About This Manual

Introduction

WARNING: Before beginning any service procedure in this manual, refer to health and safety warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.

For additional information, refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

This manual describes and directs repair procedures specified by Ford Motor Company for the vehicle. Critical health and safety precautions are included. Anyone who deviates from these instructions risks compromising personal safety or vehicle integrity.

SECTION CONTENT

This manual is divided into groups, each containing sections numbered based on the component part number. Section contents may include:

- Specifications
  - Fluid capacities, component specifications and torque values not covered in other procedures
- Description and Operation
  - Overview of the system, component locations, and system operation
- Diagnosis and Testing
  - Symptom charts, DTC charts and diagnostic tests
  - See the Diagnosis and Testing Information in this document
- General Procedures
  - Service adjustments, electronic programming and other special procedures
- Removal and Installation
  - Component removal and installation instructions
- Removal
  - Component removal instructions
- Installation
  - Component installation instructions
- Disassembly and Assembly
  - Component disassembly and assembly instructions
- Disassembly and Assembly of Subassemblies
  - Assembly disassembly and assembly instructions

IMPORTANT INFORMATION

Section number 100-00 General Information contains the following important information (including this document):

- Critical Health and Safety Precautions - service safety precautions applicable to the entire manual.
  For additional information, refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
- A Symbols Glossary - definitions of the action directed by each symbol.
  For additional information, refer to: Symbols Glossary (100-00 General Information, Description and Operation).
- Diagnostic Methods - support information for diagnostics.
  For additional information, refer to: Diagnostic Methods (100-00 General Information, Description and Operation).

Warnings, Notices and Notes

WARNINGS

Warnings provide information to avoid personal injury and to make sure service actions on critical safety systems are performed correctly. Warnings that apply to an entire system or workshop manual section are located in section 100-00 Description and Operation, Health and Safety Precautions.
For additional information, refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

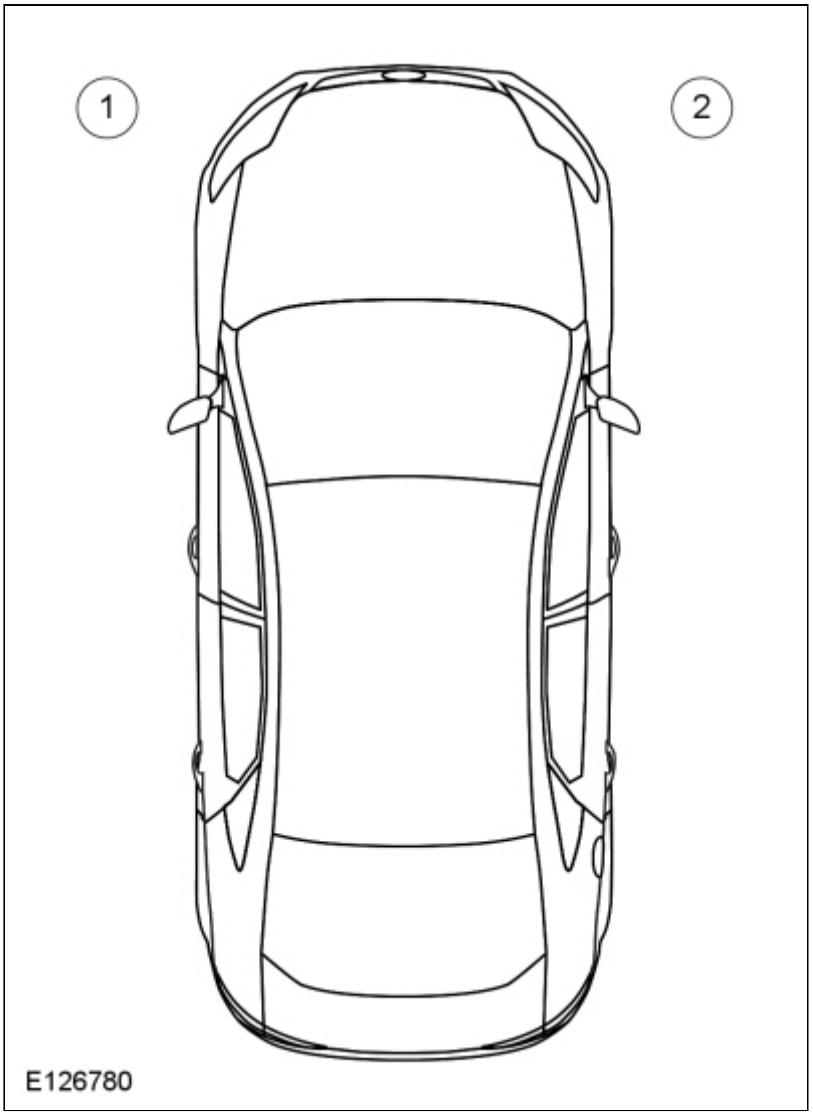
NOTICES (in some publications, CAUTIONS)

Notices provide information to avoid damage to the vehicle or a component.

NOTES

Notes provide information critical for a complete and effective repair.

Warnings, Notices, or Notes that apply to an entire procedure will be placed at the beginning of the procedure. Warnings, Notices, or Notes that apply to a single step are placed at the beginning of the step. Those that apply to a group of steps will be placed at the first step requiring it.

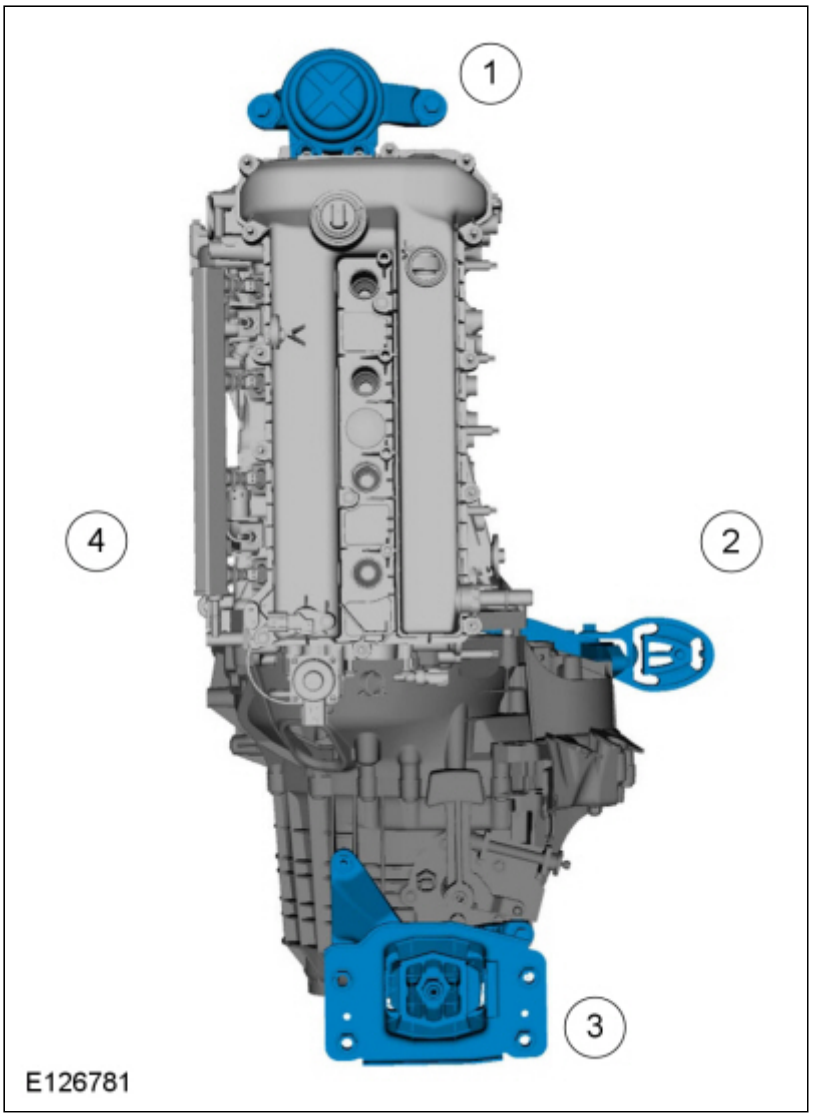


Specified Chemicals or Materials

Throughout this manual, chemicals or materials are specified that must be used to properly complete a service procedure or diagnostic step. In the event a specific material is not readily available, a substitute material meeting the same specification may be used. Ford has not reviewed third party products for compliance with environmental, health or safety regulations and is not responsible for their use. Use of third party products is at your own risk. Additionally, such products may cause degraded performance, premature failures, and/or vehicle component damage. All chemicals or materials used for vehicle servicing should be checked for compliance with local environmental and health and safety regulations.

LH and RH Designations

All LH and RH designations are oriented from the driver's seat position looking forward.



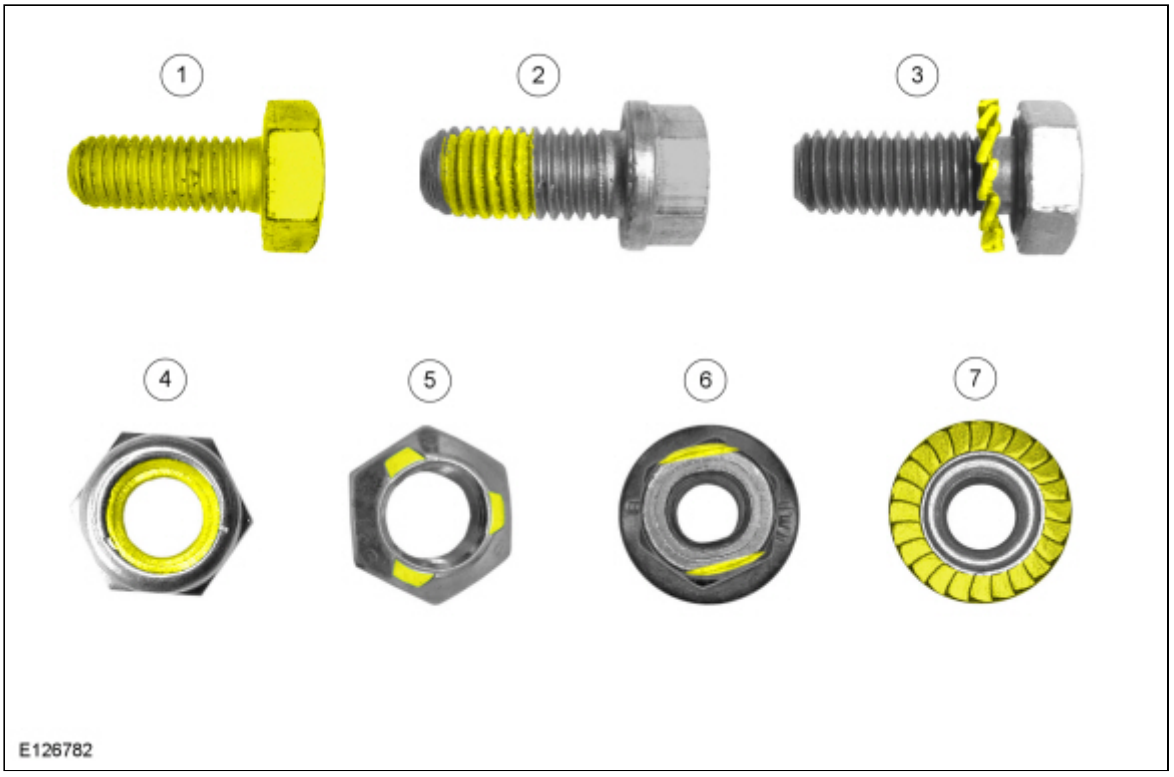
Vehicle LH and RH definition

Item	Part Number	Description
1	—	LH (left-hand)
2	—	RH (right-hand)

All LH and RH engine designations are oriented from the flywheel position looking toward the crankshaft pulley.

Powertrain LH and RH definition

Item	Part Number	Description
1	—	Front
2	—	RH (right-hand)
3	—	Rear
4	—	LH (left-hand)



Standard Practices

The following rules apply, unless specified differently in the procedure:

FASTENERS

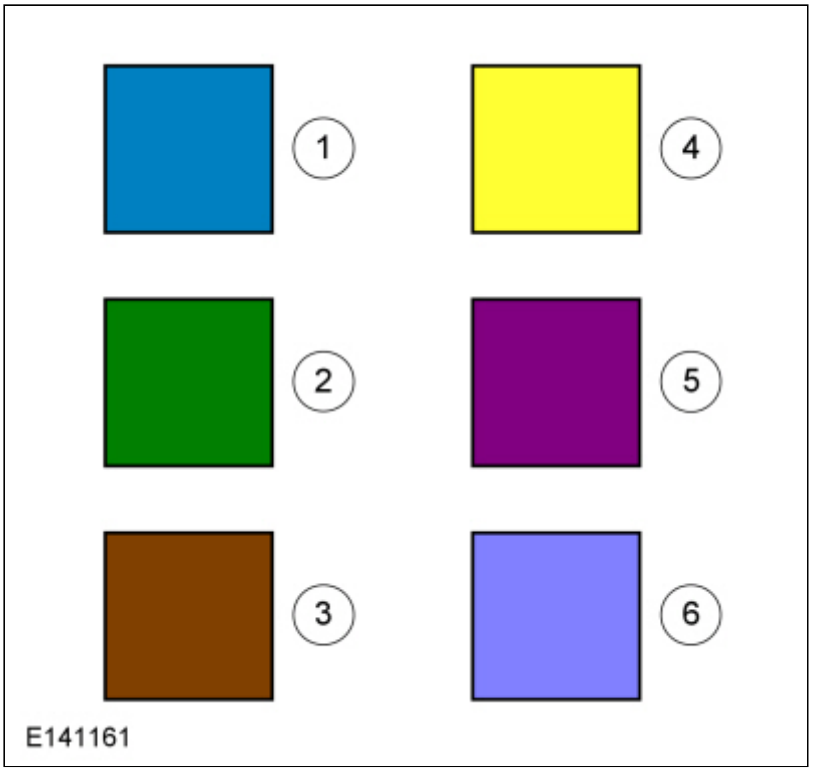
- Reuse standard fasteners.
- Replace fasteners with self-locking features.
  - Examples of fastener self-locking coatings or mechanical locking (with the locking features highlighted yellow) are shown in the illustration.
- Replace fasteners with torque angle specifications (those tightened a specified number of degrees).

Examples of self-locking nuts and bolts

Item	Part Number	Description
1	—	Completely coated self-locking bolt
2	—	Partially coated self-locking bolt
3	—	Self-locking bolt with a locking washer
4	—	Self-locking nut with a plastic locking insert
5	—	Self-locking nut with thread deformation (3 indentations)
6	—	Self-locking nut with thread deformation (to oval shape)
7	—	Self-locking nut with integrated locking ring

SEALS AND GASKETS

Replace seals and gaskets, unless specified differently in the procedure.



EXTERIOR TRIM PARTS

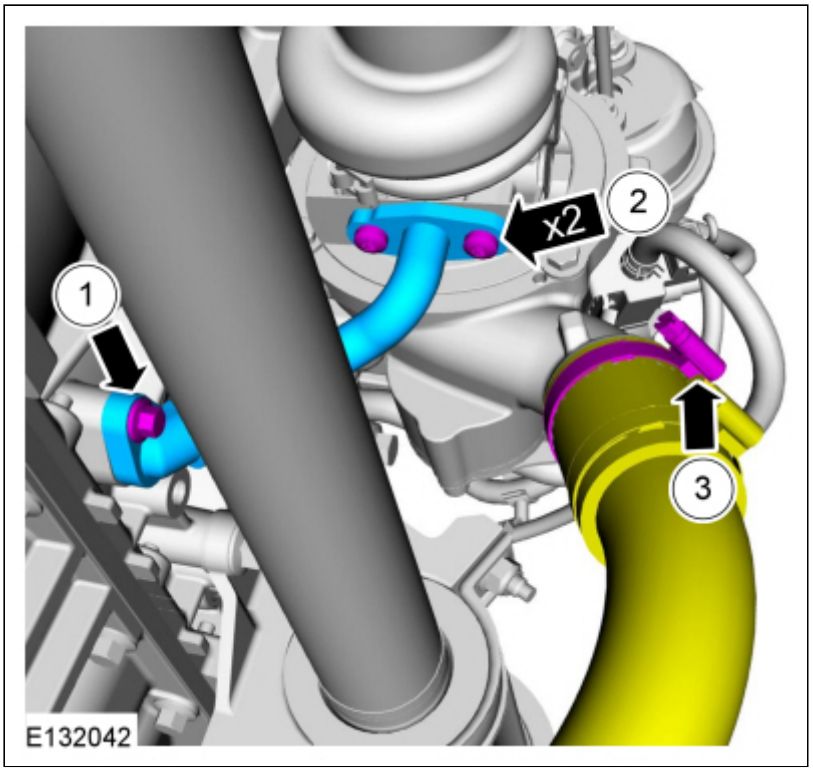
Replace exterior trim parts fastened with glue or adhesive tape, unless specified differently in the procedure.

Mechanical Procedures

Illustrations in this manual may be used instead of written step instructions. Color-coding (see color scheme illustration) is used to communicate the required step action or actions. Service action icons may be used to add information regarding the required action.
For additional information, refer to: Symbols Glossary (100-00 General Information, Description and Operation).

Illustration Color-coding

Item	Part Number	Description
1	—	Blue - Target or primary component to be removed/installed (or disassembled/assembled).
2	—	Green - Components that need to be removed prior to or installed after the target/primary.
3	—	Brown - Components that need to be removed prior to or installed after the target/primary.
4	—	Yellow - Components to be set aside for access, but not removed. Also highlighted areas to inspect or adjust.
5	—	Magenta - Electrical connectors and fasteners such as nuts, bolts, clamps, or clips to be: detached, attached, loosened, moved, removed or installed.
6	—	Pale Blue - Special tool(s), general equipment, or common tools used in an uncommon way.

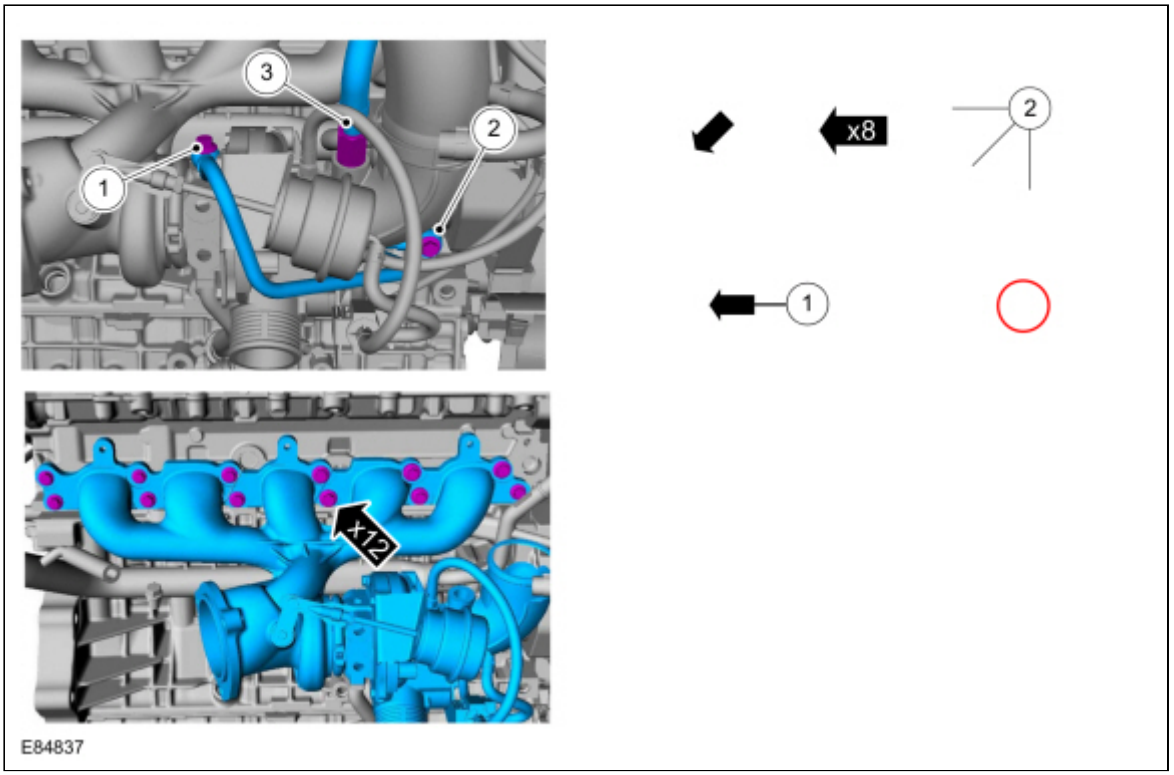


Other color coding

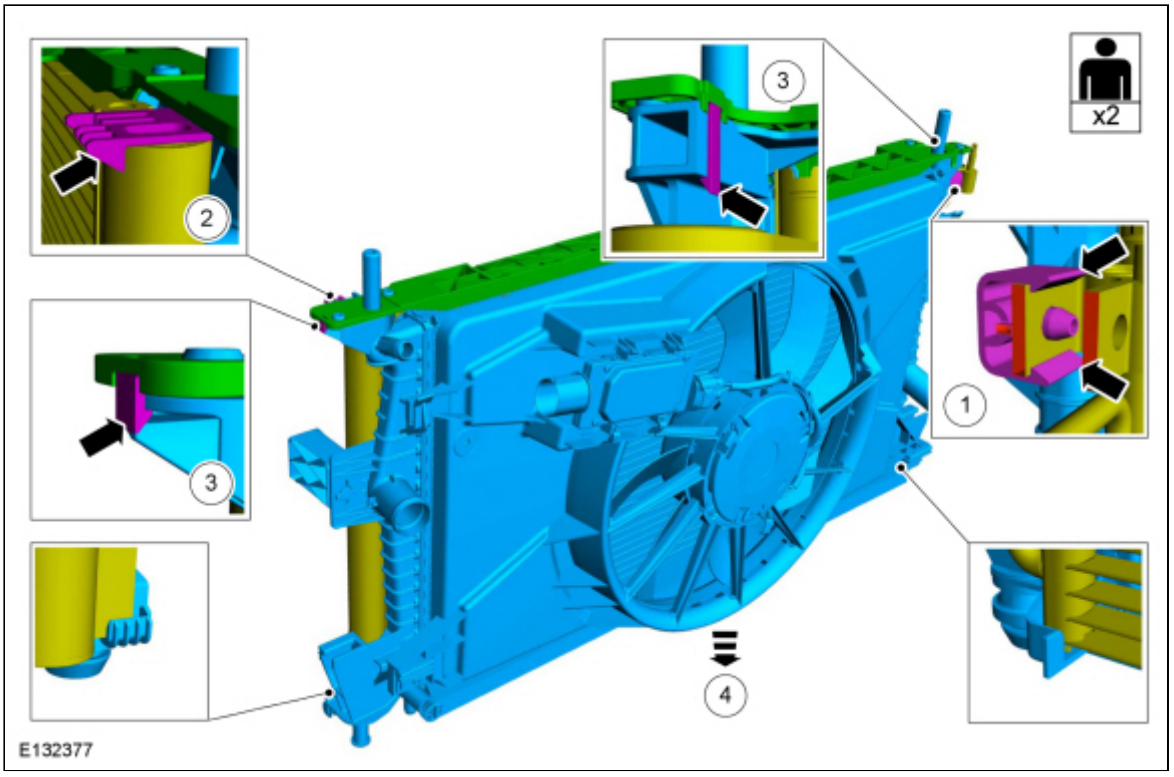
- Alternating Blue and White
  - Chemical, adhesive or sealer apply areas
- Red
  - Sectioned or cut-away areas
- Grey
  - Background components shown for location information

ILLUSTRATION TASK SEQUENCE

Components that must be removed or installed in a specific sequence are identified with a numbered callout. Any associated step text is numbered accordingly.



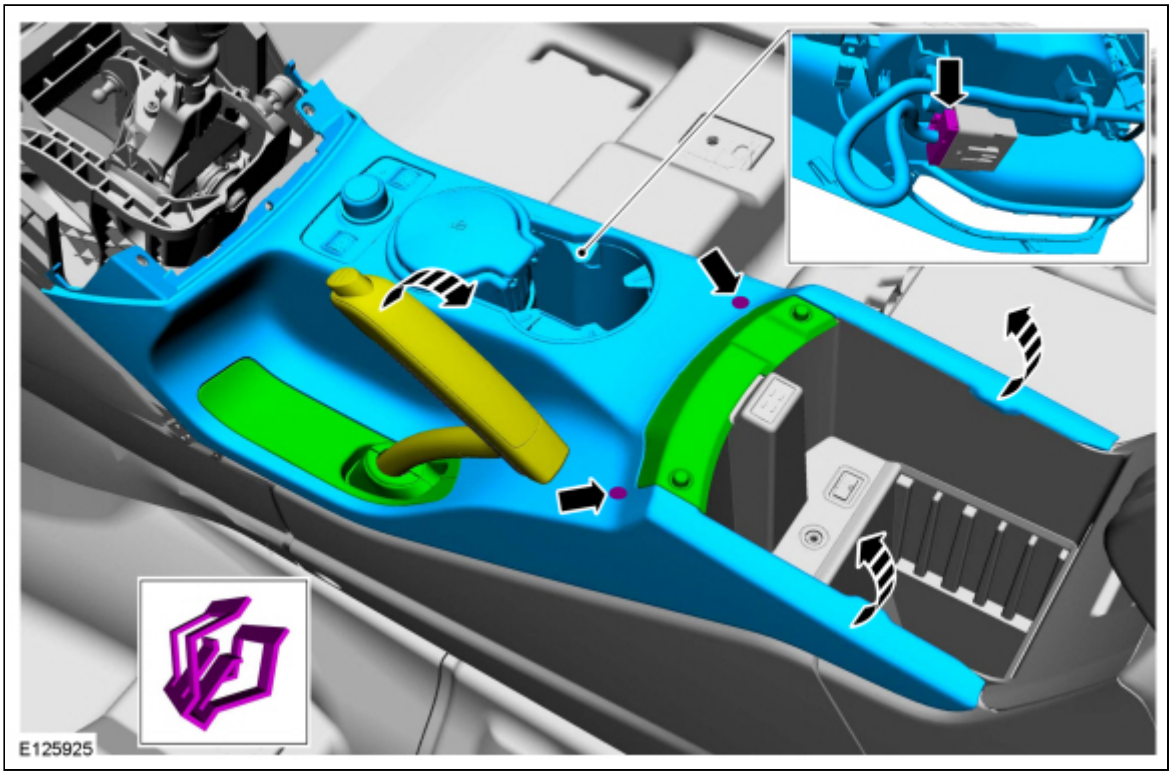
Simple procedure example showing color-coding and task sequence.



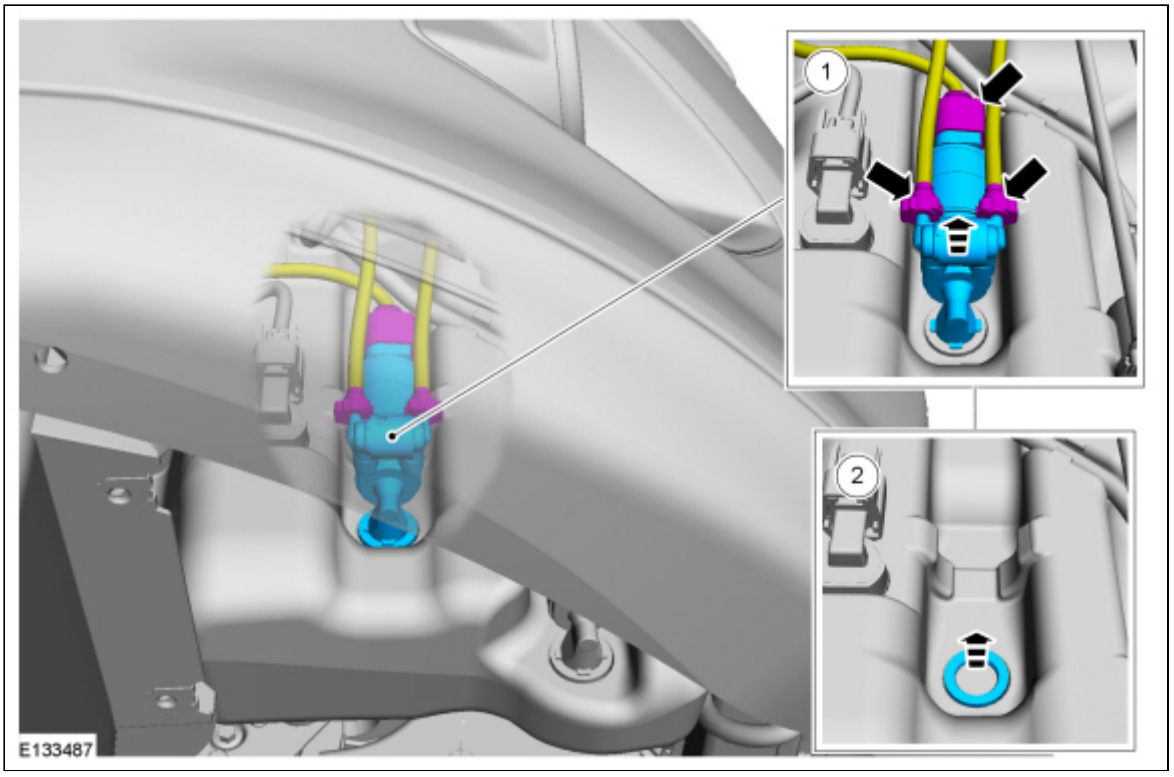
Black arrows are used to draw attention to components (usually fasteners). Arrows with multiples specified (here, x2) identify an identical number of fasteners or items. Callouts (numbers inside circles) show a required sequence or tightening torque.

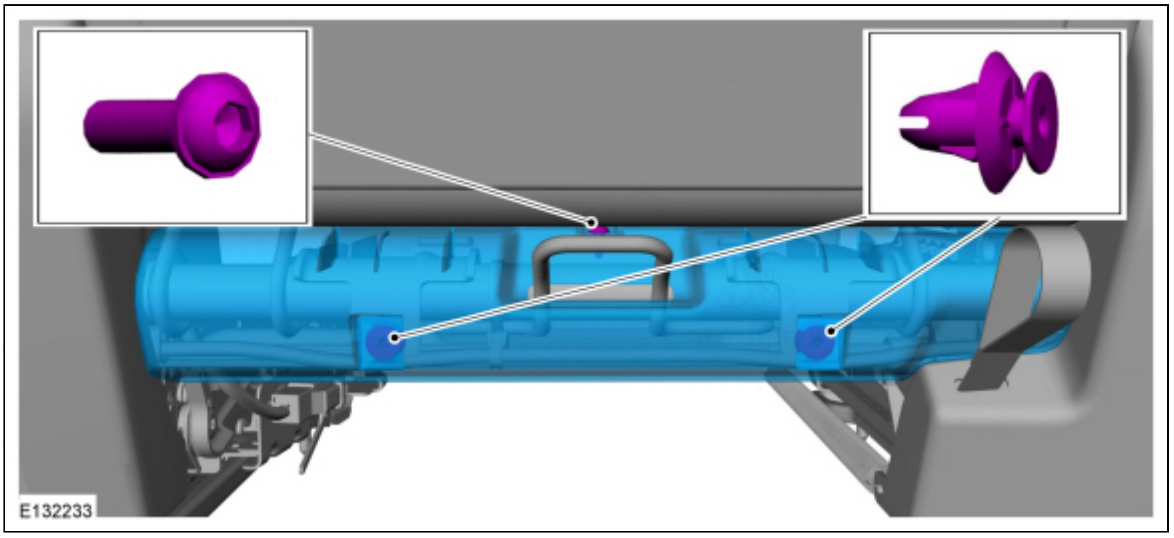
In the illustration, the callouts indicate the removal sequence, **which is reversed for installation**. The yellow coloring of the hose indicates it is to be positioned aside (not removed). Two identical (magenta-colored) fasteners are indicated by the x2 arrow. The fasteners in this illustration require different torques (same torque for the x2 fasteners) so numbered callouts are used to identify them with torque values in the associated step text. The (magenta-colored) hose clamp is another fastener to be removed.

Examples of fastener removal sequence and an identical service action for 12 fasteners. Other possible symbols are shown on the right.



Example of fastener sequence information with two persons required for the service action

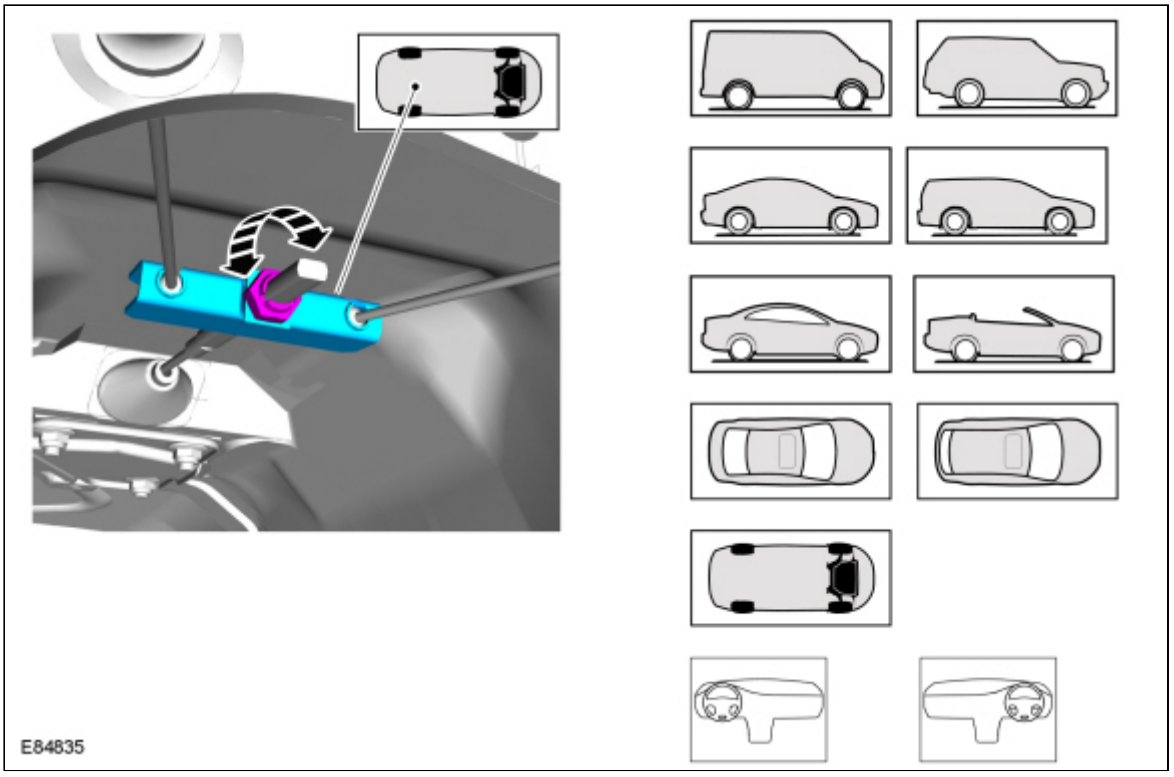


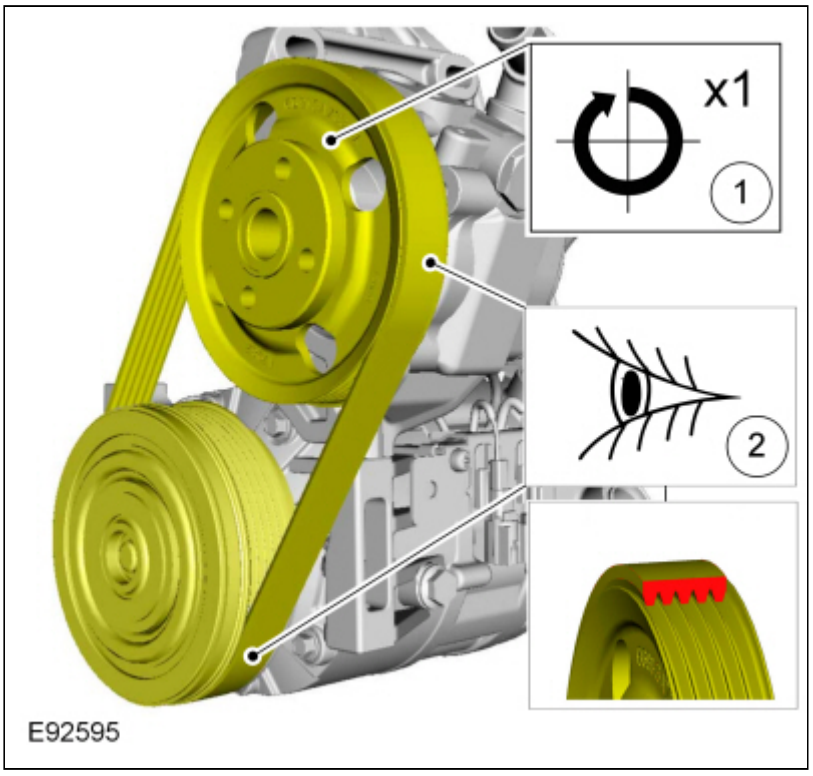


HIDDEN DETAILS

Separate detail boxes or transparent components may be used to show hidden items in an illustration.

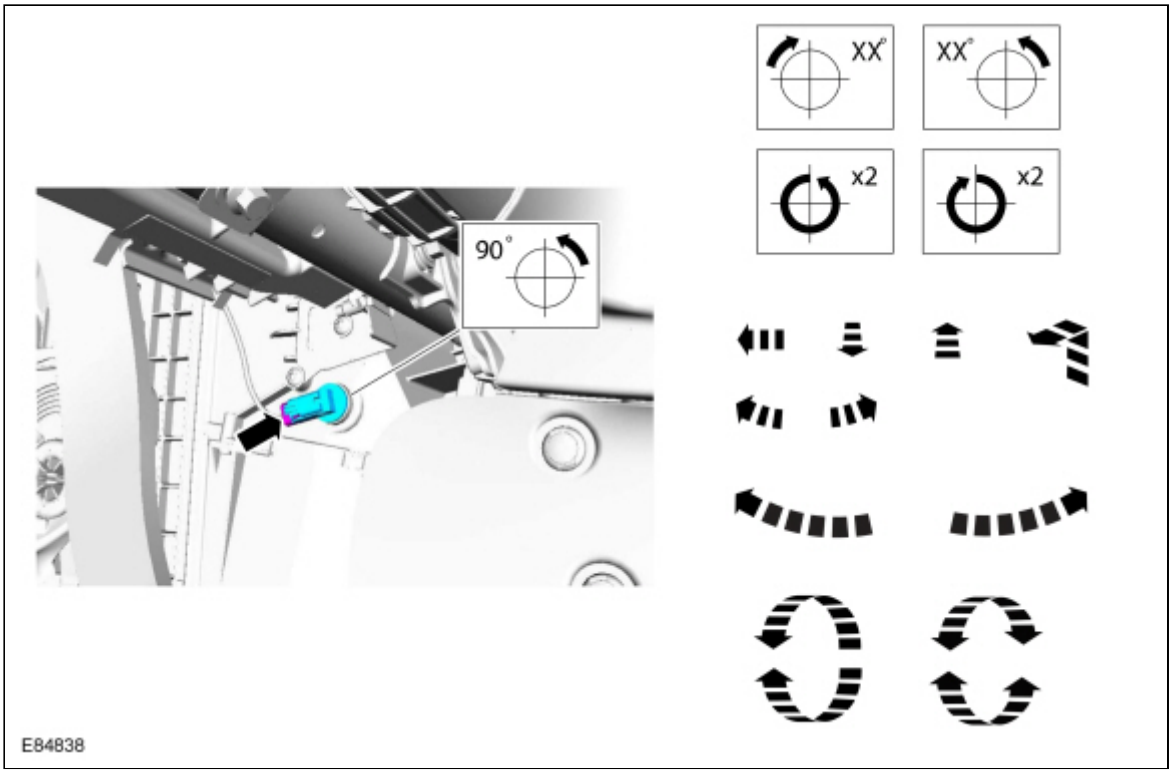
Example of hidden fastener information



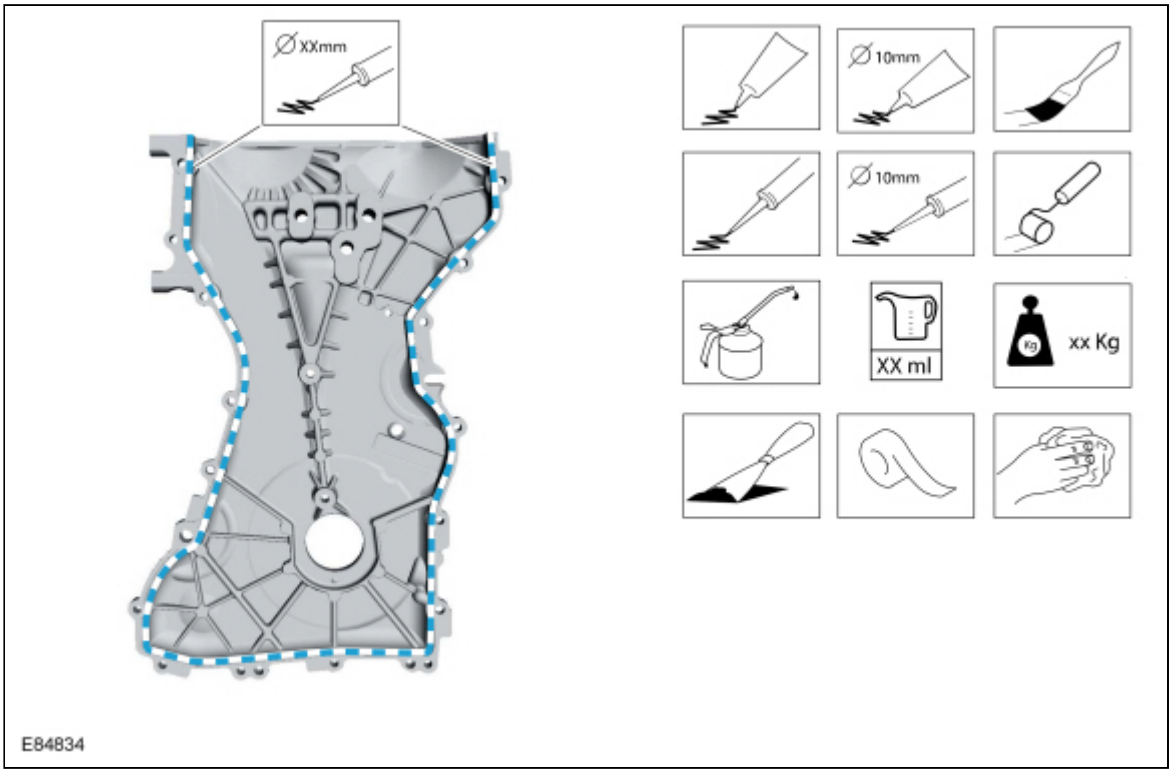


SERVICE ACTION ICONS

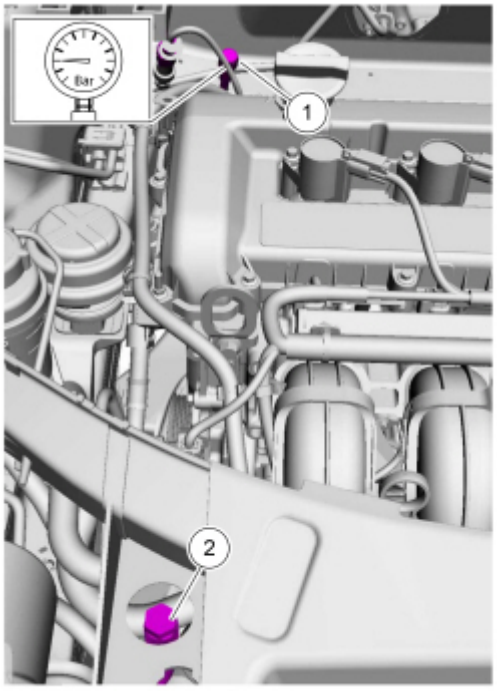
Service action icons may be used to add information regarding the required action.
For additional information, refer to: Symbols Glossary (100-00 General Information, Description and Operation).



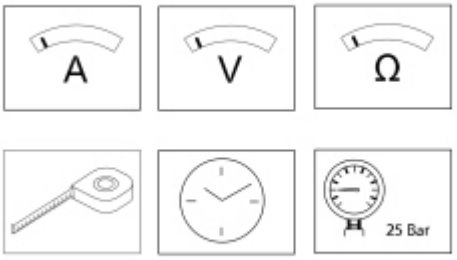
Location symbols show the location of a component or system on the vehicle.



Example of service action icons pointing to highlighted components.

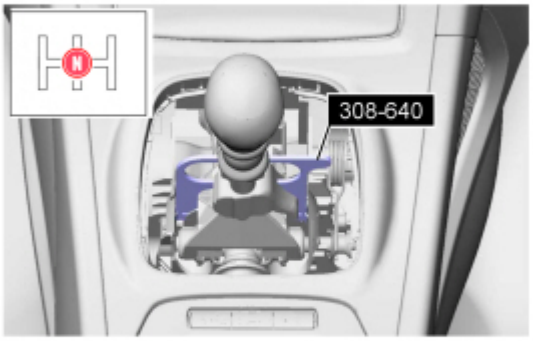


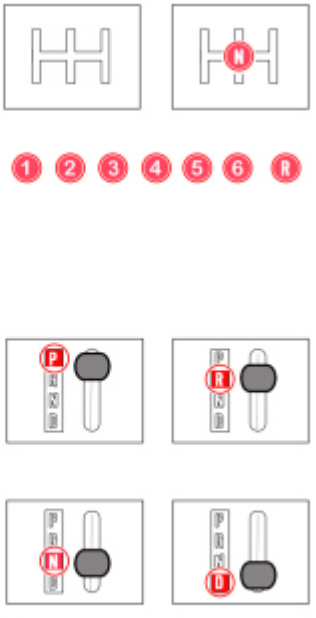
Movement arrows and service action icons show three dimensional or rotational movements.



Instruction symbols are used to apply sealer, lubricant, weight, tape or cleaning detergent to a component.

Measurement symbols provide the information required to perform a specific measurement. These symbols may include specific values.

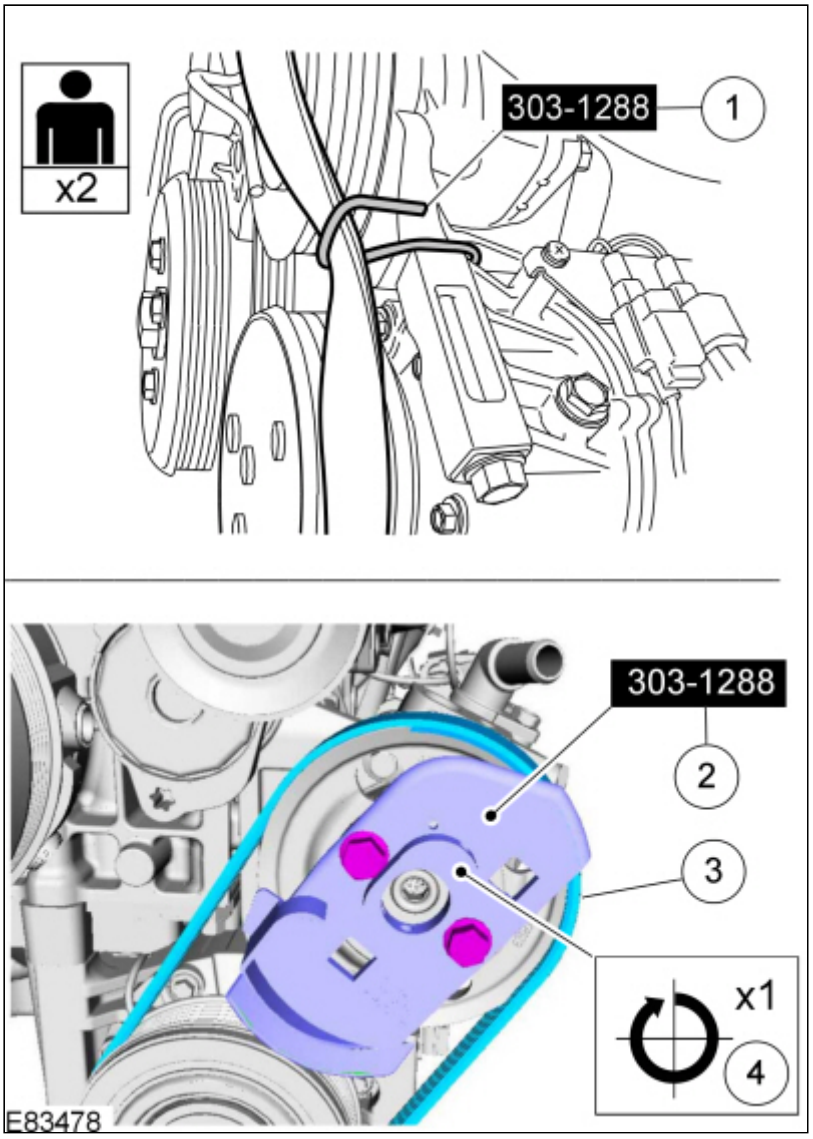




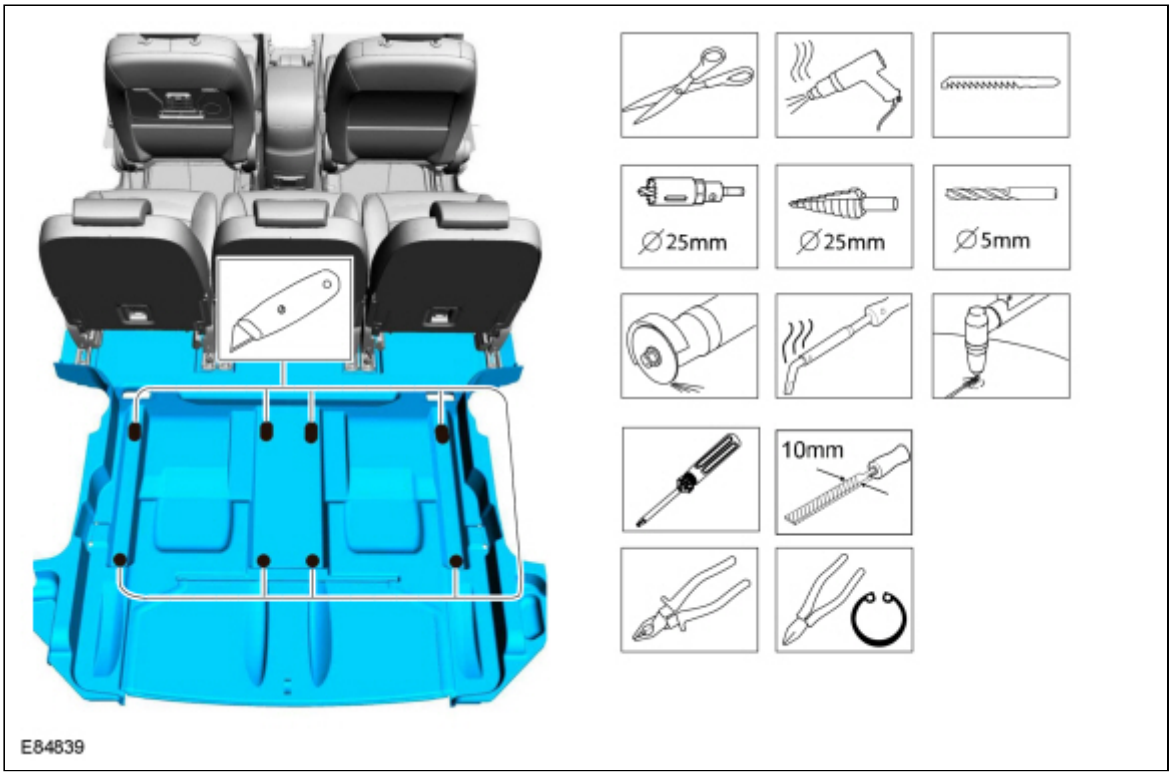
E84841

SPECIAL TOOLS, EQUIPMENT, MATERIALS AND TORQUE VALUES

When Ford special tools are required for the procedure, the tool and tool number are shown in an illustration. Special tool numbers, general equipment, materials or torque values for the procedure step are shown in the text steps.

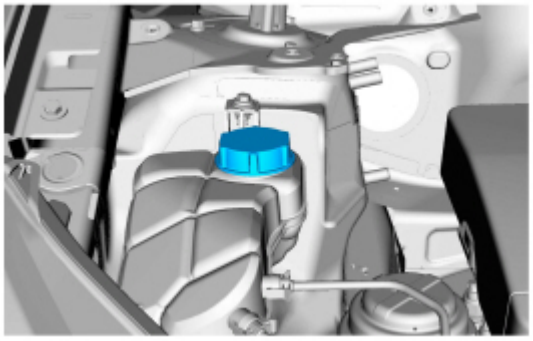


Example of special service tool and symbol used to hold the gear shift in the required gear position. Other possible symbols are shown on the right.



E84836

Example of two illustrations used together with sequence steps, service action icons and special service tools

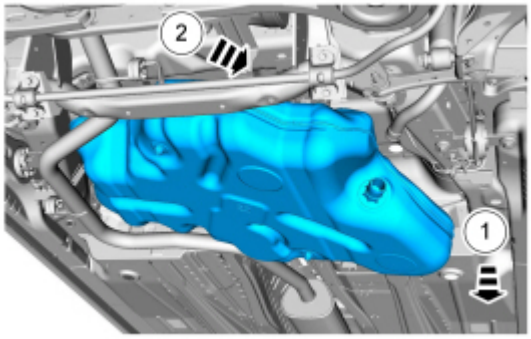


Tool symbols direct the use of standard tools. The tool size or dimension may be specified.

HEALTH AND SAFETY SYMBOLS

Some procedures may contain health and safety symbols that are associated with a specific service action. For additional information, refer to: Symbols Glossary (100-00 General Information, Description and Operation). Always read and understand all health and safety precautions found in Section 100-00 before beginning any procedure. For additional information, refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

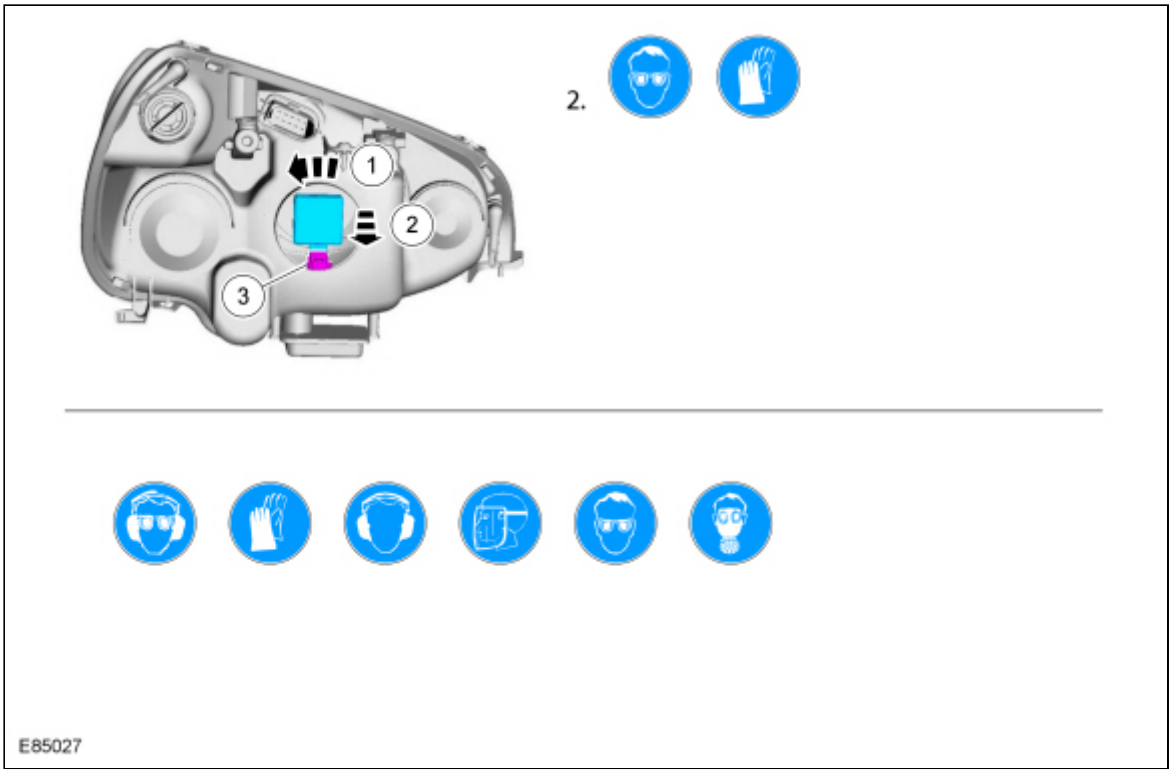
ISO warning symbols may be used to indicate potential hazards.



3. 

E85028

These symbols prohibit various hazardous actions



4. 

E85026

These symbols direct the use of personal protection equipment

Diagnosis and Testing Information

ELEMENTS OF DIAGNOSIS AND TESTING

Diagnosis and Testing may include:

- Preliminary Inspection
  - In older manuals, Inspection and Verification
- Symptom Chart
- DTC Chart
- Pinpoint Tests
- Component Tests

Some diagnostics may be contained in Symptom Based Diagnostics. Some engine performance and emission diagnostics may be placed in a separately published PC/ED manual.

MODULE NAMES MATCH THE DIAGNOSTIC SCAN TOOL

Module names and PID names in this manual match the Ford diagnostic scan tool: IDS.

The same diagnostic scan tool module name is found in some DTC definitions (for example, U024B Lost Communication with Seat Control Module "G").

MODULE DESCRIPTIVE NAMES

A descriptive name is sometimes added to the diagnostic scan tool name to clarify module function. The descriptive name will be followed by the diagnostic scan tool acronym in brackets.

- Example: “Driver Active Motion Seat Module [SCMG]”.
- Driver Active Motion Seat Module is the descriptive name added to clarify the function of the SCMG.
- The SCMG acronym is used by diagnostic scan tool, defined as “Seat Control Module G”.

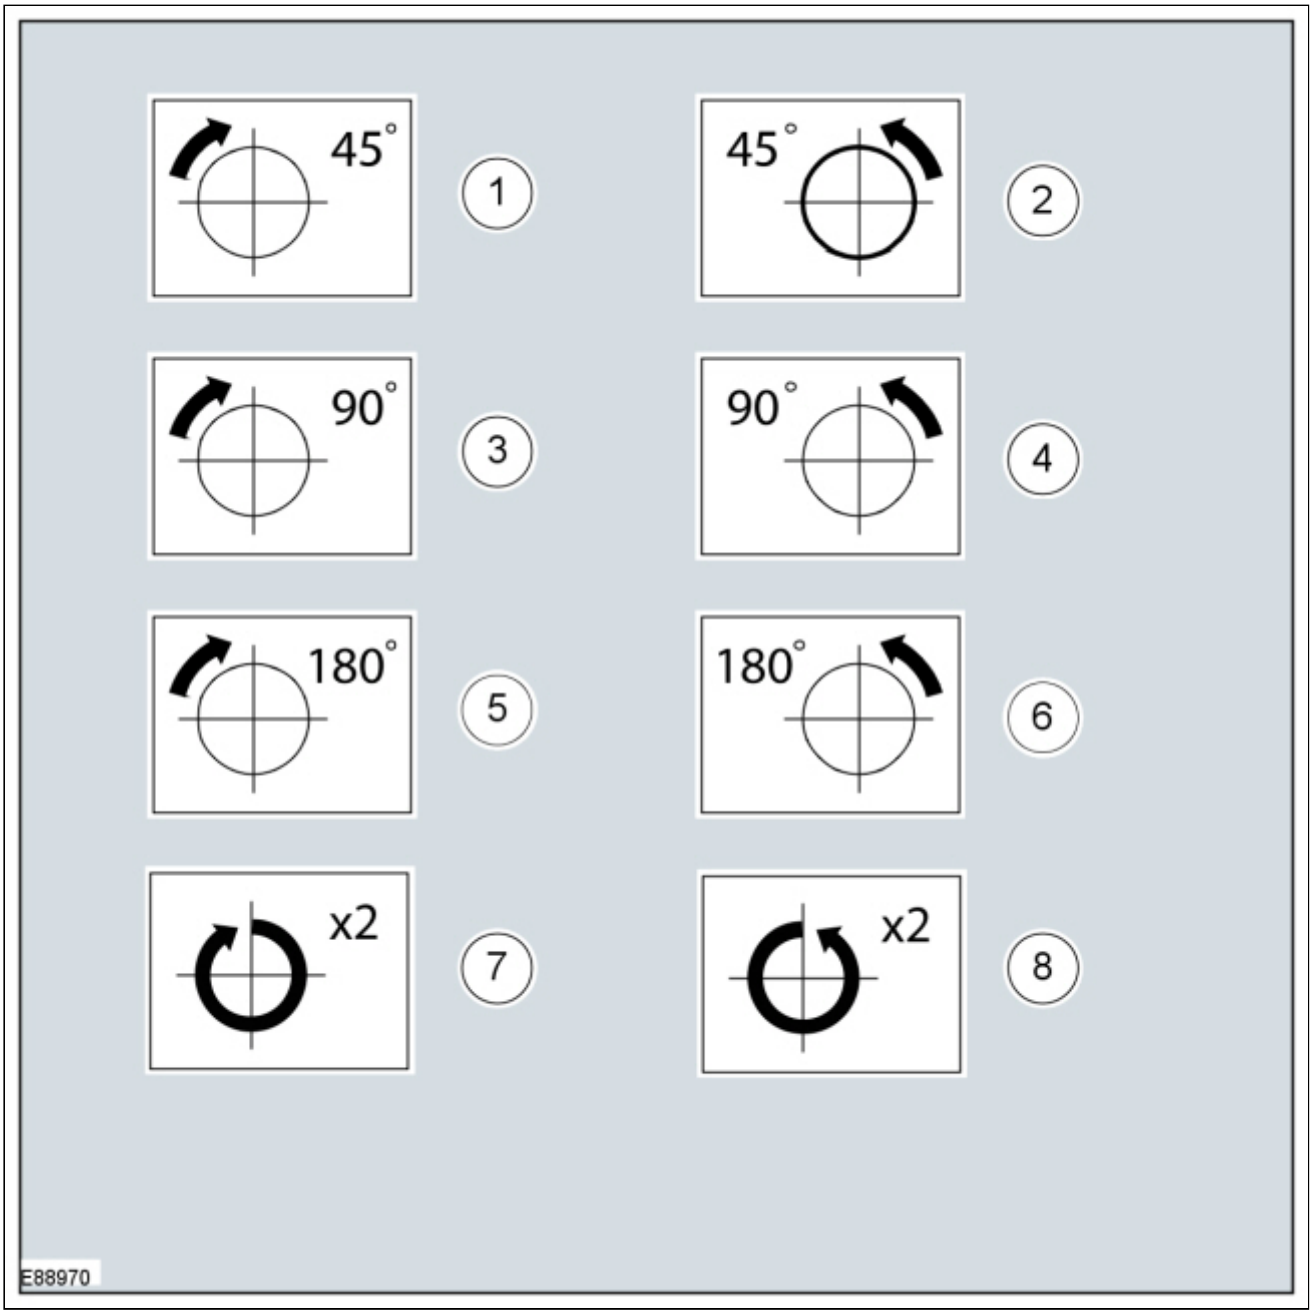
Symbols Glossary

Symbols are used inside the graphics and in the text area to enhance the information display.

Movement Symbols

Movement symbols provide detailed information to a required component movement. These component movements can be rotational or 1-3 dimensional movements.

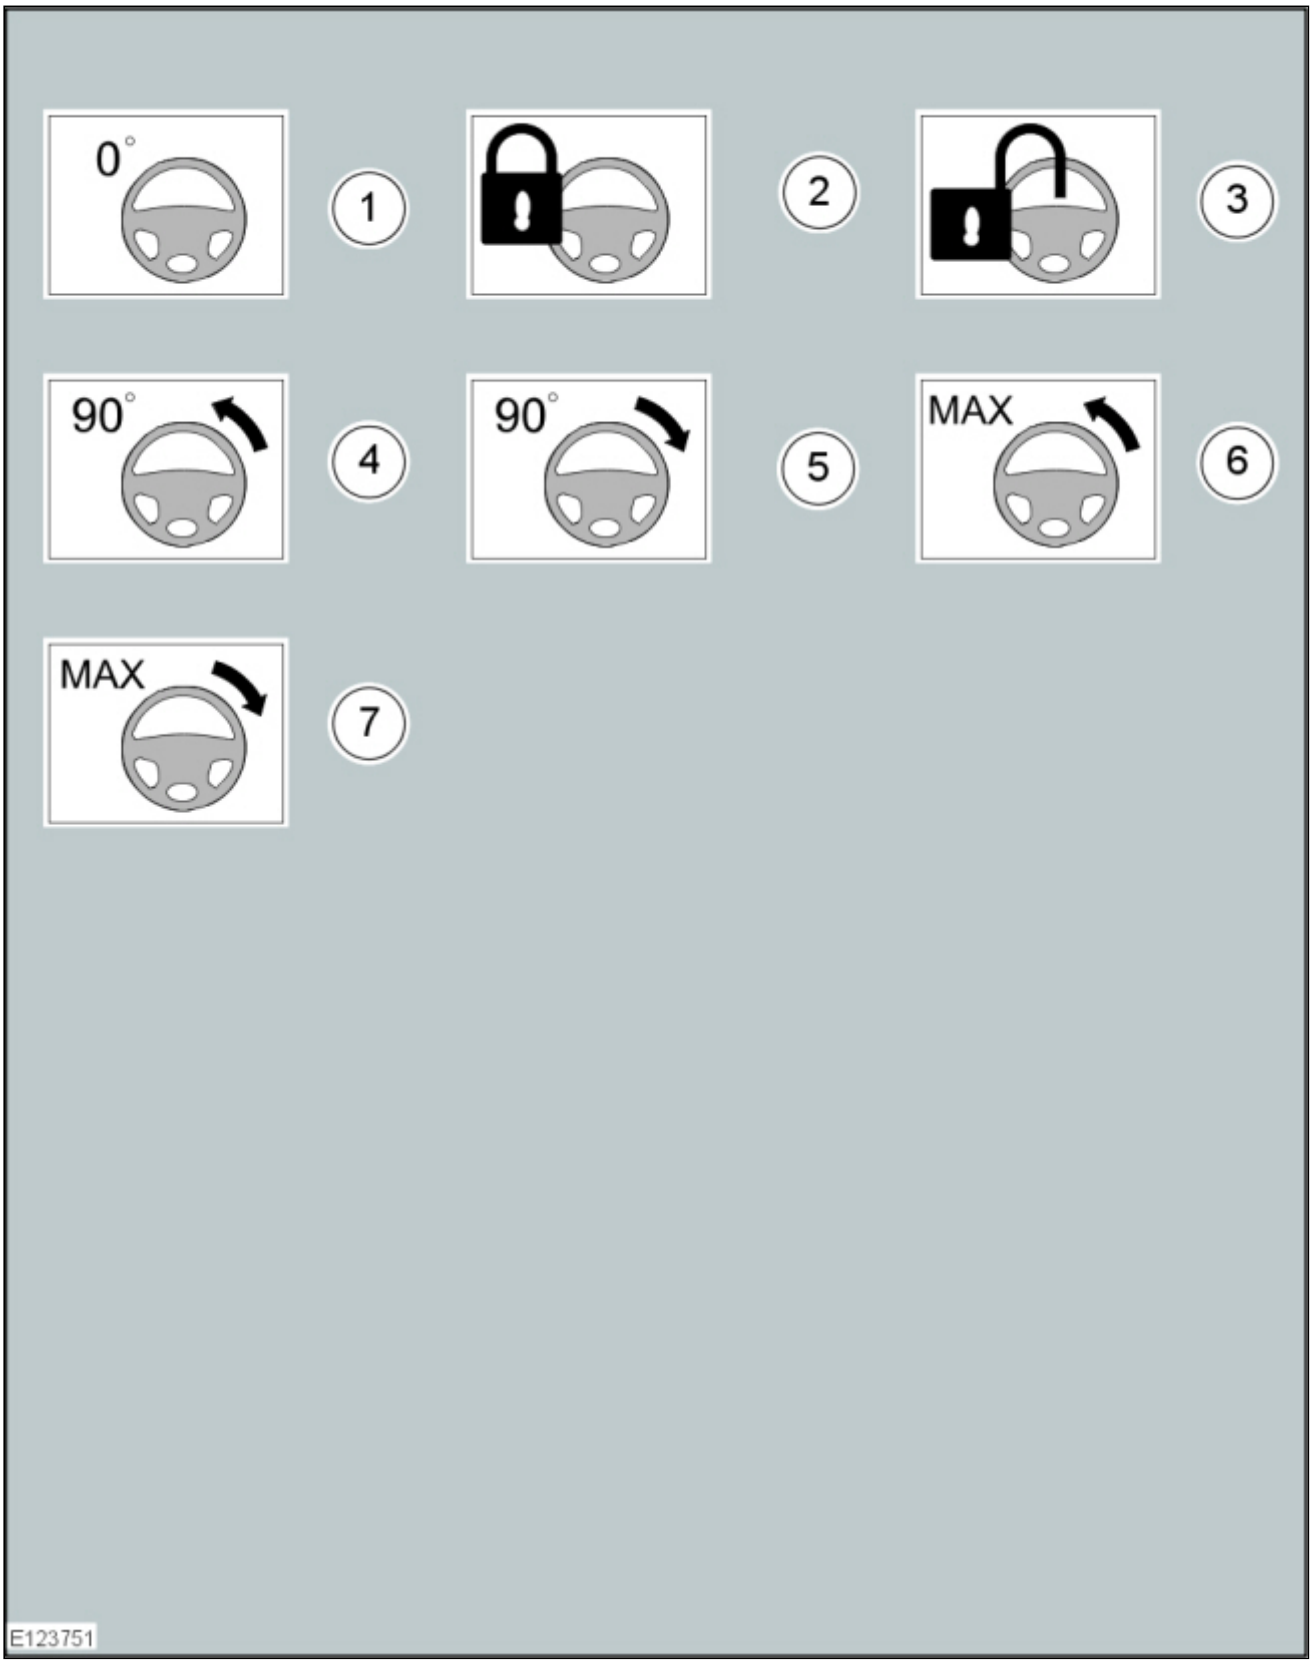


Item	Part Number	Description
1	—	Minor component movement clockwise/counterclockwise
2	—	Major component movement clockwise/counterclockwise
3	—	Component movement to the left/right/up/down
4	—	Component movement towards/away
5	—	3 dimensional component movement

6	—	2 dimensional component movement
7	—	3 dimensional component rotation
8	—	3 dimensional component cycling

Turn Symbols

Turn symbols are used to provide further information on the direction or angle of component turns.

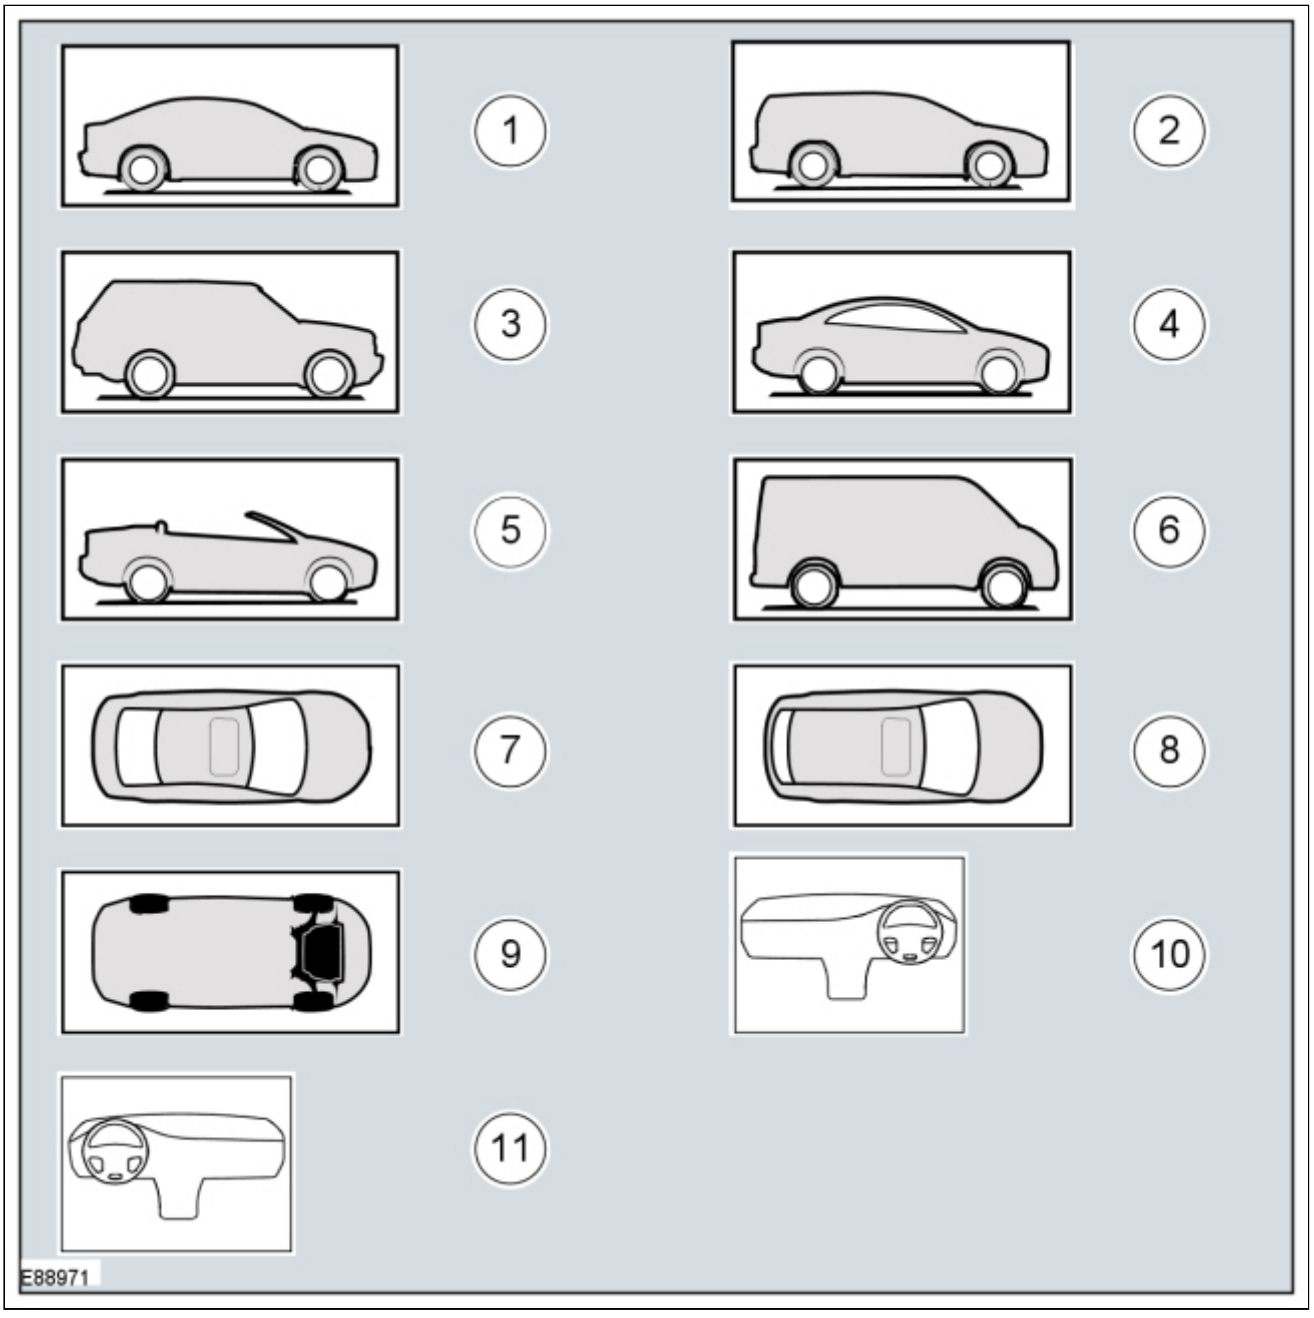


Item	Part Number	Description
1	—	Turn the component clockwise through 45°
2	—	Turn the component counterclockwise through 45°
3	—	Turn the component clockwise through 90°
4	—	Turn the component counterclockwise through 90°
5	—	Turn the component clockwise through 180°
6	—	Turn the component counterclockwise through 180°
7	—	Turn the component clockwise through 2 complete turns
8	—	Turn the component counterclockwise through 2 complete

		turns

Steering Wheel Symbols

Steering wheel symbols are used to provide further information to a required steering wheel position or steering column lock status.

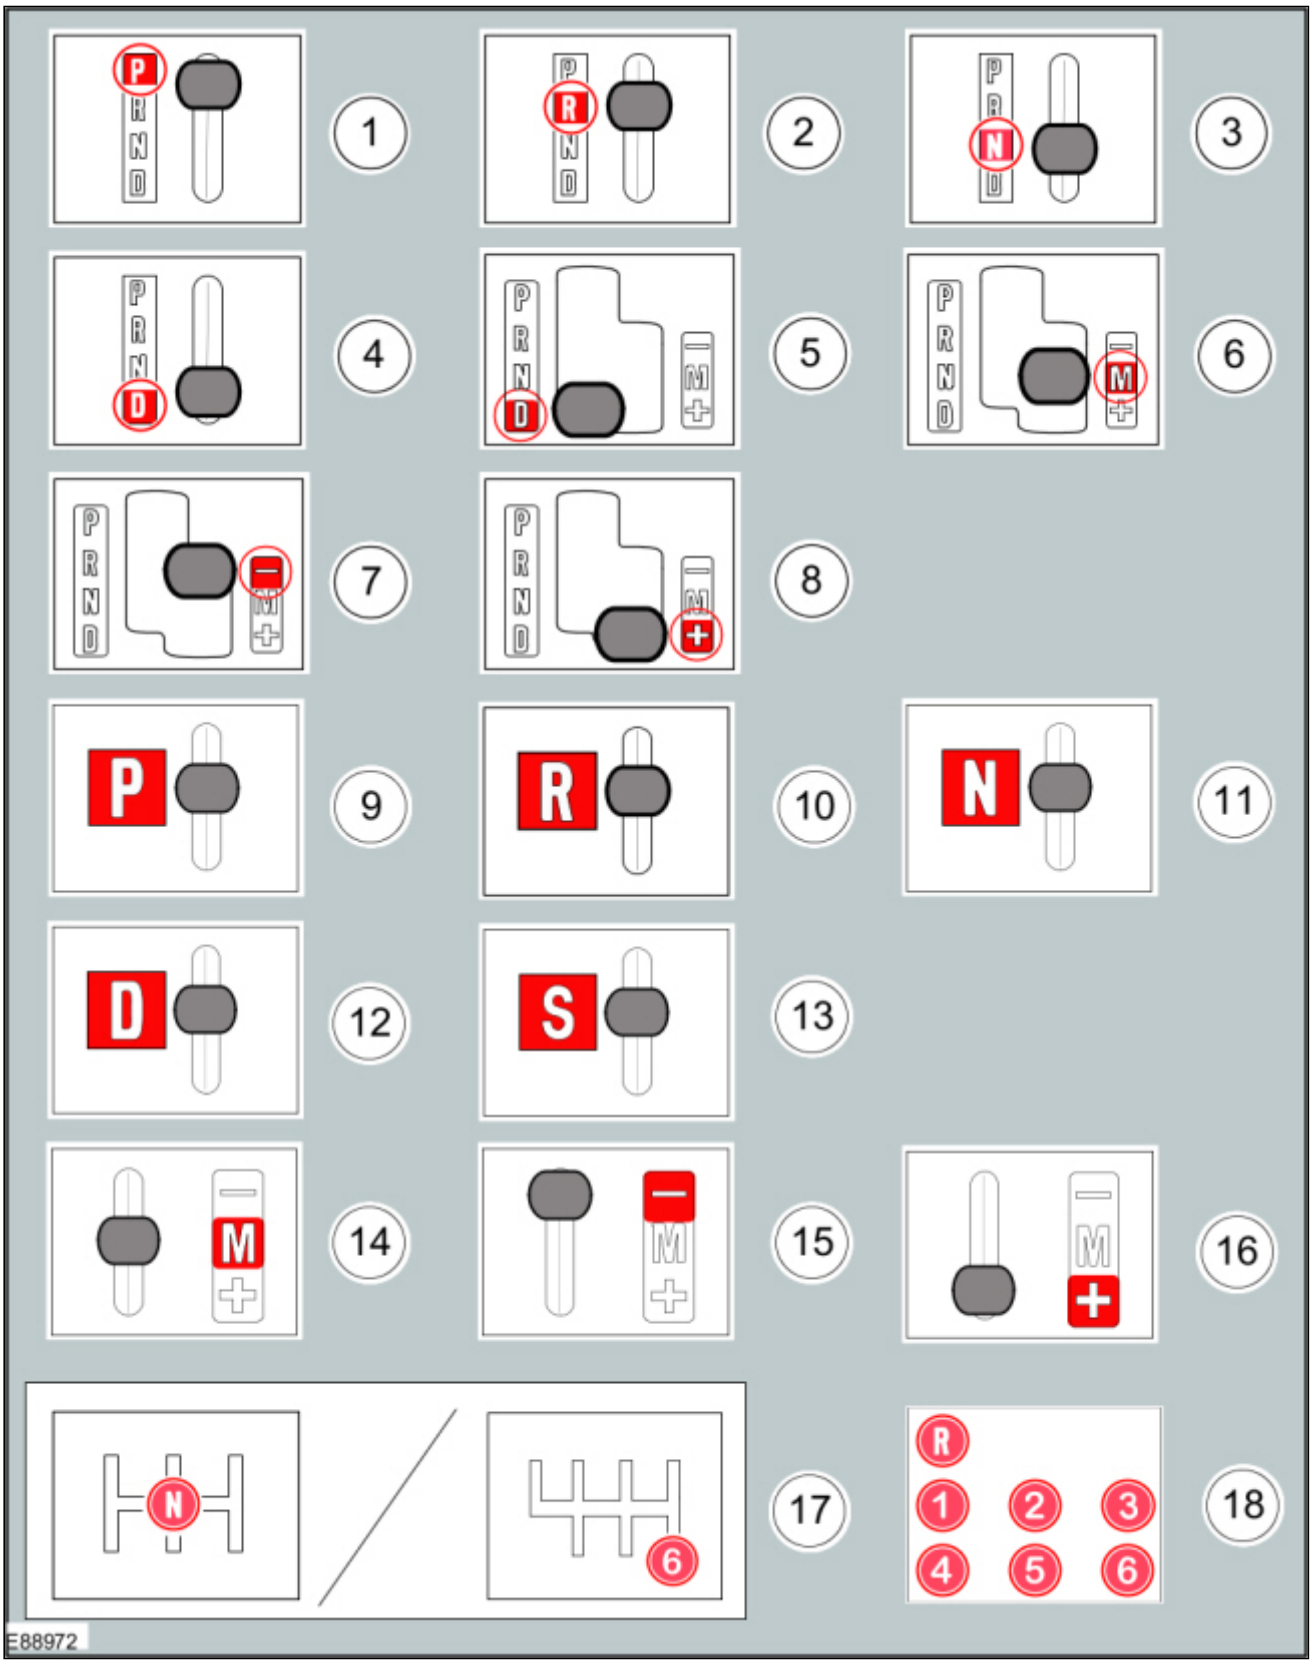


Item	Part Number	Description
1	—	Steering wheel in straight ahead position
2	—	Steering column lock locked

3	—	Steering column lock unlocked
4	—	Turn the steering wheel to the 90° left position
5	—	Turn the steering wheel to the 90° right position
6	—	Turn the steering wheel to the left-hand end position
7	—	Turn the steering wheel to the right-hand end position

Body Types

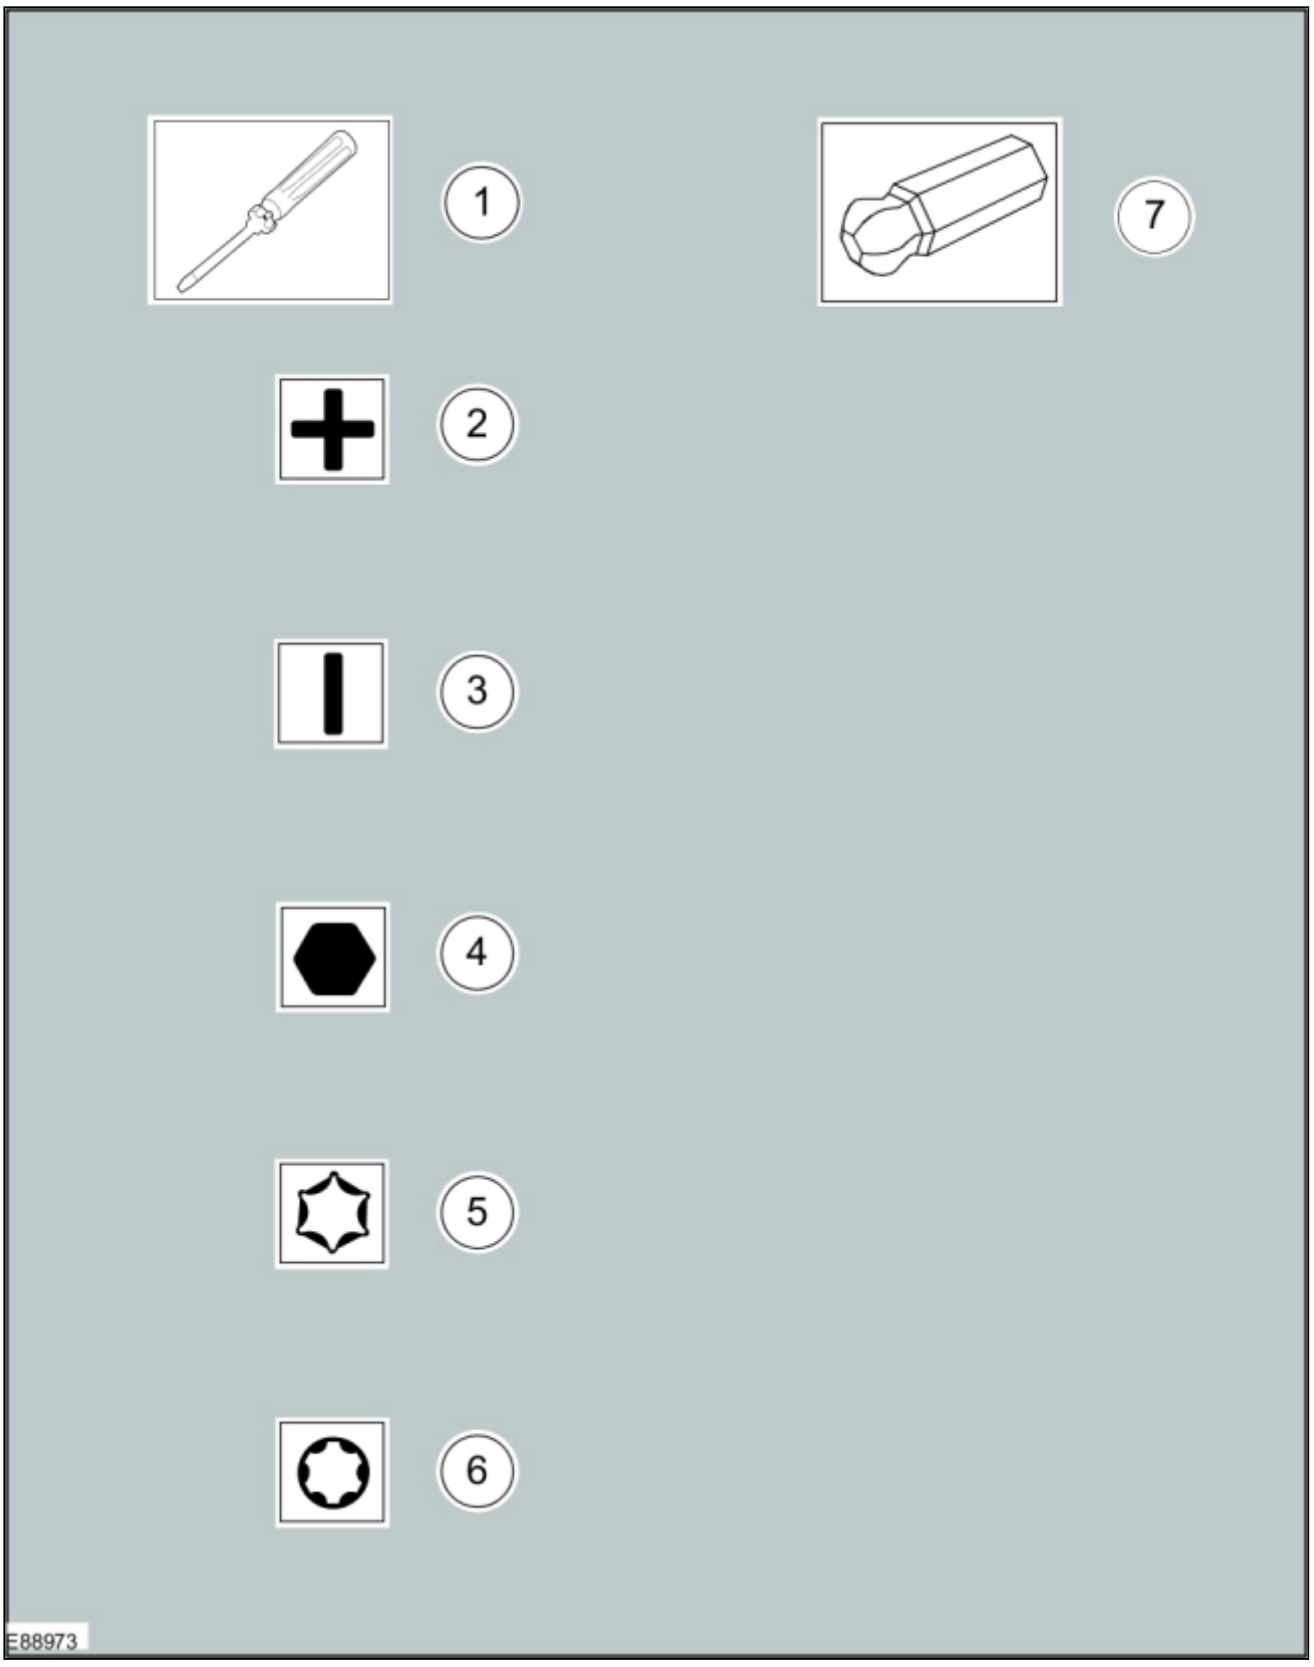
Body type symbols are used to identify different body configurations.



Item	Part Number	Description
1	—	3, 4, 5-door body style
2	—	Wagon body style
3	—	Sports utility vehicle body style
4	—	Coupe body style
5	—	Convertible body style
6	—	Van body style

7	—	3, 4, 5-door body style - Top View
8	—	Wagon body style - Top View
9	—	Underview
10	—	Right-hand drive (RHD) vehicle
11	—	Left-hand drive (LHD) vehicle

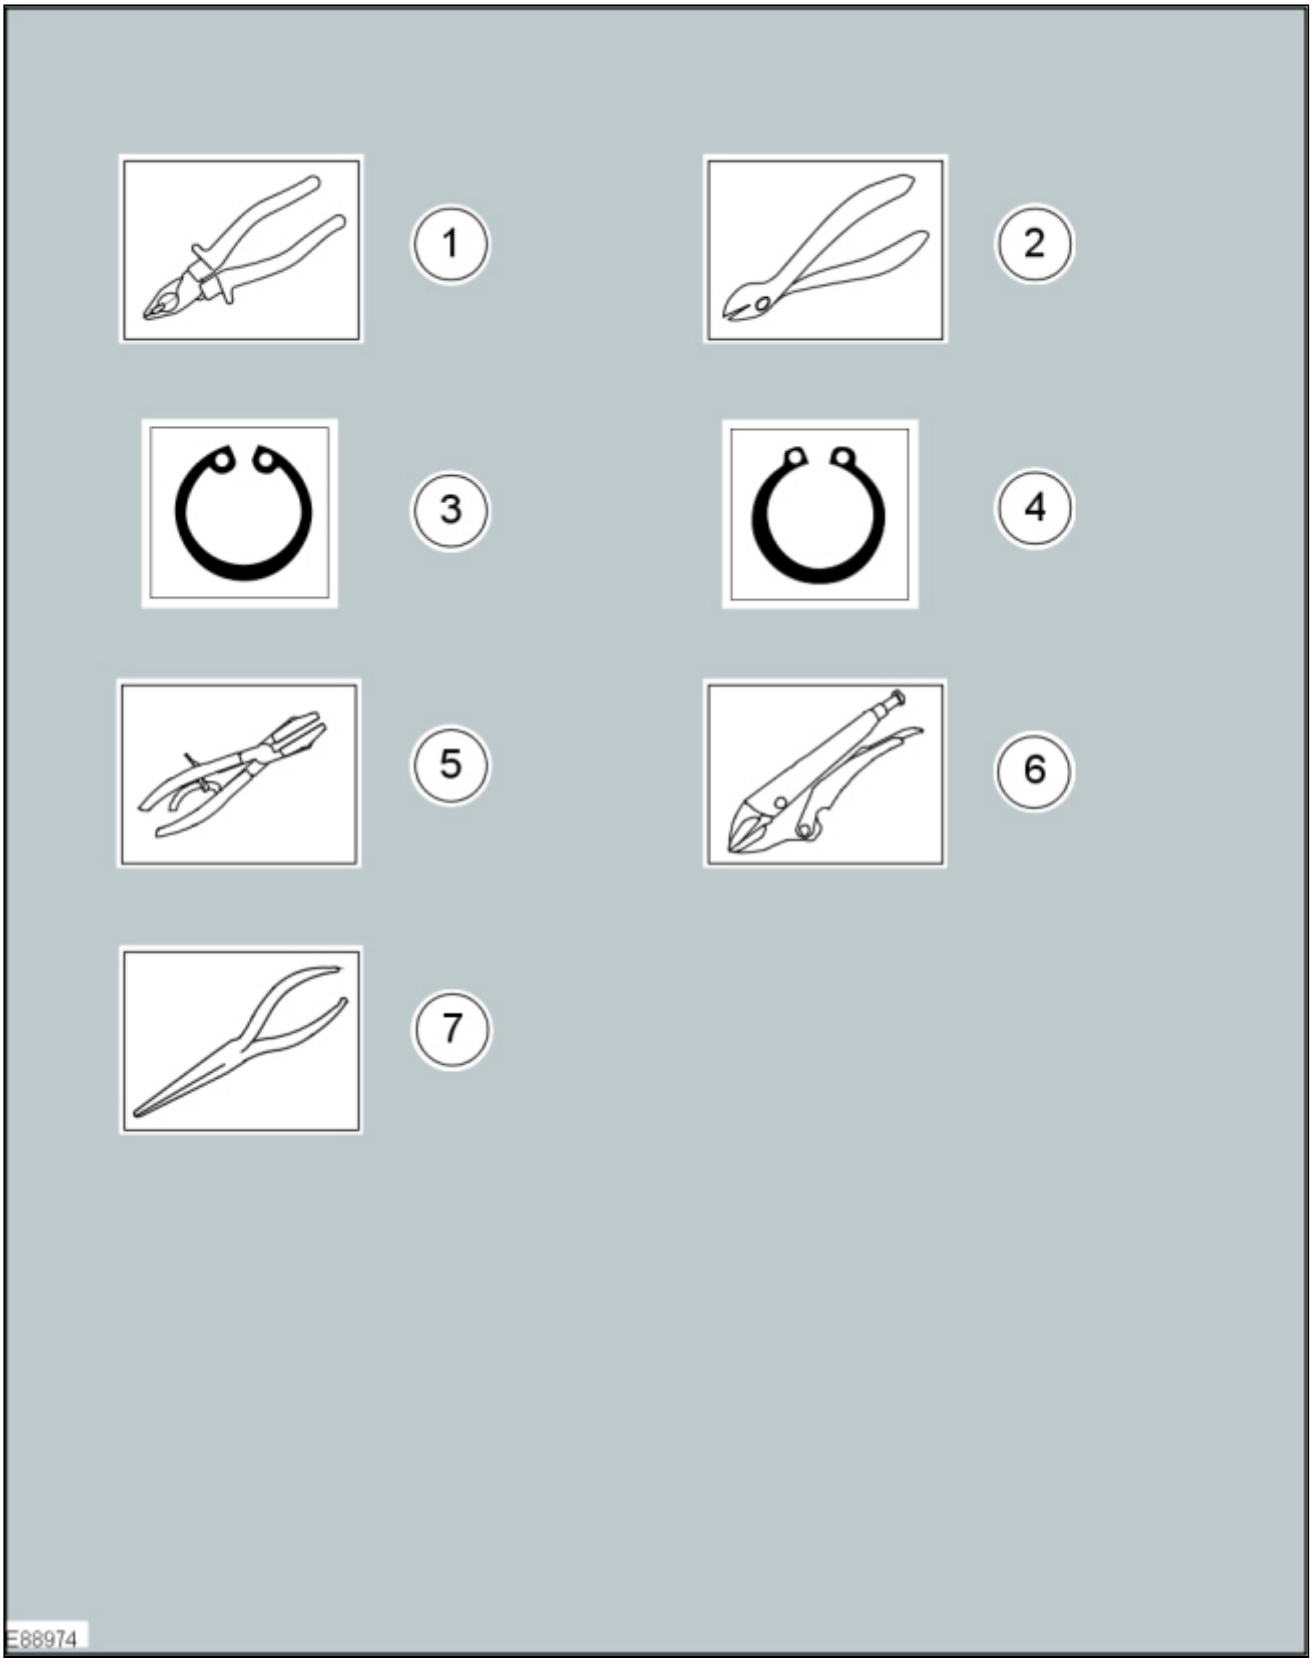
Gearshift lever and selector lever position symbols



Gearshift lever and selector lever position symbols are used to show the lever position that is required to be selected to carry out a procedure step.

Item	Part Number	Description
1	—	Replaced by symbol 9
2	—	Replaced by symbol 10
3	—	Replaced by symbol 11
4	—	Replaced by symbol 12
5	—	Replaced by symbol 12
6	—	Replaced by symbol 14
7	—	Replaced by symbol 15
8	—	Replaced by symbol 16
9	—	Set the selector lever to the park (P) position
10	—	Set the selector lever to the reverse (R) position
11	—	Set the selector lever to the neutral (N) position
12	—	Set the selector lever to the drive (D) position
13	—	Set the selector lever to the drive (S) position
14	—	Set the selector lever to the drive (M) position
15	—	Set the selector lever to the drive (-) position
16	—	Set the selector lever to the drive (+) position
17	—	Set the gearshift lever to the neutral (N) position
18	—	Further gearshift lever positions that may appear in illustrations

Screwdriver symbols

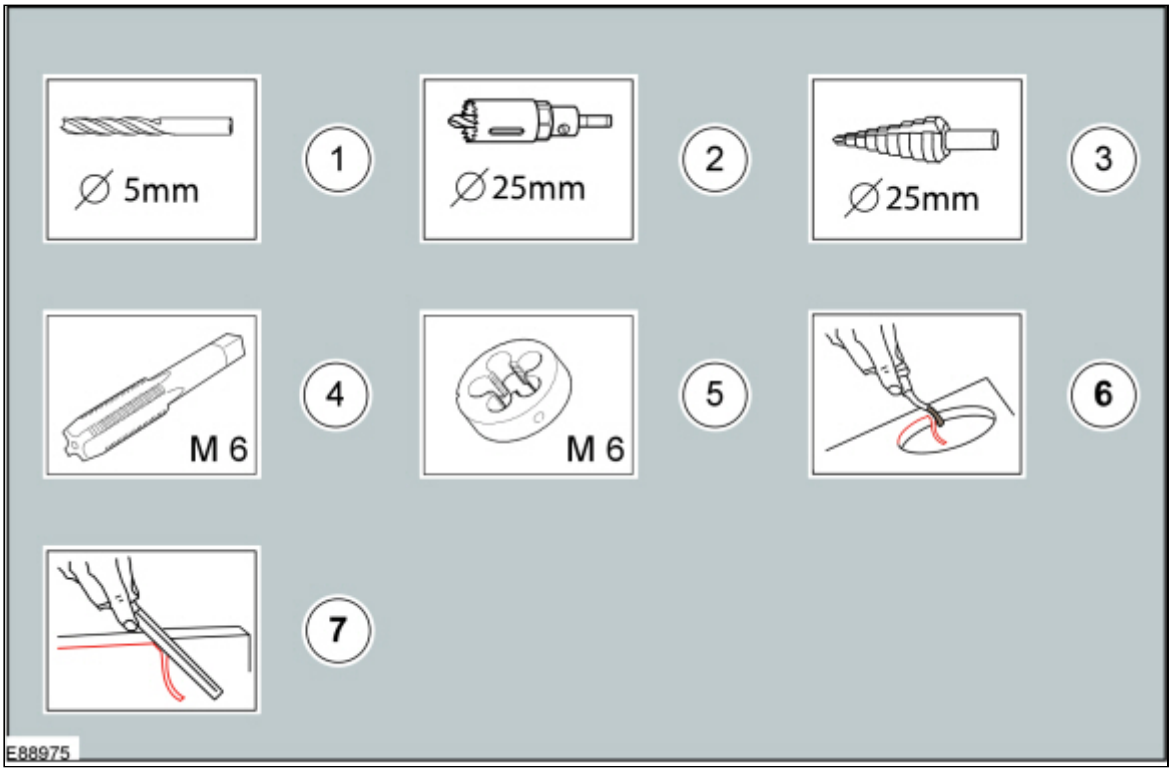


The screwdriver symbols are used to show which screwdriver bit is recommended to carry out a procedure step.

Item	Part Number	Description
1	—	Screwdriver
2	—	Cross bladed screwdriver / Cross bladed Bit Socket
3	—	Flat bladed screwdriver / Flat bladed Bit Socket
4	—	Hexagonal screwdriver / Hexagonal Bit Socket
5	—	TORX screwdriver / TORX Bit Socket
6	—	Polydrive screwdriver / Polydrive Bit Socket
7	—	Ball drive hex bit

Pliers symbols

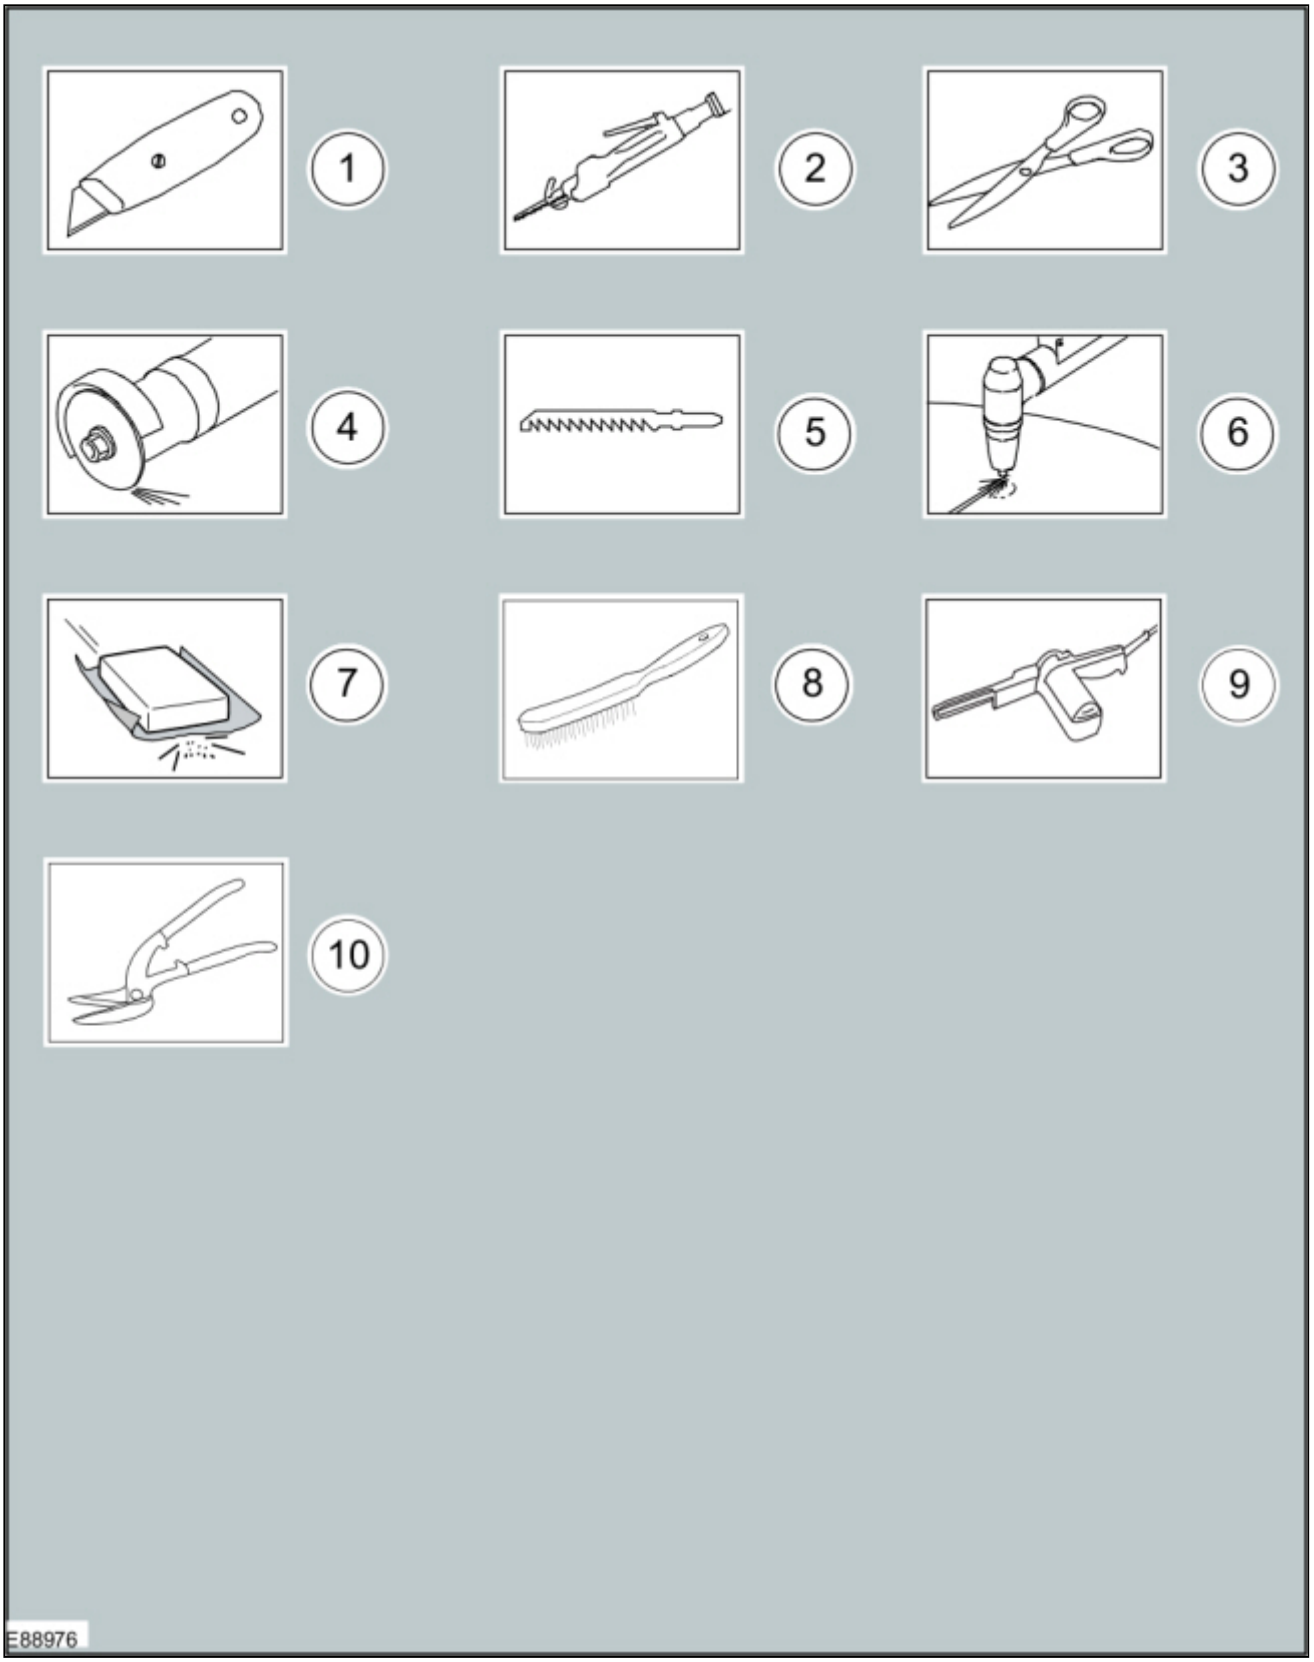
The pliers symbols are used to show which pliers is recommended to carry out a procedure step.



Item	Part Number	Description
1	—	Combination pliers
2	—	Side cutter pliers
3	—	Securing ring - inner
4	—	Securing ring - outer

5	—	Hose clamp pliers
6	—	Locking pliers
7	—	Long nose pliers

Drill symbols

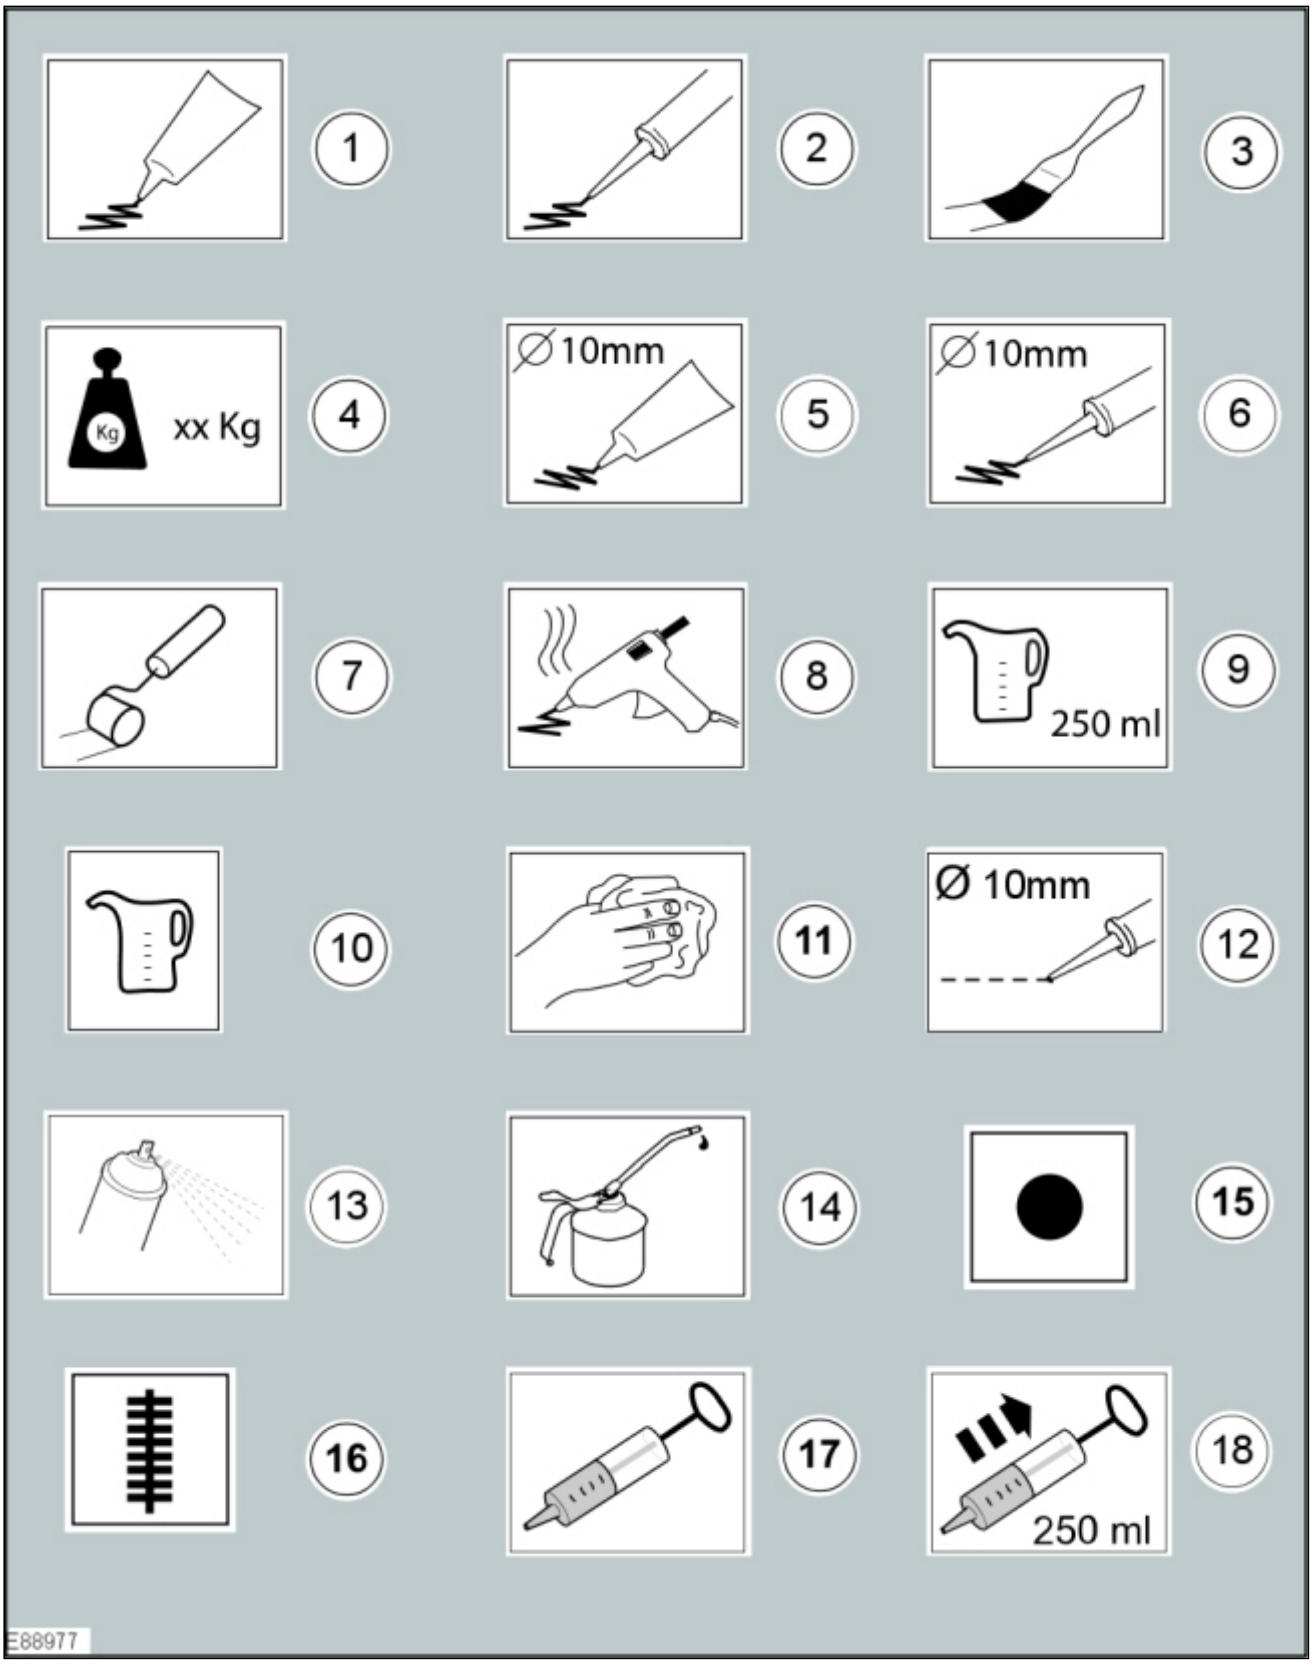


The drill symbols are used to show which type and size of drill bit is recommended to carry out a procedure step.

Item	Part Number	Description
1	—	Drill bit with a specified diameter
2	—	Hole saw with a specified diameter
3	—	Stepped drill bit with a specified diameter
4	—	Tap with a specified diameter
5	—	Die with a specified diameter
6	—	Scraper for circular holes
7	—	Scraper for straight edges

Cutting tool symbols

The cutting tool symbols are used to show which type of cutting tool is recommended to carry out a procedure step.

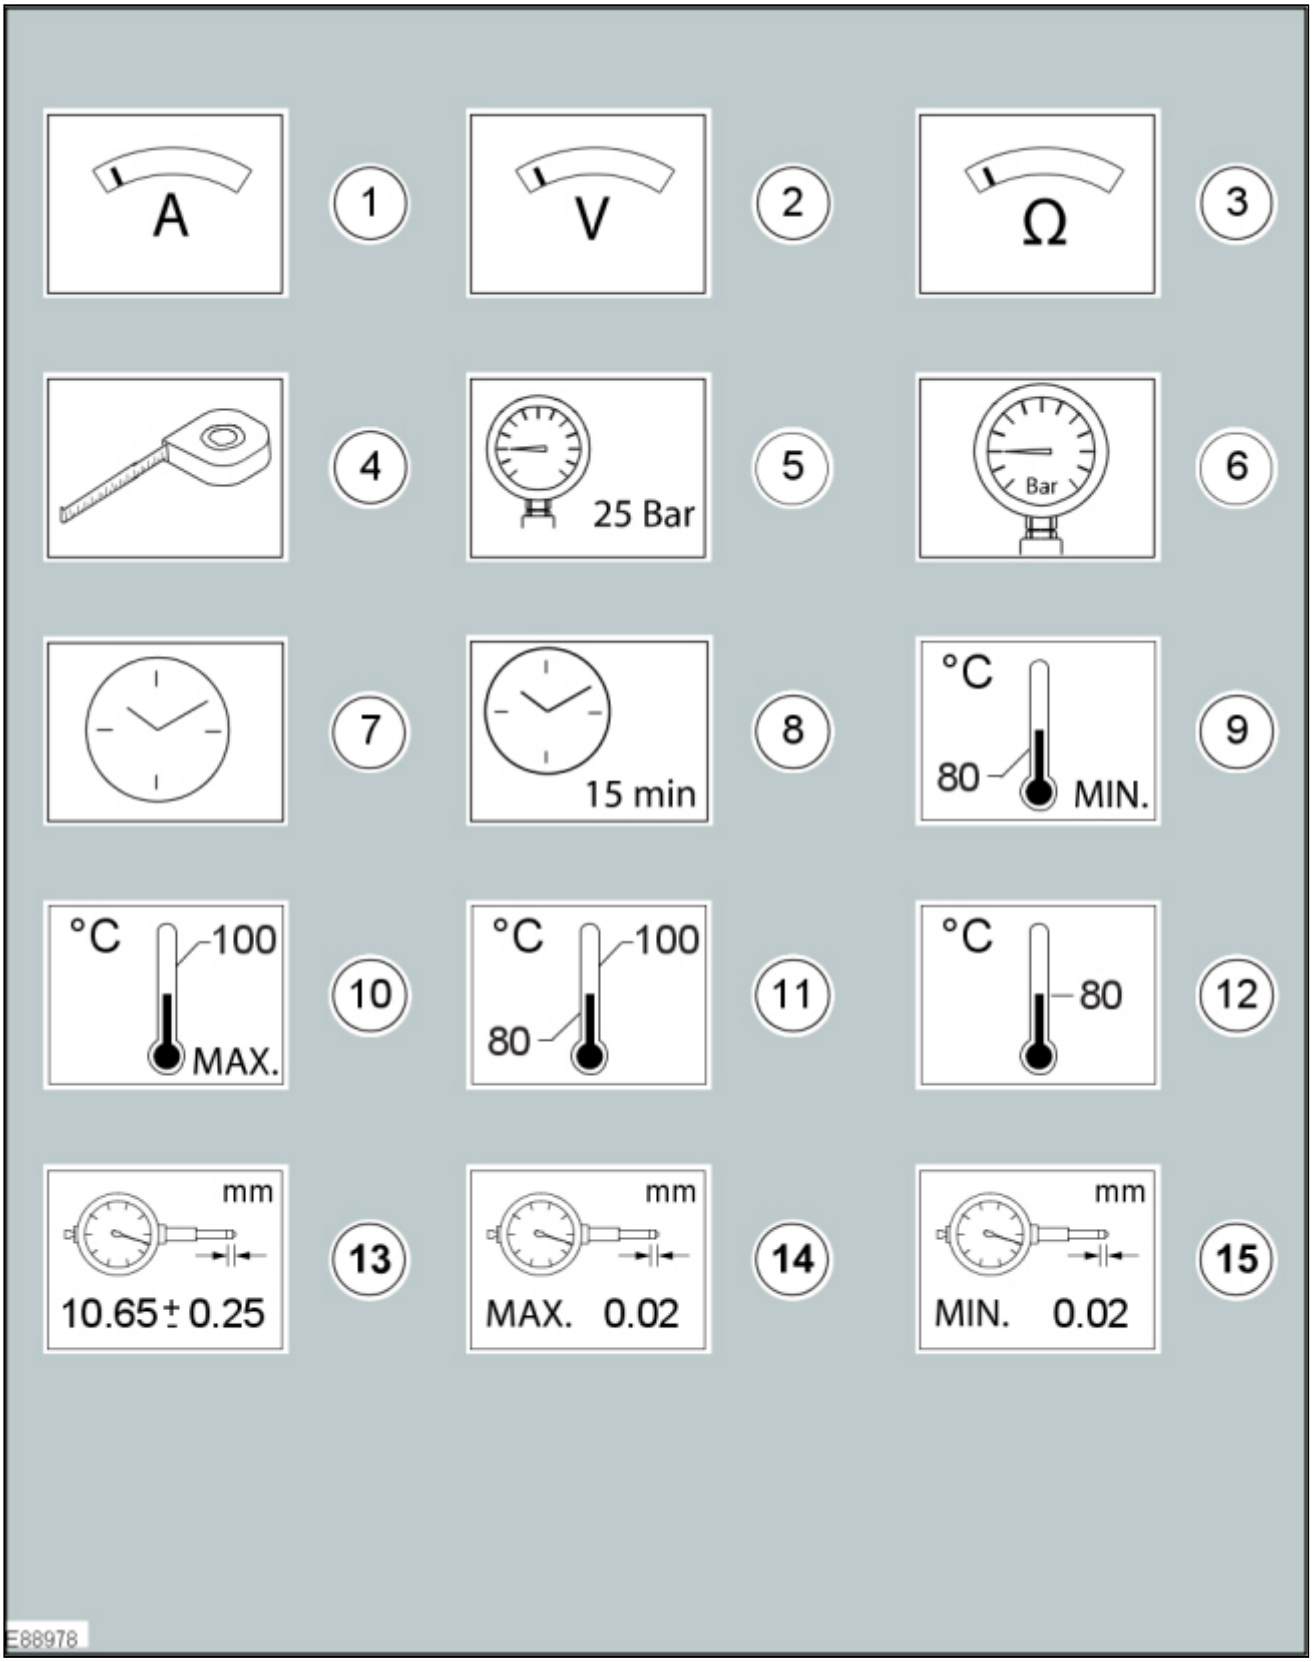


Item	Part Number	Description
1	—	Cutting knife
2	—	Air body saw
3	—	Scissors
4	—	Grinder
5	—	Jig saw
6	—	Plasma cutter
7	—	Sanding Paper

8	—	Wire brush
9	—	Belt Sander
10	—	Tin Snipes

Apply Chemical or load symbols

The apply chemical or load symbols are used to show where to apply which type of chemical or load to carry out a procedure step.

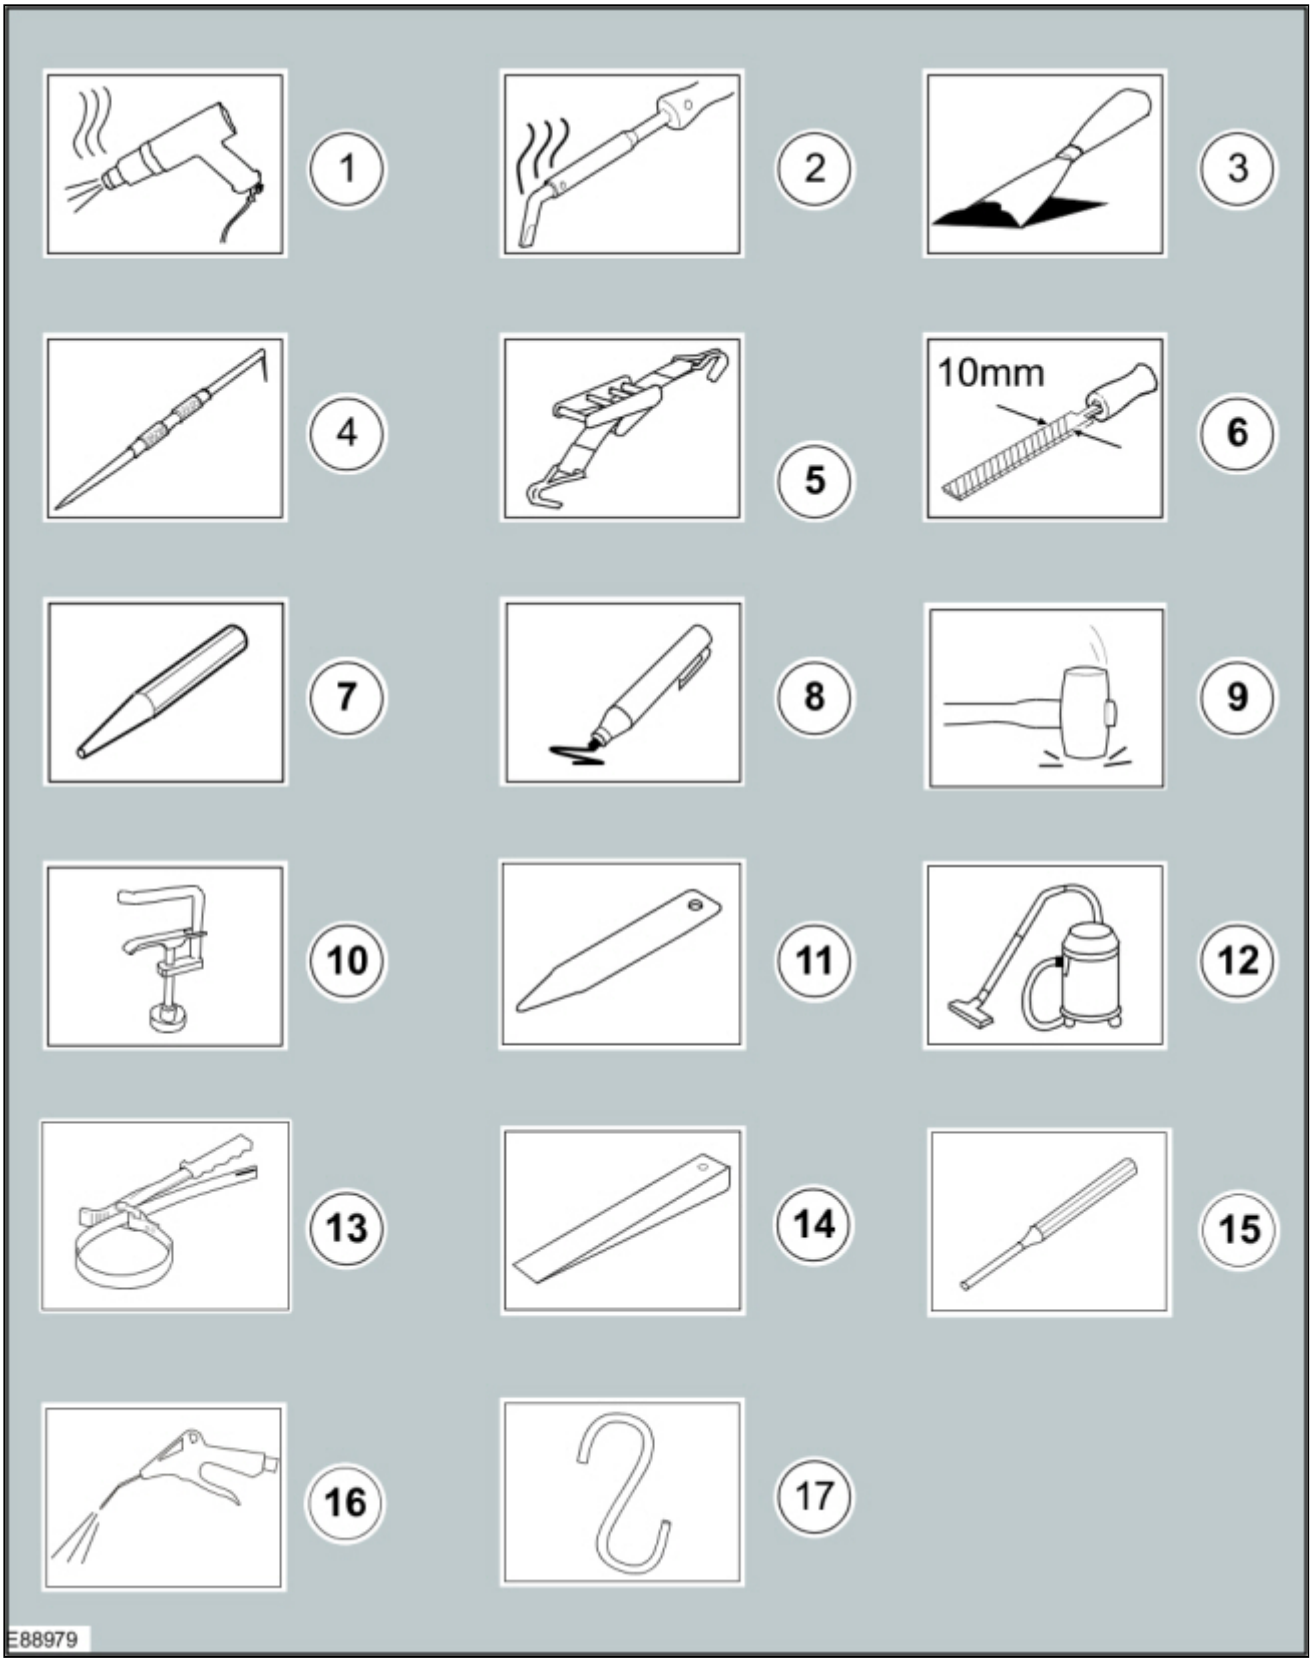


Item	Part Number	Description

1	—	Apply the substance from the specified tube
2	—	Apply the substance from the specified cartridge
3	—	Apply the specified chemical with a brush
4	—	Apply the specified load to the specified component
5	—	Apply a bead with a specific diameter from the specified tube
6	—	Apply a bead with a specific diameter from the specified cartridge
7	—	Apply the specified chemical with a roller
8	—	Apply hot glue to the specified component
9	—	Apply the specified amount of fluid from the fluid can
10	—	Apply fluid from the fluid can
11	—	Clean the specified component with the specified material
12	—	Apply a broken bead from the specified tube
13	—	Apply the specified chemical from a spray can
14	—	Apply the specified lubricant to the specified component
15	—	Apply spot welds to the specified component
16	—	Apply a continuous weld to the specified component
17	—	Handle the fluid using a syringe
18	—	Extract the specified amount of fluid using a syringe

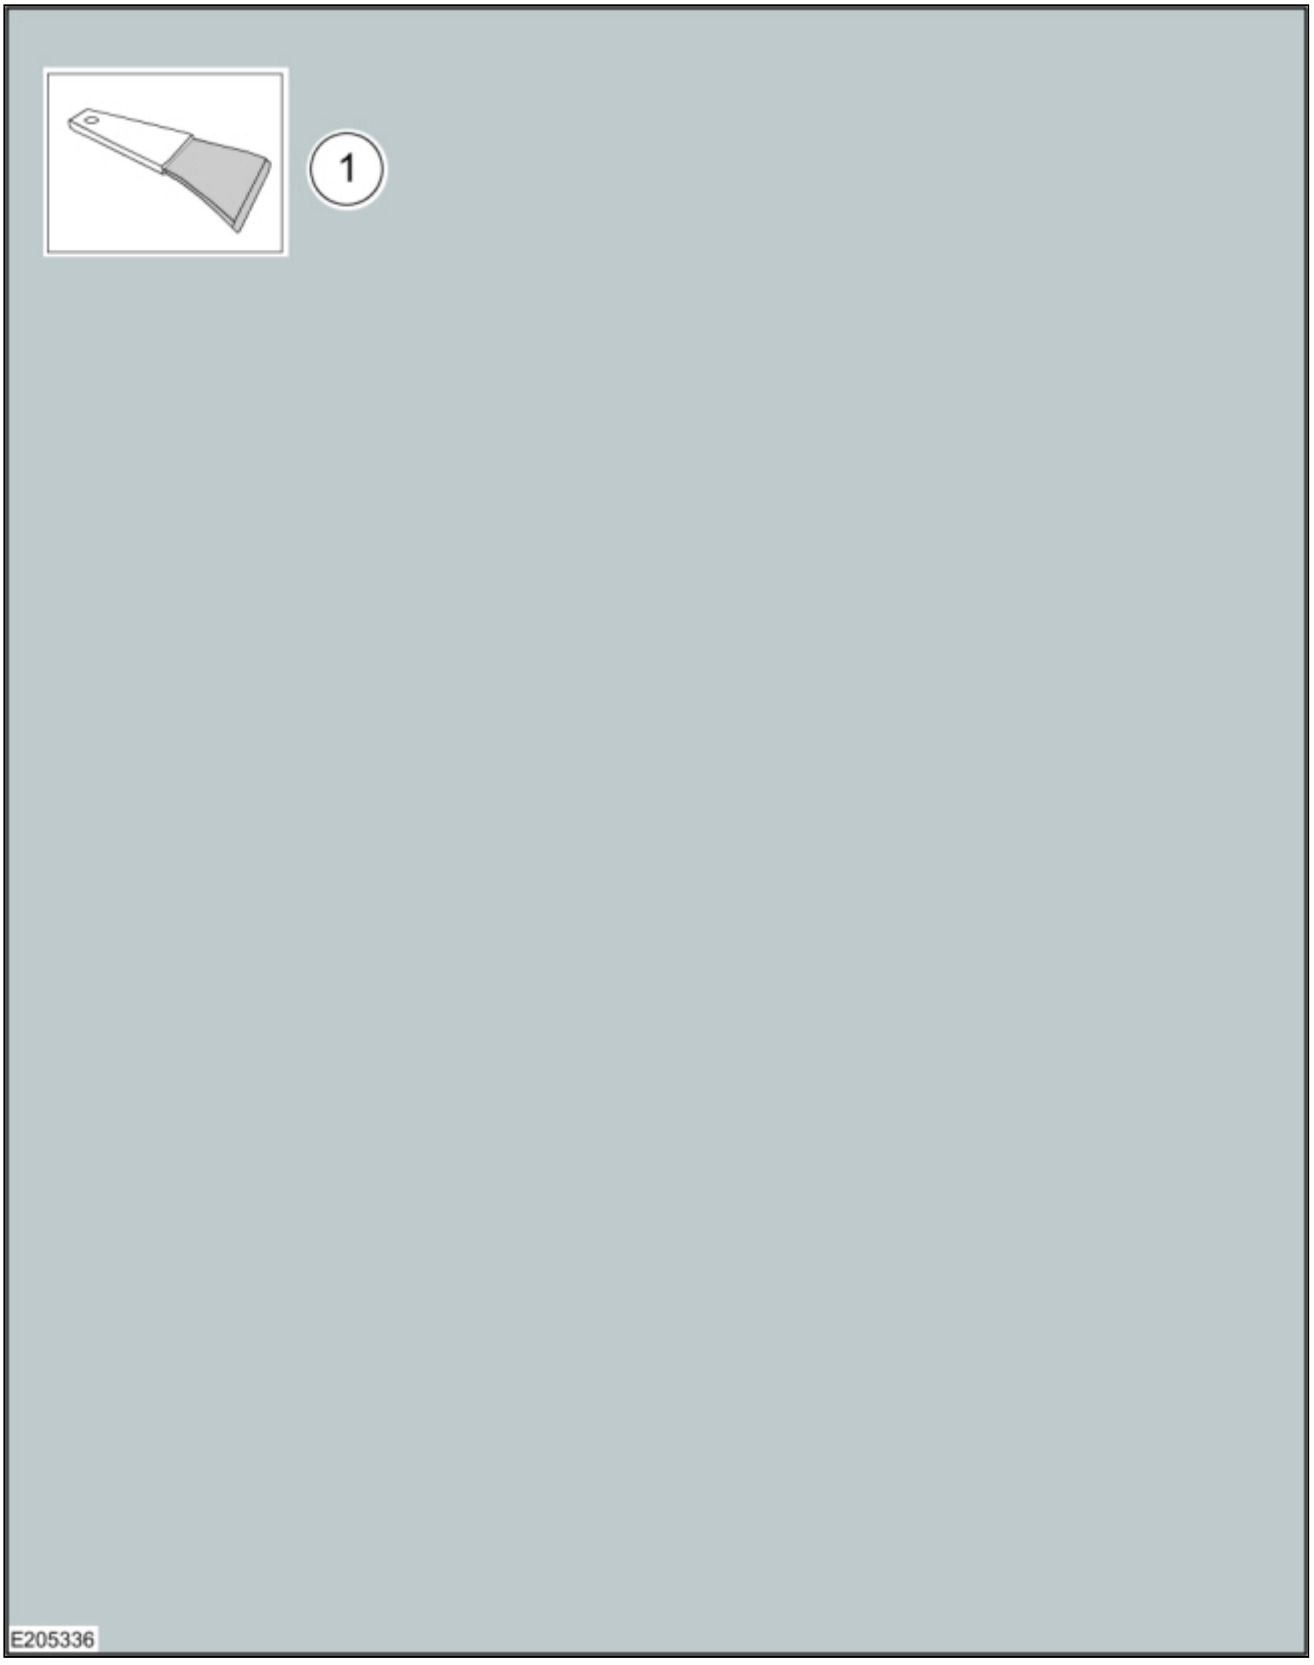
Measurement symbols

The measurement symbols are used to show where to measure which type of measurement to carry out a procedure step.



Item	Part Number	Description
1	—	Measure the current using a digital multimeter
2	—	Measure the voltage using a digital multimeter
3	—	Measure the resistance using a digital multimeter
4	—	Measure the length/distance
5	—	Check that the specified pressure is available using a suitable pressure gauge
6	—	Measure the pressure at the specified port using a suitable

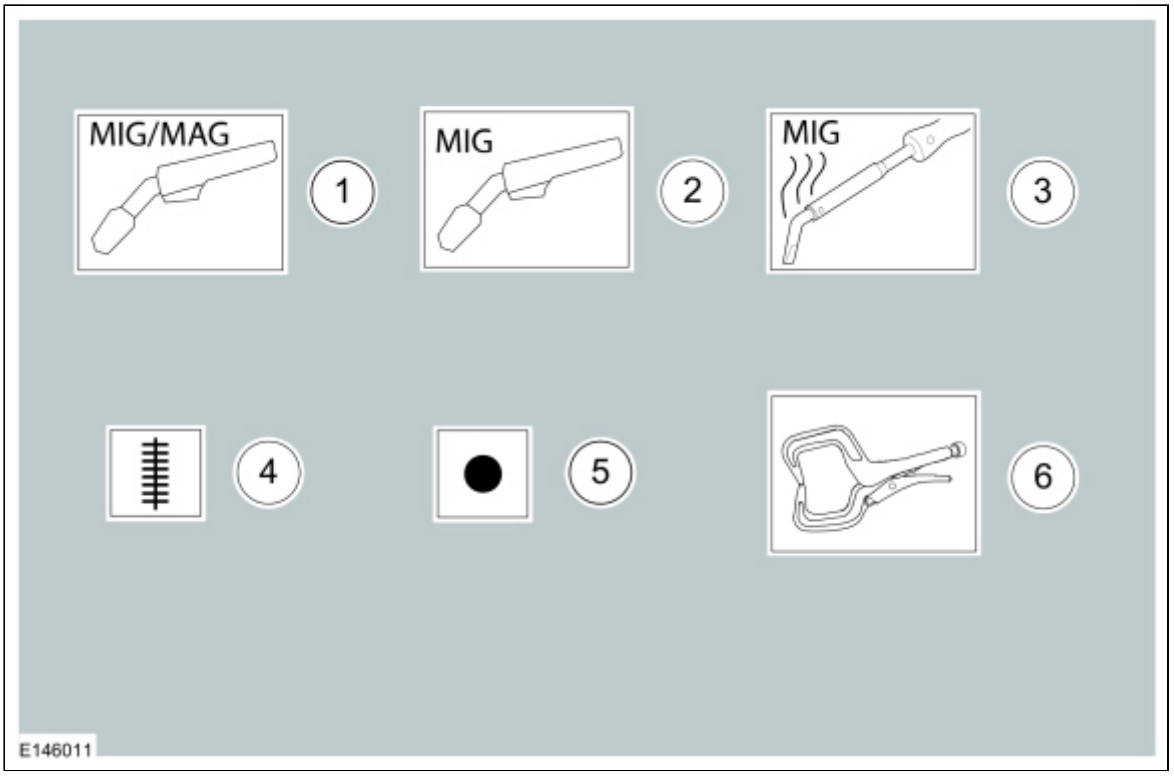
		pressure gauge
7	—	Measure the time using a suitable stopwatch
8	—	Wait for the specified period of time
9	—	The specified task requires the specified minimum temperature
10	—	The specified task requires the specified maximum temperature not to be exceeded
11	—	The specified task requires the specified temperature range
12	—	The specified task requires the specified temperature
13	—	Measure and check for the specified value using a dial indicator gauge
14	—	Measure and check for the specified MAX value using a dial indicator gauge
15	—	Measure and check for the specified MIN value using a dial indicator gauge



General equipment symbols

The general equipment symbols are used to show where to use which type of general equipment to carry out a procedure step.

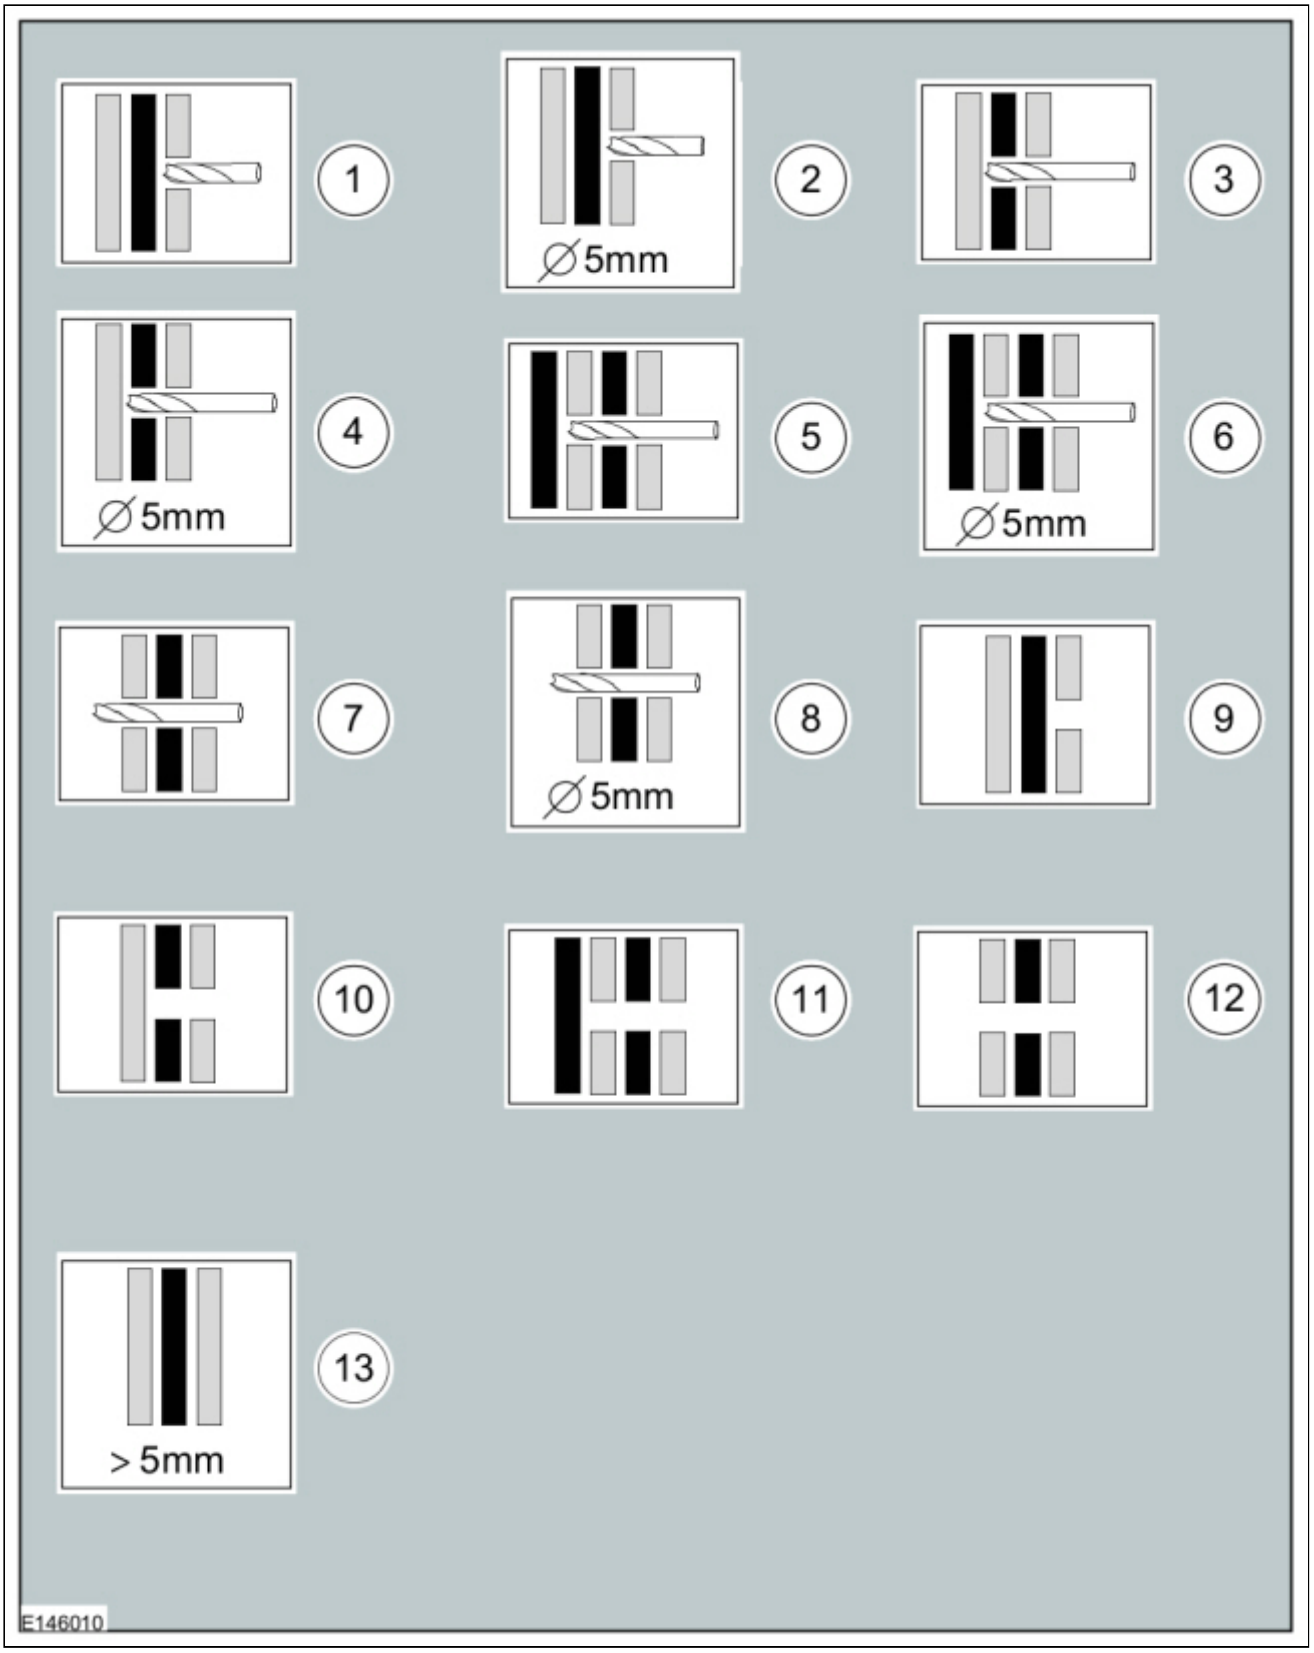
Item	Part Number	Description
1	—	Hot air gun
2	—	Soldering iron
3	—	Scraper
4	—	Scriber
5	—	Securing strap
6	—	File with a specified size
7	—	Center punch



8	—	Marker
9	—	Mallet
10	—	Hose clamp
11	—	Interior trim remover
12	—	Vacuum cleaner
13	—	Strap wrench
14	—	Wedge
15	—	Pin Punch
16	—	Air blow gun
17	—	Relocate and support the component
18	—	C-clamp

Item	Part Number	Description
1	—	Plastic scraper

Welding symbols

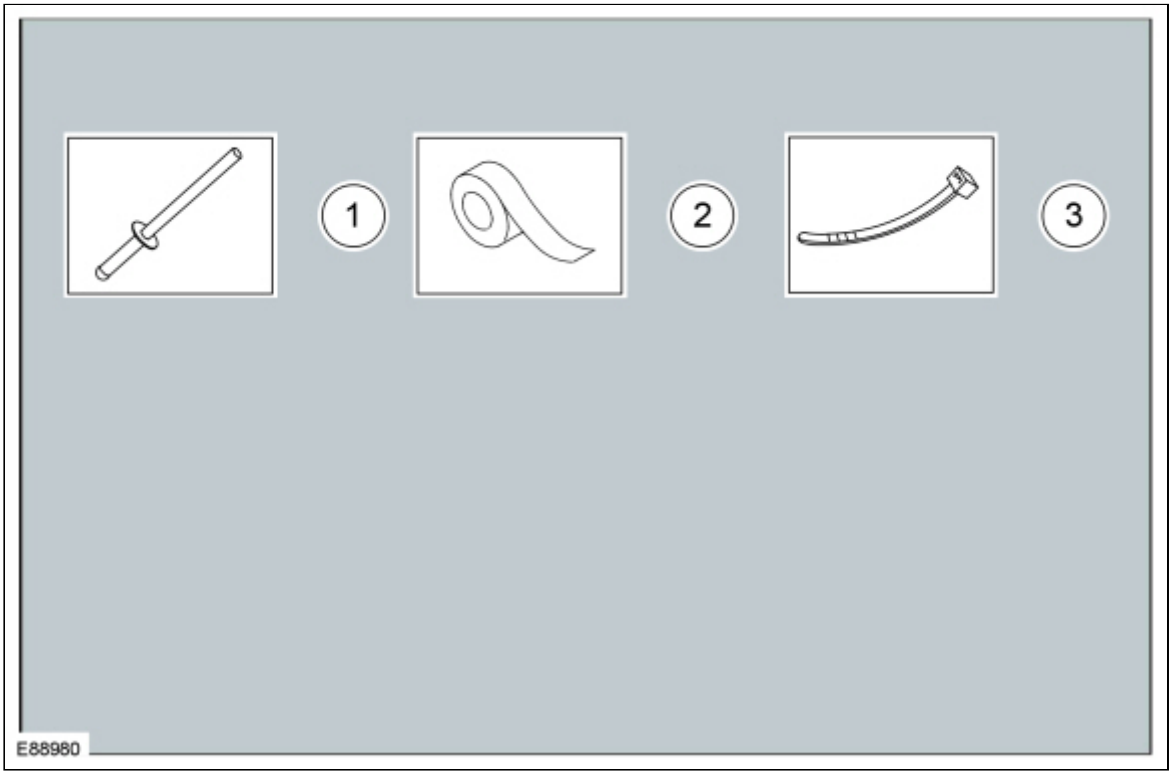


These symbols indicate the type of welding to be used.

Item	Part Number	Description
1	—	Metal inert gas (MIG) / Metal active gas (MAG) welding equipment
2	—	Metal inert gas (MIG) welding equipment
3	—	Metal inert gas (MIG) brazing equipment
4	—	Apply a continuous weld to the specified component
5	—	Apply spot welds to the specified component
6	—	C-clamp

Drilling and grinding symbols

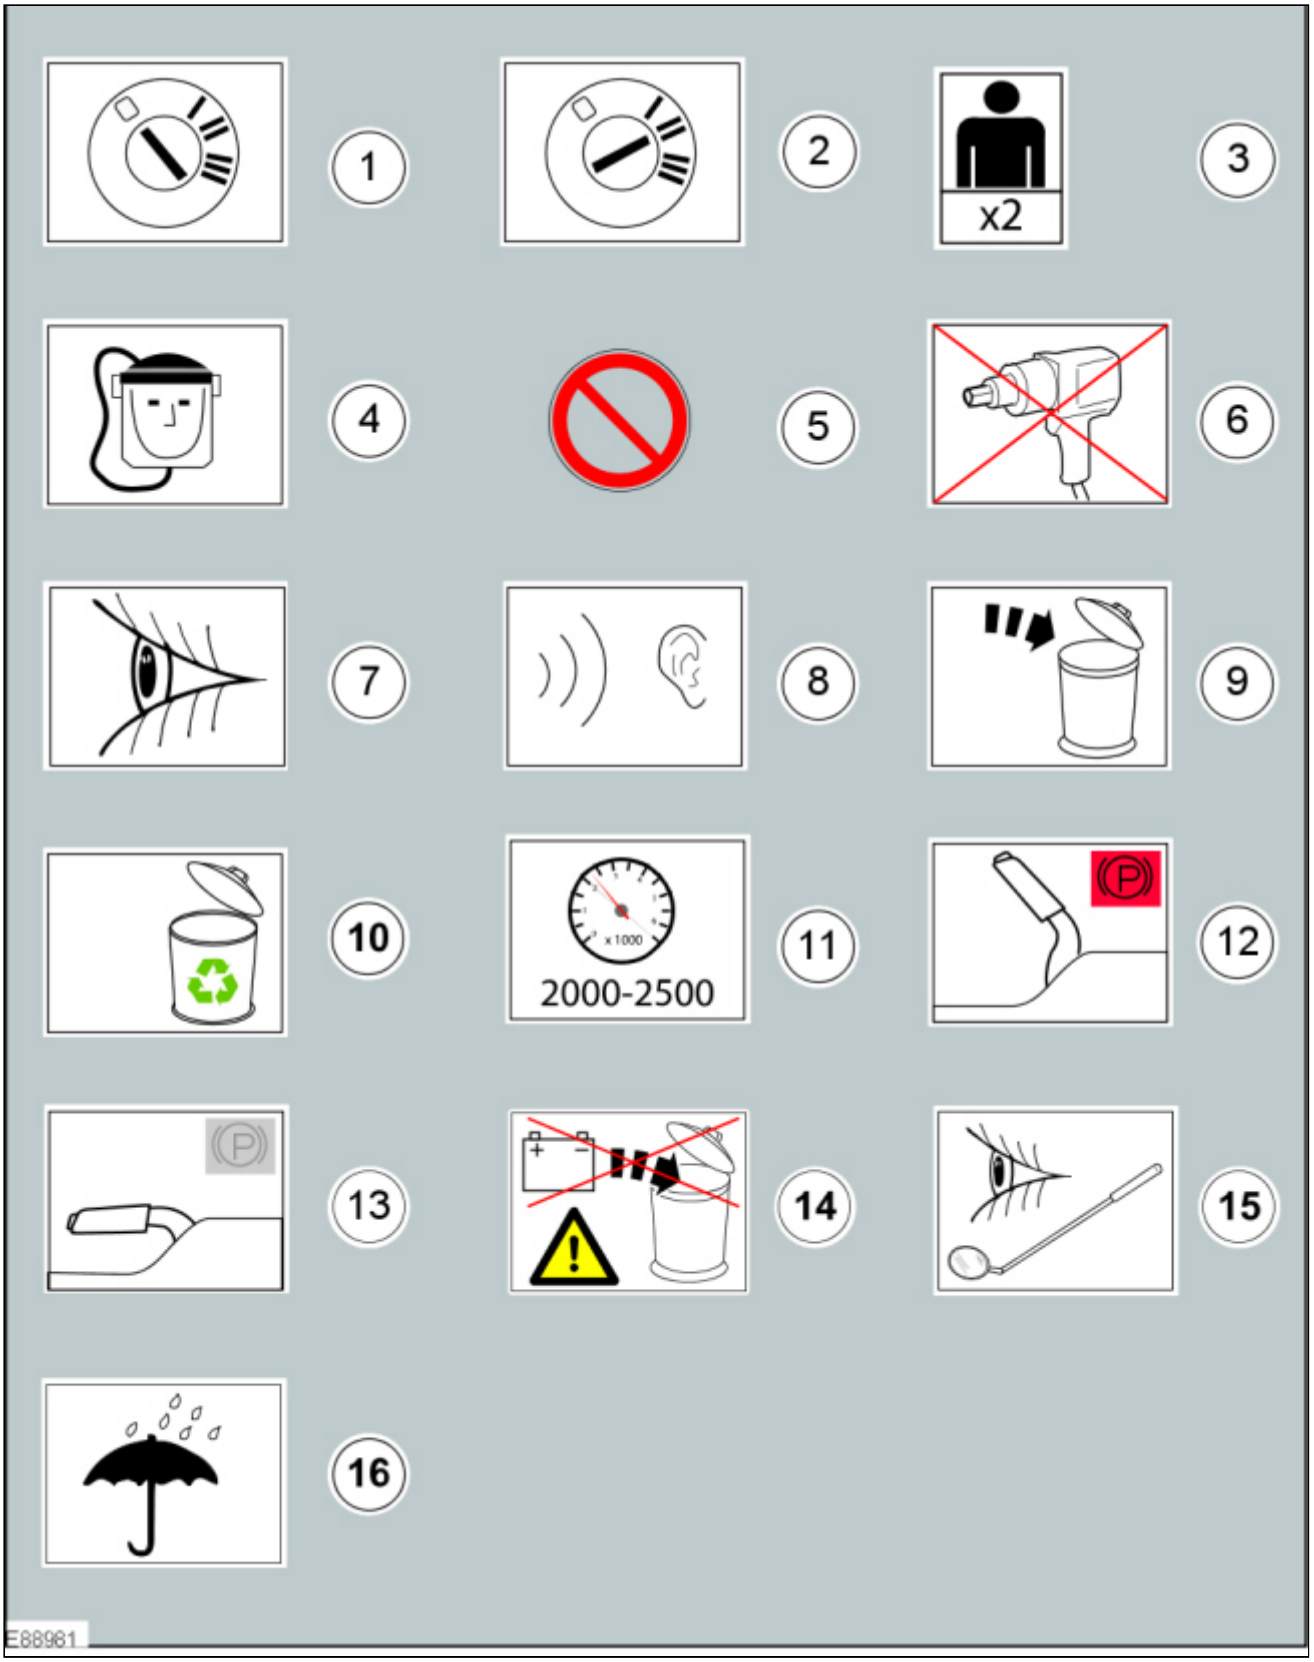
These symbols indicate the type of drilling or grinding to be used.



Item	Part Number	Description
1	—	Drill through first body layer with a suitable diameter
2	—	Drill through first body layer with the specified diameter
3	—	Drill through the indicated number of body layers with a suitable diameter
4	—	Drill through the indicated number of body layers with the specified diameter
5	—	Drill through the indicated number of body layers with a suitable diameter

6	—	Drill through the indicated number of body layers with the specified diameter
7	—	Drill through all body layers with a suitable diameter
8	—	Drill through all body layers with the specified diameter
9	—	Grind one layer
10	—	Grind two layers
11	—	Grind to last layer
12	—	Grind all layers
13	—	Material thickness > Xmm

Material symbols

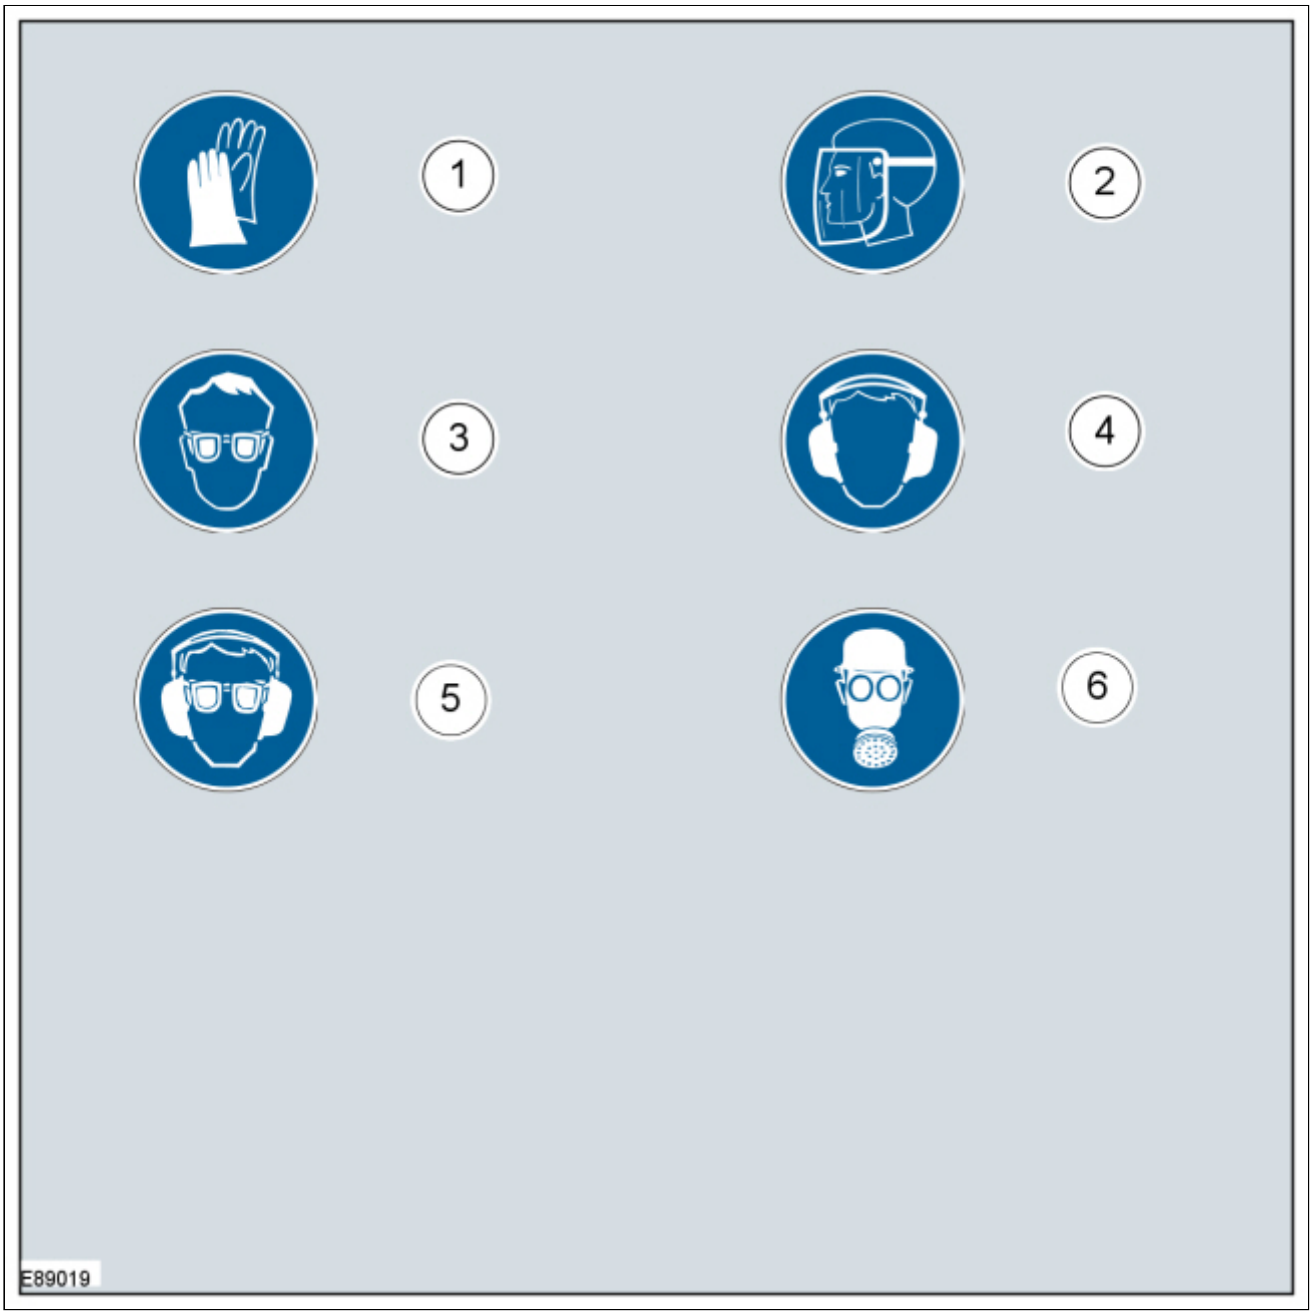


The material symbols are used to show where to use which type of material to carry out a procedure step.

Item	Part Number	Description
1	—	Remove/Install the specified blind rivet
2	—	Apply tape to the specified component/area
3	—	Remove/Install the specified cable tie

Miscellaneous symbols

These symbols provide further information that is required to carry out a procedure step.

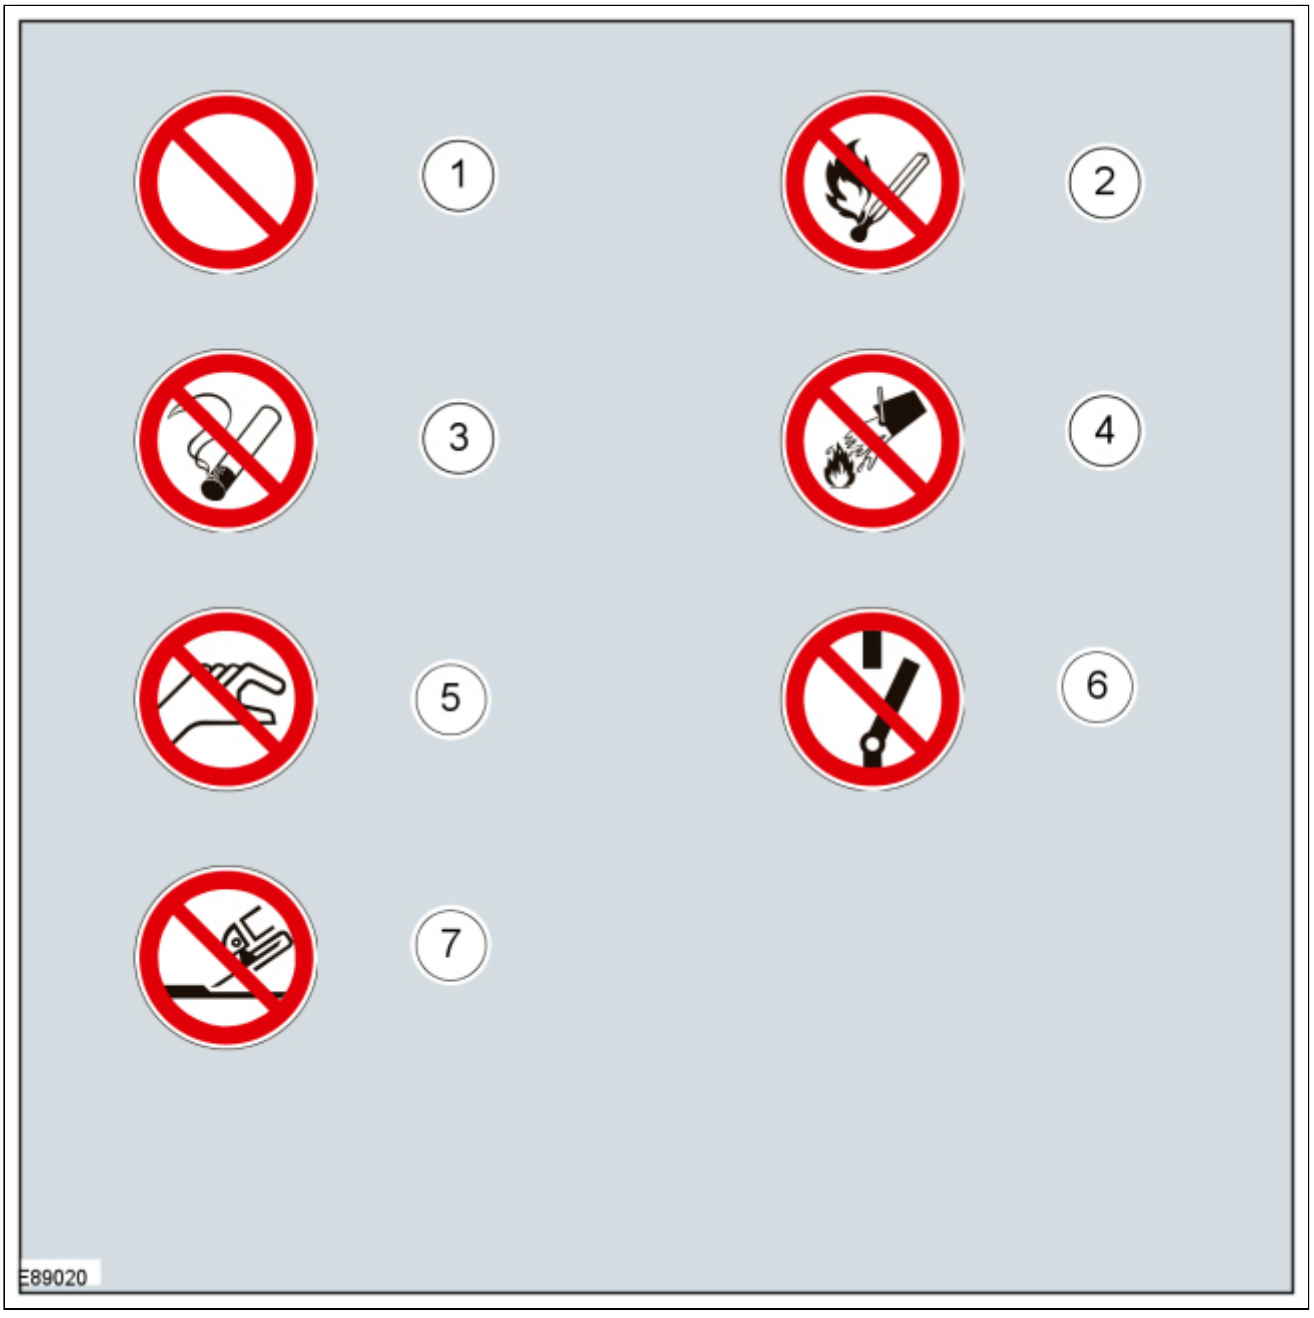


Item	Part Number	Description
1	—	Set the ignition switch to the 0 position
2	—	Set the ignition switch to the II position
3	—	The procedure step requires the aid of the specified number of supporting technicians
4	—	Self contained breathing apparatus
5	—	General prohibition used in combination with another symbol

6	—	Do not use power tools
7	—	Visual check
8	—	Noise check
9	—	Dispose the specified component
10	—	Replaced by item 9 (Dispose the specified component)
11	—	Set the engine speed to the specified value
12	—	Fully apply the parking brake lever
13	—	Fully release the parking brake lever
14	—	Do not dispose of batteries into the waste bin
15	—	Visual check using a mirror
16	—	Area/component must be dry

Mandatory Protective equipment - Health and safety symbols

The protective equipment symbols advise to use a mandatory protective equipment to avoid or at least reduce possible health and safety risks.

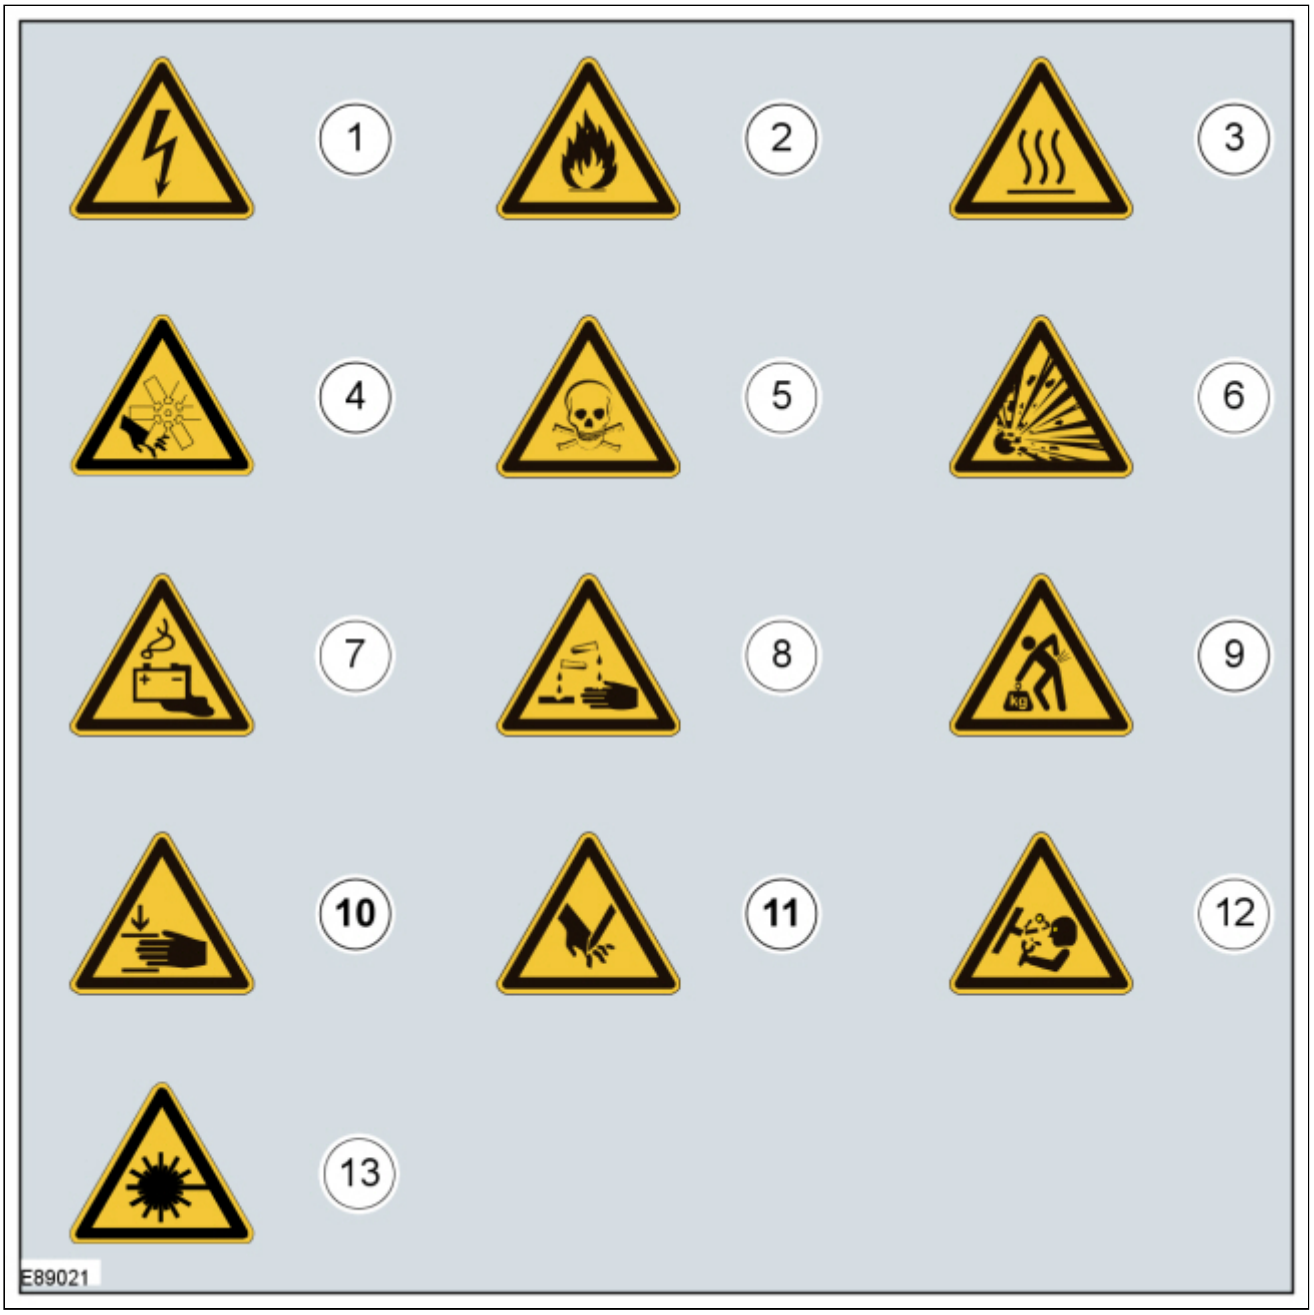


Item	Part Number	Description

1	—	Wear protective gloves
2	—	Wear face guard
3	—	Wear safety goggles
4	—	Wear ear protectors
5	—	Wear safety goggles and ear protectors
6	—	Wear a respirator

Prohibition - Health and safety symbols and component damage

The prohibition symbols are used to prohibit the specified actions to avoid or at least reduce possible component damage and health and safety risks.

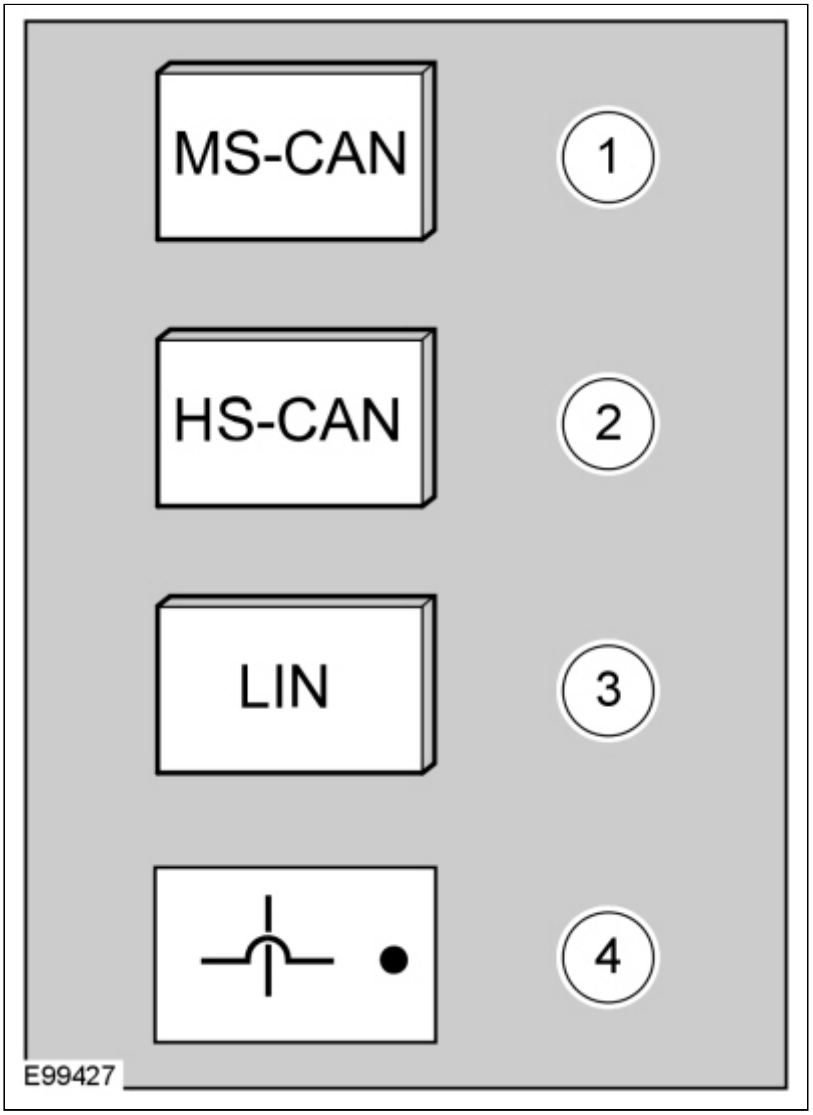


Item	Part Number	Description
1	—	General prohibition symbol
2	—	No naked flames
3	—	No smoking
4	—	No water

5	—	Do not touch
6	—	Do not switch
7	—	No grinding

Warning symbols - Health and safety and component damage

The warning symbols are used to advise on hazardous conditions to avoid or at least reduce possible component damage and health and safety risks.



Item	Part Number	Description
1	—	Hazardous voltage/Electrical shock/Electrocution
2	—	Fire Hazard/Highly flammable
3	—	Burn hazard/Hot surface
4	—	Automatic start-up
5	—	Toxic
6	—	Explosive material

7	—	Battery hazard
8	—	Corrosive material
9	—	Lifting hazard
10	—	Hand crush/Force from above
11	—	Cutting of fingers or hand
12	—	Pressure hazard
13	—	Invisible laser radiation. Do not view directly with optical instruments (magnifiers). Class 1M laser product

Control Diagram symbols - Description and Operation procedures

These symbols provide further information on the type of connectivity, direction of flow or type of data bus of a system.

Item	Part Number	Description
1	—	Mid-speed Controller Area Network (CAN)
2	—	High-speed Controller Area Network (CAN)
3	—	Local Interconnect Network (LIN)
4	—	Wires crossing not connected

Copyright © 2016 Ford Motor Company

Health and Safety Precautions

Introduction

Many of the procedures associated with vehicle maintenance and repair involve physical hazards or other risks to health. This subsection lists, alphabetically, some of these hazardous operations and the materials and equipment associated with them. Precautions necessary to avoid these hazards are identified.

The list is not exhaustive and all operations and procedures, and the handling of materials, should be carried out with health and safety in mind.

Before using any product the Materials Safety Data Sheet supplied by the manufacturer or supplier should be consulted.

Acids and Alkalis

See also Battery Acids.

For example caustic soda, sulphuric acid.

Used in batteries and cleaning materials.

Irritant and corrosive to the skin, eyes, nose and throat. Cause burns. Can destroy ordinary protective clothing.

Avoid splashes to the skin, eyes and clothing. Wear suitable protective impervious apron, gloves and goggles. Do not breath mists.

Make sure access to eye wash bottles, shower and soap are readily available for splashing accidents.

Display Eye Hazard sign.

Air Bags

See also Fire, Chemical Materials.

Highly flammable, explosive – observe No Smoking policy.

Used as a safety restraint system mounted in the steering wheel and passenger side of the instrument panel.

The inflator contains a high-energetic propellant which, when ignited, produces a VERY HOT GAS (2500°C).

The gas generant used in air bags is Sodium Azide. This material is hermetically sealed in the module and is completely consumed during deployment. No attempt should be made to open an air bag inflator as this will lead to the risk of exposure to Sodium Azide. If a gas generator is ruptured, full protective clothing should be worn when dealing with the spillage.

After normal deployment, gloves and safety goggles must be worn during the handling process.

Deployed air bags should be disposed of in a plastic bag in accordance with local regulations at an approved chemical waste site.

Following any direct contact with gas generant.

- wash affected areas thoroughly with water.
- seek medical assistance if necessary.

Air Bags - Do's

- Do store modules in an upright position.
- Do keep modules dry.
- Do carry modules with the cover side pointing away from the body.
- Do place modules with their cover side upwards.
- Do carefully inspect modules for damage.
- Do stand to one side when connecting modules.
- Do make sure all test equipment is properly calibrated and maintained.
- Do wash hands after handling deployed air bags.

Air Bags - Do Nots

- Do not store highly flammable material together with modules or gas generators.
- Do not store gas generators at temperatures exceeding 80°C.
- Do not store modules upside down.
- Do not attempt to open a gas generator housing.
- Do not expose gas generators to open flame or sources of heat.
- Do not place anything on top of a module cover.
- Do not use damaged modules.
- Do not touch a fired module or gas generator for at least 10 minutes.
- Do not use any electrical probes on the wiring circuit.

Air Conditioning Refrigerant

See also Chlorofluorocarbon, Chemical Materials

Highly flammable, combustible – observe No Smoking policy.

Skin contact may result in frostbite.

Instructions given by the manufacturer must be followed. Avoid naked lights, wear suitable protective gloves and goggles.

If refrigerant comes into contact with the skin or eyes, immediately rinse the affected areas with water. Eyes should also be rinsed with an appropriate irrigation solution and should not be rubbed. SEEK MEDICAL ASSISTANCE IF NECESSARY.

Air Conditioning Refrigerant - Do Nots

- Do not expose refrigerant bottles to sunlight or heat.
- Do not stand refrigerant bottles upright; when filling, hold them with the valve downwards.
- Do not expose refrigerant bottles to frost.
- Do not drop refrigerant bottles.
- Do not vent refrigerant to atmosphere under any circumstance.
- Do not mix refrigerants, for example R12 (Freon) and R134a.

Adhesives and Sealers

See also Fire, Chemical Materials.

Highly flammable, flammable, combustible – observe No Smoking policy.

Generally should be stored in No Smoking areas. Cleanliness and tidiness in use should be observed, for example disposable paper covering benches; should be dispensed from applicators where possible; containers, including secondary containers, should be labeled appropriately.

Solvent-based Adhesives/Sealers - See Solvents

Follow manufacturers instructions.

Water-based Adhesives/Sealers

Those based on polymer emulsions and rubber latexes may contain small amounts of volatile toxic and harmful chemicals. Skin and eye contact should be avoided and adequate ventilation provided during use.

Hot Melt Adhesives

In the solid state, they are safe. In the molten state they may cause burns and health hazards may arise from the inhalation of toxic fumes.

Use appropriate protective clothing and a thermostatically controlled heater with a thermal cut-out and adequate extraction.

Resin-based Adhesives/Sealers, for example Epoxide and Formaldehyde Resin-based

Mixing should be carried out in well ventilated areas, as harmful or toxic volatile chemicals may be released.

Skin contact with uncured resins and hardeners can result in irritation, dermatitis, and absorption of toxic or harmful chemicals through the skin. Splashes can damage the eyes.

Provide adequate ventilation and avoid skin and eye contact.

Anaerobic, Cyanoacrylate (super-glues) and other Acrylic Adhesives

Many are irritant, sensitizing or harmful to the skin and respiratory tract. Some are eye irritants.

Skin and eye contact should be avoided and the manufacturers instructions followed.

Cyanoacrylate adhesives (super-glues) MUST NOT contact the skin or eyes. If skin or eye tissue is bonded, cover with a clean moist pad and SEEK IMMEDIATE MEDICAL ATTENTION. Do not attempt to pull tissue apart. Use in well ventilated areas as vapors can cause irritation to the nose and eyes.

For two-pack systems see Resin-based and Isocyanate Adhesives/Sealers.

Isocyanate (Polyurethane) Adhesives/Sealers

See also Resin-based Adhesives.

Individuals suffering from asthma or respiratory allergies should not work with or near these materials as sensitivity reactions can occur.

Over exposure is irritating to the eyes and respiratory system. Excessive concentrations may produce effects on the nervous system including drowsiness. In extreme cases, loss of consciousness may result. Long term exposure to vapor concentrations may result in adverse health effects.

Prolonged contact with the skin may have a defatting effect which may lead to skin irritation and in some cases, dermatitis.

Splashes entering the eye will cause discomfort and possible damage.

Any spraying should preferably be carried out in exhaust ventilated booths, removing vapors and spray droplets from the breathing zone.

Wear appropriate gloves, eye and respiratory protection.

Antifreeze

See also Fire, Solvents.

For example isopropanol, ethylene glycol, methanol.

Highly flammable, flammable, combustible.

Used in vehicle coolant systems, brake air pressure systems, screenwash solutions.

Vapors may be given off from coolant antifreeze (glycol) when heated. Avoid breathing these vapors.

Antifreeze may be absorbed through the skin in toxic or harmful quantities. Antifreeze, if swallowed, can be fatal and MEDICAL ATTENTION SHOULD BE SOUGHT IMMEDIATELY.

These products must not be used in any cooling or industrial water system that is connected or linked to general, food preparation or drinking water supplies.

Asbestos

See also Warning Symbols on Vehicles at the end of this subsection.

Breathing asbestos dust may cause lung damage or, in some cases, cancer.

Used in brake and clutch linings, transmission brake bands and gaskets.

The use of drum cleaning units, vacuum cleaning or damp wiping is preferred.

Asbestos dust waste should be dampened, placed in a sealed container and marked for safe disposal. If any cutting or drilling is attempted on materials containing asbestos the item should be dampened and only hand tools or low speed power tools used.

Battery Acids

See also Acids and Alkalis.

Gases released during charging are explosive. Never use naked flames or allow sparks near charging or recently charged batteries.

Make sure there is adequate ventilation.

Brake and Clutch Linings and Pads

See Asbestos.

Brake Fluids (Polyalkylene Glycols)

See also Fire.

Splashes to the skin and eyes are slightly irritating. Avoid skin and eye contact as far as possible. Inhalation vapor hazards do not arise at ambient temperatures because of the very low vapor pressure.

Brazing

See Welding.

Chemical Materials

See also Legal Aspects.

Chemical materials such as solvents, sealers, adhesives, paints, resin foams, battery acids, antifreeze, brake fluids, fuels, oils and grease should always be used with caution and stored and handled with care. They may be toxic, harmful, corrosive, irritant or highly flammable and give rise to hazardous fumes and dusts.

The effects of excessive exposure to chemicals may be immediate or delayed; briefly experienced or permanent; cumulative; superficial; life threatening; or may reduce life expectancy.

Chemical Materials - Do's

- Do carefully read and observe hazard and precaution warnings given on material containers (labels) and in any accompanying leaflets, posters or other instructions. Material health and safety data sheets can be obtained from manufacturers.
- Do remove chemical materials from the skin and clothing as soon as practicable after soiling. Change heavily soiled clothing and have it cleaned.
- Do organize work practices and protective clothing to avoid soiling of the skin and eyes; breathing vapors, aerosols, dusts or fumes; inadequate container labeling; fire and explosion hazards.
- Do wash before job breaks, before eating, smoking, drinking or using toilet facilities when handling chemical materials.
- Do keep work areas clean, uncluttered and free of spills.
- Do store chemical materials according to national and local regulations.
- Do keep chemical materials out of the reach of children.

Chemical Materials - Do Nots

- Do not mix chemical materials except under the manufacturers instructions; some chemicals can form other toxic or harmful chemicals, give off toxic or harmful fumes or become explosive when mixed together.
- Do not spray chemical materials, particularly those based on solvents, in confined spaces, for example when people are inside a vehicle.
- Do not apply heat or flame to chemical materials except under the manufacturers instructions. Some are highly flammable and some may release toxic or harmful fumes.
- Do not leave containers open. Fumes given off can build up to toxic, harmful or explosive concentrations. Some fumes are heavier than air and will accumulate in confined areas such as pits.
- Do not transfer chemical materials to unlabelled containers.
- Do not clean hands or clothing with chemicals. Chemicals, particularly solvents and fuels, will dry the skin and may cause irritation leading to dermatitis or be absorbed through the skin in toxic or harmful quantities.
- Do not use emptied containers for other materials except when they have been cleaned under supervised conditions.
- Do not sniff or smell chemical materials. Brief exposure to high concentrations of fumes can be toxic or harmful.

Chlorofluorocarbons (CFC)

There is concern in the scientific community that CFCs and Halons are depleting the upper ozone layer which filters out harmful ultraviolet radiation. Decreased filtration of ultraviolet radiation may result in increases in skin cancer, cataracts and immune system suppression in humans, as well as decreased productivity of crops and aquatic systems.

CFCs are used primarily as refrigerants in vehicle air conditioning systems and as aerosol propellants. Halons are used as fire extinguishants.

Clutch Fluids

See Brake fluids.

Clutch Linings and Pads

See Asbestos.

Corrosion Protection Materials

See also Solvents, Fire.

Highly flammable, flammable – observe No Smoking policy.

These materials are varied and the manufacturers instructions must be followed. They may contain solvents, resins or petroleum products. Skin and eye contact should be avoided. They should only be sprayed in conditions of adequate ventilation and not in confined spaces.

Cutting

See Welding.

Dewaxing

See Solvents and Fuels (Kerosene).

Dusts

Powder, dusts or clouds may be irritant, harmful or toxic. Avoid breathing dusts from powdery chemical materials or those arising from dry abrasion operations. Wear respiratory protection if ventilation is inadequate.

Fine dusts of combustible material can present an explosion hazard. Avoid explosive limits and sources of ignition.

Electric Shock

Electric shock can result from the use of faulty electrical equipment or from the misuse of equipment in good condition.

Make sure that electrical equipment is maintained in good condition and frequently tested. Faulty equipment should be labeled and preferably removed from the workstation.

Make sure that flexes, cables, plugs and sockets are not frayed, kinked, cut, cracked or otherwise damaged.

Make sure that electrical equipment and flexes do not come into contact with water.

Make sure that electrical equipment is protected by the correct rated fuse.

Never misuse electrical equipment and never use equipment that is in any way faulty. The results could be fatal.

Make sure that the cables of mobile electrical equipment cannot get trapped and damaged, such as in a vehicle hoist.

Make sure that the designated electrical workers are trained in basic First Aid.

In cases of electrocution:

- switch off the power supply before approaching the victim.
- if this is not possible push or drag the victim from the source of electricity using dry non-conductive material.
- commence resuscitation if trained to do so.
- SUMMON MEDICAL ASSISTANCE.

Engine Oils

See Lubricants and Grease.

Exhaust Fumes

These contain asphyxiating, harmful and toxic chemicals and particles such as carbon oxides, nitrogen oxides, aldehydes, lead and aromatic hydrocarbons. Engines should be run only under conditions of adequate exhaust extraction or general ventilation and not in confined spaces.

Gasoline (petrol) engine

There may not be adequate warning of odor or of irritation before toxic or harmful effects arise. These may be immediate or delayed.

Diesel engine

Soot, discomfort and irritation usually give adequate warning of hazardous fume concentrations.

Fibre Insulation

See also Dusts.

Used in noise and sound insulation.

The fibrous nature of surfaces and cut edges can cause skin irritation. This is usually a physical and not a chemical effect.

Precautions should be taken to avoid excessive skin contact through careful organization of work practices and the use of gloves.

Fire

See also Welding, Foams, Legal Aspects.

Many of the materials found on or associated with the repair of vehicles are highly flammable. Some give off toxic or harmful fumes if burnt.

Observe strict fire safety when storing and handling flammable materials or solvents, particularly near electrical equipment or welding processes.

Make sure, before using electrical or welding equipment, that there is no fire hazard present.

Have a suitable fire extinguisher available when using welding or heating equipment.

First Aid

Apart from meeting any legal requirements it is desirable for someone in the workshop to be trained in First Aid procedures.

Splashes in the eye should be flushed carefully with clean water for at least ten minutes.

Soiled skin should be washed with soap and water.

In case of cold burns, from alternative fuels, place affected area in cool to cold water.

Individuals affected by inhalation of gases and fumes should be removed to fresh air immediately. If effects persist, consult a doctor.

If liquids are swallowed inadvertently, consult a doctor giving him the information on the container or label. Do not induce vomiting unless this action is indicated on the label.

Fluoroelastomer

See Viton.

Foams - Polyurethane

See also Fire.

Used in sound and noise insulation. Cured foams used in seat and trim cushioning.

Follow manufacturers instructions.

Unreacted components are irritating and may be harmful to the skin and eyes. Wear gloves and goggles.

Individuals with chronic respiratory diseases, asthma, bronchial medical problems, or histories of allergic diseases should not work in or near uncured materials.

The components, vapors or spray mists can cause direct irritation, sensitivity reactions and may be toxic or harmful.

Vapors and spray mists must not be inhaled. These materials must be applied with adequate ventilation and respiratory protection. Do not remove the respirator immediately after spraying; wait until the vapors/mists have cleared.

Burning of the uncured components and the cured foams can generate toxic and harmful fumes. Smoking, naked flames or the use of electrical equipment during foaming operations and until vapors/mists have cleared should not be allowed. Any heat cutting of cured foams or partially cured foams should be conducted with extraction ventilation. See

also the vehicle Body Repair Manual.

Freon

See Air Conditioning Refrigerant.

Fuels

See also, Fire, Legal Aspects, Chemicals and Solvents.

Avoid skin contact with fuel where possible. Should contact occur, wash the affected skin with soap and water.

Gasoline (Petrol)

Highly flammable - observe No Smoking policy.

Swallowing can result in mouth and throat irritation and absorption from the stomach can result in drowsiness and unconsciousness. Small amounts can be fatal to children. Aspiration of liquid into the lungs, through vomiting, is a very serious hazard.

Gasoline dries the skin and can cause irritation and dermatitis on prolonged or repeated contact. Liquid in the eye causes severe smarting.

Motor gasoline may contain appreciable quantities of benzene, which is toxic upon inhalation, and the concentration of gasoline vapors must be kept very low. High concentrations will cause eye, nose and throat irritation, nausea, headache, depression and symptoms of drunkenness. Very high concentrations will result in rapid loss of consciousness.

Make sure there is adequate ventilation when handling and using gasoline. Great care must be taken to avoid the serious consequences of inhalation in the event of vapor build up arising from spillages in confined spaces.

Special precautions apply to cleaning and maintenance operations on gasoline storage tanks.

Gasoline should not be used as a cleaning agent. It must not be siphoned by mouth. See First Aid.

Gas-oil (Diesel Fuel)

Combustible.

Gross or prolonged skin contact with high boiling point gas oils may also cause serious skin disorders including skin cancer.

Kerosene (Paraffin)

Used also as heating fuel, solvent and cleaning agent.

Flammable - observe No Smoking policy.

Irritation of the mouth and throat may result from swallowing. The main hazard from swallowing arises if liquid aspiration into the lungs occurs.

Liquid contact dries the skin and can cause irritation or dermatitis. Splashes in the eye may be slightly irritating.

In normal circumstances the low volatility does not give rise to harmful vapors. Exposure to mists and vapors from kerosene at elevated temperature should be avoided (mists may arise in dewaxing). Avoid skin and eye contact and make sure there is adequate ventilation.

Alternative Fuel

Highly flammable. Observe ``NO SMOKING'' signs.

Make sure there is adequate ventilation when working on alternative fuelled vehicles. Great care must be taken to avoid the serious consequences of inhalation in the event of vapor build up in confined spaces.

Inhalation in high concentrations may cause dizziness, headache, nausea and loss of co-ordination. Very high concentrations may result in loss of consciousness.

Contact with liquefied petroleum gas (LPG) or compressed natural gas (CNG) to the skin may cause cold burns and frost bite.

Long sleeved cotton overalls, steel toe capped safety boots and rubber neoprene gloves should be worn during removal and installation of LPG/CNG fuel system components.

LPG/CNG fuel leaks could cause a fire and be a hazard to health that can lead to personal injury, illness or even death.

If a leak is detected, under no circumstances attempt to seal the leak by tightening the union/connection until the fuel in the system or component is depressurized. Once tightened the system should be checked for integrity following the specified procedures.

If the fuel tank is to be removed for service or repair the fuel must be evacuated using dedicated equipment and following the specified procedures.

Gas Cylinders

See also Fire.

Gases such as oxygen, acetylene, argon and propane are normally stored in cylinders at pressures of up to 138 bar (2000 psi) and great care should be taken in handling these cylinders to avoid mechanical damage to them or to the valve gear attached. The contents of each cylinder should be clearly identified by appropriate markings.

Cylinders should be stored in well-ventilated enclosures, and protected from ice and snow, or direct sunlight. Fuel gases, for example acetylene and propane, should not be stored in close proximity to oxygen cylinders.

Care should be exercised to prevent leaks from gas cylinders and lines, and to avoid sources of ignition.

Only trained personnel should undertake work involving gas cylinders.

Gases

See Gas Cylinders.

Gaskets (Fluoroelastomer)

See Viton.

General Workshop Tools and Equipment

It is essential that all tools and equipment are maintained in good condition and that the correct safety equipment is used where required.

Never use tools or equipment for any purpose other than that for which they were designed. Never overload equipment such as hoists, jacks, axle and chassis stands or lifting slings. Damage caused by overloading is not always immediately apparent and may result in a fatal failure the next time that the equipment is used.

Do not use damaged or defective tools or equipment, particularly high-speed equipment such as grinding wheels. A damaged grinding wheel can disintegrate without warning and cause serious injury.

Wear suitable eye protection when using grinding, chiseling or sand blasting equipment.

Wear a suitable breathing mask when using abrasive blasting equipment, working with asbestos-based materials or using spraying equipment.

Make sure there is adequate ventilation to control dusts, mists and fumes.

High Pressure Air, Lubrication and Oil Test Equipment

See also Lubricants and Greases.

Always keep high-pressure equipment in good condition, and regularly maintained, particularly at joints and unions.

Never direct a high-pressure nozzle, for example diesel injector, at the skin as the fluid may penetrate to the underlying tissue, and cause serious injury.

Halon

See CFCs.

Legal Aspects

There are many laws and regulations relating to health and safety in the use and disposal of materials and equipment in a workshop.

For a safe working environment and to avoid environmental pollution, workshops should be familiar, in detail, with the many health and safety laws and regulations within their country, published by both national and local authorities.

Lubricants and Greases

Avoid all prolonged and repeated contact with mineral oils. All lubricants and greases may be irritating to the eyes and skin.

Transmission Fluids

Safety instructions

Certain Transmission and Power Steering fluids supplied to Ford may contain additives which have the potential to cause skin disease (dermatitis) to exposed persons. The dermatitis may be irritant or allergic in nature. Risks are higher where prolonged or repeated skin contact with a fluid may occur. These fluids are used for vehicle initial fill and service purposes. This sub-section is to:

- Inform Service personnel who may come into contact with these vehicle fluids (hazard communication).
- Summarise appropriate workplace control measures and personal protective equipment requirements.
- Draw attention to the existence of Material Safety Datasheets (MSDS's) for the fluids (available from Ford Customer Service Division). These MSDS's contain detailed information on hazards and appropriate controls.

Control measures

Workplace risk assessments made under national chemical control regulations should identify operations involving the fluids as potentially hazardous and specify workplace control and worker awareness measures. In such circumstances, the relevant Material Safety Datasheet (see the details specified below) which specifies hazards and control measures in detail should be made available for guidance.

Avoid unprotected skin contact with the fluids, and in particular, avoid prolonged or repeated skin contact. Work practices should be organised so as to minimise the potential for skin contact. This may include the use of drip trays, absorbents, correct fluid handling equipment (funnels etc), and workplace housekeeping measures such as the cleaning of contaminated surfaces.

Personnel engaged in operations where skin contact could occur (such as fluid draining or filling) should wear impervious gloves made from nitrile rubber, certified to a chemical protection standard, e.g. Europe Standard EN374. This glove type is widely available from reputable suppliers of gloves for chemical protection [including the manufacturers Ansell-Admont (Solvex Range), North Safety products (North Nitrile Latex Gloves range), and Marigold Industrial (Blue Nitrile range)]. If gloves become torn or contaminated on the inside they should be replaced. Eye protection with safety glasses is appropriate. Use of an impervious apron and arm protectors may be necessary if more extensive exposure is possible. Use of skin barrier creams suitable for work with mineral oil products may offer some supplementary protection, but such barrier creams should not be used in place of protective clothing.

If accidental skin contact occurs with the fluids, wash the area thoroughly with soap or skin cleanser and water.

Accidental eye contact should be dealt with as per normal first aid practices, by flushing the eyes with an eye wash or clean cool water for 10 minutes, after which medical attention should be obtained.

Remove and launder clothing which becomes contaminated with the fluids. Do not place rags contaminated with fluid in clothing pockets.

Wash thoroughly after completing operations where skin exposure may have occurred.

It is important that personnel do not smoke, eat or drink whilst handling the fluids or affected transmissions. These measures are designed to limit the risk from accidental ingestion.

Label any decanted fluid properly/use an equivalent label to that on original product containers.

Clean up any spills promptly using an inert absorbent and wash down contaminated surfaces with detergent and water.

Dispose of any waste fluids safely as hazardous waste.

Safety Data Sheets

Safety Data Sheets, which detail specific material handling instructions and precautions are available from the respective national sales company, and via internet www.msds.ford.com.

Used Engine Oil

Prolonged and repeated contact with mineral oil will result in the removal of natural fats from the skin, leading to dryness, irritation and dermatitis. In addition, used engine oil contains potentially harmful contaminants, which may cause skin cancer. Adequate means of skin protection and washing facilities must be provided.

Do not employ used engine oils as lubricants or for any application where appreciable skin contact is likely to occur.

Environmental Precautions

Burning used engine oil in small space heaters or boilers can be recommended only for units of approved design. If in doubt check with the appropriate local authority and manufacturer of approved appliances.

Dispose of used oil and used oil filters through authorized waste disposal contractors or licensed waste disposal sites, or to the waste oil reclamation trade. If in doubt, contact the relevant local authority for advice on disposal facilities.

It is illegal to pour used oil on to the ground, down sewers or drains, or into watercourses.

Noise

Some operations may produce high noise levels, which could, in time, damage hearing. In these cases, suitable ear protection must be worn.

Noise Insulation Materials

See Foams, Fibre Insulation.

O-Rings (Fluoroelastomer)

See Viton.

Paints

See also Solvents, Chemical Materials.

Highly flammable, flammable - observe No Smoking policy

One Pack

Can contain harmful or toxic pigments, driers and other components as well as solvents. Spraying should be carried out only with adequate ventilation.

Two Pack

Can also contain harmful and toxic unreacted resins and resin hardening agents. The manufacturers instructions should be followed. See also Resin-based Adhesives and Isocyanate Adhesives and Sealers under Adhesives and Sealers.

Spraying should preferably be carried out in exhausted ventilated booths removing vapor and spray mists from the breathing zone. Individuals working in booths should wear appropriate respiratory protection. Those doing small-scale repair work in the open workshop should wear air-fed respirators.

Pressurized Equipment

See High Pressure Air, Lubrication and Oil Test Equipment.

Solder

Solders are mixtures of metals such that the melting point of the mixture is below that of the constituent metals (normally lead and tin). Solder application does not normally give rise to toxic lead fumes, provided a gas/air flame is used. Oxy-acetylene flames should not be used, as they are much hotter and will cause lead fumes to be produced.

Some fumes may be produced by the application of any flame to surfaces coated with grease, and inhalation of these should be avoided.

Removal of excess solder should be undertaken with care, to make sure that fine lead dust is not produced, which can give toxic effects if inhaled. Respiratory protection may be necessary.

Solder spillage and filings should be collected and removed promptly to prevent general air contamination by lead.

High standards of personal hygiene are necessary in order to avoid ingestion of lead or inhalation of solder dust from clothing.

Solvents

See also Chemical Materials, Fuels (Kerosene), Fire.

For example acetone, white spirit, toluene, xylene, trichloroethane.

Used in cleaning and dewaxing materials, paints, plastics, resins and thinners.

Some may be highly flammable or flammable.

Skin contact will degrease the skin and may result in irritation and dermatitis following repeated or prolonged contact. Some can be absorbed through the skin in toxic or harmful quantities.

Splashes in the eye may cause severe irritation and could lead to loss of vision.

Brief exposure of high concentrations of vapors or mists will cause eye and throat irritation, drowsiness, dizziness, headaches and, in the worst circumstances, unconsciousness.

Repeated or prolonged exposure to excessive but lower concentrations of vapors or mists, for which there might not be adequate warning indications, can cause more serious toxic or harmful effects.

Aspiration into the lungs, for example through vomiting, is the most serious consequence of swallowing.

Avoid splashes to the skin, eyes and clothing. Wear protective gloves, goggles and clothing if necessary.

Make sure there is good ventilation when in use, avoid breathing fumes, vapors and spray mists and keep containers tightly sealed. Do not use in confined spaces.

When spraying materials containing solvents, for example paints, adhesive, coatings, use extraction ventilation or personal respiratory protection in the absence of adequate general ventilation.

Do not apply heat or flame except under specific and detailed manufacturers instructions.

Sound Insulation

See Fibre Insulation, Foams.

Suspended Loads

NOTICE: Never improvise lifting tackle.

There is always a danger when loads are lifted or suspended. Never work under an unsupported, suspended or raised load, for example a suspended engine.

Always make sure that lifting equipment such as jacks, hoists, axle stands and slings are adequate and suitable for the job, in good condition and regularly maintained.

Transmission Brake Bands

See Asbestos.

Underseal

See Corrosion Protection.

Viton

In common with many other manufacturers vehicles, some components have O-rings, seals or gaskets, which contain a material known as `Viton'.

Viton is a fluoroelastomer, that is a synthetic rubber type material, which contains Fluorine. It is commonly used for O-rings, gaskets and seals of all types. Although Viton is the most well known fluoroelastomer, there are others, including Fluorel and Tecmoflon.

When used under design conditions fluoroelastomers are perfectly safe. If, however, they are exposed to temperatures in excess of 400°C, the material will not burn, but will decompose, and one of the products formed is hydrofluoric acid.

This acid is extremely corrosive and may be absorbed directly, through contact, into the general body system.

O-rings, seals or gaskets which have been exposed to very high temperatures will appear charred or as a black sticky substance.

DO NOT; under any circumstances touch them or the attached components.

Enquiries should be made to determine whether Viton or any other fluoroelastomer has been used in the affected O-ring, seal or gasket. If they are of natural rubber or nitrile there is no hazard. If in doubt, be cautious, as the material may be Viton or any fluoroelastomer.

If Viton or any other fluoroelastomers have been used, the affected area should be decontaminated before the commencement of work.

Disposable heavy duty plastic gloves should be worn at all times, and the affected area washed down using wire wool and a limewater (calcium hydroxide) solution to neutralize the acid before disposing of the decomposed Viton residue and final cleaning of the area. After use, the plastic gloves should be discarded carefully and safely.

Welding

See also Fire, Electric Shock, Gas Cylinders.

Welding processes include Resistance Welding (Spot Welding), Arc Welding and Gas Welding.

Resistance Welding

This process may cause particles of molten metal to be emitted at a high velocity, and the eyes and skin must be protected.

Arc Welding

This process emits a high level of ultra-violet radiation, which may cause arc-eye, and skin burns to the operator and to other persons nearby. Gas-shielded welding processes are particularly hazardous in this respect. Personal protection must be worn, and screens used to shield other people.

CONTACT LENS WEARERS ARE ADVISED TO REVERT TO ORDINARY SPECTACLES WHEN ARC WELDING as the arc spectrum is believed to emit microwaves which dry out the fluid between the lens and the eye. This may result in blindness when the lens is removed from the eye.

Metal spatter will also occur, and appropriate eye and skin protection is necessary.

The heat of the welding arc will produce fumes and gases from the metals being welded, the rods and from any applied coatings or contamination on the surfaces being worked on. These gases and fumes may be toxic and inhalation of these should be avoided. The use of extraction ventilation to remove the fumes from the working area may be necessary particularly in cases where the general ventilation is poor, or where considerable welding work is anticipated. In extreme cases or confined spaces where adequate ventilation cannot be provided, air-fed respirators may be necessary.

Gas Welding (and Cutting)

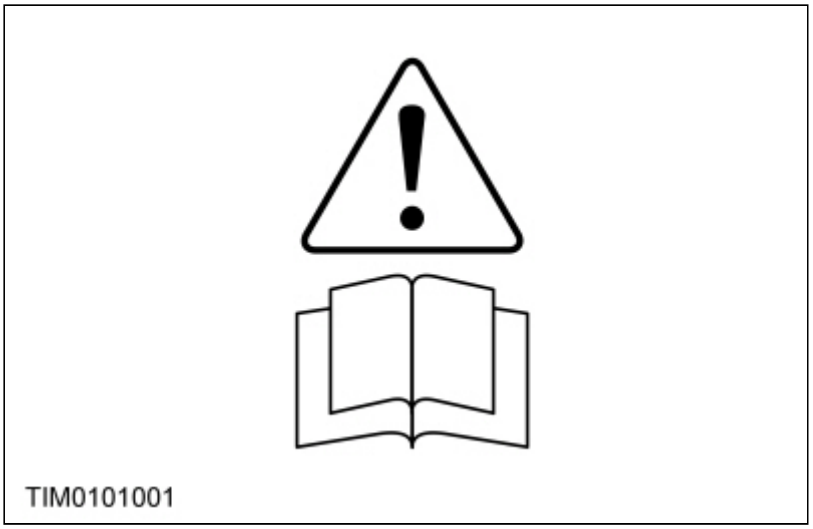
Oxy-acetylene torches may be used for welding and cutting, and special care must be taken to prevent leakage of these gases, with consequent risk of fire and explosion.

The process will produce metal spatter and eye and skin protection is necessary.

The flame is bright, and eye protection should be used, but the ultra-violet emission is much less than that from arc welding, and lighter filters may be used.

The process itself produces few toxic fumes, but such fumes and gases may be produced from coatings on the work, particularly during cutting away of damaged body parts, and inhalation of the fumes should be avoided.

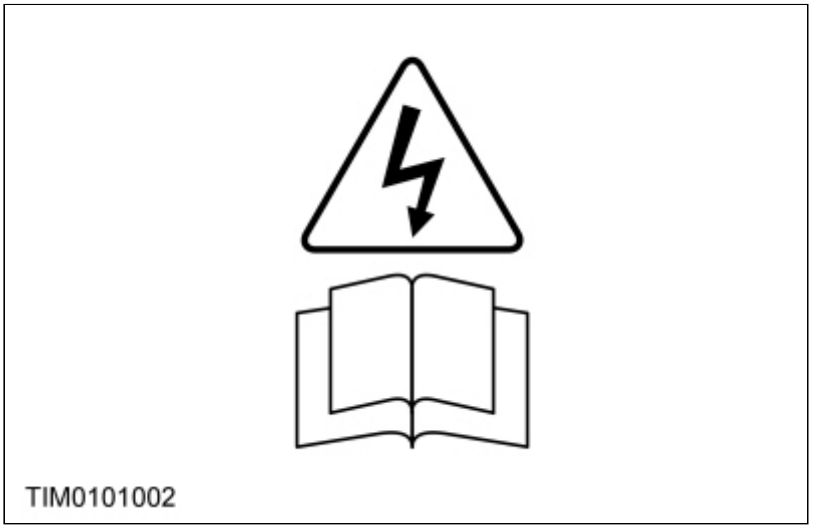
In brazing, toxic fumes may be produced from the metals in the brazing rod, and a severe hazard may arise if brazing rods containing cadmium are used. In this event particular care must be taken to avoid inhalation of fumes and expert advice may be required.



SPECIAL PRECAUTIONS MUST BE TAKEN BEFORE ANY WELDING OR CUTTING TAKES PLACE ON VESSELS, WHICH HAVE CONTAINED COMBUSTIBLE MATERIALS, FOR EXAMPLE BOILING OR STEAMING OUT OF FUEL TANKS.

Warning Symbols on Vehicles

Decals showing warning symbols will be found on various vehicle components.

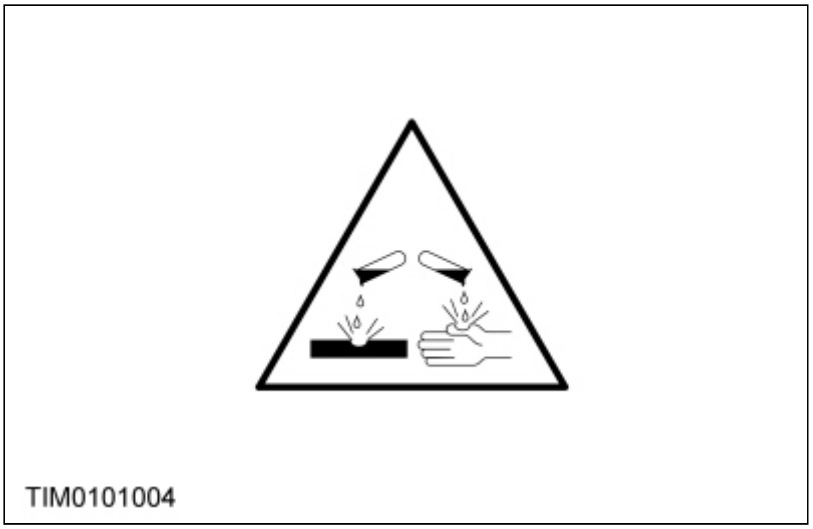


These decals must not be removed. The warnings are for the attention of owners/operators and persons carrying out service or repair operations on the vehicle.

The most commonly found decals are reproduced below together with an explanation of the warnings.

TIM0101001

1. Components or assemblies displaying the caution triangle and open book symbol advise consultation of the relevant section of the owner literature before touching or attempting adjustments of any kind.

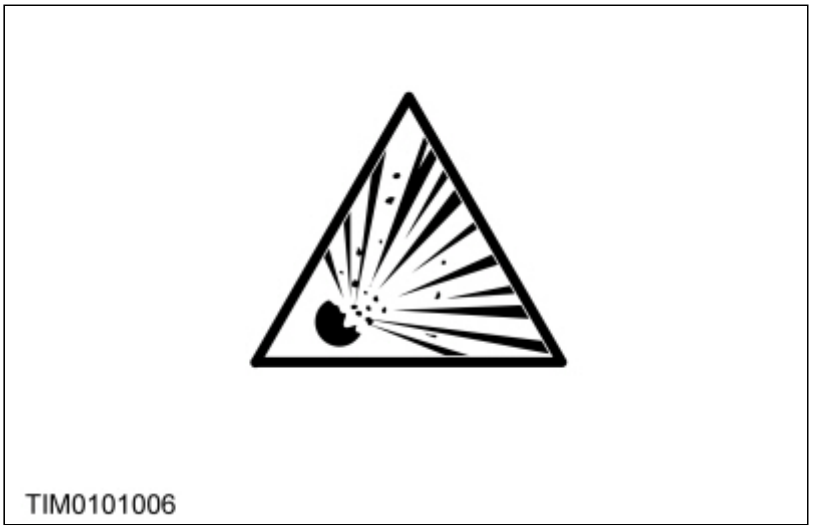


TIM0101002

2. Components or assemblies displaying the warning triangle with the `electrified' arrow and open book symbol give warning of inherent high voltages. Never touch these with the engine running or the ignition switched on. See Electric Shock in this subsection.

TIM0101003

3. Vehicles and replacement components which contain asbestos are identified by this symbol. See Asbestos in this subsection.



TIM0101004

4. Components or assemblies displaying this symbol give warning that the component contains a corrosive substance. See Acids and Alkalis in this subsection.

TIM0101005

5. Displaying the caution circle with a deleted lighted match symbol, caution against the use of naked lights or flames within the immediate vicinity due to the presence of highly flammable or explosive liquids or vapors. See Fire in this subsection.

TIM0101006

6. Displaying this symbol (normally in conjunction with 5 above) warn of the presence of potentially explosive matter within the immediate vicinity.

7. Displaying this symbol warn that children should not be allowed in the immediate vicinity unsupervised.

White Spirit

See Solvents.

Copyright © 2016 Ford Motor Company

Standard Workshop Practices

Vehicle in Workshop

This manual describes and directs repair procedures specified by Ford Motor Company for the vehicle. Critical health and safety precautions are included. Anyone who deviates from these instructions risks compromising personal safety or vehicle integrity.

Section number 100-00 General Information contains important safety warnings.

NOTE: *Always read and understand these before beginning any repair procedure.*

It is the responsibility of the dealership or automotive service business to make sure the work area is compliant with local health and safety and environmental regulations.

Understand and follow all safety practices, which include these examples:

- proper ventilation of work areas and vehicle exhaust.
- preventing unintended vehicle movement.
- proper shop and personal safety equipment (eye protection, fire extinguishers and other items).

Throughout this manual, chemicals or materials are specified that must be used to properly complete a service procedure or diagnostic step. In the event a specific material is not readily available, a substitute material meeting the same specification may be used.

Ford has not reviewed third party products for compliance with environmental, health or safety regulations and is not responsible for their use. Use of third party products is at your own risk.

Additionally, such products may cause degraded performance, premature failures, and/or vehicle component damage.

All chemicals or materials used for vehicle servicing should be checked for compliance with local environmental and health and safety regulations.

WARNING: Wear eye protection when servicing a vehicle. Failure to follow this instruction may result in serious personal injury.

WARNING: Wear protective gloves when handling components or parts that have pointed or sharp edges. Failure to follow this instruction may result in serious personal injury.

WARNING: Chemicals or materials specified in this manual, if used improperly, may present a personal health hazard. Always consult the material safety information sheet before using any material specified by this manual. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not work under the hood of a vehicle with a damaged cooling fan, as it can separate during operation. With the ignition OFF, inspect all cooling fans for damage, cracks or separation and replace with a new fan as necessary. Failure to follow this instruction may result in serious personal injury.

WARNING: Vehicles with engine auto start-stop technology may start automatically with the ignition on. Make sure the ignition is off when servicing or working in close proximity to rotating engine parts. Failure to follow this instruction may result in serious personal injury.

WARNING: Serious injury may occur if the engine is accidently started by another person during service work. Remove the key from the vehicle to prevent unauthorized starts. Failure to follow this instruction may result in serious personal injury.

WARNING: Before lifting the vehicle with a jack, make sure the jack capacity is adequate for the vehicle weight, including any vehicle cargo or modifications. Identify the correct jacking points in section 100-02 of this manual. Position the vehicle on a hard, level surface. After jacking, always support vehicle with jack stands. Never get under a vehicle supported only by a jack. Set the parking brake and block all wheels remaining on the ground. Failure to follow these instructions may result in unintended vehicle movement and serious personal injury or death.

WARNING: Before raising the vehicle on a hoist, make sure the hoist capacity is adequate for the vehicle weight, including any vehicle cargo or modifications. Always position the hoist lift arms as shown in section 100-02 of this manual. Do not use the engine to power the drive wheels unless all drive wheels are elevated off the ground. Incorrect hoist arm positioning or drive wheels in contact with the ground can cause unintended vehicle movement. Failure to follow these instructions may result in serious personal injury or death.

WARNING: Removal of heavy components (such as engines, transmissions or axles) while the vehicle is lifted on a hoist may create a dangerous weight imbalance. Restrain the vehicle on the hoist with chains or straps to prevent vehicle movement. Failure to follow this instruction may result in serious personal injury or death.

WARNING: Always secure transmission, transfer case, and axle assemblies to their service jack. Avoid obstructions while lowering and raising the jack. Improperly secured assemblies or contact with obstructions may cause the assembly to fall off the jack, which could result in serious personal injury.

WARNING: Turn off (disable) the power running boards (if equipped) before jacking, lifting or placing any object under the vehicle. Never place your hand between the power running board and the vehicle. Extended power running boards will retract when doors are closed. Failure to follow these instructions may result in serious personal injury.

WARNING: Never support an engine by the intake or exhaust manifolds. The engine may drop suddenly. Failure to follow this instruction may result in serious personal injury.

WARNING: Keep solvents away from ignition sources. Solvents may be flammable and can ignite or explode if not handled correctly. Failure to follow this instruction may result in serious personal injury.

WARNING: Use tools, not fingers, to hold flagnuts. Flagnuts may slip or spin unexpectedly when removing fasteners. Failure to follow this instruction may result in injured fingers.

Copyright © 2016 Ford Motor Company

Solvents, Sealants and Adhesives

Introduction

WARNING: Always handle all solvents, sealers and adhesives with extreme care. Some contain chemicals or give off fumes which can be dangerous to health. Always follow the manufacturers instructions. If in doubt about any substance, particularly a solvent, DO NOT use it.

NOTICE: If in doubt about the suitability of any proprietary solvent or sealer for a particular application, contact the manufacturer of the product for information regarding storage, handling and application.

The Health and Safety Precautions subsection refers to some commonly used chemicals and materials, hazards associated with their use, and safety measures to be taken.

Copyright © 2016 Ford Motor Company

Road/Roller Testing

Road or roller testing may be carried out for various reasons and a procedure detailing pre-test checks, engine starting and stopping, pre-driving checks, on-test checks and final checks to be completed on completion of the test is given below.

Unless complete vehicle performance is being checked, the full road test procedure need not be carried out. Instead, those items particularly relevant to the system(s) being checked can be extracted.

Pre-Test Checks

WARNING: If the brake system hydraulic fluid level is low, pedal travel is excessive or a hydraulic leak is found, do not attempt to road test the vehicle until the reason for the low fluid level, excessive pedal travel or hydraulic leak is found and rectified.

It is suggested that pre-test checks and functional tests of those systems and circuits which affect the safe and legal operations of the vehicle, such as brakes, lights and steering, should always be carried out before the road or roller test.

With the ignition switched off, check:

- the engine oil level.
- the engine coolant level.
- the tires, for correct pressure, compatible types and tread patterns, and wear within limits.
- that there is sufficient fuel in the tank to complete the test.
- all around the engine, transmission and under the vehicle for oil, coolant, hydraulic and fuel leaks. Make a note of any apparent leaks and wipe off the surrounding areas to make it easier to identify the extent of the leak on completion of the test.

Starting the Engine

NOTE: *On initial drive away from cold and within the first 1.5 km (1 mile), do not depress the accelerator pedal beyond half travel until the vehicle has attained a minimum speed of 25 km/h (15 miles/h). Never operate at high engine speed or with the accelerator pedal at full travel whilst the engine is cold.*

With the ignition switched off, check:

- that the parking brake is applied.
- that the gear lever is in the neutral position.
- that all instrument gauges (except fuel gauge) read zero.

With the ignition switched on, check:

- that the ignition controlled warning lamps are illuminated.
- that the engine temperature gauge registers a reading compatible with the engine temperature.
- that the fuel gauge registers a reading appropriate to the fuel level in the tank.
- the operation of the parking brake warning lamp and fluid level warning indicator.

Road or Roller Testing

NOTICE: If road testing, check the brake operation while still traveling at low speed before continuing with the test. If the brakes pull to one side, or appear to be otherwise faulty, do not continue with the road test until the fault has been found and rectified.

During the road or roller test, check:

- that the clutch pedal operation is not stiff or heavy.
- that the initial gear engagement is smooth and there is no evidence of clutch drag.
- that the parking brake control operates smoothly and releases quickly and completely.
- that the clutch takes up the drive smoothly, without slip or judder.
- that gear changing is smooth with no abnormal noises or vibrations from the transmission.
- the engine power output is satisfactory, full power is achieved, acceleration is smooth and pedal operation is not stiff or heavy, and engine speed returns to idle correctly.
- there is no excessive or abnormally colored smoke from the engine under normal driving, heavy load or overrun conditions.

- that steering operation, including power steering (if equipped), is smooth, accurate, not excessively heavy or with excessive free play or vibration.
- that the steering does not pull to one side and self centers smoothly after cornering.
- that the speedometer, coolant temperature gauge and tachometer (if equipped) register the correct readings and operate correctly.
- that the switches and controls operate smoothly and positively, warning and indicator lamps operate correctly and the direction indicator control self cancels when the steering is returned to the straight ahead position.
- that the heating and ventilation systems operate correctly and effectively.
- the brake operation and efficiency.

Brake Testing

WARNING: When brake testing, avoid breathing the fumes from hot brakes, this may contain asbestos dust which is hazardous to health. Failure to follow this instruction may result in personal injury.
For additional information, refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

NOTICE: Avoid brake testing on busy roads where it may cause inconvenience or danger to other road users.

NOTICE: Brake testing which includes heavy brake applications should not be carried out with new brake pads/discs or linings/drums until the components have bedded-in. New brake friction components will not reach full efficiency until the bedding-in process is complete.

Test the brakes at several speeds within the normal operating range using both light and heavy pedal pressure. Note any tendency to snatch, pull or drag, and any undue delay in application or release.

Allow the vehicle to coast and note any tendency to pull to one side, or evidence that the brakes are binding.

After stopping the vehicle (not immediately after a period of heavy braking), carefully check the brake temperature. A brake disc or brake drum that feels hot or is appreciably hotter than the others, indicates that the brake is binding.

After completion of the test, check for:

- oil, coolant, hydraulic, air and fuel leaks.
- abnormal temperature of any moving components or assemblies, for example wheel hubs, transmission and axle, which might indicate over tightness or lack of lubrication.

Climate Control System Health and Safety Precautions

WARNING: Only qualified technicians are allowed to work on air conditioning (A/C) systems.

WARNING: Air conditioning (A/C) system components can become particularly hot or cold.

WARNING: Make sure that the air conditioning (A/C) system is at ambient temperature before carrying out any repair.

WARNING: When handling refrigerants, always wear protective goggles and gloves made of fluoroelastomer. Leather or fabric gloves are not suitable.

WARNING: SKIN CONTACT: If liquid refrigerant comes into contact with the skin, it produces severe frostbite. Immediately flush affected areas with plenty of cold running water for 15 minutes. Seek medical attention.

WARNING: EYE CONTACT: If refrigerant comes into contact with the eyes, immediately flush the eyes with plenty of running water for 15 minutes. Seek medical attention.

WARNING: INHALED: Toxic gases generated when refrigerant is heated are hazardous to health. The gases have an irritating smell and can cause lung damage. The symptoms can continue for a long time after having been in contact with the gases. The gases can cause lung damage even if the amount of gas in the air is too small to smell.

WARNING: Refrigerant is flammable and explosive.

WARNING: Make sure that refrigerant bottles are not exposed to temperatures greater than 45°C.

WARNING: Make sure that the local regulations regarding work on air conditioning (A/C) systems are adhered to.

WARNING: Make sure that refrigerant bottles are closed properly.

WARNING: Gaseous refrigerant has a higher density than air. There is a danger of suffocation when working close to the ground or in workshop pits.

