Pinpoint Tests

PINPOINT TEST A : AIR INGRESS INTO THE FUEL LINES

A1 CHECK FOR AIR INGRESS INTO THE FUEL SYSTEM
WARNING: Do not smoke or carry lighted tobacco of any type when working on or near any fuel

WARNING: Do not smoke or carry lighted tobacco of any type when working on or near any fuel related components. Highly flammable mixtures are always present and may ignite. Failure to follow these instructions may result in personal injury.

WARNING: This procedure involves fuel handling. Be prepared for fuel spillage at all times and always observe fuel handling precautions. Failure to follow this instruction may result in personal injury.

NOTICE: Diesel fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is therefore essential that absolute cleanliness is observed when working with these components. Always install blanking plugs to any open orifices or lines.

NOTICE: Always carry out the cleaning process before carrying out any repairs to the fuel system components to prevent foreign material ingress to the components.

- Disconnect the fuel filter fuel supply line quick release coupling.
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
- Using a suitable piece of clear plastic pipe, manufacture and install a pipe between the fuel filter fuel supply line and the fuel filter.
- Start the engine, wait a few minutes and observe the clear plastic pipe for signs of air ingress.

Are any signs of air present in the clear plastic pipe?

Yes	GO to A2
No	For additional diagnostics, REFER to: Fuel Charging and Controls (303-04B Fuel Charging and Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Diagnosis and Testing). REFER to: Fuel Charging and Controls (303-04C Fuel Charging and Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Diagnosis and Testing).

A2 CHECK WHERE AIR IS ENTERING THE SYSTEM

- Using suitable clean engine oil, apply the oil to each of the fuel supply line and fuel return line connections, unions and joints in turn and observe the clear plastic pipe for visible signs of air after each oil application.

Did the amount of air in the clear plastic fuel pipe decrease when any of the connectors, unions or joints were oiled?

Yes	INSTALL a new fuel pipe(s) as necessary. Test the system for normal operation.
No	GO to A3

A3 CHECK THE FUEL LEVEL SENSOR FOR AIR INGRESS

- Drain the fuel tank.
  REFER to: Fuel Tank Draining (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
- Fill the fuel tank with 10 liters of diesel.
- Disconnect the fuel filter to fuel pump fuel supply line quick release coupling.
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
- Using a suitable piece of clear plastic pipe, manufacture and install a pipe between the fuel filter to fuel pump fuel supply line and the fuel filter.
- **NOTE:** *Make sure that the engine is at normal operating temperature.*

  Start the engine, wait a few minutes and observe the clear plastic pipe for signs of air ingress.

Are any signs of air present in the clear plastic pipe?

Yes	INSTALL a new fuel level sensor or fuel tank to fuel filter supply pipe as necessary.
No	INSTALL a new fuel filter. REFER to: Fuel Filter (310-01B Fuel Tank and Lines - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Fuel Filter (310-01B Fuel Tank and Lines - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

PINPOINT TEST B : FUEL FILTER FUEL SUPPLY LINE BLOCKAGE

B1 CHECK THE FUEL FILTER FUEL SUPPLY LINE FOR BLOCKAGE

WARNING: Do not smoke or carry lighted tobacco of any type when working on or near any fuel related components. Highly flammable mixtures are always present and may ignite. Failure to follow these instructions may result in personal injury.

WARNING: This procedure involves fuel handling. Be prepared for fuel spillage at all times and always observe fuel handling precautions. Failure to follow this instruction may result in personal injury.

NOTICE: Diesel fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is therefore essential that absolute cleanliness is observed when working with these components. Always install blanking plugs to any open orifices or lines.

NOTICE: Always carry out the cleaning process before carrying out any repairs to the fuel injection system components to prevent foreign material ingress to the components.

- Disconnect the fuel filter fuel supply line quick release coupling.
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
- **NOTE:** *Make sure that the hand pressure pump arrow indicating the direction of fuel flow is pointing towards the fuel filter.*

  Install the special tool between the fuel filter fuel supply line quick release coupling and the fuel filter union.
- Operate the hand pressure pump at least 30 times.
- Disconnect the fuel pump fuel return line quick release coupling.
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
- Using a suitable piece of clear plastic pipe, manufacture and install a pipe between the fuel pump fuel return line and the fuel return line union.
- Observe the flow of fuel in the clear plastic pipe.

Does the fuel from the fuel tank flow freely with no restrictions?

Yes	GO to Pinpoint Test A
No	REPAIR or INSTALL a new fuel filter fuel supply line as necessary.

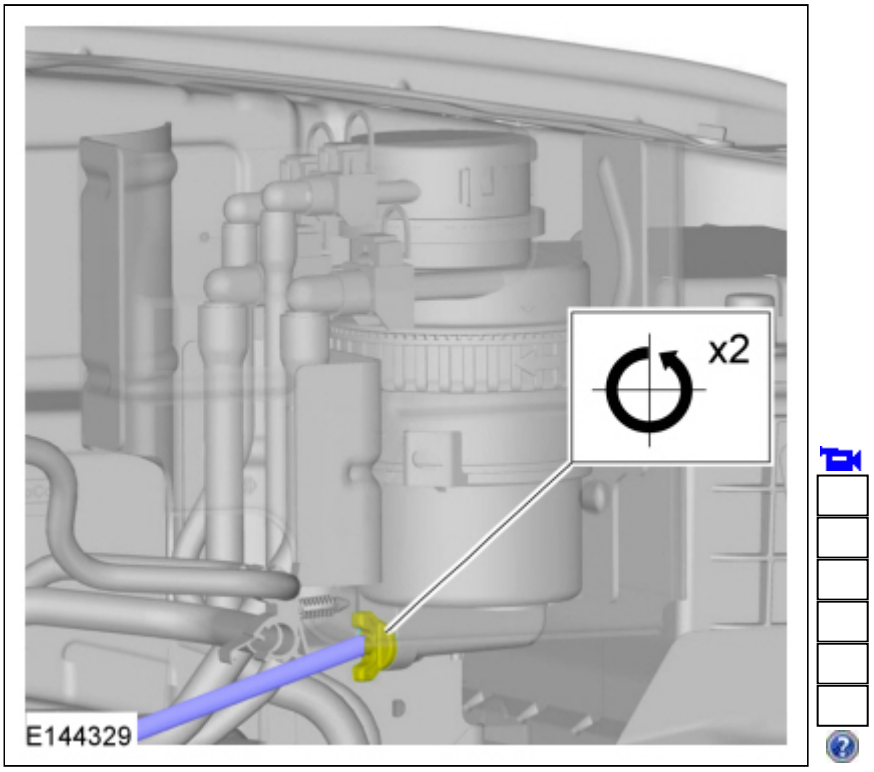
Diesel Filter Water Drain-Off



WARNING: Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.

WARNING: A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.

WARNING: Avoid fuel line spills and leaks by completing the following procedure.

1. For additional information, refer to: Diesel Fuel System Health and Safety Precautions (100-00 General Information, Description and Operation).

2. Attach a suitable length of hose to the drain plug and place it into a suitable container.

3. 

4. **WARNING: If fuel does not pass through the fuel filter, foreign material may have penetrated in the supply pump, and this may cause a malfunction resulting in damage to the fuel injection pump.**

   WARNING: Be prepared to collect escaping fluids under pressure.

   Turn ignition ON. Wait for a minimum of 5 seconds, this purges the water and fuel from the filter.

5. Tighten the drain plug and remove the hose and container.

Copyright © 2016 Ford Motor Company

Fuel System Bleeding

Bleeding

1. Turn the ignition key to ON position. Wait for 45 seconds.
2. Start the engine and hold at 1500 rpm.
3. Wait for 20 seconds.
4. If the engine is running smoothly, reduce the rpm to idle speed.
5. Check fuel leaks.
6. Switch the engine off.

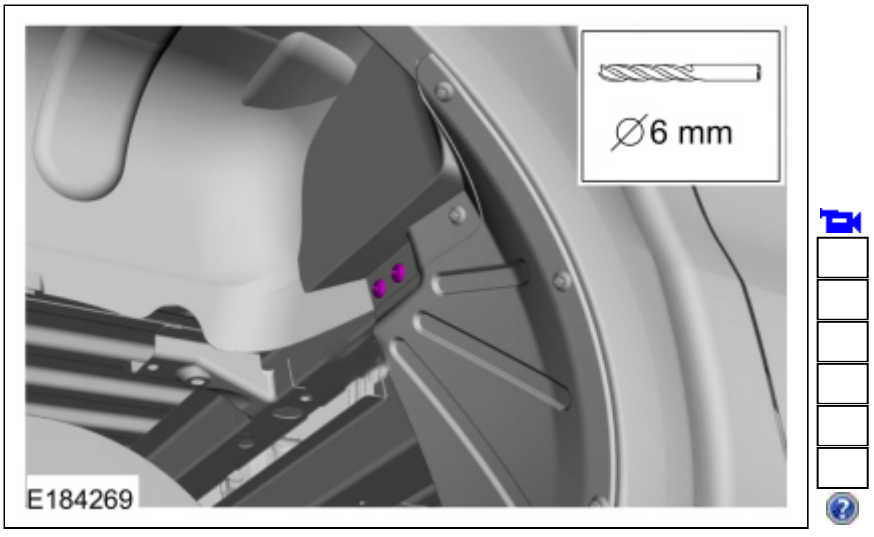
Fuel Tank Draining

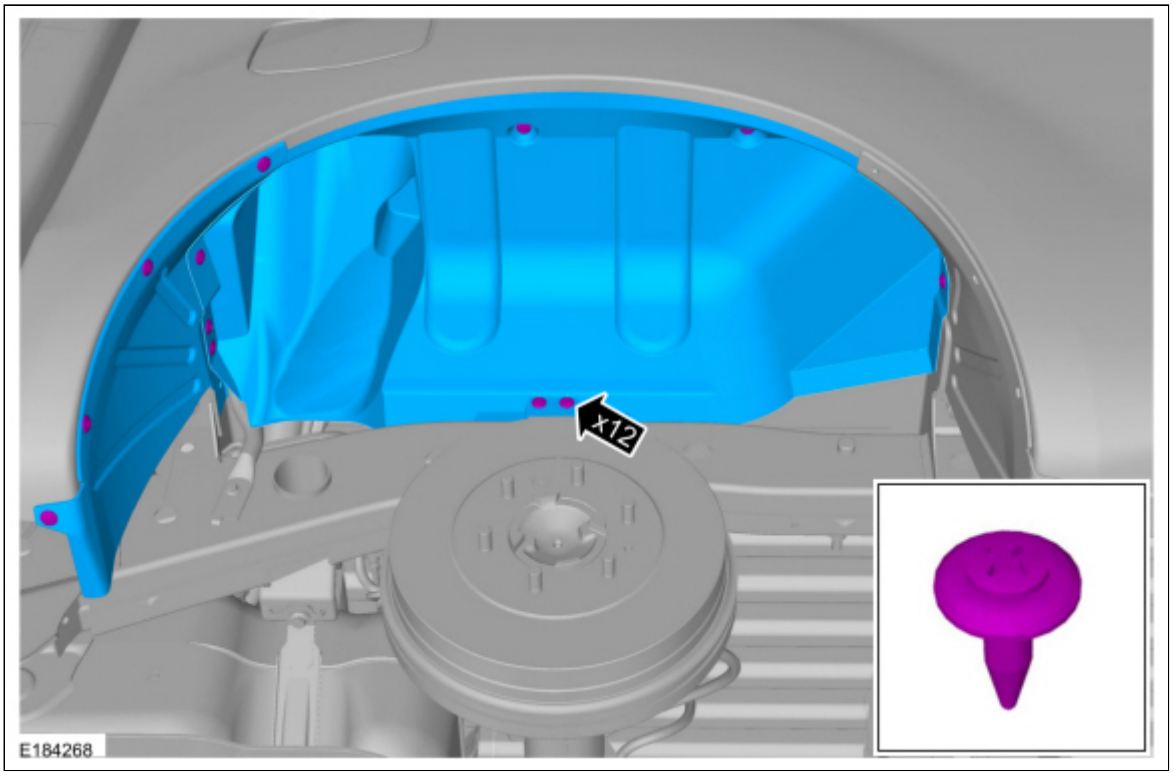
Special Tool(s) / General Equipment

10 mm Drill Bit
Fuel Tank Draining Equipment



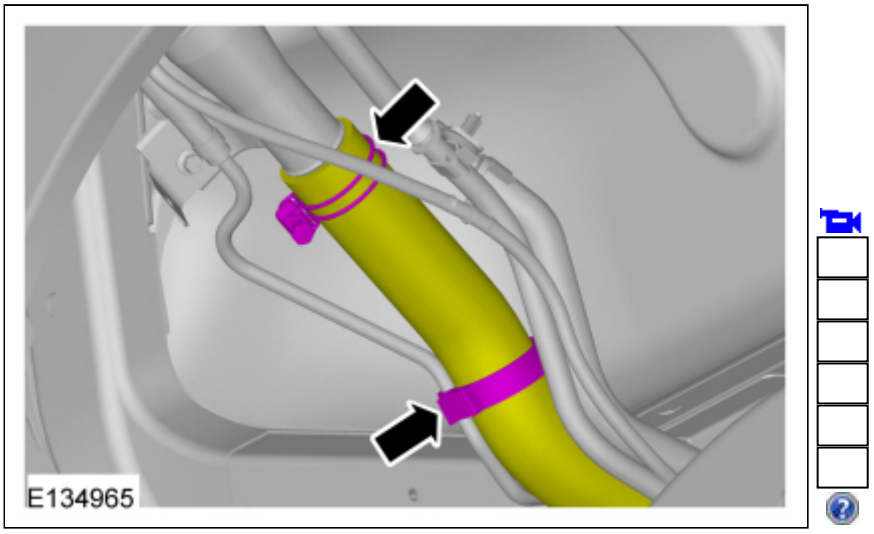
Draining

WARNING: Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.



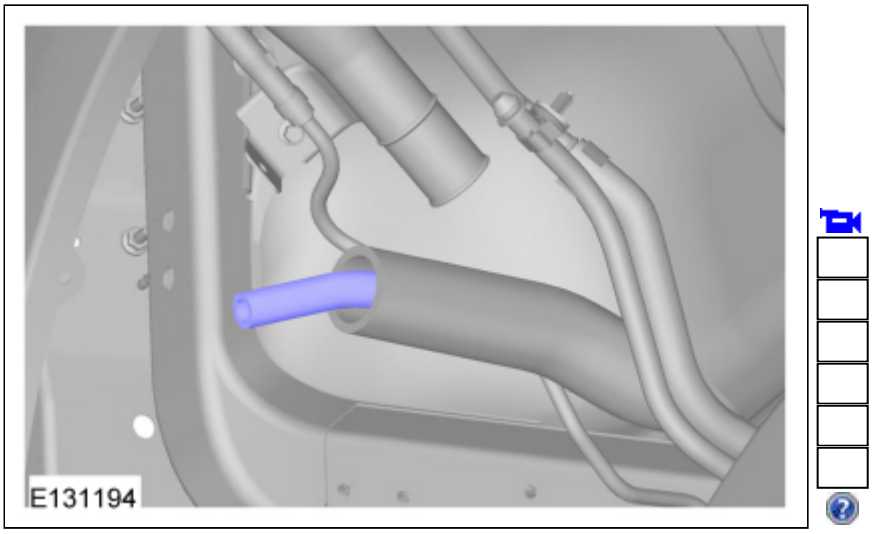
WARNING: Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: Remove the fuel filler cap slowly. The fuel system may be under pressure. If the fuel filler cap is venting vapor or if you hear a hissing sound, wait until it stops before completely removing the fuel filler cap. Otherwise, fuel may spray out. Failure to follow these instructions may result in serious personal injury.

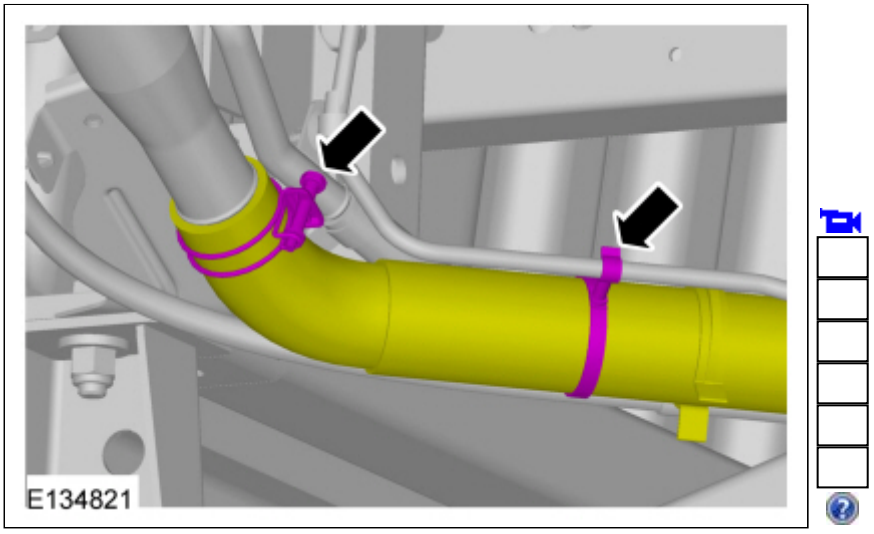


1. Refer to: Diesel Fuel System Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
3. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
4. Remove the left-hand rear wheel and tire.
   Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).
5. Use the General Equipment: 10 mm Drill Bit

6.

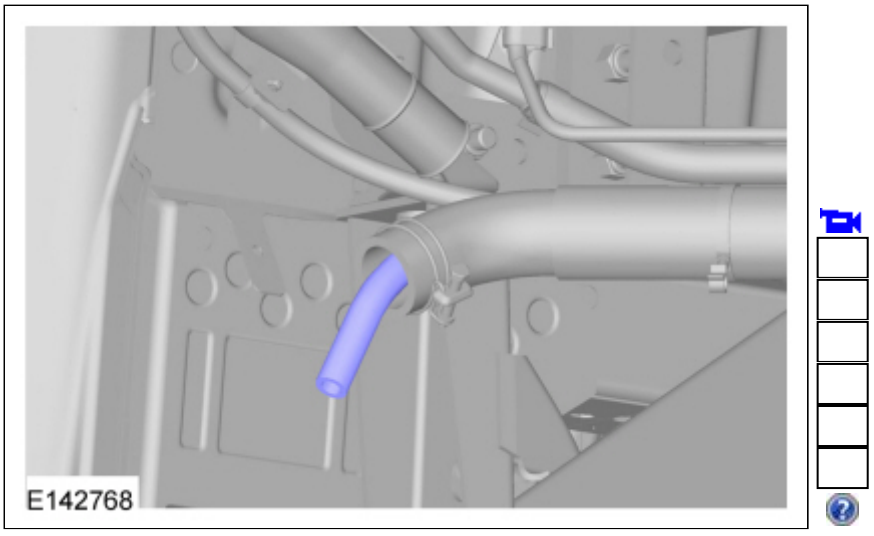


7. **NOTE:** *Make sure that the clamp is installed to the same orientation as when removed.*



8. **NOTE:** *Follow the operating instructions supplied by the equipment manufacturer.*

Insert the fuel tank drain hose into the fuel tank hose.
Use the General Equipment: Fuel Tank Draining Equipment



NOTE: *Vehicles with aluminium tray.*

9. **NOTE:** *Make sure that the clamp is installed to the same orientation as when removed.*

10. **NOTE:** *Follow the operating instructions supplied by the equipment manufacturer.*

    Insert the fuel tank drain hose into the fuel tank hose.
    Use the General Equipment: Fuel Tank Draining Equipment

Quick Release Coupling

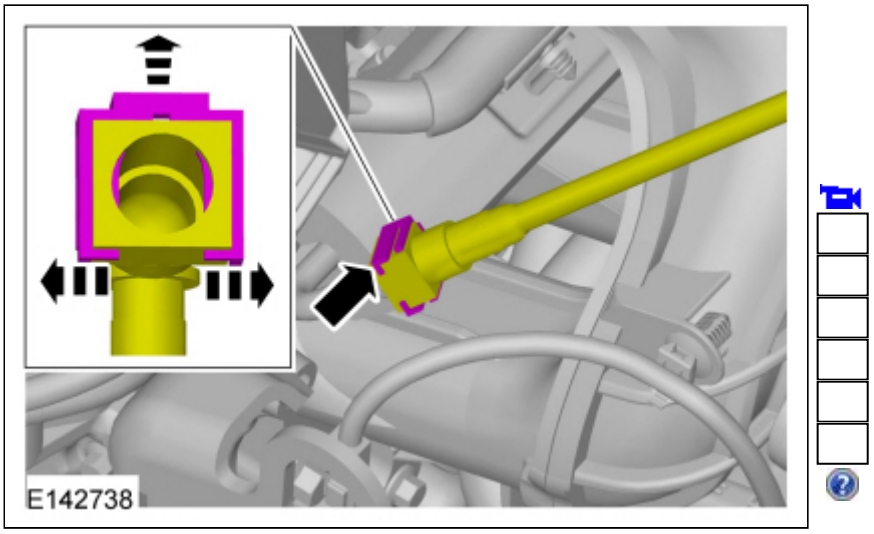
Disconnect

WARNING: Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

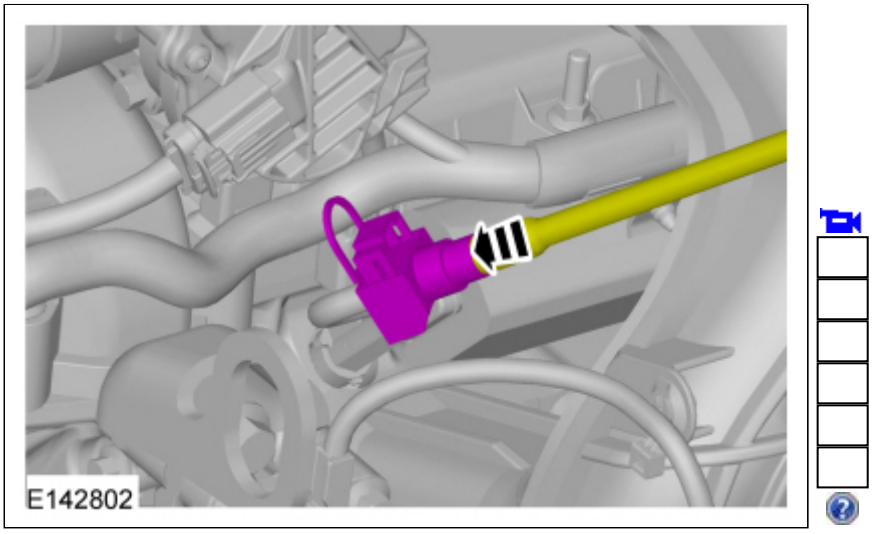
WARNING: When handling fuel, always observe fuel handling precautions and be prepared in the event of fuel spillage. Spilled fuel may be ignited by hot vehicle components or other ignition sources. Failure to follow these instructions may result in serious personal injury.



WARNING: Remove the fuel filler cap slowly. The fuel system may be under pressure. If the fuel filler cap is venting vapor or if you hear a hissing sound, wait until it stops before completely removing the fuel filler cap. Otherwise, fuel may spray out. Failure to follow these instructions may result in serious personal injury.

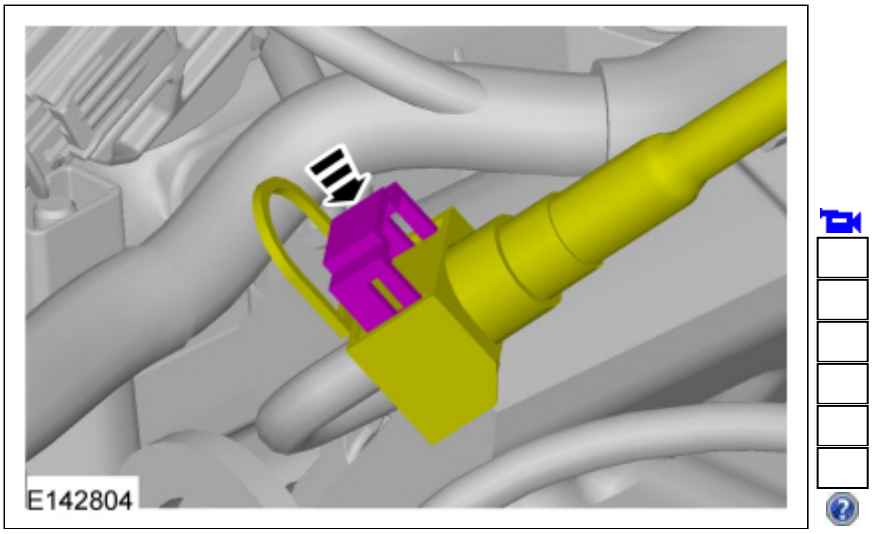
WARNING: Do not repair the fuel lines. If the fuel lines are found to damaged, a new component must be installed.

NOTE: *Fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is essential that absolute cleanliness is observed when working with these components or component damage may occur. Always install blanking plugs to any open orifices or tubes.*



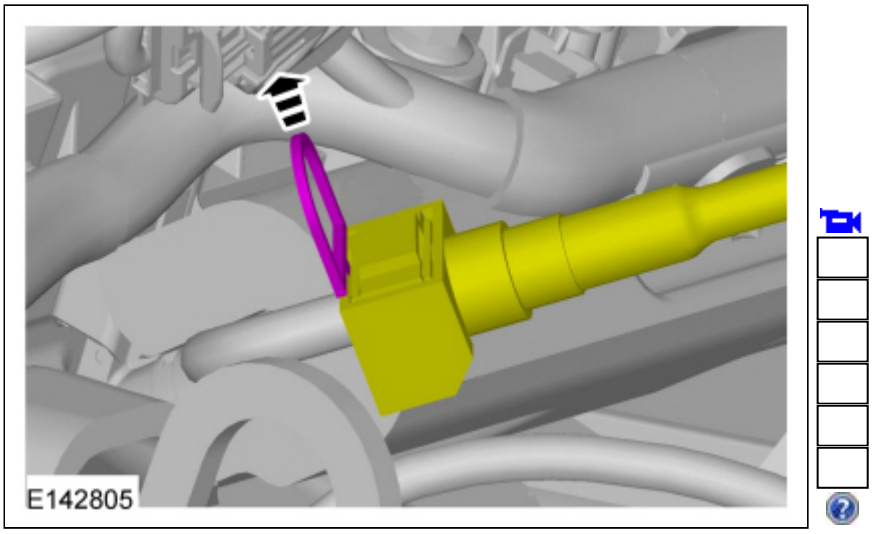
NOTE: *When reusing liquid or vapor tube connectors, make sure to use compressed air to remove any foreign material from the connector retaining clip area before separating from the tube or damage to the tube or connector retaining clip may occur. Apply clean engine oil to the end of the tube before inserting the tube into the connector.*

1. Refer to: Diesel Fuel System Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
3.



Connect

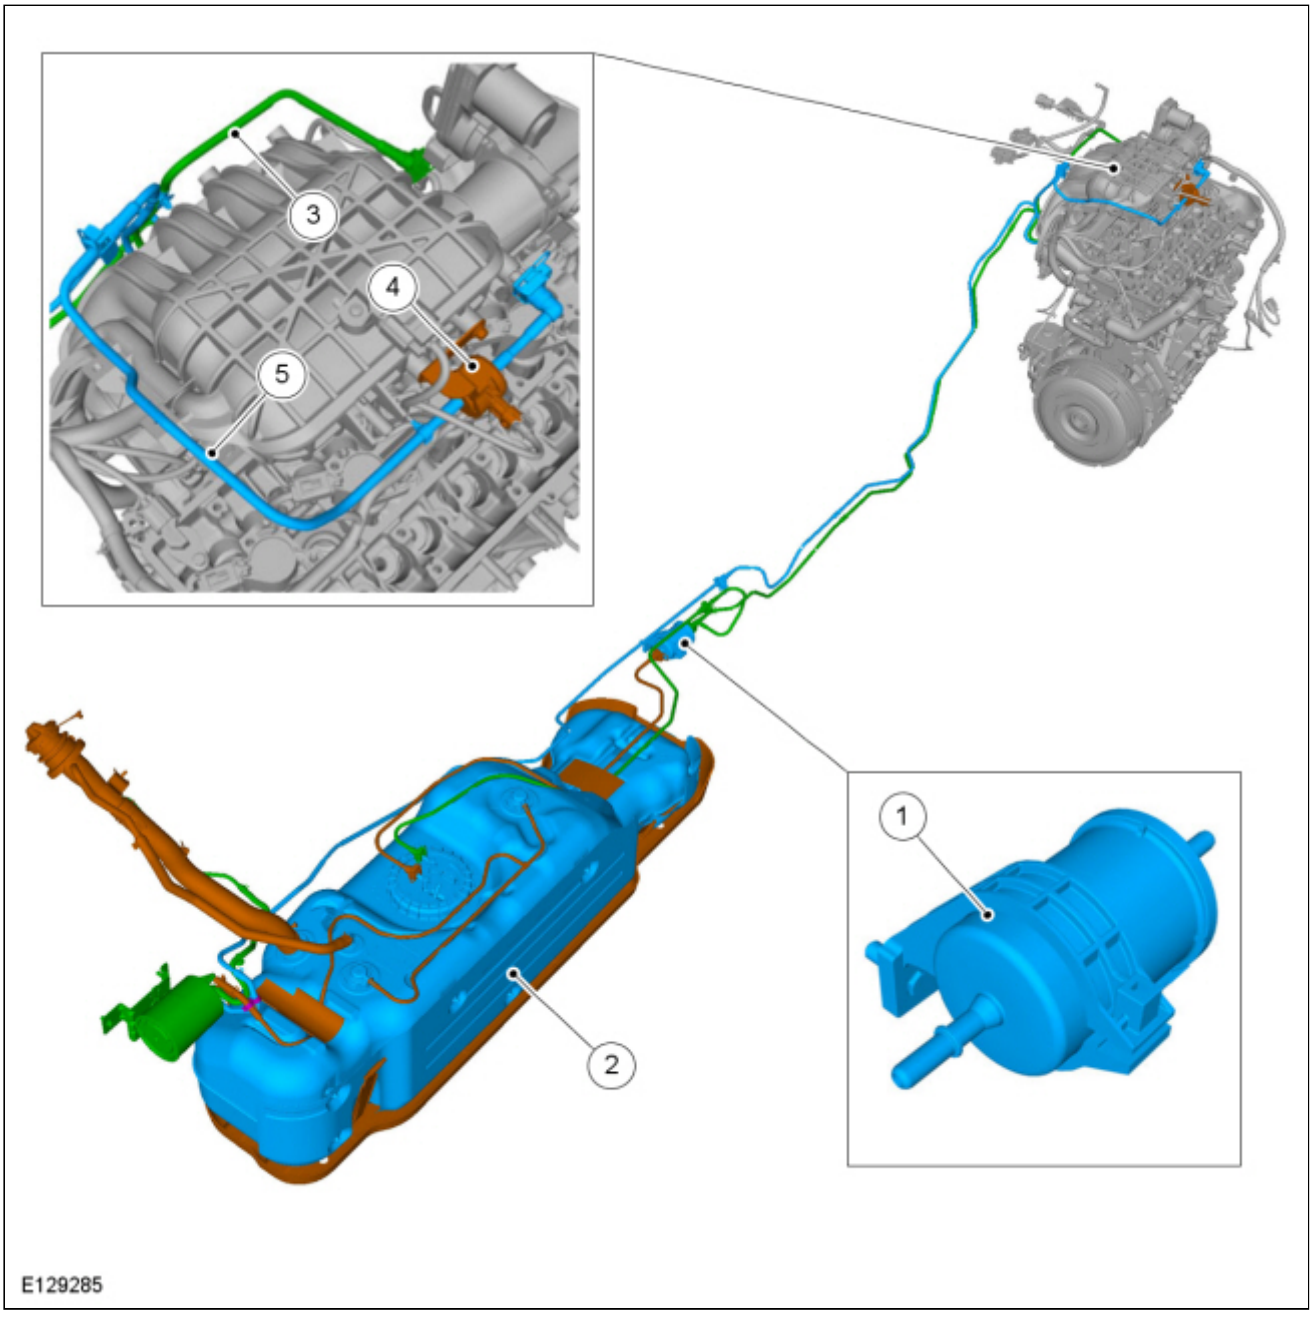
1.



2.

3. **WARNING: Make sure that all fuel connections are checked for leaks.**

NOTE: *This step is only neccessary if a new component is installed.*



4. Refer to: Fuel System Bleeding (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).

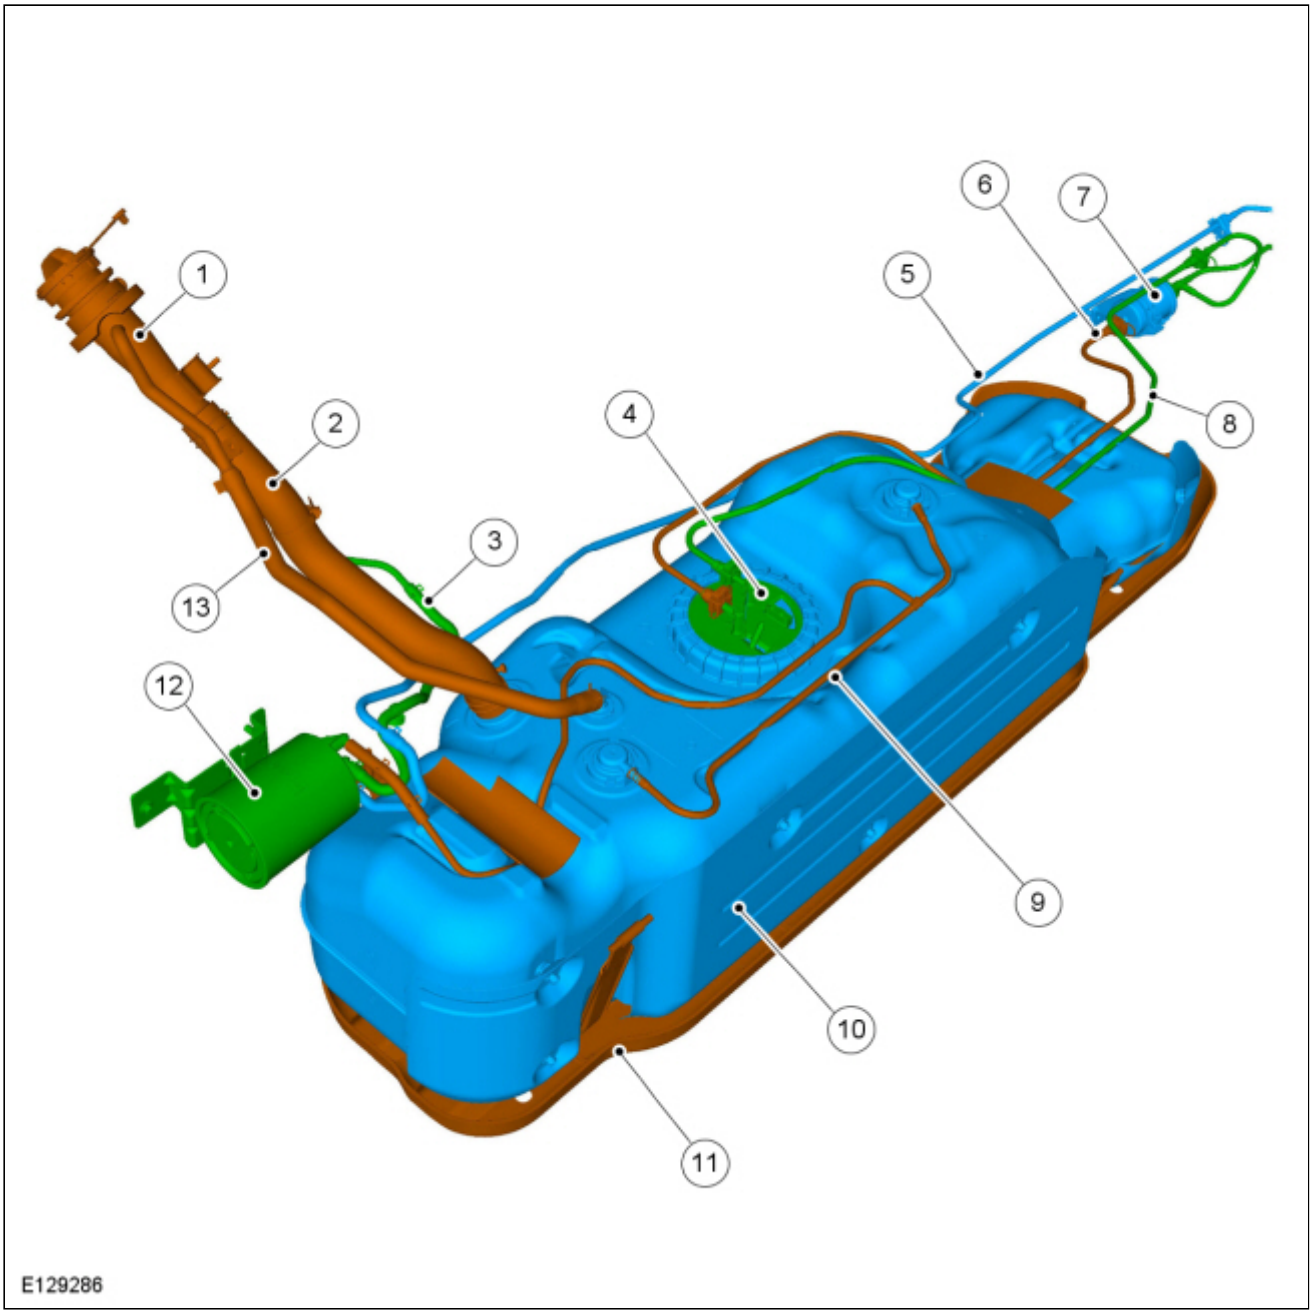
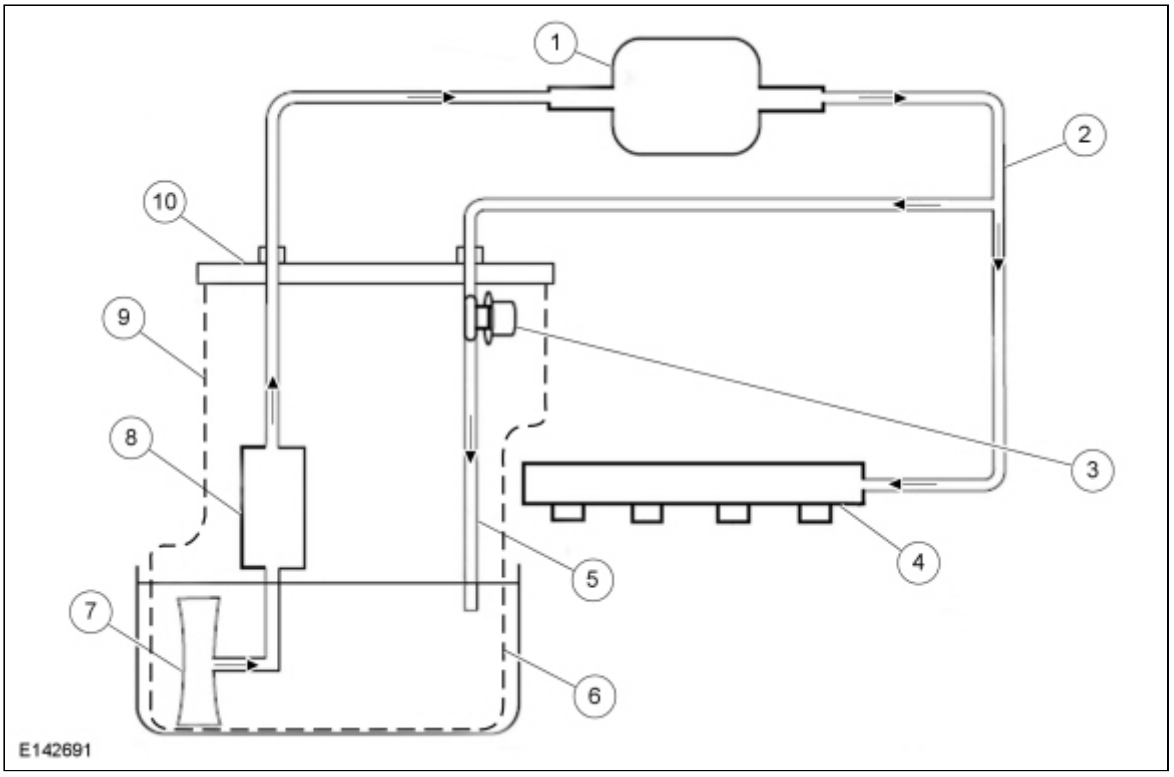
Fuel Tank and Lines



Vehicles with petrol engine

Item	Part Number	Description
1	—	Fuel filter
2	—	Fuel tank
3	—	Supply line to injection rail
4	—	Vapor emission valve
5	—	Vapor line from canister

Fuel is stored in the fuel tank and delivered to the fuel injectors by means of a submersed fuel pump through an inline fuel filter.



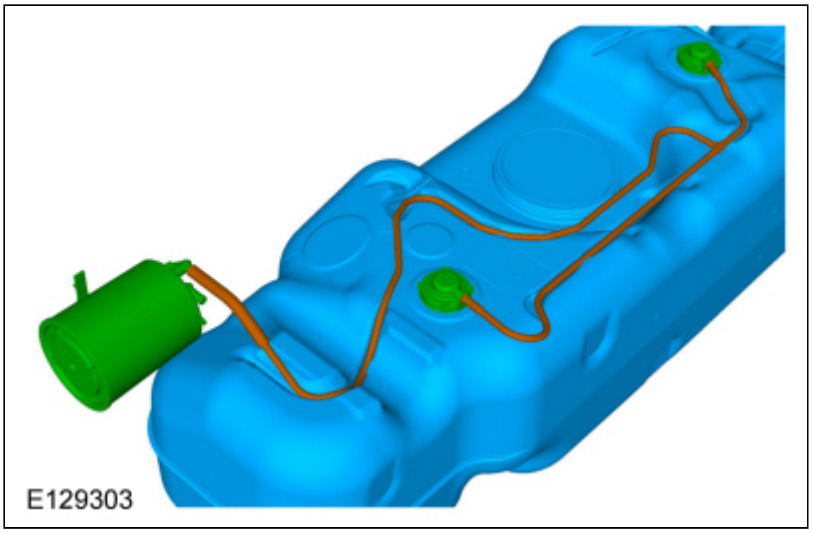
Fuel tank and lines

Item	Part Number	Description
1	—	Fuel tank filler neck
2	—	Fuel tank filler hose
3	—	Atmospheric vent line from canister
4	—	Fuel pump and sender unit
5	—	Vapor line from canister to purge valve
6	—	Supply line from fuel tank to fuel filter
7	—	Fuel filter
8	—	Return line from fuel filter to fuel tank
9	—	Fuel tank vent valve to evaporative emission canister vapor line
10	—	Fuel tank
11	—	Tank protector
12	—	Evaporative emission canister
13	—	Fuel tank breather hose

Repair of fuel system components is not allowed. Ensure that faulty components are replaced with new fuel system components in service.

Fuel return system

Item	Part Number	Description
1	—	Fuel filter
2	—	Fuel line fuel return T-piece
3	—	Fuel pressure regulator
4	—	Fuel rail
5	—	Fuel return line
6	—	Fuel tank
7	—	Fuel jet pump
8	—	Fuel pump
9	—	Fuel pump and sender unit
10	—	Fuel pump and sender unit flange



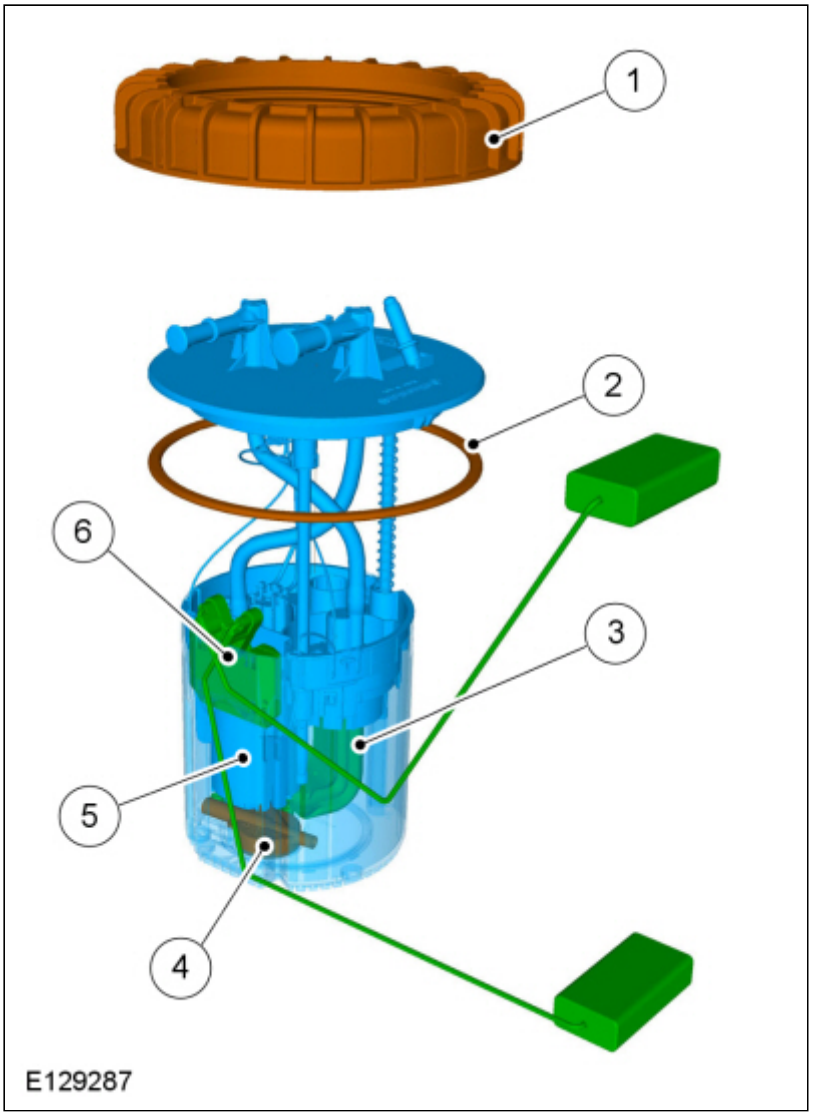
The fuel pressure at the fuel injectors is controlled by a fuel pressure regulator that is integral to the fuel pump and sender unit.

Fuel is pumped from the fuel tank to the fuel filter via the fuel supply line mounted on the left-hand chassis rail. From the fuel filter, fuel is then delivered to the fuel rail.

A "T" piece is fitted to the fuel supply line on the clean side of the filter. The T piece directs excess fuel to the fuel pressure regulator located in the fuel pump and sender unit, via the return port on the fuel pump and sender unit flange.

By allowing excess fuel to return to the tank via the fuel pressure regulator, a constant pressure can be maintained at the fuel rail and injectors.

Fuel tank vent valves



Unlike the fuel tank fitted to vehicles with diesel engines, the petrol fuel tank does not allow fuel vapor to vent to the atmosphere. Instead the fuel vapor is collected in the evaporative emission canister until the correct driving conditions permit the fuel vapor to be burnt in the engine combustion chambers. This reduces the overall emissions from the vehicle.

If the fuel tank becomes inverted, the fuel tank vent valves close preventing the evaporative emission canister being filled with fuel.

If the fuel tank vent valves, fuel vapor lines or the evaporative emission canister become restricted, vehicle performance will become impaired. The inability of the fuel tank to substitute the fuel demanded by the fuel pump with air, will create a negative pressure in the fuel tank . The fuel filler cap has both vacuum and pressure relief valves to prevent excess vacuum or pressure from causing deformation of the fuel tank.

Fuel pump and sender Unit

Item	Part Number	Description
1	—	Fuel pump and sender unit locking ring
2	—	Fuel pump and sender unit sealing ring
3	—	Sock filter
4	—	Fuel jet pump
5	—	Fuel pump
6	—	Fuel level sensor resistor card

The fuel pump and sender unit is located in the top of the fuel tank and is retained by a locking ring and seal.The fuel pump is attached to the fuel pump and sender unit flange by spring loaded guide bars, which ensure that the fuel pump is seated against the base of the fuel tank when installed.

The fuel level sender consists of a mechanical float attached to a variable resistor card by means of a rigid wire lever. The resistor card has two electrical elements. One element is solid and one element is a variable resistor. The resistance value created by the resistor card is sent to the body control module (BCM) through a hard wired circuit. The BCM distributes the information from the fuel pump and sender to the instrument cluster and the powertrain control module (PCM) using the controller area network (CAN) circuits.The fuel pump and sender unit can be sensitive to contaminated fuel. Contaminated fuel can affect the electrical continuity and give false fuel level readings.

The fuel pump and sender resistor card can be susceptible to contaminated fuel, which can affect electrical continuity. This condition is normally temporary and self-rectifying. If the fuel pump and sender has been removed, moving the rigid wire lever from empty to full a minimum of 10 times will normally be as effective as installing a new fuel pump and sender. The most common symptom of contamination occurs after refuelling where the electrical contact moves to an area of the resistor card which has not been used for several days. This results in a very slow movement of the fuel gauge pointer from empty to full over approximately 15 minutes. In more extreme cases where the resistor card resistance is continuously outside the permitted range for more than 33 seconds, a (diagnostic trouble code) DTC will be set in the BCM and the fuel gauge pointer will fall to its key-off position.

The fuel pump supplies fuel to the fuel charging system at a constant regulated pressure. The fuel pressure is controlled by the fuel pressure regulator, built into the fuel pump fuel return circuit.

The fuel pump and sender also incorporates a fuel jet pump. Fuel from the fuel charging system is passed through a venturi in the jet pump which causes a pressure drop across an open orifice. This draws in fuel through the base of the unit which then passes through the sock filter to the fuel pump.

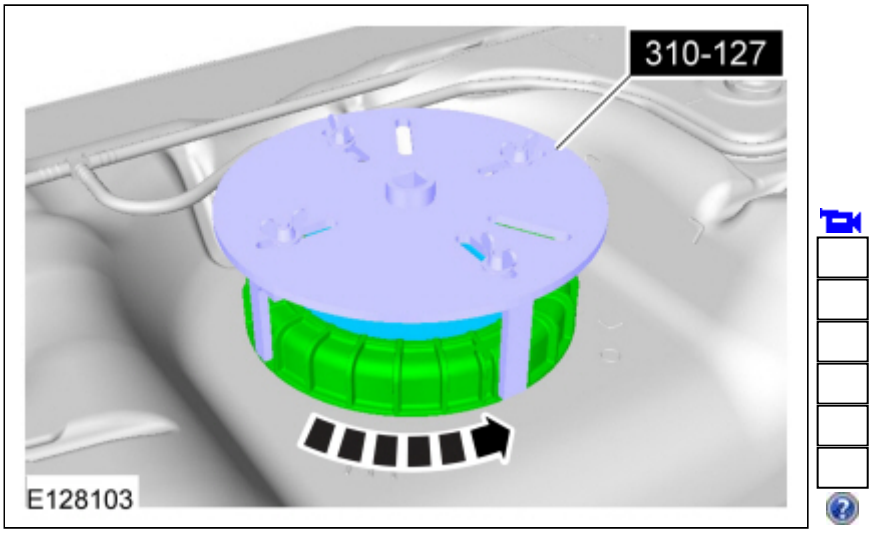
Fuel Pump and Sender Unit

Base Part Number: 9275

Special Tool(s) / General Equipment

 E42938	310-127 Wrench, Fuel Tank Sender Unit



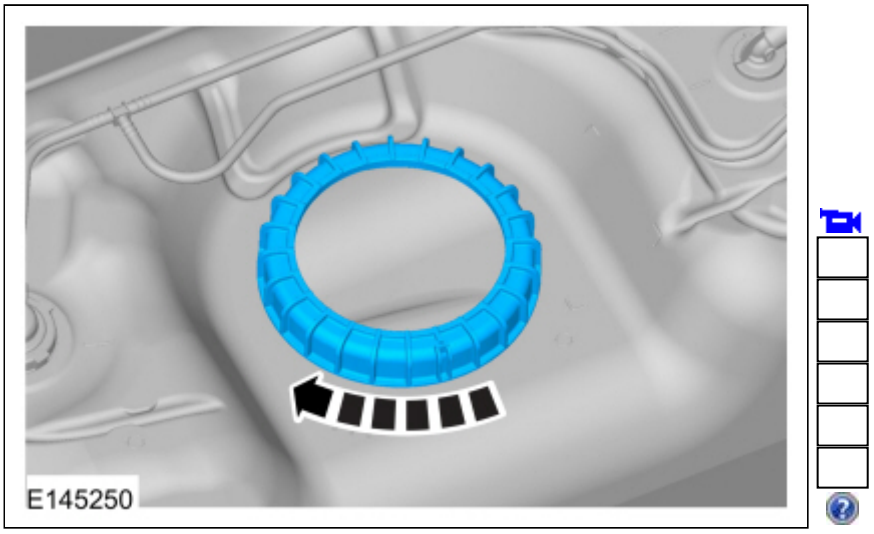
Removal

1. Refer to: Fuel Tank - Chassis Cab (310-01A Fuel Tank and Lines - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
2. **NOTICE: Take extra care not to damage the fuel tank level sensor float and arm.**

   NOTICE: The fuel pump and sender unit locking ring should be reinstalled to the fuel tank immediately after removal of the fuel pump and sender unit.

   NOTICE: If a new fuel pump and sender unit locking ring is to be installed, a new component must be installed within 15 minutes of removing the old component.

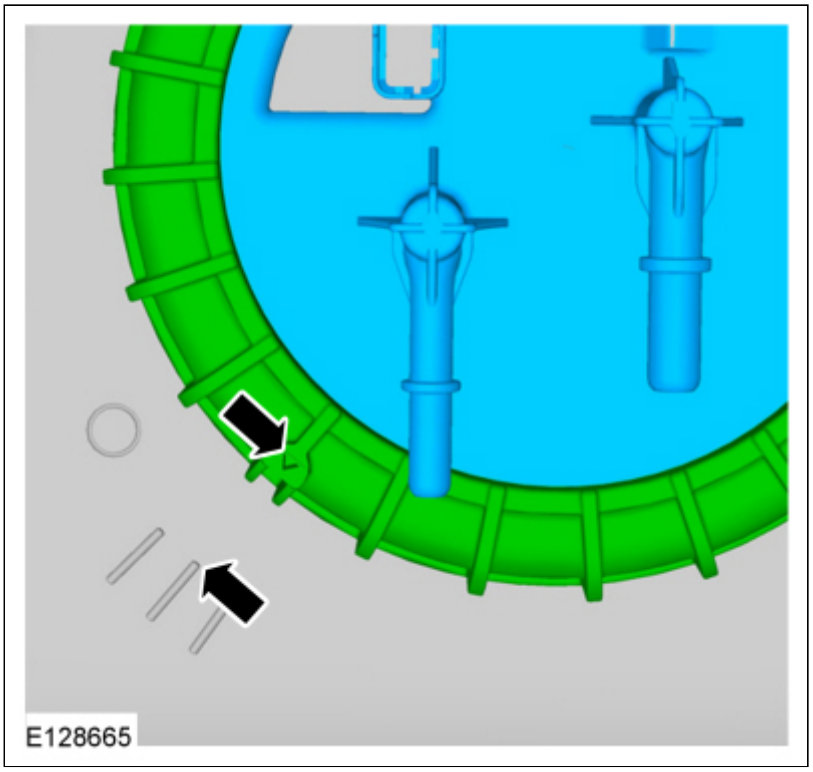
   Use Special Service Tool: 310-127 Wrench, Fuel Tank Sender Unit.



3.

4. **NOTICE: Failure to follow this instruction can lead to permanent deformation of the fuel tank.**

   NOTE: *Make sure that the locking ring is installed temporarily to the fuel tank.*



Installation

1. **NOTICE: Take extra care not to damage the fuel tank level sensor float and arm.**

   NOTE: *Make sure that the seal is correctly located.*

   NOTE: *Make sure that the installation marks are aligned.*

   Torque: 110 Nm

2. To install, reverse the removal procedure.

11	—	Fuel tank vent valve breather
12	—	Filler neck

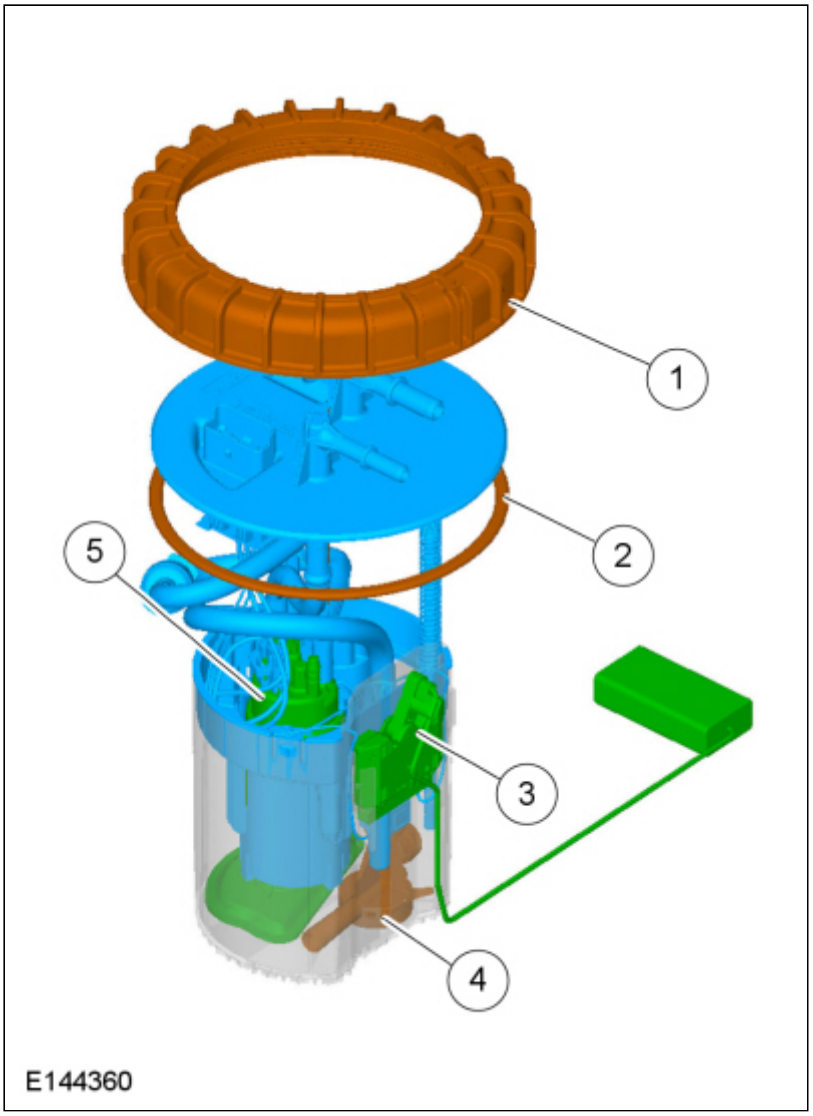
All Vehicles

Repair of fuel system components is not allowed. Ensure that faulty components are replaced with new fuel system

components in service.

Fuel tank vent valves



Fuel tank ventilation is achieved by two fuel tank vent valves. The fuel tank vent valves are integral to the fuel tank and will prevent fuel loss from the fuel tank if the vehicle becomes inverted.

Under normal working conditions, the pressure within the fuel tank is controlled by allowing the fuel vapor to vent through the fuel tank vent valves to atmosphere. If the fuel tank becomes inverted, the fuel tank vent valves close preventing fuel being lost from the fuel tank.

If the fuel tank vent valves or the fuel vapor lines connected to the vent valves become restricted, vehicle performance will become impaired. The inability of the fuel tank to substitute the fuel demanded by the fuel charging system with air, will create a negative pressure in the fuel tank which will result in reduced fuel flow to the fuel pump. The fuel filler cap has both vacuum and pressure relief valves to prevent excess vacuum or pressure from causing deformation of the tank.

Fuel pump and sender unit

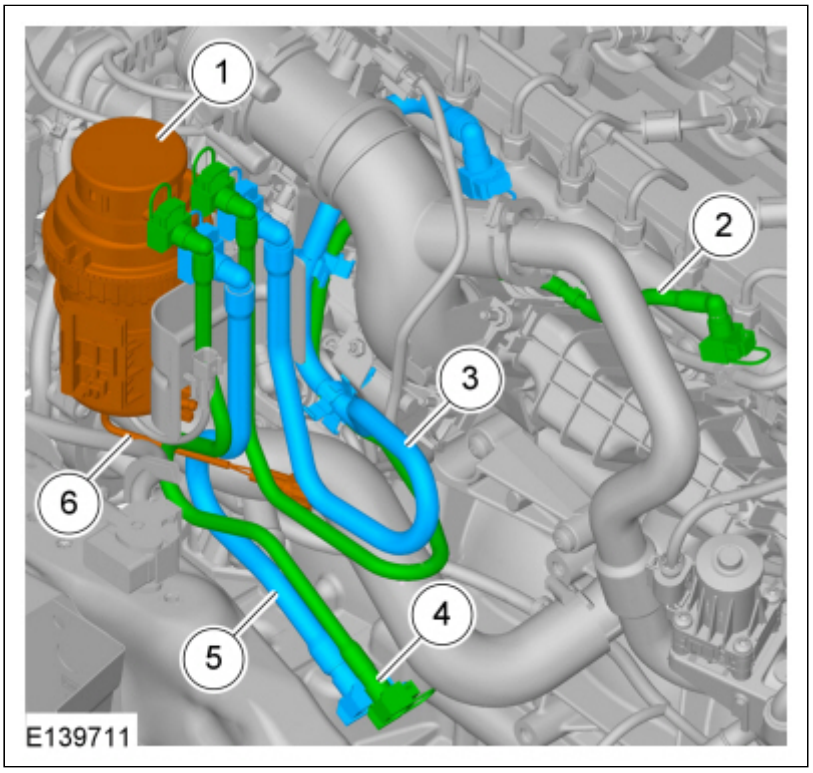
Item	Part Number	Description
1	—	Fuel pump and sender unit locking ring
2	—	Fuel pump and sender unit sealing ring
3	—	Fuel level sensor resistor card
4	—	Fuel jet pump
5	—	Fuel pump inlet filter

The pump and sender unit is located in the top of the fuel tank and is retained by a locking ring and seal. The fuel pump is attached to the fuel pump and sender unit flange by spring loaded guide bars, which ensure that the fuel pump is seated against the base of the fuel tank when installed.

The fuel level sender consists of a mechanical float attached to a variable resistor card by means of a rigid wire lever. The resistor card has two electrical elements. One element is solid and one element is a variable resistor. The resistance value created by the resistor card is sent to the central junction box (CJB) through a hard wired circuit. The CJB distributes the information from the fuel level sensor to the instrument cluster and the powertrain control module (PCM) using the controller area network (CAN) circuits.

The fuel level sensor resistor card can be susceptible to contaminated fuel, which can affect electrical continuity and give false fuel level readings. This condition is normally temporary and self-rectifying. If the fuel level sensor has been removed, moving the rigid wire lever from empty to full a minimum of 10 times will normally be as effective as installing a new fuel level sensor. The most common symptom of contamination occurs after refuelling where the electrical contact moves to an area of the resistor card which has not been used for several days. This results in a very slow movement of the fuel gauge pointer from empty to full over approximately 15 minutes. In more extreme cases where the resistor card resistance is continuously outside the permitted range for more than 33 seconds, a DTC will be set in the CJB and the fuel gauge pointer will fall to its key-off position.

The base of the fuel pump and sender unit is a chamber that sits in the swirl bowl at the bottom of the fuel tank. Built



into the chamber is a filter element.

The fuel pump and sender unit also incorporates a fuel jet pump. Fuel from the fuel charging system is passed through a venturi in the jet pump which causes a pressure drop across an open orifice. This draws in fuel through the base of the unit which then passes through the fuel supply tube.

Fuel tank

The fuel tank is of plastic construction and is secured to the vehicle by two metal support straps, which are bolted to the ladder frame cross members. The diesel fuel tank must contain at least 4 litres of fuel before the fuel pump is operated. Running the fuel pump with less than 4 litres of fuel will cause damage to the fuel pump.

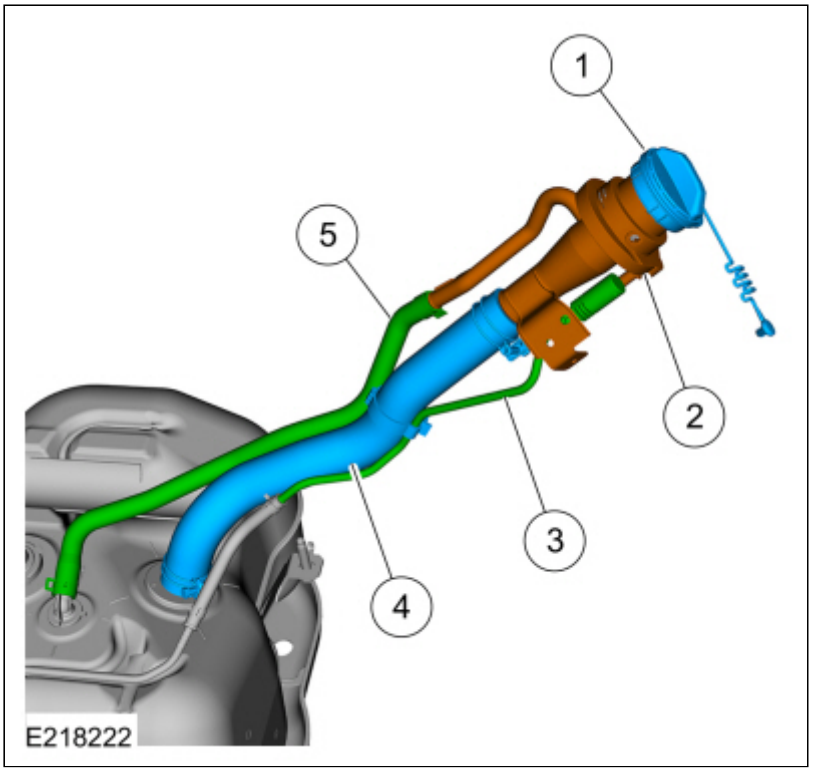
Fuel Filter

Item	Part Number	Description
1	—	Fuel filter
2	—	Return line from engine to fuel filter
3	—	Supply line from filter to engine
4	—	Return line from filter to fuel tank
5	—	Supply line from tank to fuel filter
6	—	Water-in fuel sensor

The diesel fuel filter separates air, water and other contaminants from fuel, in addition to retaining system backpressure.

The upper section of the filter incorporates the recirculation valve and the return valve.

The recirculation valve controls the flow of warm return fuel from the engine. When fuel temperature drops below 20 C, the valve opens to direct return fuel to the filter, warming the fuel to prevent waxing. When fuel temperature reaches 33 C, the valve closes and return fuel is directed back to the fuel tank via the fuel cooler. The recirculation valve also has a small bypass that allows any build up of air from the recirculation of fuel to bleed out via the return line into the tank.



The return valve is positioned in the return circuit of the filter. It controls the flow rate of the return fuel from the engine, and maintains the required backpressure at the fuel rail.

The lower section of the filter houses the filter element, water separator and the water-in-fuel level sensor.

The water separator consists of two layers of foam that encourage the formation of water droplets to separate from

the fuel. Water accumulates at the bottom of the filter, which then lifts the water-in-fuel level sensor float. The water-in-fuel indicator is triggered when 80 ml of water has accumulated in the filter.

Fuel filler

Item	Part Number	Description
1	—	Filler cap
2	—	Fuel tank filler neck
3	—	Fuel tank vent line
4	—	Fuel tank filler hose
5	—	Fuel tank breather hose

The fuel tank filler neck incorporates a fuel tank breather hose. The fuel tank breather hose is connected to the top of the fuel tank and exits just below the top of the fuel tank filler neck. The fuel tank breather hose allows the displaced vapor above the fuel in the fuel tank to escape, avoiding fuel "spit back" and premature shut off during refueling.

The fuel filler cap seals to the fuel filler neck. This is to prevent the escape of fuel vapor during normal operation and to prevent fuel loss in the event of a vehicle accident.

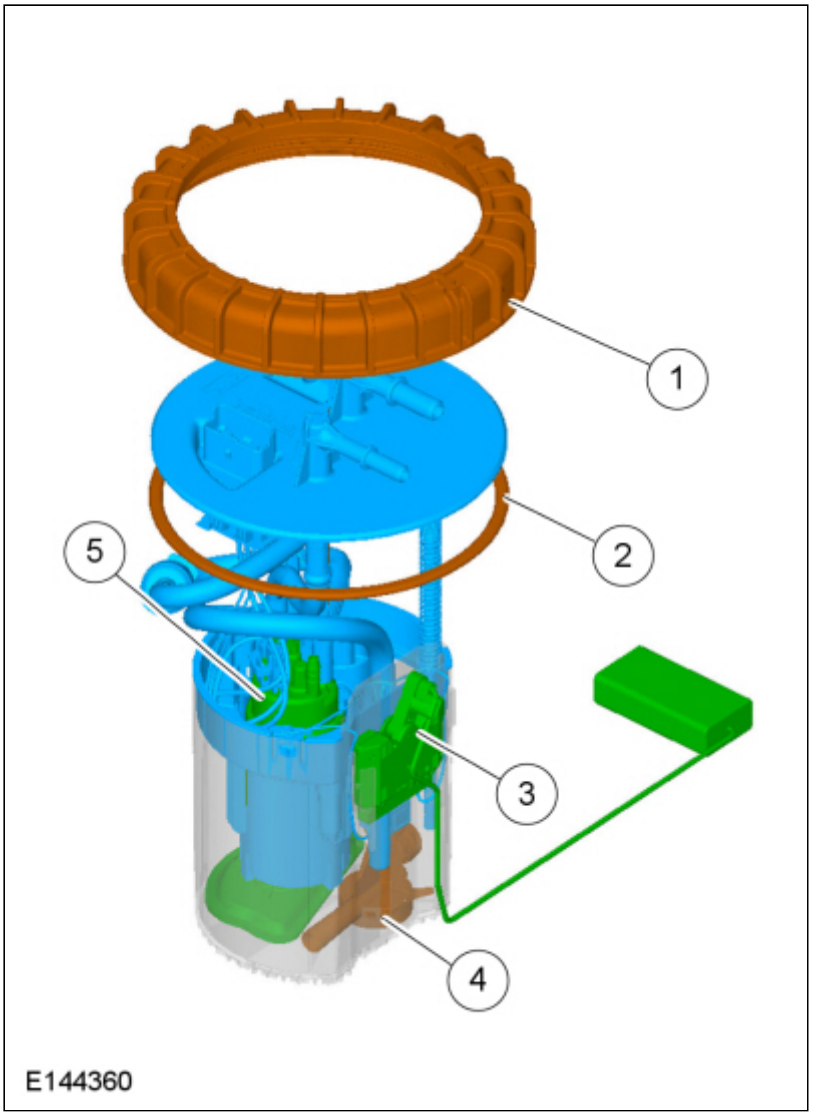
All Vehicles

Repair of fuel system components is not allowed. Ensure that faulty components are replaced with new fuel system

components in service.

Fuel tank vent valves



Fuel tank ventilation is achieved by two fuel tank vent valves. The fuel tank vent valves are integral to the fuel tank and will prevent fuel loss from the fuel tank if the vehicle becomes inverted.

Under normal working conditions, the pressure within the fuel tank is controlled by allowing the fuel vapor to vent through the fuel tank vent valves to atmosphere. If the fuel tank becomes inverted, the fuel tank vent valves close preventing fuel being lost from the fuel tank.

If the fuel tank vent valves or the fuel vapor lines connected to the vent valves become restricted, vehicle performance will become impaired. The inability of the fuel tank to substitute the fuel demanded by the fuel charging system with air, will create a negative pressure in the fuel tank which will result in reduced fuel flow to the fuel pump. The fuel filler cap has both vacuum and pressure relief valves to prevent excess vacuum or pressure from causing deformation of the tank.

Fuel pump and sender unit

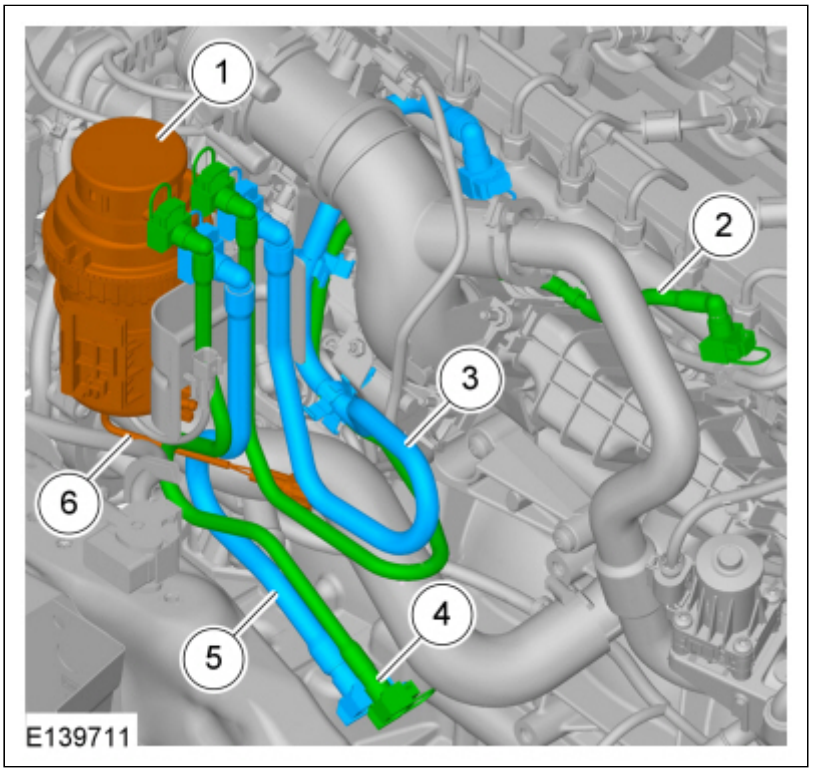
Item	Part Number	Description
1	—	Fuel pump and sender unit locking ring
2	—	Fuel pump and sender unit sealing ring
3	—	Fuel level sensor resistor card
4	—	Fuel jet pump
5	—	Fuel pump inlet filter

The pump and sender unit is located in the top of the fuel tank and is retained by a locking ring and seal. The fuel pump is attached to the fuel pump and sender unit flange by spring loaded guide bars, which ensure that the fuel pump is seated against the base of the fuel tank when installed.

The fuel level sender consists of a mechanical float attached to a variable resistor card by means of a rigid wire lever. The resistor card has two electrical elements. One element is solid and one element is a variable resistor. The resistance value created by the resistor card is sent to the central junction box (CJB) through a hard wired circuit. The CJB distributes the information from the fuel level sensor to the instrument cluster and the powertrain control module (PCM) using the controller area network (CAN) circuits.

The fuel level sensor resistor card can be susceptible to contaminated fuel, which can affect electrical continuity and give false fuel level readings. This condition is normally temporary and self-rectifying. If the fuel level sensor has been removed, moving the rigid wire lever from empty to full a minimum of 10 times will normally be as effective as installing a new fuel level sensor. The most common symptom of contamination occurs after refuelling where the electrical contact moves to an area of the resistor card which has not been used for several days. This results in a very slow movement of the fuel gauge pointer from empty to full over approximately 15 minutes. In more extreme cases where the resistor card resistance is continuously outside the permitted range for more than 33 seconds, a DTC will be set in the CJB and the fuel gauge pointer will fall to its key-off position.

The base of the fuel pump and sender unit is a chamber that sits in the swirl bowl at the bottom of the fuel tank. Built



into the chamber is a filter element.

The fuel pump and sender unit also incorporates a fuel jet pump. Fuel from the fuel charging system is passed through a venturi in the jet pump which causes a pressure drop across an open orifice. This draws in fuel through the base of the unit which then passes through the fuel supply tube.

Fuel tank

The fuel tank is of plastic construction and is secured to the vehicle by two metal support straps, which are bolted to the ladder frame cross members. The diesel fuel tank must contain at least 4 litres of fuel before the fuel pump is operated. Running the fuel pump with less than 4 litres of fuel will cause damage to the fuel pump.

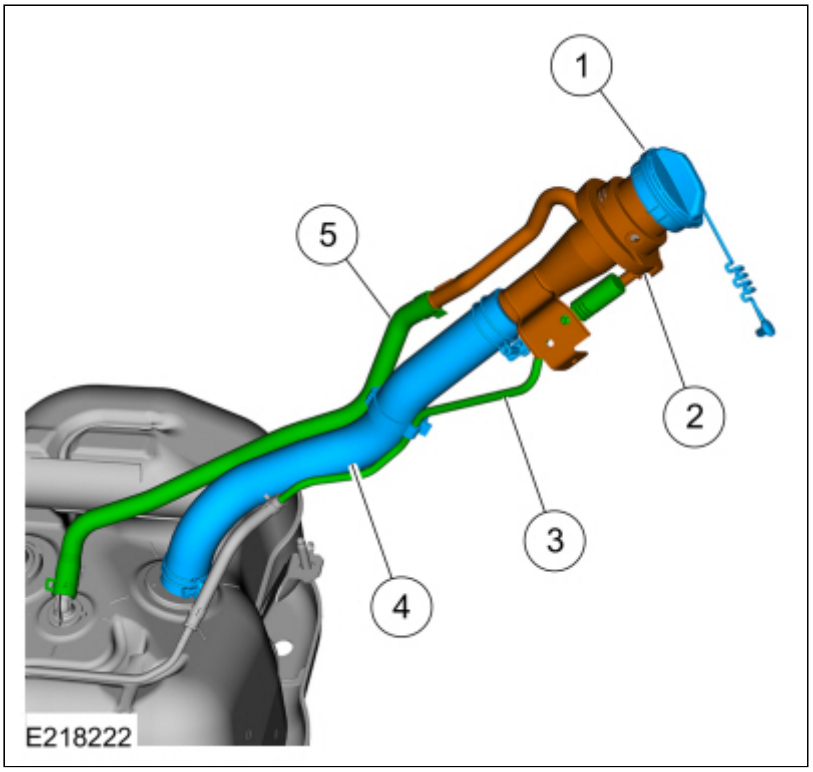
Fuel Filter

Item	Part Number	Description
1	—	Fuel filter
2	—	Return line from engine to fuel filter
3	—	Supply line from filter to engine
4	—	Return line from filter to fuel tank
5	—	Supply line from tank to fuel filter
6	—	Water-in fuel sensor

The diesel fuel filter separates air, water and other contaminants from fuel, in addition to retaining system backpressure.

The upper section of the filter incorporates the recirculation valve and the return valve.

The recirculation valve controls the flow of warm return fuel from the engine. When fuel temperature drops below 20 C, the valve opens to direct return fuel to the filter, warming the fuel to prevent waxing. When fuel temperature reaches 33 C, the valve closes and return fuel is directed back to the fuel tank via the fuel cooler. The recirculation valve also has a small bypass that allows any build up of air from the recirculation of fuel to bleed out via the return line into the tank.



The return valve is positioned in the return circuit of the filter. It controls the flow rate of the return fuel from the engine, and maintains the required backpressure at the fuel rail.

The lower section of the filter houses the filter element, water separator and the water-in-fuel level sensor.

The water separator consists of two layers of foam that encourage the formation of water droplets to separate from

the fuel. Water accumulates at the bottom of the filter, which then lifts the water-in-fuel level sensor float. The water-in-fuel indicator is triggered when 80 ml of water has accumulated in the filter.

Fuel filler

Item	Part Number	Description
1	—	Filler cap
2	—	Fuel tank filler neck
3	—	Fuel tank vent line
4	—	Fuel tank filler hose
5	—	Fuel tank breather hose

The fuel tank filler neck incorporates a fuel tank breather hose. The fuel tank breather hose is connected to the top of the fuel tank and exits just below the top of the fuel tank filler neck. The fuel tank breather hose allows the displaced vapor above the fuel in the fuel tank to escape, avoiding fuel "spit back" and premature shut off during refueling.

The fuel filler cap seals to the fuel filler neck. This is to prevent the escape of fuel vapor during normal operation and to prevent fuel loss in the event of a vehicle accident.

Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

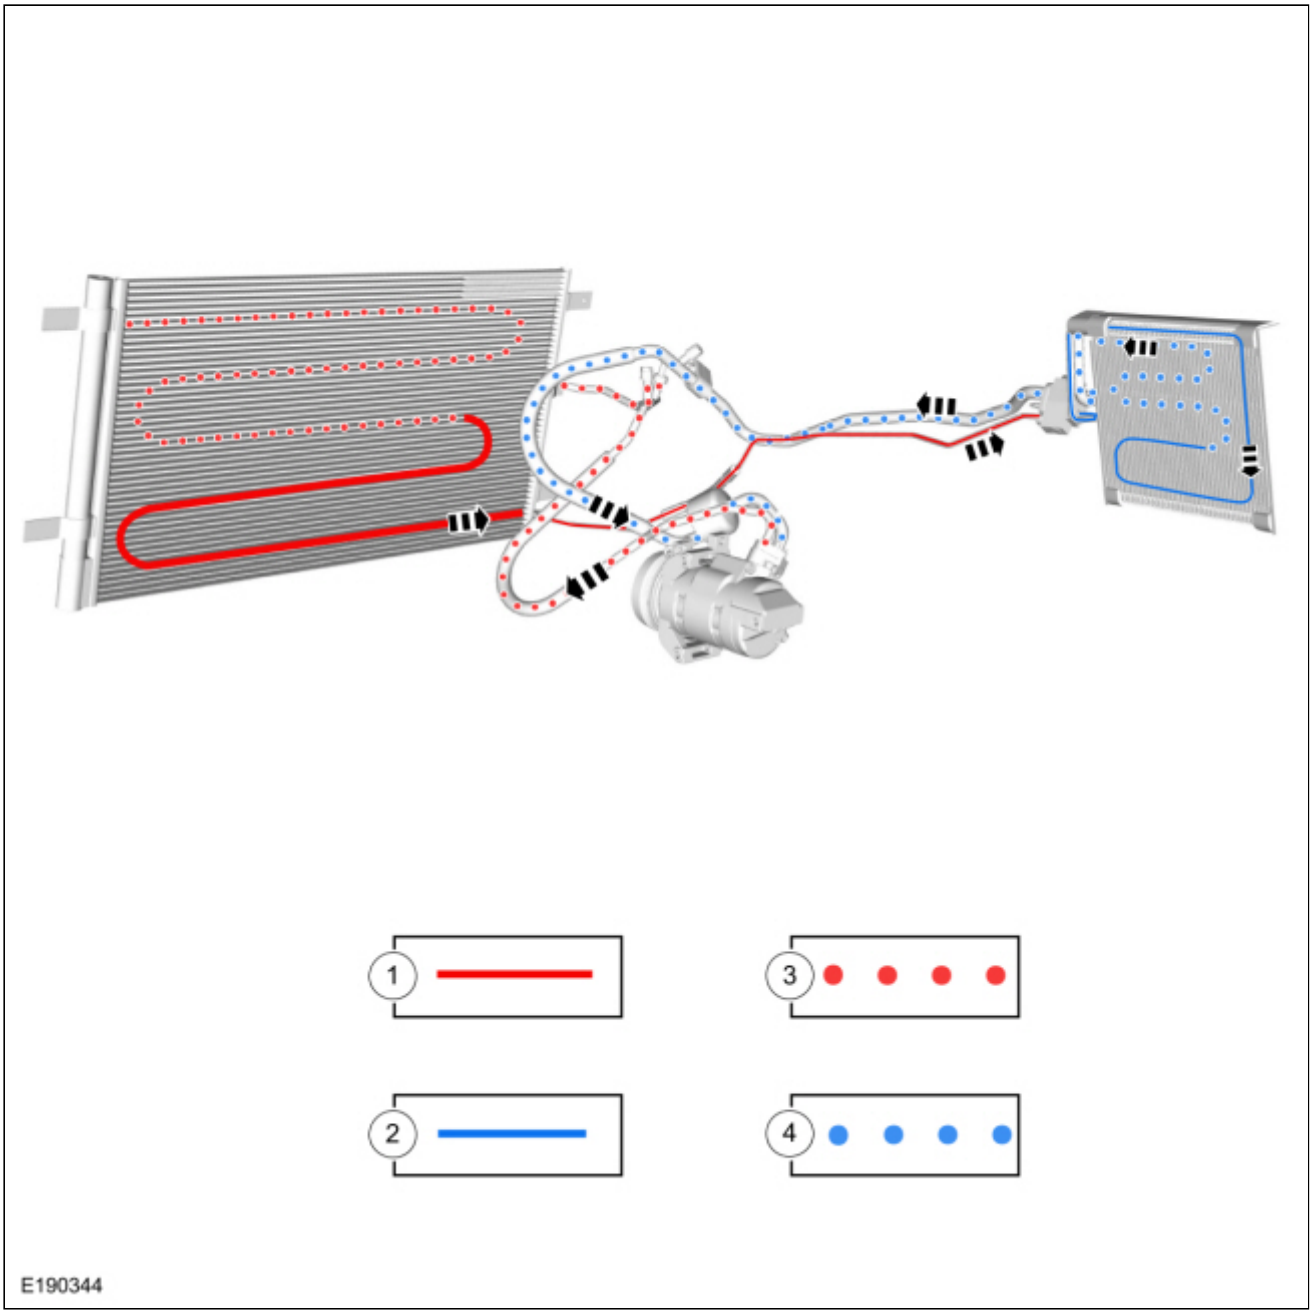
Module Network Input Messages APIM

Broadcast Message	Originating Module	Message Purpose
Climate control button status	FCIM	This message contains the climate control button status.

Module Network Input Messages FCIM

Broadcast Message	Originating Module	Message Purpose
Ambient air temperature	PCM	This message contains raw value from the ambient air temperature sensor.
Climate control requests	APIM	This message contains both the climate control system voice commands as well as all climate control system touchscreen inputs.
A/C clutch status	PCM	This message contains the status of the A/C compressor clutch.

Module Network Input Messages PCM



Broadcast Message	Originating Module	Message Purpose
HVAC request	FCIM	This message requests the A/C compressor to be engaged.
Evaporator temperature	FCIM	This message contains the evaporator temperature. The PCM uses the evaporator temperature to determine the A/C compressor output.

The Refrigerant Cycle

For information regarding basic HVAC system refrigerant operation, refer to the current Ford Web Based Technical Training courses. The following diagram shows the refrigerant system state in each component.

The following are characteristics of the DATC system:

- The PCM controls the A/C clutch relay.
- The evaporator temperature sensor monitors the temperature of the air that has passed through the evaporator core and sends a signal to the PCM. If the temperature of the evaporator core discharge air is low enough to cause the condensed water vapor to freeze, the A/C clutch is disengaged by the PCM.
- The line pressure is monitored so that A/C compressor operation is interrupted if the system pressure becomes too high or too low.
- The A/C compressor relief valve opens and vents refrigerant to relieve unusually high system pressure.

Item	Description
1	High pressure liquid
2	Low pressure liquid
3	High pressure vapor
4	Low pressure vapor

Control System Logic

The DATC system customer interface is in one or more locations depending on vehicle option content:

- FCIM
- FDIM (part of APIM)

When the touchscreen FDIM or voice commands are used and A/C is selected, the APIM sends the request message over the HS-CAN3 to the GWM. The GWM sends the message to the FCIM over the Medium Speed Controller Area Network (MS-CAN) and the GWM sends the A/C request to the PCM over the HS-CAN1.

When the customer directly inputs an A/C request into the FCIM, the module sends the request to the GWM over the MS-CAN. The GWM sends the request to the PCM over the HS-CAN1.

The FCIM requires PMI when it is replaced.

A/C Request

When an A/C request is received by the PCM, the A/C clutch relay is engaged when all of the following conditions are met:

- Excessively high or low refrigerant pressure from the A/C pressure transducer is not detected.
- Ambient air temperature is above approximately °C.
- Evaporator temperature is above approximately 1°C.

The PCM monitors the discharge pressure measured by the A/C pressure transducer. The PCM interrupts A/C compressor operation in the event the A/C pressure transducer indicates high system discharge pressures. It is also used to sense low charge conditions. If the pressure is below a predetermined value for a given ambient temperature, the PCM does not allow the A/C clutch to engage.

The FCIM adjusts the air inlet door depending on the humidity measured by the in-vehicle temperature and humidity sensor. If the vehicle cabin becomes too humid and recirculated air is selected, the FCIM adjusts the air inlet door to allow more fresh air. When the humidity level drops, it adjusts back to partial recirculated air. The FCIM also adjusts the system based on in-vehicle temperature.

The autolamp-sunload sensor supplies information to the FCIM indicating the intensity of the sun on the vehicle. The FCIM adjusts the system based on the intensity.

Heating and Ventilation

The heating and ventilation system:

- controls the temperature of the air inside the vehicle.
- reduces the relative humidity of the air inside the vehicle (during A/C compressor operation).
- delivers heated or cooled air to maintain the vehicle interior temperature and comfort level.

The heating and ventilation system uses a reheat method to provide conditioned air to the passenger compartment. Temperature blending is controlled by the temperature doors, which regulate the amount of air that flows through and around the heater core, where it is then mixed and distributed. All airflow from the blower motor passes through the A/C evaporator core.

The PTC Heater is a 1000W electrical heater (incorporated into the HVAC unit) that is to increase cabin temperature rapidly after startup where coolant temperature is low.

Air Handling

There are 4 door actuators that control the air flow into the passenger compartment:

- Defrost Vent/Register Door Actuator
- Air inlet
- Temperature door actuator, LH
- Temperature Door Actuator, RH

All of the door actuators contain a reversible electric motor and a potentiometer. The potentiometer circuit consists of a 5-volt reference signal connected to one end of a variable resistor, and a signal ground connected to the other. A signal circuit is connected to a contact wiper, which is driven along the variable resistor by the actuator shaft. The signal to the FCIM from the contact wiper indicates the actuator door position. The FCIM powers the actuator motors to move the doors to the desired positions. The desired door positions are calculated by the FCIM based on the requested temperature, in-vehicle temperature, ambient air temperature and sunload.

When an airflow mode, desired driver or passenger temperature, fresh air, or recirculation mode is selected, the FCIM moves the actuator motor in the desired direction.

The FCIM sends a PWM signal to the blower motor speed control to regulate the blower speed as necessary. The blower motor speed control provides variable ground feed for the blower motor based on the input from the FCIM. A delay function provides a gradual increase or decrease in blower motor speed under all conditions.

AUTO

When AUTO is selected:

- the HVAC system operates to achieve and maintain the temperature requested by the operator.
- the LH and RH temperature door actuators are automatically controlled by the FCIM based on the temperature setting.
- the A/C compressor is automatically controlled by the PCM based on temperature information sent by the

FCIM. °C.
- the blower motor speed is automatically controlled through the blower motor speed control when it receives a PWM signal from the FCIM based on the temperature setting, but can be manually adjusted if desired.
- the FCIM controls the air inlet door to recirculate, partially recirculate or open to the fresh air position depending on the in-car temperature and humidity sensor inputs.

OFF

When OFF is selected:

- the recirculated air request button is disabled.
- the air inlet door closes, preventing outside air and allowing only recirculated air.
- the A/C request button is disabled.
- the blower motor is off.

MAX A/C

When MAX A/C is selected:

- the air inlet door closes, preventing outside air and allowing only recirculated air.
- the recirculated air indicator is illuminated (recirculated air forced on).
- the air distribution doors operate simultaneously to direct airflow to the instrument panel registers.
- the temperature doors move to the full cool position. The air temperature is adjustable.
- the A/C button is illuminated.
- the A/C compressor operates if the outside temperature is above approximately °C .
- the blower motor is commanded to the highest speed, but can be manually adjusted if desired.

PANEL

When PANEL mode is selected:

- the recirculated air request button is enabled. If the recirculated air request button is selected (indicator on), the air inlet door closes, preventing outside air from entering the passenger compartment. If the recirculated air request button is not selected (indicator off), the air inlet door opens, allowing only outside air into the passenger compartment.
- the air distribution doors operate simultaneously to direct airflow to the instrument panel registers.
- blended air temperature is available. Only when A/C compressor operation has been selected by pressing the A/C button (indicator on) can the airflow temperature be cooled below the outside air temperature.
- the blower motor is on and the speed is adjustable.

PANEL/FLOOR

When PANEL/FLOOR mode is selected:

- the recirculated air request button is enabled. If the recirculated air request button is selected (indicator on), the air inlet door closes, preventing outside air from entering the passenger compartment. If the recirculated air request button is not selected (indicator off), the air inlet door opens, allowing only outside air into the passenger compartment.
- the air distribution doors operate simultaneously to direct airflow to the floor duct and the instrument panel registers. A small amount of airflow from the side window demisters and defrost duct is present.
- blended air temperature is available. Only when A/C compressor operation has been selected by pressing the A/C button (indicator on) can the airflow temperature be cooled below the outside air temperature.
- the blower motor is on and the speed is adjustable.

FLOOR

When FLOOR mode is selected:

- the recirculated air request button is enabled. If the recirculated air request button is selected (indicator on), the air inlet door closes, preventing outside air from entering the passenger compartment. If the recirculated air request button is not selected (indicator off), the air inlet door opens, allowing only outside air into the passenger compartment.
- the air distribution doors operate simultaneously to direct airflow to the floor duct. A small amount of airflow from the defroster duct and side window demisters is present.
- blended air temperature is available. Only when A/C compressor operation has been selected by pressing the A/C button (indicator on) can the airflow temperature be cooled below the outside air temperature.
- the blower motor is on and the speed is adjustable.

FLOOR/DEFROST

When FLOOR/DEFROST mode is selected:

- the recirculated air request button is enabled. If the recirculated air request button is selected (indicator on), the air inlet door closes, preventing outside air from entering the passenger compartment. If the recirculated air request button is not selected (indicator off), the air inlet door opens, allowing only outside air into the passenger compartment.
- the air distribution doors operate simultaneously to direct airflow to the floor duct, the defroster duct and the side window demisters.
- blended air temperature is available. Only when A/C compressor operation has been selected by pressing the A/C button (indicator on) can the airflow temperature be cooled below the outside air temperature.
- the blower motor is on and the speed is adjustable.

MAX DEFROST

When MAX DEFROST mode is selected:

- the recirculated air request button is disabled. The air inlet door opens, allowing only outside air into the passenger compartment.
- the air distribution doors operate simultaneously to direct airflow to the defroster duct and side window demisters. A small amount of airflow from the floor duct is present.
- the A/C is turned on in defrost mode. The A/C compressor operates as long as the outside temperature is above approximately °C.
- the temperature is set to the highest setting and is **not** adjustable.
- the fan is set to the highest speed and is **not** adjustable.
- MAX DEFROST can be exited by pressing the AUTO button.

Component Description

FCIM - DATC

The DATC system uses the FCIM as the HVAC control module. The FCIM also controls the outputs for rear window defrost and climate controlled seats. For vehicles equipped with touchscreen audio, the DATC system uses voice commands or the touchscreen to control the system. For details on the FCIM communication, refer to Control System Logic in this section.

The FCIM utilizes a Field-Effect Transistor (FET) protective circuit strategy for its actuator outputs. Output load (current level) is monitored for excessive current (typically short circuits) and is shut down (turns off the voltage or ground provided by the module) when a fault event is detected. A short circuit DTC is stored at the fault event and a cumulative counter is started.

When the demand for the output is no longer present, the module resets the Field-Effect Transistor (FET) circuit protection to allow the circuit to function. The next time the driver requests a circuit to activate that has been shut down by a previous short (Field-Effect Transistor (FET) protection) and the circuit is still shorted, the Field-Effect Transistor (FET) protection shuts off the circuit again and the cumulative counter advances.

When the excessive circuit load occurs often enough, the module shuts down the output until a repair procedure is carried out. The Field-Effect Transistor (FET) protected circuit has 3 predefined levels of short circuit tolerance based on the harmful effect of each circuit fault on the Field-Effect Transistor (FET) and the ability of the Field-Effect Transistor (FET) to withstand it. A module lifetime level of fault events is established based upon the durability of the Field-Effect Transistor (FET). If the total tolerance level is determined to be 600 fault events, the 3 predefined levels would be 200, 400 and 600 fault events.

When each tolerance level is reached, the short circuit DTC that was stored on the first failure cannot be cleared by a command to clear the Diagnostic Trouble Codes (DTCs). The module does not allow the DTC to be cleared or the circuit to be restored to normal operation until a successful self-test proves the fault has been repaired. After the self-test has successfully completed (no on-demand Diagnostic Trouble Codes (DTCs) present), DTC U1000:00 and the associated DTC (the DTC related to the shorted circuit) automatically clears and the circuit function returns.

When each level is reached, the DTC associated with the short circuit sets along with DTC U1000:00. These Diagnostic Trouble Codes (DTCs) can be cleared using the diagnostic scan tool. The module never resets the fault event counter to zero and continues to advance the fault event counter as short circuit fault events occur.

If the number of short circuit fault events reach the third level, then Diagnostic Trouble Codes (DTCs) U1000:00 and U3000:49 set along with the associated short circuit DTC. DTC U3000:49 cannot be cleared and a new module must be installed after the repair.

The FCIM requires PMI when it is replaced.

Ambient Air Temperature (AAT) Sensor

The Ambient Air Temperature (AAT) sensor is an input to the PCM. If the outside air temperature is below approximately 0°C (32°F), the PCM does not allow the A/C compressor clutch to engage.

Evaporator Core

The evaporator core is an aluminum plate/fin type and is located in the heater core and evaporator core housing. A mixture of liquid refrigerant and oil enters the bottom of the evaporator through the evaporator inlet tube and continues out of the evaporator through the evaporator outlet tube as a vapor. During A/C compressor operation, airflow from the blower motor is cooled and dehumidified as it flows through the evaporator fins.

Heater Core

The heater core consists of fins and tubes arranged to extract heat from the engine coolant and transfer it to air passing through the heater core.

Heater Core and Evaporator Core Housing

The heater core and evaporator core housing directs airflow from the blower motor through the evaporator core and heater core. All airflow from the blower motor passes through the evaporator core. The airflow is then directed through or around the heater core by the temperature door(s). After passing through the heater core, the airflow is distributed to the selected outlet by the airflow mode doors.

Defrost Vent/Register Door Actuator

The defrost vent/register door actuator contains a reversible electric motor and a potentiometer. The potentiometer allows the FCIM to monitor the position of the airflow mode door.

Air Inlet Door Actuator

The air inlet door actuator contains a reversible electric motor and a potentiometer. The potentiometer allows the FCIM to monitor the position of the airflow mode door. The FCIM drives the actuator motor in the direction necessary to move the door to the position set by the recirculation button and the in-vehicle temperature and humidity sensor information.

LH Temperature Door Actuator

The driver side temperature door actuator contains a reversible electric motor and potentiometer. The potentiometer allows the FCIM to monitor the position of the temperature blend door.

RH Temperature Door Actuator

The passenger side temperature door actuator contains a reversible electric motor and potentiometer. The potentiometer allows the FCIM to monitor the position of the temperature blend door.

A/C Pressure Transducer

The PCM monitors the discharge pressure measured by the A/C pressure transducer. As the refrigerant pressure changes, the resistance of the A/C pressure transducer changes. It is not necessary to recover the refrigerant before removing the A/C pressure transducer.

In-Vehicle Temperature And Humidity Sensor

The in-vehicle temperature and humidity sensor contains a thermistor and a sensing element which separately measures the in-vehicle air temperature and the humidity, then sends those readings to the FCIM. The in-vehicle temperature and humidity sensor has an electric fan within the sensor that draws in-vehicle air across the two sensing elements. The FCIM may adjust the air inlet door based on the in-vehicle temperature and humidity sensor information to maintain the desired humidity of the passenger cabin air.

Autolamp-Sunload Sensor

The autolamp-sunload sensor supplies information to the FCIM indicating the intensity of the sun on the vehicle. The FCIM compensates high sun load with higher blower and reduced discharge temperatures.

Evaporator Temperature Sensor

The evaporator temperature sensor contains a thermistor. The sensor varies its resistance with the temperature. As the temperature rises, the resistance falls. As the temperature falls, the resistance rises. The evaporator temperature sensor is an input to the FCIM and the information is relayed to the PCM over the CAN. If the evaporator temperature is below approximately 1°C (33.8°F), the PCM does not allow the A/C compressor to operate.

Air Discharge Temperature Sensors

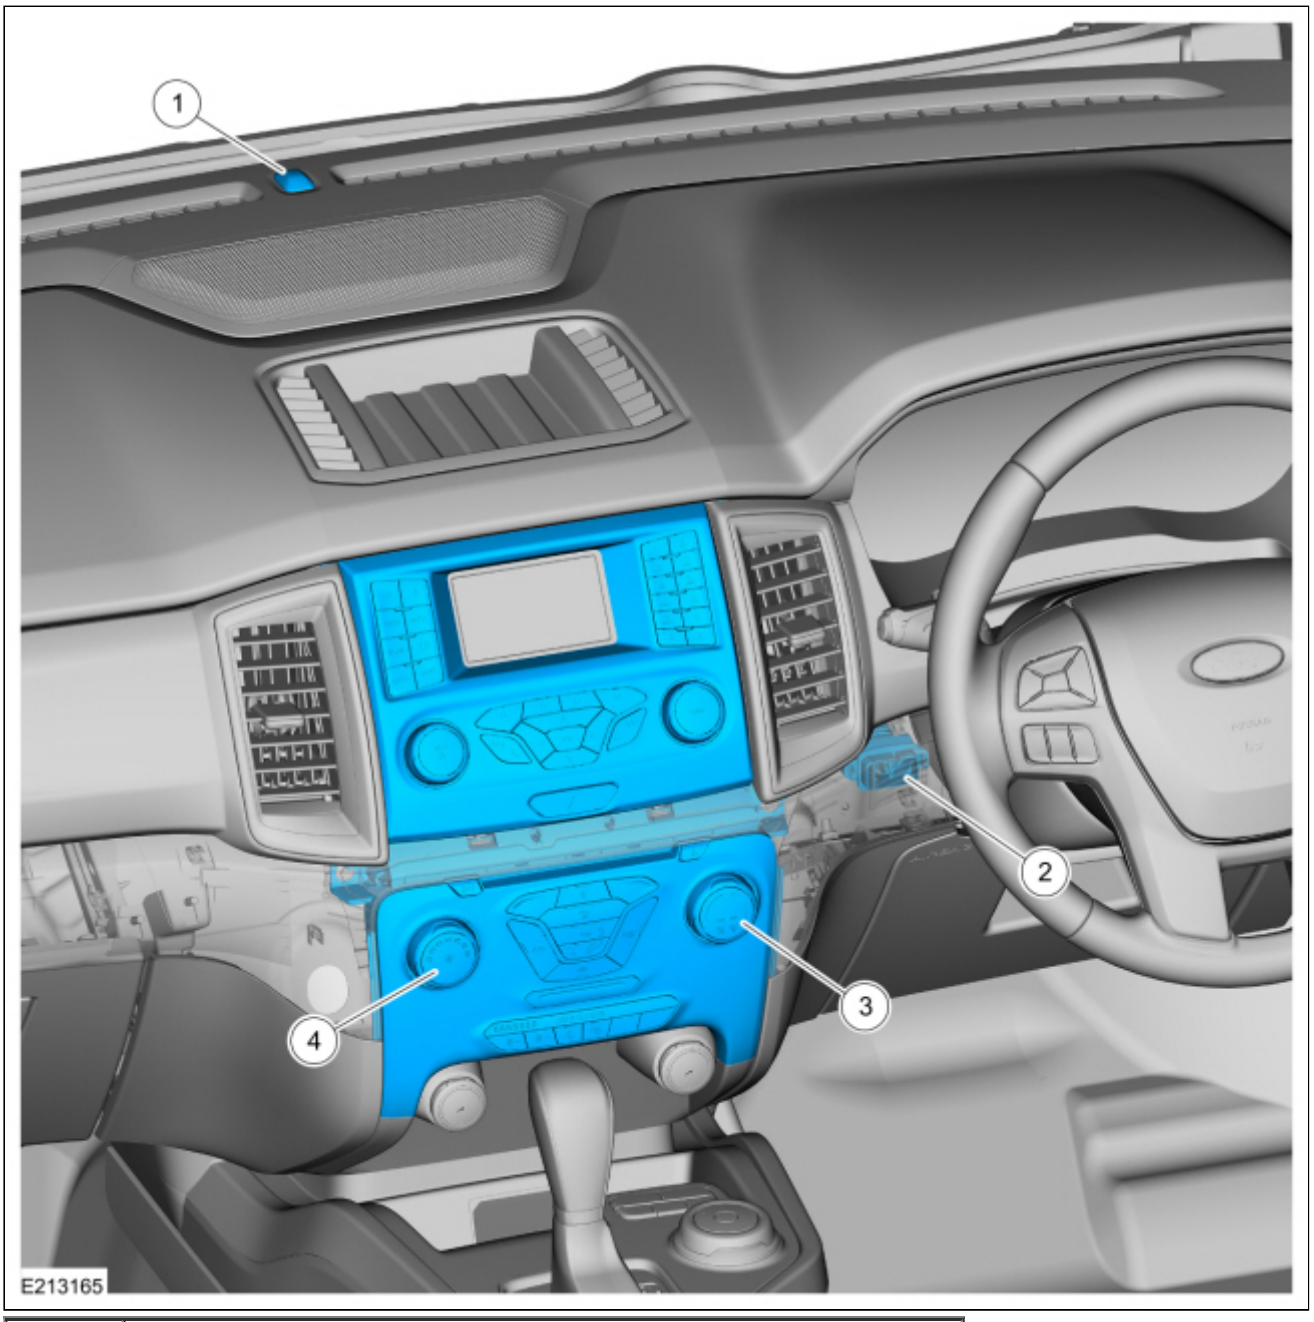
There are 2 air discharge temperature sensors in the DATC system:

- Driver side footwell air discharge temperature sensor

- Driver side center register air discharge temperature sensor

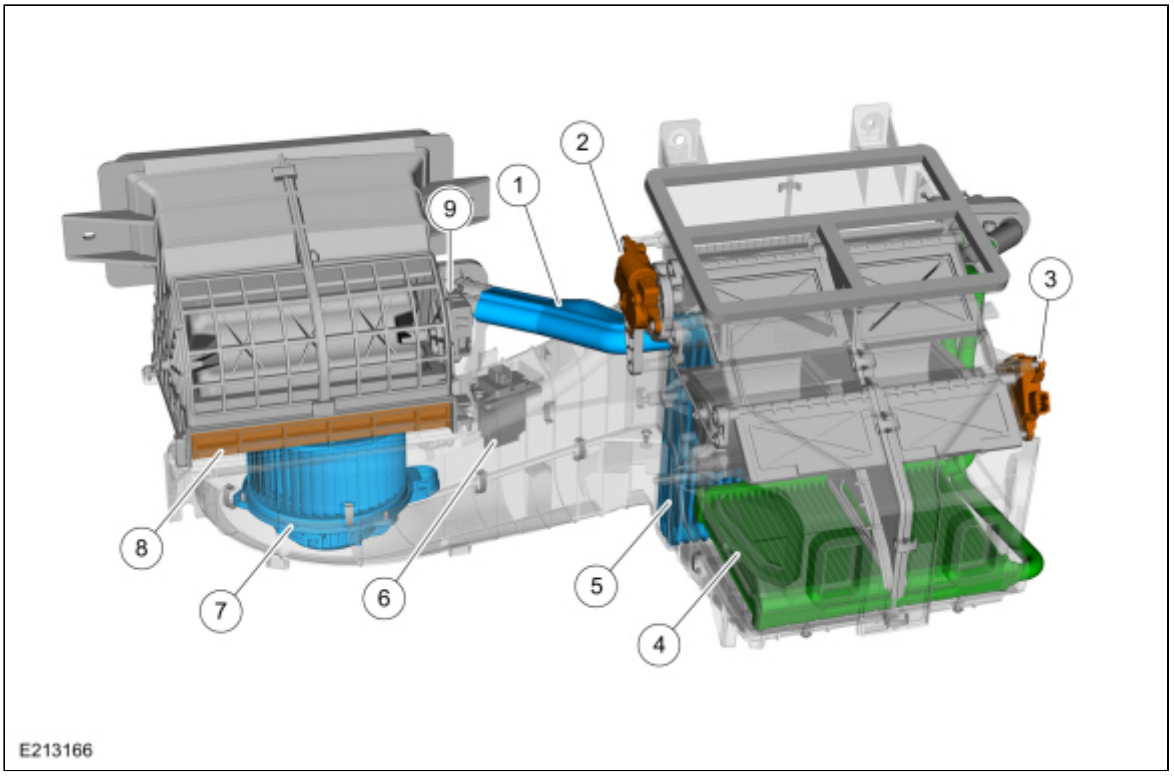
The air discharge temperature sensors contain a thermistor and are inputs to the FCIM. The sensors vary their resistance with the temperature. As the temperature rises, the resistance falls. As the temperature falls, the resistance rises. The FCIM uses the sensor information to maintain the desired temperature of the passenger cabin air.

Condenser



The A/C condenser is an aluminum fin-and-tube design heat exchanger. It cools compressed refrigerant gas by allowing air to pass over fins and tubes to extract heat, and condenses gas to liquid refrigerant as it is cooled.

Receiver Drier



The receiver drier stores high-pressure liquid. The desiccant bag mounted inside the receiver drier removes any retained moisture from the refrigerant. The receiver drier desiccant bag is a separate component and can be removed and installed separately from the condenser.

Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

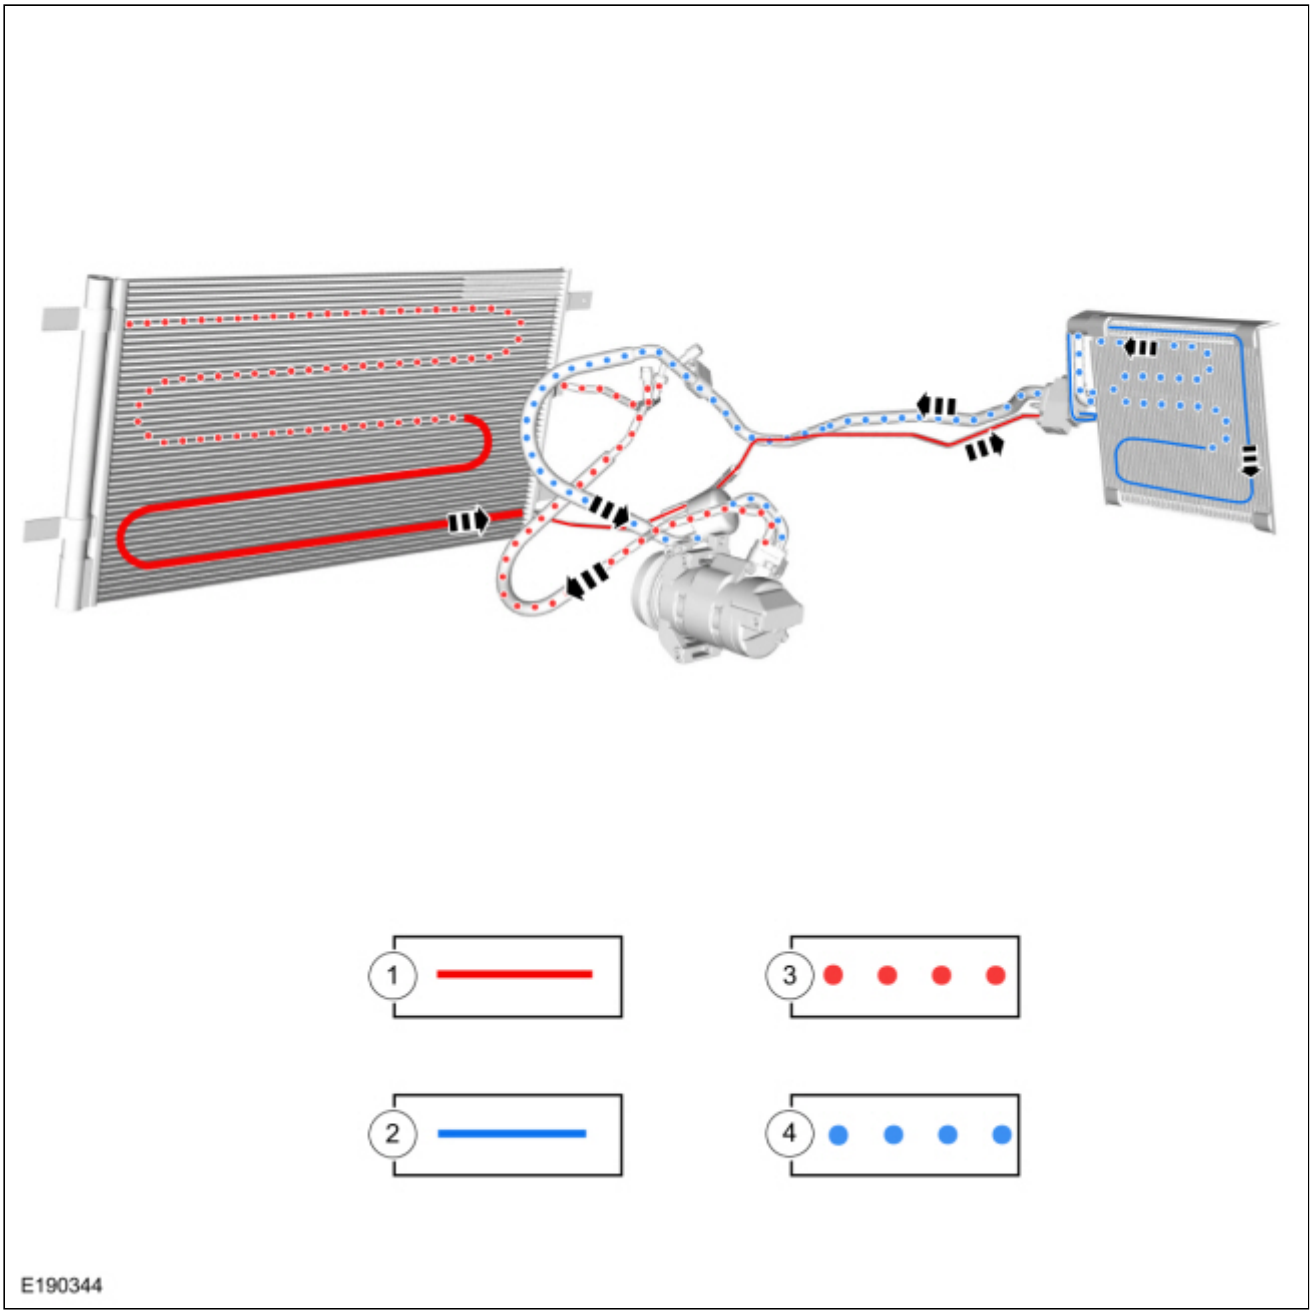
Module Network Input Messages APIM

Broadcast Message	Originating Module	Message Purpose
Climate control button status	FCIM	This message contains the climate control button status.

Module Network Input Messages FCIM

Broadcast Message	Originating Module	Message Purpose
A/C clutch status	PCM	This message contains the status of the A/C compressor clutch.
Ambient air temperature	PCM	This message contains raw value from the ambient air temperature sensor.

Module Network Input Messages PCM



Broadcast Message	Originating Module	Message Purpose
HVAC request	FCIM	This message requests the A/C compressor to be engaged.
Evaporator temperature	FCIM	This message contains the evaporator temperature. The PCM uses the evaporator temperature to determine the A/C compressor output.

The Refrigerant Cycle

For information regarding basic HVAC system refrigerant operation, refer to the current Ford Web Based Technical Training courses. The following diagram shows the refrigerant system state in each component.

The following are characteristics of the EMTC system:

- The PCM controls the A/C clutch relay.
- The evaporator temperature sensor monitors the temperature of the air that has passed through the evaporator core and sends a signal to the PCM. If the temperature of the evaporator core discharge air is low enough to cause the condensed water vapor to freeze, the A/C clutch is disengaged by the PCM.
- The line pressure is monitored so that A/C compressor operation is interrupted if the system pressure becomes too high or too low.
- The A/C compressor relief valve opens and vents refrigerant to relieve unusually high system pressure.

Item	Description
1	High pressure liquid
2	Low pressure liquid
3	High pressure vapor
4	Low pressure vapor

Control System Logic

The EMTC system customer interface is in one or more locations depending on vehicle option content:

- FCIM
- FDIM (part of APIM generation 2 only)

When the customer directly inputs an A/C request into the FCIM, the module sends the request to the GWM over the MS-CAN. The GWM sends the request to the PCM over the HS-CAN1.

SYNC generation 2 only:

When the touchscreen FDIM or voice commands are used, and A/C is selected, the APIM sends the request

message over the HS-CAN3 to the GWM. The GWM sends the message to the FCIM over the MS-CAN and the GWM sends the A/C request to the PCM over the HS-CAN1.

The FCIM requires PMI when it is replaced.

A/C Request

When an A/C request is received by the PCM, the A/C clutch relay is engaged when all of the following conditions are met:

- Excessively high or low refrigerant pressure from the A/C pressure transducer is not detected.
- Ambient air temperature is above approximately °C.
- Evaporator temperature is above approximately 1°C.

The PCM monitors the discharge pressure measured by the A/C pressure transducer. The PCM interrupts A/C compressor operation in the event the A/C pressure transducer indicates high system discharge pressures. It is also used to sense low charge conditions. If the pressure is below a predetermined value for a given ambient temperature, the PCM does not allow the A/C clutch to engage.

Heating and Ventilation

The heating and ventilation system:

- controls the temperature of the air inside the vehicle.
- reduces the relative humidity of the air inside the vehicle (during A/C compressor operation).
- delivers heated or cooled air to maintain the vehicle interior temperature and comfort level.

The heating and ventilation system uses a reheat method to provide conditioned air to the passenger compartment. Temperature blending is controlled by the temperature doors, which regulate the amount of air that flows through and around the heater core, where it is then mixed and distributed. All airflow from the blower motor passes through the A/C evaporator core.

Air Handling

There are 3 door actuators that control the air flow into the passenger compartment:

- Air distribution
- Air inlet
- Temperature

All of the door actuators contain a reversible electric motor and a potentiometer. The potentiometer circuit consists of a 5-volt reference signal connected to one end of a variable resistor, and a signal ground connected to the other. A signal circuit is connected to a contact wiper, which is driven along the variable resistor by the actuator shaft. The signal to the FCIM from the contact wiper indicates the actuator door position. The FCIM powers the actuator motors to move the doors to the desired positions. The desired door positions are calculated by the FCIM based on the requested temperature and ambient air temperature.

When an airflow mode, desired temperature, fresh air, or recirculation mode is selected, the FCIM moves the actuator motor in the desired direction.

The FCIM sends a PWM signal to the blower motor speed control to regulate the blower speed as necessary. The blower motor speed control provides variable ground feed for the blower motor based on the input from the FCIM. A delay function provides a gradual increase or decrease in blower motor speed under all conditions.

OFF

When OFF is selected:

- the recirculated air request button is disabled.
- the air inlet door closes, preventing outside air and allowing only recirculated air.
- the A/C request button is disabled.
- the blower motor is off.

MAX A/C

When MAX A/C is selected:

- the air inlet door closes, preventing outside air and allowing only recirculated air.
- the recirculated air indicator is illuminated (recirculated air forced on).
- the air distribution doors operate simultaneously to direct airflow to the instrument panel registers.
- the temperature door moves to the full cool position. The air temperature is adjustable.
- the A/C button is illuminated.

- the A/C compressor operates if the outside temperature is above approximately °C.
- the blower motor is commanded to the highest speed, but can be manually adjusted if desired.

PANEL

When PANEL mode is selected:

- the recirculated air request button is enabled. If the recirculated air request button is selected (indicator on), the air inlet door closes, preventing outside air from entering the passenger compartment. If the recirculated air request button is not selected (indicator off), the air inlet door opens, allowing only outside air into the passenger compartment.
- the air distribution doors operate simultaneously to direct airflow to the instrument panel registers.
- blended air temperature is available. Only when A/C compressor operation has been selected by pressing the A/C button (indicator on) can the airflow temperature be cooled below the outside air temperature.
- the blower motor is on and the speed is adjustable.

PANEL/FLOOR

When PANEL/FLOOR mode is selected:

- the recirculated air request button is enabled. If the recirculated air request button is selected (indicator on), the air inlet door closes, preventing outside air from entering the passenger compartment. If the recirculated air request button is not selected (indicator off), the air inlet door opens, allowing only outside air into the passenger compartment.
- the air distribution doors operate simultaneously to direct airflow to the floor duct and the instrument panel registers. A small amount of airflow from the side window demisters and defrost duct is present.
- blended air temperature is available. Only when A/C compressor operation has been selected by pressing the A/C button (indicator on) can the airflow temperature be cooled below the outside air temperature.
- the blower motor is on and the speed is adjustable.

FLOOR

When FLOOR mode is selected:

- the recirculated air request button is enabled. If the recirculated air request button is selected (indicator on), the air inlet door closes, preventing outside air from entering the passenger compartment. If the recirculated air request button is not selected (indicator off), the air inlet door opens, allowing only outside air into the passenger compartment.
- the air distribution doors operate simultaneously to direct airflow to the floor duct and the instrument panel registers. A small amount of airflow from the side window demisters and defrost duct is present.
- blended air temperature is available. Only when A/C compressor operation has been selected by pressing the A/C button (indicator on) can the airflow temperature be cooled below the outside air temperature.
- the blower motor is on and the speed is adjustable.

FLOOR/DEFROST

When FLOOR/DEFROST mode is selected:

- the recirculated air request button is enabled. If the recirculated air request button is selected (indicator on), the air inlet door closes, preventing outside air from entering the passenger compartment. If the recirculated air request button is not selected (indicator off), the air inlet door opens, allowing only outside air into the passenger compartment.
- the air distribution doors operate simultaneously to direct airflow to the floor duct and the instrument panel registers. A small amount of airflow from the side window demisters and defrost duct is present.
- blended air temperature is available. Only when A/C compressor operation has been selected by pressing the A/C button (indicator on) can the airflow temperature be cooled below the outside air temperature.
- the blower motor is on and the speed is adjustable.

DEFROST

When DEFROST mode is selected:

- the recirculated air request button is disabled. The air inlet door opens, allowing only outside air into the passenger compartment.
- the air distribution doors operate simultaneously to direct airflow to the floor duct and the instrument panel registers. A small amount of airflow from the side window demisters and defrost duct is present.
- the A/C is turned on in defrost mode. The A/C compressor operates as long as the outside temperature is above approximately °C.
- blended air temperature is available.
- the blower motor is on and the speed is adjustable.

MAX DEFROST

When MAX DEFROST mode is selected:

- the recirculated air request button is disabled. The air inlet door opens, allowing only outside air into the passenger compartment.
- the air distribution doors operate simultaneously to direct airflow to the floor duct and the instrument panel registers. A small amount of airflow from the side window demisters and defrost duct is present.
- the A/C is turned on in defrost mode. The A/C compressor operates as long as the outside temperature is above approximately °C.
- the temperature is set to the highest setting and is **not** adjustable.
- the fan is set to the highest speed and is **not** adjustable.

Remote Start

Remote start is an optional feature. In addition to being able to start the vehicle remotely, the remote start feature also utilizes other vehicle systems to increase the level of comfort to the vehicle occupants upon entering the vehicle. Additional information on the remote start feature and the other vehicle systems, refer to the Owner's Literature.

When the factory remote start feature is used, the EMTC system runs at the setting it was set to when the vehicle was last turned off. You cannot adjust the climate control system during remote start operation. Turn the ignition on to return the system to its previous settings.

Component Description

FCIM - Electronic Manual Temperature Control (EMTC)

The EMTC system uses the FCIM as the HVAC control module. The FCIM also controls the outputs for rear window defrost and climate controlled seats. For details on the FCIM communication, refer to Control System Logic in this section.

The FCIM utilizes a Field-Effect Transistor (FET) protective circuit strategy for its actuator outputs. Output load (current level) is monitored for excessive current (typically short circuits) and is shut down (turns off the voltage or ground provided by the module) when a fault event is detected. A short circuit DTC is stored at the fault event and a cumulative counter is started.

When the demand for the output is no longer present, the module resets the Field-Effect Transistor (FET) circuit protection to allow the circuit to function. The next time the driver requests a circuit to activate that has been shut down by a previous short (Field-Effect Transistor (FET) protection) and the circuit is still shorted, the Field-Effect Transistor (FET) protection shuts off the circuit again and the cumulative counter advances.

When the excessive circuit load occurs often enough, the module shuts down the output until a repair procedure is carried out. The Field-Effect Transistor (FET) protected circuit has 3 predefined levels of short circuit tolerance based on the harmful effect of each circuit fault on the Field-Effect Transistor (FET) and the ability of the Field-Effect Transistor (FET) to withstand it. A module lifetime level of fault events is established based upon the durability of the Field-Effect Transistor (FET). If the total tolerance level is determined to be 600 fault events, the 3 predefined levels would be 200, 400 and 600 fault events.

When each tolerance level is reached, the short circuit DTC that was stored on the first failure cannot be cleared by a command to clear the Diagnostic Trouble Codes (DTCs). The module does not allow the DTC to be cleared or the circuit to be restored to normal operation until a successful self-test proves that the fault has been repaired. After the self-test has successfully completed (no on-demand Diagnostic Trouble Codes (DTCs) present), DTC U1000:00 and the associated DTC (the DTC related to the shorted circuit) automatically clears and the circuit function returns.

When each level is reached, the DTC associated with the short circuit sets along with DTC U1000:00. These Diagnostic Trouble Codes (DTCs) can be cleared using the diagnostic scan tool. The module never resets the fault event counter to zero and continues to advance the fault event counter as short circuit fault events occur.

If the number of short circuit fault events reach the third level, then Diagnostic Trouble Codes (DTCs) U1000:00 and U3000:49 set along with the associated short circuit DTC. DTC U3000:49 cannot be cleared and a new module must be installed after the repair.

The FCIM requires PMI when it is replaced.

Ambient Air Temperature (AAT) Sensor

The Ambient Air Temperature (AAT) sensor is an input to the PCM. If the outside air temperature is below approximately 0°C (32°F), the PCM does not allow the A/C compressor clutch to engage.

Evaporator Core

The evaporator core is an aluminum plate/fin type and is located in the heater core and evaporator core housing. A mixture of liquid refrigerant and oil enters the bottom of the evaporator through the evaporator inlet tube and continues out of the evaporator through the evaporator outlet tube as a vapor. During A/C compressor operation, airflow from the blower motor is cooled and dehumidified as it flows through the evaporator fins.

Heater Core

The heater core consists of fins and tubes arranged to extract heat from the engine coolant and transfer it to air passing through the heater core.

Heater Core and Evaporator Core Housing

The heater core and evaporator core housing directs airflow from the blower motor through the evaporator core and heater core. All airflow from the blower motor passes through the evaporator core. The airflow is then directed through or around the heater core by the temperature door(s). After passing through the heater core, the airflow is distributed to the selected outlet by the airflow mode doors.

In-Vehicle Temperature And Humidity Sensor

The in-vehicle temperature and humidity sensor contains a thermistor and a sensing element which separately measures the in-vehicle air temperature and the humidity, then sends those readings to the FCIM. The in-vehicle temperature and humidity sensor has an electric fan within the sensor that draws in-vehicle air across the two sensing elements. The FCIM may adjust the air inlet door based on the in-vehicle temperature and humidity sensor information to maintain the desired humidity of the passenger cabin air.

Air Discharge Temperature Sensors

There are 2 air discharge temperature sensors in the EMTC system:

- Driver side footwell air discharge temperature sensor
- Driver side center register air discharge temperature sensor

The air discharge temperature sensors contain a thermistor and are inputs to the FCIM. The sensors vary their resistance with the temperature. As the temperature rises, the resistance falls. As the temperature falls, the resistance rises. The FCIM uses the sensor information to maintain the desired temperature of the passenger cabin air.

Defrost Vent/Register Door Actuator

The defrost vent/register door actuator contains a reversible electric motor and a potentiometer. The potentiometer allows the FCIM to monitor the position of the airflow mode door.

Air Inlet Door Actuator

The air inlet door actuator contains a reversible electric motor and a potentiometer. The potentiometer allows the FCIM to monitor the position of the airflow mode door. The FCIM drives the actuator motor in the direction necessary to move the door to the position set by the recirculation button and when the MAX A/C, Defrost or MAX Defrost buttons are selected.

Temperature Door Actuator

The EMTC system has one temperature door actuator located on the top of the heater core and evaporator core housing. The temperature door actuator contains a reversible electric motor and potentiometer. The potentiometer allows the FCIM to monitor the position of the temperature door.

Evaporator Temperature Sensor

The evaporator temperature sensor contains a thermistor. The sensor varies its resistance with the temperature. As the temperature rises, the resistance falls. As the temperature falls, the resistance rises. The evaporator temperature sensor is an input to the FCIM and the information is relayed to the PCM over the CAN. If the evaporator temperature is below approximately 1°C (33.8°F), the PCM does not allow the A/C compressor to operate.

A/C Pressure Transducer

The PCM monitors the discharge pressure measured by the A/C pressure transducer. As the refrigerant pressure changes, the resistance of the A/C pressure transducer changes. It is not necessary to recover the refrigerant before removing the A/C pressure transducer.

Condenser

The A/C condenser is an aluminum fin-and-tube design heat exchanger. It cools compressed refrigerant gas by allowing air to pass over fins and tubes to extract heat, and condenses gas to liquid refrigerant as it is cooled.

Receiver Drier

The receiver drier stores high-pressure liquid. The desiccant bag mounted inside the receiver drier removes any retained moisture from the refrigerant. The receiver drier desiccant bag is a separate component and can be removed and installed separately from the condenser.

Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC)

DTC Chart: Front Controls Interface Module (FCIM) - Electronic Manual Temperature Control (EMTC)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Network Diagnostic Trouble Codes (DTCs) (U-codes) are often a result of intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures, such as module reprogramming, often set network Diagnostic Trouble Codes (DTCs). Replacing a module to resolve a network DTC is unlikely to resolve the concern. To prevent repeat network DTC concerns, inspect all network wiring, especially connectors. Test the vehicle battery.
REFER to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
and REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).

FCIM - Electronic Manual Temperature Control (EMTC) DTC CHART

DTC	Description	Action
B105A:12	Cabin Temperature Sensor Fan: Circuit Short To Battery	GO to Pinpoint Test O
B105A:14	Cabin Temperature Sensor Fan: Circuit Short To Ground or Open	GO to Pinpoint Test O
B1081:07	Left Temperature Damper Motor: Mechanical Failure	INSPECT for a binding or damaged linkage or door. REPAIR as necessary. If no condition is found, INSTALL a new temperature door actuator. RHD refer to REFER to: Temperature Door Actuator RH - RHD 4WD/RHD RWD (412-00 Climate Control System - General Information, Removal and Installation). LHD refer to REFER to: Temperature Door Actuator RH - LHD 4WD/LHD RWD (412-00 Climate Control System - General Information, Removal and Installation).
B1081:11	Left Temperature Damper Motor: Circuit Short To Ground	GO to Pinpoint Test I
B1081:12	Left Temperature Damper Motor: Circuit Short To Battery	GO to Pinpoint Test I
B1081:13	Left Temperature Damper Motor: Circuit Open	GO to Pinpoint Test I
B1083:07	Recirculation Damper Motor: Mechanical Failure	INSPECT for a binding or damaged linkage or door. REPAIR as necessary. If no condition is found, INSTALL a new air inlet door actuator. REFER to: Air Inlet Door Actuator (412-00 Climate Control System - General Information, Removal and Installation).
B1083:11	Recirculation Damper Motor: Circuit Short To Ground	GO to Pinpoint Test D
B1083:12	Recirculation Damper Motor: Circuit Short To	GO to Pinpoint Test D

	Battery	
B1083:13	Recirculation Damper Motor: Circuit Open	GO to Pinpoint Test D
B1086:07	Air Distribution Damper Motor: Mechanical Failure	INSPECT for a binding or damaged linkage or door. REPAIR as necessary. If no condition is found, INSTALL a new air distribution door actuator. RHD refer to REFER to: Air Distribution Door Actuator (412-00 Climate Control System - General Information, Removal and Installation). LHD refer to REFER to: Air Distribution Door Actuator (412-00 Climate Control System - General Information, Removal and Installation).
B1086:11	Air Distribution Damper Motor: Circuit Short To Ground	GO to Pinpoint Test E
B1086:12	Air Distribution Damper Motor: Circuit Short To Battery	GO to Pinpoint Test E
B1086:13	Air Distribution Damper Motor: Circuit Open	GO to Pinpoint Test E
B10AF:11	Blower Fan Relay: Circuit Short To Ground	GO to Pinpoint Test J
B10AF:15	Blower Fan Relay: Circuit Short To Battery or Open	• For an inoperative blower motor, GO to Pinpoint Test J • For all other blower motor symptoms, GO to Pinpoint Test K
B10B3:11	Right Panel Air Discharge Temperature: Circuit Short To Ground	GO to Pinpoint Test P
B10B3:15	Right Panel Air Discharge Temperature: Circuit Short To Battery or Open	GO to Pinpoint Test P
B10B4:11	Right Floor Air Discharge Temperature: Circuit Short To Ground	GO to Pinpoint Test P
B10B4:15	Right Floor Air Discharge Temperature: Circuit Short To Battery or Open	GO to Pinpoint Test P
B10B5:11	Left Panel Air Discharge Temperature: Circuit Short To Ground	GO to Pinpoint Test P
B10B5:15	Left Panel Air Discharge Temperature: Circuit Short To Battery or Open	GO to Pinpoint Test P
B10B6:11	Left Floor Air Discharge Temperature: Circuit Short To	GO to Pinpoint Test P

	Ground	
B10B6:15	Left Floor Air Discharge Temperature: Circuit Short To Battery or Open	GO to Pinpoint Test P
B10B8:63	Push Buttons: Circuit / Component Protection Time-Out	This DTC sets when the buttons are held too long. ATTEMPT to clean buttons. CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test. If the DTC returns, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
B10B9:12	Blower Control: Circuit Short To Battery	GO to Pinpoint Test J
B10B9:14	Blower Control: Circuit Short To Ground or Open	• For an inoperative blower motor, GO to Pinpoint Test J • For all other blower motor symptoms, GO to Pinpoint Test K
B11E5:11	Left HVAC Damper Position Sensor: Circuit Short To Ground	GO to Pinpoint Test I
B11E5:15	Left HVAC Damper Position Sensor: Circuit Short To Battery or Ground	GO to Pinpoint Test I
B11E7:11	Air Distribution Damper Position Sensor: Circuit Short To Ground	GO to Pinpoint Test E
B11E7:15	Air Distribution Damper Position Sensor: Circuit Short To Battery or Open	GO to Pinpoint Test E
B11F0:11	Air Intake Damper Position Sensor: Circuit Short To Ground	GO to Pinpoint Test D
B11F0:15	Air Intake Damper Position Sensor: Circuit Short To Battery or Open	GO to Pinpoint Test D
B1A61:11	Cabin Temperature Sensor: Circuit Short To Ground	GO to Pinpoint Test O
B1A61:15	Cabin Temperature Sensor: Circuit Short To Battery or Open	GO to Pinpoint Test O
B1A69:11	Humidity Sensor: Circuit Short To Ground	GO to Pinpoint Test O
B1A69:15	Humidity Sensor: Circuit Short To Battery or Open	GO to Pinpoint Test O
B1B71:11	Evaporator Temperature Sensor: Circuit Short To Ground	GO to Pinpoint Test L
B1B71:15	Evaporator	GO to Pinpoint Test L

	Temperature Sensor: Circuit Short To Battery or Open	
C1B14:11	Sensor Supply Voltage A: Circuit Short To Ground	GO to Pinpoint Test M
C1B14:12	Sensor Supply Voltage A: Circuit Short To Battery	GO to Pinpoint Test M
All Other FCIM Diagnostic Trouble Codes (DTCs) not listed in this chart	—	Refer to the appropriate section in Group 415 for the procedure.

DTC Chart: Powertrain Control Module (PCM)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Powertrain Control Module (PCM) DTC Chart

DTC	Description	Action
P0532	A/C Refrigerant Pressure Sensor “A” Circuit Low	GO to Pinpoint Test A
P0533	A/C Refrigerant Pressure Sensor “A” Circuit High	GO to Pinpoint Test A
P0645	A/C Clutch Relay Control Circuit	GO to Pinpoint Test B
P0646	A/C Clutch Relay Control Circuit Low	GO to Pinpoint Test B
P0647	A/C Clutch Relay Control Circuit High	GO to Pinpoint Test B
P1464	A/C Demand Out Of Self Test Range	If the HVAC selector was not powered off, POWER the HVAC off, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test. If the DTC returns, GO to Pinpoint Test H
P193E	A/C Clutch Request Signal	GO to Pinpoint Test N
All Other PCM Diagnostic Trouble Codes (DTCs)	—	• For 2.5L Duratec-HE (122kW/165PS) - MI4 PCM DTC Chart, REFER to: Electronic Engine Controls (303-14A) . • For 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - PumaPCM DTC Chart, REFER to: Electronic Engine Controls (303-14B) . • For 3.2L Duratorq-TDCi (148kW/200PS) - Puma PCM DTC Chart, REFER to: Electronic Engine Controls (303-14C) .

Symptom Chart(s)

Symptom Chart: Climate Control - Electronic Manual Temperature Control (EMTC)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.

REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
A module does not communicate with the diagnostic scan tool	• Fuse(s) • Wiring, terminals or connectors • FCIM	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
Unable To Duplicate The Customer Concern And No Diagnostic Trouble Codes (DTCs) Present	Refer to Pinpoint Test	GO to Pinpoint Test C
Reduced outlet airflow	Plugged cabin air filter	INSPECT the cabin air filter. REFER to: Cabin Air Filter (412-00 Climate Control System - General Information, Removal and Installation). If OK, DIAGNOSE for low refrigerant charge, A/C always commanded on or blower motor not operating correctly.
	Improper refrigerant level	CARRY OUT the refrigerant system tests. REFER to: Refrigerant System Tests - Manual Transmission (412-00 Climate Control System - General Information, General Procedures). If refrigerant charge is OK, GO to Pinpoint Test H
	Blower motor	GO to Pinpoint Test K
The air inlet door is inoperative	Refer to Pinpoint Test	GO to Pinpoint Test D
Incorrect or erratic direction of airflow from outlets	Refer to Pinpoint Test	GO to Pinpoint Test E
Insufficient, erratic or no heat	Refer to Pinpoint Test	GO to Pinpoint Test F
The A/C is inoperative	Refer to Pinpoint Test	GO to Pinpoint Test G
The A/C is always on — A/C mode always commanded ON	Refer to Pinpoint Test	GO to Pinpoint Test H
Temperature control is inoperative/does not operate correctly	Refer to Pinpoint Test	GO to Pinpoint Test I
The blower motor is inoperative	Refer to Pinpoint Test	GO to Pinpoint Test J
The blower motor does not operate correctly	Refer to Pinpoint Test	GO to Pinpoint Test K
Insufficient A/C cooling	Improper refrigerant level	CARRY OUT the refrigerant system tests. REFER to: Refrigerant System Tests - Manual Transmission (412-00 Climate Control System - General Information, General Procedures). If OK, DIAGNOSE for a temperature door actuator not operating correctly.
	Temperature door actuator	GO to Pinpoint Test I
A/C pressure relief valve discharging	A/C pressure relief valve	• CHECK the high side system pressure. REFER to: Specifications (412-00 Climate Control System - General Information, Specifications). If the pressure is below the A/C pressure relief valve

		open pressure, INSTALL a new A/C Compressor. • REFER to: Air Conditioning (A/C) Compressor - 2.5L Duratec-HE (122kW/165PS) - MI4 (412-00 Climate Control System - General Information, Removal and Installation). • REFER to: Air Conditioning (A/C) Compressor - 2.2L Duratorq-TDCi (Puma) Diesel (412-00 Climate Control System - General Information, Removal and Installation). • REFER to: Air Conditioning (A/C) Compressor - 3.2L Duratorq-TDCi (Puma) Diesel (412-00 Climate Control System - General Information, Removal and Installation).
	High system pressure	CHECK the high side system pressure. REFER to: Specifications (412-00 Climate Control System - General Information, Specifications). If the system pressure is above the A/C pressure relief valve open pressure, REPAIR the A/C system for a restriction.
Climate control does not operate only when remote start is used	• IPC information display settings • Non-Ford approved remote start system installed	• VERIFY Remote Start - Message Center Set To Auto, or Remote Start - Message Center Set To Last User Settings. REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). • VERIFY module communications network operation. DIAGNOSE Diagnostic Trouble Codes (DTCs) if present.

Symptom Chart: Noise, Vibration, and Harshness (NVH)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
Noisy A/C compressor	A/C compressor bearing worn	• INSPECT the A/C compressor bearing for roughness. If bearing roughness is found, INSTALL a new A/C Compressor. • REFER to: Air Conditioning (A/C) Compressor - 2.5L Duratec-HE (122kW/165PS) - MI4 (412-00 Climate Control System - General Information, Removal and Installation). • REFER to: Air Conditioning (A/C) Compressor - 2.2L Duratorq-TDCi (Puma) Diesel (412-00 Climate Control System - General Information, Removal and Installation). • REFER to: Air Conditioning (A/C) Compressor - 3.2L Duratorq-TDCi (Puma) Diesel (412-00 Climate Control System - General Information, Removal and Installation).
Excessive hissing from the plenum when the A/C is on	Incorrect A/C refrigerant level	CHECK the A/C refrigerant level. REFER to: Refrigerant System Tests - Manual Transmission (412-00 Climate Control System - General Information, General Procedures).

Pinpoint Test(s)

P0532, P0533

Refer to Wiring Diagrams Cell 54 for schematic and connector information.

Normal operation and Fault Conditions

The A/C pressure transducer receives a ground from the PCM. A 5-volt reference voltage is supplied to the A/C pressure transducer from the PCM. The A/C pressure transducer then sends a voltage to the PCM to indicate the A/C pressure.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0532	A/C Refrigerant Pressure Sensor "A" Circuit Low	This DTC sets if the feedback voltage is less than 0.26 volt for at least 2 seconds and the ambient air temperature is greater than 0°C (32°F).
P0533	A/C Refrigerant Pressure Sensor "A" Circuit High	This DTC sets if the feedback voltage is greater than 4.95 volts for at least 2 seconds and the ambient air temperature is greater than 0°C (32°F).

Possible Sources

- Wiring, terminals or connectors
- A/C pressure transducer
- PCM

Visual Inspection and Diagnostic Pre-checks

- Inspect for loose or corroded PCM and A/C pressure transducer connections.

PINPOINT TEST A : P0532, P0533

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

A1 COMPARE THE PCM (POWERTRAIN CONTROL MODULE) PRESSURE SENSOR (ACP_PRESS) PID (PARAMETER IDENTIFICATION) WITH THE MANIFOLD GAUGE SET READINGS

- Allow the A/C system to stabilize to the outside ambient temperature.
- Ignition ON.
- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- With the manifold gauge set connected, compare the pressure readings of the manifold gauge set and the PCM ACP_PRESS PID.

Are the pressure values of the manifold gauge set and the ACP_PRESS PCM PID within ± 103 kPa (15 psi)?

Yes	IGNORE the Diagnostic Trouble Codes (DTCs). REFER to the Symptom Chart in this section.
No	GO to A2

A2 CHECK THE A/C (AIR CONDITIONING) PRESSURE SENSOR CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect PCM, 2.2L Duratorq-TDCi (Puma) Diesel C1232A, 3.2L Duratorq-TDCi (Puma) DieselC1232B, 2.5L Duratec-HEC175.
- Disconnect A/C pressure transducer C1260.

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1260-1	V	Ground
C1260-2	V	Ground
C1260-3	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to A3

A3 CHECK THE A/C (AIR CONDITIONING) PRESSURE SENSOR CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1260-1	Ω	Ground
C1260-2	Ω	Ground
C1260-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A4
No	REPAIR the circuit.

A4 CHECK THE A/C (AIR CONDITIONING) PRESSURE SENSOR CIRCUITS FOR AN OPEN

- Measure:

2.5L Duratec

Positive Lead	Measurement / Action	Negative Lead
C1260-1	Ω	C175-40
C1260-2	Ω	C175-16
C1260-3	Ω	C175-28

2.2L Duratorq Puma-Diesel

Positive Lead	Measurement / Action	Negative Lead
C1260-1	Ω	C1232-23
C1260-2		C1232-50

	Ω	
C1260-3	Ω	C1232-32

3.2L Duratorq Puma-Diesel

Positive Lead	Measurement / Action	Negative Lead
C1260-1	Ω	C1232-23
C1260-2	Ω	C1232-50
C1260-3	Ω	C1232-32

Are the resistances less than 3 ohms?

Yes	GO to A5
No	REPAIR the circuit.

A5 CHECK THE A/C (AIR CONDITIONING) PRESSURE SENSOR CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1260-1	Ω	C1260-2
C1260-1	Ω	C1260-3
C1260-2	Ω	C1260-3

Are the resistances greater than 10,000 ohms?

Yes	INSTALL a new A/C pressure transducer. REFER to: Air Conditioning (A/C) Pressure Transducer (412-00 Climate Control System - General Information, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to A6
No	REPAIR the circuits.

A6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM.

	For 2.5L Duratec-HE (122kW/165PS)-MI4, REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). For 2.2L Duratorq-TDCi (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2L Duratorq-TDCi (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

P0645, P0646, P0647

Refer to Wiring Diagrams Cell 54 for schematic and connector information.

Normal Operation and Fault Conditions

Voltage is provided to the A/C clutch relay. When A/C is requested and A/C line pressures allow, a ground is provided to the A/C clutch relay coil from the PCM, energizing the A/C clutch relay.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0645	A/C Clutch Relay Control Circuit	This DTC sets when the PCM grounds the relay circuit and more voltage than expected is detected on the relay circuit. This DTC also sets when the relay circuit is off and no voltage is detected on the relay circuit. The PCM expects to detect voltage coming through the relay coil to the relay circuit when it is not grounding it.
P0646	A/C Clutch Relay Control Circuit Low	This DTC sets when the relay circuit is off and no voltage is detected on the relay circuit. The PCM expects to detect voltage coming through the relay coil to the relay circuit when it is not grounding it.
P0647	A/C Clutch Relay Control Circuit High	This DTC sets when the PCM grounds the relay circuit and more voltage than expected is detected on the relay circuit.

Possible Sources

- Wiring, terminals or connectors
- A/C clutch relay
- PCM

Visual Inspection and Diagnostic Pre-checks

- Inspect BJB fuses 24 (10A).

PINPOINT TEST B : P0645, P0646, P0647

NOTICE: Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.
B1 CHECK THE VOLTAGE TO THE A/C (AIR CONDITIONING) CLUTCH RELAY VOLTAGE SUPPLY CIRCUIT

- Ignition OFF.
- Disconnect A/C clutch relay.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 1		Ground

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 3		Ground

Are the voltages greater than 11 volts?

Yes	GO to B2
No	VERIFY BJB fuse 24 (10A) are OK. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. If OK, REPAIR the circuit.

B2 CHECK THE A/C (AIR CONDITIONING) CLUTCH RELAY

- Carry out the component test on the A/C clutch relay.
  Refer to Wiring Diagrams Cell 149 for schematic and connector information.

Did the relay pass the component test?

Yes	GO to B3
No	INSTALL a new A/C clutch relay.

B3 CHECK THE A/C (AIR CONDITIONING) CLUTCH RELAY CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect A/C clutch relay.
- Disconnect PCM, C1752.5L, 2.2LC1232A, 3.2L C1232B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 2		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to B4

B4 CHECK THE A/C (AIR CONDITIONING) CLUTCH RELAY CONTROL CIRCUIT FOR A SHORT TO

GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B5
No	REPAIR the circuit.

B5 CHECK THE A/C (AIR CONDITIONING) CLUTCH RELAY CONTROL CIRCUIT FOR AN OPEN

- Measure:

2.5L Duratec

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 2	Ω	C175-25

2.2L Duratorq Puma-Diesel

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 2	Ω	C1232-49

3.2L Duratorq Puma-Diesel

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 2	Ω	C1232-49

Is the resistance less than 3 ohms?

Yes	GO to B6
No	REPAIR the circuit.

B6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary

- Reconnect all PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.5L Duratec-HE (122kW/165PS)-MI4, REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). For 2.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

Unable To Duplicate The Customer Concern And No Diagnostic Trouble Codes (DTCs) Present

This diagnostic procedure tests the functions of the HVAC system and identifies the correct HVAC symptom pinpoint test.

Normal Operation and Fault Conditions

System Operation
REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation).

PINPOINT TEST C : UNABLE TO DUPLICATE THE CUSTOMER CONCERN AND NO DIAGNOSTIC TROUBLE CODES (DTCS) PRESENT

C1 CHECK THE PCM (POWERTRAIN CONTROL MODULE) FOR DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform PCM self-test.

Are any climate control related Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the PCM DTC chart in this section.
No	GO to C2

C2 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) FOR DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform FCIM self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the FCIM DTC chart in this section.
No	GO to C3

C3 CHECK THE BLOWER MOTOR OPERATION

- Ignition ON.
- Select panel mode.
- Observe blower motor operation and select each blower motor speed.

Does the blower motor operate in all ranges?

Yes	GO to C4
No	If the blower motor does not operate in any setting, GO to Pinpoint Test J If the blower motor does not correctly change speeds or shut off, GO to Pinpoint Test K

C4 CHECK AIRFLOW OPERATION

- Select the highest blower motor setting.
- While observing the airflow, select each of the airflow positions (panel, panel/floor, floor, floor/defrost, defrost).

Is the airflow directed to the correct outlets?

Yes	GO to C5
No	GO to Pinpoint Test E

C5 VERIFY TEMPERATURE CONTROL OPERATION

- Start the vehicle and allow it to reach normal operating temperature.
- With the A/C off, select panel mode.
- Change the temperature setting from the coldest to the warmest and back to the coldest.

Does the temperature change between very warm to cool?

Yes	GO to C6
No	If the temperature does not get very warm, GO to Pinpoint Test F If the temperature does not change at all, GO to Pinpoint Test I

C6 VERIFY THE AIR CONDITIONING COMPRESSOR DOES NOT ENGAGE WITH A/C (AIR CONDITIONING) OFF

- With the engine running and the A/C off, select panel mode.
- Select the coldest temperature setting.

Is the outlet temperature close to ambient air temperature?

Yes	GO to C7
No	If the temperature is warmer than ambient air temperature, GO to Pinpoint Test I If the outlet temperature is significantly colder than ambient air temperature and the A/C compressor clutch is engaged, GO to Pinpoint Test H

C7 VERIFY THE A/C (AIR CONDITIONING) COMPRESSOR IS OPERATIONAL IN THE A/C (AIR CONDITIONING) MODE

- Make sure the ambient air temperature is above 0°C (32°F).
- With the engine running, select panel mode.
- Press the A/C button (indicator on).

Is the A/C compressor operational when the panel and A/C button (indicator on) is pressed?

Yes	GO to C8
No	GO to Pinpoint Test G

C8 CHECK THE RECIRCULATED AIR OPERATION

- With the engine running, press the recirculated air button (indicator off).
- Select panel mode.
- Select the highest blower motor setting.
- Observe airflow noise.
- Press the recirculated air button (indicator on).

Does the airflow noise increase when the recirculated air mode is selected (indicator on)?

Yes	GO to C9
No	GO to Pinpoint Test D

C9 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) LEFT DISCHARGE FLOOR TEMPERATURE (LDFTEMP) PID (PARAMETER IDENTIFICATION) (IF EQUIPPED)

- Using a diagnostic scan tool, view the FCIM Parameter Identifications (PIDs).
- Monitor the LDFTEMP PID.

Is the temperature coming out of the driver footwell vent similar to the PID?

Yes	GO to C10
No	GO to Pinpoint Test P

C10 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) LEFT DISCHARGE PANEL TEMPERATURE (LDPT) PID (PARAMETER IDENTIFICATION) (IF EQUIPPED)

- Using a diagnostic scan tool, view the FCIM Parameter Identifications (PIDs).
- Monitor the LDPT PID.

Is the temperature coming out of the driver side register similar to the PID?

Yes	GO to C12
No	GO to Pinpoint Test P

C11 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) DISCHARGE AIR TEMPERATURE, RIGHT PANEL (AIRTEMP_RP) PID (PARAMETER IDENTIFICATION) (IF EQUIPPED)

- Using a diagnostic scan tool, view the FCIM Parameter Identifications (PIDs).
- Monitor the AIRTEMP_RP PID.

Is the temperature coming out of the passenger side register similar to the PID?

Yes	GO to C12
No	GO to Pinpoint Test P

C12 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) INTERIOR TEMPERATURE SENSOR (INT_TEMP) PID (PARAMETER IDENTIFICATION) (IF EQUIPPED)

- Using a scan tool view the FCIM Parameter Identifications (PIDs).
- Monitor the INT_TEMP PID.

Is the air temperature at the cabin temperature sensor similar to the PID?

Yes	The system is operating correctly.
No	GO to Pinpoint Test O

The Air Inlet Door Is Inoperative

Refer to Wiring Diagrams Cell 54 for schematic and connector information.

Normal Operation and Fault Conditions

To rotate the air inlet door actuator, the FCIM supplies voltage and ground to the air inlet door actuator through the door actuator motor circuits. To reverse the air inlet door actuator rotation, the FCIM reverses the voltage and ground circuits. The air inlet door actuator feedback resistors are supplied a ground from the FCIM by the air inlet door actuator return circuits and a 5-volt reference voltage on the air inlet door actuator reference circuits. The FCIM uses the actuator feedback resistor wiper arm position and the voltage on the air distribution door actuator feedback circuits to determine the air inlet door actuator position.

During an actuator calibration cycle, the FCIM drives the air inlet door until the door reaches both internal stops in the FCIM case. If the air inlet door is temporarily obstructed or binding during a calibration cycle, the FCIM may interpret this as the actual end of travel for the door. When this condition occurs and the FCIM commands the actuator to its end of travel, the air intake may not be from the expected source.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1083:11	Recirculation Damper Motor: Circuit Short To Ground	This DTC sets when the module senses lower than expected voltage on an actuator motor circuit when voltage is applied to drive the motor, indicating a short to ground. The motor can move only in one direction.
B1083:12	Recirculation Damper Motor: Circuit Short To Battery	This DTC sets when the module senses higher than expected voltage on the actuator motor circuit when ground is applied to drive the motor, indicating a short to voltage. The motor can move only in one direction.
B1083:13	Recirculation Damper Motor: Circuit Open	This DTC sets when the module senses no voltage on the actuator motor circuit when ground is applied to drive the motor, indicating an open circuit. The motor cannot move.
B11F0:11	Air Intake Damper Position Sensor: Circuit Short to Ground	This DTC sets when the module senses less than 1 volt on the actuator feedback circuit, indicating a short to ground.
B11F0:15	Air Intake Damper Position Sensor: Circuit Short to Battery or Open	This DTC sets when the module senses greater than 5 volts on the actuator feedback circuit, indicating a short to voltage. This DTC sets when the module senses no voltage on the actuator feedback circuit, indicating an open circuit.

