Use the General Equipment: Locking Pliers

Installation

1. Using a wire brush or sandpaper, remove the ecoat paint from the existing frame and the replacement horn section near the edges to be
   welded on the inner and outer surfaces within approximately 15 mm (0.5 in.) of the repair joint.



2. Verify dimensional accuracy before performing any welding operations.
   Refer to: Body and Frame (501-26 Body Repairs - Vehicle Specific Information and Tolerance Checks, Description and Operation).

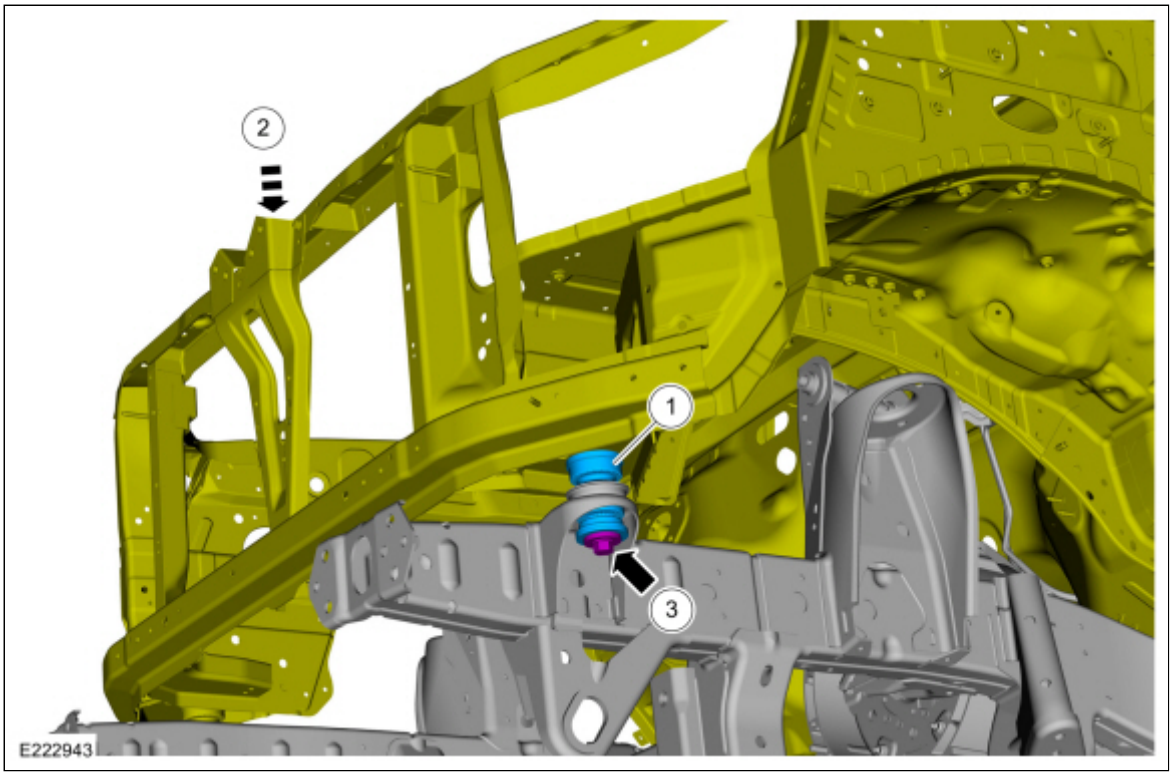


3. Sealer or adhesive must be applied with a minimum height of 6 mm.
   Refer to: Sealer, Underbody Protection Material and Adhesives (501-25 Body Repairs - General Information, Description and Operation).

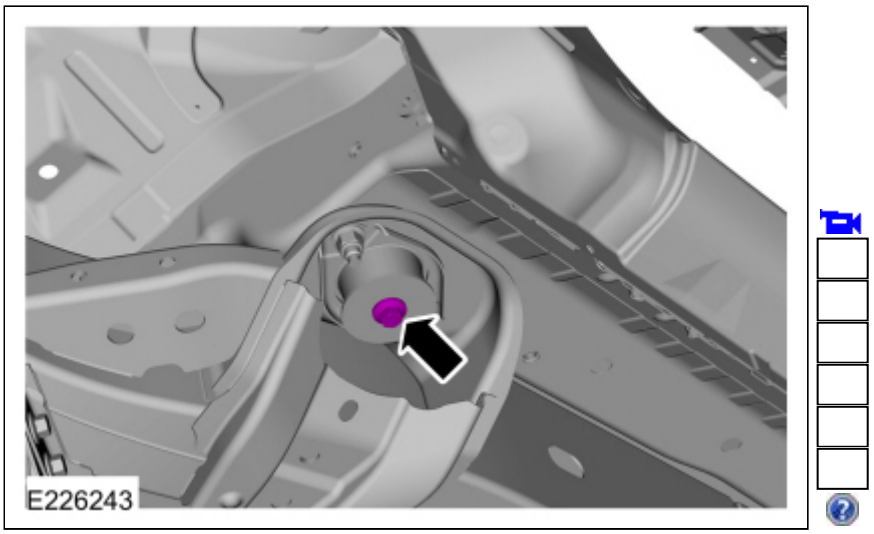
4. **NOTE:** *Check that the Front End Sheet Metal (FESM) body mount bracket lines up with the sheet metal hole for the body mount bolt.*