WARNING: Provide adequate ventilation when handling refrigerant.

WARNING: Never release refrigerant into the atmosphere.

WARNING: Only use special tools, equipment and lubricants that are approved for the type of refrigerant being used.

WARNING: Always follow the manufacturer's instructions for the correct servicing unit operating procedure.

NOTICE: Do not mix refrigerant oils for different types of refrigerant.

NOTICE: Never mix different types of refrigerant or equipment intended for them.

NOTICE: Only use refrigerant in gas form when filling the system through the low-pressure connection.

NOTICE: Only use refrigerant in liquid form when filling the system through the high-pressure connection.

NOTICE: Refrigerant attacks certain plastics. Only use seals suitable for refrigerant.

NOTICE: If the air conditioning (A/C) compressor is damaged, the fixed orifice tube can become blocked with metal particles.

NOTICE: Any sort of blockage in the refrigerant circuit will damage the air conditioning (A/C) compressor irreparably.

NOTICE: If the air conditioning (A/C) system has been opened for a period greater than 2 hours, a new receiver drier must be installed and the evacuating time to be increased by a minimum of 2 hours.

NOTE: *New air conditioning (A/C) compressors are delivered prefilled.*

NOTE: *Refrigerant oil in new air conditioning (A/C) compressors can contain Teflon, visible as white particles, which will not harm the system.*

Battery and Battery Charging Health and Safety Precautions

WARNING: Batteries contain sulphuric acid, avoid contact with skin, eyes or clothing. Wear safety goggles when working near the battery to protect against possible splashing of the acid solution.

WARNING: EYE CONTACT: If acid comes into contact with the eyes, flush immediately with plenty of running water for a minimum of 15 minutes. Seek immediate medical attention.

WARNING: SKIN CONTACT: If acid comes into contact with the skin, flush immediately with plenty of running water for a minimum of 15 minutes. Seek immediate medical attention.

WARNING: SWALLOWED: If acid is swallowed, rinse the mouth with plenty of water and then drink plenty of water or milk. Do not induce vomiting. Seek immediate medical attention.

WARNING: Batteries normally produce explosive gases. Do not allow naked flames, sparks or lighted substances to come near the battery.

WARNING: When charging the battery shield your face and wear safety goggles. Provide adequate ventilation.

NOTICE: Boost charging with excessive current or voltage above 16 volts will damage the battery.

Brake and Clutch Systems Health and Safety Precautions

WARNING: EYE CONTACT: Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with the eyes. Wash hands thoroughly after handling. If brake fluid comes into contact with the eyes, flush the eyes with plenty of cold running water for 15 minutes. Seek medical attention for any persistent eye irritation or abnormality.

WARNING: SWALLOWED: Brake fluid contains polyglycol ethers and polyglycols. If swallowed, drink plenty of water. Seek immediate medical attention.

WARNING: INHALED: Dust from friction materials can be harmful if inhaled.

WARNING: Only use new specified brake fluid from airtight containers.

NOTICE: If brake fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

Copyright © 2016 Ford Motor Company

Steering System Health and Safety Precautions

WARNING: When handling the power steering fluid, always wear protective goggles and gloves made of nitril.

WARNING: EYE CONTACT: Power steering fluid contains long chain alkyl amine thiophosphate. Avoid contact with the eyes. Wash hands thoroughly after handling. If power steering fluid comes into contact with the eyes, flush the eyes with plenty of cold running water for 15 minutes. Seek medical attention for any persistent eye irritation or abnormality.

WARNING: SKIN CONTACT: If power steering fluid comes into contact with the skin, remove contaminated clothing. Wash affected areas of skin with soap and water. Seek medical attention for any persistent skin irritation or abnormality.

WARNING: INHALED: If oil mist is inhaled, move a victim to fresh air. Keep a victim warm and at rest. Seek immediate medical attention in cases of throat irritation or coughing.

WARNING: SWALLOWED: Power steering fluid contains long chain alkyl amine thiophosphate. If swallowed, drink plenty of water. Seek immediate medical attention.

NOTICE: If the power steering fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

Copyright © 2016 Ford Motor Company

Engine Cooling System Health and Safety Precautions

WARNING: Extreme care must be exercised when handling hot fluids. Always wash off spilled fluids from affected areas of skin immediately.

WARNING: Vapors may be given off from antifreeze when heated. Avoid breathing these vapors.

WARNING: SKIN CONTACT: Antifreeze may be absorbed through the skin in toxic or harmful quantities.

WARNING: SWALLOWED: If antifreeze is swallowed, drink plenty of water, induce vomiting. Seek immediate medical attention.

WARNING: Antifreeze must not be used in any cooling or industrial water system that is connected or linked to general water supplies.

Gasoline and Gasoline-Ethanol Fuel Systems Health and Safety Precautions

WARNING: Fuel may not give adequate warning before toxic or harmful effects arise.

WARNING: Exposure to fuel can be harmful and can cause severe health damage or death.

WARNING: Extreme care must be exercised when handling hot fluids. Always wash off spilled fluids from affected areas of skin immediately.

WARNING: Highly flammable mixtures are always present and may ignite when working on fuel systems. Do not allow naked flames, sparks or lighted substances to come near fuel related components.

WARNING: Fuel must not be used as a cleaning agent.

WARNING: Keep fuel containers tightly closed, out of direct sunlight and in a cool area. Keep away from heat sources, ignition sources and oxidizing agents.

WARNING: SKIN CONTACT: Excessive or prolonged skin contact with diesel fuel may cause serious skin disorders including skin cancer.

WARNING: SKIN CONTACT: Fuel is mildly irritating to the skin and may cause dermatitis due to defatting effect. Remove contaminated clothing. Wash affected areas of skin with soap and water. Seek medical attention for any persistent skin irritation or abnormality. Wash contaminated clothing before reuse.

WARNING: EYE CONTACT: Fuel is mildly irritating to the eyes. Flush with plenty of running water, blinking as often as possible. Do not force the eyelid open. Seek medical attention for any persistent eye irritation or abnormality.

WARNING: SWALLOWED: Fuel is moderately toxic and tends to foam on vomiting. If drawn into the lungs, inflammation may develop. Do not induce vomiting. If spontaneous vomiting occurs place the victim in a forward position to reduce the risk of fuel being drawn into the lungs. Give nothing by mouth. If breathing but unconscious, place in the recovery position. If breathing has stopped, apply artificial respiration. Seek immediate medical attention.

WARNING: INHALED: Fuel is toxic to the respiratory and other body systems. Exposure may result in various symptoms including drowsiness, unconsciousness or severe health damage. Move a victim to fresh air. Keep a victim warm and at rest. If unconscious, place in the recovery position. If not breathing, apply artificial respiration. Give cardiac massage if necessary. Seek immediate medical attention.

NOTICE: Fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is essential that absolute cleanliness is observed when working with these components.

NOTICE: Make sure that the workshop area in which the vehicle is being worked on is as clean and as dust free as possible.

Diesel Fuel System Health and Safety Precautions

WARNING: Fuel may not give adequate warning before toxic or harmful effects arise.

WARNING: Exposure to fuel can be harmful and can cause severe health damage or death.

WARNING: Provide adequate ventilation when working on fuel systems.

WARNING: Extreme care must be exercised when handling hot fluids. Always wash off spilled fluids from affected areas of skin immediately.

WARNING: Fuel must not be used as a cleaning agent.

WARNING: Keep fuel containers tightly closed, out of direct sunlight and in a cool area. Keep away from heat sources, ignition sources and oxidizing agents.

WARNING: SKIN CONTACT: Fuel is mildly irritating to the skin and may cause dermatitis due to defatting effect. Remove contaminated clothing. Wash affected areas of skin with soap and water. Seek medical attention for any persistent skin irritation or abnormality. Wash contaminated clothing before reuse.

WARNING: SKIN CONTACT: Excessive or prolonged skin contact with diesel fuel may cause serious skin disorders including skin cancer.

WARNING: EYE CONTACT: Fuel is mildly irritating to the eyes. Flush with plenty of running water, blinking as often as possible. Do not force the eyelid open. Seek medical attention for any persistent eye irritation or abnormality.

WARNING: SWALLOWED: Fuel is moderately toxic and tends to foam on vomiting. If drawn into the lungs, inflammation may develop. Do not induce vomiting. If spontaneous vomiting occurs place the victim in a forward position to reduce the risk of fuel being drawn into the lungs. Give nothing by mouth. If breathing but unconscious, place in the recovery position. If breathing has stopped, apply artificial respiration. Seek immediate medical attention.

WARNING: INHALED: Fuel is toxic to the respiratory and other body systems. Exposure may result in various symptoms including drowsiness, unconsciousness or severe health damage. Move a victim to fresh air. Keep a victim warm and at rest. If unconscious, place in the recovery position. If not breathing, apply artificial respiration. Give cardiac massage if necessary. Seek immediate medical attention.

NOTICE: Fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is essential that absolute cleanliness is observed when working with these components.

NOTICE: Make sure that the workshop area in which the vehicle is being worked on is as clean and as dust free as possible.

NOTICE: Make sure that non-plated tools are used.

NOTICE: Tools must be cleaned using a new brush and fresh suitable evaporative cleaning agent.

NOTICE: Make sure to use a steel topped workbench covered with clean, lint-free, non-flocking material.

NOTICE: Make sure that all parts removed from the vehicle are placed on the lint-free, non-flocking material.

NOTICE: Make sure that any protective clothing worn is clean and made from lint-free, non-flocking material.

NOTICE: Make sure to wear non-powdered latex type gloves.

NOTICE: Make sure to protect all electrical components and connectors with lint-free non-flocking material before using the suitable evaporative cleaning agent.

NOTE: *Soot, discomfort and irritation usually give adequate warning of hazardous fume concentrations.*

Liquefied Petroleum Gas (LPG) and Compressed Natural Gas (CNG) Fuel Systems Health and Safety Precautions

WARNING: Vehicles with scheduled remote start technology may start at any time. Make sure the scheduled remote start system is disabled when servicing or working in close proximity to rotating engine parts. Failure to follow this instruction may result in serious personal injury.

WARNING: Service of Compressed Natural Gas (CNG) or Liquefied Petroleum Gas (LPG) vehicle systems is restricted to qualified personnel and authorized workshops. The required qualifications vary by region. Always observe local laws and legislative directives regarding CNG or LPG vehicle service. Failure to follow this instruction may result in serious personal injury or death.

WARNING: Compressed Natural Gas (CNG) or Liquefied Petroleum Gas (LPG) is highly flammable and toxic when contained in unventilated work areas. Work in a dedicated area with good ventilation and no sources of ignition. Failure to follow these instructions may result in serious personal injury or death.

WARNING: Liquefied Petroleum Gas (LPG) is capable of harming eyes or freezing skin. Always wear personal protection gear, including safety goggles and gloves to avoid contact with liquid gas. Failure to follow these instructions may result in serious personal injury.

WARNING: Always observe local regulations regarding storage or indoor parking of Liquefied Petroleum Gas (LPG) vehicles. Do not park vehicles near sources of heat, ignition or unventilated open pits. Failure to follow these instructions may result in serious personal injury.

WARNING: Liquefied Petroleum Gas (LPG) is heavier than air and will collect in low points in a building, such as drains or work pits. Never discharge a tank inside a building. If possible, tanks should be discharged beforehand by running the vehicle. Any discharge of gas must be done outside in well-ventilated flat areas. Failure to follow these instructions may result in the accumulation of combustible gas, which could cause personal injury or death in a fire or explosion.

WARNING: Extreme heat such as paint drying ovens will cause an increase in Compressed Natural Gas (CNG) or Liquefied Petroleum Gas (LPG) fuel tank pressure. The fuel tank must be removed before using paint drying ovens with temperatures above 60° C. Failure to follow this instruction may result in a release of combustible gas, which could cause personal injury or death in a fire or explosion.

WARNING: Liquefied Petroleum Gas (LPG) may present a personal health hazard if handled improperly. Always consult the LPG material safety information sheet before servicing a LPG vehicle. Failure to follow this instruction may result in serious personal injury or death.

Copyright © 2016 Ford Motor Company

Compressed Natural Gas (CNG) Fuel Systems Health and Safety Precautions

WARNING: Highly flammable and explosive mixtures are always present and may ignite when working on fuel systems. Do not allow naked flames, sparks or lighted substances to come near fuel related components.

WARNING: Only qualified technicians are allowed to work on CNG systems.

Make sure that all components of the CNG fuel system are labeled with the ECE R 110 approval label.

Fuel may not give adequate warning before toxic or harmful effects arise.

Exposure to fuel can be harmful and can cause severe health damage or death.

EYE CONTACT: If CNG comes into contact with the eyes, immediately flush the eyes with plenty of running water for 15 minutes. Seek immediate medical attention.

INHALED: If CNG is inhaled, move a victim to fresh air. Keep a victim warm and at rest. If breathing stops, provide artificial respiration. Seek immediate medical attention.

SKIN CONTACT: If CNG comes into contact with the skin, it produces severe frostbite. Immediately flush affected areas with plenty of cold running water. Seek immediate medical attention.

Provide adequate ventilation when working on fuel systems.

Keep fuel containers tightly closed, out of direct sunlight and in a cool area. Keep away from heat sources, ignition sources and oxidizing agents.

Pyrotechnic Device Health and Safety Precautions

WARNING: Service and handling of Pyrotechnic Components is restricted to qualified personnel. The required qualifications vary by region. Always observe local laws and legislative directives regarding Pyrotechnic Components service and handling. Failure to follow this instruction may result in serious personal injury or death.

WARNING: INHALED: Exposure to pyrotechnic residue may cause low blood pressure, severe headache, irritation of mucous membranes, fainting, shortness of breath or rapid pulse. Move a victim to fresh air. Seek immediate medical attention.

WARNING: EYE CONTACT: Exposure to unburned pyrotechnic residue may cause irritation, burning and etching of the eyes. Flush immediately with plenty of cold running water for at least 15 minutes. Seek immediate medical attention.

WARNING: EYE CONTACT: Exposure to burned pyrotechnic residue may cause irritation, burning and etching of the eyes. Flush immediately with diluted boric acid solution. Seek immediate medical attention.

WARNING: SKIN CONTACT: Unburned pyrotechnic residue may be rapidly absorbed through the skin in toxic quantities. Wash immediately with plenty of soap and water. Seek medical attention.

WARNING: SKIN CONTACT: Burned pyrotechnic residue may be rapidly absorbed through the skin in toxic quantities. Wash with plenty of water. Do not use soap. Seek medical attention.

WARNING: SWALLOWED: Unburned pyrotechnic residue is extremely toxic. If conscious drink plenty of water then induce vomiting. Seek immediate medical attention. If unconscious, or in convulsions do not attempt to induce vomiting or give anything by mouth. Seek immediate medical attention.

WARNING: SWALLOWED: Burned pyrotechnic residue is extremely toxic. Drink plenty of water and seek immediate medical attention.

WARNING: The deployment key must only be accessible to authorized personnel.

WARNING: Make sure that the deployment key remains removed from the deployment equipment except during deployment.

WARNING: If permenantly disabling or enabling the passenger air bag a new seat belt for vehicles without or with a passenger air bag must be installed.

WARNING: Undeployed pyrotechnic components must not be deployed in the vehicle.

WARNING: Pyrotechnic components must be deployed following local regulations.

WARNING: Check thoroughly that no loose objects can be spread during the deployment of pyrotechnic components.

WARNING: Pyrotechnic components must be transported following local regulations.

WARNING: Never carry out any electrical measurement on disconnected, undeployed pyrotechnic components.

WARNING: Pyrotechnic components must not be disassembled.

WARNING: Pyrotechnic components are not interchangeable between vehicles.

WARNING: Always carry a live air bag module away from the body with the air bag or trim cover pointing upwards.

WARNING: Live air bag modules must be placed in a suitable cage when removed from the vehicle. The air bag or trim cover must be facing upwards.

WARNING: Do not install a rearward facing child safety seat to the passenger seat with an activated passenger air bag.

NOTICE: Pyrotechnic components must not be subjected to temperatures higher than 110°C.

NOTICE: Never install aftermarket accessories to the vehicle on or adjacent to the supplemental restraint system module.

Window Glass Health and Safety Precautions

WARNING: Cured polyurethane (PU) adhesive can degrade if subjected to high temperatures. Isocyanide compounds can be released when grinding or welding in close proximity to cured PU adhesive.

WARNING: SKIN CONTACT: Prolonged exposure to polyurethane (PU) adhesive may cause skin irritation. If PU adhesive comes into contact with the skin, remove any contaminated clothing. Immediately wash the skin with soap and water. Seek medical attention for any persistent skin irritation or abnormality.

WARNING: EYE CONTACT: Polyurethane (PU) adhesive may cause severe irritation or damage. If PU adhesive comes into contact with the eyes, immediately flush eyes with plenty of running water for at least 15 minutes. Seek immediate medical attention.

WARNING: SWALLOWED: If polyurethane (PU) adhesive is swallowed, flush the mouth thoroughly. Do not induce vomiting. Provide rest, warmth and fresh air. Seek immediate medical attention.

WARNING: INHALED: Persons having a respiratory allergy may have an allergic reaction when handling polyurethane (PU) adhesive.

WARNING: INHALED: Polyurethane (PU) adhesive can cause asthma like symptoms. Isocyanate vapor from primer or PU adhesive can cause allergies in the respiratory tract.

WARNING: INHALED: If polyurethane (PU) adhesive fumes are inhaled, move victim to fresh air. Provide oxygen if necessary. If breathing stops, provide artificial respiration. Keep a victim warm and at rest. Seek immediate medical attention.

NOTICE: Make sure that the direct glazing for bonded glass cutting blades are changed where the cutting depth changes to avoid damage to the body and trim panels.

NOTICE: During the curing period of the PU adhesive, the door windows must be left open to avoid a build up of pressure when the doors are opened and closed.

Copyright © 2016 Ford Motor Company

Body Repair Health and Safety and General Precautions

WARNING: Always refer to Material Safety Data Sheet (MSDS) when handling chemicals and wear protective equipment as directed. Examples may include but are not limited to respirators and chemically resistant gloves. Failure to follow these instructions may result in serious personal injury.

WARNING: Always wear protective equipment including eye protection with side shields, and a dust mask when sanding or grinding. Failure to follow these instructions may result in serious personal injury.

WARNING: Do not carry out body side sectioning repairs in areas of door hinge or striker anchoring points. Welding within 50 mm (1.96 in) of door hinge or striker locations may compromise structural integrity during a collision. Failure to follow these instructions may result in serious injury to vehicle occupant(s).

WARNING: Invisible ultraviolet and infrared rays emitted in welding can injure unprotected eyes and skin. Always use protection such as a welder's helmet with dark-colored filter lenses of the correct density. Electric welding will produce intense radiation, therefore, filter plate lenses of the deepest shade providing adequate visibility are recommended. It is strongly recommended that persons working in the weld area wear flash safety goggles. Also wear protective clothing. Failure to follow these instructions may result in serious personal injury.

WARNING: All safety belt components must be inspected and corrected as part of any collision repair. Inspect all safety belt components as prescribed by Safety Belt Inspection and Repair After a Collision found in Section 501-20A General Procedures of this manual. Failure to follow this instruction may result in incorrect operation of the safety belt system and increase the risk of serious personal injury or death in a crash.

WARNING: If a vehicle has been in a crash, inspect the restraints control module (RCM) and the impact sensor (if equipped) mounting areas for deformation. If damaged, restore the mounting areas to the original production configuration. A new RCM and sensors must be installed whether or not the air bags have deployed. Failure to follow these instructions may result in serious personal injury or death in a crash.

WARNING: Collision damage repair must conform to the instructions contained in this workshop manual. Replacement components must be new, genuine Ford Motor Company parts. Recycled, salvaged, aftermarket or reconditioned parts (including body parts, wheels or safety restraint components) are not authorized by Ford.

Departure from the instructions provided in this manual, including alternate repair methods or the use of substitute components, risks compromising crash safety. Failure to follow these instructions may adversely affect structural integrity and crash safety performance, which could result in serious personal injury to vehicle occupants in a crash.

Copyright © 2016 Ford Motor Company

Wheel and Tire Health and Safety Precautions

WARNING: Never inflate a tire that has been run flat without first removing the tire from the wheel to inspect for damage. A damaged tire can fail during inflation. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not mount tube-type tires on tubeless wheels or tubeless tires on tube-type wheels. Incorrect combinations could result in tire separation from wheel and may result in serious injury to vehicle occupant(s).

WARNING: Cracked wheels can be dangerous. Deflate tires on cracked wheels prior to removal of wheels from the vehicle. Failure to follow this instruction may result in serious personal injury.

WARNING: Retighten wheel nuts within 160 km (100 mi) after a wheel is reinstalled. For dual rear wheel (DRW) only, a second retightening is required within 800 km (500 mi). Wheels can loosen after initial tightening. Failure to follow this instruction may result in serious injury to vehicle occupant(s).

WARNING: Always match the tire size to the wheel size during assembly. Incorrect matching can result in tire bead damage or tire separation from the wheel. Failure to follow this instruction may result in serious personal injury to technician or vehicle occupant(s).

WARNING: Do not weld or peen wheels. A wheel needing such repairs must have a new wheel installed. Failure to follow these instructions may result in wheel failure and serious personal injury.

Diagnostic Methods

Effective Diagnostic Techniques

NOTE: *Do not use this document in place of Ford-prescribed Symptom Based Diagnostics or Workshop Manual diagnostics. Diagnostic Methods is intended to provide Ford vehicle diagnostic information only for support of Ford-prescribed diagnostics.*

The following diagnostic process is critical for consistently successful diagnoses. Random methods work inconsistently and often lead to multiple repairs and the accompanying frustration.

- Understand and verify the **symptom**.
  - Understanding a symptom requires understanding normal operation.
  - Duplicate the concern. Recreate the same conditions that demonstrated the original concern (road testing may be necessary).
- Determine the responsible **system**.
  - Gather data, such as a visual inspection and an OASIS report.
  - Perform system tests, such as pressure tests or DTC retrieval.
- Identify the responsible **component**.
  - Test the suspect component and related parts.
- Determine the root **cause**
  - Examine related components (wiring faults, misalignments, incorrect adjustments) that may be the actual cause or may have caused the component failure.
  - Repair all related faults to avoid repeat failures.
  - Verify the repair has corrected the concern (and not created any new ones) using the identical conditions that demonstrated the original concern.

Diagnostic Scan Tool Testing

Network Test

Performing a network test is always recommended for analysis of electronic system concerns. Always solve network issues before addressing individual symptoms or DTCs.

Recommended Practices: Refer to section 418-00 Module Communications Network, Diagnosis and Testing, to diagnose a network outage or no response from an individual module (or modules).

Diagnostic Trouble Code Retrieval

Generally, a good diagnostic strategy is to resolve all on-demand codes related to the system concern. Retrieving all continuous DTCs can also be beneficial to understand historic issues or issues outside of the suspect system that may be affecting your concern. On-demand testing should be done to ensure the fault represented by a continuous DTC is still present.

Continuous Memory Diagnostic Trouble Codes

Modules that produce diagnostic trouble codes have a program that evaluates system conditions, normally while the vehicle or system is in use. Module inputs can be checked for values indicating an electrical fault with the monitoring circuit or component. Module outputs can be monitored for correct function. Codes are stored when predefined limits are exceeded and retained even if the ignition is turned off (generally a DTC is retained for 40+ ignition cycles). Not all continuous codes have a matching on-demand code - and vice versa. This varies with different modules. For example, some network communication codes are continuous only. It is important to note that the presence of a continuous DTC does not guarantee that the fault currently exists.

Clearing Continuous Memory Diagnostic Trouble Codes

Continuous Memory DTCs caused by the issue being repaired or created during the diagnosis and repair must be cleared or they will confuse future diagnosis. NOTE: Do not clear DTCs from unresolved vehicle issues.

Ford On-Demand Diagnostic Trouble Codes

Ford Motor Company modules have a unique feature that performs a special diagnostic program at the request of the technician (using a diagnostic scan tool). This "On-demand" diagnostic program can exercise system outputs not normally running when the car is parked and record observed faults. These diagnostic codes are communicated to the scan tool, but are not recorded in module memory. An on-demand test is an effective tool for evaluating real input and

output conditions during module activity – activity that might not normally be occurring during service bay conditions. For example, an air suspension module on-demand test can run the compressor, vent the system, and observe the report from the height sensor even when the car is already at correct trim height and not requiring height adjustment.

Network Communication Diagnostic Trouble Codes

Network DTCs (U-prefix codes) are often a result of intermittent concerns such as damaged wiring or low battery voltage occurrences. Additionally, vehicle repair procedures (such as module reprogramming or diagnostics with modules disconnected) often set network DTCs. Replacing a module to resolve a network DTC is unlikely to resolve the concern. To prevent recurrence of intermittent network concerns, inspect all network wiring, especially in-line and module connectors. Test the vehicle battery to make sure the vehicle voltage will be stable.

Recommended practice: Clear the DTC and retest. If the DTC repeats, test the vehicle communication network.

DTC Nomenclature (SAE J2012 and ISO 14229)

Many modules use 5-character DTCs followed by a 2-character failure-type code. The failure-type (sometimes called "fault byte") codes provide information about specific fault conditions such as opens or shorts to ground. Continuous memory DTCs have an additional 2-character DTC status code suffix to assist in determining DTC history.

Integrated Diagnostic System Scan Tool Usage

If The Integrated Diagnostic System Scan Tool Does Not Communicate With The Vehicle Communication Module

1. Check the Vehicle Communication Module connection and power from the DLC.
2. Check the communication between the scan tool and the Vehicle Communication Module.
3. Follow scan tool instructions to retry.

If The Integrated Diagnostic System Scan Tool Does Not Communicate With The Vehicle

The IDS scan tool first attempts to communicate with the PCM. After establishing communication with the PCM, the scan tool then attempts to communicate with all other modules on the vehicle.

1. Verify the scan tool operation with a known good vehicle.
2. Verify the ignition is ON.
3. If an IDS session cannot be established with the vehicle, (IDS may state "No communication can be established with the PCM"):
    - Choose "NO" when the scan tool prompts to retry communication.
    - Enter a PCM engineering part number, tear tag, or calibration number to identify the vehicle and start a session. These identifying numbers may be found:
        - The PCM engineering part number and the 4-character tear tag are printed on the PCM label.
        - (PTS website users only) The PCM engineering part number can be determined from OASIS using the VIN. Choose “HVBoM” from the OASIS tab menu and search Powertrain engine modules for the PCM engineering part number (If the first character is a "P" in the part number, enter only the characters following the "P" into IDS).
    - Establish a session based on the PCM information (above).
4. Using the tool box menu, run the network test.
    - Determine if all modules on the network are unresponsive or if only the PCM does not communicate.
    - **Recommended practice:** Refer to section 418-00 Module Communications Network, Diagnosis and Testing, to diagnose the network outage or no response from the PCM.

Measuring Automotive Circuits

Wiring Pin (Terminal) Fit And The Use Of Rotunda Flex Probes

- To avoid wiring pin (terminal) damage, Rotunda Flex Probes NUD105-R025D or Terminal Probe Kit 29-011A must be used to connect test equipment or jumper wires to pins (terminals).
- Male to female pin (terminal) fit is critical for correct connection and durability.
    - Pin (terminal) fit may be checked by using the mating pin (terminal) to test for normal separation force (a damaged pin or terminal will have very low separation force from the mating pin or terminal)
    - Correctly checking the separation force of small pins (terminals) may require removal of the connector terminal guide/retainer if it adds drag to the pin (terminal) insertion or removal
- Replace damaged connectors or pins (terminals).

Checking Power-Providing Circuits

- Measuring a power wire with the intended load disconnected using a Digital Multimeter (DMM) will only find open circuits (open fuse or wire).
- **Recommended practice:** Circuits carrying approximately 200-1000 mA* may be loaded with a 250-350 mA test light. Measure circuit voltage with a Digital Multimeter (DMM) while the test light is connected and illuminated. A reduction in the voltage present during test-light-loading indicates excessive circuit resistance.
- **Recommended practice:** Circuits carrying more than one ampere* should be loaded with a device requiring similar current (e.g., a headlamp bulb may be effective). A reduction in the voltage present during loading indicates excessive resistance.
- *Circuit current is matched to wire gauge/size; Examples:
  - Conductor sizes of 24 gauge (.5 mm) or smaller are generally used to carry approximately 1 ampere (1000 mA) or less. Use of the test light to load these circuits is appropriate.
  - Conductor sizes of 20 gauge (.8 mm) or larger are generally used to carry approximately 5 amperes (5000 mA) or more. Match the substitute load (measure substitute load current first as necessary) to this current level.

Checking Ground-Providing Circuits

- The best method of checking ground circuits is to measure the circuit voltage drop during component operation (or attempted operation).
- An ohmmeter may be accurately used if the battery has been disconnected.
- **Recommended practice:** Expect less than 2 ohms for most small diameter (18 gauge and smaller) wires.
- Ohmmeter accuracy is limited to circuits carrying less than approximately 5 amperes (this is due to the fact that very small resistances, undetectable by a Digital Multimeter (DMM), cause significant voltage loss in higher current circuits).
- Digital Multimeter (DMM) ohmmeter readings are easily corrupted by the normal voltage present (battery connected) in many ground circuits.
  - **Recommended practice:** Reverse the leads and check for changes in the measurement. Reversing the Digital Multimeter (DMM) lead connections should never change the resistance measurement (unless the circuit contains a semi-conductor). Measurement (non-semi-conductor) differences when leads are interchanged at the test points indicate invalid test results. The presence of voltage corrupts the reading, and causes the meter reading to change when the leads are reversed.

Checking Circuit Continuity

- **Recommended practice:** Expect less than 2 ohms of resistance for most wires.
- Ohmmeter low-resistance resolution (approximately 0.1 ohm) limits its use to circuits carrying less than approximately 5 amperes. This is due to the fact that very small resistances, below the resolution of a Digital Multimeter (DMM), cause significant voltage loss in higher current circuits.
- The Digital Multimeter (DMM) applies a small amount of voltage to the circuit or component to calculate resistance. As a result, Digital Multimeter (DMM) ohmmeters are very sensitive to any level of voltage present. Voltage present in the circuit will corrupt the Digital Multimeter (DMM) reading.

Checking For Unintended Continuity (Shorts) To Other Circuits

- A Digital Multimeter (DMM) ohmmeter may be used to detect undesired circuit connections to:
  - Ground
  - Other unpowered circuits
- **Recommended practice:** Expect greater than 10,000 ohms of resistance between two separate circuits; the best result is an open circuit Digital Multimeter (DMM) indication (no detected resistance).
- Shorts to voltage are checked with a voltmeter
- **Recommended practice:** Turn ignition on (with battery connected) and measure the circuit for any voltage present (none should be present)

Checking Circuits By Back-Probing A Connector

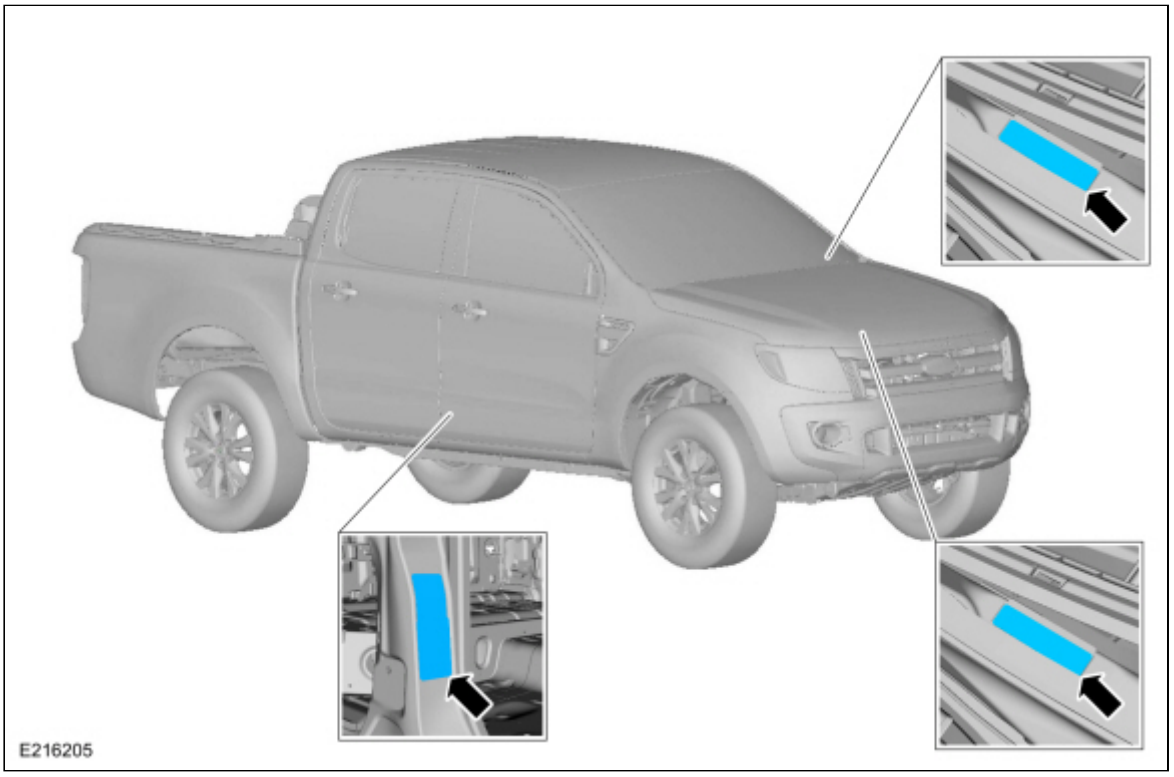
- Back-probing should be a testing method of last resort. It should only be employed where a diagnostic step requires a circuit to be tested under actual operating conditions. Back-probing is a risky testing method due to the uncertainty of the probe connection and the possibility of damaging terminals.
- Do not force test leads or other probes into connectors. Adequate care must be exercised to avoid connector terminal damage while ensuring that good electrical contact is made with the circuit or terminal. Failure to follow these instructions may cause damage to wiring, terminals, or connectors and subsequent electrical faults.
  - Use back probes specifically designed for the purpose to assist in making a good test connection and to prevent connector or terminal damage during back-probing.
- Do not test for the presence of voltage at a single point where zero volts is a possible result (you cannot tell the difference between a bad probe contact and a zero volt result).
- Do not test for continuity/opens (using an ohmmeter) between two points (you cannot tell the difference between bad probe contacts and an open circuit).
- Back-probing may be used where the circuit must be analyzed with the voltage-drop method (if the circuit carries greater than 5 amperes and no other means of testing will definitively eliminate circuit resistance as a

possible fault). A zero-volt result indicates incorrect test conditions (no current flow) or bad back-probe connections.
- Occasionally, module failure mode behavior will change the operation of a circuit when it is opened for testing. Back-probing is an acceptable remedy for these testing dilemmas.

Circuit Analysis Using Jumper Wires (Creating Substitute Circuits)

- Jumper wires may be employed for circuit analysis.
- **Cautions:**
  - Always use fused jumper wires — the recommended universal-testing jumper wire fuse is 2-5 amperes; larger fuse ratings should be used only in special circumstances.
  - Use flex probes or equivalent to prevent connector terminal damage (flex probes are not intended to carry higher currents necessary to operate motors such as a cooling fan or blower motor).
  - Follow workshop manual testing directions when using jumper wires to avoid component or harness damage due to incorrect jumper connections.
  - Never repair a circuit by adding a new wire in parallel to the old one (overlaying the circuit) without fully understanding what caused the circuit to fail. Always find, examine, and repair the fault to correct the root cause and to repair any adjacent wiring that has been damaged.

Checking Modules



- Generally, module failure rate is very low and therefore replacement modules usually do not resolve the root cause. Incorrect replacement of a module is often the result of inadequate testing.
  - Understand the correct module function.
  - Make sure programmable parameters are set correctly for the function in question (Refer to 418-01 Module Configuration for more information).
  - Resolve DTCs first — as directed by Diagnostic Routines.
  - Test all inputs, both hard-wired and networked.
  - Test outputs (see "Checking module switching circuits" below).
  - Check applicable TSBs for module software changes (flash programming).
- Checking module switching circuits.
  - Using the scan tool module-output command function (for example, IDS Output State Control) to activate components is a fast way to confirm an output is capable of being switched on by the module. Testing that reveals normal module-output function confirms the need to analyze the module inputs.
  - Don't apply ground or power directly to module-switched components with jumper wires (unless directed by a workshop manual procedure), as the component could be damaged by a direct connection to ground/power.

Identification Codes

NOTE: *The vehicle identification number (VIN) can be identified by an asterisk (*) at its start and finish.*

The vehicle identification number (VIN) is stamped on RH side of ladder frame of the vehicle . The VIN plate is located on the inside of the LH fender body panel, near to PCM. The code is stamped during production to enable the precise details of the vehicle build specification to be established.

Vehicle Identification Number

Item	Part Number	Description
1	—	VIN Positions 1, 2 and 3 — World Manufacturer Identifier
2	—	VIN Position 4 — Restraint-type code
3	—	VIN Positions 5, 6 and 7 — Vehicle line, series, body-type code

4	—	VIN Position 8— Engine-type code
5	—	VIN Position 9— Computer-generated check digit
6	—	VIN Position 10 — Model year code
7	—	VIN Position 11 — Assembly plant code
8	—	VIN Position 12-17— Production sequence number

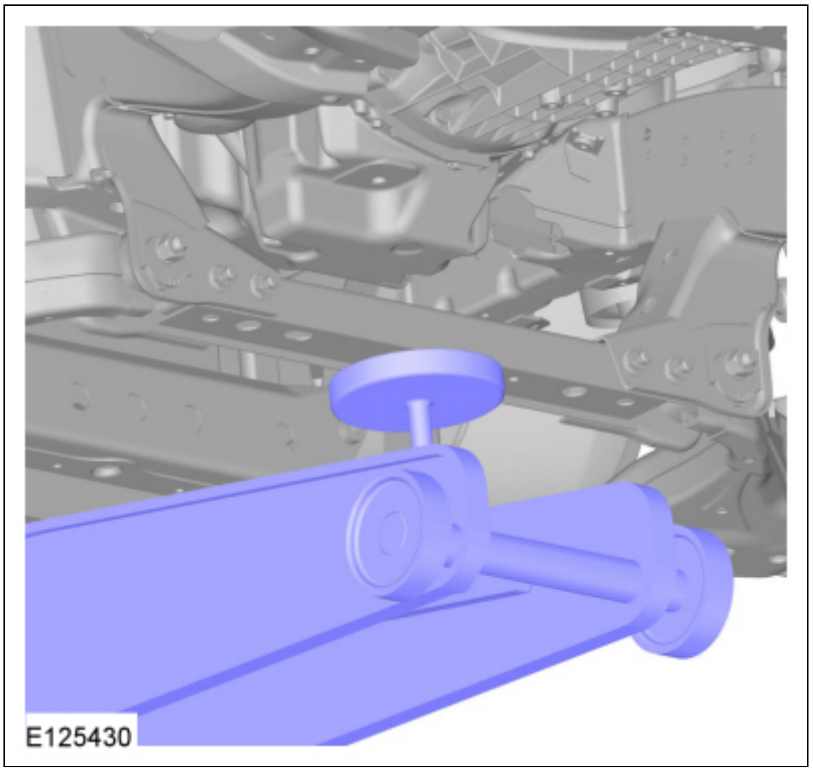
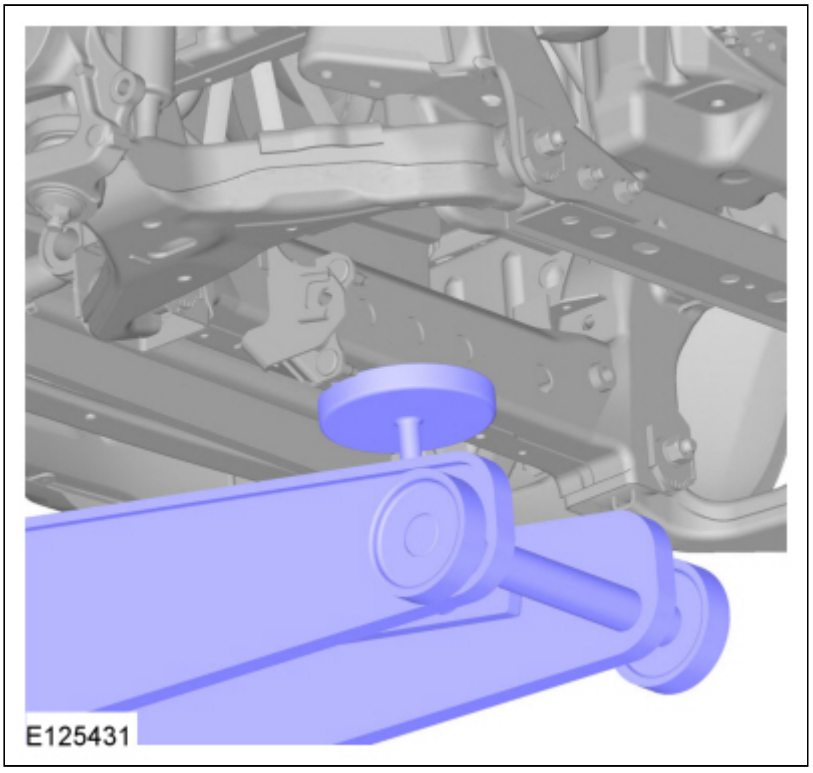
Jacking and Lifting - Overview



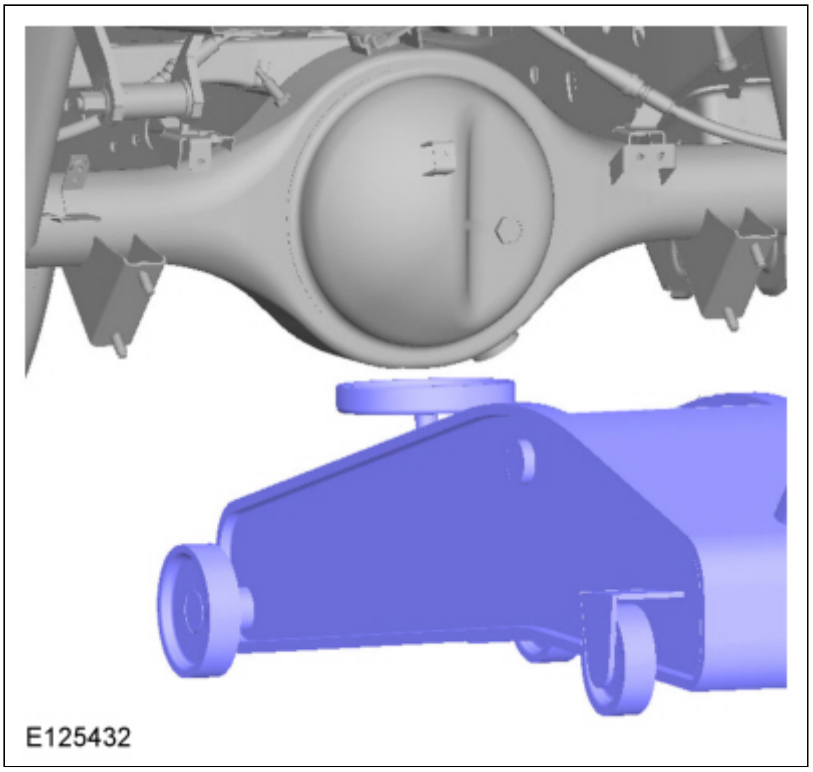
Jacking points

Only the specified jacking points may be used for jacking and supporting the vehicle.



Front

4X2

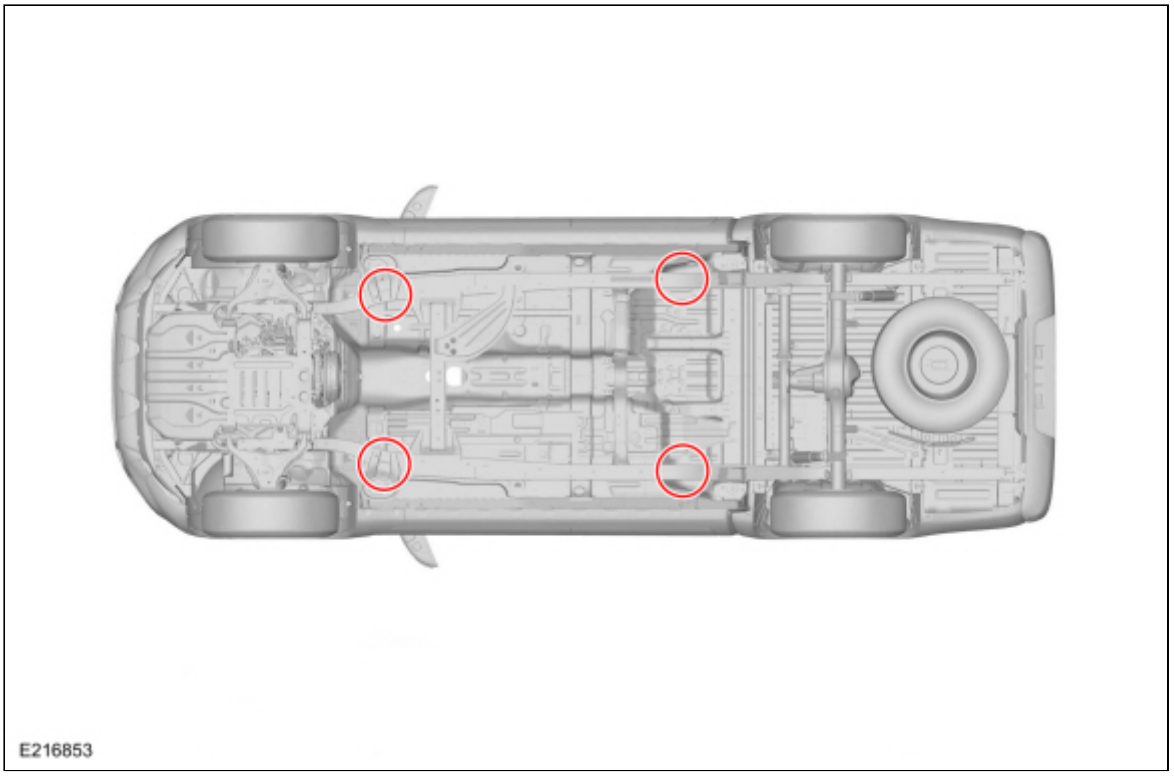


Use safety stands to support the vehicle after it has been lifted.

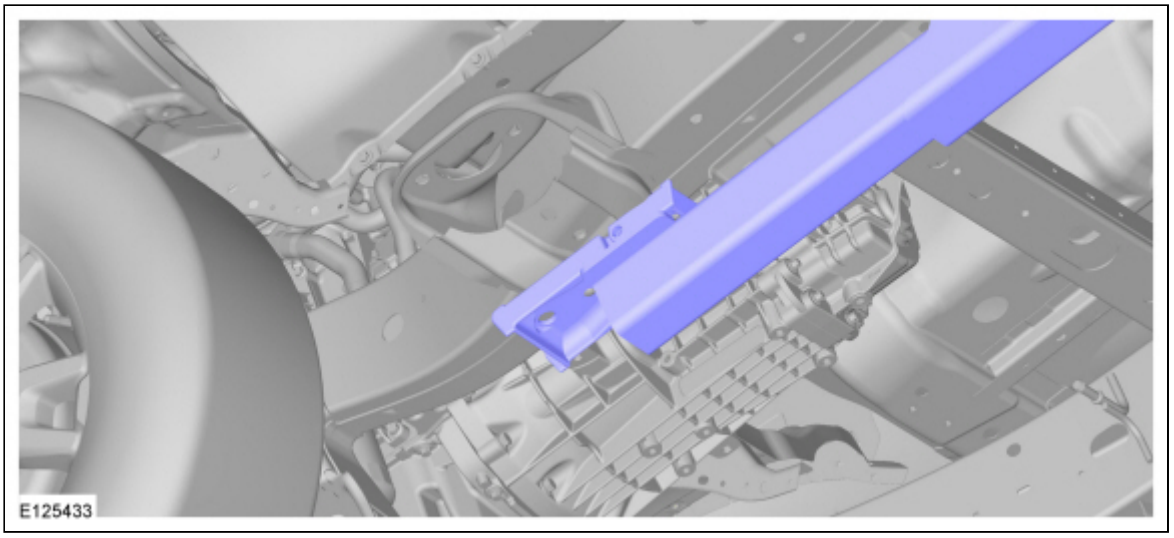
4X4

Use safety stands to support the vehicle after it has been lifted.

Rear

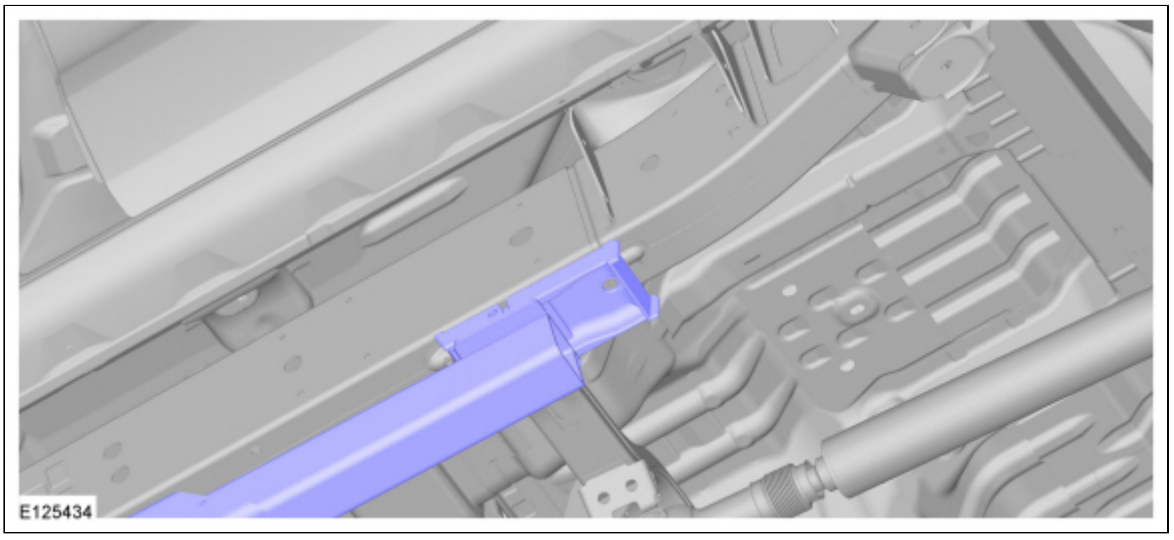


NOTE: *At the center of the rear diffferential.*



The rear jacking points are located on the rear axle.

Lifting points



WARNING: When raising a vehicle on a two-column hoist, use care when positioning the vehicle so that the hoisting forks do not interfere with side steps, suspension components, mounting brackets or stabilizer mounting brackets, if equipped. In addition, use care in hoist positioning to avoid possible damage to the axle or rear cover.

Noise, Vibration and Harshness (NVH)

Noise, vibration and harshness (NVH) is becoming more important as vehicles become more sophisticated and passenger comfort levels increase. This section is designed to aid in the diagnosis and testing and repair of NVH concerns.

- Noise is defined as sounds not associated with the operation of passenger compartment equipment that interface with customer satisfaction.
- Vibration is defined as impulses felt by the customer that are not caused by road surface changes.
- Harshness is a ride quality issue where the customer feels that the vehicle response to the road surface is sharply transmitted to the customer.

Diagnostic Theory

Diagnosis is more than just following a series of interrelated steps in order to find the solution to the specific condition. It is a way of looking at systems that are not functioning the way they should and finding out why. Also it is knowing how the system should work and whether it is working correctly.

There are basic rules for diagnosis. If these rules are followed, the cause of the condition is usually found the first time through the system.

Know the System

- Know how the parts go together.
- Know how the system operates as well as its limits and what happens when the system goes wrong.
- Sometimes this means checking the system against one that is known to be working correctly.

Know the History of the System

A clue in any one of these areas may save time:

- How old or new is the system?
- What kind of treatment has it had?
- Has it been serviced in the past in such a manner that might relate to the present condition?
- What is the service history?

Know the History of the Condition

- Did it start suddenly or appear gradually?
- Was it related to some other occurrence such as a collision or previous part replacement?
- Know how the condition made itself known; it may be an important clue to the cause.

Know the Probability of Certain Conditions Developing

- Look for the simple rather than the complex.
- For example:
    - Electrical conditions usually occur at connections rather than components.
    - An engine no-start is more likely to be caused by a loose wire or small adjustment rather than a sheared-off camshaft.
- Know the difference between impossible and improbable. Certain failures in a system can be improbable but still happen.
- New parts are just that, new. It does not mean they are always good functioning parts.

Do Not Cure the Symptom and Leave the Cause

Lowering the pressure in a front tire may correct the condition of a vehicle leaning to one side, but it does not correct the original condition.

Be Positive the Cause is Found

- Double check findings.
- What caused a worn component?
- A loose transmission or engine mount could indicate that other mounts are also loose.

Diagnostic Charts

Charts are a simple way of expressing the relationship between basic logic and a physical system of components. They help discover the cause of a condition in the least time. Diagnostic charts combine many areas of diagnosis into one visual display:

- Probability of certain things occurring in a system.
- Speed of checking certain components or functions before others.
- Simplicity of performing certain tests before others.
- Elimination of checking huge portions of a system by performing simple tests.
- Certainty of narrowing down the search to a small portion before performing in-depth testing.

The fastest way to find a condition is to work with the tools that are available. This means working with proven diagnostic charts and the correct special equipment for the system.

Copyright © 2016 Ford Motor Company

Noise, Vibration and Harshness (NVH)

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.
3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the concern is not visually evident, verify the symptom and REFER to the Symptom Chart.

How to Use this Diagnostic Procedure Section

- Noise, vibration and harshness (NVH) concerns have become more important as vehicles have become more sensitive to these vibrations. This section is designed to aid in identifying these concerns.
- The section provides diagnostic procedures based on symptom. If the condition occurs at high speed, for instance, the most likely place to start is under Shake and Vibration While Driving.
- The road test procedure will tell how to sort the conditions into categories and how to tell a vibration from a shake.
- A series of Road Test Quick Checks are provided to make sure that a cause is either pinpointed or eliminated.
- Name the condition, proceed to the appropriate section and locate the correct diagnosis. When the condition is identified, the job is partly done.
- Follow the diagnostic procedure as outlined.
- Quick Checks are described within the step, while more involved tests and adjustments are outlined in General Procedures.
- Always follow each step exactly and make notes to recall important findings later.

Customer Interview

The road test and customer interview (if available) provide information that will help identify the concern and will provide direction to the correct starting point for diagnosis.

Identify the Condition

NVH usually occur in four areas:

- tires
- engine accessories
- suspension
- driveline

It is important, therefore, that an NVH concern be isolated into its specific area(s) as soon as possible. The easiest and quickest way to do this is to carry out the Road Test as outlined. To assist in the diagnosis and testing procedure(s), use a suitable approved NVH diagnosis tester.

Noise Diagnostic Procedure

Non-Axle Noise

The five most common sources of non-axle noise are exhaust, tires, roof racks, trim panels and transmission.

Therefore, make sure that none of the following conditions are the cause of the noise before proceeding with a driveline teardown and diagnosis.

- In certain conditions, the pitch of the exhaust may sound very much like gear noise. At other times, it can be mistaken for a wheel bearing rumble.
- Tires, especially snow tires, can have a high pitched tread whine or roar, similar to gear noise. Radial tires may have this characteristic. Also, any non-standard tire with an unusual tread construction may emit a roar or whine noise.
- Trim panels can also cause whistling or whining noise.
- Clunk may be a metallic noise heard when the automatic transaxle is engaged in "R" (REVERSE) or "D" (DRIVE) or it may occur when the throttle is applied or released. It is caused by backlash somewhere in the driveline.
- Bearing rumble sounds like marbles being tumbled. This condition is usually caused by a damaged wheel

bearing.

Noise Conditions

- Gear noise is typically a howling or whining due to gear damage or incorrect bearing preload. It can occur at various speeds and driving conditions, or it can be continuous.
- Chuckle is a particular rattling noise that sounds like a stick against the spokes of a spinning bicycle wheel. It occurs while decelerating from 64 km/h (40 mph) and can usually be heard all the way to a stop. The frequency varies with vehicle speed.
- Knock is very similar to chuckle, though it may be louder and occurs on acceleration or deceleration. The teardown will disclose what has to be corrected.

Clicking, popping or grinding noises may be caused by the following:

- worn, damaged or incorrectly installed wheel bearing, suspension or brake component.

Check and rule out tires, exhaust and trim items before disassembling the transmission to diagnose and correct gear noise.

The noises described under Road Test usually have specific causes that can be diagnosed by observation as the unit is disassembled. The initial clues are the type of noise heard on the road test and driving conditions.

Vibration Conditions

Vibration at highway speeds may be caused by the following:

- out-of-balance front or rear wheels.
- out-of-round tires.

Shudder or vibration during acceleration may be caused by the following:

- damaged powertrain/drivetrain mounts.
- excessively high constant velocity (CV) joint operating angles caused by incorrect ride height. Check ride height, verify correct spring rate and check items under inoperative conditions.

Road Test

A gear-driven unit will produce a certain amount of noise. Some noise is acceptable and may be audible at certain speeds or under various driving conditions, as on a newly paved asphalt road. The slight noise is in no way detrimental and must be considered normal.

The road test and customer interview (if available) provide information needed to identify the condition and give direction to the correct starting point for diagnosis.

1. Make notes throughout the diagnosis routine. Make sure to write down even the smallest bit of information, because it may turn out to be the most important.

2. Do not touch anything until a road test and a thorough visual inspection of the vehicle have been carried out. Leave the tire pressures and vehicle load just where they were when the condition was first observed. Adjusting tire pressures, vehicle load or making other adjustments may reduce the condition(s) intensity to a point where it cannot be identified clearly. It may also inject something new into the system, preventing correct diagnosis.

3. Make a visual inspection as part of the preliminary diagnosis routine, writing down anything that does not look right. Note tire pressures, but do not adjust them yet. Note leaking fluids, loose nuts and bolts, or bright spots where components may be rubbing against each other. Check the load space for unusual loads.

4. Road test the vehicle and define the condition by reproducing it several times during the road test.

5. Carry out the Road Test Quick Checks as soon as the condition is reproduced. This will identify the correct diagnostic procedure. Carry out the Road Test Quick Checks more than once to verify they are providing a valid result. Remember, the Road Test Quick Checks may not tell where the concern is, but they will tell where it is not.

Road Test Quick Checks

1. 24-80 km/h (15-50 mph): with light acceleration, a moaning noise is heard and possibly a vibration felt in the front floor panel. It is usually worse at a particular engine speed and at a particular throttle setting during acceleration at that speed. It may also produce a moaning sound, depending on what component is causing it. REFER to Tip-in Moan in the Driveline Noise and Vibration Symptom Chart.

2. Acceleration/Deceleration: With slow acceleration and deceleration, a shake is sometimes noticed in the

steering wheel/column, seats, front floor panel, front door trim panel or front end sheet metal. It is a low frequency vibration (around 9-15 cycles per second). It may or may not be increased by applying the brakes lightly. REFER to Idle Boom/Shake/Vibration in the Driveline Noise and Vibration Symptom Chart.

3. High Speed: A vibration is felt in the front floor panel or seats with no visible shake, but with an accompanying sound or rumble, buzz, hum, drone or booming noise. Coast with the clutch pedal depressed (manual transmission) or shift control selector lever in "N" (NEUTRAL) (automatic transmission) and engine idling. If vibration is still evident, it may be related to wheels, tires, front brake discs, wheel hubs or front wheel bearings. REFER to Shake and Vibration While Driving in the Driveline Noise and Vibration Symptom Chart.

4. Engine rpm Sensitive: A vibration is felt whenever the engine reaches a particular rpm. It will disappear in neutral coasts. The vibration can be duplicated by operating the engine at the problem rpm while the vehicle is stationary. It can be caused by any component, from the accessory drive belt to the clutch or torque converter which turns at engine speed when the vehicle is stopped. REFER to Shake and Vibration While Driving in the Driveline Noise and Vibration Symptom Chart.

5. Noise and Vibration While Turning: Clicking, popping or grinding noises may be due to the following:

- worn, damaged or incorrectly installed front wheel bearing.
- damaged powertrain/drivetrain mounts.

Road Conditions

An experienced technician will always establish a route that will be used for all NVH diagnosis road tests. The road selected should be reasonably smooth, level and free of undulations (unless a particular condition needs to be identified). A smooth asphalt road that allows driving over a range of speeds is best. Gravel or bumpy roads are unsuitable because of the additional road noise produced. Once the route is established and consistently used, the road noise variable is eliminated from the test results.

NOTE: *Some concerns may be apparent only on smooth asphalt roads.*

If a customer complains of a noise or vibration on a particular road and only on a particular road, the source of the concern may be the road surface. If possible, try to test the vehicle on the same type of road.

Vehicle Preparation

Carry out a thorough visual inspection of the vehicle before carrying out the road test. Note anything which is unusual. Do not repair or adjust any condition until the road test is carried out, unless the vehicle is inoperative or the condition could pose a hazard to the technician. After verifying that the condition has been corrected, make sure all components removed have been installed.

Power Steering Conditions

Check for the noise in the following conditions to verify the customer concern.

- Check for the noise in several temperature conditions.
- Is the noise from when the vehicle was new?
- Can the noise be repeated constantly or is it random?
- Check the condition of the vehicle age, mileage and service record.
- Interview the customer to find the operating condition in which the noise will occur. Test the vehicle based on the detail(s) from the customer interview.
- Follow the power steering operation noise condition tables below, to find which condition the noise will occur.

Power Steering Operation Noise Check

Step 1: Check for NVH concerns from non-steering components, which may sound like noises coming from the steering system.

Power assisted steering operating condition			
Parking		**Driving**	
Steering central/slightly off center	Steering at a steering lock stop	Driving straight ahead	Cornering condition
REFER to NVH concerns from other components column A	REFER to NVH concerns from other components column B	REFER to NVH concerns from other components column C	REFER to NVH concerns from other components column D

NVH concerns from other components

NVH concerns from other condition (column A to D)					
Noise	**Driving Condition**	**A**	**B**	**C**	**D**
Pedal box knocking	Drive off, stop driving and slow cornering over uneven roads	X	X	O	X
Stabilizer bar link knocking	Drive off, driving and cornering	X	O	O	X
Engine support insulator knocking	Drive off, driving, acceleration and deceleration	X		X	
Air conditioning knocking	Engine on, activate switch for air conditioning	X	X	O	O
Suspension knocking (Subframe, Springs)	Drive off, driving, cornering, acceleration and deceleration	X		O	X
Constant velocity (CV) joint knocking	Drive off, driving, cornering, acceleration and deceleration	X	O		X
Washer bottle	Deceleration, acceleration and single impact	O		X	
Loose suspension bolts	All driving conditions	O		O	X
Instrument panel rattle/squeak	All driving conditions. Engine rpm dependant	X	X	X	X

- X = Noise will most likely occur in this operating condition.
- O = Noise can possibly occur in this operating condition.
- Blank = Noise is unlikely to occur in this operating condition.

Step 2: Check for steering system NVH concerns according to operation condition described at the customer interview.

Power assisted steering operating condition					
Parking		**Driving**		**Vehicle stationary with engine off**	
Steering central/slightly off center	Steering at a steering lock stop	Steering central/slightly off center	Steering at a steering lock stop	Steering central/slightly off centre	Steering at a steering lock stop
REFER to steering system NVH concerns column A	REFER to steering system NVH concerns column B	REFER to steering system NVH concerns column C	REFER to steering system NVH concerns column D	REFER to steering system NVH concerns column E	REFER to steering system NVH concerns column F

Steering system NVH concerns

Steering System operation condition (column A to F)							
Noise	**Driving condition**	**A**	**B**	**C**	**D**	**E**	**F**
Moan	Parking between lock stops, at engine idle and also increased engine speed	X	O				
Whine	Driving, high engine rpm. Must be present from new	O	O	X	X		
Hiss	a) Parking between lock stops. Must be present from new	X	X	O	O		
	b) Holding steering wheel against lock stops. Must be present from new		X				
Lock stop impact knock	a) Parking at lock stop. Must be present from new		X				X
Mechanical knock	b) Parking between lock stops, engine OFF. Must be present from new					X	

(power assisted steering (PAS) off)							
Mechanical Knock (PAS on)	c) Parking between lock stops, engine ON (ball joint knock)	X					
Hammer knock	d) Parking into lock stop and release (vehicle with hydraulic power assisted steering (HPAS) only, not for vehicles with electro-hydraulic power assisted steering (EHPAS))		X				
Hydraulic knock (clonk)	e) Driving, cobble stones, rough road (clonk). Must be present from new			O	X		
Column knock	f) Parking, driving. cobble stones and rough roads	X	X	O	X	X	X
Column rattle	Mainly driving on rough roads	O		X	X	O	
Toc-toc	Steering left and right at high frequency. Must be present from new	X					
Grinding	When turning steering wheel	X			O	X	
Zip	At engine start, low temperatures below -10°C only	X	O				

- X = Noise will most likely occur in this operating condition.
- O = Noise can possibly occur in this operating condition.
- Blank = Noise is unlikely to occur in this operating condition.

Step 3: According to each identified operating condition (Column A, B, C, D, E, F), check each possible Steering System NVH concern with the detail symptom charts below.

Before conducting a vehicle test to identify a NVH concern carry out the following checks.

1. Check the tire pressures and adjust to specification, as necessary.
2. Make sure the steering system fluid is correct, the system is free of leaks and is operating correctly.
3. Make sure the vehicle steering system temperature is the same as described at the customer interview.
4. All evaluations must take place in a relatively quiet location.
5. The heating - air conditioning (A/C) fan and radio must be turned off during evaluations and the windows closed.

Symptom Chart

Power Steering Moan Noise

Test Condition

Listen for steering moan noise with the vehicle parked, transmission in neutral and all windows closed in the following test conditions.

1. Engine speed at idle with no steering action.
2. Engine speed at idle with slow 90 degrees per second turning of the steering wheel.
3. Engine speed at 1250 +/- 50 rpm with no steering action.
4. Engine speed at 1250 +/- 50 rpm with slow 90 degrees per second turning of the steering wheel.

Symptom	Possible Sources	Action
	Power	• CHECK the routing of the power steering lines. • CHECK the power steering line clamps are secure. • CHECK the power

Power steering system moan noise – A continuous low pitched humming noise occurs when the steering wheel is turned and the steering system is loaded. Noise frequency changes with engine rpm changes. Particularly annoying at lower engine speed.	steering lines.	steering lines for clearance from the vehicle body, front axle crossmember and steering gear.
	Incorrect power steering fluid.	FLUSH the power steering system. REFER to: (211-00 Steering System - General Information) Power Steering System Flushing (General Procedures).
	Power steering pump.	Pressure pulses from the power steering pump. Certain amount of noise level acceptable, not a safety critical item.

Power Steering Whine Noise

Test Condition

Listen for steering whine noise with the vehicle parked, transmission in neutral and all windows closed in the following test conditions.

1. Engine speed at 1800 +/- 50 rpm with no steering action.
2. Engine speed at 1800 +/- 50 rpm with slow 90 degrees turning of the steering wheel.
3. Engine speed at 3000 +/- 50 rpm with no steering action.
4. Engine speed at 3000 +/- 50 rpm with slow 90 degrees turning of the steering wheel.

Symptom	Possible Sources	Action
Power steering system whine noise – a high pitched buzzing sound like an electric motor or drill. Whine occurs at the higher engine rpm, 1500 - 5000 rpm, frequency does not change if system is loaded or not loaded.	Power steering fluid aeration.	BLEED the power steering system. REFER to: Power Steering System Bleeding (211-00 Steering System - General Information, General Procedures).
	Incorrect power steering fluid.	FLUSH the power steering system. REFER to: (211-00 Steering System - General Information) Power Steering System Flushing (General Procedures).
	Overheated power steering fluid.	FLUSH the power steering system. REFER to: (211-00 Steering System - General Information) Power Steering System Flushing (General Procedures).
	Hydraulic operating condition of the power steering	Certain amount of noise level acceptable, not a safety critical item.

	pump.	

Power Steering Hiss Noise

Test Condition

Listen for steering hiss noise with the vehicle parked, transmission in neutral and all windows closed in the following test conditions.

Symptom	Possible Sources	Action
NOTE: *Engine speed at idle turning the steering wheel slowly lock to lock.* Power steering system hiss noise – a high frequency, continuous rush or swish noise like escaping air from a balloon. Hiss occurs while turning between the steering lock stops, all steering angles. Noise does not change with engine rpm and is worse at high operating temperatures.	Floor seal.	CHECK the installation and potential damage of the floor seal.
	Power steering gear valve design.	Certain amount of noise level acceptable, not a safety critical item.
	Power steering system hydraulic design.	Certain amount of noise level acceptable, not a safety critical item.
NOTE: *Engine speed at idle holding the steering wheel against a steering lock for three seconds. Do not hold for more than five seconds.* Power steering system hiss noise – a continuous noise like escaping air occurs while holding the steering against a steering lock stop.	Power steering pump pressure relief valve.	Certain amount of noise level acceptable, not a safety critical item.

Power Steering Lock Stop Impact Knock Noise

Test Condition

Listen for steering knock noise with the engine speed at idle in the following test conditions (noise also apparent with engine off).

1. Turn the steering wheel to the left-hand and right-hand steering locks and listen for the impact noise.

Symptom	Possible Sources	Action
Power steering system knock noise – a heavy loud sound like a knock on a door that occurs in parking condition when hitting the lock stop.	Power steering gear mechanical noise, metal to metal at end of steering travel.	Certain amount of noise level acceptable, not a safety critical item.

Power Steering Hammer Knock (Hydraulic) Noise

Test Condition

Listen for steering knock noise with the engine speed at idle in the following test conditions (for vehicles with hydraulic power assisted steering only, not electro-hydraulic power steering).

1. Turn the steering wheel to a steering lock position and return quickly.

Symptom	Possible Sources	Action
Power steering system knock noise – loud, metallic sound if hitting the suspension crossmember with a hammer (sounds like metallic noise but is created by pressure impulse in gear and return line).	Hydraulic noise created by pressure impulses.	Certain amount of noise level acceptable, not a safety critical item.

Power Steering Hydraulic Knock/Clonk Noise HPAS

Test Condition

Listen for steering knock/clonk noise in the following test conditions with the windows closed.

1. Drive over cobbled roads at low speed 10-30 km/h (6-20 mph) with and without turning.
2. Drive over straight tar strips road rails or 25 mm tall harshness strips at low speed 10-30 km/h (6-20 mph) both driving straight and with moderate turning.

Symptom	Possible Sources	Action
Power steering system knock/clonk noise – sounds almost identical to column knock that occurs when driving and cornering over cobbled stones or rough roads. Noise may appear to emanate from a location closer to the floor than that for column knock (Sounds like metallic noise but is created by pressure impulse in gear and return line – similar to a sound like quickly turning off a water tap).	Power steering return lines.	Certain amount of noise level acceptable, not a safety critical item.
	High power assist gain of power steering gear valve (steering gear design - no quality issue).	Certain amount of noise level acceptable, not a safety critical item.
	High power steering pump flow rate (by design).	Certain amount of noise level acceptable, not a safety critical item.

Power Steering Mechanical Knock Noise HPAS

Test Condition

Listen for steering knock noise with the engine off in the following test conditions (no power assist).

1. Turn the steering wheel 90 degrees to the right, hold and then quickly release.
2. Turn the steering wheel 90 degrees to the left, hold and then quickly release.

Symptom	Possible Sources	Action
Power steering system knock noise – a heavy loud repeating sound like a knock on a door	Power steering system knock noise – a damped, metallic knock noise which only occurs at steering condition with engine off (very high efforts).	Certain amount of noise level acceptable, not a safety critical item.

that occurs in several driving and steering conditions.	Tolerances in the steering gear components.	Certain amount of noise level acceptable, not a safety critical item.

Power Steering Mechanical Knock Noise HPAS

Test Condition

Listen for steering knock noise with the engine speed at idle in the following test conditions (power assist).

1. Turn the steering wheel to a steering lock and return to center quickly.
2. Turn the steering wheel 90 degrees to the left and then 90 degrees to the right quickly.

Symptom	Possible Sources	Action
Power steering system knock noise – clear knock noise from steering gear linkage area.	Worn tie-rod ball joints (inner and outer ball joints).	REFER to Steering System.

Power Steering Mechanical Knock Noise (EPAS off)

Test Condition

Listen for steering knock noise with the engine off in the following test conditions.

1. Turn the steering wheel 90 degrees to the right, hold and then quickly release.
2. Turn the steering wheel 90 degrees to the left, hold and then quickly release.

Symptom	Possible Sources	Action
Power steering system knock noise – a heavy loud repeating sound like a knock on a door that occurs in several driving and steering conditions.	Power steering system knock noise – a damped, metallic knock noise which only occurs at steering condition with engine off (very high efforts).	Certain amount of noise level acceptable, not a safety critical item.
	Tolerances in the steering gear components.	Certain amount of noise level acceptable, not a safety critical item.

Power Steering Mechanical Knock Noise (EPAS on)

Test Condition

Listen for steering knock noise with the engine speed at idle in the following test conditions.

1. Turn the steering wheel to a steering lock and return to center quickly.
2. Turn the steering wheel 90 degrees to the left and then 90 degrees to the right quickly.

Symptom	Possible Sources	Action
Power steering system knock noise – clear knock noise from steering gear linkage area.	Worn tie-rod ball joints (inner and outer ball	REFER to: Power Steering (211-02A

	joints).	Power Steering, Diagnosis and Testing).

Power Steering Toc-Toc Noise

Test Condition

Listen for steering toc-toc noise with the engine speed at idle and the vehicle parked, automatic transmission in "P" (PARK) or manual transmission in neutral and the windows closed.

1. Turn the steering wheel from left to right abruptly changing direction.
2. Drive the vehicle for low speed parking manoeuvres constantly changing steering direction.

Symptom	Possible Sources	Action
Power steering system toc-toc noise – a metallic noise created when changing direction of steering wheel rotation during parking manoeuvre or at standstill.	Steering gear (design tolerance in steering rack).	Certain amount of noise level acceptable, not a safety critical item.

Power Steering Column Knock Noise

Test Condition

Listen for steering knock noise in the following test conditions with windows closed.

1. Drive over cobbled stones at low speed 16-40 km/h (10-25 mph) with and without steering input carefully listening for knock sounds.
2. Drive over straight tar strips, road rails or 25 mm tall harshness strips at low speed 16-40 km/h (10-25 mph) both driving straight and with moderate cornering.

Symptom	Possible Sources	Action
Power steering system column knock noise – a loose sounding rattle or vibration coming from the column. Noticeable by hearing and touch.	Steering column or steering column shaft.	CHECK the steering column retaining bolts and attachments to the steering column and secure if necessary.
		Check steering column and intermediate shaft for free play or loose components.

Power Steering Toc-Toc Noise

Test Condition

Listen for steering toc-toc noise with the engine speed at idle and the vehicle parked, automatic transmission in "P" (PARK) or manual transmission in neutral and the windows closed.

1. Turn the steering wheel from left to right abruptly changing direction.
2. Drive the vehicle for low speed parking manoeuvres constantly changing steering direction.

Symptom	Possible Sources	Action
Power steering system toc-toc noise – a metallic noise created when changing direction of steering wheel rotation during parking	Steering gear (design tolerance in	Certain amount of noise level acceptable, not a

manoeuvre or at standstill.	steering rack).	safety critical item.

Power Steering Grinding Noise

Test Condition

Listen for steering grinding noise with the engine speed at idle and the vehicle parked, automatic transmission in "P" (PARK) or manual transmission in neutral and the windows closed.

1. Slowly turn the steering wheel from lock to lock.
2. Tilt and extend the steering column in various positions and slowly turn the steering wheel from lock to lock.

Symptom	Possible Sources	Action
Power steering system grinding noise – an abrasive noise (like sand paper rubbing against wood) occurs between moving components such as steering wheel and the steering column shroud.	Steering wheel to shroud interference.	Certain amount of noise level acceptable, not a safety critical item.
	Steering column bearing.	Certain amount of noise level acceptable, not a safety critical item.
	Foreign material in contact with the steering column shaft.	CHECK if floor covering is obstructing the steering gear pinion.
		CHECK the installation of the floor seal.
	Clockspring.	CHECK the clockspring and secure if necessary. REFER to: Clockspring (501-20B Supplemental Restraint System, Removal and Installation).

Power Steering Zip Noise HPAS

Symptom	Possible Sources	Action
Power steering system zip noise – occurs when hydraulic fluid does not flow freely through the power steering pump supply hose from steering fluid reservoir to power steering pump causing cavitation at the pump. Zip is primarily a cold weather start-up phenomenon (below -10°C).	High viscosity of power steering fluid at low temperature.	Certain amount of noise level acceptable, not a safety critical item.
	Aeration of the power steering fluid.	BLEED the power steering system. REFER to: Power Steering System Bleeding (211-00 Steering System - General Information, General Procedures).

Driveline Noise and Vibration

Symptom	Possible Sources	Action

Shake and vibration while driving	• Wheel end vibration. • Engine/transmission.	GO to Pinpoint Test A
Tip-in moan	• Air cleaner. • Power assisted steering. • Powertrain. • Powertrain/drivetrain mounts. • Exhaust system.	GO to Pinpoint Test B
Idle boom/shake/vibration/shudder	• Cable(s)/hose(s). • Powertrain/drivetrain mounts. • Exhaust system. • Belt/pulleys.	GO to Pinpoint Test C

Suspension Noise and Vibration

Symptom	Possible Sources	Action
Wheel end vibration analysis	• Suspension. • Wheel bearings.	GO to Pinpoint Test D
Non-axle noise	• Trim panels. • Air conditioning (A/C) system. • Accessories.	GO to Pinpoint Test E

Pinpoint Tests

NOTE: *These Pinpoint Tests are designed to take the technician through a step-by-step diagnosis procedure to determine the cause of a condition. It may not always be necessary to follow the chart to its conclusion. Carry out only the pinpoint test steps necessary to correct the condition. Then check the operation of the system to make sure the condition has been corrected.*

After verifying that the condition has been corrected, make sure all components removed have been installed.

PINPOINT TEST A : SHAKE AND VIBRATION WHILE DRIVING

A1 NEUTRAL COAST

- Carry out the neutral coast test.

Does the vibration disappear during the neutral coast test?

Yes	GO to A2
No	GO to Pinpoint Test D

A2 CHECK THE POWERTRAIN/DRIVETRAIN MOUNTS

- Carry out the powertrain/drivetrain mount neutralizing procedure

Are the mounts OK?

Yes	Vehicle condition corrected. ROAD TEST as necessary.
No	INSTALL new powertrain/drivetrain mounts as necessary. ROAD TEST as necessary.

PINPOINT TEST B : TIP-IN MOAN

B1 CHECK THE AIR CLEANER

- Check the condition of the air cleaner mounts, inlet tube, outlet tube, resonators and all other components associated with the air induction system for correct installation and tightness of all connections.

Are the components OK?

Yes	GO to B2
No	REPAIR or INSTALL new components as necessary. ROAD TEST as necessary.

B2 CHECK THE EXHAUST SYSTEM

- Carry out the exhaust system neutralizing procedure.

Is the exhaust system OK?

Yes	GO to B3
No	REPAIR as necessary. ROAD TEST as necessary.

B3 CHECK THE POWER STEERING

- Remove the accessory drive belt and test for tip-in moan. REFER to:
  Accessory Drive Belt (303-05A Accessory Drive - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation),
  Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation),
  Accessory Drive Belt (303-05C Accessory Drive - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

Is the tip-in moan OK?

Yes	REPAIR the power steering as necessary. REFER to: (211-00)
No	GO to B4

B4 CHECK THE POWERTRAIN/DRIVETRAIN MOUNTS

- Carry out the powertrain/drivetrain mount neutralizing procedure

Are the powertrain/drivetrain mounts OK?

Yes	Vehicle condition corrected. ROAD TEST as necessary.
No	INSTALL new powertrain/drivetrain mounts as necessary. ROAD TEST as necessary.

PINPOINT TEST C : IDLE BOOM/SHAKE/VIBRATION/SHUDDER

C1 CHECK THE CABLE/HOSES

- Check the engine compartment for any component that may have a touch condition between the engine and body or chassis. For example: control cable, air conditioning (A/C) hoses, acceleration cable.

Are the components OK?

Yes	GO to C2
No	REPAIR or INSTALL new components as necessary. ROAD TEST as necessary.

C2 CHECK THE ENGINE COOLING RADIATOR

- Check the engine cooling radiator mountings and bushings for security and condition. Check the radiator installation for any component that may have a touch condition.

Is the installation and bushings OK?

Yes	GO to C3
No	REPAIR or INSTALL new components as necessary. ROAD TEST as necessary.

C3 CHECK THE EXHAUST SYSTEM

- Carry out the exhaust system neutralizing procedure.

Is the exhaust system OK?

Yes	GO to C4
No	REPAIR as necessary. ROAD TEST as necessary.

C4 CHECK THE POWERTRAIN/DRIVETRAIN MOUNTS

- Carry out the powertrain/drivetrain mount neutralizing procedure

Are the powertrain/drivetrain mounts OK?

Yes	Vehicle condition corrected. ROAD TEST as necessary.
No	INSTALL new powertrain/drivetrain mounts as necessary. ROAD TEST as necessary.

PINPOINT TEST D : WHEEL END VIBRATION ANALYSIS

D1 INSPECT THE WHEELS AND TIRES

- Inspect the wheels and tires.
  REFER to: Wheels and Tires (204-04A Wheels and Tires, Diagnosis and Testing).

Are the wheels and tires OK?

Yes	GO to D2
No	INSTALL new wheels or tires as necessary. REFER to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation). ROAD TEST as necessary.

D2 INSPECT THE WHEEL BEARINGS

- Inspect the wheel bearings.

Are the wheel bearings OK?

Yes	GO to D3
No	INSTALL new wheel bearings as necessary. REFER to: (204-01 Front Suspension) Front Wheel Bearing (Removal and Installation). ROAD TEST as necessary.

D3 INSPECT THE WHEEL AND TIRE RUNOUT
• Inspect the wheel and tire runout. **Is the wheel and tire runout OK?**

Yes	Balance the wheels and tires. Refer to the wheel balance equipment manufacturer's instructions. ROAD TEST as necessary.
No	INSTALL new wheels or tires as necessary. REFER to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation). ROAD TEST as necessary.

PINPOINT TEST E : NON-AXLE NOISE

E1 INSPECT THE VEHICLE TRIM
• Check the radiator grille and trim panels to see if they are the source of the noise. **Are the vehicle trim components causing the noise?**

Yes	INSTALL new trim components or REPAIR as necessary. ROAD TEST as necessary.
No	GO to E2

E2 CHECK THE AIR CONDITIONING (A/C) SYSTEM FOR NOISE
• Start the engine. • Ignition ON. • Check the A/C system components for noise by turning the A/C system on and off. **Is the A/C system causing the noise?**

Yes	INSPECT the A/C system. REFER to: (412-00 Climate Control System - General Information) Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (Diagnosis and Testing), Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) (Diagnosis and Testing), Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (Diagnosis and Testing). ROAD TEST as necessary.
No	GO to E3

E3 CHECK NON-FACTORY FITTED ACCESSORIES
• Check any non-factory installed accessories for being the source of the noise. For example: touch condition body-to-frame, antennas, deflectors and fog lights. **Are the accessories the cause of the noise?**

Yes	ADJUST, REPAIR, or INSTALL new accessories or fasteners as required. ROAD TEST as necessary.
No	VERIFY the customer concern.

Specifications

General Specifications

Item	Specification
Ball Joint Deflection	
Lower	0-0.2 mm
Front Ride Height	
High ride height vehicles (4WD and 2WD)	109 mm ± 20 mm
Low ride height vehicles (2WD only)	110 mm ± 20 mm
Rear Ride Height	
High ride height vehicles (4WD and 2WD)	324 mm ± 20 mm
Low ride height vehicles (2WD only)	246 mm ± 20 mm
Side-to-Side Variation (All Vehicles)	
Front	0 mm ± 15 mm
Rear	0 mm ± 20 mm

Front Wheel Alignment (at curb weight) - Low ride height vehicles (2WD only)

NOTE: *All alignment specifications are with the vehicle fuel tank full.*

Description		Nominal and Tolerance Range		
		Single cab	Super cab	Double cab
Caster angle	Degrees and minutes	2°53' ± 1°	3°00' ± 1°	
	Decimal Degrees	2.88° ± 1°	3.00° ± 1°	
Camber angle	Degrees and minutes	0°00' ± 0.50º		
	Decimal Degrees	0.00° ± 0.50º		
Total Toe	mm	0.00 ± 2		
	Degrees and minutes	0°00' ± 9'		
	Decimal Degrees	0.00° ± 0.15º		

Front Wheel Alignment (at curb weight) - High ride height vehicles (4WD and 2WD)

Description		Nominal and Tolerance Range	
		RHD	LHD
Caster angle (right-hand side)	Degrees and minutes	2°34' ± 1°	3°04' ± 1°
	Decimal Degrees	2.57° ± 1°	3.07° ± 1°
Caster angle (left-hand side)	Degrees and minutes	3°04' ± 1°	2°34' ± 1°
	Decimal Degrees	3.07° ± 1°	2.57° ± 1°

Camber angle	Degrees and minutes	0°00' ± 0.50º
	Decimal Degrees	0.00° ± 0.50º
Total Toe	mm	0.00 ± 2

Suspension System

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical damage.

Visual Inspection Chart

Mechanical
Tire pressure(s)
Wheels and tires
Wheel knuckles
Tie-rod ends
Front suspension lower arm ball joints
Front suspension lower arm bushings
Front suspension upper arm ball joints
Front suspension upper arm bushings
Front strut and spring assemblies
Front stabilizer bar and connecting links
Rear leaf springs, bushes, shackles and interleaf buttons
Rear shock absorbers Rear stabilizer bar and connecting links Rear suspension beam axle and bushings Front bump stop
Rear bump stop

3. CARRY OUT the Suspension and Steering Components Initial Inspection component test in this procedure.
4. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
5. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Sources	Action
• Drift left or right	• Vehicle attitude incorrect (front or rear is high or low).	• CHECK for abnormal loading, spring sag or non-standard springs.
	• Steering gear or linkage worn or damaged.	• CHECK the steering system.
	• Brake system.	• CHECK the brake system. REFER to: Brake System (206-00 Brake System - General Information, Diagnosis and Testing).
	• Incorrect wheel	• ADJUST the wheel alignment.

	alignment.	
	• Worn front wheel bearings.	• CHECK the wheel bearings.
	• Worn rear wheel bearings (If equipped).	• CHECK the wheel bearings.
	• Wheels and tires.	• GO to Pinpoint Test A
• Steering wheel off-center	• Vehicle attitude incorrect (front or rear is high or low).	• CHECK for abnormal loading, spring sag or non-standard springs.
	• Steering gear or linkage worn or damaged.	• CHECK the steering system.
	• Suspension lower/upper arm ball joint.	• CARRY OUT the Ball Joint Inspection component test in this procedure.
	• Incorrect wheel alignment.	• ADJUST the wheel alignment.
• Tracks incorrectly	• Incorrect front suspension toe, castor or camber angles.	• CHECK the wheel alignment. • INSTALL new suspension components as necessary.
	• Incorrect rear suspension toe or camber angles.	• CHECK the wheel alignment. • INSTALL new suspension components as necessary.
	• Front or rear suspension damage.	• INSTALL new suspension components as necessary.
• Rough ride	• Front strut and spring assemblies.	• CARRY OUT the Strut or Shock Absorber Testing component test in this procedure. • CHECK and INSTALL new suspension components as necessary.
	• Front stabilizer bar, connecting links or bushings.	• CHECK and INSTALL new suspension components as necessary. REFER to: (204-01 Front Suspension) Front Stabilizer Bar (Removal and Installation).
	• Rear stabilizer bar and connecting links.	• CHECK and INSTALL new suspension components as necessary. REFER to: (204-02)
	• Front suspension lower arm bushings.	• INSTALL a new lower arm. REFER to: Lower Arm - LHD RWD/RHD RWD (204-01 Front Suspension, Removal and Installation).
	• Front suspension upper arm bushings.	• INSTALL a new upper arm. REFER to: Upper Arm (204-01 Front Suspension, Removal and Installation).
	• Rear suspension bushings.	• CHECK and INSTALL new components as necessary.
	• Rear shock absorbers.	• CARRY OUT the Strut or Shock Absorber Testing component test in this procedure. • CHECK and INSTALL new suspension components as necessary.
• Excessive noise	• Front strut and spring assembly or rear shock absorber and spring upper mounting bolts or nuts loose or broken.	• GO to Pinpoint Test B
	• Shock absorbers leaking	• GO to Pinpoint Test B

	• Shock absorber performance incorrect	• GO to Pinpoint Test B
	• Stabilizer bar components	• GO to Pinpoint Test B
	• Strut and spring assembly and springs	• GO to Pinpoint Test B
	• Springs moving on spring upper or lower seats	• GO to Pinpoint Test B
	• Suspension bushings	• GO to Pinpoint Test B
	• Lower arm ball joint	• GO to Pinpoint Test B
	• Upper arm ball joint	• GO to Pinpoint Test B
	• Worn front wheel bearings	• GO to Pinpoint Test B
	• Worn rear wheel bearings	• GO to Pinpoint Test B
	• Wheels and tires	• GO to Pinpoint Test B
• Incorrect tire wear	• Front or rear suspension damage.	• CHECK and INSTALL new suspension components as necessary.
	• Incorrect wheel alignment.	• ADJUST the wheel alignment.
• Vibration	• Damaged or worn front wheel bearings.	• CHECK the front wheel bearings.
	• Damaged or worn rear wheel bearings.	• CHECK the rear wheel bearings.
	• Wheels and tires.	• CHECK the tires. BALANCE or INSTALL new tires as necessary.
	• Incorrect wheel alignment.	• ADJUST the wheel alignment.
	• Steering gear or linkage worn or damaged.	• CHECK the steering system.
	• Front strut and spring assemblies.	• CARRY OUT the Strut or Shock Absorber Testing component test in this procedure. • CHECK and INSTALL new suspension components as necessary.
	• Damaged front suspension lower arm(s).	• INSTALL a new lower arm(s). REFER to: Lower Arm - LHD RWD/RHD RWD (204-01 Front Suspension, Removal and Installation).
	• Damaged front suspension upper arm(s).	• INSTALL a new upper arm(s). REFER to: Upper Arm (204-01 Front Suspension, Removal and Installation).
• Rear suspension noise - a squeak, creak or rattle noise. Occurs mostly over bumps or rough roads	• Loose or damaged rear shock absorber(s) or shock absorber bushing(s).	• Inspect the rear suspension. INSTALL new components as necessary. REFER to: Rear Suspension - Component Location (204-02 Rear Suspension, Description and Operation).

	• Rear leaf spring tip isolator or bushing.	• Inspect the rear suspension. INSTALL new components as necessary. REFER to: Rear Suspension - Component Location (204-02 Rear Suspension, Description and Operation).
	• Damaged leaf spring or leaf spring mount(s).	• Inspect the rear suspension. INSTALL new components as necessary. REFER to: Rear Suspension - Component Location (204-02 Rear Suspension, Description and Operation).
	• Worn or damaged stabilizer bar bushing(s) or link(s).	• Inspect the rear suspension. INSTALL new components as necessary. REFER to: Rear Suspension - Component Location (204-02 Rear Suspension, Description and Operation).
	• Rear leaf spring or bushing contaminated with dirt, sand or mud.	• **NOTE:** *To avoid the re-occurrence of noise, make sure that all contamination and moisture trapped between the individual leaf spring components have been completely removed.* • **NOTE:** *Do not apply any lubricant or grease to the leaf springs as this will attract dirt and moisture.* • PRESSURE WASH the leaf springs between the individual spring leafs and the gaps between the spring bushings, mounting brackets and shackles to remove any trapped debris. USE compressed (shop) air to remove any remaining debris and to completely dry between all of the individual spring components.

Pinpoint Tests

PINPOINT TEST A : DRIFT LEFT OR RIGHT

WARNING: To avoid personal injury due to the loss of vehicle control, the inspection should be carried out by two people to maintain safe driving conditions. Adequate grip should always be maintained on the steering wheel. Failure to follow these instructions may result in personal injury.

NOTE: *The following conditions must be met when evaluating the vehicle.*

NOTE: *The tire swapping procedures are for bi-directional rotating tires only.*

A1 SWAP THE FRONT WHEEL AND TIRE ASSEMBLIES

- Raise and support the vehicle.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
  - Swap the front left-hand wheel and tire assembly with the front right-hand wheel and tire assembly.
  - Road test the vehicle.

Does the vehicle drift?

Yes	GO to A2
No	Vehicle condition corrected.

A2 SWAP THE REAR WHEEL AND TIRE ASSEMBLIES

- Raise and support the vehicle.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
  - Swap the rear left-hand wheel and tire assembly with the rear right-hand wheel and tire assembly.
  - Road test the vehicle.

Does the vehicle drift?

Yes	GO to A3
No	Vehicle condition corrected.

A3 SWAP THE LEFT-HAND WHEEL AND TIRE ASSEMBLIES

- Raise and support the vehicle.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
  - Swap the front left-hand wheel and tire assembly with the rear left-hand wheel and tire assembly.
  - Road test the vehicle.

Does the vehicle drift?

Yes	GO to A4
No	Vehicle condition corrected.

A4 SWAP THE RIGHT-HAND WHEEL AND TIRE ASSEMBLIES

- Raise and support the vehicle.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
  - Swap the front right-hand wheel and tire assembly with the rear right-hand wheel and tire assembly.
  - Road test the vehicle.

Does the vehicle drift?

Yes	GO to A5
No	Vehicle condition corrected.

A5 SWAP THE FRONT LEFT-HAND WHEEL AND TIRE ASSEMBLY

- Raise and support the vehicle.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
  - Swap the front left-hand wheel and tire assembly with the rear right-hand wheel and tire assembly.
  - Road test the vehicle.

Does the vehicle drift?

Yes	GO to A6
No	Vehicle condition corrected.

A6 SWAP THE FRONT RIGHT-HAND WHEEL AND TIRE ASSEMBLY

- Raise and support the vehicle.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
  - Swap the front right-hand wheel and tire assembly with the rear left-hand wheel and tire assembly.
  - Road test the vehicle.

Does the vehicle drift?

Yes	GO to A7
No	Vehicle condition corrected.

A7 INSTALL NEW TIRES

NOTE: *Install new tires only once.*

- Install new tires to the four road wheels. TEST the system for normal operation.

Does the vehicle drift?

Yes	Verify possible sources, refer to the Symptom Chart.
No	Vehicle condition corrected.

PINPOINT TEST B : EXCESSIVE NOISE

B1 INSPECT ALL STRUT AND SPRING ASSEMBLY AND SHOCK ABSORBER MOUNTING BOLTS AND NUTS

- Inspect the strut and spring assembly and shock absorber mounting bolts and nuts.

Are the mounting bolts or nuts loose or broken?

Yes	TIGHTEN or INSTALL new mounting bolts and nuts.
No	GO to B2

B2 INSPECT THE STRUT AND SPRING ASSEMBLIES AND SHOCK ABSORBERS FOR LEAKS

- **NOTE:** *Make sure that the oil is not from another source.*

  Inspect the strut and spring assemblies and shock absorbers for signs of oil weepage or leaks. Refer to weepage and leakage conditions in the Strut or Shock Absorber Testing component test in this procedure.

Are the struts or shock absorbers leaking?

Yes	INSTALL new struts or shock absorbers as necessary. REFER to: Front Strut and Spring Assembly (204-01 Front Suspension, Disassembly and Assembly), Front Strut and Spring Assembly (204-01 Front Suspension, Disassembly and Assembly), Rear Shock Absorber (204-02 Rear Suspension, Removal and Installation).
No	GO to B3

B3 INSPECT THE SPRINGS AND STABILIZER BAR(S)

- Inspect the springs and stabilizer bar(s) for damage.

Are the springs or stabilizer bar(s) damaged?

Yes	INSTALL new springs or stabilizer bar(s). REFER to: Front Strut and Spring Assembly (204-01 Front Suspension, Disassembly and Assembly), Front Stabilizer Bar (204-01 Front Suspension, Removal and Installation), Spring (204-02 Rear Suspension, Removal and Installation).
No	GO to B4

B4 INSPECT THE SUSPENSION BUSHINGS

- Inspect the suspension bushings for excessive wear or damage.

Are the bushings worn or damaged?

Yes	INSTALL new components as necessary. REFER to: Lower Arm - LHD RWD/RHD RWD (204-01 Front Suspension, Removal and Installation), Upper Arm (204-01 Front Suspension, Removal and Installation), Front Strut and Spring Assembly (204-01 Front Suspension, Removal and Installation), Front Stabilizer Bar (204-01 Front Suspension, Removal and Installation),
No	GO to B5

B5 INSPECT THE SUSPENSION LOWER/UPPER ARM BALL JOINTS

- Carry out the Ball Joint Inspection component test in this procedure.

Is the lower/upper arm ball joint or gaiter damaged?

Yes	INSTALL a new lower/upper arm. REFER to: (204-01 Front Suspension) Lower Arm - LHD RWD/RHD RWD (Removal and Installation), Upper Arm (Removal and Installation).
No	GO to B6

B6 INSPECT THE WHEEL BEARINGS

- Check the wheel bearings.

Are the wheel bearings damaged?

Yes	INSTALL/ADJUST a new wheel bearing(s). REFER to: Front Wheel Bearing (204-01 Front Suspension, Removal and Installation),
No	GO to B7

B7 INSPECT THE WHEELS AND TIRES

- Check the tires for uneven wear.

Is there uneven tire wear?

Yes	REFER to the Symptom Chart.
No	GO to B8

B8 INSPECT THE STRUT AND SPRING ASSEMBLY AND REAR SUSPENSION SPRING INTERFACE

- Loosen the strut and spring assemblies and shock absorbers top and bottom mounting bolts and nuts. Tighten the mounting bolts and nuts.
  - Carry out a road test.
    REFER to: Road/Roller Testing (100-00 General Information, Description and Operation).

Is the concern still evident?

Yes	GO to B9
No	Vehicle condition corrected.

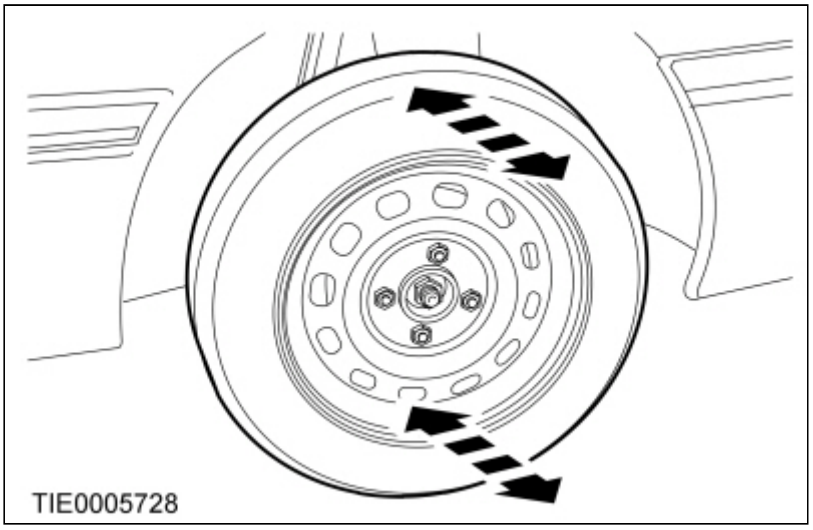
B9 INSPECT THE STRUT AND SPRING ASSEMBLIES AND SHOCK ABSORBER COMPONENTS

- Check that the spring is correctly located on the spring seat and has not moved.
- Disassemble the strut and spring and assembly and inspect the individual components.
  REFER to: Front Strut and Spring Assembly (204-01 Front Suspension, Disassembly and Assembly).
- Inspect the shock absorber top mount for wear or damage.
- Carry out the Strut or Shock Absorber Testing component test in this procedure.

Are any of the strut and spring assemblies or shock absorber components damaged?

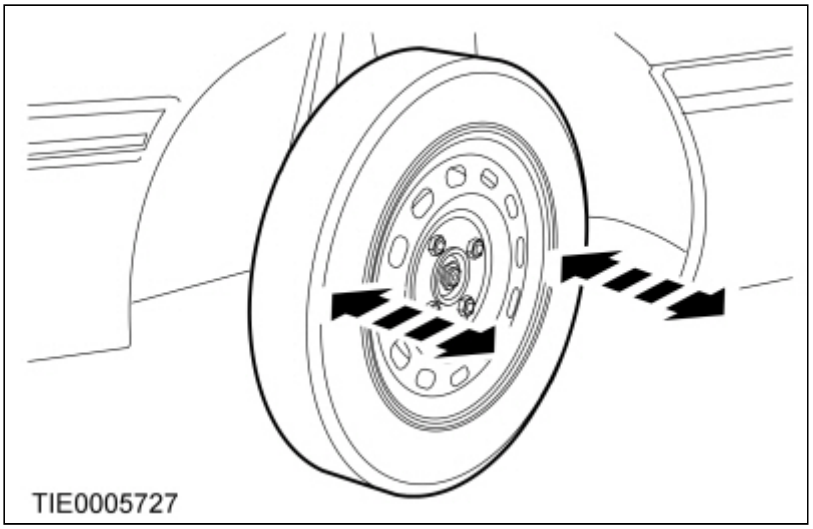
Yes	INSTALL new components as necessary. REFER to: Front Strut and Spring Assembly (204-01 Front Suspension, Removal and Installation), Spring (204-02 Rear Suspension, Removal and Installation), Rear Shock Absorber (204-02 Rear Suspension, Removal and Installation).
No	REINSTALL the strut and spring assemblies or shock absorbers. GO to B10

B10 CARRY OUT A ROAD TEST
• Carry out a road test. REFER to: Road/Roller Testing (100-00 General Information, Description and Operation). **Is the concern still evident?**



Yes	REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness, Diagnosis and Testing).
No	Vehicle condition corrected.

Component Tests



Noises such as knocks, which may appear to originate from the front suspension components, may also be generated by the steering linkage.
REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness, Diagnosis and Testing).

Raise and support the vehicle.
REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

Suspension and Steering Components Initial Inspection

1. With the aid of another technician observing for any free play in the wheel bearing and feeling for any free play in suspension components firmly grasp the road wheel and apply a rocking motion.
2. The wheel bearing and suspension components should have no free movement.
3. If there is any free movement install new components as necessary.REFER to: (204-01 Front Suspension)
   Lower Arm - LHD RWD/RHD RWD (Removal and Installation),
   Upper Arm (Removal and Installation),
   Front Wheel Bearing (Removal and Installation).
4. If a new lower/upper arm is installed it will be necessary to check and adjust the front wheel alignment.

5. With the aid of another technician feeling for any free play in the steering linkage, position the steering against the right-hand steering lock stop. Firmly grasp the road wheel and apply a rocking motion. Repeat the task on the left-hand steering lock stop.

6. Tie-Rod and Tie-Rod ends should have no free movement

7. If there is any free movement install a new components as necessary.REFER to: (211-02A Power Steering)
   Tie Rod - LHD (Removal and Installation),
   Tie Rod End - LHD (Removal and Installation).

8. If a Tie-Rod or Tie-Rod End is installed it will be necessary to check and adjust the front wheel alignment.

Ball Joint Inspection

1. Firmly grasp the outer end of the suspension lower/upper arm and try to move it up and down, watching and feeling for any movement. Free movement will usually be accompanied by an audible "click''. There should be no free movement.

2. If there is any free movement install a new lower/upper arm.REFER to: (204-01 Front Suspension)
   Lower Arm - LHD RWD/RHD RWD (Removal and Installation),
   Upper Arm (Removal and Installation).

3. If a new lower/upper arm is installed it will be necessary to check and adjust the front wheel alignment.

Strut or Shock Absorber Inspection

NOTE: *Inspect the struts or shock absorber for signs of oil weepage or leaks. Make sure that the oil is not from another source.*

Weepage:

- deposits a thin film of oil on the strut and spring assembly or shock absorber.
- is normally noticed due to a collection of dust on the strut and spring assembly or shock absorber.
- occurs during the normal running-in period of 4800 - 8050 km. After this period no new signs of oil should be visible.
- does not require new struts or shock absorbers to be installed.

Leakage:

- covers the entire strut and spring assembly or shock absorber with oil.
- will drip oil onto the surrounding suspension components.

- requires new struts or shock absorbers to be installed.

Strut or Shock Absorber Testing

NOTE: *Struts or shock absorbers must be tested in the vertical position.*

1. Remove both strut and spring assemblies or shock absorbers. The piston rods should extend.
   - Disassemble the strut and spring assemblies.
     REFER to: Front Strut and Spring Assembly (204-01 Front Suspension, Disassembly and Assembly).

2. Compress the piston rods. Both piston rods should offer the same resistance when compressing.

3. Compress and release the piston rods. The piston rods should extent equally.

4. Compress and pull the piston rod in the vertical position. Feel if the resistance force at the point of direction change-over is perceptible without a lag. If a lag is perceptible it is an indication of damper valve damage and new struts or shock absorbers must be installed. REFER to:
   Rear Shock Absorber (204-02 Rear Suspension, Removal and Installation),
   Front Strut and Spring Assembly (204-01 Front Suspension, Removal and Installation).

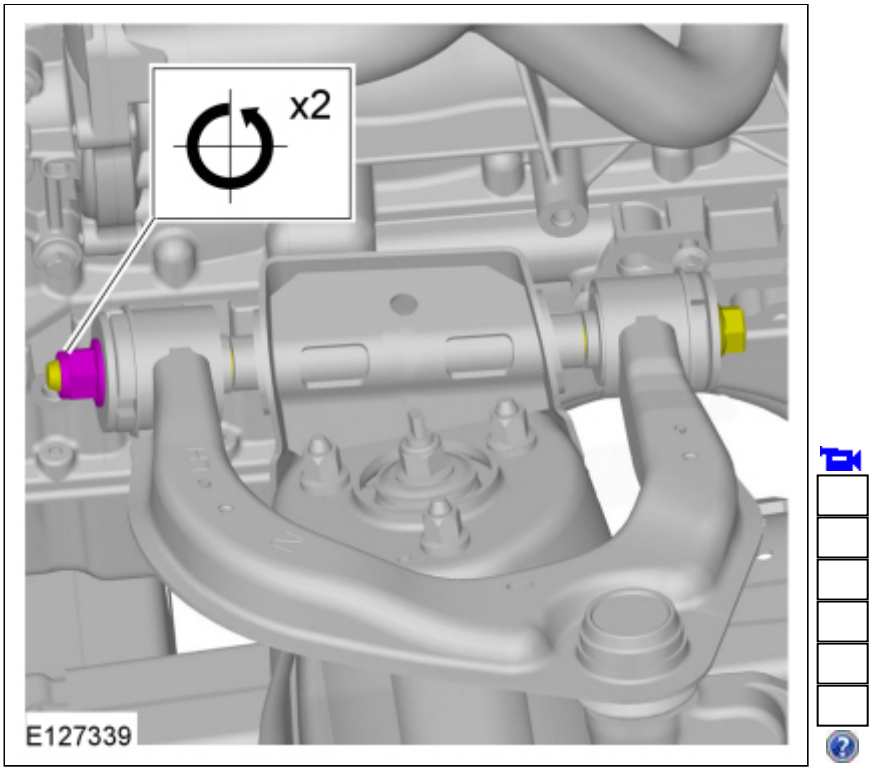
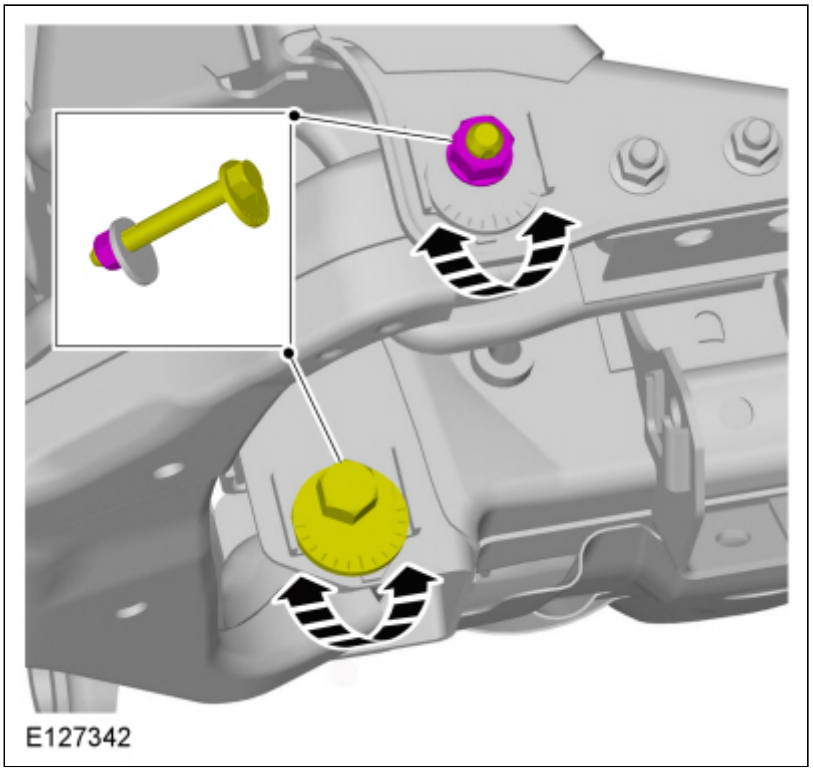
Camber and Caster Adjustment



Special Tool(s) / General Equipment

Wheel Alignment System

Adjustment



NOTICE: Replace the component with the same or equivalent parts to prevent component failure.

NOTE: *Make sure that the tire pressures are to specification and that the vehicle is unladen.*

1. Using alignment equipment and the manufacturer's instructions, measure the front caster and camber.
   Refer to: Specifications (204-00 Suspension System - General Information, Specifications).
   Use the General Equipment: Wheel Alignment System
2. 

3. Loosen the lower arm bolt(s) and adjust the caster and camber settings according to manufacturer's instructions.
4. **NOTE:** *Make sure that the weight of the vehicle is on the wheels and that no suspension settings are disurbed.*

   On both sides.
   Torque:
   Upper arm bolt : 86 Nm
   Lower arm bolt: 270 Nm

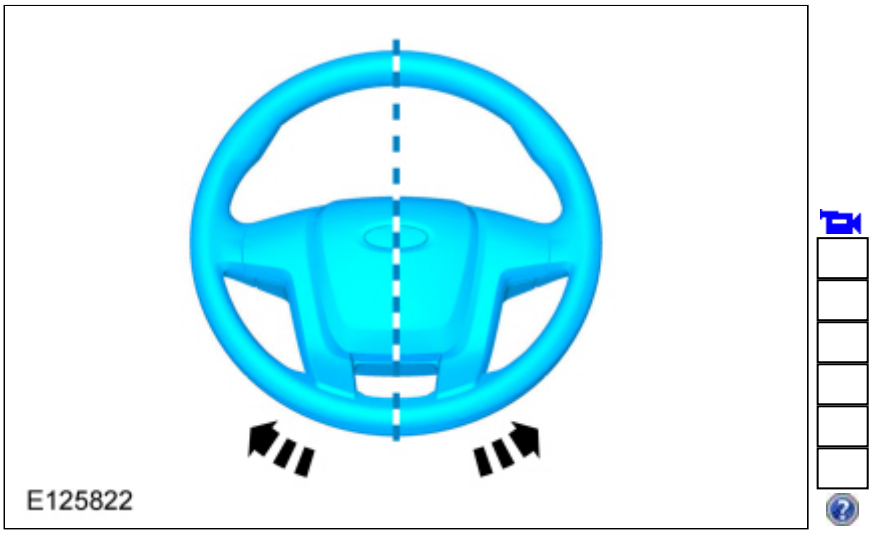
5. Check and if necessary, adjust front toe.
   Refer to: Front Toe Adjustment (204-00 Suspension System - General Information, General Procedures).

Copyright © 2016 Ford Motor Company

Front Toe Adjustment

Special Tool(s) / General Equipment

Wheel Alignment System



Check

NOTE: *Make sure that the vehicle is standing on a level surface.*

NOTE: *Make sure that the tire pressures are to specification and that the vehicle is unladen.*

1. **NOTICE: Make sure that the steering wheel is locked.**

   NOTE: *Make sure that the road wheels are in the straight ahead position.*

2. Using alignment equipment and the manufacturer's instructions, check the front toe setting on both sides. Use the General Equipment: Wheel Alignment System

3. **NOTICE: Take extra care not to damage the component.**

   On both sides.
   Torque: 73 Nm

4. **NOTICE: One turn of the tie rod (both sides) changes the toe-in by about approx. 30 mm (1.18 in).**

   NOTE: *The left and right tie rods are both right threaded. To increase toe-in, turn the right tie rod toward the*

front of the vehicle sand the left tie rod equally toward the rear.

NOTE: *Make sure that the boot is correctly located.*

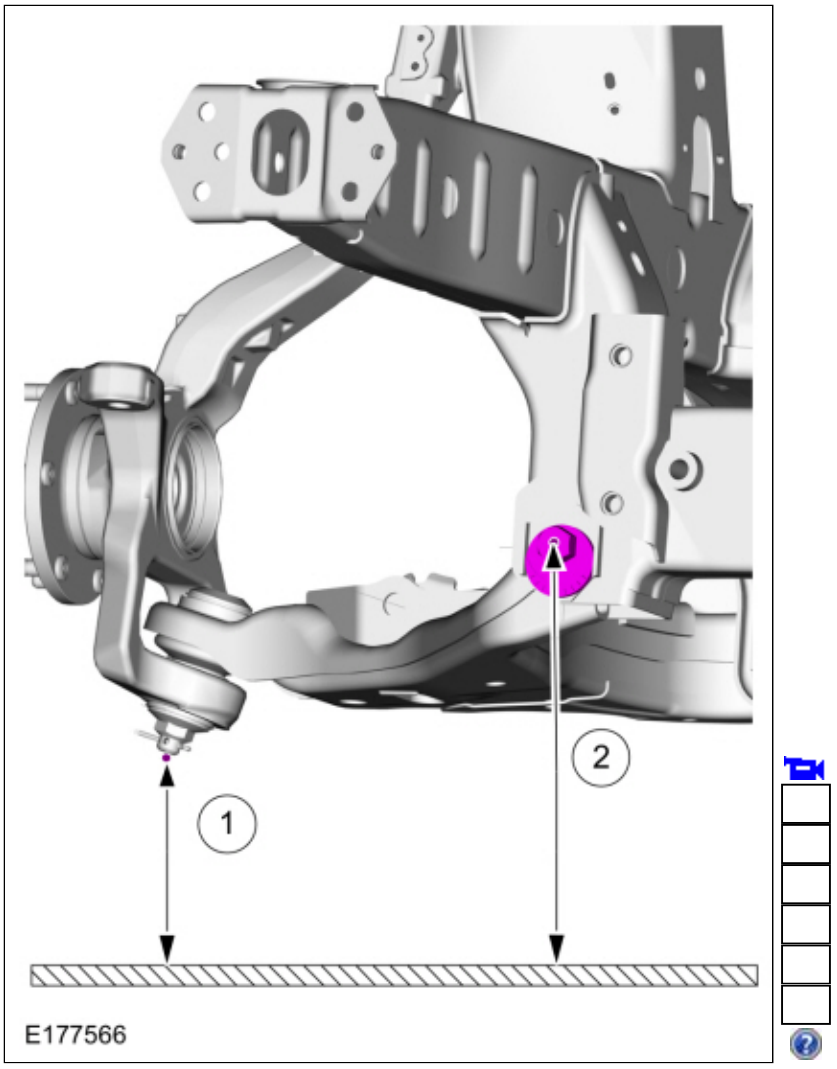
Ride Height Measurement

Special Tool(s) / General Equipment

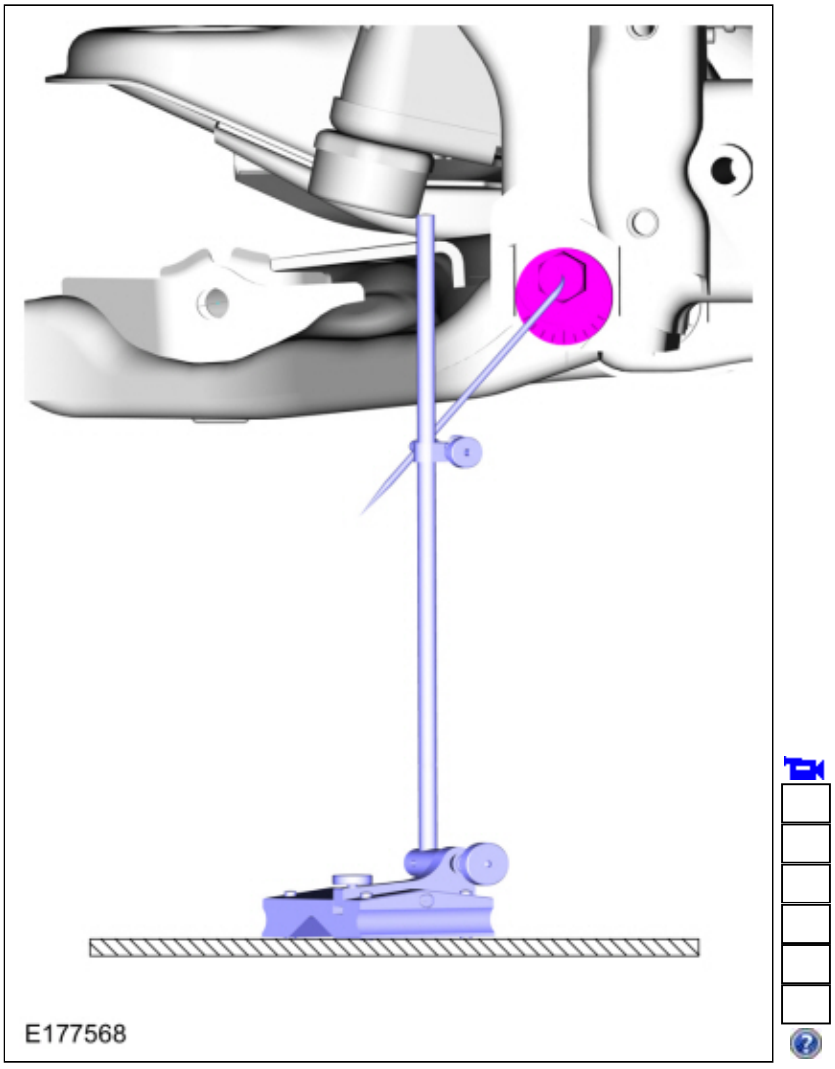
Surface Gauge



Check

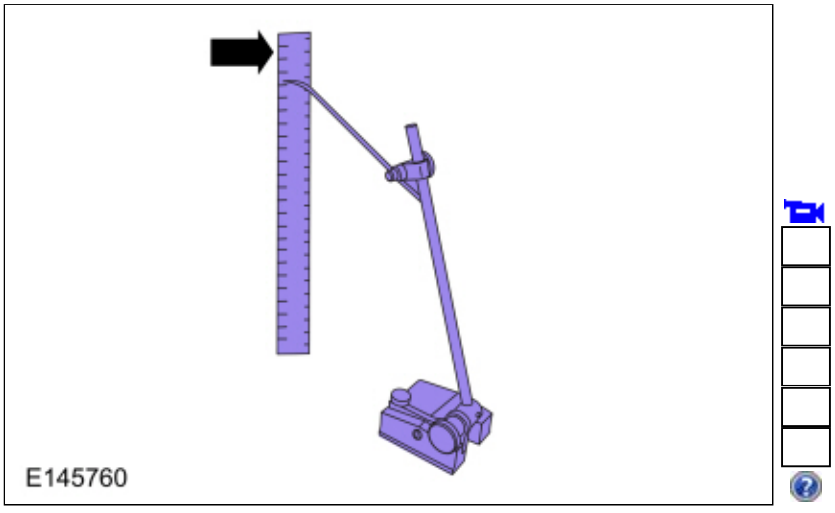
Front Ride Height Measurement

NOTE: *Make sure that the vehicle is positioned on a flat, level surface and the tires are inflated to the correct pressure. The vehicle should have a full tank of fuel.*



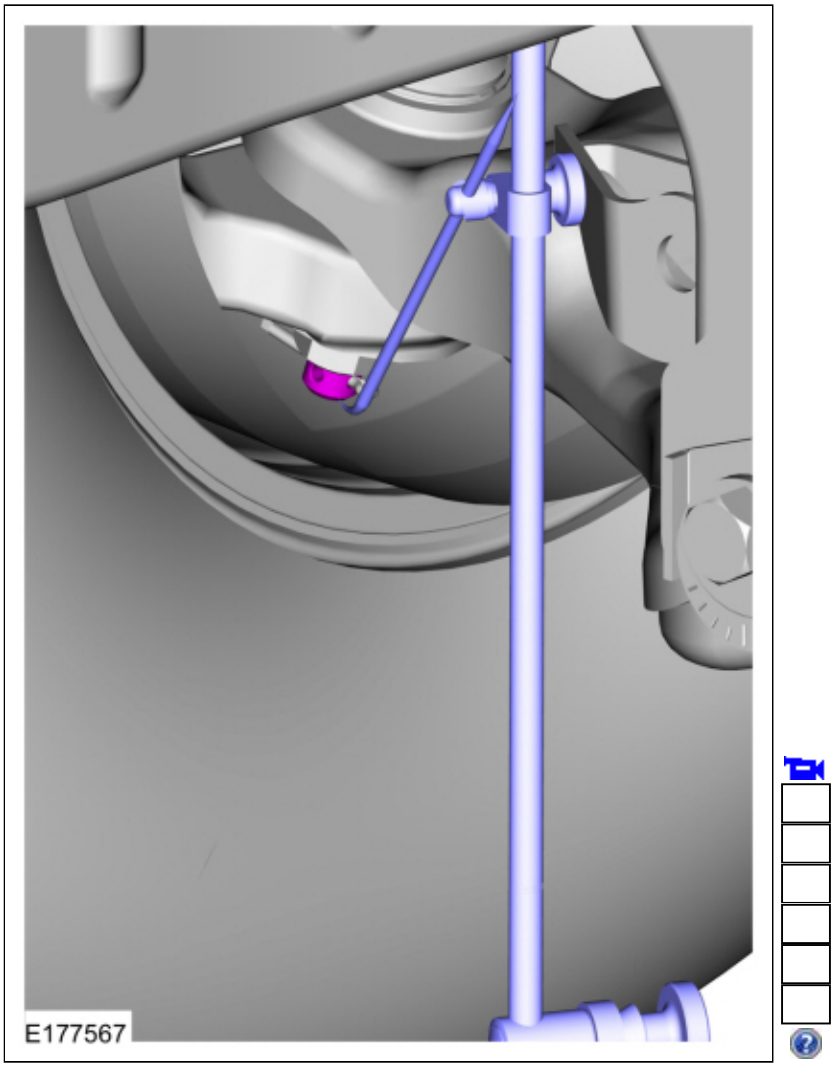
1. Refer to: Specifications (204-00 Suspension System - General Information, Specifications).

    1. Ride height = (Measurment2) - (Measurment1)

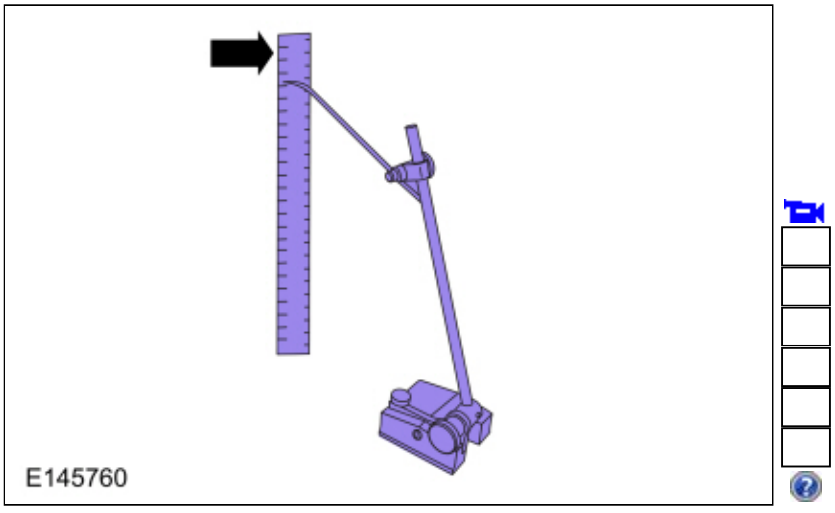


3. **NOTE:** *Lock the tool in the position shown.*

    Position the surface gauge on the same flat, level surface, adjust the gauge arm until the scriber point is located in the center of the front lower arm bolt.
    Use the General Equipment: Surface Gauge



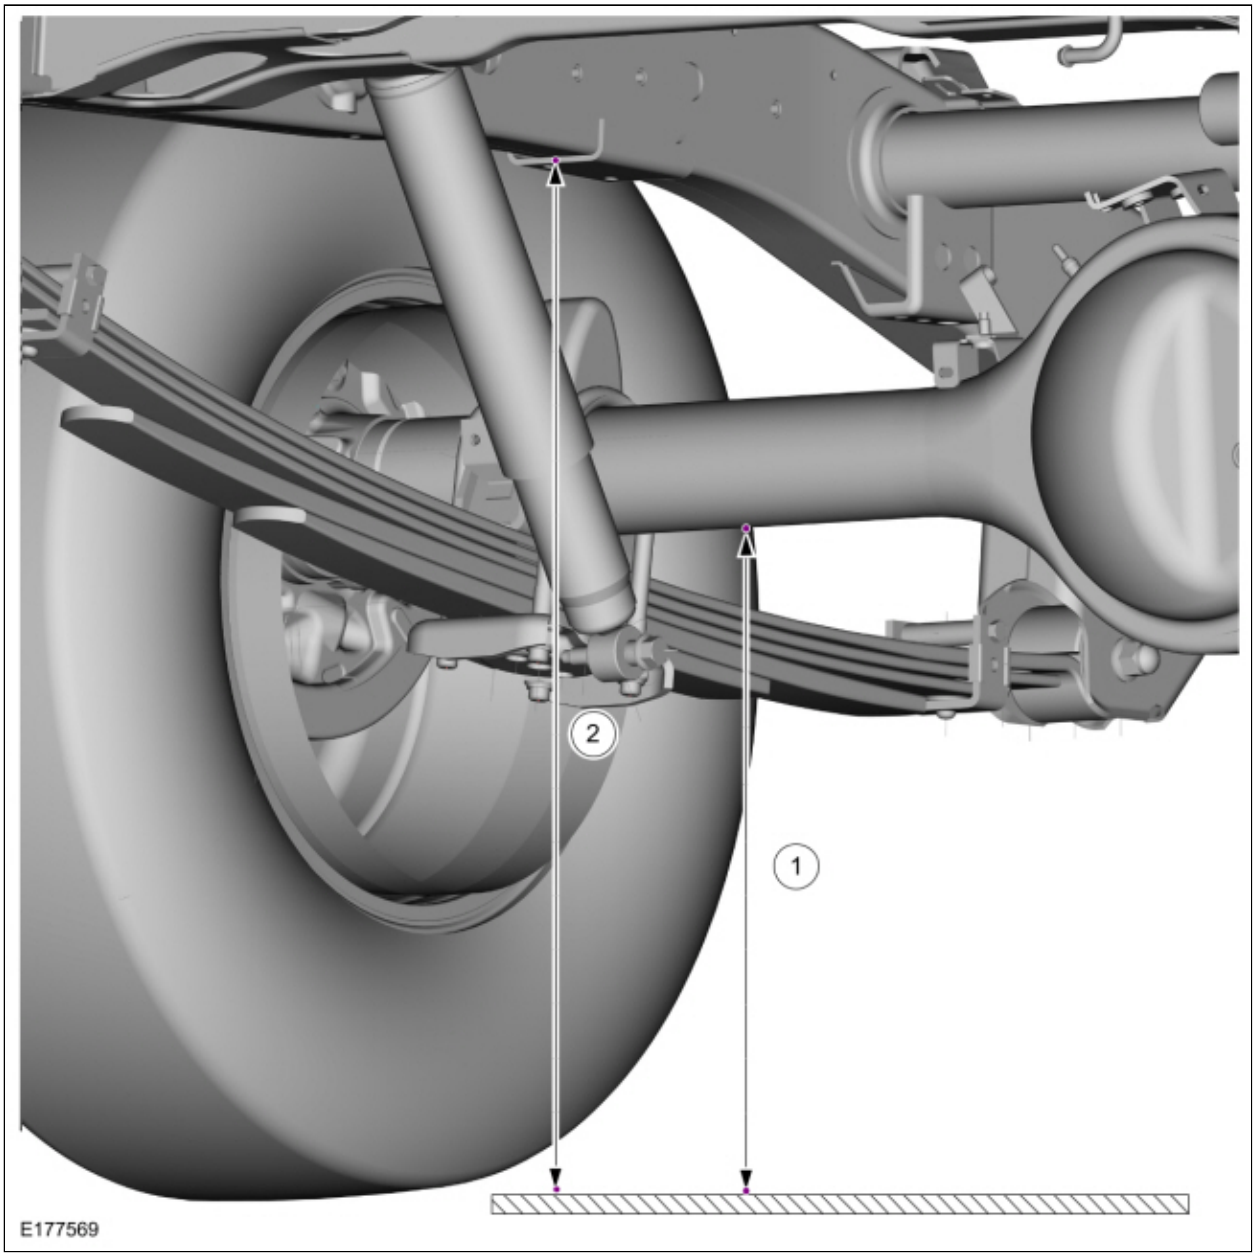
4. With the surface gauge positioned on a flat, level surface, record the measurement of the surface gauge position (measurement 2).
   Use the General Equipment: Surface Gauge



5. **NOTE:** *Lock the tool in the position shown.*

   Position the surface gauge on the same flat, level surface, adjust the gauge arm until the scriber point is located in the center of the lower ball joint stud.
   Use the General Equipment: Surface Gauge

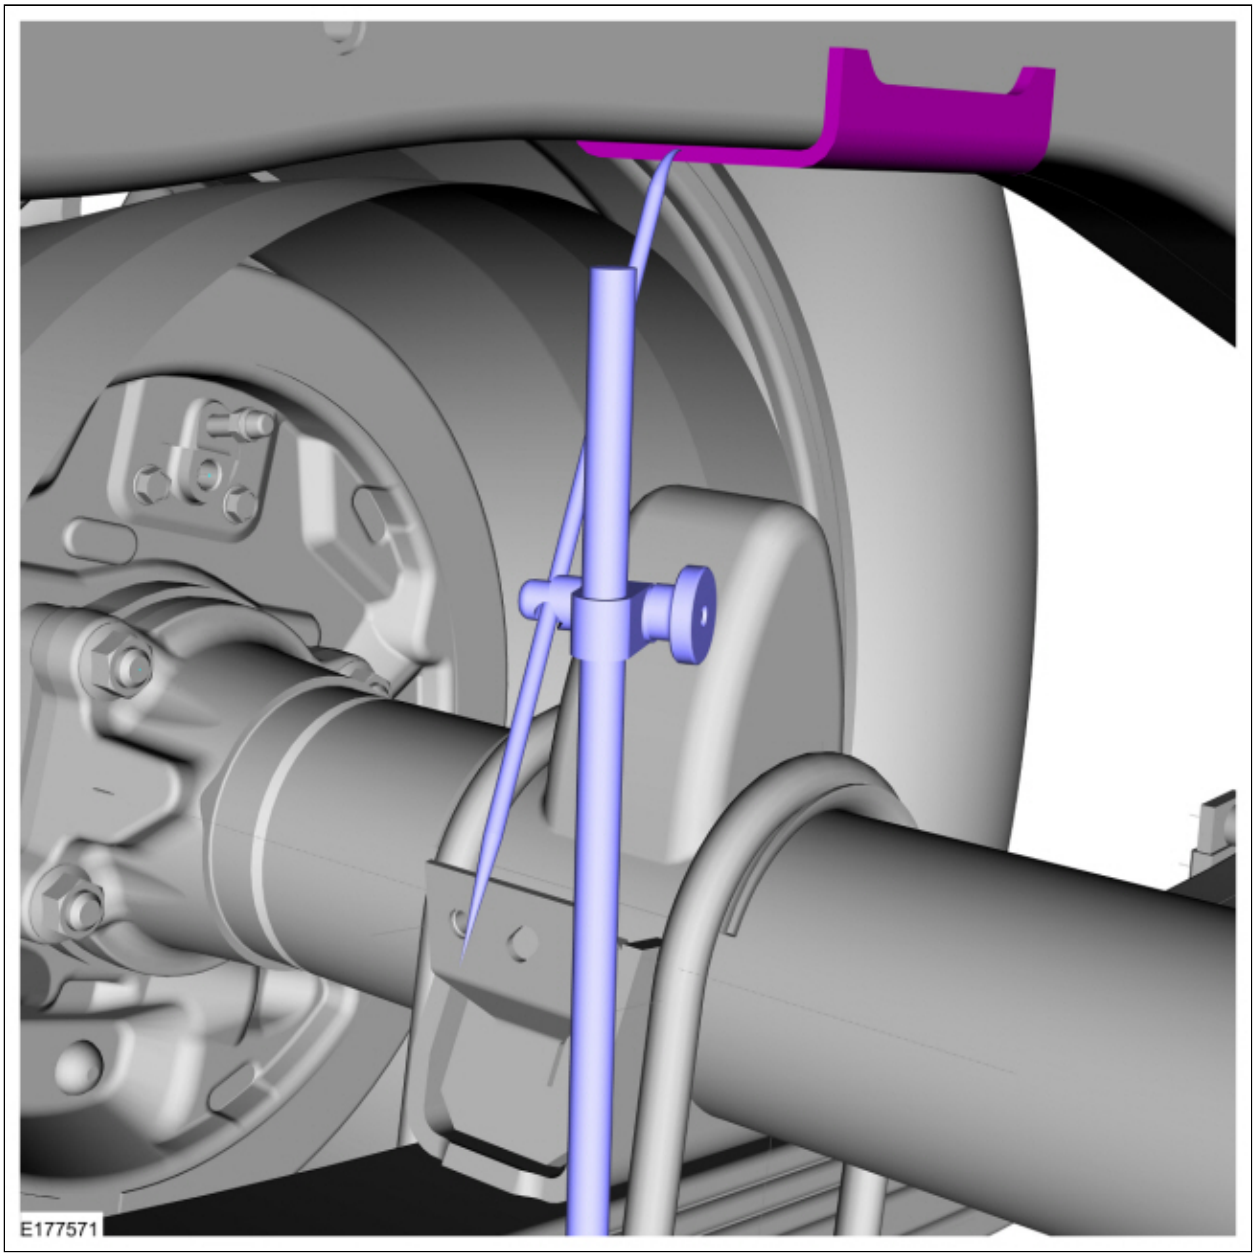
6. With the surface gauge positioned on a flat, level surface, record the measurement of the surface gauge position (measurement 1).



7. Subtract measurement 1 from measurement 2 to obtain the front ride height.

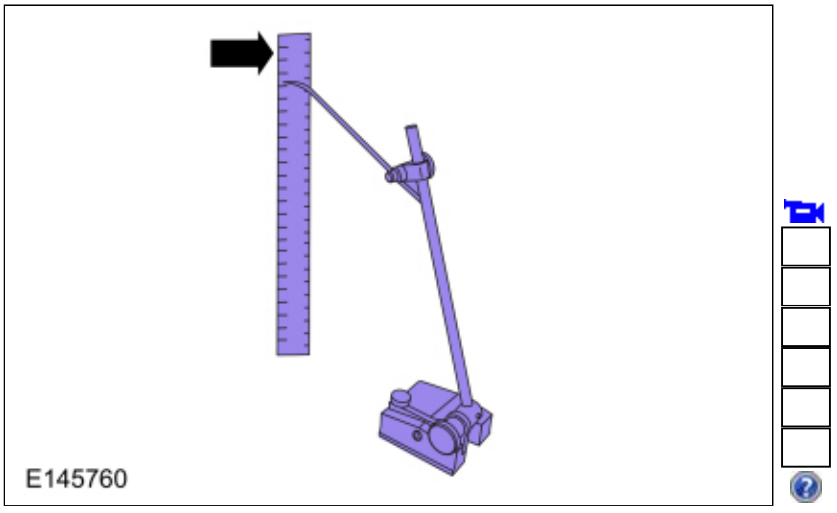
Rear Ride Height Measurement

NOTE: *Make sure that the vehicle is positioned on a flat, level surface and the tires are inflated to the correct pressure. The vehicle should have a full tank of fuel.*



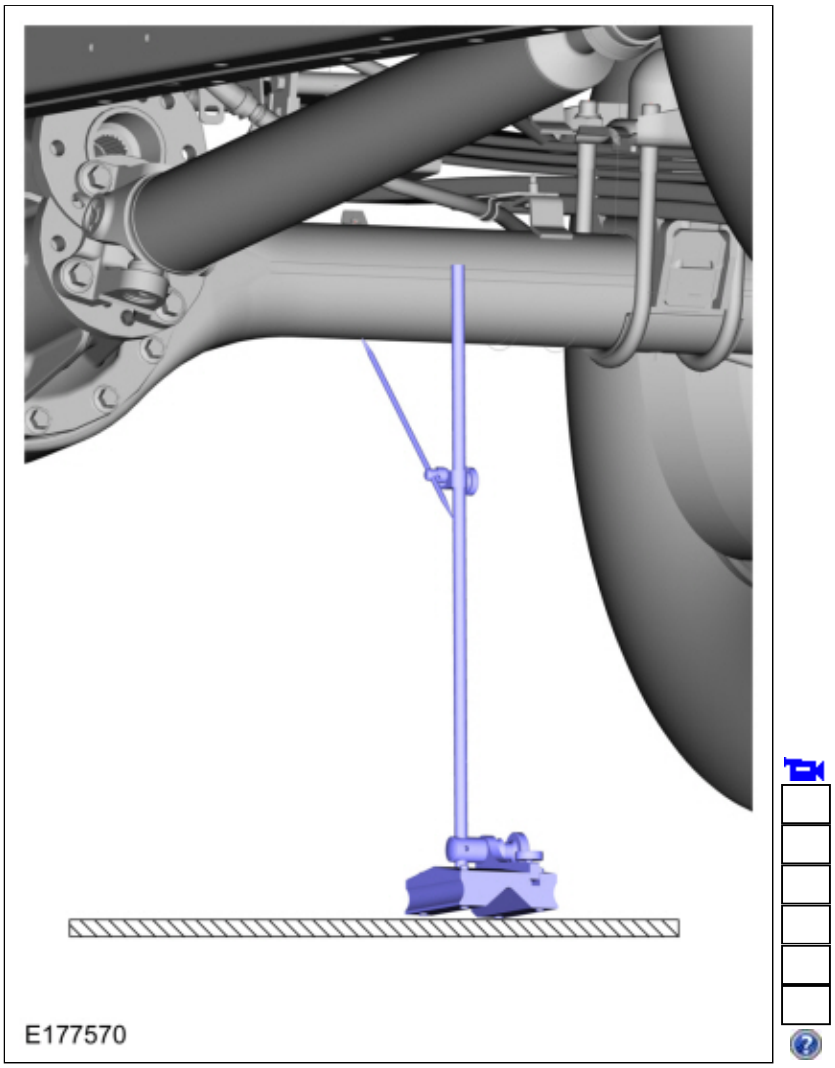
8. Refer to: Specifications (204-00 Suspension System - General Information, Specifications).

    1. Ride height = (Measurment2) - (Measurment1)

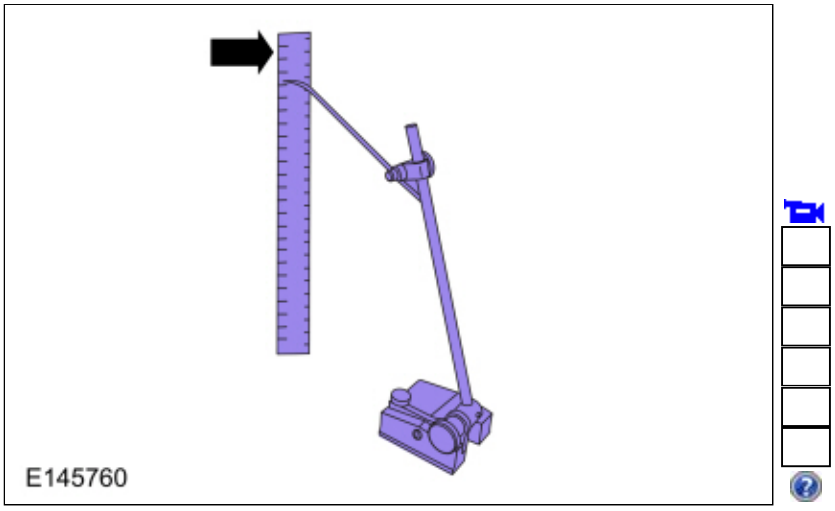


10. **NOTE:** *Lock the tool in the position shown.*

    Position the surface gauge on the same flat, level surface, adjust the gauge arm until the scriber point is located on the rear of the lower edge of the chassis rail bump stop bracket.
    Use the General Equipment: Surface Gauge



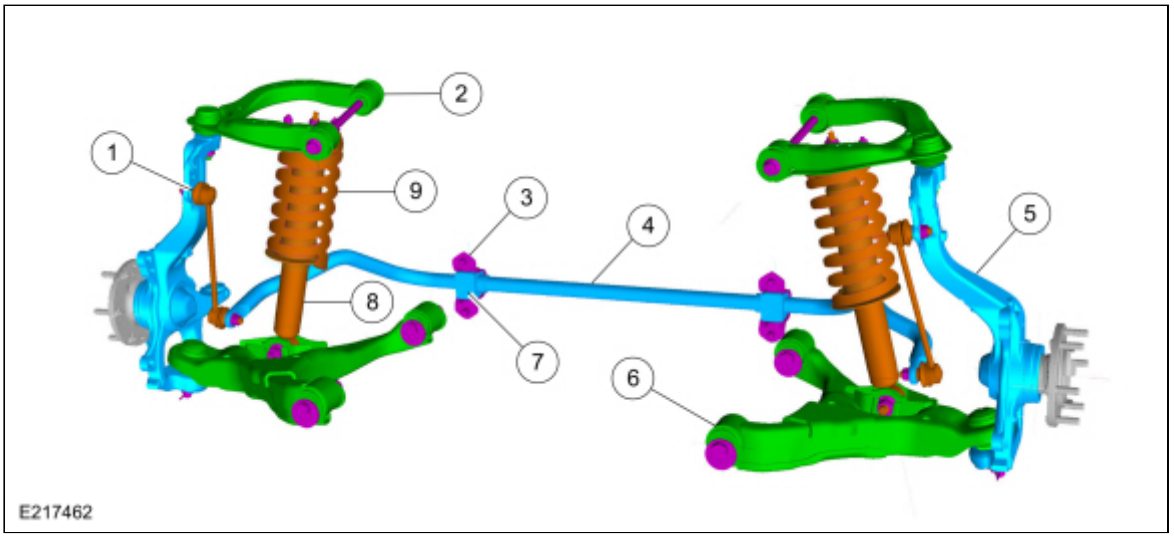
11. With the surface gauge positioned on a flat, level surface, record the measurement of the surface gauge position (measurement 2).
    Use the General Equipment: Surface Gauge



12. **NOTE:** *Lock the tool in the position shown.*

    Position the surface gauge on the same flat, level surface, adjust the gauge arm until the scriber point is located in the lower side of axle tube.
    Use the General Equipment: Surface Gauge

13. With the surface gauge positioned on a flat, level surface, record the measurement of the surface gauge position (measurement 1).



14. Subtract measurement 1 from measurement 2 to obtain the rear ride height.

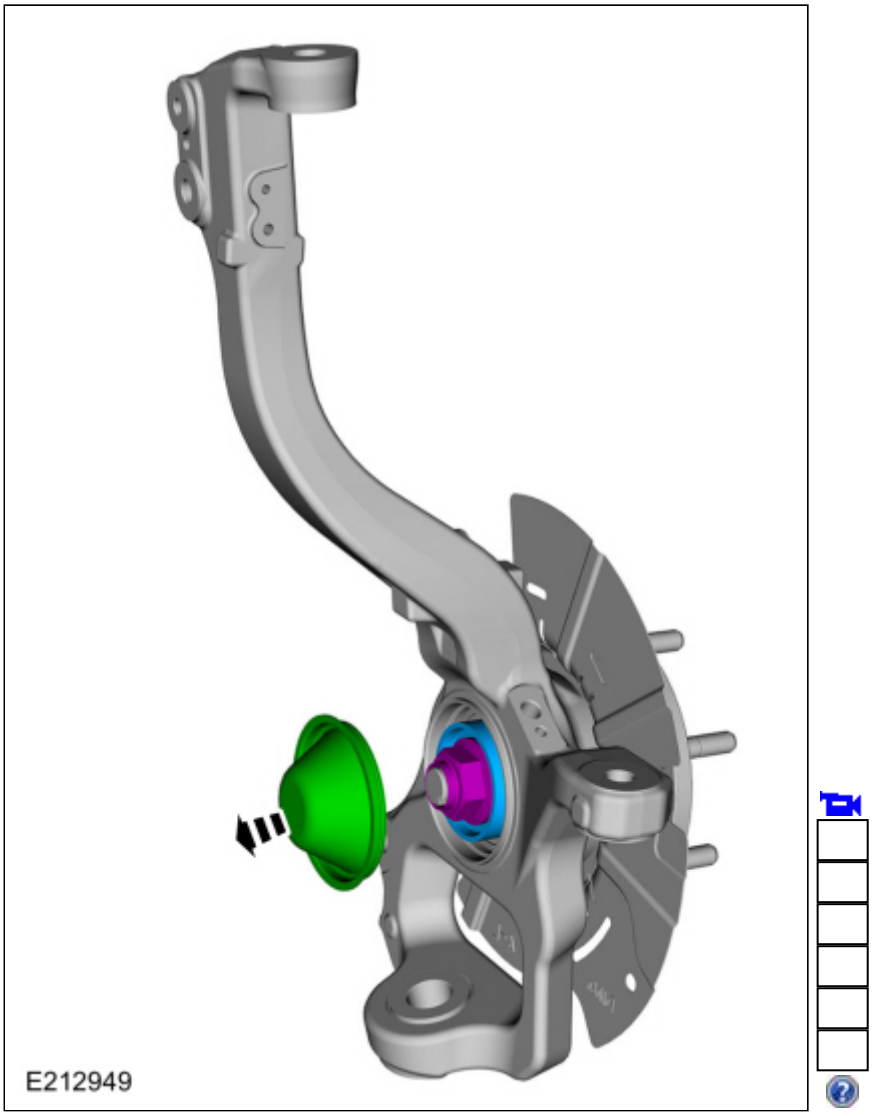
Front Wheel Bearing

Base Part Number: 1215

Special Tool(s) / General Equipment

 15089	205-307 Installer, Wheel Speed Sensor Ring
 16038	308-095 Installer, Input Shaft Bearing
Hydraulic Press	
Bearing Separator	

Removal



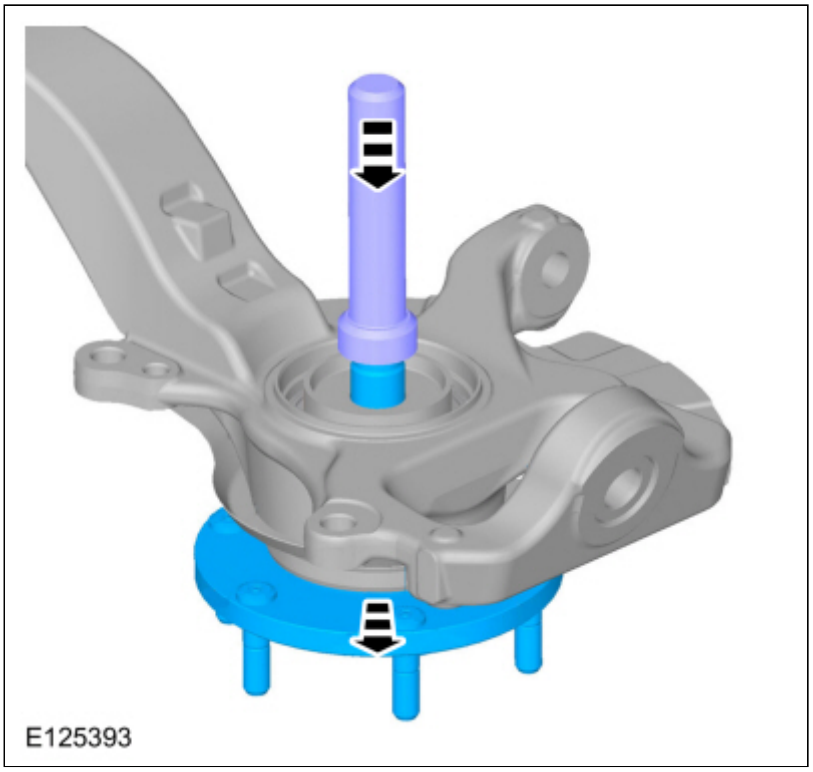
NOTICE: Replace the component with the same or equivalent parts to prevent component failure.

NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

4x2

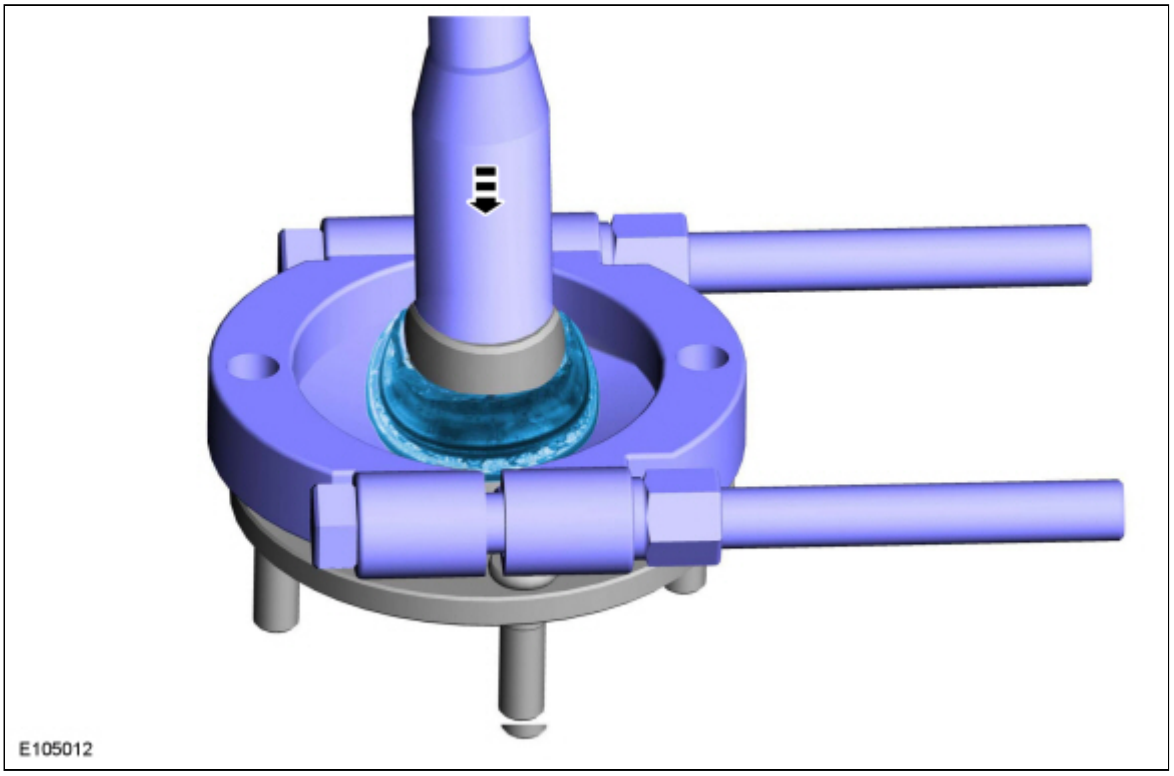
2. Refer to: Wheel Knuckle - LHD RWD/RHD RWD (204-01 Front Suspension, Removal and Installation).
3. *Torque*: 300 Nm



4x4

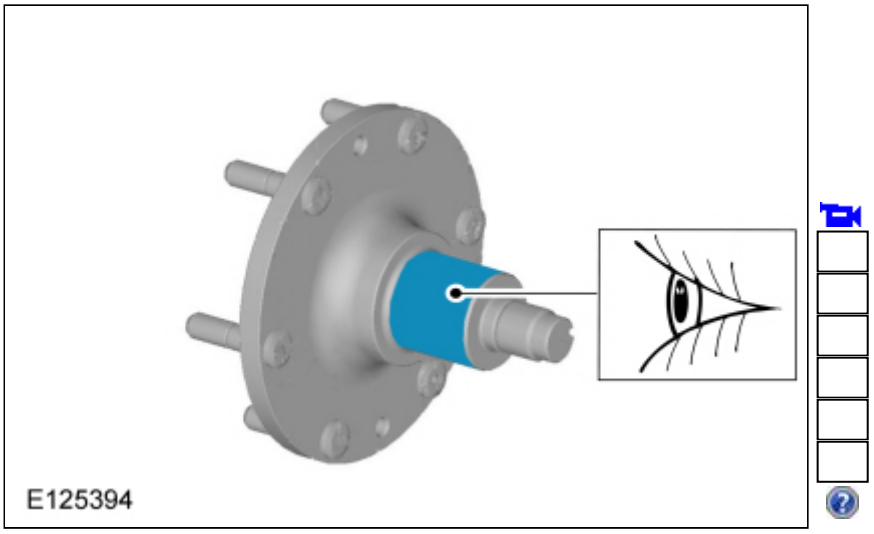
4. Refer to: Wheel Knuckle - LHD 4WD/RHD 4WD (204-01 Front Suspension, Removal and Installation).

All vehicles



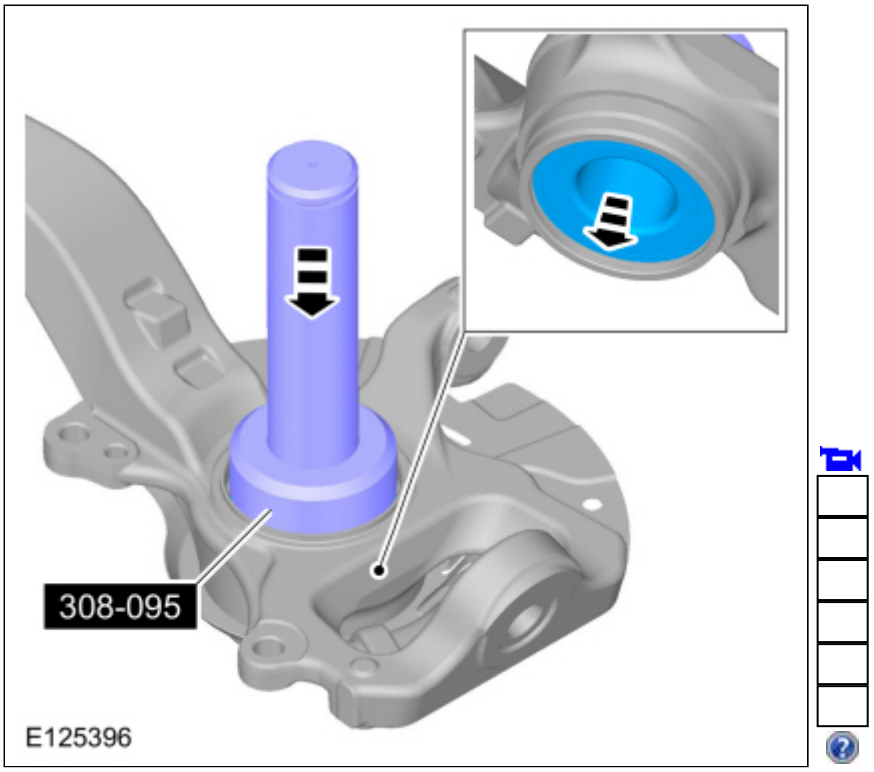
5. **NOTICE: Use a suitable tool to prevent damage to the component during removal.**

   Use the General Equipment: Hydraulic Press



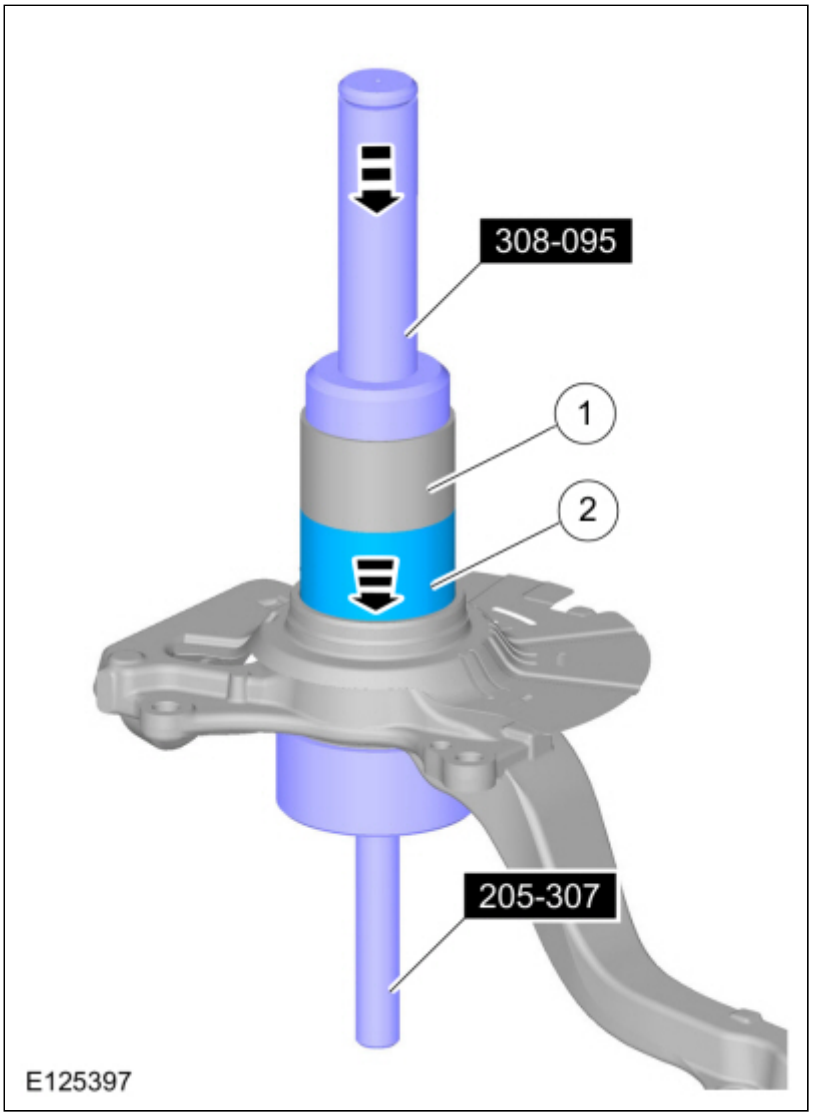
6. **NOTICE: Use a suitable tool to prevent damage to the component during removal.**

   Use the General Equipment: Hydraulic Press
   Use the General Equipment: Bearing Separator

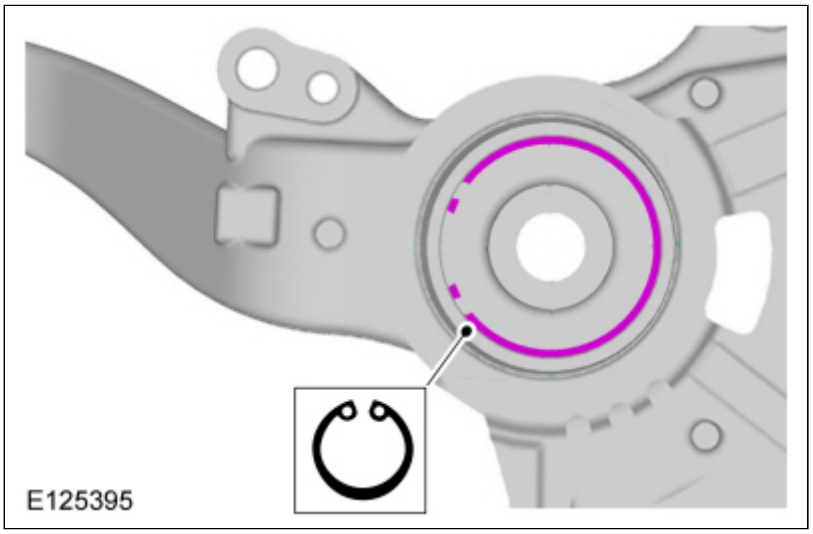


7.

8.

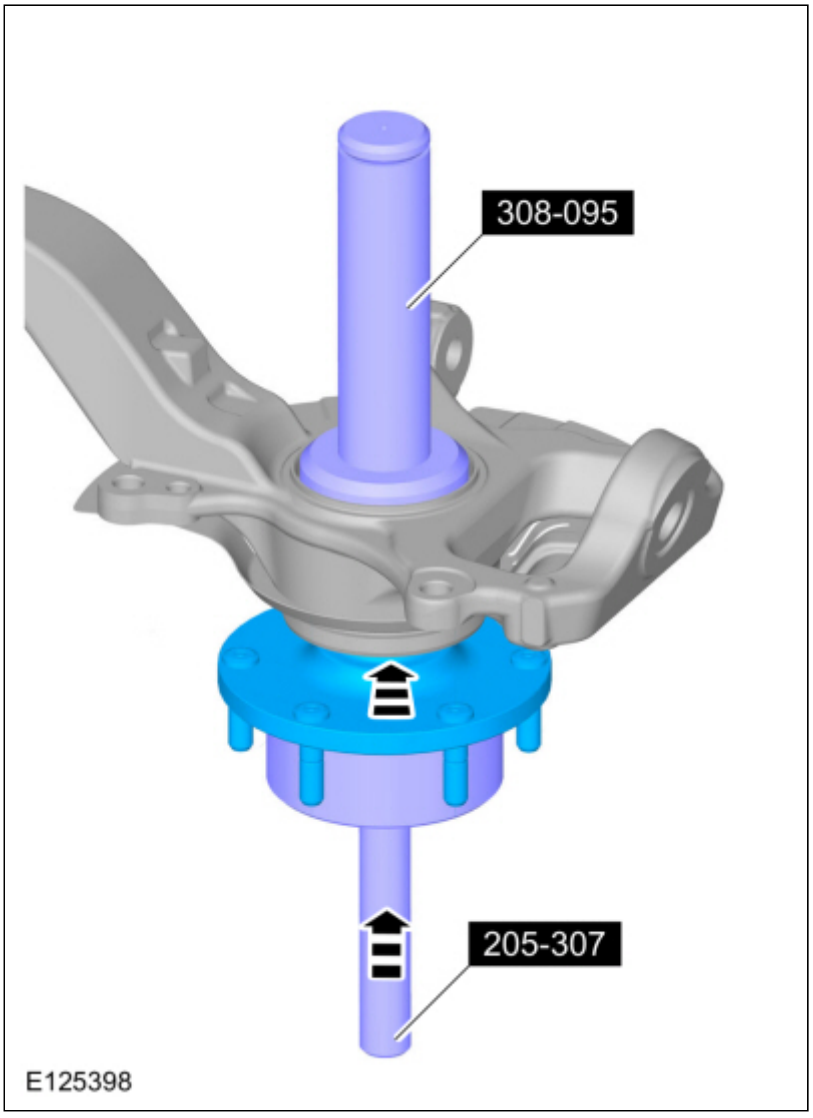


9. Use Special Service Tool: 308-095 Installer, Input Shaft Bearing.
   Use the General Equipment: Hydraulic Press



Installation

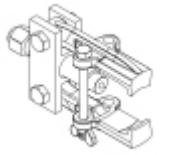
1. Old Front wheel bearing.
2. New Front wheel bearing.
3. Press and install the new wheel bearing.
   Use Special Service Tool: 308-095 Installer, Input Shaft Bearing. , 205-307 Installer, Wheel Speed Sensor Ring.
   Use the General Equipment: Hydraulic Press

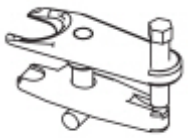


2. **NOTE:** *Make sure that the sensor ring is correctly located.*

   NOTE: *Make sure that a new snap ring is installed.*

3. Use Special Service Tool: 308-095 Installer, Input Shaft Bearing. , 205-307 Installer, Wheel Speed Sensor Ring.
   Use the General Equipment: Hydraulic Press





4. To install, reverse the removal procedure.

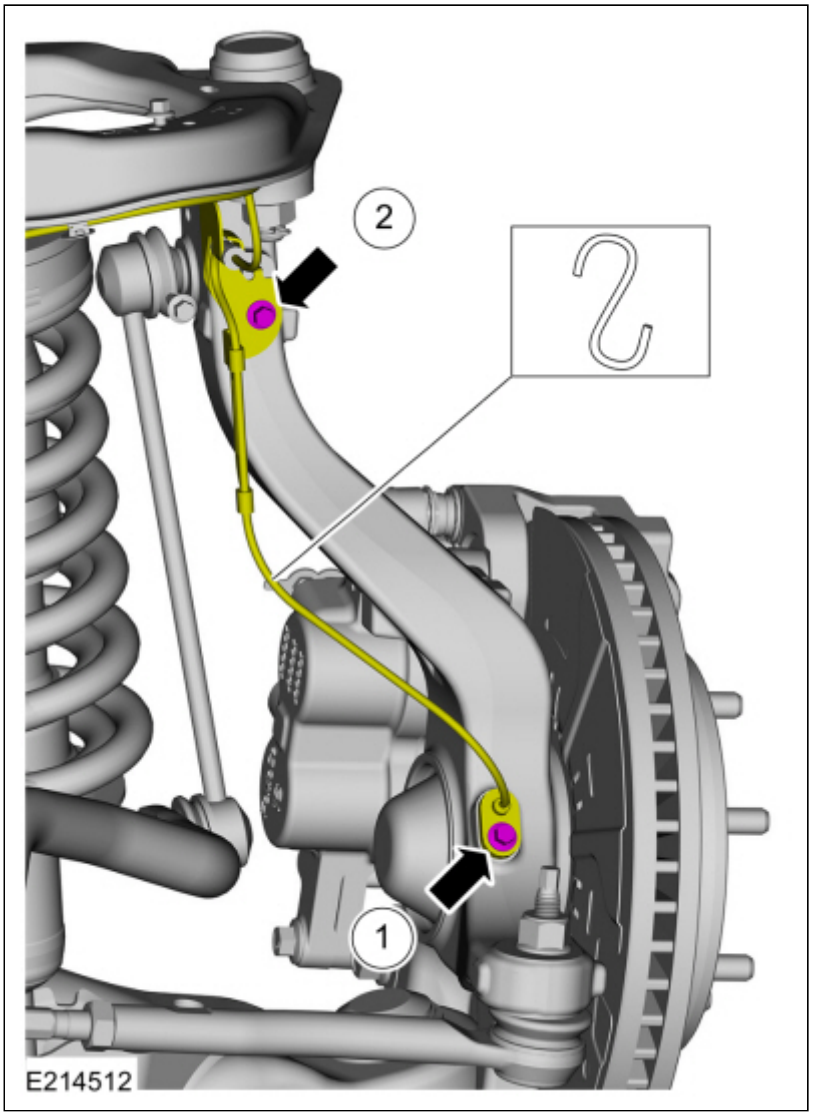
Wheel Knuckle - LHD RWD/RHD RWD

Base Part Number: 3K170

Special Tool(s) / General Equipment

 E216592	211-003 (T64P-3590-F) Remover, Steering Arm
 E139377	49-T028-3A0 Remover, Ball Joint Puller Set



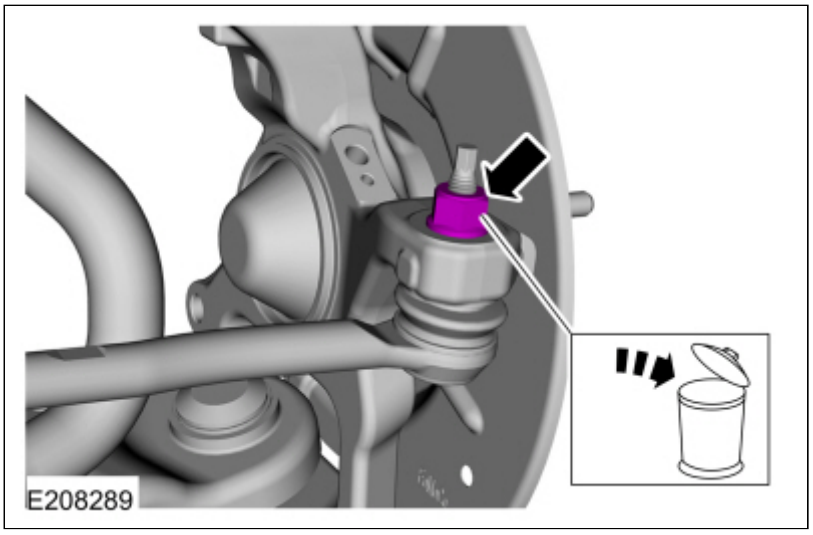
Removal

NOTICE: Replace the component with the same or equivalent parts to prevent component failure.

NOTICE: Before performing the following procedures, remove the ABS wheel-speed sensor (axle side) and fix it to an appropriate place where the sensor will not be pulled by mistake while the vehicle is being serviced.

NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).
3. *Torque*: 6 Nm



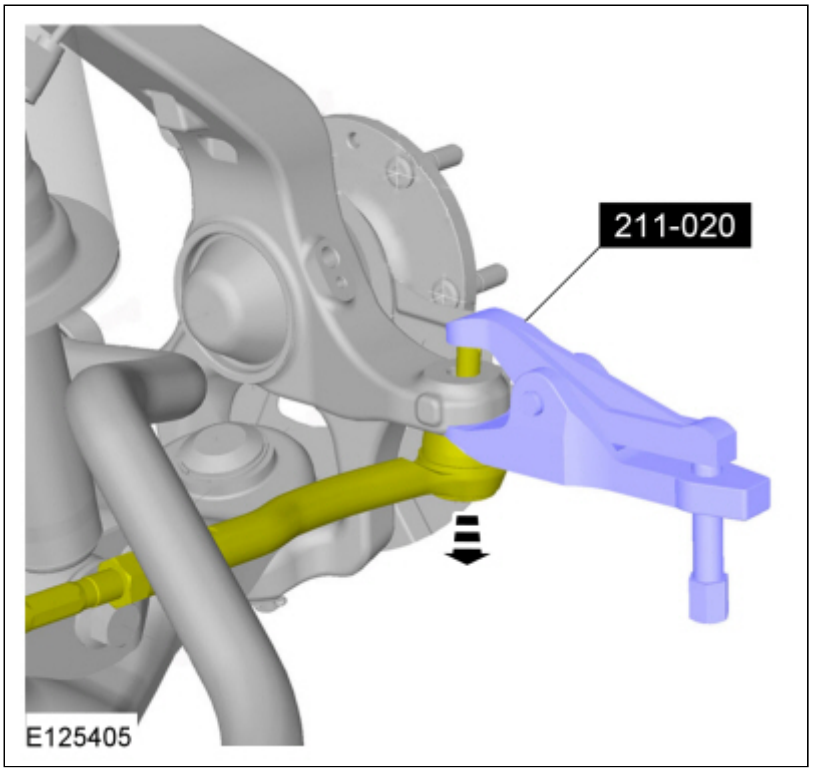
4. **NOTICE: Make sure that no load is placed on the brake hose.**

   Refer to: Brake Disc (206-03 Front Disc Brake, Removal and Installation).

5. **NOTICE: Make sure that a new nut is installed.**

   NOTICE: Make sure that ball joint does not rotate.

   Torque: 63 Nm



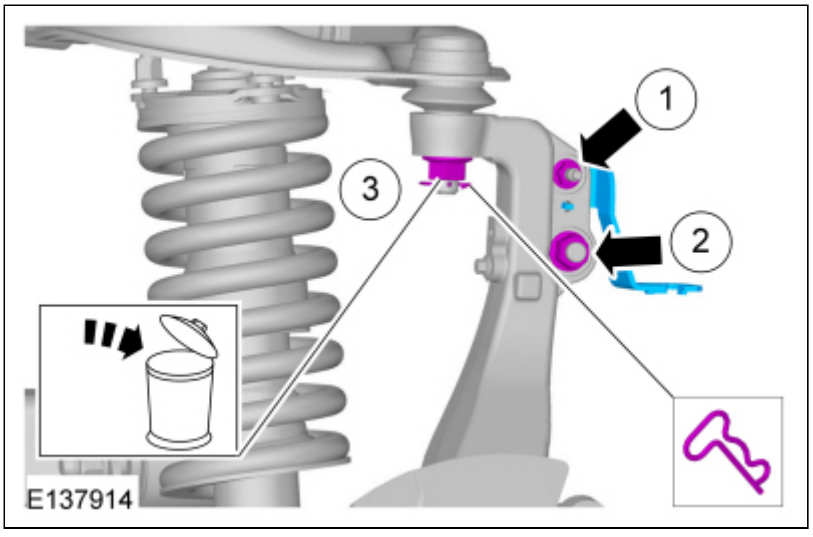
6. **NOTICE: Use a suitable tool to prevent damage to the components during removal.**

   NOTICE: Take extra care not to damage the component.

NOTICE: Leave the tie-rod end retaining nut in place to protect the ball joint stud.

NOTICE: Protect the ball joint seal using a soft cloth to prevent damage.

Use Special Service Tool: 211-003 (T64P-3590-F) Remover, Steering Arm.



7. **NOTICE: Make sure that a new nut is installed.**

   NOTICE: Use suitable packing material to prevent damage to the component.

   NOTICE: Make sure that the ball joint ball does not rotate.

   1. *Torque*: 14 Nm
   2. *Torque*: 90 Nm
   3. *Torque*: 63 Nm

8. **NOTICE: Protect the component with a soft cloth to prevent damage.**

   NOTICE: Take extra care not to damage the component.

   Use Special Service Tool: 49-T028-3A0 Remover, Ball Joint Puller Set.

9. **NOTICE: Make sure that a new nut is installed.**

   NOTE: *Make sure that the component is correctly secured..*

   Torque: 175 Nm

10. **NOTICE: Use a suitable tool to prevent damage to the components during removal.**

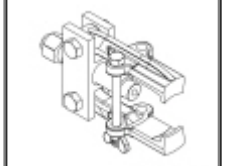
    NOTICE: Take extra care not to damage the component.

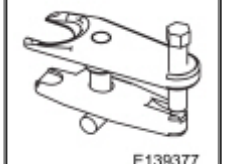
    Use Special Service Tool: 49-T028-3A0 Remover, Ball Joint Puller Set.

11. **NOTE:** *This step is only necessary when installing a new component.*

    Refer to: Front Wheel Bearing (204-01 Front Suspension, Removal and Installation).

Installation





1. To install, reverse the removal procedure.
2. Refer to: Front Toe Adjustment (204-00 Suspension System - General Information, General Procedures).

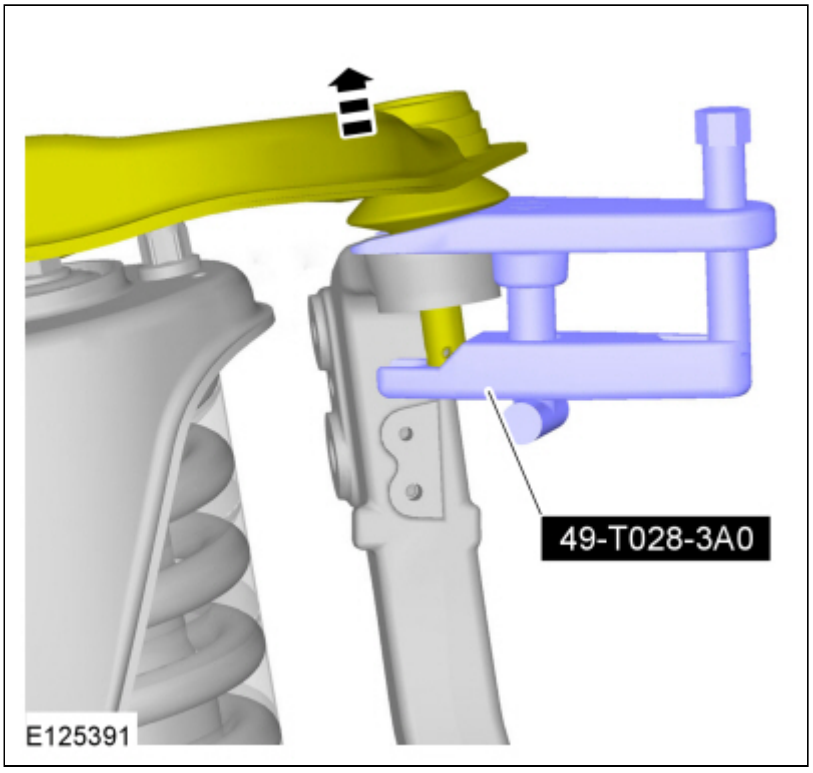
9. **NOTICE: Make sure that a new nut is installed.**

   NOTICE: Use suitable packing material to prevent damage to the component.

   NOTICE: Make sure that the ball joint ball does not rotate.

   1. *Torque*: 14 Nm
   2. *Torque*: 90 Nm
   3. *Torque*: 63 Nm



10. **NOTICE: Use a suitable tool to prevent damage to the components during removal.**

    NOTICE: Take extra care not to damage the component.

    NOTICE: Protect the component with a soft cloth to prevent damage.

    Use Special Service Tool: 49-T028-3A0 Remover, Ball Joint Puller Set.

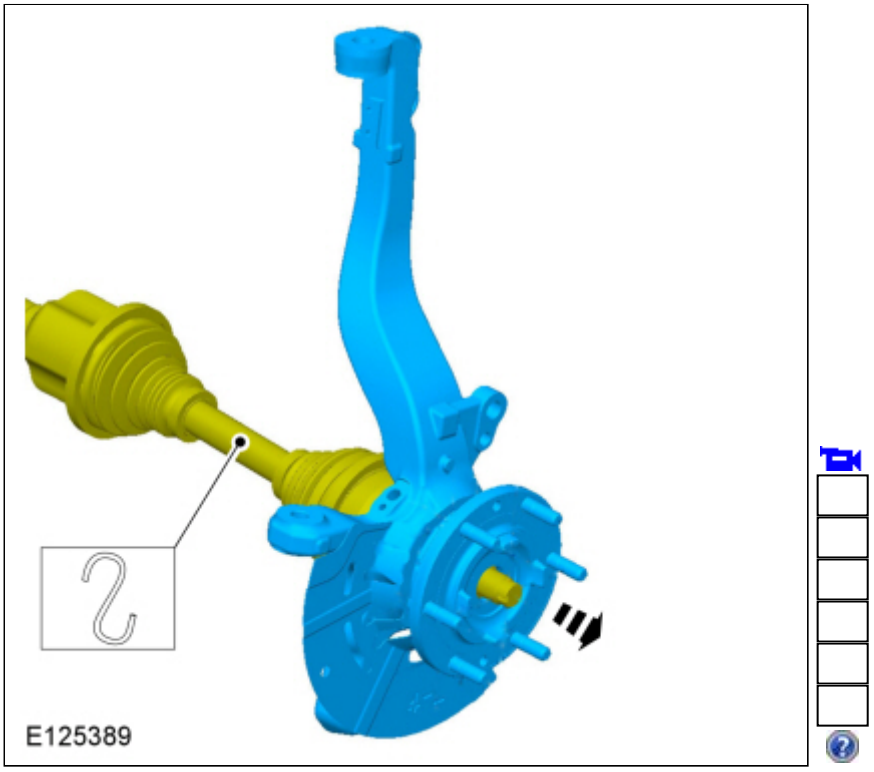
11. **NOTE:** *Make sure that the component is correctly secured.*

    Torque: 175 Nm

12. **NOTICE: Use a suitable tool to prevent damage to the components during removal.**

    NOTICE: Take extra care not to damage the component.

    Use Special Service Tool: 49-T028-3A0 Remover, Ball Joint Puller Set.



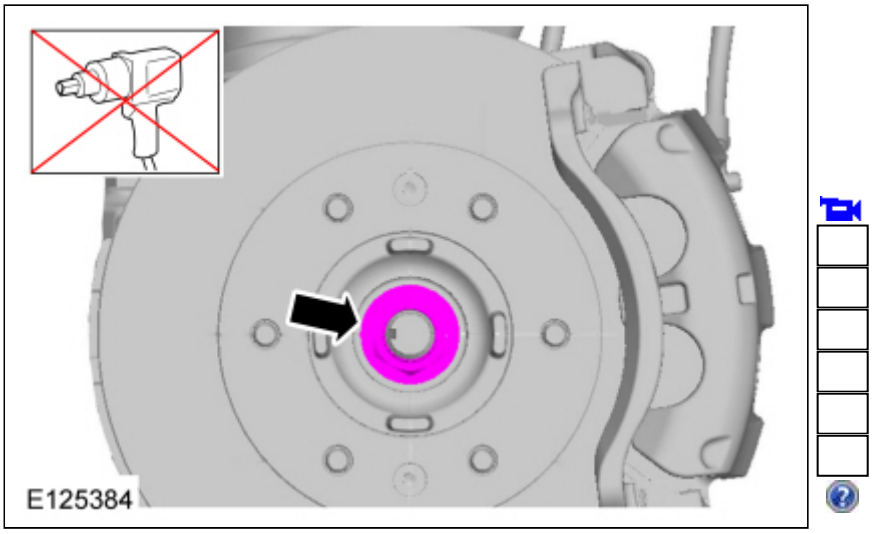
13. **NOTICE: Use a suitable tool to prevent damage to the components during removal.**

    Using the special tool, press the outboard CV joint until it is loose in the hub.
    Use the General Equipment: Puller

14. **NOTICE: Take extra care not to damage the mating faces.**

    NOTICE: Take extra care not to damage the seal.

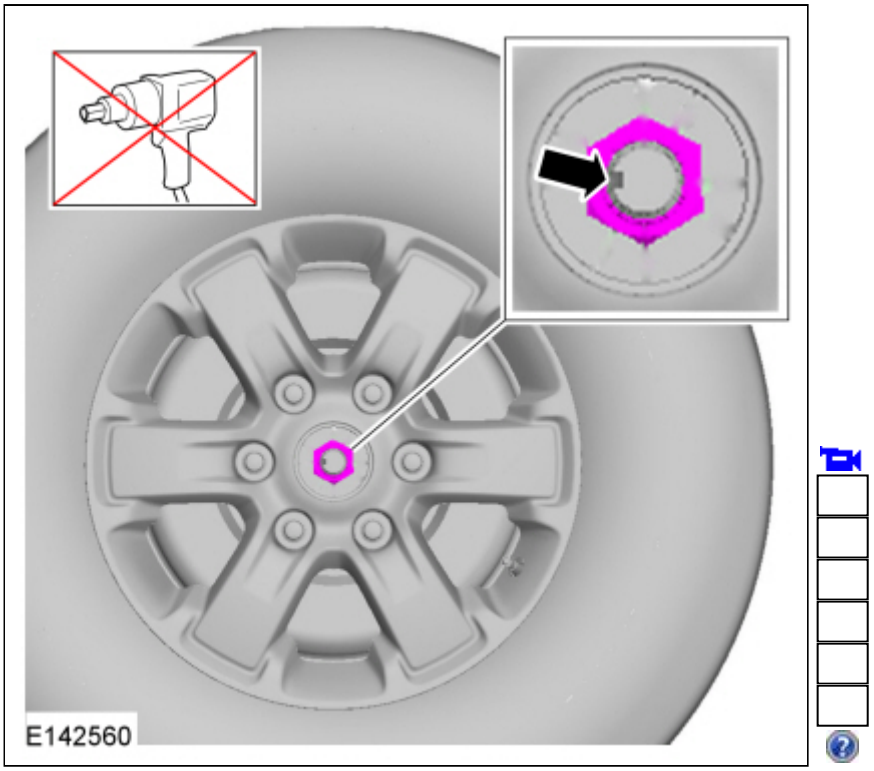
Installation



1. **NOTICE: Make sure that the ball joint ball does not rotate.**

   NOTE: *This step is only necessary if the component needs to be replaced.*

   NOTE: *Install a new component if it is damaged or has excessive wear.*

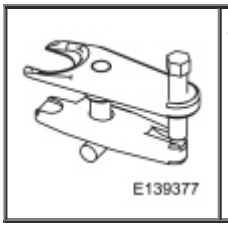


2. To install, reverse the removal procedure.
3. **NOTICE: If the outer constant velocity (CV) joint boot is damaged a new halfshaft must be installed.**

   NOTE: *Only tighten the hub nut finger tight at this stage.*

4. Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).
5. **NOTICE: Make sure that the hub nut is pinned after installation.**

   General Equipment: Ford approved diagnostic tool
   Torque: 300 Nm



6. Refer to: Front Toe Adjustment (204-00 Suspension System - General Information, General Procedures).

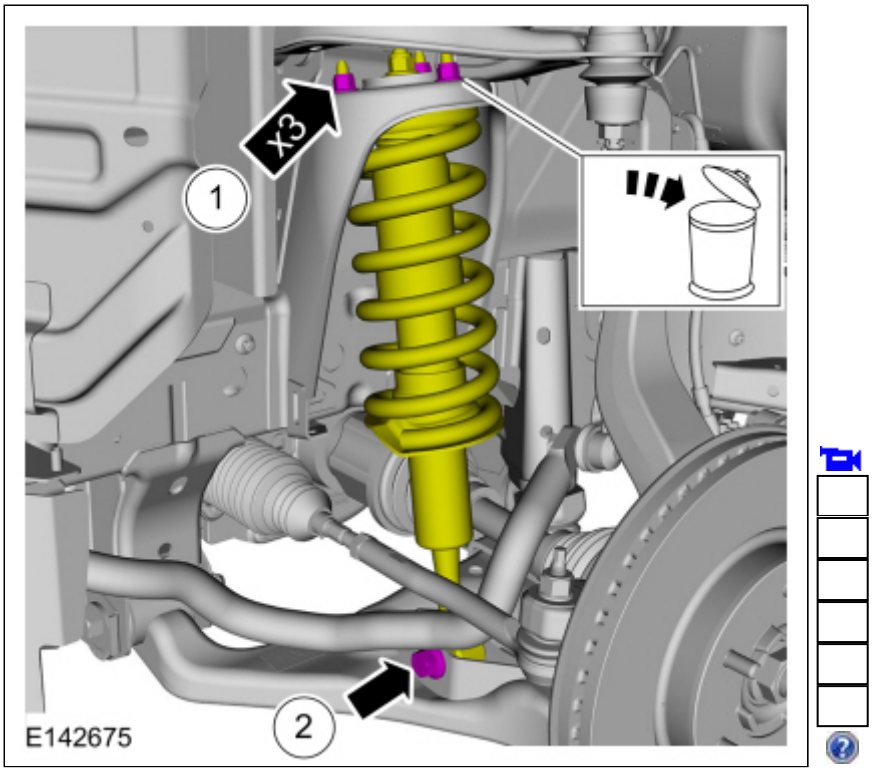
Front Strut and Spring Assembly

Base Part Number: 18045

Special Tool(s) / General Equipment

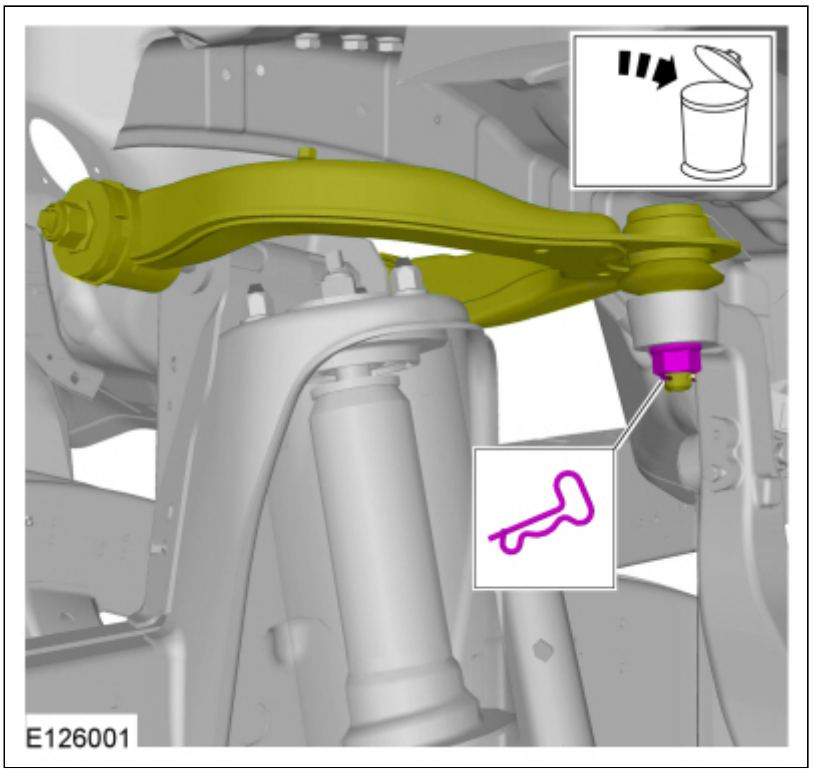
 E139377	49-T028-3A0 Remover, Ball Joint Puller Set

Removal



WARNING: All vehicles are equipped with gas-pressurized shock absorbers which will extend unassisted. Do not apply heat or flame to the shock absorbers during removal or component servicing. Failure to follow these instructions may result in personal injury.

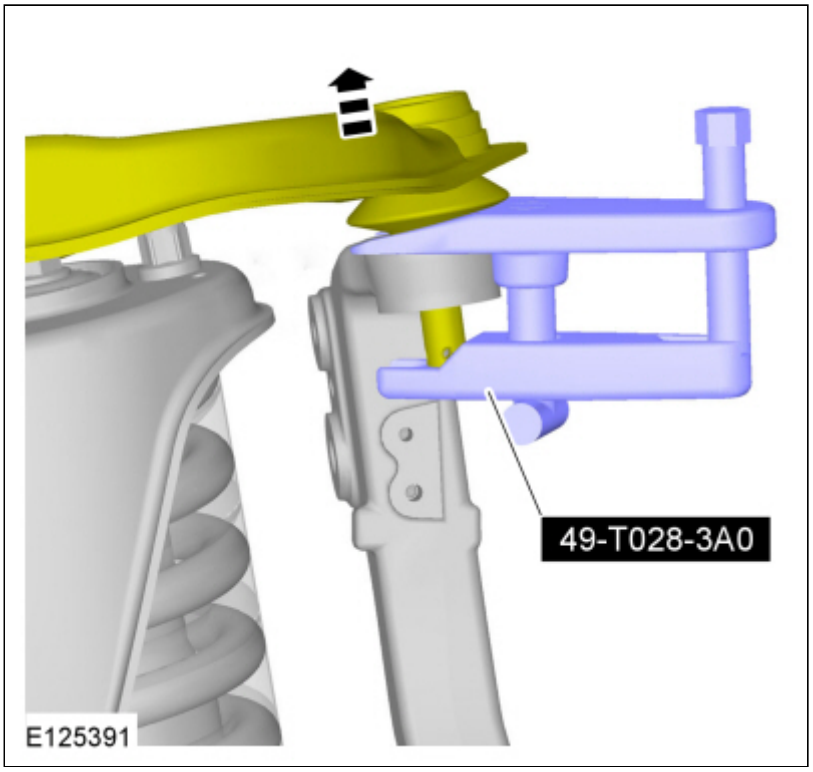
NOTICE: Suspension fasteners are critical parts because they affect performance of vital components and systems and their failure can result in major service expense. A new part with the same part number or an equivalent part must be installed, if installation is necessary. Do not use a part of lesser quality or substitute design. Torque values must be used as specified during reassembly to make sure of correct retention of these parts.



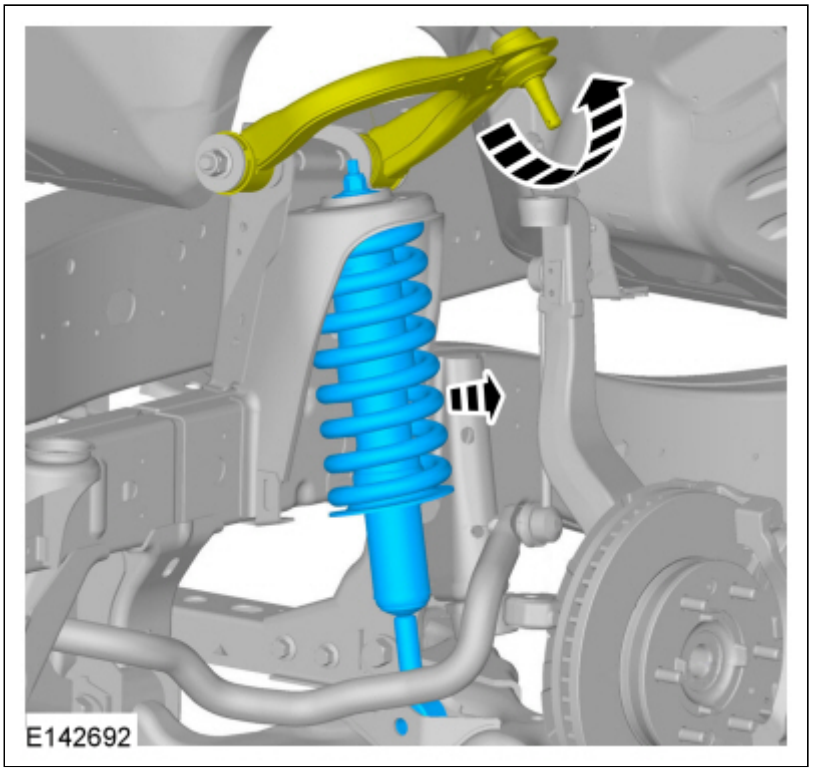
NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).

1. *Torque*: 55 Nm
2. *Torque*: 235 Nm



4. *Torque*: 65 Nm



5. **NOTICE: Do not use a hammer to separate the ball joint from the wheel knuckle or damage to the wheel knuckle can result.**

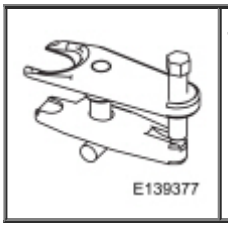
   - **Do not damage the ball joint boot while installing the special tool.**
   - **Make sure that the knuckle assembly is secured with suitable retaining straps.**

   Use Special Service Tool: 49-T028-3A0 Remover, Ball Joint Puller Set.

6. Using a suitable jack support the lower control arm near the lower ball joint.
7. Lower the jack support to lower the control arm.
8. **NOTE:** *Note the position of the components before removal.*

Installation

NOTICE: Before tightening any suspension bushing fasteners, use a suitable jack to raise the suspension.



1. To install, reverse the removal procedure.

Special Tool(s) / General Equipment

 E199894	204-167 Compressor, Coil Spring
 E199896	204-215 Adapter for 204-167
Vise	

DISASSEMBLY

1. **WARNING: Coil springs and strut assemblies are compressed under extreme load. Always use a spring compressor for disassembly. Follow procedure instructions carefully and make sure the spring compressor has the correct spring plates or adapters. Failure to follow these instructions may result in serious personal injury..**

   Refer to: Front Strut and Spring Assembly (204-01 Front Suspension, Removal and Installation).

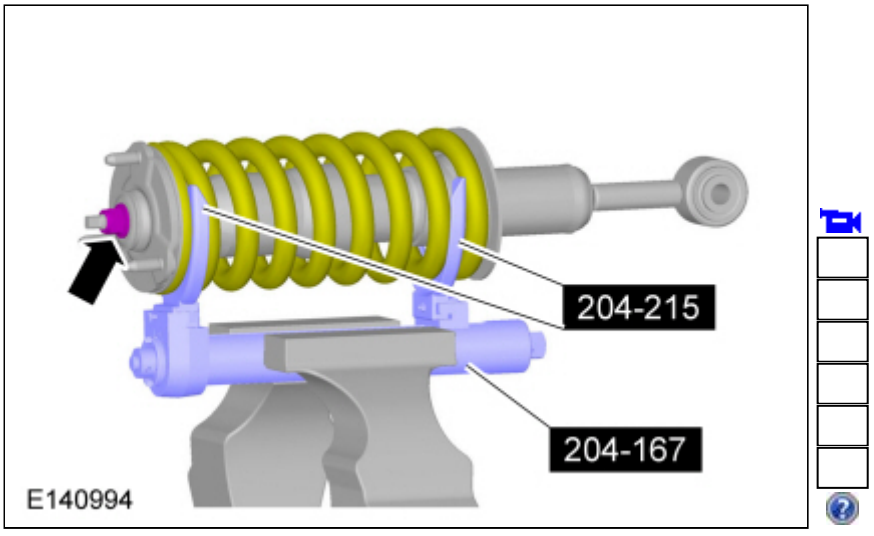
   1. **NOTICE: Take extra care not to damage the component.**

      NOTICE: Do not use power tools to remove the nut.

      NOTE: *Typical assembly shown. actual application may vary.*

      Carefully remove and discard the strut rod nut and remove the bearing plate.
      Install Special Service Tool: 204-167 Compressor, Coil Spring. , 204-215 Adapter for 204-167.

3. **NOTE:** *Note the position of the component before removal.*



ASSEMBLY

1. **WARNING: Take extra care when handling a compressed spring. Failure to follow this instruction may result in personal injury.**

   To assemble, reverse the disassembly procedure.

2. **NOTE:** *Only tighten the nut finger tight at this stage.*

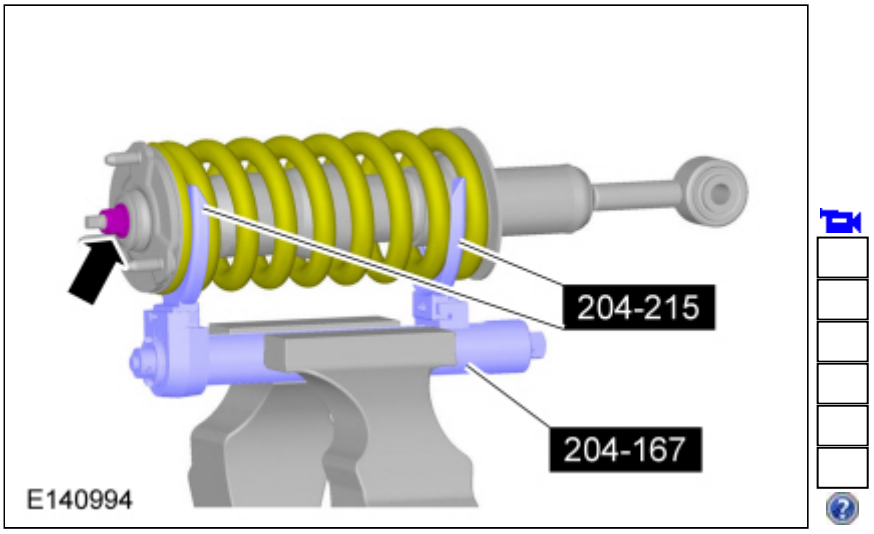
   Use Special Service Tool: 204-167 Compressor, Coil Spring. , 204-215 Adapter for 204-167.
   Use the General Equipment: Vise

3. **NOTE:** *Make sure that the components are installed to the position noted before removal.*

   NOTE: *Make sure that the installation marks are aligned.*

   Use Special Service Tool: 204-167 Compressor, Coil Spring. , 204-215 Adapter for 204-167.

1. Damper bush bottom axis .
   Use Special Service Tool: 204-167 Compressor, Coil Spring. , 204-215 Adapter for 204-167.

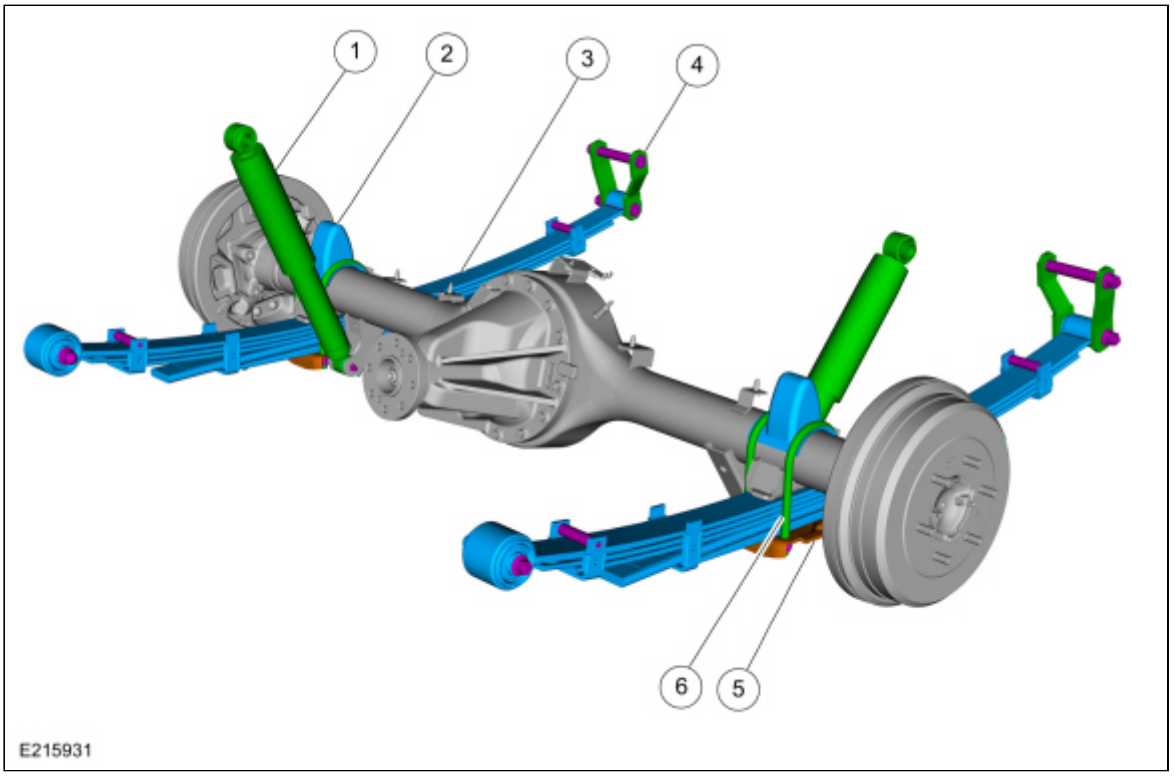


2. **NOTE:** *Make sure that the correct tolerances are observed.*

   37° ± 3°

5. **NOTICE: Use an open-ended wrench to prevent the component from turning.**

   Use Special Service Tool: 204-167 Compressor, Coil Spring. , 204-215 Adapter for 204-167.
   Use the General Equipment: Vise
   Torque: 65 Nm



6. Remove Special Service Tool: 204-167 Compressor, Coil Spring. , 204-215 Adapter for 204-167.
7. Refer to: Front Strut and Spring Assembly (204-01 Front Suspension, Removal and Installation).

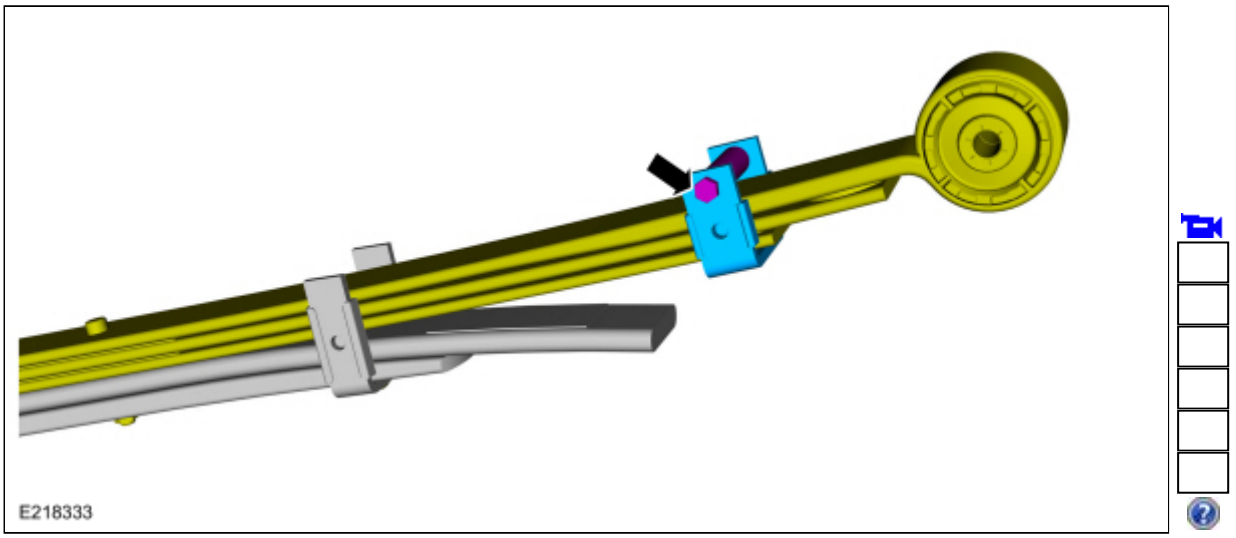
Leaf Spring Tip Isolator

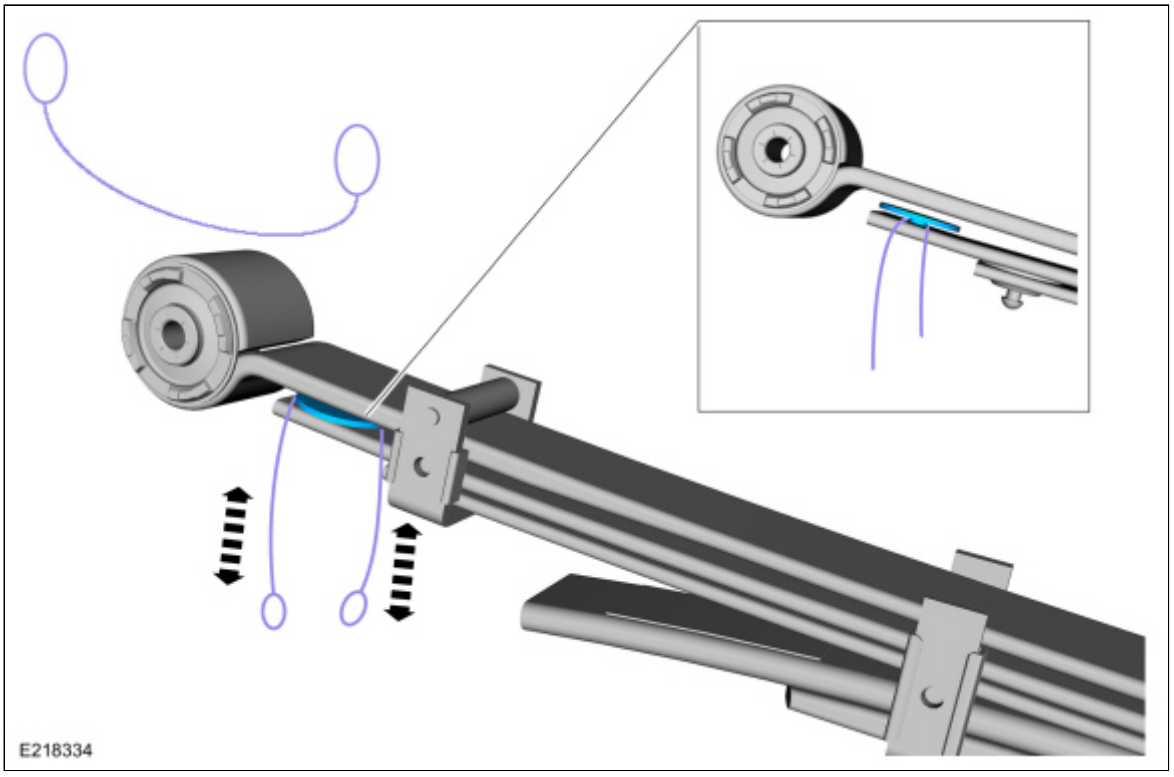
Special Tool(s) / General Equipment

Knife



Materials

Name	Specification
Grease - Silicone	ESE-M1C171-A
Brake Cleaner	-



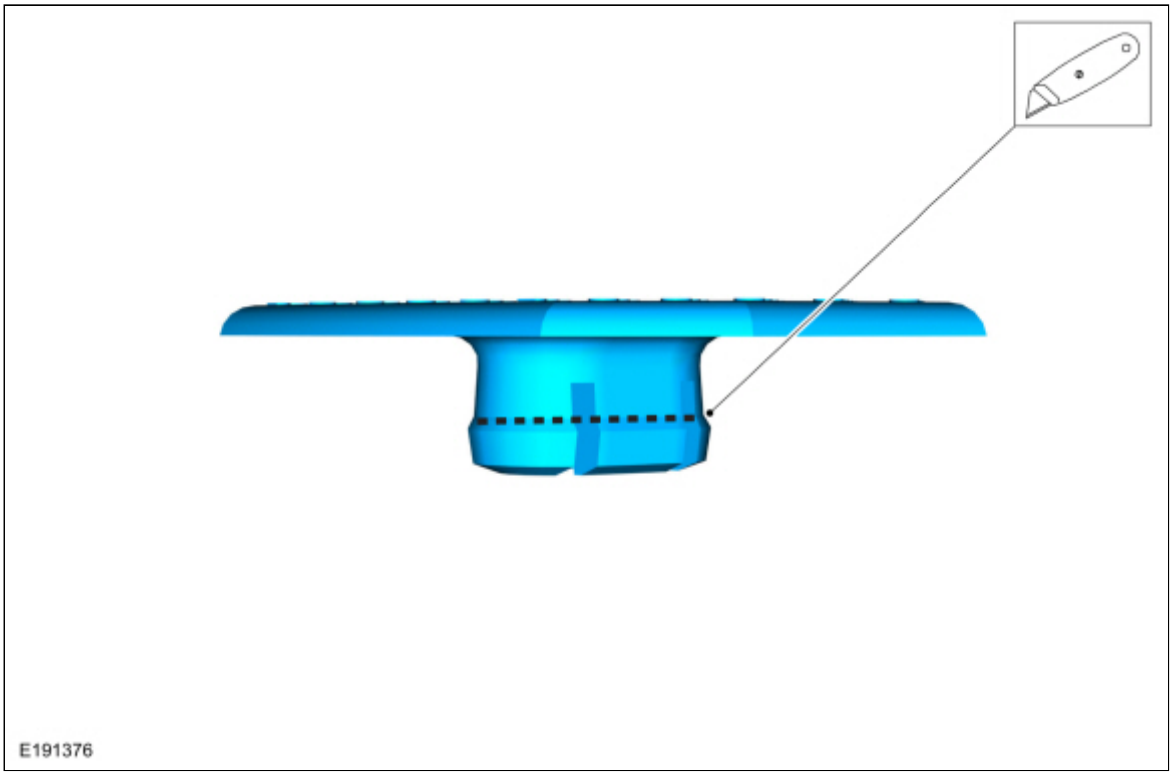
Removal

1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
3. **NOTICE: It is very important to use a non-metallic wedge or corrosion protection can be compromised.**

   Use a non-metallic wedge (such as a rubber door stop or rubber coated pry bar) near the leaf spring tip isolator and wedge the leaf spring apart.
   Torque: 30 Nm

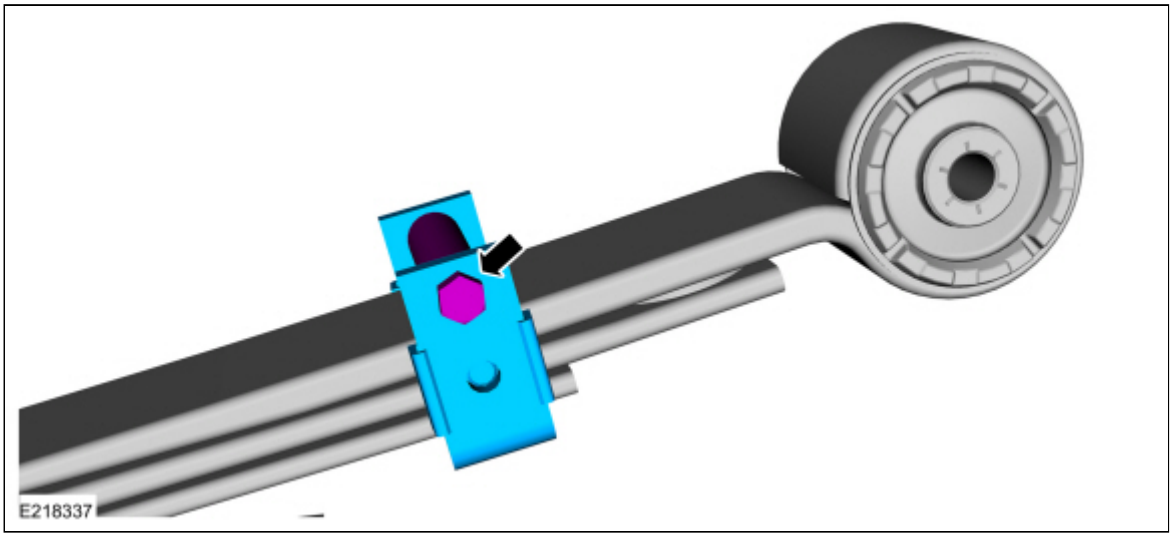
4. Using a locally obtained PVC cable saw, cut the top of the leaf spring tip isolator off and remove the insert.

5. Thoroughly rinse the leaf spring tip isolator area with brake clean and a clean shop rag to remove debris from the leaf spring tip isolator seating area.
   Material: Brake Cleaner



Installation

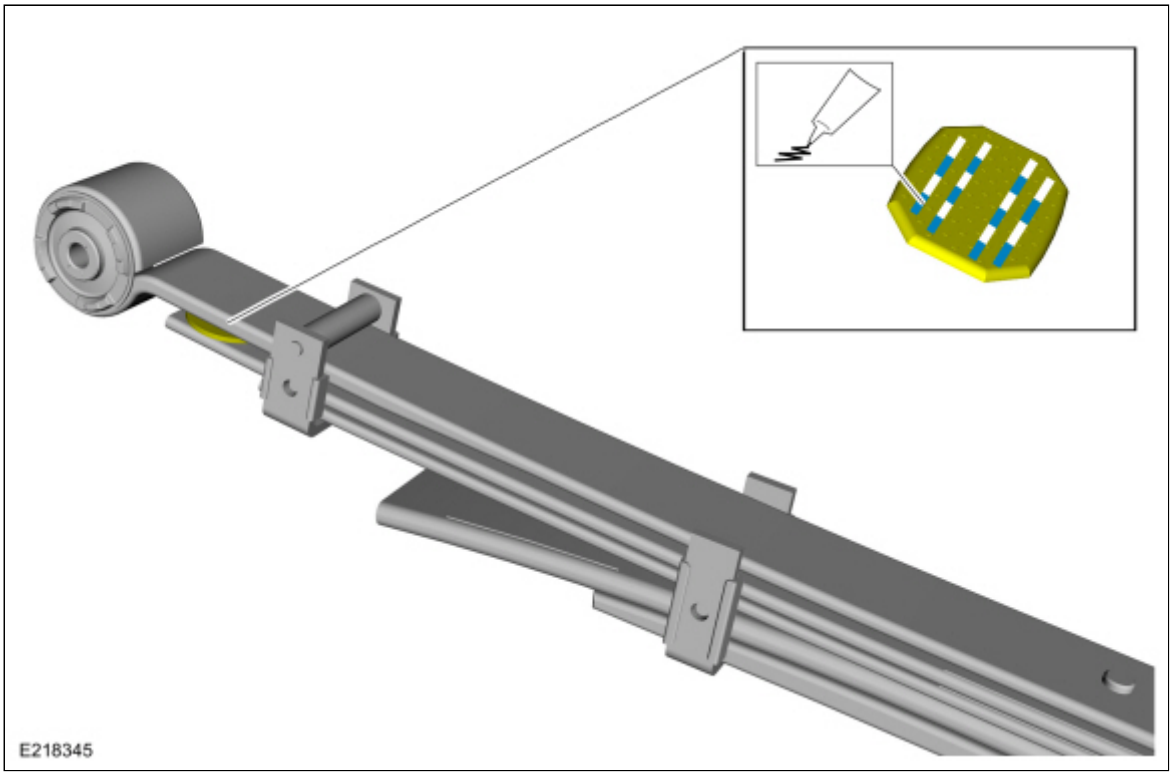
NOTE: *Leaf spring isolator tips can be replaced. Replacement components will depend on the vehicle payload rating.*



- *Black — Base payload vehicles*
- *White — Heavy duty payload vehicles (greasable)*

1. **NOTE:** *This step is only necessary if the trim leaf spring tip isolator post to aid installation between the leaves.*

   If necessary.
   Use the General Equipment: Knife



2. Install the new leaf spring tip isolator and remove the non-metallic wedge.
   Torque: 30 Nm

3. Wash the leaf spring assembly to remove any remaining dirt or debris using a power washer or direct stream of water. Using shop air, dry the leaf spring assembly thoroughly.

4. On heavy duty payload vehicles (white leaf tip insert), apply a thin coat of grease to the leaf spring tip isolator surface.
   Material: Grease - Silicone (ESE-M1C171-A)

5. Repeat the procedure for the remaining leaf spring tip isolators.

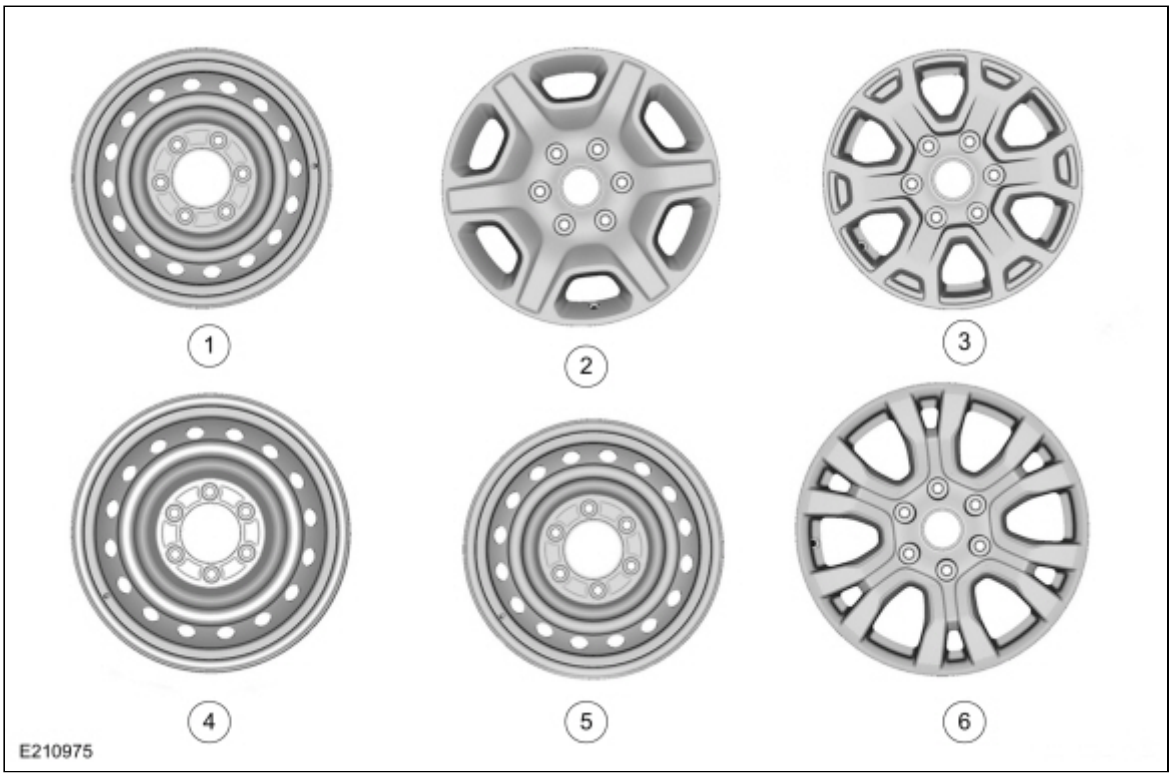
Safety Precautions - Overview

Overview

WARNING: Before servicing any tire, ask the customer if anyone injected a tire sealant into the tire. Tire sealants may be flammable and can burn or explode if exposed to an ignition source. Failure to follow this instruction may result in serious personal injury.

NOTICE: Do not clean aluminum wheels with steel wool, abrasive-type cleaners or strong detergents or damage to the wheel finish may occur.



Factory-installed tires and wheels are designed to operate satisfactorily with loads up to and including full-rated load capacity when inflated to recommended inflation pressures.

Correct tire pressure and driving techniques have an important influence on tire life. Heavy cornering, excessively rapid acceleration and unnecessary sharp braking increase tire wear.

To equalize tire wear, the tires should be rotated at recommended intervals.

Wheels and Tires

General Equipment

Ford diagnostic equipment

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical damage.

Visual Inspection Chart

Mechanical
Wheel(s)
Tire(s)
Tire pressure(s) *
Valve stem(s)
Wheel nuts
Wheel studs
* Vehicles equipped with a tire pressure monitoring system must be inspected for correct operation using the Ford diagnostic equipment.

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

Tires should be checked for correct:

- tire pressure(s)
- tire sizes
- speed rating
- load range.
- tire construction type

The use of any other tire/wheel size, load range or type can seriously affect:

- ride
- handling
- speedometer/odometer calibration
- vehicle ground clearance
- tire clearance between the body and chassis
- wheel bearing life.
- braking performance

New wheels need to be installed when the vehicle wheels:

- are bent
- are cracked
- are dented
- are heavily corroded
- are leaking
- have elongated wheel hub bolt holes
- have excessive lateral or radial runout

It is mandatory to use only the tire sizes recommended on the tire label located on the door pillar attached to the vehicle. Larger or smaller tires can damage the vehicle, affect durability and require changing the speedometer calibration. Make sure wheel size and offsets match those recommended for the tire in use.

Inspect the tires for signs of uneven wear. the following descriptions to identify the type of wear.

Check the tires for:

- cuts
- stone bruises
- abrasions
- blisters
- embedded objects

Check the valve stems for:

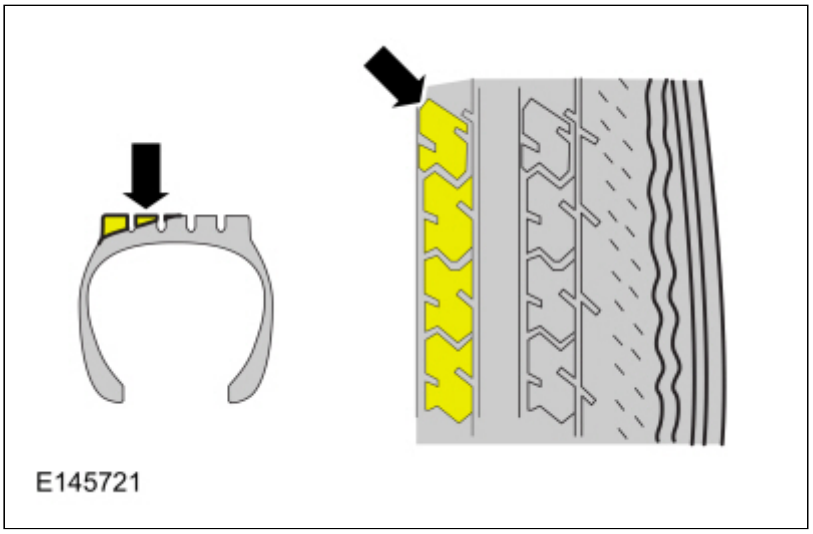
- cracks
- cuts

Install a new valve stem when damage is found or when a new tire is installed.

Normal Tire Wear

Normal tire wear is identified as even wear around and across the tread. Because there are many factors (driving style, road surfaces, type of vehicle, type of tire) that can affect tire wear, there is no absolute mileage expectation for a normal wear condition. A tire is considered worn-out when the tread has worn to the level of the tread-wear indicators.

Abnormal/Incorrect Tire Wear



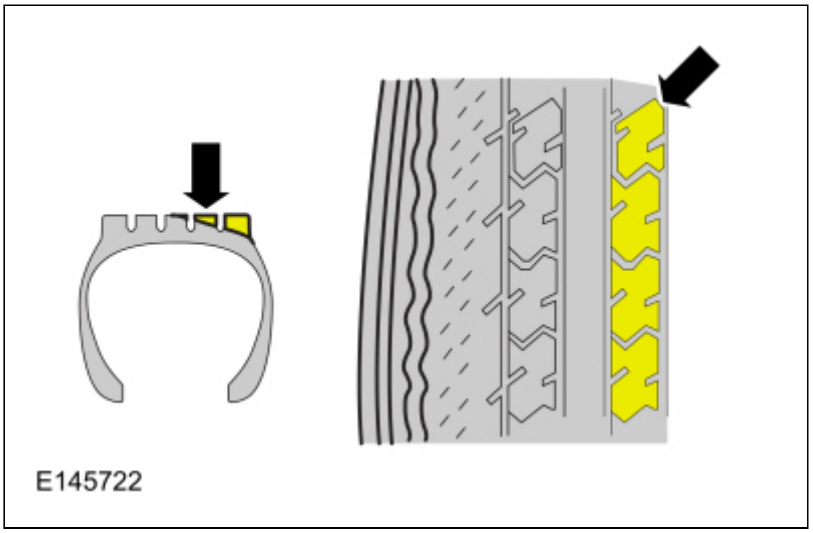
Abnormal/incorrect tire wear is identified as tire wear that is not even around or across the tread and that creates performance-related issues.

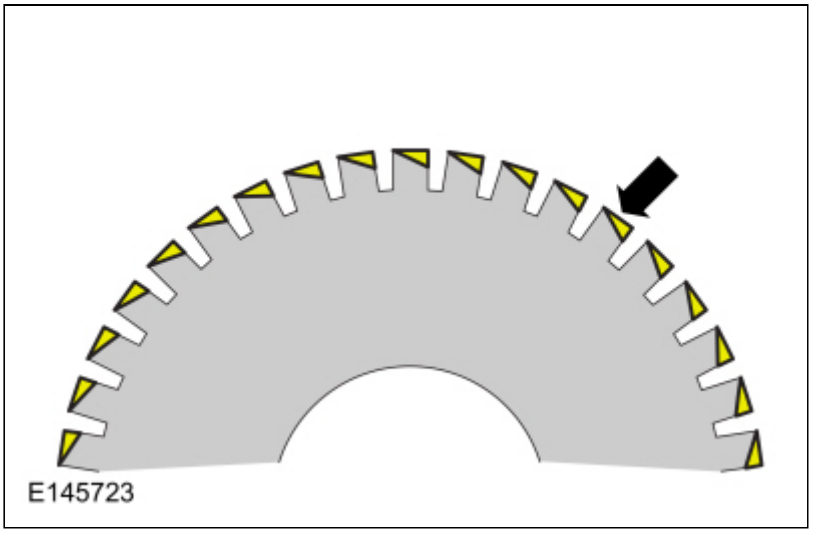
Abnormal/incorrect wear can be caused by numerous factors, some of which include driving style (aggressive, passive), climate (hot, cold), road conditions, vehicle loading and maintenance (correct tire pressure, rotation intervals and balance). It is important to determine the root cause of wear on a vehicle before carrying out repair. Tires exhibiting abnormal/incorrect tire wear may still be serviceable provided that the minimum tread depth is greater than and the tire is not causing a vehicle performance (noise/vibration) concern.

Inner Edge/Shoulder Wear

Inner edge (or shoulder) wear occurs on the inside edge of the tire and is usually caused by excessive toe out and/or excessive negative camber. If the tread depth of the outer shoulder is at least 50% greater than the tread depth of the inner shoulder, the tire is experiencing inner edge/shoulder wear. To determine whether tires have this type of wear, visually inspect the tires. In some instances, it may be necessary to measure the tread depth of each rib and compare it to that of the shoulder.

NOTE: *Right-Front tire shown, others similar.*

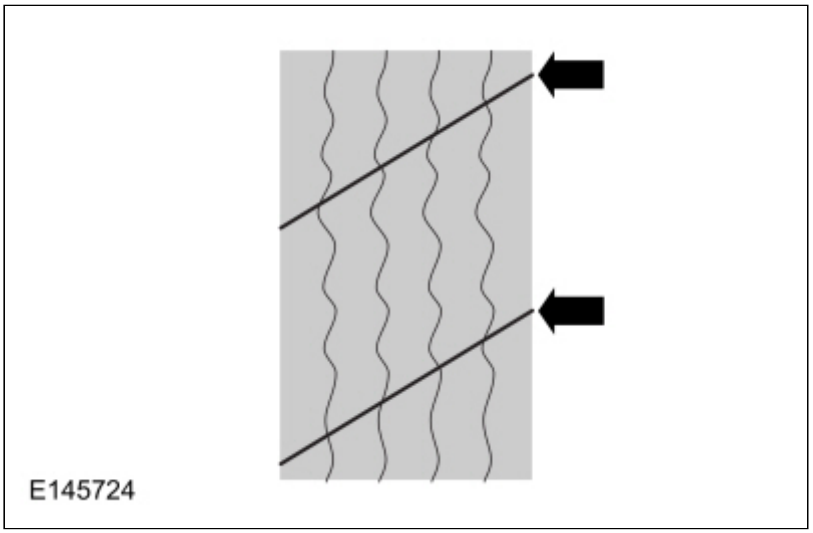




Outer Edge/Shoulder Wear

Outer edge (or shoulder) wear occurs on the outside edge of the tire and is usually caused by excessive toe in and/or excessive positive camber. If the tread depth of the inner shoulder is at least 50% greater than the tread depth of the

outer shoulder, the tire is experiencing outer edge/shoulder wear. To determine whether tires have this type of wear, visually inspect the tires. In some instances, it may be necessary to measure the tread depth of each rib and compare it to that of the shoulder.