Possible Sources

- Wiring, terminals or connectors
- Air inlet door actuator
- Air inlet door binding or stuck
- FCIM

PINPOINT TEST D : THE AIR INLET DOOR IS INOPERATIVE

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

D1 CHECK THE AIR INLET DOOR ACTUATOR CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect FCIM C2402A.
- Disconnect FCIM C2402B.
- Disconnect RH temperature door actuator C2092.
- Disconnect Defrost vent/register door actuatorC232.
- Disconnect In vehicle temperature and humidity sensor C2247.
- Disconnect Air inlet door actuator C282.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C282-6	V	Ground
C282-5	V	Ground
C282-4	V	Ground
C282-3	V	Ground
C282-7	V	Ground

Is there any voltage present?

Yes	REPAIR the circuit.
No	GO to D2

D2 CHECK THE AIR INLET DOOR ACTUATOR CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C282-6	Ω	Ground
C282-5	Ω	Ground
C282-4	Ω	Ground
C282-3	Ω	Ground
C282-7	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to D3
No	REPAIR the circuit.

D3 CHECK THE AIR INLET DOOR ACTUATOR CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C282-6	Ω	C2402A-2
C282-5	Ω	C2402A-16

C282-4	Ω	C2402A-3
C282-3	Ω	C2402A-25
C282-7	Ω	C2402A-24

Are the resistances less than 3 ohms?

Yes	GO to D4
No	REPAIR the circuit.

D4 CHECK THE AIR INLET DOOR ACTUATOR CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C282-6	Ω	C282-5
C282-6	Ω	C282-4
C282-6	Ω	C282-3
C282-6	Ω	C282-7
C282-5	Ω	C282-4
C282-5	Ω	C282-3
C282-5	Ω	C282-7
C282-4	Ω	C282-3
C282-4	Ω	C282-7
C282-3	Ω	C282-7

Are the resistances greater than 10,000 ohms?

Yes	INSTALL a new air inlet door actuator. REFER to: Air Inlet Door Actuator (412-00 Climate Control System - General Information, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to D5
No	REPAIR the circuit.

D5 CHECK FOR CORRECT FRONT CONTROLS INTERFACE MODULE OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the

	appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

Incorrect Or Erratic Direction Of Airflow From Outlets

Refer to Wiring Diagrams Cell 54 for schematic and connector information.

Normal Operation and Fault Conditions

To rotate the air distribution door actuator, the FCIM supplies voltage and ground to the air distribution door actuator through the door actuator motor circuits. To reverse the air distribution door actuator rotation, the FCIM reverses the voltage and ground circuits. The air distribution door actuator feedback resistors are supplied a ground from the FCIM by the air distribution door actuator return circuits and a 5-volt reference voltage on the air distribution door actuator reference circuits. The FCIM uses the actuator feedback resistor wiper arm position and the voltage on the air distribution door actuator feedback circuits to determine the air distribution door actuator position.

During an actuator calibration cycle, the FCIM drives the air distribution door until the door reaches both internal stops in the FCIM case. If the air distribution door is temporarily obstructed or binding during a calibration cycle, the FCIM may interpret this as the actual end of travel for the door. When this condition occurs and the FCIM commands the actuator to its end of travel, the airflow may not be from the expected outlets.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1086:11	Air Distribution Damper Motor: Circuit Short to Ground	This DTC sets when the module senses lower than expected voltage on an actuator motor circuit when voltage is applied to drive the motor, indicating a short to ground. The motor can move only in one direction.
B1086:12	Air Distribution Damper Motor: Circuit Short to Battery	This DTC sets when the module senses higher than expected voltage on the actuator motor circuit when ground is applied to drive the motor, indicating a short to voltage. The motor can move only in one direction.
B1086:13	Air Distribution Damper Motor: Circuit Open	This DTC sets when the module senses no voltage on the actuator motor circuit when ground is applied to drive the motor, indicating an open circuit. The motor cannot move.
B11E7:11	Air Distribution Damper Position Sensor: Circuit Short to Ground	This DTC sets when the module senses less than 1 volt on the actuator feedback circuit, indicating a short to ground.
B11E7:15	Air Distribution Damper Position Sensor: Circuit Short to Battery or Open	This DTCsets when the module senses greater than 4 volts on the actuator feedback circuit, indicating an open circuit or a short to voltage.

Possible Sources

- Wiring, terminals or connectors
- Air distribution door actuator
- Air distribution door binding or stuck
- FCIM

PINPOINT TEST E : INCORRECT OR ERRATIC DIRECTION OF AIRFLOW FROM OUTLETS

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.
E1 CHECK THE AIR DISTRIBUTION DOOR ACTUATOR CIRCUITS FOR A SHORT TO VOLTAGE
• Ignition OFF. • Disconnect FCIM C2402A.

- Disconnect FCIM C2402B.
- Disconnect RH temperature door actuator C2092.
- Disconnect Defrost vent/register door actuatorC232.
- Disconnect In vehicle temperature and humidity sensor C2247.
- Disconnect Air inlet door actuator C282.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C232-7	V	Ground
C232-6	V	Ground
C232-4	V	Ground
C232-5	V	Ground
C232-3	V	Ground

Is there any voltage present?

Yes	REPAIR the circuit.
No	GO to E2

E2 CHECK THE AIR DISTRIBUTION DOOR ACTUATOR CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C232-7	Ω	Ground
C232-6	Ω	Ground
C232-4	Ω	Ground
C232-5	Ω	Ground
C232-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to E3
No	REPAIR the circuit.

E3 CHECK THE AIR DISTRIBUTION DOOR ACTUATOR CIRCUITS FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C232-3	Ω	C2402A-20
C232-6	Ω	C2402A-2
C232-4	Ω	C2402A-3
C232-5	Ω	C2402A-22

C232-7	Ω	C2402A-21

Are the resistances less than 3 ohms?

Yes	GO to E4
No	REPAIR the circuit.

E4 CHECK THE AIR DISTRIBUTION DOOR ACTUATOR CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C232-7	Ω	C232-6
C232-7	Ω	C232-4
C232-7	Ω	C232-5
C232-7	Ω	C232-3
C232-6	Ω	C232-4
C232-6	Ω	C232-5
C232-6	Ω	C232-3
C232-4	Ω	C232-5
C232-4	Ω	C232-3
C232-5	Ω	C232-3

Are the resistances greater than 10,000 ohms?

Yes	INSTALL a new air distribution door actuator, For RHD, refer to REFER to: Air Distribution Door Actuator (412-00 Climate Control System - General Information, Removal and Installation). For LHD, refer to REFER to: Air Distribution Door Actuator (412-00 Climate Control System - General Information, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to E5
No	REPAIR the circuit.

E5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the

	appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

Insufficient, Erratic Or No Heat

Normal Operation and Fault Conditions

When the engine is at operating temperature hot coolant flows from the electric motor through the heater core and back to the electric motor. Correct coolant temperatures are critical for good heater performance.

Possible Sources

- Wiring, terminals or connectors
- Temperature blend door actuator
- Air trapped in the coolant system
- Heater core

Visual Inspection and Diagnostic Pre-checks

- Inspect for low engine coolant level.

PINPOINT TEST F : INSUFFICIENT, ERRATIC OR NO HEAT

F1 CHECK FOR CORRECT ENGINE COOLANT LEVEL

- Ignition OFF.
- Check the engine coolant level.

Is the engine coolant at the correct level as indicated on the engine coolant recovery reservoir?

Yes	GO to F3
No	GO to F2

F2 CHECK THE ENGINE COOLING SYSTEM FOR LEAKS

- Pressure test the cooling system for leaks. Refer to the appropriate section in Group 303 for the procedure..

Does the engine cooling system leak?

Yes	REPAIR the engine coolant leak. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation.
No	FILL and BLEED the cooling system. Refer to the appropriate section in Group 303 for the procedure. After filling and bleeding the cooling system, GO to F3

F3 CHECK FOR COOLANT FLOW TO THE HEATER CORE

- Run the motor until it reaches normal operating temperature. Select the floor position on the control assembly. Set the temperature control to full warm and the blower to the lowest setting.
- Increase engine speed to 3,500 RPM and hold for 30 seconds.
- Allow the engine to idle for 30 seconds.
- Using a suitable temperature measuring device, check the heater core inlet hose to see if it is hot.

Is the heater core inlet hose hot?

Yes	GO to F4
No	BLEED the cooling system per the cooling system draining and vacuum filling general procedure. Refer to the appropriate section in Group 303 for the procedure. After bleeding the cooling system, GO to F4

F4 CHECK FOR A PLUGGED OR RESTRICTED HEATER CORE	
• Using a suitable temperature measuring device, measure the heater core outlet hose temperature. **Is the heater core outlet hose temperature similar to the inlet hose temperature (within approximately 6-17°C [10-30°F])?**	
Yes	DIAGNOSE for a temperature door actuator not operating correctly. For inadequate temperature, GO to Pinpoint Test I
No	INSTALL a new heater core. REFER to: Heater Core (412-00 Climate Control System - General Information, Removal and Installation).

The A/C Is Inoperative

Refer to Wiring Diagrams Cell 54 for schematic and connector information.

Normal Operation and Fault Conditions

Control System Logic
REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation).

Possible Sources

- Wiring, terminals or connectors
- A/C pressure transducer
- Evaporator temperature sensor
- FCIM
- PCM
- Electric cooling fan

Visual Inspection and Diagnostic Pre-checks

- Inspect BJB fuses 22 (10A).

PINPOINT TEST G : THE A/C (AIR CONDITIONING) IS INOPERATIVE

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.	
G1 CHECK THE A/C (AIR CONDITIONING) SYSTEM PRESSURE	
• Ignition OFF. • With the R-134a manifold gauge set connected, check the A/C system pressure. **Is the A/C system pressure above 290 kPa (42 psi)?**	
Yes	GO to G2
No	CHECK the A/C system for leaks. REFER to: Electronic Leak Detection (412-00 Climate Control System - General Information, General Procedures). REFER to: Fluorescent Dye Leak Detection (412-00 Climate Control System - General Information, General Procedures). After the leak is repaired, RECHARGE the A/C system. REFER to: Air Conditioning (A/C) System Recovery, Evacuation and Charging (412-00

	Climate Control System - General Information, General Procedures).

G2 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out the network test.

Do the FCIM and the PCM pass the network test?

Yes	GO to G3
No	DIAGNOSE the FCIM or PCM does not communicate with the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

G3 CHECK THE PCM (POWERTRAIN CONTROL MODULE) A/C (AIR CONDITIONING) PRESSURE SENSOR (ACP_PRESS) PID (PARAMETER IDENTIFICATION)

- Ignition ON.
- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- With a manifold gauge set connected, compare the pressure readings of the manifold gauge set and the PCM ACP_PRESS PID.

Are the pressure values of the manifold gauge set and the ACP_PRESS PCM PID within ± 103 kPa (15 psi)?

Yes	GO to G4
No	INSTALL a new A/C pressure transducer. REFER to: Air Conditioning (A/C) Pressure Transducer (412-00 Climate Control System - General Information, Removal and Installation).

G4 ELECTRIC COOLING FAN FUNCTIONAL CHECK

- Ignition ON.
- Using a diagnostic scan tool, carry out the PCM KOEO self-test.

Does the electric cooling fan operate during the KOEO self-test?

Yes	GO to G5
No	DIAGNOSE the electric cooling fan operation. REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual. Section 3 Symptom Charts.

G5 COMPARE THE EVAPORATOR TEMPERATURE SENSOR TO THE PCM (POWERTRAIN CONTROL MODULE) AMBIENT AIR TEMPERATURE (AAT) PID (PARAMETER IDENTIFICATION)

- Ignition OFF.
- Allow the vehicle exterior and interior to stabilize to ambient temperature.
- Disconnect Evaporator Temperature Sensor C296.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C296-1 (component side)	Ω	C296-2(component side)

- Compare the resistance values to the table below:

Ambient Temperature °C	Resistance ohms

-40°C	98,625 - 103,275 ohms
-20°C	28,640 - 29,600 ohms
°C	9695 - 9895 ohms
20°C	3675 - 3810 ohms
25°C	2950 - 3050 ohms
30°C	2370 - 2565 ohms
40°C	1565 - 1635 ohms

- Ignition ON.
- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Monitor the AAT PID.

Are the temperature values similar?

Yes	GO to G6
No	INSTALL a new evaporator temperature sensor. REFER to: Evaporator (412-00 Climate Control System - General Information, Removal and Installation).

G6 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) A/C (AIR CONDITIONING) SWITCH (CC_SW_AC) PID (PARAMETER IDENTIFICATION) WITH THE A/C (AIR CONDITIONING) ON

- Using a diagnostic scan tool, view FCIM Parameter Identifications (PIDs).
- Monitor the CC_SW_AC PID.

Does the PID display Active?

Yes	GO to G7
No	GO to G14

G7 CHECK THE PCM (POWERTRAIN CONTROL MODULE) A/C (AIR CONDITIONING) REQUEST SIGNAL (AC_REQ) PID (PARAMETER IDENTIFICATION) WITH THE A/C (AIR CONDITIONING) ON

- Start the engine.
- Using a diagnostic scan tool, monitor the PCM AC_REQ PID.
- On the HVAC controls, select PANEL and then press the A/C button (indicator on).

Does the PID display Yes when the button is pressed?

Yes	GO to G8
No	GO to G14

G8 CHECK THE PCM (POWERTRAIN CONTROL MODULE) A/C (AIR CONDITIONING) COMPRESSOR COMMANDED STATE (ACC_CMD) PID (PARAMETER IDENTIFICATION) WITH THE A/C (AIR CONDITIONING) COMMANDED ON

- Using a diagnostic scan tool, activate the PCM ACC_CMD PID.

Does the A/C compressor turn on?

Yes	GO to G15
No	GO to G9

G9 CHECK THE VOLTAGE TO THE A/C (AIR CONDITIONING) CLUTCH RELAY

- Ignition OFF.
- Disconnect the A/C clutch relay.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 1		Ground
A/C clutch relay socket 3		Ground

Are the voltages greater than 11 volts?

Yes	GO to G10
No	VERIFY BJB fuses 24 (10A) are OK. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. If OK, REPAIR the circuit.

G10 BYPASS THE A/C (AIR CONDITIONING) CLUTCH RELAY

- Ignition OFF.
- Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 3		A/C clutch relay socket 5

- Ignition ON.

Does the A/C compressor clutch engage?

Yes	REMOVE the fused jumper wire. INSTALL a new A/C clutch relay.
No	LEAVE the fused jumper wire installed. GO to G11

G11 CHECK THE A/C (AIR CONDITIONING) COMPRESSOR CLUTCH FIELD COIL VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Disconnect A/C compressor clutch field coil C100.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C100-1		Ground

Is the voltage greater than 11 volts?

Yes	REMOVE the fused jumper wire. GO to G12
No	REMOVE the fused jumper wire. REPAIR the circuit.

G12 CHECK THE A/C (AIR CONDITIONING) COMPRESSOR CLUTCH FIELD COIL GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C100-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to G13
No	REPAIR the circuit.

G13 CHECK THE A/C (AIR CONDITIONING) COMPRESSOR CLUTCH AIR GAP

- Measure the A/C compressor clutch air gap at 3 equally spaced locations between the clutch hub and the A/C compressor clutch pulley.
  REFER to: Air Conditioning (A/C) Clutch Air Gap Adjustment (412-00 Climate Control System - General Information, General Procedures).

Is the A/C compressor clutch air gap greater than 0.6 mm (0.0236 in)?

Yes	ADJUST the A/C compressor clutch air gap. REFER to: Air Conditioning (A/C) Clutch Air Gap Adjustment (412-00 Climate Control System - General Information, General Procedures).
No	INSTALL a new A/C compressor clutch field coil. REFER to: Air Conditioning (A/C) Compressor - 2.5L Duratec-HE (122kW/165PS) - MI4 (412-00 Climate Control System - General Information, Removal and Installation). REFER to: Air Conditioning (A/C) Compressor - 2.2L Duratorq-TDCi (Puma) Diesel (412-00 Climate Control System - General Information, Removal and Installation). REFER to: Air Conditioning (A/C) Compressor - 3.2L Duratorq-TDCi (Puma) Diesel (412-00 Climate Control System - General Information, Removal and Installation).

G14 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

G15 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.

- Disconnect and inspect all PCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all PCM connectors. Make sure they seat and latch correctly.
- Operate the system and verify the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.5L Duratec-HE (122kW/165PS)-MI4, REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). For 2.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The A/C Is Always On - A/C Mode Always Commanded On

Refer to Wiring Diagrams Cell 54 for schematic and connector information.

Normal Operation and Fault Conditions

Control System Logic
REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P1464	A/C Demand Out Of Self Test Range	This DTC sets when the PCM senses an A/C request during a PCM self-test.

Possible Sources

- A/C clutch relay
- Wiring, terminals or connectors
- PCM
- FCIM

PINPOINT TEST H : THE A/C (AIR CONDITIONING) IS ALWAYS ON - A/C (AIR CONDITIONING) MODE ALWAYS COMMANDED ON

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.
H1 CHECK THE A/C (AIR CONDITIONING) CLUTCH RELAY

- Carry out the component test on the A/C clutch relay.
  Refer to Wiring Diagrams Cell 149 for schematic and connector information.

Did the relay pass the component test?

Yes	GO to H2
No	INSTALL a new A/C clutch relay.

H2 CHECK THE A/C (AIR CONDITIONING) COMPRESSOR CLUTCH FIELD COIL VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect A/C compressor clutch field coil C100.
- Disconnect the A/C clutch relay.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C100-1		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to H3

H3 COMPARE THE EVAPORATOR TEMPERATURE SENSOR TO THE PCM (POWERTRAIN CONTROL MODULE) AMBIENT AIR TEMPERATURE (AAT) PID (PARAMETER IDENTIFICATION)

- Ignition OFF.
- Allow the vehicle exterior and interior to stabilize to ambient temperature.
- Disconnect Evaporator Temperature Sensor C296.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C296-1(component side)	Ω	C296-2(component side)

- Compare the resistance values to the table below:

Ambient Temperature °C	Resistance ohms
-40°C	98,625 - 103,275 ohms
-20°C	28,640 - 29,600 ohms
°C	9695 - 9895 ohms
20°C	3675 - 3810 ohms
25°C	2950 - 3050 ohms
30°C	2370 - 2565 ohms
40°C	1565 - 1635 ohms

- Ignition ON.
- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).

- Monitor the AAT PID.

Are the temperature values similar?

Yes	GO to H4
No	INSTALL a new evaporator temperature sensor. REFER to: Evaporator (412-00 Climate Control System - General Information, Removal and Installation).

H4 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) A/C (AIR CONDITIONING) SWITCH STATUS (CC_SW_AC) PID (PARAMETER IDENTIFICATION)

- Ignition ON.
- Using a diagnostic scan tool, view FCIM Parameter Identifications (PIDs).
- Monitor the CC_SW_AC PID.
- Select panel mode, press and release the A/C button (indicator off) on the FCIM controls.

Does the PID display Active when pressed and Inactive when released?

Yes	GO to H5
No	GO to H8

H5 CHECK THE A/C (AIR CONDITIONING) PRESSURE SENSOR (ACP_PRESS) PARAMETER IDENTIFICATION (PID)

- Using a diagnostic scan tool, view the PCM Parameter Identification (PIDs).
- With a manifold gauge set connected, compare the pressure readings of the manifold gauge set and the PCM Parameter Identification (PID) ACP_PRESS.

Are the pressure values of the manifold gauge set and the ACP_PRESS PCM PID within ± 103 kPa (15 psi)?

Yes	GO to H6
No	INSTALL a new A/C pressure transducer. REFER to: Air Conditioning (A/C) Pressure Transducer (412-00 Climate Control System - General Information, Removal and Installation).

H6 CHECK THE PCM (POWERTRAIN CONTROL MODULE) A/C (AIR CONDITIONING) REQUEST SIGNAL (AC_REQ) PID (PARAMETER IDENTIFICATION) WITH THE A/C (AIR CONDITIONING) OFF

- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Monitor the AC_REQ PID.
- While in panel mode, release the A/C button (indicator off) on the FCIM controls.

Does the PID display No?

Yes	GO to H9
No	GO to H7

H7 CHECK THE PCM (POWERTRAIN CONTROL MODULE) A/C (AIR CONDITIONING) REQUEST SIGNAL (AC_REQ) PID (PARAMETER IDENTIFICATION) WITH FCIM (FRONT CONTROLS INTERFACE MODULE) DISCONNECTED

- Ignition OFF.
- Disconnect FCIM C2402A.
- Ignition ON.
- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Monitor the AC_REQ PID.

Does the PID display No?

Yes	GO to H9
No	GO to H8

H8 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

H9 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all PCM connectors. Make sure they seat and latch correctly.
- Operate the system and verify the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, L a new PCM. For 2.5L Duratec-HE (122kW/165PS)-MI4, REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). For 2.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Temperature Control Is Inoperative Or Does Not Operate Correctly

Refer to Wiring Diagrams Cell 54 for schematic and connector information.

Normal Operation and Fault Conditions

Temperature Door Actuator,
REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation).

During an actuator calibration cycle, the FCIM drives the temperature door until the door reaches both internal stops in the HVAC case. If the temperature door is temporarily obstructed or binding during a calibration cycle, the module may interpret this as the actual end of travel for the door. When this condition occurs and the module commands the actuator to its end of travel, the airflow may not be the expected temperature.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1082:11	Right Temperature Damper Motor: Circuit Short To Ground	This DTC sets when the module senses lower than expected voltage on an actuator motor circuit when voltage is applied to drive the motor, indicating a short to ground. The motor can move only in one direction.
B1082:12	Right Temperature Damper Motor: Circuit Short To Battery	This DTC sets when the module senses higher than expected voltage on the actuator motor circuit when ground is applied to drive the motor, indicating a short to voltage. The motor can move only in one direction.
B1082:13	Right Temperature Damper Motor: Open Circuit	This DTC sets when the module senses no voltage on the actuator motor circuit when ground is applied to drive the motor, indicating an open circuit. The motor can not move.
B11E6:11	Right HVAC Damper Position Sensor: Circuit Short to Ground	This DTC sets when the module senses less than 1 volt on the actuator feedback circuit, indicating an open circuit or a short to ground.
B11E6:15	Right HVAC Damper Position Sensor: Circuit Short to Battery or Ground	This DTC sets when the module senses less than 1 volt, or greater than 5 volts on the actuator feedback circuit, indicating an open circuit, short to ground or short to voltage.

Possible Sources

- Wiring, terminals or connectors
- Temperature door actuator
- FCIM

PINPOINT TEST I : THE TEMPERATURE CONTROL IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

I1 CHECK THE TEMPERATURE DOOR ACTUATOR CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect FCIM C2402A..
- Disconnect FCIM C2402B..
- Disconnect BCM fuse 21 (5A)..
- Disconnect In-vehicle temperature and humidity sensor C2247.
- Disconnect RH temperature door actuator C2092.
- Disconnect Defrost Vent/Register Door Actuator C232.
- Disconnect Air Inlet Door Actuator C282.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead

C2092-7	V	Ground
C2092-6	V	Ground
C2092-4	V	Ground
C2092-5	V	Ground
C2092-3	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to I2

I2 CHECK THE TEMPERATURE DOOR ACTUATOR CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2092-7	Ω	Ground
C2092-6	Ω	Ground
C2092-4	Ω	Ground
C2092-5	Ω	Ground
C2092-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to I3
No	REPAIR the circuit.

I3 CHECK THE TEMPERATURE DOOR ACTUATOR CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2092-6	Ω	C2402A-2
C2092-4	Ω	C2402A-3
C2092-7	Ω	C2402A-8
C2092-5	Ω	C2402A-10
C2092-3	Ω	C2402A-9

Are the resistances less than 3 ohms?

Yes	GO to I4
No	REPAIR the circuit.

I4 CHECK THE TEMPERATURE DOOR ACTUATOR CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2092-7	Ω	C2092-6
C2092-7	Ω	C2092-4
C2092-7	Ω	C2092-5
C2092-7	Ω	C2092-3
C2092-6	Ω	C2092-4
C2092-6	Ω	C2092-5
C2092-6	Ω	C2092-3
C2092-4	Ω	C2092-5
C2092-4	Ω	C2092-3
C2092-5	Ω	C2092-3

Are the resistances greater than 10,000 ohms?

Yes	INSTALL a new temperature door actuator. For RHD, refer to REFER to: Temperature Door Actuator RH - LHD 4WD/LHD RWD (412-00 Climate Control System - General Information, Removal and Installation). For LHD, refer to REFER to: Temperature Door Actuator RH - RHD 4WD/RHD RWD (412-00 Climate Control System - General Information, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to I5
No	REPAIR the circuit.

I5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The Blower Motor Is Inoperative

Refer to Wiring Diagrams Cell 54 for schematic and connector information.

Normal Operation and Fault Conditions

Voltage is supplied to the blower motor relay switched contact from the BJB. Ground to the blower motor relay coil is a dedicated circuit. When the blower motor relay coil receives power from the FCIM, the relay coil is energized and voltage is delivered to the blower motor control module. Power and ground for the blower motor is provided by the blower motor control module. The FCIM sends a PWM signal to the blower motor control module to control the blower motor speed.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10AF:11	Blower Fan Relay: Circuit Short To Ground	This DTC sets when the module senses low voltage on the blower motor relay coil voltage circuit when the module is energizing the circuit. The blower motor relay is permanently inactive.
B10AF:15	Blower Fan Relay: Circuit Short To Battery or Open	This DTC sets when the module senses greater than expected voltage on the blower motor relay coil voltage circuit, indicating an open circuit or a short to voltage. The blower motor relay is inactive when circuit is open; the blower motor relay is on all the time when shorted to battery.
B10B9:12	Blower Control: Circuit Short To Battery	This DTC sets when the module senses high voltage on the blower motor control PWM circuit, indicating a short directly to voltage. The blower motor is inoperative.
B10B9:14	Blower Control: Circuit Short To Ground or Open	This DTC sets when the module senses no voltage on the blower motor control PWM circuit, indicating a short directly to ground or an open circuit. The blower motor runs at full speed if the circuit is shorted to ground. The blower motor is inoperative if the circuit is open.

Possible Sources

- Wiring, terminals or connectors
- Fuse
- Blower motor relay
- Blower motor control module
- FCIM

Visual Inspection and Diagnostic Pre-checks

- Inspect BJB fuse 79 (40A).

PINPOINT TEST J : THE BLOWER MOTOR IS INOPERATIVE

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

J1 CHECK THE BLOWER MOTOR RELAY

- Ignition OFF.
- Disconnect Blower motor relay.
- Carry out the component test on the blower motor relay.
  Refer to Wiring Diagrams Cell 149 for schematic and connector information.

Did the relay pass the component test?

Yes	GO to J2
No	INSTALL a new blower motor relay.

J2 CHECK THE BLOWER MOTOR RELAY SWITCH CONTACT SUPPLY VOLTAGE

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
Blower motor relay socket 3		Ground

Is the voltage greater than 11 volts?

Yes	GO to J3
No	VERIFY BJB fuse 60 (40A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

J3 CHECK THE BLOWER MOTOR RELAY COIL GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
Blower motor relay socket 2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to J4
No	REPAIR the circuit.

J4 CHECK THE BLOWER MOTOR RELAY COIL CONTROL CIRCUIT FOR A SHORT TO GROUND

- Disconnect FCIM C2402A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
Blower motor relay socket 1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to J5
No	REPAIR the circuit.

J5 CHECK THE BLOWER MOTOR RELAY COIL CONTROL CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
Blower motor relay socket 1	Ω	C2402A-11

Blower motor relay socket 1		

Is the resistance less than 3 ohms?

Yes	GO to J6
No	REPAIR the circuit.

J6 CHECK THE BLOWER MOTOR SPEED CONTROL CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Blower motor control module C2004.
- Disconnect Blower motor speed control field effect transistor (FET) C2384.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2004-1	V	Ground
C2384-3	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to J7

J7 CHECK THE BLOWER MOTOR SPEED CONTROL CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2004-1	Ω	Ground
C2384-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to J8
No	REPAIR the circuit.

J8 CHECK THE BLOWER MOTOR SPEED CONTROL CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2384-2	Ω	Ground

Positive Lead	Measurement / Action	Negative Lead
C2004-1	Ω	Blower motor relay socket 5

Positive Lead	Measurement / Action	Negative Lead
C2384-3	Ω	C2402A-11

Are the resistances less than 3 ohms?

Yes	GO to J9
No	REPAIR the circuit.

J9 CHECK THE BLOWER MOTOR CONTROL MODULE CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2384-2	Ω	C2004-1
C2384-2	Ω	C2384-3
C2004-1	Ω	C2384-3

Are the resistances greater than 10,000 ohms?

Yes	If C2004blower motor is effected. INSTALL a new blower motor. REFER to: Blower Motor (412-00 Climate Control System - General Information, Removal and Installation). If C2384 field effect transistor (FET) is effected. INSTALL A new FET. REFER to: Blower Motor Speed Control (412-00 Climate Control System - General Information, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to J10
No	REPAIR the circuits.

J10 CHECK FOR CORRECT FRONT CONTROLS INTERFACE MODULE (FCIM) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The Blower Motor Does Not Operate Correctly

Refer to Wiring Diagrams Cell 54 for schematic and connector information.

Normal Operation and Fault Conditions

Voltage is supplied to the blower motor relay switched contact from the BJB. Ground to the blower motor relay coil is a dedicated circuit. When the blower motor relay coil receives power from the FCIM, the relay coil is energized and voltage is delivered to the blower motor control module. Power and ground for the blower motor is provided by the blower motor control module. The FCIM sends a PWM signal to the blower motor control module to control the blower motor speed.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10AF:11	Blower Fan Relay: Circuit Short To Ground	This DTC sets when the module senses low voltage on the blower motor relay coil voltage circuit when the module is energizing the circuit. The blower motor relay is permanently inactive.
B10AF:15	Blower Fan Relay: Circuit Short To Battery or Open	This DTC sets when the module senses greater than expected voltage on the blower motor relay coil voltage circuit, indicating an open circuit or a short to voltage. The blower motor relay is inactive when circuit is open; the blower motor relay is on all the time when shorted to battery.
B10B9:12	Blower Control: Circuit Short To Battery	This DTC sets when the module senses high voltage on the blower motor control PWM circuit, indicating a short directly to voltage. The blower motor is inoperative.
B10B9:14	Blower Control: Circuit Short To Ground or Open	This DTC sets when the module senses no voltage on the blower motor control PWM circuit, indicating a short directly to ground or an open circuit. The blower motor runs at full speed if the circuit is shorted to ground. The blower motor is inoperative if the circuit is open.

Possible Sources

- Wiring, terminals or connectors
- Blower motor relay
- Blower motor
- Blower motor speed control, field effect transistor (FET)
- FCIM

PINPOINT TEST K : THE BLOWER MOTOR DOES NOT OPERATE CORRECTLY

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.
K1 VERIFY THE BLOWER MOTOR OPERATION
• Ignition ON. • Select panel on the HVAC controls and, starting with LO, operate the blower motor in all settings. Observe the blower motor operation in each setting. **Does the blower motor operate at any setting?**

Yes	GO to K2
No	GO to Pinpoint Test J

K2 CHECK THE BLOWER MOTOR SPEED CONTROL PWM (PULSE WIDTH MODULATION) CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Blower motor speed control (field effect transistor (FET))C2384.
- Disconnect FCIM C2402A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-23		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to K3

K3 CHECK THE BLOWER MOTOR SPEED CONTROL PWM (PULSE WIDTH MODULATION) CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-23	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to K4
No	REPAIR the circuit.

K4 CHECK THE BLOWER MOTOR RELAY COIL CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Blower motor relay.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-11		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to K5

No	GO to K5

K5 CHECK THE BLOWER MOTOR OPERATION WITH THE BLOWER MOTOR RELAY DISCONNECTED

- Ignition OFF.
- Connect Field effect transistor part of Blower motor speed control C2387.
- Connect Blower motor part of Blower motor speed control C2004.
- Connect FCIM C2402A.
- Ignition ON.
- Operate the HVAC system and determine if the concern is still present.

Does the fan still operate all the time?

Yes	REPAIR the blower motor speed control voltage circuit CH402 (YE/GN) for a short to voltage.
No	GO to K6

K6 CHECK FOR CORRECT BLOWER MOTOR SPEED CONTROL OPERATION

- Ignition OFF.
- Disconnect and inspect the blower motor speed control connector field effect transistor C2384and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the blower motor control module connector. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	INSTALL a new blower motor speed control. REFER to: Blower Motor Speed Control (412-00 Climate Control System - General Information, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to K7
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

K7 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B1B71:11, B1B71:15

Refer to Wiring Diagrams Cell 54 for schematic and connector information.

Normal Operation and Fault Conditions

Evaporator Temperature Sensor,
REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1B71:11	Evaporator Temperature Sensor: Circuit Short To Ground	The module senses excessive voltage drop on the sensor reference voltage circuit, indicating a short directly to ground. The module defaults to calculated evaporator temperature and the compressor is shut off.
B1B71:15	Evaporator Temperature Sensor: Circuit Short To Battery or Open	The module senses no voltage drop on the sensor reference voltage circuit, indicating a short directly to voltage or an open circuit. The module defaults to calculated evaporator temperature and the compressor is shut off.

Possible Sources

- Wiring, terminals or connectors
- Evaporator temperature sensor
- FCIM

PINPOINT TEST L : B1B71:11, B1B71:15

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

L1 CHECK THE EVAPORATOR TEMPERATURE SENSOR RESISTANCE

- Ignition OFF.
- Disconnect Evaporator temperature sensor C296.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C296-1(component side)	Ω	C296-2(component side)

- Compare the evaporator temperature sensor measured resistance with the table below.

Ambient Temperature °C	Resistance ohms
-40°C	98,625 - 103,275 ohms
-20°C	28,640 - 29,600 ohms
°C	9695 - 9895 ohms
20°C	3675 - 3810 ohms
25°C	2950 - 3050 ohms
30°C	2370 - 2565 ohms
40°C	1565 - 1635 ohms

Is the resistance within the specified values for the temperatures?

Yes	GO to L2
No	INSTALL a new evaporator temperature sensor. REFER to: Evaporator (412-00 Climate Control System - General Information, Removal and Installation).

L2 CHECK THE EVAPORATOR TEMPERATURE SENSOR INPUT CIRCUIT FOR A SHORT TO VOLTAGE

- Disconnect FCIM C2402A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-19	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to L3

L3 CHECK THE EVAPORATOR TEMPERATURE SENSOR INPUT CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-19	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to L4
No	REPAIR the circuit.

L4 CHECK THE EVAPORATOR TEMPERATURE SENSOR INPUT CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-19	Ω	C296-2

Is the resistance less than 3 ohms?

Yes	GO to L5
No	REPAIR the circuit.

L5 CHECK THE EVAPORATOR TEMPERATURE SENSOR SIGNAL AND SIGNAL RETURN CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C296-1	Ω	C296-2

Is the resistance greater than 10,000 ohms?

Yes	GO to L6
No	REPAIR the circuit.

L6 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

C1B14:11, C1B14:12

Refer to Wiring Diagrams Cell 54 for schematic and connector information.

Normal Operation and Fault Conditions

A 5-volt reference voltage and ground is supplied to the climate control sensors and actuators from the FCIM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C1B14:11	Sensor Supply Voltage A: Circuit Short to Ground	This DTC sets when the module senses less than 5 volts on the sensor reference voltage circuit, indicating a short to ground.

C1B14:12	Sensor Supply Voltage A: Circuit Short to Battery	This DTC sets when the module senses greater than 5 volts on the sensor reference voltage circuit, indicating a short to voltage.

Possible Sources

- Wiring, terminals or connectors
- FCIM

PINPOINT TEST M : C1B14:11, C1B14:12

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

M1 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) DTCS

- Ignition ON.
- Using a diagnostic scan tool, perform FCIM self-test.

Is DTC C1B14:11 present?

Yes	GO to M2
No	GO to M5

M2 CHECK THE REFERENCE VOLTAGE CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect FCIM C2402A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-3	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to M3
No	REPAIR the circuit.

M3 CHECK THE REFERENCE VOLTAGE CIRCUIT AND THE SIGNAL RETURN CIRCUIT FOR A SHORT TOGETHER

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-3	Ω	C2402A-2

Is the resistance greater than 200 ohms?

Yes	GO to M6
No	GO to M4

M4 CHECK THE A/C (AIR CONDITIONING) COMPONENTS

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-3	Ω	C2402A-2

- While measuring the resistance, disconnect the following components one at a time, in order. Stop disconnecting components if the measured resistance rises above 200 ohms.
  - In-vehicle temperature and humidity sensor (Ambient quality sensor)C2247
  - Evaporator temperature sensor C296
  - Driver side center register air discharge temperature sensor C2438
  - Driver side footwell air discharge temperature sensor C2436
  - Air distribution door actuator C232
  - Passenger side temperature door actuator C2092
  - Air inlet door actuator C282

Did the resistance rise above 200 ohms?

Yes	INSTALL a new sensor or actuator (the last one to be disconnected). Refer to the appropriate section in Group 412 for the procedure. When installing an actuator, CONNECT the actuator electrical connector before the FCIM. This allows the actuator to be calibrated when the FCIM is connected.
No	REPAIR the circuit.

M5 CHECK THE REFERENCE VOLTAGE CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect FCIM C2402A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-3	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to M6

M6 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the

	appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

P193E

Refer to Wiring Diagrams Cell 54 for schematic and connector information.

Normal Operation and Fault Conditions

The PCM controls the A/C compressor clutch field coil based on messages received from the BCM over the HS-CAN. When the FCIM determines it is necessary to activate the A/C compressor due to driver request or automatic climate control settings, the FCIM sends a message to the BCM over the MS-CAN, the BCM then sends a message to the PCM to activate the A/C compressor.

An internal failure of the PCM, BCM or FCIM, or a failure in the MS-CAN or HS-CAN, causes the PCM to set a DTC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P193E	A/C Clutch Request Signal	This DTC sets when the PCM does not receive the A/C enable request from the BCM.

Possible Sources

- Network concerns
- BCM
- PCM
- FCIM

PINPOINT TEST N : P193E

N1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to N2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

N2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, carry out the Network Test.

Do the BCM, PCM and the FCIM pass the Network Test?

Yes	GO to N3
No	DIAGNOSE the BCM, PCM or FCIM does not communicate with the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

N3 CHECK THE PCM (POWERTRAIN CONTROL MODULE) A/C (AIR CONDITIONING) REQUEST SIGNAL (AC_REQ) PID (PARAMETER IDENTIFICATION)

- Start the engine.
- Using a diagnostic scan tool, monitor the PCM AC_REQ PID.
- On the HVAC controls, select PANEL mode, then press the A/C button (indicator ON).

Does the AC_REQ PID display YES when the A/C button indicator is illuminated?

Yes	GO to N7
No	GO to N4

N4 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) A/C (AIR CONDITIONING) SWITCH (CC_SW_AC) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, monitor the FCIM CC_SW_AC PID while pressing and releasing the A/C button.

Does the PID display Active when the A/C button indicator is illuminated?

Yes	GO to N6
No	GO to N5

N5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

N6 VERIFY CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all BCM electrical connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. For LHD REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules,

	Removal and Installation). For RHD REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

N7 VERIFY CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all PCM electrical connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.5L Duratec-HE (122kW/165PS)-MI4, REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). For 2.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

B105A:12, B105A:14, B1A61:11, B1A61:15, B1A69:11, B1A69:15

Refer to Wiring Diagrams Cell 54 for schematic and connector information.

Normal Operation and Fault Conditions

In-Vehicle Temperature and Humidity Sensor,
REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B105A:12	Cabin Temperature Sensor Fan: Circuit Short To Battery	This DTC sets when the module senses higher than expected voltage on the in-vehicle temperature and humidity sensor fan motor circuit. The in-vehicle temperature and humidity sensor fan motor is inactive.
B105A:14	Cabin Temperature Sensor Fan: Circuit	This DTC sets when the module senses no voltage on the in-vehicle temperature and humidity sensor fan motor circuit, indicating an open or a short directly to

	Short To Ground or Open	ground. The in-vehicle temperature and humidity sensor fan motor is active.
B1A61:11	Cabin Temperature Sensor: Circuit Short to Ground	This DTC sets when the module senses lower than expected voltage on the in-vehicle temperature and humidity sensor feedback circuit, indicating a short to ground.
B1A61:15	Cabin Temperature Sensor: Circuit Short to Battery or Open	This DTC sets when the module senses greater than expected voltage on the in-vehicle temperature and humidity sensor feedback circuit, indicating a short to voltage or an open circuit or sensor.
B1A69:11	Humidity Sensor: Circuit Short To Ground	This DTCsets when the module senses lower than expected voltage on the in-vehicle temperature and humidity sensor humidity input circuit, indicating a short to ground.
B1A69:15	Humidity Sensor: Circuit Short To Battery or Open	This DTCsets when the module senses greater than expected voltage on the in-vehicle temperature and humidity sensor humidity input circuit, indicating a short to voltage or an open circuit or sensor.

Possible Sources

- Fuse
- Wiring, terminals or connectors
- In-vehicle temperature and humidity sensor
- FCIM

Visual Inspection and Diagnostic Pre-checks

- Make sure the in-vehicle temperature and humidity sensor harness is not chaffed.

PINPOINT TEST O : B105A:12, B105A:14, B1A61:11, B1A61:15, B1A69:11, B1A69:15

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

O1 CHECK THE IN-VEHICLE TEMPERATURE AND HUMIDITY SENSOR CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect FCIM C2402A..
- Disconnect FCIM C2402B..
- Disconnect BCM fuse 21 (5A)..
- Disconnect In-vehicle temperature and humidity sensor C2247.
- Disconnect RH temperature door actuator C2092.
- Disconnect Defrost Vent/Register Door Actuator C232.
- Disconnect Air Inlet Door Actuator C282.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2247-1		Ground
C2247-2		Ground
C2247-3		Ground
C2247-4		Ground
C2247-5		Ground
C2247-6		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to O2

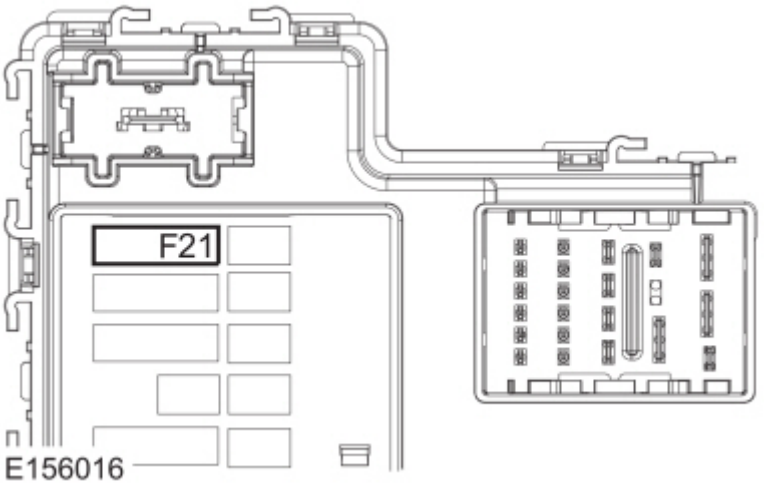
O2 CHECK THE IN-VEHICLE TEMPERATURE AND HUMIDITY SENSOR CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2247-1	Ω	Ground
C2247-2	Ω	Ground
C2247-3	Ω	Ground
C2247-4	Ω	Ground
C2247-5	Ω	Ground
C2247-6	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to O3
No	REPAIR the circuit.



O3 CHECK THE IN-VEHICLE TEMPERATURE AND HUMIDITY SENSOR CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2247-3	Ω	C2402A-3
C2247-5	Ω	C2402A-2

Positive Lead	Measurement / Action	Negative Lead
C2247-1	Ω	C2402B-27
C2247-2	Ω	C2402B-29
C2247-4	Ω	C2402B-19

Positive Lead	Measurement / Action	Negative Lead
C2247-6	Ω	BCM fuse 21 cavity, (component

		 side)

Are the resistances less than 3 ohms?

Yes	GO to O4
No	REPAIR the circuit.

O4 CHECK THE IN-VEHICLE TEMPERATURE AND HUMIDITY SENSOR CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2247-1	Ω	C2247-2
C2247-1	Ω	C2247-3
C2247-1	Ω	C2247-4
C2247-1	Ω	C2247-5
C2247-1	Ω	C2247-6
C2247-2	Ω	C2247-3
C2247-2	Ω	C2247-4
C2247-2	Ω	C2247-5
C2247-2	Ω	C2247-6
C2247-3	Ω	C2247-4
C2247-3	Ω	C2247-5
C2247-3	Ω	C2247-6
C2247-4	Ω	C2247-5
C2247-4	Ω	C2247-6
C2247-5	Ω	C2247-6

Are the resistances greater than 10,000 ohms?

Yes	GO to O5
No	REPAIR the circuit.

O5 CHECK FOR CORRECT IN-VEHICLE TEMPERATURE AND HUMIDITY SENSOR OPERATION

- Ignition OFF.
- Inspect the disconnected connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all disconnected connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	INSTALL a new in-vehicle temperature and humidity sensor. REFER to: Ambient Air Quality Sensor (412-00 Climate Control System - General Information, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to O6
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

O6 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

Air Discharge Temperature Sensor Circuit Faults

Refer to Wiring Diagrams Cell 54 for schematic and connector information.

Normal Operation and Fault Conditions

The 2 air discharge temperature sensors contain a thermistor. The sensor varies its resistance with the temperature. As the temperature rises, the resistance falls. As the temperature falls, the resistance rises.
REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10B3:11	Right Panel Air Discharge Temperature:	This DTC sets when the FCIM senses erratic voltages from

	Circuit Short To Ground	the right panel air discharge temperature sensor.
B10B3:15	Right Panel Air Discharge Temperature: Circuit Short To Battery or Open	This DTC sets when the FCIM senses erratic voltages from the right panel air discharge temperature sensor.
B10B5:11	Left Panel Air Discharge Temperature: Circuit Short To Ground	This DTC sets when the FCIM senses erratic voltages from the left panel air discharge temperature sensor.
B10B5:15	Left Panel Air Discharge Temperature: Circuit Short To Battery or Open	This DTC sets when the FCIM senses erratic voltages from the left panel air discharge temperature sensor.
B10B6:11	Left Floor Air Discharge Temperature: Circuit Short To Ground	This DTC sets when the FCIM senses erratic voltages from the left floor air discharge temperature sensor.
B10B6:15	Left Floor Air Discharge Temperature: Circuit Short To Battery or Open	This DTC sets when the FCIM senses erratic voltages from the left floor air discharge temperature sensor.

Possible Sources

- Wiring, terminals or connectors
- Air discharge temperature sensor(s)
- FCIM

PINPOINT TEST P : AIR DISCHARGE TEMPERATURE SENSOR CIRCUIT FAULTS

P1 CHECK THE AIR DISCHARGE TEMPERATURE SENSOR OUTPUT VOLTAGE CIRCUIT

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

- Ignition OFF.
- Disconnect the suspect air discharge temperature sensor:
  - Driver side register air discharge temperature sensor C2438
  - Driver side footwell air discharge temperature sensor C2436
- Ignition ON.
- Turn the HVAC system on.
- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2436-1		C2436-3

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-1		C2438-3

Is the voltage between 4.7 and 5.1 volts?

Yes	INSTALL a new air discharge temperature sensor. Refer to the appropriate section in Group 412 for the procedure. CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. If Diagnostic Trouble Code (DTC) returns, GO to P9
No	GO to P2

P2 CHECK THE AIR DISCHARGE TEMPERATURE SENSOR SIGNAL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect FCIM C2402A.
- Disconnect FCIM C2402B.
- Ignition ON.
- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2436-1		Ground

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-1		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to P3

P3 CHECK THE AIR DISCHARGE TEMPERATURE SENSOR SIGNAL RETURN CIRCUIT FOR A SHORT TO VOLTAGE

- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2436-3		Ground

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-3		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to P4

P4 CHECK THE AIR DISCHARGE TEMPERATURE SENSOR SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.

- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2436-1	Ω	Ground

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-1	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to P5
No	REPAIR the circuit.

P5 CHECK THE AIR DISCHARGE TEMPERATURE SENSOR SIGNAL RETURN CIRCUIT FOR A SHORT TO GROUND

- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2436-3	Ω	Ground

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to P6
No	REPAIR the circuit.

P6 CHECK THE AIR DISCHARGE TEMPERATURE SENSOR SIGNAL CIRCUIT FOR AN OPEN

- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead

C2436-1	Ω	C2402B-5

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-1	Ω	C2402B-4

Are the resistances less than 3 ohms?

Yes	GO to P7
No	REPAIR the circuit.

P7 CHECK THE AIR DISCHARGE TEMPERATURE SENSOR SIGNAL RETURN CIRCUIT FOR AN OPEN

- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2436-3	Ω	C2402A-2

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-3	Ω	C2402A-2

Is the resistance less than 3 ohms?

Yes	GO to P8
No	REPAIR the circuit.

P8 CHECK AIR DISCHARGE TEMPERATURE SENSOR SIGNAL CIRCUIT AND THE SIGNAL RETURN FOR A SHORT TO TOGETHER

- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2436-1	Ω	C2436-3

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-1	Ω	C2438-3

Are the resistances greater than 10,000 ohms?

Yes	INSTALL a new air discharge temperature sensor.Refer to the appropriate section in Group 412 for the procedure. CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. If Diagnostic Trouble Code (DTC) returns, GO to P9
No	REPAIR the circuit.

P9 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC)

DTC Chart: Front Controls Interface Module (FCIM) - Dual Automatic Temperature Control (DATC)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Network Diagnostic Trouble Codes (DTCs) (U-codes) are often a result of intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures, such as module reprogramming, often set network Diagnostic Trouble Codes (DTCs). Replacing a module to resolve a network DTC is unlikely to resolve the concern. To prevent repeat network DTC concerns, inspect all network wiring, especially connectors. Test the vehicle battery.

C1B14:11	Sensor Supply Voltage A: Circuit Short To Ground	GO to Pinpoint Test R
C1B14:12	Sensor Supply Voltage A: Circuit Short To Battery	GO to Pinpoint Test R
All Other FCIM Diagnostic Trouble Codes (DTCs) not listed in this chart	—	Refer to the appropriate section in Group 415 for the procedure.

DTC Chart: Powertrain Control Module (PCM)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Powertrain Control Module (PCM) DTC Chart

DTC	Description	Action
P0532	A/C Refrigerant Pressure Sensor “A” Circuit Low	GO to Pinpoint Test B
P0533	A/C Refrigerant Pressure Sensor “A” Circuit High	GO to Pinpoint Test B
P0645	A/C Clutch Relay Control Circuit	GO to Pinpoint Test C
P0646	A/C Clutch Relay Control Circuit Low	GO to Pinpoint Test C
P0647	A/C Clutch Relay Control Circuit High	GO to Pinpoint Test C
P1464	A/C Demand Out Of Self Test Range	If the HVAC selector was not powered off, POWER the HVAC off, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test. If the DTC returns, GO to Pinpoint Test I
P193E	A/C Clutch Request Signal	GO to Pinpoint Test S
All Other PCM Diagnostic Trouble Codes (DTCs)	—	• For 2.5L Duratec-HE (122kW/165PS) - MI4 PCM DTC Chart, REFER to: Electronic Engine Controls (303-14A) . • For 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - PumaPCM DTC Chart, REFER to: Electronic Engine Controls (303-14B) . • For 3.2L Duratorq-TDCi (148kW/200PS) - Puma PCM DTC Chart, REFER to: Electronic Engine Controls (303-14C) .

Symptom Chart(s)

Symptom Chart: Climate Control - Dual Automatic Temperature Control (DATC)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
A module does not communicate with the diagnostic scan tool	• Fuse(s) • Wiring, terminals or connectors • FCIM	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
Unable To Duplicate The Customer Concern And No Diagnostic Trouble Codes (DTCs) Present	Refer to Pinpoint Test	GO to Pinpoint Test D
HVAC functions are inoperative/do not operate correctly from touchscreen only	• Communication network • FCIM • APIM	Refer to the appropriate section in Group 415 for the procedure.
Reduced outlet airflow	Plugged cabin air filter	INSPECT the cabin air filter. REFER to: Cabin Air Filter (412-00 Climate Control System - General Information, Removal and Installation). If OK, DIAGNOSE for low refrigerant charge, A/C always commanded on or blower motor not operating correctly.
	Improper refrigerant level	CARRY OUT the refrigerant system tests. REFER to: Refrigerant System Tests - Automatic Transmission (412-00 Climate Control System - General Information, General Procedures). If refrigerant charge is OK, GO to Pinpoint Test I
	Blower motor	GO to Pinpoint Test M
The air inlet door is inoperative	Refer to Pinpoint Test	GO to Pinpoint Test E
Incorrect or erratic direction of airflow from outlets	Refer to Pinpoint Test	GO to Pinpoint Test E
Insufficient, erratic or no heat	Refer to Pinpoint Test	GO to Pinpoint Test G
The A/C is inoperative	Refer to Pinpoint Test	GO to Pinpoint Test H
The A/C is always on — A/C mode always commanded ON	Refer to Pinpoint Test	GO to Pinpoint Test I
Temperature control is inoperative/does not operate correctly — driver side	Refer to Pinpoint Test	GO to Pinpoint Test J
Temperature control is inoperative/does not operate correctly — passenger side	Refer to Pinpoint Test	GO to Pinpoint Test K
The blower motor is inoperative	Refer to Pinpoint Test	GO to Pinpoint Test L
The blower motor does not	Refer to Pinpoint Test	GO to Pinpoint Test M

operate correctly		
Insufficient A/C cooling	Improper refrigerant level	CARRY OUT the refrigerant system tests. REFER to: Refrigerant System Tests - Automatic Transmission (412-00 Climate Control System - General Information, General Procedures). If OK, DIAGNOSE for a temperature door actuator not operating correctly.
	Temperature door actuator	• For inadequate temperature out of the driver side, GO to Pinpoint Test J • For inadequate temperature out of the passenger side, GO to Pinpoint Test K
A/C pressure relief valve discharging	A/C pressure relief valve	• CHECK the high side system pressure. REFER to: Specifications (412-00 Climate Control System - General Information, Specifications). If the pressure is below the A/C pressure relief valve open pressure, INSTALL a new A/C Compressor. • REFER to: Air Conditioning (A/C) Compressor - 2.5L Duratec-HE (122kW/165PS) - MI4 (412-00 Climate Control System - General Information, Removal and Installation). • REFER to: Air Conditioning (A/C) Compressor - 2.2L Duratorq-TDCi (Puma) Diesel (412-00 Climate Control System - General Information, Removal and Installation). • REFER to: Air Conditioning (A/C) Compressor - 3.2L Duratorq-TDCi (Puma) Diesel (412-00 Climate Control System - General Information, Removal and Installation).
	High system pressure	CHECK the high side system pressure. REFER to: Specifications (412-00 Climate Control System - General Information, Specifications). If the system pressure is above the A/C pressure relief valve open pressure, REPAIR the A/C system for a restriction.
Climate control does not operate only when remote start is used	• IPC information display settings • Non-Ford approved remote start system installed	• VERIFY Remote Start - Message Center Set To Auto, or Remote Start - Message Center Set To Last User Settings. REFER to: Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation). • VERIFY module communications network operation. DIAGNOSE Diagnostic Trouble Codes (DTCs) if present.

Symptom Chart: Noise, Vibration, and Harshness (NVH)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
Noisy A/C compressor	A/C	• INSPECT the A/C compressor bearing for roughness. If bearing

	compressor bearing worn	roughness is found, INSTALL a new A/C Compressor. • REFER to: Air Conditioning (A/C) Compressor - 2.5L Duratec-HE (122kW/165PS) - MI4 (412-00 Climate Control System - General Information, Removal and Installation). • REFER to: Air Conditioning (A/C) Compressor - 2.2L Duratorq-TDCi (Puma) Diesel (412-00 Climate Control System - General Information, Removal and Installation). • REFER to: Air Conditioning (A/C) Compressor - 3.2L Duratorq-TDCi (Puma) Diesel (412-00 Climate Control System - General Information, Removal and Installation).
Excessive hissing from the plenum when the A/C is on	Incorrect A/C refrigerant level	CHECK the A/C refrigerant level. REFER to: Refrigerant System Tests - Automatic Transmission (412-00 Climate Control System - General Information, General Procedures).

Pinpoint Test(s)

The Electric Booster Heater Is Inoperative Or Does Not Operate Correctly

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Supplemental Climate Control - System Operation and Component Description (412-03 Supplemental Climate Control, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10EA:12	Positive Temperature Coefficient Heater: Circuit Short To Battery	This DTC sets when the BCM detects a short to voltage on the heater control circuit.
B10EA:14	Positive Temperature Coefficient Heater: Circuit Short To Ground Or Open	This DTC sets when the BCM detects a short to ground or an open on the heater control circuit.

Possible Sources

- Fuses
- Wiring, terminals or connectors
- Electric booster (PTC) heater
- Battery junction box (BJB)
- FCIM

Visual Inspection and Diagnostic Pre-checks

- Make sure High Current MIDI fuse (100A) is OK.
- Make sure BJB fuse 27 (5A) is OK.
- Make sure operating conditions for the operation of the electric booster heater are met.
  REFER to: Supplemental Climate Control - System Operation and Component Description (412-03 Supplemental Climate Control, Description and Operation).

NOTE: *Diagnose and repair all FCIM control module Diagnostic Trouble Codes (DTCs) before continuing with this pinpoint test.*

PINPOINT TEST A : THE ELECTRIC BOOSTER PTC HEATER IS INOPERATIVE OR DOES NOT

OPERATE CORRECTLY

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

A1 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) FOR DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, carry out the FCIM self-test.

Is DTC B10EA:12 or B10EA:14 retrieved?

Yes	For DTC B10EA:12, GO to A5 For DTC B10EA:14, GO to A6 For all other FCIMDiagnostic Trouble Codes (DTCs), GO to the DTC Chart: FCIMin this section.
No	GO to A2

A2 CHECK THE ELECTRIC BOOSTER PTC HEATER HOT AT ALL TIME VOLTAGE SUPPLY CIRCUIT

- Ignition OFF.
- Disconnect electric booster heater C2603A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2603A-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to A3
No	VERIFY High Current BJB MIDI fuse (100A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

A3 CHECK THE ELECTRIC BOOSTER PTC HEATER GROUND CIRCUIT

- Disconnect the electric booster heater C2603B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2603B-3	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to A4
No	REPAIR the circuit.

A4 CHECK THE ELECTRIC BOOSTER PTC HEATER IGNITION VOLTAGE SUPPLY CIRCUIT

- Disconnect electric booster heater C2603C.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2603C-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to A5
No	VERIFY BJB fuse 27 (5A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

A5 CHECK THE ELECTRIC BOOSTER PTC HEATER CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect the electric booster heater C2603C (if not previously disconnected).
- Disconnect the FCIM C2402B.
- Disconnect the BJB C1035A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2603C-2		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to A6

A6 CHECK THE ELECTRIC BOOSTER PTC HEATER CONTROL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect electric booster heater C2603C (if not previously disconnected).
- Disconnect BJB C1035A.
- Disconnect the FCIM C2402B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2603C-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A7
No	REPAIR the circuit.

A7 CHECK THE ELECTRIC BOOSTER PTC HEATER CONTROL CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2603C-2	Ω	C2402B-6

Is the resistance less than 3 ohms?

Yes	GO to A8
No	REPAIR the circuit.

A8 CHECK FOR CORRECT ELECTRIC BOOSTER PTC HEATER OPERATION

- Disconnect and inspect all electric booster heater electrical and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminal - clean module pins)
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
- Connect all electric booster heater electrical connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	GO to A9
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

A9 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Disconnect and inspect all FCIMelectrical and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminal - clean module pins)
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
- Connect all FCIM electrical connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

P0532, P0533

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal operation and Fault Conditions

The A/C pressure transducer receives a ground from the PCM. A 5-volt reference voltage is supplied to the A/C pressure transducer from the PCM. The A/C pressure transducer then sends a voltage to the PCM to indicate the A/C

pressure.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0532	A/C Refrigerant Pressure Sensor "A" Circuit Low	This DTC sets if the feedback voltage is less than 0.26 volt for at least 2 seconds and the ambient air temperature is greater than 0°C (32°F).
P0533	A/C Refrigerant Pressure Sensor "A" Circuit High	This DTC sets if the feedback voltage is greater than 4.95 volts for at least 2 seconds and the ambient air temperature is greater than 0°C (32°F).

Possible Sources

- Wiring, terminals or connectors
- A/C pressure transducer
- PCM

Visual Inspection and Diagnostic Pre-checks

- Inspect for loose or corroded PCM and A/C pressure transducer connections.

PINPOINT TEST B : P0532, P0533

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

B1 COMPARE THE PCM (POWERTRAIN CONTROL MODULE) PRESSURE SENSOR (ACP_PRESS) PID (PARAMETER IDENTIFICATION) WITH THE MANIFOLD GAUGE SET READINGS

- Allow the A/C system to stabilize to the outside ambient temperature.
- Ignition ON.
- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- With the manifold gauge set connected, compare the pressure readings of the manifold gauge set and the PCM ACP_PRESS PID.

Are the pressure values of the manifold gauge set and the ACP_PRESS PCM PID within ± 103 kPa (15 psi)?

Yes	IGNORE the Diagnostic Trouble Codes (DTCs). REFER to the Symptom Chart in this section.
No	GO to B2

B2 CHECK THE A/C (AIR CONDITIONING) PRESSURE SENSOR CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect PCM, 2.2L Duratorq-TDCi (Puma) Diesel C1232A, 3.2L Duratorq-TDCi (Puma) DieselC1232B, 2.5L Duratec-HEC175.
- Disconnect A/C pressure transducer C1260.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1260-1		Ground
C1260-2		Ground
C1260-3		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to B3

B3 CHECK THE A/C (AIR CONDITIONING) PRESSURE SENSOR CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1260-1	Ω	Ground
C1260-2	Ω	Ground
C1260-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to B4
No	REPAIR the circuit.

B4 CHECK THE A/C (AIR CONDITIONING) PRESSURE SENSOR CIRCUITS FOR AN OPEN

- Measure:

2.5L Duratec

Positive Lead	Measurement / Action	Negative Lead
C1260-1	Ω	C175-40
C1260-2	Ω	C175-16
C1260-3	Ω	C175-28

2.2L Duratorq Puma-Diesel

Positive Lead	Measurement / Action	Negative Lead
C1260-1	Ω	C1232-23
C1260-2	Ω	C1232-50
C1260-3	Ω	C1232-32

3.2L Duratorq Puma-Diesel

Positive Lead	Measurement / Action	Negative Lead
C1260-1	Ω	C1232-23

C1260-2	Ω	C1232-50
C1260-3	Ω	C1232-32

Are the resistances less than 3 ohms?

Yes	GO to B5
No	REPAIR the circuit.

B5 CHECK THE A/C (AIR CONDITIONING) PRESSURE SENSOR CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1260-1	Ω	C1260-2
C1260-1	Ω	C1260-3
C1260-2	Ω	C1260-3

Are the resistances greater than 10,000 ohms?

Yes	INSTALL a new A/C pressure transducer. REFER to: Air Conditioning (A/C) Pressure Transducer (412-00 Climate Control System - General Information, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to B6
No	REPAIR the circuits.

B6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.5L Duratec-HE (122kW/165PS)-MI4, REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). For 2.2L Duratorq-TDCi (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2L Duratorq-TDCi (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

P0645, P0646, P0647

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

Voltage is provided to the A/C clutch relay. When A/C is requested and A/C line pressures allow, a ground is provided to the A/C clutch relay coil from the PCM, energizing the A/C clutch relay.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0645	A/C Clutch Relay Control Circuit	This DTC sets when the PCM grounds the relay circuit and more voltage than expected is detected on the relay circuit. This DTC also sets when the relay circuit is off and no voltage is detected on the relay circuit. The PCM expects to detect voltage coming through the relay coil to the relay circuit when it is not grounding it.
P0646	A/C Clutch Relay Control Circuit Low	This DTC sets when the relay circuit is off and no voltage is detected on the relay circuit. The PCM expects to detect voltage coming through the relay coil to the relay circuit when it is not grounding it.
P647	A/C Clutch Relay Control Circuit High	This DTC sets when the PCM grounds the relay circuit and more voltage than expected is detected on the relay circuit.

Possible Sources

- Wiring, terminals or connectors
- A/C clutch relay
- PCM

Visual Inspection and Diagnostic Pre-checks

- Inspect BJB fuses 24 (10A).

PINPOINT TEST C : P0645, P0646, P647

NOTICE: Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.

C1 CHECK THE VOLTAGE TO THE A/C (AIR CONDITIONING) CLUTCH RELAY VOLTAGE SUPPLY CIRCUITS

- Ignition OFF.
- Disconnect A/C clutch relay located within the BJB..
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 1		Ground
A/C clutch relay socket 3		Ground

Are the voltages greater than 11 volts?

Yes	GO to C2
No	VERIFY BJB fuse 24 (10A) is OK. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. If OK, REPAIR the circuit.

C2 CHECK THE A/C (AIR CONDITIONING) CLUTCH RELAY

- Carry out the component test on the A/C clutch relay.
  Refer to Wiring Diagrams Cell 149 for schematic and connector information.

Did the relay pass the component test?

Yes	GO to C3
No	INSTALL a new A/C clutch relay.

C3 CHECK THE A/C (AIR CONDITIONING) CLUTCH RELAY CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect A/C clutch relay.
- Disconnect PCM, C1752.5L, 2.2LC1232A, 3.2L C1232B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 2		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to C4

C4 CHECK THE A/C (AIR CONDITIONING) CLUTCH RELAY CONTROL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to C5
No	REPAIR the circuit.

C5 CHECK THE A/C (AIR CONDITIONING) CLUTCH RELAY CONTROL CIRCUIT FOR AN OPEN

- Measure:

2.5L Duratec

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 2	Ω	C175-25

2.2L Duratorq Puma-Diesel

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 2	Ω	C1232-49

3.2L Duratorq Puma-Diesel

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 2	Ω	C1232-49

Is the resistance less than 3 ohms?

Yes	GO to C6
No	REPAIR the circuit.

C6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.5L Duratec-HE (122kW/165PS)-MI4, REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). For 2.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

Unable To Duplicate The Customer Concern And No Diagnostic Trouble Codes (DTCs) Present

This diagnostic procedure tests the functions of the HVAC system and identifies the correct HVAC symptom pinpoint test.

Normal Operation and Fault Conditions

System Operation
REFER to: Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation).

PINPOINT TEST D : UNABLE TO DUPLICATE THE CUSTOMER CONCERN AND NO DIAGNOSTIC TROUBLE CODES (DTCS) PRESENT

D1 CHECK THE PCM (POWERTRAIN CONTROL MODULE) FOR DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform PCM self-test.

Are any climate control related Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the PCM DTC chart in this section.
No	GO to D2

D2 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) FOR DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform FCIM self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the FCIM DTC chart in this section.
No	GO to D3

D3 CHECK THE BLOWER MOTOR OPERATION

- Ignition ON.
- Select panel mode.
- Observe blower motor operation and select each blower motor speed.

Does the blower motor operate in all ranges?

Yes	GO to D4
No	If the blower motor does not operate in any setting, GO to Pinpoint Test L If the blower motor does not correctly change speeds or shut off, GO to Pinpoint Test M

D4 CHECK AIRFLOW OPERATION

- Select the highest blower motor setting.
- While observing the airflow, select each of the airflow positions (panel, panel/floor, floor, floor/defrost, defrost).

Is the airflow directed to the correct outlets?

Yes	GO to D5
No	GO to Pinpoint Test F

D5 VERIFY TEMPERATURE CONTROL OPERATION

- Start the vehicle and allow it to reach normal operating temperature.
- With the A/C off, select panel mode.
- Change the driver and passenger temperature settings from the coldest to the warmest and back to the coldest.

Does the temperature change between very warm to cool?

Yes	GO to D6
No	If the temperature does not get very warm, GO to Pinpoint Test G If the driver side temperature does not change at all, GO to Pinpoint Test J If the passenger side temperature does not change at all, GO to Pinpoint Test K

D6 VERIFY THE AIR CONDITIONING COMPRESSOR DOES NOT ENGAGE WITH A/C (AIR CONDITIONING) OFF

- With the engine running and the A/C off, select panel mode.
- Select the coldest temperature setting.

Is the outlet temperature close to ambient air temperature?

Yes	GO to D7
No	If the driver side temperature is warmer than ambient air temperature, GO to Pinpoint Test J If the passenger side temperature is warmer than ambient air temperature, GO to Pinpoint Test K If the outlet temperature is significantly colder than ambient air temperature and the A/C compressor clutch is engaged, GO to Pinpoint Test I

D7 VERIFY THE A/C (AIR CONDITIONING) COMPRESSOR IS OPERATIONAL IN THE A/C (AIR CONDITIONING) MODE

- Make sure the ambient air temperature is above 0°C (32°F).
- With the engine running, select panel mode.
- Press the A/C button (indicator on).

Is the A/C compressor operational when the panel and A/C button (indicator on) is pressed?

Yes	GO to D8
No	GO to Pinpoint Test H

D8 CHECK THE RECIRCULATED AIR OPERATION

- With the engine running, press the recirculated air button (indicator off).
- Select panel mode.
- Select the highest blower motor setting.
- Observe airflow noise.
- Press the recirculated air button (indicator on).

Does the airflow noise increase when the recirculated air mode is selected (indicator on)?

Yes	GO to D9
No	GO to Pinpoint Test E

D9 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) LEFT DISCHARGE FLOOR TEMPERATURE (LDFTEMP) PID (PARAMETER IDENTIFICATION) (IF EQUIPPED)

- Using a diagnostic scan tool, view the FCIM Parameter Identifications (PIDs).
- Monitor the LDFTEMP PID.

Is the temperature coming out of the driver footwell vent similar to the PID?

Yes	GO to D10
No	GO to Pinpoint Test N

D10 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) LEFT DISCHARGE PANEL TEMPERATURE (LDPT) PID (PARAMETER IDENTIFICATION) (IF EQUIPPED)

- Using a diagnostic scan tool, view the FCIM Parameter Identifications (PIDs).
- Monitor the LDPT PID.

Is the temperature coming out of the driver side register similar to the PID?

Yes	GO to D13
No	GO to Pinpoint Test N

D11 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) DISCHARGE AIR TEMPERATURE, RIGHT PANEL (AIRTEMP_RP) PID (PARAMETER IDENTIFICATION) (IF EQUIPPED)

- Using a diagnostic scan tool, view the FCIM Parameter Identifications (PIDs).
- Monitor the AIRTEMP_RP PID.

Is the temperature coming out of the passenger side register similar to the PID?

Yes	GO to D12
No	GO to Pinpoint Test N

D12 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) DISCHARGE AIR TEMPERATURE, RIGHT FLOOR (AIRTEMP_RF) PID (PARAMETER IDENTIFICATION) (IF EQUIPPED)

- Using a diagnostic scan tool, view the FCIM Parameter Identifications (PIDs).
- Monitor the AIRTEMP_RF PID.

Is the temperature coming out of the passenger side footwell vent similar to the PID?

Yes	GO to D13
No	GO to Pinpoint Test N

D13 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) INTERIOR TEMPERATURE SENSOR (INT_TEMP) PID (PARAMETER IDENTIFICATION) (IF EQUIPPED)

- Using a scan tool view the FCIM Parameter Identifications (PIDs).
- Monitor the INT_TEMP PID.

Is the air temperature at the cabin temperature sensor similar to the PID?

Yes	GO to D14
No	GO to Pinpoint Test O

D14 CHECK THE TOUCHSCREEN CONTROLS OPERATION
• Using the touchscreen controls, select each climate control function. • Using the touchscreen controls, select each audio control function. **Do all touchscreen controls operate?**

Yes	The system is operating correctly.
No	Refer to the appropriate section in Group 415 for the procedure.

The Air Inlet Door Is Inoperative

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

To rotate the air inlet door actuator, the FCIM supplies voltage and ground to the air inlet door actuator through the door actuator motor circuits. To reverse the air inlet door actuator rotation, the FCIM reverses the voltage and ground circuits. The air inlet door actuator feedback resistors are supplied a ground from the FCIM by the air inlet door actuator return circuits and a 5-volt reference voltage on the air inlet door actuator reference circuits. The FCIM uses the actuator feedback resistor wiper arm position and the voltage on the air distribution door actuator feedback circuits to determine the air inlet door actuator position.

During an actuator calibration cycle, the FCIM drives the air inlet door until the door reaches both internal stops in the FCIM case. If the air inlet mode door is temporarily obstructed or binding during a calibration cycle, the FCIM may interpret this as the actual end of travel for the door. When this condition occurs and the FCIM commands the actuator to its end of travel, the air intake may not be from the expected source.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1083:11	Recirculation Damper Motor: Circuit Short To Ground	This DTC sets when the module senses lower than expected voltage on an actuator motor circuit when voltage is applied to drive the motor, indicating a short to ground. The motor can move only in one direction.
B1083:12	Recirculation Damper Motor: Circuit Short To Battery	This DTC sets when the module senses higher than expected voltage on the actuator motor circuit when ground is applied to drive the motor, indicating a short to voltage. The motor can move only in one direction.
B1083:13	Recirculation Damper Motor: Circuit Open	This DTC sets when the module senses no voltage on the actuator motor circuit when ground is applied to drive the motor, indicating an open circuit. The motor cannot move.
B11F0:11	Air Intake Damper Position Sensor: Circuit Short to Ground	This DTC sets when the module senses less than 1 volt on the actuator feedback circuit, indicating a short to ground.
B11F0:15	Air Intake Damper Position Sensor: Circuit Short to Battery or Open	This DTC sets when the module senses greater than 5 volts on the actuator feedback circuit, indicating a short to voltage. This DTC sets when the module senses no voltage on the actuator feedback circuit, indicating an open circuit.

Possible Sources

- Wiring, terminals or connectors
- Air inlet door actuator

- Air inlet door binding or stuck
- FCIM

PINPOINT TEST E : THE AIR INLET DOOR IS INOPERATIVE

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

E1 CHECK THE AIR INLET DOOR ACTUATOR CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect FCIM C2402A.
- Disconnect FCIM C2402B.
- Disconnect LH temperature door actuator C2091.
- Disconnect RH temperature door actuator C2092.
- Disconnect Defrost vent/register door actuatorC232.
- Disconnect In vehicle temperature and humidity sensor C2247.
- Disconnect Air inlet door actuator C282.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C282-6	V	Ground
C282-5	V	Ground
C282-4	V	Ground
C282-3	V	Ground
C282-7	V	Ground

Is there any voltage present?

Yes	REPAIR the circuit.
No	GO to E2

E2 CHECK THE AIR INLET DOOR ACTUATOR CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C282-6	Ω	Ground
C282-5	Ω	Ground
C282-4	Ω	Ground
C282-3	Ω	Ground
C282-7	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to E3
No	REPAIR the circuit.

E3 CHECK THE AIR INLET DOOR ACTUATOR CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C282-6	Ω	C2402A-2
C282-5	Ω	C2402A-16
C282-4	Ω	C2402A-3
C282-3	Ω	C2402A-25
C282-7	Ω	C2402A-24

Are the resistances less than 3 ohms?

Yes	GO to E4
No	REPAIR the circuit.

E4 CHECK THE AIR INLET DOOR ACTUATOR CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C282-6	Ω	C282-5
C282-6	Ω	C282-4
C282-6	Ω	C282-3
C282-6	Ω	C282-7
C282-5	Ω	C282-4
C282-5	Ω	C282-3
C282-5	Ω	C282-7
C282-4	Ω	C282-3
C282-4	Ω	C282-7
C282-3	Ω	C282-7

Are the resistances greater than 10,000 ohms?

Yes	INSTALL a new air inlet door actuator. REFER to: Air Inlet Door Actuator (412-00 Climate Control System - General Information, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to E5
No	REPAIR the circuit.

E5 CHECK FOR CORRECT FRONT CONTROLS INTERFACE MODULE OPERATION

- Ignition OFF.
- Disconnect and inspect all the FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins

- pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

Incorrect Or Erratic Direction Of Airflow From Outlets

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

To rotate the air distribution door actuator (Defrost Vent/Register Door Actuator), the FCIM supplies voltage and ground to the air distribution door actuator through the door actuator motor circuits. To reverse the air distribution door actuator rotation, the FCIM reverses the voltage and ground circuits. The air distribution door actuator feedback resistors are supplied a ground from the FCIM by the air distribution door actuator return circuits and a 5-volt reference voltage on the air distribution door actuator reference circuits. The FCIM uses the actuator feedback resistor wiper arm position and the voltage on the air distribution door actuator feedback circuits to determine the air distribution door actuator position.

During an actuator calibration cycle, the FCIM drives the air distribution door until the door reaches both internal stops in the FCIM case. If the air distribution door is temporarily obstructed or binding during a calibration cycle, the FCIM may interpret this as the actual end of travel for the door. When this condition occurs and the FCIM commands the actuator to its end of travel, the airflow may not be from the expected outlets.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1086:11	Air Distribution Damper Motor: Circuit Short to Ground	This DTC sets when the module senses lower than expected voltage on an actuator motor circuit when voltage is applied to drive the motor, indicating a short to ground. The motor can move only in one direction.
B1086:12	Air Distribution Damper Motor: Circuit Short to Battery	This DTC sets when the module senses higher than expected voltage on the actuator motor circuit when ground is applied to drive the motor, indicating a short to voltage. The motor can move only in one direction.
B1086:13	Air Distribution Damper Motor: Circuit Open	This DTC sets when the module senses no voltage on the actuator motor circuit when ground is applied to drive the motor, indicating an open circuit. The motor cannot move.
B11E7:11	Air Distribution Damper Position Sensor: Circuit Short to Ground	This DTC sets when the module senses less than 1 volt on the actuator feedback circuit, indicating a short to ground.
B11E7:15	Air Distribution Damper Position Sensor: Circuit Short to Battery or Open	This DTCsets when the module senses greater than 4 volts on the actuator feedback circuit, indicating an open circuit or a short to voltage.

Possible Sources

- Wiring, terminals or connectors
- Air distribution door actuator
- Air distribution door binding or stuck

- FCIM

PINPOINT TEST F : INCORRECT OR ERRATIC DIRECTION OF AIRFLOW FROM OUTLETS

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

F1 CHECK THE AIR DISTRIBUTION DOOR ACTUATOR CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect FCIM C2402A.
- Disconnect FCIM C2402B.
- Disconnect LH temperature door actuator C2091.
- Disconnect RH temperature door actuator C2092.
- Disconnect Defrost vent/register door actuatorC232.
- Disconnect In vehicle temperature and humidity sensor C2247.
- Disconnect Air inlet door actuator C282.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C232-7	V	Ground
C232-6	V	Ground
C232-4	V	Ground
C232-5	V	Ground
C232-3	V	Ground

Is there any voltage present?

Yes	REPAIR the circuit.
No	GO to F2

F2 CHECK THE AIR DISTRIBUTION DOOR ACTUATOR CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C232-7	Ω	Ground
C232-6	Ω	Ground
C232-4	Ω	Ground
C232-5	Ω	Ground
C232-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to F3
No	REPAIR the circuit.

F3 CHECK THE AIR DISTRIBUTION DOOR ACTUATOR CIRCUITS FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C232-3	Ω	C2402A-20
C232-6	Ω	C2402A-2
C232-4	Ω	C2402A-3
C232-5	Ω	C2402A-22
C232-7	Ω	C2402A-21

Are the resistances less than 3 ohms?

Yes	GO to F4
No	REPAIR the circuit.

F4 CHECK THE AIR DISTRIBUTION DOOR ACTUATOR CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C232-7	Ω	C232-6
C232-7	Ω	C232-4
C232-7	Ω	C232-5
C232-7	Ω	C232-3
C232-6	Ω	C232-4
C232-6	Ω	C232-5
C232-6	Ω	C232-3
C232-4	Ω	C232-5
C232-4	Ω	C232-3
C232-5	Ω	C232-3

Are the resistances greater than 10,000 ohms?

Yes	INSTALL a new air distribution door actuator, For RHD, refer to REFER to: Air Distribution Door Actuator (412-00 Climate Control System - General Information, Removal and Installation). For LHD, refer to REFER to: Air Distribution Door Actuator (412-00 Climate Control System - General Information, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to F5
No	REPAIR the circuit.

F5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the FCIM and related in-line connectors.
- Repair:

- corrosion (install new connector or terminals – clean module pins)
- damaged or bent pins – install new terminals/pins
- pushed-out pins – install new pins as necessary

- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

Insufficient, Erratic Or No Heat

Normal Operation and Fault Conditions

When the engine is at operating temperature hot coolant flows from the electric motor through the heater core and back to the electric motor. Correct coolant temperatures are critical for good heater performance.

Possible Sources

- Wiring, terminals or connectors
- Temperature door actuator(s)
- Heater core

Visual Inspection and Diagnostic Pre-checks

- Inspect for low engine coolant level.

PINPOINT TEST G : INSUFFICIENT, ERRATIC OR NO HEAT

G1 CHECK FOR CORRECT ENGINE COOLANT LEVEL

- Ignition OFF.
- Check the engine coolant level.

Is the engine coolant at the correct level as indicated on the engine coolant recovery reservoir?

Yes	GO to G3
No	GO to G2

G2 CHECK THE ENGINE COOLING SYSTEM FOR LEAKS

- Pressure test the cooling system for leaks. Refer to the appropriate section in Group 303 for the procedure..

Does the engine cooling system leak?

Yes	REPAIR the engine coolant leak. Refer to the appropriate section in Group 303 for the procedure. TEST the system for normal operation.
No	FILL and BLEED the cooling system. Refer to the appropriate section in Group 303 for the procedure. After filling and bleeding the cooling system, GO to G3

G3 CHECK FOR COOLANT FLOW TO THE HEATER CORE

- Run the motor until it reaches normal operating temperature. Select the floor position on the control

assembly. Set the temperature control to full warm and the blower to the lowest setting.
- Increase engine speed to 3,500 RPM and hold for 30 seconds.
- Allow the engine to idle for 30 seconds.
- Using a suitable temperature measuring device, check the heater core inlet hose to see if it is hot.

Is the heater core inlet hose hot?

Yes	GO to G4
No	BLEED the cooling system per the cooling system draining and vacuum filling general procedure. Refer to the appropriate section in Group 303 for the procedure. After bleeding the cooling system, GO to G4

G4 CHECK FOR A PLUGGED OR RESTRICTED HEATER CORE

- Using a suitable temperature measuring device, measure the heater core outlet hose temperature.

Is the heater core outlet hose temperature similar to the inlet hose temperature (within approximately 6-17°C [10-30°F])?

Yes	DIAGNOSE for a blend door actuator not operating correctly. For inadequate driver side temperature, GO to Pinpoint Test J For inadequate passenger side temperature, GO to Pinpoint Test K
No	INSTALL a new heater core. REFER to: Heater Core (412-00 Climate Control System - General Information, Removal and Installation).

The A/C Is Inoperative

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

Control System Logic
REFER to: Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation).

Possible Sources

- Wiring, terminals or connectors
- A/C pressure transducer
- Evaporator temperature sensor
- FCIM
- PCM
- Electric cooling fan

Visual Inspection and Diagnostic Pre-checks

- Inspect BJB fuse 22(10A).

PINPOINT TEST H : THE A/C (AIR CONDITIONING) IS INOPERATIVE

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

H1 CHECK THE A/C (AIR CONDITIONING) SYSTEM PRESSURE

- Ignition OFF.
- With the R-134a manifold gauge set connected, check the A/C system pressure.

Is the A/C system pressure above 290 kPa (42 psi)?

Yes	GO to H2
No	CHECK the A/C system for leaks. REFER to: Electronic Leak Detection (412-00 Climate Control System - General Information, General Procedures). REFER to: Fluorescent Dye Leak Detection (412-00 Climate Control System - General Information, General Procedures). After the leak is repaired, RECHARGE the A/C system. REFER to: Air Conditioning (A/C) System Recovery, Evacuation and Charging (412-00 Climate Control System - General Information, General Procedures).

H2 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out the network test.

Do the FCIM and the PCM pass the network test?

Yes	GO to H3
No	DIAGNOSE the FCIM or PCM does not communicate with the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

H3 CHECK THE PCM (POWERTRAIN CONTROL MODULE) A/C (AIR CONDITIONING) PRESSURE SENSOR (ACP_PRESS) PID (PARAMETER IDENTIFICATION)

- Ignition ON.
- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- With a manifold gauge set connected, compare the pressure readings of the manifold gauge set and the PCM ACP_PRESS PID.

Are the pressure values of the manifold gauge set and the ACP_PRESS PCM PID within ± 103 kPa (15 psi)?

Yes	GO to H4
No	INSTALL a new A/C pressure transducer. REFER to: Air Conditioning (A/C) Pressure Transducer (412-00 Climate Control System - General Information, Removal and Installation).

H4 ELECTRIC COOLING FAN FUNCTIONAL CHECK

- Ignition ON.
- Using a diagnostic scan tool, carry out the PCM KOEO self-test.

Does the electric cooling fan operate during the KOEO self-test?

Yes	GO to H5
No	DIAGNOSE the electric cooling fan operation. REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual. Section 3 Symptom Charts.

H5 COMPARE THE EVAPORATOR TEMPERATURE SENSOR TO THE PCM (POWERTRAIN CONTROL MODULE) AMBIENT AIR TEMPERATURE (AAT) PID (PARAMETER IDENTIFICATION)

- Ignition OFF.
- Allow the vehicle exterior and interior to stabilize to ambient temperature.
- Disconnect Evaporator Temperature Sensor C296.

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C296-1 (component side)	Ω	C296-2(component side)

- Compare the resistance values to the table below:

Ambient Temperature °C	Resistance ohms
-40°C	98,625 - 103,275 ohms
-20°C	28,640 - 29,600 ohms
°C	9695 - 9895 ohms
20°C	3675 - 3810 ohms
25°C	2950 - 3050 ohms
30°C	2370 - 2565 ohms
40°C	1565 - 1635 ohms

- Ignition ON.
- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Monitor the AAT PID.

Are the temperature values similar?

Yes	GO to H6
No	INSTALL a new evaporator temperature sensor. REFER to: Evaporator (412-00 Climate Control System - General Information, Removal and Installation).

H6 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) A/C (AIR CONDITIONING) SWITCH (CC_SW_AC) PID (PARAMETER IDENTIFICATION) WITH THE A/C (AIR CONDITIONING) ON

- Using a diagnostic scan tool, view FCIM Parameter Identifications (PIDs).
- Monitor the CC_SW_AC PID.

Does the PID display Active?

Yes	GO to H7
No	GO to H14

H7 CHECK THE PCM (POWERTRAIN CONTROL MODULE) A/C (AIR CONDITIONING) REQUEST SIGNAL (AC_REQ) PID (PARAMETER IDENTIFICATION) WITH THE A/C (AIR CONDITIONING) ON

- Start the engine.
- Using a diagnostic scan tool, monitor the PCM AC_REQ PID.
- On the HVAC controls, select PANEL and then press the A/C button (indicator on).

Does the PID display Yes when the button is pressed?

Yes	GO to H8
No	GO to H14

H8 CHECK THE PCM (POWERTRAIN CONTROL MODULE) A/C (AIR CONDITIONING)

COMPRESSOR COMMANDED STATE (ACC_CMD) PID (PARAMETER IDENTIFICATION) WITH THE A/C (AIR CONDITIONING) COMMANDED ON

- Using a diagnostic scan tool, activate the PCM ACC_CMD PID.

Does the A/C compressor turn on?

Yes	GO to H15
No	GO to H9

H9 CHECK THE VOLTAGE TO THE A/C (AIR CONDITIONING) CLUTCH RELAY

- Ignition OFF.
- Disconnect the A/C clutch relay.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 1		Ground
A/C clutch relay socket 3		Ground

Are the voltages greater than 11 volts?

Yes	GO to H10
No	VERIFY BJB fuses 24 (10A) are OK. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short. If OK, REPAIR the circuit.

H10 BYPASS THE A/C (AIR CONDITIONING) CLUTCH RELAY

- Ignition OFF.
- Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
A/C clutch relay socket 3		A/C clutch relay socket 5

- Ignition ON.

Does the A/C compressor clutch engage?

Yes	REMOVE the fused jumper wire. INSTALL a new A/C clutch relay.
No	LEAVE the fused jumper wire installed. GO to H11

H11 CHECK THE A/C (AIR CONDITIONING) COMPRESSOR CLUTCH FIELD COIL VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Disconnect A/C compressor clutch field coil C100.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C100-1		Ground

Is the voltage greater than 11 volts?

Yes	REMOVE the fused jumper wire. GO to H12
No	REMOVE the fused jumper wire. REPAIR the circuit.

H12 CHECK THE A/C (AIR CONDITIONING) COMPRESSOR CLUTCH FIELD COIL GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C100-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to H13
No	REPAIR the circuit.

H13 CHECK THE A/C (AIR CONDITIONING) COMPRESSOR CLUTCH AIR GAP

- Measure the A/C compressor clutch air gap at 3 equally spaced locations between the clutch hub and the A/C compressor clutch pulley.
  REFER to: Air Conditioning (A/C) Clutch Air Gap Adjustment (412-00 Climate Control System - General Information, General Procedures).

Is the A/C compressor clutch air gap greater than 0.6 mm (0.0236 in)?

Yes	ADJUST the A/C compressor clutch air gap. REFER to: Air Conditioning (A/C) Clutch Air Gap Adjustment (412-00 Climate Control System - General Information, General Procedures).
No	INSTALL a new A/C compressor clutch field coil. REFER to: Air Conditioning (A/C) Compressor - 2.5L Duratec-HE (122kW/165PS) - MI4 (412-00 Climate Control System - General Information, Removal and Installation). REFER to: Air Conditioning (A/C) Compressor - 2.2L Duratorq-TDCi (Puma) Diesel (412-00 Climate Control System - General Information, Removal and Installation). REFER to: Air Conditioning (A/C) Compressor - 3.2L Duratorq-TDCi (Puma) Diesel (412-00 Climate Control System - General Information, Removal and Installation).

H14 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

H15 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM and related in-line connectors.
- Repair:
  - corrosion (replace connector or terminals – clean module pins)
  - damaged or bent pins – replace terminals/pins
  - pushed-out pins – replace pins as necessary
- Reconnect all PCM connectors. Make sure they seat and latch correctly.
- Operate the system and verify the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.5L Duratec-HE (122kW/165PS)-MI4, REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). For 2.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The A/C Is Always On - A/C Mode Always Commanded On

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

Control System Logic
REFER to: Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P1464	A/C Demand Out Of Self Test Range	This DTC sets when the PCM senses an A/C request during a PCM self-test.

Possible Sources

- A/C clutch relay
- Wiring, terminals or connectors
- PCM
- FCIM

PINPOINT TEST I : THE A/C (AIR CONDITIONING) IS ALWAYS ON - A/C (AIR CONDITIONING) MODE ALWAYS COMMANDED ON

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

I1 CHECK THE A/C (AIR CONDITIONING) CLUTCH RELAY

- Carry out the component test on the A/C clutch relay.
  Refer to Wiring Diagrams Cell 149 for schematic and connector information.

Did the relay pass the component test?

Yes	GO to I2
No	INSTALL a new A/C clutch relay.

I2 CHECK THE A/C (AIR CONDITIONING) COMPRESSOR CLUTCH FIELD COIL VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect A/C compressor clutch field coil C100.
- Disconnect the A/C clutch relay.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C100-1		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to I3

I3 COMPARE THE EVAPORATOR TEMPERATURE SENSOR TO THE PCM (POWERTRAIN CONTROL MODULE) AMBIENT AIR TEMPERATURE (AAT) PID (PARAMETER IDENTIFICATION)

- Ignition OFF.
- Allow the vehicle exterior and interior to stabilize to ambient temperature.
- Disconnect Evaporator Temperature Sensor C296.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C296-1(component side)	Ω	C296-2(component side)

- Compare the resistance values to the table below:

Ambient Temperature °C	Resistance ohms
-40°C	98,625 - 103,275 ohms

-20°C	28,640 - 29,600 ohms
°C	9695 - 9895 ohms
20°C	3675 - 3810 ohms
25°C	2950 - 3050 ohms
30°C	2370 - 2565 ohms
40°C	1565 - 1635 ohms

- Ignition ON.
- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Monitor the AAT PID.

Are the temperature values similar?

Yes	GO to I4
No	INSTALL a new evaporator temperature sensor. REFER to: Evaporator (412-00 Climate Control System - General Information, Removal and Installation).

I4 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) A/C (AIR CONDITIONING) SWITCH STATUS (CC_SW_AC) PID (PARAMETER IDENTIFICATION)

- Ignition ON.
- Using a diagnostic scan tool, view FCIM Parameter Identifications (PIDs).
- Monitor the CC_SW_AC PID.
- Select panel mode, press and release the A/C button (indicator off) on the FCIM controls.

Does the PID display Active when pressed and Inactive when released?

Yes	GO to I5
No	GO to I8

I5 CHECK THE A/C (AIR CONDITIONING) PRESSURE SENSOR (ACP_PRESS) PARAMETER IDENTIFICATION (PID)

- Using a diagnostic scan tool, view the PCM Parameter Identification (PIDs).
- With a manifold gauge set connected, compare the pressure readings of the manifold gauge set and the PCM Parameter Identification (PID) ACP_PRESS.

Are the pressure values of the manifold gauge set and the ACP_PRESS PCM PID within ± 103 kPa (15) psi?

Yes	GO to I6
No	INSTALL a new A/C pressure transducer. REFER to: Air Conditioning (A/C) Pressure Transducer (412-00 Climate Control System - General Information, Removal and Installation).

I6 CHECK THE PCM (POWERTRAIN CONTROL MODULE) A/C (AIR CONDITIONING) REQUEST SIGNAL (AC_REQ) PID (PARAMETER IDENTIFICATION) WITH THE A/C (AIR CONDITIONING) OFF

- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Monitor the AC_REQ PID.
- While in panel mode, release the A/C button (indicator off) on the FCIM controls.

Does the PID display No?

Yes	GO to I9
No	GO to I7

I7 CHECK THE PCM (POWERTRAIN CONTROL MODULE) A/C (AIR CONDITIONING) REQUEST SIGNAL (AC_REQ) PID (PARAMETER IDENTIFICATION) WITH FCIM (FRONT CONTROLS INTERFACE MODULE) DISCONNECTED

- Ignition OFF.
- Disconnect FCIM C2402A.
- Ignition ON.
- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Monitor the AC_REQ PID.

Does the PID display No?

Yes	GO to I9
No	GO to I8

I8 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, L a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

I9 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM and related in-line connectors.
- Repair:
  - corrosion (replace connector or terminals – clean module pins)
  - damaged or bent pins – replace terminals/pins
  - pushed-out pins – replace pins as necessary
- Reconnect all PCM connectors. Make sure they seat and latch correctly.
- Operate the system and verify the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, L a new PCM. For 2.5L Duratec-HE (122kW/165PS)-MI4, REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). For 2.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L

	Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Temperature Control Is Inoperative Or Does Not Operate Correctly - Driver Side

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

Temperature Door Actuator - Driver Side,
REFER to: Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation).

During an actuator calibration cycle, the FCIM drives the temperature door until the door reaches both internal stops in the HVAC case. If the temperature door is temporarily obstructed or binding during a calibration cycle, the module may interpret this as the actual end of travel for the door. When this condition occurs and the module commands the actuator to its end of travel, the airflow may not be the expected temperature.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1081:11	Left Temperature Damper Motor: Circuit Short To Ground	This DTC sets when the module senses lower than expected voltage on an actuator motor circuit when voltage is applied to drive the motor, indicating a short to ground. The motor can move only in one direction.
B1081:12	Left Temperature Damper Motor: Circuit Short To Battery	This DTC sets when the module senses higher than expected voltage on the actuator motor circuit when ground is applied to drive the motor, indicating a short to voltage. The motor can move only in one direction.
B1081:13	Left Temperature Damper Motor: Open Circuit	This DTC sets when the module senses no voltage on the actuator motor circuit when ground is applied to drive the motor, indicating an open circuit. The motor cannot move.
B11E5:11	Left HVAC Damper Position Sensor: Circuit Short to Ground	This DTC sets when the module senses less than 1 volt on the actuator feedback circuit, indicating a short to ground.
B11E5:15	Left HVAC Damper Position Sensor: Circuit Short to Battery or Ground	This DTC sets when the module senses less than 1 volt, or greater than 5 volts on the actuator feedback circuit, indicating an open circuit, short to ground or short to voltage.

Possible Sources

- Wiring, terminals or connectors
- Driver side temperature door actuator
- FCIM

PINPOINT TEST J : THE TEMPERATURE CONTROL IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY - DRIVER SIDE

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

J1 CHECK THE DRIVER SIDE TEMPERATURE DOOR ACTUATOR CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect FCIM C2402A..
- Disconnect FCIM C2402B..
- Disconnect BCM fuse 21 (5A)..
- Disconnect In-vehicle temperature and humidity sensor C2247.

Are the resistances greater than 10,000 ohms?

Yes	INSTALL a new driver side temperature door actuator. For LHD, refer to REFER to: Temperature Door Actuator LH - LHD 4WD/LHD RWD (412-00 Climate Control System - General Information, Removal and Installation). For RHD, refer to REFER to: Temperature Door Actuator LH - RHD 4WD/RHD RWD (412-00 Climate Control System - General Information, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to J5

No	REPAIR the circuit.

J5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (I new connector or terminals – clean module pins)
  - damaged or bent pins – I new terminals/pins
  - pushed-out pins – I new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The Temperature Control Is Inoperative Or Does Not Operate Correctly - Passenger Side

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

Temperature Door Actuator - Passenger side,
REFER to: Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation).

During an actuator calibration cycle, the FCIM drives the temperature door until the door reaches both internal stops in the HVAC case. If the temperature door is temporarily obstructed or binding during a calibration cycle, the module may interpret this as the actual end of travel for the door. When this condition occurs and the module commands the actuator to its end of travel, the airflow may not be the expected temperature.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1082:11	Right Temperature Damper Motor: Circuit Short To Ground	This DTC sets when the module senses lower than expected voltage on an actuator motor circuit when voltage is applied to drive the motor, indicating a short to ground. The motor can move only in one direction.
B1082:12	Right Temperature Damper Motor: Circuit Short To Battery	This DTC sets when the module senses higher than expected voltage on the actuator motor circuit when ground is applied to drive the motor, indicating a short to voltage. The motor can move only in one direction.
B1082:13	Right Temperature Damper Motor: Open Circuit	This DTC sets when the module senses no voltage on the actuator motor circuit when ground is applied to drive the motor, indicating an open circuit. The motor can not move.
B11E6:11	Right HVAC Damper Position Sensor: Circuit Short to Battery	This DTC sets when the module senses less than 1 volt on the actuator feedback circuit, indicating an open circuit or a short to ground.
B11E6:15	Right HVAC Damper Position Sensor: Circuit	This DTC sets when the module senses less than 1 volt, or greater than 5 volts on the actuator feedback circuit, indicating an open circuit, short to

	Short to Battery or Ground	ground or short to voltage.

Are the resistances greater than 10,000 ohms?

Yes	INSTALL a new passenger side temperature door actuator. For LHD, refer to REFER to: Temperature Door Actuator RH - LHD 4WD/LHD RWD (412-00 Climate Control System - General Information, Removal and Installation). For RHD, refer to REFER to: Temperature Door Actuator RH - RHD 4WD/RHD RWD (412-00 Climate Control System - General Information, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to K5
No	REPAIR the circuit.

K5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The Blower Motor Is Inoperative

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

Voltage is supplied to the blower motor relay switched contact from the BJB. Ground to the relay coil is a dedicated circuit. When the blower motor relay coil receives power from the FCIM, the relay coil is energized and voltage is delivered to the blower motor control module. Power and ground for the blower motor is provided by the blower motor control module. The FCIM sends a PWM signal to the blower motor speed control to control the blower speed.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10AF:11	Blower Fan Relay: Circuit Short To Ground	This DTC sets when the module senses low voltage on the blower motor relay coil voltage circuit when the module is energizing the circuit. The blower motor relay is permanently inactive.
B10AF:12	Blower Fan Relay: Circuit Short To	This DTC sets when the module senses greater than expected voltage on the blower motor relay coil voltage circuit, indicating an open circuit or a short to voltage. The blower motor relay is inactive when circuit is open; the blower motor relay is on all the

	Battery	time when shorted to battery.
B10AF:13	Blower Fan Relay: Circuit Open	This DTC sets when the module senses greater than expected voltage on the blower motor relay coil voltage circuit, indicating an open circuit or a short to voltage. The blower motor relay is inactive when circuit is open; the blower motor relay is on all the time when shorted to battery.
B10AF:15	Blower Fan Relay: Circuit Short To Battery or Open	This DTC sets when the module senses greater than expected voltage on the blower motor relay coil voltage circuit, indicating an open circuit or a short to voltage. The blower motor relay is inactive when circuit is open; the blower motor relay is on all the time when shorted to battery.
B10B9:12	Blower Control: Circuit Short To Battery	This DTC sets when the module senses high voltage on the blower motor control PWM circuit, indicating a short directly to voltage. The blower motor is inoperative.
B10B9:14	Blower Control: Circuit Short To Ground or Open	This DTC sets when the module senses no voltage on the blower motor control PWM circuit, indicating a short directly to ground or an open circuit. The blower motor runs at full speed if the circuit is shorted to ground. The blower motor is inoperative if the circuit is open.

Possible Sources

- Wiring, terminals or connectors
- Fuse
- Blower motor relay
- Blower motor speed control field effect transistor (FET)
- FCIM

Visual Inspection and Diagnostic Pre-checks

- Inspect BJB fuse 79 (40A).

PINPOINT TEST L : THE BLOWER MOTOR IS INOPERATIVE

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

L1 CHECK THE BLOWER MOTOR RELAY

- Ignition OFF.
- Disconnect Blower motor relay.
- Carry out the component test on the blower motor relay.
  Refer to Wiring Diagrams Cell 149 for schematic and connector information.

Did the relay pass the component test?

Yes	GO to L2
No	INSTALL a new blower motor relay.

L2 CHECK THE BLOWER MOTOR RELAY SWITCH CONTACT SUPPLY VOLTAGE

- Measure:

Positive Lead	Measurement / Action	Negative Lead
Blower motor relay socket 3		Ground

Is the voltage greater than 11 volts?

Yes	GO to L3

No	VERIFY BJB fuse 79 (40A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

L3 CHECK THE BLOWER MOTOR RELAY COIL GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
Blower motor relay socket 2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to L4
No	REPAIR the circuit.

L4 CHECK THE BLOWER MOTOR RELAY COIL CONTROL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect FCIM C2402A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
Blower motor relay socket 1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to L5
No	REPAIR the circuit.

L5 CHECK THE BLOWER MOTOR RELAY COIL CONTROL CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
Blower motor relay socket 1	Ω	C2402A-11

Is the resistance less than 3 ohms?

Yes	GO to L6
No	REPAIR the circuit.

L6 CHECK THE BLOWER MOTOR SPEED CONTROL CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Blower motor C2004.

- Disconnect Blower motor speed control field effect transistor (FET) C2384.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2004-1		Ground
C2384-3		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to L7

L7 CHECK THE BLOWER MOTOR SPEED CONTROL CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2004-1	Ω	Ground
C2384-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to L8
No	REPAIR the circuit.

L8 CHECK THE BLOWER MOTOR SPEED CONTROL CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2384-2	Ω	Ground

Positive Lead	Measurement / Action	Negative Lead
C2004-1	Ω	Blower motor relay socket 5

Positive Lead	Measurement / Action	Negative Lead
C2384-3	Ω	C2402A-11

Are the resistances less than 3 ohms?

Yes	GO to L9
No	REPAIR the circuit.

L9 CHECK THE BLOWER MOTOR SPEED CONTROL CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2384-2	Ω	C2004-1
C2384-2	Ω	C2384-3
C2004-1	Ω	C2384-3

Are the resistances greater than 10,000 ohms?

Yes	If C2004blower motor is effected. INSTALL a new blower motor. REFER to: Blower Motor (412-00 Climate Control System - General Information, Removal and Installation). If C2384 field effect transistor (FET) is effected. INSTALL A new FET. REFER to: Blower Motor Speed Control (412-00 Climate Control System - General Information, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to L10
No	REPAIR the circuits.

L10 CHECK FOR CORRECT FRONT CONTROLS INTERFACE MODULE (FCIM) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The Blower Motor Does Not Operate Correctly

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

Voltage is supplied to the blower motor relay switched contact from the BJB. Ground to the relay coil is a dedicated circuit. When the blower motor relay coil receives power from the FCIM, the relay coil is energized and voltage is

delivered to the blower motor speed control field effect transistor (FET). The FCIM sends a PWM signal to the blower motor speed control field effect transistor to control the blower speed.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10AF:11	Blower Fan Relay: Circuit Short To Ground	This DTC sets when the module senses low voltage on the blower motor relay coil voltage circuit when the module is energizing the circuit. The blower motor relay is permanently inactive.
B10AF:12	Blower Fan Relay: Circuit Short To Battery	This DTC sets when the module senses greater than expected voltage on the blower motor relay coil voltage circuit, indicating a short to voltage. The blower motor relay is on all the time when shorted to battery.
B10AF:13	Blower Fan Relay: Circuit Open	This DTC sets when the module senses less than expected voltage on the blower motor relay coil voltage circuit, indicating an open circuit. The blower motor relay is inactive when circuit is open.
B10AF:15	Blower Fan Relay: Circuit Short To Battery or Open	This DTC sets when the module senses greater than expected voltage on the blower motor relay coil voltage circuit, indicating an open circuit or a short to voltage. The blower motor relay is inactive when circuit is open; the blower motor relay is on all the time when shorted to battery.
B10B9:14	Blower Control: Circuit Short To Ground or Open	This DTC sets when the module senses no voltage on the blower motor control PWM circuit, indicating a short directly to ground or an open circuit. The blower motor runs at full speed if the circuit is shorted to ground. The blower motor is inoperative if the circuit is open.

Possible Sources

PINPOINT TEST M : THE BLOWER MOTOR DOES NOT OPERATE CORRECTLY

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

M1 VERIFY THE BLOWER MOTOR OPERATION

- Ignition ON.
- Select panel on the FCIM controls. Adjust the blower motor setting to the minimum and maximum settings.

Does the blower motor operate at any setting?

Yes	GO to M2
No	GO to Pinpoint Test L

M2 CHECK THE BLOWER MOTOR SPEED CONTROL PWM (PULSE WIDTH MODULATION) CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Blower motor speed control (field effect transistor (FET))C2384.
- Disconnect Blower motor C2004.
- Disconnect FCIM C2402A.
- Ignition ON.

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-23		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to M3

M3 CHECK THE BLOWER MOTOR SPEED CONTROLPWM (PULSE WIDTH MODULATION) CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-23	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to M4
No	REPAIR the circuit.

M4 CHECK THE BLOWER MOTOR RELAY COIL CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Blower motor relay.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-11		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to M5

M5 CHECK THE BLOWER MOTOR OPERATION WITH THE BLOWER MOTOR RELAY DISCONNECTED

- Ignition OFF.
- Connect Field effect transistor part of Blower motor speed control C2387.
- Connect Blower motor part of Blower motor speed control C2004.
- Connect FCIM C2402A.
- Ignition ON.
- Operate the HVAC system and determine if the concern is still present.

Does the fan still operate all the time?

Yes	REPAIR the blower motor speed control voltage circuit CH402 (YE/GN) for a short to voltage.
No	GO to M6

M6 CHECK FOR CORRECT BLOWER MOTOR SPEED CONTROL OPERATION

- Ignition OFF.
- Disconnect and inspect the blower motor speed control connector field effect transistor C2384and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the blower motor speed control connector. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	INSTALL a new blower motor speed control. REFER to: Blower Motor Speed Control (412-00 Climate Control System - General Information, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to M7
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

M7 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

Air Discharge Temperature Sensor Circuit Faults

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

The 2 air discharge temperature sensors contain a thermistor. The sensor varies its resistance with the temperature. As the temperature rises, the resistance falls. As the temperature falls, the resistance rises.
REFER to: Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and

Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10B3:11	Right Panel Air Discharge Temperature: Circuit Short To Ground	This DTC sets when the FCIM senses erratic voltages from the right panel air discharge temperature sensor.
B10B3:15	Right Panel Air Discharge Temperature: Circuit Short To Battery or Open	This DTC sets when the FCIM senses erratic voltages from the right panel air discharge temperature sensor.
B10B4:11	Right Floor Air Discharge Temperature: Circuit Short To Ground	This DTC sets when the FCIM senses erratic voltages from the right panel air discharge temperature sensor.
B10B4:15	Right Floor Air Discharge Temperature: Circuit Short To Battery or Open	This DTC sets when the FCIM senses erratic voltages from the right panel air discharge temperature sensor.
B10B5:11	Left Panel Air Discharge Temperature: Circuit Short To Ground	This DTC sets when the FCIM senses erratic voltages from the left panel air discharge temperature sensor.
B10B5:15	Left Panel Air Discharge Temperature: Circuit Short To Battery or Open	This DTC sets when the FCIM senses erratic voltages from the left panel air discharge temperature sensor.
B10B6:11	Left Floor Air Discharge Temperature: Circuit Short To Ground	This DTC sets when the FCIM senses erratic voltages from the left floor air discharge temperature sensor.
B10B6:15	Left Floor Air Discharge Temperature: Circuit Short To Battery or Open	This DTC sets when the FCIM senses erratic voltages from the left floor air discharge temperature sensor.

Possible Sources

- Wiring, terminals or connectors
- Air discharge temperature sensor(s)
- FCIM

PINPOINT TEST N : AIR DISCHARGE TEMPERATURE SENSOR CIRCUIT FAULTS

N1 CHECK THE AIR DISCHARGE TEMPERATURE SENSOR OUTPUT VOLTAGE CIRCUIT

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

- Ignition OFF.
- Disconnect the suspect air discharge temperature sensor:
  - Driver side center register air discharge temperature sensor C2438
  - Driver side footwell air discharge temperature sensor C2436
- Ignition ON.
- Turn the HVAC system on.
- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2436-1		C2436-3

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-1		C2438-3

Is the voltage between 4.7 and 5.1 volts?

Yes	INSTALL a new air discharge temperature sensor. Refer to the appropriate section in Group 412 for the procedure. CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. If DTC returns, GO to N9
No	GO to N2

N2 CHECK THE AIR DISCHARGE TEMPERATURE SENSOR SIGNAL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect FCIM C2402B.
- Ignition ON.
- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2436-1		Ground

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-1		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to N3

N3 CHECK THE AIR DISCHARGE TEMPERATURE SENSOR SIGNAL RETURN CIRCUIT FOR A SHORT TO VOLTAGE

- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2436-3		Ground

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-3		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to N4

N4 CHECK THE AIR DISCHARGE TEMPERATURE SENSOR SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2436-1	Ω	Ground

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-1	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to N5
No	REPAIR the circuit.

N5 CHECK THE AIR DISCHARGE TEMPERATURE SENSOR SIGNAL RETURN CIRCUIT FOR A SHORT TO GROUND

- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2436-3	Ω	Ground

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to N6

No	REPAIR the circuit.

N6 CHECK THE AIR DISCHARGE TEMPERATURE SENSOR SIGNAL CIRCUIT FOR AN OPEN

- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2436-1	Ω	C2402B-5

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-1	Ω	C2402B-4

Are the resistances less than 3 ohms?

Yes	GO to N7
No	REPAIR the circuit.

N7 CHECK THE AIR DISCHARGE TEMPERATURE SENSOR SIGNAL RETURN CIRCUIT FOR AN OPEN

- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2436-3	Ω	C2402A-2

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-3	Ω	C2402A-2

Are the resistances less than 3 ohms?

Yes	GO to N8
No	REPAIR the circuit.

N8 CHECK AIR DISCHARGE TEMPERATURE SENSOR SIGNAL CIRCUIT AND THE SIGNAL RETURN FOR A SHORT TO TOGETHER

- Measure:

Driver side footwell air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2436-1	Ω	C2436-3

Driver side center register air discharge temperature sensor

Positive Lead	Measurement / Action	Negative Lead
C2438-1	Ω	C2438-3

Are the resistances greater than 10,000 ohms?

Yes	INSTALL a new air discharge temperature sensor. Refer to the appropriate section in Group 412 for the procedure. CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. If DTC returns, GO to N9
No	REPAIR the circuit.

N9 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B105A:12, B105A:14, B1A61:11, B1A61:15, B1A69:12, B1A69:14

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

In-Vehicle Temperature and Humidity Sensor,
REFER to: Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B105A:12	Cabin Temperature Sensor Fan: Circuit Short To Battery	This DTC sets when the module senses higher than expected voltage on the in-vehicle temperature and humidity sensor fan motor circuit. The in-vehicle temperature and humidity sensor fan motor is inactive.
B105A:14	Cabin Temperature Sensor Fan: Circuit Short To Ground or Open	This DTC sets when the module senses no voltage on the in-vehicle temperature and humidity sensor fan motor circuit, indicating an open or a short directly to ground. The in-vehicle temperature and humidity sensor fan motor is active.
B1A61:11	Cabin Temperature Sensor: Circuit Short to Ground	This DTC sets when the module senses lower than expected voltage on the in-vehicle temperature and humidity sensor feedback circuit, indicating a short to ground.
B1A61:15	Cabin Temperature Sensor: Circuit Short to Battery or Open	This DTC sets when the module senses greater than expected voltage on the in-vehicle temperature and humidity sensor feedback circuit, indicating a short to voltage or an open circuit or sensor.
B1A69:11	Humidity Sensor: Circuit Short To Ground	This DTCsets when the module senses lower than expected voltage on the in-vehicle temperature and humidity sensor humidity input circuit, indicating a short to ground.
B1A69:15	Humidity Sensor: Circuit Short To Battery or Open	This DTCsets when the module senses greater than expected voltage on the in-vehicle temperature and humidity sensor humidity input circuit, indicating a short to voltage or an open circuit or sensor.

Possible Sources

- Fuse
- Wiring, terminals or connectors
- In-vehicle temperature and humidity sensor
- FCIM

Visual Inspection and Diagnostic Pre-checks

- Make sure the in-vehicle temperature and humidity sensor harness is not chaffed.

PINPOINT TEST O : B105A:12, B105A:14, B1A61:11, B1A61:15, B1A69:11, B1A69:15

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

O1 CHECK THE IN-VEHICLE TEMPERATURE AND HUMIDITY SENSOR CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect FCIM C2402A. .
- Disconnect FCIM C2402B..
- Disconnect BCM fuse 21 (5A)..
- Disconnect In-vehicle temperature and humidity sensor C2247.
- Disconnect LHtemperature door actuator C2091.
- Disconnect RH temperature door actuator C2092.
- Disconnect Defrost Vent/Register Door Actuator C232.
- Disconnect Air Inlet Door Actuator C282.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2247-1		Ground
C2247-2		Ground
C2247-3		Ground
C2247-4		Ground

C2247-5	V	Ground
C2247-6	V	Ground

Is any voltage present?

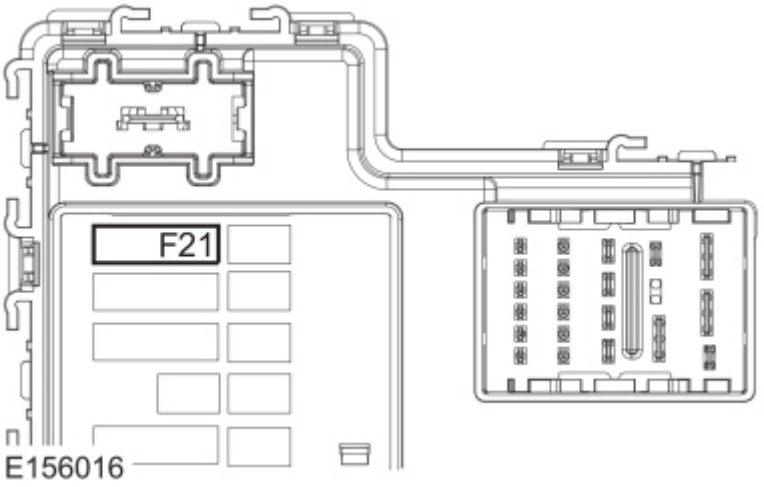
Yes	REPAIR the circuit.
No	GO to O2

O2 CHECK THE IN-VEHICLE TEMPERATURE AND HUMIDITY SENSOR CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2247-1	Ω	Ground
C2247-2	Ω	Ground
C2247-3	Ω	Ground
C2247-4	Ω	Ground
C2247-5	Ω	Ground
C2247-6	Ω	Ground

Are the resistances greater than 10,000 ohms?



Yes	GO to O3
No	REPAIR the circuit.

O3 CHECK THE IN-VEHICLE TEMPERATURE AND HUMIDITY SENSOR CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2247-3	Ω	C2402A-3
C2247-5	Ω	C2402A-2

Positive Lead	Measurement / Action	Negative Lead
C2247-1	Ω	C2402B-27
C2247-2	Ω	C2402B-29
C2247-4	Ω	C2402B-19

Positive Lead	Measurement / Action	Negative Lead
C2247-6	Ω	BCM fuse 21 cavity, (component  side)

Are the resistances less than 3 ohms?

Yes	GO to O4
No	REPAIR the circuit.

O4 CHECK THE IN-VEHICLE TEMPERATURE AND HUMIDITY SENSOR CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2247-1	Ω	C2247-2
C2247-1	Ω	C2247-3
C2247-1	Ω	C2247-4
C2247-1	Ω	C2247-5
C2247-1	Ω	C2247-6
C2247-2	Ω	C2247-3
C2247-2	Ω	C2247-4
C2247-2	Ω	C2247-5
C2247-2	Ω	C2247-6
C2247-3	Ω	C2247-4
C2247-3	Ω	C2247-5
C2247-3	Ω	C2247-6
C2247-4	Ω	C2247-5
C2247-4	Ω	C2247-6
C2247-5	Ω	C2247-6

Are the resistances greater than 10,000 ohms?

Yes	GO to O5
No	REPAIR the circuit.

O5 CHECK FOR CORRECT IN-VEHICLE TEMPERATURE AND HUMIDITY SENSOR OPERATION

- Ignition OFF.
- Inspect the disconnected connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all disconnected connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	INSTALL a new in-vehicle temperature and humidity sensor. REFER to: Ambient Air Quality Sensor (412-00 Climate Control System - General Information, Removal and Installation). TEST the system for normal operation. If the concern is still present, GO to O6
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

O6 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B1A63:11, B1A63:15, B1A64:11, B1A64:15

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

Sunload Sensor,
REFER to: Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A63:11	Right Solar Sensor: Circuit Short To Ground	This DTC sets when the control module senses lower than expected voltage on the RH sensor feedback circuit, indicating a short to ground.
B1A63:15	Right Solar Sensor: Circuit Short To Battery or Open	This DTC sets when the control module senses higher than expected voltage on the RH sensor feedback circuit, indicating a short to voltage or an open circuit or sensor.
B1A64:11	Left Solar Sensor: Circuit Short To Ground	This DTC sets when the control module senses lower than expected voltage on the LH sensor feedback circuit, indicating a short to ground.
B1A64:15	Left Solar Sensor: Circuit Short To Battery or Open	This DTC sets when the control module senses higher than expected voltage on the LH sensor feedback circuit, indicating a short to voltage or an open circuit or sensor.

Possible Sources

- Wiring, terminals or connectors
- Sunload sensor
- FCIM

Visual Inspection and Diagnostic Pre-checks

- Inspect loose or corroded FCIM and sunload sensor connections.

PINPOINT TEST P : B1A63:11, B1A63:15, B1A64:11, B1A64:15

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

P1 CHECK THE SUNLOAD SENSOR CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Autolamp/sunload sensor C286.
- Disconnect FCIM C2402B.
- Disconnect BCM C2280G.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C286-1	V	Ground
C286-2	V	Ground
C286-3	V	Ground
C286-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to P2

P2 CHECK THE SUNLOAD SENSOR CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C286-1	Ω	Ground
C286-2	Ω	Ground

C286-2	Ω	Ground
C286-3	Ω	Ground
C286-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to P3
No	REPAIR the circuit.

P3 CHECK THE SUNLOAD SENSOR SIGNAL CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C286-1	Ω	C2402B-22
C286-3	Ω	C2402B-21

Positive Lead	Measurement / Action	Negative Lead
C286-2	Ω	C2280G-24
C286-4	Ω	C2280G-22

Are the resistances less than 3 ohms?

Yes	GO to P4
No	REPAIR the circuit.

P4 CHECK THE SUNLOAD SENSOR SIGNAL CIRCUITS FOR A SHORT TO EACH OTHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C286-1	Ω	C286-2
C286-1	Ω	C286-3
C286-1	Ω	C286-4
C286-2	Ω	C286-3
C286-2	Ω	C286-4
C286-3	Ω	C286-4

Are the resistances greater than 10,000 ohms?

Yes	INSTALL a new sunload sensor. REFER to: Sunload Sensor (412-00 Climate Control System - General Information, Removal

	and Installation). TEST the system for normal operation. If the concern is still present, GO to P5
No	REPAIR the circuit.

P5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B1B71:11, B1B71:15

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

Evaporator Temperature Sensor,
REFER to: Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) - System Operation and Component Description (412-00 Climate Control System - General Information, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1B71:11	Evaporator Temperature Sensor: Circuit Short To Ground	The module senses excessive voltage drop on the sensor reference voltage circuit, indicating a short directly to ground. The module defaults to calculated evaporator temperature and the compressor is shut off.
B1B71:15	Evaporator Temperature Sensor: Circuit Short To Battery or Open	The module senses no voltage drop on the sensor reference voltage circuit, indicating a short directly to voltage or an open circuit. The module defaults to calculated evaporator temperature and the compressor is shut off.

Possible Sources

- Wiring, terminals or connectors
- Evaporator temperature sensor
- FCIM

PINPOINT TEST Q : B1B71:11, B1B71:15

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

Q1 CHECK THE EVAPORATOR TEMPERATURE SENSOR RESISTANCE

- Ignition OFF.
- Disconnect Evaporator temperature sensor C296.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C296-1(component side)	Ω	C296-2(component side)

- Compare the evaporator temperature sensor measured resistance with the table below.

Ambient Temperature °C	Resistance ohms
-40°C	98,625 - 103,275 ohms
-20°C	28,640 - 29,600 ohms
°C	9695 - 9895 ohms
20°C	3675 - 3810 ohms
25°C	2950 - 3050 ohms
30°C	2370 - 2565 ohms
40°C	1565 - 1635 ohms

Is the resistance within the specified values for the temperatures?

Yes	GO to Q2
No	INSTALL a new evaporator temperature sensor. REFER to: Evaporator (412-00 Climate Control System - General Information, Removal and Installation).

Q2 CHECK THE EVAPORATOR TEMPERATURE SENSOR INPUT CIRCUIT FOR A SHORT TO VOLTAGE

- Disconnect FCIM C2402A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-19	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to Q3

Q3 CHECK THE EVAPORATOR TEMPERATURE SENSOR INPUT CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-19	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to Q4
No	REPAIR the circuit.

Q4 CHECK THE EVAPORATOR TEMPERATURE SENSOR INPUT CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-19	Ω	C296-2

Is the resistance less than 3 ohms?

Yes	GO to Q5
No	REPAIR the circuit.

Q5 CHECK THE EVAPORATOR TEMPERATURE SENSOR SIGNAL AND SIGNAL RETURN CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C296-1	Ω	C296-2

Is the resistance greater than 10,000 ohms?

Yes	GO to Q6
No	REPAIR the circuit.

Q6 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

C1B14:11, C1B14:12

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

A 5-volt reference voltage and ground is supplied to the climate control sensors and actuators from the FCIM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C1B14:11	Sensor Supply Voltage A: Circuit Short to Ground	This DTC sets when the module senses less than 5 volts on the sensor reference voltage circuit, indicating a short to ground.
C1B14:12	Sensor Supply Voltage A: Circuit Short to Battery	This DTC sets when the module senses greater than 5 volts on the sensor reference voltage circuit, indicating a short to voltage.

Possible Sources

- Wiring, terminals or connectors
- FCIM

PINPOINT TEST R : C1B14:11, C1B14:12

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

R1 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) DTCS

- Ignition ON.
- Using a diagnostic scan tool, perform FCIM self-test.

Is DTC C1B14:11 present?

Yes	GO to R2
No	GO to R5

R2 CHECK THE REFERENCE VOLTAGE CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect FCIM C2402A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-3	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to R3
No	REPAIR the circuit.

R3 CHECK THE REFERENCE VOLTAGE CIRCUIT AND THE SIGNAL RETURN CIRCUIT FOR A SHORT TOGETHER

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-3	Ω	C2402A-2

Is the resistance greater than 200 ohms?

Yes	GO to R6
No	GO to R4

R4 CHECK THE A/C (AIR CONDITIONING) COMPONENTS

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-3	Ω	C2402A-2

- While measuring the resistance, disconnect the following components one at a time, in order. Stop disconnecting components if the measured resistance rises above 200 ohms.
  - In-vehicle temperature and humidity sensor (Ambient quality sensor)C2247
  - Evaporator temperature sensor C296
  - Driver side center register air discharge temperature sensor C2438
  - Driver side footwell air discharge temperature sensor C2436
  - Air distribution door actuator C232
  - Passenger temperature door actuator C2092
  - Driver temperature door actuator C2091
  - Air inlet door actuator C282

Did the resistance rise above 200 ohms?

Yes	INSTALL a new sensor or actuator (the last one to be disconnected). Refer to the appropriate section in Group 412 for the procedure. When installing an actuator, CONNECT the actuator electrical connector before the FCIM. This allows the actuator to be calibrated when the FCIM is connected.
No	REPAIR the circuit.

R5 CHECK THE REFERENCE VOLTAGE CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect FCIM C2402A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead

C2402A-3		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to R6

R6 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

P193E

Refer to Wiring Diagrams Cell 55 for schematic and connector information.

Normal Operation and Fault Conditions

The PCM controls the A/C compressor clutch field coil based on messages received from the BCM over the HS-CAN. When the FCIM determines it is necessary to activate the A/C compressor due to driver request or automatic climate control settings, the FCIM sends a message to the BCM over the MS-CAN, the BCM then sends a message to the PCM to activate the A/C compressor.

An internal failure of the PCM, BCM or FCIM, or a failure in the MS-CAN or HS-CAN, causes the PCM to set a DTC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P193E	A/C Clutch Request Signal	This DTC sets when the PCM does not receive the A/C enable request from the BCM.

Possible Sources

- Network concerns
- BCM
- PCM
- FCIM

PINPOINT TEST S : P193E

S1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to S2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

S2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, carry out the Network Test.

Do the BCM, PCM and the FCIM pass the Network Test?

Yes	GO to S3
No	DIAGNOSE the BCM, PCM or FCIM does not communicate with the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

S3 CHECK THE PCM (POWERTRAIN CONTROL MODULE) A/C (AIR CONDITIONING) REQUEST SIGNAL (AC_REQ) PID (PARAMETER IDENTIFICATION)

- Start the engine.
- Using a diagnostic scan tool, monitor the PCM AC_REQ PID.
- On the HVAC controls, select PANEL mode, then press the A/C button (indicator ON).

Does the AC_REQ PID display YES when the A/C button indicator is illuminated?

Yes	GO to S7
No	GO to S4

S4 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) A/C (AIR CONDITIONING) SWITCH (CC_SW_AC) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, monitor the FCIM CC_SW_AC PID while pressing and releasing the A/C button.

Does the PID display Active when the A/C button indicator is illuminated?

Yes	GO to S6
No	GO to S5

S5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all FCIM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

S6 VERIFY CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM electrical connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all BCM electrical connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

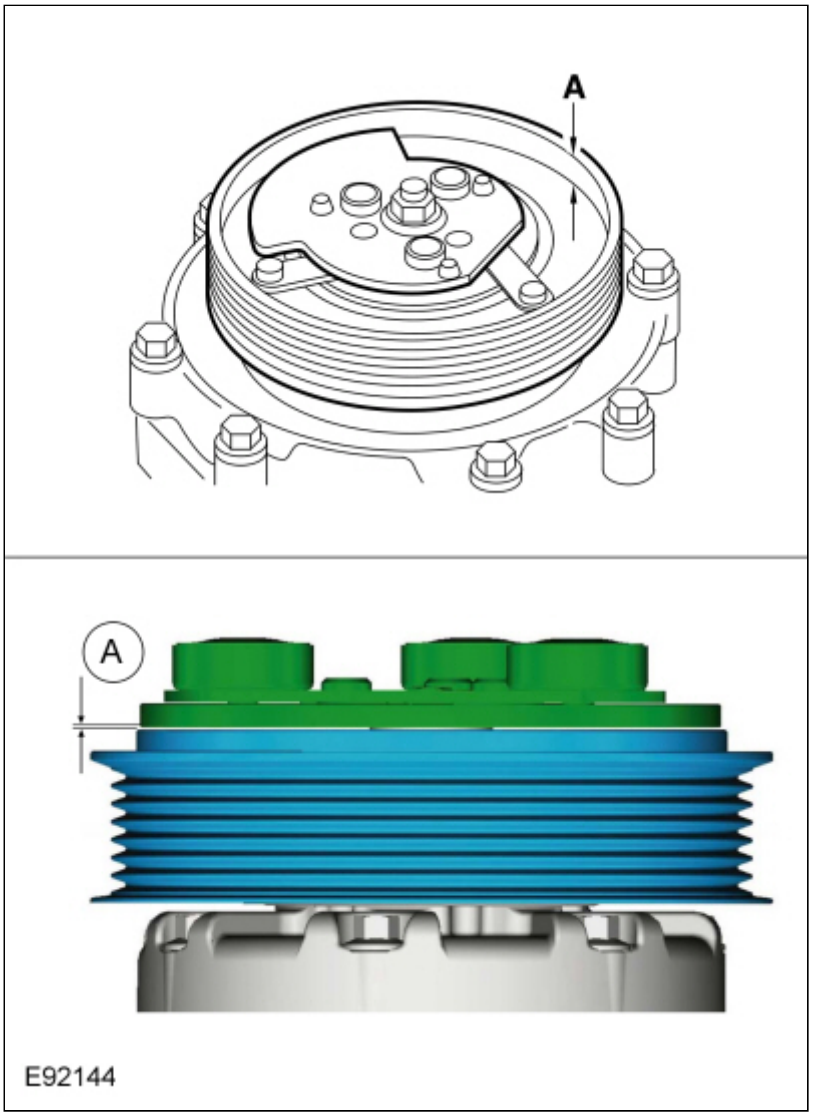
Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. For LHD REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). For RHD REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

S7 VERIFY CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM and related in-line electrical connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all PCM electrical connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?



Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. For 2.5L Duratec-HE (122kW/165PS)-MI4, REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). For 2.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). For 3.2L Duratorq-TDCI (Puma) Diesel, REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by

	module connections. ADDRESS the root cause of any connector or pin issues.

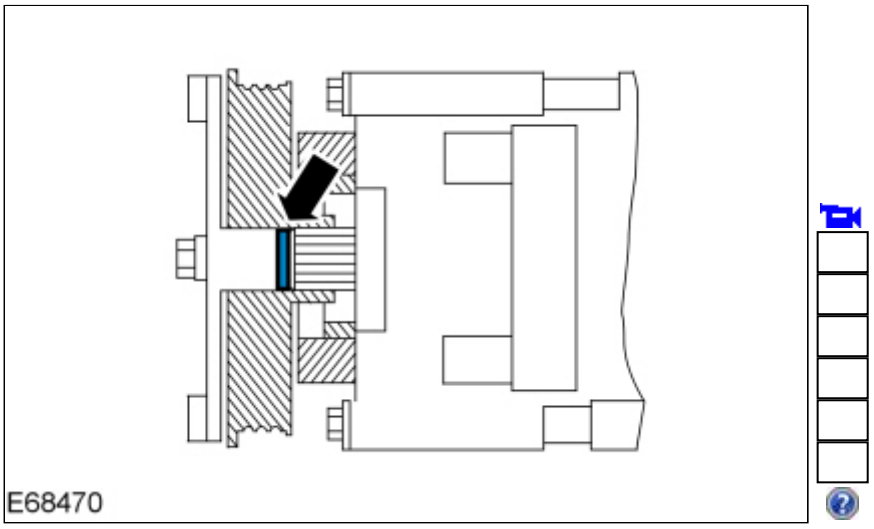
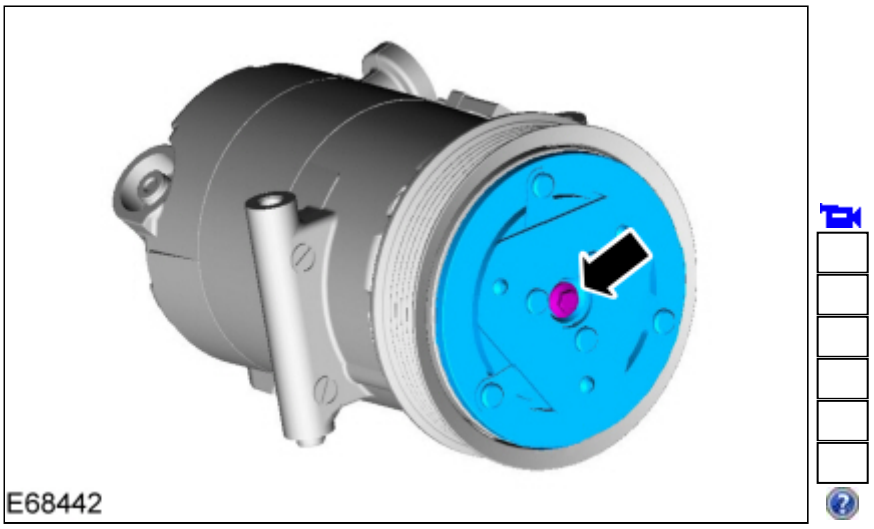
Air Conditioning (A/C) Clutch Air Gap Adjustment



1. Check the gap A (measure the difference between the engaged and disengaged positions of the air conditioning clutch) at 60° intervals around the circumference of the pulley. Operate the air conditioning clutch several times with the aid of a 5 A fused cable. Refer to the relevant wiring diagram for the correct electrical connection. Refer to: Specifications (412-00 Climate Control System - General Information, Specifications).



2.

3. If necessary correct the gap A using spacer washers.

4. Refer to: Specifications (412-00 Climate Control System - General Information, Specifications).

5. Check the gap A as described in step 1. If necessary, repeat steps 2-5.

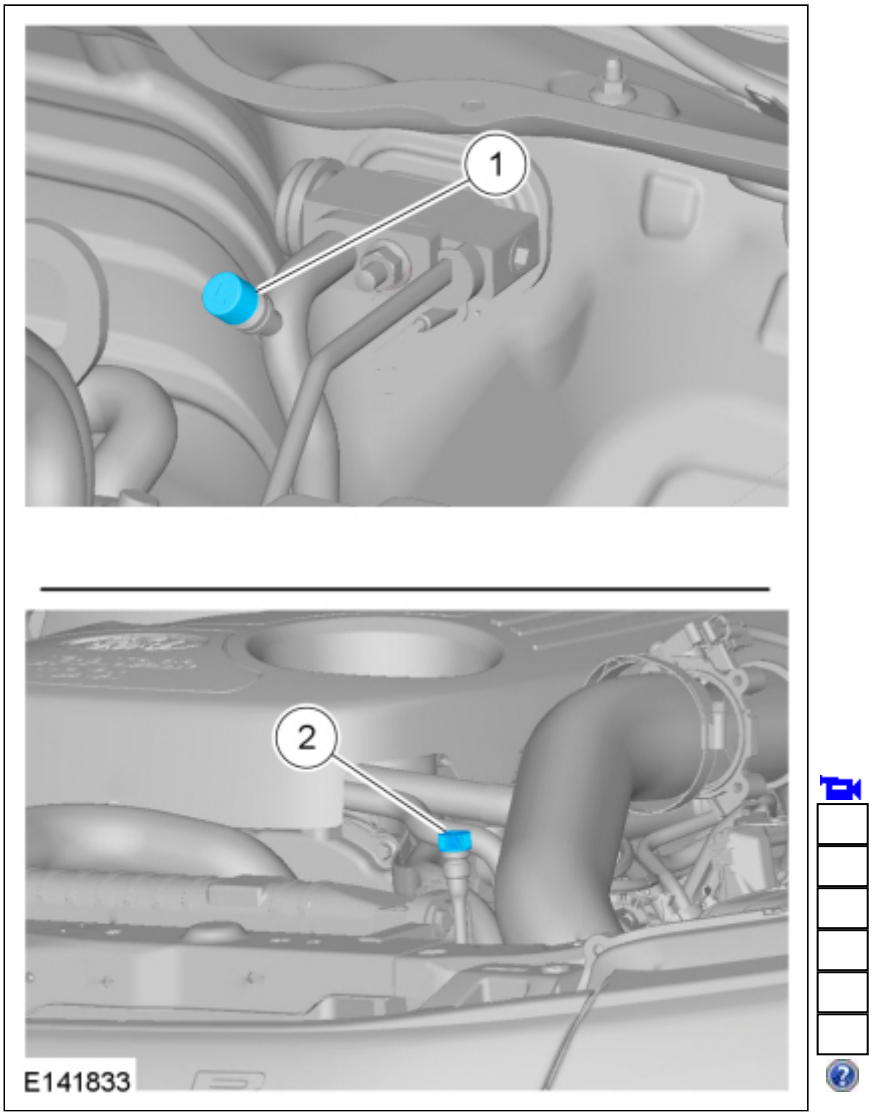
Air Conditioning (A/C) System Recovery, Evacuation and Charging

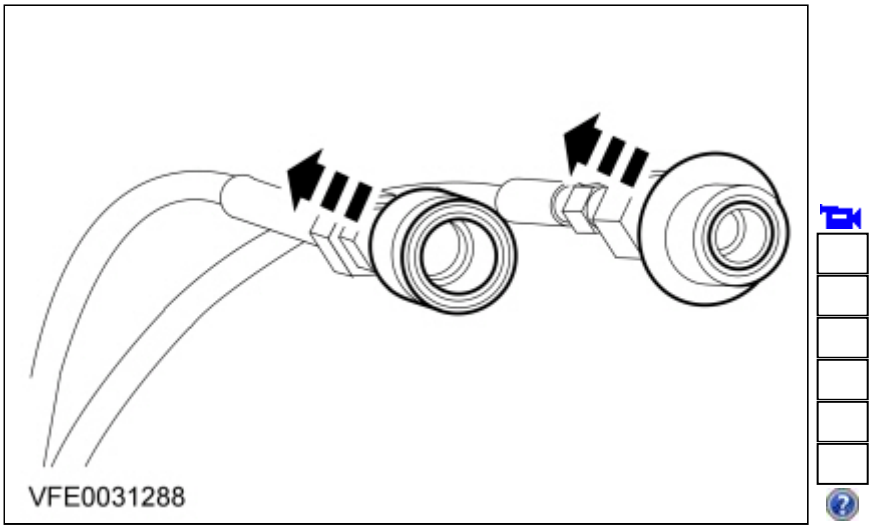
Base Part Number: YN-19

Special Tool(s) / General Equipment



Air Conditioning Service Unit
UV Leak Detector
Electronic Leak Detector
Refrigerant Identification Equipment
Automatic Calibration Halogen Leak Detector

1. Refer to: Climate Control System Health and Safety Precautions (100-00 General Information, Description and Operation).



2. **NOTICE: The refrigerant analyzer must be used before recovery, otherwise the refrigerant center may become contaminated. Contaminated refrigerant must be disposed of as hazardous waste. Always follow the manufacturer's instructions when using the refrigerant center and the refrigerant analyzer.**

   Unscrew and remove the protective caps from the A/C charging connections.
   Use the General Equipment: Air Conditioning Service Unit
   Use the General Equipment: Refrigerant Identification Equipment

   1. Low-pressure connection
   2. High-pressure connection

4. Connect the service unit lines to the filling connection of the air conditioning system.

5. Drain the air conditioning system via the low-pressure port in accordance with the service unit manufacturer instructions.

6. **NOTICE: Make sure that the specified amount of refrigerant oil is added.**

   NOTE: *This step is only required when installing a new component.*

   Fill up with refrigerant oil.
   Refer to: Specifications (412-00 Climate Control System - General Information, Specifications).
   Refer to: Refrigerant Oil Adding (412-00 Climate Control System - General Information, General Procedures).

7. Evacuate the air conditioning system in accordance with the service unit manufacturer instructions.
8. **NOTE:** *The system is leak-tight if the pressure increase does not exceed 20 mbar.*

   Perform the leak test, by closing the hand valves on the gauge set, switching off the service unit vacuum pump and observing the low pressure gauge.
9. **NOTE:** *This step is only necessary if the pressure increase exceeds 20 mbar.*

   Locate and rectify any leaks in the A/C refrigerant circuit using a leak tester.
   Use the General Equipment: UV Leak Detector
   Use the General Equipment: Electronic Leak Detector
   Use the General Equipment: Automatic Calibration Halogen Leak Detector
10. Add refrigerant oil to the air conditioning system.
    Refer to: Specifications (412-00 Climate Control System - General Information, Specifications).
    Refer to: Refrigerant Oil Adding (412-00 Climate Control System - General Information, General Procedures).
11. Fill the air conditioning system with liquid through the high-pressure connection.
    Refer to: Specifications (412-00 Climate Control System - General Information, Specifications).

    1. Open the shut-off valve on the high-pressure side.
    2. Switch the service unit to "Fill" mode and fill the system with the specified quantity of liquid refrigerant (R134a).
13. Fill the air conditioning system with gas through the low-pressure connection.
    Refer to: Specifications (412-00 Climate Control System - General Information, Specifications).

    1. Open the shut-off valve on the low-pressure side.
    2. Switch the service unit to "Fill" mode and fill the system with the specified quantity of gaseous refrigerant.
    3. Add the remaining amount of refrigerant with the air conditioning switched on. To do so run the engine at about 1200-1500 rev/min. Set the air conditioning system to full cooling power and fresh air mode. Set the blower motor to the highest setting. Fill with the remainder of the specified fill capacity.
15. Disconnect the service unit.

    1. Close the shut-off valve.
    2. Switch off the service unit.
    3. Disconnect the service unit lines from the filling connections of the air conditioning system.
    4. Screw the protective caps onto the charging connections.
17. Install all components in reverse order.

Copyright © 2016 Ford Motor Company

Refrigerant Oil Adding

NOTICE: Collect the refrigerant oil in a clean measuring cylinder.

1. **NOTE:** *This step only needs to be carried out when removing the A/C compressor.*

   NOTE: *Rotate the compressor shaft at least 6 to 8 turns when draining the refrigerant oil.*

   Drain the refrigerant oil from the defective A/C compressor and dispose of it.

2. **NOTICE: The refrigerant oil top-up quantity must not exceed the refrigerant oil fill quantity.**

   NOTICE: If other A/C components are being renewed in addition to the A/C compressor, there is no need to top up with additional refrigerant oil, apart from filling the compressor.

   Top up with the calculated quantity of new refrigerant oil. See: Specifications (412-00 Heating, Ventilation, Air-Conditioning - General information, Specifications).

Copyright © 2016 Ford Motor Company

Contaminated Refrigerant Handling

1. **NOTICE: Any R134a or R12 refrigerant which is contaminated with unsuitable refrigerant should be extracted only by means of a suitable servicing unit designed for the purpose of collecting and storing contaminated refrigerant, so that the spread to other vehicles can be prevented.**

   Use refrigerant identification equipment to check that there is contaminated refrigerant in the air conditioning system.

2. Inform the customer about the additional costs involved to repair the system because of the contamination.

3. Extract the contaminated refrigerant.

Copyright © 2016 Ford Motor Company

Electronic Leak Detection

Leak detection

1. Refer to: Climate Control System Health and Safety Precautions (100-00 General Information, Description and Operation).

2. **WARNING: Before starting leak detection, make sure that the area where it is to be done is well ventilated. If the surrounding air is contaminated with refrigerant gas, the leak detector will indicate this gas all the time. Odors from cigarette smoke and other chemicals such as antifreeze, diesel fuel, disc brake cleaner, or other cleaning solvents can cause the same problem. Prevent air movement while performing leak detection.**

   WARNING: The refrigerant identification equipment must be used before attaching the manifold gauge set. Otherwise the manifold gauge set may become contaminated. Contaminated refrigerant must be disposed of as special waste. Follow the manufacturer's instructions when working with the service unit.

   NOTE: *At 24°C with the engine switched off, both manifold gauges should show 4.1 to 5.5 bar.*

   Attach the manifold gauge set to the service gauge port valves.

3. For the leak test, close the manual valves on the gauge set.

4. If little or no pressure is indicated, charge the system with approx. 300g of refrigerant.
   Refer to: Air Conditioning (A/C) System Recovery, Evacuation and Charging (412-00 Climate Control System - General Information, General Procedures).

5. **WARNING: Make sure that the surface is clean and free of foreign material.**

   NOTE: *Make sure that the leak detector is calibrated and set in accordance with the operating instructions.*

   Use the R-134a automatic calibration halogen leak detector to leak test the refrigerant system. Follow the instructions included with leak detector for handling and operation techniques.

6. **NOTICE: Do not let the detector sensing tip contact any substance as this could cause a false reading and may damage the sensor.**

   Position the sensor about 5mm from the point to be checked. Circle each fitting completely.

7. If a leak is detected, repeat the leak detection process after blowing away the chemical detected with compressed air.

8. If a leak is detected again, extract the refrigerant under suction.
   Refer to: Air Conditioning (A/C) System Recovery, Evacuation and Charging (412-00 Climate Control System - General Information, General Procedures).

Fluorescent Dye Leak Detection

Special Tool(s) / General Equipment

UV Leak Detector

Leak detection

NOTICE: Make sure that the vehicle is in a low sunlight area before performing any actions.

1. Refer to: Climate Control System Health and Safety Precautions (100-00 General Information, Description and Operation).
2. **NOTE:** *The exact location of leaks can be pinpointed by the bright yellow - green glow of the tracer dye. Since more than one leak can exist, always inspect each component.*
    - Locate the leaks. Check all components, fittings and lines of the A/C system for leaks. Use the General Equipment: UV Leak Detector
3. After the leak is found and rectified, remove any traces of dye with a general purpose solvent.
4. Check the repair by operating the system for some minutes and inspecting with the UV lamp again.

Copyright © 2016 Ford Motor Company

Vacuum Leak Detection

1. Carry out the air conditioning (A/C) system recovery procedure.
   Refer to: Air Conditioning (A/C) System Recovery, Evacuation and Charging (412-00 Climate Control System - General Information, General Procedures).

Refrigerant System Tests - Automatic Transmission

Inspection

NOTE: *The following refrigerant system specification information was developed for vehicles with 2.2L Puma diesel and 3.2L Puma diesel engines with automatic transmission.*

1. **NOTE:** *Procedure 1 — Ambient Temperature below 21°C (70°F).*

   NOTE: *Variable compressors need to see a thermal load on the system in order to create normal operating pressures.*

   NOTE: *To perform an accurate test make sure the vehicle ambient temperature is 21°C (70°F) or above. Perform the following steps to achieve normal operating pressures.*

   Drive the vehicle or run the engine until it reaches normal operating temperature.

2. Set the A/C system temperature to the highest possible temperature setting with the dual function disabled (if equipped). Manually set the blower on HI. If the vehicle has a fresh air/recirc button, set it to recirculation. If the vehicle has an A/C switch or compressor on switch, set it to A/C OFF.

3. Close all the vehicle windows and doors.

4. Allow the vehicle to idle for 5 minutes.

5. Confirm the cabin temperature is above 24°C (75°F). Set the A/C switch or compressor on switch to MAX A/C ON.

6. Allow the vehicle to idle for 5 minutes.

7. Turn engine off and proceed to procedure 2 — ambient temperature between 21°C (70°F) and 38°C (100°F).

Inspection

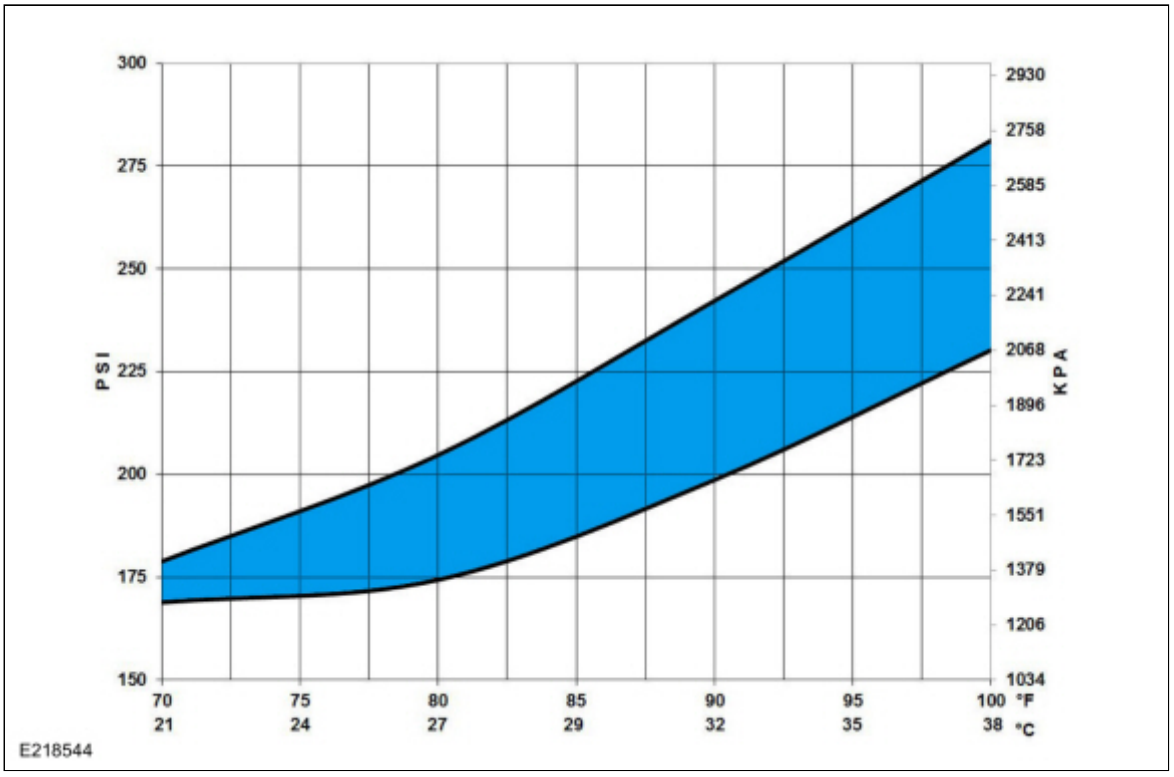
NOTE: *To perform an accurate test make sure the vehicle ambient temperature is 21°C (70°F) or above. Perform the following steps to achieve normal operating pressures.*

1. **NOTE:** *Procedure 2 — Ambient Temperature between 21°C (70°F) and 38°C (100°F)*

   Run the engine until it reaches normal operating temperature.

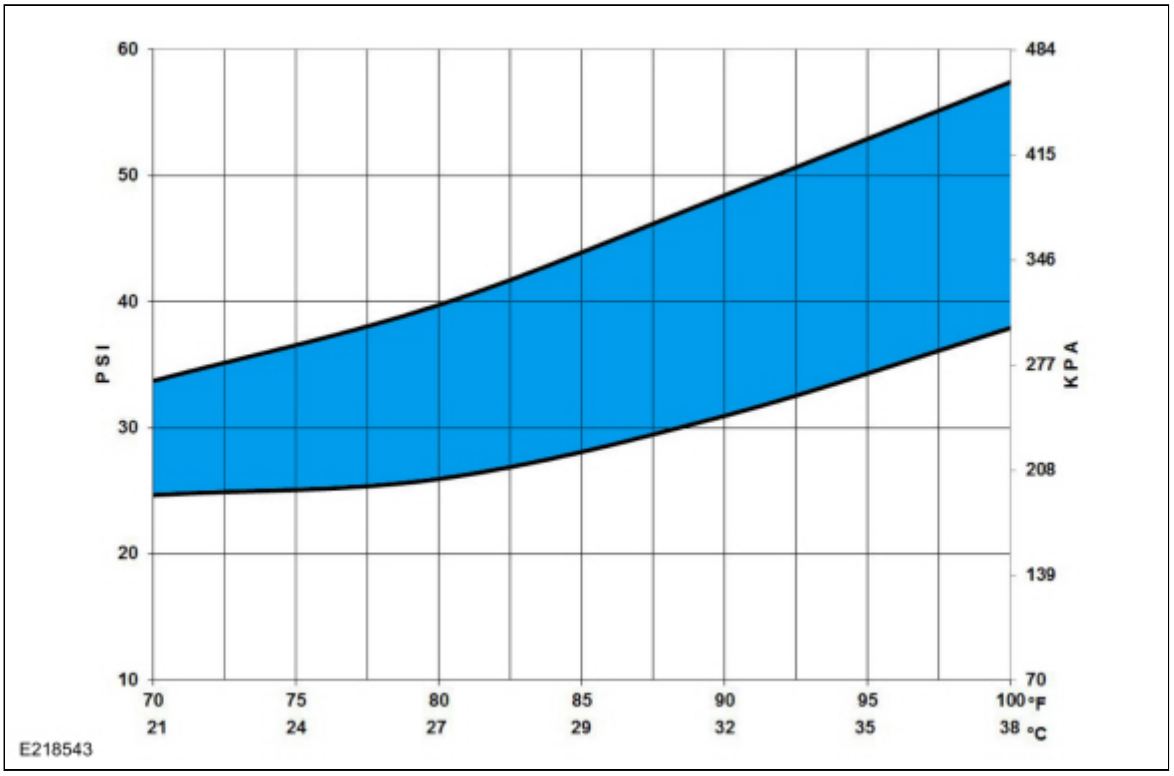
2. Connect the air conditioning service unit to the refrigerant system.

3. Set the A/C system temperature to the lowest possible temperature setting with the dual function disabled (if equipped). Manually set blower on HI. If the vehicle has a fresh air/recirc button, set it to FRESH. If the vehicle has an A/C switch or compressor on switch, set it to A/C ON.



4. Open all vehicle windows and leave the hood open for the test. Open the rear doors.

5. Confirm the compressor is operating and the engine cooling fan(s) are operating or engaged. Allow the vehicle to idle until the suction (low-side) and discharge (high-side) pressures are stable or fluctuate in a range that repeats.