   Install the front frame section inside the mid front rail of the frame and tack weld at 4 locations.
   Refer to: Joining Techniques (501-25 Body Repairs - General Information, Description and Operation).
   Use the General Equipment: MIG/MAG Welding Equipment
   Use the General Equipment: Locking Pliers

5. Re-check the frame replacement alignment by lowering the body, and then raise it. Weld the joint completely if this alignment is correct.
   Use the General Equipment: MIG/MAG Welding Equipment



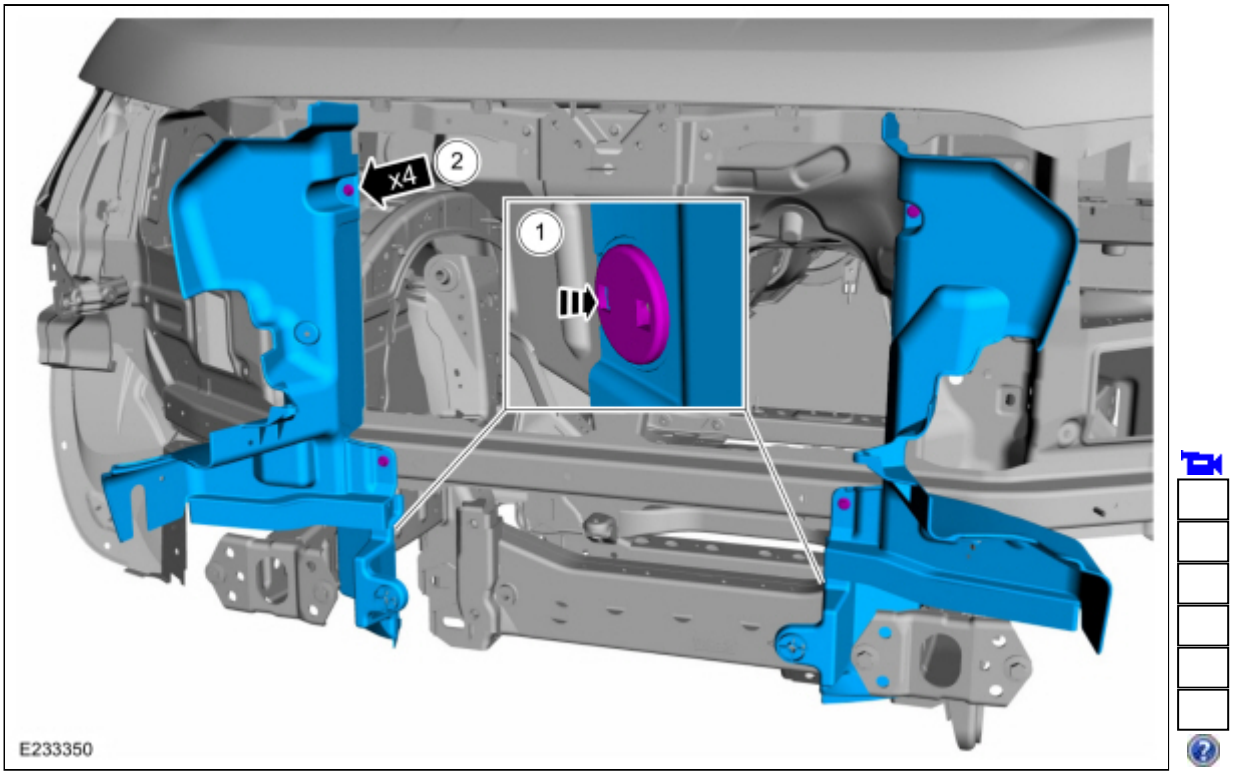
6. Metal finish the repair area using typical metal finishing techniques.



7. Refer to: Refinishing Materials (501-36 Paint - General Information, Description and Operation).

8. Sealing work: All areas must be sealed to production level.
   Refer to: Corrosion Prevention (501-36 Paint - General Information, Description and Operation).

1. Install the body-frame mounting bushes.
2. Using the frame rack towers, lower the radiator support to align with the frame rail bolts.
3. On both sides, install the mounting bolts.
   Torque: 80 Nm



10. *Torque*: 108 Nm

11. Remove the vehicle from the frame rack.

12. *Torque*:
    2.: 5 Nm

13. Install the following items:
    1. Refer to: Front Stabilizer Bar (204-01 Front Suspension, Removal and Installation).
    2. Refer to: Radiator (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
       Refer to: Radiator (303-03B Engine Cooling - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
       Refer to: Radiator (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
    3. Refer to: Engine - 6-Speed Automatic Transmission - 6R80 (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal).
       Refer to: Engine - 6-Speed Automatic Transmission - 6R80 (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal).
       Refer to: Engine - 5-Speed Manual Transmission - MT75 (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal).
       Refer to: Engine - 5-Speed Manual Transmission - MT75 (303-01B Engine - 2.2L Duratorq-TDCi

(88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Installation).
Refer to: Engine - 6-Speed Manual Transmission - MT82 (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Installation).
Refer to: Engine - 6-Speed Manual Transmission - MT82 (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Installation).

4. Refer to: Fender (501-02 Front End Body Panels, Removal and Installation).
5. Refer to: Front Bumper (501-19 Bumpers, Removal and Installation).