NOTE: *Right-Front tire shown, others similar.*

Heel/Toe Wear

Heel/toe wear (also known as feathering) occurs along the outside or inside edge/shoulder of the tire. To determine whether tires have this type of wear, visually inspect the tires in both the inside and outside shoulder ribs. In some instances, it may be necessary to measure the difference in tread depth of leading versus trailing edge of each lug in the inside and outside shoulder rib.

Diagonal Wear

Diagonal wear occurs diagonally across the tread area and around the circumference of the tire. To determine whether tires have this type of wear, visually inspect the tires to determine if the wear pattern runs diagonally across the tread and around the circumference of the tire. In some instances, the difference in tread depth along the diagonal wear pattern may need to be measured.

Tire Vibration Diagnosis

A tire vibration diagnostic procedure should begin with a road test. The road test and customer interview (if available) will provide much of the information needed to find the source of a vibration.

During the road test, drive the vehicle on a road that is smooth and free of undulations. If vibration is apparent, note and record the following:

- the speed at which the vibration occurs
- what type of vibration occurs in each speed range.
  - mechanical or audible
- how the vibration is affected by changes in the following:
  - engine torque
  - vehicle speed
  - engine speed
- type of vibration - sensitivity:
  - torque sensitive
  - vehicle speed sensitive
  - engine speed sensitive

The following explanations help isolate the source of the vibration.

Torque Sensitive

This means that the condition can be improved or made worse by accelerating, decelerating, coasting, maintaining a steady vehicle speed or applying engine torque.

Vehicle Speed Sensitive

This means that the vibration always occurs at the same vehicle speed and is not affected by engine torque, engine speed or the transmission gear selected.

Engine Speed Sensitive

This means that the vibration occurs at varying vehicle speeds when a different transmission gear is selected. It can sometimes be isolated by increasing or decreasing engine speed with the transmission in NEUTRAL or by stall testing with the transmission in gear. If the condition is engine speed sensitive, the cause is probably not related to the tires.

If the road test indicates that there is tire whine, but no shake or vibration, the noise originates with the contact between the tire and the road surface.

A thumping noise usually means that the tire is flat or has soft spots making a noise as they slap the roadway. Tire whine can be distinguished from axle noise. Tire whine remains the same over a range of speeds.

1. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Sources	Action
• Tire(s) show excess wear on edge of tread	• Tire(s) under-inflated.	• ADJUST the tire pressure(s).
	• Vehicle overloaded.	• CORRECT as necessary.
	• Incorrect wheel alignment.	• ADJUST the wheel alignment. REFER to: (204-00 Suspension System - General Information) Specifications (Specifications), Front Toe Adjustment (General Procedures).
• Tire(s)	• Tire(s) over-	• ADJUST the tire pressure(s).

show excess wear in center of tread	inflated.	
• Other excessive tire wear concerns	• Incorrect tire pressure(s).	• ADJUST the tire pressure(s).
	• Wheel and tire assemblies need rotating.	• ROTATE the wheel and tire assemblies.
	• Incorrect wheel alignment.	• ADJUST the wheel alignment. REFER to: (204-00 Suspension System - General Information) Specifications (Specifications), Front Toe Adjustment (General Procedures).
	• Vehicle overloaded.	• CORRECT as necessary.
	• Loose or leaking front strut and spring assembly.	• TIGHTEN or INSTALL new suspension components as necessary. REFER to: (204-01 Front Suspension) Front Strut and Spring Assembly (Removal and Installation).
	• Wheel bearings worn.	• INSTALL new wheel bearings as necessary. REFER to: Front Wheel Bearing (204-01 Front Suspension, Removal and Installation),
	• Suspension components, bushings and ball joints.	• CHECK or INSTALL new suspension components as necessary.
	• Excessive lateral or radial runout of wheel or tire.	• BALANCE the wheel and tire assemblies. Using a suitable dial indicator gauge and holding fixture, CHECK lateral and radial runout of the wheel and tire assemblies. INSTALL new wheel and tire assemblies as necessary. REFER to: (204-04 Wheels and Tires) Specifications (204-04 Wheels and Tires) , Wheel and Tire (Removal and Installation).
• Wobble or shimmy affecting wheel runout	• Damaged wheel.	• INSPECT the wheel rims for damage. BALANCE the wheel and tire assemblies. Using a suitable dial indicator gauge and holding fixture, CHECK lateral and radial runout of the wheel and tire assemblies. INSTALL new wheel and tire assemblies as necessary. REFER to: (204-04 Wheels and Tires) Specifications (204-04 Wheels and Tires) , Wheel and Tire (Removal and Installation).
	• Front wheel bearing.	• CHECK or INSTALL new wheel bearings as necessary. REFER to: (204-01 Front Suspension) Front Wheel Bearing (Removal and Installation).
• Excessive vehicle vibration, rough steering	• Suspension components.	• CHECK or INSTALL new suspension components as necessary.
• Vehicle vibrations from wheels and tires	• Incorrect tire pressure(s).	• ADJUST the tire pressure(s).
	• Wheel or tire imbalance.	• BALANCE the wheel and tire assemblies.
	• Uneven tire wear.	• INSTALL a new tire(s) as necessary. REFER to: (204-04A Wheels and Tires) Wheel and Tire (Removal and Installation).
	• Brake disc imbalance	• CHECK the brake disc for foreign material.

	imbalance.	
	• Water in tire(s).	• REMOVE the water.
	• Bent wheel.	• INSTALL a new wheel and tire assembly. REFER to: (204-04A Wheels and Tires) Wheel and Tire (Removal and Installation).
	• Incorrectly seated tire bead.	• SPIN the wheel on the vehicle. EXAMINE the area where the tire and the wheel meet. If that section of the tire appears to waver while being rotated, the tire bead may not be correctly seated on the wheel. REMOVE the tire and CLEAN the bead seat areas on both wheel and tire.
	• Excessive lateral or radial runout of wheel or tire.	• BALANCE the wheel and tire assemblies. Using a suitable dial indicator gauge and holding fixture, CHECK the lateral and radial runout of the wheel and tire assemblies. INSTALL new wheel and tire assemblies as necessary. REFER to: (204-04 Wheels and Tires) Specifications (204-04 Wheels and Tires) , Wheel and Tire (Removal and Installation).
	• Foreign material between wheel mounting face and hub mounting surface.	• CLEAN mounting surfaces.
	• Front wheel bearing.	• CHECK or INSTALL new wheel bearings as necessary. REFER to: (204-01 Front Suspension) Front Wheel Bearing (Removal and Installation).
• Rust streaks from the wheel stud holes in the wheel	• Wheel nuts.	• REMOVE the wheel and tire assembly. Inspect the wheel nuts and wheel and tire assembly for damage. INSTALL new wheel nuts and wheel and tire assemblies as necessary. REFER to: (204-04 Wheels and Tires) Specifications (204-04 Wheels and Tires) , Wheel and Tire (Removal and Installation).
• Seized wheel nuts	• Corrosion.	• CAUTION: Do not permit lubricant to get on cone sets of stud holes or on cone angle of wheel nuts. If corrosion is slight, wire brush away. If corrosion is excessive, INSTALL new wheel studs and nuts. REFER to: (204-04 Wheels and Tires) Specifications (204-04 Wheels and Tires) , Wheel and Tire (Removal and Installation). If the condition persists, LUBRICATE the first three threads of each wheel stud with a graphite-based lubricant.
	• Vehicle overloaded	• CORRECT as necessary.

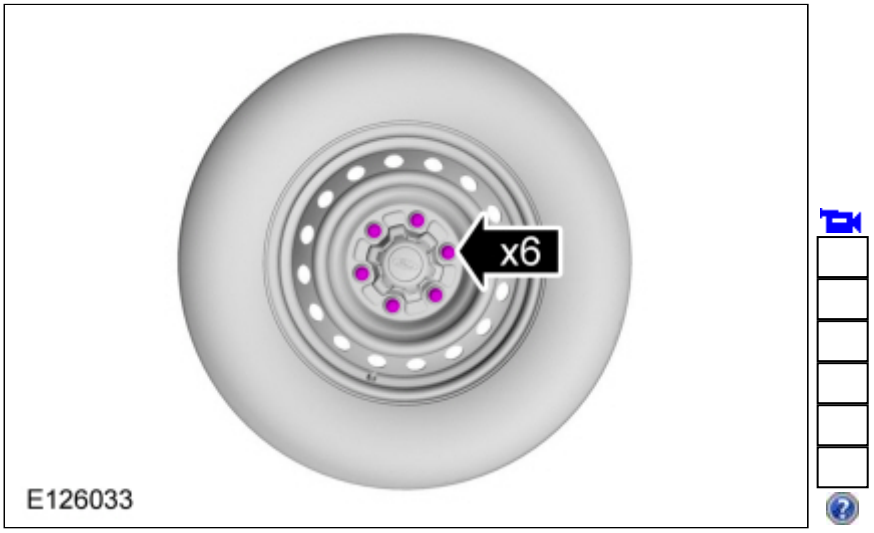
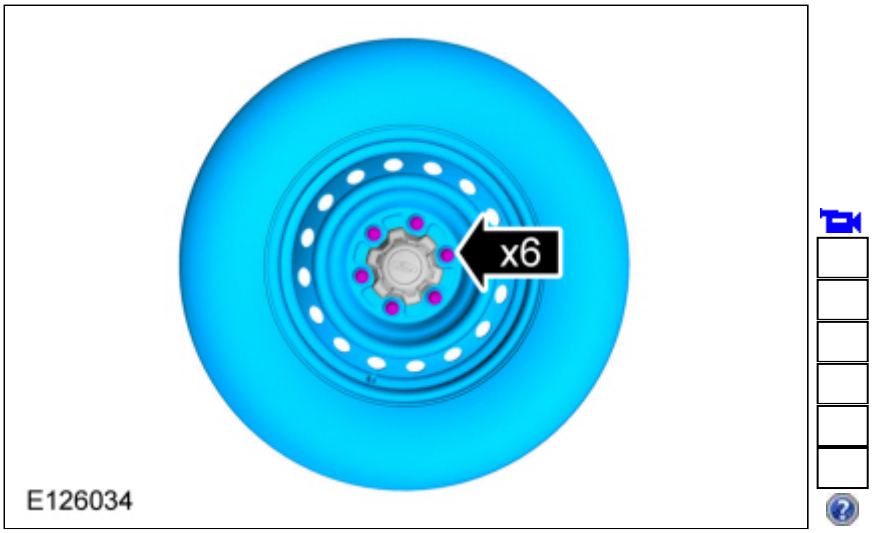
Wheel and Tire



Base Part Number: 1007

Removal

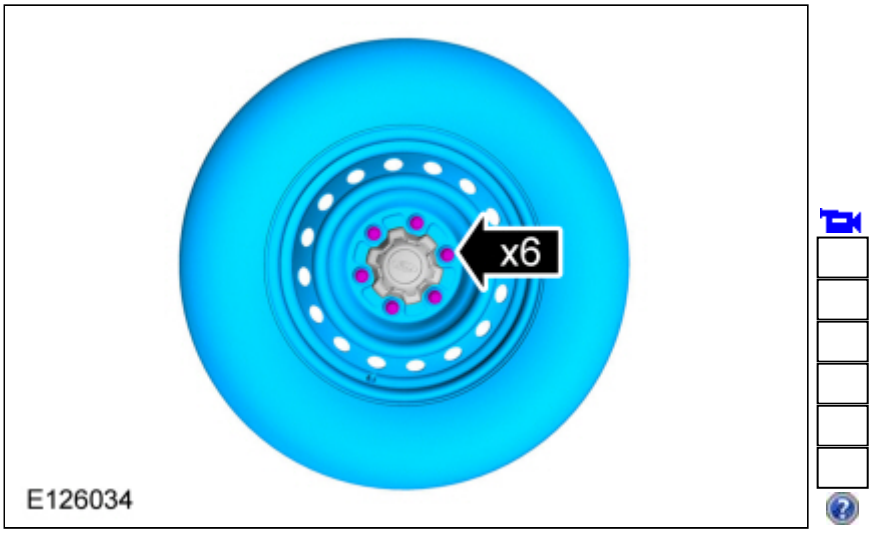
NOTICE: Do not use heat to loosen a seized wheel nut.



NOTICE: Do not use power tools on locking wheel nuts.

1. Loosen
   1.

2. For additional information, refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
   For additional information, refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

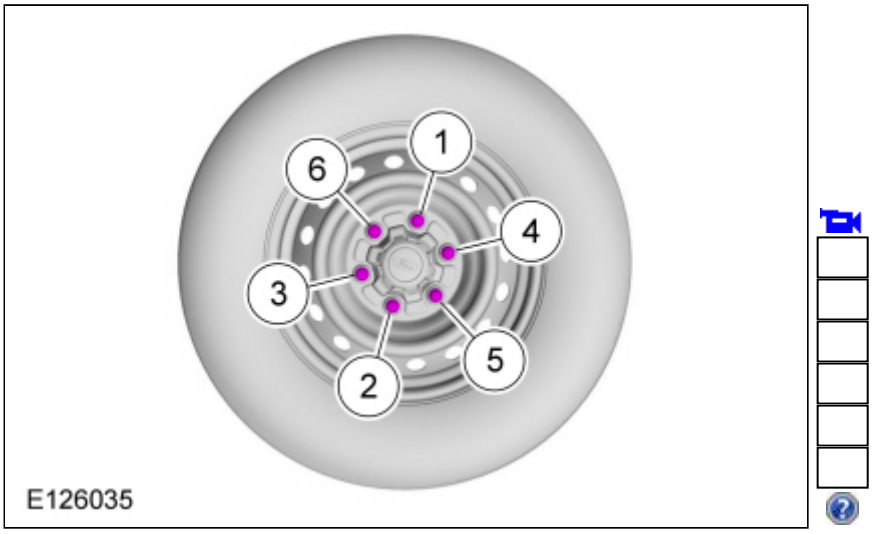


3.

Installation

1. **NOTICE: Make sure that the mating faces are clean and free of corrosion and foreign material.**

   NOTE: *Only tighten the nuts finger tight at this stage.*



2. Lower the vehicle.
3. **NOTICE: Failure to tighten the wheel nuts in a star/cross pattern can result in high brake disc runout, which accelerates the development of brake roughness, shudder and vibration.**

   NOTE: *The wheel nut torque specification is for clean, dry wheel stud and wheel nut threads.*

   NOTE: *Final tightening to be performed with vehicle resting on tires.*

   For additional information, refer to: Specifications - Vehicles Built Up To: 16-08-2015 (204-04 Wheels and Tires) .

Tire Pressure Monitoring System (TPMS)

Item	Part Number	Description

1	—	BCM (body control module)
2	—	TPMS (tire pressure monitoring system) sensor assembly (4 required)

Copyright © 2016 Ford Motor Company

Tire Pressure Monitoring System (TPMS) Sensor Activation

Special Tool(s) / General Equipment

 E170534	204-D081 TPM Activation Tool

Activation

1. **NOTE:** *The tire pressure sensors will go into a "sleep mode" when a vehicle is stationary to conserve battery power. The sensors do not transmit information while in sleep mode. It will be necessary to wake them up so they will transmit the latest tire pressure information.*

   Turn the ignition switch to the ON position.

2. Position the special tool against the Left Front (LF) tire sidewall at the tire valve stem.
   Use Special Service Tool: 204-D081 TPM Activation Tool.

3. **NOTE:** *The special tool should provide feedback in the form of a flashing green light and a beep sound for each successful response from a tire pressure sensor. This feedback may not always be present, do not rely on it as a confirmation that the module heard a particular sensor.*

   NOTE: *If a sensor does not respond to the special tool move the vehicle to rotate the wheels at least one-fourth of a turn and attempt to activate the same sensor again. If the sensor still does not respond, attempt to activate the same sensor again using the customer activation tool (if available). If the sensor still fails to train, attempt to train the sensor with the vehicle doors open.*

   Press the test button on the special tool to activate the sensor. Activate the sensor at least 2 times.
   Use Special Service Tool: 204-D081 TPM Activation Tool.

4. Repeat Steps 2 and 3 for the remaining tires.

5. If the TPMS indicator remains illuminated after adjusting and activating each sensor,
   Refer to: Tire Pressure Monitoring System (TPMS) Sensor Activation (204-04B Tire Pressure Monitoring System (TPMS), General Procedures).

Copyright © 2016 Ford Motor Company

Tire Pressure Monitoring System (TPMS) Sensor Location Calibration

Special Tool(s) / General Equipment

 E170534	204-D081 TPM Activation Tool
Ford Diagnostic Equipment	

Programming

NOTE: *The TPMS can be placed into learn mode using a diagnostic scan tool or manually where a diagnostic scan tool is not available.*

NOTE: ***Enter Training Mode With Scan Tool***

NOTE: *The TPMS can be placed into learn mode using a diagnostic scan tool or manually where a diagnostic scan tool is not available.*

NOTE: ***Enter Training Mode With Scan Tool***

1. **NOTE:** *The horn will sound once and the TPMS indicator will flash if the training mode has been entered successfully. If equipped, the message center will display TRAIN Left Front (LF) TIRE.*

    1. Select Chassis.
    2. Select TPMS.
    3. Select Training Mode.
       Use the General Equipment: Ford Diagnostic Equipment

Programming

NOTE: ***Enter Training Mode Without Scan Tool***

1. **NOTE:** *The horn will sound once and the TPMS indicator will flash if the training mode has been entered successfully. If equipped, the message center will display TRAIN Left Front (LF) TIRE.*

   With the ignition OFF, press and release the brake pedal.

2. Using the start/stop switch, position the ignition from OFF to RUN 3 times, ending in the RUN position.

3. Press and release the brake pedal.

4. Position the ignition to OFF position.

5. Using the start/stop switch, position the ignition from OFF to RUN 3 times, ending in the RUN position.

Programming

NOTE: ***TPMS Sensor Training Procedure***

1. **NOTE:** *It may take up to 6 seconds to activate a tire pressure sensor. During this time, the special tool must remain in place at the valve stem.*

   Place the special tool on the Left Front (LF) tire sidewall at the valve stem. Press and release the test button on the special tool. The horn will sound briefly to indicate that the tire pressure sensor has been recognized by the BCM.
   Use Special Service Tool: 204-D081 TPM Activation Tool.

2. Within 2 minutes of the horn sounding, place the special tool on the Right Front (RF) tire sidewall at the valve stem and press and release the test button to train the Right Front (RF) tire pressure sensor.
   Use Special Service Tool: 204-D081 TPM Activation Tool.

3. Repeat Step 1 for the Right Rear (RR) and Left Rear (LR) tires. The procedure is completed after the last tire has been trained. When the training procedure is complete, the message center (if equipped) will display TIRE TRAINING COMPLETE. For vehicles not equipped with a message center, successful completion of the training procedure will be verified by positioning the ignition to OFF without the horn sounding. If the horn sounds twice when the ignition is positioned to OFF, the training procedure was not successful.

4. Using the scan tool, locate the updated TPMS sensor identifiers trained to the BCM and document them on the applicable warranty claim.
   Use Special Service Tool: 204-D081 TPM Activation Tool.

5. This step is required to clear DTC B1182:55, cause the BCM to exit the manufacturing mode and to make sure there are no other concerns with a newly programmed BCM.

6. If the sensors are being trained due to the installation of a new BCM, clear any DTC and carry out the BCM On-Demand Self Test.

Tire Pressure Monitoring System (TPMS) Sensor

Base Part Number: 1552

Removal

1. **WARNING: Before beginning any service procedure in this section. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. **WARNING: The Tire Pressure Monitoring System (TPMS) sensor battery may release hazardous chemicals if exposed to extreme mechanical damage. If these chemicals contact the skin or eyes, flush immediately with water for a minimum of 15 minutes and get prompt medical attention. If any part of the battery is swallowed, contact a physician immediately. When disposing of Tire Pressure Monitoring System (TPMS) sensors, follow the correct procedures for hazardous material disposal. Failure to follow these instructions may result in serious personal injury.**

   NOTE: *The Tire Pressure Monitoring System (TPMS) sensor cannot be removed without disassembly of the wheel and tire.*

   NOTE: *The maximum shelf life of a TPMS snap in valve stems before being mounted to a wheel is 1 year. The production date / week / year is marked on the TPMS sensor / valve stem itself. Snap in valve stems which are older than 1 year are to be scrapped. TPMS snap in sensors with valve stems older than one year should not be mounted but the valve stem should be replaced.*

   Refer to: Tire Pressure Monitoring System (TPMS) Sensor (204-04B Tire Pressure Monitoring System (TPMS), Disassembly and Assembly).

Installation

1. **NOTE:** *The Tire Pressure Monitoring System (TPMS) sensor cannot be installed without disassembly of the wheel and tire.*

   Refer to: Tire Pressure Monitoring System (TPMS) Sensor (204-04B Tire Pressure Monitoring System (TPMS), Disassembly and Assembly).

Copyright © 2016 Ford Motor Company

Tire Pressure Monitoring System (TPMS) Sensor

Base Part Number: 1552

Special Tool(s) / General Equipment

Wooden Block

DISASSEMBLY

NOTICE: Failure to follow the instructions below may result in damage to the TPMS.

NOTICE: The TPMS sensor is mounted to the valve stem. Removal of the valve stem requires dismounting the tire from the wheel and removal of the TPMS sensor.

NOTE: *Use only the Digital Tire Pressure Gauge any time tire pressures are measured to be sure that accurate values are obtained.*

1. Refer to: Wheel and Tire Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).
3. **NOTICE: The valve stem is connected to the TPMS sensor. Do not pull the valve stem from the wheel, or damage to the sensor will occur.**

   NOTE: *If a new TPMS sensor is being installed, remove and discard the valve stem-to-sensor screw and the sensor.*

   Remove the valve stem core and fully deflate all air from the tire.
4. **NOTICE: Do not allow the tire beads to move beyond the wheel mid-plane (middle of the wheel) when separating the beads from the wheels, damage to the TPMS sensor may occur.**

   NOTICE: Tire and valve stem position is critical to prevent damage to theTPMS sensor when using a paddle-type bead separator.

   NOTE: *Some machines may have a nylon roller bead separator at the 12 o'clock position instead of the paddle-type bead separator at the 3 o'clock position.*

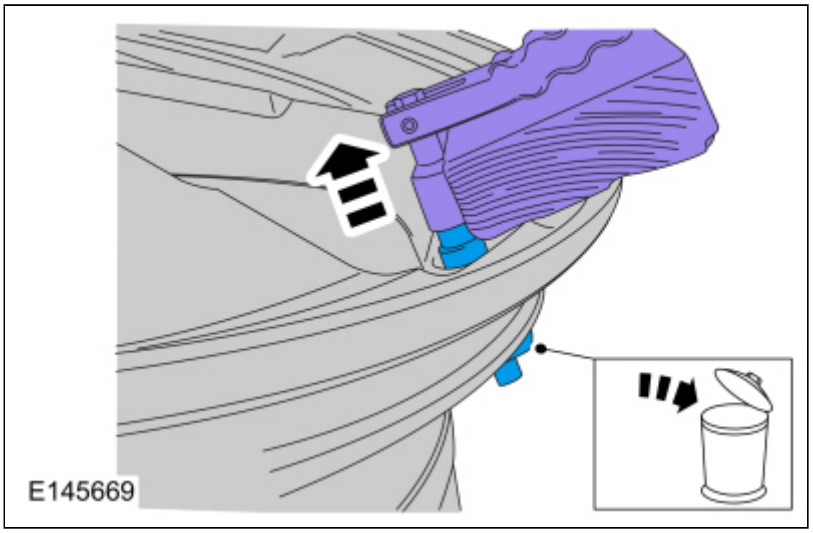
   - *For a paddle-type tire machine, position the valve stem at the 12 o'clock or 6 o'clock position and the paddle at the 3 o'clock position.*
   - *For a roller-type tire machine, align the valve stem with the roller at any position.*

   NOTE: *Paddle type shown, roller type similar.*

5. **NOTE:** *Index-mark the valve stem and wheel weight positions on the tire.*

   Place the wheel and tire assembly on the turntable of the tire machine with the valve stem at the 11:30 position and the machine arm at the 12 o'clock position and dismount the outer bead from the wheel.

6. Reset the wheel and tire assembly on the turntable of the tire machine with the valve stem at the 11:30 position and the machine arm at the 12 o'clock position and dismount the inner bead from the wheel.

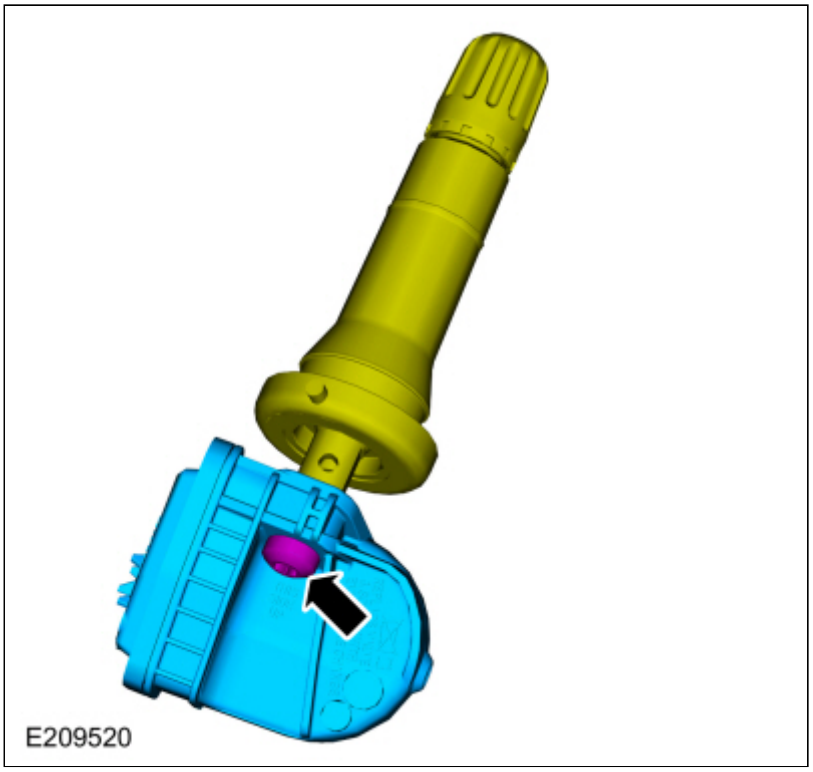


7. **NOTE:** *A new valve stem must be installed whenever a new tire or wheel is installed.*

   1. Remove and discard the TPMS sensor-to-valve stem screw.
   2. Separate the TPMS sensor from the valve stem.

8. **NOTICE: Use care not to damage the wheel surface when removing the valve stem.**

   Using a suitable valve stem remover/installer, remove and discard the valve stem.
   Use the General Equipment: Wooden Block



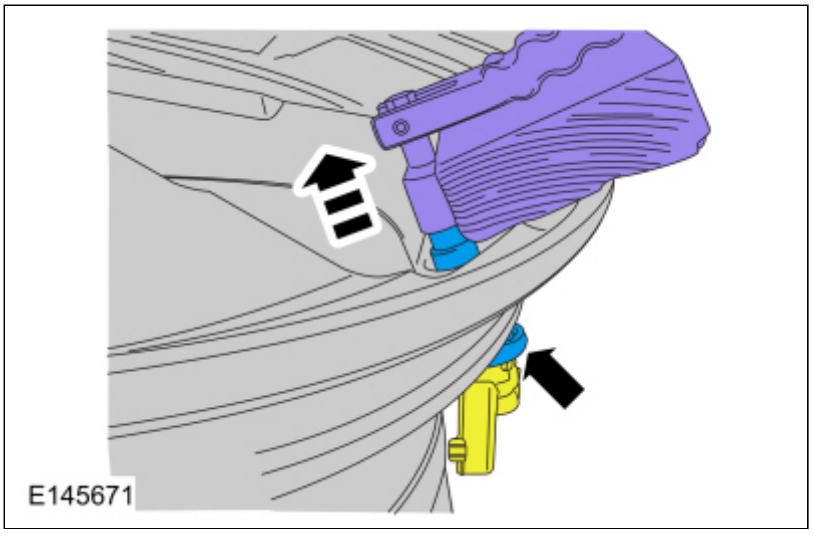
NOTE: *When installing a new wheel, always install a new valve stem and sensor screw. Reuse theTPMS sensor from the previous wheel if possible. The TPMS will not have to be trained if the sensor is reused.*

NOTE: *If the TPMS sensor is being reused, inspect the TPMS sensor for damage and install a new sensor as necessary.*

9. **NOTICE: To prevent TPMS sensor and valve stem damage, the valve stem must be installed onto the TPMS sensor and then installed into the wheel as an assembly.**

   Position the new valve stem onto the TPMS sensor and install the new screw.
   Torque: 1.5 Nm

ASSEMBLY



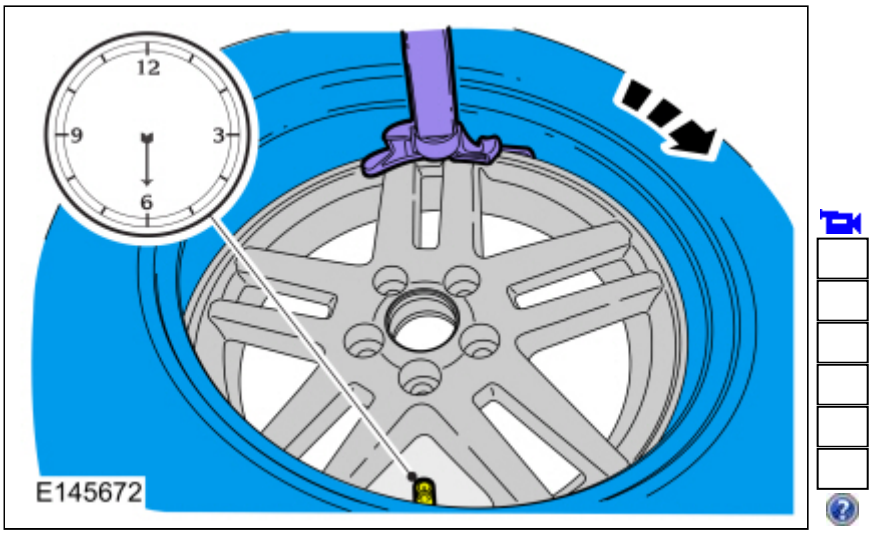
NOTICE: Damage to the TPMS sensor may result if the tire mounting is not carried out as instructed.

1. **NOTICE: It is important to pull the valve stem and TPMS sensor assembly through the wheel rim hole in a direction parallel to the valve stem hole axis. If the assembly is pulled through at an angle, damage to the valve stem and sensor assembly may occur.**

   NOTICE: Use care not to damage the wheel surface when installing the valve stem and TPMS sensor assembly.

   NOTE: *Lubricate the valve stem with soapy water and install the valve stem and TPMS sensor assembly into the wheel using a block of wood and a suitable valve stem installer.*

   Using a suitable valve stem installer, install the new valve stem and TPMS sensor assembly.
   Use the General Equipment: Wooden Block



2. **NOTE:** *Lubricate the tire beads using a suitable fast-drying, corrosion-inhibiting tire bead lubricant.*

   NOTE: *Do not mount the tire at this time.*

   Position the wheel on the turntable of the tire machine, then lubricate and position the bottom bead of the tire on the wheel.

3. Position the wheel to align the valve stem with the machine arm, at the 6 o'clock position, and mount the

bottom bead of the tire.

4. Reposition the wheel to align the valve stem with the machine arm at the 6 o'clock position, and mount the top bead of the tire.
5. **NOTE:** *Use only the Digital Tire Pressure Gauge any time tire pressures are measured to be sure that accurate values are obtained.*

   Inflate the tire to the pressure specified on the VC label located on the driver door or door pillar.

NOTE: *Proceed to the next step if the tire beads do not seat at the specified inflation pressure.*

6. **WARNING: If there is a need to exceed the maximum pressure indicated on the sidewall of the tire in order to seat the beads, follow all steps listed below. Failure to follow these steps may result in serious personal injury.**

   NOTICE: The following steps should only be carried out if the tire beads cannot be seated by inflating the tire up to the maximum inflation pressure listed on the tire sidewall.

   1. Relubricate the tire bead and wheel bead seat area.
   2. Install a remote valve and pressure gauge.
   3. Wear eye and ear protection and stand at a minimum of 3.65 m (12 ft) away from the wheel and tire assembly.
   4. Inflate the tire using the remote valve and tire gauge until the beads have seated or until the pressure gauge is 138 kPa (20 psi) more than maximum inflation pressure on tire sidewall. If beads have not seated, deflate the tire and proceed to the next step.
   5. Place the wheel and tire assembly in an OSHA-approved tire safety cage.
   6. Inflate the tire using the remote valve and pressure gauge until the beads have seated or until the pressure gauge is 276 kPa (40 psi) more than maximum inflation pressure on the tire sidewall. **Do not exceed 276 kPa (40 psi) above the maximum pressure on tire sidewall. Install a new tire if the beads do not seat at this pressure.**

7. Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).

Driveline System

Special Tool(s)

	Flange Holding Wrench, Universal 205-072 (15-030A)

Inspection and Verification

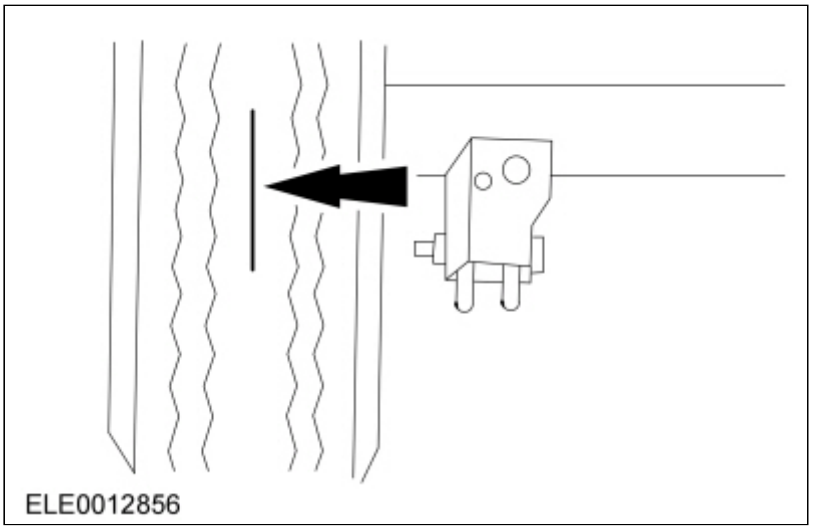
Certain axle noise or vibration symptoms are also common to the engine, transmission, wheel bearings, tires and other parts of the vehicle. For this reason, make sure that the cause of the trouble is in the axle before disassembling, adjusting or repairing the axle.
REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness, Diagnosis and Testing).

Certain driveshaft vibration symptoms are common to the engine accessory drive, the engine, transmission or tires. Make sure the cause of the concern is the driveshaft before repairing or installing a new driveshaft.
REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness, Diagnosis and Testing).

Noise Acceptability

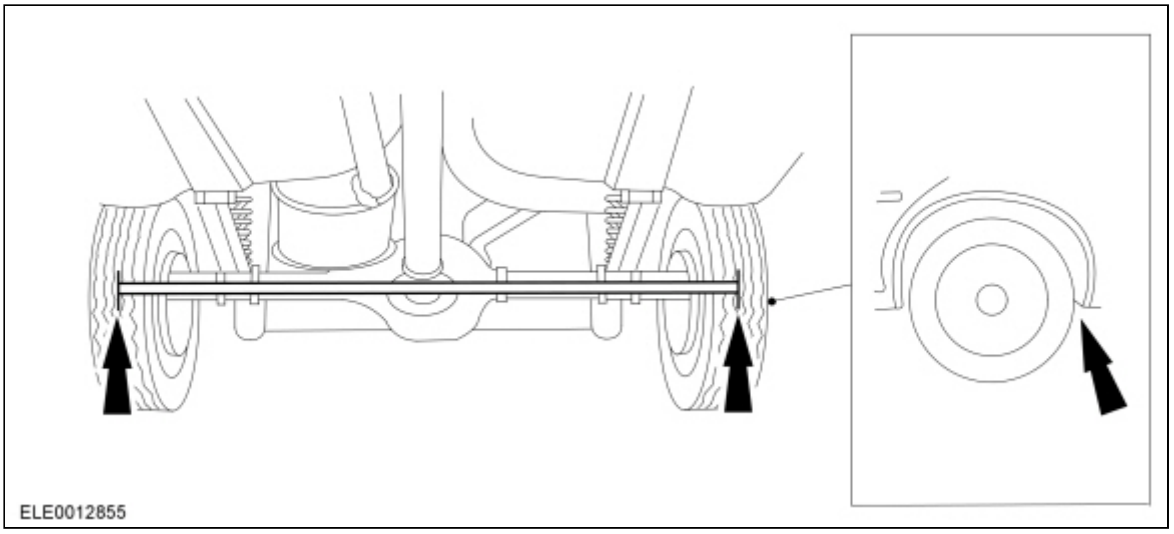
NOTE: *A gear driven unit will produce a certain amount of noise. Some noise is acceptable and audible at certain speeds or under various driving conditions such as a newly tarmaced road. Slight noise is not detrimental to the operation of the axle and is considered normal.*

Universal Joint Inspection



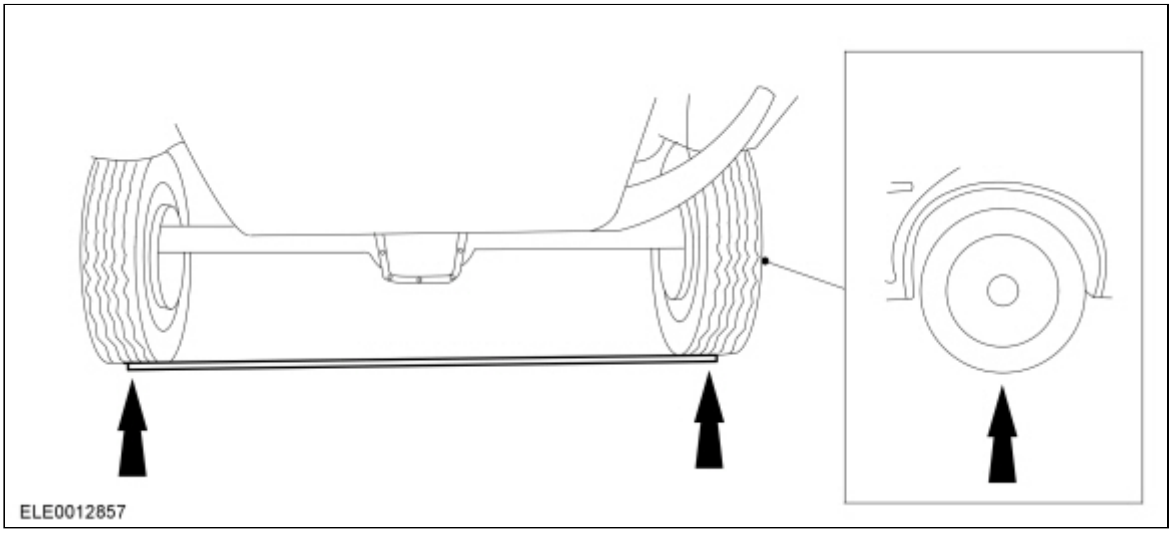
Raise and support the vehicle. REFER to: (100-02 Jacking and Lifting)

Jacking and Lifting - Overview (Description and Operation).
Place the vehicle on a wheel free lift and rotate the driveshaft by hand. Check for rough operation or seized universal joints.

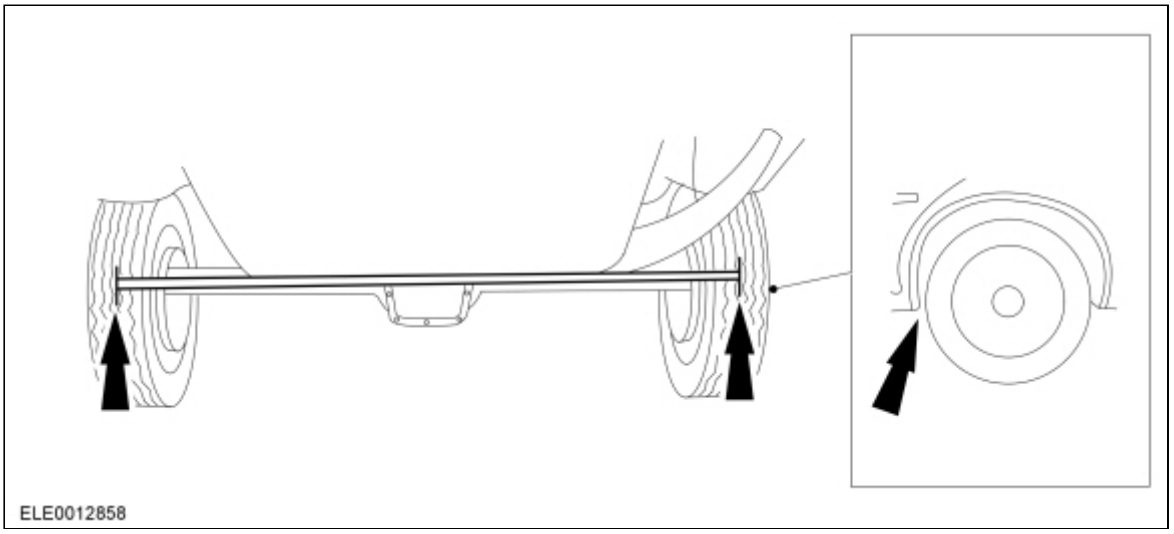


Inspection for Bent Rear Axle

1. Raise and support the vehicle. REFER to: (100-02 Jacking and Lifting)
   Jacking and Lifting - Overview (Description and Operation).
   Allow the rear axle to be freely suspended.



2. Use white chalk or paint to mark a vertical line on the center of each rear tire.



3. Adjust both wheels so that the markings face the front of the vehicle. With a tape measure, measure the distance between the marks and note this measurement (front measurement).

4. Rotate the rear wheels so the markings are directly underneath the vehicle. With a tape measure, measure the distance between the marks and note this measurement (bottom measurement).

5. Rotate the rear wheels so the markings face the rear of the vehicle. With a tape measure, measure the distance between the marks and note this measurement (rear measurement).

6. Compare the front and the rear measurements (Steps 3 and 5) to find the toe - in or toe - out condition.
    - Toe - in occurs when the front measurement is less than the rear measurement.
    - Toe - out occurs when the rear measurement is less than the front measurement.

7. To determine camber, find the average of the front and the rear measurements (Steps 3 and 5). Subtract the bottom measurement (Step 4) from this number.

Positive (+) camber is when the bottom measurement is less than the average of the front and rear measurements.
Negative (-) camber is when the bottom measurement is greater than the average of the front and rear measurements.

8. The results of the calculations in Steps 6 and 7 must conform to the following specification:

Toe - in: 0 - 1.6 mm.

Toe - out: 0 - 4.8 mm.

Camber: 0 ± 4 mm.

If the axle housing does not meet these specifications, a new axle housing must be installed. REFER to: (205-02 Rear Drive Axle/Differential)

Axle Assembly - 2WD (Removal and Installation),
Axle Assembly - 4WD (Removal and Installation).

9. After the axle housing has been installed, repeat steps the previous steps.

Analysis of Leakage

Clean up the leaking area to identify the exact source.

A blocked axle housing vent can cause excessive drive pinion oil seal lip wear due to the internal pressure buildup.

Make sure axle oil level is correct.
REFER to: Differential Draining and Filling (205-02 Rear Drive Axle/Differential, General Procedures).

Axle Vent

NOTE: *If a blocked vent cannot be cleared, install a new one.*

A blocked vent will cause excessive oil seal lip wear due to internal pressure buildup. If a leak occurs, check the vent. Make sure the vent hose is not kinked. Remove the hose from the vent nipple and clear the hose of any foreign material. While the hose is removed, pass a length of mechanics wire or a small diameter Allen key in and out of the vent to clean it. Connect the hose when done.

Drive Pinion Oil Seal

Leaks at the axle drive pinion oil seal orginate for the following reasons:

- The drive pinion oil seal was not correctly installed.

Any damage to the oil seal bore (dings, dents, gouges, or other imperfections) will distort the oil seal casing and allow leakage past the outer edge of the axle drive pinion oil seal.

The axle drive pinion oil seal can be torn, cut, or gouged if it is not installed correctly. The spring that holds the axle drive pinion oil seal lip against the drive pinion flange may be dislodged resulting in allowing leakage past the lip of the oil seal.

The rubber oil seal lips can occasionally become hard (like plastic) with cracks at the lip contact point. The contact point on the drive pinion flange may blacken, indicating excessive heat. Marks, nicks, gouges, or rough surface texture on the oil seal journal of the drive pinion flange will also cause leaks.

Axle drive pinion oil seal wear 1.27 mm or greater is considered excessive.

A new drive pinion flange must be installed if any of these conditions exist.

Metal chips or sand trapped at the oil seal lip may also cause oil leaks. This can cause a wear groove on the drive pinion flange and heavy drive pinion oil seal wear.

When an oil seal leak occurs, install a new oil seal and check the vent. Make sure they are clean and free of foreign material.

Axle Shaft Oil Seals

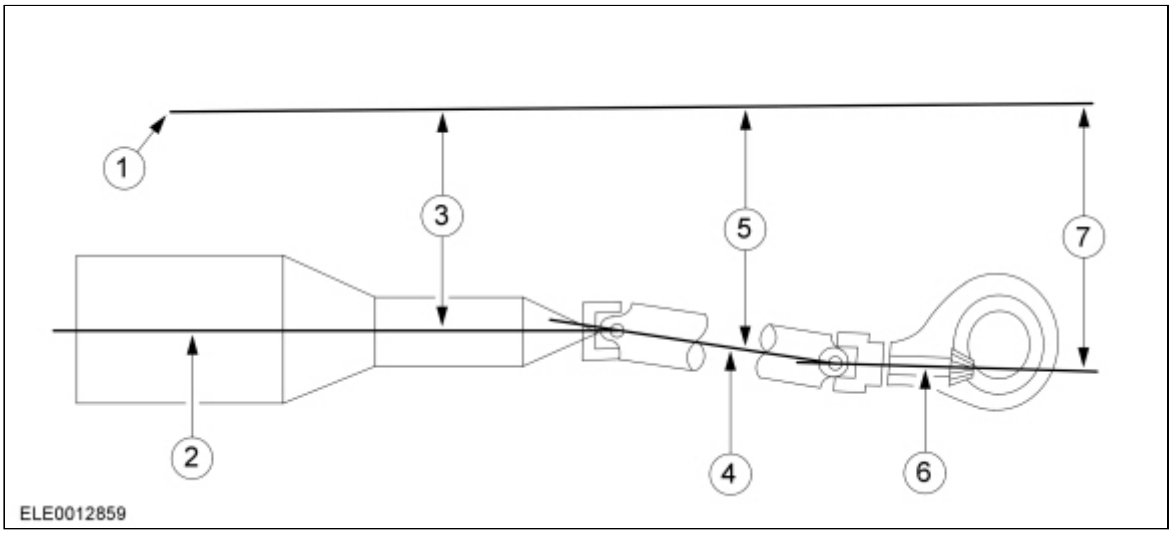
The axle shaft oil seals are susceptible to the same kinds of damage as axle drive pinion oil seals if incorrectly installed. The oil seal bore must be clean and the oil seal lip handled carefully to avoid cutting or tearing it. The axle shaft journal surface must be free of nicks, gouges, and rough surface texture.

Analysis of Vibration

Few vibration conditions are caused by the front or rear axle. Follow the diagnosis procedure unless there is a good reason to suspect the axle.
REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness, Diagnosis and Testing).

Tires

WARNING: Do not balance the wheels and tires while they are mounted on the vehicle. Possible tire disintegration/differential failure could result, causing personal injury/extensive component damage. Use an off - vehicle wheel and tire balancer only.



Most vibration in the rear end is caused by tires or driveline angle.

Vibration is a concern with modern, high - mileage tires if they are not ``true" both radially and laterally. They are more susceptible to vibration around the limits of radial and lateral runout of the tire and wheel assembly. They also require more accurate balancing. Wheel and tire runout checks, truing and balancing are normally done before axle inspection.
REFER to: Wheels and Tires (204-04A Wheels and Tires, Diagnosis and Testing).

Driveline Angle

Driveline angularity is the angular relationship between the engine crankshaft, the driveshaft, and the rear axle drive pinion. Factors determining driveline angularity include ride height, rear spring, and engine mounts.

Driveline Angle

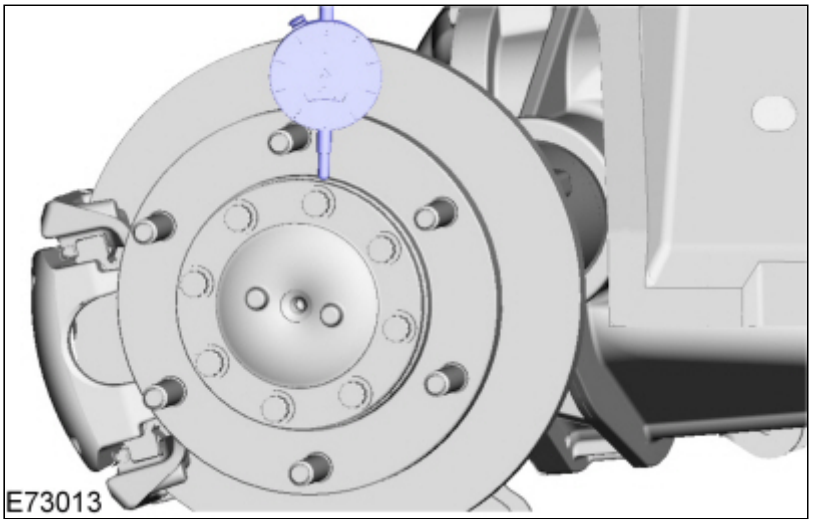
Item	Part Number	Description
1	—	Bottom of the frame
2	—	Engine crankshaft centerline
3	—	Engine angle
4	—	Driveshaft and coupling shaft centerline
5	—	Driveshaft and coupling angle
6	—	Rear axle drive pinion centerline
7	—	Axle drive pinion angle

An incorrect driveline (drive pinion) angle can often be detected by the driving condition in which the vibration occurs.

- A vibration during coasting from 72 to 56 km/h 45 to 35 mph) is often caused by a high axle drive pinion angle.
- A vibration during acceleration, from 56 to 72 km/h (35 to 45 mph) may indicate a low drive pinion angle.

When these conditions exist, check the driveline angles.
REFER to: Suspension System (204-00 Suspension System - General Information, Diagnosis and Testing).

If the tires and driveline angle are not the cause, carry out the NVH tests to determine whether the concern is caused by a condition in the axle.
REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness, Diagnosis and Testing).



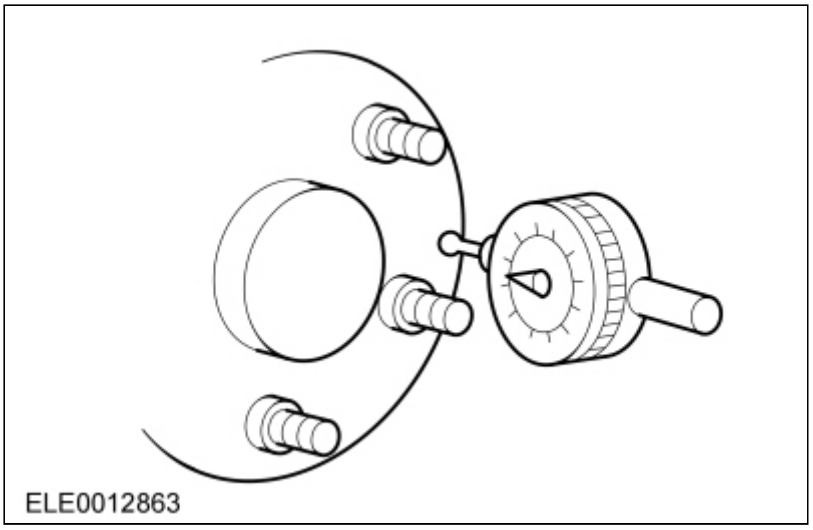
Universal Joint Wear

Place the vehicle on a wheel free lift and rotate the driveshaft by hand. Check for rough operation or seized universal joints.

Pilot Runout

1. **NOTE:** *Clean the wheel hub flange with abrasive paper before positioning the dial indicator gauge with magnetic base.*

   Position the dial indicator with magnetic base as close to the wheel hub or axle flange face as possible. Zero the indicator dial.



2. Rotate the wheel hub or axle flange one full turn and note the maximum and minimum measurements. The difference between the maximum and minimum measurements will be the total runout. Pilot runout must not exceed 0.15 mm.

Wheel hub or Axle Flange Face Runout

NOTE: *If the axle shaft assembly is removed, check the runout of the axle shaft itself. The forged (unmachined) part of the axle shaft is allowed to have as much as 3.0 mm runout. This alone will not cause a vibration condition.*

1. Position the dial indicator gauge on the wheel hub or axle flange face, as close to the outer edge as possible. Zero the indicator dial.

2. Rotate the wheel hub or axle flange one full turn and note the maximum and minimum measurements. The difference between the maximum and minimum measurements will be the total face runout. The runout must not exceed 0.25 mm.

Drive Pinion and Drive Pinion Flange

Check the drive pinion flange runout when all other checks have failed to show the cause of vibration.

One cause of excessive drive pinion flange runout is incorrect installation of the axle drive pinion oil seal. Check to see if the spring on the oil seal lip has been dislodged before installing a new ring gear and drive pinion.

Axle Noise

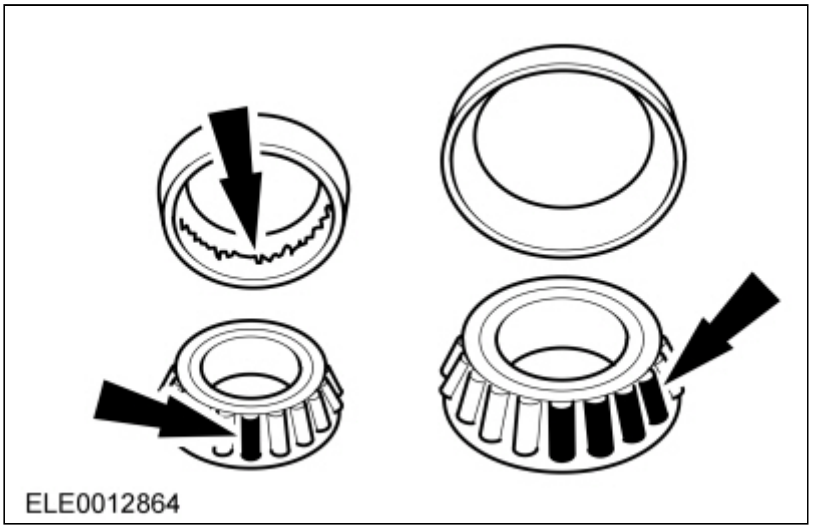
NOTE: *Before disassembling the axle to diagnose and correct gear noise, eliminate the tires, exhaust system, trim*

items, roof racks, axle shafts and wheel bearings as possible causes. Follow the diagnostic procedures.

The noises described as follows usually have specific causes that can be diagnosed by observation as the unit is disassembled. The initial clues are the type of noise heard during the road test.
REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness, Diagnosis and Testing).

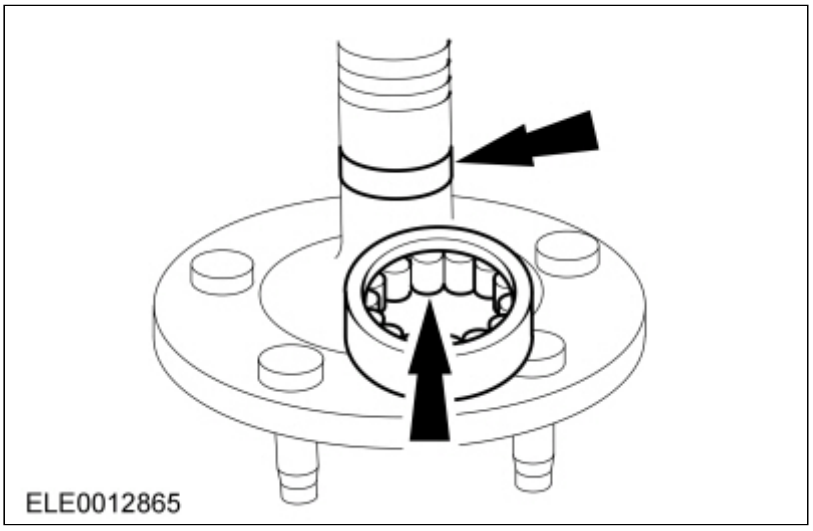
Gear Howl and Whine

Howling or whining of the ring gear and drive pinion is due to an incorrect gear pattern, gear damage or incorrect bearing preload.



Bearing Whine

Bearing whine is a high - pitched sound similar to a whistle. It is usually caused by worn or damaged drive pinion bearings, which are operating at driveshaft speed. Bearing noise occurs at all driving speeds. This distinguishes it from gear whine which usually comes and goes as speed changes.



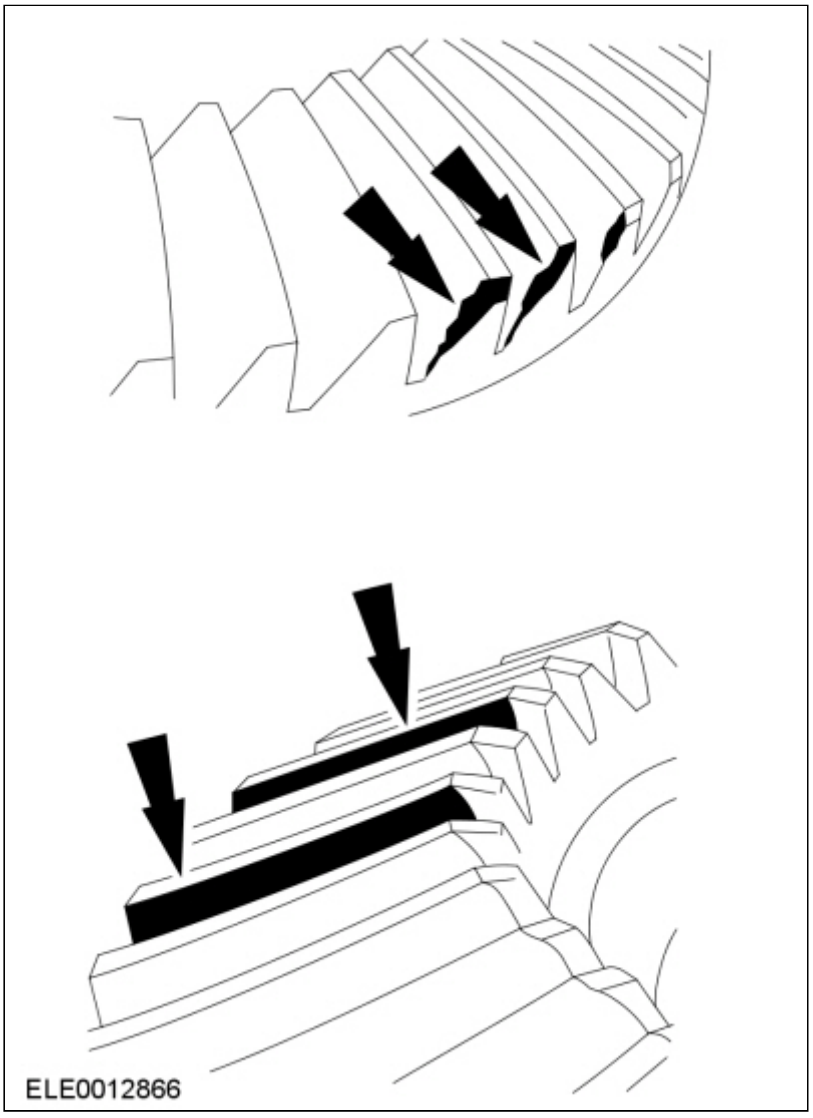
As noted, drive pinion bearings make a high - pitched, whistling noise, usually at all speeds. If however there is only one drive pinion bearing that is worn or damaged, the noise may vary in different driving phases. New drive pinion bearings must not be installed unless scoring or damage is found or there is a specific drive pinion bearing noise. A worn or damaged bearing will normally be obvious at disassembly. Examine the large diameter of the rollers for wear. If the drive pinion bearings original blend radius has worn to a sharp edge, a new front and rear drive pinion bearing must be installed.

NOTE: *A low - pitched rumble normally associated with a worn or damaged wheel bearing can be caused by an exterior luggage rack or tires.*

A wheel bearing noise can be mistaken for a drive pinion bearing noise. Check the wheel bearing for a spalled cup, and spalled or damaged rollers. Install a new wheel bearing if any of these concerns are detected.

If the wheel bearing is damaged, the roller surface on the axle shaft may also be damaged. Install a new axle shaft if any damage is detected.

Chuckle

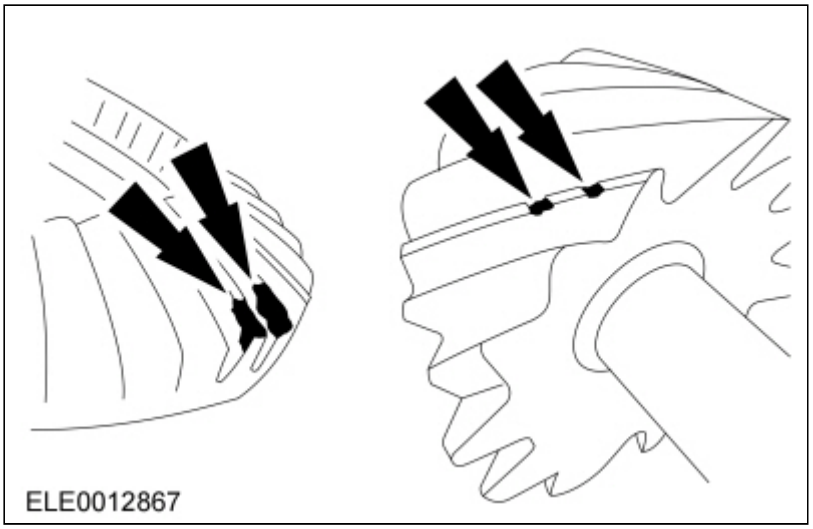


Chuckle that occurs on coasting is usually caused by excessive clearance between the differential gear wheel hub and the differential case bore.

Damage to a gear tooth on the coast side can cause a noise identical to a chuckle. A very small tooth nick or ridge on the edge of a tooth can cause the noise.

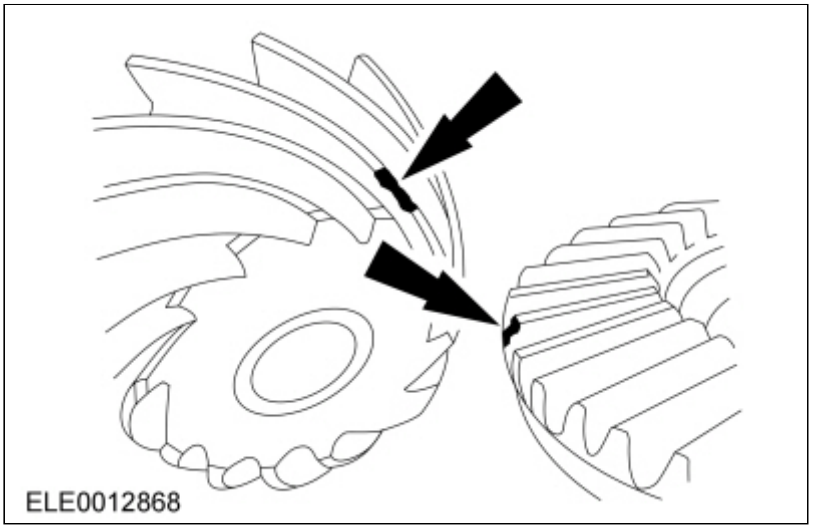
Clean the gear tooth nick or ridge with a small grinding wheel. If the damaged area is larger than 3.2 mm, install a new gearset.

To check the ring gear and drive pinion, remove as much oil as possible from the gears with clean solvent. Wipe the gears dry or blow them dry with compressed air. Look for scored or damaged teeth. Also look for cracks or other damage.



If either gear is scored or damaged badly, a new ring gear and drive pinion must be installed.

If metal has broken loose, the axle housing must be cleaned to remove particles that will cause damage. At this time if any other damaged parts are found in the axle housing, new parts must also be installed.



Knock

Knock, which can occur on all driving phases, has several causes including damaged teeth or gearset.

In most cases, one of the following conditions will occur:

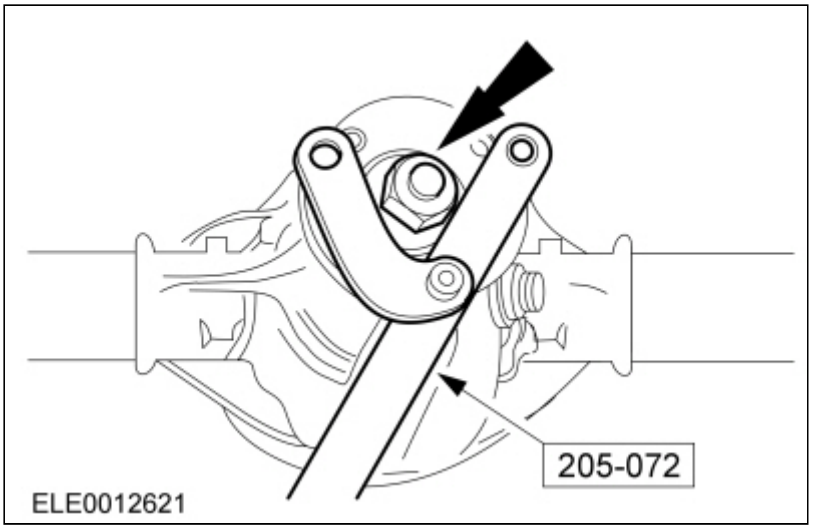
1. A gear tooth damaged on the drive side is a common cause of the knock. This can usually be corrected by grinding the damaged area.

2. **NOTE:** *Measure the end play with a dial indicator gauge and not by feel.*

   The knock is also caused by excessive end play in the axle shafts. Up to 0.76 mm is allowed in semi - floating axles. The frequency of the knock will be less because the axle shaft speed is slower than the driveshaft.

Clunk

Clunk is a metallic noise heard when the automatic transmission is engaged in REVERSE or DRIVE. The noise may also occur when throttle is applied or released. It is caused by backlash somewhere in the driveline or loose suspension components; it is felt or heard in the axle.



Additionally, clunk may be heard upon initial drive - away. This occurs as engine torque shifts vehicle weight, forcing changes in driveline angles, preventing the driveshaft slip - yoke from sliding on the output shaft. To correct this condition, lubricate the slip - yoke splines.

Total Backlash Check

1. Raise and support the vehicle. REFER to: (100-02 Jacking and Lifting)
   Jacking and Lifting - Overview (Description and Operation).

2. Remove the driveshaft.
   REFER to: Front Driveshaft - 4WD (205-01 Driveshaft, Removal and Installation).

3. Install the special tool.
   - Clamp a rigid bar or pipe to the tool. Clamp the other end of the bar or pipe to the frame or a body member in order to prevent movement of the drive pinion flange.

4. Lower the vehicle so that one rear wheel is resting on a wheel chock to prevent it from turning. The other rear wheel will be used to measure total rear axle backlash.

5. Rotate the free wheel slowly, by hand, until the feeling of driving the rear axle is encountered. Place a mark on the side of the tire, 305 mm from the center of the wheel, with a crayon or chalk.

6. While holding the crayon or chalk against the tire, rotate the wheel slowly in the opposite direction until the feeling of driving the rear axle is encountered again.

7. Measure the length of the mark on the tire.
    - If the length of the mark is 25 mm or less, the rear axle backlash is within specification.
    - If the mark is greater than 25 mm, check for these conditions:
        - Elongation of the differential drive pinion shaft and holes in the differential case.
        - Galling of the differential drive pinion shaft and bore.
        - Excessive ring gear and drive pinion backlash. Follow the procedure for the type of rear axle to check backlash.

Axle Shaft Bearing Noise

Axle shaft bearing noise is similar to gear noise and differential drive pinion bearing whine. Axle shaft bearing noise will usually distinguish itself from gear noise by occuring in all driving modes (drive, coast, and float), and will persist with the transmission in NEUTRAL while the vehicle is moving at the speed in which the concern is occuring. If the vehicle makes this noise, remove the suspect axle shaft and install a new bearing and axle oil seal. Re - evaluate the vehicle for noise before removing any internal components.

Bearing Rumble

Bearing rumble sounds like marbles being tumbled. This condition is usually caused by a worn or damaged wheel bearing. The lower pitch is because the wheel bearing turns at only about one - third of the driveshaft speed. Wheel bearing noise also may be high - pitched, similar to gear noise, but will be evident in all driving modes.

Analysis of Inoperative Conditions

If the axle does not operate, it may be caused by broken welds or wheel bearing wear or damage.

Broken Welds

If axle housing welds are completely broken, install a new axle housing.

Wheel Bearing Wear or Damage

Because of the severe loads they must handle, new wheel bearings may be required at high mileage. If a wheel bearing fails at low mileage, it is often caused by overloading.

Symptom Chart

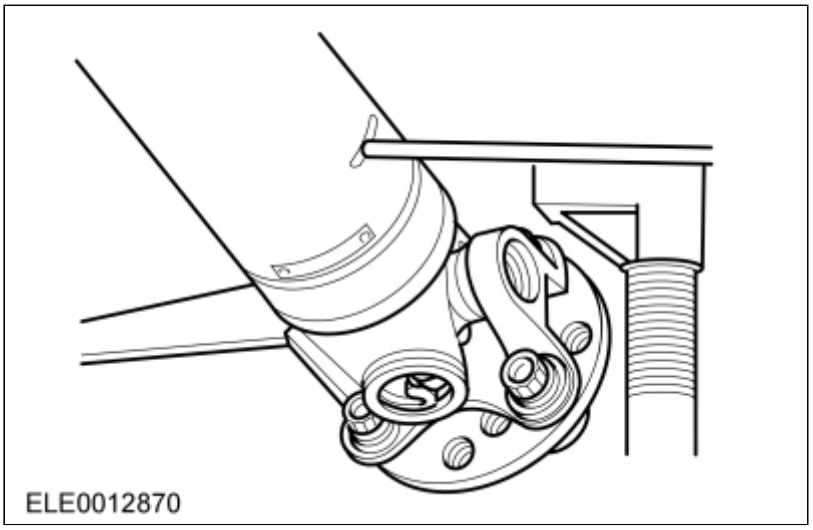
Symptom Chart

Symptom	Possible Sources	Action
• Oil leaking from the drive pinion oil seal, axle shaft oil seals or support arm to the housing	• Axle housing vent.	• CLEAN the axle housing vent.
	• Damage in the oil seal contact	• INSTALL a new drive pinion

	areas or dust slinger on the drive pinion flange dust shield.	flange and the drive pinion oil seal if damage is found.

Component Tests

Driveline Vibration



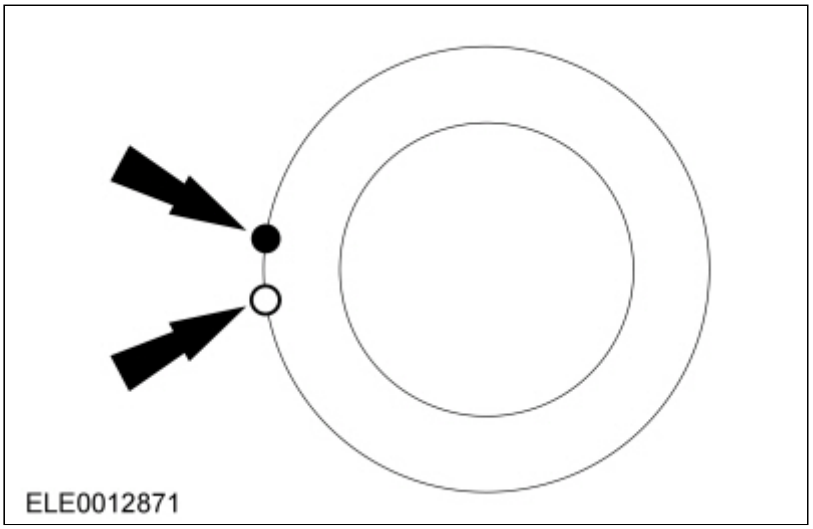
Driveline vibration exhibits a higher frequency and lower amplitude than does high - speed shake. Driveline vibration is directly related to the speed of the vehicle and is usually noticed at various speed ranges. Driveline vibration can be perceived as a tremor in the floor pan or is heard as a rumble, hum or boom. Driveline vibration can exist in all drive modes, but may exhibit different symptoms depending upon whether the vehicle is accelerating, decelerating, floating, or coasting. Check the driveline angles if the vibration is particulary noticeable during acceleration or deceleration, especially at lower speeds. Driveline vibration can be duplicated by supporting the axle upon a vehicle lift or upon axle stands, though the brakes may need to be applied lightly in order to simulate road resistance.

1. Raise and support the vehicle promptly after road testing. Use a two post lift or axle stands to prevent tire flat - spotting. Engage the drivetrain and accelerate to the observed road test speed to verify the presence of the vibration. If the vibration is not evident, check the nondriving wheels with a wheel balancer to rule out imbalance as a possible cause. If required, balance the nondriving wheels and repeat the road test. If the vibration is still evident, proceed to the following step.

2. Mark the relative position of the drive wheels to the wheel bolts. Remove the wheels. Install all the wheel nuts in the reversed position and repeat the road speed acceleration test. If the vibration is gone, refer to the wheel and tire runout procedure.
   REFER to: Wheels and Tires (204-04A Wheels and Tires, Diagnosis and Testing).
   If the vibration persists, proceed to the following step.

3. Inspect the driveshafts for signs of physical damage, missing balance weight, undercoating, incorrect seating, wear and binding universal joints. Clean the driveshaft and install new universal joints or install a new driveshaft if damaged. Check the index marks (paint spots) on the rear of the driveshaft and drive pinion flange. If these marks are more than one - quarter turn apart, disconnect the driveshaft and reindex to align the marks as closely as possible. After any corrections are made, recheck for vibration at the road test speed. If the vibration is gone, install the wheels and road test the vehicle. If the vibration persists, proceed to following step.

4. Raise and support the vehicle. REFER to: (100-02 Jacking and Lifting)
   Jacking and Lifting - Overview (Description and Operation).
   Remove the wheels and tires.
   REFER to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).
   Rotate the driveshaft by turning the axle and measure the runout at the front, the center, and the rear of the driveshaft with the dial indicator gauge. If the runout exceeds 0.89 mm at the front or center, a new driveshaft must be installed. If the front and center are within this limit, but the rear runout is not, mark the rear runout high point and proceed to following step. If the runout is within specifications at all points, proceed to following step.



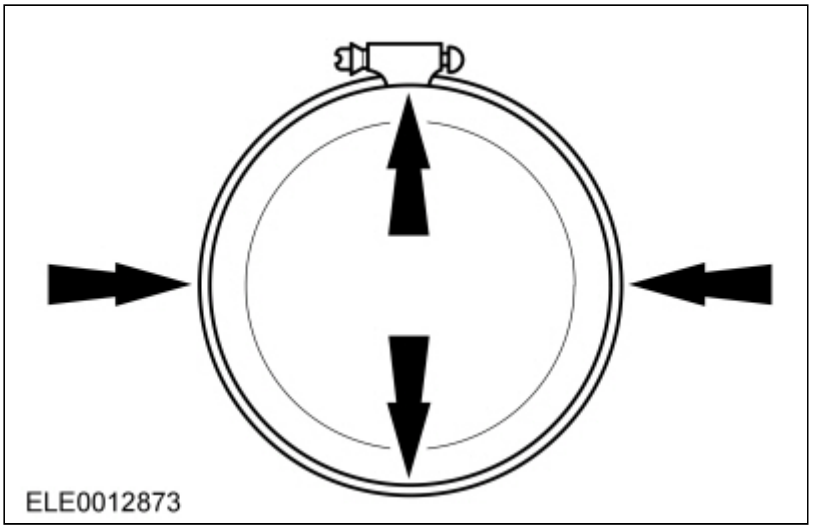
ELE0012870

5. **NOTE:** *Check the universal joints during re - indexing. If a universal joint feels stiff or gritty, install new universal joints.*

   Scribe alignment marks on the driveshaft and the drive pinion flange. Disconnect the driveshaft, rotate it one - half turn and reconnect it. Circular drive pinion flanges can be turned by one - quarter increments to fine tune the runout condition; half - round drive pinion flanges are limited to two positions. Check the runout at the rear of the driveshaft. If it is still over 0.89 mm, mark the high point and proceed to the following step. If the runout

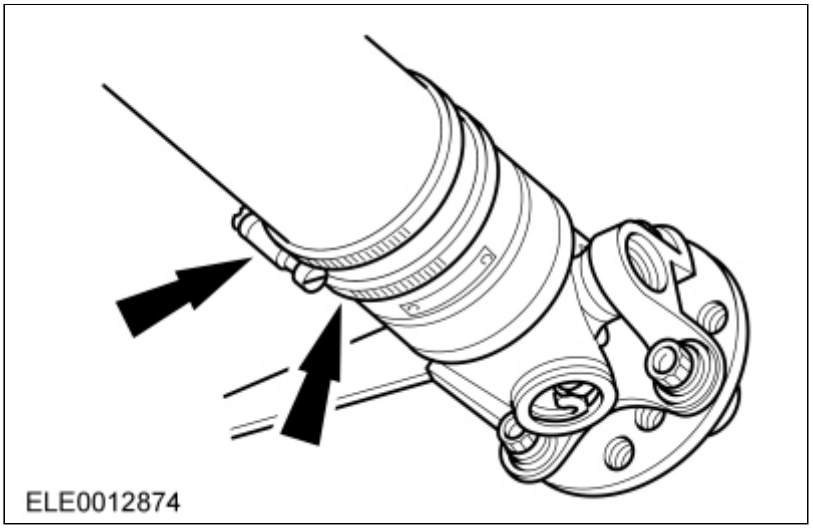
is no longer excessive, check for vibration at the road test speed. If vibration is still present, reindex the driveshaft slip - yoke on the transmission output shaft one half - turn and road test the vehicle. If the vibration persists, proceed to the following Step.

6. Excessive driveshaft runout may originate in the driveshaft itself or in the drive pinion flange. To determine which, compare the two high points marked in previous steps. If the marks are close together, within about 25 mm, a new driveshaft must be installed and the vehicle road tested.



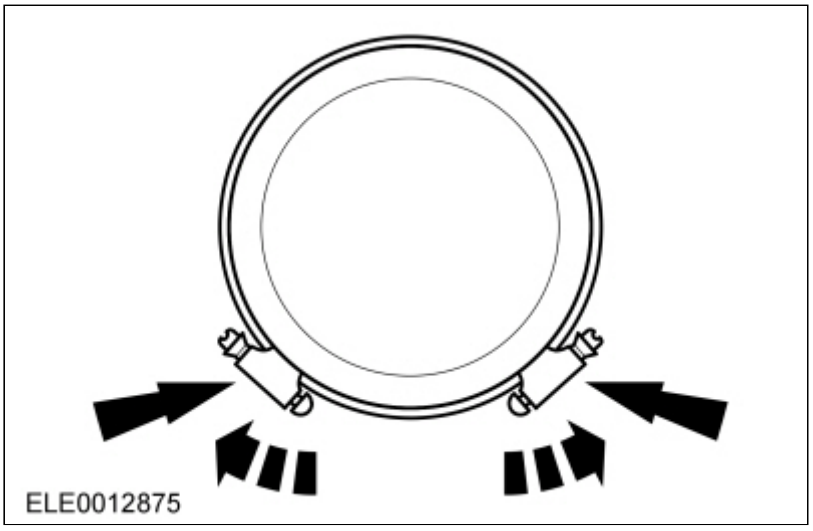
If the marks are on opposite sides of the driveshaft, the yoke or drive pinion flange is responsible for the vibration.

When installing a new drive pinion flange, the driveshaft runout must not exceed 0.89 mm. When runout is within limits, recheck for vibration at road speed. If vibration persists, balance the driveshaft.



7. To balance the driveshaft, install one or two hose clamps on the driveshaft, near the rear. Position of the hose clamp head(s) can be determined by trial - and - error.

8. Mark the rear of the driveshaft into four approximately equal sectors and number the marks 1 through 4. Install a hose clamp on the driveshaft with its head at position No. 1.



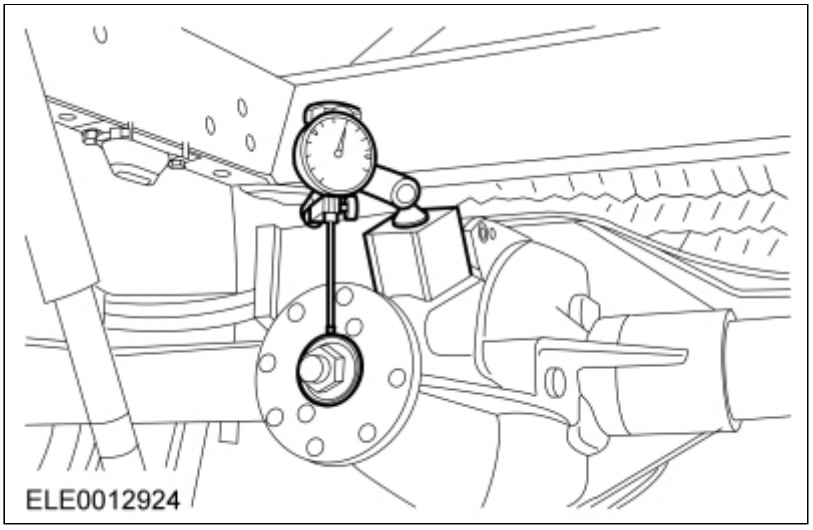
Check for vibration at road speed. Recheck with the clamp at each of the other positions to find the position that shows minimum vibration. If two adjacent positions show equal improvement, position the clamp head between them.

9. If the vibration persists, add a second clamp at the same position and recheck for vibration.

If no improvement is noted, rotate the clamps in opposite directions, equal distances from the best position determined in the previous step. Separate the clamp heads about 13 mm and recheck for vibration at the road speed.

Repeat the process with increasing separation until the best combination is found or the vibration is reduced to an acceptable level.

10. Install the wheels and road test the vehicle (vibration noticeable on the vehicle lift may not be evident during the road test). If the vibration is still not acceptable, install a new axle driveline vibration damper first (if equipped).



Driveshaft Vibrates

1. Road test the vehicle to determine the critical vibration points. Note the road speed, the engine rpm, and the gearshift lever positions at which the vibration occurs.
2. Stop the vehicle, place the gearshift lever in neutral and run the engine through the critical speed ranges determined in previous step.
3. If no vibration is felt, balance the driveshaft.

Drive Pinion Flange Runout Check

NOTICE: Drive pinion bearing preload must be reset if the drive pinion nut has been loosened or removed for drive pinion flange reindexing or renewal.

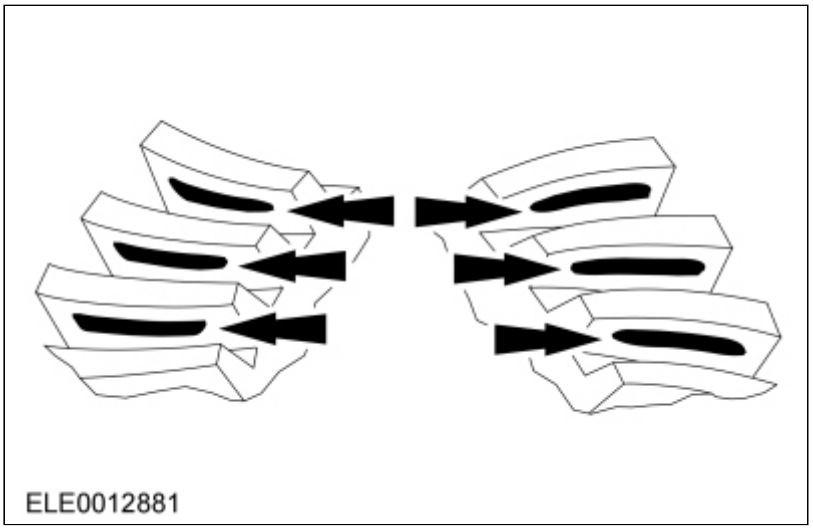
1. Raise and support the vehicle on a two post lift that supports the rear axle.
2. Remove the driveshaft.
   REFER to: Front Driveshaft - 4WD (205-01 Driveshaft, Removal and Installation).
3. Check the drive pinion flange for damage.
4. Position a dial indicator gauge with magnetic base on the drive pinion flange.

If the drive pinion flange runout exceeds 0.25 mm, remove the drive pinion flange, reindex the drive pinion flange one - half turn on the drive pinion and install it. REFER to: (205-02 Rear Drive Axle/Differential)

Differential Carrier (Disassembly and Assembly).

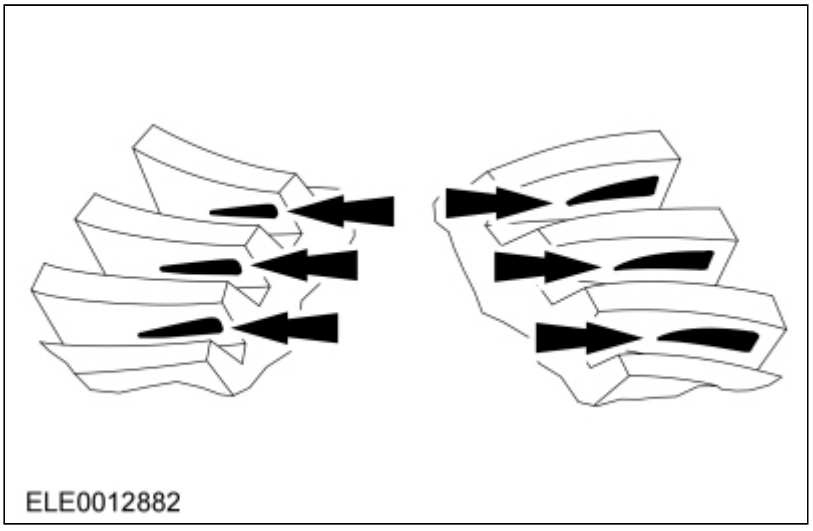
5. Check the runout again. If necessary, rotate the drive pinion flange until an acceptable runout is obtained. If the drive pinion flange runout is still more than 0.25 mm, install a new drive pinion flange.
6. If excessive runout is still evident after installation of a new drive pinion flange, install a new ring gear set. Repeat the above checks until the runout is within specifications.
7. Install the driveshaft.
   REFER to: Front Driveshaft - 4WD (205-01 Driveshaft, Removal and Installation).

Tooth Contact Pattern Check - Gearset



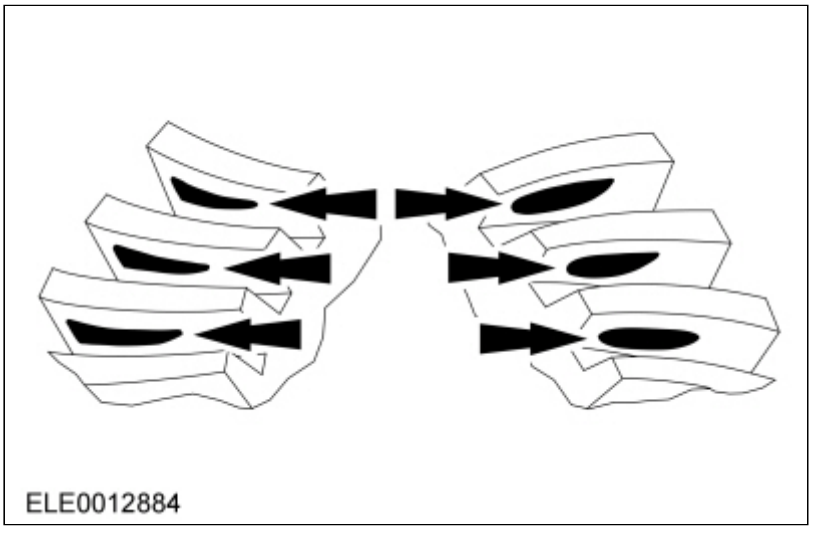
1. To check the gear tooth contact, paint the gear teeth with the special marking compound. A mixture that is too wet will run and smear; a mixture that is too dry cannot be pressed out from between the teeth.
2. Use a box wrench on the ring gear bolts as a lever to rotate the ring gear several complete revolutions in both directions or until a clear tooth contact pattern is obtained.
3. Certain types of gear tooth contact patterns on the ring gear indicate incorrect adjustment. Incorrect adjustment can be corrected by readjusting the ring gear or the drive pinion.

Contact Pattern Location

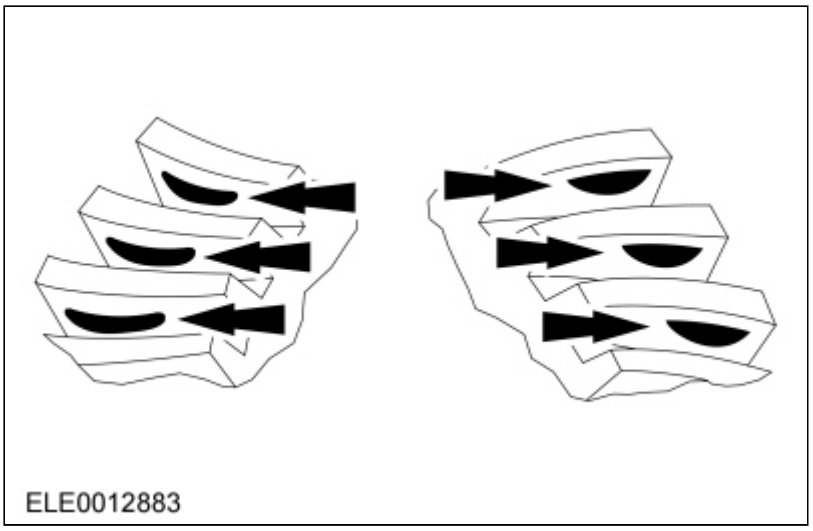


In general, acceptable ring gear tooth patterns must have the following characteristics:

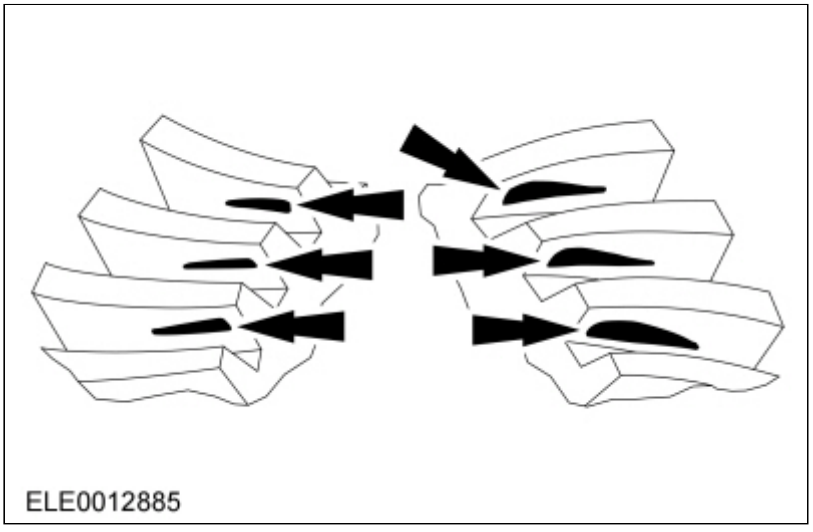
- Drive pattern on the drive side ring gear well centered on the tooth.
- Coast pattern in the coast side ring gear well centered on the tooth.
- Clearance between the pattern and the top of the tooth.
- No hard lines where the pressure is high.



Acceptable ring gear tooth patterns for all axles.



Correct backlash with a thinner drive pinion position shim.



Correct backlash with a thicker drive pinion position shim required.

Correct drive pinion position shim that requires a decrease in backlash.

Correct drive pinion position shim that requires an increase in backlash.

Driveshaft Angle Measurement

Check

NOTE: *This procedure does not apply to CV joints, flex couplers or double cardan joints that are used in some driveshafts. This check is for single-cross and roller-style joints found in the driveshafts.*

NOTE: *Prior to checking driveline angularity, inspect the U-joints for correct operation.*

NOTE: *An incorrect driveline angle can cause a vibration or shudder.*

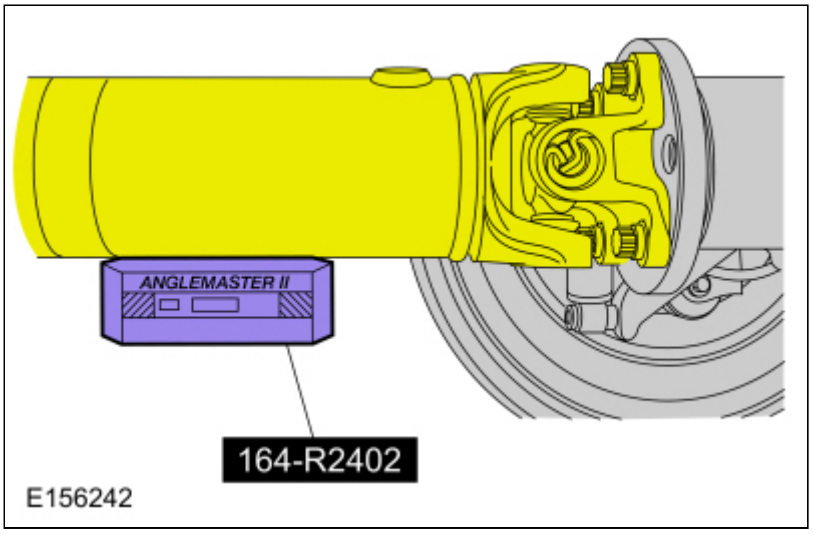
NOTE: *Driveline angularity is the angular relationship between the engine crankshaft, the driveshaft and the rear axle pinion. Factors determining driveline angularity include ride height, rear spring and engine mounts.*

1. **NOTE:**

   - *Special Tool(s): Anglemaster II Driveline Inclinometer/Protractor 164-R2402. Carry out the following preliminary setup steps:*

   1. Inspect the U-joints for correct operation.
   2. Park the vehicle on a level surface such as a drive-on hoist, or back onto a front end alignment rack.
   3. Verify the curb position ride height is within specifications with the vehicle unloaded and all of the tires are inflated to their normal operating pressures.
   4. Calibrate the Anglemaster II Driveline Inclinometer/Protractor by placing it on a clean, flat level section of the frame rail and press the ALT-ZERO button.

Vehicles with flat-flanged, split-pin or slip-flanged U-joints

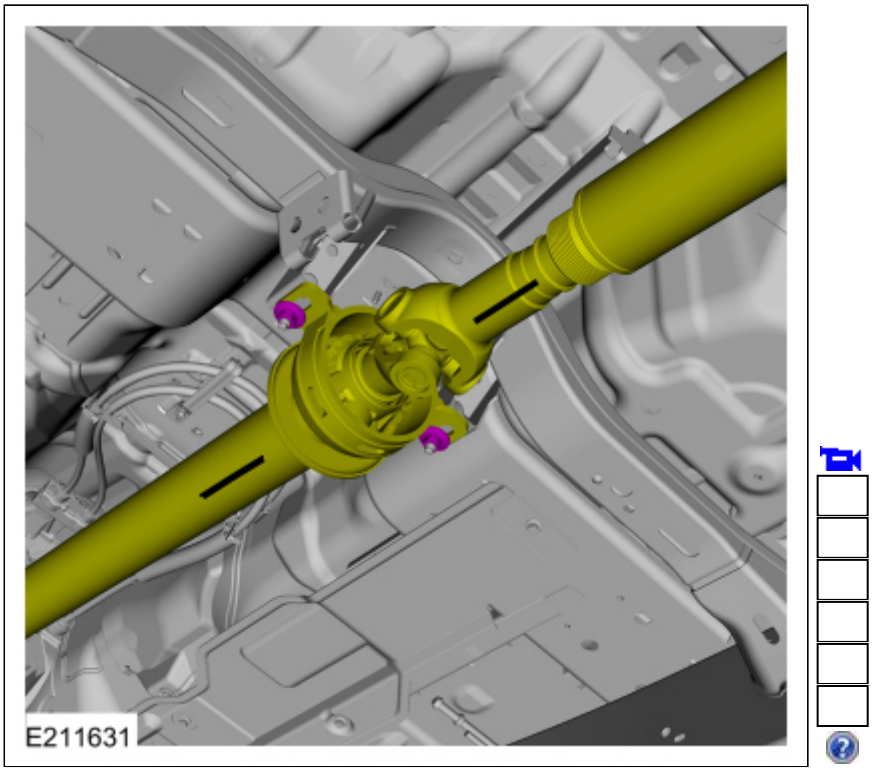


2. **NOTE:** *If equipped, remove the snap ring to allow access to the base of the U-joint cup. Make sure the Anglemaster II Driveline Inclinometer/Protractor is seated against the U-joint cup.*

   NOTE: *Rotate the driveshaft until the flange U-joint cup is parallel with the floor. This will simplify taking measurements.*

   Special Tool(s): Anglemaster II Driveline Inclinometer/Protractor 164-R2402. Check and record the flange angle as angle A.

3. Special Tool(s): Anglemaster II Driveline Inclinometer/Protractor 164-R2402. Measure the slope of the connecting component. Record the measurement of the component angle as angle B.



Multiple piece driveshafts

4. **NOTE:** *Repeat this step for each center support bearing on the driveshaft.*

   NOTE: *It is not necessary to remove the U-joint snap ring, if equipped, for these measurements.*

   Special Tool(s): Anglemaster II Driveline Inclinometer/Protractor 164-R2402. Measure the slope of the components in front and behind the center support bearing U-joint in the area indicated. Record the front component as angle A and the rear component as angle B.

All vehicles

5. **NOTE:** *When 2 connected components slope in the same direction, subtract the smallest number from the larger number to find the U-joint operating angle. When 2 connected components slope in the opposite direction, add the measurements to find the U-joint operating angle.*

   Calculate the difference in the slope of the components to determine the U-joint operating angle.

6. **NOTE:**

   - *The U-joint operating angle is the angle formed by 2 yokes connected by a cross and bearing kit. Ideally, the operating angles on each connection of the driveshaft must:*

   1. be equal or within one degree of each other.
   2. have a 3 degree maximum operating angle.
   3. have at least one-half of one degree continuous operating angle.

7. If the angle is not within specifications, repair or adjust to obtain the correct angle. Inspect the engine mounts, transmission mounts, center support bearing mounting, rear suspension, rear axle, rear axle mounting or the frame for wear or damage.

Driveshaft Runout and Balancing

Base Part Number: 04602

Special Tool(s) / General Equipment

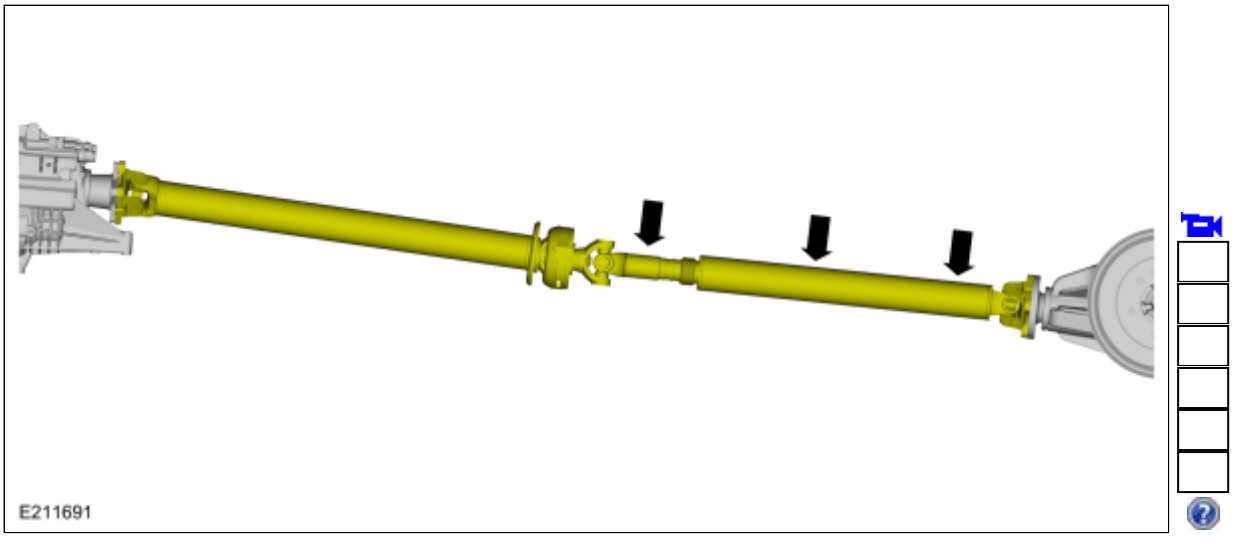
 E139373	100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge

Inspection

NOTE: *Driveline vibration exhibits a higher frequency and lower amplitude then high-speed shake. Driveline vibration is directly related to the speed of the vehicle and is noticed at various speeds. Driveline vibration can be perceived as a tremor in the floorpan or heard as a rumble, hum or boom.*

NOTE: *Refer to Specifications in this section for runout specifications.*

1. **NOTE:** *Do not make any adjustments before carrying out a road test. Do not change the tire pressure or the vehicle load.*
    - *Carry out a visual inspection of the vehicle. Operate the vehicle and verify the condition by reproducing it during the road test.*
    - The concern should be directly related to vehicle road speed. not affected by acceleration or deceleration or could be reduced by coasting in NEUTRAL.
2. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
3. **NOTE:** *The driveshaft should be kept at an angle equal to or close to the curb-weighted position. Use a twin-post hoist or a frame hoist with jackstands.*
    - *Inspect the driveshaft for damage, undercoating or incorrectly seated U-joints. Rotate the driveshaft slowly by hand and feel for binding or end play in the U-joint trunions. Remove the driveshaft. Inspect the slip yoke splines for any galling, dirt, rust or incorrect lubrication. Clean the driveshaft or install new U-joints as necessary. Install a new driveshaft if damaged. After any corrections or new components are installed, recheck for the vibration at the road test speed.*
    - *If the vibration persists after inspection, measure the driveshaft runout.*



Check

1. **NOTE:**

- *Measure and check for the specified maximum value. Install the Dial Indicator Gauge with Holding Fixture. Rotate the driveshaft by turning the axle and measure the runout at the front, center and rear of the driveshaft. Multiple piece driveshaft measure each section at the front, center and rear.*

1. If the runout exceeds 1 mm (0.040 in) at the front or center, install a new driveshaft.
   Use Special Service Tool: 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.
2. If the front and center is within 1 mm (0.040 in) , but the rear runout is not, index-mark the rear runout high point and proceed to step 2.
3. If the runout is within 1 mm (0.040 in) at all points, recheck for vibration at road test speed. If the vibration persists, balance the driveshaft. Refer to Driveshaft Balancing in this procedure.

2. **NOTE:** *Circular pinion flanges can be turned in 90 degree or one-fourth increments. Half-round pinion flanges are limited to 2 positions. CV joint pinion flanges that have 6 bolts, can be turned in 60 degree or one-sixth increments.*

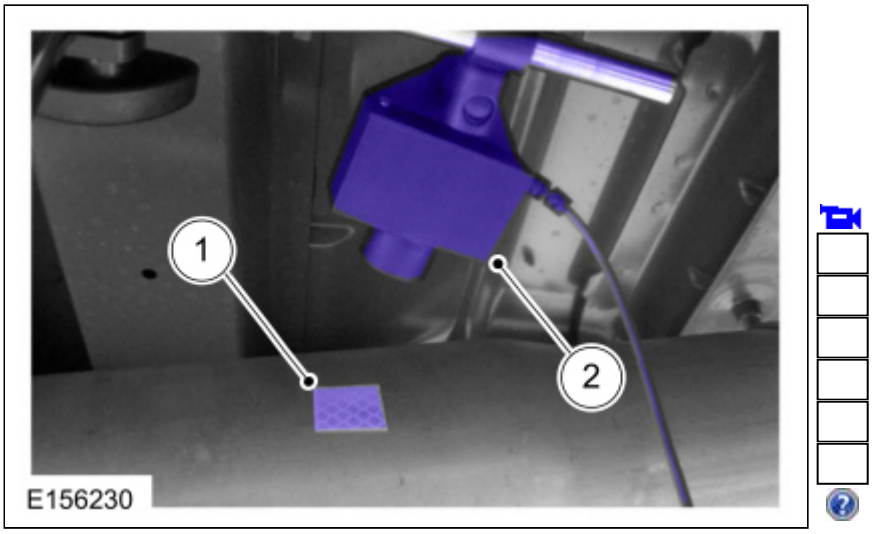
   - *Index-mark the driveshaft to the pinion flange. Disconnect the driveshaft and rotate it 180 degrees. Reconnect the driveshaft. Recheck the runout at the rear of the driveshaft.*

   1. If the runout is still over specification, mark the high point and proceed to Step 3.
   2. If the runout is within specification, check for the vibration at the road test speed. If the vibration is still present, balance the driveshaft. Refer to Driveshaft Balancing in this procedure.

3. **NOTE:**

   - *Excessive driveshaft runout can originate in the driveshaft itself or from the pinion flange. To find the source, compare the 2 high points previously determined.*

   1. If the index marks are close together, within 25 mm (1 in), the driveshaft is eccentric. Install a new driveshaft.
   2. If the marks are on opposite sides of the driveshaft, 180 degrees apart, the slip yoke or pinion flange is responsible. Check the pinion flange runout. If the pinion flange runout exceeds specifications, a bent pinion is indicated.
      Refer to: Rear Drive Axle and Differential (205-02 Rear Drive Axle/Differential) .
   3. If the pinion flange and pinion runouts are within specifications, road test and check for the vibration at the road test speed. If the vibration persists, balance the driveshaft. Refer to Driveshaft Balancing in this procedure.



Driveshaft Balancing – Using the Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix)

4. Special Tool(s): Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) 257-00018. Working under the vehicle, install an accelerometer. The accelerometer can be attached and mounted near either the transmission or differential end of the driveshaft.

5. **NOTE:**

    - *Clean an area of the driveshaft and install the reflective tape, then install the photo-tachometer sensor. The sensor should be placed at approximately a 20-degree angle from perpendicular to the surface of the reflective tape. Make sure the sensor does not get moved during the balance procedure.*

    1. Reflective tape.
    2. Photo-tachometer sensor.

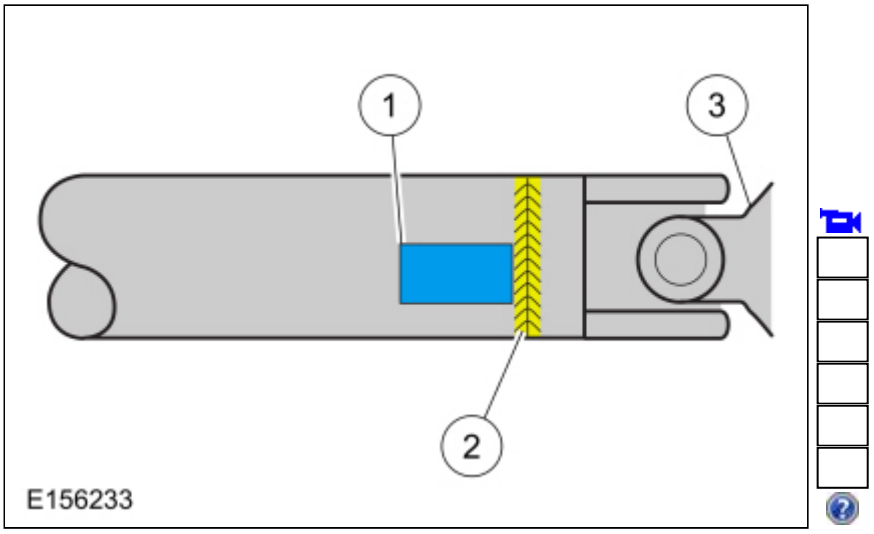
6. Special Tool(s): Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) 257-00018. Run a driveshaft balance test with the driveshaft unmodified.
   Use Special Service Tool: 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.

Vehicles with tapped pinion flanges

7. Label the tapped holes in the pinion flange numerically, starting at the top hole as 1. Mark the remaining holes 2, 3, 4, (depending on flange type, 5 and 6 may also be needed). Label in the direction of rotation.

8. Special Tool(s): Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) 257-00018. Run a second test with the 12 mm (0.47 in) test weight set screw in the No. 1 hole, previously marked on the pinion flange.

9. Remove the test weight, then install the weight combination directed by the Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix).



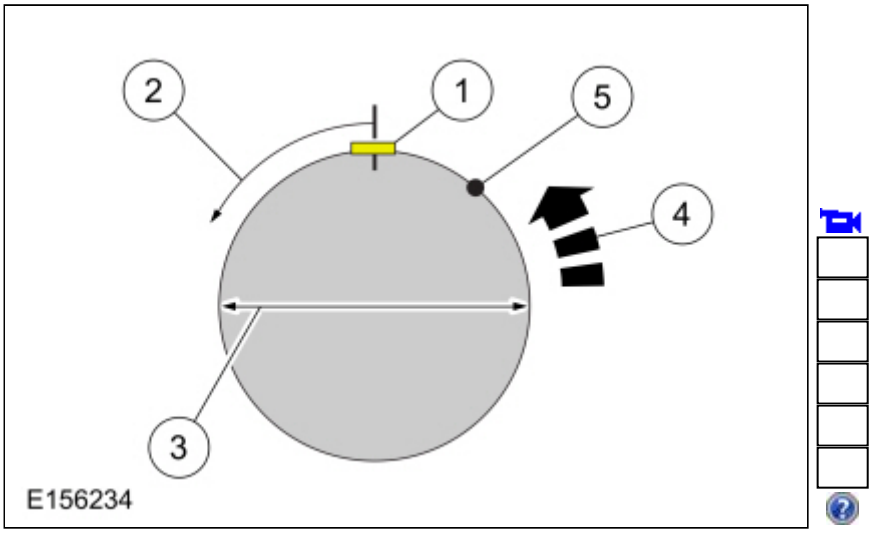
Vehicles without tapped pinion flanges

10. **NOTE:**

    - *Special Tool(s): Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) 257-00018. Run a second test with a test weight. Using a metal band, secure the test weight to the end of the driveshaft. The weight should be placed at the end of the driveshaft tube, as close to the tube-to-yoke weld seam as possible. Mark the location of the test weight on the driveshaft, as shown in the figure below.*

1. Test weight.
2. Tube-to-yoke weld seam.
3. Driveshaft pinion flange.

- Select the test weight based on driveshaft size. Larger driveshafts use 10 g (0.353 oz). Smaller driveshafts use 5 g (0.176 oz).

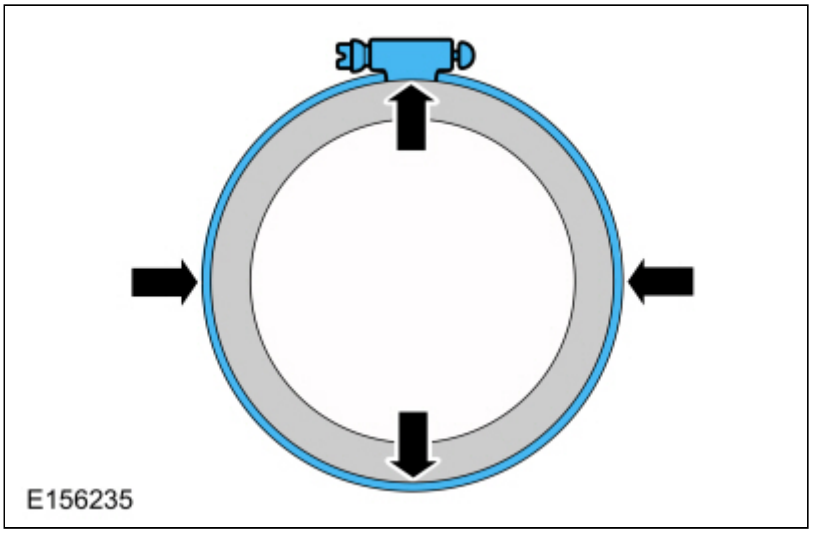


11. **NOTE:**

    - *Remove the test weight, then install the recommended weight at the position directed by the Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix). Using a metal band and epoxy, secure the test weight to the driveshaft, as shown in the figure below.*

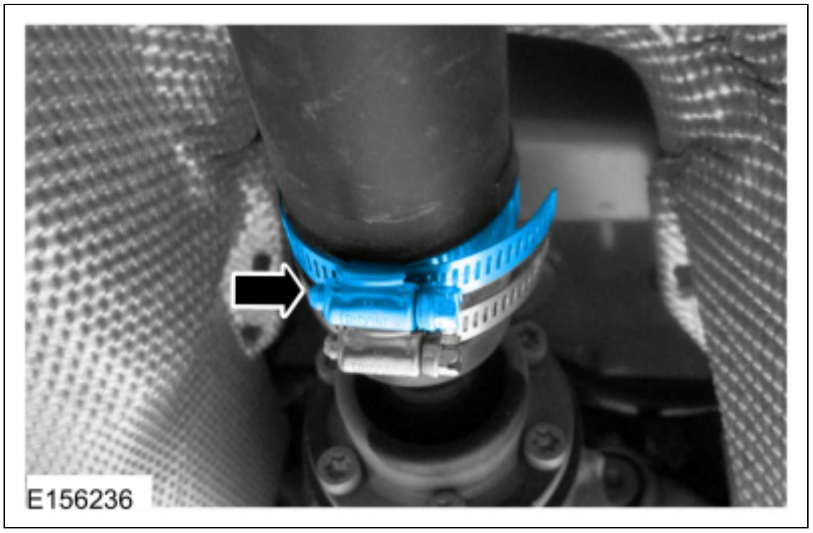
1. Test weight.
2. Measure in this direction.
3. Driveshaft diameter.
4. Directional rotation.
5. Balance weight relative to test weight centerline.

- The results are displayed with respect to the location to where the test weight was placed.



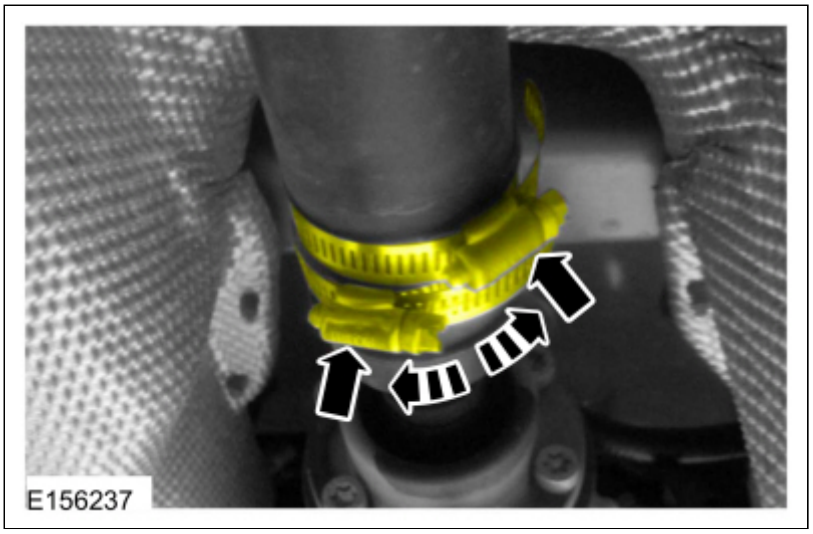
All vehicles

12. Special Tool(s): Mastertech® Series MTS 4000 Driveline Balance and NVH Analyzer (Vetronix) 257-00018. Run a third test to verify the repair.



Driveshaft Balancing – Hose Clamp Method

13. Install 1 or 2 hose clamps on the driveshaft, near the rear. Position of the hose clamp head(s) can be determined through trial and error.



14. Mark the rear of the driveshaft into 4 approximately equal sectors and number the marks 1 through 4. Install a hose clamp on the driveshaft with its head at position No. 1, as shown in the figure below. Check for vibration at road speed. Recheck with the clamp at each of the other positions to find the position that shows minimum vibration. If 2 adjacent positions show equal improvement, position the clamp head between them.

15. If the vibration persists, add a second clamp at the same position and recheck for vibration.

16. If no improvement is noted, rotate the clamps in opposite directions, equal distances from the best position determined in Step 14. Separate the clamp heads about 13 mm (1/2 in) and recheck for vibration at the road speed.

17. Repeat the process with increasing separation until the best combination is found or the vibration is reduced to an acceptable level.

Front Driveshaft - 4WD

Removal

NOTICE: Always disconnect the front driveshaft from the transfer case first. Otherwise, the weight of the driveshaft can pinch the boot between the driveshaft and the constant velocity (CV) joint flange which can cause the boot to tear.

NOTICE: It is possible to fit the driveshaft incorrectly. Note the orientation before removal.

NOTE: *A small amount of oil may weep from the driveshaft joints during storage. The loss of this oil will not affect the operation or durability of the joint.*

NOTE: *Removal steps in this procedure may contain installation details.*

1. **WARNING: Do not work on or under a vehicle supported only by a jack. Always support the vehicle on safety stands.**

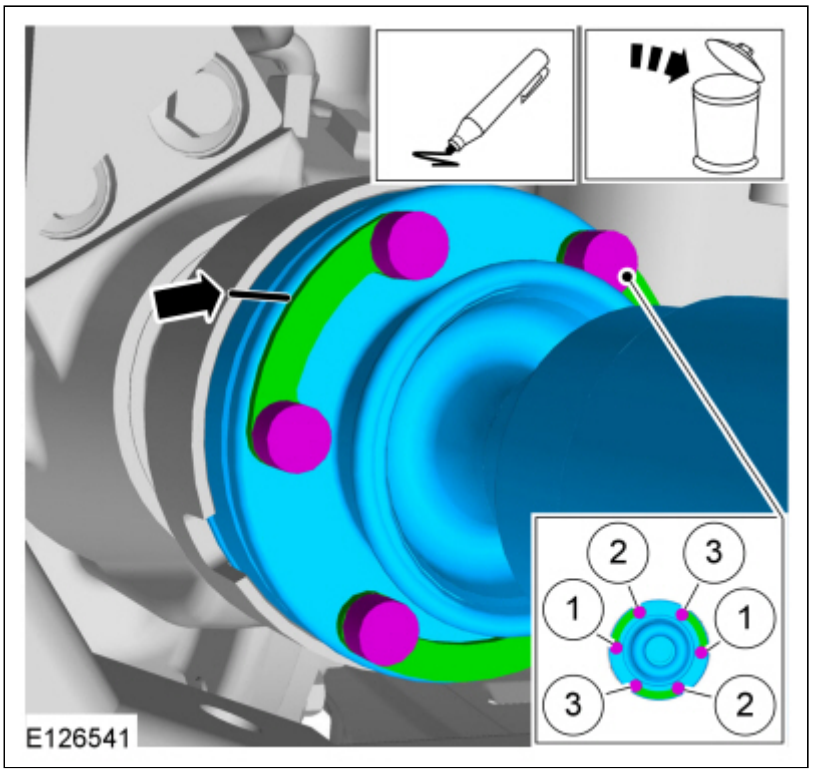
   Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

2. **NOTICE: To avoid damage to the joint or gaiter, do not allow the driveshaft to hang.**

   NOTICE: Do not reuse the bolts, install new bolts or damage to the vehicle may occur.

   NOTE: *Lock the driveshaft before removing the bolts to avoid slipping.*

   Torque:
   Stage 1: 15 Nm
   Stage 2: 180°



3. **NOTICE: To avoid damage to the joint or gaiter, do not allow the driveshaft to hang.**

   NOTICE: Do not reuse the bolts, install new bolts or damage to the vehicle may occur.

   NOTE: *Lock the driveshaft before removing the bolts to avoid slipping.*

   Torque:
   Stage 1: 15 Nm

Stage 2: 180°

Installation

1. To install, reverse the removal procedure.

Rear Driveshaft

Removal

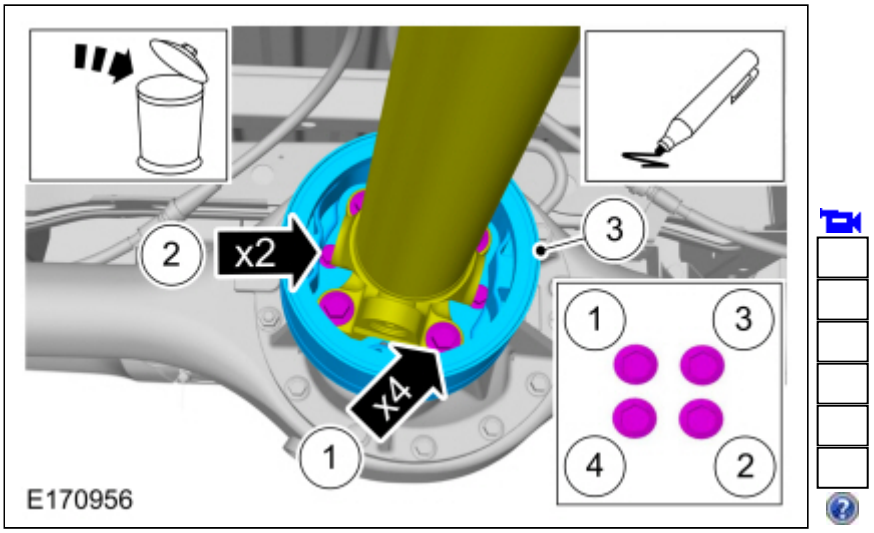
WARNING: The normal operating temperature of the exhaust system is very high. Never attempt to remove any part of the system until it has cooled. Be especially careful when working around the catalytic converters. The temperature of the converter rises to a high level after only a few minutes of engine operation. Failure to follow these instructions may result in personal injury.

NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

2. **NOTE:** *The position of the driveshaft damper may vary depending on vehicle variant.*

   For further information on driveshaft damper location.
   Refer to: Driveshaft (205-01 Driveshaft, Description and Operation).



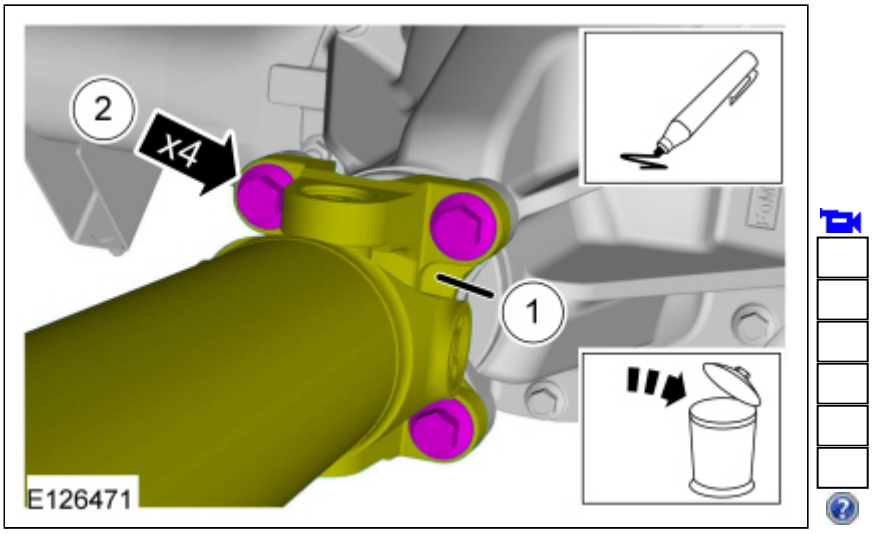
Vehicles with driveshaft damper fitted on rear axle

3. **NOTICE: Note the position of the component before removal.**

   NOTE: *Make sure that new bolts are installed.*

   NOTE: *Make sure that the damper is fully seated on the axle flange and square to the flange.*

   Torque:
   1: 110 Nm
   2: 10 Nm



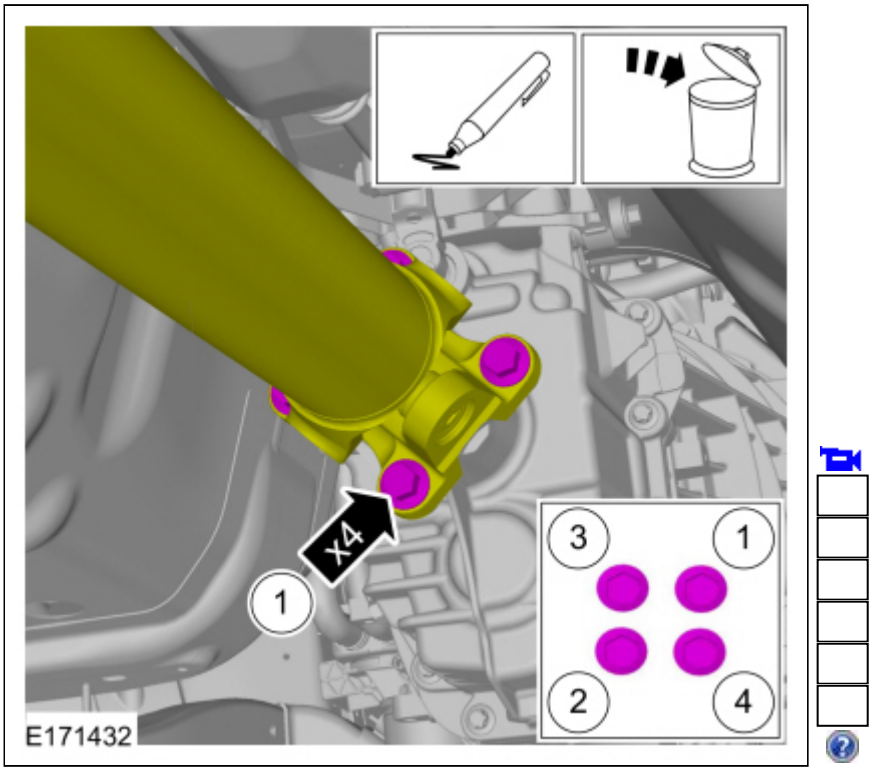
Vehicles without driveshaft damper fitted on rear axle

4. **NOTICE: Note the position of the component before removal.**

   NOTE: *Make sure that new bolts are installed.*

   NOTE: *Make sure that the damper is fully seated on the transmission flange and square to the flange.*

   Torque: 110 Nm



Vehicles without driveshaft damper fitted on transmission

5. **NOTICE: Note the position of the component before removal.**

   NOTE: *Make sure that new bolts are installed.*

   NOTE: *Make sure that the damper is fully seated on the transmission flange and square to the flange.*

   Torque: 110 Nm

All vehicles

6. **NOTE:** *Make sure that the center bearing is aligned with the propeller shaft and mounting bracket so that the FoMoCo on the center bearing is on the topside.*

   Torque: 48 Nm

Installation

1. To install, reverse the removal procedure.

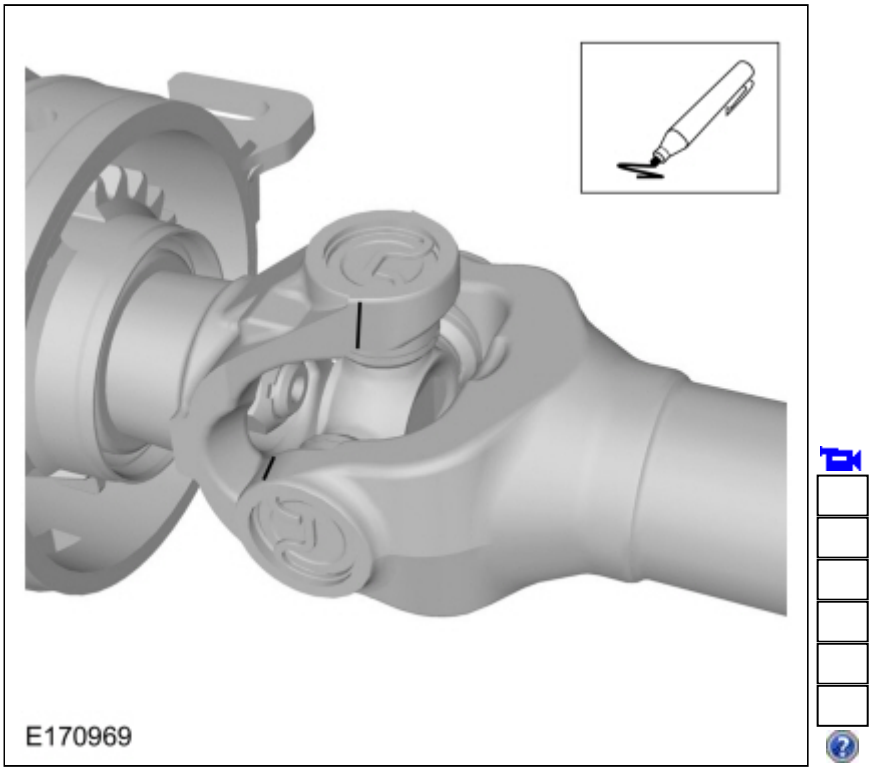
Driveshaft Universal Joint

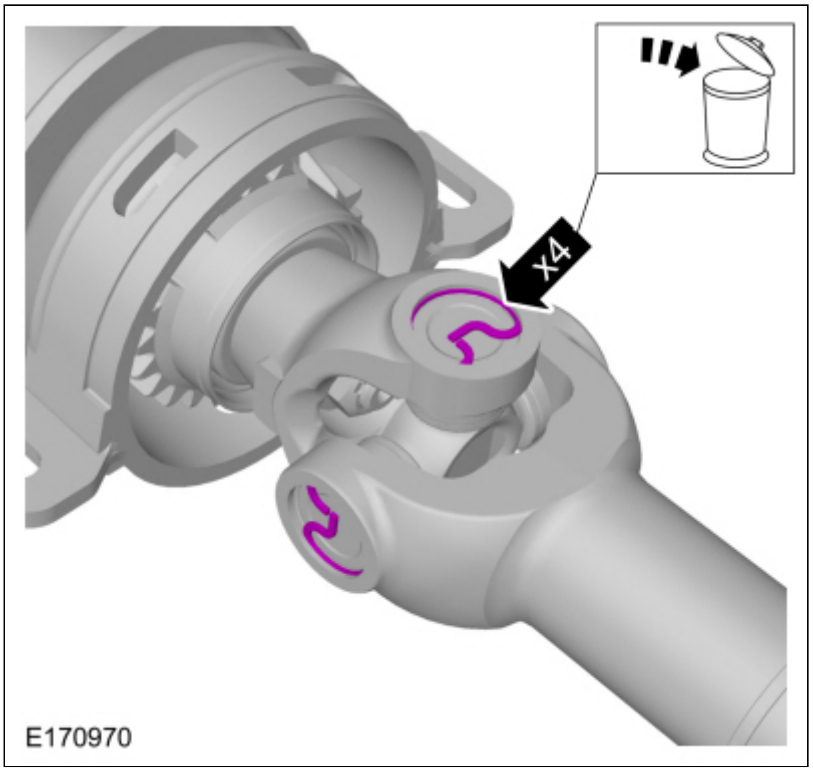
Special Tool(s) / General Equipment

	205-086 (T74P-4635-C) Installer/Remover, C-Frame and Screw
Vise	



DISASSEMBLY

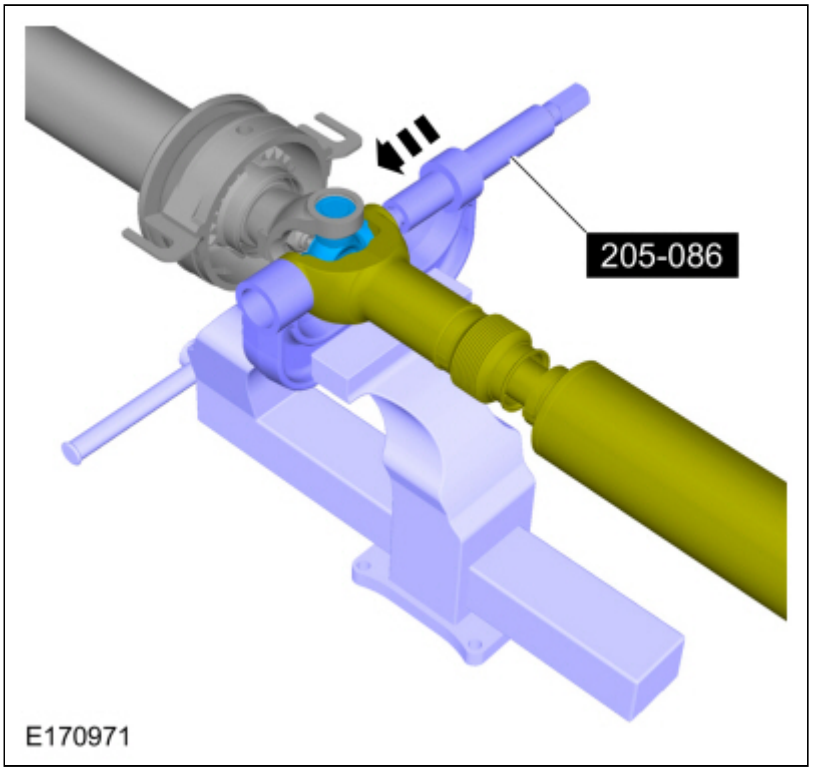
1. Refer to: Front Driveshaft - 4WD (205-01 Driveshaft, Removal and Installation).
   Refer to: Front Driveshaft - 4WD (205-01 Driveshaft, Removal and Installation).



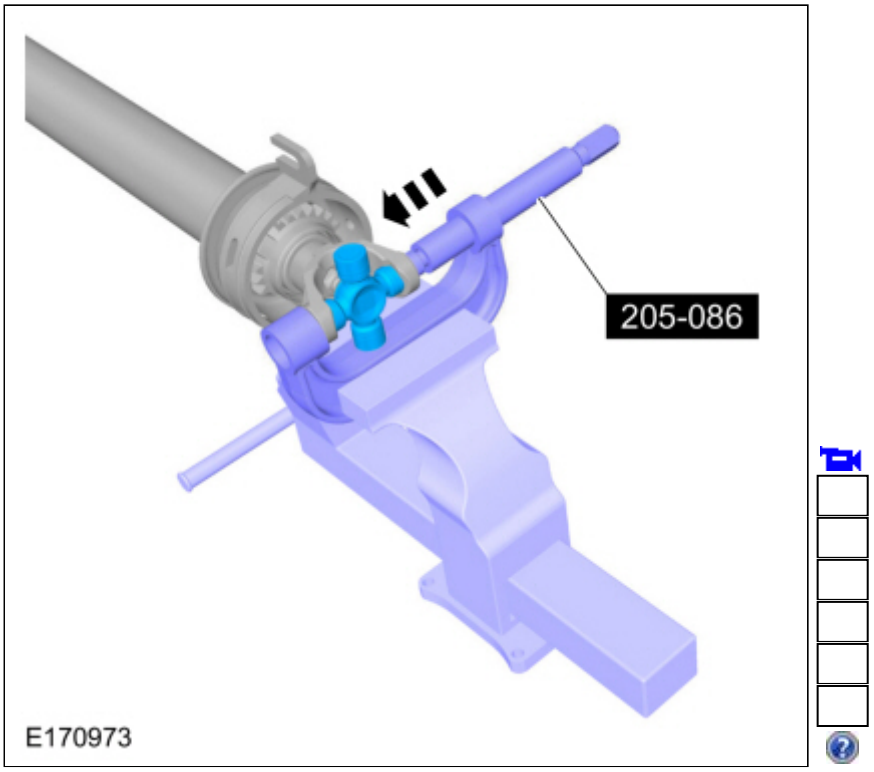
2. **NOTE:** *Do not clamp the driveshaft assembly in the jaws of a vise or similar holding fixture. Denting or localized fracturing may result, causing driveshaft failure or vibration during vehicle operation.*

   NOTE: *Place the driveshaft on a suitable workbench.*

3. **NOTE:** *If the components are not marked and therefore installed incorrectly, driveshaft imbalance can occur.*

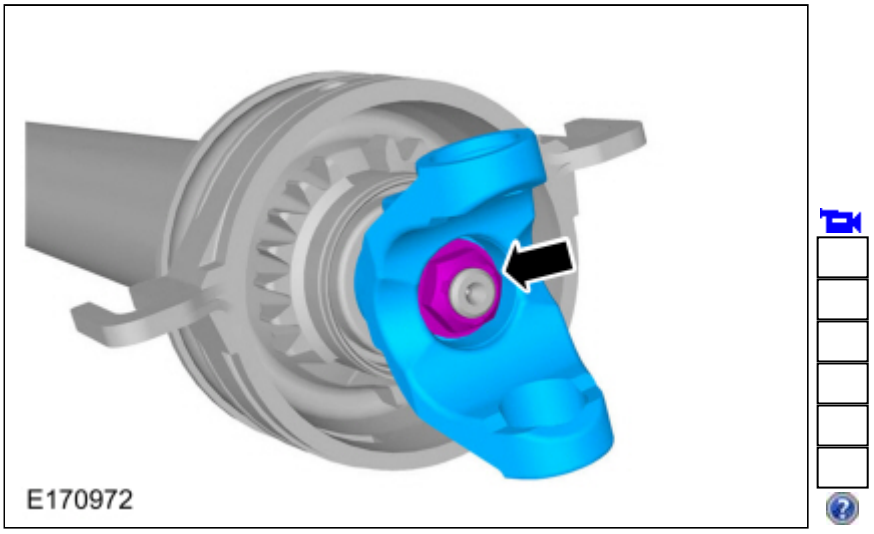


4.



5. **NOTE:** *If necessary, use a pair of pliers to remove a bearing cup that fails to press out all the way.*

   Use Special Service Tool: 205-086 (T74P-4635-C) Installer/Remover, C-Frame and Screw.
   Use the General Equipment: Vise



6. **NOTICE: Inspect the bearing cup bores and retaining ring grooves. Remove any rust or other surface irregularities.**

   Use Special Service Tool: 205-086 (T74P-4635-C) Installer/Remover, C-Frame and Screw.
   Use the General Equipment: Vise

7. *Torque*: 150 Nm

ASSEMBLY

1. **NOTE:** *Lubricate the driveshaft slip yoke and driveshaft yoke bearing cup bores with grease before installing the bearing cups.*

   To install, reverse the removal procedure.

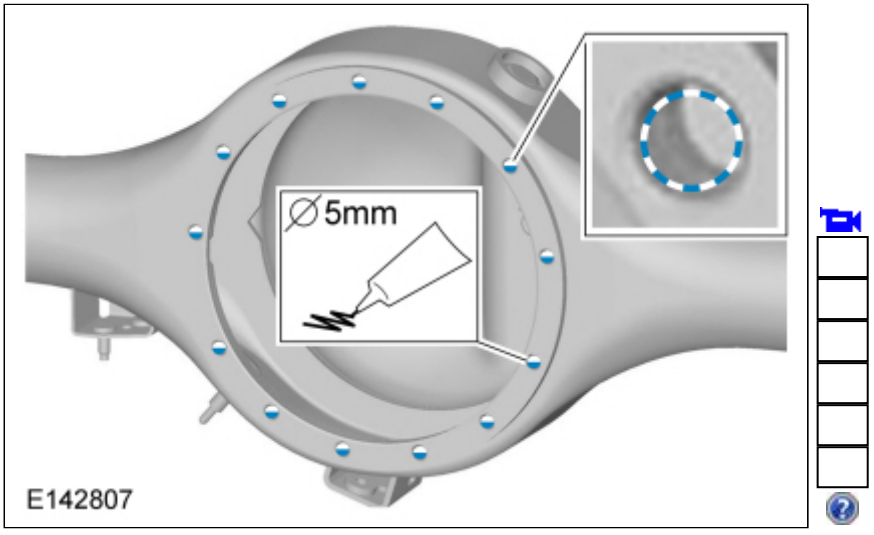
Differential Carrier

Removal

NOTE: *Removal steps in this procedure may contain installation details.*

1. Drain the rear differential oil.
   Refer to: Differential Draining and Filling (205-02 Rear Drive Axle/Differential, General Procedures).
2. **NOTE:** *The driveshaft flange fits tightly on the pinion flange pilot. Never hammer on the driveshaft or any of its components to disconnect the driveshaft flange from the pinion flange or damage to the component may occur.*

   Refer to: Rear Driveshaft (205-01 Driveshaft, Removal and Installation).
3. Refer to: Rear Halfshaft (205-05 Rear Drive Halfshafts, Removal and Installation).
4. *Torque*: 65 Nm



Installation

1. **NOTICE: Clean away the old sealant before applying the new sealant.**

   NOTICE: Install the differential carrier 10 min. after applying sealant.

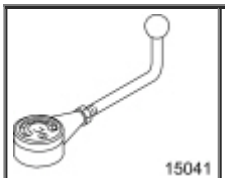
   NOTICE: Allow the sealant to set at least 30 min. after installation before filling the differential with the specified oil.

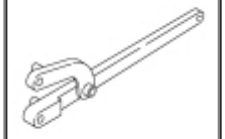
   Material: WSS-M4G323-A8 (Sealant)

2. **NOTICE: Clean away the old sealant before applying the new sealant.**

   Material: WSS-M4G323-A8 (Sealant)

3. To install, reverse the removal procedure.





4. Fill the rear differential oil.
   Refer to: Differential Draining and Filling (205-02 Rear Drive Axle/Differential, General Procedures).

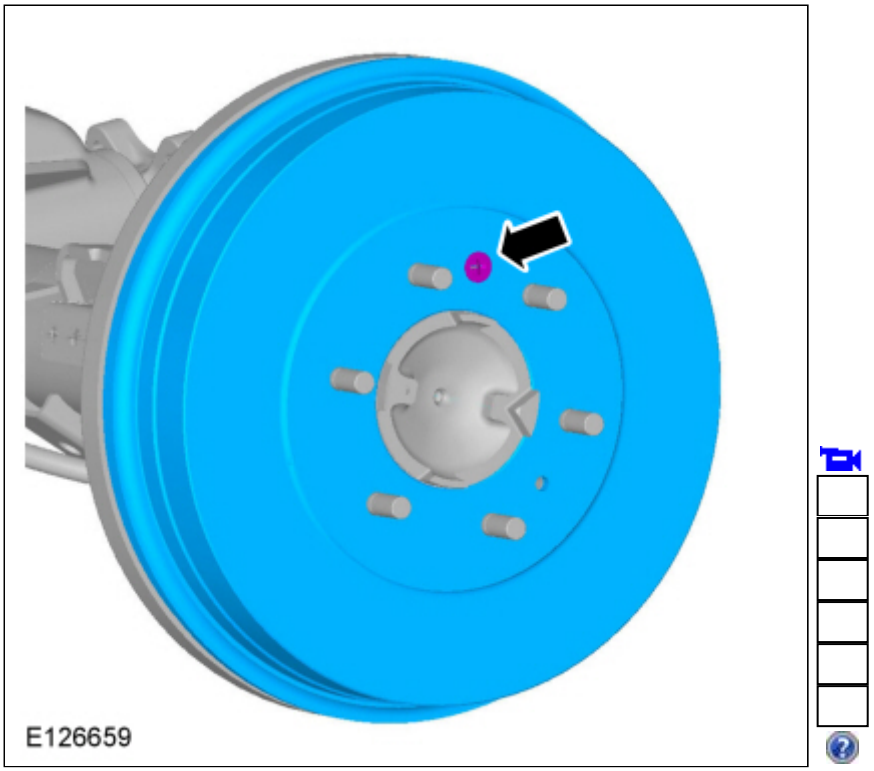
Drive Pinion Seal

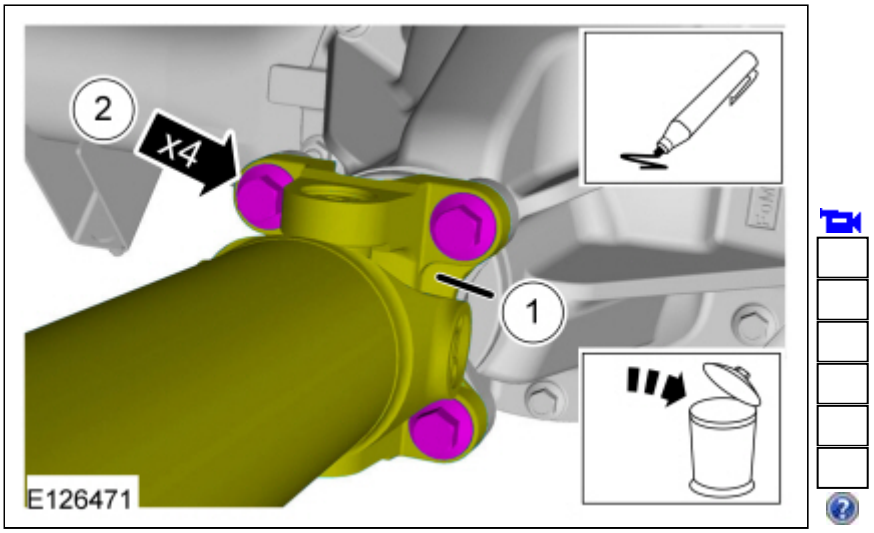


Base Part Number: 3N134

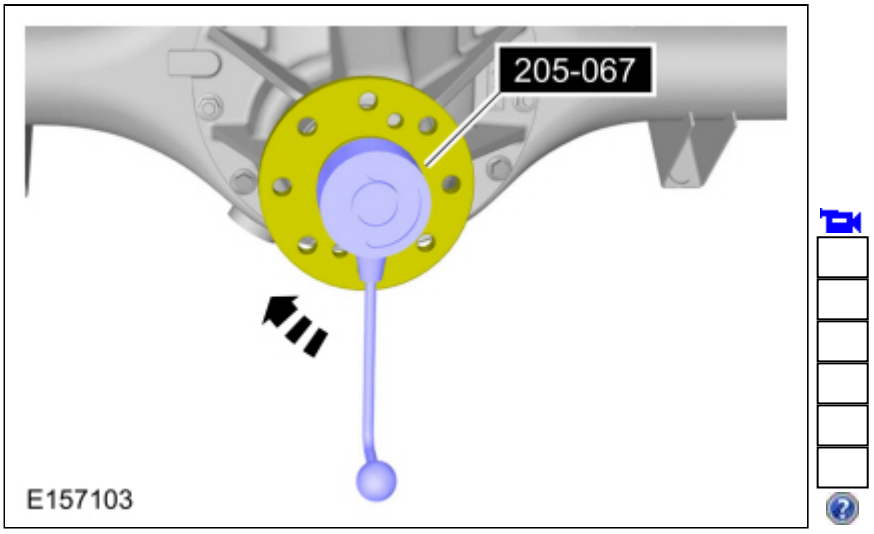
Special Tool(s) / General Equipment

 15041	205-067 Preload Gauge
 15030A	205-072 Universal Flange Holding Wrench
 E163724	205-1002 Installer, Drive Pinion Seal
Flat Headed Screw Driver	
Two Leg Puller	

Removal



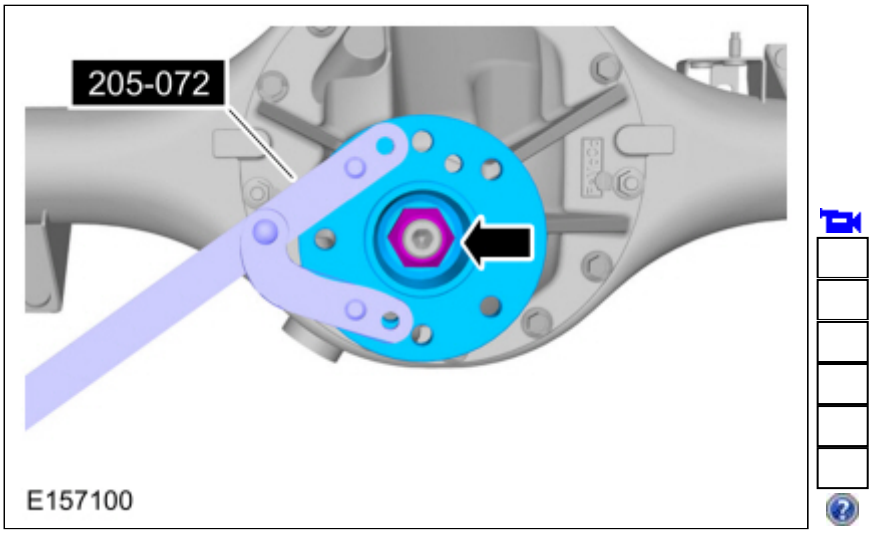
1. Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).
2. **NOTE:** *The brake drums must be removed to prevent drag during drive pinion bearing preload measurement.*



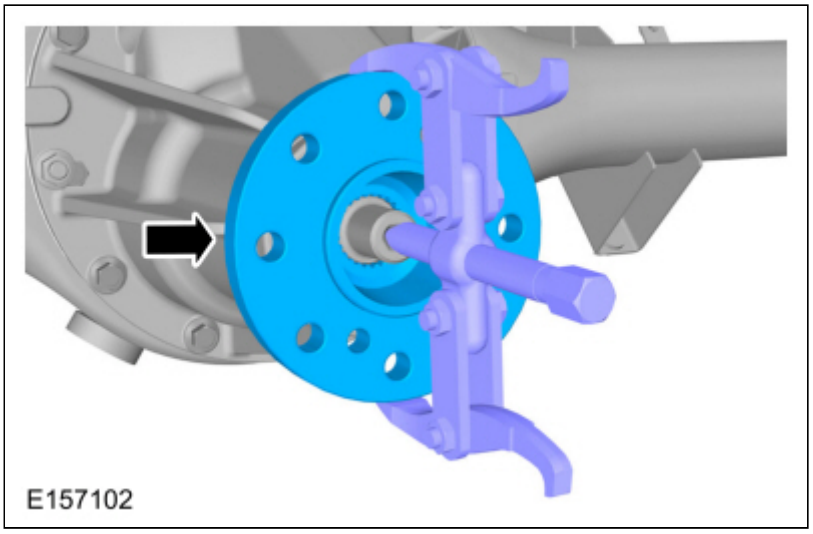
3. **NOTE:** *Make sure that new bolts are installed.*

NOTE: *Make sure to note the position of the driveshaft in relation to the companion flange prior to removal.*

NOTE: *Note the position of the component before removal.*



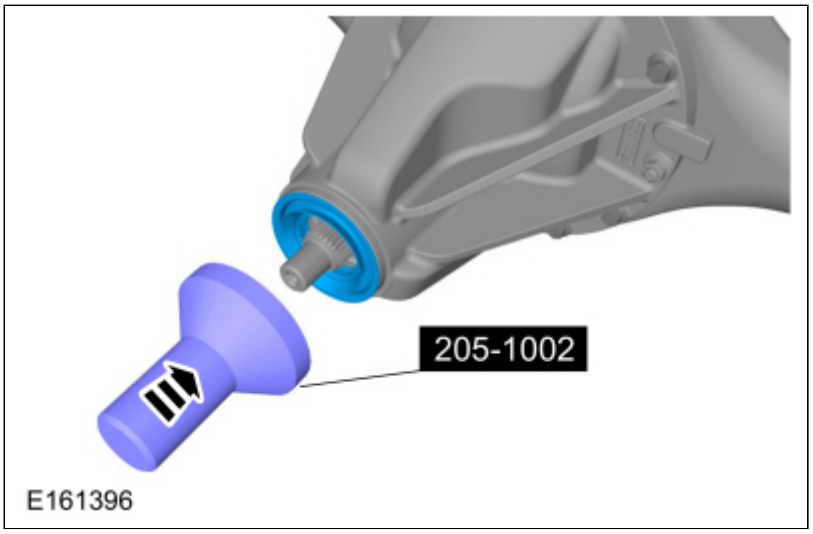
4. Turn the drive pinion smoothly with the preload gauge and note the value.
   Use Special Service Tool: 205-067 Preload Gauge.



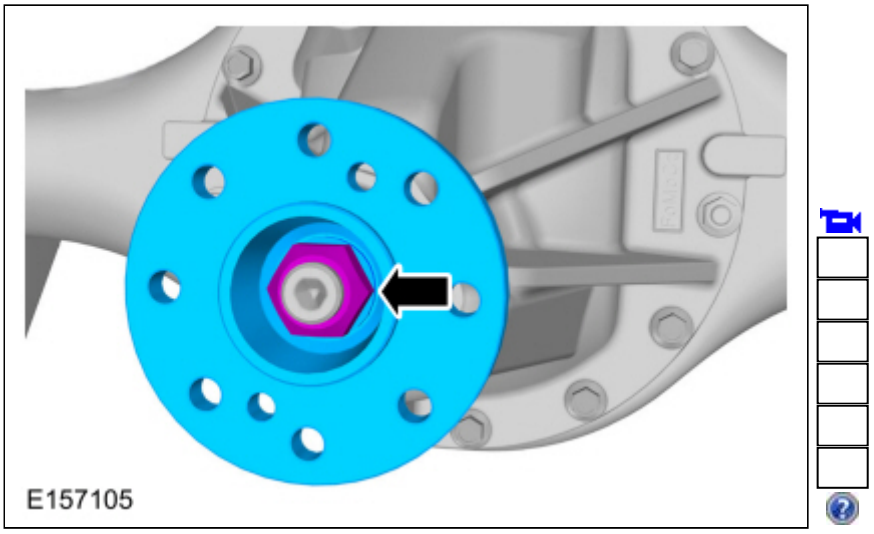
5. **NOTE:** *Discard the nut*

   Use Special Service Tool: 205-072 Universal Flange Holding Wrench.

6. Use the General Equipment: Two Leg Puller



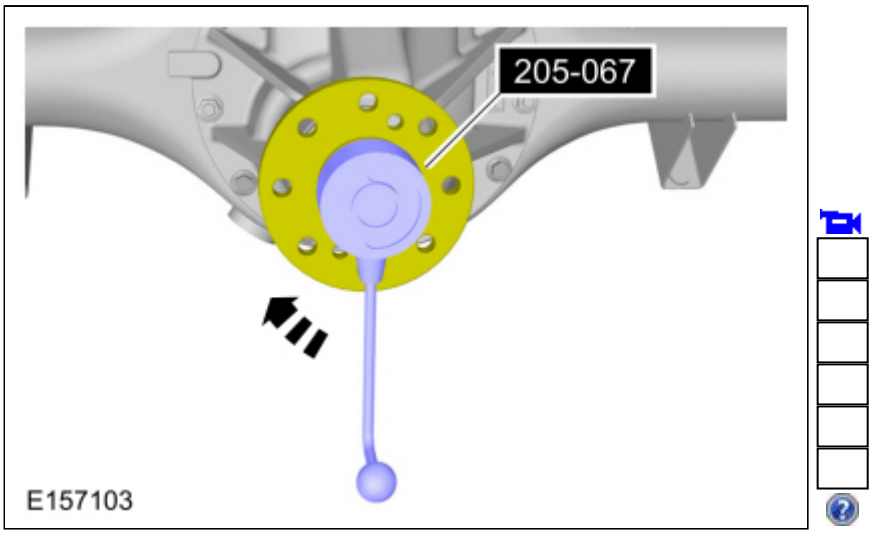
7. Use the General Equipment: Flat Headed Screw Driver



Installation

1. **NOTE:** *Make sure that a new component is installed.*

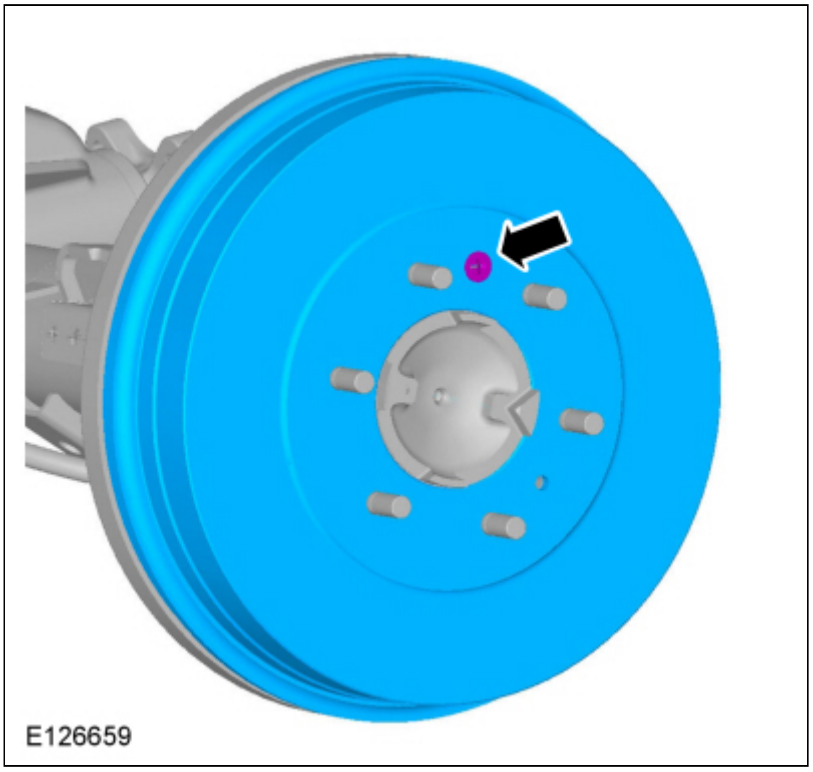
   Use Special Service Tool: 205-1002 Installer, Drive Pinion Seal.



2. *Torque*: 300 Nm

3. **NOTICE: If the specified torque is exceeded a new drive pinion flange collapsible spacer and a new drive pinion flange locknut must be installed.**

   Using the special tool, measure the torque to rotate. Tighten the drive pinion nut until the previously determined torque plus 0.3 - 1.0 Nm value is reached.
   Use Special Service Tool: 205-067 Preload Gauge.
   Torque: 650 Nm

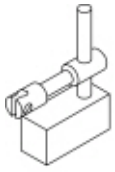


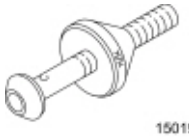
4. **NOTICE: Make sure that the installation marks are aligned.**

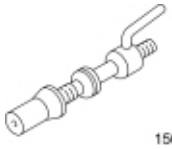
   NOTE: *Make sure that new bolts are installed.*

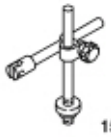
   Torque: 110 Nm

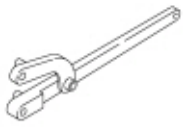
5.

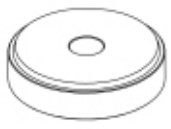


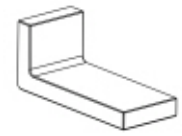


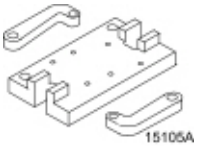


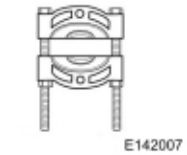


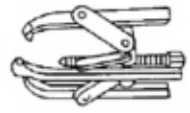












6. Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).

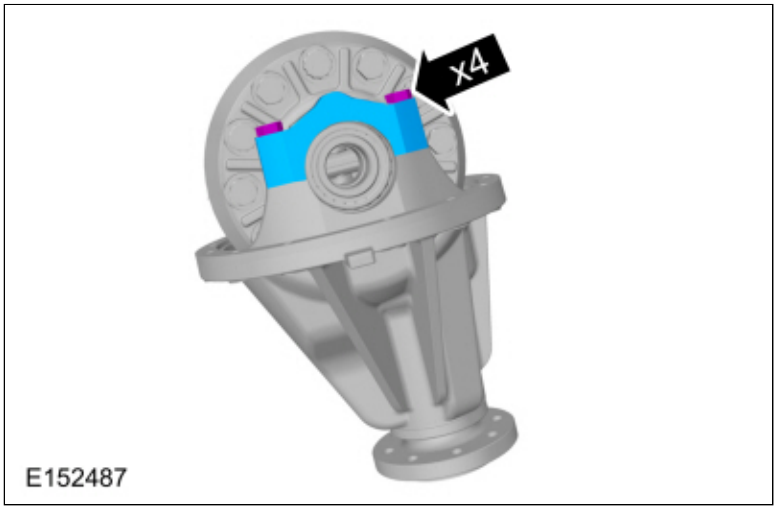
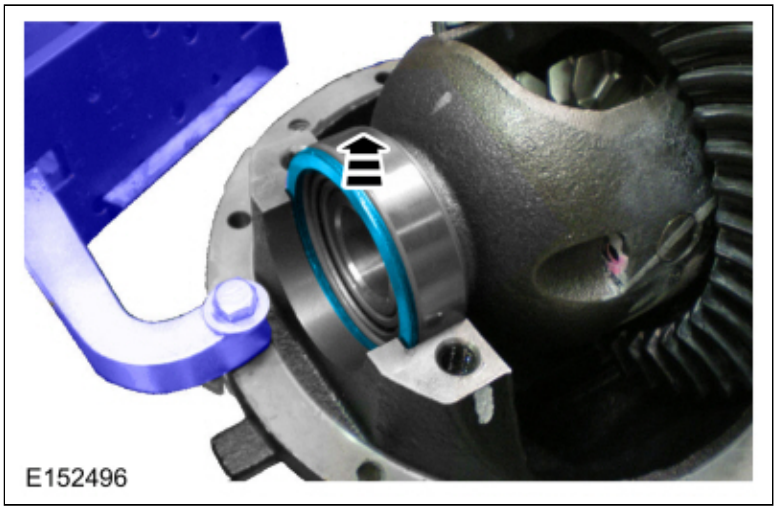
DISASSEMBLY

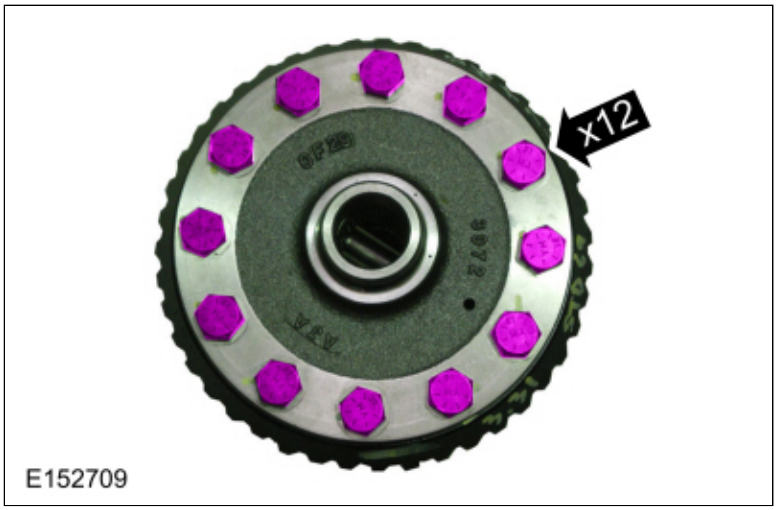
WARNING: The engine stand is equipped with a self-lock mechanism, however, if the rear differential is tilted, the self-lock mechanism could become inoperative. If the rear differential unexpectedly rotates, it could cause injury, therefore do not maintain the rear differential tilted. When turning the rear differential, grasp the rotation handle firmly.



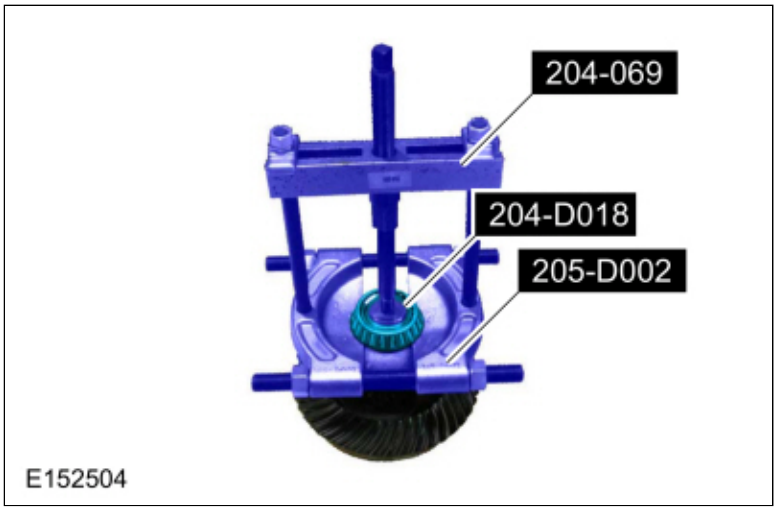
1. Refer to: Differential Carrier (205-02 Rear Drive Axle/Differential, Removal and Installation).
2. Use Special Service Tool: 205-329 Mounting Bracket, Engine/Differential.



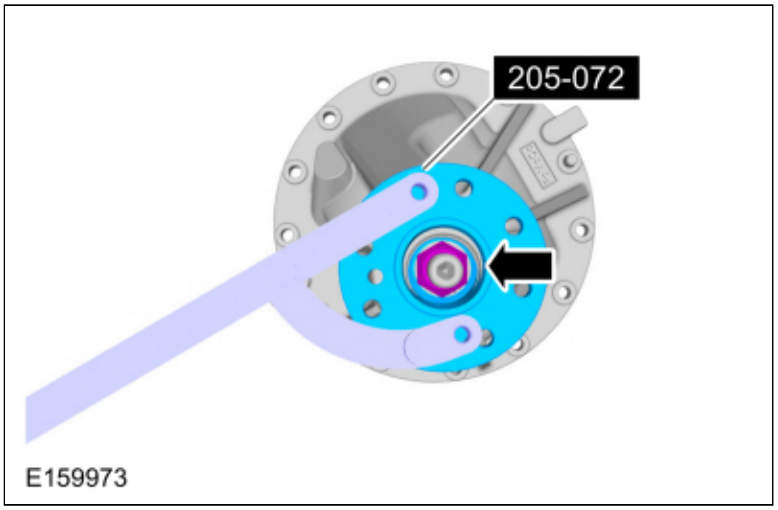
3. **NOTE:** *Place a mark on one of the bearing caps to ensure assembly to the same position.*



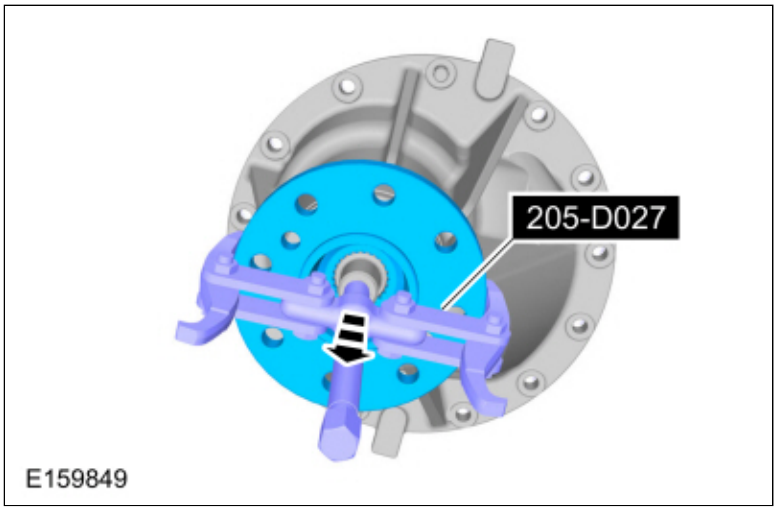
4.



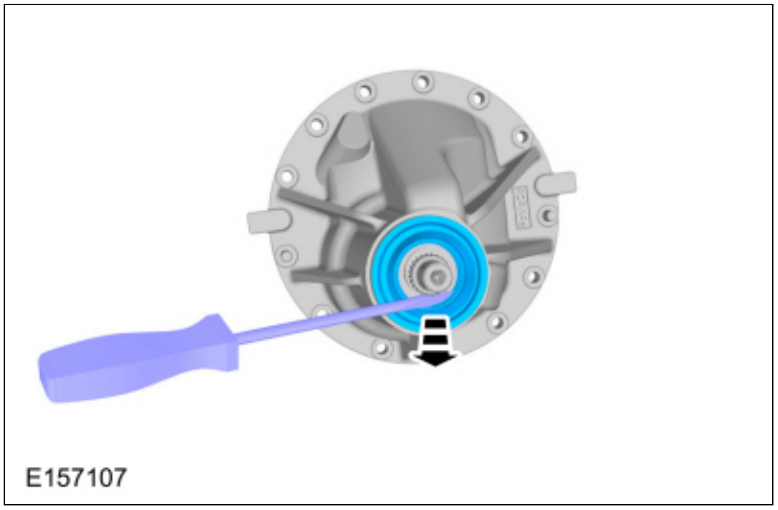
5. **NOTE:** *Make sure that the component is installed to the position noted before removal.*



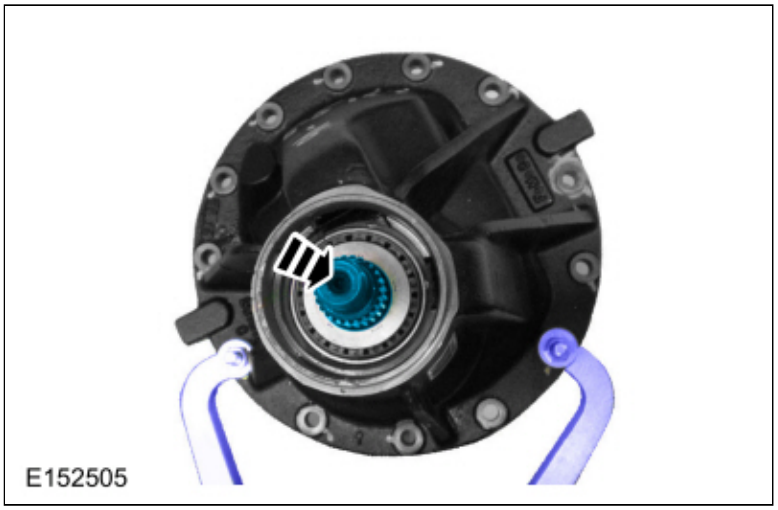
6.



7. Use Special Service Tool: 204-069 (T81P-1104-C) Remover/Installer, Front Wheel Hub. , 205-D018 Adapter. , 205-D002 Bearing Splitter.

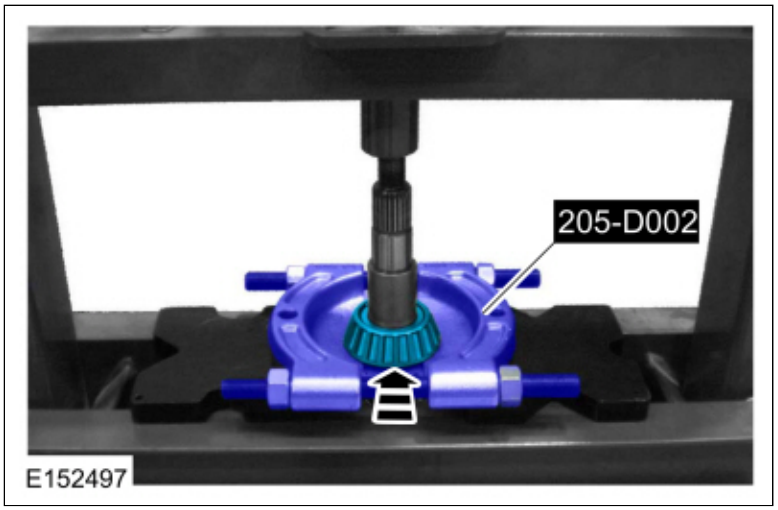


8. Use Special Service Tool: 205-072 Universal Flange Holding Wrench.

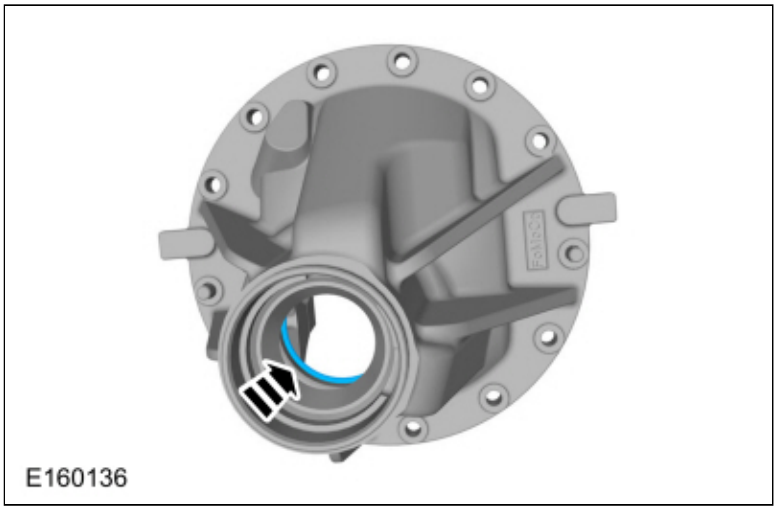


9. Use Special Service Tool: 205-D027 (D80L-1013-A) 2 or 3 Jaw Puller.

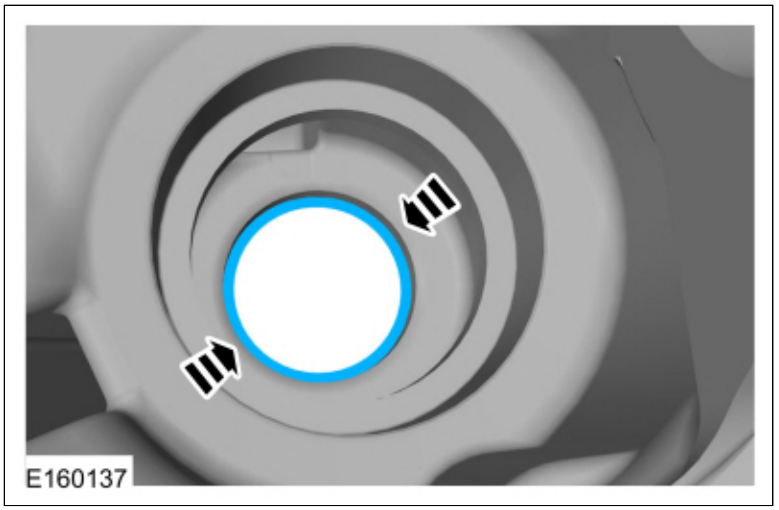
10.



11. Use the General Equipment: Copper Hammer

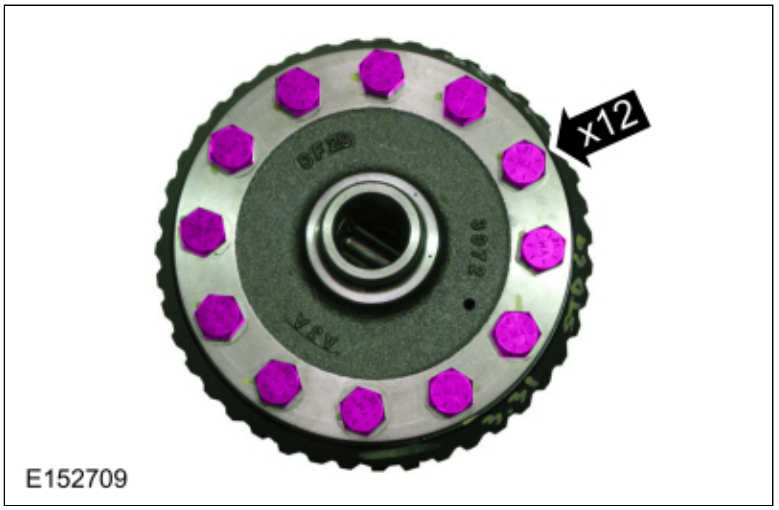


12.

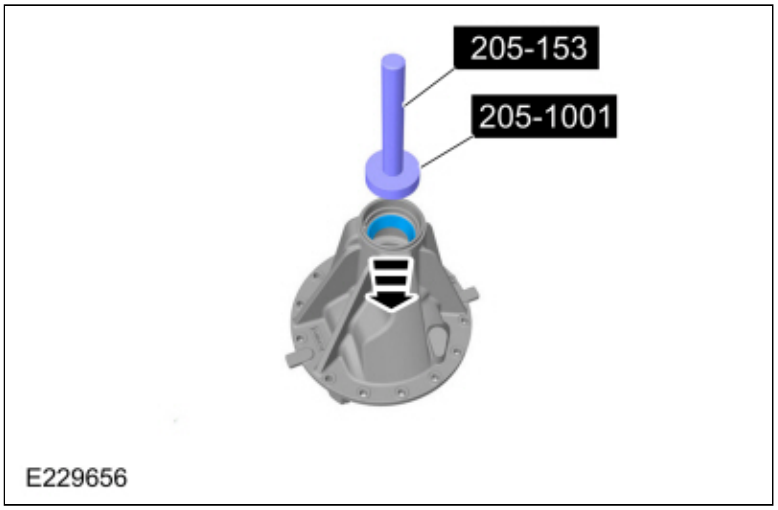


13. Use Special Service Tool: 205-D002 Bearing Splitter.
Use the General Equipment: Hydraulic Press

14.

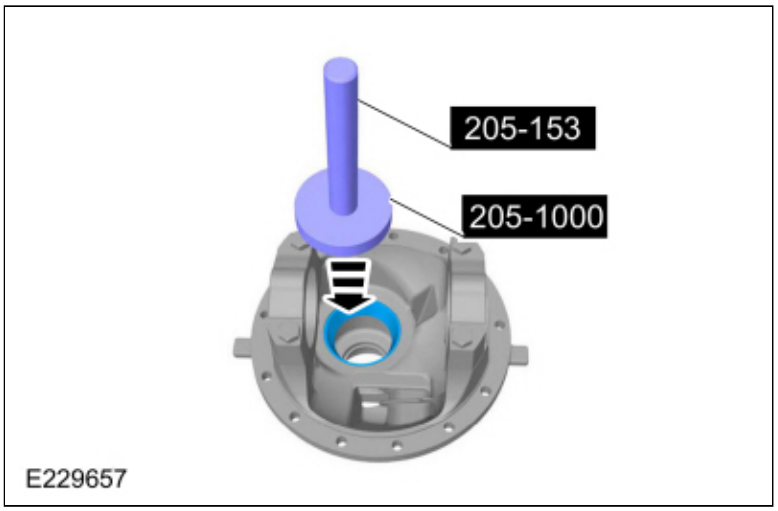


15.



ASSEMBLY

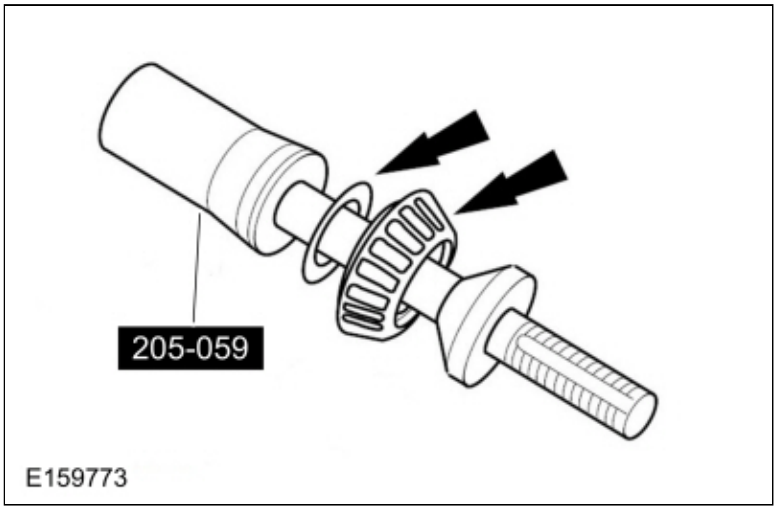
1. *Torque*: 255 Nm



2. **NOTE:** *New bearings should be used when diff case is changed.*

3. Install Special Service Tool: 205-153 (T80T-4000-W) Handle.
   Use Special Service Tool: 205-1001 Installer, Rear Differential Bearing.

4. Install Special Service Tool: 205-153 (T80T-4000-W) Handle.
   Use Special Service Tool: 205-1000 Installer, Rear Differential Bearing.

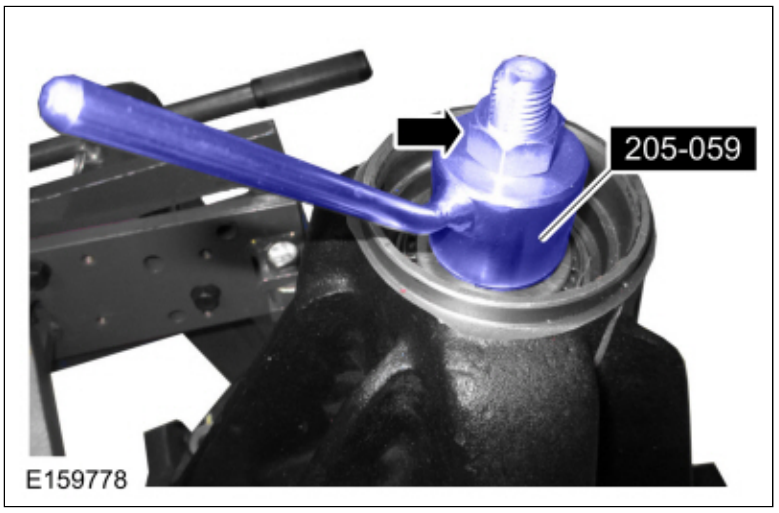


5. **NOTICE: Make sure that the drive pinion shim is centralized on the special tool.**

   NOTE: *Lubricate the drive pinion bearing cones with rear axle oil.*

   NOTE: *The conical nut of the special has a left-hand thread.*

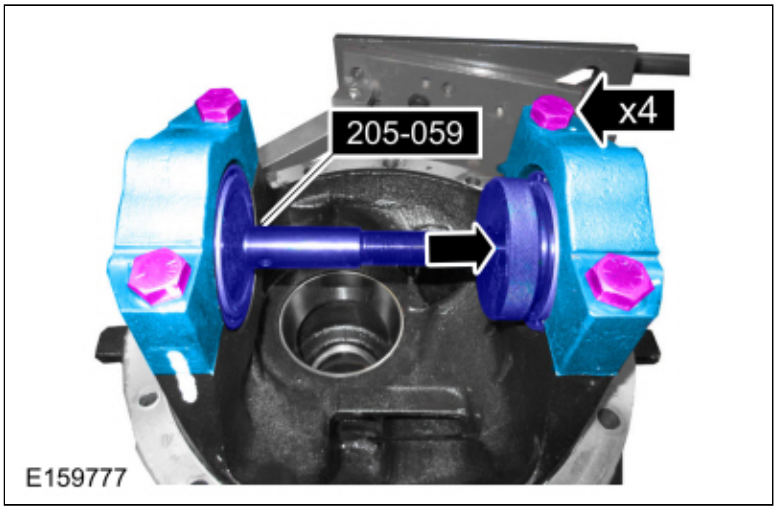
   Assemble the special tool with the old drive pinion shim and the drive pinion rear bearing cone.
   Use Special Service Tool: 205-059 Gauge, Master Pinion.



6. **NOTE:** *Lubricate the drive pinion bearing cones with rear axle oil.*

   Assemble the special tools with the drive pinion front bearing cone.
   Use Special Service Tool: 205-059 Gauge, Master Pinion.

7. Tighten the retaining nut and check bearings for smooth rotation.
   Use Special Service Tool: 205-059 Gauge, Master Pinion.
   Torque: 30 Nm

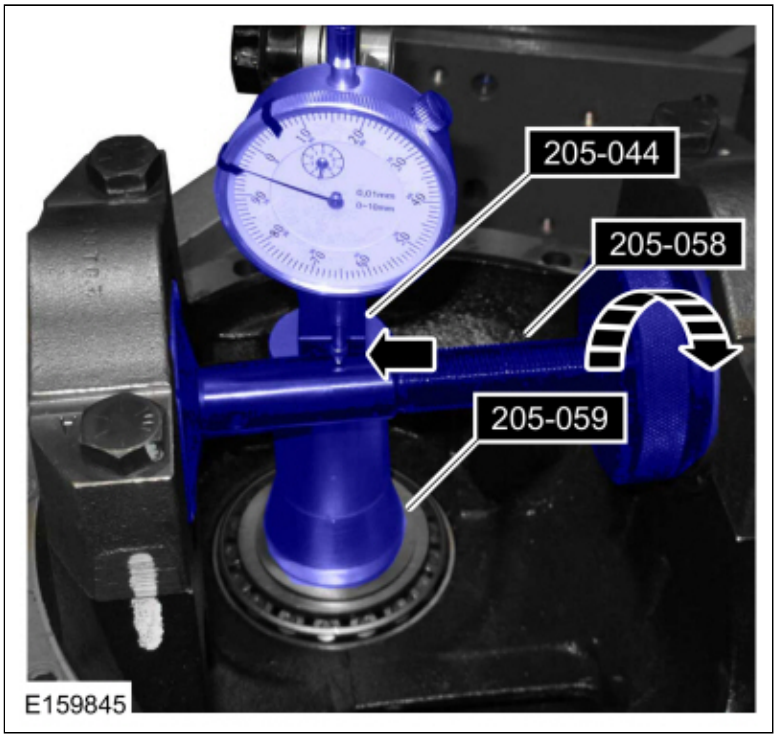


8. **NOTICE: Make sure that the bearing caps are installed to their original positions.**

   NOTE: *Lubricate the differential bearing cones with rear axle oil.*

   NOTE: *The adjusting nuts must be tight against the differential bearing cups.*

   Install the special tool together with the differential bearings and the adjusting nuts.
   Use Special Service Tool: 205-059 Gauge, Master Pinion.
   Torque: 88 Nm

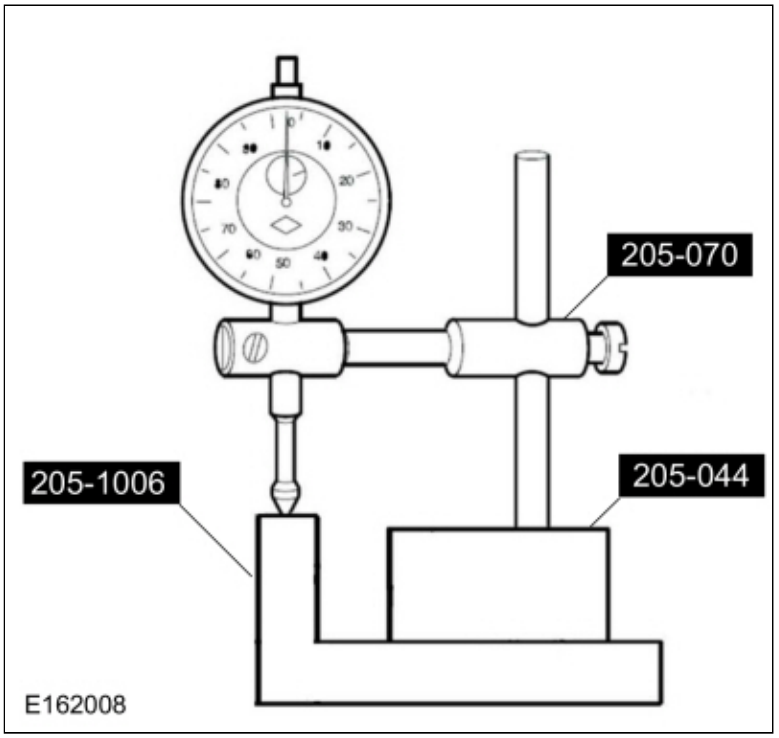


9. **NOTE:** *Make sure that the special tool can still be turned by hand.*

   Using a suitable drift, tighten the adjusting nut of the special tool.
   Use Special Service Tool: 205-058 Adjustment Gauge, Drive Pinion.

10. **NOTE:** *The dial indicator gauge plunger must be on the center line of the special tool.*

    Using a suitable dial indicator gauge, determine the total deflection of the special tool as it is rotated.
    Use Special Service Tool: 205-059 Gauge, Master Pinion. , 205-044 Holding Fixture, Dial Indicator Gauge. , 205-058 Adjustment Gauge, Drive Pinion.



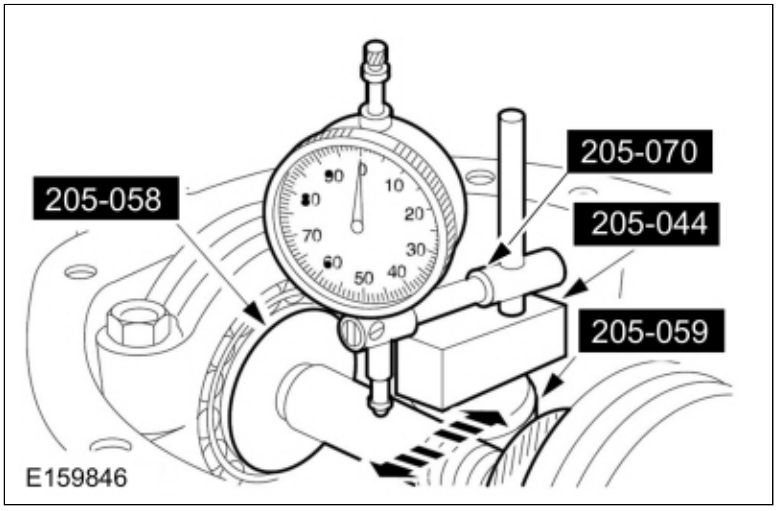
11. **NOTICE: When half of the total deflection is shown on the dial indicator gauge, do not turn the special tool further.**

    NOTE: *The dial indicator gauge plunger must be on the center line of the special tool (as shown).*

    - Turn the special tool until half of the total deflection is shown on the dial indicator gauge.

12. **NOTICE: Make sure that the dial indicator settings are not altered while transfering the dial indicator to the master pinion gauge.**

    Using the special tools, zero the dial indicator gauge on the step gauge.
    Use Special Service Tool: 205-1006 Gauge, Drive Pinion Height. , 205-044 Holding Fixture, Dial Indicator Gauge. , 205-070 Holding Fixture, Dial Indicator Gauge.



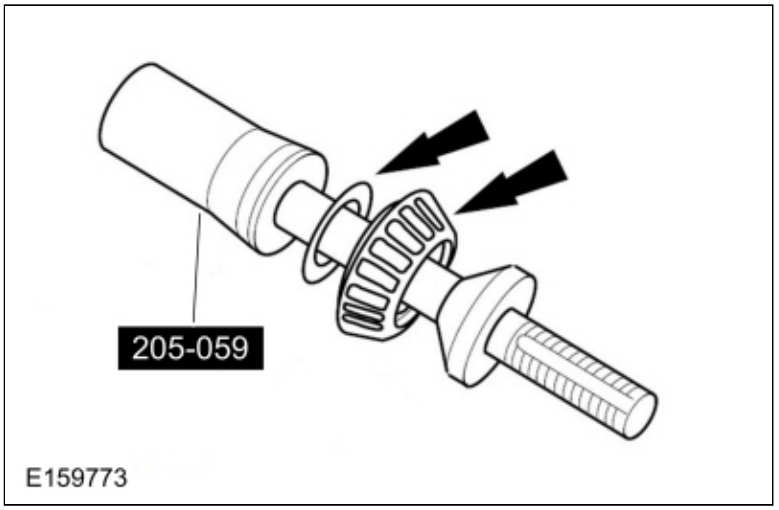
13. **NOTE:** *Verify the measurement three times.*

    NOTE: *The dial indicator gauge plunger must be on the center line of the special tool (as shown).*

    - Calculate the required drive pinion shim thickness.
    - Slide the dial indicator gauge plunger slowly across the drive pinion adjustment gauge (as shown).

- Make a note of the measurement when the dial indicator gauge plunger is on the highest point of the drive pinion adjustment gauge and the dial indicator gauge pointer changes direction.
- If the measurement is positive, the dial indicator gauge reading must be added to the old shim thickness.
- If the measurement is negative, the dial indicator gauge reading must be subtracted from the old shim thickness.
  Use Special Service Tool: 205-059 Gauge, Master Pinion. , 205-044 Holding Fixture, Dial Indicator Gauge. , 205-058 Adjustment Gauge, Drive Pinion. , 205-070 Holding Fixture, Dial Indicator Gauge.

14. Select the appropiate shim from the pinion shim selection chart.



Pinion Shim Selection Chart

MM	INCH		MM	INCH

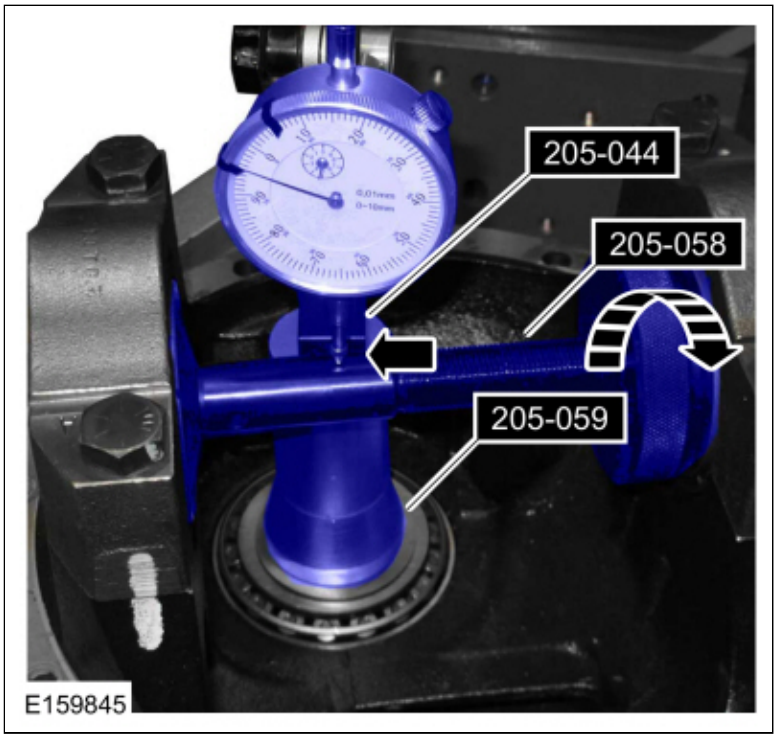
1.17	.046			

- Remove Special Service Tool: 205-059 Gauge, Master Pinion.

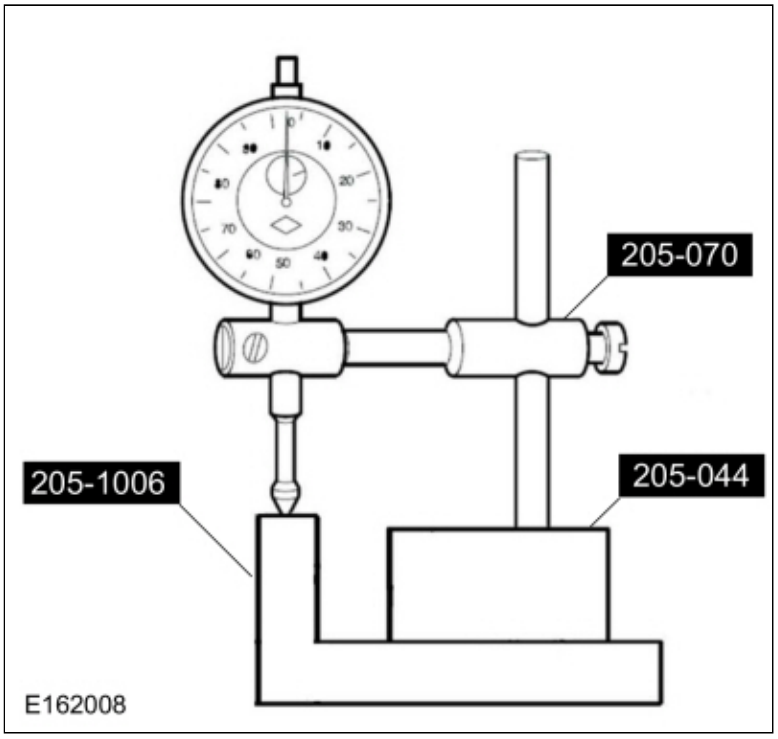


16. **NOTE:** *The conical nut of the special tool has a left-hand thread.*

- Re-assemble the special tool with the new drive pinion shim and the drive pinion rear bearing cone.
  Use Special Service Tool: 205-059 Gauge, Master Pinion.

17. **NOTE:** *The dial indicator gauge plunger must be on the center line of the special tool (as shown).*

    Using a suitable dial indicator gauge, determine the total deflection of the special tool as it is rotated.
    Use Special Service Tool: 205-059 Gauge, Master Pinion. , 205-044 Holding Fixture, Dial Indicator Gauge. , 205-058 Adjustment Gauge, Drive Pinion.



18. **NOTICE: When half of the total deflection is shown on the dial indicator gauge, do not turn the special tool further.**

    NOTE: *The dial indicator gauge plunger must be on the center line of the special tool (as shown).*

    - Turn the special tool until half of the total deflection is shown on the dial indicator gauge.

19. **NOTICE: Make sure that the dial indicator settings are not altered whilst transfering the dial indicator to the master pinion gauge.**

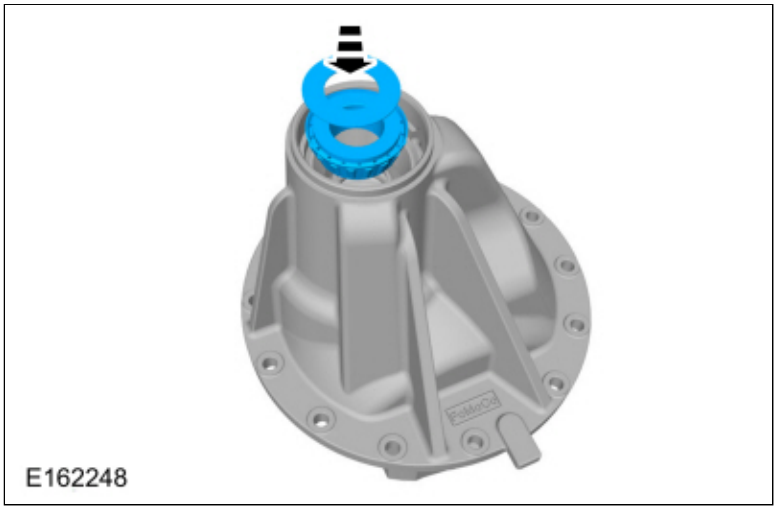
    Using the special tools, zero the dial indicator gauge on the step gauge.
    Use Special Service Tool: 205-1006 Gauge, Drive Pinion Height. , 205-044 Holding Fixture, Dial Indicator Gauge. , 205-070 Holding Fixture, Dial Indicator Gauge.

20. **NOTE:** *Verify the measurement three times.*

    NOTE: *The dial indicator gauge plunger must be on the center line of the special tool (as shown).*

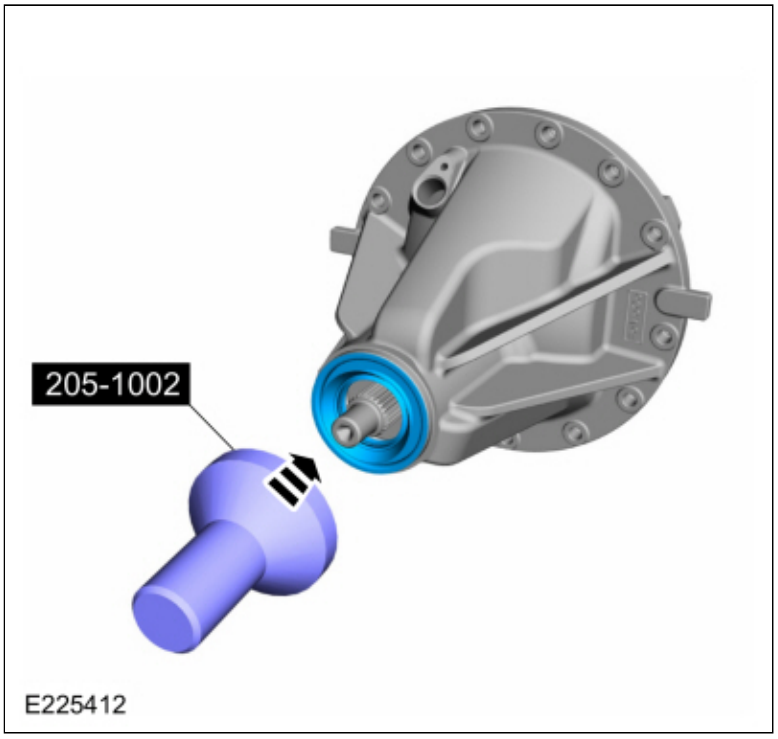
    - Slide the dial indicator gauge plunger slowly across the drive pinion adjustment gauge (as shown).
    - Make a note of the measurement when the dial indicator gauge plunger is on the highest point of the drive pinion adjustment gauge and the dial indicator gauge pointer changes direction.
    - If the selected shim is correct, the dial gauge reading should be zero. If the reading is not zero, repeat the shim selection proccess and adjust the shim thickness accordingly.
      Use Special Service Tool: 205-059 Gauge, Master Pinion. , 205-044 Holding Fixture, Dial Indicator Gauge. , 205-058 Adjustment Gauge, Drive Pinion. , 205-070 Holding Fixture, Dial Indicator Gauge.

    - Remove Special Service Tool: 205-044 Holding Fixture, Dial Indicator Gauge. , 205-070 Holding Fixture, Dial Indicator Gauge. , 205-059 Gauge, Master Pinion. , 205-058 Adjustment Gauge, Drive Pinion.

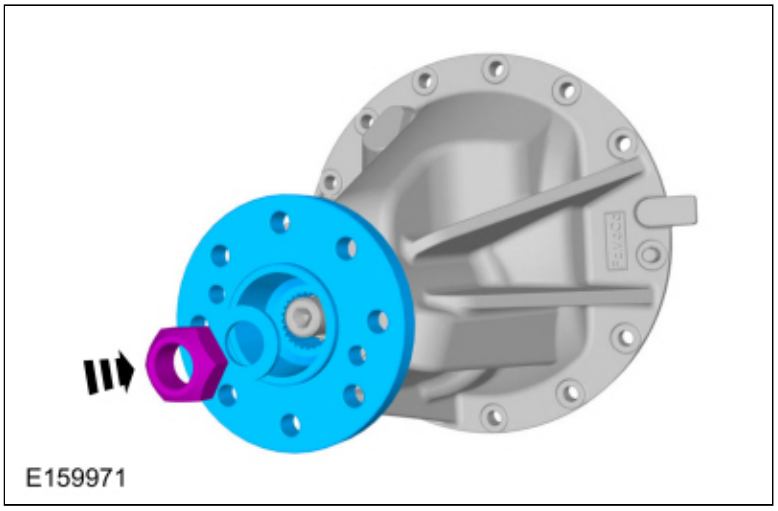


22. Install the pinion **bearing** and **shim**.
    Use the General Equipment: Hydraulic Press
    Use the General Equipment: Bearing Separator

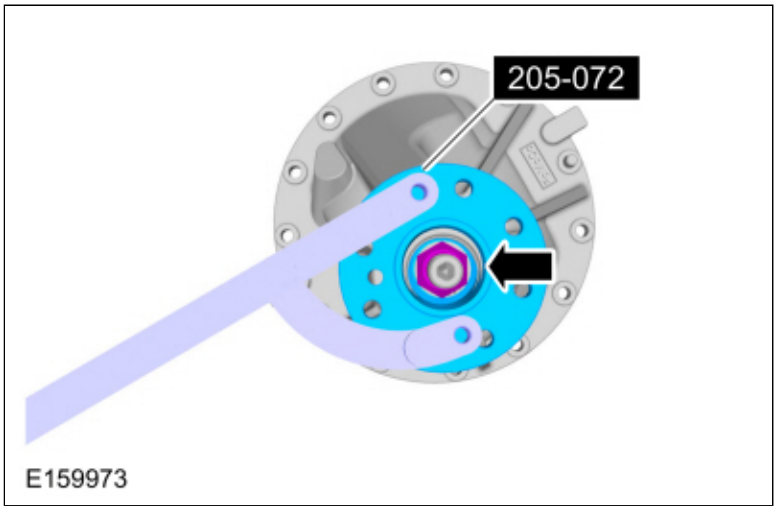
23.



24.

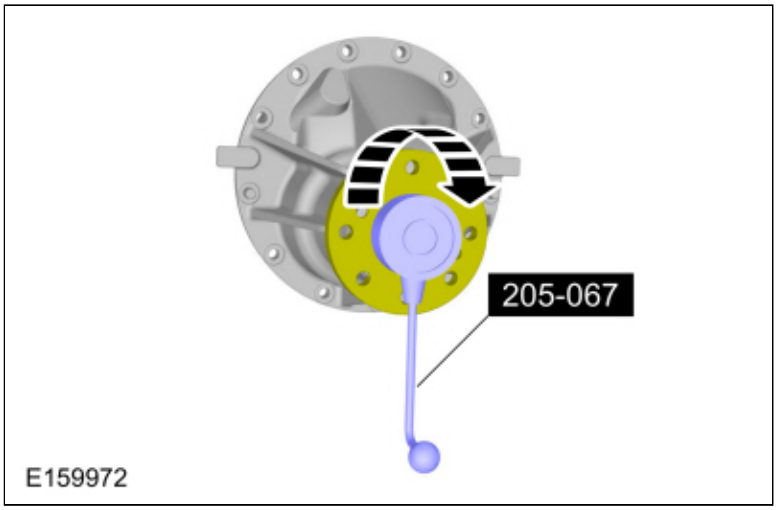


25. Apply differential oil to the lip of a new oil seal.

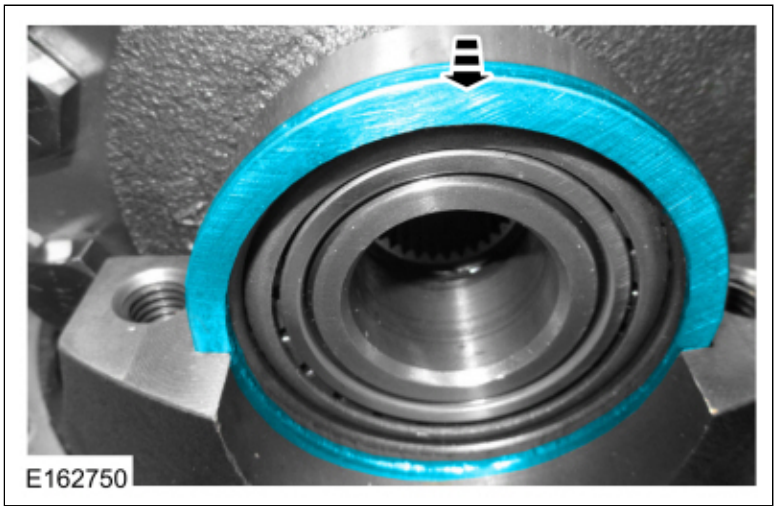


26. Use Special Service Tool: 205-1002 Installer, Drive Pinion Seal.

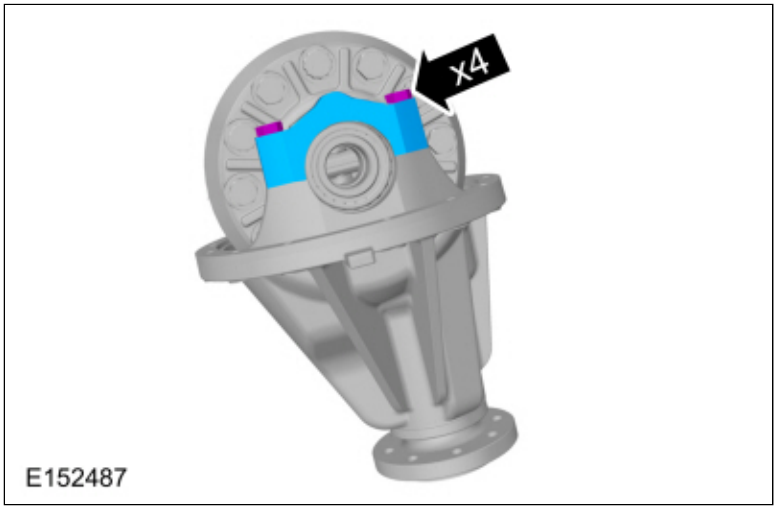
27. **NOTE:** *Only tighten the nut finger tight at this stage.*



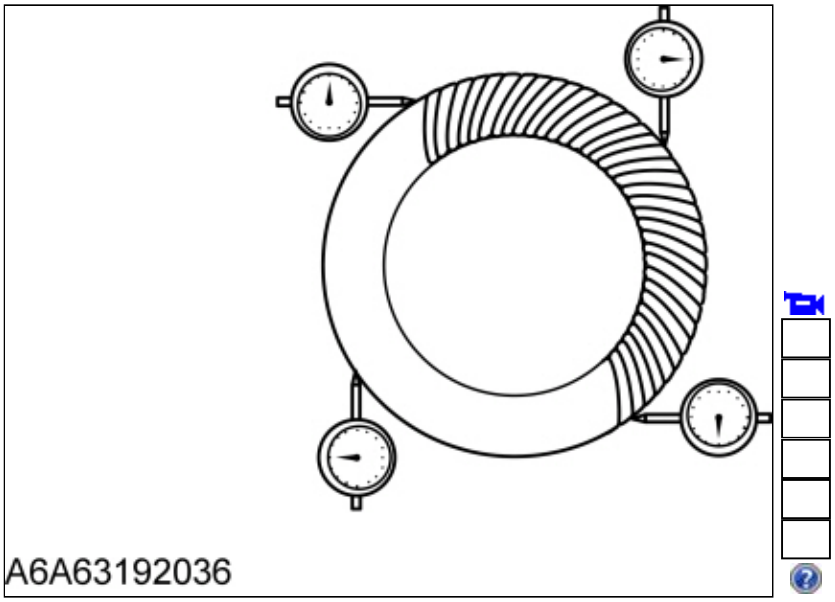
28. Use Special Service Tool: 205-072 Universal Flange Holding Wrench.
Torque: 300 Nm



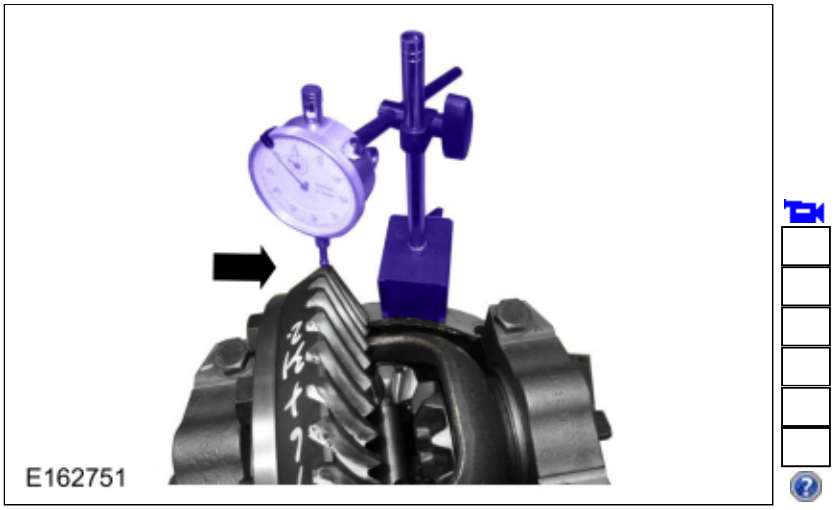
- Using the preload gauge, measure the torque to rotate. Tighten the drive pinion nut untill the torque to rotate measures 2-3 Nm.
- If the specified preload can’t be obtained within a pinion nut torque of 237 - 650 Nm, replace the collapsable



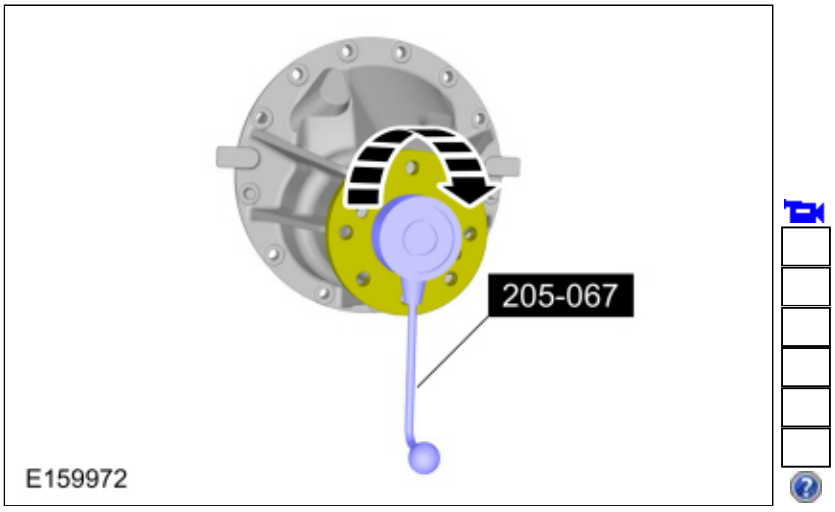
spacer and inspect again.
Use Special Service Tool: 205-067 Preload Gauge.



- Install the gear case component on the differential carrier.
- The original shims can be re-used if the ring and pinion is not replaced.
- If a new ring and pinion is fitted, measure the total thickness of the original shims, and split the thickness evenly between left and right.

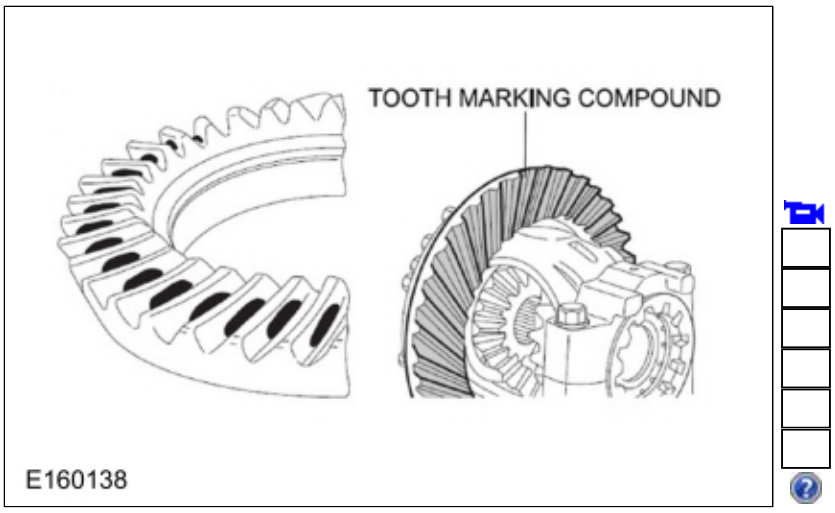


31. *Torque*: 110 Nm

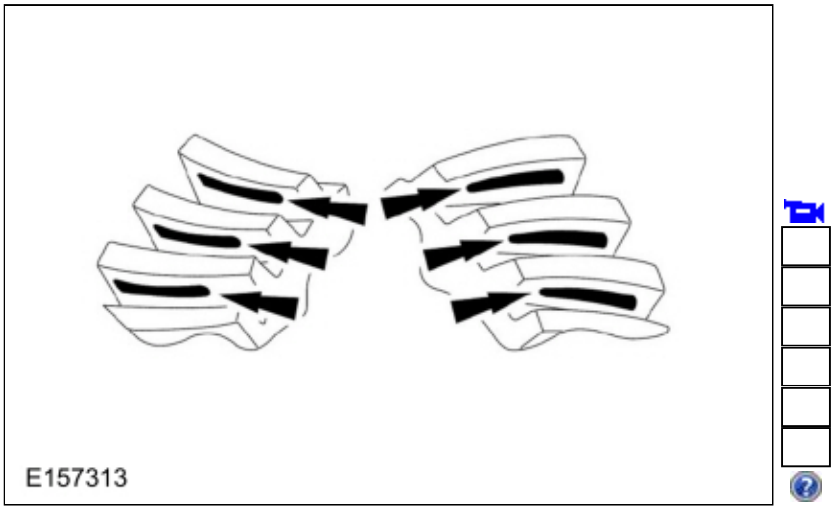


32. Mark the ring gear at four points at 90° intervals.

- Adjust the drive pinion, ring gear backlash and the side bearing preload as follows:
- Mount a dial indicator to the carrier so that the feeler comes in contact at a 90° angle with one of the ring gear teeth.
- Inspect the backlash at the three other marked points and make sure that the measurement is between 0.127 —0.203 mm {0.005—0.008 in}.

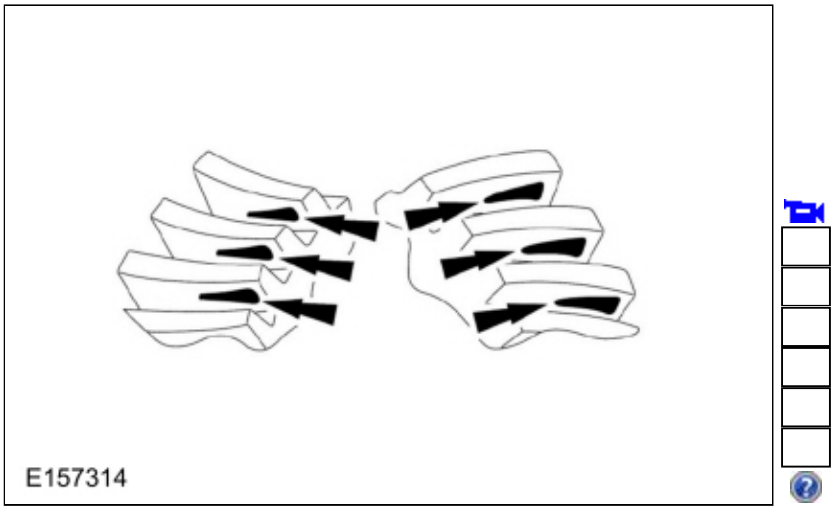


34. Using the preload gauge, measure the torque to rotate. The readings should not exceed 3.0 Nm. If the backlash is within specification but the rotating torque is high, the preload may be adjusted by removing an equal amount of shim thickness from both sides of the differential.
    Use Special Service Tool: 205-067 Preload Gauge.

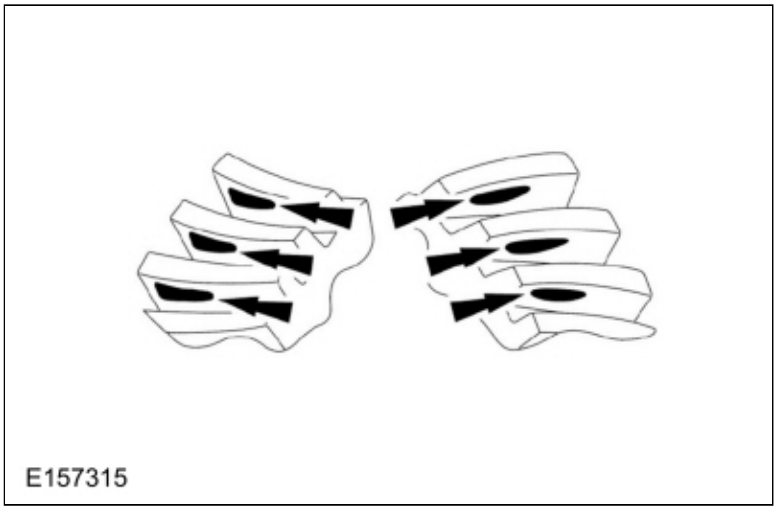


35. If backlash is not as specified, correct the backlash by adding and subtracting the required shim thickness from

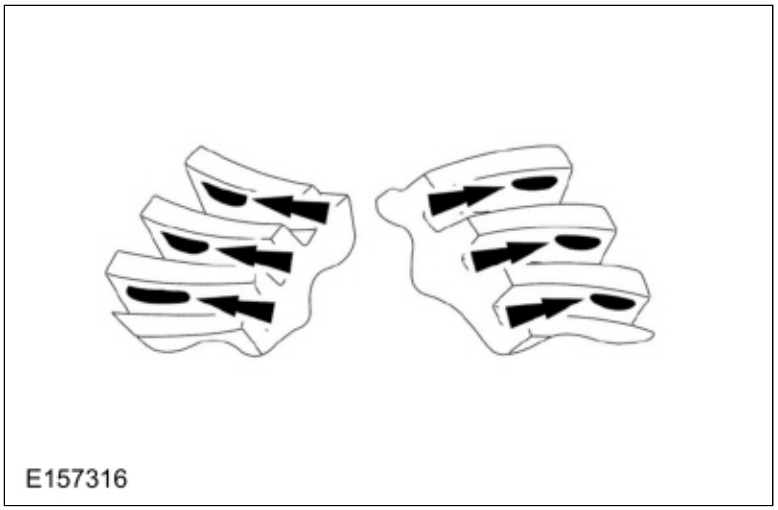
either left or right, keeping the total shim thickness the same.



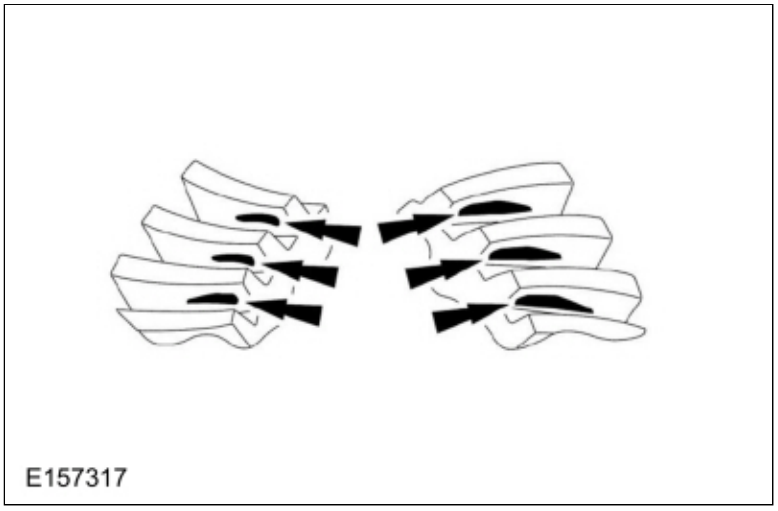
- The inspection and adjustment procedure is as follows:
- Coat both surfaces of 6—8 teeth of the ring gear uniformly with a tooth marking compound.
- While moving the ring gear back and forth by hand, rotate the drive pinion several times and inspect the tooth contact.
- If the tooth contact is good, wipe off the tooth marking compound.



37. Acceptable ring gear tooth patterns for all axles.



38. Correct backlash with a thinner pinion position shim.



39. Correct backlash with a thicker pinion position shim.

40. Correct pinion position shim that requires a decrease in backlash.

41. Correct pinion position shim that requires an increase in backlash.

- Select the appropriate shim from the differential bearing preload shim selection table.

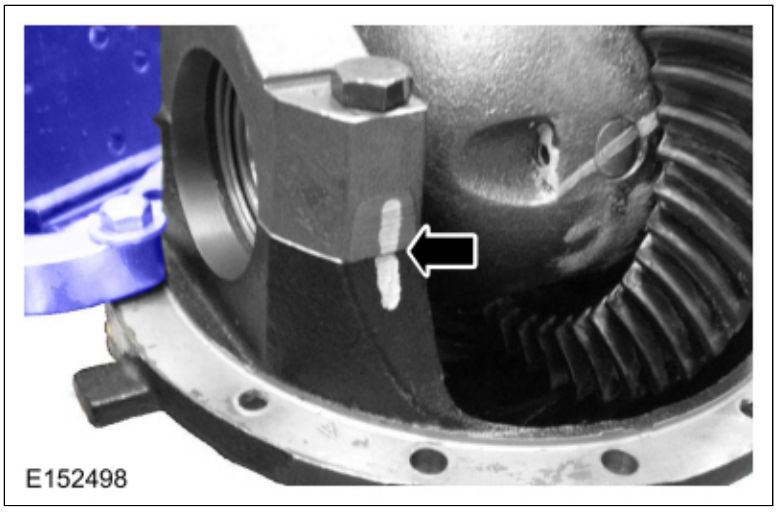
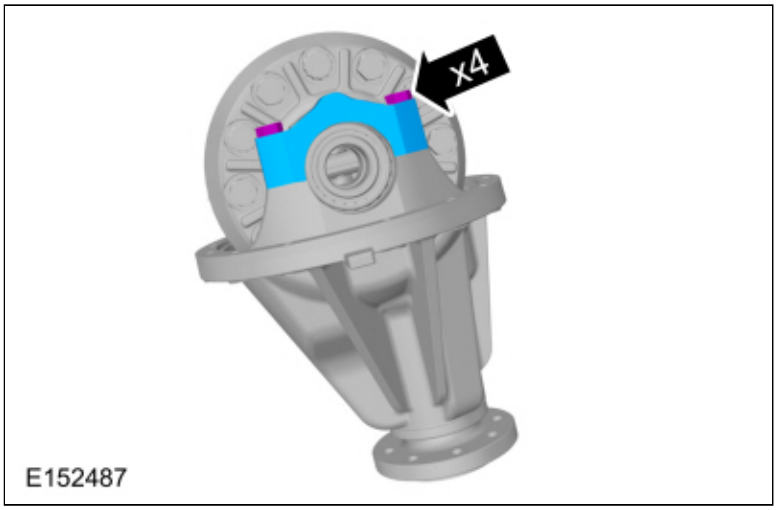
DISASSEMBLY

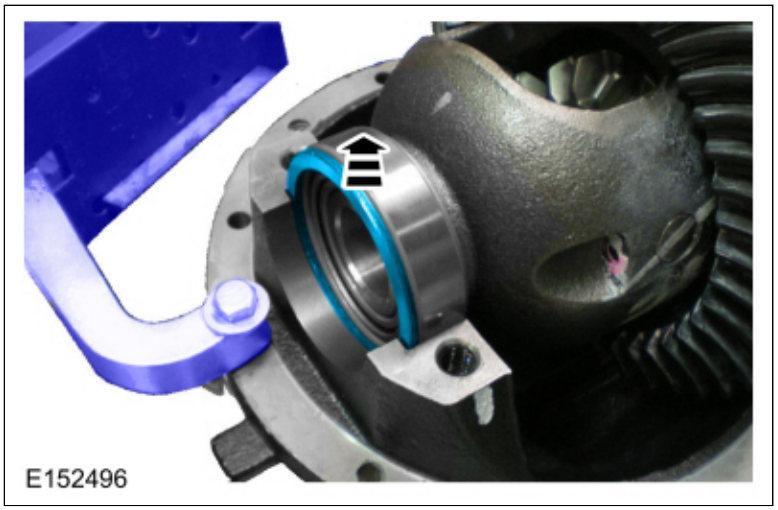
WARNING: The engine stand is equipped with a self-lock mechanism, however, if the rear differential is tilted, the self-lock mechanism could become inoperative. If the rear differential unexpectedly rotates, it could cause injury, therefore do not maintain the rear differential tilted. When turning the rear differential, grasp the rotation handle firmly.



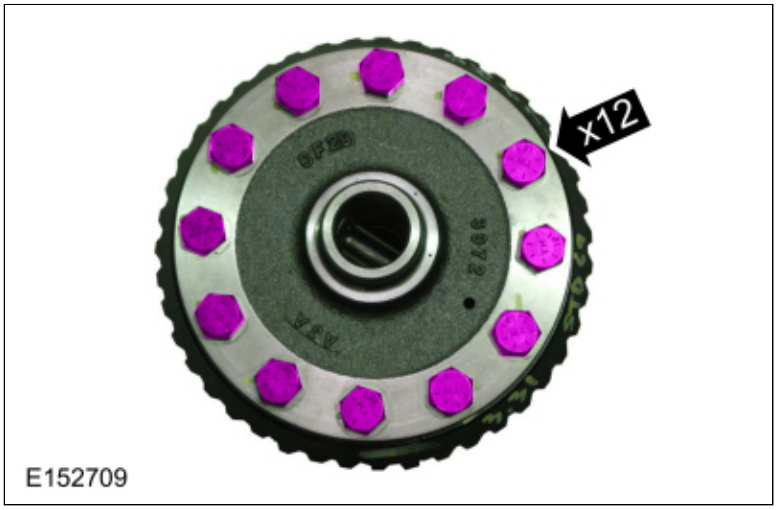
1. Refer to: Differential Carrier (205-02 Rear Drive Axle/Differential, Disassembly and Assembly).
2.



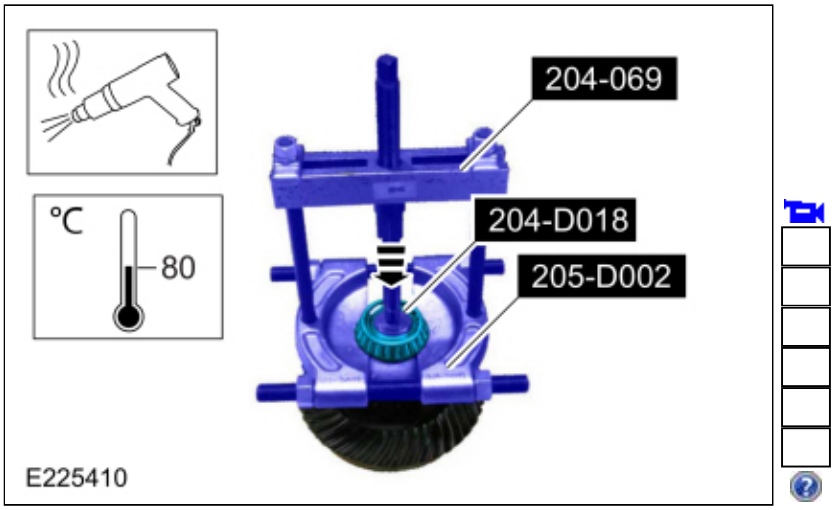
3. Use Special Service Tool: 205-329 Mounting Bracket, Engine/Differential.