6. Record the ambient (shop) temperature.

7. Record the discharge pressure. If the pressure is fluctuating, record the average value.

8. A/C **system**, determine if the discharge pressure falls within the normal operating limits using the **Normal Refrigerant Discharge Pressures 21 - 38° C (70 - 100° F) Ambient (30 - 60% Relative Humidity)** chart below.

9. Record the suction pressure. If the pressure is fluctuating, record the average value.
10. A/C **system**, determine if the suction pressure falls within the normal operating limits using the **Normal Refrigerant Suction Pressures 21 - 38° C (70 - 100° F) Ambient (30 - 60% Relative Humidity)** chart below.

11. **NOTE:** *Use the following table to guide diagnosis of the refrigerant system if operating pressures are outside normal limits.*

High (Discharge) Pressure	Low (Suction) Pressure	Component — Causes
High	Normal to High	• Condenser — inadequate airflow. • Engine — overheating.

Normal to High	Normal	• Refrigerant overcharge — air in refrigerant.
Normal to Low	High	• A/C Compressor — low performance.
Normal to Low	Normal to High	• A/C suction line — partially restricted or plugged. [a]
Normal to Low	Low	• Low refrigerant charge — leak in system. • A/C suction line — partially restricted or plugged. [b]
Erratic Operation or Compressor Not Running		• Ambient Air Temperature (AAT) sensor — poor connection. • A/C pressure transducer — poor connection. • Evaporator temperature sensor — poor connection. • Low refrigerant charge — leak in system.
Additional Possible Components or Causes Associated With Inadequate Compressor Operation		
• Compressor drive belt — loose • Compressor clutch — slipping • Clutch coil open — shorted, or loose mounting • Control assembly switch — dirty contacts or sticking open • Clutch wiring circuit — high resistance, open or blown fuse • Compressor operation interrupted by engine computer		
Additional Possible Components or Causes Associated With a Damaged Compressor		
• Incorrect clutch air-gap • Suction accumulator — refrigerant oil bleed hose plugged • Refrigerant leaks		

[a] Low pressure reading will be normal to high if restriction is downstream of service access valve.

[b] Low pressure reading will be low if restriction is upstream of service access valve.

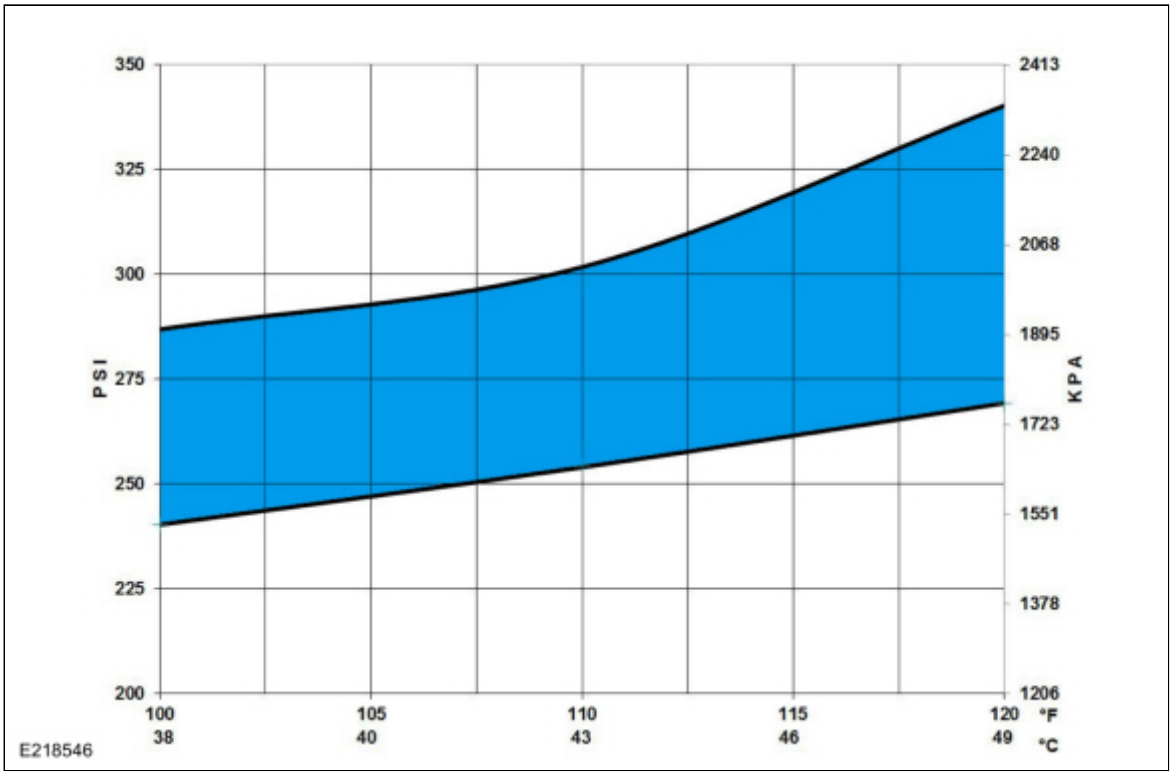
Inspection

1. **NOTE:** *Procedure 3 — Ambient Temperature Above 38°C (100°F)*

   Run the engine until it reaches normal operating temperature.

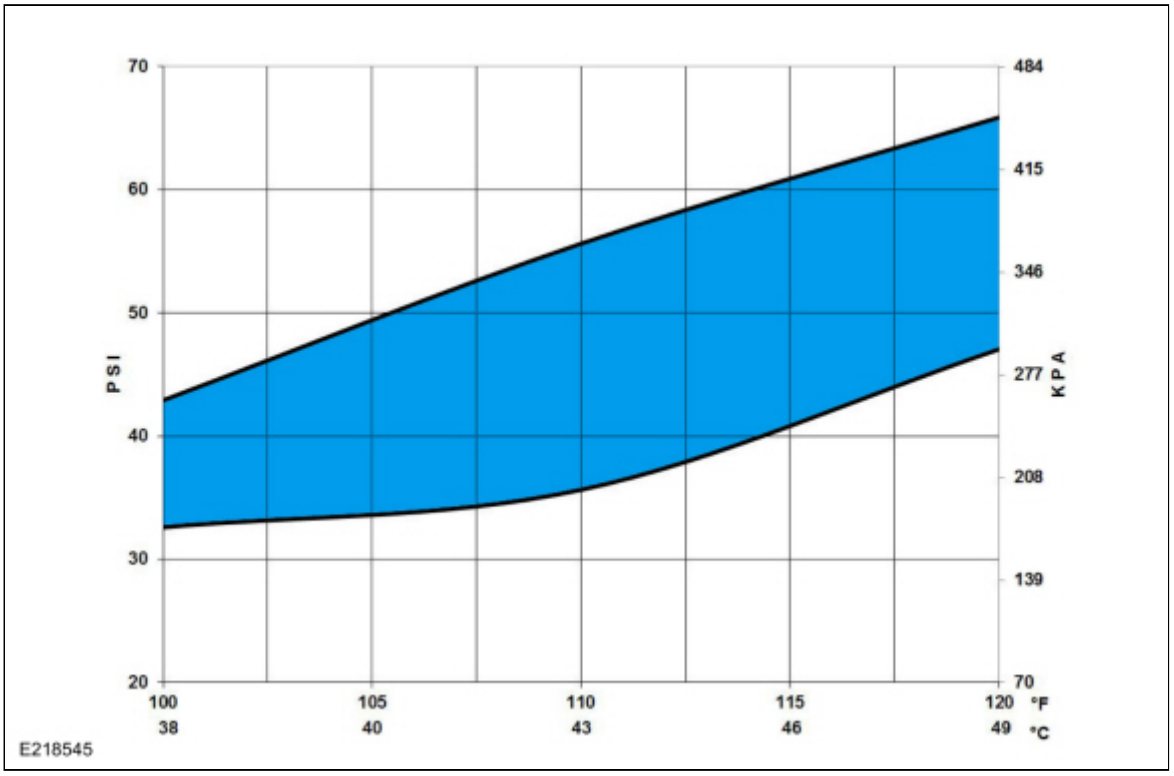
2. Connect the air conditioning service unit to the refrigerant system.

3. Set temperature to the lowest possible temperature setting with the dual function disabled (if equipped). Manually set blower on HI. If the vehicle has a fresh air/recirc button, set it to FRESH. If the vehicle has an A/C switch or compressor on switch, set it to A/C ON.



4. Open all vehicle windows and leave the hood open for the test. Open the rear hatch and/or rear doors (if equipped).

5. Confirm the compressor is operating and the engine cooling fan(s) are operating or engaged. Allow the vehicle to idle until the suction (low-side) and discharge (high-side) pressures are stable or fluctuate in a range that repeats.



6. Record the ambient (shop) temperature.

7. Record the discharge pressure. If the pressure is fluctuating, record the average value.

8. A/C **system**, determine if the discharge pressure falls within the normal operating limits using the **Normal Refrigerant Discharge Pressures 38 - 49° C (100 - 120° F) Ambient (15 - 40% Relative Humidity)** chart below.

9. A/C **system**, determine if the suction pressure falls within the normal operating limits using the **Normal Refrigerant Suction Pressures 38 - 49° C (100 - 120° F) Ambient (15 - 40% Relative Humidity)** chart below.

10. Record the suction pressure. If the pressure is fluctuating, record the average value.
11. **NOTE:** *Use the following table to guide diagnosis of the refrigerant system if operating pressures are outside normal limits.*

High (Discharge) Pressure	Low (Suction) Pressure	Component — Causes
High	Normal to High	• Condenser — inadequate airflow. • Engine — overheating.

Normal to High	Normal	• Refrigerant overcharge — air in refrigerant.
Normal to Low	High	• A/C Compressor — low performance.
Normal to Low	Normal to High	• A/C suction line — partially restricted or plugged. [a]
Normal to Low	Low	• Low refrigerant charge — leak in system. • A/C suction line — partially restricted or plugged. [b]
Erratic Operation or Compressor Not Running		• Ambient Air Temperature (AAT) sensor — poor connection. • A/C pressure transducer — poor connection. • Evaporator temperature sensor — poor connection. • Low refrigerant charge — leak in system.
Additional Possible Components or Causes Associated With Inadequate Compressor Operation		
• Compressor drive belt — loose • Compressor clutch — slipping • Clutch coil open — shorted, or loose mounting • Control assembly switch — dirty contacts or sticking open • Clutch wiring circuit — high resistance, open or blown fuse • Compressor operation interrupted by engine computer		
Additional Possible Components or Causes Associated With a Damaged Compressor		
• Incorrect clutch air-gap • Suction accumulator — refrigerant oil bleed hose plugged • Refrigerant leaks		

[a] Low pressure reading will be normal to high if restriction is downstream of service access valve.

[b] Low pressure reading will be low if restriction is upstream of service access valve.

Erratic Operation or Compressor Not Running		• Ambient Air Temperature (AAT) sensor — poor connection. • A/C pressure transducer — poor connection. • Evaporator temperature sensor — poor connection. • Low refrigerant charge — leak in system.
Additional Possible Components or Causes Associated With Inadequate Compressor Operation		
• Compressor drive belt — loose • Compressor clutch — slipping • Clutch coil open — shorted, or loose mounting • Control assembly switch — dirty contacts or sticking open • Clutch wiring circuit — high resistance, open or blown fuse • Compressor operation interrupted by engine computer		
Additional Possible Components or Causes Associated With a Damaged Compressor		
• Incorrect clutch air-gap • Suction accumulator — refrigerant oil bleed hose plugged • Refrigerant leaks		

[a] Low pressure reading will be normal to high if restriction is downstream of service access valve.

[b] Low pressure reading will be low if restriction is upstream of service access valve.

Air Conditioning (A/C) Compressor - 2.5L Duratec-HE (122kW/165PS) - MI4

Base Part Number: 19D629

Materials

Name	Specification
Refrigerant Oil	WSH-M1C231-B

Removal

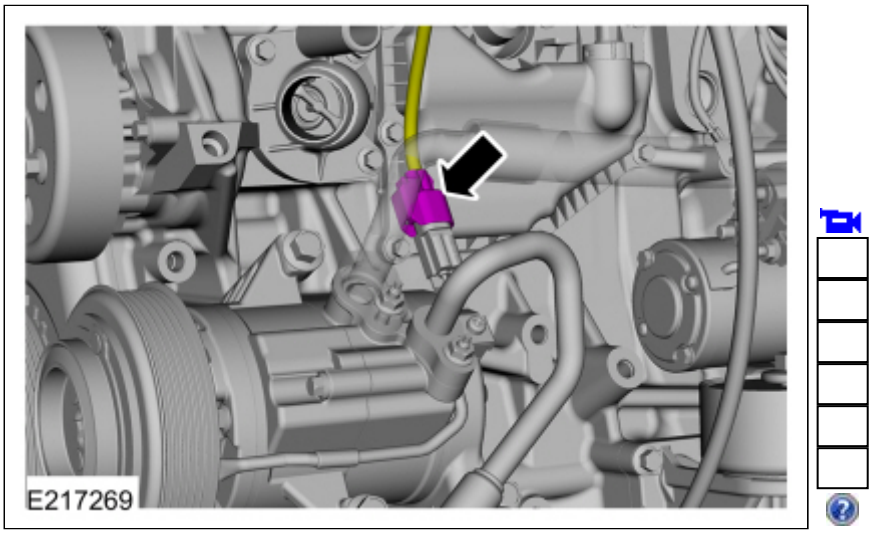
NOTICE: If installing a new A/C compressor due to an internal failure of the old unit, carry out the following procedures to remove contamination from the A/C system. Failure to remove contamination from the A/C system, if present, will result in poor A/C performance and/or damage to the new A/C compressor and other components.

- **If A/C flushing equipment is available, carry out flushing of the A/C system prior to installing a new A/C compressor.**
- **If A/C flushing equipment is not available, replace all contaminated components after a new A/C compressor has been installed.**
- **Install a new Thermostatic Expansion Valve (TXV) as directed by the A/C flushing.**
- **Install a new receiver drier element as directed by the A/C flushing.**

NOTE: *Installation of a new receiver drier element is not required when repairing the A/C system except when there is physical evidence of system contamination from a failed A/C compressor or damage to the receiver drier element.*

NOTE: *A new A/C compressor may come equipped with an A/C clutch disc and hub, A/C compressor pulley and A/C clutch field coil already installed. If these components are not pre-installed, it will be necessary to transfer these parts from the old A/C compressor to the new compressor prior to installation of the A/C compressor if suitable for reuse.*

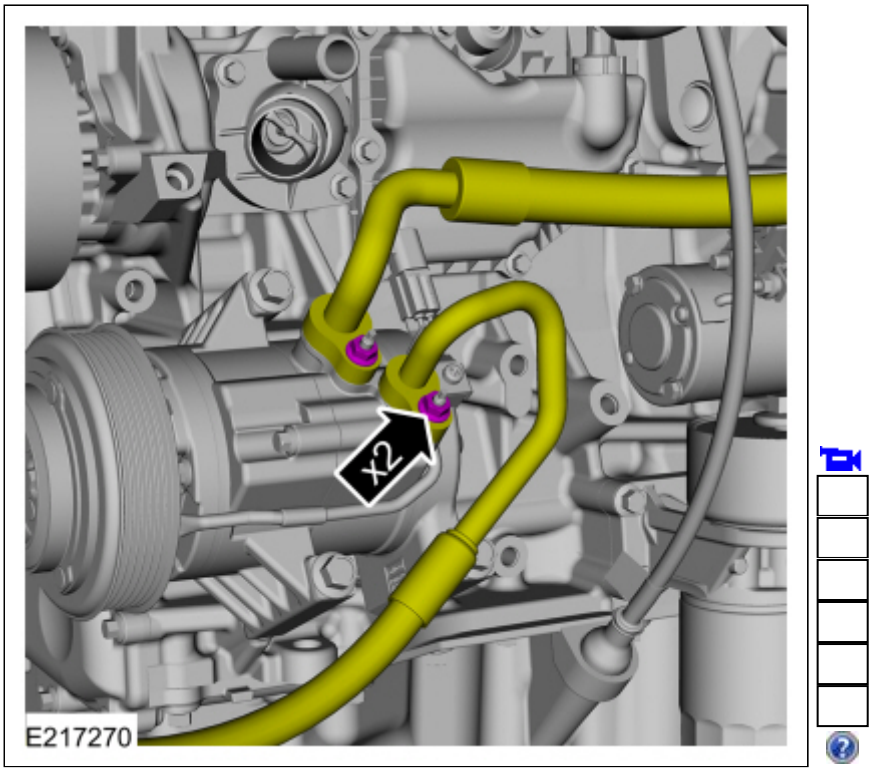
NOTE: *Removal steps in this procedure may contain installation details.*



1. Refer to: Air Conditioning (A/C) System Recovery, Evacuation and Charging (412-00 Climate Control System - General Information, General Procedures).

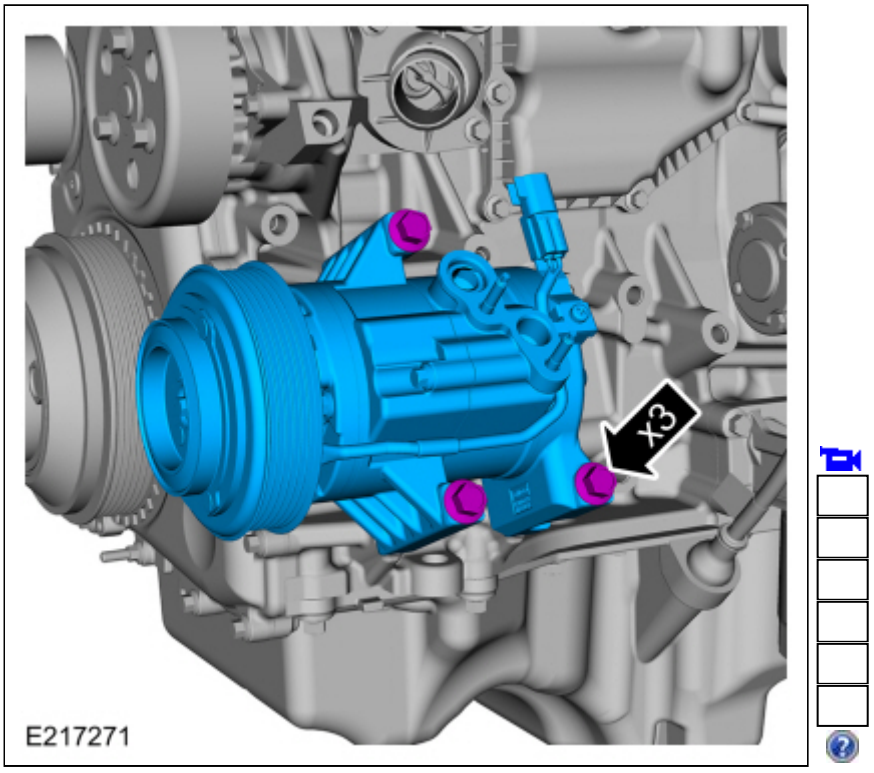
2. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

Refer to: Engine Undershield (501-02 Front End Body Panels, Removal and Installation).



3. Refer to: Accessory Drive Belt (303-05A Accessory Drive - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).

4.



5. **NOTICE: Make sure that all openings are sealed.**

   Torque: 10 Nm

6. *Torque*: 25 Nm

Installation

1. To install, reverse the removal procedure.
2. **NOTICE: Only use the specified material to lubricate the seals.**

   NOTE: *Make sure that new O-ring seals are installed.*

   Material: Refrigerant Oil (WSH-M1C231-B)
3. Refer to: Specifications (412-00 Climate Control System - General Information, Specifications).

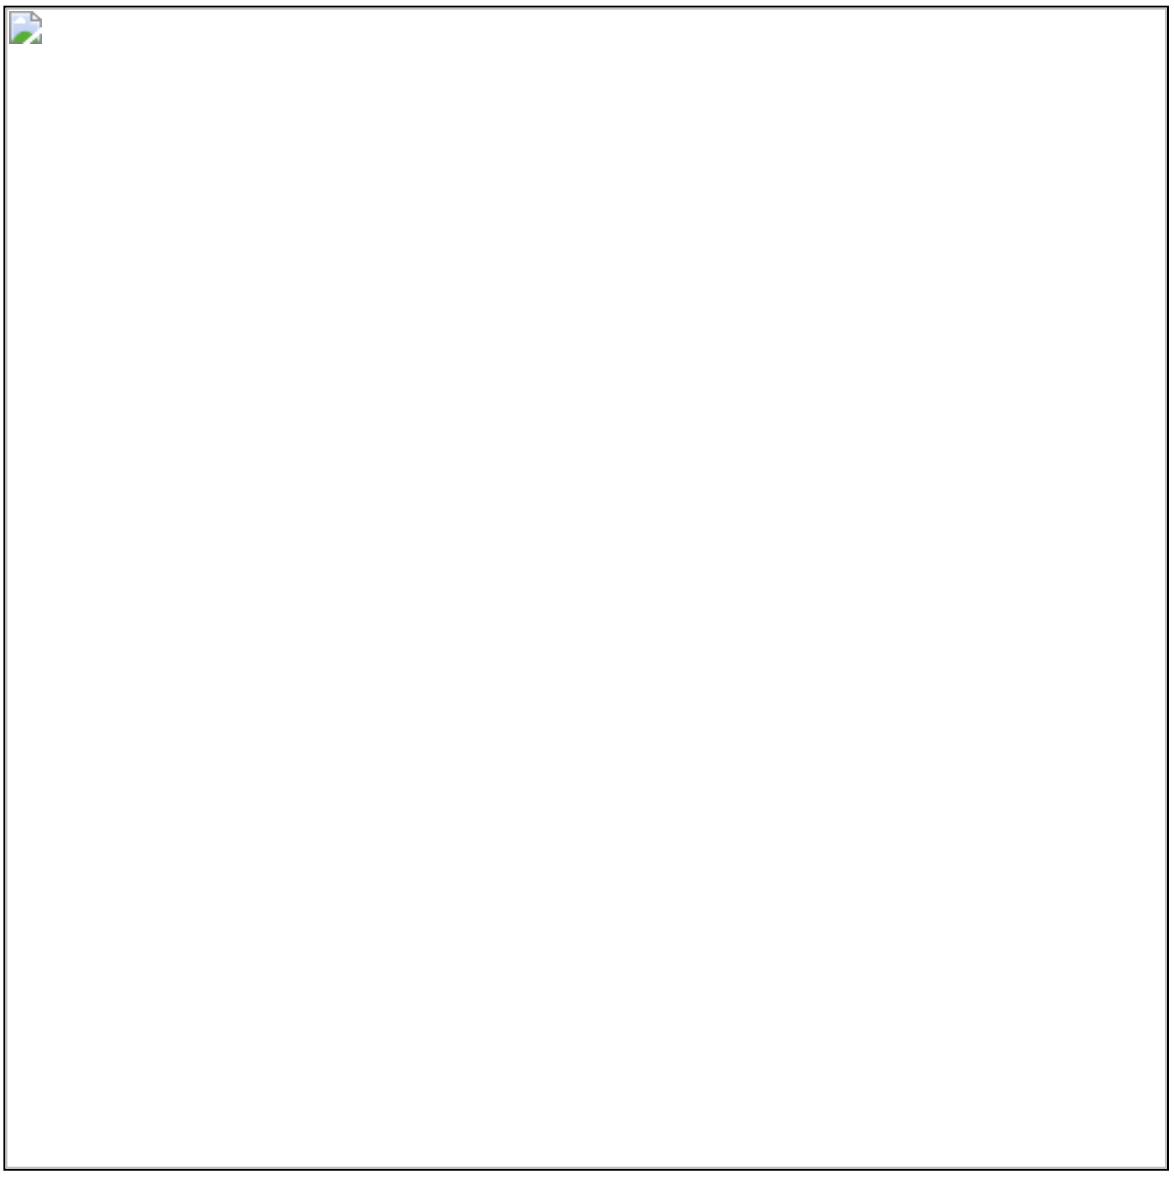
Supplemental Climate Control - Overview

Overview



The climate control system uses the electric booster heater to heat the passenger compartment in place of the heater core in low ambient temperatures. Once engine coolant reaches a sufficient temperature to heat the passenger compartment, the climate control system stops using the electric booster heater.

Supplemental Climate Control - System Operation and Component Description

System Operation

System Diagram

Network Message Charts

Module Network Input LIN Messages - PTC

Broadcast Message	Originating Module	Message Purpose
PTC heater request	FCIM	This message contains the request to activate the electric booster heater.

Electric Booster Heater Operation

The FCIM controls the PTC heater through the LIN interface. The FCIM has a set of PTC enabling parameters within its PTC algorithm. When the conditions are set, the FCIM sends messages on the LIN with the PWM value that switches the 3 relays within the PTC module to set the right amount of heat required.

The electric booster heater is deactivated when an engine coolant temperature of 70°C (158°F) or an ambient air temperature of 20°C (68°F) is exceeded.

Component Description

Electric Booster Heater

The electric booster heater is composed of 3 separate PTC elements and a micro-controller. The micro-controller allows the 3 PTC elements to be activated or deactivated individually or together depending on the PWM input from the FCIM.

Instrument Panel and Interior Switches Illumination - Overview

Overview

Dimmable illumination provides backlighting to switches and control components when the headlamps or parking lamps are on. The level of intensity is adjusted by pressing the illumination dim up switch up to increase intensity or the dim down switch to decrease intensity. The illumination components can be controlled directly (non-networked) or indirectly (networked) by a module.

Symptom Chart

Symptom Chart: Instrument Panel and Interior Switches Illumination

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Condition	Possible Sources	Action
A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals or connectors • Module	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
All illumination (networked and non-networked) does not dim or increase brightness	Refer to the Pinpoint Test	GO to Pinpoint Test A
All networked illumination is inoperative (non-networked illumination fuctions correctly)	• Network communication concern • BCM	• PERFORM the network test. – If all modules pass the network test, INSTALL a new BCM. – REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). – REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). – If all modules do not pass the network test, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
All non-networked illumination sources are inoperative (networked illumination functions correctly)	Refer to the Pinpoint Test	GO to Pinpoint Test B
All non-networked illumination sources are always on (networked illumination functions correctly)	Refer to the Pinpoint Test	GO to Pinpoint Test D
One or more non-networked illumination source is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test C
A single non-network illuminated switch or component is always on	Illuminated switch or component	INSTALL a new illuminated switch or component.
Steering wheel switch(es) illumination is	Refer to the Pinpoint Test	GO to Pinpoint Test G

inoperative or always on		
The driver front window control switch illumination is inoperative or always on	• Window control switch • Wiring, terminals or connectors • Fuse • Module	• Verify the operation of the power window. – If the power window operates correctly, INSTALL a new window control switch. REFER to: Driver Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation). – If the power window does not operate correctly, REFER to: Glass, Frames and Mechanisms (501-11 Glass, Frames and Mechanisms, Diagnosis and Testing).
The passenger front window control switch illumination is inoperative or always on	Refer to the Pinpoint Test	GO to Pinpoint Test F
The passenger front door lock switch illumination is inoperative or always on	Refer to the Pinpoint Test	GO to Pinpoint Test F
The LH rear window control switch illumination is inoperative or always on	• Window control switch • Wiring, terminals or connectors	• Verify the operation of the power window. – If the power window operates correctly, INSTALL a new window control switch. REFER to: Rear Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation). – If the power window does not operate correctly, REFER to: Glass, Frames and Mechanisms (501-11 Glass, Frames and Mechanisms, Diagnosis and Testing).
The RH rear window control switch illumination is inoperative or always on	• Window control switch • Wiring, terminals or connectors	• Verify the operation of the power window. – If the power window operates correctly, INSTALL a new window control switch. REFER to: Rear Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation). – If the power window does not operate correctly, REFER to: Glass, Frames and Mechanisms (501-11 Glass, Frames and Mechanisms, Diagnosis and Testing).
The IPC illumination is inoperative or does not dim	• Network communication concern • IPC	• PERFORM the network test. – If the IPC passes the network test, INSTALL a new IPC. – REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). – REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). – If the diagnostic scan tool responds with no communication with the IPC, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
The FCIM illumination is inoperative or does not dim	• Network communication concern • FCIM	• PERFORM the network test. – If the FCIM passes the network test, INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure. – If the diagnostic scan tool responds with no communication with the FCIM, REFER to: Communications Network (418-00

		Module Communications Network, Diagnosis and Testing).
The FDIM illumination is inoperative or does not dim	• APIM • FDIM	• VERIFY that the audio system can be operated from the FDIM. – If the audio system responds normally to FDIM inputs,  Click here to access Guided Routine (APIM). If the FDIM illumination still does not function correctly after the repair, INSTALL a new FDIM. Refer to the appropriate section in Group 415 for the procedure. – If the audio system does not respond normally to FDIM inputs, Refer to the appropriate section in Group 415 for the procedure.

Pinpoint Test

All Illumination (Networked and Non-Networked Sources) Does Not Dim Or Increase Brightness

Refer to Wiring Diagrams Cell 71 for schematic and connector information.

Normal Operation and Fault Conditions

The illumination dimmer switch is integral to the headlamp switch and provides a ground to the BCM corresponding to the switch that is pressed, dim up or dim down.

DTC	Description	Fault Trigger Conditions
B1436:01	Digital Dimmer Switch Input: General Electrical Failure	This DTC sets on-demand and in continuous memory when the BCM detects an open, short to power or ground on the dim up or dim down circuit.

Possible Sources

- Wiring, terminals or connectors
- Dimmer switch (part of the headlamp switch)
- BCM

PINPOINT TEST A : ALL ILLUMINATION (NETWORKED AND NON-NETWORKED SOURCES) DOES NOT DIM OR INCREASE BRIGHTNESS

A1 RETRIEVE AND RECORD DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using the diagnostic scan tool, retrieve all Diagnostic Trouble Codes (DTCs).

Is DTC B1436:01 present?

Yes	GO to A2
No	GO to A7

A2 CHECK THE DIM UP AND DIM DOWN CIRCUITS FOR A SHORT TO VOLTAGE

- Disconnect Headlamp switch C205.
- Disconnect BCM C2280G.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-3	V	Ground
C205-6	V	Ground

Is any voltage present?

Yes	REPAIR the affected circuit.
No	GO to A3

A3 CHECK THE DIM UP AND DIM DOWN CIRCUITS FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-3	Ω	C2280G-3
C205-6	Ω	C2280G-7

Is the resistance less than 3 ohms?

Yes	GO to A4
No	REPAIR the affected circuit.

A4 CHECK THE DIM UP AND DIM DOWN CIRCUITS FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-3	Ω	Ground
C205-6	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A5
No	REPAIR the affected circuit.

A5 CHECK THE DIM UP AND DIM DOWN CIRUCITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-3	Ω	C205-6

Is the resistance greater than 10,000 ohms?

Yes	GO to A6
No	REPAIR the circuits.

A6 CHECK THE HEADLAMP SWITCH ILLUMINATION GROUND CIRCUIT

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C205-5	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new dimmer switch (part of the headlamp switch). REFER TO SECTION 417-01
No	REPAIR the circuit.

A7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM and related in-line connectors and all previously disconnected illumination system connectors. Make sure all connectors seat and latch correctly.
- Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

All Non-Networked Illumination Is Inoperative (Networked Illumination Functions Correctly)

Refer to Wiring Diagrams Cell 71 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Instrument Panel and Interior Switches Illumination - System Operation and Component Description (413-00 Instrument Panel and Interior Switches Illumination, Description and Operation).

DTC	Description	Fault Trigger Conditions
B1315:11	Backlighting (Non Reflective Controls) Illumination Output: Circuit Short To Ground	This DTC sets in continuous memory and on-demand when the BCM detects excessive current draw from the backlighting illumination output circuit.
B1315:15	Backlighting (Non Reflective Controls) Illumination Output: Circuit Short To Battery or Open	This DTC sets in continuous memory and on-demand when the BCM detects lower than expected current draw from the backlighting illumination output circuit.

Possible Sources

- Wiring, terminals or connectors
- BCM

PINPOINT TEST B : ALL NON-NETWORKED ILLUMINATION SOURCES ARE INOPERATIVE (NETWORKED ILLUMINATION FUNCTIONS CORRECTLY)

B1 BYPASS THE BCM (BODY CONTROL MODULE)

- Ignition OFF.
- Disconnect BCM C2280G.
- **NOTE:** *If the jumper wire fuse fails during this step, refer to the Wiring Diagrams manual to identify the possible causes for a short to ground.*

  Connect:

Positive Lead	Measurement / Action	Negative Lead
C2280G-45		CBATTERY POSITIVE

Do the non-networked components illuminate?

Yes	GO to B2
No	REMOVE the fused jumper wire. REPAIR the illumination circuit. After the repair: If DTC U1000:00 is present in the BCM, CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the self-test (required to enable the illumination output driver when DTC U1000:00 is stored in the BCM). If DTC U3000:49 is present in the BCM, INSTALL a new BCM after all other Diagnostic Trouble Codes (DTCs) have been addressed. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).

B2 CHECK THE BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Connect BCM C2280G.
- Ignition ON.
- Perform the BCM self-test.

Is DTC B1315:11 or DTC U1000:00 currently set, or has DTC U1000:00 set in the past?

Yes	CHECK the illumination circuit for an intermittent short to ground. If DTC U1000:00 is present in the BCM, a successful self-test must be completed before the illumination output

	is enabled.
No	GO to B3

B3 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM and related in-line connectors and all previously disconnected illumination system connectors. Make sure all connectors seat and latch correctly.
- Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

One Or More Non-Networked Illumination Source Is Inoperative

Refer to Wiring Diagrams Cell 71 for schematic and connector information.

Normal Operation and Fault Conditions

The BCM supplies pulse-width modulated voltage to the non-networked illuminated components.

Possible Sources

- Wiring, terminals or connectors
- Illuminated component

PINPOINT TEST C : ONE OR MORE NON-NETWORKED ILLUMINATION SOURCE IS INOPERATIVE

C1 CHECK THE COMPONENT VOLTAGE CIRCUIT

- Ignition OFF.
- **NOTE:** *If the headlamp switch illumination is inoperative, set the instrument panel illumination to the brightest setting with the ignition on prior to disconnecting the headlamp switch.*

  Disconnect: Inoperative Illuminated Component.
- Ignition ON.
- Place a shop light over the ambient light sensor to make sure the illumination can reach maximum brightness.
- Place the headlamp switch in the PARKING LAMPS ON position.
- Press the illumination dim up switch until the illumination reaches full brightness.
- Measure:

Headlamp switch

Positive Lead	Measurement / Action	Negative Lead

C205-15		Ground

Overhead console

Positive Lead	Measurement / Action	Negative Lead
C930-1		Ground

Power fold switch

Positive Lead	Measurement / Action	Negative Lead
C2269-3		Ground

Floor shifter/TCS

Positive Lead	Measurement / Action	Negative Lead
C3245-5		Ground

4WD switch

Positive Lead	Measurement / Action	Negative Lead
C284-4		Ground

Active park assist/Differential lock switch

Positive Lead	Measurement / Action	Negative Lead
C3360-2		Ground

Truck bed lamp switch

Positive Lead	Measurement / Action	Negative Lead
C221-3		Ground

Media Hub

Positive Lead	Measurement / Action	Negative Lead
C3553-1		Ground

Is the voltage greater than 10 volts?

Yes	GO to C2
No	REPAIR the affected circuit.

C2 CHECK THE COMPONENT GROUND CIRCUIT

- Measure:

Headlamp switch

Positive Lead	Measurement / Action	Negative Lead
C205-15		C205-5

Overhead console

Positive Lead	Measurement / Action	Negative Lead
C930-1		C930-2

Power fold mirror

Positive Lead	Measurement / Action	Negative Lead
C2269-3		C2269-2

Floor shifter/TCS

Positive Lead	Measurement / Action	Negative Lead
C3245-5		C3245-9

4WD switch

Positive Lead	Measurement / Action	Negative Lead
C284-4		C284-1

Active park assist/Differential lock switch

Active park assist/Differential lock switch

Positive Lead	Measurement / Action	Negative Lead
C3360-2		C3360-12

Truck bed lamp switch

Positive Lead	Measurement / Action	Negative Lead
C221-3		C221-2

Media Hub

Positive Lead	Measurement / Action	Negative Lead
C3553-1		C3553-2

Is the voltage greater than 10 volts?

Yes	INSTALL a new component in question.
No	REPAIR the affected circuit.

All Non-Networked Illumination Is Always On (Networked Illumination Functions Correctly)

Refer to Wiring Diagrams Cell 71 for schematic and connector information.

Normal Operation and Fault Conditions

The BCM provides pulse-width modulated voltage to all non-networked illuminated components.

DTC	Description	Fault Trigger Conditions
B1315:15	Backlighting (Non Reflective Controls) Illumination Output: Circuit Short To Battery or Open	This DTC sets in continuous memory and on-demand when the BCM detects lower than expected current draw from the backlighting illumination output circuit.

Possible Sources

- Wiring, terminals or connectors
- Headlamp switch concern
- BCM

PINPOINT TEST D : ALL NON-NETWORKED ILLUMINATION IS ALWAYS ON (NETWORKED ILLUMINATION FUNCTIONS CORRECTLY)

D1 CHECK THE EXTERIOR LIGHTING
• Ignition ON.

- Place the headlamp switch in the OFF position.
- Observe the parking lights.

Are the parking lights illuminated?

Yes	DIAGNOSE a concern with the headlamp switch. REFER to: Parking, Rear and License Plate Lamps (417-01 Exterior Lighting, Diagnosis and Testing).
No	GO to D2

D2 CHECK FOR BCM (BODY CONTROL MODULE) DTC (DIAGNOSTIC TROUBLE CODE) B1315:15

- Perform the BCM self-test.

Is BCM DTC B1315:15 present?

Yes	GO to D3
No	GO to Pinpoint Test A

D3 CHECK THE BCM (BODY CONTROL MODULE) ILLUMINATION OUTPUT CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280G.
- Ignition ON.

Do the non-networked components continue to illuminate?

Yes	REPAIR the circuit.
No	GO to D4

D4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM and related in-line connectors and all previously disconnected illumination system connectors. Make sure all connectors seat and latch correctly.
- Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Driver Front Door Lock Switch Illumination Is Inoperative Or Always On

Refer to Wiring Diagrams Cell 117 for schematic and connector information.

Normal Operation and Fault Conditions

Based on messages recieved from the BCM, the DDM supplies voltage to the driver door lock switch.

DTC	Description	Fault Trigger Conditions
U2010:00	Switch Illumination: No Sub Type Information	This DTC sets on-demand and in continuous memory when the DDM detects an open or short to ground on the switch illumination output circuit.

Possible Sources

- Communication network concern
- Wiring, terminals or connectors
- Front door lock switch
- DDM

PINPOINT TEST E : THE DRIVER FRONT DOOR LOCK SWITCH ILLUMINATION IS INOPERATIVE OR ALWAYS ON

E1 PERFORM A NETWORK TEST

- Ignition ON.
- Perform a network test.

Does the DDM pass the network test?

Yes	GO to E2
No	DIAGNOSE a concern with the network. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

E2 VERIFY THE DOOR LOCK SWITCH FUNCTINALITY

- Actuate the door locks from the driver door lock switch.

Can the doors be locked and unlocked from the driver door lock switch?

Yes	If the switch illumination is always on, GO to E3 If the switch illumination is inoperative, GO to E5
No	DIAGNOSE a concern with the door locks. REFER to: Locks, Latches and Entry Systems (501-14 Handles, Locks, Latches and Entry Systems, Diagnosis and Testing).

E3 CHECK THE ILLUMINATION CIRCUIT FOR A SHORT TO VOLTAGE

- Place the headlamp switch in the OFF position.
- Ignition OFF.
- Disconnect C505LHD Vehicles.
- Disconnect C605RHD Vehicles.
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C505-1		Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C605-5		Ground

Is any voltage present?

Yes	GO to E4
No	INSTALL a new front door lock control switch. REFER TO 501-14.

E4 CHECK THE ILLUMINATION CIRCUIT FOR A SHORT TO VOLTAGE WITH THE DDM (DRIVER DOOR MODULE) DISCONNECTED

- Ignition OFF.
- Disconnect C501ALHD Vehicles.
- Disconnect C601ARHD Vehicles.
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C505-1		Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C605-5		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to E9

E5 CHECK THE ILLUMINATION CIRCUIT FOR VOLTAGE AT THE DOOR LOCK SWITCH

- Ignition OFF.
- Disconnect C505LHD Vehicles.
- Disconnect C605RHD Vehicles.
- Ignition ON.
- Place a shop light over the ambient light sensor so illumination can reach maximum brightness.
- Press the illumination dim up switch until the illumination reaches full brightness.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C505-1		Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C605-5		Ground

Is the voltage greater than 10 volts?

Yes	INSTALL a new front door lock control switch. REFER TO SECTION 501-14.
No	GO to E6

E6 CHECK THE ILLUMINATION CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect C501ALHD Vehicles.
- Disconnect C601ARHD Vehicles.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C505-1	Ω	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C605-5	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to E7
No	REPAIR the circuit.

E7 CHECK THE ILLUMINATION CIRCUIT FOR AN OPEN

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C505-1	Ω	C501A-15

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C605-5	Ω	C601A-15

Is the resistance less than 3 ohms?

Yes	GO to E8
No	REPAIR the circuit.

E8 CHECK THE ILLUMINATION AND GROUND CIRCUITS FOR A SHORT TOGETHER

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C505-1	Ω	C505-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C605-5	Ω	C605-3

Is the resistance greater than 10,000 ohms?

Yes	GO to E9
No	REPAIR the circuit.

E9 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

- Disconnect and inspect all DDM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the DDM and related in-line connectors and all previously disconnected illumination system connectors. Make sure all connectors seat and latch correctly.
- Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for

	this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Passenger Front Door Lock And/Or Window Control Switch Illumination Is Inoperative Or Always On

Refer to Wiring Diagrams Cell 100 for schematic and connector information.

Normal Operation and Fault Conditions

Based on messages recieved from the BCM, the PDM supplies voltage to illuminate the passenger window control switch.

DTC	Description	Fault trigger conditions
U2010:00	Switch Illumination: No Sub Type Information	This DTC sets on-demand and in continuous memory when the PDM detects an open or a short to ground on the switch illumination output circuit.

Possible Sources

- Communication network concern
- Wiring, terminals or connectors
- Passenger door lock switch
- Passenger window control switch
- PDM

PINPOINT TEST F : THE PASSENGER FRONT DOOR LOCK AND/OR WINDOW CONTROL SWITCH ILLUMINATION IS INOPERATIVE OR ALWAYS ON

F1 PERFORM A NETWORK TEST

- Ignition ON.
- Perform a network test.

Does the PDM pass the network test?

Yes	If the door lock **and** window control switch illumination is always on, GO to F2 If the door lock **and** window control switch illumination is inoperative, GO to F6 If the door lock control switch illumination is inoperative, GO to F10 If the window control switch illumination is inoperative, GO to F13
No	DIAGNOSE a concern with the network. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

F2 CHECK THE ILLUMINATION CIRCUIT FOR A SHORT TO VOLTAGE

- Place the headlamp switch in the OFF position.
- Ignition OFF.
- Disconnect C6009LHD Vehicles.
- Disconnect C5009RHD Vehicles.
- Ignition ON.
- Make sure all other illuminated switches inside the vehilce have turned OFF before continuing.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6009-1		Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5009-1		Ground

Is any voltage present?

Yes	GO to F3
No	INSTALL new window control switch. REFER to: Passenger Door Window Control Switch (501-11 Glass, Frames and Mechanisms, Removal and Installation).

F3 VERIFY THE DOOR LOCK SWITCH FOR AN INTERNAL SHORT

- Ignition OFF.
- Disconnect C605LHD Vehicles.
- Disconnect C541RHD Vehicles.
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C605-5		Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C541-1		Ground

Is any voltage present?

Yes	GO to F4
No	INSTALL new door lock control switch. REFER TO 501-14 Front Door Lock Control Sw.

F4 CHECK THE ILLUMINATION CIRCUIT FOR A SHORT TO VOLTAGE WITH THE PDM (PASSENGER DOOR MODULE) DISCONNECTED

- Ignition OFF.
- Disconnect C652ALHD Vehicles.

- Disconnect C552ARHD Vehicles.
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C652A-15	V	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C552A-15	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to F5

F5 CHECK THE SWITCH CIRCUITS FOR A SHORT TOGETHER

- Ignition OFF.
- Measure:

Window Control Switch LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6009-1	Ω	C6009-2
C6009-1	Ω	C6009-3
C6009-1	Ω	C6009-4

Window Control Switch RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5009-1	Ω	C5009-2
C5009-1	Ω	C5009-3
C5009-1	Ω	C5009-4

Door Lock Switch LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C541-1	Ω	C541-2

C541-1	Ω	C541-3
C541-1	Ω	C541-4
C541-1	Ω	C541-5

Door Lock Switch RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C605-5	Ω	C605-1
C605-5	Ω	C605-2
C605-5	Ω	C605-3
C605-5	Ω	C605-4

Are the resistances greater than 10,000 ohms?

Yes	GO to F16
No	REPAIR the affected circuit.

F6 VERIFY THE DOOR LOCK SWITCH FUNCTIONALITY

- Actuate the door locks from the passenger front door lock switch.

Does the passenger door lock switch function correctly?

Yes	GO to F7
No	DIAGNOSE a concern with the door locks. REFER to: Locks, Latches and Entry Systems (501-14 Handles, Locks, Latches and Entry Systems, Diagnosis and Testing).

F7 CHECK THE WINDOW SWITCH ILLUMINATION CIRCUIT FOR VOLTAGE

- Ignition OFF.
- Disconnect C6009LHD Vehicles.
- Disconnect C5009RHD Vehicles.
- Place a shop light over the ambient light sensor to make sure the illumination can reach maximum brightness.
- Ignition ON.
- Press the illumination dim up switch until the illumination reaches full brightness.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6009-1	V	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5009-1	V	Ground

C5009-1	V	Ground

Is the voltage greater than 10 volts?

Yes	The system is functioning correctly at this time, CHECK the illumination output circuit for an intermitent fault condition.
No	GO to F8

F8 CHECK THE WINDOW SWITCH ILLUMINATION CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect PDM C652ALHD Vehicles.
- Disconnect PDM C552ARHD Vehicles.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C652A-15	Ω	C6009-1

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C552A-15	Ω	C5009-1

Is the resistance less than 3 ohms?

Yes	GO to F9
No	Repair the circuit.

F9 CHECK THE WINDOW SWITCH ILLUMINATION CIRCUIT FOR A SHORT TO GROUND

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6009-1	Ω	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5009-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to F16
No	REPAIR the circuit.

F10 VERIFY THE PASSENGER DOOR LOCK CONTROL SWITCH OPERATION

- Verify the operation of the door lock from the passenger door lock control switch.

Does the door lock operate correctly?

Yes	GO to F11
No	DIAGNOSE a concern with the door locks. REFER to: Locks, Latches and Entry Systems (501-14 Handles, Locks, Latches and Entry Systems, Diagnosis and Testing).

F11 CHECK THE ILLUMINATION CIRCUIT FOR VOLTAGE

- Ignition OFF.
- Disconnect C605LHD Vehicles.
- Disconnect C541RHD Vehicles.
- Place a shop light over the ambient light sensor to make sure the illumination can reach maximum brightness.
- Ignition ON.
- Press the illumination dim up switch until the illumination reaches full brightness.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C541-1	V	C541-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C605-5	V	C605-3

Is the voltage greater than 10 volts?

Yes	INSTALL new door lock control switch. REFER TO SECTION 501-14.
No	GO to F12

F12 CHECK THE ILLUMINATION CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect PDM C652ALHD Vehicles.
- Disconnect PDM C552ARHD Vehicles.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C541-1	Ω	C652A-15

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C605-5	Ω	C552A-15

Is the resistance less than 3 ohms?

Yes	GO to F16
No	Repair the circuit.

F13 CHECK THE ILLUMINATION CIRCUIT FOR VOLTAGE

- Ignition OFF.
- Disconnect C6009LHD Vehicles.
- Disconnect C5009RHD Vehicles.
- Place a shop light over the ambient light sensor to make sure the illumination can reach maximum brightness.
- Ignition ON.
- Press the illumination dim up switch until the illumination reaches full brightness.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6009-1	V	C6009-4

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5009-1	V	C5009-4

Is the voltage greater than 10 volts?

Yes	INSTALL new window control switch. REFER TO SECTION 501-11.
No	GO to F14

F14 CHECK THE ILLUMINATION CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect PDM C652ALHD Vehicles.
- Disconnect PDM C552ARHD Vehicles.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C6009-1	Ω	C652A-15

Positive Lead	Measurement / Action	Negative Lead
C5009-1	Ω	C552A-15

Is the resistance less than 3 ohms?

Yes	GO to F15
No	Repair the circuit.

F15 CHECK THE ILLUMINATION GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C6009-4	Ω	C652A-17

Positive Lead	Measurement / Action	Negative Lead
C5009-4	Ω	C552A-17

Is the resistance less than 3 ohms?

Yes	GO to F16
No	Repair the circuit.

F16 CHECK FOR CORRECT PDM (PASSENGER DOOR MODULE) OPERATION

- Disconnect and inspect all PDM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PDM and related in-line connectors and all previously disconnected illumination system connectors. Make sure all connectors seat and latch correctly.
- Operate the system to determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PDM. REFER to: Passenger Door Module (PDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Steering Wheel Switch(es) Illumination Is Inoperative (Without Active Front Steering)

Refer to Wiring Diagrams Cell 71 for schematic and connector information.

Normal Operation and Fault Conditions

The steering wheel switches receive illumination voltage from the BCM on a common illumination circuit through SCCM and clockspring.

Possible Sources

- Wiring, terminals or connectors
- Steering wheel switch(es)
- Clockspring
- SCCM

PINPOINT TEST G : THE STEERING WHEEL SWITCH(ES) ILLUMINATION IS INOPERATIVE OR ALWAYS ON (WITHOUT ACTIVE FRONT STEERING)

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

G1 INSPECT THE NON-NETWORKED ILLUMINATION COMPONENTS

- Ignition ON.
- Place the headlamp switch in the PARKING LAMPS ON position.
- While pressing the illumination dim up and dim down switch, monitor the non-networked illumination components.

Are all of the non-networked illumination sources inoperative or always on?

Yes	If all non-networked illumination sources are inoperative, GO to Pinpoint Test B If all non-networked illumination sources are always on, GO to Pinpoint Test D
No	If all steering wheel switch illumination is inoperative, GO to G2 If only one steering wheel switch is inoperative, GO to G5

G2 CHECK FOR ILLUMINATION VOLTAGE AT THE CLOCKSPRING

- Ignition OFF.
- Place the headlamp switch in the OFF position.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect Clockspring C218A.
- Place a light source over the ambient light sensor so the illumination can reach maxium brightness.

- Place the headlamp switch in the PARKING LAMPS ON position.
- Ignition ON.

- Press the illumination dim up switch to the full illumination position.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C218A-1		Ground

Is the voltage greater than 10 volts?

Yes	GO to G3
No	REPAIR the circuit

G3 CHECK THE ILLUMINATION GROUND CIRCUIT

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C218A-1		C218A-4

Is the voltage greater than 10 volts?

Yes	GO to G4
No	REPAIR the circuit.

G4 CHECK THE CLOCKSPRING

- Ignition OFF.
- Connect C218A.
- Disconnect C218B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C218B pin 1 (component side)		C218B pin 11 (component side)

Is the voltage greater than 10 volts?

Yes	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column) .
No	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

G5 CHECK THE STEERING WHEEL HARNESS VOLTAGE CIRCUIT FOR AN OPEN

- Ignition OFF.
- Place the headlamp switch in the OFF position.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental

Restraint System, General Procedures).
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect the faulty switch.
- Disconnect Clockspring C218B.
- Measure:

LH steering wheel switch

Positive Lead	Measurement / Action	Negative Lead
C218B-11	Ω	C2490-8

RH steering wheel switch

Positive Lead	Measurement / Action	Negative Lead
C218B-11	Ω	C2491-8

Is the resistance less then 3 ohms?

Yes	GO to G6
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column) .

G6 CHECK THE STEERING WHEEL HARNESS GROUND CIRCUIT FOR AN OPEN

- Measure:

LH steering wheel switch

Positive Lead	Measurement / Action	Negative Lead
C218B-1	Ω	C2490-2

RH steering wheel switch

Positive Lead	Measurement / Action	Negative Lead
C218B-1	Ω	C2491-2

Is the resistance less then 3 ohms?

Yes	INSTALL a new steering wheel switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation).
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column) .

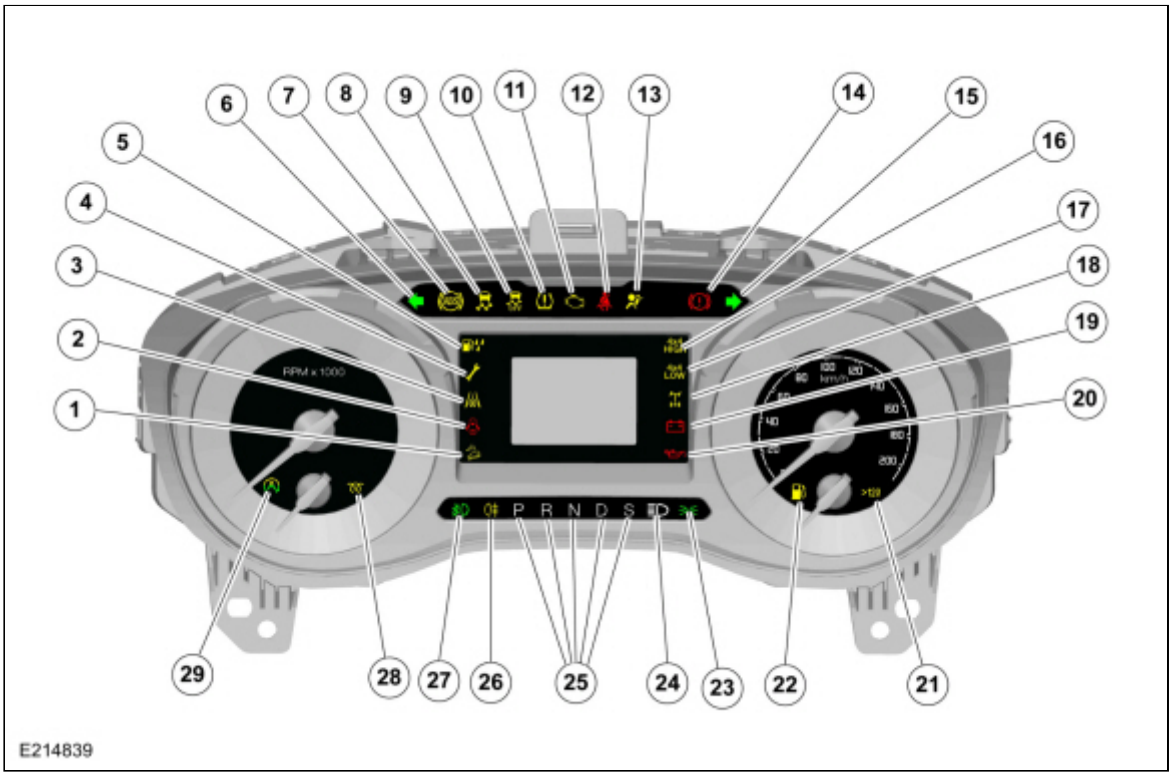
Instrument Panel Cluster (IPC) - Overview



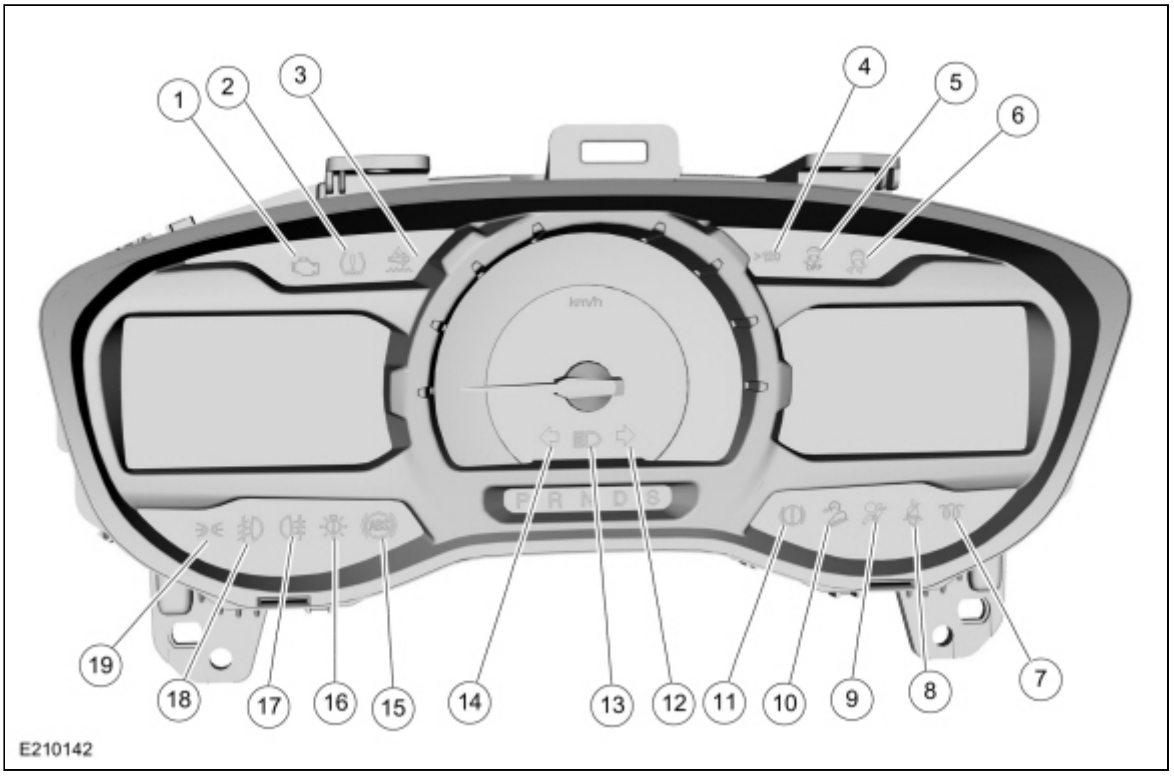
Base Part Number: 10849

Overview

The IPC uses the following methods and functionality to alert the driver of vehicle conditions:

- gauges
- informational indicators
- warning indicators
- warning messages
- warning chimes

Base IPC



Base IPC

Item	Description
1	HDC
2	Door Ajar Indicator
3	Frost Indication
4	Powertrain malfunction Indicator
5	Diesel Water in Fuel indicator
6	Left Turn Signal / Hazard Indicator
7	ABS Warning
8	IVD Traction Control Event
9	TC/ESC/ RSC Traction Control Off
10	Low Tire Pressure Warning (TPMS)
11	Check Engine Warning / MIL

12	Seat Belt Warning / Belt minder
13	Airbag Failure Warning Light
14	Right Turn Signal / Hazard Indicator
15	Fuel gauge
16	4x4 High
17	4x4 Low
18	Rear Differential Lock indicator
19	Charge System Fault
20	Low Engine Oil Pressure
21	Over speed Warning GCC
22	Low Fuel
23	Park Lamp
24	High Beam
25	PRNDL display
26	Rear Fog
27	Front Fog
28	Wait To Start
29	Auto-start-stop system

High-Level IPC

High-Level IPC

Item	Description
1	Check Engine Warning / MIL
2	Low Tire Pressure Warning (TPMS)
3	Left Turn Signal / Hazard Indicator
4	Over speed Warning GCC

5	TC/ESC/ RSC Traction Control Off
6	IVD Traction Control Event
7	Wait To Start
8	Seat Belt Warning / Belt mindert
9	Airbag Failure Warning Light
10	HDC
11	Brake Warning / Low Brake Fluid / Park Brake
12	Right Turn Signal / Hazard Indicator
13	High Beam
14	Left Turn Signal / Hazard Indicator
15	ABS Warning
16	Lighting Control
17	Rear Fog Switch Indicator
18	Front Fog Switch Indicator
19	Park Lamp

The base IPC uses a dot matrix message centre display to display driver information.

The high-level IPC uses dual RH and LH 4.2" thin film transistor screens to display driver information.

For LHD vehicles, the LH display screen contains the virtual gauge displays and message center information. The RH display screen displays multimedia information (audio, phone and navigation), as well as items such as vehicle direction, outside air temperature and time.

For RHD vehicles, the RH display screen contains the virtual gauge displays and message center information. The LH display screen displays the multimedia information.

The dual screen message center IPC utilizes mostly virtual gauges. Virtual gauges are video displays that provide information in a unique format. The exception is the speedometer, which is still an analog-type gauge. Each virtual gauge is somewhat different in how it is displayed.

Informational indicators inform the driver of conditions that exist in the vehicle. Warning indicators provide information to the driver of conditions that could potentially cause personal injury or alter vehicle performance.

IPC RTT indicators illuminate in the message center and replace the typical informational or warning indicator, using the same graphical representation. The message center displays RTT indicators in both fixed locations and in a rotating display where they are turned on in the order the request was received by the IPC.

Network Messaged Inputs

Module messaging has increased over time and is the standard for sending and receiving information required to operate the IPC. The majority of the inputs required to operate the IPC are received over the HS-CAN.

Hardwired Inputs

The IPC requires hardwired inputs from components that are not on the CAN. These components are required for specific IPC functions.

The hardwired inputs are provided by the following components:

- HDC switch
- ESC switch
- fuel level sensor
- park detect switch (part of the floor shifter assembly)
- low washer fluid level switch

11	Fuel
12	Speedometer
13	Fuel level sensor
14	Analog gauges
15	Virtual gauges

Network Message Chart - Gauges

Module Network Input Messages - IPC

Broadcast Message	Originating Module	Message Purpose
Engine coolant temperature data	PCM	Input used for the analog and virtual temperature gauge indication.
Engine overheat indication request	PCM	Input used to send the analog and virtual temperature gauge pointer to full hot.
Engine RPM data	PCM	Input used for analog and virtual tachometer indication.
Ignition status	BCM	Ignition RUN, START and accessory states required for the IPC operating modes and fault reporting.
Vehicle speed	PCM	Vehicle speed data used for the virtual AWD gauge display and speedometer indication.

System Diagram - Indicators

Item	Description
1	RCM
2	ABS module
3	IPC
4	Brake fluid level switch
5	Driver safety belt buckle
6	PCM
7	Passenger safety belt buckle
8	Park detect switch

9	GWM
10	BCM
11	Fuel level sensor
12	Fuel pump assembly
13	Oil pressure switch
14	Diesel exhaust fluid sensor
15	TCM

Network Message Chart - Indicators

Module Network Input Messages - IPC

Broadcast Message	Originating Module	Message Purpose
ABS warning indicator request	ABS module	Input used to control the ABS warning indicator.
Airbag warning indicator request	RCM	Input used to control the airbag warning indicator.
Brake fluid level low message request	BCM	Input from the BCM for low brake fluid level used to control the brake warning indicator.
Brake (red) warning indicator request	ABS module	Input from the ABS used to control the brake warning indicator.
Driver safety belt buckle status	RCM	Input used to control the safety belt warning indicator.
High beam status	BCM	Input used to control the high beam indicator.
Ignition status	BCM	Ignition RUN, START and accessory states required for the IPC operating modes and fault reporting.
MIL request	PCM	Input used to control the MIL.
Parking brake (red) indicator request	ABS module	Input from the ABS for the parking brake input used to control the brake warning indicator.
Parklamp status	BCM	Input used to control the lights on indicator.
Stability-traction control indicator request	ABS module	Input used to control the stability/traction control (sliding car icon) indicator.
Stop/start standby indicator	PCM	Input used to control the auto stop/start indicator.
Tire pressure warning indicator	BCM	Input used to control the TPMS indicator.
Traction control mode	ABS module	Input used to control the stability/traction control disabled (sliding car OFF icon) indicator.
Turn indication request	BCM	Input used to control the RH turn, LH turn and hazard indicators.
Diesel Exhaust Fluid Indicator request	PCM	Input used to control DEF warning indicator.
Water in Fuel Indicator request	PCM	Input used to control Water in Fuel warning indicator.
Frost Indicator request	FCIM	Input used to control Frost warning indicator.
Door Ajar Indicator request	BCM	Input used to control door ajar warning states.
HDC Indicator request	ABS module	Input used to control HDC warning indicator.
Wait to Start Indicator request	PCM	Input used to control Wait to Start indicator.
4WD Indicator request	PCM	Input used to control 4WD high or 4WD low warning indicators.
Engine Coolant Warning indicator	PCM	Input used to control Engine temperature warning indicator.

Charge warning Indicator request	BCM	Input used to control Charge fail warning indicator.
Oil Pressure Warning indicator request	PCM	Input used to control Oil Pressure warning indicator.
Fog Lamp Indicator request	BCM	Input used to control front and/or rear fog lamp warning indicator.
E Locker indicator request	PCM	Input used to control E Locker warning indicator.

Networked Input Messages and Default States

NOTE: *Whenever a network message is suspected as missing and confirmed by a missing message DTC (U-code), it is important to look for other symptoms that can also be present in the IPC and throughout the vehicle. Once a DTC sets in the IPC, it is helpful to review the complete message list to determine which other modules also rely on the same message and run the self-test for those modules. If the message is missing from other modules, the same or similar lost communication DTC can also be set in those modules. Confirmation of missing messages common to multiple modules can indicate the originating module is the source of the concern or the communication network may be faulted.*

For a list of all the network messages,
Refer to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

The IPC uses input messages from other modules to control the gauges, informational indicators, warning indicators and message center message displays over the communication networks. The IPC receives all networked data over the HS-CAN3.

The vehicle uses 4 communication networks to transmit the data used by the IPC.

- HS-CAN1
- HS-CAN2
- HS-CAN3
- MS-CAN

For overview information,
Refer to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

For system operation information,
Refer to: Communications Network - Component Location (418-00 Module Communications Network, Description and Operation).

All messaged inputs to the IPC from other networks are received from the GWM over the HS-CAN3. The GWM, as the name implies, acts as a gateway to convert messages from one of the other 3 networks to the HS-CAN3, which is recognized by the IPC.

Network messages can drop out or be missing for a variety of reasons, such as high network traffic on the bus. The IPC incorporates a defined strategy for handling missing network messages based on time. The required time for a network message to be missing differs between the various gauges, indicators and message center displays. The strategy is basically the same for all indication outputs (gauges, indicators or chimes), but differs in the length of time required for the network message to be missing. If a required network message is missing or invalid for less than the programmed length of time, the gauge, indicator or message center display that requires the network message remains at the last commanded state based upon the last network message received. If the messaged input is missing for longer than the programmed length of time, the IPC output (gauge, indicator etc.) reacts according to a pre-defined default action.

For example, if the stability-traction control indicator request network message is missing for less than 5 seconds, and the stability-traction control indicator (sliding car icon) was on, the indicator remains in the on state until the next network message is received. If the network message remains missing or invalid for more than 5 seconds, the IPC sets a U-code DTC and the IPC output becomes a default action for the indicator or gauge. The indicator may default on/off or the gauge may default to the rest position.

Each indicator or gauge utilizes a different default strategy depending on the nature of the indication. Refer to the diagnostic overview descriptions located before each pinpoint test for further descriptions of the default action specific to each indicator or gauge. If the missing messaged input to the IPC returns at any time, the normal function of the gauge, indicator or message center display resumes.

It is very important to understand:

- where the input originates.
- all the information necessary in order for a feature to operate.
- which module(s) receive(s) the input or command message.
- which module controls the output of the feature.
- whether the module that receives the input controls the output of the feature, or whether it outputs a message over the communication network to another module.

Startup-Shutdown

The IPC provides a startup/shutdown sequence also known as a welcome/goodbye strategy. The IPC initiates and follows a progressive strategy providing increasing IPC functionality from IPC wake up to ready to drive status. This sequence begins at RKE unlock or driver door open through the ignition RUN state. During this period, the IPC provides increasing functionality from backlighting or illuminating gauge rings, gauge pointers, illuminating the PRNDL, backlighting of the message center display, displaying a message center splash screen, gauge and LED prove out, gauge sweep and finally normal IPC operation.

MyKey®

The MyKey® feature allows the customer to program a restricted driving mode that is tied to one or more keys known as a MyKey® key. The following features are provided by the IPC when a MyKey® key is being used:

- At the beginning of vehicle start up, as part of the welcome strategy, the message center greets the MyKey® driver with MYKEY ACTIVE DRIVE SAFELY displayed in the message center. If the MyKey® speed limiter feature is turned on, the message center also displays the MyKey® administrator selected top speed setting message; SPEED LIMITED TO 128.747 km/h or to the administrator desired setpoint.
- The MyKey® top speed selections are;
  - 104.607 km/h
  - 112.654 km/h
  - 120.7 km/h
  - 128.747 km/h

- The IPC provides a periodic Belt-Minder® warning chime until the driver and passenger safety belts are buckled. When the Belt-Minder® is issued, the ACM is muted and the message center displays BUCKLE UP TO UNMUTE AUDIO.
- If the MyKey® speed limiter feature is turned on and the vehicle speed approaches the selected top speed, the message center displays NEAR VEHICLE TOP SPEED along with a chime.
- If the MyKey® speed limiter feature is turned on and the vehicle speed reaches the selected top speed, the message center displays TOP SPEED MYKEY SETTING along with a chime.
- If the speed warning is selected at one of the preset values and the vehicle approaches the preset speed, the message center displays CHECK SPEED DRIVE SAFELY along with a chime.
- At approximately 1/8 tank of remaining fuel, the IPC illuminates the low fuel message center indicator and the message center displays FUEL LEVEL LOW along with a chime.
- Traction control, Emergency Assist® feature and the Do Not Disturb feature can be set to always on or user selectable in the MyKey® menu.
- If the traction control always on feature is turned on and the MyKey® driver attempts to disable the traction control, the message center displays ADVANCETRAC ON MYKEY SETTING.
- MyKey® miles driven by the MyKey® user can be found in the information display.
- The number of MyKey® programmed and administrator keys can be found in the MyKey® menu.
- The parking aid, lane departure alert and collision avoidance warning menus are disabled in the message center to force these features always on.

When an administrator key is in use, the IPC provides:

- a menu in the message center guiding the user to create a MyKey®. When the maximum MyKey® limit is reached, the MyKey® creation menu is no longer available.
- a menu in the message center with options for setting 6 MyKey® features:
  - MyKey® speed limiter.
  - MyKey® pre-selected speed warning.
  - MyKey® radio volume limiter.
  - traction control always on or user selectable.
  - emergency assist feature always on or user selectable.
  - do not disturb feature always on or user selectable.
- a menu in the message center with the option to clear all MyKey® programmed keys at once.
- MyKey® mileage driven by the MyKey® user can be found in system check function of the message center.
- the number of MyKey® programmed keys and administrator keys can be found in the system check function of the message center.

For information on the MyKey® features, refer to the Owner's Literature.

Configuration

The IPC contains items that are configurable. Most of the configurable items (configurable parameters) are customer preference items, which can be set with a scan tool. The remaining configurable items can only be set through the vehicle configuration parameters. Refer to: (418-01 Module Configuration)

Programmable Module Installation (PMI) (418-01 Module Configuration) .

Prove-Out

The IPC carries out a display prove-out to verify the gauges function and all module controlled warning indicator lamps and monitored systems are functioning correctly within the IPC. The IPC provides a timed prove-out of some indicators while other indicators illuminate upon engine start up or have no prove-out. When the ignition is cycled on, the indicators illuminate to prove-out according to the following table:

Indicator	Indicator Type	Prove-Out Duration
Airbag	Warning	6 seconds
ABS	Warning	3 seconds
Brake	Informational	3 seconds
Diesel Exhaust Fluid	Informational	3 seconds
MIL	Informational	Engine start up
Safety belt	Informational	6 seconds if the safety belt is unbuckled, turns off when the safety belt is buckled
Stability –Traction control ESC	Warning	3 seconds
Stability –Traction control OFFESC OFF	Informational	3 seconds
TPMS	Warning	3 seconds

Dealer Test Mode

NOTE: *The table lists the displays as they appear when navigating using the down arrow button.*

To enter the IPC engineering test mode or dealer test mode, begin with the ignition OFF. Press and hold the RH steering wheel switch OK button. Place the ignition ON and continue to hold the button for 5-8 seconds until the display indicates Test or Gauge Sweep. Press the up or down arrow buttons to navigate through each of the display windows. To exit the IPC dealer test mode, press and hold the OK button for 5-8 seconds or place the ignition in OFF. Each down arrow button press advances the viewing window to the next set of items.

IPC Display	Description
– Engineering Test – Mode – – Use Right – Up/Down – to scroll screens	Initial entry display into the dealer test mode.
– ANALOG GAUGE – TEST	Carries out the gauge sweep of the analog gauges. When the sweep (zero to maximum then return to zero) is complete, the actual data is displayed.
– TELLTALE AND – COLOR TEST	Illuminates all cluster microprocessor controlled LED telltales or indicators. Also displays a color palette of boxes below the title.

– PartNo: xxxx-xx – Core: xxxx-xx – Cal#1: xxxx-xx – ECU S/W: xxxx-xx	Displays the IPC part number information.
– Man Date: xxxxxx – B&A Config Bytes – xx xx xx xx xx – xx xx xx xx xx	• Displays the manufacturing information. • Date in the format of YYMMDD. • B&A configuration bytes
– DTC: HIST CURR – xxxxxx x x – xxxxxx x x	Displays all of the Diagnostic Trouble Codes (DTCs) set (history and current Diagnostic Trouble Codes [DTCs]). An X in the HIST or CURR column means the DTC is active. Three Diagnostic Trouble Codes (DTCs) display on each screen. If more Diagnostic Trouble Codes (DTCs) are present, there will be additional screens listing them. If there are no Diagnostic Trouble Codes (DTCs) in history or current, the display will only be the title row.
– Vehicle Speed: – xxx.x km/h – xxx.x MPH – Tach: xxxx RPM	• **NOTE:** *These are the filtered values used to drive the gauge positions, not the actual positions.* Displays the digital representation of the speedometer gauge in mph and km/h.
– Inst Fuel: xxxx – FLPM: xxxx.xx	Displays the instant fuel level and filtered fuel level in percent. This is used for a single sender fuel level input.
– Inst Fuel1: xxxx – FLPM: xxxx.xx	Displays the instant fuel level and filtered fuel level in percent. This is used for the fuel pump assembly input on a dual sender fuel tank configuration.
– Inst Fuel2: xxxx – FLPM: xxxx.xx	Displays the instant fuel level and filtered fuel level in percent. This is used for the fuel level sensor input on a dual sender fuel tank configuration.
– DTE: Inst 01 Disp – km xxx xxx xxx – mi xxx xxx xxx	Displays the values used for calculating the DTE function.
– RAFE RAFE_01 – xxx.x xxx.x 1/100km – xxx.x xxx.x MPG – xxx.x xxx.x km/l	Displays the running average fuel economy. The values are derived from the DTE function.
– State Val #ofVS	Displays the key ON initialization, key OFF reference, and zero speed reference fuel level values in fuel level for a single sender fuel level input.

– Szero: xxxx xxxx – Off: xxxx xxxx – On: xxxx xxxx	
– State Val #ofVS – Szero1: xxxx xxxx – Off: xxxx xxxx – On: xxxx xxxx	Displays the key ON initialization, key OFF reference, and zero speed reference fuel level values in fuel level for the fuel pump assembly input on a dual sender fuel tank configuration.
– State Val #ofVS – Szero2: xxxx xxxx – Off: xxxx xxxx – On: xxxx xxxx	Displays the key ON initialization, key OFF reference, and zero speed reference fuel level values in fuel level for the fuel level sensor input on a dual sender fuel tank configuration.
– Coolant Temp (°C): – xxx	Displays the digital representation of the coolant temperature gauge indication in degrees Celsius.
– Odo cnts: xx – Trip A: xxxxx.x km – Trip A: xxxxx.x mi	Displays the values from the odometer count signal and the trip A statistics.
– Odo cnts: xx – Trip B: xxxxx.x km – Trip B: xxxxx.x mi	Displays the values from the odometer count signal and the trip B statistics.
• Fuel cnts: xxx • Fuel A: xxxxx.x l • Fuel A: xxxxx.x g	Displays the values of the fuel flow display signal from the PCM and the approximate fuel used for the trip stats A.
• Fuel cnts: xxx • Fuel B: xxxxx.x l • Fuel B: xxxxx.x g	Displays the values of the fuel flow display signal from the PCM and the approximate fuel used for the trip stats B.
– Battery: xx.xV – Compass: xx – Last Chime: xx	• Displays the current battery level. • Displays the compass direction. • Displays the number of the last chime sounded.
– Dim Step:	• Displays the first screen of dimming information.

xx – Dim Gauge: xxxxx – Dim Pointer: xxxxx	• Dim step is the dimming level. • Dim gauge is the internal illumination number for the gauge backlighting (1 to 10,000). • Dim pointer is the internal illumination number for the gauge pointer backlighting (1 to 10,000).
– Dim Step: xx – Dim PRNDL: xxxxx – Dim Display: xxxxx	• Displays the second screen of dimming information. • Dim step is dimming level. • Dim PRNDL is the internal illumination number for PRNDL backlighting (1 to 10,000). • Dim display is the internal illumination number for the display backlighting (1 to 10,000).
– PDS: x – LWS: x	Park detect switch (0 = open/not park, 1 = closed/park).
– HDC: x – TC: x	• LWS Low Washer fluid switch (1 is Empty, 0 if Full). • HDC switch (1 is Switch Pressed, 0 is not pressed). • TC ESP switch (1 is Switch Pressed, 0 is not pressed).
– Engineering Test Mode – – Use Right – Up/Down – to scroll screens	Repeats the test display cycle.

Analog Gauges

Fuel Gauge

The IPC sends a reference voltage to the fuel level sender(s). As the fuel level changes, a float actuates the variable resistor fuel level sender, raising or lowering the fuel level signal voltage. The IPC monitors the changes in voltage from both senders and commands the fuel gauge with a corresponding movement of the pointer.

After a fuel fill up, the time for the fuel gauge to move from empty (E) to full (F) ranges from 2 seconds to 55 minutes depending on which operating mode the fuel gauge is in.

The IPC uses 4 different operating modes to calculate the fuel level:

- Anti-slosh (default mode)
- Key OFF fueling
- Key ON fueling
- Recovery

The default fuel gauge mode is called the anti-slosh mode. To prevent fuel gauge changes from fuel slosh (gauge instability due to changes in fuel sensor readings caused by fuel moving around in the tank), the fuel gauge takes approximately 40 minutes to go from empty (E) to full (F).

The key OFF fueling mode (2 seconds to read empty [E] to full [F]) requires 3 conditions to be met:

- The ignition must be in the OFF mode when refueling the vehicle.
- At least 6% of the vehicle's fuel capacity must be added to the fuel tank.
- The IPC must receive a valid ignition ON fuel sensor reading within one second of the ignition being put into the RUN mode. The key ON sample readings are considered valid if the fuel sensor reading is between 10 ohms ± 2 ohms and 180 ohms ± 4 ohms.

If these conditions are not met, the fuel gauge stays in the anti-slosh mode, which results in a slow to read full (F) event.

The key ON fueling mode (approximately 60 seconds to read empty [E] to full [F]) requires the following conditions be met:

- The transmission is in PARK (P) or NEUTRAL (N).
- The ignition is in the RUN mode.
- At least 6% of the vehicle's fuel capacity must be added to the fuel tank

In key ON fueling mode, a 30-second timer activates after the transmission is put into the PARK (P) or NEUTRAL (N) position. When the 30-second time has elapsed and at least 9% of the vehicle's fuel capacity has been added, the fuel gauge response time is 60 seconds to read from empty (E) to full (F). When the transmission is shifted out of PARK (P) or NEUTRAL (N), the fuel gauge strategy reverts to the anti-slosh mode. The key ON fueling mode prevents slow to read full events from happening if the customer refuels the vehicle with the ignition in the RUN mode.

Recovery mode is incorporated into the IPC strategy to recover from a missing fuel level input after a refueling event. Missing fuel level inputs result from intermittent opens in the fuel sensor or its circuits. Recovery mode (empty [E] to full [F] approximately 17 minutes) is initiated when the following 2 conditions are met:

- The IPC is in the anti-slosh (default) mode.
- The actual fuel level in the tank is 5% different from what is being displayed by the fuel gauge.

Speedometer

The IPC receives the vehicle speed data from the GWM over the HS-CAN3. The GWM receives the vehicle speed message from the PCM over the HS-CAN1. The PCM receives the wheel speed data from the ABS module. The PCM uses tire size stored in the vehicle configuration file along with wheel speed inputs to generate a vehicle speed signal.

Tachometer

The IPC receives the engine RPM data message from the GWM over the HS-CAN3. The GWM receives the engine RPM data message from the PCM over the HS-CAN1.

Temperature Gauge

The IPC uses 2 messages to control the temperature gauge. The first is the engine coolant temperature data, which provides the current engine temperature input to the PCM. The second message is the engine overheat indication request, which is sent by the PCM to the IPC when an overheating condition exists. When the IPC receives the engine overheat indication request message, the IPC sends the temperature gauge to full hot and turns on the over-temperature warning indicator.

The IPC receives all the temperature gauge inputs from the GWM over the HS-CAN3. The GWM receives the engine coolant temperature data and the engine overheat indication request messages from the PCM over the HS-CAN1.

Virtual Gauges

The IPCprovides a tolerance that allows the speed indication to display between actual vehicle speed and 10% above vehicle speed. This means that with an actual vehicle speed of 100kmh the speedometer can indicate between 100 and 110. Incorrect axle ratio, tyre size or tyre size configuration can potentially affect the speedometer accuracy.

Fuel Gauge

The IPC sends a reference voltage to the fuel level sender(s). As the fuel level changes, a float actuates the variable resistor fuel level sender, raising or lowering the fuel level signal voltage. The IPC monitors the changes in voltage from both senders and commands the fuel gauge with a corresponding movement of the pointer.

After a fuel fill up, the time for the fuel gauge to move from empty (E) to full (F) ranges from 2 seconds to 55 minutes depending on which operating mode the fuel gauge is in.

The IPC uses 4 different operating modes to calculate the fuel level:

- Anti-slosh (default mode)
- Key OFF fueling
- Key ON fueling
- Recovery

The default fuel gauge mode is called the anti-slosh mode. To prevent fuel gauge changes from fuel slosh (gauge instability due to changes in fuel sensor readings caused by fuel moving around in the tank), the fuel gauge takes approximately 40 minutes to go from empty (E) to full (F).

The key OFF fueling mode (2 seconds to read empty [E] to full [F]) requires 3 conditions to be met:

- The ignition must be in the OFF mode when refueling the vehicle.
- At least 6% of the vehicle's fuel capacity must be added to the fuel tank.
- The IPC must receive a valid ignition ON fuel sensor reading within one second of the ignition being put into the RUN mode. The key ON sample readings are considered valid if the fuel sensor reading is between 10 ohms ± 2 ohms and 180 ohms ± 4 ohms.

If these conditions are not met, the fuel gauge stays in the anti-slosh mode, which results in a slow to read full (F) event.

The key ON fueling mode (approximately 60 seconds to read empty [E] to full [F]) requires the following conditions be met:

- The transmission is in PARK (P) or NEUTRAL (N).
- The ignition is in the RUN mode.
- At least 6% of the vehicle's fuel capacity must be added to the fuel tank

In key ON fueling mode, a 30-second timer activates after the transmission is put into the PARK (P) or NEUTRAL (N) position. When the 30-second time has elapsed and at least 9% of the vehicle's fuel capacity has been added, the fuel gauge response time is 60 seconds to read from empty (E) to full (F). When the transmission is shifted out of PARK (P) or NEUTRAL (N), the fuel gauge strategy reverts to the anti-slosh mode. The key ON fueling mode prevents slow to read full events from happening if the customer refuels the vehicle with the ignition in the RUN mode.

Recovery mode is incorporated into the IPC strategy to recover from a missing fuel level input after a refueling event. Missing fuel level inputs result from intermittent opens in the fuel sensor or its circuits. Recovery mode (empty [E] to full [F] approximately 17 minutes) is initiated when the following 2 conditions are met:

- The IPC is in the anti-slosh (default) mode.
- The actual fuel level in the tank is 5% different from what is being displayed by the fuel gauge.

Tachometer

The IPC receives the engine RPM data message from the GWM over the HS-CAN3. The GWM receives the engine RPM data message from the PCM over the HS-CAN1.

Temperature Gauge

The IPC uses 2 messages to control the temperature gauge. The first is the engine coolant temperature data, which provides the current engine temperature input to the PCM. The second message is the engine overheat indication request, which is sent by the PCM to the IPC when an overheating condition exists. When the IPC receives the engine overheat indication request message, the IPC sends the temperature gauge to full hot and turns on the over-temperature warning indicator.

The IPC receives all the temperature gauge inputs from the GWM over the HS-CAN3. The GWM receives the engine coolant temperature data and the engine overheat indication request messages from the PCM over the HS-CAN1.

Indicators

Diesel Exhaust Fluid Indicator

The IPC provides a Diesel Exhaust Fluid Level Warnings indicator to indicate that Diesel Exhaust Fluid level is low on diesel vehicles equipped with SCR emissions system. The IPC receives the DEF message from the GWM over the HS-CAN3. The GWM receives the DEF message from the PCM over the HS-CAN1

Water in Fuel Indicator

The IPC provides a Water in Fuel indicator to indicate that there is water in the fuel system. The IPC receives the Water in Fuel message from the GWM over the HS-CAN3. The GWM receives the Water in Fuel message from the PCM over the HS-CAN1.

Frost Indicator

The IPC provides a Frost indicator to indicate when the roads may be slippery due to frost induced by very low ambient temperatures. It uses the outside air temperature message to determine ambient temperature and thus whether to set indicator. The IPC receives all the required messages from the GWM over the HS-CAN3. The GWM receives the outside air temperature messages from FCIM over HS-CAN1.

Hill Descent Control

The IPC provides a HDC indicator to indicate when the HDC is in ready mode, active control mode, or in an over temperature mode with the system cooling. The IPC receives all the required messages from the GWM over the HS-

CAN3. The GWM receives the HDC messages from ABS over HS-CAN2.

Door Ajar Indicator

The IPC provides a door ajar indicator along with message displays to indicate the status of the doors. The BCM monitors each of the ajar inputs (driver, passenger, left rear, right rear and liftgate) and sends a door ajar status message to the GWM over the HS-CAN1. The IPC receives the driver door ajar status messages from the GWM over the HS-CAN3 to display the door ajar indicator and corresponding warning message.

Wait to Start Indicator

Diesel engines. The IPC provides a Wait to Start indicator which when lit requests the driver to "wait to start" to allow the glow plugs to heat. The IPC receives the required messages from the GWM over the HS-CAN3. The GWM receives the wait to start messages from PCM over HS-CAN1. E100 engines. The IPC provides a Wait to Start indicator which when lit requests the driver to "wait to start" until the E100 fuel is heated by heaters in the fuel rail to where the vehicle will start. The IPC receives the required messages from the GWM over the HS-CAN3. The GWM receives the wait to start messages from PCM over HS-CAN1.

4WD Indicators

The IPC provides a 4WD Low and 4WD High indicators to indicate transmission status. It uses 4WD status display message to set the indicators. The IPC receives all the required messages from the GWM over the HS-CAN3 . The GWM receives the transmission messages from PCM over HS-CAN1.

Charge warning Indicator

The IPC provides a charging system indicator along with message displays indicating the status of the charging system. When a fault is present in the charging system, the BCM sends the battery low state of charge message to display message center warning messages and the charging system RTT indicator. The IPC receives the battery low state of charge message from the GWM over the HS-CAN3. The GWM receives the battery low state of charge message from the BCM over the HS-CAN1.

Oil Pressure Warning indicator

The IPC uses the oil pressure warning indicator request and engine RPM data to control the low oil pressure indicator. The engine oil pressure switch is hardwired to the PCM. The PCM provides the oil pressure warning indicator status request and the engine RPM data to the GWM over the HS-CAN1. The GWM provides the oil pressure warning indicator status request and engine RPM data to the IPC over the HS-CAN3. The IPC requires engine RPM above 400 RPM before the message center displays the low oil pressure warning.

Fog Lamp Indicator Front

The IPC provides a Front Fog Lamp indicator to indicate when the Front Fog Lamp is on. The IPC receives all the required messages from the GWM over the HS-CAN3. The GWM receives the Front Fog Lamp message from BCM over HS-CAN1.

Fog Lamp Indicator Rear

The IPC provides a Rear Fog Lamp indicator to indicate when the Rear Fog Lamp is on. The IPC receives all the required messages from the GWM over the HS-CAN3. The GWM receives the Rear Fog Lamp message from BCM over HS-CAN1.

Engine Coolant Warning indicator

The IPC provides an indicator to alert the driver the engine is over temperature. The IPC receives the engine overheat indication request and the engine coolant temperature data from the GWM over the HS-CAN3. The GWM receives the engine overheat indication request and the engine over-temperature message from the PCM over the HS-CAN1.

E Locker indicator

The IPC provides an elocker indicator to indicate current elocker status. It uses 4WD status display message to set the indicator. The IPC receives all the required messages from the GWM over the HS-CAN3. The GWM receives the transmission messages from PCM over HS-CAN1.

ABS Warning Indicator

The IPC receives the ABS warning indicator request message from the GWM over the HS-CAN3. The GWM receives the ABS warning indicator request message from the ABS module over the HS-CAN2. If a fault condition exists in the ABS, the ABS module sends the ABS warning indicator request message to either flash or illuminate the ABS warning indicator.

Refer to ABS/Brake/Stability-Traction Control System Indication description for information on the conditions when

the ABS warning indicator is turned on.

ABS/Brake/Stability-Traction Control System Indication

The brake/stability-traction control system indication is controlled almost entirely by the ABS module. The ABS module can illuminate multiple indicators for various fault conditions. The following table provides a summary of the basic fault conditions and the indicators that are illuminated for each condition.

NOTE: *Refer to the Normal Operation and Fault Condition description before each brake/stability-traction control system indicator Pinpoint Test (PPT) for the IPC default action for network/missing message conditions.*

Event/Fault Condition	ABS Warning Indicator Status	Brake Warning Indicator Status	Stability-Traction Control Indicator Status	Stability-Traction Control Disabled Indicator Status
Parking brake applied	Off	• Flashing while applying • On when applied	Off	Off
Low brake fluid level or brake fluid level input concern	Off	On	Off	Off
Stability-traction control event	Off	Off	Flashing	Off
Stability-traction control disabled by driver	Off	Off	Off	On
Single wheel speed sensor faults	On	On	On	On
2 wheel speed sensor faults on the same axle or 3 wheel speed sensor faults	On	Flashing or on	On	On
HCU valve fault	On	On	On	On
ABS module fault	On	Flashing or on	On	On
HCU pressure sensor fault (master cylinder pressure input)	Off	On	On	On
ABS battery voltage faults	On	Flashing or on	On	On
ABS pump motor fault	On	On	On	On
ABS low brake booster vacuum or vacuum sensor fault	Off	On	Off	Off
Steering wheel angle sensor center not found fault	Off	On	On	On
ABS to CAN total failure	• Off (4x2) • On (4x4)	Off	On	On
Thermal shutdown to brake over-temperature condition	Off	Off	Off	Off
Parking brake switch fault	Off	Flashing	Off	Off
Configuration mismatch	Off	Off	Off	Off
VIN mismatch	On	On	On	On
ACC and ABS both active	Off	Off	Flashing	Off

Airbag Warning Indicator

The IPC receives the airbag warning indicator request from the GWM over the HS-CAN3. The GWM receives the airbag indicator request from the RCM over the HS-CAN2. If a SRS concern is detected, the RCM sets a DTC and the IPC illuminates the airbag warning indicator.

Auto Stop/Start Indicator

The auto stop/start indicator informs the driver of the following states:

- Solid green - the auto stop/start feature has temporarily turned off the engine.
- Solid amber - a stop/start system concern exists.
- Flash in either green or amber - system state as determined by the PCM.

The IPC receives the stop/start standby request from the GWM over the HS-CAN3. The GWM receives the auto stop/start standby request from the PCM over the HS-CAN1.

Brake Warning Indicator

The brake warning indicator informs the driver the brake fluid level is low, there is a failure in the base brake system or the park brake is applied. The IPC uses 3 messaged inputs to control the brake warning indicator.

- Brake (red) warning indicator request
- Brake fluid level low message request
- Parking brake (red) indicator request

The IPC receives the brake (red) warning indicator request, the brake fluid level low message request and the parking brake (red) indicator request messages from the GWM over the HS-CAN3.

The GWM receives the brake (red) warning indicator request and the parking brake (red) indicator request from the ABS module over the HS-CAN2.

The GWM receives the brake fluid level low message request from the BCM over the HS-CAN2.

Refer to ABS/Brake/Stability-Traction Control System Indication description for information on the conditions when the brake warning indicator is turned on.

High Beam Indicator

The high beam indicator informs the driver that the high beams are on. The IPC receives the high beam status message from the GWM over the HS-CAN3. The GWM receives the high beam status message from the BCM module over the HS-CAN1.

LH/ RH Turn Signal/Hazard Indicator

When the multifunction switch is in the LH or RH turn position or if the hazard switch is on, the BCM sends the turn indication request to the GWM over the HS-CAN1. The GWM sends the turn indication request to the IPC over the HS-CAN3. Upon receipt of the applicable turn signal on/off message, the IPC flashes the turn signal indicator on and off.

Lights On Indicator

When the parking lamps are turned on, the BCM sends the parklamp status message to the GWM over the HS-CAN1. The IPC receives the parklamp status message from the GWM over the HS-CAN3 to illuminate the lights on indicator.

MIL

The IPC receives the MIL request from the GWM over the HS-CAN3. The GWM receives the MIL request from the PCM over the HS-CAN1.

PRNDL Indicator

The IPC uses the following messages to control the PRNDL:

- Battery shed level request
- Ignition status
- Transmission gear display
- Transmission shift mode display
- Transport mode
- Vehicle speed

The IPC receives all messaged inputs from the GWM over the HS-CAN3.

The GWM receives the transmission gear display, transmission shift mode display and vehicle speed messages from the PCM over the HS-CAN1.

The GWM receives the ignition status, transport mode and battery shed level request messages from the BCM over the HS-CAN1.

When the vehicle is in transport mode or during battery load shed operation, the PRNDL is not displayed upon entry or exit from the vehicle to prevent battery drain during longer periods of time when the vehicle is not in use, such as those experienced during vehicle transport.

The IPC also uses a park position detect switch (part of the selector lever) input to signal the IPC the shift lever is fully seated in the PARK (P) position. The IPC compares the park position detect switch input with the transmission gear display message sent from the PCM.

Safety Belt Warning Indicator

The RCM monitors the driver safety belt position through the driver safety belt buckle switch. The RCM provides the driver safety belt buckle status message to the GWM over the HS-CAN2. The GWM provides the driver safety belt status message to the IPC over the HS-CAN3 to either turn on or turn off the safety belt warning indicator.

Stability-Traction Control Indicator (Sliding Car Icon)ESC

The stability-traction control indicator (sliding car icon) informs the driver of the current status of the stability and traction control systems. The stability-traction control indicator illuminates when a fault condition exists or when an active traction control or stability control event is occuring. The IPC receives the stability-traction control indicator request message from the GWM over the HS-CAN3. The GWM receives the stability-traction control indicator request message from the ABS over the HS-CAN2.

Refer to ABS/Brake/Stability-Traction Control System Indication description for information on the conditions when the stability-traction control indicator (sliding car icon) is turned on. Refer to: (206-09 Anti-Lock Brake System (ABS) and Stability Control)

> Anti-Lock Brake System (ABS) and Stability Control - System Operation and Component Description (Description and Operation).

Stability-Traction Control Disabled Indicator (Sliding Car OFF Icon)ESC OFF

The Stability-Traction control (ESP) is configured on/off from the console mounted switch. When the driver enables or disables the stability-traction control system, the ABS module sends the traction control mode message to the GWM over the HS-CAN2. The GWM sends the traction control mode message to the IPC over the HS-CAN3 to illuminate or turn off the stability-traction control disabled indicator (sliding car OFF icon) based upon the system state.

Refer to ABS/Brake/Stability-Traction Control System Indication description for information on the conditions when the stability-traction control disabled indicator (sliding car OFF icon) is turned on.

When a MyKey® administrator has set the AdvanceTrac® feature to always on and a MyKey® programmed key is in use, the stability-traction control system cannot be disabled. The menu selection in the message center used to disable the stability-traction control system does not display when a MyKey® is in use, but remains active for the MyKey® administrator to select the AdvanceTrac® always on feature off. The stability-traction control indicator still functions normally to indicate a stability-traction control system fault and a stability-traction control active event.

TPMS Warning Indicator

The IPC receives the tire pressure warning indicator message from the GWM over the HS-CAN3. The GWM receives the tire pressure warning indicator message from the BCM over the HS-CAN1.

If the BCM determines the tire pressure has exceeded the low tire pressure limits, the tire pressure warning indicator request message is sent to the IPC to illuminate the TPMS warning indicator.

If a TPMS monitor or sensor fault condition exists, the BCM sends the tire pressure warning indicator request message to the IPC to flash the TPMS warning indicator. The IPC flashes the TPMS warning indicator for 75 seconds then turns the indicator on solid.

Component Description

Brake Fluid Level Switch

The brake fluid level switch is mounted in the master cylinder reservoir and is hardwired to the BCM through a signal circuit. The brake fluid level switch is grounded through a separate body ground circuit. The BCM provides a reference voltage to the brake fluid level switch. When the brake fluid level is low the switch closes, pulling the reference voltage low. When the brake fluid level is high, the switch opens, sending the reference voltage high on the signal

circuit to the BCM.

Fuel Level Sender

The fuel level sender is mounted to the fuel pump assembly or the fuel level sensor. The fuel level sender is a dual sweep potentiometer style resistor connected to a float mechanism. The dual sweep design provides a second resistance measurement that reduces the intermittent loss of data due to corrosion between the resistor wires and the sweep arm. As the fuel level changes, the float rises or falls with the fuel level moving the sweep arm across the resistor wires. This movement either increases or decreases the resistance through the unit. The fuel level sensor for Diesel and Petrol fuels resistance ranges from 300 ohms ± 4 ohms at empty (E) to 10 ohms ± 2 ohms at full (F). The fuel level sensor for Flex fuel (E100) resistance ranges from 500 ohms ± 4 ohms at empty (E) to 50 ohms ± 2 ohms at full (F). When the fuel level is low, the fuel level sensor resistance is high. When the fuel level is high, the fuel level sensor resistance is low. The fuel level sensor is hardwired to the IPC through separate signal and return circuits. .

Both the fuel pump assembly and fuel level sensor are hardwired to the IPC through separate signal and return circuits. The fuel level return circuits are grounded internally in the IPC. The IPC provides a reference voltage on the fuel level signal circuit. As the fuel level changes, the change in resistance raises or lowers the fuel level signal voltage depending on the resistance of the fuel level sender.

IPC

The IPC provides the driver with a system status and alerts the driver when certain conditions exist in the vehicle. The IPC receives the ignition status from the BCM through the GWM over the HS-CAN3.

The IPC requires PMI when the IPC is replaced. The IPC lens and mask assembly are replaceable as an assembly.

Oil Pressure Switch

The oil pressure switch is a normally open switch that is hardwired to the PCM through a single signal circuit. The ground is provided by the switch housing when it is mounted on the engine. The PCM provides a reference voltage to the oil pressure switch. When oil pressure is low, the oil pressure switch remains open, sending the reference voltage high. When the oil pressure is sufficient, the oil pressure switch closes, pulling the reference voltage low to the PCM.

Park Position Detect Switch

The park position detect switch is hardwired to the IPC through a single signal circuit and is grounded by a separate circuit through the selector lever. The IPC provides a reference voltage to the park position detect switch. When the selector lever is in PARK (P), the park position detect switch closes to ground, pulling the reference voltage low. When the selector lever is moved out of PARK (P), the park position detect switch opens to ground, sending the reference voltage high to the IPC.

Safety Belt Buckle Sensor

The safety belt buckles contain integrated sensors that are Hall-effect switches. The safety belt buckle sensors are serviced as one component with the safety belt buckle.

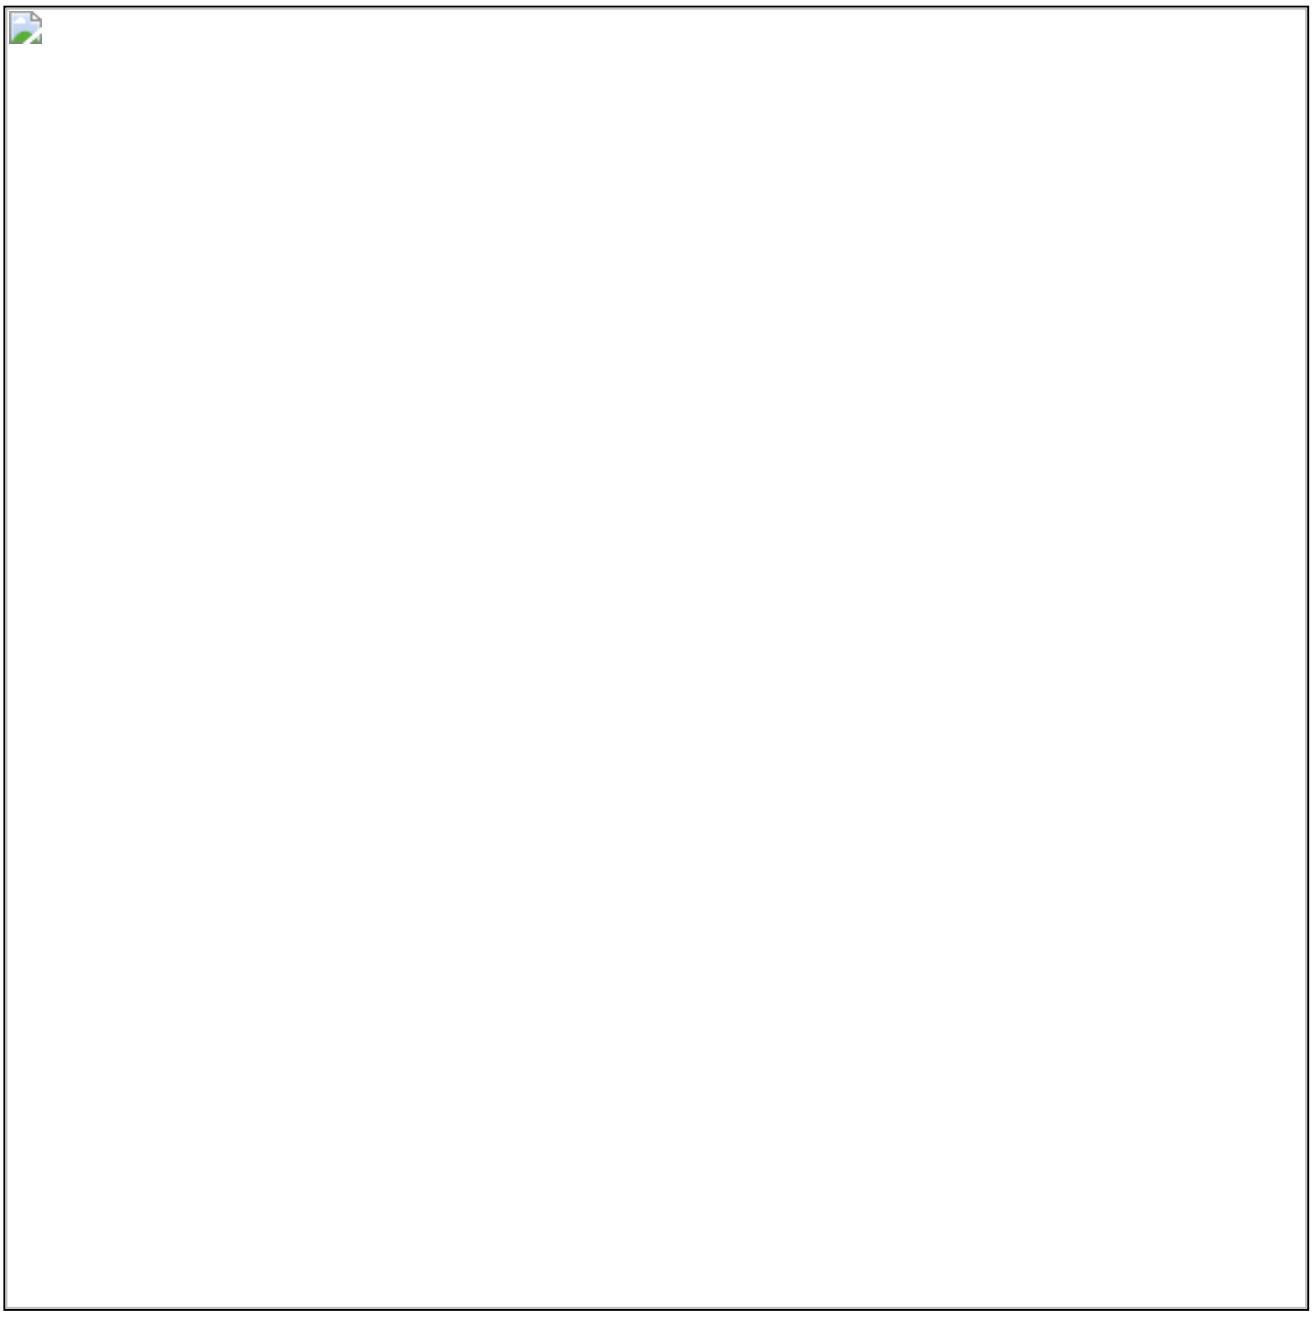
Message Center - Overview

Overview

The message center is an integral part of the IPC that receives and acts upon much of the same information that is input and used to operate the IPC (gauges, informational indicators, and warning indicators). The message center uses both hardwired and network-based inputs to receive information. The message center functionality is controlled through the message center switch (part of the LH steering wheel switch for LHD vehicles, and RH steering wheel switch for RHD vehicles).

Whenever conditions are present that require a warning message, the message center replaces the last selected display with the new warning display. Once the message is reset or cleared, the message center returns to the last selected display. If multiple warnings are present, the message center rotates through the messages, displaying each warning for approximately 4 seconds. Warning messages are also generally associated with other observable outputs of the IPC (gauges, informational indicators and RTT (message center) indicators). For example, when the BCM detects a low brake fluid condition, the BCM sends the IPC a request through the GWM to illuminate the brake warning indicator and a request to display the LOW BRAKE FLUID message in the message center. This allows the message center to be a more informative supplement to the IPC gauges and indicators.



The system warning messages alert the operator to possible concerns or malfunctions in the vehicle operating systems. System warning messages can be stand-alone messages, but are often associated with another form of indication, such as a gauge or an indicator. The message center displays the last selected feature if there are no additional warning messages. Once a warning message has been displayed, the message must be acknowledged to allow full functionality of the message center by pressing the OK button to acknowledge and clear the warning message. For a complete list of warning messages displayed, refer to the message center section of the Owner's Literature.

Message Center - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

Module Network Input Messages - IPC

Broadcast Message	Originating Module	Message Purpose
Adaptive cruise control warning request	CCM	Input used to display the adaptive cruise control warning messages.
Ambient air	FCIM	Filtered input used to display the outside air temperature.

temperature filtered		
Auto high beam indication request	IPMA	Input used to control the auto high beam RTT indicator.
4WD service required	PCM	Input used for the AWD component to control the powertrain malfunction (wrench) RTT indicator.
4WD status display	PCM	Input used to display the AWD messages.
Battery low state of charge	BCM	Input used to control the charging system RTT indicator, check charging system warning message and load shed messages.
Body service required request	BCM	Input used for the BCM controlled system faults input to control the powertrain malfunction (wrench) RTT indicator.
Brake fluid level low message request	BCM	Input used to display the low brake fluid level message center message and the electronic parking brake fault message.
Brake (red) warning indicator request	ABS module	Input used to display the message center brake system messages and to display the electronic parking brake message center warning messages.
Camera status	IPMA	Input used to display the lane keeping system camera malfunction message.
Check fuel fill inlet message request	PCM	Input used to display the check fuel fill inlet message.
Child lock message display request	BCM	Input used to display the child lock system fault message.
Cruise control set speed	PCM	Input used to indicate the cruise control set speed and the digital speedometer displayed in the message center.
Cruise control status	PCM	Input used to control the cruise control RTT indicator and message display based on the system status.
Cruise control override	PCM	Input used to control the adaptive cruise control set speed display when the cruise control is overridden by the driver.
Driver door ajar status	BCM	Input used for the door ajar RTT indicator, driver door ajar warning message, engine on warning message (push button start) and the PRNDL not in park warning message.
EPAS failure	PSCM	Input used to control the service power steering message display.
Engine coolant temperature data	PCM	Input used to control the over-temperature RTT indicator and engine over-temperature warning message.
Diesel Exhaust Fluid Status	PCM	Input used to display diesel exhaust fluid RTT and warnings which indicate low fluid levels or system errors.
Diesel Warnings	PCM	Input used to display diesel specific warnings including low fuel pressure, reduced power, and exhaust over temp.
Dimming Level	BCM	Input used to determine the illumination level that should be displayed.
Front Camera Malfunction	IPMA	Input used to indicate faults with the front camera module
Engine oil life	PCM	Input used for the oil life display.
Engine overheat indication request	PCM	Input used to control the engine over-temperature RTT indicator and engine over-temperature warning message.
Engine rpm data	PCM	Input used to control the low oil pressure RTT indicator and low engine oil pressure warning message. Input is also used to calculate the Average Fuel Economy (AFE)

		and DTE.
Engine service required request	PCM	Input used for the powertrain Electronic Throttle Control (ETC) component to control the powertrain malfunction (wrench) RTT indicator.
Forward collision warning message request	CCM	Input used to display the forward collision malfunction messages.
Fuel flow volume display	PCM	Input used to calculate the Average Fuel Economy (AFE) and DTE.
GPS compass direction	GPSM	Input used to display the current compass heading.
Hill start assist status	ABS module	Input used to display the hill start status messages.
Ignition key type	BCM	Input used to calculate the Average Fuel Economy (AFE) and DTE for MyKey® settings.
Ignition status	BCM	Ignition RUN, START and accessory states required for the IPC operating modes and fault reporting. Also used to display the PRNDL not in park warning message.
Immobilizer message request	BCM	Input used to display the passive entry (no key detected, place key in backup slot, restart now, key programming and accessory power active).
Lane keeping system status display	IPMA	Input used to control the lane keeping system off RTT indicator and the lane keeping system fault messages.
Hill Descent Control	ABS	Input used to display hill descent control warnings.
Lane keeping system hands off display	IPMA	Input used to display the lane keeping system keep hands off the steering wheel warning message.
Left rear door ajar status	BCM	Input used for the door ajar RTT indicator and the left rear door ajar warning message.
Odometer count	PCM	Input used to display the odometer and to calculate the Average Fuel Economy (AFE) and DTE.
Oil pressure warning indicator status	PCM	Input used to control the oil pressure RTT indicator and the low oil pressure message center warning.
Parking aid rear status	PAM	Input used to display the parking aid malfunction message.
Parking brake chime request	BCM	Input used to display the message center brake system messages.
Parking brake message request	ABS module	Input used to display the electronic parking brake status messages.
Parking brake (red) indicator request	ABS module	Input used to display the electronic parking brake status messages.
Passenger door ajar status	BCM	Input used for the door ajar RTT indicator and the passenger door ajar warning message.
Perimeter alarm chime request	BCM	Input used to display the perimeter alarm message when the vehicle is entered before deactivating the perimeter alarm.
Powertrain cooling message request	PCM	Input used to display the reduced power to cool the engine on the Gasoline Turbo Direct Injection (GTDI) engines.

Rear belt monitor	RCM	Input used to display rear belt monitor status.
Remote start status	BCM	Input used to control the remote start informational message display.
Right rear door ajar status	BCM	Input used for the door ajar RTT indicator and the right rear door ajar warning message.
Starting system fault message request	PCM	Input used to display starting system messages.
Stability-traction control chime request	ABS module	Input used to control the service AdvanceTrac® and traction control off warning displays. Also used to control the traction control on/off status messages.
Steering wheel lock message request	BCM	Input used to control the steering wheel lock system messages.
Steering wheel message center switch data	SCCM	Input used to control the message center navigation and functions.
Stop/start message request	PCM	Input used to control the auto stop/start RTT and message displays.
Tire pressure system status	BCM	Input used to display specific tire training instructional messages and TPMS fault messages.
Trailer sway status	ABS module	Input used to display the trailer sway event in progress message.
Transmission shift mode actual	PCM	Input used to display the PRNDL not in park warning message and the engine on message (push button start).
Transmission service required	PCM	Input used for the transmission component to control the powertrain malfunction (wrench) RTT indicator.
Transport mode	BCM	Input used to indicate whether the vehicle is set in factory mode or transport mode, display the PRNDL not in park warning message and to display the appropriate message and power down items such as the PRNDL at key off to conserve the battery.
Vehicle dynamics SOS	ABS module	Input used to control the spin-out detected message.
Vehicle speed	PCM	Input used to display the PRNDL not in park warning message and the engine on warning message (push button start). Input is also used to calculate the Average Fuel Economy (AFE) and DTE.
Transmission gear display	TCM	Transmission gear selection input used for the PRNDL display.
Transmission gear lever position	TCM	Input used to display the manual (M) in the PRNDL.
Transmission message request	TCM	Input used to display transmission related messages.
Transmission malfunction	PCM/ TCM	Input used to illuminate check engine lamp or wrench.
Transmission Overheating	PCM/ TCM	Transmission is overheating and needs to cool.
Transmission too hot	PCM/ TCM	Transmission is getting hot. Stop to let cool.
Transmission	PCM/ TCM	Transmission is overheated and has limited functions.

Limited Function		
Transmission Warming Up Please Wait	PCM/ TCM	Transmission too cold. Wait for it to warm up.
Transmission Not in Park	PCM/ TCM	Shift to park.
Transmission Adjusted	PCM/ TCM	Transmission has adjusted shift strategy
Transmission Adapt Mode	PCM/ TCM	Transmission has adjusted shift strategy
Transmission Indicate Mode Lockup On	PCM/ TCM	Transmission shift lever is locked and unable to select gear
Transmission Indicate Mode Lockup On	PCM/ TCM	Transmission shift lever is unlocked and free to select gear

Module Network Input Messages - PCM

Broadcast Message	Originating Module	Message Purpose
Engine oil life data reset	IPC	Input used to reset the oil life.

Message Center Displays

Compass Display

On the IPC, the compass is displayed as a 1 or 2 character display in the message center that indicates the current direction of the vehicle (N, NE, E, SE, S, SW, W, or NW). The IPC receives the GPS compass direction from the GWM over the HS-CAN3. The GWM receives the GPS compass direction from the GPSM over the MS-CAN.

Digital Speedometer

NOTE: *The digital speed displayed can differ slightly from the analog speedometer due to stepper motor-pointer movement, indication tolerances and gauge bias.*

The IPC provides a redundant digital speedometer display in the message center. The digital speedometer display operates using the same vehicle speed inputs used to control the analog speedometer. See Speedometer. The IPC utilizes software that modifies the display to account for differences between the speedometer gauge indication and the digital display resulting from built in biasing of the indication and tolerances in speedometer stepper motor/needle movement.
Refer to: Instrument Panel Cluster (IPC) (413-01 Instrument Panel Cluster (IPC)) .

DTE/Average Fuel Economy (AFE)

The DTE is calculated in the IPC using the Running Average Fuel Economy (RAFE), which is the fuel economy over the last 480 km (300 miles), and the fuel level input from the fuel sender(s) to determine how many miles the vehicle can be driven based on the remaining fuel in the tank. The DTE can vary in the short term by up to 50 miles, but is usually within 10 miles. Even if the fuel economy is relatively constant, the DTE can be off over a 50 mile range by -24% to +38%. The DTE display and the fuel gauge both use the fuel level input from the fuel tank to provide their respective functions. If the fuel gauge doesn't function correctly, both the fuel gauge and the DTE display are affected.

The IPC defaults to a preset baseline mpg when the battery is initially connected and changes based on driving habits and conditions.

NOTE: *The actual DTE can be higher or lower than the DTE displayed in the message center due to changes in driving conditions. It is important to understand how the DTE is calculated and the factors that impact the DTE display when determining how to address any DTE concerns.*

Since the DTE is calculated and averaged over a longer period of time (480 km [300 miles]), varying driving conditions can have a significant impact on the current or short term DTE as opposed to the displayed DTE. This difference often leads to customer complaints of incorrect or invalid DTE. The following list provides some (not all) of the driving conditions that may lead to an incorrect or fluctuating DTE concern:

- Changing between towing/not towing
- Changing driving between city and highway
- Allowing the vehicle to idle for long periods of time
- Using the remote start feature frequently to allow the vehicle to warm up, particularly when parked on a grade
- Parking or driving on grades
- Inconsistent use of gasoline or E85 fuels
- Over-fueling or not filling the tank completely (partial refueling)

To better illustrate the affects of how driving conditions can affect DTE, refer to the following 2 examples. The first example below illustrates how the following observations are normal and expected since the low fuel reminder is triggered from a fuel volume and not from a fixed distance to empty.

- If while driving, the low fuel reminder (low fuel indicator and low fuel warning message) displays when the DTE equals 94.4 km (59 miles) and the driver adds 11.36 L (3 gallons) of fuel, the new DTE may become 124.8 km (78 miles). After continued driving, the low fuel reminder may now display when the DTE equals 83.2 km (52 miles).

The second example (below) illustrates what occurs when idling on an incline. In this example, the customer should be made aware of how the condition will correct after a few minutes of idling on a level surface.

- If the customer stops and parks the vehicle on an incline in a driveway, then in the morning remote starts the vehicle, allowing the engine to idle, the DTE may now equal 184 km (115 miles). As the customer drives, the low fuel reminder displays when the DTE equals 148.8 km (93 miles). Finally, after 5 more minutes of driving, the DTE is back to 80 km (50 miles).

Factory-Transport Mode Display

During vehicle build, some modules, such as the IPC and the BCM, are set in factory mode. While in the factory mode the IPC displays FACTORY MODE CONTACT DEALER in the message center. If the vehicle is set in factory mode, the system does not automatically exit the mode and must be manually set to either the transport or normal operation mode.

When the vehicle build is complete, the vehicle is set to transport mode. While in transport mode, the IPC displays TRANSPORT MODE CONTACT DEALER in the message center. Transport mode is used to reduce the drain on the battery during longer periods where the vehicle is not used. Various systems may be altered or are disabled when in the transport mode. The vehicle automatically reverts to normal operation mode after being driven 80 km (50 mi).

The IPC receives the transport mode message from the GWM over the HS-CAN3. The GWM receives the transport mode message from the BCM over the HS-CAN1.

Lane Keeping System

The lane keeping system combines the lane keeping alert and lane keeping aid systems. The lane keeping alert system alerts the driver of unintentional drifting outside of the lane and the lane keeping aid system corrects the vehicle steering to keep the vehicle in the center of the lane. The IPC provides a lane keeping display as an overhead view of the vehicle in the middle of a lane with right and left lane markers to indicate the vehicle position with relation to the lane markings as well as overlay or popup messages to alert the driver when they are drifting out of their lane. The lane markers change color to indicate the condition associated with a specific condition and action or warning as controlled by the lane keeping system. The IPC also provides a lane keeping system message center off indicator to inform the driver that the lane keeping system is turned off. When the lane keeping system is turned off, the IPC turns on the lane keeping system RTT and turns off the lane keeping system display.

The IPC receives the camera status, lane keeping system status display and the lane keeping system hands off display messages from the GWM over the HS-CAN3.

The GWM receives the lane keeping system status display, the lane keeping system hands off display and camera status messages from the IPMA over the HS-CAN2.

MyKey® Function Displays

The IPC provides message center displays for the MyKey® feature. MyKey® displays are controlled through the IPC software based on the MyKey® settings configured through the message center and the type of key in use (MyKey® or administrator key). The MyKey® function also uses other messages received by the IPC for other indications such as vehicle speed for speed limiter displays.

Odometer

The IPC receives the odometer count message from the GWM over the HS-CAN3. The GWM receives the odometer count from the PCM over the HS-CAN1. The IPC monitors the odometer count input from the GWM and commands the odometer with a digital display in the message center.

Oil Life Message Center Display

The IPC provides message center messages to inform the driver about the oil life status and when an oil change is required. The duration of the interval between oil changes is calculated in the PCM and varies due to driving conditions. The PCM assumes a base mileage of 16,090 km (10,000 mi) or 1 year for normal driving. However, this number is adjusted down for conditions such as high engine temperature, high engine rpm, use of flex fuel and possibly low oil level. The PCM calculates and provides the engine oil life percent message to the IPC. The oil change minder can be reset at any time by the driver.

The PCM receives the engine oil life data reset request from the GWM over the HS-CAN1. The GWM receives the engine oil life data reset request from the IPC over the HS-CAN3.

The IPC receives the engine oil life message from the GWM over the HS-CAN3.

The GWM receives the engine oil life message from the PCM over the HS-CAN1.

Outside Air Temperature

The Ambient Air Temperature (AAT) sensor is hardwired to the PCM through separate input and return circuits. The PCM provides a reference voltage to the Ambient Air Temperature (AAT) sensor and monitors the change in voltage resulting from changes in resistance as determined by outside air temperature.

The PCM sends the ambient air temperature data to the GWM through the HS-CAN1. The GWM sends the ambient air temperature message to the HVAC (part of the FCIM) over the MS-CAN. The FCIM filters the data and sends the ambient air temperature filtered data back to the GWM over the MS-CAN. The GWM sends the ambient air temperature filtered message to the IPC over the HS-CAN3.

The FCIM is programmed to update the messaged outside temperature data at different rates depending on several criteria to prevent false temperature displays due to a condition known as heat soaking. Heat soaking is where the outside air temperature is hotter in the location of the Ambient Air Temperature (AAT) sensor than the actual outside air temperature.

The outside air temperature display update strategy requires a starting temperature to update from. This starting temperature is controlled based on the length of time the engine is off and the engine temperature. When the engine has been off for longer than 6 hours, the update strategy begins with the unfiltered ambient air temperature input to the PCM. If the engine has been off for less than 6 hours, and the engine coolant temperature is less than 49° C (120° F), the update strategy begins with the filtered ambient air temperature equal to the unfiltered ambient air temperature. If the engine has been off for less than 6 hours, and the engine coolant temperature is greater than 49° C (120° F), the update strategy begins at the stored previous outside air temperature value.

When the sensed outside temperature rises and the vehicle speed is above 33 km/h (21 mph), the outside air temperature display updates after approximately 90 seconds. As the vehicle speed increases, the outside air temperature display updates at a faster rate that is proportional to the increase in vehicle speed. Once the vehicle speeds exceeds 81 km/h (50 mph), the display updates without any delay. If the vehicle speed drops below 33 km/h (21 mph), the update delays reset. When the sensed outside temperature drops, the display updates more quickly following the drop experienced by the Ambient Air Temperature (AAT) sensor.

TPMS

The IPC receives the tire pressure system status message from the GWM over the HS-CAN3. The GWM receives the tire pressure system status message from the BCMB over the HS-CAN1.

RTT Indicators

Auto High Beam

The IPC provides the auto high beam RTT to inform the driver the auto high beam function is turned on and the high beam status may automatically change. The IPC receives the auto high beam indication request from the GWM over the HS-CAN3. The GWM receives the high beam indication request from the IPMA over the HS-CAN2.

Auto Stop-Start

The IPC provides the auto stop-start RTT along with multiple messages displayed at various times throughout the auto stop-start system operation to inform the driver of the system status and to provide direction for the driver intervention required. The IPC receives the stop-start standby indicator message from the GWM over the HS-CAN1. The GWM receives the stop-start standby indicator message from the PCM over the HS-CAN3.

The auto stop-start indicator informs the driver of the following states:

Indicator Status	System Status
Solid green	The auto stop-start feature has temporarily turned off the engine.
Solid amber	A stop-start system concern exists.
Flash in either green or amber	A system state as determined by the PCM.
Grayed out	Indicates the auto stop-start feature is not available.

The IPC receives the stop/start indicator request from the GWM over the HS-CAN3. The GWM receives the auto stop/start indicator request from the PCM over the HS-CAN1.

Charging System

The IPC provides a charging system RTT indicator along with message displays indicating the status of the charging system. When a fault is present in the charging system, the BCM sends the battery low state of charge message to display message center warning messages and the charging system RTT indicator.

The IPC receives the battery low state of charge message from the GWM over the HS-CAN3. The GWM receives the battery low state of charge message from the BCM over the HS-CAN1.

Cruise Control

The IPC uses the following messaged inputs to control the cruise control RTT indicator:

- cruise control status
- cruise control set speed
- cruise control override

The IPC receives the cruise control messages from the GWM over the HS-CAN3. The GWM receives the cruise control messages from the PCM over the HS-CAN1.

Door Ajar

The IPC provides a door ajar RTT along with message displays to indicate the status of the doors. The BCM monitors each of the ajar inputs (driver, passenger, left rear, right rear and liftgate) and sends a door ajar status (driver door ajar status, passenger door ajar status, left rear door ajar status, right rear door ajar status or liftgate ajar status) message to the GWM over the HS-CAN1. The IPC receives the driver door ajar status, passenger door ajar status, left rear door ajar status, right rear door ajar status or liftgate ajar status messages from the GWM over the HS-CAN3 to display the specific ajar RTT and corresponding warning message.

Engine Over-Temperature

The IPC provides a message center warning indicator to alert the driver the engine is over temperature. The IPC receives the engine overheat indication request and the engine coolant temperature data from the GWM over the HS-CAN3. The GWM receives the engine overheat indication request and the engine over-temperature message from the PCM over the HS-CAN1.

Lane Keeping System Off

The IPC provides the lane keeping system off RTT to indicate the lane keeping system has been turned off or is disabled due to a fault condition. The IPC receives the lane keeping system status display message from the GWM over the HS-CAN3. The GWM receives the lane keeping system status display message from the IPMA over the HS-CAN2.

Elocker

The IPC provides a RTT to indicate current elocker status. It uses 4WD status display message to set RTT. The IPC receives all the required messages from the GWM over the HS-CAN3. The GWM receives the transmission messages from PCM over HS-CAN1.

Frost Indication

The IPC provides a RTT to indicate when the roads may be slippery due to frost induced by very low ambient

temperatures. It uses the outside air temperature message to determine ambient temperature and thus whether to set RTT. The IPC receives all the required messages from the GWM over the HS-CAN3. The GWM receives the outside air temperature messages from FCIM over HS-CAN1.

Low Fuel

To supplement the fuel gauge indication, the IPC provides the low fuel message center warning indicator. When the fuel level reaches approximately 1/16 tank or 1/8 tank for MyKey® users, the IPC turns on the low fuel message center warning indicator.

Low Oil Pressure

The IPC uses the oil pressure warning indicator request and engine rpm data to control the low oil pressure indicator. The engine oil pressure switch is hardwired to the PCM. The PCM provides the oil pressure warning indicator status request and the engine rpm data to the GWM over the HS-CAN1. The GWM provides the oil pressure warning indicator status request and engine rpm data to the IPC over the HS-CAN3. The IPC requires engine rpm above 400 rpm before the message center displays the low oil pressure RTT.

Low Washer Fluid Level

The low washer fluid level switch is hardwired to the IPC through a single signal circuit and is grounded through a separate ground circuit. The IPC provides a reference voltage to the washer fluid level switch. When the washer fluid is low, the washer fluid level switch opens, pulling the reference voltage high. When the IPC detects the washer fluid input is an open circuit, it illuminates the low washer fluid level RTT indicator.

Powertrain Malfunction (Wrench)

The IPC provides a powertrain malfunction (wrench) RTT indicator to indicate transmission, Electronic Throttle Control (ETC), AWD and BCM concerns.

The IPC receives all the required messages from the GWM over the HS-CAN3.

The GWM receives the body service required message from the BCM over the HS-CAN1.

The GWM receives the AWD service required, engine service required and transmission service required messages from the PCM over the HS-CAN1.

4WD Transmission

The IPC provides a 4WD Low and High RTT to indicate transmission status. It uses 4WD status display message to set RTT. The IPC receives 4WD status display message from the GWM over the HS-CAN3. The GWM receives the transmission messages from PCM over HS-CAN1.

Warning Messages

Adaptive Cruise Control

The message center provides messages explaining the need for driver intervention and system status. The adaptive cruise control messages are supplemental to the cruise control RTT and the adaptive cruise control warning chime. The IPC receives the adaptive cruise control message display from the GWM over the HS-CAN3. The GWM receives the adaptive cruise control message display from the CCM over the HS-CAN2.

4WD

The IPC provides message center messages to inform the driver of the status of the 4WD. The IPC receives the 4WD status display message from the GWM over the HS-CAN3. The GWM receives the 4WD status display message from the PCM over the HS-CAN1.

Auto Stop-Start

The message center provides messages explaining the need for driver intervention and system status. The IPC receives the stop/start message request from the GWM over the HS-CAN3. The GWM receives the stop/start message request from the PCM over the HS-CAN1.

Brake System

The IPC provides brake system messages for the following concerns and status:

- Low brake fluid level
- Parking brake status and faults
- ABS concerns that display along with the brake warning indicator operation

When the parking brake is applied, the BCM sends the parking brake chime request to the GWM over the HS-CAN1. The GWM gateways the message to the IPC over the HS-CAN3 to illuminate the brake warning indicator and turn on the parking brake applied message in the message center.

When a low brake fluid level condition exists, the BCM sends the brake fluid level low message request to the GWM over the HS-CAN1. The GWM gateways the message to the IPC over the HS-CAN3 to illuminate the brake warning indicator and turn on the brake fluid level low message in the message center.

When an ABS or parking brake system concern exists, the ABS module sends the brake (red) warning indicator request message to the GWM over the HS-CAN2. The GWM sends the brake (red) warning indicator request message to the IPC over the HS-CAN3 to illuminate the ABS warning indictor and to turn on the check brake system message center warning display.

Charging System

The message center provides a warning message indicating the status of the charging system. When a fault is present in the charging system, the BCM sends the battery low state of charge message to the GWM over the HS-CAN1. The IPC receives the battery low state of charge message from the GWM over the HS-CAN3.

Check Fuel Fill Inlet

The message center provides a check fuel fill inlet message to warn the driver there is a problem with the fuel fill inlet pipe resulting in a significant evaporative emission leak following vehicle refueling. The IPC receives the check fuel fill inlet message request from the GWM over the HS-CAN3. The GWM receives the check fuel fill inlet message request from the PCM over the HS-CAN1.

Check Locking Differential (Elocker)

The IPC provides elocker warnings to indicate an issue with the electronic locking differential. When a fault is present with the elocker the PCM sends the 4WD status message to the GWM over HS-CAN1. The IPC receives the required message from the GWM over the HS-CAN3.

Diesel Low Fuel Pressure

IPC provides diesel fuel pressure warnings to indicate an issue with the diesel fuel system. When a fault is present with the fuel system the PCM sends the Diesel Warnings message to the GWM over HS-CAN1. The IPC receives the required message from the GWM over the HS-CAN3.

Dimming Scroll Bar

IPC displays a dimming scroll bar warning to provide customers feedback on the current dimming status. This warning will be displayed for every dimming button press regardless of a dimming level change. When there is a dimming button press the BCM sends an updated dimming level message to the GWM over HS-CAN1. The IPC receives the required message from the GWM over the HS-CAN3.

EPAS

The IPC provides a message center message to indicate there is an EPAS system concern. When a fault exists in the EPAS, the PSCM sends a request to the IPC through the GWM.

The IPC receives the EPAS failure message from the GWM over the HS-CAN3.

The GWM receives the EPAS failure message from the PSCM over the HS-CAN2.

Engine On

The message center provides the engine on warning message to inform the driver they are exiting the vehicle when the engine is running. The IPC uses multiple inputs to determine the vehicle is stopped and the driver is preparing to exit the vehicle. The messages required to control the engine on warning message are as follows:

- Driver door ajar status
- Power pack status
- Transmission shift mode display
- Vehicle speed

The IPC receives all required messages from the GWM over the HS-CAN3.

The GWM receives the driver door ajar status from the BCM over the HS-CAN1.

The GWM receives the power pack status, transmission shift mode display and the vehicle speed messages from the PCM over the HS-CAN1.

Engine Over-Temperature

The message center provides the engine coolant over-temperature warning message to supplement the engine over-temperature RTT and alert the driver the engine is over temperature. The IPC receives the engine overheat indication request and the engine coolant temperature data from the GWM over the HS-CAN3. The GWM receives the engine overheat indication request and the engine over-temperature message from the PCM over the HS-CAN1.

Forward Collision

The message center provides the forward collision warning messages to inform the driver of the forward collision status. The IPC receives the forward collision warning message request from the GWM over the HS-CAN3. The GWM receives the forward collision warning message request from the CCM over the HS-CAN2.

Front Camera Malfunction

When a fault is present with the front camera the IPMA sends the front camera malfunction message to the GWM over HS-CAN2. The IPC receives the required message from the GWM over the HS-CAN3.

Hill Descent Control

The IPC provides hill descent control warnings to inform the operator that they have entered or exited various states or conditions with respect to the HDC. The ABS sends the HDC message to GWM over HS-CAN2. The IPC receives the required message from the GWM over the HS-CAN3.

Hill Start Assist

The message center provides a message indicating the hill start assist feature is not available due to a fault in the ABS. When a fault is detected and the hill start assist is disabled, the ABS module sends the hill start assist status message to the GWM over the HS-CAN2. The GWM sends the hill start assist status message to the IPC over the HS-CAN3.

Lane Keeping System

The message center provides a warning message for the lane keeping alert and system fault messages for the over all lane keeping system. The IPC receives all required messages from the GWM over the HS-CAN3. The GWM receives the lane keeping system hands off display message, the lane keeping system status display and the camera status message from the IPMA over the HS-CAN2.

Load Shed

The message center provides load shed messages to inform the driver to use less options to conserve battery voltage. The IPC receives the battery low state of charge message from the GWM over the HS-CAN3. The GWM receives the battery low state of charge message from the BCM over the HS-CAN1.

Oil Life

The instrument cluster provides messages to inform the driver about the oil life status, oil life reset status and when an oil change is required. The duration of the interval between oil changes is calculated in the PCM and varies due to driving conditions. The PCM assumes a base mileage of 16,090 km (10,000 mi) or 1 year for normal driving. However, this number is adjusted down for conditions such as high engine temperature, high engine rpm, use of flex fuel and possibly low oil level. The PCM calculates and provides the engine oil life percent message to the IPC. The oil change minder can be reset at any time by the driver.

The IPC receives the engine oil life message from the GWM over the HS-CAN3. The GWM receives the engine oil life message from the PCM over the HS-CAN1.

The PCM receives the engine oil life data reset message from the GWM over the HS-CAN1. The GWM receives the engine oil life data reset message from the IPC over the HS-CAN3.

Parking Aid System

The IPC provides messages to indicate the status of the parking aid system. The IPC receives the parking aid rear status message from the GWM over the HS-CAN3. The GWM receives the parking aid rear status message from the PAM over the HS-CAN1.

PATS And Passive Key And Immobilizer System

The message center provides the starting system fault message to indicate there is a concern with the PATS. The message center provides passive key and immobilizer system messages to indicate the key is in the luggage compartment, the key is left in the vehicle, no key is detected, accessory power is active, to press the brake to start the vehicle or to place the key in the backup slot. The IPC uses the immobilizer message display messaged input from the BCM to display the applicable message center message.

The IPC receives the immobilizer message request from the GWM over the HS-CAN3.

The GWM receives the immobilizer message request from the BCM over the HS-CAN1.

MyKey®

The IPC provides a number of MyKey® related warnings and status messages to indicate restrictions imposed on the MyKey® user. These include MyKey® active, park aid, speed limits, and buckle up warnings among others. MyKey® displays are controlled through the IPC software based on the MyKey® settings configured through the message center and the type of key in use (MyKey® or administrator key). The MyKey® function also uses other messages received by the IPC for other indications such as vehicle speed for speed limiter displays.

Perimeter Alarm Message Display

The IPC provides a display to indicate the perimeter alarm has been activated and to start the vehicle to stop the alarm. The IPC receives the perimeter alarm chime request message from the GWM over the HS-CAN3. The GWM receives the perimeter alarm chime request from the BCM over the HS-CAN1.

Power Child Lock-Switch Inhibit And Low Key Fob

The IPC provides a power child lock warning to inform the driver the child lock feature did not function properly. The power child lock feature is activated through the rear window lockout switch on the driver side master window control switch.

The IPC provides a switch inhibit warning to notify the driver that some switches have been purposely inhibited and are inoperative. For security purposes, interior switches are inhibited by the BCM 20 seconds after the vehicle is electronically locked and prevents someone from using a stick (or other object) through an open window and activating the switch.

The IPC provides a low key fob battery warning to alert the driver the key fob battery needs to be replaced. The low key fob battery warning is not displayed in RUN or START modes if the power child lock warning is active to prevent the BCM from cycling between the two warnings, causing the chime associated with the power child lock warning to repeatedly sound every 4 seconds.

The IPC receives the child lock message request from the GWM over the HS-CAN3. The GWM receives the child lock message request from the BCM over the HS-CAN1.

Powertrain Cooling

On vehicles equipped with a Gasoline Turbo Direct Injection (GTDI) engine, the IPC provides a message to inform the driver that vehicle performance is reduced to allow the engine to cool. This feature is part of the smart cooling function in the PCM and provides powertrain cooling protection under high ambient temperature conditions.

The IPC receives the powertrain cooling message request from the GWM over the HS-CAN3. The GWM receives the powertrain cooling message request from the PCM over the HS-CAN1.

PRNDL Not In Park (Shift To Park)

The message center provides a shift to park message to inform the driver the vehicle is not in PARK (P) under 2 sets of conditions. First, the IPC displays the shift to park message if the selector lever is not in PARK (P), the ignition is OFF and the driver door is open or ajar. Second, the message center displays the shift to park message if the selector lever is not in PARK (P), the ignition is ON or in ACC, the driver door is open or ajar and the brake pedal is not applied with vehicle speed less than 5 km/h (3 mph). The IPC uses multiple messages to control the shift to park message.

The IPC receives all required messages from the GWM over the HS-CAN3.

The GWM receives the transmission shift mode display and vehicle speed messages from the PCM over the HS-CAN1.

The GWM receives the driver door ajar status, transport mode and ignition status message from the BCM over the HS-CAN1.

The IPC also uses the park position detect input to determine whether the vehicle is in PARK (P) along with the transmission gear display mode message.

See Park Position Detect Switch component description.
Refer to: Instrument Panel Cluster (IPC) (413-01 Instrument Panel Cluster (IPC)) .

Remote Start

The IPC provides remote start messages to inform the driver the vehicle is in the remote start active state and how to change the state to a drivable state. The remote start message display is active as soon as the vehicle is remote

started (that is, the engine is running, but the ignition status is off).

The IPC receives the remote start status message from the GWM over the HS-CAN3. The GWM receives the remote start status message from the BCM over the HS-CAN1.

Rear Belt Monitor

The IPC provides a popup warning to alert the customer of a change in status of the rear belt buckles, or a fault with the rear belt monitor system. The RCM will send the rear belt monitor message to the GWM over HS-CAN2. The IPC receives the required message from the GWM over the HS-CAN3.

Stability - Traction Control

The message center provides stability-traction control system messages to indicate the stability-traction control system status or if the stability-traction control system has a fault and requires service.

When the stability-traction control system has been selected off or on, the ABS module sends the stability-traction control on/off message request to the GWM over the HS-CAN2. The GWM sends the stability-traction control on/off message request to the IPC over the HS-CAN3.

When a fault condition exists in the stability-traction control system, the ABS module sets a DTC and sends the stability-traction control chime request to the GWM over the HS-CAN2. The GWM sends the stability-traction control chime request to the IPC over the HS-CAN3.

Starting System

The message center provides a starting system message to inform the driver of further actions required to start the engine or to explain the reason for the inability to start the engine. The IPC receives the starting system fault message request and stop/start message request from the GWM over the HS-CAN3. The GWM receives the starting system fault message request and stop/start message request from the PCM over the HS-CAN1.

Steering Wheel Lock

The message center provides informational and fault messages to inform the driver of steering wheel lock conditions and to indicate a fault in the system. The IPC receives the steering wheel lock message request from the GWM over the HS-CAN3. The GWM receives the steering wheel lock message request from the BCM over the HS-CAN1.

TPMS

The IPC provides message center displays to indicate the TPMS sensor training status or a malfunction in the TPMS. The IPC receives the tire pressure system status message from the GWM over the HS-CAN3. The GWM receives the tire pressure system status message from the BCM over the HS-CAN1.

Trailer Sway

The message center provides a message to inform the driver to slow the vehicle to reduce trailer sway and bring the trailer under control. The IPC receives the trailer sway status message from the GWM over the HS-CAN3. The GWM receives the trailer sway status message from the ABS module over the HS-CAN2.

Component Description

Low Washer Fluid Level Switch

The low washer fluid switch is hardwired to the IPC through a single signal wire and is grounded to a body ground through a separate circuit. The IPC provides a reference voltage to the low washer fluid level switch. When the washer fluid level is low, the float drops closing the switch and pulling the reference voltage low. When the washer fluid level is high, the float lifts opening the circuit to the IPC and sending the reference voltage high.

Oil Pressure Switch

The oil pressure switch is a normally open switch that is hardwired to the PCM through a single signal circuit. The ground is provided by the switch housing when it is mounted on the engine. The PCM provides a reference voltage to the oil pressure switch. When oil pressure is low, the oil pressure switch remains open, sending the reference voltage high. When the oil pressure is sufficient, the oil pressure switch closes, pulling the reference voltage low to the PCM.

Steering Wheel Switch - Message Center

The message center switch is the 5-way portion of the LH steering wheel switch. The message center switch uses different resistance values associated with each specific button (up, down, left, right and OK). The SCCM sends out a reference voltage to the upper LH steering wheel switch on the input circuit and monitors the voltage drops. The voltage drop varies depending upon the resistance of the specific button pressed, providing indication to the SCCM

which button is pressed.

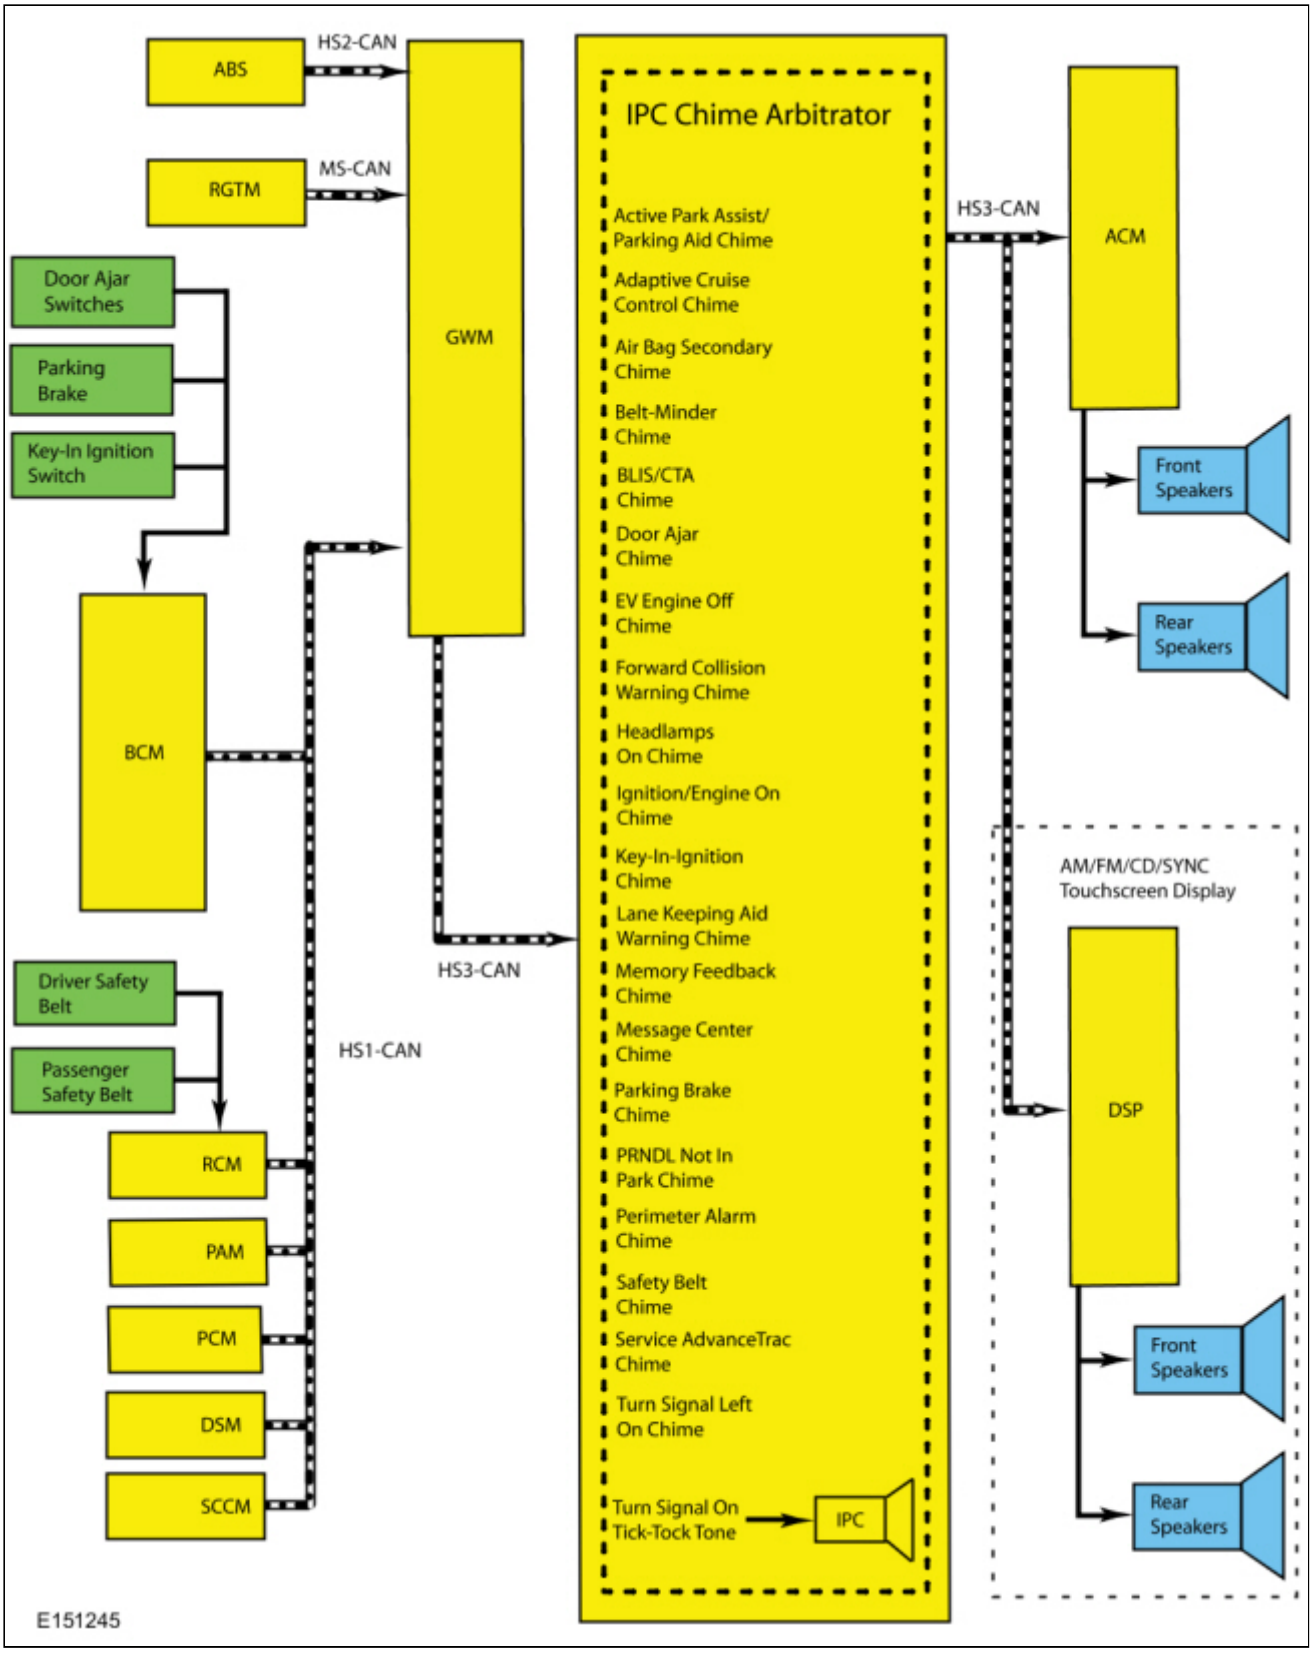
Warning Chimes - Overview



Overview

The warning chimes provide the driver with audible warnings that act as reminders and supplemental alerts to visual IPC indications such as gauges, indicators and message center warnings. The IPC controls all warning chimes based on messages received from external modules. The IPC prioritizes the chimes according to a preset hierarchy programmed into the IPC software. When more than one chime request is received by the IPC, the most important chime sounds. If a lower priority chime is currently sounding, the higher priority request takes over and replaces or delays the lower priority chime.

The warning chimes are sounded through the audio system speakers and the IPC. The turn signal/hazard on (tick-tock) is the only individual chime that sounds through the IPC, not the audio system. The parking aid, lift gate warning, and Blind Spot Information System (BLIS®®)/Cross Traffic Alert (CTA) warning chimes are sounded through the rear speakers. All other warning chimes are sounded through the front audio system speakers.

The IPC also acts as a backup. In the event of an audio system chime failure, the IPC sounds all chimes that are required.

NOTE: *There are instances where some chimes may sound through the IPC and should not be interpreted as a fault in the audio system. An example might be when the ignition is off, with the key in the igntion and the driver door ajar. In this instance, the audio system is offline and the key-in-igntion chime defaults to the IPC.*

Network Message Chart

Module Network Input Messages - IPC

Broadcast Message	Originating Module	Message Purpose

ACC warning request	CCM	Input used to control the ACC warning chime.
Cruise control status	PCM	Input used to control the ACC warning chime.
Driver door ajar status	BCM	Input used for the ignition-engine on warning chime and the PRNDL not in park warning chime.
Driver safety belt buckle status	RCM	Input used to control the Belt-Minder® and safety belt warning chime.
Forward collision chime request	CCM	Input used for the forward collision warning chime.
Forward collision warning message request	CCM	Input used for the forward collision warning chime.
Front passenger detect status	RCM	Input used to control the Belt-Minder® chime.
Gear lever position	PCM	Input used to control the Belt-Minder® chime.
Headlamp on warning chime	BCM	Input used to control the headlamps on warning chime
Ignition status	BCM	Ignition RUN, START and accessory states required for the IPC operating modes and fault reporting. Also used to control the PRNDL not in park warning chime.
Key-in-ignition status	BCM	Input used to control the key-in-ignition chime status.
Lane keeping system hands off display	IPMA	Input used to control the lane keeping system hands off the steering wheel warning chime.
Parking aid rear status	PAM	Input used to control the parking aid chime status.
Parking brake chime request	ABS module	Input used to control the electric parking brake chime status.
Passenger safety belt buckle status	RCM	Input used to control the Belt-Minder® chime.
Perimeter alarm chime request	BCM	Input used to control the perimeter alarm chime status.
Diesel Warnings	PCM	Input used to display diesel specific warnings including low fuel pressure, reduced power, and exhaust over temp.
Transmission shift mode display	PCM	Input used for the ignition-engine on warning chime and the PRNDL not in park warning chime.
Transport mode	BCM	Input used to control the PRNDL not in park warning chime.
Turn indication request	BCM	Input used for the turn signal-hazard (tick-tock) chime.
Turn signal switch status	SCCM	Input used for the turn signal left on chime.
Vehicle speed	PCM	Input used to control the Belt-Minder® chime, ignition-engine on warning chime, and the PRNDL not in park warning chime.

Module Network Input Messages - ACM and DSP

Broadcast Message	Originating Module	Message Purpose
Belt-Minder® audio mute	IPC	Input from the IPC used to control the Belt-Minder® audio chime output.
Chime source	IPC	Input used to configure the chime source (IPC or the audio system).
IPC chime request	IPC	Input from the IPC used to control the audio chime output.

Power up chime modules	IPC	Input used to initiate the audio system as the chime source, control the chime characteristics and chime location.

Warning Chime Characteristics

The warning chimes use volume, chime frequency, length of time the chime sounds, decay of the chime tone and the number of chime tones to identify which chime is sounding. Most warning chimes have unique characteristics, however, there are chimes that do sound the same. The chime characteristics are defined by the different chime types:

- Information
- Soft-warning
- Hard-warning
- Tick-tock (on-off)

Active Park Assist Chime

The active park assist system uses informational and instructional messages displayed in the centerstack infotainment display to direct the driver's interaction with the system. The active park assist system chimes alert or draw the driver's attention to the requested actions as displayed in the centerstack infotainment display messages. The active park assist chime sounds through the front speakers.

The IPC receives the active park assist chime request from the GWM over the HS-CAN3.

The GWM receives the active park assist chime request from the PAM over the HS-CAN1.

The IPC then sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

ACC Warning Chime

The ACC warning chime supplements the message center displays to draw the driver's attention to the need to intervene and take control of the vehicle. There are 2 levels of chime output (high priority and low priority) based upon the nature and urgency of the warning. The ACC warning chime sounds through the front speakers. The audio system sounds the appropriate warning chime when it receives the adaptive cruise control warning request (high priority chime) or cruise control status (low priority chime) message from the CCM.

The low priority ACC warning chime is a single-tone, 1-second chime that sounds to alert the driver the ACC system has shut itself off due to low vehicle speed (approximately 32 km/h [20 mph]) and the driver needs to intervene if further braking is required or to resume the ACC operation.

The high priority ACC warning chime is a 0.25-second chime that sounds 12 times. The chime alerts the driver the vehicle is approaching the vehicle ahead at a faster rate than the ACC system can brake the vehicle and the driver needs to apply the brakes to slow the vehicle down.

The IPC receives the cruise control status and the adaptive cruise control warning request messages from the GWM over the HS-CAN3.

The GWM receives the cruise control status message from the PCM over the HS-CAN1.

The GWM receives the adaptive cruise control warning request message from the CCM over the HS-CAN2.

When a chime request is received, the IPC sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

Airbag Secondary Warning Chime

The airbag secondary warning chime warns the airbag warning indicator LED is inoperative. The airbag secondary warning chime sounds through the front speakers. If the IPC detects a fault with the airbag warning indicator LED during the bulb prove out, the airbag secondary warning chime sounds. If the IPC detects a fault in the airbag warning indicator when a SRS fault condition exists and the RCM has sent the IPC the airbag indicator request, the airbag secondary warning chime sounds. The airbag chime is a 0.5-second chime that sounds 5 times.

When a fault condition is detected, the IPC sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

Belt-Minder® Feature

NOTE: *Whenever the vehicle is operated using MyKey®, the IPC enables the Belt-Minder®.*

The Belt-Minder® is configurable on or off.
Refer to: Seatbelt Minder Deactivating/Activating (413-01 Instrumentation, Message Center and Warning Chimes, General Procedures).

The Belt-Minder® feature supplements the current safety belt warning function and is enabled after the current safety belt warning is complete. The Belt-Minder® reminds the driver that the driver or front passenger safety belt is unbuckled by intermittently sounding a chime and simultaneously illuminating the safety belt warning indicator through the front speakers. The Belt-Minder® begins once the current safety belt warning has ended and the vehicle speed has exceeded 10 km/h (6 mph) with the driver or front passenger safety belt unbuckled. While activated, the Belt-Minder® chime provides a series of chimes/safety belt warning indicator flash sequences.

If the vehicle speed drops below 5 km/h (3 mph) once the Belt-Minder® chime has activated, the chime turns off and the safety belt warning indicator remains on. When the vehicle speed exceeds 10 km/h (6 mph) again, the Belt-Minder® chime resumes.

When MyKey® is in use, the driver cannot configure the Belt-Minder® off. Once the Belt-Minder® is activated, the Belt-Minder® continues to chime periodically (does not time out after 5 minutes) and the audio system is muted until the driver and passenger safety belts are fastened.

To control the Belt-Minder®, the IPC receives the vehicle speed, gear lever position, driver and passenger safety belt buckle status and front passenger detect status messages from the GWM over the HS-CAN3.

The GWM receives the vehicle speed and gear lever position messages from the PCM over the HS-CAN1.

The IPC receives the driver and passenger safety belt status messages from the RCM over the HS-CAN2.

When the conditions require the Belt-Minder® chime, the IPC sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

Door Ajar Warning Chime

The door ajar warning chime warns that a door is ajar and sounds the chime through the front speakers. When a door becomes ajar while the ignition is in RUN with vehicle speed greater than 5 km/h (3 mph), the IPC displays the appropriate door ajar warning message and sounds a single chime tone for each door opened. The door ajar chime only sounds once for each time the door is opened, and only repeats the chime if the door is closed then reopened.

The IPC receives the driver door ajar status, passenger door ajar status, left rear door ajar status, right rear door ajar status or liftgate ajar status message from the GWM over the HS-CAN3. The GWM receives the driver door ajar status, passenger door ajar status, left rear door ajar status, right rear door ajar status or liftgate ajar status messages from the BCM over the HS-CAN1.

When a chime request is received, the IPC sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

Forward Collision Warning Chime

The forward collision warning chime warns that a forward collision potential has been detected or the CCM detects a forward collision warning system concern. Once the forward collision system detects a possible forward collision, the CCM sends the HUD module the heads up flash rate message to flash the forward collision warning, and the forward collision warning message request to the IPC through the GWM to sound a 0.25-second chime tone 12 times.

The forward collision warning system and chime can be disabled or turned off using the message center. When MyKey® is in use, the driver cannot configure the forward collision warning system or chime off. When the driver disables the forward collision warning chime, the CCM sends the IPC the forward collision chime request through the GWM to sound a 0.25-second chime tone 12 times at 50% volume. The forward collision warning chime and confirmation chime are both sounded through the front speakers.

The IPC receives the forward collision warning message request and the forward collision chime request from the GWM over the HS-CAN3.

The GWM receives the forward collision warning message request and the forward collision chime request from the CCM over the HS-CAN2.

When a chime request is received, the IPC sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

Headlamps On Warning Chime

The headlamps on warning chime warns the headlamps are on when exiting the vehicle. When the driver exits the vehicle with the driver door ajar, the headlamp switch is in the PARK or HEADLAMP position and the ignition is OFF, the BCM sends the headlamp switch status message to the IPC through the GWM to sound the headlamps on

chime. The headlamps on chime sounds a 1-second chime tone continuously.

The IPC receives the headlamp on warning chime request from the GWM over the HS-CAN3.

The GWM receives the headlamp on warning chime request from the BCM over the HS-CAN1.

When a chime request is received, the IPC sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

Ignition-Engine On Warning Chime

The ignition-engine on chime informs the driver they are exiting the vehicle when the ignition has been left on (engine off) or the engine is running. When the driver exits the vehicle with the ignition on or with the engine running, the ignition-engine on warning chime sounds five 1-second chime tones. The ignition-engine on warning chime sounds through the front speakers. The IPC uses driver door ajar status, transmission shift mode display and vehicle speed messaged inputs to control the ignition-engine on warning chime.

The IPC receives all required messages from the GWM over the HS-CAN3.

The GWM receives the driver door ajar status message from the BCM over the HS-CAN1.

The GWM receives the transmission shift mode display and vehicle speed messages from the PCM over the HS-CAN1.

When a chime request is received, the IPC sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

Key-In-Ignition Warning Chime

The key-in-ignition warning chime warns the key is still in the ignition lock cylinder or the ignition is in ACC when the driver door is ajar. The key-in-ignition warning chime sounds repetitive 0.5-second chime tones from the front speakers until either the key is removed from the lock cylinder, the ignition is in RUN or the driver door is closed.

The IPC receives the key-in-ignition status from the GWM over the HS-CAN3.

The GWM receives the key-in-ignition status from the BCM over the HS-CAN1.

When a chime request is received, the IPC sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

Lane Keeping Alert Warning System Chime

The lane keeping alert warning chime alerts the driver they have removed their hands from the steering wheel. The lane keeping alert warning chime sounds three 0.25-second chime tones through the front speakers.

The IPC receives the lane keeping system hands off display request from the GWM over the HS-CAN3.

The GWM receives the lane keeping system hands off display request from the IPMA over the HS-CAN2.

When a chime request is received, the IPC sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

Message Center Warning Chime

The message center warning chime feature draws the driver's attention to the message center display to view new warning messages. There are 3 different message center warning chime types that are defined by the length of the chime tone, which are designed to create a greater sense of urgency based on the nature of the condition and message displayed in the message center.

- Informational (1-second chime)
- Soft warning (0.5-second chime)
- Hard warning (0.25-second chime)

When a new message request is received, the IPC sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

Parking Aid Chime

The parking aid system uses a visual display in the centerstack infotainment display and a chime to alert the driver objects are close to the vehicle. The parking aid chime sounds a repetitive chime tone that decreases the time off between chime tones as objects get closer to the sensor until a continuous tone is heard through the rear speakers.

The IPC receives the parking aid rear status request from the GWM over the HS-CAN3.

The GWM receives the parking aid rear status request from the PAM over the HS-CAN1.

When a chime request is received, the IPC sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

Parking Brake Warning Chime

The parking brake warning chime warns the parking brake is engaged when the vehicle is in motion. The parking brake warning chime sounds if the ignition is in RUN, the parking brake is engaged, and the vehicle speed is greater than 5 km/h (3 mph). The parking brake warning chime stops sounding and resets if the parking brake is released, the ignition is not in RUN, the vehicle speed is less than 5 km/h (3 mph), or after 90 seconds from the time the chime is activated. The parking brake warning chime sounds a repetitive 0.5 second chime tone through the front speakers.

The IPC receives the parking brake chime request from the GWM over the HS-CAN3.

The GWM receives the parking brake chime request from the ABS module over the HS-CAN1.

When a chime request is received, the IPC sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

Perimeter Alarm Warning Chime

The perimeter alarm warning chime alerts the driver the perimeter alarm is armed when the driver door is unlocked before disarming the alarm. The IPC displays a perimeter alarm message in the message center and the perimeter alarm warning chime sounds for 12 1-second chime tones when the driver door is opened. The perimeter alarm warning chime turns off when the perimeter alarm is disarmed (either by using the key fob or turning the key to the ON position). After the twelve second warning chime duration, the warning chime stops sounding and the perimeter alarm activates, sounding the horn and flashing the turn signal lamps.

The IPC receives the perimeter alarm warning chime request from the GWM over the HS-CAN3.

The GWM receives the perimeter alarm warning chime request from the BCM over the HS-CAN1.

When a chime request is received, the IPC sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

PRNDL Not In Park Warning Chime

The IPC provides a PRNDL not in park warning chime that sounds along with the transmission not in park message center warning message to inform the driver the vehicle is not in PARK (P). The IPC displays the shift to park message and the PRNDL not in park warning chime sounds three 0.5-second chime tones if the selector lever is not in PARK (P), the ignition is OFF and the driver door is open or ajar. The IPC requires the transmission shift mode display, transport mode vehicle speed, driver door ajar and ignition status to control the PRNDL not in park warning chime.

Refer to Shift To Park Message Display for message details.
Refer to: Message Center - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

When a chime request is received, the IPC sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

Safety Belt Warning Chime

The safety belt warning chime warns the safety belt is not fastened. The safety belt warning chime sounds a repetitive 1-second chime tone for 6 seconds through the front speakers when the driver safety belt is not fastened and the ignition is transitioned from OFF or ACC to ON or START. The safety belt warning chime stops sounding when the safety belt is fastened, when the ignition is transitioned from ON or START to OFF or ACC, or when the chime has sounded for 6 seconds.

The IPC receives the driver safety belt buckle status message from the GWM over the HS-CAN3.

The GWM receives the driver safety belt buckle status from the RCM over the HS-CAN2.

When the conditions require the safety belt warning chime, the IPC sends the IPC chime request message to the ACM and DSP to sound the chime.

Turn Signal On Chime Tone

The IPC provides a repetitive 1-second on/off tick-tock chime tone along with visual RH or LH turn indicators to

inform the driver the turn signal or hazard lamp function is on.

The IPC receives the turn indication status from the GWM over the HS-CAN3.

The GWM receives the turn indication status from the BCM over the HS-CAN1.

Turn Signal Left On Chime

The turn signal left on or turn signal minder chime uses both odometer and turn signal status messages. The turn signal left on chime sounds a repetitive 1-second chime through the front speakers when the vehicle is driven with the turn signal on for more than 3.2 km (2.0 miles).

The IPC receives the turn signal switch status and odometer count from the GWM over the HS-CAN3.

The GWM receives the turn signal switch status from the BCM over the HS-CAN1.

The GWM receives the odometer count from the PCM over the HS-CAN1.

When a chime request is received, the IPC sends the IPC chime request message to the ACM and the audio DSP to sound the chime.

U0184:00	Lost Communication With Radio	GO to Pinpoint Test BK
U0199:00	Lost Communication With "Door Control Module A"	GO to Pinpoint Test BL
U0212:00	Lost Communication With Steering Column Control Module	GO to Pinpoint Test BM
U023A:00	Lost Communication With Image Processing Module A	GO to Pinpoint Test BN
U0241:00	Lost Communication With Headlamp Control Module "A"	GO to Pinpoint Test BN
U0401:00	Invalid Data Received from ECM/PCM A: No Sub Type Information	This DTC sets when the IPC receives invalid network data for the speedometer, temperature or odometer data from the PCM. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the PCM and other modules on the network. Refer to the appropriate section in Group 303 for the procedure. If no Diagnostic Trouble Codes (DTCs) are present in the PCM, DIAGNOSE the observable symptom.
U0401:81	Invalid Data Received from	This DTC sets when the IPC receives invalid network data for the speedometer or temperature gauge from the PCM.

	ECM/PCM A: Invalid Serial Data Received	RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the PCM and other modules on the network. Refer to the appropriate section in Group 303 for the procedure. If no Diagnostic Trouble Codes (DTCs) are present in the PCM, DIAGNOSE the observable symptom.
U0401:82	Invalid Data Received from ECM/PCM A: Alive/Sequence Counter Incorrect/Not Updated	This DTC sets when the IPC fails to receive updated data for the cruise control or adaptive cruise control from the PCM. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the PCM and other modules on the network. Refer to the appropriate section in Group 303 for the procedure. If no Diagnostic Trouble Codes (DTCs) are present in the PCM, DIAGNOSE the observable symptom.
U0405:56	Invalid Data Received From Cruise Control Module: Invalid/Incompatible Configuration	This DTC sets when the IPC receives invalid network data for adaptive cruise control and forward collision warning from the CCM. CHECK the vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT the PMI procedure as directed by the scan tool. If there have been no recent service actions, INSTALL a new module to correct the failure to retain configuration data.
U0415:82	Invalid Data Received From Anti-Lock Brake System (ABS) Control Module: Alive/Sequence Counter Incorrect/Not Updated	This DTC sets when the IPC fails to receive updated ABS data from the ABS module. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the ABS module and other modules on the network. REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing). If no Diagnostic Trouble Codes (DTCs) are present in the ABS module, DIAGNOSE the observable symptom.
U0420:82	Invalid Data Received From Power Steering Control Module: Alive/Sequence Counter Incorrect/Not Updated	This DTC sets when the IPC fails to receive power steering data from the PSCM. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the PSCM and other modules on the network. REFER to: Power Steering (211-02 Power Steering - Vehicles With: Hydraulic Power Assist Steering (HPAS)) . If no Diagnostic Trouble Codes (DTCs) are present in the PSCM, DIAGNOSE the observable symptom.
U0422:00	Invalid Data Received From Body Control Module	This DTC sets when the IPC receives invalid network TPMS data from the BCM. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the BCM and other modules on the network. REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) . If no Diagnostic Trouble Codes (DTCs) are present in the BCM, DIAGNOSE the observable symptom.
U0422:82	Invalid Data Received From Body Control Module	This DTC sets when the IPC receives invalid network Battery Charge data from the BCM. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the BCM and other modules on the network. REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing). If no Diagnostic Trouble Codes (DTCs) are present in the BCM, DIAGNOSE the observable symptom.
U0424:00	Invalid Data Received From HVAC Control Module	This DTC sets when the IPC receives invalid outside air temperature data from the HVAC control module. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the HVAC control module and other modules on the network. REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). or REFER to: Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) (412-00 Climate Control System - General Information, Diagnosis and Testing). If no Diagnostic Trouble Codes (DTCs) are present in the HVAC control module, DIAGNOSE the observable symptom.
U0424:81	Invalid Data Received From HVAC Control Module	This DTC sets when the IPC receives invalid outside air temperature data from the HVAC control module. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the HVAC control module and other modules on the network. REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). or REFER to: Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) (412-00 Climate Control System - General Information, Diagnosis and Testing). If no Diagnostic Trouble Codes (DTCs) are present in the HVAC control module, DIAGNOSE the observable symptom.
U0424:82	Invalid Data Received From HVAC Control Module	This DTC sets when the IPC receives invalid outside air temperature data from the HVAC control module. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the HVAC control module and other modules on the network. REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). or REFER to: Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) (412-00 Climate Control System - General Information, Diagnosis and Testing). If no Diagnostic Trouble Codes (DTCs) are present in the HVAC control module, DIAGNOSE the observable symptom.
U0452:81	Invalid Data Received From Restraints Control Module: Invalid Serial Data Received	This DTC sets when the IPC receives invalid network data from the RCM due to incorrect Belt-Minder® configuration in the IPC. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the RCM and other modules on the network. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing). If no Diagnostic Trouble Codes (DTCs) are present in the RCM , DIAGNOSE the observable symptom.
U046B:86	Invalid Data Received From Global Positioning System Module: Signal Invalid	This DTC sets when the IPC receives invalid compass data from the GPSM. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the GPSM and other modules on the network. Refer to the appropriate section in Group 415 for the procedure. If no Diagnostic Trouble Codes (DTCs) are present in the GPSM, DIAGNOSE the observable symptom.
U0557:00	Invalid Data Received From Front Controls Interface Module "A": No Sub Type Information	This DTC sets when the IPC fails to receive invalid outside air temperature data from the FCIM. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the FCIM and other modules on the network. Refer to the appropriate section in Group 415 for the procedure. If no Diagnostic Trouble Codes (DTCs) are present in the FCIM, DIAGNOSE the observable symptom.
U0557:80	Invalid Data Received From Front Controls Interface Module "A": ISO/SAE Reserved	This DTC sets when the IPC fails to receive invalid outside air temperature data from the FCIM. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the FCIM and other modules on the network. Refer to the appropriate section in Group 415 for the procedure. If no Diagnostic Trouble Codes (DTCs) are present in the FCIM, DIAGNOSE the observable symptom.
U0557:81	Invalid Data Received From Front Controls Interface Module "A": Invalid Serial Data Received	This DTC sets when the IPC fails to receive unknown outside air temperature data from the FCIM. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the FCIM and other modules on the network. Refer to the appropriate section in Group 415 for the procedure. If no Diagnostic Trouble Codes (DTCs) are present in the FCIM, DIAGNOSE the observable symptom.
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK the vehicle service history for recent service actions related to this module. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT the PMI procedure as directed by the scan tool. REFER to: Programmable Module Installation (PMI) (418-01 Module Configuration) .

		If there have been no recent service actions, INSTALL a new module to correct the failure to retain configuration data.
U3000:41	Control Module: General Checksum Failure	CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. If DTC U3000:41 is retrieved again, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
U3000:42	Control Module: General Memory Failure	CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. If DTC U3000:42 is retrieved again, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
U3000:43	Control Module: Special Memory Failure	CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. If DTC U3000:43 is retrieved again, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
U3000:44	Control Module: Data Memory Failure	CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. If DTC U3000:44 is retrieved again, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
U3000:46	Control Module: Calibration/Parameter Memory Failure	CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. If DTC U3000:46 is retrieved again, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
U3000:54	Control Module: Missing Calibration	CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the self-test. If DTC U3000:54 is retrieved again, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test BO
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test BP
U300A:64	Ignition Switch: Signal Plausibility Failure	DTC U300A:64 sets in continuous memory when the IPC detects a messaged START input for 15 seconds or longer. Once the fault condition is detected, the IPC operates with limited functionality for 15 seconds then returns to full functionality. DIAGNOSE any ignition or starting system concerns. REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches) .

DTC Chart: Body Control Module (BCM)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

DTC Chart - BCM

DTC	Description	Action
B1048:01	Brake Fluid Level Switch: General Electrical Failure	GO to Pinpoint Test O
B1048:7B	Brake Fluid Level Switch: Low Fluid Level	GO to Pinpoint Test O
B10F1:14	Key In Switch: Circuit Short To Ground or Open	• If the key in ignition warning chime is inoperative, GO to Pinpoint Test AV • If the key in ignition warning chime always sounds, GO to Pinpoint Test AR
All other DTCs	-	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .

DTC Chart: Steering Column Control Module (SCCM)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

DTC Chart - SCCM

DTC	Description	Action
B137F:09	Steering Wheel Left Switch Pack: Component Failure	GO to Pinpoint Test X
B137F:11	Steering Wheel Left Switch Pack: Circuit Short To Ground	GO to Pinpoint Test X
B137F:17	Steering Wheel Left Switch Pack: Circuit Voltage Above Threshold	GO to Pinpoint Test X

All other DTCs	-	REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches) .

Symptom Chart(s)

Symptom Chart: Instrument Panel Cluster (IPC)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
A module does not respond to the scan tool	• Fuse • Wiring, terminals or connectors • Communication concern • Module	REFER to: Communications Network (418-00 Module Communications Network) .
The IPC is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test A
Multiple gauges, indicators, RTT indicators, warnings and chimes are inoperative or always on	Refer to the Pinpoint Test	GO to Pinpoint Test A
The 4WD High/Low indicator is inoperative or always on	Refer to the Pinpoint Test	GO to Pinpoint Test A
The PCM (wrench) indicator is inoperative or always on	Refer to the Pinpoint Test	GO to Pinpoint Test A
The load shed indicator is inoperative or always on	Refer to the Pinpoint Test	GO to Pinpoint Test A
The electronic locking differential indicator is inoperative or always on	Refer to the Pinpoint Test	GO to Pinpoint Test A
The hill descent control indicator is inoperative or always on	Refer to the Pinpoint Test	GO to Pinpoint Test A
The wait to start indicator is inoperative or always on	Refer to the Pinpoint Test	GO to Pinpoint Test A
The frost warning indicator is inoperative or always on	Refer to the Pinpoint Test	GO to Pinpoint Test A
The water in fuel indicator is inoperative or always on	Refer to the Pinpoint Test	GO to Pinpoint Test A
A virtual gauge (4WD, tachometer or temperature), is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test B
Incorrect fuel gauge indication	Refer to the Pinpoint Test	GO to Pinpoint Test C
The speedometer is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test D
Incorrect speedometer indication	Refer to the Pinpoint Test	GO to Pinpoint Test E
The odometer is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test F
The analog tachometer is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test G
Incorrect analog tachometer indication	Refer to the Pinpoint Test	GO to Pinpoint Test H
The analog temperature gauge is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test I
Incorrect analog temperature gauge indication	Refer to the Pinpoint Test	GO to Pinpoint Test J
The ABS warning indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test K
The airbag warning indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test L
The auto stop-start indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test M
The brake warning indicator is never on	Refer to the Pinpoint Test	GO to Pinpoint Test N
The brake warning indicator is always on	Refer to the Pinpoint Test	GO to Pinpoint Test O
The LH- RH turn signal or high beam indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test P
The lights on indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test Q
The MIL is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test R
The PRNDL indicator is never on or never displays P	Refer to the Pinpoint Test	GO to Pinpoint Test S
The safety belt warning indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test T
The stability-traction control indicator (sliding car icon) is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test U
The stability-traction control disabled indicator (sliding car OFF icon) is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test V
The TPMS warning indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test W

Symptom Chart: Information And Message Center

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
The message center is not operating correctly	Refer to the Pinpoint Test	GO to Pinpoint Test X
The LH or RH message center display is blank	Refer to the Pinpoint Test	GO to Pinpoint Test A
A virtual display is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test B
The compass is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test Y
The child lock malfunction warning message is inoperative or always displayed	Child lock system concern	REFER to: Locks, Latches and Entry Systems (501-14 Handles, Locks, Latches and Entry Systems, Diagnosis and Testing).
The diesel system malfunction warning message is inopertive or always on	Diesel system concern	Refer to the appropriate section in Group 303 for the procedure.
The DTE-Average Fuel Economy (AFE) display is inoperative	IPC	• CHECK the operation of the fuel gauge, the speedometer and the odometer. – If the fuel gauge does not operate correctly, GO to Pinpoint Test C – If the speedometer does not operate correctly, GO to Pinpoint Test DGO to Pinpoint Test E – If the odometer does not operate correctly, GO to Pinpoint Test F – If the speedometer, the fuel gauge and the odometer operate correctly, INSTALL a new IPC.
The DTE display is incorrect or fluctuates	Refer to the Pinpoint Test	GO to Pinpoint Test Z
The digital speedometer displays the incorrect speed	Refer to the Pinpoint Test	DIAGNOSE the speedometer. GO to Pinpoint Test E
The outside air temperature display is inoperative or incorrect	Refer to the Pinpoint Test	GO to Pinpoint Test AA
The auto high beam RTT is never or always displayed	Refer to the Pinpoint Test	GO to Pinpoint Test AB
The auto stop-start RTT indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test AC
The charging system RTT warning indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test AD
The cruise control RTT indicator is never on	Refer to the Pinpoint Test	GO to Pinpoint Test AE
The door ajar RTT warning indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test AF
The engine over-temperature RTT warning indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test AG
The lane keeping system off RTT indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test AH
The low fuel RTT warning indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test AI
The low oil pressure RTT warning indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test AJ
The low washer fluid level RTT warning indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test AK
The powertrain malfunction (wrench) RTT indicator is never or always on	Refer to the Pinpoint Test	GO to Pinpoint Test AN
The 4WD message is always displayed	4WD concern	DIAGNOSE the 4WD system. REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
The auto high beam malfunction message is always displayed	Auto high beam concern	DIAGNOSE the auto high beams. REFER to: Headlamps (417-01 Exterior Lighting, Diagnosis and Testing).
The auto stop-start malfunction message is always displayed	Stop-start system concern	DIAGNOSE the auto stop-start system. Refer to the appropriate section in Group 303 for the procedure.
A brake warning (brake fluid level low, parking brake applied or brake system malfunction) message is never or always displayed	• Message center concern • Brake warning indication concern	• OPEN then CLOSE the driver door and VERIFY the driver door ajar message displays correctly with the door open and closed. • If the driver door ajar message does not function correctly, GO to Pinpoint Test AF • If the driver door ajar message functions correctly and the brake warning indicator is never on, GO to Pinpoint Test N • If the driver door ajar message functions correctly and the brake warning indicator is always on, GO to Pinpoint Test O
The charging system warning message is always displayed	Charging system concern	DIAGNOSE the charging system. Refer to the appropriate section in Group 414 for the procedure.
The check fuel fill inlet message is always displayed	Refer to the Pinpoint Test	GO to Pinpoint Test AO
A door or hood ajar warning message is never or always displayed	• Message center concern • Door ajar RTT indication concern	DIAGNOSE the door ajar RTT. GO to Pinpoint Test AF
The EPAS (steering system) malfunction message is always on	• Message center concern • EPAS system concern	• OPEN then CLOSE the driver door and VERIFY the driver door ajar message displays correctly with the door open and closed. • If the driver door ajar message does not function correctly, GO

		to Pinpoint Test AF • If the driver door ajar message functions correctly, DIAGNOSE the EPAS. REFER to: Power Steering (211-02 Power Steering - Vehicles With: Hydraulic Power Assist Steering (HPAS)) .
The engine oil change message is never displayed	• Message center concern • The PCM has not reached the programmed mileage/time based on the criteria required to display the message.	**NOTE:** *Using the system check in the message center, verify the oil life is between 1 and 5% for the CHANGE ENGINE OIL SOON message or at 0% for the OIL CHANGE REQUIRED message.* • OPEN then CLOSE the driver door and VERIFY the driver door ajar message functions correctly. • If the driver door ajar message does not function correctly, GO to Pinpoint Test AF • If the driver door ajar message functions correctly with the oil life between 0-5%, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). • If the driver door ajar message functions correctly with the oil life **not** at the specified value, INFORM the customer how the message center functions and how the oil life messages are set.
The engine oil change message is always displayed	The oil life needs reset	RESET the oil life. REFER to the Owner's Literature.
The engine on warning message is always displayed	Refer to the Pinpoint Test	DIAGNOSE the igntion-engine on warning chime. GO to Pinpoint Test AU
The engine over-temperature warning message is never or always displayed	• Message center concern • Engine over-temperature indication concern	• OPEN then CLOSE the driver door and VERIFY the driver door ajar message displays correctly with the door open and closed. • If the driver door ajar message does not function correctly, GO to Pinpoint Test AF • If the driver door ajar message functions correctly, DIAGNOSE the engine over-temperature warning indicator. GO to Pinpoint Test AG
The factory or transport mode message is always displayed	Vehicle is in factory or transport mode	PLACE the vehicle in normal operation mode. REFER to: Transport and Factory Mode Deactivation (419-10 Multifunction Electronic Modules, General Procedures).
A forward collision warning message is always displayed	Forward collision concern	DIAGNOSE the forward collision warning system. REFER to: Collision Warning and Collision Avoidance System (419-03C Collision Warning and Collision Avoidance System, Diagnosis and Testing).
The hill start assist not available message is always displayed	Hill start assist feature concern	DIAGNOSE the hill start assist feature. REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
The hill descent RTT is never or always on	Refer to the Pinpoint Test	• OPEN then CLOSE the driver door and VERIFY the driver door ajar message displays correctly with the door open and closed. • If the driver door ajar message does not function correctly, GO to Pinpoint Test AF • If the driver door ajar message functions correctly, DIAGNOSE the hill descent switch. GO to Pinpoint Test AL
The ESC RTT is never or always on	Refer to the Pinpoint Test	• OPEN then CLOSE the driver door and VERIFY the driver door ajar message displays correctly with the door open and closed. • If the driver door ajar message does not function correctly, GO to Pinpoint Test AF • If the driver door ajar message functions correctly, DIAGNOSE the ESC switch. GO to Pinpoint Test AM
The lane keeping alert system warning message (keep hands on wheel) is never or always displayed	• Message center concern • Lane keeping alert warning chime concern	• OPEN then CLOSE the driver door and VERIFY the driver door ajar message displays correctly with the door open and closed. • If the driver door ajar message does not function correctly, GO to Pinpoint Test AF • If the driver door ajar message functions correctly, DIAGNOSE the lane keeping alert warning chime. GO to Pinpoint Test AW
A lane keeping system fault message is always displayed	Lane departure warning system concern	DIAGNOSE the lane keeping system. REFER to: Lane Keeping System (419-07 Lane Keeping System) .
A load shed warning message is always displayed	• Message center concern • Charging system indication concern	• OPEN then CLOSE the driver door and VERIFY the driver door ajar message displays correctly with the door open and closed. • If the driver door ajar message does not function correctly, GO to Pinpoint Test AF • If the driver door ajar message functions correctly, DIAGNOSE the charging system warning indicator or charging system RTT. GO to Pinpoint Test AD
A MyKey® menu is not available or incorrect	• MyKey® programmed key in use • Number of keys set to unlimited	**NOTE:** *MyKey® may not be compatible with non-Ford approved remote start systems*

	mode • Non-Ford approved remote start system installed	• REFER to the Owner's Literature.
The check parking aid message is always displayed	Parking aid system concern	DIAGNOSE the parking aid system. REFER to: Parking Aid (413-13 Parking Aid - Vehicles With: Rear Parking Aid) .
The perimeter alarm message is always displayed	• Message center concern • Perimeter alarm concern	• OPEN then CLOSE the driver door and VERIFY the driver door ajar message displays correctly with the door open and closed. • If the driver door ajar message does not function correctly, GO to Pinpoint Test AF • If the driver door ajar message functions correctly, REFER to: Perimeter Anti-Theft Alarm (419-01 Perimeter Anti-Theft Alarm) .
The powertrain cooling warning message is always displayed	Engine over heating concern	DIAGNOSE the engine cooling system. Refer to the appropriate section in Group 303 for the procedure.
The PRNDL not in park (shift to park) message is always displayed	• Message center concern • PRNDL not in park warning chime concern	• OPEN then CLOSE the driver door and VERIFY the driver door ajar message displays correctly with the door open and closed. • If the driver door ajar message does not function correctly, GO to Pinpoint Test AF • If the driver door ajar message functions correctly, DIAGNOSE the PRNDL. GO to Pinpoint Test S
A starting/ignition status (press brake to start or switch ignition off press power) message is always on	• Message center concern • Push button start concern	• OPEN then CLOSE the driver door and VERIFY the driver door ajar message displays correctly with the door open and closed. • If the driver door ajar message does not function correctly, GO to Pinpoint Test AF • If the driver door ajar message functions correctly, DIAGNOSE the ignition/starting system concern. REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches) .
A TPMS malfunction message is never or always on	• Message center concern • TPMS warning indication concern	• OPEN then CLOSE the driver door and VERIFY the driver door ajar message displays correctly with the door open and closed. • If the driver door ajar message does not function correctly, GO to Pinpoint Test AF • If the driver door ajar message functions correctly, DIAGNOSE the TPMS warning indicator. GO to Pinpoint Test W
The tire training complete message is never on	TPMS sensor training incomplete	**NOTE:** *This message only appears during the TPMS sensor training procedure.* • CARRY OUT the TPMS sensor training. REFER to: Tire Pressure Monitoring System (TPMS) Sensor Location Calibration (204-04B Tire Pressure Monitoring System (TPMS), General Procedures).
A tire training message (train left front, right front, left rear or right rear tire) message is never on	• TPMS warning indicator concern • TPMS sensor training concern	**NOTE:** *These messages only appear during the TPMS sensor training procedure.* • VERIFY the TPMS warning indicator functions. • If the TPMS warning indicator does not operate, GO to Pinpoint Test W • If the TPMS warning indicator operates, CARRY OUT the TPMS sensor training. REFER to: Tire Pressure Monitoring System (TPMS) Sensor Location Calibration (204-04B Tire Pressure Monitoring System (TPMS), General Procedures).
The tires not trained message is always on	TPMS sensor training concern	• This message only appears during the TPMS sensor training procedure. • CARRY OUT the TPMS sensor training. REFER to: Tire Pressure Monitoring System (TPMS) Sensor Location Calibration (204-04B Tire Pressure Monitoring System (TPMS), General Procedures).
The water in fuel message is always displayed	• Message center concern • Water in fuel concern	• OPEN then CLOSE the driver door and VERIFY the driver door ajar message displays correctly with the door open and closed. • If the driver door ajar message does not function correctly, GO to Pinpoint Test A • If the driver door ajar message functions correctly, DIAGNOSE all PCM water in fuel Diagnostic Trouble Codes (DTCs). Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Symptom Chart: Warning Chimes

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
All the chimes are inoperative	IPC	GO to Pinpoint Test A
The active park assist chime is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test AP
The adaptive cruise control warning chime is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test AQ
The airbag secondary warning chime is inoperative	• Normal condition • IPC	• Using a diagnostic scan tool, PERFORM the IPC self-test. • If DTC P1534:01 is present, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). • If DTC P1534:01 is **not** present, the system is operating correctly. The airbag secondary warning chime sounds only when a fault in the airbag warning indicator is present and DTC P1534:01 is recorded.
The airbag secondary warning chime has activated	IPC	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
The Belt-Minder® feature is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test AZ
The Belt-Minder® cannot be deactivated	MyKey® programmed key in use	The system is operating correctly. Use an administrator key to disable the Belt-Minder®.
The chime always sounds	Refer to the Pinpoint Test	GO to Pinpoint Test AR
The chime only sounds from the IPC	Refer to the Pinpoint Test	• Using a diagnostic scan tool, perform the IPC self-test. • If any Diagnostic Trouble Codes (DTCs) are present, REFER to the IPC DTCDTC Chart. • If no Diagnostic Trouble Codes (DTCs), DIAGNOSE the audio system. If equipped with the touchscreen audio system, REFER to: Information and Entertainment System (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Diagnosis and Testing).
The door ajar warning chime is inoperative	• Door ajar indication concern • IPC	• With the ignition OFF, the headlamps in the PARKING LAMPS position and the doors closed, OPEN the driver door and VERIFY the headlamps on warning chime sounds. • If the headlamps on chime sounds, GO to Pinpoint Test AF • If the headlamps on chime does not sound, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
The forward collision warning chime is inoperative (If Equipped)	Refer to the Pinpoint Test	GO to Pinpoint Test AS
The headlamps on warning chime is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test AT
The ignition-engine on warning chime is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test AU
The key-in-ignition warning chime is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test AV
The lane keeping aid warning chime is inoperative	Refer to the Pinpoint Test	**NOTE:** *The lane keeping aid warning chime only sounds to alert the driver they have their hands off the steering wheel. Normal alerting is done through steering wheel vibrations, which cannot be felt when the driver's hands are not on the steering wheel.* GO to Pinpoint Test AW
The lane keeping aid warning chime sounds with the hands on the steering wheel	Road conditions	Certain road conditions could lead to false activation of the chime. REFER to: Lane Keeping System - System Operation and Component Description (419-07 Lane Keeping System, Description and Operation).
The message center warning chime is inoperative	• No warnings present • IPC	• With all the doors closed and the ignition OFF, PLACE the ignition ON. Once the IPC has completed the prove-out, OPEN the driver door and VERIFY the message center displays the door ajar RTT indicator and the chime sounds once. • If the chime sounds, the system is operating correctly. The message center warning chime only sounds when a new warning is displayed in the message center. • If the door ajar message does not display, GO to Pinpoint Test AF • If the door ajar message displays and the chime does not sound, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
The parking aid chime is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test AP
The parking brake warning chime is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test AX
	• Perimeter	

The perimeter alarm chime is inoperative	• Perimeter alarm concern • IPC	GO to Pinpoint Test AY
The PRNDL not in park warning chime is inoperative	• PRNDL indication concern • IPC	• With the ignition OFF, the headlamps in the PARKING LAMPS position and the doors closed, OPEN the driver door and VERIFY the headlamps on warning chime sounds. • If the headlamps on chime sounds, DIAGNOSE the PRNDL indicator. GO to Pinpoint Test S • If the headlamps on chime does not sound, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
The safety belt warning chime is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test AZ
The turn signal-hazard on warning chime is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test BA
The turn signal left on chime is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test BA

Pinpoint Tests

The IPC Is Inoperative/Multiple Gauges, Indicators, RTT Indicators, Warnings And Chimes Are Inoperative Or Always On

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

The IPC receives hot at all times voltage from the BCM. The IPC receives the ignition status message for the RUN/START or ACC input from the BCM through the GWM over the CAN.

Possible Sources

- Fuse
- Communication concern
- GWM
- IPC

Visual Inspection and Diagnostic Pre-checks

Inspect the BCM fuse.

PINPOINT TEST A : THE IPC (INSTRUMENT PANEL CLUSTER) IS INOPERATIVE/MULTIPLE GAUGES, INDICATORS, RTT (RECONFIGURABLE TELLTALE) INDICATORS, WARNINGS AND CHIMES ARE INOPERATIVE OR ALWAYS ON

A1 PERFORM THE NETWORK TEST FOR ALL MODULES

- Ignition ON.
- Using a diagnostic scan tool, perform a network test.

Do all modules pass the network test?

Yes	GO to A2
No	REFER to: Communications Network (418-00 Module Communications Network) .

A2 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to A3

A3 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs) from the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to A4

A4 CHECK FOR CORRECT GWM (GATEWAY MODULE A) OPERATION

- Ignition OFF.
- Disconnect and inspect the GWM and all related in-line connectors.

- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the GWM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GWM. REFER to: Gateway Module A (GWM) (418-00 Module Communications Network, Removal and Installation). CLEAR the DTC. REPEAT the IPC self-test. If the IPC is still inoperative, GO to A5
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A5 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A Virtual Gauge (4WD, Tachometer Or Temperature) Is Inoperative

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

4WD Gauge

- If the 4WD data or vehicle speed messages are missing for less than 5 seconds or if the IPC receives invalid torque data for less than 5 seconds, the IPC defaults the display fill area in front of the front wheels and behind the rear wheels to the last setting based upon that last message received.
- If the IPC does not receive the 4WD data or vehicle speed messages for 5 seconds or longer, the IPC defaults the display fill area in front of the front wheels and behind the rear wheels off.

Tachometer

- If the engine rpm message is missing for less than 5 seconds, the IPC defaults the tachometer to the last indication state, based upon the last message received.
- If the engine rpm message is missing for 5 seconds or longer, the IPC defaults the tachometer to 0 rpm.

Temperature Gauge

- If the engine coolant temperature data or engine overheat indication request messages are missing for less than 5 seconds, the IPC defaults the temperature gauge to the last indication state, based upon the last message received.
- If the engine coolant temperature data or engine overheat indication request messages are missing for 5 seconds or longer, the IPC defaults the temperature gauge to the full hot position.

Possible Sources

- Communication concern
- GWM
- PCM
- IPC

PINPOINT TEST B : A VIRTUAL GAUGE (4WD (FOUR-WHEEL DRIVE) , TACHOMETER OR TEMPERATURE) IS INOPERATIVE

B1 VERIFY THE IPC (INSTRUMENT PANEL CLUSTER) IS SET TO DISPLAY THE GAUGE

- Ignition ON.
- **NOTE:** *The IPC and message center navigation can be found in the Owner's Literature.*

  Using the message center controls, make sure the IPC is set to display the gauge in question.

Is the IPC set to display the gauge?

Yes	GO to B2
No	The virtual gauge is operating correctly. The IPC was not set to display the gauge in question.

B2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to B3

B3 PERFORM THE PCM (POWERTRAIN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PCM self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to B4

B4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

Incorrect Fuel Gauge Indication

Refer to Wiring Diagrams Cell 60 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P1346:11	Fuel Level Sensor "B" Circuit: Circuit Short To Ground	A continuous and on-demand DTC that sets in the IPC if the fuel level input is pulled low out of range on the fuel level input circuit indicating a short to ground for 33 seconds or longer. The IPC defaults the fuel gauge to empty (E).
P1346:13	Fuel Level Sensor "B" Circuit: Circuit Open	A continuous and on-demand DTC that sets in the IPC if the fuel level input is sent high out of range on the fuel level input circuit indicating an open or short to voltage for 33 seconds or longer. The IPC defaults the fuel gauge to empty (E).

Possible Sources

- Wiring, terminals or connectors
- Fuel pump assembly

- Fuel level sender (float and card)
- Fuel level sensor
- Fuel tank
- IPC

Visual Inspection and Diagnostic Pre-checks

Inspect the fuel tank for signs of damage that can affect the float operation inside the tank. For the analog fuel gauge, inspect the gauge needle for signs of binding or damage.

PINPOINT TEST C : INCORRECT FUEL GAUGE INDICATION

NOTE: *Following any fuel gauge repairs, remove BCM fuse for one minute then reinstall to reset the fuel gauge timers.*

C1 CARRY OUT THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the IPC self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	For DTC P1346:11 GO to C2 For DTC P1346:13, GO to C5
No	If equipped with an analog fuel gauge, GO to C9 If not equipped with an analog fuel gauge, GO to C10

C2 CHECK THE FUEL LEVEL INPUT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect Fuel Pump Assembly C4330.
- Ignition ON.
- Wait one minute.
- **NOTE:** *DTC P1346:11 can be present when carrying out this step and should be disregarded at this time.*

  Using a diagnostic scan tool, repeat the IPC on-demand self-test.

Is DTC P1346:13 present?

Yes	GO to C11
No	GO to C3

C3 CHECK THE FUEL PUMP ASSEMBLY SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect IPC C220.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-14	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to C4
No	REPAIR the circuit.

C4 CHECK THE FUEL PUMP ASSEMBLY SIGNAL AND RETURN CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-14	Ω	C220-2

Is the resistance greater than 10,000 ohms?

Yes	GO to C15
No	REPAIR the circuits.

C5 CHECK THE FUEL PUMP ASSEMBLY FOR AN OPEN

- Ignition OFF.
- Disconnect Fuel Pump Assembly C4330.
- Connect a fused jumper wire:

Lead 1	Measurement / Action	Lead 2
C4330-1		C4330-2

- Ignition ON.
- Wait one minute.
- **NOTE:** *DTC P1346:11 can be present when carrying out this step and should be disregarded at this time.*

  Using a diagnostic scan tool, repeat the IPC self-test.

Is DTC P1346:11 present?

Yes	GO to C11
No	GO to C6

C6 CHECK THE FUEL LEVEL SIGNAL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect IPC C220.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-14		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to C7

C7 CHECK THE FUEL LEVEL SIGNAL CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-14	Ω	C4330-2

Is the resistance less than 3 ohms?

Yes	GO to C8
No	REPAIR the circuit.

C8 CHECK THE FUEL LEVEL RETURN CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-1	Ω	C4330-1

Is the resistance less than 3 ohms?

Yes	GO to C15
No	REPAIR the circuit.

C9 CARRY OUT THE IPC (INSTRUMENT PANEL CLUSTER) FUEL GAUGE ACTIVE COMMAND

- Ignition ON.
- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC fuel gauge (FUELLEVEL) active command.
- Command the fuel gauge from 0% to 25%, 50%, 75% and 100% while observing the fuel gauge.

Does the fuel gauge begin at E (empty), move to approximately 1/4, 1/2, 3/4 and F (full)?

Yes	GO to C10
No	GO to C15

C10 INSPECT THE FUEL TANK

- Visually inspect the fuel tank for any damage or deformation.

Is the fuel tank in good condition?

Yes	GO to C11
No	VERIFY the fuel level sensor and fuel pump module are in good condition. INSTALL a new fuel tank. Refer to the appropriate section in Group 310 for the procedure.

C11 CHECK THE FUEL PUMP ASSEMBLY

- Disconnect and inspect the fuel pump assembly connector.
- Repair:
  - corrosion (install new connector or terminals-clean module pins)
  - damaged pins-install new terminals/pins
  - pushed-out pins-install new pins as necessary
- Reconnect the fuel pump assembly connector. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	GO to C12
No	The system is operating correctly at this time. The concern may have been caused by component connections. ADDRESS the root cause of any connector or pin issues.

C12 CHECK THE FUEL PUMP MODULE

NOTE: *The fuel pump module (excluding Flex Fuel) resistance measures between 10 ohms ± 2 ohms at the upper stop position and 300 ohms ± 6 ohms at the lower stop position.*

NOTE: *The Flex Fuel pump module resistance measures between 50 ohms ± 3 ohms at the upper stop position and 540 ohms ± 10 ohms at the lower stop position.*

- Remove the fuel pump module.
- While moving the float arm from the lower stop position to the upper stop position measure the component side of the connector:

Positive Lead	Measurement / Action	Negative Lead
C4330-2	Ω	C4330-1

Does the resistance slowly decrease from the maximum to minimum ohms?

Yes	GO to C14
No	GO to C13

C13 CHECK THE FUEL PUMP ASSEMBLY FOR CORRECT OPERATION

- Disconnect the fuel level sender (float and card) input wire from the fuel pump assembly.
- Measure the resistance between the fuel level sender (float and card) input wire and the fuel level sender (float and card) ground while slowly moving the float arm between the lower and upper stop position.

Positive Lead	Measurement / Action	Negative Lead
Fuel Level Sensor (Component Side) - Pin 1	Ω	Fuel Level Sensor (Component Side) - Pin 2

Does the resistance slowly decrease from the maximum to minimum ohms?

Yes	INSTALL a new fuel pump assembly. Refer to the appropriate section in Group 310 for the procedure.
No	INSTALL a new fuel level sender (float and card). Refer to the appropriate section in Group 310 for the procedure.

C14 CHECK THE FUEL PUMP ASSEMBLY SIGNAL AND RETURN CIRCUITS

- Ignition OFF.
- Disconnect IPC C220.
- Connect a fused jumper wire:

Lead 1	Measurement / Action	Lead 2
C4330-1		C4330-2

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-14	Ω	C220-1

Is the resistance less than 3 ohms?

Yes	REMOVE the fused jumper wire. GO to C15
No	REMOVE the fused jumper wire. REPAIR the circuits.

C15 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Speedometer Is Inoperative

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the vehicle speed message is missing or invalid for 5 seconds or longer, the IPC defaults the speedometer to 0 km/h (0 mph).

Possible Sources

- Communication concern
- ABS
- GWM
- PCM
- IPC

PINPOINT TEST D : THE SPEEDOMETER IS INOPERATIVE

D1 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the IPC self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs) from the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to D2

D2 PERFORM THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST

- Using a diagnostic scan tool, perform the ABS module self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	GO to D3

D3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to D4

D4 PERFORM THE SPEEDOMETER ACTIVE COMMAND

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC speedometer (SPDOMETER) PID.
- Command the speedometer on and off while monitoring the speedometer.

Does the speed begin at 0 km/h (0 mph) move to 257 km/h (160 mph) and return to 0 km/h (0 mph)?

Yes	DIAGNOSE all PCM Diagnostic Trouble Codes (DTCs). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

Incorrect Speedometer Indication

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the vehicle speed message is missing or invalid for less than 5 seconds, the IPC defaults the speedometer to the last indication state, based upon the last message received.

Possible Sources

- Axle ratio configuration
- Tire size configuration
- ABS
- IPC

Visual Inspection and Diagnostic Pre-checks

Verify the tire size on the vehicle matches the tire size listed on the vehicle certification label.
REFER to: Identification Codes (100-01 Identification Codes) .

PINPOINT TEST E : INCORRECT SPEEDOMETER INDICATION

E1 CHECK THE TIRE SIZE CONFIGURATION

- Ignition ON.
- Using a diagnostic scan tool, view Module Programming for the programmed axle ratio.
- **NOTE:** *The vehicle build axle ratio can be found in PTS under the OASIS>HVBoM>Features tab.*

  Locate and determine the vehicle build axle ratio.

Does the programmed axle ratio match the vehicle build axle ratio?

Yes	GO to E2
No	CONFIGURE the correct axle ratio as required.

E2 CHECK THE TIRE SIZE CONFIGURATION

- Ignition ON.
- Using a diagnostic scan tool, view Module Programming for the programmed tire size.
- **NOTE:** *The correct tire size can be found on the vehicle certification label.*

  Verify the size of the tires installed on the vehicle matches the vehicle configuration and the vehicle certification label.
  REFER to: Identification Codes (100-01 Identification Codes) .

Is the tire size correct and is the tire size correctly configured?

Yes	GO to E3
No	INSTALL the correct size tires or CONFIGURE the correct tire size as required.

E3 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs) from the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to E4

E4 PERFORM THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST

- Using a diagnostic scan tool, perform the ABS self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	GO to E5

E5 PERFORM THE SPEEDOMETER ACTIVE COMMAND

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC speedometer (SPDOMETER) PID.
- Command the speedometer in 10% increments while monitoring the speedometer. The speed indicated should increase in increments of approximately 26 km/h (16 mph) for each 10% change.

Command	Indication Range
10% (20 km/h [12 mph])	20-26 km/h (12-16 mph)
20% (40 km/h [25 mph])	40-48 km/h (25-30 mph)
30% (60 km/h [37 mph])	60-70 km/h (37-43 mph)
40% (80 km/h [50 mph])	80-92 km/h (50-57 mph)
50% (100 km/h [62 mph])	100-114 km/h (62-71 mph)
60% (120 km/h [75 mph])	120-136 km/h (75-85 mph)
70% (140 km/h [87 mph])	140-158 km/h (87-98 mph)
80% (160 km/h [99 mph])	160-180 km/h (99-112 mph)
90% (180 km/h [112 mph])	180-202 km/h (112-126 mph)
100% (200 km/h [124 mph])	200-224 km/h (124-139 mph)

Does the speedometer increase within the specified range?

Yes	GO to E6
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

E6 CHECK THE PCM (POWERTRAIN CONTROL MODULE) VEHICLE SPEED PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- **NOTE:** *Always drive the vehicle in a safe manner according to driving conditions and obey all traffic laws.*
  Select the PCM VSS PID while driving the vehicle at 32 km/h (20 mph), 64 km/h (40 mph) and 97 km/h (60 mph).

Does the speedometer indicate between 31-34 km/h (19-21 mph), 63-69 km/h (39-43 mph) and 93-103 km/h (58-64 mph) at the 3 PCM PID values?

Yes	GO to E7
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

E7 OBSERVE THE SPEEDOMETER OPERATION

- Observe the speedometer while operating at various speeds and stopping frequently.

Does the speedometer begin at 0 km/h (0 mph) and fully return to the 0 km/h (0 mph) position when the vehicle is stopped?

Yes	The speedometer is operating correctly at this time.
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

The Odometer Is Inoperative

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the odometer count message is missing from the PCM through the GWM for 5 seconds or longer, the IPC defaults the odometer display to all dashes (------).

If the odometer count message is deemed invalid by the IPC, the IPC defaults the odometer display to all dashes (------). If the NVM becomes corrupted or if any NVM failure occurs, odometer displays ERROR.

Possible Sources

- Communication concern
- GWM
- PCM
- IPC

PINPOINT TEST F : THE ODOMETER IS INOPERATIVE

F1 CHECK FOR CORRUPTED NON-VOLATILE MEMORY (NVM)

- Ignition ON.
- Observe the message center display area.

Does the odometer display ERROR?

Yes	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	GO to F2

F2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to F3

F3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	DIAGNOSE all PCM Diagnostic Trouble Codes (DTCs). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) .

The Analog Tachometer Is Inoperative

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the IPC does not receive the engine rpm data from the PCM for more than 5 seconds, the IPC defaults the tachometer to 0 rpm.

Possible Sources

- Communication concern
- PCM
- GWM
- IPC

PINPOINT TEST G : THE ANALOG TACHOMETER IS INOPERATIVE

G1 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs) from the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to G2

G2 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to G3

G3 PERFORM THE TACHOMETER ACTIVE COMMAND

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC tachometer (TACH_IND) PID.
- **NOTE:** *Make sure to set the scan tool to 0 rpm before beginning this step.*

  Command the tachometer in 10% increments while monitoring the tachometer.

Does the tachometer increase approximately 800 rpm with each 10% increment?

Yes	DIAGNOSE all PCM Diagnostic Trouble Codes (DTCs). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

Incorrect Analog Tachometer Indication

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the rpm data is missing for 5 seconds or less or if the IPC receives invalid rpm data for 5 seconds or less, the IPC defaults the tachometer to the last setting,

based upon the last good message received. If the engine rpm message is missing or invalid for 5 seconds or less, the gauge can appear to momentarily freeze or become erratic.

Possible Sources

- PCM
- IPC

PINPOINT TEST H : INCORRECT ANALOG TACHOMETER INDICATION

H1 RETRIEVE THE RECORDED DTCS FROM THE PCM (POWERTRAIN CONTROL MODULE) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the PCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	DIAGNOSE all PCM Diagnostic Trouble Codes (DTCs). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . No	GO to H2

H2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs) from the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to H3

H3 PERFORM THE TACHOMETER ACTIVE COMMAND

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC tachometer (TACH_IND) PID.
- **NOTE:** *Make sure to set the scan tool to 0 rpm before beginning this step.*

  Command the tachometer in 10% increments while monitoring the tachometer.

Does the tachometer increase approximately 800 rpm with each 10% increment?

Yes	GO to H4
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

H4 CHECK THE PCM (POWERTRAIN CONTROL MODULE) RPM PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view the PCM Parameter Identifications (PIDs).
- Select the PCM rpm PID (RPM).
- Set the PID to run the engine at 1,000, 1,500, 2,000 and 2,500 rpm.

Does the tachometer indication range between 944-1,056 at 1,000 rpm, 1,444-1,556 rpm at 1,500 rpm, 1,944-2,056 rpm at 2,000 rpm and 2,444-2,556 rpm at 2,500 rpm?

Yes	The tachometer is operating correctly at this time.
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

The Analog Temperature Gauge Is Inoperative

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the IPC does not receive the engine coolant temperature message or if the engine coolant temperature message is deemed invalid from the PCM for more than 5 seconds, the IPC defaults the temperature gauge to cold (C).

Possible Sources

- Communication concern
- PCM
- GWM
- IPC

PINPOINT TEST I : THE ANALOG TEMPERATURE GAUGE IS INOPERATIVE

I1 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs) from the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to I2

I2 PERFORM THE TACHOMETER ACTIVE COMMAND

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC temperature gauge (ENGCOOLNT) PID.
- **NOTE:** *Make sure to set the scan tool to 0 or full cold before beginning this step.*

  Command the temperature gauge on and off while monitoring the temperature gauge.

Does the temperature gauge start at cold (C), move to full hot (H) and return to cold (C)?

Yes	GO to I3
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

I3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	DIAGNOSE all PCM Diagnostic Trouble Codes (DTCs). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . No	GO to J3

J3 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs) from the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to J4

J4 CARRY OUT THE TEMPERATURE GAUGE ACTIVE COMMAND

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC temperature gauge (ENGCOOLNT) PID.
- **NOTE:** *Make sure to set the scan tool to 0 or full cold before beginning this step.*

  Command the temperature gauge as follows:

Command	Indication Range
0% (under 38° C [100° F])	Full cold (C)
15% (60° C [140° F])	Beginning of the normal range
45% (823° C [180° F]-110° C [230° F])	Center of the gauge
85% (120° C [248° F])	End of the normal range
95% (123° C [255° F])	Hot (H) (red line)

Does the temperature gauge operate according to the above specifications?

Yes	GO to J5
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

J5 CHECK THE PCM (POWERTRAIN CONTROL MODULE) TEMPERATURE PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view the PCM Parameter Identifications (PIDs).
- Start the engine.
- Select the PCM temperature PID CHT.
- With the engine running and temperature increasing, monitor the PCM CHT PID.

Does the PCM PID agree with the temperature gauge indication?

Yes	The temperature gauge is operating correctly at this time.
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

The ABS Warning Indicator Is Never Or Always On

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Normal Operation and Fault Conditions

If the ABS warning indicator request message is missing for less than 5 seconds, the IPC defaults the ABS warning indicator to its last indication state (on or off), based upon the last message received.

If the ABS warning indicator request message is missing for 5 seconds or longer, the IPC defaults the ABS warning indicator on.

Possible Sources

- Communication concern
- ABS
- GWM
- IPC

PINPOINT TEST K : THE ABS (ANTI-LOCK BRAKE SYSTEM) WARNING INDICATOR IS NEVER OR ALWAYS ON

K1 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to K2

K2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) INDICATOR LAMP CONTROL ACTIVE COMMAND

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC ABS warning indicator (ABS_LAMP) PID.
- Command the ABS warning indicator on then off. Observe the ABS warning indicator.

Does the ABS warning indicator turn on when commanded on and turn off when commanded off?

Yes	GO to K3
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

K3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	If the ABS warning indicator is never on, the system is operating correctly. If the ABS warning indicator is always on, DIAGNOSE all ABS module Diagnostic Trouble Codes (DTCs). REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).

The Airbag Warning Indicator Is Never Or Always On

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the airbag indicator lamp request message is missing for less than 5 seconds, the IPC defaults the airbag warning indicator to its last indication state (on or off), based upon the last message received.

If the airbag indicator lamp request message is missing for 5 seconds or longer, the IPC defaults the airbag warning indicator on.

Possible Sources

- Communication concern
- SRS
- GWM
- IPC

PINPOINT TEST L : THE AIRBAG WARNING INDICATOR IS NEVER OR ALWAYS ON

L1 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to L2

L2 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to L3

L3 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) INDICATOR LAMP CONTROL ACTIVE COMMAND

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC airbag warning indicator (AIRBAG_LMP) PID.
- Command the airbag warning indicator on then off. Observe the airbag warning indicator.

Does the airbag warning indicator turn on when commanded on and turn off when commanded off?

Yes	If the airbag warning indicator is never on, the system is operating correctly. If the airbag warning indicator is always on, DIAGNOSE the SRS. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

The Auto Stop-Start Indicator Is Never Or Always On

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the stop/start indicator request message is missing for less than 5 seconds, the IPC defaults the auto stop-start warning indicator to its last indication state (on or off), based upon the last message received.

If the stop/start indicator request message is missing for 5 seconds or longer, the IPC defaults the stop/start indicator off.

Possible Sources

- Communication concern
- GWM
- PCM
- IPC

PINPOINT TEST M : THE AUTO STOP-START INDICATOR IS NEVER OR ALWAYS ON

M1 VERIFY THE AUTO STOP-START SWITCH STATUS INDICATOR ILLUMINATION FUNCTION

- Ignition ON.
- Press the auto stop-start momentary contact switch and verify illumination of the status indicator in the switch.

Does the switch illuminate when pressed and turn off when pressed again?

Yes	GO to M2
No	DIAGNOSE the auto stop-start switch. REFER TO SECTION 413-00.

M2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to M3

M3 PERFORM THE PCM (POWERTRAIN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to M4

M4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to M5

M5 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) INDICATOR LAMP CONTROL ACTIVE COMMAND USING A SCAN TOOL

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC all lamps (ALL_LAMP) PID.
- Command all the indicators on then off. Observe the auto stop-start indicator.

Does the auto stop-start indicator turn on when commanded on and turn off when commanded off?

Yes	DIAGNOSE the auto stop-start system. REFER TO SECTION 413-00.
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

The Brake Warning Indicator is Never On

Refer to Wiring Diagrams Cell 60 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the brake (red) warning indicator request, brake warning indicator request or red brake warning indicator request messages are missing or invalid for less than

5 seconds, the IPC defaults the ABS warning indicator to the last indication state (on or off), based upon the last message received.

Possible Sources

- Brake fluid level switch
- Parking brake system concern
- BCM
- IPC

Visual Inspection and Diagnostic Pre-checks

Inspect the:

- brake fluid level switch for signs of any external damage.
- wiring harness for signs of a pinched harness causing a shorted circuit.

PINPOINT TEST N : THE BRAKE WARNING INDICATOR IS NEVER ON

N1 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) INDICATOR LAMP CONTROL ACTIVE COMMAND

- Ignition ON.
- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC brake warning indicator (PBA_LMP) PID.
- Command the brake warning indicator on then off. Observe the brake warning indicator.

Does the brake warning indicator turn on when commanded on and turn off when commanded off?

Yes	GO to N2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

N2 DOES THE BRAKE WARNING INDICATOR OPERATES WITH THE PARKING BRAKE APPLIED

- Apply the parking brake while monitoring the brake warning indicator.

Does the brake warning indicator illuminate?

Yes	GO to N4
No	GO to N3

N3 CHECK THE PARKING BRAKE SYSTEM OPERATION

- Apply the parking brake.

Does the parking brake system apply the rear parking brakes?

Yes	GO to N4
No	REFER to: Parking Brake (206-05 Parking Brake and Actuation) .

N4 CHECK THE LOW BRAKE FLUID LEVEL SWITCH OPERATION

- Ignition OFF.
- Disconnect Low Brake Fluid Level Switch C157.
- Ignition ON.
- Wait one minute.

Does the brake warning indicator illuminate?

Yes	VERIFY the brake fluid level is low enough to turn on the brake warning indicator or has been reported low enough to turn on the brake warning indicator. If the brake fluid level is currently low or has been reported low, INSTALL a new brake fluid reservoir. REFER to: Brake Fluid Reservoir (206-06 Hydraulic Brake Actuation, Removal and Installation). If the brake fluid level is not currently low or has not been reported low, the system is operating correctly at this time.
No	GO to N5

N5 CHECK THE LOW BRAKE FLUID LEVEL SWITCH FOR SHORT TO GROUND

- Ignition OFF.
- Disconnect BCM C2280H.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C124-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to N6
No	REPAIR the circuit.

N6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the BCM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Brake Warning Indicator is Always On

Refer to Wiring Diagrams Cell 60 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the brake (red) warning indicator request, brake warning indicator request or red brake warning indicator request messages are missing for 5 seconds longer, the IPC defaults the brake warning indicator on.

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1048:01	Brake Fluid Level Switch: General Electrical Failure	A continuous and on-demand DTC that sets in the BCM when the BCM detects an open on the brake fluid level switch input.
B1048:7B	Brake Fluid Level Switch: Low Fluid Level	An on-demand DTC that sets in the BCM if the BCM detects a low brake fluid level input from the brake fluid level switch.

Possible Sources

- Wiring, terminals or connectors
- Brake fluid level switch
- Parking brake position switch
- Communication concern
- ABS
- GWM
- BCM
- IPC

Visual Inspection and Diagnostic Pre-checks

Inspect the:

- base brake system and the parking brake system for correct operation.
- brake fluid level switch connection and check for signs of connector terminal damage, corrosion or pushed-out pins.
- brake fluid level switch wiring for signs of a cut or opened circuit.
- brake fluid level switch for signs of any external damage.

PINPOINT TEST O : THE BRAKE WARNING INDICATOR IS ALWAYS ON

O1 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to O2

O2 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	For DTC B1048:01, GO to O5 For DTC B1048:7B, VERIFY the brake fluid level is low. If the brake fluid level is low, CORRECT the low brake fluid condition. If the brake fluid level is not low, INSTALL a new brake fluid reservoir. REFER to: Brake Fluid Reservoir (206-06 Hydraulic Brake Actuation, Removal and Installation). For all other Diagnostic Trouble Codes (DTCs), REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	GO to O3

O3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to O4

O4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST

- Using a diagnostic scan tool, perform the ABS module self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

O5 CHECK THE LOW BRAKE FLUID LEVEL SWITCH INPUT CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280H.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-28		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to O6

O6 CHECK THE LOW BRAKE FLUID LEVEL SWITCH INPUT CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect Low Brake Fluid Level Switch C157.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-28	Ω	C157-1

Is the resistance less than 3 ohms?

Yes	GO to O7
No	REPAIR the circuit.

O7 CHECK THE LOW BRAKE FLUID LEVEL GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C157-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to O8
No	REPAIR the circuit.

O8 CHECK THE LOW BRAKE FLUID LEVEL SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Connect Low Brake Fluid Level Switch C157.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-28	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to O9
No	GO to O10

O9 CHECK THE LOW BRAKE FLUID LEVEL SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND

- Disconnect Low Brake Fluid Level Switch C157.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-28	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new brake fluid reservoir. REFER to: Brake Fluid Reservoir (206-06 Hydraulic Brake Actuation, Removal and Installation).
No	REPAIR the circuit.

O10 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the BCM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The LH- RH Turn Signal, Front Fog Lamp Or High Beam Indicator Is Never or Always On

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the turn indication data or high beam status message is missing for less than 5 seconds, the IPC defaults the turn signal or high beam indicator to its last indication state (on or off), based upon the last message received.

If the turn indication data or high beam status message is missing for 5 seconds or longer, the IPC defaults the turn signal or high beam indicator off.

Possible Sources

- Turn signal concern
- High beam concern
- Communication concern
- BCM
- GWM
- IPC

PINPOINT TEST P : THE LH (LEFT-HAND) - RH (RIGHT-HAND) TURN SIGNAL OR HIGH BEAM INDICATOR IS NEVER OR ALWAYS ON

P1 DETERMINE THE FAULT CONDITION

- Ignition ON.
- Check the operation of the high beams or turn signals.

Do the high beams or turn signals operate correctly?

Yes	GO to P2
No	For high beams, REFER to: Headlamps (417-01 Exterior Lighting, Diagnosis and Testing). For turn signals, REFER to: Turn Signal and Hazard Lamps (417-01 Exterior Lighting, Diagnosis and Testing).

P2 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to P3

P3 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	For the LH or RH turn indicator, GO to P4 For the high beam indicator, GO to P5

P4 CHECK THE LH (LEFT-HAND) AND RH (RIGHT-HAND) TURN INDICATOR OPERATION

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC RH or LH turn signal indicator (RH_TURN_L) or (LH_TURN_L) PID.
- Command the RH or LH turn signal indicator on and off while observing the RH or LH turn signal indicator.

Does the RH or LH turn signal indicator illuminate when commanded on and turn off when commanded off?

Yes	DIAGNOSE all BCM Diagnostic Trouble Codes (DTCs). REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

P5 CHECK THE HIGH BEAM INDICATOR OPERATION

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).

- Select the IPC high beam indicator (HIGH_BEAM) PID.
- Command the high beam indicator on and off while observing the high beam indicator.

Does the high beam indicator illuminate when commanded on and turn off when commanded off?

Yes	DIAGNOSE all BCM Diagnostic Trouble Codes (DTCs). REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

The Lights On Indicator Is Never or Always On

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the park lamp status message is missing for less than 5 seconds, the IPC defaults the lights on indicator to its last indication state (on or off), based upon the last message received.

If the park lamp status message is missing for 5 seconds or longer, the IPC defaults the lights on indicator off.

Possible Sources

- Exterior lighting concern
- Communication concern
- GWM
- BCM
- IPC

PINPOINT TEST Q : THE LIGHTS ON INDICATOR IS NEVER OR ALWAYS ON

Q1 CHECK THE PARKING LAMPS OPERATION

- Place the headlamp switch in the PARKLAMP position.
- Ignition ON.
- Observe the parking lamps.

Do the parking lights operate correctly?

Yes	GO to Q2
No	REFER to: Parking, Rear and License Plate Lamps (417-01 Exterior Lighting, Diagnosis and Testing).

Q2 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to Q3

Q3 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to Q4

Q4 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) INDICATOR LAMP CONTROL ACTIVE COMMAND

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC lights on indicator (SIDELIGHT_LMP) PID.
- Command the lights on indicator on and off while observing the indicator.

Does the lights on indicator illuminate when commanded on and turn off when commanded off?

Yes	DIAGNOSE all BCM Diagnostic Trouble Codes (DTCs). REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .

No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

The MIL Is Never Or Always On

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the MIL request message is missing or invalid for less than 5 seconds, the IPC defaults the MIL to its last state (on or off) based upon the last known good message received.

If the MIL request message is missing for 5 seconds or longer, the IPC defaults the MIL on.

Possible Sources

- Communication concern
- GWM
- PCM
- IPC

PINPOINT TEST R : THE MIL (MALFUNCTION INDICATOR LAMP) IS NEVER OR ALWAYS ON

R1 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to R2

R2 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to R3

R3 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) INDICATOR LAMP CONTROL ACTIVE COMMAND

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC MIL PID.
- Command the MIL on and off while observing the indicator.

Does the MIL illuminate when commanded on and turn off when commanded off?

Yes	If the MIL is never on, the system is operating correctly at this time. If the MIL is always on, DIAGNOSE all PCM Diagnostic Trouble Codes (DTCs). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

The PRNDL Indicator Is Never On Or Never Displays P

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the transmission gear display or transmission shift mode display message is missing for less than 5 seconds, the PRNDL display remains in the last indication state (on or off), based upon the last message received.

If the transmission gear display or transmission shift mode display message is missing for 5 seconds or longer, the IPC defaults the PRNDL display off.

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P1706:00	High Vehicle Speed Observed in Park: No Sub Type Information	A continuous and on-demand DTC that sets in the IPC if the IPC detects a park detect input with vehicle speed over 16 km/h (10 mph), indicating the vehicle is in park while in motion.

Possible Sources

- Wiring, terminals or connectors
- Selector lever cable adjustment
- Communication concern
- Park detect switch (part of the selector lever)
- Transmission concern
- GWM
- BCM
- IPC

Visual Inspection And Diagnostic Pre-checks

Verify the vehicle is not in transport mode.

PINPOINT TEST S : THE PRNDL INDICATOR IS NEVER ON OR NEVER DISPLAYS P

S1 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the IPC self-test.

Are any DTCs recorded?

Yes	For DTC P1706:00, GO to S5 For all other Diagnostic Trouble Codes (DTCs), REFER to the IPC DTC Chart.
No	GO to S2

S2 PERFORM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any DTCs recorded?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	GO to S3

S3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to S4

S4 PERFORM THE PCM (POWERTRAIN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PCM self-test.

Are any transmission related DTCs recorded?

Yes	DIAGNOSIS all PCM Diagnostic Trouble Codes (DTCs). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) .

	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to S5

S5 BYPASS THE SELECTOR LEVER AND CHECK THE IPC (INSTRUMENT PANEL CLUSTER) PARK DETECT INPUT

- Ignition OFF.
- Disconnect Selector Lever C3245.
- Connect a fused jumper wire:

Lead 1	Measurement / Action	Lead 2
C3245-6		Ground

- Ignition ON.
- Monitor the PRNDL indicator with the fused jumper wire installed and with the fused jumper wire removed.

Does the PRNDL display P with the fused jumper wire connected and blank with the fused jumper wire disconnected?

Yes	REMOVE the fused jumper wire. GO to S8
No	REMOVE the fused jumper wire. GO to S6

S6 CHECK THE SELECTOR LEVER INPUT CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect IPC C220.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-7	Ω	C3245-6

Is the resistance less than 3 ohms?

Yes	GO to S7
No	REPAIR the circuit.

S7 CHECK THE SELECTOR LEVER INPUT CIRCUIT FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-7	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to S15
No	REPAIR the circuit.

S8 CHECK THE PARK DETECT SWITCH CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect IPC C220.
- Disconnect BCM C2280G.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-12		Ground

Is any voltage present?

Yes	GO to S9
No	GO to S10

S9 CHECK THE SELECTOR LEVER CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Selector Lever C3245.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-12	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	INSTALL a new selector lever. REFER to: Selector Lever Assembly (307-05 Automatic Transmission External Controls, Removal and Installation).

S10 CHECK THE PARK DETECT SWITCH CONTROL CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect Selector Lever C3245.
- Measure:

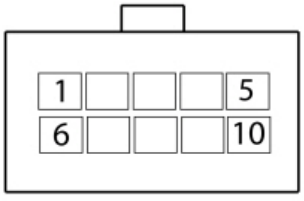
Positive Lead	Measurement / Action	Negative Lead
C2280G-12	Ω	C3245-10

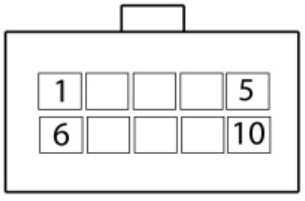
Is the resistance less than 3 ohms?

Yes	GO to S11
No	REPAIR the circuit.

S11 CHECK THE PARK DETECT SWITCH CONTROL CIRCUIT FOR A SHORT TO GROUND

- Measure:





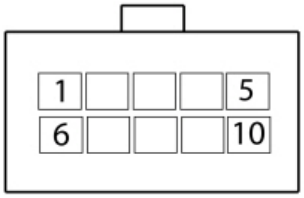
Positive Lead	Measurement / Action	Negative Lead
C2280G-12	Ω	Ground

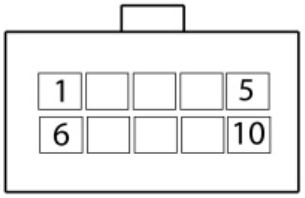
Is the resistance greater than 10,000 ohms?

Yes	GO to S12
No	REPAIR the circuit.

S12 CHECK THE PARK DETECT SWITCH OPERATION IN PARK

- Place the selector lever in PARK (P).
- With the selector lever in PARK (P), measure:





Positive Lead	Measurement / Action	Negative Lead
 E206581 Selector Lever Pin 6 (Component Side)	Ω	 E206581 Selector Lever Pin 10 (Component Side)

Is the resistance less than 3 ohms?

Yes	GO to S13
No	INSTALL a new selector lever. REFER to: Selector Lever Assembly (307-05 Automatic Transmission External Controls, Removal and Installation).

S13 CHECK THE PARK DETECT SWITCH OPERATION OUT OF PARK

- Apply the parking brake.
- Move the selector lever out of PARK (P).
- With the selector lever out of PARK (P), measure:

Positive Lead	Measurement / Action	Negative Lead
 E206581 Selector Lever Pin 6 (Component Side)	Ω	 E206581 Selector Lever Pin 10 (Component Side)

Is the resistance greater than 3 ohms?

Yes	GO to S14
No	INSTALL a new selector lever. REFER to: Selector Lever Assembly (307-05 Automatic Transmission External Controls, Removal and Installation).

S14 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the BCM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

S15 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

	REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Safety Belt Warning Indicator Is Never or Always On

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the driver safety belt status is missing for less than 5 seconds, the IPC defaults the safety belt warning indicator to its last indication state (on or off), based upon the last message received.

If the driver safety belt status message is missing for 5 seconds or longer, the IPC defaults the safety belt warning indicator off.

Possible Sources

- Driver safety belt buckle concern
- Communication concern
- GWM
- SRS
- IPC

PINPOINT TEST T : THE SAFETY BELT WARNING INDICATOR IS NEVER OR ALWAYS ON

T1 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to T2

T2 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to T3

T3 CHECK THE DRIVER SAFETY BELT BUCKLE STATUS

- Using a diagnostic scan tool, monitor the RCM driver safety belt buckle PID (SBELT_D_ST) while buckling and unbuckling the driver safety belt.

Does the PID display BUCKLED with the safety belt buckled and UNBUCKLED with the safety belt unbuckled?

Yes	GO to T4
No	INSTALL a new safety belt buckle. REFER to: Front Seatbelt Buckle (501-20A Seatbelt Systems, Removal and Installation).

T4 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) INDICATOR LAMP CONTROL ACTIVE COMMAND

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC safety belt warning indicator (SBLT_LAMP) PID PID.
- Command the safety belt warning indicator on and off while observing the safety belt warning indicator.

Does the safety belt warning indicator illuminate when commanded on and turn off when commanded off?

Yes	INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

The Stability-Traction Control Indicator (Sliding Car Icon) Is Never Or Always On

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the stability-traction control indicator request is missing or invalid for less than 5 seconds, the IPC defaults the stability-traction control indicator (sliding car icon) to the last indication state (on or off), based upon the last message received.

If the IPC does not receive the stability-traction control indicator request for 5 seconds or longer, the IPC defaults the stability-traction control indicator (sliding car icon) on.

Possible Sources

- Communication concern
- Stability-traction control system concern
- GWM
- IPC

PINPOINT TEST U : THE STABILITY-TRACTION CONTROL INDICATOR (SLIDING CAR ICON) IS NEVER OR ALWAYS ON

U1 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to U2

U2 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to U3

U3 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) INDICATOR LAMP CONTROL ACTIVE COMMAND

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC stability-traction control indicator (TC/IVD/RSCLMP) PID.
- Command the stability-traction control indicator (sliding car icon) on and off while observing the stability-traction control indicator (sliding car icon).

Does the stability-traction control indicator (sliding car icon) illuminate when commanded on and turn off when commanded off?

Yes	If the stability-traction control indicator (sliding car icon) is never on, the system is operating correctly. If the stability-traction control indicator (sliding car icon) is always on, DIAGNOSE all ABS module Diagnostic Trouble Codes (DTCs). REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

The Stability-Traction Control Disabled Indicator (Sliding Car OFF Icon) Is Never Or Always On

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the stability-traction control disabled indicator request is missing or invalid for less than 5 seconds, the IPC defaults the stability-traction control disabled indicator (sliding car OFF icon) to the last indication state (on or off), based upon the last message received.

If the IPC does not receive the stability-traction control disabled indicator request for 5 seconds or longer, the IPC defaults the stability-traction control disabled indicator (sliding car OFF icon) off.

When a MyKey® programmed key is in use and the AdvanceTrac® on feature is configured always on, the traction control system cannot be disabled and the traction control indicator does not turn on when the traction control disable button is pressed. The traction control indicator still functions correctly to indicate a traction control system fault and a traction control active event.

Possible Sources

- MyKey® programmed key in use
- Stability-traction control system concern
- Stability-traction control system cannot be disabled
- Communication concern
- GWM
- IPC

PINPOINT TEST V : THE STABILITY-TRACTION CONTROL DISABLED INDICATOR (SLIDING CAR OFF ICON) IS NEVER OR ALWAYS ON

V1 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to V2

V2 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to V3

V3 CHECK FOR THE KEY TYPE

- Check if the key is a MyKey® programmed key or an administrator key. Refer to the Owner's Literature.

Is the key an administrator key?

Yes	GO to V4
No	GO to V5

V4 CHECK FOR THE ADVANCETRAC® ON FEATURE CONFIGURED ALWAYS ON

- Check if the AdvanceTrac® feature is configured always on. Refer to the Owner's Literature.

Is the AdvanceTrac® feature configured always on?

Yes	The traction control system cannot be disabled when the AdvanceTrac® on feature is configured always on.
No	GO to V5

V5 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) INDICATOR LAMP CONTROL ACTIVE COMMAND

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC stability-traction control disabled indicator (sliding car OFF icon) (STAB_TC_LMP) PID.
- Command the stability-traction control disabled indicator (sliding car OFF icon) on and off while observing the stability-traction control disabled indicator (sliding car OFF icon).

Does the stability-traction control disabled indicator (sliding car OFF icon) illuminate when commanded on and turn off when commanded off?

Yes	GO to V6
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

V6 CHECK THE TRACTION CONTROL SETTING THE EXTERNAL SWITCH

- Press the ESC switch once then again.

Does the stability-traction control disable the indicator (sliding car OFF icon) illuminate when commanded on and turn off when commanded off?

Yes	The system is operating correctly at this time.
No	DIAGNOSE the stability-traction control switch and circuitary. REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).

The TPMS Warning Indicator Is Never or Always On

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the tire pressure warning indicator message is missing for 5 seconds or less, the TPMS warning indicator remains in its last indication state (on or off), based upon the last message received.

If the tire pressure warning indicator message is missing for 5 seconds or longer, the IPC flashes the TPMS warning indicator for approximately 75 seconds, then illuminates the TPMS warning indicator.

Possible Sources

- Low tire pressure
- Communication concern
- BCM
- GWM
- TPMS
- IPC

PINPOINT TEST W : THE TPMS (TIRE PRESSURE MONITORING SYSTEM) WARNING INDICATOR IS NEVER OR ALWAYS ON

W1 CHECK THE TIRE PRESSURE

- Verify the tire pressure in all tires meets the recommended tire pressures on the vehicle certification label.
  REFER to: Identification Codes (100-01 Identification Codes) .

Do all the tires meet the recommended tire pressures?

Yes	GO to W2
No	CORRECT the tire pressures.

W2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to W3

W3 PERFORM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any DTCs recorded?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	GO to W4

W4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to W5

W5 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) INDICATOR LAMP CONTROL ACTIVE COMMAND USING A SCAN TOOL

- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Select the IPC TPMS warning indicator (TPMWARN_LMP) PID.
- Command the TPMS warning indicator on and off while observing the TPMS warning indicator.

Does the TPMS warning indicator illuminate when commanded on and turn off when commanded off?

Yes	If the TPMS warning indicator is never on, the system is operating correctly. If the TPMS warning indicator is always on, DIAGNOSE the TPMS. REFER to: Tire Pressure Monitoring System (TPMS) (204-04 Tire Pressure Monitoring System (TPMS)) .
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

	REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

The Message Center Is Not Operating Correctly

Refer to Wiring Diagrams Cell 60 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Message Center - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

SCCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B137F:09	Steering Wheel Left Switch Pack: Component Failure	A continuous and on-demand DTC that sets in the SCCM when the SCCM detects a message center switch pressed for 2 minutes or longer.
B137F:11	Steering Wheel Left Switch Pack: Circuit Short To Ground	A continuous and on-demand DTC that sets in the SCCM when the SCCM detects a short to ground on the message center switch input circuit.
B137F:17	Steering Wheel Left Switch Pack: Circuit Voltage Above Threshold	A continuous and on-demand DTC that sets in the SCCM when the SCCM detects an open or short to voltage on the message center switch input circuit.

Possible Sources

- Wiring, terminals or connectors
- Clockspring
- Message center switch (part of the LH steering wheel switch)
- SCCM
- IPC

PINPOINT TEST X : THE MESSAGE CENTER IS NOT OPERATING CORRECTLY

WARNING: Incorrect repair techniques or actions can cause an accidental Supplemental Restraint System (SRS) deployment. Never compromise or depart from these instructions. Failure to precisely follow all instructions could result in serious personal injury from an accidental deployment.

X1 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to X2

X2 PERFORM THE SCCM (STEERING COLUMN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the SCCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	For DTC B137F:09, CLEAR the DTC. REPEAT the self-test. If DTC B137F:09 returns, INSTALL a new LH steering wheel switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation). For DTC B137F:11, GO to X5 For DTC B137F:17, GO to X8
No	GO to X3

X3 CHECK THE STEERING WHEEL SWITCH INPUT TO THE SCCM (STEERING COLUMN CONTROL MODULE)

- Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).
- Select the LH steering wheel switch Parameter Identifications (PIDs) (L_CURS_LFT, L_CURS_RGT, L_CURS_UP, L_CURS_DWN and L_CURS_OK).

Do the Parameter Identifications (PIDs) match the switch position?

Yes	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

No	GO to X4

X4 CHECK THE SCCM (STEERING COLUMN CONTROL MODULE) OUTPUT AT THE LH (LEFT-HAND) STEERING WHEEL SWITCH

- Ignition OFF.
- Disconnect LH Steering Wheel Switch C2490.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-3	V	C2490-5

Is the voltage approximately 5 volts?

Yes	INSTALL a new LH steering wheel switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation).
No	INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).

X5 CHECK THE MESSAGE CENTER SWITCH SIGNAL CIRCUIT BETWEEN THE LH (LEFT-HAND) STEERING WHEEL SWITCH AND THE UPPER CLOCKSPRING FOR A SHORT TO GROUND

- Ignition OFF.
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20 Supplemental Restraint System) .
- Disconnect Upper Clockspring C218B.
- Ignition ON.
- Using a diagnostic scan tool, perform the SCCM self-test.

Is DTC B137F:17 recorded?

Yes	GO to X6
No	GO to X7

X6 CHECK THE MESSAGE CENTER SWITCH SIGNAL CIRCUIT BETWEEN THE LH (LEFT-HAND) STEERING WHEEL SWITCH AND THE UPPER CLOCKSPRING FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect LH Steering Wheel Switch C2490.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-3	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new LH steering wheel switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation).
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column) .

X7 CHECK THE MESSAGE CENTER SWITCH SIGNAL CIRCUIT BETWEEN THE LH (LEFT-HAND) STEERING WHEEL SWITCH AND THE UPPER CLOCKSPRING FOR A SHORT TO GROUND

- Ignition OFF.
- Remove the clockspring from the SCCM.
- Ignition ON.
- Using a diagnostic scan tool, perform the SCCM self-test.

Is DTC B137F:17 recorded?

Yes	INSTALL a new clockspring. REFER to: Clockspring (501-20 Supplemental Restraint System) .
No	GO to X13

X8 CHECK THE MESSAGE CENTER SWITCH SIGNAL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20 Supplemental Restraint System) .
- Disconnect LH Steering Wheel Switch C2490.
- Disconnect SCCM C226A.

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-3	V	C2490-5

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to X9

X9 CHECK THE MESSAGE CENTER SWITCH SIGNAL CIRCUIT BETWEEN THE LH (LEFT-HAND) STEERING WHEEL SWITCH AND THE UPPER CLOCKSPRING FOR AN OPEN

- Ignition OFF.
- Disconnect Upper Clockspring C218B.
- Measure:

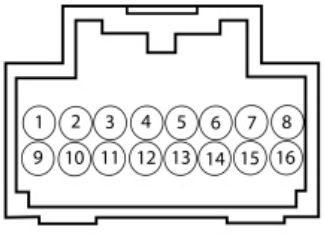
Positive Lead	Measurement / Action	Negative Lead
C2490-3	Ω	C218B-14

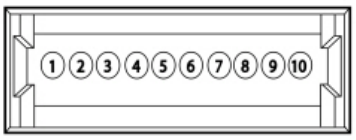
Is the resistance less than 3 ohms?

Yes	GO to X10
No	REPAIR the circuit.

X10 CHECK THE MESSAGE CENTER SWITCH RETURN CIRCUIT BETWEEN THE LH (LEFT-HAND) STEERING WHEEL SWITCH AND THE UPPER CLOCKSPRING FOR AN OPEN

- Measure:





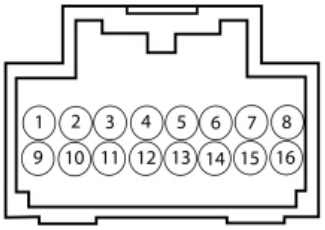
Positive Lead	Measurement / Action	Negative Lead
C2490-5	Ω	C218B-8

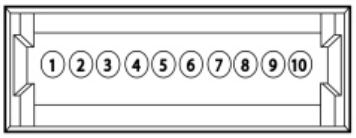
Is the resistance less than 3 ohms?

Yes	GO to X11
No	REPAIR the circuit.

X11 CHECK THE MESSAGE CENTER SWITCH SIGNAL CIRCUIT THROUGH THE CLOCKSPRING FOR AN OPEN

- Remove the clockspring from the SCCM.
- Measure:





Positive Lead	Measurement / Action	Negative Lead
 E155137 Upper Clockspring (Component Side) - Pin 14	Ω	 E155657 Lower Clockspring (Component Side) - Pin 6

Is the resistance less than 3 ohms?

Yes	GO to X12
No	INSTALL a new clockspring. REFER to: Clockspring (501-20 Supplemental Restraint System) .

X12 CHECK THE MESSAGE CENTER SWITCH RETURN CIRCUIT THROUGH THE CLOCKSPRING FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
 E155137 Upper Clockspring (Component Side) - Pin 8	Ω	 E155657 Lower Clockspring (Component Side) - Pin 9

Is the resistance less than 3 ohms?

Yes	GO to X13
No	INSTALL a new clockspring. REFER to: Clockspring (501-20 Supplemental Restraint System) .

X13 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the SCCM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all the SCCM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK On-Line Automotive Service Information System (OASIS) for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Compass Is Inoperative

Normal Operation and Fault Conditions

REFER to: Message Center - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the compass display data messages are missing or invalid for 5 seconds or less, the compass displays the last vehicle direction based upon the last known good compass display message received.

If the compass display data messages are invalid or missing for more than 5 seconds, the IPC defaults the display to all dashes (---).

Possible Sources

- Communication concern
- GPSM
- IPC

PINPOINT TEST Y : THE COMPASS IS INOPERATIVE

Y1 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE GPSM (GLOBAL POSITIONING SYSTEM MODULE) SELF-TEST

- Ignition ON.

- Using a diagnostic scan tool, perform the GPSM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	Refer to the appropriate section in Group 415 for the procedure.
No	GO to Y2

Y2 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .

The DTE Display Is Incorrect Or Fluctuates

Normal Operation and Fault Conditions

NOTE: *The DTE display and the fuel gauge both use the fuel level input from the fuel tank to provide their respective functions. If the fuel gauge doesn't function correctly, both the fuel gauge and the DTE display are affected.*

NOTE: *The actual DTE can be higher or lower than the DTE displayed in the message center due to changes in driving conditions. It is important to understand how the DTE is calculated and the factors that impact the DTE display when determining how to address any DTE concerns.*

The DTE is calculated in the IPC using the Running Average Fuel Economy (RAFE), which is the fuel economy over a much longer distance than the Instantaneous Fuel Economy (IFE), and the fuel level input from the fuel sender(s) to determine how many miles the vehicle can be driven based on the remaining fuel in the tank.

NOTE: *Even if the fuel economy is relatively constant, the DTE can vary in the short term by up to 50 miles, but is usually within 10 miles.*

The IPC defaults to a base programmed fuel economy when the battery is initially connected and adjusts upward or downward based on driving habits and conditions.

Since the DTE is calculated and averaged over a longer period of time, varying driving conditions can have a significant impact on the current or short term DTE as opposed to the displayed DTE. This difference often leads to customer complaints of incorrect or invalid DTE.

The following list provides some (not all) of the driving conditions that may lead to an incorrect or fluctuating DTE concern:

- Changing between towing/not towing
- Changing driving between city and highway
- Allowing the vehicle to idle for long periods of time
- Using the remote start feature (if equipped) frequently or allowing the vehicle to warm up, particularly when parked on a grade
- Parking or driving on grades
- Not using a type of fuel consistently
- Over-fueling or not filling the tank completely (partial refueling)

To better illustrate the affects of how driving conditions can affect DTE, please refer to the examples below.

The example below illustrates how the following observations are normal and expected since the low fuel reminder is triggered from a fuel volume and not from a fixed distance to empty.

If while driving, the low fuel reminder (low fuel indicator and low fuel warning message) displays when the DTE equals 94.4 km (59 miles) and the driver adds 11.36 L (3 gallons) of fuel, the new DTE may become 124.8 km (78 miles). After continued driving, the low fuel reminder may now display when the DTE equals 83.2 km (52 miles).

The next example (below) illustrates what occurs when idling on an incline. In this example, the customer should be made aware of how the condition will correct after a few minutes of idling on a level surface.

If the customer stops and parks the vehicle on an incline in a driveway, then in the morning remote starts the vehicle, allowing the engine to idle, the DTE may now equal 184 km (115 miles). As the customer drives, the low fuel reminder displays when the DTE equals 148.8 km (93 miles). Finally, after 5 more minutes of driving, the DTE is back to 80 km (50 miles).

In this example, the fuel gauge and the DTE display can be out of sync, but self-corrects after several minutes of driving.

Possible Sources

- BCM
- Fuel gauge concern
- Changes in driving conditions such as:
  - towing
  - extended idle times
  - parking on any grades
  - alcohol in the fuel
  - refueling patterns
- IPC configuration

Visual Inspection and Diagnostic Prechecks

Make sure to record the Running Average Fuel Economy (RAFE) prior to disconnecting the battery or removing the IPC fuse. If any of the previous conditions occur, the vehicle must be driven over time to allow the DTE calculations to adjust.

PINPOINT TEST Z : THE DTE (DISTANCE TO EMPTY) DISPLAY IS INCORRECT OR FLUCTUATES

Z1 REVIEW AND INVESTIGATE THE FOLLOWING DRIVING CONDITIONS WITH THE CUSTOMER

- Determine whether the driver changes the following driving conditions:
  - changing between towing/not towing, city/highway driving
  - use of extended idle times
  - use of remote start frequently (if equipped)
  - parking/driving on grades
  - use of E85 fuel exclusively or switching to non-Ethanol fuel
  - over filling the fuel tank or not filling the tank completely (partial refueling)

Does the driver change driving conditions?

Yes	Advise the customer how changing driving conditions can affect the current short-term DTE as opposed to the displayed long-term DTE.
No	GO to Z2

Z2 CHECK THE FUEL GAUGE FOR CORRECT OPERATION

- Ignition ON.
- Verify the fuel gauge is functioning and correctly indicating the remaining fuel level.

Is the fuel gauge operating correctly?

Yes	GO to Z3
No	GO to Pinpoint Test C

Z3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to Z4

Z4 PERFORM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	The vehicle configuration is most likely incorrect for the fuel tank size. INSTALL As-Built data from PTS following scan tool instructions.

The Outside Air Temperature Display Is Inoperative or Incorrect

Normal Operation and Fault Conditions

REFER to: Message Center - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the air ambient temperature message is missing or invalid for less than 5 seconds, the IPC defaults the outside air temperature display to the last temperature reading, based upon the last message received.

If the air ambient temperature message is missing or invalid for 5 seconds or longer from the PCM, the IPC displays all dashes (- - - -) in the outside air temperature display area.

Possible Sources

- Communication concern
- Ambient Air Temperature (AAT) sensor input to the PCM
- GWM
- FCIM

PINPOINT TEST AA : THE OUTSIDE AIR TEMPERATURE DISPLAY IS INOPERATIVE OR INCORRECT

AA1 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AA2

AA2 PERFORM THE FCIM (FRONT CONTROLS INTERFACE MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the FCIM module self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	Refer to the appropriate section in Group 415 for the procedure.
No	GO to AA3

AA3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to AA4

AA4 PERFORM THE PCM (POWERTRAIN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to AA5

AA5 CHECK THE AMBIENT AIR TEMPERATURE INPUT TO THE PCM (POWERTRAIN CONTROL MODULE)

- Using a diagnostic scan tool, view the PCM Parameter Identifications (PIDs).
- Select the ambient air temperature PID (AAT).
- Allow the vehicle to sit out of the sun with the engine off, for approximately 6 hours to remove any potential heat soak at the ambient air temperature sensor.
- Monitor the ambient air temperature PID and compare the PID value with the actual outside air temperature.

Does the ambient air temperature match the actual outside air temperature?

Yes	INSTALL a new FCIM. Refer to the appropriate section in Group 415 for the procedure.
No	GO to AA6

AA6 CHECK THE OUTSIDE AIR TEMPERATURE DISPLAY UPDATE

- **NOTE:** *Always drive the vehicle in a safe manner according to driving conditions and obey all traffic laws.*
  Drive the vehicle above 33 km/h (20 mph) to allow the outside air temperature display to update.

Did the outside air temperature display update toward the actual ambient air temperature?

Yes	The system is operating correctly at this time. Explain to the customer the operation of the system as it relates to the update strategy.
No	GO to AA7

AA7 CHECK THE AMBIENT AIR TEMPERATURE (AAT) SENSOR FOR OBSTRUCTIONS OR DEBRIS

- Check the area around the Ambient Air Temperature (AAT) sensor for any obstructions or debris such as leaves or paper.

Is the area around the Ambient Air Temperature (AAT) sensor free from any obstructions or debris?

Yes	GO to AA8
No	CLEAR all debris or obstructions as necessary to allow for the free flow of air around the Ambient Air Temperature (AAT) sensor.

AA8 CHECK THE AMBIENT AIR TEMPERATURE (AAT) SENSOR OPERATION

- Ignition OFF.
- Disconnect Ambient Air Temperature (AAT) Sensor C132.
- Inspect the connector and wiring:
  - water intrusion
  - corrosion
  - damaged pins
  - pushed-out pins

Are there any signs of water intrusion, corrosion, damaged or pushed out pins?

Yes	REPAIR the Ambient Air Temperature (AAT) sensor connector or wiring for any water intrusion, corrosion, damaged or pushed out pins.
No	INSTALL a new ambient air temperature sensor.

The Auto High Beam RTT Is Never Or Always On

Normal Operation and Fault Conditions

REFER to: Message Center - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the auto high beam status display message is missing for less than 5 seconds, the IPC defaults the auto high beam RTT to its last indication state (on or off), based upon the last message received.

If the auto high beam status display message is missing for 5 seconds or longer, the IPC defaults the high beam RTT off.

Possible Sources

- Communication concern
- IPMA
- GWM
- IPC

PINPOINT TEST AB : THE AUTO HIGH BEAM RTT (RECONFIGURABLE TELLTALE) IS NEVER OR ALWAYS ON

AB1 CHECK THE MESSAGE CENTER OPERATION

- Ignition ON.
- Close all doors and hood.
- Clear all message center warnings by pressing the OK button for each warning present.
- Monitor the door ajar RTT.
- Open the driver door.
- Clear the message center popup warning.
- Monitor the door ajar RTT.

Is the door ajar RTT off with the door closed, and on with the door open?

Yes	GO to AB2
No	GO to Pinpoint Test AF

AB2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AB3

AB3 PERFORM THE IPMA (IMAGE PROCESSING MODULE A) SELF-TEST

- Using a diagnostic scan tool, perform the IPMA self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Lane Keeping System (419-07 Lane Keeping System) .
No	GO to AB4

AB4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	DIAGNOSE the auto high beams. REFER to: Headlamps (417-01 Exterior Lighting, Diagnosis and Testing).

The Auto Stop-Start RTT Indicator Is Never Or Always On

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the stop/start indicator request message is missing for less than 5 seconds, the IPC defaults the auto stop-start warning indicator to its last indication state (on or off), based upon the last message received.

If the stop/start indicator request message is missing for 5 seconds or longer, the IPC defaults the stop/start indicator off.

Possible Sources

- Communication concern
- Auto stop-start concern
- PCM
- GWM
- IPC

PINPOINT TEST AC : THE AUTO STOP-START RTT (RECONFIGURABLE TELLTALE) INDICATOR IS NEVER OR ALWAYS ON

AC1 VERIFY THE AUTO STOP-START FEATURE IS ENABLED

- Ignition ON.
- **NOTE:** *Refer to the Owner's Literature for message center menu navigation.*

  Using the message center controls, verify the stop-start feature is enabled.

Is the stop-start system enabled?

Yes	GO to AC2
No	ENABLE the stop-start feature and INFORM the customer how to enable the feature.

AC2 CHECK THE MESSAGE CENTER OPERATION

- Ignition ON.
- Close all doors, the hood and the liftgate.
- Clear all message center warnings by pressing the OK button for each warning present.
- Monitor the door ajar RTT warning indicator.
- Open the driver door.
- Clear the message center popup warning.
- Monitor the door ajar RTT warning indicator.

Is the door ajar RTT warning indicator off with the door closed, and on with the door open?

Yes	GO to AC3
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AC3 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AC4

AC4 PERFORM THE PCM (POWERTRAIN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to AC5

AC5 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	DIAGNOSE the auto stop-start feature. Refer to the appropriate section in Group 303 for the procedure.

The Charging System RTT Warning Indicator Is Never Or Always On

Normal Operation and Fault Conditions

REFER to: Message Center - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the charging system indication request is missing for less than 5 seconds, the IPC defaults the charging system RTT indicator to the last indication state (on or off), based upon on the last message received.

If the charging system indication request is missing for 5 seconds or longer, the IPC defaults the charging system RTT indicator on.

Possible Sources

- Charging system concern
- Communication concern
- GWM
- IPC

PINPOINT TEST AD : THE CHARGING SYSTEM RTT (RECONFIGURABLE TELLTALE) WARNING INDICATOR IS NEVER OR ALWAYS ON

AD1 CHECK THE MESSAGE CENTER OPERATION

- Ignition ON.
- Close all the doors and hood.
- Clear all message center warnings by pressing the OK button for each warning present.
- Monitor the door ajar RTT warning indicator.
- Open the driver door.
- Clear the message center popup warning.
- Monitor the door ajar RTT warning indicator.

Is the door ajar RTT warning indicator off with the door closed, and on with the door open?

Yes	GO to AD2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AD2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AD3

AD3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to AD4

AD4 CHECK THE CHARGING SYSTEM OPERATION

- Check the charging system operation.

Does the charging system operate correctly?

Yes	If the charging system warning indicator is never on, the system is operating correctly at this time. If the charging system warning indicator is always on, DIAGNOSE all BCM Diagnostic Trouble Codes (DTCs). REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	

	REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).

The Cruise Control RTT Indicator Is Never On

Normal Operation and Fault Conditions

REFER to: Message Center - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the cruise control status, cruise control override (adaptive cruise) or cruise control set speed (adaptive cruise) message is missing or deemed invalid by the IPC for less than 5 seconds, the IPC defaults the cruise control indicator to the last indication state (on or off), based upon the last message received.

If the cruise control status, cruise control override (adaptive cruise) or cruise control set speed (adaptive cruise) message is missing or if the data is deemed invalid by the IPC for 5 seconds or longer, the IPC defaults the cruise control indicator off.

Possible Sources

- Communication concern
- Cruise control concern
- GWM
- IPC

PINPOINT TEST AE : THE CRUISE CONTROL RTT (RECONFIGURABLE TELLTALE) INDICATOR IS NEVER ON

AE1 CHECK THE MESSAGE CENTER OPERATION

- Ignition ON.
- Close all the doors and hood.
- Clear all message center warnings by pressing the OK button for each warning present.
- Monitor the door ajar RTT warning indicator.
- Open the driver door.
- Clear the message center popup warning.
- Monitor the door ajar RTT warning indicator.

Is the door ajar RTT warning indicator off with the door closed, and on with the door open?

Yes	GO to AE2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AE2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AE3

AE3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	DIAGNOSE the cruise control system. REFER to: Cruise Control (419-03 Cruise Control) .

The Door Ajar RTT Warning Indicator Is Never Or Always On

Normal Operation and Fault Conditions

REFER to: Message Center - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the door status message is missing for less than 5 seconds, the IPC defaults all door ajar message center displays to the last indication state (on or off), based upon the last message received.

If the door status message is missing for 5 seconds or longer, the IPC defaults all door ajar message center displays off.

Possible Sources

- Interior lighting concern
- Communication concern
- Message center concern
- GWM
- BCM
- IPC

PINPOINT TEST AF : THE DOOR AJAR RTT (RECONFIGURABLE TELLTALE) WARNING INDICATOR IS NEVER OR ALWAYS ON

AF1 CHECK THE MESSAGE CENTER OPERATION

- Ignition OFF.
- Disconnect PCM C1232A and C1232B.
- Ignition ON.
- Monitor the message center messages and RTT indicators.

Did multiple message center messages and RTT warning indicators appear?

Yes	GO to AF2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AF2 CHECK THE INTERIOR LIGHTING OPERATION

- Open and close each door while monitoring the interior lamps.

Do the interior lamps operate correctly?

Yes	GO to AF3
No	REFER to: Interior Lighting (417-02 Interior Lighting) .

AF3 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AF4

AF4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to AF5

AF5 PERFORM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).

The Engine Over-Temperature RTT Warning Indicator Is Never Or Always On

Normal Operation and Fault Conditions

REFER to: Message Center - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the engine coolant temperature data or engine overheat indication request messages are missing or invalid for less than 5 seconds, the IPC defaults the engine over-temperature RTT warning indicator to the last indication state (on or off), based upon on the last message received.

If the engine coolant temperature data or engine overheat indication request messages are missing or invalid for 5 seconds or longer, the IPC defaults the engine over-temperature RTT warning indicator on.

Possible Sources

- Communication concern
- GWM
- PCM
- IPC

PINPOINT TEST AG : THE ENGINE OVER-TEMPERATURE RTT (RECONFIGURABLE TELLTALE) WARNING INDICATOR IS NEVER OR ALWAYS ON

AG1 CHECK THE MESSAGE CENTER OPERATION

- Ignition ON.
- Close all the doors and hood.
- Clear all message center warnings by pressing the OK button for each warning present.
- Monitor the door ajar RTT warning indicator.
- Open the driver door.
- Clear the message center popup warning.
- Monitor the door ajar RTT warning indicator.

Is the door ajar RTT warning indicator off with the door closed, and on with the door open?

Yes	GO to AG2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AG2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AG3

AG3 PERFORM THE PCM (POWERTRAIN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PCM self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to AG4

AG4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	If the engine over-temperature message center is never on, the system is operating correctly at this time. If the engine over-temperature RTT indicator is always on, DIAGNOSE all PCM Diagnostic Trouble Codes (DTCs). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) .

	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .

The Lane Keeping System Off RTT Indicator Is Never Or Always On

Normal Operation and Fault Conditions

REFER to: Message Center - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the lane departure warning indicator request is missing for less than 5 seconds, the IPC defaults the lane departure RTT indicator to the last indication state (on or off), based upon the last message received.

If the lane departure warning indicator request is missing for 5 seconds or longer, the IPC defaults the lane departure RTT indicator off.

Possible Sources

- Lane departure warning system concern
- Communication concern
- GWM
- IPC

PINPOINT TEST AH : THE LANE KEEPING SYSTEM OFF RTT (RECONFIGURABLE TELLTALE) INDICATOR IS NEVER OR ALWAYS ON

AH1 CHECK THE MESSAGE CENTER OPERATION

- Ignition ON.
- Close all the doors and hood.
- Clear all message center warnings by pressing the OK button for each warning present.
- Monitor the door ajar RTT warning indicator.
- Open the driver door.
- Clear the message center popup warning.
- Monitor the door ajar RTT warning indicator.

Is the door ajar RTT warning indicator off with the door closed, and on with the door open?

Yes	GO to AH2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AH2 CHECK THE LANE DEPARTURE SWITCH OPERATION

- Press the lane departure switch to turn the system on then off again.

Does the lane departure RTT indicator turn on then off again?

Yes	The system is operating correctly at this time. The system was turned off.
No	GO to AH3

AH3 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AH4

AH4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	DIAGNOSE the lane departure warning system. REFER to: Lane Keeping System (419-07 Lane Keeping System) .

The Low Fuel RTT Warning Indicator Is Never Or Always On

Normal Operation and Fault Conditions

REFER to: Message Center - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Possible Sources

- Fuel gauge concern
- Message center concern
- IPC

PINPOINT TEST AI : THE LOW FUEL RTT (RECONFIGURABLE TELLTALE) WARNING INDICATOR IS NEVER OR ALWAYS ON

AI1 CHECK THE MESSAGE CENTER OPERATION

- Ignition ON.
- Close all the doors and hood.
- Clear all message center warnings by pressing the OK button for each warning present.
- Monitor the door ajar RTT warning indicator.
- Open the driver door.
- Clear the message center popup warning.
- Monitor the door ajar RTT warning indicator.

Is the door ajar RTT warning indicator off with the door closed, and on with the door open?

Yes	GO to AI2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AI2 VERIFY THE OPERATION OF THE FUEL GAUGE

- Ignition ON.
- Verify the fuel gauge operates correctly and there are no customer concerns with the fuel gauge operation.

Does the fuel gauge operate correctly without any customer concerns related to fuel gauge indication?

Yes	GO to AI3
No	GO to Pinpoint Test C

AI3 CONFIRM THE CURRENT FUEL LEVEL

- Enter the Dealer Test Mode.
  REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).
- Scroll to the **Inst Fuel1** display.

Does the FLPM (second value) indicate 104 or less with an administrator key or between 104 and 164 with a MyKey® programmed key?

Yes	If the low fuel RTT warning indicator is always on, the system is operating correctly at this time based on the current fuel level. If the low fuel RTT warning indicator is never on, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	If the low fuel RTT warning indicator is always on, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). If the low fuel RTT warning indicator is never on, the system is operating correctly at this time based on the current fuel level.

The Low Oil Pressure RTT Warning Indicator Is Never Or Always On

Refer to Wiring Diagrams Cell 60 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Message Center - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the engine rpm data or oil pressure warning message is missing less than 5 seconds, the IPC defaults the low oil pressure warning indicator to the last state (on or off), based upon the last message received.

If the engine rpm data or oil pressure warning message is missing for 5 seconds or longer, the IPC defaults the low oil pressure warning indicator on.

Possible Sources

- Wiring, terminals or connectors
- Engine oil pressure switch
- Base engine concern
- GWM
- PCM
- IPC

PINPOINT TEST AJ : THE LOW OIL PRESSURE RTT (RECONFIGURABLE TELLTALE) WARNING INDICATOR IS NEVER OR ALWAYS ON

AJ1 CHECK THE MESSAGE CENTER OPERATION

- Ignition ON.
- Close all the doors and hood.
- Clear all message center warnings by pressing the OK button for each warning present.
- Monitor the door ajar RTT warning indicator.
- Open the driver door.
- Clear the message center popup warning.
- Monitor the door ajar RTT warning indicator.

Is the door ajar RTT warning indicator off with the door closed, and on with the door open?

Yes	GO to AJ2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AJ2 CHECK THE TACHOMETER OPERATION

- Start the engine.
- Verify the tachometer operates.

Does the tachometer operate?

Yes	GO to AJ3
No	For optional IPC, GO to Pinpoint Test B For the base IPC, GO to Pinpoint Test G

AJ3 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	If the low oil pressure RTT warning indicator is never on, GO to AJ4 If the low oil pressure RTT warning indicator is always on, GO to AJ6

AJ4 CHECK FOR A STUCK CLOSED ENGINE OIL PRESSURE SWITCH

- Ignition OFF.
- Disconnect Engine Oil Pressure Switch C1642.
- Ignition ON.
- Observe the low oil pressure warning indicator.

Does the low oil pressure warning indicator turn on?

Yes	INSTALL a new engine oil pressure switch. Refer to the appropriate section in Group 303 for the procedure.
No	GO to AJ5

AJ5 CHECK THE OIL PRESSURE INPUT CIRCUIT FOR A SHORT TO GROUND

- Disconnect PCM C1381B 2.2L Engine.
- Disconnect PCM C1551B 2.5L Engine.
- Disconnect PCM C1551B 3.2L Engine.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1642-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to AJ11
No	REPAIR the circuit.

AJ6 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to AJ7

AJ7 PERFORM THE PCM (POWERTRAIN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to AJ8

AJ8 CHECK FOR A STUCK OPEN ENGINE OIL PRESSURE SWITCH

- Ignition OFF.
- Disconnect Engine Oil Pressure Switch C1642.
- Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C1642-1		Ground

- Ignition ON.
- Observe the low oil pressure warning indicator.

Does the low oil pressure indicator turn off?

Yes	REMOVE the fused jumper wire. GO to AJ9
No	LEAVE the jumper wire connected. GO to AJ10

AJ9 CHECK THE OIL PRESSURE

- Test the engine for low oil pressure.

Was a low oil pressure concern detected?

Yes	REPAIR the low oil pressure concern. REFER to: Engine (303-00 Engine System - General Information, Diagnosis and Testing).
No	INSTALL a new engine oil pressure switch. Refer to the appropriate section in Group 303 for the procedure.

AJ10 CHECK THE ENGINE OIL PRESSURE INPUT CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect PCM C1381B 2.2L Engine.
- Disconnect PCM C1551B 2.5L Engine.
- Disconnect PCM C1551B 3.2L Engine.
- Measure:

2.2L Engine

Positive Lead	Measurement / Action	Negative Lead
C1551B-5	Ω	C1642-1

2.5L Engine

Positive Lead	Measurement / Action	Negative Lead
C1232C-5	Ω	C1642-1

3.2L Engine

Positive Lead	Measurement / Action	Negative Lead
C1232C-5	Ω	C1642-1

Is the resistance less than 3 ohms?

Yes	REMOVE the fused jumper wire. GO to AJ11
No	REMOVE the fused jumper wire. REPAIR the circuit.

AJ11 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the PCM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present

Is the concern still present?

Yes	CHECK On-Line Automotive Service Information System (OASIS) for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Low Washer Fluid Level Message Center Indicator Is Never Or Always On

Refer to Wiring Diagrams Cell 60 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Message Center - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Possible Sources

- Wiring, terminals or connectors
- Low washer fluid switch
- IPC

Visual Inspection and Diagnostic Pre-checks

Verify the washer fluid reservoir is full and the ignition has been cycled at least once prior to beginning the pinpoint test for an always on condition or the washer fluid is or has been reported low for a never on condition.

PINPOINT TEST AK : THE LOW WASHER FLUID LEVEL MESSAGE CENTER INDICATOR IS NEVER OR ALWAYS ON

AK1 CHECK THE MESSAGE CENTER OPERATION

- Ignition ON.
- Close all the doors and hood.
- Clear all message center warnings by pressing the OK button for each warning present.

- Monitor the door ajar message center warning indicator.
- Open the driver door.
- Clear the message center popup warning.
- Monitor the door ajar message center warning indicator.

Is the door ajar message center warning indicator off with the door closed then does the message center warning indicator turn on with the door open?

Yes	If the low washer fluid level message center indicator is inoperative, GO to AK2 If the low washer fluid level message center indicator is always on, GO to AK4
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AK2 CHECK THE LOW WASHER FLUID INDICATOR OPERATION

- Ignition OFF.
- Disconnect Low Washer Fluid Level Switch C138.
- Ignition ON.
- Wait one minute.
- Observe the low washer fluid level message center indicator.

Is the low washer fluid level message center indicator on?

Yes	GO to AK3
No	GO to AK5

AK3 CHECK THE WASHER FLUID LEVEL SWITCH GROUND CIRCUIT FOR AN OPEN AT THE WASHER FLUID LEVEL SWITCH

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C138-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to AK4
No	REPAIR the circuit.

AK4 CHECK THE WASHER FLUID LEVEL INPUT CIRCUIT FOR AN OPEN

- Disconnect IPC C220.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-8	Ω	C138-1

Is the resistance less than 3 ohms?

Yes	GO to AK7
No	REPAIR the circuit.

AK5 CHECK THE WASHER FLUID INPUT CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect Low Washer Fluid Level Switch C138.
- Ignition ON.
- Wait one minute.
- Observe the low washer fluid level message center indicator.

Did the low washer fluid level message center indicator turn off?

Yes	INSTALL a new washer fluid level switch. REFER to: Windshield Washer Reservoir (501-16 Wipers and Washers) .
No	GO to AK6

AK6 CHECK THE WASHER FLUID INPUT CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect IPC C220.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-8	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to AK7
No	REPAIR the circuit.

AK7 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present

Is the concern still present?

Yes	CHECK On-Line Automotive Service Information System (OASIS) for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Hill Descent Indicator Is Never Or Always On

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the hill descent mode message is missing for less than 5 seconds, the IPC defaults the hill descent indicator or hill descent RTT to its last indication state (on or off), based upon the last message received.

If the hill descent mode message is missing for 5 seconds or longer, the IPC defaults the hill descent indicator or hill descent RTT off.

Possible Sources

- Communication concern
- Message center concern
- Hill descent control system concern
- ABS concern
- GWM concern
- IPC

PINPOINT TEST AL : THE HILL DESCENT INDICATOR IS NEVER OR ALWAYS ON

AL1 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs) from the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AL2

AL2 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) HILL DESCENT INPUT PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, select and monitor the IPC hill descent control PID while selecting hill descent on then off.

Did the IPC PID match the hill descent switch operation?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	GO to AL3

AL3 CHECK THE HILL DESCENT SWITCH INDICATOR OPERATION

- Ignition OFF.
- Disconnect Active Park Assist/Differential Lock Switch C3360.
- Connect a fused jumper wire:

Lead 1	Measurement / Action	Lead 2
C3360-4		C3360-12

- Ignition ON.
- Wait one minute.
- Observe the hill descent control message center indicator.

Is the hill descent control message indicator on?

Yes	REMOVE the fused jumper wire. INSTALL a new active park assist/differential lock switch.
No	REMOVE the fused jumper wire. GO to AL4

AL4 CHECK THE HILL DESCENT SWITCH GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3360-12	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to AL5
No	REPAIR the circuit.

AL5 CHECK THE HILL DESCENT SWITCH INPUT CIRCUIT FOR AN OPEN

- Disconnect IPC C220.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-10	Ω	C3360-4

Is the resistance less than 3 ohms?

Yes	GO to AL6
No	REPAIR the circuit.

AL6 CHECK THE HILL DESCENT SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-10	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to AL7
No	REPAIR the circuit.

AL7 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present

Is the concern still present?

Yes	CHECK On-Line Automotive Service Information System (OASIS) for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The ESC Indicator Is Never Or Always On

Normal Operation and Fault Conditions

REFER to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the ESC disabled indicator request is missing or invalid for less than 5 seconds, the IPC defaults the stability control disabled indicator RTT (sliding car OFF icon) to the last indication state (on or off), based upon the last message received.

If the IPC does not receive the stability control disabled indicator request for 5 seconds or longer, the IPC defaults the stability control disabled indicator RTT (sliding car OFF icon) off.

When a MyKey® programmed key is in use, the stability control is always on, the stability control system cannot be disabled and the indicator or RTT does not turn on when the ESC disable button is pressed. The indicator or RTT still functions correctly to indicate system fault and a stability control active event.

Possible Sources

- MyKey® programmed key in use
- Stability-traction control system concern
- Stability-traction control system cannot be disabled
- Communication concern
- Message center concern
- GWM concern
- IPC

PINPOINT TEST AM : THE ESC (ELECTRONIC STABILITY CONTROL) INDICATOR IS NEVER OR ALWAYS ON

AM1 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.
- Check for recorded Diagnostic Trouble Codes (DTCs) from the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AM2

AM2 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) ESC (ELECTRONIC STABILITY CONTROL) INPUT PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, select and monitor the IPC ESC PID while selecting stability control on then off.

Did the IPC PID match the stibility control switch operation?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	GO to AM3

AM3 CHECK THE ESC (ELECTRONIC STABILITY CONTROL) SWITCH INDICATOR OPERATION

- Ignition OFF.
- Disconnect Active Park Assist/Differential Lock Switch C3360.
- Connect a fused jumper wire:

Lead 1	Measurement / Action	Lead 2
C3360-1		C3360-12

- Ignition ON.
- Wait one minute.
- Observe the stability control control indicator.

Is the hill stability control indicator on?

Yes	REMOVE the fused jumper wire. INSTALL a new active park assist/differential lock switch.
No	REMOVE the fused jumper wire. GO to AM4

AM4 CHECK THE ESC (ELECTRONIC STABILITY CONTROL) SWITCH GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3360-12	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to AM5
No	REPAIR the circuit.

AM5 CHECK THE ESC (ELECTRONIC STABILITY CONTROL) SWITCH INPUT CIRCUIT FOR AN OPEN

- Disconnect IPC C220.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-18	Ω	C3360-1

Is the resistance less than 3 ohms?

Yes	GO to AM6
No	REPAIR the circuit.

AM6 CHECK THE ESC (ELECTRONIC STABILITY CONTROL) SWITCH INPUT CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-18	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to AM7
No	REPAIR the circuit.

AM7 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present

Is the concern still present?

Yes	CHECK On-Line Automotive Service Information System (OASIS) for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs)

	address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Powertrain Malfunction (Wrench) RTT Indicator Is Never Or Always On

Normal Operation and Fault Conditions

REFER to: Message Center - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the transmission service required, engine service required, 4WD service required or body service required message is missing for less than 5 seconds, the IPC defaults the powertrain malfunction (wrench) RTT indicator to the last indication state (on or off), based upon the last message received.

If the transmission service required, engine service required, 4WD service required or body service required message is missing for 5 seconds or longer, the IPC defaults the powertrain malfunction (wrench) RTT indicator on.

Possible Sources

- Communication concern
- BCM
- GWM
- PCM
- IPC

PINPOINT TEST AN : THE POWERTRAIN MALFUNCTION (WRENCH) RTT (RECONFIGURABLE TELLTALE) INDICATOR IS NEVER OR ALWAYS ON

AN1 CHECK THE MESSAGE CENTER OPERATION

- Ignition ON.
- Close all the doors and hood.
- Clear all message center warnings by pressing the OK button for each warning present.
- Monitor the door ajar RTT warning indicator.
- Open the driver door.
- Clear the message center popup warning.
- Monitor the door ajar RTT warning indicator.

Is the door ajar RTT warning indicator off with the door closed, and on with the door open?

Yes	GO to AN2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AN2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AN3

AN3 PERFORM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	GO to AN4

AN4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	If the powertrain malfunction (wrench) RTT indicator is never on, the system is operating correctly at this time. There are currently no vehicle concerns present that require the powertrain malfunction (wrench) RTT indicator display. If the powertrain malfunction (wrench) RTT indicator is always on, DIAGNOSE all PCM Diagnostic Trouble Codes (DTCs). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .

The Check Fuel Fill Inlet Message Is Always Displayed

Normal Operation and Fault Conditions

REFER to: Message Center - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

If the check fuel fill inlet message request is missing for less than 5 seconds, the IPC defaults the check fuel fill inlet message center message to the last indication state, based upon the last message received.

If the check fuel fill inlet message request is missing for 5 seconds or longer, the IPC defaults the check fuel fill inlet message center message off.

Possible Sources

- Evaporative emissions system concern
- GWM
- PCM
- IPC

PINPOINT TEST AO : THE CHECK FUEL FILL INLET MESSAGE IS ALWAYS DISPLAYED

AO1 CHECK THE MESSAGE CENTER OPERATION

- Ignition ON.
- Close all the doors and hood.
- Clear all message center warnings by pressing the OK button for each warning present.
- Monitor the door ajar RTT warning indicator.
- Open the driver door.
- Clear the message center popup warning.
- Monitor the door ajar RTT warning indicator.

Is the door ajar RTT warning indicator off with the door closed, and on with the door open?

Yes	
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AO2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AO3

AO3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	If the check fuel fill inlet message is never on, the system is operating correctly at this time. There are currently no vehicle concerns present that require the check fuel fill inlet message display. If the check fuel fill inlet message is always on, DIAGNOSE all PCM Diagnostic Trouble Codes (DTCs). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) .

	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .

The Active Park Assist/Parking Aid Chime Is Inoperative

Normal Operation and Fault Conditions

REFER to: Warning Chimes - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Possible Sources

- Parking aid system concern
- Communication concern
- GWM
- IPC

PINPOINT TEST AP : THE ACTIVE PARK ASSIST/PARKING AID CHIME IS INOPERATIVE

AP1 CHECK THE SAFETY BELT WARNING CHIME OPERATION

- Ignition OFF.
- Ignition ON.
- Unbuckle the driver safety belt.
- Monitor the safety belt warning chime when the ignition is transitioned from OFF to RUN for 6 seconds.

Does the safety belt warning chime operate for approximately 6 seconds?

Yes	GO to AP2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AP2 VERIFY THE CHIMES FUNCTION THROUGH THE AUDIO SPEAKERS

- Ignition OFF.
- Ignition ON.
- Monitor the location of the safety belt warning chime (front/rear audio speakers or IPC) when the ignition is transitioned from OFF to RUN.

Does the chime sound through the audio speakers?

Yes	GO to AP4
No	GO to AP3

AP3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to AP4

AP4 PERFORM THE PAM (PARKING ASSIST CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PAM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Parking Aid (413-13 Parking Aid - Vehicles With: Rear Parking Aid) .
No	GO to AP5

AP5 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	DIAGNOSE the audible parking aid. REFER to: Parking Aid (413-13 Parking Aid - Vehicles With: Rear Parking Aid) .

The Adaptive Cruise Control Warning Chime Is Inoperative

Normal Operation and Fault Conditions

REFER to: Warning Chimes - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Possible Sources

- Adaptive cruise control concern
- Communication concern
- GWM
- IPC

PINPOINT TEST AQ : THE ADAPTIVE CRUISE CONTROL WARNING CHIME IS INOPERATIVE

AQ1 CHECK THE SAFETY BELT WARNING CHIME OPERATION

- Ignition OFF.
- Ignition ON.
- Unbuckle the driver safety belt.
- Monitor the safety belt warning chime when the ignition is transitioned from OFF to RUN for 6 seconds.

Does the safety belt warning chime operate for approximately 6 seconds?

Yes	GO to AQ2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AQ2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AQ3

AQ3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to AQ4

AQ4 CHECK THE CRUISE CONTROL DISPLAY IN THE MESSAGE CENTER

- Verify the adaptive cruise control display functions in the message center when the adaptive cruise control is in operation.

Does the cruise control display operate in the message center?

Yes	DIAGNOSE the cruise control system. REFER to: Cruise Control (419-03 Cruise Control) .
No	GO to Pinpoint Test AE

The Chime Always Sounds

Refer to Wiring Diagrams Cell 60 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Warning Chimes - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Possible Sources

- Exterior lighting concern
- Interior lighting concern
- Wiring, terminals or connectors
- Ignition switch
- Ignition lock cylinder housing
- BCM
- IPC

PINPOINT TEST AR : THE CHIME ALWAYS SOUNDS

AR1 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) FOR MESSAGE CENTER MESSAGES

- Ignition OFF.
- Ignition ON.
- Check the IPC and message center for illuminated warning indicator or message center displays.

Does the IPC have any RTT indicators illuminated or message center messages displayed?

Yes	REPAIR all message center indication concerns first. REFER to Symptom Chart: IPC or Symptom Chart: Information And Message Center.
No	GO to AR2

AR2 CHECK THE EXTERIOR LIGHTING OPERATION

- Place the headlamp switch in the OFF position.
- Close all doors.
- Wait one minute.
- Observe the exterior lights.

Are the headlamps and parking lamps off?

Yes	GO to AR3
No	REFER to: Headlamps (417-01 Exterior Lighting, Diagnosis and Testing). REFER to: Parking, Rear and License Plate Lamps (417-01 Exterior Lighting, Diagnosis and Testing).

AR3 CHECK THE INTERIOR LIGHTING OPERATION

- Open and close the driver door.
- Observe the interior lights.

Do the interior lights operate correctly from the driver door?

Yes	GO to AR4
No	REFER to: Interior Lighting (417-02 Interior Lighting) .

AR4 PERFORM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	GO to AR5

AR5 CHECK THE BCM (BODY CONTROL MODULE) INPUT PIDS FROM THE IGNITION SWITCH

- Using a diagnostic scan tool, view the BCM Parameter Identifications (PIDs).
- Select and monitor the BCM ignition switch (IGN_SW_ACC), (IGN_SW_RUN) and (IGN_SW_KEY_IN) Parameter Identifications (PIDs) while cycling the ignition switch through the ACC, OFF, and RUN states.

Do the BCM Parameter Identifications (PIDs) match the ignition switch position?

Yes	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	For ignition RUN or ACC concerns, DIAGNOSE the ignition switch outputs to the BCM.

	REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches) . For key-in-ignition concern, GO to AR6

AR6 CHECK THE KEY-IN-IGNITION INPUT CIRCUIT FOR VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280G.
- Remove the key from the ignition cylinder.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-38		Ground

Is any voltage present?

Yes	GO to AR7
No	GO to AR9

AR7 CHECK THE KEY-IN-IGNITION INPUT

- Disconnect Ignition Switch C250.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-38		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to AR8

AR8 CHECK THE IGNITION SWITCH OPERATION

- Perform the ignition switch component test.
  Refer to Wiring Diagrams Cell 149 for schematic and connector information.

Does the ignition switch pass the component test?

Yes	INSTALL a new ignition lock cylinder housing. REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).
No	INSTALL a new ignition switch. REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).

AR9 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the BCM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and verify the concern is still present

Is the concern still present?

Yes	CHECK On-Line Automotive Service Information System (OASIS) for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Forward Collision Warning Chime Is Inoperative (If Equipped)

Normal Operation and Fault Conditions

REFER to: Warning Chimes - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Possible Sources

- Forward collision system concern
- Communication concern
- GWM
- IPC

PINPOINT TEST AS : THE FORWARD COLLISION WARNING CHIME IS INOPERATIVE (IF EQUIPPED)

AS1 CHECK THE SAFETY BELT WARNING CHIME OPERATION

- Ignition OFF.
- Ignition ON.
- Unbuckle the driver safety belt.
- Monitor the safety belt warning chime when the ignition is transitioned from OFF to RUN for 6 seconds.

Does the safety belt warning chime operate for approximately 6 seconds?

Yes	GO to AS2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AS2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AS3

AS3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	DIAGNOSE the collision warning system. REFER to: Collision Warning and Collision Avoidance System (419-03C Collision Warning and Collision Avoidance System, Diagnosis and Testing).

The Headlamps On Warning Chime Is Inoperative

Normal Operation and Fault Conditions

REFER to: Warning Chimes - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Possible Sources

- BCM
- GWM
- IPC

PINPOINT TEST AT : THE HEADLAMPS ON WARNING CHIME IS INOPERATIVE

AT1 CHECK THE SAFETY BELT WARNING CHIME OPERATION

- Ignition OFF.
- Ignition ON.
- Unbuckle the driver safety belt.
- Monitor the safety belt warning chime when the ignition is transitioned from OFF to RUN for 6 seconds.

Does the safety belt warning chime operate for approximately 6 seconds?

Yes	GO to AT2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and

	REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AT2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AT3

AT3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	DIAGNOSE all BCM Diagnostic Trouble Codes (DTCs). REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .

The Ignition-Engine On Warning Chime Is Inoperative

Normal Operation and Fault Conditions

REFER to: Warning Chimes - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Possible Sources

- Interior lighting concern
- PRNDL indication concern
- BCM
- GWM
- IPC

PINPOINT TEST AU : THE IGNITION-ENGINE ON WARNING CHIME IS INOPERATIVE

AU1 CHECK THE SAFETY BELT WARNING CHIME OPERATION

- Ignition OFF.
- Ignition ON.
- Unbuckle the driver safety belt.
- Monitor the safety belt warning chime when the ignition is transitioned from OFF to RUN for 6 seconds.

Does the safety belt warning chime operate for approximately 6 seconds?

Yes	GO to AU2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AU2 CHECK THE DOOR AJAR INDICATION

- Open the driver door.
- Observe the door ajar warning indicator or door ajar RTT warning indicator.

Does the door ajar warning indicator or door ajar RTT warning indicator turn on with the driver door ajar?

Yes	GO to AU3
No	GO to Pinpoint Test AF

AU3 CHECK THE PRNDL OPERATION

- Shift the transmission range selector through the ranges while observing the PRNDL indication.

Does the PRNDL indication match the selected transmission range?

Yes	GO to AU4
No	GO to Pinpoint Test S

AU4 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	DIAGNOSE all GWM Diagnostic Trouble Codes (DTCs) REFER to: Communications Network (418-00 Module Communications Network) .

The Key-In-Ignition Warning Chime Is Inoperative

Refer to Wiring Diagrams Cell 60 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Warning Chimes - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10F1:14	Key In Switch: Circuit Short To Ground or Open	A continuous and on-demand DTC that sets in the BCM if an open is detected on the key-in-ignition switch input with the ignition ON.

Possible Sources

- Wiring, terminals or connectors
- Interior lighting concern
- Key-in-ignition switch (part of the ignition switch)
- BCM
- GWM
- IPC

PINPOINT TEST AV : THE KEY-IN-IGNITION WARNING CHIME IS INOPERATIVE

AV1 CHECK THE SAFETY BELT WARNING CHIME OPERATION

- Ignition OFF.
- Ignition ON.
- Monitor the safety belt warning chime when the ignition switch is transitioned from OFF to RUN for 6 seconds.

Does the safety belt warning chime operate for approximately 6 seconds?

Yes	GO to AV2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AV2 CHECK THE INTERIOR LAMPS OPERATION

- Open and close the driver door.
- Observe the interior lamps.

Do the interior lamps operate correctly from the driver door?

Yes	GO to AV3
No	REFER to: Interior Lighting (417-02 Interior Lighting) .

AV3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to AV4

AV4 PERFORM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Is DTC B10F1:14 present?

Yes	GO to AV5
No	GO to AV9

AV5 CHECK THE KEY-IN-IGNITION INPUT CIRCUIT FOR VOLTAGE

- Ignition OFF.
- Insert the key into the ignition cylinder.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-38	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to AV9
No	GO to AV6

AV6 CHECK THE KEY-IN-IGNITION INPUT CIRCUIT FOR SHORT TO GROUND

- Remove the key from the ignition cylinder.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-38	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to AV7
No	REPAIR the circuit.

AV7 CHECK THE KEY-IN-IGNITION INPUT CIRCUIT FOR OPEN

- Disconnect Ignition Switch C250.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-38	Ω	C250-5

Is the resistance less than 3 ohms?

Yes	REPAIR the circuit.
No	GO to AV8

AV8 CHECK THE IGNITION SWITCH

- Remove the ignition switch.
  REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).
- Perform the ignition switch component test.

Is the ignition switch OK?

Yes	INSTALL a new ignition lock cylinder housing. REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).
No	INSTALL a new ignition switch. REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).

AV9 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the BCM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and verify the concern is still present

Is the concern still present?

Yes	CHECK On-Line Automotive Service Information System (OASIS) for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Lane Keeping Aid Warning Chime Is Inoperative

Normal Operation and Fault Conditions

REFER to: Warning Chimes - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Possible Sources

- Communication concern
- Lane departure warning system concern
- GWM
- IPC

PINPOINT TEST AW : THE LANE KEEPING AID WARNING CHIME IS INOPERATIVE

AW1 CHECK THE SAFETY BELT WARNING CHIME OPERATION

- Ignition OFF.
- Ignition ON.
- Unbuckle the driver safety belt.
- Monitor the safety belt warning chime when the ignition is transitioned from OFF to RUN for 6 seconds.

Does the safety belt warning chime operate for approximately 6 seconds?

Yes	GO to AW2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AW2 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AW3

AW3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to AW4

AW4 CHECK THE LANE DEPARTURE SYSTEM OPERATION

- Verify the lane departure system operates correctly.

Does the lane departure system operate correctly?

Yes	The system is operating correctly at this time. Inform the customer that this chime only operates with the hands off the steering wheel.
No	REFER to: Lane Keeping System (419-07 Lane Keeping System) .

The Parking Brake Warning Chime Is Inoperative

Normal Operation and Fault Conditions

REFER to: Warning Chimes - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Possible Sources

- Brake warning indication concern
- Communication concern
- BCM
- GWM
- IPC

Visual Inspection And Diagnostic Pre-checks

Check the operation of the parking brake warning chime with the vehicle moving at least 10 km/h (6.2 mph) and the parking brake slightly applied (just enough to turn the brake warning indicator on without damaging the rear brakes).

PINPOINT TEST AX : THE PARKING BRAKE WARNING CHIME IS INOPERATIVE

AX1 CHECK THE SAFETY BELT WARNING CHIME OPERATION

- Ignition OFF.
- Ignition ON.
- Unbuckle the driver safety belt.
- Monitor the safety belt warning chime when the ignition is transitioned from OFF to RUN for 6 seconds.

Does the safety belt warning chime operate for approximately 6 seconds?

Yes	GO to AX2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AX2 CHECK THE BRAKE WARNING INDICATOR FOR CORRECT OPERATION

- Apply the parking brake.
- Observe the brake warning indicator.

Does the brake warning indicator illuminate?

Yes	GO to AX3
No	GO to Pinpoint Test N

AX3 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AX4

AX4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	DIAGNOSE all BCM Diagnostic Trouble Codes (DTCs).

	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .

The Perimeter Alarm Chime Is Inoperative

Normal Operation and Fault Conditions

REFER to: Warning Chimes - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Possible Sources

- Perimeter alarm concern
- BCM
- GWM
- IPC

PINPOINT TEST AY : THE PERIMETER ALARM CHIME IS INOPERATIVE

AY1 CHECK THE SAFETY BELT WARNING CHIME OPERATION

- Ignition OFF.
- Ignition ON.
- Monitor the safety belt warning chime when the ignition switch is transitioned from OFF to RUN for 6 seconds.

Does the safety belt warning chime operate for approximately 6 seconds?

Yes	GO to AY2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AY2 CHECK THE OPERATION OF THE PERIMETER ALARM

- Arm the perimeter alarm using the remote key locking feature (key fob).
- Wait approximately 15 seconds for the system to arm.
- Open the driver door using the interior door handle.

Does the perimeter alarm sound after 12 seconds?

Yes	GO to AY3
No	REFER to: Perimeter Anti-Theft Alarm (419-01 Perimeter Anti-Theft Alarm) .

AY3 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AY4

AY4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	DIAGNOSE all BCM Diagnostic Trouble Codes (DTCs). REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .

The Safety Belt Warning Chime Or The Belt-Minder® Feature Is Inoperative

Normal Operation and Fault Conditions

REFER to: Warning Chimes - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Possible Sources

- Belt-Minder® deactivated
- Communication concern
- Safety belt warning indication concern
- Vehicle speed input concern
- GWM
- RCM
- IPC

PINPOINT TEST AZ : THE SAFETY BELT WARNING CHIME OR THE BELT-MINDER® FEATURE IS INOPERATIVE

AZ1 CHECK THE HEADLAMPS ON WARNING CHIME

- Ignition OFF.
- Turn the headlamps on.
- Remove the ignition key (except push button start) or place the ignition OFF (with push button start).
- Open the driver door.
- Monitor the headlamps on warning chime.

Does the headlamps on warning chime operate?

Yes	GO to AZ2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

AZ2 CHECK THE SAFETY BELT WARNING CHIME OPERATION

- Ignition ON.
- Monitor the safety belt warning chime when the ignition switch is transitioned from OFF to RUN for 6 seconds.

Does the safety belt warning chime operate for approximately 6 seconds?

Yes	For the Belt-Minder®, GO to AZ3 For a safety belt warning chime, GO to AZ4
No	GO to AZ5

AZ3 CHECK THE SPEEDOMETER OPERATION

- Ignition ON.
- Verify the speedometer operates.

Does the speedometer operate?

Yes	GO to AZ4
No	GO to Pinpoint Test D

AZ4 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to AZ5

AZ5 PERFORM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	GO to AZ6

AZ6 PERFORM THE RCM (RESTRAINTS CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the RCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	GO to AZ7

AZ7 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to AZ8

AZ8 CHECK THE DRIVER AND FRONT PASSENGER SAFETY BELT BUCKLE SWITCH

- Using a diagnostic scan tool, monitor the RCM driver and front passenger safety belt buckle Parameter Identifications (PIDs) (SBELT_D_ST) and (SBLT_P_ST) while buckling and unbuckling the safety belt.

Do the Parameter Identifications (PIDs) display BUCKLED with the safety belt buckled and UNBUCKLED with the safety belt unbuckled?

Yes	GO to AZ9
No	INSTALL a new safety belt buckle. SEAT BELT BUCKLE R&I IS UNAVAILABLE AT THIS TIME.

AZ9 CHECK THE BELT-MINDER® CONFIGURATION

NOTE: *Verify that an administrator key is used for this test and not a MyKey® programmed key. When a MyKey® programmed key is used, the Belt-Minder® is automatically turned on and cannot be disabled (if previously disabled by an administrator, the Belt-Minder® remains disabled when an administrator key is used).*

- Verify the Belt-Minder® is activated or configured on for the seating position in question.
  REFER to: Seatbelt Minder Deactivating/Activating (413-01 Instrumentation, Message Center and Warning Chimes, General Procedures).

Is the Belt-Minder activated for the seating position in question?

Yes	If the Belt-Minder® is always on above 10 km/h (6 mph) with the safety belt unfastened, the system is operating correctly. If the Belt-Minder® is always on with the safety belt fastened or never on with the safety belt unfastened above 10 km/h (6 mph), INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
No	ACTIVATE the Belt-Minder® for the seating position in question. REFER to: Seatbelt Minder Deactivating/Activating (413-01 Instrumentation, Message Center and Warning Chimes, General Procedures).

The Turn Signal-Hazard On Chime Or Turn Signal Left On Chime Is Inoperative

Normal Operation and Fault Conditions

REFER to: Warning Chimes - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Possible Sources

- Turn signal indication concern
- Communication concern
- BCM
- GWM
- IPC

PINPOINT TEST BA : THE TURN SIGNAL-HAZARD ON CHIME OR TURN SIGNAL LEFT ON CHIME IS INOPERATIVE

BA1 CHECK THE SAFETY BELT WARNING CHIME OPERATION

- Ignition OFF.
- Ignition ON.
- Unbuckle the driver safety belt.
- Monitor the safety belt warning chime when the ignition is transitioned from OFF to RUN for 6 seconds.

Does the safety belt warning chime operate for approximately 6 seconds?

Yes	GO to BA2
No	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

BA2 CHECK THE TURN SIGNAL INDICATOR OPERATION

- Verify the RH and LH turn signal indicators operate correctly.

Do the turn signal indicators operate correctly?

Yes	GO to BA3
No	GO to Pinpoint Test P

BA3 PERFORM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	DIAGNOSE all GWM Diagnostic Trouble Codes (DTCs). REFER to: Communications Network (418-00 Module Communications Network) .

Lost Communication With ECM/ PCM U0100:00

Normal Operation and Fault Conditions

REFER to: Communications Network - Overview (418-00 Module Communications Network, Description and Operation).

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication With ECM/PCM "A": No Sub Type Information	Sets in continuous memory in the IPC if data messages received from the PCM through the GWM are missing for 5 seconds or longer.

Possible Sources

- Communication concern
- Battery voltage concern
- GWM
- PCM
- IPC

PINPOINT TEST BB : LOST COMMUNICATION WITH ECM (ENGINE CONTROL MODULE) / PCM (POWERTRAIN CONTROL MODULE) U0100:00

BB1 VERIFY THE SCAN TOOL COMMUNICATES WITH THE PCM (POWERTRAIN CONTROL MODULE)

- Connect the scan tool.
- Check that a vehicle session can be established using the scan tool.

Can a vehicle session be established?

Yes	GO to BB2
No	REFER to: Communications Network (418-00 Module Communications Network) .

BB2 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform the IPC self-test.
- Clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the IPC self-test.

Is DTC U0100:00 retrieved again?

Yes	GO to BB3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BB3 PERFORM THE PCM (POWERTRAIN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PCM self-test.

Are any Diagnostic Trouble Codes (DTCs) DTC recorded?

Yes	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) .

	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to BB4

BB4 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to BB5

BB5 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) set?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to BB6

BB6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00 OR DTC (DIAGNOSTIC TROUBLE CODE) U0100:87 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, perform the continuous memory self-test.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0100:00 set in the ABS module or DTC U0100:87 set in the BCM?

Yes	GO to BB7
No	GO to BB8

BB7 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the PCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PCM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BB8 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins

- pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connector. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication with TCM U0101:00

Normal Operation and Fault Conditions

REFER to: Communications Network - Overview (418-00 Module Communications Network, Description and Operation).

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0101:00	Lost Communication with TCM	Sets in continuous memory in the IPC if transmission data messages received from the TCM through the GWM are missing for 5 seconds or longer.

Possible Sources

- Communication concern
- Battery voltage concern
- GWM
- TCM
- IPC

PINPOINT TEST BC : LOST COMMUNICATION WITH TCM (TRANSMISSION CONTROL MODULE) U0101:00

BC1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to BC2
No	CLEAR the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BC2 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, perform a network test.

Does the TCM pass the network test?

Yes	GO to BC3
No	REFER to: Communications Network (418-00 Module Communications Network) .

BC3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to BC4

BC4 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to BC5

BC5 RECHECK THE IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI, or the PMI may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the IPC self-test.

Is DTC U0101:00 still present?

Yes	GO to BC6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BC6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00 SET IN OTHER MODULES

NOTE: *If new modules were installed prior to the DTC being set, the module configuration can be incorrectly set during the PMI or the PMI may not have been carried out.*

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0100:00 set in the BCM?

Yes	GO to BC7
No	GO to BC8

BC7 CHECK FOR CORRECT TCM (TRANSMISSION CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the TCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the TCM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BC8 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With CCM U0104:00

Normal Operation and Fault Conditions

REFER to: Communications Network - Overview (418-00 Module Communications Network, Description and Operation).

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0104:00	Lost Communication With Cruise Control Module: No Sub Type Information	Sets in continuous memory in the IPC if data messages received from the CCM through the GWM are missing for 5 seconds or longer.

Possible Sources

- Communication concern
- Battery voltage concern
- GWM
- CCM
- IPC

PINPOINT TEST BD : LOST COMMUNICATION WITH CCM (CRUISE CONTROL MODULE) U0104:00

BD1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to BD2
No	CLEAR the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BD2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Does the CCM pass the network test?

Yes	GO to BD3
No	REFER to: Communications Network (418-00 Module Communications Network) .

BD3 PERFORM THE CCM (CRUISE CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the CCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Cruise Control (419-03 Cruise Control) .
No	GO to BD4

BD4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to BD5

BD5 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to BD6

BD6 RECHECK THE IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI, or the PMI may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the IPC self-test.

Is DTC U0104:00 still present?

Yes	GO to BD7
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BD7 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0104:00 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, perform the continuous memory self-test.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0104:00 set in the ABS module?

Yes	GO to BD8
No	GO to BD9

BD8 CHECK FOR CORRECT CCM (CRUISE CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all CCM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the CCM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BD9 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connector. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With ABS Control Module U0121:00

Normal Operation and Fault Conditions

REFER to: Communications Network - Overview (418-00 Module Communications Network, Description and Operation).

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0121:00	Lost Communication With Anti-Lock Brake System (ABS) Control Module: No Sub Type Information	Sets in continuous memory in the IPC if data messages received from the ABS module through the GWM are missing for 5 seconds or longer.

Possible Sources

- Communication concern
- Battery voltage concern
- GWM
- ABS module
- IPC

PINPOINT TEST BE : LOST COMMUNICATION WITH ABS (ANTI-LOCK BRAKE SYSTEM) CONTROL MODULE U0121:00

BE1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to BE2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BE2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Does the ABS module pass the network test?

Yes	GO to BE3
No	REFER to: Communications Network (418-00 Module Communications Network) .

BE3 PERFORM THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST

- Using a diagnostic scan tool, perform the ABS module self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	GO to BE4

BE4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to BE5

BE5 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to BE6

BE6 RECHECK THE IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI, or the PMI may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the IPC self-test.

Is DTC U0121:00 still present?

Yes	GO to BE7
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BE7 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0121:87 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, perform the continuous memory self-test.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0121:87 set in the BCM?

Yes	GO to BE8
No	GO to BE9

BE8 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect and inspect the ABS module and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the ABS module and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module - Vehicles With: Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BE9 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With PSCM U0131:00

Normal Operation and Fault Conditions

REFER to: Communications Network - Overview (418-00 Module Communications Network, Description and Operation).

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0131:00	Lost Communication With Power Steering Control Module: No Sub Type Information	Sets in continuous memory in the IPC if data messages received from the PSCM through the GWM are missing for 5 seconds or longer.

Possible Sources

- Communication concern
- Battery voltage concern
- GWM
- PSCM
- IPC

PINPOINT TEST BF : LOST COMMUNICATION WITH PSCM (POWER STEERING CONTROL MODULE) U0131:00

BF1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to BF2
No	CLEAR the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BF2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Does the BCM pass the network test?

Yes	GO to BF3
No	REFER to: Communications Network (418-00 Module Communications Network) .

BF3 PERFORM THE PSCM (POWER STEERING CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PSCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Power Steering (211-02 Power Steering - Vehicles With: Hydraulic Power Assist Steering (HPAS)) .
No	GO to BF4

BF4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to BF5

BF5 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to BF6

BF6 RECHECK THE IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the Programmable Module Installation (PMI), or the Programmable Module Installation (PMI) may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the IPC self-test.

Is DTC U0131:00 still present?

Yes	GO to BF7
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BF7 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0131:87 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, perform the continuous memory self-test.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0131:87 set in the BCM?

Yes	GO to BF8
No	GO to BF9

BF8 CHECK FOR CORRECT PSCM (POWER STEERING CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the PSCM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all the PSCM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PSCM. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BF9 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With BCM U0140:00

Normal Operation and Fault Conditions

REFER to: Communications Network - Overview (418-00 Module Communications Network, Description and Operation).

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	Sets in continuous memory in the IPC if data messages received from the BCM through the GWM are missing for 5 seconds or longer.

Possible Sources

- Communication concern
- Battery voltage concern
- GWM
- BCM
- IPC

PINPOINT TEST BG : LOST COMMUNICATION WITH BCM (BODY CONTROL MODULE) U0140:00

BG1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to BG2
No	CLEAR the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BG2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Does the BCM pass the network test?

Yes	GO to BG3
No	REFER to: Communications Network (418-00 Module Communications Network) .

BG3 PERFORM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	GO to BG4

BG4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to BG5

BG5 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	REFER to DTC Chart: IPC in this section.
No	GO to BG6

BG6 RECHECK THE IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI, or the PMI may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the IPC self-test.

Is DTC U0140:00 or DTC U0140:81 still present?

Yes	GO to BG7
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BG7 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140:00 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.

- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, perform the continuous memory self-test.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0140:00 set in the ABS, APIM or RCM?

Yes	GO to BG8
No	GO to BG9

BG8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the BCM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BG9 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With GWM U0146:00

Normal Operation and Fault Conditions

REFER to: Communications Network - Overview (418-00 Module Communications Network, Description and Operation).

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0146:00	Lost Communication With Gateway "A": No Sub Type Information	Sets in continuous memory in the IPC if data messages received from the GWM over the MS-CAN or HS-CAN are missing for 5 seconds or longer.

Possible Sources

- Communication concern
- Battery voltage concern
- GWM
- IPC

PINPOINT TEST BH : LOST COMMUNICATION WITH GWM (GATEWAY MODULE A) U0146:00

BH1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to BH2
No	CLEAR the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BH2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Does the GWM pass the network test?

Yes	GO to BH3
No	REFER to: Communications Network (418-00 Module Communications Network) .

BH3 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to BH4

BH4 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to BH5

BH5 RECHECK THE IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI, or the PMI may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the IPC self-test.

Is DTC U0146:00 still present?

Yes	GO to BH6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BH6 CHECK FOR CORRECT GWM (GATEWAY MODULE A) OPERATION

- Ignition OFF.
- Disconnect and inspect the GWM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the GWM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GWM. REFER to: Gateway Module A (GWM) (418-00 Module Communications Network, Removal and Installation). CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the IPC self-test. If DTC U0146:00 is still present, GO to BH7
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BH7 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

BH7 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connector. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	Sets in continuous memory in the IPC if data messages received from the RCM through the GWM are missing for 5 seconds or longer.

Possible Sources

- Communication concern
- Battery voltage concern
- GWM
- RCM
- IPC

PINPOINT TEST BI : LOST COMMUNICATION WITH RCM (RESTRAINTS CONTROL MODULE) U0151:00

BI1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to BI2
No	CLEAR the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BI2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Does the RCM pass the network test?

Yes	GO to BI3
No	REFER to: Communications Network (418-00 Module Communications Network) .

BI3 PERFORM THE RCM (RESTRAINTS CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the RCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	GO to BI4

BI4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to BI5

BI5 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to BI6

BI6 RECHECK THE IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI, or the PMI may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the IPC self-test.

Is DTC U0151:00 still present?

Yes	GO to BI7
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BI7 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0151:87 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, perform the continuous memory self-test.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0151:87 set in the BCM?

Yes	GO to BI8
No	GO to BI9

BI8 CHECK FOR CORRECT RCM (RESTRAINTS CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the RCM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the RCM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BI9 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With PAM U159:00

Normal Operation and Fault Conditions

REFER to: Communications Network - Overview (418-00 Module Communications Network, Description and Operation).

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0159:00	Lost Communication With Parking Assist Control Module "A": No Sub Type Information	Sets in continuous memory in the IPC if data messages received from the PAM (part of the BCM) through the GWM are missing for 5 seconds or longer.

Possible Sources

- Communication concern
- Battery voltage concern
- GWM
- BCM
- IPC

PINPOINT TEST BJ : LOST COMMUNICATION WITH PAM (PARKING ASSIST CONTROL MODULE) U159:00

BJ1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to BJ2
No	CLEAR the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BJ2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Does the PAM pass the network test?

Yes	GO to BJ3
No	REFER to: Communications Network (418-00 Module Communications Network) .

BJ3 PERFORM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Parking Aid (413-13 Parking Aid - Vehicles With: Rear Parking Aid) .
No	GO to BJ4

BJ4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	

	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to BJ5

BJ5 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to BJ6

BJ6 RECHECK THE IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI, or the PMI may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the IPC self-test.

Is DTC U0159:00 still present?

Yes	GO to BJ7
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BJ7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the BCM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all the BCM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PAM (part of the BCM). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the IPC self-test. If DTC U0184:00 is still present, GO to BJ8
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BJ8 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With Radio U0184:00

Normal Operation and Fault Conditions

REFER to: Communications Network - Overview (418-00 Module Communications Network, Description and Operation).

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0184:00	Lost Communication With Radio: No Sub Type Information	Sets in continuous memory in the IPC if data messages received from the ACM are missing for 5 seconds or longer.

Possible Sources

- Communication concern
- Battery voltage concern
- ACM
- IPC

PINPOINT TEST BK : LOST COMMUNICATION WITH RADIO U0184:00

BK1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to BK2
No	CLEAR the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BK2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Does the ACM pass the network test?

Yes	GO to BK3
No	REFER to: Communications Network (418-00 Module Communications Network) .

BK3 PERFORM THE ACM (AUDIO FRONT CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the ACM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	Refer to the appropriate section in Group 415 for the procedure.
No	GO to BK4

BK4 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to BK5

BK5 RECHECK THE IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the Programmable Module Installation (PMI), or the Programmable Module Installation (PMI) may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the IPC self-test.

Is DTC U0184:00 still present?

Yes	GO to BK6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BK6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all ACM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all the ACM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. Refer to the appropriate section in Group 415 for the procedure. CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the IPC self-test. If DTC U0184:00 is still present, GO to BK7
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BK7 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With Door Control Module "A" U0199:00

Normal Operation and Fault Conditions

REFER to: Communications Network - Overview (418-00 Module Communications Network, Description and Operation).

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0199:00	Lost Communication With Door Control Module "A": No Sub Type Information	Sets in continuous memory in the IPC if data messages received from the DDM through the GWM are missing for 5 seconds or longer.

Possible Sources

- Communication concern
- Battery voltage concern
- GWM
- DDM
- IPC

PINPOINT TEST BL : LOST COMMUNICATION WITH DOOR CONTROL MODULE "A" :00

BL1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to BL2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BL2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Does the DDM pass the network test?

Yes	GO to BL3
No	REFER to: Communications Network (418-00 Module Communications Network) .

BL3 PERFORM THE DDM (DRIVER DOOR MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the DDM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Locks, Latches and Entry Systems (501-14 Handles, Locks, Latches and Entry Systems, Diagnosis and Testing).
No	GO to BL4

BL4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to BL5

BL5 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to BL6

BL6 RECHECK THE IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI, or the PMI may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the IPC self-test.

Is DTC U0199:00 still present?

Yes	GO to BL7
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BL7 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0199:87 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, perform the continuous memory self-test.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0199:87 set in the BCM?

Yes	GO to BL8
No	GO to BL9

BL8 CHECK FOR CORRECT DDM (DRIVER DOOR MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the DDM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the DDM and all related in-line connectors. Make sure they seat and latch correctly.

- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new DDM. REFER to: Driver Door Module (DDM) (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BL9 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With SCCM U0212:00

Normal Operation and Fault Conditions

REFER to: Communications Network - Overview (418-00 Module Communications Network, Description and Operation).

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0212:00	Lost Communication With Steering Column Control Module: No Sub Type Information	Sets in continuous memory in the IPC if data messages received from the SCCM through the GWM are missing for 5 seconds or longer.

Possible Sources

- Communication concern
- Battery voltage concern
- GWM
- SCCM
- IPC

PINPOINT TEST BM : LOST COMMUNICATION WITH SCCM (STEERING COLUMN CONTROL MODULE) U0212:00

BM1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to BM2
No	CLEAR the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BM2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Does the SCCM pass the network test?