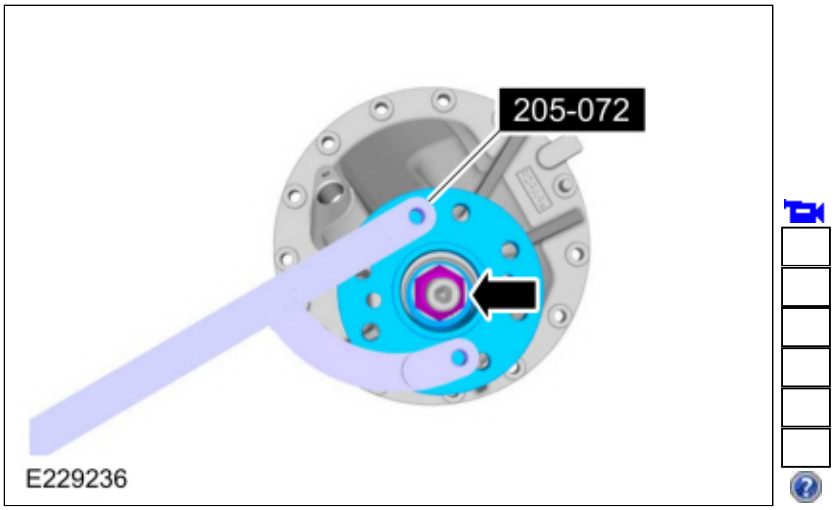
4. **NOTE:** *Place a mark on one of the bearing caps to ensure assembly to the same position.*



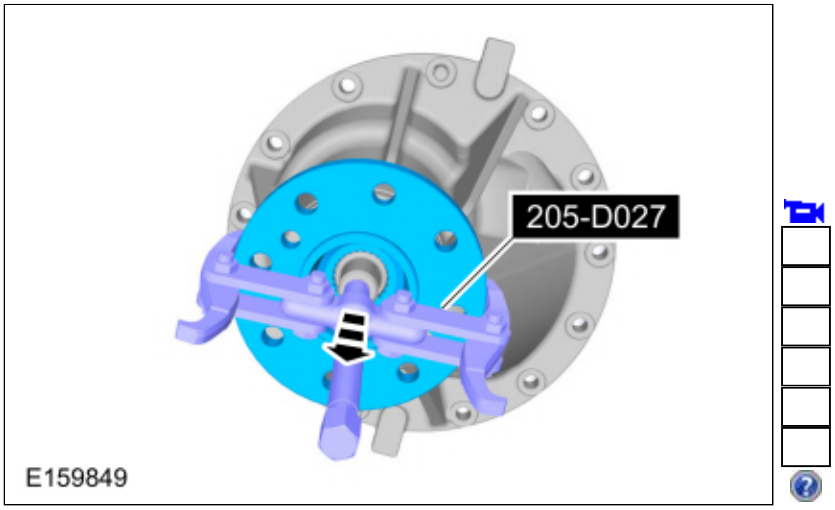
5.



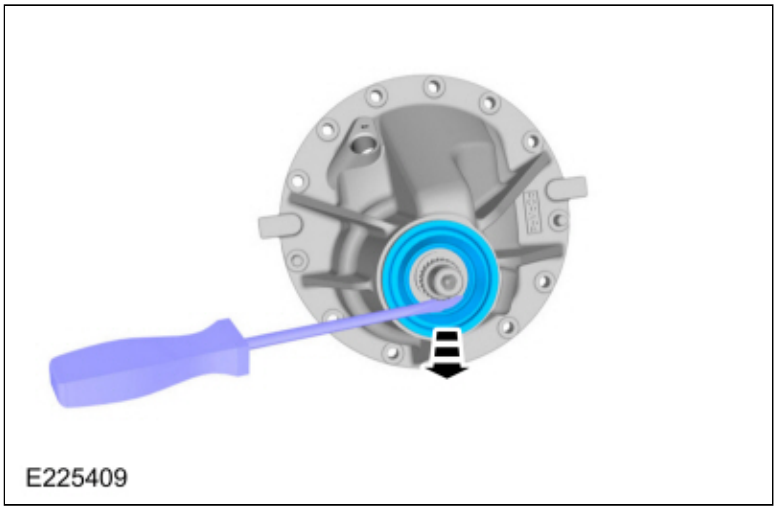
6. **NOTE:** *Take note of the position of the bearings and shims upon removal to ensure assembly to the same positions.*



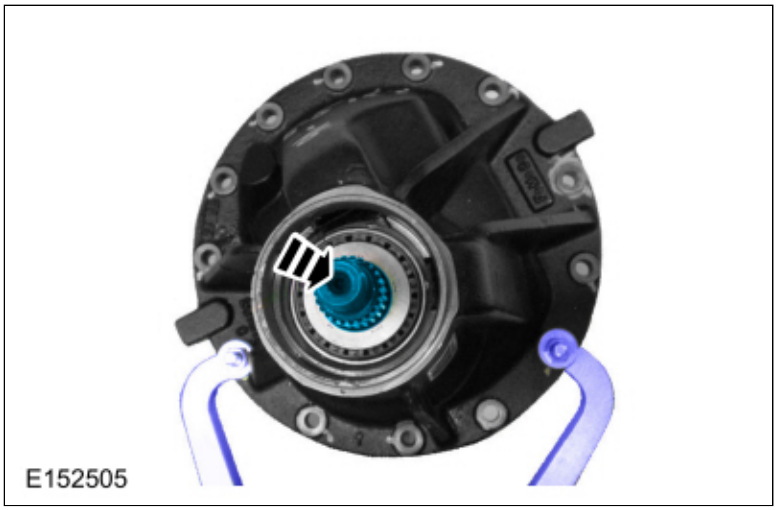
7.



8. Use Special Service Tool: 204-069 (T81P-1104-C) Remover/Installer, Front Wheel Hub. , 205-D018 Adapter. , 205-D002 Bearing Splitter.

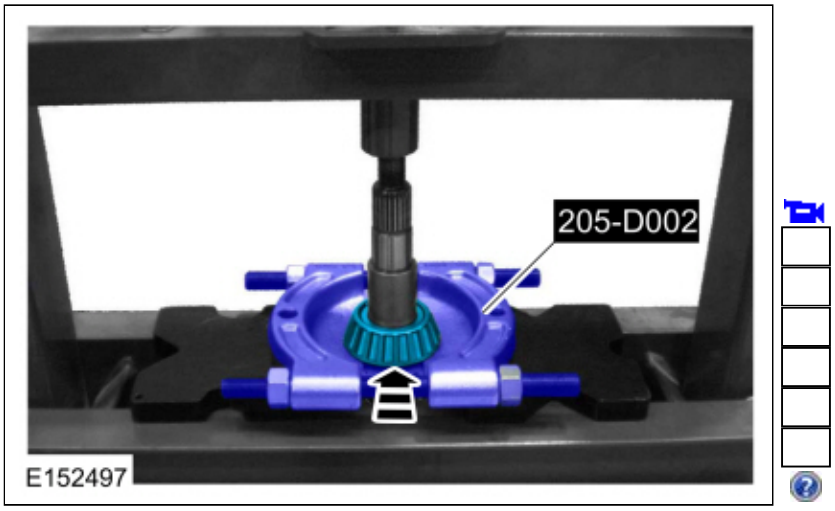


9. Use Special Service Tool: 205-072 Universal Flange Holding Wrench.

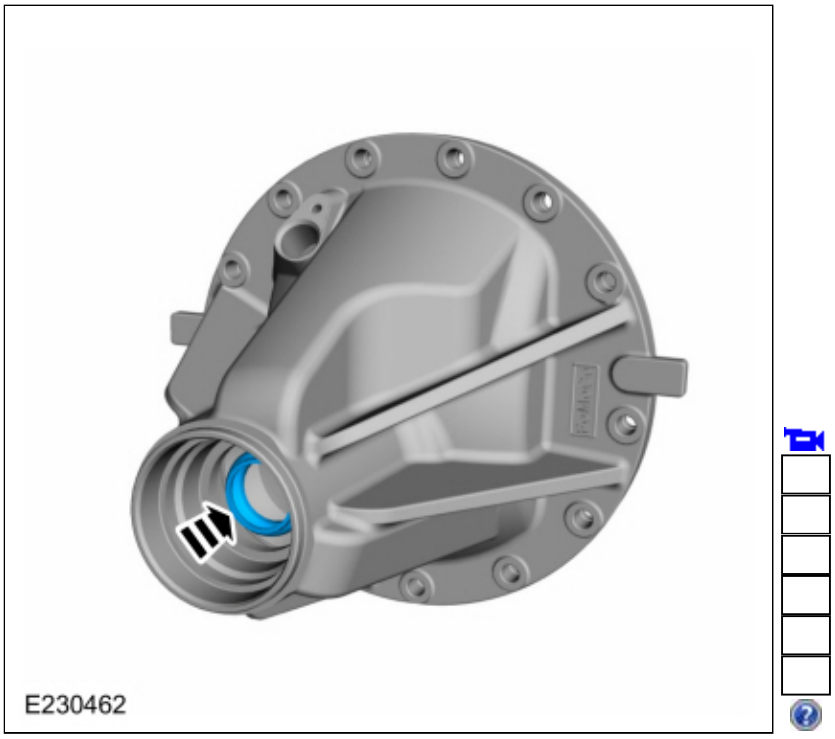


10. Use Special Service Tool: 205-D027 (D80L-1013-A) 2 or 3 Jaw Puller.

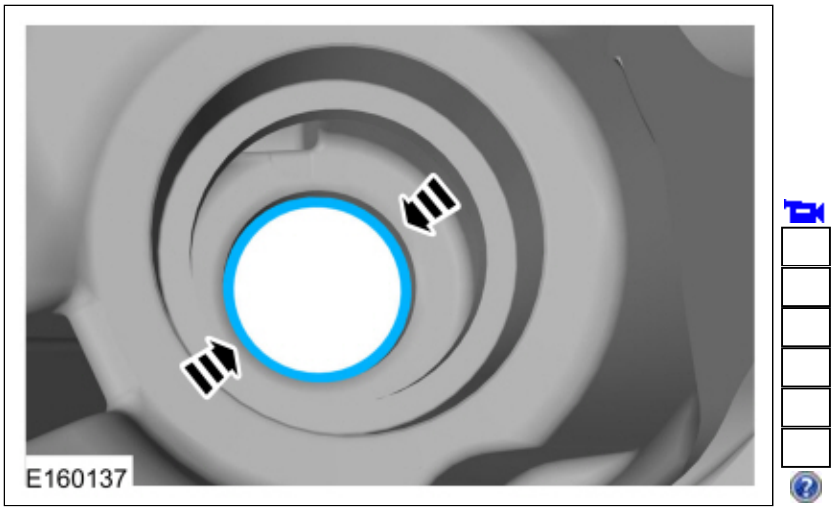
11.



12. Use the General Equipment: Copper Hammer

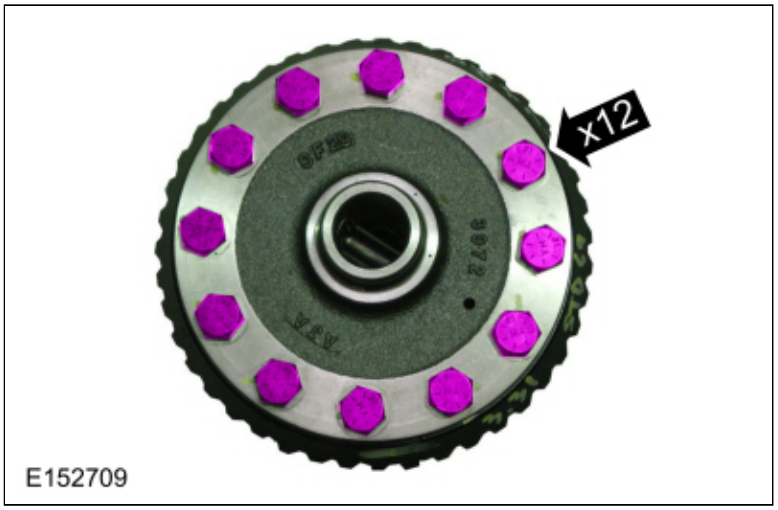


13.

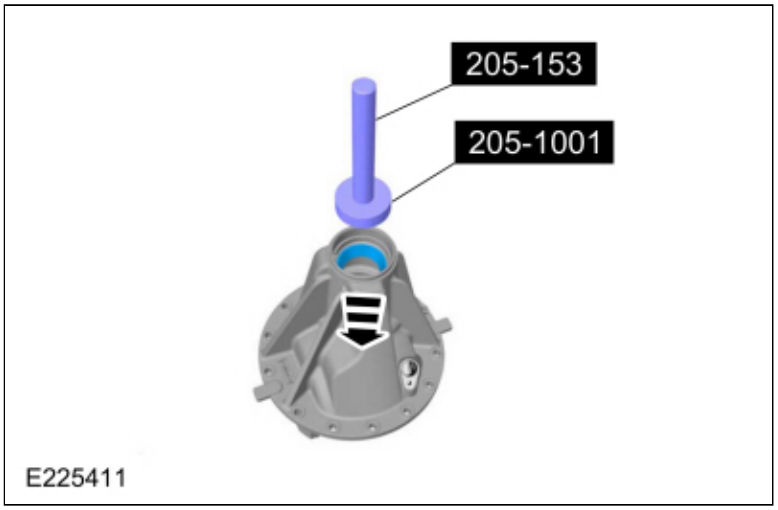


14. Use Special Service Tool: 205-D002 Bearing Splitter.
    Use the General Equipment: Hydraulic Press

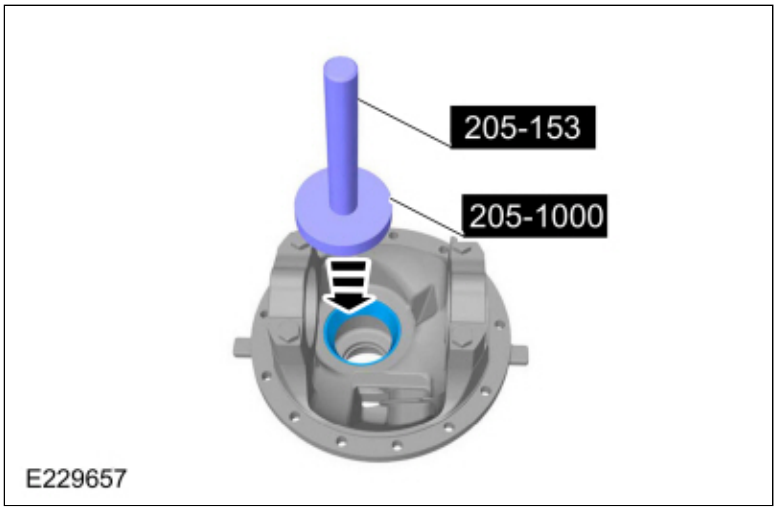
15.



16.



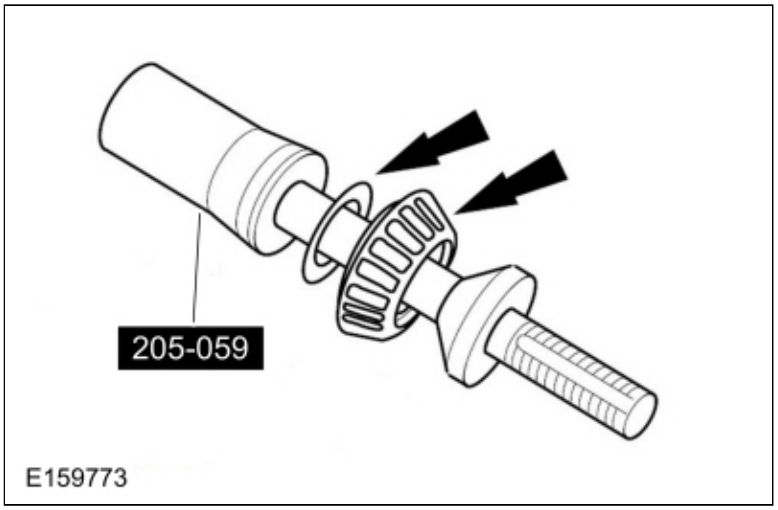
ASSEMBLY



1. *Torque*: 255 Nm

2. **NOTE:** *New bearings should be used when diff case is changed.*
3. Use Special Service Tool: 205-153 (T80T-4000-W) Handle. , 205-1001 Installer, Rear Differential Bearing.

4. Use Special Service Tool: 205-153 (T80T-4000-W) Handle. , 205-1000 Installer, Rear Differential Bearing.

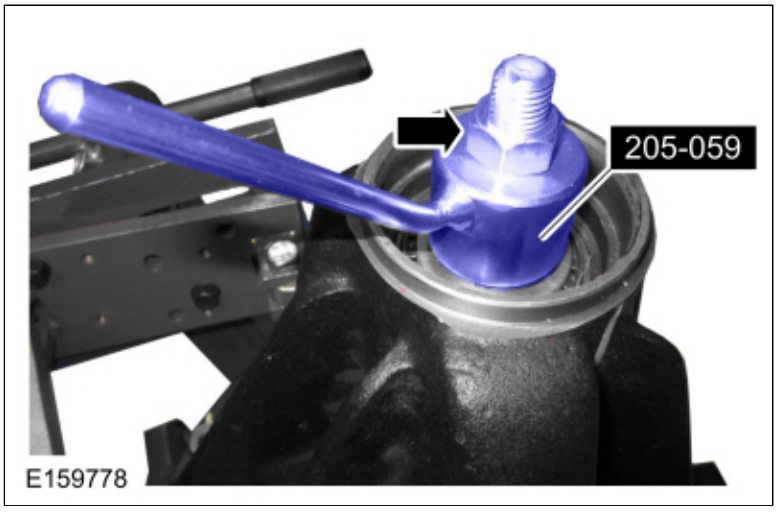


5. **NOTICE: Make sure that the drive pinion shim is centralized on the special tool.**

   NOTE: *Lubricate the drive pinion bearing cones with rear axle oil.*

   NOTE: *The conical nut of the special has a left-hand thread.*

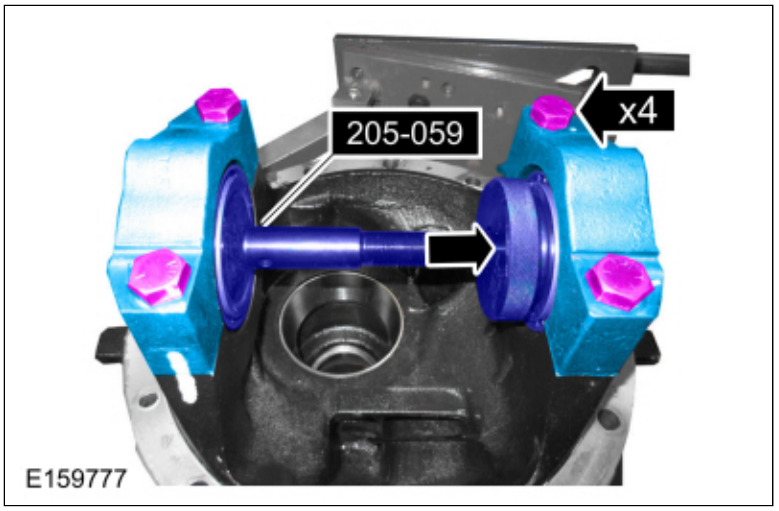
   Assemble the special tool with the old drive pinion shim and the drive pinion rear bearing cone.
   Use Special Service Tool: 205-059 Gauge, Master Pinion.



6. **NOTE:** *Lubricate the drive pinion bearing cones with rear axle oil.*

   Assemble the special tools with the drive pinion front bearing cone.
   Use Special Service Tool: 205-059 Gauge, Master Pinion.

7. Tighten the retaining nut and check bearings for smooth rotation.
   Use Special Service Tool: 205-059 Gauge, Master Pinion.
   Torque: 30 Nm

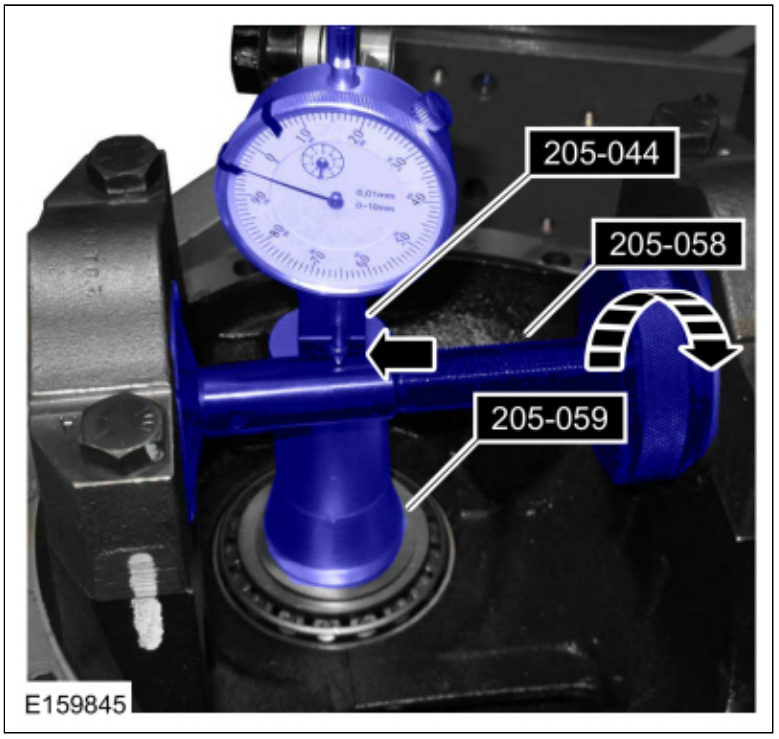


8. **NOTICE: Make sure that the bearing caps are installed to their original positions.**

   NOTE: *Lubricate the differential bearing cones with rear axle oil.*

   NOTE: *The adjusting nuts must be tight against the differential bearing cups.*

   Install the special tool together with the differential bearings and the adjusting nuts.
   Use Special Service Tool: 205-059 Gauge, Master Pinion.
   Torque: 88 Nm

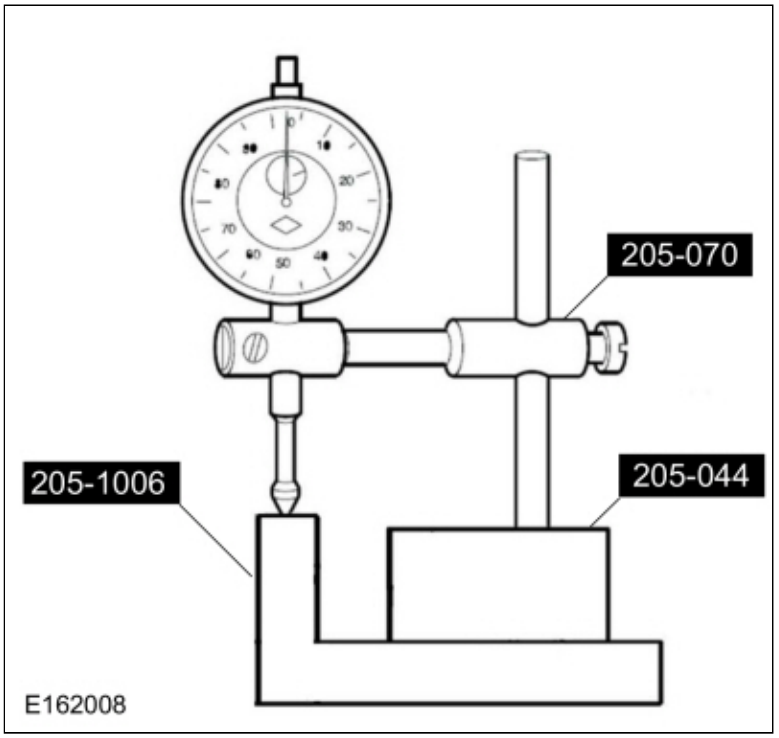


9. **NOTE:** *Make sure that the special tool can still be turned by hand.*

   Using a suitable drift, tighten the adjusting nut of the special tool.
   Use Special Service Tool: 205-058 Adjustment Gauge, Drive Pinion.

10. **NOTE:** *The dial indicator gauge plunger must be on the center line of the special tool.*

    Using a suitable dial indicator gauge, determine the total deflection of the special tool as it is rotated.
    Use Special Service Tool: 205-059 Gauge, Master Pinion. , 205-044 Holding Fixture, Dial Indicator Gauge. , 205-058 Adjustment Gauge, Drive Pinion.



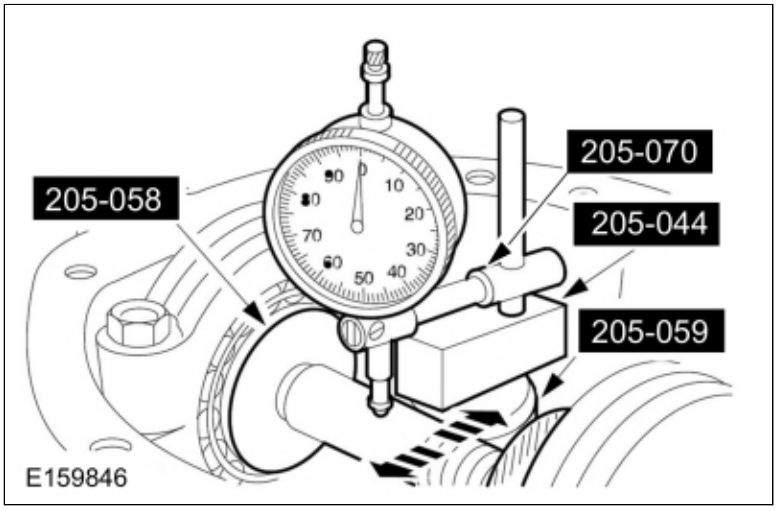
11. **NOTICE: When half of the total deflection is shown on the dial indicator gauge, do not turn the special tool further.**

    NOTE: *The dial indicator gauge plunger must be on the center line of the special tool (as shown).*

    - Turn the special tool until half of the total deflection is shown on the dial indicator gauge.

12. **NOTICE: Make sure that the dial indicator settings are not altered while transfering the dial indicator to the master pinion gauge.**

    Using the special tools, zero the dial indicator gauge on the step gauge.
    Use Special Service Tool: 205-1006 Gauge, Drive Pinion Height. , 205-044 Holding Fixture, Dial Indicator Gauge. , 205-070 Holding Fixture, Dial Indicator Gauge.



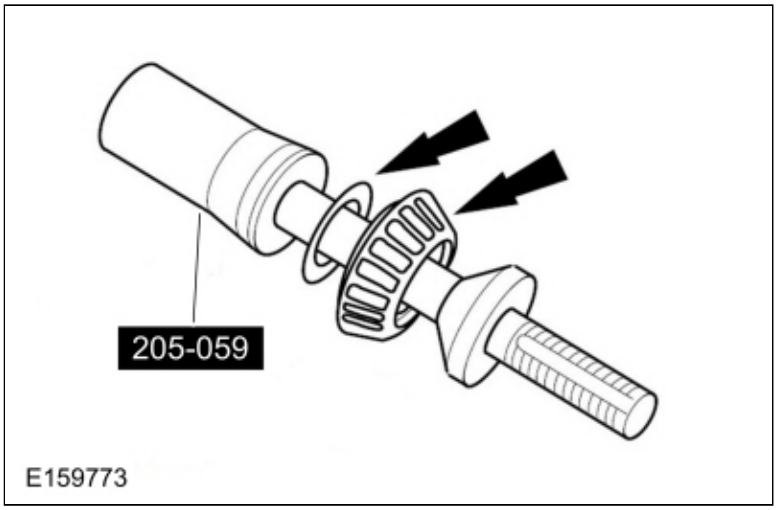
13. **NOTE:** *Verify the measurement three times.*

    NOTE: *The dial indicator gauge plunger must be on the center line of the special tool (as shown).*

    - Calculate the required drive pinion shim thickness.
    - Slide the dial indicator gauge plunger slowly across the drive pinion adjustment gauge (as shown).

- Make a note of the measurement when the dial indicator gauge plunger is on the highest point of the drive pinion adjustment gauge and the dial indicator gauge pointer changes direction.
- If the measurement is positive, the dial indicator gauge reading must be added to the old shim thickness.
- If the measurement is negative, the dial indicator gauge reading must be subtracted from the old shim thickness.
  Use Special Service Tool: 205-059 Gauge, Master Pinion. , 205-044 Holding Fixture, Dial Indicator Gauge. , 205-058 Adjustment Gauge, Drive Pinion. , 205-070 Holding Fixture, Dial Indicator Gauge.

14. Select the appropiate shim from the pinion shim selection chart.



Pinion Shim Selection Chart

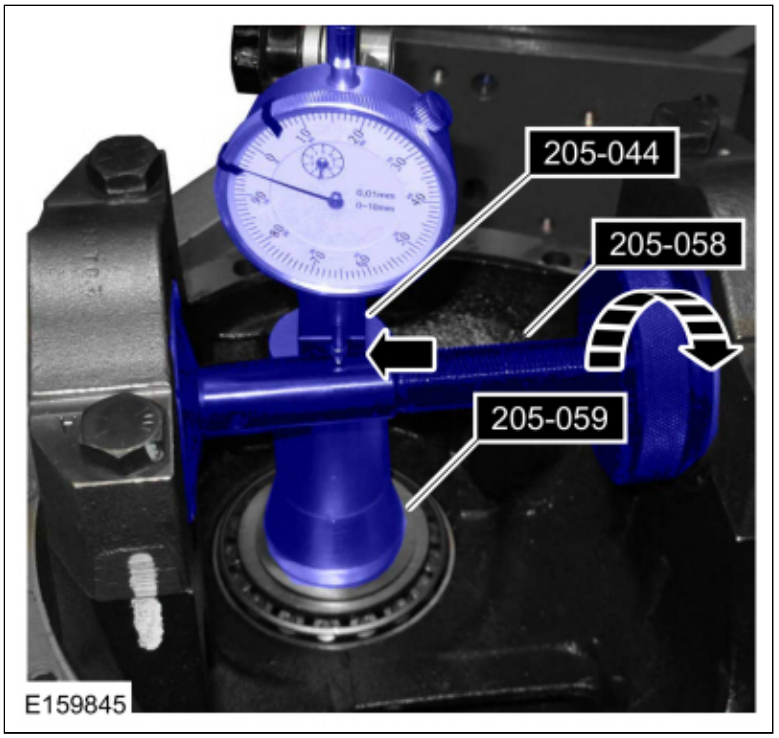
- Remove Special Service Tool: 205-059 Gauge, Master Pinion.

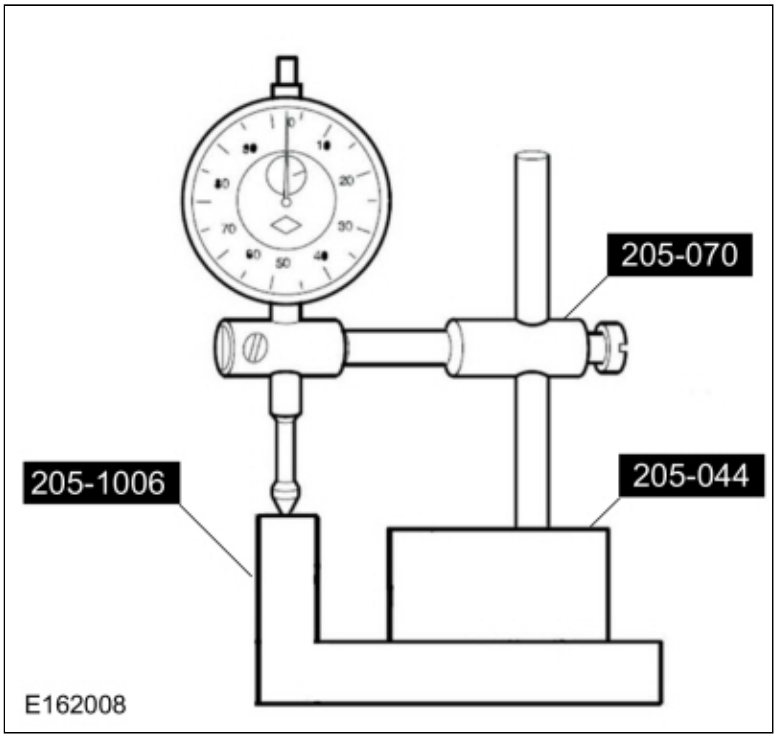


16. **NOTE:** *The conical nut of the special tool has a left-hand thread.*

- Re-assemble the special tool with the new drive pinion shim and the drive pinion rear bearing cone.
  Use Special Service Tool: 205-059 Gauge, Master Pinion.

17. **NOTE:** *The dial indicator gauge plunger must be on the center line of the special tool (as shown).*

    Using a suitable dial indicator gauge, determine the total deflection of the special tool as it is rotated.
    Use Special Service Tool: 205-059 Gauge, Master Pinion. , 205-044 Holding Fixture, Dial Indicator Gauge. , 205-058 Adjustment Gauge, Drive Pinion.



18. **NOTICE: When half of the total deflection is shown on the dial indicator gauge, do not turn the special tool further.**

    NOTE: *The dial indicator gauge plunger must be on the center line of the special tool (as shown).*

    - Turn the special tool until half of the total deflection is shown on the dial indicator gauge.

19. **NOTICE: Make sure that the dial indicator settings are not altered whilst transfering the dial indicator to the master pinion gauge.**

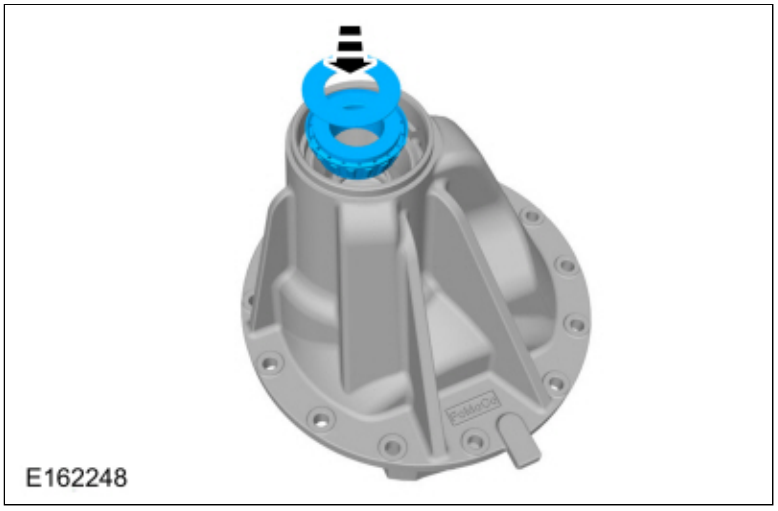
    Using the special tools, zero the dial indicator gauge on the step gauge.
    Use Special Service Tool: 205-1006 Gauge, Drive Pinion Height. , 205-044 Holding Fixture, Dial Indicator Gauge. , 205-070 Holding Fixture, Dial Indicator Gauge.

20. **NOTE:** *Verify the measurement three times.*

    NOTE: *The dial indicator gauge plunger must be on the center line of the special tool (as shown).*

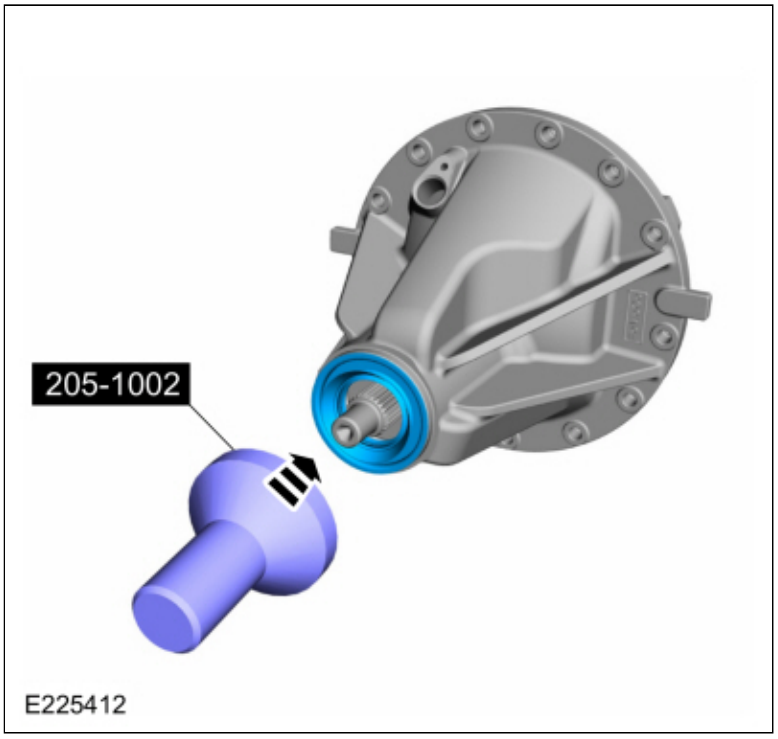
    - Slide the dial indicator gauge plunger slowly across the drive pinion adjustment gauge (as shown).
    - Make a note of the measurement when the dial indicator gauge plunger is on the highest point of the drive pinion adjustment gauge and the dial indicator gauge pointer changes direction.
    - If the selected shim is correct, the dial gauge reading should be zero. If the reading is not zero, repeat the shim selection proccess and adjust the shim thickness accordingly.
      Use Special Service Tool: 205-059 Gauge, Master Pinion. , 205-044 Holding Fixture, Dial Indicator Gauge. , 205-058 Adjustment Gauge, Drive Pinion. , 205-070 Holding Fixture, Dial Indicator Gauge.

    - Remove Special Service Tool: 205-044 Holding Fixture, Dial Indicator Gauge. , 205-070 Holding Fixture, Dial Indicator Gauge. , 205-059 Gauge, Master Pinion. , 205-058 Adjustment Gauge, Drive Pinion.

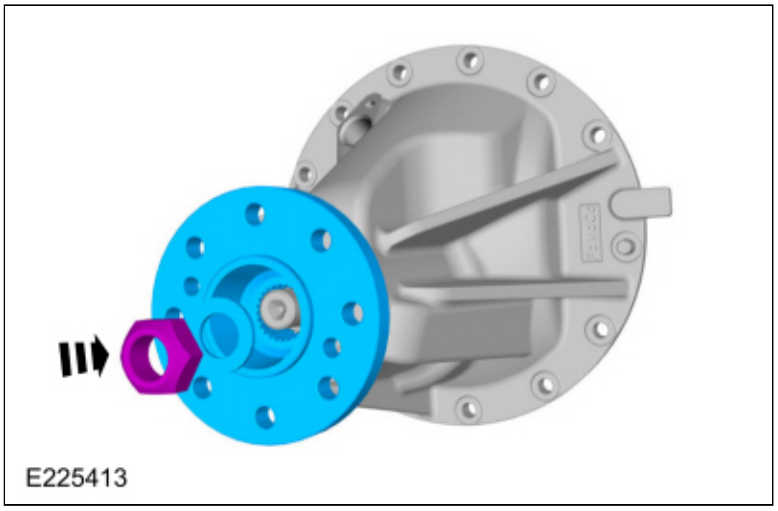


22. Install the pinion **bearing** and **shim**.
    Use the General Equipment: Hydraulic Press
    Use the General Equipment: Bearing Separator

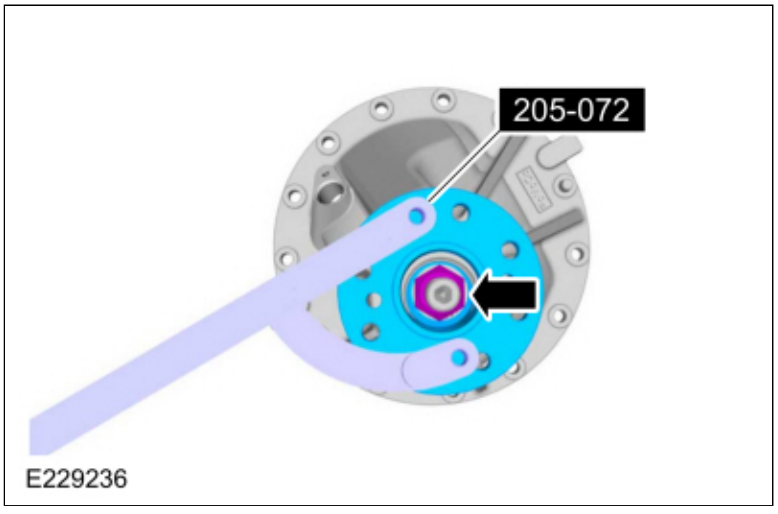
23.



24.

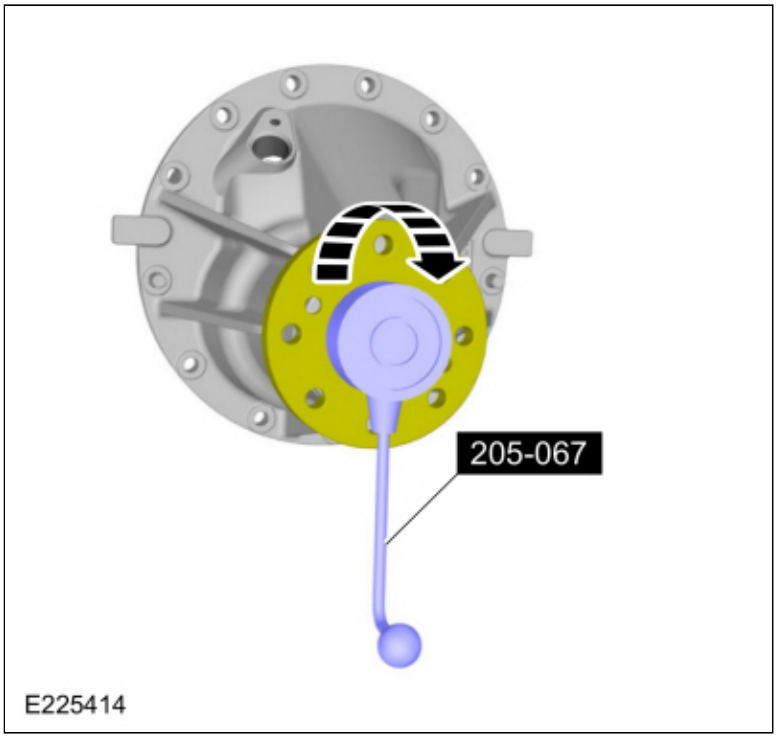


25. Apply differential oil to the lip of a new oil seal.

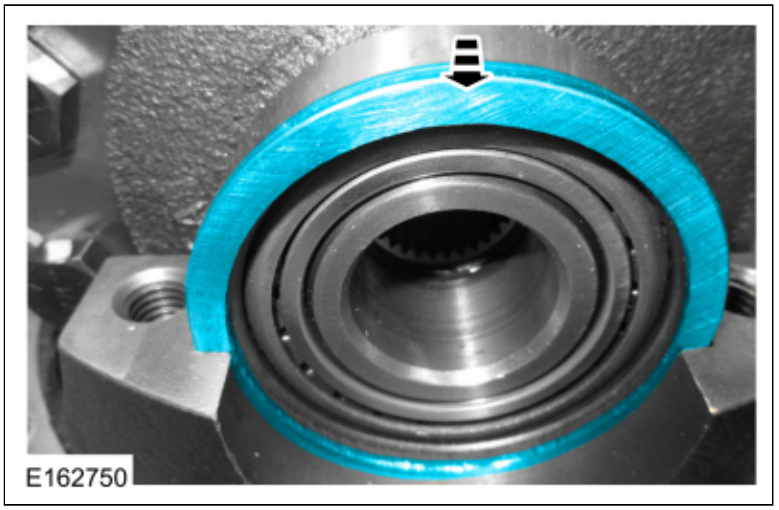


26. Use Special Service Tool: 205-1002 Installer, Drive Pinion Seal.

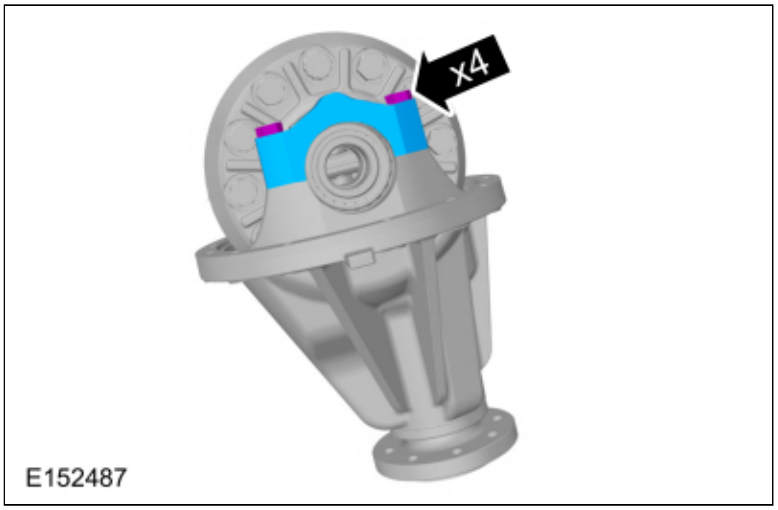
27. **NOTE:** *Only tighten the nut finger tight at this stage.*



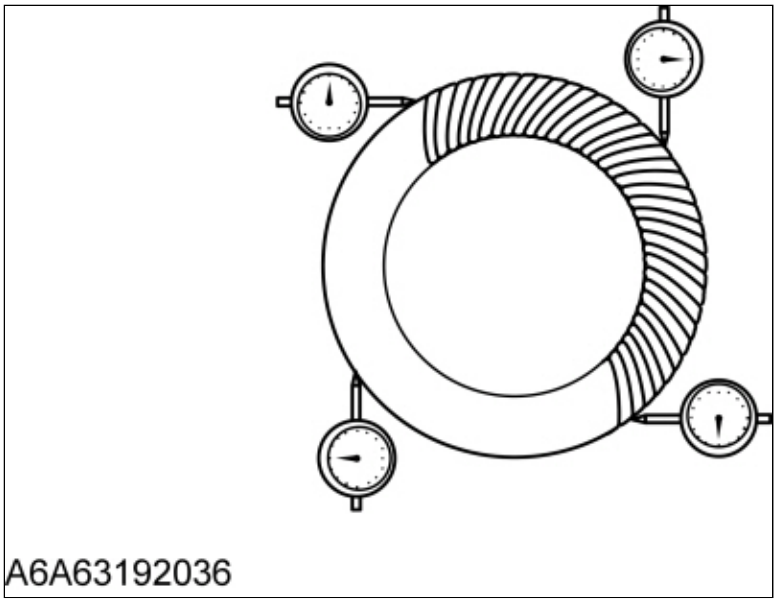
28. Use Special Service Tool: 205-072 Universal Flange Holding Wrench.
Torque: 300 Nm



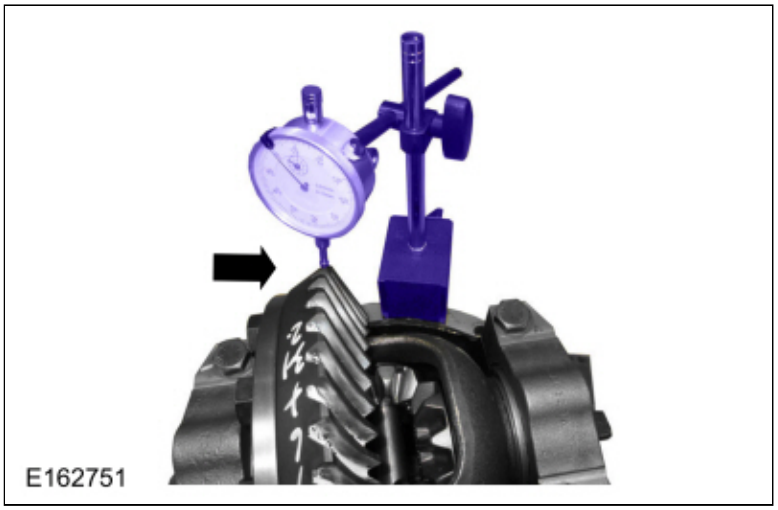
- Using the preload gauge, measure the torque to rotate. Tighten the drive pinion nut untill the torque to rotate measures 2-3 Nm.
- If the specified preload can’t be obtained within a pinion nut torque of 237 - 650 Nm, replace the collapsable



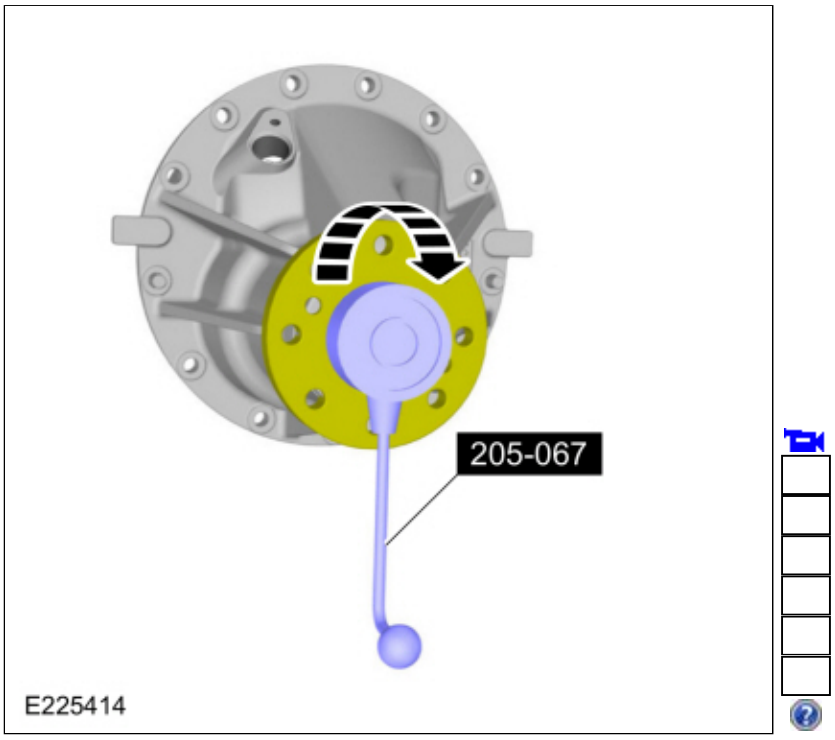
spacer and inspect again.
Use Special Service Tool: 205-067 Preload Gauge.



- Install the gear case component on the differential carrier.
- The original shims can be re-used if the ring and pinion is not replaced.
- If a new ring and pinion is fitted, measure the total thickness of the original shims, and split the thickness evenly between left and right.

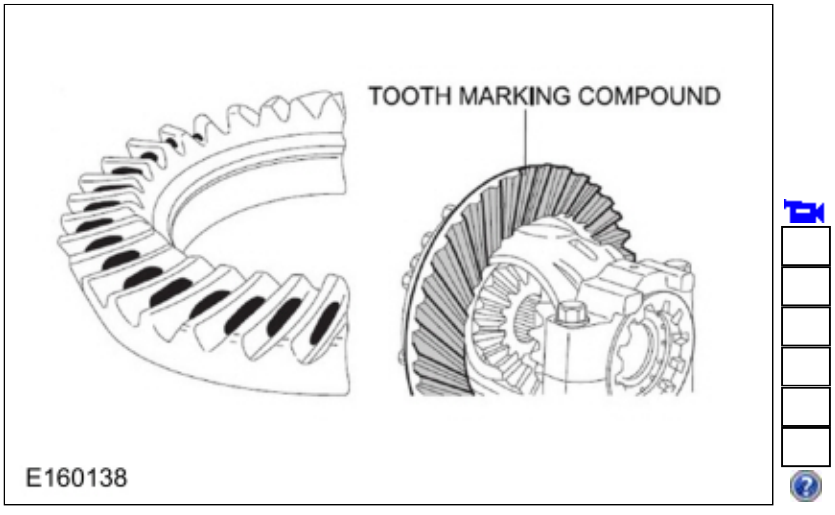


31. *Torque*: 110 Nm

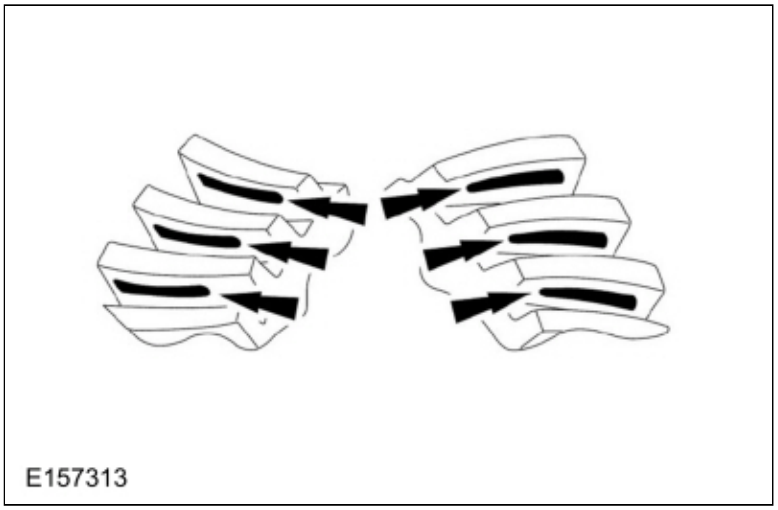


32. Mark the ring gear at four points at 90° intervals.

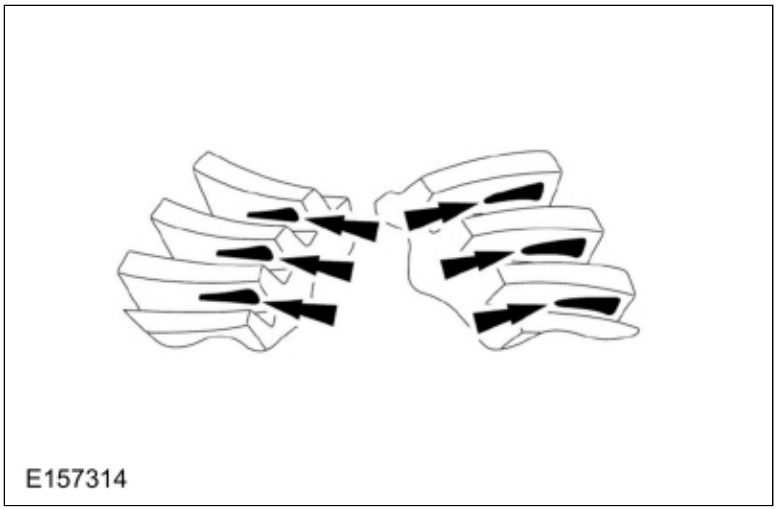
- Adjust the drive pinion, ring gear backlash and the side bearing preload as follows:
- Mount a dial indicator to the carrier so that the feeler comes in contact at a 90° angle with one of the ring gear teeth.
- Inspect the backlash at the three other marked points and make sure that the measurement is between 0.127 —0.203 mm {0.005—0.008 in}.



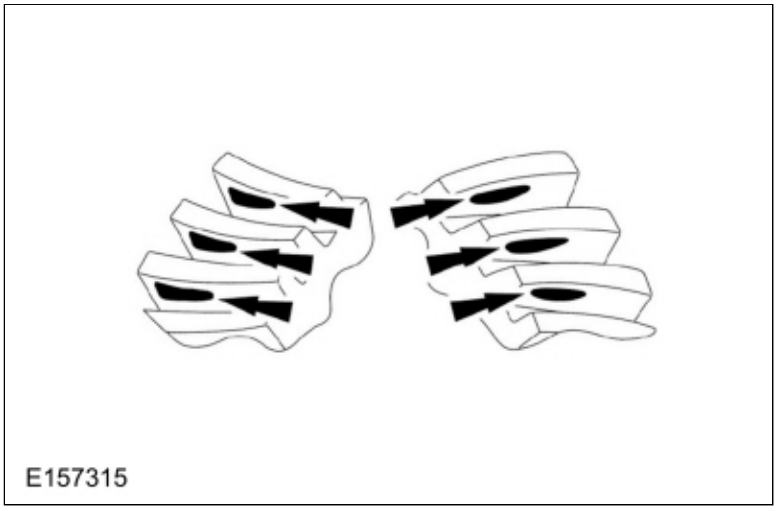
34. Using the preload gauge, measure the torque to rotate. The readings should not exceed 3.0 Nm. If the backlash is within specification but the rotating torque is high, the preload may be adjusted by removing an equal amount of shim thickness from both sides of the differential.
Use Special Service Tool: 205-067 Preload Gauge.



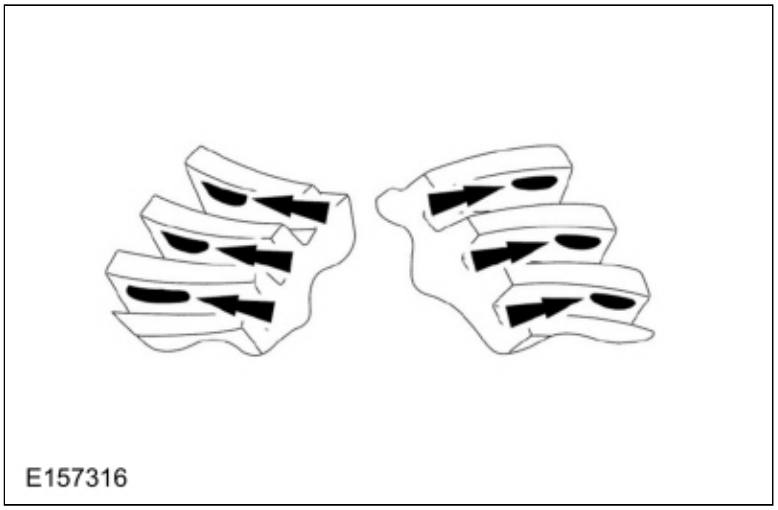
35. If backlash is not as specified, correct the backlash by adding and subtracting the required shim thickness from either left or right, keeping the total shim thickness the same.



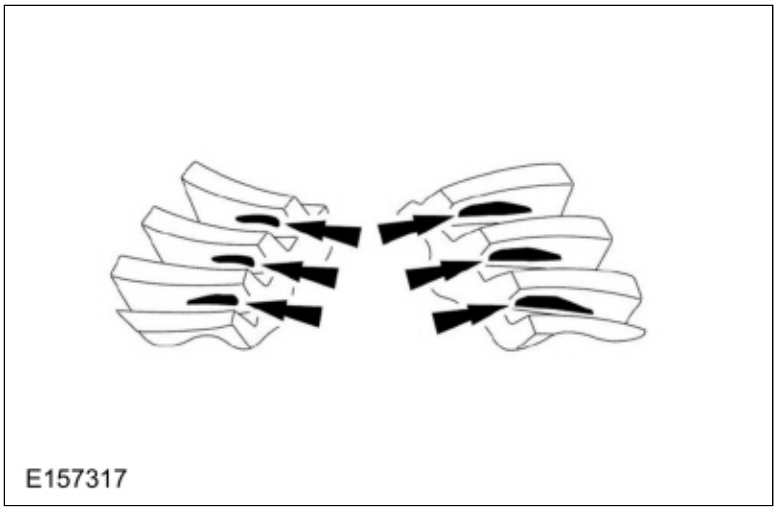
- The inspection and adjustment procedure is as follows:
- Coat both surfaces of 6—8 teeth of the ring gear uniformly with a tooth marking compound.
- While moving the ring gear back and forth by hand, rotate the drive pinion several times and inspect the tooth contact.
- If the tooth contact is good, wipe off the tooth marking compound.



37. Acceptable ring gear tooth patterns for all axles.



38. Correct backlash with a thinner pinion position shim.



39. Correct backlash with a thicker pinion position shim.

40. Correct pinion position shim that requires a decrease in backlash.

41. Correct pinion position shim that requires an increase in backlash.

- Select the appropriate shim from the differential bearing preload shim selection table.

Front Drive Axle and Differential - Overview

Front Drive Axle and Differential

The front differential is conventional open differential. The front hubs are not fitted with locking/unlocking devices, therefore the front drive shafts and propshaft rotate in 2WD or 4WD.

The front driveshafts are fitted with CV joints and transfer torque from the front differential to the front wheels. The front differential is driven by a prop shaft from the transfer case.

Front Drive Axle

Principles of Operation

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.
3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step
4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart - Front Differential

Symptom Chart - Front Differential

Condition	Possible Sources	Actions
Axle overheating	• Axle lubricant low	• CHECK the lubricant level. FILL the axle to specification. REFER to: Specifications (205-03 Front Drive Axle/Differential, Specifications).
	• Incorrect or contaminated lubrication type	• INSPECT the axle for damage. REPAIR as necessary. CLEAN and REFILL the axle to specification as necessary. REFER to: Specifications (205-03 Front Drive Axle/Differential, Specifications).
	• Excessive gear wear	• INSTALL new axle assembly. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
	• Incorrect ring gear backlash	• INSTALL new axle assembly. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
Broken gear teeth on the ring gear or pinion	• Overloading the vehicle	• INSTALL new axle assembly. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
Differential side gears/pinion gears are scored	• Insufficient lubrication	• INSTALL new axle assembly. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
	• Incorrect or contaminated lubricant type	• INSTALL new axle assembly. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
Front axle will not disengage	• Mode switch	• REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).

	• Wiring/relays	• REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
	• 4x4 control module	• REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
	• Shift motor	• REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
Front axle will not engage	• Mode switch	• REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
	• Wiring/relays	• REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
	• 4x4 control module	• REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
	• Shift motor	• REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
Gray or milky axle lubricant in low mileage vehicles	• Marking compound in axle fluid	• Inspect axle housing and vent for damage or leaks. Refer to Axle Fluid Analysis in this section.
Lubricant leaking from the pinion seal, axle shaft oil seals or support arm to the housing	• Vent	• CLEAN the axle housing vent.
	• Damage in the seal contact area or dust slinger on the pinion flange dust shield	• INSTALL a new pinion seal if damage is found.

Symptom Chart - NVH

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart - NVH

Condition	Possible Sources	Actions
Axle howling or whine	• Axle lubricant low	• CHECK the lubricant level. FILL the axle to specification. REFER to: Specifications (205-03 Front Drive Axle/Differential, Specifications).

	• Axle housing damage	• INSPECT the axle housing for damage. INSTALL a new axle as necessary. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
	• Damaged or worn wheel hub bearings	• CHECK for abnormal wheel hub bearing play or roughness.
	• Damaged or worn differential ring and pinion	• INSTALL new axle assembly. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
	• Damaged or worn differential side or pinion bearings	• INSTALL new axle assembly. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
Driveline clunk - loud clunk when shifting from REVERSE to DRIVE	• Incorrect axle lubricant level	• CHECK the lubricant level. FILL the axle to specification. REFER to: Specifications (205-03 Front Drive Axle/Differential, Specifications).
	• Excessive backlash in the axle	• INSTALL new axle assembly. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
	• Damaged or worn pinion bearings	• INSTALL new axle assembly. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
	• Loose or missing fasteners	• CHECK all driveline fasteners for proper torque.
Driveline clunk — occurs as the vehicle starts to move forward following a stop	• Loose axle mount	• CHECK the axle for loose bolts. TIGHTEN to proper torque. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
	• Loose or missing fasteners	• CHECK all driveline fasteners for proper torque.
Driveline clunk — occurs during acceleration or from cruise to coast/deceleration	• Loose or missing fasteners	• CHECK all driveline fasteners for proper torque.
High pitched chattering — noise from the axle when the vehicle is turning	• Incorrect or contaminated lubricant	• CHECK the vehicle by driving in tight circles (5 clockwise, 5 counterclockwise). CLEAN and REFILL the axle to specification. REFER to: Specifications (205-03 Front Drive Axle/Differential, Specifications).
	• Damaged or worn differential (differential side gears and pinion gears)	• INSTALL new axle assembly. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).

Grunting — normally associated with a shudder experienced during acceleration from a complete stop	• Loose axle mount bolts or suspension fasteners	• INSPECT the front suspension and axle. TIGHTEN the fasteners to specification. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
Howl — can occur at various speeds and driving conditions. Affected by acceleration and deceleration	• Incorrect ring and pinion contact, incorrect bearing preload or gear damage	• INSTALL new axle assembly. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
Chuckle — heard at coast/deceleration. Also described as a knock	• Incorrect ring and pinion contact or damaged teeth on the coast side of the ring and pinion	• INSTALL new axle assembly. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
Knock — noise occurs at various speeds. Not affected by acceleration or deceleration	• Gear tooth damage to the drive side of the ring and pinion	• INSTALL new axle assembly. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
Scraping noise — a continuous low pitched noise starting at low speeds	• Worn or damaged pinion bearings	• INSTALL new axle assembly. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
Driveline shudder – occurs during acceleration from a slow speed or stop	• Drive axle assembly mispositioned	• CHECK the axle mounts and the front suspension for damage or wear. REPAIR as necessary. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
	• Loose axle bolts	• CHECK the axle for loose bolts. TIGHTEN the bolts to specification. REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).
	• Loose or missing fasteners	• CHECK all driveline fasteners for proper torque.

Axle Fluid Analysis

The appearance of milky or gray axle fluid in early mileage axles is a result of white marking compound used at the assembly plant to verify gear mesh contact pattern. The marking compound within the fluid will darken some over time. The milky fluid appearance will diminish and cause no harm and does not require a fluid change.

Analysis of Leakage

Clean up the leaking area enough to identify the exact source.

A plugged front axle housing vent can cause excessive pinion seal lip wear due to internal pressure buildup.

Verify the differential lubricant level is at the correct level.
REFER to: Specifications (205-03 Front Drive Axle/Differential, Specifications).

Axle Vent

A plugged vent will cause excessive seal lip wear due to internal pressure buildup. If a leak occurs, check the vent. If the vent cannot be cleared, install a new vent.

Drive Pinion Seal

Leaks at the drive pinion seal originate from the following causes:

- Damaged seal
- Worn seal journal surface

A new drive pinion seal must be installed if any of these conditions exist.

- The drive pinion seal can be torn, cut or gouged if it is not installed correctly. The spring that holds the drive pinion seal against the pinion flange may be knocked out and allow fluid to pass the lip.
- Metal chips trapped at the sealing lip can cause oil leaks. These can cause a wear groove on the drive pinion flange and result in pinion seal wear.
- When a seal leak occurs, install a new drive pinion seal and check the vent to make sure it is clean and free of foreign material.

If a mechanical failure is causing the leak, the axle must be replaced.
REFER to: Axle Assembly (205-03 Front Drive Axle/Differential, Removal and Installation).

Differential Seals

NOTICE: When installing shafts, do not allow splines to contact seals during installation or damage to the seals may occur.

Halfshaft pilot bearing housing seals are susceptible to the same types of damage as drive pinion seals if incorrectly installed. The seal bore must be clean and the lip handled carefully to avoid cutting or tearing it. The seal journal surface must be free of nicks, gouges and rough surface texture.

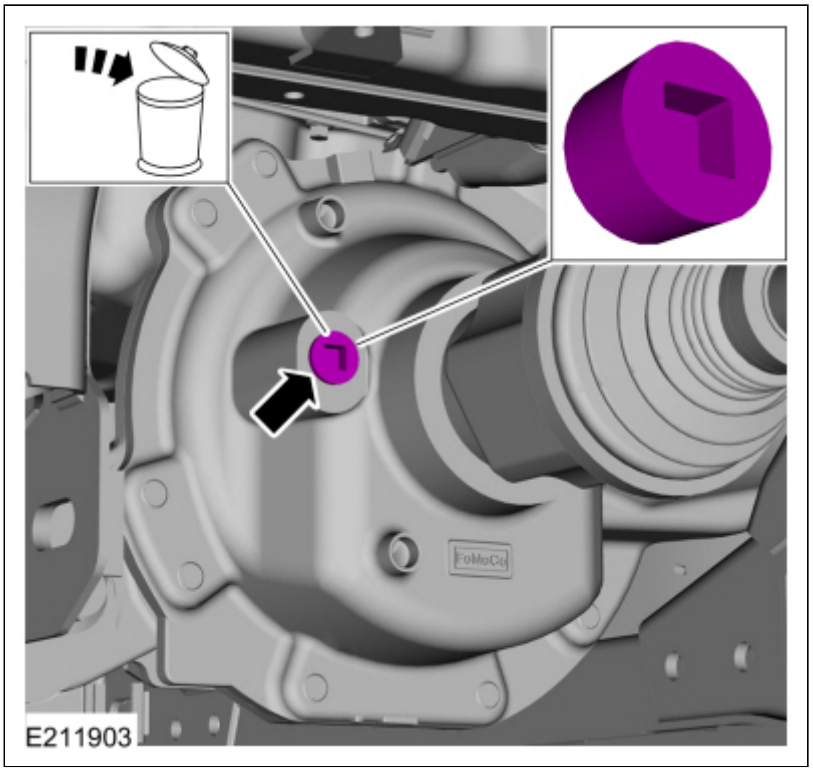
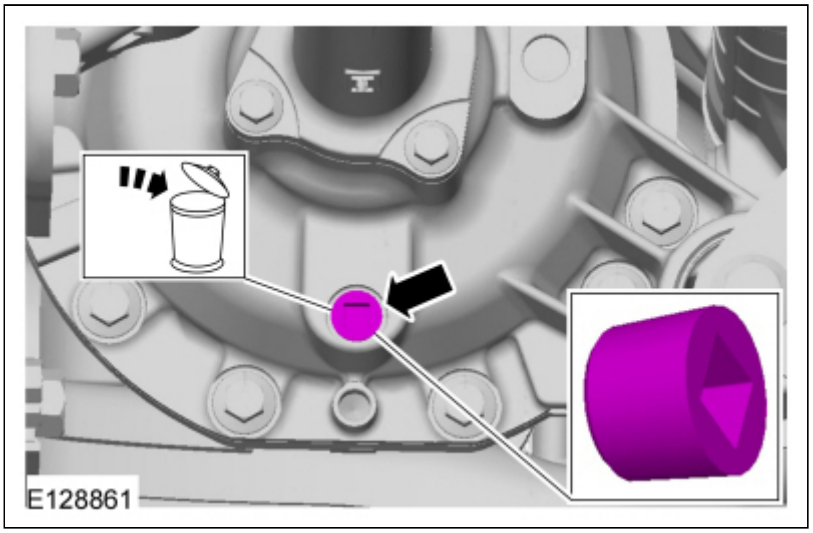
Differential Draining and Filling

Materials



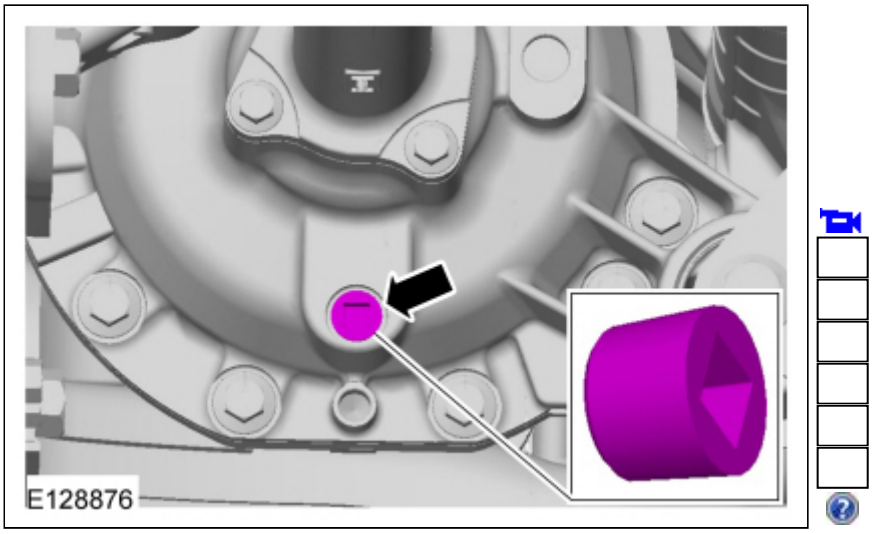
Name	Specification
Gear/Transmission Fluid - SAE 80W-90	WSP-M2C197-A

Draining



1. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
2. *Torque*: 30 Nm

3.

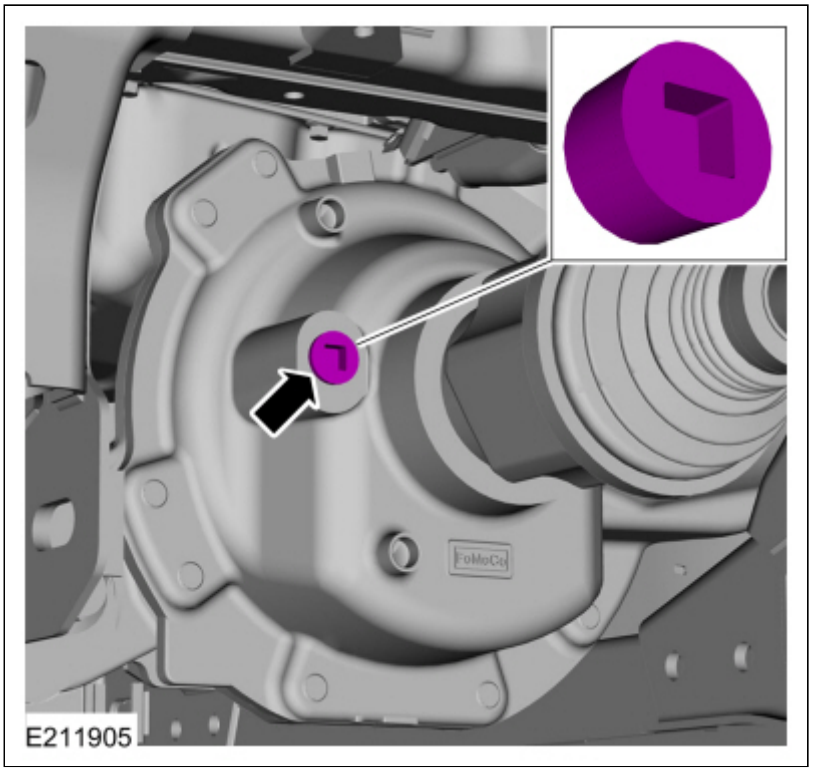


4. **WARNING: Be prepared to collect escaping fluids.**

5. **NOTE:** *Make sure that a new component is installed.*

   NOTE: *The drain plug is magnetic. Make sure that the correct component is installed.*

   Torque: 30 Nm



Filling

1. Refer to: Specifications (205-03 Front Drive Axle/Differential, Specifications).
   Material: Gear/Transmission Fluid - SAE 80W-90 (WSP-M2C197-A)

2. **NOTE:** *Make sure that a new component is installed.*

   Torque: 30 Nm

Drive Pinion Flange and Seal

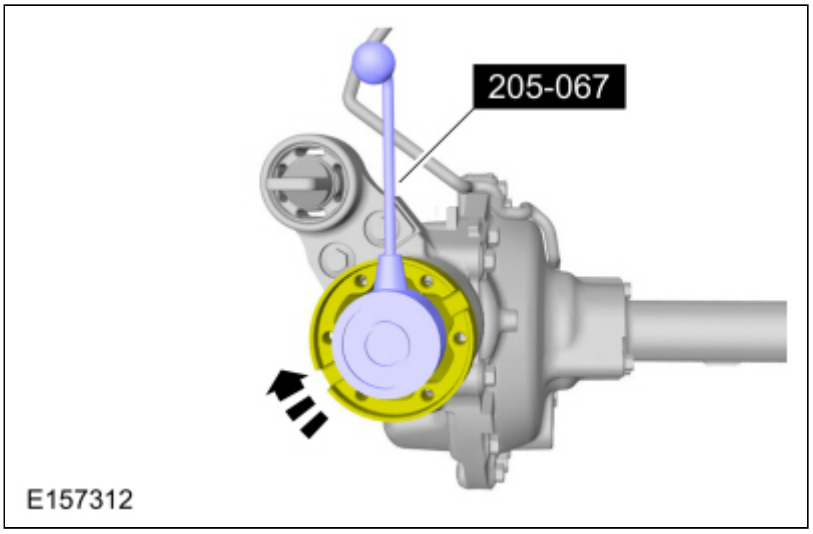
Base Part Number: 3N134

Special Tool(s) / General Equipment

 15041	205-067 Preload Gauge
 15030A	205-072 Universal Flange Holding Wrench
 15048	205-078 Remover, Drive Pinion Seal
 E163724	205-1002 Installer, Drive Pinion Seal
	205-D027 (D80L-1013-A) 2 or 3 Jaw Puller

Removal

NOTICE: Exceeding the drive pinion bearing preload will damage the bearings.



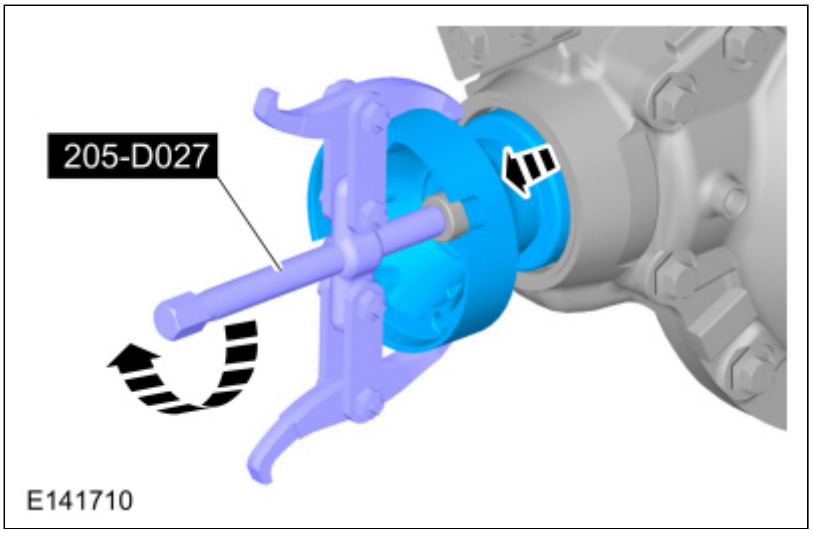
NOTE: *Removal steps in this procedure may contain installation details.*

1. **NOTE:** *The front wheels and tires and brake calipers must be removed to prevent drag during the pinion bearing preload recording and adjustment.*

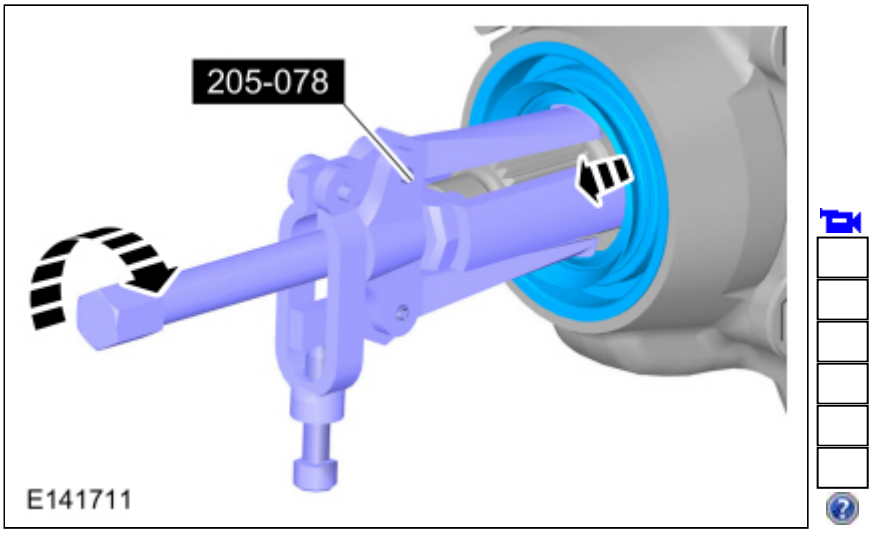
   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
   Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).

2. Refer to: Front Driveshaft - 4WD (205-01 Driveshaft, Removal and Installation).

3. Turn the drive pinion smoothly with the preload gauge and note the value.
   Use Special Service Tool: 205-067 Preload Gauge.

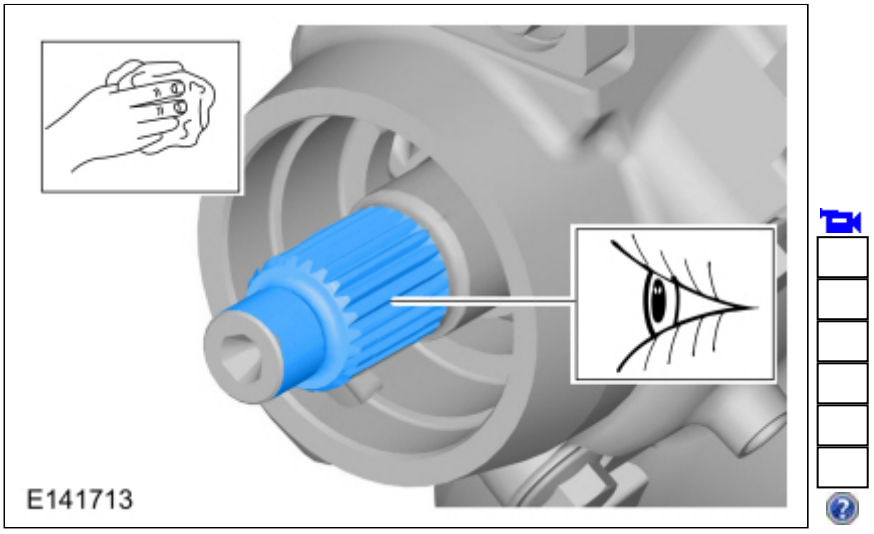


4. Use Special Service Tool: 205-072 Universal Flange Holding Wrench.

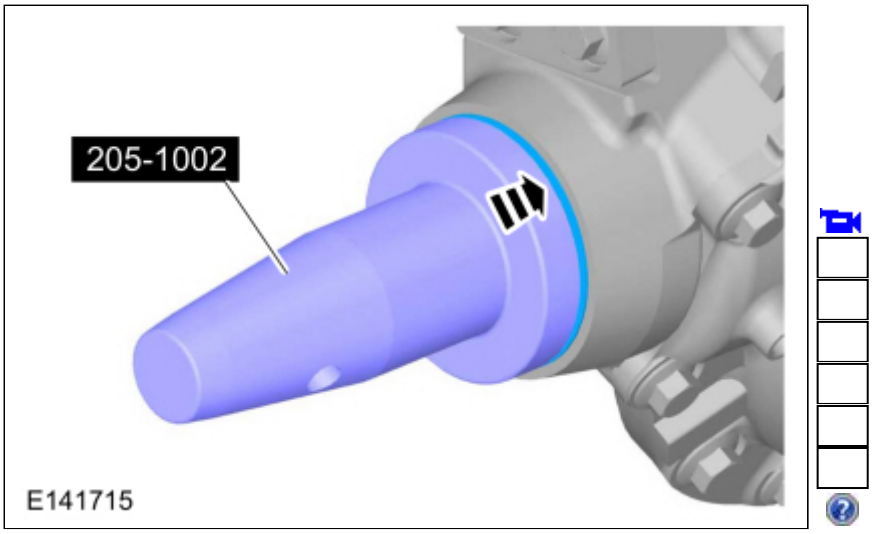


5. **NOTICE: Do not use power tools to remove the pinion flange.**

   Use Special Service Tool: 205-D027 (D80L-1013-A) 2 or 3 Jaw Puller.

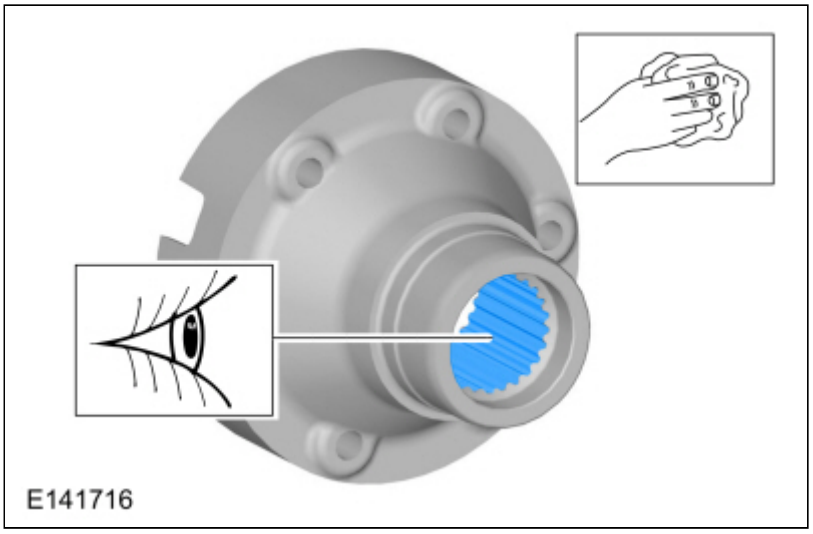


6. Use Special Service Tool: 205-078 Remover, Drive Pinion Seal.



Installation

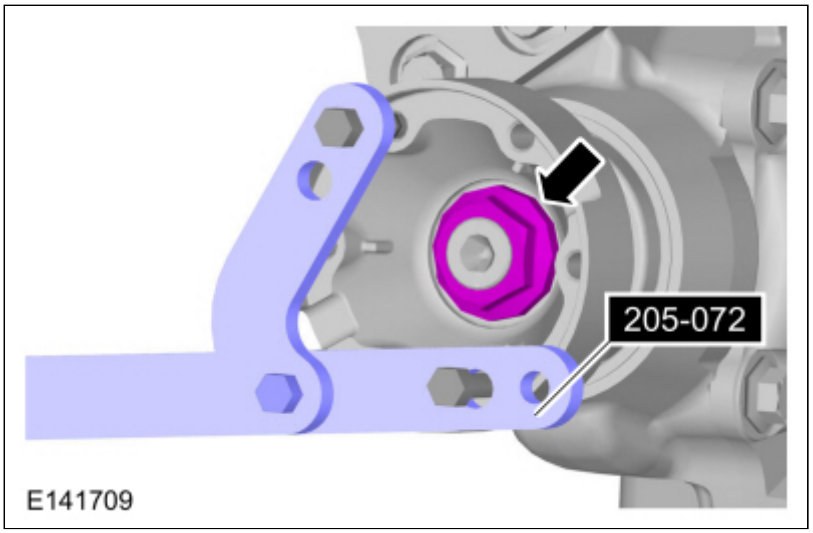
1.



2. **NOTICE: Only use the specified material to lubricate the seals.**

   Use Special Service Tool: 205-1002 Installer, Drive Pinion Seal.

3.



4.

5. **NOTE:** *Only tighten the nut finger tight at this stage.*

   NOTE: *Make sure that a new nut is installed.*

   Use Special Service Tool: 205-072 Universal Flange Holding Wrench.
   Torque: 300 Nm

6. **NOTICE: Do not exceed the specified torque. If excess preload is applied, the differential unit may require replacement.**

   Using the special tool, measure the torque to rotate. Tighten the drive pinion nut untill the previosly determined torque plus 0.3 - 1.0 Nm value is reached.

Use Special Service Tool: 205-067 Preload Gauge.
Torque: 650 Nm

7. Refer to: Front Driveshaft - 4WD (205-01 Driveshaft, Removal and Installation).
8. Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).

Front Drive Halfshafts

Inspection and Verification

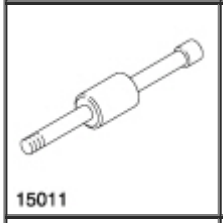
NOTE: *New front wheel drive halfshafts should not be installed unless disassembly and inspection reveals unusual wear.*

1. Inspect front wheel driveshaft joint boots for evidence of cracks, tears or splits.

NOTE: *While inspecting the front wheel driveshaft CV joint boots, watch for indentations (dimples) in the boot convolutions. If an indentation is observed, it must be removed.*

2. Inspect the underbody for any indication of grease splatter in the vicinity of the front wheel driveshaft CV joint boots outboard and inboard locations, which is an indication of front wheel driveshaft CV joint boot and/or front wheel driveshaft CV joint boot clamp damage.
3. Inspect for inboard CV joint stub shaft pilot bearing housing seal leakage at the front wheel driveshaft CV joint.
4. Make sure front axle wheel hub retainer is the correct prevailing torque type.
5. If the concerns remain after the inspection, determine the symptoms and go to the Symptom Chart. For additional Noise, Vibration and Harshness (NVH).
   REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness) .

Symptom Chart



Symptom	Possible Sources	Action
• Clicking, Popping or Grinding Noises While Turning	• Inadequate or contaminated lube in outboard/inboard front wheel driveshaft CV joint.	• INSPECT, CLEAN and LUBRICATE as necessary.
	• Another component contacting driveshaft assembly.	• INSPECT and REPAIR as necessary.
	• Wheel bearings, brakes, suspension or steering components.	• INSPECT and REPAIR as necessary. REFER to: Suspension System (204-00 Suspension System - General Information) . REFER to: Brake System (206-00 Brake System - General Information) . REFER to: Steering System (211-00 Steering System - General Information, Diagnosis and Testing).
• Vibration at Highway Speeds	• Out of balance front wheels or tires.	• REPAIR or INSTALL new as necessary. REFER to: Wheels and Tires (204-04 Wheels and Tires) .
	• Out-of-round tires.	• REPAIR or INSTALL new as necessary. REFER to: Wheels and Tires (204-04 Wheels and Tires) .
	• Incorrectly seated outboard front wheel driveshaft CV joint in front wheel hub.	• REPAIR or INSTALL new as necessary. REFER to: Front Drive Halfshafts (205-04 Front Drive Halfshafts) .
• Shudder Vibration During Acceleration.	• Excessively high CV joint operating angles caused by incorrect ride height.	• CHECK ride height, VERIFY correct spring rate and CHECK items under Halfshaft Joint Pullout. REPAIR or INSTALL new as necessary.
	• Excessively worn or damaged inboard front wheel driveshaft joint or outboard front wheel driveshaft joint.	• INSPECT and INSTALL new as necessary.
• Halfshaft Joint Pullout	• Inboard driveshaft bearing retainer circlip missing or not correctly	• INSPECT and REPAIR or INSTALL new as necessary.

Pullout	circlip missing or not correctly seated in differential side gear.	necessary.
	• Engine/transaxle assembly mispositioned.	• CHECK engine mounts for damage or wear. REPAIR or INSTALL new as necessary.
	• Frame rail or strut tower out of position or damaged.	• CHECK underbody dimensions.
	• Front suspension components worn or damaged.	• CHECK for worn bushings or bent components (front stabilizer bar, front suspension lower arm). REPAIR or INSTALL new as necessary.

Removal

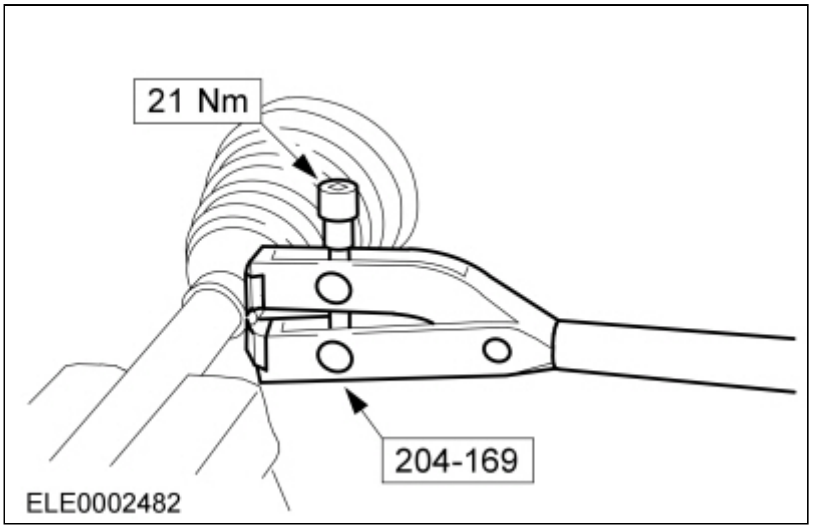
NOTICE: The component must not be disassembled.

NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Inner Constant Velocity (CV) Joint Boot (205-04 Front Drive Halfshafts, Removal and Installation).
2. **NOTE:** *Discard the damaged component.*

   Use the General Equipment: Vise
   Use the General Equipment: Vise Jaw Protectors

Installation



1. **NOTE:** *Make sure that a new component is installed.*

   Refer to: Specifications (205-04 Front Drive Halfshafts, Specifications).
   Use the General Equipment: Vise
   Use the General Equipment: Vise Jaw Protectors

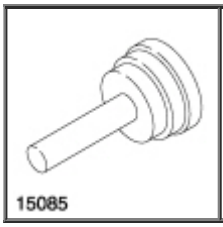
2. **NOTE:** *Make sure that a new clamp is installed.*

   Use Special Service Tool: 204-169 Clamping Tool, Boot Retaining Clamp.
   Use the General Equipment: Vise
   Use the General Equipment: Vise Jaw Protectors
   Torque: 21 Nm

3. **NOTICE: Make sure that a new clamp is installed.**

   NOTE: *Do not move the CV joint housing. Make sure that the CV joint boot is installed with the boot in the CV groove.*

   Use Special Service Tool: 204-169 Clamping Tool, Boot Retaining Clamp.
   Use the General Equipment: Vise
   Use the General Equipment: Vise Jaw Protectors
   Torque: 21 Nm



4. Refer to: Inner Constant Velocity (CV) Joint Boot (205-04 Front Drive Halfshafts, Removal and Installation).

Specifications

BRAKE TECHNICAL DATA

ITEM	SPECIFICATION
Brake fluid type	WSS-M6C65-A2, DOT4 LV
Brake pedal height	214—219 mm
Standard pedal play	3.0—8.0 mm
Standard pedal-to-floor clearance	105 mm or more
Power brake unit fluid pressure when pedal depressed at 200 N {20 kgf}	At 0 kPa {0 mmHg}: 237 kPa or more
Power brake unit fluid pressure when pedal depressed at 200 N {20 kgf}	At 67 kPa {500 mmHg}:8.75 kpa or more
Minimum front disc pad thickness	1.5 mm min
Minimum front disc plate thickness	30 mm
Minimum front disc plate thickness after machining using a brake lathe on-vehicle	30.8 mm
Front disc plate runout limit	0.05 mm max
Minimum rear brake lining thickness	1.0 mm
Maximum rear brake drum diameter - 4x2 (except vehicles with increased ride height)	270—271.5 mm
Maximum rear brake drum diameter - 4x2 vehicles with increased ride height and 4x4	296.5 mm
Parking brake lever stroke when pulled at 98 N {10 kgf}	3—6 notches

Load sensing proportioning valve (LSPV) fluid pressure

Type	Front wheel cylinder fluid pressure (kPa)	Rear wheel cylinder (kPa)
4x2 (except vehicles with increased ride height)	4,900	1,950-2,470
	9,800	3,070-3,910
4x2 vehicles with increased ride height and 4x4	4,900	1,820-2,320
	9,800	2,950-3,750

Brake System

Inspection and Verification

NOTE: *Before carrying out any diagnosis, make sure that the brake system warning indicator operates correctly.*

1. Verify the customer concern, carrying a road test with the customer if necessary.
   REFER to: Road/Roller Testing (100-00 General Information, Description and Operation).

2. Visually inspect for obvious signs of mechanical damage.

Visual Inspection Chart

Mechanical
– Tire pressure(s) – Wheels and tires – Brake line(s)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Sources	Action
• The brakes pull or drift	• Brake pads • Front brake disc(s) • Brake caliper(s) • Wheel alignment	• GO to Pinpoint Test A
	• Wheel bearing(s)	• CHECK or INSTALL new wheel bearings as necessary.
• The red brake warning indicator is always on	• Brake fluid level	• FILL the brake system to specification. INSPECT the brake lines for leaks.
	• Brake master cylinder primary piston cup	• INSTALL a new brake master cylinder. REFER to: (206-06 Hydraulic Brake Actuation) Brake Master Cylinder - RHD 4WD/RHD RWD (Removal and Installation), Brake Master Cylinder - RHD 4WD/RHD RWD (Removal and Installation).
	• Parking brake control	• RELEASE and ADJUST the parking brake cable. REFER to: Parking Brake Cable Adjustment (206-05 Parking Brake and Actuation, General Procedures).
	• Circuit • Anti-lock braking system (ABS)	• GO to Pinpoint Test B
• Vibration when brakes are applied	• Grease or fluid on brake pads; glazed linings	• GO to Pinpoint Test C
	• Brake caliper retaining bolts	• TIGHTEN the brake caliper bolts.
	• Insufficient	• APPLY

	• Insufficient grease on sliding parts	• APPLY grease as necessary.
	• Foreign material or scratches on front brake disc contact surfaces	• INSTALL a new brake disc. REFER to: Brake Disc (206-03 Front Disc Brake, Removal and Installation),
	• Loose wheel hub nuts	• TIGHTEN or INSTALL new wheel hub nuts.
	• Wheel bearings	• CHECK or INSTALL new wheel bearings as necessary.
	• Wheel and tire imbalance	• CHECK and BALANCE the wheels and tires as necessary.
• The brake pedal goes down fast	• Leak in brake system	• GO to Pinpoint Test D
	• Air in the brake system	• BLEED the brakes. REFER to: (206-00 Brake System - General Information) Brake System Bleeding (General Procedures), Brake System Pressure Bleeding (General Procedures).
	• Brake master cylinder	• INSTALL a new brake master cylinder. REFER to: (206-06 Hydraulic Brake Actuation) Brake Master Cylinder - RHD 4WD/RHD RWD (Removal and Installation), Brake Master Cylinder - RHD 4WD/RHD RWD (Removal and Installation).
	• Brake pads	• INSPECT the brake pads. REPAIR or INSTALL new brake pads as necessary. REFER to: Brake Pads (206-03 Front Disc Brake, Removal and Installation),
• The brake pedal eases down slowly	• Air in the brake system	• BLEED the brakes. REFER to: (206-00 Brake System - General Information) Brake System Bleeding (General Procedures), Brake System Pressure Bleeding (General Procedures).
	• Brake Booster • Brake master cylinder	• GO to Pinpoint Test E
• The brake pedal is low or feels spongy	• Brake pads	• INSPECT the brake pads. INSTALL new brake pads as necessary. REFER to: Brake Pads (206-03 Front Disc Brake, Removal and Installation),
	• Brake system	• GO to Pinpoint Test F
• Brake lockup during light brake pedal force	• Brake pads • Brake calipers • Brake load sensor proportioning valve	• GO to Pinpoint Test G
• Excessive/erratic brake pedal travel	• Brake pads	• INSPECT the brake pads. REPAIR or INSTALL new brake pads as necessary. REFER to: Brake Pads (206-03 Front Disc Brake, Removal and Installation),
	• Air in the brake system	• Bleed the brake. REFER to: (206-00 Brake System - General Information) Brake System Bleeding (General Procedures), Brake System Pressure Bleeding (General Procedures).
• Brakes drag	• Brake booster • Seized brake caliper • Parking brake control applied/inoperative/over adjusted • Seized parking brake cables • Seized brake caliper	• GO to Pinpoint Test H

	slide pins	
• Excessive brake pedal effort	• Brake booster	• CHECK the brake booster. Carry out the component test. REPAIR or INSTALL a new brake booster as necessary. REFER to: (206-07 Power Brake Actuation) Brake Booster - RHD 4WD/RHD RWD (Removal and Installation), Brake Booster - RHD 4WD/RHD RWD (Removal and Installation).
	• Brake pads	• INSPECT the brake pads.
	• Brake booster check valve	• GO to Pinpoint Test I
• Slow or incomplete brake pedal return	• Brake booster • Brake master cylinder	• GO to Pinpoint Test J

Pinpoint Tests

PINPOINT TEST A : THE BRAKES PULL OR DRIFT

A1 INSPECT THE BRAKE PADS

- Check the brake pads for grease or fluid on the linings and excessive wear.

Are the brake pad linings contaminated, or worn excessively?

Yes	INSTALL new brake pads. REFER to: Brake Pads (206-03 Front Disc Brake, Removal and Installation),
No	GO to A2

A2 INSPECT THE BRAKE CALIPERS

- Check the brake caliper components for binding, leaking or sticking.

Is there evidence of leaks, or do the pistons and pins bind or stick?

Yes	INSTALL new pistons or pins as necessary. REFER to: Brake Caliper (206-03 Front Disc Brake, Removal and Installation), TEST the system for normal operation.
No	GO to A3

A3 INSPECT THE BRAKE DISCS

- Check the brake discs for damage.

Are the brake discs damaged?

Yes	INSTALL new brake discs. REFER to: Brake Disc (206-03 Front Disc Brake, Removal and Installation),
No	GO to A4

A4 CHECK THE VEHICLE WHEEL ALIGNMENT

- Check the vehicle wheel alignment.

Is the wheel alignment within specification?

Yes	Vehicle is OK. VERIFY the customer concern.

No	ADJUST the wheel alignment as necessary. REFER to: (204-00 Suspension System - General Information) Specifications (Specifications). TEST the system for normal operation.

PINPOINT TEST B : THE RED BRAKE WARNING INDICATOR IS ALWAYS ON

B1 CHECK THE RED BRAKE WARNING INDICATOR

- Ignition ON.

Is the red brake warning indicator on?

Yes	GO to B2
No	Vehicle is OK. VERIFY the customer concern.

B2 CHECK THE AMBER ABS WARNING INDICATOR

- Ignition ON.

Is the amber ABS warning indicator on?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	GO to B3

B3 CHECK THE PARKING BRAKE

- Check the parking brake is fully released.

Does the red brake warning indicator go out?

Yes	Vehicle is OK. TEST the system for normal operation.
No	GO to B4

B4 CHECK THE PARKING BRAKE SWITCH FOR SHORT TO GROUND

- Ignition OFF.
- Disconnect Parking Brake Switch C306.
- Ignition ON.

Does the red brake warning indicator go out?

Yes	INSTALL a new parking brake warning indicator switch. TEST the system for normal operation.
No	GO to B5

B5 CHECK THE BRAKE FLUID LEVEL

- Check the brake fluid level in the brake fluid reservoir.

Is the brake fluid level within specification?

Yes	GO to B6
No	FILL the brake fluid reservoir to the MAX mark.

B6 CHECK THE LOW BRAKE FLUID WARNING INDICATOR SWITCH FOR SHORT TO GROUND

- Disconnect Low Brake Fluid Warning Indicator Switch C157 LHD, C124 RHD.

Does the red brake warning indicator go out?

Yes	INSTALL a new low brake fluid warning indicator switch. TEST the system for normal operation.
No	GO to B7

B7 CHECK LOW BRAKE FLUID SIGNAL CIRCUIT FOR SHORT TO GROUND

- Ignition OFF.
- Disconnect BCM C2280A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280A-28	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). TEST the system for normal operation.
No	REPAIR circuit. TEST the system for normal operation.

PINPOINT TEST C : VIBRATION WHEN BRAKES ARE APPLIED

C1 ROAD TEST THE VEHICLE

- Road test the vehicle between 40-80 km/h (25-50 mph) without depressing the brakes.

Is a vibration present?

Yes	TEST for noise, vibration and harshness. REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness, Diagnosis and Testing). REPEAT the road test if necessary.
No	GO to C2

C2 CHECK FOR REAR BRAKE VIBRATION

- Road test the vehicle between 40-80 km/h (25-50 mph) with medium application on the parking brake control only.

Is a vibration present?

Yes	CHECK the brake rotors and brake pads for excessive wear. INSTALL new brake rotors or brake pads as necessary. REFER to: Brake Pads (206-03 Front Disc Brake, Removal and Installation), TEST the system for normal operation.
No	GO to C3

C3 CHECK FOR FRONT BRAKE VIBRATION

- Road test the vehicle between 40-80 km/h (25-50 mph) with light and medium application on the brake pedal.

Is a vibration present?

Yes	CHECK the brake rotors and brake pads for excessive wear. INSTALL new brake rotors or brake pads as necessary. REFER to: Brake Pads (206-03 Front Disc Brake, Removal and Installation), TEST the system for normal operation.
No	Vehicle is OK. VERIFY the customer concern.

PINPOINT TEST D : THE PEDAL GOES DOWN FAST

D1 CHECK THE BRAKE PEDAL EFFORT

- Road test the vehicle and depress the brake pedal.

Is the brake pedal effort OK?

Yes	Vehicle is OK. VERIFY the customer concern.
No	GO to D2

D2 CHECK THE BRAKE FLUID LEVEL

- Check the brake fluid level in the brake fluid reservoir.

Is the brake fluid level between the MAX and MIN mark?

Yes	GO to D3
No	INSPECT the brake fluid reservoir sealing points. For additional information, refer to the procedure Brake Master Cylinder component test in this procedure. ADD brake fluid and BLEED the brake system. REFER to: (206-00 Brake System - General Information) Brake System Bleeding (General Procedures), Brake System Pressure Bleeding (General Procedures). INSPECT the brake system for further leaks. TEST the system for normal operation.

D3 CHECK THE BRAKE PEDAL HEIGHT - PRESSURIZE THE SYSTEM

- Pump the brake pedal rapidly five times and hold in the depressed position.

Does the brake pedal height build up and then hold?

Yes	BLEED the brake system. REFER to: (206-00 Brake System - General Information) Brake System Bleeding (General Procedures), Brake System Pressure Bleeding (General Procedures). TEST the system for normal operation. ROAD TEST as necessary. REFER to: Road/Roller Testing (100-00 General Information, Description and Operation).
No	GO to D4

D4 CHECK THE BRAKE SYSTEM FOR LEAKS

- Inspect for external brake system leaks. For additional information, refer to the procedure Brake Master Cylinder component test in this section.

Are leaks found?

Yes	REPAIR as necessary. ADD brake fluid and BLEED the brake system. REFER to: (206-00 Brake System - General Information) Brake System Bleeding (General Procedures), Brake System Pressure Bleeding (General Procedures). TEST the system for normal operation.
No	GO to D5

D5 CHECK BRAKE MASTER CYLINDER BYPASS CONDITION

- Test for brake master cylinder bypass condition. For additional information, refer to the procedure Brake Master Cylinder component test in this section.

Are any concerns found?

Yes	INSTALL a new brake master cylinder. REFER to: (206-06 Hydraulic Brake Actuation) Brake Master Cylinder - RHD 4WD/RHD RWD (Removal and Installation), Brake Master Cylinder - RHD 4WD/RHD RWD (Removal and Installation).
No	System is OK.

PINPOINT TEST E : THE PEDAL EASES DOWN SLOWLY

E1 CHECK THE BRAKE BOOSTER

- With the engine running, apply and release the brake pedal three times. Slowly apply the brake pedal.

Does the brake pedal continue to gradually apply before holding?

Yes	System is OK. This is a characteristic of a tandem type brake booster.
No	GO to E2

E2 CHECK THE BRAKE PEDAL OPERATION

- Check if the condition occurs during actual stopping application by depressing the brake pedal while the vehicle is moving.

Does the condition occur when the vehicle is moving?

Yes	GO to E3
No	GO to E4

E3 CHECK THE BRAKE SYSTEM FOR LEAKS

- Check for external brake system leaks. For additional information, REFER to the procedure Brake Master Cylinder component test in this section.

Are leaks found?

Yes	REPAIR as necessary. ADD brake fluid and BLEED the brake system. REFER to: (206-00 Brake System - General Information) Brake System Bleeding (General Procedures), Brake System Pressure Bleeding (General Procedures). TEST the system for normal operation.
No	GO to E4

E4 CHECK THE BRAKE MASTER CYLINDER BYPASS CONDITION

- Test the brake master cylinder bypass condition. For additional information, REFER to the procedure Brake Master Cylinder component test in this section.

Are any concerns found?

Yes	INSTALL a new brake master cylinder. REFER to: (206-06 Hydraulic Brake Actuation) Brake Master Cylinder - RHD 4WD/RHD RWD (Removal and Installation), Brake Master Cylinder - RHD 4WD/RHD RWD (Removal and Installation). TEST the system for normal operation.
No	System is OK.

PINPOINT TEST F : THE PEDAL IS LOW OR FEELS SPONGY

F1 CHECK FOR SPONGY BRAKE PEDAL FEEL

- Road test the vehicle and depress the brake pedal.

Is the brake pedal effort normal?

Yes	Vehicle is OK. VERIFY the customer concern.
No	GO to F2

F2 CHECK BRAKE PEDAL RESERVE

NOTE: *The increased resistance may feel like the brake pedal has bottomed out.*

- Start the engine.
- Engine at idle.
- Pump the brake pedal lightly three or four times.
- Wait 15 seconds for the vacuum to replenish.
- Depress the brake pedal until it stops moving downwards or an increased resistance to the brake pedal travel occurs.
- Hold the brake pedal in the depressed position while increasing the engine speed to 2000 rpm.
- Release the accelerator pedal.

Does the brake pedal move downwards as the engine speed returns to idle?

Yes	GO to F3
No	CHECK the vacuum to the brake booster. For additional information, REFER to the procedure Brake Booster component test in this procedure.

F3 CHECK THE BRAKE FLUID LEVEL

- Check the brake fluid reservoir fluid level.

Is the brake fluid level between the MAX and MIN mark?

Yes	BLEED the brake system. REFER to: (206-00 Brake System - General Information) Brake System Bleeding (General Procedures), Brake System Pressure Bleeding (General Procedures). TEST the system for normal operation.
No	CHECK the brake fluid reservoir sealing points. For additional information, REFER to the procedure Brake Master Cylinder component test in this procedure. ADD fluid and BLEED the brake system. REFER to: (206-00 Brake System - General Information) Brake System Bleeding (General Procedures), Brake System Pressure Bleeding (General Procedures).

	TEST the system for normal operation. ROAD TEST as necessary. REFER to: Road/Roller Testing (100-00 General Information, Description and Operation).

PINPOINT TEST G : BRAKE LOCKUP DURING LIGHT BRAKE PEDAL FORCE

G1 TEST BRAKE LOCKUP

- Road test the vehicle and depress the brake pedal lightly.

Do the rear brakes lockup?

Yes	GO to G2
No	Vehicle is OK. VERIFY the customer concern.

G2 INSPECT THE BRAKE PADS

- Inspect the brake pads for grease or fluid on the linings and wear concerns, correct installation, damage, correct size and type.

Are any concerns found?

Yes	INSTALL new brake pads. REFER to: Brake Pads (206-03 Front Disc Brake, Removal and Installation), TEST the system for normal operation. ROAD TEST as necessary.
No	GO to G3

G3 CHECK THE BRAKE LOAD SENSOR PROPORTIONING VALVE

- Check the brake load sensor proportioning valve for correct installation and adjustment.

Is the brake load sensor proportioning valve correctly adjusted?

Yes	INSTALL a new brake load sensor proportioning valve. TEST the system for normal operation.
No	ADJUST the brake load sensor proportioning valve.

PINPOINT TEST H : BRAKE DRAG

H1 ROAD TEST THE VEHICLE

- Road test the vehicle and apply the brakes.

Are the brakes functioning correctly?

Yes	Vehicle is OK. VERIFY the customer condition.
No	INSPECT individual brake calipers and INSTALL brake calipers as necessary. REFER to: Brake Caliper (206-03 Front Disc Brake, Removal and Installation), GO to H2

H2 CHECK THE BRAKE BOOSTER

- Check the brake booster actuating rod alignment and travel.

Is the actuating rod OK?

Yes	Vehicle is OK. VERIFY the customer condition.
No	INSTALL a new brake booster. REFER to: (206-07 Power Brake Actuation) Brake Booster - RHD 4WD/RHD RWD (Removal and Installation), Brake Booster - RHD 4WD/RHD RWD (Removal and Installation). TEST the system for normal operation.

PINPOINT TEST I : EXCESSIVE BRAKE PEDAL EFFORT

I1 CHECK THE VACUUM

- Disconnect the vacuum hose from the brake booster.
- Connect the vacuum/pressure tester to the vacuum hose.
- Start the engine.
- Run the engine at normal operating temperature.
- Record the vacuum reading.

Is the vacuum reading 40.5kPa (12in-Hg)?

Yes	GO to I2
No	LOCATE and REPAIR the source of low vacuum. TEST the system for normal operation.

I2 INSPECT THE VACUUM SYSTEM

- Ignition OFF.
- Reconnect the vacuum hose.
- Inspect the brake booster, rubber grommet, and all vacuum hoses for cracks, holes, bad connections, or missing clamps.
- Pump the brake pedal five times to exhaust the vacuum and hold in the depressed position.

Does the brake pedal move down when the engine is started?

Yes	Vacuum system is OK.
No	GO to I3

I3 CHECK THE BRAKE BOOSTER CHECK VALVE

- Check the brake booster check valve. For additional information, REFER to the procedure Brake Booster component test in this section.

Is the brake booster check valve OK?

Yes	CHECK the brake booster. For additional information, REFER to the procedure Brake Booster component Test in this section. INSTALL a new brake booster as necessary. REFER to: (206-07 Power Brake Actuation) Brake Booster - RHD 4WD/RHD RWD (Removal and Installation), Brake Booster - RHD 4WD/RHD RWD (Removal and Installation). TEST the system for normal operation.
No	INSTALL a new brake booster check valve. TEST the system for normal operation.

PINPOINT TEST J : SLOW OR INCOMPLETE BRAKE PEDAL RETURN

J1 CHECK THE BRAKE PEDAL RETURN

- Start the engine.
- Run the engine at fast idle while making several brake applications.
- Pull the brake pedal rearward with approximately 44.5 N (10 lb) of force.
- Release the brake pedal and measure the pedal travel. From the floor pan to the pedal rubber.

- Make a hard brake application.
- Release the brake pedal and measure the brake pedal travel. The brake pedal should return to its original position.

Does the brake pedal return to its original position?

Yes	Vehicle is OK. VERIFY the customer concern.
No	GO to J2

J2 CHECK FOR BRAKE PEDAL BINDING

- Check the brake pedal to make sure it is operating freely.

Is the brake pedal operating freely?

Yes	INSTALL a new brake booster. REFER to: (206-07 Power Brake Actuation) Brake Booster - RHD 4WD/RHD RWD (Removal and Installation), Brake Booster - RHD 4WD/RHD RWD (Removal and Installation). TEST the system for normal operation.
No	REPAIR or INSTALL new brake pedal bushings. REFER to: Brake Pedal and Bracket (206-06 Hydraulic Brake Actuation, Removal and Installation). TEST the system for normal operation.

Component Tests

Brake Booster

1. Inspect all hoses and connections. All unused vacuum connectors should be capped. Hoses and their connections should be correctly secured and in good condition with no holes and no collapsed areas. Inspect the brake booster check valve for damage.

2. Check the hydraulic brake system for leaks or low fluid.

3. With the transmission in PARK (automatic transmission), stop the engine and operate the parking brake. Operate the brake pedal several times to exhaust all vacuum in the system.

4. With the engine turned OFF and all vacuum in the system exhausted, operate the brake pedal and hold it down. Start the engine. If the vacuum system is operating, the brake pedal will tend to move downward under constant foot pressure. If no motion is felt, the vacuum booster system is not functioning.

5. Remove the vacuum hose from the brake booster. Manifold vacuum should be available at the brake booster end of the hose with the engine at idle speed and the transmission in PARK or NEUTRAL. Make sure that all unused vacuum outlets are correctly capped, hose connectors are correctly secured and vacuum hoses are in good condition. When it is established that manifold vacuum is available to the brake booster, connect the vacuum hose to the brake booster and repeat Step 3. If no downward movement of the brake pedal is felt, the vacuum booster system is not functioning.

6. Run the engine for a minimum of 10 seconds at fast idle. Stop the engine and let the vehicle stand for 10 minutes. Then, operate the brake pedal with approximately 89 Nm (20 lb) of force. The pedal feel (brake applications) should be the same as noted with the engine running. If the brake pedal feels hard (no power assist), install a new check valve and then repeat the testing. If the brake pedal stills feels hard, install a new brake booster. If the brake pedal movement feels spongy, bleed the brake system. REFER to: (206-00 Brake System - General Information)
   Brake System Bleeding (General Procedures),
   Brake System Pressure Bleeding (General Procedures).

Brake Master Cylinder

NOTE: *Before carrying out any diagnosis, make sure the brake system warning indicator is functional.*

Usually, the first and strongest indicator of anything wrong in the brake system is a feeling through the brake pedal. In

diagnosing the condition of the brake master cylinder, check brake pedal feel as evidence of a brake concern.

Check for brake warning indicator illumination and the brake fluid level in the brake fluid reservoir.

Normal Conditions

The following conditions are considered normal and are not indications that the brake master cylinder is in need of repair.

1. New brake systems are not designed to produce as hard a pedal effort as in the past. Complaints of light pedal efforts should be compared to pedal efforts of another vehicle, same model and year.

2. During normal operation of the brake master cylinder, the brake fluid level in the reservoir will rise during brake application and fall during release. The net brake fluid level (after brake application and release) will remain unchanged.

3. A trace of brake fluid exists on the brake booster shell below the master cylinder mounting flange. This results from the normal lubricating action of the master cylinder bore end seal.

4. Brake fluid level will fall with brake pad wear.

Abnormal Conditions

Changes in brake pedal feel or travel are indicators that something could be wrong in the brake system. The diagnostic procedure and techniques are brake pedal feel, brake warning indicator illumination and low brake fluid level as indicators in diagnosing brake system concerns. The following conditions are considered abnormal and indicate that the brake master cylinder is in need of repair.

5. Brake pedal goes down fast. This could be caused by an external or internal leak.

6. Brake pedal eases down slowly. This could be caused by an external or internal leak.

7. Brake pedal is low or feels spongy. This condition may be caused by no fluid in the brake master cylinder reservoir, brake fluid reservoir cap vent holes blocked or air in the hydraulic system.

8. Brake pedal effort is excessive. This may be caused by a bind or obstruction in pedal or linkage, blocked fluid control valve or insufficient brake booster vacuum.

9. Rear brakes lock up during light pedal force. This may be caused by grease or fluid on brake pads, damaged brake pads and linings, incorrectly adjusted parking brakes, damaged, contaminated brake pressure control valve.

10. Brake pedal effort is erratic. This condition could be caused by the brake booster being in operative, extreme brake caliper piston knock back or incorrectly installed brake pads.

11. Brake warning indicator is always ON. This may be caused by low fluid level, ignition wire routing too close to the fluid level indicator, or float assembly damage.

Bypass Condition Test

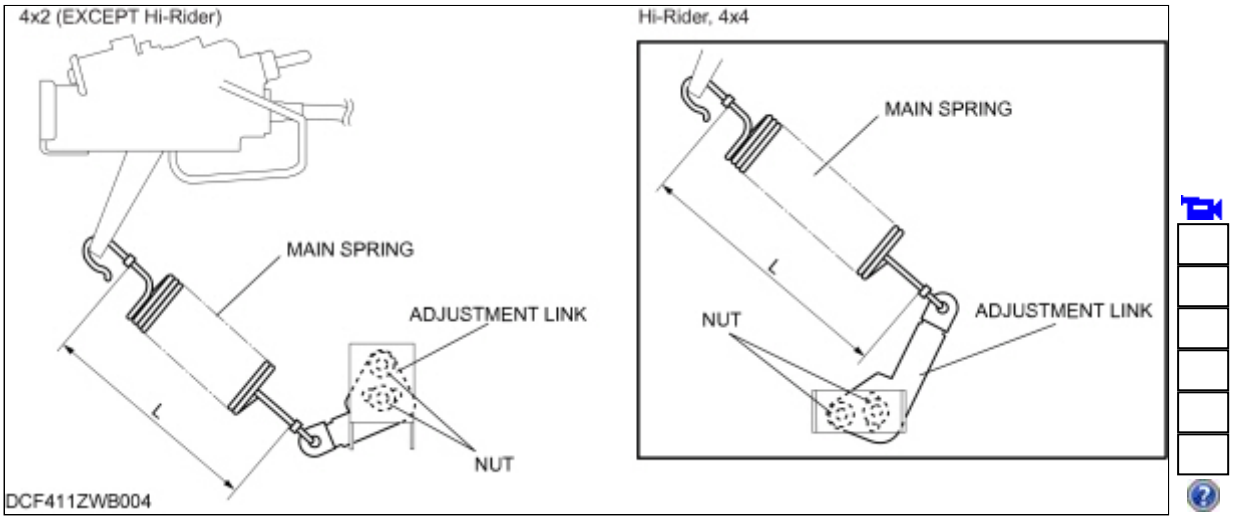
12. Check the brake fluid level in the brake fluid reservoir. Fill the brake fluid reservoir to the MAX mark if low or empty.

13. Observe the brake fluid level in the brake fluid reservoir. If after several brake applications, the brake fluid level remains the same, measure the wheel turning torque required to rotate the wheels with rearward with brakes applied as follows:
    1. Place the transmission in NEUTRAL and raise and support the vehicle.
       REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

    2. Operate the brakes with a minimum of 445 N (100 lb) and hold for approximately 15 seconds. With the brakes still applied, exert torque on the front wheels to 102 Nm (75 lb-ft). If either wheel rotates, install a new brake master cylinder.

Non-Pressure Leaks

Any empty brake fluid reservoir condition may be the result of two types of non-pressure external leaks.



- Type 1: An external leak may occur at the brake fluid reservoir cap because of incorrect positioning of the gasket and cap. Reposition the gasket and cap.
- Type 2: An external leak may occur at the brake fluid reservoir mounting seals, install new seals.

Copyright © 2016 Ford Motor Company

Brake Load Sensor Proportioning Valve Adjustment

1. Place the unloaded vehicle on level ground. Unloaded: Fuel tank is full. Jack and tools are in designated position.
2. A change of 5 mm (0.20 in) in dimension L results in a change of the following.

Type	Change (kPa {kgf/cm2, psl})
4x2 (except Hi-Rider) Without 4W-ABS	625 (8.7, 123)
Hi-Rider, 4x4 Without 4W-ABS	510 (11, 154)

3. Adjust main spring dimension L between the LSPV and the adjustment link loosening and repositioning the LSPV.
   · Decrease dimension L if the fluid pressure is low.
   · Increase dimension L if the fluid pressure is high.

Specification Dimension L

Type	Dimension x (mm {in})
4x2 (except Hi-Rider) Without 4W-ABS	166.0—173.0 (5.808—6.082)
Hi-Rider, 4x4 Without 4W-ABS	184.5—191.5 (6.910—7.185)

5. Tightening the nut.
   Specification 11.4—15.6 Nm (1.90—2.59 kgfm, 13.8—18.7 ftlbf).
6. After adjustment, recheck the fluid pressure.
   If not as specified, replace the LSPV as a component.

Brake System Bleeding

General Equipment

Ford diagnostic equipment

Bleeding

All Vehicles

WARNING: Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with the eyes. Wash hands thoroughly after handling. If brake fluid contacts the eyes, flush the eyes for 15 minutes with cold running water. Get medical attention if irritation persists. If taken internally, drink water and induce vomiting. Get medical attention immediately. Failure to follow these instructions may result in personal injury.

NOTICE: If brake fluid is spilt on the paintwork, the affected area must be immediately washed down with cold water.

NOTE: *Make sure that the vehicle is standing on a level surface.*

NOTE: *The system consists of separate circuits for each front and diagonally opposite rear wheel. Each circuit can be bled independently.*

1. **NOTICE: The brake fluid reservoir must remain full with new, clean brake fluid at all times during bleeding.**

   Install the bleed tube to the bleed nipple.
2. Immerse the end of the bleed tube in a bleed jar containing a small quantity of approved brake fluid.
3. Position the bleed jar base at least 300 mm above the bleed nipple to maintain fluid pressure and prevent air leaking past the threads of the bleed nipple.
4. Loosen the rear left bleed nipple by one-half turn.
5. Operate the brake pedal fully (pumping brake fluid and air into the bleed jar) and allow the brake pedal to return to the rest position.
6. **NOTE:** *Rear brakes only.*

   Rapidly operate the parking brake control several times.
7. Fill the brake fluid reservoir to the MAX mark.
8. Continue operating the brake pedal until air-free fluid is being pumped into the bleed jar.
9. With the brake pedal fully depressed tighten the bleed nipple.
10. **NOTICE: Make sure that the bleed nipple cap is installed after bleeding the brake line(s). This will prevent corrosion to the bleed nipple. Failure to follow this instruction may result in the bleed nipple becoming seized.**

    Repeat the procedure for the remaining brake lines in the following order:
    1. Front left.
    2. Front right.
    3. Rear right.

Vehicles with anti-lock brakes

11. **NOTE:** *This step is only necessary when changing the brake fluid to remove the used brake fluid from the hydraulic control unit (HCU).*

    Using Ford diagnostic equipment, bleed the brake system.

Copyright © 2016 Ford Motor Company

Brake System Leak Check

Check

1. **NOTE:** *Brake fluid is water soluble and it is possible that all evidence of fluid leakage has been washed off if the vehicle has been operated in rain or snow.*

   Check the brake fluid level. Add brake fluid as necessary.

2. Apply the brakes several times and make sure the pedal feel is not spongy. If necessary, bleed the brake system.
   For additional information, refer to: Brake System Bleeding.

3. Check the brake fluid level and verify that the fluid level is actually dropping.

4. **NOTE:** *If the brake fluid level drops and no external leak is evident, check for a brake master cylinder bore end seal leak.*

   Locate and correct the external leak.

Brake System Pressure Bleeding

General Equipment

Ford diagnostic equipment
Brake/clutch system pressure bleeder/filler

Bleeding

All vehicles

WARNING: Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with the eyes. Wash hands thoroughly after handling. If brake fluid contacts the eyes, flush the eyes for 15 minutes with cold running water. Get medical attention if irritation persists. If taken internally, drink water and induce vomiting. Get medical attention immediately. Failure to follow these instructions may result in personal injury.

NOTICE: If brake fluid is spilt on the paintwork, the affected area must be immediately washed down with cold water.

NOTE: *Make sure that the vehicle is standing on a level surface.*

NOTE: *The system consists of separate circuits for each front and diagonally opposite rear wheel. Each circuit can be bled independently.*

1. Fill the brake fluid reservoir to the MAX mark.
2. **NOTICE: Make sure that the pressure within the brake system does not exceed 1 bar.**

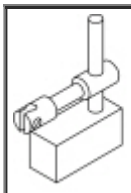
   NOTICE: Make sure that the pressure bleeding equipment is filled with new brake fluid to the correct specification.

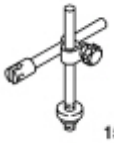
   Using the brake/clutch system pressure bleeder/filler, pressure bleed the system in accordance with the manufacturer's instructions in the following order:
   1. Rear left.
      - Rapidly operate the parking brake control several times.
   2. Front left.
   3. Front right.
   4. Rear right.
      - Rapidly operate the parking brake control several times.

NOTICE: Make sure that the bleed nipple cap is installed after bleeding the brake line(s). This will prevent corrosion to the bleed nipple. Failure to follow this instruction may result in the bleed nipple becoming seized.

3. Fill the brake fluid reservoir to the MAX mark as necessary.

Vehicles with anti-lock brakes





4. **NOTE:** *This step is only necessary when changing the brake fluid to remove the used brake fluid from the hydraulic control unit (HCU).*

   Using Ford diagnostic equipment, bleed the brake system.

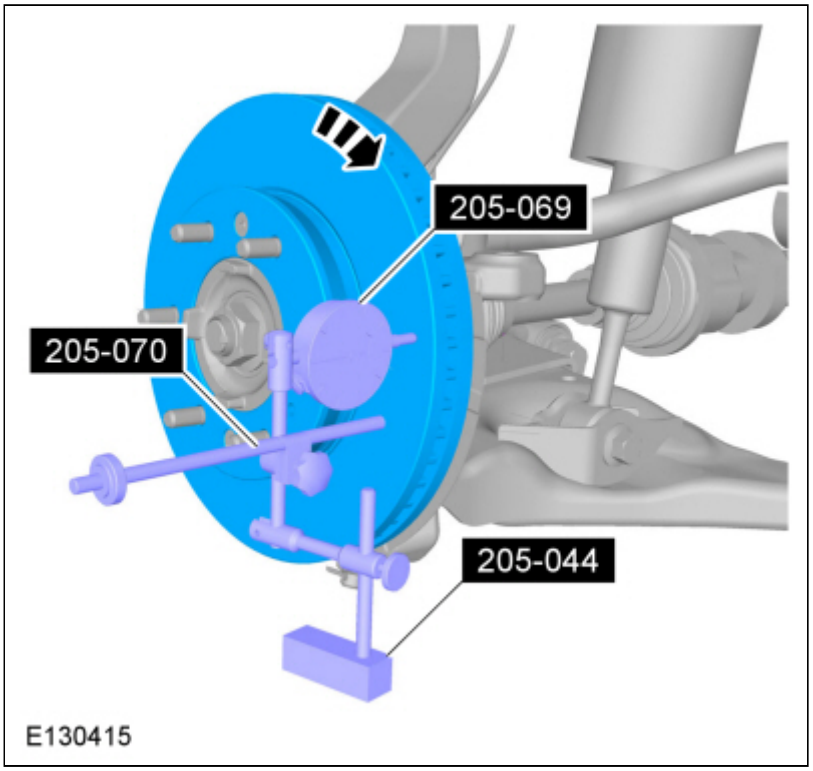
Front Brake Disc Runout Check

Special Tool(s) / General Equipment

 15008	205-044 Holding Fixture, Dial Indicator Gauge
 15046	205-069 Dial Indicator Gauge (Metric)
 15022a	205-070 Holding Fixture, Dial Indicator Gauge
Caliper Gauge	

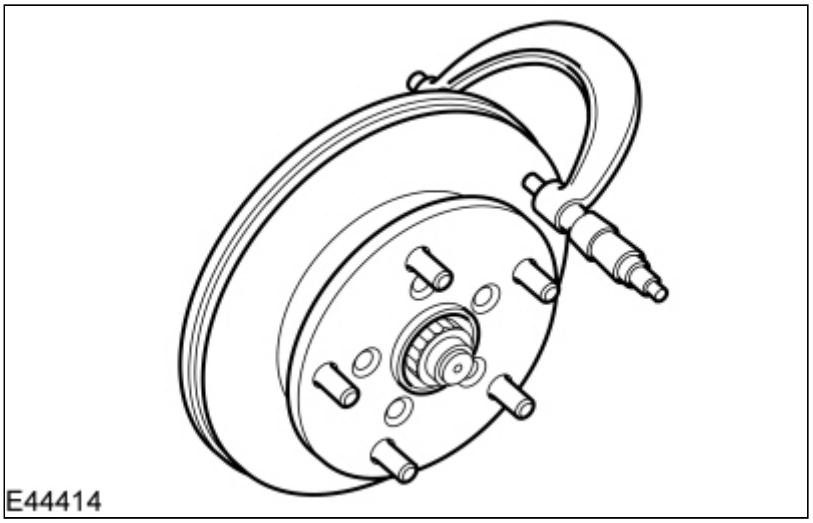
Activation

1. Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).
2. 



3. **NOTE:** *The total dial indicator gauge reading should not exceed specification.*

   Use Special Service Tool: 205-069 Dial Indicator Gauge (Metric). , 205-070 Holding Fixture, Dial Indicator Gauge. , 205-044 Holding Fixture, Dial Indicator Gauge.



4. **NOTE:** *The total dial indicator gauge reading should not exceed specification.*

   Use Special Service Tool: 205-069 Dial Indicator Gauge (Metric). , 205-070 Holding Fixture, Dial Indicator Gauge. , 205-044 Holding Fixture, Dial Indicator Gauge.

5. **NOTE:** *If any of the measurements exceed the run out specification of 0.05 mm or the brake disc thickness variation is more than 0.018 mm, a new brake disc must be installed and the brake disc runout re-checked.*

   Using a suitable micrometer, measure the brake disc thickness at eight positions, 45 degrees apart and approximately 10 mm from the outer edge of the brake disc.
   Use the General Equipment: Caliper Gauge

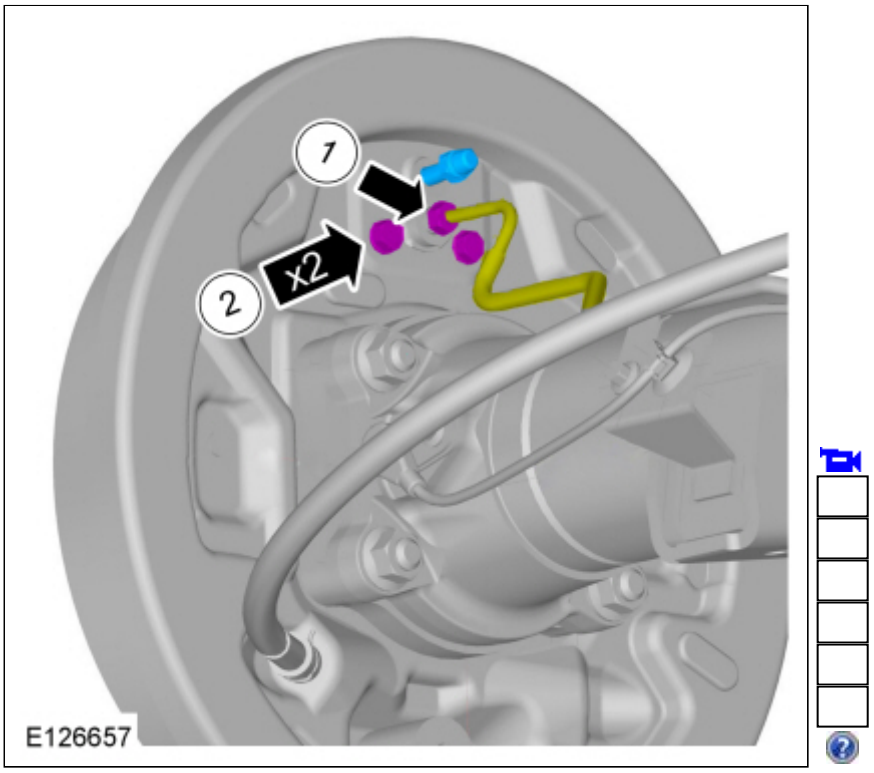
Wheel Cylinder



Base Part Number: 2261

Removal

NOTE: *Removal steps in this procedure may contain installation details.*

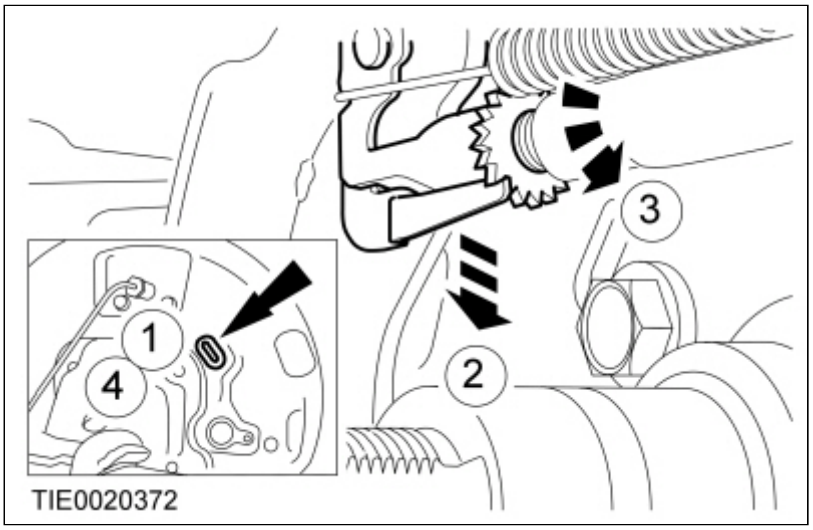
1. Refer to: Brake and Clutch Systems Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Brake Shoes (206-02 Drum Brake, Removal and Installation).

1. *Torque*: 19 Nm
2. *Torque*: 13 Nm

Installation

1. To install, reverse the removal procedure.
2. Refer to: Brake System Bleeding (206-00 Brake System - General Information, General Procedures).

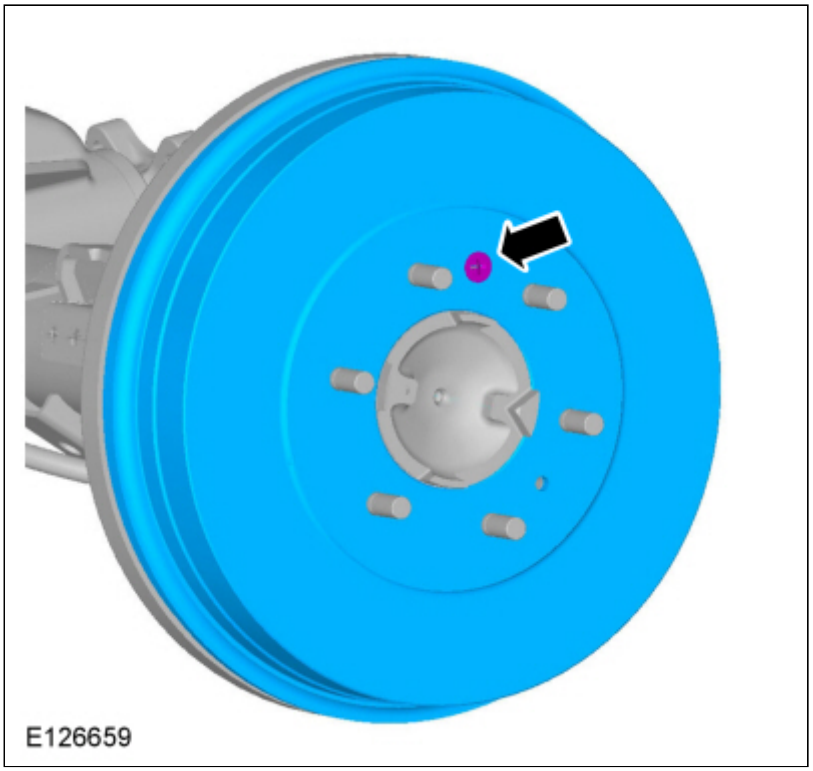
Copyright © 2016 Ford Motor Company



Brake Shoes

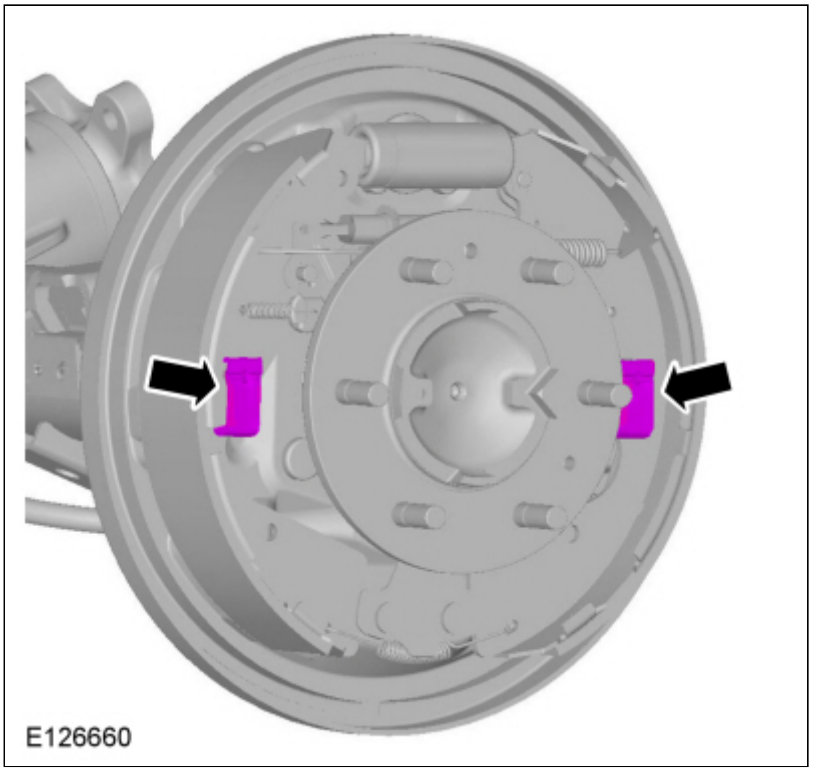
Removal

NOTE: *Removal steps in this procedure may contain installation details.*

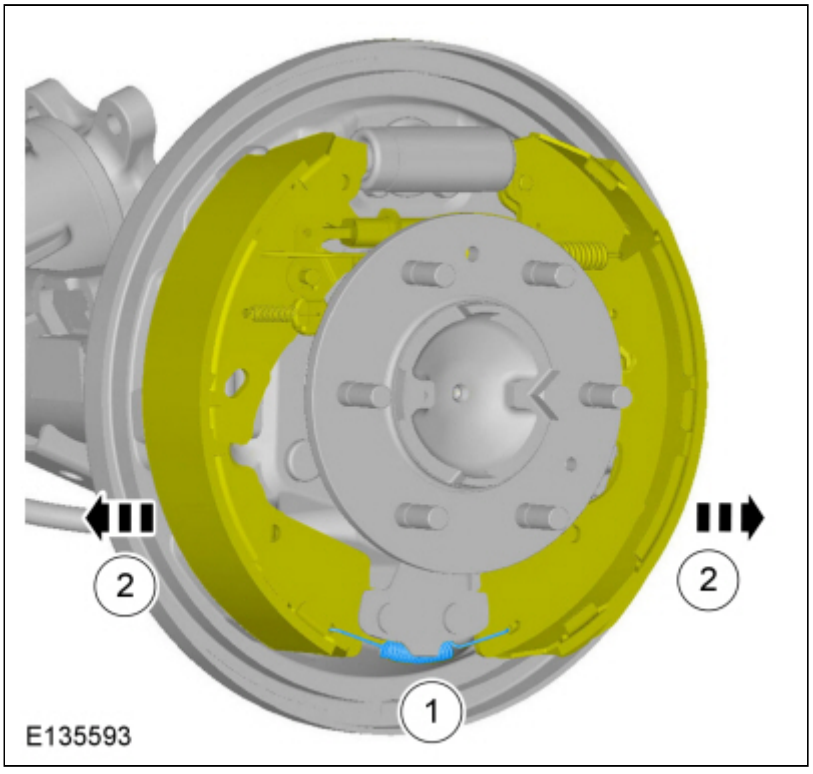


NOTE: *Parking brake lever should be rest position.*

1.

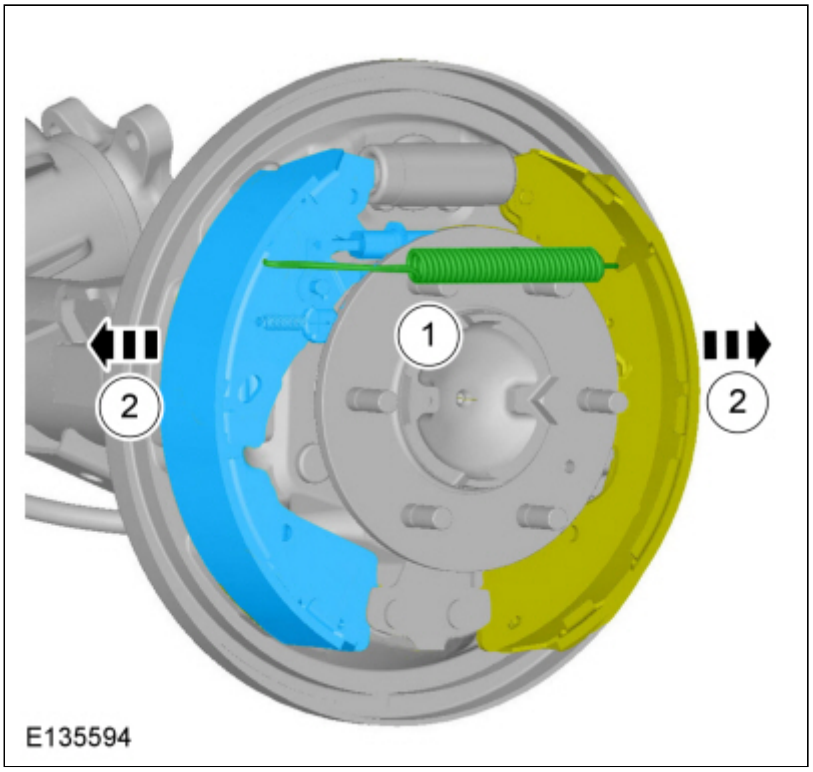


2. Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).

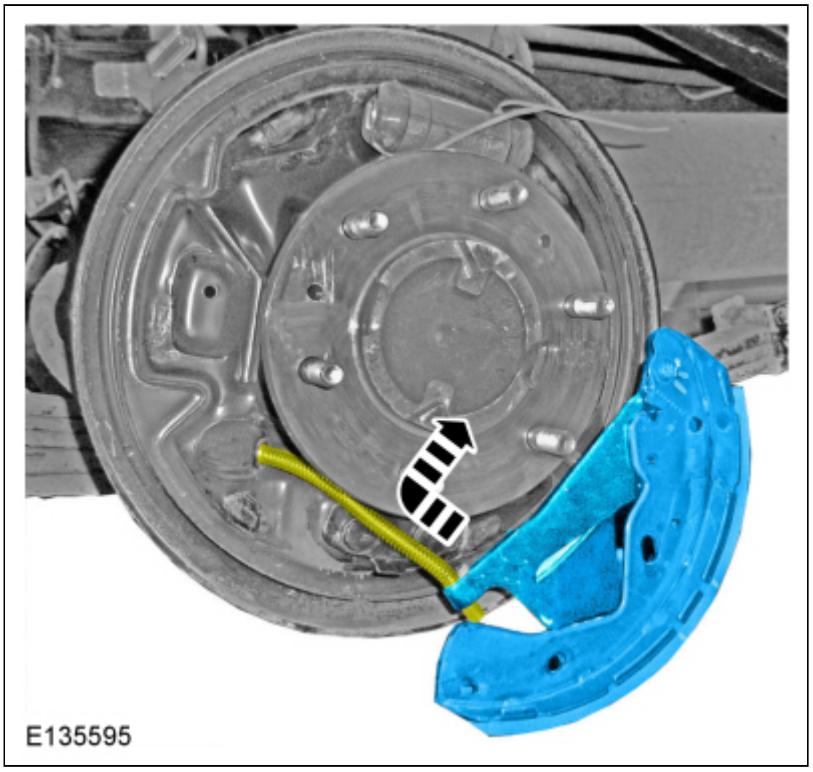


3.

4.

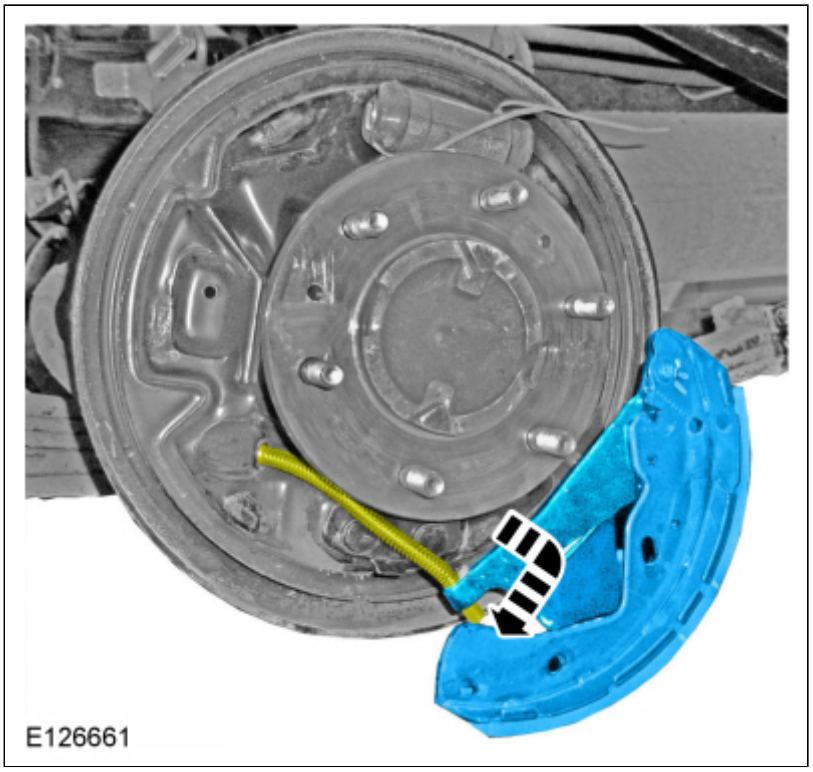


5.

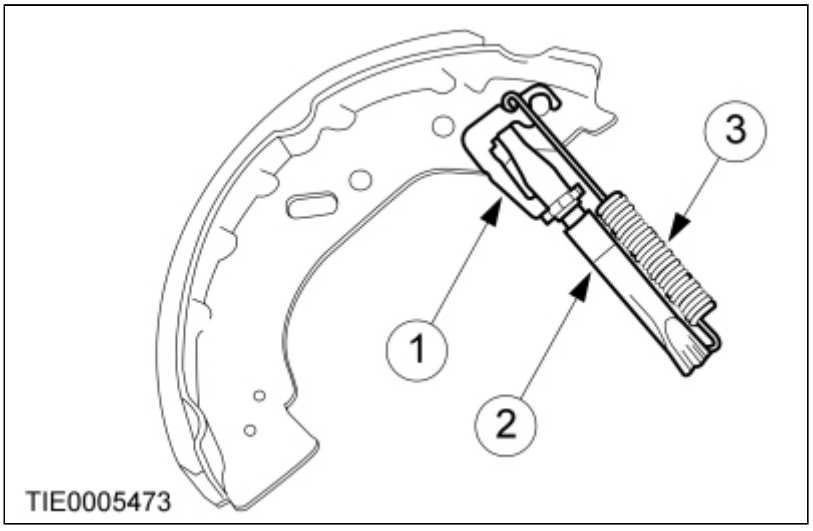


6. Hold the wheel cylinder pistons in place with a plastic band before removal of shoes.

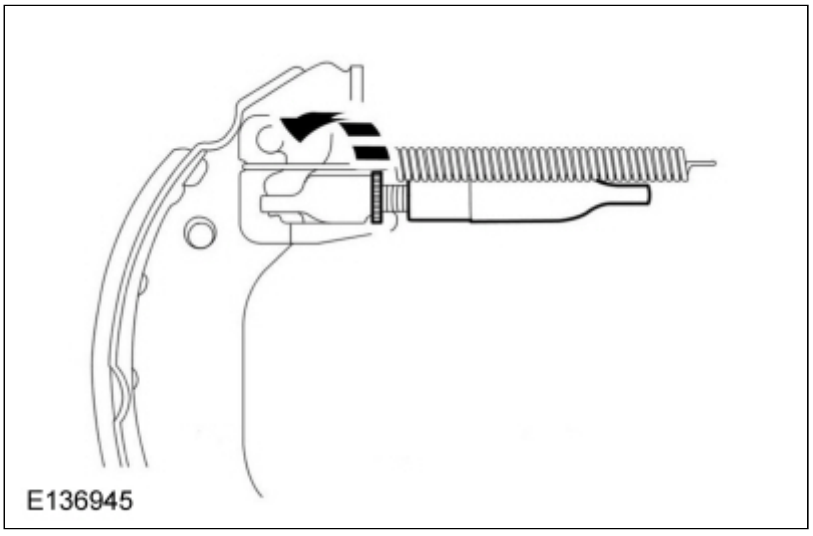
7. **NOTICE: Do not damage the wheel cylinder boots.**



8.



Installation



1.

2.

3. Turn the adjuster on the adjustment strut to adjust the brake shoe until the outer diameter of the brake shoe is as specified.
   Refer to: Specifications (206-00 Brake System - General Information, Specifications).

4. To install, reverse the removal procedure.
5. Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).
6. Depress the brake pedal to adjust the brake shoes.

Brake Pads

Base Part Number: 2001

Special Tool(s) / General Equipment

	206-005 Retractor, Brake Caliper Piston

Materials

Name	Specification
Brake Fluid	WSS-M6C65-A2

Removal

NOTE: *Removal steps in this procedure may contain installation details.*

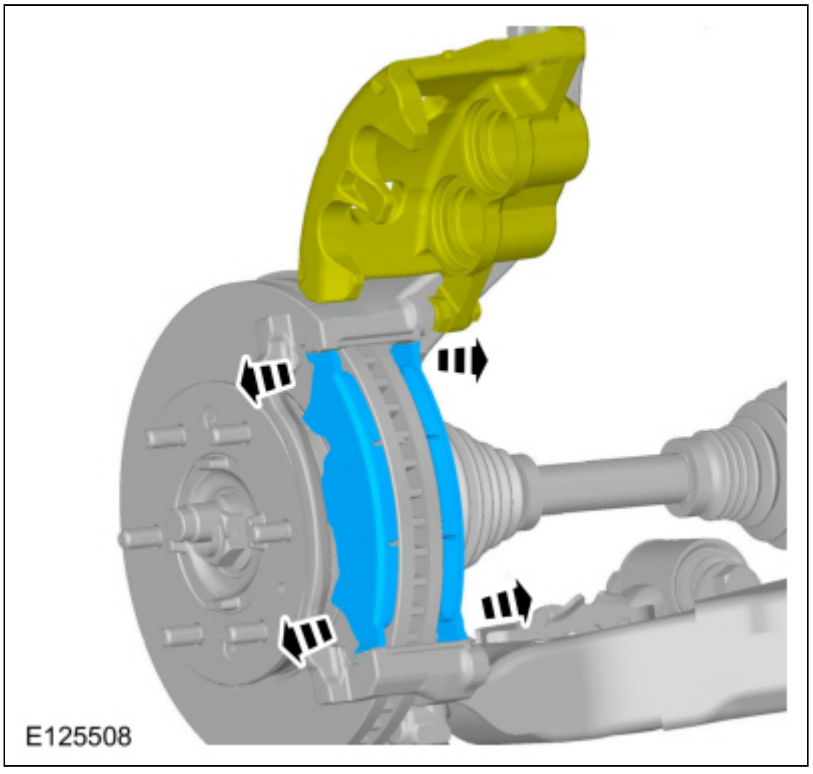
1. **WARNING: Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with eyes. Wash hands thoroughly after handling. If brake fluid contacts eyes, flush eyes with running water for 15 minutes. Get medical attention if irritation persists. If taken internally, drink water and induce vomiting. Get medical attention immediately. Failure to follow these instructions may result in personal injury.**

   NOTICE: Only use the specified material.

   NOTICE: If the brake fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.

   Refer to: Brake and Clutch Systems Health and Safety Precautions (100-00 General Information, Description and Operation).

2. Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).

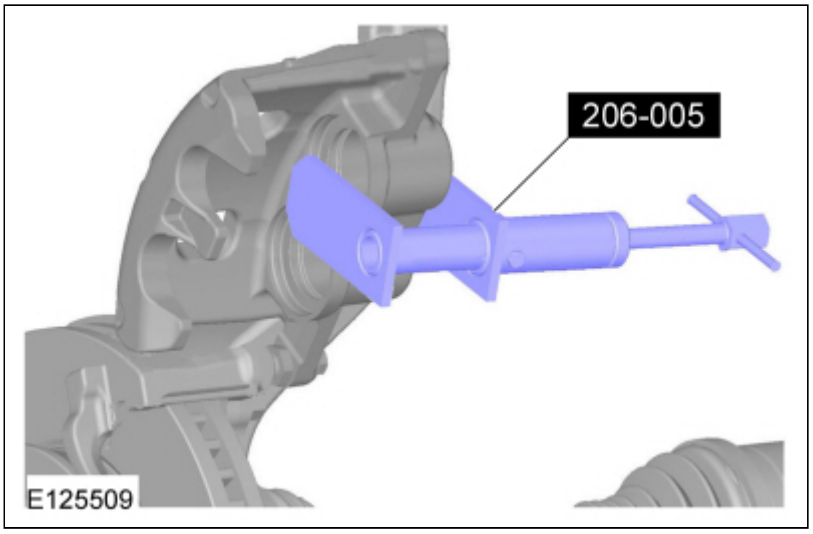


3. **NOTICE: Make sure that no load is placed on the brake hose.**

   NOTICE: Do not pry in the brake caliper sight hole to retract the pistons as this can damage the pistons and boots.

   Torque: 52 Nm

4. **NOTE:** *Note the position of the components before removal.*



5. **NOTICE: Take extra care not to damage the component.**

   NOTE: *Make sure that the brake pad contact points are clean and free of foreign material.*

   NOTE: *Remove the adhesive foil from the rear of the brake pad.*

   Use Special Service Tool: 206-005 Retractor, Brake Caliper Piston.

Installation

1. **NOTICE: Do not allow grease, oil, brake fluid or other contaminants to contact the pad lining material. Do not install contaminated pads.**

   NOTICE: Make sure that the brake hose is not twisted and is correctly located.

   NOTE: *Make sure that the mating faces are clean and free of foreign material.*

2. To install, reverse the removal procedure.

3. **NOTICE: The fluid level must remain between the MAX and MIN marks.**

   Depress the brake pedal, check the brake fluid level in the brake fluid reservoir and top up as necessary with brake fluid.

Parking Brake

Inspection and Verification

1. Verify the customer concern by operating the parking brake system.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
– Parking brake control REFER to: Parking Brake Control (206-05 Parking Brake and Actuation, Removal and Installation). – Cable and conduit REFER to: Parking Brake Rear Cables (206-05 Parking Brake and Actuation, Removal and Installation).	– Parking brake warning circuit. REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the concern is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom Chart

Symptom	Possible Sources	Action
• The parking brake will not apply	• Parking brake control. • Cable and conduit.	• GO to Pinpoint Test A
• The parking brake will not release	• Parking brake control. • Cable and conduit.	• GO to Pinpoint Test B

Pinpoint Tests

PINPOINT TEST A : THE PARKING BRAKE WILL NOT APPLY

A1 CHECK FOR MISADJUSTED REAR PARKING BRAKE CABLE

- Operate the parking brake control several times to adjust the cable.

Does the parking brake now engage correctly?

Yes	Vehicle OK
No	GO to A2

A2 CHECK FOR WORN BRAKE SHOES OR PADS

- Inspect the brake shoes or pads for excessive wear.
  REFER to: Brake Shoes (206-02 Drum Brake, Removal and Installation).
  REFER to: Brake Shoes (206-02 Drum Brake, Removal and Installation).
  REFER to: Brake Pads (206-03 Front Disc Brake, Removal and Installation).

Are the brake shoe linings or brake pads OK?

Yes	GO to A3
No	INSTALL new brake shoes or pads. REFER to: Brake Shoes (206-02 Drum Brake, Removal and Installation). REFER to: Brake Pads (206-03 Front Disc Brake, Removal and Installation). TEST the system for normal operation.

A3 CHECK FOR DAMAGED PARKING BRAKE CABLES

- Inspect the parking brake cables and conduits for damage, rust or fraying.

Are the parking brake cables and conduits OK?

Yes	CHECK for other causes such as loose parking brake control or conventional brake system components.
No	REPAIR or INSTALL cables and conduit as necessary. TEST the system for normal operation.

PINPOINT TEST B : THE PARKING BRAKE WILL NOT RELEASE

B1 CHECK PARKING BRAKE CONTROL

- Raise and support the vehicle on a lift with the parking brake fully applied.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
  - With the aid of another technician, release the parking brake and check the operation of the brake cables and levers.

Did the parking brake release?

Yes	CHECK the other causes such as conventional brake system components. REPAIR or INSTALL new components as necessary.
No	GO to B2

B2 CHECK PARKING BRAKE CABLES

- Loosen the parking brake cable tension.
  - Rotate the rear wheels by hand.

Did the rear wheels turn freely?

Yes	INSTALL a new parking brake control. REFER to: Parking Brake Control (206-05 Parking Brake and Actuation, Removal and Installation). TEST the system for normal operation.
No	GO to B3

B3 CHECK FRONT PARKING BRAKE CABLE

- Disconnect the parking brake front cable and conduit from the rear brake cable and conduit at the equalizer.
  - Rotate the rear wheels by hand.

Did the rear wheels turn freely?

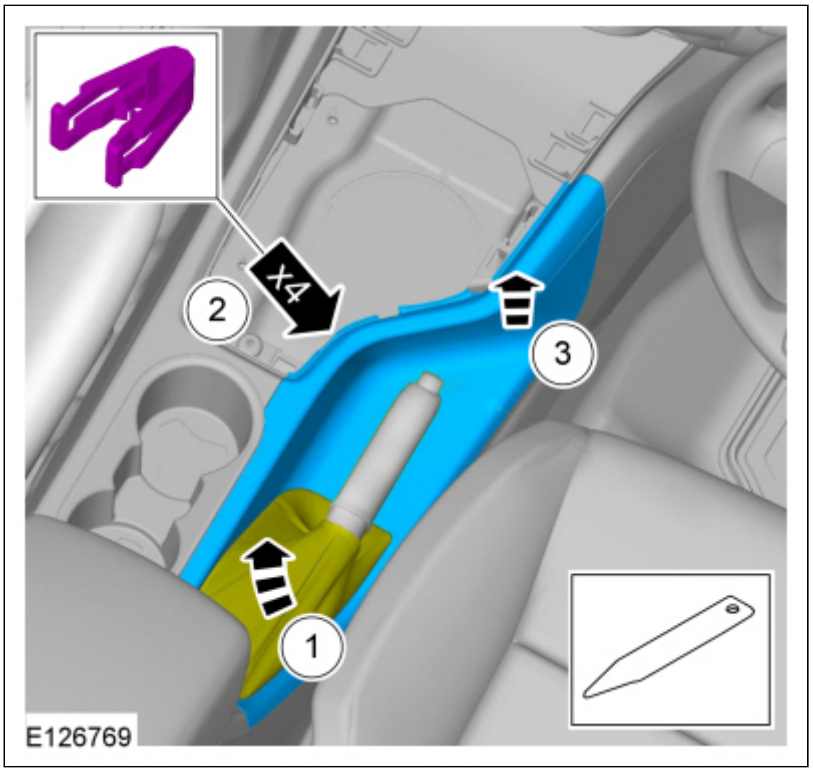
Yes	INSTALL a new front parking brake cable and conduit. REFER to: Parking Brake Rear Cables (206-05 Parking Brake and Actuation, Removal and Installation). TEST the system for normal operation.

No	GO to B4

B4 CHECK REAR PARKING BRAKE CABLES

- Disconnect the parking brake at the rear brakes, one at a time.
  - Rotate the wheel affected by the disconnected parking brake.

Did the wheel turn freely?



Yes	INSTALL a new parking brake control lever on the rear drum brakes or caliper assembly on rear disc brakes. REFER to: Brake Shoes (206-02 Drum Brake, Removal and Installation). REFER to: Brake Caliper (206-03 Front Disc Brake, Removal and Installation). TEST the system for normal operation.
No	REFER to: Brake System (206-00 Brake System - General Information, Diagnosis and Testing).

Parking Brake Cable Adjustment

Base Part Number: 2780

1. Before adjustment, depress the brake pedal several times while the vehicle is moving in reverse.

2. Pull the parking lever two to three times and turn the adjustment nut until the stroke reaches within range.
   - Parking brake lever stroke when pulled at 98 N (10 kgf, 22 lbf) 3-6 notches.

3. After adjustment, pull the parking brake lever one notch and verify that the parking brake warning light illuminates.

4. Verify that the rear brakes do not drag.

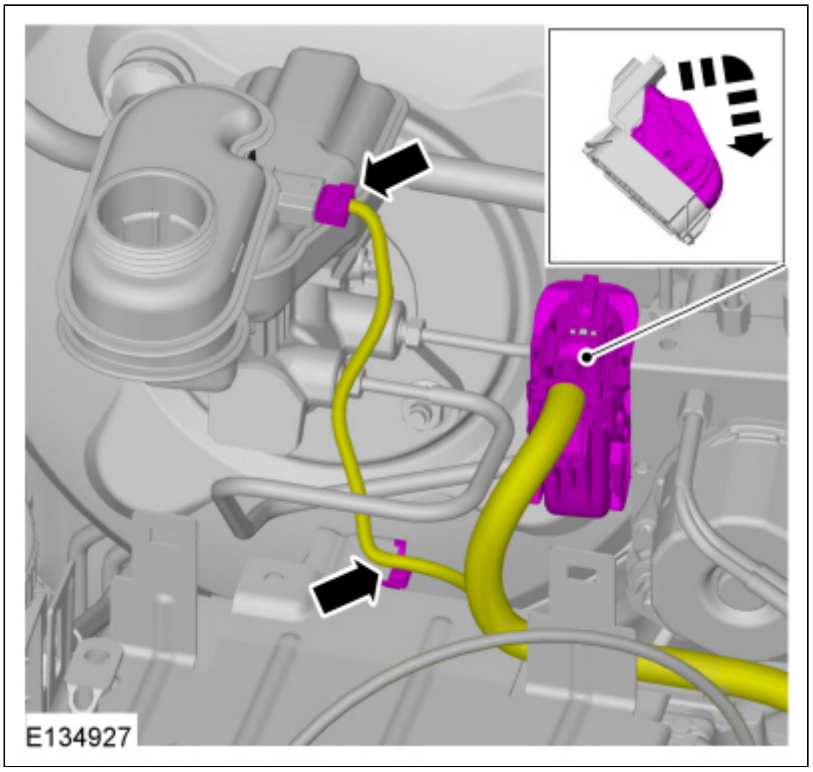
Brake Master Cylinder - LHD 4WD/LHD RWD

Base Part Number: 2A032



Removal

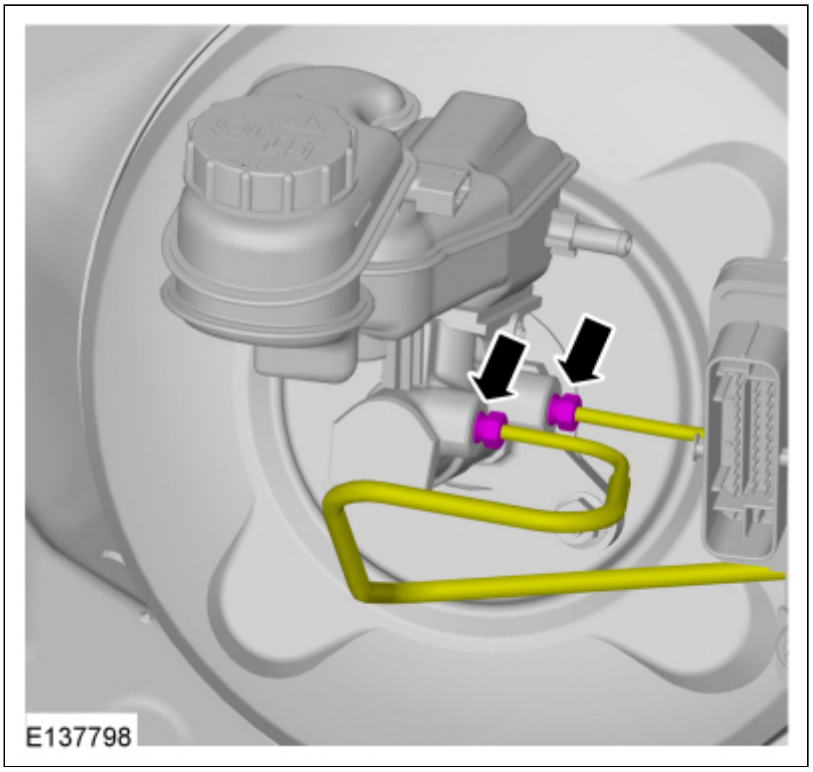
NOTICE: Before removing the master cylinder, relieve the vacuum in the brake booster or the master cylinder O-ring seal may be drawn into the brake booster, causing brake booster failure and increased brake pedal effort.

NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. 

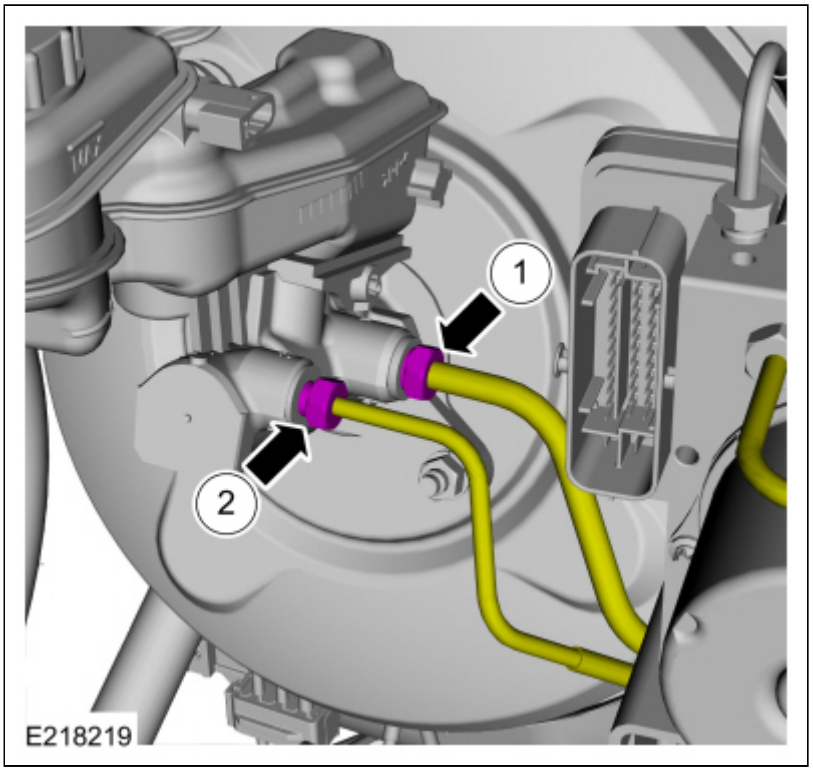
    1. Connect one end of a suitable piece of clear plastic pipe to the brake caliper bleed nipple and place the other end into a suitable container.
    2. Loosen the bleed nipple.
    3. Depress the brake pedal until no more brake fluid comes through the bleed nipple.
    4. Tighten the bleed nipple.
    5. Repeat the draining procedure on the opposite side brake caliper.
4.

Vehicles with manual transmission



5. 

NOTE: *Be prepared to collect escaping fluids.*

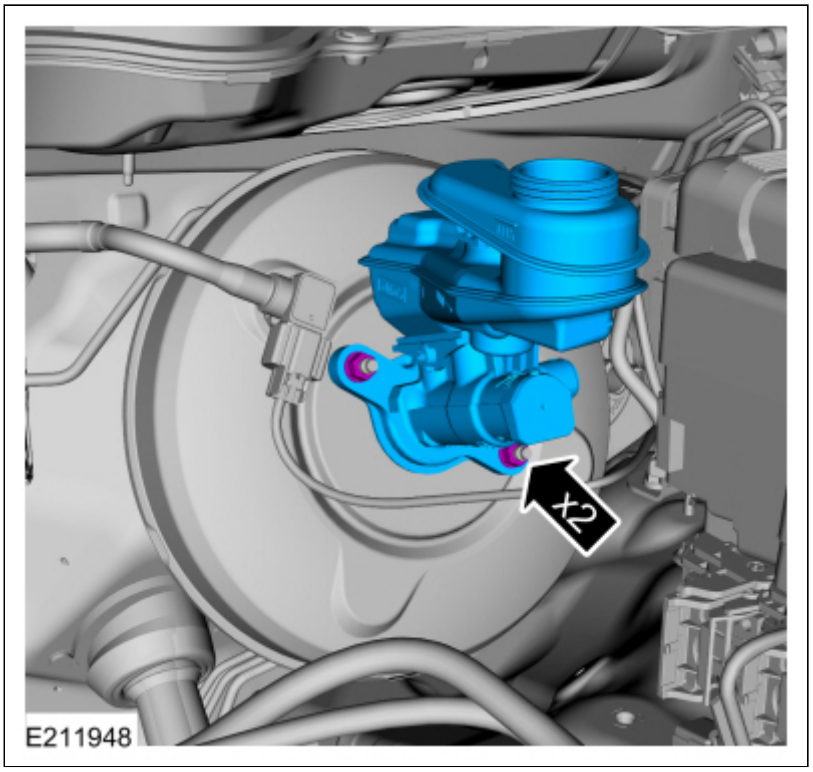


Vehicles With: 4-Channel ABS

6. *Torque*: 17 Nm

Vehicles With: 4-Channel ABS/Stability Assist/Hill Start Assist

1. *Torque*: 28 Nm
2. *Torque*: 23 Nm



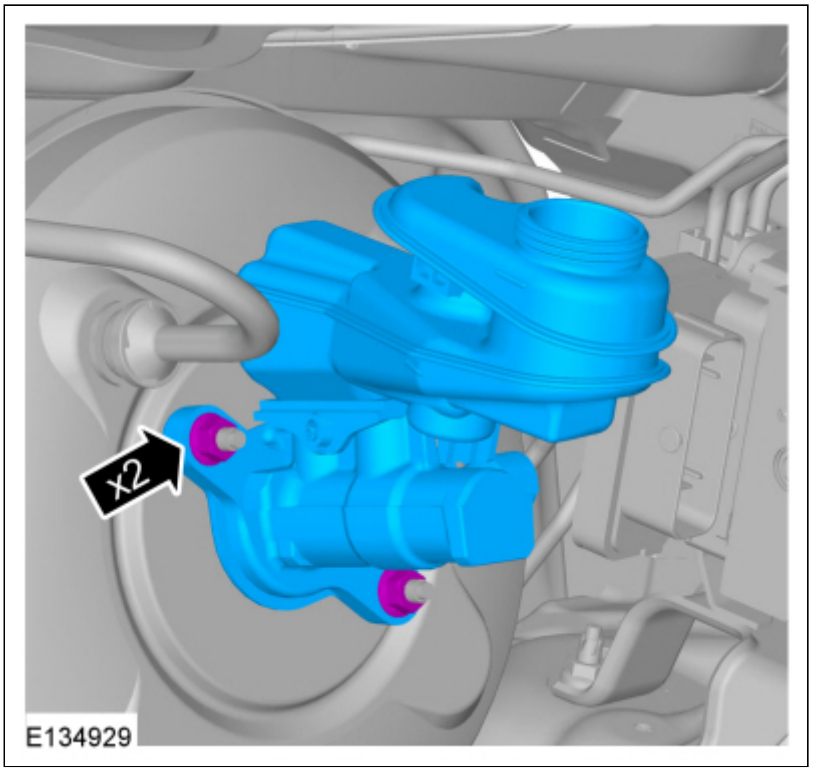
Vehicles With: Auto-Start-Stop

8. **NOTICE: Make sure that all openings are sealed.**

   NOTICE: Take extra care when handling the components.

   NOTE: *Depress the brake pedal 3 to 4 times to release the vacuum from brake booster.*

   Torque: 13 Nm



All vehicles

9. **NOTICE: Make sure that all openings are sealed.**

   NOTICE: Take extra care when handling the components.

   NOTE: *Depress the brake pedal 3 to 4 times to release the vacuum from brake booster.*

   Torque: 13 Nm

Installation

1. Refer to: Brake System Bleeding (206-00 Brake System - General Information, General Procedures).
   Refer to: Brake System Pressure Bleeding (206-00 Brake System - General Information, General Procedures).

2. To install, reverse the removal procedure.

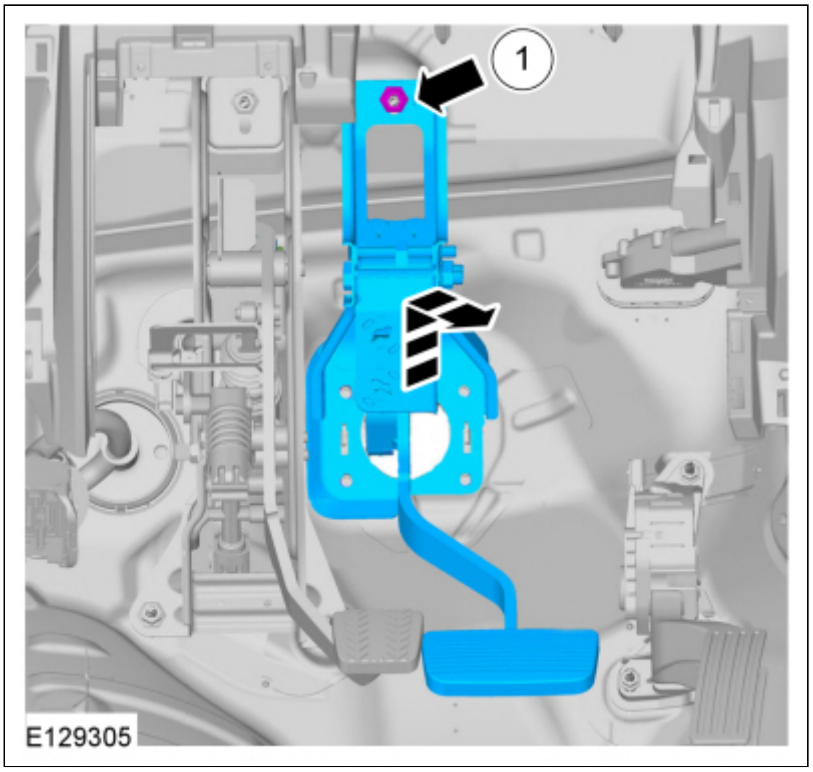
Brake Pedal and Bracket

Base Part Number: 2455



Removal

NOTICE: Do not service the brake pedal or brake booster without first removing the stoplamp switch. This switch must be removed with the brake pedal in the at-rest position. The switch plunger must be compressed for the switch to rotate in the bracket. Attempting to remove the switch when the plunger is extended (during pedal apply) will result in damage to the switch.

NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Brake Booster - RHD 4WD/RHD RWD (206-07 Power Brake Actuation, Removal and Installation).
   Refer to: Brake Booster - LHD 4WD/LHD RWD (206-07 Power Brake Actuation, Removal and Installation).
2. 

3. Torque : 15 Nm

Installation

1. **NOTICE: Make sure that the brake booster push rod is correctly located.**

   NOTICE: An incorrectly set Stop Lamp Switch causes either over-heating brakes in the case of the pedal being pushed down or ABS faults in the case of it being lifted during Stop Lamp Switch installation. To avoid damages to the brake system, remove the Stop Lamp Switch and install with the brake pedal in neutral position.

   To install, reverse the removal procedure.

Anti-Lock Brake System (ABS) and Stability Control - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

Module Network Input Messages - ABS Module

Broadcast Message	Originating Module	Message Purpose
Accelerator pedal position	PCM	This message is sent to the GWM and then to the ABS module. The ABS module uses accelerator pedal position information for correct operation of the ABS, traction control and ESC.
Adaptive cruise control	CCM	This message is used to request vehicle deceleration by the ABS module to maintain the distance gap set by the driver for the adaptive cruise control system.

braking deceleration		
Adaptive cruise control brake torque request	CCM	This message informs the ABS module of the amount of braking required to maintain the distance gap set by the driver for the adaptive cruise control system.
Adaptive cruise control precharge request	CCM	This message is used to request precharging of the hydraulic brake system in preparation of a severe braking event.
4WD locking status	TCCM	This message is sent to the GWM and then to the ABS module. The ABS module uses 4WD information for correct operation of the ABS and stability control systems.
Brake on/off switch	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module the driver has applied the brake pedal. This message is also used by the ABS module to check the brake pressure sensor located inside the HCU.
Brake pedal applied	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module the driver has applied the brake pedal. This message is also used by the ABS module to check the brake pressure sensor located inside the HCU.
Collision mitigation by braking deceleration	CCM	This message is used to request vehicle deceleration by the ABS module for the collision avoidance system.
Collision mitigation by braking precharge request	CCM	This message is used to request precharging of the hydraulic brake system in preparation of a severe braking event.
Door ajar status	BCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current door ajar status. There is a separate message for each door. The ABS module resets the parameters used for the ESC function when a door is opened.
Driver seat belt buckle	RCM	This message informs the ABS module of the current driver seat belt buckle status, buckled or unbuckled.
Engine disable status	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module the engine is currently disabled or enabled due to the stop-start system.
Engine status	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current status of the engine system; off, on, hot or cold.
Gear lever position	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current transmission selector lever position, this is used for the hill start assist system and the ESC system. The hill start assist system operates in forward and reverse gears. The ESC system does not operate when the transmission is in REVERSE.
Hill start assist request	IPC	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current, driver selected mode for the hill start assist system; off, auto or manual.
Ignition status	BCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current ignition status; off, accessory, run, start, unknown or invalid.
Odometer master value	IPC	This message is sent to the GWM and then to the ABS module. This message informs the ABS module of the current odometer mileage.
RCM serial number	RCM	The ABS module stores the RCM serial number and verifies the serial number when the vehicle is started or the ignition is set to RUN or ACC. Over time, the ABS module learns the offset of the sensors inside the RCM. When a new serial number is found and the IVD Initialization procedure is carried out using a scan tool, the ABS module resets the offset number learned for ESC.
Steering angle sensor data	PSCM	Several steering angle messages are sent to the ABS module from the PSCM. These messages include steering angle sensor status, steering wheel angle and steering wheel rotation count. The ABS module uses the steering angle sensor data for ESC and RSC system operation.

Traction control request	IPC	This message is sent to the GWM and then to the ABS module. This message informs the ABS module the driver has chosen a mode for the traction control feature, ON or OFF.
Trailer sway configuration	IPC	This message is sent to the GWM and then to the ABS module. This message informs the ABS module the driver has chosen a mode for the trailer sway feature, ON or OFF.
Transmission in reverse	PCM	This message is sent to the GWM and then to the ABS module. This message informs the ABS module when the transmission is in REVERSE, this is used for the hill start assist system and the ESC system. The hill start assist system operates in forward and reverse gears. The ESC system does not operate when the transmission is in REVERSE.
Vehicle configuration data	BCM	This message is sent to the GWM and then to the ABS module. This message provides the ABS module with the current optional and configured items such as tire size, axle ratio, manual or automatic transmission, keyless entry and VIN.
Vehicle lateral acceleration data	RCM	This message provides the ABS module with the current vehicle lateral acceleration and deceleration information and whether or not the information is valid.
Vehicle longitudinal acceleration data	RCM	This message provides the ABS module with the current vehicle longitudinal acceleration information and whether or not the information is valid.
Vehicle roll rate data	RCM	This message provides the ABS module with the current vehicle roll rate information and whether or not the information is valid.
Vehicle speed	PCM	This message is sent to the GWM and then to the ABS module. This message provides the ABS module with the current vehicle speed.
Vehicle yaw data	RCM	This message provides the ABS module with the current vehicle yaw information and whether or not the information is valid.

ABS

The ABS module continuously monitors brake pedal input, longitudinal vehicle motion and the rotational speed of each wheel. The ABS module receives the brake pedal input from the PCM and the longitudinal acceleration sensor information from the RCM. The PCM sends the information to the GWM over the HS-CAN1. The GWM then relays the information to the ABS module over the HS-CAN2. The RCM sends the information directly to the ABS module over the HS-CAN2. Wheel speed information is received by the ABS module using 4 wheel speed sensors. When the ABS module detects an impending wheel lock during a braking event, the ABS module modulates brake pressure to the appropriate wheel by opening and closing the appropriate solenoid valves inside the HCU while the hydraulic pump motor is activated. Once the affected wheel(s) return to the desired speed, the ABS module returns the solenoid valves in the HCU to their normal position.

When the ABS module is initialized (ignition ON), a preliminary electrical check of the system sensors is carried out and hydraulic pump motor is activated for approximately one-half second. During this time, a buzzing or humming noise may be heard and a vibration may be felt in the brake pedal, this is a normal condition. During the module initialized self-test, the pump motor check is carried out at approximately 10 km/h (6 mph). Any malfunction detected in the system causes the ABS module to set a DTC, disable the ABS function and send a message over the HS-CAN2 to the GWM. The GWM relays the message to the IPC over the HS-CAN3 to illuminate the ABS warning indicator. The base hydraulic power assist braking system functions normally.

EBD

On initial application of the brake pedal, full pressure is applied to the rear brakes. The ABS module then uses wheel speed sensor inputs to evaluate rear wheel slip. Once the rear wheel slip exceeds a predetermined threshold, the ABS module commands the HCU to close the appropriate isolation valves to hold the rear brake pressure constant while allowing the front brake pressure to build. This creates a balanced braking condition between the front and rear wheels. If the rear wheel slip continues and exceeds a second predetermined threshold, the ABS module commands the HCU to open the dump valves to decrease the rear brake pressure and allow the rear wheels to recover. A slight bump sensation may be felt in the brake pedal when EBD is active.

If the ABS is disabled due to a DTC being present in the ABS module, EBD continues to function unless the DTC is for wheel speed sensors or the HCU. When EBD is disabled, the ABS warning indicator, the red brake warning indicator and stability-traction control indicator (sliding car icon) illuminate.

Traction Control

The ABS module continuously monitors and compares the rotational speed of the drive wheels in relation to the non-driven wheels. When the drive wheels begin to spin faster than the non-driven wheels, the ABS module modulates brake pressure to the appropriate wheel(s) by opening and closing the appropriate solenoid valves inside the HCU while the hydraulic pump motor is activated. At the same time, the ABS module calculates how much engine torque reduction is required to eliminate the wheel slip and sends this torque reduction message along with a traction event message to the GWM over the HS-CAN2. The GWM sends the engine torque reduction message to the PCM over the HS-CAN1 and the traction event message to the IPC over the HS-CAN3. When the PCM receives the torque reduction message, it adjusts engine timing and decreases fuel injector pulses to reduce the engine torque to the requested level. When the IPC receives the traction event message it flashes the stability-traction control indicator (sliding car icon). Once the driven wheel speed returns to the desired speed, the ABS module returns the solenoid valves in the HCU to their normal position, deactivates the hydraulic pump motor and stops sending the traction event and torque reduction messages. The PCM returns engine timing and fuel injectors to normal operation and the IPC extinguishes the stability-traction control indicator (sliding car icon). After the vehicle speed exceeds 100 km/h (62 mph), traction control is accomplished only through the PCM torque control.

Traction control can be disabled through the menu in the message center, refer to the Owner's Literature for instructions on disabling traction control. This is independent of the ABS and ESC, which cannot be disabled by the driver. When the driver disables traction control, the IPC communicates traction control status to the GWM along the HS-CAN3. The GWM sends the message to the ABS module along the HS-CAN2. The ABS module takes no further action in regards to traction control until the driver activates the function or until the ignition is cycled from OFF to ON.

Traction control is disabled if there is a wheel speed sensor or solenoid valve DTC present in the ABS module. Traction control is also disabled if there is a communication error between the ABS module and the GWM. When traction control is disabled, the ABS module sends a message to the GWM along the HS-CAN2 which gateways the message to the IPC over the HS-CAN3 to illuminate the stability-traction control OFF indicator (sliding car OFF icon).

ESC

The ABS module continuously monitors the vehicle motion relative to the intended course. This is done by using sensors to compare the steering wheel sensor messages, yaw rate sensor messages and longitudinal acceleration with the actual vehicle motion. The ABS module determines steering wheel angle using information from the wheel speed sensors, the PSCM and the RCM. Steering angle information is calculated by the PSCM and sent to the ABS module over the HS-CAN2. Vehicle yaw rate and longitudinal acceleration information is sent to the ABS module from the RCM over the HS-CAN2. If the ABS module determines from the inputs the vehicle is unable to travel in the intended direction, the brake pressure to the appropriate wheel(s) is modulated by opening and closing the appropriate solenoid valves inside the HCU while the hydraulic pump motor is activated. At the same time the ABS module calculates how much engine torque reduction is required to reduce vehicle speed to help stabilize the vehicle and sends this torque reduction message, along with an ESC event message, to the GWM over the HS-CAN2. The GWM sends the torque reduction message to the PCM over the HS-CAN1 and the ESC event message to the IPC over the HS-CAN3. When the PCM receives the torque reduction message, it adjusts engine timing and decreases fuel injector pulses to reduce the engine torque to the requested level. When the IPC receives this message, it flashes the stability-traction control indicator (sliding car icon).

Once the vehicle instability has been corrected, the ABS module returns the solenoid valves in the HCU to their normal position, deactivates the hydraulic pump motor and stops sending the ESC event and torque reduction messages. The PCM returns engine timing and fuel injectors to normal operation and the IPC extinguishes the stability-traction control indicator (sliding car icon).

ESC does not operate with the transmission in REVERSE. ESC is disabled if there is a wheel speed sensor, stability sensor or steering angle sensor DTC present in the ABS module. ESC is also disabled if there is a communication error between the ABS module and the PSCM or the ABS module and the RCM. When ESC is disabled, the ABS module sends a message to the GWM along the HS-CAN2 which gateways the message to the IPC over the along the HS-CAN3 to illuminate the stability-traction control OFF indicator (sliding car OFF icon).

Trailer Sway Control

Trailer sway is the undesirable yaw force a trailer can apply to the towing vehicle. Trailer sway control is a unique function of the stability control system that uses steering wheel angle information and yaw rate information to determine if a trailer sway event is taking place. The ABS module determines steering wheel angle using information from the wheel speed sensors, the PSCM and the RCM. Steering angle information is calculated by the PSCM and sent to the ABS module over the HS-CAN2. Vehicle yaw rate information is sent to the ABS module from the RCM over the HS-CAN2. If the ABS module determines from the inputs a trailer sway event is taking place, the ABS module modulates brake pressure to the appropriate brake calipers by opening and closing the appropriate solenoid valves inside the HCU while the hydraulic pump motor is activated. At the same time, the ABS module calculates how much engine torque reduction is required to eliminate the trailer sway and sends this torque reduction message to the GWM over the HS-CAN2 which relays the message to the PCM over the HS-CAN1. The ABS module also sends a trailer sway event message to the GWM over the HS-CAN2 which relays this message to the IPC over the HS-CAN3. When the PCM receives the torque reduction message, it adjusts engine timing and decreases fuel injector pulses to reduce the engine torque to the requested level. When the IPC receives the vehicle stability event message, it flashes the stability-traction control indicator (sliding car icon) and displays TRAILER SWAY REDUCE SPEED in

the message center.

Once the trailer sway has been corrected, the ABS module returns the solenoid valves in the HCU to their normal position, deactivates the hydraulic pump motor and stops sending the traction event and torque reduction messages. The PCM returns engine timing and fuel injectors to normal operation and the IPC extinguishes the stability-traction control indicator (sliding car icon) and stops displaying the trailer sway message in the message center. Trailer sway control only activates when vehicle speed is greater than 65 km/h (40 mph). Any malfunction disabling RSC also disables trailer sway control.

The driver can enable and disable the trailer sway control feature using the message center and steering wheel controls. For additional information, refer to the Owner's Literature.

Curve Control

The ABS module continuously monitors the vehicle motion relative to the intended course. This is done by using sensors to compare the steering wheel input, the yaw rate sensor input, the lateral acceleration sensor input and the longitudinal acceleration sensor input with that of the actual vehicle motion. The ABS module determines steering wheel angle using information from the wheel speed sensors, the PSCM and the RCM. Steering angle information is calculated by the PSCM and sent to the ABS module over the HS-CAN2. Vehicle yaw rate, lateral acceleration and longitudinal acceleration information is sent to the ABS module from the RCM over the HS-CAN2. If the ABS module determines from the inputs the vehicle is experiencing over-steer or under-steer while traveling through a curve, the module sends a curve control event message over the HS-CAN2 to the GWM. The GWM relays this message to the PCM over the HS-CAN1 and to the IPC over the HS-CAN3. When the PCM receives this message, it assists with curve control by adjusting engine timing and decreasing fuel injector pulses. When the IPC receives this message, it flashes the stability-traction control indicator (sliding car icon). The ABS module continues to monitor the sensor inputs while the PCM assists with curve control. If the ABS module determines PCM intervention is insufficient to control the stability event, the ABS module modulates brake pressure to the appropriate brake caliper(s) by opening and closing the appropriate solenoid valves inside the HCU while the hydraulic pump motor is activated. Once the vehicle instability has been corrected, the ABS module returns the solenoid valves in the HCU to their normal position, deactivates the hydraulic pump motor and stops sending the curve control event message. The PCM returns engine timing and fuel injectors to normal operation and the IPC extinguishes the stability-traction control indicator (sliding car icon).

The Curve Control function does not operate with the transmission in REVERSE. The ABS module disables the Curve Control function if there are any wheel speed sensor, stability sensor or steering angle sensor Diagnostic Trouble Codes (DTCs) present in the ABS module. Also, if there is a communication error between the ABS module and the PSCM or the RCM, the Curve Control function is disabled. When the Curve Control function is disabled, the ABS module sends a message over the HS-CAN2 to the GWM. The GWM relays this message over the HS-CAN3 to the IPC to illuminate both the stability-traction control indicator (sliding car icon) and the stability-traction control disabled indicator (sliding car OFF icon).

Hill Start Assist

When the vehicle is stopped on an incline greater than 1.5 degrees (approximately a 3% grade), the ABS module holds the brake pressure for approximately 1.5 seconds while the driver transitions from the brake pedal to the accelerator pedal. This is accomplished by monitoring several HS-CAN messages and several sensors to determine if the vehicle is stopped and not parked, and if the vehicle is on an appropriate incline. The brake pedal message sent by the PCM and the wheel speed sensor inputs allow the ABS module to determine the vehicle has come to a complete stop. The transmission selector lever message sent by the PCM informs the ABS module the vehicle is not parked. The stability sensor messages sent by the RCM enable the ABS module to determine if the vehicle is on an incline greater than 1.5 degrees (approximately a 3% grade). Once the above conditions have been met, the hill start assist function automatically engages. As the driver releases the brake pedal, the ABS module commands the HCU to close the isolation valves which maintain the current brake system pressure, preventing the vehicle from rolling down the incline. Once the driver presses the accelerator pedal and the engine RPM increases, the ABS module gradually releases the brake pressure to make sure the vehicle is neither rolling back nor driving off until there is sufficient driving torque to accelerate the vehicle forward (or backward if reversing up the incline).

Stability-Traction Control Indicator (Sliding Car Icon)

Refer to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Stability-Traction Control Disabled Indicator (Sliding Car OFF Icon)

Refer to: Instrument Panel Cluster (IPC) - System Operation and Component Description (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).

Component Description

ABS Module

The ABS module is attached directly to the HCU but is available separately for service. The ABS module is the ECU for all of the ABS and stability control systems. The ABS module monitors all sensor inputs and all CAN messages relating to ABS and stability control, then directly controls the solenoid valves and the hydraulic pump motor in the HCU.

When a new ABS module is installed, it must be programmed with the vehicle configuration information and programmed with the latest level of module software. These procedures are carried out using a diagnostic scan tool, follow all scan tool instructions. For additional information,
Refer to: Module Configuration (418-01 Module Configuration) .

When an ABS or stability control system fault has been corrected or a new component installed, the ABS module must be calibrated. The calibration procedure is required for the stability control sensors to learn the zero-position of the vehicle. The calibration procedure requires the vehicle to be on a level surface and not moving. The calibration procedure (IVD Initialization) is carried out using a diagnostic scan tool. The vehicle must also be driven over 20 km/h (12 mph) for at least 1 minute on a fairly straight road which allows the ABS module to find the steering angle center.

Brake Booster Vacuum Sensor (Vehicles Equipped With Start-Stop Only)

The brake booster vacuum sensor is a piezoelectric device used by the ABS module to monitor the vacuum in the brake booster. The sensor is hardwired to the ABS module by 3 circuits. One circuit is for the 5 volt sensor supply, one circuit is for sensor ground and one circuit is for sensor output. The sensor output is a serial data stream which communicates the vacuum level in the booster to the ABS module.

HCU

The HCU contains the solenoid valves, the hydraulic pump motor and the pressure sensor used by the ABS for the various stability control systems. The ABS module and the HCU are attached directly together, a new HCU comes with a new ABS module.

When a new ABS module and HCU assembly is installed, it must be programmed with the vehicle configuration information and programmed with the latest level of module software. These procedures are carried out using a diagnostic scan tool, follow all scan tool instructions. For additional information,
Refer to: Module Configuration (418-01 Module Configuration) .

When an ABS or stability control system fault has been corrected or a new component installed, the ABS module must be calibrated. The calibration procedure is required for the stability control sensors to learn the zero-position of the vehicle. The calibration procedure requires the vehicle to be on a level surface and not moving. The calibration procedure (IVD Initialization) is carried out using a diagnostic scan tool. The vehicle must also be driven over 20 km/h (12 mph) for at least 1 minute on a fairly straight road which allows the ABS module to find the steering angle center.

Stability Control Sensors

The stability control sensors for the vehicle dynamic system consist of the yaw rate sensor, lateral accelerometer, longitudinal accelerometer and roll rate sensor. The sensors are housed in the RCM which sends sensor information to the ABS module over a private HS-CAN. If any of the sensors are defective, a new RCM must be installed.

- The yaw rate sensor measures the yaw angle which is the difference between the direction the vehicle is pointing when cornering and the direction the vehicle is actually moving.
- The longitudinal accelerometer measures the acceleration and deceleration of the vehicle as it moves forward and backward.
- The lateral accelerometer measures the force created when a vehicle corners that tends to push a vehicle sideways.
- The roll rate sensor measures the rate of rotation of the vehicle along the centerline of the vehicle from front to back.

Lateral acceleration has 2 forms. The first is the centrifugal acceleration that is generated when the vehicle travels around in a circle. The second is the acceleration due to gravity. On level ground there is no lateral acceleration due to gravity. However, if the vehicle is parked sideways on a bank or incline, the sensor measures some lateral acceleration due to gravity, even though the vehicle is not moving.

Steering Wheel Rotation Sensor

The steering wheel rotation sensor is part of the SASM and clockspring assembly. The steering wheel rotation speed, angle and direction of travel is derived based on the position of the steering wheel position sensor and is sent to the ABS module over the HS-CAN2.

Information from the wheel speed sensors, PSCM and RCM are used by the ABS module to determine steering wheel angle when the vehicle is driven after initial start up. The ABS module uses the information received to calculate the steering center and save the information in memory. Then, using the information provided from the PSCM along with

the saved center data, the ABS module determines the steering angle. The ABS module must re-learn the steering center whenever power is lost, for example during service when the battery is disconnected. To re-learn the steering center, the vehicle must be driven over 20 km/h (12 mph) for at least 1 minute on a fairly straight road.

Wheel Speed Sensor

All 4 wheel speed sensors are active (magneto resistive) sensors that operate on the Hall-effect principle to generate a square wave signal proportional to the rotational speed of the wheel. Because these are active sensors, receiving voltage from the ABS module and then sending a varying voltage back to the ABS module, they are able to detect much lower rotational speeds than passive (magnetic inductive) sensors. Each wheel speed sensor is connected to the ABS module by 2 circuits. One circuit provides voltage for sensor operation and the other circuit provides sensor input to the ABS module.

Anti-Lock Brake System (ABS) and Stability Control - Overview

Overview

The ABS and stability control systems are comprised of the following subsystems which assist the driver in maintaining control of the vehicle:

- ABS
- Curve control
- EBD
- ESC
- Hill start assist
- RSC
- Supplemental braking assist
- Supports adaptive cruise control
- Supports collision avoidance
- Torque vectoring control
- Traction control
- Trailer sway control

The ABS helps maintain steering control by preventing the wheels from locking up during hard braking. The ABS also includes a supplemental brake assist function providing maximum brake system pressure during a severe braking event.

The curve control system helps to maintain vehicle stability during adverse maneuvers such as cornering or avoiding objects in the roadway.

The EBD system helps maintain vehicle control by keeping a balanced braking condition between the front and rear wheels.

The ESC system helps prevent skids or lateral slides by modulating brake fluid to the brake calipers and reducing engine torque.

The hill start assist system is designed to assist the driver during hill starts. Using the ABS, the hill start assist system holds the vehicle on an incline for a short time, allowing the driver to release the brake pedal and press the accelerator pedal without needing to use the parking brake.

The supplemental braking assist system uses the hydraulic pump motor and the HCU to provide additional braking assist in the event of severe vacuum loss at the brake booster.

The ABS supports the adaptive cruise control system by applying the brakes as necessary to maintain the distance gap that has been set. For information on the adaptive cruise control system,
Refer to: Cruise Control - System Operation and Component Description (419-03B Cruise Control - Vehicles With: Adaptive Cruise Control, Description and Operation).

The ABS supports the collision avoidance system by monitoring information and precharging the brake system to allow the vehicle to stop in the shortest distance possible. For information on the collision avoidance system,
Refer to: Collision Warning and Collision Avoidance System - Component Location (419-03C Collision Warning and Collision Avoidance System, Description and Operation).

The traction control system helps prevent loss of traction by reducing drive wheel spin during acceleration.

The trailer sway control system helps maintain vehicle stability while towing a trailer by detecting and aiding in the reduction of conditions that cause trailer sway.

Torque vectoring control uses the rear brakes to adjust the speed between the driven wheels while accelerating through a corner, forcing the front end to hug the inside of the curve and improve tire grip.

Some noise from the system and pulsations in the brake pedal are normal conditions during most ABS and stability control events. Also, longer than normal brake pedal travel may be experienced immediately following an ABS or stability control activation.

C0040:24	Brake Pedal Switch "A": Signal Stuck High	GO to Pinpoint Test N
C0040:64	Brake Pedal Switch "A": Signal Plausibility Failure	GO to Pinpoint Test N
C0051:23	Steering Wheel Position Sensor: Signal Stuck Low	• This DTC sets if the steering wheel position signal from the PSCM is unchanged for a predetermined amount of time. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs). REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the PSCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

		• If there are no Diagnostic Trouble Codes (DTCs) in the PSCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all PSCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
C0051:27	Steering Wheel Position Sensor: Signal Rate of Change Above Threshold	• This DTC sets if steering angle signal message sent from the PSCM indicates a higher rate of change than other ABS module inputs. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs). REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the PSCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the PSCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all PSCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
C0051:29	Steering Wheel Position Sensor: Signal Invalid	• This DTC sets if the steering angle signal message does not match other ABS module inputs. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs). REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the PSCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the PSCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all PSCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
C0051:54	Steering Wheel Position Sensor: Missing Calibration	• This DTC sets if the steering angle center position is not found and the speed or time limit is exceeded. This DTC clears automatically as soon as the center position is found. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs). REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the PSCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the PSCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all PSCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
C0051:62	Steering Wheel Position Sensor: Signal Compare Failure	• This DTC sets when the ABS module detects a time-out, quality factor failure, plausibility failure of the yaw or active yaw signals or a plausibility failure of the wheel speed data. When this occurs, the steering angle center cannot be determined to be valid and the system triggers the steering angle center learning process. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all PSCM, ABS module and RCM communication (U-code) Diagnostic Trouble Codes (DTCs). REPAIR all communication Diagnostic Trouble Codes (DTCs) before repairing DTC C0051:62. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing). • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE any wheel speed sensor Diagnostic Trouble Codes (DTCs) present in the ABS module. • If there are no Diagnostic Trouble Codes (DTCs) in the PSCM, ABS

		module and RCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all PSCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
C0051:64	Steering Wheel Position Sensor: Signal Plausibility Failure	• This DTC sets when the ABS module determines the PSCM steering angle message is implausible when compared to the steering angle module value (based on the yaw rate sensor information). This DTC also sets if the long term offset compensation monitoring is completed after more than 30 km (18 miles) of straight driving resulting in a long term filtered steering angle offset greater than 15 degrees. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs). REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the PSCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the PSCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all PSCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
C0051:86	Steering Wheel Position Sensor: Signal Invalid	• This DTC sets in the ABS module when there is a time-out, quality factor failure or plausibility failure of the steering angle sensor data. When this occurs, the steering angle sensor center cannot be determined to be valid and the system triggers the relearn center process. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs). REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the PSCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the PSCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all PSCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.

C101A:29	Vacuum Pressure Sensor: Signal Invalid	GO to Pinpoint Test O
		This DTC sets if an active... if the ABS module has...

C101F:4B	Generic Valve Failure: Over Temperature	• This DTC sets in continuous memory if the ABS module plausibility monitor of the hydraulic valves in the HCU determines degraded valve performance due to operating temperatures greater than 195°C (383°F). • This is most likely due to extended ABS usage (Hill Descent Control™, traction control, ESC or RSC) without allowing sufficient time for the system and components to cool. SET the ignition to OFF and ALLOW the vehicle to cool for at least 30 minutes.
C1020:00	Brake System Fill Not Complete: No Sub Type Information	• This DTC is pre-set in a new ABS module and can only be cleared after PMI has been successfully preformed. • REPEAT the PMI procedure as directed by the diagnostic scan tool. • If the DTC is still present after the second PMI procedure, INSTALL a new ABS module and HCU assembly. FOLLOW all instructions in the removal and installation procedure. REFER to: Hydraulic Control Unit (HCU) - Vehicles Without: Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Hydraulic Control Unit (HCU) - Vehicles With: Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
C1137:64	Reverse Gear Switch: Signal Plausibility Failure	• This DTC sets when the reverse gear message sent from the PCM indicates the transmission is in REVERSE when other stability control inputs received by the ABS module indicate the vehicle is moving forward. • VERIFY the reverse lamps operate correctly. If the lamps do not operate correctly, REFER to: Reversing Lamps (417-01 Exterior Lighting, Diagnosis and Testing). • If the reverse lamps operate correctly and the vehicle has a manual transmission, RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the PCM. REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . • If the reverse lamps operate correctly and the vehicle has an automatic transmission, RETRIEVE and REPAIR all non-network Diagnostic Trouble Codes (DTCs) in the TCM. REFER to: Diagnostic Trouble Code Charts (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
C1A76:49	Valve Relay: Internal Electronic Failure	• This DTC is set when the valve relay circuit feedback does not match the commanded state. • Using a diagnostic scan tool, CLEAR the ABS module Diagnostic Trouble Codes (DTCs). CYCLE the ignition from ON to OFF and back to ON. • Using a diagnostic scan tool, RETRIEVE and RECORD all ABS module Diagnostic Trouble Codes (DTCs). If C1A76:49 returns, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
C1A77:11	Valve Relay Supply Circuit: Circuit Short To Ground	• This DTC is set when the monitoring detects UVR voltage compared to the UBVR voltage indicates the valve relay has a high impedance short to ground. • Using a diagnostic scan tool, CLEAR the ABS module Diagnostic Trouble Codes (DTCs). CYCLE the ignition from ON to OFF and back to ON.

		• Using a diagnostic scan tool, RETRIEVE and RECORD all ABS module Diagnostic Trouble Codes (DTCs). If C1A77:11 returns, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
C1A78:49	Left Front Inlet Valve: Internal Electronic Failure	• This DTC indicates that part of the ABS module has failed internally. • Using a diagnostic scan tool, CLEAR the DTCs. CYCLE the ignition from ON to OFF and back to ON. • Using a diagnostic scan tool, RETRIEVE and RECORD any DTCs. If DTC C1A78:49 is retrieved again, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). CLEAR the DTC. REPEAT the self-test.
C1A79:49	Left Front Outlet Valve: Internal Electronic Failure	• This DTC indicates that part of the ABS module has failed internally. • Using a diagnostic scan tool, CLEAR the DTCs. CYCLE the ignition from ON to OFF and back to ON. • Using a diagnostic scan tool, RETRIEVE and RECORD any DTCs. If DTC C1A79:49 is retrieved again, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). CLEAR the DTC. REPEAT the self-test.
C1A80:49	Right Front Inlet Valve: Internal Electronic Failure	• This DTC indicates that part of the ABS module has failed internally. • Using a diagnostic scan tool, CLEAR the DTCs. CYCLE the ignition from ON to OFF and back to ON. • Using a diagnostic scan tool, RETRIEVE and RECORD any DTCs. If DTC C1A80:49 is retrieved again, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). CLEAR the DTC. REPEAT the self-test.
C1A81:49	Right Front Outlet Valve: Internal Electronic Failure	• This DTC indicates that part of the ABS module has failed internally. • Using a diagnostic scan tool, CLEAR the DTCs. CYCLE the ignition from ON to OFF and back to ON. • Using a diagnostic scan tool, RETRIEVE and RECORD any DTCs. If DTC C1A81:49 is retrieved again, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). CLEAR the DTC. REPEAT the self-test.
C1A82:49	Left Rear Inlet Valve: Internal Electronic Failure	• This DTC indicates that part of the ABS module has failed internally. • Using a diagnostic scan tool, CLEAR the DTCs. CYCLE the ignition from ON to OFF and back to ON. • Using a diagnostic scan tool, RETRIEVE and RECORD any DTCs. If DTC C1A82:49 is retrieved again, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). CLEAR the DTC. REPEAT the self-test.
C1A83:49	Left Rear Outlet Valve: Internal Electronic Failure	• This DTC indicates that part of the ABS module has failed internally. • Using a diagnostic scan tool, CLEAR the DTCs. CYCLE the ignition from ON to OFF and back to ON.

		• Using a diagnostic scan tool, RETRIEVE and RECORD any DTCs. If DTC C1A83:49 is retrieved again, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). CLEAR the DTC. REPEAT the self-test.
C1A84:49	Right Rear Inlet Valve: Internal Electronic Failure	• This DTC indicates that part of the ABS module has failed internally. • Using a diagnostic scan tool, CLEAR the DTCs. CYCLE the ignition from ON to OFF and back to ON. • Using a diagnostic scan tool, RETRIEVE and RECORD any DTCs. If DTC C1A84:49 is retrieved again, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). CLEAR the DTC. REPEAT the self-test.
C1A85:49	Right Rear Outlet Valve: Internal Electronic Failure	• This DTC indicates that part of the ABS module has failed internally. • Using a diagnostic scan tool, CLEAR the DTCs. CYCLE the ignition from ON to OFF and back to ON. • Using a diagnostic scan tool, RETRIEVE and RECORD any DTCs. If DTC C1A85:49 is retrieved again, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). CLEAR the DTC. REPEAT the self-test.
C1A95:02	Wheel Speed Sensor: General Signal Failure	GO to Pinpoint Test B
C1A95:2F	Wheel Speed Sensor: Signal Erratic	GO to Pinpoint Test B
C1A95:4A	Wheel Speed Sensor: Incorrect Component Installed	COMPARE the part numbers of the installed wheel speed sensors to the part numbers in the parts catalog or equivalent. INSTALL new wheel speed sensor as necessary. REFER to: Front Wheel Speed Sensor (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Rear Wheel Speed Sensor (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
C1A95:62	Wheel Speed Sensor: Signal Compare Failure	GO to Pinpoint Test B
C1A95:64	Wheel Speed Sensor: Signal Plausibility Failure	GO to Pinpoint Test B
C1A99:01	Pressure Sensor: General Electrical Failure	• This DTC indicates the brake fluid line hydraulic pressure sensor signal line located inside the ABS module has failed. • CLEAR the DTC. CYCLE the ignition from ON to OFF and back to ON. REPEAT the ABS module self-test. • If the DTC returns, INSTALL a new ABS module and HCU assembly. REFER to: Hydraulic Control Unit (HCU) - Vehicles Without: Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Hydraulic Control Unit (HCU) - Vehicles With: Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
C1A99:28	Pressure Sensor: Signal Bias Level Out of Range / Zero Adjustment Failure	• This DTC indicates the brake fluid line hydraulic pressure sensor located inside the ABS module has failed. • CLEAR the DTC. CYCLE the ignition from ON to OFF and back to ON. REPEAT the ABS module self-test.

		• If the DTC returns, INSTALL a new ABS module and HCU assembly. REFER to: Hydraulic Control Unit (HCU) - Vehicles Without: Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Hydraulic Control Unit (HCU) - Vehicles With: Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
P050F:00	Brake Assist Vacuum Too Low: No Sub Type Information	GO to Pinpoint Test U
P0604:94	Internal Control Module Random Access Memory (RAM) Error: Unexpected Operation	CLEAR the DTC. CYCLE the ignition switch. REPEAT the ABS module self-test. If the DTC is retrieved again, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
P062F:46	Internal Control Module EEPROM Error: Calibration / Parameter Memory Failure	CLEAR the DTC. CYCLE the ignition switch. REPEAT the ABS module self-test. If the DTC is retrieved again, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
U0073:88	Control Module Communication Bus "A" Off: Bus Off	• The module could not communicate on the network at a point in time. The fault is not currently present since the module is able to communicate with the diagnostic scan tool to report this DTC. • VERIFY the integrity of the connectors and wiring. Refer to Wiring Diagrams Cell 14 for schematic and connector information.
U0100:00	Lost Communication With ECM/PCM "A": No Sub Type Information	GO to Pinpoint Test I
U0104:00	Lost Communication With Cruise Control Module: No Sub Type Information	GO to Pinpoint Test M
U0131:00	Lost Communication With Power Steering Control Module: No Sub Type Information	GO to Pinpoint Test P
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	GO to Pinpoint Test D
U0146:00	Lost Communication With Gateway "A": No Sub Type Information	GO to Pinpoint Test F
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	GO to Pinpoint Test G
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	GO to Pinpoint Test Q
U0401:00	Invalid Data	• This DTC sets in continuous memory if the brake pedal position message,

	Received From ECM/PCM "A": No Sub Type Information	driven wheel torque message or the accelerator pedal position message from the PCM (sent through the GWM) contains invalid information. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all PCM and GWM Diagnostic Trouble Codes (DTCs). REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . • If the diagnostic scan tool cannot communicate with the PCM or GWM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the PCM or GWM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all PCM and GWM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
U0401:02	Invalid Data Received From ECM/PCM "A": General Signal Failure	• This DTC sets if the brake pedal position message, driven wheel torque message or the accelerator pedal position message from the PCM (sent through the GWM) contains invalid information during an auto stop-start event. DTC U3013:16 is also set when U0401:02 sets. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all PCM and GWM Diagnostic Trouble Codes (DTCs). REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . • If the diagnostic scan tool cannot communicate with the PCM or GWM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the PCM or GWM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all PCM and GWM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
U0401:86	Invalid Data Received From ECM/PCM "A": Signal Invalid	GO to Pinpoint Test R
U0403:00	Invalid Data Received From Transfer Case Control Module: No Sub Type Information	• This DTC sets if the AWD locking torque request message or the rear differential locking torque message from the TCCM contains "fault" instead of the actual information. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all TCCM Diagnostic Trouble Codes (DTCs). REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).

		• If the diagnostic scan tool cannot communicate with the TCCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the TCCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all TCCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
U0405:82	Invalid Data Received From Cruise Control Module: Alive / Sequence Counter Incorrect / Not Updated	• This DTC sets if the counter signal value in the adaptive cruise control message does not increase. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all CCM Diagnostic Trouble Codes (DTCs). REFER to: Cruise Control (419-03B Cruise Control - Vehicles With: Adaptive Cruise Control, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the CCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the CCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all CCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
U0405:83	Invalid Data Received From Cruise Control Module: Value of Signal Protection Calculation Incorrect	• This DTC sets if an invalid checksum value is received in the adaptive cruise control message. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all CCM Diagnostic Trouble Codes (DTCs). REFER to: Cruise Control (419-03B Cruise Control - Vehicles With: Adaptive Cruise Control, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the CCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the CCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all CCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
U0420:00	Invalid Data Received From Power Steering Control Module: No Sub Type Information	• This DTC sets if the ABS module receives invalid data values in the steering wheel data messages. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs). REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the PSCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no DTCs in the PSCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all PSCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
U0420:82	Invalid Data Received From Power Steering Control Module: Alive / Sequence Counter Incorrect / Not Updated	• This DTC sets if the information in the steering wheel data message from the PSCM does not change for a predetermined amount of time. This DTC clears automatically in the same ignition cycle it was set once valid data has been received. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs). REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the PSCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no DTCs in the PSCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all PSCM

		electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
U0420:83	Invalid Data Received From Power Steering Control Module: Value of Signal Protection Calculation Incorrect	• This DTC sets if the checksum data in the steering wheel data message from the PSCM is incorrect. This DTC clears automatically in the same ignition cycle it was set after receiving 5 seconds of valid data. If the DTC is set a second time, it does not clear in the same ignition cycle. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs). REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the PSCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no DTCs in the PSCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all PSCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
U0422:00	Invalid Data Received From Body Control Module: No Sub Type Information	• This DTC sets if the ignition signal status message is invalid for 5 seconds. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all BCM Diagnostic Trouble Codes (DTCs). REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the BCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the BCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF. DISCONNECT and INSPECT all BCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
U0452:00	Invalid Data Received From Restraints Control Module: No Sub Type Information	• This DTC sets if the yaw rate, roll rate, longitudinal acceleration or lateral acceleration messages from the RCM are invalid. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the RCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the RCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF and WAIT 1 minute. DISCONNECT and INSPECT all RCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
U0452:02	Invalid Data Received From Restraints Control Module: General Signal Failure	• This DTC sets if the yaw rate, roll rate, longitudinal acceleration or lateral acceleration messages from the RCM are invalid during an auto stop-start event. DTC U3013:16 is also set when U0452:02 sets. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the RCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the RCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF and WAIT 1 minute. DISCONNECT and INSPECT all RCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.

U0452:81	Invalid Data Received From Restraints Control Module: Invalid Serial Data Received	• This DTC sets if the yaw rate, roll rate, longitudinal acceleration or lateral acceleration messages from the RCM are not received. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the RCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the RCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF and WAIT 1 minute. DISCONNECT and INSPECT all RCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
U0452:82	Invalid Data Received From Restraints Control Module: Alive / Sequence Counter Incorrect / Not Updated	• This DTC sets if the yaw rate, roll rate, longitudinal acceleration or lateral acceleration counter signal message from the RCM does not update. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the RCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the RCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF and WAIT 1 minute. DISCONNECT and INSPECT all RCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
U0452:83	Invalid Data Received From Restraints Control Module: Value of Signal Protection Calculation Incorrect	• This DTC sets if the yaw rate, roll rate, longitudinal acceleration or lateral acceleration counter signal message from the RCM is invalid. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the RCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the RCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF and WAIT 1 minute. DISCONNECT and INSPECT all RCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.
U0452:92	Invalid Data Received From Restraints Control Module: Performance or Incorrect Operation	• This DTC sets if the yaw rate, roll rate, longitudinal acceleration or lateral acceleration messages from the RCM are not within the specified data range for at least 200 milliseconds. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing). • If the diagnostic scan tool cannot communicate with the RCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). • If there are no Diagnostic Trouble Codes (DTCs) in the RCM, the condition may be caused by an intermittent concern. • SET the ignition to OFF and WAIT 1 minute. DISCONNECT and INSPECT all RCM electrical connectors and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR as necessary.

U2007:49	Valve(s): Internal Electronic Failure	• This DTC sets due to an electrical failure (open circuit, short to ground, short to voltage) in one or more of the ABS module valve coils. • CLEAR the DTC and REPEAT the self-test. If the DTC returns, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
U2100:00	Initial Configuration Not Complete: No Sub Type Information	• This DTC is pre-set in a new ABS module and clears automatically when the ABS module is configured correctly. • CHECK the service history for recent service actions related to the clears module. This DTC sets due to incomplete or improper PMI procedures. • If there have been recent service actions with the ABS module, REPEAT the PMI procedure as directed by the diagnostic scan tool. • If there have been no recent service actions, INSTALL a new ABS module to correct the failure to retain the configuration data. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
U2100:46	Initial Configuration Not Complete: Calibration / Paramenter Memory Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). CYCLE the ignition. CARRY OUT the ABS module self-test. RETRIEVE and RECORD all Diagnostic Trouble Codes (DTCs). • If the DTC returns INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	This DTC sets due to incomplete or improper flash programming procedures. REPEAT the programming procedure as directed by the diagnostic scan tool.
U2107:00	Collision Mitigation By Braking: No Sub Type Information	• This DTC sets when the collision deceleration message from the CCM is sent too often or the duration of the message is too long. This is most likely caused by a network communication concern or an internal failure of the CCM. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all CCM Diagnostic Trouble Codes (DTCs). REFER to: Cruise Control (419-03B Cruise Control - Vehicles With: Adaptive Cruise Control, Diagnosis and Testing).
U2108:62	Adaptive Cruise Control: Signal Compare Failure	• This DTC sets when the actual vehicle deceleration monitored by the module exceeds the CCM deceleration maximum request limit by 1.0 m/s^2. • Using a diagnostic scan tool, RETRIEVE and DIAGNOSE all CCM Diagnostic Trouble Codes (DTCs). REFER to: Cruise Control (419-03B Cruise Control - Vehicles With: Adaptive Cruise Control, Diagnosis and Testing).
U2200:00	Control Module Configuration Memory Corrupt: No Sub Type Information	• CHECK the service history for recent service actions related to the clears module. This DTC sets due to incomplete or improper PMI procedures. • If there have been recent service actions with the ABS module, REPEAT the PMI procedure as directed by the diagnostic scan tool. • If there have been no recent service actions, INSTALL a new ABS module to correct the failure to retain the configuration data. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
U3000:00	Control Module: No Sub Type Information	• CLEAR the Diagnostic Trouble Codes (DTCs). CYCLE the ignition. CARRY OUT the ABS module self-test. RETRIEVE and RECORD all Diagnostic Trouble Codes (DTCs).

		• If the DTC returns, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
U3000:44	Control Module: Data Memory Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). CYCLE the ignition. CARRY OUT the ABS module self-test. RETRIEVE and RECORD all Diagnostic Trouble Codes (DTCs). • If the DTC returns, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
U3000:45	Control Module: Program Memory Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). CYCLE the ignition. CARRY OUT the ABS module self-test. RETRIEVE and RECORD all Diagnostic Trouble Codes (DTCs). • If the DTC returns INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
U3000:46	Control Module: Calibration / Parameter Memory Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). CYCLE the ignition. CARRY OUT the ABS module self-test. RETRIEVE and RECORD all Diagnostic Trouble Codes (DTCs). • If the DTC returns INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
U3000:47	Control Module: Watchdog / Safety μC^a Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). CYCLE the ignition. CARRY OUT the ABS module self-test. RETRIEVE and RECORD all Diagnostic Trouble Codes (DTCs). • If the DTC returns INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
U3000:48	Control Module: Supervisor Software Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). CYCLE the ignition. CARRY OUT the ABS module self-test. RETRIEVE and RECORD all Diagnostic Trouble Codes (DTCs). • If the DTC returns INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
U3000:49	Control Module: Internal Electronic Failure	• CLEAR the Diagnostic Trouble Codes (DTCs). CYCLE the ignition. CARRY OUT the ABS module self-test. RETRIEVE and RECORD all Diagnostic Trouble Codes (DTCs). • If the DTC returns INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
U3000:4B	Control Module: Over Temperature	• This DTC sets due to excessive temperatures in the ABS module. • Allow the vehicle to cool down for at least 30 minutes.
U3002:62	Vehicle Identification Number: Signal	GO to Pinpoint Test S

	Compare Failure	
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	GO to Pinpoint Test A
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	GO to Pinpoint Test E
U3013:16	Control Module Input Power "C": Voltage Below Threshold	• This DTC is for informational purposes only. • This DTC sets in continuous memory when the ABS module has detected an auto stop-start event with vehicle speed less than 10 km/h (6 mph). Low voltage is expected during an auto stop-start event.

[a]Micro-Controller

Symptom Chart

Symptom Chart: Anti-Lock Brake System (ABS) and Stability Control

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart: ABS and Stability Control

Condition	Possible Sources	Actions
A module does not respond to the diagnostic scan tool	• Fuse • Wiring, terminals or connectors • ABS module concern	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
The brake warning indicator is always or never on	• Low brake fluid level • Brake fluid level sensor • Parking brake applied • Parking brake switch • IPC concern • ABS concern	RETRIEVE and DIAGNOSE all ABS module Diagnostic Trouble Codes (DTCs). If there are no ABS module Diagnostic Trouble Codes (DTCs), DIAGNOSE the brake warning indicator. REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
The ABS warning indicator is always or never on	• IPC concern • ABS concern	RETRIEVE and DIAGNOSE all ABS module Diagnostic Trouble Codes (DTCs). If there are no ABS module Diagnostic Trouble Codes (DTCs), DIAGNOSE the ABS warning indicator. REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
The stability-traction control OFF indicator (sliding-car OFF icon) is always on	• IPC concern • ABS concern	RETRIEVE and DIAGNOSE all ABS module Diagnostic Trouble Codes (DTCs). If there are no ABS module Diagnostic Trouble Codes (DTCs), DIAGNOSE the stability-traction control OFF indicator. REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
ABS false activation, ABS too sensitive, ABS activates on normal stop	Front or rear suspension concern	ELIMINATE the front or rear suspension as the cause of the problem. REFER to: Front Suspension (204-01 Front Suspension, Diagnosis and Testing). REFER to: Rear Suspension (204-02 Rear Suspension, Diagnosis and Testing).
	RCM mounting	CONFIRM the RCM is mounted correctly. REINSTALL as necessary. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and

		Installation).
	Loose wheel speed sensor or excessive air gap	INSPECT wheel speed sensors for looseness or excessive air gap. TIGHTEN or INSTALL new as necessary. REFER to: Front Wheel Speed Sensor (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Rear Wheel Speed Sensor (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
	Rear wheel speed sensor tone ring or front wheel bearing damaged, rusted or contaminated with foreign material	INSPECT the rear tone rings and front wheel bearings for damage, rust and foreign material. CLEAN, REMOVE foreign material or INSTALL new as necessary. For the front wheel bearing, REFER to: Front Wheel Bearing (204-01 Front Suspension, Removal and Installation).
	Parking brake shoes out of adjustment (dragging)	CHECK and if necessary, ADJUST the parking brake. REFER to: Parking Brake Cable Adjustment (206-05 Parking Brake and Actuation, General Procedures).
The traction control system is inoperative or cannot be disabled	Refer to the Pinpoint Test	GO to Pinpoint Test L
The Hill Descent Control™ system is inoperative or cannot be disabled	Refer to the Pinpoint Test	GO to Pinpoint Test R

Pinpoint Tests

U3003:16

Refer to Wiring Diagrams Cell 42 for schematic and connector information.

Normal Operation and Fault Conditions

The ABS module, hydraulic pump and solenoid valves require an operating voltage that is between 10 and 17 volts. The ABS module receives this voltage from the BJB. The ABS module has 2 ground circuits that splice together and terminate at a single location. Excessive resistance or an open in one or more of these circuits, a discharged battery or a inoperative charging system results in the ABS module setting a DTC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	This DTC sets in continuous memory and on-demand if the voltage supplied to the ABS module falls below 10 volts.

Possible Causes

- Fuses
- Wiring, terminals or connectors
- Charging system concern
- Battery
- ABS module

Visual Inspection and Diagnostic Pre-checks

- Make sure both battery terminals and cables are free of any corrosion and other contaminants.
- Make sure both battery terminals are tightened to their correct torque specifications.

- Make sure AJB fuses are OK.

PINPOINT TEST A : U3003:16

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

A1 RECHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, clear the ABS module Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Using a diagnostic scan tool, carry out the ABS module self-test.

Is DTC U3003:16 still present?

Yes	GO to A2
No	The system is operating correctly at this time. The DTC may have set due to a previous low battery voltage condition.

A2 CHECK FOR CHARGING SYSTEM DIAGNOSTIC TROUBLE CODES (DTCS) IN THE PCM (POWERTRAIN CONTROL MODULE)

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC B1317, U3003:16 or U3003:17 present in 1 or more modules AND are any charging system Diagnostic Trouble Codes (DTCs) present in the PCM?

Yes	DIAGNOSE the PCM Diagnostic Trouble Codes (DTCs). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to A3

A3 CHECK THE BATTERY CONDITION AND STATE OF CHARGE

- Carry out the Battery Condition Test diagnostic routine.
  REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).

Did the battery pass the condition test?

Yes	GO to A4
No	INSTALL a new battery. REFER to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation).

A4 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE VOLTAGE (VPWR_ABS) PID (PARAMETER IDENTIFICATION)

- Ignition ON.
- Measure and record the voltage at the battery.
- Using a diagnostic scan tool, monitor the VPWR_ABS PID.

Is the PID display within 0.2 volt of the recorded battery voltage?

Yes	GO to A7
No	GO to A5

A5 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE VOLTAGE SUPPLY

- Ignition OFF.
- Disconnect ABS module C135.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-1	V	Ground
C135-25	V	Ground
C135-28	V	Ground

Is each voltage within 0.2 volt of the recorded battery voltage?

Yes	GO to A6
No	VERIFY AJB fuses are OK. If not OK, REFER to the Wiring Diagrams manual to identify the cause of the circuit short. If OK, REPAIR the affected circuit for high resistance or an open.

A6 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE GROUND CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect the battery negative cable.
  REFER to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-13	Ω	Ground
C135-38	Ω	Ground

Are the resistances less than 3 ohms?

Yes	GO to A7
No	REPAIR the circuit.

A7 VERIFY ALL WIRING CONNECTIONS

- Ignition OFF.
- Disconnect ABS module C135 (if not previously disconnected) and related in-line connectors.
- Using a good light source, inspect all connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary

Is the connector free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to A8
No	REPAIR the connector or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

A8 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Connect ABS module C135 and related in-line connectors. Make sure they seat and latch correctly.
- Connect the battery negative cable.
  REFER to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

Wheel Speed Sensor Erratic Signal Faults

Normal Operation and Fault Conditions

The wheel speed sensor uses the tone ring to generate a square wave signal proportional to wheel speed which is sent to the ABS module. The front wheel bearings, rear axle shafts, encoder (tone) rings and wheel speed sensors must be undamaged and free from any contamination to produce a clean signal for use by the ABS module. Also, all 4 tires and wheels must be of the same manufacturer recommended size for the wheel speed sensor to generate an accurate wheel speed signal.

The front wheel speed sensors and encoder rings are part of the front wheel hub and bearing assembly.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
• C0030:07 • C0033:07 • C0036:07 • C0039:07	• Left Front Tone Wheel: Mechanical Failure • Right Front Tone Wheel: Mechanical Failure • Left Rear Tone Wheel: Mechanical Failure • Right Rear Tone Wheel: Mechanical Failure	These Diagnostic Trouble Codes (DTCs) set in continuous memory if there is damage to the wheel speed sensor or tone ring. After module initialization and when vehicle speed is above 48 km/h (30 mph), the ABS module monitors the raw wheel speed sensor signal for a cyclically reoccurring gap or slope in the signal. This indicates a possible missing tooth in the tone ring. If the signal is incorrect for more than 1 minute, the DTC is set.

• C0031:07 • C0034:07 • C0037:07 • C003A:07	• Left Front Wheel Speed Sensor: Mechanical Failure • Right Front Wheel Speed Sensor: Mechanical Failure • Left Rear Wheel Speed Sensor: Mechanical Failure • Right Rear Wheel Speed Sensor: Mechanical Failure	The ABS module monitors wheel speed sensor signal for noise which could create an invalid signal. If the ABS module detects noise on one or more of the wheel speed sensor signals, this DTC is set.
• C0031:24 • C0034:24 • C0037:24 • C003A:24	• Left Front Wheel Speed Sensor: Signal Stuck High • Right Front Wheel Speed Sensor: Signal Stuck High • Left Rear Wheel Speed Sensor: Signal Stuck High • Right Rear Wheel Speed Sensor: Signal Stuck High	After the ABS has initialized, wheel speed sensor supply voltage is above 9 volts and vehicle speed exceeds 60 km/h (37 mph) for more than 5 seconds, the ABS module monitors wheel speed sensor signal plausibility. If one or more wheel speed signals does not match the other and exceeds a pre-set parameter, one or more of these Diagnostic Trouble Codes (DTCs) set in continuous memory.
• C0031:25 • C0034:25 • C0037:25 • C003A:25	• Left Front Wheel Speed Sensor: Signal Shape / Waveform Failure • Right Front Wheel Speed Sensor: Signal Shape / Waveform Failure • Left Rear Wheel	After module initialization, the ABS module monitors each wheel speed sensor input waveform and sets one or more of these Diagnostic Trouble Codes (DTCs) in continuous memory or on-demand if the waveform is implausible when compared to other inputs.