Yes	GO to BM3
No	

No	REFER to: Communications Network (418-00 Module Communications Network) .

BM3 PERFORM THE SCCM (STEERING COLUMN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the SCCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches) .
No	GO to BM4

BM4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to BM5

BM5 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to BM6

BM6 RECHECK THE IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI, or the PMI may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the IPC self-test.

Is DTC U0212:00 still present?

Yes	GO to BM7
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BM7 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0212:87 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, perform the continuous memory self-test.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0212:87 set in the BCM?

Yes	GO to BM8
No	GO to BM9

BM8 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the SCCM and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the SCCM and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root

	cause of any connector or pin issues.

BM9 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With IPMA U023A:00 Or U0241:00

Normal Operation and Fault Conditions

REFER to: Communications Network - Overview (418-00 Module Communications Network, Description and Operation).

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U023A:00	Lost Communication With Image Processing Module A: No Sub Type Information	Sets in continuous memory in the IPC if data messages received from the IPMA through the GWM are missing for 5 seconds or longer.
U0241:00	Lost Communication With Headlamp Control Module "A"	Sets in continuous memory in the IPC if data messages received from the IPMA through the GWM are missing for 5 seconds or longer.

Possible Sources

- Communication concern
- Battery voltage concern
- GWM
- IPMA
- IPC

PINPOINT TEST BN : LOST COMMUNICATION WITH IPMA (IMAGE PROCESSING MODULE A) U023A:00 OR U0241:00

BN1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to BN2
No	CLEAR the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BN2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Does the IPMA pass the network test?

Yes	GO to BN3
No	REFER to: Communications Network (418-00 Module Communications Network) .

BN3 PERFORM THE IPMA (IMAGE PROCESSING MODULE A) SELF-TEST

- Using a diagnostic scan tool, perform the IPMA self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Interior Rear View Mirrors (501-09 Interior Rear View Mirrors) .
No	GO to BN4

BN4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network) .
No	GO to BN5

BN5 PERFORM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U3003:16 or DTC U3003:17 recorded?

Yes	REFER to the IPC DTC Chart.
No	GO to BN6

BN6 RECHECK THE IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI, or the PMI may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the IPC self-test.

Is DTC U023A:00 still present?

Yes	GO to BN7
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

BN7 CHECK FOR CORRECT IPMA (IMAGE PROCESSING MODULE A) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPMA and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPMA and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new interior rear view mirror. REFER to: Interior Rear View Mirror (501-09B Interior Rear View Mirrors, Removal and Installation). CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the IPC self-test. If DTC U023A:00 is still present, GO to BN8
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

BN8 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).

	REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Battery Voltage Low U3003:16

Refer to Wiring Diagrams Cell 60 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Auxiliary Battery System (414-00 Charging System - General Information, Description and Operation).

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	Sets in the IPC in continuous memory if the IPC detects battery voltage below 9 volts on the voltage supply circuit for 5 seconds or longer.

Possible Sources

- Wiring, terminals or connectors
- High circuit resistance
- Charging system concern
- IPC

PINPOINT TEST BO : BATTERY VOLTAGE LOW U3003:16

BO1 RECHECK THE IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U3003:16 still present?

Yes	GO to BO2
No	The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition.

BO2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) IN THE BCM (BODY CONTROL MODULE)

- Using a diagnostic scan tool, perform the BCM self-test.

Are any charging system Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules) .
No	GO to BO3

BO3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

- Check the battery condition and verify the battery is fully charged.
  REFER to: Battery Charging (414-00 Charging System - General Information, General Procedures).

Is the battery OK and fully charged?

Yes	GO to BO4
No	If the battery is discharged, DIAGNOSE the cause of the low battery condition. REFER to: Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma (414-00 Charging System - General Information, Diagnosis and Testing). REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). If the battery condition fails, INSTALL a new battery. REFER to: Battery (414-01 Battery, Mounting and Cables) .

BO4 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) VOLTAGE PID (PARAMETER IDENTIFICATION)

- Measure and record the voltage at the battery.
- Using a diagnostic scan tool, view the IPC Parameter Identifications (PIDs).
- Monitor the IPC voltage (MODULE_VOLT) PID

Is the voltage within 0.2 volt of the recorded battery voltage?

Yes	GO to BO7
No	GO to BO5

BO5 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) VOLTAGE SUPPLY

- Ignition OFF.
- Disconnect IPC C220.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-21		Ground

Is the voltage greater than 11 volts?

Yes	GO to BO6
No	REPAIR the circuit for high circuit resistance.

BO6 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C220-21		C220-5

Is the voltage greater than 11 volts?

Yes	GO to BO7
No	REPAIR the circuit for high circuit resistance.

BO7 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and all related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and all related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Battery Voltage High U3003:17

Normal Operation and Fault Conditions

REFER to: Auxiliary Battery System (414-00 Charging System - General Information, Description and Operation).

IPC DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	Sets in the IPC in continuous memory if the IPC detects battery voltage above 16 volts on the voltage supply circuit for 5 seconds or longer.

Possible Sources

- Charging system concern
- IPC

PINPOINT TEST BP : BATTERY VOLTAGE HIGH U3003:17

NOTE: *DTC U3003:17 may be stored in the module memory due to past battery charging or vehicle jump starting events.*

BP1 CHECK FOR OVERCHARGING DIAGNOSTIC TROUBLE CODES (DTCS) SET IN OTHER MODULES

- Ignition ON.
- Using a diagnostic scan tool, perform self-test on all modules.
- Retrieve the continuous memory DTCs from all modules.

Is DTC B1317, B1676, P0563 (PCM), U3003:17 or U3006:17 set in more than one module?

Yes	DIAGNOSE the overcharging condition. REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to BP2

BP2 CHECK THE BATTERY VOLTAGE

- Turn off all interior/exterior lights and accessories.
- Start and run the engine at approximately 2,000 rpm for 3 minutes while monitoring the battery voltage.

Does the battery voltage rise to 15.5 volts or higher?

Yes	DIAGNOSE the overcharging condition. REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to BP3

BP3 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:17

- Ignition OFF.
- Ignition ON.
- Using a diagnostic scan tool, clear the continuous memory DTCs.
- Carry out the IPC self-test.

Is DTC U3003:17 present?

Yes	INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

Seatbelt Minder Deactivating/Activating

Activation

WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.

NOTE: *The driver and passenger seat Belt-Minder® deactivating/activating can be carried out using the scan tool.*

NOTE: *If you are using a MyKey® programmed key, the Belt-Minder® cannot be disabled and does not time out after 5 minutes. If the Belt-Minder® has been previously disabled, it is re-enabled when a MyKey® programmed key is used.*

NOTE: *The driver and front passenger Belt-Minder® are deactivated/activated independently. When deactivating/activating one seating position, do not buckle the other position.*

NOTE: *Clear any message center warnings that are present before and throughout the procedure.*

1. Apply the parking brake before deactivating/activating the Belt-Minder®.
2. Place the selector lever in PARK (P).
3. Place the ignition in OFF.
4. Unbuckle the driver and the front passenger safety belts.
5. Place the ignition in the RUN mode (do not start the engine).
6. Wait until the safety belt warning indicator turns off (approximately 1 minute).
7. **NOTE:** *This step must be completed within 30 seconds after the safety belt warning indicator turns off (step 6).*

   Wait 5 seconds after the safety belt warning indicator turns off then for the seating position to be disabled, buckle then unbuckle the safety belt 3 times at a moderate speed, ending with the safety belt in the unbuckled state. After this step the safety belt warning indicator illuminates for 3 seconds then turns off.
8. **NOTE:** *Clear any message center warnings that are present before proceding with this step.*

   NOTE: *As confirmation of disabling the Belt-Minder® (if currently enabled), the safety belt warning indicator flashes 4 times per second for 3 seconds.*

   NOTE: *As confirmation of enabling the Belt-Minder® (if currently disabled), the safety belt warning indicator flashes 4 times per second for 3 seconds, followed by 3 seconds with the safety belt warning indicator off, followed by another flash sequence of 4 times per second for 3 seconds.*

   Within 7 seconds of the safety belt warning indicator turning off, buckle then unbuckle the safety belt one time at a moderate speed.
9. After confirmation, the deactivation/activation procedure is complete.

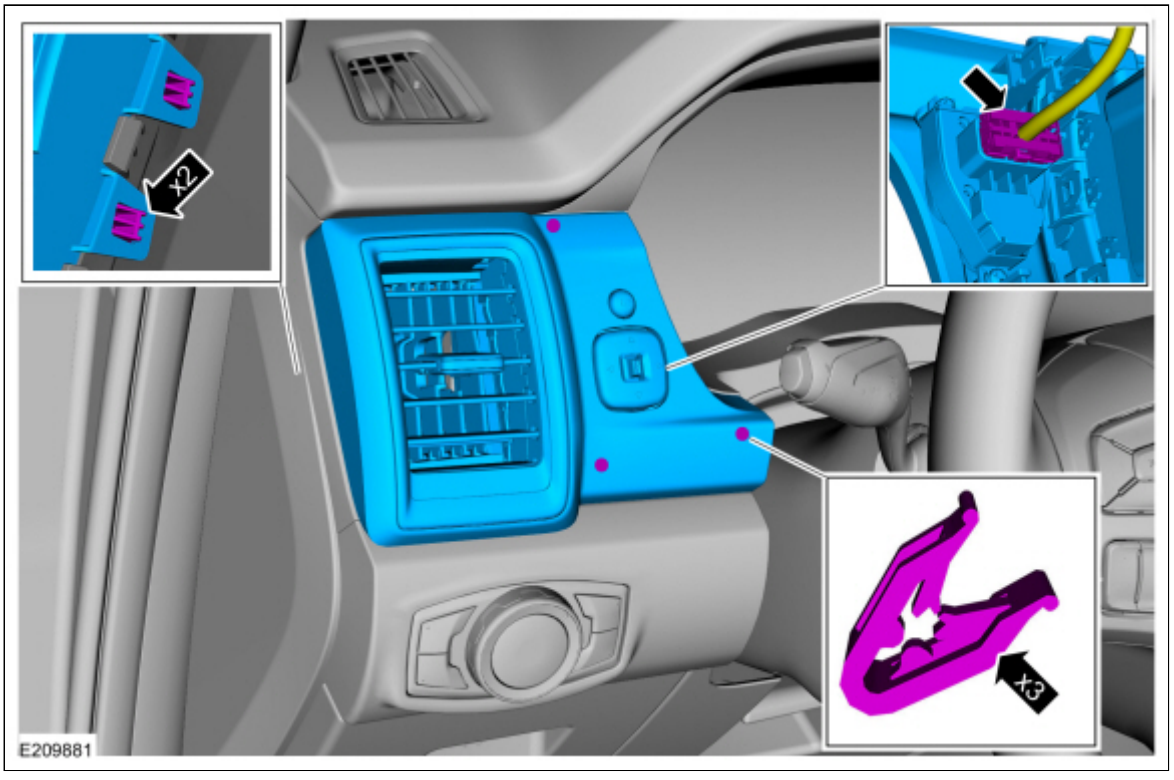
Special Tool(s) / General Equipment

Interior Trim Remover

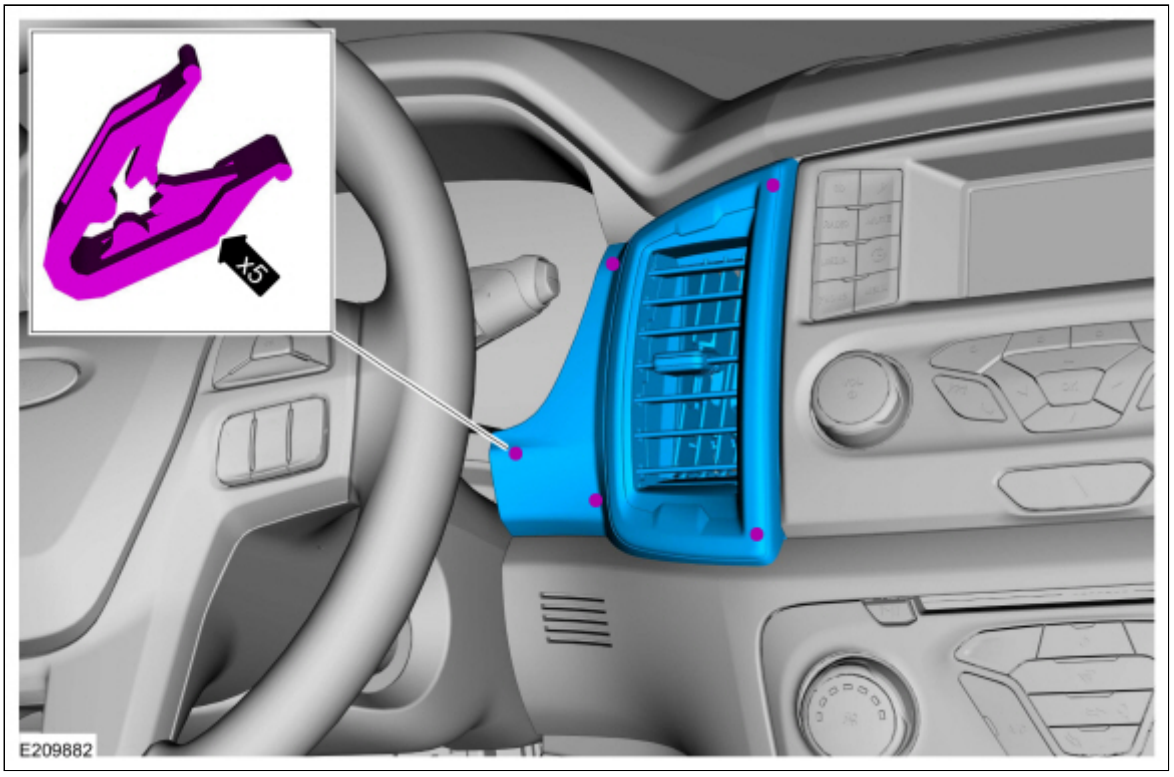
Removal

NOTE: *Removal steps in this procedure may contain installation details.*



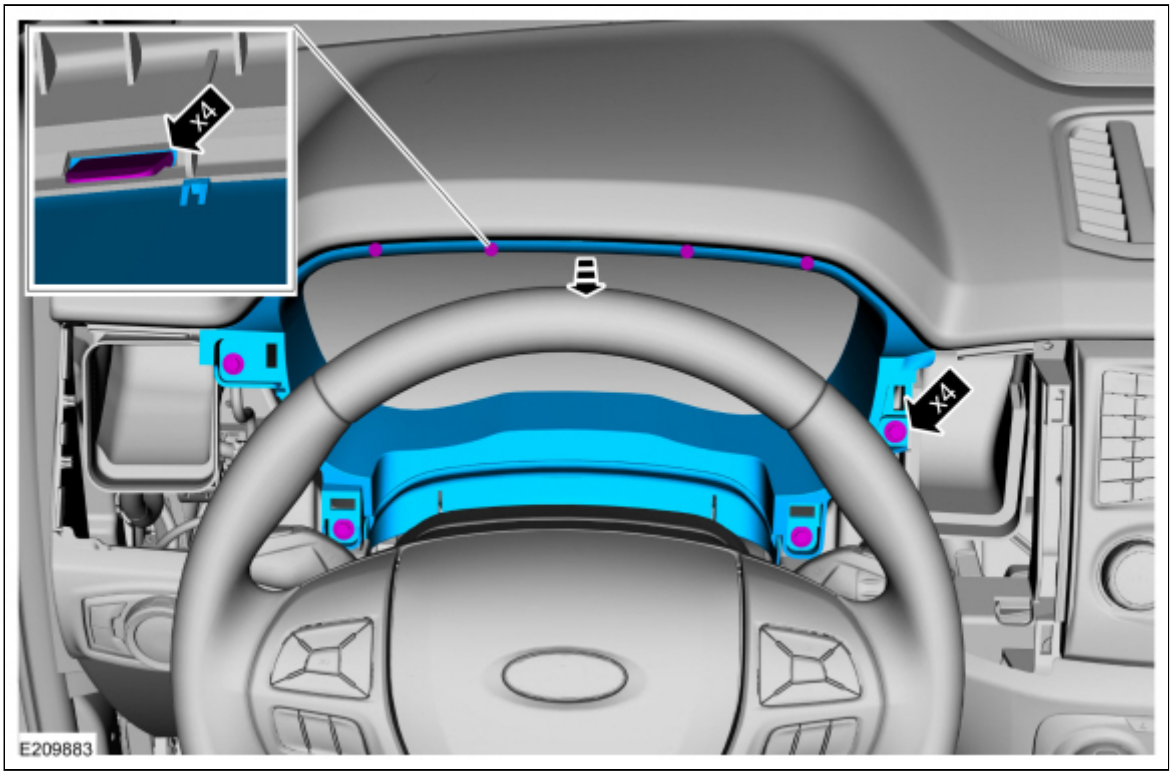
1. **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

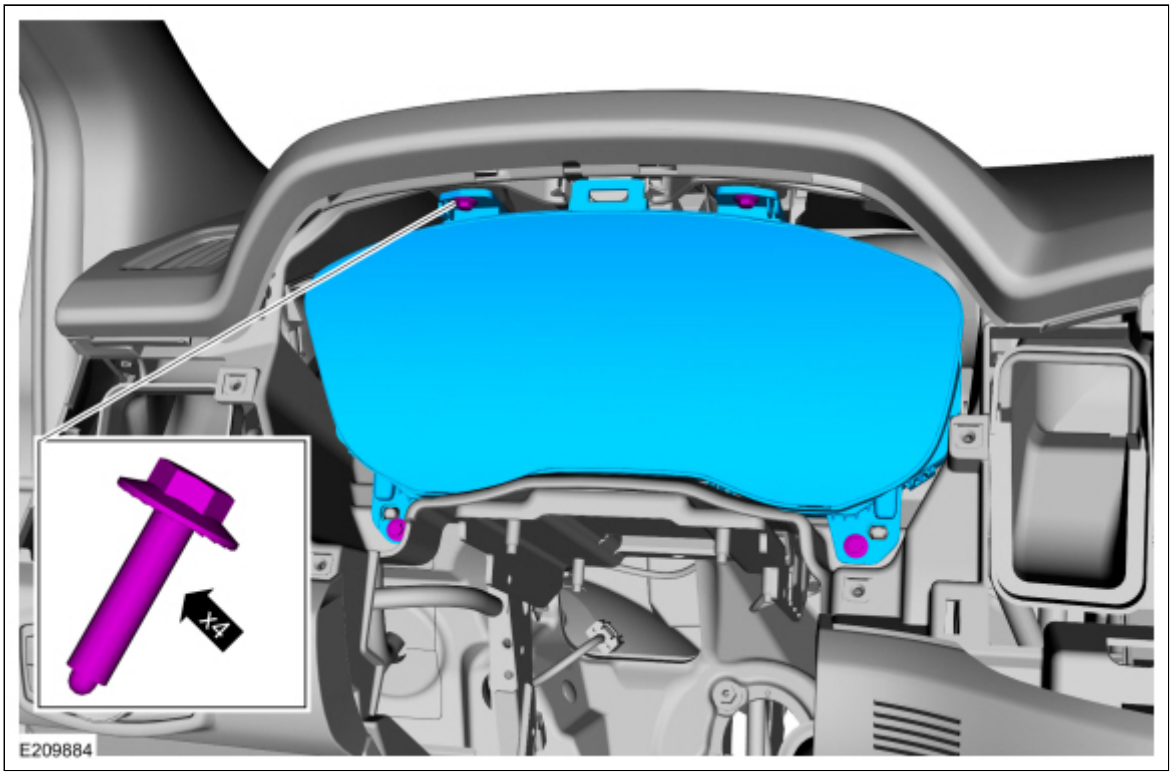


2. **NOTE:** *If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.*

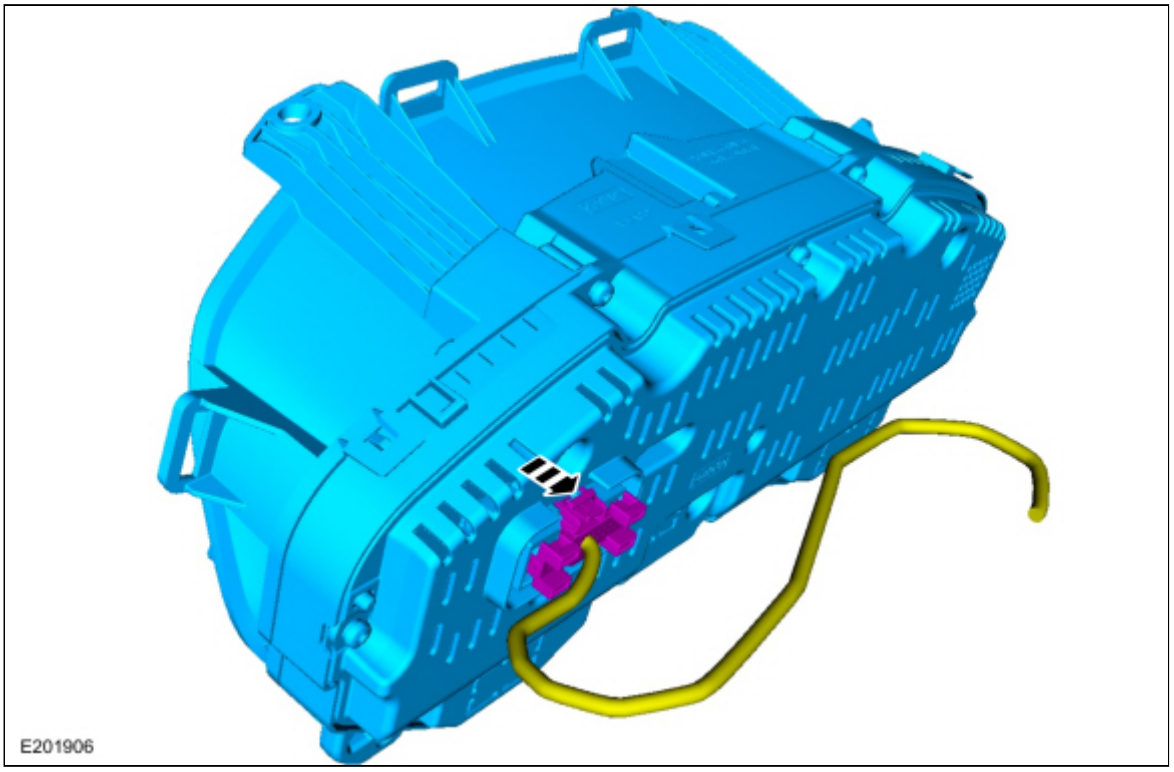
   Using a diagnostic scan tool, begin the PMI process for the IPC following the on-screen instructions. Record the odometer value from the original IPC. If the odometer value cannot be obtained from the IPC (display failure), perform the diagnostic routine. If the value cannot be obtained after the diagnostic routine, the customer should supply the approximate odometer value.



3. Disconnect the electrical connector.
   Use the General Equipment: Interior Trim Remover



4. Use the General Equipment: Interior Trim Remover



5. Remove bolts, release the clips and remove the IPC bezel.
   Torque: 3 Nm

6. Remove the bolts and the IPC
   Torque: 3 Nm

7. Disconnect the electrical connector.

Installation

1. To install, reverse the removal procedure.
2. Using a diagnostic scan tool, complete the PMI process for the IPC following the on-screen instructions.

System Operation

Horn Operation

The horn switch consists of 2 sets of contacts separated by springs. The lower set is connected to ground and the upper set is connected to the horn signal circuit. When the driver air bag module is pressed, it pushes down on the upper set of contacts, collapsing the springs and allowing the contacts to touch. When the contacts touch, it completes the circuit and provides the ground signal which is routed through the clockspring, the SCCM and then to the horn relay, which is integral to the BJB. The BCM supplies the control and switched (load) voltage to the horn relay. When energized, the horn relay provides voltage to the horn, enabling the horn to sound.

Condition	Possible Sources	Actions
The horn is inoperative	Refer to the pinpoint test	GO to Pinpoint Test A
The horn is always on	Refer to the pinpoint test	GO to Pinpoint Test B

Pinpoint Tests

The Horn Is Inoperative

Refer to Wiring Diagrams Cell 413-06 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Horn - System Operation and Component Description (413-06 Horn, Description and Operation).

DTC Chart

DTC	Description	Fault Trigger Condition
B1C55:11	Horn Relay: Circuit Short to Ground	This DTC sets when the BCM detects a short to ground on the horn relay control circuit.
B1C55:12	Horn Relay: Circuit Short To Battery	A Continuous Memory Diagnostic Trouble Code (CMDTC) or On Demand DTC that sets when the BCM detects a high current condition on the horn relay control circuit. The BCM disables the horn when this DTC is set.
B1C55:13	Horn Relay: Circuit Open	A Continuous Memory Diagnostic Trouble Code (CMDTC) that sets when the BCM detects an open on the horn relay control circuit.
B1C55:14	Horn Relay: Circuit Short to Ground or Open	• If the horn is inoperative, GO to Pinpoint Test A • If the horn is always on, GO to Pinpoint Test B
B1C55:19	Horn Relay: Circuit Current Above Threshold	A Continuous Memory Diagnostic Trouble Code (CMDTC) that sets when the BCM detects a high current condition on the horn relay control circuit. The BCM disables the horn when this DTC is set.

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Steering wheel harness (part of steering wheel)
- Steering Column Control Module
- Clockspring
- Horn
- Horn relay
- Horn switch
- BCM

Visual Inspection and Diagnostic Pre-checks

Inspect the BJB fuse 48 (20A).

PINPOINT TEST A : THE HORN IS INOPERATIVE

CHECK THE BCM (BODY CONTROL MODULE) OUTPUT

- Ignition ON.
- Using a diagnostic scan tool, view BCM Parameter Identifications (PIDs).
- Select the active command BCM HORN PID. Command the horn ON and then OFF.

Does the horn sound when commanded on?

Yes	GO to A1
No	VERIFY the EJB fuse 48 (20A) are OK. If OK, GO to A7 If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

A1 CHECK HORN OPERATION WITH HORN SWITCH CIRCUITS ISOLATED

NOTE: *This test step is carried out with the jumper wire at the female (harness) side of the connector.*

- Ignition OFF.
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect Clockspring part of the SCCM.
- Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C226E-1		C226E-4

Does the horn sound?

Yes	REMOVE the fused jumper wire. GO to A5
No	REMOVE the fused jumper wire. GO to A2

A2 CHECK THE HORN CIRCUIT FOR A SHORT TO VOLTAGE

- Disconnect BCM.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C226E-4		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to A3

A3 CHECK THE HORN CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C226-4	Ω	Horn switch control circuit pinout

Is the resistance less than 3 ohms?

Yes	GO to A4
No	REPAIR the circuit.

A4 CHECK THE HORN SWITCH GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C226E-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to A15
No	REPAIR the circuit.

A5 CHECK HORN OPERATION WITH STEERING WHEEL HARNESS ISOLATED

NOTE: *The switch harness may be temporarily removed from the driver airbag for test purposes.*

- Ignition OFF.
- Connect Clockspring part of SCCM.
- Disconnect Horn Switch control circuit located in the Steering Column Assembly. Or disconnect at the SCCM C226E-4
- Disconnect Horn Switch ground circuit located in the Steering Column Assembly. Or disconnect at the SCCM C226E-1
- Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
Horn Switch control circuit pinout		Horn Switch ground circuit pinout

Does the horn sound?

Yes	REMOVE the fused jumper wire. INSTALL a new driver airbag. REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
No	REMOVE the fused jumper wire. If vehicle is equipped with lower steering wheel switch(es), GO to A6 If vehicle is not equipped with lower steering wheel switch(es), INSTALL a new steering wheel. REFER to: Steering Wheel (211-04) .

A6 CHECK THE STEERING WHEEL HARNESS FOR AN OPEN

NOTE: *This test step is carried out with the jumper wire at the female (harness) side of the connector. The switch harness can be temporarily removed from the driver airbag for test purposes.*

- Disconnect Clockspring part of SCCM.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
Horn switch contol circuit pinout	Ω	C226E-4

Are the resistances less than 3 ohms?

Yes	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04) .
No	INSTALL a new driver airbag. REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).

A7 CHECK THE HORN RELAY

- Ignition OFF.
- Disconnect the Horn Relay.
- Ignition ON.

- Substitute a known good relay and recheck the horn operation.

Does the horn operate?

Yes	REMOVE the known good relay. INSTALL a new horn relay.
No	GO to A8

A8 CHECK THE HORN OPERATION WITH RELAY CONTROL ISOLATED

- Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
Horn Relay Pin 3		Horn Relay Pin 5

Does the horn sound?

Yes	REMOVE the fused jumper wire. GO to A9
No	REMOVE the fused jumper wire. GO to A12

A9 CHECK THE HORN OPERATION WITH BCM (BODY CONTROL MODULE) ISOLATED

NOTE: *This test step is carried out with the jumper wire at the female (harness) side of the connector. The switch harness can be temporarily removed from the driver airbag for test purposes.*

- Ignition OFF.
- Install the horn relay.
- Disconnect BCM C2280H.
- Connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead
C2280H-20		Ground

Does the horn sound?

Yes	REMOVE the fused jumper wire. GO to A15
No	REMOVE the fused jumper wire. GO to A10

A10 CHECK THE HORN RELAY CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-20		Ground

Is any voltage present?

Yes	REPAIR the circuit.

No	GO to A11

A11 CHECK THE HORN RELAY COIL CIRCUIT FOR VOLTAGE

- Measure:

Positive Lead	Measurement / Action	Negative Lead
Horn Relay Pin 1		Ground

Is the voltage greater than 11 volts?

Yes	REPAIR the horn relay control circuit.
No	REPAIR the horn relay voltage supply circuit.

A12 CHECK THE HORN RELAY LOAD CIRCUIT FOR VOLTAGE

- Measure:

Positive Lead	Measurement / Action	Negative Lead
Horn Relay R3, Pin 3		Ground

Is the voltage greater than 11 volts?

Yes	GO to A13
No	REPAIR the circuit.

A13 CHECK FOR VOLTAGE AT THE HORN

- Install the horn relay.
  - Refer to horn removal and installation.
    REFER to: Horn (413-06 Horn, Removal and Installation).
- Disconnect the Dual Horns.
- Press and hold the horn switch.
- Measure:

LH Lower Horn

Positive Lead	Measurement / Action	Negative Lead
C1101-1		Ground

RH Lower Horn

Positive Lead	Measurement / Action	Negative Lead
C1102-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to A14
No	REPAIR the open circuit.

A14 CHECK THE HORN GROUND CIRCUIT FOR AN OPEN

- Press and hold the horn switch.
- Measure:

RH Lower Horn

Positive Lead	Measurement / Action	Negative Lead
C1102-2		C1102-1

LH Lower Horn

Positive Lead	Measurement / Action	Negative Lead
C1101-2		C1101-1

Is the voltage greater than 11 volts?

Yes	INSTALL a new horn. Refer to the horn removal and installation. REFER to: Horn (413-06 Horn, Removal and Installation).
No	REPAIR the circuit.

A15 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect the BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. INSTALL a new BCM. For RHD refer to REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). For LHD refer to REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Horn Is Always On

Refer to Wiring Diagrams Cell 413-06 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Horn - System Operation and Component Description (413-06 Horn, Description and Operation).

DTC Chart

DTC	Description	Fault Trigger Condition
B1323:11	Horn Switch: Circuit Short to Ground	A Continuos Memory Diagnostic Trouble Code (CMDTC) that sets when the BCM detects a short to ground on the horn signal circuit.
B1323:23	Horn Switch: Signal Stuck Low	An on-demand DTC that sets when the BCM detects a short to ground on the horn signal circuit.
B1C55:11	Horn Relay: Circuit Short to Ground	A Continuous Memory Diagnostic Trouble Code (CMDTC) that sets when the BCM detects a short to ground on the horn relay control circuit.
B1C55:13	Horn Relay: Circuit Open	This DTC sets when the BCM detects an open on the horn relay control circuit.
B1C55:14	Horn Relay: Circuit Short To Ground or Open	A Continuous Memory Diagnostic Trouble Code (CMDTC) or On Demand DTC that sets when the BCM detects a short to ground or open on the horn relay control circuit.

Possible Causes

- Wiring, terminals or connectors
- Steering wheel harness (part of steering wheel)
- Clockspring
- Horn relay
- Horn switch
- BCM

PINPOINT TEST B : THE HORN IS ALWAYS ON

ISOLATE THE HORN VOLTAGE SUPPLY CIRCUIT

- Ignition OFF.
- Remove the horn relay.

Does the horn continue to sound?

Yes	DISCONNECT the horn to prevent damage from continuous operation. REPAIR the circuit.
No	GO to B1

B1 CHECK THE HORN RELAY

- Ignition OFF.
- Disconnect the Horn Relay.
- Ignition ON.
- Substitute a known good relay and recheck the horn operation.

Does the horn operate?

Yes	REMOVE the known good relay. INSTALL a new horn relay.
No	GO to B2

B2 ISOLATE THE HORN RELAY CONTROL CIRCUIT

- Install the horn relay.
- Disconnect BCM C2280H.

Does the horn continue to sound?

Yes	REPAIR the circuit for a short to ground.
No	GO to B3

B3 ISOLATE THE BCM (BODY CONTROL MODULE) HORN INPUT CIRCUIT

- Connect BCM C2280H.
- Disconnect SCCM C226.

Does the horn continue to sound?

Yes	GO to B8
No	GO to B4

B4 CHECK THE HORN SWITCH INPUT FOR A SHORT TO GROUND

- Connect BCM C2280C.
- Disconnect the Clockspring part of the SCCM.

Does the horn continue to sound?

Yes	REPAIR the circuit.
No	GO to B5

B5 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND

- Connect Clockspring part of the SCCM.
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect the Clockspring part of the SCCM.

Does the horn continue to sound?

Yes	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).
No	GO to B6

B6 CHECK THE HORN SWITCH

- Connect Clockspring C218A.
- Disconnect Horn Switch .

Does the horn continue to sound?

Yes	If the vehicle is equipped with lower steering wheel switches, GO to B7 If vehicle is not equipped with lower steering wheel switch(es), INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column) .
No	INSTALL a new driver airbag.

	REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).

B7 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TO GROUND

- Connect Horn Switch .
- Disconnect the Clockspring.

Does the horn continue to sound?

Yes	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04) .
No	INSTALL a new driver airbag. REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).

B8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect the BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. INSTALL a new BCM. For RHD refer to REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). For LHD refer to REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Seatbelt Minder Deactivating/Activating

Preparation

1. Apply the parking brake.
2. Place the transmission selector lever in P (Park) - vehicles with automatic transmission or the neutral position - vehicles with manual transmission.
3. Turn the ignition switch to the OFF position.
4. Close all the vehicle doors from the inside of the vehicle.

Deactivating/Activating

NOTE: *Deactivation of the belt minder may also be carried out using IDS. Follow the instructions on the screen.*

NOTE: *The belt minder can be turned off independently for the driver and the front passenger by performing the following procedure.*

1. **Unbuckle** the driver's safety belt.
2. **Unbuckle** the front passenger's safety belt.
3. Turn the ignition switch to the ON position (do not start the engine).
4. **Wait until the safety belt warning indicator turns off.**
5. **NOTE:** *This step must be completed within 30 seconds or the procedure must be repeated.*

   Buckle then unbuckle the safety belt four times, ending with the safety belt unbuckled. Release the red unbuckle switch **completely** every cycle.
6. The safety belt warning indicator flashes momentarily to confirm the belt minder status change.
7. Turn the ignition switch to the OFF position. The deactivation/activation procedure is now complete.

Parking Aid - Component Location

Component Location, Parking Aid - Audible

Item	Description
1	Front parking aid sensors (4 required)
2	Parking Aid Module (PAM) (integral to the BCM
3	Rear parking aid sensors (4 required)
4	Rear speakers (part of audio system)
5	Front speakers (part of audio system)

Copyright © 2016 Ford Motor Company

Parking Aid - Overview

Parking Aid - Audible

The rear parking aid system sounds a warning tone through the rear audio speakers to alert the driver of stationary objects near the rear bumper when reverse is selected. The rear parking aid system assists the driver in detecting certain objects while the vehicle moves slowly with the transmission in reverse. The rear parking aid system may not detect moving objects.

If equipped, the front parking aid system sounds a warning through the front audio speakers to alert the driver of stationary objects near the front bumper in all transmission gear selections except neutral when the vehicle is moving forward. The front parking aid system may not detect moving objects.

The parking aid system is disabled if a fault is detected in a parking aid sensor, the communications network or the PAM. This is indicated by a parking aid disabled warning message in the message center.

The rear parking aid only system is enabled and disabled through the message center located in the IPC. To disable the rear parking aid, remove the check mark from the parking aid selection box using the message center navigaton buttons. The rear parking aid remains disabled until it is enabled in the IPC message center.

If the vehicle is equipped with rear parking aid and front parking aid, the parking aid switch on the FCIM "B" is used to disable the rear parking aid and front parking aid instead of the IPC message center. When disabled using the FCIM "B" mounted switch, the parking aid remains disabled for one key cycle, or until the switch is pressed again.

If a MyKey® restricted key is in use, the parking aid menu is not available in the message center and cannot be deactivated.

Parking Aid - System Operation and Component Description

System Operation

Parking Aid - Audible

System Diagram

Network Message Chart

PAM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Ignition key type	BCM	Used to disable the parking aid menus if a MyKey® is in use.
Ignition status	BCM	Used to communicate the ignition switch state.
Outside air	FCIM	Used to temperature compensate the parking aid sensors.

temperature		
Parking aid enable request	IPC	Used to enable or disable the rear parking aid.
Parking aid switch request	FCIM	Used to enable or disable the rear parking aid and front parking aid. (Vehicles with rear parking aid and front parking aid)
Gear lever position	TCM	Used to enable or disable the front or rear parking aid depending on the gear lever position.
Trailer lamp connected	TRM	Used to disable the rear parking aid when a trailer is electrically connected to the vehicle.
Vehicle speed	PCM	Used to disable the parking aid if the vehicle speed exceeds a preset threshold.

IPC Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Audio system response status	ACM	Used to provide feedback to the IPC.
DSP Chime request	DSP	Used to provide feedback to the IPC.
Parking aid chime request	PAM	Used to command parking aid warning tones through the audio system speakers.

Audible Parking Aid System Operation

When the rear parking aid and/or front parking aid system is active, the PAM calculates the distance to an object within a 170 degree semicircular area (azimuth) around the rear or front of the vehicle. A variable frequency warning tone is generated through the audio speakers in proportion to the distance from the rear and/or front of the vehicle to the object.

The rear parking aid system calculates the distance to an object around the rear of the vehicle using 4 ultrasonic sensors. The rear parking aid sensors detect objects approximately 180 cm (70 in) from the rear of the vehicle, 50 cm (20 in) from the rear side of the vehicle, and 30 cm (12 in) above the ground. To detect objects behind the vehicle, the PAM supplies voltage and ground to the rear ultrasonic sensors while monitoring a signal return circuit from each sensor. The 4 rear sensors share common voltage and ground circuits.

The front parking aid system calculates the distance to an object around the front of the vehicle using 4 ultrasonic sensors. The front parking aid sensors detect objects approximately 70 cm (27 in) from the front of the vehicle, 50 cm (20 in) from the front side of the vehicle, 30 cm (12 in) above the ground. To detect objects in front of the vehicle, the PAM supplies voltage and ground to the front ultrasonic sensors while monitoring a signal return circuit from each sensor. The 4 front sensors share common voltage and ground circuits. Vehicles equipped with active park assist must be equipped with front parking aid.

Only objects that reflect a sufficient amount of sound waves are detected by the parking aid sensors. The surface properties, size and composition an object can affect the ability of the parking aid system to detect the object.

Also affecting the parking aid operation are:

- Improper sensor installation or alignment
- Dirt or ice covered sensors
- Heavy rain or snow

The parking aid system detects objects under the following conditions:

- The vehicle is in REVERSE (rear parking aid)
- The vehicle is in motion in any gear except NEUTRAL (front parking aid)
- The vehicle is moving toward the object.
- The vehicle is stationary and the object is moving toward the vehicle.
- The vehicle and object are both moving toward one another.

Parking Aid Audible Alert

Audio system volume is automatically reduced when a parking aid alert tone is sounded. The alert tone frequency increases as the vehicle gets closer to an obstacle. When an object is detected within 30 cm (12 in) of the sensors, the warning tone becomes continuous. Objects detected outside the continuous tone area to the side of the vehicle generate a warning tone for 3 seconds. The warning tones are prioritized to the closest object. If the front and rear objects are located the same distance from the vehicle, the rear object is prioritized.

Component Description

Parking Aid Sensors

The parking aid sensors are wide beam ultrasonic sensors. The sensors continuously send out ultrasonic signals to detect objects and communicate the information back to the PAM.

Only objects which reflect enough sound waves are detected by the sensors. This varies due to the shape, surface properties and size of objects being detected. Incorrect sensor alignment, dirt covered sensors, heavy rain or snow can cause objects not to be recognized.

PAM

The PAM calculates and reports (via audio system tones) the distance between the front or rear bumper of the vehicle and an object. The PAM is integral to the BCM and requires PMI when replaced.

RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in other modules on the network. If no Diagnostic Trouble Codes (DTCs) are present in the PCM, DIAGNOSE the observable symptom.
U0402:00	Invalid Data Received From TCM: No Sub Type Information	A continuous and on-demand DTC that sets when the PAM receives invalid network data from the TCM (part of the PCM) with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in other modules on the network. If no Diagnostic Trouble Codes (DTCs) are present in the TCM (part of the PCM0. DIAGNOSE the observable symptom.
U0415:00	Invalid Data Received From Anti-Lock Brake System (ABS) Control Module: No Sub Type Information	A continuous and on-demand DTC that sets when the PAM receives invalid network data from the ABS module with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in other modules on the network. If no Diagnostic Trouble Codes (DTCs) are present in the ABS module, DIAGNOSE the observable symptom.
U0422:00	Invalid Data Received From Body Control Module: No Sub Type Information	A continuous and on-demand DTC that sets when the PAM receives invalid network data from the BCM with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in other modules on the network. If no Diagnostic Trouble Codes (DTCs) are present in the BCM, DIAGNOSE the observable symptom.
U0423:00	Invalid Data Received from Instrument Panel Cluster Control Module: No Sub Type Information	A continuous and on-demand DTC that sets when the PAM receives invalid network data from the IPC with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in other modules on the network. If no Diagnostic Trouble Codes (DTCs) are present in the IPC, DIAGNOSE the observable symptom.
U0424:00	Invalid Data Received From Heating, Ventilation and Air Conditioning (HVAC) Module: No Sub Type Information	A continuous and on-demand DTC that sets when the PAM receives invalid network data from the HVAC module with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in other modules on the network. If no Diagnostic Trouble Codes (DTCs) are present in the HVAC, DIAGNOSE the observable symptom.
U0557:00	Invalid Data Received	A continuous and on-demand DTC that sets when the PAM receives invalid

	From Front Controls Interface Module "A": No Sub Type Information	network data from the FCIM with a faulted signal data input. RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in other modules on the network. If no Diagnostic Trouble Codes (DTCs) are present in the FCIM, DIAGNOSE the observable symptom.
U2024:41	Control Module Cal-Config Data: General Checksum Failure	CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the PAM self-test. If DTC U2024:41 is retrieved again, PROGRAM the PAM using as-built data. REFER to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation). REPEAT the self-test. If DTC U2024:41 is retrieved again, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
U2100:00	Initial Configuration Not Complete: No Sub Type Information	CHECK the vehicle service history for recent service actions related to the PAM. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT the PMI procedure using as-built data. REFER to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation). If there have been no recent service actions, INSTALL a new REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	CHECK the vehicle service history for recent service actions related to the PAM. This DTC sets due to incomplete or incorrect PMI procedures. If there have been recent service actions with this module, REPEAT the PMI procedure using as-built data. REFER to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation). If there have been no recent service actions, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).

Symptom Chart(s)

Symptom Chart: Parking Aid

Condition	Possible Sources	Actions
A module does not communicate with the diagnostic scan tool	• Fuse • Wiring, terminals or connectors • Parking Aid Module (PAM)	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
The audible parking aid is inoperative	• Refer to the Pinpoint Test	GO to Pinpoint Test A
Continuous or intermittent tone when no obstacles or fault codes are present	• Dirty or iced over parking aid sensor(s)	CLEAN the rear bumper and sensors with high-pressure water.
	• Ice between parking aid sensor(s) and bezel(s)	ALLOW time for the ice between the parking aid sensor(s) and bezel(s) to melt.
	• Parking aid sensor(s) locked into the rear bumper incorrectly	INSTALL the parking aid sensor(s) into the bezel(s) correctly.

	• Parking aid sensor(s) are not aligned correctly	CARRY OUT the elevation system check. REFER to: Elevation System Check (413-13A Parking Aid - Vehicles With: Rear Parking Aid, General Procedures).
	• Parking aid sensor(s) isolator ring missing, damaged or misaligned	INSTALL a new parking aid sensor. REFER to: Front Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation). REFER to: Rear Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).
The parking aid audio tones are inoperative	• Refer to the Pinpoint Test	GO to Pinpoint Test A
The parking aid disable switch is inoperative	• Refer to the Pinpoint Test	GO to Pinpoint Test D
The parking aid menu is not available in the message center and cannot be deactivated	• A MyKey® restricted key is in use	Normal operation.

Pinpoint Test(s)

The Audible Parking Aid Is Inoperative

Refer to Wiring Diagrams Cell 145 for schematic and connector information.

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Description and Operation).

NOTE: *If a MyKey® restricted key is in use, the parking aid menu is not available in the message center and cannot be deactivated.*

NOTE: *Before disconnecting the BCM or any of the parking aid sensors, verify the connectors are properly seated and latched.*

Possible Sources

- Parking aid system disabled
- Communication concern
- PAM (integral to the BCM)
- IPC concern
- TR input concern

PINPOINT TEST A : THE AUDIBLE PARKING AID IS INOPERATIVE

A1 PERFORM A NETWORK TEST
• Ignition ON. • Using a diagnostic scan tool, perform a network test. **Do all modules pass the network test?**

Yes	GO to A2
No	DIAGNOSE any communication concerns. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

A2 CHECK THE PAM (PARKING ASSIST CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS

- Using the diagnostic scan tool, perform the PAM self-test.

Are any PAM Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the DTC Chart in this section.
No	GO to A3

A3 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using the diagnostic scan tool, perform the IPC self-test.

Are any IPC Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	GO to A4

A4 VERIFY THE PARKING AID IS ENABLED

- Verify the rear parking aid and front parking aid (if equipped) is enabled in the IPC message center.

Is the parking aid system enabled?

Yes	If equipped with Automatic Transmission GO to A5 If equipped with Manual Transmission GO to A6
No	ENABLE the parking aid system.

A5 CHECK FOR CORRECT GEAR INPUT

- Apply the parking brake.
- Ignition ON.
- While monitoring the IPC PRNDL display, briefly select each gear in the entire gear range.

Does the IPC PRNDL indicator match the gear selection throughout the entire range?

Yes	GO to A6
No	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).

A6 CHECK THE AUDIO CHIMES

- Ignition OFF.
- Open the driver door.
- Place the headlamp switch in the ON position.

Does the warning chime operate through the audio system?

Yes	GO to A7
No	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).

A7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

• Ignition OFF.
• Disconnect and inspect all BCM and related in-line connectors.
• Repair:
  • corrosion (install new connector or terminals – clean module pins)
  • damaged or bent pins – install new terminals/pins
  • pushed-out pins – install new pins as necessary
• Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
 	
Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B1B57:11

Refer to Wiring Diagrams Cell 145 for schematic and connector information.

Normal Operation and Fault Conditions

The PAM supplies voltage to the front parking aid sensors via a common circuit.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1B57:11	Front Sensors Power Circuit: Circuit Short To Ground	A continuous memory and on-demand DTC that sets when the front sensor voltage supply circuit is shorted to ground or the signal return circuit.

Possible Sources

- Wiring, terminals or connectors
- Front parking aid sensor
- Front active park assist sensor (if equipped)
- PAM (integral to the BCM)

NOTE: *Before disconnecting the BCM or any of the parking aid sensors, verify the connectors are properly seated and latched.*

PINPOINT TEST B : B1B57:11

B1 CHECK THE FRONT BUMPER WIRING HARNESS
• Ignition OFF. • Inspect the front bumper wiring harness for opens, shorts, grounds, or corrosion. **Is the front bumper wiring harness OK?**

Yes	GO to B2
No	REPAIR or INSTALL a new bumper wiring harness.

B2 CHECK THE LHF (LEFT-HAND FRONT) OUTER PARKING AID SENSOR FOR AN INTERNAL SHORT

- Disconnect: LHF Front Outer Parking Aid Sensor C1428.
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the PAM self-test.

Is DTC B1B57:11 present?

Yes	GO to B3
No	INSTALL a new LHF outer parking aid sensor. REFER to: Front Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).

B3 CHECK THE LHF (LEFT-HAND FRONT) INNER PARKING AID SENSOR FOR AN INTERNAL SHORT

- Ignition OFF.
- Disconnect:LHF Inner Parking Aid Sensor C1429.
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the PAM self-test.

Is DTC B1B57:11 present?

Yes	If the vehicle is NOT equipped with active park assist, GO to B4
No	INSTALL a new LHF inner parking aid sensor. REFER to: Front Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).

B4 CHECK THE RHF (RIGHT-HAND FRONT) INNER PARKING AID SENSOR FOR AN INTERNAL SHORT

- Ignition OFF.
- Disconnect: RHF inner parking aid sensor C1430.
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the PAM self-test.

Is DTC B1B57:11 present?

Yes	GO to B5
No	INSTALL a new RHF inner parking aid sensor. REFER to: Front Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).

B5 CHECK THE RHF (RIGHT-HAND FRONT) OUTER PARKING AID SENSOR FOR AN INTERNAL SHORT

- Ignition OFF.
- Disconnect: RHF Outer Parking Aid Sensor C1431.
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the PAM self-test.

Is DTC B1B57:11 present?

Yes	GO to B6
No	INSTALL a new RHF outer parking aid sensor. REFER to: Front Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).

B6 CHECK THE FRONT PARKING AID SENSOR VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect: BCM C2280H.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-7	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B7
No	REPAIR the circuit.

B7 CHECK THE FRONT PARKING AID SENSOR VOLTAGE SUPPLY CIRCUIT AND GROUND CIRCUIT FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-7	Ω	C2280H-35

Is the resistance greater than 10,000 ohms?

Yes	GO to B8
No	REPAIR the circuit.

B8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).

	REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B1B58:11

Refer to Wiring Diagrams Cell 145 for schematic and connector information.

Normal Operation and Fault Conditions

The PAM supplies voltage to the rear parking aid sensors via a common circuit.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1B58:11	Rear Sensors Power Circuit: Circuit Short To Ground	A continuous and on-demand DTC that sets when the rear sensor voltage supply circuit is shorted to ground or to the signal return circuit.

Possible Sources

- Wiring, terminals or connectors
- Rear parking aid sensor
- PAM (integral to the BCM)

NOTE: *Before disconnecting the BCM or any of the parking aid sensors, verify the connectors are properly seated and latched.*

PINPOINT TEST C : B1B58:11

C1 CHECK THE REAR BUMPER WIRING HARNESS

- Ignition OFF.
- Inspect the rear bumper wiring harness for opens, shorts, grounds, or corrosion.

Is the bumper wiring harness OK?

Yes	GO to C2
No	REPAIR or INSTALL a new bumper wiring harness.

C2 CHECK THE LHR (LEFT-HAND REAR) OUTER PARKING AID SENSOR FOR AN INTERNAL SHORT

- Disconnect: LHR Outer Parking Aid Sensor C4009.
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the PAM self-test.

Is DTC B1B58:11 present?

Yes	GO to C3
No	INSTALL a new LHR outer parking aid sensor. REFER to: Rear Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).

C3 CHECK THE LHR (LEFT-HAND REAR) INNER PARKING AID SENSOR FOR AN INTERNAL SHORT

- Ignition OFF.
- Disconnect: LHR Inner Parking Aid Sensor C4010.
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the PAM self-test.

Is DTC B1B58:11 present?

Yes	GO to C4
No	INSTALL a new LHR inner parking aid sensor. REFER to: Rear Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).

C4 CHECK THE RHR (RIGHT-HAND REAR) INNER PARKING AID SENSOR FOR AN INTERNAL SHORT

- Ignition OFF.
- Disconnect: RHR Inner Parking Aid Sensor C4012.
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the PAM self-test.

Is DTC B1B58:11 present?

Yes	GO to C5
No	INSTALL a new RHR inner parking aid sensor. REFER to: Rear Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).

C5 CHECK THE RHR (RIGHT-HAND REAR) OUTER PARKING AID SENSOR FOR AN INTERNAL SHORT

- Ignition OFF.
- Disconnect: RHR Outer Parking Aid Sensor C4011.
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the PAM self-test.

Is DTC B1B58:11 present?

Yes	GO to C6
No	REFER to: Rear Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).

C6 CHECK THE REAR PARKING AID SENSOR VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect: BCM C2280E.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280E-26	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to C7
No	REPAIR the circuit.

C7 CHECK THE PARKING AID SENSOR VOLTAGE SUPPLY CIRCUIT AND GROUND CIRCUIT FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280E-26	Ω	C2280E-27

Is the resistance greater than 10,000 ohms?

Yes	GO to C8
No	REPAIR the circuit.

C8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The Parking Aid Disable Switch is Inoperative

Refer to Wiring Diagrams Cell 145 for schematic and connector information.

Normal Operation and Fault Conditions

When pressed, the parking aid disable switch supplies a ground signal to the PAM to disable the parking aid system and illuminate the parking aid LED. The switch is a normally open, momentary contact switch. The switch is disabled when a MyKey® is in use.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1303:11	Park Assist Switch: Circuit Short To Ground	A continuous and on-demand DTC that sets when the PAM detects that the parking aid disable switch signal circuit is shorted to ground or the parking aid disable switch has been closed for at least 10 seconds.

Possible Sources

- MyKey® restricted key in use
- Wiring, terminals or connectors
- Parking aid disable switch
- PAM (integral to the BCM)

Visual Inspection and Diagnostic Pre-checks

- Verify that a MyKey® is not in use

NOTE: *Before disconnecting the BCM or any other connectors verify they are properly seated and latched.*

PINPOINT TEST D : THE PARKING AID DISABLE SWITCH IS INOPERATIVE

D1 CHECK THE PAM (PARKING ASSIST CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, retrieve the PAM Diagnostic Trouble Codes (DTCs).

Is DTC B1303:11 present?

Yes	GO to D2
No	GO to D4

D2 CHECK THE PARKING AID DISABLE SWITCH FOR AN INTERNAL SHORT

- Disconnect: Active Park Assist/Differential Lock Switch C3360
- Ignition ON.
- Using a diagnostic scan tool, clear the PAM Diagnostic Trouble Codes (DTCs).
- Perform the PAM self-test.

Is DTC B1303:11 present?

Yes	GO to D3
No	Active Park Assist/Differential Lock Switch.

D3 CHECK THE PARKING AID DISABLE SWITCH SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3360-7	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to D7
No	REPAIR the circuit.

No	REPAIR the circuit.

D4 CHECK THE PARKING AID DISABLE CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect the Active Park Assist/Differential Lock Switch C3360.
- Connect a fused jumper wire between:

Positive Lead	Measurement / Action	Negative Lead
C3360-7		C3360-12

- Using a diagnostic scan tool, repeat the PAM self-test.

Is DTC B1303:11 present?

Yes	REMOVE the fused jumper wire. INSTALL a new parking aid disable switch.
No	REMOVE the fused jumper wire. GO to D5

D5 CHECK THE PARKING AID DISABLE SWITCH SIGNAL CIRCUIT FOR AN OPEN BETWEEN THE SWITCH AND THE BCM (BODY CONTROL MODULE)

- Ignition OFF.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3360-7	Ω	C2280G-4

Is the resistance less than 3 ohms?

Yes	GO to D6
No	REPAIR the circuit.

D6 CHECK THE GROUND CIRCUIT TO THE PARKING AID SWITCH FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3360-12	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to D7
No	Repair the circuit.

D7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.

- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B1B44:14, B1B46:14, B1B48:14, B1B50:14

Refer to Wiring Diagrams Cell 145 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1B44:14	Right Rear Outer Sensor: Circuit Short To Ground Or Open	A continuous and on-demand DTC that sets when any of the RHR outer parking aid sensor circuits are open or shorted to ground.
B1B46:14	Right Rear Inner Sensor: Circuit Short To Ground Or Open	A continuous and on-demand DTC that sets when any of the RHR inner parking aid sensor circuits are open or shorted to ground.
B1B48:14	Left Rear Outer Sensor: Circuit Short To Ground Or Open	A continuous and on-demand DTC that sets when any of the LHR outer parking aid sensor circuits are open or shorted to ground.
B1B50:14	Left Rear Inner Sensor: Circuit Short To Ground Or Open	A continuous and on-demand DTC that sets when any of the LHR inner parking aid sensor circuits are open or shorted to ground.

Possible Sources

- Wiring, terminals or connectors
- Rear parking aid sensor
- PAM (integral to the BCM)

NOTE: *Before disconnecting the BCM or any of the parking aid sensors, verify the connectors are properly seated and latched.*

PINPOINT TEST E : B1B44:14, B1B46:14, B1B48:14, B1B50:14

E1 RETRIEVE THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PAM (PARKING ASSIST

CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PAM self-test.
- Check the PAM Diagnostic Trouble Codes (DTCs).

Are multiple rear parking aid sensor Diagnostic Trouble Codes (DTCs) recorded?

Yes	GO to E2
No	For DTC B1B44:14, B1B46:14, B1B48:14 or B1B50:14, GO to E3 For all other Diagnostic Trouble Codes (DTCs), REFER to the DTC Chart in this section.

E2 CHECK THE REAR BUMPER WIRING HARNESS

- Ignition OFF.
- Inspect the rear bumper wiring harness for opens, shorts, grounds, or corrosion.

Is the rear bumper wiring harness OK?

Yes	GO to E3
No	REPAIR or INSTALL a new rear bumper wiring harness.

E3 CHECK THE REAR PARKING AID SENSOR CIRCUITRY FOR OPENS

- Disconnect: suspect parking aid sensor.
- Disconnect: BCM C2280E.
- For DTC B1B44:14, measure:

Positive Lead	Measurement / Action	Negative Lead
C2280E-26	Ω	C4011-1
C2280E-7	Ω	C4011-2
C2280E-27	Ω	C4011-3

- For DTC B1B46:14, measure:

Positive Lead	Measurement / Action	Negative Lead
C2280E-26	Ω	C4012-1
C2280E-8	Ω	C4012-2
C2280E-27	Ω	C4012-3

- For DTC B1B48:14, measure:

Positive Lead	Measurement / Action	Negative Lead
C2280E-26	Ω	C4009-1
C2280E-23	Ω	C4009-2
C2280E-27	Ω	C4009-3

- For DTC B1B50:14, measure:

Positive Lead	Measurement / Action	Negative Lead

C2280E-26	Ω	C4010-1
C2280E-24	Ω	C4010-2
C2280E-27	Ω	C4010-3

Is resistance less than 3 ohms?

Yes	GO to E4
No	REPAIR the circuit.

E4 CHECK THE REAR PARKING AID SENSOR SIGNAL CIRCUITRY FOR SHORTS TO GROUND

- For DTC B1B44:14, measure:

Positive Lead	Measurement / Action	Negative Lead
C4011-2	Ω	Ground

- For DTC B1B46:14, measure:

Positive Lead	Measurement / Action	Negative Lead
C4012-2	Ω	Ground

- For DTC B1B48:14, measure:

Positive Lead	Measurement / Action	Negative Lead
C4009-2	Ω	Ground

- For DTC B1B50:14, measure:

Positive Lead	Measurement / Action	Negative Lead
C4010-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	If all of the parking aid sensors recorded Diagnostic Trouble Codes (DTCs), GO to E5 If one or more (but not all) parking aid sensor(s) recorded Diagnostic Trouble Codes (DTCs), INSTALL a new sensor(s) for the one(s) in question. REFER to: Rear Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).
No	REPAIR the circuit.

E5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM and related in-line connectors.
- Repair:

- corrosion (install new connector or terminals – clean module pins)
- damaged or bent pins – install new terminals/pins
- pushed-out pins – install new pins as necessary

- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B1B44:12, B1B46:12, B1B48:12, B1B50:12

Refer to Wiring Diagrams Cell 145 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1B44:12	Right Rear Outer Sensor: Circuit Short To Battery	A continuous and on-demand DTC that sets when the RHR outer parking aid sensor signal circuit is shorted to battery voltage.
B1B46:12	Right Rear Inner Sensor: Circuit Short To Battery	A continuous and on-demand DTC that sets when the RHR inner parking aid sensor signal circuit is shorted to battery voltage.
B1B48:12	Left Rear Outer Sensor: Circuit Short To Battery	A continuous and on-demand DTC that sets when the LHR outer parking aid sensor signal circuit is shorted to battery voltage.
B1B50:12	Left Rear Inner Sensor: Circuit Short To Battery	A continuous and on-demand DTC that sets when the LHR inner parking aid sensor signal circuit is shorted to battery voltage.

Possible Sources

- Wiring, terminals or connectors
- Rear parking aid sensor
- PAM (integral to the BCM)

NOTE: *Before disconnecting the BCM or any of the parking aid sensors, verify the connectors are properly seated and latched.*

PINPOINT TEST F : B1B44:12, B1B46:12, B1B48:12, B1B50:12

F1 RETRIEVE THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PAM (PARKING ASSIST CONTROL MODULE) SELF-TEST
• Using a diagnostic scan tool, perform the PAM self-test. • Check the PAM Diagnostic Trouble Codes (DTCs) from the self-test.

Are multiple rear parking aid sensor Diagnostic Trouble Codes (DTCs) recorded?

Yes	GO to F2
No	For Diagnostic Trouble Codes (DTCs) B1B44:12, B1B46:12, B1B48:12 or B1B50:12, GO to F3 For all other Diagnostic Trouble Codes (DTCs), REFER to the DTC Chart in this section.

F2 CHECK THE REAR BUMPER WIRING HARNESS

- Ignition OFF.
- Inspect the rear bumper wiring harness for opens, shorts, grounds, or corrosion.

Is the rear bumper wiring harness OK?

Yes	GO to F3
No	REPAIR or INSTALL a new rear bumper wiring harness.

F3 CHECK THE REAR PARKING AID SENSOR CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: Suspect Parking Aid Sensor(s).
- Disconnect: BCM C2280E
- Ignition ON.
- For DTC B1B44:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C4011-2		Ground

- For DTC B1B46:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C4012-2		Ground

- For DTC B1B48:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C4009-2		Ground

- For DTC B1B50:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C4010-2		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to F4

F4 CHECK THE REAR PARKING AID SENSOR SIGNAL AND VREF CIRCUITS FOR A SHORT TOGETHER

- Ignition OFF.
- For DTC B1B44:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C4011-2	Ω	C4011-1

- For DTC B1B46:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C4012-2	Ω	C4012-1

- For DTC B1B48:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C4009-2	Ω	C4009-1

- For DTC B1B50:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C4010-2	Ω	C4010-1

Is the resistance greater than 10,000 ohms?

Yes	If all the sensor Diagnostic Trouble Codes (DTCs) are set, GO to F5 If one or more (but not all) parking aid sensor(s) recorded Diagnostic Trouble Codes (DTCs), INSTALL a new sensor(s) for the one in question. REFER to: Rear Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).
No	REPAIR the circuit.

F5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules,

	Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B1B44:96, B1B46:96, B1B48:96, B1B50:96

Refer to Wiring Diagrams Cell 145 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1B44:96	Right Rear Outer Sensor: Component Internal Failure	A continuous and on-demand DTC that sets when the RHR outer parking aid sensor has internally failed or has an incorrect attenuation time.
B1B46:96	Right Rear Inner Sensor: Component Internal Failure	A continuous and on-demand DTC that sets when the RHR inner parking aid sensor has internally failed or has an incorrect attenuation time.
B1B48:96	Left Rear Outer Sensor: Component Internal Failure	A continuous and on-demand DTC that sets when the LHR outer parking aid sensor has internally failed or has an incorrect attenuation time.
B1B50:96	Left Rear Inner Sensor: Component Internal Failure	A continuous and on-demand DTC that sets when the LHR inner parking aid sensor has internally failed or has an incorrect attenuation time.

Possible Sources

- Wiring, terminals or connectors
- Rear parking aid sensor
- PAM (integral to the BCM)

NOTE: *Before disconnecting the BCM or any of the parking aid sensors, verify the connectors are properly seated and latched.*

PINPOINT TEST G : B1B44:96, B1B46:96, B1B48:96, B1B50:96

G1 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PAM (PARKING ASSIST CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PAM self-test.
- Check the PAM Diagnostic Trouble Codes (DTCs) from the self-test.

Are parking aid Diagnostic Trouble Codes (DTCs) other than B1B44:96, B1B46:96, B1B48:96 or B1B50:96 recorded?

Yes	GO to G2
No	For all other Diagnostic Trouble Codes (DTCs) REFER to the DTC Chart in this section.

G2 CHECK THE PARKING AID SENSOR DISTANCE PARAMETER IDENTIFICATIONS (PIDS) WITH NO OBJECTS BEHIND THE VEHICLE

NOTE: *Make sure the area around the vehicle is clear of anything that can activate the parking aid system.*

- Clean the rear bumper and sensors with high-pressure water.
- Make sure the suspect parking aid sensor(s) is flush-mounted in the bezel.
- Ignition ON.
- Using a diagnostic scan tool, monitor the PAM parking aid sensor distance Parameter Identifications (PIDs) (LRI_DIST, LRO_DIST, RRI_DIST, RRO_DIST). The PID reads 2,540 mm (100 in) on a correctly functioning sensor.

Does the PID read 2,540 mm (100 in)?

Yes	GO to G3
No	GO to G4

G3 CHECK THE PARKING AID SENSOR DISTANCE PARAMETER IDENTIFICATIONS (PIDS) WITH A TEST OBJECT BEHIND THE VEHICLE

NOTE: *Make sure the area around the vehicle is clear of anything that can activate the parking aid system.*

- Using a diagnostic scan tool, monitor the PAM parking aid sensor distance Parameter Identifications (PIDs) (LRI_DIST, LRO_DIST, RRI_DIST, RRO_DIST).
- While monitoring the Parameter Identifications (PIDs), move a test object into and out of the detection zone behind each sensor. For an example of a test object,
  REFER to: Azimuth System Check (413-13A Parking Aid - Vehicles With: Rear Parking Aid, General Procedures).

Does the PID approximately match the distance from the test object to the rear bumper of the vehicle?

Yes	GO to G5
No	GO to G4

G4 CHECK THE PARKING AID SENSORS

- Ignition OFF.
- Install a known good sensor for the suspect parking aid sensor.
  REFER to: Rear Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) and repeat the PAM self-test.

Is the concern still present?

Yes	GO to G5
No	The cause of the concern was an inoperative parking aid sensor. The system is now operating correctly.

G5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB

	addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B1B36:12, B1B38:12, B1B40:12, B1B42:12

Refer to Wiring Diagrams Cell 145 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1B36:12	Right Front Outer Sensor: Circuit Short To Battery	A continuous and on-demand DTC that sets when the RHF outer parking aid sensor signal circuit is shorted to battery voltage.
B1B38:12	Right Front Inner Sensor: Circuit Short To Battery	A continuous and on-demand DTC that sets when the RHF inner parking aid sensor signal circuit is shorted to battery voltage.
B1B40:12	Left Front Outer Sensor: Circuit Short To Battery	A continuous and on-demand DTC that sets when the LHF outer parking aid sensor signal circuit is shorted to battery voltage.
B1B42:12	Left Front Inner Sensor: Circuit Short To Battery	A continuous and on-demand DTC that sets when the LHF inner parking aid sensor signal circuit is shorted to battery voltage.

Possible Sources

- Wiring, terminals or connectors
- Front parking aid sensor
- PAM (integral to the BCM)

NOTE: *Before disconnecting the BCM or any of the parking aid sensors, verify the connectors are properly seated and latched.*

PINPOINT TEST H : B1B36:12, B1B38:12, B1B40:12, B1B42:12

H1 RETRIEVE THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PAM (PARKING ASSIST CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PAM self-test.
- Check the PAM Diagnostic Trouble Codes (DTCs) from the self-test.

Are multiple rear parking aid sensor Diagnostic Trouble Codes (DTCs) recorded?

Yes	GO to H2
No	For Diagnostic Trouble Codes (DTCs) B1B44:12, B1B46:12, B1B48:12 or B1B50:12, GO to H3 For all other Diagnostic Trouble Codes (DTCs), REFER to the DTC Chart in this section.

H2 CHECK THE FRONT BUMPER WIRING HARNESS

H2 CHECK THE FRONT BUMPER WIRING HARNESS

- Ignition OFF.
- Inspect the front bumper wiring harness for opens, shorts, grounds, or corrosion.

Is the front bumper wiring harness OK?

Yes	GO to H3
No	REPAIR or INSTALL a new front bumper wiring harness.

H3 CHECK THE FRONT PARKING AID SENSOR CIRCUITRY FOR A SHORT TO VOLTAGE

- Disconnect: suspect parking aid sensor(s).
- Disconnect BCM C2280H.
- Ignition ON.
- For DTC B1B36:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C1431-2		Ground

- For DTC B1B38:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C1430-2		Ground

- For DTC B1B40:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C1428-2		Ground

- For DTC B1B42:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C1429-2		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to H4

H4 CHECK THE FRONT PARKING AID SENSOR SIGNAL AND VREF CIRCUITS FOR A SHORT TOGETHER

- Ignition OFF.
- For DTC B1B36:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C1431-2	Ω	C1431-1

- For DTC B1B38:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C1430-2	Ω	C1430-1

- For DTC B1B40:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C1428-2	Ω	C1428-1

- For DTC B1B42:12, measure:

Positive Lead	Measurement / Action	Negative Lead
C1429-2	Ω	C1429-1

Is the resistance greater than 10,000 ohms?

Yes	If all the sensor Diagnostic Trouble Codes (DTCs) are set, GO to H5 If one or more (but not all) parking aid sensor(s) recorded Diagnostic Trouble Codes (DTCs), INSTALL a new sensor(s) for the one in question. REFER to: Front Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).
No	REPAIR the circuit.

H5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

Refer to Wiring Diagrams Cell 145 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1B36:14	Right Front Outer Sensor: Circuit Short To Ground Or Open	A continuous and on-demand DTC that sets when any of the RHF outer parking aid sensor circuits are open, or the sensor signal line is shorted to ground.
B1B38:14	Right Front Inner Sensor: Circuit Short To Ground Or Open	A continuous and on-demand DTC that sets when any of the RHF inner parking aid sensor circuits are open, or the sensor signal line is shorted to ground.
B1B40:14	Left Front Outer Sensor: Circuit Short To Ground Or Open	A continuous and on-demand DTC that sets when any of the LHF outer parking aid sensor circuits are open, or the sensor signal line is shorted to ground.
B1B42:14	Left Front Inner Sensor: Circuit Short To Ground Or Open	A continuous and on-demand DTC that sets when any of the LHF inner parking aid sensor circuits are open, or the sensor signal line is shorted to ground.

Possible Sources

- Wiring, terminals or connectors
- Front parking aid sensor
- PAM (integral to the BCM)

NOTE: *Before disconnecting the BCM or any of the parking aid sensors, verify the connectors are properly seated and latched.*

PINPOINT TEST I : B1B36:14, B1B38:14, B1B40:14, B1B42:14

I1 RETRIEVE THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PAM (PARKING ASSIST CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PAM self-test.
- Check the PAM Diagnostic Trouble Codes (DTCs).

Are multiple front parking aid sensor Diagnostic Trouble Codes (DTCs) recorded?

Yes	GO to I2
No	For DTC B1B36:14, B1B38:14, B1B40:14 or B1B42:14, GO to I3 For all other Diagnostic Trouble Codes (DTCs), REFER to the DTC Chart in this section.

I2 CHECK THE FRONT BUMPER WIRING HARNESS

- Ignition OFF.
- Inspect the front bumper wiring harness for opens, shorts, grounds, or corrosion.

Is the front bumper wiring harness OK?

Yes	GO to I3
No	REPAIR or INSTALL a new front bumper wiring harness.

I3 CHECK THE FRONT PARKING AID SENSOR CIRCUITRY FOR OPENS

- Disconnect: Suspect Parking Aid Sensor(s).
- Disconnect: BCM C2280C.
- For DTC B1B36:14, measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-7	Ω	C1431-1
C2280H-21	Ω	C1431-2
C2280H-35	Ω	C1431-3

- For DTC B1B38:14, measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-7	Ω	C1430-1
C2280H-22	Ω	C1430-2
C2280H-35	Ω	C1430-3

- For DTC B1B40:14, measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-7	Ω	C1428-1
C2280H-31	Ω	C1428-2
C2280H-35	Ω	C1428-3

- For DTC B1B42:14, measure:

Positive Lead	Measurement / Action	Negative Lead
C2280H-7	Ω	C1429-1
C2280H-32	Ω	C1429-2
C2280H-35	Ω	C1429-3

Is the resistance less than 3 ohms?

Yes	GO to I4
No	REPAIR the circuit.

I4 CHECK THE FRONT PARKING AID SENSOR CIRCUITRY FOR SHORTS TO GROUND

- For DTC B1B36:14, measure:

Positive Lead	Measurement / Action	Negative Lead
C1431-2	Ω	Ground

- For DTC B1B38:14, measure:

Positive Lead	Measurement / Action	Negative Lead
C1430-2	Ω	Ground

- For DTC B1B40:14, measure:

Positive Lead	Measurement / Action	Negative Lead
C1428-2	Ω	Ground

- For DTC B1B42:14, measure:

Positive Lead	Measurement / Action	Negative Lead
C1429-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	If all of the parking aid sensors recorded Diagnostic Trouble Codes (DTCs), GO to I5 If one or more (but not all) parking aid sensor(s) recorded Diagnostic Trouble Codes (DTCs), INSTALL a new sensor(s) for the one(s) in question. REFER to: Front Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).
No	REPAIR the circuit.

I5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B1B36:96, B1B38:96, B1B40:96, B1B42:96

Refer to Wiring Diagrams Cell 145 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1B36:96	Right Front Outer Sensor: Component Internal Failure	A continuous and on-demand DTC that sets when the RHF outer parking aid sensor has internally failed or has an incorrect attenuation time.
B1B38:96	Right Front Inner Sensor: Component Internal Failure	A continuous and on-demand DTC that sets when the RHF inner parking aid sensor has internally failed or has an incorrect attenuation time.
B1B40:96	Left Front Outer Sensor: Component Internal Failure	A continuous and on-demand DTC that sets when the LHF outer parking aid sensor has internally failed or has an incorrect attenuation time.
B1B42:96	Left Front Inner Sensor: Component Internal Failure	A continuous and on-demand DTC that sets when the LHF inner parking aid sensor has internally failed or has an incorrect attenuation time.

Possible Sources

- Wiring, terminals or connectors
- Front parking aid sensor
- PAM (integral to the BCM)

NOTE: *Before disconnecting the BCM or any of the parking aid sensors, verify the connectors are properly seated and latched.*

PINPOINT TEST J : B1B36:96, B1B38:96, B1B40:96, B1B42:96

J1 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PAM (PARKING ASSIST CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PAM self-test.
- Check the PAM Diagnostic Trouble Codes (DTCs).

Are parking aid Diagnostic Trouble Codes (DTCs) other than B1B36:96, B1B38:96, B1B40:96 or B1B42:96 recorded?

Yes	GO to J2
No	For all other Diagnostic Trouble Codes (DTCs) REFER to the DTC Chart in this section

J2 CHECK THE PARKING AID SENSOR DISTANCE PARAMETER IDENTIFICATIONS (PIDS) WITH NO OBJECTS IN FRONT OF THE VEHICLE

NOTE: *Make sure the area around the vehicle is clear of anything that can activate the parking aid system.*

- Clean the front bumper and sensors with high-pressure water.
- Make sure the suspect parking aid sensor(s) is flush-mounted in the bezel.
- Ignition ON.
- Using a diagnostic scan tool, monitor the PAM parking aid sensor distance Parameter Identifications (PIDs) (LFI_DIST, LFO_DIST, RFI_DIST, RFO_DIST). The PID reads 2,540 mm (100 in) on a correctly functioning sensor.

Does the PID read 2,540 mm (100 in)?

Yes	GO to J3
No	GO to J4

No	GO to J4

J3 CHECK THE PARKING AID SENSOR DISTANCE PARAMETER IDENTIFICATIONS (PIDS) WITH A TEST OBJECT IN FRONT OF THE VEHICLE

NOTE: *Make sure the area around the vehicle is clear of anything that can activate the parking aid system.*

- Using a diagnostic scan tool, monitor the PAM parking aid sensor distance Parameter Identifications (PIDs) (LFI_DIST, LFO_DIST, RFI_DIST, RFO_DIST).
- While monitoring the Parameter Identifications (PIDs), move a test object into and out of the detection zone behind each sensor. For an example of a test object,
  REFER to: Azimuth System Check (413-13A Parking Aid - Vehicles With: Rear Parking Aid, General Procedures).

Does the PID approximately match the distance from the test object to the front bumper of the vehicle?

Yes	GO to J5
No	GO to J4

J4 CHECK THE PARKING AID SENSORS

- Ignition OFF.
- Install a new sensor for the suspect parking aid sensor.
  REFER to: Front Parking Aid Sensor (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs). Repeat the self-test. Operate the system and verify the concern is still present.

Is the concern still present?

Yes	GO to J5
No	The cause of the concern was an inoperative parking aid sensor. The system is now operating correctly.

J5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B1B54:11, B1B5412

Refer to Wiring Diagrams Cell 145 for schematic and connector information.

Normal Operation and Fault Conditions

The PAM supplies voltage to the parking aid switch status LED when the parking aid system is disabled.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1B54:11	Function LED - Park Aid: Circuit Short To Ground	A continuous and on-demand DTC that sets when the parking aid switch status LED circuit is shorted to ground.
B1B54:12	Function LED - Park Aid: Circuit Short To Battery	A continuous and on-demand DTC that sets when the parking aid switch status LED circuit is shorted to battery voltage or is open.

Possible Sources

- Wiring, terminals or connectors
- PAM
- Parking aid switch

PINPOINT TEST K : THE PARKING AID SWITCH STATUS LED (LIGHT EMITTING DIODE) IS INOPERATIVE OR ALWAYS ON

K1 CHECK THE PAM (PARKING ASSIST CONTROL MODULE) CONTINUOUS AND ON-DEMAND DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, clear the PAM Diagnostic Trouble Codes (DTCs).
- Perform the PAM self-test.

Is DTC B1B54:11 or B1B54:12 still present?

Yes	GO to K2
No	If the LED is inoperative GO to K6 If the LED is always on GO to K4

K2 CHECK THE PAM (PARKING ASSIST CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS) WITH THE PARKING AID SWITCH DISCONNECTED

- Ignition OFF.
- Disconnect: Active Park Assist/Differential Lock Switch C3360.
- Ignition ON.
- Using a diagnostic scan tool, clear the PAM Diagnostic Trouble Codes (DTCs).
- Perform the PAM self-test.

Is DTC B1B54:11 or B1B54:12 still present?

Yes	GO to K3
No	INSTALL a new parking aid switch.

K3 CHECK THE PARKING AID SWITCH STATUS LED (LIGHT EMITTING DIODE) CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.

- Disconnect: BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-34	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to K4
No	REPAIR the circuit.

K4 CHECK THE PARKING AID SWITCH STATUS LED (LIGHT EMITTING DIODE) CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: BCM C2280G.
- Connect: Active Park Assist/Differential Lock Switch C3360.
- Ignition ON.

Does the parking aid switch status LED continue to illuminate?

Yes	GO to K5
No	GO to K9

K5 CHECK FOR VOLTAGE ON THE PARKING AID SWITCH STATUS LED (LIGHT EMITTING DIODE) CIRCUIT

- Disconnect: Parking aid switch C3258.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3360-8	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	INSTALL a new Active Park Assist/Differential Lock Switch.

K6 CHECK THE PAM (PARKING ASSIST CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS) WITH THE PARKING AID SWITCH STATUS LED (LIGHT EMITTING DIODE) CIRCUIT JUMPERED TO GROUND

- Ignition OFF.
- Disconnect: Active Park Assist/Differential Lock Switch C3360.
- Connect a fused jumper wire between:

Positive Lead	Measurement / Action	Negative Lead
C3360-8		C3360-12

- Ignition ON.
- Using a diagnostic scan tool, clear the PAM Diagnostic Trouble Codes (DTCs).
- Perform the PAM self-test.

Is DTC B1B54:11 or B1B54:12 still present?

Yes	REMOVE the jumper wire. INSTALL a new Active Park Assist/Differential Lock Switch.
No	REMOVE the jumper wire. GO to K7

K7 CHECK THE PARKING AID SWITCH STATUS LED (LIGHT EMITTING DIODE) CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect: BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3360-8	Ω	C2280G-34

Is the resistance less than 3 ohms?

Yes	GO to K8
No	REPAIR the circuit.

K8 CHECK THE PARKING AID SWITCH GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3360-12	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to K9
No	REPAIR the circuit.

K9 CHECK FOR CORRECT PAM (PARKING ASSIST CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PAM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PAM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB

	addresses this concern, INSTALL a new PAM (part of the BCM). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

U0100:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The PAM communicates with the PCM on the HS-CAN1.
REFER to: Parking Aid - System Operation and Component Description (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication With ECM/PCM "A": No Sub Type Information	A continuous and on-demand DTC that sets when the messages received from the PCM are missing for 5 seconds or more.

Possible Sources

- Communication concern
- PAM (integral to the BCM)
- PCM

PINPOINT TEST L : U0100:00

L1 VERIFY THAT A VEHICLE SESSION CAN BE ESTABLISHED USING THE DIAGNOSTIC SCAN TOOL

- Ignition ON.
- Verify that a vehicle session can be established using a diagnostic scan tool.

Can a vehicle session be established?

Yes	GO to L2
No	REPAIR the communication fault. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

L2 RECHECK THE PAM (PARKING ASSIST CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, clear the PAM Diagnostic Trouble Codes (DTCs).
- Operate the system and test for normal operation.
- Check the PAM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0100:00 present?

Yes	GO to L3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

L3 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PCM (POWERTRAIN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	Refer to the appropriate section in Group 303 for the procedure.
No	GO to L4

L4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait 10 seconds.
- Ignition ON.
- Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0100:00 set in other modules?

Yes	GO to L5
No	GO to L6

L5 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new PCM. Refer to the appropriate section in Group 303 for the procedure.
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

L6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

U0101:00

Normal Operation and Fault Conditions

The PAM communicates with the PCM on the HS-CAN1.
REFER to: Parking Aid - System Operation and Component Description (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0101:00	Lost Communication with TCM: No Sub Type Information	A continuous and on-demand DTC that sets when the messages received from the TCM are missing for 5 seconds or more.

Possible Sources

- Communication concern
- TCM
- PAM (integral to the BCM)

PINPOINT TEST M : U0101:00

M1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to M2
No	Clear the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

M2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Does the TCM pass the network test?

Yes	GO to M3

No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

M3 RECHECK THE PAM (PARKING ASSIST CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Operate the system and test for normal operation.
- Check the PAM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0101:00 present?

Yes	GO to M4
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

M4 RETRIEVE THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE TCM (TRANSMISSION CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the TCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	Refer to the appropriate section in Group 303 for the procedure.
No	GO to M5

M5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0101:00 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait 10 seconds.
- Ignition ON
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0101:00 set in other modules?

Yes	GO to M6
No	GO to M7

M6 CHECK FOR CORRECT TCM (TRANSMISSION CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all TCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new TCM.Refer to the appropriate section in Group 303 for the procedure.

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

M7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

U0121:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The PAM communicates with the ABS module through the GWM.
REFER to: Parking Aid - System Operation and Component Description (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0121:00	Lost Communication With Anti-Lock Brake System (ABS) Control Module: No Sub Type Information	A continuous and on-demand DTC that sets when the messages received from the ABS module through the GWM are missing for 5 seconds or more.

Possible Sources

- Communication concern
- ABS module
- GWM concern
- PAM (integral to the BCM)

PINPOINT TEST N : U0121:00

N1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to N2
No	Clear the DTC code. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

N2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Do the ABS module and the GWM pass the network test?

Yes	GO to N3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

N3 PERFORM THE ABS (ANTI-LOCK BRAKE SYSTEM) CONTROL MODULE SELF-TEST

- Using a diagnostic scan tool, perform the ABS module self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	GO to N4

N4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to N5

N5 RECHECK THE PAM (PARKING ASSIST CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Operate the system and test for normal operation.
- Check the PAM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0121:00 present?

Yes	GO to N6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

N6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0121:00 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).

- Ignition OFF.

- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0121:00 set in other modules?

Yes	GO to N7
No	GO to N8

N7 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect and inspect all ABS module connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the ABS module and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

N8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

R7 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect all IPC and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the IPC and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

R8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules,

	Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

U0164:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The PAM communicates with the SCCM through the GWM.
REFER to: Parking Aid - System Operation and Component Description (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0164:00	Lost Communication With Heating, Ventilation and Air Conditioning (HVAC) Module: No Sub Type Information	A continuous and on-demand DTC that sets when the messages received from the HVAC module through the GWM are missing for 5 seconds or more.

Possible Sources

- Communication concern
- GWM concern
- HVAC
- PAM (integral to the BCM)

PINPOINT TEST S : U0164:00

S1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to S2
No	Clear the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

S2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Do the HVAC module and the GWM pass the network test?

Yes	GO to S3
No	. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

S3 PERFORM THE HVAC (HEATING, VENTILATION AND AIR CONDITIONING) SELF-TEST

- Using a diagnostic scan tool, perform the HVAC self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). REFER to: Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
No	GO to S4

S4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs)

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to S5

S5 RECHECK THE PAM (PARKING ASSIST CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Operate the system and test for normal operation.
- Check the PAM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0164:00 present?

Yes	GO to S6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

S6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0164:00 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait 10 seconds.
- Ignition ON
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0164:00 set in other modules?

Yes	GO to S7
No	GO to S8

S7 CHECK FOR CORRECT HVAC (HEATING, VENTILATION AND AIR CONDITIONING) OPERATION

- Ignition OFF.
- Disconnect and inspect all HVAC and related in-line connectors.

- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the HVAC and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new HVAC module.
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

S8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

U0252:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The PAM communicates with the APIM through the GWM.
REFER to: Parking Aid - System Operation and Component Description (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0252:00	Lost Communication With Lighting Control Module - Rear B: No Sub Type Information	A continuous and on-demand DTC that sets when the messages received from the LCM -Rear B are missing for 5 seconds or more.

Possible Sources

- Communication concern
- GWM concern
- LCM -Rear B
- PAM (integral to the BCM)

PINPOINT TEST T : U0252:00

T1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to T2
No	Clear the DTC. The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

T2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform the network test.

Does the LCM- Rear B pass the network test?

Yes	GO to T3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

T3 PERFORM THE LCM (LIGHTING CONTROL MODULE) - REAR B SELF-TEST

- Using a diagnostic scan tool, perform the LCM- Rear B self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	Refer to the appropriate section in Group 417 for the procedure.
No	GO to T4

T4 CHECK THE GWM (GATEWAY MODULE A) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, check the GWM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to T5

T5 RECHECK THE PAM (PARKING ASSIST CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Operate the system and test for normal operation.
- Check the PAM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0252:00 present?

Yes	GO to T6
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

T6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0252:00 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait 10 seconds.
- Ignition ON
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0252:00 set in other modules?

Yes	GO to T8
No	GO to T7

T7 CHECK FOR CORRECT LCM (LIGHTING CONTROL MODULE) - REAR B OPERATION

- Ignition OFF.
- Disconnect and inspect all LCM- Rear B and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the LCM- Rear B and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new LCM- Rear B. Refer to the appropriate section in Group 417 for the procedure.
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

T8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).

No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

- Ignition OFF.
- Wait 10 seconds.
- Ignition ON
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U025D:00 set in other modules?

Yes	GO to V7
No	GO to V8

V7 CHECK FOR CORRECT FCIMB (FRONT CONTROLS INTERFACE MODULE B) OPERATION

- Ignition OFF.
- Disconnect and inspect all FCIMB and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the FCIMB and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new FCIMB. Refer to the appropriate section in Group 415 for the procedure.
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

V8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

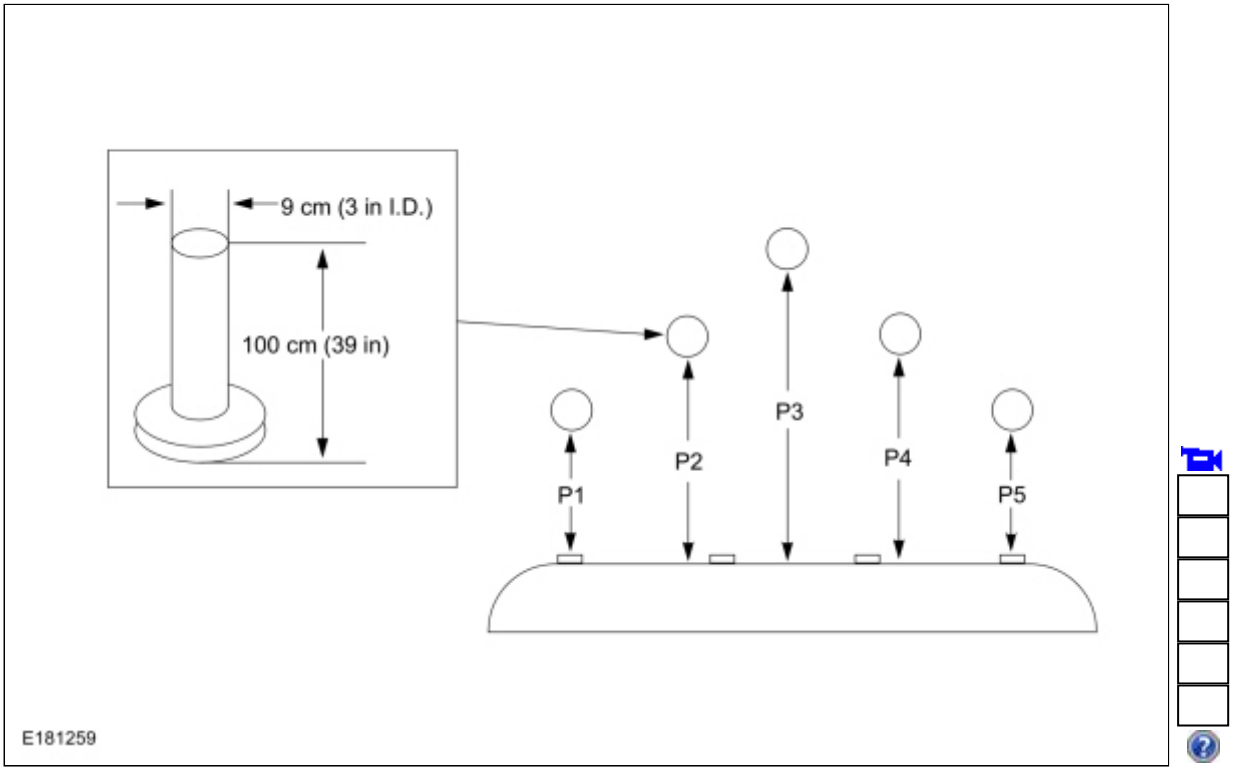
Azimuth System Check



Check

1. **NOTE:** *The object used in this system check can be fabricated using a 9 cm diameter (3 in I.D.) pipe, 100 cm (39 in) in length (available as Polyvinyl Chloride (PVC) pipe, or similar from a hardware or plumbing supply.*

   NOTE: *The following system check should be carried out with the vehicle on a level surface.*

   NOTE: *Actual sensor arrangement may differ from the configuration shown.*

   Distribute the test objects evenly across the bumper as shown. Refer to the specifications in this section.

2. Turn the ignition switch to the ON position, engine off.
3. Apply the parking brake.
4. Select REVERSE (R) for rear parking aid.
5. Select DRIVE (D) for front parking aid.
6. **NOTE:** *The system provides audio warnings only when the vehicle is moving or when the vehicle is stationary and the detected obstacle is less than 12 in (30 cm) away from the bumper.*

   NOTE: *If the PAM does not detect the object above, refer to Diagnosis and Testing.*

   Using a diagnostic scan tool, monitor the PAM parking aid sensor distance Parameter Identifications (PIDs) to verify the PAM detects the objects when placed in the specified locations (P1, P2, P3, P4 and P5).

Copyright © 2016 Ford Motor Company

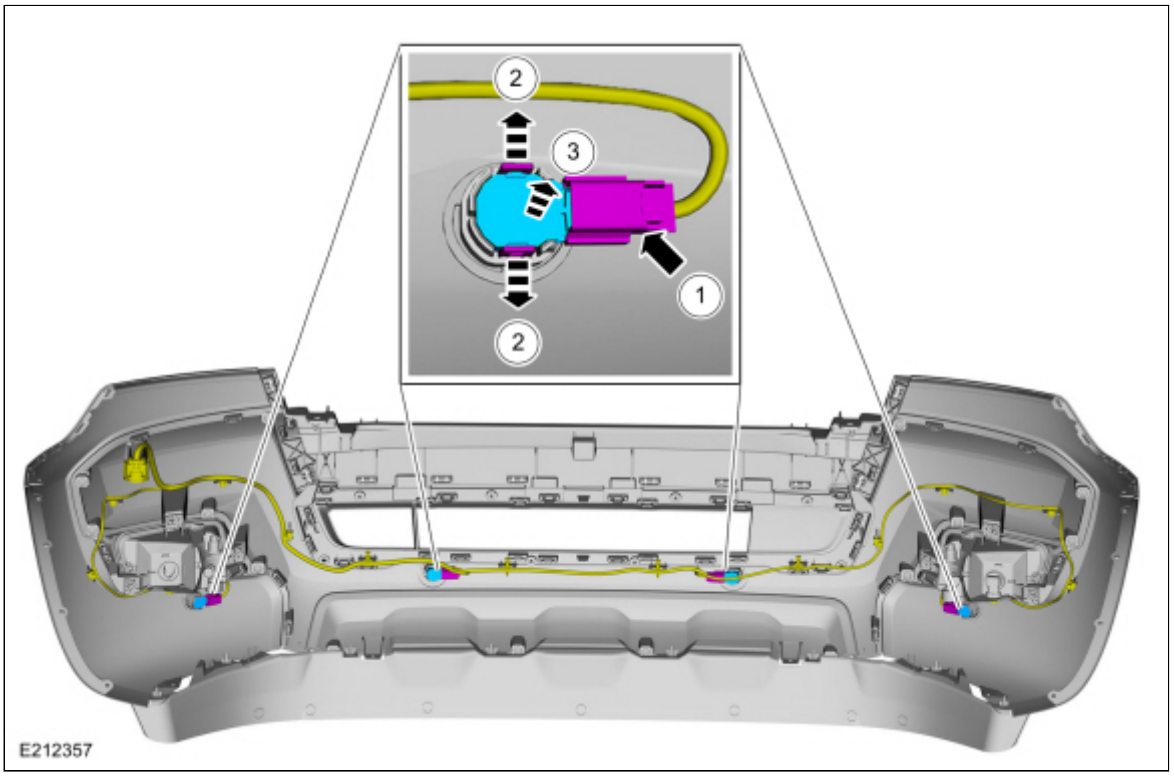
Elevation System Check

Check

1. Turn the ignition ON, engine OFF.

2. Set the parking brake.
3. Place the gearshift in REVERSE (R) for rear parking aid sensors.
4. Place the gearshift in DRIVE (D) for front parking aid sensors.
5. Using a diagnostic scan tool, monitor the PAM parking aid sensor distance Parameter Identifications (PIDs) to verify the PAM detects no objects.
6. If the audible warning is heard or if the Parameter Identifications (PIDs) indicate an object is detected, check to make sure the bumper is correctly installed and is not tilted downward so the sensor is pointing at the ground. Refer to Diagnosis and Testing.

Copyright © 2016 Ford Motor Company



Front Parking Aid Sensor

Removal

NOTE: *This procedure can be used for all locations of the component.*

1. Remove the front bumper cover.
   Refer to: Front Bumper Cover (501-19 Bumpers, Removal and Installation).

2. Remove the front parking aid sensor.
   1. Disconnect the front parking aid sensor electrical connector.
   2. Release the tabs.
   3. Remove the front parking aid sensor.

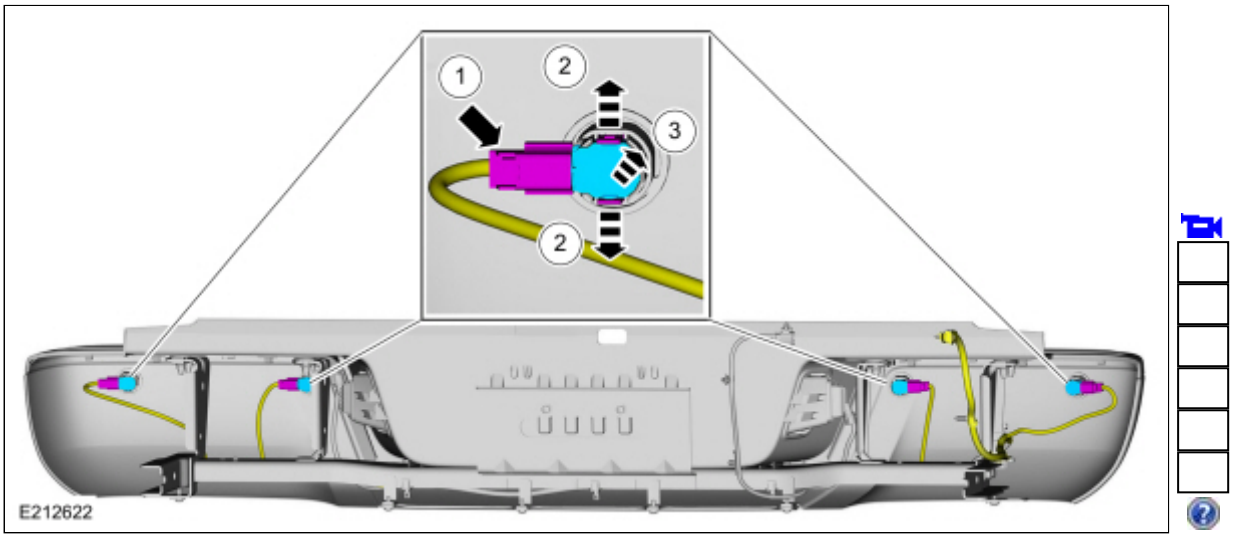
Installation

1. To install, reverse the removal procedure.

2. Carry out the azimuth and elevation system checks.
   Refer to: Azimuth System Check (413-13A Parking Aid - Vehicles With: Rear Parking Aid, General Procedures).
   Refer to: Elevation System Check (413-13A Parking Aid - Vehicles With: Rear Parking Aid, General Procedures).

3. If any sensor fails the checks, diagnose the sensor fault.
   Refer to: Parking Aid (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Diagnosis and Testing).

Copyright © 2016 Ford Motor Company



Rear Parking Aid Sensor

Removal

NOTE: *This procedure can be used for all locations of the component.*

1. Remove the rear bumper cover.
   Refer to: Rear Bumper (501-19 Bumpers, Removal and Installation).

2. Remove the rear park aid sensor.
   1. Disconnect the rear park aid sensor electrical connector.
   2. Release the tabs.
   3. Remove the park aid sensor from the bracket.

Installation

1. To install, reverse the removal procedure.

2. Carry out the azimuth and elevation system checks.
   Refer to: Azimuth System Check (413-13A Parking Aid - Vehicles With: Rear Parking Aid, General Procedures).
   Refer to: Elevation System Check (413-13A Parking Aid - Vehicles With: Rear Parking Aid, General Procedures).

3. If any sensor fails the system checks, diagnose the sensor fault.
   Refer to: Parking Aid (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Diagnosis and Testing).

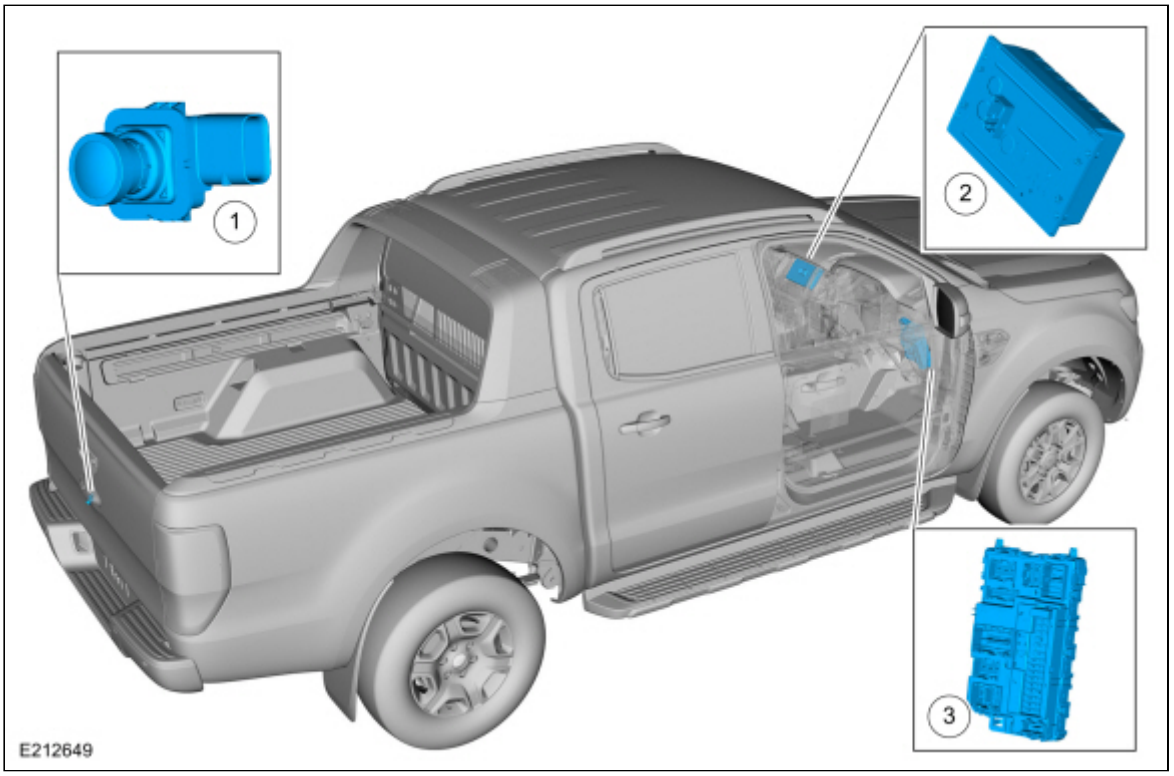
Copyright © 2016 Ford Motor Company

Parking Assist Control Module (PAM)

Removal

NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
   Refer to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).



Installation

1. To install, reverse the removal procedure.

Parking Aid - Overview

Overview

The vehicle may be equipped with:

- Rear only parking aid camera system

Rear Only Parking Aid Camera

The rear parking aid camera system visually aids the driver while reversing or reverse parking the vehicle. The camera system has features that provide fixed and active guideline overlays on the video image to assist the driver in aligning the vehicle and a visual alert function that provides a visual highlight in the zone where an object is detected by the audible parking aid system. The rear parking aid camera communicates with the BCM through a LIN circuit.

Parking Aid - System Operation and Component Description

System Operation

Rear Only Parking Aid Camera

System Diagram

Network Message Chart

BCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Camera commands	APIM	Used to command the zoom level on and off based on driver inputs through the FDIM.
Gear lever position	PCM	Used to support the rear parking aid camera standby mode. Turns the camera image output on when reverse gear is selected.

Parking aid sensor data	PAM	Used to generate the visual highlights in the zone where an object is detected by the rear parking aid system.
Steering angle	ABS Module	Used to generate the intended vehicle path for the active guideline feature.
Trailer lamp connected	TRM	Disables the guidelines and visual park aid alert when a trailer is electrically connected to the vehicle (if equipped with trailer tow).
Vehicle speed	PCM	Used to support the rear parking aid camera standby mode. Turns the camera image output off when vehicle speed is 10 mph (16 km/h) or greater and turns the camera image output on when the vehicle speed is 5 mph (8 km/h) or less.

ABS Module Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Steering wheel angle sensor data	PSCM	The ABS module uses the steering angle sensor data to generate the steering angle message that is sent to the BCM to support the active guideline feature.

FCDIM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Gear lever position	PCM	Used to enable and disable the rear video display.
Parking aid sensor data	PAM	Used to generate the visual highlights in the zone where an object is detected by the rear parking aid system.
Vehicle speed	PCM	When the video delay feature is turned on, this message is used to turn the rear camera display off after the vehicle speed exceeds a preset threshold.

APIM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Camera status	IPMB	Used to display the current status for active guidelines and visual park aid alert.
Gear lever position	PCM	Used to enable the video display when reverse gear is selected.
Parking aid sensor data	PAM	Used to generate the visual highlights in the zone where an object is detected by the rear parking aid system.
Vehicle speed	PCM	When the video delay feature is turned on, this message is used to turn the rear camera display off after the vehicle speed exceeds a preset threshold.

Image Display - 8 in (203 mm) Touchscreen

NOTE: *The liftgate must be fully closed for correct operation of the rear parking aid camera system.*

The rear parking aid camera image is displayed by the FDIM when reverse gear is selected. To determine the selector lever position and enable the camera display, the PCM sends the gear position message to the GWM on the HS-CAN1. The GWM then sends the message to the APIM via the HS-CAN3.

The camera is on any time it receives voltage (when the ignition is ON), but a video signal is only generated under certain conditions. When reverse gear is selected, the camera continuously generates a video signal. When any gear except reverse is selected, the camera turns the video signal off when the vehicle speed reaches 10 mph (16 km/h), and turns the video signal on when vehicle speed falls below 5 mph (8 km/h). If the camera is not configured properly, some features may be inoperative. The camera sends the video signal on shielded twisted pair wires to the APIM, which displays the image on the FDIM.

The following parking aid camera system features are driver selectable:

- Visual park aid alert — assists the driver to visually see the object causing the parking aid system to sound.
- Manual zoom — allows the driver to manually zoom the image.
- Video delay — allows the driver to see the image behind the vehicle after the vehicle is shifted out of reverse into any gear other than park.

The following camera system features are not driver selectable:

- Fixed guidelines — assists the driver with aligning the vehicle with an object.
- Active guidelines — displays the intended path of the vehicle based upon steering wheel input.

The FDIM settings menu is used to turn the visual park aid alert and video delay on and off. The visual park aid alert and video delay features are generated within the APIM.

To turn the manual zoom feature on and off, the driver uses an on screen button located on the FDIM while in reverse. The driver generated commands originate at the FDIM, which is hardwired to the APIM. The APIM sends the driver generated commands over the HS-CAN3 to the GWM. The GWM then sends the commands to the BCM on the HS-CAN1. The BCM sends the zoom command to the rear parking aid camera via the LIN circuit. The zoom is generated by the rear parking aid camera.

The fixed and active guidelines are generated by the rear parking aid camera and are not selectable by the driver.

Image Display - 4.2 in (107 mm) Display

NOTE: *The lifgate must be fully closed for correct operation of the rear parking aid camera system.*

The rear parking aid camera image is displayed by the FCDIM when reverse gear is selected. To determine the selector lever position and enable the camera display, the PCM sends the gear position message to the GWM on the HS-CAN1. The GWM then sends the message to the FCDIM via the HS-CAN3.

The camera is on any time it receives voltage (when the ignition is ON), but a video signal is only generated under certain conditions. When reverse gear is selected, the camera continuously generates a video signal. When any gear except reverse is selected, the camera turns the video signal off when the vehicle speed reaches 10 mph (16 km/h), and turns the video signal on when vehicle speed falls below 5 mph (8 km/h). If the camera is not configured properly, some features may be inoperative. The camera sends the video signal on shielded twisted pair wires to the FCDIM.

The following parking aid camera system are driver selectable:

- Visual park aid alert — assists the driver to visually see the object causing the parking aid system to sound.
- Manual zoom — allows the driver to manually zoom the image.
- Video delay — allows the driver to see the image behind the vehicle after the vehicle is shifted out of reverse into any gear other than park.
- Active guidelines — displays the intended path of the vehicle based upon steering wheel input.

The following camera system features are not driver selectable:

- Fixed guidelines — assists the driver with aligning the vehicle with an object.

The visual park aid alert and video delay are turned on and off in the FCDIM. The visual park aid alert feature is generated by the rear parking aid camera and video delay feature is generated within the FCDIM.

To turn the visual park aid alert and manual zoom features on and off, the driver generated commands originate from the FCDIM on the HS-CAN3. The GWM sends the commands from the HS-CAN3 to the BCM on the HS-CAN1. The BCM then sends the command to the rear parking aid camera via the LIN circuit.

The fixed and active guidelines and the manual zoom are generated by the rear parking aid camera.

LIN Communication

The BCM and the rear parking aid camera communicate via a LIN circuit which is a dedicated single wire

communication network.

The messages sent from the BCM to the camera are:

- Camera configuration data
- Display manual zoom request
- Guideline on/off request
- Trailer connection status (if equipped with trailer tow)
- Steering angle
- Standby enable/disable request

The messages sent from the camera to the BCM are:

- Camera status
- Display zoom status
- Camera part number data
- Guideline status

Visual Park Aid Alert

NOTE: *The on-screen alert transitions may not match changes in the audible parking aid alert tone frequency.*

The visual park aid alert feature displays a visual highlight in the zone where an object has been detected by the rear parking aid system. This feature utilizes the parking aid sensor data from the PAM to generate the visual highlights on the video image. When reverse gear is selected and an object is detected by a rear parking aid sensor, the parking aid sensor data message from the PAM is used by the FCDIM or APIM to generate the alert.

If the visual park aid alert feature is enabled, the feature is still operational even if the rear parking aid system has been disabled by the driver.

Fixed Guidelines

NOTE: *The color-coded lines cannot indicate accurate or consistent distances between the rear of the vehicle and objects shown in the video image. This normal condition is due to variances in vehicle ride height, including, but not limited to, vehicle loading.*

The video camera fixed guidelines feature displays guidelines on top of the video image to assist the driver with alignment of the vehicle. A dashed line on the displayed image represents the center of the vehicle and 3 color-coded lines (red, yellow, green) identify different zones between the rear of the vehicle and objects.

The guidelines are not shown when reverse is not selected (video delay active).

If the vehicle is equipped with a TRM, the fixed guidelines are not shown when a trailer is electrically connected to the vehicle.

Active Guidelines

NOTE: *If the battery has been disconnected or discharged, or a module is disconnected or replaced, the active guidelines may be inoperative until the vehicle is driven on a flat and smooth road at 32 km/h (20 mph) or more, with hands placed loosely on the steering wheel and minimal steering correction for approximately 30 seconds.*

If the guidelines remain inoperative, it may be necessary to disconnect the battery for 5 minutes with the driver's door open, then drive the vehicle for 5 miles in normal city driving before performing the procedure described above.

The active guidelines feature displays dynamic guidelines that correspond to the projected path of vehicle travel, based on the current steering angle. Several modules are involved in generating the steering angle data used to support the active guidelines. The PSCM monitors the steering angle sensor and sends the steering wheel angle sensor data to the ABS module via the HS-CAN2. The ABS module uses this message from the PSCM to generate the steering angle message that is sent to the GWM on the HS-CAN2. The GWM then sends the message to the BCM via the HS-CAN1. The BCM sends the steering angle data to the rear parking aid camera via the LIN circuit. The camera uses this data to generate the active guidelines over the video image.

If the steering wheel is in the straight-ahead position, the active guidelines are not shown.

The guidelines are not shown when reverse is not selected (video delay active).

If the vehicle is equipped with a TRM, the active guidelines are not shown when a trailer is electrically connected to the vehicle.

Manual Zoom

The manual zoom feature is generated by the rear parking aid camera and has one level of zoom. If the manual zoom

feature is on and the vehicle is shifted out of reverse gear, the manual zoom feature is disabled and must be re-enabled the next time reverse gear is selected. When the driver turns the zoom on or off at the FDIM or FCDIM, the zoom command is sent through HS-CAN3 to the GWM then over HS-CAN1 to the BCM. The BCM then sends the manual zoom request message to the rear parking aid camera via the LIN circuit. The camera then turns the zoom on or off.

Video Delay

When the video delay is turned on, the display keeps the rear video display enabled after the transmission is shifted out of reverse gear, into any gear other than park, until the vehicle speed reaches 8 km/h (5 mph). With the delay off (default), the image displays until the transmission is shifted out of reverse gear.

Component Description

Rear Camera

The rear parking aid camera is located on the liftgate. On vehicles equipped with the front and rear parking aid camera system, the rear camera communicates with the IPMB through a LIN circuit. On vehicles equipped with the rear only parking aid camera system, the rear camera communicates with the BCM through a LIN circuit. The camera must be configured using a diagnostic scan tool after replacement in order for all features to operate properly.

BCM (vehicles equipped with rear only parking aid camera)

The BCM serves as a gateway between the rear parking aid camera and other modules on the HS-CAN1. It communicates with the rear camera via the LIN and stores Diagnostic Trouble Codes (DTCs) for the camera and the LIN in the event of a concern.

Parking Aid

DTC Chart(s)

DTC Chart: BCM

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

DTC	Description	Action
B115E:01	Camera Module: General Electrical Failure	GO to Pinpoint Test A
B115E:02	Camera Module: General Signal Failure	GO to Pinpoint Test A
B115E:08	Camera Module: Bus Signal/Message Failure	GO to Pinpoint Test A
B115E:49	Camera Module: Internal Electronic Failure	• Sets in continuous memory and on-demand in the BCM when an internal fault in the rear parking aid camera is detected. – CLEAR the Diagnostic Trouble Codes (DTCs) and REPEAT the BCM self-test. – If DTC B115E:49 returns, INSTALL a new rear parking aid camera. REFER to: Rear Parking Aid Camera (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Removal and Installation).
B115E:55	Camera Module: Not Configured	• Sets in continuous memory and on-demand in the BCM when the rear parking aid camera is not configured. – PERFORM the rear parking aid camera configuration using a diagnostic scan tool under Electrical>Service Functions>LIN New Module Initialization.
B115E:9A	Camera Module: Component or System Operating Conditions	• Sets as an on-demand DTC in the BCM when the prerequisite conditions are not met for the on-demand self test. – INSPECT the liftgate to make sure it is fully closed and DIAGNOSE any other Diagnostic Trouble Codes (DTCs) present in the BCM. REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
All other Diagnostic Trouble Codes (DTCs)	-	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).

DTC Chart: APIM

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

DTC	Description	Action
C1001:01	Vision System Camera: General Electrical Failure	• If the vehicle is equipped with a rear only parking aid camera, GO to Pinpoint Test A
All other Diagnostic Trouble Codes (DTCs)	—	Refer to the appropriate section in Group 415 for the procedure.

DTC Chart: FCDIM

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

DTC	Description	Action
C1001:01	Vision System Camera: General Electrical Failure	GO to Pinpoint Test A
All other Diagnostic Trouble Codes (DTCs)	—	REFER to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing).

Symptom Chart(s)

Rear Only Parking Aid Camera

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Condition	Possible Sources	Actions
The rear parking aid camera is inoperative	Refer to the Pinpoint Test	• If the vehicle is equipped with an 8 in (203 mm) touchscreen, PERFORM an APIM reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). − If the concern is still present after the APIM reset, GO to Pinpoint Test A • If the vehicle is equipped with a 4.2 in (107 mm) centerstack infotainment display, GO to Pinpoint Test A
The FDIM or FCDIM displays REAR VIDEO CAMERA IS UNAVAILABLE or CAMERA IS UNAVAILABLE PLEASE CONTACT YOUR DEALERSHIP and a black screen/no image	Refer to the Pinpoint Test	• If the vehicle is equipped with an 8 in (203 mm) touchscreen, PERFORM an APIM reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With:

		AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). – If the concern is still present after the APIM reset, GO to Pinpoint Test A • If the vehicle is equipped with a 4.2 in (107 mm) centerstack infotainment display, GO to Pinpoint Test A
Static/flashing/blinking/flickering/scrolling or rolling image/screen/scrolling horizontal lines	Refer to the Pinpoint Test	GO to Pinpoint Test B
Poor image quality (foggy/cloudy/fuzzy/blurry/hazy image or moisture/water in lens or black spots)	Refer to the Pinpoint Test	GO to Pinpoint Test B
Frozen screen or slow screen transitions (vehicles with an 8 in (203 mm) touchscreen)	• FDIM • APIM	PERFORM an APIM reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). If the concern is still present after the APIM reset, DIAGNOSE the APIM and FDIM. REFER to: Information and Entertainment System (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Diagnosis and Testing).
Frozen screen or slow screen transitions (vehicles with a 4.2 in (107 mm) centerstack infotainment display)	• FCDIM	DIAGNOSE the FCDIM. REFER to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing).
Manual zoom function is inoperative	Refer to the Pinpoint Test	• If the vehicle is equipped with an 8 in (203 mm) touchscreen, PERFORM an APIM reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). – If the concern is still present after the APIM reset, GO to Pinpoint Test E • If the vehicle is equipped with a 4.2 in (107 mm) centerstack infotainment display, GO to Pinpoint Test E
Visual park aid alert is inoperative	Refer to the Pinpoint Test	• If the vehicle is equipped with an 8 in (203 mm) touchscreen, PERFORM an APIM reset. REFER to: Reset the SYNC Module [APIM]

		(415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). – If the concern is still present after the APIM reset, GO to Pinpoint Test C • If the vehicle is equipped with a 4.2 in (107 mm) centerstack infotainment display, GO to Pinpoint Test C
Active guidelines are inoperative or do no operate correctly	Refer to the Pinpoint Test	• If the vehicle is equipped with an 8 in (203 mm) touchscreen, PERFORM an APIM reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). – If the concern is still present after the APIM reset, GO to Pinpoint Test D • If the vehicle is equipped with a 4.2 in (107 mm) centerstack infotainment display, GO to Pinpoint Test D
Fixed guidelines are inoperative or do not operate correctly	Refer to the Pinpoint Test	• If the vehicle is equipped with an 8 in (203 mm) touchscreen, PERFORM an APIM reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). – If the concern is still present after the APIM reset, GO to Pinpoint Test D • If the vehicle is equipped with a 4.2 in (107 mm) centerstack infotainment display, GO to Pinpoint Test D
The video delay feature is inoperative or does not operate correctly	Refer to the Pinpoint Test	• If the vehicle is equipped with an 8 in (203 mm) touchscreen, PERFORM an APIM reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment

		System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). – If the concern is still present after the APIM reset, GO to Pinpoint Test F • If the vehicle is equipped with a 4.2 in (107 mm) centerstack infotainment display, GO to Pinpoint Test F
Video image is upside down	• Internal parking aid camera failure • Incorrect parking aid camera installed on vehicle	INSTALL a new rear parking aid camera. REFER to: Rear Parking Aid Camera (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Removal and Installation).
All other image concerns	Refer to the Pinpoint Test	GO to Pinpoint Test A

Pinpoint Test(s)

The Rear Parking Aid Camera Is Inoperative - Vehicles With Rear Only Parking Aid Camera

Refer to Wiring Diagrams Cell 145 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B115E:01	Camera Module: General Electrical Failure	A continuous and on-demand DTC that sets in the BCM when an internal electrical failure is detected from the camera.
B115E:02	Camera Module: General Signal Failure	A continuous and on-demand DTC that sets in the BCM when invalid LIN data is received from the video camera.
B115E:08	Camera Module: Bus Signal/Message Failure	A continuous and on-demand DTC that sets in the BCM when there is a LIN communication fault from the video camera.

APIM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C1001:01	Vision System Camera: General Electrical Failure	A continuous and on-demand DTC that sets in the APIM when no video signal is detected from the rear parking aid camera when the vehicle is in REVERSE.

FCDIM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C1001:01	Vision System Camera: General Electrical Failure	A continuous and on-demand DTC that sets in the FCDIM when no video signal is detected from the rear parking aid camera when the vehicle is in REVERSE.

Possible Causes

- Wiring, terminals or connectors
- Fuse
- Communication network concern
- Rear parking aid camera
- TR input concern
- Infotainment display concern
- LIN concern
- BCM
- APIM (vehicles equipped with 8 in (203 mm) touchscreen)

Visual Inspection and Diagnostic Pre-Checks

- If the vehicle is equipped with an 8 in (203 mm) touchscreen display, perform an APIM reset and reevaluate the concern prior to following this pinpoint test.
  REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
  REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
- BJB fuse 23 (15A).
- Verify the liftgate is fully closed.
- If the rear parking aid camera is not configured after replacement, some video functions will be inoperative. Verify the rear parking aid camera configuration using the diagnostic scan tool.

NOTE: *Before disconnecting the camera, verify the connector is properly seated and latched.*

PINPOINT TEST A : THE REAR PARKING AID CAMERA IS INOPERATIVE - VEHICLES WITH REAR ONLY PARKING AID CAMERA

A1 CHECK AND CLEAN THE REAR PARKING AID CAMERA LENS

- Clean and make sure the rear video camera lens is clear of any debris.
- Ignition ON.
- Select REVERSE.
- Test the rear parking aid camera system and monitor the video image.
- Select PARK.

Is the concern still present?

Yes	For vehicles equipped with Automatic Transmissions GO to A2 For vehicles equipped with Manual Transmissions GO to A3
No	The system is operating correctly at this time. The concern may have been caused by dirt or debris on the camera lens.

A2 CHECK FOR CORRECT GEAR INPUT AT THE IPC (INSTRUMENT PANEL CLUSTER)

- While monitoring the IPC PRNDL indicator, briefly select each gear in the entire range.

Does the IPC PRNDL indicator match the actual gear selection?

Yes	GO to A3
No	

	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).

A3 PERFORM A NETWORK TEST

- Using a diagnostic scan tool, perform a network test.

Do all modules pass the network test?

Yes	GO to A4
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

A4 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using the diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) retrieved?

Yes	For BCM Diagnostic Trouble Codes (DTCs) B115E:01, B115E:02 or B115E:08, GO to A9 For all other Diagnostic Trouble Codes (DTCs), REFER to the DTC chart in this section.
No	For vehicles equipped with a 8 in (203 mm) touchscreen, GO to A5 For vehicles equipped with a 4.2 in (107 mm) centerstack infotainment display, GO to A7

A5 PERFORM THE APIM (SYNC MODULE) RESET

- Perform the APIM reset.
  REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
- Test the system to determine if the concern is still present.

Is the concern still present?

Yes	GO to A6
No	The system is operating correctly at this time. The concern may have been caused by an intermittent APIM concern.

A6 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE APIM (SYNC MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the APIM self-test.

Are any Diagnostic Trouble Codes (DTCs) retrieved?

Yes	For DTC C1001:01, GO to A9 For all other Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Diagnosis and Testing).
No	GO to A8

A7 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the FCDIM self-test.

- Using a diagnostic scan tool, perform the FCDIM self-test.

Are any Diagnostic Trouble Codes (DTCs) retrieved?

Yes	For DTC C1001:01, GO to A9 For all other Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing).
No	GO to A8

A8 CHECK THE VIDEO DISPLAY

- Observe the FDIM (if equipped) or FCDIM (if equipped) display.
- Select REVERSE.
- Wait 30 seconds.

Does the display switch to rear parking camera display mode?

Yes	Select PARK. GO to A9
No	Select PARK. DIAGNOSE the display. REFER to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing). REFER to: Information and Entertainment System (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Diagnosis and Testing). REFER to: Information and Entertainment System (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Diagnosis and Testing).

A9 CHECK FOR VOLTAGE TO THE REAR CAMERA

- Ignition OFF.
- Disconnect Rear Parking Aid Camera C4357.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to A10
No	INSPECT BJB fuse 23 (15A). If the fuse is OK, repair the circuit for an open. If the fuse is not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the short circuit.

A10 CHECK FOR GROUND AT THE REAR CAMERA

- Measure:

Positive Lead	Measurement / Action	Negative Lead

C4357-1		C4357-5

Is the voltage greater than 11 volts?

Yes	GO to A12
No	For vehicles with an 8 in (203 mm) touchscreen, GO to A11 For vehicles with a 4.2 in (107 mm) centerstack infotainment display, REPAIR the circuit.

A11 CHECK THE CAMERA GROUND/SHIELD CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect APIM C3342.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-6	Ω	C3342-33

Is the resistance less than 3 ohms?

Yes	GO to A18
No	REPAIR the circuit.

A12 CHECK THE VIDEO SIGNAL CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect APIM C3342 (vehicles with an 8 in (203 mm) touchscreen).
- Disconnect FCDIM C2123 (vehicles with a 4.2 in (107 mm) centerstack infotainment display).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3		Ground
C4357-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to A13

A13 CHECK THE VIDEO SIGNAL CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	Ground

C4357-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A14
No	REPAIR the circuit in question.

A14 CHECK VIDEO SIGNAL CIRCUITS FOR AN OPEN

- Measure:

8 in (203 mm) Touchscreen

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	C3342-15
C4357-4	Ω	C3342-14

4.2 in (107 mm) Centerstack Infotainment Display

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	C2123-12
C4357-4	Ω	C2123-6

Are the resistances less than 3 ohms?

Yes	GO to A15
No	REPAIR the circuit in question.

A15 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO VOLTAGE

- Disconnect BCM C2280G.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-2	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to A16

A16 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

- Ignition OFF

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-2	Ω	C2280G-37

Is resistance less than 3 ohms ?

Yes	GO to A17
No	REPAIR the circuit.

A17 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-2	Ω	Ground

Is resistance greater than 10,000 ohms?

Yes	GO to A19
No	REPAIR the circuit.

A18 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the APIM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,   Click here to access Guided Routine (APIM).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

A19 CHECK FOR CORRECT REAR PARKING AID CAMERA OPERATION

- Ignition OFF.
- Disconnect and inspect the rear parking aid camera connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the rear parking aid camera connector and related in-line connectors. Make sure they seat and

latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new rear parking aid camera. REFER to: Rear Parking Aid Camera (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Removal and Installation). If the concern is still present after camera replacement, GO to A20
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

A20 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the BCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the BCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

Poor Image Quality - Rear Parking Aid Camera

Refer to Wiring Diagrams Cell 145 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Description and Operation).

Possible Causes

- Dirty or scratched camera lens
- Wiring, terminals or connectors
- Fuse
- Rear parking aid camera
- APIM (vehicles with 8 in (203 mm) touchscreen)
- Interference from other sources

Visual Inspection and Diagnostic Pre-Checks

- Make sure the rear video camera lens is clear of any debris.
- BJB Fuse 23 (15A).
- If the vehicle is equipped with an 8 in (203 mm) touchscreen display, perform an APIM reset and reevaluate the concern prior to following this pinpoint test.
  REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
  REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).

NOTE: *Before disconnecting the camera, verify the connector is properly seated and latched.*

PINPOINT TEST B : POOR IMAGE QUALITY - REAR PARKING AID CAMERA

B1 CHECK AND CLEAN THE CAMERA LENS

- Clean and make sure the rear parking aid camera lens is clear of any debris and scratches.
- Test the rear parking aid camera system while observing the video camera image.

Is the concern still present?

Yes	GO to B2
No	The system is operating correctly at this time. The concern may have been caused by dirt or debris on the camera lens or intermittent electromagnetic interference from an outside source.

B2 CHECK THE VOLTAGE TO THE REAR CAMERA

- Ignition OFF.
- Disconnect Rear Parking Aid Camera C4357.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to B3
No	INSPECT BJB fuse 23 (15A). If the fuse is OK, repair the circuit for an open. If the fuse is not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the short circuit.

B3 CHECK THE REAR CAMERA GROUND CIRCUIT

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-1		C4357-5

Is the voltage greater than 11 volts?

Yes	GO to B5
No	For vehicles with an 8 in (203 mm) touchscreen, GO to B4 For vehicles with a 4.2 in (107 mm) centerstack infotainment display, REPAIR the circuit.

B4 CHECK THE REAR CAMERA GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect APIM C3342.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-6	Ω	C3342-33

Is the resistance less than 3 ohms?

Yes	GO to B9
No	REPAIR the circuit.

B5 CHECK THE VIDEO SIGNAL CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect APIM C2342 (vehicles with an 8 in (203 mm) touchscreen).
- Disconnect FCDIM C2123 (vehicles with a 4.2 in (107 mm) centerstack infotainment display).
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3	V	Ground
C4357-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to B6

B6 CHECK THE VIDEO SIGNAL CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	Ground
C4357-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to B7
No	REPAIR the circuit in question.

B7 CHECK THE VIDEO SIGNAL CIRCUITS FOR A SHORT TO VIDEO SHIELD

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	C4357-6
C4357-4	Ω	C4357-6

Are the resistances greater than 10,000 ohms?

Yes	GO to B8
No	REPAIR the circuit in question.

B8 CHECK VIDEO SIGNAL CIRCUITS FOR AN OPEN

- Measure:

8 in (203 mm) Touchscreen

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	C3342-15
C4357-4	Ω	C3342-14

4.2 in (107 mm) Centerstack Infotainment Display

Positive Lead	Measurement / Action	Negative Lead
C4357-3	Ω	C2807-12
C4357-4	Ω	C2807-6

Are the resistances less than 3 ohms?

Yes	GO to B10
No	REPAIR the circuit in question.

B9 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the APIM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical

	Service Bulletins (TSBs) address this concern,   Click here to access Guided Routine (APIM).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B10 CHECK FOR CORRECT REAR PARKING AID CAMERA OPERATION

- Ignition OFF.
- Disconnect and inspect the rear parking aid camera connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the rear parking aid camera connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new rear parking aid camera. REFER to: Rear Parking Aid Camera (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The Visual Park Aid Alert Is Inoperative - Vehicles With Rear Only Parking Aid Camera

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Description and Operation).

Possible Causes

- Communication network concern
- Rear parking aid camera
- PAM (integral to the BCM)
- BCM concern
- FCDIM (vehicles equipped with 4.2 in (107 mm) display)
- APIM (vehicles equipped with 8 in (203 mm) touchscreen)

Visual Inspection and Diagnostic Pre-Checks

- If the vehicle is equipped with an 8 in (203 mm) touchscreen display, perform an APIM reset and reevaluate the concern prior to following this pinpoint test.
  REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
  REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
- If the rear parking aid camera is not configured after replacement, some video functions will be inoperative. Verify the rear video camera configuration using the diagnostic scan tool.

PINPOINT TEST C : THE VISUAL PARK AID ALERT IS INOPERATIVE - VEHICLES WITH REAR ONLY PARKING AID CAMERA

C1 VERIFY THE VISUAL PARK AID ALERT IS ENABLED

- Ignition ON.

- Verify that the visual park aid alert is enabled in the infotainment system settings menu. Refer to the Owner's Literature.

Is the visual park aid alert enabled?

Yes	GO to C2
No	ENABLE the visual park aid alert.

C2 PERFORM A NETWORK TEST

- Ignition ON.
- Using a diagnostic scan tool, perform a network test.

Do all modules pass the network test?

Yes	GO to C3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

C3 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PAM (PARKING ASSIST CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PAM self-test.

Are any PAM Diagnostic Trouble Codes (DTCs) recorded?

Yes	REPAIR all PAM Diagnostic Trouble Codes (DTCs) before continuing this test. REFER to: Parking Aid (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Diagnosis and Testing).
No	GO to C4

C4 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any BCM Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to the BCM DTC chart in this section.
No	For vehicles with an 8 in (203 mm) touchscreen, GO to C8 For vehicles with a 4.2 in (107 mm) centerstack infotainment display, GO to C5

C5 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the FCDIM self-test.

Are any FCDIM Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing).
No	GO to C6

C6 CHECK FOR CORRECT REAR PARKING AID CAMERA OPERATION

- Ignition OFF.
- Disconnect and inspect the rear parking aid camera connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the rear parking aid camera connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new rear parking aid camera. REFER to: Rear Parking Aid Camera (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Removal and Installation). If the concern is still present after camera replacement, GO to C7
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

C7 CHECK FOR CORRECT FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the FCDIM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the FCDIM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

C8 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE APIM (SYNC MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the APIM self-test.

Are any APIM Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing). REFER to: Information and Entertainment System (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Diagnosis and Testing).
No	GO to C9

C9 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the APIM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,   Click here to access Guided Routine (APIM).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The Guidelines Are Inoperative Or Do Not Operate Correctly - Vehicles With Rear Only Parking Aid Camera

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Description and Operation).

Possible Causes

- Communication network concern
- Rear parking aid camera
- Liftgate position data concern
- LIN concern
- TRM concern
- ABS module concern (active guidelines only)
- PSCM concern (active guidelines only)
- BCM

Visual Inspection and Diagnostic Pre-Checks

- If the vehicle is equipped with an 8 in (203 mm) touchscreen display, perform an APIM reset and reevaluate the concern prior to following this pinpoint test.
  REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
  REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
- Verify the inoperative feature is enabled in the settings menu. Refer to the Owner's Literature.
- Verify that a trailer is not electrically connected to the vehicle.
- Verify the liftgate is fully closed.
- If the rear parking aid camera is not configured after replacement, some video functions will be inoperative. Verify the rear video camera configuration using the diagnostic scan tool.
- For active guideline concerns, verify the concern was not caused by the steering wheel being in the straight ahead position. Active guidelines are not displayed unless the steering wheel is rotated.

NOTE: *If the battery has been disconnected or discharged, or a module is disconnected or replaced, the active guidelines may be inoperative until the vehicle is driven on a flat and smooth road at 32 km/h (20 mph) or more, with hands placed loosely on the steering wheel and minimal steering correction for approximately 30 seconds.*

If the guidelines are remain inoperative, it may be necessary to disconnect the battery for 5 minutes with the driver's door open, then drive the vehicle for 5 miles in normal city driving before performing the procedure described above.

PINPOINT TEST D : THE GUIDELINES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY - VEHICLES WITH REAR ONLY PARKING AID CAMERA

D1 PERFORM A NETWORK TEST

- Ignition ON.
- Using a diagnostic scan tool, perform a network test.

Do all modules pass the network test?

Yes	If the vehicle is equipped with factory trailer tow, GO to D2 If the vehicle is **not** equipped with factory trailer tow, GO to D3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

D2 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE TRM (TRAILER MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the TRM self-test.

Are any TRM Diagnostic Trouble Codes (DTCs) retrieved?

Yes	REFER to: Trailer Lamps (417-01 Exterior Lighting, Diagnosis and Testing).
No	GO to D3

D3 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a scan tool, perform the BCM self-test.

Are any BCM Diagnostic Trouble Codes (DTCs) retrieved?

Yes	REFER to the BCM DTC chart in this section.
No	For an active guideline concern, GO to D4 For a fixed guideline concern, GO to D7

D4 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST

- Using a diagnostic scan tool, perform the ABS module self-test.

Are any ABS module Diagnostic Trouble Codes (DTCs) retrieved?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	GO to D5

D5 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PSCM (POWER STEERING CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PSCM self-test.

Are any PSCM Diagnostic Trouble Codes (DTCs) retrieved?

Yes	REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column

	Switches, Diagnosis and Testing).
No	GO to D6

D6 CHECK THE LIFTGATE AJAR PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view the BCM Parameter Identifications (PIDs).
- Monitor the liftgate ajar PID while opening and closing the liftgate.

Does the PID consistently agree with the liftgate position?

Yes	GO to D7
No	REFER to: Locks, Latches and Entry Systems (501-14 Handles, Locks, Latches and Entry Systems, Diagnosis and Testing).

D7 CHECK FOR CORRECT REAR PARKING AID CAMERA OPERATION

- Ignition OFF.
- Disconnect and inspect the rear parking aid camera connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the rear parking aid camera connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new rear parking aid camera. REFER to: Rear Parking Aid Camera (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Removal and Installation). If the concern is still present after camera replacement, GO to D8
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

D8 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM connectors and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all BCM connectors and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or

	corroded connector. ADDRESS the root cause of any connector or pin issues.

The Manual Zoom Is Inoperative -Vehicles With Rear Only Parking Aid Camera

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Description and Operation).

Possible Causes

- Communication network concern
- Rear parking aid camera
- LIN concern
- FCDIM concern (vehicles with a 4.2 in (107 mm) centerstack infotainment display)
- APIM concern (vehicles with an 8 in (203 mm) touchscreen)

Visual Inspection and Diagnostic Pre-Checks

- If the vehicle is equipped with an 8 in (203 mm) touchscreen display, perform an APIM reset and reevaluate the concern prior to following this pinpoint test.
  REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
  REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
- If the rear parking aid camera is not configured after replacement, some video functions will be inoperative. Verify the rear video camera configuration using the diagnostic scan tool.

PINPOINT TEST E : THE MANUAL ZOOM IS INOPERATIVE - VEHICLES WITH REAR ONLY PARKING AID CAMERA

E1 PERFORM A NETWORK TEST

- Ignition ON.
- Using a diagnostic scan tool, perform a network test.

Do all modules pass the network test?

Yes	GO to E2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

E2 CHECK FOR RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to the BCM DTC chart in this section.
No	For vehicles with an 8 in (203 mm) touchscreen, GO to E3 For vehicles with a 4.2 in (107 mm) centerstack infotainment display, GO to E4

E3 CHECK FOR RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE APIM (SYNC MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the APIM self-test.

Are any Diagnostic Trouble Codes present?

Yes	For DTC C1001:01, GO to Pinpoint Test A For all other Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing). REFER to: Information and Entertainment System (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Diagnosis and Testing).
No	GO to E5

E4 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the FCDIM self-test.

Are any Diagnostic Trouble Codes (DTCs) retrieved?

Yes	For DTC C1001:01, GO to Pinpoint Test A For all other Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing).
No	GO to E5

E5 CHECK FOR CORRECT REAR PARKING AID CAMERA OPERATION

- Ignition OFF.
- Disconnect and inspect the rear parking aid camera connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the rear parking aid camera connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new rear parking aid camera. REFER to: Rear Parking Aid Camera (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The Video Delay Is Inoperative Or Does Not Operate Correctly

Normal Operation and Fault Conditions

REFER to: Parking Aid - System Operation and Component Description (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Description and Operation).

Possible Causes

- Communication network concern
- TR data concern
- FCDIM concern (vehicles with a 4.2 in (107 mm) centerstack infotainment display)
- APIM concern (vehicles with an 8 in (203 mm) touchscreen)

Visual Inspection and Diagnostic Pre-Checks

- If the vehicle is equipped with an 8 in (203 mm) touchscreen display, perform an APIM reset and reevaluate the concern prior to following this pinpoint test.
  REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
  REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
- Verify the video delay feature is turned on in the settings menu. Refer to the Owner's Literature.

PINPOINT TEST F : THE VIDEO DELAY IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

F1 PERFORM A NETWORK TEST

- Ignition ON.
- Using a diagnostic scan tool, perform a network test.

Do all modules pass the network test?

Yes	GO to F2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

F2 CHECK THE FOR CORRECT GEAR INPUT

- Apply the parking brake.
- While monitoring the reversing lamps, move the selector lever through the entire range.

Do the reversing lamps illuminate only when reverse gear is selected?

Yes	For vehicles with an 8 in (203 mm) touchscreen, GO to F3 For vehicles with a 4.2 in (107 mm) centerstack infotainment display, GO to F4
No	REFER to: Reversing Lamps (417-01 Exterior Lighting, Diagnosis and Testing).

F3 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE APIM (SYNC MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the APIM self-test.

Are any Diagnostic Trouble Codes (DTCs) retrieved?

Yes	For DTC C1001:01, GO to Pinpoint Test A For all other Diagnostic Trouble Codes (DTCs), REFER to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing). REFER to: Information and Entertainment System (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Diagnosis and Testing).
No	GO to F5

F4 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the FCDIM self-test.

Are any Diagnostic Trouble Codes (DTCs) retrieved?

Yes	For DTC C1001:01, GO to Pinpoint Test A For all other Diagnostic Trouble Codes (DTCs),

	REFER to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing).
No	GO to F6

F5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the APIM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern,   Click here to access Guided Routine (APIM).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

F6 CHECK FOR CORRECT FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the FCDIM connector and related in-line connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the FCDIM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

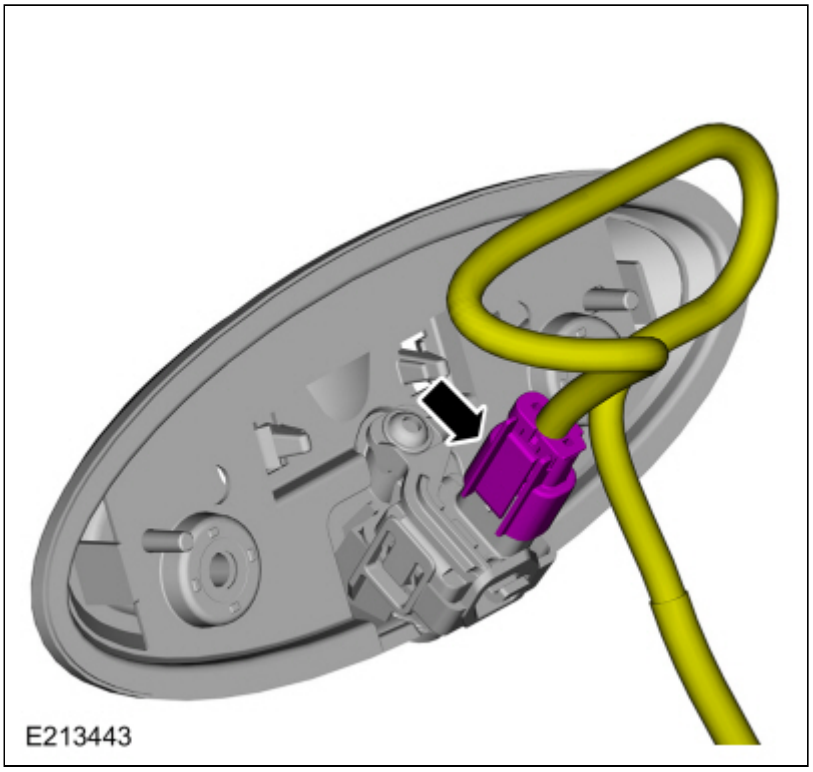
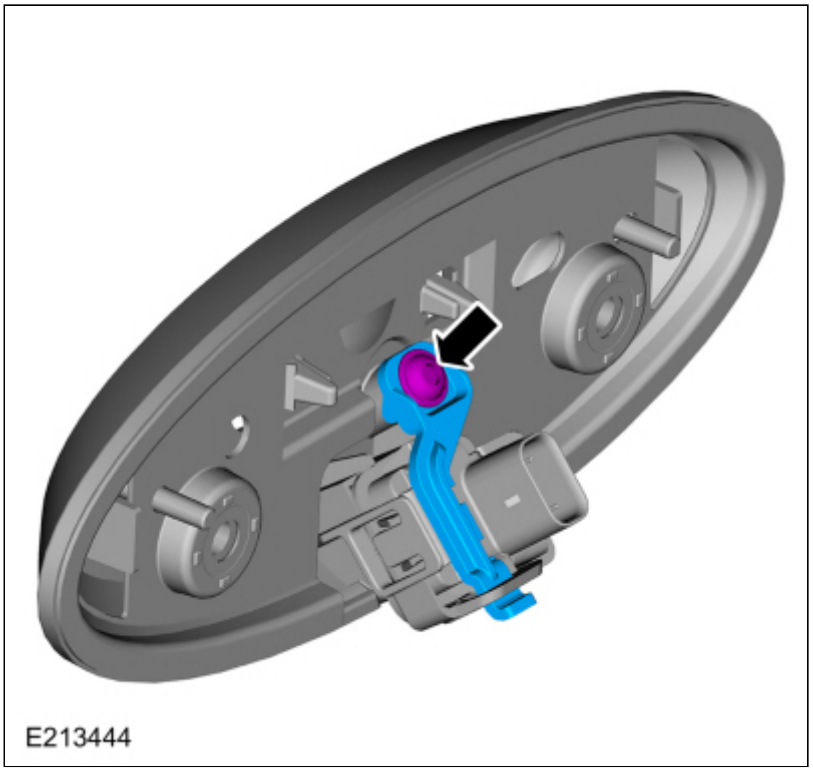
Rear Parking Aid Camera

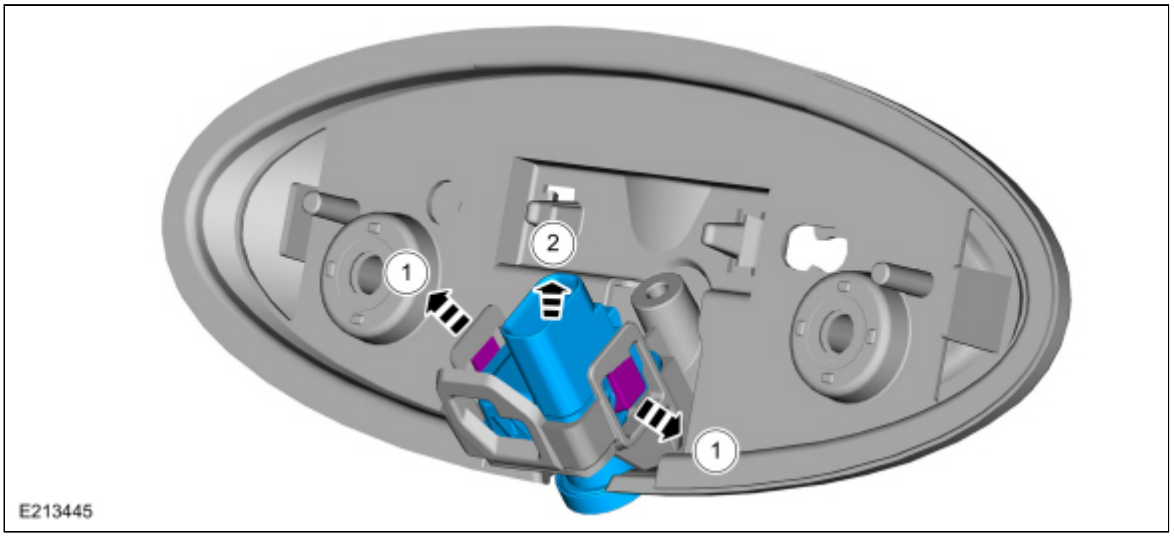


Removal

NOTE: *Removal steps in this procedure may contain installation details.*



1.



2. Remove the screws and the rear view camera bracket.

3. Remove the screws and the rear view camera bracket.

4. Disconnect and remove the rear view camera.

Installation

1. To install, reverse the removal procedure.
2. Follow the instructions on the scan tool to configure the rear view camera.

Copyright © 2016 Ford Motor Company

Image Processing Module B (IPMB)

Removal

1. Refer to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
   Refer to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).

Installation

1. To install, reverse the removal procedure.

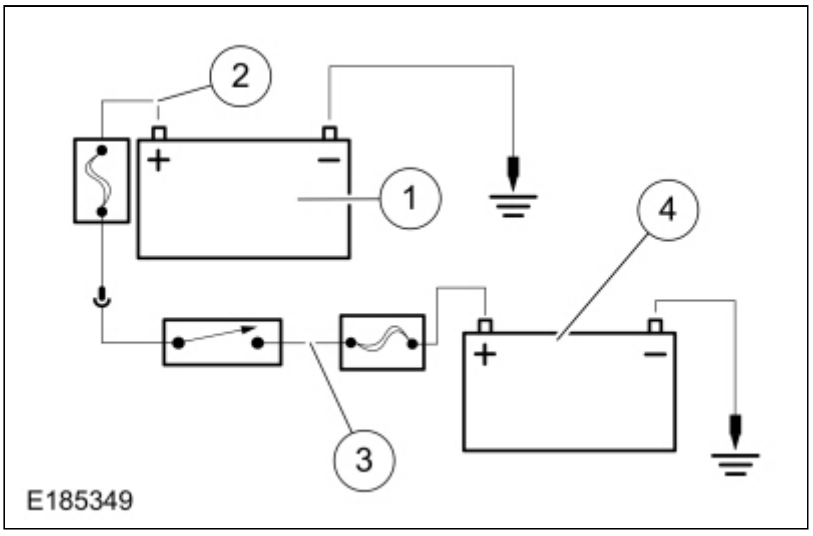
Auxiliary Battery System



Auxiliary Battery System

WARNING: The Battery Monitor System (BMS) fitted to Ranger models cannot be used in conjunction with an auxiliary battery system, as a direct connection to the battery terminals (such as in a voltage sensitive relay based auxiliary battery charging system) will prevent correct operation of the BMS.

WARNING: Vehicles fitted with non-sealed type auxiliary batteries (non-maintenance free), must have regular checks made to determine that the electrolyte levels are correctly maintained.

WARNING: Batteries used in the auxiliary battery system must be suitable for off road excursions.

NOTE: *If a battery is disconnected, there is no requirement to reprogram the vehicle; the vehicle retains its 'normal' power management setting and remembers exactly what its previous configuration was (although the central locking latches may cycle if one of these was opened manually in the intervening period). With the radio, all of the settings are retained, but the key code needs to be entered to restore functionality. The clock will need resetting. The power windows will need to be re calibrated.*

The auxiliary battery system consists of the following components:

1. Primary Battery
2. Auxiliary Battery Cable
3. Auxiliary Battery Wiring Harness (with integrated battery isolator and fuse box)
4. Auxiliary Battery

Auxiliary Battery Cable

The auxiliary battery cable provides electrical power from the primary battery/generator to the auxiliary battery wiring harness.

Auxiliary Battery Wiring Harness

NOTE: *The auxiliary battery wiring harness contains the wiring harness, isolator, fuse box, mounting assembly, input cables, output cables, battery connections and associated components. The assembly must not be disassembled and is serviced as a complete unit if replacement is required.*

The auxiliary battery wiring harness incorporates the battery isolator, 125A MIDI fuse, fuse block, auxiliary battery connection terminals, output connections for auxiliary loads and a mounting assembly. The wiring harness facilitates both input charge to the auxiliary battery and output charge to the auxiliary loads.

Auxiliary Battery

The auxiliary battery is a 12-volt direct current (DC) 80 ampere-hour, 800CCA, DIN H7 size, 140 RC, absorption glass matt (AGM) deep cycle unit. The battery is connected to the vehicle using negative grounding. The auxiliary

battery provides electrical power supply for accessory loads when the engine is not running.

Auxiliary Battery Mount

NOTICE: Cab chassis vehicles must not be driven with the auxiliary battery still mounted on the auxiliary battery carrier. This method of mounting the auxiliary battery is only suitable for delivery of the vehicle from the plant.

The auxiliary battery is mounted at the rear of the vehicle in the following model specific locations:

- Cab chassis vehicles have the auxiliary battery mounted on a temporary auxiliary battery carrier located across the chassis rails at the rear of the vehicle.
- Style side box vehicles have the auxiliary battery mounted in a dedicated steel framed battery box in the rear right corner of the load tray.

Normal Operation

- When the engine is running, the generator supplies electrical power to both the primary and the auxiliary battery. Electrical power to the auxiliary battery is supplied through the auxiliary battery cable and is then regulated through the isolator located within the auxiliary battery wiring harness.
- When the engine is not running and the generator is no longer supplying electrical power to the batteries, the battery isolator in the auxiliary battery wiring harness is opened, protecting the primary battery from being depleted and allowing the auxiliary battery to provide output power to accessory loads.
- Once the engine is running and the primary battery measures 13.2V, the battery isolator will close the circuit, allowing the auxiliary battery to be charged. By not reconnecting the auxiliary battery until the primary battery is charged, the alternator is protected from excessive current draw.

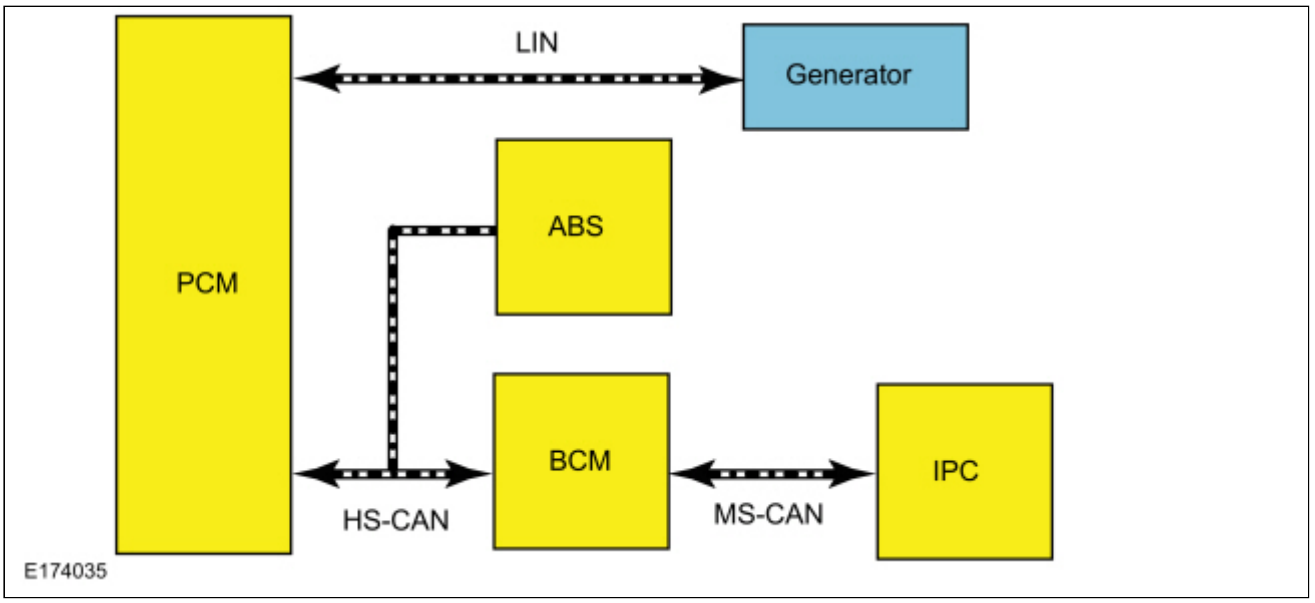
Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 - Overview

Overview



The generator is driven by the FEAD belt. When the engine is started, the generator begins to generate AC voltage which is internally converted to DC voltage. The DC voltage level is controlled by the internal voltage regulator and is supplied to the battery. The PCM controls the voltage regulation setpoint, communicating with the generator internal voltage regulator over a dedicated LIN communication circuit

Broadcast Message	Originating Modle	Message Purpose
Power system status	BCM	Reports any generator/charging system faults. Used for charging system fault indicator.

Module Network Input Messages — Powertrain Control Module (PCM)

Broadcast Message	Originating Module	Message Purpose
Vehicle speed	ABS module	Vehicle speed is reported via High Speed Controller Area Network (HS-CAN). Used by the PCM during charging system voltage calculation.

Charging System

The PCM-controlled, or Smart Charge charging system determines the optimal voltage setpoint for the charging

system and communicates this information to the voltage regulator. The Smart Charge charging system is designed to set 1 of 7 Diagnostic Trouble Codes (DTCs) any time a charging system fault is present. All of the Diagnostic Trouble Codes (DTCs) can set continuous faults, but not all Diagnostic Trouble Codes (DTCs) set as on-demand faults.

Diagnostic Trouble Code (DTC)	Key ON Engine OFF (KOEO)	Key ON Engine Running (KOER)	Continuous
P0562	X	X	X
P0563		X Requires vehicle speed above 8 mph.	X
P065B		X	X
P065C		X	X
P0A3B		X	X
P1397	X	X	
U012D	X	X	X
U042E		X	X

Parameter Identification (PID)	Description	Normal Display
GEN_FAULT	Generator Fault Status	No Fault
GEN_LOSTCOMM	Lost Communication with Starter/Generator Control Module	No Fault
GENFIL	Generator Fault Indicator Lamp	OFF
GENREG_ELEC_F	Generator Regulator Reporting Electrical Fault	No Fault
GENREG_INVCMD	Generator Regulator Receiving Invalid Commands	No Fault
GENREG_MECH_F	Generator Regulator Reporting Mechanical Fault	No Fault
GENREG_NOCMD	Generator Regulator Indicating Missing Commands	No Fault
GENREG_OVRTMP	Generator Regulator Indicating Over Temperature	No Fault
GENVDSD	Generator Voltage Desired	Voltage varies by vehicle needs - May be controlled by an output state control
RPM	Engine Revolutions Per Minute	Engine Revolutions Per Minute (RPM) - May be controlled by an output state control
VPWR	Module Supply Voltage	Within 0.5 volt of battery voltage

The PCM simultaneously controls and monitors the output of the generator. When the current consumption is high or the battery is discharged, the PCM raises engine speed as needed to increase generator output. The generator charges the battery and at the same time supplies power for all of the electrical loads that are required. The battery is more effectively charged with a higher voltage when the battery is cold and a lower voltage when the battery is warm.

The PCM turns off the generator during cranking to reduce the generator load and improve cranking speed. Once the engine starts, the PCM slowly increases generator output to the desired voltage.

The PCM reports any charging system faults and sends a message through the HS-CAN to the BCM. The BCM then sends a message over the MS-CAN to the IPC , which controls the charging system warning indicator. The status of

the PCM charging system warning indicator message can be confirmed by viewing the PCM Generator Fault Indicator Lamp (GENFIL) PID. Any charging system fault detected by the PCM results in 1 or more Diagnostic Trouble Codes (DTCs) being set and the GENFIL PID having a status of ON. The IPC turns the charging system warning indicator ON and the message center may display a corresponding message to notify the driver of the condition.

Under certain circumstances, the charging system may have a concern but still keep the battery charged while the vehicle is running. The LIN is normally used to initiate charging, but with a fault on this circuit, the generator can self-excite, or begin charging on its own. The engine may need to operate at more than 2,000 RPM momentarily for this to occur. The charging system warning indicator illuminates, the corresponding message is displayed and the generator operates in a default mode (approximately 13.5 volts).

Engine Off Load Shed

When the ignition is in ACC or ON mode and the BCM determines the battery voltage or the battery state of charge has dropped below set levels, a low battery warning message may display in the message center. Should the battery voltage or the battery state of charge continue to drop, the audio system is powered down to save the remaining battery charge. This load shed state clears once the vehicle is started and battery state of charge is allowed to recover.

When the ignition is in the ON mode and if load shed occurs, the message center may display a corresponding message to notify the driver that battery protection actions are active. The audio system shuts down after the message center displays the warning.

Another engine off load shed strategy is a 45 minute timer. After 45 minutes have elapsed, the audio system turns off. To clear the load shed state, restart the engine.

Battery Charging

When it is required to charge the vehicle battery, connect the positive connection to the battery positive post, and attach the charger negative connection to a body or engine ground. The placement of the battery is such that the battery negative terminal is located under a sheet metal shroud making sheet metal ground the obvious choice for the charger.

Jump Starting

Connect the positive connection to the battery positive post, and connect the Jump Start negative to the vehicle ground. For a convenient ground location look for the body ground cable coming off the clamp and connect in this location (typically on the shock tower sheet metal).

Battery Replacement

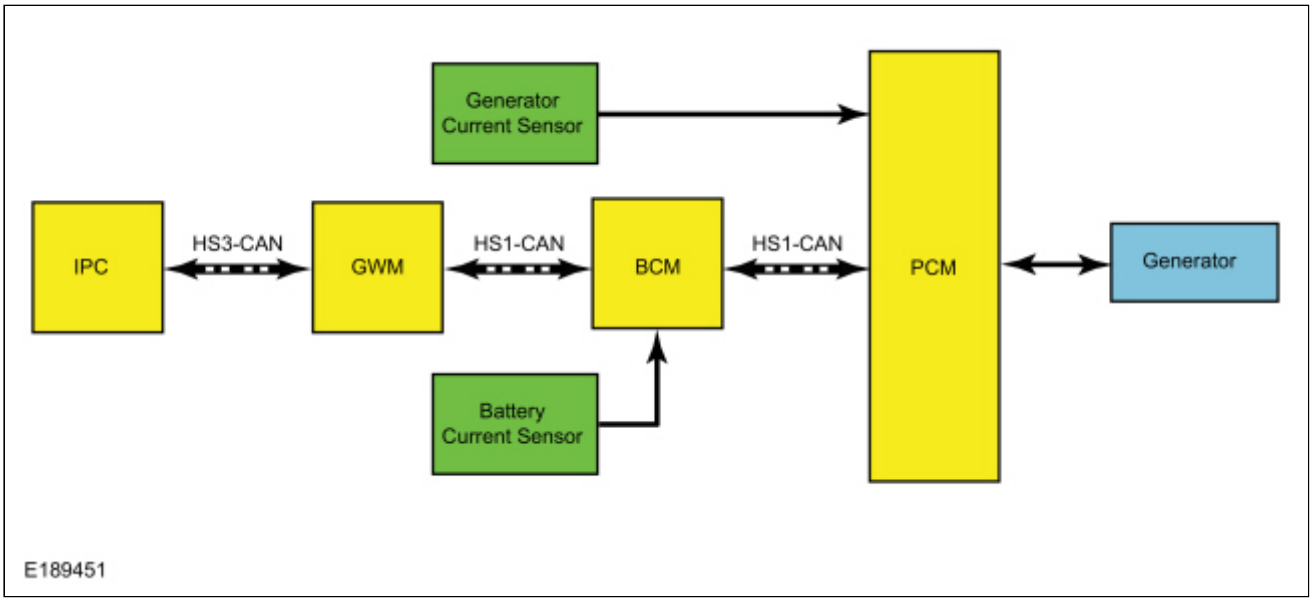
Refer to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation).

Component Description

Generator

The generator is equipped with an electronic internal voltage regulator.

Powertrain Control Module (PCM)



The PCM monitors and controls the charging system.

Charging System

The smart regenerative charge system primary strategy is stored in the BCM. The BCM receives all of the important information relating to the battery condition from the battery monitoring sensor via the LIN. The BCM calculates and sends the set value needed for the generator charging voltage via the High Speed Controller Area Network (HS-CAN) to the PCM. The PCM then adjusts the value received (if necessary) and sends it to the generator via the LIN. The charging voltage is adjusted depending on various parameters, such as the current level of engine efficiency. The smallest possible set value for the generator voltage is 12.2 volts, while the maximum charging voltage can be anywhere between 14.5 and 14.9 volts. However, when the battery is in a refresh phase, the voltage may occasionally reach up to 15.2 volts. These refresh phases are required when the battery charge status is 80% over long periods of time, which increases the risk of sulfation in the battery cells.

The PCM simultaneously controls and monitors the generator output. When the current consumption is high or the battery is discharged, the PCM raises engine speed as needed to increase generator output. The generator charges the battery and at the same time supplies power for all of the electrical loads. The battery is more effectively charged with a higher voltage when the battery is cold and a lower voltage when the battery is warm.

The PCM turns off the generator during cranking to reduce the generator load and improve cranking speed. Once the engine starts, the PCM slowly increases generator output to the desired voltage.

The PCM reports any charging system faults and sends a message through the High Speed Controller Area Network (HS-CAN) to the BCM. The BCM controls the charging system warning indicator by sending a message over the High Speed Controller Area Network (HS-CAN) to the IPC. The IPC then controls charging system warning indication based on the message from the PCM through the BCM. The status of the PCM charging system warning indicator and/or message is confirmed by viewing PCM PID generator fault indicator lamp (GENFIL). Any charging system fault detected by the PCM results in 1 or more Diagnostic Trouble Codes (DTCs) being set and the PID GENFIL having a status of On. If equipped with a charging system warning indicator, the IPC turns the indicator on or off. If equipped with a message center, the IPC displays a CHECK CHARGING SYSTEM message. In some instances, the CHECK CHARGING SYSTEM message may not display if the ignition is on and the engine is off.

Under certain circumstances, the charging system may have a concern but still charge the battery while the vehicle is running. The LIN is normally used to initiate charging, but with a fault on this circuit, the generator can self-excite, or begin charging on its own. The engine may need to operate at more than 2,000 RPM momentarily for this to occur. The charging system warning indicator illuminates, the corresponding message is displayed and the generator operates in a default mode (approximately 13.5 volts).

Electrical Energy Management System

NOTICE: When any vehicle module is being programmed, connect an external battery charger to make sure the module programming is completed without interruption due to the load shedding feature becoming active. The external battery charger must maintain a system voltage above 13 volts. This may require a charger setting higher than the lowest charge setting. The external battery charger negative connection must be made to an engine or vehicle chassis ground and not the negative battery terminal. If the connection is to the negative battery terminal, load shedding may begin and module programming may be corrupted. After charging has begun, start the engine to clear any load shed states and then turn the engine off and proceed with programming.

This vehicle is equipped with an Electrical Energy Management system which manages battery charging and monitors the battery state of charge. The Electrical Energy Management system software is housed in the BCM. It has the algorithms and control structure for the Smart Regenerative Charging, and Load Shed Control Strategy. The Electrical Energy Management system is equipped with a battery monitor sensor and generator current sensor to monitor the battery. These sensors serve as input to the Electrical Energy Management system software. If the sensors malfunction due to wiring issues or failure, a DTC will be set. In most cases the Electrical Energy Management system functions will be turned off until the sensor operation is restored.

Battery State of Charge

The BCM uses the battery current sensor to keep track of the battery state of charge. During a drive cycle the Electrical Energy Management software adjusts the battery state of charge up during charging, and down during discharge.

During rest periods with the key off, and the vehicle enters sleep mode, the BCM automatically recalibrates the Battery State of Charge. It takes 4 hours in sleep mode, with the vehicle undisturbed, no doors opened or keyless entry buttons pressed, and the total vehicle current draw less than 500mA, to calibrate the battery state of charge to a high accuracy. If the system draw has not allowed the battery state of charge to calibrate over the previous 7 days, the state of charge quality factor changes to identify this and some Electrical Energy Management system functions may be temporarily turned off until a calibration takes place.

Engine Off Load Shed

When the engine is off, and the BCM determines the battery state of charge is below 40% or 45 minutes have elapsed, a load shed message is sent over the CAN. This message turns off the audio/navigation system to save the remaining battery charge. Under this condition, the FDIM displays SYS OFF TO SAVE BATT (without navigation) or

BATTERY SAVER — SYSTEM OFF PLEASE START THE ENGINE (with navigation) to notify the driver that battery protection actions are active.

Engine off load shed occurs when the engine is not running, and the ignition is in the ACC or RUN position. To clear the load shed state, restart the engine.

NOTE: *To maintain correct operation of the load shed system, any electrical devices or equipment must be grounded to the engine or chassis ground and not the negative battery terminal. A connection to the negative battery terminal may cause an inaccurate measurement of the battery state of charge and may cause incorrect load shed system operation.*

When the ignition is in the RUN position and load shed occurs, the IPC message center displays either TURN POWER OFF TO SAVE BATT (base message center) or TURN POWER OFF TO SAVE BATTERY (optional message center). The audio/navigation system will shut down after the message center displays it's warning.

If a fault occurs with the battery current sensor or circuit(s), the only engine off load shed strategy is a 45 minute timer. After 45 minutes have elapsed, the audio/navigation system turns off. To clear the load shed state, restart the engine.

Engine Running Load Shed

When the BCM and/or PSCM voltage is low, with the engine running, a message is sent by the BCM to either minimize or shut down the climate controlled seats, rear defrost, heated mirrors and DATC blower motor to improve system voltage. Under this condition, the IPC message center displays either LOW BATTERY LESS FEATURES (base message center) or LOW BATTERY FEATURES TEMPORARILY TURNED OFF (optional message center) to notify the driver that battery protection actions are active.

For more information on message center messages, Refer to the Owner's Literature or
Refer to: Message Center (413-01) .

There are 3 states of engine running load shed:

Load Shed State	Entry Conditions	Impact to Features	Clear Conditions
Load shed 1	If vehicle speed is **below 16 km/h (10 mph)**, and voltage to the PSCM is less than 11.5-volts or the PSCM measures current draw greater than 0 amps. If vehicle speed is **above 16 kp/h (10 mph)**, and the voltage to the BCM is less than 11.6 volts.	These loads are incrementally reduced (if equipped): Heated steering wheel and climate controlled seats. These loads are turned off (if equipped): smart trailer tow battery charge, heated mirrors, heated backglass, and heated windshield.	Voltage to the BCM is greater than 12.7 volts **or** the generator field duty cycle is less than 80%.
Load shed 2 transient	PSCM indicating reduced voltage and increased current. System voltage less than 11.5 volts	• If equipped, climate controlled seats are disabled, but the indicators remain illuminated. • If equipped, rear defrost and heated mirrors are disabled, but the indicator remain illuminated.	Voltage to the BCM is greater than 12.7 volts.
Load shed 2 continuous	Load Shed 2 Transient condition in excess of 20 seconds	• If equipped, climate controlled seats are disabled and the indicators are off. • If equipped, rear defrost and heated mirrors are disabled and the indicator is off. • If equipped with DATC, the blower motor is reduced to 50% speed. • If equipped, DC/AC inverter (AC powerpoint) is disabled. • The base IPC message center displays LOW BATTERY LESS FEATURES. • The optional IPC message center displays LOW BATTERY FEATURES TEMPORARILY TURNED OFF.	Voltage to the BCM is greater than 12.4 volts for more than 60 seconds.

Battery Charging or Jump Starting

To charge or jump start the vehicle, connect the positive cable to the battery positive post. It is preferred to connect the negative cable to a vehicle ground and **not** the battery negative post. Connecting directly to the negative battery post can have an adverse effect on the Electrical Energy Management system. For a good connection point, follow the cable from the battery negative post to the vehicle body connection (typically on the shock tower sheet metal) and connect there.

If the battery is jump started or charged, the BCM**must** recalibrate the battery state of charge. Engine off load shedding may occur if the vehicle is operated before the BCM calibrates the new battery state of charge.

NOTICE: DO NOT reset the battery monitoring system using the diagnostic scan tool. This reset is reserved for new battery installation. Resetting the battery monitoring system will clear the learned battery data, the battery time in service, and will affect the aging algorithm parameters, which have been learned since the installation of the battery.

Battery Replacement

If the vehicle battery is replaced, it is very important to perform the BMS Reset using a diagnostic scan tool. If the battery monitoring system reset is not carried out, it holds the old battery parameters and time in service counter in memory. Additionally it tells the system the battery is in an aged state and may limit the Electrical Energy Management system functions. For more information,
Refer to: Battery Disconnect and Connect (414-01) .

Component Description

Generator

The generator is equipped with an electronic internal voltage regulator.

Generator Current Sensor

The generator current sensor is attached to the generator B+ cable. It is supplied a 5-volt reference voltage and a ground from the PCM. The generator current sensor is a Hall-effect sensor that supplies an analog feedback signal to the PCM. The PCM uses this information for battery charging strategy and idle stability and torque control.

Battery Monitoring Sensor

Vehicles with the Auto-start-stop system are equipped with a battery monitoring sensor. The battery monitoring sensor is integrated with the negative battery terminal clamp and cable assembly, which provides a ground to the sensor. The battery monitoring sensor measures voltage, current, and temperature of the battery and uses these inputs to calculate the battery condition. The sensor transmits this information through a LIN circuit to the BCM. The battery monitoring sensor has a 2-pin connector providing battery voltage and LIN connections.

Powertrain Control Module (PCM)

The PCM monitors and controls the charging system.

Generator Clutch

The generator clutch (if equipped) primary function is to separate the generator rotor inertia from the FEAD belt, lowering belt tension at high Revolutions Per Minute (RPM) and reducing NVH.

Inspection and Verification

WARNING: Batteries contain sulphuric acid. Avoid contact with skin, eyes, or clothing. Also, shield your eyes when working near batteries to protect against possible splashing of the acid solution. In case of acid contact with skin or eyes, flush immediately with water for a minimum of 15 minutes and get prompt medical attention. If acid is swallowed, call a physician immediately. Failure to follow these instructions may result in personal injury.

WARNING: Batteries normally produce explosive gases which can cause personal injury. Therefore, do not allow flames, sparks or lighted substances to come near the battery. When charging or working near a battery, always shield your face and protect your eyes. Always provide ventilation. Failure to follow these instructions may result in personal injury.

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
– Accessory drive belt – Generator	– Fuse(s) – Wiring harness – Electrical connector(s) – Charging system warning indicator – Generator – Battery – Battery cables – Battery monitoring sensor – Engine junction box (EJB) – Central junction box (CJB) – Powertrain control module (PCM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. Check the operation of the charging system warning indicator lamp, located in the instrument cluster. Normal operation is as follows:

Normal Charging System Voltages

Ignition Switch Position	I Circuit	Generator B+ Circuit	Battery	Engine to battery ground	Charging System Warning Indicator Operation
Position 0	0V	10-12V	10-12V	0V	OFF

Position II	0V	10-12V	10-12V	0V	Illuminated
Position II with the engine running	13-15V	13-15V	13-15V	0V	OFF

5. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

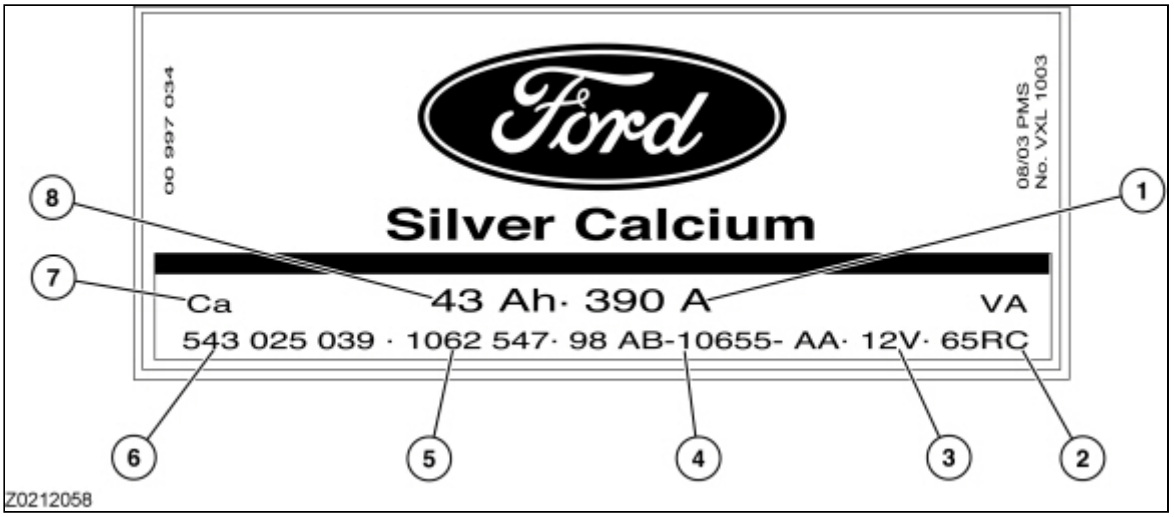
Component Tests

Generator On-Vehicle Tests - No-Load Test



1. Turn off all electrical loads and the ignition switch.
2. Switch the multimeter to the voltage function.
3. Connect the leads of the multimeter across the battery terminals.
4. Read the voltage (base voltage).
5. Start the engine.
6. Run the engine at 1500 rpm with no electrical load.
7. Read the voltage. The voltage should be in the range of 14.1 volts to 15.1 volts. If the voltage increase is less than 2.5 volts above the base voltage, carry out the Load Test. If the voltage increase is greater than 2.5 volts, REFER to the Ford diagnostic equipment.

Generator On-Vehicle Tests - Load Test

1. With the engine running, turn on the air conditioning (if equipped), turn the blower motor to high speed and the headlamps to high beam.
2. Increase the engine speed to 2000 rpm. The voltage should increase a minimum of 0.5 volts above the base voltage. If the voltage does not increase as specified, REFER to the Ford diagnostic equipment. If the voltage increases as specified, the charging system is charging correctly.

Battery Tests

Battery Identification

Item	Part Number	Description
1	—	Cold crank amp (CCA) rating
2	—	Reserve capacity (RC) rating (minutes)
3	—	Battery voltage
4	—	Ford Part number
5	—	FINIS code
6	—	EN number (European Norm)
7	—	Battery type: Ca = Silver/Calcium; Sb = Lead/Antimony
8	—	Amp hour rating

Item	Part Number	Description
1	—	Battery performance data
2	—	Motorcraft internal labelling
3	—	DIN labelling

Battery Performance Data

NOTE: *The data only applies to a new fully-charged battery.*

- The first group of digits (12V) indicates the battery voltage (12 volts).
- The second group of digits (590A) indicates that the battery delivers a current of 590 amps at -18°C without the terminal voltage falling below 7.2 volts.
- The third group of digits (90RC) indicates the time in minutes in which the battery voltage falls to 10.5 volts in the case of a 25 amp load and an ambient temperature of 22°C.

DIN Labelling

- The first group of letters (WF) indicates that the battery is maintenance-free.
- The first digit (5) indicates that the battery is 12 volts.
- The second and third digits (58) indicates the battery capacity is 58 Ah, which means it could power a 58 amp load for 1 hour.
- The last two digits (11) is a sequential serial number.

Midtronics EXP-1050 Battery Tester

The Midtronics EXP-1050 battery tester is the only battery tester recommended by Ford to test latest technology batteries including Absorbent Glass Mat (AGM) and Enhanced Flooded Battery (EFB), previously known as Improved Flooded Battery (IFB) used on Ford Start-Stop vehicles.

Main specifications of the Midtronics EXP-1050 battery tester

- Tests 6/12V batteries
- Tests discharged batteries down to 1V both in and out of the vehicle
- Ratings in battery tester: CCA, JIS, EN, DIN, IEC, SAE
- CCA range: By Ford battery type 100-1700 A SAE / EN / CCA 100-1000 A DIN / IEC All current JIS codes
- Large LCD display with adjustable backlight
- Detects short-circuited cells
- Surface charge removal procedure
- Dynamic Response procedure for refined decisiveness on battery diagnostics
- Upgradeable by SD card
- Export data feature to send data to infra red printer
- Voltmeter function
- Date and time indication with every test
- 23 languages included within the battery tester

Using the Midtronics EXP-1050 Battery Tester

- Disconnect the battery ground cable at the battery negative (-) post. Note: if using this battery tester on models where the ground cable is not accessible, the battery does not have to be removed from the vehicle and may be tested using the vehicle's 'jump start post' if the battery tester is set to the correct mode. In this case, the battery must be disconnected at the positive (+) post before testing.
- Connect the positive red clamp of the Midtronics EXP-1050 battery tester to the battery positive (+) post.
- Connect the negative black clamp of the Midtronics EXP-1050 battery tester to the battery negative (-) post or jump start post as appropriate.

A poor connection will prevent testing and the battery tester will display the message CHECK CONNECTION. If this message appears after you have correctly reconnected the clamps, clean the terminals and reconnect.

It is recommended that batteries are always tested using both battery posts. However, if used in 'jump start post' mode, the Midtronics EXP-1050 battery tester will compensate for the extra resistance of the additional cable.

1. Select BATTERY TEST or START-STOP BATTERY TEST.
    - Press the NEXT key to continue.
2. Select the BATTERY LOCATION
    - UNDER HOOD
    - UNDER SEAT
    - OUT OF VEHICLE
    - Press the NEXT key to continue.
3. Select the negative POST TYPE (IN-VEHICLE ONLY)
    - BATTERY POST
    - JUMP START POST
    - JUMP START POST (Battery Monitoring Sensor)
    - Press the NEXT key to continue.
4. Select the BATTERY RATING from the drop down list.
    - Press the NEXT key to test the battery.
5. If the battery under test is not listed in the drop down list, it can still be selected with the MANUAL ENTRY mode. This is item 11 of 11 in the list.

The Midtronics EXP-1050 battery tester will display the word TESTING while it evaluates the battery.

Battery Tester Results and Required Actions

Battery Tester Reading	Action
GOOD BATTERY	Return the battery to service
GOOD - RECHARGE	Fully recharge the battery and return it to service
CHARGE & RETEST	Fully charge the battery and retest (failure to fully charge the battery before retesting may cause false readings)
REPLACE BATTERY or BAD CELL BATTERY	**WARNING: Do not recharge the battery.** Make sure that the surface charge was removed. A "REPLACE BATTERY" result could also mean a poor connection between the battery cables and the battery. Check the connections are OK and retest. If the result remains the same, INSTALL a NEW battery
In addition it is advisable to check the vehicle electrical system. Check that the generator is functioning correctly and the vehicle does not have an excessive key-off load (in general this should be under 20mA after 40 minutes of key off).	

Midtronics EXP-1050 Battery Tester Test Code

At the end of the test, use the arrow keys to scroll down the screens to see additional information. One of these is the TEST CODE.

The TEST CODE has 11 digits, for example: 0021U-B88WKX.

Midtronics GRX-3590 Battery Diagnostic Station

Using the Midtronics GRX-3590

Item	Description
1	GRX-3590 stand-alone version with integrated keypad and display
2	GRX-3590 docking station

The Midtronics GRX-3590 is both a battery charger and battery tester and automatically removes the surface charge as part of the normal operating procedure.

The Midtronics GRX-3590 can be used on a battery in-vehicle or out-of-vehicle.

- Disconnect the battery ground cable.
- Connect the positive red clamp from the Midtronics GRX-3590 to the battery positive terminal.
- Connect the negative black clamp from the Midtronics GRX-3590 to the battery negative terminal.
- Connect the AC power cable to the mains outlet and switch ON.
- Follow the instructions supplied with the Midtronics GRX-3590 to charge the battery.
- To disconnect the Midtronics GRX-3590, reverse the connection procedure.

The Midtronics GRX-3590 will automatically carry out a charge cycle before giving the resulting test code. The TEST CODE has 13 digits, for example: Y74NH-58R36-ESV. It will bring the battery into a serviceable condition and if required can proceed to fully charge the battery.

Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma

Inspection and Verification

1. Verify the customer concern by operating the charging system.
2. Before diagnosing or repairing the charging system inspect the following items:

- Check the battery for loose, damaged or corroded connections.
- Check the generator for loose, damaged or corroded connections.
- Check the engine and battery grounds for loose, damaged or corroded connections.
- Check the high current BJB for loose or corroded connections.
- Verify fuses or fusible links.
- Inspect the wiring, terminals and connectors.

3. Check the battery condition and state of charge.
   REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).
4. Check for abnormal ignition-off current drain(s).
   REFER to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
5. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding.
6. Using the diagnostic scan tool, retrieve all Diagnostic Trouble Codes (DTCs). Refer to the appropriate DTC Chart in this section.

DTC Charts

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).

PCM DTC Chart

DTC	Description	Action
P0562	System Voltage Low	GO to Pinpoint Test B
P0563	System Voltage High	GO to Pinpoint Test A
P1632	Smart Alternator Fault Sensor / Circuit	If system voltage is high, GO to Pinpoint Test A If system voltage is low, GO to Pinpoint Test B
U0120	Lost Communication With Generator Control Module	GO to Pinpoint Test E
All Other DTCs	—	Refer to: Electronic Engine Controls.

BCM DTC Chart

DTC	Description	Action
All DTCs	—	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).

Symptom Chart(s)

Symptom Chart: Charging System

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
System voltage high	Refer to the Pinpoint Test	GO to Pinpoint Test A
System voltage low or battery is discharged	Refer to the Pinpoint Test	GO to Pinpoint Test B
The generator is noisy	Refer to the Pinpoint Test	GO to Pinpoint Test C
Radio interference	Refer to the Pinpoint Test	GO to Pinpoint Test D
Charging system warning indicator is never or always	• IPC • Generator	RETRIEVE Diagnostic Trouble Codes (DTCs) from all modules. If any Diagnostic Trouble Codes (DTCs) are found, Refer to DTC Chart in this section. If no Diagnostic Trouble Codes (DTCs) are found,

on	• PCM • Wiring, terminals or connectors	REFER to: Instrument Panel and Interior Switches Illumination (413-00 Instrument Panel and Interior Switches Illumination, Diagnosis and Testing).

Pinpoint Tests

System Voltage High

Refer to Wiring Diagrams Cell 12 for schematic and connector information.

NOTE: *DTC P0563 can set if the vehicle has been recently jump started or the battery has been recently charged. The battery may become discharged due to excessive load(s) on the charging system from aftermarket accessories or if vehicle accessories have been operating for an extended period of time without the engine running.*

Normal Operation and Fault Conditions

With the engine running, the charging system supplies voltage to the battery and the vehicle electrical system through the high current BJB and battery B+ cable. The voltage that is supplied to the vehicle electrical system is used for the operation of the various vehicle systems and modules. Many modules monitor this voltage and if it rises above or below their calibrated setpoints, a DTC sets.

Diagnostic Trouble Code (DTC) Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0563	System Voltage High	This DTC sets in the PCM when the PCM detects voltage from the charging system greater than 15.9 volts with vehicle speed above 8 km/h (5 mph).

Possible Sources

- Battery
- Generator
- Engine, generator or battery ground
- PCM
- Wiring, terminals or connectors

Visual Inspection and Diagnostic Pre-checks

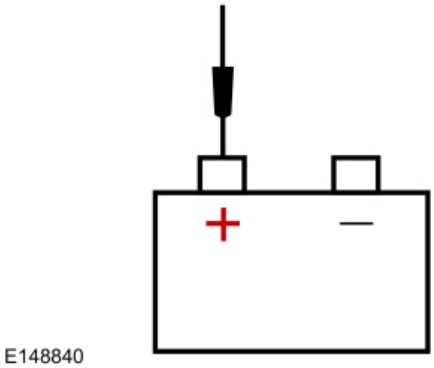
- Inspect engine and battery grounds for loose or corroded connections.
- Inspect the high current BJB for loose or corroded connections.
- Inspect BJB fuse F29 (15A).

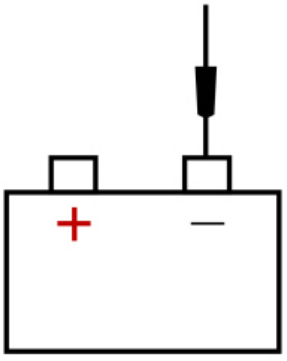
PINPOINT TEST A : SYSTEM VOLTAGE HIGH

NOTE: *Make sure battery voltage is greater than 12.2 volts prior to and during this pinpoint test.*

NOTE: *Do not have a battery charger attached during vehicle testing.*

A1 PERFORM INSPECTION AND VERIFICATION





- Perform the Inspection and Verification in this section.

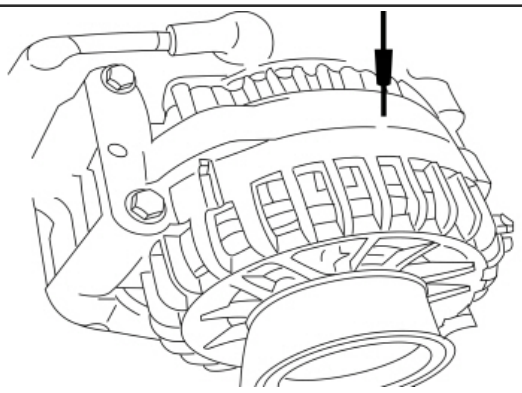
Was an obvious cause for an observed or reported concern found?

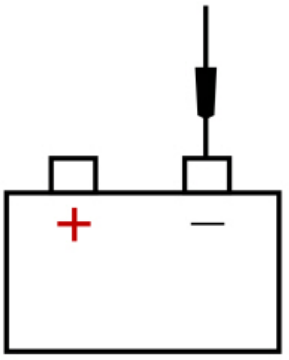
Yes	CORRECT the cause as necessary.
No	GO to A2

A2 COMPARE THE GENERATOR VOLTAGE DESIRED (GENVDSD) PID (PARAMETER IDENTIFICATION) WITH BATTERY VOLTAGE

- Start the engine.
- With the engine still running at idle, measure and record:

Positive Lead	Measurement / Action	Negative Lead
		





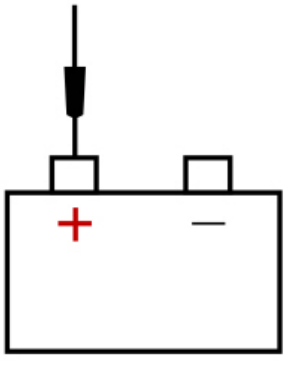
- Using a diagnostic scan tool, view the PCM PID GENVDSD.

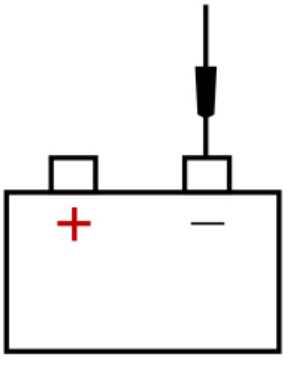
Is the recorded battery voltage within ±0.5 volt of the PID?

Yes	GO to A5
No	GO to A3

A3 CHECK THE VOLTAGE DROP IN THE VEHICLE GROUNDS

- With the engine still running at idle, headlamps on and heater blower on high, measure the voltage drop between generator case and the battery negative terminal
- Measure and record:





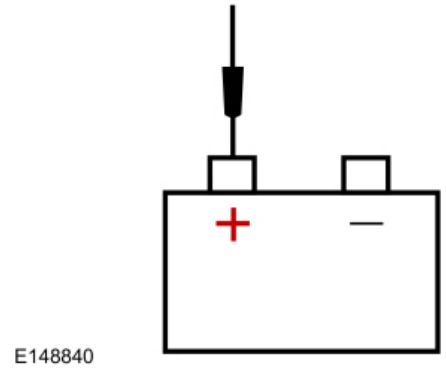
Positive Lead	Measurement / Action	Negative Lead
 Generator case		 E148841

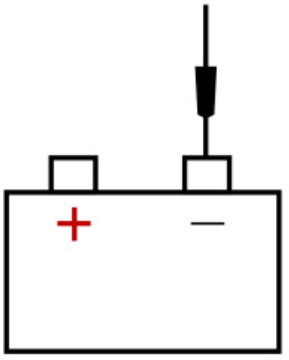
Is the voltage drop less than 0.5 volt?

Yes	GO to A4
No	INSPECT and REPAIR the engine ground, generator ground or the battery ground for corrosion.

A4 MONITOR THE GENERATOR VOLTAGE DESIRED (GENVDSD) PID (PARAMETER IDENTIFICATION) WHILE COMMANDED

- Using a diagnostic scan tool, view the PCM GENVDSD PID.
- Using a diagnostic scan tool active command, set the PCM PID GENVDSD to 14 volts.
- With the engine still running at idle, measure battery and record:





Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841

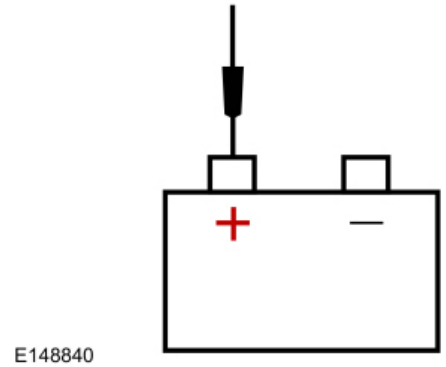
Is the recorded battery voltage within ±0.5 volt of the PID?

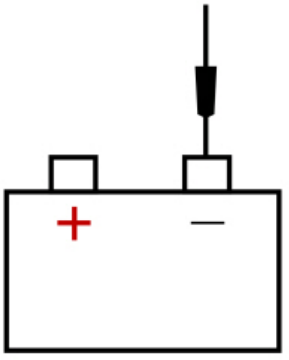
Yes	GO to A5
No	INSTALL a new generator. REFER to: Generator - 2.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation). REFER to: Generator - 3.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation).

A5 COMPARE THE PCM (POWERTRAIN CONTROL MODULE) SUPPLY VOLTAGE (VPWR) PID (PARAMETER IDENTIFICATION) TO BATTERY VOLTAGE

- With the engine still running at idle, measure and record:

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841





- Using a diagnostic scan tool, view PCM Parameter Identifications (PIDs).
- Monitor the PCM PID VPWR.

Does the PID accurately display battery voltage within ±0.5 volt of the recorded battery voltage?

Yes	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.
No	GO to A6

A6 CHECK PCM (POWERTRAIN CONTROL MODULE) VOLTAGE SUPPLY CIRCUITS

- Ignition OFF.
- Disconnect PCM C1232A.
- Measure and record:

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-5		Ground
C1232A-17		Ground
C1232A-29		Ground

Are the voltages within 0.5 volt of the recorded battery voltage?

Yes	GO to A7
No	REPAIR the affected circuit(s).

A7 CHECK PCM (POWERTRAIN CONTROL MODULE) GROUND CIRCUITS

NOTE: *The following step will load test the circuit. A headlamp bulb would be an effective load. To avoid connector terminal damage, use the Flex Probe Kit for connector connections.*

- Connect the load to a suitable 12 volt power connection.

- Ignition OFF.
- Connect the load to each circuit and measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-2		Ground
C1232A-3		Ground
C1232A-7		Ground
C1232A-42		Ground
C1232A-53		Ground

Is the voltage drop less than 0.5 volt?

Yes	GO to A8
No	REPAIR the affected circuit(s).

A8 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

System Voltage Low or Battery is Discharged

Refer to Wiring Diagrams Cell 12 for schematic and connector information.

Normal Operation and Fault Conditions

With the engine running, the charging system supplies voltage to the battery and the vehicle electrical system through the high current BJB and battery B+ cable. The PCM monitors this B+ voltage through its own voltage supply circuit.

Diagnostic Trouble Code (DTC) Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0562	System Voltage Low	If voltage drops 1.5 volts or more below the generator voltage desired (calculated by the PCM), this DTC sets after 30 seconds.

Possible Sources

- Battery
- Fuses or fusible links
- Generator
- PCM
- Wiring, terminals or connectors

Visual Inspection and Diagnostic Pre-checks

- Verify in-line Generator fuse 3.
- Inspect the generator clutch.

PINPOINT TEST B : SYSTEM VOLTAGE LOW OR BATTERY IS DISCHARGED

NOTE: *Make sure battery voltage is greater than 12.2 volts prior to and during this pinpoint test.*

NOTE: *Do not have a battery charger attached during vehicle testing.*

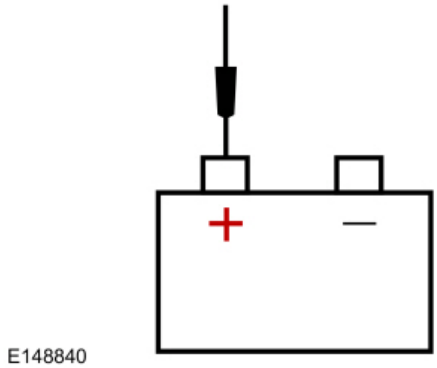
B1 PERFORM INSPECTION AND VERIFICATION

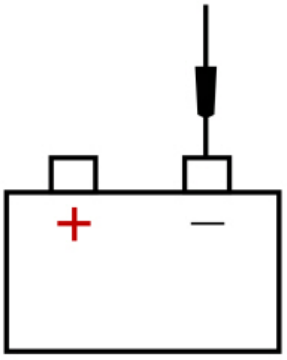
- Perform the Inspection and Verification in this section.

Was an obvious cause for an observed or reported concern found?

Yes	CORRECT the cause as necessary.
No	GO to B2

B2 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS)





- Using a diagnostic scan tool, perform the PCM self-test.

Is DTC P1632, or U0120 present?

Yes	If P1632 is present INSTALL a new generator. REFER to: Generator - 2.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation). REFER to: Generator - 3.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation). If U0120 is present, GO to Pinpoint Test E
No	GO to B3

B3 CHECK THE GENERATOR CONNECTIONS

- Ignition OFF.
- Disconnect all of the generator connectors and inspect for:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the generator connectors. Make sure they seat and latch correctly.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
		

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C102C-1		Ground

Is the voltage within 0.5 volt of the recorded battery voltage?

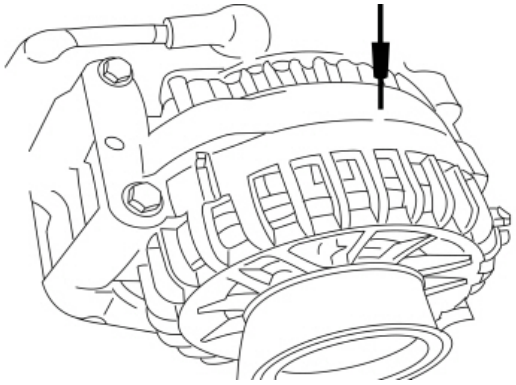
Yes	GO to B4
No	TIGHTEN or INSTALL a new generator B+ nut as needed. REFER to: Generator - 2.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation). REFER to: Generator - 3.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation). VERIFY high current BJB MEGA fuse (125A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

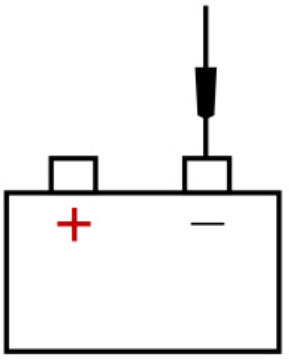
B4 CHECK THE VOLTAGE DROP IN THE GENERATOR B+ CIRCUIT

- Start the engine.
- With the engine running at idle, headlamps on and blower on high, measure:

Positive Lead	Measurement / Action	Negative Lead
C102C-1		

- Perform a wiggle test of the generator wiring and connections while measuring voltage drop.





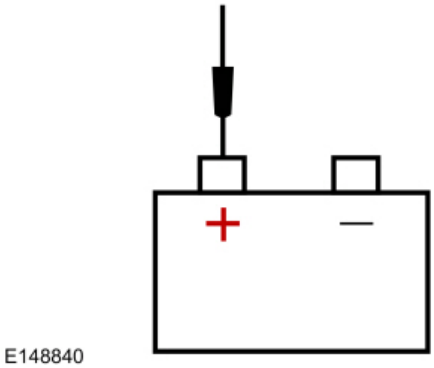
Is the voltage drop less than 0.5 volt?

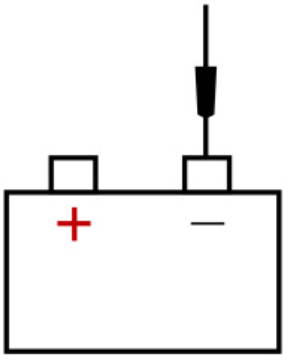
Yes	GO to B5

No	INSPECT and REPAIR any corrosion in the generator B+ circuit or positive battery cable connections.

B5 CHECK THE VOLTAGE DROP IN THE VEHICLE GROUNDS

- With the engine still running at idle, headlamps on and heater blower on high, measure:





Positive Lead	Measurement / Action	Negative Lead
 Generator case		 E148841

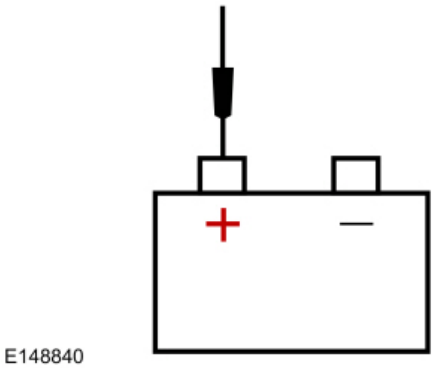
Is the voltage drop less than 0.5 volt?

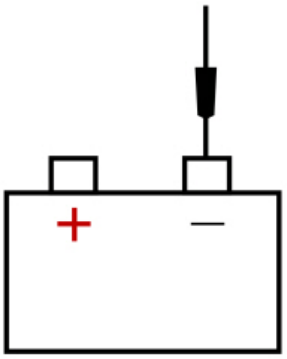
Yes	GO to B6
No	INSPECT and REPAIR the engine ground, generator ground or the battery ground for corrosion.

B6 MONITOR THE GENERATOR VOLTAGE DESIRED (GENVDSD) PID (PARAMETER IDENTIFICATION) WHILE COMMANDED

- Using a diagnostic scan tool, view the PCM GENVDSD PID.
- Using a diagnostic scan tool active command, set the PCM PID GENVDSD to 14 volts.
- With the engine still running at idle, measure battery and record:

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841





Is the recorded battery voltage within ±0.5 volt of the PID?

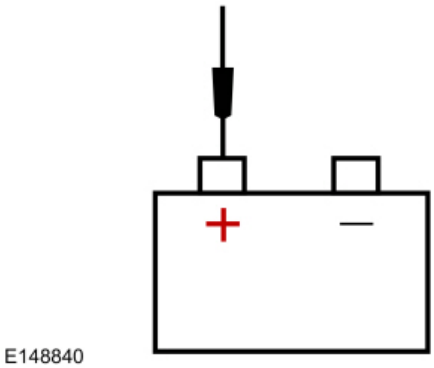
Yes	GO to B7
No	INSTALL a new generator. REFER to: Generator - 2.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation). REFER to: Generator - 3.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation).

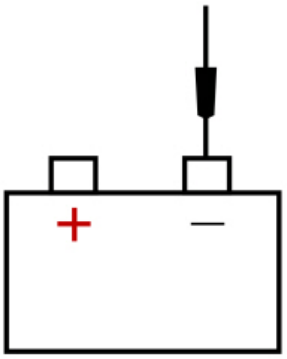
B7 COMPARE THE SUPPLY VOLTAGE (VPWR) PID (PARAMETER IDENTIFICATION) TO BATTERY VOLTAGE

- With the engine still running at idle, headlamps on and blower on high, measure and record:

Positive Lead	Measurement / Action	Negative Lead

 E148840		 E148841





- Using a diagnostic scan tool, view the PCM PID VPWR.

Does the PID accurately display battery voltage within ±0.5 volt of the recorded battery voltage?

Yes	GO to B8
No	REPAIR high resistance or loose connections in the affected PCM power circuit(s).

B8 CHECK PCM (POWERTRAIN CONTROL MODULE) VOLTAGE SUPPLY CIRCUITS

- Ignition OFF.
- Disconnect PCM C1232A.
- Measure and record:

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-5		Ground
C1232A-17		Ground
C1232A-29		Ground

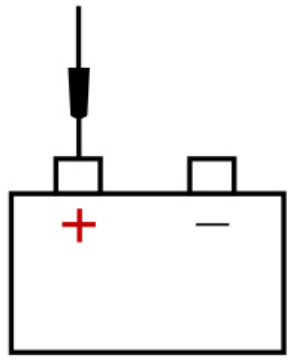
Are the voltages within 0.5 volt of the recorded battery voltage?

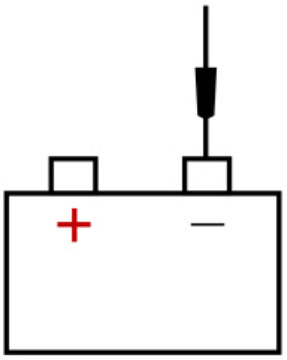
Yes	GO to B9
No	REPAIR the affected circuit(s).

B9 CHECK PCM (POWERTRAIN CONTROL MODULE) GROUND CIRCUITS

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-2		Ground
C1232A-3		Ground
C1232A-7		Ground
C1232A-42		Ground





C1232A-53		Ground

Is the voltage drop less than 0.5 volt?

Yes	GO to B10
No	REPAIR the affected circuit(s).

B10 MONITOR THE SUPPLY VOLTAGE (VPWR) PID (PARAMETER IDENTIFICATION)

- **NOTE:** *Measure battery voltage at the battery.*
  With the engine still running at idle, turn off all accessory loads.
- Measure and record:

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841

- Using a diagnostic scan tool, view PCM PID VPWR and record.
- Momentarily accelerate the engine to Wide Open Throttle (WOT) and release. Repeat this step 4-5 times while continuing to monitor the PID .

Does the PID stay within 0.5 volt of the recorded battery voltage when the engine Revolutions Per Minute (RPM) are increased?

Yes	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. INSPECT and REPAIR any connector or pin issues found. REFER to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
No	GO to B11

B11 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

Generator Noise or Mechanical Performance

Normal Operation and Fault Conditions

The generator is belt-driven by the engine FEAD system. There are several sources of generator noise which include bearing noise, electrical fault noise, generator or belt pulley misalignment. A generator with certain types of diode or stator failures can also produce an audible noise.

Possible Sources

- FEAD belt
- Loose bolts/brackets
- Generator/pulleys

Visual Inspection and Diagnostic Pre-checks

- Inspect the FEAD belt.
- Inspect for loose bolts/brackets.
- Inspect the generator/pulley.

PINPOINT TEST C : GENERATOR NOISE OR MECHANICAL PERFORMANCE

C1 CHECK FOR ACCESSORY DRIVE BELT NOISE AND LOOSE MOUNTING BRACKETS

- Ignition OFF.
- Check the FEAD belt and tensioner for damage and correct installation.
  REFER to: Accessory Drive - Component Location (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Description and Operation).

Is the accessory drive OK?

Yes	GO to C2
No	REPAIR as necessary.

C2 CHECK THE GENERATOR MOUNTING

- Check the generator mounting for loose bolts or misalignment.

Is the generator mounted correctly?

Yes	GO to C3
No	REPAIR as necessary.

C3 CHECK THE GENERATOR FOR NOISE

- Start the engine.
- With the engine running, use a stethoscope or equivalent listening device to probe the generator and the accessory drive area for unusual mechanical noise.

Is the generator the noise source?

Yes	INSTALL a new generator. REFER to: Generator - 2.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation). REFER to: Generator - 3.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation).
No	Diagnose the source of the engine noise. REFER to: Engine (303-00 Engine System - General Information, Diagnosis and Testing).

Radio Interference

Refer to Wiring Diagrams Cell 12 for schematic and connector information.

Normal Operation and Fault Conditions

The generator radio suppression equipment reduces interference transmitted through the speakers by the vehicle electrical system.

NOTE: *If the Original Equipment Manufacturer (OEM) ACM has been replaced with an aftermarket unit, the vehicle may not pass this test. Return the vehicle to Original Equipment Manufacturer (OEM) condition before following this pinpoint test.*

NOTE: *Inspect for any aftermarket accessories. Check the wiring for these accessories and be sure they have not been attached to the generator circuits and are positioned away from the generator wiring.*

Possible Sources

- Generator
- In-vehicle entertainment system
- Wiring, terminals or connectors

Visual Inspection and Diagnostic Pre-checks

- Inspect the generator.
- Inspect the in-vehicle entertainment system.

PINPOINT TEST D : RADIO INTERFERENCE

D1 VERIFY THE GENERATOR IS THE SOURCE OF THE AUDIO SYSTEM INTERFERENCE

- Start the engine.
- Allow the engine to idle.
- Tune the audio system to a station where interference is present.
- Ignition OFF.
- Disconnect Generator C102B.
- Start the engine.
- Allow the engine to idle.

Is the interference present with the generator disconnected?

Yes	DIAGNOSE the audio system. Refer to the appropriate section in Group 415 for the procedure.
No	INSTALL a new generator.

	REFER to: Generator - 2.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation). REFER to: Generator - 3.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation).

DTC U0120

Refer to Wiring Diagrams Cell 12 for schematic and connector information.

Normal Operation and Fault Conditions

The charging system supplies voltage to the battery and the vehicle electrical system through the battery B+ cable. The PCM monitors the generator output through a dedicated LIN communication circuit. The PCM uses this LIN circuit to communicate the desired voltage setpoint to the generator internal voltage regulator. The generator also uses this to communicate the generator load and error conditions to the PCM.

Diagnostic Trouble Code (DTC) Fault Trigger Conditions

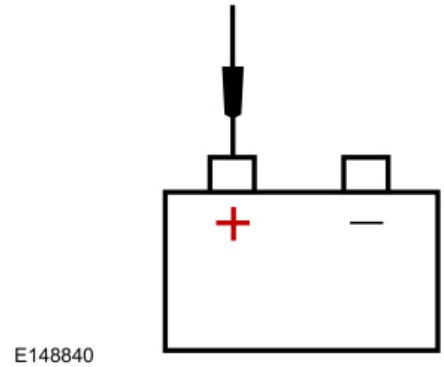
DTC	Description	Fault Trigger Conditions
U0120	Lost Communication With Generator Control Module	This DTC sets if the PCM does not detect communication through the LIN circuit. This can be a result of an open or short in the LIN circuit. This DTC also sets if the generator B+ circuit is open.

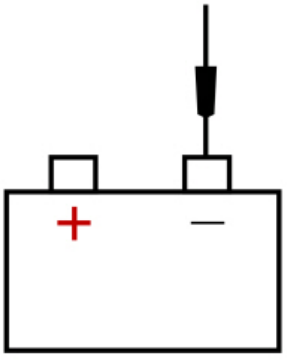
Possible Sources

- BCM
- Generator
- PCM
- Wiring, terminals or connectors

Visual Inspection and Diagnostic Pre-checks

- Inspect engine and battery grounds for loose or corroded connections.
- Inspect high current BJB for loose or corroded connections.
- Inspect the FEAD belt.
- Inspect the battery monitoring sensor.
- Verify the BJB fuse F29 (15A).





PINPOINT TEST E : DTC U0120

NOTE: *Make sure battery voltage is greater than 12.2 volts prior to and during this pinpoint test.*

NOTE: *Do not have a battery charger attached during vehicle testing.*

E1 COMPARE THE GENERATOR B+ CIRCUIT TO BATTERY VOLTAGE

- Ignition OFF.
- Measure and record:

Positive Lead	Measurement / Action	Negative Lead
		

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C102C-1		Ground

Is the voltage within 0.5 volt of the recorded battery voltage?

Yes	GO to E2
No	TIGHTEN or INSTALL a new generator B+ nut as needed. REFER to: Generator - 2.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation). REFER to: Generator - 3.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation).

	VERIFY high current BJB fuse MEGA (125A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

E2 CHECK THE GENERATOR LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Generator C102B.
- Disconnect PCM C1232C.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C102B-1		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to E3

E3 CHECK THE GENERATOR LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C102B-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to E4
No	REPAIR the circuit.

E4 CHECK THE GENERATOR LIN (LOCAL INTERCONNECT NETWORK) CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C102B-1	Ω	C1232C-30

Is the resistance less than 3 ohms?

Yes	INSTALL a new generator. REFER to: Generator - 2.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation). REFER to: Generator - 3.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation). REPEAT the PCM self-test. If DTC U012D is retrieved again, GO to E5
No	REPAIR the affected circuit.

E5 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Pinpoint Tests

System Voltage High

Refer to Wiring Diagrams Cell 12 for schematic and connector information.

NOTE: *Diagnostic Trouble Codes can be set if the vehicle has been recently jump started or the battery has been recently charged. The battery may become discharged due to excessive load(s) on the charging system from aftermarket accessories or if vehicle accessories have been operating for an extended period of time without the engine running.*

Normal Operation and Fault Conditions

With the engine running, the charging system supplies voltage to the battery and the vehicle electrical system through the high current BJB and battery B+ cable. The voltage that is supplied to the vehicle electrical system is used for the operation of the various vehicle systems and modules. Many modules monitor this voltage and if it rises above or below their calibrated setpoints, a DTC sets.

Possible Sources

- Wiring, terminals or connectors
- Engine, generator or battery ground
- Battery
- Generator
- PCM

Visual Inspection and Diagnostic Pre-checks

- Inspect high current BJB for loose or corroded connections.

PINPOINT TEST A : SYSTEM VOLTAGE HIGH

NOTE: *Make sure battery voltage is greater than 12.2 volts prior to and during this pinpoint test.*

NOTE: *Do not have a battery charger attached during vehicle testing.*

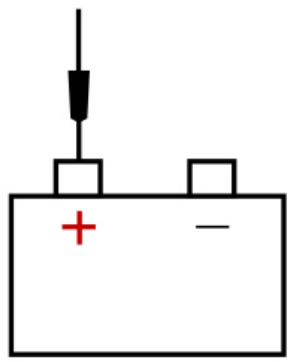
A1 CHECK BATTERY CONDITION

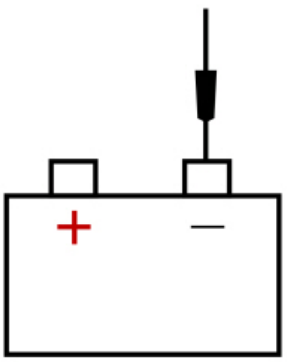
- Check the battery condition and state of charge.
  REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).
  .

Does the battery pass the condition test?

Yes	GO to A2
No	CHARGE or INSTALL a new battery as necessary. REFER to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation). .

A2 MONITOR THE GENERATOR VOLTAGE DESIRED (GENVDSD) PID





- Start the engine.
- Using a diagnostic scan tool, view the PCM Parameter Identification (PID) GENVDSD.

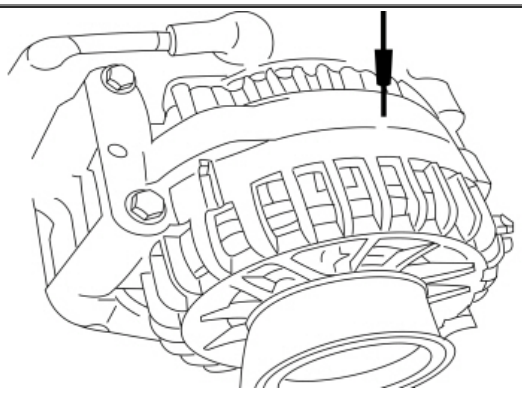
Does the Parameter Identification (PID) indicate 15.9 volts or less?

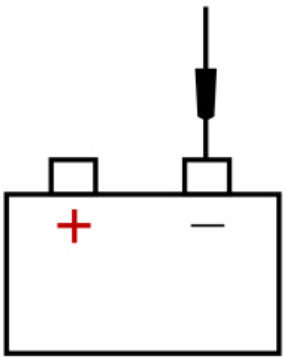
Yes	GO to A3
No	GO to A9

A3 COMPARE THE GENERATOR VOLTAGE DESIRED (GENVDSD) PID WITH BATTERY VOLTAGE

- With the engine still running at idle, measure and record:

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841





- Using a diagnostic scan tool, view the PCM Parameter Identification (PID) GENVDSD.

Is the recorded battery voltage within ±0.5 volt of the Parameter Identification (PID)?

Yes	The system is operating correctly at this time. The concern may have been caused by an intermittently loose or corroded connector. ADDRESS the root cause of any connector or pin issues.
No	GO to A4

A4 CHECK THE VEHICLE GROUND VOLTAGE DROP

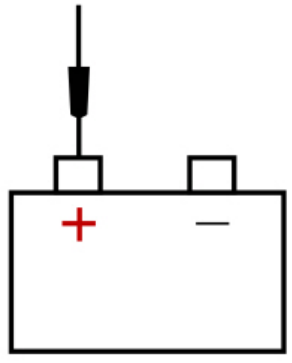
- With the engine still running at idle, headlamps on and heater blower on high, measure:

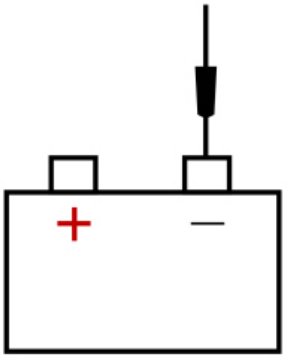
Positive Lead	Measurement / Action	Negative Lead
 Generator case		 E148841

Is the voltage drop less than 0.5 volt?

Yes	GO to A5
No	INSPECT and REPAIR the engine ground, generator ground or the battery ground for corrosion.

A5 MONITOR THE GENERATOR VOLTAGE DESIRED (GENVDSD) PID WHILE COMMANDED





- Using a diagnostic scan tool, view the PCM Parameter Identification (PID) GENVDSD.
- Using a diagnostic scan tool, active command, set the PCM Parameter Identification (PID) GENVDSD to 14 volts.
- With the engine still running at idle, measure battery voltage and record.

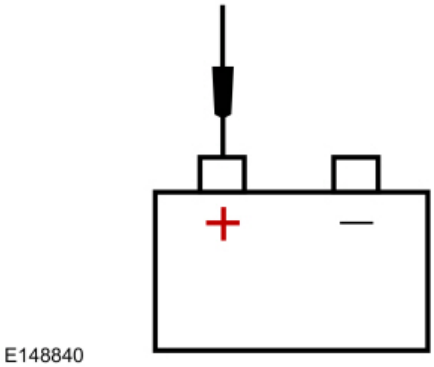
Is the recorded battery voltage within ±0.5 volt of the Parameter Identification (PID)?

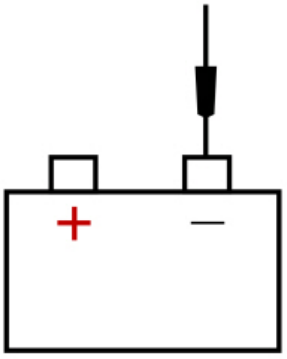
Yes	GO to A6
No	INSTALL a new generator. REFER to: Generator - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-02 Generator and Regulator, Removal and Installation). .

A6 CHECK THE GENERATOR OUTPUT

- Increase engine Revolutions Per Minute (RPM) until generator starts to generate output.
- With the engine running, measure and record:

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841





Is the voltage greater than 15.2 volts?

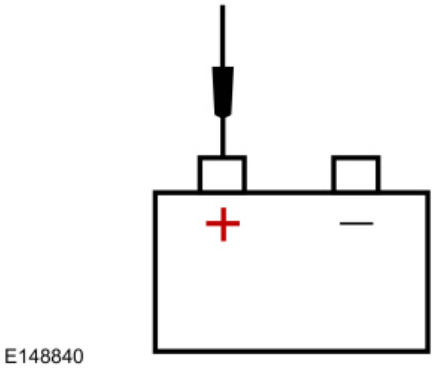
Yes	INSTALL a new generator.

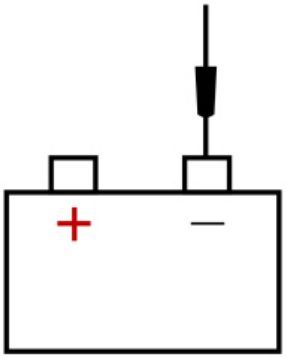
	REFER to: Generator - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-02 Generator and Regulator, Removal and Installation). .
No	GO to A7

A7 COMPARE THE SUPPLY VOLTAGE (VPWR) PID TO BATTERY VOLTAGE

- With the engine still running at idle, measure and record:

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841





- Using a diagnostic scan tool, view the PCM Parameter Identification (PID) VPWR.

Does the Parameter Identification (PID) accurately display battery voltage within ±0.5 volt of the recorded battery voltage?

Yes	INSTALL a new generator. REFER to: Generator - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-02 Generator and Regulator, Removal and Installation). .
No	GO to A8

A8 CHECK PCM SUPPLY VOLTAGE CIRCUITS

- Ignition OFF.
- Disconnect PCM C175C.
- Ignition ON.
- Measure and record:

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C175C-39		Ground

Are the voltages within 0.5 volt of the recorded battery voltage?

Yes	GO to A9
No	REPAIR the affected circuit(s) for high resistance. CLEAR all Diagnostic Trouble Codes (DTCs) in all modules.

A9 CHECK FOR CORRECT PCM OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). CLEAR all Diagnostic Trouble Codes (DTCs) in all modules.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

System Voltage Low or Battery is Discharged

Refer to Wiring Diagrams Cell 12 for schematic and connector information.

Normal Operation and Fault Conditions

With the engine running, the charging system supplies voltage to the battery and the vehicle electrical system through the high current BJB and battery B+ cable. The PCM monitors this B+ voltage through its own voltage supply circuit.

Diagnostic Trouble Code (DTC) Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P065B	Generator Control Circuit Range/Performance	This DTC sets when the generator reports an internal regulator failure to the PCM.

Possible Sources

- Wiring, terminals or connectors
- Excessive ignition-OFF current drain
- Battery
- Generator
- PCM
- High current BJB

Visual Inspection and Diagnostic Pre-checks

- Inspect for abnormal ignition-off current drain(s).
- Inspect the battery.
- Inspect high current BJB for loose or corroded connections.
- Inspect the generator clutch.

PINPOINT TEST B : SYSTEM VOLTAGE LOW OR BATTERY IS DISCHARGED

NOTE: *Make sure battery voltage is greater than 12.2 volts prior to and during this pinpoint test.*

NOTE: *Do not have a battery charger attached during vehicle testing.*

B1 RETRIEVE PCM DTCS

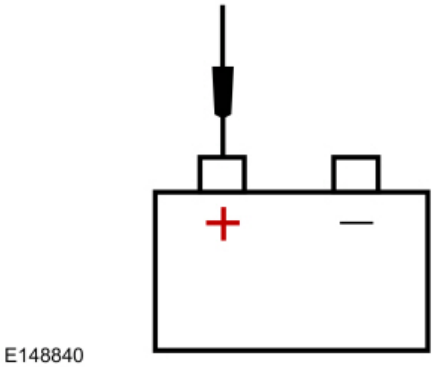
- Ignition ON.
- Using a diagnostic scan tool, perform PCM self-test.

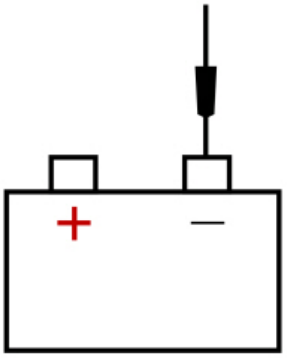
Is DTC P065B present?

Yes	If P065B is present, INSTALL a new generator. REFER to: Generator - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-02 Generator and Regulator, Removal and Installation). .
No	For all other PCM Diagnostic Trouble Codes (DTCs) REFER to the PCM DTC Chart in this section. If no Diagnostic Trouble Codes (DTCs) are present, GO to B2

B2 CHECK BATTERY CONDITION

- Ignition OFF.
- Check the battery condition and state of charge.
  REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).
  .





Does the battery pass the condition test?

Yes	GO to B3

No	INSTALL a new battery. REFER to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation). .

B3 CHECK THE GENERATOR CONNECTIONS

- Disconnect and inspect all generator connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the generator connectors. Make sure they seat and latch correctly.
- Measure and record:

Positive Lead	Measurement / Action	Negative Lead
		

- Measure at the Generator B+ Nut connection:

Positive Lead	Measurement / Action	Negative Lead
C102C-1		Ground

Is the voltage within 0.5 volt of the recorded battery voltage?

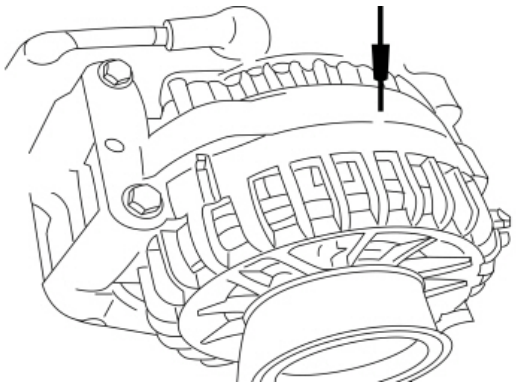
Yes	GO to B4
No	TIGHTEN or INSTALL a new Generator B+ nut as needed. REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). . VERIFY high current BJB MEGA 2 fuse (150A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

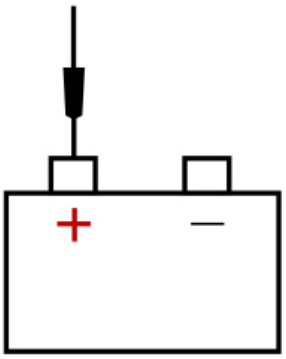
B4 CHECK THE VOLTAGE DROP IN THE GENERATOR B+ CIRCUIT

- Start the engine.
- With the engine running at idle, headlamps on and blower on high, measure:

Positive Lead	Measurement / Action	Negative Lead
C102C-1		

- Carry out a wiggle test of the generator wiring and connections while measuring voltage drop.





Is the voltage drop less than 0.5 volt?

Yes	GO to B5
No	INSPECT and REPAIR any corrosion in the generator B+ circuit or positive battery cable connections.

B5 CHECK THE VOLTAGE DROP IN THE VEHICLE GROUNDS

- With the engine still running at idle, headlamps on and heater blower on high, measure:

Positive Lead	Measurement / Action	Negative Lead

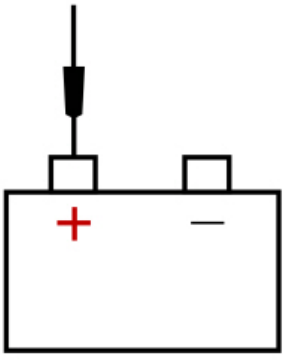
 Generator case		 E148840

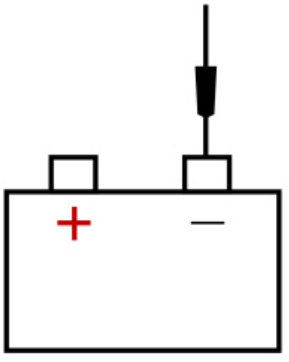
Is the voltage drop less than 0.5 volt?

Yes	GO to B6
No	INSPECT and REPAIR the engine ground, generator ground or the battery ground for corrosion.

B6 MONITOR THE GENERATOR VOLTAGE DESIRED (GENVDSD) PID WHILE COMMANDED

- Using a diagnostic scan tool, view the PCM GENVDSD Parameter Identification (PID).
- Using a diagnostic scan tool active command, set the PCM Parameter Identification (PID) GENVDSD to 14 volts.
- With the engine still running at idle, measure battery and record:





Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841

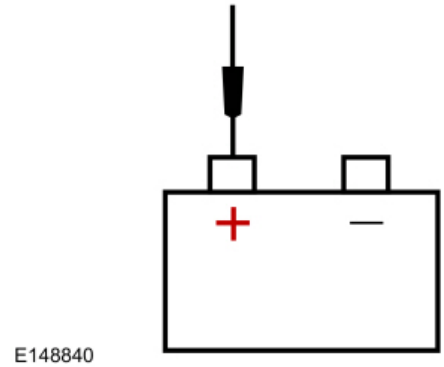
Is the recorded battery voltage within ±0.5 volt of the Parameter Identification (PID)?

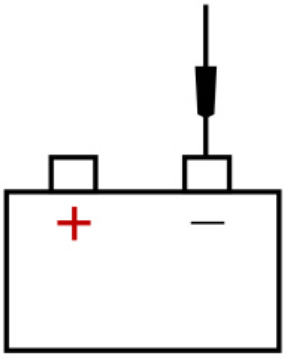
Yes	GO to B7
No	GO to B10

B7 COMPARE THE SUPPLY VOLTAGE (VPWR) PID TO BATTERY VOLTAGE

- With the engine still running at idle, headlamps on and blower on high, measure and record:

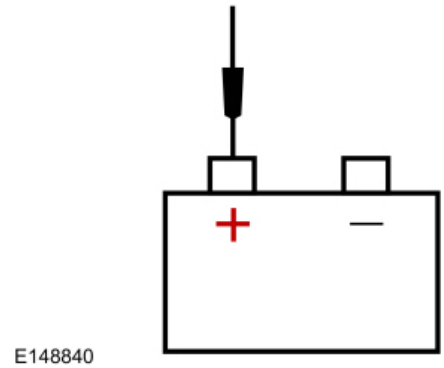
Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841

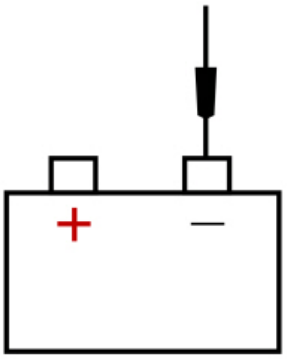




- Using a diagnostic scan tool, view the PCM Parameter Identification (PID) VPWR.

Does the Parameter Identification (PID) accurately display battery voltage within ±0.5 volt of the recorded battery voltage?





Yes	GO to B8
No	REPAIR high resistance or loose connections in the affected PCM power circuit(s).

B8 CHECK PCM GROUND FOR HIGH RESISTANCE

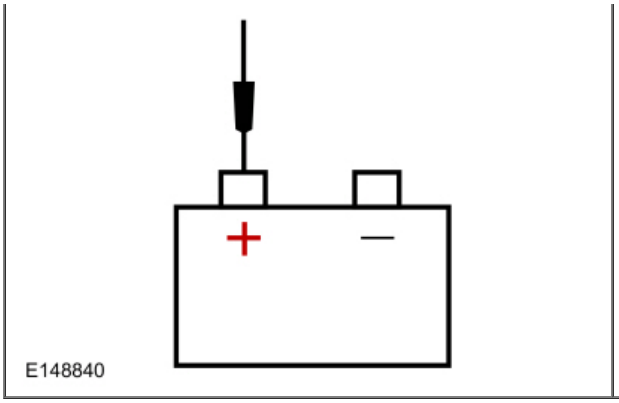
- **NOTE:** *Measure battery voltage at the battery.*
  With the engine still running at idle, turn off all accessory loads, measure and record:

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841

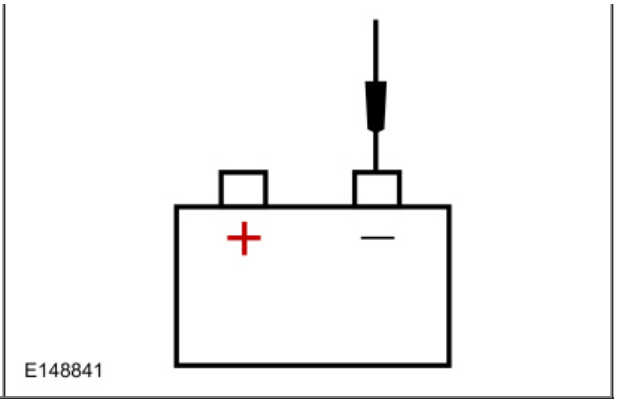
- Using a diagnostic scan tool, view PCM Parameter Identification (PID) VPWR and record.
- With the engine still running at idle, turn headlamps on and blower on high.
- Measure and record:

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148841

- Using a diagnostic scan tool, view PCM Parameter Identification (PID) VPWR and record.



Does the Parameter Identification (PID) read within ±0.5 volt of battery voltage with accessory loads on and off?



Yes	GO to B9
No	REPAIR the affected PCM ground circuit(s).

B9 MONITOR THE SUPPLY VOLTAGE (VPWR) PID

- **NOTE:** *Measure battery voltage at the battery.*
  With the engine still running at idle, turn off all accessory loads.
- Measure and record:

Positive Lead	Measurement / Action	Negative Lead
		

- Using a diagnostic scan tool, view PCM Parameter Identification (PID) VPWR and record.
- Momentarily accelerate the engine to Wide Open Throttle (WOT) and release. Repeat this step 4-5 times while continuing to monitor the Parameter Identification (PID).

Does the Parameter Identification (PID) stay within 0.5 volt of the recorded battery voltage when the engine Revolutions Per Minute (RPM) are increased?

Yes	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. INSPECT and REPAIR any connector or pin issues found. REFER to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures). .
No	GO to B11

B10 CHECK GENERATOR CLUTCH OPERATION

- Ignition OFF.
- Carry out the generator clutch component test in this section.

Is the generator clutch OK?

Yes	INSTALL a new generator. REFER to: Generator - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-02 Generator and Regulator, Removal and Installation). .
No	INSTALL a new generator clutch. Refer to : Generator Pully in section 414-02.

B11 CHECK FOR CORRECT PCM OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). . CLEAR all Diagnostic Trouble Codes (DTCs) in all modules.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The Generator is Noisy

Normal Operation and Fault Conditions

The generator is belt-driven by the engine accessory drive system. There are several sources of generator noise which include bearing noise, electrical fault noise, generator or belt pulley misalignment. A generator with certain types of diode or stator failures can also produce an audible noise.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P065C	Generator Mechanical Performance	This DTC sets when the generator reports an internal mechanical failure.

Possible Sources

- FEAD belt
- Loose bolts/brackets
- Generator/pulleys

Visual Inspection and Diagnostic Pre-checks

- Inspect the FEAD belt.
- Inspect for loose bolts/brackets.
- Inspect the generator/pulley.

PINPOINT TEST C : THE GENERATOR IS NOISY

C1 CHECK FOR ACCESSORY DRIVE BELT NOISE AND LOOSE MOUNTING BRACKETS

- Ignition OFF.
- Check the FEAD belt and tensioner for damage and correct installation.
  REFER to: Accessory Drive - Component Location (303-05A Accessory Drive - 2.5L Duratec-HE (122kW/165PS) - MI4, Description and Operation).
  .

Is the accessory drive OK?

Yes	GO to C2
No	REPAIR as necessary.

C2 CHECK THE GENERATOR MOUNTING

- Check the generator mounting for loose bolts or misalignment.

Is the generator mounted correctly?

Yes	GO to C3
No	REPAIR as necessary.

C3 CHECK THE GENERATOR FOR NOISE

- Start the engine.
- With the engine running, use a stethoscope or equivalent listening device to probe the generator and the accessory drive area for unusual mechanical noise.

Is the generator the noise source?

Yes	GO to C4
No	REFER to: Engine (303-00 Engine System - General Information, Diagnosis and Testing). to diagnose the source of the engine noise.

C4 CHECK GENERATOR CLUTCH OPERATION

- Ignition OFF.
- Carry out the generator clutch component test in this section.

Is the generator clutch OK?

Yes	INSTALL a new generator. REFER to: Generator - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-02 Generator and Regulator, Removal and Installation). .
No	INSTALL a new generator clutch. Refer to : Generator Pully in section 414-02.

Radio Interference

Refer to Wiring Diagrams Cell 12 for schematic and connector information.

Normal Operation and Fault Conditions

The generator radio suppression equipment reduces interference transmitted through the speakers by the vehicle electrical system.

NOTE: *If the Original Equipment Manufacturer (OEM) Audio Control Module (ACM) has been replaced with an aftermarket unit, the vehicle may not pass this test. Return the vehicle to Original Equipment Manufacturer (OEM) condition before following this pinpoint test.*

NOTE: *If the engine is operated at greater than 2,000 Revolutions Per Minute (RPM) momentarily, the generator self-excites. Make sure when the generator is disconnected the engine rpm stays below 2,000 Revolutions Per Minute (RPM). If it rises above 2,000 Revolutions Per Minute (RPM), turn the ignition to the OFF position and start the test over again.*

NOTE: *Inspect for any aftermarket accessories that have been added to the vehicle. Check the wiring for these accessories and be sure they have not been attached to the generator circuits and are positioned away from the generator wiring.*

Possible Sources

- Generator
- Wiring, terminals or connectors
- In-vehicle entertainment system

Visual Inspection and Diagnostic Pre-checks

- Inspect the generator.
- Inspect the in-vehicle entertainment system.

PINPOINT TEST D : RADIO INTERFERENCE

D1 VERIFY THE GENERATOR IS THE SOURCE OF THE AUDIO SYSTEM INTERFERENCE

- Start the engine and allow the engine to idle.
- Tune the audio system to a station where interference is present.
- Ignition OFF.
- Disconnect Generator C102C.
- Start the engine and allow the engine to idle.

Is the interference present with the generator disconnected?

Yes	REFER to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing). (Base), or REFER to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing). (w/Navigation).
No	INSTALL a new generator. REFER to: Generator - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-02 Generator and Regulator, Removal and Installation). .

U012D, U0469

Refer to Wiring Diagrams Cell 12 for schematic and connector information.

Normal Operation and Fault Conditions

The charging system supplies voltage to the battery and the vehicle electrical system through the battery B+ cable. The PCM monitors the generator output through a dedicated LIN communication circuit. The generator uses this LIN circuit to communicate the desired voltage setpoint from the PCM to the internal voltage regulator. The generator also uses this LIN circuit to communicate the generator load and error conditions to the PCM.

Diagnostic Trouble Code (DTC) Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U012D	Lost Communication With Generator Control Module	This DTC sets if the PCM does not detect communication through the LIN circuit. This can be a result of an open or short in the LIN circuit. This DTC also sets if the generator B+ circuit is open.
U0469	Invalid Data Received From Generator Control Module	This DTC sets when the PCM receives invalid data from the generator.

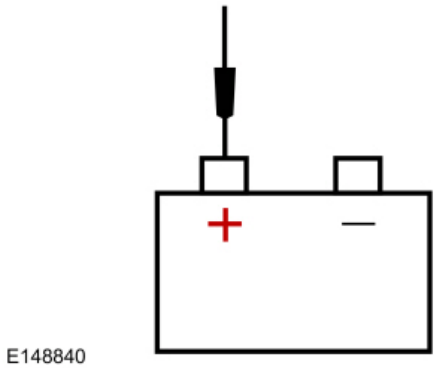
Possible Sources

- PCM
- Generator
- Wiring, terminals or connectors

Visual Inspection and Diagnostic Pre-checks

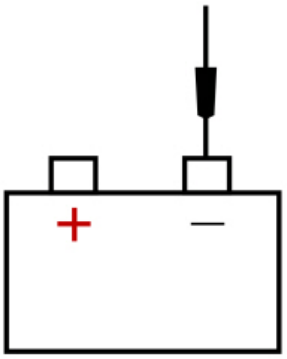
- Inspect high current BJB fuse 2 (150A).
- Inspect high current BJB for loose or corroded connections.

PINPOINT TEST E : U012D, U0469



NOTE: *Make sure battery voltage is greater than 12.2 volts prior to and during this pinpoint test.*

NOTE: *Do not have a battery charger attached during vehicle testing.*



E1 COMPARE THE GENERATOR B+ CIRCUIT TO BATTERY VOLTAGE

- Measure and record:

Positive Lead	Measurement / Action	Negative Lead
		

E148840

E148841

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C102C-1	V	Ground

Is the voltage within 0.5 volt of the recorded battery voltage?

Yes	GO to E2
No	TIGHTEN or INSTALL a new Generator B+ nut as needed. REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). . VERIFY high current BJB MEGA 2 fuse (150A) is OK. If OK, REPAIR the circuit. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

E2 CHECK THE GENERATOR LIN CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Generator C102B.
- Disconnect PCM C175C.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C102B-1	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to E3

E3 CHECK THE GENERATOR LIN CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C102B-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to E4
No	REPAIR the circuit.

E4 CHECK THE GENERATOR LIN CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C102B-1	Ω	C1232C-30

Is the resistance less than 3 ohms?

Yes	INSTALL a new generator. REFER to: Generator - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-02 Generator and Regulator, Removal and Installation). . CLEAR the Diagnostic Trouble Codes (DTCs). REPEAT the PCM self-test. If DTC U012D is retrieved again, GO to E5
No	REPAIR the affected circuit.

E5 CHECK FOR CORRECT PCM OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). . CLEAR all Diagnostic Trouble Codes (DTCs) in all modules.
No	The system is operating correctly at this time. The concern may have been caused by loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

Copyright © 2016 Ford Motor Company

Battery Charging

General Equipment

Midtronics GR-590 Battery Management Center
Battery Charger

WARNING: Always observe the battery charger equipment manufacturer's instructions.

WARNING: Do not jump/slave start using a battery charging system from another vehicle.

WARNING: Do not overfill a battery as this can cause acid leakage that will result in damage to the vehicle and possible personal injury.

NOTICE: Do not rely on the generator to recharge a discharged battery. It would take in excess of eight hours of continuous driving with no additional loads placed on the charging system.

NOTICE: Make sure that the battery electrolyte reaches the indicated maximum mark.

NOTICE: Connect the battery charger cables to the battery before switching the battery charger on.

NOTICE: Switch the battery charger off before disconnecting the battery charger cables from the battery.

NOTE: *Ford batteries generally require no maintenance however, in certain conditions, it is possible for the electrolyte in a battery to fall below the minimum level.*

NOTE: *The use of the Midtronics GR-590 Battery Management Center, which has been specifically designed for use on silver calcium type batteries is recommended. Once connected to the battery, the battery charger detects the state of battery charge and then applies the appropriate charge rate and duration. When the battery is fully charged, the battery charger switches to stand-by, keeping the battery in a fully charged state preventing excessive gassing and overcharging. The Midtronics GR-590 Battery Management Center also incorporates a software program that has the capability to assist in the recovery of deeply discharged (sulphated) batteries.*

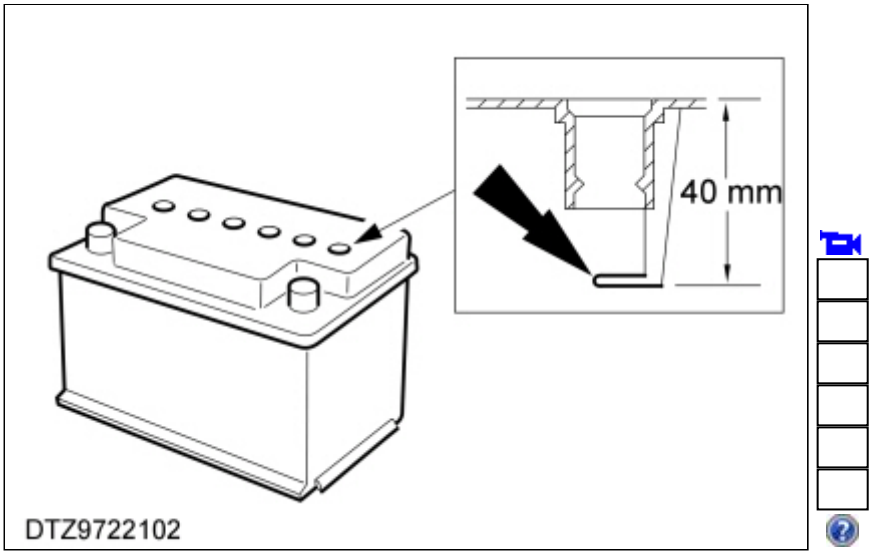
NOTE: *Charging methods and types of battery chargers vary widely. Whichever method is utilized it must be carried out carefully to avoid damage to the battery and possible personal injury. Specific instructions accompanying each battery charger and must be followed exactly. Safeguards provided by the equipment manufacturer should not be disregarded by the operator.*

NOTE: *A battery which has been stored in a highly discharged state may be slow to accept a charge at first. In such cases the initial charging rate may be so low that the ammeter on some battery testers will not show any indication of charge for 5 to 10 minutes.*

NOTE: *Automatic battery chargers are also protected against reverse polarity connection and require no adjustment or monitoring.*

NOTE: *Slow-charging will readily restore a battery to a full state of charge and, since the charging current is relatively low, the possibility of overcharging a battery are minimized. The charge rate used should be approximately equal to 5% of the reserve capacity of the battery being charged (approximately three to six Amps depending on battery size). The charging current should be adjusted 10 minutes after initial setting and again after 1 hour before being left to charge the battery for between 8 and 12 hours.*

NOTE: *A constant voltage battery charger will charge a battery at a set maximum voltage. The voltage used depends upon the design and condition of the battery charger and the age and temperature of the battery. This type of battery charger initially charges at a high rate of current that reduces as battery voltage is restored. When using a constant voltage battery charger, the charging current should be recorded after five minutes and the battery charger switched off when the charging current falls to one–third of the recorded value, or after eight hours whichever occurs first.*



NOTE: *Multiple battery chargers are designed to charge a number of batteries, simultaneously. Of the two different types of multiple battery chargers available, only those that charge batteries in series should be used and it is important that batteries are of the same or very similar ratings and voltages. Multiple battery chargers that charge batteries in parallel are not recommended.*

NOTE: *The use of a fast (boost) battery charger is not recommended as it can cause damage to a battery. Fast charging will only restore a battery to a state of charge that will enable it to carry out it's critical function of cranking the engine. Fast charging will not restore a battery to a full state of charge and must therefore be followed by a period of slow charging. Excessively fast charging can cause damage to a battery. For this reason, charging times must be carefully controlled. Fast battery chargers vary widely in design so it is very important to strictly adhere to the equipment manufacturer's instructions. A charge of 30 amps for up to 30 minutes is the most common fast charging application. If the battery is very discharged and requires additional restoration, an additional charge of 20 amps for a period up to one and a half hours should be applied. Fast charging for a period in excess of two hours significantly increases the risk of causing damage to the battery.*

NOTE: *When connecting and disconnecting the battery from the vehicle, make sure that the battery ground cable is disconnected first and connected last and that all electrical items are switched off. Record the audio unit keycode and preset radio frequencies before disconnecting the battery.*

1. Remove the battery (Focus C-MAX 2003.75, Focus 2004.75, S-MAX/Galaxy 2006.50, Mondeo 2007.50 only).
2. Disconnect the battery ground cable (All, except the vehicles mentioned in the previous step).
3. **NOTE:** *The maximum battery electrolyte level is approximately 40 mm below the very top of the battery casing. This corresponds to a point just below the lower rim of the battery casing.*

   Check that the battery electrolyte reaches the indicated maximum level. Top up with distilled/de-ionized water, as necessary.

4. Connect the positive red clamp from the battery charger to the positive battery terminal.
5. Connect the negative black clamp from the battery charger to the negative battery terminal.
6. Connect the AC power cable to the mains outlet and switch on.
7. Follow the instructions supplied with the battery charger to charge the battery.
8. To disconnect the battery charger, reverse the connection procedure.

Copyright © 2016 Ford Motor Company

Auxiliary Battery

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.
3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step
4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Auxiliary Battery Check

WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.

WARNING: Batteries contain sulphuric acid. Avoid contact with skin, eyes, or clothing. Also, shield your eyes when working near batteries to protect against possible splashing of the acid solution. In case of acid contact with skin or eyes, flush immediately with water for a minimum of 15 minutes and get prompt medical attention. If acid is swallowed, call a physician immediately. Failure to follow these instructions may result in personal injury.

WARNING: Batteries normally produce explosive gases which can cause personal injury. Therefore, do not allow flames, sparks or lighted substances to come near the battery. When charging or working near a battery, always shield your face and protect your eyes. Always provide ventilation. Failure to follow these instructions may result in personal injury.

1. Turn the ignition OFF.
   REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. REFER to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
3. REFER to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
   REFER to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).

Symptom Chart

Auxiliary Battery

Symptom	Possible Sources	Action
• Auxiliary Electrical Systems Inoperative/Malfunction	• Auxiliary Battery • Auxiliary Battery Wiring Assembly	• Carry out the battery test. Refer to the Battery Test in Component Tests in this section. • Check the electrical connections on the auxiliary battery wiring assembly. • Check the auxiliary battery fuse panel for blown fuses.
• Auxiliary Battery will not charge	• Fuses (125A MIDI) • Auxiliary Battery Wiring Assembly • Auxiliary Battery Cable Assembly • Ground Point Defective	• Check the 125A MIDI fuse in the auxiliary battery cable. • Check the 125A MIDI fuse in the auxiliary battery wiring. • Check the electrical connections on the auxiliary battery wiring assembly. • Check the electrical connections on the auxiliary battery cable assembly.

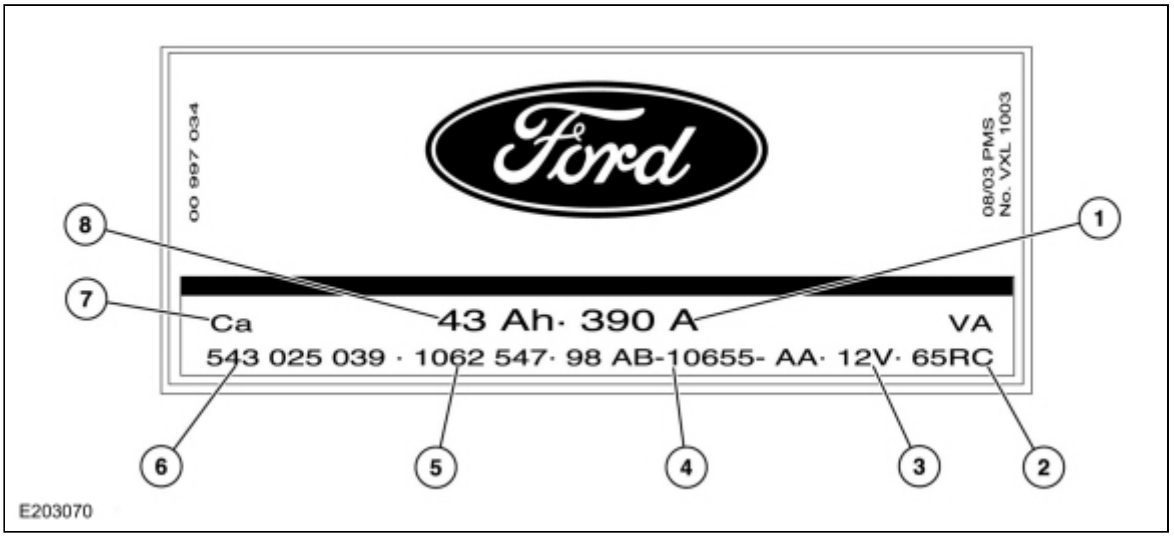
Battery



Base Part Number: 10655

Battery inspection

REFER to: Battery and Battery Charging Health and Safety Precautions (100-00 General Information, Description and Operation).

1. Inspecting the Battery before starting the test, visually inspect the battery for:
2. Cracked, buckled or leaking case. If you see any of these defects, replace the battery. DO NOT CHARGE THE BATTERY.
3. Corroded, loose or damaged cables and connections. If you see any of these defects, repair or replace as needed.
4. Corrosion on the battery terminals, dirt or acid on the case top. If you see any of these defects, Clean the case and terminals using a wire brush and a mixture of water and baking soda.
5. Low electrolyte level. If the electrolyte level is too low, add distilled water to the level indicated by the battery manufacturer. Do not overfill.

Battery Identification

Item	Part Number	Description
1	—	Cold crank amp (CCA) rating
2	—	Reserve capacity (RC) rating (minutes)
3	—	Battery voltage
4	—	Ford Part number
5	—	FINIS code
6	—	EN number (European Norm)
7	—	Battery type: Ca = Calcium; Sb = Lead/Antimony
8	—	Amp hour rating

Battery test equipment

NOTE: *Anyone of the Ford approved battery test equipment can be used from the list below.*

- *Midtronics MDX-650 (Example) or P-300/P-600/490/1050*
- *Midtronics GRX-3590 (Example) or 3000*
- *Voltmeter/Hydrometer*

MDX-650

NOTE: *Before performing the test disconnect the battery, as the BCM draws current for upto 45 minutes even when the ignition is off and the key is removed from the ignition. Failure to follow the instruction may give an incorrect reading.*

- Disconnect the battery ground cable at the battery negative (-) post.
- Connect the positive red clamp of the Midtronics MDX-650 battery tester to the battery positive (+) post.
- Connect the negative black clamp of the Midtronics MDX-650 battery tester to the battery negative (-) post.

A poor connection will prevent testing and the battery tester will display the message CHECK CONNECTION. If this message appears after you have correctly reconnected the clamps, clean the terminals and reconnect.

1. Select BATTERY TEST or START-STOP BATTERY TEST.
    - Press the NEXT key to continue.
2. Select the BATTERY LOCATION
    - UNDER HOOD
    - UNDER SEAT
    - OUT OF VEHICLE
    - Press the NEXT key to continue.
3. Select the negative POST TYPE (IN-VEHICLE ONLY)
    - BATTERY POST
    - JUMP START POST
    - JUMP START POST (Battery Monitoring Sensor)
    - Press the NEXT key to continue.
4. Select the BATTERY RATING from the drop down list.
    - Press the NEXT key to test the battery.
5. If the battery under test is not listed in the drop down list, it can still be selected with the MANUAL ENTRY

mode. This is item 11 of 11 in the list.

The Midtronics MDX-650 battery tester will display the word TESTING while it evaluates the battery.

If battery fails test, charge battery for 2 hours and repeat test. If battery fails a retest replace the battery.

End of this Diagnosis

Battery tester results and required actions

Battery Tester Reading	Action
GOOD BATTERY	Return the battery to service
GOOD-RECHARGE	Fully charge the battery and return it to service
CHARGE & RETEST	Fully charge the battery and retest (failure to fully charge the battery before retesting may cause false readings)
REPLACE BATTERY	If the battery initially fails the test, charge the battery for 2 hours, this assures that the battery was not just highly discharged. For example (Lights left on overnight) then repeat the test; if the battery fails a secondary test then replace the battery.
BAD CELL BATTERY	**WARNING: Do not recharge the battery.** Make sure that the surface charge was removed. A "REPLACE BATTERY" result could also mean a poor connection between the battery cables and the battery. Check the connections are OK and retest. If the result remains the same, INSTALL a NEW battery

Midtronics MDX-650 Battery Tester Test Code

At the end of the test, use the arrow keys to scroll down the screens to see additional information. One of these is the TEST CODE.

The TEST CODE has 11 digits, for example: 0021U-B88WKX will be included in the print out.

Midtronics GRX-3590 (Example) or 3000

Using the GRX-3590

The Midtronics GRX-3590 is both a battery charger and battery tester and automatically removes the surface charge as part of the normal operating procedure.

The Midtronics GRX-3590 can be used on a battery in-vehicle or out-of-vehicle.

- Disconnect the battery ground cable.
- Connect the positive red clamp from the Midtronics GRX-3590 to the battery positive terminal.
- Connect the negative black clamp from the Midtronics GRX-3590 to the battery negative terminal.
- Connect the AC power cable to the mains outlet and switch ON.
- To disconnect the Midtronics GRX-3590, reverse the connection procedure.

The Midtronics GRX-3590 will automatically carry out a charge cycle before giving the resulting test code. It will bring the battery into a serviceable condition and if required can proceed to fully charge the battery.

Diagnostic charging

- Select the battery LOCATION: UNDER HOOD, UNDER SEAT or OUT OF VEHICLE. Press NEXT to continue.
- In case of UNDER HOOD or UNDER SEAT, please enter the TEST LOCATION: BATTERY POST, JUMP START POST or JUMPER POST (BMS). Press NEXT to continue.
- Select the BATTERY RATING. Press NEXT to continue.
- When the charge cycle is completed, the GRX sounds an alarm and displays the results. These results can also be printed (OPTIONAL).

Voltmeter/Hydrometer

TEST PREPARATION

- Battery surface charge has to be removed before battery testing. Turn the headlights on for 5 seconds. Remove the key from the ignition and ensure all electrical items are turned off and that all doors /deck lid / lift gate are closed and allow the key off loads to reach their steady state value.
- Inspecting the battery before starting the test, visually inspect the battery for:
- Cracked, buckled, or leaking case. If you see any of these defects, replace the battery. DO NOT CHARGE THE BATTERY.
- Corroded, loose or damaged cables and connections. If you see any of these defects, Repair or replace as needed.
- Corrosion on the battery terminals, dirt or acid on the case top. If you see any of these defects, Clean the case and terminals using a wire brush and a mixture of water and baking soda.
- Low electrolyte level. If the electrolyte level is too low, add distilled water to the level indicated by the battery manufacturer. Do not overfill.
- Corroded or loose battery terminals, tray and holddown fixture. If you see any of these defects, Tighten or replace as needed.

1. MEASURE BATTERY "IN VEHICLE" CONDITION

Use multi-meter/voltmeter to measure voltage. If the battery voltage is below 12.5 Volts carry out a hydrometer test. If no voltage is measured, do not charge battery, instead replace defective unit.

NOTICE: Remove the battery from the vehicle.

2. BATTERY TEST WITH BATTERY REMOVED FROM VEHICLE

- Remove battery from vehicle, check for damage or leakage.
  REFER to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation).
- Ensure that the battery temperature is below 40°C.
- Use hydrometer for measuring specific gravity (SG). If difference of SG is more than 0.04 in any of the cells, replace the battery. If the SG measured is within 0.04 of each other then follow the below process.
- Securely connect charger cable clamp to battery post/terminal , please note that battery cell caps have vent feature and do not have to be opened during charging process.
- Initiate battery charge process for duration indicated in table, Referencing results of SG test. (refer to the battery charge procedure within this document)
- During charging process the current will decrease as battery charge acceptance decreases. The battery should be monitored for gassing and leakage during the charging process.
- The charger connection should be disconnected at the end of charging duration.
- When the charging process is complete, allow the battery to rest for 10 minutes to stabilize it.
- Voltage and SG should be measured, voltage should be above 12.5V and the difference in SG between cells <0.04.
- If the battery fails the retest, replace the battery.
- Install the recharged battery into vehicle.
- End of the Diagnosis

Charging time based on specific gravity (manual charging)

SG. before charging	Charging Time
1.250-1.240	3 Hrs.
1.239-1.230	4 Hrs.
1.229-1.200	5 Hrs.
1.199-1.180	7 Hrs.
1.179-1.160	8 Hrs.
1.159-1.140	9 Hrs.
1.139-1.120	10 Hrs.
1.199-1.000	12 Hrs.

Battery Charging

NOTICE: Batteries contain sulphuric acid, avoid contact with skin, eyes or clothing. Wear safety goggles when working near the battery to protect against possible splashing of the acid solution.

NOTICE: Batteries normally produce explosive gases. Do not allow naked flames, sparks or lighted substances to come near the battery.

NOTICE: When charging the battery shield your face and wear safety goggles. Provide adequate ventilation.

NOTICE: Boost charging with excessive current or voltage above 16 volts will damage the battery.

Using the table below calculate the required charging current.

NOTE: *Charging current should be approximately 10% of the battery Ah rating.*

Indicative Charge Table

Specification	Charging current
36Ah,290CCA	3.6A
43Ah, 390CCA	4.3 A
60Ah, 590CCA	6.0 A
68Ah, 740CCA	6.8 A
70Ah, 680CCA	7.0 A

80Ah, 800CCA	8.0 A

NOTE: *Always read the manufacturer's instructions before attempting to charge a battery and ensure you have a good quality approved battery charger. The battery type and its internal components will determine which type of charger is required.*

- Using a suitable battery charger, charge the battery.

 E165532	GR1 190 V3.0 Intelligent Diagnostic Charger 162-00036

Battery Condition Test

Battery condition is determined by measuring battery terminal voltage after a specific discharge current is applied for a specified time period.

Visual Inspection and Diagnostic Pre-checks

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

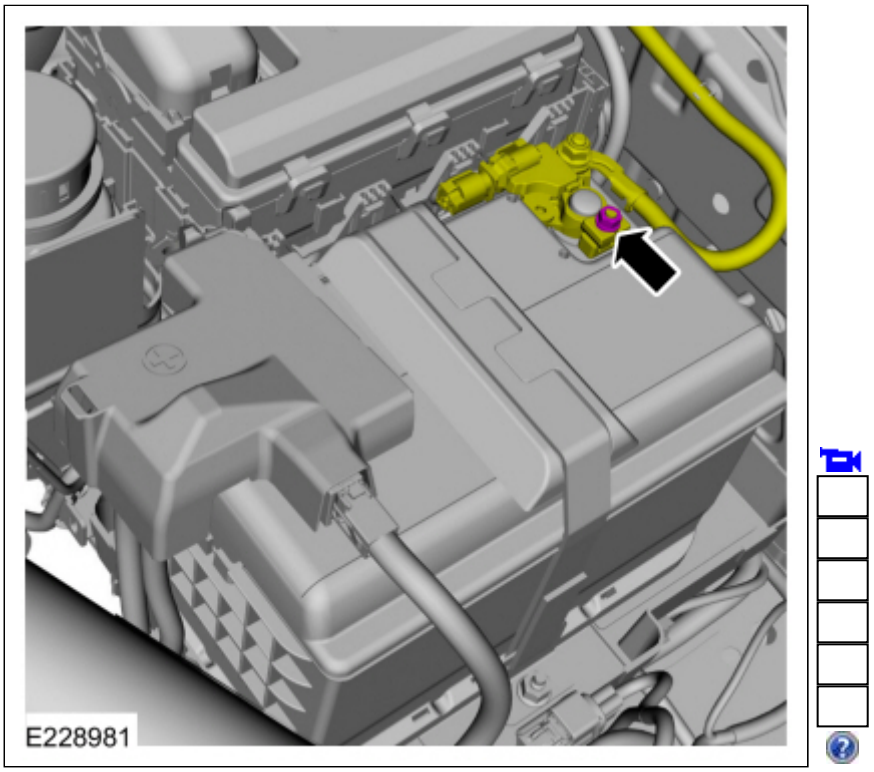
- Inspect wiring, terminals and connectors.
- Inspect the battery.
- Inspect battery mounting.
- Inspect high current BJB connections.

PINPOINT TEST A : BATTERY CONDITION TEST

A1 TEST THE BATTERY CONDITION

NOTE: *Failure to fully charge the battery/batteries before retesting may cause false readings.*

- Using the Intelligent Diagnostic Charger and the battery cables removed from the battery/batteries, verify the battery/batteries condition.



Is the battery OK?

Yes	RETURN the battery/batteries to service.
No	If the analyzer reads REPLACE BATTERY or REPLACE-BAD CELL, INSTALL a new battery. REFER to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation).

Auxiliary Battery - Chassis Cab

Removal

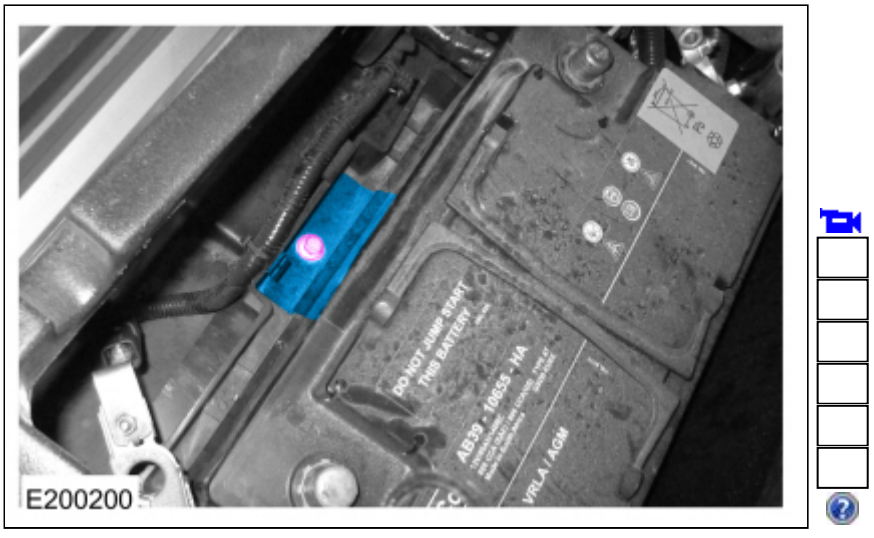
WARNING: Batteries may produce explosive gases which can cause personal injury. Therefore, do not allow flames, sparks or lighted substances to come near the battery. When charging or working near a battery, always shield your face and protect your eyes. Always provide ventilation. Failure to follow these instructions may result in personal injury.

WARNING: Use caution when removing or installing the auxiliary battery, as it may weigh 50 pounds. Failure to follow these instructions may result in personal injury.

NOTICE: Failure to accurately follow the battery disconnect procedures described in this section may result in vehicle or component damage.

NOTE: *Removal steps in this procedure may contain installation details.*

NOTE: *If a battery is disconnected, there is no requirement to reprogram the vehicle; the vehicle retains its 'normal' power management setting and remembers exactly what its previous configuration was (although the central locking latches may cycle if one of these was opened manually in the intervening period).*



NOTE: *If a battery is disconnected, the radio, settings are retained, but the key code needs to be entered to restore functionality.*

NOTE: *If a battery is disconnected, the clock will need resetting.*

NOTE: *If a battery is disconnected, the power windows will need to be re calibrated.*

1. Refer to: Auxiliary Battery Disconnect and Connect (414-01 Battery, Mounting and Cables) .
   Torque: 5 Nm

2. *Torque*: 20 Nm

WARNING: When lifting a battery, excessive pressure on the end walls could cause acid to spew through the vent caps, resulting in personal injury. Lift with a battery carrier or with your hands on opposite corners. Failure to follow these instructions may result in personal injury.

3.

Installation

1. To install, reverse the removal procedure.

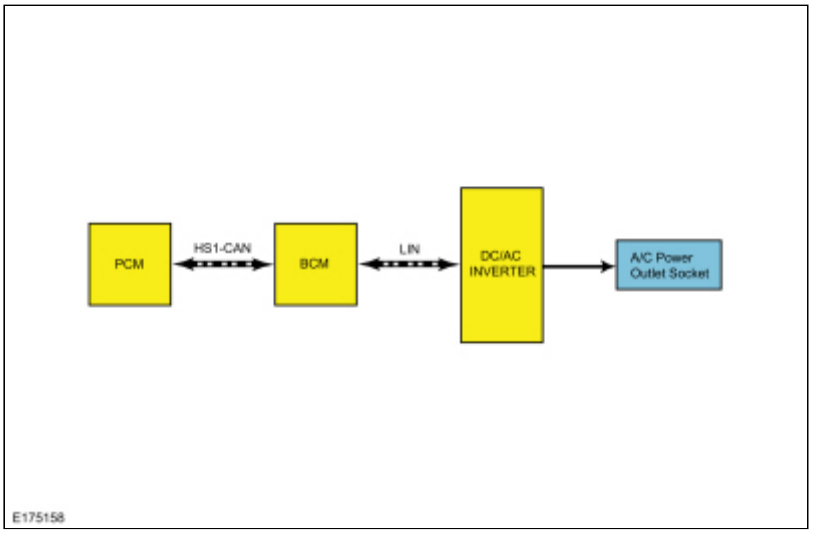
Direct Current/Alternating Current (DC/AC) Inverter - Overview



Overview

The DC- AC inverter converts 12 volts DC to 230 or 110 volts AC to power AC devices rated 150 watts or less.

Copyright © 2016 Ford Motor Company

Direct Current/Alternating Current (DC/AC) Inverter - System Operation and Component Description

System Diagram

System Operation

Network Message Chart

Broadcast Message	Originating Module	Message Purpose
Power pack torque status	PCM	Used to determine if the engine is started.

AC OUTLETS (POWER POINTS)

This vehicle is equipped with a 230 or 110 volts AC outlet on the center floor console. The AC outlet is equipped with an amber LED that indicates the system status. The LED is illuminated continuously when the inverter is ON and the system is operating normally. If the LED has a series of three flashes, the power point is overloaded. The LED flashes constantly if the ignition is on and a fault is detected.

DC/AC INVERTER

The direct current/alternating current (DC/AC) inverter converts 12 volts DC to 230 or 110 volts AC to power AC devices rated 150 watts or less.

The 230 or 110 volts AC created by the inverter measures differently than conventional, utility generated AC with some multi-meters.

SYSTEM OPERATION

When the ignition is turned to RUN and the engine started, the LED will flash as the inverter runs a self-test. The LED will then illuminate constantly and the inverter supplies 230 or 110 volts to the AC outlet. The engine **must** be started for the AC outlet to begin to operate. In **accessory delay mode**, the direct current/alternating current (DC/AC) inverter shuts off after 13 minutes. When the direct current/alternating current (DC/AC) inverter stops receiving information from the BCM over the LIN circuit indicating the engine is started, it begins counting the elapsed time. After 13 minutes the direct current/alternating current (DC/AC) inverter shuts down. Cycling the ignition from RUN to OFF and back to RUN will reset the timer is and the inverter is powered back on by but only for another 13 minutes. This prevents the 12-volt battery from being fully discharged. If the vehicle is started, the inverter operation is not time-limited.

The direct current/alternating current (DC/AC) inverter has a self-protection feature for the following conditions:

- Short circuits on the inverter output circuits: The inverter shuts down if it detects a short on the output circuit(s). After 6 seconds, it restarts and checks for a short condition. If the condition still exists, the inverter

shuts down again. The inverter restarts 5 times and if the short still exists on the 5th restart, the inverter disables AC output and the green LED indicator flashes.
- Low voltage input: The inverter does not operate when the input voltage is less than 11 volts.
- High voltage input: The inverter does not operate when the input voltage is greater than 16 volts.
- Load exceeds 150 watts
- High temperature: The inverter does not operate if it has overheated or if ambient (cabin) temperatures exceed 75°C .

If the self-protection feature is activated, the LED indicator flashes and the direct current/alternating current (DC/AC) inverter does not provide power output to the AC outlet. If the LED is flashing, the problem must be corrected before direct current/alternating current (DC/AC) inverter operation resumes.

Refer to the Owner's Literature for a list of appropriate electrical loads and devices.

Component Description

COMPONENT OPERATION

The AC power outlet and inverter module are replaced as separate components. The AC outlets are standard 3-prong outlets, similar to a standard wall outlet. The contacts of the outlet exert a more powerful grip on the plug so that it does not shake loose on poor road surfaces.

Direct Current/Alternating Current (DC/AC) Inverter

Inspection and Verification

Before diagnosing or repairing the Direct Current/Alternating Current (DC/AC) Inverter system refer to the Owner's Literature and
REFER to: Direct Current/Alternating Current (DC/AC) Inverter - System Operation and Component Description (414-05 Voltage Converter/Inverter, Description and Operation).
for proper system operation.

DTC Chart

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Body Control Module (BCM) DTC Chart

DTC	Description	Action
B1330:01	DC/AC Inverter Module: General Electrical Failure	GO to Pinpoint Test A
B1330:02	DC/AC Inverter Module: General Signal Failure	GO to Pinpoint Test C
B1330:08	DC/AC Inverter Module: Bus Signal / Message Failure	GO to Pinpoint Test C
B1330:49	DC/AC Inverter Module: Internal Electronic Failure	CLEAR the DTC. REPEAT the self-test. If DTC B1330:49 is retrieved again, INSTALL a new Direct Current/Alternating Current (DC/AC) Inverter.
B1330:55	DC/AC Inverter Module: Not Configured	CLEAR the DTC. REPEAT the self-test. If DTC B1330:55 is retrieved again, INSTALL a new Direct Current/Alternating Current (DC/AC) Inverter.
B1330:9A	DC/AC Inverter Module: Component or System Operating Conditions	ADDRESS all other Diagnostic Trouble Codes (DTCs) first. If no other Diagnostic Trouble Codes (DTCs) are present ADDRESS any symptoms. REFER to SYMPTOM CHART in this section. If no symptoms are present clear the DTC. If the DTC returns and no symptoms are present INSTALL a new Direct Current/Alternating Current (DC/AC) Inverter.
All Other DTCs	—	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).

Symptom Chart(s)

Symptom Chart: Direct Current/Alternating Current (DC/AC) Inverter

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom	Possible Sources	Action
• The AC power point LED indicator is always flashing with the key in the ON position.	• Refer to the Pinpoint Test	• DISCONNECT all electrical accessories from the AC outlet and VERIFY that cabin temperature is below 75°C (167°F). CYCLE the ignition. TEST the system for normal operation. If the system is operating normally, RETURN the vehicle to the customer. If the AC outlet LED indicator is still flashing, GO to Pinpoint Test A
• No power at the AC power point	• Refer to the Pinpoint Test	• GO to Pinpoint Test A
• The AC power point LED indicator is never on	• Refer to the Pinpoint Test	• GO to Pinpoint Test B
• The AC power point turns off after 13 minutes	• Refer to the Pinpoint Test	• GO to Pinpoint Test C

Pinpoint Tests

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

No Power at the AC Power Point or the AC Power Point LED Indicator Flashes with the Key in the ON Position

Refer to Wiring Diagrams Cell 44 for schematic and connector information.

Normal Operation and Fault Conditions

The engine **must** be started for the AC outlet to begin to operate.
REFER to: Direct Current/Alternating Current (DC/AC) Inverter - System Operation and Component Description (414-05 Voltage Converter/Inverter, Description and Operation).

NOTE: *The electrical device that is powered by the AC power point must not exceed 150 watts.*

NOTE: *If the LED is flashing, the AC power point may be overloaded, overheated or shorted. Unplug the electrical device from the AC power point and cycle the ignition. Refer to the Owner's Literature to determine if the electrical device is appropriate for the AC power point.*

Diagnostic Trouble Code (DTC) Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1330:01	DC/AC Inverter Module: General Electrical Failure	Sets in the BCM when the general electrical fault is detected by the direct current/alternating current (DC/AC) inverter.

Possible Sources

- Fuse(s)
- Direct current/alternating current (DC/AC) inverter
- AC power point
- Wiring, terminals or connectors

Visual Inspection and Diagnostic Pre-checks

- Verify that any device being used in the AC outlet is rated at less than 150 watts.
- Verify the AC outlet is not being used with the engine off for a period longer than 13 minutes without starting the engine or cycling the ignition.
- Verify the cabin temperature is less than 75ºC (167ºF).
- Verify the BCM fuse 23 (10A) is OK.
- Verify the BJB fuse 81 (40A) is OK.
- Inspect the AC outlet for damage.

PINPOINT TEST A : NO POWER AT THE AC (ALTERNATING CURRENT) POWER POINT OR THE AC (ALTERNATING CURRENT) POWER POINT LED (LIGHT EMITTING DIODE) INDICATOR FLASHES WITH THE KEY IN THE ON POSITION

NOTICE: Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.

A1 CHECK THE POWER OUTLET LED (LIGHT EMITTING DIODE) STATUS

- Start the engine.
- Check the LED on the AC outlet

Is the LED flashing?

Yes	GO to A2
No	GO to A3

A2 DETERMINE IF THE DC/AC INVERTER IS OVERHEATED

- Determine if the direct current/alternating current (DC/AC) inverter is overheated.

Is the vehicle cabin temperature is greater than 75º C (167º F) or has the inverter been in continuous use for a long period of time?

Yes	The inverter does not operate if it has overheated or if ambient (cabin) temperatures have exceeded 75º C (166.9º F). Cycle the ignition off and ALLOW to cool. Test the system for normal operation.
No	GO to A3

A3 CHECK AC (ALTERNATING CURRENT) POWER OUTLET OPERATION

- Start the engine.
- With the engine running, plug a device rated less than 150 watts into AC power outlet.

Is the device operating?

Yes	If the 110V device is operating and the LED is NOT illuminated, GO to Pinpoint Test B If the device is operating and the LED is illuminated solid, the AC power outlet is operating correctly at this time.
No	GO to A4

A4 CHECK THE INVERTER MODULE POWER SUPPLY CIRCUITS FOR VOLTAGE

- Ignition OFF.
- Disconnect Direct current/Alternating current (DC/AC) Inverter C3501.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3501-5		Ground
C3501-6		Ground

Are the voltages greater than 11 volts?

Yes	GO to A5
No	VERIFY BCM fuse 23 (10A) and BJB fuse 81 (40A) are OK. If OK, REPAIR the open circuit or high resistance on the affected circuit(s). If not OK, REFER to the Wiring Diagrams manual to identify the possible cause of the circuit short.

A5 CHECK THE GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3501-12	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to A6
No	REPAIR the circuit.

A6 CHECK THE AC (ALTERNATING CURRENT) CIRCUITS FOR AN OPEN

- Disconnect AC Outlet C3429.
- Disconnect Direct current/Alternating current (DC/AC) Inverter C3501.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3501-1	Ω	C3429-1
C3501-7	Ω	C3429-6

Are the resistances less than 3 ohms?

Yes	GO to A7
No	REPAIR the affected circuit(s).

A7 CHECK THE AC (ALTERNATING CURRENT) CIRCUITS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3501-1	Ω	C3501-7

Is the resistance greater than 10,000 ohms?

Yes	GO to A8
No	REPAIR the circuits.

A8 CHECK THE AC (ALTERNATING CURRENT) CIRCUITS FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3501-1	Ω	Ground
C3501-7	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A9
No	REPAIR the affected circuit(s).

A9 CHECK AC (ALTERNATING CURRENT) OUTLET FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
pin 1 (component side)	Ω	pin 6 (component side)

Positive Lead	Measurement / Action	Negative Lead
pin 2 (component side)	Ω	pin 1 (component side)

Are the resistances less than 3 ohms?

Yes	INSTALL a new direct current/alternating current (DC/AC) inverter.
No	INSTALL a new AC Outlet.

The AC Power Point LED Indicator is Never On

Refer to Wiring Diagrams Cell 44 for schematic and connector information.

Normal Operation and Fault Conditions

The engine **must** be started for the AC outlet to begin to operate. The DC/AC inverter supplies 12V DC and ground to the indicator LED.
REFER to: Direct Current/Alternating Current (DC/AC) Inverter - System Operation and Component Description (414-05 Voltage Converter/Inverter, Description and Operation).

Possible Sources

- Fuse(s)
- Direct current/alternating current (DC/AC) inverter
- AC power point
- Wiring, terminals or connectors

Visual Inspection and Diagnostic Pre-checks

- Verify the BCM fuse 23 (10A) is OK.
- Verify the BJB fuse 81 (40A) is OK.
- Inspect the AC outlet for damage.

PINPOINT TEST B : THE AC (ALTERNATING CURRENT) POWER POINT LED INDICATOR IS NEVER ON

NOTICE: Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.

B1 CHECK AC (ALTERNATING CURRENT) POWER OUTLET OPERATION

- Start the engine.
- With the engine running, plug a device rated less than 150 watts into the AC power outlet.

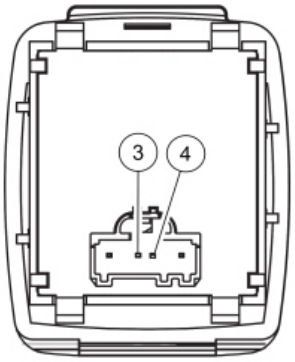
Is the device operating?

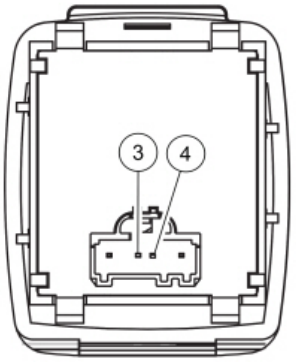
Yes	GO to B2
No	GO to Pinpoint Test A

B2 CHECK THE POWER OUTLET LED CONTROL CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect direct current/alternating current (DC/AC) Inverter C3501.
- Disconnect AC Outlet C3429.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3501-10	Ω	C3429-4
C3501-11	Ω	C3429-3





Are the resistances less than 3 ohms?

Yes	GO to B3

No	REPAIR the affected circuit(s).

B3 CHECK THE AC (ALTERNATING CURRENT) OUTLET LED (LIGHT EMITTING DIODE)

- Measure the diode in both directions:

Positive Lead	Measurement / Action	Negative Lead
 E157835 pin 3(component side)	Ω	 E157835 pin 4 (component side)

Is the resistance greater than 10,000 ohms in one direction and between 10-20 ohms in the opposite direction?

Yes	INSTALL a new DC/ AC inverter.
No	INSTALL a new AC outlet.

The AC Power Point Turns Off After 13 Minutes

Refer to Wiring Diagrams Cell 44 for schematic and connector information.

Normal Operation and Fault Conditions

The DC/ AC inverter receives a signal from the BCM over the LIN whenever the engine is running. If the DC/ AC inverter does not receive this message for 13 minutes, the inverter stops supplying 110 volts to the power outlet and the LED indicator flashes. The system can be reset by cycling the ignition from ON to OFF and back to ON, however the system only operates for another 13 minutes unless the signal is received from the BCM that the engine is running.

Diagnostic Trouble Code (DTC) Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1330:02	DC/AC Inverter Module: General Signal Failure	Sets in the BCM when sets when a general signal failure occurs on the LIN.
B1330:08	DC/AC Inverter Module: Bus Signal / Message Failure	Sets in the BCM when there is a LIN communication fault from the DC/ AC inverter.

Possible Sources

- Wiring, terminals or connectors
- DC/ AC inverter
- BCM

Visual Inspection and Diagnostic Pre-checks

- Verify the concern by monitoring the AC outlet LED indicator for 13 minutes with the engine running. If the LED indicator starts to flash after 13 minutes, continue to the pinpoint test. If the system continues to operate normally after 13 minutes, make sure the customer is aware of the DC/ AC inverter time-out function.

PINPOINT TEST C : THE AC (ALTERNATING CURRENT) POWER POINT TURNS OFF AFTER 13 MINUTES

NOTICE: Use the correct probe adapter(s) from the Flex Probe Kit when taking measurements. Failure to use the correct probe adapter(s) may damage the connector.

C1 RETRIEVE BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform BCM self-test.

Is DTC U0100:00 present?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	GO to C2

C2 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) COMMUNICATION CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280G.
- Disconnect Inline connector C214.
- Disconnect DC/ AC Inverter module C3501.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3501-9		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to C3

C3 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) COMMUNICATION CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3501-9	Ω	Ground

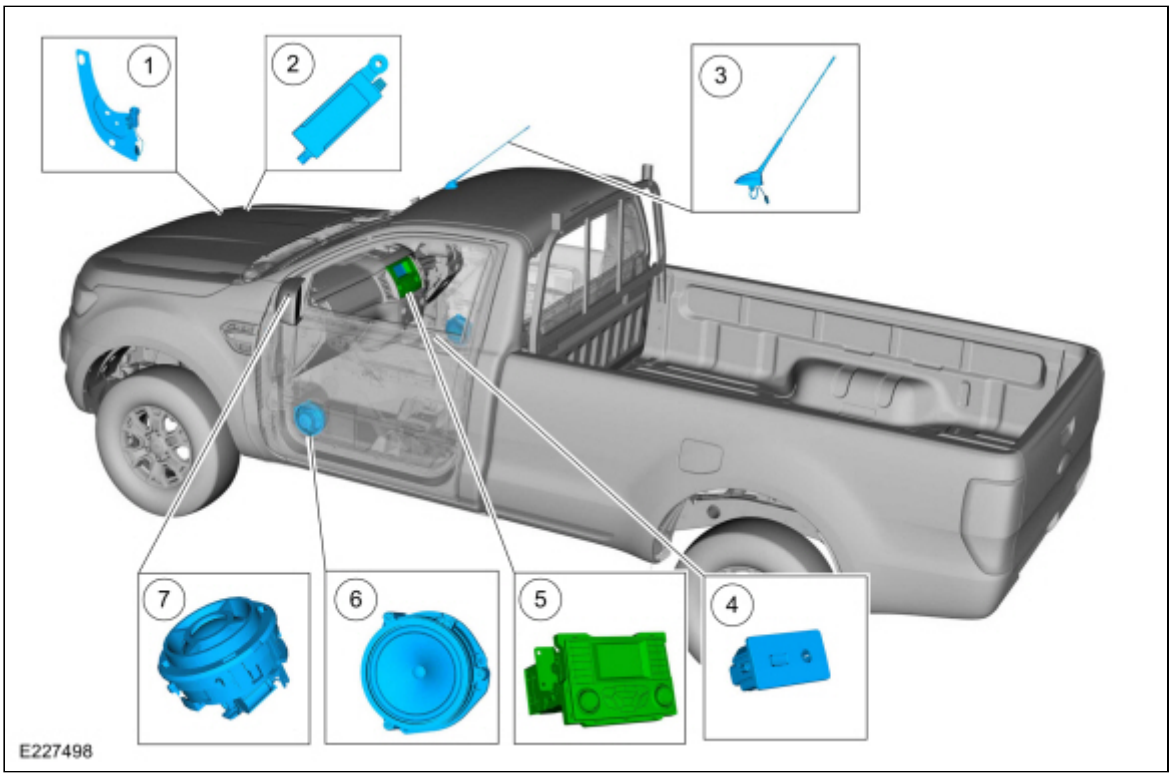
Is the resistance greater than 10,000 ohms?

Yes	GO to C4
No	REPAIR the circuit.

C4 CHECK THE LIN (LOCAL INTERCONNECT NETWORK) COMMUNICATION CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3501-9	Ω	C2280G-37



Is the resistance less than 3 ohms?

Yes	INSTALL a new DC/ AC inverter module. TEST the system for normal operation. If the AC outlet still turns off after 13 minutes when the engine is running, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	REPAIR the circuit.

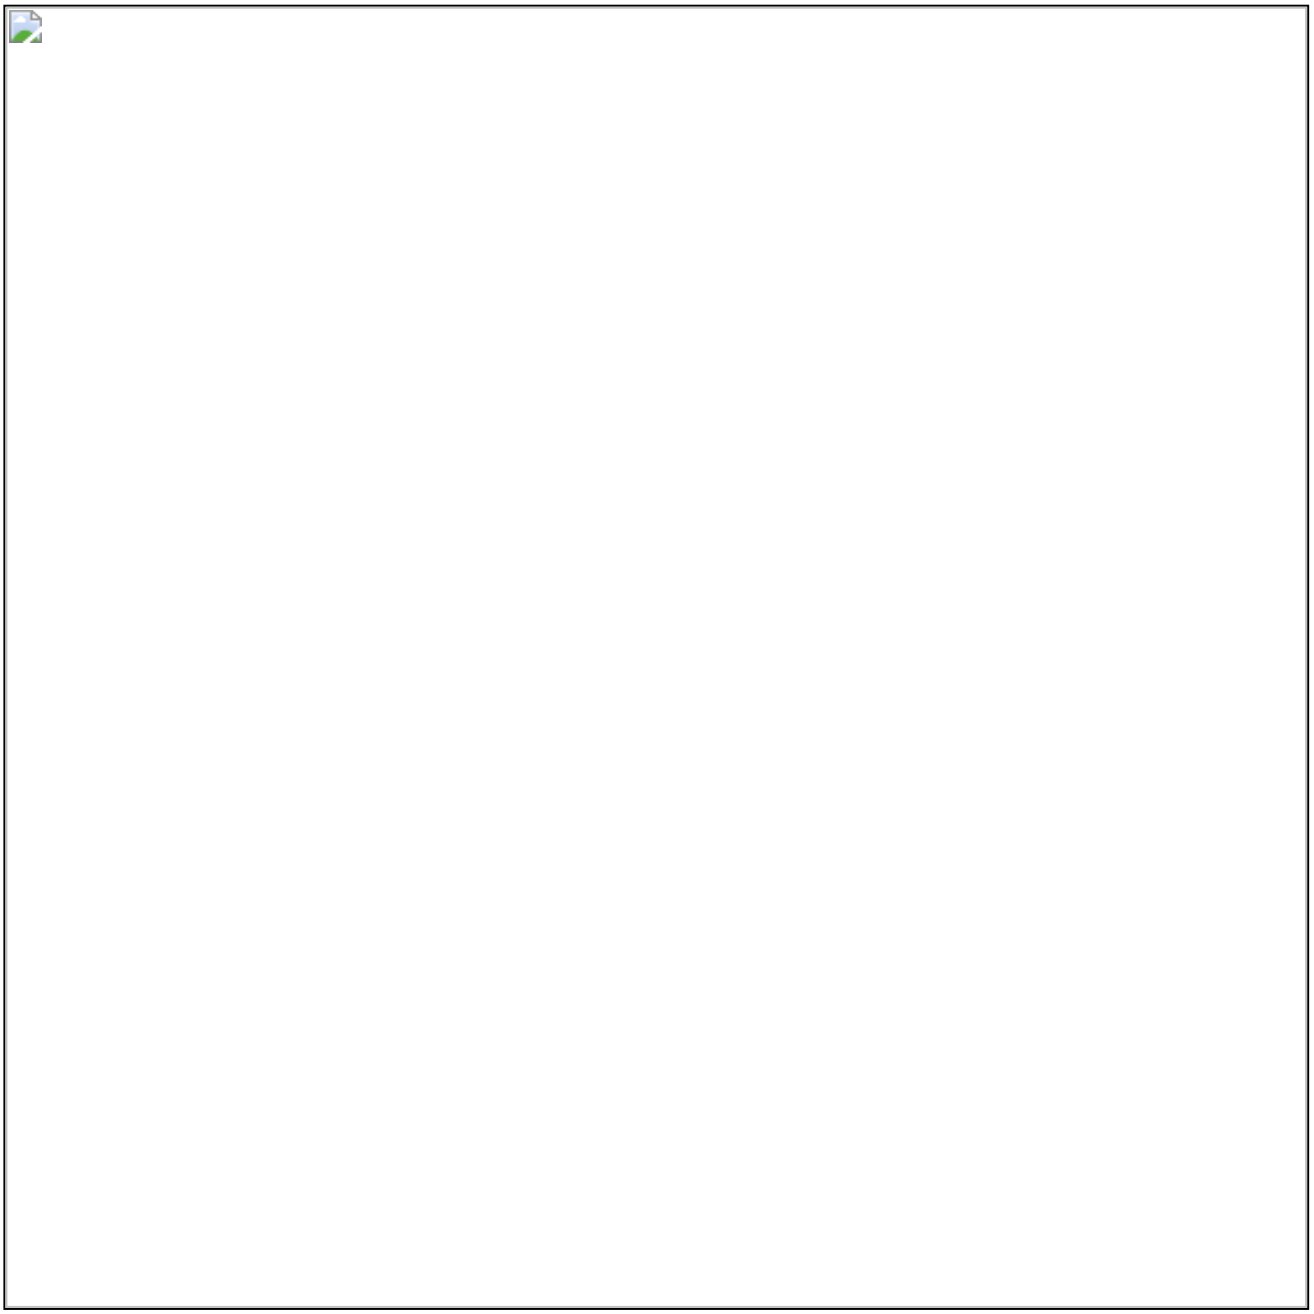
Information and Entertainment System - Overview

Overview

The audio system consists of the following:

Main Components:



- AM/ FM antenna
- Front door speakers
- Rear door speakers
- Front door tweeters
- ACM (with integral USB port and Bluetooth)
- Audio input jack

Copyright © 2016 Ford Motor Company

Information and Entertainment System - System Operation and Component Description

System Operation

System Diagram

AM/ FM1/ FM2/ DAB Radio With Diversity Antenna

The AM/ FM1/ DAB antennas receives analog radio waves and sends them through the antenna amplifier and AM/ FM1/ DAB antenna coaxial cable to the ACM. The FM2 antenna receives analog radio waves and sends them through the FM2 diversity antenna amplifier and FM2 antenna coaxial cable to the ACM. The radio waves are converted into fluctuating AC voltage and sent as left and right analog audio signals to the audio amplifier and all speakers.

AM/ FM1/ FM2 Radio Without Diversity Antenna

The AM/ FM1 antenna receives the AM/ FM radio signals. The antenna modules sends the radio signals to the ACM.

Audio Input Jack Mode

When a portable audio device, such as an iPod® or other MP3 player, is connected to the vehicle audio system through the audio input jack, audio from the device can be played through the vehicle speakers. When using the audio input jack, only the volume is controlled by the vehicle audio controls. All other functions such as seek, fast forward, pause, etc. must be carried out on the device itself.

No metadata (information such as artist, album title, song title, and genre) is transferred when a device is connected to the audio input jack.

Bluetooth Mode

Bluetooth is a secure, short-range radio frequency that allows devices to communicate wirelessly through radio waves. The operating range of a Bluetooth signal is application specific, but will have a minimum range of 10 meters (33 feet). The Bluetooth interface can accommodate both Bluetooth-enabled mobile phones and Bluetooth-enabled media devices. The ACM contains an on-board Bluetooth chipset, which enables certain wireless devices to interact with the system.

Any Bluetooth device used with the audio system must first be paired with the ACM on-board Bluetooth chipset before it can become operational. Pairing a Bluetooth device is accomplished through the "Add Device" selection of the phone menu. When pairing a device, the ACM generates a unique PIN that must be entered on the Bluetooth device in order for the pairing process to be successful. There are also some device-specific actions that must take place. For information on the pairing process, refer to the Owner's Literature.

The system can store up to 12 unique Bluetooth devices, but only one Bluetooth device can be connected to the system at any one time. If an additional Bluetooth device is paired and made active, the ACM disconnects any active connection and establishes a connection with the new device.

USB Mode

When a portable media device, such as an iPod® with its available cable or portable mass storage such as a USB thumb drive, is connected to the vehicle audio system through the USB port, audio from the device can be played through the vehicle speakers. Functions such as volume, seek, fast forward, pause, etc. can be controlled by the vehicle audio controls.

When playing media files stored on a mass storage device such as a flash drive, the audio system only plays files that do not have DRM protection.

In addition to audio information (track length, track number, etc.), song metadata (information such as artist, album title, song title, and genre) may also be retrieved from a device connected to the USB port. The ACM uses the metadata to create indexes that can be used to sort for particular music based on the customer’s preferences. When a new media device is connected to the USB port, the ACM automatically indexes the information. This may take several minutes depending on the amount of data on the device, and is considered normal operation.

Component Description

ACM

The ACM can be operated with the ignition in RUN, ACC or OFF. This feature allows the audio system to operate with the ignition OFF, regardless of door latch position. When the power button is pressed ON, audio system functionality is enabled and remains active for a period of 60 minutes. Audio extended play will not function if the battery load shed is active. To turn the audio system off, press the power button OFF.

The ACM processes all inputs from the various audio sources and sends stereo or mono audio signals to the speakers as fluctuating AC voltage.

The USB port and Bluetooth interface are integral to the ACM.

Antenna

The AM/ FM radio uses the roof-mounted combination AM/ FM antenna to receive analog radio waves. The DAB radio waves are sent through the AM/ FM2 antenna coaxial cable to the ACM, where they are amplified. A second FM 2 foil antenna is mounted under the splash shield next to the bumper for diversity functionality.

Audio Input Jack

The audio input jack can be used to play audio files from an audio device connected through a 1/8-inch (3.5 mm) audio jack. Audio signals are sent from the audio input jack through shielded circuits to the ACM.

There are no power or ground circuits connected to the audio input jack.

Refer to Wiring Diagrams Cell 12 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A56:11	Antenna #1: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the FM1 antenna coaxial cable for more than 1 second.
B1A56:15	Antenna #1: Circuit Short To Battery or Open	Set by the ACM when a short to voltage or open is detected on the FM1 antenna coaxial cable for more than 1 second.
B1D55:11	Antenna #2: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the FM2 antenna coaxial cable for more than 1 second.
B1D55:15	Antenna #2: Circuit Short To Battery or Open	Set by the ACM when a short to voltage or open is detected on the FM2 antenna coaxial cable for more than 1 second.

Possible Sources

- No channel found in the selected RDS category
- Charging system
- Wiring, terminals, or connectors
- Ignition system
- FM2 antenna
- AM/ FM1 antenna coaxial cable
- FM2 antenna coaxial cable
- AM/ FM1 antenna
- Mounting surface corrosion
- FM2 diversity antenna amplifier
- ACM

PINPOINT TEST A : POOR RECEPTION OR CONTINUOUS SEEK OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION)

A1 CHECK THE AUDIO SYSTEM RECEPTION WITH THE ENGINE RUNNING
• Operate the audio system in AM/ FM mode.

- Check the reception with the engine running, and with the engine off.

Is poor reception only present with the engine running?

Yes	GO to A2
No	GO to A3

A2 CHECK THE GENERATOR

- Ignition OFF.
- Disconnect Generator B+ Cable C102C.**NOTICE: Do not allow the generator B+ cable terminal to make contact with a conductive surface. Failure to follow this instruction may result in personal injury or damage to the vehicle.**
- Start the engine.
- Operate the audio system in AM/ FM mode.

Is the reception OK?

Yes	INSTALL a new generator. Refer to the appropriate section in Group 414 for the procedure.
No	GO to A3

A3 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA ENABLE CIRCUIT FOR CORRECT VOLTAGE

- Ignition OFF.
- Disconnect Antenna C4823.
- Ignition ON.
- Operate the audio system in AM/ FM mode.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4823-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to A6
No	GO to A4

A4 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA ENABLE CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect ACM C240A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4823-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A5
No	REPAIR the circuit

No	REPAIR the circuit.

A5 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA ENABLE CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4823-1	Ω	C240A-2

Is the resistance less than 3 ohms?

Yes	GO to A21
No	REPAIR the circuit.

A6 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 AND FM (FREQUENCY MODULATION) 2 ANTENNA COAXIAL CABLE CORES AND SHIELDS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: AM/ FM1 antenna coaxial cable at the ACM.
- Disconnect: FM2 antenna coaxial cable at the ACM.
- Disconnect: AM/ FM1 antenna coaxial cable at the antenna.
- Disconnect: FM2 antenna inline coaxial cable at the antenna.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	V	Ground
AM/ FM1 antenna coaxial cable shield at the ACM	V	Ground
FM2 antenna coaxial cable core at the ACM	V	Ground
FM2 antenna coaxial cable shield at the ACM	V	Ground

Is any voltage present?

Yes	REPAIR, or INSTALL a new AM/ FM1 or FM2 antenna coaxial cable.
No	GO to A7

A7 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 AND FM (FREQUENCY MODULATION) 2 ANTENNA COAXIAL CABLE CORES FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	Ω	Ground
FM2 antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A8
No	REPAIR, or INSTALL a new AM/ FM1 or FM2 antenna coaxial cable.

A8 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 AND FM (FREQUENCY MODULATION) 2 ANTENNA COAXIAL CABLE CORES AND SHIELDS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	Ω	AM/ FM1 antenna connection
AM/ FM1 antenna coaxial cable shield at the ACM	Ω	AM/ FM1 antenna connection
FM2 antenna coaxial cable core at the ACM	Ω	FM2 antenna connection
FM2antenna coaxial cable shield at the ACM	Ω	FM2 antenna connection

Are the resistances less than 1 ohm?

Yes	GO to A9
No	REPAIR, or INSTALL a new AM/ FM1 or FM2 antenna coaxial cable.

A9 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 AND FM (FREQUENCY MODULATION) 2 ANTENNA COAXIAL CABLE CORES AND SHIELDS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	Ω	AM/ FM1 antenna coaxial cable shield at the ACM
FM2 antenna coaxial cable core at the ACM	Ω	FM2 antenna coaxial cable shield at the ACM

Is the resistance greater than 10,000 ohms?

Yes	GO to A10
No	REPAIR, or INSTALL a new AM/ FM1 or FM2 antenna coaxial cable.

A10 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA UNIT CORE AND SHIELD FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: AM/ FM1 antenna coaxial cable at the antenna unit.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead

AM/ FM1 antenna coaxial cable core at the ACM		Ground
AM/ FM1 antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	INSTALL a new AM/ FM1 antenna. REFER to: Audio Unit Antenna (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to A11

A11 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA UNIT CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A12
No	INSTALL a new AM/ FM1 antenna. REFER to: Roof Mounted Antenna (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).

A12 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	Ω	AM/ FM1 antenna coaxial cable shield at the ACM

Is the resistance greater than 10,000 ohms?

Yes	GO to A13
No	INSTALL a new AM/ FM1 antenna. REFER to: Roof Mounted Antenna (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).

A13 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable shield at the ACM	Ω	Ground

Is the resistance less than 1 ohm?

Yes	GO to A15
No	GO to A14

A14 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

- Remove the AM/ FM1 antenna unit.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna unit shield at the antenna unit (component side)	Ω	AM/ FM1 antenna base (unpainted surface)

Is the resistance less than 1 ohm?

Yes	INSPECT and REPAIR any corrosion on the antenna unit base and/or vehicle mounting surface. REINSTALL the antenna and ensure the proper torque value is achieved. REFER to: Roof Mounted Antenna (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	INSTALL a new AM/ FM1 antenna. REFER to: Roof Mounted Antenna (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).

A15 CHECK THE FM (FREQUENCY MODULATION) 2 DIVERSITY ANTENNA AMPLIFIER CORE AND SHIELD FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: FM2 antenna coaxial cable at the FM2 Diversity Antenna Amplifier.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
FM2 antenna coaxial cable core at the ACM	V	Ground
FM2 antenna coaxial cable shield at the ACM	V	Ground

Is any voltage present?

Yes	INSTALL a new FM2 diversity antenna amplifier. REFER to: Audio Unit Antenna Amplifier (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to A16

A16 CHECK THE FM (FREQUENCY MODULATION) 2 DIVERSITY ANTENNA AMPLIFIER CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
FM2 antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A17
No	INSTALL a new FM2 diversity antenna amplifier. REFER to: Audio Unit Antenna Amplifier (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).

A17 CHECK THE FM (FREQUENCY MODULATION) 2 DIVERSITY ANTENNA AMPLIFIER CORE AND SHIELD FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
FM2 antenna coaxial cable core at the ACM	Ω	FM2 antenna coaxial cable shield at the ACM

Is the resistance greater than 10,000 ohms?

Yes	GO to A18
No	INSTALL a new FM2 diversity antenna amplifier. REFER to: Audio Unit Antenna Amplifier (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).

A18 CHECK THE FM (FREQUENCY MODULATION) 2 DIVERSITY ANTENNA AMPLIFIER SHIELD FOR CONTINUITY TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
FM2 antenna coaxial cable shield at the ACM	Ω	Ground

Is the resistance less than 1 ohm?

Yes	GO to A20
No	GO to A19

A19 CHECK THE FM (FREQUENCY MODULATION) 2 DIVERSITY ANTENNA AMPLIFIER SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

- Remove the FM2 diversity antenna amplifier.
  REFER to: Audio Unit Antenna Amplifier (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
- Measure:

Positive Lead	Measurement / Action	Negative Lead
FM2 antenna shield at the FM2 diversity antenna amplifier (component side)	Ω	FM2 diversity antenna amplifier base (unpainted surface on the mounting tab)

Is the resistance less than 1 ohm?

Yes	INSPECT and REPAIR any corrosion on theFM2 diversity antenna amplifier base and/or vehicle mounting surface. REINSTALL the FM2 diversity antenna amplifier and ensure the proper torque value is achieved. REFER to: Audio Unit Antenna Amplifier (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	INSTALL a new FM2 diversity antenna amplifier. REFER to: Audio Unit Antenna Amplifier (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).

A20 CHECK THE FM (FREQUENCY MODULATION) 2 ANTENNA COMPONENTS

- Disconnect and inspect the FM2 diversity antenna amplifier connector for the FM2 antenna circuits.
  REFER to: Audio Unit Antenna Amplifier (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
- Inspect the FM2 antenna circuits and connectors.

Is any damage present on the FM2 antenna circuits or connections?

Yes	REPAIR or REPLACE as necessary.
No	GO to A21

A21 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Speed Compensated Volume Does Not Operate Correctly

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Description and Operation).

Possible Sources

- Speed compensated volume setting
- ACM

PINPOINT TEST B : THE SPEED COMPENSATED VOLUME DOES NOT OPERATE CORRECTLY

B1 CHECK THE SPEEDOMETER OPERATION

- Drive the vehicle and observe the speedometer.

Does the speedometer operate correctly?

Yes	GO to B2
No	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes) .

B2 CHECK THE SPEED COMPENSATED VOLUME SETTING

- Turn the speed compensated volume off. Refer to the Owner's Literature.
- Operate the audio system in AM/ FM mode.
- Drive the vehicle at various speeds and observe the speaker volume.
- Set the speed compensated volume to maximum compensation. Refer to the Owner's Literature.
- Operate the audio system in AM/ FM mode.
- Drive the vehicle at various speeds and observe the speaker volume.

Does the volume remain constant with the speed compensated volume turned off, and increase and decrease with vehicle speed with the speed compensated volume set to maximum?

Yes	The system is operating correctly at this time. INSTRUCT the customer in the correct usage of the speed compensated volume feature.
No	GO to B3

B3 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155:00 retrieved in any audio system module?

Yes	GO to Pinpoint Test Q
No	GO to B4

B4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Poor Sound Quality Or Distorted Sound From One Or More Speakers (Not All Speakers)

Normal Operation and Fault Conditions

The ACM sends audio signals to the speakers in the form of AC voltage, resulting in clear audio output.

Possible Sources

- Loose component fasteners
- Loose door handle, lock, and other trim panel components and fasteners
- Loose items in storage areas
- Loose speaker grilles
- Loose wire harnesses or wire harness fasteners
- Speaker(s)
- Water shield bonding and placement

Visual Inspection and Diagnostic Pre-checks

Inspect the suspect area for any possible rattle conditions such as:

- Any storage compartments including cup holders (if equipped)
- Door map pockets for contents that can rattle (if equipped)
- Door pull cup attachments (if equipped)
- Door switch bezels (if equipped)
- Package tray (if equipped)
- Speaker grilles
- Loose trim panels and/or fasteners

PINPOINT TEST C : POOR SOUND QUALITY OR DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS)

C1 ISOLATE THE ZONE

- Ignition ON.
- Operate the audio system using digital media (Bluetooth or USB input).
- Using the audio system fade and balance feature, adjust the audio sound to each of the four zones (Left Front (LF), Right Front (RF), Left Rear (LR), and Right Rear (RR) of the vehicle to isolate the poor sound quality.
- Locate and apply pressure to the trim panel(s) around the poor sound quality area in question.

Does applying pressure to a trim panel reduce or eliminate the audible noise?

Yes	REPAIR or REPLACE the trim panel as needed.
No	GO to C2

C2 REMOVE AND INSPECT BEHIND/UNDERNEATH THE SUSPECT TRIM PANEL(S)

- Remove the trim panel to access the suspect speaker.
- Operate the audio system using digital media USB input.
- Validate where the poor sound quality area is located.
- Check:
  - Trim panel for loose components around the speaker area such as the speaker grille.

- Trim panel joining components for missing or broken pieces.
- Lock and handle mechanical parts for correct attachment.
- Wire harnesses for correct routing.
- Wire harness fasteners for correct attachment.
- Water shield for correct placement (speaker air path not blocked).
- Water shield for correct bonding to sheet metal.
- Storage areas for loose items.
- All child safety belt anchors (if equipped).
- All safety belt retractors.
- All speaker bracket fasteners and other fasteners are secured and tightened to specified torque.

Was the source of the noise located?

Yes	REPAIR or REPLACE any loose or broken component or fastener as needed.
No	GO to C3

C3 CHECK THE SUSPECT SPEAKER FOR WATER INTRUSION

- Inspect for watermarks.
- Check the:
  - Cone
  - Magnet
  - Basket

Are any watermarks present on the speaker?

Yes	VERIFY the water shield is in the correct location, REPAIR or REPLACE any trim, door, or speaker seal as required. DRY the speaker in question and TEST the system for normal operation.
No	GO to C4

C4 ISOLATE SPEAKER TO VERIFY NOISE

- Remove the suspect speaker from its location and leave the speaker connected to the harness.
- Hold the speaker away from any trim panel(s) and ensure the speaker is isolated from contact.
- Operate the audio system using digital media USB input.

Is the noise still present in the suspect speaker?

Yes	INSTALL a new speaker for the one in question.
No	LOCATE the source of the noise and REPAIR as needed.

No Sound From All Speakers

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

A short to ground in the circuitry to one of the speakers may cause multiple speakers to lose sound due to the built-in overload protection feature of the ACM. In this case, a speaker fault DTC sets.

Possible Source Diagnosed In This Pinpoint Test

- Wiring, terminals, or connectors
- ACM

PINPOINT TEST D : NO SOUND FROM ALL SPEAKERS

D1 VERIFY THE ACM (AUDIO FRONT CONTROL MODULE) PASSES THE NETWORK TEST

- Using a diagnostic scan tool, perform the network test.

Did the ACM pass the network test?

Yes	GO to D2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

D2 CHECK FOR SPEAKER DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the ACM self-test.

Are any speaker fault Diagnostic Trouble Codes (DTCs) present?

Yes	See DTC Chart: ACM.
No	GO to D3

D3 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the ACM and related in-line connectors.
- Repair:
  - corrosion (clean module pins or install new connectors or terminals)
  - damaged or bent pins (install new terminals or pins)
  - pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The LHF Door Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Description and Operation).

The LHF door speaker and LHF door tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A01:11	Speaker #1: Circuit	Set by the ACM when a short to ground is detected on the LHF door or LHF door

	Short To Ground	tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:15	Speaker #1: Circuit Short To Battery Or Open	Set by the ACM when a short to voltage or an open is detected on the LHF door or LHF door tweeter speaker circuits. When DTC B1A01:15 is set, the speaker output is disabled.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

PINPOINT TEST E : THE LHF (LEFT-HAND FRONT) DOOR SPEAKER IS INOPERATIVE

E1 CHECK THE AUDIO SIGNAL TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER

- Ignition OFF.
- Disconnect LHF Door Speaker C5003LHD Vehicles .
- Disconnect LHF Door Speaker C6003RHD Vehicles .
- Operate the audio system in AM/ FM mode.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	V~	C5003-4

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	V~	C6003-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHF door speaker. REFER to: Front Door Speaker LH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to E2

E2 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C240A.
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	+ V~ −	Ground

C5003-4	V	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	V	Ground
C6003-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to E3

E3 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect LHF Door Tweeter Speaker C536LHD Vehicles .
- Disconnect LHF Door Tweeter Speaker C613RHD Vehicles .
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	Ω	Ground
C5003-4	Ω	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	Ω	Ground
C6003-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to E4
No	REPAIR the circuit in question.

E4 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR AN OPEN

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	Ω	C240A-22
C5003-4	Ω	C240A-10

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	Ω	C240A-23
C6003-4	Ω	C240A-11

Are the resistances less than 3 ohms?

Yes	GO to E5
No	REPAIR the circuit in question.

E5 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR A SHORT TOGETHER

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	Ω	C5003-4

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	Ω	C6003-4

Is the resistance greater than 10,000 ohms?

Yes	GO to E6
No	REPAIR the circuit in question.

E6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)

- Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The LHF Door Tweeter Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Description and Operation).

The LHF door speaker and LHF door tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A01:11	Speaker #1: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the LHF door or LHF door tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:15	Speaker #1: Circuit Short To Battery Or Open	Set by the ACM when a short to voltage or an open is detected on the LHF door or LHF door tweeter speaker circuits. When DTC B1A01:15 is set, the speaker output is disabled.

Possible Sources

- Speaker
- Wiring, terminals, or connectors

PINPOINT TEST F : THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER IS INOPERATIVE

F1 CHECK THE LHF (LEFT-HAND FRONT) DOOR SPEAKER

- Ignition OFF.
- Operate the audio system in AM/ FM mode.

Does the LHF door speaker operate correctly?

Yes	GO to F2
No	GO to Pinpoint Test E

F2 CHECK THE AUDIO SIGNAL TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER

- Ignition OFF

- Ignition OFF.
- Disconnect LHF Door Tweeter Speaker C536LHD Vehicles .
- Disconnect LHF Door Tweeter Speaker C613RHD Vehicles .
- Operate the audio system in AM/ FM mode.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C536-1	V~	C536-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C613-1	V~	C613-3

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHF door tweeter speaker. REFER to: Front Door Tweeter Speaker (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	GO to F3

F3 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect LHF Door Speaker C5003LHD Vehicles .
- Disconnect LHF Door Speaker C6003RHD Vehicles .
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C536-1	+ V −	Ground
C536-3	+ V −	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C613-1	+ V −	Ground
C613-3	+ V −	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to F4

F4 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C536-1	Ω	Ground
C536-3	Ω	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C613-1	Ω	Ground
C613-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to F5
No	REPAIR the circuit in question.