	Speed Sensor: Signal Shape / Waveform Failure • Right Rear Wheel Speed Sensor: Signal Shape / Waveform Failure	
• C0031:28 • C0034:28 • C0037:28 • C003A:28	• Left Front Wheel Speed Sensor: Signal Bias Level Out of Range/Zero Adjustment Failure • Right Front Wheel Speed Sensor: Signal Bias Level Out of Range/Zero Adjustment Failure • Left Rear Wheel Speed Sensor: Signal Bias Level Out of Range/Zero Adjustment Failure • Right Rear Wheel Speed Sensor: Signal Bias Level Out of Range/Zero Adjustment Failure	These Diagnostic Trouble Codes (DTCs) set in continuous memory or on-demand if the wheel speed signal input is out of range, continuously indicates low wheel speed or continuously indicates high wheel speed.
• C0031:29 • C0034:29 • C0037:29 • C003A:29	• Left Front Wheel Speed Sensor: Signal Invalid • Right Front Wheel Speed Sensor: Signal Invalid	After the ABS module is initialized, wheel speed sensor supply voltage is above 9 volts and vehicle speed exceeds 60 km/h (37 mph) for 72 seconds the ABS module compares the wheel speed signals to each other and to a calculated reference speed. If the difference between maximum and minimum wheel speed related to the calculated reference speed exceeds 16% or the difference between the left wheel speed sensor and the right wheel speed sensor on same axle exceeds 5% one or more of these Diagnostic Trouble Codes (DTCs) sets in continuous memory or on-demand.

	• Left Rear Wheel Speed Sensor: Signal Invalid • Right Rear Wheel Speed Sensor: Signal Invalid	
• C0031:38 • C0034:38 • C0037:38 • C003A:38	• Left Front Wheel Speed Sensor: Signal Frequency Incorrect • Right Front Wheel Speed Sensor: Signal Frequency Incorrect • Left Rear Wheel Speed Sensor: Signal Frequency Incorrect • Right Rear Wheel Speed Sensor: Signal Frequency Incorrect	After the ABS has initialized, wheel speed sensor supply voltage is above 9 volts and vehicle speed exceeds 60 km/h (37 mph) for more than 5 seconds with no brake pedal input, the ABS module monitors wheel speed sensor signal plausibility. If there is a wheel speed sensor signal plausibility due to interference or a signal disturbance, one or more of these Diagnostic Trouble Codes (DTCs) set in continuous memory.
• C0031:65 • C0034:65 • C0037:65 • C003A:65	• Left Front Wheel Speed Sensor: Signal Has Too Few Transitions / Events • Right Front Wheel Speed Sensor: Signal Has Too Few Transitions / Events • Left Rear Wheel Speed Sensor: Signal Has Too Few Transitions / Events • Right Rear Wheel	After the ABS has initialized, wheel speed sensor supply voltage is above 9 volts and vehicle speed exceeds 60 km/h (37 mph) for more than 5 seconds, the ABS module monitors wheel speed sensor signal plausibility. If a wheel speed sensor signal does not increase past 43 km/h (27 mph), one or more of these Diagnostic Trouble Codes (DTCs) set in continuous memory.

	Speed Sensor: Signal Has Too Few Transitions / Events	
• C0031:76 • C0034:76 • C0037:76 • C003A:76	• Left Front Wheel Speed Sensor: Wrong Mounting Position • Right Front Wheel Speed Sensor: Wrong Mounting Position • Left Rear Wheel Speed Sensor: Wrong Mounting Position • Right Rear Wheel Speed Sensor: Wrong Mounting Position	After the ABS has initialized and the wheel speed sensor signal monitoring is complete, the ABS module monitors wheel speed sensor signal plausibility. If the module detects signal behavior indicating a sensor installation issue (excessive air gap, incorrect mounting position), one or more of these Diagnostic Trouble Codes (DTCs) set in continuous memory.
C006B:00	Stability System Active Too Long: No Sub Type Information	This DTC is set if the ABS module detects continuous ABS or EBD control activations for an implausible time period (more than 60 seconds) at one or more wheels.
C1A95:02	Wheel Speed Sensor: General Signal Failure	This DTC is set if there is low power to the wheel speed sensors or reverse current on the wheel speed sensor supply is detected.
C1A95:2F	Wheel Speed Sensor: Signal Erratic	This DTC sets when multiple wheel speed sensors simultaneously exhibit suspicious failure type behavior for more than 500 milliseconds.
C1A95:62	Wheel Speed Sensor: Signal Compare Failure	This DTC is set when the ABS module detects one wheel speed sensor mounted in the wrong direction.
C1A95:64	Wheel Speed Sensor: Signal Plausibility Failure	This DTC is set when the ABS module monitoring determines an implausible ABS control activation has been requested for more 1 second.

Possible Causes

- Underinflated tires
- Incorrect or mismatched tires
- Wiring, terminals or connectors
- Wheel bearings
- Wheel speed sensor tone rings
- Wheel speed sensors
- ABS module

PINPOINT TEST B : WHEEL SPEED SENSOR ERRATIC SIGNAL FAULTS

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

B1 CHECK FOR ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, carry out the ABS module self-test.
- Retrieve and record all ABS module Diagnostic Trouble Codes (DTCs).

Is DTC C0031:01, C0031:12, C0031:14, C0032:11, C0034:01, C0034:12, C0034:14 or C0035:11 present?

Yes	GO to Pinpoint Test J
No	If DTC C0037:01, C0037:12, C0037:14, C0038:11, C003A:01, C003A:12, C003A:14 or C003B:11 is present, GO to Pinpoint Test K If one or more of the Diagnostic Trouble Codes (DTCs) shown in the DTC Fault Trigger Conditions table is present, GO to B2 For all other ABS module Diagnostic Trouble Codes (DTCs), GO to the ABS Module DTC Chart.

B2 CHECK THE TIRES SIZE AND PRESSURE

- Ignition OFF.
- Verify all the tires and wheels are the same size and the tire size and inflation pressures are correct as indicated on the VC label.

Are the tires and wheels OK?

Yes	GO to B3
No	INSTALL the correct size tire or wheel or ADJUST tire pressure as necessary.

B3 CHECK THE WHEEL SPEED SENSOR ELECTRICAL CONNECTOR FOR DAMAGE

- With the transmission in NEUTRAL, position the vehicle on a hoist.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- Disconnect the suspect wheel speed sensor electrical connector.
- Using a good light source, inspect the wheel speed sensor and electrical connector for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
  - water intrusion - clean and dry the connector, install a new connector as necessary
- Inspect the wheel speed sensor and harness for abrasions, broken connector tabs or water intrusion.

Is the wheel speed sensor and harness OK?

Yes	For rear wheel speed sensor Diagnostic Trouble Codes (DTCs), GO to B4 For front wheel speed sensor Diagnostic Trouble Codes (DTCs), GO to B5
No	INSTALL a new wheel speed sensor. REFER to: Front Wheel Speed Sensor (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Rear Wheel Speed Sensor (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).

B4 INSPECT THE WHEEL SPEED SENSOR MOUNTING

- Inspect the rear wheel speed sensor and fastener for looseness.
- Inspect the rear wheel speed sensor installation.

Is the wheel speed sensor installed correctly and are the wheel speed sensor and fastener tight?

Is the wheel speed sensor installed correctly and are the wheel speed sensor and fastener tight?

Yes	GO to B5
No	REINSTALL or TIGHTEN the wheel speed sensor fastener to specification.

B5 CHECK THE FRONT WHEEL BEARINGS AND REAR TONE RINGS FOR DAMAGE

- Inspect the front wheel bearings for abnormal wear or roughness, deformation or contamination of the seal and tone ring.
- Inspect the front wheel speed sensor for signs of damage.
- Inspect the rear wheel speed sensor tone rings for signs of damage, deformation and missing teeth.

Are the front wheel bearings, front wheel speed sensors and rear tone rings OK?

Yes	If DTC C003x:24, C003x:25, C003x:28, C003x:29, C003x:38 or C003x:76 is present, GO to B6 If DTC C003x:07, C003x:65 or C1A95:2F is present, GO to B7
No	INSTALL new components as necessary. For the front wheel speed sensor, REFER to: Front Wheel Speed Sensor (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). For the front wheel hub, REFER to: Front Wheel Bearing (204-01 Front Suspension, Removal and Installation).

B6 CHECK THE WHEEL SPEED SENSOR SIGNAL RETURN CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect the suspect wheel speed sensor electrical connector (if not previously disconnected).
- Disconnect ABS module C135.
- For the LH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-8	Ω	C150-1

- For the RH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-4	Ω	C160-1

- For the LH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-18	Ω	C440-1

- For the RH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-29	Ω	C426-1

Is the resistance less than 3 ohms?

Yes	GO to B7
No	REPAIR the circuit.

B7 CHECK FOR RETURNING DIAGNOSTIC TROUBLE CODES (DTCS)

- Connect the suspect wheel speed sensor electrical connector.
- Connect ABS module C135.
- Ignition ON.
- Using a diagnostic scan tool, clear all ABS module Diagnostic Trouble Codes (DTCs).
- Test drive the vehicle under normal driving conditions above 60 km/h (37 mph) for a minimum of 2 minutes.
- Using a diagnostic scan tool, carry out the ABS module self-test.

Is one or more of the Diagnostic Trouble Codes (DTCs) shown in the DTC Fault Trigger Conditions table present?

Yes	GO to B8
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

B8 VERIFY ALL WIRING CONNECTIONS

- Ignition OFF.
- Disconnect ABS module C135 and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary

Is the connector free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to B9
No	REPAIR the affected connectors or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

B9 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Connect ABS module C135 and related in-line connectors. Make sure they seat and latch correctly.
- Connect any disconnected wheel speed sensor electrical connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

C101A:1C

Refer to Wiring Diagrams Cell 42 for schematic and connector information.

Normal Operation and Fault Conditions

The brake booster vacuum sensor receives a sensor supply voltage of 5 volts from the ABS module. The sensor is also grounded through the ABS module. The sensor uses the pressure differential between the atmosphere and the brake booster vacuum chamber to produce a return voltage signal to the ABS module between 0.3 volt and 4.7 volts. The ABS module uses other sensor inputs such as wheel speed, brake pedal and stability sensors to determine if the vehicle is stopping and at what rate of deceleration. This information is compared against the vacuum pressure sensor to determine the validity of the sensor signal and the working condition of the sensor itself.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C101A:1C	Vacuum Pressure Sensor: Circuit Voltage Out of Range	This DTC sets in continuous memory if the 5-volt sensor supply voltage falls outside of a predetermined specification (either too high or too low).

Possible Causes

- Brake booster vacuum leak
- Wiring, terminals or connectors
- Brake booster vacuum sensor
- ABS module

Visual Inspection and Diagnostic Pre-checks

- Inspect the brake booster for vacuum leaks.
- Inspect the brake booster for any obvious signs of damage.
- Inspect the brake booster vacuum sensor harness and connector of any obvious signs of damage.
- Make sure the brake booster vacuum sensor electrical connector is free from any corrosion or other contaminants.

PINPOINT TEST C : C101A:1C

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

C1 VERIFY ALL WIRING CONNECTIONS

- Ignition OFF.
- Disconnect ABS module C135 and related in-line connectors.
- Disconnect brake booster vacuum sensor C1603 and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
- Using a suitable mating terminal, check each female terminal for deformed or enlarged contacts by comparing the mating terminal's fit between each of the following pins:
  - C135-5
  - C135-10
  - C135-37
  - C1603-1
  - C1603-2
  - C1603-3

Are both connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to C2

No	REPAIR the affected connectors or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

C2 CHECK THE VACUUM SENSOR WIRING FOR A SHORT TO VOLTAGE

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-5	V	Ground
C135-10	V	Ground
C135-37	V	Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to C3

C3 CHECK THE VACUUM SENSOR WIRING FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-5	Ω	Ground
C135-32	Ω	Ground
C135-37	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to C4
No	REPAIR the circuit.

C4 CHECK THE VACUUM SENSOR WIRING FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-5	Ω	C1603-3
C135-10	Ω	C1603-2
C135-37	Ω	C1603-1

Are the resistances less than 3 ohms?

Yes	GO to C5

No	REPAIR the circuit.

C5 CHECK THE VACUUM SENSOR WIRING FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1603-1	Ω	C1603-2
C1603-1	Ω	C1603-3
C1603-2	Ω	C1603-3

Are the resistances greater than 10,000 ohms?

Yes	GO to C6
No	REPAIR the circuit.

C6 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OUTPUT

- Connect ABS module C135 and related in-line connectors. Make sure they seat and latch correctly.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1603-3	V	Ground

Is the voltage between 4.7 and 5.2 volts?

Yes	INSTALL a new brake booster vacuum sensor.
No	GO to C7

C7 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Connect brake booster vacuum sensor C1603 and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

U0140:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition ON, the BCM sends messages to the GWM over the HS-CAN1, the GWM relays these message to the ABS module over the HS-CAN2. If the ABS module does not receive these messages within the specified time frame, the ABS module sets Diagnostic Trouble Codes (DTCs). This can be due to a BCM failure, a GWM failure, a circuit failure on the network or an excessive load on the network. For information on the messages sent to the ABS module by the BCM,
REFER to: Anti-Lock Brake System (ABS) and Stability Control - System Operation and Component Description (206-09 Anti-Lock Brake System (ABS) and Stability Control, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	This DTC sets in the ABS module if the ABS module does not receive any messages from the BCM.

Possible Causes

- Wiring, terminals or connectors
- Network communication concern
- GWM
- BCM
- ABS module

PINPOINT TEST D : U0140:00

D1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out the Network Test.

Do the GWM and the BCM pass the Network Test?

Yes	GO to D2
No	DIAGNOSE the no communication with the GWM or the BCM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

D2 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, carry out the ABS module self-test.
- Clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Repeat the ABS module self-test.
- Retrieve and record all ABS module Diagnostic Trouble Codes (DTCs).

Is DTC U0140:00 retrieved again?

Yes	GO to D3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

D3 REVIEW THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ABS (ANTI-LOCK

BRAKE SYSTEM) SELF-TEST

- Review the recorded Diagnostic Trouble Codes (DTCs) from the ABS module self-test.

Is DTC U3003:16 or U3003:17 present in the ABS module?

Yes	For DTC U3003:16, GO to Pinpoint Test A For DTC U3003:17, GO to Pinpoint Test E
No	GO to D4

D4 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) IN THE GWM (GATEWAY MODULE A)

- Using a diagnostic scan tool, carry out the GWM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the GWM?

Yes	DIAGNOSE the GWM Diagnostic Trouble Codes (DTCs). REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to D5

D5 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) IN THE BCM (BODY CONTROL MODULE)

- Using a diagnostic scan tool, carry out the BCM self-test.
- Retrieve and record all Diagnostic Trouble Codes (DTCs) from the BCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the BCM?

Yes	DIAGNOSE the BCM Diagnostic Trouble Codes (DTCs). REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	GO to D6

D6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140:XX SET IN OTHER MODULES

- Using the diagnostic scan tool, carry out the self-test for all modules.
- Retrieve and record the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0140:xx set in 1 or more modules other than the ABS module?

Yes	GO to D7
No	GO to D8

D7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect all BCM connectors and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
- Connect all BCM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical

	Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

D8 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect ABS module C135 and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
- Connect ABS module C135 and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U3003:17

Refer to Wiring Diagrams Cell 42 for schematic and connector information.

Normal Operation and Fault Conditions

The ABS module, hydraulic pump and solenoid valves require an operating voltage between 10 and 17 volts. The ABS module receives this voltage from the BJB. The ABS module has 2 ground circuits that splice together and terminate at a single location. An overcharging condition in the charging system results in the ABS module setting a DTC. This DTC may also set in the ABS module due to battery charging or vehicle jump starting events.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:17	Battery Voltage: Circuit Voltage Above Threshold	This DTC sets on-demand if the voltage supplied to the ABS module is above 17 volts.

Possible Causes

- Charging system concern
- ABS module

PINPOINT TEST E : U3003:17

E1 CHECK FOR HIGH VOLTAGE DIAGNOSTIC TROUBLE CODES (DTCS) SET IN OTHER MODULES

- Ignition ON.
- Using a diagnostic scan tool, retrieve and record all Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC B1317, B1318, B1676, U3003:16 or U3003:17 present in one or more modules AND are any charging system Diagnostic Trouble Codes (DTCs) present in the PCM?

Yes	DIAGNOSE the PCM Diagnostic Trouble Codes (DTCs). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to E2

E2 CHECK THE BATTERY VOLTAGE

- Turn off all interior lights, exterior lights and accessories.
- **NOTE:** *Do not allow the engine speed to increase above 2,000 RPM while performing this step or the generator may self-excite and result in default charging system output voltage. If engine speed increases above 2,000 RPM, turn the vehicle off and restart the engine before performing this step.*

  Start and run the engine at approximately 1,500 RPM for 3 minutes while monitoring the battery voltage.

Is the battery voltage between 13 and 15.2 volts ?

Yes	GO to E3
No	DIAGNOSE the overcharging condition. REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).

E3 RECHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U3003:17

- Turn the engine off.
- Ignition ON.
- Using a diagnostic scan tool, carry out the ABS module self-test.
- Clear the ABS module Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Repeat the ABS module self-test.

Is DTC U3003:17 still present?

Yes	GO to E4
No	The system is operating normally at this time. The DTC may have been set previously during battery charging or while jump starting the vehicle.

E4 VERIFY ALL WIRING CONNECTIONS

- Ignition OFF.
- Disconnect ABS module C135 and related in-line connectors.
- Using a good light source, inspect all connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins

- pushed-out pins - install new pins as necessary
- spread terminals - install new terminals as necessary

Is the connector free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to E5
No	REPAIR the connector or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

E5 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Connect ABS module C135 and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

U0146:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition ON, the GWM sends messages to the ABS module over the HS-CAN2. If the ABS module does not receive these messages within the specified time frame, the ABS module sets Diagnostic Trouble Codes (DTCs). This can be due to a GWM failure, a circuit failure on the network or an excessive load on the network. For information on the messages sent to the ABS module by the GWM,
REFER to: Anti-Lock Brake System (ABS) and Stability Control - System Operation and Component Description (206-09 Anti-Lock Brake System (ABS) and Stability Control, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0146:00	Lost Communication With Gateway "A": No Sub Type Information	This DTC sets in the ABS module if any of the GWM messages is missing. This can be due to a failure, a circuit failure on the HS-CAN or an excessive load on the network

Possible Causes

- Wiring, terminals or connectors
- Network communication concern
- GWM
- ABS module

PINPOINT TEST F : U0146:00

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

F1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using the diagnostic scan tool, carry out the Network Test.

Does the GWM pass the Network Test?

Yes	GO to F2
No	DIAGNOSE the no communication with the GWM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

F2 RECHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, carry out the ABS module self-test.
- Clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Repeat the ABS module self-test.
- Retrieve and record all ABS module Diagnostic Trouble Codes (DTCs).

Is DTC U0151:00 retrieved again?

Yes	GO to F3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

F3 REVIEW THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ABS (ANTI-LOCK BRAKE SYSTEM) SELF-TEST

- Review the recorded Diagnostic Trouble Codes (DTCs) from the ABS module self-test.

Is DTC U3003:16 or U3003:17 present in the ABS module?

Yes	For DTC U3003:16, GO to Pinpoint Test A For DTC U3003:17, GO to Pinpoint Test E
No	GO to F4

F4 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) IN THE GWM (GATEWAY MODULE A)

- Using a diagnostic scan tool, carry out the GWM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the GWM?

Yes	DIAGNOSE the GWM Diagnostic Trouble Codes (DTCs). REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to F5

F5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0146:XX SET IN OTHER MODULES

- Using the diagnostic scan tool, carry out the self-test for all modules.
- Retrieve and record the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0146:xx set in 1 or more modules other than the ABS module?

Yes	GO to F6
No	GO to F7

F6 CHECK FOR CORRECT GWM (GATEWAY MODULE A) OPERATION

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

- Ignition OFF.
- Wait one minute then disconnect all GWM connectors and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
- Connect all GWM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, DIAGNOSE the GWM concern. REFER to: Gateway Module A (GWM) (418-00 Module Communications Network, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

F7 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect ABS module C135 and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
- Connect ABS module C135 and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0151:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition ON, the RCM sends messages to the ABS module over the HS-CAN2. If the ABS module does not receive these messages within the specified time frame, the ABS module sets Diagnostic Trouble Codes (DTCs). This can be due to a RCM failure, a circuit failure on the network or an excessive load on the network. For information on the messages sent to the ABS module by the RCM,
REFER to: Anti-Lock Brake System (ABS) and Stability Control - System Operation and Component Description (206-09 Anti-Lock Brake System (ABS) and Stability Control, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	This DTC sets in the ABS module if the time allotted for stability sensor messages expires before the ABS module receives any stability sensor messages.

Possible Causes

- Wiring, terminals or connectors
- Network communication concern
- RCM
- ABS module

PINPOINT TEST G : U0151:00

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

G1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using the diagnostic scan tool, carry out the Network Test.

Does the RCM pass the Network Test?

Yes	GO to G2
No	DIAGNOSE the no communication with the RCM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

G2 RECHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, carry out the ABS module self-test.
- Clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Repeat the ABS module self-test.
- Retrieve and record all ABS module Diagnostic Trouble Codes (DTCs).

Is DTC U0151:00 retrieved again?

Yes	GO to F3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

G3 REVIEW THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ABS (ANTI-LOCK BRAKE SYSTEM) SELF-TEST

- Review the recorded Diagnostic Trouble Codes (DTCs) from the ABS module self-test.

Is DTC U3003:16 or U3003:17 present in the ABS module?

Yes	For DTC U3003:16, GO to Pinpoint Test A For DTC U3003:17, GO to Pinpoint Test E
No	GO to G4

G4 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) IN THE RCM (RESTRAINTS CONTROL MODULE)

- Using a diagnostic scan tool, carry out the RCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the RCM?

Yes	DIAGNOSE the RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	GO to G5

G5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0151:XX SET IN OTHER MODULES

- Using the diagnostic scan tool, carry out the self-test for all modules.
- Retrieve and record the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0151:xx set in 1 or more modules other than the ABS module?

Yes	GO to G6
No	GO to G7

G6 CHECK FOR CORRECT RCM (RESTRAINTS CONTROL MODULE) OPERATION

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

- Ignition OFF.
- Wait one minute then disconnect all RCM connectors and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
- Connect all RCM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, DIAGNOSE the RCM concern. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

G7 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect ABS module C135 and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
- Connect ABS module C135 and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C0020:16, C0020:17, C0020:49

Refer to Wiring Diagrams Cell 42 for schematic and connector information.

Normal Operation and Fault Conditions

The ABS module uses an internal solid state switch to operate the hydraulic pump motor. The ABS module tests the hydraulic pump motor by activating it for 30 milliseconds. While the pump motor is activated, the ABS module monitors the voltage drop across the hydraulic pump motor. After 30 milliseconds have passed, the ABS module stops applying voltage to the pump motor and monitors the voltage the spinning hydraulic pump motor is generating and the voltage drop across the hydraulic pump motor solid state switch. If the monitored voltages are not within specifications, the ABS module sets a DTC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C0020:16	ABS Pump Motor Control: Circuit Voltage Below Threshold	This DTC sets if the ABS module detects an under voltage condition at the pump motor voltage input.
C0020:17	ABS Pump Motor Control: Circuit Voltage Above Threshold	This DTC sets on-demand if the ABS module detects a pump motor voltage input greater than 17 volts for more than 0.5 seconds.
C0020:49	ABS Pump Motor Control: Internal Electronic Failure	This DTC sets if the hydraulic pump motor actual state does not match the commanded state for 30 seconds; pump is running, pump is not running or pump motor relay shorted.

Possible Causes

- Fuse
- Wiring, terminals or connectors
- HCU
- ABS module

Visual Inspection and Diagnostic Pre-checks

- Make sure the vehicle battery terminals and cables are free of any corrosion and other contaminants.
- Make sure the vehicle battery terminals are tightened to their correct torque specifications.
- Make sure BJB fuses and the fuse sockets are OK.

PINPOINT TEST H : C0020:16, C0020:17, C0020:49

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

H1 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE ELECTRICAL CONNECTOR

- Ignition OFF.
- Disconnect ABS module C135.
- Using a good light source, inspect ABS module C135 for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to H2
No	REPAIR the affected connectors or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

H2 CHECK FOR FAULT REPEATABILITY

- Connect ABS module C135.
- Ignition ON.
- Using a diagnostic scan tool, clear the ABS module Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Test drive the vehicle at speeds greater than 20 km/h (12 mph).
- Ignition OFF.
- Ignition ON.
- Using a diagnostic scan tool, carry out the ABS module self-test.
- Retrieve and record all ABS module Diagnostic Trouble Codes (DTCs).

Are any ABS module Diagnostic Trouble Codes (DTCs) retrieved?

Yes	For DTC C0020:16 GO to H4 For all other ABS module Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: ABS Module.
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

H3 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE PUMP MOTOR VOLTAGE SUPPLY FOR AN OPEN

- Ignition OFF.
- Remove BJB fuse (60A).
- Disconnect ABS module C135.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-1	Ω	BJB fuse (60A) Output Cavity

Is the resistance less than 0.5 ohm?

Yes	GO to H4
No	REPAIR the circuit.

H4 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE PUMP MOTOR VOLTAGE SUPPLY FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to H5
No	REPAIR the circuit. REFER to the Wiring Diagrams manual to identify the cause of the circuit short.

H5 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE GROUND CIRCUIT FOR AN OPEN

- Disconnect the battery negative cable.
  REFER to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-13	Ω	Ground

Is the resistance less than 0.5 ohm?

Yes	GO to H6
No	REPAIR the circuit.

H6 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect and inspect ABS module C135 (if not previously disconnected).
- Repair:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
- Connect ABS module C135. Make sure it seats and latches correctly.
- Install BJB fuse 11 (60A).
- Connect the battery negative cable.
  REFER to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module and HCU. REFER to: Hydraulic Control Unit (HCU) - Vehicles Without: Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).

	REFER to: Hydraulic Control Unit (HCU) - Vehicles With: Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

U0100:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition ON, the PCM sends messages to the GWM over the HS-CAN1, the GWM relays these message to the ABS module over the HS-CAN2. If the ABS module does not receive these messages within the specified time frame, the ABS module sets Diagnostic Trouble Codes (DTCs). This can be due to a PCM failure, a GWM failure, a circuit failure on the network or an excessive load on the network. For information on the messages sent to the ABS module by the PCM,
REFER to: Anti-Lock Brake System (ABS) and Stability Control - System Operation and Component Description (206-09 Anti-Lock Brake System (ABS) and Stability Control, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication With ECM/PCM "A": No Sub Type Information	This DTC sets if the ABS module does not receive any messages from the PCM.

Possible Causes

- Wiring, terminals or connectors
- Network communication concern
- GWM
- PCM
- ABS module

PINPOINT TEST I : U0100:00

I1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out the Network Test.

Do the GWM and PCM pass the Network Test?

Yes	GO to I2
No	DIAGNOSE the no communication with the GWM or PCM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

I2 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, carry out the ABS module self-test.
- Clear the ABS module Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Using a diagnostic scan tool, carry out the ABS module self-test.
- Retrieve and record the ABS module Diagnostic Trouble Codes (DTCs).

Is DTC U0100:00 retrieved again?

Yes	GO to I3
No	For all other ABS module Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: ABS Module. If no Diagnostic Trouble Codes (DTCs) are present, the system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

I3 REVIEW THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ABS (ANTI-LOCK BRAKE SYSTEM) SELF-TEST

- Review the recorded Diagnostic Trouble Codes (DTCs) from the ABS self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	For DTC U3003:16, GO to Pinpoint Test A For DTC U3003:17, GO to Pinpoint Test E
No	GO to I4

I4 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) IN THE GWM (GATEWAY MODULE A)

- Using a diagnostic scan tool, carry out the GWM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the GWM?

Yes	DIAGNOSE the GWM Diagnostic Trouble Codes (DTCs). REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to I5

I5 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) IN THE PCM (POWERTRAIN CONTROL MODULE)

- Using a diagnostic scan tool, carry out the PCM KOEO self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the PCM?

Yes	DIAGNOSE the PCM Diagnostic Trouble Codes (DTCs). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to I6

I6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:XX SET IN OTHER MODULES

- Using a diagnostic scan tool, carry out the self-test for all modules.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0100:xx set in 1 or more modules in addition to the ABS module?

Yes	GO to I7
No	GO to I8

I7 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect all PCM connectors and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
- Connect all PCM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

I8 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect ABS module C135 and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
- Connect ABS module C135 and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Wheel Speed Sensor Electrical Faults - Front

Refer to Wiring Diagrams Cell 42 for schematic and connector information.

Normal Operation and Fault Conditions

Active wheel speed sensors generate a square wave signal proportional to wheel speed which is sent to the ABS module. Each wheel speed sensor is connected to the ABS module through 2 wires and a connector at each wheel speed sensor. One wire is for sensor voltage supply from the ABS module and the other wire is for the signal return to the ABS module. When the ignition is set to ON, the ABS module carries out a self-test by sending a reference voltage through the wheel speed sensors and their circuitry.

The front wheel speed sensors and encoder rings are part of the front wheel hub and bearing assembly.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
• C0031:01 • C0034:01	• Left Front Wheel Speed Sensor: General Electrical Failure • Right Front Wheel Speed Sensor: General Electrical Failure	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if one or more wheel speed sensors are not sending a signal to the ABS module.
• C0031:12 • C0034:12	• Left Front Wheel Speed Sensor: Circuit Short to Battery • Right Front Wheel Speed Sensor: Circuit Short to Battery	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if there is a short to battery voltage in the sensor signal return circuit. A short to battery voltage may be due to the sensor signal return circuit and the sensor voltage supply circuit shorted together. These Diagnostic Trouble Codes (DTCs) also set if the sensor has an internal short to battery voltage.
• C0032:11 • C0035:11	• Left Front Wheel Speed Sensor Supply: Circuit Short to Ground • Right Front Wheel Speed Sensor Supply: Circuit Short to Ground	These Diagnostic Trouble Codes (DTCs) set in continuous memory if there is a short to ground in the sensor signal voltage supply circuit.

• C0031:14 • C0034:14	• Left Front Wheel Speed Sensor: Circuit Short to Ground or Open • Right Front Wheel Speed Sensor: Circuit Short to Ground or Open	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if there is a short to ground or an open in the sensor signal return circuit or if the sensor has an internal short to ground or an internal open.

Possible Causes

- Wiring, terminals or connectors
- Wheel speed sensor
- ABS module

Visual Inspection and Diagnostic Pre-checks

- Make sure the wheel speed sensor harness is routed correctly and is undamaged.
- Make sure the wheel speed sensor electrical connector is free from any corrosion or other contaminants.

PINPOINT TEST J : WHEEL SPEED SENSOR ELECTRICAL FAULTS - FRONT

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

J1 CHECK FOR FAULT REPEATABILITY

- Ignition ON.
- Using a diagnostic scan tool, clear all ABS module Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Test drive the vehicle under normal driving conditions above 60 km/h (37 mph) for a minimum of 2 minutes.
- Using a diagnostic scan tool, carry out the ABS module self-test.

Is DTC C0031:01, C0031:12, C0031:14, C0032:11, C0034:01, C0034:12, C0034:14 or C0035:11 present?

Yes	If the Rotunda Active Wheel Speed Sensor Tester **is** available, GO to J2 If the Rotunda Active Wheel Speed Sensor Tester **is not** available and DTC C0031:01, C0031:12, C0034:01 or C0034:12 is present, GO to J5 If the Rotunda Active Wheel Speed Sensor Tester **is not** available and DTC C0031:14 or C0034:14 is present, GO to J6 If the Rotunda Active Wheel Speed Sensor Tester **is not** available and DTC C0032:11 or C0035:11 is present, GO to J7
No	The system is operating correctly at this time. INSPECT both front wheel speed sensor electrical connectors and the ABS module electrical connector. REPAIR or CLEAN the connector as necessary. ADDRESS the root cause of any connector or pin issues.

J2 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OUTPUT USING THE ROTUNDA ACTIVE WHEEL SPEED SENSOR TESTER

- Ignition OFF.
- Disconnect the suspect wheel speed sensor electrical connector.
- Connect the Rotunda Active Wheel Speed Sensor Tester to the wheel speed sensor connectors.

- Ignition ON.
- Select the correct system polarity on the Rotunda Active Wheel Speed Sensor Tester and turn the power switch to the ON position.

Is the tester output LED illuminated?

Yes	GO to J3
No	GO to J5

J3 CHECK THE WHEEL SPEED SENSOR FOR A SHORT TO VOLTAGE WITH THE ROTUNDA ACTIVE WHEEL SPEED SENSOR TESTER

- Observe the current overload LED on the Rotunda Active Wheel Speed Sensor Tester.

Is the current overload LED illuminated?

Yes	REPAIR the suspect wheel speed sensor circuit for a short to voltage.
No	GO to J4

J4 CHECK THE WHEEL SPEED SENSOR OUTPUT WITH THE ROTUNDA ACTIVE WHEEL SPEED SENSOR TESTER

- Raise the suspect wheel until it can spin freely.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- While monitoring the Rotunda Active Wheel Speed Sensor Tester, slowly spin the suspect wheel.

Do the sensor output Light-emitting Diodes (LEDs) illuminate and flash?

Yes	The system is operating correctly at this time. INSPECT all wheel speed sensor electrical connectors and the ABS module electrical connectors. REPAIR or CLEAN the connector as necessary. ADDRESS the root cause of any connector or pin issues.
No	INSTALL a new wheel speed sensor.

J5 CHECK THE WHEEL SPEED SENSOR CIRCUITS FOR A SHORT TO BATTERY VOLTAGE

- Ignition OFF.
- Disconnect ABS module C135.
- Disconnect the suspect wheel speed sensor.
- Ignition ON.
- For the LH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-8		Ground
C135-19		Ground

- For the RH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-4		Ground
C135-16		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to J6

J6 CHECK THE WHEEL SPEED SENSOR CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect ABS module C135 (if not previously disconnected).
- Disconnect the suspect wheel speed sensor (if not previously disconnected).
- For the LH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-8	Ω	C150-1
C135-19	Ω	C150-2

- For the RH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-4	Ω	C160-1
C135-16	Ω	C160-2

Are the resistances less than 3 ohms?

Yes	GO to J7
No	REPAIR the circuit.

J7 CHECK FOR SHORTED WHEEL SPEED SENSOR CIRCUITS

- Ignition OFF.
- Disconnect ABS module C135 (if not previously disconnected).
- Disconnect the suspect wheel speed sensor (if not previously disconnected).
- For the LH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C150-1	Ω	C150-2

- For the RH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C160-1	Ω	C160-2

Is the resistance greater 10,000 ohms?

Yes	If DTC C0031:01, C0031:14, C0032:11, C0034:01, C0034:14, C0035:11 is present, GO to J8 If DTC C0031:12 or C0034:12 is present, GO to J9
No	REPAIR the circuit.

J8 CHECK THE WHEEL SPEED SENSOR CIRCUITS FOR A SHORT TO GROUND

- For the LH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-8	Ω	Ground
C135-19	Ω	Ground

- For the RH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-4	Ω	Ground
C135-16	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to J9
No	REPAIR the circuit.

J9 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OUTPUT

- Ignition OFF.
- Connect ABS module C135.
- Ignition ON.
- For the LH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C150-1	V	C150-2

- For the RH front wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C160-1	V	C160-2

Is the voltage greater 10 volts?

Yes	INSTALL a new wheel speed sensor. REFER to: Front Wheel Speed Sensor (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	GO to J10

J10 VERIFY ALL WIRING CONNECTIONS

- Ignition OFF.
- Disconnect ABS module C135 (if not previously disconnected) and related in-line connectors.

- Disconnect the suspect wheel speed sensor electrical connector (if not previously disconnected) and related in-line connectors.
- Using a good light source, inspect all connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary

Is the connector free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to J11
No	REPAIR the affected connectors or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

J11 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Connect ABS module C135 and related in-line connectors. Make sure they seat and latch correctly.
- Connect the suspect wheel speed sensor and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

Wheel Speed Sensor Electrical Faults - Rear

Refer to Wiring Diagrams Cell 42 for schematic and connector information.

Normal Operation and Fault Conditions

Active wheel speed sensors generate a square wave signal proportional to wheel speed which is sent to the ABS module. Each wheel speed sensor is connected to the ABS module through 2 wires and a connector at each wheel speed sensor. One wire is for sensor voltage supply from the ABS module and the other wire is for the signal return to the ABS module. When the ignition is set to ON, the ABS module carries out a self-test by sending a reference voltage through the wheel speed sensors and their circuitry.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
• C0037:01 • C003A:01	• Left Rear Wheel Speed Sensor: General Electrical Failure • Right Rear	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if one or more wheel speed sensors are not sending a signal to the ABS module.

	Wheel Speed Sensor: General Electrical Failure	
• C0037:12 • C003A:12	• Left Rear Wheel Speed Sensor: Circuit Short to Battery • Right Rear Wheel Speed Sensor: Circuit Short to Battery	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if there is a short to battery voltage in the sensor signal return circuit. A short to battery voltage may be due to the sensor signal return circuit and the sensor voltage supply circuit shorted together. These Diagnostic Trouble Codes (DTCs) also set if the sensor has an internal short to battery voltage.
• C0037:14 • C003A:14	• Left Rear Wheel Speed Sensor: Circuit Short to Ground or Open • Right Rear Wheel Speed Sensor: Circuit Short to Ground or Open	These Diagnostic Trouble Codes (DTCs) set in continuous memory and on-demand if there is a short to ground or an open in the sensor signal return circuit or if the sensor has an internal short to ground or an internal open.
• C0038:11 • C003B:11	• Left Rear Wheel Speed Sensor Supply: Circuit Short to Ground • Right Rear Wheel Speed Sensor Supply: Circuit Short to Ground	These Diagnostic Trouble Codes (DTCs) set in continuous memory if there is a short to ground in the sensor signal voltage supply circuit.

Possible Causes

- Wiring, terminals or connectors
- Wheel speed sensor
- ABS module

Visual Inspection and Diagnostic Pre-checks

- Make sure the wheel speed sensor harness is routed correctly and is undamaged.
- Make sure the wheel speed sensor electrical connector is free from any corrosion or other contaminants.

PINPOINT TEST K : WHEEL SPEED SENSOR ELECTRICAL FAULTS - REAR

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

K1 CHECK FOR FAULT REPEATABILITY

- Ignition ON.
- Using a diagnostic scan tool, clear all ABS module Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Test drive the vehicle under normal driving conditions above 60 km/h (37 mph) for a minimum of 2 minutes.
- Using a diagnostic scan tool, carry out the ABS module self-test.

Is DTC C0037:01, C0037:12, C0037:14, C0038:11, C003A:01, C003A:12, C003A:14 or C003B:11 present?

Yes	If the Rotunda Active Wheel Speed Sensor Tester **is** available, GO to K2 If the Rotunda Active Wheel Speed Sensor Tester **is not** available and DTC C0037:01, C0037:12, C003A:01 or C003A:12 is present, GO to K5 If the Rotunda Active Wheel Speed Sensor Tester **is not** available and DTC C0037:14 or C003A:14 is present, GO to K6 If the Rotunda Active Wheel Speed Sensor Tester **is not** available and DTC C0038:11 or C003B:11 is present, GO to K7
No	The system is operating correctly at this time. INSPECT both front wheel speed sensor electrical connectors and the ABS module electrical connector. REPAIR or CLEAN the connector as necessary. ADDRESS the root cause of any connector or pin issues.

K2 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OUTPUT USING THE ROTUNDA ACTIVE WHEEL SPEED SENSOR TESTER

- Ignition OFF.
- Disconnect the suspect wheel speed sensor electrical connector.
- Connect the Rotunda Active Wheel Speed Sensor Tester to the wheel speed sensor connectors.
- Ignition ON.
- Select the correct system polarity on the Rotunda Active Wheel Speed Sensor Tester and turn the power switch to the ON position.

Is the tester output LED illuminated?

Yes	GO to K3
No	GO to K5

K3 CHECK THE WHEEL SPEED SENSOR FOR A SHORT TO VOLTAGE WITH THE ROTUNDA ACTIVE WHEEL SPEED SENSOR TESTER

- Observe the current overload LED on the Rotunda Active Wheel Speed Sensor Tester.

Is the current overload LED illuminated?

Yes	REPAIR the suspect wheel speed sensor circuit for a short to voltage.
No	GO to K4

K4 CHECK THE WHEEL SPEED SENSOR OUTPUT WITH THE ROTUNDA ACTIVE WHEEL SPEED SENSOR TESTER

- Raise the suspect wheel until it can spin freely.

REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- While monitoring the Rotunda Active Wheel Speed Sensor Tester, slowly spin the suspect wheel.

Do the sensor output Light-emitting Diodes (LEDs) illuminate and flash?

Yes	The system is operating correctly at this time. INSPECT all wheel speed sensor electrical connectors and the ABS module electrical connectors. REPAIR or CLEAN the connector as necessary. ADDRESS the root cause of any connector or pin issues.
No	INSTALL a new wheel speed sensor. REFER to: Rear Wheel Speed Sensor (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).

K5 CHECK THE WHEEL SPEED SENSOR CIRCUITS FOR A SHORT TO BATTERY VOLTAGE

- Ignition OFF.
- Disconnect ABS module C135.
- Disconnect the suspect wheel speed sensor.
- Ignition ON.
- For the LH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-18		Ground
C135-31		Ground

- For the RH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-17		Ground
C135-29		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to K6

K6 CHECK THE WHEEL SPEED SENSOR CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect ABS module C135 (if not previously disconnected).
- Disconnect the suspect wheel speed sensor (if not previously disconnected).
- For the LH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-18	Ω	C440-1
C135-31	Ω	C440-2

- For the RH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead

C135-17	Ω	C426-2
C135-29	Ω	C426-1

Are the resistances less than 3 ohms?

Yes	GO to K7
No	REPAIR the circuit.

K7 CHECK FOR SHORTED WHEEL SPEED SENSOR CIRCUITS

- Ignition OFF.
- Disconnect ABS module C135 (if not previously disconnected).
- Disconnect the suspect wheel speed sensor (if not previously disconnected).
- For the LH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C440-1	Ω	C440-2

- For the RH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C426-1	Ω	C426-2

Is the resistance greater 10,000 ohms?

Yes	If DTC C0037:01, C0037:14, C0038:11, C003A:01, C003A:14, C003B:11 is present, GO to K8 If DTC C0037:12 or C003A:12 is present, GO to K9
No	REPAIR the circuit.

K8 CHECK THE WHEEL SPEED SENSOR CIRCUITS FOR A SHORT TO GROUND

- For the LH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-18	Ω	Ground
C135-31	Ω	Ground

- For the RH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C135-17	Ω	Ground
C135-29	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to K9
No	REPAIR the circuit.

K9 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OUTPUT

- Ignition OFF.
- Connect ABS module C135.
- Ignition ON.
- For the LH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C440-1		C440-2

- For the RH rear wheel speed sensor, measure:

Positive Lead	Measurement / Action	Negative Lead
C426-1		C426-2

Is the voltage greater 10 volts?

Yes	INSTALL a new wheel speed sensor. REFER to: Rear Wheel Speed Sensor (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	GO to K10

K10 VERIFY ALL WIRING CONNECTIONS

- Ignition OFF.
- Disconnect ABS module C135 (if not previously disconnected) and related in-line connectors.
- Disconnect the suspect wheel speed sensor electrical connector (if not previously disconnected) and related in-line connectors.
- Using a good light source, inspect all connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary

Is the connector free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to K11
No	REPAIR the affected connectors or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

K11 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Connect ABS module C135 and related in-line connectors. Make sure they seat and latch correctly.
- Connect the suspect wheel speed sensor and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

The Traction Control System Is Inoperative Or Cannot Be Disabled

Refer to Wiring Diagrams Cell 60 for schematic and connector information.

Normal Operation and Fault Conditions

The traction control switch is used to switch the AdvanceTrac features (traction control, ESC and RSC) on or off. When the driver presses the traction control switch, the IPC receives a ground signal from the switch and illuminates the stability-traction control OFF indicator. The IPC sends a traction control switch message to the GWM over the HS-CAN3 and the GWM relays this message to the ABS module over the HS-CAN2. The ABS module takes the necessary action depending on the switch inputs and traction control message. For additional information on disabling AdvanceTrac,
REFER to: Anti-Lock Brake System (ABS) and Stability Control - System Operation and Component Description (206-09 Anti-Lock Brake System (ABS) and Stability Control, Description and Operation).

If equipped, MyKey® allows users to configure traction control to be either always on or selectable. If a MyKey® restricted key is in use with the MyKey® traction control feature configured to always on, traction control cannot be disabled. An admin key must be used to enable and disable traction control.

NOTE: *For vehicles equipped with a keyless vehicle system, this test requires the use of at least 2 passive keys programmed to the vehicle; one admin passive key and one restricted passive key.*

NOTE: *For vehicles not equipped with a keyless vehicle system, this test requires the use of at least 2 Integrated Keyhead Transmitters (IKTs) programmed to the vehicle, one admin IKT and one restricted IKT.*

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C0089:73	TCS Disable Switch: Actuator Stuck Closed	This DTC sets in the ABS module if the traction control switch is pressed and held in the applied position for longer than 30 seconds, this can be caused by a short to ground on the traction control off circuit or if there is an internal failure of the traction control switch.

Possible Causes

- A MyKey® restricted key is in use
- Wiring, terminals or connectors
- Traction control switch
- IPC

PINPOINT TEST L : THE TRACTION CONTROL SYSTEM IS INOPERATIVE OR CANNOT BE DISABLED

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.
L1 VERIFY THAT THE KEY IN USE IS NOT RESTRICTED
• For vehicles equipped with a keyless vehicle system; – place 1 of the passive keys inside the vehicle and all other passive keys at least 1 meter (3 feet)

away from the vehicle.
  - press the start-stop button without pressing the brake pedal.
- For vehicles not equipped with a keyless vehicle system, turn the ignition to the ON position.
- Monitor the message center.

Does the message center display MYKEY ACTIVE DRIVE SAFELY?

Yes	The current passive key or IKT is a restricted key and is operating correctly. REPEAT the test using different passive keys or Integrated Keyhead Transmitters (IKTs) until the message center **does not** display MYKEY ACTIVE DRIVE SAFELY. GO to L2
No	GO to L2

L2 VERIFY THE MYKEY® TRACTION CONTROL SETTING

- Using the message center, verify the MyKey® traction control setting. Refer to the Owner's Literature for instructions on setting the MyKey® functions.

Is the MyKey® traction control setting configured to always on?

Yes	GO to L3
No	GO to L4

L3 VERIFY TRACTION CONTROL FUNCTION CAN BE DISABLED USING THE ADMIN PASSIVE KEY OR THE ADMIN IKT (INTEGRATED KEYHEAD TRANSMITTER)

- Using the message center, verify traction control can be enabled and disabled using the admin passive key or the admin IKT. Refer to the Owner's Literature for instructions on enabling and disabling traction control.

Can traction control be enabled and disabled using the admin passive key or the admin IKT?

Yes	The system is operating correctly at this time. The concern may have been caused by the use of a restricted passive key or restricted IKT. INFORM the customer that traction control can only be disabled using an admin passive key or an admin IKT when the MyKey® traction control setting is configured to always on.
No	GO to L4

L4 CHECK FOR IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, carry out the IPC self-test.

Are there any Diagnostic Trouble Codes (DTCs) in the IPC?

Yes	DIAGNOSE all IPC Diagnostic Trouble Codes (DTCs). REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	If the IPC does not communicate with the diagnostic scan tool, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). If the IPC does communicate with the diagnostic scan tool and there are no Diagnostic Trouble Codes (DTCs) present, GO to L5

L5 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, carry out the ABS module self-test.

Is DTC C0089:73 or U0155:00 present in the ABS module?

Yes	If DTC U0155:00 is present, GO to Pinpoint Test Q If DTC C0089:73 is present, GO to L6
No	If no Diagnostic Trouble Codes (DTCs) are present in the ABS module, GO to L6 For all other ABS module Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: ABS Module.

L6 CHECK THE TRACTION CONTROL SWITCH

- Ignition OFF.
- Disconnect multifunction switch C202.
- Measure **component side** while pressing and releasing the traction control switch:

Positive Lead	Measurement / Action	Negative Lead
C202-1	Ω	C202-12

Is the resistance less than 3 ohms with the switch pressed and greater than 10,000 ohms with the switch released?

Yes	If DTC C0089:73 is not present, GO to L7 If DTC C0089:73 is present, GO to L9
No	INSTALL a new stability-traction control switch.

L7 CHECK THE TRACTION CONTROL SWITCH GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C202-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to L8
No	REPAIR the circuit.

L8 CHECK THE TRACTION CONTROL SWITCH SIGNAL CIRCUIT FOR AN OPEN

- Disconnect IPC C220.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C202-1	Ω	C220-18

Is the resistance less than 3 ohms?

Yes	GO to L9
No	REPAIR the circuit.

L9 CHECK THE TRACTION CONTROL SWITCH SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect IPC C220 (if not previously disconnected).
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C202-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to L10
No	REPAIR the circuit.

L10 VERIFY ALL WIRING CONNECTIONS

- Ignition OFF.
- Disconnect IPC C220 and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to L11
No	REPAIR the affected connectors or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

L11 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Connect IPC C220 and related in-line connectors. Make sure they seat and latch correctly.
- Connect center stack switch assembly C2114. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern is still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

U0104:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition ON, the CCM sends messages to the ABS module over the HS-CAN2. If the ABS module does not receive these messages within the specified time frame, the module sets a DTC. This can be due to a CCM failure, a circuit failure on the network or an excessive load on the network. For information on the messages sent to the ABS module by the CCM,
REFER to: Anti-Lock Brake System (ABS) and Stability Control - System Operation and Component Description (206-09 Anti-Lock Brake System (ABS) and Stability Control, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0104:00	Lost Communication With Cruise Control Module: No Sub Type Information	This DTC sets in continuous memory in the ABS module if the ABS module does not receive any messages from the CCM.

Possible Causes

- Wiring, terminals or connectors
- Network communication concern
- CCM
- ABS module

PINPOINT TEST M : U0104:00

M1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out the Network Test.

Does the CCM pass the Network Test?

Yes	GO to M2
No	DIAGNOSE the no communication with the CCM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

M2 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, carry out the ABS module self-test.
- Clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Using a diagnostic scan tool, carry out the ABS module self-test.
- Record the ABS module Diagnostic Trouble Codes (DTCs).

Is DTC U0104:00 retrieved again?

Yes	GO to M3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

M3 REVIEW THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ABS (ANTI-LOCK BRAKE SYSTEM) SELF-TEST

- Check the recorded Diagnostic Trouble Codes (DTCs) from the ABS module self-test.

Was DTC U3003:16 or U3003:17 recorded?

Yes	For DTC U3003:16, GO to Pinpoint Test A For DTC U3003:17, GO to Pinpoint Test E
No	GO to M4

M4 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) IN THE CCM (CRUISE CONTROL MODULE)

- Using a diagnostic scan tool, carry out the CCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the CCM?

Yes	DIAGNOSE the CCM Diagnostic Trouble Codes (DTCs). REFER to: Cruise Control (419-03A Cruise Control, Diagnosis and Testing).
No	GO to M5

M5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0104:XX SET IN OTHER MODULES

- Using a diagnostic scan tool, carry out the self-test for all modules.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0104:xx set in 1 or more modules in addition to the ABS module?

Yes	GO to M6
No	GO to M7

M6 CHECK FOR CORRECT CCM (CRUISE CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect all CCM connector and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
- Connect all CCM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new CCM. REFER to: Cruise Control Module (CCM) (419-03A Cruise Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

M7 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect ABS module C135 and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary

- Connect ABS module C135 and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C0040:24, C0040:64

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The ABS module receives BPP and accelerator pedal position from the PCM through the GWM over the HS-CAN2. The ABS module uses the brake fluid pressure sensor in the HCU, wheel speed sensor and lateral acceleration information to verify the brake pedal position message. An incorrectly installed BPP switch can cause a signal plausibility concern. An implausible signal can also be created if the driver is resting one foot on the brake pedal while using the other foot to press the accelerator with vehicle speed above 10 km/h (6 mph).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C0040:24	Brake Pedal Switch "A": Signal Stuck High	There are 2 conditions which can cause this DTC to set in continuous memory in the ABS module. Thet first condition is if the PCM CAN messages indicate the brake pedal and accelerator pedals are pressed, vehicle speed is above 10 km/h (6 mph) and the brake fluid hydraulic pressure sensor in the HCU indicates less than 500 kPa (5 bar) for more than 60 seconds. The second condition is if the PCM CAN messages indicate the brake pedal and accelerator pedals are pressed and vehicle speed is greater than 10 km/h (6 mph) for more than 30 seconds.
C0040:64	Brake Pedal Switch "A": Signal Plausibility Failure	This DTC sets in continuous memory in the ABS module if the PCM CAN messages indicates the brake pedal is not being pressed, but brake hydraulic pressure is over 30 bar (435 psi) for more than 1 second.

Possible Causes

- Wiring, terminals or connectors
- BPP switch
- Network communication concern
- PCM
- Pressing both pedals (brake and accelerator) at the same time

Visual Inspection and Diagnostic Pre-checks

- Make sure the brake pedal switch electrical connector is connected and free of corrosion and other contaminants.
- Make sure the brake pedal switch is installed correctly.
- Make sure the brake pedal switch is operating correctly.

PINPOINT TEST N : C0040:24, C0040:64

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector

NOTE: *The BPP is also known as the stoplamp switch.*

N1 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) IN THE PCM (POWERTRAIN CONTROL MODULE)

- Ignition ON.
- Using a diagnostic scan tool, carry out the PCM KOEO self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the PCM?

Yes	DIAGNOSE all PCM Diagnostic Trouble Codes (DTCs). REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) . REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma) .
No	GO to N2

N2 CHECK THE DIAGNOSTIC TROUBLE CODES (DTCS) IN THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE

- Using a diagnostic scan tool, carry out the ABS module self-test.

Are any lost communication with PCM, invalid data from PCM, pressure sensor, wheel speed sensor or stability control sensor Diagnostic Trouble Codes (DTCs) present in the ABS module?

Yes	DIAGNOSE all lost communication with PCM, invalid data from PCM, pressure sensor, wheel speed sensor or stability control sensor Diagnostic Trouble Codes (DTCs) before diagnosing DTC C0040:64. GO to the DTC Chart: ABS Module.
No	GO to N3

N3 CHECK THE STOPLAMP SWITCH AND BRAKE PEDAL ASSEMBLY INSTALLATION

- Inspect the stoplamp switch and brake pedal assembly, verify there is no brake pedal pressure unintentionally applied due to incorrect stoplamp switch or brake pedal installation.

Are the stoplamp switch and brake pedal assembly installed correctly?

Yes	GO to N4
No	REINSTALL the stoplamp switch or brake pedal assembly.

N4 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE BRAKE ON / OFF (BOO_ABS) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, monitor the ABS module BOO_ABS PID while pressing and releasing the brake pedal.

Does the PID reflect the brake pedal movement?

Yes	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.
No	GO to N5

N5 CHECK THE PCM (POWERTRAIN CONTROL MODULE) BRAKE PEDAL POSITION (BOO1) PID (PARAMETER IDENTIFICATION)
• Ignition ON. • Using a diagnostic scan tool, monitor the PCM BOO1 PID while pressing and releasing the brake pedal. **Does the PID reflect the brake pedal movement?**

Yes	The concern is not present at this time and may have been caused by high network traffic, a loose or corroded connector or an intermittent condition. SET the ignition to OFF. DISCONNECT and INSPECT all PCM electrical connectors, stoplamp switch C278 and related in-line connectors for corrosion, bent pins, pushed-out pins and spread terminals. REPAIR or INSTALL new as necessary.
No	DIAGNOSE the BPP switch. REFER to: Stoplamps (417-01 Exterior Lighting, Diagnosis and Testing).

C101A:15, C101A:16, C101A:29

Refer to Wiring Diagrams Cell 42 for schematic and connector information.

Normal Operation and Fault Conditions

The brake booster vacuum pressure sensor receives a sensor supply voltage of 5 volts from the ABS module. The sensor is also grounded through the ABS module. The sensor uses the pressure differential between the atmosphere and the brake booster vacuum chamber to produce a return voltage signal to the ABS module between 0.39 volt and 4.38 volts. The ABS module uses other sensor inputs such as wheel speed, brake pedal and stability sensors to determine if the vehicle is stopping and at what rate of deceleration. This information is compared against the vacuum pressure sensor to determine the validity of the sensor signal and the working condition of the sensor itself. An open circuit, a short to ground, a short to voltage or a faulted vacuum sensor cause the ABS module to set a DTC.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C101A:15	Vacuum Pressure Sensor: Circuit Short To Battery or Open	This DTC sets in continuous memory in the ABS module if the brake booster vacuum sensor return signal line outside the expected range, 0.3 volt and 4.7 volts.
C101A:16	Vacuum Pressure Sensor: Circuit Voltage Below Threshold	This DTC sets in continuous memory in the ABS module if the brake booster vacuum sensor return signal line outside the expected range, 0.3 volt and 4.7 volts.
C101A:29	Vacuum Pressure Sensor: Signal Invalid	This DTC sets in continuous memory in the ABS module if the driver applies the brake pedal and the brake fluid pressure sensor indicates an increase in pressure but the vacuum level in the brake booster does not decrease by the expected amount.

Possible Causes

- Wiring, terminals or connectors
- Brake booster vacuum sensor
- Low battery voltage

Visual Inspection and Diagnostic Pre-checks

- Make sure the brake pedal switch electrical connector is connected and free of corrosion and other

contaminants.
- Make sure the brake pedal switch is installed correctly.
- Make sure the brake pedal switch is operating correctly.

PINPOINT TEST O : C101A:15, C101A:16, C101A:29

O1 CHECK FOR OTHER ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, carry out the ABS module self-test.

Are any brake pedal position or pressure sensor Diagnostic Trouble Codes (DTCs) present in the ABS module?

Yes	DIAGNOSE all ABS module brake pedal position or pressure sensor Diagnostic Trouble Codes (DTCs) before diagnosing DTC C101A:15 or C101A:16.
No	GO to O2

O2 VERIFY ALL WIRING CONNECTIONS

- Ignition OFF.
- Disconnect ABS module C135.
- Disconnect brake booster vacuum sensor C1782.
- Using a good light source, inspect each connector terminal for any corrosion.
- Inspect both connectors for any pushed-out pins.
  Refer to Wiring Diagrams Cell 5 for schematic and connector information.
- Using a suitable mating terminal, check each female terminal for deformed or enlarged contacts by comparing the mating terminal's fit between each of the following pins:
  - C135-5
  - C135-10
  - C135-37
  - C1782-1
  - C1782-2
  - C1783-3

Are both connectors free of corrosion, pushed-out pins and deformed or enlarged contacts?

Yes	GO to O3
No	REPAIR the affected terminal. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

O3 RECHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

- Connect ABS module C135.
- Connect brake booster vacuum sensor C1782.
- Ignition ON.
- Using a diagnostic scan tool, clear the ABS module Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Start the engine and allow it to run for at least 1 minute to build up vacuum in the brake booster.
- Fully and firmly, press and release the brake pedal 3 times.
- Using a diagnostic scan tool, carry out the ABS module self-test.

Is DTC C101A:15 or C101A:16 present?

Yes	GO to O4
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

O4 CHECK THE VACUUM SENSOR WIRING FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect ABS module C135.
- Disconnect brake booster vacuum sensor C1782.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-5		Ground
C135-10		Ground
C135-37		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to O5

O5 CHECK THE VACUUM SENSOR WIRING FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-5	Ω	Ground
C135-10	Ω	Ground
C135-37	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to O6
No	REPAIR the circuit.

O6 CHECK THE VACUUM SENSOR WIRING FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C135-5	Ω	C1782-3
C135-10	Ω	C1782-2
C135-37	Ω	C1782-1

Are the resistances less than 3 ohms?

Yes	GO to O7
No	REPAIR the circuit.

O7 CHECK THE VACUUM SENSOR WIRING FOR A SHORT TOGETHER

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1782-1	Ω	C1782-2
C1782-1	Ω	C1782-3
C1782-2	Ω	C1782-3

Are the resistances greater than 10,000 ohms?

Yes	INSTALL a new brake booster vacuum sensor.
No	REPAIR the circuit.

U0131:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition ON, the PSCM sends messages to the ABS module over the HS-CAN2. If the ABS module does not receive these messages within the specified time frame, the module sets a DTC. This can be due to a PSCM failure, a circuit failure on the network or an excessive load on the network. For information on the messages sent to the ABS module by the PSCM,
REFER to: Anti-Lock Brake System (ABS) and Stability Control - System Operation and Component Description (206-09 Anti-Lock Brake System (ABS) and Stability Control, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0131:00	Lost Communication With Power Steering Control Module: No Sub Type Information	This DTC sets in continuous memory in the ABS module if the ABS module does not receive any messages from the PSCM.

Possible Causes

- Wiring, terminals or connectors
- Network communication concern
- PSCM
- ABS module

PINPOINT TEST P : U0131:00

P1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out the Network Test.

Does the PSCM pass the Network Test?

Yes	GO to P2

No	DIAGNOSE the no communication with the PSCM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

P2 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, carry out the ABS module self-test.
- Clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Using a diagnostic scan tool, carry out the ABS module self-test.
- Record the ABS module Diagnostic Trouble Codes (DTCs).

Is DTC U0131:00 retrieved again?

Yes	GO to P3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

P3 REVIEW THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ABS (ANTI-LOCK BRAKE SYSTEM) SELF-TEST

- Check the recorded Diagnostic Trouble Codes (DTCs) from the ABS module self-test.

Was DTC U3003:16 or U3003:17 recorded?

Yes	For DTC U3003:16, GO to Pinpoint Test A For DTC U3003:17, GO to Pinpoint Test E
No	GO to P4

P4 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) IN THE PSCM (POWER STEERING CONTROL MODULE)

- Using a diagnostic scan tool, carry out the PSCM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the PSCM?

Yes	DIAGNOSE the PSCM Diagnostic Trouble Codes (DTCs). REFER to: Power Steering (211-02A Power Steering, Diagnosis and Testing).
No	GO to P5

P5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0131:XX SET IN OTHER MODULES

- Using a diagnostic scan tool, carry out the self-test for all modules.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0131:xx set in 1 or more modules in addition to the ABS module?

Yes	GO to P6
No	GO to P7

P6 CHECK FOR CORRECT PSCM (POWER STEERING CONTROL MODULE) OPERATION

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not

be cleared and result in the need to install a new EPAS gear.

- Ignition OFF.
- Disconnect all PSCM connector and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
- Connect all PSCM connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, REFER to the EPAS symptom chart or DTC chart.
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

P7 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect ABS module C135 and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
- Connect ABS module C135 and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U0155:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition ON, the IPC sends messages to the GWM over the HS-CAN3, the GWM relays these messages to the ABS module over the HS-CAN2. If the ABS module does not receive these messages within the specified time frame, the module sets a DTC. This can be due to a GWM failure, an IPC failure, a circuit failure on the network or an excessive load on the network. For information on the messages sent to the ABS module by the IPC,
REFER to: Anti-Lock Brake System (ABS) and Stability Control - System Operation and Component Description (206-09 Anti-Lock Brake System (ABS) and Stability Control, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	This DTC sets in continuous memory in the ABS module if the ABS module does not receive any messages from the IPC.

Possible Causes

- Wiring, terminals or connectors
- Network communication concern
- GWM
- IPC
- ABS module

PINPOINT TEST Q : U0155:00

Q1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out the Network Test.

Do the GWM and the IPC pass the Network Test?

Yes	GO to Q2
No	DIAGNOSE the no communication with the GWM or IPC. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

Q2 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, carry out the ABS module self-test.
- Clear the Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Using a diagnostic scan tool, carry out the ABS module self-test.
- Record the ABS module Diagnostic Trouble Codes (DTCs).

Is DTC U0155:00 retrieved again?

Yes	GO to Q3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

Q3 REVIEW THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ABS (ANTI-LOCK BRAKE SYSTEM) SELF-TEST

- Check the recorded Diagnostic Trouble Codes (DTCs) from the ABS module self-test.

Was DTC U3003:16 or U3003:17 recorded?

Yes	For DTC U3003:16, GO to Pinpoint Test A For DTC U3003:17, GO to Pinpoint Test E
No	GO to Q4

Q4 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) IN THE GWM (GATEWAY MODULE A)

- Using a diagnostic scan tool, carry out the GWM self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the GWM?

Yes	DIAGNOSE the GWM Diagnostic Trouble Codes (DTCs). REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to Q5

Q5 CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS) IN THE IPC (INSTRUMENT PANEL CLUSTER)

- Using a diagnostic scan tool, carry out the IPC self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the IPC?

Yes	DIAGNOSE the IPC Diagnostic Trouble Codes (DTCs). REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	GO to Q6

Q6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:XX SET IN OTHER MODULES

- Using a diagnostic scan tool, carry out the self-test for all modules.
- Retrieve the Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0155:xx set in 1 or more modules in addition to the ABS module?

Yes	GO to Q7
No	GO to Q8

Q7 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Ignition OFF.
- Disconnect all IPC connector and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
- Connect all IPC connector and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Q8 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect ABS module C135 and related in-line connectors.
- Using a good light source, inspect the electrical connectors for the following:

- corrosion - install new connector or terminal and clean the module pins
- damaged or bent pins - install new terminals or pins
- pushed-out pins - install new pins as necessary
- spread terminals - install new terminals as necessary

- Connect ABS module C135 and related in-line connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Hill Descent Control™ System Is Inoperative Or Cannot Be Disabled

Refer to Wiring Diagrams Cell 60 for schematic and connector information.

Normal Operation and Fault Conditions

The Hill Descent Control™ switch is used to activate and deactivate the Hill Descent Control™ system. When the driver presses the Hill Descent Control™ switch, the IPC receives a ground signal from the switch and illuminates the Hill Descent Control™ indicator. The IPC sends a Hill Descent Control™ switch message to the GWM over the HS-CAN3 and the GWM relays this message to the ABS module over the HS-CAN2. The ABS module takes the necessary action depending on the switch inputs and traction control message.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0401:86	Invalid Data Received From ECM/PCM "A": Signal Invalid	This DTC sets in continuous memory if the Hill Descent Control™ switch message from the IPC indicates the switch is stuck or held in place for longer than 30 seconds. This can be caused by a short to ground on the Hill Descent Control™ circuit or if there is an internal failure of the Hill Descent Control™ switch.

Possible Causes

- A MyKey® restricted key is in use
- Wiring, terminals or connectors
- Traction control switch
- IPC

PINPOINT TEST R : THE HILL DESCENT CONTROL™ SYSTEM IS INOPERATIVE OR CANNOT BE DISABLED

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.
R1 CHECK FOR IPC (INSTRUMENT PANEL CLUSTER) DIAGNOSTIC TROUBLE CODES (DTCS)
• Ignition ON. • Using a diagnostic scan tool, carry out the IPC self-test. **Are there any Diagnostic Trouble Codes (DTCs) in the IPC?**

Yes	DIAGNOSE all IPC Diagnostic Trouble Codes (DTCs). REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	If the IPC does not communicate with the diagnostic scan tool, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). If the IPC does communicate with the diagnostic scan tool and there are no Diagnostic Trouble Codes (DTCs) present, GO to R2

R2 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, carry out the ABS module self-test.

Are there any "lost communication" or "invalid data" Diagnostic Trouble Codes (DTCs) present in the ABS module?

Yes	DIAGNOSE all ABS module "lost communication" and "invalid data" Diagnostic Trouble Codes (DTCs)
No	GO to R3

R3 CHECK THE HILL DESCENT CONTROL™ SWITCH

- Ignition OFF.
- Disconnect multifunction switch C202.
- Measure **component side** while pressing and releasing the Hill Descent Control™ switch:

Positive Lead	Measurement / Action	Negative Lead
C202-4	Ω	C202-12

Is the resistance less than 3 ohms with the switch pressed and greater than 10,000 ohms with the switch released?

Yes	GO to R4
No	INSTALL a new multifunction switch.

R4 CHECK THE HILL DESCENT CONTROL™ SWITCH GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C202-12	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to R5
No	REPAIR the circuit.

R5 CHECK THE HILL DESCENT CONTROL™ SWITCH SIGNAL CIRCUIT FOR AN OPEN

- Disconnect IPC C220.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C202-4	Ω	C220-10

Is the resistance less than 3 ohms?

Yes	GO to R6
No	REPAIR the circuit.

R6 CHECK THE HILL DESCENT CONTROL™ SWITCH SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C202-4	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to R7
No	REPAIR the circuit.

R7 VERIFY ALL WIRING CONNECTIONS

- Ignition OFF.
- Disconnect IPC C220 and related in-line connectors.
- Using a good light source, inspect the Hill Descent Control™ switch, the IPC and related in-line electrical connectors for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to R8
No	REPAIR the affected connectors or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

R8 CHECK FOR CORRECT IPC (INSTRUMENT PANEL CLUSTER) OPERATION

- Connect IPC C220 and related in-line connectors. Make sure they seat and latch correctly.
- Connect center stack switch assembly C2114. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern is still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical

	Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

U3002:62

Normal Operation and Fault Conditions

When the ignition is ON, the ABS module and the PCM share VIN information through the GWM over the HS-CAN1 and the HS-CAN2.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3002:62	Vehicle Identification Number: Signal Compare Failure	This DTC sets in continuous memory if the VIN message sent by the PCM over the HS-CAN1 does not match the VIN stored in the ABS module.

Possible Causes

- Module configuration (ABS and PCM)
- ABS module

PINPOINT TEST S : U3002:62

S1 VERIFY THE PCM (POWERTRAIN CONTROL MODULE) VIN (VEHICLE IDENTIFICATION NUMBER)

- Ignition ON.
- Using a diagnostic scan tool, compare the VIN in the PCM with the VIN plate on the vehicle.

Does the VIN in the PCM match the VIN plate?

Yes	GO to S2
No	RECONFIGURE the PCM. FOLLOW the instructions on the diagnostic scan tool. REFER to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation).

S2 VERIFY THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE PART NUMBER

- Using a diagnostic scan tool, retrieve and record the ABS module part number.
- Compare the part number retrieved to the part number in the parts catalog or equivalent.

Is the correct ABS module installed in the vehicle?

Yes	CONFIGURE the ABS module. FOLLOW the instructions on the diagnostic scan tool. REFER to: Module Configuration - System Operation and Component Description (418-01 Module Configuration, Description and Operation).
No	INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation). REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS)

and Stability Control, Removal and Installation).

Stability Control Sensor Signal Faults

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

The ABS module receives vehicle yaw rate, lateral acceleration, longitudinal acceleration and roll rate from RCM over the HS-CAN2. The yaw rate sensor, lateral accelerometer and longitudinal accelerometer are contained in the RCM. A failure of the HS-CAN2, an incorrectly installed RCM, an internal failure of the RCM or the internal sensors causes the ABS to set one or more Diagnostic Trouble Codes (DTCs).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
• C0061:22 • C0062:22 • C0063:22	• Lateral Acceleration Sensor: Signal Amplitude > Maximum • Longitudinal Acceleration Sensor: Signal Amplitude > Maximum • Yaw Rate Sensor: Signal Amplitude > Maximum	This DTC sets if the absolute value of the yaw rate, lateral acceleration or longitudinal acceleration message from the RCM is outside of the maximum allowable range.
• C0061:28 • C0062:28 • C0063:28	• Lateral Acceleration Sensor: Signal Bias Level Out of Range / Zero Adjustment Failure • Longitudinal Acceleration Sensor: Signal Bias Level Out of Range / Zero Adjustment Failure • Yaw Rate Sensor: Signal Bias Level Out of Range / Zero Adjustment Failure	This DTC sets if the difference between the measured yaw rate and the calculated yaw rate is greater than a predetermined limit or if the learned lateral acceleration sensor offset or learned longitudinal acceleration sensor offset exceeds the programmed limits.
• C0061:64 • C0062:64 • C0063:64	• Lateral Acceleration Sensor:	This DTC sets if the yaw rate, lateral acceleration or longitudinal acceleration does not match other sensor input or calculated values.

• C0064:64	Signal Plausibility Failure • Longitudinal Acceleration Sensor: Signal Plausibility Failure • Yaw Rate Sensor: Signal Plausibility Failure • Roll Rate Sensor: Signal Plausibility Failure	
• C0062:02	• Longitudinal Acceleration Sensor: General Signal Failure	This DTC sets if the ABS module calibration of the longitudinal acceleration sensor is incomplete or not completed correctly.
• C0062:23	• Longitudinal Acceleration Sensor: Signal Stuck Low	This DTC sets if the absolute value of the longitudinal acceleration message from the RCM is outside stuck low.
• C0062:2A	• Longitudinal Acceleration Sensor: Signal Stuck In Range	This DTC is set in the ABS module if, during each drive-off acceleration, the measured longitudinal acceleration signal value sent from the RCM does not change as expected when compared to the calculated reference longitudinal acceleration signal value.
• C0062:67	• Longitudinal Acceleration Sensor: Signal Incorrect After Event	This DTC only sets when the ABS module does not complete a successful IVD Initialization routine. The ABS module longitudinal acceleration sensor input (LONG_ACCL) PID can be used to read the sensor value. The longitudinal acceleration sensor signal value from the RCM during standstill calibration on a level surface should be less than 2 m/s^2.
• C0063:27	• Yaw Rate Sensor: Signal Rate of Change Above Threshold	This DTC sets if the yaw rate signal gradient received from the RCM is greater than 500 deg/s^2.
• C0063:62	• Yaw Rate Sensor: Signal Compare Failure	This DTC sets if the difference between the yaw rate received from the RCM and the calculated reference yaw rate exceeds a predetermined threshold.
• C0064:96	• Roll Rate Sensor: Component Internal Failure	This DTC sets if the RCM sends an implausible roll rate sensor value.

Possible Causes

- Underinflated tires
- Incorrect or mismatched tires
- Network communication concern
- Incorrect or incomplete ABS module IVD Initialization
- Incorrectly installed RCM
- RCM

PINPOINT TEST T : STABILITY CONTROL SENSOR SIGNAL FAULTS

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

T1 CHECK FOR RETURNING ABS (ANTI-LOCK BRAKE SYSTEM) MODULE DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, clear the ABS module Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Test drive the vehicle above 12 km/h (7 mph) and make at least 1 left turn and 1 right turn.
- Using a diagnostic scan tool, carry out the ABS module self-test.
- Retrieve and record all ABS module Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) present in the ABS module?

Yes	If any of the Diagnostic Trouble Codes (DTCs) listed in the DTC Fault Trigger Conditions table are present, GO to T2 For all other ABS module Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: ABS Module.
No	The fault is not present and cannot be recreated at this time. CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSPECT all in-line connectors and the wire harness between the RCM and the ABS module for corrosion, loose terminals, spread terminals, loose wire connections, frayed wire connections, pinched wire harnesses and cut or pierced wire harnesses. REPAIR as necessary.

T2 CHECK THE WHEELS AND TIRES

- Inspect the wheels and tires for any damage or excessive wear.
- Verify all wheels and tires are the same size and match the size indicated on the VC label.
- Verify the inflation pressure of all 4 tires is correct as indicated on the VC label.

Are the wheels and tires OK?

Yes	GO to T3
No	INSTALL the correct size wheel or tire as necessary. ADJUST tire pressure as necessary. REFER to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).

T3 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out the Network Test.

Does the RCM pass the Network Test?

Yes	GO to T4
No	DIAGNOSE the RCM does not communicate with the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

T4 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, carry out the ABS module self-test.
- Retrieve and record all ABS module Diagnostic Trouble Codes (DTCs).
- Clear the ABS module Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Using a diagnostic scan tool, carry out the ABS module self-test.

Are any Diagnostic Trouble Codes (DTCs) present in the ABS module?

Yes	If any of the Diagnostic Trouble Codes (DTCs) listed in the DTC Fault Trigger Conditions table are present, GO to T5 For all other ABS module Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: ABS Module.
No	GO to T6

T5 CHECK THE RCM (RESTRAINTS CONTROL MODULE) FOR DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, carry out the RCM self-test.

Are there any Diagnostic Trouble Codes (DTCs) present in the RCM?

Yes	DIAGNOSE all RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	GO to T6

T6 VERIFY STABILITY CONTROL SENSOR CALIBRATION

NOTE: *The vehicle must be on level ground and at a complete standstill during IVD initialization. Any vehicle movement results in false values for this test.*

- Using the diagnostic scan tool, carry out the IVD Initialization routine. Follow the diagnostic scan tool directions.
- Ignition OFF.
- Ignition ON.
- Test drive the vehicle above 12 km/h (7 mph) and make at least 1 left turn and 1 right turn.

Is the Advance Trac® warning indicator illuminated?

Yes	Using a diagnostic scan tool, CARRY OUT the ABS module self-test. If any of the Diagnostic Trouble Codes (DTCs) listed in the DTC Fault Trigger Conditions table are present, GO to T7 For all other ABS module Diagnostic Trouble Codes (DTCs), GO to the DTC Chart: ABS Module.
No	The condition which caused the concern is no longer present. The concern was most likely due to an incomplete calibration or a failed calibration of the stability control sensors.

T7 CHECK THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE PID (PARAMETER IDENTIFICATION) VALUES

NOTE: *The vehicle must be on level ground and at a complete standstill during this step. Any vehicle movement results in false values for this test.*

- Ignition OFF.
- Ignition ON.

- Using a diagnostic scan tool, monitor the following ABS module Parameter Identifications (PIDs):
  - Yaw rate (YAW_RATE)
  - Lateral accelerometer (LAT_ACCL)
  - Longitudinal accelerometer (LONG_ACCL)
  - Roll rate (ROLL_RATE)

Is the YAW_RATE PID value between -0.05 and 0.05, the LAT_ACCL PID value between -0.4 and 0.4, the LONG_ACCL PID value between -0.4 and 0.4, and the ROLL_RATE PID value between -0.05 and 0.05?

Yes	GO to T9
No	GO to T8

T8 CHECK THE RCM (RESTRAINTS CONTROL MODULE) INSTALLATION AND MOUNTING SURFACE

WARNING: Turn the ignition OFF and wait one minute to deplete the backup power supply. Failure to follow this instruction may result in serious personal injury or death in the event of an accidental deployment.

- Ignition OFF.
- Wait one minute then disconnect RCM C310A and C310B.
- Inspect the RCM installation and make sure the fasteners are fully seated and tightened to specifications. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
- Inspect the RCM mounting surface for damage, corrosion or dirt.

Is the RCM installed correctly and is the mounting surface clean and free from damage?

Yes	GO to T9
No	CLEAN or REPAIR the mounting surface or correctly REINSTALL the RCM as necessary. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).

T9 CHECK FOR CORRECT RCM (RESTRAINTS CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect ABS module C135 and related in-line electrical connectors.
- Inspect the ABS module, RCM and related in-line electrical connectors for:
  - corrosion
  - loose or spread terminals
  - loose or frayed wire connections at terminals
  - pushed-out or bent pins
  - damage, pinched, cut or pierced wires
- Repair any electrical connector concerns found,
  Refer to Wiring Diagrams Cell 5 for schematic and connector information.
- Ignition OFF.
- Wait one minute then connect RCM C310A and C310B. Make sure the connectors seat and latch correctly.
- Connect ABS module C135 and related in-line electrical connectors. Make sure the connectors seat and latch correctly.
- Test drive the vehicle above 12 km/h (7 mph) and make at least 1 left turn and 1 right turn.

Is the Advance Trac® warning indicator illuminated?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, DIAGNOSE the RCM concern. REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	The system is operating correctly at this time. The concern may have been caused by a loose or corroded connector. ADDRESS the root cause of any connector or pin issues.

DTC P050F:00

Normal Operation and Fault Conditions

The vacuum pump is mechanically driven by the camshaft. The ABS module uses a sensor mounted on the brake booster to monitor the vacuum. A vacuum pump failure or a leak in the vacuum hoses, check valve, seals or brake booster can all cause insufficient vacuum for brake booster operation.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P050F:00	Brake Assist Vacuum Too Low: No Sub Type Information	This DTC sets if the either of these conditions exist. Condition 1: vacuum level in the brake booster is less than -10 kPa (-3 inch Hg) for more than 10 seconds and there are no ABS hydraulic pressure Diagnostic Trouble Codes (DTCs) present and it has been more than 1 minute after engine start or vehicle speed is greater than 1.25 km/h (0.77 mph) for 10 seconds. Condition 2: vacuum level in the brake booster is less than -10 kPa (-3 inch Hg) for more than 1 second and there are ABS hydraulic pressure Diagnostic Trouble Codes (DTCs) present and vehicle speed is greater than 1.25 km/h (0.77 mph) for 10 seconds.

Possible Causes

- Vacuum hoses
- Brake master cylinder seal
- Check valve grommet
- Vacuum sensor grommet
- Check valve
- Brake vacuum pump

PINPOINT TEST U : DTC P050F:00

U1 CHECK FOR OTHER ABS MODULE DTCS

- Ignition ON.
- Using a diagnostic scan tool, perform the ABS module self-test.

Is DTC C101A:15, C101A:16, C101A:1C or C101A:29 present?

Yes	For DTC C101A:15, C101A:16 and C101A:29, GO to Pinpoint Test O For DTC C101A:1C, GO to Pinpoint Test C
No	The system is operating correctly at this time.

U2 CHECK THE BRAKE BOOSTER AND VACUUM COMPONENTS

- Ignition OFF.
- Inspect the following components for signs of obvious damage:
  - Check valve grommet
  - Vacuum sensor grommet
  - Brake master cylinder seal
  - Check valve
  - Vacuum hoses
  - Brake booster

Are the components listed free from any damage?

Yes	GO to U3
No	INSTALL new components as necessary, then GO to U3

U3 TEST THE BRAKE BOOSTER

- 1. Carry out the Component Test – Brake Booster.
  REFER to: Brake System (206-00 Brake System - General Information, Diagnosis and Testing).

Was the component test successful?

Yes	GO to U4
No	INSTALL new components as directed by the component test.

U4 VERIFY ABS MODULE VACUUM / PRESSURE SENSOR SIGNAL 1 (VAC_PRS_S1) PID (PARAMETER IDENTIFICATION)

NOTE: *Running the engine with the vacuum sensor removed from the brake booster sets Diagnostic Trouble Codes (DTCs) in the ABS module. Clear all Diagnostic Trouble Codes (DTCs) once the repair is complete.*

- Start the engine and allow to idle for at least 20 seconds.
- Using a diagnostic scan tool, observe ABS module PID VAC_PRS_S1.
- Record the PID display.
- Ignition OFF.
- Remove the vacuum sensor from the brake booster (leave the electrical connector connected).
- Connect a vacuum gauge to the vacuum sensor port.
- Start the engine and allow to idle for at least 20 seconds.
- Read and record the vacuum gauge display.
- Ignition OFF.
- Disconnect the vacuum gauge from the brake booster and install the vacuum sensor.

Does the VAC_PRS_S1 PID display match the recorded vacuum gauge display ±10 kPa (3 inches Hg) of each other?

Yes	The condition causing the concern is not present at this time. The concern may be temperature related. ALLOW the vehicle to remain outside overnight and RETEST the vacuum system.
No	INSTALL a new brake booster vacuum sensor.

Steering Gear Checks After a Collision

General Equipment

Feeler gauge
Straight edge
Ford diagnostic equipment

Items to be observed when checking the steering system

The following list of steering gear conditions and the methods of testing should be taken into account when carrying out checks to the steering system:

- If the steering gear has no faults after completing the following checks, do not install a new steering gear.
- Surface corrosion and marks on the tie-rod are acceptable.
- When checking for turning effort torque peaks in the steering gear, turn the steering wheel from steering lock stop to steering lock stop in approximately 15 seconds.
- A steady increase of turning effort torque from steering center to steering lock stop is acceptable.
- Noises from the power steering, for example the power steering motor, are acceptable. If in doubt, compare the noise level to a known good vehicle of similar specification.

STEERING GEAR HOUSING

1. Connect the Ford diagnostic equipment to the vehicle and check for any EPAS DTC(s). If DTC U3000-49, U3000-53 or U3000-96 is present, install a new steering gear.
   REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
2. Raise and support the vehicle.
   REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
3. Visually inspect the steering gear housing (especially along the split lines), power steering motor, electrical connectors, rubber bushes, and wiring harness for cracks, cuts and damage. If the steering gear housing, power steering motor/electrical connector or bushes of the steering gear are cracked or damaged, install a new steering gear.
   REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
   If the vehicle-side wiring harness or electrical connectors are cut or damaged, install a new wiring harness.

STEERING GEAR BOOTS

1. Visually inspect the steering gear boot(s) for splits, damage and correct fitment. If the steering gear boot(s) is split, damaged or incorrectly fitted, install a new steering gear boot(s) as necessary.
   REFER to: Steering Gear Boot (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).

TIE RODS AND TIE-ROD ENDS

1. Using a straight edge and feeler gauge, check the tie-rods to see if they are straight. If the distance between the tie-rod and straight edge is greater than 0.5 mm, install a new steering gear.
   REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
2. Check the tightening torque of the tie-rod end to wheel knuckle nut.
   REFER to: Tie Rod End (211-02) .
3. Check the tightening torque of the tie-rod end locking nut.
   REFER to: Tie Rod End (211-02) .

CHECK FOR TURNING EFFORT TORQUE PEAKS IN THE STEERING GEAR

1. Lower and support the vehicle making sure that the road wheels are just clear of the floor.
2. With the ignition switch in position I (engine off), slowly turn the steering wheel from steering lock stop to steering lock stop.
3. Only continue to the step 4, if a turning effort torque peak or judder is felt while turning the steering wheel.
4. Detach the tie-rods from the wheel knuckles.
5. Slowly turn the steering wheel from steering lock stop to steering lock stop.

- If no torque peak or judder can be felt now, investigate the front suspension for damage.
- If a turning effort torque peak or judder is felt while turning the steering wheel, install a new steering gear.
  REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).

6. Lower the vehicle and drive it onto a four-post hoist or inspection pit.
7. Run the engine at idle and slowly turn the steering wheel to the left-hand steering lock stop. Hold the steering wheel in this position for 5 seconds with a turning effort torque of 15 Nm at the steering wheel rim and check for steering gear movements and touch conditions to surrounding components.
8. Turn the steering wheel away from the left-hand steering lock stop for 30 seconds.
9. Run the engine at idle and slowly turn the steering wheel to the right-hand steering lock stop. Hold the steering wheel in this position for 5 seconds with a turning effort torque of 15 Nm at the steering wheel rim and check for steering gear movements and touch conditions to surrounding components.
10. Turn the steering wheel away from the right-hand steering lock stop.
11. Rectify any touch conditions found.
12. Install new steering gear retaining bolts and tighten to the correct torque if steering gear movement was found.
    REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
13. Drive the vehicle on roads at different vehicle speeds while executing different steering manoeuvres. In an appropriate location, drive several figures of 8. Carry out a parking manoeuvre and steer to full lock during this manoeuvre. Check for torque peaks, judder noise and any warning messages in the message center.
14. If available, use Active Park Assist to carry out a parking manoeuvre.
15. If available, drive on straight roads with clearly visible side limitation bars at speeds above 60 km/h and check the Lane Departure Warning and Lane Keeping Aid for correct function.
16. Rectify any faults found.

Copyright © 2016 Ford Motor Company

Steering System

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
− Tire pressure(s) − Accessory drive belt − Loose tie-rod end(s) − Tie-rod(s) − Steering gear housing − Loose strut and spring assemblies or ball joints − Loose pinch bolts on steering column shaft flexible coupling − Wheels and tires − Power steering lines fluid leaks − Steering gear bellows	− Power steering pressure (PSP) switch

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Sources	Action
• Drift left or right	• Vehicle attitude incorrect (front or rear is high or low).	• CHECK for abnormal loading, coil spring sag or non-standard springs.
	• Incorrect wheel alignment.	• CHECK the wheel alignment and ADJUST if necessary. REFER to: Front Toe Adjustment (204-00 Suspension System - General Information, General Procedures).
	• Worn front wheel bearings.	• CHECK and INSTALL new wheel bearings as necessary. REFER to: Front Wheel Bearing (204-01 Front Suspension) .
	• Brake system.	• CHECK the brake system. REFER to: Brake System (206-00 Brake System - General Information) .
	• Steering linkage.	• CARRY OUT the Steering Linkage Component Test. REFER to Steering Linkage Component Test in this procedure.
	• Steering gear.	• CARRY OUT the Steering Linkage Component Test. REFER to Steering Linkage Component Test in this procedure.
	• Wheels and tires.	• REFER to: Wheels and Tires (204-04A Wheels and Tires, Diagnosis and Testing).

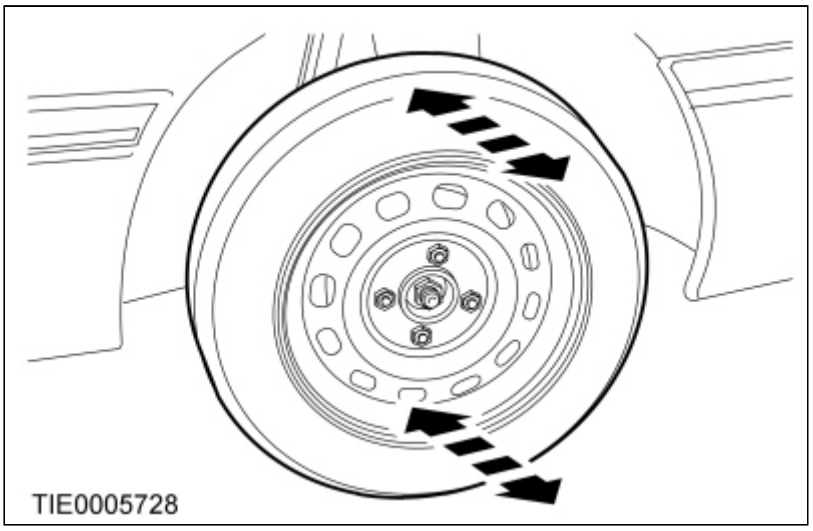
• Steering wheel off center	• Vehicle attitude incorrect (front or rear is high or low).	• CHECK for abnormal loading, coil spring sag or non-standard springs.
	• Incorrect wheel alignment.	• CHECK the wheel alignment and ADJUST if necessary. REFER to: Front Toe Adjustment (204-00 Suspension System - General Information, General Procedures).
	• Suspension lower arm ball joint.	• CARRY OUT the Ball Joint Inspection Component Test. REFER to: Suspension System (204-00 Suspension System - General Information, Diagnosis and Testing).
	• Steering linkage.	• CARRY OUT the Steering Linkage Component Test. REFER to Steering Linkage Component Test in this procedure.
	• Steering gear.	• CARRY OUT the Steering Linkage Component Test. REFER to Steering Linkage Component Test in this procedure.
• Vibration	• Incorrect wheel alignment.	• CHECK the wheel alignment and ADJUST if necessary. REFER to: Front Toe Adjustment (204-00 Suspension System - General Information, General Procedures).
	• Wheels and tires.	• CHECK the wheels and tires. BALANCE or INSTALL new wheels and tires as necessary.
	• Damaged or worn front wheel bearings.	• CHECK and INSTALL new wheel bearings as necessary. REFER to: Front Wheel Bearing (204-01 Front Suspension) .
	• Front strut and spring assemblies.	• CHECK and INSTALL new suspension components as necessary.
	• Damaged front suspension lower arm(s).	• CHECK and INSTALL new suspension components as necessary.
	• Steering linkage.	• CARRY OUT the Steering Linkage Component Test. REFER to Steering Linkage Component Test in this procedure.
• Steering effort is high/low	• Power steering hose restriction.	• CHECK the power steering hoses for damage, kinks or restrictions. INSTALL new components as necessary.
	• Power steering fluid contamination.	• FLUSH the power steering system. REFER to: (211-00 Steering System - General Information) Power Steering System Flushing (General Procedures), Power Steering System Filling (General Procedures), Power Steering System Bleeding (General Procedures).
	• Aeration of the power steering fluid.	• BLEED the power steering system. REFER to: Power Steering System Bleeding (211-00 Steering System - General Information, General Procedures).
	• Steering gear floor seal touch condition.	• CHECK the installation of the floor seal.
	• Steering column.	• CHECK if the floor covering is obstructing the steering gear pinion. • CHECK the installation of the floor seal. • CARRY OUT the Steering Column Universal Joint Component Test. REFER to Steering Column Universal Joint Component Test.

	• Steering linkage.	• CARRY OUT the Steering Linkage Component Test. REFER to Steering Linkage Component Test in this procedure.
	• Steering gear.	• CARRY OUT the Steering Linkage Component Test. REFER to Steering Linkage Component Test in this procedure.
	• Worn power steering pump.	• INSTALL a new power steering pump. REFER to: (211-02A Power Steering) Power Steering Pump - 2.5L Duratec-HE (122kW/165PS) - MI4 (Removal and Installation).
• Excessive noise	• Power steering operation noise.	• CARRY OUT the Power Steering Operation Noise Check. REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness) .
	• Aeration of the power steering fluid.	• BLEED the power steering system. REFER to: Power Steering System Bleeding (211-00 Steering System - General Information, General Procedures).
	• Power steering lines.	• CHECK that the power steering line clamps are secure. • CHECK the power steering lines for clearance from the vehicle body, subframe and steering gear. • CHECK the steering gear transfer lines for clearance from the steering gear.
	• Loose steering gear retaining bolts.	• CHECK and INSTALL new bolts as necessary.
	• Power steering pump.	• INSTALL a new power steering pump. REFER to: (211-02A Power Steering) Power Steering Pump - 2.5L Duratec-HE (122kW/165PS) - MI4 (Removal and Installation).
	• Tie-rod.	• CARRY OUT the Tie-Rod Component Test. REFER to Tie-Rod Component Test in this procedure.
• Steering does not vary with increased wheel rotation	• Worn tie-rod ends.	• INSTALL new components as necessary. REFER to: Tie Rod End (211-03 Steering Linkage) .
	• Worn front suspension bushings.	• CHECK and INSTALL new components as necessary.
	• Suspension lower arm ball joint.	• CARRY OUT the Ball Joint Inspection Component Test. REFER to: Suspension System (204-00 Suspension System - General Information, Diagnosis and Testing).
	• Steering gear insulator bushings worn or perished.	• CHECK and INSTALL new components as necessary.
	• Loose steering gear retaining bolts.	• CHECK and INSTALL new bolts as necessary.
	• Loose steering column retaining bolts.	• CHECK and INSTALL new bolts as necessary.
	• Loose steering column to steering gear pinion retaining bolt.	• CHECK and INSTALL a new bolt as necessary.
	• Excessive steering gear backlash.	• CARRY OUT the Steering Linkage Component Test. REFER to Steering Linkage Component Test in this procedure.

Components Tests

Steering Linkage

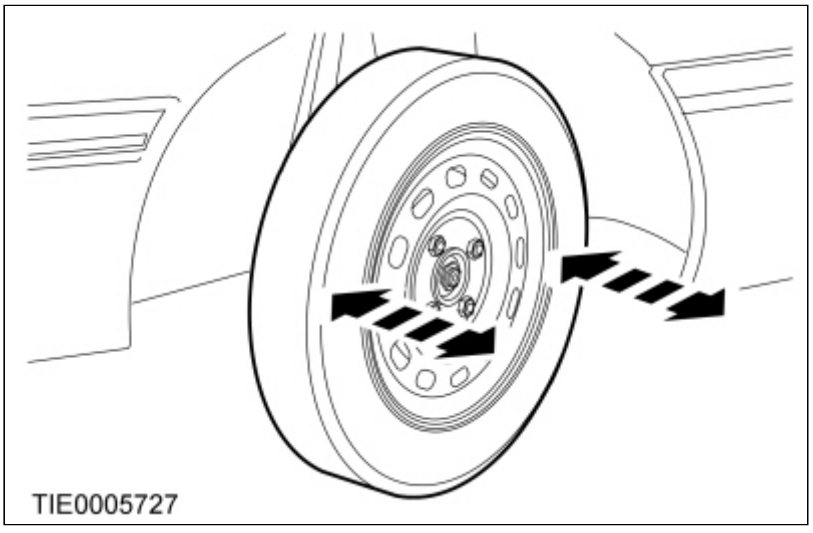
1. Grasp the steering wheel firmly and move it up and down and to the left and right without turning the steering wheel to check the steering column bearing for wear, steering column shaft for wear, steering wheel for looseness and steering column for looseness. If the steering column bearing or the steering column shaft is worn install a new steering column shaft.
   REFER to: Steering Column (211-04 Steering Column) .
   If the steering wheel or the steering column is loose, tighten the steering wheel or the steering column retaining bolts.



2. With the road wheels in the straight ahead position, gently turn the steering wheel to the left and the right to check for free play in the steering linkage.

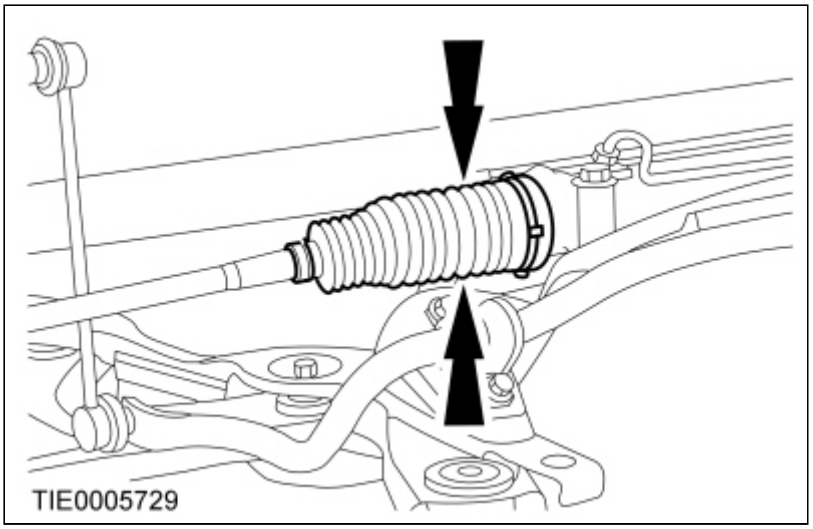
3. There should be no excessive free play at the steering wheel rim. If there is excessive free play, CHECK the tie-rod inner and outer ball joints, REFER to Tie-Rod Component Test in this procedure. CHECK the steering column universal joint, REFER to Steering Column Universal Joint Component Test in this procedure. If there is no free play in the tie-rod and the steering column, install a new steering gear.
   REFER to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).

Tie-Rod

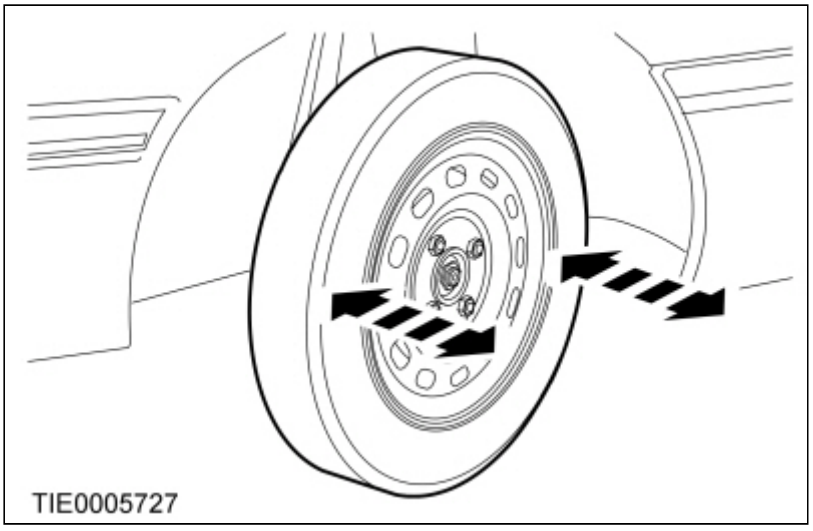


1. Noises such as knocks, which may appear to originate from the steering linkage, may also be generated by front suspension components.
   REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness) .

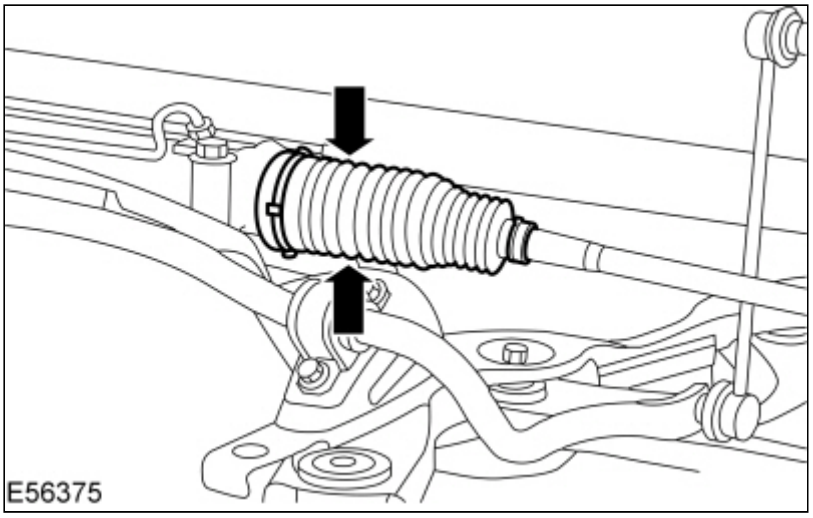
2. Raise and support the vehicle. REFER to: Jacking (100-02) .
   REFER to: Lifting (100-02) .



3. Firmly grasp the road wheel and apply a rocking motion checking for any free play in the wheel bearing or suspension components.



4. Turn the steering wheel to position the steering linkage against the right-hand steering lock stop.



5. With the aid of another technician holding the steering linkage against the right-hand steering lock stop, firmly grasp the right-hand road wheel and apply a rocking motion checking for any free play in the steering linkage.

6. Detach the steering gear boot from the steering gear body and check for free play at the tie-rod inner ball joint.
7. If there is free play at the tie-rod inner ball joint, install a new tie-rod.
   REFER to: Tie Rod (211-03 Steering Linkage) .
8. Check the tie-rod end for free play. Install a new tie-rod end if necessary.
   REFER to: Tie Rod End (211-03 Steering Linkage) .
9. Attach the steering gear boot to the steering gear body. Install new steering gear boot clamps.
10. Turn the steering wheel to position the steering linkage against the left-hand steering lock stop.

11. With the aid of another technician holding the steering against the left-hand steering lock stop, firmly grasp the left-hand road wheel and apply a rocking motion checking for any free play in the steering linkage.

12. Detach the steering gear boot from the steering gear body and check for free play at the tie-rod inner ball joint.

13. If there is free play at the tie-rod inner ball joint, install a new tie-rod.
REFER to: Tie Rod (211-03 Steering Linkage) .

14. Check the tie-rod end for free play. Install a new tie-rod end if necessary.
REFER to: Tie Rod End (211-03 Steering Linkage) .

15. Attach the steering gear boot to the steering gear body. Install new steering gear boot clamps.

Turning Effort Test

1. Before carrying out the turning effort test, make sure that the following are serviceable:

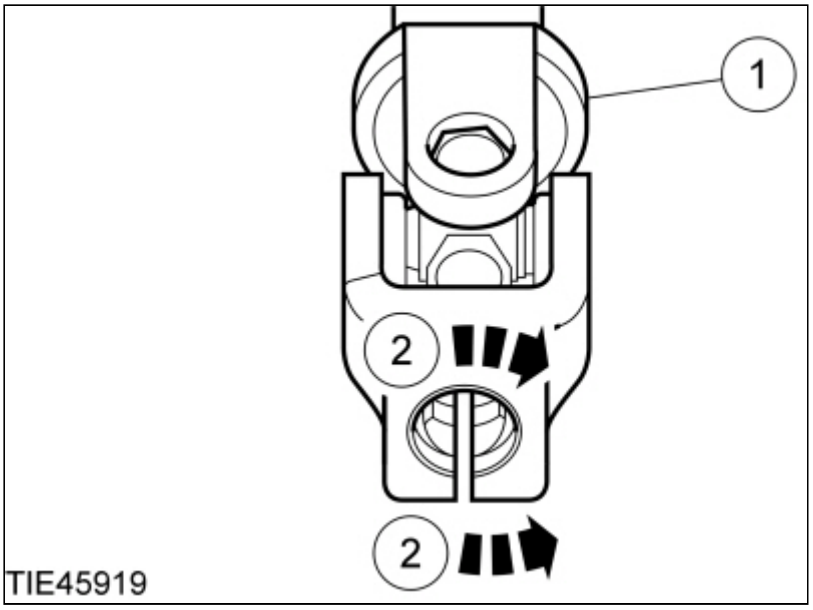
- Suspension components.
- Steering column.
- Toe adjustment.
  REFER to: Front Toe Adjustment (204-00 Suspension System - General Information, General Procedures).
- Tire pressures.

2. Park the vehicle on a dry, even surface and apply the parking brake.

3. Remove the driver air bag module.
REFER to: Driver Airbag (501-20 Supplemental Restraint System) .

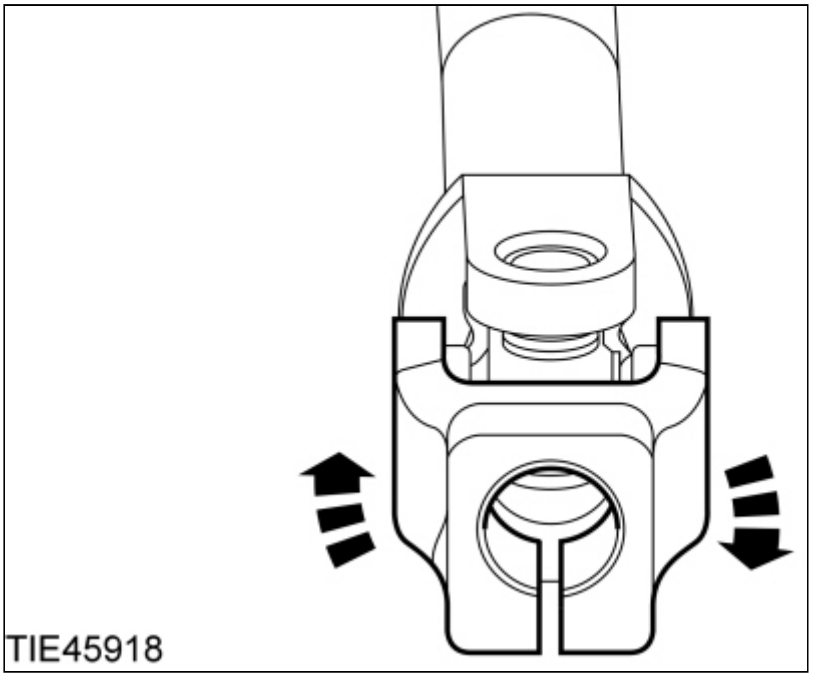
4. Connect the air bag simulators to the sub-harnesses in place of the driver air bag module at the top of the steering column.

5. Start the engine and turn the steering wheel from lock to lock several times until the power steering fluid has reached normal operating temperature.



6. Using a suitable torque wrench and socket, check the steering wheel turning effort.

7. If the steering wheel turning effort is greater than the specification, install a new steering gear.
REFER to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).



Steering Column Universal Joint

1. **WARNING: Make sure that a new steering column flexible coupling bolt is installed.**

   Detach the steering column from the steering gear pinion.
   - Discard the steering column to steering gear pinion retaining bolt.

2. Check for smooth movement of the steering column universal joint.
    1. Hold the steering column universal joint yoke.
    2. Articulate the free yoke in a figure of eight movement.
    - If the movement is not smooth or resistance is felt, install a new steering column or shaft as necessary. REFER to: Steering Column (211-04 Steering Column) .

3. Hold both of the steering column universal joint yokes and twist them clockwise and counterclockwise.
    - If movement is felt, install a new steering column or shaft as necessary. REFER to: Steering Column (211-04 Steering Column) .

Lower Arm Ball Joint Inspection

1. Raise and support the vehicle.

2. Firmly grasp the outer end of the suspension lower arm and try to move it up and down, watching and feeling for any movement. Free movement will usually be accompanied by an audible "click". There should be no free movement.

3. If there is any free movement, install a new lower arm. REFER to: Lower Arm - 2WD (204-01 Front Suspension) .

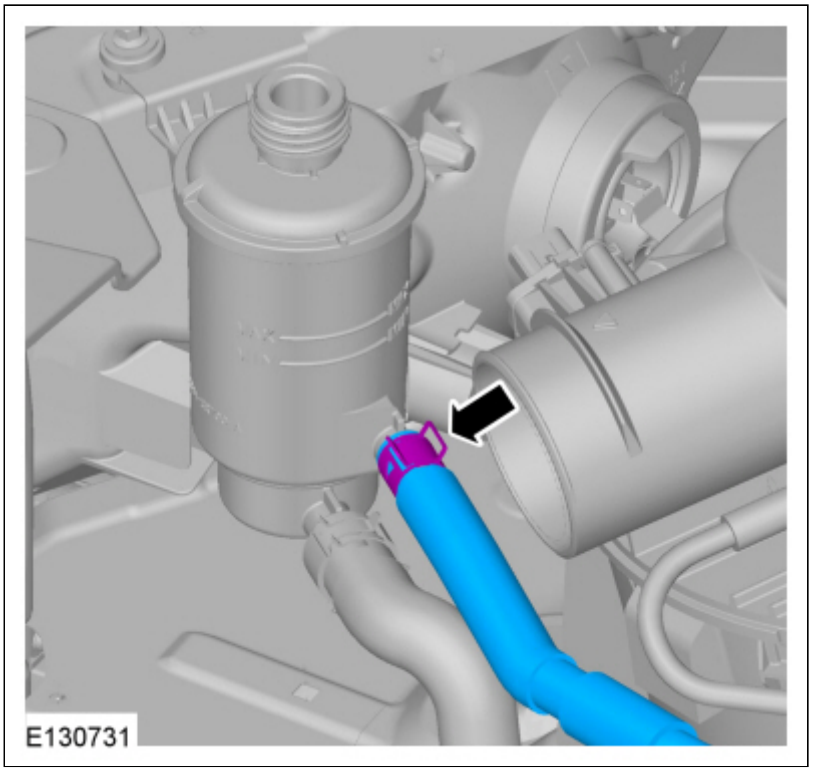
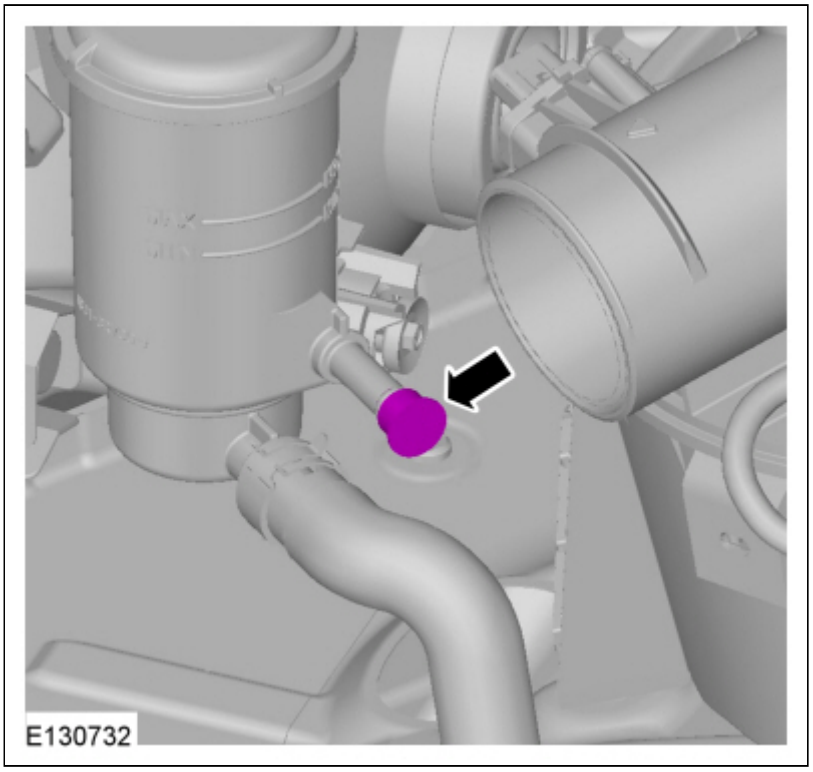
Power Steering System Flushing



Activation

NOTICE: Do not mix fluid types. Any mixture or any unapproved fluid may lead to seal deterioration and leaks. A leak may ultimately cause loss of fluid, which may result in a loss of power steering assist.



1.

2. Using a suitable suction device, remove the power steering fluid from the reservoir.
3. Remove the clamp from the hose and allow the remaining fluid to drain out of the reservoir.

4. Plug the power steering fluid reservoir inlet port.

5. Attach an extension hose to the return hose.
6. **NOTE:** *Do not reuse the power steering fluid that has been flushed from the power steering system.*

   Place the open end of the extension hose into a suitable container.
7. If equipped with Hydro-Boost®, apply the brake pedal 4 times.
8. **NOTE:** *Do not overfill the reservoir.*

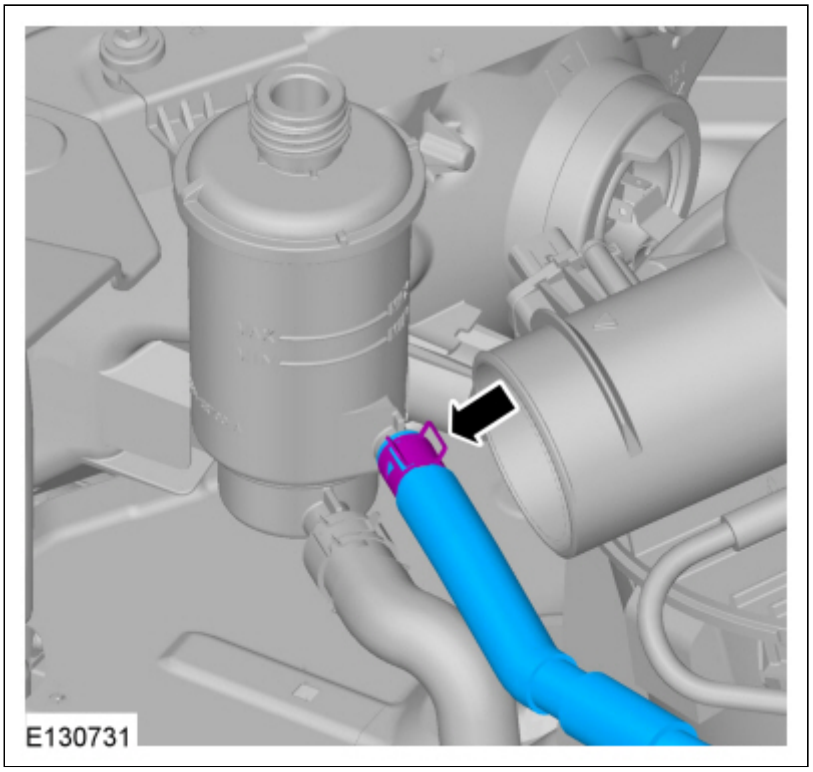
   Fill the reservoir as needed with the specified fluid.
9. **NOTICE: Do not allow the power steering pump to run completely dry of power steering fluid. Damage to the power steering pump may occur.**

Start the engine and let it idle, simultaneously turn the steering wheel to lock and then immediately turn the ignition switch to the OFF position.

10. **NOTICE: Avoid turning the steering wheel without the engine running as this may cause air to be pulled into the steering gear.**

    NOTE: *Do not overfill the reservoir.*

    Fill the reservoir as needed with the specified fluid.

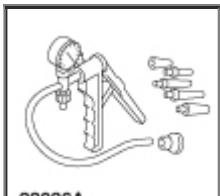


11. Repeat Steps 8 and 9, turning the steering wheel in the opposite direction each time, until the fluid exiting the power steering fluid return hose is clean and clear of foreign material.

12. Remove the extension hose from the return hose.

13. Remove the plug from the fluid reservoir inlet port.

14. Install the clamp and connect the power steering return hose to the reservoir.



15. **NOTE:** *If, after correctly filling the power steering system, there is power steering noise accompanied by evidence of aerated fluid and there are no fluid leaks, it may be necessary to bleed the power steering system.*

    Refer to: Power Steering System Filling (211-00 Steering System - General Information, General Procedures).
    Refer to: Power Steering System Bleeding (211-00 Steering System - General Information, General Procedures).

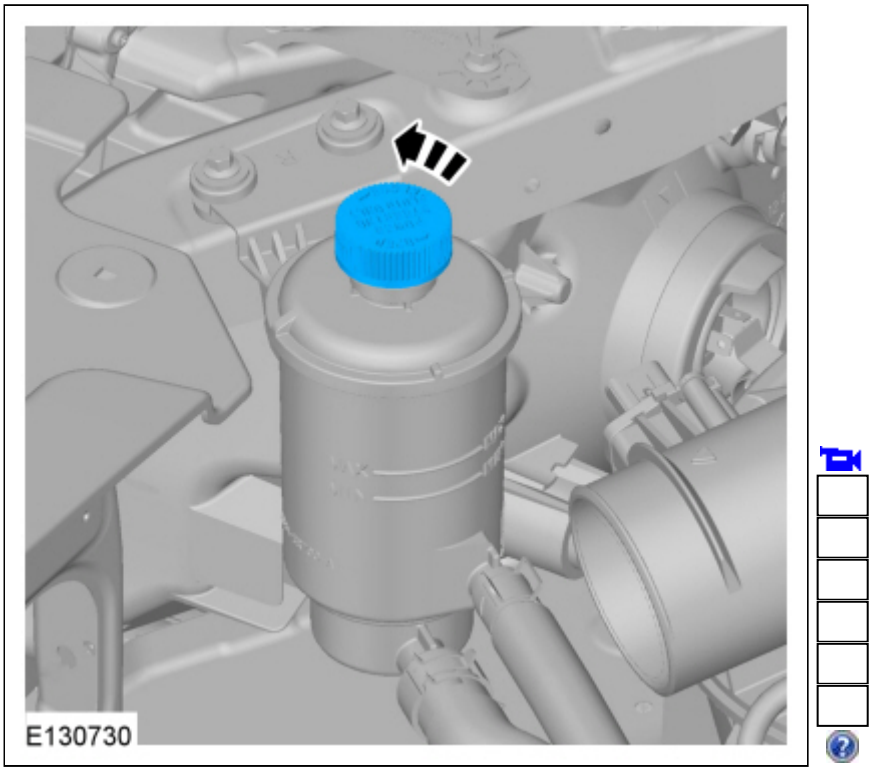
Power Steering System Bleeding

Special Tool(s) / General Equipment

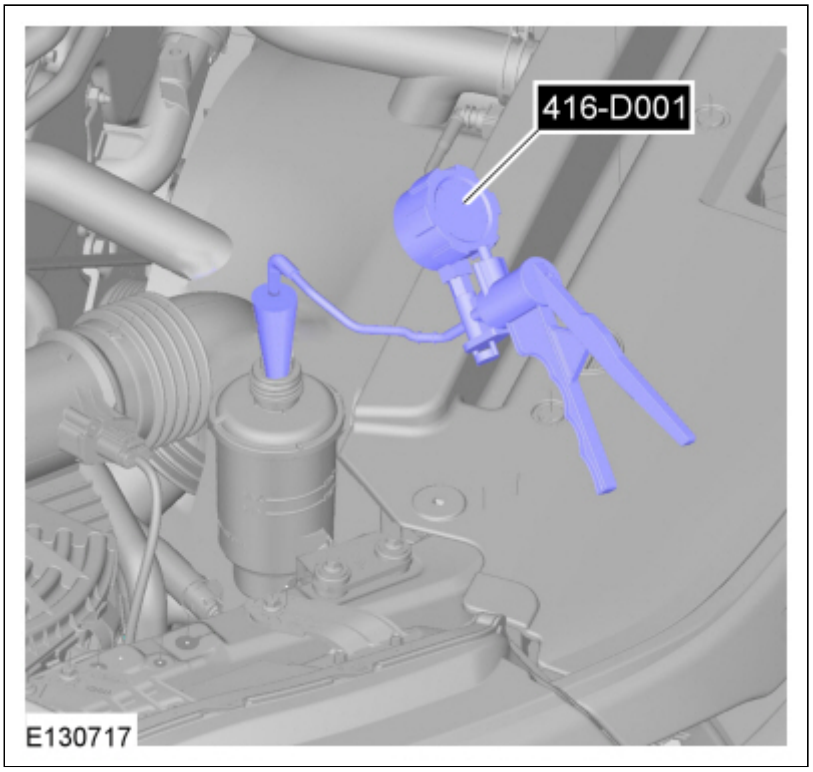
 23036A	416-D001 Hand Vacuum Pump/Pressure Pump



Activation

NOTICE: If the air is not purged from the power steering system correctly, premature power steering pump failure may result. The condition may occur on pre-delivery vehicles with evidence of aerated fluid or on vehicles that have had steering component repairs.

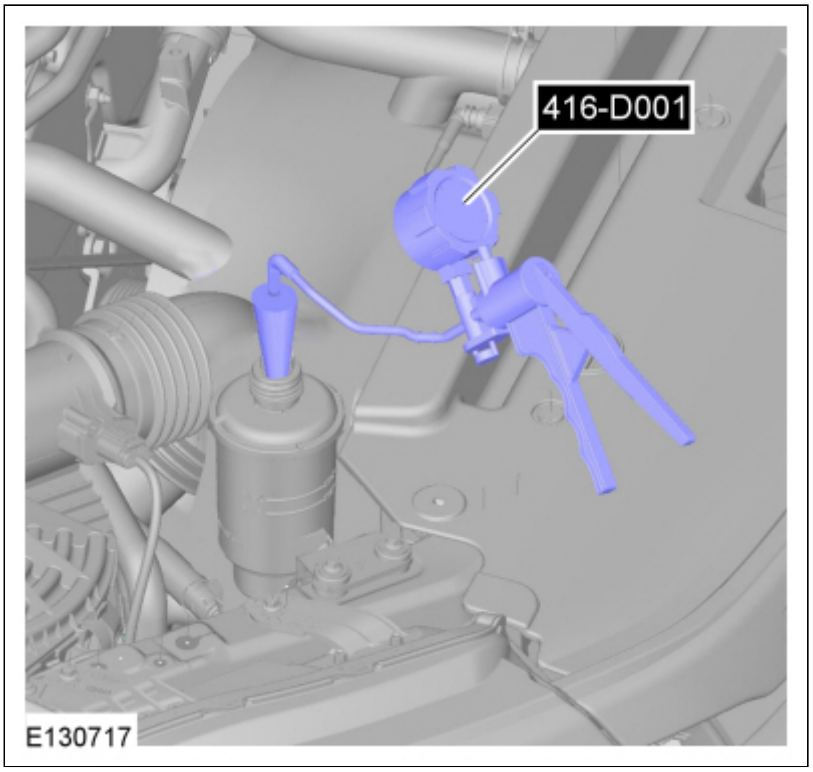
NOTE: *When filling the power steering fluid reservoir, make sure that the power steering fluid is clean and not agitated prior to use. The power steering fluid should be poured slowly into the reservoir to minimize the possibility of aeration.*



1. **NOTE:** *Make sure that the power steering fluid in the power steering fluid reservoir does not fall below the MIN mark, as air could enter the system.*

   Remove the power steering reservoir cap. Check the fluid.

2. Raise and support the vehicle making sure that the road wheels are just clear of the floor.
   Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).



3. Use Special Service Tool: 416-D001 Hand Vacuum Pump/Pressure Pump.

4. Start the engine and let it idle.
5. Using the Vacuum Pump Kit, apply vacuum and maintain the maximum vacuum of 68-85 kPa (20-25 in-Hg).
6. If the vacuum decreases by more than 5cm-Hg in 5 minutes,check the power steering system for leaks .
7. If equipped with Hydro-Boost®, apply the brake pedal 4 times.
8. **NOTICE: Do not hold the steering wheel against the stops for more than 5 seconds. Damage to the power steering pump may occur.**

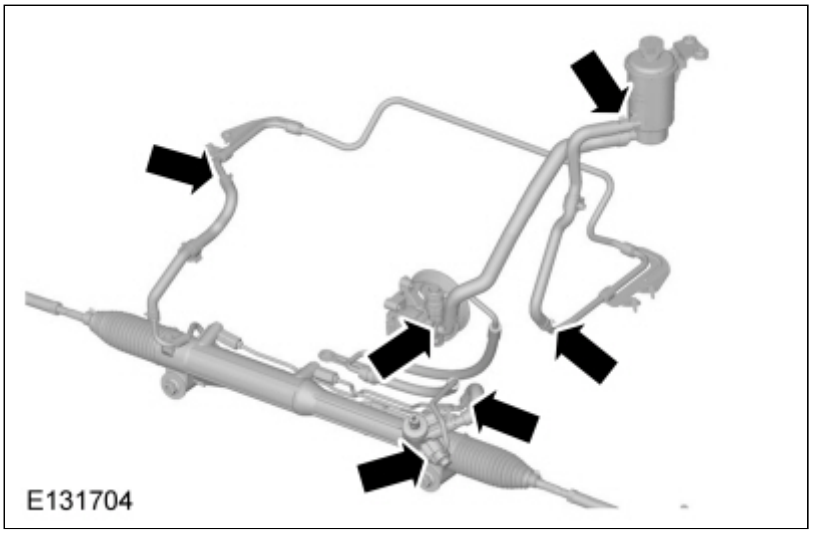
   Cycle the steering wheel fully from stop-to-stop 10 times.
9. Stop the engine.
10. Release the vacuum and remove the Vacuum Pump Kit.
11. **NOTE:** *Do not overfill the reservoir.*

    Fill the power steering fluid reservoir to the MAX mark with the appropriate power steering fluid.
12. Start the engine and let it idle.
13. Install the Vacuum Pump Kit. Apply and maintain the maximum vacuum of 68-85 kPa (20-25 in-Hg).
    Use Special Service Tool: 416-D001 Hand Vacuum Pump/Pressure Pump.

14. **NOTICE: Do not hold the steering wheel against the stops for more than 5 seconds. Damage to the power steering pump may occur.**

    Cycle the steering wheel fully from stop-to-stop 10 times.

15. Stop the engine, release the vacuum and remove the Vacuum Pump Kit.



16. **NOTE:** *Do not overfill the reservoir.*

    Fill the power steering fluid reservoir to the MAX mark with the appropriate power steering fluid.

17. **NOTICE: Do not hold the steering wheel against the stops for more than 5 seconds. Damage to the power steering pump may occur.**

    NOTE: *The points where fluid leakage may occur are indicated in the figure.*

    Visually inspect the power steering system for leaks. Start the engine and let it idle, turn the steering wheel from lock to lock. If excessive noise is apparent, repeat the power steering bleeding procedure.

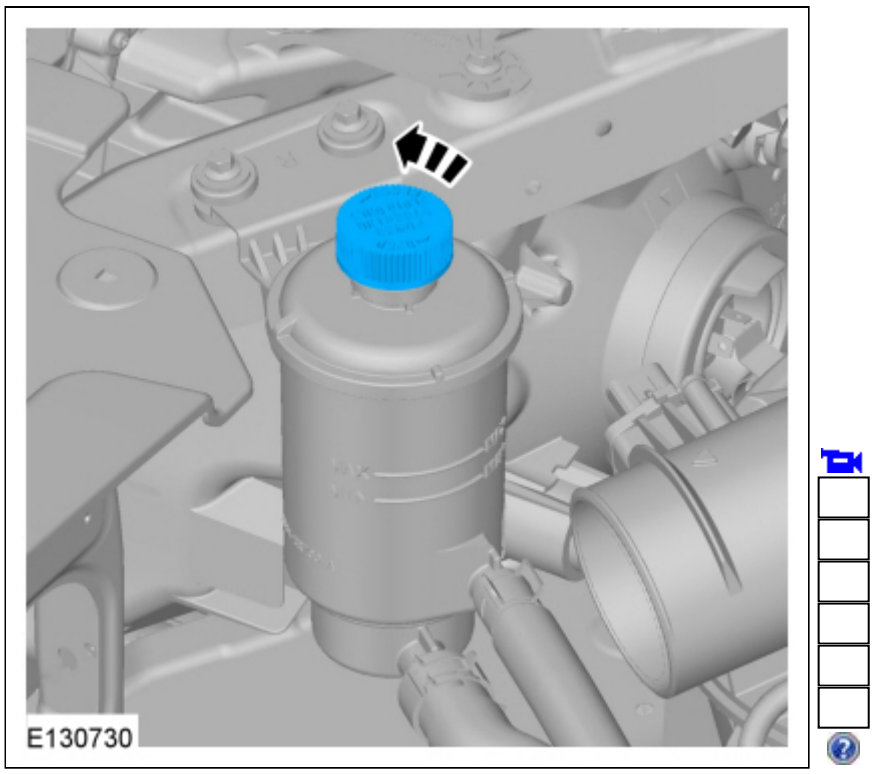
Power Steering System Filling



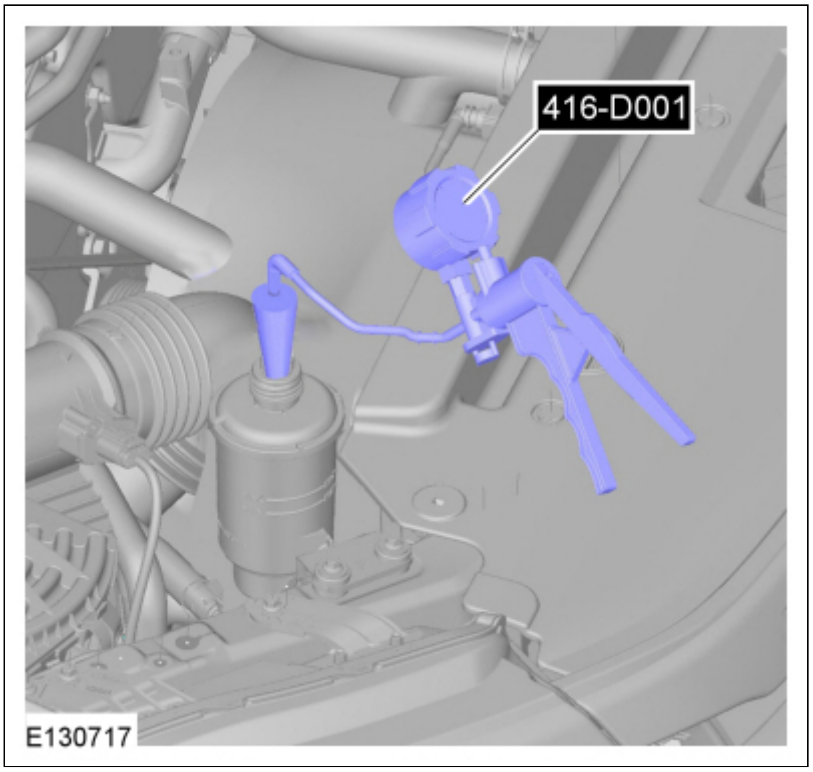
Special Tool(s) / General Equipment

 23036A	416-D001 Hand Vacuum Pump/Pressure Pump

Activation

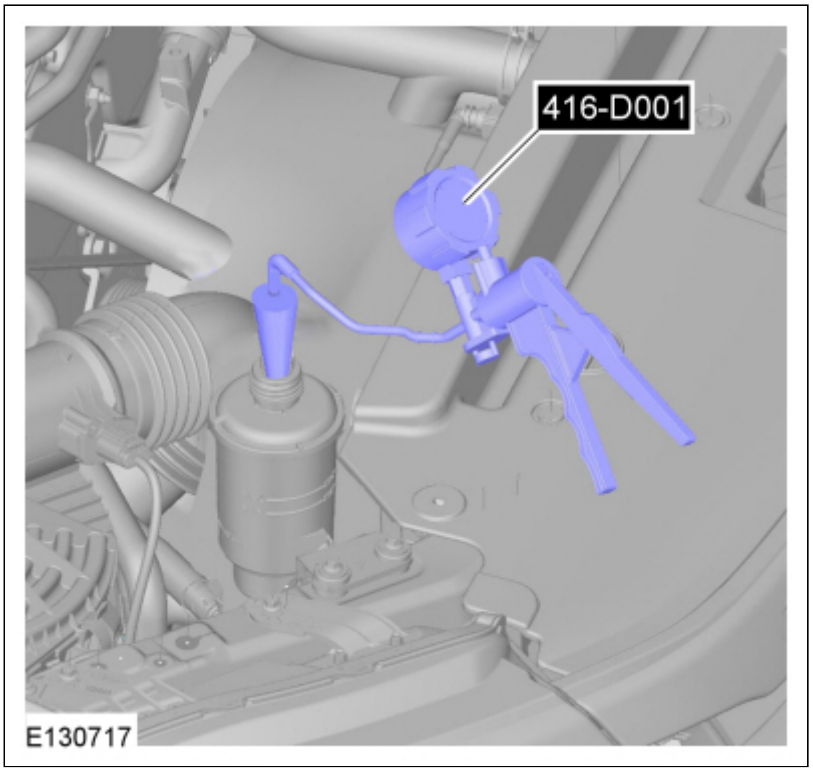
NOTE: *When filling the power steering fluid reservoir, make sure that the power steering fluid is clean and not agitated prior to use. The power steering fluid should be poured slowly into the reservoir to minimize the possibility of aeration.*

1.



2. **NOTE:** *Make sure that the power steering fluid in the power steering fluid reservoir does not fall below the MIN mark, as air could enter the system.*

   Fill the reservoir as needed with the specified fluid.



3. Raise and support the vehicle making sure that the road wheels are just clear of the floor.
   Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

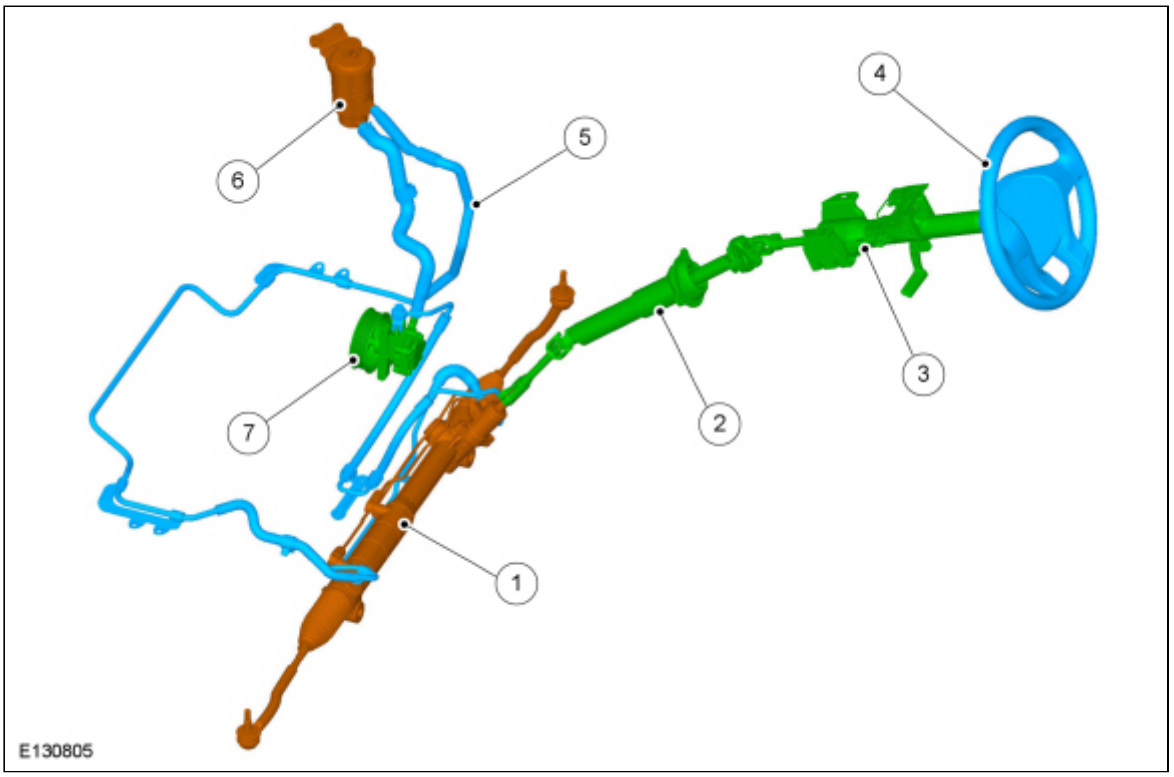
4. Use Special Service Tool: 416-D001 Hand Vacuum Pump/Pressure Pump.

5. Using the Vacuum Pump Kit, apply vacuum and maintain the maximum vacuum of 68-85 kPa (20-25 in-Hg).
6. If the vacuum decreases by more than 5cm-Hg in 5 minutes,check the power steering system for leaks .
7. Remove the Power Steering Evacuation Cap and Vacuum Pump Kit.
8. **NOTE:** *Do not overfill the reservoir.*

   Fill the power steering fluid reservoir to the MAX mark with the appropriate power steering fluid.
9. Install the Vacuum Pump Kit. Apply and maintain the maximum vacuum of 68-85 kPa (20-25 in-Hg).
   Use Special Service Tool: 416-D001 Hand Vacuum Pump/Pressure Pump.

10. Start the engine and let it idle.
11. **NOTICE: Do not hold the steering wheel against the stops for more than 5 seconds. Damage to the power steering pump may occur.**

NOTE: *There will be a slight drop in the power steering fluid level in the reservoir when the engine is started.*



Cycle the steering wheel fully from stop-to-stop 10 times.

12. Stop the engine, release the vacuum and remove the Vacuum Pump Kit.
13. **NOTE:** *Do not overfill the reservoir.*

    Fill the power steering fluid reservoir to the MAX mark with the appropriate power steering fluid.

Power Steering

The hydraulic power steering system consists of the following components:

- Power steering pump
- Power steering fluid reservoir
- Power steering pressure and return lines/hoses
- Power steering fluid cooler (gas engines)
- Steering gear
- Inner tie rod
- Outer tie rod

The power steering system uses a vane-type pump to move the fluid from the reservoir to the steering gear and through the rest of the steering hydraulic system. The power steering pump is mounted to the engine and driven by the engine accessory drive belt. Power steering fluid flows into the pump from the reservoir. The power steering fluid is then trapped between the pump vanes and moved to the high-pressure side of the pump creating a flow of fluid. The restriction of this flow by the steering gear creates the pressure that provides the steering assist. A combined pressure relief/flow valve is built into the pump to control the maximum pressure and flow provided to the steering system. This action prevents damage to the system and provides the correct level of assist during all engine speeds. While under pressure, the power steering fluid flows through the high-pressure power steering line to the steering gear. The fluid exits the gear and flows through the return line, cooler and finally to the reservoir. The reservoir slows the fluid, allows air to escape and filters the fluid before returning it to the pump.

Vehicles are built using a left biased steering gear to help compensate for road crown.

Power Steering

Materials

Name	Specification
Automatic Transmission Fluid	MERCON® LV WSS-M2C938-A

The power steering system uses a vane-type pump to move the fluid from the reservoir to the steering gear and through the rest of the steering hydraulic system. The power steering pump is mounted to the engine and driven by the engine accessory drive belt. Power steering fluid flows into the pump from the reservoir. The power steering fluid is trapped between the pump vanes and moved to the high pressure side of the pump creating a flow of fluid. The restriction of this flow by the steering gear creates the pressure that provides the steering assist. A combined pressure relief/flow valve is built into the pump to control the maximum pressure and flow provided to the steering system. This action prevents damage to the system and provides the correct level of assist during all engine speeds. While under pressure, the power steering fluid flows through the high pressure power steering line to the steering gear. The fluid exits the gear and flows through the return line, cooler and finally to the reservoir. The reservoir slows the fluid, allows air to escape and filters the fluid before returning it to the pump.

Material

Item	Specification
Dye-Lite® ATF/Power Steering Fluid Leak Detection Dye 164-R3701 (Rotunda)	—
Material: Automatic Transmission Fluid (MERCON® LV) (WSS-M2C938-A)	MERCON® LV

Preliminary Inspection

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical damage or leaks.

Visual Inspection Check

- Fluid level
- Tire pressure
- Tires
- Drive belt
- Drive belt tensioner
- Steering column alignment
- Tie-rod ends
- Suspension components
- Steering column shaft U-joints
- Intermediate shaft bolts
- Power steering reservoir baffle
- Power steering reservoir screen
- Power steering pressure lines, fittings or O-rings
- Power steering return hoses and clamps
- Steering gear
- Power steering pump
- Power steering fluid cooler (if equipped)

3. Inspect the power steering fluid for the following conditions:
    - Aeration or foam: Purge the power steering system.
    - Overheating or contamination: Flush the power steering system.
4. **NOTE:** *It may be necessary to add power steering fluid to achieve the correct level.*

Check the fluid level and clean the power steering components. With the ignition OFF:

- check the power steering fluid level and add fluid as necessary.Automatic Transmission Fluid (WSS-M2C938-A;MERCON® LV)
- wipe off any visible signs of fluid or residue build up.

- **NOTICE: Do not hold the steering wheel at the stops for an extended amount of time. Damage to the power steering pump may occur.**

  Start the engine and turn the steering wheel from stop-to-stop several times.

5. Visually inspect the power steering hydraulic line/hose connections for damage or leaks.
   - If a leak is detected at a threaded fitting or clamp plate joint, tighten to specification. If the leak is still evident, visually inspect the O-rings or Teflon® seals. Install new O-rings or Teflon® seals as necessary.
   - If a leak is detected at a constant tension spring clamp, verify that the hose is not damaged and fully installed on the hose fitting. Make sure that the constant tension spring clamp is positioned 2 mm (0.078 in) from the end of the hose. If the leak remains, install a new constant tension spring clamp.
   - If a leak is detected at a screw clamp joint, verify that the hose is not damaged and fully installed on the hose fitting and the clamp is positioned 2 mm (0.078 in) from the end of the hose before tightening the screw clamp. If the leak remains, install a new screw clamp.

6. Visually inspect the power steering components for leaks.
   - If a leak is detected in the power steering pressure line or return hose, install a new hose.
   - If a leak is detected in the steering gear turn tubes, repair or install new turn tubes.
   - If a leak is detected in the power steering pump, install a new power steering pump.
     REFER to: Power Steering Pump - 2.5L Duratec-HE (122kW/165PS) - MI4 (211-02A Power Steering, Removal and Installation).
     REFER to: Power Steering Pump - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (211-02A Power Steering, Removal and Installation).
     REFER to: Power Steering Pump - 3.2L Duratorq-TDCi (148kW/200PS) - Puma (211-02A Power Steering, Removal and Installation).

   - **NOTE:** *On vehicles with rack-and-pinion steering gear, it may be necessary to remove the bellows boot clamp from the steering gear bellows boot to inspect for internal steering gear leaks.*

     If a leak is detected in the steering gear, repair or install a new steering gear.
     REFER to: Steering Gear - RHD 4WD/RHD RWD/RHD (211-02A Power Steering, Removal and Installation).
     REFER to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).

7. For information on power steering leak detection, refer to Component Tests in this section.

8. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding.

9. If the cause is not visually evident, verify the symptom and GO to Symptom Chart — Steering System or GO to Symptom Chart - NVH.

Steering System Symptom Definitions

Drift/Pull

Pull is described as a tugging sensation felt by the hands on the steering wheel that must be overcome to keep the vehicle going straight.

Drift describes what a vehicle with this condition does with the hands off the steering wheel.

- A vehicle-related drift/pull on a flat road can cause a consistent deviation from the straight-ahead path and require constant steering input in the opposite direction to counteract the effect.
- Drift/pull can be induced by conditions external to the vehicle, such as wind or road camber.

Excessive Steering Wheel Play

Excessive steering wheel play is a condition in which there is too much steering wheel movement before the wheels move. A small amount of steering wheel free play is considered normal.

Lack of Assist or Inconsistent Assist

Lack of assist or inconsistent assist is experienced when the steering wheel effort is higher than normal. Hard steering can remain constant through the full turn or occur near the end of a turn. It is important to know the difference between hard steering/lack of assist and poor returnability/sticky steering.

Hard steering or lack of assist can result from either hydraulic or mechanical conditions. It is extremely important to know if this concern occurs during driving or during high-effort parking maneuvers.

Poor Returnability/Sticky Steering

Poor returnability and sticky steering is used to describe the poor return of the steering wheel to center after a turn or steering correction is completed.

Wander

Wander is the tendency of the vehicle to require frequent, random left and right steering wheel corrections to maintain a straight path down a level road.

Symptom Chart — Steering System

Condition	Possible Sources	Action
Steering has lack of assist or inconsistent assist	• Contaminated power steering fluid • Steering gear • Power steering pump • Restricted power steering lines/hoses	GO to Pinpoint Test A
Excessive steering wheel play	• Steering gear • Steering column shaft/coupling • Steering linkage	GO to Pinpoint Test B
Steering system drift/pull wander	• Steering column shaft/U-joints • Steering gear • Steering gear mounts	GO to Pinpoint Test C
Poor returnability/sticky steering	Binding steering column shaft/coupling U-joints	To continue the steering column diagnosis. REFER to: Steering Column (211-04) .
	Suspension components	To continue the suspension diagnosis. REFER to: Suspension System (204-00 Suspension System - General Information, Diagnosis and Testing).
	Binding steering column bearing(s)	To continue the steering column diagnosis. REFER to: Steering Column (211-04) .
	Binding dash boot seal	INSTALL a new dash boot seal.
	Steering gear	The steering gear cannot be adjusted. INSTALL a new steering gear as necessary. REFER to: Steering Gear - RHD 4WD/RHD RWD/RHD (211-02A Power Steering, Removal and Installation). REFER to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).

Symptom Chart — NVH

NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms,
REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness, Description and Operation).

. Since it is possible any one of multiple systems may be the cause of a symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness, Diagnosis and Testing).
for the next likely system and continue diagnosis.

Condition	Possible Sources	Action
Steering system cold start noise	Blockage in the power steering fluid reservoir filter screen or return ports caused by power steering fluid contamination	**NOTE:** *Some noise during an extremely cold start (-12.2°C [-10°F]) is normal and should improve as the steering system warms up (usually within 60 seconds).* **NOTE:** *It may be necessary to remove the power steering fluid reservoir to flush contamination trapped in the reservoir filter/screen or to remove blockage in the return ports.* CHECK the power steering fluid reservoir filter/screen or return ports for contaminants or blockage. FLUSH the power steering system as necessary.
	Air in the steering hydraulic system (aerated fluid)	CHECK for leaks in the system. REFER to Power Steering Leak Test Component Test. PURGE the air from the system.
Steering grunt or shudder — occurs when turning into or out of a turn at low speeds (temperature sensitive)	Air in the steering hydraulic system (aerated fluid)	CHECK for leaks in the system. REFER to Power Steering Leak Test Component Test. PURGE the air from the system.
	Steering gear or power steering hoses	GO to Steering Gear Grunt/Shudder Component Test in this section.
Steering system clonk — hydraulic knocking sound	Air in the steering hydraulic system (aerated fluid)	**NOTE:** *Some amount of clonk noise is considered acceptable. If in doubt of the acceptability, compare to another vehicle.* CHECK for leaks in the system. REFER to Power Steering Leak Test Component Test. PURGE the air from the system.
Power steering pump moan — loud humming noise occurs when the steering wheel is rotated to the stop position. Produces a 120-600 Hz frequency that changes with rpm	Low fluid and/or air in the steering hydraulic system (aerated fluid)	CHECK for leaks in the system. REFER to Power Steering Leak Test Component Test. PURGE the air from the system. If a pump moan still exists, INSTALL a new power steering pump. REFER to: Power Steering Pump - 2.5L Duratec-HE (122kW/165PS) - MI4 (211-02A Power Steering, Removal and Installation). REFER to: Power Steering Pump - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (211-02A Power Steering, Removal and Installation). REFER to: Power Steering Pump - 3.2L Duratorq-TDCi (148kW/200PS) - Puma (211-02A Power Steering, Removal and Installation).
	Blockage in the power steering fluid reservoir filter/screen or return ports caused by power steering fluid contamination	**NOTE:** *It may be necessary to remove the power steering fluid reservoir to flush contamination trapped in the reservoir filter/screen or to remove blockage in the return ports.* CHECK the power steering fluid reservoir filter/screen or return ports for contaminants or blockage. FLUSH the power steering system as necessary.
	Power steering line/hose grounded to chassis	INSPECT the power steering lines/hoses. REPAIR as necessary.

	Power steering pump brackets loose or misaligned	CHECK bolts, brackets and bracket alignment. TIGHTEN bolts to specification. REPAIR or INSTALL new brackets as necessary. REFER to: Power Steering Pump - 2.5L Duratec-HE (122kW/165PS) - MI4 (211-02A Power Steering, Removal and Installation). REFER to: Power Steering Pump - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (211-02A Power Steering, Removal and Installation). REFER to: Power Steering Pump - 3.2L Duratorq-TDCi (148kW/200PS) - Puma (211-02A Power Steering, Removal and Installation).
	Steering gear isolators	INSPECT the isolators for wear or damage. REPAIR as necessary.
Steering gear clunk — occurs only while cornering over a bump (can be temperature sensitive)	Steering gear	INSPECT the steering gear for loose mounting bolts. TIGHTEN to specification as necessary. REFER to: Steering Gear - RHD 4WD/RHD RWD/RHD (211-02A Power Steering, Removal and Installation). REFER to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).
Feedback (rattle, chuckle or knocking noise in the steering gear) — roughness is felt in the steering wheel when the vehicle is driven over rough surfaces	Loose, damaged or worn tie rod ends	INSPECT and INSTALL new tie-rod ends as necessary. GO to Steering Linkage Component Test in this section.
	Steering gear insulators or mounting bolts loose or damaged	TIGHTEN the bolts to specification or INSTALL new bolts as necessary. REFER to: Steering Gear - RHD 4WD/RHD RWD/RHD (211-02A Power Steering, Removal and Installation). REFER to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).
Power steering hiss or whistle	Steering column shaft/coupling-to-steering gear is binding or misaligned	To continue the steering column diagnosis. REFER to: Steering Column (211-04) .
	Grounded or loose steering column boot at the dash panel	To continue the steering column diagnosis. REFER to: Steering Column (211-04) .
	Damaged or worn steering gear input shaft and valve	REPAIR or INSTALL a new steering gear as necessary. REFER to: Steering Gear - RHD 4WD/RHD RWD/RHD (211-02A Power Steering, Removal and Installation). REFER to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).
	Restricted power steering lines/hoses	GO to Pinpoint Test A
Steering gear squeak	Incorrect power steering fluid in system	If incorrect power steering fluid is suspected, FLUSH the power steering system. If noise persists after system flush, INSTALL a new steering gear. REFER to: Steering Gear - RHD 4WD/RHD RWD/RHD (211-02A Power Steering, Removal and Installation). REFER to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).
	Steering gear rotary seal	**NOTE:** *Use the chassis ears to verify that the steering gear is the source of the noise. It may be*

		steering gear is the source of the noise. It may be necessary to replicate the customer operating conditions (fluid temperature, turning rate of steering wheel) to get the squeak to reoccur. INSTALL a new steering gear as necessary. REFER to: Steering Gear - RHD 4WD/RHD RWD/RHD (211-02A Power Steering, Removal and Installation). REFER to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).
	Stone shield (if equipped)	MAKE SURE that the stone shield is correctly installed and that it is not making contact with the steering shaft. REPOSITION stone shield or INSTALL a new stone shield as necessary.
Power steering pump noisy	Blockage in the power steering fluid reservoir filter/screen or return ports caused by power steering fluid contamination	**NOTE:** *It may be necessary to remove the power steering fluid reservoir to flush contamination trapped in the reservoir filter/screen or to remove blockage in the return ports.* CHECK the power steering fluid reservoir filter/screen or return ports for contaminants or blockage. FLUSH the power steering system as necessary.
	Power steering pump	INSTALL a new power steering pump as necessary. REFER to: Power Steering Pump - 2.5L Duratec-HE (122kW/165PS) - MI4 (211-02A Power Steering, Removal and Installation). REFER to: Power Steering Pump - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (211-02A Power Steering, Removal and Installation). REFER to: Power Steering Pump - 3.2L Duratorq-TDCi (148kW/200PS) - Puma (211-02A Power Steering, Removal and Installation).
Power steering pump noise (steering wheel turned fully to stop/lock)	Power steering fluid flow into the bypass valve of the pump valve housing, with fluid temperature below 54°C (130°F)	Acceptable condition.
Power steering pump whine noise	Aerated fluid	CHECK for a leak in the system. REFER to Power Steering Fluid Leak Test Component Test. PURGE the air from the system.
	Blockage in the power steering fluid reservoir filter/screen or return ports caused by power steering fluid contamination	**NOTE:** *It may be necessary to remove the power steering fluid reservoir to flush contamination trapped in the reservoir filter/screen or to remove blockage in the return ports.* CHECK the power steering fluid reservoir filter/screen or return ports for contaminants or blockage. FLUSH the power steering system as necessary.
	Damaged power steering pump	INSTALL a new power steering pump as necessary. REFER to: Power Steering Pump - 2.5L Duratec-HE (122kW/165PS) - MI4 (211-02A Power Steering, Removal and Installation). REFER to: Power Steering Pump - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (211-02A Power Steering, Removal and Installation). REFER to: Power Steering Pump - 3.2L Duratorq-

		TDCi (148kW/200PS) - Puma (211-02A Power Steering, Removal and Installation).
High speed shake or shimmy — occurs at high speeds	Worn or damaged steering linkage components	GO to Steering Linkage Component Test in this section.

Pinpoint Tests

Pinpoint Test A: Steering Has a Lack of Assist or Inconsistent Assist

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

NOTE: *Hard steering or lack of assist is experienced when the steering wheel effort is higher than normal. Hard steering can remain constant through the full turn, occur near the end of a turn or differ right to left.*

Possible Causes

- Power steering fluid contamination
- Steering gear
- Power steering pump
- Power steering hoses

PINPOINT TEST A : STEERING HAS A LACK OF ASSIST OR INCONSISTENT ASSIST

A1 CHECK FOR POWER STEERING FLUID CONTAMINATION

- Check the power steering fluid for contamination.

Is the power steering fluid free of any contamination?

Yes	GO to A2
No	FLUSH the power steering system. TEST the system for normal operation. If the assist concern is still present, GO to A2

A2 CHECK THE STEERING ASSIST WITH THE ENGINE SPEED RAISED

- **NOTICE: Do not hold the steering wheel at the stops for an extended amount of time. Damage to the power steering pump may occur.**
  Set the engine speed to 2,100 rpm and turn the steering wheel fully to the left and right.

Is steering assist fully restored to normal with the engine speed raised?

Yes	INSTALL a new power steering pump. REFER to: Power Steering Pump - 2.5L Duratec-HE (122kW/165PS) - MI4 (211-02A Power Steering, Removal and Installation). REFER to: Power Steering Pump - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (211-02A Power Steering, Removal and Installation). REFER to: Power Steering Pump - 3.2L Duratorq-TDCi (148kW/200PS) - Puma (211-02A Power Steering, Removal and Installation).
No	GO to A3

A3 CHECK FOR A CHANGE IN ASSIST ON LEFT AND RIGHT TURNS

- With the engine running at idle, turn the steering wheel fully to the left and to the right.

Does the steering assist change when turning from right to left?

Yes	INSTALL a new power steering gear. REFER to: Steering Gear - RHD 4WD/RHD RWD/RHD (211-02A Power Steering, Removal and Installation). REFER to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).
No	GO to A4

A4 CHECK THE STEERING LINES AND HOSES FOR RESTRICTIONS

- Inspect the steering lines and hoses for damage, kinks or restrictions.

Are the steering lines and hoses free from any damage, kinks and/or restrictions?

Yes	GO to A5
No	INSTALL new lines and/or hoses as necessary. TEST the system for normal operation.

A5 MONITOR THE ENGINE SPEED CHANGES

NOTICE: Do not hold the steering wheel at the stops for an extended amount of time. Damage to the power steering pump may occur.

NOTE: *Make sure that the vehicle is on a flat dry surface, all accessories are in the OFF position and that the steering system is at normal operating temperature.*

- Connect the diagnostic tool.
- Start the engine.
- With the engine running at idle, raise the power steering fluid temperature to 74°- 80°C (165°-176°F) by rotating the steering wheel fully to the left and to the right several time.
- Using a diagnostic scan tool, monitor the Engine Revolutions Per Minute (RPM) PIDwhile turning the steering wheel quickly to the left stop position and then to the right stop position.
- Note the engine Revolutions Per Minute (RPM) during the turns.

Does the engine speed change (even temporarily) by more than 30 rpm when turning the steering wheel?

Yes	INSTALL a new power steering gear. REFER to: Steering Gear - RHD 4WD/RHD RWD/RHD (211-02A Power Steering, Removal and Installation). REFER to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).
No	INSTALL a new power steering pump. REFER to: Power Steering Pump - 2.5L Duratec-HE (122kW/165PS) - MI4 (211-02A Power Steering, Removal and Installation). REFER to: Power Steering Pump - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (211-02A Power Steering, Removal and Installation). REFER to: Power Steering Pump - 3.2L Duratorq-TDCi (148kW/200PS) - Puma (211-02A Power Steering, Removal and Installation).

Pinpoint Test B: Excessive Steering Wheel Play

Diagnostic Overview

Possible Causes

- Steering linkage
- Steering column shaft
- Steering gear

PINPOINT TEST B : EXCESSIVE STEERING WHEEL PLAY

B1 CHECK THE STEERING LINKAGE
• Carry out the Steering Linkage Component Test in this section. **Is the steering linkage OK?**

Yes	REFER to: Steering Column (211-04) .
No	INSTALL new steering linkage components as necessary.

Pinpoint Test C: Steering System Drift/Pull/Wander

Diagnostic Overview

Possible Causes

- Steering column shaft
- Steering gear
- Steering gear mounts
- Steering column shaft U-joints

PINPOINT TEST C : STEERING SYSTEM DRIFT/PULL/WANDER

C1 CHECK THE STEERING COLUMN SHAFT
• Inspect the steering column shaft U-joints for looseness or wear. REFER to: Steering Column (211-04) . **Are the steering column shaft U-joints OK?**

Yes	GO to C2
No	INSTALL new steering column shaft as necessary. REFER to: Steering Column Lower Shaft (211-04 Steering Column, Removal and Installation). REFER to: Steering Column Upper Shaft (211-04 Steering Column, Removal and Installation).

C2 CHECK THE STEERING GEAR MOUNTING
• Check the steering gear mounts for looseness or wear. **Are the steering gear mounts OK?**

Yes	GO to C3
No	INSTALL a new steering gear as necessary. REFER to: Steering Gear - RHD 4WD/RHD RWD/RHD (211-02A Power Steering, Removal and Installation). REFER to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).

C3 CHECK THE STEERING GEAR
• Carry out the Steering Gear Valve Component Test in this section. **Is the steering gear valve OK?**

Yes	To diagnose suspension system drift/pull/wander, REFER to: Suspension System (204-00 Suspension System - General Information, Diagnosis and Testing).
No	INSTALL a new steering gear as necessary.

REFER to: Steering Gear - RHD 4WD/RHD RWD/RHD (211-02A Power Steering, Removal and Installation).
REFER to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).

Component Tests

Power Steering Fluid Leak Test

NOTE: *This test should only be carried out if a leak in the system has not been detected during a thorough visual inspection. Refer to Inspection and Verification.*

1. Remove the power steering pump reservoir cap and check the power steering fluid level. If necessary, add the specified power steering fluid. Automatic Transmission Fluid (WSS-M2C938-A;MERCON® LV)
2. Tightly install the Power Steering Evacuation Cap onto the reservoir and connect the Vacuum Pump Kit to the Evacuation Cap.
3. Using the Vacuum Pump Kit, apply 68-85 kPa (20-25 in-Hg) of vacuum to the power steering system.
4. Observe the vacuum gauge for 30 seconds. If the vacuum gauge reading drops more than 3 kPa (0.88 in-Hg), a leak is present.
5. Remove the Vacuum Pump Kit.
6. Start the engine and insert the Dial Thermometer into the Evacuation Cap.
7. **NOTICE: Do not hold the steering wheel at the stops for an extended amount of time. Damage to the power steering pump may occur.**

   With the engine at idle, raise the power steering fluid temperature to 74-80°C (165-176°F) by rotating the steering wheel fully to the left and right several times.
8. Stop the engine and visually inspect the system for leaks.

- If a leak is evident, repair as necessary.
- If a leak is not evident, add the specified UV fluorescent tracer dye to the power steering fluid. Use 14.78 ml (1/2 oz) of dye solution for every 1.89L (2 qt) of power steering fluid.

9. Start the engine.
10. **NOTICE: Do not hold the steering wheel at the stops for an extended amount of time. Damage to the power steering pump may occur.**

    With the engine at idle, raise the power steering fluid temperature to 74-80°C (165-176°F) by rotating the steering wheel fully to the left and right several times.
11. Stop the engine and inspect the system for traces of UV dye using the 100W/12 Volt DC UV Lamp. Repair as necessary.

Steering Gear Valve Test

1. Position vehicle on a hoist.
   REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

- Raise the vehicle until the front wheels are off the ground.

2. **NOTE:** *Do not hold the steering wheel while carrying out this step.*

   Start the engine.

- If the steering wheel rotates in either direction (with no hand input), install a new steering gear.
  REFER to: Steering Gear - RHD 4WD/RHD RWD/RHD (211-02A Power Steering, Removal and Installation).
  REFER to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).

Steering Gear Grunt/Shudder Test

1. Place a Dial Thermometer in the power steering fluid reservoir.
2. With the engine cold, start the engine and set engine idle speed to 1,200 rpm.
3. **NOTICE: Do not hold the steering wheel against the stops for an extended amount of time. Damage to the power steering pump may occur.**

   Rotate the steering wheel to the RH stop, then turn the steering wheel 90 degrees back from that position. Slowly turn the steering wheel back and forth approximately one-twelfth of a full turn.
4. Turn the steering wheel another 90 degrees. Slowly turn the steering wheel back and forth approximately one-twelfth of a full turn.
5. Repeat the test with the power steering fluid at different temperatures until the temperature reaches 74-80°C (165-176°F).
6. If a light grunt is heard or a low (50-200 Hz) shudder is present, this is a normal steering system condition.
7. If a loud grunt is heard, or a strong shudder is felt, purge the power steering system. If a loud grunt or strong shudder still exists, check the power steering lines/hoses for restrictions or damage and repair as necessary. If the lines/hoses are OK, install a new steering gear.
   REFER to: Steering Gear - RHD 4WD/RHD RWD/RHD (211-02A Power Steering, Removal and Installation).
   REFER to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).

Steering Linkage Test

1. Position vehicle on a hoist.
   REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
2. Using hand force only, check the inner and outer tie rods for vertical and lateral movement in the tie-rod ball studs/sockets.

- If there is any lateral or vertical movement in the tie-rod ball studs/sockets (inner or outer), a new tie-rod must be installed.
  REFER to: Tie Rod End - LHD (211-02A Power Steering, Removal and Installation).
  REFER to: Tie Rod End - RHD (211-02A Power Steering, Removal and Installation).

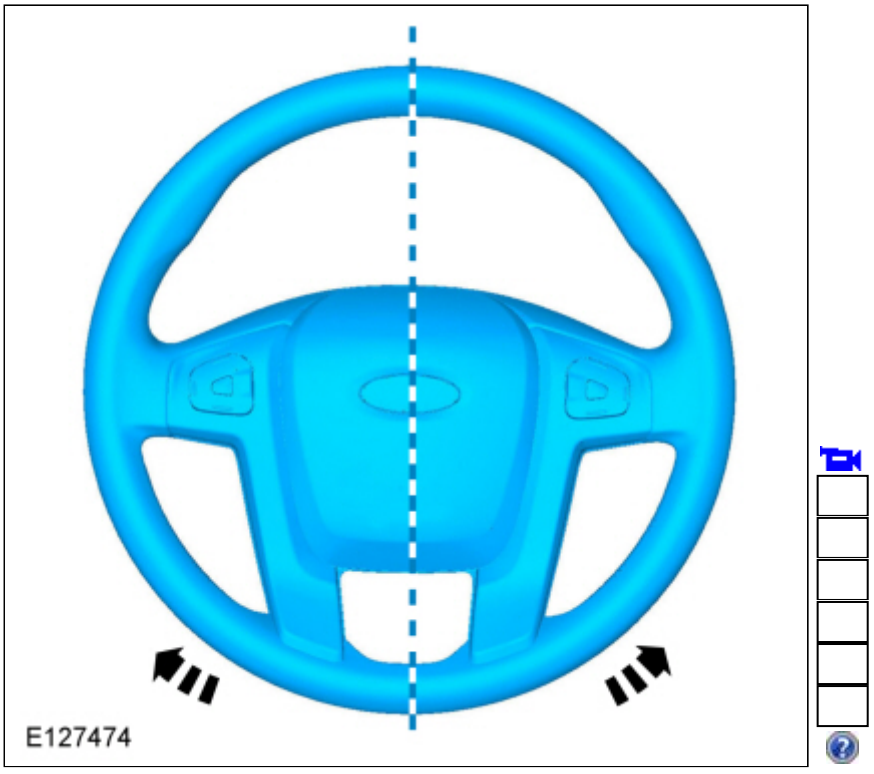
Steering Gear - RHD 4WD/RHD RWD/RHD

Base Part Number: 3D080

Special Tool(s) / General Equipment

 E216592	211-003 (T64P-3590-F) Remover, Steering Arm



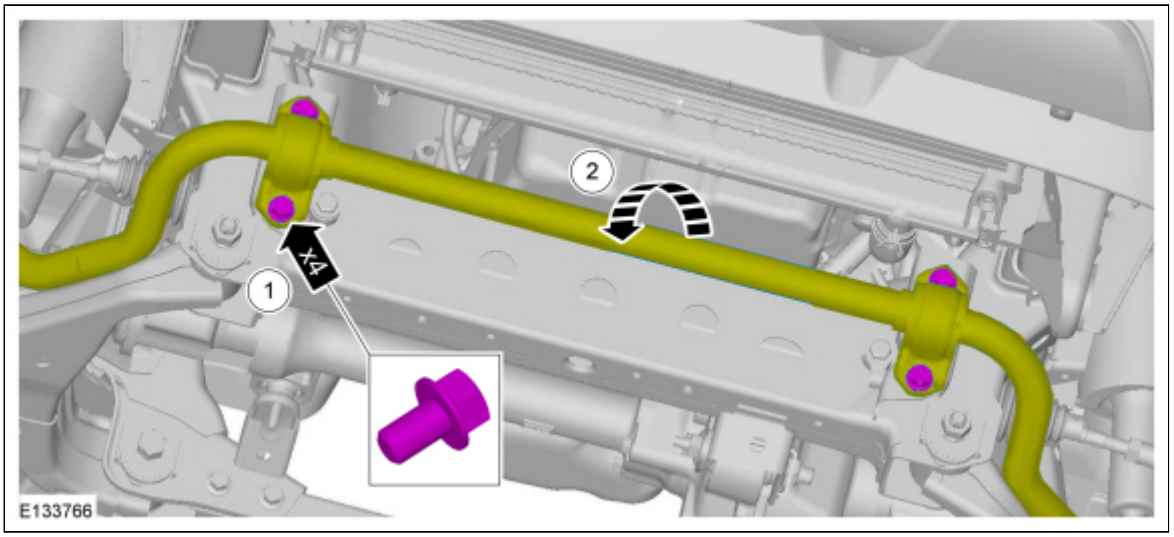
Removal

NOTICE: Suspension fasteners are critical parts because they affect performance of vital components and systems and their failure can result in major service expense. A new part with the same part number or an equivalent part must be installed, if installation is necessary. Do not use a part of lesser quality or substitute design. Torque values must be used as specified during reassembly to make sure of correct retention of these parts.

NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Steering System Health and Safety Precautions (100-00 General Information, Description and Operation).
2. **NOTICE: Disconnect the battery ground cable anytime the steering gear is being serviced or damage to the steering gear internal power relay may occur resulting in steering gear replacement.**

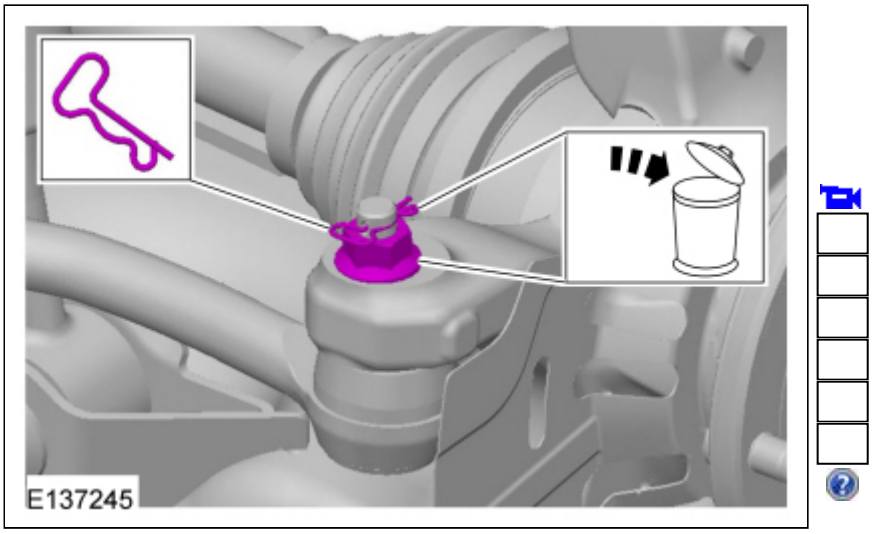
   Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
3. **NOTE:** *Make sure that the road wheels are in the straight ahead position.*



4. Remove both front wheels.
   Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).
5. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

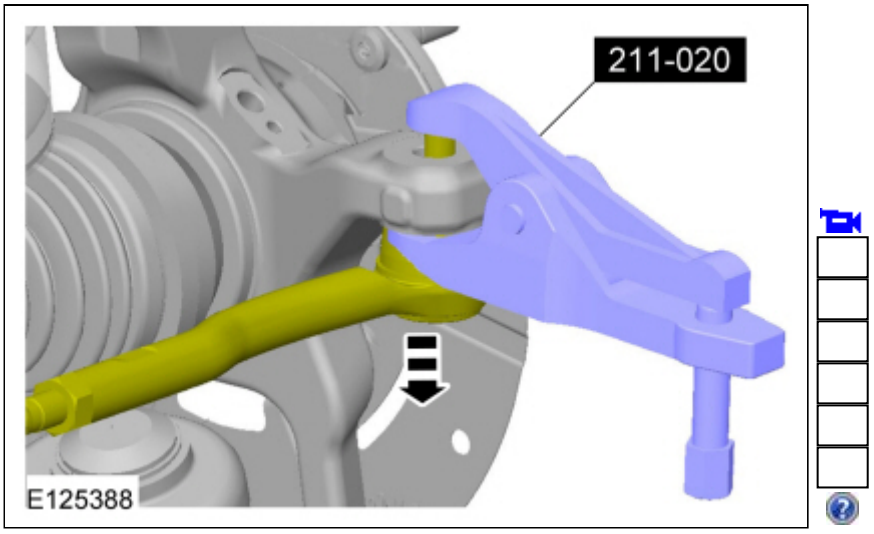
4x4

6. *Torque*: 30 Nm



7. *Torque*: 90 Nm

All vehicles

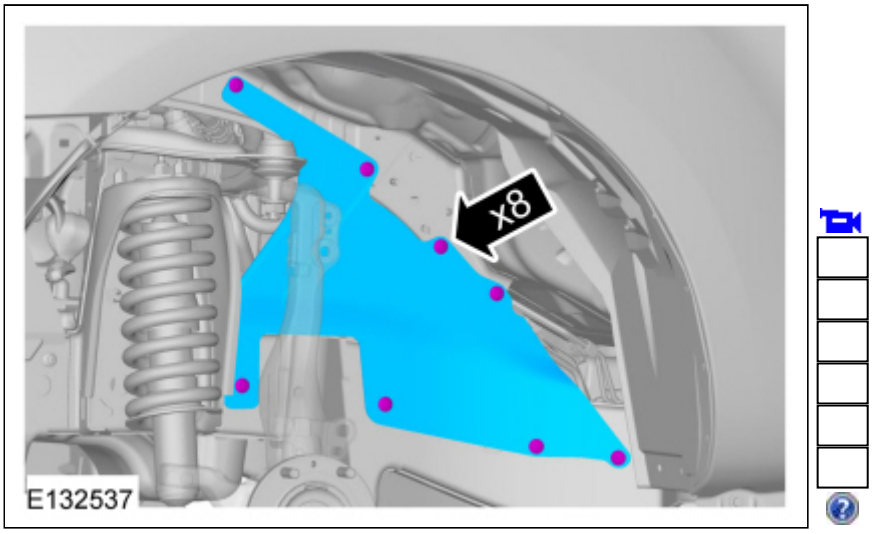


8. **NOTE:** *Make sure that the ball joint ball does not rotate.*

   On both sides.
   Torque: 63 Nm

9. **NOTICE: Do not use a hammer to separate the tie rod from the wheel knuckle or damage to the wheel knuckle can result.**

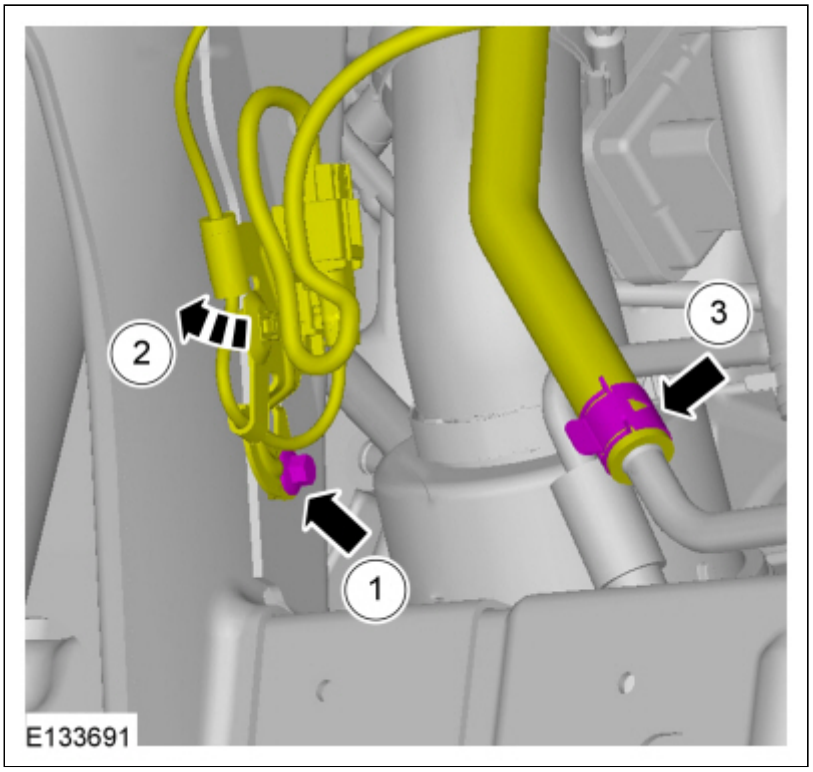
   On both sides.
   Use Special Service Tool: 211-003 (T64P-3590-F) Remover, Steering Arm.



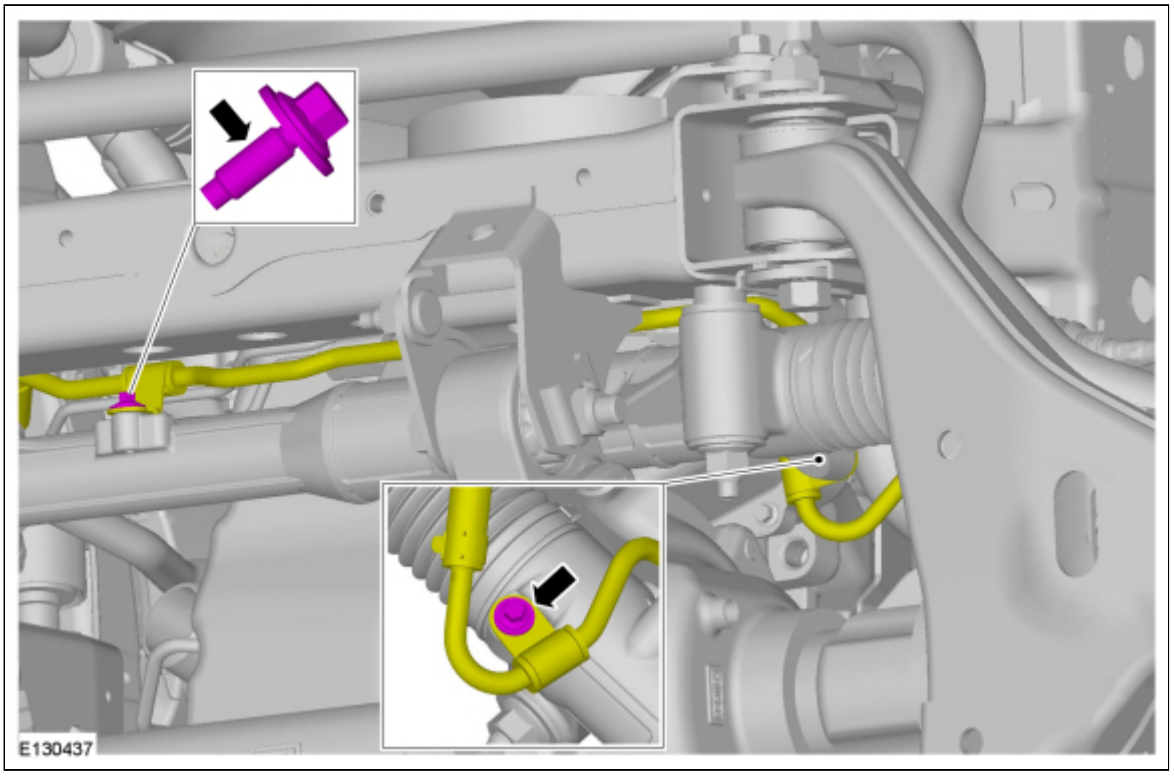
10. **NOTICE: Cap the power steering line and steering gear body to prevent fluid loss or dirt ingress.**

    NOTE: *Be prepared to collect escaping fluid.*

    1. *Torque*: 15 Nm
    2. *Torque*: 35 Nm

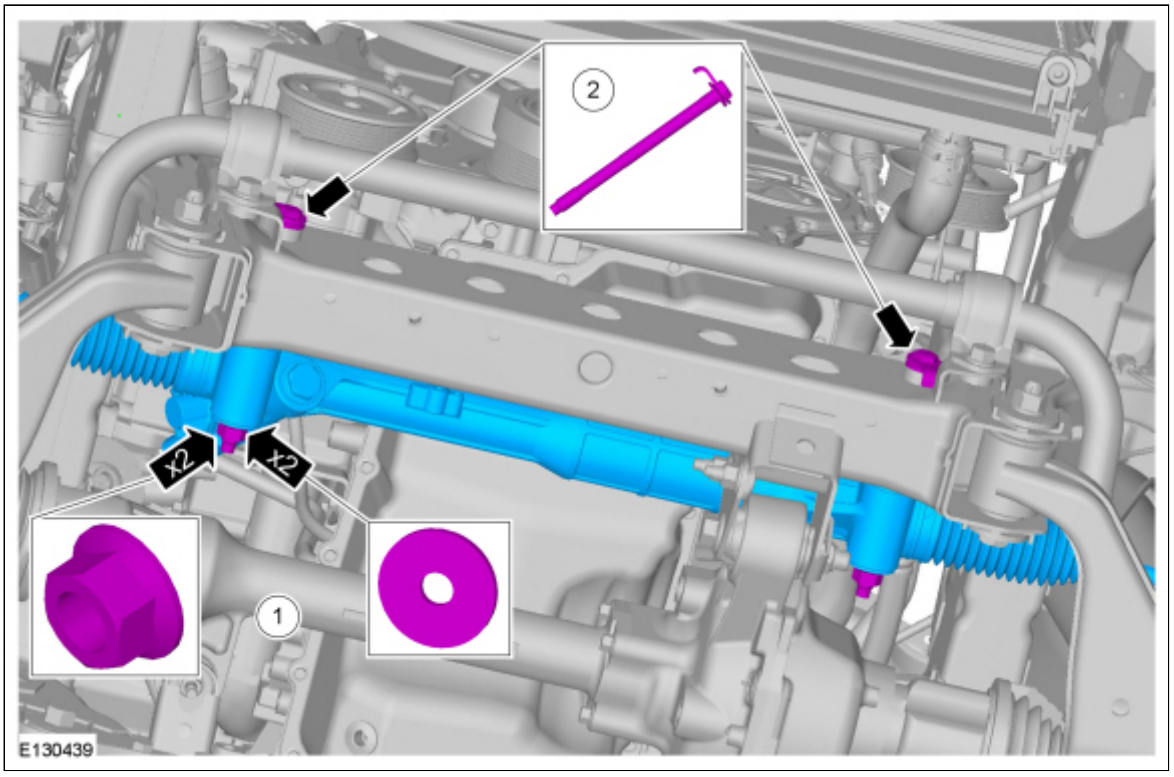


11.



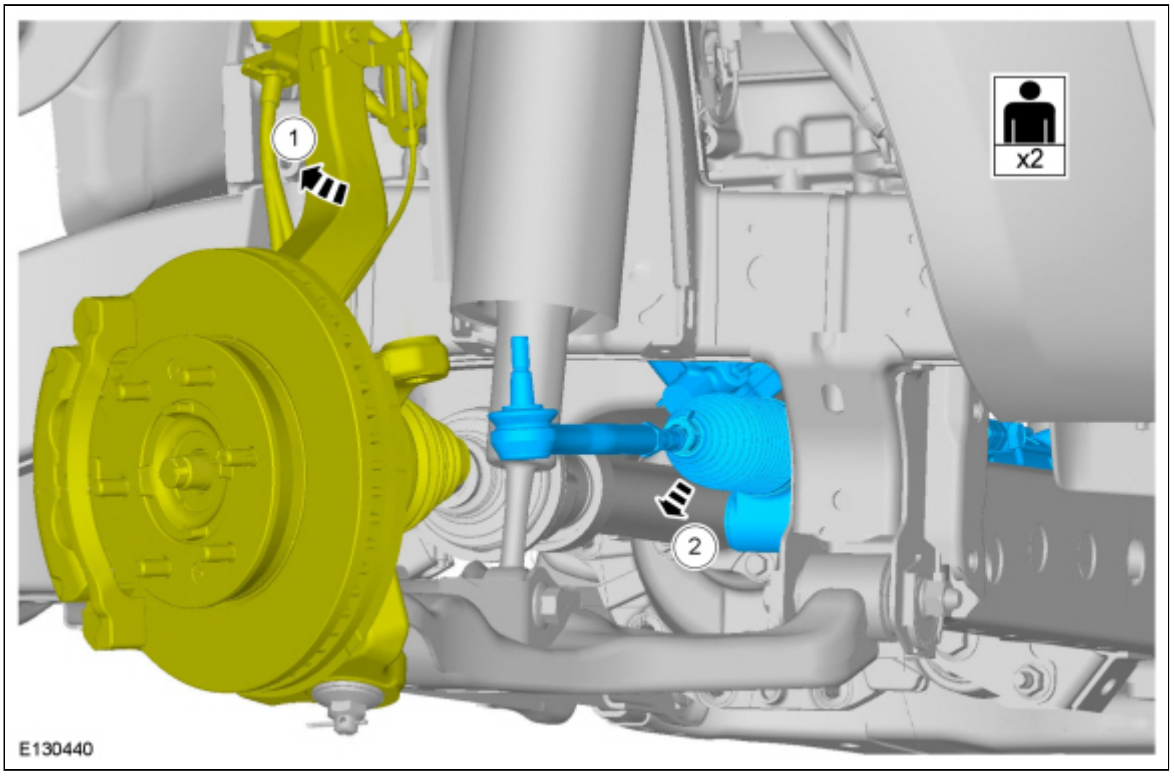
12. **NOTICE: Cap the power steering line to prevent fluid loss or dirt ingress.**

Torque: 7 Nm



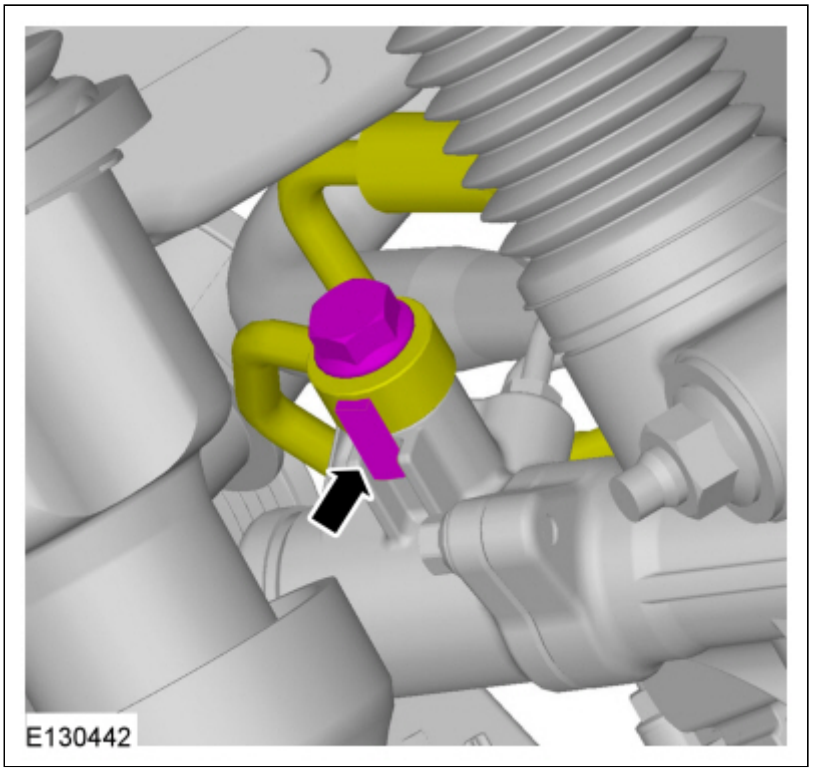
Vehicles with diesel engine

13. *Torque*: 10 Nm



All vehicles

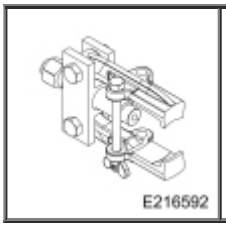
14. *Torque*: 150 Nm



15.

Installation

1. To install, reverse the removal procedure.
2. **NOTE:** *Make sure that the components are correctly located.*



3. Refer to: Power Steering System Filling (211-00 Steering System - General Information, General Procedures).
4. Refer to: Power Steering System Bleeding (211-00 Steering System - General Information, General Procedures).

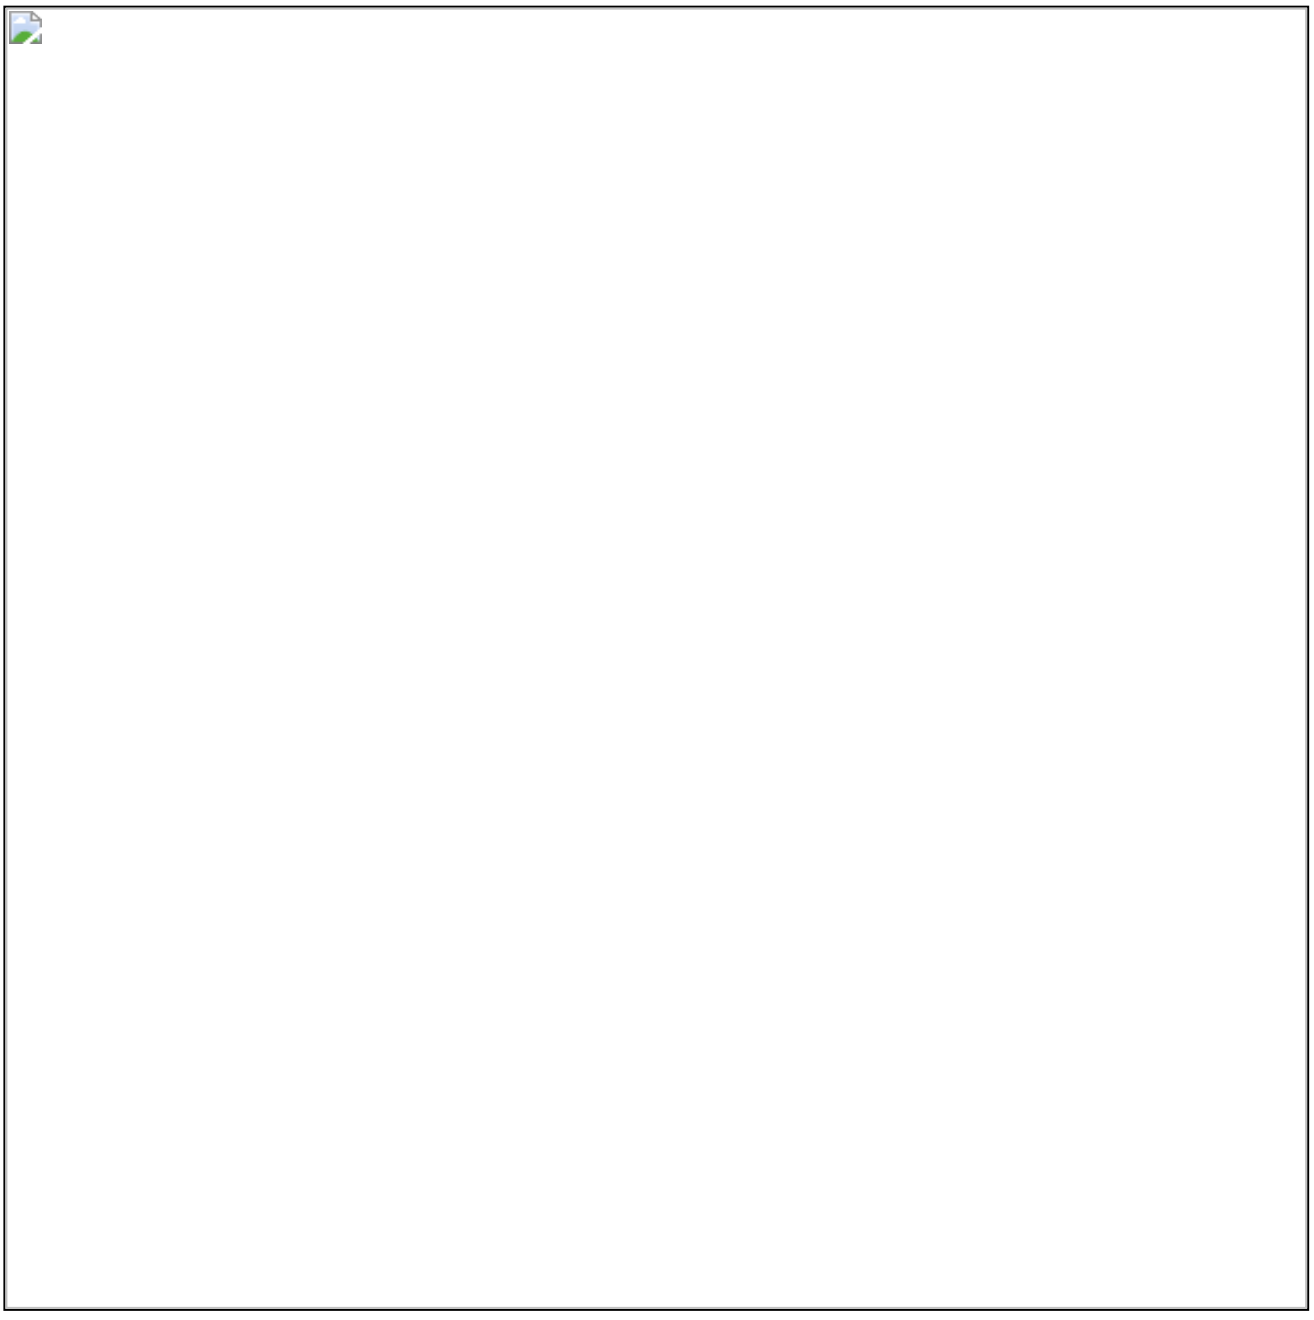
Power Steering - Overview

Overview



The EPAS system provides steering assist to the driver by replacing the conventional hydraulic valve system with a steering gear equipped with an integrated electrical motor and PSCM. The motor operation and level of steering assist provided is controlled by the PSCM.

Power Steering - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

PSCM Network Input Messages

Broadcast Message	Originating Module	Message Purpose
ABS active	ABS	Used to confirm the operational state of the ABS.
Ignition status	BCM	This message is first sent to the GWM and then to the PSCM. Used to confirm the ignition status of the vehicle.
Power pack status	PCM	This message is first sent to the GWM and then to the PSCM. Used to confirm the status of the operating mode; off - torque not available, on - torque not available, start in

		progress - torque not available or on - torque available.
Power system status	BCM	This message is first sent to the GWM and then to the PSCM. Used to confirm the status of the vehicle battery and charging system.
Stability control brake active	ABS	Used to confirm the operational state of the stability control system.
Steering wheel angle	ABS	Used to verify the validity of the steering angle sensor.
Traction control brake active	ABS	Used to confirm the operational state of the traction control system.
Vehicle configuration information	BCM	This message is first sent to the GWM and then to the PSCM. Used to compare the PSCM configuration against the vehicles specific configuration (central car configuration).
Vehicle lateral acceleration	ABS	Used by the PSCM for steering assist calculations.
Vehicle lateral acceleration	RCM	Used by the PSCM for steering assist calculations.
Vehicle longitudinal acceleration	ABS	Used by the PSCM for steering assist calculations.
Vehicle speed	PCM	This message is first sent to the GWM and then to the PSCM. Used to determine the level of assist supplied to the steering gear.
Vehicle yaw rate	ABS	Used by the PSCM for steering assist calculations.
Wheel speed data	ABS	Used to determine the level of assist supplied to the steering gear and to validate the steering wheel component angle by comparing the rotational speeds of each wheel. The difference in the speed of each wheel is used to derive a steering angle for comparison against the EPAS motor position sensor.

EPAS System

The PSCM controls the functions of the EPAS system and communicates with other modules over the HS-CAN2 and through the GWM.

To activate, the EPAS system requires battery voltage at the hot at all times PSCM input, battery voltage at the PSCM ignition-run input, the PSCM must communicate with other modules over the HS-CAN2 and the PSCM must receive the power pack status message from the PCM.

The main input for calculating the level of EPAS assist is the steering torque sensor signal (internal to the PSCM). Vehicle speed is also taken into consideration in order to achieve the vehicle speed dependent steering assist characteristic.

The EPAS gear uses a reversible motor to apply the steering assist by moving the rack inside the steering gear. The motor is connected to the rack of the steering gear by a toothed belt and pulley-bearing assembly.

The PSCM continually monitors and adjusts steering efforts based on the steering torque sensor signal, motor position and HS-CAN2 inputs to enhance the feel of the steering system. As vehicle speed increases, the amount of assist decreases to improve and enhance road feel at the steering wheel. As vehicle speed decreases, the amount of assist increases to ease vehicle maneuvering. Compensation is made to reduce the effect of pull or drift experienced when driving on roads with a high degree of camber. Compensation is also made for the impact of wheel imbalance on steering feel, up to a predetermined threshold.

The steering torque sensor senses the torque at the steering wheel. It is integrated into the PSCM and works by measuring the relative rotation between an input and output shaft which are connected by a torsion bar. The steering torque sensor sends out 2 opposing signals which allows a channel to channel cross-check and an accurate correction of the neutral point.

The PSCM is self-monitoring and is capable of setting and storing Diagnostic Trouble Codes (DTCs). Depending on

the DTC set, the PSCM may enter a failure mode. In addition, the PSCM may send a request to the IPC to display a message in the message center, alerting the driver of a potential EPAS concern. The warning message is sent over the HS-CAN2 to the GWM which relays the message to the IPC over the HS-CAN3.

Failure Modes

When a DTC is present in the PSCM, the EPAS enters 1 of 2 modes of operation.

The EPAS enters a **reduced steering assist mode** to protect the internal components of the EPAS when a non-critical safety concern is detected by the PSCM, concerns such as low battery voltage, high battery voltage or over-temperature are considered non-critical safety concerns. This reduced steering assist mode gives the steering operation a heavier than normal feel.

The EPAS enters a **manual steering mode** (no electrical steering assistance is provided) when a concern considered to be a critical safety concern is detected. In manual steering mode, the vehicle has mechanical steering only which gives the steering operation a heavy feel.

Active Park Assist

NOTE: *If equipped*

The active park assist system is controlled by the PAM (integrated into the BCM) and, when activated, can detect a parking space and steer the vehicle into the space by sending commands to the EPAS gear (the driver still controls the throttle, brakes and transmission). The active park assist system is comprised of several systems and modules working together to aid in parallel parking maneuvers. The presence of certain Diagnostic Trouble Codes (DTCs) in any of those modules or systems may keep the active park assist system from being enabled or may disable the system if currently being used.
Refer to: Parking Aid - System Operation and Component Description (413-13B Parking Aid - Vehicles With: Parking Aid Camera, Description and Operation).

Lane Keeping System (LKS)

The Lane Keeping System (LKS) utilizes the camera located in the IPMA to detect and track the road lane markings. The Lane Keeping System (LKS) has 2 functions, lane keeping alert and lane keeping aid. The lane keeping alert detects unintentional drifting toward the outside of the lane and alerts the driver through steering wheel vibrations and a visual alert in the IPC message center. The lane keeping aid assists the driver by automatically providing steering torque to help the driver keep the vehicle in the lane.
Refer to: Lane Keeping System - Overview (419-07 Lane Keeping System, Description and Operation).

Component Description

EPAS Steering Gear

The EPAS gear is an assembly consisting of a PSCM, a motor, and a steering torque sensor, all of which are serviced as an assembly. The inner and outer tie rods and the steering gear bellows boots are available separately for service.

- The steering torque sensor is mounted near the input shaft of the EPAS gear and is used by the PSCM to determine how much force is being used to turn the steering wheel.
- The EPAS gear has one inner tie rod located at each end of the gear assembly.
- The EPAS gear has one outer tie rod located at each end of the gear assembly.
- The EPAS gear has one bellows boot located at each side of the EPAS gear assembly. Each boot is held in place with 2 boot clamps.

PSCM

The PSCM is the ECU for the EPAS system. The module monitors all sensor inputs and HS-CAN2 messages relating to the EPAS system and directly controls the output of the EPAS motor.

Power Steering

DTC Chart: Power Steering Control Module (PSCM)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

NOTE: *If present, diagnose DTC B1D23:68 before diagnosing any other Diagnostic Trouble Codes (DTCs).*

PSCM DTC Chart

DTC	Description	Action
B1D23:68	Overheat Sensor: Event Information	• The PSCM uses a thermistor to monitor the internal temperature of the EPAS gear and sets DTC B1D23:68 when the temperature exceeds a predetermined threshold. DTC B1D23:68 appearing by itself **does not** indicate a fault condition in the steering system. • DTC B1D23:68 indicates an over-temperature condition due to ambient conditions or a heavy load on the EPAS system. A heavy load is defined as multiple parking lot maneuvers over a short duration of time with low tire pressure or towing for long distances followed by multiple parking maneuvers. • The thermistor used by the PSCM is calibrated for 80°C (176°F) and as ambient temperature decreases, so does the accuracy of the sensor. At room temperature and lower, the sensor is ±20°C (68°F). • If no other Diagnostic Trouble Codes (DTCs) are present, INFORM the customer high ambient temperatures or heavy loads on the EPAS system cause this DTC to set, resulting in higher than usual steering efforts.
C102D:00	High Friction Inside Power Steering: No Sub Type Information	GO to Pinpoint Test C
C1B00:00	Steering Angle Sensor: No Sub Type Information	GO to Pinpoint Test B
C1B00:2F	Steering Angle Sensor: Signal Erratic	GO to Pinpoint Test B
C200B:61	Steering Shaft Torque Sensor 1: Signal Calculation Failure	GO to Pinpoint Test B
U0001:88	High Speed CAN Communication Bus: Bus off	A HS-CAN fault was present at a point in time. The fault is not currently present since the module is communicating with the diagnostic scan tool. CLEAR the DTC. REPEAT the Network Test with the diagnostic scan tool. VERIFY the integrity of the connectors and wiring. Refer to Wiring Diagrams Cell 14 for schematic and connector information.
U0100:00	Lost Communication with ECM/PCM "A": No Sub Type Information	GO to Pinpoint Test D
U0102:00	Lost Communication with Transfer Case Control Module (TCCM): No Sub Type Information	GO to Pinpoint Test E

U0401:00	Invalid Data Received from ECM/PCM A: No Sub Type Information	GO to Pinpoint Test D
U0415:00	Invalid Data Received From Anti-Lock Brake System (ABS) Control Module: No Sub Type Information	GO to Pinpoint Test F
U0423:00	Invalid Data Received from Instrument Panel Cluster Control Module: No Sub Type Information	GO to Pinpoint Test I
U0452:00	Invalid Data Received from Restraints Control Module: No Sub Type Information	GO to Pinpoint Test H
U045A00	Invalid Data Received From Parking Assist Control Module A: No Sub Type Information	GO to Pinpoint Test J
U053B:00	Invalid Data Received from Image Processing Module A: No Sub Type Information	• This DTC sets if the PSCM receives an invalid or unknown message from the IPM-A instead of valid lane information. • RETRIEVE and RECORD all IPM-A DTCs. Diagnose the IPM-A concern.
U053C:00	Invalid Data Received from Image Processing Module B: No Sub Type Information	• This DTC sets if the PSCM receives an invalid or unknown message from the IPM-B instead of valid lane information. • RETRIEVE and RECORD all IPM-B DTCs. Diagnose the IPM-B concern.
U0554:00	Invalid Data Received from Accessory Protocol Interface	• This DTC sets if the PSCM receives an invalid or unknown message from the APIM instead of valid lane information. • RETRIEVE and RECORD all APIM DTCs. Diagnose the APIM concern.

	Module (APIM): No Sub Type Information	
U2011:61	Motor: Signal Calculation Failure	GO to Pinpoint Test B
U2100:00	Initial Configuration Not Complete: No Sub Type Information	• DTC U2100:00 sets if the PSCM was not correctly configured before leaving the assembly plant. • INSTALL As-Built data from Professional Technician Society (PTS) following diagnostic scan tool instructions under Module Programming>As-Built. • If DTC is still set, INSTALL a new EPAS gear. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
U2100:55	Initial Configuration Not Complete: Not Configured	• When a new EPAS gear is installed, the PSCM must be configured with the vehicle information. Configuration is checked during initial PSCM power up (ignition ON) when the voltage supply to the PSCM is greater than 6 volts. • If the PSCM detects the vehicle data configuration or the component base data configuration is missing or incomplete, DTC U2100:55 sets. This usually occurs when the initial PSCM configuration is not carried out or if the configuration fails. • CHECK vehicle service history for recent service actions related to the PSCM. This DTC sets due to incomplete or improper PMI procedures. • If there have been recent service actions with the PSCM, REPEAT the PMI procedure as directed by the diagnostic scan tool. • If there have been no recent service actions, INSTALL a new EPAS gear to correct the failure to retain configuration data. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
U3000:41	Control Module: General Checksum Failure	GO to Pinpoint Test B
U3000:49	Control Module: Internal Electronic Failure	GO to Pinpoint Test B
U3000:62	Control Module: Signal Compare Failure	• Using a diagnostic scan tool, CLEAR the DTC. • CYCLE the ignition from ON to OFF, WAIT at least 15 seconds and SET the ignition back to ON. Using a diagnostic scan tool, CARRY OUT the PSCM self-test. • If DTC U3000:62 returns, INSTALL a new EPAS gear. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
U3000:64	Control Module: Signal Plausibility Failure	• Using a diagnostic scan tool, CLEAR the DTC. • CYCLE the ignition from ON to OFF, WAIT at least 15 seconds and SET the ignition back to ON. Using a diagnostic scan tool, CARRY OUT the PSCM self-test. • If DTC U3000:64 returns, INSTALL a new EPAS gear. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). Message center displays STEERING FAULT SERVICE NOW	Diagnostic Trouble Codes (DTCs) present in the PSCM	• This message appears when a condition has been detected in the EPAS system requiring the PSCM to disable the system (remove assist) to help prevent the system from sustaining any possible damage. This message (and related symptom) may be cleared when the ignition is cycled and may not be present at the time of diagnosis. • RETRIEVE all PSCM Diagnostic Trouble Codes (DTCs) and REFER to the DTC Chart: PSCM.
Message center	Diagnostic Trouble	• This message appears if a condition exists (high friction for

displays STEERING LOSS STOP SAFELY	Codes (DTCs) present in the PSCM	example) that puts extra load on the EPAS gear. Steering assist remains for the current ignition cycle, but with a reduced level of assist. If the ignition is set to OFF and then back to ON, STEERING LOSS STOP SAFELY appears in the message center and steering assist is removed until the condition is repaired. • RETRIEVE all PSCM Diagnostic Trouble Codes (DTCs) and REFER to the DTC Chart: PSCM.
Message center displays STEERING ASSIST FAULT SERVICE REQUIRED	Diagnostic Trouble Codes (DTCs) present in the PSCM	• This message appears when a condition has been detected in the EPAS system requiring the PSCM to disable the system (remove assist) to help prevent the system from sustaining any possible damage. This message (and related symptom) cannot be cleared until the condition has been repaired. • RETRIEVE all PSCM Diagnostic Trouble Codes (DTCs) and REFER to the DTC Chart: PSCM.
Poor returnability or sticky steering	Refer to the Pinpoint Test	GO to Pinpoint Test M
Steering system pull, drift or wander	Refer to the Pinpoint Test	GO to Pinpoint Test N
Steering wheel is off center	Refer to the Pinpoint Test	GO to Pinpoint Test N

Symptom Chart: Noise, Vibration and Harshness (NVH)

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

NVH symptoms should be identified using the diagnostic tools available. For a list of these tools, an explanation of their uses and a glossary of common terms,
REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness, Description and Operation).
Since it is possible any one of multiple systems may be the cause of a symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness, Diagnosis and Testing).

Condition	Possible Sources	Actions
Feedback (rattle, chuckle or knocking noise) - roughness is felt in the steering wheel when driven over rough surfaces	Refer to the Pinpoint Test	GO to Pinpoint Test O
Grinding noise or gravely feel	Refer to the Pinpoint Test	GO to Pinpoint Test P
Shimmy	Refer to the Pinpoint Test	GO to Pinpoint Test O
Steering column squeaks, clicks or grinds	• Loose or misaligned steering column shrouds • Steering wheel rubbing against steering column shrouds	• TIGHTEN the steering column shroud screws. • ALIGN the steering column shrouds.
Steering gear clunk occurs only while cornering over a bump (can	• EPAS gear mounting bolts	**NOTE:** *Some noise when turning into the steering stops is normal.*

be temperature sensitive)	loose or damaged • EPAS gear has reached the end of travel and is contacting the steering stops	• If the mounting bolts are loose, INSTALL new bolts and TIGHTEN to specification. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). • COMPARE to other EPAS equipped vehicles. If the noise is excessive, INSPECT the outer tie-rods and suspension ball joints. TIGHTEN or INSTALL new as necessary.
Whirring or whine noise that gets louder with increased steering wheel speed	• Grounded or loose steering column shaft dash panel seal • EPAS gear	**NOTE:** *Some noise from the EPAS gear is considered normal.* • REPAIR or INSTALL a new dash panel seal as necessary. REFER to: Steering Column (211-04 Steering Column, Removal and Installation). • COMPARE to other EPAS equipped vehicles. If the noise is excessive, INSTALL a new EPAS gear. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).

Pinpoint Tests

U3003:16, U3003:17, U3003:68

Refer to Wiring Diagrams Cell 43 for schematic and connector information.

Normal Operations and Fault Conditions

The EPAS is supplied voltage through one high current circuit. The EPAS internally monitors supply voltage to detect system power concerns on the high current circuit. The EPAS system uses a shared ground circuit via the vehicle's engine and body. Although the ground circuit is not directly monitored, ground circuit concerns may be interpreted by the PSCM as voltage supply concerns.

When DTC U3003:68 is set, the PSCM reduces steering assist if the voltage is below 11.3 volts. The PSCM reporting **only**DTC U3003:68 **does not** indicate a concern with the EPAS system.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U3003:16	Battery Voltage: Circuit Voltage Below Threshold	If the voltage supply to the PSCM falls below 9 volts with the ignition ON, DTC U3003:16 is set. DTC U3003:16 can also set if the vehicle has been recently jump started or the 12-volt battery has been discharged. The 12-volt battery may become discharged due to excessive loads on the charging system from aftermarket accessories or if the battery has been left unattended with the accessories on.
U3003:17	Battery	If the voltage supply to the PSCM exceeds 16.4 volts for less than 1 second with the

	Voltage: Circuit Voltage Above Threshold	ignition ON, DTC U3003:17 is set. DTC U3003:17 can also set if the vehicle has been recently jump started or the 12-volt battery has been recently charged.
U3003:68	Battery Voltage: Event Information	If the voltage supply to the PSCM is between 9 volts and 11.2 volts, and the PSCM is commanded to provide steering assist greater than the present voltage level allows, DTC U3003:68 is set.

Possible Sources

- Fuses
- Wiring, terminals or connectors
- Charging system concern
- Battery
- PSCM

Visual Inspection and Diagnostic Pre-checks

- Make sure the vehicle battery terminals and cables are free of any corrosion and other contaminants.
- Make sure the vehicle battery terminals are tightened to their correct torque specifications.
- Make sure high current BJB fuse(s) is OK.
- Make sure BJB fuse(s) is OK.

PINPOINT TEST A : U3003:16, U3003:17, U3003:68

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

A1 CHECK FOR KNOWN CONCERNS

- Using the VIN, check OASIS for any applicable Technical Service Bulletins (TSBs) or Special Service Messages (SSMs).

Are there any Technical Service Bulletins (TSBs) or Special Service Messages (SSMs) relating to the customer concern?

Yes	DISCONTINUE this test and FOLLOW the TSB or Special Service Message (SSM) instructions.
No	GO to A2

A2 RECHECK THE PSCM (POWER STEERING CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, clear the PSCM Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait at least 15 seconds to allow modules to properly shut down.
- Ignition ON.
- Using a diagnostic scan tool, carry out the PSCM self-test.

Is U3003:16 the only DTC present in the PSCM?

Yes	GO to A3
No	GO to A4

A3 FAULT CONDITION CONFIRMATION

NOTE: *If DTC U3003:13 is present and the steering assist is unaffected, the DTC may have been set due to the battery voltage dropping below the required parameters during engine cranking.*

- Test drive the vehicle and identify any EPAS related symptoms.

Is the vehicle experiencing heavy steering or a lack of steering assist?

Yes	DIAGNOSE the vehicle battery and charging system. REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). REFER to: Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma (414-00 Charging System - General Information, Diagnosis and Testing).
No	The system is operating correctly at this time. The DTC may have been set due to the battery voltage dropping below the required parameters during engine cranking.

A4 RETRIEVE ALL CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS) FROM ALL MODULES

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is the PCM and at least one other module, in addition to the PSCM, reporting charging system or battery voltage Diagnostic Trouble Codes (DTCs)?

Yes	DIAGNOSE the vehicle battery and charging system. REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). REFER to: Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma (414-00 Charging System - General Information, Diagnosis and Testing).
No	GO to A5

A5 CHECK THE BATTERY CONDITION

- Ignition OFF.
- Carry out the Battery Condition Test.
  REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).

Did the battery pass the condition test?

Yes	GO to A6
No	INSTALL a new battery. REFER to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation).

A6 CHECK THE CHARGING SYSTEM VOLTAGE

- Start the engine.
- Turn off all interior lights, exterior lights and accessories.
- Measure and record the battery voltage.
- Turn on all interior lights, exterior lights and set the HVAC fan to HIGH.
- Measure and record the battery voltage.

Are the recorded voltages between 13 and 15.2 volts?

Yes	GO to A7
No	DIAGNOSE the vehicle charging system. REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). REFER to: Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma (414-00 Charging System - General Information, Diagnosis and

	Testing).

A7 CHECK THE PSCM (POWER STEERING CONTROL MODULE) MODULE SUPPLY VOLTAGE (MOD_SUP_V) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, access and monitor the PSCM MOD_SUP_V PID.
- Turn the steering wheel from lock to lock with the vehicle running and note the MOD_SUP_V PID reading while holding the wheel in a lock position.

Does the MOD_SUP_V PID match the previously recorded loaded battery voltage ±1.5 volts?

Yes	The system is operating correctly at this time. The DTC may have been set due to an intermittent fault in the wiring harness. INSPECT for chaffed wires or other physical damage to the wire harness along the top of the EPAS gear and both PSCM electrical connectors.
No	GO to A8

A8 CHECK THE PSCM (POWER STEERING CONTROL MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

- Ignition OFF.
- Disconnect the battery negative cable.
  REFER to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
- Disconnect high current BJB C1617A.
- Disconnect PSCM C1463B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1617B-1	Ω	C1463A-2

Is the resistance less than 0.5 ohms?

Yes	GO to A9
No	INSPECT the high-current BJB fuse (125A). If the fuse is open, REFER to the Wiring Diagrams manual to determine the cause of the circuit short. If the high-current BJB fuse is **not** open, INSPECT the PSCM connectors for corrosion, spread terminals and pushed-out terminals. REPAIR as necessary. If the connectors are OK, REPAIR the circuit.

A9 CHECK THE PSCM (POWER STEERING CONTROL MODULE) GROUND

- Inspect ground for looseness and corrosion.

Are the ground bolt and eyelet tight and free from any corrosion?

Yes	INSPECT the PSCM wiring harness and connectors for damage, corrosion, spread terminals or pushed out pins. If the wiring harness and connectors are OK, REPAIR the PSCM ground circuit.
No	CLEAN and TIGHTEN the ground connection.

Steering Angle Sensor Signal, Steering Shaft Torque Sensor Signal, Motor or Control Module Failure

Refer to Wiring Diagrams Cell 43 for schematic and connector information.

Normal Operation and Fault Conditions

While the ignition is set to ON and the voltage supply to the PSCM is above 6 volts, the module monitors the motor, steering angle sensor and the 2 steering torque sensors inside the EPAS gear to calculate the relative and actual steering wheel angle. This value is then transmitted to other modules over the HS-CAN2. The PSCM monitors various inputs and outputs of the EPAS system in order to keep the system operating at peak capacity. Information provided by sensors (steering torque, vehicle speed, vehicle travel distance, etc.) are all compared to programmed and learned information. Likewise, outputs like the motor and steering rack (travel) are tested against programmed and learned information.

When DTC C1B00:2F, C200B:61, U3000:41 or U3000:49 is present, the PSCM sends a message to the IPC to display STEERING FAULT SERVICE NOW in the message center.

When DTC U2011:61 is present, the PSCM sends a message to the IPC to display SERVICE POWER STEERING in the message center.

When DTC C1B00:2F is present, the EPAS gear enters a reduced performance mode, the EPAS gear does not automatically assist to return to center after completing a turn.

When DTC C200B:61 or U2011:61 is present, the EPAS gear enters manual steering mode, no electrical power assistance is provided and the steering operation has a heavy feel.

The presence of DTC U3000:49 may or may not affect steering assist. It depends on what other Diagnostic Trouble Codes (DTCs) (if any) are set along with U3000:49. If other Diagnostic Trouble Codes (DTCs) are set along with U3000:49, then power steering assist is affected as described in those DTC fault conditions.

The EPAS gear is very susceptible to water, moisture, dust, rust and other contaminants. If a damaged boot is discovered the inner tie rods and steering rack should be inspected for contamination. If contamination is found a new EPAS gear should be installed. New bellows boots and clamps must be installed whenever they are removed. To avoid unnecessary repairs, address all other Diagnostic Trouble Codes (DTCs) and customer concerns before removing the bellows boots and inspecting the EPAS gear.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
• C1B00:00 • C1B00:2F	• Steering Angle Sensor : No Sub Type Information • Steering Angle Sensor : Signal Error	• If the steering angle calculated by the PSCM does not match other sensor input, DTC C1B00:00 is set. • If the steering angle calculated by the PSCM exceeds a calibrated threshold, DTC C1B00:2F is set.
• C200B:61	• Steering Shaft Torque Sensor 1: Signal Calculation Failure	• If the steering shaft torque sensor signals do not equal 5 volts when combined or if either sensor signal is invalid, DTC C200B:61 is set.
• U2011:61	• Motor: Signal Calculation Failure	• If the difference between the motor position signals exceeds a calibrated threshold, or the calculated motor position is outside allowable tolerances, or the difference between the expected command and the actual command is outside allowable tolerances, DTC U2011:61 is set.
• U3000:41	• Control	• If at any time during normal operation the module detects an internal

• U3000:49	Module: General Checksum Failure • Control Module: Internal Electronic Failure	software error with more than 6 volts supplied to the PSCM, DTC U3000:41 is set. • If at any time during normal operation with more than 6 volts supplied to the PSCM, the module detects a software or internal hardware error then DTC U3000:49 is set.

Possible Sources

- Wiring, terminals or connectors
- EPAS gear
- Inner tie rods
- PSCM

PINPOINT TEST B : STEERING ANGLE SENSOR SIGNAL, STEERING SHAFT TORQUE SENSOR SIGNAL, MOTOR OR CONTROL MODULE FAILURE

B1 CHECK FOR KNOWN CONCERNS

- Using the VIN, check OASIS for any applicable Technical Service Bulletins (TSBs) or Special Service Messages (SSMs).

Are there any Technical Service Bulletins (TSBs) or Special Service Messages (SSMs) relating to the customer concern?

Yes	DISCONTINUE this test and FOLLOW the TSB or Special Service Message (SSM) instructions.
No	GO to B2

B2 INSPECT THE EPAS (ELECTRONIC POWER ASSIST STEERING) GEAR WIRING HARNESS

- With the transmission in NEUTRAL, position the vehicle on a hoist.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- Ignition OFF.
- Thoroughly inspect the wire harness along the top of the EPAS gear for cuts, breaks and pinched wires.
- **NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.**

  Disconnect PSCM C1463A and C1463B connectors and inspect them for corrosion, pushed-out pins, bent pins and spread terminals.

Is the wire harness undamaged and are connectors in good condition?

Yes	CONNECT PSCM C1463A and C1463B connectors. GO to B3
No	REPAIR the connectors and wiring harness as necessary. REPAIR whatever caused the damage to the wire harness. CONNECT PSCM C1463A and C1463B connectors. GO to B5

B3 INSPECT THE INNER TIE RODS AND STEERING RACK FOR CORROSION

NOTICE: When installing new bellows boots and clamps, apply new lubricant as instructed to prevent water contamination or damage to the EPAS gear may result.

- Remove the outer tie rods and bellows boots.
  REFER to: Tie Rod - LHD (211-02A Power Steering, Removal and Installation).
  REFER to: Tie Rod - RHD (211-02 Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS)) .

  REFER to: Tie Rod End - LHD (211-02A Power Steering, Removal and Installation).

REFER to: Tie Rod End - RHD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
REFER to: Steering Gear Boot (211-02A Power Steering, Removal and Installation).

- The following inspection must be carried out on **both** sides of the steering rack:
  - Expose the steering rack by turning the steering wheel in one direction all the way until it stops.
  - Inspect the rack, inner tie rod and gear housing for rust, moisture, corrosion and other signs of harmful contamination.

Is the rack, inner tie rod and gear housing free of moisture, rust, corrosion and other harmful contamination?

Yes	INSTALL the removed outer tie rods and INSTALL new EPAS gear bellows boots with new clamps. REFER to: Steering Gear Boot (211-02A Power Steering, Removal and Installation). REFER to: Tie Rod - LHD (211-02A Power Steering, Removal and Installation). REFER to: Tie Rod - RHD (211-02 Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS)) . REFER to: Tie Rod End - LHD (211-02A Power Steering, Removal and Installation). REFER to: Tie Rod End - RHD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). ADJUST the front toe setting. REFER to: Front Toe Adjustment (204-00 Suspension System - General Information, General Procedures). GO to B4
No	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new EPAS gear. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).

B4 VERIFY ALL WIRING CONNECTIONS

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

- Ignition OFF.
- Disconnect PSCM C1463A and C1463B.
- Using a good light source, inspect PSCM C1463A and C1463B for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	GO to B5
No	REPAIR the affected connectors or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

B5 TEST DRIVE TO CHECK FOR RETURNING DIAGNOSTIC TROUBLE CODES (DTCS)

- Connect PSCM C1463A and C1463B.
- Ignition ON.
- Using a diagnostic scan tool, clear the PSCM Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait at least 15 seconds to allow modules to properly shut down.
- Ignition ON.
- **NOTE:** *Always drive the vehicle in a safe manner according to driving conditions and obey all traffic laws.* Test drive the vehicle in the following manner:

- With the engine running, stop the vehicle on an unsealed concrete or asphalt surface (in order to provide adequate friction for a thorough test).
- With the vehicle in DRIVE and the brakes applied, turn the steering wheel from lock-to-lock.
- Return the steering wheel to the center position and move the vehicle forward approximately 32 cm (1 ft).
- With the vehicle in DRIVE and the brakes applied, turn the steering wheel from lock-to-lock.
- Return the steering wheel to the center position and move the vehicle forward approximately 32 cm (1 ft).
- With the vehicle in DRIVE and the brakes applied, turn the steering wheel from lock-to-lock.
- The test drive is complete.

- Select PARK.
- Using a diagnostic scan tool, carry out the PSCM self-test.

Is DTC C1B00:00, C1B00:2F, C200B:61, U2011:61, U3000:41 or U3000:49 present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new EPAS gear. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by loose or corroded connector. ADDRESS the root cause of any connector or wire harness concerns.

C102D:00

Refer to Wiring Diagrams Cell 43 for schematic and connector information.

Normal Operations and Fault Conditions

The PSCM monitors various inputs and outputs of the EPAS system to keep the system operating at peak capacity. Information provided by sensors (steering torque, motor position, vehicle speed, vehicle travel distance, etc.) are all compared to programmed and learned information. Likewise, outputs like the motor and steering rack (travel) are tested against programmed and learned information. If a concern is detected, the PSCM sets one or more Diagnostic Trouble Codes (DTCs) and sends the appropriate message to the IPC message center.

When DTC C102D:00 is set steering assist is unaffected during the ignition cycle the DTC set. During the next ignition cycle, the EPAS gear enters manual steering mode, no electrical power assistance is provided and the steering operation has a heavy feel. The message center displays STEERING MALFUNCTION SERVICE NOW during the ignition cycle the DTC set and STEERING LOSS STOP SAFELY during the next ignition cycle after the DTC set.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
C102D:00	High Friction Inside Power Steering: No Sub Type Information	This DTC sets in the PSCM if the calculated friction value exceeds a predetermined threshold.

Possible Sources

- EPAS gear internal failure

PINPOINT TEST C : C102D:00

C1 CHECK FOR KNOWN CONCERNS
• Using the VIN, check OASIS for any applicable Technical Service Bulletins (TSBs) or Special Service

Messages (SSMs).

Are there any Technical Service Bulletins (TSBs) or Special Service Messages (SSMs) relating to the customer concern?

Yes	DISCONTINUE this test and FOLLOW the TSB or Special Service Message (SSM) instructions.
No	GO to C2

C2 CHECK AND RECORD THE LEFT FRONT AND RIGHT FRONT TIRE PRESSURES

- Check and record the left front and right front tire pressures.
- Compare the recorded tire pressure readings with the information on the VC label.

Is the air pressure in the tires correct as indicated on the VC label?

Yes	GO to C3
No	ADJUST the air pressure in the tires. GO to C3

C3 CHECK FOR UNLOADED STEERING RACK TRAVEL FEEL

- With the transmission in NEUTRAL, position the vehicle on a hoist.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- Ignition OFF.
- Raise the vehicle until the front wheels no longer touch the ground.
- Rotate the steering wheel from lock-to-lock and inspect the steering rack travel for the following:
  - Abnormal noises
  - Rough spots
  - Sticky spots
  - Tight spots

Is steering rack travel smooth and free of any abnormal noises, rough, sticky and tight spots?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new EPAS gear. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
No	GO to C5

C4 ISOLATE THE FRONT SUSPENSION COMPONENTS

- Disconnect the outer tie rods from the wheel knuckles.
  REFER to: Tie Rod End - LHD (211-02A Power Steering, Removal and Installation).
  REFER to: Tie Rod End - RHD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
- Rotate the steering wheel from lock-to-lock and inspect the steering rack travel for the following:
  - Abnormal noises
  - Rough spots
  - Sticky spots
  - Tight spots

Is steering rack travel smooth and free of any abnormal noises, rough, sticky and tight spots?

Yes	The condition may be caused by tires, wheel knuckles, ball joints, struts or damaged subframe. ISOLATE the component(s) causing the binding. INSTALL new component(s) as necessary.
No	GO to C5

C5 CHECK THE UNLOADED STEERING COLUMN FEEL

NOTICE: Do not allow the steering column to rotate more than 1 complete revolution in each direction. If the steering column shaft is allowed to rotate more than 1 complete revolution in each direction damage to the clockspring may occur.

- Disconnect the steering column intermediate shaft from the EPAS gear.
  - Discard the bolt.
- Rotate the steering wheel 1 complete revolution in each direction and inspect the steering column travel for the following:
  - Abnormal noises
  - Rough spots
  - Sticky spots
  - Tight spots
- Using a suitable steering wheel holding device, hold the steering wheel in the straight ahead position.

Is steering column travel smooth and free of any abnormal noises, rough, sticky and tight spots?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new EPAS gear. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
No	GO to C6

C6 INSPECT THE STEERING COLUMN SHAFT U-JOINTS

NOTICE: Do not allow the steering column to rotate while the steering column shaft is disconnected or damage to the clockspring may result. If there is evidence that the steering column shaft has rotated, the clockspring must be removed and re-centered.

- Inspect the steering column shaft U-joints for looseness or wear.

Are the steering column shaft U-joints OK?

Yes	CONNECT the steering column shaft to the EPAS gear. INSTALL a new bolt and tighten to specifications. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). DIAGNOSE further possible causes, REFER to: Front Suspension (204-01 Front Suspension, Diagnosis and Testing).
No	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new steering column shaft. REFER to: Steering Column Lower Shaft (211-04 Steering Column, Removal and Installation).

U0100:00, U0401:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition set to ON, the PCM sends messages to the GWM over the HS-CAN1, the GWM relays these messages to the PSCM over the HS-CAN2. The PSCM monitors the HS-CAN2 when the ignition has been set to ON

for more than 5 seconds, when the voltage to the PSCM is greater than 9 volts and when there are no Diagnostic Trouble Codes (DTCs) inhibiting PSCM operation. For information on the network messages sent to the PSCM by the PCM,
REFER to: Power Steering - System Operation and Component Description (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Description and Operation).

When DTC U0100:00 is initially set, steering assist remains unaffected. Once the PSCM has detected missing messages from the PCM for at least 200 milliseconds, the PSCM enters the reduced steering assist failure mode, resulting in higher steering efforts during low-speed maneuvering.

When DTC U0401:00 is present the PSCM enters the reduced steering assist failure mode, resulting in higher steering efforts during low-speed maneuvering.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0100:00	Lost Communication With ECM / PCM "A": No Sub Type Information	This DTC sets if communications between the PSCM and the PCM fail or if the vehicle speed, engine torque or transmission gear message is missing for more than 200 milliseconds. This can be due to a GWM failure, a PCM failure, a circuit failure on the HS-CAN1, HS-CAN2 or an excessive load on the network.
U0401:00	Invalid Data Received From ECM / PCM "A": No Sub Type Information	This DTC sets if the PSCM receives "fault" or "unknown" messages from the PCM instead of valid gear lever position or valid power pack status messages.

Possible Sources

- Wiring, terminals or connectors
- Network communication concern
- GWM
- PCM

PINPOINT TEST D : U0100:00, U0401:00

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

D1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out the Network Test.

Do the PCM and the GWM pass the Network Test?

Yes	GO to D2
No	DIAGNOSE the GWM does not respond to the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). DIAGNOSE the PCM does not respond to the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

D2 CHECK THE PSCM (POWER STEERING CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, carry out the PSCM self-test.
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).

- Ignition OFF.
- Wait at least 15 seconds to allow modules to properly shut down.
- Ignition ON.
- Using a diagnostic scan tool, carry out the PSCM self-test.
- Retrieve and record the PSCM Diagnostic Trouble Codes (DTCs).

Is DTC U0100:00 or U0401:00 retrieved again?

Yes	GO to D3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

D3 REVIEW THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PSCM (POWER STEERING CONTROL MODULE) SELF-TEST

- Review the recorded Diagnostic Trouble Codes (DTCs) from the PSCM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	GO to Pinpoint Test A
No	GO to D4

D4 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE GWM (GATEWAY MODULE A) SELF-TEST

- Using a diagnostic scan tool, carry out the GWM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	DIAGNOSE the GWM Diagnostic Trouble Codes (DTCs). REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to D5

D5 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PCM (POWERTRAIN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, carry out the PCM KOEO self-test.

Is DTC P0562 or P0563 present?

Yes	DIAGNOSE the PCM Diagnostic Trouble Codes (DTCs). Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
No	GO to D6

D6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0100:XX OR U0401:XX SET IN OTHER MODULES

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0100:xx or U0401:xx set in 1 or more modules in addition to the PSCM?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).

	REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	GO to D7

D7 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST

- Using a diagnostic scan tool, carry out the ABS module self-test.

Are any ABS DTCs recorded?

Yes	DIAGNOSE the ABS module Diagnostic Trouble Codes (DTCs). REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	GO to D8

D8 VERIFY ALL WIRING CONNECTIONS

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

- Ignition OFF.
- Disconnect PSCM C1463A and C1463B electrical connectors..
- Disconnect All PCM electrical connectors..
- Disconnect All GWM electrical connectors..
- Disconnect All ABS electrical connectors..
- Using a good light source, inspect each connector for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	The condition that caused the concern is not present at this time. The concern is intermittent and may have been caused by a loose or corroded connector, low battery voltage or an excessive load on the HS-CAN1 or HS-CAN2.
No	REPAIR the affected connectors or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

U0102:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition set to ON, the TCCM module sends messages to the PSCM over the HS-CAN2. The PSCM monitors the HS-CAN2 when the ignition has been set to ON for more than 5 seconds, when the voltage to the PSCM is greater than 9 volts and when there are no Diagnostic Trouble Codes (DTCs) inhibiting PSCM operation. For information on the network messages sent to the PSCM by the TCCM module,
REFER to: Power Steering - System Operation and Component Description (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0102:00	Lost Communication with Transfer Case Control Module (TCCM): No Sub Type Information	This DTC sets when communications between the PSCM and the TCCM module fails. This can be due to an TCCM failure, a circuit failure on the HS-CAN2 or an excessive load on the network.

Possible Sources

- Wiring, terminals or connectors
- Network communication concern
- TCCM

PINPOINT TEST E : U0102:00

E1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out the Network Test.

Does the TCCM module pass the Network Test?

Yes	GO to E2
No	DIAGNOSE the TCCM module does not respond to the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

E2 CHECK THE PSCM (POWER STEERING CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, carry out the PSCM self-test.
- Using a diagnostic scan tool, clear the PSCM Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait at least 15 seconds to allow modules to properly shut down.
- Ignition ON.
- Using a diagnostic scan tool, carry out the PSCM self-test.
- Retrieve and record the PSCM Diagnostic Trouble Codes (DTCs).

Is DTC U0102:00 retrieved again?

Yes	GO to E3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

E3 REVIEW THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PSCM (POWER STEERING CONTROL MODULE) SELF-TEST

- Review the Diagnostic Trouble Codes (DTCs) recorded from the PSCM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	GO to Pinpoint Test A
No	For Everest, GO to E4 For Ranger, GO to E5

E4 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE TCCM (TRANSFER CASE CONTROL MODULE) MODULE SELF-TEST

- Using a diagnostic scan tool, carry out the TCCM module self-test.

Are any Uxxx DTCs recorded?

Yes	DIAGNOSE the TCCM module Diagnostic Trouble Codes (DTCs). REFER to: Four-Wheel Drive Systems (308-07 Four-Wheel Drive Systems) .
No	GO to E5

E5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0102 SET IN OTHER MODULES

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0102 set in 1 or more modules in addition to the PSCM?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new TCCM module.
No	GO to E6

E6 VERIFY ALL WIRING CONNECTIONS

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

- Ignition OFF.
- Disconnect PSCM C1463A and C1463B electrical connectors.
- Disconnect TCCM electrical connectors.
- Using a good light source, inspect each connector for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	The condition that caused the concern is not present at this time. The concern is intermittent and may have been caused by a loose or corroded connector, low battery voltage or an excessive load on the HS-CAN2.
No	REPAIR the affected connectors or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

U0121:00, U0415:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition set to ON, the ABS module sends messages to the PSCM over the HS-CAN2. The PSCM monitors the HS-CAN2 when the ignition has been set to ON for more than 5 seconds, when the voltage to the PSCM is greater than 9 volts and when there are no Diagnostic Trouble Codes (DTCs) inhibiting PSCM operation. For information on the network messages sent to the PSCM by the ABS module,
REFER to: Power Steering - System Operation and Component Description (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0121:00	Lost Communication With Anti-lock Brake System (ABS) Control Module: No Sub Type Information	This DTC sets when communications between the PSCM and the ABS module fails or if the steering wheel compensation angle, wheel speed sensor, traction control active, stability control active or ABS active message is missing for more than 250 milliseconds. This can be due to an ABS module failure, a circuit failure on the HS-CAN2 or an excessive load on the network.
U0415:00	Invalid Data Received From Anti-lock Brake System (ABS) Control Module: No Sub Type Information	This DTC sets if the PSCM receives "fault" or "unknown" messages from the ABS module instead of valid steering wheel compensation angle, wheel speed sensor, traction control active, stability control active or ABS active messages.

Possible Sources

- Wiring, terminals or connectors
- Network communication concern
- ABS Module

PINPOINT TEST F : U0121:00, U0415:00

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

F1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out the Network Test.

Does the ABS module pass the Network Test?

Yes	GO to F2
No	DIAGNOSE the ABS module does not respond to the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

F2 CHECK THE PSCM (POWER STEERING CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, carry out the PSCM self-test.
- Using a diagnostic scan tool, clear the PSCM Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait at least 15 seconds to allow modules to properly shut down.
- Ignition ON.
- Using a diagnostic scan tool, carry out the PSCM self-test.
- Retrieve and record the PSCM Diagnostic Trouble Codes (DTCs).

Is DTC U0121:00 or U0415:00 retrieved again?

Yes	GO to F3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

F3 REVIEW THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PSCM (POWER STEERING CONTROL MODULE) SELF-TEST

- Review the Diagnostic Trouble Codes (DTCs) recorded from the PSCM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	GO to Pinpoint Test A
No	GO to F4

F4 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST

- Using a diagnostic scan tool, carry out the ABS module self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	DIAGNOSE the ABS module Diagnostic Trouble Codes (DTCs). REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	GO to F5

F5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0121:XX OR U0415:XX SET IN OTHER MODULES

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0121:xx or U0415:xx set in 1 or more modules in addition to the PSCM?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module - Vehicles With: Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control) . REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	GO to F6

F6 VERIFY ALL WIRING CONNECTIONS

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

- Ignition OFF.
- Disconnect PSCM C1463A and C1463B electrical connectors.
- Disconnect ABS module C135.
- Using a good light source, inspect each connector for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	The condition that caused the concern is not present at this time. The concern is intermittent and may have been caused by a loose or corroded connector, low battery voltage or an excessive load on the HS-CAN2.
No	REPAIR the affected connectors or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

U0140:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition set to ON, the BCM sends messages to the GWM over the HS-CAN1, the GWM relays the messages to the PSCM over the HS-CAN2. The PSCM monitors the HS-CAN2 when the ignition has been set to ON for more than 5 seconds, when the voltage to the PSCM is greater than 9 volts and when there are no Diagnostic Trouble Codes (DTCs) inhibiting PSCM operation. For information on the network messages sent to the PSCM by the BCM,
REFER to: Power Steering - System Operation and Component Description (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Description and Operation).

The Battery Charger Control Module (BCCM) is an internal component of the BCM.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0140:00	Lost Communication With Body Control Module: No Sub Type Information	This DTC sets when communication between the PSCM and the BCM fails or if the ignition status message, power system status or vehicle configuration message is missing for more than 1000 milliseconds. This can be due to a GWM failure, a BCM failure, a circuit failure on the HS-CAN1, HS-CAN2 or an excessive load on the network.

Possible Sources

- Wiring, terminals or connectors
- Network communication concern
- GWM
- BCM

PINPOINT TEST G : U0140:00

G1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out the Network Test.

Do the GWM and the BCM pass the Network Test?

Yes	GO to G2
No	DIAGNOSE the GWM does not respond to the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). DIAGNOSE the BCM does not respond to the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

G2 CHECK THE PSCM (POWER STEERING CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, carry out the PSCM self-test.
- Using a diagnostic scan tool, clean the PSCM Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait at least 15 seconds to allow modules to properly shut down.

- Ignition ON.
- Using a diagnostic scan tool, carry out the PSCM self-test.
- Retrieve and record the PSCM Diagnostic Trouble Codes (DTCs).

Is DTC U0140:00 retrieved again?

Yes	GO to G3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

G3 REVIEW THE RECORDED CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PSCM (POWER STEERING CONTROL MODULE) SELF-TEST

- Review the Diagnostic Trouble Codes (DTCs) recorded from the PSCM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	GO to Pinpoint Test A
No	GO to G4

G4 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE GWM (GATEWAY MODULE A) SELF-TEST

- Using a diagnostic scan tool, carry out the GWM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	DIAGNOSE the GWM Diagnostic Trouble Codes (DTCs). REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to G5

G5 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE BCM (BODY CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	DIAGNOSE the BCM Diagnostic Trouble Codes (DTCs). REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	GO to G6

G6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0140:XX SET IN OTHER MODULES

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0140:xx set in 1 or more modules in addition to the PSCM?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).

No	GO to G7

G7 VERIFY ALL WIRING CONNECTIONS

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

- Ignition OFF.
- Disconnect PSCM C1463A and C1463B electrical connectors.
- Disconnect all BCM electrical connectors.
- Disconnect all GWM electrical connectors.
- Using a good light source, inspect each connector for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	The condition that caused the concern is not present at this time. The concern is intermittent and may have been caused by a loose or corroded connector, low battery voltage or an excessive load on the HS-CAN1 or HS-CAN2.
No	REPAIR the affected connectors or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

U0151:00, U0452:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition set to ON, the RCM sends messages to the PSCM over the HS-CAN2. The PSCM monitors the HS-CAN2 when the ignition has been set to ON for more than 5 seconds, when the voltage to the PSCM is greater than 9 volts and when there are no Diagnostic Trouble Codes (DTCs) inhibiting PSCM operation. For information on the network messages sent to the PSCM by the RCM,
REFER to: Power Steering - System Operation and Component Description (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0151:00	Lost Communication With Restraints Control Module: No Sub Type Information	This DTC sets if communications between the PSCM and the RCM fail or if the vehicle speed, engine torque or transmission gear message is missing for more than 100 milliseconds. This can be due to a RCM failure, a circuit failure on the HS-CAN2 or an excessive load on the network.
U0452:00	Invalid Data Received From Restraints Control Module: No Sub Type Information	This DTC sets if the PSCM receives "fault" or "unknown" messages from the RCM instead of valid vehicle lateral acceleration messages.

Possible Sources

- Wiring, terminals or connectors
- Network communication concern
- RCM

PINPOINT TEST H : U0151:00, U0452:00

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

H1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out the Network Test.

Does the RCM module pass the Network Test?

Yes	DIAGNOSE the RCM does not respond to the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to H2

H2 CHECK THE PSCM (POWER STEERING CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, carry out the PSCM self-test.
- Using a diagnostic scan tool, clear the PSCM Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait at least 15 seconds to allow modules to properly shut down.
- Ignition ON.
- Using a diagnostic scan tool, carry out the PSCM self-test.
- Retrieve and record the PSCM Diagnostic Trouble Codes (DTCs).

Is DTC U0151:00 or U0452:00 retrieved again?

Yes	GO to H3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

H3 REVIEW THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PSCM (POWER STEERING CONTROL MODULE) SELF-TEST

- Review the Diagnostic Trouble Codes (DTCs) recorded from the PSCM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	GO to Pinpoint Test A
No	GO to H4

H4 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE RCM (RESTRAINTS CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, carry out the RCM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	DIAGNOSE the RCM Diagnostic Trouble Codes (DTCs). REFER to: Airbag Supplemental Restraint System (SRS) (501-20B Supplemental Restraint System, Diagnosis and Testing).
No	GO to H5

H5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0151:XX OR U0452:XX SET IN OTHER MODULES

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0151:xx or U0452:xx set in 1 or more modules in addition to the PSCM?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new RCM. REFER to: Restraints Control Module (RCM) (501-20B Supplemental Restraint System, Removal and Installation).
No	GO to H6

H6 VERIFY ALL WIRING CONNECTIONS

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

- Ignition OFF.
- Disconnect PSCM C1463A and C1463B electrical connectors.
- Disconnect all RCM electrical connectors.
- Using a good light source, inspect each connector for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	The condition that caused the concern is not present at this time. The concern is intermittent and may have been caused by a loose or corroded connector, low battery voltage or an excessive load on the HS-CAN2.
No	REPAIR the affected connectors or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

U0155:00, U0423:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition set to ON, the IPC sends messages to the GWM over the HS-CAN3, the GWM relays these messages to the PSCM over the HS-CAN2. The PSCM monitors the HS-CAN2 when the ignition has been set to ON for more than 5 seconds, when the voltage to the PSCM is greater than 9 volts and when there are no Diagnostic Trouble Codes (DTCs) inhibiting PSCM operation.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0155:00	Lost Communication With Instrument Panel Cluster (IPC) Control Module: No Sub Type Information	This DTC sets if communications between the PSCM and the IPC fail or if the odometer master value message is missing for more than 1 second. This can be due to a GWMfailure, an IPC failure, a circuit failure on the HS-CAN3, HS-CAN2 or an excessive load on the network.
U0423:00	Invalid Data Received From Instrument Panel Cluster Control Module: No Sub Type Information	This DTC sets if the PSCM receives "fault" or "unknown" message from the IPC instead of valid odometer master value message.

Possible Sources

- Wiring, terminals or connectors
- Network communication concern
- GWM
- IPC

PINPOINT TEST I : U0155:00, U0423:00

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

I1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out the Network Test.

Do the GWM and the IPC pass the Network Test?

Yes	GO to I2
No	DIAGNOSE the GWM does not respond to the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). DIAGNOSE the IPC does not respond to the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

I2 CHECK THE PSCM (POWER STEERING CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, carry out the PSCM self-test.
- Using a diagnostic scan tool, clean the PSCM Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait at least 15 seconds to allow modules to properly shut down.
- Ignition ON.
- Using a diagnostic scan tool, carry out the PSCM self-test.
- Retrieve and record the PSCM Diagnostic Trouble Codes (DTCs).

Is DTC U0155:00 or U0423:00 retrieved again?

Yes	GO to I3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

I3 REVIEW THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PSCM (POWER STEERING CONTROL MODULE) SELF-TEST

- Review the Diagnostic Trouble Codes (DTCs) recorded from the PSCM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	GO to Pinpoint Test A
No	GO to I4

I4 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE GWM (GATEWAY MODULE A) SELF-TEST

- Using a diagnostic scan tool, carry out the GWM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	DIAGNOSE the GWM Diagnostic Trouble Codes (DTCs). REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to I5

I5 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE IPC (INSTRUMENT PANEL CLUSTER) SELF-TEST

- Using a diagnostic scan tool, carry out the IPC self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	DIAGNOSE the IPC Diagnostic Trouble Codes (DTCs). REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	GO to I6

I6 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0155:XX OR U0423:XX SET IN OTHER MODULES

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0155:xx or U0423:xx set in 1 or more modules in addition to the PSCM?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new IPC. REFER to: Instrument Panel Cluster (IPC) - LHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation). REFER to: Instrument Panel Cluster (IPC) - RHD (413-01 Instrumentation, Message Center and Warning Chimes, Removal and Installation).
No	GO to I7

I7 VERIFY ALL WIRING CONNECTIONS

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

- Ignition OFF.
- Disconnect PSCM C1463A and C1463B electrical connectors.
- Disconnect all IPC electrical connectors.
- Disconnect all GWM electrical connectors.
- Using a good light source, inspect each connector for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	The condition that caused the concern is not present at this time. The concern is intermittent and may have been caused by a loose or corroded connector, low battery voltage or an excessive load on the HS-CAN2 or HS-CAN3.
No	REPAIR the affected connectors or terminals.

	Refer to Wiring Diagrams Cell 5 for schematic and connector information.

U0159:00, U045A:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition set to ON, the PAM sends messages to the relays these messages to the PSCM over the HS-CAN. For information on the network messages sent to the PSCM by the PAM,
REFER to: Power Steering - System Operation and Component Description (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0159:00	Lost Communication With Park Assist Control Module "A": No Sub Type Information	This DTC is set if communication between the PSCM and the PAM fails. The PAM sends various commands to the PSCM along the HS-CAN bus.
U045A:00	Invalid Date Received from Park Assist Control Module "A": No Sub Type Information	This DTC sets if the PSCM receives an "invalid" or "unknown" message from the PAM instead of a valid steering angle request message.

Possible Sources

- Wiring, terminals or connectors
- Network communication concern
- GWM
- PAM

PINPOINT TEST J : U0159:00, U045A:00

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

J1 CHECK THE COMMUNICATION NETWORK

- Ignition ON.
- Using a diagnostic scan tool, carry out the Network Test.

Does the PAM pass the Network Test?

Yes	GO to J2
No	DIAGNOSE the PAM does not respond to the diagnostic scan tool. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

J2 CHECK THE PSCM (POWER STEERING CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, carry out the PSCM self-test.
- Using a diagnostic scan tool, clean the PSCM Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Wait at least 15 seconds to allow modules to properly shut down.
- Ignition ON.
- Using a diagnostic scan tool, carry out the PSCM self-test.

- Retrieve and record the PSCM Diagnostic Trouble Codes (DTCs).

Is DTC U0159:00 or U045A:00 retrieved again?

Yes	GO to J3
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

J3 REVIEW THE RECORDED DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PSCM (POWER STEERING CONTROL MODULE) SELF-TEST

- Review the Diagnostic Trouble Codes (DTCs) recorded from the PSCM self-test.

Is DTC U3003:16 or U3003:17 recorded?

Yes	GO to Pinpoint Test A
No	GO to J4

J4 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS) FROM THE PAM (PARKING ASSIST CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, carry out the PAM self-test.

Are any DTCs recorded?

Yes	DIAGNOSE the PAM Diagnostic Trouble Codes (DTCs). REFER to: Parking Aid (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Diagnosis and Testing).
No	GO to J5

J5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0159:XX OR U045A:XX SET IN OTHER MODULES

- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0159:xx or U045A:xx set in 1 or more modules in addition to the PSCM?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PAM. REFER to: Parking Assist Control Module (PAM) (413-13A Parking Aid - Vehicles With: Rear Parking Aid, Removal and Installation).
No	GO to J6

J6 VERIFY ALL WIRING CONNECTIONS

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

- Ignition OFF.
- Disconnect PSCM C1463A and C1463B electrical connectors.
- Disconnect all PAM electrical connectors.
- Using a good light source, inspect each connector for the following:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary

- spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	The condition that caused the concern is not present at this time. The concern is intermittent and may have been caused by a loose or corroded connector, low battery voltage or an excessive load on the HS-CAN2 or HS-CAN3.
No	REPAIR the affected connectors or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

U0212:00

Refer to Wiring Diagrams Cell 14 for schematic and connector information.

Normal Operation and Fault Conditions

With the ignition set to ON, the SCCM sends messages to the GWM over the HS-CAN1, the GWM relays these messages to the PSCM over the HS-CAN2. The PSCM monitors the HS-CAN2 when the ignition has been set to ON for more than 5 seconds, when the voltage to the PSCM is greater than 9 volts and when there are no Diagnostic Trouble Codes (DTCs) inhibiting PSCM operation. For information on the network messages sent to the PSCM by the PCM,
REFER to: Power Steering - System Operation and Component Description (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U0212:00	Lost Communication With Steering Column Control Module: No Sub Type Information	This DTC sets if communications between the PSCM and the SCCM fail. This can be due to a GWM failure, a SCCM failure, a circuit failure on the HS-CAN1, HS-CAN2 or an excessive load on the network.

Possible Sources

- Wiring, terminals or connectors
- Network communication concern
- GWM
- SCCM

PINPOINT TEST K : U0212:00

K1 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Does the SCCM pass the network test?

Yes	GO to K2
No	DIAGNOSE no communication with the SCCM. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

K2 CHECK THE PSCM (POWER STEERING CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the DTCs

- Wait 10 seconds.
- Using a diagnostic scan tool, check the BCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U3003:16 or U3003:17 recorded?

Yes	DIAGNOSE the GWM Diagnostic Trouble Codes (DTCs). REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to K3

K3 RETRIEVE THE RECORDED DTCS ( ) FROM THE SCCM (STEERING COLUMN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the SCCM self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to 211-05 Steering Wheel and Column Electrical Components, Diagnosis and Testing
No	GO to K4

K4 RECHECK THE PSCM (POWER STEERING CONTROL MODULE) CONTINUOUS MEMORY DIAGNOSTIC TROUBLE CODES (CMDTCS)

- Using a diagnostic scan tool, clear the DTCs
- Wait 10 seconds.
- Using a diagnostic scan tool, check the PSCM Continuous Memory Diagnostic Trouble Codes (CMDTCs).

Is DTC U0212:00 still present?

Yes	GO to K5
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

K5 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0212 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear the DTCs.
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory DTCs.

Is DTC U0212:xx set in any other module?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new SCCM.
No	GO to K6

K6 VERIFY ALL WIRING CONNECTIONS

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

- Ignition OFF.
- Disconnect PSCM C1463A and C1463B electrical connectors.
- Disconnect all SCCM electrical connectors.
- Using a good light source, inspect each connector for the following:

- corrosion - install new connector or terminal and clean the module pins
- damaged or bent pins - install new terminals or pins
- pushed-out pins - install new pins as necessary
- spread terminals - install new terminals as necessary

Are the connectors free of corrosion, damaged pins, bent pins, pushed-out pins and spread terminals?

Yes	The condition that caused the concern is not present at this time. The concern is intermittent and may have been caused by a loose or corroded connector, low battery voltage or an excessive load on the HS-CAN2 or HS-CAN3.
No	REPAIR the affected connectors or terminals. Refer to Wiring Diagrams Cell 5 for schematic and connector information.

Excessive Steering Wheel Play

Normal Operation and Fault Conditions

Excessive steering wheel play is a condition in which there is too much steering wheel movement before the wheels move. A small amount of steering wheel free play is considered normal.

Possible Sources

- Steering column shaft fasteners
- Steering column shaft U-joints
- Steering linkage

PINPOINT TEST L : EXCESSIVE STEERING WHEEL PLAY

L1 CHECK FOR KNOWN CONCERNS

- Using the VIN, check OASIS for any applicable Technical Service Bulletins (TSBs) or Special Service Messages (SSMs).

Are there any Technical Service Bulletins (TSBs) or Special Service Messages (SSMs) relating to the customer concern?

Yes	DISCONTINUE this test and FOLLOW the TSB or Special Service Message (SSM) instructions.
No	GO to L3

L2 CHECK FOR PSCM (POWER STEERING CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, carry out the PSCM self-test.
- Retrieve and record all PSCM Diagnostic Trouble Codes (DTCs).

Are there any Diagnostic Trouble Codes (DTCs) present in the PSCM?

Yes	DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs) before diagnosing any steering assist symptoms. GO to the DTC Chart: PSCM.
No	If the diagnostic scan tool cannot communicate with the PSCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). If there are no Diagnostic Trouble Codes (DTCs) present in the PSCM, GO to L3

L3 CHECK THE STEERING COLUMN SHAFT FASTENERS

- Inspect the steering column shaft fasteners for looseness.

Are the steering column shaft fasteners OK?

Yes	GO to L4
No	TIGHTEN the steering column shaft fasteners to specifications. REFER to: Steering Column (211-04 Steering Column, Removal and Installation).

L4 CHECK THE STEERING COLUMN SHAFT U-JOINTS

NOTICE: Do not allow the steering column to rotate while the steering column shaft is disconnected or damage to the clockspring may result. If there is evidence the steering column shaft has rotated, the clockspring must be removed and recentered.

- Disconnect the steering column intermediate shaft from the EPAS gear.
  - Discard the bolt.
- Inspect the steering column shaft U-joints for looseness.

Are the steering column shaft U-joints OK?

Yes	CONNECT the steering column shaft to the EPAS gear. INSTALL a new bolt and tighten to specifications. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). INSPECT the tie rods and ball joints. For tie rods, GO to Pinpoint Test O For ball joints, REFER to the Ball Joint Inspection Component Test. REFER to: Front Suspension (204-01 Front Suspension, Diagnosis and Testing).
No	INSTALL a new steering column shaft assembly. REFER to: Steering Column Lower Shaft (211-04 Steering Column, Removal and Installation). REFER to: Steering Column Upper Shaft (211-04 Steering Column, Removal and Installation).

Poor Returnability, Sticky Steering, Lack of Assist or Inconsistent Assist

Refer to Wiring Diagrams Cell 43 for schematic and connector information.

Normal Operation and Fault Conditions

With a fully charged battery and the ignition ON, the EPAS system provides adequate assist to maneuver the vehicle and returns to the straight-ahead position with little difficulty. The assist provided by the EPAS system should be smooth and consistent at all times. The steering and suspension components should be free of any binding conditions and should not interfere with the steering assist provided by the EPAS system.

If the steering wheel is held at lock end for more than 2 seconds the EPAS system noticeably reduces steering assist. This is a normal condition programmed into the PSCM to protect the system from permanent damage.

It is important to know the difference between lack of assist or inconsistent assist and poor returnability or sticky steering.

- Poor returnability or sticky steering is used to describe how the steering wheel returns to center after a turn or steering correction is completed.
- Lack of assist or inconsistent assist (also known as hard steering) is experienced when the steering wheel effort is higher than normal. Hard steering can remain constant through the full turn or occur near the end of a turn.

Possible Sources

- Fuses

- Wiring, terminals or connectors
- Under inflated or mismatched tires
- EPAS gear internal failure
- Inner tie rods
- Outer tie rods
- Misaligned steering column shrouds
- Binding lower steering column shaft coupling or U-joint
- Loose, worn or damaged steering linkage
- Binding suspension components
- Binding EPAS gear bearing
- Binding steering column shaft dash panel seal

PINPOINT TEST M : POOR RETURNABILITY, STICKY STEERING, LACK OF ASSIST OR INCONSISTENT ASSIST

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may cause damage to the connector.

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM which can not be cleared and result in the need to install a new EPAS gear.

M1 CHECK FOR KNOWN CONCERNS

- Using the VIN, check OASIS for any applicable Technical Service Bulletins (TSBs) or Special Service Messages (SSMs).

Are there any Technical Service Bulletins (TSBs) or Special Service Messages (SSMs) relating to the customer concern?

Yes	DISCONTINUE this test and FOLLOW the TSB or Special Service Message (SSM) instructions.
No	GO to M2

M2 CHECK FOR PSCM (POWER STEERING CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, carry out the PSCM self-test.
- Retrieve and record all PSCM Diagnostic Trouble Codes (DTCs).

Are there any Diagnostic Trouble Codes (DTCs) present in the PSCM?

Yes	DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs) before diagnosing any steering assist symptoms. GO to the DTC Chart: PSCM.
No	If the diagnostic scan tool cannot communicate with the PSCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). If there are no Diagnostic Trouble Codes (DTCs) present in the PSCM, GO to M3

M3 CONFIRM THE CONDITION WHILE STATIONARY

- Start the engine.
- With the transmission in PARK, turn the steering wheel to the left and the right to confirm if a sticky or binding feel condition exists.

Does the steering have a sticky or binding feeling when turning the steering wheel?

Yes	GO to M5
No	GO to M4

M4 CONFIRM THE CONDITION WHILE DRIVING

NOTE: *It may be necessary to drive the vehicle up to 16 km (10 miles) to experience the condition.*

NOTE: *It may be necessary to test drive a similar vehicle in a similar fashion and compare the test drive results.*

- Test drive the vehicle above 73 km/h (45 mph). Drive straight, make only small turns (10 degrees or less) of the steering wheel. Stay within your lane and check for any stickiness or binding while turning the steering wheel.

Does the steering have a sticky or binding feeling when turning the steering wheel?

Yes	GO to M5
No	CONSULT the customer for clarification on the concern.

M5 CHECK CHARGING SYSTEM VOLTAGE

- Start the engine.
- With the vehicle running, turn the steering wheel from lock-to-lock and take the voltage measurement while holding the wheel in a lock position.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
Battery Positive Terminal		Battery Negative Terminal

- Using a diagnostic scan tool, monitor the PSCM module supply voltage (MOD_SUP_V) PID.
- Turn the steering wheel from lock to lock with the vehicle running and note the PID reading while holding the wheel in a lock position.

Is the battery voltage greater than 13 volts and does the PID match battery voltage ±1.5 volts?

Yes	GO to M6
No	GO to M9

M6 INSPECT STEERING SYSTEM, TIRES, SUSPENSION AND WIRING

- With the transmission in NEUTRAL, position the vehicle on a hoist.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- Start the engine.
- While turning the steering wheel from side to side, inspect the following for binding, excessive play or damage:
  - steering wheel-to-steering shrouds
  - steering shaft-to-dash panel seal
  - steering shaft U-joints
  - misplaced carpet or mats
  - foreign material or debris on steering parts or steering joints
  - EPAS gear bellows boots
  - tie-rod ends
- Inspect the front suspension joints and components for:
  - free movement
  - free of rust
- Inspect all 4 tires for:
  - correct air pressure per the VC label
  - being the correct size per the VC label
  - being the same size
- Ignition OFF.
- **NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM that can not be cleared and result in the need to install a new EPAS gear.**

  Disconnect PSCM C1463A and C1463B.
- Inspect the condition of the following electrical components:

- High-current BJB fuse (125A)
- PDB fuse (10A)
- PSCM electrical connectors

Did all items listed pass the inspection?

Yes	GO to M7
No	CLEAN, ADJUST or INSTALL new, the component or components that failed the inspection. DRIVE the vehicle as directed in Step 4 to confirm the condition has been eliminated.

M7 ISOLATE AND INSPECT THE EPAS (ELECTRONIC POWER ASSIST STEERING) GEAR

- Using a suitable steering wheel holding device, hold the steering wheel in the straight ahead position.
- Disconnect the steering column intermediate shaft from the EPAS gear.
  - Discard the bolt.
- Raise the vehicle until the front wheels no longer touch the ground.
- **NOTICE: Turning the front wheels by hand too quickly may cause internal damage to the EPAS gear. Do not use excessive force while turning the front wheels.**

  Using hand force only, carefully turn the front wheels side to side and check for a sticky condition or a binding condition.

Does the steering have a sticky or binding feeling when turning the front wheels?

Yes	CONNECT the steering column shaft to the EPAS gear. INSTALL a new bolt and tighten to specifications. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). GO to M8
No	REPAIR or INSTALL new steering column components as necessary to repair the binding condition. DRIVE the vehicle as directed in Step 4 to confirm the condition has been eliminated.

M8 ISOLATE THE WHEEL KNUCKLES AND BALL JOINTS

NOTE: ***Do not*** *disconnect the EPAS gear from the steering column.*

- Isolate the EPAS gear from the steering knuckles.
- Turn the steering wheel through the full range of motion (lock-to-lock).

Does the steering have a sticky or binding feeling when turning the steering wheel?

Yes	INSTALL a new EPAS gear. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). DRIVE the vehicle as directed in Step 4 to confirm the condition has been eliminated.
No	The condition may have been caused by tires, wheels, wheel knuckles or ball joints. ISOLATE the component or components causing the condition. REPAIR or INSTALL new as necessary. DRIVE the vehicle as directed in Step 4 to confirm the condition has been eliminated.

M9 CHECK THE BATTERY CONDITION

- Ignition OFF.
- Carry out the Battery Condition Test.

REFER to: Battery (414-01 Battery, Mounting and Cables) .

Did the battery pass the condition test?

Yes	GO to M10
No	INSTALL a new battery. REFER to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation).

M10 CHECK THE CHARGING SYSTEM VOLTAGE

- Start the engine.
- Turn off all interior lights, exterior lights and accessories.
- Measure and record the battery voltage.
- Turn on all interior lights, exterior lights and set the HVAC fan to HIGH.
- Measure and record the battery voltage.

Are the recorded voltages between 13 and 15.2 volts?

Yes	GO to M11
No	DIAGNOSE the vehicle battery and charging system. REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). REFER to: Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma (414-00 Charging System - General Information, Diagnosis and Testing).

M11 CHECK THE PSCM (POWER STEERING CONTROL MODULE) VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

NOTICE: The ignition must be set to OFF when disconnecting PSCM electrical connectors. Failure to follow this direction may lead to Diagnostic Trouble Codes (DTCs) being set in the PSCM that can not be cleared and result in the need to install a new EPAS gear.

- Ignition OFF.
- Disconnect the battery negative cable.
  REFER to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
- Disconnect high current BJB C1617B.
- Disconnect PSCM C1463A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1617K-1	Ω	C1463B-2

Is the resistance less than 0.5 ohms?

Yes	GO to M12
No	INSPECT the PSCM connectors for corrosion, spread terminals and pushed-out terminals. REPAIR as necessary. If the connectors are OK, REPAIR the circuit.

M12 CHECK THE PSCM (POWER STEERING CONTROL MODULE) GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1463B-1	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to M13
No	INSPECT the PSCM ground eyelet for looseness and corrosion, Refer to Wiring Diagrams Cell 10 for schematic and connector information. CLEAN and TIGHTEN as necessary. If the PSCM ground is OK, REPAIR the circuit.

M13 CHECK FOR CORRECT PSCM (POWER STEERING CONTROL MODULE) OPERATION

- Disconnect and inspect both PSCM C1463A and C1463B electrical connectors (if not previously disconnected).
- Repair:
  - corrosion - install new connector or terminal and clean the module pins
  - damaged or bent pins - install new terminals or pins
  - pushed-out pins - install new pins as necessary
  - spread terminals - install new terminals as necessary
- Connect PSCM C1463A and C1463B, make sure the connectors seat and latch correctly.
- Connect the positive battery cable.
  REFER to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new EPAS gear. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Steering Wheel is Off Center, Steering System Pull, Drift, Wander

Refer to Wiring Diagrams Cell 43 for schematic and connector information.

Normal Operation and Fault Conditions

The EPAS system is designed to compensate for some steering issues (drift, pull, wander, etc.). If the steering issue is severe enough the steering wheel may become off center due to system compensation. The system starts compensating when vehicle speed exceeds 40 km/h (25 mph) and the vehicle is traveling straight. The system compensates on any road crown condition; however, some amount of pull is present during, and shortly after, quick lane transitions. After driving straight on a constant road crown with both hands on the steering wheel for at least 45 seconds, the pull condition can be assessed. The system does not compensate when turning at low speeds. For the system to compensate, the driver's hands must remain on the steering wheel.

Drift describes what a vehicle with this condition does with hands off the steering wheel.

Pull is described as a tugging sensation on the steering wheel felt by the driver, which must be overcome to keep the vehicle going straight.

Wander is the tendency of the vehicle to require frequent, random left and right steering wheel corrections to maintain a straight path down a level road.

A vehicle-related drift or pull, on a flat road, can cause a consistent deviation from the straight-ahead path and require constant steering input in the opposite direction to counteract the effect.

Drift or pull can be induced by conditions external to the vehicle, such as wind or road camber.

Possible Sources

- Alignment
- Tires
- EPAS gear mounts
- Steering column shaft U-joints
- Steering column
- Suspension components
- EPAS gear

PINPOINT TEST N : STEERING WHEEL IS OFF CENTER, STEERING SYSTEM PULL, DRIFT, WANDER

N1 CHECK FOR KNOWN CONCERNS

- Using the VIN, check OASIS for any applicable Technical Service Bulletins (TSBs) or Special Service Messages (SSMs).

Are there any Technical Service Bulletins (TSBs) or Special Service Messages (SSMs) relating to the customer concern?

Yes	DISCONTINUE this test and FOLLOW the TSB or Special Service Message (SSM) instructions.
No	GO to N2

N2 CHECK FOR PSCM (POWER STEERING CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, carry out the PSCM self-test.
- Retrieve and record all PSCM Diagnostic Trouble Codes (DTCs).

Are there any Diagnostic Trouble Codes (DTCs) present in the PSCM?

Yes	DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs) before diagnosing any steering assist symptoms. GO to the DTC Chart: PSCM.
No	If the diagnostic scan tool cannot communicate with the PSCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). If there are no Diagnostic Trouble Codes (DTCs) present in the PSCM, GO to N3

N3 VEHICLE DRIFT PULL EVALUATION

NOTE: *Always drive the vehicle in a safe manner according to driving conditions and obey all traffic laws.*

- Test drive the vehicle in the following manner:
  - Drive straight on a constant right road crown, at a speed greater than 40 km/h (25 mph), with both hands on the steering wheel for more than 45 seconds.
  - Drive straight on a constant left road crown, at a speed greater than 40 km/h (25 mph), with both hands on the steering wheel for more than 45 seconds.
  - Drive straight on a road with constant minimal road crown, at a speed greater than 40 km/h (25 mph), with both hands on the steering wheel for greater than 45 seconds.
- If the vehicle pulls left on a left crown, pulls right on a right crown and does not pull on flat (no crown) roads when driven as instructed above, the EPAS system is performing as designed.

Is the EPAS system performing as designed?

Yes	RETURN the vehicle to the customer and EXPLAIN the pull-drift compensation operation to the customer.
No	GO to N4

No	GO to N4

N4 CHECK THE STEERING WHEEL INSTALLATION

- Remove the steering wheel.
  REFER to: Steering Wheel (211-04 Steering Column) .
- Verify that the steering wheel connection is not bent or twisted and the steering wheel has been correctly installed.

Is the steering wheel connection undamaged and has the steering wheel been correctly installed?

Yes	GO to N5
No	REINSTALL or INSTALL new components (steering wheel or steering column) as necessary.

N5 CHECK FOR UNEVENLY LOADED VEHICLE

- Visually check the vehicle for an uneven loading condition.

Is the vehicle unevenly loaded?

Yes	ADVISE the customer of the uneven loading condition.
No	GO to N6

N6 CHECK THE TIRE PRESSURES AND CONDITIONS

- Check the tire pressures. Refer to the VC label.
- Check the tires for uneven and abnormal wear.
  REFER to: Wheels and Tires (204-04A Wheels and Tires, Diagnosis and Testing).

Are the tire pressures and tire conditions OK?

Yes	GO to N7
No	ADJUST the tire pressures to the specified pressure or INSTALL new tires as necessary. REFER to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).

N7 ISOLATE TIRE DRIFT PULL CONDITION

- Cross the front wheel and tire assemblies from left-to-right.
  REFER to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).
- **NOTE:** *Always drive the vehicle in a safe manner according to driving conditions and obey all traffic laws.*

  Test drive the vehicle in the following manner:
  - Drive straight on a constant right road crown, at a speed greater than 40 km/h (25 mph), with both hands on the steering wheel for more than 45 seconds.
  - Drive straight on a constant left road crown, at a speed greater than 40 km/h (25 mph), with both hands on the steering wheel for more than 45 seconds.
  - Drive straight on a road with constant minimal road crown, at a speed greater than 40 km/h (25 mph), with both hands on the steering wheel for greater than 45 seconds.

Does the vehicle drift or pull?

Yes	If the vehicle drifts or pulls in the same direction, GO to N8 If the vehicle drifts or pulls in the opposite direction, tire forces are causing the drift or pull. DIAGNOSE the tire concern, REFER to: Wheels and Tires (204-04A Wheels and Tires, Diagnosis and Testing).
No	Tire forces were causing the drift or pull concern. The concern has been corrected.

N8 CHECK FOR BRAKE DRAG

N8 CHECK FOR BRAKE DRAG

- With the transmission in NEUTRAL, position the vehicle on a hoist.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- Spin all 4 wheel and tire assemblies by hand and check for brake drag.

Do the wheels spin freely?

Yes	GO to N9
No	DIAGNOSE the brake drag condition, REFER to: Brake System (206-00 Brake System - General Information, Diagnosis and Testing).

N9 CHECK THE WHEEL ALIGNMENT

- Using alignment equipment and the manufacturer's instructions, check the wheel alignment.

Is the wheel alignment within specification?

Yes	GO to N10
No	ADJUST the alignment as necessary. REFER to: Front Suspension (204-01 Front Suspension, Diagnosis and Testing).

N10 CHECK THE EPAS (ELECTRONIC POWER ASSIST STEERING) GEAR MOUNT FASTENERS

- With the transmission in NEUTRAL, position the vehicle on a hoist.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- Check the EPAS gear for loose fasteners.
  REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
  REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).

Are the EPAS gear fasteners OK?

Yes	GO to N11
No	INSTALL new fasteners and TIGHTEN to specification. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).

N11 CHECK THE STEERING COLUMN SHAFT FASTENERS

- Verify the steering column shaft rotates freely and is not grounded against other vehicle components.

Does the steering shaft rotate freely and is it free from grounding against other components?

Yes	GO to N12
No	REPAIR or INSTALL new components as necessary. REFER to: Steering Column (211-04 Steering Column, Removal and Installation).

N12 INSPECT THE STEERING COLUMN SHAFT U-JOINTS

NOTICE: Do not allow the steering column to rotate while the steering column shaft is disconnected or damage to the clockspring may result. If there is evidence the steering column shaft has rotated, the clockspring must be removed and recentered.

- Disconnect the lower steering shaft from the EPAS gear.
  - Discard the bolt.

- Inspect the steering column shaft upper and lower U-joints for looseness.

Are the steering column shaft U-joints OK?

Yes	CONNECT the steering column shaft to the EPAS gear. INSTALL a new bolt and tighten to specifications. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). DIAGNOSE further possible causes of pulling, drifting or wandering. REFER to: Front Suspension (204-01 Front Suspension, Diagnosis and Testing).
No	INSTALL a new steering column shaft assembly. REFER to: Steering Column Lower Shaft (211-04 Steering Column, Removal and Installation). REFER to: Steering Column Upper Shaft (211-04 Steering Column, Removal and Installation).

Shimmy Or Feedback

Normal Operation and Fault Conditions

The tie rods connect the EPAS gear to the wheel knuckles. There should be very little to no vertical or lateral movement in the inner and outer tie rod studs or sockets. Some rotational movement is acceptable.

Possible Sources

- Steering column shaft coupling bolts loose
- Steering column shaft joints damaged or worn
- EPAS gear mounting bolts loose
- EPAS gear insulators damaged
- Inner tie rods
- Outer tie rods

PINPOINT TEST O : SHIMMY OR FEEDBACK

O1 CHECK FOR KNOWN CONCERNS

- Using the VIN, check OASIS for any applicable Technical Service Bulletins (TSBs) or Special Service Messages (SSMs).

Are there any Technical Service Bulletins (TSBs) or Special Service Messages (SSMs) relating to the customer concern?

Yes	DISCONTINUE this test and FOLLOW the TSB or Special Service Message (SSM) instructions.
No	GO to O2

O2 CHECK FOR PSCM (POWER STEERING CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, carry out the PSCM self-test.
- Retrieve and record all PSCM Diagnostic Trouble Codes (DTCs).

Are there any Diagnostic Trouble Codes (DTCs) present in the PSCM?

Yes	DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs) before diagnosing any steering NVH symptoms. GO to the DTC Chart: PSCM.
No	If the diagnostic scan tool cannot communicate with the PSCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis

	and Testing). If there are no Diagnostic Trouble Codes (DTCs) present in the PSCM, GO to O3

O3 CHECK THE STEERING COLUMN SHAFT FASTENERS

- Verify the steering column mounting bolts are installed and tightened to the correct specifications.
  REFER to: Steering Column (211-04 Steering Column, Removal and Installation).
- Verify the steering column intermediate shaft-to-EPAS gear lower shaft bolt and upper shaft bolt is installed and tightened to the correct specification.
  REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
  REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).

Are the fasteners installed and tightened to the correct specification?

Yes	GO to O4
No	INSTALL or TIGHTEN the fasteners as necessary. For the steering column mounting bolts, REFER to: Steering Column (211-04 Steering Column, Removal and Installation). For the steering column intermediate shaft-to-EPAS gear upper shaft and lower shaft bolts, REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).

O4 CHECK THE STEERING COLUMN SHAFT U-JOINTS

- Inspect the steering column shaft U-joints for looseness.

Are the steering column shaft U-joints OK?

Yes	GO to O5
No	INSTALL a new steering column shaft assembly. REFER to: Steering Column Lower Shaft (211-04 Steering Column, Removal and Installation). REFER to: Steering Column Upper Shaft (211-04 Steering Column, Removal and Installation).

O5 CHECK THE EPAS (ELECTRONIC POWER ASSIST STEERING) GEAR ISOLATORS AND MOUNTING BOLTS

- With the transmission in NEUTRAL, position the vehicle on a hoist.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- Verify the EPAS gear mounting bolts are present and tightened to the correct specification.
  REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
  REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).

Are the EPAS gear isolators present and undamaged and are the mounting bolts present and tightened to the correct specification?

Yes	GO to O6
No	TIGHTEN the EPAS gear mounting bolts to specification or INSTALL new bolts as necessary. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic

	Power Assist Steering (EPAS), Removal and Installation).

O6 CHECK THE INNER AND OUTER TIE RODS FOR MOVEMENT

NOTICE: When installing new bellows boots and clamps, apply new lubricant as instructed to prevent water contamination or damage to the EPAS gear may result.

- Remove the EPAS gear bellows boots.
  REFER to: Tie Rod - LHD (211-02A Power Steering, Removal and Installation).
  REFER to: Tie Rod - RHD (211-02 Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS)) .
  REFER to: Steering Gear Boot (211-02A Power Steering, Removal and Installation).
- **Using hand force only**, check the inner and outer tie rods for vertical and lateral movement in the tie-rod ball studs and sockets.

Are the inner and outer tie rods free from any vertical or lateral movement?

Yes	GO to O7
No	INSTALL a new inner or outer tie rod as necessary and INSTALL new EPAS gear bellows boots with new clamps. REFER to: Tie Rod - LHD (211-02A Power Steering, Removal and Installation). REFER to: Tie Rod - RHD (211-02 Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS)) . REFER to: Steering Gear Boot (211-02A Power Steering, Removal and Installation).

O7 INSPECT THE INNER TIE RODS AND STEERING RACK FOR CORROSION

NOTICE: When installing new bellows boots and clamps, apply new lubricant as instructed to prevent water contamination or damage to the EPAS gear may result.

- Remove the outer tie rods.
  REFER to: Tie Rod End - LHD (211-02A Power Steering, Removal and Installation).
  REFER to: Tie Rod End - RHD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
- The following inspection must be carried out on **both** sides of the steering rack:
  - Expose the steering rack by turning the steering wheel in one direction all the way until it stops.
  - Inspect the rack, inner tie rod and gear housing for rust, moisture, corrosion and other signs of harmful contamination.

Is the rack, inner tie rod and gear housing free of moisture, rust, corrosion and other harmful contamination?

Yes	INSTALL the removed outer tie rods and INSTALL new EPAS gear bellows boots with new clamps. REFER to: Tie Rod - LHD (211-02A Power Steering, Removal and Installation). REFER to: Tie Rod - RHD (211-02 Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS)) . REFER to: Steering Gear Boot (211-02A Power Steering, Removal and Installation). ADJUST the front toe setting. REFER to: Front Toe Adjustment (204-00 Suspension System - General Information, General Procedures). The condition may be caused by wheel and tire runout. REFER to: Wheels and Tires (204-04A Wheels and Tires, Diagnosis and Testing).
No	INSTALL a new EPAS gear. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).

Grinding Noise Or Gravely Feel

Refer to Wiring Diagrams Cell 43 for schematic and connector information.

Normal Operation and Fault Conditions

The EPAS gear is very susceptible to water, moisture, dust, rust and other contaminants. If a damaged boot is discovered, the inner tie rods and steering rack should be inspected for contamination. If contamination is found, a new EPAS gear should be installed. New bellows boots and clamps must be installed whenever they are removed. To avoid unnecessary repairs, address all other Diagnostic Trouble Codes (DTCs) and customer concerns before removing the bellows boots and inspecting the steering gear.

Possible Sources

- EPAS gear bellows boot
- Inner tie rod
- EPAS gear internal failure

PINPOINT TEST P : GRINDING NOISE OR GRAVELY FEEL

P1 CHECK FOR KNOWN CONCERNS

- Ignition ON.
- Using a diagnostic scan tool, carry out the PSCM self-test.
- CHECK OASIS for any applicable steering system Technical Service Bulletins (TSBs).

Are there any Diagnostic Trouble Codes (DTCs) present or are there any applicable Technical Service Bulletins (TSBs)?

Yes	DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs) before diagnosing this symptom. GO to the DTC Chart: PSCM. If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions.
No	GO to P2

P2 CHECK FOR PSCM (POWER STEERING CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, carry out the PSCM self-test.
- Retrieve and record all PSCM Diagnostic Trouble Codes (DTCs).

Are there any Diagnostic Trouble Codes (DTCs) present in the PSCM?

Yes	DIAGNOSE all PSCM Diagnostic Trouble Codes (DTCs) before diagnosing any steering NVH symptoms. GO to the DTC Chart: PSCM.
No	If the diagnostic scan tool cannot communicate with the PSCM, REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing). If there are no Diagnostic Trouble Codes (DTCs) present in the PSCM, GO to P3

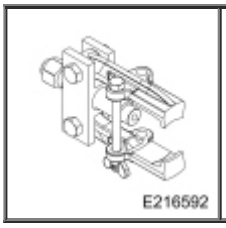
P3 INSPECT THE INNER TIE RODS AND STEERING RACK FOR CORROSION

NOTICE: When installing new bellows boots and clamps, apply new lubricant as instructed to prevent water contamination or damage to the EPAS gear may result.

- Remove the outer tie rods and bellows boots.
  REFER to: Tie Rod End - LHD (211-02A Power Steering, Removal and Installation).
  REFER to: Tie Rod End - RHD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
  REFER to: Steering Gear Boot (211-02A Power Steering, Removal and Installation).
- The following inspection must be carried out on **both** sides of the steering rack:
  - Expose the steering rack by turning the steering wheel in one direction all the way until it stops.
  - Inspect the rack, inner tie rod and gear housing for rust, moisture, corrosion and other signs of harmful

contamination.

Is the rack, inner tie rod and gear housing free of moisture, rust, corrosion and other harmful contamination?



Yes	INSTALL the removed outer tie rods and INSTALL new EPAS gear bellows boots with new clamps. REFER to: Tie Rod - LHD (211-02A Power Steering, Removal and Installation). REFER to: Tie Rod - RHD (211-02 Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS)) . REFER to: Tie Rod End - LHD (211-02A Power Steering, Removal and Installation). REFER to: Tie Rod End - RHD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear Boot (211-02A Power Steering, Removal and Installation). ADJUST the front toe setting. REFER to: Front Toe Adjustment (204-00 Suspension System - General Information, General Procedures). The condition may be caused by ball joints, wheel knuckles, steering column or steering column shrouds. INSPECT the suspension components and REPAIR or INSTALL new as necessary. REFER to: Front Suspension (204-01 Front Suspension, Diagnosis and Testing). INSPECT the steering column or steering column shrouds and REPAIR or INSTALL new as necessary. REFER to: Steering Column (211-04 Steering Column, Removal and Installation).
No	INSTALL a new EPAS gear. REFER to: Steering Gear - LHD RWD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation). REFER to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).

Steering Column - Vehicles With: Electronic Power Assist Steering (EPAS) - Overview

Base Part Number: 3524

Steering Column Overview

The steering column system consists of the following components:

- Steering wheel
- SCCM
- Upper and lower steering shafts
- Steering column control switch (power steering column)

The steering column is the mechanical linkage between the steering wheel and the steering gear. The steering wheel is mounted to a shaft which passes through the center of the steering column to the steering gear. The steering column shaft utilizes non-servicable U-joint type couplings.

Vehicles with the manual tilt/telescope steering column are controlled by a mechanical lever on the underside of the steering column to lock and unlock the steering column. When the lever is pulled down, the steering column can be adjusted up or down and in or out to the desired position. While holding the steering wheel in the desired position, pulling the lever up to its original position locks the steering column.

Steering Wheel Cover Repair

Materials

Name	Specification
Adhesive	WSK-M2G402-A4

Activation

1. **NOTE:** *If re-adhering leather to the front side of the steering wheel only, it will not be necessary to remove the steering wheel. Steering wheel removal is necessary only when repairing loose leather on the backside of the steering wheel.*

   If necessary, remove the steering wheel.
   Refer to: Steering Wheel (211-04 Steering Column) .

2. Position the loose leather out of the way.

3. Apply the specified adhesive evenly over the wheel spoke.
   Material: Adhesive (WSK-M2G402-A4)

4. Position the loose leather back into the original position.

5. **NOTE:** *The adhesive should be completely set after 5 minutes. Do not pull on the repair area.*

   Smooth the leather and tuck in for neat appearance.

6. Apply pressure (for at least 30 seconds) until the leather is bonded to the wheel spoke.

7. If removed, install the steering wheel.
   Refer to: Steering Wheel (211-04 Steering Column) .

Steering Wheel and Column Electrical Components - Overview

Steering Column Switches Overview

The steering column switches are located on and around the steering column. They enable the driver to control various vehicle functions while remaining focused on driving. The steering column switches consist of:

- Left multifunction switch - mounted on the left side of the SCCM and is used:
  - to control the turn signals, low/high beam selection and the flash-to-pass feature.
    Refer to: Exterior Lighting - Component Location (417-01 Exterior Lighting, Description and Operation).
  - to control the windshield wipers and washer.
    Refer to: Wipers and Washers (501-16 Wipers and Washers, Description and Operation).
- Steering wheel switches - mounted on the front of the steering wheel and can be serviced separately from the steering wheel. These are used to access settings and controls displayed in the message center or for control of the cruise control system, the audio system and the SYNC® system.
  - For the message center (left upper switch),
    Refer to: Message Center - Overview (413-01 Instrumentation, Message Center and Warning Chimes, Description and Operation).
  - For the cruise control system (left lower switch),
    Refer to: Cruise Control - System Operation and Component Description (419-03A Cruise Control, Description and Operation).
    Refer to: Cruise Control - System Operation and Component Description (419-03B Cruise Control - Vehicles With: Adaptive Cruise Control, Description and Operation).
  - For the audio system (right upper switch), Refer to the appropriate section in Group 415 for the procedure.
  - For the SYNC® system (right lower switch), Refer to the appropriate section in Group 415 for the procedure.

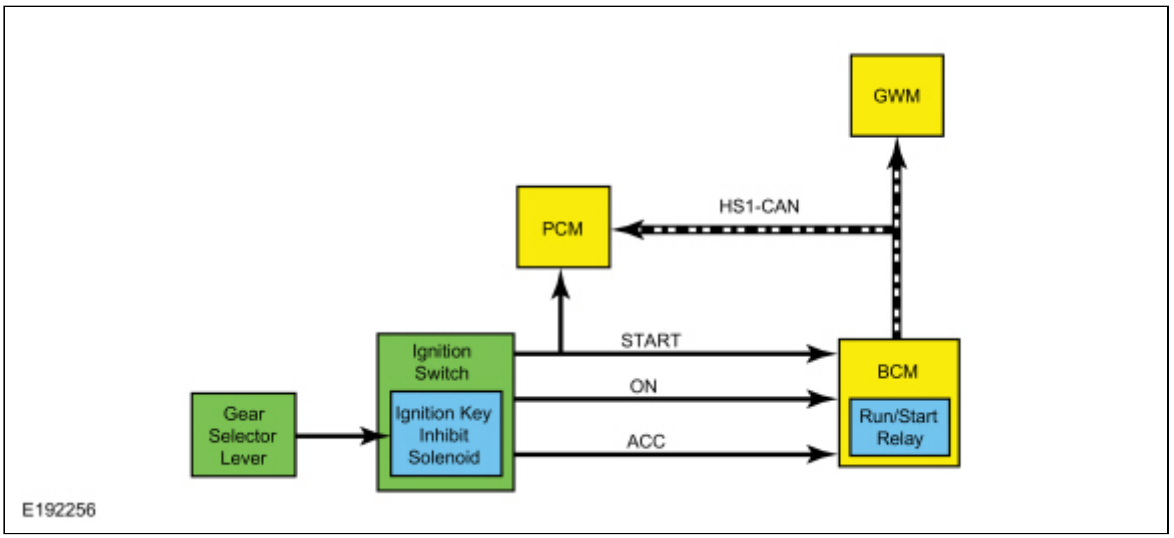
The steering column and steering wheel switches interface with other modules and components on the vehicle through the SCCM, which communicates on the High Speed Controller Area Network 2 (HS2-CAN).

Conventional Ignition Switch Overview

The conventional ignition switch is controlled by the ignition lock cylinder and key. The ignition lock cylinder and ignition switch are connected mechanically. Turning the ignition lock cylinder places the ignition switch into the desired position. The available ignition switch positions are:

- OFF
- ACC
- ON
- START

When placed in ACC or ON, the ignition switch provides voltage inputs to the BCM.



When placed in START, the ignition switch provides voltage inputs to the BCM and PCM.

Steering Wheel and Column Electrical Components - System Operation and Component Description

System Operation

System Diagram - Conventional Ignition Switch

Network Message Chart - Conventional Ignition Switch

GWM Module Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Ignition status	BCM	This message informs the GWM of the current ignition status; off, on, start, unknown or invalid.

PCM Module Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Ignition status	BCM	This message informs the PCM of the current ignition status; off, on, start, unknown or invalid.

Ignition Switch System

The BCM controls the ignition modes, including OFF, ACC, ON and START. This allows some systems to be activated without starting the vehicle.

The BCM provides voltage at all times to the ignition switch. Depending on the ignition switch position, voltage may be routed to one or two of the ignition switch input circuits back to the BCM.

OFF

The BCM supplies voltage to the ignition switch at all times. When the ignition switch is in the OFF position, the switch is open, preventing any voltage signals from reaching the BCM. When the BCM does not detect voltage from any of the ignition mode-designated circuits, the BCM interprets this as the ignition off mode.

The BCM communicates the ignition mode to the other modules by sending an ignition status message over the CAN

and does not energize any relays to prevent voltage from being distributed to the various electrical systems.

ACC

When the ignition switch is in the ACC position, the switch routes voltage through the ACC-designated circuit to the BCM. The BCM interprets this as the ignition accessory mode.

The BCM communicates the ignition mode to the other modules by sending an ignition status message over the CAN and energizes the accessory designated relays and provides power to some electrical system.

ON

When the ignition switch is in the ON position, the switch routes voltage through the ACC-designated and ON-designated circuits to the BCM. The BCM interprets this as the ignition on mode.

The BCM communicates the ignition mode to the other modules by sending an ignition status message over the CAN and activates the internal run/start relay, providing ignition power to the various vehicle systems and modules.

START

When the ignition switch is placed in the START position, the switch routes voltage through the ON-designated and START-designated circuits to the BCM.

The BCM interprets this as the ignition start mode and communicates the ignition mode to the other modules by sending an ignition status message over the CAN. Additionally, the ignition switch routes voltage to the PCM indicating a request to start the vehicle.

The START-designated circuit is only used for vehicle starting.

Ignition Key Inhibit (Vehicles with Automatic Transmission)

The ignition key cylinder inhibit feature prevents the ignition lock cylinder from being rotated to the OFF/LOCK position when the vehicle is not in PARK.

The key removal inhibit solenoid (part of the ignition switch) receives battery voltage at all times from the BCM fuse 18 (5A). The ground control circuit for the key removal inhibit solenoid is routed to a park detect switch within the selector lever assembly (floor shift).

For vehicles equipped with a floor shifter, the ground is controlled by the BCM.

When the selector lever is in PARK, the park detect switch inside the selector lever assembly (floor shift) is open, preventing the solenoid from actuating. When the selector lever is moved out of PARK, the switch closes and completes the circuit to the BCM (floor shifter).

For vehicles with a floor shifter, the BCM controls the ground by means of a Field Effect Transistor (FET). The BCM enables the path to ground when it detects the vehicle is not in PARK based on messages received over the CAN.

When the selector lever is in PARK, the key removal inhibit solenoid deactivates and allows the ignition lock cylinder to be turned to the OFF/LOCK position to remove the key.

Component Description

Conventional Ignition Switch

The ignition switch is a multiple position rotary switch that is controlled by a lock cylinder and a key. The ignition switch is monitored by the BCM, which controls the voltage to the various electrical systems depending on input from the ignition switch.

The key removal inhibit solenoid (internal to the ignition switch) is an electronically controlled solenoid that prevents the ignition lock cylinder from being turned to the OFF/LOCK position unless the selector lever is in the PARK position. This also prevents the key from being removed from the ignition lock cylinder.

BCM

The BCM controls the run/start relays and sets the vehicle ignition mode based on inputs from the ignition switch. It communicates the ignition mode to other modules over the CAN. If a fault is detected with the ignition switch system, Diagnostic Trouble Codes (DTCs) are set in the BCM.

The BCM requires at least 2 keys to be programmed and PMI when replaced. Additionally, the parameter reset procedure must be carried out.

B1380:17	Steering Wheel Right Switch Pack: Circuit	Refer to the appropriate section in Group 415 for the procedure.

	Voltage Above Threshold	
B1D36:09	Turn Indicator Switch: Component Failure	REFER to: Turn Signal and Hazard Lamps (417-01 Exterior Lighting, Diagnosis and Testing).
U2100:00	Initial Configuration Not Complete: No Sub Type Information	Check vehicle service history for recent service actions related to this module. This DTC will set due to incomplete or improper PMI procedures. If there have been recent service actions with this module, REPEAT/CARRY OUT the PMI procedure as directed by the diagnostic scan tool. If there have been no recent service actions, INSTALL a new module to correct the failure to retain configuration data.
U2101:00	Control Module Configuration Incompatible: No Sub Type Information	This DTC sets if the steering wheel switches do not match the switch function configuration data in the SCCM. CHECK the parts catalog and CONFIRM that the correct SCCM and steering wheel control switches are installed in the vehicle. INSTALL the correct components, as necessary.

Symptom Charts

Symptom Chart: Ignition Switch - Conventional

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Causes	Actions
No power in all ignition switch positions	• Refer to Pinpoint Test	• GO to Pinpoint Test A
No power in ACC	• Refer to Pinpoint Test	• GO to Pinpoint Test B
No power in ON	• Refer to Pinpoint Test	• GO to Pinpoint Test C
No power in START	• Refer to Pinpoint Test	• DIAGNOSE the no-start condition. Refer to the appropriate section in Group 303 for the procedure.
Key not detected displays in the message center	• Refer to Pinpoint Test	• REFER to: Passive Anti-Theft System (PATS) (419-01B Passive Anti-Theft System (PATS), Diagnosis and Testing).
The ignition key cannot be returned to the OFF position	• Refer to Pinpoint Test	• GO to Pinpoint Test D
The ignition key can be turned to the OFF position when the selector lever is not in PARK	• Refer to Pinpoint Test	• GO to Pinpoint Test E
The ignition lock cylinder is difficult to turn	• Refer to Pinpoint	• REFER to: Locks, Latches and Entry Systems

	Test	(501-14 Handles, Locks, Latches and Entry Systems, Diagnosis and Testing).

Pinpoint Tests

No Power in All Ignition Switch Positions - Conventional Ignition Switch

Refer to Wiring Diagrams Cell 13 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Steering Wheel and Column Electrical Components - System Operation and Component Description (211-05 Steering Column Switches, Description and Operation).

Possible Causes

- Fuse
- Wiring, terminals or connectors
- Ignition switch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the battery and battery cables
- Inspect the BCM fuse 18 (5A)

PINPOINT TEST A : NO POWER IN ALL IGNITION SWITCH POSITIONS - CONVENTIONAL IGNITION SWITCH

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

A1 CHECK THE VEHICLE BATTERY

- Carry out the Battery Condition Test.
  REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).

Is the battery OK?

Yes	GO to A2
No	CORRECT the battery condition.

A2 CHECK FOR VOLTAGE TO THE IGNITION SWITCH

- Ignition OFF.
- Disconnect Ignition Switch C250.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C250-4		Ground

Is the voltage greater than 11 volts?

Yes	INSTALL a new ignition switch. REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).
No	VERIFY the BCM fuse 18 (5A) is OK. If OK, GO to A3 If not OK, REFER to the Wiring Diagrams manual to identify the possible cause of the circuit short.

A3 CHECK THE IGNITION SWITCH VOLTAGE SUPPLY CIRCUIT FOR AN OPEN

- Disconnect BCM C2280B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C250-4	Ω	C2280B-12

Is the resistance less than 3 ohms?

Yes	GO to A4
No	REPAIR the circuit.

A4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors and all other previously disconnected connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

No Power in ACC - Conventional Ignition Switch

Refer to Wiring Diagrams Cell 13 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Steering Wheel and Column Electrical Components - System Operation and Component Description (211-05 Steering Column Switches, Description and Operation).

Possible Causes

- Wiring, terminals or connectors
- Ignition switch
- BCM

PINPOINT TEST B : NO POWER IN ACC - CONVENTIONAL IGNITION SWITCH

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

B1 CHECK FOR BCM (BODY CONTROL MODULE) DTC (DIAGNOSTIC TROUBLE CODE) U300A:01

- Ignition ON.
- Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC U300A:01 present?

Yes	GO to Pinpoint Test F
No	GO to B2

B2 CHECK FOR VOLTAGE TO THE BCM (BODY CONTROL MODULE) WITH THE IGNITION SWITCH IN THE ACC POSITION

- Ignition OFF.
- Disconnect BCM C2280G.
- Accessory ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-50		Ground

Is the voltage greater than 11 volts?

Yes	GO to B4
No	GO to B3

B3 CHECK THE IGNITION ACC CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect Ignition Switch C250.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-50	Ω	C250-6

Is the resistance less than 3 ohms?

Yes	INSTALL a new ignition switch. REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).
No	REPAIR the circuit.

B4 CHECK FOR VOLTAGE TO THE BCM (BODY CONTROL MODULE) WITH THE IGNITION SWITCH IN THE ON POSITION

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-50		Ground

Is the voltage greater than 11 volts?

Yes	GO to B5
No	INSTALL a new ignition switch. REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).

B5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

No Power in ON - Conventional Ignition Switch

Refer to Wiring Diagrams Cell 13 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Steering Wheel and Column Electrical Components - System Operation and Component Description (211-05 Steering Column Switches, Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1142:29	Ignition Status 1: Signal Invalid	Sets when the BCM does not receive a valid ignition signal during a BCM self-test.

Possible Causes

- Network concern
- Wiring, terminals or connectors
- Ignition switch
- BCM

Visual Inspection and Diagnostic Pre-checks

- Inspect the BCM fuse 34 (30A)

PINPOINT TEST C : NO POWER IN ON - CONVENTIONAL IGNITION SWITCH

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

C1 CARRY OUT A NETWORK TEST

- Ignition ON.
- Using a diagnostic scan tool, carry out the network test.

Does the BCM and the IPC pass the network test?

Yes	GO to C2
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

C2 CHECK FOR BCM (BODY CONTROL MODULE) DTC (DIAGNOSTIC TROUBLE CODE) U300A:01

- Using a diagnostic scan tool, carry out the BCM self-test.

Is DTC U300A:01 present?

Yes	GO to Pinpoint Test F
No	GO to C3

C3 CHECK FOR VOLTAGE TO THE BCM (BODY CONTROL MODULE) WITH THE IGNITION SWITCH IN THE ON POSITION

- Ignition OFF.
- Disconnect BCM C2280G.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-37		Ground

Is the voltage greater than 11 volts?

Yes	VERIFY the BCM fuse 34 (30A) is OK. If OK, GO to C5 If not OK, REFER to the Wiring Diagrams manual to identify the possible cause of the circuit short.
No	GO to C4

C4 CHECK THE IGNITION ON-DESIGNATED INPUT CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect Ignition Switch C250.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-37	Ω	C250-1

Is the resistance less than 3 ohms?

Yes	INSTALL a new ignition switch. REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).
No	REPAIR the circuit.

C5 CHECK FOR AN INTERMITTENT COMMUNICATION CONCERN

- Ignition OFF.
- Connect BCM C2280G.
- Using a diagnostic scan tool, retrieve the Continuous Mode Diagnostic Trouble Codes (CMDTCs) from all modules.

Are multiple communication Diagnostic Trouble Codes (DTCs) set in multiple modules?

Yes	DIAGNOSE an intermittent network concern. REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
No	GO to C6

C6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors and all other previously disconnected connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

The Ignition Key Cannot Be Returned to the OFF Position

Refer to Wiring Diagrams Cell 37 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Steering Wheel and Column Electrical Components - System Operation and Component Description (211-05 Steering Column Switches, Description and Operation).

Possible Causes

- Wiring, terminals or connectors
- Ignition switch
- Ignition lock cylinder
- Selector lever assembly (floor shifter)

PINPOINT TEST D : THE IGNITION KEY CANNOT BE RETURNED TO THE OFF POSITION

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

D1 CHECK FOR AN ENERGIZED KEY REMOVAL INHIBIT SOLENOID

- Disconnect BCM fuse 18 (5A).
- Attempt to turn the ignition lock cylinder to the ON position and then back to the OFF-LOCK position and remove the key.

Can the ignition lock cylinder be turned to the OFF-LOCK position and the key removed?

Yes	GO to D3
No	GO to D2

D2 CHECK THE IGNITION SWITCH FOR MECHANICAL DAMAGE

- Remove the ignition switch.
  REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).
- Attempt to turn the ignition lock cylinder to the OFF-LOCK position and remove the ignition key.

Does the ignition lock cylinder turn to the OFF-LOCK position and can the key be removed?

Yes	INSTALL a new ignition switch. REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).
No	INSTALL a new ignition lock cylinder. REFER to: Ignition Lock Cylinder (501-14 Handles, Locks, Latches and Entry Systems, Removal and Installation).

D3 CHECK THE KEY REMOVAL INHIBIT SOLENOID CIRCUIT FOR A SHORT TO GROUND

NOTE: *The following pinpoint test step uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250- 300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.*

- Connect BCM fuse 18 (5A).
- Select PARK.
- Disconnect Ignition Switch C250.
- Connect:

Positive Lead	Measurement / Action	Negative Lead
C250-4		C250-3

Does the test lamp illuminate?

Yes	GO to D4
No	INSTALL a new ignition switch. REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).

D4 CHECK THE KEY REMOVAL INHIBIT SOLENOID CIRCUIT FOR A SHORT TO GROUND

NOTE: *The following pinpoint test step uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250- 300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.*

- Disconnect Selector Lever Assembly C3245 (floor shifter).
- Connect:

Positive Lead	Measurement / Action	Negative Lead
C250-4		C250-3

Does the test lamp illuminate?

Yes	INSTALL a new selector lever assembly (floor shifter). REFER to: Selector Lever Assembly (307-05 Automatic Transmission External Controls, Removal and Installation).
No	REPAIR the circuit.

The Ignition Key Can Be Turned to the OFF Position When the Selector Lever is Not in PARK

Refer to Wiring Diagrams Cell 37 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Steering Wheel and Column Electrical Components - System Operation and Component Description (211-05 Steering Column Switches, Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1472:12	Ignition Key Removal Inhibit: Circuit Short To Battery	Sets when the BCM detects a short to voltage from the key removal inhibit solenoid control circuit.
B1472:14	Ignition Key Removal Inhibit: Circuit Short To Ground or Open	Sets when the BCM detects an open from the key removal inhibit solenoid control circuit.

Possible Causes

- Wiring, terminals or connectors
- Ignition switch
- Selector lever assembly (floor shifter)
- BCM

PINPOINT TEST E : THE IGNITION KEY CAN BE TURNED TO THE OFF POSITION WHEN THE SELECTOR LEVER IS NOT IN PARK

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.
NOTE: *The following Pinpoint Test uses a test lamp to simulate normal circuit loads. Use only a Rotunda Test Lamp (SGT27000) or 250- 300mA incandescent bulb test lamp. To avoid connector terminal damage, use the Rotunda Flex Probe kit for the test lamp probe connection to the vehicle. Do not use the test lamp probe directly on any connector.*

E1 CHECK THE KEY INHIBIT SOLENOID CIRCUIT FOR GROUND

- Ignition OFF.
- Disconnect Ignition Switch C250.
- Set the park brake.
- Select NEUTRAL.
- Connect:

Positive Lead	Measurement / Action	Negative Lead
C250-4		C250-3

Is the test lamp illuminated?

Yes	INSTALL a new ignition switch. REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).
No	GO to E2

E2 CHECK THE KEY INHIBIT SOLENOID CIRCUIT FOR AN OPEN

- Disconnect Selector Lever Assembly C3245 (floor shifter).
- Measure:

Floor Shifter

Positive Lead	Measurement / Action	Negative Lead
C250-3	Ω	C3245-4

Is the resistance less than 3 ohms?

Yes	For vehicles equipped with a floor shifter, GO to E3
No	REPAIR the circuit.

E3 BYPASS THE SELECTOR LEVER

- Connect:

Positive Lead	Measurement / Action	Negative Lead
C250-4		C250-3

- Connect:

Lead 1	Measurement / Action	Lead 2
C3245-4		C3245-10

- Remove the fused jumper wire.

Does the test lamp illuminate with the fused jumper wire connected?

Yes	INSTALL a new selector lever assembly. REFER to: Selector Lever Assembly (307-05 Automatic Transmission External Controls, Removal and Installation).
No	GO to E4

E4 CHECK THE KEY INHIBIT SOLENOID CIRCUIT FOR A SHORT TO VOLTAGE

- Connect:

Positive Lead	Measurement / Action	Negative Lead
C3245-4		Ground

Does the test lamp illuminate?

Yes	REPAIR the circuit.
No	GO to E5

E5 CHECK THE BCM (BODY CONTROL MODULE) KEY INHIBIT GROUND CONTROLLED CIRCUIT FOR A SHORT TO VOLTAGE

- Connect Ignition Switch C250.
- Ignition ON.
- Disconnect BCM C2280G.
- Connect:

Positive Lead	Measurement / Action	Negative Lead
C3245-10		Ground

Does the test lamp illuminate?

Yes	REPAIR the circuit.
No	GO to E6

E6 CHECK THE BCM (BODY CONTROL MODULE) KEY INHIBIT GROUND CONTROLLED CIRCUIT FOR AN OPEN

- Connect BCM C2280G.
- Ignition OFF.
- Disconnect BCM C2280G.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3245-10	Ω	C2280G-12

Is the resistance less than 3 ohms?

Yes	GO to E7

No	REPAIR the circuit.

E7 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors and all other previously disconnected connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

U300A:01

Refer to Wiring Diagrams Cell 13 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Steering Wheel and Column Electrical Components - System Operation and Component Description (211-05 Steering Column Switches, Description and Operation).

BCM DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
U300A:01	Ignition Switch: General Electrical Failure	Sets when the BCM detects an invalid combination from the ignition switch input circuits, such as a voltage signal only from the ON-designated circuit, a voltage signal only from the START-designated circuit or a voltage signal from ACC and START-designated circuits at the same time.

Possible Causes

- Wiring, terminals or connectors
- Ignition switch
- BCM

PINPOINT TEST F : U300A:01

NOTICE: Use the correct probe adapter(s) when making measurements. Failure to use the correct probe adapter(s) may damage the connector.

F1 CHECK FOR IGNITION SWITCH CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280G.
- Disconnect BCM C2280H.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-50		Ground
C2280G-37		Ground
C2280H-14		Ground

Is any voltage present?

Yes	REPAIR the circuit in question.
No	GO to F2

F2 CHECK THE BCM (BODY CONTROL MODULE) IGNITION SWITCH INPUT CIRCUITS FOR VOLTAGE

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-50		Ground
C2280G-37		Ground

- While placing the ignition switch to the START position, measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-37		Ground
C2280H-14		Ground

Are the voltages greater than 11 volts?

Yes	GO to F4
No	GO to F3

F3 CHECK THE IGNITION SWITCH CIRCUITS FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2280G-50	Ω	C250-6
C2280G-37	Ω	C250-1
C2280H-14	Ω	C250-7

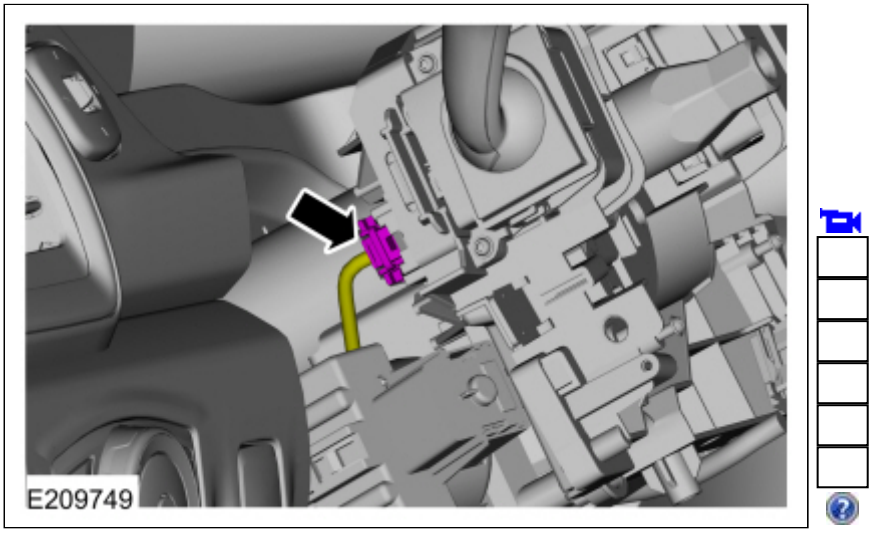
Are the resistances less than 3 ohms?

Yes	INSTALL a new ignition switch. REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).
No	REPAIR the circuit in question.

F4 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors and all other previously disconnected connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?



Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Base Part Number: 6L084

Special Tool(s)

 E50097	Adapter, Compression Test 303-1305
 ES21202	Socket, Spark Plug 303-499

General Equipment

Ford diagnostic equipment
Compression tester
Oil pressure gauge
UV leak detection lamp

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
− Coolant leaks − Oil leaks − Fuel system leaks − Visibly damaged or worn parts − Loose or missing nuts or bolts	− Fuse(s) − Loose or corroded connector(s) − Control module − Damaged or worn switch(es)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Sources	Action
• Loss of oil	• Oil leaks from the engine or auxiliary components.	• Look for evidence of oil leaks on components. Use an UV leak tester if oil leak is not evident. Install new gaskets or components as required.
	• Internal or external leak at the oil cooler.	• Check the coolant expansion tank for oil film on the coolant surface. Install a new oil cooler or oil cooler gasket.
	• Leak at the crankshaft	• Install a new oil seal.

	front or rear oil seal.	• Align the front cover.
• Oil consumption	• Use of the wrong type of engine oil.	• Determine the last type of engine oil used (refer to the latest invoice or oil receipt) and compare with the specification. Change the engine oil.

	• Faulty positive crankcase ventilation system.
	  • Hoses or ventilation/breather valves are blocked. This causes excessive pressure in the crankcase which causes oil to enter the combustion chamber.
	  • Crankcase ventilation oil separator is faulty and engine oil can enter the combustion chamber through the intake manifold.
		• Check that the crankcase ventilation system is operating correctly and repair as necessary.

	• Turbocharger seals.	• Install a new turbocharger.REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation).

	• Damaged gaskets or mating surfaces.
	  • Cylinder head gasket is damaged or mating faces are warped.
	  • Valve stem oil seals are worn causing engine oil to enter the combustion chamber between the valve stem and the valve stem guide.
		• Check the gaskets and mating surfaces for damage.
		  • Remove the cylinder head. Check the mating faces, cylinder head gaskets and the flatness of the cylinder head and engine block mating faces.
		  • Install new valve stem oil seals.

	• Piston ring or cylinder liner wear.	• Install new components as necessary.
• Coolant consumption	• Cooling system components.	• REFER to: Engine Cooling (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, Diagnosis and Testing), Engine Cooling (303-03B Engine Cooling - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Diagnosis and

		Testing), Engine Cooling (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Diagnosis and Testing).
	• EGR (if equipped).	• Install a new EGR cooler.
	• Oil cooler.	• Install a new oil cooler.
	• Damaged gaskets or warped mating faces.	• Check the cylinder head gasket for damage. Check the cylinder head and cylinder block for distortion. REFER to: (303-00 Engine System - General Information) Cylinder Head Distortion (General Procedures), Cylinder Block Distortion (General Procedures).
	• Cracks or fractures in engine components surrounded by coolant, such as cylinder liners and cylinder head combustion chamber.	• Determine the damaged engine component and install a new component.
• Engine will not crank	• Battery or cables.	• Check the battery, bracket and cables. REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing). REFER to: Charging System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/3.2L Duratorq-TDCi (148kW/200PS) - Puma (414-00 Charging System - General Information, Diagnosis and Testing).
	• Starter motor or cables.	• Check the starting system. REFER to: Starting System (303-06A Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4, Diagnosis and Testing), Starting System (303-06B Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Diagnosis and Testing), Starting System (303-06B Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Diagnosis and Testing).
• Engine cranks but will not start	• Fuel tank is empty.	• Check the fluid level.
	• Water in fuel.	• Drain the water from the fuel system.
	• Fuel filter blocked (only vehicles with diesel engine).	• Install a new fuel filter element. REFER to: (310-01B Fuel Tank and Lines - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Fuel Filter Element (Removal and Installation).
	• Air in fuel lines (only vehicles with diesel engine).	• Bleed the fuel system. Check the fuel system for leaks. REFER to: Fuel System Bleeding (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
	• Engine intake air system.	• Check the intake air system. REFER to: Intake Air Distribution and Filtering (303-12A Intake Air Distribution and Filtering -

		12A Intake Air Distribution and Filtering - 2.5L Duratec-HE (122kW/165PS) - MI4, Diagnosis and Testing), Intake Air Distribution and Filtering (303-12B Intake Air Distribution and Filtering - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Diagnosis and Testing).
	• Glow plug faulty (only vehicles with diesel engine).	• Check the glow plugs. Install new glow plugs as necessary. REFER to: Glow Plugs (303-07B Glow Plug System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation), Glow Plugs (303-07C Glow Plug System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
	• Engine management system.	• Check the engine management system. REFER to: Electronic Engine Controls - Vehicles Built From: 17-08-2015 (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) , Electronic Engine Controls - Vehicles Built From: 17-08-2015 (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) .
	• Fuel injection pump faulty or incorrect timing (only vehicles with diesel engine).	• Check the fuel injection pump for correct timing and performance.
	• Incorrect valve timing.	• Check and adjust the valve timing.
	• Broken or damaged timing chain or sprocket.	• Check the timing chain and sprockets. Install new components as necessary.
• Very poor power output/fuel consumption too high/engine running rough	• Fuel system.	• Check the fuel system components.
	• Engine intake air system.	• Check the intake air system. REFER to: Intake Air Distribution and Filtering (303-12A Intake Air Distribution and Filtering - 2.5L Duratec-HE (122kW/165PS) - MI4, Diagnosis and Testing), Intake Air Distribution and Filtering (303-12B Intake Air Distribution and Filtering - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Diagnosis and Testing).
	• Exhaust system blocked.	• Check the exhaust system.
	• Engine management system.	• Check the engine management system. REFER to: Electronic Engine Controls - Vehicles Built

		From: 17-08-2015 (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) , Electronic Engine Controls - Vehicles Built From: 17-08-2015 (303-14 Electronic Engine Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) .
	• Turbocharger (only vehicles with diesel engine).	• Check the turbocharger. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger (Diagnosis and Testing).
	• Fuel injection pump faulty or incorrect timing (only vehicles with diesel engine).	• Check and adjust fuel injection pump timing.
	• Incorrect valve timing, timing chain or timing sprocket damaged.	• Check and adjust valve timing. Install new components as necessary.
• Noisy running	• Engine auxiliary components loose or damaged.	• Check engine auxiliary components for damage/looseness.
• Noisy running, misfiring/backfiring	• Incorrect fuel	• Determine which type of fuel was the last put in the tank (note the country specific fuel specifications).
	• Water in fuel or fuel contaminated.	• Check the fuel system for water or other contamination.
	• Fuel injection pump faulty or incorrect timing (only vehicles with diesel engine).	• Check and adjust fuel injection pump timing.
	• Valve timing incorrect, timing chain or timing sprocket damaged.	• Check and adjust valve timing. Install new components as necessary.
• Noisy running/valve train noise	• Excessive valve clearance due to faulty hydraulic valve tappets.	• Install new hydraulic valve tappets.
	• Timing chain damaged.	• Install a new timing chain.
	• Timing chain incorrectly tensioned.	• Check the timing chain tension. Install a new tensioner, as necessary.
	• Timing chain guides worn or damaged.	• Check the timing chain guides. Install new guides as necessary.

• Noisy running/engine block	• Engine components
	  • Pistons
	  • Piston rings
	  • Connecting rod large end, main bearing or thrust bearing journals
	  • Connecting rods bent or damaged.
		• Check the engine components for wear or damage. Make sure all components are within specification. Install new components as necessary.

Engine Oil Leaks

NOTE: *Before installing new gaskets or oil seals, make sure that the fault is clearly established.*

If the oil leak cannot be identified clearly by a visual inspection, carry out a UV test:

UV Testing

1. Clean the engine and transmission with a suitable cleaning fluid such as brake cleaner.
2. Pour test fluid GV-2911-3090A in accordance with the quantity specified by the manufacturer through the oil filler neck into the engine and install the oil filler cap.

WARNING: On manual transmissions put the transmission into NEUTRAL. Failure to follow these instructions may result in personal injury.

3. Start the engine and let it run for about five minutes.
4. Switch off the engine.

NOTE: *If no leak can be found, road test the vehicle under various loads and again check the engine for leaks.*

5. Check the engine for oil leaks using an UV leak detection lamp GV-2929 or UV leak detection lamp GV-2911 B11. A clear bright yellow or orange area will identify the leak. For extremely small leaks, several hours may be required for the leak to appear.
6. Rectify any leaks found and recheck the engine for oil leaks.
7. At the end of test, make sure the oil level is within the upper and lower oil indicator marks. Remove oil as necessary if it registers above the full mark.

Leakage Points - Underhood

Examine the following areas for oil leakage:

- Valve cover gaskets
- Cylinder head gaskets
- Oil cooler, if equipped
- Oil filter adapter
- Engine front cover
- Oil filter adapter and filter body
- Oil level indicator tube connection
- Oil pressure switch

Leakage Points - Under Engine, With Vehicle on Hoist

Examine the following areas for oil leakage:

- Oil pan gaskets
- Oil pan sealer
- Engine front cover gasket
- Crankshaft front seal
- Crankshaft rear oil seal
- Oil filter adapter and filter body
- Oil cooler, if equipped
- Oil pressure switch

Leakage Points - With Transmission and Flywheel/Flexplate Removed

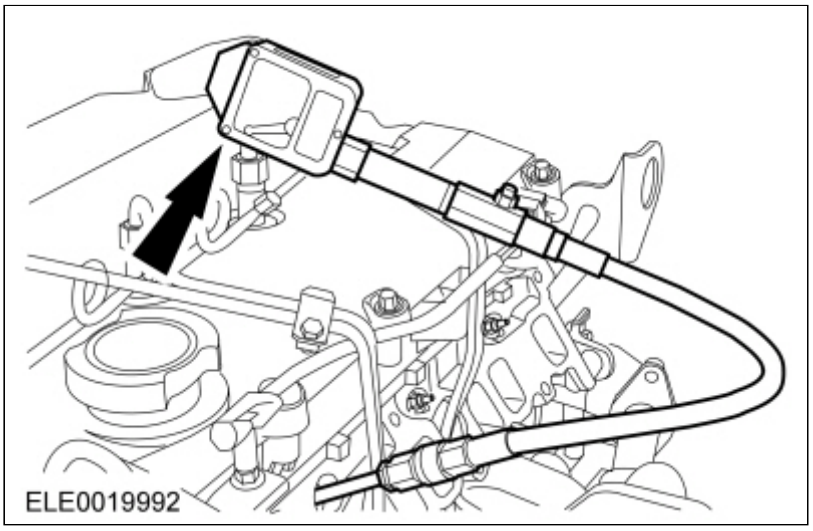
Examine the following areas for oil leakage:

- Crankshaft rear oil seal
- Rear main bearing cap parting line
- Flexplate mounting bolt holes (with flexplate installed)
- Pipe plugs at the end of oil passages

Measure the Compression Pressure

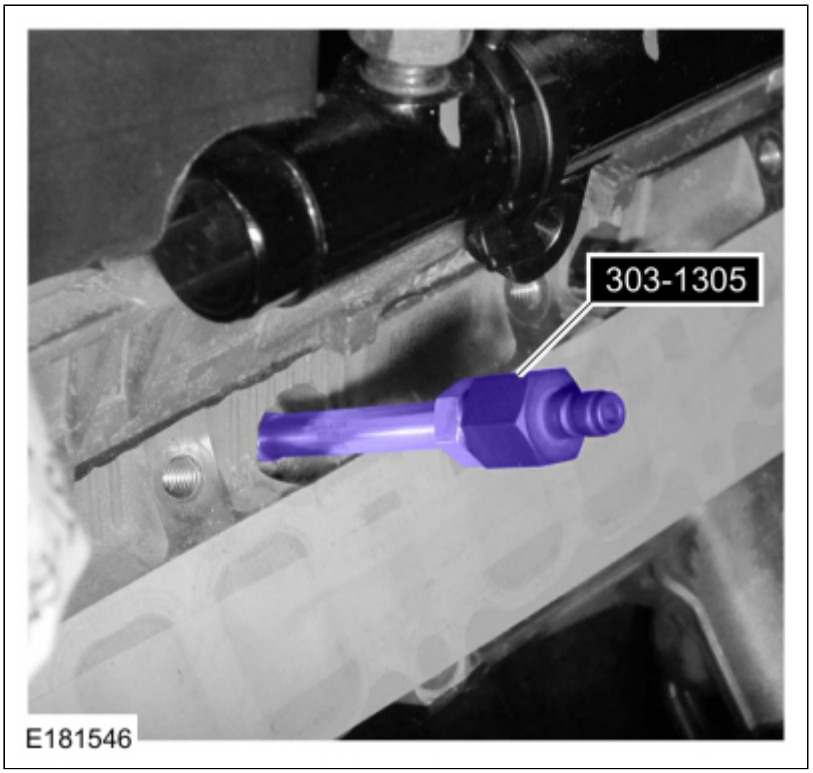
NOTE: *The PCM receives an error message when the relay is removed or electrical components are disconnected. This error message must be deleted from the fault memory by connecting the Ford diagnostic equipment after completing the measurement.*

NOTE: *Valve clearance must be set correctly before performing a compression test. Make sure engine is at the normal operating temperature.*



NOTE: *The varying design of compression checking devices and fluctuating starter motor speeds normally only allows to check if the compression is even in all cylinders.*

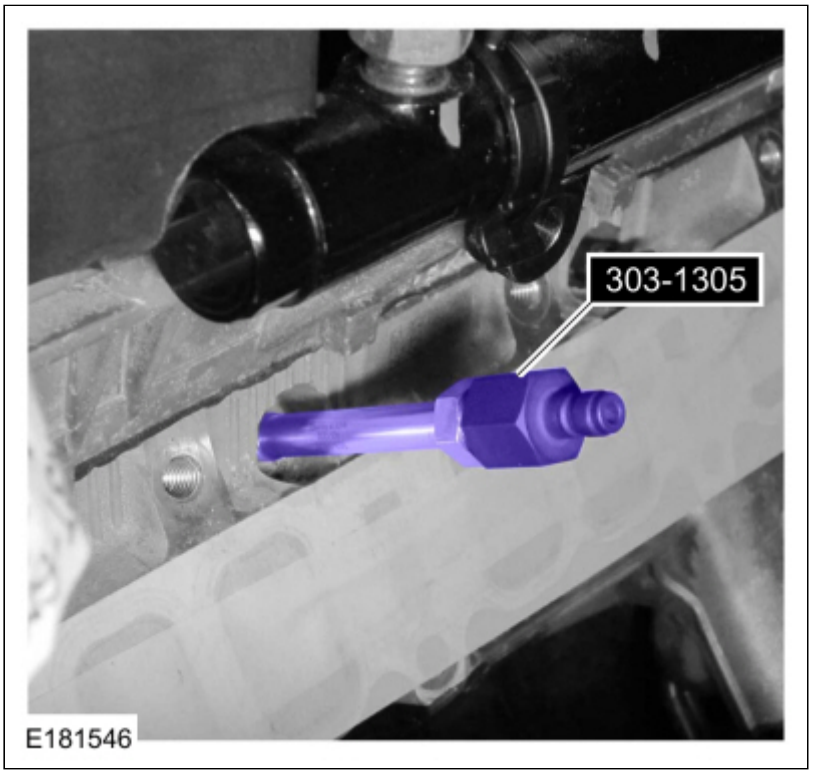
Vehicles with diesel engines



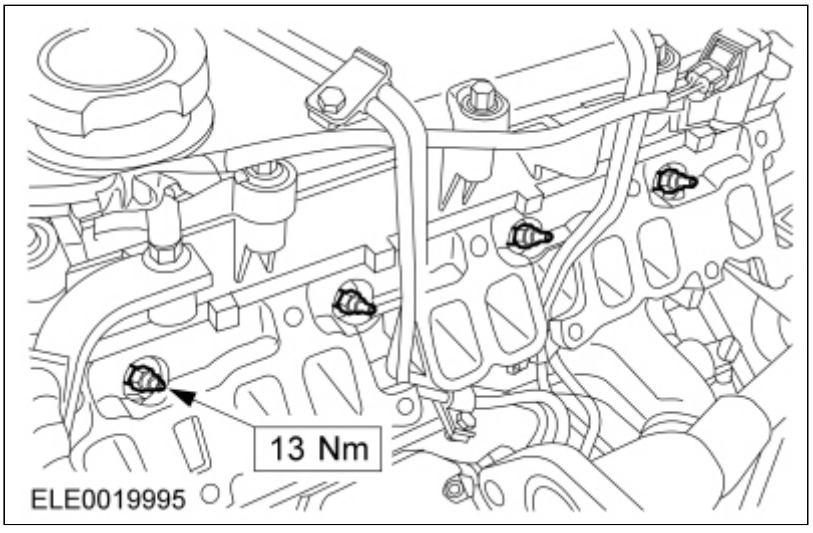
1. Make sure the oil in the crankcase is of the correct viscosity and at the correct level.
2. **NOTE:** *Failure to remove all glow plugs may result in inconsistent test results.*

   The battery charger must be left connected during the compression test and disconnected when the test is complete.

   Remove the glow plugs. REFER to:
   Glow Plugs (303-07B Glow Plug System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation),
   Glow Plugs (303-07C Glow Plug System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).



3. Connect a battery charger to the battery.

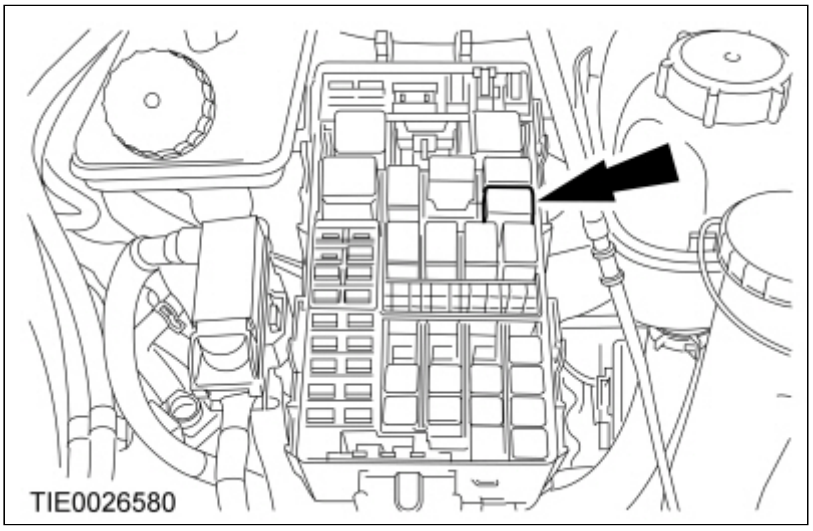


4. Install the Compression Test Adapter (303-1305) and a commercially available diesel compression tester.

NOTE: *Note the approximate number of compression strokes necessary to obtain the highest reading.*

5. Carry out the measurement on all cylinders, following the measuring equipment manufacturer's instructions and compare each cylinder compression reading.
6. Install an auxiliary starter switch in the starting circuit. With the ignition switch in the OFF position, and using the auxiliary starter switch, crank the engine a minimum of 5 compression strokes and record the highest reading.
7. Repeat the test on each cylinder, cranking the engine approximately the same number of compression strokes.
    - There must not have no more than a 20% difference from the average on any given cylinder.
8. Investigate and repair any cylinder(s) that are outside the 20% range.

9. Remove the Compression Test Adapter (303-1305) and the commercially available diesel compression tester.
10. Disconnect the battery charger from the battery.
11. Detach the compression tester and adapter.

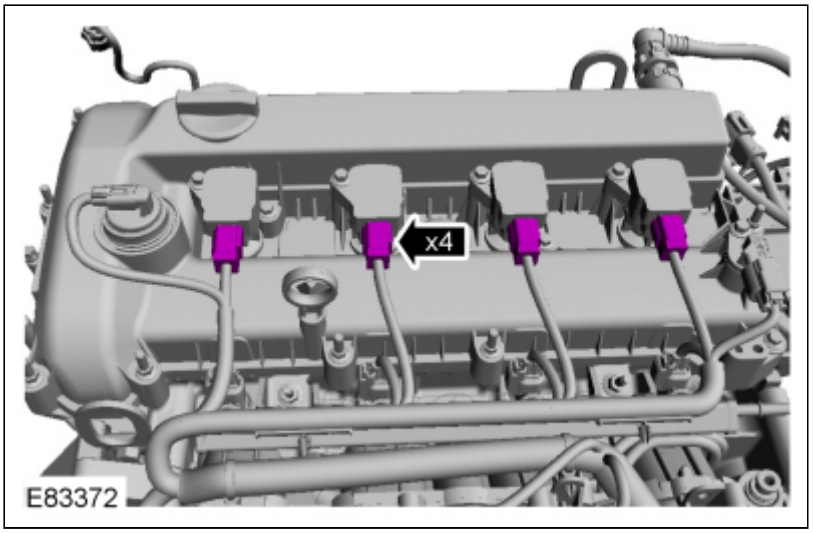


12. Install the glow plugs.
    REFER to: Glow Plugs (303-07B Glow Plug System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
    REFER to: Glow Plugs (303-07C Glow Plug System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal

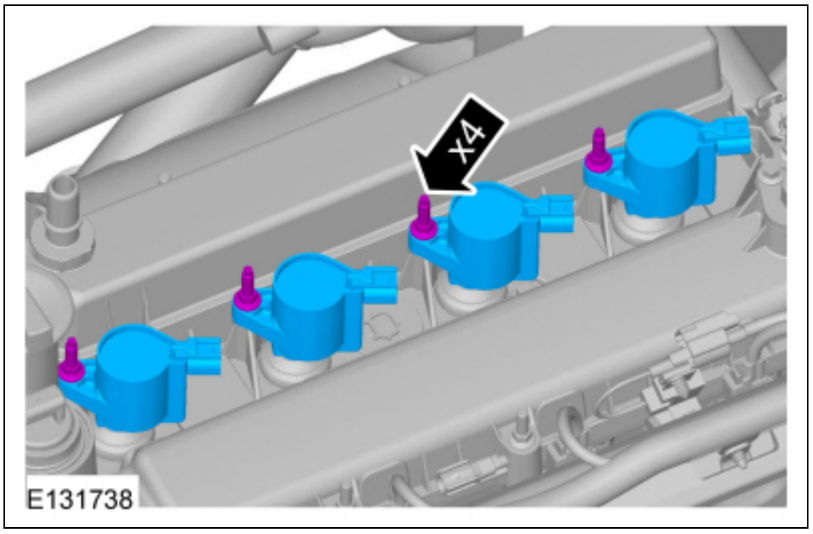
and Installation).

Compression Test - Interpreting Compression Readings

1. If compression improves considerably, piston rings are worn or damaged.
2. If compression does not improve, valves are sticking or not seating correctly.
3. If 2 adjacent cylinders indicate low compression pressures and squirting oil on each piston does not increase compression, the head gasket may be leaking between cylinders. Engine oil or coolant in cylinders could result from this condition.

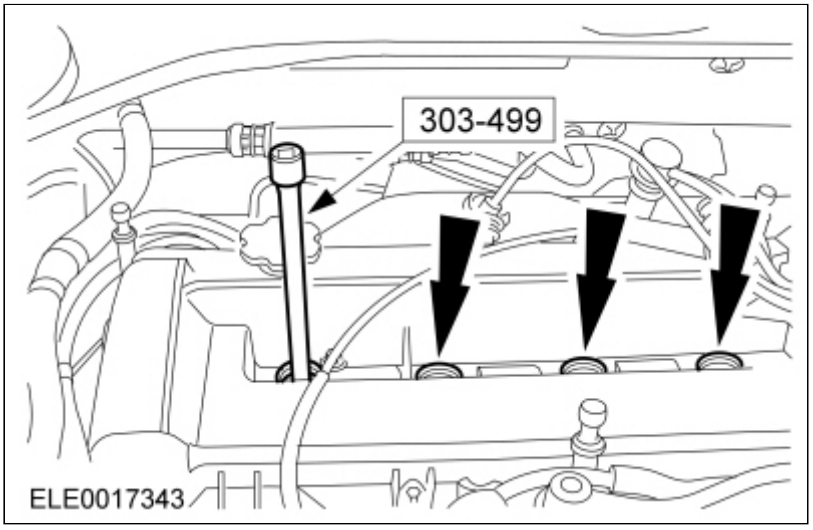


Vehicles with gasoline engines

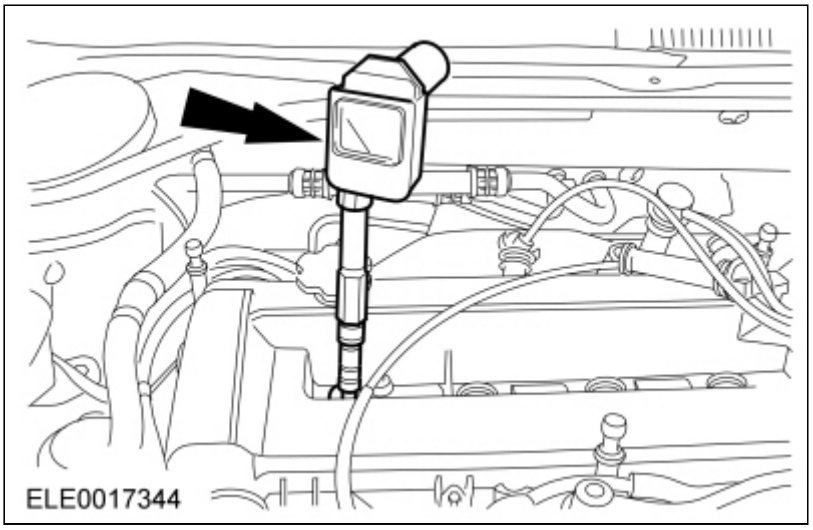


1. Open the Battery Junction Box (BJB) and remove the fuel pump relay.

NOTE: *The engine will start, run for a few seconds and then stop.*

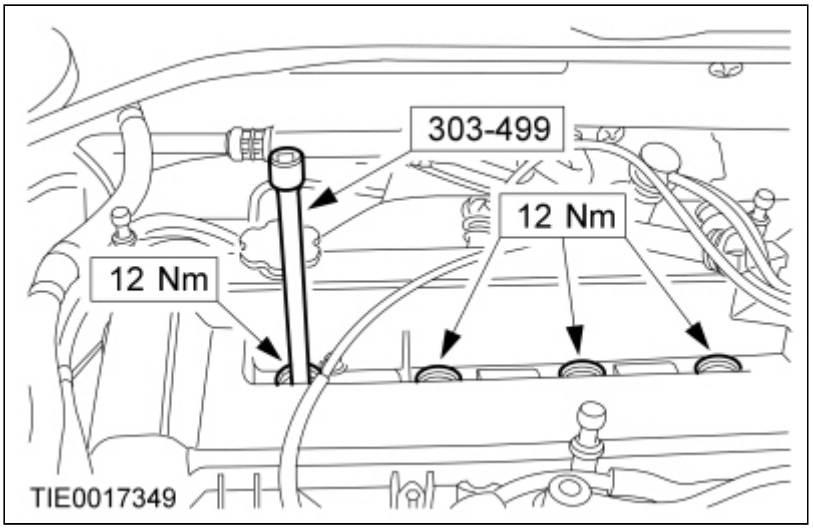


2. Start the engine.

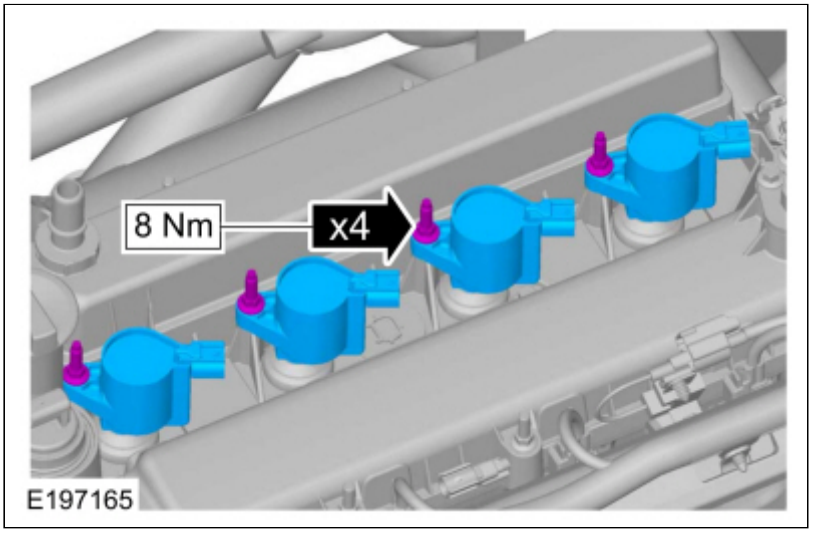


3. Disconnect the ignition coil electrical connectors.

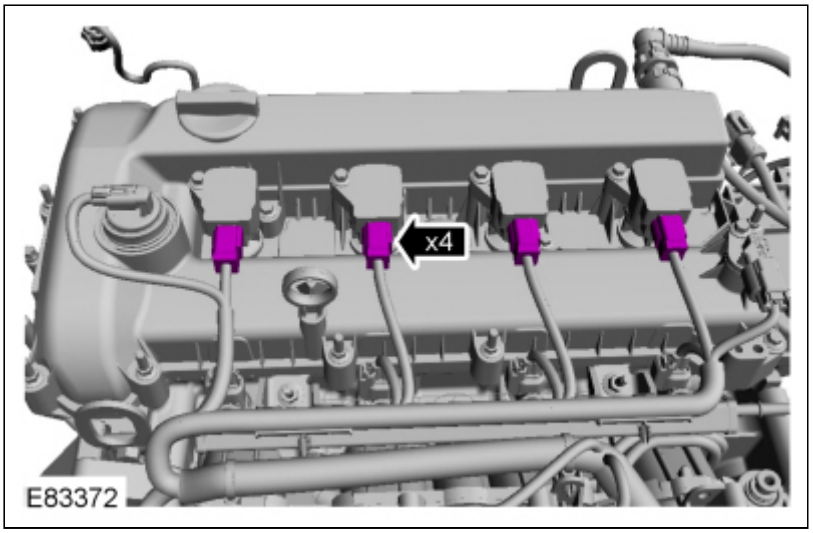
4. Remove the ignition coils.



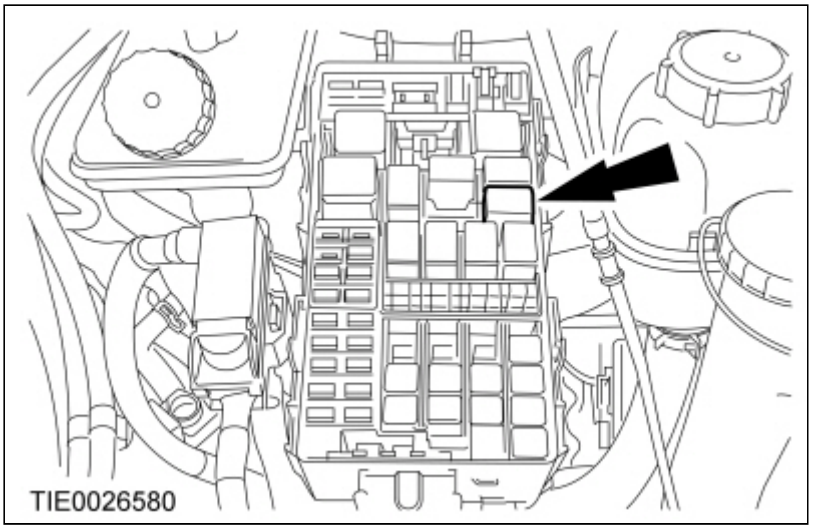
5. Using the special tool, remove the spark plugs.



NOTE: *Crank the engine with the starter motor and with wide open throttle, until the reading on the compression tester stops rising.*



6. Carry out the measurement on all cylinders, following the measuring equipment manufacturer's instructions and compare each cylinder compression reading.



7. Using the special tool, install the spark plugs.

8. Install the ignition coils.

9. Connect the ignition coil electrical connectors.

10. Install the fuel pump relay.
11. Reset the PCM fault memory.

Compression Test - Test Results

The indicated compression pressures are considered within specification if the lowest reading cylinder is at least 75% of the highest reading. Refer to the Compression Pressure Limit Chart.

Compression Pressure Limit Chart

Maximum Recorded Cylinder Pressure	Minimum Recorded Cylinder Pressure	Maximum Recorded Cylinder Pressure	Minimum Recorded Cylinder Pressure	Maximum Recorded Cylinder Pressure	Minimum Recorded Cylinder Pressure	Maximum Recorded Cylinder Pressure	Minimum Recorded Cylinder Pressure
924 kPa (134 psi)	696 kPa (101 psi)	1,131 kPa (164 psi)	848 kPa (123 psi)	1,338 kPa (194 psi)	1,000 kPa (145 psi)	1,544 kPa (224 psi)	1,158 kPa (168 psi)

E151691

If one or more cylinders reads low, squirt approximately one tablespoon of engine oil meeting Ford specification on top of the pistons in the low-reading cylinders. Repeat the compression pressure check on these cylinders.

Cylinder Leakage Detection

When a cylinder produces a low reading, use of a cylinder leakage tester will be helpful in pinpointing the exact cause.

The leakage tester is inserted in the glow plug hole, the piston is brought up to TDC on the compression stroke, and compressed air is admitted.

Once the combustion chamber is pressurized, the leakage tester gauge will read the percentage of leakage. Leakage exceeding 20% is excessive.

While the air pressure is retained in the cylinder, listen for the hiss of escaping air. A leak at the intake valve will be heard in the Throttle Body (TB). A leak at the exhaust valve can be heard at the tailpipe. Leakage past the piston rings will be audible at the crankcase vent oil separator connection. If air is passing through a blown head gasket to an adjacent cylinder, the noise will be evident at the glow plug hole of the cylinder into which the air is leaking. Cracks in the cylinder block or gasket leakage into the cooling system may be detected by a stream of bubbles in the radiator.

Excessive Engine Oil Consumption

Nearly all engines consume oil, which is essential for normal lubrication of the cylinder bore walls and pistons and rings. Determining the level of oil consumption may require testing by recording how much oil is being added over a given set of miles.

Customer driving habits greatly influence oil consumption. Mileage accumulated during towing or heavy loading

generates extra heat. Frequent short trips, stop-and-go type traffic or extensive idling, prevent the engine from reaching normal operating temperature. This prevents component clearances from reaching specified operating ranges.

The following diagnostic procedure may be utilized to determine internal oil consumption. Make sure that the concern is related to internal oil consumption, and not external leakage, which also consumes oil. Verify there are no leaks before carrying out the test. Once verified, the rate of internal oil consumption can be tested.

A new engine may require extra oil in the early stages of operation. Internal piston-to-bore clearances and sealing characteristics improve as the engine breaks in. Engines are designed for close tolerances and do not require break-in oils or additives. Use the oil specified in the Owner's Literature. Ambient temperatures may determine the oil viscosity specification. Verify that the correct oil is being used for the vehicle in the geographic region in which it is driven.

Basic Pre-checks

1. For persistent complaints of oil consumption, interview the customer to determine the oil consumption characteristics. If possible, determine the brand and grade of oil currently in the oil pan. Look at the oil filter or oil-change station tags to determine if Ford-recommended maintenance schedules have been followed. Make sure that the oil has been changed at the specified mileage intervals. If vehicle mileage is past the first recommended drain interval, the OEM (original equipment manufacturer) production filter should have been changed.

2. Ask how the most current mileage was accumulated. That is, determine whether the vehicle was driven under the following conditions:
    - Extended idling or curbside engine operation
    - Stop-and-go traffic or taxi operation
    - Towing a trailer or vehicle loaded heavily
    - Frequent short trips (engine not up to normal operating temperature)
    - Excessive throttling or high engine-rpm driving

3. Verify that there are no external leaks. If necessary, review the diagnostic procedure under Engine Oil Leaks in the Diagnosis and Testing portion of this section.

4. Inspect the crankcase ventilation system for:
    - disconnected hoses at the valve cover or ACL (air cleaner).
    - loose or missing valve cover fill cap.
    - missing or incorrectly seated engine oil level indicator.
    - incorrect or damaged crankcase vent oil separator.

5. Inspect for signs of sludge. Sludge affects crankcase vent oil separator performance and can plug or restrict cylinder head drainback wells. It can also increase oil pressure by restricting passages and reducing the drainback capability of piston oil control rings.

6. Inspect the air filter for dirt, sludge or damage. A hole in the filter element will allow unfiltered air to bypass into the air induction system. This can cause premature internal wear (engine dusting), allowing oil to escape past rings, pistons, valves and guides.

7. If the engine is hot or was recently shut down, wait at least 10-minutes to allow the oil to drain back. Ask the customer if this requirement has been followed. Adding oil without this wait period can cause an overfill condition, leading to excessive oil consumption and foaming which may cause engine damage.

8. Make sure the oil level indicator (dipstick) is correctly and fully seated in the indicator tube. Remove the oil level indicator and record the oil level.

Detailed Pre-checks

1. Check the thermostat opening temperature to make sure that the cooling system is operating at the specified temperature. If it is low, internal engine parts are not running at specified internal operating clearances.

Oil Consumption Test

1. **NOTE:** *Once all of the previous conditions are met, carry out an oil consumption test.*

    Drain the engine oil and remove the oil filter. Install a new manufacturer-specified oil filter. Make sure the vehicle is positioned on a level surface. Refill the oil pan to a level one liter (quart) less than the specified fill level, using manufacturer-specified oil.

2. Run the engine for 3 minutes (if hot) or 10 minutes (if cold). Allow for a minimum 10-minute drainback period and then record the oil level shown on the oil level indicator. Place a mark on the backside of the oil level indicator noting the oil level location.

3. Add the final one liter (quart) to complete the normal oil fill. Restart the engine and allow it to idle for 2 minutes. Shut the engine down.

4. After a 10-minute drainback period, record the location of the oil level again. Mark the oil level indicator with the new oil level location. (Note: Both marks should be very close to the MIN-MAX upper and lower limits or the upper and lower holes on the oil level indicator. These marks will exactly measure the engine's use of oil, with a one quart differential between the new marks.) Demonstrate to the customer that the factory-calibrated marks on the oil level indicator are where the oil should fall after an oil change with the specified fill amount. Explain however, that this may vary slightly between MIN-MAX or the upper and lower holes on the oil level indicator.

5. Record the vehicle mileage.

6. Advise the customer that oil level indicator readings must be taken every 320 km (200 mi) or weekly, using the revised marks as drawn. Remind the customer that the engine needs a minimum 10-minute drainback for an accurate reading and that the oil level indicator must be firmly seated in the tube prior to taking the reading.

7. When the subsequent indicator readings demonstrate a full liter (quart) has been used, record the vehicle mileage. The mileage driven should not be less than 4,800 km (3,000 mi). The drive cycle the vehicle has been operated under must be considered when making this calculation. It may be necessary to have the customer bring the vehicle in for a periodic oil level indicator reading to closely monitor oil usage.

Post Checks, Evaluation and Corrective Action

1. If test results indicate excessive oil consumption, carry out a cylinder compression test. The cylinder compression test should be carried out with a fully charged battery and all glow plugs removed.

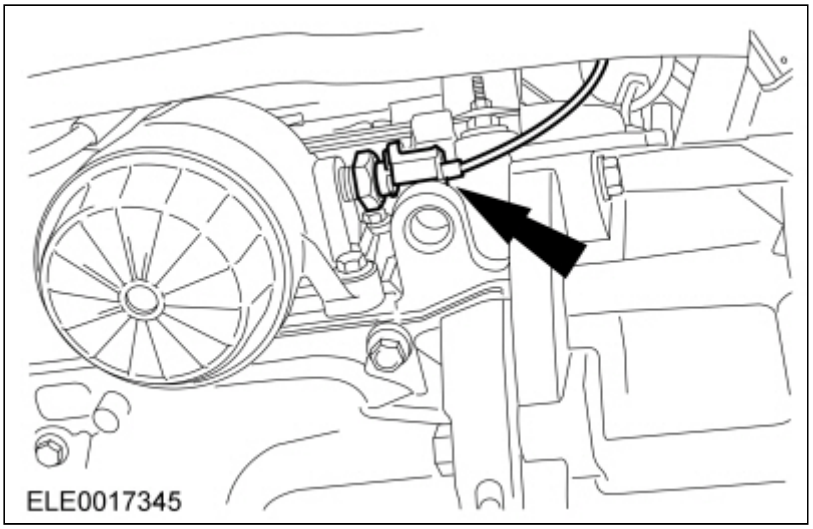
2. Compression should be consistent across all cylinders. If compression tested within the specifications found in this section, the excessive oil consumption may be due to wear on the valve guides, valves or valve seals.

3. A cylinder leak detection test can be carried out using a cylinder leakage detector. This can help identify valves, piston rings, or worn valve guides/valve stems, inoperative valve stem seals or other related areas as the source of oil consumption.

4. If an internal engine part is isolated as the root cause, determine if the repair will exceed cost limits and proceed with a repair strategy as required.

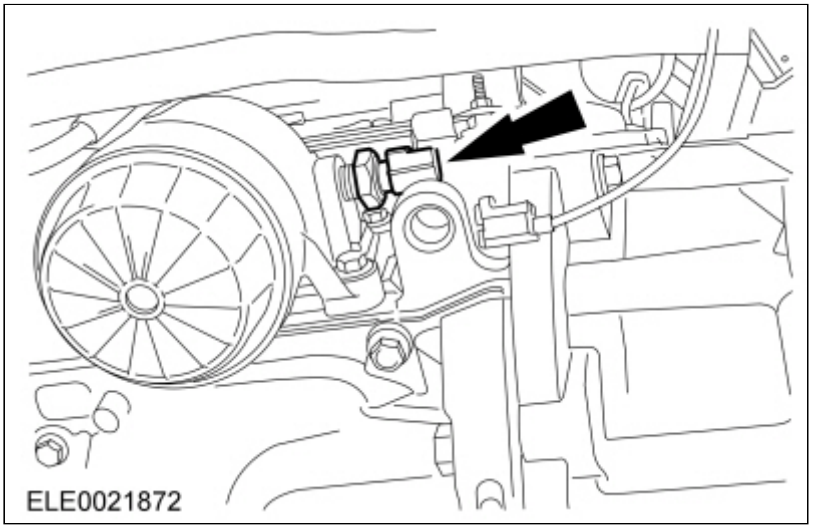
5. Once corrective action to engine is complete and verifying that all pre-check items were eliminated in the original diagnosis, repeat the Oil Consumption Test as described above and verify consumption results.

Oil Pressure - Measure



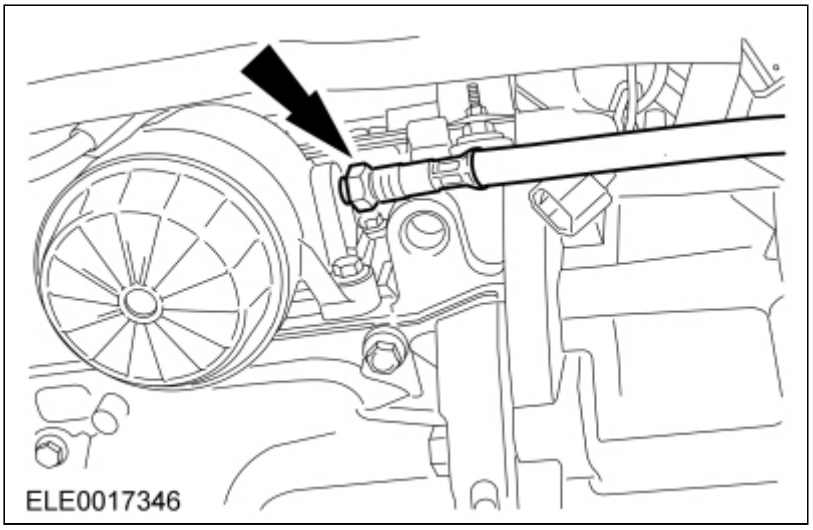
The oil pressure depends on various factors (engine speed, oil temperature, oil viscosity, amount of oil filter contamination etc.).

NOTE: *Measure the oil pressure at the specified engine speed. Measure the oil pressure at an oil temperature of 80°C.*

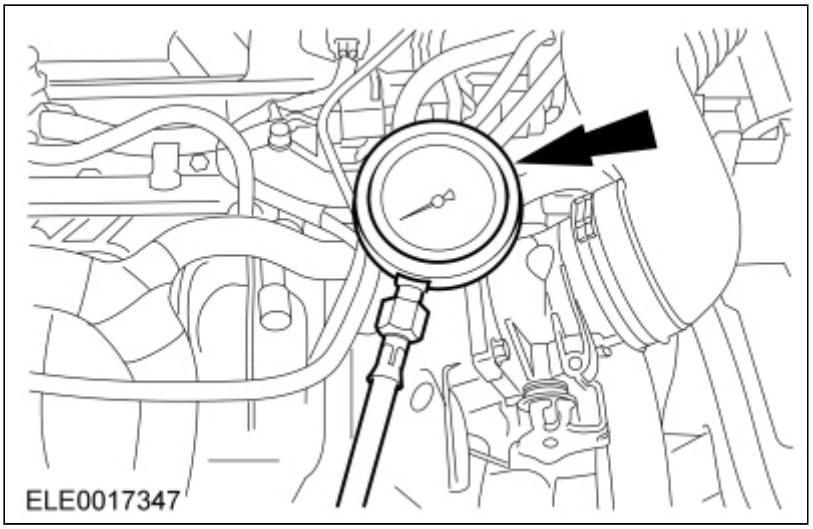


Vehicles with gasoline engines

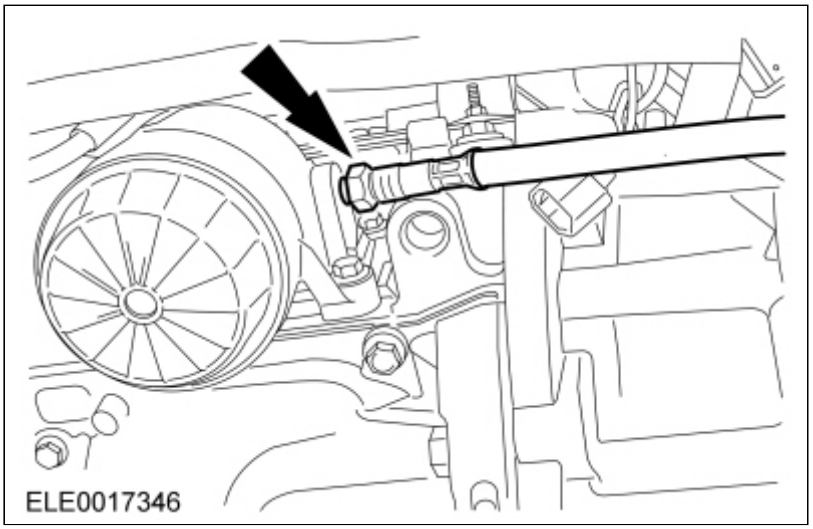
1. Raise and support the vehicle.
   REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).



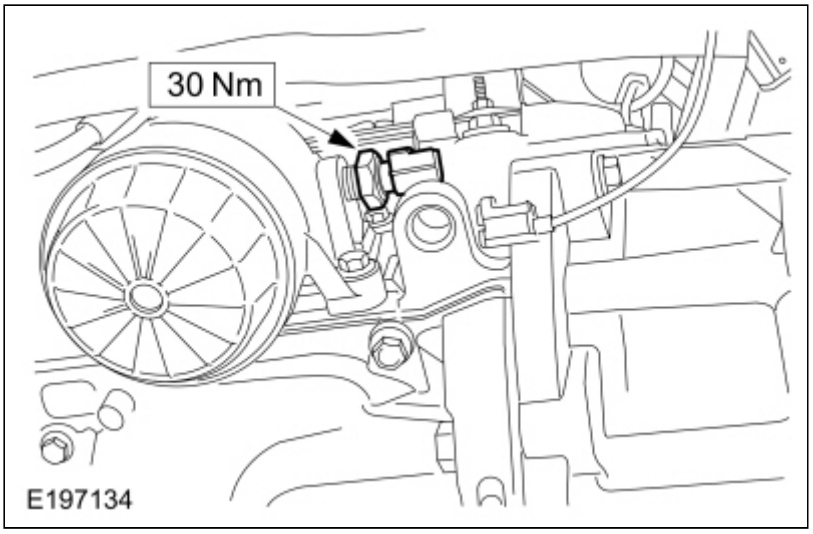
2. Remove the engine undershield.



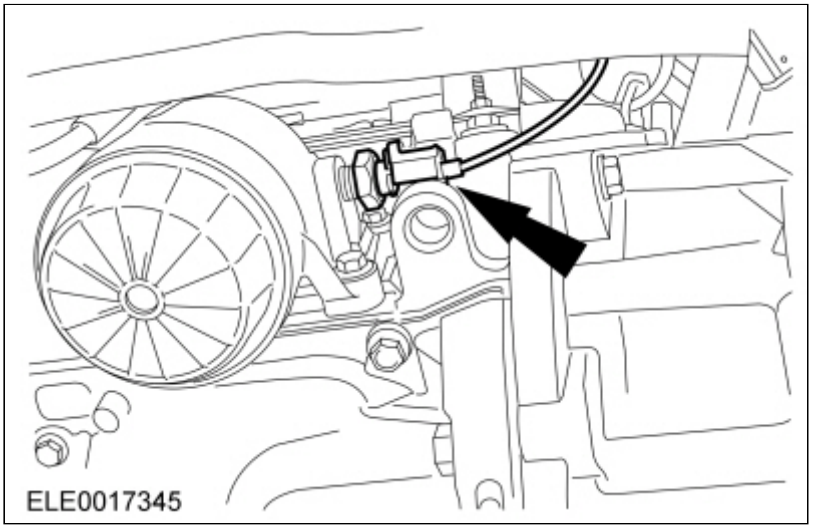
3. Disconnect the oil pressure switch electrical connector.



4. Remove the oil pressure switch.



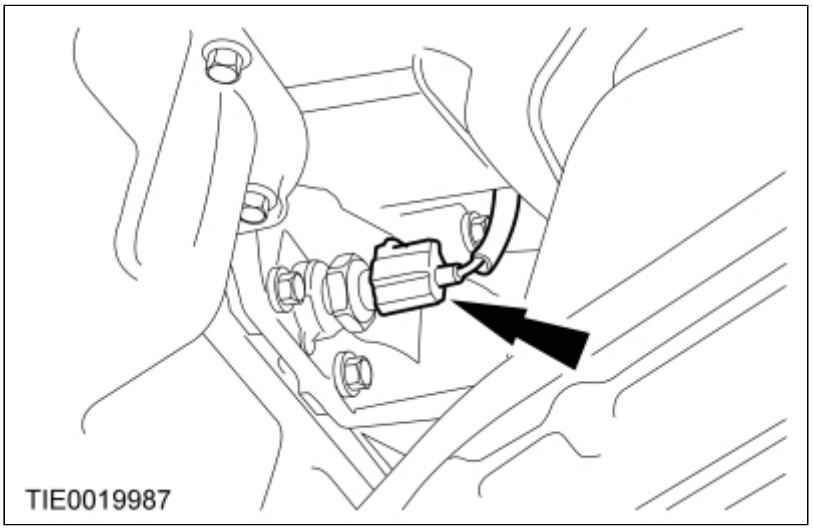
5. Attach the oil pressure gauge (GV 2134) with the oil pressure gauge connector.
6. Lower the vehicle.
7. Start the engine.
8. Raise and support the vehicle.
   REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).



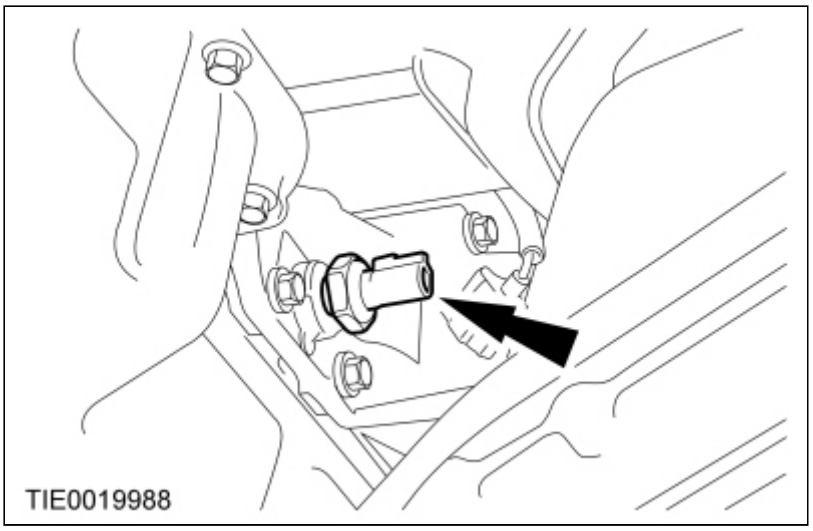
9. Run the engine until normal operating temperature is reached.
10. Run the engine at the specified rpm and record the gauge reading.
11. Measure the oil pressure.
12. The oil pressure should be within specifications.
    REFER to: Specifications - Vehicles Built Up To: 16-08-2015 (303-01A) .
    REFER to: Specifications (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Specifications).
13. If the pressure is not within specification, check the following possible sources:
    - Insufficient Oil
    - Oil leakage
    - Worn or damaged oil pump
    - Oil pump screen cover and tube
    - Excessive main bearing clearance
    - Excessive connecting rod bearing clearance
    - Chain tensioner leak
14. Lower the vehicle.
15. Stop the engine.
16. Raise and support the vehicle.
    REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

17. Remove the oil pressure gauge and the oil pressure gauge connector.

18. Install the oil pressure switch.

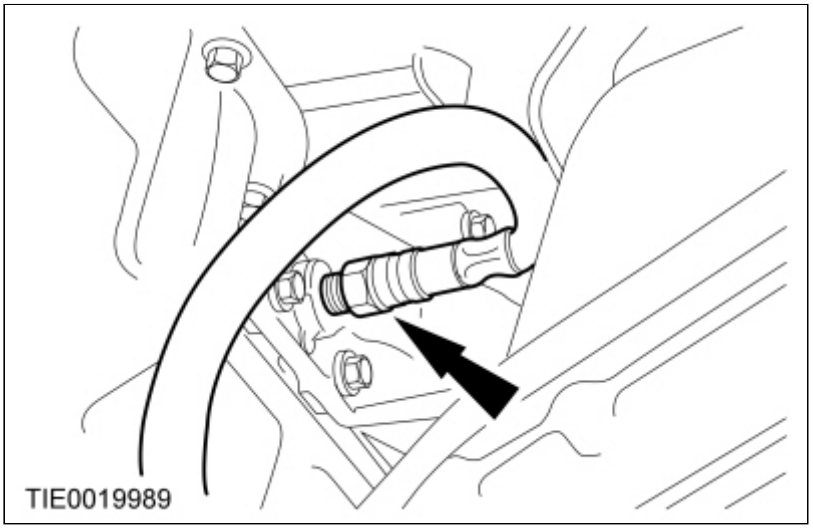


19. Connect the oil pressure switch electrical connector.
20. Install the engine undershield.
21. Lower the vehicle.

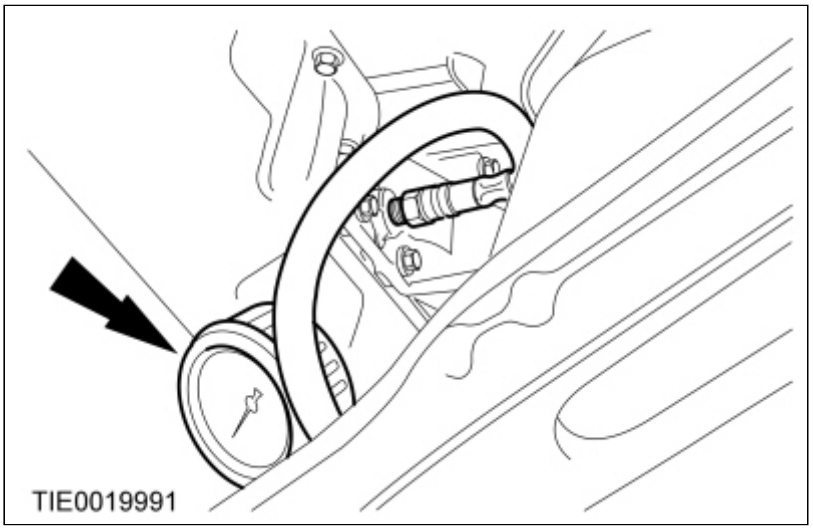


Vehicles with diesel engines

1. Raise and support the vehicle.
   REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).



2. Remove the engine undershield.



3. Disconnect the oil pressure switch electrical connector.

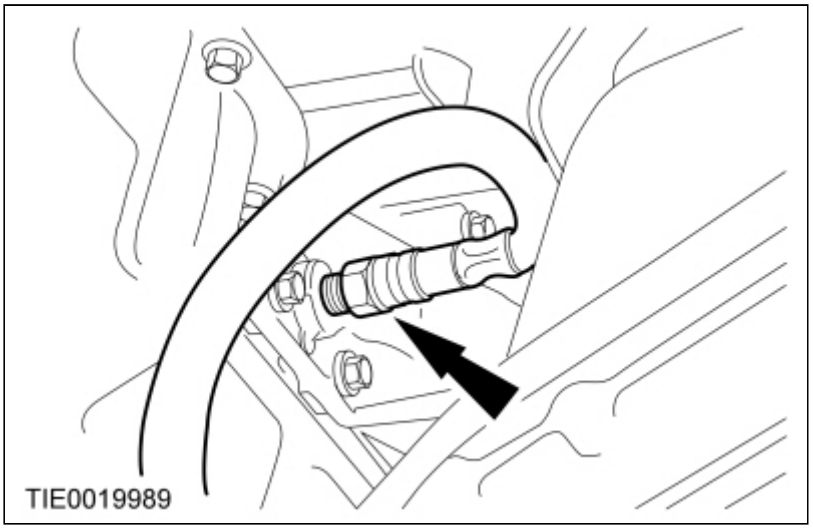
4. Remove the oil pressure switch.

5. Attach the oil pressure gauge (GV 2134) with the oil pressure gauge connector.
6. Lower the vehicle.
7. Start the engine
8. Raise and support the vehicle.
   REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

9. Run the engine until normal operating temperature is reached.

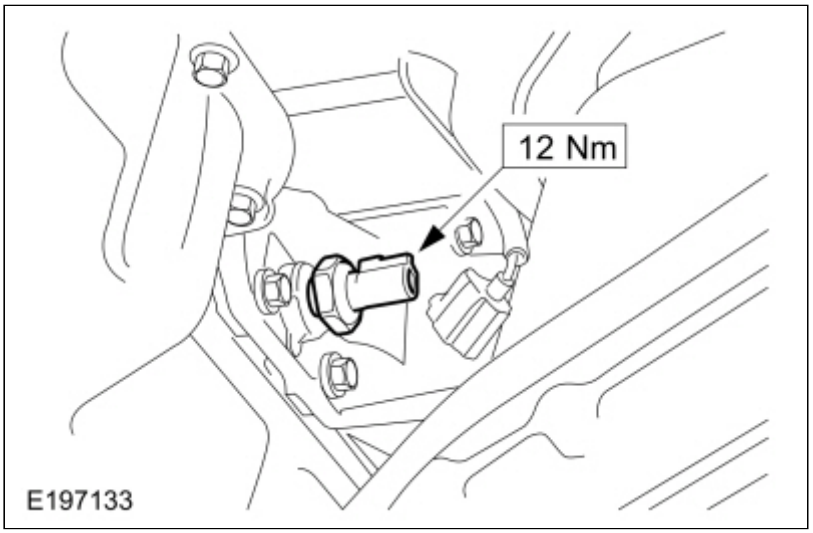
10. Run the engine at the specified rpm and record the gauge reading.

11. Measure the oil pressure.



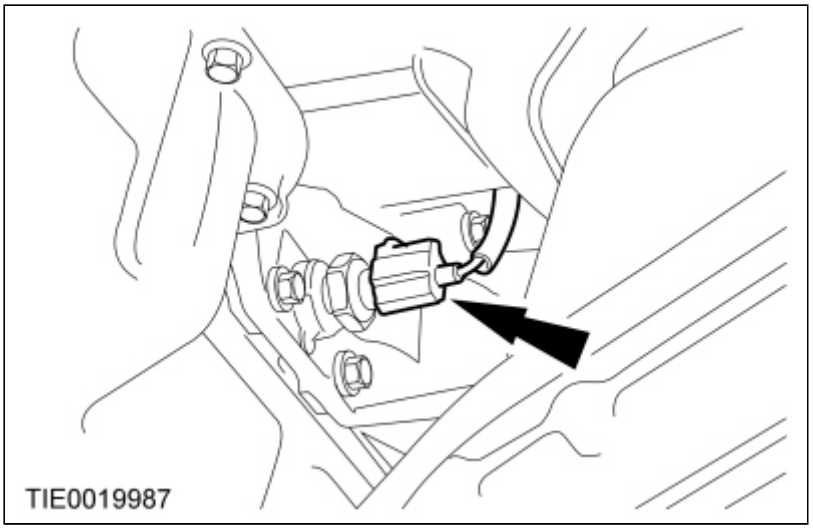
12. The oil pressure should be within specifications.
    REFER to: Specifications - Vehicles Built Up To: 16-08-2015 (303-01B) .
    REFER to: Specifications (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Specifications).
    REFER to: Specifications - Vehicles Built Up To: 16-08-2015 (303-01C) .
    REFER to: Specifications (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Specifications).

13. If the pressure is not within specification, check the following possible sources:
    - Insufficient Oil
    - Oil leakage
    - Worn or damaged oil pump
    - Oil pump screen cover and tube
    - Excessive main bearing clearance
    - Excessive connecting rod bearing clearance
    - Chain tensioner leak



14. Lower the vehicle.

15. Stop the engine.



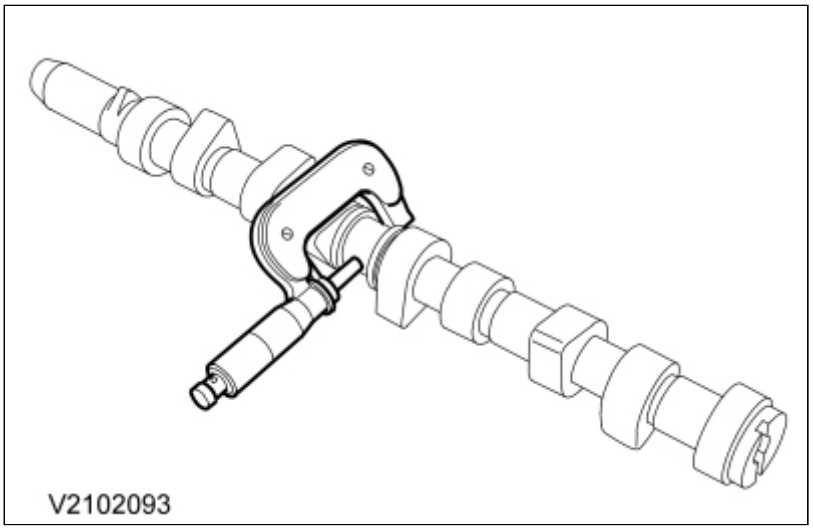
16. Raise and support the vehicle.
    REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

17. Remove the oil pressure gauge and the oil pressure gauge connector.

18. Install the oil pressure switch.

19. Connect the oil pressure switch electrical connector.
20. Install the engine undershield.
21. Lower the vehicle.

Valve Train Analysis - Static (Engine Off)



1. Remove the valve cover.

Check all components of the valve train for damage and wear. Make sure that only original components are installed and that all nuts and bolts are tightened to the specified torque.

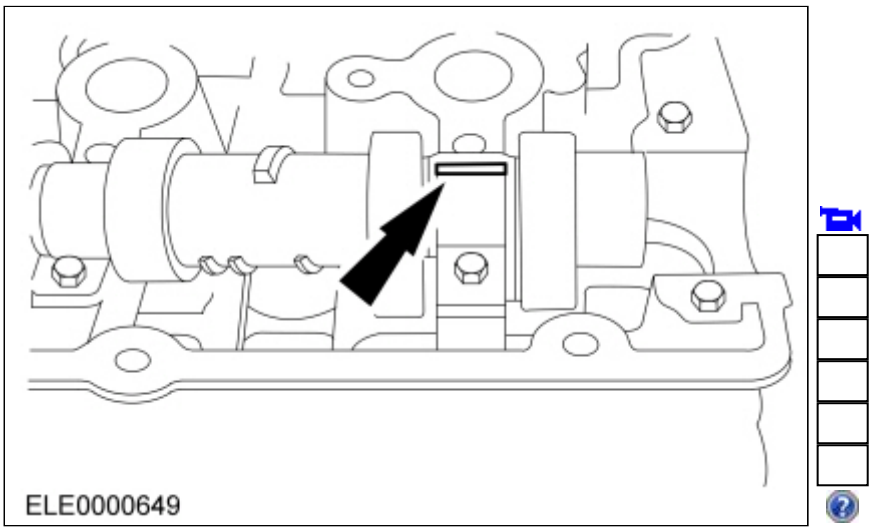
Camshaft Bearing Journal Diameter

1. Determine the diameter of the camshaft journals.
    - Using a micrometer measure the diameter at 90 degrees intervals to determine if the journals are out-of-round.
    - Measure at two different points on the journal to determine if there is any tapering.
    - If the measurements are out of the specified range, install a new camshaft.

Copyright © 2016 Ford Motor Company



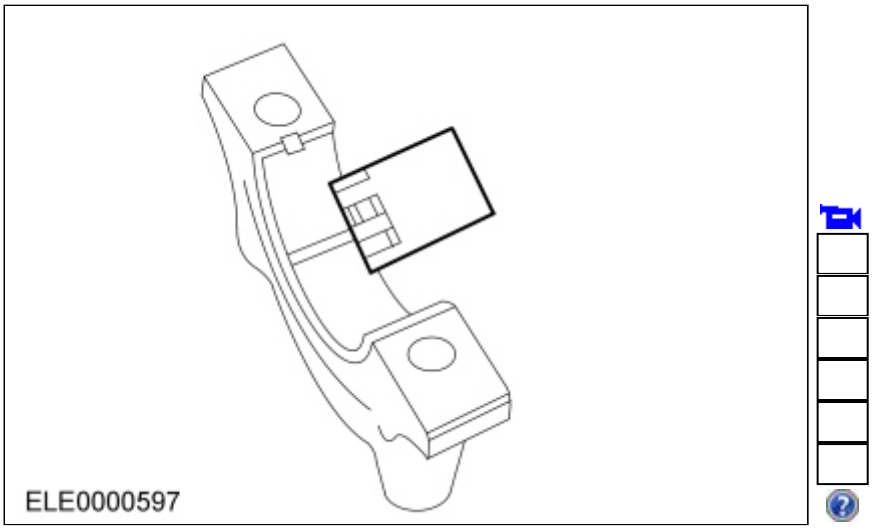
Camshaft Bearing Journal Clearance

1. **NOTE:** *Make sure that the following stages are followed exactly. The tappets or followers must be removed to carry out this measurement.*

   NOTE: *Make sure that the camshaft is to specification.*

   NOTE: *The bearing caps and journals should be free from engine oil and dirt.*

   Position on a width of plastigage on the bearing cap.
   - Insert the camshaft, without lubrication, into the cylinder head.
   - Position a plastigage strip, which should be equal to the width of the bearing cap, on the bearing journal.

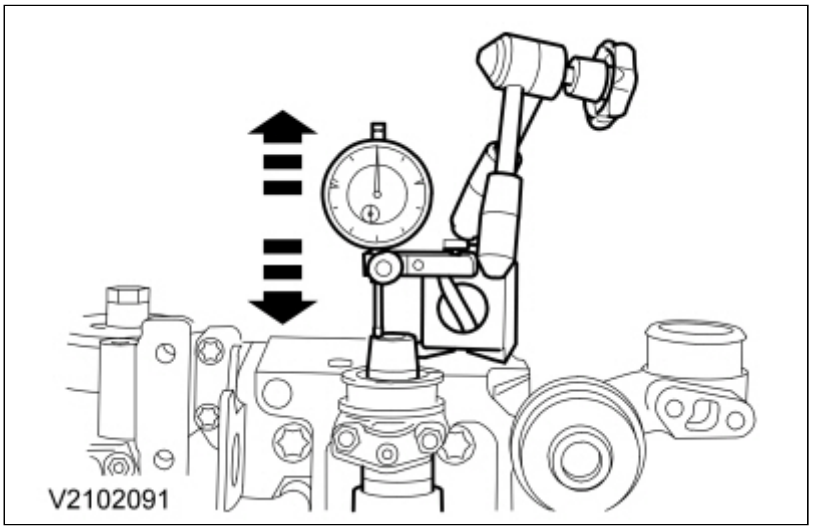


2. Following the tightening specification, install the camshaft bearing caps. Refer to the corresponding Section 303-01.

3. **NOTE:** *Do not strike the bearing caps.*

   Remove the camshaft bearing caps, refer to the corresponding Section 303-01.

4. Using the Plastigage, read off the measurement.
   - Compare the width of plastigage with the plastigage scale.
   - The value that is read off is the bearing clearance.



Copyright © 2016 Ford Motor Company

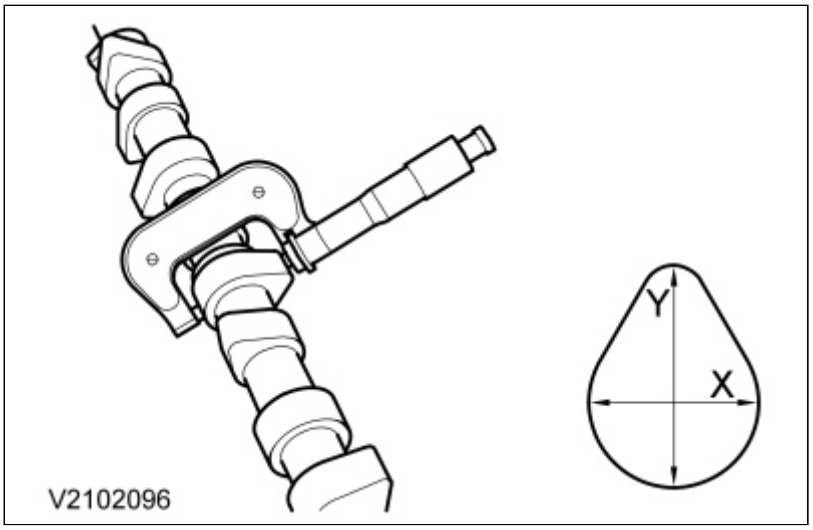
Camshaft End Play

1. **NOTE:** *Make sure that the camshaft is to specification.*

   Using a Dial Indicator Gauge, measure the end play.
   - Slide the camshaft in both directions. Read and note the maximum and minimum values on the Dial Indicator Gauge.
     - End play = maximum value minus minimum value
   - If the measurement is out of specification, install new components.

Copyright © 2016 Ford Motor Company

Camshaft Surface Inspection



1. Inspect the camshaft lobes for pitting or damage in the active area. Minor pitting is acceptable outside the active area.

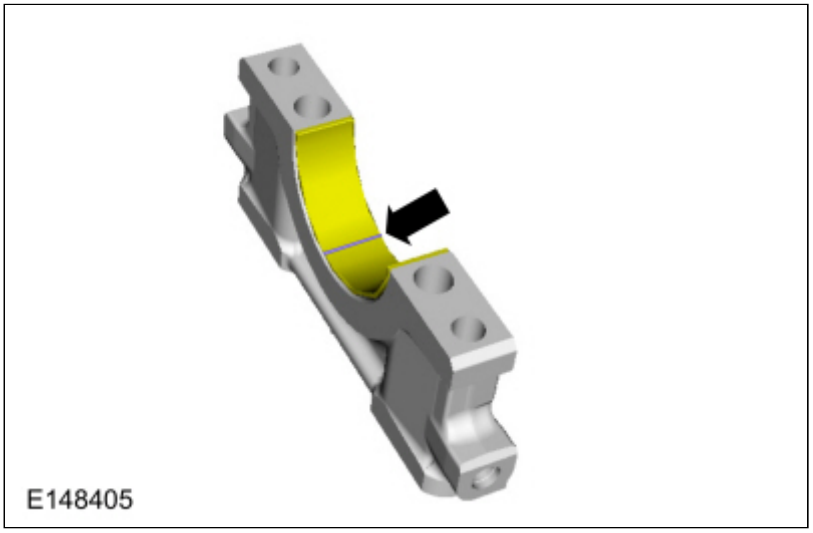
Copyright © 2016 Ford Motor Company

Camshaft Lobe Lift

1. Determine the cam lift.
    - Using a micrometer measure the cam in two directions.
    - The difference between the two measurements is the cam lift.

Copyright © 2016 Ford Motor Company

Crankshaft Main Bearing Journal Clearance

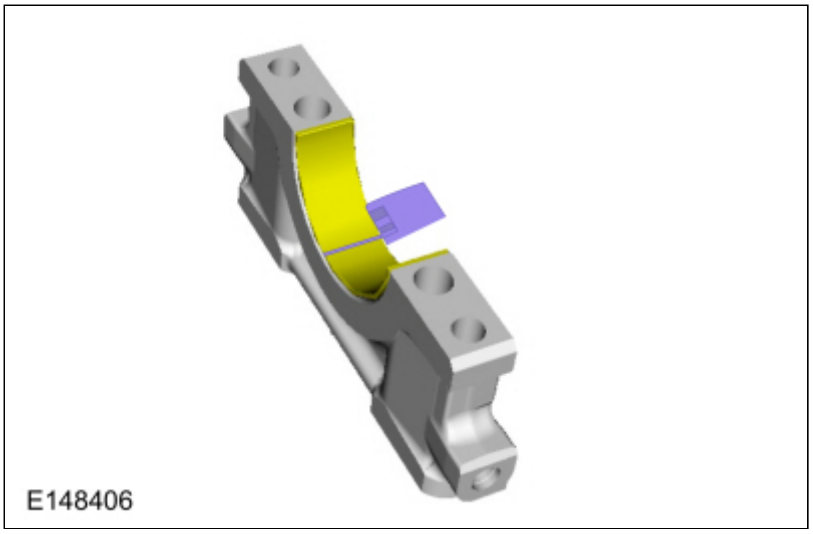


Check

NOTE: *Refer to the appropriate Section 303-01 for the specification.*

1. **NOTE:** *Crankshaft main bearing journals must be within specifications before checking journal clearance.*

   Remove the crankshaft main bearing cap and crankshaft main bearing.

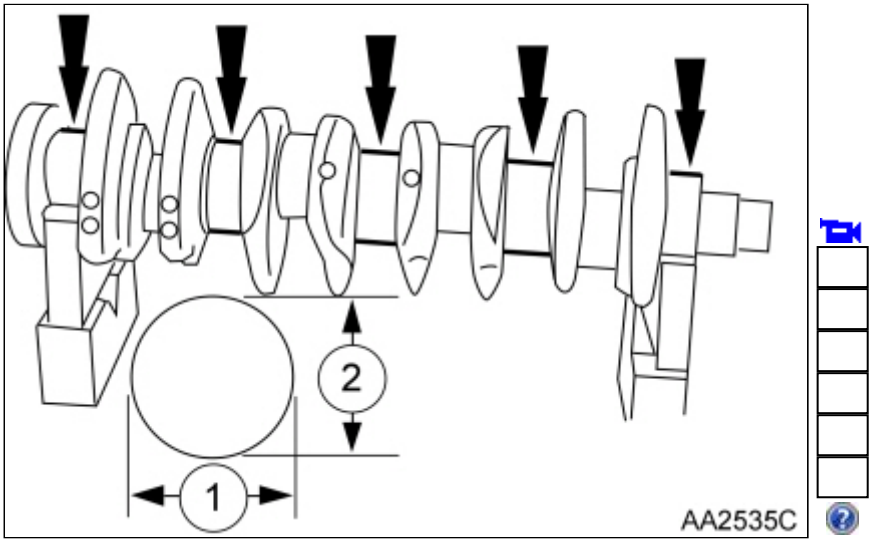


2. Position a piece of Plastigage across the crankshaft main bearing surface.

3. **NOTE:** *Do not turn the crankshaft while carrying out this procedure.*

   Install and tighten to specifications, then remove the crankshaft main bearing cap.

4. Measure the Plastigage to get the crankshaft main bearing clearance. The Plastigage should be smooth and flat. A changing width indicates a tapered or damaged crankshaft or crankshaft bearing.



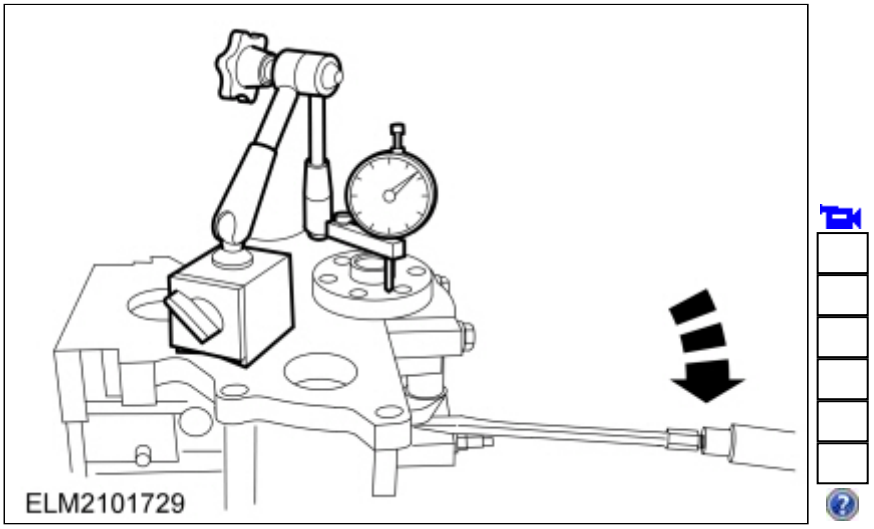
Copyright © 2016 Ford Motor Company

Crankshaft Main Bearing Journal Diameter

General Equipment

Micrometer

1. Measure the diameter of the main bearing journals and the big-end bearing journals.
    - Repeat the measurement with the micrometer offset by 90°, in order to determine any eccentricity which may be present.
    - Measure the journal at two different positions to determine any conicity which may be present.



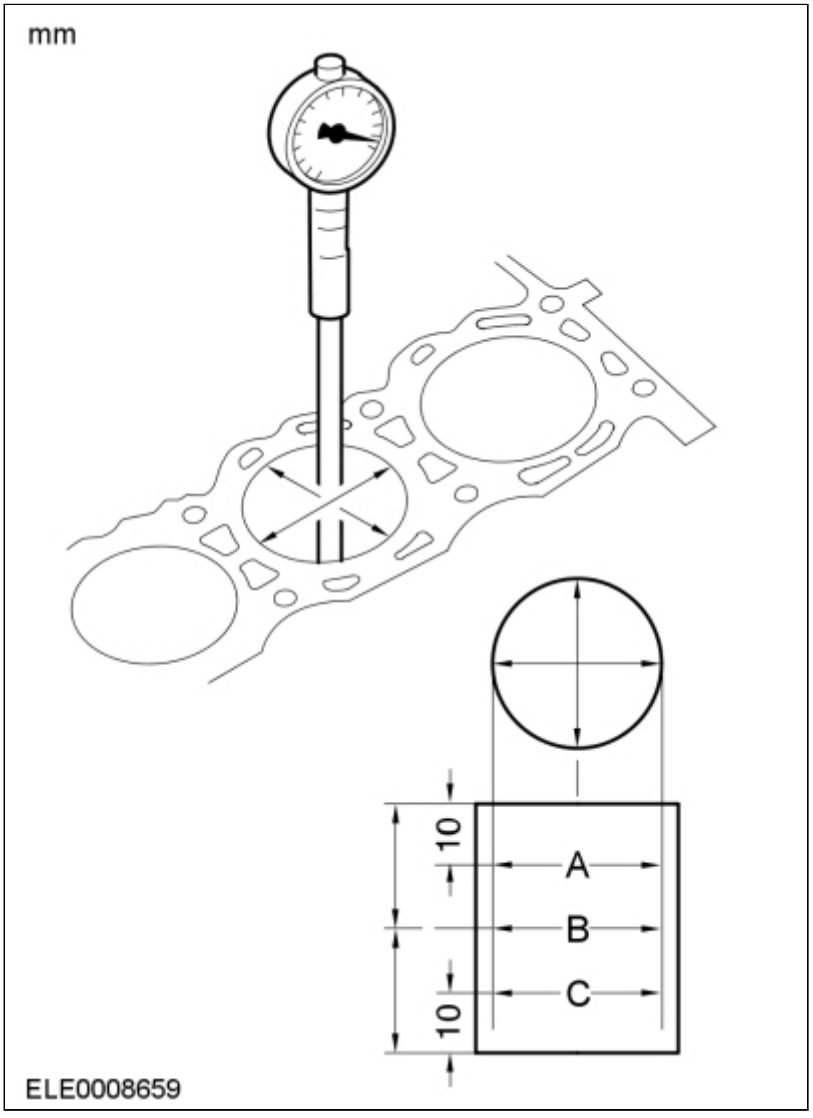
Copyright © 2016 Ford Motor Company

Crankshaft End Play

General Equipment

Dial indicator
Dial indicator fixture

1. Determine the end float
   - Place on the dial indicator and bracket .
   - Determine the end float by raising the crankshaft with the aid of a screwdriver.
   - If necessary, correct the end float by using new thrust half washers.

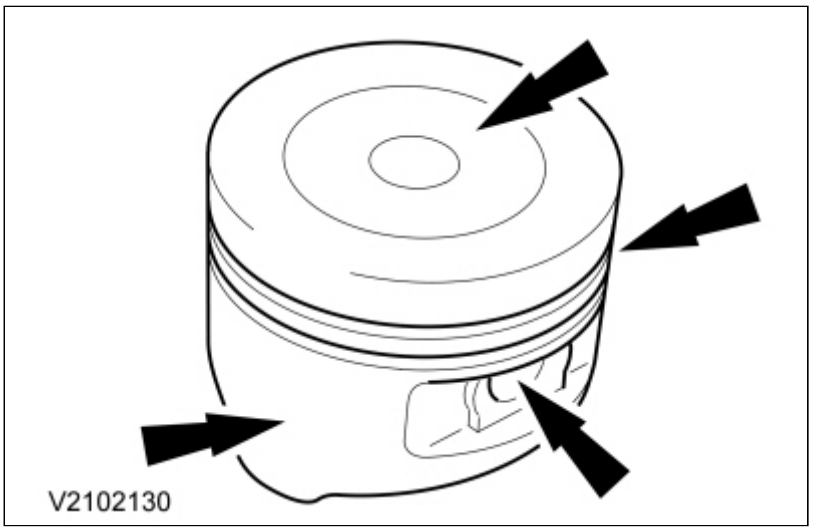


Copyright © 2016 Ford Motor Company

Cylinder Bore Taper

1. **NOTE:** *The main bearing caps or lower crankcase must be in place and tightened to the specified torque; however, the bearing shells should not be installed.*

   Measure the cylinder bore with an internal micrometer.
   - Carry out the measurements in different directions and at different heights to determine if there is any out-of-roundness or tapering.
   - If the measurement is out of the specified range, install a new block or hone out the cylinder block (if aplicable/allowed).

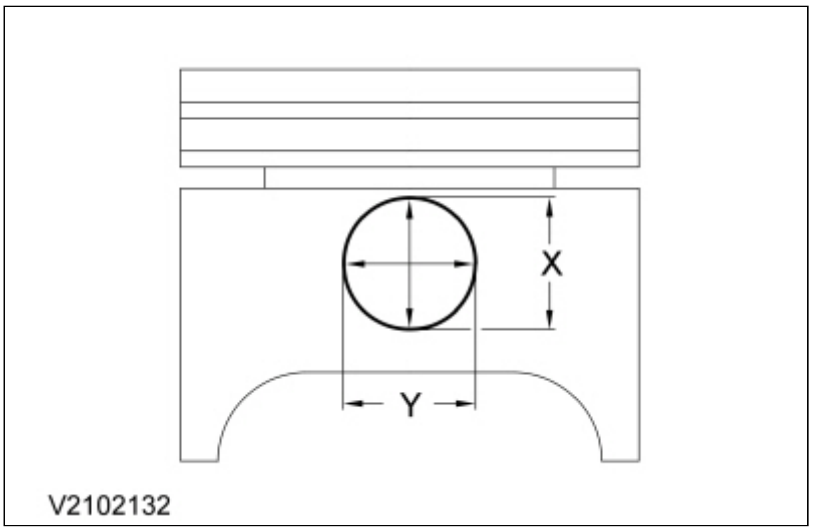


Copyright © 2016 Ford Motor Company

Piston Inspection

1. **NOTICE: Do not use any aggressive cleaning fluid or a wire brush to clean the piston.**

   Carry out a visual inspection.
   - Clean the piston skirt, pin bush, ring grooves and crown and check for wear or cracks.
   - If there are signs of wear on the piston skirt, check whether the connecting rod is twisted or bent.



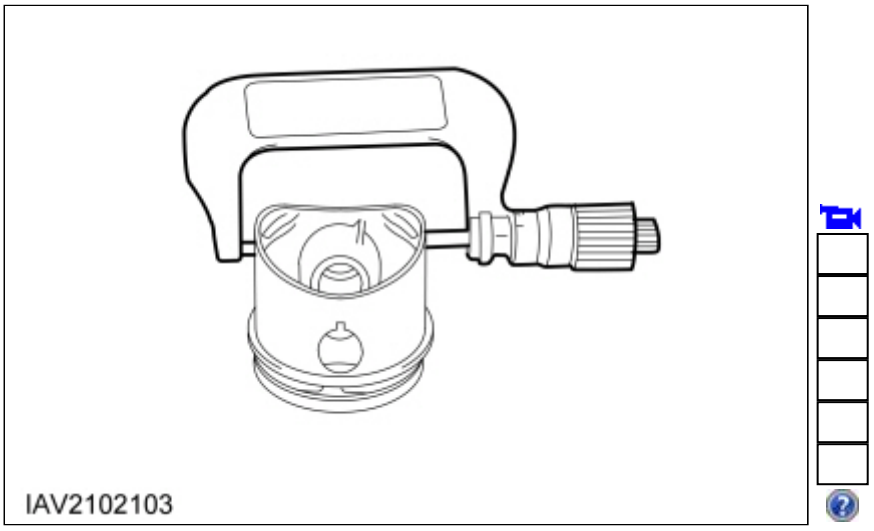
Copyright © 2016 Ford Motor Company

Piston Pin to Bore Diameter

1. **NOTE:** *The piston and piston pin form a matched pair. Do not mix up the components.*

   Measure the diameter of the piston pin bore.
   - Measure the diameter in two directions.
   - If the values are not to specification, install both a new piston and a new piston pin.

Copyright © 2016 Ford Motor Company



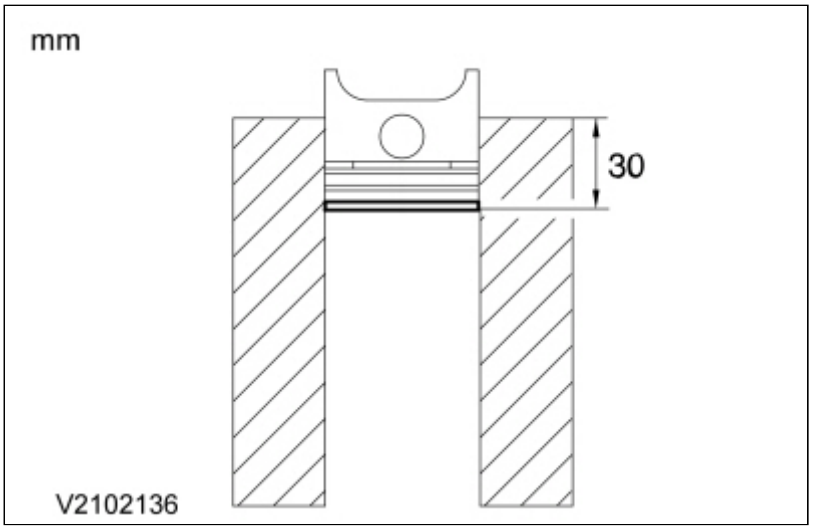
Piston Diameter

General Equipment

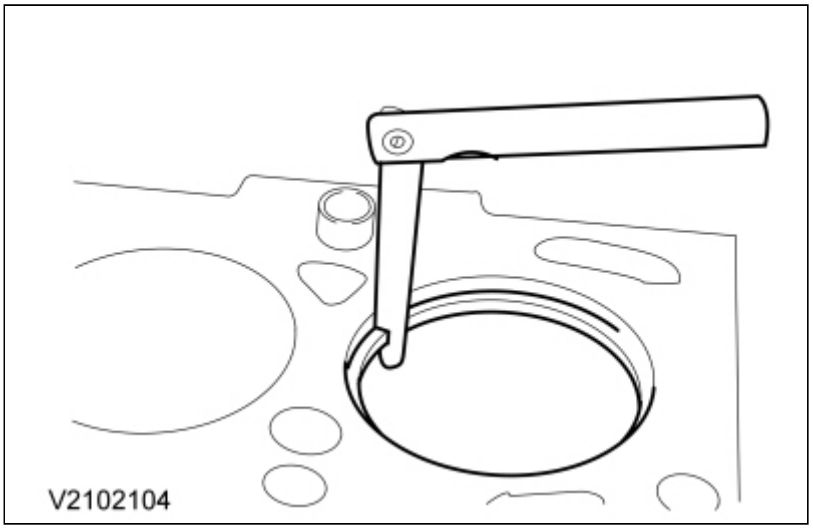
Micrometer

1. **NOTE:** *Mark the piston to make sure the piston is installed correctly.*

   Using a Micrometer measure the piston diameter.



Copyright © 2016 Ford Motor Company



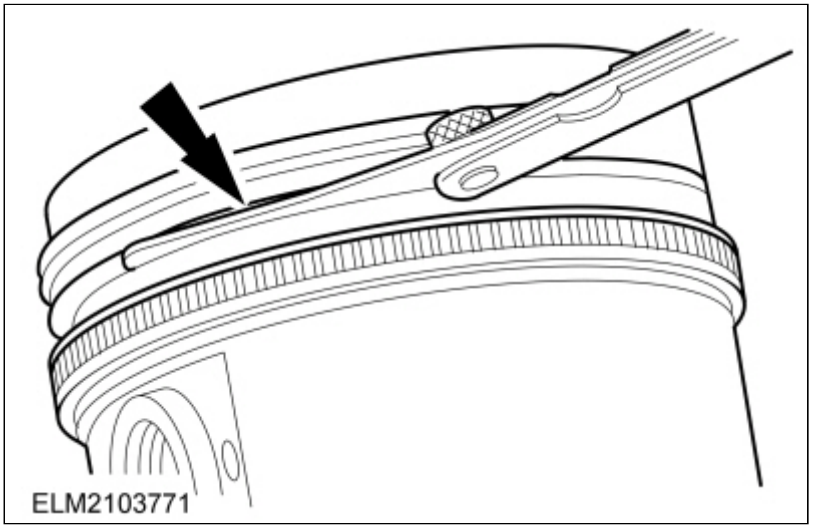
Piston Ring End Gap

1. **NOTICE: Do not mix up the piston rings. Install the piston rings in the same position and location.**

   Take the piston ring and use a piston without rings to push the piston ring about 30 mm into the cylinder bore.

2. Using the Feeler Gauge, measure the piston ring gap.

Copyright © 2016 Ford Motor Company



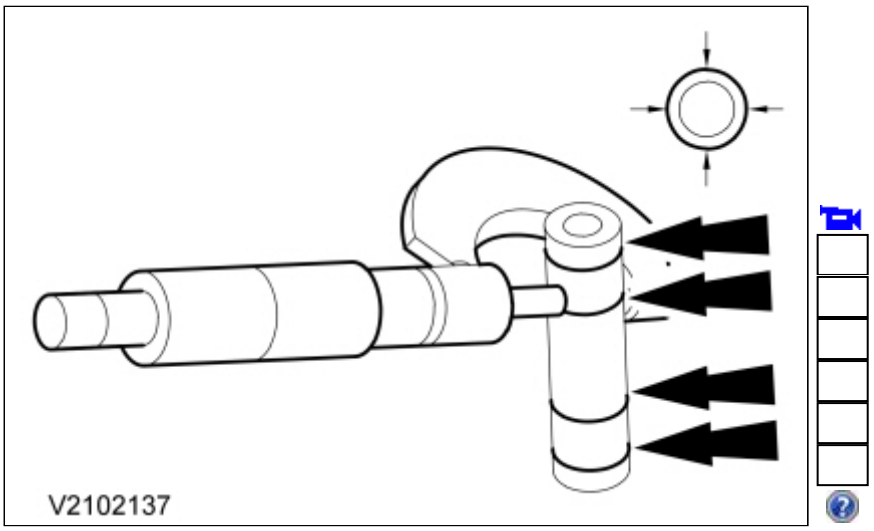
Piston Ring-to-Groove Clearance

General Equipment

Feeler Gauge

1. **NOTE:** *The piston ring must protrude from the piston groove. To determine the piston ring clearance, insert the Feeler Gauge right to the back of the groove, behind the wear ridge.*

   Using the Feeler Gauge , measure the piston ring clearance.



Copyright © 2016 Ford Motor Company

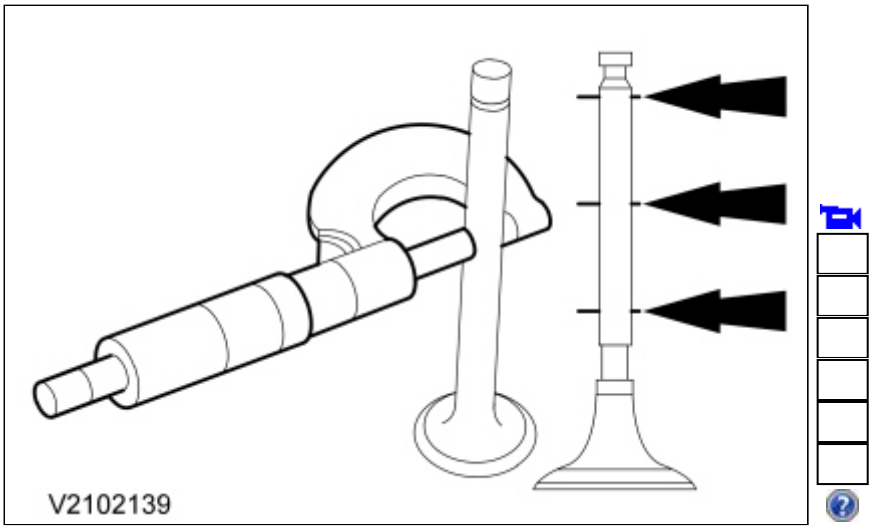
Piston Pin Diameter

1. **NOTE:** *The piston and piston pin are a matched pair. Do not mix up the components.*

   Measure the piston pin diameter.
   - Measure the diameter in two directions.
   - If the values are not to specification, install a new piston and a new piston pin.

Copyright © 2016 Ford Motor Company

Connecting Rod Large End Bore

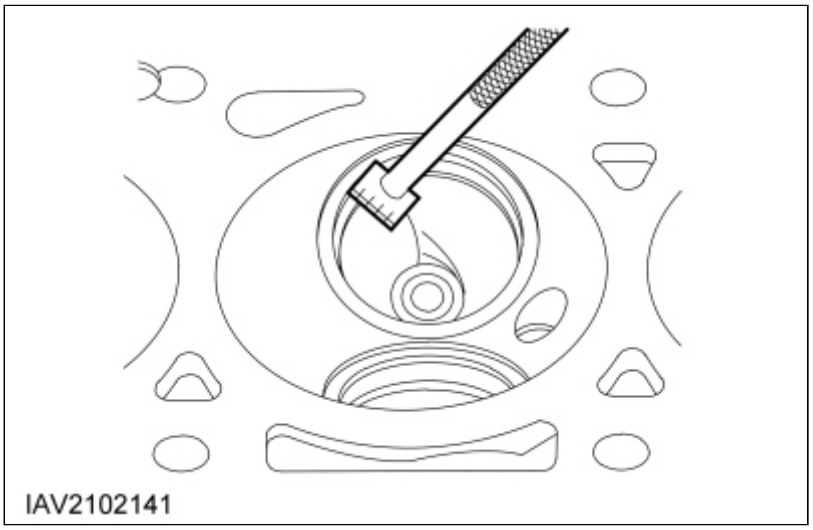


1. Measure the bearing bore in two directions. The difference is the connecting rod bore out-of-round. Verify the out-of-round and the bearing bore is within specification.

Copyright © 2016 Ford Motor Company

Valve Stem Diameter

1. Using a micrometer measure the diameter of the valve stems.
    - If the measurements are not to specification, install a new valve.

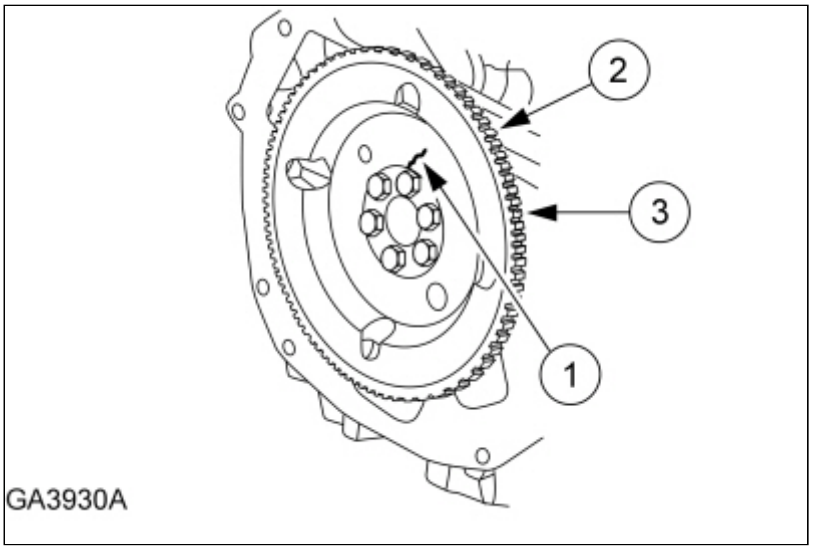


Copyright © 2016 Ford Motor Company

Valve Seat Inspection

General Equipment

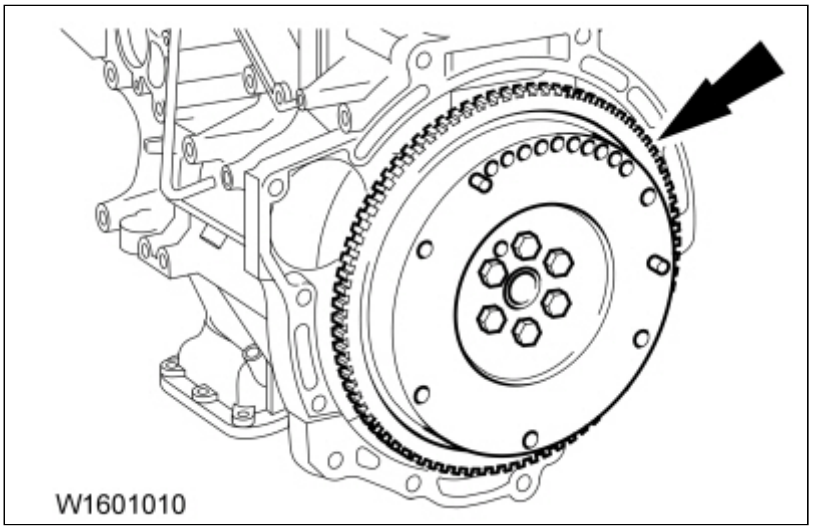
Valve seat width scale



1. Measure the width of the valve seat.
    - Measure the valve seat width using the Valve seat width scale.
    - If the value is not to specification rework the valve seat.

Copyright © 2016 Ford Motor Company

Flywheel Inspection

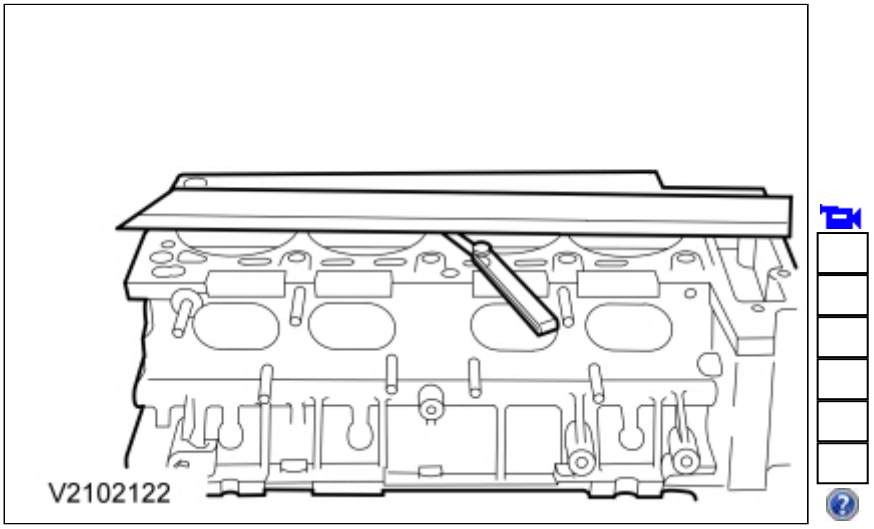


1. Inspect the flywheel. If there is evidence of the following, install a new flywheel.
    1. Cracks.
    2. Worn ring gear teeth.
    3. Chipped or cracked ring gear teeth.

Copyright © 2016 Ford Motor Company

Flywheel Clutch Surface Inspection

1. Check the flywheel for:
    - burning
    - grooves
    - cracks
    - Renew the flywheel if necessary.

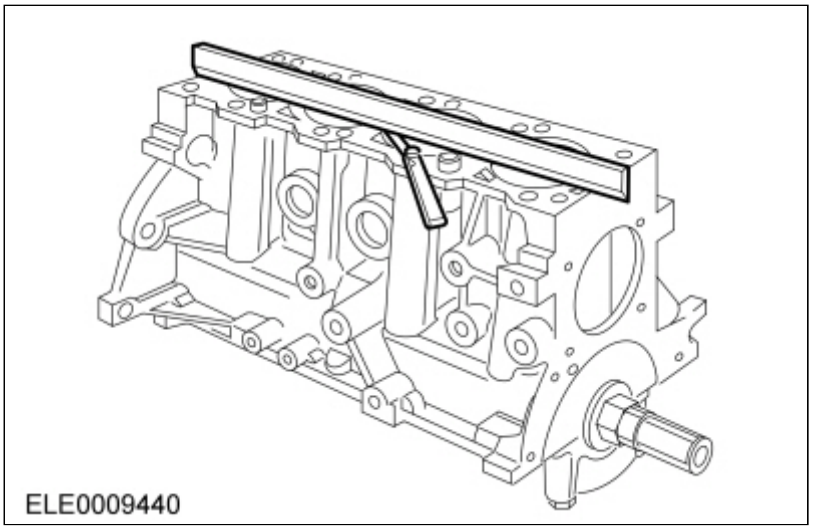


Copyright © 2016 Ford Motor Company

Cylinder Head Distortion

General Equipment

Feeler gauge
Straight edge



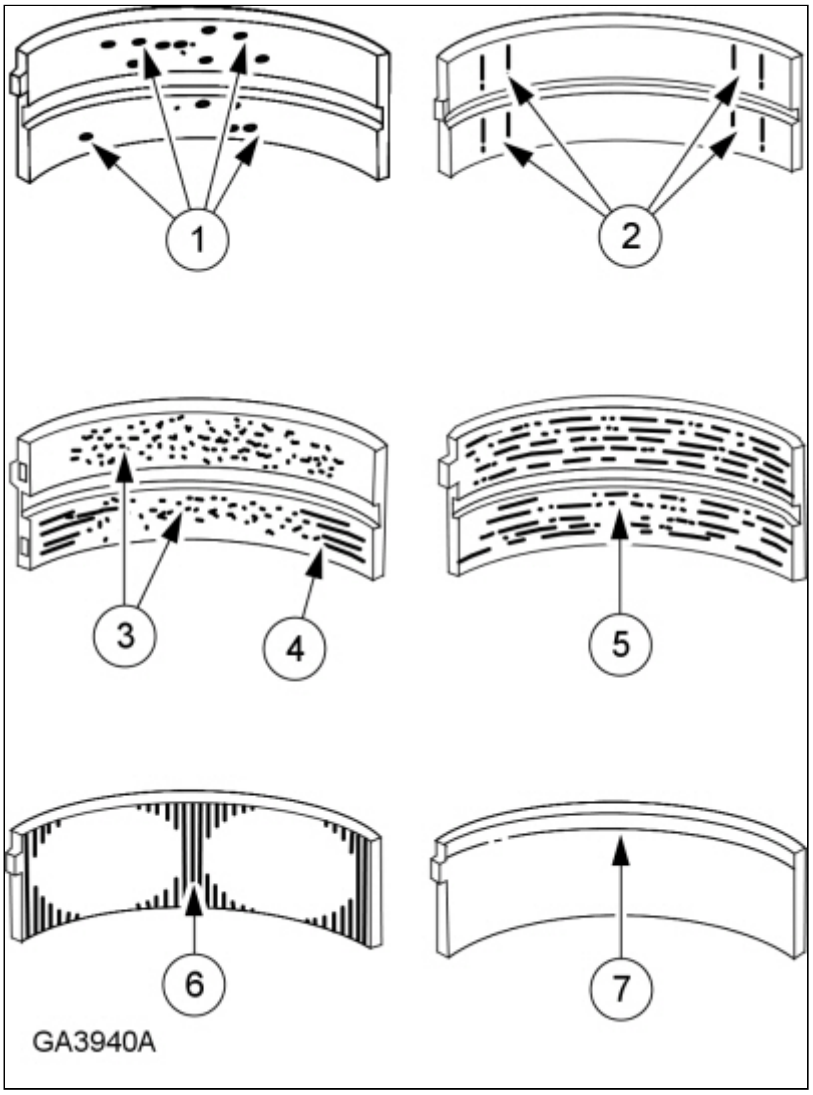
1. Using a straight edge and feeler gauge, measure the cylinder head distortion.
    - Measure the mating face distortion.
    - Refer to Specifications in the appropriate engine section.

Copyright © 2016 Ford Motor Company

Cylinder Block Distortion

1. Using a Straight Edge and a Feeler Gauge, measure the cylinder block/cylinder head distortion.
    - Measure the mating face distortion.
    - If the value is not to specification rework the mating face (if allowed).

Copyright © 2016 Ford Motor Company



Exhaust Manifold Cleaning and Inspection

1. Inspect the cylinder head joining flanges of the exhaust manifold for evidence of exhaust gas leaks.
2. Inspect the exhaust manifold for cracks, damaged gasket surfaces, or other damage that would make it unfit for further use.

Copyright © 2016 Ford Motor Company

Bearing Inspection

1. Inspect bearings for the following defects.
    1. Cratering - fatigue failure
    2. Spot polishing - incorrect seating.
    3. Imbedded dirt engine oil.
    4. Scratching - dirty engine oil.
    5. Base exposed - poor lubrication.
    6. Both edges worn - journal damaged.
    7. One edge worn - journal tapered or bearing not seated.

Specifications

Engine data

Description	Specification
Engine code	ENEV
Firing order	1-3-4-2
Emission level	Stage II, Stage IV
Displacement	2.5L
No. of cylinders	4
Bore	89 mm
Stroke	100 mm
Cubic capacity	2488.5 cm^3
Compression ratio	9.7 : 1
Power output at 5500 rpm	122 kW (165 PS)
Maximum torque at 1500 rpm	213 Nm
Maximum engine speed (intermittent)	6500 rpm
Maximum engine speed (continuous)	6000 rpm
Idle speed	700 rpm
Number of main bearings	5
Camshaft drive	Chain
Oil pressure (hot @ 2,000 rpm)	200-268 kPa (29-39 psi)
Engine weight (without accessory drive components and flexplate or flywheel)	203.8 kg

Engine oil capacity

Description	Liters
Initial fill including oil filter	6.7
Service fill including oil filter	6.4
Service fill without oil filter	6

Engine oil

Viscosity	Specification

Cylinder block

Description	mm
Cylinder bore diameter	89.0 - 89.03 mm
Cylinder bore maximum out-of-round	0.008 mm
Main bearing bore diameter	57.018 - 57.040 mm
Head gasket surface flatness	0.1 mm/general and 0.05 mm/200 x 200

Piston

Description	mm
Diameter (1)	88.965 - 88.975 mm
Diameter (2)	88.975 - 88.985 mm
Diameter (3)	88.985 - 88.995 mm
Piston-to-bore clearance	0.025 - 0.045 mm
Ring groove width - top	1.203 - 1.205 mm
Ring groove width - 2nd	1.202 - 1.204 mm
Ring groove width - oil	2.501 - 2.503 mm
Piston skirt coating thickness	0.008 - 0.016 mm

Piston pin

Description	mm
Diameter	19.995 - 20.0 mm
Length	54.7 - 55.0 mm

Valve

Description	mm and degree
Valve head diameter - intake	34.85 - 35.15 mm
Valve head diameter - exhaust	29.85 - 30.15 mm
Valve stem diameter - intake	5.470 - 5.485 mm

Valve stem diameter - exhaust	5.465 - 5.480 mm
Valve stem-to-guide clearance - intake	0.0027 mm
Valve stem-to-guide clearance - exhaust	0.0029 mm
Valve face runout	0.05 mm
Valve face angle	45 degrees

Valve spring - compression pressure

Description	kg and mm
Intake and exhaust (installed)	17.5 kg
Intake (valve open) 8.9 mm of lift	44 kg
Exhaust (valve open) 7.4 mm of lift	42 kg
Free length	44.92 mm
Assembled height	37.9 mm

Cylinder head

Description	mm and degree
Cylinder head flatness	0.08 maximum overall, a maximum of 0.05 mm within 150 mm
Valve lift @ zero lash (exhaust)	7.7 mm
Valve lift @ zero lash (intake)	8.8 mm
Valve guide diameter	5.509 - 5.539 mm
Valve seat width - intake/exhaust	0.99 - 1.84 mm
Valve seat angle	45 degrees
Valve seat runout	0.075 mm
Valve lash adjuster bore diameter	31.00 - 31.03 mm
Cam bore diameter	25.015 - 25.040 mm

Crankshaft

Description	mm
Main bearing journal diameter	51.978 - 52.002 mm
Production repair	51.730 - 51.750 mm
Main bearing clearance	0.016 - 0.047 mm
Connecting rod journal diameter	51.978 - 52.002 mm
Production repair	51.730 - 51.750 mm
End play	0.220 - 0.450 mm

Rings

Description	mm
Width - top	1.17 - 1.185 mm
Width - 2nd	1.197 - 1.199 mm
Width - oil	2.38 - 2.45 mm
Ring gap (in bore) - top	0.16 - 0.26 mm
Ring gap (in bore) - 2nd	0.31 - 0.46 mm
Ring gap (in bore) - oil	0.15 - 0.40 mm

Valve tappet

Description	mm
Diameter	30.97 - 30.98 mm
Tappet-to-valve clearance -intake	0.22 - 0.28 mm
Tappet-to-valve clearance -exhaust	0.27 - 0.33 mm
Tappet-to-bore clearance	0.02 - 0.06 mm

Valve tappet for flex fuel vehicles (FFV)

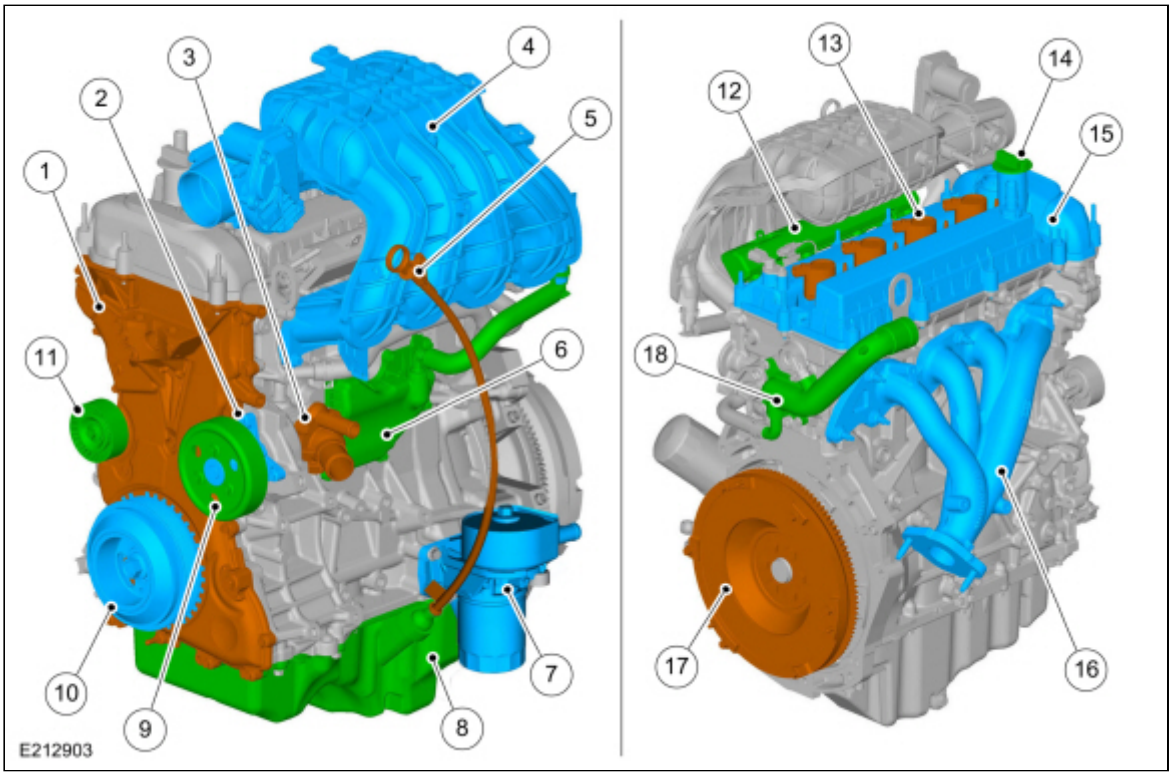
Description	mm
Diameter	30.97 - 30.98 mm
Tappet-to-valve clearance -intake	0.25 - 0.31 mm
Tappet-to-valve clearance -exhaust	0.30 - 0.36 mm
Tappet-to-bore clearance	0.02 - 0.06 mm

Camshaft

Description	mm
Intake camshaft lobe lift	8.24999 mm
Exhaust camshaft lobe lift	7.80007 mm
Runout (1)a	0.03 mm
Thrust clearance	0.09 - 0.24 mm
Journal diameter	24.96 - 24.98 mm
Journal-to-bore clearance	0.035 - 0.080 mm

a - No. 3 journal - supported by No. 1 and No. 5 journals.

Connecting rod



Description	mm

Bearing clearance	0.027 - 0.052 mm
Bearing thickness	1.496 - 1.520 mm
Crank bore diameter	55.025 - 55.045 mm
Pin bore diameter (with bushing inserted)	20.010 - 20.021 mm
Length (center-to-center)	151.8 mm
Side clearance	1.95 - 3.05 mm
Axial clearance	0.14 - 0.36 mm

Variable camshaft timing (VCT)

Item	Description
1	Control unit - variable camshaft timing
2	Camshaft bearing cap
3	VCT oil control solenoid
4	Valve cover
5	Camshaft position sensor

6	Camshaft sensor ring

This system is an electronically controlled camshaft adjuster that allows variable timing for the inlet camshaft.

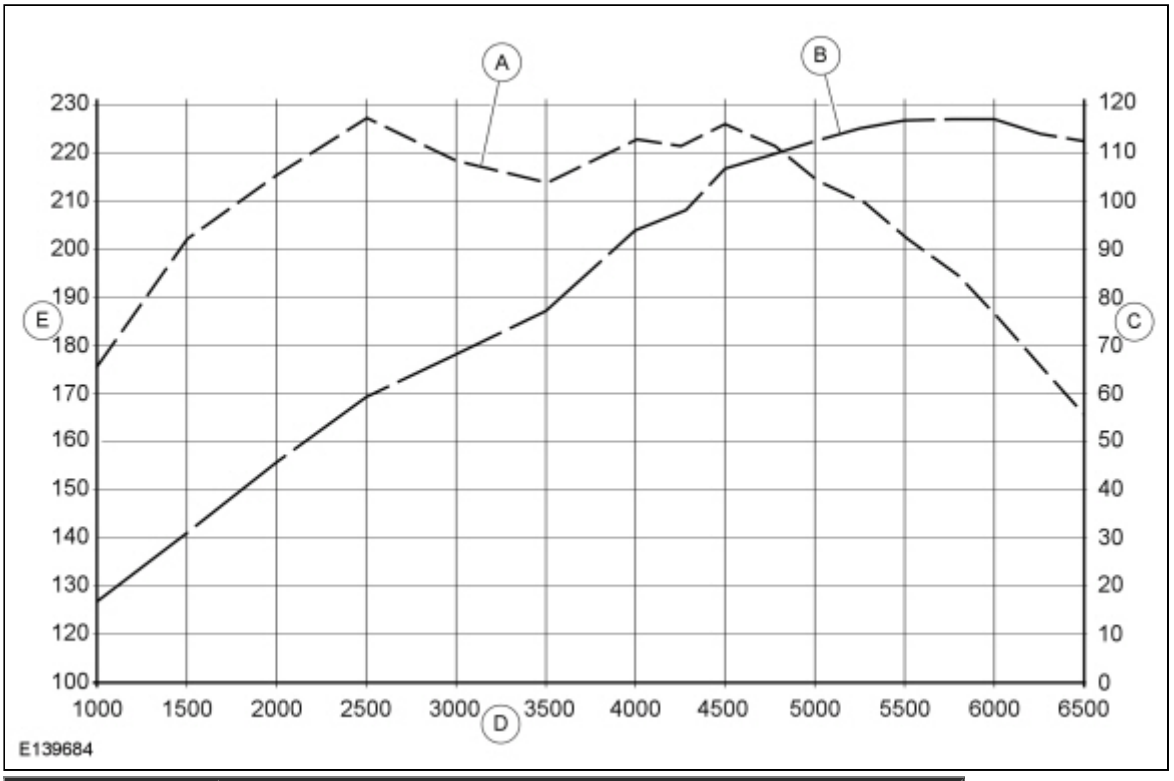
The valves are driven by a timing chain which drives the inlet camshaft timing control unit. This unit drives the associated camshafts. The timing chain is tensioned using a conventional timing chain tensioner.

The inlet camshaft is fitted with a sensor ring for the active camshaft position (CMP) sensor.

This CMP sensor is mounted inside the valve cover.

Timing chain replacement does not require the variable camshaft timing control unit to be disconnected.

To ensure trouble-free operation of the variable camshaft timing system and optimum engine performance, it is essential to adhere precisely to the valve timing adjustment procedure.



A special tool is needed to fix the camshafts in the adjustment position.

Remember that this special tool must not be used to keep the camshaft from rotating when mounting the camshaft sprocket. They may only be kept from rotating by using the hexagon, which has been specially provided for this purpose.

Advantages of variable camshaft timing (VCT).

- Lower fuel consumption due to improved volumetric efficiency
- Enhanced engine power and torque
- Improved idling characteristics

Power and torque curve

Item	Description
A	Torque curve
B	Power curve
C	SAE Power (kW)
D	Engine speed (rpm)
E	SAE torque (Nm)

Service note: (If applicable)

The valve clearance of the engine only needs to be monitored (every 60,000 km) if the engine is converted to operation using alternative fuel such as LPG, CNG or ethanol blends.

Conversion of the engine to operation with alternative fuel requires no modification to the engine as the valve seats are reinforced as standard. All that is required is an adaptation of the fuel system.

Valves and valve seats

The engines for petrol operation and LPG/CNG operation are basically identical. Because LPG/CNG is a dry fuel and combusts at a higher temperature, the valve train is under higher stress. The adaptations described below are therefore necessary.

Because of the higher stress involved in LPG/CNG operation:

- The inlet valves are made of a harder material.
- The inlet and exhaust valve seats are made of a harder material.
- The valve clearances must be checked and corrected if necessary.

Lubrication System

The engine lubrication system operates as follows:

- Oil is drawn into the oil pump through the oil pump screen cover and tube in the sump of the oil pan.
- Oil is pumped through the oil filter on the right front side of the cylinder block.
- Oil enters the main gallery where it is distributed to the crankshaft main journals and to the cylinder head.
- From the main journals, the oil is routed through cross-drilled passages in the crankshaft to lubricate the connecting rod bearings. Controlled leakage through the crankshaft main bearings and connecting rod bearings is slung radially outward to cool and lubricate the cylinder walls as well as the entire connecting rod, piston and piston ring assembly.

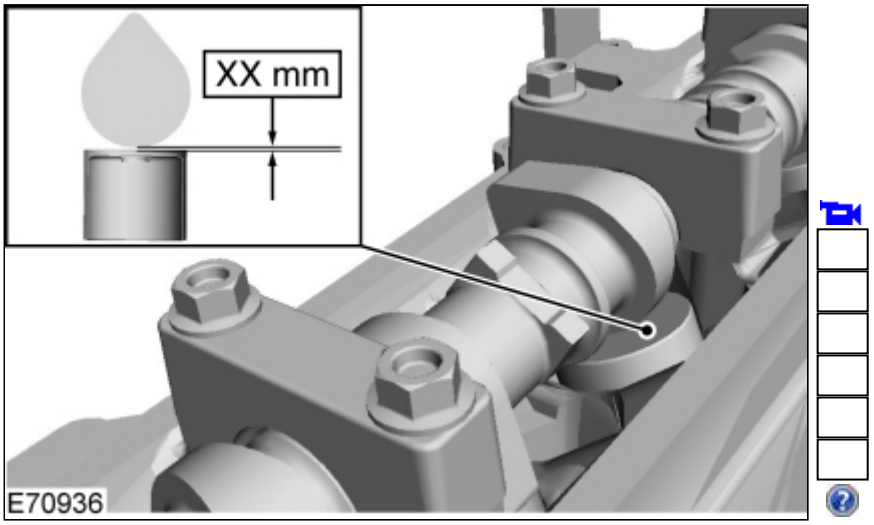
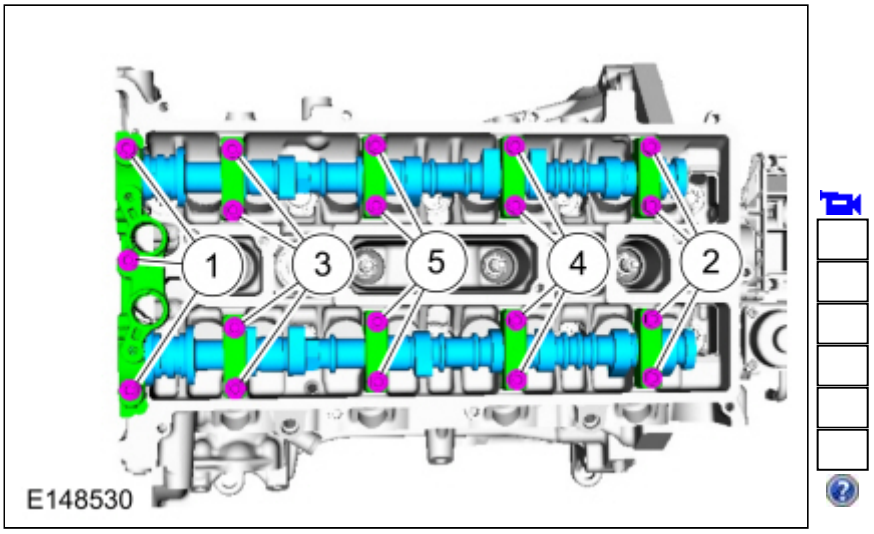
Valve Clearance Adjustment



Materials

Name	Specification
Engine Oil - SAE 5W-30	WSS-M2C913-C

Check



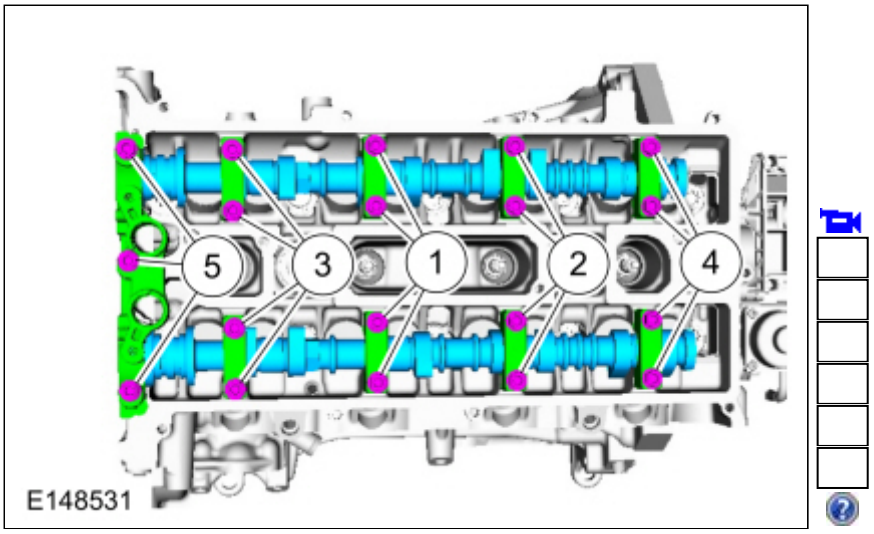
1. Refer to: Valve Cover (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
2. **NOTICE: Only rotate the crankshaft clockwise.**

   Rotate the crankshaft until the cam pair of the cylinder to be adjusted are pointing upwards. Using a suitable feeler gauge, measure the valave clearance.
3. Make a note of each cylinder number with the corresponding valve clearance.
4. Compare the measured valve clearance(s) with the specifications.
   Refer to: Specifications (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Specifications).

Adjustment

1. **NOTE:** *Only carry out the following steps when the valve clearance(s) require adjustment.*
2. Refer to: Timing Chain (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
3. **NOTICE: Note the position of each component before removal.**

- Remove the valve tappet and read the thickness from the underside.
- The number on the valve tappet indicates the thickness of the bottom of the tappet. However, the number only indicates the digits after the decimal point (example: .650 = 3,650).



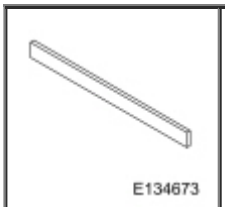
- Calculate the required thickness of the valve tappet with the following formula: **X = S + M - V**
- Required thickness of tappet = **X**
- Thickness of currently fitted tappet = **S**
- Measurement of existing valve clearance (actual value) = **M**
- Desired valve clearance = **V**

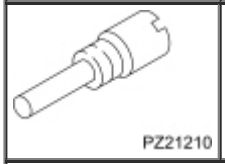
6. Install the correct valve tappet.

7. **NOTICE: Make sure that the camshafts and camshaft bearing caps are installed in their original locations.**

   Coat the camshaft bearing caps with oil.
   Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)

8. Install the camshafts approximately at valve overlap position cylinder No. 4.
   Torque:
   Stage 1: 7 Nm
   Stage 2: 16 Nm





9. Refer to: Timing Chain (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).

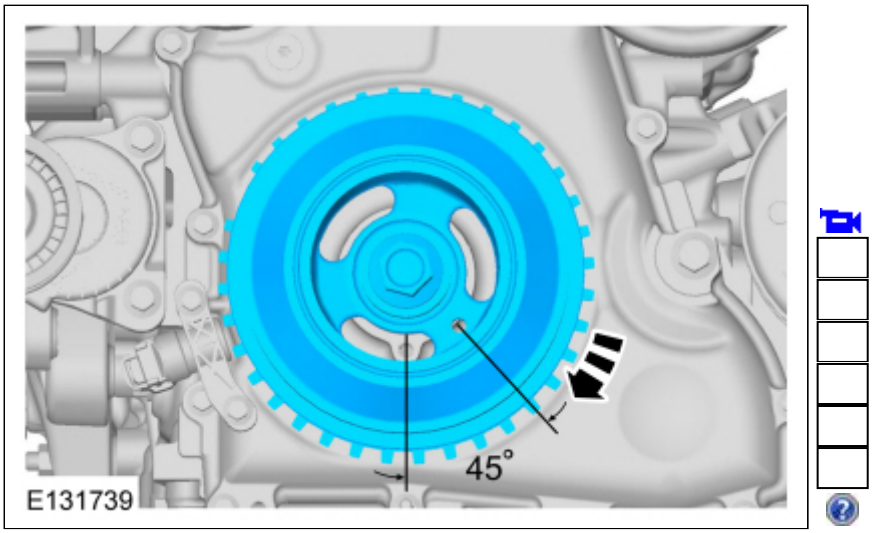
Camshafts

Special Tool(s) / General Equipment

 E134673	303-465 Tool, Camshaft Align Timing
 PZ21210	303-507 Timing Peg, Crankshaft TDC
2 mm Punch	

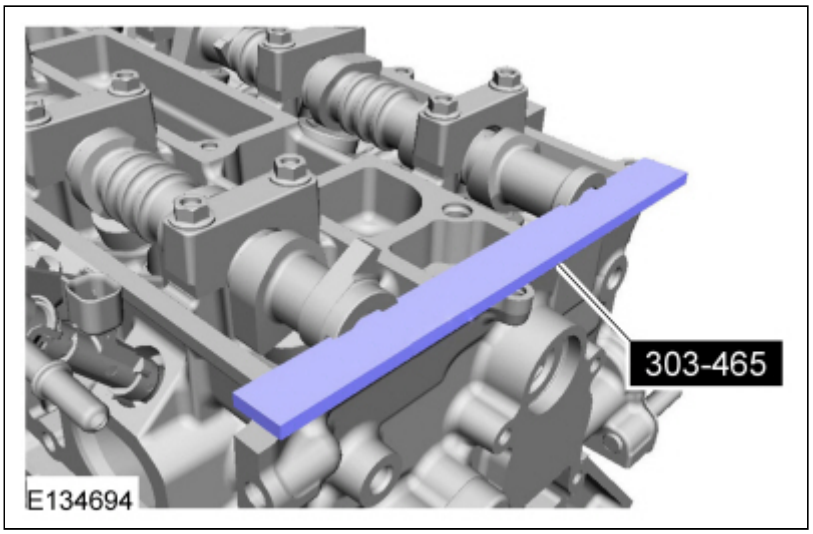
Materials



Name	Specification
Gear/Transmission Fluid - SAE 85W-90	SQ-M2C9002-AA
Thread Locking Adhesive	WSK-M2G349-A7

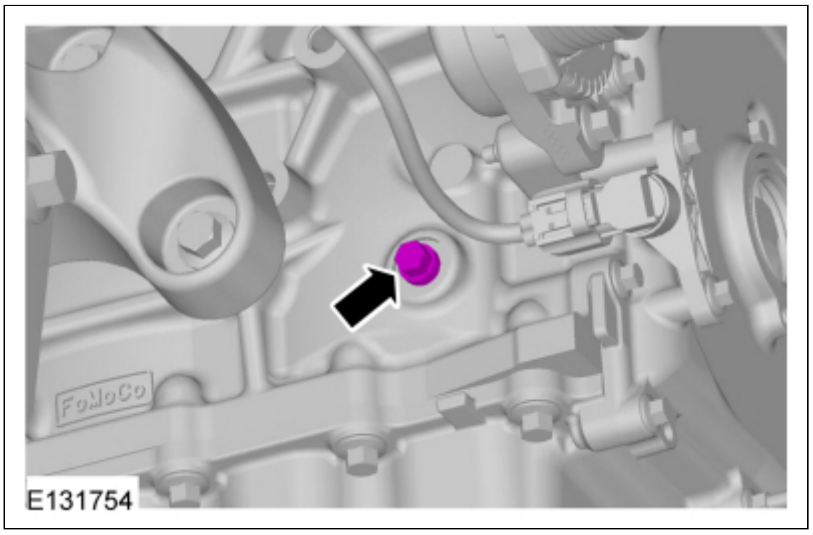
Removal

NOTE: *Removal steps in this procedure may contain installation details.*



1. Refer to: Accessory Drive Belt (303-05A Accessory Drive - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
2. Refer to: Valve Cover (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
3. **NOTICE: Only rotate the crankshaft clockwise.**

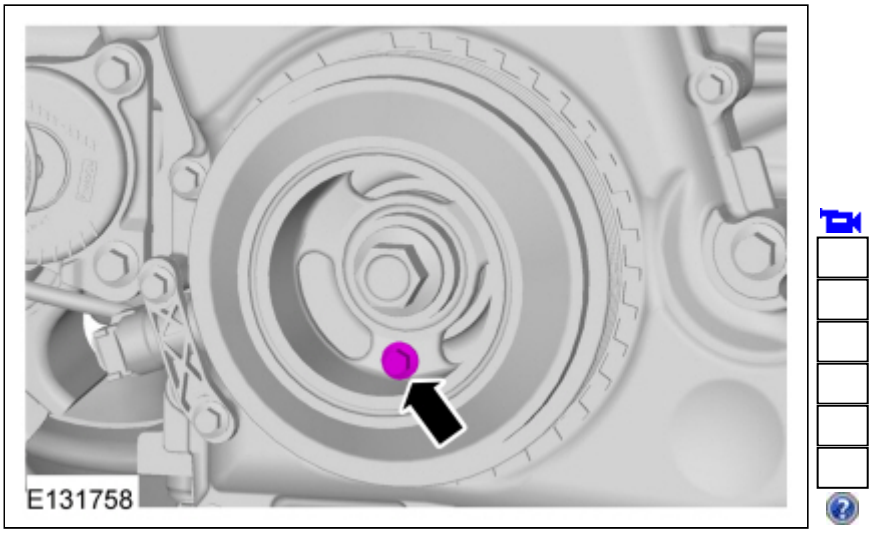
   Turn the crankshaft until no. 1 piston is at about 45° before TDC.



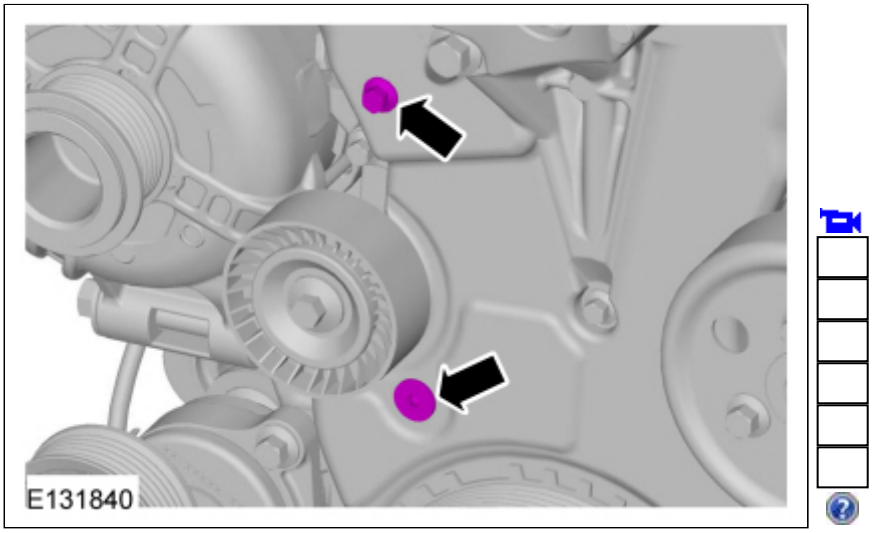
4. **NOTE:** *The camshaft timing slots are offset. If the camshaft alignment plate cannot be installed, rotate the crankshaft one complete revolution clockwise to correctly position the camshafts.*

   Use Special Service Tool: 303-465 Tool, Camshaft Align Timing.

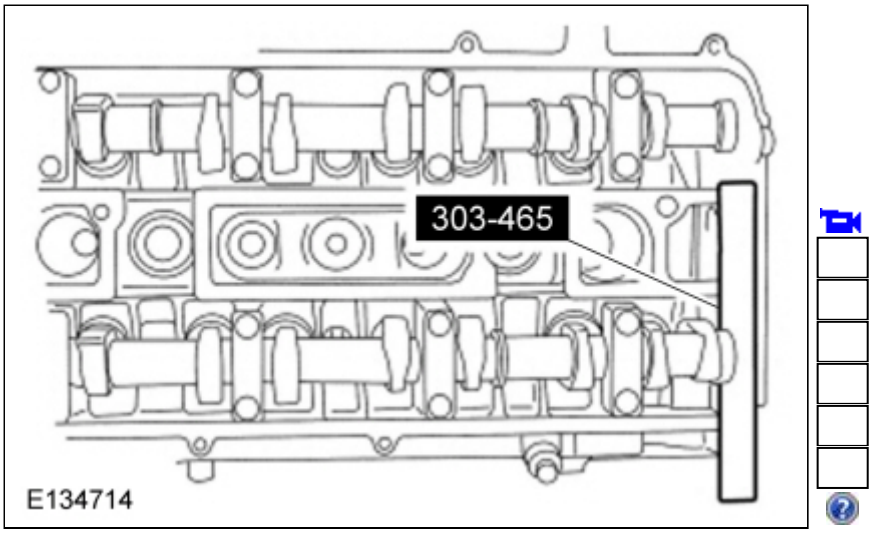
5.



6. Use Special Service Tool: 303-507 Timing Peg, Crankshaft TDC.

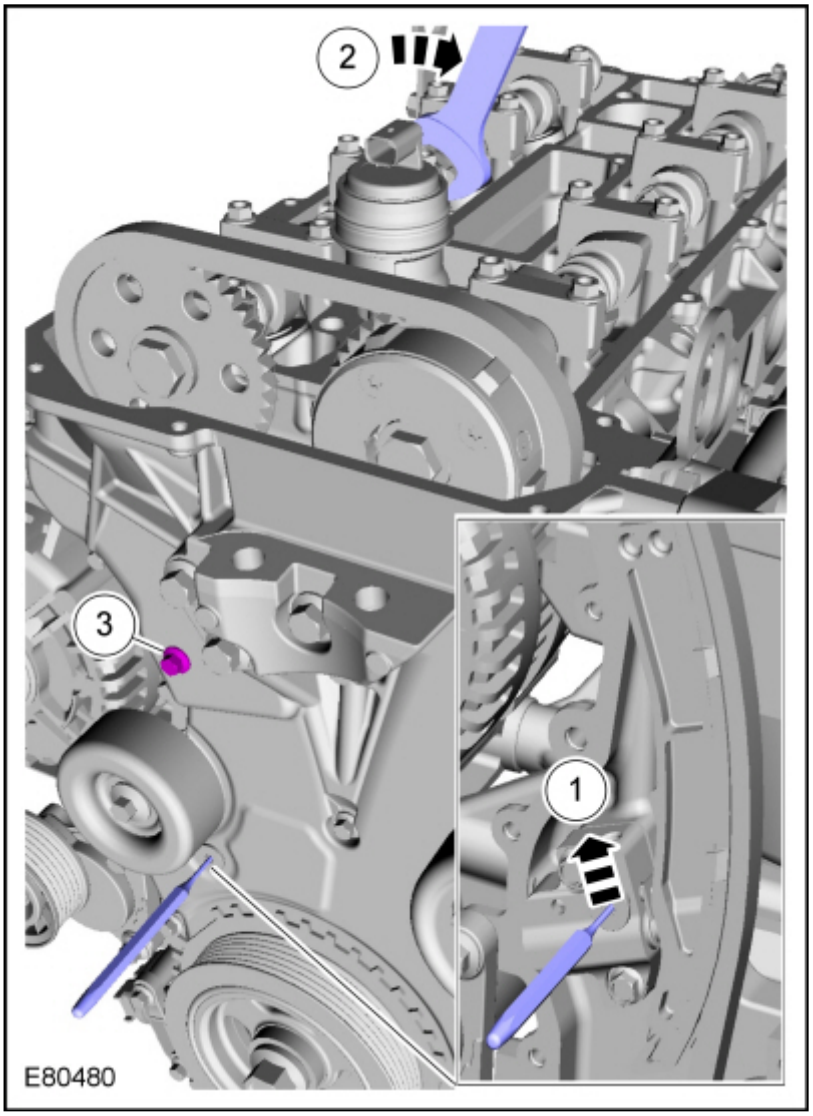


7. **NOTE:** *Only tighten the bolt finger tight at this stage.*

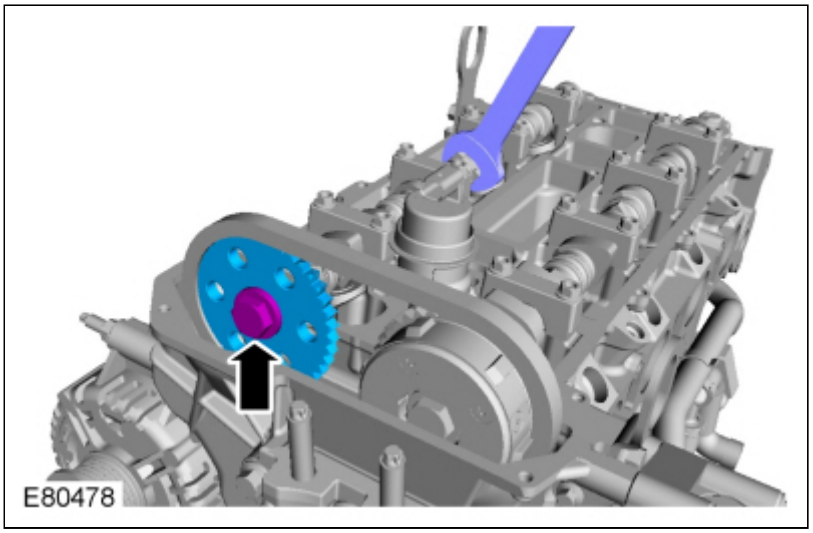


- Bolt M6 x 18 mm

8.

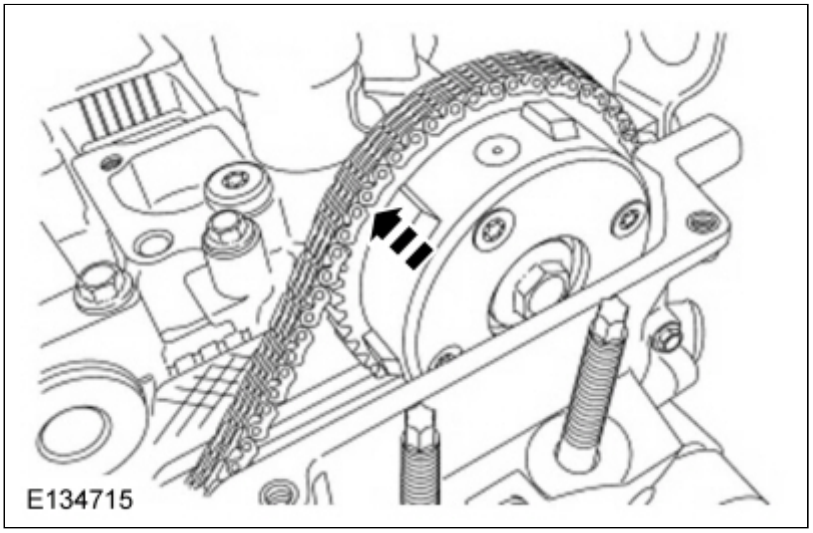


9. Reposition the camshaft alignment plate to the slot on the rear of the intake camshaft only.
   Use Special Service Tool: 303-465 Tool, Camshaft Align Timing.

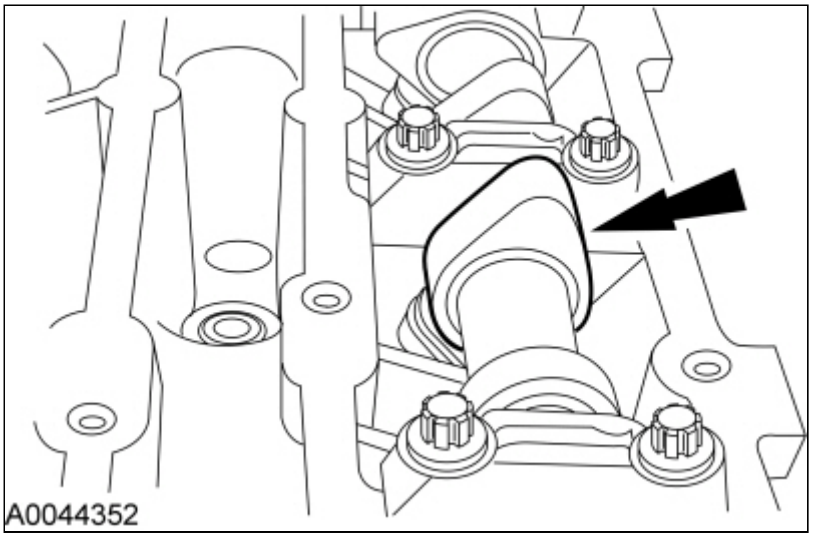


10. **NOTE:** *To hold the tensioner arm in a retracted position and allow enough slack in the timing chain for removal of the exhaust camshaft gear,, install an M6 x 25 mm bolt into the upper front cover timing hole.*

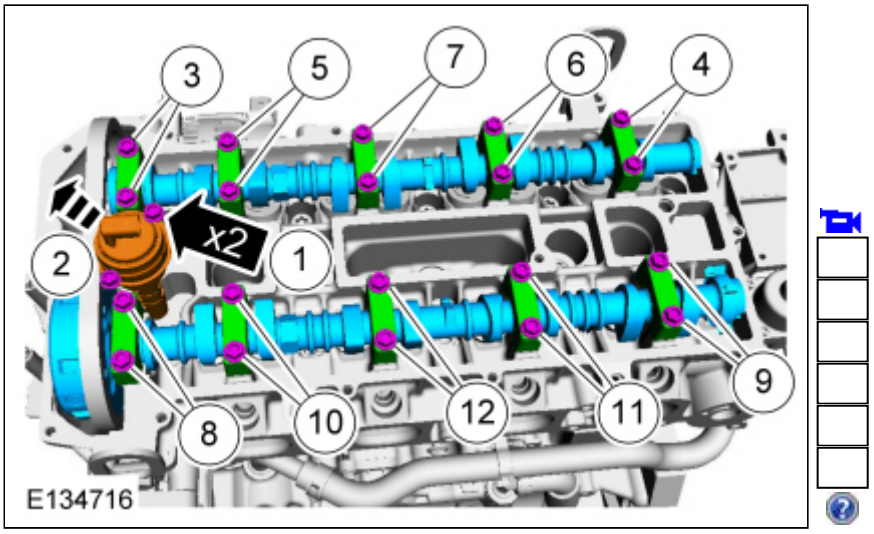
    1. Use the General Equipment: 2 mm Punch
    3. Bolt M6 x 25 mm



11. **NOTICE: Use an open-ended wrench to prevent the component from turning..**



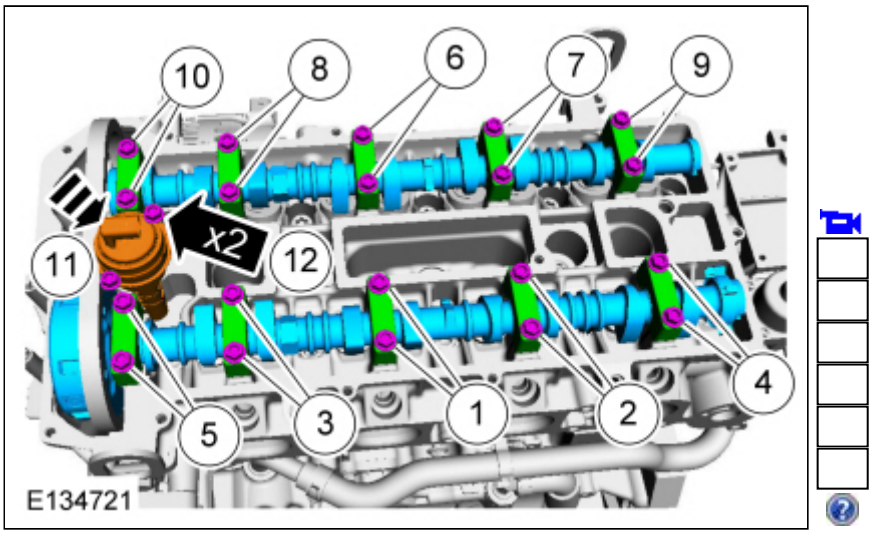
12. Remove Special Service Tool: 303-465 Tool, Camshaft Align Timing.



13. Remove the timing chain from the intake camshaft drive gear.

14. Mark the position of the camshaft lobes on the No. 1 cylinder for installation reference.

15. **NOTE:** *Note the position of the components before removal.*

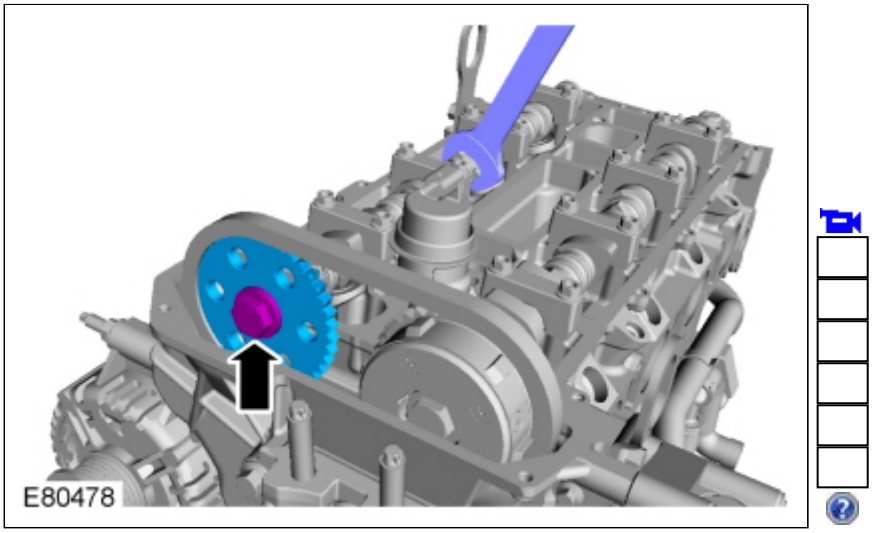


Installation

1. **NOTE:** *Make sure that the components are installed to the position noted before removal.*

   NOTE: *Lubricate the components with clean engine oil..*

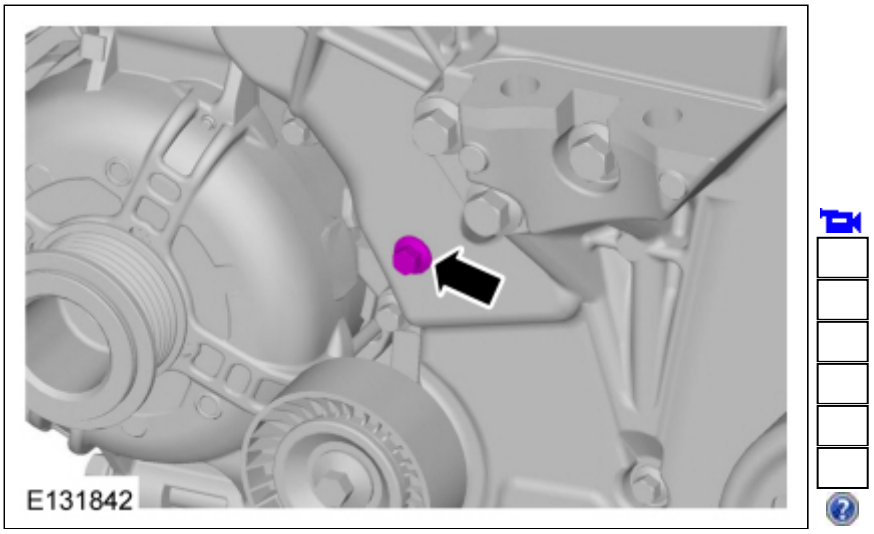
   Coat the camshaft bearing caps with oil and install the camshafts approximately at valve overlap position cylinder No. 4.
   Material: Gear/Transmission Fluid - SAE 85W-90 (SQ-M2C9002-AA)
   Torque:
   Stage 1: 7 Nm
   Stage 2: 16 Nm



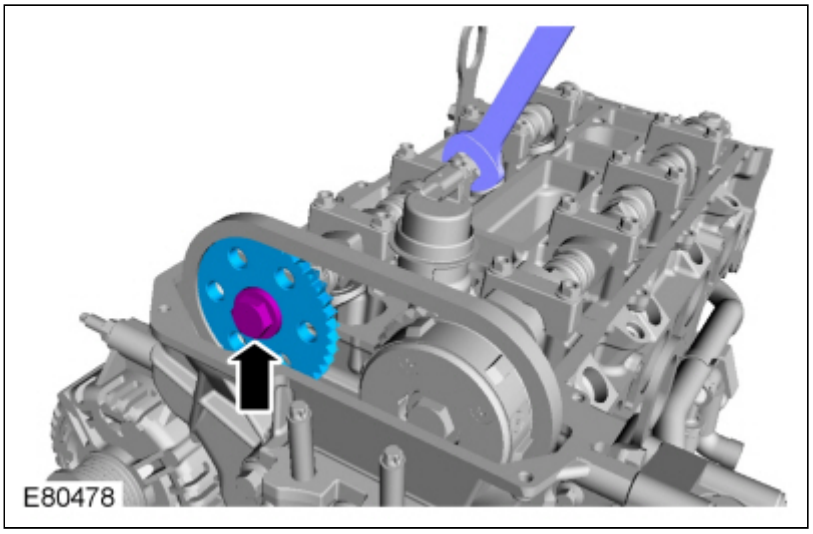
2. **NOTE:** *This step is only necessary when installing a new component.*

   Refer to: Valve Clearance Adjustment (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, General Procedures).