F5 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR AN OPEN

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C536-1	Ω	C5003-2
C536-3	Ω	C5003-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C613-1	Ω	C6003-2
C613-3	Ω	C6003-3

Are the resistances less than 3 ohms?

Yes	GO to F6
No	REPAIR the circuit in question.

F6 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TOGETHER

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C536-1	Ω	C536-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C613-1	Ω	C613-3

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new LHF door speaker. REFER to: Front Door Speaker LH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	REPAIR the circuit in question.

The RHF Door Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Description and Operation).

The RHF door speaker and RHF door tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A02:11	Speaker #2: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the RHF door or RHF door tweeter speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:15	Speaker #2: Circuit Short To Battery Or Open	Set by the ACM when a short to voltage or an open is detected on the RHF door or RHF door tweeter speaker circuits. When DTC B1A02:15 is set, the speaker output is disabled.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

PINPOINT TEST G : THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER IS INOPERATIVE

G1 CHECK THE AUDIO SIGNAL TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER

- Ignition OFF.
- Disconnect RHF Door Speaker C6015LHD Vehicles .
- Disconnect RHF Door Speaker C5015RHD Vehicles .
- Operate the audio system in AM/ FM mode.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1	V~	C6015-4

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	V~	C5015-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new RHF door speaker. REFER to: Front Door Speaker RH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to G2

G2 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C240A.
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1	V	Ground
C6015-4	V	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1		Ground
C5015-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to G3

G3 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect RHF Door Tweeter Speaker C6012LHD Vehicles.
- Disconnect RHF Door Tweeter Speaker C5012RHD Vehicles.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1	Ω	Ground
C6015-4	Ω	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	Ω	Ground
C5015-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to G4
No	REPAIR the circuit in question.

G4 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR AN OPEN

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1	Ω	C240A-23

C6015-4	Ω	C240A-11

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	Ω	C240A-22
C5015-4	Ω	C240A-10

Are the resistances less than 3 ohms?

Yes	GO to G5
No	REPAIR the circuit in question.

G5 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A SHORT TOGETHER

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1	Ω	C6015-4

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	Ω	C5015-4

Is the resistance greater than 10,000 ohms?

Yes	GO to G6
No	REPAIR the circuit in question.

G6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The RHF Door Tweeter Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Description and Operation).

The RHF door speaker and RHF door tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A02:11	Speaker #2: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the RHF door or RHF door tweeter speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:15	Speaker #2: Circuit Short To Battery Or Open	Set by the ACM when a short to voltage or an open is detected on the RHF door or RHF door tweeter speaker circuits. When DTC B1A02:15 is set, the speaker output is disabled.

PINPOINT TEST H : THE RHF (RIGHT-HAND FRONT) DOOR TWEETER SPEAKER IS INOPERATIVE

H1 CHECK THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER

- Ignition OFF.
- Operate the audio system in AM/ FM mode.

Does the RHF door speaker operate correctly?

Yes	GO to H2
No	GO to Pinpoint Test G

H2 CHECK THE AUDIO SIGNAL TO THE RHF (RIGHT-HAND FRONT) DOOR TWEETER SPEAKER

- Ignition OFF.
- Disconnect RHF Door Tweeter Speaker C6012LHD Vehicles.
- Disconnect RHF Door Tweeter Speaker C5012RHD Vehicles.
- Operate the audio system in AM/ FM mode.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6012-1		C6012-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5012-1		C5012-3

Is a fluctuating AC voltage present?

Yes	INSTALL a new RHF door tweeter speaker. REFER to: Front Door Tweeter Speaker (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	GO to H3

H3 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect RHF Door Speaker C6015LHD Vehicles.
- Disconnect RHF Door Speaker C5015RHD Vehicles.
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6012-1		Ground
C6012-3		Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5012-1		Ground
C5012-3		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to H4

H4 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6012-1	Ω	Ground
C6012-3	Ω	Ground

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5012-1	Ω	Ground
C5012-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to H5
No	REPAIR the circuit in question.

H5 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR TWEETER SPEAKER FOR AN OPEN

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6012-1	Ω	C6015-2
C6012-3	Ω	C6015-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5012-1	Ω	C5015-2
C5012-3	Ω	C5015-3

Are the resistances less than 3 ohms?

Yes	GO to H6
No	REPAIR the circuit in question.

H6 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TOGETHER

- Measure:

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6012-1	Ω	C6012-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5012-1	Ω	C5012-3

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new RHF door speaker. REFER to: Front Door Speaker RH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	REPAIR the circuit in question.

The RHR Door Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A03:11	Speaker #3: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the RHR door circuits. When DTC B1A03:11 is set, the speaker output is disabled.
B1A03:15	Speaker #3: Circuit Short To Battery Or Open	Set by the ACM when a short to voltage or an open is detected on the RHR door circuits. When DTC B1A03:15 is set, the speaker output is disabled.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

PINPOINT TEST I : THE RHR (RIGHT-HAND REAR) DOOR SPEAKER IS INOPERATIVE

I1 CHECK THE AUDIO SIGNAL TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER
• Ignition OFF. • Disconnect RHR Door Speaker C802.

- Operate the audio system in AM/ FM mode.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C802-1	V~	C802-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new RHR door speaker. REFER to: Rear Door Speaker RH (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	GO to I2

I2 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C240A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C802-1	+ V⎓ −	Ground
C802-4	+ V⎓ −	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to I3

I3 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C802-1	Ω	Ground
C802-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to I4
No	REPAIR the circuit in question.

I4 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C802-1	Ω	C240A-24
C802-4	Ω	C240A-12

Are the resistances less than 3 ohms?

Yes	GO to I5
No	REPAIR the circuit in question.

I5 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C802-1	Ω	C802-4

Is the resistance greater than 10,000 ohms?

Yes	GO to I6
No	REPAIR the circuit in question.

I6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The LHR Door Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A04:11	Speaker #4: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the LHR door circuits. When DTC B1A04:11 is set, the speaker output is disabled.
B1A04:15	Speaker #4: Circuit Short To Battery Or Open	Set by the ACM when a short to voltage or an open is detected on the LHR door circuits. When DTC B1A04:15 is set, the speaker output is disabled.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

PINPOINT TEST J : THE LHR (LEFT-HAND REAR) DOOR SPEAKER IS INOPERATIVE

J1 CHECK THE AUDIO SIGNAL TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER

- Ignition OFF.
- Disconnect LHR Door Speaker C702.
- Ignition ON.
- Operate the audio system in AM/ FM mode.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	V~	C702-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHR door speaker. REFER to: Rear Door Speaker LH (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	GO to J2

J2 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C240A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead

C702-1	V	Ground
C702-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to J3

J3 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	Ω	Ground
C702-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to J4
No	REPAIR the circuit in question.

J4 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	Ω	C240A-21
C702-4	Ω	C240A-9

Are the resistances less than 3 ohms?

Yes	GO to J5
No	REPAIR the circuit in question.

J5 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	Ω	C702-4

Is the resistance greater than 10,000 ohms?

Yes	GO to J6
No	REPAIR the circuit in question.

J6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - corrosion (clean module pins or install new connectors or terminals)
  - damaged or bent pins (install new terminals or pins)
  - pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Audio Input Jack Is Inoperative Or Does Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Description and Operation).

Possible Sources

- Customer's device
- Wiring, terminals, or connectors
- Audio input jack
- ACM

PINPOINT TEST K : THE AUDIO INPUT JACK IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

K1 CHECK THE AUDIO INPUT JACK AUDIO FUNCTIONALITY

- Connect MIT 420-373 .
- Ignition ON.
- Using the MIT 420-373, attempt to play an audio file using the audio input jack.
- Operate the audio system in line mode and observe the audio output.

Is the audio output operating correctly for the audio input jack?

Yes	The system is operating correctly at this time. The concern is with the customer's device.
No	GO to K2

K2 CHECK THE AUDIO INPUT JACK CIRCUITS FOR A SHORT TO VOLTAGE

K2 CHECK THE AUDIO INPUT JACK CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Audio Input Jack C3077.
- Disconnect ACM C240A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3077-1	V	Ground
C3077-3	V	Ground
C3077-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to K3

K3 CHECK THE AUDIO INPUT JACK CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3077-1	Ω	Ground
C3077-3	Ω	Ground
C3077-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to K4
No	REPAIR the circuit.

K4 CHECK THE AUDIO INPUT JACK CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3077-1	Ω	C240A-17
C3077-3	Ω	C240A-18
C3077-4	Ω	C240A-5

Are the resistances less than 3 ohms?

Yes	GO to K5

No	REPAIR the circuit in question.

K5 ISOLATE THE AUDIO INPUT JACK

- Install a new audio input jack.
  REFER to: Audio Input Jack (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
- Connect ACM C240A.
- Connect MIT 420-373.
- Ignition ON.
- Using the MIT 420-373, attempt to play an audio file using the audio input jack.

Is the audio output OK for the audio input jack?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative audio input jack.
No	GO to K6

K6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the ACM and related in-line connectors.
- Repair:
  - corrosion (clean module pins or install new connectors or terminals)
  - damaged or bent pins (install new terminals or pins)
  - pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

ACM Is Inoperative Or Does Not Operate Correctly

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10B8:23	Push Buttons: Signal Stuck Low	Set by the ACM when a short to ground is detected.

Possible Sources

- Fuse(s)
- Wiring, terminals, or connectors
- Dust, dirt or other debris
- ACM

PINPOINT TEST L : THE ACM (AUDIO FRONT CONTROL MODULE) IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

L1 VERIFY THE OPERATION OF THE ACM (AUDIO FRONT CONTROL MODULE) BUTTONS

- Ignition ON.
- Operate all of the ACM buttons and check for proper operation.

Do all of the buttons work properly?

Yes	The system is operating correctly at this time.
No	If some (but not all) of the buttons do not work properly, GO to L2 If all of the buttons do not work properly or the ACM does not turn on, GO to L3

L2 CHECK FOR DEBRIS

- Ignition OFF.
- Carefully inspect the suspect ACM buttons for dust, dirt or other debris.

Is any dust, dirt or other debris found?

Yes	CLEAN as necessary.
No	INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).

L3 CHECK THE ACM (AUDIO FRONT CONTROL MODULE) VOLTAGE SUPPLY

- Disconnect ACM C240A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-1	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to L4
No	VERIFY that BCM fuse is in good condition. If fuse is in good condition, REPAIR the circuit.

L4 CHECK THE ACM (AUDIO FRONT CONTROL MODULE) GROUND CIRCUITS

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-13	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to L5
No	REPAIR the circuit.

L5 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - corrosion (clean module pins or install new connectors or terminals)
  - damaged or bent pins (install new terminals or pins)
  - pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The USB Port Is Inoperative Or Does Not Operate Correctly

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1252:11	USB Port: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the USB input.

Possible Sources

- Customer device
- USB port
- USB cable
- ACM

PINPOINT TEST M : THE USB (UNIVERSAL SERIAL BUS) PORT IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

M1 CHECK THE USB (UNIVERSAL SERIAL BUS) PORTS

- Remove any devices connected to the USB port.
- Ignition OFF.
- Ensure the front doors of the vehicle are closed, then open and close the driver's door and wait at least 10 seconds to disable the accessory delay feature.
- Ignition ON.
- Connect MIT 420-373 to the USB port.

- Select USB mode on the MIT.
- Operate the audio system in USB mode and observe the audio output.

Is the audio system USB output OK with the MIT 420-373 connected to the USB port?

Yes	GO to M2
No	GO to M3

M2 RETEST THE CUSTOMER'S DEVICE

- Connect the customer's device and test the audio output to the USB port.

Is the audio system USB output OK with the customer's device connected to the USB port?

Yes	The system is operating correctly at this time. The concern may have been caused by a faulty USB device previously connected to the USB port.
No	The fault is with the customer's device.

M3 VERIFY THE OPERATION OF THE USB (UNIVERSAL SERIAL BUS) CABLE

- Disconnect: USB cable from the USB port.
  REFER to: Media Hub (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
- Connect MIT 420-373 to the USB Adaptor.
- Select USB mode on the MIT 420-373.
- Operate the audio system in USB mode and observe the audio output.

Is the audio system USB output OK?

Yes	INSTALL a new USB port. REFER to: Media Hub (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
No	GO to M4

M4 INSPECT THE USB (UNIVERSAL SERIAL BUS) CABLE AND ACM (AUDIO FRONT CONTROL MODULE)

- Ignition OFF.
- Disconnect: USB cable from the ACM.
  REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
- Inspect the USB cable, USB cable ends, and the ACM USB connector port for damage. Remove any debris.

Is any damage present?

Yes	• For the USB cable, INSTALL a new USB cable. • For the ACM, INSTALL a new ACM
No	GO to M5

M5 ISOLATE THE USB (UNIVERSAL SERIAL BUS) CABLE

- Install a new USB cable.
- Connect: USB cable to the ACM.
- Connect: MIT 420-373 to the USB Adaptor.
- Select USB mode on the MIT 420-373.
- Operate the audio system in USB mode and observe the audio output.

Is the audio system USB output OK?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative USB cable.
No	GO to M6

M6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the ACM and related in-line connectors.
- Repair:
  - corrosion (clean module pins or install new connectors or terminals)
  - damaged or bent pins (install new terminals or pins)
  - pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Steering Wheel Multifunction Switches Are Inoperative Or Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1380:09	Steering Wheel Right Switch Pack: Component Failure	Set by the SCCM when the steering wheel switch is input is shorted to ground.
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	Set by the SCCM when an open is detected on the input.
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	Set by the SCCM when the steering wheel switch is stuck for more than 2 minutes during normal operation.

Possible Sources

- Steering wheel switch
- Wiring, terminals, or connectors
- Clockspring
- SCCM

PINPOINT TEST N : THE STEERING WHEEL MULTIFUNCTION SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

N1 CHECK THE STEERING WHEEL PARAMETER IDENTIFICATIONS (PIDS)

- Ignition ON.
- Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).
- Monitor the steering wheel switch Parameter Identifications (PIDs) while pressing each multimedia steering wheel switch.
  - Voice (SW_VOICE)
  - Mute (SW_MUTE)
  - Volume + (SW_VOLUP)
  - Volume - (SW_VOLDOWN)
  - Seek-/Phone (SW_SEEKMINUS)/(SW_PHONE)
  - Seek+/End (SW_SEEKPLUS)/(SW_END)

Do the PID values agree with the switch positions?

Yes	GO to N10
No	• If one or more, but not all PID values are incorrect or always read one particular switch position, INSTALL a new steering wheel multifunction switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation). • If all PID values are incorrect or always read one particular switch position, GO to N2

N2 CHECK FOR IPC (INSTRUMENT PANEL CLUSTER) DTC (DIAGNOSTIC TROUBLE CODE) U0212:00

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) from the IPC.
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U0212:00 present?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	GO to N3

N3 CHECK FOR VOLTAGE FROM THE SCCM (STEERING COLUMN CONTROL MODULE)

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

- Ignition OFF.
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect Steering Wheel Switch C2491.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-4	V	C2491-5
C2491-6	V	C2491-5
C2491-7	V	C2491-5

Is approximately 5 volts present?

Yes	INSTALL a new steering wheel multifunction switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation).
No	GO to N4

N4 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect Clockspring C218B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-4	Ω	Ground
C2491-5	Ω	Ground
C2491-6	Ω	Ground
C2491-7	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to N5
No	INSTALL a new steering wheel multifunction switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation).

N5 CHECK THE STEERING WHEEL HARNESS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-4	Ω	C218B-6
C2491-5	Ω	C218B-7
C2491-6	Ω	C218B-16
C2491-7	Ω	C218B-15

Are the resistances less than 3 ohms?

Yes	GO to N6
No	INSTALL a new steering wheel multifunction switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation).

N6 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-4	Ω	C2491-6
C2491-4	Ω	C2491-7
C2491-4	Ω	C2491-5
C2491-6	Ω	C2491-7
C2491-6	Ω	C2491-5
C2491-7	Ω	C2491-5

Are the resistances greater than 10,000 ohms?

Yes	GO to N7
No	INSTALL a new steering wheel multifunction switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation).

N7 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND

- Connect Clockspring C218B.
- Disconnect Clockspring C218C.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-4	Ω	Ground
C2491-5	Ω	Ground
C2491-6	Ω	Ground
C2491-7	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to N8
No	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

N8 CHECK THE CLOCKSPRING FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-4	Ω	C218C-5
C2491-5	Ω	C218C-7
C2491-6	Ω	C218C-10
C2491-7	Ω	C218C-8

Are the resistances less than 3 ohms?

Yes	GO to N9
No	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

N9 CHECK THE CLOCKSPRING FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-4	Ω	C2491-6
C2491-4	Ω	C2491-7
C2491-4	Ω	C2491-5
C2491-6	Ω	C2491-7
C2491-6	Ω	C2491-5
C2491-7	Ω	C2491-5

Are the resistances greater than 10,000 ohms?

Yes	GO to N10
No	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

N10 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the SCCM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the SCCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Steering Wheel Multifunction Switches Are Inoperative Or Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10BD:11	Multifunction Switch: Circuit Short To Ground	Set by the ACM when the steering wheel switch is input is shorted to ground.
B10BD:13	Multifunction Switch: Circuit Open	Set by the ACM when an open is detected on the input.
B10BD:23	Multifunction Switch: Signal Stuck Low	Set by the ACM when the steering wheel switch is stuck for more than 2 minutes during normal operation.

Possible Sources

- Steering wheel switch
- Wiring, terminals, or connectors
- Clockspring
- ACM

PINPOINT TEST O : THE STEERING WHEEL MULTIFUNCTION SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

O1 CHECK THE STEERING WHEEL SWITCH PARAMETER IDENTIFICATIONS (PIDS)

- Ignition ON.
- Using a diagnostic scan tool, view the Parameter Identifications (PIDs).
- Monitor the steering wheel switch Parameter Identifications (PIDs) while pressing each steering wheel switch.
  - Voice (SW_VOICE)
  - Seek+ (SW_SEEKPLUS)
  - Seek– (SW_SEEKMINUS)
  - Volume+ (SW_VOLUP)
  - Volume- (SW_VOLDOWN)

Do the PID values agree with the switch positions?

Yes	GO to O15
No	• If one or more, but not all PID values are incorrect or always read one particular switch position, INSTALL a new steering wheel multifunction switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation). • If all PID values are incorrect or always read one particular switch position, GO to O2

O2 CHECK FOR VOLTAGE FROM THE ACM (AUDIO FRONT CONTROL MODULE)

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

- Ignition OFF.
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect Steering Wheel Switch C2998.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-7	V	C2491-5

Is approximately 5 volts present?

Yes	INSTALL a new steering wheel multifunction switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation).
No	GO to O3

O3 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Clockspring C218C.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-7	V	Ground
C2491-5	V	Ground

Is any voltage present?

Yes	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04) .
No	GO to O4

O4 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-7	Ω	Ground
C2491-5	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to O5
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04) .

O5 CHECK THE STEERING WHEEL HARNESS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead

C2491-7	Ω	C218C-11
C2491-5	Ω	C218C-10

Are the resistances less than 3 ohms?

Yes	GO to O6
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04) .

O6 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2998-2	Ω	C2998-4

Is the resistance greater than 10,000 ohms?

Yes	GO to O7
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04) .

O7 CHECK THE CLOCKSPRING FOR A SHORT TO VOLTAGE

- Connect Clockspring C218C.
- Disconnect Clockspring C218B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2998-2	V	Ground
C2998-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to O8

O8 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2998-2	Ω	Ground
C2998-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to O9
No	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

O9 CHECK THE CLOCKSPRING FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2998-2	Ω	C218B-14 (Component Side)
C2998-4	Ω	C218B-12 (Component Side)

Are the resistances less than 3 ohms?

Yes	GO to O10
No	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

O10 CHECK THE CLOCKSPRING FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2998-2	Ω	C2998-4

Is the resistance greater than 10,000 ohms?

Yes	GO to O11
No	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

O11 CHECK THE CIRCUITRY TO THE CLOCKSPRING FOR A SHORT TO VOLTAGE

- Connect Clockspring C218B.
- Disconnect ACM C240A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2998-2	V	Ground
C2998-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to O12

O12 CHECK THE CIRCUITRY TO THE CLOCKSPRING FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2998-2	Ω	Ground
C2998-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to O13
No	REPAIR the circuit in question.

O13 CHECK THE CIRCUITRY TO THE CLOCKSPRING FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2998-2	Ω	C2383-46
C2998-4	Ω	C2383-47

Are the resistances less than 3 ohms?

Yes	GO to O14
No	REPAIR the circuit in question.

O14 CHECK THE CIRCUITRY TO THE CLOCKSPRING FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2998-2	Ω	C2998-4

Is the resistance greater than 10,000 ohms?

Yes	GO to O15
No	REPAIR the circuit in question.

O15 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

• Ignition OFF.
• Disconnect and inspect the ACM and related in-line connectors.
• Repair:
  • corrosion (clean module pins or install new connectors or terminals)
  • damaged or bent pins (install new terminals or pins)
  • pushed-out pins (install new pins as necessary)
• Reconnect the ACM and related in-line connectors. Make sure it seats and latches correctly.
• Operate the system and determine if the concern is still present.
 	
Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

During a phone call, poor quality or no outgoing audio is heard on the outside device or the microphone is inoperable

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D79:11	Microphone Input: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the microphone circuits.
B1D79:15	Microphone Input: Circuit Short To Battery Or Open	Set by the ACM when a short to voltage or open is detected on the microphone circuits.

Possible Sources

- Wiring, terminals, or connectors
- Microphone
- ACM

PINPOINT TEST P : DURING A PHONE CALL, POOR QUALITY OR NO OUTGOING AUDIO IS HEARD ON THE OUTSIDE DEVICE OR THE MICROPHONE IS INOPERABLE

P1 CHECK THE AUDIBLE PROMPT FUNCTIONALITY
• Operate the audio system in AM/ FM mode. • Operate the VOICE steering wheel switch and listen for the audible prompt. **Does the system produce an audible prompt correctly; indicating voice recognition mode has been entered?**

Yes	GO to P3
No	GO to P2

P2 CHECK THE OPERATION OF THE STEERING WHEEL SWITCHES

- Operate the audio system in AM/ FM mode.
- Operate the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches.

Do the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches operate correctly?

Yes	GO to Pinpoint Test D
No	GO to P3

P3 CHECK THE MICROPHONE CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C240A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-4	V	Ground
C240A-16	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to P4

P4 CHECK THE MICROPHONE CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect Microphone C9221.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-4	Ω	Ground
C240A-16	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to P5
No	REPAIR the circuit in question.

P5 CHECK THE MICROPHONE CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-16	Ω	C9221-2
C240A-4	Ω	C9221-3

Are the resistances less than 3 ohms?

Yes	GO to P6
No	REPAIR the circuit in question.

P6 CHECK THE MICROPHONE CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-4	Ω	C240A-16

Is the resistance greater than 10,000 ohms?

Yes	GO to P7
No	REPAIR the circuit in question.

P7 ISOLATE THE MICROPHONE

- Connect ACM C240A.
- Install a new microphone.
  REFER to: Microphone (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
- Operate the audio system in AM/ FM mode.
- Operate the VOICE steering wheel switch and listen for the audible prompt.
- Speak a command to test the voice recognition for normal operation.

Is the voice recognition functioning correctly?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative microphone.
No	GO to P8

P8 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With IPC U0155:00

Normal Operation and Fault Conditions

REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0155:00	Lost Communication With IPC Control Module: No Sub Type Information	Set by the ACM when network messages are missing from the IPC for more than 5 seconds with the ignition in RUN.

Possible Source

- IPC

PINPOINT TEST Q : LOST COMMUNICATION WITH IPC (INSTRUMENT PANEL CLUSTER) U0155:00

Q1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to Q2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

Q2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155:00 set in the ACM?

Yes	GO to Q3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

Q3 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the IPC self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	GO to Q4

Q4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test R • For DTC U3003:17, GO to Pinpoint Test S
No	GO to Q5

Q5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0155:00 set in more than one module?

Yes	GO to Q6
No	• If there is an observable symptom, REFER to the Symptom Chart: General Audio System, to diagnose the observed symptom. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

Q6 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the IPC and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. For LHD vehicles, REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). For RHD vehicles, REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Battery Voltage Low U3003:16

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	Set by the ACM when the supply voltage falls below 10 volts for at least 10 seconds during normal operation or for more than 250 milliseconds during the self-test.

Possible Sources

- Previous low battery voltage
- Wiring, terminals, or connectors
- ACM

PINPOINT TEST R : BATTERY VOLTAGE LOW U3003:16

R1 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:16

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) for the module in question.
- Wait at least 15 seconds.
- Using a diagnostic scan tool, repeat the self-test for the module in question.

Is DTC U3003:16 still present?

Yes	GO to R2
No	The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition.

R2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the PCM self-test

Are any voltage-related DTC set in the PCM?

Yes	Refer to the appropriate section in Group 414 for the procedure.
No	GO to R3

R3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

- Check the battery condition and verify the battery is fully charged.
  REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).

Is the battery fully charged and in good condition?

Yes	GO to R4
No	Refer to the appropriate section in Group 414 for the procedure.

R4 CHECK THE MODULE VOLTAGE SUPPLY

- Ignition OFF.
- Disconnect ACM C240A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-1		Ground

Is the voltage within 0.2 volts of the recorded battery voltage?

Yes	GO to R5
No	REPAIR the circuit.

R5 CHECK THE MODULE GROUND CIRCUIT FOR CONTINUITY

- Measure the voltage at the suspect module.
- For the ACM, measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-1		C240A-13

Is the suspect module voltage greater than 11 volts?

Yes	GO to R6
No	REPAIR the circuit.

R6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Battery Voltage High U3003:17

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	Set by the ACM when the supply voltage is more than 15.8 volts for more than 250 milliseconds during normal operation or the self-test.

Possible Sources

- ACM

PINPOINT TEST S : BATTERY VOLTAGE HIGH U3003:17

S1 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:17

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) for the module in question.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, perform the self-test for the module in question.

Is DTC U3003:17 present?

Yes	GO to S2
No	The system is operating correctly at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

S2 CHECK FOR HIGH VOLTAGE DIAGNOSTIC TROUBLE CODES (DTCS) SET IN MULTIPLE MODULES

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are high voltage Diagnostic Trouble Codes (DTCs) such as B1676, P0563, or U3003:17 set in more than one module?

Yes	Refer to the appropriate section in Group 414 for the procedure.
No	GO to S3

S3 CHECK THE BATTERY VOLTAGE

- Turn off all interior lights, exterior lights, and accessories.
- Start and run the engine at approximately 2,000 RPM for 3 minutes while monitoring the battery voltage.

Does the battery voltage rise to 15.5 volts or higher?

Yes	Refer to the appropriate section in Group 414 for the procedure.
No	GO to S4

S4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)

- Pushed-out pins (install new pins as necessary)

- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00A Information and Entertainment System - General Information - Vehicles With: AM/FM/CD, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Audio Front Control Module (ACM) Self-Test

Activation

1. **WARNING: Before beginning any service procedure in this section, refer to Health and Safety Precautions in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. **NOTE:** *If the ACM, FCDIM (if equipped), FCIM, or FDIM (if equipped) are inoperative (blank or do not power on), obtain the ACM part number by referencing the label attached to the ACM chassis.*

   Turn the ACM on.

3. Operate the audio system in radio tuner AM/ FM mode.

4. Press and hold the eject button, and within 1 second, press and hold the seek up button. If supported, the speaker walk around test will begin, and the display will indicate each speaker as it is tested.

NOTE: *AHU Diagnostics refers to the ACM, EFP Diagnostics refers to the FCIM that communicates on the CAN (if equipped), and MFD Diagnostics (if supported) refers to the FCDIM (if equipped).*

5. To exit the self-diagnostic mode, turn the ACM off, or select "Exit Diagnostics."

Copyright © 2016 Ford Motor Company

Reset the SYNC Module [APIM]

Programming

NOTE: *An APIM Reset consists of a battery disconnect and a SYNC® system Master Reset. It may **not** be necessary to perform a Master Reset after disconnecting the battery if the concern is resolved.*

NOTE: *This procedure clears all Continuous Memory Diagnostic Trouble Codes (CMDTCs). The Diagnostic Trouble Codes (DTCs) must be recorded now if other non-SYNC® diagnoses are to be performed after this procedure.*

1. Remove any devices connected to the USB port(s), audio input jack/socket (if equipped), SD slot (if equipped), or RCA jacks (if equipped).

2. Disconnect the negative battery cable for 1 minute, then reconnect it.
   Refer to: Battery Disconnect and Connect - Vehicles With: Single Battery (414-01 Battery, Mounting and Cables) .

3. **NOTE:** *Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, and deletes any Bluetooth devices paired with the SYNC® system. For vehicles with navigation, the customer's saved destinations (home, favorites, and previous) are erased. For vehicles with a TCU, any devices paired with the MyFord® Mobile or MyLincoln Mobile™ phone application will be deleted.*

   Perform a Master Reset. If necessary, refer to "Master Reset" in the Owner's Literature.

4. Verify system function using the MIT 105-00120 to test the audio output for the USB port(s), audio input jack/socket (if equipped), and Bluetooth. If equipped, test the audio output for the RCA jacks using RCA Adapter 105-00121.

5. **NOTE:** *If the concern remains after completing the APIM Reset procedure, advise the customer to power their device off and back on for a simple reboot. In some cases, if possible, the device's battery may also need to be removed and re-installed to complete a reboot. Delete SYNC® from the device's Bluetooth menu prior to re-pairing the phone to the SYNC® system. If necessary, the customer can also perform a Master Clear, Master Reset, or Factory Data Reset on their device following the manufacturer's instructions in the device's owner's manual and/or website. Customer devices may affect the operation of SYNC® and this should be understood to prevent unnecessary diagnosis or repairs to the system.*

   If a concern is still present, return to the Symptom Charts.

SYNC Module [APIM] Programming

Special Tool(s) / General Equipment

SYNC USB 2.0 A Male to A Male Cable

Activation

1. **WARNING: Before beginning any service procedure in this section, refer to Health and Safety Precautions in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. If a new APIM is being installed, install the new APIM before carrying out the following procedure.
   Refer to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).

3. **NOTE:**

   - *This programming procedure deletes any phones that were paired with the SYNC® system.*
   - *To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.*
   - *A file of approximately 80 megabytes (MB) needs to be downloaded from the online database for the programming. Allow extra time for the file to download.*
   - *The diagnostic scan tool is required.*
     - *Ensure that the IDS version and patch software levels are up to date.*

4. Connect a battery charger to the vehicle and select the low charge setting. The negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

5. Plug the diagnostic scan tool into a power supply due to the length of time the programming requires.

6. Connect the diagnostic scan tool to the VCM, and the VCM to the DLC.

7. Connect one end of the USB cable (male type A 4-pin to male type a 4-pin) to the diagnostic scan tool's USB port, and the other end to the vehicle's USB port.
   Use the General Equipment: SYNC USB 2.0 A Male to A Male Cable

8. Close the IDS software program.

9. Place the ignition in the ON/RUN position. For ON/RUN position information with Push Button Start vehicles, Refer to: Steering Wheel and Column Electrical Components - System Operation and Component Description (211-05 Steering Column Switches, Description and Operation).

10. **NOTE:**

    - *Using the diagnostic scan tool, open Internet Explorer and access the technician service publication website.*
    - *Run OASIS using "Read VIN & DTCs."*
      - *If the "Read VIN & DTCs" button is green with a red VCM icon, refer to the "SYNC - Software Programming" document under the "Service Tips" tab.*
      - *If the "Read VIN & DTCs" button is red with a grey VCM icon, ensure pop-ups are enabled, follow the Internet Explorer pop-ups, and then refer to the "SYNC - Software Programming" document under the "Service Tips" tab.*
    - *If the "SYNC - Software Programming" document is not followed, the programming may stop or encounter errors due to improperly configured Internet browser settings.*

11. From the OASIS tab, select the "SYNC" button. The Last Recorded State — Software is displayed.

12. **NOTE:** *There are 3 types of APIM programming available:*

    - *Standard — Used to update the APIM and any currently installed Applications to the latest software*

levels.

- *Custom — Used to show all the available software options (including Applications that may not have been installed previously) that can be programmed into the APIM. Use this selection when upgrades become available or as directed by a TSB or FSA.*
- *Module Replacement — Used when the APIM has been replaced. This type of programming performs the required provisioning (restores software for newly installed hardware).*

13. Scroll to the bottom of the screen, select 1 of the 3 options (Standard, Custom, or Module Replacement), and select the "Read SYNC" button. The current APIM assembly, Vehicle Interface Processor (VIP), and Consumer Interface Processor (CIP) software levels are compared to the last recorded state in the Ford online database, and the available software is displayed.

14. **NOTE:** *Do **not** disconnect the VCM or USB cable during APIM programming unless directed by the diagnostic scan tool on-screen prompts.*

    Select the "Program SYNC" button to begin the APIM programming process.

15. Follow the diagnostic scan tool on-screen directions. After programming is complete, the diagnostic scan tool displays "Programming has been successfully completed."

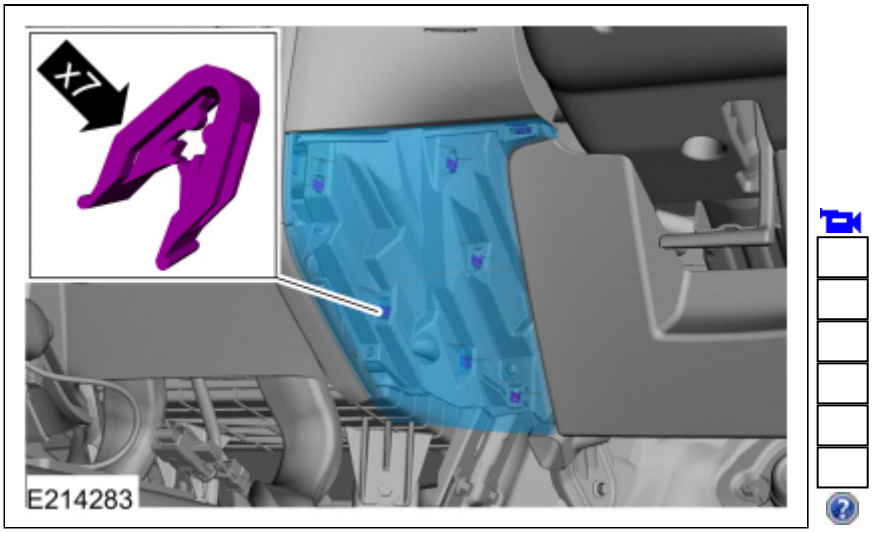
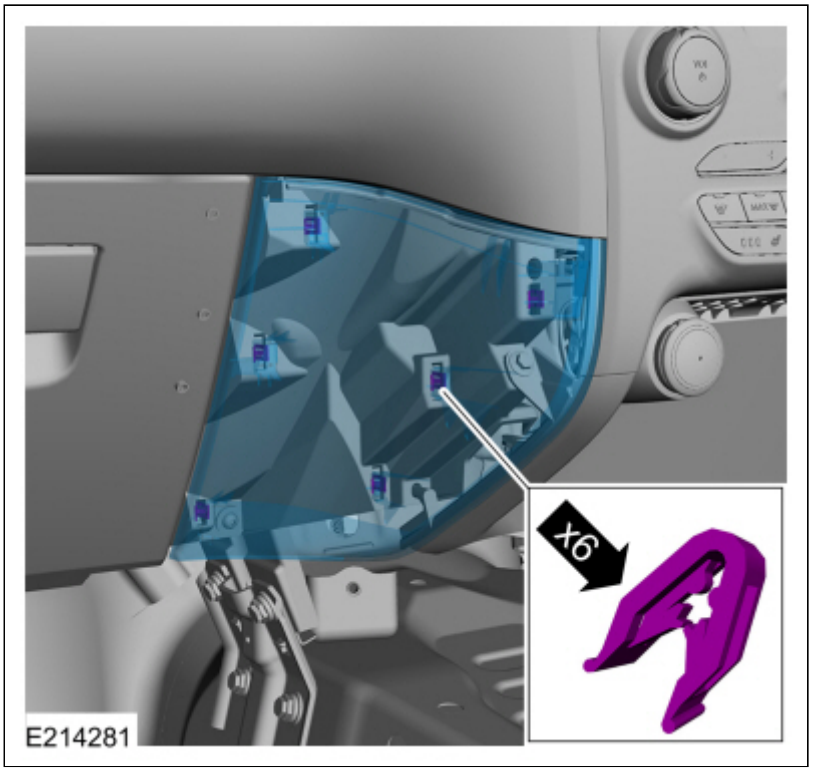
Audio Front Control Module (ACM)

Special Tool(s) / General Equipment



Interior Trim Remover

Removal

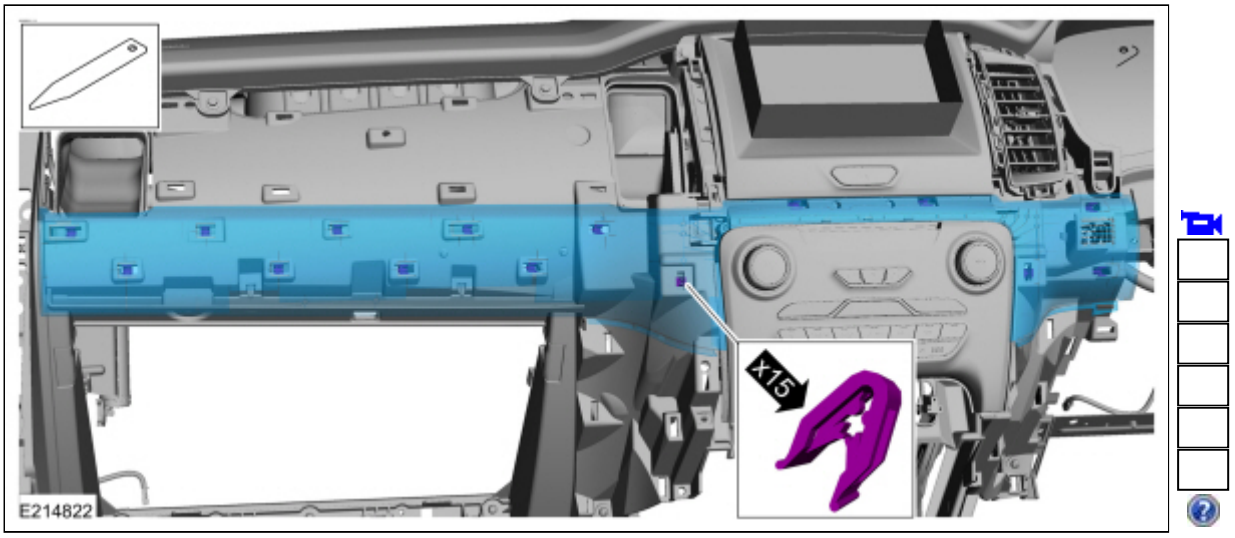


NOTE: *Removal steps in this procedure may contain installation details.*

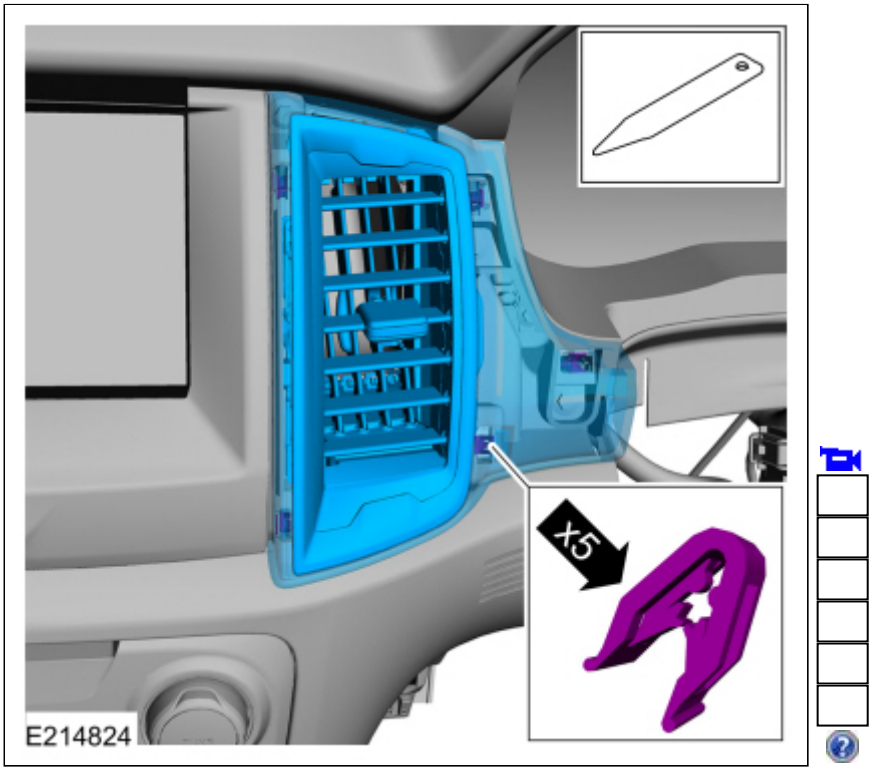
1. **NOTE:** *If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.*

   Using a diagnostic scan tool, begin the PMI process for the FCIM following the on-screen instructions.

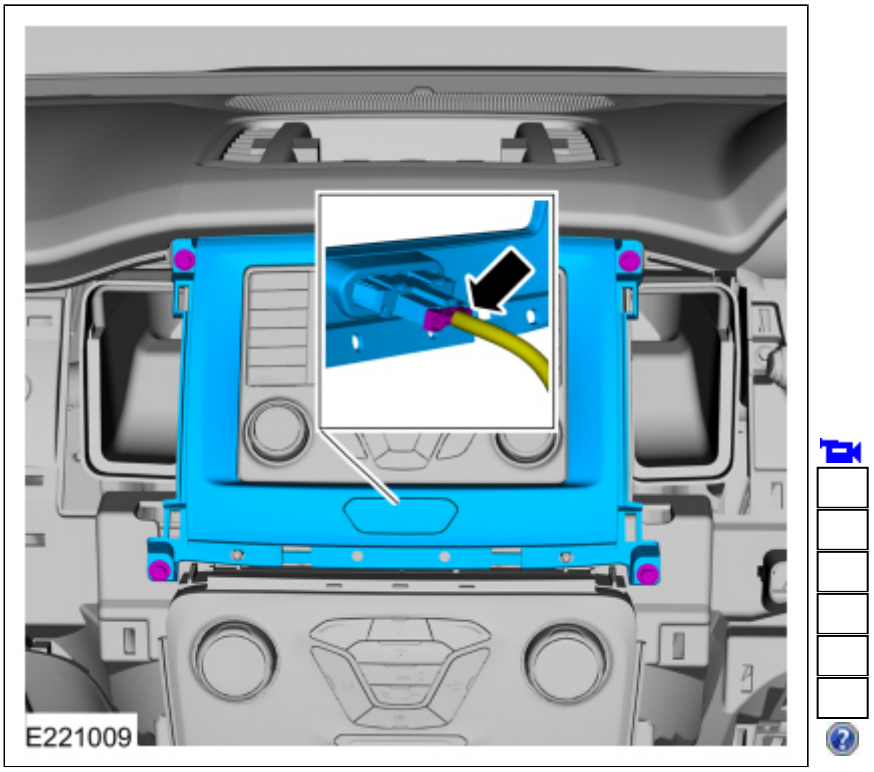
2. 



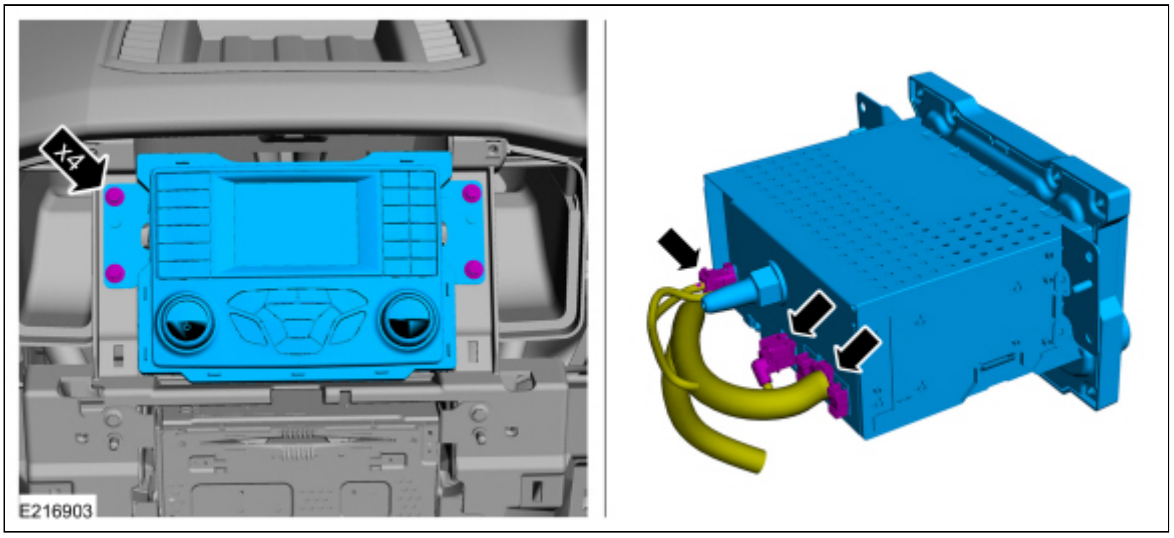
3.



4. Use the General Equipment: Interior Trim Remover



5. Use the General Equipment: Interior Trim Remover



6. Use the General Equipment: Interior Trim Remover

7. *Torque*: 3 Nm

8. *Torque*: 3 Nm

Installation

1. To install, reverse the removal procedure.
2. **NOTE:** *This step is only necessary if replacing the component.*

   Using a diagnostic scan tool, complete the PMI process for the FCIM following the on-screen instructions.

Information and Entertainment System - Overview

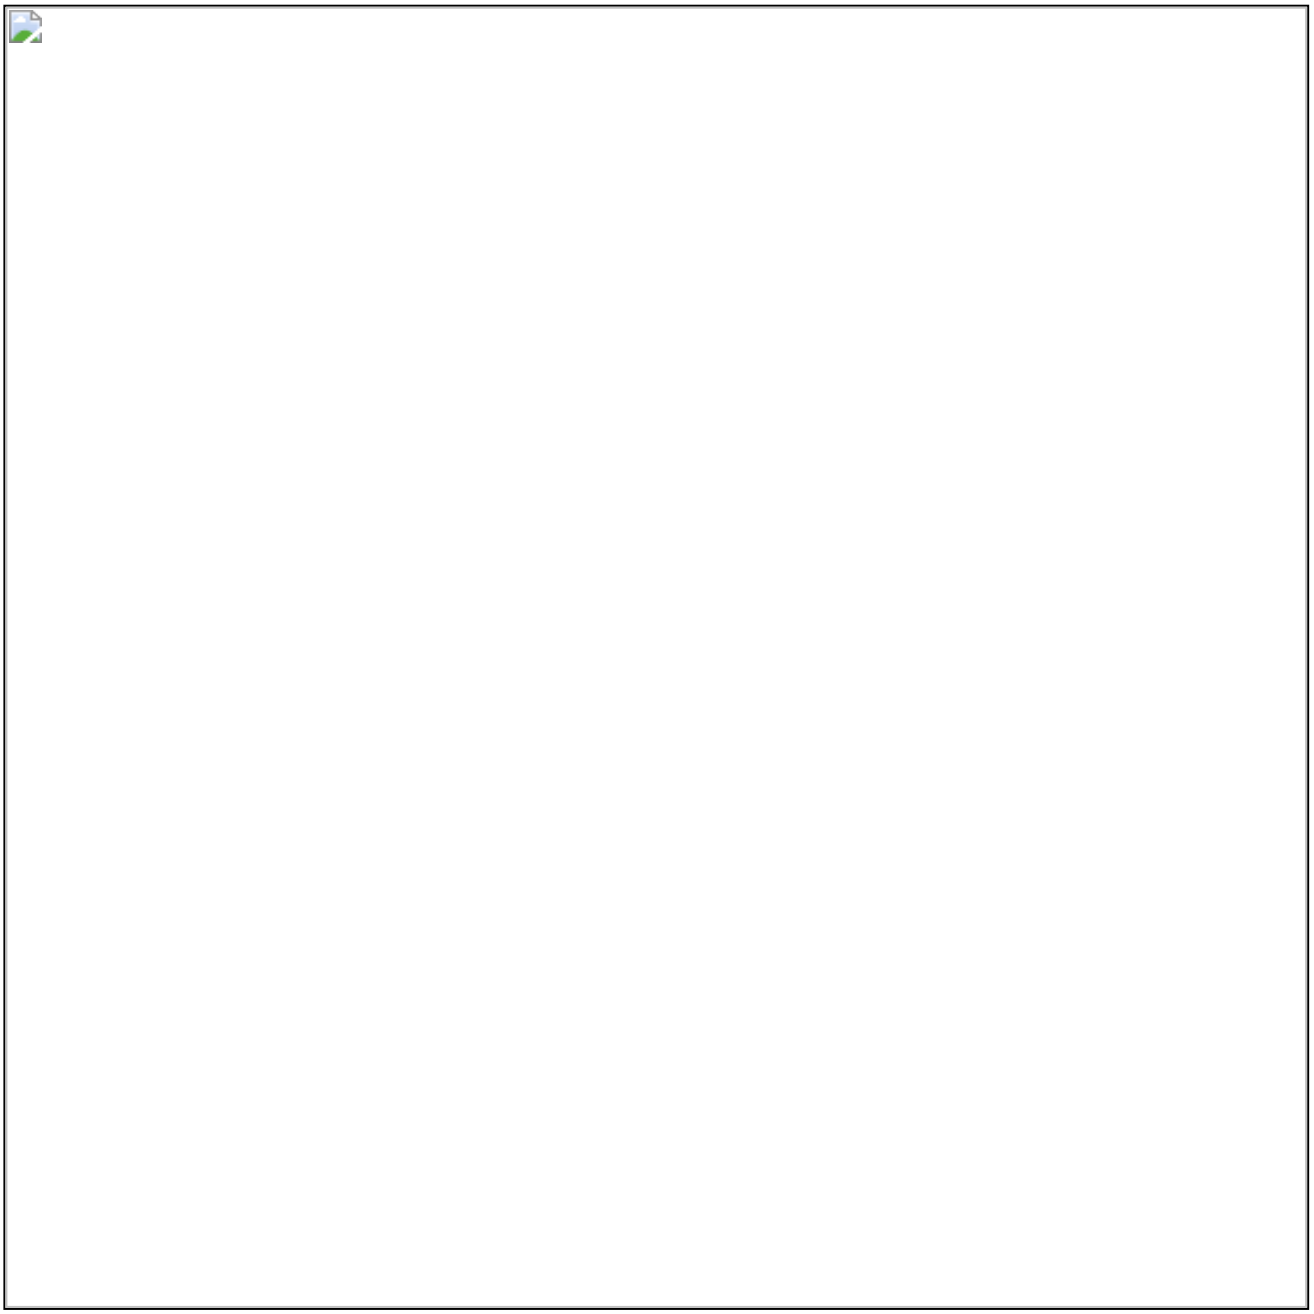
Overview

The audio system consists of the following:

Main Components

- 4 to 6 speakers
- 4.2-inch (107 mm) non-touchscreen FCDIM
- ACM
- APIM
- Audio input jack
- FCIM
- USB port
- GPSM
- Media hub
- Audio steering wheel switches

Main Features



- Audio extended play
- Battery load shed
- MyKey®
- Speed compensated volume
- SYNC®

Copyright © 2016 Ford Motor Company

Information and Entertainment System - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

A missing network message can set a DTC (U-code) and can be the result of intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures such as module reprogramming can set these Diagnostic Trouble Codes (DTCs). When a missing network message DTC (U-code) sets, it is important to look for symptoms present in the audio system and throughout the vehicle, and to review the complete message list to determine which other modules rely on the same message.
Refer to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
See CAN Multiplex Messages.

When other modules are identified, run the self-test for those modules. If the same message is missing from those modules, the identical, or similar lost communication Diagnostic Trouble Codes (DTCs) may be set in those modules.

Confirmation of missing messages common to multiple modules can indicate the originating module is the source of the concern, or the communication network may be at fault.

It is very important to understand the following:

- Where the input originates
- All of the information necessary for a feature to operate
- Which module(s) receive(s) the input or command message
- Which module controls the output of the feature
- If the module that receives the input controls the output of the feature, or whether it outputs a message over the CAN to another module.

NOTE: *Emergency Assistance may not call emergency service in some countries. Visit the regional Ford website for the latest details.*

Module Network Input Messages - ACM

Broadcast Message	Originating Module	Message Purpose
Audio settings	IPC	Used to select the audio system listening source (AM or FM) from the steering wheel switch.
Audio source select	IPC	Used to set the audio system listening source (AM/ FM/ DAB, CD, etc.) from the steering wheel switch through the IPC RH infotainment display.
Battery saver status	BCM	Used to disable the functionality of the ACM due to the load shedding feature.
Chime request	IPC	Used to control the priority, characteristics, volume, and speaker output of the warning chime tones played through the audio system speakers.
Chime source	IPC	Used to set the audio system or IPC as the source for the chime tones.
Factory mode	BCM	Used to disable the functionality of the ACM while the vehicle is in factory mode.
Ignition key type	BCM	Used to determine if a MyKey® is enabled and in use.
Ignition status	BCM	Used to indicate the ignition state (OFF, CRANK, RUN, and START) required for ACM operating modes and fault reporting.
MyKey® Belt-Minder® audio mute	IPC	Used to mute speaker output so the Belt-Minder® tone can be more easily heard. This message only applies to vehicles with a MyKey® enabled and in use. The audio system is muted until the safety belt(s) are buckled.
Power up chime modules	IPC	Used to initiate the audio system as the chime source.
Set point volume	FCIM	Used to set the ACM volume using the FCIM.
Transport mode	BCM	Used to disable the functionality of the ACM until the vehicle is taken out of transport mode.
Turn signal lamp on request	BCM	Used to enable the turn signal tone to be played through the audio system speakers.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.
Voice recognition audio source request	IPC	Used to reduce the volume from the audio system so an IPC warning notification or parking aid chime can be more easily heard.

Module Network Input Messages - APIM

Broadcast Message	Originating Module	Message Purpose
Emergency Assist override status	IPC	Used to enable or disable the “Always on” Emergency Assist MyKey® feature as selected through the IPC while using an administrator MyKey®.
Accessory delay status	BCM	Used to determine the audio system operating mode.
Airbag deployment status	RCM	Used to notify the dispatcher of the airbag deployment status during the vehicle emergency data information provided in a Emergency Assist call.
Do Not Disturb override status	IPC	Used to enable or disable the “Always on” Do Not Disturb MyKey® feature as selected through the IPC while using an administrator MyKey®.
Door ajar status	BCM	Used to determine the door ajar status for the accessory delay feature.
Driver safety belt status	RCM	Used to notify the dispatcher of the driver’s seat belt status during the vehicle emergency data information provided in a Emergency Assist call.
eCall notification	RCM	Used to notify the vehicle occupant(s) of a Emergency Assist call being initiated due to an airbag deployment.
FCIM button state	FCIM	Used to indicate when a button is pressed on the FCIM so the audio system can make the desired setting change.
Factory mode	BCM	Used to disable the functionality of the APIM while the vehicle is in factory mode.
GPS data	GPSM	Used to notify the dispatcher of the vehicle position during the vehicle emergency data information provided in a Emergency Assist call.
Ignition key type	BCM	Used to determine if a MyKey® is enabled and in use.
Ignition status	BCM	Used to indicate the ignition state (OFF, CRANK, RUN, and START) required for APIM operating modes and fault reporting.
Language update status	IPC	Used to confirm the language change performed using the FDIM was updated in the IPC.
Low beam and high beam headlamp usage status	BCM	Used to dim the FDIM backlight intensity when the headlamps are turned on and the screen dimming mode is set to auto.
MyKey® Belt-Minder® audio mute	IPC	Used to mute speaker output so the Belt-Minder® tone can be more easily heard. This message only applies to vehicles with a MyKey® enabled and in use. The audio system is muted until the safety belt(s) are buckled.
Passenger safety belt status	RCM	Used to notify the dispatcher of the passenger’s seat belt status during the vehicle emergency data information provided in a Emergency Assist call.
Transport mode	BCM	Used to disable the functionality of the APIM until the vehicle is taken out of transport mode.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.

Module Network Input Messages - BCM

Broadcast Message	Originating Module	Message Purpose
eCall confirmation	APIM	Used to temporarily disable the horn while the post-crash alert is active so the Emergency Assist phone call can be more easily heard.

Module Network Input Messages - FCDIM

Broadcast Message	Originating	Message Purpose

	Module	
Door ajar status	BCM	Used to determine the door ajar status for the accessory delay feature.
Vehicle configuration data	IPC	Used to verify vehicle configuration data such as the VIN and system module configuration.

Module Network Input Messages - FCIM

Broadcast Message	Originating Module	Message Purpose
Audio source status	ACM	Used to confirm the audio source selected from the FCIM .
Day/night status	BCM	Used for day/night illumination status for the FCIM.
Factory mode	BCM	Used to disable the functionality of the FCIM while the vehicle is in factory mode.
Illumination dimming level	BCM	Used to control the backlight intensity of the FCIM based on the dimmer switch input.
Transport mode	BCM	Used to disable the functionality of the FCIM until the vehicle is taken out of transport mode.

Module Network Input Messages - GPSM

Broadcast Message	Originating Module	Message Purpose
Ignition status	BCM	Used to indicate the ignition state (OFF, CRANK, RUN, and START) required for GPSM operating modes and fault reporting.
Vehicle configuration data	BCM	Used to verify vehicle configuration data and system module configuration.

Module Network Input Messages - IPC

Broadcast Message	Originating Module	Message Purpose
Audio chimes	ACM	Used to indicate the status of the warning chimes being played through the audio system.
Date and time	FCDIM	Used to display the date and time information on the IPC.
Display language request	FCDIM	Used to display information on the IPC in the language selected from the FCIM.
Date and time adjustment request	FCDIM	Used to adjust the date and time information stored in the IPC from the FCIM buttons.

Module Network Input Messages - RCM

Broadcast Message	Originating Module	Message Purpose

eCall confirmation	APIM	Used to confirm the configuration of the Emergency Assist feature and to confirm the status of the Emergency Assist phone call.

Accessory Delay Feature

The accessory delay feature is a BCM controlled software function that allows the audio system to be operated for a preset period of time after the ignition is turned off and a front door has not been opened.

AM/ FM Radio

The AM/ FM roof-mounted antenna receives analog radio waves and sends them through the AM/ FM antenna coaxial cable to the ACM. The radio waves are converted into fluctuating AC voltage and sent as left and right analog audio signals to the speakers.

AM/ FM1/ FM2 Radio Without Diversity Antenna

The AM/ FM1 antenna receives the AM/ FM radio signals. The antenna modules sends the radio signals to the ACM through a splitter which connects both antenna inputs of the ACM.

APIM Programming

The APIM requires specific programming procedures for correct operation when it is replaced, when upgrades are available and requested, or when directed by a TSB, FSA, SSM, or Electronic Field Communication (EFC) to resolve SYNC® performance concerns. For more information,
Refer to: SYNC Module [APIM] Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).

Audio Extended Play

This software feature allows the audio system to operate with the ignition OFF, regardless of the door latch position. When the power button on the FCIM is pressed, the audio system functionality is enabled and remains active for a period of 20-60 minutes, depending on configuration settings. Audio extended play will not function if the battery load shed is active. To turn the audio system off, press the FCIM power button.

Audio Input Jack Mode

When a portable audio device, such as an iPod® with its available cable, is connected to the vehicle audio system through the audio input jack, audio from the device can be played through the vehicle speakers. Only the volume can be controlled with the vehicle audio controls. All other functions such as seek, fast forward, pause, etc. must be carried out on the device itself.

No metadata (information such as artist, album title, song title, and genre) is transferred when a device is connected to the audio input jack.

Battery Load Shed

The BCM uses the battery current sensor to monitor the battery state of charge. The battery current sensor is attached to the battery ground cable. With the ignition in RUN, ACC, or OFF, a load shed message is sent over the CAN when the BCM determines the battery state of charge is below 40%, 45 minutes have elapsed, or 10% of the charge has drained. This message turns off the audio system to save the remaining battery charge. Under this condition, "Battery Saver - System Off" is displayed on the centerstack infotainment display to notify the driver that battery protection actions are active. To clear the load shed state, start the vehicle.

Bluetooth Mode

Bluetooth is a secure, short-range radio frequency that allows devices to communicate wirelessly through radio waves. The operating range of a Bluetooth signal is application specific, but will have a minimum range of 10 meters (33 feet).

The Bluetooth interface can accommodate both Bluetooth-enabled mobile phones and Bluetooth-enabled media devices. The SYNC® system allows interaction with several types of customer Bluetooth devices, including mobile phones and media devices. The APIM contains an on-board Bluetooth chipset, which enables certain wireless devices to interact with the system.

Any Bluetooth device used with the SYNC® system must first be paired with the APIM on-board Bluetooth chipset before it can become operational. Pairing a Bluetooth device is accomplished through the "Add Device" selection of the phone menu. When pairing a device, the SYNC® system generates a unique PIN that must be entered on the Bluetooth device in order for the pairing process to be successful. There are also some device-specific actions that must take place. For information on the pairing process, refer to the Owner's Literature.

Multiple Bluetooth phones and Bluetooth media devices can be paired to the APIM at the same time. The APIM supports an active connection with one Bluetooth phone and one Bluetooth media device at a time. If an additional device of either type is paired and made active, the APIM ends any active connection with an already-paired device, and establishes an active connection with the new device.

It is important to understand that while most Bluetooth devices can pair with the SYNC® system, not all Bluetooth devices have the same level of features available when interacting with the SYNC® system. To determine if a Bluetooth device or feature is supported, review the device compatibility list. Refer to www.syncmyride.com.

Chimes

Various vehicle systems send chime requests over the CAN to the IPC. The following are determined as the IPC processes these requests:

- Chime characteristics (tone, tone length, number of repetitions, time between tones, etc.)
- Chime output volume
- Priority of the chime request
- Which speakers (all, front, or rear) will play the specific chime

The IPC sends the processed requests over the CAN to the ACM. The ACM outputs the left and right analog chime tones to the appropriate audio system speakers as fluctuating AC voltage.

For more information,
Refer to: Warning Chimes - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

MyKey® Audio Operation

- The following MyKey® features are always enabled when a MyKey® is in use, and are not configurable on/off with an administrator key:
  - Belt-Minder®: The audio system is muted, and “MyKey Buckle Up to Unmute Audio" is displayed in the information display until the safety belts are buckled.

- The following MyKey® features are configurable with an administrator key:
  - Emergency Assist: If the administrator has selected "Always On" in the MyKey® menu, Emergency Assist is enabled and cannot be disabled.
  - Do Not Disturb: If the administrator has selected "Always On" in the MyKey® menu, the Do Not Disturb feature is enabled and cannot be disabled.
  - Speed Compensated Volume: If the administrator has enabled the Volume Limiter feature, the speed compensated volume feature will be disabled.
  - Speed Limiter: If the administrator has enabled the Speed Limiter feature, the audio volume level is temporarily reduced so the top speed alert chime can be heard when the preselected top vehicle speed is reached.
  - Speed Minder: If the administrator has enabled the Speed Minder feature, the audio volume level is temporarily reduced so the speed alert chime can be heard when the preselected Speed Minder vehicle speed is exceeded.
  - Volume Limiter: If the administrator has enabled the Volume Limiter feature, the audio system volume is limited to 45%. In an attempt to exceed the limited volume, “MyKey® VOLUME LIMITED” is displayed in the information display.

For more information, refer to “MyKey®” in the Owner's Literature.

Speed Compensated Volume

The ACM compensates for wind and road noise by adjusting the audio system volume based on the Vehicle Speed Sensor signal and customer-defined setting.

When a MyKey® is in use and the MyKey® Volume Limiter is enabled, the speed compensated volume is disabled.

Steering Wheel Switch Functions

The RH 9-way steering wheel switch operates the seek +/-, volume +/-, audio mode, send/receive call, end call, mute, and voice functions.

SYNC® AppLink™

SYNC® AppLink™ allows the customer to control smartphone Applications by using voice commands and in-vehicle controls. Data is transferred from the customer’s device to the APIM through Bluetooth, or through the USB port with Apple® devices.

For more information, refer to “AppLink” in the Owner's Literature.

SYNC® System

The SYNC® system is a hands-free communication and entertainment system that supports many features. All features are not available with every phone/device.

The SYNC® system provides the following abilities:

- Connect media devices in order to play audio files
- Control the entertainment system using voice commands
- Initiate an emergency assistance call when the airbags deploy (for more information, refer to “Emergency Assistance” in the Owner's Literature).
- Play media files via a paired Bluetooth-enabled audio device
- Send and receive phone calls via a paired Bluetooth-enabled phone
- Send and receive text messages via a paired Bluetooth-enabled phone

USB Mode

When a portable media device, such as an iPod® with its available cable or portable mass storage such as a USB thumb drive, is connected to the vehicle audio system through the USB port, audio from the device can be played through the vehicle speakers. Functions such as volume, seek, fast forward, pause, etc. can be controlled with the vehicle’s audio controls.

When playing media files stored on a mass storage device such as a flash drive, the SYNC® system only plays files that do not have DRM protection.

In addition to audio information (track length, track number, etc.), metadata (information such as artist, album title, song title, and genre) may also be sent to the APIM from a device connected to the USB port. The APIM uses the metadata to create indexes that can be used to sort for particular music based on the customer’s preferences. Not all USB devices can send metadata to the APIM. When a new media device is connected to the SYNC® system, the APIM automatically indexes the information. This may take several minutes depending on the amount of data on the device, and is considered normal operation. When a device that was previously connected to the SYNC® system is reconnected, the APIM updates the index rather than creating a new one. This reduces the time needed to index the device.

Voice Recognition

Voice recognition allows certain phone and audio system functions to be controlled with voice commands to reduce or eliminate the need to interact with the centerstack infotainment display and/or device while driving.

When the voice steering wheel switch is pressed, an audible prompt originating from the APIM is heard from the speakers. Based on the customer’s setting, audible prompts will either be a voice or a simple tone. When interaction mode is set to standard, detailed voice guidance is provided. When interaction mode is set to advanced, most prompts are tones only, and minimal voice guidance is provided. The microphone receives the voice commands and sends them to the APIM. For more information, refer to “voice recognition” in the Owner's Literature.

Component Description

ACM

The ACM can be operated with the ignition in RUN, ACC, or OFF.

The ACM receives radio waves containing audio from the antenna coaxial cable(s) and converts them into fluctuating AC voltage. The ACM receives stereo and mono audio signals from the APIM in the form of fluctuating AC voltage. The ACM processes all inputs, and depending on the input received, sends stereo or mono analog audio signals to the speakers as fluctuating AC voltage.

The ACM requires PMI when it is replaced.

Antenna

The AM/ FM radio uses the roof-mounted combination AM/ FM antenna to receive analog radio waves. The radio waves are sent through the AM/ FM antenna coaxial cable to the ACM, where they are amplified. A second FM 2 foil antenna is mounted under the splash shield next to the bumper for diversity functionality.

APIM

The APIM can be operated with the ignition in RUN, ACC, or OFF.

The APIM receives stereo and mono inputs. Stereo inputs include audio from the USB port, audio input jack, and connected Bluetooth media device. Mono inputs include audio from the outside device during a phone call and inputs from the SYNC® microphone.

The APIM sends stereo and mono audio signals to the ACM as fluctuating AC voltage. Stereo outputs include audio from the USB port, audio input jack, and connected Bluetooth media device. Mono outputs include audio from the TTS feature, incoming call ringtone, ringback tone, outside device during a phone call, voice or tone prompts initiated from the steering wheel switches and infotainment centerstack, and SYNC® system instructions.

The TTS setting allows the customer to hear incoming caller information and incoming text messages through the audio system speakers so it does not have to be read from the centerstack infotainment display and/or device while driving.

The APIM consists of two internal modules: the CIP and the VIP. The modules are not replaceable individually, but can be programmed independently if required.

The CIP interfaces with all of the customer inputs to the APIM. It contains an analog-to-digital-to-analog converter, as well as the Bluetooth chipset.

The VIP provides an interface between the CIP and the vehicle inputs. Its main functions are controlling the APIM power management and translating inbound and outbound CAN signals.

The APIM requires programming when it is replaced.

Audio Input Jack

The audio input jack can be used to play audio files from an audio device connected through the 1/8-inch (3.5 mm) audio jack.

Audio signals are sent from the audio input jack to the APIM.

There are no power or ground circuits to the audio input jack.

FCDIM

The FCDIM can be operated with the ignition in RUN, ACC, or OFF.

The FCDIM displays infotainment data received from various modules over the CAN. If the FCDIM loses the signal from any of these modules, only those specific displays will be inoperative. For more information,
Refer to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

The FCDIM requires PMI when replaced.

FCIM

The FCIM audio functions can be operated with the ignition in RUN, ACC, or OFF.

The FCIM audio system buttons provide one of the methods with which the customer interacts with the infotainment system.

The FCIM is separate from the ACM.

The FCIM requires PMI when replaced.

GPSM

The GPSM provides vehicle location information for identifying the vehicle location in the event of a collision.

The GPSM requires PMI when it is replaced.

Media Hub

The media hub allows for various audio and video devices to play content through the vehicle speakers and to be viewed on the FDIM. The media hub contains:

- 1 USB port
  - Data is sent from the USB ports to the APIM through the USB cable.
  - Although there is one USB port and cable connecting the media hub to the APIM.
  - The USB port is powered through circuits from the APIM, and can be used to power and/or charge a device if the device supports this feature. If the device does not support this feature, an external power source is needed in order to power the device.
- 1 set of component RCA jacks (left audio, right audio, video)
  - The media hub contains an internal composite audio/video translator connected to the external RCA jacks, which outputs video and audio signals to the APIM through shielded audio and video circuits.

Noise Suppression Equipment

The radio frequency suppression equipment reduces interference transmitted through the speakers by the engine, ignition, and electrical systems. When installing any new radio suppression equipment components, make sure that a good contact is made at all connections. (Not applicable on vehicles with diesel engines).

Steering Wheel Switches

The RH steering wheel switches contain series of resistors. Each steering wheel switch function corresponds with a specific resistance value within the switch.

The SCCM sends a 5-volt reference voltage to the RH steering wheel switches on the input circuit. When a switch is pressed, the voltage is routed through the corresponding resistor(s), through the return circuit to ground through the SCCM. The SCCM monitors the voltage drop to determine which switch was pressed. The voltage drop varies depending upon the resistance of the specific switch pressed.

The left, right, up, down, and OK steering wheel switch inputs are sent as network messages from the SCCM to the FCDIM to control the infotainment display.

The seek +/-, audio mode, mute, and volume +/- steering wheel switch inputs are sent as network messages from the CCM to the ACM to control audio functions.

The voice, send/receive call, and end call steering wheel switch inputs are sent as network messages from the SCCM to the APIM to control SYNC® functions.

SYNC® Microphone

The SYNC® microphone receives SYNC® system voice commands and outgoing audio during a phone call. The monitored sounds are converted into analog signals by the microphone and sent to the APIM.

USB Port/Cables

Data is sent from the USB port to the APIM through the USB cable.

The USB port is part of the USB cable, and cannot be replaced separately.

The USB port is powered through the USB cable by the APIM and can be used to power and/or charge a device if the device supports this feature. If the device does not support this feature, an external power source is needed in order to power the device.

Information and Entertainment System

For a SYNC®-related concern, refer to the SYNC® Symptom Chart before connecting the scan tool and beginning DTC-based diagnostics.

DTC Chart: ACM

DTC	Description	Action
B1142:27	Ignition Status 1: Signal Rate of Change Above Threshold	GO to Pinpoint Test E
B1A01:01	Speaker #1: General Electrical Failure	• For a LHF door speaker concern, GO to Pinpoint Test F • For a LHF door tweeter speaker concern, GO to Pinpoint Test G
B1A01:11	Speaker #1: Circuit Short To Ground	• For a LHF door speaker concern, GO to Pinpoint Test F • For a LHF door tweeter speaker concern, GO to Pinpoint Test G
B1A01:12	Speaker #1: Circuit Short To Battery	• For a LHF door speaker concern, GO to Pinpoint Test F • For a LHF door tweeter speaker concern, GO to Pinpoint Test G
B1A01:13	Speaker #1: Circuit Open	GO to Pinpoint Test F
B1A02:01	Speaker #2: General Electrical Failure	• For a RHF door speaker concern, GO to Pinpoint Test H • For a RHF door tweeter speaker concern, GO to Pinpoint Test I
B1A02:11	Speaker #2: Circuit Short To Ground	• For a RHF door speaker concern, GO to Pinpoint Test H • For a RHF door tweeter speaker concern, GO to Pinpoint Test I
B1A02:12	Speaker #2: Circuit Short To Battery	• For a RHF door speaker concern, GO to Pinpoint Test H • For a RHF door tweeter speaker concern, GO to Pinpoint Test I
B1A02:13	Speaker #2: Circuit Open	GO to Pinpoint Test H
B1A03:01	Speaker #3: General Electrical Failure	GO to Pinpoint Test J
B1A03:11	Speaker #3: Circuit Short To Ground	GO to Pinpoint Test J
B1A03:12	Speaker #3: Circuit Short To Battery	GO to Pinpoint Test J
B1A03:13	Speaker #3: Circuit Open	GO to Pinpoint Test J
B1A04:01	Speaker #4: General Electrical Failure	GO to Pinpoint Test K
B1A04:11	Speaker #4: Circuit Short To Ground	GO to Pinpoint Test K
B1A04:12	Speaker #4: Circuit Short To Battery	GO to Pinpoint Test K
B1A04:13	Speaker #4: Circuit Open	GO to Pinpoint Test K
B1A56:21	Antenna: Signal Amplitude <	If DTC B1A56:21 sets after running the bezel diagnostic tests, DISREGARD this DTC. This test is used for end of line or repair bay testing at the assembly plant.

	Minimum	Each plant has its own assigned frequency and signal strength requirements. The running and passing of this test depends on local radio stations. If no local station is broadcasting on the required frequency, the test will fail.
B1D19:49	Compact Disc Unit: Internal Electronic Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC B1D19:49 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
B1D19:4B	Compact Disc Unit: Over Temperature	The ACM was over temperature. This may occur during extended use. Audio operation can resume after the ACM cools. CLEAR the DTC.
B1D55:11	Antenna #2 Circuit Short To Ground	GO to Pinpoint Test A
B1D55:15	Antenna #2 Circuit Short To Battery Or Open	GO to Pinpoint Test A
U0100:00	Lost Communication With ECM/PCM "A": No Sub Type Information	GO to Pinpoint Test V
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test W
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test Y
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	GO to Pinpoint Test AC
U0256:00	Lost Communication With Front Controls Interface Module “A”: No Sub Type Information	GO to Pinpoint Test AD
U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	GO to Pinpoint Test AE
U201A:51	Control Module Main Calibration Data: Not Programmed	This DTC sets due to an incorrect or incomplete ACM configuration. Using a diagnostic scan tool, PERFORM the ACM programming procedure using as-built data. For information on as-built data.
U2100:00	Initial Configuration Not Complete: No Sub Type Information	This DTC sets due to an incorrect or incomplete ACM configuration. Using a diagnostic scan tool, PERFORM the ACM programming procedure using as-built data. For information on as-built data.
U2101:00	Control Module	This DTC sets due to an incorrect or incomplete ACM configuration. Using a

	Configuration Incompatible: No Sub Type Information	diagnostic scan tool, PERFORM the ACM programming procedure using as-built data. For information on as-built data.
U3000:41	Control Module: General Checksum Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3000:42	Control Module: General Memory Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:42 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3000:96	Control Module: Component Internal Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:96 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AF
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test AG

DTC Chart: APIM

DTC	Description	Action
B1252:04	USB Port: System Internal Failure	GO to Pinpoint Test Q
B1252:11	USB Port: Circuit Short To Ground	GO to Pinpoint Test Q
B1D79:01	Microphone Input: General Electrical Failure	GO to Pinpoint Test O
B1D79:11	Microphone Input: Circuit Short To Ground	GO to Pinpoint Test O
B1D79:12	Microphone Input: Circuit Short To Battery	GO to Pinpoint Test O

U0155:00	Lost Communication With Instrument Panel Cluster (IPC)	GO to Pinpoint Test Y

	Control Module: No Sub Type Information	
U016A:00	Lost Communication With Global Positioning System Module: No Sub Type Information	GO to Pinpoint Test AA
U0184:00	Lost Communication With Radio: No Sub Type Information	GO to Pinpoint Test AB
U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	GO to Pinpoint Test AE
U0422:00	Invalid Data Received from Body Control Module: No Sub Type Information	• RETRIEVE and FOLLOW Diagnostic Trouble Codes (DTCs) present in the BCM. REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing). • If no Diagnostic Trouble Codes (DTCs) are present in the BCM, DIAGNOSE the observable symptom.
U0423:00	Invalid Data Received From Instrument Panel Cluster Control Module: No Sub Type Information	• RETRIEVE and FOLLOW Diagnostic Trouble Codes (DTCs) present in the IPC. REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing). • If no Diagnostic Trouble Codes (DTCs) are present in the IPC, DIAGNOSE the observable symptom.
U0452:00	Invalid Data Received From Restraints Control Module: No Sub Type Information	• RETRIEVE and FOLLOW Diagnostic Trouble Codes (DTCs) present in the RCM. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing). • If no Diagnostic Trouble Codes (DTCs) are present in the RCM, DIAGNOSE the observable symptom.
U2100:00	Initial Configuration Not Complete: No Sub Type Information	This DTC sets due to an incorrect or incomplete APIM programming/provisioning. Using a diagnostic scan tool, PERFORM the APIM programming procedure. REFER to: SYNC Module [APIM] Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	This DTC sets due to an incorrect or incomplete APIM programming/provisioning. Using a diagnostic scan tool, PERFORM the APIM programming procedure. REFER to: SYNC Module [APIM] Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
U3000:04	Control Module: System Internal Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:04 is retrieved again, INSTALL a new APIM. PERFORM the APIM programming procedure. REFER to: SYNC Module [APIM] Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
U3000:41	Control Module: General Checksum Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, INSTALL a new APIM. PERFORM the APIM programming procedure.

		REFER to: SYNC Module [APIM] Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
U3000:42	Control Module: General Memory Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:42 is retrieved again, INSTALL a new APIM. PERFORM the APIM programming procedure. REFER to: SYNC Module [APIM] Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
U3000:88	Control Module: Bus Off	**NOTE:** *The module was unable to communicate on the network at a point in time. The fault is not currently present since the module had to communicate with the diagnostic scan tool to report this DTC.* **To avoid repeat network concerns:** • INSPECT for damaged or corroded wiring at the APIM. • CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the network test with the diagnostic scan tool.
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AF
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test AG

DTC Chart: FCDIM

DTC	Description	Action
C1001:01 (only for vehicles that display the rear video camera image in the FCDIM)	Vision System Camera: General Electrical Failure	REFER to: Parking Aid (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Diagnosis and Testing). See FCDIM DTC Chart.
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test W
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test Y
U0159:00	Lost Communication With Parking Assist Control Module "A": No Sub Type Information	GO to Pinpoint Test Z
U0184:00	Lost Communication With Radio: No Sub Type Information	GO to Pinpoint Test AB
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	GO to Pinpoint Test AC
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	GO to Pinpoint Test AD

U2013:87	Switch Pack: Missing Message	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U2013:87 is retrieved again, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U201A:51	Control Module Main Calibration Data: Not Programmed	This DTC sets due to an incorrect or incomplete FCDIM configuration. Using a diagnostic scan tool, PERFORM the FCDIM programming procedure using as-built data. For information on as-built data.
U2100:00	Initial Configuration Not Complete: No Sub Type Information	This DTC sets due to an incorrect or incomplete FCDIM configuration. Using a diagnostic scan tool, PERFORM the FCDIM programming procedure using as-built data.
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	This DTC sets due to an incorrect or incomplete FCDIM configuration. Using a diagnostic scan tool, PERFORM the FCDIM programming procedure using as-built data.
U3000:41	Control Module: General Checksum Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3000:42	Control Module: General Memory Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:42 is retrieved again, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AF

Symptom Chart: General Audio System

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals, or connectors • Module	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
The RH steering wheel switches are inoperative or do not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test S
The CD player is inoperative or does not operate correctly	Refer to the Pinpoint Test	• INSPECT the CD for scratches, fingerprints, a loose paper label, incorrect format, or damage. INSERT a known good CD and TEST the system. – If the system operates correctly, the concern was caused by a damaged CD. – If the system does not operate correctly, INSTALL a new ACM . REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
The speed compensated volume does not operate correctly	Refer to the Pinpoint Test	GO to Pinpoint Test B
The audio system does not operate correctly from the FCIM	Refer to the Pinpoint Test	GO to Pinpoint Test T
The FCIM illumination is inoperative or does not dim	• Illumination system concern • FCIM	REFER to: Instrument Panel and Interior Switches Illumination (413-00 Instrument Panel and Interior Switches Illumination, Diagnosis and Testing).
The FCDIM is inoperative or does not operate	Refer to the Pinpoint Test	GO to Pinpoint Test U

correctly		
The FCDIM illumination is inoperative or does not dim	• Illumination system concern • FCIM	REFER to: Instrument Panel and Interior Switches Illumination (413-00 Instrument Panel and Interior Switches Illumination, Diagnosis and Testing).

Symptom Chart: Sound Quality

Condition	Possible Sources	Actions
Poor reception - AM/ FM	Refer to the Pinpoint Test	GO to Pinpoint Test A
Continuous seek or scan - AM/ FM	Refer to the Pinpoint Test	GO to Pinpoint Test A
A loud popping sound is heard when cycling the ignition	Refer to the Pinpoint Test	GO to Pinpoint Test C
Poor sound quality or distorted sound from one or more speakers (not all speakers)	Refer to the Pinpoint Test	GO to Pinpoint Test D
No sound from all speakers	Refer to the Pinpoint Test	GO to Pinpoint Test E
The LF door midwoofer speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test F
The LF door tweeter speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test G
The RF door tweeter speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test H
The RF door midwoofer speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test I
The RR door full-range speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test J
The LR door full-range speaker is inoperative	Refer to the Pinpoint Test	GO to Pinpoint Test K

Symptom Chart: SYNC® System

Condition	Possible Sources	Actions
The SYNC® system is inoperative (no response is received from phone, voice, and media inputs)	Refer to the Pinpoint Test	GO to Pinpoint Test L
All APIM stereo outputs are inoperative or do not operate correctly. Refer to the Owners Literature for additional information.	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). If the concern is still present, GO to Pinpoint Test M
All APIM mono outputs are inoperative or do not operate correctly. Refer to the Owners Literature for additional information.	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). If the concern is still present, GO to Pinpoint Test N
Voice recognition is	Refer to the	PERFORM the APIM Reset.

inoperative or does not operate correctly	Pinpoint Test	REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). Check phone and perform a full power cycle, OFF then ON. Confirm voice quality performance. Delete all previously paired phones on the phone and pair the phone again to the SYNC. Check voice quality performance. Check phone is listed on the phone compatibility list. REPEAT with known phone from the phone compatibility list and confirm voice quality performance. If the concern is still present, GO to Pinpoint Test O
During a phone call, no outgoing audio is heard on the outside device	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). If the concern is still present, GO to Pinpoint Test O
The SYNC® steering wheel switches are inoperative or do not operate correctly	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). If the concern is still present, GO to Pinpoint Test S
The audio input jack is inoperative or does not operate correctly	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). If the concern is still present, GO to Pinpoint Test P
The USB port is inoperative or does not operate correctly	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). If the concern is still present, GO to Pinpoint Test Q
Unable to pair Bluetooth device	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). If the concern is still present, GO to Pinpoint Test R
An individual Bluetooth device feature is inoperative (text messaging, media playback or controls, phone book download, call history, or call waiting)	Customer's device compatibility	• PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). • INSTRUCT the customer to review the device compatibility list. REFER to www.syncmyride.com. It is normal operation for unsupported or incompatible Bluetooth features to be unavailable through the SYNC® system. • If the inoperative feature is compatible, ADVISE the customer to check their device for firmware updates, and if required, reset their device following the manufacturer's instructions.
SYNC® AppLink™ is inoperative or does not operate correctly	Customer's device compatibility	• PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). • If the concern is still present, INSTRUCT the customer to review the mobile device platform, application, and application version compatibility list. REFER to www.syncmyride.com. It is normal operation for incompatible mobile device platforms, applications, and application versions to be unavailable through SYNC® AppLink™. • If the mobile device platform, application, and application version

		are compatible, and the device is connected through Bluetooth only, GO to Pinpoint Test R • If the mobile device platform, application, and application version are compatible, and the device is connected through Bluetooth and the USB port, GO to Pinpoint Test Q

Pinpoint Tests

Poor Reception Or Continuous Seek Or Scan - AM/ FM

Refer to Wiring Diagrams Cell 131 for schematic and connector information.

Refer to Wiring Diagrams Cell 12 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D55:11	Antenna #2: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the FM2 antenna coaxial cable for more than 1 second.
B1D55:15	Antenna #2: Circuit Short To Battery or Open	Set by the ACM when a short to voltage or open is detected on the FM2 antenna coaxial cable for more than 1 second.

Possible Sources

- No channel found in the selected RDS category
- Noise suppression equipment
- Charging system
- Wiring, terminals, or connectors
- Ignition system
- FM2 antenna
- AM/ FM1 antenna coaxial cable
- FM2 antenna coaxial cable
- AM/ FM1 antenna
- Mounting surface corrosion
- FM2 diversity antenna amplifier
- ACM

PINPOINT TEST A : POOR RECEPTION OR CONTINUOUS SEEK OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION)

A1 CHECK THE AUDIO SYSTEM RECEPTION WITH THE ENGINE RUNNING

- Operate the audio system in AM/ FM mode.
- Check the reception with the engine running, and with the engine off.

Is poor reception only present with the engine running?

Yes	GO to A2
No	GO to A4

A2 CHECK THE GENERATOR

- Ignition OFF.
- **NOTICE: Do not allow the generator B+ cable terminal to make contact with a conductive surface. Failure to follow this instruction may result in personal injury or damage to the vehicle.**
- Disconnect Generator B+ Cable C102C.
- Start the engine.
- Operate the audio system in AM/ FM mode.

Is the reception OK?

Yes	INSTALL a new generator. REFER to: Generator - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-02 Generator and Regulator, Removal and Installation). REFER to: Generator - 2.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation). REFER to: Generator - 3.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation).
No	GO to A3

A3 CHECK THE IGNITION CIRCUITS

- Ignition OFF.
- Connect Generator B+ Cable C102C.
- Inspect all the wiring harnesses and connectors for damaged insulation and loose or broken conditions.

Are the ignition components OK?

Yes	USE a jumper cable to temporarily ground various parts of the vehicle (examples include: engine, fenders, quarter panels, body sheet metal) to the frame. When the noise is eliminated, PROVIDE a permanent ground where necessary.
No	REPAIR or REPLACE the harness or components as necessary.

A4 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA ENABLE CIRCUIT FOR CORRECT VOLTAGE

- Ignition OFF.
- Disconnect Antenna C9021.
- Ignition ON.
- Operate the audio system in AM/ FM mode.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9021-2		Ground

Is the voltage greater than 11 volts?

Yes	GO to A7
No	GO to A5

A5 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA ENABLE CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect ACM C240A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9021-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A6
No	REPAIR the circuit.

A6 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA ENABLE CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9021-2	Ω	C240A-2

Is the resistance less than 3 ohms?

Yes	GO to A22
No	REPAIR the circuit.

A7 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 AND FM (FREQUENCY MODULATION) 2 ANTENNA COAXIAL CABLE CORES AND SHIELDS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: AM/ FM1 antenna coaxial cable at the ACM.
  REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
- Disconnect: FM2 antenna coaxial cable at the ACM.
  REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
- Disconnect: AM/ FM1 antenna coaxial cable at the antenna.
  REFER to: Audio Unit Antenna Cable (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .
- Disconnect: FM2 antenna inline coaxial cable at the antenna.
  REFER to: Audio Unit Antenna Cable (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	V	Ground
AM/ FM1 antenna coaxial cable shield at the ACM	V	Ground
FM2 antenna coaxial cable core at the ACM	V	Ground

FM2 antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	REPAIR, or INSTALL a new front AM/ FM1 or FM2 antenna coaxial cable. REFER to: Audio Unit Antenna Cable (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .
No	GO to A8

A8 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 AND FM (FREQUENCY MODULATION) 2 ANTENNA COAXIAL CABLE CORES FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	Ω	Ground
FM2 antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A9
No	REPAIR, or INSTALL a new front AM/ FM1 or FM2 antenna coaxial cable. REFER to: Audio Unit Antenna Cable (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .

A9 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 AND FM (FREQUENCY MODULATION) 2 ANTENNA COAXIAL CABLE CORES AND SHIELDS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	Ω	AM/ FM1 antenna connection
AM/ FM1 antenna coaxial cable shield at the ACM	Ω	AM/ FM1 antenna connection
FM2 antenna coaxial cable core at the ACM	Ω	FM2 antenna connection
FM2antenna coaxial cable shield at the ACM	Ω	FM2 antenna connection

Are the resistances less than 1 ohm?

Yes	GO to A10
No	REPAIR, or INSTALL a new front AM/ FM1 or FM2 antenna coaxial cable. REFER to: Audio Unit Antenna Cable (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .

A10 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 AND FM (FREQUENCY MODULATION) 2 ANTENNA COAXIAL CABLE CORES AND SHIELDS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	Ω	AM/ FM1 antenna coaxial cable shield at the ACM
FM2 antenna coaxial cable core at the ACM	Ω	FM2 antenna coaxial cable shield at the ACM

Is the resistance greater than 10,000 ohms?

Yes	GO to A11
No	REPAIR, or INSTALL a new front AM/ FM1 or FM2 antenna coaxial cable. REFER to: Audio Unit Antenna Cable (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .

A11 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA UNIT CORE AND SHIELD FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: AM/ FM1 antenna coaxial cable at the antenna unit.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM		Ground
AM/ FM1 antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	INSTALL a new AM/ FM1 antenna. REFER to: Audio Unit Antenna (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .
No	GO to A12

A12 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA UNIT CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A13
No	INSTALL a new AM/ FM1 antenna.

	REFER to: Audio Unit Antenna (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .

A13 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	Ω	AM/ FM1 antenna coaxial cable shield at the ACM

Is the resistance greater than 10,000 ohms?

Yes	GO to A14
No	INSTALL a new AM/ FM1 antenna. REFER to: Audio Unit Antenna (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .

A14 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable shield at the ACM	Ω	Ground

Is the resistance less than 1 ohm?

Yes	GO to A16
No	GO to A15

A15 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

- Remove the AM/ FM1 antenna unit.
  REFER to: Audio Unit Antenna (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna unit shield at the antenna unit (component side)	Ω	AM/ FM1 antenna base (unpainted surface)

Is the resistance less than 1 ohm?

Yes	INSPECT and REPAIR any corrosion on the antenna unit base and/or vehicle mounting surface. REINSTALL the antenna and ensure the proper torque value is achieved.

	REFER to: Audio Unit Antenna (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .
No	INSTALL a new AM/ FM1 antenna. REFER to: Audio Unit Antenna (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .

A16 CHECK THE FM (FREQUENCY MODULATION) 2 DIVERSITY ANTENNA AMPLIFIER CORE AND SHIELD FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: FM2 antenna coaxial cable at the FM2 Diversity Antenna Amplifier.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
FM2 antenna coaxial cable core at the ACM		Ground
FM2 antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	INSTALL a new FM2 diversity antenna amplifier. REFER to: Audio Unit Antenna (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .
No	GO to A17

A17 CHECK THE FM (FREQUENCY MODULATION) 2 DIVERSITY ANTENNA AMPLIFIER CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
FM2 antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A18
No	INSTALL a new FM2 diversity antenna amplifier. REFER to: Audio Unit Antenna (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .

A18 CHECK THE FM (FREQUENCY MODULATION) 2 DIVERSITY ANTENNA AMPLIFIER CORE AND SHIELD FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
FM2 antenna coaxial cable core at the ACM	Ω	FM2 antenna coaxial cable shield at the ACM

Is the resistance greater than 10,000 ohms?

Yes	GO to A19
No	INSTALL a new FM2 diversity antenna amplifier. REFER to: Audio Unit Antenna (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .

A19 CHECK THE FM (FREQUENCY MODULATION) 2 DIVERSITY ANTENNA AMPLIFIER SHIELD FOR CONTINUITY TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
FM2 antenna coaxial cable shield at the ACM	Ω	Ground

Is the resistance less than 1 ohm?

Yes	GO to A21
No	GO to A20

A20 CHECK THE FM (FREQUENCY MODULATION) 2 DIVERSITY ANTENNA AMPLIFIER SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

- Remove the FM2 diversity antenna amplifier.
  REFER to: Audio Unit Antenna (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .
- Measure:

Positive Lead	Measurement / Action	Negative Lead
FM2 antenna shield at the FM2 diversity antenna amplifier (component side)	Ω	FM2 diversity antenna amplifier base (unpainted surface on the mounting tab)

Is the resistance less than 1 ohm?

Yes	INSPECT and REPAIR any corrosion on theFM2 diversity antenna amplifier base and/or vehicle mounting surface. REINSTALL the FM2 diversity antenna amplifier and ensure the proper torque value is achieved. REFER to: Audio Unit Antenna (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .
No	INSTALL a new FM2 diversity antenna amplifier. REFER to: Audio Unit Antenna (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .

A21 CHECK THE FM (FREQUENCY MODULATION) 2 ANTENNA COMPONENTS

- Disconnect and inspect the FM2 diversity antenna amplifier connector for the FM2 antenna circuits.
  REFER to: Audio Unit Antenna (415-00A) .
- Inspect the FM2 antenna circuits and connectors.

Is any damage present on the FM2 antenna circuits or connections?

Yes	REPAIR or REPLACE as necessary.
No	GO to A22

A22 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Speed Compensated Volume Does Not Operate Correctly

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

Possible Sources

- Speed compensated volume setting
- ACM

PINPOINT TEST B : THE SPEED COMPENSATED VOLUME DOES NOT OPERATE CORRECTLY

B1 CHECK THE SPEEDOMETER OPERATION

- Drive the vehicle and observe the speedometer.

Does the speedometer operate correctly?

Yes	GO to B2
No	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).

B2 CHECK THE SPEED COMPENSATED VOLUME SETTING

- Turn the speed compensated volume off. Refer to the Owner's Literature.
- Operate the audio system in AM/ FM mode.
- Drive the vehicle at various speeds and observe the speaker volume.
- Set the speed compensated volume to maximum compensation. Refer to the Owner's Literature.

- Operate the audio system in AM/ FM mode.
- Drive the vehicle at various speeds and observe the speaker volume.

Does the volume remain constant with the speed compensated volume turned off, and increase and decrease with vehicle speed with the speed compensated volume set to maximum?

Yes	The system is operating correctly at this time. INSTRUCT the customer in the correct usage of the speed compensated volume feature.
No	GO to B3

B3 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155:00 retrieved in any audio system module?

Yes	GO to Pinpoint Test Y
No	GO to B4

B4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A Loud Popping Sound Is Heard When Cycling The Ignition

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Refer to Wiring Diagrams Cell 20 for schematic and connector information.

Normal Operation and Fault Conditions

The ACM receives voltage on a start signal circuit when the ignition is in the START position, and mutes the audio signal output. This prevents voltage spikes from producing popping noises through the speakers.

Possible Sources

- Wiring, terminals, or connectors
- ACM

PINPOINT TEST C : A LOUD POPPING SOUND IS HEARD WHEN CYCLING THE IGNITION

C1 CHECK THE START SENSE CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect ACM C4821A.
- Disconnect BJB C1035D.
- Disconnect PCM C1232C 2.2L Engine .
- Disconnect PCM C175B 2.5L Engine .
- Disconnect PCM C1232C 3.2L Engine .
- Measure:

2.2L Duratorq

Positive Lead	Measurement / Action	Negative Lead
C4821A-3	Ω	C1035D-13
C4821A-3	Ω	C1232C-37

2.5L Duratec

Positive Lead	Measurement / Action	Negative Lead
C4821A-3	Ω	C1035D-13
C4821A-3	Ω	C175A-37

3.2L Duratorq

Positive Lead	Measurement / Action	Negative Lead
C4821A-3	Ω	C1035D-13
C4821A-3	Ω	C1232C-37

Are the resistances less than 3 ohms?

Yes	GO to C2
No	REPAIR the circuit.

C2 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment

	System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Poor Sound Quality Or Distorted Sound From One Or More Speakers (Not All Speakers)

Normal Operation and Fault Conditions

The ACM sends audio signals to the speakers in the form of AC voltage, resulting in clear audio output.

Possible Sources

- Loose component fasteners
- Loose door handle, lock, and other trim panel components and fasteners
- Loose items in storage areas
- Loose speaker grilles
- Loose wire harnesses or wire harness fasteners
- Speaker(s)
- Water shield bonding and placement

Visual Inspection and Diagnostic Pre-checks

Inspect the suspect area for any possible rattle conditions such as:

- Any storage compartments including cup holders (if equipped)
- Door map pockets for contents that can rattle (if equipped)
- Door pull cup attachments (if equipped)
- Door switch bezels (if equipped)
- Package tray (if equipped)
- Speaker grilles (if equipped)
- Trim panels and fasteners

PINPOINT TEST D : POOR SOUND QUALITY OR DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS)

D1 ISOLATE THE ZONE

- Operate the audio system using digital media such as a CD or MP3.
- Using the audio system fade and balance feature, adjust the audio sound to each of the four zones (LHF, RHF, LHR, and RHR) of the vehicle to isolate the poor sound quality.
- Locate and apply pressure to the trim panel(s) around the poor sound quality area in question.

Does applying pressure to a trim panel reduce or eliminate the audible noise?

Yes	REPAIR or REPLACE the trim panel as needed.
No	GO to D2

D2 REMOVE AND INSPECT BEHIND/UNDERNEATH THE SUSPECT TRIM PANEL(S)

- Remove the trim panel to access the suspect speaker.
- Operate the audio system using digital media such as a CD or MP3.
- Validate where the poor sound quality area is located.
- Check:
  - All child safety belt anchors (if equipped).
  - All safety belt retractors.
  - All speaker bracket fasteners and other fasteners are secured and tightened to specified torque.
  - Lock and handle mechanical parts for correct attachment.
  - Storage areas for loose items.
  - Trim panel for loose components around the speaker area such as the speaker grille.
  - Trim panel joining components for missing or broken pieces.
  - Water shield for correct bonding to sheet metal.
  - Water shield for correct placement (speaker air path not blocked).
  - Wire harness fasteners for correct attachment.

- Wire harnesses for correct routing.

Was the source of the noise located?

Yes	REPAIR or REPLACE any loose or broken component or fastener as needed.
No	GO to D3

D3 CHECK THE SUSPECT SPEAKER FOR WATER INTRUSION

- Inspect for watermarks.
- Check the:
  - Basket
  - Cone
  - Magnet

Are any watermarks present on the speaker?

Yes	VERIFY the water shield is in the correct location, REPAIR or REPLACE any trim, door, or speaker seal as required. DRY the speaker in question and TEST the system for normal operation.
No	GO to D4

D4 ISOLATE SPEAKER TO VERIFY NOISE

- Remove the suspect speaker from its location and leave the speaker connected to the harness.
- Hold the speaker away from any trim panel(s) and ensure the speaker is isolated from contact.
- Operate the audio system using digital media such as a CD or MP3.

Is the noise still present in the suspect speaker?

Yes	INSTALL a new speaker for the one in question.
No	LOCATE the source of the noise and REPAIR as needed.

No Sound From All Speakers

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Refer to Wiring Diagrams Cell 13 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

To prevent voltage spikes from producing popping noises through the speakers when the ignition is in the START position, the BCM provides an Ignition Status CAN message, and the PCM applies voltage on the ACM start signal circuit. When the CAN message and/or voltage is received by the ACM, the audio signal output is muted. A short to voltage on this circuit causes the ACM output to be muted continuously, and will cause the warning chimes to only sound from the IPC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions

B1142:27	Ignition Status 1: Signal Rate of Change Above Threshold	Set by the ACM when a short to voltage is detected on the start signal circuit.

Possible Sources

- Wiring, terminals, or connectors
- Fuse
- ACM

PINPOINT TEST E : NO SOUND FROM ALL SPEAKERS

E1 VERIFY THE ACM (AUDIO FRONT CONTROL MODULE) PASSES THE NETWORK TEST

- Using a diagnostic scan tool, perform the network test.

Did the ACM pass the network test?

Yes	GO to E2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

E2 CHECK THE START SENSE CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821A.
- Disconnect BJB Starter Relay.
- Disconnect PCM C1232A 2.2L Engine.
- Disconnect PCM C175B 2.5L Engine.
- Disconnect PCM C1232A 3.2L Engine .
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C240A-3		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to E3

E3 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical

	Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The LHF Door Midwoofer Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

The LHF door speaker and LHF door tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A01:01	Speaker #1: General Electrical Failure	Set by the ACM when a failure is detected on the LHF door or LHF door tweeter speaker circuits.
B1A01:11	Speaker #1: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the LHF door or LHF door tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:12	Speaker #1: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the LHF door or LHF door tweeter speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.
B1A01:13	Speaker #1: Circuit Open	Set by the ACM when an open is detected on the LHF door speaker circuits.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

PINPOINT TEST F : THE LHF (LEFT-HAND FRONT) DOOR MIDWOOFER SPEAKER IS INOPERATIVE

F1 CHECK THE AUDIO SIGNAL TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER

- Ignition OFF.
- Disconnect LHF Door Speaker C5003LHD Vehicles .
- Disconnect LHF Door Speaker C6003RHD Vehicles .
- Operate the audio system in AM/ FM mode.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	~	C5003-4

	V	

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1		C6003-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHF door speaker. REFER to: Front Door Speaker LH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to F2

F2 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821A.
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1		Ground
C5003-4		Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1		Ground
C6003-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to F3

F3 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	Ω	Ground
C5003-4	Ω	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	Ω	Ground
C6003-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to F4
No	REPAIR the circuit in question.

F4 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR AN OPEN

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	Ω	C4821A-10
C5003-4	Ω	C4821A-22

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	Ω	C4821A-10
C6003-4	Ω	C4821A-22

Are the resistances less than 3 ohms?

Yes	GO to F5
No	REPAIR the circuit in question.

F5 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR A SHORT TOGETHER

- Measure:

Measure.

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	Ω	C5003-4

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	Ω	C6003-4

Is the resistance greater than 10,000 ohms?

Yes	GO to F6
No	REPAIR the circuit in question.

F6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The LHF Door Tweeter Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

The LHF door speaker and LHF door tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A01:01	Speaker #1: General Electrical Failure	Set by the ACM when a failure is detected on the LHF door or LHF door tweeter speaker circuits.
B1A01:11	Speaker #1: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the LHF door or LHF door tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:12	Speaker #1: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the LHF door or LHF door tweeter speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.

Possible Sources

- Speaker
- Wiring, terminals, or connectors

PINPOINT TEST G : THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER IS INOPERATIVE

G1 CHECK THE LHF (LEFT-HAND FRONT) DOOR SPEAKER

- Ignition OFF.
- Operate the audio system in AM/ FM mode.

Does the LHF door speaker operate correctly?

Yes	GO to G2
No	GO to Pinpoint Test F

G2 CHECK THE AUDIO SIGNAL TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER

- Ignition OFF.
- Disconnect LHF Door Tweeter Speaker C5002LHD Vehicles .
- Disconnect LHF Door Tweeter Speaker C6002RHD Vehicles .
- Operate the audio system in AM/ FM mode.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5002-1	V~	C5002-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6002-1	V~	C6002-3

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHF door tweeter speaker. REFER to: Front Door Tweeter Speaker (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to G3

G3 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect LHF Door Speaker C5003LHD Vehicles .
- Disconnect LHF Door Speaker C6003RHD Vehicles .
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5002-1	V	Ground
C5002-3	V	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6002-1	V	Ground
C6002-3	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to G4

G4 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5002-1	Ω	Ground
C5002-3	Ω	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6002-1	Ω	Ground
C6002-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to G5
No	REPAIR the circuit in question.

G5 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR AN OPEN

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5002-1	Ω	C5003-3
C5002-3	Ω	C5003-2

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6002-1	Ω	C6003-3
C6002-3	Ω	C6003-2

Are the resistances less than 3 ohms?

Yes	GO to G6
No	REPAIR the circuit in question.

G6 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TOGETHER

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5002-1	Ω	C5002-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead

C6002-1	Ω	C6002-3

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new LHF door speaker. REFER to: Front Door Speaker LH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	REPAIR the circuit in question.

The RHF Door Midwoofer Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

The door speaker and door tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A02:01	Speaker #2: General Electrical Failure	Set by the ACM when a failure is detected on the RHF door or RHF door tweeter speaker circuits.
B1A02:11	Speaker #2: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the RHF door or RHF door tweeter speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:12	Speaker #2: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the RHF door or RHF door tweeter speaker circuits. When DTC B1A02:12 is set, the speaker output is disabled.
B1A02:13	Speaker #2: Circuit Open	Set by the ACM when an open is detected on the RHF door speaker circuits.

PINPOINT TEST H : THE RHF (RIGHT-HAND FRONT) DOOR MIDWOOFER SPEAKER IS INOPERATIVE

H1 CHECK THE AUDIO SIGNAL TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER

- Ignition OFF.
- Disconnect RHF Door Speaker C6015LHD Vehicles .
- Disconnect RHF Door Speaker C5015RHD Vehicles .
- Operate the audio system in AM/ FM mode.
- Measure:

LHD Vehicles

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1		C6015-4

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1		C5015-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new RHF door speaker. REFER to: Front Door Speaker LH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to H2

H2 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821A.
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1		Ground
C6015-4		Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1		Ground
C5015-4		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to H3

H3 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A

H3 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1	Ω	Ground
C6015-4	Ω	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	Ω	Ground
C5015-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to H4
No	REPAIR the circuit in question.

H4 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR AN OPEN

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1	Ω	C4821A-23
C6015-4	Ω	C4821A-11

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	Ω	C4821A-23
C5015-4	Ω	C4821A-11

Are the resistances less than 3 ohms?

Yes	GO to H5
No	REPAIR the circuit in question.

H5 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A SHORT TOGETHER

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead

PINPOINT TEST K : THE LHR (LEFT-HAND REAR) DOOR SPEAKER IS INOPERATIVE

K1 CHECK THE AUDIO SIGNAL TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER

- Ignition OFF.
- Disconnect LHR Door Speaker C702.
- Operate the audio system in AM/ FM mode.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	V~	C702-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHR door speaker. REFER to: Front Door Speaker LH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to K2

K2 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	+ V~ −	Ground
C702-4	+ V~ −	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to K3

K3 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	Ω	Ground
C702-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to K4
No	REPAIR the circuit in question.

K4 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	Ω	C4821A-21
C702-4	Ω	C4821A-9

Are the resistances less than 3 ohms?

Yes	GO to K5
No	REPAIR the circuit in question.

K5 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	Ω	C702-4

Is the resistance greater than 10,000 ohms?

Yes	GO to K6
No	REPAIR the circuit in question.

K6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The SYNC® System Is Inoperative (No Response Is Received From Phone, Voice, And Media Inputs)

Refer to Wiring Diagrams Cell 132 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

Possible Sources

- Customer's device
- APIM

PINPOINT TEST L : THE SYNC® SYSTEM IS INOPERATIVE (NO RESPONSE IS RECEIVED FROM PHONE, VOICE, AND MEDIA INPUTS)

L1 VERIFY THE APIM (SYNC MODULE) PASSES THE NETWORK TEST

- Using a diagnostic scan tool, perform the network test.

Did the APIM pass the network test?

Yes	GO to L2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

L2 CHECK THE SYNC® SYSTEM INPUTS FOR FUNCTIONALITY

NOTE: *Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, and deletes any devices paired with the SYNC® system.*

- Connect: Multi-Media Interface Tester 420-373.

- Using the Multi-Media Interface Tester 420-373, test the audio output for the SYNC® audio sources (Bluetooth, USB, audio input jack) using the VOICE steering wheel switch to enter each mode.

Do all of the SYNC® inputs function correctly?

Yes	The SYNC® system is operating correctly at this time. PERFORM a Master Reset. REFER to the Owner's Literature. REVIEW the SYNC® system operation with the customer. If the customer's device still does not operate correctly, the fault is with the customer's device.
No	GO to L3

L3 RESET THE APIM (SYNC MODULE) AND RECHECK SYNC® SYSTEM OPERATION

NOTE: *Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, and deletes any devices paired with the SYNC® system.*

- Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.
- Connect: Multi-Media Interface Tester 420-373.
- Using the Multi-Media Interface Tester 420-373, test the audio output for the SYNC® audio sources (Bluetooth, USB, audio input jack) using the VOICE steering wheel switch to enter each mode.

Do all of the SYNC® inputs function correctly?

Yes	The SYNC® system is operating correctly at this time. PERFORM a Master Reset. REFER to the Owner's Literature. REVIEW the SYNC® system operation with the customer. If the customer's device still does not operate correctly, the fault is with the customer's device.
No	• If there is a concern with one or more, but not all SYNC® audio sources, REFER to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing). • If there is a concern with the VOICE steering wheel switch, GO to Pinpoint Test S • If all inputs are inoperative, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).

All APIM Stereo Outputs Are Inoperative Or Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

Possible Sources

- Customer's device
- Wiring, terminals, or connectors
- APIM
- ACM

PINPOINT TEST M : ALL APIM (SYNC MODULE) STEREO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

M1 VERIFY THE OPERATION OF THE SYNC® SYSTEM AUDIO SOURCES

- Connect: Multi-Media Interface Tester 420-373.
- Using the Multi-Media Interface Tester 420-373, test the audio output for the SYNC® audio sources (Bluetooth, USB ports, and audio input jack).

Is there poor quality, distorted, or no sound from all SYNC® audio sources?

Yes	GO to M2
No	• If there is a concern with one or more, but not all SYNC® audio sources, REFER to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing). • If all SYNC® audio sources operate correctly with the Multi-Media Interface Tester 420-373, the concern is with the customer's device.

M2 CHECK FOR AN AC (ALTERNATING CURRENT) VOLTAGE SIGNAL ON THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE)

NOTICE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

- Play an audio file through the audio system using a SYNC® audio source (Bluetooth, USB ports, or audio input jack).
- While back-probing ACM C4821B, measure the AC voltage.

Positive Lead	Measurement / Action	Negative Lead
C4821B-12	~V	C4821B-25
C4821B-13	~V	C4821B-26

Is a fluctuating AC voltage present?

Yes	GO to M8
No	GO to M3

M3 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821B.
- Disconnect APIM C2383.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-12	+ V −	Ground
C4821B-13	+ V −	Ground
C4821B-25	+ V −	Ground
C4821B-26	+ V −	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to M4

M4 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-12	Ω	Ground
C4821B-13	Ω	Ground
C4821B-25	Ω	Ground
C4821B-26	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to M5
No	REPAIR the circuit in question.

M5 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-12	Ω	C2383-25
C4821B-13	Ω	C2383-23
C4821B-25	Ω	C2383-26
C4821B-26	Ω	C2383-24

Are the resistances less than 3 ohms?

Yes	GO to M6
No	REPAIR the circuit in question.

M6 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-12	Ω	C4821B-13
C4821B-12	Ω	C4821B-25
C4821B-12	Ω	C4821B-26
C4821B-13	Ω	C4821B-25
C4821B-13	Ω	C4821B-26

C4821B-25	Ω	C4821B-26

Are the resistances greater than 10,000 ohms?

Yes	GO to M7
No	REPAIR the circuit in question.

M7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connector.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connector. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

M8 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

All APIM Mono Outputs Are Inoperative Or Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

Possible Sources

- Customer's setting
- Wiring, terminals, or connectors
- APIM
- ACM

PINPOINT TEST N : ALL APIM (SYNC MODULE) MONO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

N1 CHECK THE AUDIBLE PROMPT FUNCTIONALITY

- Operate the audio system in AM/ FM mode.
- Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt.

Does the SYNC® system produce an audible prompt correctly; indicating voice recognition mode has been entered?

Yes	The system is operating correctly at this time. INSTRUCT the customer in the correct operation of the audible prompt feature. REFER to "SYNC® Voice Recognition Feature" in the Owner's Literature.
No	GO to N2

N2 CHECK THE OPERATION OF THE OTHER RH (RIGHT-HAND) STEERING WHEEL SWITCHES

- Operate the audio system in AM/ FM mode.
- Operate the SEEK +/-, VOLUME +/-, AUDIO MODE, SEND/RECEIVE CALL, END CALL, and MUTE steering wheel switches.

Do the SEEK +/-, VOLUME +/-, AUDIO MODE, SEND/RECEIVE CALL, END CALL, and MUTE steering wheel switches operate correctly?

Yes	GO to N3
No	GO to Pinpoint Test S

N3 CHECK FOR AN AC (ALTERNATING CURRENT) VOLTAGE SIGNAL ON THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE)

NOTICE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

- Operate the audio system in AM/ FM mode.
- While back-probing ACM C4821B, measure the AC voltage while repeatedly operating the VOICE steering wheel switch.

Positive Lead	Measurement / Action	Negative Lead
C4821B-8		C4821B-21

Is a fluctuating AC voltage present each time the VOICE steering wheel switch is operated?

Yes	GO to N9
No	GO to N4

N4 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821B.
- Disconnect APIM C2383.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-8	V	Ground
C4821B-21	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to N5

N5 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-8	Ω	Ground
C4821B-21	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to N6
No	REPAIR the circuit in question.

N6 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-8	Ω	C2383-3
C4821B-21	Ω	C2383-4

Are the resistances less than 3 ohms?

Yes	GO to N7
No	REPAIR the circuit in question.

N7 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-8		C4821B-21

Is the resistance greater than 10,000 ohms?

Yes	GO to N8
No	REPAIR the circuit in question.

N8 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

N9 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment

	System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Voice Recognition Is Inoperative Or Does Not Operate Correctly, Or During A Phone Call, Poor Quality Or No Outgoing Audio Is Heard On The Outside Device

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D79:01	Microphone Input: General Electrical Failure	Set by the APIM when a microphone is not detected during the on-demand self-test.
B1D79:11	Microphone Input: Circuit Short To Ground	Set by the APIM when a short to ground is detected on the microphone circuits.
B1D79:12	Microphone Input: Circuit Short To Battery	Set by the APIM when a short to battery voltage is detected on the microphone circuits.
B1D79:13	Microphone Input: Circuit Open	Set by the APIM when an open is detected on the microphone circuits.

Possible Sources

- Wiring, terminals, or connectors
- Insufficiently quiet vehicle
- Microphone
- Inadequate phone reception
- APIM

PINPOINT TEST O : VOICE RECOGNITION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY, OR DURING A PHONE CALL, POOR QUALITY OR NO OUTGOING AUDIO IS HEARD ON THE OUTSIDE DEVICE

O1 CHECK THE AUDIBLE PROMPT FUNCTIONALITY

- Operate the audio system in AM/ FM mode.
- Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt.

Does the SYNC® system produce an audible prompt correctly; indicating voice recognition mode has been entered?

Yes	GO to O3
No	GO to O2

O2 CHECK THE OPERATION OF THE OTHER RH (RIGHT-HAND) STEERING WHEEL SWITCHES

- Operate the audio system in AM/ FM mode.
- Operate the SEEK +/-, VOLUME +/-, AUDIO MODE, SEND/RECEIVE CALL, END CALL, and MUTE

steering wheel switches.

Do the SEEK +/-, VOLUME +/-, AUDIO MODE, SEND/RECEIVE CALL, END CALL, and MUTE steering wheel switches operate correctly?

Yes	GO to Pinpoint Test N
No	GO to Pinpoint Test S

O3 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect APIM C2383.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-16	V	Ground
C2383-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to O4

O4 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect Microphone C9221.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-16	Ω	Ground
C2383-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to O5
No	REPAIR the circuit in question.

O5 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-16	Ω	C9221-1
C2383-4	Ω	C9221-2

Are the resistances less than 3 ohms?

Yes	GO to O6
No	REPAIR the circuit in question.

O6 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-16	Ω	C2383-4

Is the resistance greater than 10,000 ohms?

Yes	GO to O7
No	REPAIR the circuit in question.

O7 ISOLATE THE MICROPHONE

- Connect APIM C2383.
- Install a new microphone.
  REFER to: Microphone (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
- Operate the audio system in AM/ FM mode.
- Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt.
- Speak a command to test the voice recognition for normal operation.

Is the voice recognition functioning correctly?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative microphone.
No	GO to O8

O8 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure they seat and latch correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Audio Input Jack Is Inoperative Or Does Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

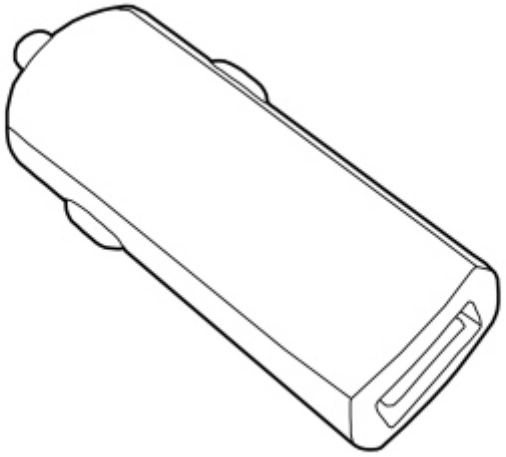
REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

Possible Sources

- Customer's device
- Wiring, terminals, or connectors
- Audio input jack
- APIM

PINPOINT TEST P : THE AUDIO INPUT JACK IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

P1 RESET THE APIM (SYNC MODULE) AND RECHECK SYNC® SYSTEM OPERATION



- Remove any devices connected to the USB port and audio input jack.
- Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.
- Ignition ON.
- Wait at least 2 minutes for the APIM to re-initialize.
- Connect: Multi-Media Interface Tester 420-373.
- Using the Multi-Media Interface Tester 420-373, play an audio file using the audio input jack.

Is the audio output working correctly for the audio input jack?

Yes	The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. If the customer's device still does not operate correctly, the fault is with the customer's device.
No	• If a power point to USB adapter **is** available, GO to P2 • If a power point to USB adapter is **not** available, GO to P3

P2 CHECK FOR AN AC (ALTERNATING CURRENT) VOLTAGE SIGNAL ON THE AUDIO INPUT JACK CIRCUITS TO THE APIM

- Ignition OFF.
- Disconnect APIM C2383.
- Connect: Power point to USB adapter to the instrument panel power point.

E210068

- Connect: Multi-Media Interface Tester 420-373 to the power point to USB adapter.
- Ignition ON.
- Using the Multi-Media Interface Tester 420-373, play an audio file using the audio input jack.
- Measure the AC voltage:

Positive Lead	Measurement / Action	Negative Lead
C2383-45	~V	C2383-46
C2383-47	~V	C2383-46

Is a fluctuating AC voltage present?

Yes	GO to P7
No	GO to P3

P3 CHECK THE AUDIO INPUT JACK CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Audio Input Jack C3077.
- Disconnect APIM C2383.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3077-1	+ V −	Ground
C3077-3	+ V −	Ground
C3077-4	+ V −	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to P4

P4 CHECK THE AUDIO INPUT JACK CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3077-1	Ω	Ground
C3077-3	Ω	Ground
C3077-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to P5
No	REPAIR the circuit in question.

P5 CHECK THE AUDIO INPUT JACK CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3077-1	Ω	C2383-47
C3077-3	Ω	C2383-46
C3077-4	Ω	C2383-45

Are the resistances less than 3 ohms?

Yes	• If a power point to USB adapter **is** available, INSTALL a new audio input jack. REFER to: Media Hub (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) . • If a power point to USB adapter is **not** available, GO to P6
No	REPAIR the circuit in question.

P6 ISOLATE THE AUDIO INPUT JACK

- Connect APIM C2383.
- Install a new audio input jack.
  REFER to: Media Hub (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .
- Connect: Multi-Media Interface Tester 420-373.
- Using the Multi-Media Interface Tester 420-373, attempt to play an audio file using the audio input jack.

Is the audio output working correctly for the audio input jack?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative audio input jack.
No	GO to P7

P7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.

- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The USB Port Is Inoperative Or Does Not Operate Correctly

Refer to Wiring Diagrams Cell 132 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

The Multi-Media Interface Tester 420-373 is powered by the USB port

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1252:04	USB Port: System Internal Failure	Set by the APIM when an over-temperature condition is detected on the USB cable. This can be caused by a fault on the USB cable/ port, or customer's USB device.
B1252:11	USB Port: Circuit Short to Ground	Set by the APIM when a short to ground or over-current condition is detected in the USB cable. This can be caused by a fault in the USB cable/port, or customer's USB device.

Possible Sources

- Customer's device
- USB cable/port
- USB cable/port connection
- APIM

PINPOINT TEST Q : THE USB (UNIVERSAL SERIAL BUS) PORT IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Q1 CHECK THE USB (UNIVERSAL SERIAL BUS) PORT FOR POWER OUTPUT

- Connect: Multi-Media Interface Tester 420-373.

Does the Multi-Media Interface Tester 420-373 power on from the USB port?

Yes	GO to Q2

No	GO to Q3

Q2 RESET THE APIM (SYNC MODULE) AND RECHECK SYNC® SYSTEM OPERATION

- Remove any devices connected to the USB port and audio input jack.
- Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.
- Wait at least 2 minutes for the APIM to re-initialize.
- Connect: Multi-Media Interface Tester 420-373.
- Using the Multi-Media Interface Tester 420-373, attempt to play an audio file using the USB port.

Is the audio output working correctly for the USB port?

Yes	The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. If the customer's device still does not operate correctly, the fault is with the customer's device.
No	GO to Q3

Q3 CHECK THE APIM (SYNC MODULE) FOR DTC (DIAGNOSTIC TROUBLE CODE) B1252:04 OR DTC (DIAGNOSTIC TROUBLE CODE) B1252:11

- Using a diagnostic scan tool, clear the APIM Diagnostic Trouble Codes (DTCs).
- Perform the APIM self-test.

Is DTC B1252:04 or DTC B1252:11 present?

Yes	GO to Q4
No	GO to Q6

Q4 INSPECT THE USB (UNIVERSAL SERIAL BUS) CABLE AND APIM (SYNC MODULE)

- Ignition OFF.
- Disconnect: USB cable at APIM.
  REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
- Inspect the APIM connector port and both ends of the USB cable for damage. Remove any debris.

Is any damage present?

Yes	• For the USB cable, INSTALL a new USB cable/port. • For the APIM, PERFORM the APIM reset. REFER to: Reset the SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, General Procedures).
No	GO to Q5

Q5 CHECK THE USB (UNIVERSAL SERIAL BUS) PORT FOR FUNCTIONALITY

- Connect: USB Cable At APIM.
- Connect: Multi-Media Interface Tester 420-373.
- Using the Multi-Media Interface Tester 420-373, attempt to play an audio file using the USB port.

Is the audio output working correctly for the USB port?

Yes	The system is operating correctly at this time. The concern was caused by the USB connector not being seated correctly.
No	GO to Q6

Q6 ISOLATE THE USB (UNIVERSAL SERIAL BUS) CABLE/PORT

- Install a new USB cable/port.
- Connect: Multi-Media Interface Tester 420-373.
- Using the Multi-Media Interface Tester 420-373, attempt to play a file using the USB port.

Is the audio output working correctly for the USB port?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative USB cable.
No	GO to Q7

Q7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Unable To Pair Bluetooth Device

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

Possible Sources

- Incompatible Bluetooth device
- APIM

PINPOINT TEST R : UNABLE TO PAIR BLUETOOTH DEVICE

R1 CHECK THE BLUETOOTH CONNECTION

NOTE: *Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, erases navigation and address data, deletes any devices paired with the SYNC® system, and deletes any devices paired with the MyLincoln Mobile™ phone application.*

- Connect: Multi-Media Interface Tester 420-373.
- Using the Multi-Media Interface Tester 420-373, connect to the SYNC® system using Bluetooth. Follow the tool instructions.
- Using a diagnostic scan tool, view the APIM Parameter Identifications (PIDs).
- Monitor the Bluetooth device paired PID (BT_PAIR) and the Bluetooth device connected PID (BT_CONN).

Do the Parameter Identifications (PIDs) both read "Yes"?

Yes	The SYNC® system is operating correctly at this time. PERFORM a Master Reset. REFER to the Owner's Literature. REVIEW the pairing process with the customer. If the customer's device still does not pair, the fault is with the customer's device.
No	GO to R2

R2 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The RH Steering Wheel Switches Are Inoperative Or Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1380:09	Steering Wheel Right Switch Pack: Component Failure	Set by the SCCM when the RH steering wheel switch is stuck for more than 2 minutes during normal operation.
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	Set by the SCCM when a short to ground is detected on the RH steering wheel switch circuits.
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	Set by the SCCM when a short to voltage is detected on the RH steering wheel switch circuits.

Possible Sources

- Steering wheel switch

- Wiring, terminals, or connectors
- Clockspring
- SCCM

PINPOINT TEST S : THE RH (RIGHT-HAND) STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

S1 CHECK THE RH (RIGHT-HAND) LOWER STEERING WHEEL SWITCH PARAMETER IDENTIFICATIONS (PIDS)

- Ignition ON.
- Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).
- Monitor the steering wheel switch Parameter Identifications (PIDs) while pressing each RH steering wheel switch.

RH Steering Wheel Switch
- Seek + (SW_SEEKPLUS)
- Seek - (SW_SEEKMINUS)
- Volume + (SW_VOLUP)
- Volume - (SW_VOLDOWN)
- Mode (SW_MODE)
- Send/Receive Call (SW_SEND)
- End Call (SW_END)
- Mute (SW_MUTE)
- Voice (SW_VOICE)

Do the PID values agree with the switch positions?

Yes	GO to S10
No	• If one or more, but not all PID values are incorrect or always read one particular switch position, INSTALL a new RH steering wheel switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation). • If all PID values are incorrect or always read one particular switch position, GO to S2

S2 CHECK FOR IPC (INSTRUMENT PANEL CLUSTER) DTC (DIAGNOSTIC TROUBLE CODE) U0212:00

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) from the IPC.
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U0212:00 set in the IPC?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	GO to S3

S3 CHECK FOR VOLTAGE FROM THE SCCM (STEERING COLUMN CONTROL MODULE)

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Remove the driver airbag.

REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect RH Steering Wheel Switch C2491.
- Disconnect LH Steering Wheel Switch C2490.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-3	V	C2491-5
C2491-4	V	C2491-5
C2491-6	V	C2491-5
C2491-7	V	C2491-5

Is approximately 5 volts present?

Yes	INSTALL a new RH steering wheel switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation).
No	GO to S4

S4 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect Clockspring C218B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-3	Ω	Ground
C2491-4	Ω	Ground
C2491-5	Ω	Ground
C2491-6	Ω	Ground
C2491-7	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to S5
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column) .

S5 CHECK THE STEERING WHEEL HARNESS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-3	Ω	C218B-6
C2491-4	Ω	C218B-7
C2491-5	Ω	C218B-16

C2491-6	Ω	C218B-15
C2491-7	Ω	C218B-14

Are the resistances less than 3 ohms?

Yes	GO to S6
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column) .

S6 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-3	Ω	C2491-4
C2491-3	Ω	C2491-5
C2491-3	Ω	C2491-6
C2491-3	Ω	C2491-7
C2491-4	Ω	C2491-5
C2491-4	Ω	C2491-6
C2491-4	Ω	C2491-7
C2491-5	Ω	C2491-6
C2491-5	Ω	C2491-7
C2491-6	Ω	C2491-7

Are the resistances greater than 10,000 ohms?

Yes	GO to S7
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column) .

S7 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND

- Connect Clockspring C218B.
- Disconnect Clockspring C218C.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-3	Ω	Ground
C2491-4	Ω	Ground
C2491-5	Ω	Ground
C2491-6	Ω	Ground
C2491-7	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to S8
No	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

S8 CHECK THE CLOCKSPRING FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-3	Ω	C218C-5
C2491-4	Ω	C218C-7
C2491-5	Ω	C218C-9
C2491-6	Ω	C218C-10
C2491-7	Ω	C218C-8

Are the resistances less than 3 ohms?

Yes	GO to S9
No	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

S9 CHECK THE CLOCKSPRING FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2491-3	Ω	C2491-4
C2491-3	Ω	C2491-5
C2491-3	Ω	C2491-6
C2491-3	Ω	C2491-7
C2491-4	Ω	C2491-5
C2491-4	Ω	C2491-6
C2491-4	Ω	C2491-7
C2491-5	Ω	C2491-6
C2491-5	Ω	C2491-7
C2491-6	Ω	C2491-7

Are the resistances greater than 10,000 ohms?

Yes	GO to S10
No	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

S10 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the FCIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the FCIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Audio System Does Not Operate Correctly From The FCIM

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

Possible Source

- FCIM

PINPOINT TEST T : THE AUDIO SYSTEM DOES NOT OPERATE CORRECTLY FROM THE FCIM (FRONT CONTROLS INTERFACE MODULE)

T1 VERIFY THE ACM (AUDIO FRONT CONTROL MODULE) , APIM (SYNC MODULE) , FCDIM, AND FCIM (FRONT CONTROLS INTERFACE MODULE) PASS THE NETWORK TEST

- Using a diagnostic scan tool, perform the network test.

Did the ACM, APIM, FCDIM, and FCIM pass the network test?

Yes	GO to T2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

T2 RESET THE AUDIO SYSTEM MODULES AND RECHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Disconnect the battery for 1 minute, then reconnect it.
- Turn the infotainment system on.
- Test the FCIM for normal operation.

Does the FCIM operate correctly?

Yes	The FCIM is operating correctly at this time. The concern was corrected by resetting the audio system modules.
No	GO to T3

No	GO to T3

T3 RETRIEVE THE ACM (AUDIO FRONT CONTROL MODULE) , APIM (SYNC MODULE) , FCDIM, AND FCIM (FRONT CONTROLS INTERFACE MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM
  - FCDIM
  - FCIM

Are any Diagnostic Trouble Codes (DTCs) recorded in the ACM, APIM, FCDIM, or FCIM?

Yes	REFER to the module DTC Chart in which the DTC is present.
No	GO to T4

T4 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the FCIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the FCIM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. Address the root cause of any connector or pin issues.

The FCDIM Is Inoperative Or Does Not Operate Correctly

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

Possible Source

- FCDIM

PINPOINT TEST U : THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

U1 CHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition ON.
- Turn the audio system on.
- Press each FCIM button and check for proper operation.

Does each FCIM button perform the correct operation?

Yes	GO to U2
No	GO to Pinpoint Test T

U2 VERIFY THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) PASSES THE NETWORK TEST

- Using a diagnostic scan tool, perform the network test.

Did the FCDIM pass the network test?

Yes	GO to U3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

U3 OBSERVE THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) DISPLAY

- Observe the FCDIM display while carrying out various operations using the FCIM controls.

Is the FCDIM screen completely inoperative or blank?

Yes	GO to U5
No	GO to U4

U4 CHECK FOR LOST COMMUNICATION DIAGNOSTIC TROUBLE CODES (DTCS) SET IN THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE)

- Ignition ON.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are any lost communication Diagnostic Trouble Codes (DTCs) (U-codes) recorded in the FCDIM?

Yes	REFER to the DTC Chart for the FCDIM.
No	GO to U5

U5 CHECK FOR CORRECT FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the FCDIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the FCDIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication with ECM/PCM U0100:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication with ECM/PCM "A": No Sub Type Information	Set by the ACM, and GPSM when network messages are missing from the PCM for more than 5 seconds with the ignition in RUN.

Possible Source

- PCM

PINPOINT TEST V : LOST COMMUNICATION WITH ECM/PCM U0100:00

V1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify if there is an observable symptom present.

Is an observable symptom present?

Yes	GO to V2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

V2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0100:00 set in the ACM or GPSM?

Yes	GO to V3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

V3 CHECK THE PCM (POWERTRAIN CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the PCM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the PCM?

Yes	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to V4

V4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - GPSM

Are low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the ACM or the GPSM?

Yes	• For DTC U3003:16, GO to Pinpoint Test AF • For DTC U3003:17, GO to Pinpoint Test AG
No	GO to V5

V5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0100:00 set in both the ACM and GPSM?

Yes	GO to V6
No	• If there is an observable symptom, REFER to Symptom Chart: General Audio System. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

V6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the PCM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the PCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal

	and Installation). REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With BCM U0140:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	Set by the ACM, APIM, FCDIM, FCIM, and GPSM when network messages are missing from the BCM for more than 5 seconds with the ignition in RUN.

Possible Source

- BCM

PINPOINT TEST W : LOST COMMUNICATION WITH BCM (BODY CONTROL MODULE) U0140:00

W1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify if there is an observable symptom present.

Is an observable symptom present?

Yes	GO to W2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

W2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0140:00 set in the ACM, APIM, FCDIM, FCIM, or the GPSM?

Yes	GO to W3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

W3 CHECK THE BCM (BODY CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the BCM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the BCM?

Yes	If DTC U3006:16, U3006:17 and/or U3006:1C are set, REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	GO to W4

W4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM
  - FCDIM
  - FCIM
  - GPSM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the ACM, APIM, FCDIM, FCIM, or the GPSM?

Yes	• For DTC U3003:16, GO to Pinpoint Test AF • For DTC U3003:17, GO to Pinpoint Test AG
No	GO to W5

W5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0140:00 set in more than one module?

Yes	GO to W6
No	• If there is an observable symptom, REFER to Symptom Chart: General Audio System. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

W6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the BCM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).

	REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With RCM U0151:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	Set by the APIM when the airbag deployment notification message from the RCM is missing for more than 5 seconds with the ignition in RUN.

Possible Source

- RCM

PINPOINT TEST X : LOST COMMUNICATION WITH RCM (RESTRAINTS CONTROL MODULE) U0151:00

X1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to X2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

X2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0151:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0151:00 set in the APIM?

Yes	GO to X3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

X3 CHECK THE RCM (RESTRAINTS CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the RCM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the RCM?

Yes	If DTC U3003:16 and/or U3003:17 are set, REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	GO to X4

X4 CHECK THE APIM FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the APIM self-test for the following modules:

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the APIM?

Yes	• For DTC U3003:16, GO to Pinpoint Test AF • For DTC U3003:17, GO to Pinpoint Test AG
No	GO to X5

X5 CHECK FOR CORRECT RCM (RESTRAINTS CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the RCM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the RCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With IPC U0155:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions

U0155:00	Lost Communication With IPC Control Module: No Sub Type Information	Set by the ACM, APIM, FCDIM, FCIM, and GPSM when network messages are missing from the IPC for more than 5 seconds with the ignition in RUN.

Possible Source

- IPC

PINPOINT TEST Y : LOST COMMUNICATION WITH IPC (INSTRUMENT PANEL CLUSTER) U0155:00

Y1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to Y2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

Y2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155:00 set in the ACM, APIM, FCDIM, FCIM, or the GPSM?

Yes	GO to Y3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

Y3 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the IPC self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the IPC?

Yes	If DTC U3003:16 and/or U3003:17 is set, REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	GO to Y4

Y4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM
  - FCDIM
  - FCIM
  - GPSM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the ACM, APIM, FCDIM, FCIM, or GPSM?

Yes	• For DTC U3003:16, GO to Pinpoint Test AF • For DTC U3003:17, GO to Pinpoint Test AG
No	GO to Y5

Y5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0155:00 set in more than one module?

Yes	GO to Y6
No	• If there is an observable symptom, REFER to Symptom Chart: General Audio System. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

Y6 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the IPC and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With PAM U0159:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

The PAM is integral to the BCM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0159:00	Lost Communication With Parking Assist	Set by the ECDIM when network messages are missing

U0159:00	Lost Communication With Parking Assist Control Module "A": No Sub Type Information	Set by the FCDIM when network messages are missing from the PAM for more than 5 seconds with the ignition in RUN.

Possible Source

- PAM

PINPOINT TEST Z : LOST COMMUNICATION WITH PAM (PARKING ASSIST CONTROL MODULE) U0159:00

Z1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify if there is an observable symptom present.

Is an observable symptom present?

Yes	GO to Z2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

Z2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0159:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0159:00 set in the FCDIM?

Yes	GO to Z3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

Z3 CHECK THE BCM (BODY CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the BCM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the BCM?

Yes	If DTC U3006:16, U3006:17 and/or U3006:1C are set, REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	GO to Z4

Z4 CHECK THE FCDIM FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the FCDIM self-test.

Are low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the FCDIM?

Yes	• For DTC U3003:16, GO to Pinpoint Test AF • For DTC U3003:17, GO to Pinpoint Test AG
No	GO to Z5

Z5 CHECK FOR CORRECT PAM (PARKING ASSIST CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the BCM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With GPSM U016A:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U016A:00	Lost Communication With Global Positioning System Module: No Sub Type Information	Set by the APIM when it is missing network messages from the GPSM for more than 5 seconds with the ignition in RUN.

Possible Source

- GPSM

PINPOINT TEST AA : LOST COMMUNICATION WITH GPSM (GLOBAL POSITIONING SYSTEM MODULE) U016A:00

AA1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AA2

No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AA2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U016A:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U016A:00 set in the APIM?

Yes	GO to AA3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AA3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - APIM
  - GPSM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the APIM or the GPSM?

Yes	• For DTC U3003:16, GO to Pinpoint Test AF • For DTC U3003:17, GO to Pinpoint Test AG
No	GO to AA4

AA4 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the GPSM and related in-line connector.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the GPSM and related in-line connector. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With The Radio U0184:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0184:00	Lost Communication With Radio: No Sub Type Information	Set by the APIM and FCDIM when network messages are missing from the ACM for more than 5 seconds with the ignition in RUN.

Possible Source

- ACM

PINPOINT TEST AB : LOST COMMUNICATION WITH THE RADIO U0184:00

AB1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AB2
No	The system is operating normally at this time. This DTC may have been set due to high network traffic or an intermittent fault condition.

AB2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0184:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0184:00 set in the APIM or the FCDIM?

Yes	GO to AB3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AB3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM
  - FCDIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the ACM, APIM or the FCDIM?

Yes	• For DTC U3003:16, GO to Pinpoint Test AF • For DTC U3003:17, GO to Pinpoint Test AG
No	GO to AB4

AB4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

• Ignition OFF.
• Disconnect and inspect all the ACM and related in-line connectors.
• Repair:
  • Corrosion (clean module pins or install new connectors or terminals)
  • Damaged or bent pins (install new terminals or pins)
  • Pushed-out pins (install new pins as necessary)
• Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
 	
Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With The APIM U0253:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	Set by the ACM and FCDIM when network messages are missing from the APIM for more than 5 seconds with the ignition in RUN.

Possible Source

- APIM

PINPOINT TEST AC : LOST COMMUNICATION WITH THE APIM (SYNC MODULE) U0253:00

AC1 VERIFY THE CUSTOMER'S CONCERN
• Ignition ON. • Verify there is an observable symptom present. **Is an observable symptom present?**

Yes	GO to AC2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AC2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0253:00

- Ignition ON.
- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0253:00 set in the ACM or FCDIM?

Yes	GO to AC3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AC3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM
  - FCDIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the ACM, APIM or the FCDIM?

Yes	• For DTC U3003:16, GO to Pinpoint Test AF • For DTC U3003:17, GO to Pinpoint Test AG
No	GO to AC4

AC4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0253:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0253:00 set in both the ACM and FCDIM?

Yes	GO to AC5
No	• If there is an observable symptom, REFER to Symptom Chart: General Audio System. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AC5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).

No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With The FCIM U0256:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	Set by the ACM and FCDIM when network messages are missing from the FCIM for more than 5 seconds with the ignition in RUN.

Possible Source

- FCIM

PINPOINT TEST AD : LOST COMMUNICATION WITH THE FCIM (FRONT CONTROLS INTERFACE MODULE) U0256:00

AD1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AD2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AD2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0256:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0256:00 set in the ACM or FCDIM?

Yes	GO to AD3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AD3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - FCDIM
  - FCIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the ACM, FCDIM or FCIM?

Yes	• For DTC U3003:16, GO to Pinpoint Test AF • For DTC U3003:17, GO to Pinpoint Test AG
No	GO to AD4

AD4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0256:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0256:00 set in both the ACM and FCDIM?

Yes	GO to AD5
No	• If there is an observable symptom, REFER to Symptom Chart: General Audio System. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AD5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the FCIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the FCIM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. Address the root cause of any connector or pin issues.

Lost Communication With The FCDIM U0257:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions

U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	Set by the ACM, FCDIM and FCIM when network messages are missing from the APIM for more than 5 seconds with the ignition in RUN. This DTC may be set in conjunction with DTC U0253:00.

Possible Source

- APIM

PINPOINT TEST AE : LOST COMMUNICATION WITH THE FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) U0257:00

AE1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AE2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AE2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0257:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0257:00 set in the ACM, FCDIM or the FCIM?

Yes	GO to AE3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AE3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM
  - FCDIM
  - FCIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded in the ACM, APIM, FCDIM or FCIM?

Yes	• For DTC U3003:16, GO to Pinpoint Test AF • For DTC U3003:17, GO to Pinpoint Test AG
No	GO to AE4

AE4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0257:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0257:00 set in more than one module?

Yes	GO to AE5
No	• If there is an observable symptom, REFER to Symptom Chart: General Audio System. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AE5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Battery Voltage Low U3003:16

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	Set by the ACM, APIM, FCDIM, FCIM and GPSM when the supply voltage falls below 10 volts for at least 10 seconds during normal operation or for more than 250 milliseconds during the self-test.

Possible Sources

- Previous low battery voltage
- Wiring, terminals, or connectors
- ACM
- APIM
- FCDIM
- FCIM
- GPSM

PINPOINT TEST AF : BATTERY VOLTAGE LOW U3003:16

AF1 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:16

- Ignition ON.
- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) for the module in question.

- Wait at least 15 seconds.
- Using a diagnostic scan tool, repeat the self-test for the module in question.

Is DTC U3003:16 still present?

Yes	GO to AF2
No	The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition.

AF2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) IN THE PCM (POWERTRAIN CONTROL MODULE)

- Using a diagnostic scan tool, perform the PCM self-test

Are any voltage-related Diagnostic Trouble Codes (DTCs) set in the PCM?

Yes	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to AF3

AF3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

- Check the battery condition and verify the battery is fully charged.
  REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).

Is the battery fully charged and in good condition?

Yes	GO to AF4
No	REFER to: Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma (414-00 Charging System - General Information, Diagnosis and Testing). REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing).

AF4 CHECK THE MODULE VOLTAGE SUPPLY

- Ignition OFF.
- Measure and record the voltage at the battery.
- Disconnect the audio system module setting DTC U3003:16.
- Ignition ON.
- Measure the voltage between the module setting DTC U3003:16 and ground.
- For the ACM, measure:

Positive Lead	Measurement / Action	Negative Lead

C4821A-1		Ground

- For the APIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-1		Ground

- For the FCDIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2123-1		Ground

- For the FCIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2402-1		Ground

- For the GPSM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2398-1		Ground

Is the voltage within 0.2 volts of the recorded battery voltage?

Yes	GO to AF5
No	REPAIR the circuit for high resistance.

AF5 CHECK THE SUSPECT MODULE GROUND CIRCUIT FOR CONTINUITY

- Measure the voltage at the suspect module.
- For the ACM, measure:

Positive Lead	Measurement / Action	Negative Lead
C4821A-1		C240A-13

- For the APIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-1		C2383-37
C2383-1		C2383-38

- For the FCDIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2123-1		C2123-9

- For the FCIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2402-1		C2402-6

- For the GPSM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2398-1		C2398-6

Is the suspect module voltage greater than 11 volts?

Yes	• For the ACM, GO to AF6 • For the APIM, GO to AF7 • For the FCDIM, GO to AF8 • For the FCIM, GO to AF9 • For the GPSM, GO to AF10
No	REPAIR the circuit for high resistance.

AF6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AF7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)

- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AF8 CHECK FOR CORRECT FCDIM (FRONT CONTROL/DISPLAY INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the FCDIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the FCDIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AF9 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the FCIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the FCIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AF10 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

- Ignition OFF.

- Disconnect and inspect the GPSM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the GPSM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Battery Voltage High U3003:17

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	Set by the ACM, APIM, FCDIM, FCIM, and GPSM when the supply voltage is more than 15.8 volts for more than 250 milliseconds during normal operation or the self-test.

Possible Sources

- ACM
- APIM
- FCDIM
- FCIM
- GPSM

PINPOINT TEST AG : BATTERY VOLTAGE HIGH U3003:17

AG1 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:17

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) for the module in question.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, perform the self-test for the module in question.

Is DTC U3003:17 present?

Yes	GO to AG2
No	The system is operating correctly at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

AG2 CHECK FOR HIGH VOLTAGE DIAGNOSTIC TROUBLE CODES (DTCS) SET IN MULTIPLE MODULES

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are high voltage Diagnostic Trouble Codes (DTCs) such as B1676, P0563, or U3003:17 set in more than one module?

Yes	REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to AG3

AG3 CHECK THE BATTERY VOLTAGE

- Turn off all interior lights, exterior lights, and accessories.
- Start and run the engine at approximately 2,000 RPM for 3 minutes while monitoring the battery voltage.

Does the battery voltage rise to 15.5 volts or higher?

Yes	REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
No	• For the ACM, GO to AG4 • For the APIM, GO to AG5 • For the FCDIM, GO to AG6 • For the FCIM, GO to AG7 • For the GPSM, GO to AG8

AG4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for

	this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG6 CHECK FOR CORRECT FCDIM OPERATION

- Ignition OFF.
- Disconnect and inspect the FCDIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the FCDIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCDIM. REFER to: Front Control/Display Interface Module (FCDIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG7 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the FCIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the FCIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AG8 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the GPSM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the GPSM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Audio Front Control Module (ACM) Self-Test

Activation

1. **WARNING: Before beginning any service procedure in this section, refer to Health and Safety Precautions in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. **NOTE:** *If the ACM, FCDIM (if equipped), FCIM, or FDIM (if equipped) are inoperative (blank or do not power on), obtain the ACM part number by referencing the label attached to the ACM chassis.*

   Turn the ACM on.

3. Operate the audio system in radio tuner AM/ FM mode.

4. Press and hold the eject button, and within 1 second, press and hold the seek up button. If supported, the speaker walk around test will begin, and the display will indicate each speaker as it is tested.

NOTE: *AHU Diagnostics refers to the ACM, EFP Diagnostics refers to the FCIM that communicates on the CAN (if equipped), and MFD Diagnostics (if supported) refers to the FCDIM (if equipped).*

5. To exit the self-diagnostic mode, turn the ACM off, or select "Exit Diagnostics."

Copyright © 2016 Ford Motor Company

Reset the SYNC Module [APIM]

Programming

NOTE: *An APIM Reset consists of a battery disconnect and a SYNC® system Master Reset. It may **not** be necessary to perform a Master Reset after disconnecting the battery if the concern is resolved.*

NOTE: *This procedure clears all Continuous Memory Diagnostic Trouble Codes (CMDTCs). The Diagnostic Trouble Codes (DTCs) must be recorded now if other non-SYNC® diagnoses are to be performed after this procedure.*

1. Remove any devices connected to the USB port(s), audio input jack/socket (if equipped), SD slot (if equipped), or RCA jacks (if equipped).

2. Disconnect the negative battery cable for 1 minute, then reconnect it.
   Refer to: Battery Disconnect and Connect - Vehicles With: Single Battery (414-01 Battery, Mounting and Cables) .

3. **NOTE:** *Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, and deletes any Bluetooth devices paired with the SYNC® system. For vehicles with navigation, the customer's saved destinations (home, favorites, and previous) are erased. For vehicles with a TCU, any devices paired with the MyFord® Mobile or MyLincoln Mobile™ phone application will be deleted.*

   Perform a Master Reset. If necessary, refer to "Master Reset" in the Owner's Literature.

4. Verify system function using the MIT 105-00120 to test the audio output for the USB port(s), audio input jack/socket (if equipped), and Bluetooth. If equipped, test the audio output for the RCA jacks using RCA Adapter 105-00121.

5. **NOTE:** *If the concern remains after completing the APIM Reset procedure, advise the customer to power their device off and back on for a simple reboot. In some cases, if possible, the device's battery may also need to be removed and re-installed to complete a reboot. Delete SYNC® from the device's Bluetooth menu prior to re-pairing the phone to the SYNC® system. If necessary, the customer can also perform a Master Clear, Master Reset, or Factory Data Reset on their device following the manufacturer's instructions in the device's owner's manual and/or website. Customer devices may affect the operation of SYNC® and this should be understood to prevent unnecessary diagnosis or repairs to the system.*

   If a concern is still present, return to the Symptom Charts.

SYNC Module [APIM] Programming

Special Tool(s) / General Equipment

SYNC USB 2.0 A Male to A Male Cable

Activation

1. **WARNING: Before beginning any service procedure in this section, refer to Health and Safety Precautions in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. If a new APIM is being installed, install the new APIM before carrying out the following procedure.
   Refer to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).

3. **NOTE:**

   - *This programming procedure deletes any phones that were paired with the SYNC® system.*
   - *To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.*
   - *A file of approximately 80 megabytes (MB) needs to be downloaded from the online database for the programming. Allow extra time for the file to download.*
   - *The diagnostic scan tool is required.*
     - *Ensure that the IDS version and patch software levels are up to date.*

4. Connect a battery charger to the vehicle and select the low charge setting. The negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

5. Plug the diagnostic scan tool into a power supply due to the length of time the programming requires.

6. Connect the diagnostic scan tool to the VCM, and the VCM to the DLC.

7. Connect one end of the USB cable (male type A 4-pin to male type a 4-pin) to the diagnostic scan tool's USB port, and the other end to the vehicle's USB port.
   Use the General Equipment: SYNC USB 2.0 A Male to A Male Cable

8. Close the IDS software program.

9. Place the ignition in the ON/RUN position. For ON/RUN position information with Push Button Start vehicles, Refer to: Steering Wheel and Column Electrical Components - System Operation and Component Description (211-05 Steering Column Switches, Description and Operation).

10. **NOTE:**

    - *Using the diagnostic scan tool, open Internet Explorer and access the technician service publication website.*
    - *Run OASIS using "Read VIN & DTCs."*
      - *If the "Read VIN & DTCs" button is green with a red VCM icon, refer to the "SYNC - Software Programming" document under the "Service Tips" tab.*
      - *If the "Read VIN & DTCs" button is red with a grey VCM icon, ensure pop-ups are enabled, follow the Internet Explorer pop-ups, and then refer to the "SYNC - Software Programming" document under the "Service Tips" tab.*
    - *If the "SYNC - Software Programming" document is not followed, the programming may stop or encounter errors due to improperly configured Internet browser settings.*

11. From the OASIS tab, select the "SYNC" button. The Last Recorded State — Software is displayed.

12. **NOTE:** *There are 3 types of APIM programming available:*

    - *Standard — Used to update the APIM and any currently installed Applications to the latest software*

levels.

- *Custom — Used to show all the available software options (including Applications that may not have been installed previously) that can be programmed into the APIM. Use this selection when upgrades become available or as directed by a TSB or FSA.*
- *Module Replacement — Used when the APIM has been replaced. This type of programming performs the required provisioning (restores software for newly installed hardware).*

13. Scroll to the bottom of the screen, select 1 of the 3 options (Standard, Custom, or Module Replacement), and select the "Read SYNC" button. The current APIM assembly, Vehicle Interface Processor (VIP), and Consumer Interface Processor (CIP) software levels are compared to the last recorded state in the Ford online database, and the available software is displayed.

14. **NOTE:** *Do **not** disconnect the VCM or USB cable during APIM programming unless directed by the diagnostic scan tool on-screen prompts.*

    Select the "Program SYNC" button to begin the APIM programming process.

15. Follow the diagnostic scan tool on-screen directions. After programming is complete, the diagnostic scan tool displays "Programming has been successfully completed."

Audio Front Control Module (ACM)

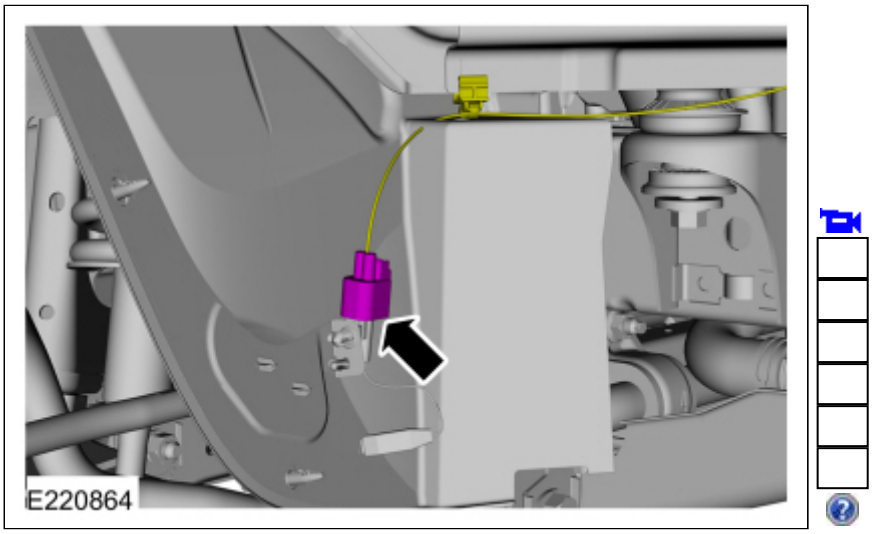
Removal

NOTE: *Eject any media from the ACM. If a disc fails to eject, do not forceably remove the disc from the ACM.*

NOTE: *Removal steps in this procedure may contain installation details.*

1. **NOTE:** *If installing a new module, it is necessary to upload the module configuration information to the scan tool prior to removing the module. This information must be downloaded into the new module after installation.*
2. Refer to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
3. *Torque*: 3 Nm

Installation



1. To install, reverse the removal procedure.
2. **NOTE:** *This step is only necessary if replacing the component.*

   Using a diagnostic scan tool, complete the PMI process for the ACM following the on-screen instructions.

Information and Entertainment System - Overview

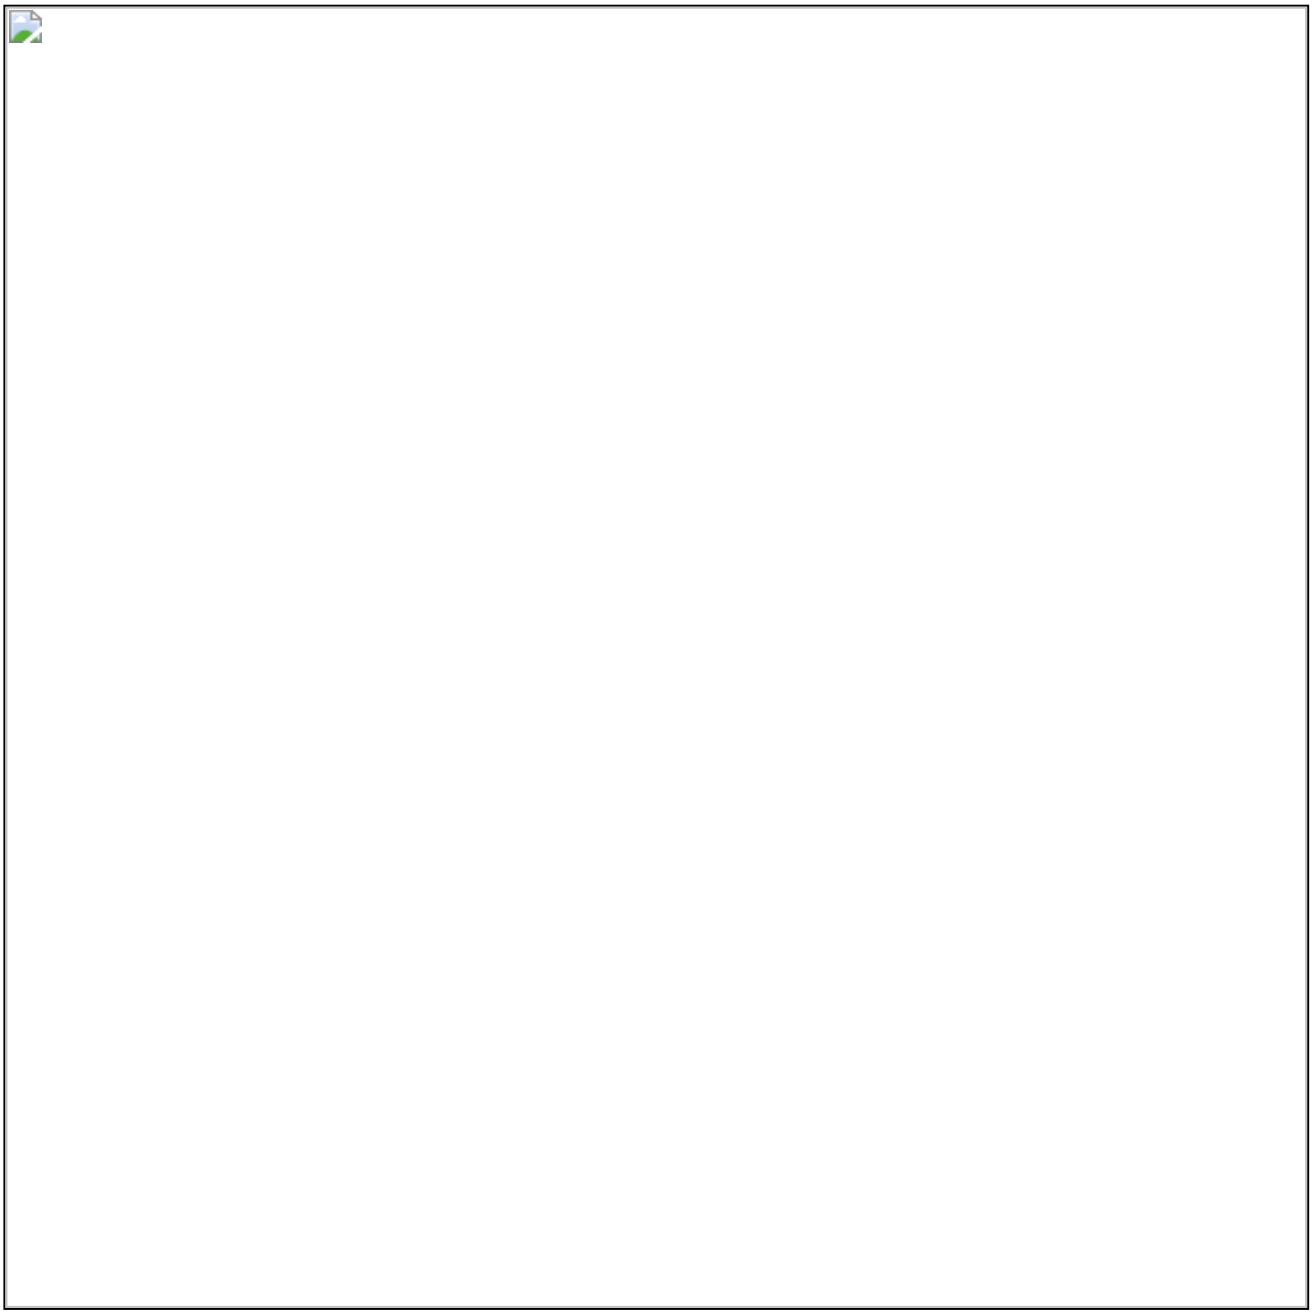
Overview

The audio system consists of the following:

Main Components

- 4 to 6 speakers
- 8-inch (203 mm) FDIM touchscreen
- ACM
- APIM
- FCIM
- GPSM
- Media hub
- Redundant steering wheel switches

Main Features



- Audio extended play
- Battery load shed
- Compass
- MyKey®
- Navigation
- Speed compensated volume
- SYNC®
- SYNC® Services - if equipped
- TMC
- DAB

Copyright © 2016 Ford Motor Company

Information and Entertainment System - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

A missing network message is indicated by a DTC (U-code) and can be the result of intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures such as module reprogramming can set these Diagnostic Trouble Codes (DTCs). When a missing message DTC (U-code) sets, it is important to look for symptoms present in the audio system and throughout the vehicle, and to review the complete message list to determine which other modules rely on the same message.
Refer to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

When the other modules have been identified, run the self-test for those modules. If the same message is missing from those modules, the identical, or similar lost communication Diagnostic Trouble Codes (DTCs) may be set in those modules. Confirmation of missing messages common to multiple modules can indicate that the originating

module is the source of the concern, or that the communication network may be at fault.

It is very important to understand the following:

- Where the input originates
- All of the information necessary for a feature to operate
- Which module(s) receive(s) the input or command message
- Which module controls the output of the feature
- If the module that receives the input controls the output of the feature, or whether it outputs a message over the CAN to another module.

NOTE: *Emergency Assistance may not be available in some countries. Visit the regional Ford website for latest details.*

Module Network Input Messages - ACM

Broadcast Message	Originating Module	Message Purpose
Audio settings	IPC	Used to set the radio listening source AM/ FM and DAB from the steering wheel switch.
Audio source select	IPC	Used to set the audio system listening source (AM/ FM/ DAB, CD, etc.) from the steering wheel switch through the IPC RH infotainment display.
Belt-Minder® audio mute	IPC	Used to mute speaker output so the Belt-Minder® tone can be more easily heard. This message only applies to vehicles with a MyKey® enabled and in use. The audio system is muted until the safety belt(s) are buckled.
CD request signals	CD player	Used to request audio source priority when the CD listening source is selected.
Day/night status	BCM	Used to adjust the AM radio reception sensitivity when using the seek button.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for ACM operating modes and fault reporting.
Instrument panel cluster chime	IPC	Used to request a warning chime to be played through the audio system.
MyKey® volume limit status	IPC	Used to limit the maximum audio system volume when a MyKey® restricted key is in use.
Power mode	IPC	Used to disable the functionality of the ACM due to the load shedding feature.
Power up chime modules	IPC	Used to initiate the audio system as the chime source.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.

Module Network Input Messages - APIM

Broadcast Message	Originating Module	Message Purpose
Airbag deployment status	RCM	Used to monitor airbag deployment status for Emergency Assist.
Audio settings	IPC	Used to set the radio listening source AM/ FM and Satellite from the steering wheel switch through the IPC RH infotainment display.
Day/night status	BCM	Used for day/night illumination status for the FDIM.

Display language selection	IPC	Used to display information on the FDIM in the selected language.
eCall notification	RCM	Used to notify of a Emergency Assist call being initiated due to airbag deployment.
FCIM bezel diagnostic status	GWM	Used to display the requested bezel diagnostics operations in the centerstack infotainment display.
FCIM button state	FCIM	Used to indicate when a button is pressed on the FCIM so the audio system can make the desired setting change.
Selector lever position	IPC	Used to verify the gear selector position for bezel diagnostics.
GPS compass direction	GPSM	Used to display the compass direction on the FDIM.
GPS data	GPSM	Used for vehicle positioning, heading, and direction for navigation and Emergency Assist.
Ignition key type	BCM	Used to determine if a MyKey® is enabled and in use.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for APIM operating modes and fault reporting.
MyKey® volume limit status	IPC	Used to limit the maximum audio system volume when a MyKey® restricted key is in use.
Navigation rolling wheel count and direction	ABS module	Used to provide more accurate vehicle position tracking when the GPS signal is temporarily unavailable.
Steering wheel switch status	SCCM	Used to indicate the button press status of the steering wheel switches.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.
Vehicle speed	PCM	Used for navigation functionality.

Module Network Input Messages - DACMC

Broadcast Message	Originating Module	Message Purpose
Accelerator pedal position	PCM	Used to determine the throttle position status for the ANC system operation.
Driver's door ajar status	BCM	Used to enable the ANC system if the driver’s door (and all other doors and luggage compartment lid) is closed, or to disable the ANC system if the driver's door is ajar.
Engine RPM data	PCM	Used to determine the engine rotation speed for the ANC system operation.
Engine status	PCM	Used to enable the ANC system if the engine is ON, or to disable the ANC system if the engine is OFF.
Engine torque	PCM	Used for ANC system operation by indicating the amount of engine torque being produced.
Ignition status	GWM	Used to indicate the ignition state (OFF, ACCESSORY, CRANK, RUN, and START) required for DACMC operating modes and fault reporting.
LHR door ajar status	BCM	Used to enable the ANC system if the LHR door (and all other doors and luggage compartment lid) is closed, or to disable the ANC system if the LHR door is ajar.
Luggage compartment lid ajar status	BCM	Used to enable the ANC system if the luggage compartment lid (and all other doors) is closed, or to disable the ANC system if the luggage compartment lid is ajar.
Passenger door ajar status	BCM	Used to enable the ANC system if the front passenger door (and all other doors and luggage compartment lid) is closed, or to disable the ANC system if the front passenger door is ajar.
Power up chime modules	IPC	Used to initiate the audio system as the chime source.

RHR door ajar status	BCM	Used to enable the ANC system if the RHR door (and all other doors and luggage compartment lid) is closed, or to disable the ANC system if the RHR door is ajar.

Module Network Input Messages - FCIM

Broadcast Message	Originating Module	Message Purpose
Audio source selection	ACM	Used to indicate the selected audio system source.
Day/night status	BCM	Used for day/night illumination status for the FCIM.
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for FCIM operating modes and fault reporting.
Power mode	IPC	Used to disable the functionality of the FCIM due to the load shedding feature.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.

Module Network Input Messages - GFM (CD Player)

Broadcast Message	Originating Module	Message Purpose
CD display	APIM	Used to control the CD functions from the FDIM touchscreen.
CD multifunction control	IPC	Used to control the CD functions from the steering wheel switches through the IPC infotainment display.

Module Network Input Messages - GPSM

Broadcast Message	Originating Module	Message Purpose
Ignition status	BCM	Used to indicate the ignition state (OFF, ACCESSORY, RUN, and START) required for GPSM operating modes and fault reporting.
Vehicle configuration data	BCM	Used to verify vehicle configuration data such as the VIN and system module configuration.
Vehicle yaw rate	RCM	Used to verify the vehicle acceleration data for navigation.
Wheel rotation count	BCM	Used to provide more accurate vehicle position tracking when the GPS signal is temporarily unavailable.
Wheel rotation direction	BCM	Used to determine wheel rotation direction for navigation.

Module Network Input Messages - IPC

Broadcast Message	Originating	Message Purpose

	Module	
Audio source selection	ACM	Used to display the selected audio source on the IPC.
CD function status	ACM	Used to indicate the loading status of a CD.
Display language request	APIM	Used to display information on the IPC in the selected language.
Multimedia player total play time status	APIM	Used to indicate the total play time of the audio track being played.

Accessory Delay Feature

The accessory delay feature allows the audio system to be operated for a preset period of time after the ignition is turned off and a front door has not been opened.

AM/ FM/ DAB Radio

The AM/ FM1/ DAB antennas receives analog radio waves and sends them through the antenna amplifier and AM/ FM1/ DAB antenna coaxial cable to the ACM. The FM2 antenna receives analog radio waves and sends them through the FM2 diversity antenna amplifier and FM2 antenna coaxial cable to the ACM. The radio waves are converted into fluctuating AC voltage and sent as left and right analog audio signals to the audio amplifier and all speakers.

APIM Programming

The APIM requires specific programming procedures for correct operation. APIM programming is required when:

- The APIM is replaced.
- Directed by a TSB. Updates to resolve SYNC® performance concerns should only be performed when directed by a TSB.
- Feature upgrades are requested. Occasional feature upgrades and/or new applications can be programmed when they become available. This type of programming is available upon customer request and expense.

There are 3 types of APIM programming available:

- Module Replacement — Used when the APIM has been replaced. This type of programming performs the required provisioning (restores software for newly installed hardware).
- Standard — Used to update the APIM and any currently installed applications to the latest software level.
- Custom — Used to show all the available software options (including applications that may not have been installed previously) that can be programmed into the APIM. Use this selection when upgrades become available or as directed by a TSB.

There are 3 types of software installation methods:

- Full Flash [Force CIP] — A CIP program is the entire software package for the APIM. Performing a Full Flash erases the existing APIM software and installs the complete program. A Full Flash should only be performed if a Service Pack is not available. If a Full Flash is performed, all applications must be re-installed. Performing a Full Flash by selecting Force CIP requires additional programming time and is not necessary unless directed by a TSB.
- Service Pack — A Service Pack update only provides the necessary software to update the existing APIM program to a new level. For example, a Service Pack changes the software program from an 'AA' to an 'AB' version level. It does not delete or overwrite the existing APIM software. A Service Pack is a much smaller program than a Full Flash and requires less downloading and programming time. A Service Pack software installation should always be performed instead of a Full Flash, if possible.
- Applications — Applications are special software programs that may be installed on the APIM. Applications necessary for each vehicle are determined by the vehicle build information stored in the Ford online database. Selecting individual applications for installation may not be necessary every time the APIM is programmed.

NOTE: *VIP programming is not selectable because the VIP is configured automatically during programming.*

There are some general programming guidelines that are applicable to multiple types of programming:

- Full Flash/Force CIP
  - The media hub must be removed for programming.
  - The diagnostic scan tool and SYNC® Re-Flash Kit (or equivalent), are required to complete the flash procedure.
  - All previously paired phones are deleted from the SYNC® system.
  - The file needs to be downloaded from the Ford online database. Allow for extra time in order to complete the download. The compressed files are between 200 and 400 megabytes (MB), and once downloaded,

are extracted to the full size of approximately 2 gigabytes (GB).
    - Once diagnostic scan tool programming is complete, Applications need to be installed with the USB flash drive. This should be accomplished by reinstalling the media hub and connecting the USB flash drive to the media hub.
- Service Pack and Applications
    - A USB flash drive with a minimum 1 gigabyte (GB) storage capacity is required.
    - The file is downloaded from the Ford online database onto the flash drive. The files are then transferred via the flash drive to the APIM through the vehicle USB port.

To perform module replacement programming,
Refer to: SYNC Module [APIM] Replacement Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).

To perform standard programming,
Refer to: SYNC Module [APIM] Standard Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).

To perform custom programming,
Refer to: SYNC Module [APIM] Custom Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).

Audio Extended Play

This feature allows the audio system to operate with the ignition OFF, regardless of door latch position. When the power button on the FCIM is pressed, audio system functionality is enabled and remains active for a period of 20-60 minutes, depending on configuration settings. Audio extended play will not function if the battery load shed is active. To turn the audio system off, press the FCIM power button.

Audio Input Jack Mode

When a portable audio device, such as an iPod® with its available cable, is connected to the vehicle audio system through the audio input jack, audio from the device can be played through the vehicle speakers. Only the volume can be controlled with the vehicle audio controls. All other functions such as seek, fast forward, pause, etc. must be carried out on the device itself.

No metadata (information such as artist, album title, song title, and genre) is transferred when a device is connected to the audio input jack.

Battery Load Shed

The BCM uses the battery current sensor to monitor the battery state of charge. The battery current sensor is attached to the battery ground cable. With the ignition in RUN, ACC, or OFF, a load shed message is sent over the CAN when the BCM determines that the battery state of charge is below 40%, 45 minutes have elapsed, or 10% of the charge has been drained. This message turns off the audio system to save the remaining battery charge. Under this condition, "Battery Saver - System Off" is displayed on the centerstack infotainment display to notify the driver that battery protection actions are active. To clear the load shed state, start the vehicle.

Bluetooth Mode

Bluetooth is a secure, short-range radio frequency that allows devices to communicate wirelessly through radio waves. The operating range of a Bluetooth signal is application specific, but will have a minimum range of 10 meters (33 feet).

The Bluetooth interface can accommodate both Bluetooth-enabled mobile phones and Bluetooth-enabled media devices. The SYNC® system allows interaction with several types of customer Bluetooth devices, including mobile phones and media devices. The APIM contains an on-board Bluetooth chipset, which enables certain wireless devices to interact with the system.

Any Bluetooth device used with the SYNC® system must first be paired with the APIM on-board Bluetooth chipset before it can become operational. Pairing a Bluetooth device is accomplished through the "Add Device" selection of the phone menu. When pairing a device, the SYNC® system generates a unique PIN that must be confirmed on the Bluetooth device in order for the pairing process to be successful. There are also some device-specific actions that must take place. For information on the pairing process, refer to the Owner's Literature.

Multiple Bluetooth phones and Bluetooth media devices can be paired to the APIM at the same time. The APIM supports an active connection with one Bluetooth phone and one Bluetooth media device at a time. If an additional device of either type is paired and made active, the APIM ends any active connection with an already-paired device, and establishes an active connection with the new device.

It is important to understand that while most Bluetooth devices can pair with the SYNC® system, not all Bluetooth

devices have the same level of features available when interacting with the SYNC® system. To determine if a Bluetooth device or feature is supported, review the device compatibility list. Refer to www.syncmyride.com.

Chimes

Various vehicle systems send chime requests over the CAN to the IPC. The following are determined as the IPC processes these requests:

- Chime characteristics (tone, tone length, number of repetitions, time between tones, etc.)
- Chime output volume
- Priority of the chime request
- Which speakers (all, front, or rear) will play the specific chime

The IPC sends the processed requests over the CAN to the ACM. The ACM outputs the left and right analog chime tones to the appropriate audio system speakers as fluctuating AC voltage.

For additional information on chimes,
Refer to: Warning Chimes - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Compass

The GPS antenna integral to the GPSM is used to acquire the compass heading. The compass heading is sent over the CAN to be displayed on the centerstack infotainment display.

MyKey® Audio Operation

- The following MyKey® features are always enabled when a MyKey® is in use, and are not configurable on/off with an administrator key:
  - Belt-Minder®: The audio system is muted, and “MyKey Buckle Up to Unmute Audio" is displayed in the information display until the safety belts are buckled.

- The following MyKey® features are configurable with an administrator key:
  - Emergency Assist: If the administrator has selected "Always On" in the MyKey® menu, Emergency Assist is enabled and cannot be disabled.
  - Do Not Disturb: If the administrator has selected "Always On" in the MyKey® menu, the Do Not Disturb feature is enabled and cannot be disabled.
  - Speed Compensated Volume: If the administrator has enabled the Volume Limiter feature, the speed compensated volume feature will be disabled.
  - Speed Limiter: If the administrator has enabled the Speed Limiter feature, the audio volume level is temporarily reduced so the top speed alert chime can be heard when the preselected top vehicle speed is reached.
  - Speed Minder: If the administrator has enabled the Speed Minder feature, the audio volume level is temporarily reduced so the speed alert chime can be heard when the preselected Speed Minder vehicle speed is exceeded.
  - Volume Limiter: If the administrator has enabled the Volume Limiter feature, the audio system volume is limited to 45%. In an attempt to exceed the limited volume, “MyKey® VOLUME LIMITED” is displayed in the information display.

Refer to the Owner's Literature for more information on MyKey®.

Speed Compensated Volume

The ACM compensates for wind and road noise by adjusting the audio system volume based on the VSS signal and customer-defined setting.

When a MyKey® is in use and the MyKey® Volume Limiter is enabled, the speed compensated volume is disabled.

Steering Wheel Switch Functions

The RH steering wheel switches consist of an upper 5-way switch, and a lower 6-way switch. The upper 5-way steering wheel switch operates the IPC infotainment display. The lower 6-way steering wheel switch operates the volume +/-, seek +/end call, seek-/send call/receive call, voice, and mute functions.

SYNC® AppLink™

SYNC® AppLink™ allows the customer to control smartphone Applications by using voice commands and in-vehicle controls. Data is transferred from the customer’s device to the APIM through Bluetooth, or through the USB port with Apple® devices.

For more information, refer to “AppLink” in the Owner's Literature.

SYNC® System

The SYNC® system is a hands-free communication and entertainment system that supports many features. All features are not available with every phone.

The SYNC® system provides the following abilities:

- Connect media devices in order to play audio files
- Control the entertainment system using voice commands
- Initiate an emergency assistance call when the airbags deploy (for more information, refer to “Emergency Assistance” in the Owner's Literature).
- Play media files via a paired Bluetooth-enabled audio device
- Send and receive phone calls via a paired Bluetooth-enabled phone
- Send and receive text messages via a paired Bluetooth-enabled phone

TMC

Many stations that brodcast on the FM waveband have a TP code to signify that they carry traffic program information. Before traffic anouncements can be received, the TA or TRAFFIC button must be pressed. A TA display will appear to show the feature is switched on. When traffic information is broadcast, normal radio or CD playback will be interrupted. The audio unit will return to normal operation at the end of each traffic announcement.

USB Mode

When a portable media device, such as an iPod® with its available cable or portable mass storage such as a USB thumb drive, is connected to the vehicle audio system through the USB ports, audio from the device can be played through the vehicle speakers. Functions such as volume, seek, fast forward, pause, etc. can be controlled by the vehicle audio controls.

When playing media files stored on a mass storage device such as a flash drive, the SYNC® system only plays files that do not have DRM protection.

In addition to audio information (track length, track number, etc.), metadata (information such as artist, album title, song title, and genre) may also be sent to the APIM from a device connected to the USB port. The APIM uses the metadata to create indexes that can be used to sort for particular music based on the customer’s preferences. Not all USB devices can send metadata to the APIM. When a new media device is connected to the SYNC® system, the APIM automatically indexes the information. This may take several minutes depending on the amount of data on the device, and is considered normal operation. When a device that was previously connected to the SYNC® system is reconnected, the APIM updates the index rather than creating a new one. This reduces the time needed to index the device.

The USB port can be used to upload vehicle Application upgrades to the APIM from a mass storage device such as a flash drive.

Image files can be saved to the APIM from a USB device in order to be used as wallpaper backgrounds displayed on the FDIM.

Voice Recognition

Voice recognition allows certain phone, navigation system, audio system, and climate control system functions to be controlled with voice commands. This minimizes driver distraction by reducing or eliminating the need to interact with the centerstack infotainment display and/or device while driving.

When the voice steering wheel switch is pressed, an audible prompt originating at the APIM is heard from the speakers. Based on the customer’s setting, audible prompts will either be a voice or a simple tone. When interaction mode is set to standard, detailed voice guidance is provided. When interaction mode is set to advanced, most prompts are tones only, and minimal voice guidance is provided. The microphone receives the voice commands and sends them to the APIM. Refer to the Owner's Literature for more information on voice recognition.

Component Description

ACM

The ACM can be operated with the ignition in RUN, ACC, or OFF.

The ACM receives radio waves containing audio from the antenna coaxial cables and converts them into fluctuating AC voltage. The ACM processes all inputs and depending on the input received, sends stereo or mono analog audio signals to the audio amplifier and door speakers.

Antenna

The AM/ FM radio uses the roof-mounted combination AM/ FM antenna to receive analog radio waves. The DAB radio waves are sent through the AM/ FM2 antenna coaxial cable to the ACM, where they are amplified. A second FM 2 foil antenna is mounted under the splash shield next to the bumper for diversity functionality.

APIM

The APIM can be operated with the ignition in RUN, ACC, or OFF.

The APIM receives stereo and mono inputs. Stereo inputs include audio from USB port and connected Bluetooth media device. Mono inputs include audio from the outside device during a phone call and inputs from the SYNC® microphone.

The APIM sends stereo and mono audio signals to the ACM as fluctuating AC voltage. Stereo outputs include audio from the USB port and connected Bluetooth media device, ringback tone, outside device during a phone call, and voice or tone prompts initiated from the steering wheel switches.

The APIM consists of 2 internal modules: the CIP and the VIP. The modules are not replaceable individually, but can be flashed independently if required.

The CIP interfaces with all of the customer inputs to the APIM. It contains an analog-to-digital-to-analog converter, as well as the Bluetooth chipset. Any Application upgrades that are available to the customer are loaded directly to the CIP through the USB port.

The VIP provides an interface between the CIP and the vehicle inputs. Its main functions are controlling the APIM power management and translating inbound and outbound CAN signals. In addition, the VIP queries the modules on the network to retrieve any DTCs.

The Touchscreen Calibration must be performed every time the APIM is separated from the FDIM.

The APIM requires programming when it is replaced.

Audio Input Jack

The audio input jack can be used to play audio files from an audio device connected through the 1/8-inch (3.5 mm) audio jack.

Audio signals are sent from the audio input jack to the APIM.

There are no power or ground circuits to the audio input jack.

Built-In Antenna Amplifier

The audio unit antenna amplifier receives AM/ FM radio waves from the antenna. The antenna amplifier is powered by the ACM and amplifies AM audio signals to improve reception. The AM/ FM radio waves are sent through the AM/ FM antenna coaxial cable to the ACM.

FCIM

The FCIM can be operated with the ignition in RUN, ACC, or OFF.

The FCIM audio system buttons provide one of the methods with which the customer interacts with the infotainment system.

The FCIM is separate from the ACM.

The FCIM requires PMI when it is replaced.

FDIM

The FDIM can be operated with the ignition in RUN, ACC, or OFF.

The FDIM touchscreen provides one of the methods with which the customer interacts with the infotainment system.

The FDIM plugs directly into the APIM, and therefore does not communicate directly on any network, and no external circuits are connected.

The Touchscreen Calibration must be performed every time the FDIM is separated from the APIM.

GPSM

For vehicles equipped with SYNC Services® or SIRIUS Data Services, the GPSM provides vehicle location information for real-time traffic reports and for traffic avoidance re-routing.

The GPS antenna integral to the GPSM is used to acquire the compass heading. The compass heading is sent over the CAN to be displayed on the centerstack infotainment display.

The GPSM provides vehicle location information for identifying the vehicle location in the event of a collision.

The GPSM acts as the antenna for the navigation system.

The GPSM requires PMI when it is replaced.

Media Hub

The media hub allows for various audio and video devices to play content through the vehicle speakers and to be viewed on the FDIM. The media hub contains:

- 1 USB port
  - Data is sent from the USB ports to the APIM through the USB cable.
  - Although there is one USB port and cable connecting the media hub to the APIM.
  - The USB port is powered through circuits from the APIM, and can be used to power and/or charge a device if the device supports this feature. If the device does not support this feature, an external power source is needed in order to power the device.
- 1 set of component RCA jacks (left audio, right audio, video)
  - The media hub contains an internal composite audio/video translator connected to the external RCA jacks, which outputs video and audio signals to the APIM through shielded audio and video circuits.

Steering Wheel Switches

The RH upper and lower steering wheel switches contain series of resistors. Each steering wheel switch function corresponds with a specific resistance value within the switch.

The SCCM sends a 5-volt reference voltage to the RH upper and lower steering wheel switches on the input circuit. When a switch is pressed, the voltage is routed through the corresponding resistor(s), through the return circuit, and then to ground through the SCCM. The SCCM monitors the resultant voltage drop to determine which switch was pressed. The voltage drop varies depending upon the resistance of the specific switch pressed.

The upper steering wheel switch inputs are sent as network messages from the SCCM to the IPC to control the IPC infotainment display.

The lower steering wheel switch inputs are sent as network messages from the SCCM to the APIM to control SYNC® functions, or to the ACM to control audio functions.

SYNC® Microphone

The SYNC® microphone receives SYNC® system voice commands and outgoing audio during a phone call. The monitored sounds are converted into analog signals by the microphone and sent to the APIM.

Information and Entertainment System

For a SYNC®-related concern, refer to the SYNC® System Symptom Chart before connecting the scan tool and beginning DTC-based diagnostics.

DTC Chart: ACM

DTC	Description	Action
B1142:27	Ignition Status 1: Signal Rate of Change Above Threshold	GO to Pinpoint Test E
B1A01:01	Speaker #1: General Electrical Failure	• For a LHF door speaker concern, GO to Pinpoint Test F • For a LHF door tweeter speaker concern, GO to Pinpoint Test G
B1A01:11	Speaker #1: Circuit Short To Ground	• For a LHF door speaker concern, GO to Pinpoint Test F • For a LHF door tweeter speaker concern, GO to Pinpoint Test G
B1A01:12	Speaker #1: Circuit Short To Battery	• For a LHF door speaker concern, GO to Pinpoint Test F • For a LHF door tweeter speaker concern, GO to Pinpoint Test G
B1A01:13	Speaker #1: Circuit Open	GO to Pinpoint Test F
B1A02:01	Speaker #2: General Electrical Failure	• For a RHF door speaker concern, GO to Pinpoint Test H • For a RHF door tweeter speaker concern, GO to Pinpoint Test I
B1A02:11	Speaker #2: Circuit Short To Ground	• For a RHF door speaker concern, GO to Pinpoint Test H • For a RHF door tweeter speaker concern, GO to Pinpoint Test I
B1A02:12	Speaker #2: Circuit Short To Battery	• For a RHF door speaker concern, GO to Pinpoint Test H • For a RHF door tweeter speaker concern, GO to Pinpoint Test I
B1A02:13	Speaker #2: Circuit Open	GO to Pinpoint Test H
B1A03:01	Speaker #3: General Electrical Failure	• For a RHR door speaker concern, GO to Pinpoint Test J
B1A03:11	Speaker #3: Circuit Short To Ground	• For a RHR door speaker concern, GO to Pinpoint Test J
B1A03:12	Speaker #3: Circuit Short To Battery	• For a RHR door speaker concern, GO to Pinpoint Test J
B1A03:13	Speaker #3: Circuit Open	GO to Pinpoint Test J
B1A04:01	Speaker #4: General Electrical Failure	• For a LHR door speaker concern, GO to Pinpoint Test K
B1A04:11	Speaker #4: Circuit Short To Ground	• For a LHR door speaker concern, GO to Pinpoint Test K
B1A04:12	Speaker #4: Circuit Short To Battery	• For a LHR door speaker concern, GO to Pinpoint Test K
B1A04:13	Speaker #4: Circuit Open	GO to Pinpoint Test K
B1A56:21	Antenna: Signal Amplitude <	If DTC B1A56:21 sets after running the bezel diagnostic tests, DISREGARD this DTC. This test is used for end of line or repair bay testing at the Ford plant. Each

	Minimum	plant has its own assigned frequency and signal strength requirements. The running and passing of this test depends on local radio stations. If no local station is broadcasting on the required frequency, the test will fail.
B1D19:49	Compact Disc Unit: Internal Electronic Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC B1D19:49 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
B1D19:4B	Compact Disc Unit: Over Temperature	The ACM was over temperature. This may occur during extended use. Audio operation can resume after the ACM cools. CLEAR the DTC.
B1D55:11	Antenna #2 Circuit Short To Ground	GO to Pinpoint Test A
B1D55:15	Antenna #2 Circuit Short To Battery Or Open	GO to Pinpoint Test A
U0100:00	Lost Communication With ECM/PCM "A": No Sub Type Information	GO to Pinpoint Test AA

U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AD
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	GO to Pinpoint Test AH
U0256:00	Lost Communication With Front Controls Interface Module “A”: No Sub Type Information	GO to Pinpoint Test AI
U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	**NOTE:** *Despite the description, this DTC applies to the FDIM, not the FCDIM.* GO to Pinpoint Test AJ
U201A:51	Control Module Main Calibration Data: Not Programmed	• This DTC sets due to an incomplete or incorrect ACM PMI. CHECK the vehicle service history for recent service actions related to the ACM. – If there have been recent service actions with the ACM, PERFORM the ACM PMI procedure as directed by the diagnostic scan tool. – If there have been no recent service actions, the ACM has failed to retain configuration data. INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U2100:00	Initial Configuration Not Complete: No Sub Type Information	• This DTC sets due to an incomplete or incorrect ACM PMI. CHECK the vehicle service history for recent service actions related to the ACM. – If there have been recent service actions with the ACM, PERFORM the ACM PMI procedure as directed by the diagnostic scan tool. – If there have been no recent service actions, the ACM has failed to retain configuration data. INSTALL a new ACM.

		REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	• This DTC sets due to an incomplete or incorrect ACM PMI. CHECK the vehicle service history for recent service actions related to the ACM. – If there have been recent service actions with the ACM, PERFORM the ACM PMI procedure as directed by the diagnostic scan tool. – If there have been no recent service actions, the ACM has failed to retain configuration data. INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3000:41	Control Module: General Checksum Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3000:42	Control Module: General Memory Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:42 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3000:96	Control Module: Component Internal Failure	• CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:96 is retrieved again, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AK
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test AL

DTC Chart: APIM

DTC	Description	Action
B108E:01	Display: General Electrical Failure	GO to Pinpoint Test W
B116A:01	Handset Microphone: General Electrical Failure	GO to Pinpoint Test O
B1215:00	External Memory Card: No Sub Type Information	GO to Pinpoint Test X
B1252:11	USB Port: Circuit Short To Ground	• For an inoperative USB port, GO to Pinpoint Test Q • For an inoperative SD card slot, GO to Pinpoint Test R
B1252:13	USB Port: Circuit Open	• For an inoperative USB port, GO to Pinpoint Test Q • For an inoperative SD card slot, GO to Pinpoint Test R

B12B8:11	USB Port #2: Circuit Short To Ground	**NOTE:** *This DTC refers to USB port #2 on the APIM itself, which is not used.* • INSPECT the APIM USB port #2 for damage and REMOVE any debris. • CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC B12B8:11 is retrieved again, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
C1001:01	Vision System Camera: General Electrical Failure	REFER to: Parking Aid (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Diagnosis and Testing).
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test AB
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	GO to Pinpoint Test AC
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test AD
U0159:00	Lost Communication With Parking Assist Control Module "A": No Sub Type Information	GO to Pinpoint Test AE
U0162:00	Lost Communication With Navigation Display Module: No Sub Type Information	GO to Pinpoint Test W
U016A:00	Lost Communication With Global Positioning System Module: No Sub Type Information	GO to Pinpoint Test AF
U0184:00	Lost Communication With Radio: No Sub Type Information	GO to Pinpoint Test AG
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	GO to Pinpoint Test AI
U0423:00	Invalid Data Received From Instrument Panel Cluster Control Module: No Sub Type Information	• RETRIEVE and FOLLOW Diagnostic Trouble Codes (DTCs) present in the IPC. REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing). • RETRIEVE and FOLLOW Diagnostic Trouble Codes (DTCs) present in the IPC.
U0452:00	Invalid Data Received From Restraints Control Module: No Sub Type Information	• RETRIEVE and FOLLOW Diagnostic Trouble Codes (DTCs) present in the RCM. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing). • RETRIEVE and FOLLOW Diagnostic Trouble Codes (DTCs) present in the RCM.
U2017:45	Control Module Software #2: Program Memory Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U2017:45 is retrieved again, INSTALL a new APIM.

		REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U2017:51	Control Module Software #2: Not Programmed	• This DTC sets due to incomplete or incorrect APIM programming/provisioning. CHECK the vehicle service history for recent service actions related to the APIM. – If there have been recent service actions with the APIM, PERFORM the APIM programming as directed by the diagnostic scan tool. REFER to: SYNC Module [APIM] Standard Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). – If there have been no recent service actions, the APIM has failed to retain configuration data. INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U2017:52	Control Module Software #2: Not Activated	• This DTC sets due to incomplete or incorrect APIM programming/provisioning. CHECK the vehicle service history for recent service actions related to the APIM. – If there have been recent service actions with the APIM, PERFORM the APIM programming as directed by the diagnostic scan tool. REFER to: SYNC Module [APIM] Standard Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). – If there have been no recent service actions, the APIM has failed to retain configuration data. INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U2017:54	Control Module Software #2: Missing Calibration	• This DTC sets due to incomplete or incorrect APIM programming/provisioning. CHECK the vehicle service history for recent service actions related to the APIM. – If there have been recent service actions with the APIM, PERFORM the APIM programming as directed by the diagnostic scan tool. REFER to: SYNC Module [APIM] Standard Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). – If there have been no recent service actions, the APIM has failed to retain configuration data. INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U2100:00	Initial Configuration Not Complete: No Sub Type Information	• This DTC sets due to incomplete or incorrect APIM programming/provisioning. CHECK the vehicle service history for recent service actions related to the APIM. – If there have been recent service actions with the APIM, PERFORM the APIM programming as directed by the diagnostic scan tool. REFER to: SYNC Module [APIM] Standard Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).

		– If there have been no recent service actions, the APIM has failed to retain configuration data. INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	• This DTC sets due to incomplete or incorrect APIM programming/provisioning. CHECK the vehicle service history for recent service actions related to the APIM. – If there have been recent service actions with the APIM, PERFORM the APIM programming as directed by the diagnostic scan tool. REFER to: SYNC Module [APIM] Standard Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures). – If there have been no recent service actions, the APIM has failed to retain configuration data. INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3000:04	Control Module: System Internal Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:04 is retrieved again, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3000:41	Control Module: General Checksum Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:41 is retrieved again, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3000:42	Control Module: General Memory Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC U3000:42 is retrieved again, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
U3000:88	Control Module: Bus Off	**NOTE:** *The module was unable to communicate on the network at a point in time. The fault is not currently present since the module had to communicate with the diagnostic scan tool to report this DTC.* **To avoid repeat network concerns:** • INSPECT for damaged or corroded wiring at the APIM. • CLEAR the DTC. • WAIT at least 10 seconds. • REPEAT the network test with the diagnostic scan tool.
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test AK
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test AL

DTC Chart: FCIM

DTC	Description	Action
B00D5:01	Restraint System Passenger Disable Indicator: General Electrical Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC B00D5:01 is retrieved again, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
B1034:11	Left Front Seat Heater Element: Circuit Short To Ground	REFER to: Seats (501-10A Seating, Diagnosis and Testing).
B1034:12	Left Front Seat Heater Element: Circuit Short To Battery	REFER to: Seats (501-10A Seating, Diagnosis and Testing).
B1034:13	Left Front Seat Heater Element: Circuit Open	REFER to: Seats (501-10A Seating, Diagnosis and Testing).
B1036:11	Right Front Seat Heater Element: Circuit Short To Ground	REFER to: Seats (501-10A Seating, Diagnosis and Testing).
B1036:12	Right Front Seat Heater Element: Circuit Short To Battery	REFER to: Seats (501-10A Seating, Diagnosis and Testing).
B1036:13	Right Front Seat Heater Element: Circuit Open	REFER to: Seats (501-10A Seating, Diagnosis and Testing).
B1038:11	Left Front Seat Heater Sensor: Circuit Short To Ground	REFER to: Seats (501-10A Seating, Diagnosis and Testing).
B1038:15	Left Front Seat Heater Sensor: Circuit Short To Battery or Open	REFER to: Seats (501-10A Seating, Diagnosis and Testing).
B103A:11	Right Front Seat Heater Sensor: Circuit Short To Ground	REFER to: Seats (501-10A Seating, Diagnosis and Testing).
B103A:15	Right Front Seat Heater Sensor: Circuit Short To Battery or Open	REFER to: Seats (501-10A Seating, Diagnosis and Testing).
B105A:12	Cabin Temperature Sensor Fan: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B105A:14	Cabin Temperature Sensor Fan: Circuit Short To Ground or Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1081:07	Left Temperature Damper Motor: Mechanical Failure	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1081:11	Left Temperature Damper Motor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B1081:12	Left Temperature Damper Motor: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General

		Information, Diagnosis and Testing).
B1081:13	Left Temperature Damper Motor: Circuit Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B1082:07	Right Temperature Damper Motor: Mechanical Failure	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1082:11	Right Temperature Damper Motor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B1082:12	Right Temperature Damper Motor: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B1082:13	Right Temperature Damper Motor: Circuit Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B1083:07	Recirculation Damper Motor: Mechanical Failure	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1083:11	Recirculation Damper Motor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B1083:12	Recirculation Damper Motor: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B1083:13	Recirculation Damper Motor: Circuit Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B1086:07	Air Distribution Damper Motor: Mechanical Failure	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1086:11	Air Distribution Damper Motor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B1086:12	Air Distribution Damper Motor: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B1086:13	Air Distribution Damper Motor: Circuit Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B10AF:11	Blower Fan Relay: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).

B10AF:12	Blower Fan Relay: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B10AF:13	Blower Fan Relay: Circuit Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B10B3:11	Right Panel Air Discharge Temperature: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B10B3:15	Right Panel Air Discharge Temperature: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B10B4:11	Right Floor Air Discharge Temperature: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B10B4:15	Right Floor Air Discharge Temperature: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B10B5:11	Left Panel Air Discharge Temperature: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B10B5:15	Left Panel Air Discharge Temperature: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B10B6:11	Left Floor Air Discharge Temperature: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B10B6:15	Left Floor Air Discharge Temperature: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B10B8:63	Push Buttons: Circuit / Component Protection Time-Out	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC B10B8:63 is retrieved again, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
B10B9:12	Blower Control: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B10B9:14	Blower Control: Circuit	

	Short To Ground or Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B113C:11	Hazard Switch Illumination: Circuit Short To Ground	REFER to: Instrument Panel and Interior Switches Illumination (413-00 Instrument Panel and Interior Switches Illumination, Diagnosis and Testing).
B11E5:11	Left HVAC Damper Position Sensor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B11E5:15	Left HVAC Damper Position Sensor: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B11E6:11	Right HVAC Damper Position Sensor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B11E6:15	Right HVAC Damper Position Sensor: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B11E7:11	Air Distribution Damper Position Sensor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B11E7:15	Air Distribution Damper Position Sensor: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B11F0:11	Air Intake Damper Position Sensor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B11F0:15	Air Intake Damper Position Sensor: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
B1202:01	Restraint System Passenger Enable Indicator: General Electrical Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). • WAIT at least 10 seconds. • REPEAT the self-test. • If DTC B1202:01 is retrieved again, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
B1A61:11	Cabin Temperature Sensor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1A61:15	Cabin Temperature Sensor: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1A63:11	Right Solar Sensor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).

		See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1A63:15	Right Solar Sensor: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1A64:11	Left Solar Sensor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1A64:15	Left Solar Sensor: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1A69:11	Humidity Sensor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1A69:15	Humidity Sensor: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1B71:11	Evaporator Temperature Sensor: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1B71:15	Evaporator Temperature Sensor: Circuit Short To Battery or Open	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing). See DTC Chart: FCIM - DATC (Dual Automatic Temperature Control).
B1C83:12	Rear Defog Relay: Circuit Short To Battery	REFER to: Glass, Frames and Mechanisms (501-11 Glass, Frames and Mechanisms, Diagnosis and Testing).
B1C83:14	Rear Defog Relay: Circuit Short To Ground or Open	REFER to: Glass, Frames and Mechanisms (501-11 Glass, Frames and Mechanisms, Diagnosis and Testing).
C1B14:11	Sensor Supply Voltage A: Circuit Short To Ground	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
C1B14:12	Sensor Supply Voltage A: Circuit Short To Battery	REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test AB

		Procedures). If the concern is still present, GO to Pinpoint Test S
Unable to pair Bluetooth device	Refer to the Pinpoint Test	PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, General Procedures). If the concern is still present, GO to Pinpoint Test T
An individual Bluetooth device feature is inoperative (text messaging, media playback or controls, phone book download, call history, or call waiting)	Customer's device compatibility	• PERFORM the APIM Reset. REFER to: Reset the SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, General Procedures). • INSTRUCT the customer to review the device compatibility list. REFER to www.syncmyride.com. It is normal operation for unsupported or incompatible Bluetooth features to be unavailable through the SYNC® system. • If the inoperative feature is compatible, ADVISE the customer to check their device for firmware updates, and if required, reset their device following the manufacturer's instructions.
Emergency Assistance is inoperative or does not operate correctly	• Unregistered owner account • RCM misconfiguration • IPC misconfiguration	• Verify the customer has an account. • This error message appears due to incomplete or incorrect PMI procedures. CHECK the vehicle service history for recent service actions related to the IPC or RCM. – If there have been recent service actions with the IPC or RCM, PERFORM the PMI procedure as directed by the diagnostic scan tool. – If there have been no recent service actions, the APIM has failed to retain configuration data. INSTALL a new

		APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).

Pinpoint Tests

Poor Reception Or Continuous Seek Or Scan - AM/ FM

Refer to Wiring Diagrams Cell 131 for schematic and connector information.

Refer to Wiring Diagrams Cell 12 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1D55:11	Antenna #2: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the FM2 antenna coaxial cable for more than 1 second.
B1D55:15	Antenna #2: Circuit Short To Battery or Open	Set by the ACM when a short to voltage or open is detected on the FM2 antenna coaxial cable for more than 1 second.

Possible Sources

- No channel found in the selected RDS category
- Charging system
- Wiring, terminals, or connectors
- Ignition system
- FM2 antenna
- AM/ FM1 antenna coaxial cable
- FM2 antenna coaxial cable
- AM/ FM1 antenna
- Mounting surface corrosion
- FM2 diversity antenna amplifier
- ACM

PINPOINT TEST A : POOR RECEPTION OR CONTINUOUS SEEK OR SCAN - AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION)

A1 CHECK THE AUDIO SYSTEM RECEPTION WITH THE ENGINE RUNNING
• Operate the audio system in AM/ FM mode. • Check the reception with the engine running, and with the engine off.

Is poor reception only present with the engine running?

Yes	GO to A2
No	GO to A4

A2 CHECK THE GENERATOR

- Ignition OFF.
- **NOTICE: Do not allow the generator B+ cable terminal to make contact with a conductive surface. Failure to follow this instruction may result in personal injury or damage to the vehicle.**
- Disconnect Generator B+ Cable C102C.
- Start the engine.
- Operate the audio system in AM/ FM mode.

Is the reception OK?

Yes	INSTALL a new generator. REFER to: Generator - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-02 Generator and Regulator, Removal and Installation). REFER to: Generator - 2.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation). REFER to: Generator - 3.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation).
No	GO to A3

A3 CHECK THE IGNITION CIRCUITS

- Ignition OFF.
- Connect Generator B+ Cable C102C.
- Inspect all the wiring harnesses and connectors for damaged insulation and loose or broken conditions.

Are the ignition components OK?

Yes	USE a jumper cable to temporarily ground various parts of the vehicle (examples include: engine, fenders, quarter panels, body sheet metal) to the frame. When the noise is eliminated, PROVIDE a permanent ground where necessary.
No	REPAIR or REPLACE the harness or components as necessary.

A4 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA ENABLE CIRCUIT FOR CORRECT VOLTAGE

- Ignition OFF.
- Disconnect Antenna C9021.
- Ignition ON.
- Operate the audio system in AM/ FM mode.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9021-2		Ground

Is the voltage greater than 11 volts?

Yes	GO to A7
No	GO to A5

A5 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA ENABLE CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect ACM C240A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9021-2	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A6
No	REPAIR the circuit.

A6 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA ENABLE CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C9021-2	Ω	C240A-2

Is the resistance less than 3 ohms?

Yes	GO to A22
No	REPAIR the circuit.

A7 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 AND FM (FREQUENCY MODULATION) 2 ANTENNA COAXIAL CABLE CORES AND SHIELDS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect: AM/ FM1 antenna coaxial cable at the ACM.
  REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
- Disconnect: FM2 antenna coaxial cable at the ACM.
  REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
- Disconnect: AM/ FM1 antenna coaxial cable at the antenna.
  REFER to: Audio Unit Antenna Cable (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .
- Disconnect: FM2 antenna inline coaxial cable at the antenna.
  REFER to: Audio Unit Antenna Cable (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC) .
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM		Ground
AM/ FM1 antenna coaxial cable shield at the ACM		Ground
FM2 antenna coaxial cable core at the ACM		Ground
FM2 antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	REPAIR, or INSTALL a new AM/ FM1 or FM2 antenna coaxial cable. REFER to: Audio Unit Antenna Cable (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .
No	GO to A8

A8 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 AND FM (FREQUENCY MODULATION) 2 ANTENNA COAXIAL CABLE CORES FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	Ω	Ground
FM2 antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A9
No	REPAIR, or INSTALL a new AM/ FM1 or FM2 antenna coaxial cable. REFER to: Audio Unit Antenna Cable (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .

A9 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 AND FM (FREQUENCY MODULATION) 2 ANTENNA COAXIAL CABLE CORES AND SHIELDS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	Ω	AM/ FM1 antenna connection
AM/ FM1 antenna coaxial cable shield at the ACM	Ω	AM/ FM1 antenna connection
FM2 antenna coaxial cable core at the ACM	Ω	FM2 antenna connection
FM2antenna coaxial cable shield at the ACM	Ω	FM2 antenna connection

Are the resistances less than 1 ohm?

Yes	GO to A10
No	REPAIR, or INSTALL a new AM/ FM1 or FM2 antenna coaxial cable.

	REFER to: Audio Unit Antenna Cable (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .

A10 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 AND FM (FREQUENCY MODULATION) 2 ANTENNA COAXIAL CABLE CORES AND SHIELDS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	Ω	AM/ FM1 antenna coaxial cable shield at the ACM
FM2 antenna coaxial cable core at the ACM	Ω	FM2 antenna coaxial cable shield at the ACM

Is the resistance greater than 10,000 ohms?

Yes	GO to A11
No	REPAIR, or INSTALL a new AM/ FM1 or FM2 antenna coaxial cable. REFER to: Audio Unit Antenna Cable (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .

A11 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA UNIT CORE AND SHIELD FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: AM/ FM1 antenna coaxial cable at the antenna unit.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM		Ground
AM/ FM1 antenna coaxial cable shield at the ACM		Ground

Is any voltage present?

Yes	INSTALL a new AM/ FM1 antenna. REFER to: Audio Unit Antenna (415-00G) .
No	GO to A12

A12 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA UNIT CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	Ω	Ground

AM/ FM1 antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A13
No	INSTALL a new AM/ FM1 antenna. REFER to: Audio Unit Antenna (415-00G) .

A13 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA UNIT CORE AND SHIELD FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable core at the ACM	Ω	AM/ FM1 antenna coaxial cable shield at the ACM

Is the resistance greater than 10,000 ohms?

Yes	GO to A14
No	INSTALL a new AM/ FM1 antenna. REFER to: Audio Unit Antenna (415-00G) .

A14 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA UNIT SHIELD FOR CONTINUITY TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna coaxial cable shield at the ACM	Ω	Ground

Is the resistance less than 1 ohm?

Yes	GO to A16
No	GO to A15

A15 CHECK THE AM (AMPLITUDE MODULATION) / FM (FREQUENCY MODULATION) 1 ANTENNA UNIT SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

- Remove the AM/ FM1 antenna unit.
  REFER to: Audio Unit Antenna (415-00G) .
- Measure:

Positive Lead	Measurement / Action	Negative Lead
AM/ FM1 antenna unit shield at the antenna unit (component side)	Ω	AM/ FM1 antenna base (unpainted surface)

Is the resistance less than 1 ohm?

Yes	INSPECT and REPAIR any corrosion on the antenna unit base and/or vehicle mounting surface. REINSTALL the antenna and ensure the proper torque value is achieved. REFER to: Audio Unit Antenna (415-00G) .
No	INSTALL a new AM/ FM1 antenna. REFER to: Audio Unit Antenna (415-00G) .

A16 CHECK THE FM (FREQUENCY MODULATION) 2 DIVERSITY ANTENNA AMPLIFIER CORE AND SHIELD FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Connect: FM2 antenna coaxial cable at the FM2 Diversity Antenna Amplifier.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
FM2 antenna coaxial cable core at the ACM	V	Ground
FM2 antenna coaxial cable shield at the ACM	V	Ground

Is any voltage present?

Yes	INSTALL a new FM2 diversity antenna amplifier. REFER to: Audio Unit Antenna Amplifier (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
No	GO to A17

A17 CHECK THE FM (FREQUENCY MODULATION) 2 DIVERSITY ANTENNA AMPLIFIER CORE FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
FM2 antenna coaxial cable core at the ACM	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A18
No	INSTALL a new FM2 diversity antenna amplifier. REFER to: Audio Unit Antenna Amplifier (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).

A18 CHECK THE FM (FREQUENCY MODULATION) 2 DIVERSITY ANTENNA AMPLIFIER CORE AND SHIELD FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
FM2 antenna coaxial cable core at the ACM	Ω	FM2 antenna coaxial cable shield at the ACM

Is the resistance greater than 10,000 ohms?

Yes	GO to A19
No	INSTALL a new FM2 diversity antenna amplifier. REFER to: Audio Unit Antenna Amplifier (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).

A19 CHECK THE FM (FREQUENCY MODULATION) 2 DIVERSITY ANTENNA AMPLIFIER SHIELD FOR CONTINUITY TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
FM2 antenna coaxial cable shield at the ACM	Ω	Ground

Is the resistance less than 1 ohm?

Yes	GO to A21
No	GO to A20

A20 CHECK THE FM (FREQUENCY MODULATION) 2 DIVERSITY ANTENNA AMPLIFIER SHIELD FOR CONTINUITY TO ANTENNA UNIT BASE

- Remove the FM2 diversity antenna amplifier.
  REFER to: Audio Unit Antenna Amplifier (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
- Measure:

Positive Lead	Measurement / Action	Negative Lead
FM2 antenna shield at the FM2 diversity antenna amplifier (component side)	Ω	FM2 diversity antenna amplifier base (unpainted surface on the mounting tab)

Is the resistance less than 1 ohm?

Yes	INSPECT and REPAIR any corrosion on theFM2 diversity antenna amplifier base and/or vehicle mounting surface. REINSTALL the FM2 diversity antenna amplifier and ensure the proper torque value is achieved. REFER to: Audio Unit Antenna Amplifier (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
No	INSTALL a new FM2 diversity antenna amplifier. REFER to: Audio Unit Antenna Amplifier (415-00C Information and Entertainment System -

	General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).

A21 CHECK THE FM (FREQUENCY MODULATION) 2 ANTENNA COMPONENTS

- Disconnect and inspect the FM2 diversity antenna amplifier connector for the FM2 antenna circuits. REFER to: Audio Unit Antenna Amplifier (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
- Inspect the FM2 antenna circuits and connectors.

Is any damage present on the FM2 antenna circuits or connections?

Yes	REPAIR or REPLACE as necessary.
No	GO to A22

A22 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Speed Compensated Volume Does Not Operate Correctly

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

Possible Sources

- Speed compensated volume setting
- ACM

PINPOINT TEST B : THE SPEED COMPENSATED VOLUME DOES NOT OPERATE CORRECTLY

B1 CHECK THE SPEEDOMETER OPERATION

- Drive the vehicle and observe the speedometer.

Does the speedometer operate correctly?

Yes	GO to B2
No	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).

B2 CHECK THE SPEED COMPENSATED VOLUME SETTING

- Turn the speed compensated volume off. Refer to the Owner's Literature.
- Operate the audio system in AM/ FM mode.
- Drive the vehicle at various speeds and observe the speaker volume.
- Set the speed compensated volume to maximum compensation. Refer to the Owner's Literature.
- Operate the audio system in AM/ FM mode.
- Drive the vehicle at various speeds and observe the speaker volume.

Does the volume remain constant with the speed compensated volume turned off, and increase and decrease with vehicle speed with the speed compensated volume set to maximum?

Yes	The system is operating correctly at this time. INSTRUCT the customer in the correct usage of the speed compensated volume feature.
No	GO to B3

B3 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155:00 retrieved in any audio system module?

Yes	GO to Pinpoint Test AD
No	GO to B4

B4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A Loud Popping Sound Is Heard When Cycling The Ignition

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Refer to Wiring Diagrams Cell 13 for schematic and connector information.

Normal Operation and Fault Conditions

The ACM receives voltage on a start signal circuit when the ignition is in the START position and mutes the audio signal output. This prevents voltage spikes from producing popping noises through the speakers. An open on this circuit between splice CS157 and the ACM could cause voltage spikes to produce popping noises through the speakers.

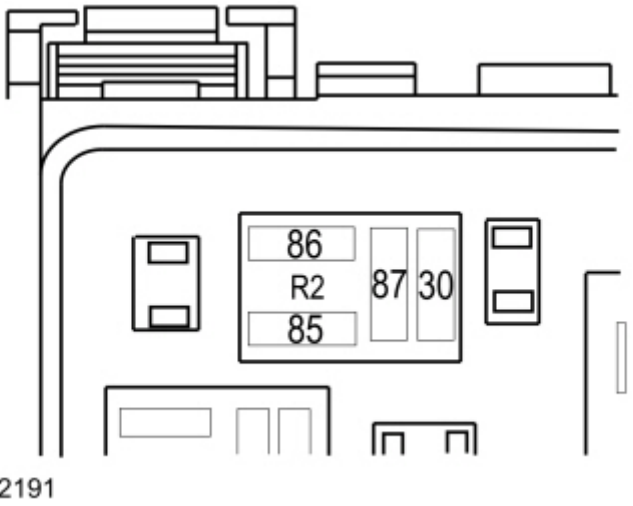
Possible Sources

- Wiring, terminals, or connectors
- ACM

PINPOINT TEST C : A LOUD POPPING SOUND IS HEARD WHEN CYCLING THE IGNITION

C1 CHECK THE PCM (POWERTRAIN CONTROL MODULE) FOR DTC (DIAGNOSTIC TROUBLE CODE) P0615, P0616 OR P0617

- Using a diagnostic scan tool, perform the PCM self-test.



Is DTC P0615, P0616 or P0617 set?

Yes	REFER to: Starting System (303-06A Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4, Diagnosis and Testing). REFER to: Starting System (303-06B Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Diagnosis and Testing). REFER to: Starting System (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Diagnosis and Testing).
No	GO to C2

C2 CHECK THE START SENSE CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect ACM C4821A.
- Disconnect BJB Starter Relay C1035D.
- Disconnect PCM C1232C 2.2L Engine .
- Disconnect PCM C175B 2.5L Engine .
- Disconnect PCM C1232C 3.2L Engine .
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821A-3	Ω	

BJB Starter Relay Socket 86

2.2L Duratorq

Positive Lead	Measurement / Action	Negative Lead
C4821A-3	Ω	C1035D-13
C4821A-3	Ω	C1232C-37

2.5L Duratec

Positive Lead	Measurement / Action	Negative Lead
C4821A-3	Ω	C1035D-13
C4821A-3	Ω	C175A-37

3.2L Duratorq

Positive Lead	Measurement / Action	Negative Lead
C4821A-3	Ω	C1035D-13
C4821A-3	Ω	C1232C-37

Are the resistances less than 3 ohms?

Yes	GO to C3
No	REPAIR the circuit.

C3 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:

- Corrosion (clean module pins or install new connectors or terminals)
- Damaged or bent pins (install new terminals or pins)
- Pushed-out pins (install new pins as necessary)

- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Poor Sound Quality Or Distorted Sound From One Or More Speakers (Not All Speakers)

Normal Operation and Fault Conditions

The ACM sends audio signals to the speakers in the form of AC voltage, resulting in clear audio output.

Possible Sources

- Loose component fasteners
- Loose door handle, lock, and other trim panel components and fasteners
- Loose items in storage areas
- Loose speaker grilles
- Loose wire harnesses or wire harness fasteners
- Speaker(s)
- Water shield bonding and placement

Visual Inspection and Diagnostic Pre-checks

Visually inspect around the suspect area for any possible rattle conditions such as:

- Any storage compartments including cup holders (if equipped)
- Door map pockets for contents that can rattle (if equipped)
- Door pull cup attachments (if equipped)
- Door switch bezels (if equipped)
- Package tray (if equipped)
- Speaker grilles
- Trim panels and fasteners

PINPOINT TEST D : POOR SOUND QUALITY OR DISTORTED SOUND FROM ONE OR MORE SPEAKERS (NOT ALL SPEAKERS)

D1 ISOLATE THE ZONE

- Operate the audio system using digital media such as a CD or MP3.
- Using the audio system fade and balance feature, adjust the audio sound to each of the four zones (LHF, RHF, LHR, and RHR) of the vehicle to isolate the poor sound quality.
- Locate and apply pressure to the trim panel(s) around the poor sound quality area in question.

Does applying pressure to a trim panel reduce or eliminate the audible noise?

Yes	REPAIR or REPLACE the trim panel as needed.
No	GO to D2

D2 REMOVE AND INSPECT BEHIND/UNDERNEATH THE SUSPECT TRIM PANEL(S)

- Remove the trim panel to access the suspect speaker.

- Operate the audio system using digital media such as a CD or MP3.
- Validate where the poor sound quality area is located.
- Check:
  - Trim panel for loose components (e.g. speaker grille) around the speaker area.
  - Trim panel joining components for missing or broken pieces.
  - Lock and handle mechanical parts for correct attachment.
  - Wire harnesses for correct routing.
  - Wire harness fasteners for correct attachment.
  - Water shield for correct placement (speaker air path not blocked).
  - Water shield for correct bonding to sheet metal.
  - Storage areas for loose items.
  - All child safety belt anchors (if equipped).
  - All safety belt retractors.
  - All speaker bracket fasteners and other fasteners are secured and tightened to specified torque.

Was the source of the noise located?

Yes	REPAIR or REPLACE any loose or broken component or fastener as needed.
No	GO to D3

D3 CHECK THE SUSPECT SPEAKER FOR WATER INTRUSION

- Inspect for watermarks.
- Check the:
  - Cone
  - Magnet
  - Basket

Are any watermarks present on the speaker?

Yes	VERIFY the water shield is in the correct location, REPAIR or REPLACE any trim, door, or speaker seal as required. DRY the speaker in question and TEST the system for normal operation.
No	GO to D4

D4 ISOLATE SPEAKER TO VERIFY NOISE

- Remove the suspect speaker from its location and leave the speaker connected to the harness.
- Hold the speaker away from any trim panel(s) and ensure the speaker is isolated from contact.
- Operate the audio system using digital media such as a CD or MP3.

Is the noise still present in the suspect speaker?

Yes	INSTALL a new speaker for the one in question.
No	LOCATE the source of the noise and REPAIR as needed.

No Sound From All Speakers

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Refer to Wiring Diagrams Cell 13 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen

Display/Navigation System, Description and Operation).

To prevent voltage spikes from producing popping noises through the speakers when the ignition is in the START position, the BCM provides an ignition status CAN message and also applies voltage on the ACM start signal circuit. When the CAN message and/or voltage is received by the ACM, the audio signal output is muted. A short to voltage on this circuit causes the ACM output to be muted continuously, and will cause the warning chimes to only sound from the IPC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1142:27	Ignition Status 1: Signal Rate of Change Above Threshold	Set by the ACM when a short to voltage is detected on the start signal circuit.

Possible Sources

- Wiring, terminals, or connectors
- Fuse
- ACM

PINPOINT TEST E : NO SOUND FROM ALL SPEAKERS

E1 VERIFY THE ACM (AUDIO FRONT CONTROL MODULE) PASSES THE NETWORK TEST

- Using a diagnostic scan tool, perform the network test.

Did the ACM pass the network test?

Yes	GO to E2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

E2 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) P0615, P0616 OR P0617

- Using a diagnostic scan tool, perform the PCM self-test.

Is DTC P0615, P0616 or P0617 set?

Yes	REFER to: Starting System (303-06A Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4, Diagnosis and Testing). REFER to: Starting System (303-06B Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Diagnosis and Testing). REFER to: Starting System (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Diagnosis and Testing).
No	GO to E3

E3 CHECK THE START SENSE CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821A.
- Disconnect BJB Starter Relay.
- Disconnect PCM C1232A 2.2L Engine .

- Disconnect PCM C175B 2.5L Engine .
- Disconnect PCM C1232A 3.2L Engine .
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821A-3		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to E4

E4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The LHF Door Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

The LHF door speaker and LHF door tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A01:01	Speaker #1: General Electrical Failure	Set by the ACM when a failure is detected on the LHF door or LHF door tweeter speaker circuits.

B1A01:11	Speaker #1: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the LHF door or LHF door tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:12	Speaker #1: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the LHF door or LHF door tweeter speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.
B1A01:13	Speaker #1: Circuit Open	Set by the ACM when an open is detected on the LHF door speaker circuits.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

PINPOINT TEST F : THE LHF (LEFT-HAND FRONT) DOOR SPEAKER IS INOPERATIVE

F1 CHECK THE AUDIO SIGNAL TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER

- Ignition OFF.
- Disconnect LHF Door Speaker C5003LHD Vehicles .
- Disconnect LHF Door Speaker C6003RHD Vehicles .
- Operate the audio system in AM/ FM mode.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	V~	C5003-4

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	V~	C6003-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHF door speaker. REFER to: Front Door Speaker LH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to F2

F2 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821A.
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	V	Ground
C5003-4	V	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	V	Ground
C6003-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to F3

F3 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect LHF Door Tweeter Speaker C5002LHD Vehicles .
- Disconnect LHF Door Tweeter Speaker C6002RHD Vehicles .
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	Ω	Ground
C5003-4	Ω	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	Ω	Ground
C6003-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to F4
No	REPAIR the circuit in question.

F4 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR AN OPEN

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	Ω	C4821A-10
C5003-4	Ω	C4821A-22

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	Ω	C4821A-10
C6003-4	Ω	C4821A-22

Are the resistances less than 3 ohms?

Yes	GO to F5
No	REPAIR the circuit in question.

F5 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR SPEAKER FOR A SHORT TOGETHER

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-1	Ω	C5003-4

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-1	Ω	C6003-4

Is the resistance greater than 10,000 ohms?

Yes	GO to F6
No	REPAIR the circuit in question.

F6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:

- Corrosion (clean module pins or install new connectors or terminals)
- Damaged or bent pins (install new terminals or pins)
- Pushed-out pins (install new pins as necessary)

- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The LHF Door Tweeter Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

The LHF door speaker and LHF door tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A01:01	Speaker #1: General Electrical Failure	Set by the ACM when a failure is detected on the LHF door or LHF door tweeter speaker circuits.
B1A01:11	Speaker #1: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the LHF door or LHF door tweeter speaker circuits. When DTC B1A01:11 is set, the speaker output is disabled.
B1A01:12	Speaker #1: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the LHF door or LHF door tweeter speaker circuits. When DTC B1A01:12 is set, the speaker output is disabled.

Possible Sources

- Speaker
- Wiring, terminals, or connectors

PINPOINT TEST G : THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER IS INOPERATIVE

G1 CHECK THE LHF (LEFT-HAND FRONT) DOOR SPEAKER
• Ignition OFF. • Operate the audio system in AM/ FM mode. **Does the LHF door speaker operate correctly?**

Yes	GO to G2

No	GO to Pinpoint Test F

G2 CHECK THE AUDIO SIGNAL TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER

- Ignition OFF.
- Disconnect LHF Door Tweeter Speaker C5002LHD Vehicles .
- Disconnect LHF Door Tweeter Speaker C6002RHD Vehicles .
- Operate the audio system in AM/ FM mode.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5002-1	V~	C5002-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6002-1	V~	C6002-3

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHF door tweeter speaker. REFER to: Front Door Tweeter Speaker (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to G3

G3 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect LHF Door Tweeter Speaker C5002LHD Vehicles .
- Disconnect LHF Door Tweeter Speaker C6002RHD Vehicles .
- Operate the audio system in AM/ FM mode.
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5002-1	+ V-	Ground
C5002-3	+ V-	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6002-1		Ground
C6002-3		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to G4

G4 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5002-1	Ω	Ground
C5002-3	Ω	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6002-1	Ω	Ground
C6002-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to G5
No	REPAIR the circuit in question.

G5 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR AN OPEN

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5002-1	Ω	C5003-2
C5002-3	Ω	C5003-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6002-1	Ω	C6003-2
C6002-3	Ω	C6003-3

Are the resistances less than 3 ohms?

Yes	GO to G6
No	REPAIR the circuit in question.

G6 CHECK THE AUDIO CIRCUITS TO THE LHF (LEFT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TOGETHER

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5003-2	Ω	C5003-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6003-2	Ω	C6003-3

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new LHF door speaker. REFER to: Front Door Speaker LH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	REPAIR the circuit in question.

The RHF Door Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

The RHF door speaker and RHF door tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A02:01	Speaker #2: General Electrical Failure	Set by the ACM when a failure is detected on the RHF door or RHF door tweeter speaker circuits.
B1A02:11	Speaker #2: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the RHF door or RHF door tweeter speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:12	Speaker #2: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the RHF door or RHF door tweeter speaker circuits. When DTC B1A02:12 is set, the speaker output is disabled.
B1A02:13	Speaker #2: Circuit Open	Set by the ACM when an open is detected on the RHF door speaker circuits.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

PINPOINT TEST H : THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER IS INOPERATIVE

H1 CHECK THE AUDIO SIGNAL TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER

- Ignition OFF.
- Disconnect RHF Door Speaker C6015LHD Vehicles .
- Disconnect RHF Door Speaker C5015RHD Vehicles .
- Operate the audio system in AM/ FM mode.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1	V~	C6015-4

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	V~	C5015-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new RHF door speaker. REFER to: Front Door Speaker RH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to H2

H2 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.

- Disconnect ACM C4821A.
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1	V	Ground
C6015-4	V	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	V	Ground
C5015-4	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to H3

H3 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect RHF Door Tweeter Speaker C6012LHD Vehicles.
- Disconnect RHF Door Tweeter Speaker C5012RHD Vehicles.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1	Ω	Ground
C6015-4	Ω	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	Ω	Ground
C5015-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to H4
No	REPAIR the circuit in question.

H4 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR AN OPEN

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1	Ω	C4821A-11
C6015-4	Ω	C4821A-23

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	Ω	C4821A-11
C5015-4	Ω	C4821A-23

Are the resistances less than 3 ohms?

Yes	GO to H5
No	REPAIR the circuit in question.

H5 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER FOR A SHORT TOGETHER

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6015-1	Ω	C6015-4

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5015-1	Ω	C5015-4

Is the resistance greater than 10,000 ohms?

Yes	GO to H6
No	REPAIR the circuit in question.

H6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

• Ignition OFF.
• Disconnect and inspect all the ACM and related in-line connectors.
• Repair:
  • Corrosion (clean module pins or install new connectors or terminals)
  • Damaged or bent pins (install new terminals or pins)
  • Pushed-out pins (install new pins as necessary)
• Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
 	
Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The RHF Door Tweeter Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

The RHF door speaker and RHF door tweeter speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A02:01	Speaker #2: General Electrical Failure	Set by the ACM when a failure is detected on the RHF door or RHF door tweeter speaker circuits.
B1A02:11	Speaker #2: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the RHF door or RHF door tweeter speaker circuits. When DTC B1A02:11 is set, the speaker output is disabled.
B1A02:12	Speaker #2: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the RHF door or RHF door tweeter speaker circuits. When DTC B1A02:12 is set, the speaker output is disabled.

Possible Sources

- Speaker
- Wiring, terminals, or connectors

PINPOINT TEST I : THE RHF (RIGHT-HAND FRONT) DOOR TWEETER SPEAKER IS INOPERATIVE

I1 CHECK THE RHF (RIGHT-HAND FRONT) DOOR SPEAKER
• Ignition OFF.

- Ignition OFF.
- Operate the audio system in AM/ FM mode.

Does the RHF door speaker operate correctly?

Yes	GO to I2
No	GO to Pinpoint Test H

I2 CHECK THE AUDIO SIGNAL TO THE RHF (RIGHT-HAND FRONT) DOOR TWEETER SPEAKER

- Ignition OFF.
- Disconnect RHF Door Tweeter Speaker C6012LHD Vehicles.
- Disconnect RHF Door Tweeter Speaker C5012RHD Vehicles.
- Operate the audio system in AM/ FM mode.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6012-1	V~	C6012-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5012-1	V~	C5012-3

Is a fluctuating AC voltage present?

Yes	INSTALL a new RHF door tweeter speaker. REFER to: Front Door Tweeter Speaker (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to I3

I3 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect RHF Door Speaker C6015LHD Vehicles.
- Disconnect RHF Door Speaker C5015RHD Vehicles.
- Ignition ON.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6012-1	+ V~ −	Ground
C6012-3	+ V~ −	Ground

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5012-1		Ground
C5012-3		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to I4

I4 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6012-1	Ω	Ground
C6012-3	Ω	Ground

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5012-1	Ω	Ground
C5012-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to I5
No	REPAIR the circuit in question.

I5 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR TWEETER SPEAKER FOR AN OPEN

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6012-1	Ω	C6015-3
C6012-3	Ω	C6015-2

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5012-1	Ω	C5015-3
C5012-3	Ω	C5015-2

Are the resistances less than 3 ohms?

Yes	GO to I6
No	REPAIR the circuit in question.

I6 CHECK THE AUDIO CIRCUITS TO THE RHF (RIGHT-HAND FRONT) DOOR TWEETER SPEAKER FOR A SHORT TOGETHER

- Measure:

LHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C6012-1	Ω	C6012-3

RHD Vehicles

Positive Lead	Measurement / Action	Negative Lead
C5012-1	Ω	C5012-3

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new RHF door speaker. REFER to: Front Door Speaker RH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	REPAIR the circuit in question.

The RHR Door Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

The RHR door tweeter speaker and the RHR door speaker share the same audio signal.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A03:01	Speaker #3: General Electrical Failure	Set by the ACM when a failure is detected on the RHR door or RHR door tweeter speaker circuits.
B1A03:11	Speaker #3: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the RHR door or RHR door tweeter speaker circuits. When DTC B1A03:11 is set, the speaker output is disabled.
B1A03:12	Speaker #3: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the RHR door or RHR door tweeter speaker circuits. When DTC B1A03:12 is set, the speaker output is disabled.
B1A03:13	Speaker #3: Circuit Open	Set by the ACM when an open is detected on the RHR door speaker circuits.

Possible Sources

- Speaker
- Wiring, terminals, or connectors

PINPOINT TEST J : THE RHR (RIGHT-HAND REAR) DOOR SPEAKER IS INOPERATIVE

J1 CHECK THE AUDIO SIGNAL TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER

- Ignition OFF.
- Disconnect RHR Door Speaker C802.
- Operate the audio system in AM/ FM mode.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C802-1	V~	C802-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new RHR door speaker. REFER to: Rear Door Speaker RH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to J2

J2 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C802-1	+ V~ −	Ground
C802-4	+ V~ −	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to J3

J3 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect RHR Door Tweeter Speaker C830.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C802-1	Ω	Ground
C802-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to J4
No	REPAIR the circuit in question.

J4 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C802-1	Ω	C4821A-12
C802-4	Ω	C4821A-24

Are the resistances less than 3 ohms?

Yes	GO to J5
No	REPAIR the circuit in question.

J5 CHECK THE AUDIO CIRCUITS TO THE RHR (RIGHT-HAND REAR) DOOR SPEAKER FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C802-1	Ω	C802-4

Is the resistance greater than 10,000 ohms?

Yes	GO to J6
No	REPAIR the circuit in question.

J6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The LHR Door Speaker Is Inoperative

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1A04:01	Speaker #4: General Electrical Failure	Set by the ACM when a failure is detected on the LHR door or LHR door tweeter speaker circuits.
B1A04:11	Speaker #4: Circuit Short To Ground	Set by the ACM when a short to ground is detected on the LHR door or LHR door tweeter speaker circuits. When DTC B1A04:11 is set, the speaker output is disabled.
B1A04:12	Speaker #4: Circuit Short To Battery	Set by the ACM when a short to voltage is detected on the LHR door or LHR door tweeter speaker circuits. When DTC B1A04:12 is set, the speaker output is disabled.
B1A04:13	Speaker #4: Circuit Open	Set by the ACM when an open is detected on the LHR door speaker circuits.

Possible Sources

- Speaker
- Wiring, terminals, or connectors
- ACM

PINPOINT TEST K : THE LHR (LEFT-HAND REAR) DOOR SPEAKER IS INOPERATIVE

K1 CHECK THE AUDIO SIGNAL TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER

- Ignition OFF.
- Disconnect LHR Door Speaker C702.
- Operate the audio system in AM/ FM mode.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	$\tilde{V}$	C702-4

Is a fluctuating AC voltage present?

Yes	INSTALL a new LHR door speaker. REFER to: Rear Door Speaker LH (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to K2

K2 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821A.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	+ $\bar{V}$ −	Ground
C702-4	+ $\bar{V}$ −	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to K3

K3 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect LHR Door Tweeter Speaker C730.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	Ω	Ground
C702-4	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to K4
No	REPAIR the circuit in question.

K4 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	Ω	C4821A-9
C702-4	Ω	C4821A-21

Are the resistances less than 3 ohms?

Yes	GO to K5
No	REPAIR the circuit in question.

K5 CHECK THE AUDIO CIRCUITS TO THE LHR (LEFT-HAND REAR) DOOR SPEAKER FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C702-1	Ω	C702-4

Is the resistance greater than 10,000 ohms?

Yes	GO to K6
No	REPAIR the circuit in question.

K6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment

	System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

All SYNC® Services Features Are Inoperative Or Inaccurate (Traffic, Directions, And Information)

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

Possible Sources

- Unregistered Owner Account
- Unregistered, inactive, or expired subscription
- Unregistered mobile phone number
- Mobile phone being used not selected as "Active"
- Inadequate phone reception
- Obstructions in the GPS antenna's line of sight
- APIM
- GPSM

PINPOINT TEST L : ALL SYNC® SERVICES FEATURES ARE INOPERATIVE OR INACCURATE (TRAFFIC, DIRECTIONS, AND INFORMATION)

L1 VERIFY THE CUSTOMER'S PHONE CONNECTION TO SYNC® SERVICES WHILE AWAY FROM THE VEHICLE

NOTE: *Caller ID blocking must be disabled on the customer's mobile phone so the SYNC® Services server can recognize the registered and "Active" phone number.*

- Advise the customer to call SYNC® Services from their mobile phone.
- Verify the phone call is placed and that the phone connects to SYNC® Services.
- Observe whether the SYNC® Services subscription commercial plays, or if the system asks which service is wanted.

Does the SYNC® Services subscription commercial play?

Yes	GO to L2
No	GO to L4

L2 VERIFY THE CUSTOMER'S SYNC® OWNER ACCOUNT AND SYNC® SERVICES REGISTRATION AND SUBSCRIPTION

- Verify the customer has a SYNC® Owner Account on www.syncmyride.com.
- Verify the customer has registered for SYNC® Services and has an active subscription.

Does the customer have a SYNC® Owner Account and an active SYNC® Services subscription?

Yes	GO to L3
No	• If the customer does not have a SYNC® Owner Account, INFORM the customer that an account must be created in order to sign up for SYNC® Services. REFER to www.syncmyride.com. • If the customer does not have an active SYNC® Services subscription, INFORM the customer that in order for SYNC® Services to function, the subscription needs to be activated. REFER to www.syncmyride.com.

L3 VERIFY THE CUSTOMER'S REGISTERED PHONE NUMBER AND STATUS

NOTE: *Only one mobile phone number can be selected as "Active" at a time, and only the "Active" mobile phone number has access to SYNC® Services.*

- Verify the mobile phone being used has the correct mobile phone number registered with the SYNC® Owner Account on www.syncmyride.com.
- Verify the mobile phone being used is selected as "Active" on www.syncmyride.com.

Is the customer using the registered and active mobile phone associated with the SYNC® Services account?

Yes	GO to L5
No	INFORM the customer that the correct mobile phone number must be registered on the SYNC® website and selected as "Active." REFER to www.syncmyride.com.

L4 VERIFY THE CUSTOMER'S PHONE CONNECTION TO SYNC® SERVICES FROM INSIDE THE VEHICLE

- Ensure the registered and "Active" mobile phone is paired with the SYNC® system. For information on the pairing process, refer to the Owner's Literature. If necessary, review the device compatibility list found on support.ford.com/sync-technology/device-compatibility-sync.
- Ensure the customer's mobile phone has adequate reception.
- Ensure the vehicle is in an open location that is free from obstacles such as tall buildings or large trees.
- Start the vehicle.
- Connect to SYNC® Services from the vehicle controls.
- Verify the phone call is placed and that the phone is connected to SYNC® Services.
- When prompted, select "Directions," and follow the audible prompts to get directions to an address or Saved Point.

Did SYNC® Services indicate that the vehicle location was being obtained, the route was being sent, and that the route download from the server to the vehicle was complete?

Yes	SYNC® Services is operating correctly at this time.
No	• If SYNC® Services indicated the vehicle location was **not** able to be obtained, GO to L5 • If SYNC® Services indicated the vehicle location was being obtained, but did not indicate that the route was being sent, there is a potential SYNC® Services server issue. The problem does not reside in the vehicle's audio system. • If SYNC® Services indicated the vehicle location was being obtained, the route was being sent, but did not indicate that the route download from the server to the vehicle was complete, GO to L8 • If SYNC® Services did **not** indicate the vehicle location was being obtained, the route was being sent, and that the route download from the server to the vehicle was complete, there is a potential SYNC® Services server issue. The problem does not reside in the vehicle's audio system.

L5 CHECK FOR APIM (SYNC MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform the APIM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded in the APIM?

Yes	REFER to the DTC Chart: APIM.
No	GO to L6

L6 CHECK FOR GPSM (GLOBAL POSITIONING SYSTEM MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the GPSM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded in the GPSM?

Yes	REFER to the DTC Chart: GPSM.
No	GO to L7

L7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern. If the concern is still present, GO to L8
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

L8 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the GPSM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the GPSM and related in-line connectors. Make sure it seats and latches correctly.
- **NOTE:** *Before operating the system to determine if the concern is still present, ensure that the vehicle is in an open location that is free from obstacles such as tall buildings or large trees so an adequate GPS signal can be obtained.*

  Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) - Vehicles Built From: 17-08-2015 (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

All APIM Stereo Outputs Are Inoperative Or Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen

Display/Navigation System, Description and Operation).

Possible Sources

- Customer's device
- Wiring, terminals, or connectors
- APIM
- ACM

PINPOINT TEST M : ALL APIM (SYNC MODULE) STEREO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

M1 VERIFY THE OPERATION OF THE SYNC® SYSTEM AUDIO SOURCES

- Connect: Multi-Media Interface Tester 420-373.
- Using the Multi-Media Interface Tester 420-373 and RCA adapter, test the audio output for the SYNC® audio sources (Bluetooth, USB ports, and RCA jacks).

Is there poor quality, distorted, or no sound from all SYNC® audio sources?

Yes	GO to M2
No	• If there is a concern with one or more, but not all SYNC® audio sources, REFER to Symptom Chart: SYNC® System. • If all SYNC® audio sources operate correctly with the Multi-Media Interface Tester 420-373 and RCA adapter, the concern is with the customer's device.

M2 CHECK FOR AN AC (ALTERNATING CURRENT) VOLTAGE SIGNAL ON THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE)

NOTICE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

- Play an audio file through the audio system using a SYNC® audio source (Bluetooth, USB ports, RCA jacks).
- While back-probing ACM C4821B, measure the AC voltage.

Positive Lead	Measurement / Action	Negative Lead
C4821B-12		C4821B-25
C4821B-13		C4821B-26

Is a fluctuating AC voltage present?

Yes	GO to M8
No	GO to M3

M3 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821B.
- Disconnect APIM C3342.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-12	V	Ground
C4821B-13	V	Ground
C4821B-25	V	Ground
C4821B-26	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to M4

M4 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-12	Ω	Ground
C4821B-13	Ω	Ground
C4821B-25	Ω	Ground
C4821B-26	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to M5
No	REPAIR the circuit in question.

M5 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-12	Ω	C3342-23
C4821B-13	Ω	C3342-25
C4821B-25	Ω	C3342-24
C4821B-26	Ω	C3342-26

Are the resistances less than 3 ohms?

Yes	GO to M6
No	REPAIR the circuit in question.

M6 CHECK THE APIM (SYNC MODULE) STEREO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-12	Ω	C4821B-13
C4821B-12	Ω	C4821B-25
C4821B-12	Ω	C4821B-26
C4821B-13	Ω	C4821B-25
C4821B-13	Ω	C4821B-26
C4821B-25	Ω	C4821B-26

Are the resistances greater than 10,000 ohms?

Yes	GO to M7
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column) .

M7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

M8 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

All APIM Mono Outputs Are Inoperative Or Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

Possible Sources

- Customer's setting
- Wiring, terminals, or connectors
- APIM
- ACM

PINPOINT TEST N : ALL APIM (SYNC MODULE) MONO OUTPUTS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

N1 CHECK THE AUDIBLE PROMPT FUNCTIONALITY

- Operate the audio system in AM/ FM mode.
- Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt.

Does the SYNC® system produce an audible prompt correctly; indicating voice recognition mode has been entered?

Yes	The system is operating correctly at this time. INSTRUCT the customer in the correct operation of the audible prompt feature. REFER to "SYNC® Voice Recognition Feature" in the Owner's Literature.
No	GO to N2

N2 CHECK THE OPERATION OF THE RH (RIGHT-HAND) LOWER STEERING WHEEL SWITCHES

- Operate the audio system in AM/ FM mode.
- Operate the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches.

Do the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches operate correctly?

Yes	GO to N3
No	GO to Pinpoint Test U

N3 CHECK FOR AN AC (ALTERNATING CURRENT) VOLTAGE SIGNAL ON THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE)

NOTICE: This pinpoint test step directs testing circuits using a back-probe method. Use the special

NOTICE: This pinpoint test step directs testing circuits using a back-probe method. Use the special back-probe tool POM6411. Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage, while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors, and may cause subsequent electrical faults.

- Operate the audio system in AM/ FM mode.
- While back-probing ACM C4821B, measure the AC voltage while repeatedly operating the VOICE steering wheel switch.

Positive Lead	Measurement / Action	Negative Lead
C4821B-8	$\tilde{V}$	C4821B-21

Is a fluctuating AC voltage present each time the VOICE steering wheel switch is operated?

Yes	GO to N9
No	GO to N4

N4 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ACM C4821B.
- Disconnect APIM C3342.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-8	+ $\bar{V}$ −	Ground
C4821B-21	+ $\bar{V}$ −	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to N5

N5 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-8	Ω	Ground
C4821B-21	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to N6

No	REPAIR the circuit in question.

N6 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-8	Ω	C3342-3
C4821B-21	Ω	C3342-4

Are the resistances less than 3 ohms?

Yes	GO to N7
No	REPAIR the circuit in question.

N7 CHECK THE APIM (SYNC MODULE) MONO OUTPUT CIRCUITS TO THE ACM (AUDIO FRONT CONTROL MODULE) FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C4821B-8	V~	C4821B-21

Is the resistance greater than 10,000 ohms?

Yes	GO to N8
No	REPAIR the circuit in question.

N8 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

N9 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

• Ignition OFF.
• Disconnect and inspect all the ACM and related in-line connectors.
• Repair:
  • Corrosion (clean module pins or install new connectors or terminals)
  • Damaged or bent pins (install new terminals or pins)
  • Pushed-out pins (install new pins as necessary)
• Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
 	
Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, discontinue this test and follow TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Voice Recognition Is Inoperative Or Does Not Operate Correctly, Or During A Phone Call, Poor Quality Or No Outgoing Audio Is Heard On The Outside Device

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B116A:01	Handset Microphone: General Electrical Failure	Set by the APIM when a short to voltage, short to ground, or open is detected on the microphone circuits.

Possible Sources

- Wiring, terminals, or connectors
- Microphone
- APIM

PINPOINT TEST O : VOICE RECOGNITION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY, OR DURING A PHONE CALL, POOR QUALITY OR NO OUTGOING AUDIO IS HEARD ON THE OUTSIDE DEVICE

O1 CHECK THE AUDIBLE PROMPT FUNCTIONALITY
• Operate the audio system in AM/ FM mode. • Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt. **Does the SYNC® system produce an audible prompt correctly; indicating voice recognition mode has**

been entered?

Yes	GO to O3
No	GO to O2

O2 CHECK THE OPERATION OF THE LOWER STEERING WHEEL SWITCHES

- Operate the audio system in AM/ FM mode.
- Operate the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches.

Do the VOLUME +/-, SEEK +/END CALL, SEEK-/SEND CALL/RECEIVE CALL, VOICE, and MUTE steering wheel switches operate correctly?

Yes	GO to Pinpoint Test N
No	GO to Pinpoint Test U

O3 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect APIM C3342.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3342-12	V	Ground
C3342-13	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to O4

O4 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect Microphone C9221.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3342-12	Ω	Ground
C3342-13	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to O5
No	REPAIR the circuit in question.

O5 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3342-12	Ω	C9221-2
C3342-13	Ω	C9221-3

Are the resistances less than 3 ohms?

Yes	GO to O6
No	REPAIR the circuit in question.

O6 CHECK THE MICROPHONE CIRCUITS TO THE APIM (SYNC MODULE) FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-12	Ω	C2383-13

Is the resistance greater than 10,000 ohms?

Yes	GO to O7
No	REPAIR the circuit in question.

O7 ISOLATE THE MICROPHONE

- Connect APIM C2383.
- Install a new microphone.
  REFER to: Microphone (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
- Operate the audio system in AM/ FM mode.
- Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt.
- Speak a command to test the voice recognition for normal operation.

Is the voice recognition functioning correctly?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative microphone.
No	GO to O8

O8 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)

- Reconnect the APIM and related in-line connectors. Make sure they seat and latch correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

All Media Hub Functions Are Inoperative Or Do Not Operate Correctly (USB Ports, SD Card, And RCA Jacks)

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

The media hub requires a power and ground circuit from the APIM to operate. Loss of power or ground disables all media hub functionality.

Possible Sources

- Customer's device
- Media hub
- Wiring, terminals, or connectors
- APIM

PINPOINT TEST P : ALL MEDIA HUB FUNCTIONS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY (USB (UNIVERSAL SERIAL BUS) PORTS, SD (SECURE DIGITAL) CARD, AND RCA JACKS)

P1 CHECK FOR APIM (SYNC MODULE) BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the APIM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded?

Yes	• For DTC U3003:16, GO to Pinpoint Test AK • For DTC U3003:17, GO to Pinpoint Test AL
No	GO to P2

P2 RESET THE APIM (SYNC MODULE)

- Remove any devices connected to the media hub.
- Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.
- Wait at least 2 minutes for the APIM to re-initialize.
- Test the system for normal operation.

Does the system operate correctly?

Yes	The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. If the customer's device still does not operate correctly, the fault is with

	the customer's device.
No	GO to P3

P3 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT

- Ignition OFF.
- Disconnect Media Hub C2809.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2809-1		Ground

Is the voltage greater than 11 volts?

Yes	GO to P4
No	GO to P5

P4 CHECK THE MEDIA HUB GROUND CIRCUIT

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2809-1		C2809-10

Is the voltage greater than 11 volts?

Yes	INSTALL a new media hub. REFER to: Media Hub (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .
No	GO to P5

P5 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT AND GROUND CIRCUIT FOR A SHORT TOGETHER

- Ignition OFF.
- Disconnect APIM C3342.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2809-1	Ω	C2809-10

Is the resistance greater than 10,000 ohms?

Yes	GO to P6
No	Repair the circuit in question.

P6 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT AND GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2809-1	Ω	C3342-8
C2809-10	Ω	C3342-38

Are the resistances less than 3 ohms?

Yes	GO to P7
No	Repair the circuit in question.

P7 CHECK THE MEDIA HUB VOLTAGE SUPPLY CIRCUIT FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2809-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to P8
No	REPAIR the circuit.

P8 CHECK THE MEDIA HUB GROUND CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2809-10	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to P9

P9 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.

- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The USB Port(s) Is/Are Inoperative Or Does/Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

The Multi-Media Interface Tester 420-373 is powered by the USB port.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1252:11	USB Port: Circuit Short to Ground	Set by the APIM when a short to ground or over-current condition is detected on the USB cable. This can be caused by a fault on the USB cable, USB port, or by the customer's USB or SD card device.
B1252:13	USB Port: Circuit Open	Set by the APIM when an open is detected on the USB cable.

Possible Sources

- Media hub
- Customer's device
- USB cable
- USB cable connection
- APIM

PINPOINT TEST Q : THE USB (UNIVERSAL SERIAL BUS) PORT(S) IS/ARE INOPERATIVE OR DOES/DO NOT OPERATE CORRECTLY

Q1 CHECK THE USB (UNIVERSAL SERIAL BUS) PORTS FOR POWER

- Connect: Multi-Media Interface Tester 420-373.

Does the Multi-Media Interface Tester 420-373 power on from both USB ports?

Yes	GO to Q2
No	• If the Multi-Media Interface Tester 420-373 powers on from one USB port, INSTALL a new media hub. REFER to: Media Hub (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .

	• If the Multi-Media Interface Tester 420-373 does not power on from both USB ports, GO to Pinpoint Test P

Q2 RESET THE APIM (SYNC MODULE)

- Remove all devices connected to the media hub.
- Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.
- Wait at least 2 minutes for the APIM to re-initialize.
- Connect: Multi-Media Interface Tester 420-373.
- Using the Multi-Media Interface Tester 420-373, attempt to play an audio file using each USB port.

Is the audio output working properly for each USB port?

Yes	The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. If the customer's device still does not operate correctly, the fault is with the customer's device.
No	• If the audio output is not working properly from one USB port, INSTALL a new media hub. REFER to: Media Hub (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) . • If the audio output is not working properly from both USB ports, GO to Q3

Q3 VERIFY THE OPERATION OF THE USB (UNIVERSAL SERIAL BUS) CABLE

- Insert a known good non-navigation SD card containing music files.
- Operate the audio system in SD card mode and attempt to play an audio file.

Is the audio output working properly for the SD card slot?

Yes	INSTALL a new media hub. REFER to: Media Hub (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .
No	GO to Q4

Q4 CHECK THE APIM (SYNC MODULE) FOR DTC (DIAGNOSTIC TROUBLE CODE) B1252:11 OR B1252:13

- Using a diagnostic scan tool, clear the APIM Diagnostic Trouble Codes (DTCs).
- Perform the APIM self-test.

Is DTC B1252:11 or B1252:13 present?

Yes	GO to Q5
No	GO to Q7

Q5 INSPECT THE USB (UNIVERSAL SERIAL BUS) CABLE, MEDIA HUB, AND APIM (SYNC MODULE)

- Ignition OFF.
- Disconnect: USB cable at the media hub.
- Disconnect: USB cable at the APIM.
- Inspect the USB cable, USB cable ends, media hub USB connector port, and APIM USB connector port for damage. Remove any debris.

Is any damage present?

Yes	• For the USB cable, INSTALL a new USB cable. • For the media hub, INSTALL a new media hub.

	REFER to: Media Hub (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) . • For the APIM, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to Q6

Q6 CHECK EACH USB (UNIVERSAL SERIAL BUS) PORT FOR FUNCTIONALITY

- Connect: USB cable at the media hub.
- Connect: USB cable at the APIM.
- Connect: Multi-Media Interface Tester 420-373.
- Using the Multi-Media Interface Tester 420-373, attempt to play an audio file using each USB port.

Is the audio output working properly for each USB port?

Yes	The system is operating correctly at this time. The concern was caused by the USB connector not being seated correctly.
No	GO to Q7

Q7 ISOLATE THE USB (UNIVERSAL SERIAL BUS) CABLE

- INSTALL a new USB cable.
- Connect: Multi-Media Interface Tester 420-373.
- Using the Multi-Media Interface Tester 420-373, attempt to play an audio file using each USB port.

Is the audio output working properly for each USB port?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative USB cable.
No	GO to Q8

Q8 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The SD Card Slot Is Inoperative Or Does Not Operate Correctly

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1252:11	USB Port: Circuit Short to Ground	Set by the APIM when a short to ground or an over-current condition is detected on the USB cable. This can be caused by a fault in the USB cable, USB port, or by the customer's USB or SD card device.
B1252:13	USB Port: Circuit Open	Set by the APIM when an open is detected on the USB cable.

Possible Sources

- Customer's device
- Media hub
- USB cable
- APIM

PINPOINT TEST R : THE SD (SECURE DIGITAL) CARD SLOT IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

R1 RESET THE APIM (SYNC MODULE)

- Remove all devices connected to the media hub.
- Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.
- Wait at least 2 minutes for the APIM to re-initialize.
- Insert a known good non-navigation SD card containing music files.
- Operate the audio system in SD card mode and attempt to play an audio file.

Is the audio output working properly for the SD card slot?

Yes	The system is operating correctly at this time. The concern was corrected by performing the APIM power reset. If the customer's device still does not operate correctly, the fault is with the customer's device.
No	GO to R2

R2 VERIFY THE OPERATION OF THE USB (UNIVERSAL SERIAL BUS) CABLE

- Using the Multi-Media Interface Tester 420-373, attempt to play an audio file using each USB port.

Is the audio output working properly for each USB port?

Yes	INSTALL a new media hub. REFER to: Media Hub (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .
No	• If the audio output is not working properly from one USB port, install a new media hub. REFER to: Media Hub (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) . • If the audio output is not working properly from both USB ports, GO to R3

R3 CHECK THE APIM (SYNC MODULE) FOR DTC (DIAGNOSTIC TROUBLE CODE) B1252:11 OR B1252:13

- Using a diagnostic scan tool, clear the APIM Diagnostic Trouble Codes (DTCs).

- Using a diagnostic scan tool, clear the APIM Diagnostic Trouble Codes (DTCs).
- Perform the APIM self-test.

Is DTC B1252:11 or B1252:13 present?

Yes	GO to R4
No	GO to R6

R4 INSPECT THE USB (UNIVERSAL SERIAL BUS) CABLE, MEDIA HUB, AND APIM (SYNC MODULE)

- Ignition OFF.
- Disconnect: USB cable at the media hub.
- Disconnect: USB cable at the APIM.
- Inspect the USB cable, USB cable ends, media hub USB connector port, and APIM USB connector port for damage and remove any debris.

Is any damage present?

Yes	• For the USB cable, install a new USB cable. • For the media hub, install a new media hub. REFER to: Media Hub (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) . • For the APIM, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to R5

R5 RECHECK FOR APIM (SYNC MODULE) DTC (DIAGNOSTIC TROUBLE CODE) B1252:11 OR B1252:13

- Using a diagnostic scan tool, clear the APIM Diagnostic Trouble Codes (DTCs).
- Perform the APIM self-test.

Is DTC B1252:11 or B1252:13 present?

Yes	GO to R7
No	GO to R6

R6 ISOLATE THE USB (UNIVERSAL SERIAL BUS) CABLE

- INSTALL a new USB cable.
- Insert a known good non-navigation SD card containing music files.
- Operate the audio system in SD card mode and attempt to play an audio file.

Is the audio output working properly for the SD card slot?

Yes	The system is operating correctly at this time. The concern was caused by an inoperative USB cable.
No	GO to R7

R7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
    - Corrosion (clean module pins or install new connectors or terminals)

- Damaged or bent pins (install new terminals or pins)
- Pushed-out pins (install new pins as necessary)

- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The RCA Jacks Are Inoperative Or Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

Possible Sources

- Customer's device
- Wiring, terminals, or connectors
- Media hub
- APIM

PINPOINT TEST S : THE RCA JACKS ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

S1 RESET THE APIM (SYNC MODULE)

- Remove all devices connected to the media hub.
- Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.
- Wait at least 2 minutes for the APIM to re-initialize.
- Connect: Multi-Media Interface Tester 420-373 and RCA adapter.
- Using the Multi-Media Interface Tester 420-373 and RCA adapter, attempt to play audio content using the RCA jacks.

Is the audio output working properly for the RCA jacks?

Yes	The system is operating correctly at this time. The concern was corrected by performing the APIM power reset.
No	GO to S2

S2 CHECK THE RCA CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Media Hub C2809.
- Disconnect APIM C3342.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2809-2		Ground

C2809-2	V	Ground
C2809-3	V	Ground
C2809-4	V	Ground
C2809-5	V	Ground
C2809-6	V	Ground
C2809-9	V	Ground
C2809-11	V	Ground
C2809-12	V	Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to S3

S3 CHECK THE RCA CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2809-2	Ω	Ground
C2809-3	Ω	Ground
C2809-4	Ω	Ground
C2809-5	Ω	Ground
C2809-6	Ω	Ground
C2809-9	Ω	Ground
C2809-11	Ω	Ground
C2809-12	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to S4
No	REPAIR the circuit in question.

S4 CHECK THE RCA CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2809-2	Ω	C3342-36
C2809-3	Ω	C3342-34
C2809-4	Ω	C3342-9
C2809-5	Ω	C3342-10
C2809-6	Ω	C3342-11

C2809-9	Ω	C3342-35
C2809-11	Ω	C3342-28
C2809-12	Ω	C3342-29

Are the resistances less than 3 ohms?

Yes	INSTALL a new media hub. REFER to: Media Hub (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) . RETEST the system for normal operation. If the concern is still present, GO to S5
No	REPAIR the circuit in question.

S5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Unable To Pair Bluetooth Device

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

Possible Sources

- Incompatible Bluetooth device
- APIM

PINPOINT TEST T : UNABLE TO PAIR BLUETOOTH DEVICE

T1 CHECK THE BLUETOOTH CONNECTION

NOTE: *Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, erases navigation and address data, deletes any devices paired with the SYNC® system, and deletes any devices paired with the MyLincoln Mobile™ phone application.*

- Connect: Multi-Media Interface Tester 420-373.
- Using the Multi-Media Interface Tester 420-373, connect to the SYNC® system using Bluetooth. Follow the tool instructions.
- Using a diagnostic scan tool, view the APIM Parameter Identifications (PIDs).

- Monitor the Bluetooth device paired PID (BT_PAIR) and the Bluetooth device connected PID (BT_CONN).

Do the Parameter Identifications (PIDs) both read "Yes"?

Yes	The SYNC® system is operating correctly at this time. PERFORM a Master Reset. REFER to the Owner's Literature. REVIEW the pairing process with the customer. If the customer's device still does not pair, the fault is with the customer's device.
No	GO to T2

T2 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The RH Steering Wheel Switches Are Inoperative Or Do Not Operate Correctly

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1380:09	Steering Wheel Right Switch Pack: Component Failure	Set by the SCCM when the RH steering wheel switch is stuck for more than 2 minutes during normal operation.
B1380:11	Steering Wheel Right Switch Pack: Circuit Short To Ground	Set by the SCCM when a short to ground is detected on the RH steering wheel switch circuits.
B1380:17	Steering Wheel Right Switch Pack: Circuit Voltage Above Threshold	Set by the SCCM when a short to voltage is detected on the RH steering wheel switch circuits.

Possible Sources

- Steering wheel switch
- Wiring, terminals, or connectors
- Clockspring
- SCCM

PINPOINT TEST U : THE RH (RIGHT-HAND) STEERING WHEEL SWITCHES ARE INOPERATIVE OR DO NOT OPERATE CORRECTLY

U1 CHECK THE RH (RIGHT-HAND) STEERING WHEEL SWITCH PARAMETER IDENTIFICATIONS (PIDS)

- Ignition ON.
- Using a diagnostic scan tool, view the SCCM Parameter Identifications (PIDs).
- Monitor the steering wheel switch Parameter Identifications (PIDs) while pressing each RH lower steering wheel switch.
  - Voice (SW_VOICE)
  - Mute (SW_MUTE)
  - Volume + (SW_VOLUP)
  - Volume - (SW_VOLDOWN)
  - Seek-/Phone (SW_SEEKMINUS)/(SW_PHONE)
  - Seek+/End (SW_SEEKPLUS)/(SW_END)

Do the PID values agree with the switch positions?

Yes	GO to U10
No	• If one or more, but not all PID values are incorrect or always read one particular switch position, INSTALL a new RH steering wheel switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation). • If all PID values are incorrect or always read one particular switch position, GO to U2

U2 CHECK FOR IPC (INSTRUMENT PANEL CLUSTER) DTC (DIAGNOSTIC TROUBLE CODE) U0212:00

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) from the IPC.
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, perform the IPC self-test.

Is DTC U0212:00 present?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	GO to U3

U3 CHECK FOR VOLTAGE FROM THE SCCM (STEERING COLUMN CONTROL MODULE)

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

- Ignition OFF.
- Depower the SRS.
  REFER to: Supplemental Restraint System (SRS) Depowering and Repowering (501-20B Supplemental Restraint System, General Procedures).
- Remove the driver airbag.
  REFER to: Driver Airbag (501-20B Supplemental Restraint System, Removal and Installation).
- Disconnect RH Steering Wheel Switch C2490.
- Ignition ON.

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-2	V	C2490-4
C2490-3	V	C2490-4
C2490-5	V	C2490-4

Is approximately 5 volts present?

Yes	INSTALL a new RH steering wheel switch. REFER to: Steering Wheel Multifunction Switch (211-05 Steering Column Switches, Removal and Installation).
No	GO to U4

U4 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect Clockspring C218B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-2	Ω	Ground
C2490-3	Ω	Ground
C2490-4	Ω	Ground
C2490-5	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to U5
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column) .

U5 CHECK THE STEERING WHEEL HARNESS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-2	Ω	C218B-6
C2490-3	Ω	C218B-7
C2490-4	Ω	C218B-16
C2490-5	Ω	C218B-15

Are the resistances less than 3 ohms?

Yes	GO to U6

No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column) .

U6 CHECK THE STEERING WHEEL HARNESS FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-2	Ω	C2490-3
C2490-2	Ω	C2490-4
C2490-2	Ω	C2490-5
C2490-3	Ω	C2490-4
C2490-3	Ω	C2490-5
C2490-4	Ω	C2490-5

Are the resistances greater than 10,000 ohms?

Yes	GO to U7
No	INSTALL a new steering wheel. REFER to: Steering Wheel (211-04 Steering Column) .

U7 CHECK THE CLOCKSPRING FOR A SHORT TO GROUND

- Connect Clockspring C218B.
- Disconnect Clockspring C218C.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-2	Ω	Ground
C2490-3	Ω	Ground
C2490-4	Ω	Ground
C2490-5	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to U8
No	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

U8 CHECK THE CLOCKSPRING FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-2	Ω	C218C-5
C2490-3	Ω	C218C-7

C2490-4	Ω	C218C-10
C2490-5	Ω	C218C-8

Are the resistances less than 3 ohms?

Yes	GO to U9
No	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

U9 CHECK THE CLOCKSPRING FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2490-2	Ω	C2490-3
C2490-2	Ω	C2490-4
C2490-2	Ω	C2490-5
C2490-3	Ω	C2490-4
C2490-3	Ω	C2490-5
C2490-4	Ω	C2490-5

Are the resistances greater than 10,000 ohms?

Yes	GO to U10
No	INSTALL a new clockspring. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

U10 CHECK FOR CORRECT SCCM (STEERING COLUMN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the SCCM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the SCCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM. REFER to: Steering Column Control Module (SCCM) (211-05 Steering Column Switches, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Audio System Does Not Operate Correctly From The FCIM

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

Possible Source

- FCIM

PINPOINT TEST V : THE AUDIO SYSTEM DOES NOT OPERATE CORRECTLY FROM THE FCIM (FRONT CONTROLS INTERFACE MODULE)

V1 CHECK THE FDIM (FRONT DISPLAY INTERFACE MODULE) OPERATION

- Verify the FDIM screen operation.

Does the FDIM operate correctly?

Yes	GO to V2
No	GO to Pinpoint Test W

V2 VERIFY THE ACM (AUDIO FRONT CONTROL MODULE) , APIM (SYNC MODULE) AND FCIM (FRONT CONTROLS INTERFACE MODULE) PASS THE NETWORK TEST

- Using a diagnostic scan tool, perform the network test.

Did the ACM, APIM and FCIM pass the network test?

Yes	GO to V3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

V3 RESET THE AUDIO SYSTEM MODULES AND RECHECK THE FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Disconnect the battery for 1 minute, then reconnect it.
- Turn the infotainment system on.
- Test the FCIM for normal operation.

Does the FCIM operate correctly?

Yes	The FCIM is operating correctly at this time. The concern was corrected by resetting the audio system modules.
No	GO to V4

V4 RETRIEVE THE ACM (AUDIO FRONT CONTROL MODULE) , APIM (SYNC MODULE) , FCIM (FRONT CONTROLS INTERFACE MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM
  - FCIM

Are any Diagnostic Trouble Codes (DTCs) present in the ACM, APIM and/or FCIM?

Yes	• For ACM Diagnostic Trouble Codes (DTCs), REFER to the DTC Chart: ACM. • For APIM Diagnostic Trouble Codes (DTCs), REFER to the DTC Chart: APIM.

	• For FCIM Diagnostic Trouble Codes (DTCs), REFER to the DTC Chart: FCIM.
No	GO to V5

V5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the FCIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the FCIM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. Address the root cause of any connector or pin issues.

The FDIM Touchscreen Is Inoperative Or Does Not Operate Correctly

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B108E:01	Display: General Electrical Failure	Set by the APIM when an error is detected in the touch sensing ability of the FDIM.
U0162:00	Lost Communication With Navigation Display Module: No Sub Type Information	Set by the APIM when communication is missing from the FDIM for more than 1 second with the ignition in RUN.

Possible Sources

- Object pressed against the touchscreen
- FDIM
- Uncalibrated touchscreen
- APIM

NOTE: *The FDIM touchscreen can only sense one touch command at a time. If any objects are pressed against the touchscreen (including wiring or components behind the trim panel surrounding the touchscreen), the FDIM can appear to be inoperative.*

PINPOINT TEST W : THE FDIM (FRONT DISPLAY INTERFACE MODULE) TOUCHSCREEN IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

W1 VERIFY THE TOUCHSCREEN RESPONSE TO TOUCH COMMANDS

- Ignition ON.
- Press each tab of the 4 corners on the FDIM and observe the touchscreen operation.

Does the FDIM touchscreen respond correctly when each tab is pressed?

Yes	VERIFY the customer's specific concern by duplicating the steps that were taken when the original concern was generated. If the concern is not duplicated, the system is operating correctly at this time. INSTRUCT the customer in the correct operation of the FDIM touchscreen.
No	• If the FDIM**is not** completely inoperative or blank, GO to W2 • If the FDIM**is** completely inoperative or blank, GO to W3

W2 MAKE SURE THE TOUCHSCREEN IS CALIBRATED

- Calibrate the touchscreen.
  REFER to: Touchscreen Calibration (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
- Verify the touchscreen operation.

Does the FDIM touchscreen respond correctly?

Yes	The system is operating correctly at this time. The concern was a result of the touchscreen not being calibrated.
No	GO to W5

W3 VERIFY THE APIM (SYNC MODULE) PASSES THE NETWORK TEST

- Using a diagnostic scan tool, perform the network test.

Did the APIM pass the network test?

Yes	GO to W4
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

W4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0162:00 SET IN THE APIM (SYNC MODULE)

- Using a diagnostic scan tool, perform the APIM self-test.

Is DTC U0162:00 present?

Yes	INSTALL a new FDIM. REFER to: Front Control/Display Interface Module (FCDIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	GO to W5

W5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) B108E:01 SET IN THE APIM (SYNC MODULE)

- Using a diagnostic scan tool, perform the APIM self-test.

Is DTC B108E:01 present?

Yes	INSTALL a new FDIM. REFER to: Front Control/Display Interface Module (FCDIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).

No	GO to W6

W6 RESET THE APIM (SYNC MODULE) AND RECHECK THE SYSTEM OPERATION

NOTE: *Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, erases navigation and address data, deletes any devices paired with the SYNC® system, and deletes any devices paired with the MyLincoln Mobile™ phone application.*

- Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.
- Wait at least 2 minutes for the APIM to re-initialize.
- Turn the infotainment system on.
- While pressing each tab of the 4 corners on the FDIM, observe the touchscreen operation.

Does the touchscreen operate correctly?

Yes	The FDIM is operating correctly at this time. PERFORM a Master Reset. REFER to the Owner's Literature.
No	GO to W7

W7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Navigation Is Inoperative Or Does Not Operate Correctly

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

Removal of the map data SD card results in loss of navigation while the card is removed. This is normal operation.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1215:00	External Memory Card: No Sub Type Information	Set by the APIM when the map data SD card is missing.

Possible Sources

- Media hub
- Map data SD card not present, not fully seated, or damaged
- GPSM
- APIM

PINPOINT TEST X : NAVIGATION IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

X1 DETERMINE IF THE VEHICLE IS EQUIPPED WITH A FACTORY-INSTALLED NAVIGATION SYSTEM

- Make sure the correct VIN was entered on the technician service publication website.
- Hover the mouse cursor over or click on the OASIS tab toward the top left of the screen.
- Select "HVBoM (Historical Vehicle Bill of Material)."
- Locate the **Limit to Base:** text entry box toward the center of the screen.
- Enter the map data SD card base part number 19H449.
- Press Enter on the keyboard or click on "View BoM (Build of Material)."
  - If the vehicle is equipped with a factory-installed navigation system, a row will appear indicating "CARD - MEMORY" in the DESCRIPTION column.
  - If the vehicle is **not** equipped with a factory-installed navigation system, a row will **not** appear and the DESCRIPTION column will be blank.

Does the technician service publication website indicate the vehicle is equipped with a factory-installed navigation system?

Yes	GO to X2
No	Ford Motor Company does not support the addition of a navigation system to vehicles not equipped with a factory-installed navigation system.

X2 VERIFY THE APIM (SYNC MODULE) PASSES THE NETWORK TEST

- Using a diagnostic scan tool, perform the network test.

Did the APIM pass the network test?

Yes	GO to X3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

X3 CHECK THE USB (UNIVERSAL SERIAL BUS) PORTS FOR POWER OUTPUT

- Connect: Multi-Media Interface Tester 420-373.

Does the Multi-Media Interface Tester 420-373 power on from both USB ports?

Yes	GO to X4
No	• If the Multi-Media Interface Tester 420-373 powers on from only one USB port, INSTALL a new media hub. REFER to: Media Hub (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) . • If the Multi-Media Interface Tester 420-373 does not power on from either USB port, GO to Pinpoint Test P

X4 RESET THE APIM (SYNC MODULE) AND VERIFY THE OPERATION OF THE USB (UNIVERSAL SERIAL BUS) CABLE

- Remove all devices connected to the media hub.
- Carry out an APIM power reset by disconnecting the battery for 1 minute, then reconnecting it.
- Wait at least 2 minutes for the APIM to re-initialize.
- Connect: Multi-Media Interface Tester 420-373.
- Using the Multi-Media Interface Tester 420-373, attempt to play an audio file using each USB port.

Is the audio output operating correctly for each USB port?

Yes	GO to X5
No	• If the audio output is not operating correctly from one USB port, INSTALL a new media hub. REFER to: Media Hub (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) . • If the audio output is not operating correctly from both USB ports, GO to Pinpoint Test Q

X5 CHECK FOR A MAP DATA SD (SECURE DIGITAL) CARD FAULT MESSAGE

- Ignition ON.
- Observe the FDIM display.

Does the FDIM display "Insert Nav SD Card" or "Navigation SD Card Fault?"

Yes	GO to X6
No	GO to X9

X6 VERIFY THE MAP DATA SD (SECURE DIGITAL) CARD IS PRESENT

- Check for the presence of a map data SD card in the media hub SD card slot.

Is the map data SD card present and fully seated?

Yes	GO to X7
No	INSTALL the map data SD card. TEST the system for normal operation.

X7 INSPECT THE MAP DATA SD (SECURE DIGITAL) CARD

- **NOTE:** *The media hub SD card slot is spring loaded. The SD card is removed by pushing the card inward until a faint click is heard and the card is released outward. Attempting to remove the card without properly releasing it may cause damage to the SD card pins.*

  Remove the map data SD card.
- Inspect the map data SD card case and pins for damage.

Is any damage present?

Yes	INSTALL a new map data SD card.
No	If a known good map data SD card is available, GO to X8 If a known good map data SD card is **not** available, GO to X9

X8 VERIFY NAVIGATION SYSTEM OPERATION WITH KNOWN GOOD MAP DATA SD (SECURE DIGITAL) CARD

- Insert a known good map data SD card with the correct software version level.
- Confirm the navigation system operates correctly.

Does the navigation system operate correctly with the known good map data SD card?

Yes	INSTALL a new map data SD card.

No	GO to X9

X9 VERIFY THE GPSM (GLOBAL POSITIONING SYSTEM MODULE) PASSES THE NETWORK TEST

- Using a diagnostic scan tool, perform the network test.

Did the GPSM pass the network test?

Yes	GO to X10
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

X10 RETRIEVE THE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE APIM (SYNC MODULE) AND GPSM (GLOBAL POSITIONING SYSTEM MODULE)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - APIM
  - GPSM

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	• For APIM Diagnostic Trouble Codes (DTCs), REFER to the DTC Chart: APIM. • For GPSM Diagnostic Trouble Codes (DTCs), REFER to the DTC Chart: GPSM.
No	GO to X11

X11 REPROGRAM THE APIM (SYNC MODULE)

- Perform the APIM Standard Programming.
  REFER to: SYNC Module [APIM] Standard Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
- Override the Service Pack installation and perform a Full Flash/Force CIP.
- Once the APIM programming is complete and the system has re-initialized, confirm the navigation system operates correctly.

Does the navigation system operate correctly?

Yes	The navigation system is operating correctly at this time. The concern was resolved by reprogramming the APIM.
No	GO to X12

X12 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the GPSM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the GPSM and related in-line connectors. Make sure it seats and latches correctly.
- **NOTE:** *Before operating the system to determine if the concern is still present, ensure that the vehicle is in an open location that is free from obstacles such as tall buildings or large trees so an adequate GPS signal can be obtained.*

  Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for

	this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) - Vehicles Built From: 17-08-2015 (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) . RETEST the system for normal operation. If the concern is still present, GO to X13
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

X13 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Compass Is Inoperative Or Does Not Operate Correctly

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

Possible Source

- GPSM

PINPOINT TEST Y : THE COMPASS IS INOPERATIVE OR DOES NOT OPERATE CORRECTLY

Y1 VERIFY THE APIM (SYNC MODULE) AND GPSM (GLOBAL POSITIONING SYSTEM MODULE) PASS THE NETWORK TEST

- Using a diagnostic scan tool, perform the network test.

Did the APIM and GPSM pass the network test?

Yes	GO to Y2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

Y2 RETRIEVE THE APIM (SYNC MODULE) AND GPSM (GLOBAL POSITIONING SYSTEM MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - APIM
  - GPSM

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	• For APIM Diagnostic Trouble Codes (DTCs), REFER to the DTC Chart: APIM. • For GPSM Diagnostic Trouble Codes (DTCs), REFER to the DTC Chart: GPSM.
No	GO to Y3

Y3 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the GPSM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the GPSM and related in-line connectors. Make sure it seats and latches correctly.
- **NOTE:** *Before operating the system to determine if the concern is still present, ensure that the vehicle is in an open location that is free from obstacles such as tall buildings or large trees so an adequate GPS signal can be obtained.*

  Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) - Vehicles Built From: 17-08-2015 (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Voice Recognition Does Not Operate Correctly To Voice Navigate To A Destination

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

Visual Inspection and Diagnostic Pre-checks

- Verify the ignition is ON.
- Verify the vehicle is located in a clear, open area to ensure the satellite information can be received by the vehicle.
- Verify the navigation SD card is present and fully seated in the SD card slot.
- Run the vehicle for at least one minute before testing the system in order for the navigation and voice recognition application to load properly.

PINPOINT TEST Z : VOICE RECOGNITION DOES NOT OPERATE CORRECTLY TO VOICE NAVIGATE TO A DESTINATION

Z1 DETERMINE IF THE VEHICLE IS EQUIPPED WITH A FACTORY-INSTALLED NAVIGATION SYSTEM

- Make sure the correct VIN was entered on the technician service publication website.
- Hover the mouse cursor over or click on the OASIS tab toward the top left of the screen.

- Select "HVBoM (Historical Vehicle Bill of Material)."
- Locate the **Limit to Base:** text entry box toward the center of the screen.
- Enter the map data SD card base part number 19H449.
- Press Enter on the keyboard or click on "View BoM (Build of Material)."
  - If the vehicle is equipped with a factory-installed navigation system, a row will appear indicating "CARD - MEMORY" in the DESCRIPTION column.
  - If the vehicle is **not** equipped with a factory-installed navigation system, a row will **not** appear and the DESCRIPTION column will be blank.

Does the technician service publication website indicate the vehicle is equipped with a factory-installed navigation system?

Yes	GO to Z2
No	Ford Motor Company does not support the addition of a navigation system to vehicles not equipped with a factory-installed navigation system.

Z2 REPROGRAM THE APIM (SYNC MODULE)

- Perform the APIM Standard Programming.
  REFER to: SYNC Module [APIM] Standard Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
- Override the Service Pack installation and perform a Full Flash/Force CIP.
- Once the APIM programming is complete and the system has re-initialized, confirm that that the navigation system operates correctly.

Does the navigation system operate correctly?

Yes	The navigation system is operating correctly at this time. The concern was resolved by reprogramming the APIM.
No	GO to Z3

Z3 VERIFY NO ROUTE PREFERENCE, NAVIGATION, TRAFFIC, OR AVOID AREA RESTRICTIONS ARE SELECTED

- Verify the Navigation Route Preferences are not set to avoid freeways, toll roads, ferries, and car trains. Refer to the Owner's Literature.
- Verify Traffic Preferences are set properly. Refer to the Owner's Literature.
- Verify the destination being entered is not located within the boundaries of a “to avoid” area. Refer to the Owner's Literature.
- Change preferences as necessary, and operate the Voice Navigation system.

Does the Voice Navigation system operate as expected?

Yes	If the concern is not duplicated, the system is operating correctly at this time. INSTRUCT the customer in the correct operation of the route preference, navigation, traffic, and avoid area restrictions.
No	GO to Z4

Z4 CHECK THE AUDIBLE PROMPT FUNCTIONALITY

- Operate the audio system in AM/ FM mode.
- Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt.

Does the SYNC® system produce an audible prompt correctly; indicating voice recognition mode has been entered?

Yes	GO to Z5
No	GO to Pinpoint Test N

Z5 CHECK THE VOICE RECOGNITION OPERATION
• Operate the VOICE steering wheel switch and listen for the SYNC® audible prompt. • **NOTE:** *Make sure the interior of the vehicle is as quiet as possible. Excessive noise may prevent the system from correctly recognizing spoken commands.* Clearly speak the word "help." **Does the SYNC® system respond correctly to the "help" voice command?**

Yes	The voice recognition of the navigation destination concern may have been caused by an insufficiently quiet vehicle or a destination not being present in the map database. GO to Z6
No	GO to Pinpoint Test O

Z6 CHECK OPERATION OF NAVIGATION SYSTEM WITH MANUAL DESTINATION ENTRY
NOTE: *Dragging your finger and pinching two fingers will not scroll to a location or zoom in or out as in other devices on the market. Holding your finger on a location off-center will cause the map to scroll to that location. Refer to the Owner's Literature for more information about navigating the map screen.* • Using the map feature, touch the screen at the requested destination. • Verify a road is present on the map at the requested location and verify the address of the destination is correct. **Does the navigation system properly navigate to the destination requested?**

Yes	The information on the navigation SD card may not include the correct map data, or is in a different format than what was expected. The system is operating correctly at this time. NOTIFY the customer that there may be an updated map upgrade available for purchase.
No	GO to Pinpoint Test X

Lost Communication with ECM/PCM U0100:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication with ECM/PCM "A": No Sub Type Information	Set by the ACM and GPSM when network messages are missing from the PCM for more than 5 seconds with the ignition in RUN.

Possible Source

- PCM

PINPOINT TEST AA : LOST COMMUNICATION WITH ECM/PCM U0100:00

AA1 VERIFY THE CUSTOMER'S CONCERN
• Ignition ON.

- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AA2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AA2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0100:00 set in the ACM, and GPSM?

Yes	GO to AA3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AA3 CHECK THE PCM (POWERTRAIN CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the PCM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to AA4

AA4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - GPSM

Are low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AK • For DTC U3003:17, GO to Pinpoint Test AL
No	GO to AA5

AA5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0100:00 set in more than one module?

Yes	GO to AA6
No	• If there is an observable symptom, REFER to the Symptom Chart: General Audio System. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AA6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

• Ignition OFF.
• Disconnect and inspect the PCM and related in-line connectors.
• Repair:
  • Corrosion (clean module pins or install new connectors or terminals)
  • Damaged or bent pins (install new terminals or pins)
  • Pushed-out pins (install new pins as necessary)
• Reconnect the PCM and related in-line connectors. Make sure they seat and latch correctly.
• Operate the system and determine if the concern is still present.
 	
Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With BCM U0140:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	Set by the ACM, APIM, FCIM and GPSM when network messages are missing from the BCM for more than 5 seconds with the ignition in RUN.

Possible Source

- BCM

PINPOINT TEST AB : LOST COMMUNICATION WITH BCM (BODY CONTROL MODULE) U0140:00

AB1 VERIFY THE CUSTOMER'S CONCERN
• Ignition ON. • Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AB2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AB2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0140:00 set in the ACM, APIM, FCIM or the GPSM?

Yes	GO to AB3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AB3 CHECK THE BCM (BODY CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the BCM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	GO to AB4

AB4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM
  - FCIM
  - GPSM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AK • For DTC U3003:17, GO to Pinpoint Test AL
No	GO to AB5

AB5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0140:00 set in more than one module?

Yes	GO to AB6
No	• If there is an observable symptom, REFER to the Symptom Chart: General Audio System. • If there is no observable symptom, the system is operating correctly at this time. The DTC

	may have been set due to high network traffic or an intermittent fault condition.

AB6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the BCM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the BCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. For LHD vehicles, REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). For RHD vehicles, REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With RCM U0151:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	Set by the APIM and FCIM when the airbag deployment notification message from the RCM is missing for more than 5 seconds with the ignition in RUN.

Possible Source

- RCM

PINPOINT TEST AC : LOST COMMUNICATION WITH RCM (RESTRAINTS CONTROL MODULE) U0151:00

AC1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AC2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AC2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0151:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0151:00 set in the APIM or FCIM?

Yes	GO to AC3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AC3 CHECK THE RCM (RESTRAINTS CONTROL MODULE) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the RCM self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Pinpoint Test - DTC: AH (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	GO to AC4

AC4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - APIM
  - FCIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AK • For DTC U3003:17, GO to Pinpoint Test AL
No	GO to AC5

AC5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0151:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0151:00 set in both the APIM and FCIM?

Yes	GO to AC6
No	• If there is an observable symptom, REFER to the Symptom Chart: General Audio System. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AC6 CHECK FOR CORRECT RCM (RESTRAINTS CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the RCM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the RCM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With IPC U0155:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0155:00	Lost Communication With IPC Control Module: No Sub Type Information	Set by the ACM, APIM, FCIM, (CD player) and the GPSM when network messages are missing from the IPC for more than 5 seconds with the ignition in RUN.

Possible Source

- IPC

PINPOINT TEST AD : LOST COMMUNICATION WITH IPC (INSTRUMENT PANEL CLUSTER) U0155:00

AD1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AD2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AD2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0155:00 set in the ACM, APIM, FCIM, (CD player) or the GPSM?

Yes	GO to AD3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AD3 CHECK THE IPC (INSTRUMENT PANEL CLUSTER) FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the IPC self-test.

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	GO to AD4

AD4 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM
  - FCIM
  - GPSM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AK • For DTC U3003:17, GO to Pinpoint Test AL
No	GO to AD5

AD5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0155:00 set in more than one module?

Yes	GO to AD6
No	• If there is an observable symptom, REFER to the Symptom Chart: General Audio System, to diagnose the observed symptom. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AD6 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect and inspect the IPC and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the IPC and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. For LHD vehicles, REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). For RHD vehicles, REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With PAM U0159:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

The PAM is integral to the BCM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0159:00	Lost Communication With Parking Assist Control Module "A": No Sub Type Information	Set by the APIM when network messages are missing from the PAM for more than 5 seconds with the ignition in RUN.

Possible Source

Yes	GO to AF3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AF3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - APIM
  - GPSM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AK • For DTC U3003:17, GO to Pinpoint Test AL
No	GO to AF4

AF4 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the GPSM and related in-line connector.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the GPSM and related in-line connector. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) - Vehicles Built From: 17-08-2015 (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With Radio U0184:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0184:00	Lost Communication With Radio: No Sub Type Information	Set by the APIM when network messages are missing from the ACM for more than 5 seconds with the ignition in RUN.

Possible Source

- ACM

PINPOINT TEST AG : LOST COMMUNICATION WITH RADIO U0184:00

AG1 VERIFY THE CUSTOMER'S CONCERN

- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AG2
No	The system is operating normally at this time. This DTC may have been set due to high

	network traffic or an intermittent fault condition.

AG2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0184:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0184:00 set in the APIM?

Yes	GO to AG3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AG3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AK • For DTC U3003:17, GO to Pinpoint Test AL
No	GO to AG4

AG4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With APIM U0253:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen

Display/Navigation System, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0253:00	Lost Communication With Accessory Protocol Interface Module: No Sub Type Information	Set by the ACM and the FCIM when network messages are missing from the APIM for more than 5 seconds with the ignition in RUN.

Possible Source

- APIM

PINPOINT TEST AH : LOST COMMUNICATION WITH APIM (SYNC MODULE) U0253:00

AH1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AH2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AH2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0253:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0253:00 set in the ACM, and/or the FCIM?

Yes	GO to AH3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AH3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM
  - FCIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AK • For DTC U3003:17, GO to Pinpoint Test AL
No	GO to AH4

AH4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0253:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0253:00 set in the ACM and/or the FCIM?

Yes	GO to AH5
No	• If there is an observable symptom, REFER to the Symptom Chart: General Audio System. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AH5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Lost Communication With FCIM U0256:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0256:00	Lost Communication With Front Controls Interface Module "A": No Sub Type Information	Set by the ACM and APIM when network messages are missing from the FCIM for more than 5 seconds with the ignition in RUN.

Possible Source

- FCIM

PINPOINT TEST AI : LOST COMMUNICATION WITH FCIM (FRONT CONTROLS INTERFACE MODULE) U0256:00

AI1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AI2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AI2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0256:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0256:00 set in the ACM or APIM?

Yes	GO to AI3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AI3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM
  - FCIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AK • For DTC U3003:17, GO to Pinpoint Test AL
No	GO to AI4

AI4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0256:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0256:00 set in both the ACM and the APIM?

Yes	GO to AI5
No	• If there is an observable symptom, REFER to the Symptom Chart: General Audio System, to diagnose the observed symptom. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AI5 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition ON.
- Disconnect and inspect the FCIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the FCIM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. Address the root cause of any connector or pin issues.

Lost Communication With FDIM U0257:00

Normal Operation and Fault Conditions

REFER to: Information and Entertainment System - System Operation and Component Description (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0257:00	Lost Communication With Front Controls / Display Interface Module: No Sub Type Information	**NOTE:** *The FDIM is a non-networked module attached to the APIM. The APIM acts as the gateway module for messages sent over the Infotainment Controller Area Network (I-CAN) between the FDIM, ACM, and FCIM.* Set by the ACM when network messages are missing from the APIM for more than 5 seconds with the ignition in RUN. This DTC may be set in conjunction with DTC U0253:00.

Possible Source

- APIM

PINPOINT TEST AJ : LOST COMMUNICATION WITH FDIM (FRONT DISPLAY INTERFACE MODULE) U0257:00

AJ1 VERIFY THE CUSTOMER'S CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to AJ2
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AJ2 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0257:00

- Ignition ON.
- Using a diagnostic scan tool, clear all Continuous Memory Diagnostic Trouble Codes (CMDTCs).
- Ignition OFF.
- Ignition ON.
- Wait at least 10 seconds.

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0257:00 set in the ACM?

Yes	GO to AJ3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AJ3 CHECK FOR BATTERY VOLTAGE OUT-OF-RANGE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the self-test for the following modules:
  - ACM
  - APIM

Are any low or high voltage Diagnostic Trouble Codes (DTCs) present?

Yes	• For DTC U3003:16, GO to Pinpoint Test AK • For DTC U3003:17, GO to Pinpoint Test AL
No	GO to AJ4

AJ4 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0257:00 SET IN MULTIPLE MODULES

- Review the recorded results from the self-test.

Is DTC U0257:00 set in the ACM?

Yes	INSTALL a new FDIM. CLEAR the DTCs. Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs). If DTC U0257:00 is still present, GO to AJ5
No	• If there is an observable symptom, REFER to the Symptom Chart: General Audio System, to diagnose the observed symptom. • If there is no observable symptom, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

AJ5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Battery Voltage Low U3003:16

Refer to Wiring Diagrams Cell 130 for schematic and connector information.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	Set by the ACM, APIM, FCIM and GPSM when the supply voltage falls below 10 volts for at least 10 seconds during normal operation or for more than 250 milliseconds during the self-test.

Possible Sources

- Previous low battery voltage
- Wiring, terminals, or connectors
- ACM
- APIM
- FCIM
- GPSM

PINPOINT TEST AK : BATTERY VOLTAGE LOW U3003:16

AK1 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:16

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) for the module in question.
- Wait at least 15 seconds.
- Using a diagnostic scan tool, repeat the self-test for the module in question.

Is DTC U3003:16 still present?

Yes	GO to AK2
No	The system is operating correctly at this time. The DTC may have been set due to a previous low battery voltage condition.

AK2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform the PCM self-test

Are any voltage-related DTC set in the PCM?

Yes	REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to AK3

AK3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

- Check the battery condition and verify the battery is fully charged.
  REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).

Is the battery fully charged and in good condition?

Yes	GO to AK4
No	REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).

AK4 CHECK THE MODULE VOLTAGE SUPPLY

- Ignition OFF.
- Measure and record the voltage at the battery.
- Disconnect the audio system module setting DTC U3003:16.
- Ignition ON.
- Measure the voltage between the module setting DTC U3003:16 and ground.
- For the ACM, measure:

Positive Lead	Measurement / Action	Negative Lead
C4821A-1		Ground

- For the APIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-1		Ground

- For the FCIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-26		Ground

- For the GPSM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2398-1		Ground

Is the voltage within 0.2 volts of the recorded battery voltage?

Yes	GO to AK5
No	REPAIR the circuit for high resistance.

AK5 CHECK THE SUSPECT MODULE GROUND CIRCUIT FOR CONTINUITY

- Measure the voltage at the suspect module.
- For the ACM, measure:

Positive Lead	Measurement / Action	Negative Lead
C4821A-1		C4821A-13

- For the APIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2383-1		C2383-37

- For the FCIM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2402A-26		C2402A-1

- For the GPSM, measure:

Positive Lead	Measurement / Action	Negative Lead
C2398-1		C2398-6

Is the suspect module voltage greater than 11 volts?

Yes	• For the ACM, GO to AK6 • For the APIM, GO to AK7 • For the FCIM, GO to AK8 • For the GPSM, GO to AK9
No	REPAIR the circuit for high resistance.

AK6 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AK7 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for

	this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AK8 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the FCIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the FCIMand related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AK9 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the GPSM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the GPSM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) - Vehicles Built From: 17-08-2015 (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Battery Voltage High U3003:17

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:17	Battery Voltage:	Set by the ACM, APIM, FCIM and the GPSM when the supply voltage is more

	Circuit Voltage Above Threshold	than 15.8 volts for more than 250 milliseconds during normal operation or the self-test.

Possible Sources

- ACM
- APIM
- FCIM
- GPSM

PINPOINT TEST AL : BATTERY VOLTAGE HIGH U3003:17

AL1 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:17

- Ignition ON.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs) for the module in question.
- Wait at least 10 seconds.
- Using a diagnostic scan tool, perform the self-test for the module in question.

Is DTC U3003:17 present?

Yes	GO to AL2
No	The system is operating correctly at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

AL2 CHECK FOR HIGH VOLTAGE DIAGNOSTIC TROUBLE CODES (DTCS) SET IN MULTIPLE MODULES

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Are high voltage Diagnostic Trouble Codes (DTCs) such as B1676, P0563, or U3003:17 set in more than one module?

Yes	REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to AL3

AL3 CHECK THE BATTERY VOLTAGE

- Turn off all interior lights, exterior lights, and accessories.
- Start and run the engine at approximately 2,000 RPM for 3 minutes while monitoring the battery voltage.

Does the battery voltage rise to 15.5 volts or higher?

Yes	REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
No	• For the ACM, GO to AL4 • For the APIM, GO to AL5 • For the FCIM, GO to AL6 • For the GPSM, GO to AL7

AL4 CHECK FOR CORRECT ACM (AUDIO FRONT CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all the ACM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)

- Damaged or bent pins (install new terminals or pins)
- Pushed-out pins (install new pins as necessary)

- Reconnect the ACM and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ACM. REFER to: Audio Front Control Module (ACM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AL5 CHECK FOR CORRECT APIM (SYNC MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the APIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the APIM and related in-line connectors. Make sure it seats and latches correctly.
- Wait at least 2 minutes for the APIM to re-initialize.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new APIM. REFER to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AL6 CHECK FOR CORRECT FCIM (FRONT CONTROLS INTERFACE MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the FCIM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the FCIM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new FCIM. REFER to: Front Controls Interface Module (FCIM) (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

AL7 CHECK FOR CORRECT GPSM (GLOBAL POSITIONING SYSTEM MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect the GPSM and related in-line connectors.
- Repair:
  - Corrosion (clean module pins or install new connectors or terminals)
  - Damaged or bent pins (install new terminals or pins)
  - Pushed-out pins (install new pins as necessary)
- Reconnect the GPSM and related in-line connectors. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new GPSM. REFER to: Global Positioning System Module (GPSM) - Vehicles Built From: 17-08-2015 (415-00 Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Audio Front Control Module (ACM) Self-Test

Activation

1. **WARNING: Before beginning any service procedure in this section, refer to Health and Safety Precautions in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. **NOTE:** *If the ACM, FCDIM (if equipped), FCIM, or FDIM (if equipped) are inoperative (blank or do not power on), obtain the ACM part number by referencing the label attached to the ACM chassis.*

   Turn the ACM on.

3. Operate the audio system in radio tuner AM/ FM mode.

4. Press and hold the eject button, and within 1 second, press and hold the seek up button. If supported, the speaker walk around test will begin, and the display will indicate each speaker as it is tested.

NOTE: *AHU Diagnostics refers to the ACM, EFP Diagnostics refers to the FCIM that communicates on the CAN (if equipped), and MFD Diagnostics (if supported) refers to the FCDIM (if equipped).*

5. To exit the self-diagnostic mode, turn the ACM off, or select "Exit Diagnostics."

Copyright © 2016 Ford Motor Company

Reset the SYNC Module [APIM]

Programming

NOTE: *An APIM Reset consists of a battery disconnect and a SYNC® system Master Reset. It may **not** be necessary to perform a Master Reset after disconnecting the battery if the concern is resolved.*

NOTE: *This procedure clears all Continuous Memory Diagnostic Trouble Codes (CMDTCs). The Diagnostic Trouble Codes (DTCs) must be recorded now if other non-SYNC® diagnoses are to be performed after this procedure.*

1. Remove any devices connected to the USB port(s), audio input jack/socket (if equipped), SD slot (if equipped), or RCA jacks (if equipped).

2. Disconnect the negative battery cable for 1 minute, then reconnect it.
   Refer to: Battery Disconnect and Connect - Vehicles With: Single Battery (414-01 Battery, Mounting and Cables) .

3. **NOTE:** *Performing a Master Reset returns all preference settings to the factory defaults, erases the phone book and call histories, and deletes any Bluetooth devices paired with the SYNC® system. For vehicles with navigation, the customer's saved destinations (home, favorites, and previous) are erased. For vehicles with a TCU, any devices paired with the MyFord® Mobile or MyLincoln Mobile™ phone application will be deleted.*

   Perform a Master Reset. If necessary, refer to "Master Reset" in the Owner's Literature.

4. Verify system function using the MIT 105-00120 to test the audio output for the USB port(s), audio input jack/socket (if equipped), and Bluetooth. If equipped, test the audio output for the RCA jacks using RCA Adapter 105-00121.

5. **NOTE:** *If the concern remains after completing the APIM Reset procedure, advise the customer to power their device off and back on for a simple reboot. In some cases, if possible, the device's battery may also need to be removed and re-installed to complete a reboot. Delete SYNC® from the device's Bluetooth menu prior to re-pairing the phone to the SYNC® system. If necessary, the customer can also perform a Master Clear, Master Reset, or Factory Data Reset on their device following the manufacturer's instructions in the device's owner's manual and/or website. Customer devices may affect the operation of SYNC® and this should be understood to prevent unnecessary diagnosis or repairs to the system.*

   If a concern is still present, return to the Symptom Charts.

SYNC Module [APIM] Programming

Special Tool(s) / General Equipment

SYNC USB 2.0 A Male to A Male Cable

Activation

1. **WARNING: Before beginning any service procedure in this section, refer to Health and Safety Precautions in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. If a new APIM is being installed, install the new APIM before carrying out the following procedure.
   Refer to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).

3. **NOTE:**

   - *This programming procedure deletes any phones that were paired with the SYNC® system.*
   - *To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.*
   - *A file of approximately 80 megabytes (MB) needs to be downloaded from the online database for the programming. Allow extra time for the file to download.*
   - *The diagnostic scan tool is required.*
     - *Ensure that the IDS version and patch software levels are up to date.*

4. Connect a battery charger to the vehicle and select the low charge setting. The negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

5. Plug the diagnostic scan tool into a power supply due to the length of time the programming requires.

6. Connect the diagnostic scan tool to the VCM, and the VCM to the DLC.

7. Connect one end of the USB cable (male type A 4-pin to male type a 4-pin) to the diagnostic scan tool's USB port, and the other end to the vehicle's USB port.
   Use the General Equipment: SYNC USB 2.0 A Male to A Male Cable

8. Close the IDS software program.

9. Place the ignition in the ON/RUN position. For ON/RUN position information with Push Button Start vehicles, Refer to: Steering Wheel and Column Electrical Components - System Operation and Component Description (211-05 Steering Column Switches, Description and Operation).

10. **NOTE:**

    - *Using the diagnostic scan tool, open Internet Explorer and access the technician service publication website.*
    - *Run OASIS using "Read VIN & DTCs."*
      - *If the "Read VIN & DTCs" button is green with a red VCM icon, refer to the "SYNC - Software Programming" document under the "Service Tips" tab.*
      - *If the "Read VIN & DTCs" button is red with a grey VCM icon, ensure pop-ups are enabled, follow the Internet Explorer pop-ups, and then refer to the "SYNC - Software Programming" document under the "Service Tips" tab.*
    - *If the "SYNC - Software Programming" document is not followed, the programming may stop or encounter errors due to improperly configured Internet browser settings.*

11. From the OASIS tab, select the "SYNC" button. The Last Recorded State — Software is displayed.

12. **NOTE:** *There are 3 types of APIM programming available:*

    - *Standard — Used to update the APIM and any currently installed Applications to the latest software*

levels.

- *Custom — Used to show all the available software options (including Applications that may not have been installed previously) that can be programmed into the APIM. Use this selection when upgrades become available or as directed by a TSB or FSA.*
- *Module Replacement — Used when the APIM has been replaced. This type of programming performs the required provisioning (restores software for newly installed hardware).*

13. Scroll to the bottom of the screen, select 1 of the 3 options (Standard, Custom, or Module Replacement), and select the "Read SYNC" button. The current APIM assembly, Vehicle Interface Processor (VIP), and Consumer Interface Processor (CIP) software levels are compared to the last recorded state in the Ford online database, and the available software is displayed.

14. **NOTE:** *Do **not** disconnect the VCM or USB cable during APIM programming unless directed by the diagnostic scan tool on-screen prompts.*

    Select the "Program SYNC" button to begin the APIM programming process.

15. Follow the diagnostic scan tool on-screen directions. After programming is complete, the diagnostic scan tool displays "Programming has been successfully completed."

SYNC Module [APIM] Custom Programming

Special Tool(s) / General Equipment

SYNC USB 2.0 A Male to A Male Cable
SYNC USB 2.0 A Female to Mini B Female 5-Pin Adapter

Activation

1. **WARNING: Before beginning any service procedure in this section, refer to Health and Safety Precautions in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. **NOTE:** *Use this procedure to show all available software options, including Applications, that can be programmed into the APIM when upgrades become available, or as directed by a TSB or FSA. For additional information about choosing the correct APIM programming procedure, see Accessory Protocol Interface Module (APIM) Programming.*

   Refer to: Information and Entertainment System - Component Location (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Description and Operation).

3. **NOTE:**

   - *To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.*
   - *A USB flash drive with a minimum storage size of 1 gigabyte (GB) may be required for this procedure.*
     - *Some programming files are large (greater than 2GB). It is important that the diagnostic scan tool has enough available hard drive space to accommodate the programming file download.*
     - *If a "Disk Space Error" is received, create additional free space on the hard drive.*
   - *The diagnostic scan tool is required.*
     - *Ensure that the IDS version and patch software levels are up to date.*
   - *During programming, the vehicle display may momentarily go blank.*

4. Connect a battery charger to the vehicle and select the low charge setting. The negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

5. Plug the diagnostic scan tool into a power supply due to the length of time the programming requires.

6. Connect the diagnostic scan tool to the VCM, and the VCM to the DLC.

7. Close the IDS software program.

8. Place the ignition in the ON/RUN position. For ON/RUN position information with Push Button Start vehicles, Refer to: Steering Wheel and Column Electrical Components - System Operation and Component Description (211-05 Steering Column Switches, Description and Operation).

9. **NOTE:**

   - *Using the diagnostic scan tool, open Internet Explorer and access the technician service publication website.*
   - *Run OASIS using "Read VIN & DTCs."*
     - *If the "Read VIN & DTCs" button is green with a red VCM icon, refer to the "SYNC - Software Programming" document under the "Service Tips" tab.*
     - *If the "Read VIN & DTCs" button is red with a grey VCM icon, ensure pop-ups are enabled, follow the Internet Explorer pop-ups, and then refer to the "SYNC - Software Programming" document under the "Service Tips" tab.*
   - *If the "SYNC - Software Programming" document is not followed, the programming may stop or encounter errors due to improperly configured Internet browser settings.*

10. **NOTE:** *This procedure clears all Continuous Memory Diagnostic Trouble Codes (CMDTCs). The Diagnostic*

Trouble Codes (DTCs) must be recorded now if other diagnoses are to be performed after this procedure.

Select "Toolbox" from the technician service publications website to retrieve and record all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

11. From the OASIS tab, select the "SYNC" button. The Last Recorded State — Software is displayed.

    - Scroll to the bottom of the screen, select "Custom," and select the "Read SYNC" button. The current APIM assembly, Vehicle Interface Processor (VIP), Consumer Interface Processor (CIP), and Application software levels are compared to the last recorded state in the Ford online database, and the available software is displayed.
    - Select the software level needed as indicated by the TSB or FSA. If the software level is not known, stop this procedure and perform standard programming, which automatically selects the latest software levels.
      Refer to: SYNC Module [APIM] Standard Programming (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).
    - Applications may require selection for installation. Applications with a green check mark next to them indicates the APIM already has the latest level installed (no reinstallation is required).
    - Depending on the software level required, the diagnostic scan tool automatically selects either the Service Pack or Full Flash programming method.
    - Although there may be an option available to override the Service Pack installation and perform a Full Flash/Force Consumer Interface Processor (CIP), choosing this option requires additional programming time and is not recommended unless directed by a TSB or FSA.
    - Select the customer-requested upgrade or the Application directed by the TSB or FSA.

13. **NOTE:** *Only Applications on a flash drive may be loaded into the APIM through the media hub.*

    NOTE: *If not performing a Full Flash/Force Consumer Interface Processor (CIP), go to step 16.*

    - Disconnect the vehicle's USB cable by removing the media hub.
      Refer to: Media Hub (415-00D) .
    - If the USB cable cannot be accessed by removing the media hub, access and disconnect the USB inline connector.

    - Connect the USB adaptor (female type A 4-pin to female type Mini-B 5-pin) to the vehicle's USB cable.
      Use the General Equipment: SYNC USB 2.0 A Female to Mini B Female 5-Pin Adapter
    - Connect one end of the USB cable (male type A 4-pin to male type a 4-pin) to the diagnostic scan tool's USB port, and the other end to the USB adaptor.
      Use the General Equipment: SYNC USB 2.0 A Male to A Male Cable

15. **NOTE:** *Do **not** disconnect the VCM or USB cable during APIM programming unless directed by the diagnostic scan tool on-screen prompts.*

16. **NOTE:** *Diagnostic scan tools that have never been used to program SYNC® may encounter a Hardware Wizard pop-up requesting a "WMA SBOOT" driver installation. If this request is encountered, install the driver and select the diagnostic scan tool "Retry" button to continue programming.*

    NOTE: *This step may take 20 minutes or longer.*

    - Select the "Program SYNC" button to begin the APIM programming process.
    - When prompted by the diagnostic scan tool, disconnect the battery charger, start the engine, and select "OK." Once "OK" is selected, do not interrupt this step, which may take 20 minutes or longer.

17. **NOTE:** *This step may take 20 minutes or longer.*

    Connect the USB flash drive to the diagnostic scan tool and follow the on-screen instructions to download Service Pack and Application files onto the USB flash drive. (If the diagnostic scan tool does not have an available USB port, the USB cable that is connected to the vehicle's USB cable can be unplugged at this time to make room for the USB flash drive. Do **not** disconnect the VCM from the diagnostic scan tool).

    - Install the media hub if it was removed.
      Refer to: Media Hub (415-00D) .
    - Reconnect the USB inline connector if it was accessed and disconnected.

19. **NOTE:** *This step may take 20 minutes or longer.*

    - When prompted by the diagnostic scan tool, remove the USB flash drive from the diagnostic scan tool

and connect it to the media hub to install the Applications into the APIM.
- The update should start automatically, and may take 20 minutes or longer.
- It is normal for the APIM to reset during this step.

20. Once the diagnostic scan tool programming and USB flash drive programming are complete, reinstall the flash drive into the diagnostic scan tool and select "OK." This initiates the remaining automated configuration steps and reports the software installation to the Ford online database. Failure to do so results in the loss of features such as navigation (if equipped) and SYNC® Services.

21. **NOTE:** *Calibrate the touchscreen.*

    Refer to: Touchscreen Calibration (415-00C Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC/Touchscreen Display/Navigation System, General Procedures).

SYNC Module [APIM] Replacement Programming

Special Tool(s) / General Equipment

SYNC USB 2.0 A Male to A Male Cable
SYNC USB 2.0 A Female to Mini B Female 5-Pin Adapter

Activation

1. **WARNING: Before beginning any service procedure in this section, refer to Health and Safety Precautions in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. **NOTE:** *Use this procedure to program and provision the module when a new APIM is being installed. For additional information about choosing the correct APIM programming procedure, see Accessory Protocol Interface Module (APIM) Programming.*

   Refer to: Information and Entertainment System (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Diagnosis and Testing).

3. Install the new APIM before performing this procedure.
   Refer to: SYNC Module [APIM] (415-00B Information and Entertainment System - General Information - Vehicles With: AM/FM/CD/SYNC, Removal and Installation).

4. **NOTE:**

   - *To prevent timeout errors and to minimize programming time, a hardwired Internet connection is strongly recommended when programming.*
   - *A USB flash drive with a minimum storage size of 1 gigabyte (GB) may be required for this procedure.*
     - *Some programming files are large (greater than 2GB). It is important that the diagnostic scan tool has enough available hard drive space to accommodate the programming file download.*
     - *If a "Disk Space Error" is received, create additional free space on the hard drive.*
   - *The diagnostic scan tool is required.*
     - *Ensure that the IDS version and patch software levels are up to date.*
   - *During programming, the vehicle display may momentarily go blank.*

5. Connect a battery charger to the vehicle and select the low charge setting. The negative battery charger lead must be connected to a clean chassis ground, not the negative battery post.

6. Plug the diagnostic scan tool into a power supply due to the length of time the programming requires.

7. Connect the diagnostic scan tool to the VCM, and the VCM to the DLC.

8. Close the IDS software program.

9. Place the ignition in the ON/RUN position. For ON/RUN position information with Push Button Start vehicles, Refer to: Steering Wheel and Column Electrical Components - System Operation and Component Description (211-05 Steering Column Switches, Description and Operation).

10. **NOTE:**

    - *Using the diagnostic scan tool, open Internet Explorer and access the technician service publication website.*
    - *Run OASIS using "Read VIN & DTCs."*
      - *If the "Read VIN & DTCs" button is green with a red VCM icon, refer to the "SYNC - Software Programming" document under the "Service Tips" tab.*
      - *If the "Read VIN & DTCs" button is red with a grey VCM icon, ensure pop-ups are enabled, follow the Internet Explorer pop-ups, and then refer to the "SYNC - Software Programming" document under the "Service Tips" tab.*
    - *If the "SYNC - Software Programming" document is not followed, the programming may stop or*

encounter errors due to improperly configured Internet browser settings.

11. **NOTE:** *This procedure clears all Continuous Memory Diagnostic Trouble Codes (CMDTCs). The Diagnostic Trouble Codes (DTCs) must be recorded now if other diagnoses are to be performed after this procedure.*

    Select "Toolbox" from the technician service publications website to retrieve and record all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

12. From the OASIS tab, select the "SYNC" button. The Last Recorded State — Software is displayed.

    - Scroll to the bottom of the screen, select "Module Replacement," and select the "Read SYNC" button. The current APIM assembly, Vehicle Interface Processor (VIP), Consumer Interface Processor (CIP), and Application software levels are compared to the last recorded state in the Ford online database, and the diagnostic scan tool automatically selects the latest software for programming.
    - Applications may require selection for installation. Applications with a green check mark next to them indicates the APIM already has the latest level installed (no reinstallation is required).
    - Depending on the software level required, the diagnostic scan tool automatically selects either the Service Pack or Full Flash programming method.
    - Although there may be an option available to override the Service Pack installation and perform a Full Flash/Force Consumer Interface Processor (CIP), choosing this option requires additional programming time and is not recommended unless directed by a TSB or FSA.

14. **NOTE:** *Only Applications on a flash drive may be loaded into the APIM through the media hub.*

    NOTE: *If not performing a Full Flash/Force Consumer Interface Processor (CIP), go to step 17.*

    - Disconnect the vehicle's USB cable by removing the media hub.
      Refer to: Steering Wheel and Column Electrical Components - System Operation and Component Description (211-05 Steering Column Switches, Description and Operation).
    - If the USB cable cannot be accessed by removing the media hub, access and disconnect the USB inline connector.