3. Install the timing chain on the intake camshaft drive gear.

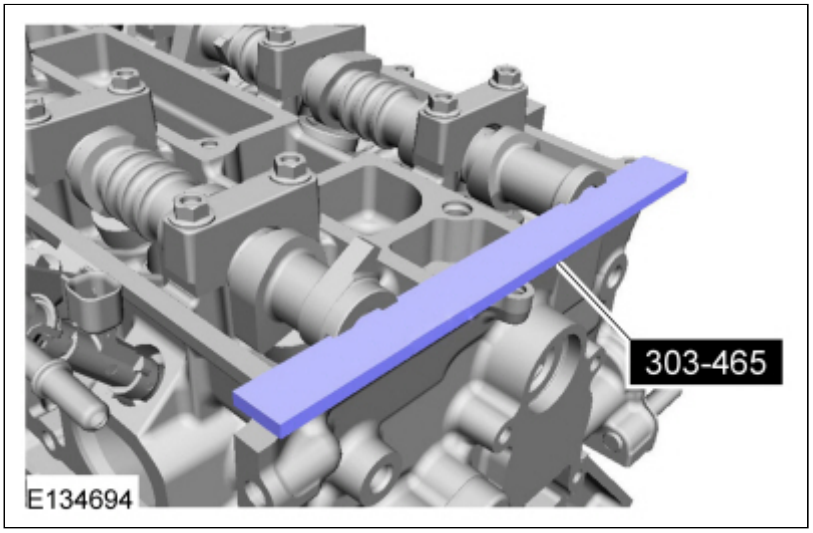


4. **NOTE:** *Only tighten the bolt finger tight at this stage.*



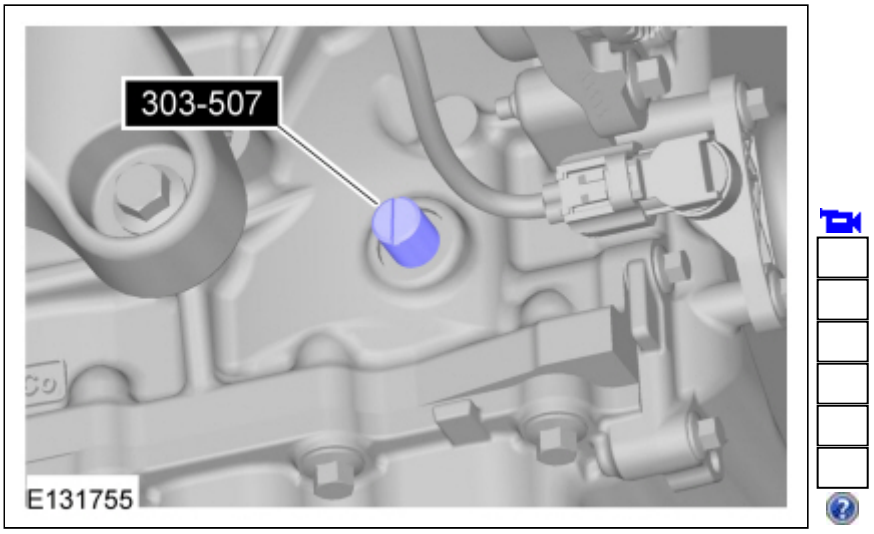
5. **NOTE:** *Releasing the tensioner arm will remove the slack from the timing chain..*

   Remove the bolt M6 x 30mm.



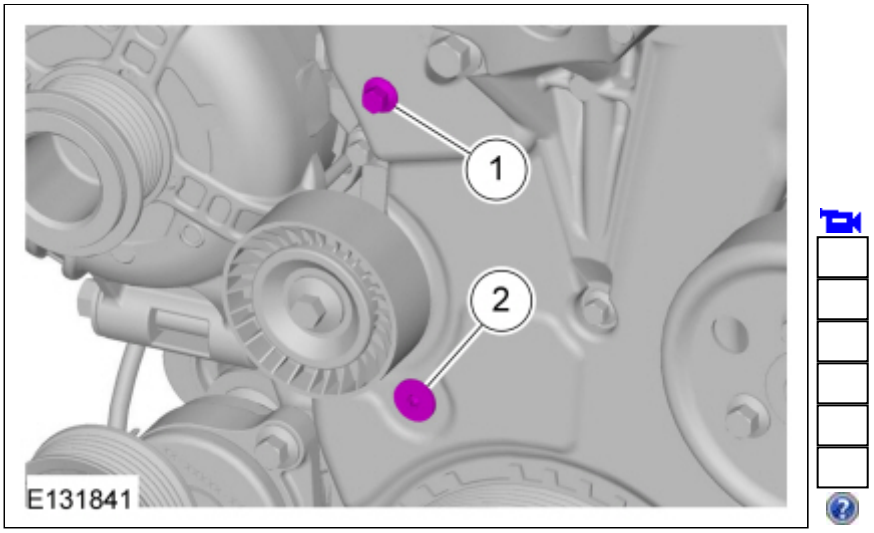
6. **NOTICE: Use an open-ended wrench to prevent the component from turning.**

   Torque: 72 Nm

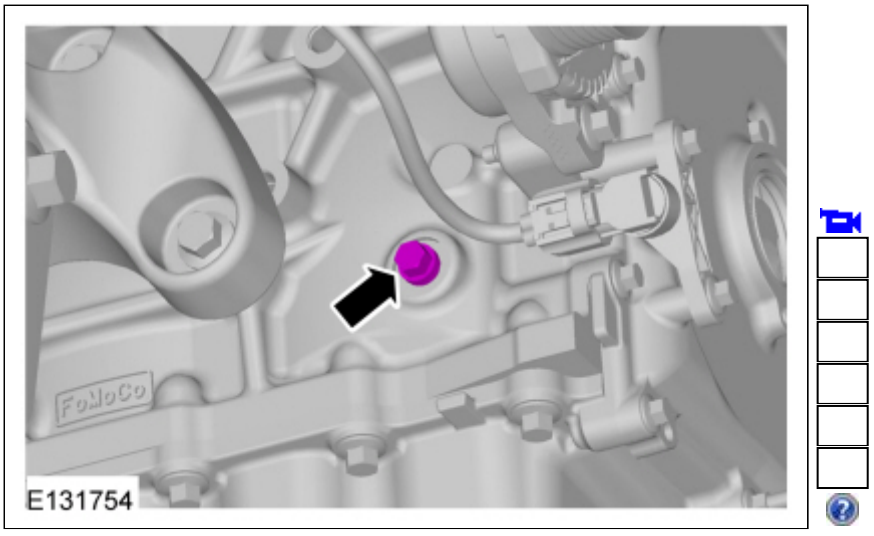


7. Remove Special Service Tool: 303-465 Tool, Camshaft Align Timing.

8. Remove the bolt M6 x 18 mm.



9. Remove Special Service Tool: 303-507 Timing Peg, Crankshaft TDC.



- *Material*: Thread Locking Adhesive (WSK-M2G349-A7)

1. *Torque*: 10 Nm
2. *Torque*: 12 Nm

11. *Torque*: 20 Nm

12. Refer to: Valve Cover (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
13. Refer to: Accessory Drive Belt (303-05A Accessory Drive - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).

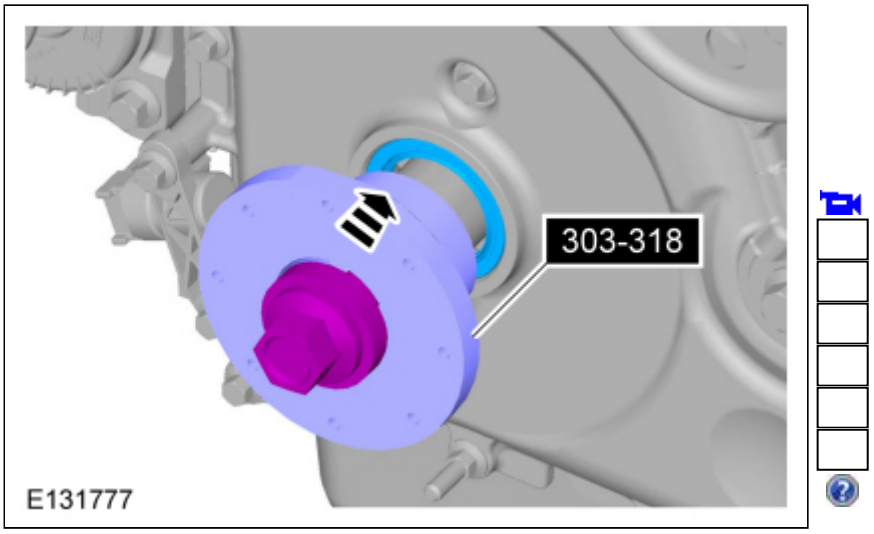
Removal



NOTE: *Removal steps in this procedure may contain installation details.*

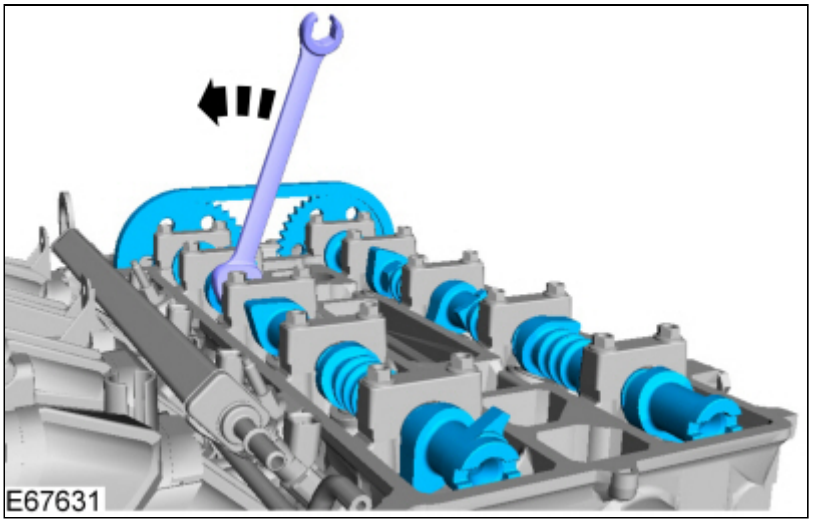
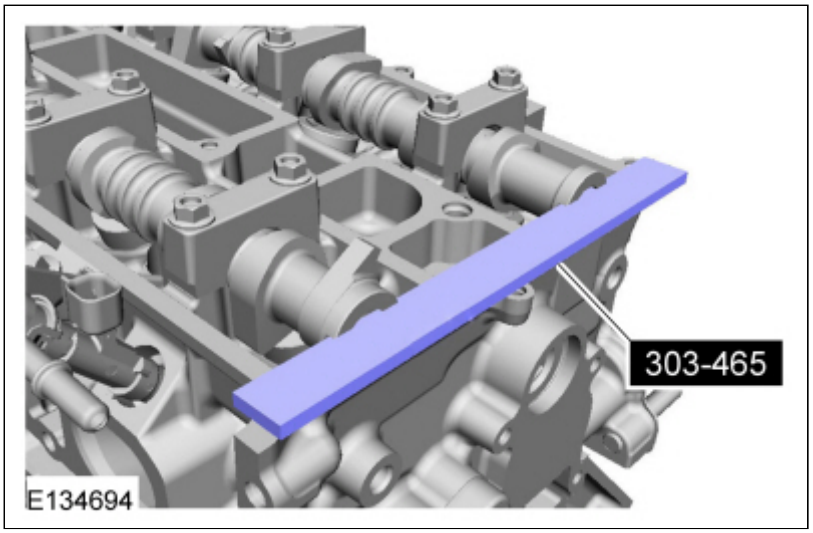
1. Refer to: Accessory Drive Belt (303-05A Accessory Drive - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
2. Refer to: Valve Cover (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
3. **NOTICE: Only rotate the crankshaft clockwise.**

   Turn the crankshaft until no. 1 piston is at about 45° before TDC.



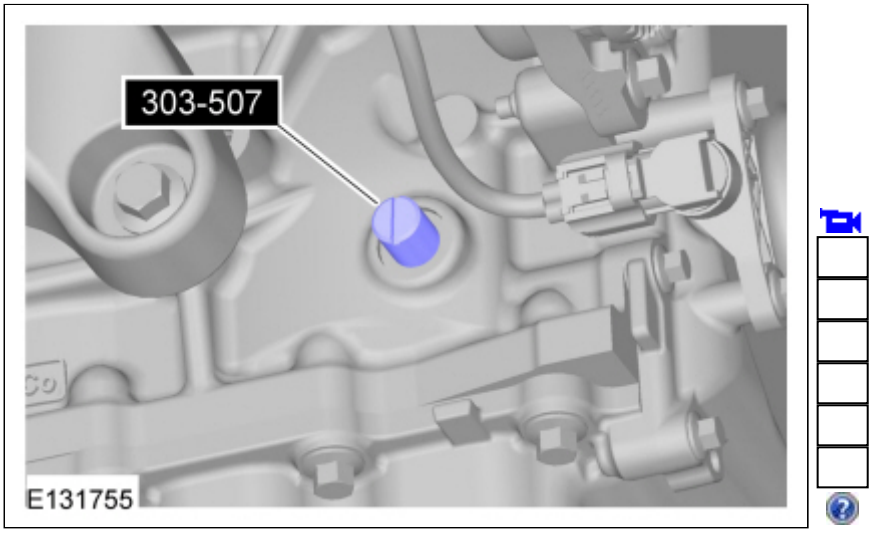
4. Use Special Service Tool: 303-1416 Tool, Crank Damper Holding.



Installation

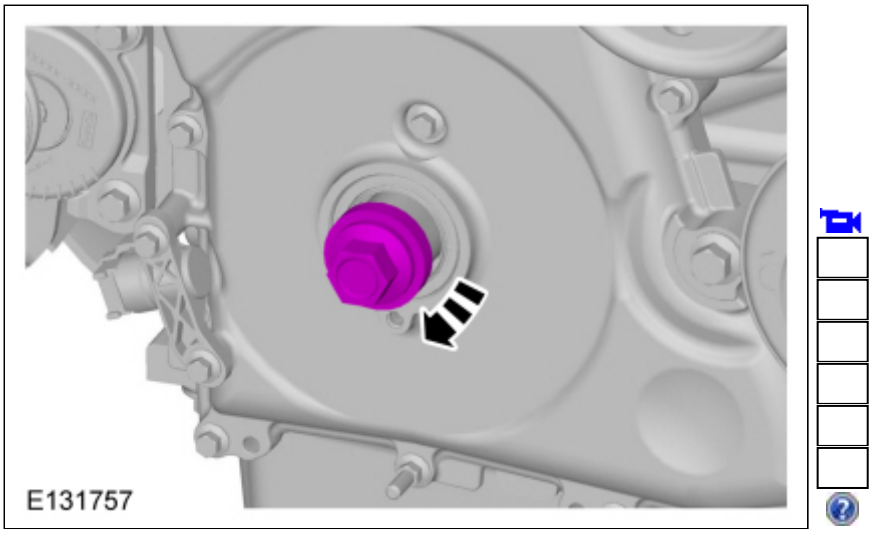
1. **NOTICE: Only rotate the crankshaft clockwise.**

   Turn the camshafts to cylinder no. 4 valve overlap position.

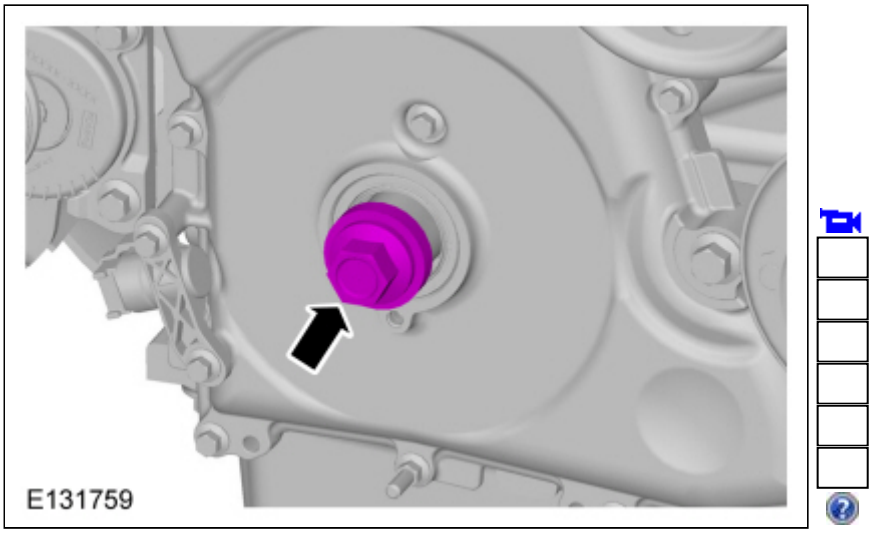


2. Use Special Service Tool: 303-465 Tool, Camshaft Align Timing.

3.



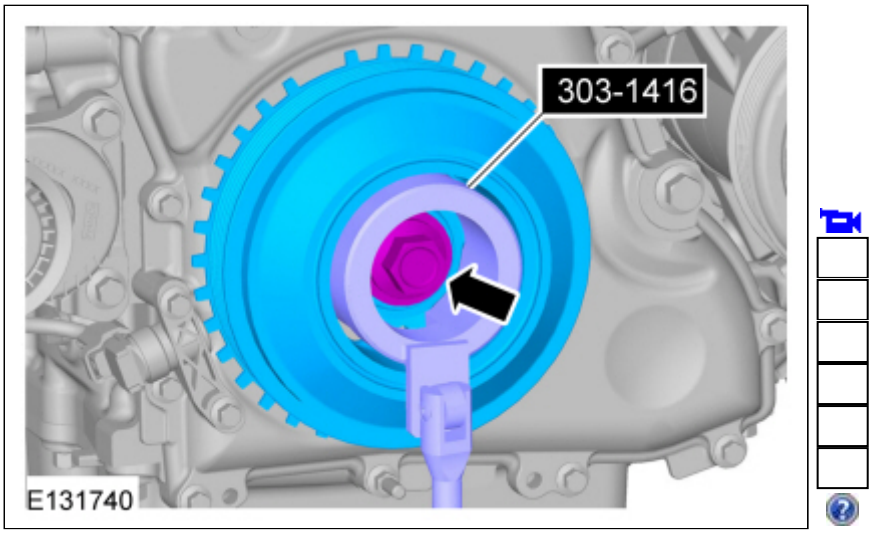
4. Use Special Service Tool: 303-507 Timing Peg, Crankshaft TDC.



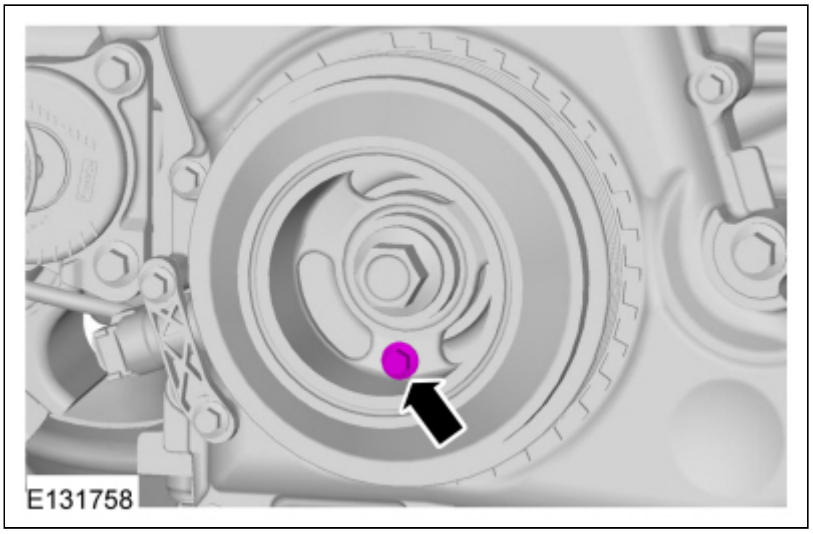
5. **NOTICE: Only rotate the crankshaft clockwise.**

   Turn the crankshaft until it stops against the special tool.

6.

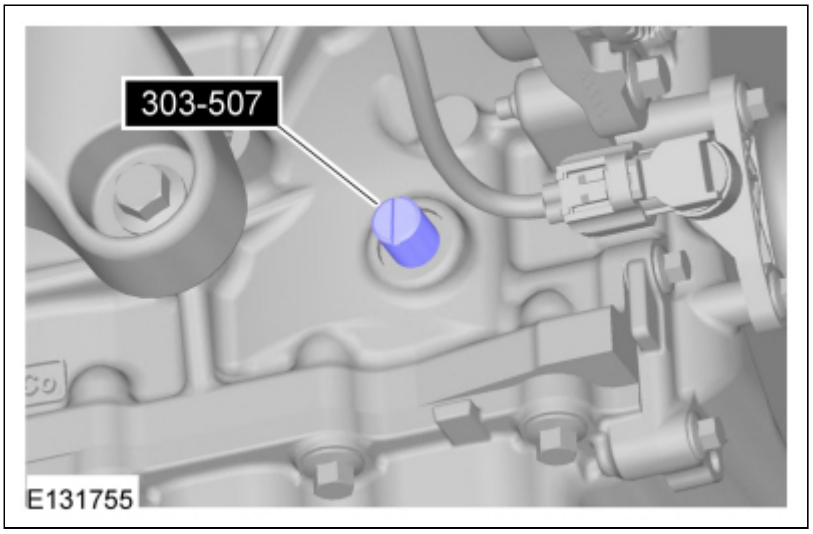


7. **NOTE:** *Only tighten the bolt finger tight at this stage.*
   - M6 x 18 mm.



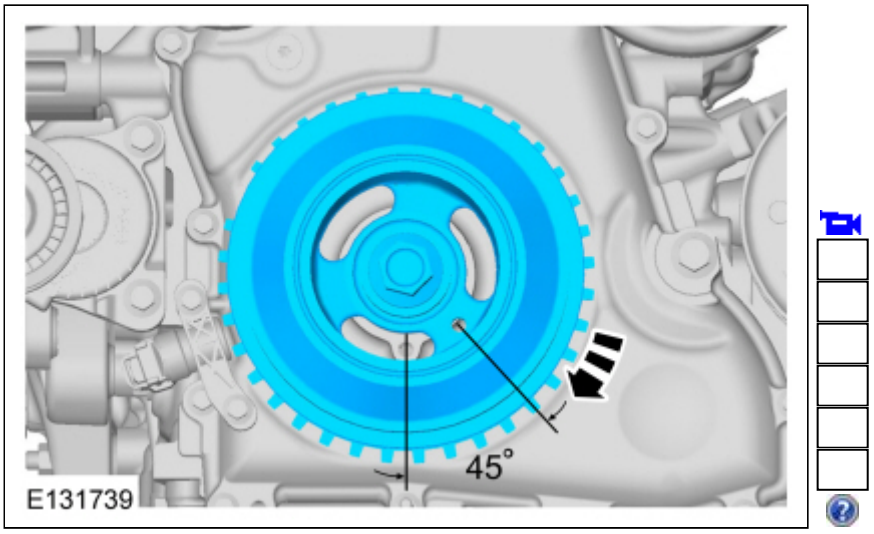
8. **NOTICE: Make sure that a new bolt is installed.**

   Use Special Service Tool: 303-1416 Tool, Crank Damper Holding.
   Torque:
   Stage 1: 100 Nm
   Stage 2: 90°

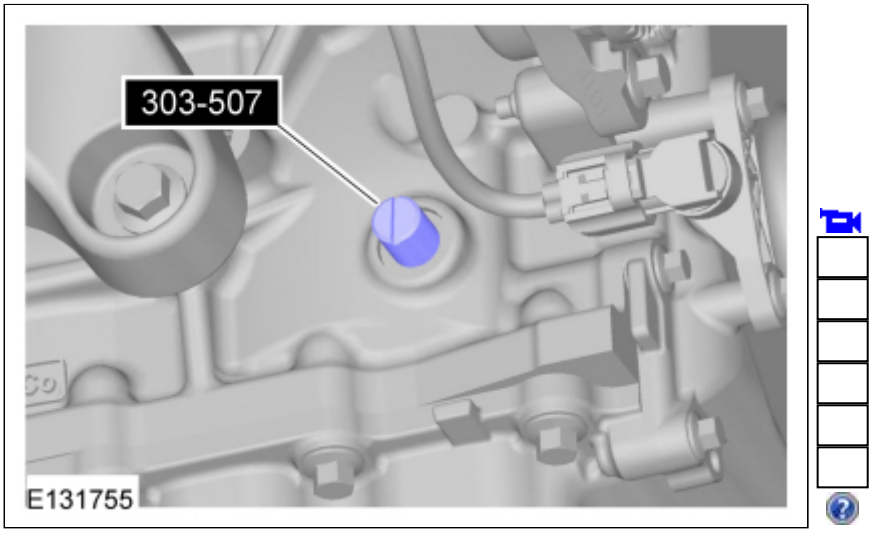


9.

10. Remove Special Service Tool: 303-465 Tool, Camshaft Align Timing.

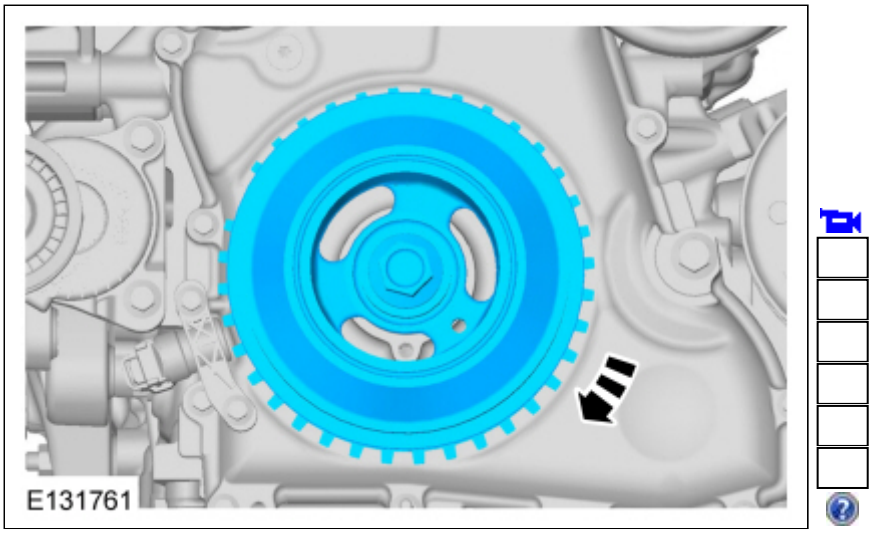


11. Remove Special Service Tool: 303-507 Timing Peg, Crankshaft TDC.



12. **NOTICE: Only rotate the crankshaft clockwise.**

    Turn the crankshaft one and three quarters of a turn until no. 1 piston is at about 45° before TDC.



13. Use Special Service Tool: 303-507 Timing Peg, Crankshaft TDC.

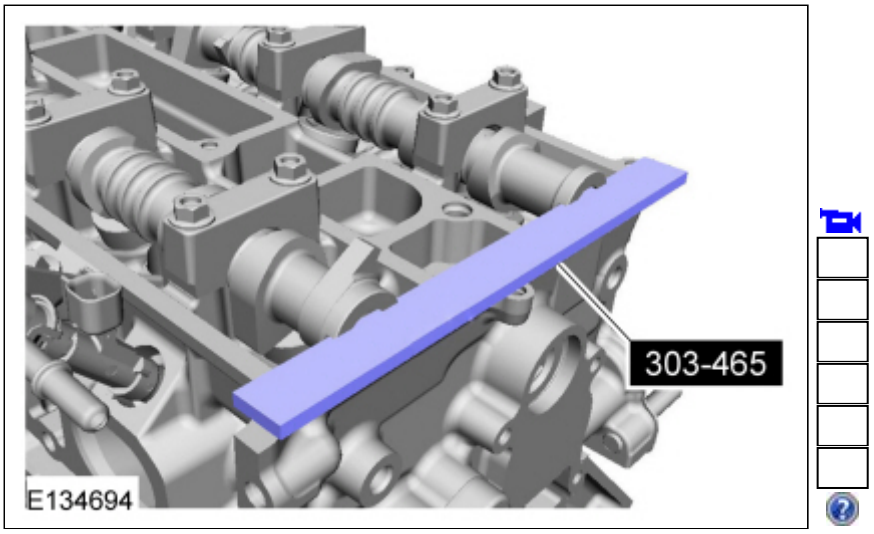
14. **NOTICE: Only rotate the crankshaft clockwise.**

    Turn the crankshaft until it stops against the special tool.

15. **NOTE:** *Only tighten the bolt finger tight at this stage.*

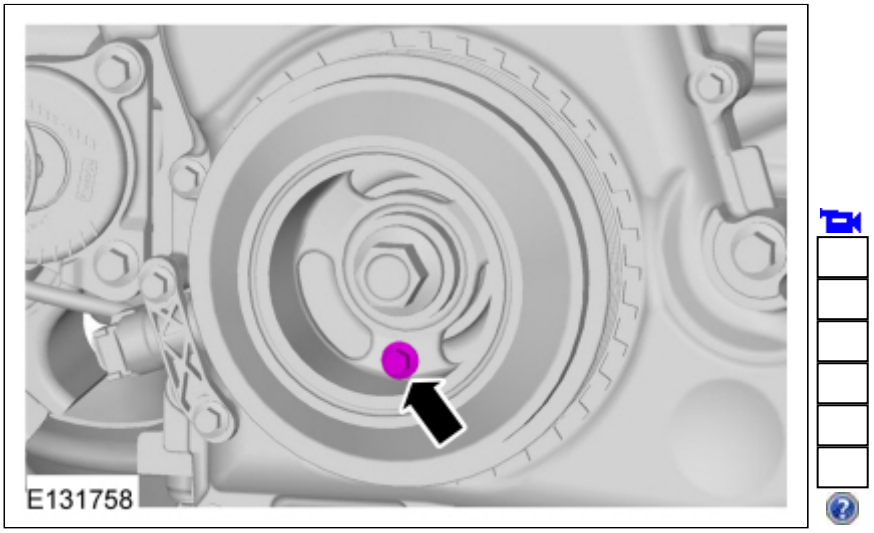
    NOTE: *The bolt can only be installed if the valve timing is correct.*

    - M6 x 18 mm.

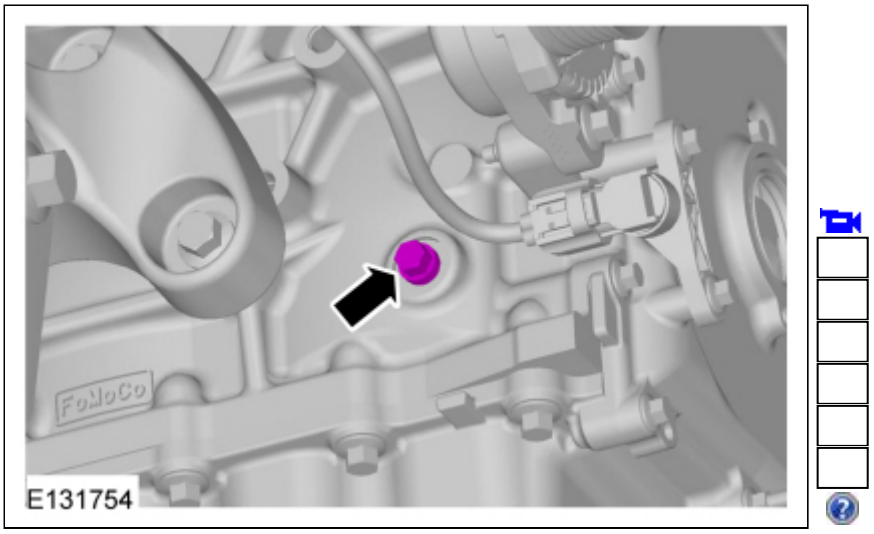


16. **NOTE:** *The special tool can only be installed if the valve timing is correct.*

    Use Special Service Tool: 303-465 Tool, Camshaft Align Timing.



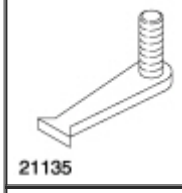
17. Remove Special Service Tool: 303-465 Tool, Camshaft Align Timing.



18. Remove Special Service Tool: 303-507 Timing Peg, Crankshaft TDC.

19. M6 x 18 mm.

20. *Torque*: 20 Nm



21. To install reverse the removal procedure.

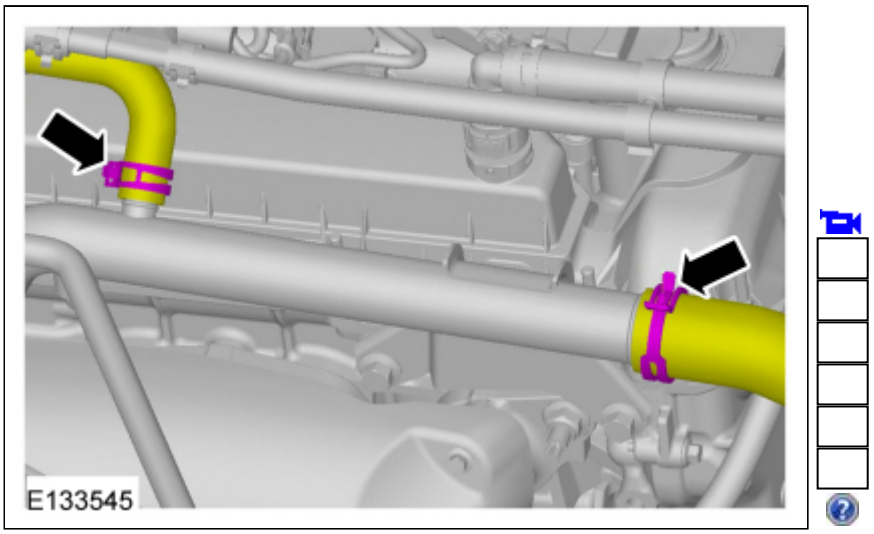
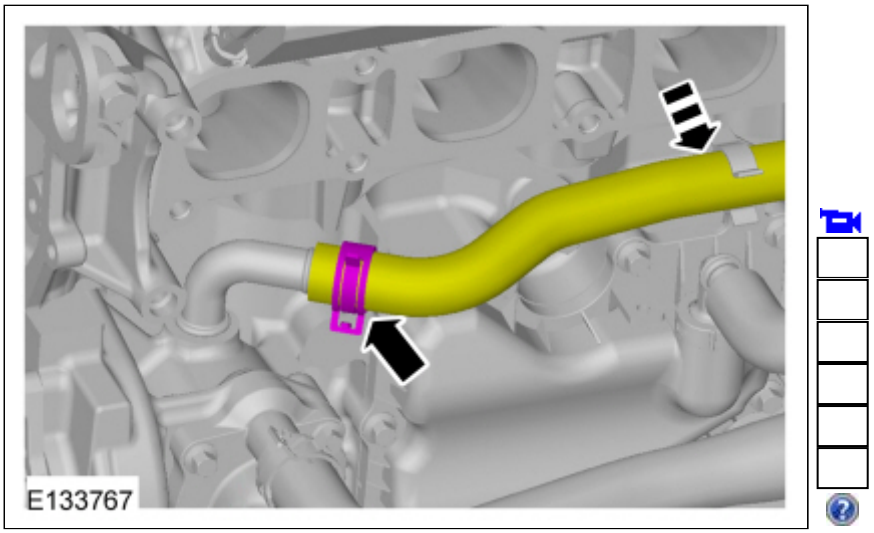
Cylinder Head

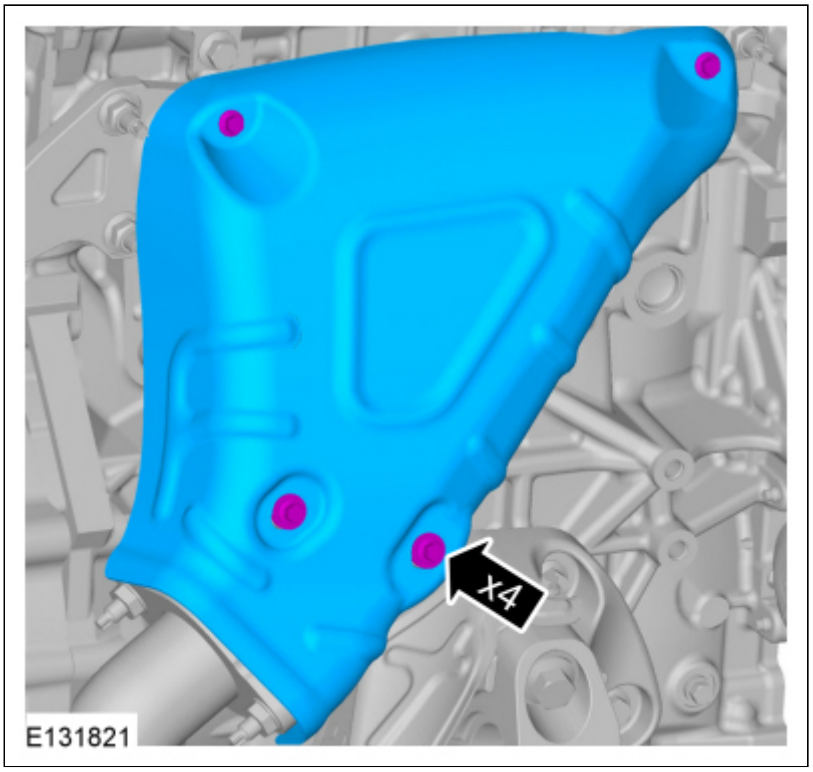


Base Part Number: 6051



Materials

Name	Specification
Gear/Transmission Fluid - SAE 85W-90	SQ-M2C9002-AA



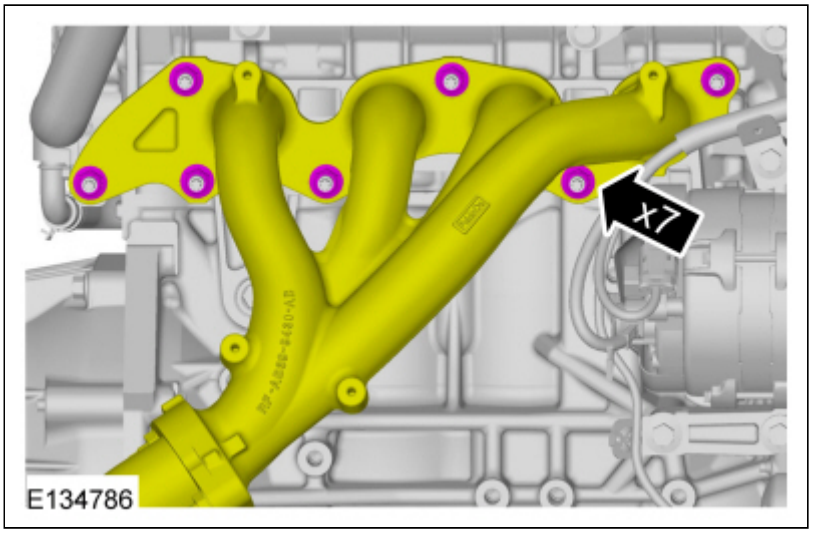
Removal

NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Cooling System Draining, Filling and Bleeding (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, General Procedures).
2. Refer to: Timing Chain (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
3. 

4. 

5. *Torque*: 10 Nm

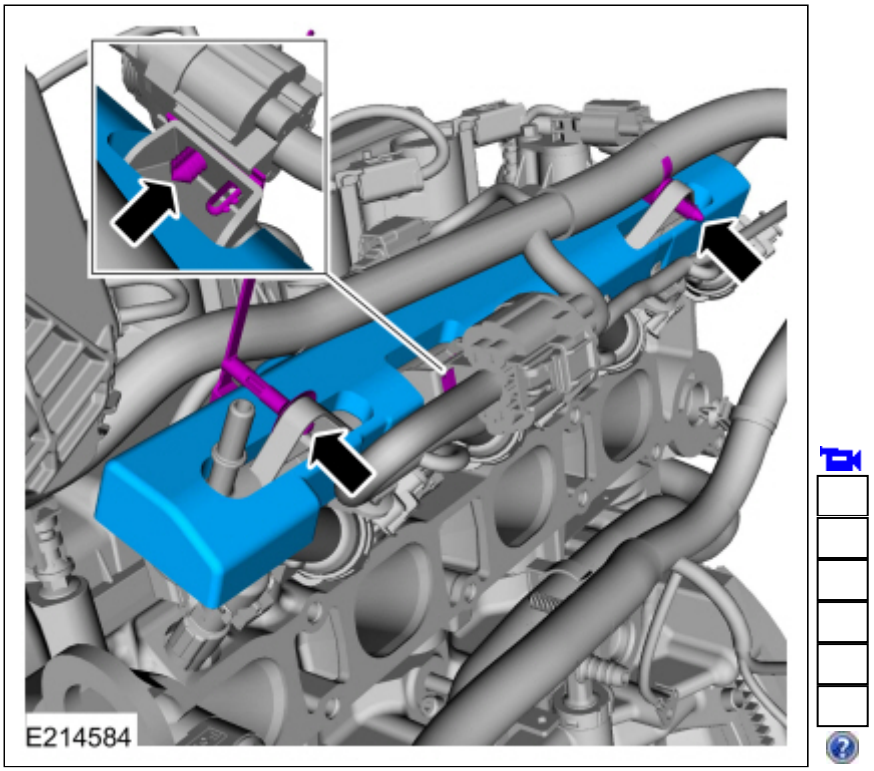


6. **NOTICE: Over bending the exhaust flexible pipe may cause damage resulting in failure.**

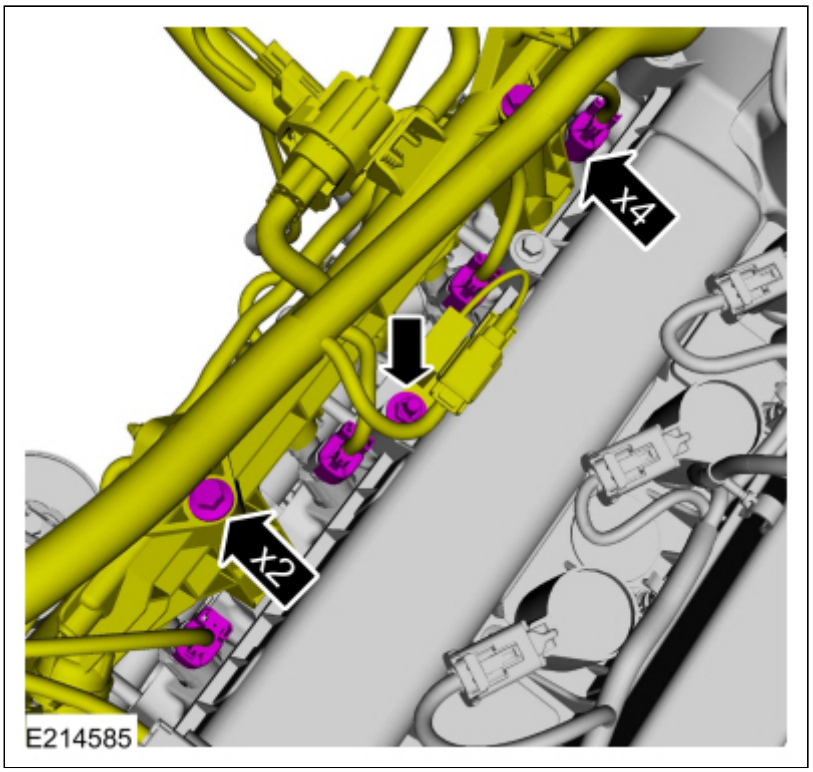
   NOTICE: Make sure that the catalytic converter is supported with suitable retaining straps.

   NOTE: *The gasket is to be reused unless damaged.*

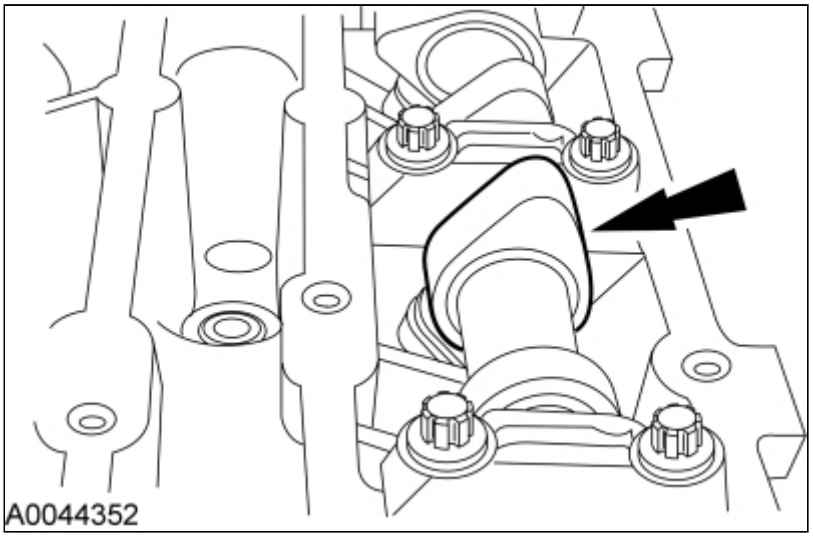
   Torque: 48 Nm



7. *Torque*: 48 Nm

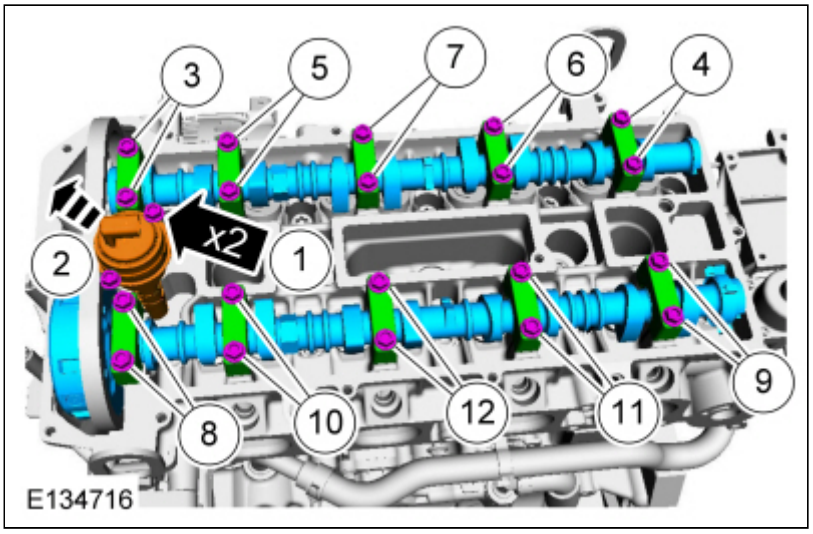


8.

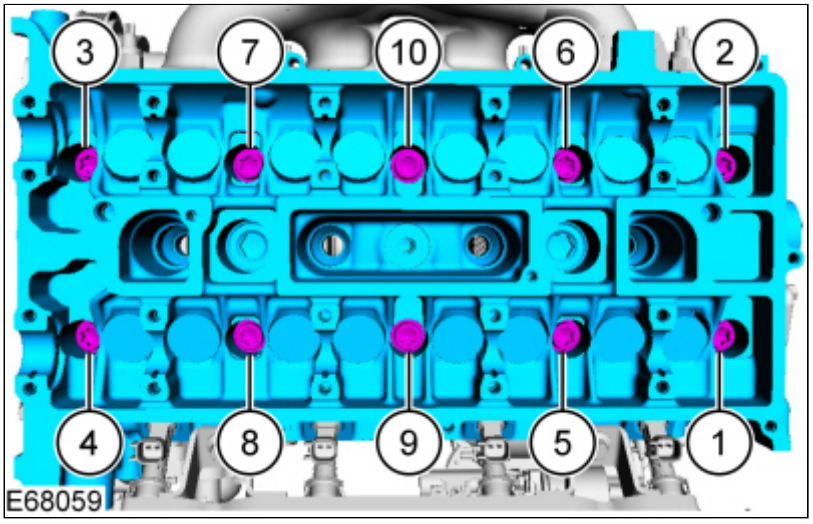


9.

10. *Torque*: 23 Nm



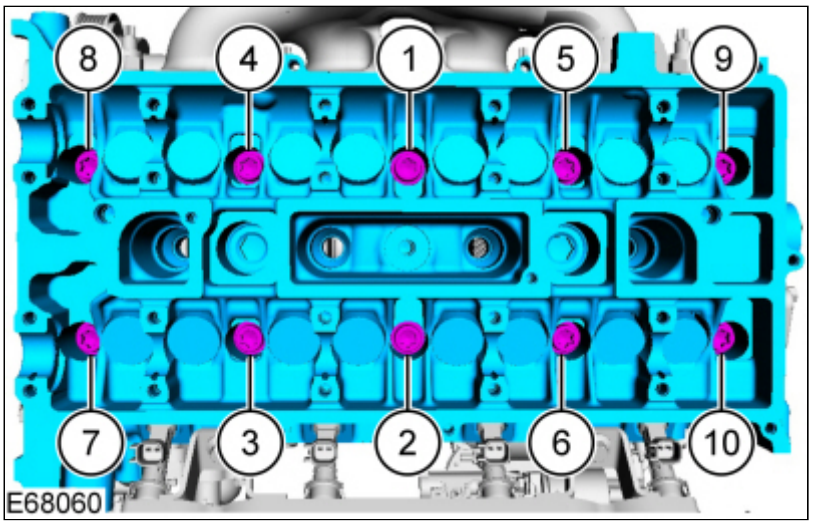
11. Mark the position of the camshaft lobes on the No. 1 cylinder for installation reference.



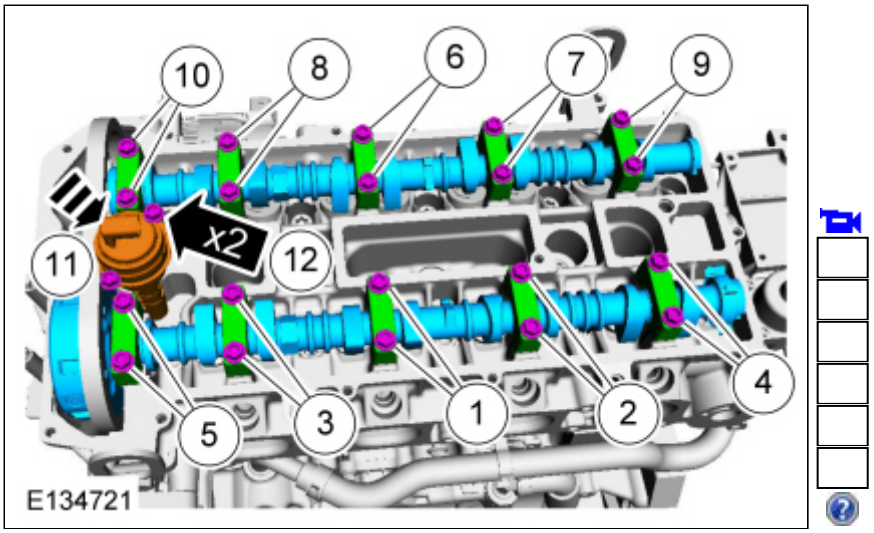
12. **NOTICE: Failure to follow the camshaft loosening procedure can result in damage to the camshafts.**

    NOTICE: Note the position of each component before removal.

    NOTE: *Mark the location and orientation of each camshaft bearing cap.*



13. Discard the cylinder head bolts.



Installation

1. Install new cylinder head bolts.
   Torque:
   Stage 1: 5 Nm
   Stage 2: 15 Nm
   Stage 3: 45 Nm
   Stage 4: 90°
   Stage 5: 90°

2. **NOTICE: Make sure that the camshafts and camshaft bearing caps are installed in their original locations.**

Apply hypoid gear oil to the camshaft bearing caps. Install the camshafts approximately at valve overlap position cylinder No. 4.
Material: Gear/Transmission Fluid - SAE 85W-90 (SQ-M2C9002-AA)
Torque:
Stage 1: 7 Nm
Stage 2: 16 Nm

Intake Manifold

Base Part Number: 9424

Removal

NOTE: *Removal steps in this procedure may contain installation details.*

1. **WARNING: Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.**

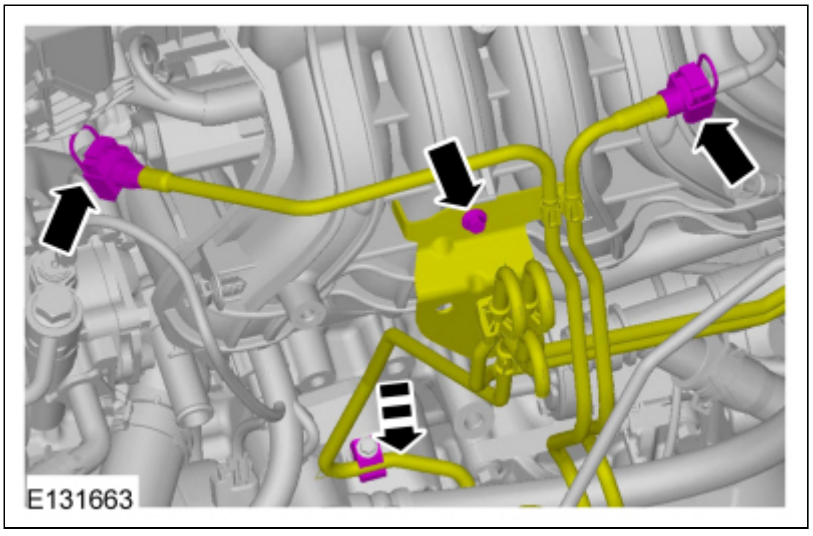
   WARNING: Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

   WARNING: Always disconnect the battery ground cable at the battery when working on an evaporative emission (EVAP) system or fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

   Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).

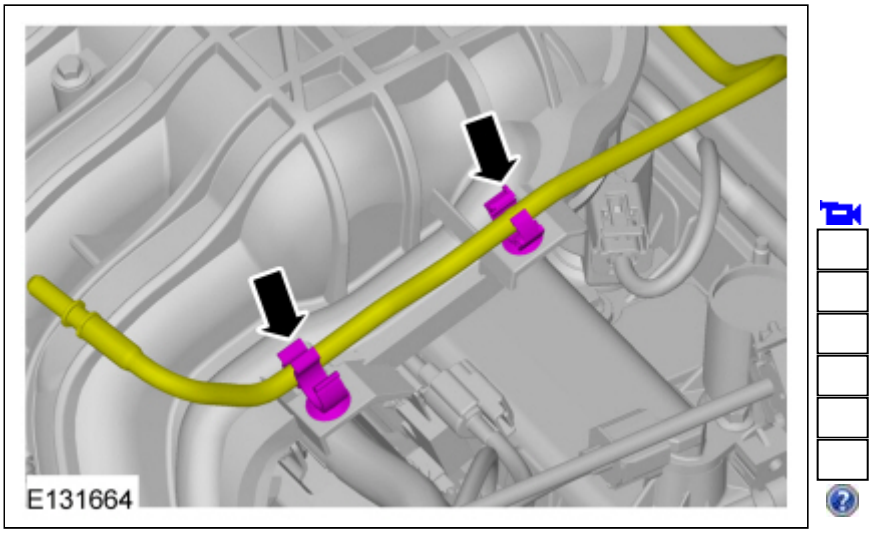
2. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

3. Refer to: Throttle Body (303-04A Fuel Charging and Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).



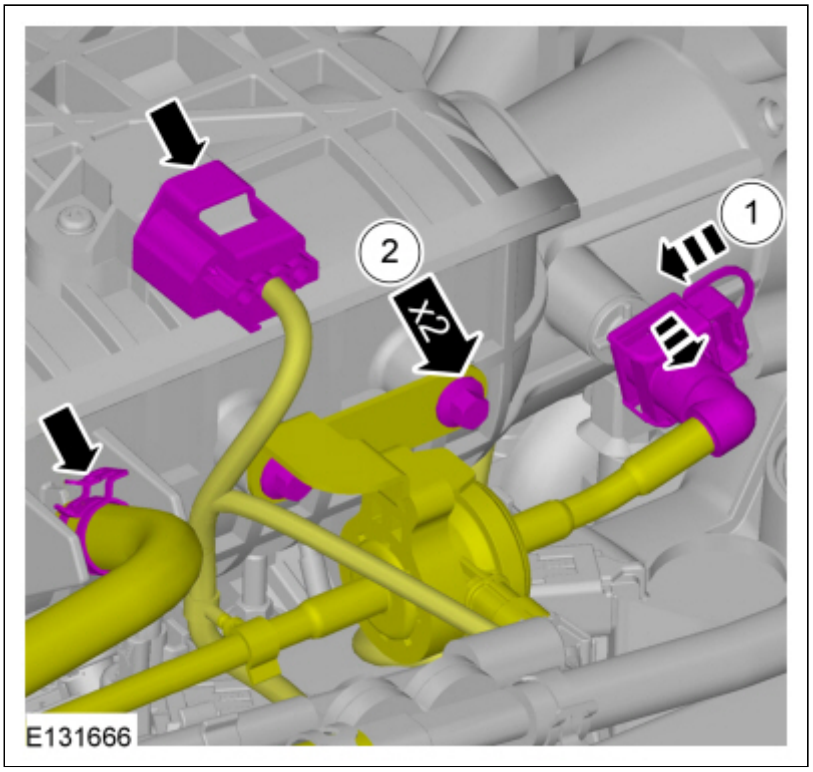
4. Refer to: Fuel System Pressure Release (310-00A Fuel System - General Information - 2.5L Duratec-HE (122kW/165PS) - MI4, General Procedures).

5. *Torque*: 10 Nm



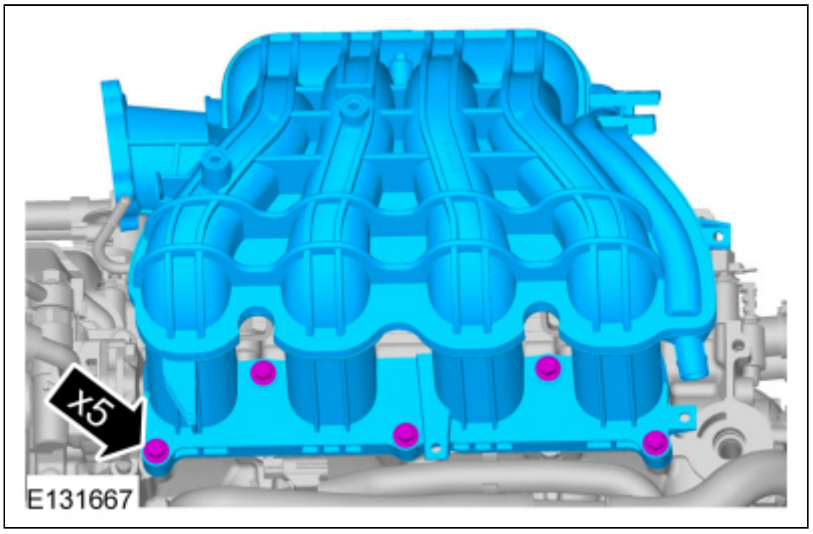
6. **NOTE:** *Securely strap the fuel and breather tubes.*

   Torque: 8 Nm



7.

8.



9. *Torque*: 11 Nm

10. **NOTE:** *The gasket is to be reused unless damage.*

    Torque: 19 Nm

Installation

1. **NOTE:** *Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools can cause scratches and gouges which can make leak paths. Use a plastic scraping tool to remove all traces of the old intake manifold gaskets.*

   NOTE: *If the engine is repaired or replaced because of upper engine failure, typically including valve or piston damage, check the intake manifold for metal debris. If metal debris is found, install a new intake manifold. Failure to follow these instructions can result in engine damage.*

2. To install, reverse the removal procedure.

3. **NOTE:** *Make sure that the pedals remain in the rest position.*

   Turn the ignition key to position II and then wait one minute in order to initialise the throttle valve.

4. Turn the ignition key to the OFF position.

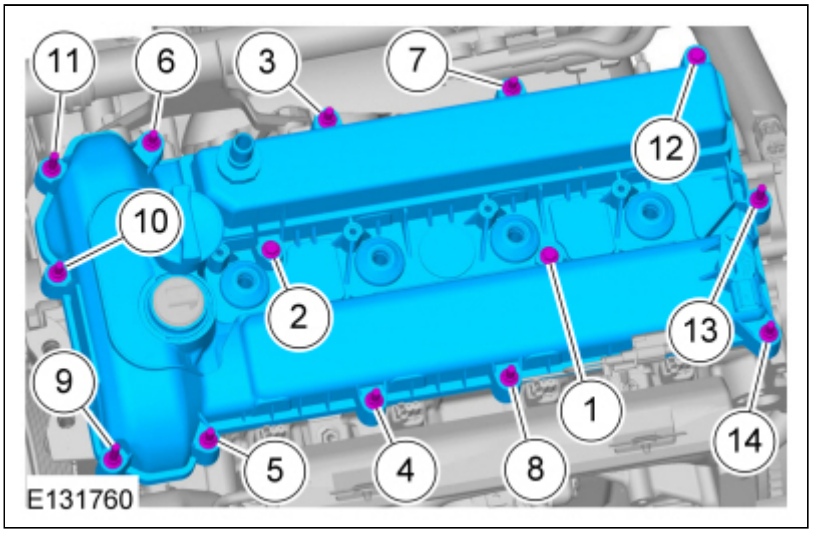
13.

Installation

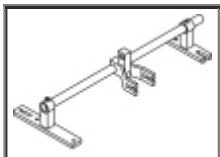


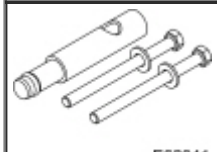
1. **NOTE:** *The valve cover must be secured within 4 minutes of silicone gasket application. If the valve cover is not secured within 4 minutes, the sealant must be removed and the sealing area cleaned with metal surface prep.*

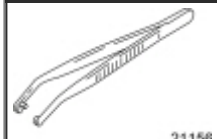
   Material: Silicone Sealant (WSE-M4G323-A4)

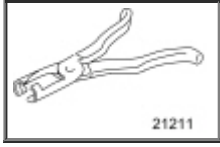
2. **NOTE:** *The gasket is to be reused unless damaged.*

   Torque: 10 Nm









3. To install, reverse the removal procedure.

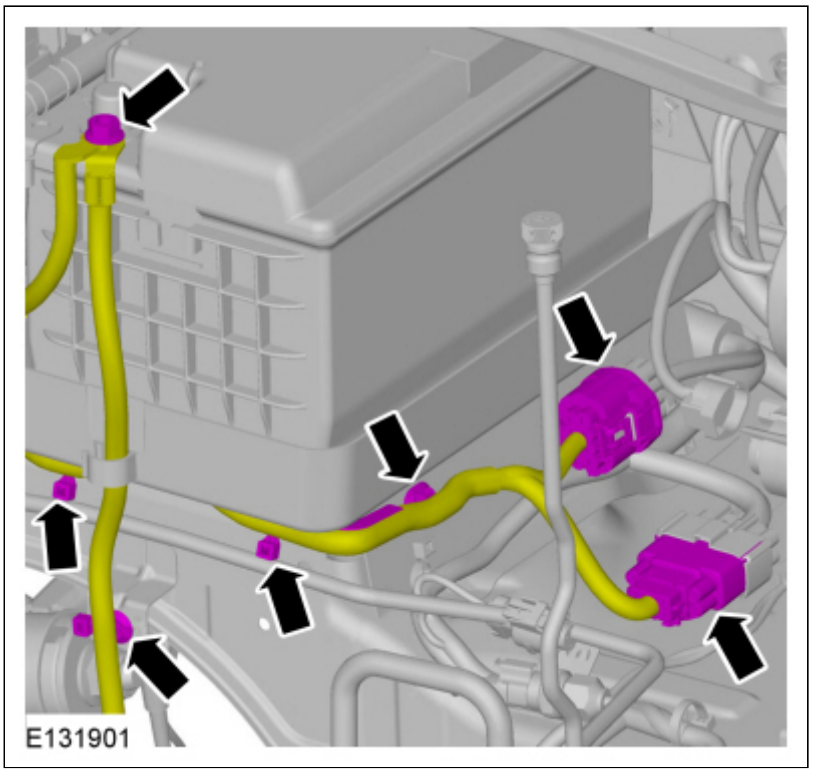
Base Part Number: 6L084



Special Tool(s) / General Equipment

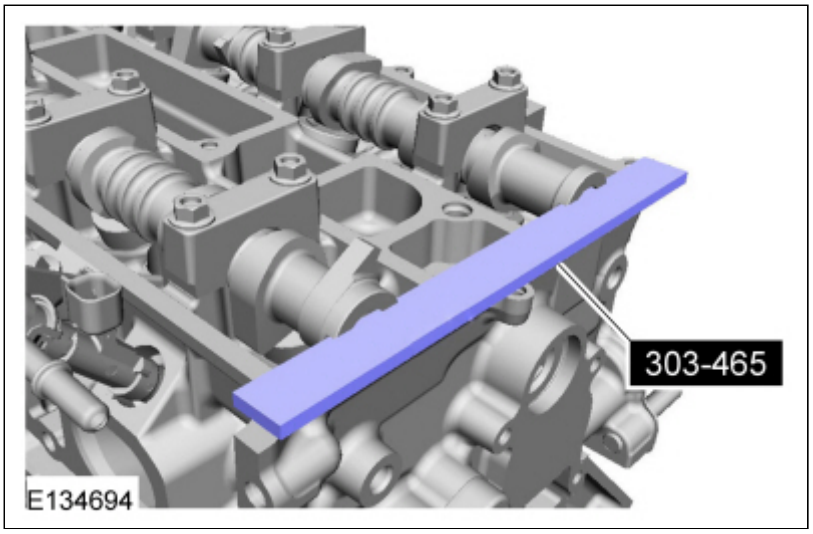
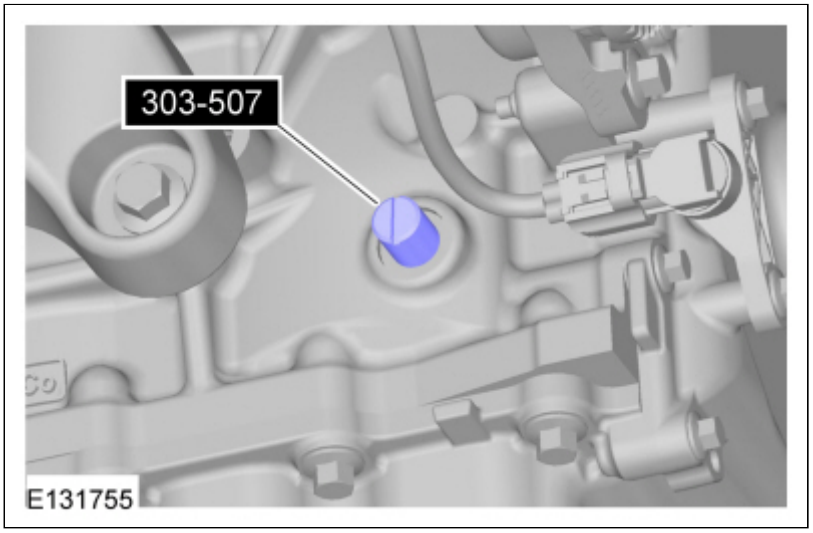
 17063	100-010 Remover, O-Ring Seal
 E134674	303-1416 Tool, Crank Damper Holding
 E134603	303-409 (T92C-6700-CH) Remover, Crankshaft Seal
 21179	303-428 Separator, Oil Pan
 E139375	303-462 Installer, Connecting Rod
 E134673	303-465 Tool, Camshaft Align Timing
 PZ21210	303-507 Timing Peg, Crankshaft TDC
2 mm Punch	

1.

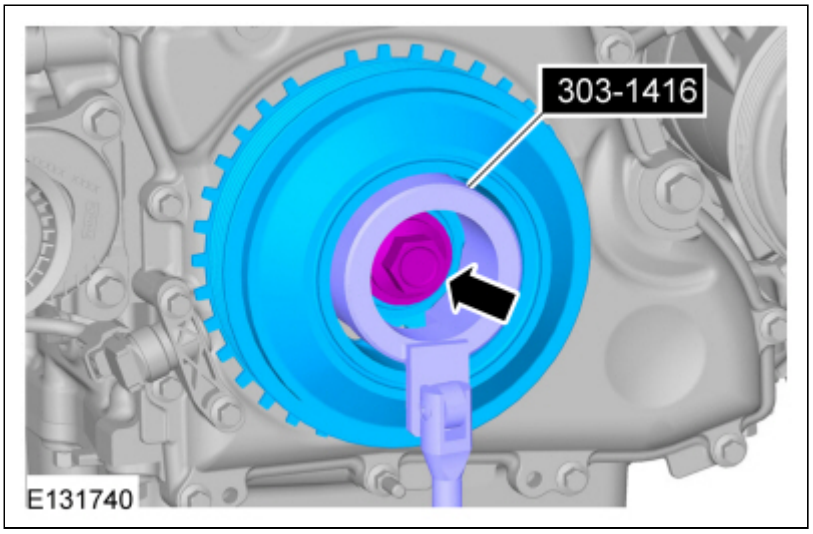


2. **NOTICE: Only rotate the crankshaft clockwise.**

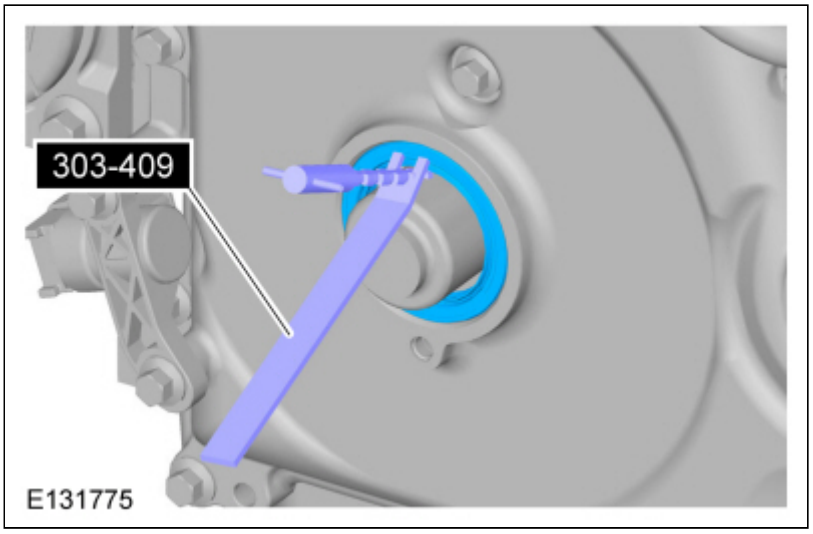
   Rotate the crankshaft until piston No. 1 is approximately 45 degrees before top dead center (TDC).



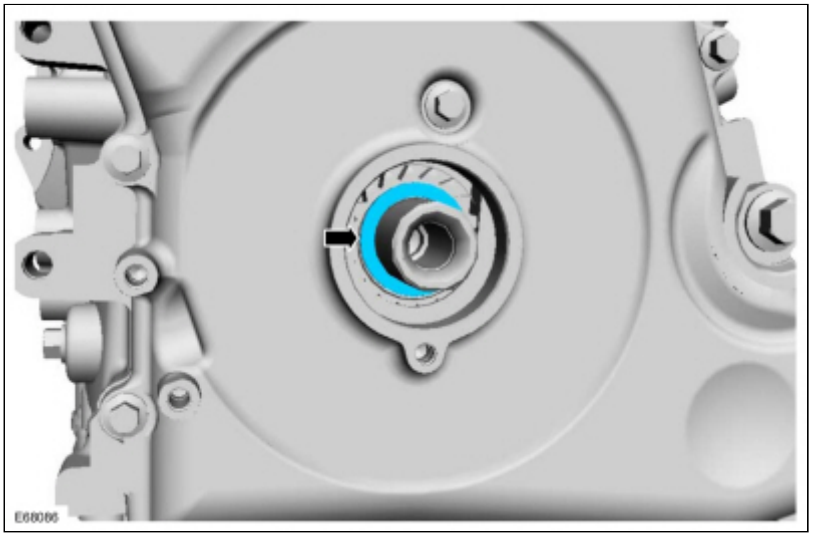
3. Use Special Service Tool: 303-465 Tool, Camshaft Align Timing.



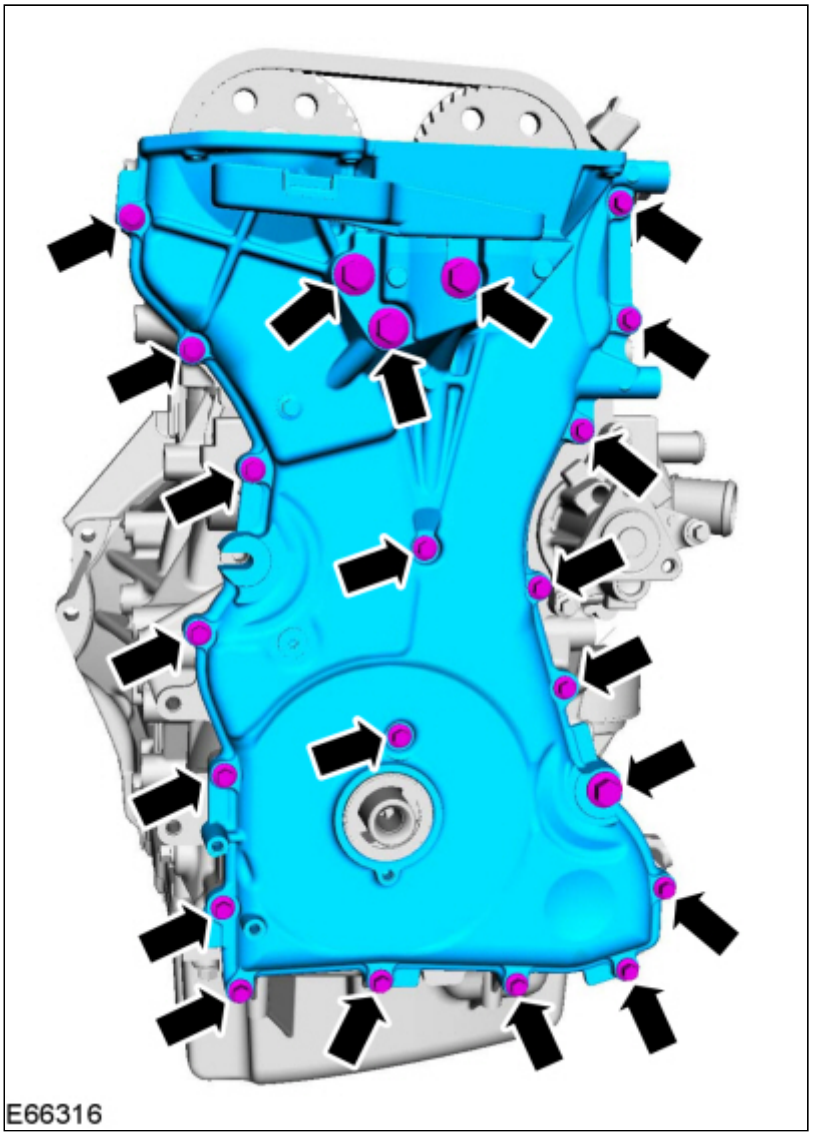
4.



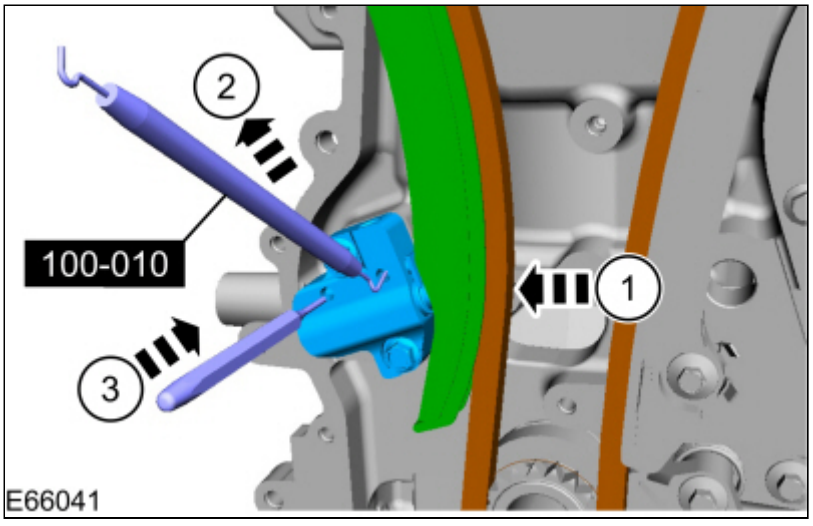
5. Use Special Service Tool: 303-507 Timing Peg, Crankshaft TDC.



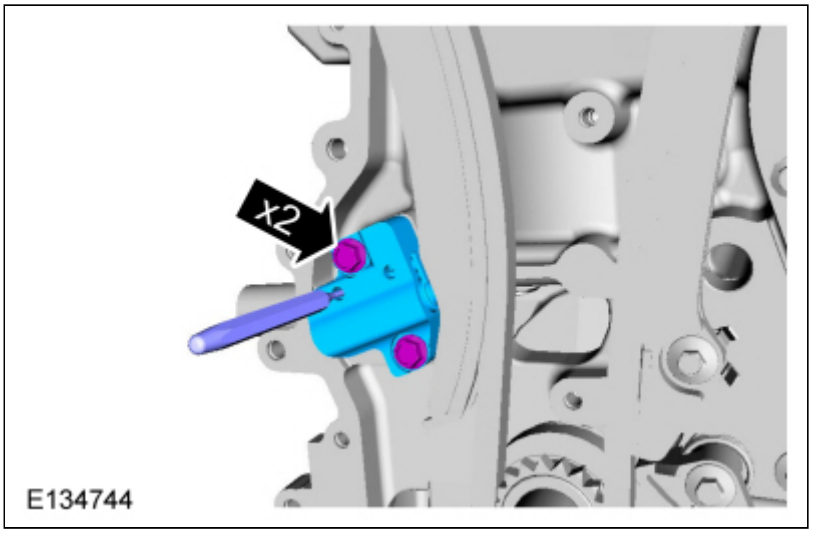
6. Use Special Service Tool: 303-1416 Tool, Crank Damper Holding.



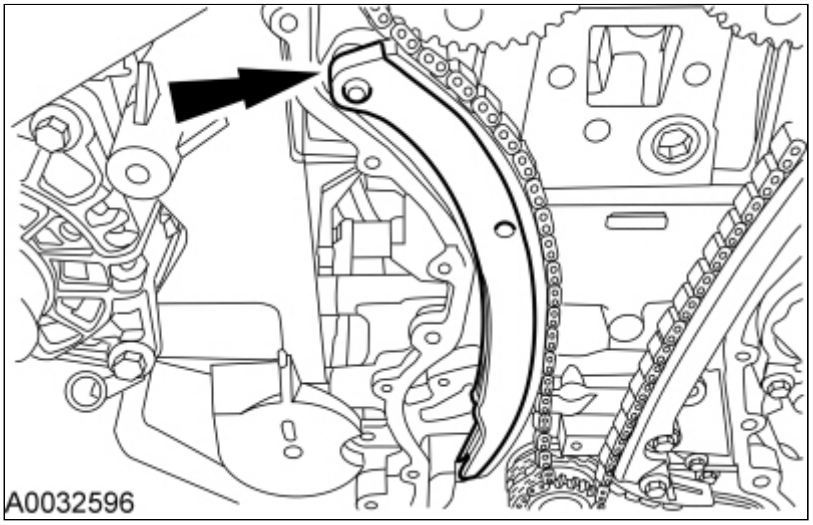
7. Use Special Service Tool: 303-409 (T92C-6700-CH) Remover, Crankshaft Seal.



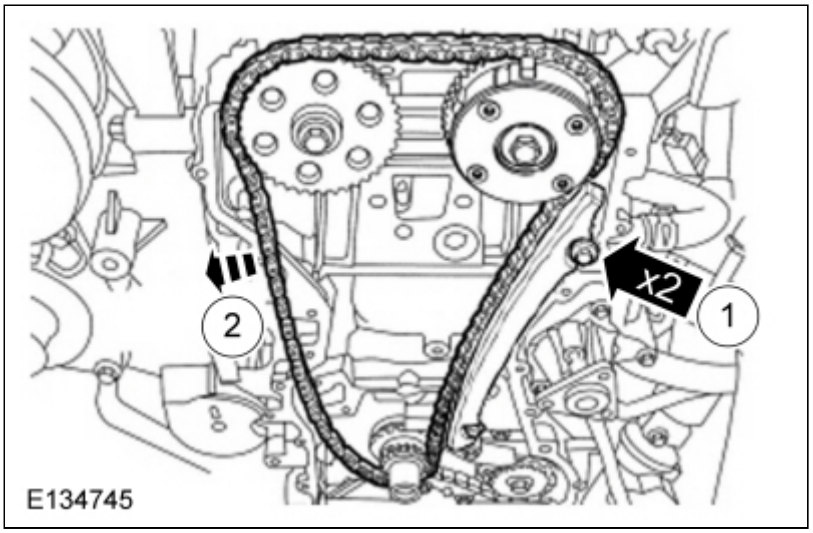
8. Discard the friction washer.



9.

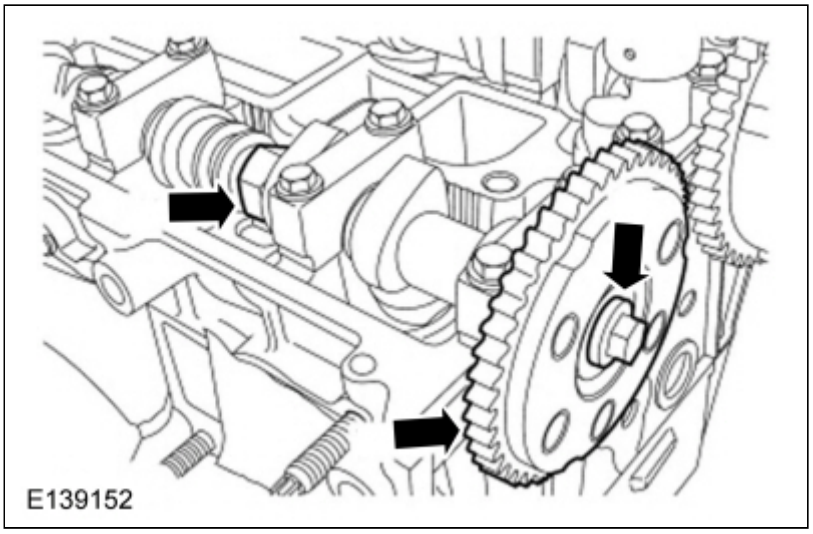


10. Use Special Service Tool: 100-010 Remover, O-Ring Seal.
    Use the General Equipment: 2 mm Punch

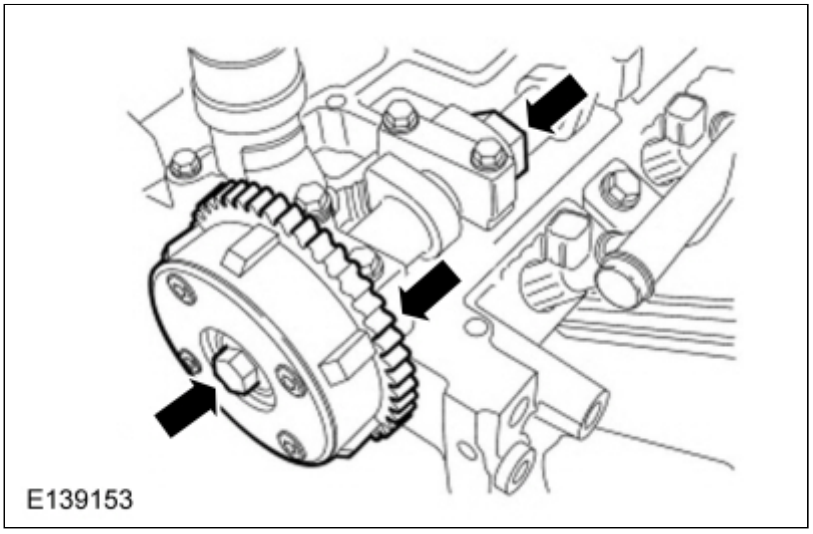


11.

12. Remove the RH timing chain guide.

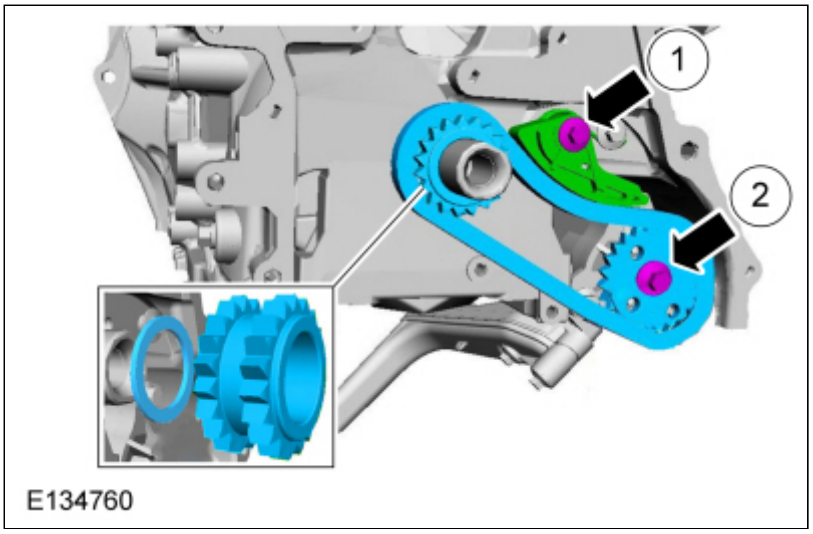


13. Remove the timing chain.



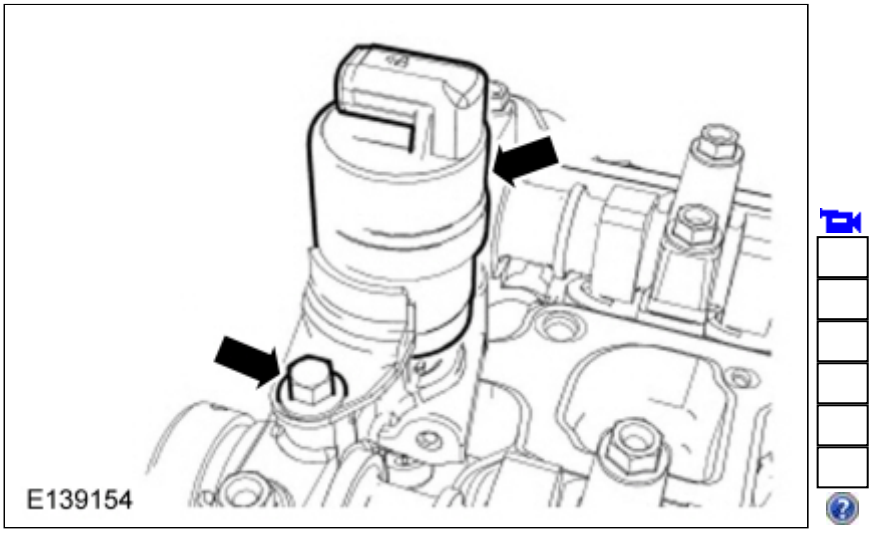
14. **NOTICE: Use an open-ended wrench to prevent the component from turning.**

    Remove the bolt and the exhaust camshaft sprocket.

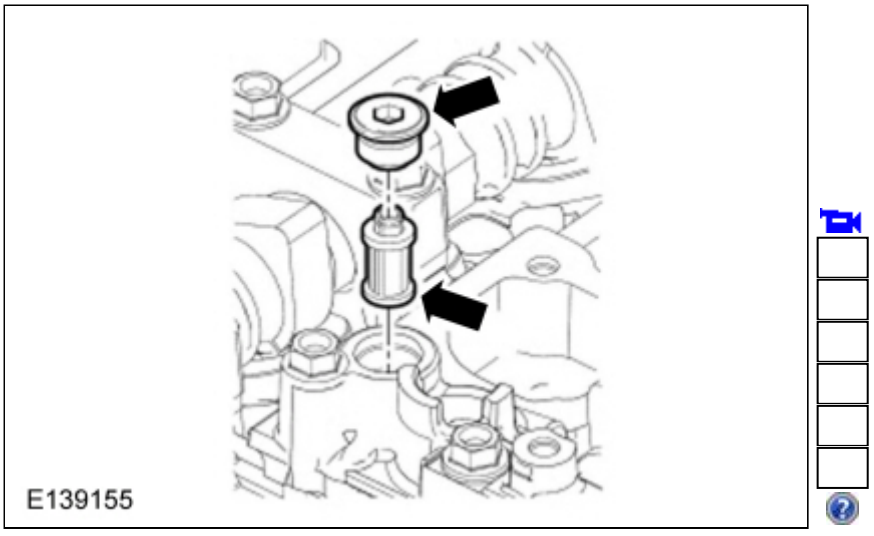


15. **NOTICE: Use an open-ended wrench to prevent the component from turning.**

    Remove the bolt and the camshaft phaser and sprocket.

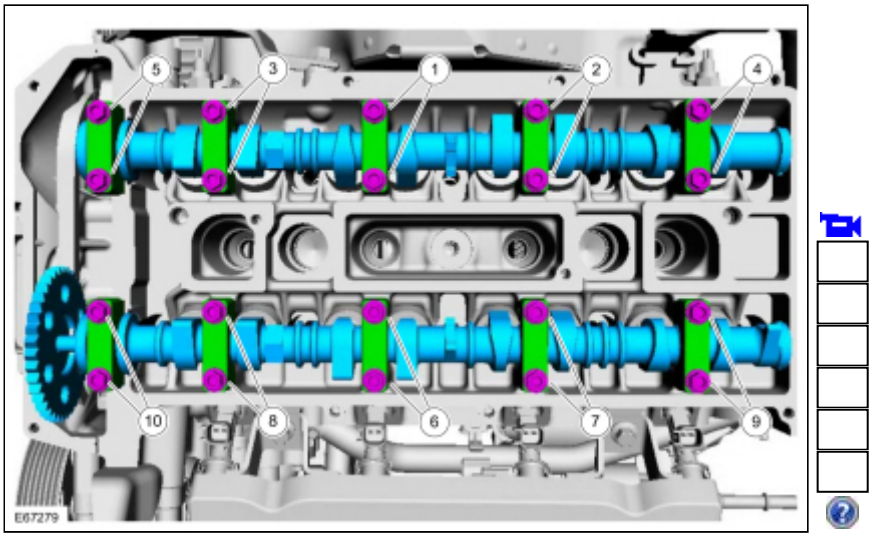


16. **NOTICE: Make sure that a new friction washer is installed.**



17. Mark the position of the camshaft lobes on the No. 1 cylinder for assembly reference.

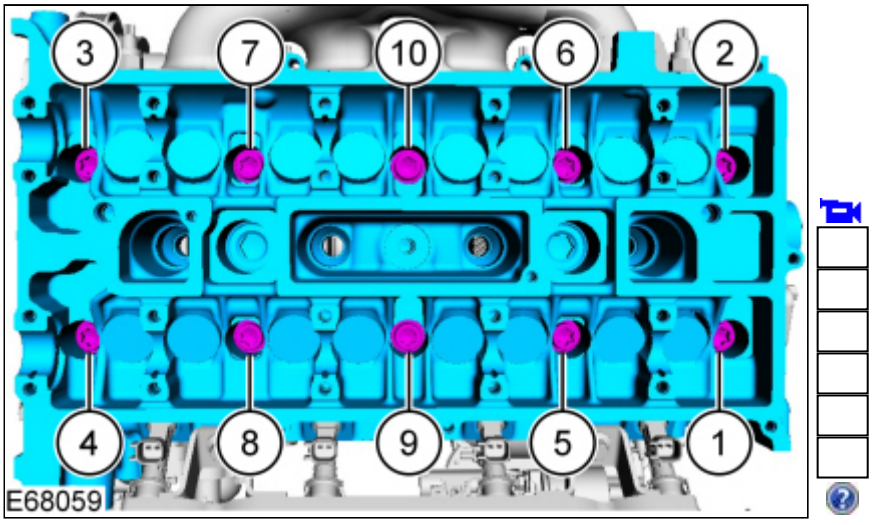
18. Remove the bolt and the VCT solenoid.



19. Remove the plug and the VCT system oil filter from the intake camshaft thrust cap.

20. **NOTICE: Failure to follow this procedure may result in damage to the components.**

    NOTE: *Mark the location and orientation of each component..*

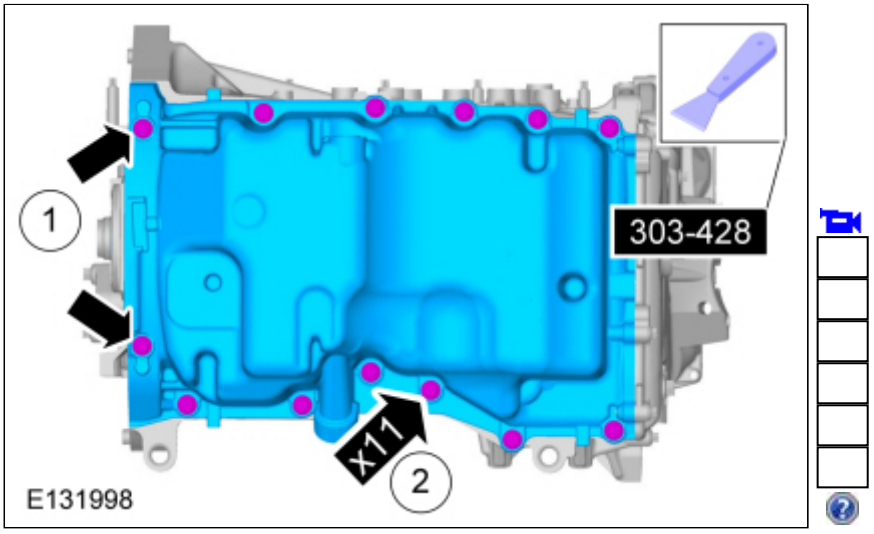


21. **NOTE:** *Note the position of the components before removal.*

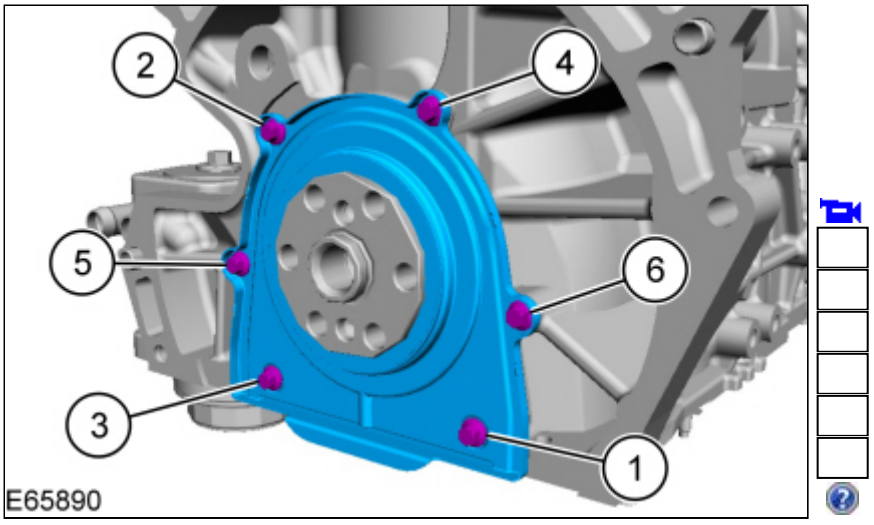
    NOTE: *The number on the valve tappets only reflects the digits that follow the decimal. For example, a tappet with the number 0.650 has the thickness of 3.650 mm.*

    Remove and inspect the valve tappets.

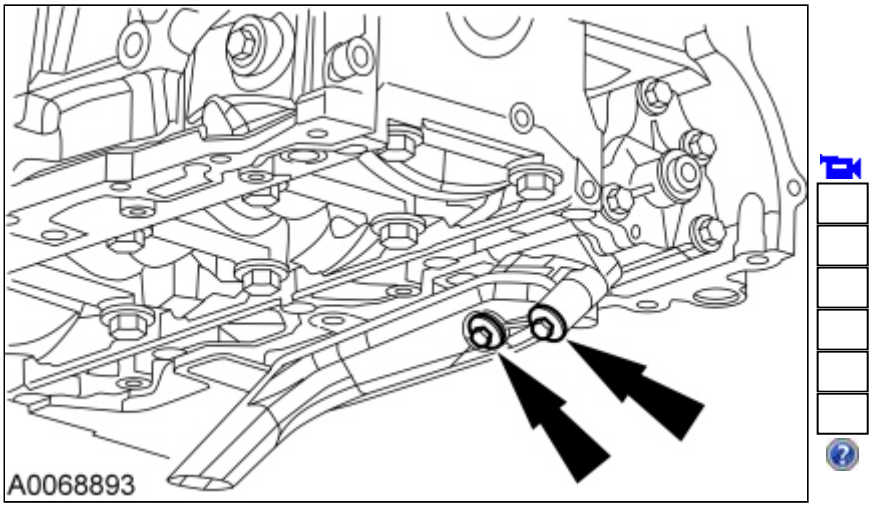
22. Discard the cylinder head bolts.



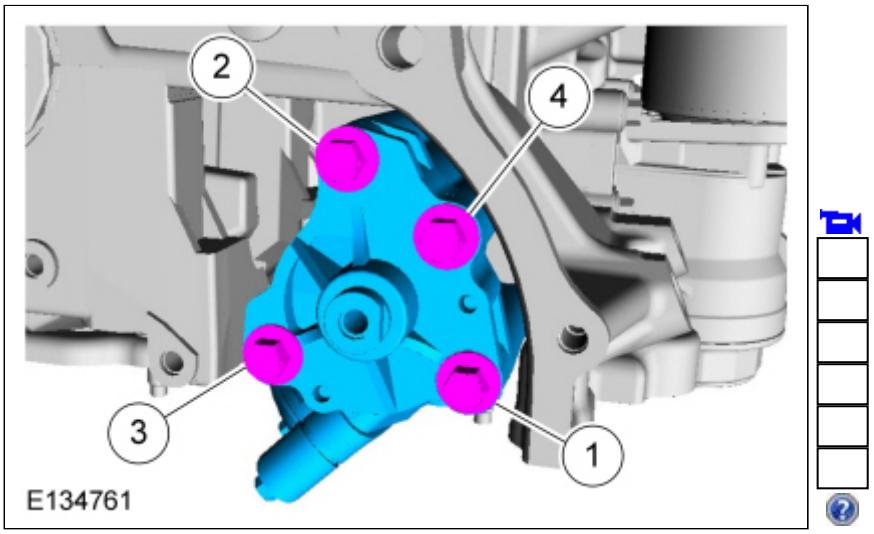
23. Support the cylinder head on a bench with the head gasket side up. Check the cylinder head distortion and the cylinder block distortion.
    Refer to: Cylinder Head Distortion (303-00 Engine System - General Information, General Procedures).
    Refer to: Cylinder Block Distortion (303-00 Engine System - General Information, General Procedures).



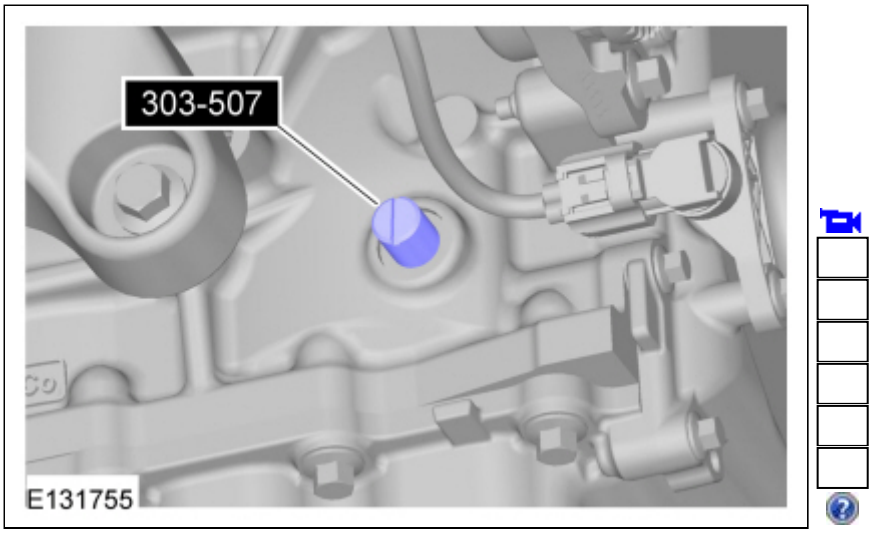
24. Remove the cylinder head alignment dowels.



25. Use Special Service Tool: 303-428 Separator, Oil Pan.

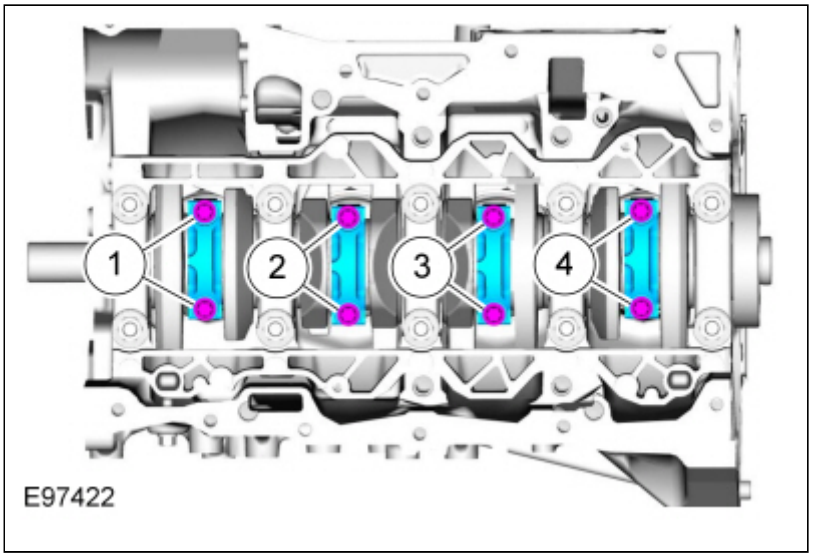


26.

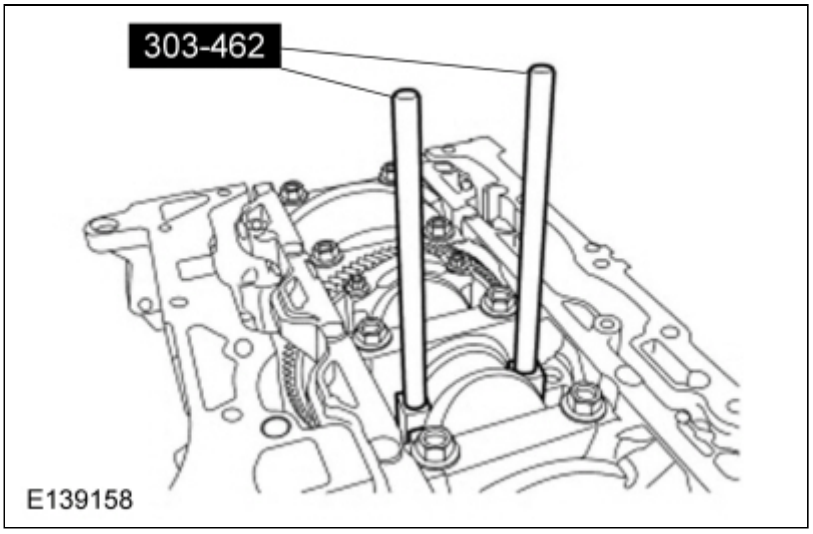


27. Remove the bolts, oil pump pickup tube and discard the gasket.

28.

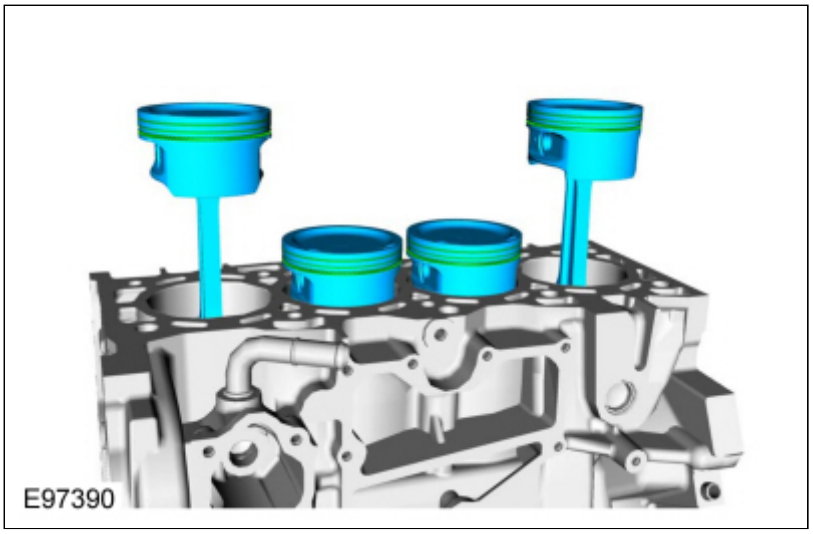


29. Rotate the crankshaft slowly clockwise until the crankshaft balance weight is up against the crankshaft TDC timing peg.
Use Special Service Tool: 303-507 Timing Peg, Crankshaft TDC.



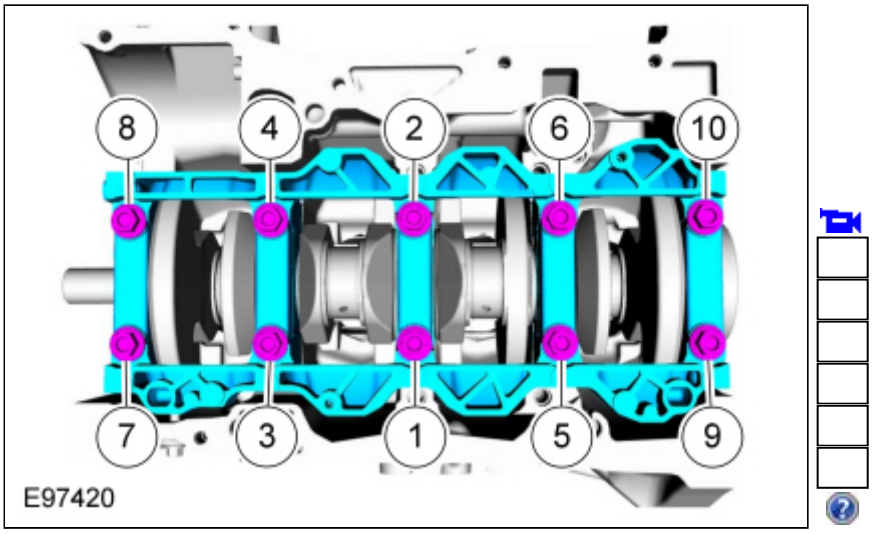
30. Before removing the pistons, inspect the top of the cylinder bores. If necessary, remove the ridge or carbon deposits from each cylinder using an abrasive pad or equivalent, following manufacturer's instructions.

31. **NOTE:** *Note the position of the components before removal*

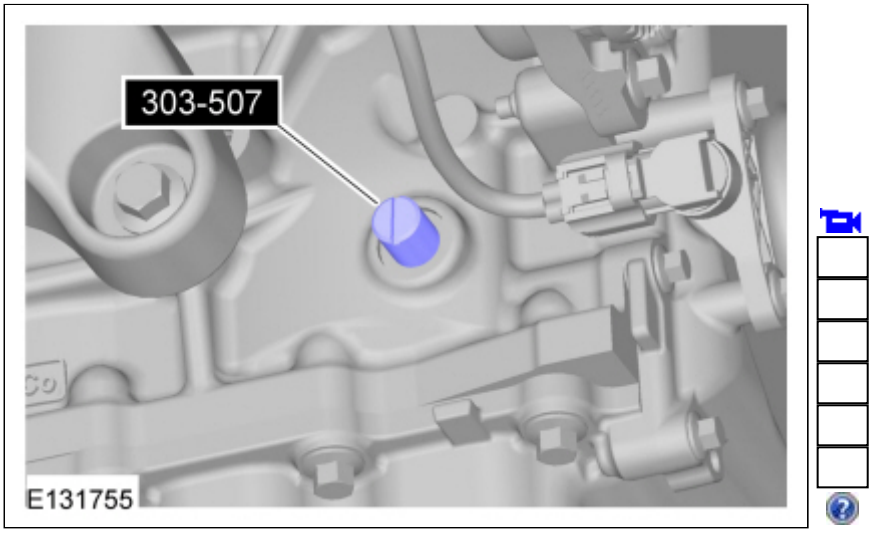


32. **NOTICE: Do not scratch the cylinder walls or crankshaft journals with the connecting rod.**

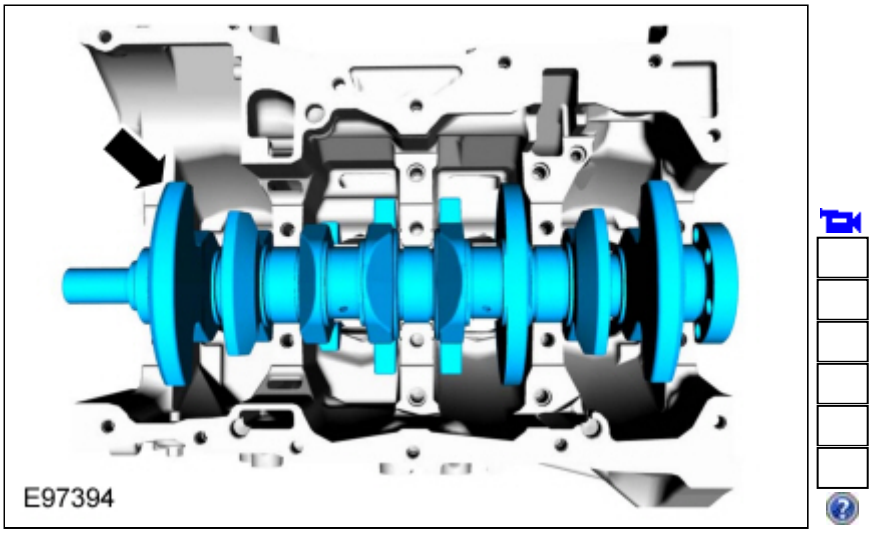
    Using the connecting rod installer, remove the piston or rod assembly from the engine block.
    Use Special Service Tool: 303-462 Installer, Connecting Rod.



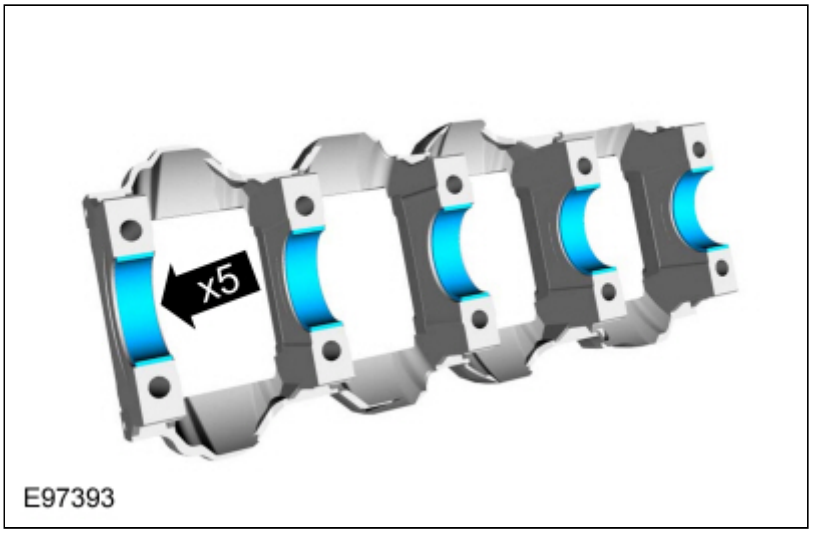
33. **NOTE:** *Note the position of each component before removal.*



34. Repeat the previous 2 steps until all the piston or rod assemblies are removed from the engine block.

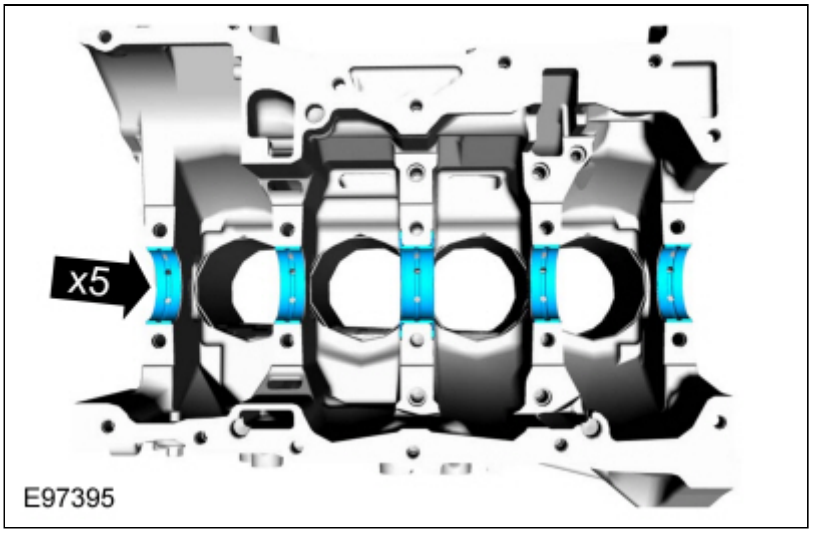


35. Discard the bolts.



36. Remove Special Service Tool: 303-507 Timing Peg, Crankshaft TDC.

37. **NOTICE: Make sure that the balance shaft oil feed plug remain installed in the cylinder block.**



38. **NOTE:** *If the components are to be reused, make sure that they are installed to the position noted before removal*

39. **NOTE:** *If the main bearings are being reused,Note the position of the components before removal..*

    NOTE: *The thrust bearing is located in the center bulkhead.*

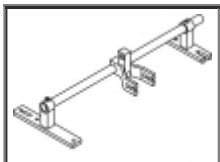
    Remove the main bearings from the cylinder block.

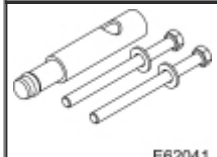
40. **NOTE:** *If the components are to be reused, make sure that they are installed to the position noted before removal..*

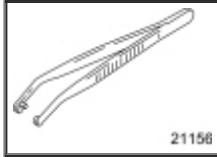
    NOTE: *The front bulkhead does not have an oil squirter.*

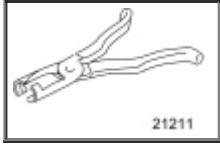
    Remove the 4 oil squirters.

41. Inspect the cylinder block, main bearing beam, pistons and connecting rods.









Refer to: Piston Inspection (303-00 Engine System - General Information, General Procedures).
Refer to: Bearing Inspection (303-00 Engine System - General Information, General Procedures).
Refer to: Connecting Rod Large End Bore (303-00 Engine System - General Information, General Procedures).
Refer to: Cylinder Block Distortion (303-00 Engine System - General Information, General Procedures).

Materials

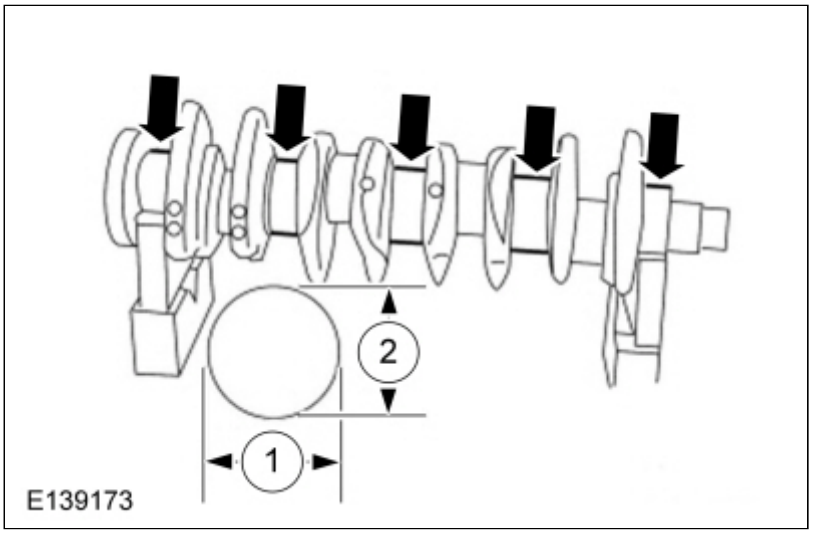
Name	Specification
Gear/Transmission Fluid - SAE 85W-90	SQ-M2C9002-AA

Silicone Sealant	WSE-M4G323-A4

1. **NOTICE: Do not loosen or remove the crankshaft pulley bolt without first installing the special tools as instructed in this procedure. The crankshaft pulley and the crankshaft timing sprocket are not keyed to the crankshaft. The crankshaft, the crankshaft sprocket and the pulley are fitted together by friction, using diamond washers between the flange faces on each part. For that reason, the crankshaft sprocket is also unfastened if the pulley bolt is loosened. Before any repair requiring loosening or removal of the crankshaft pulley bolt, the crankshaft and camshafts must be locked in place by the special service tools, otherwise severe engine damage may occur.**

   NOTICE: During engine repair procedures, cleanliness is extremely important. All parts must be thoroughly cleaned and any foreign material, including any material created while cleaning gasket surfaces, that enters the oil passages, coolant passages or the oil pan, can cause engine failure.

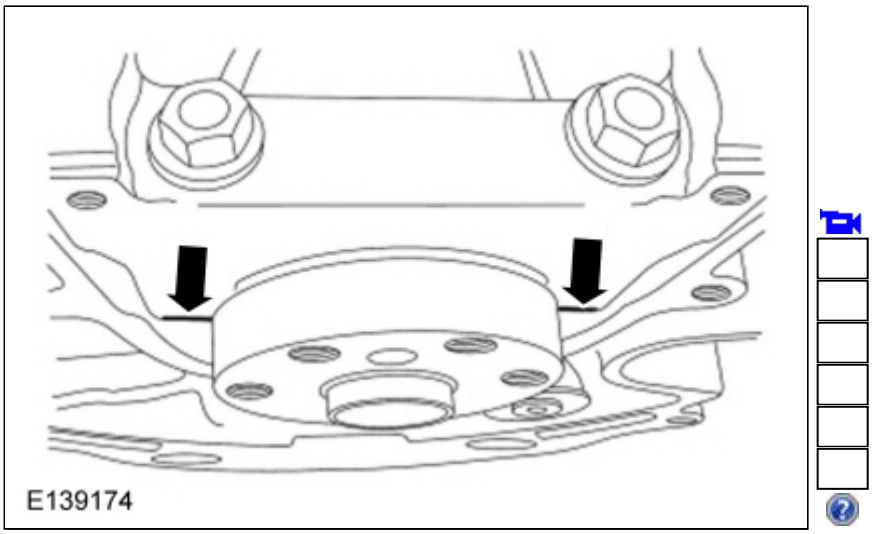
   NOTE: *Assembly of the engine requires various inspections/measurements of the engine components (engine block, crankshaft, connecting rods, pistons and piston rings). These inspections/measurements will aid in determining if the engine components will require replacement.*



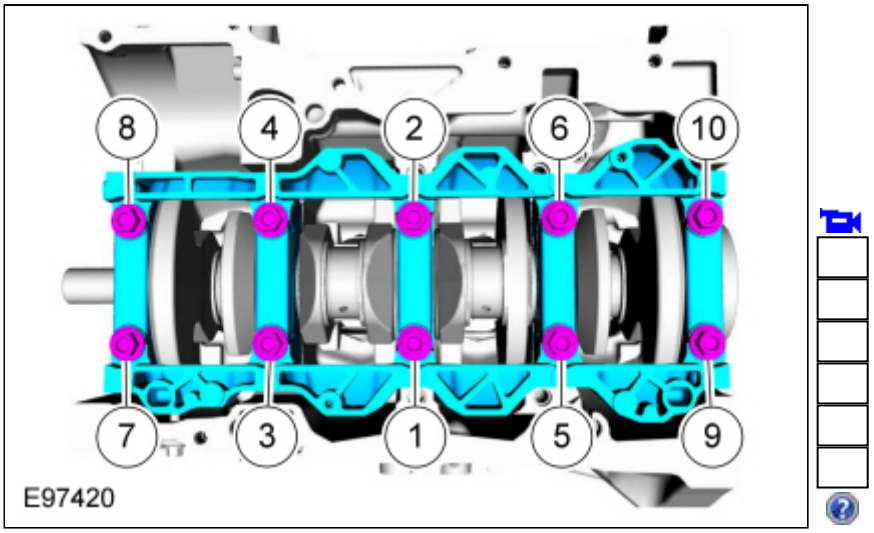
2. **NOTE:** *If the oil squirters are being reused, they must be installed in the same location as marked during disassembly.*

   NOTE: *The front bulkhead does not have an oil squirter.*

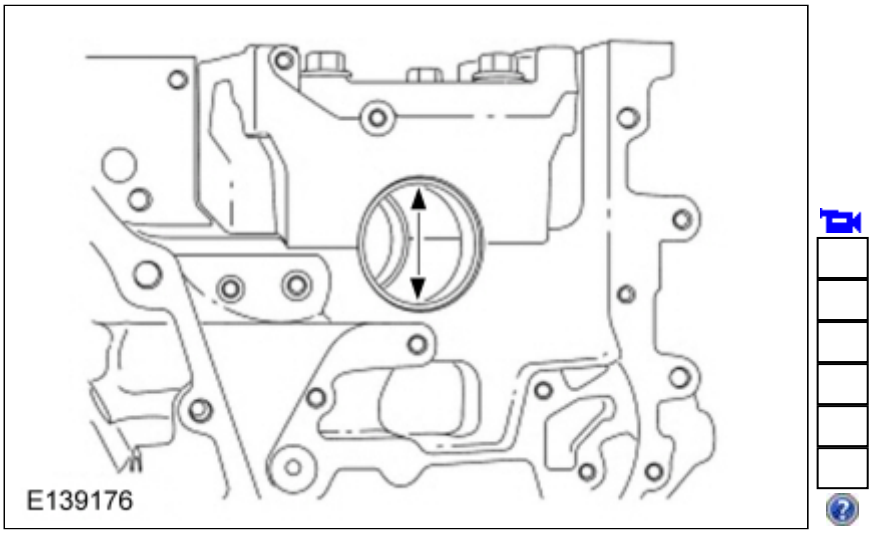
   Install the 4 oil squirters.
   Torque: 4 Nm



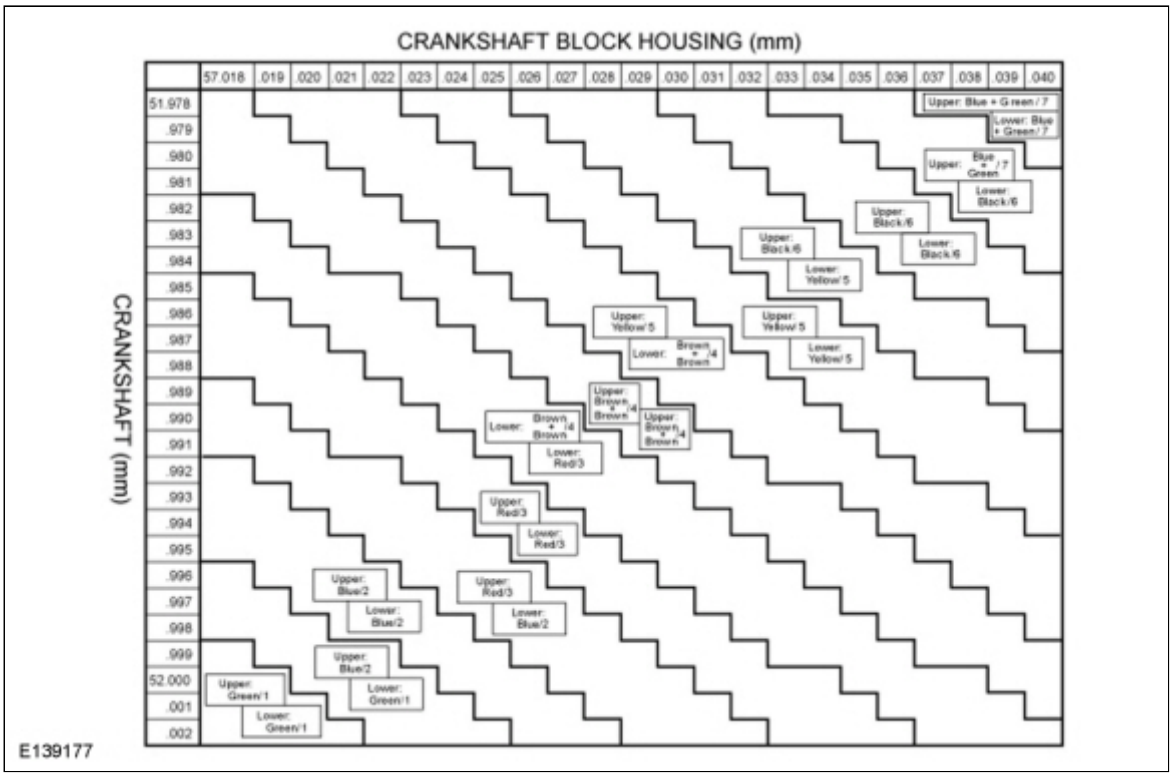
3. Measure each of the crankshaft main bearing journal diameters in at least 2 directions and record the smallest diameter for each journal.



4. Position the main bearing beam in the engine block with the main bearing beam mounted flush with the rear

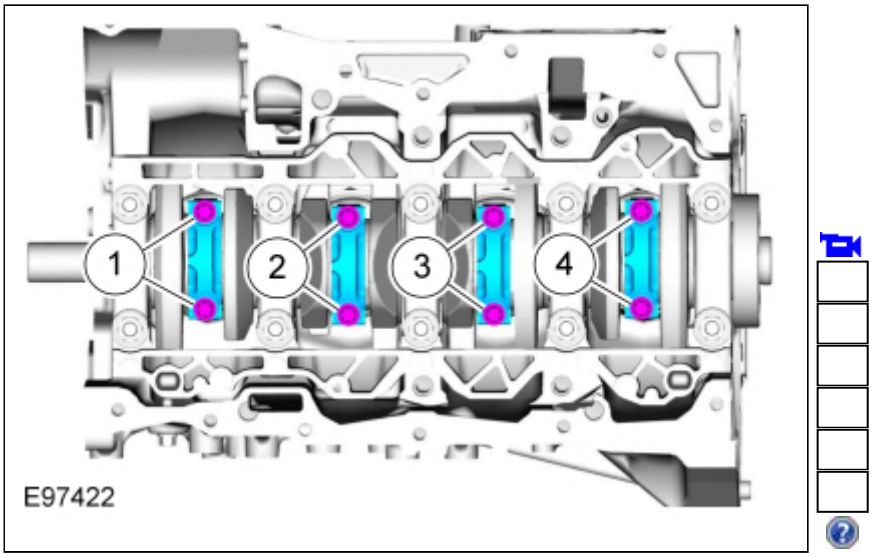


face of the engine block.

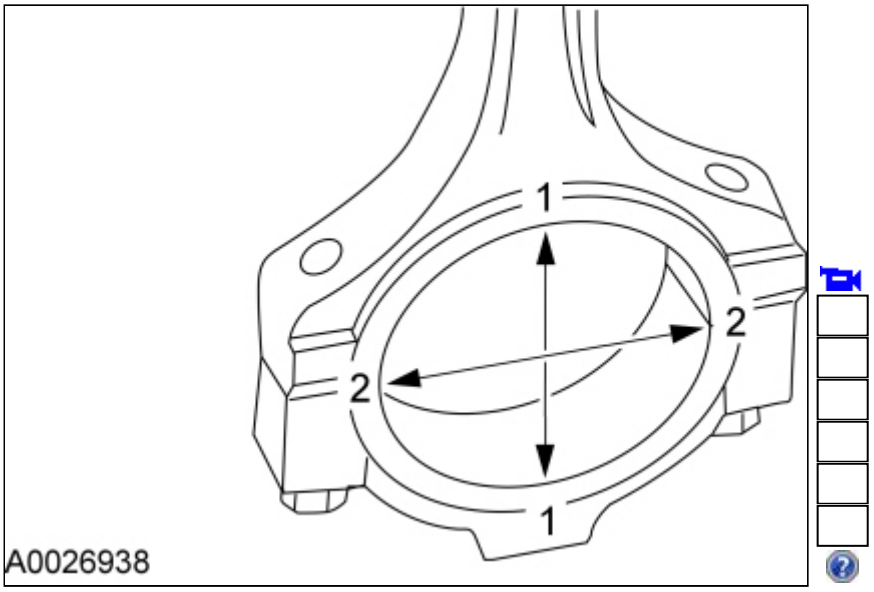


5. Using the original main bearing beam bolts, install and tighten the 10 main bearing beam bolts.
   Torque:
   Stage 1: 5 Nm
   Stage 2: 25 Nm
   Stage 3: 90 °

- Measure each crankshaft block main bearing bore diameter.
- Remove the bolts and the main bearing beam.
- Discard the main bearing beam bolts.

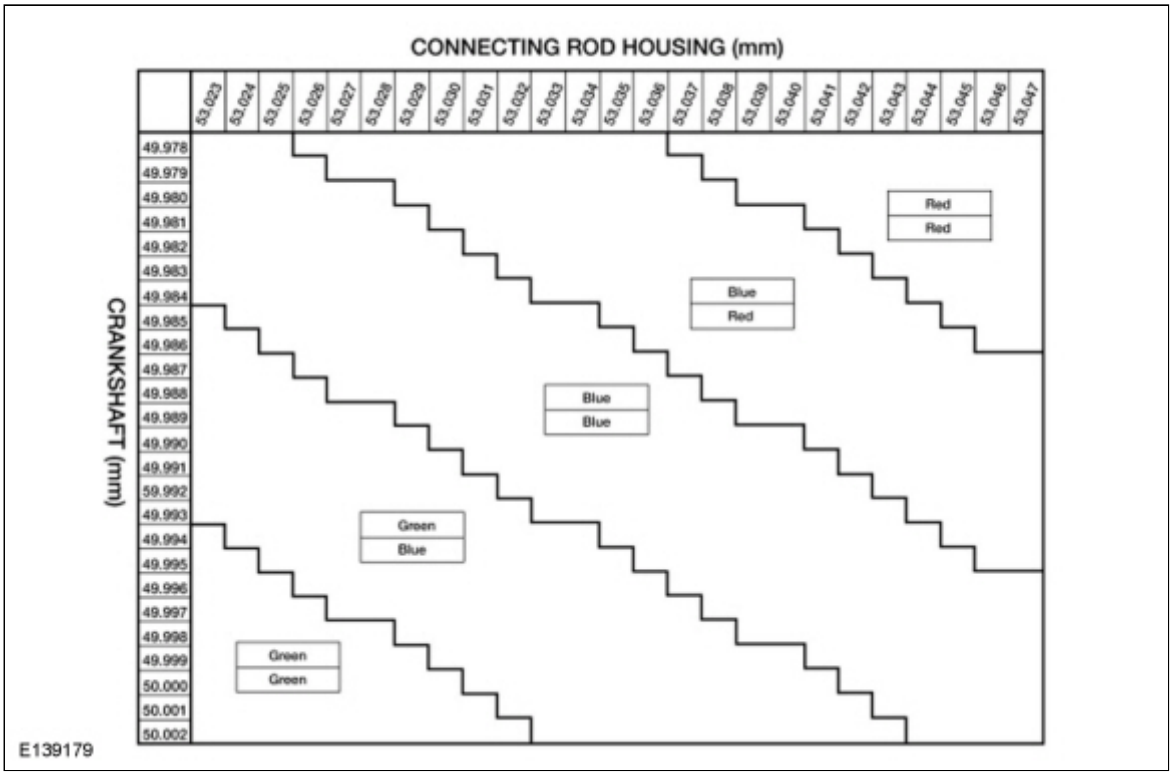


7. Using the chart, select the crankshaft main bearings.



8. **NOTICE: The rod cap installation must keep the same orientation as marked during disassembly or engine damage may occur.**

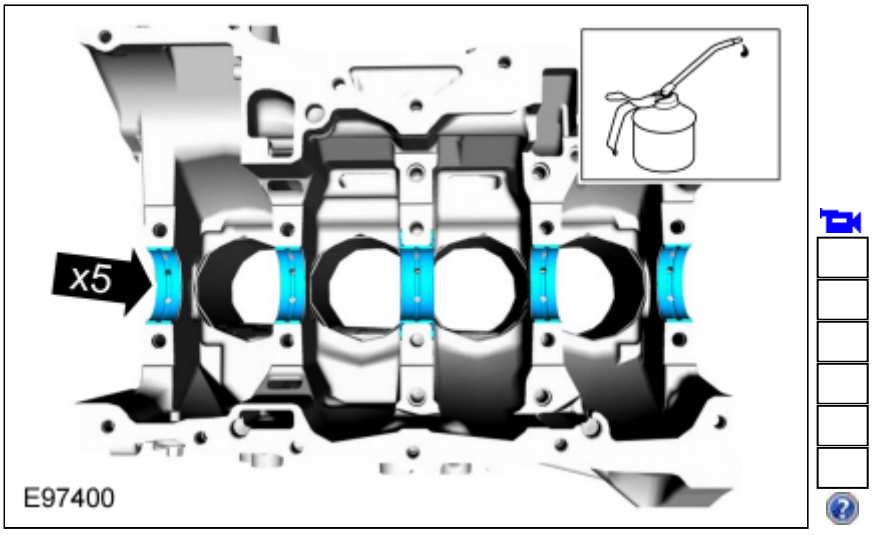
   Using the original connecting rod cap bolts, install the connecting caps and bolts.
   Torque:
   Stage 1: 29 Nm
   Stage 2: 90 °



- Measure the connecting rod large end bore in 2 directions. Record the smallest measurement for each connecting rod.
- Remove the bolts and the connecting rod cap.
- Discard the connecting rod cap bolts.

10. Measure each of the crankshaft connecting rod bearing journal diameters in at least 2 directions. Record the smallest measurement for each connecting rod journal.

11. Using the chart, select the correct connecting rod bearings for each crankshaft connecting rod journal.



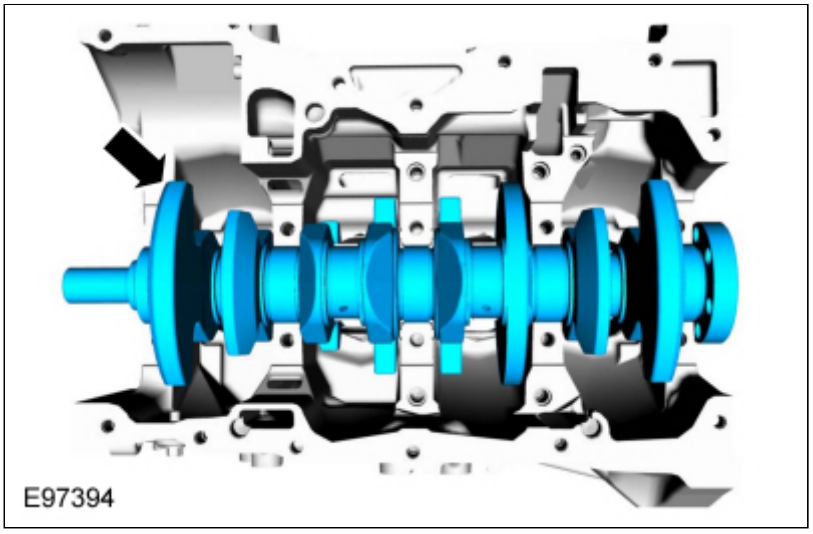
12. **NOTE:** *Before assembling the cylinder block, all sealing surfaces must be free of chips, dirt, paint and foreign material. Also, make sure the coolant and oil passages are clear.*

    NOTE: *If reusing the crankshaft main bearings, install them in their original positions and orientation as noted during disassembly.*

    NOTE: *The center bulkhead is the thrust bearing.*

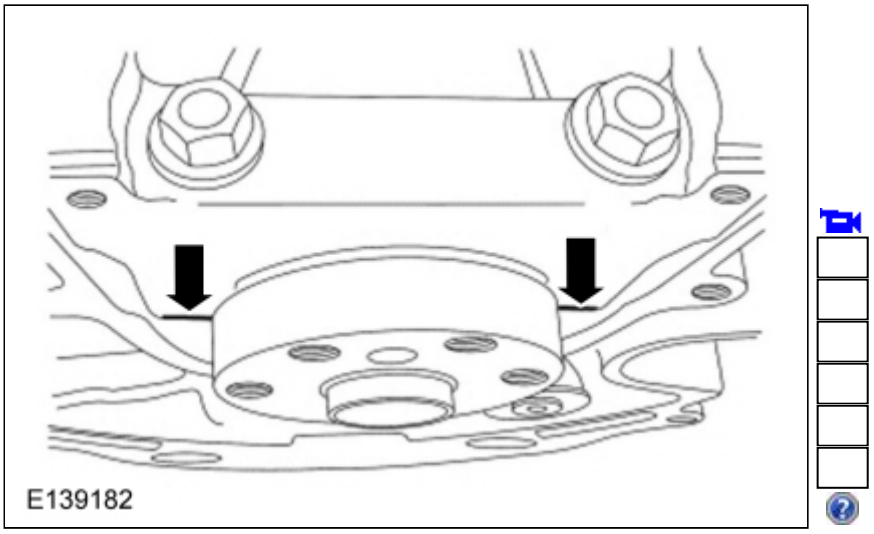
    NOTE: *Make sure that these components are installed to the noted removal position.*

    Lubricate the upper crankshaft main bearings with clean engine oil and install the 5 crankshaft main bearings in the cylinder block.



13. **NOTE:** *If reusing the crankshaft main bearings, install them in their original positions and orientation as noted during disassembly.*

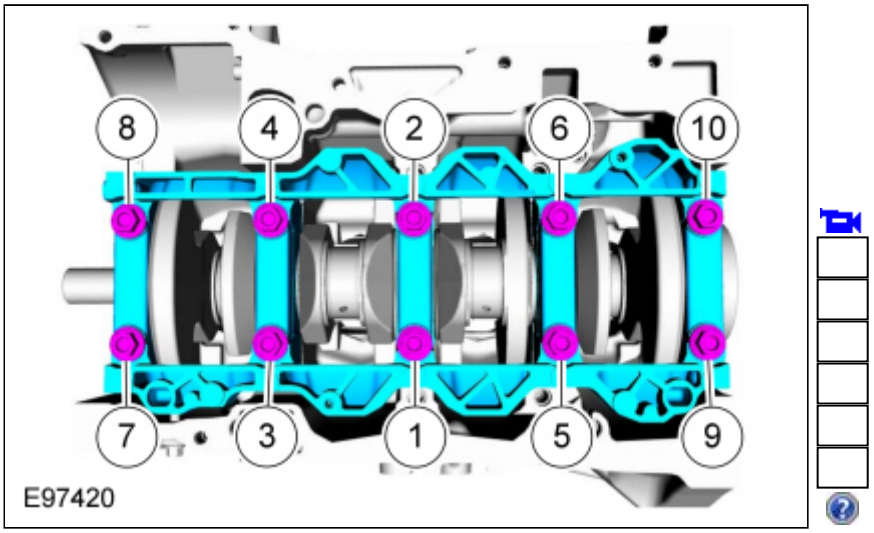
    Lubricate the crankshaft main bearings with clean engine oil and install the 5 crankshaft main bearings in the main bearing beam.



14. Lubricate journals on the crankshaft with clean engine oil.
15. Position the crankshaft in the cylinder block.

16. Lubricate the 10 main bearing beam side fit surfaces (front 2 shown) with clean engine oil.

17. Lubricate the crankshaft bearing journals on the main bearing beam with clean engine oil. Then position the main bearing beam in the engine block with the main bearing beam mounted flush with the rear face of the engine block.



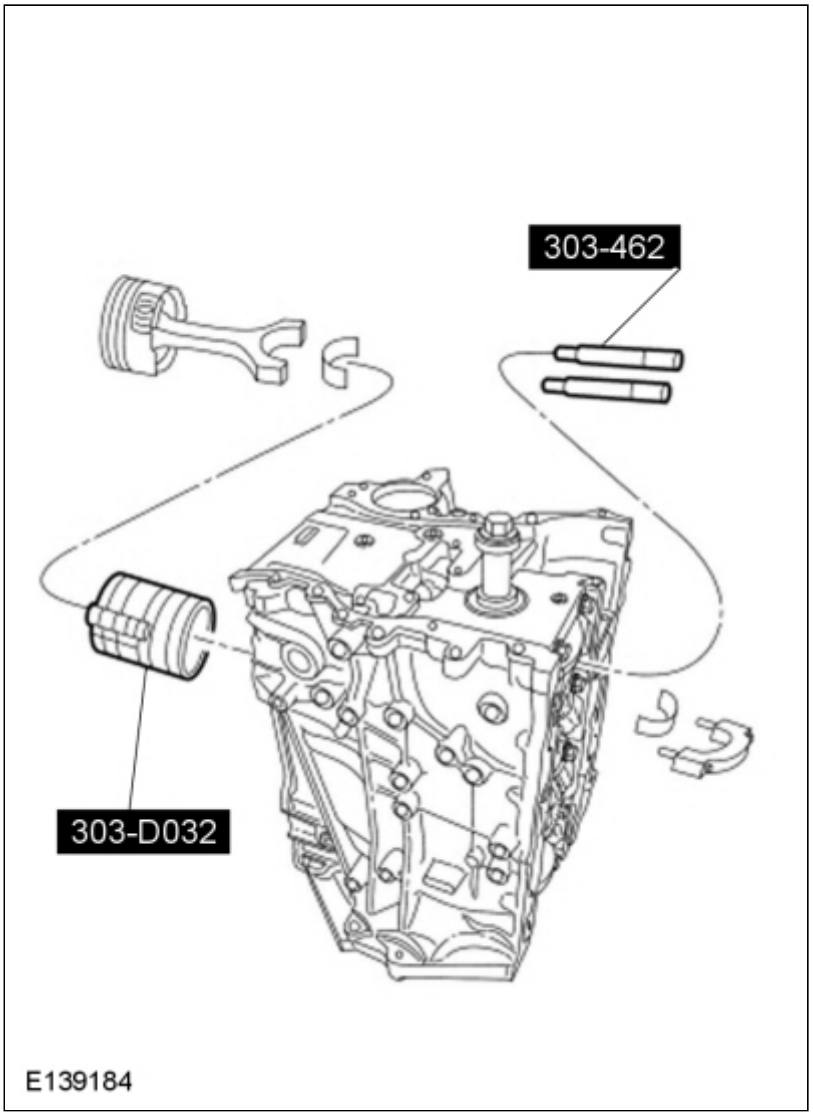
18. **NOTICE: Make sure that new bolts are installed.**

    NOTE: *Lubricate the main bearing beam bolts threads and under the bolt heads with clean engine oil.*

    NOTE: *Position the crankshaft to the rear of the cylinder block, then position the crankshaft to the front of the cylinder block before tightening the main bearing beam bolts.*

    Torque:
    Stage 1: 5 Nm
    Stage 2: 25 Nm
    Stage 3: 90°

- Using the dial indicator gauge with holding fixture, measure crankshaft end play.
  Use Special Service Tool: 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.
- Position the crankshaft to the rear of the cylinder block.
- Zero the dial indicator gauge with holding fixture.
- Move the crankshaft to the front of the cylinder block. Note and record the crankshaft end play.
- Acceptable crankshaft end play is 0.22-0.43 mm (0.008-0.016 in). If the crankshaft end play exceeds the specified range, install new parts as necessary.

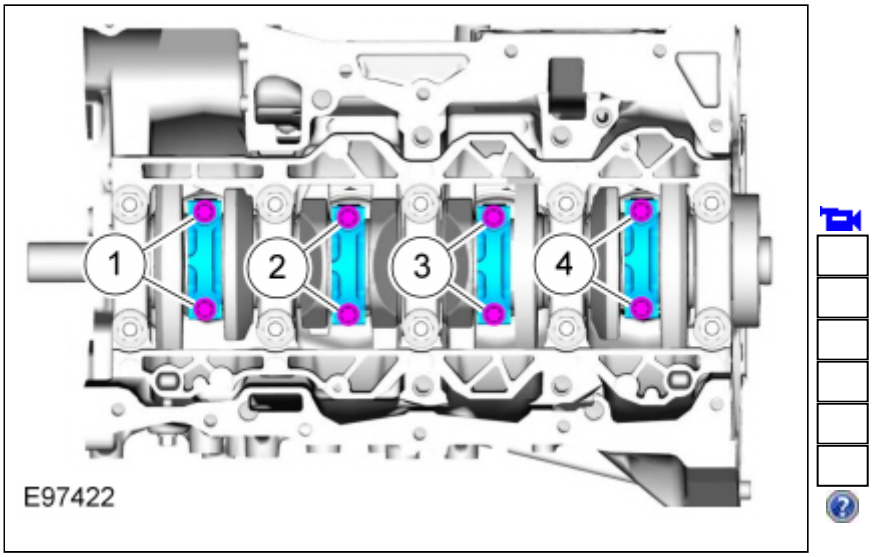


20. **NOTICE: Be sure not to scratch the cylinder wall or crankshaft journal with the connecting rod. Push the piston down until the connecting rod bearing seats on the crankshaft journal.**

    NOTE: *Lubricate the pistons, piston rings, connecting rod bearings and the entire cylinder bores with clean engine oil.*

    NOTE: *Make sure the piston arrow on top is facing toward the front of the engine.*

    - Using the piston ring compressor and the connecting rod installer, install the piston and connecting rod assemblies.
      Use Special Service Tool: 303-D032 (D81L-6002-C) Compressor, Piston Ring. , 303-462 Installer, Connecting Rod.
    - When installing the pistons and connecting rod assemblies, the oil ring gaps must be positioned 60 degrees apart from each other and a minimum of 90 degrees from the expander gap.
    - The position of the upper and lower compression ring gaps are not controlled for installation.

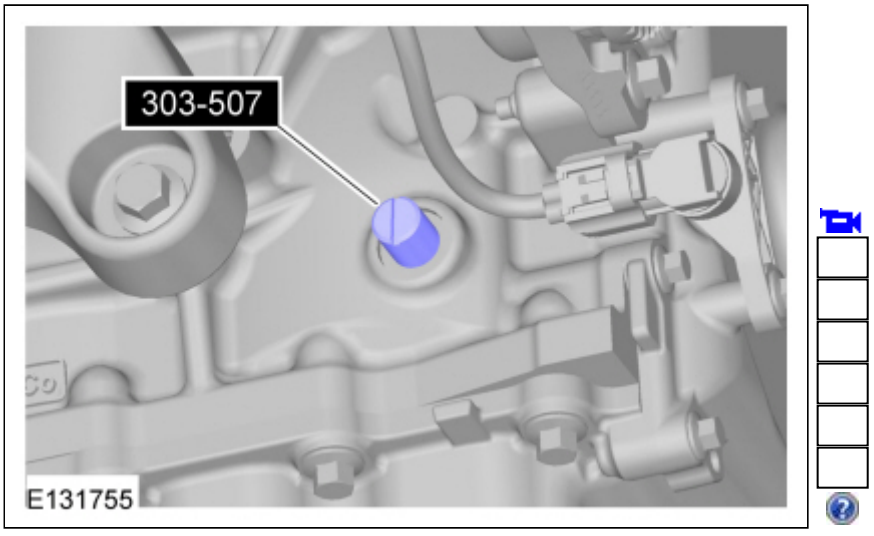


21. **NOTICE: The rod cap installation must keep the same orientation as marked during disassembly or engine damage may occur.**

    NOTE: *Install connecting rod caps and bolts on the connecting rods for cylinders 1 and 4 first and tighten. Then rotate crankshaft 180 degrees and install connecting rod caps and bolts on connecting rods for cylinders 2 and 3 and tighten.*

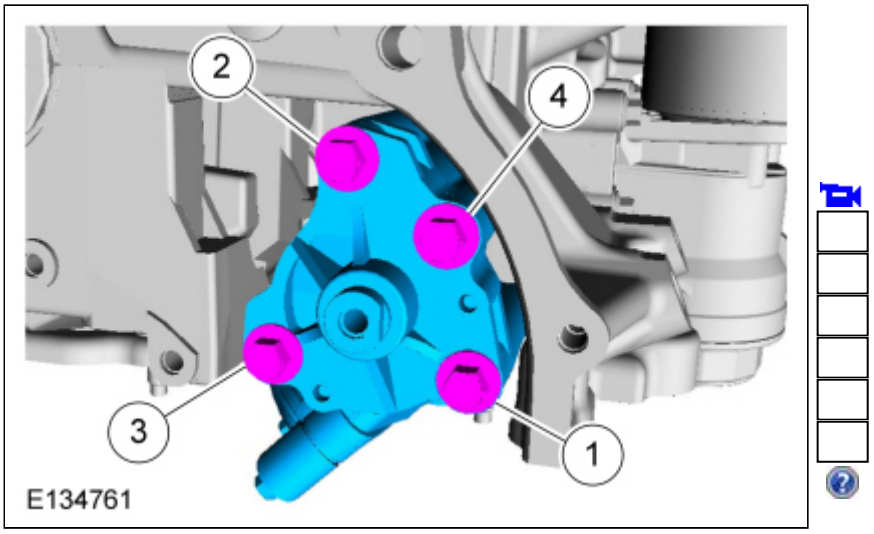
    NOTE: *After installation of each connecting rod cap, rotate the crankshaft to verify smooth operation.*

    Install the connecting rod caps and the new bolts.
    Torque:
    Stage 1: 29 Nm
    Stage 2: 90 °



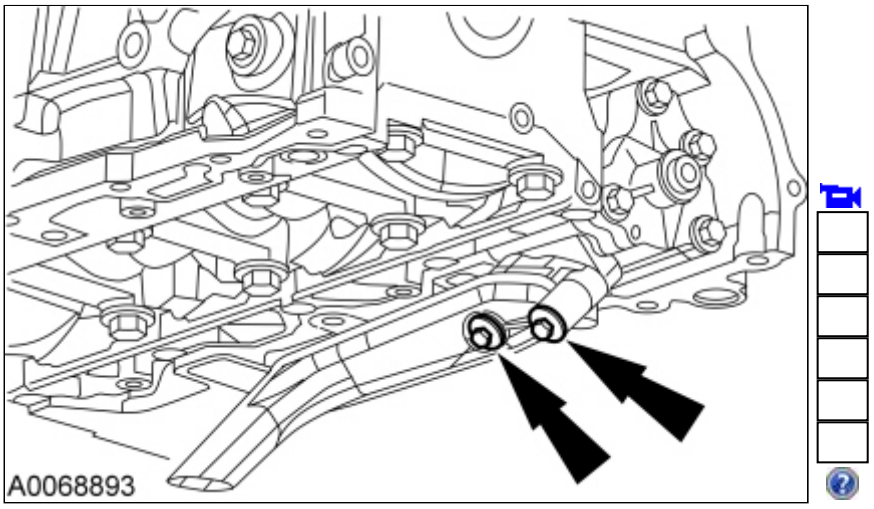
22. **NOTICE: Failure to position the No. 1 piston at TDC can result in damage to the engine. Turn the engine in the normal direction of rotation only.**

    Turn the crankshaft clockwise to position the No. 1 piston at TDC.



23. **NOTE:** *The crankshaft TDC timing peg will contact the crankshaft and prevent it from turning past TDC. However, the crankshaft can still be rotated in the counterclockwise direction. The crankshaft must remain at the TDC position until the timing drive components and crankshaft pulley are installed. Install the crankshaft TDC timing peg.*

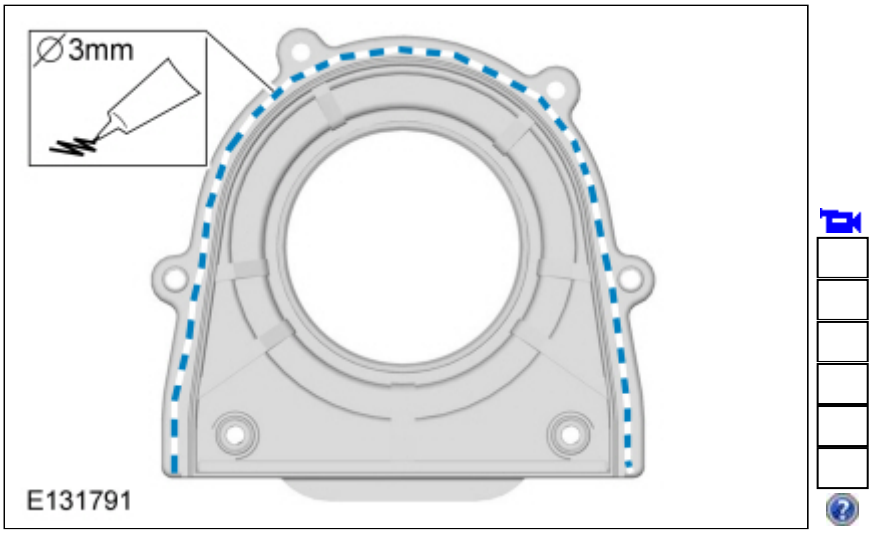
    Install the crankshaft TDC timing peg.
    Use Special Service Tool: 303-507 Timing Peg, Crankshaft TDC.



24. **NOTE:** *Clean the oil pump and cylinder block mating surfaces with metal surface prep.*

    Torque:
    Stage 1: 10 Nm
    Stage 2: 20 Nm

25. Install a new oil pump pickup tube gasket and the pickup tube.
    Torque: 10 Nm

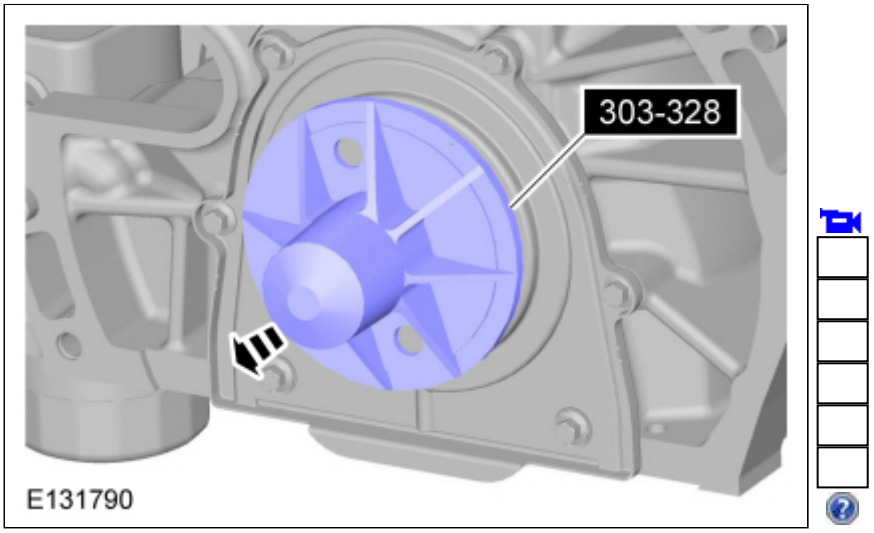


26. **NOTICE: Install the crankshaft rear seal carriers within five minutes of applying the sealer.**

    NOTE: *Do not damage the mating faces.*

    NOTE: *Mating surface should not have traces of oil to improve the adhesion.*

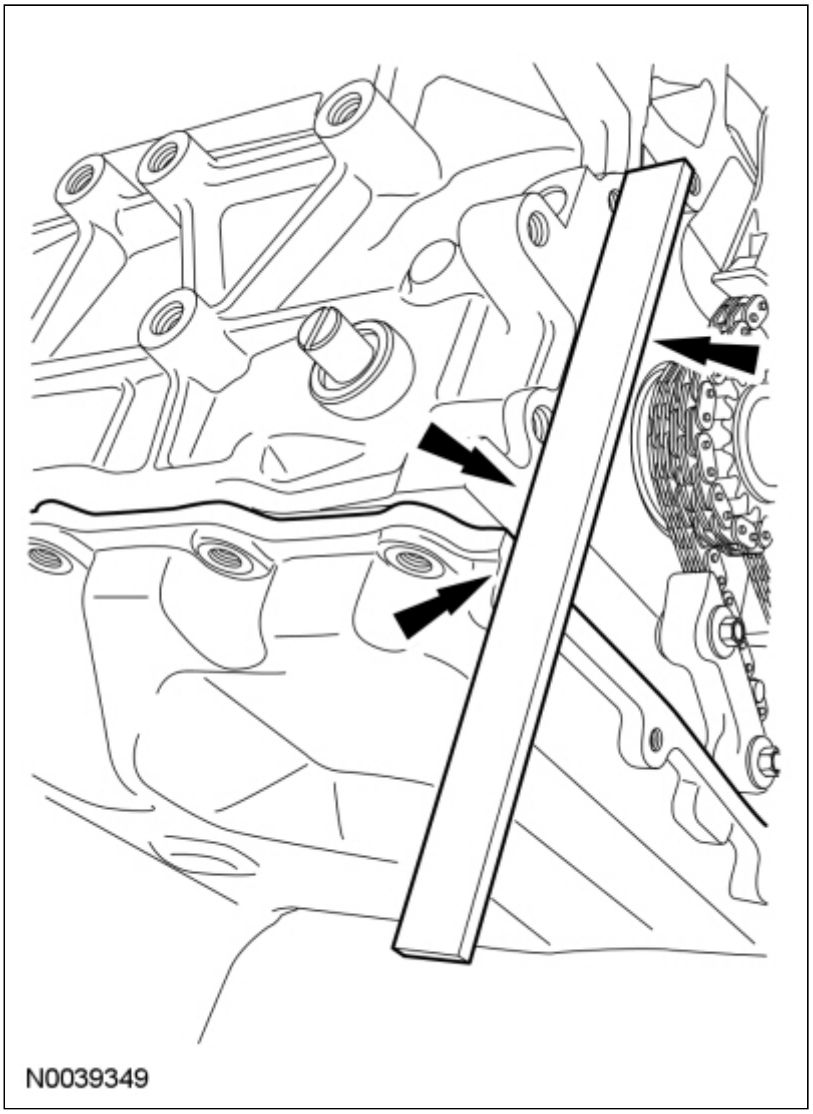
    Material: Silicone Sealant (WSE-M4G323-A4)



27. **NOTE:** *New crankshaft rear seal carriers are supplied with an alignment sleeve which must be removed after installation.*

    Use Special Service Tool: 303-328 (T88P-6701-B1) Replacer, Rear Seal.

Torque: 10 Nm

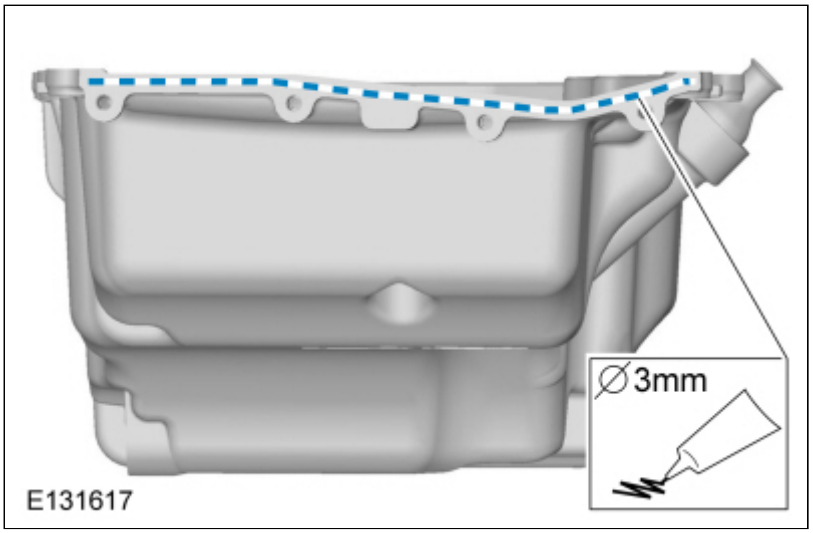


28. Remove Special Service Tool: 303-328 (T88P-6701-B1) Replacer, Rear Seal.

29. **NOTICE: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges, which make leak paths. Use a plastic scraping tool to remove traces of sealant.**

    Clean and inspect all mating surfaces.

30. Using a suitable straight edge, align the front surface of the oil pan flush with the front surface of the engine block.

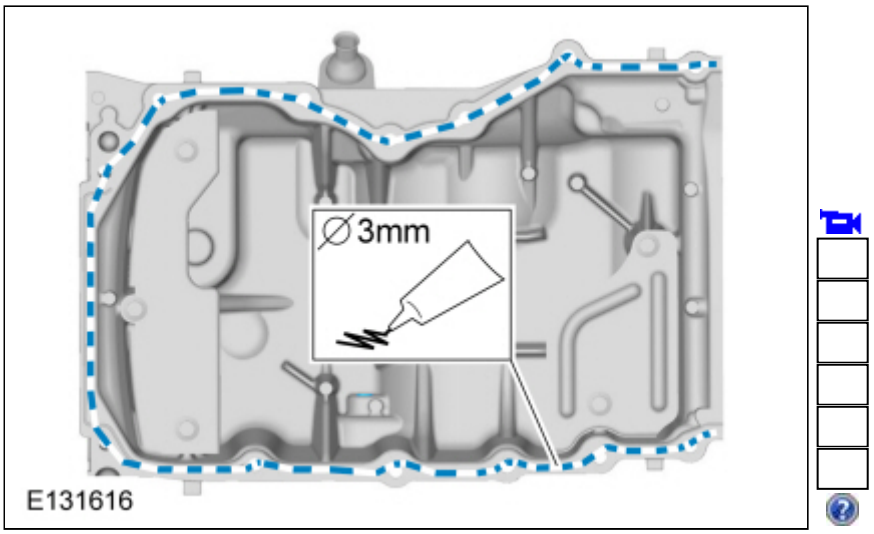


31. **NOTICE: Install the oil pan within five minutes of applying the sealer.**

    NOTE: *Do not damage the mating faces.*

    NOTE: *Mating surface should not have traces of oil to improve the adhesion.*

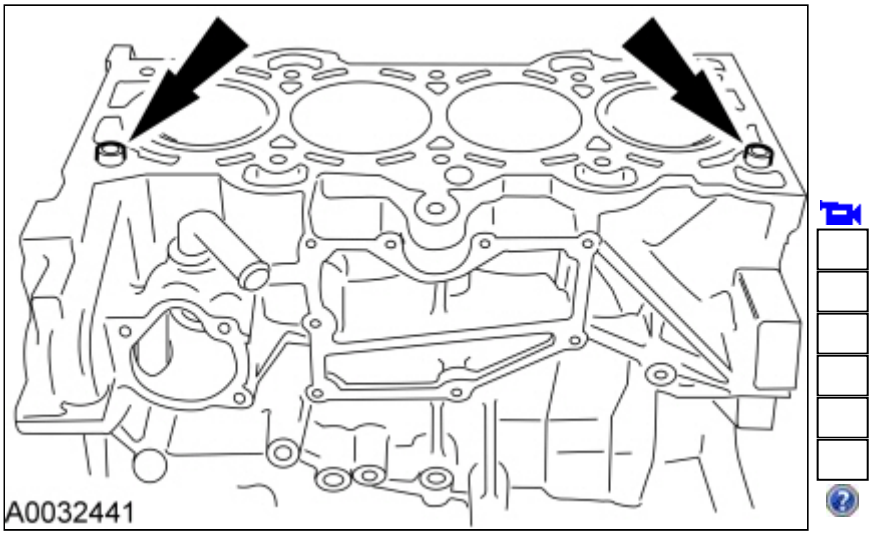
    Material: Silicone Sealant (WSE-M4G323-A4)



32. **NOTICE: Install the oil pan within five minutes of applying the sealer.**

    NOTE: *Do not damage the mating faces.*

    NOTE: *Mating surface should not have traces of oil to improve the adhesion.*



Material: Silicone Sealant (WSE-M4G323-A4)

33. Install the oil pan.
Torque: 25 Nm

- Install the cylinder head alignment dowels.
- Dowels must be fully seated in the cylinder block.

35. **NOTICE: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges that make leak paths. Use a plastic scraping tool to remove all traces of the head gasket.**

    NOTE: *Observe all warnings and cautions and follow all application directions contained on the packaging of the silicone gasket remover and the metal surface prep.*

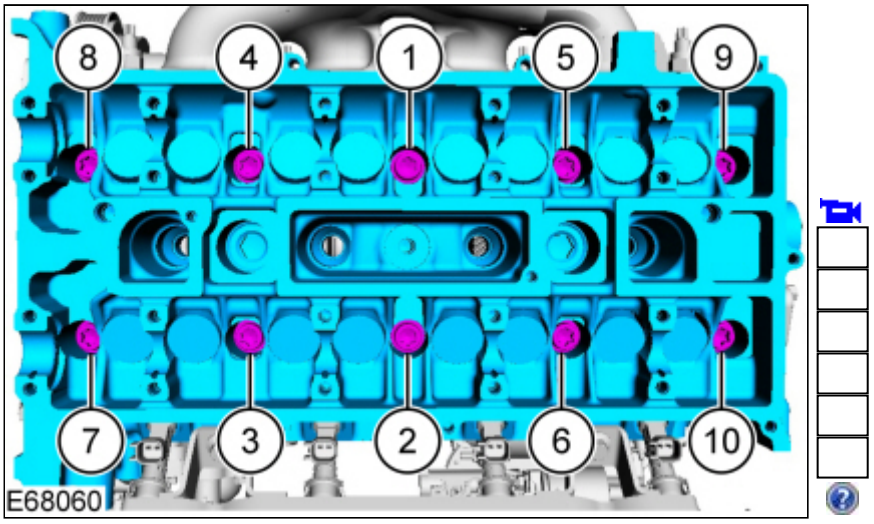
    NOTE: *If there is no residual gasket material present, metal surface prep can be used to clean and prepare the surfaces.*

    - Clean the cylinder head-to-cylinder block mating surface of both the cylinder head and the cylinder block in the following sequence.

    1. Remove any large deposits of silicone or gasket material with a plastic scraper.
    2. Apply silicone gasket remover, following package directions, and allow to set for several minutes.
    3. Remove the silicone gasket remover with a plastic scraper. A second application of silicone gasket remover may be required if residual traces of silicone or gasket material remain.
    4. Apply metal surface prep, following package directions, to remove any traces of oil or coolant, and to prepare the surfaces to bond with the new gasket. Do not attempt to make the metal shiny. Some staining of the metal surfaces is normal.

36. Apply silicone gasket and sealant to the locations shown.

37. Install a new head gasket.

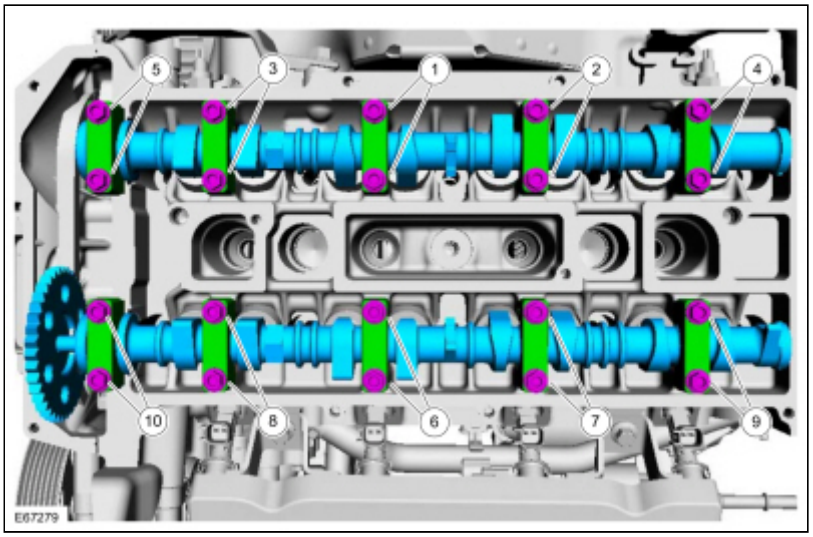


38. **NOTICE: Make sure that new bolts are installed.**

    NOTE: *The cylinder head bolts are torque-to-yield and must not be reused.*

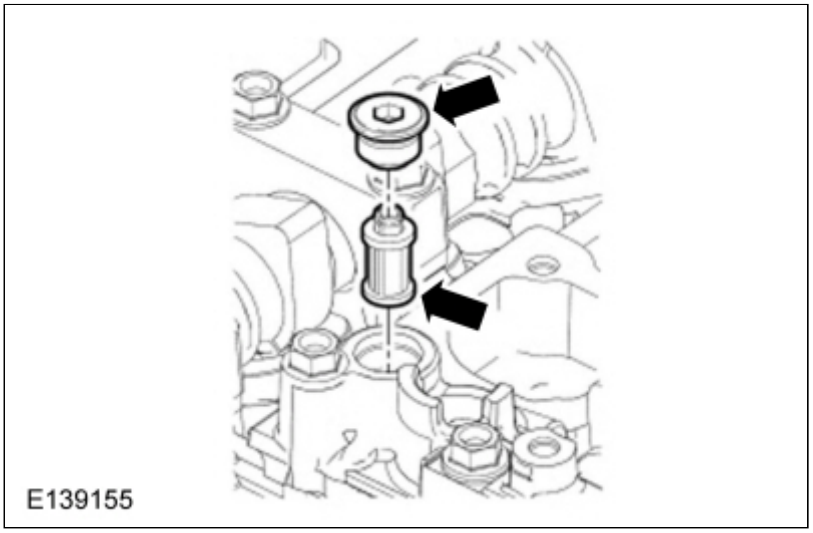
    NOTE: *Lubricate the bolts with clean engine oil prior to installation.*

    Torque:
    Stage 1: 5 Nm
    Stage 2: 15 Nm
    Stage 3: 45 Nm
    Stage 4: 90°
    Stage 5: 90°



39. **NOTE:** *Coat the valve tappets with clean engine oil prior to installation.*

    Install the valve tappets.

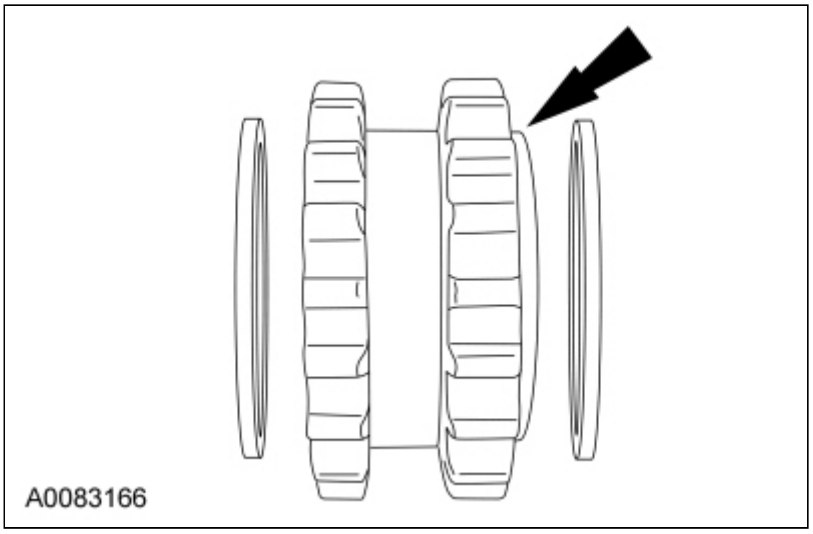


40. **NOTICE: Make sure that the camshafts and camshaft bearing caps are installed in their original locations.**

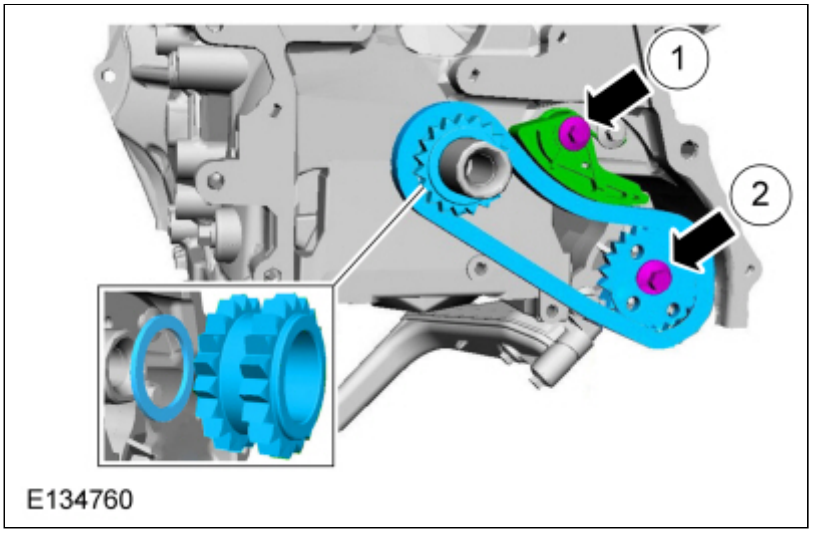
    NOTE: *Lubricate the camshaft journals and bearing caps with clean engine oil.*

    Install the camshafts approximately at valve overlap position cylinder No. 4 and tighten the camshaft bearing cap bolts one at a time until finger-tight.
    Material: Gear/Transmission Fluid - SAE 85W-90 (SQ-M2C9002-AA)
    Torque:
    Stage 1: 7 Nm
    Stage 2: 16 Nm

41. Install the variable camshaft timing (VCT) system oil filter and the plug in the intake camshaft thrust cap.
    Torque: 17 Nm

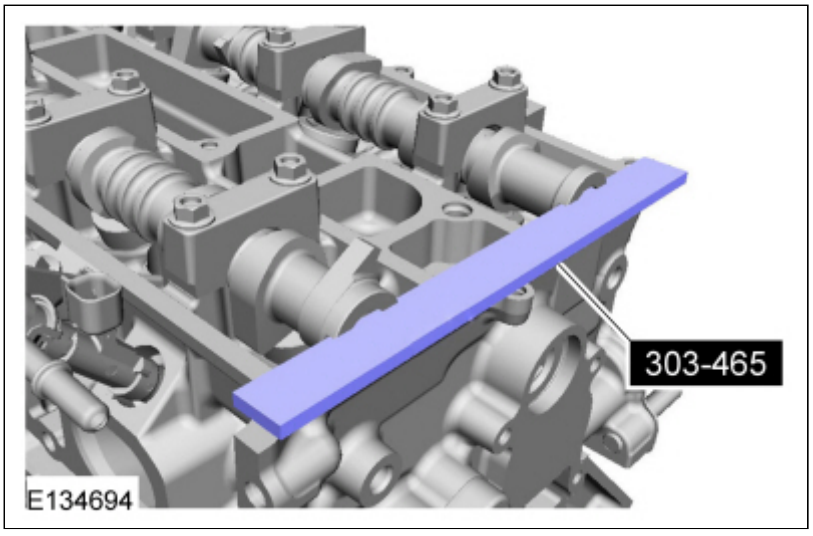


42. Install the VCT solenoid and the bolt.
    Torque: 10 Nm



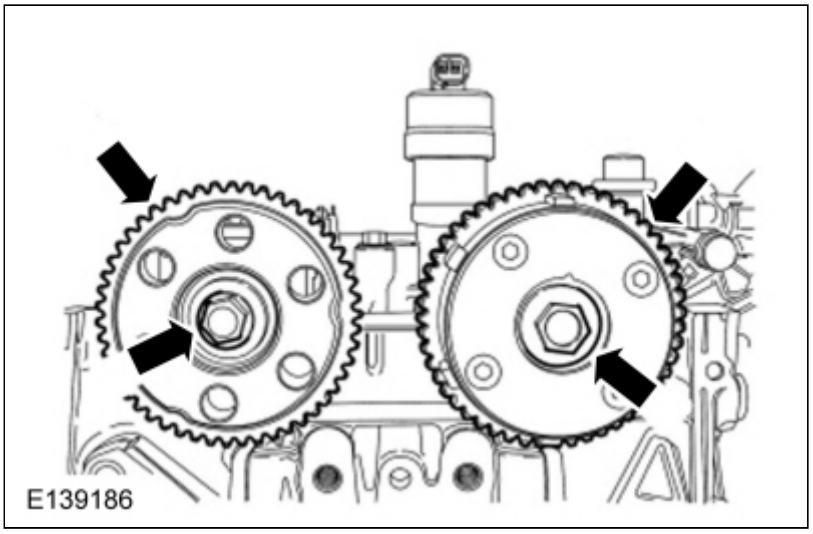
43. **NOTE:** *Install a new crankshaft sprocket diamond washer on both sides of the crankshaft sprocket.*

- Install the crankshaft sprocket, new crankshaft sprocket diamond washers, oil pump chain and oil pump sprocket.
- The crankshaft sprocket flange must be facing away from the engine block.

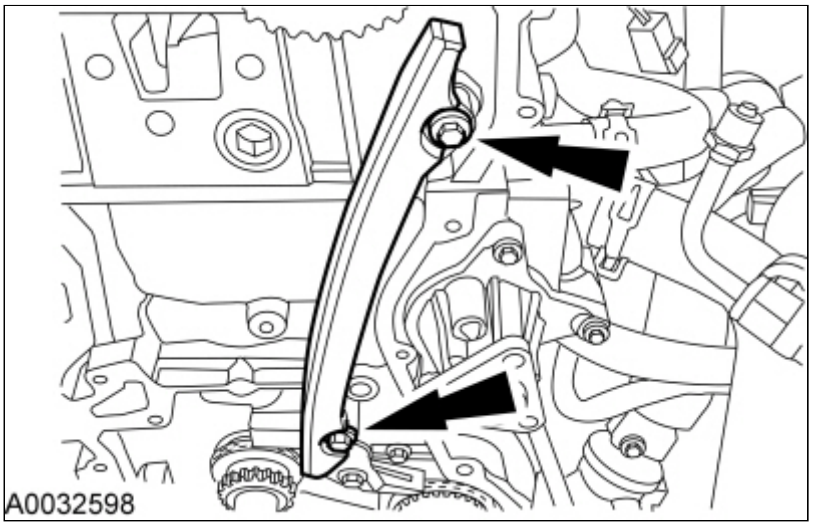


44. **NOTICE: Make sure that a new friction washer is installed.**

    1. *Torque*: 10 Nm
    2. *Torque*: 25 Nm



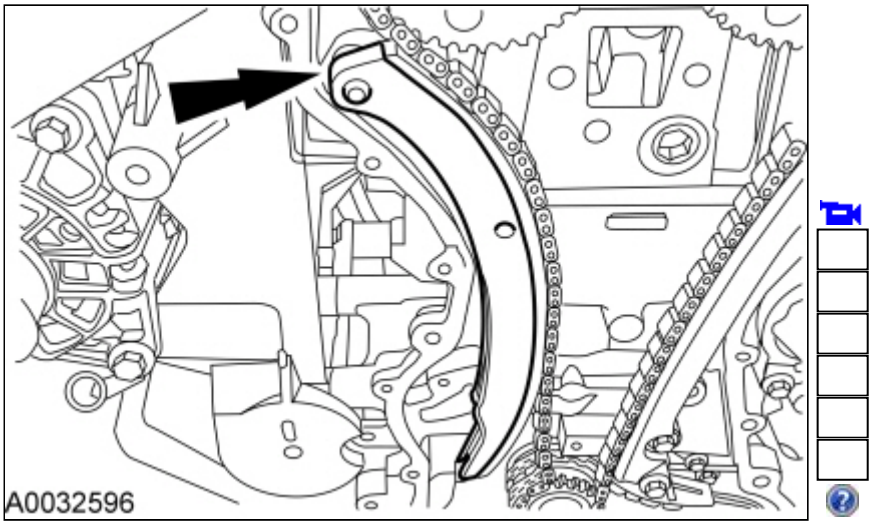
45. Use Special Service Tool: 303-465 Tool, Camshaft Align Timing.



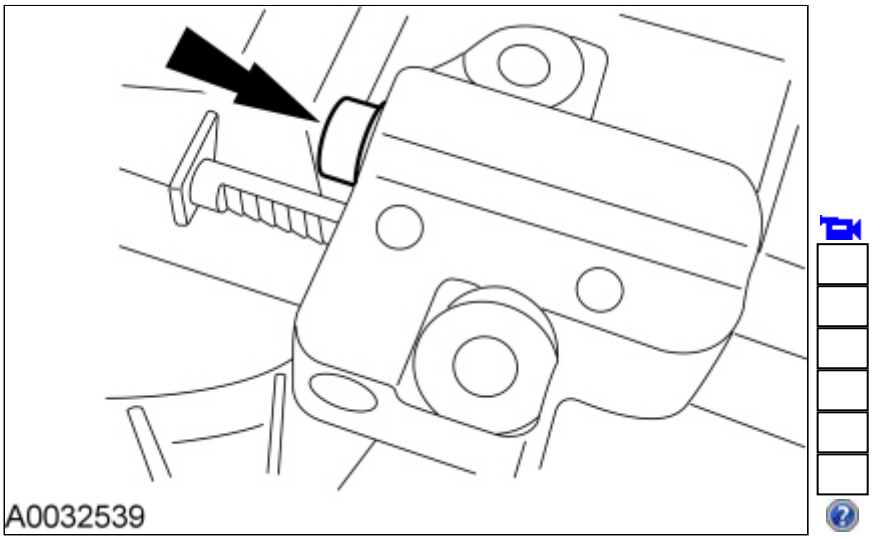
46. **NOTE:** *Hand tighten the bolts at this stage.*

    Install the camshaft sprockets and the bolts.

47. Install the timing chain guide and the bolts.
    Torque: 10 Nm

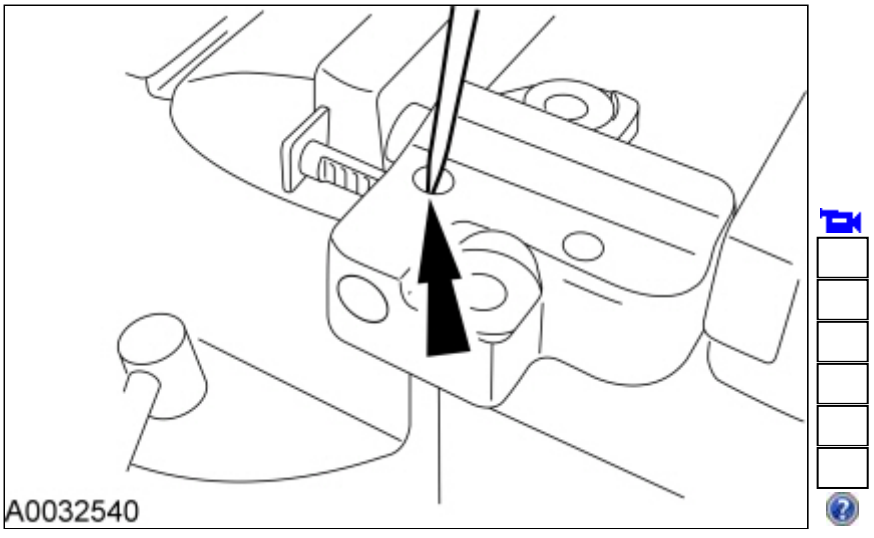


48. Install the timing chain.



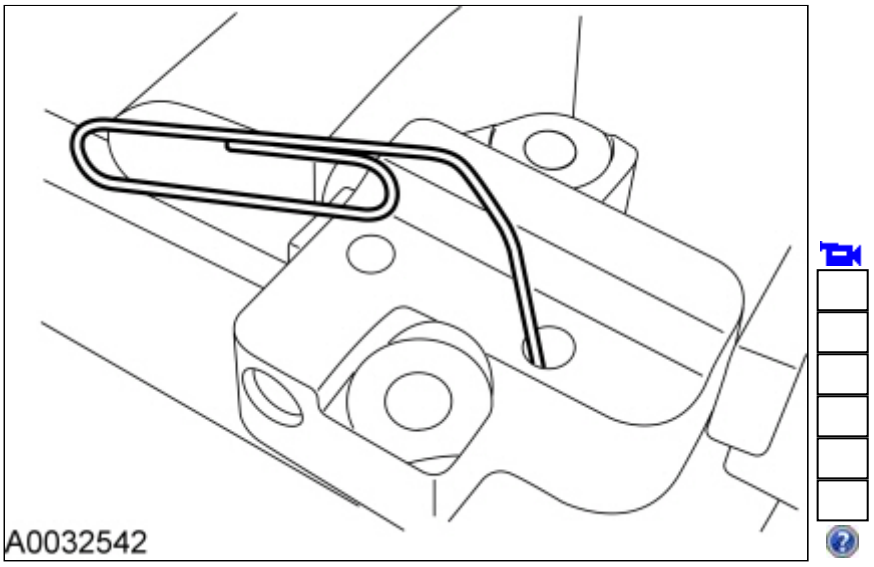
49. **NOTE:** *If the timing chain tensioner plunger and ratchet assembly are not pinned in the compressed position, follow the next 4 steps.*

    Install the timing chain guide.

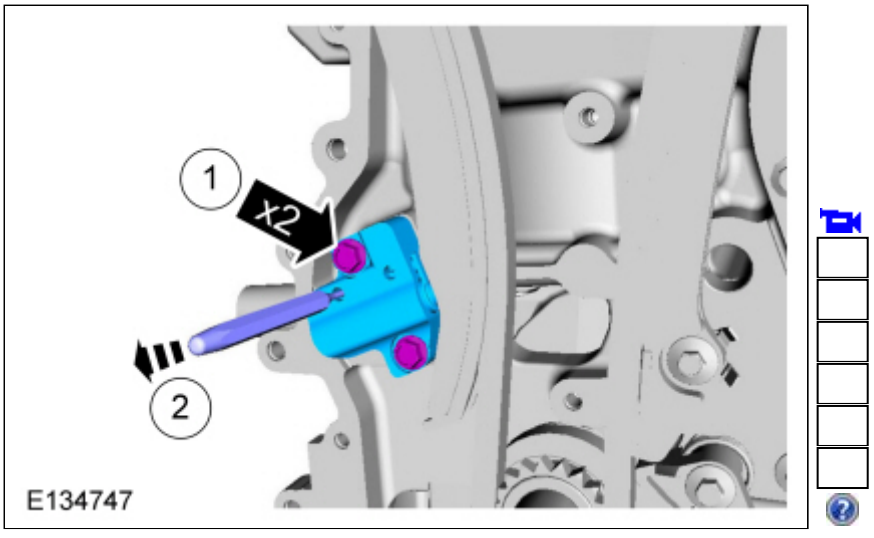


50. **NOTICE: Do not compress the ratchet assembly. This will damage the ratchet assembly.**

    Using the edge of a vise, compress the timing chain tensioner plunger.

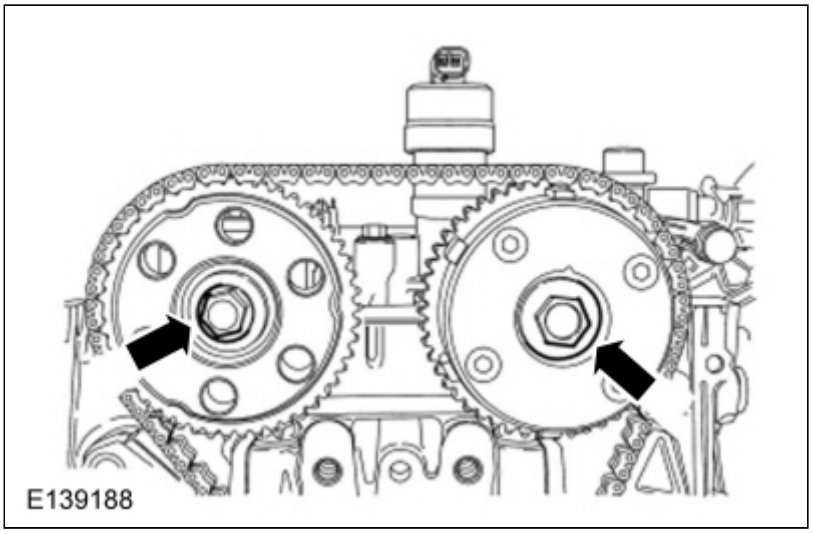


51. Using a small pick, push back and hold the ratchet mechanism.



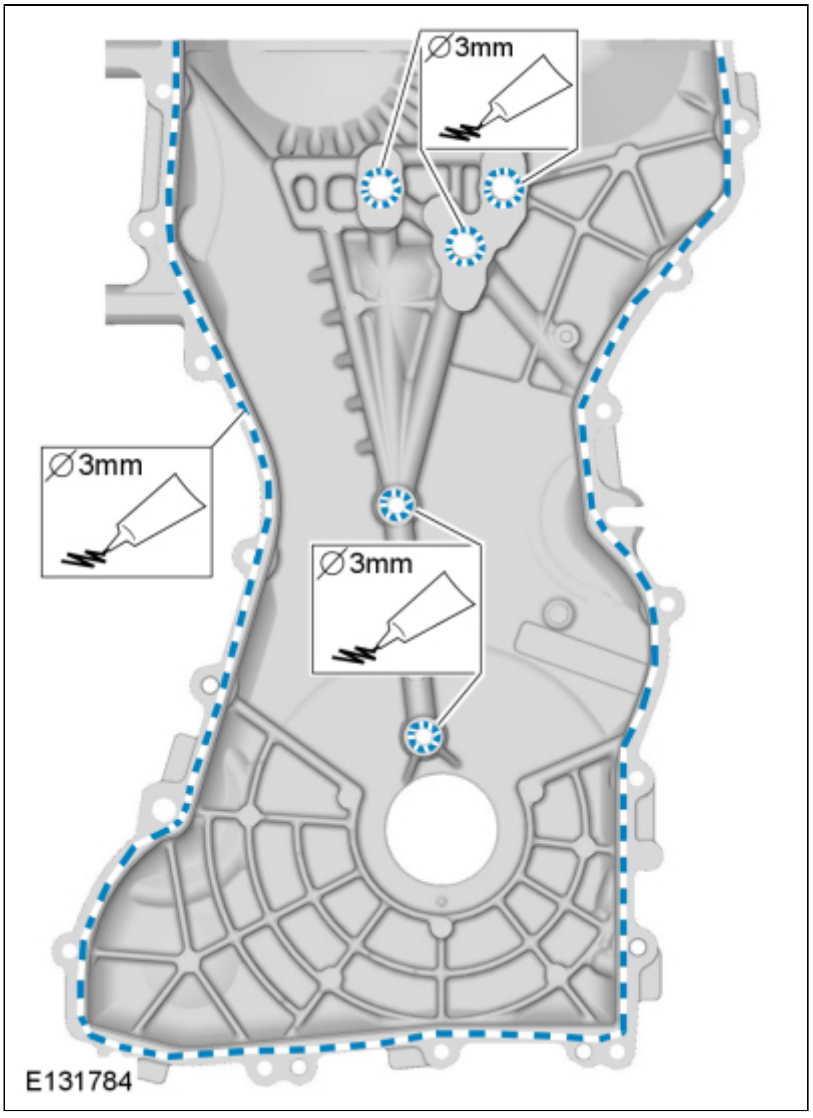
52. While holding the ratchet mechanism, push the ratchet arm back into the tensioner housing.

53. Install a paper clip into the hole in the tensioner housing to hold the ratchet assembly and the plunger in during installation.

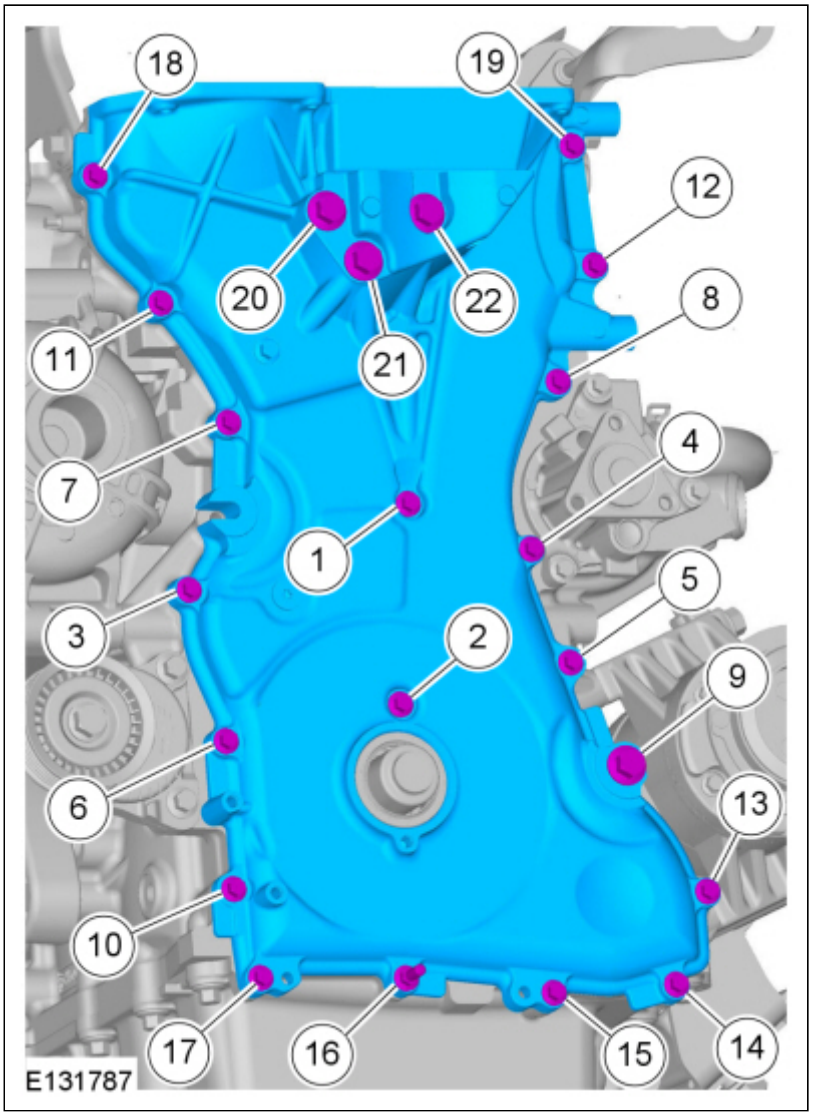


54. Install the timing chain tensioner and the bolts.
Torque: 10 Nm

55. **NOTICE: Use an open-ended wrench to hold the camshafts by the hexagon to prevent the camshafts from turning.**



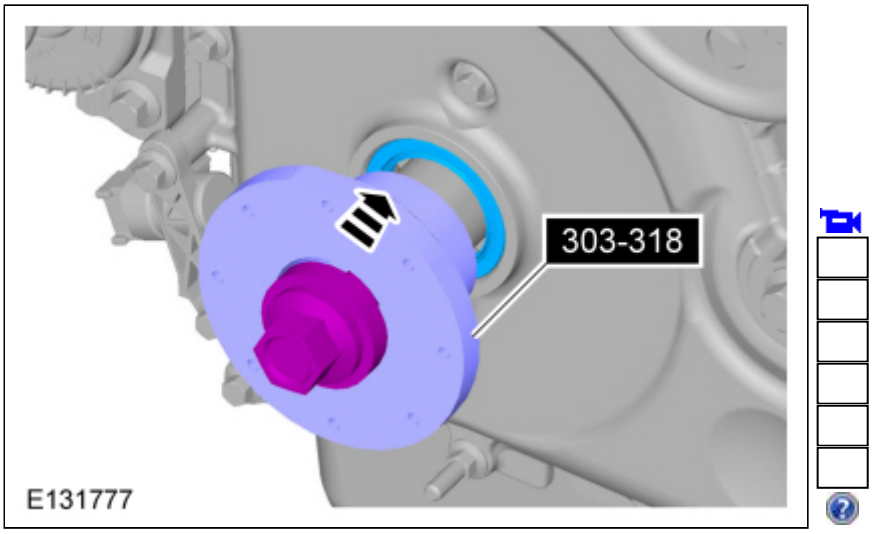
Torque: 72 Nm



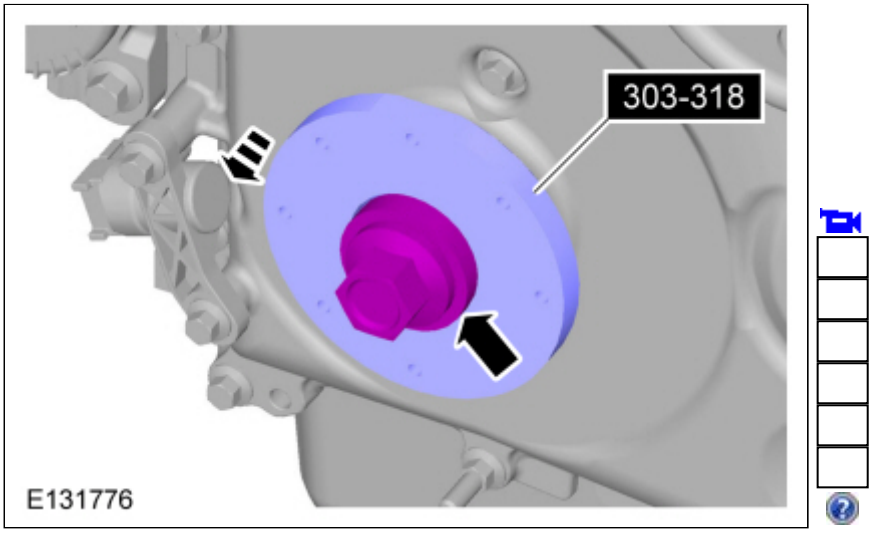
56. **NOTICE: Install the engine front cover within five minutes of applying the sealer.**

    NOTE: *The engine front cover must be installed and the bolts tightened within 4 minutes of applying the silicone gasket and sealant.*

    Material: Silicone Sealant (WSE-M4G323-A4)

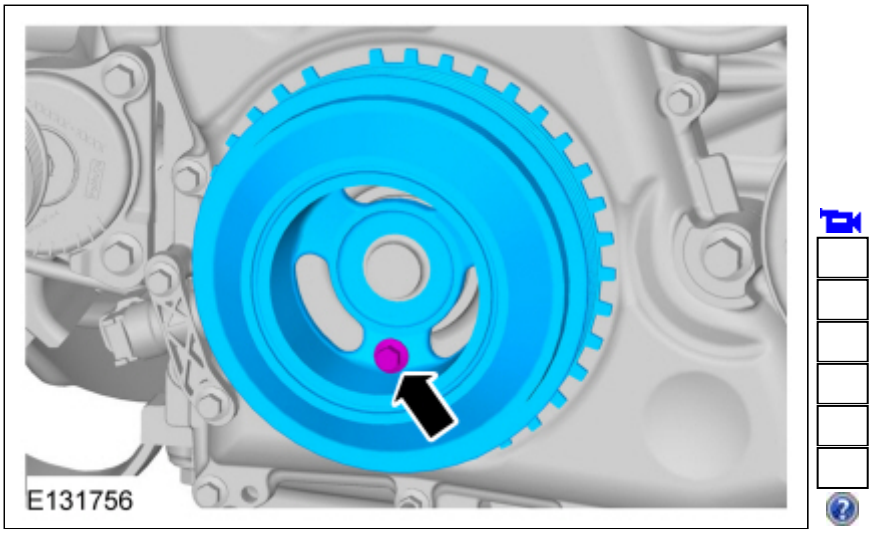


57. *Torque*:
    1 - 8: 10 Nm
    9: 48 Nm
    10 - 19: 10 Nm
    20 - 22: 48 Nm

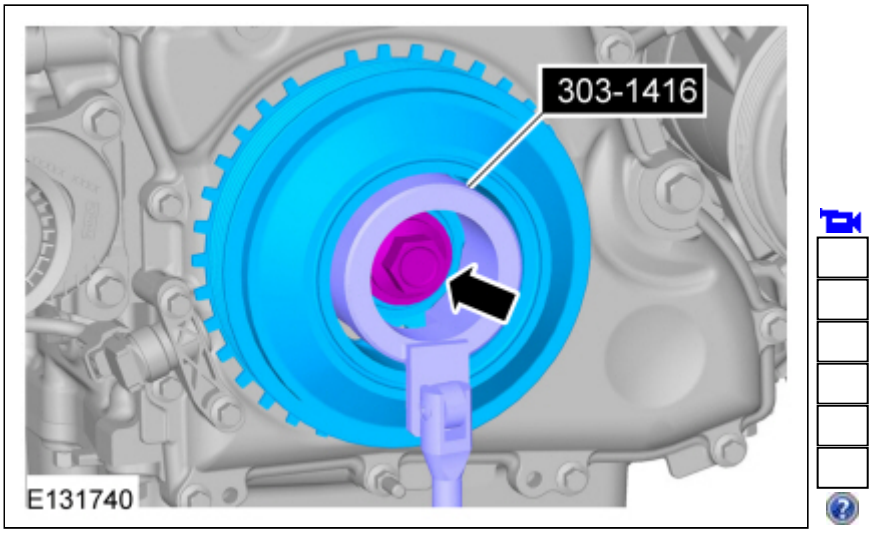


58. **NOTICE: Make sure that a new friction washer is installed.**

59. Use Special Service Tool: 303-318 Aligner/Installer, Crankshaft Front Seal.
Torque: 50 Nm

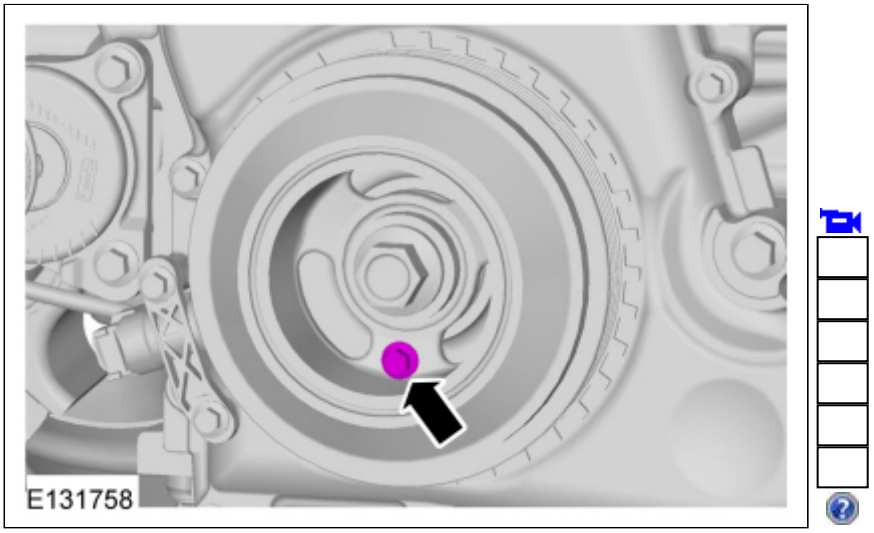


60. Remove Special Service Tool: 303-318 Aligner/Installer, Crankshaft Front Seal.

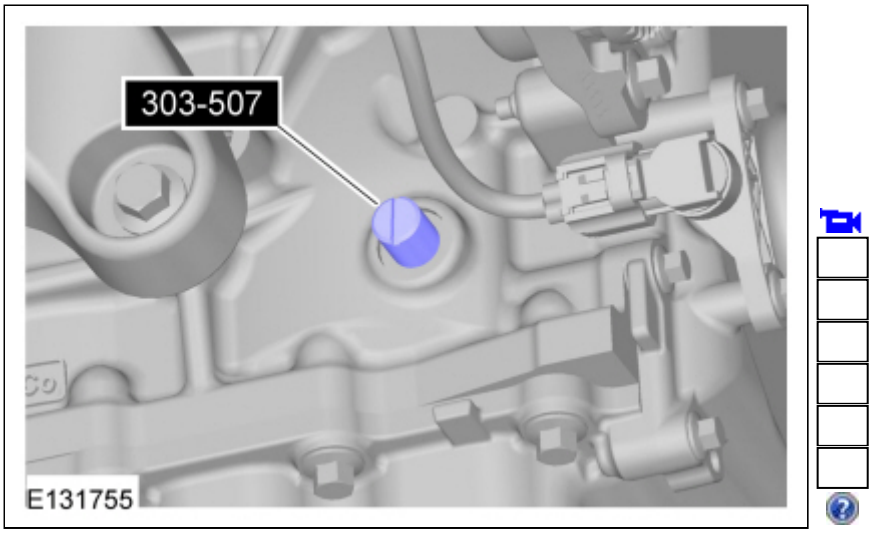


61. **NOTE:** *Hand tighten the bolt at this stage.*

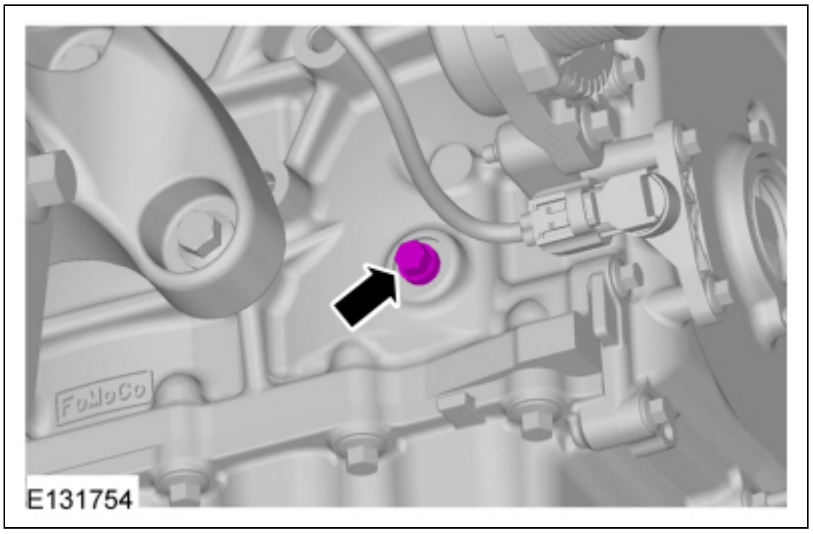
- Bolt M6 x 18 mm



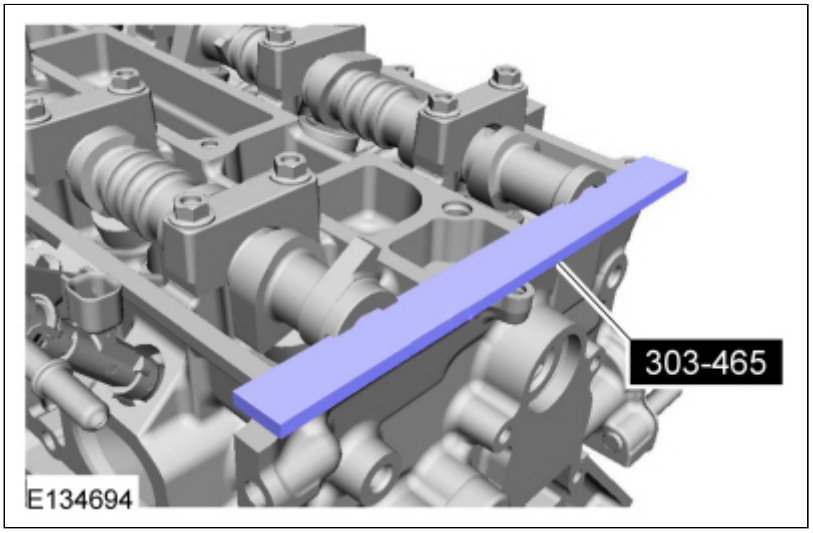
62. **NOTICE: Make sure that a new bolt is installed.**



Use Special Service Tool: 303-1416 Tool, Crank Damper Holding.
Torque:
Stage 1: 100 Nm
Stage 2: 90°

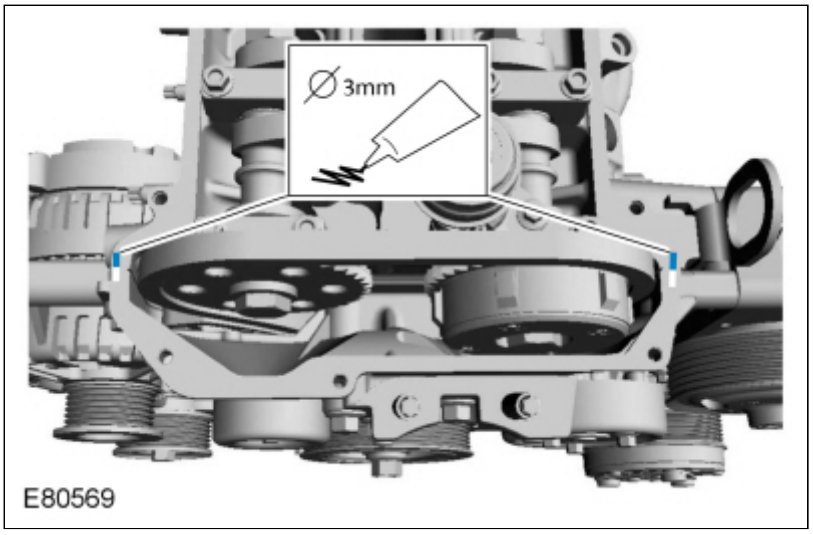


63. Remove the 6 mm x 18 mm bolt.

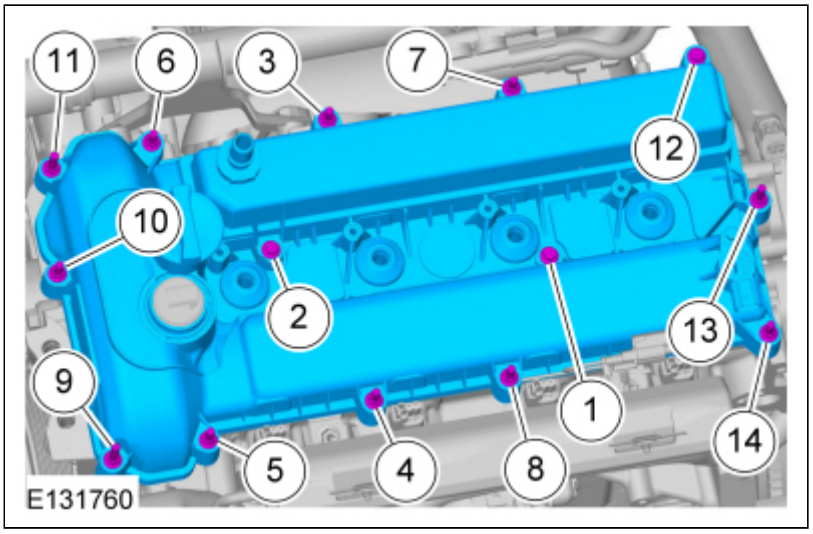


64. Remove Special Service Tool: 303-507 Timing Peg, Crankshaft TDC.

65. Install the engine plug bolt.
    Torque: 20 Nm



66. Use Special Service Tool: 303-465 Tool, Camshaft Align Timing.



67. **NOTE:** *The valve cover must be secured within 4 minutes of silicone gasket application. If the valve cover is not secured within 4 minutes, the sealant must be removed and the sealing area cleaned with metal surface prep.*

    Material: Silicone Sealant (WSE-M4G323-A4)

68. **NOTE:** *The gasket is to be reused unless damaged.*

    Torque: 10 Nm

Specifications

Engine Data — 130 PS

Description	
Code	GBVAJQW
Firing order	1-3-4-2
Bore diameter	86 mm
Stroke	94.6 mm
Displacement	2198 cc
Compression ratio	15.6:1
Power output at _3200 rpm	96 kW (130 PS)
Torque between 1600 to 2500 rpm	320 Nm
Idle speed	800 rpm

Engine Data — 160 PS

Description	
Code	GBVAJQJ
Firing order	1-3-4-2
Bore diameter	86 mm
Stroke	94.6 mm
Displacement	2198 cc
Compression ratio	15.6:1
Power output at _3200 rpm	118 kW (160 PS)
Torque between 1600 to 2500 rpm	385 Nm
Idle speed	800 rpm

Engine Oil Capacity

Description	Liters
Initial fill including oil filter	8.9
Service fill including oil filter	8.6
Service fill without oil filter	8.2

Cylinder Block Dimensions

Description	mm
Cylinder bore diameter	86.000-86.020
Main bearings radial clearance	0.028-0.072
Main bearings 1 to 4 parent bore diameter — vertical measurement	69.504-64.520
Main bearing 5 parent bore diameter — vertical measurement	74.504-74.520
Main bearings 1 to 4 parent bore diameter — horizontal measurement	69.502-69.525
Main bearing 5 parent bore diameter — horizontal measurement	74.502-74.525

Piston Dimensions

Description	mm
Piston diameter	85.950-85.934
Piston clearance in cylinder	0.05-0.086
Piston ring end gaps	
— upper compression ring	0.25-0.035
— lower compression ring	0.85-1.1
— oil control ring	0.2-0.4

Piston ring gap position: The piston ring gaps must be distributed evenly around the circumference of the piston. This also applies to the oil control ring elements. Align the piston ring gaps at 120 degrees to each other.

Crankshaft Dimensions

Description	mm
Main bearing journal end float	0.090-0.305
Main bearing journals 1 to 4 diameter	64.950-64.970
Main bearing journal 5 diameter	69.950-69.970
Connecting rod bearing journal diameter	52.980-53.000

Connecting Rod Dimensions

Description	mm
Bearing clearance	0.04-0.09
Large end bore diameter	55.996-56.016
Small end bore diameter	30.010-30.018
Connecting rod bearing shell inner diameter — bearings installed	53.017-53.043
Connecting rod bearing radial clearance	0.034-0.100
Connecting rod bearing axial clearance	0.100-0.320

Connecting Rod Grade Selection

Crank Pin to Cylinder Head Face 'X' (mm)	Connecting Rod Grade	Connecting Rod Length (mm)
176.255-176.319	A	154.905-154.964 (154.94)
176.320-176.365	B	154.965-155.035 (155.00)
176.366-176.369	A	154.905-154.964 (154.94)
176.370-176.440	B	154.965-155.035 (155.00)
176.441-176.460	C	155.036-155.095 (155.06)

Piston Pin Dimensions

Description	mm
Piston pin length	66.85-66.87
Piston pin diameter	29.995-29.999
Piston pin slide clearance	0.013-0.022

Camshaft Dimensions

Description	mm
Camshaft end float	0.014-0.20
Camshaft bearing journal diameter	26.450
Camshaft bearing clearance — radial measurement	0.065

Valve Dimensions

Description	mm
Valve stem to valve guide clearance — intake valve	0.045
Valve stem to valve guide clearance — exhaust valve	0.055
Valve seat width	26

Cylinder Head Dimensions

Description	mm
Maximum distortion — measured longitudinally and diagonally over 25mm,over 150 mm,over distance in excess of 150mm	0.025,0.050,0.10
Peak to valley height of mating surface	0.02
Thickness of cylinder head gasket with piston protrusion of 0.430 - 0.520 mm	0.01
Thickness of cylinder head gasket with piston protrusion of 0.521 - 0.570 mm	1.15(two hole/teeth)

Thickness of cylinder head gasket with piston protrusion of 0.571 - 0.620 mm	1.2(three holes/teeth)

Oil Pressure Specifications

Description	bar
Minimum oil pressure at idle speed	1.25
Minimum oil pressure at 2000 rpm	2.0

Engine - Overview

Base Part Number: 6L084

Duratorq-TDCi

NOTE: *The 2.2L and 3.2L Duratorq-TDCi engines are members of the "Global Puma" engine family. The 3.2L engine shares the design of the 2.2L engine with an extra cylinder added.*

The 2.2L Duratorq-TDCi engine is a 4 cylinder common rail, turbo charged diesel engine which delivers a power of 118 kW.

The 3.2L Duratorq TDCi engine is a 5 cylinder common rail, turbo charged diesel engine which delivers a power of 147kW and the maximum torque is 470 Nm.

The engines have a cast iron cylinder block with a ladder frame in order to increase rigidity and reduce vibration.

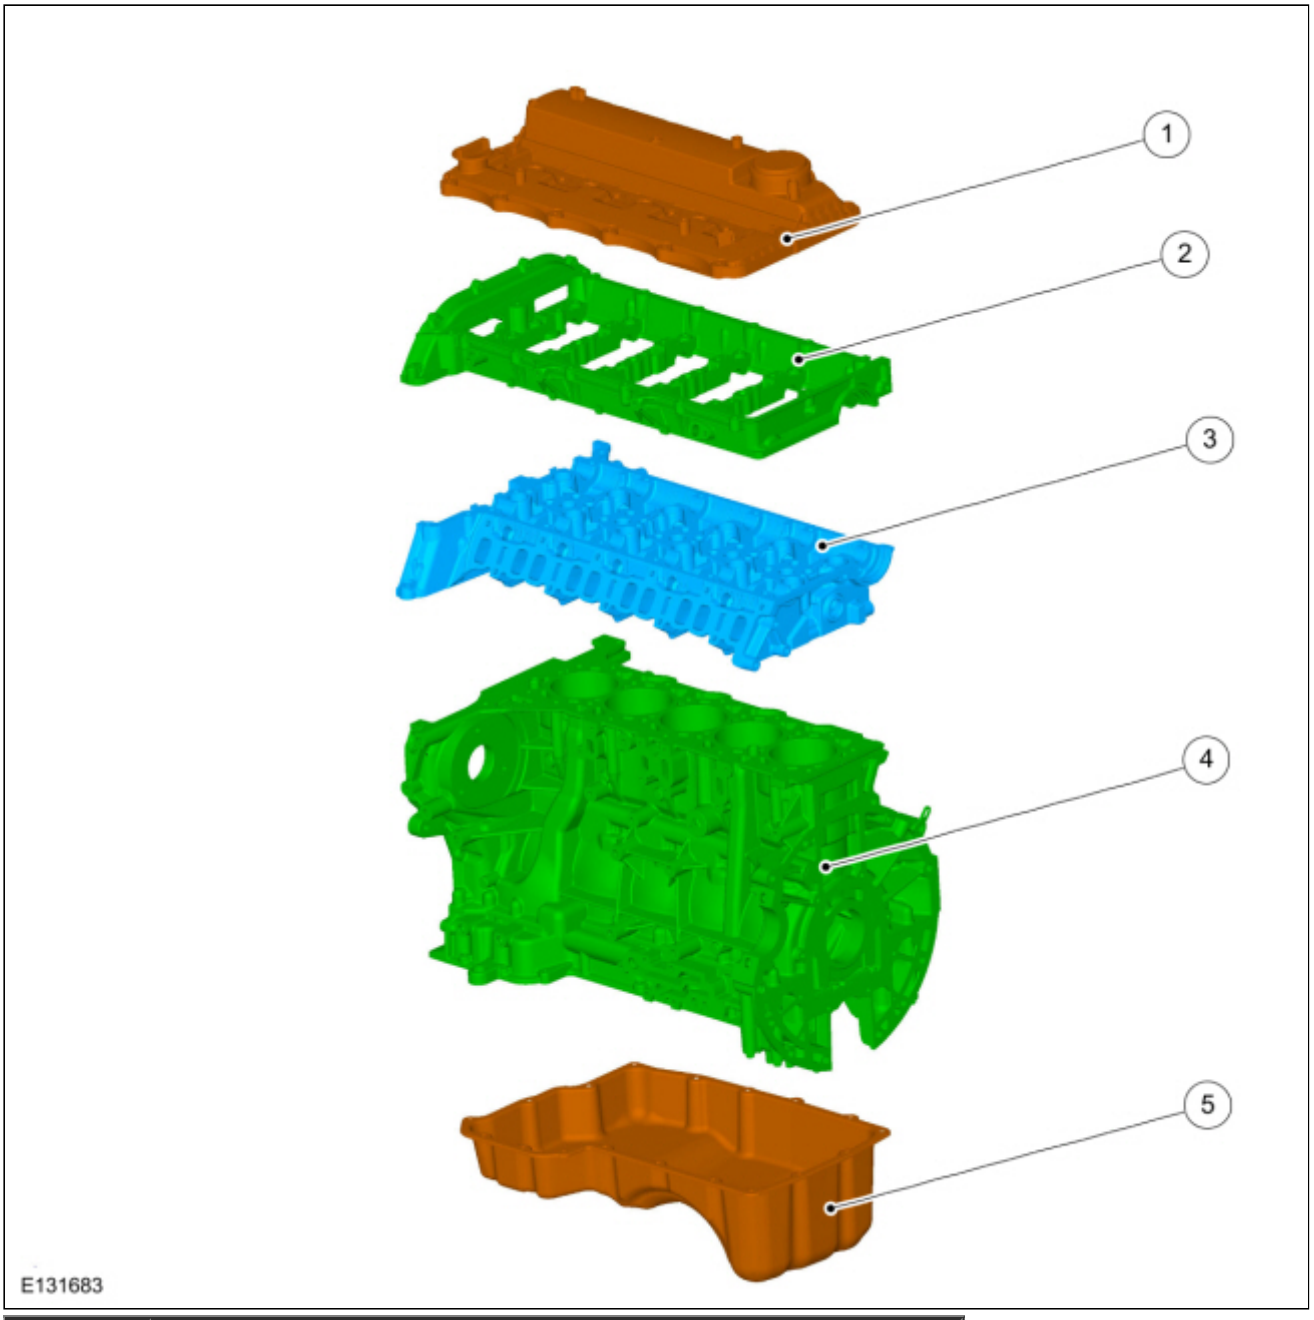
The engine turbocharger is a variable guide vane type. The guide vanes are electrically adjustable.

Engine Features

- 4 or 5-cylinder turbo diesel in-line engine with two overhead camshafts and 16 valve technology
- Cast iron cylinder block with cast-in cylinder liners
- Ladder frame for extending the cylinder block
- Two-part cylinder head made from aluminium
- Intake and exhaust camshaft and fuel high pressure pump driven a timing chain
- Oil pump drive by chain
- Oil level/oil temperature sensor
- Camshaft driven vacuum pump
- Valves actuated by roller cam followers with hydraulic tappets
- Variable-geometry turbocharger for optimum cylinder charging

Fuel System

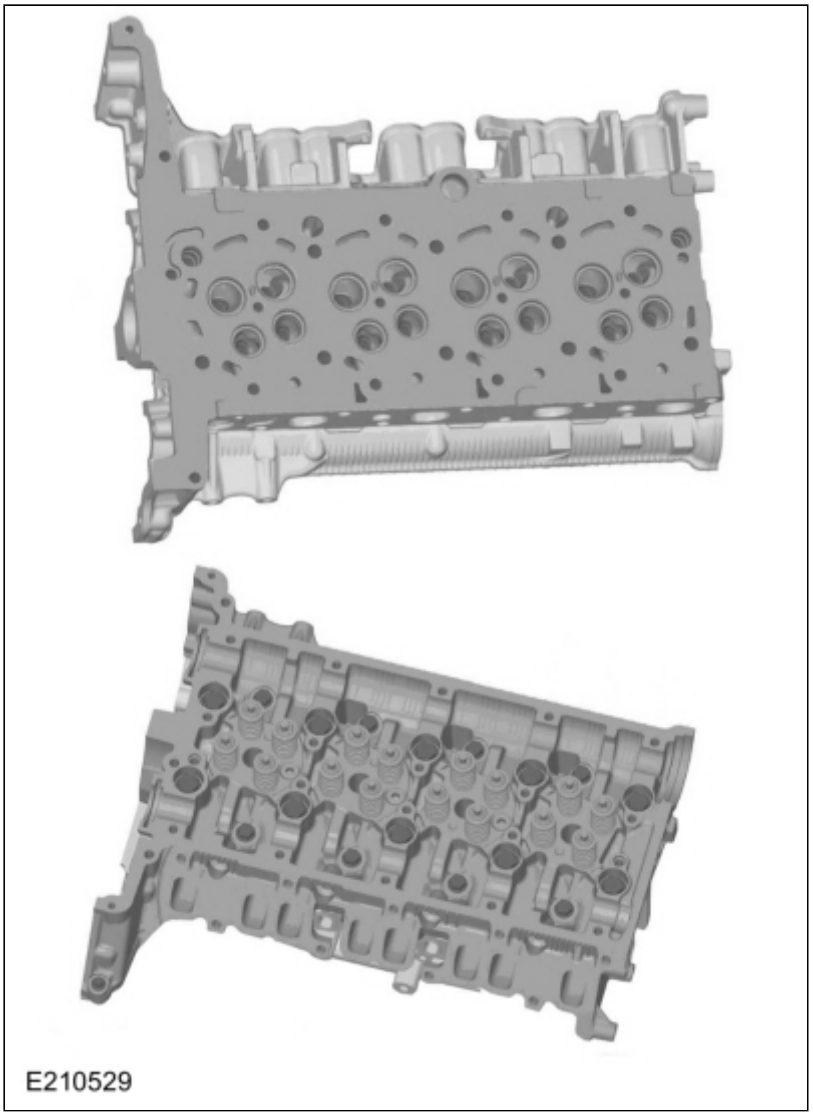
- Continental common rail system 1800 bar
- Fuel injectors with piezo technology



Engine Management

- Continental PCM
- Volume control valve, fuel inlet temperature sensor and fuel rail pressure sensor for efficient regulation of fuel pressure
- Actuator motor-controlled EGR (exhaust gas recirculation) valve

Engine-Emission Control



- Depending on region Meets EURO 2,4 or 5
- Actuator motor-controlled EGR valve and cooled by water
- Electronic throttle body with position sensor
- Broadband Lambda probe for correcting the injection volume and for optimizing the EGR
- Coated DPF (diesel particulate filter) to minimize particle emissions (region dependent)

Engine Components

Item	Description
1	Valve cover
2	Housing valve rocker arm
3	Cylinder head
4	Cylinder block and ladder frame
5	Oil pan

Cylinder Head

Cylinder head consists of two parts and is made of aluminum. Both parts are bolted to each other.

Lower part contains four valves for each combustion chamber and the two camshafts.

The upper part houses the rocker arm frame with the roller rocker arms. The hydraulic valve clearance adjustment is integrated in the roller rocker arms.

Camshafts and the fuel injection pump are driven by the crankshaft via the timing chain.

Oil pump is located inside the oil pan and is driven by the crankshaft via a chain.

NOTE: *Cylinder 1 is located on the timing chain end.*

Engine - System Operation and Component Description

Base Part Number: 6L084

System Operation

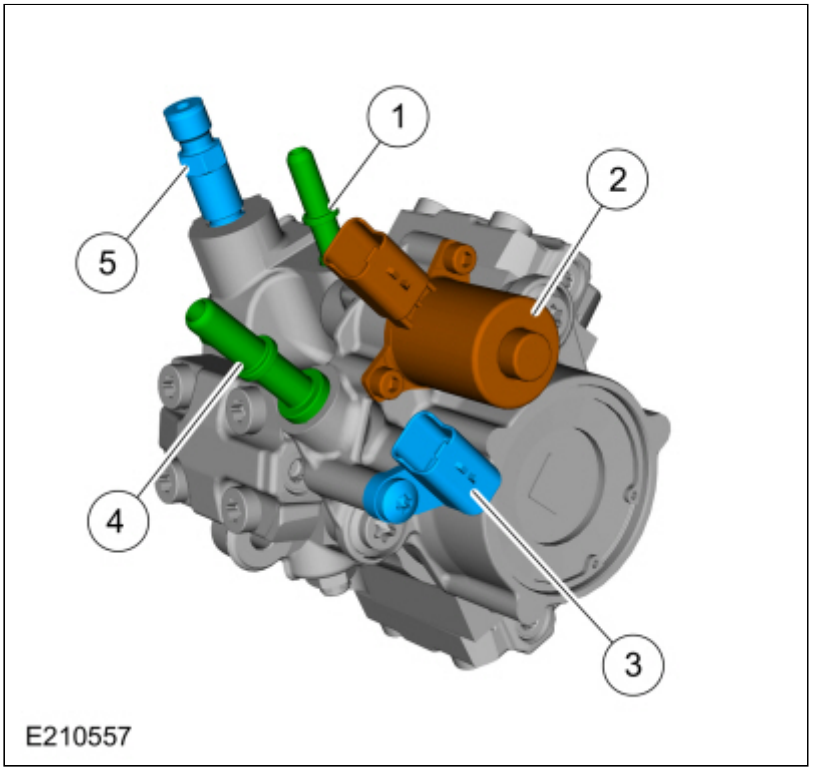
Continental common rail fuel injection system

Item	Description
1	Electrical connector
2	Fuel return line clip
3	Fuel injector
4	Sealing washer
5	Injector nozzle
6	High pressure fuel supply line union

The continental common rail fuel injection system works in a similar fashion to a petrol fuel injection system where fuel is supplied to the injector via a fuel rail. The injection control occurs at the injector.

NOTE: *Fuel injectors for the 2.2L Duratorq TDCi HP engine have a higher flow rate than for the other two versions.*

The piezo injectors, which are hydraulically connected to the fuel rail, inject the necessary amount of fuel into the combustion chamber for all operating conditions of the engine. The injector is centralized in the combustion chamber. The injection quantity is composed of a pre-injection amount and a main-injection amount. This separation causes a "soft" combustion operation of the diesel engine reducing Diesel 'knock'.



Piezo actuators ensure extremely quick response times are possible, and are faster than solenoid injectors. Because of this, the injected fuel amount and the dosage can be extremely accurately controlled. The injectors are controlled by the PCM.

The fuel rail is made from forged steel and is retained by a support bracket located on the camshaft carrier. The fuel is delivered by one high-pressure fuel supply line from the fuel pump to the fuel rail. From the fuel rail, the fuel travels through high-pressure fuel supply lines to the fuel injectors. At the end of the fuel rail is the fuel pressure sensor.

NOTE: *Whenever a high pressure fuel line is removed it must be replaced with a new part.*

NOTE: *The fuel pressure sensor is never to be removed from the fuel rail. If faulty it must be replaced together with the fuel rail as an assembly.*

Fuel pump

Item	Description
1	Fuel return bleed from injectors
2	Fuel metering valve
3	Fuel temperature sensor
4	Fuel supply from tank
5	High pressure outlet to fuel rail

The high pressure fuel pump is driven via the timing chain, and houses two pumps. A low-pressure vane pump and a three cylinder positive displacement pump. The cylinders are staggered at 120°. The fuel volume flow is variable.

The low pressure part of the pump supplies the high pressure part with fuel for pressure generation. Between the low and high pressure parts of the pump the volumetric control valve is fitted to limit the fuel volume flow.

The fuel enters the high pressure part of the pump where high pressure is generated and the fuel is pumped to the fuel pressure regulator where the pressure is controlled to between 230 bar and 1800 bar. The fuel then leaves the fuel pump and is supplied to the fuel rail.

The combination of piezo injectors and the ability to rapidly increase and decrease the fuel pressure gives the engine

the ability to vary the amount of fuel being injected in a given time, and for the injector to react very quickly. This enables a small pre-injection then a larger main injection. Having a pre-injection and a main injection reduces combustion noise and, emissions while increasing performance and economy. The fuel pressure, injection timing, and duration are all controlled by the PCM.

Vacuum pump

The diesel engines are fitted with a vacuum pump to provide the brake booster with vacuum in order to assist with braking. The vacuum pump is mounted on the rear of the cylinder head and is driven via the exhaust camshaft.

Intake manifold flap

Mounted on the intake manifold is a servo controlled flap. The intake manifold flap unit has the following functions:

- preventing "serious engine judder" when the engine is stopped
- throttling of the intake air during the DPF regeneration process

The intake manifold flap is actuated by a DC motor. Actuation is performed via Pulse Width Modulation (PWM) which is controlled by the PCM. The position of the intake manifold flap is detected by a position sensor (potentiometer). The output signal is an analogue voltage signal.

Engine oil quality

Ranger is fitted with a warning light on the instrument cluster. When illuminated, the PCM has calculated the acceptable level of contaminants and soot in the engine oil has been exceeded. The oil quality calculation strategy is loaded in the PCM software. This strategy calculates the oil quality taking into consideration various engine operating conditions including trip duration, engine speed and load. When the PCM requests an oil change, the warning lamp is activated. This warning lamp signals to the driver that an oil change must be carried out irrespective of the kilometres travelled since the last service. After the oil change, the parameters for the oil quality calculation strategy must be reset.

To reset the oil change warning lamp;

- 1. Push and hold brake pedal and simultaneously hold the accelerator pedal at full throttle.
- 2. Turn the ignition to the 'On' position
- 3. Wait minimum 10 secs.
- 4. Release both brake and accelerator pedals and turn the key to the 'Off' position.

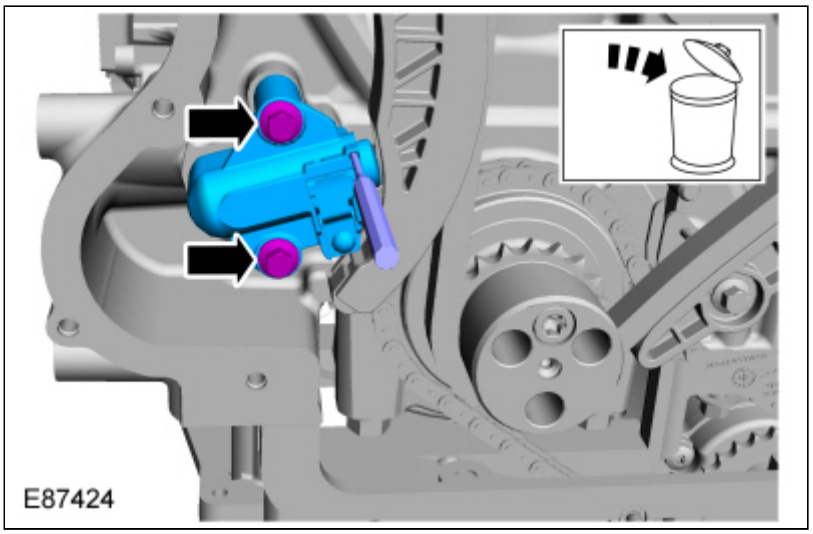
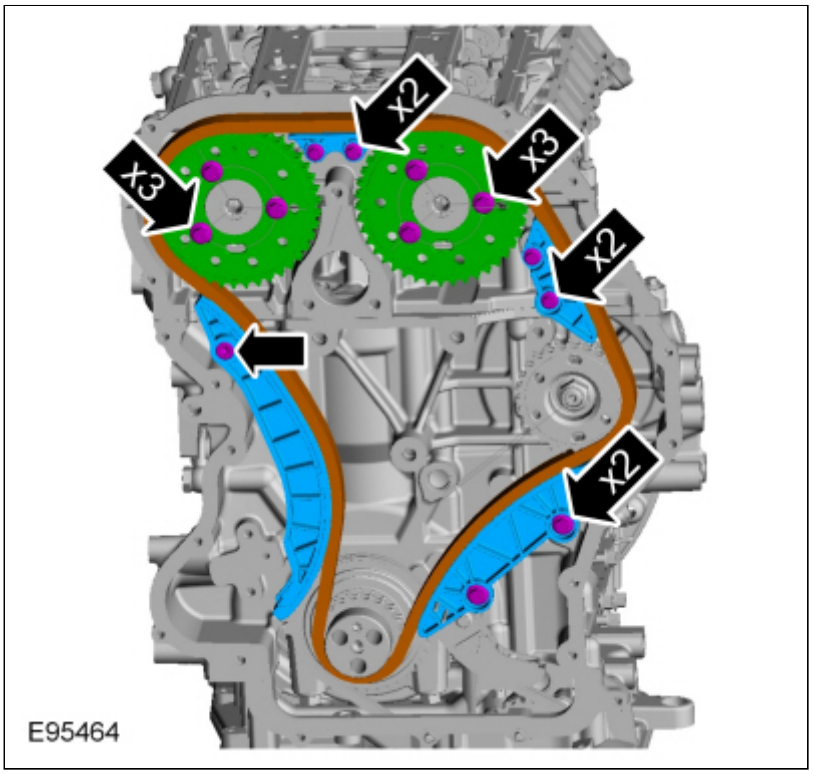
Removal

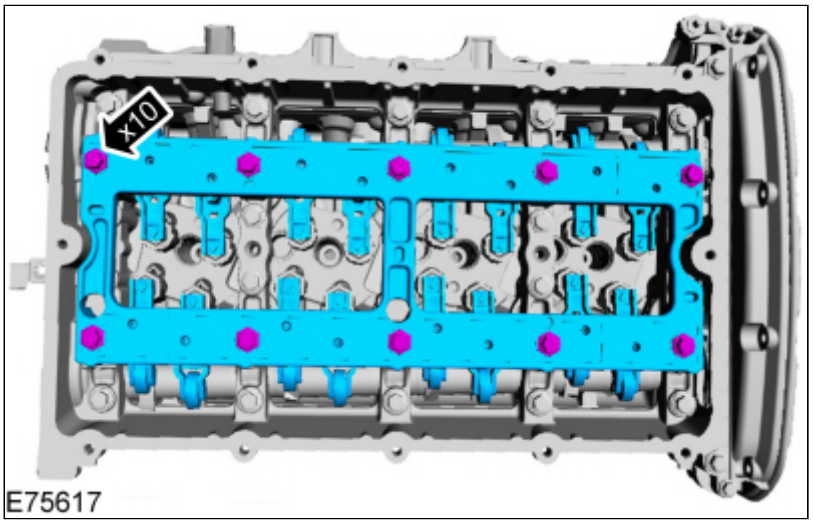


WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable mixtures are always present and may ignite. Failure to follow these instructions may result in personal injury.

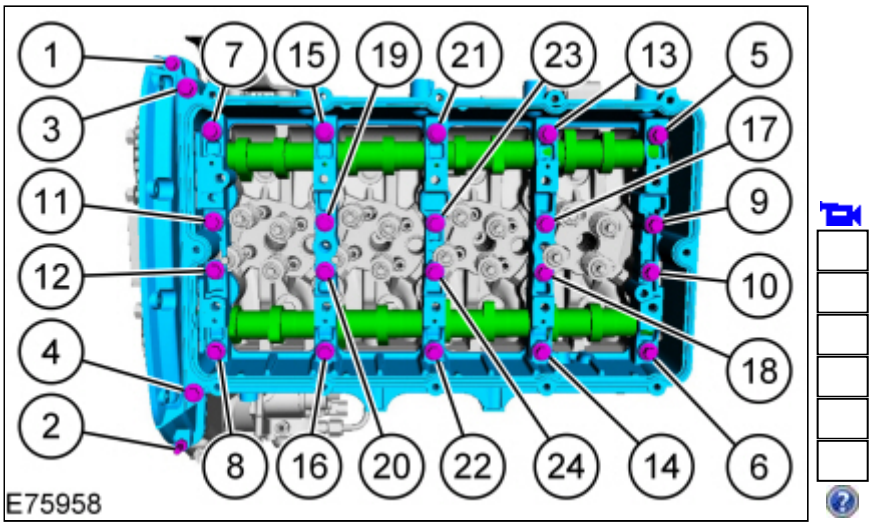
NOTE: *Removal steps in this procedure may contain installation details.*



1. Refer to: Fuel Rail (303-04B Fuel Charging and Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Removal and Installation).
2. Refer to: Valve Cover (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
3. Refer to: Timing Cover (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
4. Refer to: Brake Vacuum Pump - RHD (206-07 Power Brake Actuation, Removal and Installation).
5. Use Special Service Tool: 100-010 Remover, O-Ring Seal.
   Use the General Equipment: 2 mm Punch

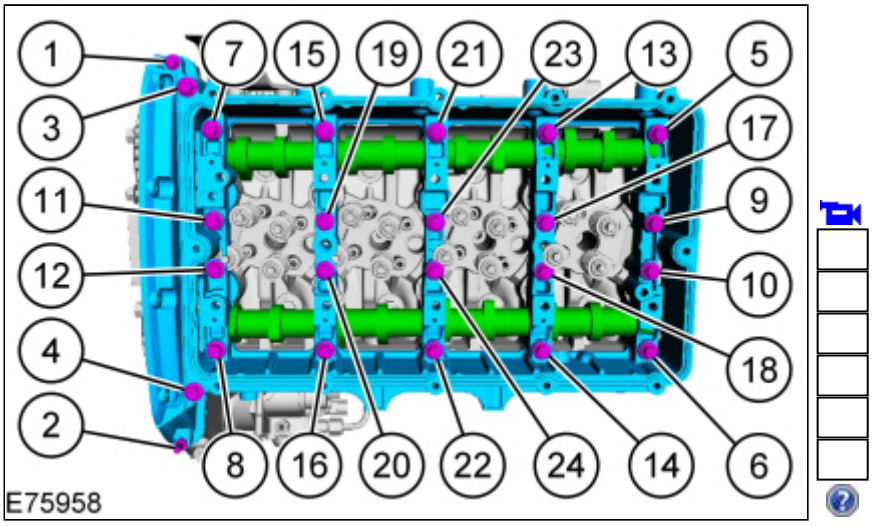


6. Use the General Equipment: 2 mm Punch

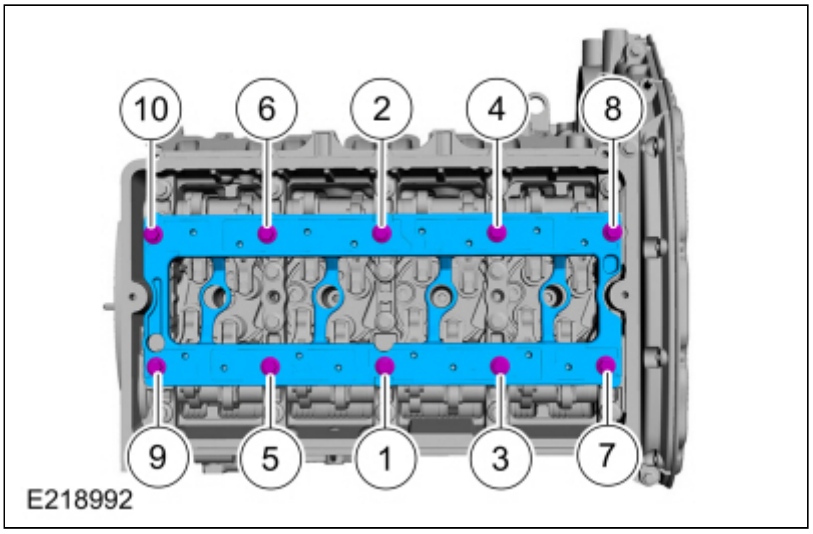


7.

8.

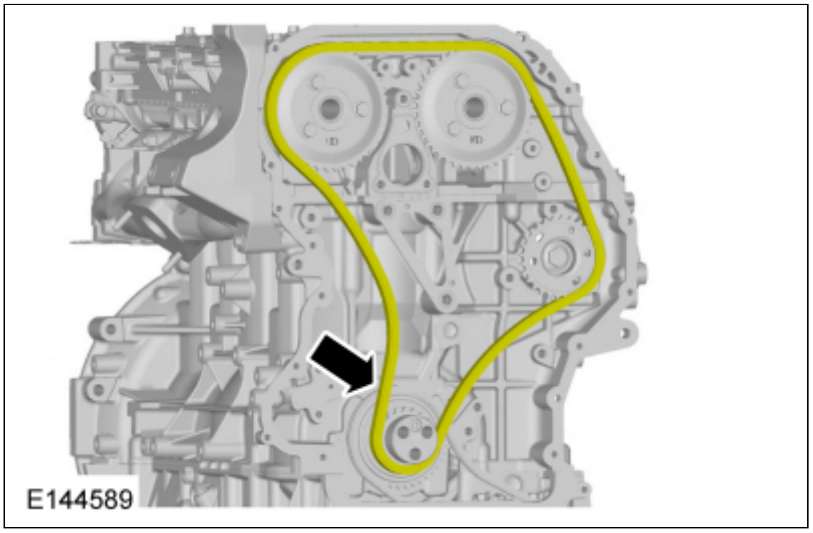


9. **NOTICE: Remove the camshaft carrier bolts in the sequence shown.**

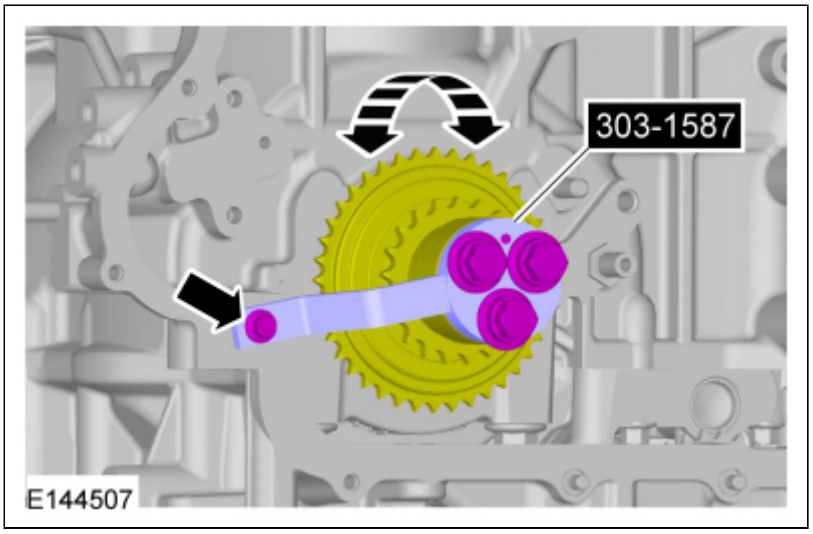


Installation

NOTE: *Clean the mating faces of the camshaft carrier and the cylinder head.*

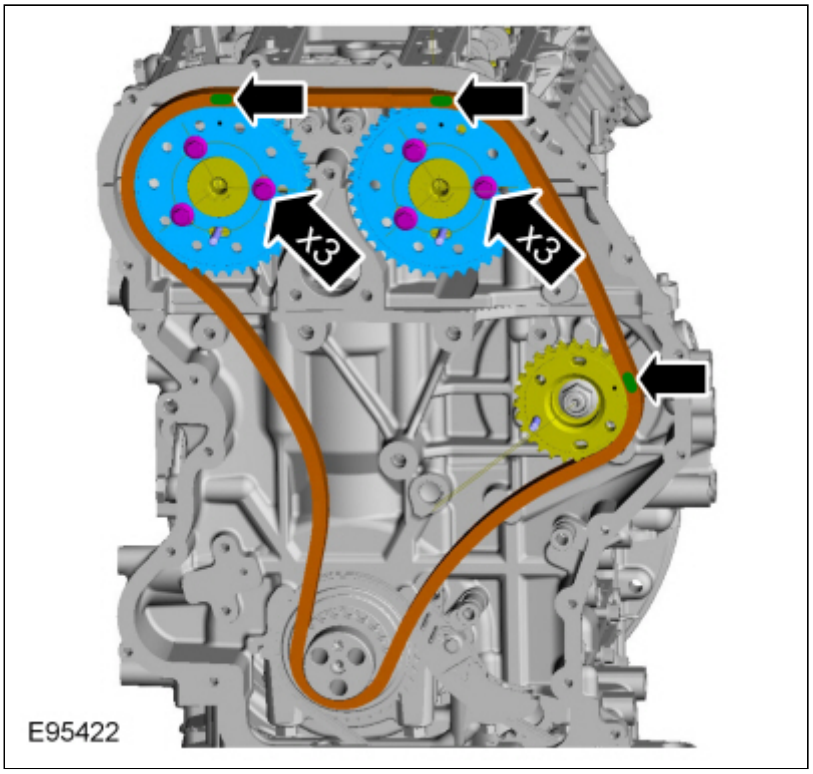


- Bolts 1 to 22
  Torque: 23 Nm
- Bolts 23 to 25
  Torque: 10 Nm

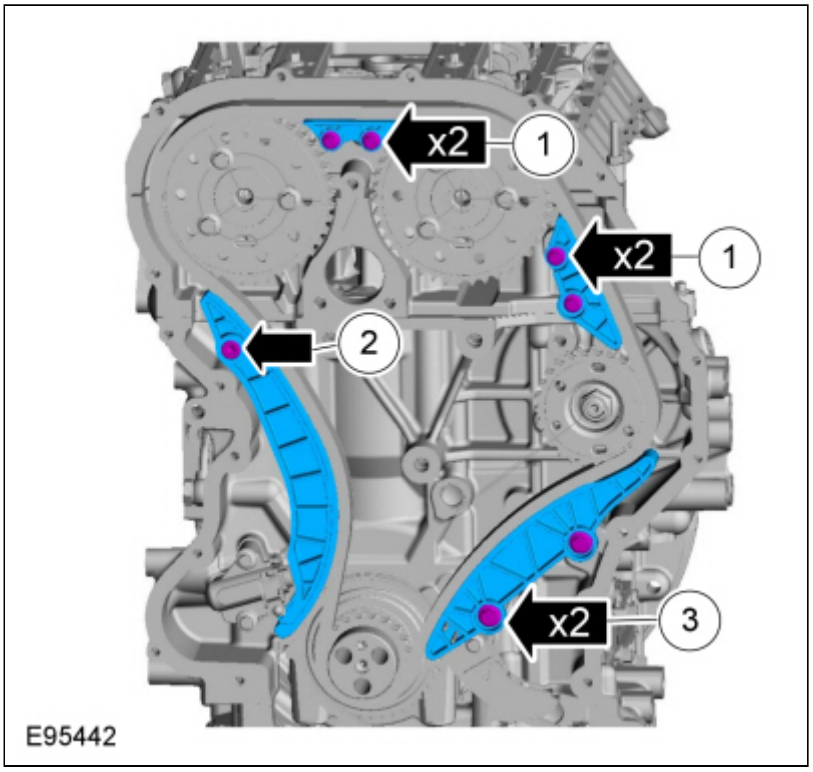


2. Ensure rockers are seating on the valve tip prior to commencing rundown.
   Torque:
   Stage 1: 5 Nm
   Stage 2: 8 Nm
   Stage 3: 10 Nm
   Stage 4: 45°

3.

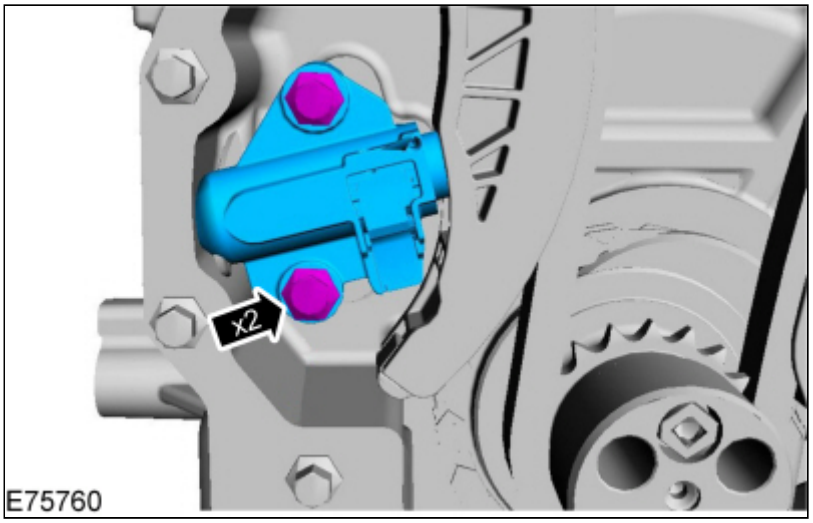


4. Install Special Service Tool: 303-1587 Timing Tool, Crankshaft.

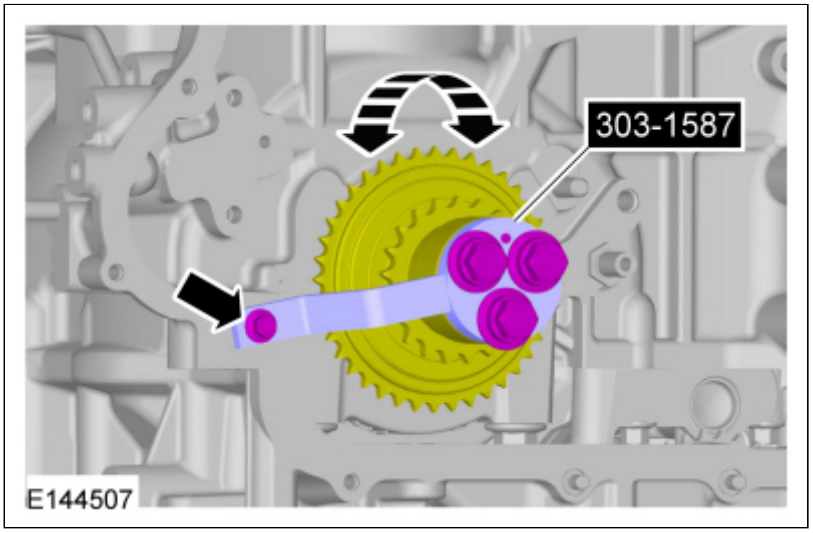


5. **NOTE:** *Make sure that the installation marks are aligned.*

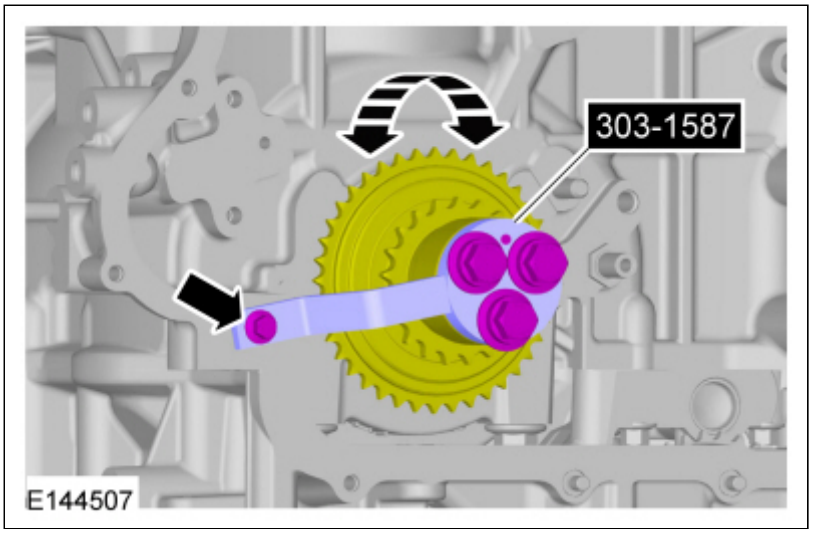
Use the General Equipment: 6 mm Drill Bit
Torque: 33 Nm



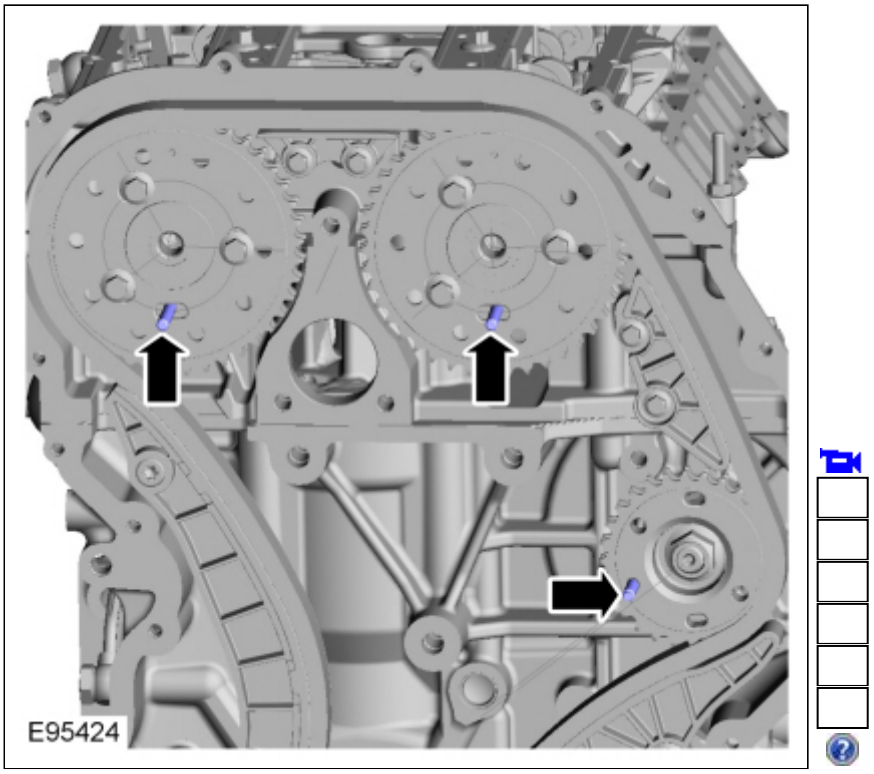
6. Remove the 6 mm drill bits.



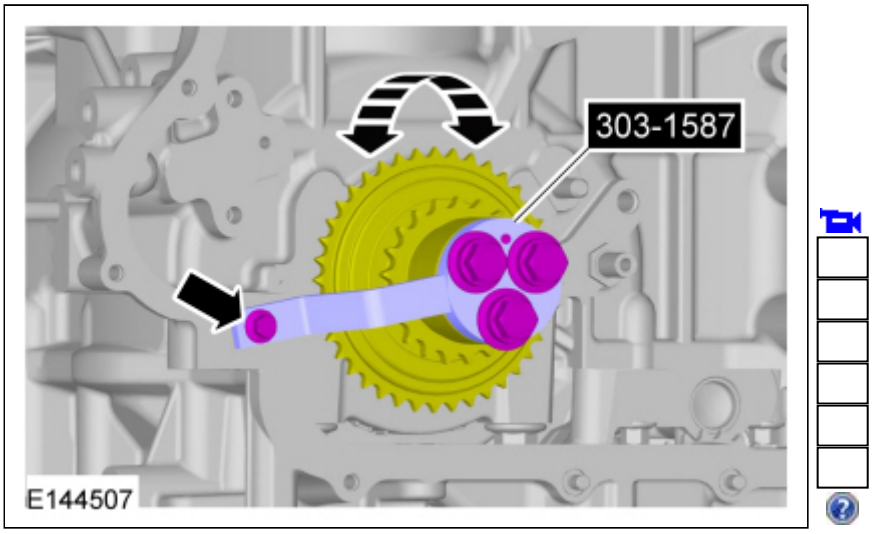
1. *Torque*: 14 Nm
2. *Torque*: 31 Nm
3. *Torque*: 15 Nm



8. **NOTE:** *Make sure that a new component is installed.*



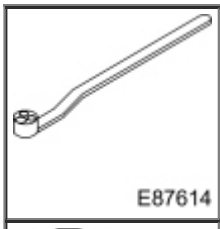
9. Remove Special Service Tool: 303-1587 Timing Tool, Crankshaft.

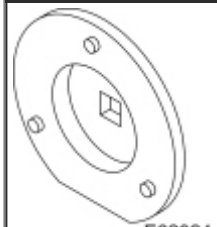


10. Rotate the engine two revolutions.
11. Install Special Service Tool: 303-1587 Timing Tool, Crankshaft.

12. Check the valve timing by inserting the drill bits. If the drill bits cannot be inserted repeat the timing steps. Use the General Equipment: 6 mm Drill Bit

13. Remove the 6 mm drill bits.
14. Remove Special Service Tool: 303-1587 Timing Tool, Crankshaft.





15. Refer to: Brake Vacuum Pump - RHD (206-07 Power Brake Actuation, Removal and Installation).
16. Refer to: Timing Cover (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
17. Refer to: Valve Cover (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
18. Refer to: Fuel Rail (303-04B Fuel Charging and Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Removal and Installation).

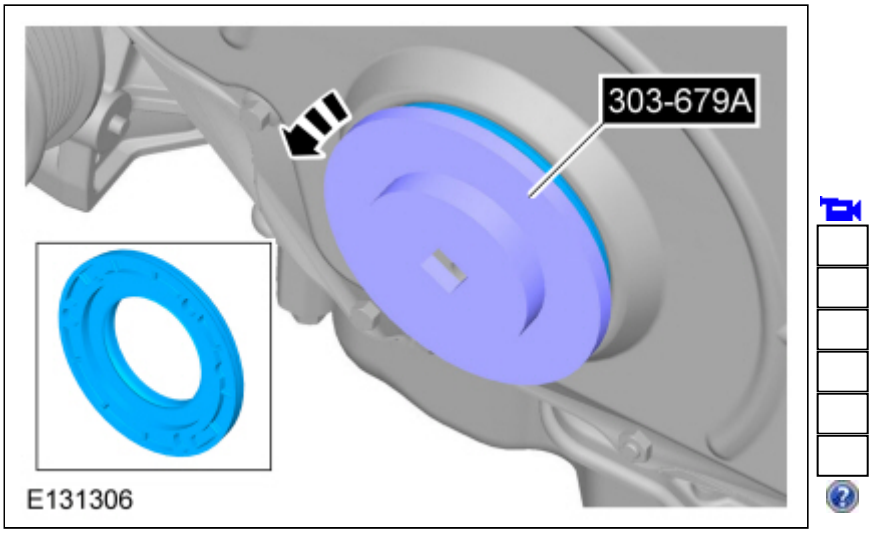
Crankshaft Front Seal

Base Part Number: 6700

Special Tool(s) / General Equipment

 E87614	303-1310 Holding Wrench, Crankshaft
 E62024	303-679A Remover/Installer, Engine Front Cover Inspection Plate

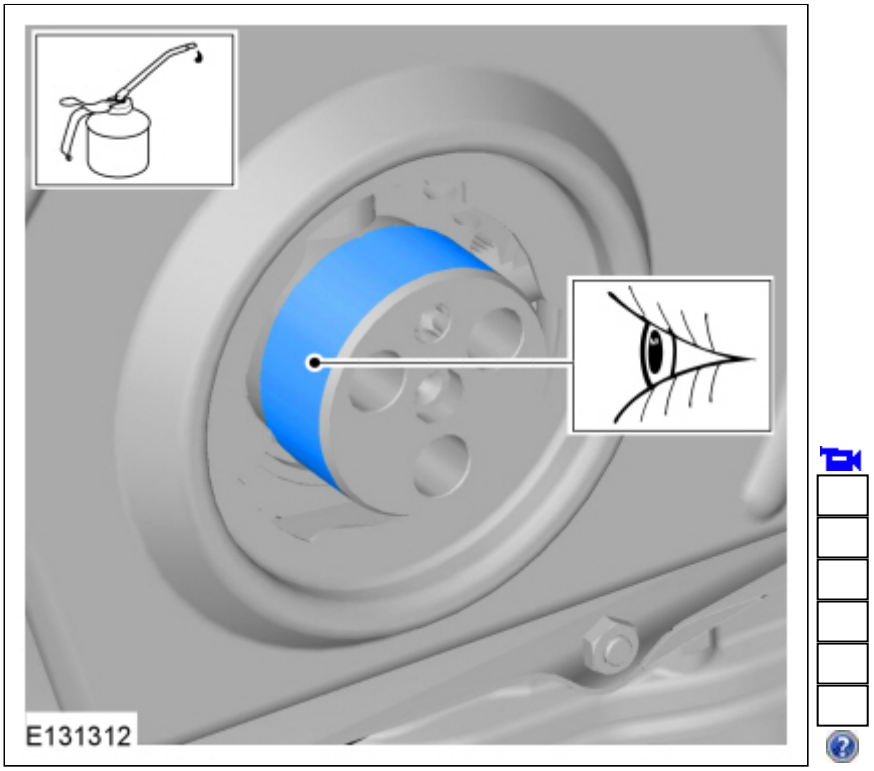
Removal



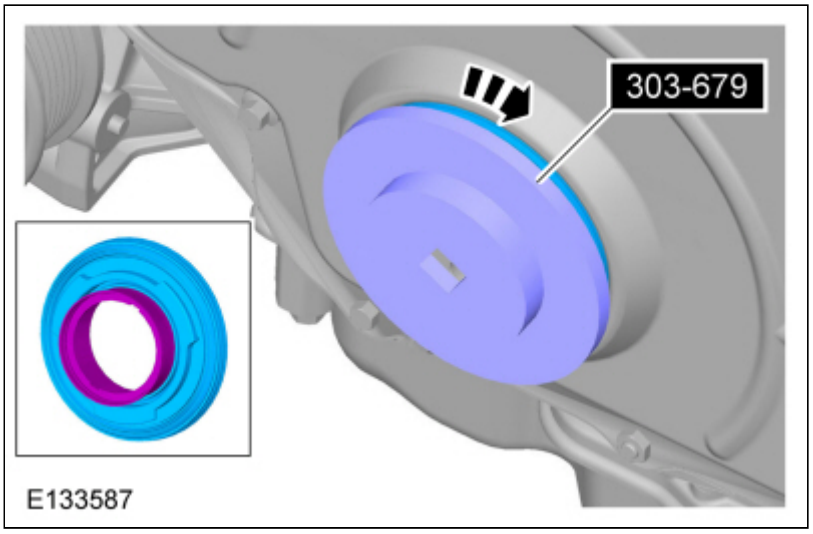
NOTE: *Removal steps in this procedure may contain installation details.*

1.

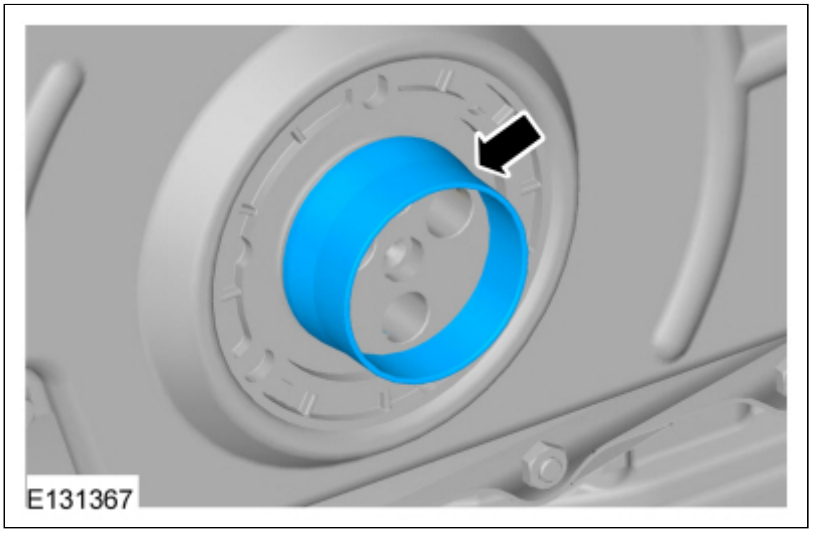
1. Do not completely loosen the crankshaft pulley bolts.
   Use Special Service Tool: 303-1310 Holding Wrench, Crankshaft.



3. Use Special Service Tool: 303-679A Remover/Installer, Engine Front Cover Inspection Plate.

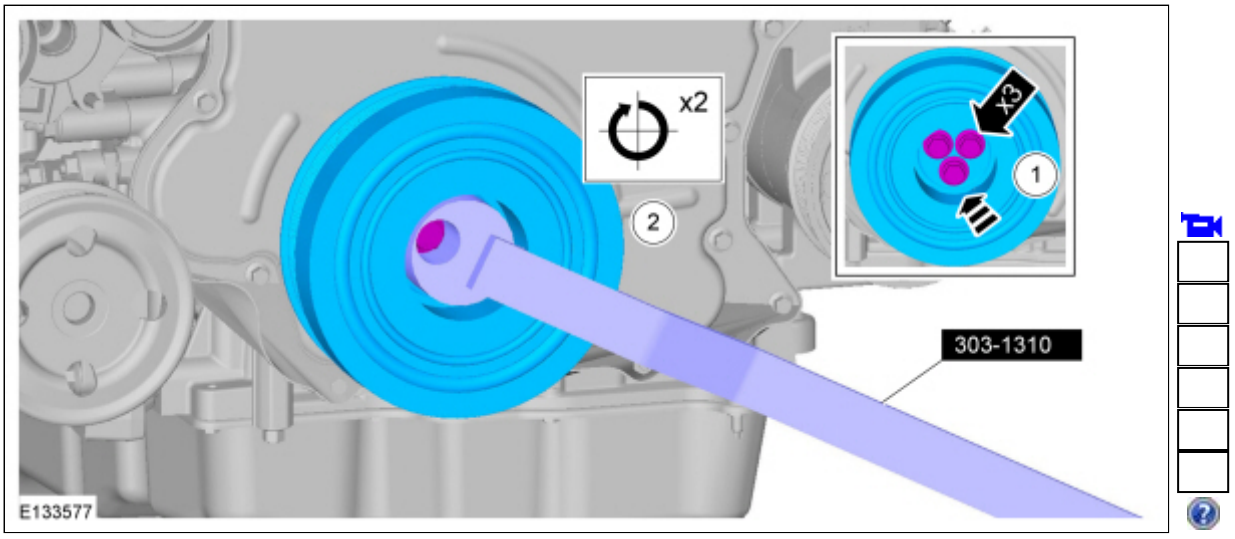


Installation



1. **NOTE:** *Make sure that mounting face is clean and lubricated.*

2. **NOTICE: A new crankshaft seal carrier is supplied with an alignment sleeve that must not be removed until the crankshaft seal if fully installed. Failure to follow this instruction may result in damage to the crankshaft.**



3.

4. **NOTE:** *Initially hand tighten the fastners.*

Torque:
Stage 1: 45 Nm
Stage 2: 120°

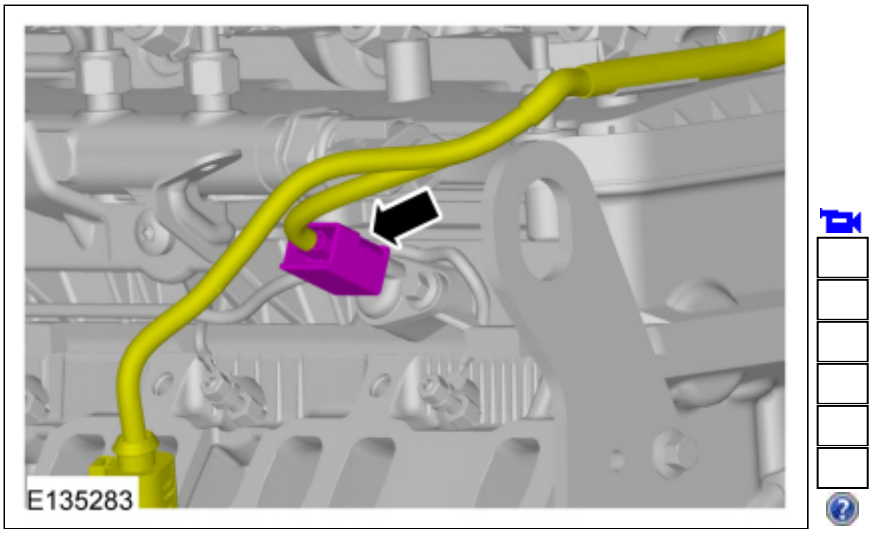
Cylinder Head

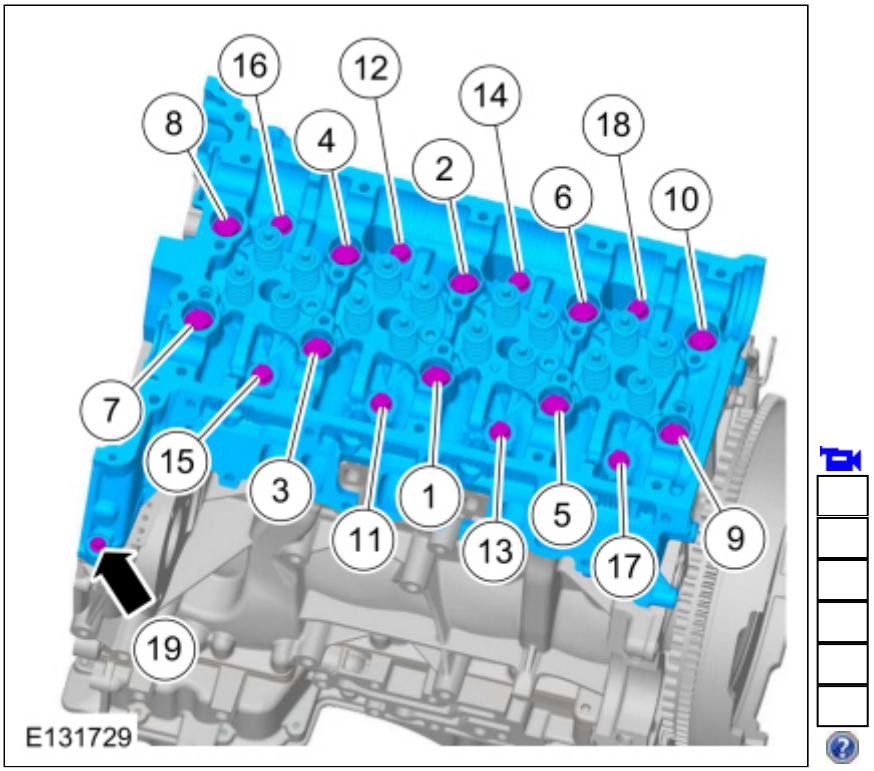


Base Part Number: 6051

Special Tool(s) / General Equipment

 15046	205-069 Dial Indicator Gauge (Metric)
 15022a	205-070 Holding Fixture, Dial Indicator Gauge
 21183	303-432 Holding Fixture, Dial Indicator Gauge (Cylinder Liner Protrusion)

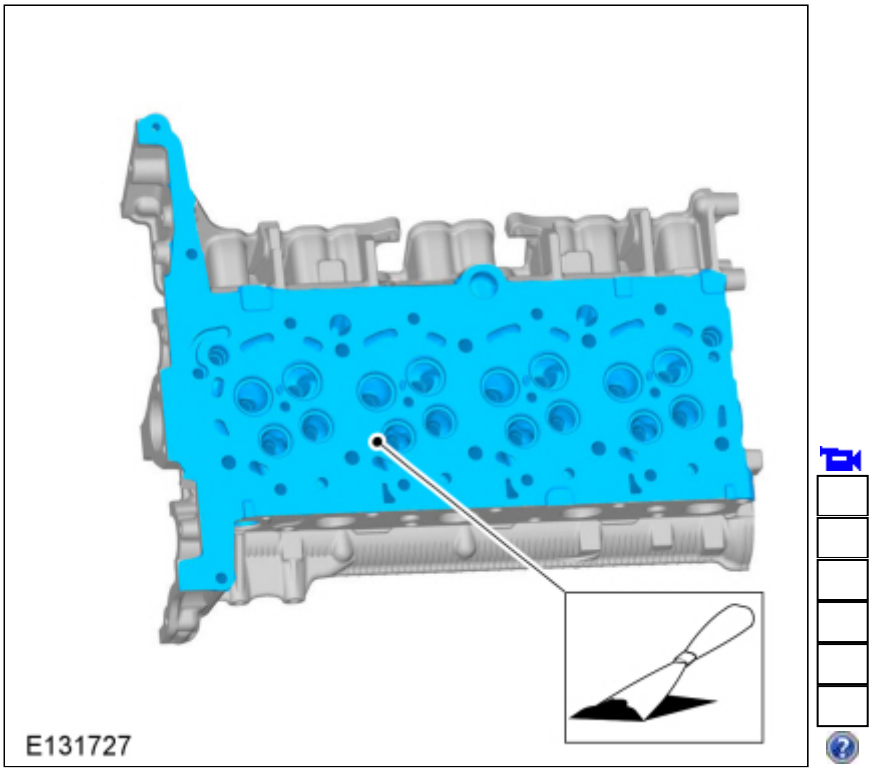
Removal



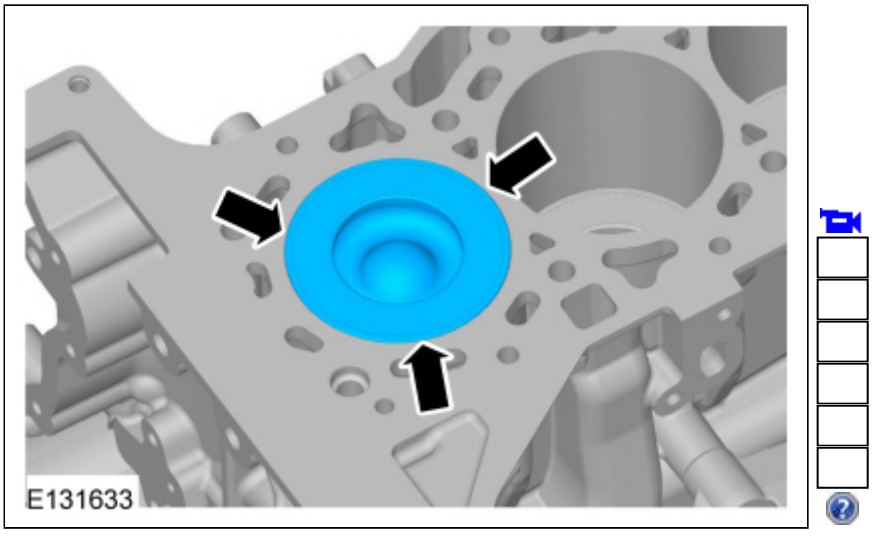
NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Intake Manifold - Emission Requirements: EURO Stage V LDT (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
2. 

3. *Torque*:
   1: 8 Nm
   2: 13 Nm

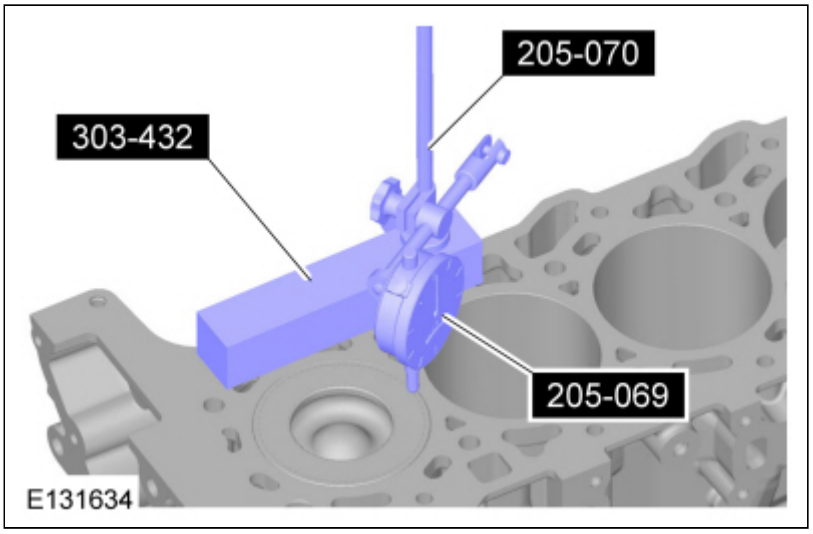


4. Refer to: Exhaust Gas Recirculation (EGR) Valve - 2.2L Duratorq-TDCi (118kW/160PS) - Puma (303-08B Engine Emission Control - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
5. Refer to: Exhaust Manifold (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
6. Refer to: Camshafts (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
7.



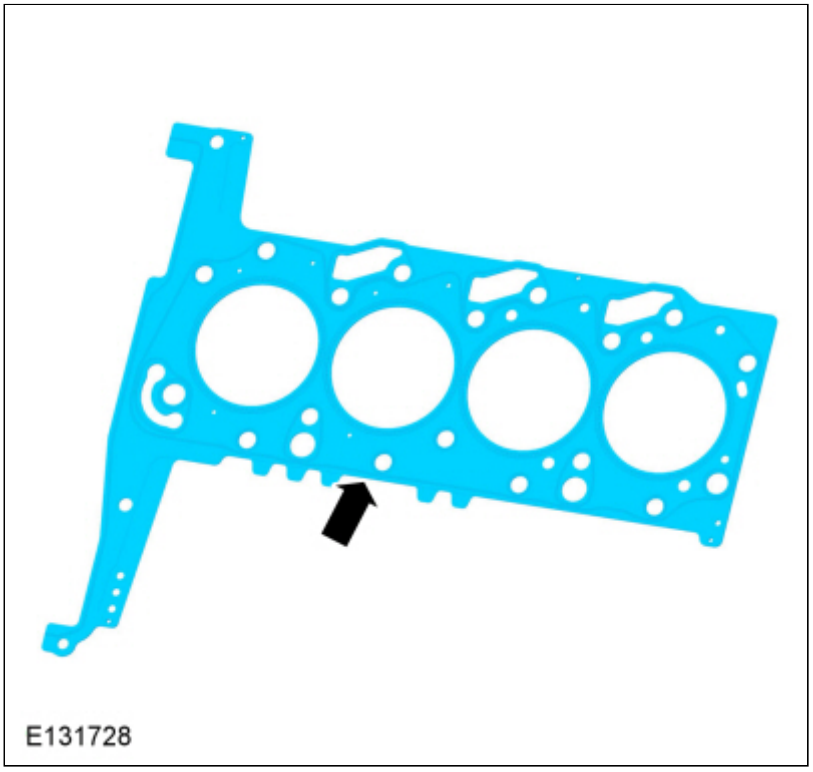
Installation

1. **WARNING: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges that make leak paths. Use a plastic scraping tool to remove all traces of the head gasket.**



2. **NOTE:** *Measure the piston protrusion of each cylinder at top dead center (TDC)*

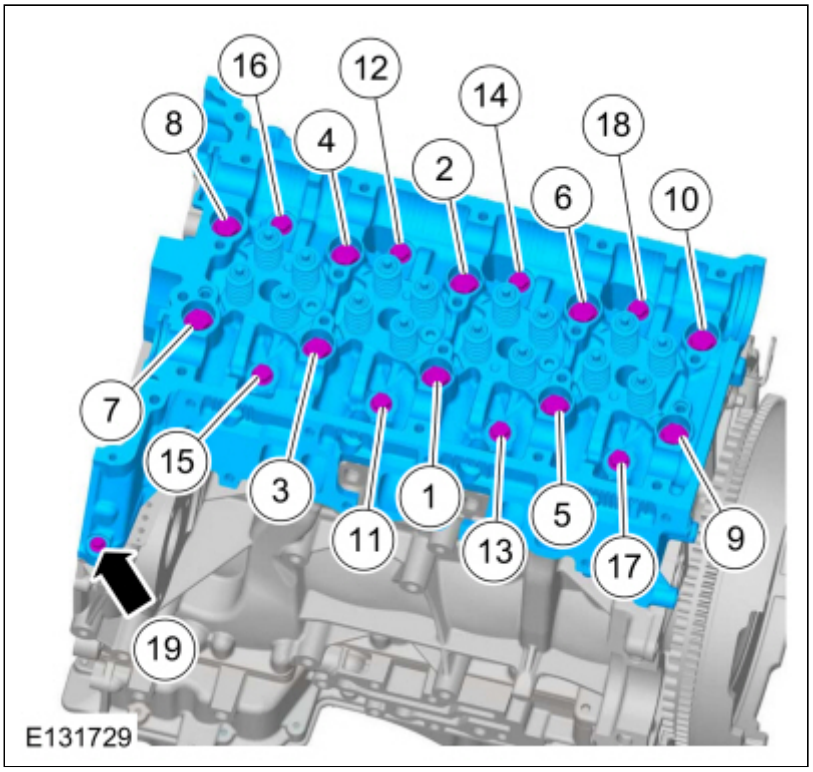
   Measure the distance between the piston crown and the cylinder block at the points indicated.



3. **NOTE:** *The largest measurement determines the choice of the cylinder head gasket.*

   Use Special Service Tool: 303-432 Holding Fixture, Dial Indicator Gauge (Cylinder Liner Protrusion). , 205-070 Holding Fixture, Dial Indicator Gauge. , 205-069 Dial Indicator Gauge (Metric).

4. **NOTE:** *Make sure that new component is installed.*



5.

6. **NOTICE: Make sure that new cylinder head bolts are installed.**

   NOTE: *Install all the bolts finger tight before final tightening.*

   Torque:
   Stage 1: 1 -10: 10 Nm
   Stage 2: 11-18: 5 Nm
   Stage 3: 1-10: 20 Nm

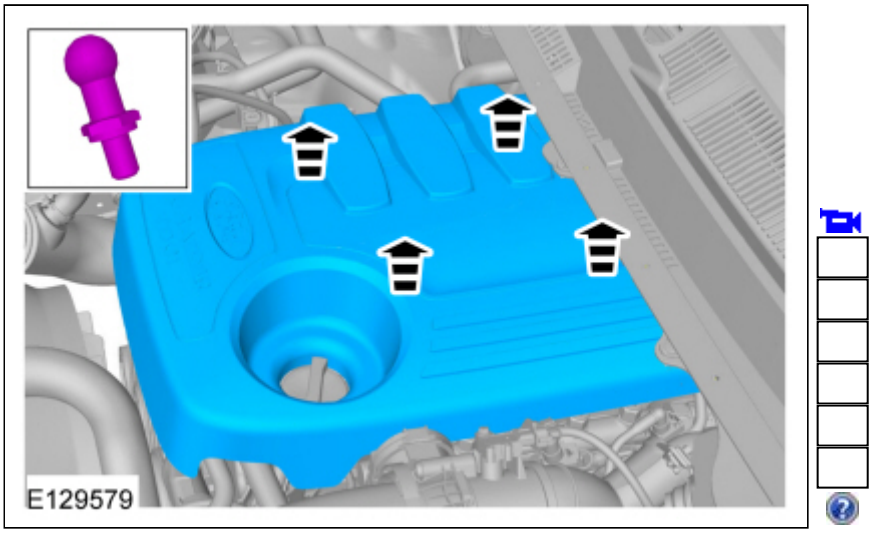
Intake Manifold - Emission Requirements: EURO Stage V LDT

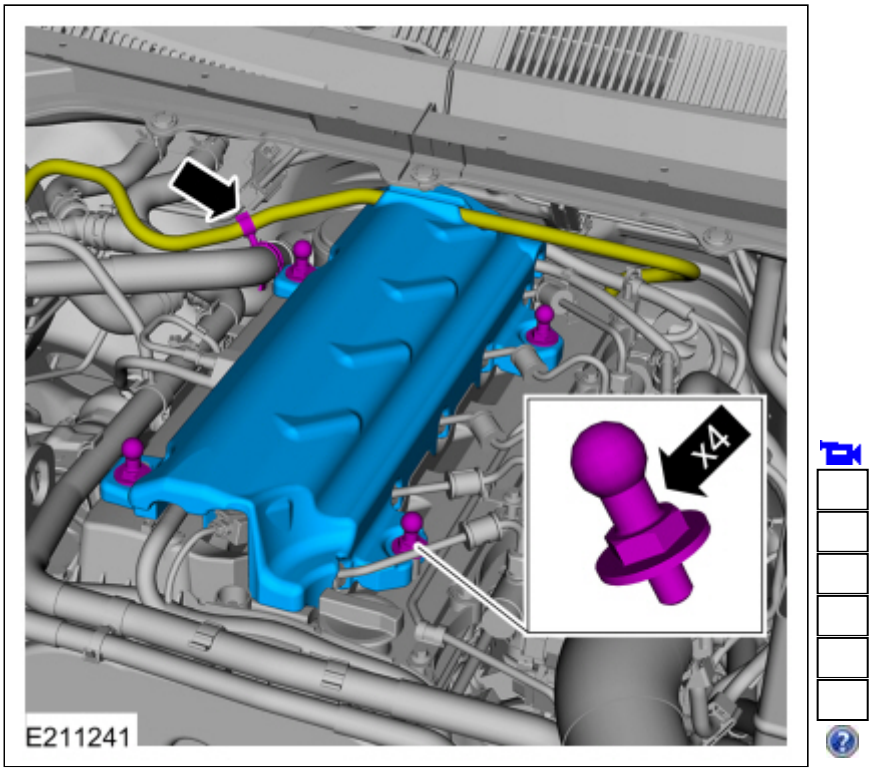
Base Part Number: 9424

Removal



WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable mixtures are always present and may ignite. Failure to follow these instructions may result in personal injury.

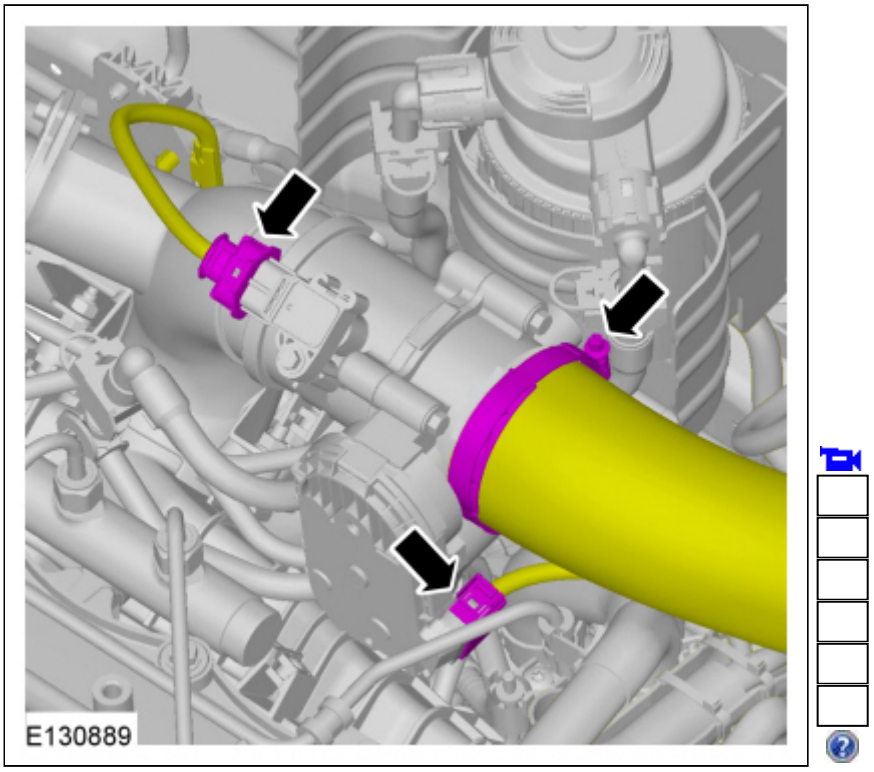
WARNING: Do not carry out any repairs to the fuel injection system with the engine running. The fuel pressure within the system is approximately 1600 bars. Failure to follow this instruction may result in personal injury.



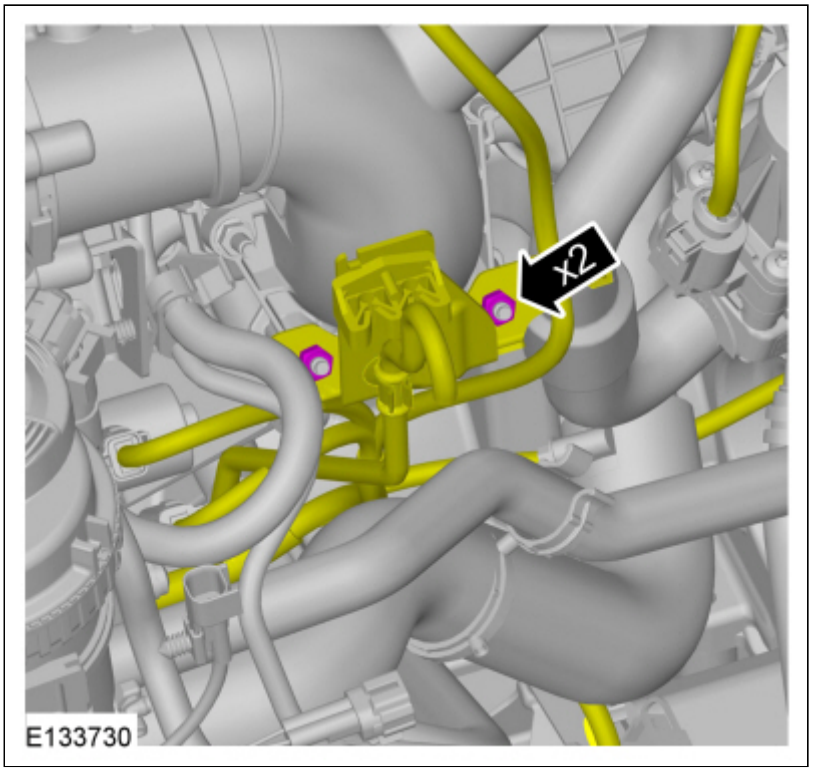
WARNING: Wait at least one minute after the engine stops before commencing any repair to the fuel injection system. Failure to follow this instruction may result in personal injury.

NOTE: *Removal steps in this procedure may contain installation details.*

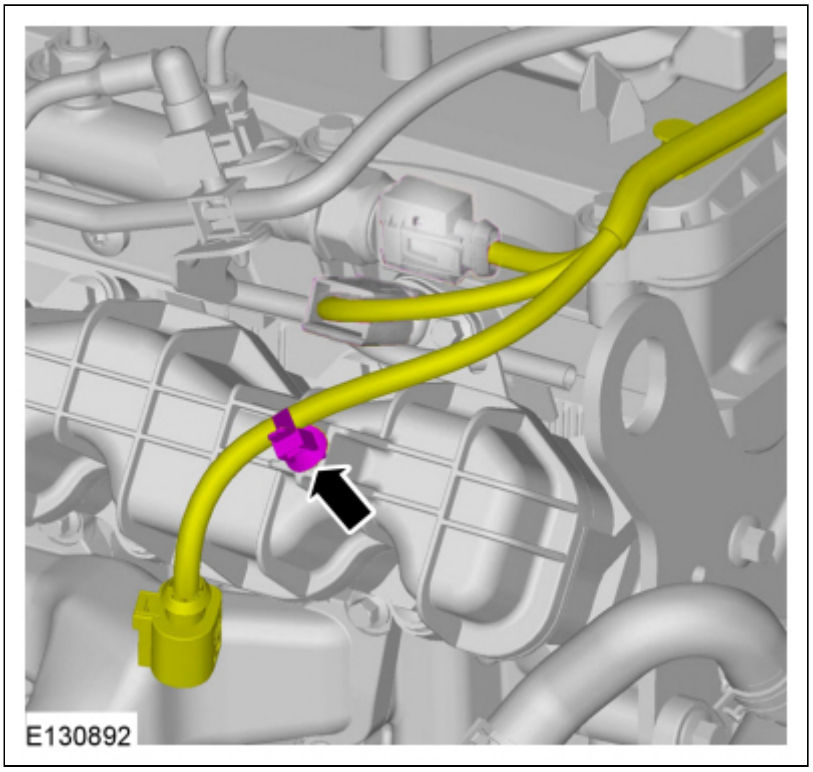
1.



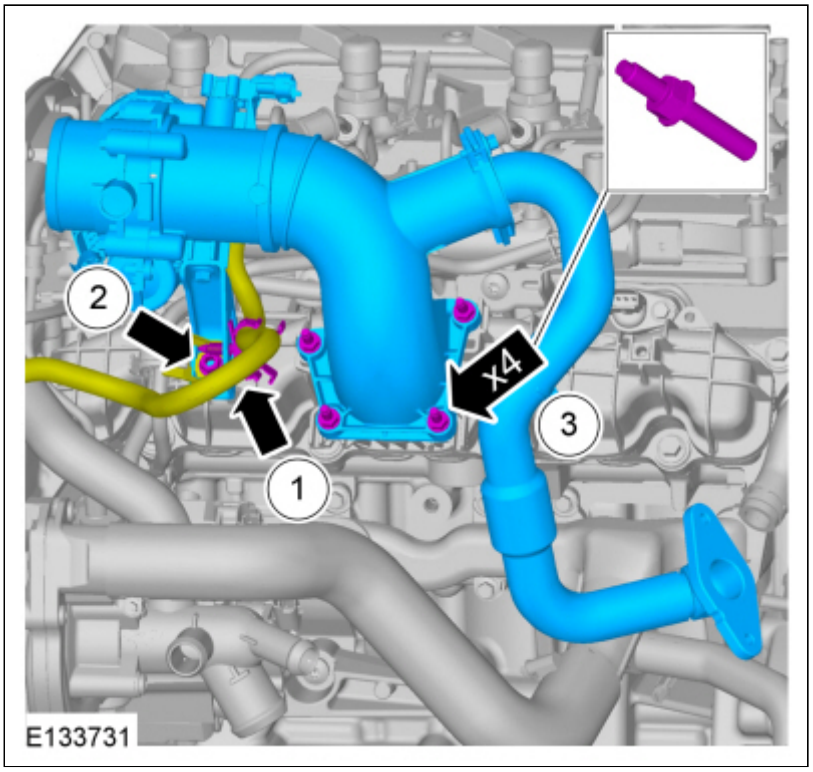
2. *Torque*: 3 Nm



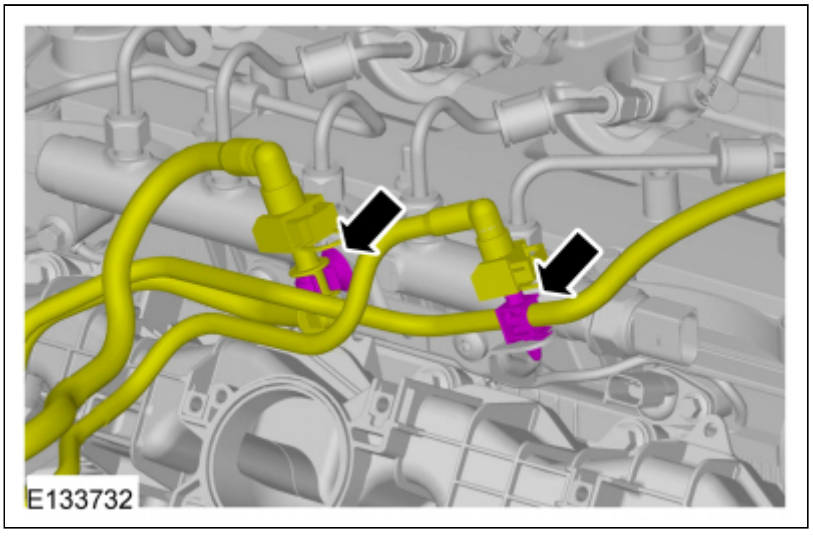
3. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).



4.



5. *Torque*: 11 Nm



6. Refer to: Exhaust Gas Recirculation (EGR) Valve - 2.2L Duratorq-TDCi (118kW/160PS) - Puma (303-08B Engine Emission Control - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

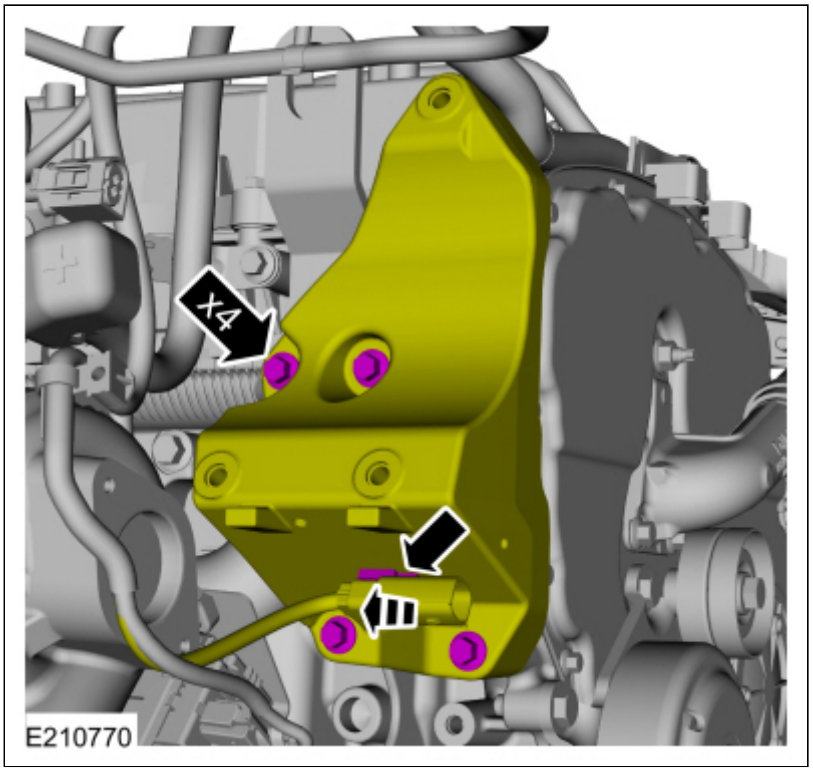
Timing Cover

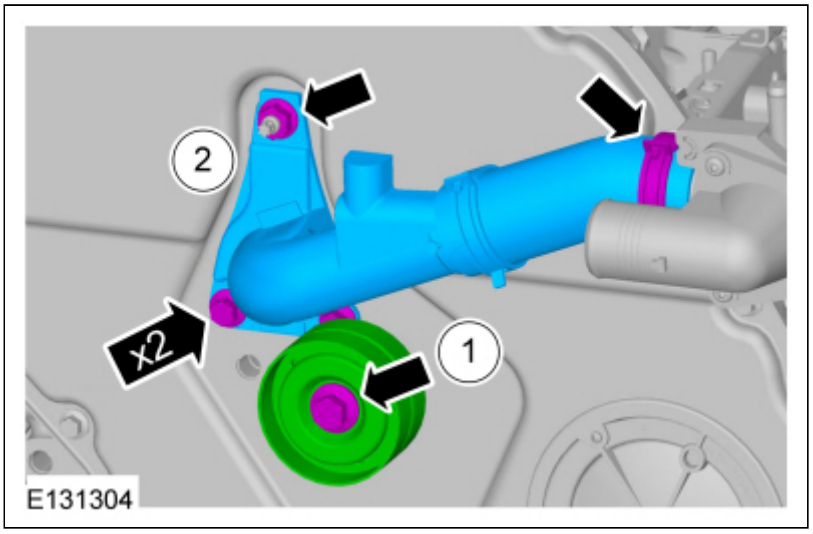
Special Tool(s) / General Equipment

 21179	303-428 Separator, Oil Pan
 303682	303-682 Aligner, Engine Front Cover



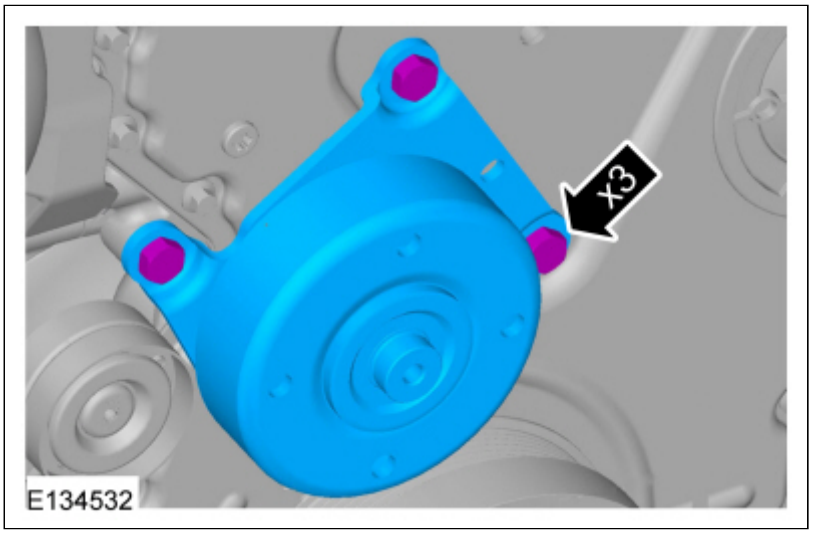
Materials

Name	Specification
Silicone Sealant	WSE-M4G323-A4



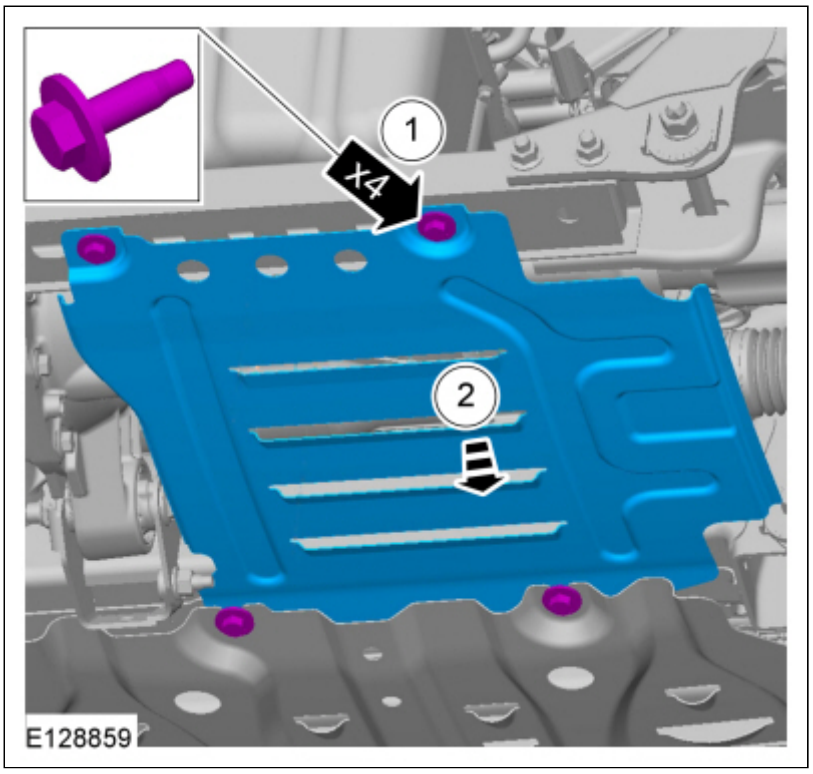
Removal

NOTE: *Removal steps in this procedure may contain installation details.*

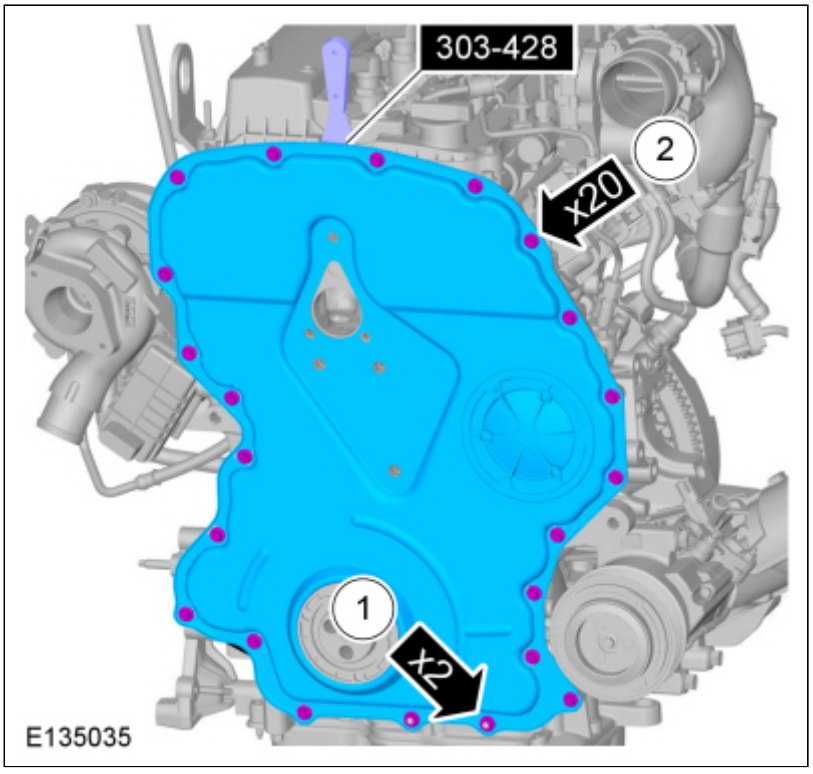


1. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
2. Refer to: Cooling Fan (303-03B Engine Cooling - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
3. Refer to: Generator - 2.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation).
4. *Torque*: 23 Nm

1. *Torque*: 48 Nm
2. *Torque*: 23 Nm



6. *Torque*: 48 Nm



7. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

Refer to: Engine Undershield (501-02 Front End Body Panels, Removal and Installation).

8. *Torque*: 30 Nm

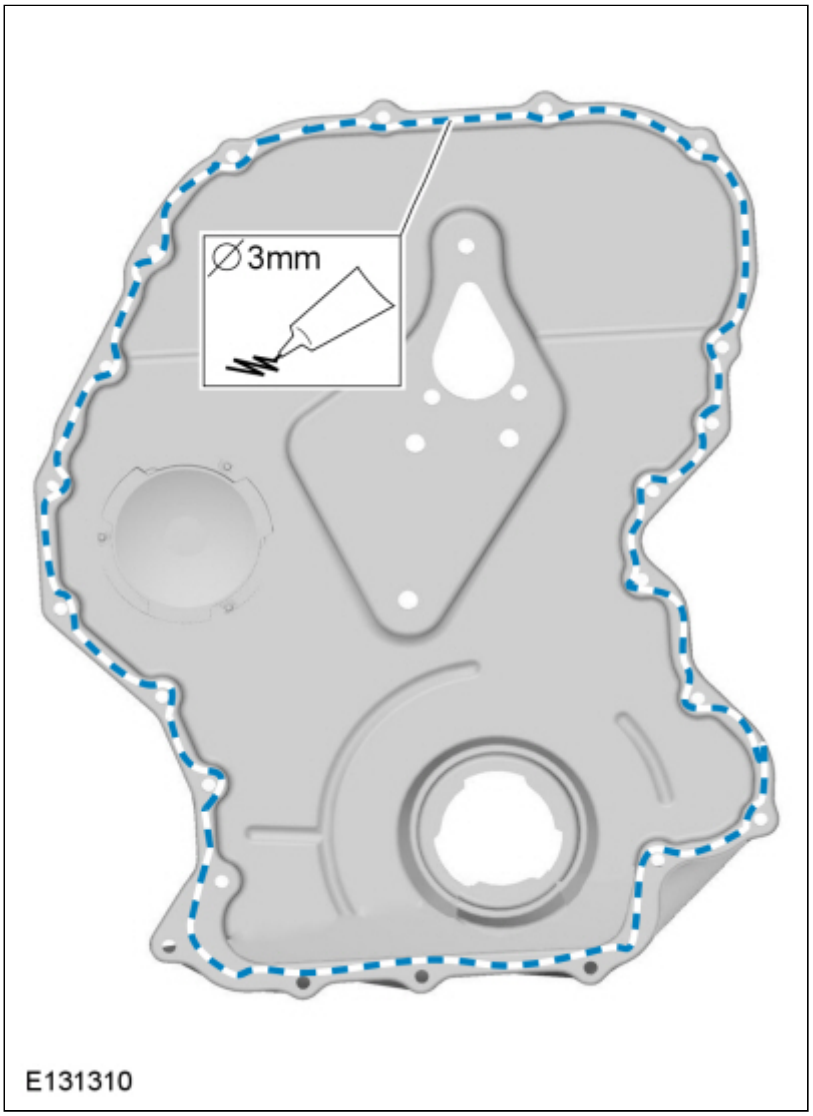
9. Refer to: Crankshaft Front Seal (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
10. Use Special Service Tool: 303-428 Separator, Oil Pan.

Installation

NOTE: *To remove oil from the cylinder block flange bonderite 1455-w wipes must be used.*

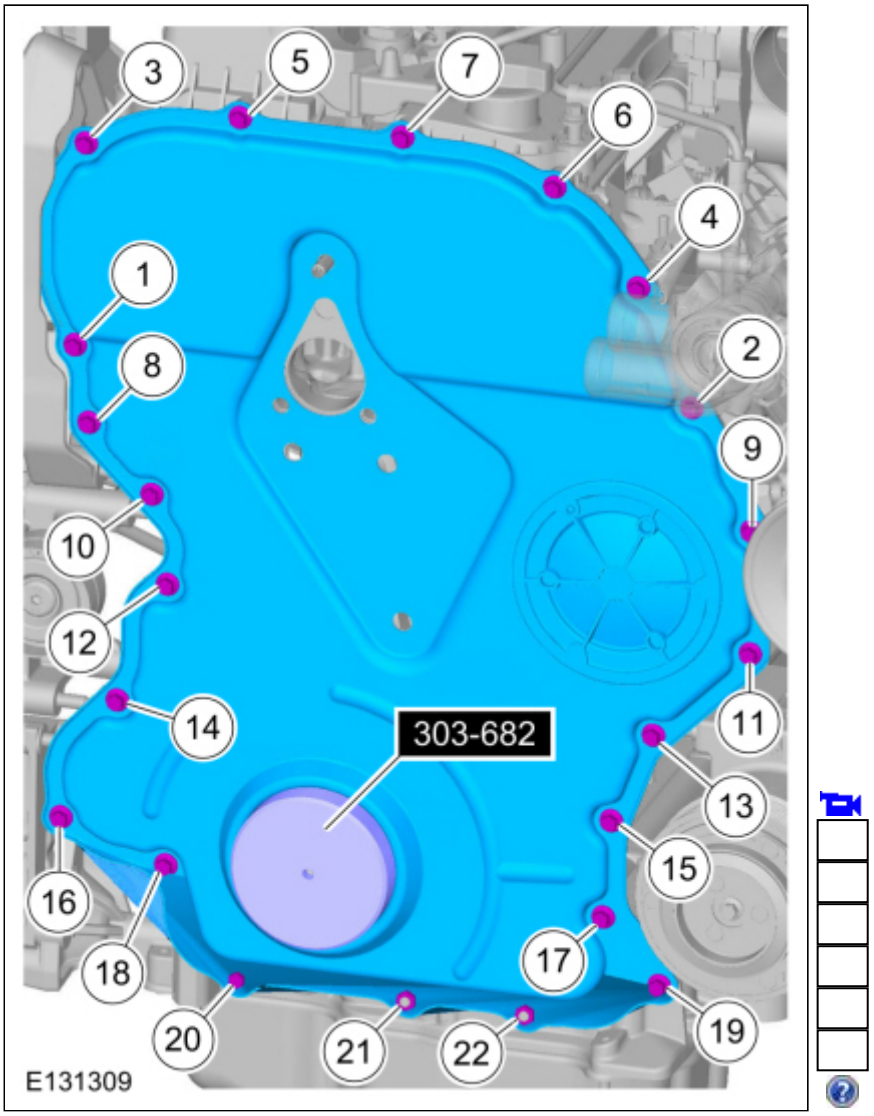
NOTE: *Loctite 7070 or other de-contaminator must not be used on cylinder block flanges.*

NOTE: *Always apply bonderite 1455 wipes to (4) x t-joints(block/head, block/ladderframe).*



NOTE: *Apply bonderite 1455-w wipes to (2) x t-joints(head/cam-carrier interfaces).*

NOTE: *One minute flash time is recommended after bonderite 1455-w application. apply different section of wipes to each t-joints and do not re-use.*

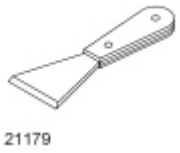


1. **NOTICE: Install timing cover with in five minutes of applying the sealent.**

   NOTE: *Do not damage the mating surfaces.*

   Material: Silicone Sealant (WSE-M4G323-A4)

2. Use Special Service Tool: 303-682 Aligner, Engine Front Cover.
   Torque:
   Stage 1: 5 Nm
   Stage 2: 10 Nm



3. To install, reverse the removal procedure.

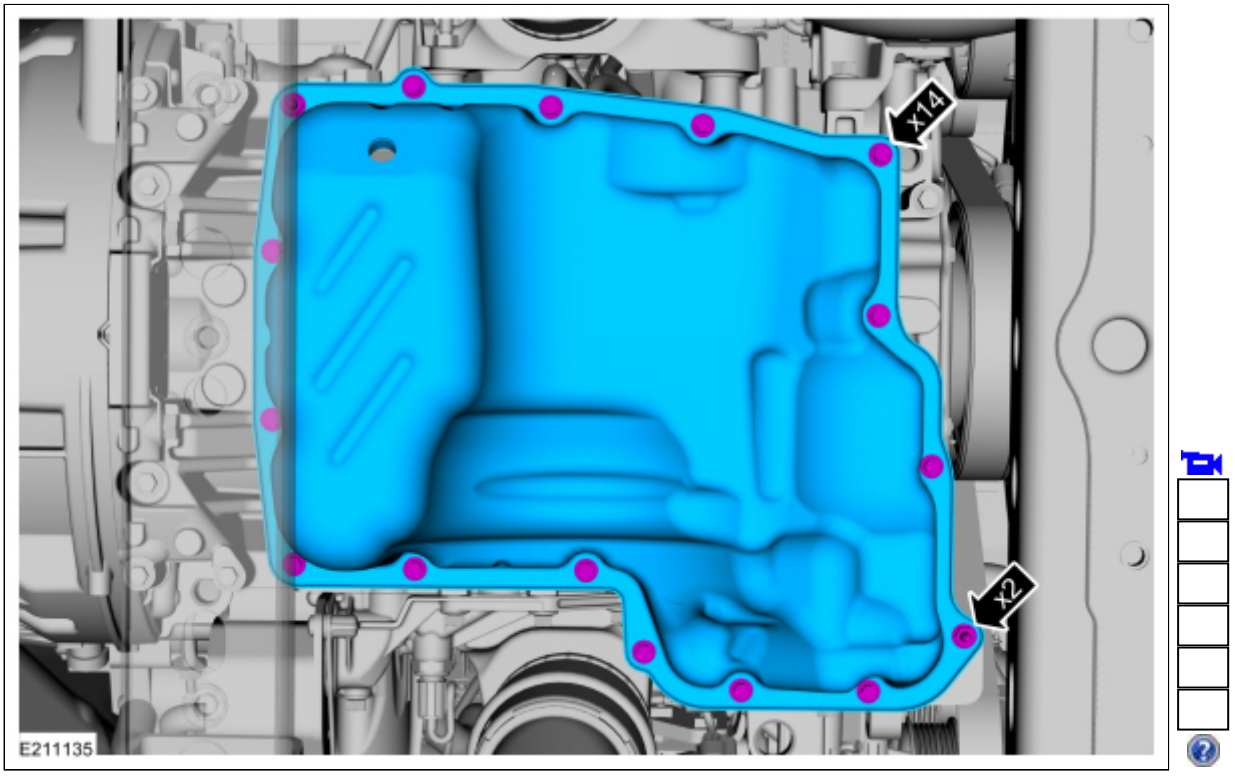
All vehicles



5. Raise the vehicle.

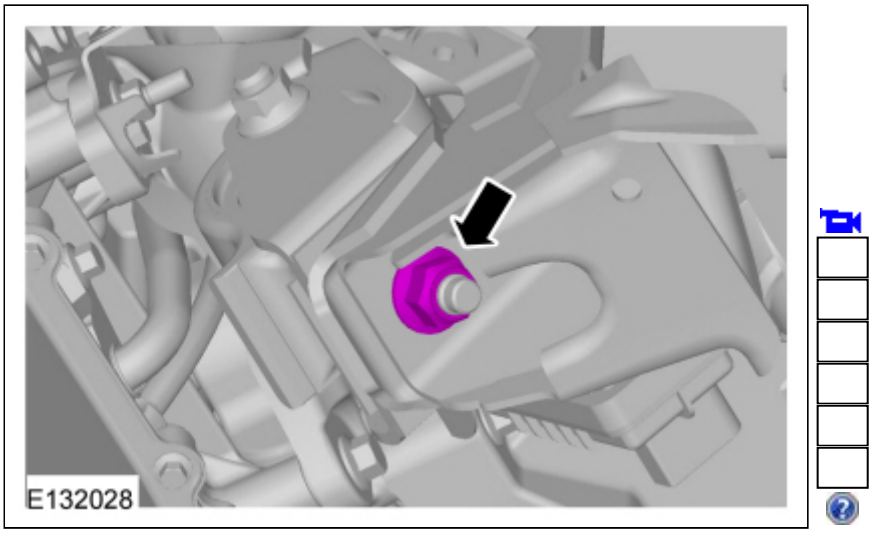
6. Refer to: Differential Draining and Filling (205-03 Front Drive Axle/Differential, General Procedures).

7. **WARNING: Be prepared to collect escaping fluids.**

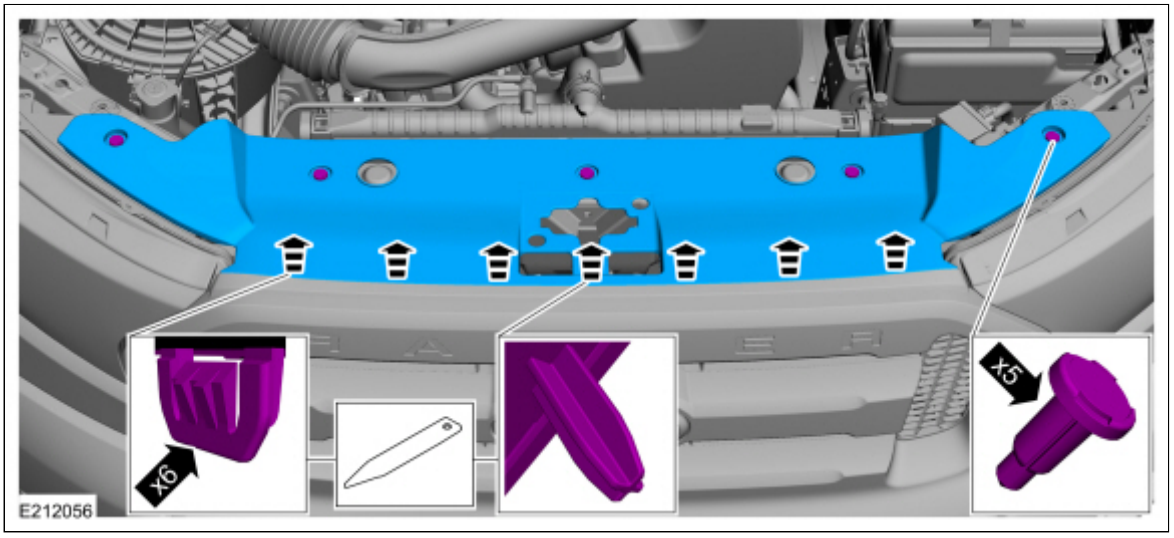
   NOTE: *The seal is to be reused unless damaged.*

   Drain the oil pan into a suitable container.
   Torque: 39 Nm

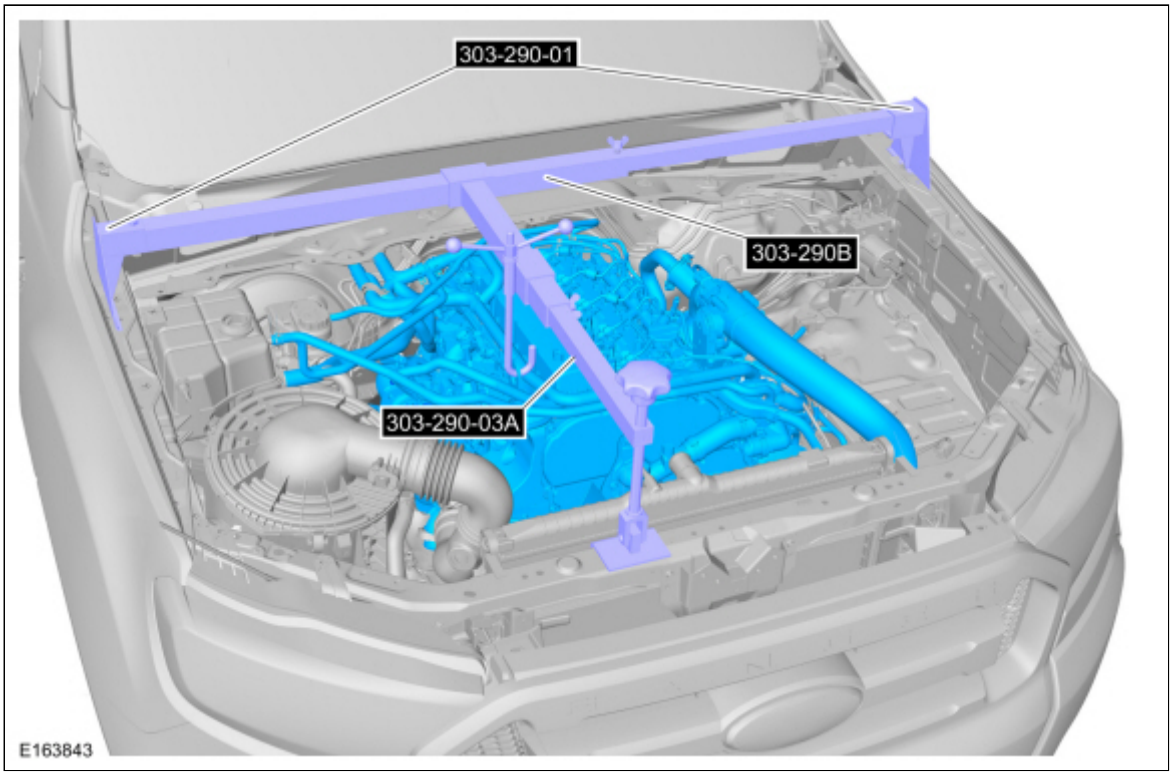


8. Refer to: Front Halfshaft RH (205-04 Front Drive Halfshafts, Removal and Installation).

9.

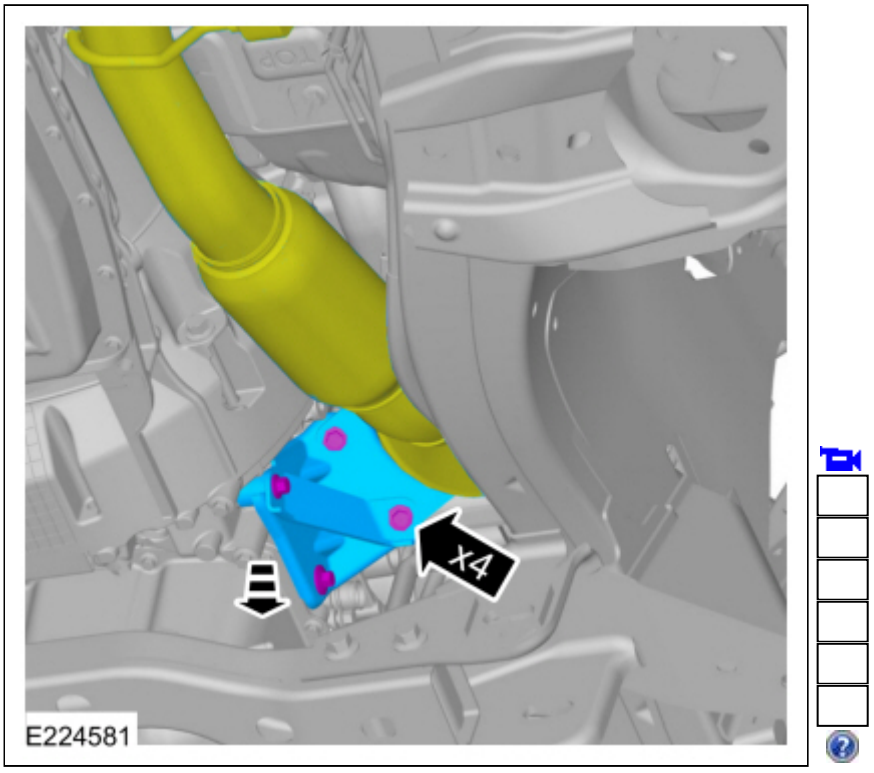


10. On both sides.



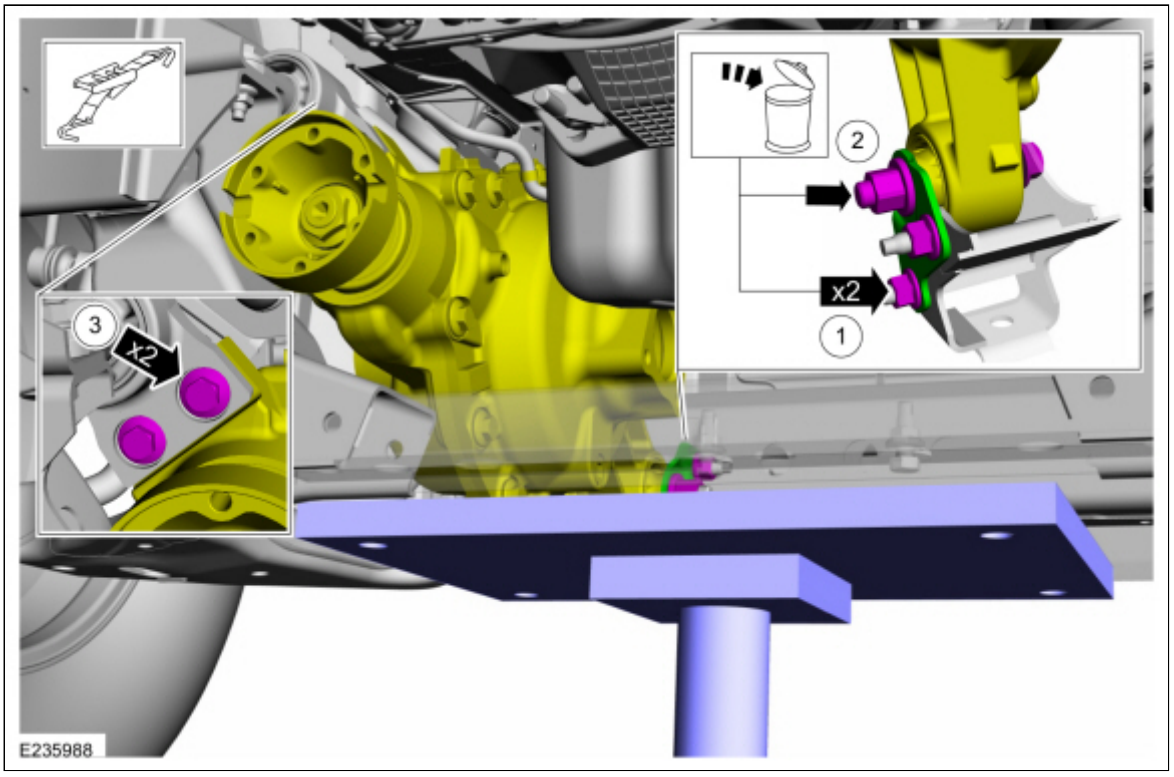
11. Lower the vehicle.

12. Use the General Equipment: Interior Trim Remover



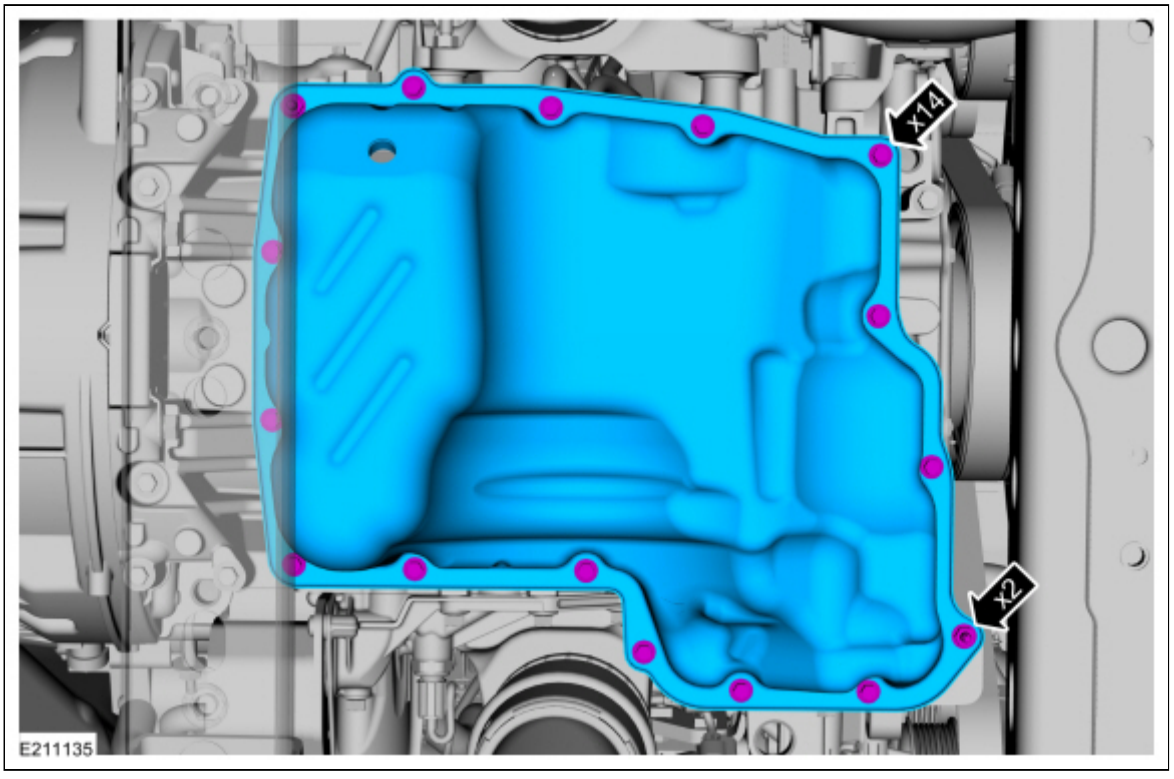
13. Refer to: Cooling Fan (303-03B Engine Cooling - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

14. Install the special tools and lift the engine to 60mm approximately.
    Use Special Service Tool: 303-290-01 Adapter for 303-290A. , 303-290B Support Bar, Engine. , 303-290-03A Adapter for 303-290A.



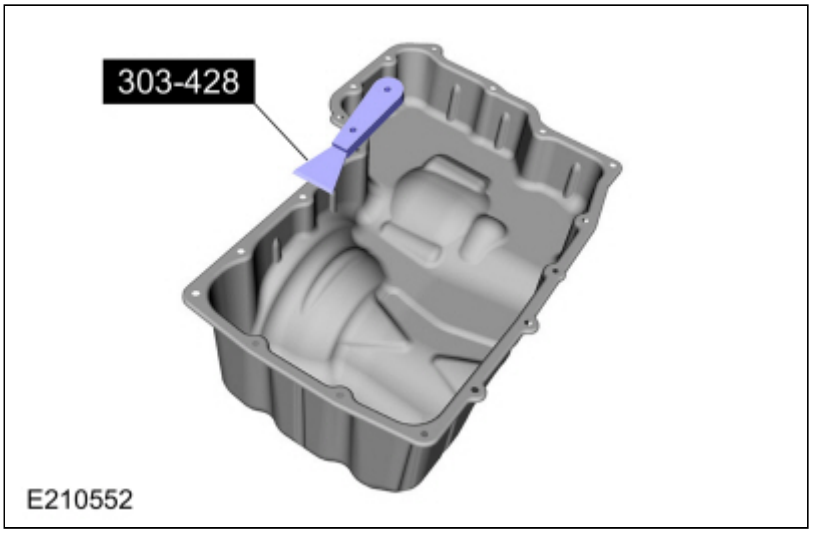
15. Raise the vehicle.

16.



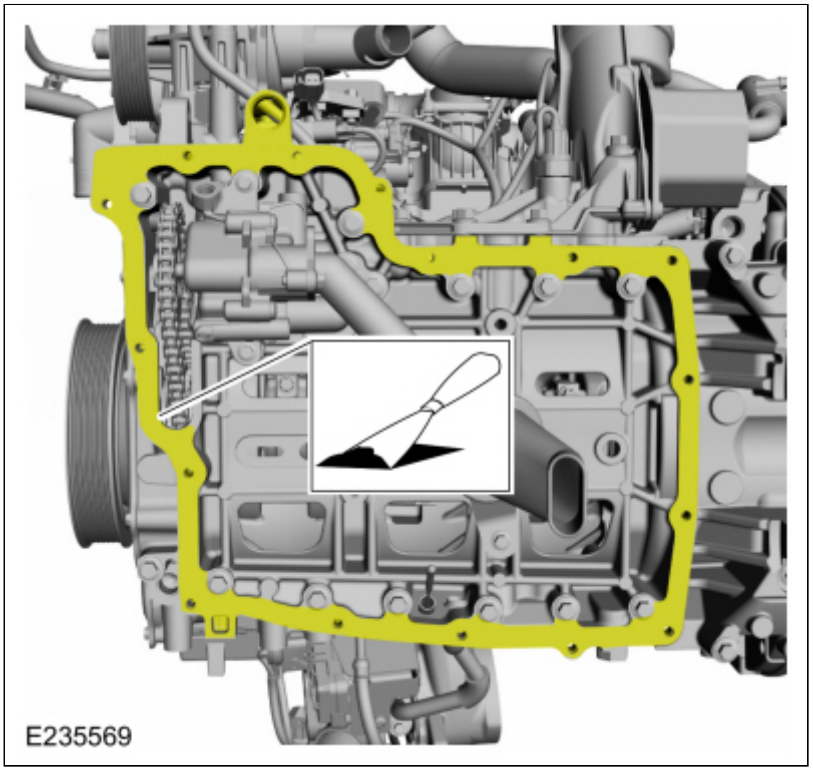
17. **WARNING: Always secure engines, transmissions, or other heavy components to the support fixture with straps and wooden support blocks. Improperly secured assemblies could fall off the fixture, resulting in serious personal injury.**

    Use the General Equipment: Transmission Jack



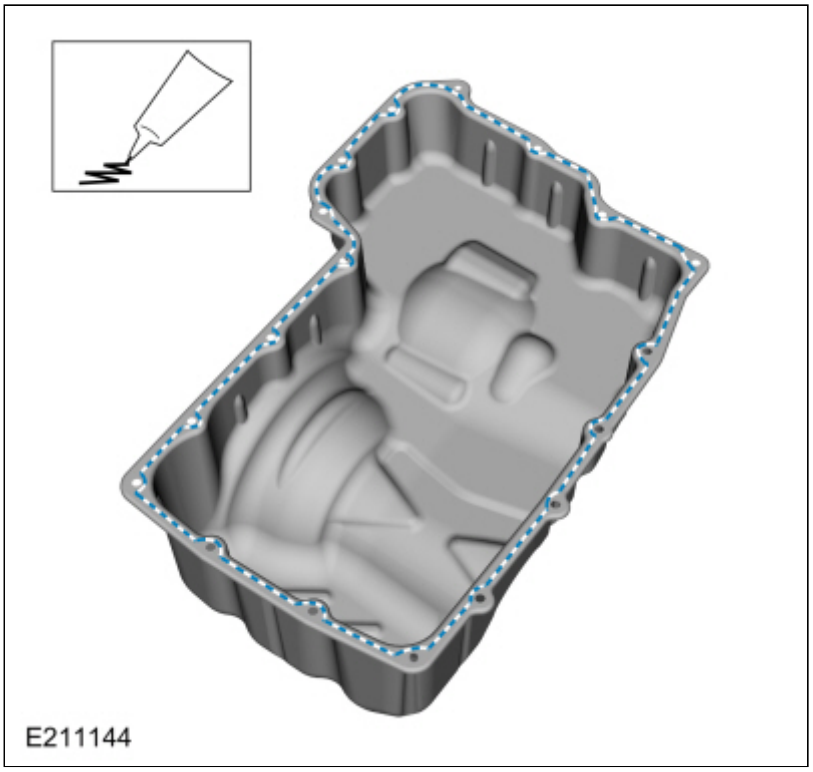
18.

Installation



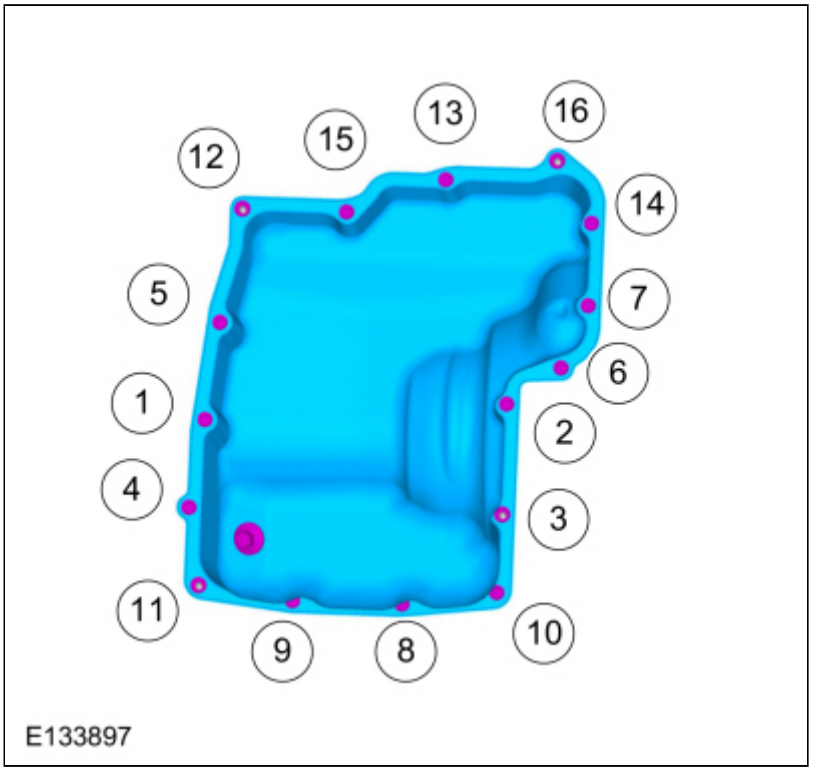
1. **NOTE:** *Do not damage the mating faces.*

   Use Special Service Tool: 303-428 Separator, Oil Pan.



2. **NOTE:** *Make sure that the mating faces are clean and free of foreign material.*

   Use the General Equipment: Plastic Scraper

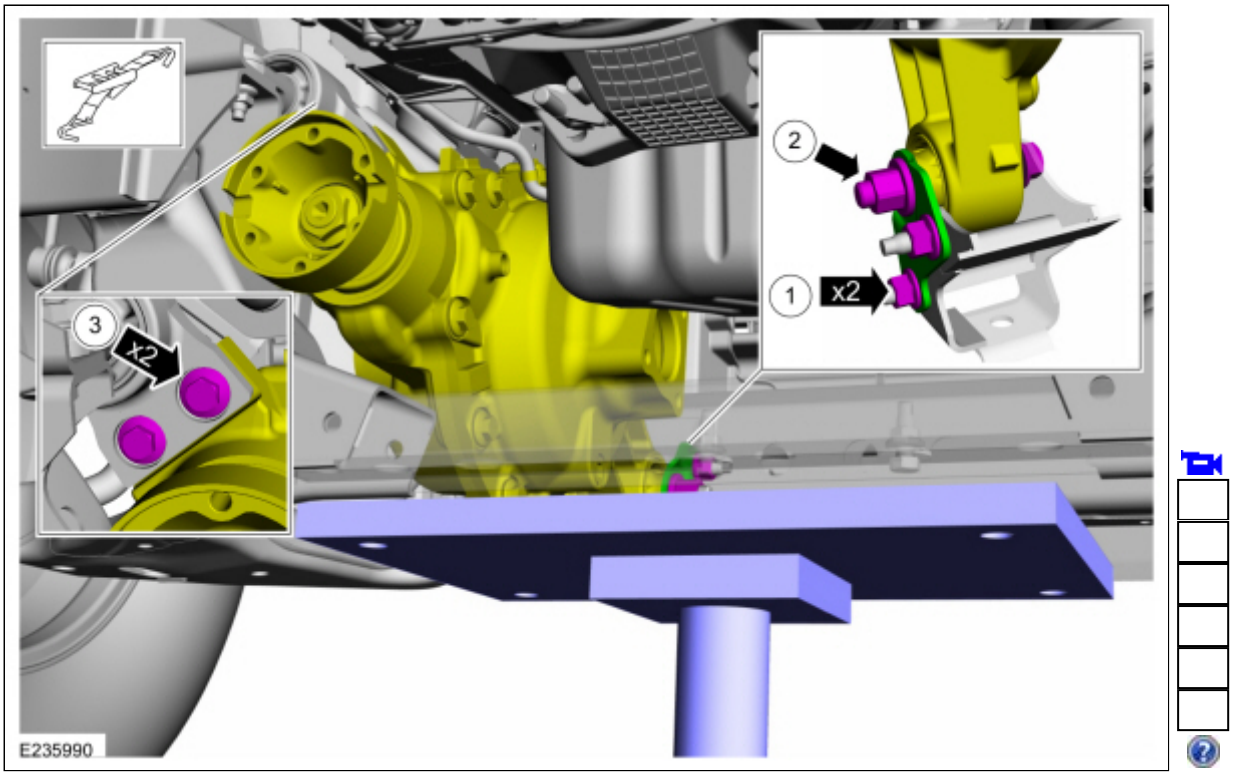


3. **NOTE:** *Do not damage the mating faces.*

   Install the oil pan within five minutes of applying the sealer.
   Material: Silicone Sealant (WSE-M4G323-A4)

4. *Torque*:
   Stage 1: 7 Nm
   Stage 2: 14 Nm

5. *Torque*: 25 Nm

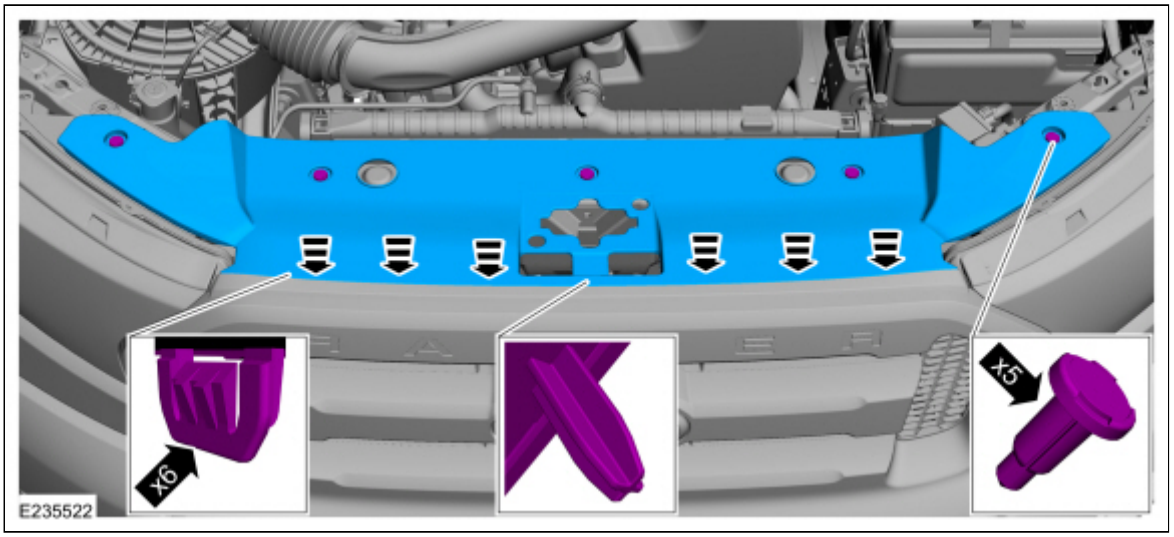


6. **WARNING: Always secure engines, transmissions, or other heavy components to the support fixture with straps and wooden support blocks. Improperly secured assemblies could fall off the fixture, resulting in serious personal injury.**

   NOTE: *Make sure that new nuts are installed.*

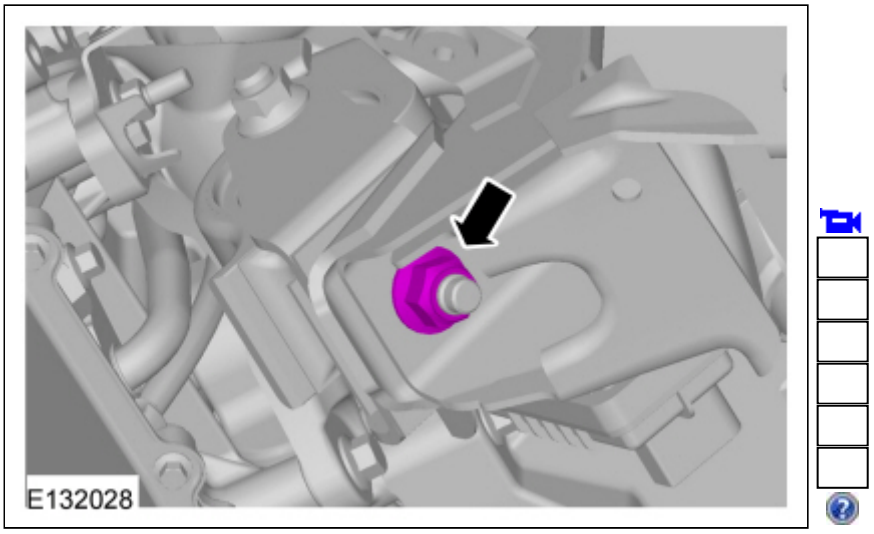
   NOTE: *Make sure that new bolts are installed.*

   Remove the transmission jack.
   Torque:
   1.: 90 Nm
   2.: 265 Nm
   3.: 110 Nm

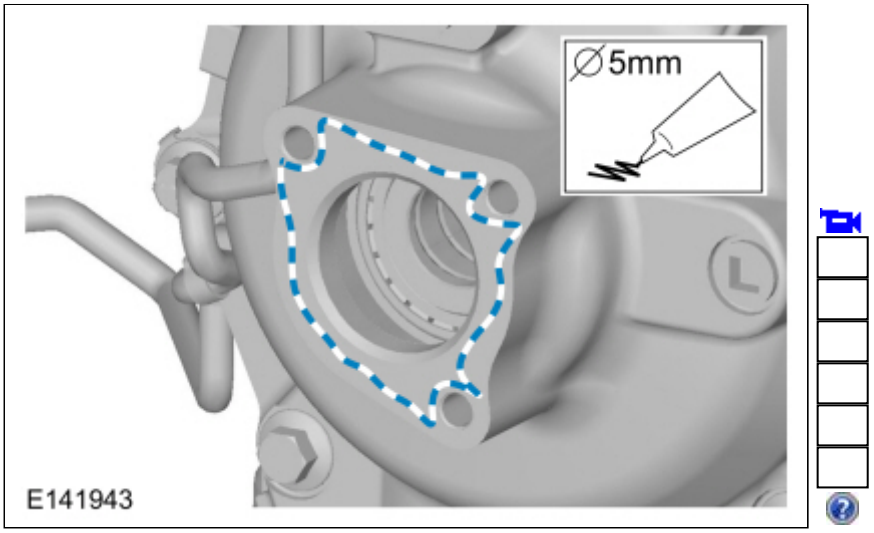


7. Lower the vehicle.

8. Remove the special tools.
   Use Special Service Tool: 303-290-01 Adapter for 303-290A. , 303-290B Support Bar, Engine. , 303-290-03A Adapter for 303-290A.

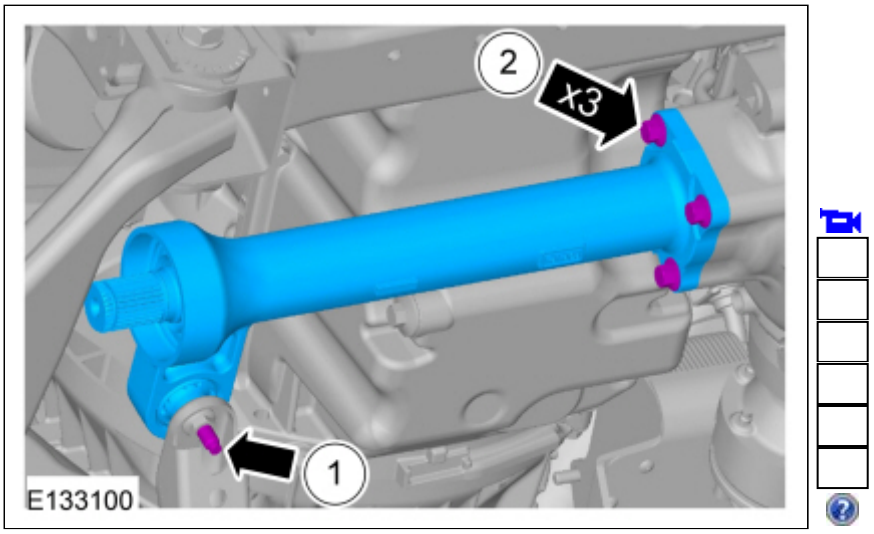


9.



10. Raise the Vehicle.

11. On both sides.
    Torque: 175 Nm



12. **NOTE:** *Do not damage the mating faces.*

    Install the Front axle tube within five minutes of applying the sealer.
    Material: Silicone Sealant (WSS-M4G323-A8)

1. *Torque*: 70 Nm
2. *Torque*: 40 Nm

14. Refer to: Front Halfshaft RH (205-04 Front Drive Halfshafts, Removal and Installation).
15. Refer to: Differential Draining and Filling (205-03 Front Drive Axle/Differential, General Procedures).

Vehicles With: Electronic Power Assist Steering (EPAS)

16. Refer to: Steering Gear - RHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).

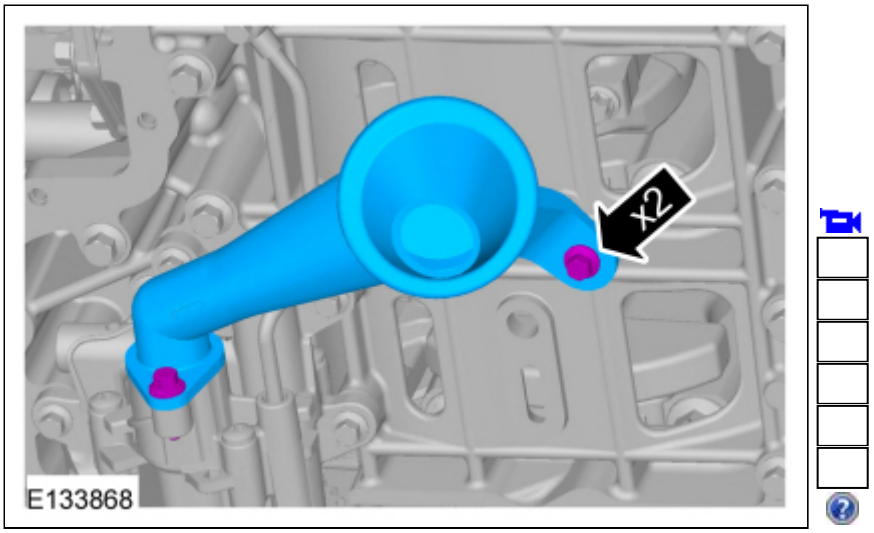
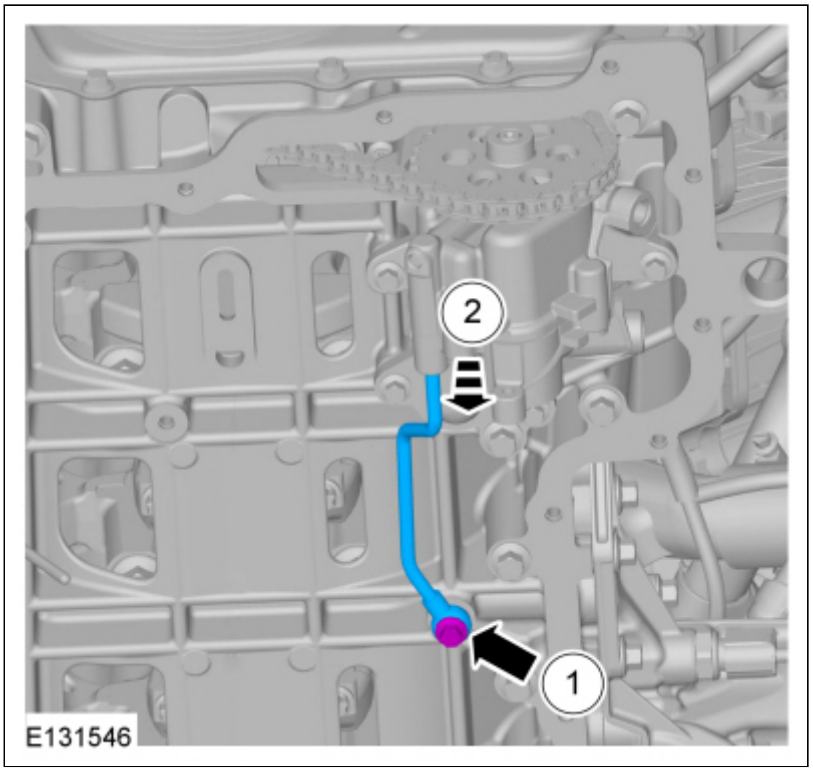
Oil Pump

Base Part Number: 6621



Special Tool(s) / General Equipment

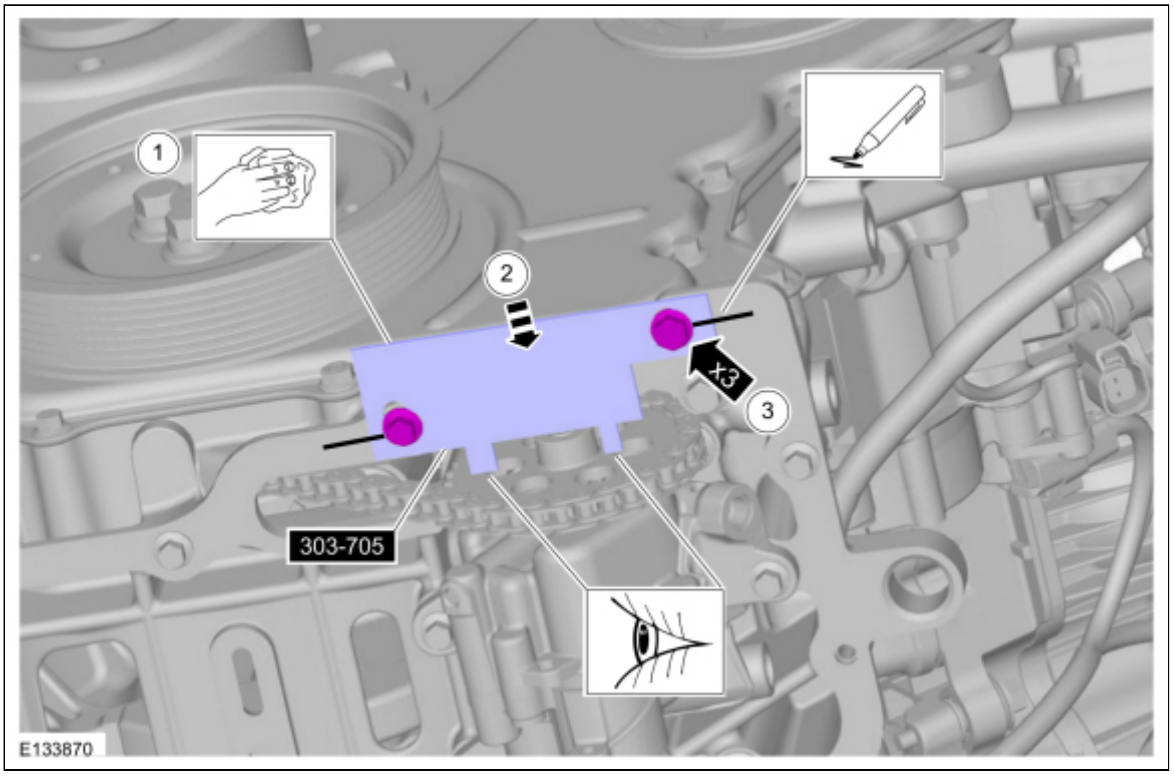
	303-705 Aligner, Oil Pump



Materials

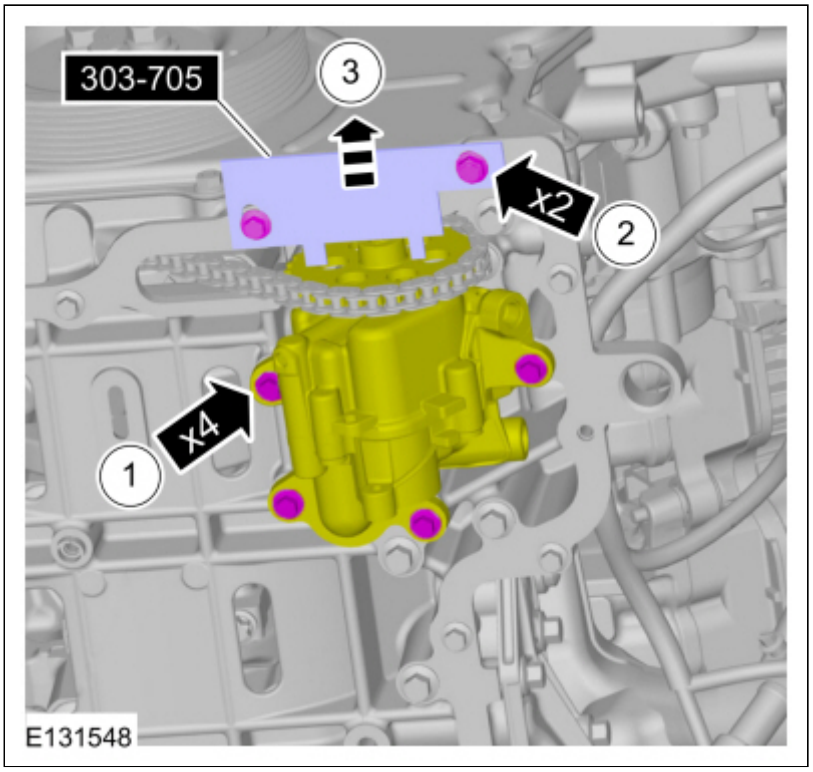
Name	Specification
Engine Oil - SAE 5W-30	WSS-M2C913-C

Removal



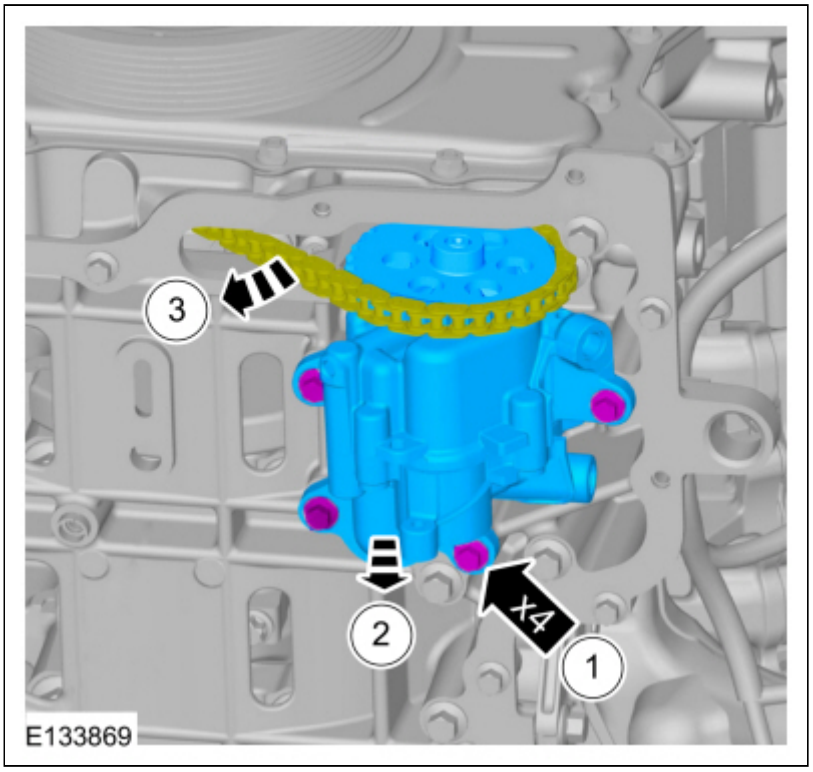
1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Oil Pan - 4WD (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
   Refer to: Oil Pan - 4x2 (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
3. 

4. **WARNING: Be prepared to collect escaping fluids.**



1. **NOTE:** *Make sure that the surface is clean and free of foreign material.*

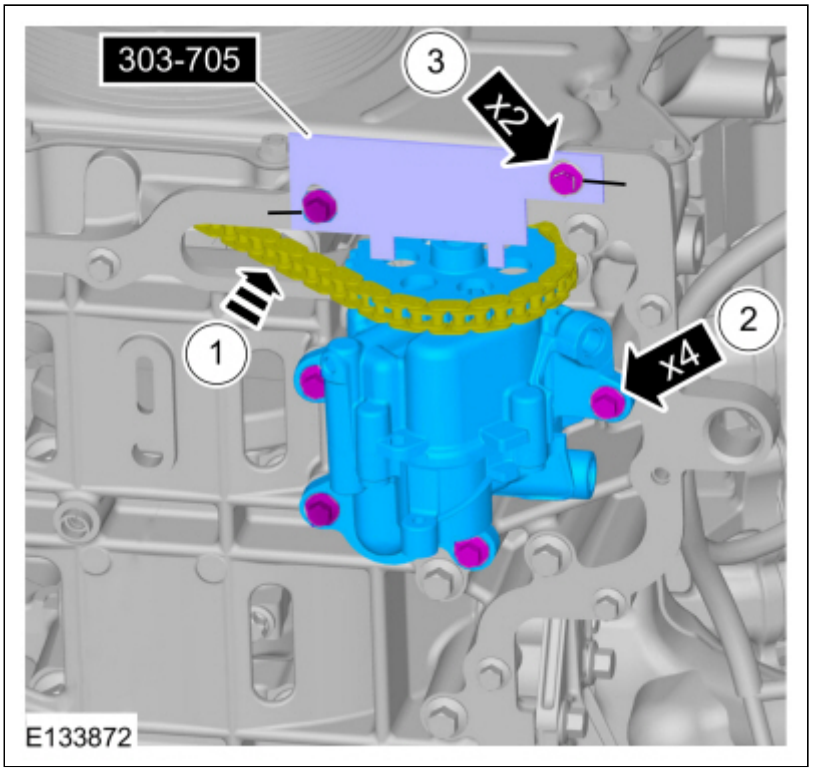
2. Use Special Service Tool: 303-705 Aligner, Oil Pump.
3. *Torque*: 15 Nm



6. **NOTE:** *Do not completely loosen the bolts at this stage.*

   Remove Special Service Tool: 303-705 Aligner, Oil Pump.

7.



Installation

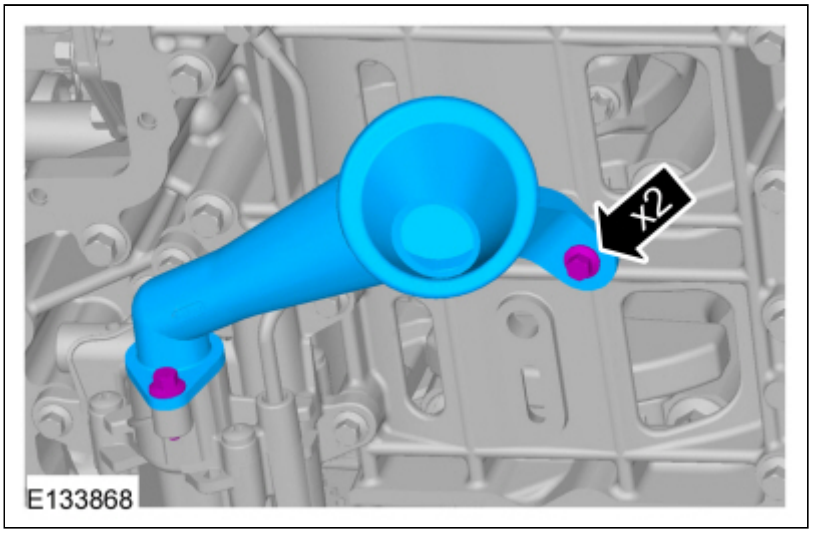
1. **NOTE:** *Only tighten the bolts finger tight at this stage.*

   NOTE: *Make sure that the installation marks are aligned.*

   Use Special Service Tool: 303-705 Aligner, Oil Pump.

2. **NOTE:** *The profile of the special tool must be in contact with the component.*

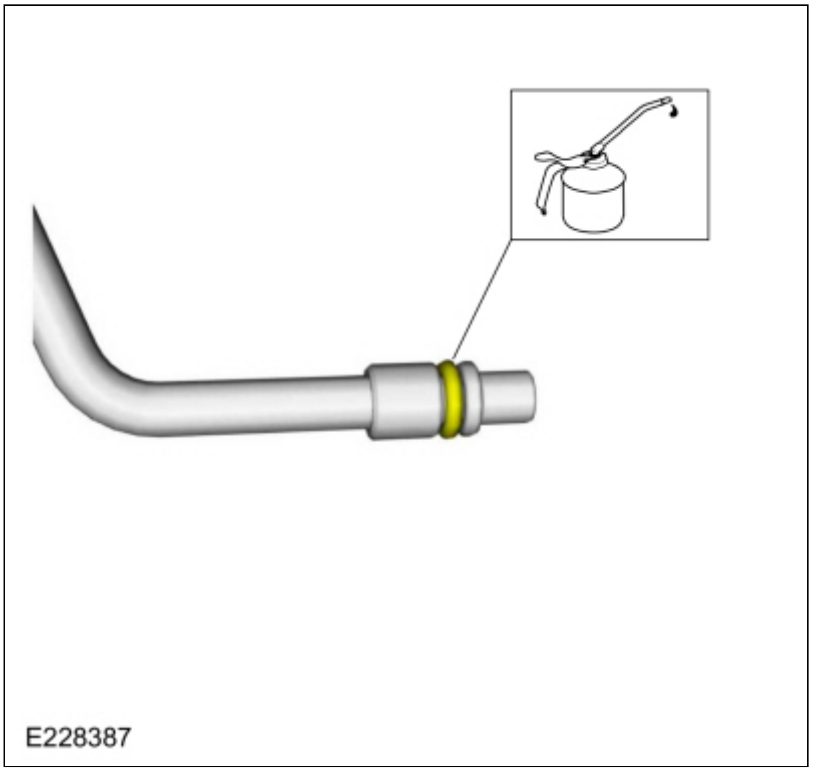
   Remove Special Service Tool: 303-705 Aligner, Oil Pump.
   Torque: 10 Nm



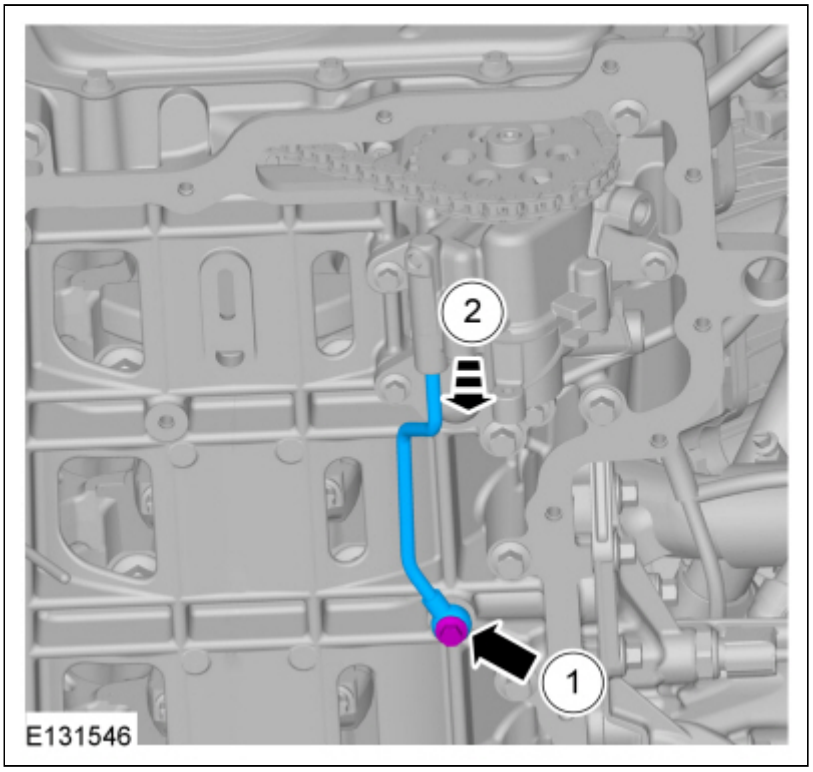
3. **NOTE:** *Lubricate the "O" ring before installing.*

   Make sure that a new component is installed if the O-ring is damaged.

   Inspect the O-ring before installation.
   Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)



4. *Torque*: 10 Nm

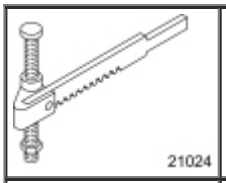


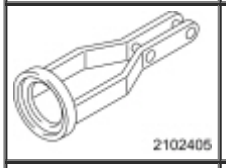
5. **NOTE:** *Lubricate the "O" ring before installing.*

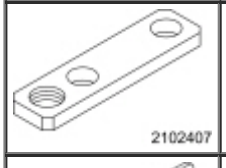
   Make sure that a new component is installed if the O-ring is damaged.

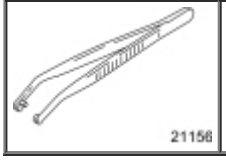
   Inspect the O-ring before installation.
   Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)

6. *Torque*: 13 Nm









7. Refer to: Oil Pan - 4WD (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

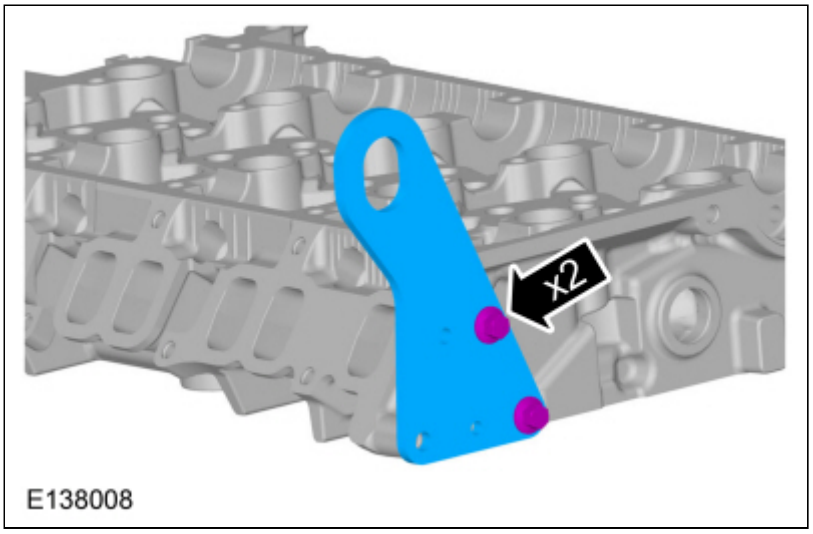
Cylinder Head



Base Part Number: 6051

Disassembly

1. For additional information, refer to: Valves (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
2. Torque : 13 Nm

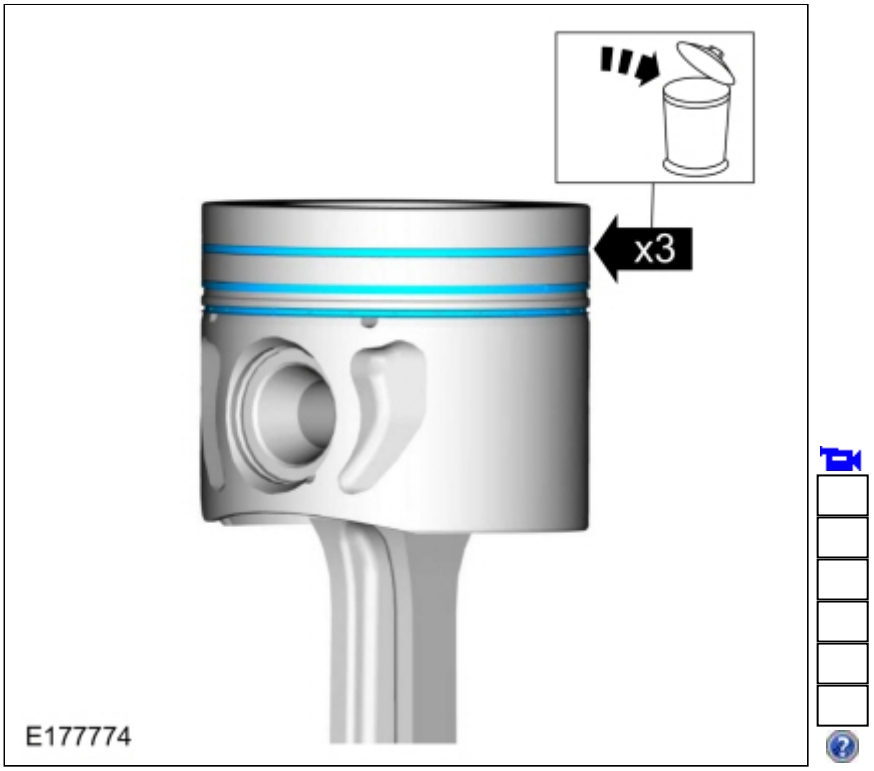
3. Torque : 23 Nm

Assembly

1. To assemble, reverse the disassembly procedure.

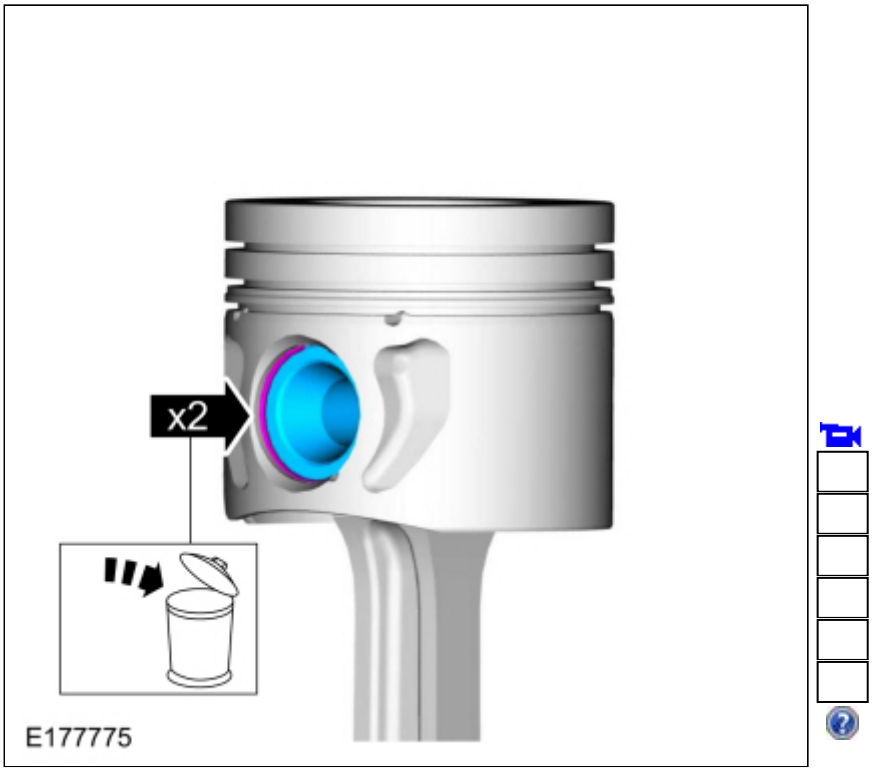
Copyright © 2016 Ford Motor Company

Piston



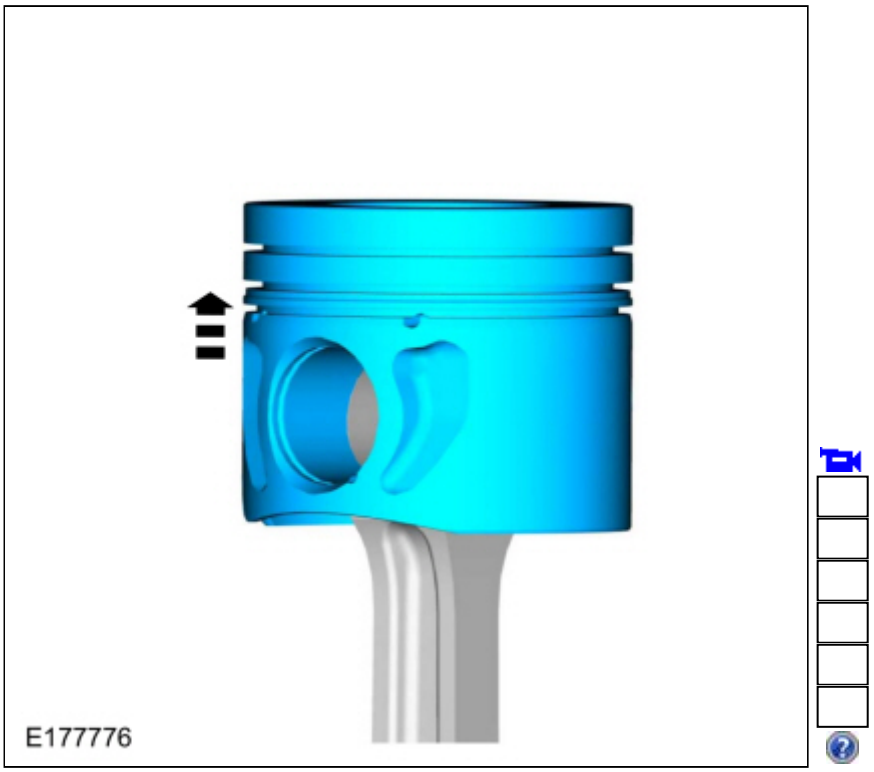
Materials

Name	Specification
Engine Oil - SAE 5W-30	WSS-M2C913-C



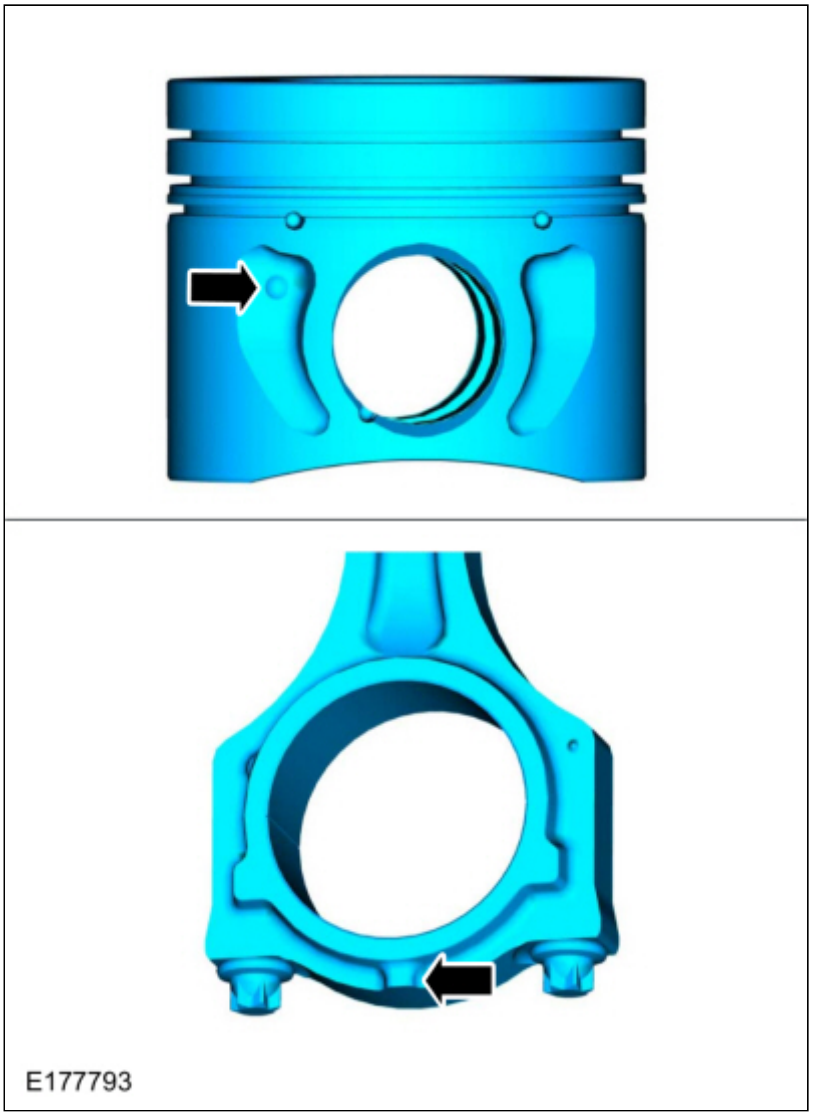
DISASSEMBLY

NOTE: *If the piston and connecting rod are to be reinstalled, they must be assembled in the same orientation. Mark the piston orientation to the connecting rod for reassembly.*

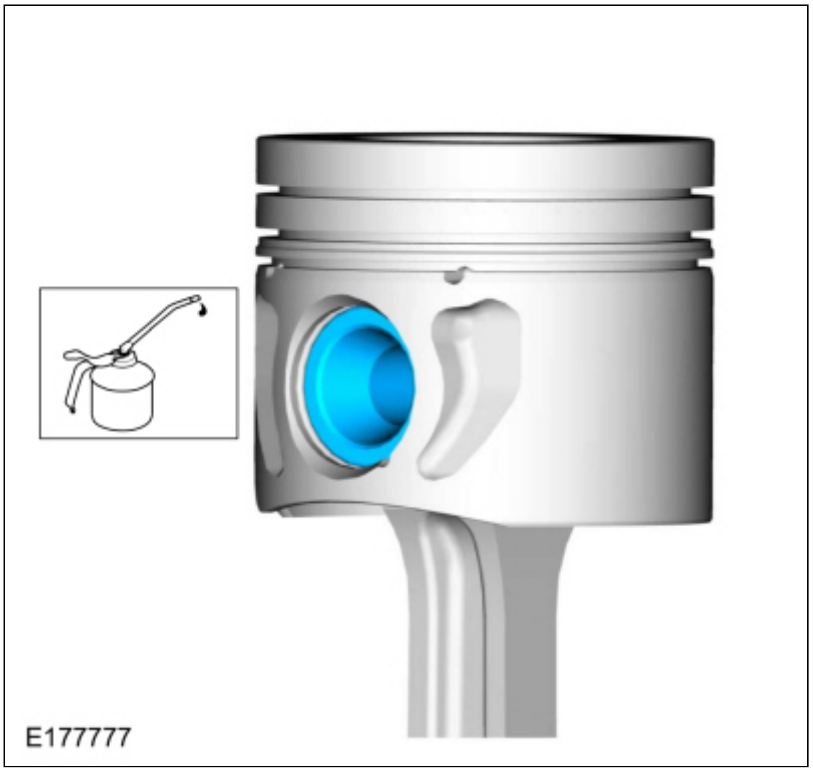


1. Remove and discard the piston rings.

2. Remove and discard the piston pin retainers. Remove the piston pin.



3. Separate the piston from the connecting rod. Clean and inspect the piston.
   Refer to: Piston Inspection (303-00 Engine System - General Information, General Procedures).



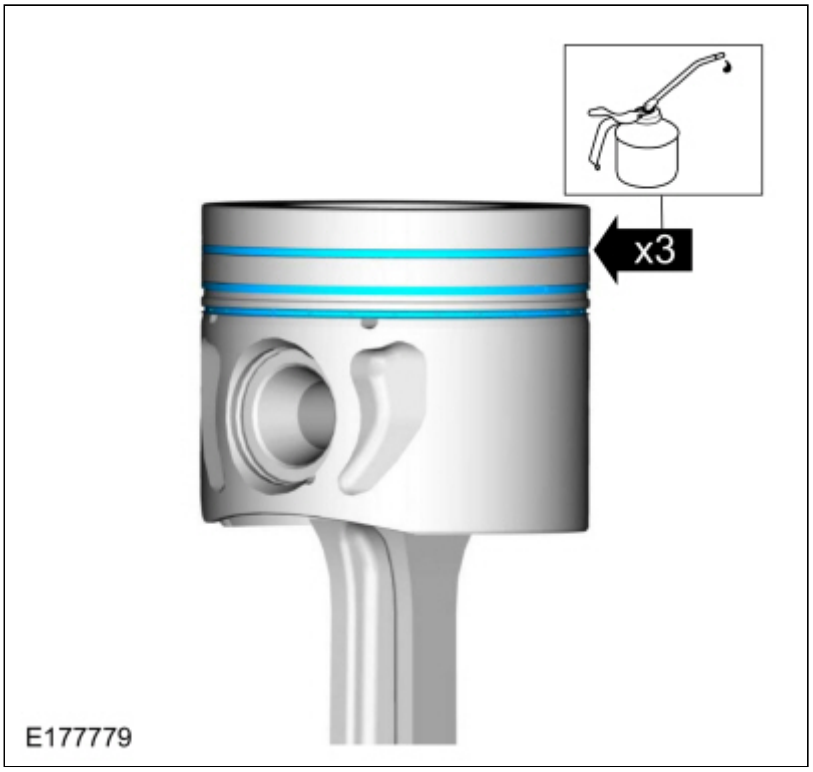
ASSEMBLY

1. **NOTE:** *Align the piston-to-connnecting rod orientation marks made during disassembly.*

   Align the front of the piston and connecting rod. Assembly the piston and the connecting rod.

2. Lubricate with clean engine oil and install the piston pin.
   Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)

3. Install the piston pin retainers.



4. **NOTE:** *The rings are to be fitted with the paint mark to the left of the piston ring gap.*

   NOTE: *The upper and lower compression ring gaps are the be installed 180 degrees apart.*

   NOTE: *The oil control ring position is not controlled.*

   Lubricate with clean engine oil and install the piston rings.
   Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)

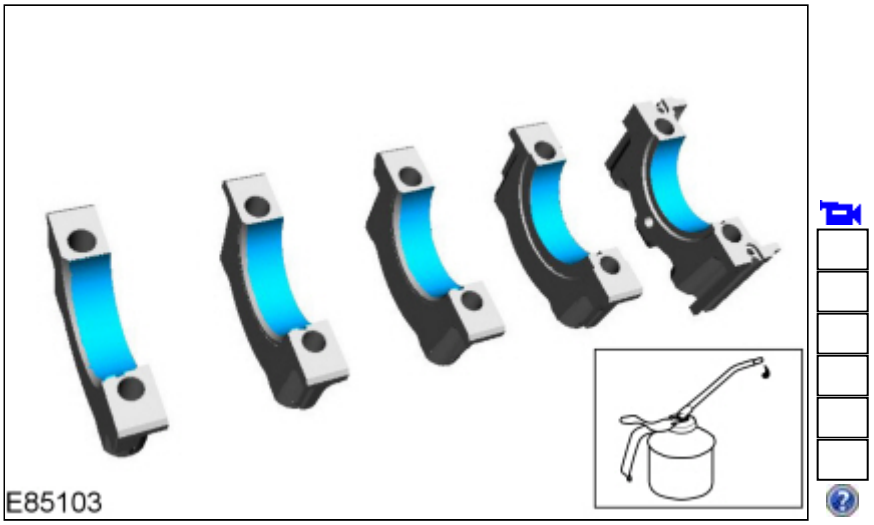
Materials

Name	Specification
Silicone Sealant	WSE-M4G323-A4
Engine Oil - SAE 5W-30	WSS-M2C913-C

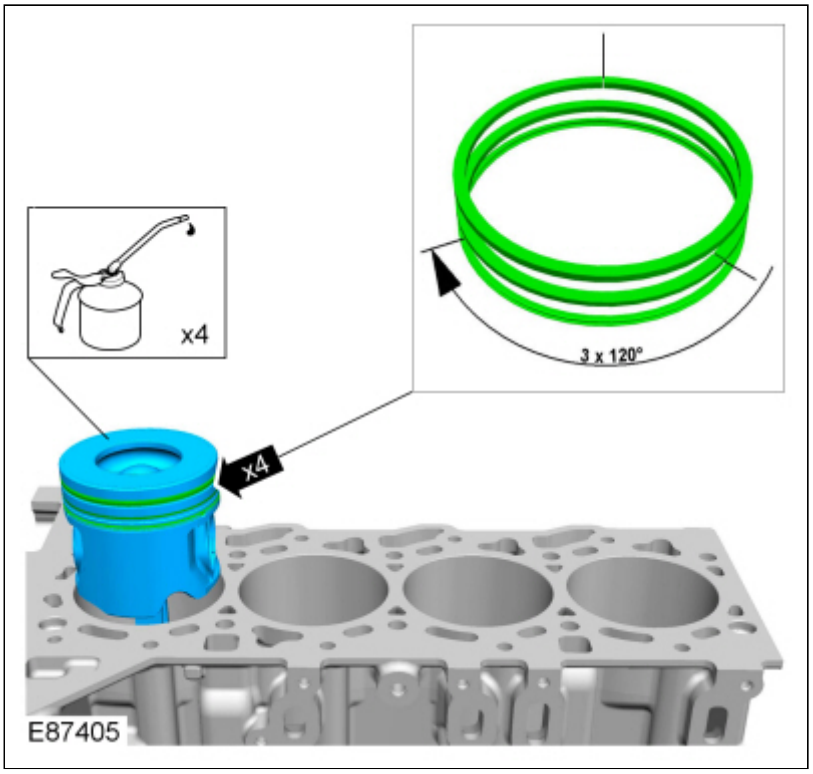


1. **NOTE:** *Make sure that these components are installed to the noted removal position.*

   Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)
   Torque: 10 Nm

2. **NOTE:** *Make sure that these components are installed to the noted removal position.*

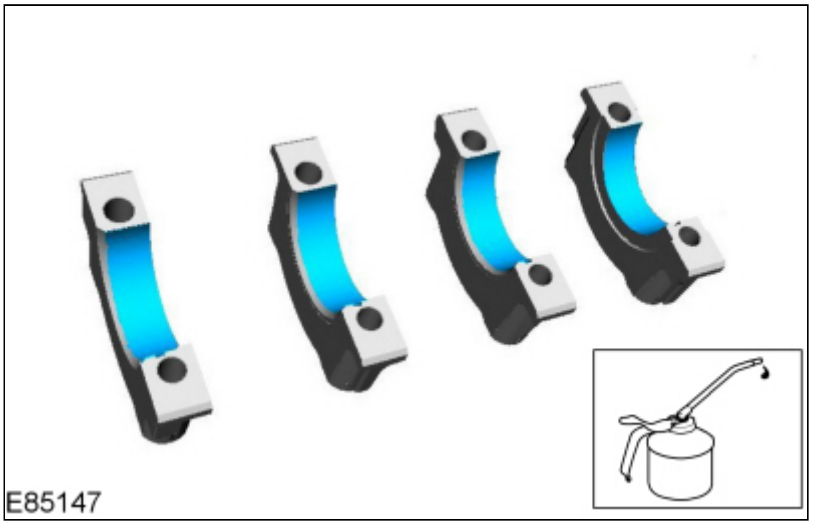
   Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)



3. **NOTE:** *Make sure that these components are installed to the noted removal position.*

   NOTE: *Install all the bolts finger tight before final tightening.*

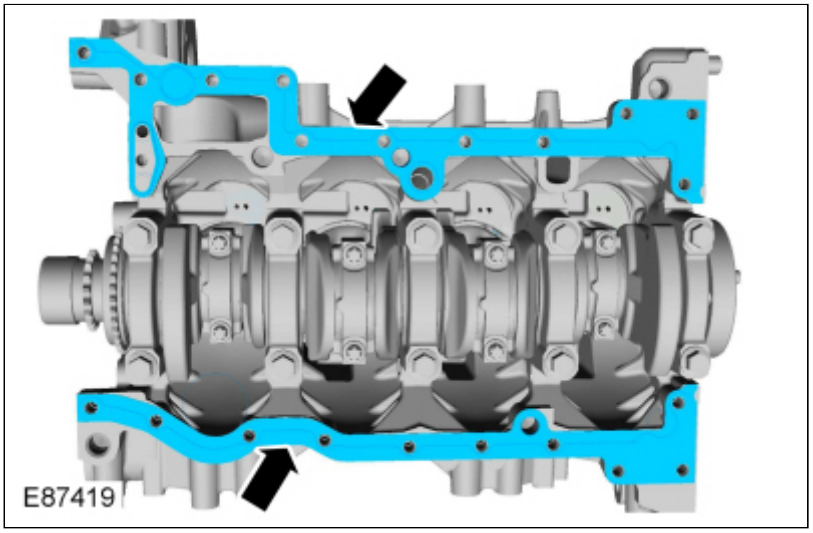
   Torque:
   Stage 1: 6 Nm
   Stage 2: 15 Nm
   Stage 3: 20 Nm
   Stage 4: 35 Nm
   Stage 5: 80 Nm
   Stage 6: 90°



4. Use the General Equipment: Piston Ring Compressor
   Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)

5. **NOTE:** *Make sure that these components are installed to the noted removal position.*

   Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)

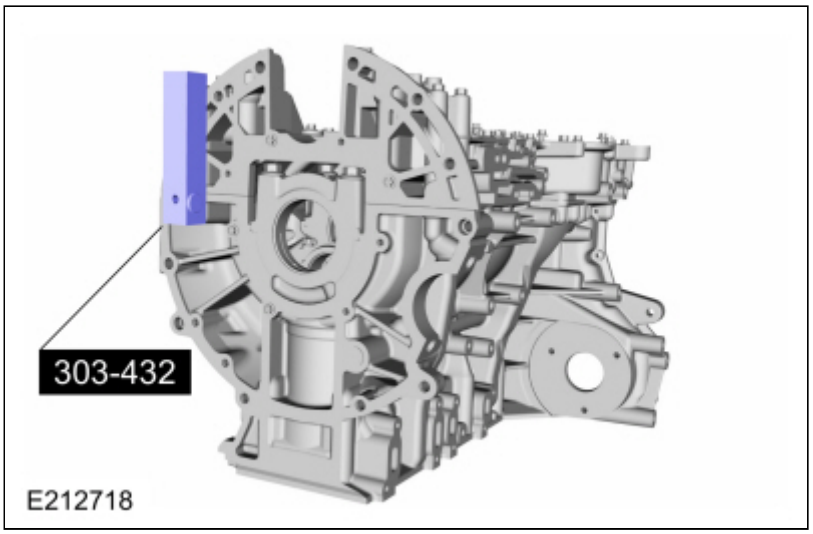


6. **NOTE:** *Make sure that these components are installed to the noted removal position.*

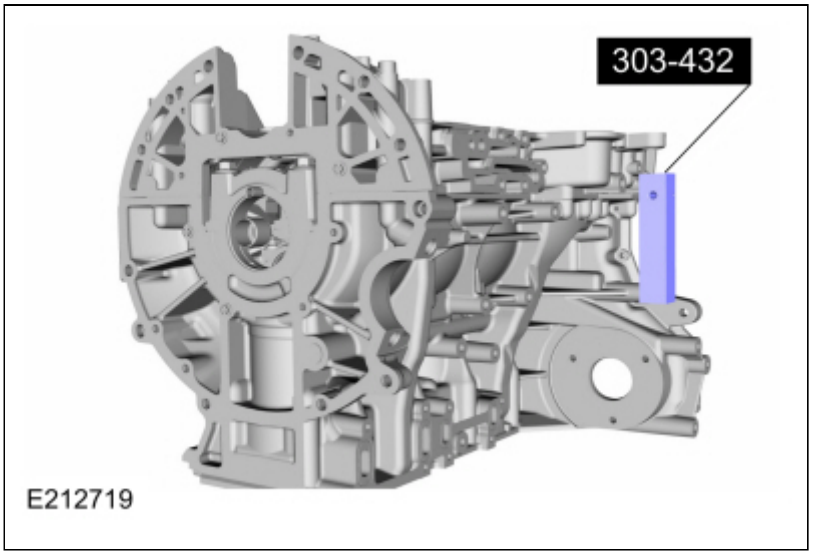
   NOTE: *Install all the bolts finger tight before final tightening.*

   Torque:
   Stage 1: 4 Nm
   Stage 2: 25 Nm
   Stage 3: 37 Nm
   Stage 4: 90°

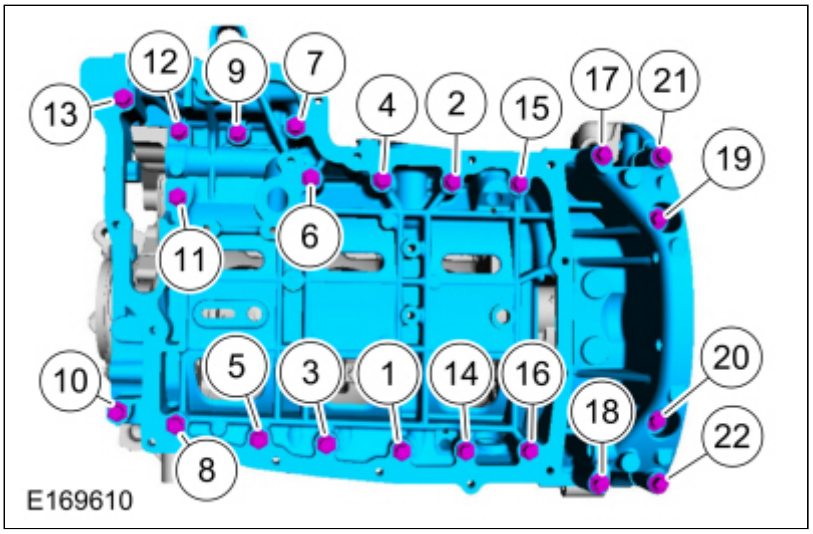
7.



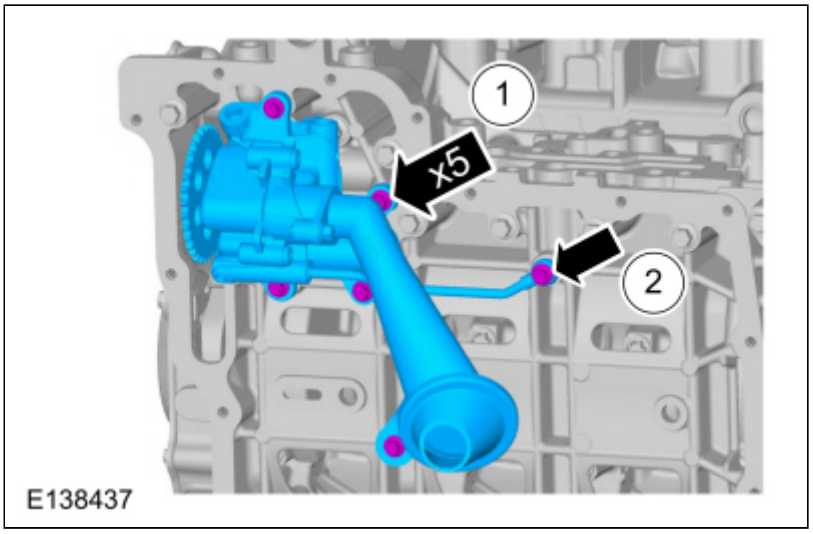
8. **NOTE:** *Only tighten the bolts finger tight at this stage.*



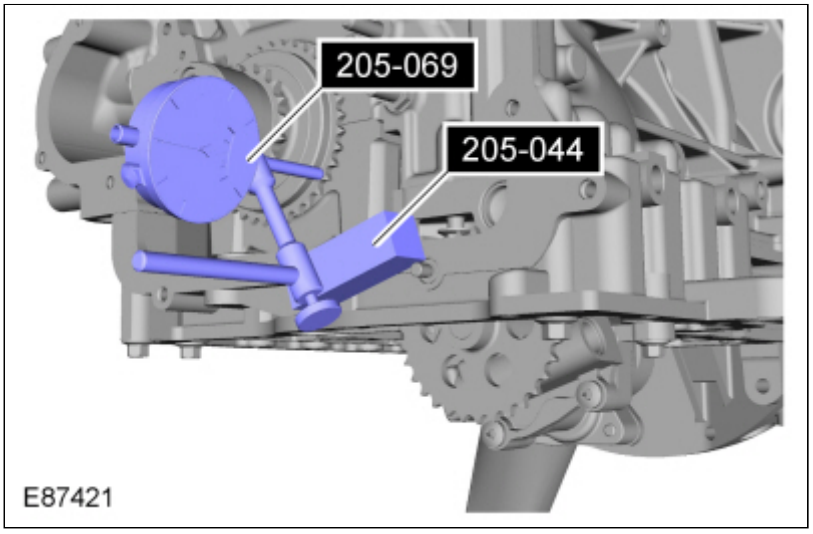
9. Using a straight edge, align the rear surface of the ladderframe with the rear surface of the engine block. The rear clearance does not exceed 0.05 mm gap.



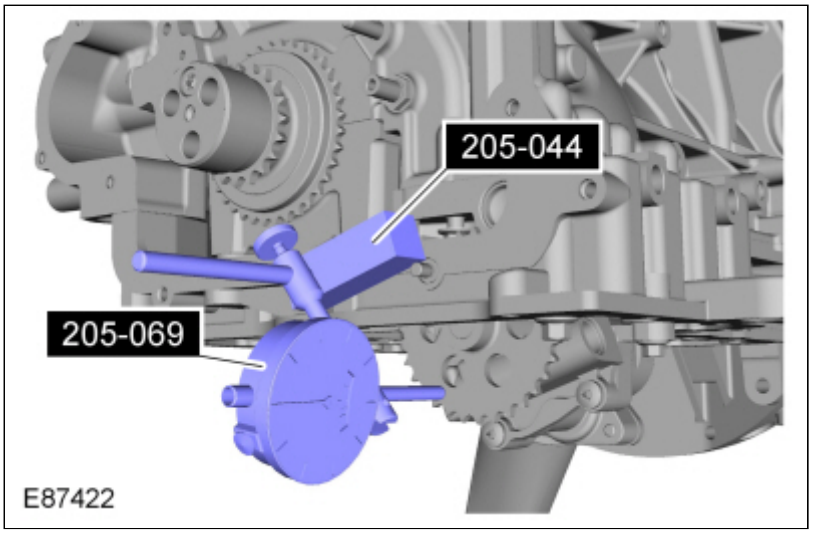
Use Special Service Tool: 303-432 Holding Fixture, Dial Indicator Gauge (Cylinder Liner Protrusion).



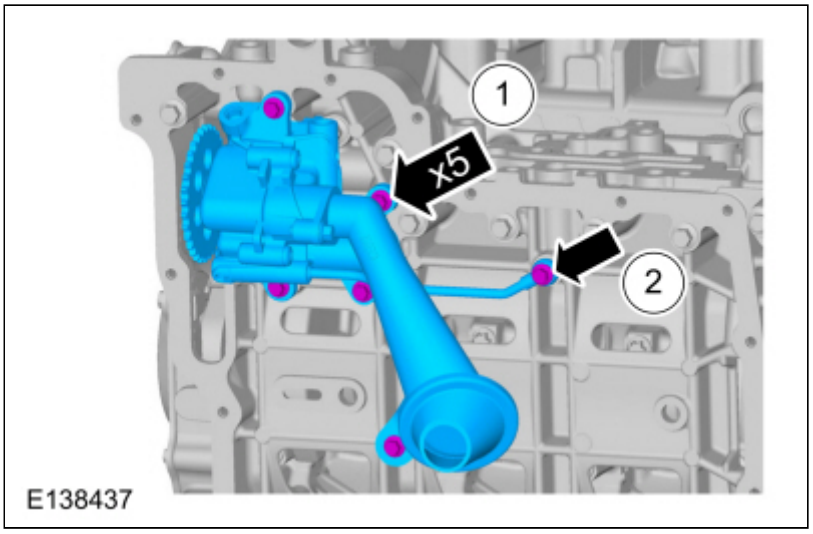
10. Using a straight edge, align the side surface of the ladderframe with the side surface of the engine block. The side clearance does not exceed 0.01mm overlap.
    Use Special Service Tool: 303-432 Holding Fixture, Dial Indicator Gauge (Cylinder Liner Protrusion).



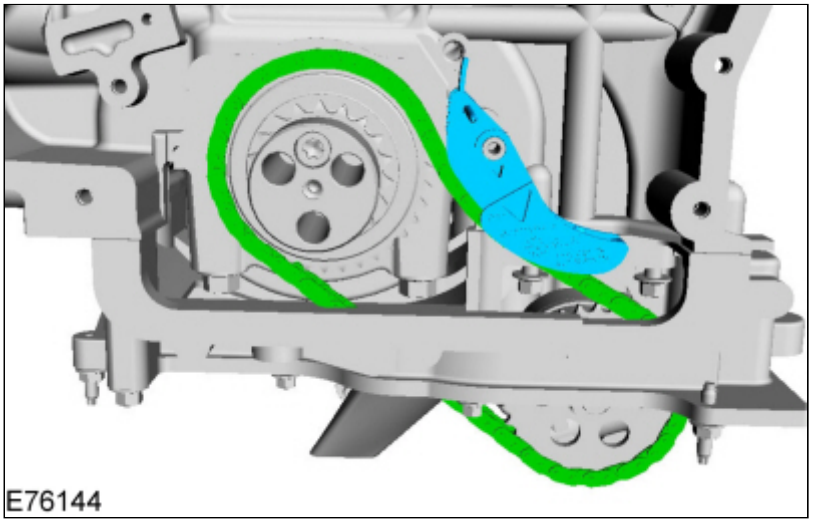
11. *Torque*: 23 Nm



12. **NOTE:** *Only tighten the bolts finger tight at this stage.*

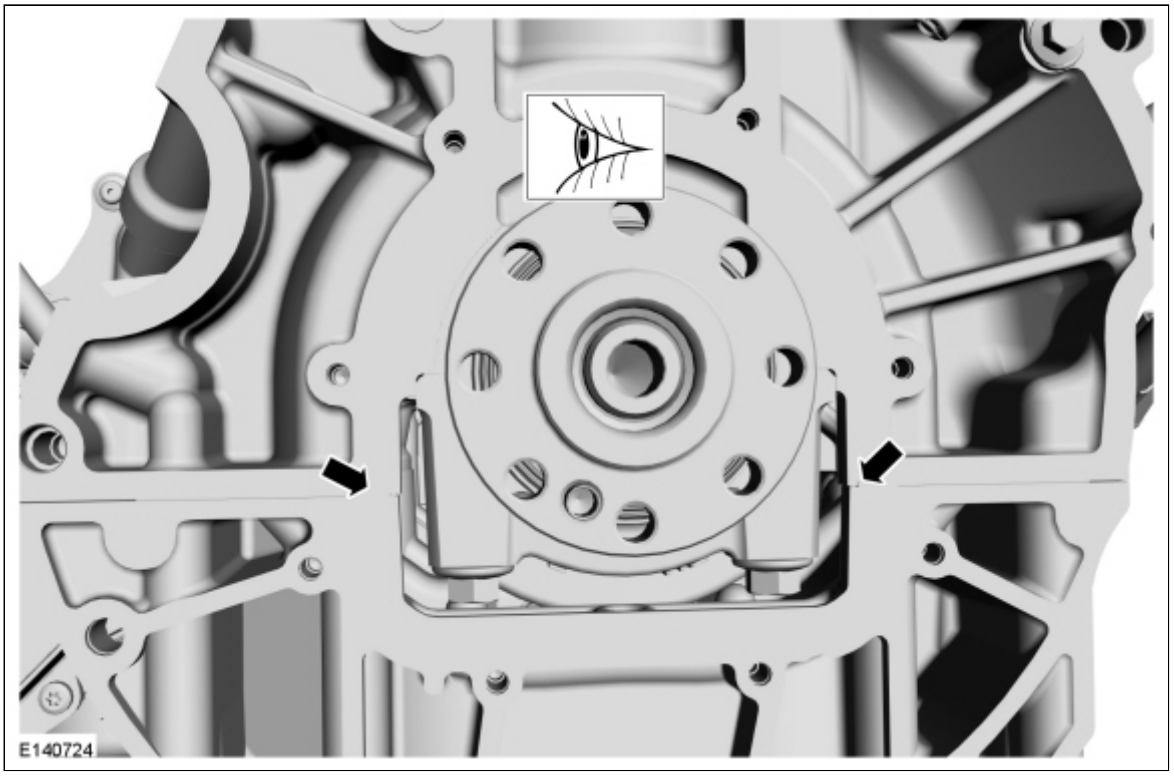


13. Take a reference measurement from the front face of the crankshaft sprocket.
    Use Special Service Tool: 205-044 Holding Fixture, Dial Indicator Gauge. , 205-069 Dial Indicator Gauge (Metric).

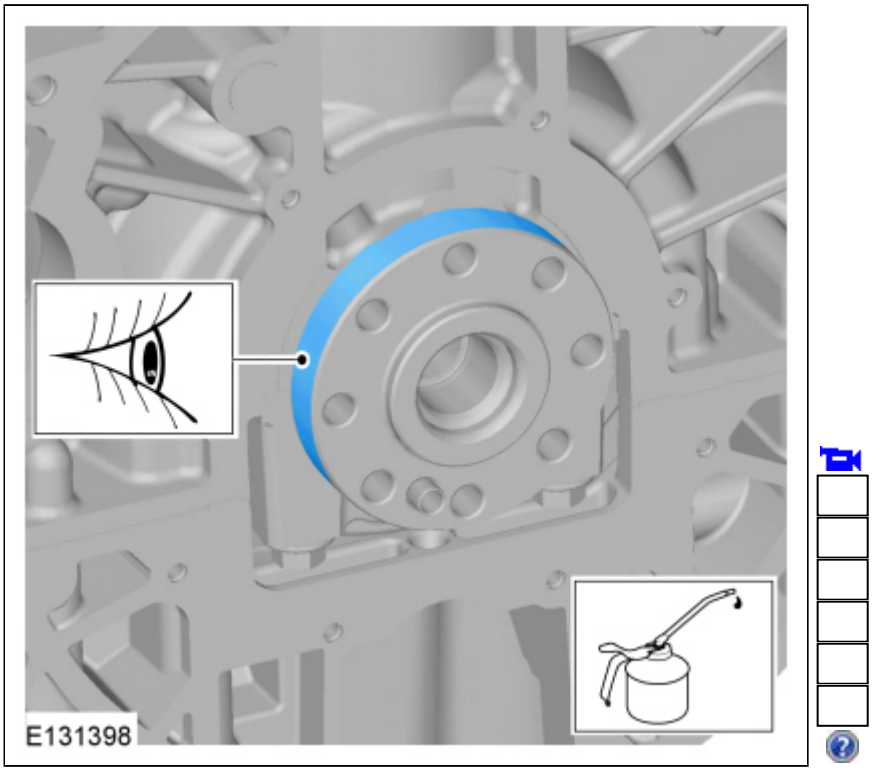


14. Take measurements at two different points on the oil pump sprocket and align the oil pump sprocket.
    Use Special Service Tool: 205-044 Holding Fixture, Dial Indicator Gauge. , 205-069 Dial Indicator Gauge (Metric).

15. *Torque*: 10 Nm



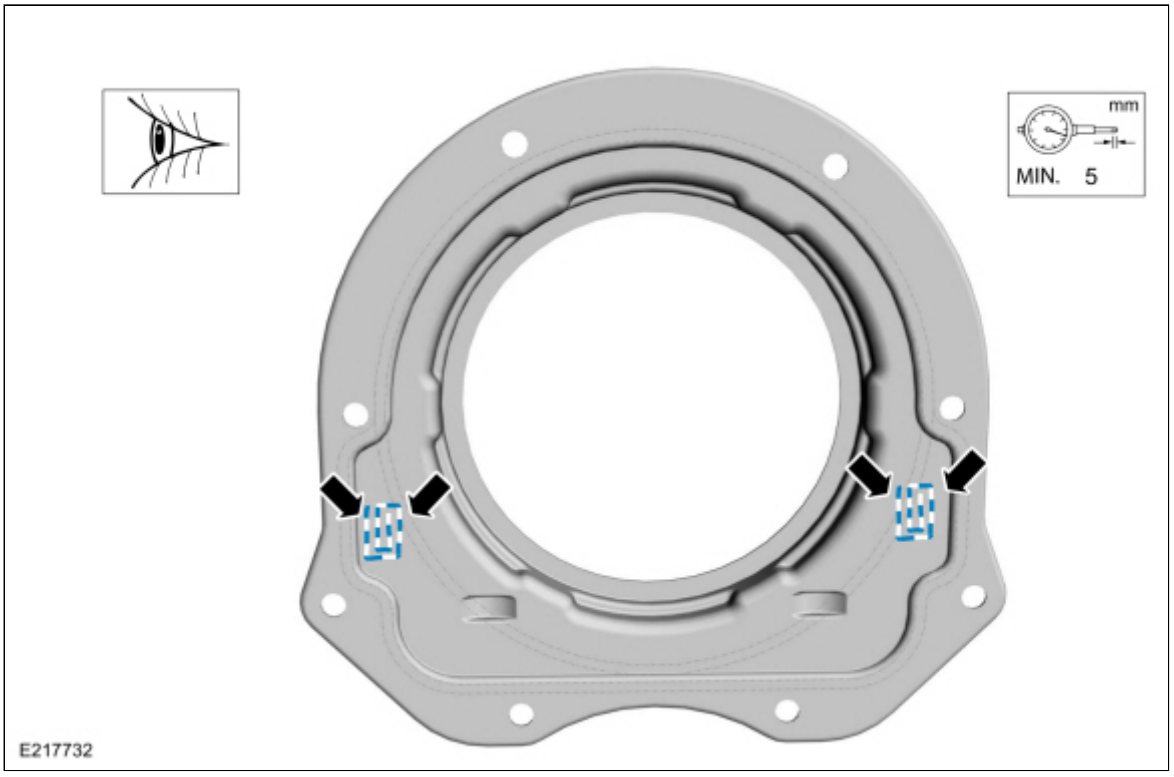
16.



17. **NOTE:** *A new crankshaft rear seal carrier is supplied with an alignment sleeve that must not be removed until the crankshaft rear seal is fully installed. Failure to follow this instruction may result in damage to the vehicle.*

- Clean the area on the engine before installing a new crankshaft rear seal carrier.
- Check the two foam pads are located as shown on the ladder frame gasket.

18.

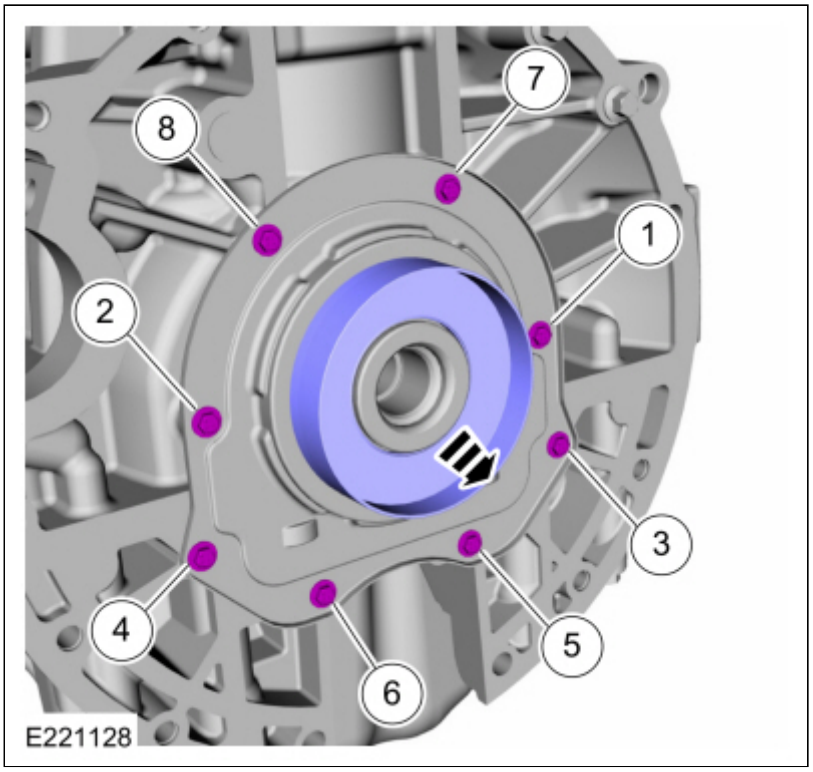


19. **NOTE:** *Install new crankshaft rear seal carrier with in five minutes after applying the recomended sealent. Failure to follow this instruction may result in damage to the vehicle.*

    NOTE: *Do not add any more than the specified quantity of sealant or add the sealant anywhere other than the area shown.*

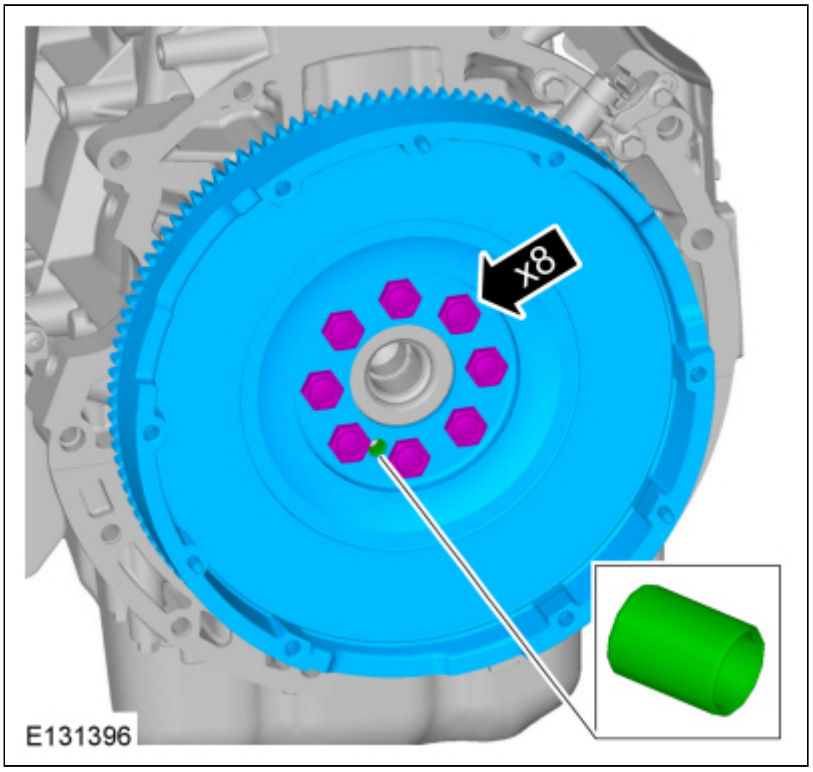
    NOTE: *If the foam pads are not present on inspection, fill the square areas shown with 75% of sealant.*

    Material: Silicone Sealant (WSE-M4G323-A4)



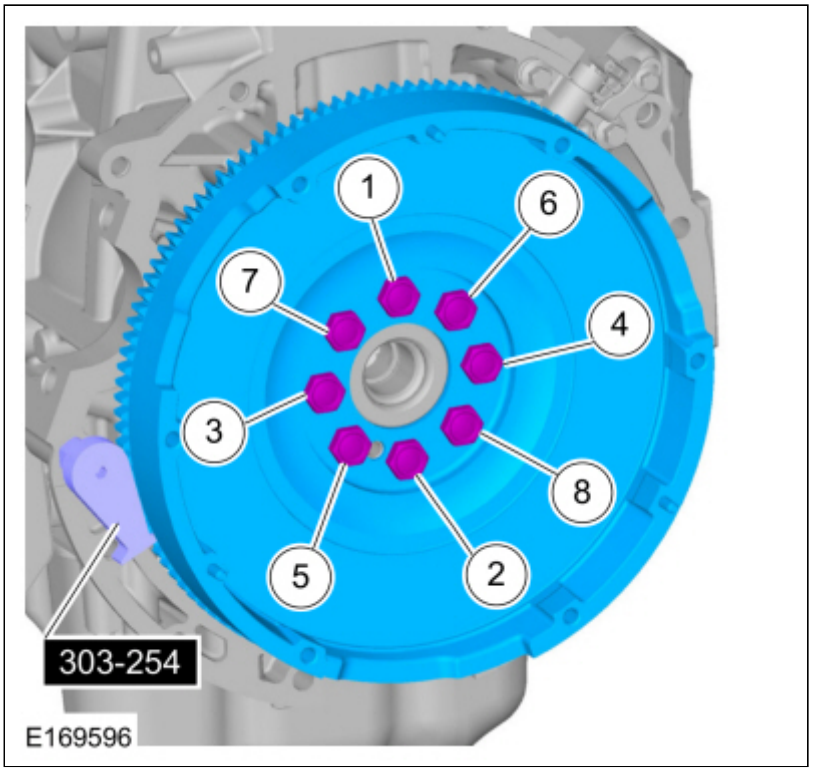
20. **NOTICE: A new crankshaft rear seal carrier is supplied with an alignment sleeve that must not be removed until the crankshaft rear seal is fully installed. Failure to follow this instruction may result in damage to the vehicle.**

    NOTE: *Initially hand tighten the fasteners.*



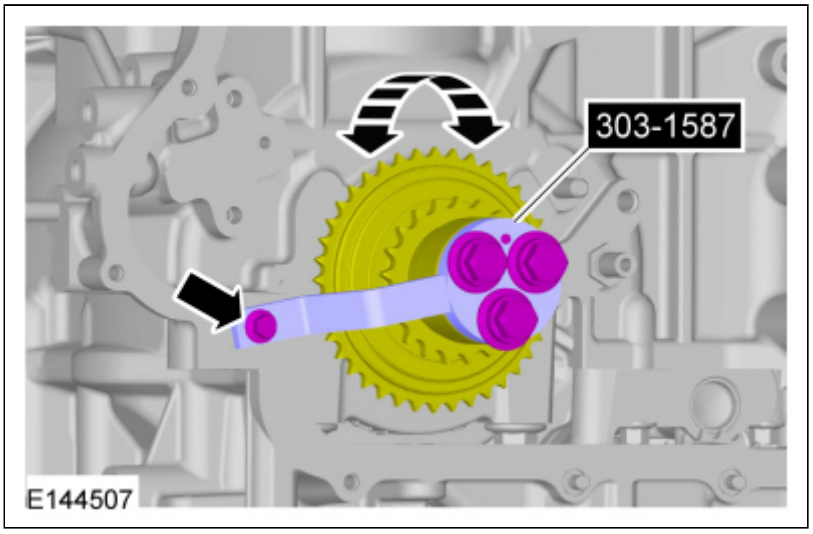
21. **NOTE:** *New crankshaft rear seal carriers are supplied with an alignment sleeve which must be removed after installation.*

    Torque:
    :
    Stage 1: 5 Nm
    Stage 2: 10 Nm



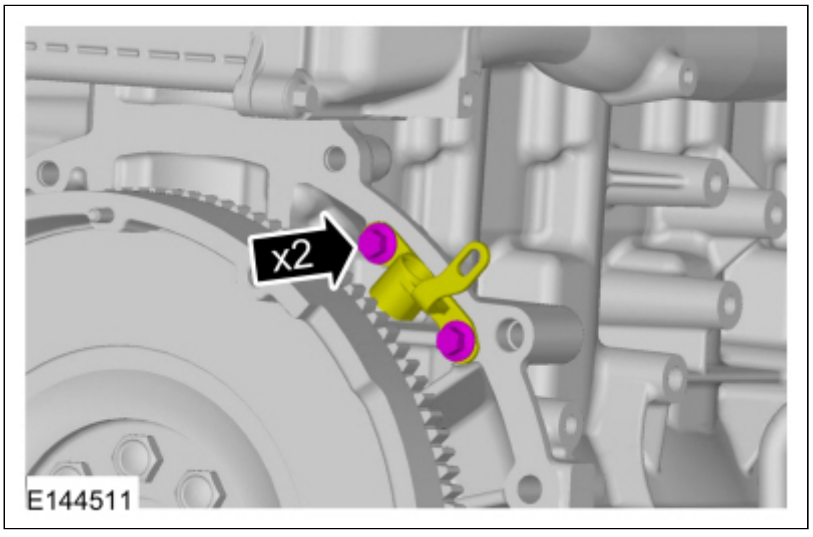
22. **NOTE:** *Make sure that flywheel is in full contact with flywheel flange before installing the flywheel bolts.*

    NOTE: *Only tighten the bolts finger tight at this stage.*

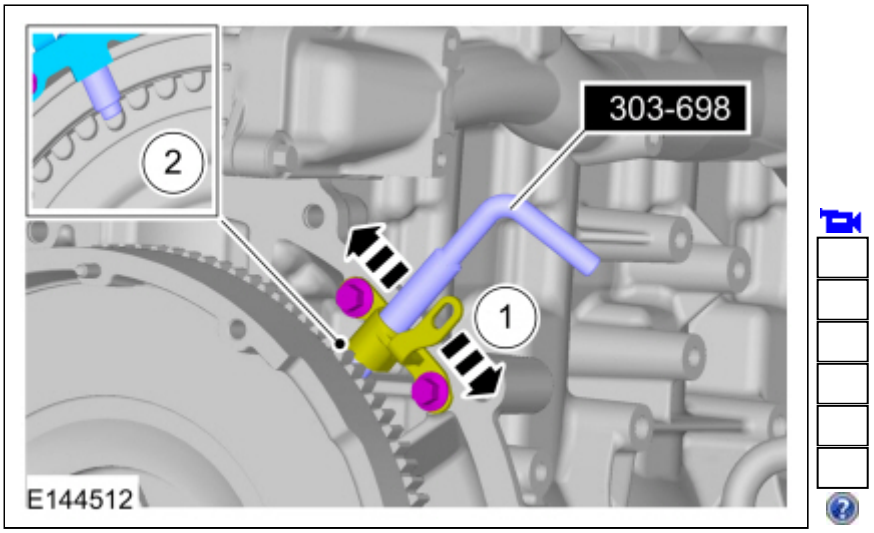


23. **NOTICE: Make sure that the flywheel is in full contact with the crankshaft flange before installing the flywheel bolts.**

    Use Special Service Tool: 303-254 Locking Tool, Flywheel.
    Torque:
    Stage 1: 25 Nm
    Stage 2: 45 Nm
    Stage 3: 45°

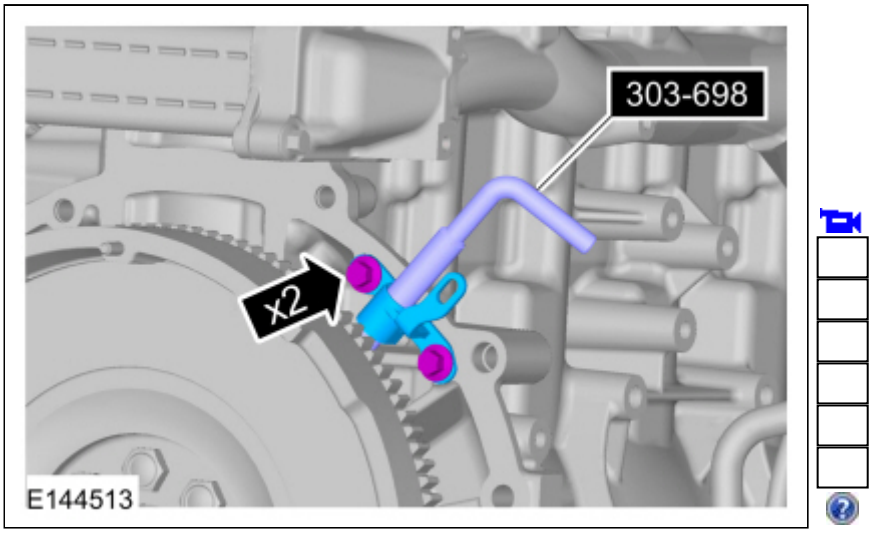


24.



Vehicles with manual transmission

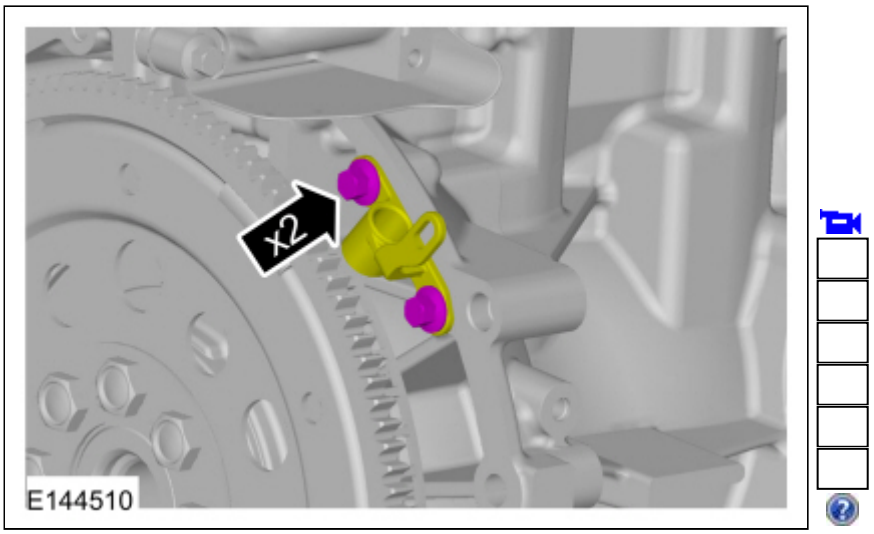
25. Initially hand tighten the fasteners.



26. **NOTE:** *Make sure that the special tool is located in the flywheel timing slot.*

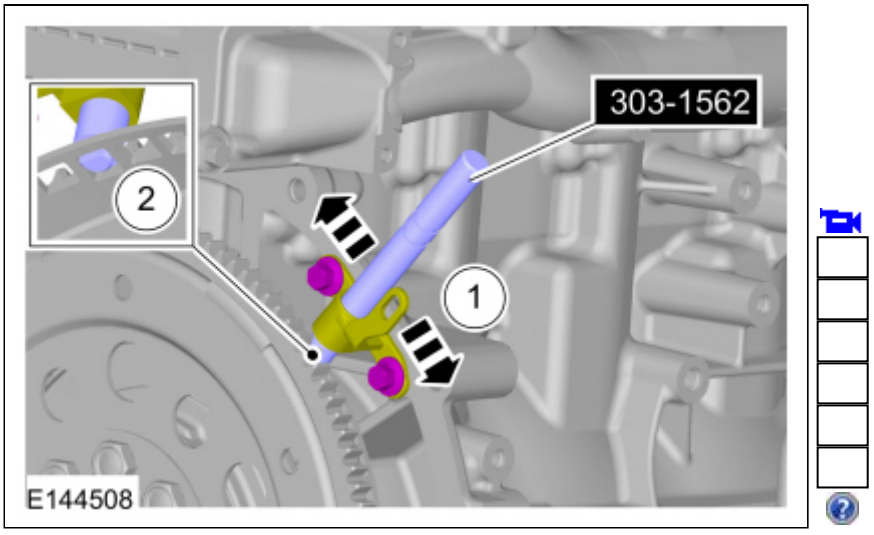
    Use Special Service Tool: 303-698 Timing Tool, Crankshaft.

27. Tighten bolts before removing tool.
    Remove Special Service Tool: 303-698 Timing Tool, Crankshaft.
    Torque: 20 Nm



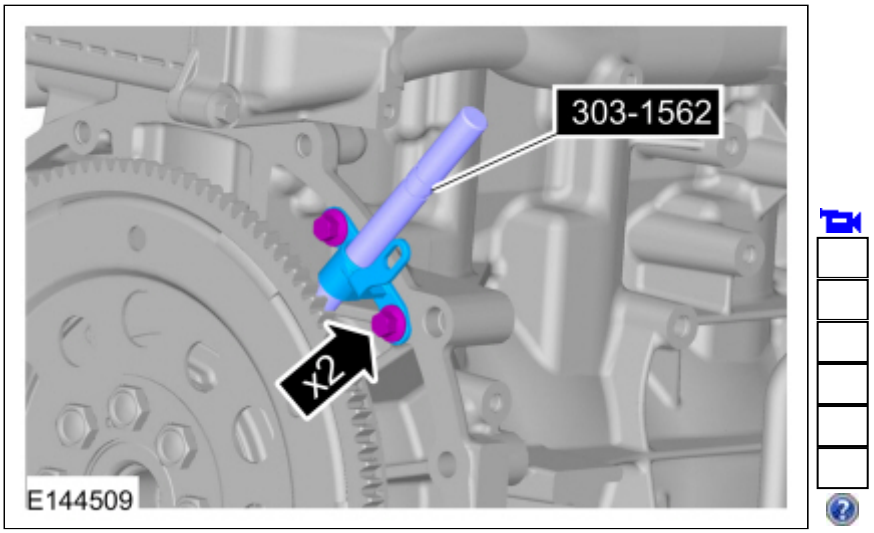
28. *Torque*: 8 Nm

Vehicles with automatic transmission



29. Initially hand tighten the fasteners.

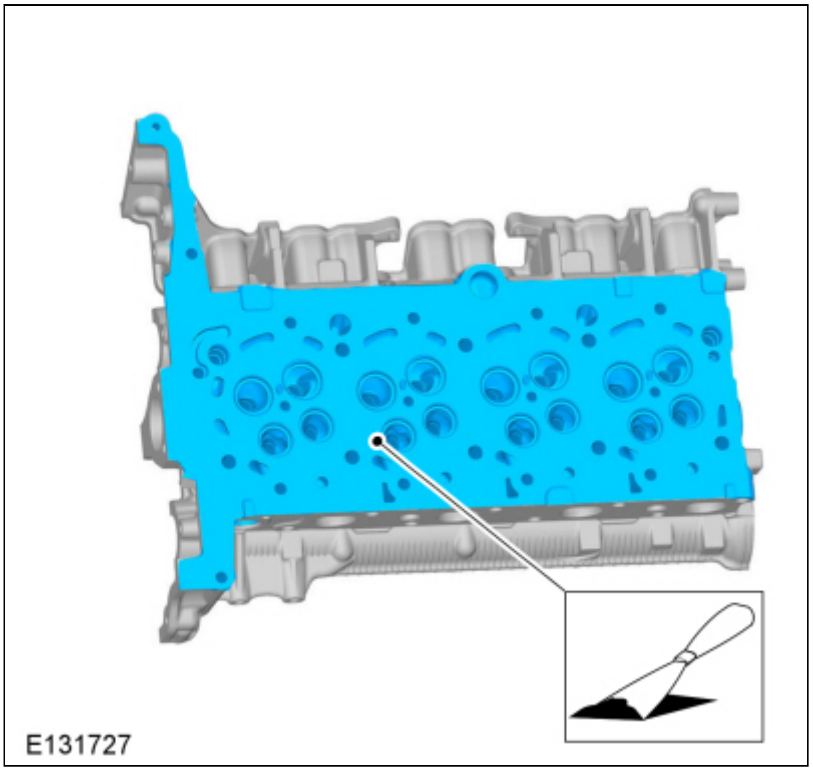
Use Special Service Tool: 303-698 Timing Tool, Crankshaft.



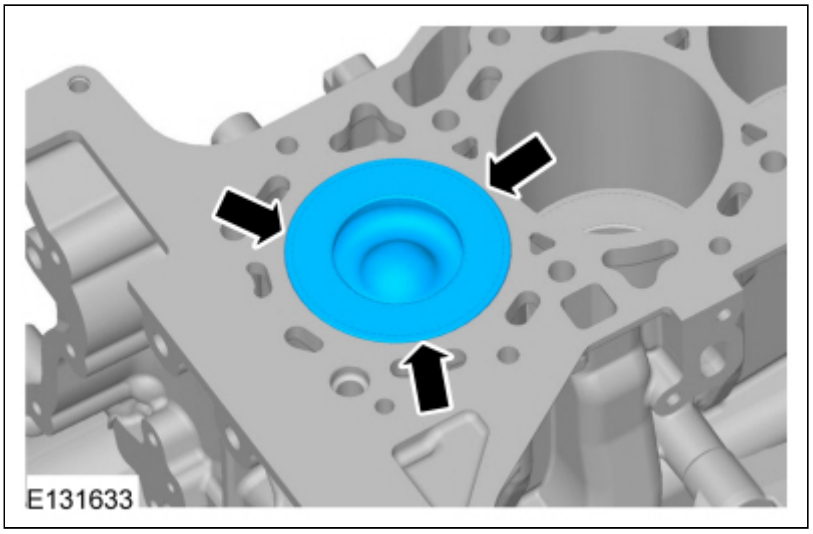
30. **NOTE:** *Make sure that the special tool is located in the flexplate timing slot.*

    Use Special Service Tool: 303-1562 Timing Tool.

31. Tighten bolts before removing tool.
    Remove Special Service Tool: 303-1562 Timing Tool.
    Torque: 20 Nm

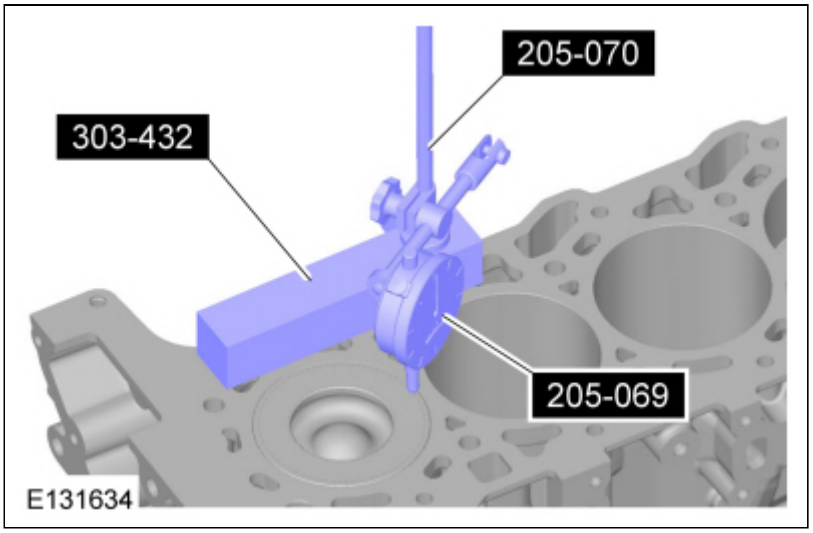


32. *Torque*: 8 Nm



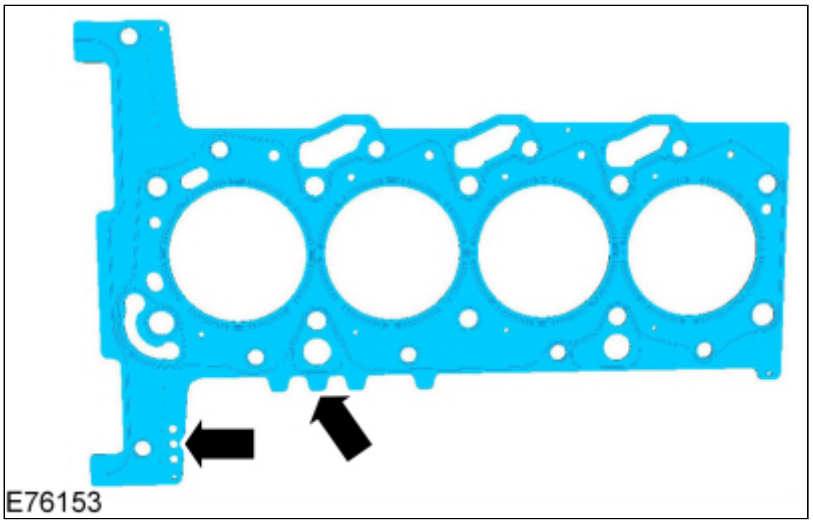
All vehicles

33. **WARNING: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges that make leak paths. Use a plastic scraping tool to remove all traces of the head gasket.**



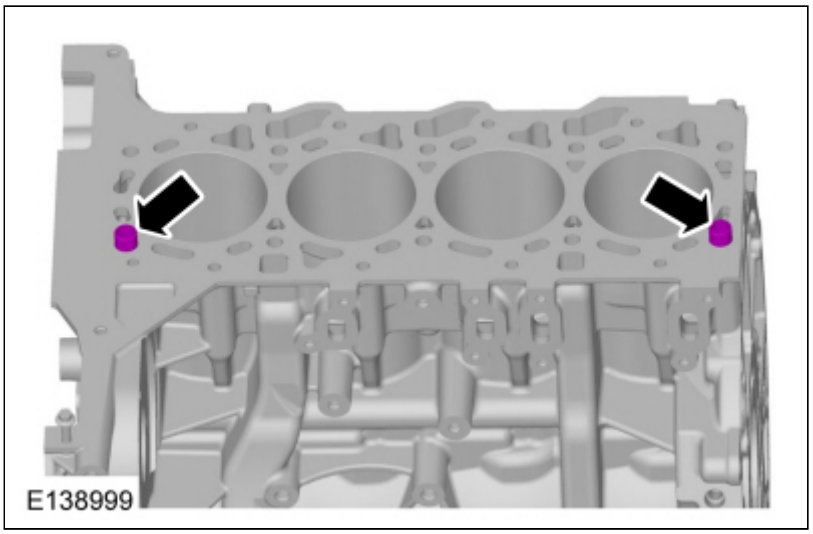
34. **NOTE:** *Measure the piston protrusion of each cylinder at top dead center (TDC).*

    Measure the distance between the piston crown and the cylinder block at the points indicated.



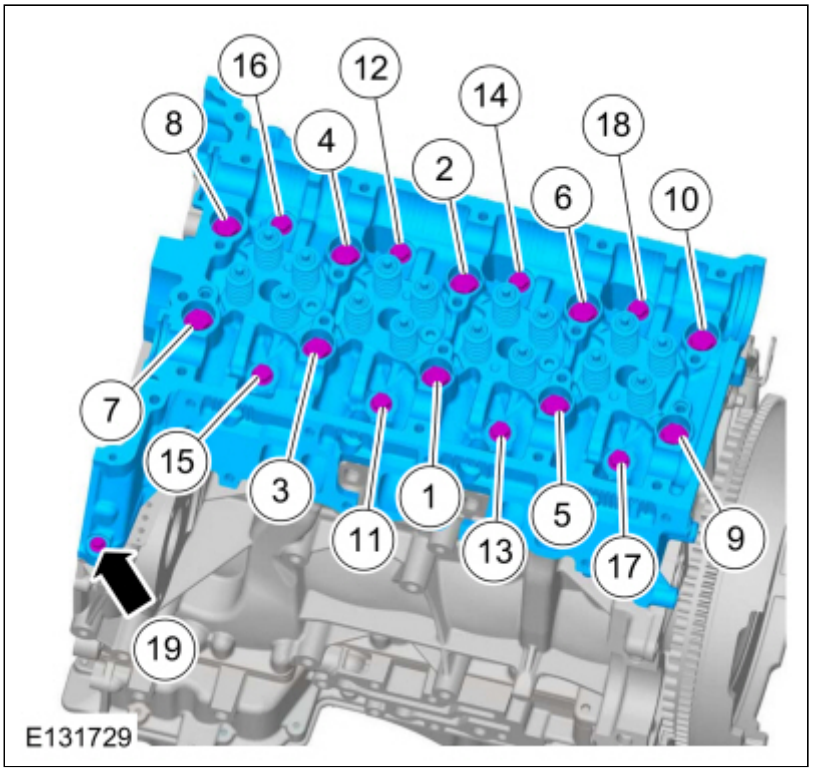
35. **NOTE:** *The largest measurement determines the choice of the cylinder head gasket.*

    - Using the special tools, measure the piston protrusion.
      Use Special Service Tool: 205-070 Holding Fixture, Dial Indicator Gauge. , 205-069 Dial Indicator Gauge (Metric). , 303-432 Holding Fixture, Dial Indicator Gauge (Cylinder Liner Protrusion).

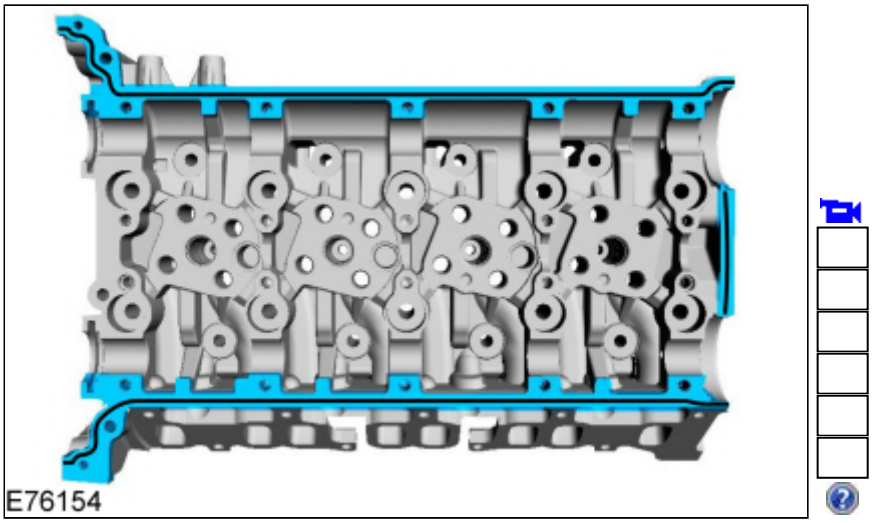


36. Determine the cylinder head gasket.
    Refer to: Specifications (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Specifications).

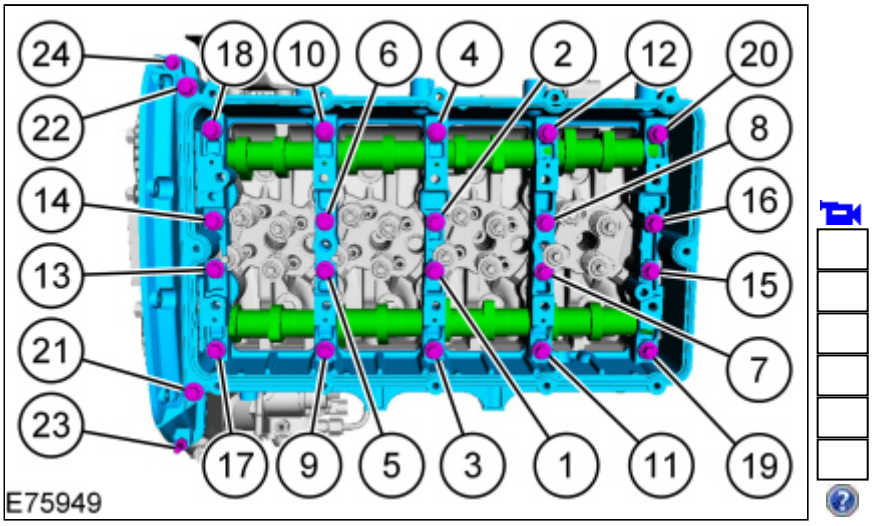
37. **NOTE:** *Make sure that a new component is installed.*



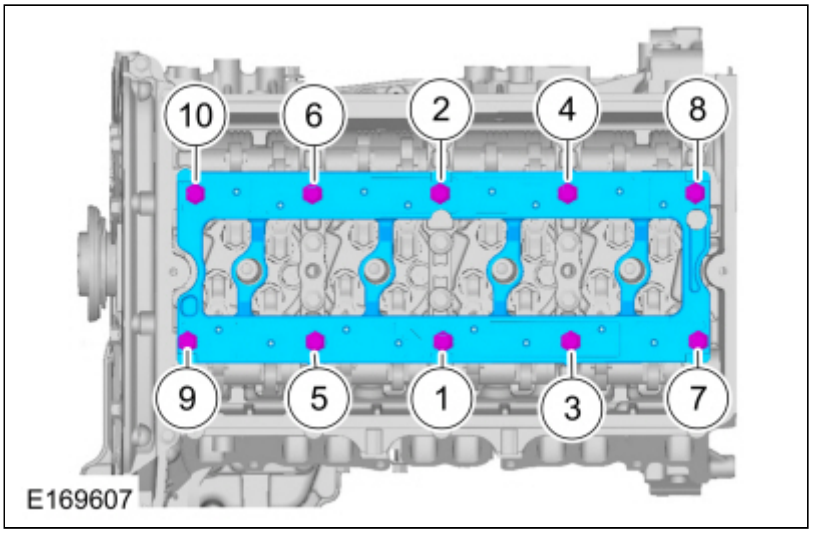
38.



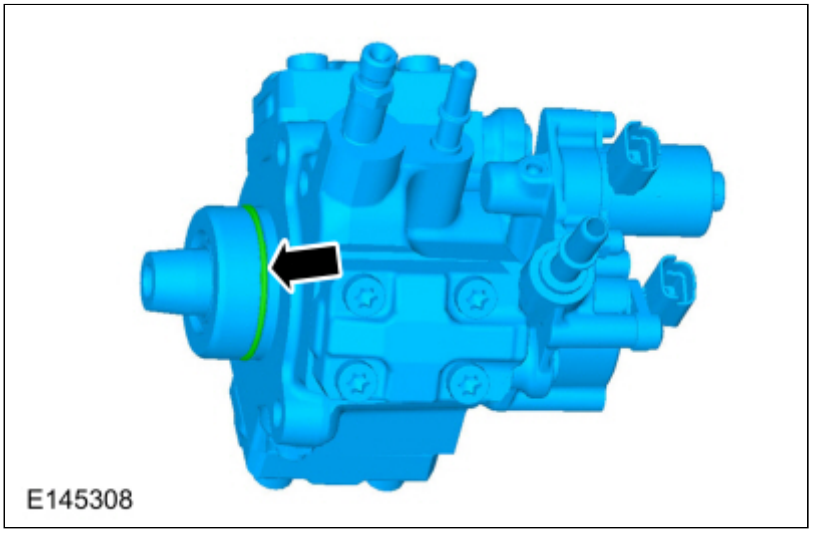
39. **NOTE:** *Install all the bolts finger tight before final tightening.*



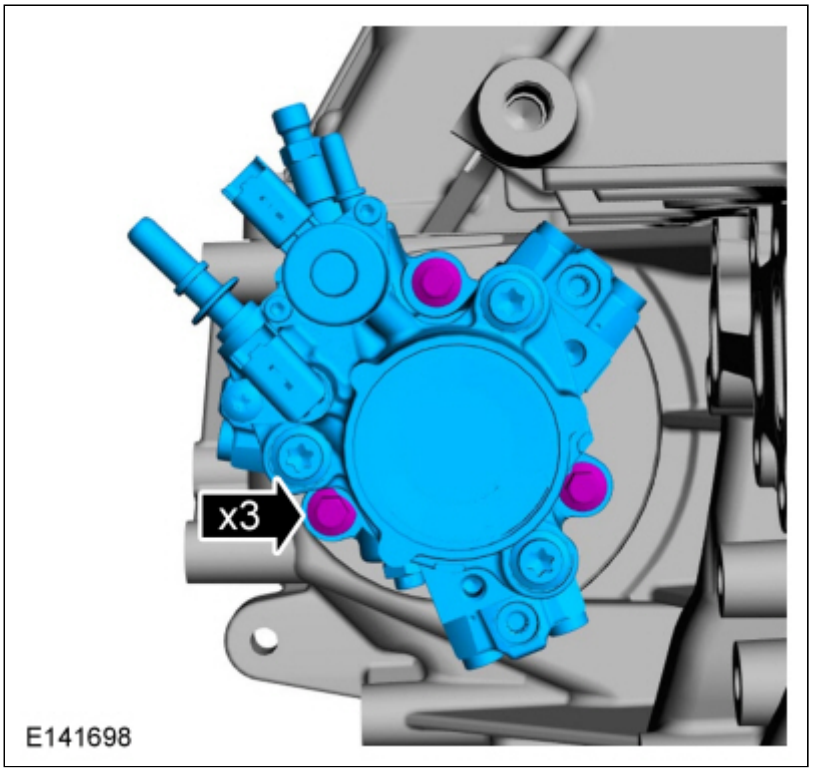
Torque:
Stage 1: 1-10: 10 Nm
Stage 2: 11-18: 5 Nm
Stage 3: 19: 4 Nm
Stage 4: 1-10: 20 Nm
Stage 5: 11-18: 10 Nm
Stage 6: 19: 6 Nm
Stage 7: 1-10: 35 Nm
Stage 8: 11-18: 20 Nm
Stage 9: 19: 10 Nm
Stage 10: 1-10: 45 Nm
Stage 11: 11-18: 26 Nm
Stage 12: 1-10: 90°
Stage 13: 11-18: 90°
Stage 14: 1-10: 90°
Stage 15: 11-18: 90°



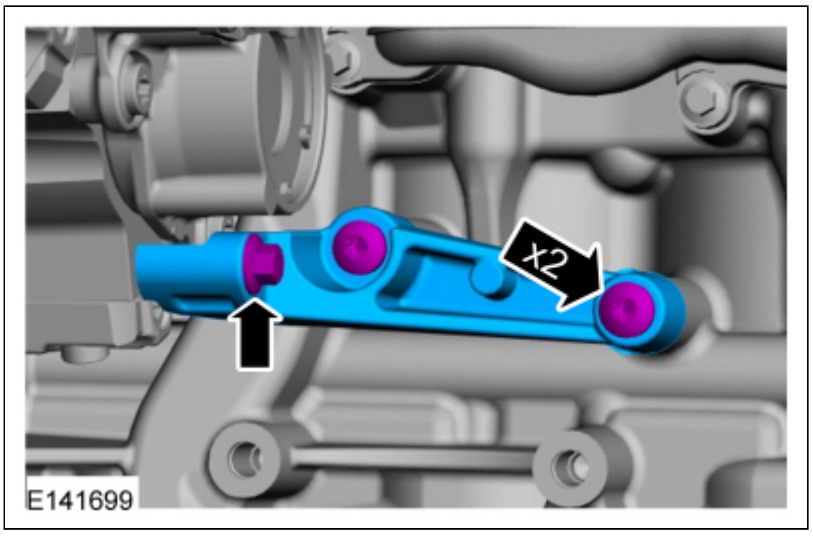
40. *Material*: Silicone Sealant (WSE-M4G323-A4)



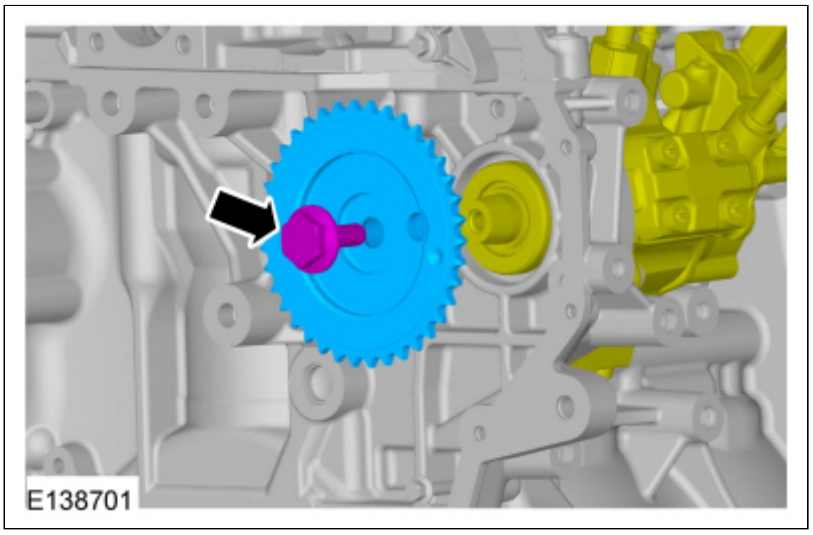
41. *Torque*:
    Bolts 1 to 22:
    Stage 1: 6 Nm
    Stage 2: 15 Nm
    Stage 3: 23 Nm
    Bolts 23 to 24:
    Stage 4: 4 Nm
    Stage 5: 5 Nm
    Stage 6: 10 Nm



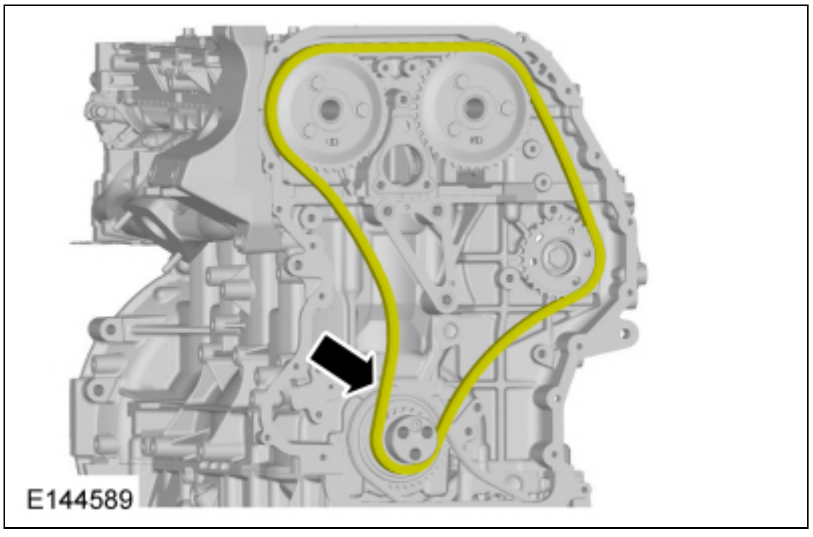
42. *Torque*:
    Stage 1: 5 Nm
    Stage 2: 8 Nm
    Stage 3: 10 Nm
    Stage 4: 45°



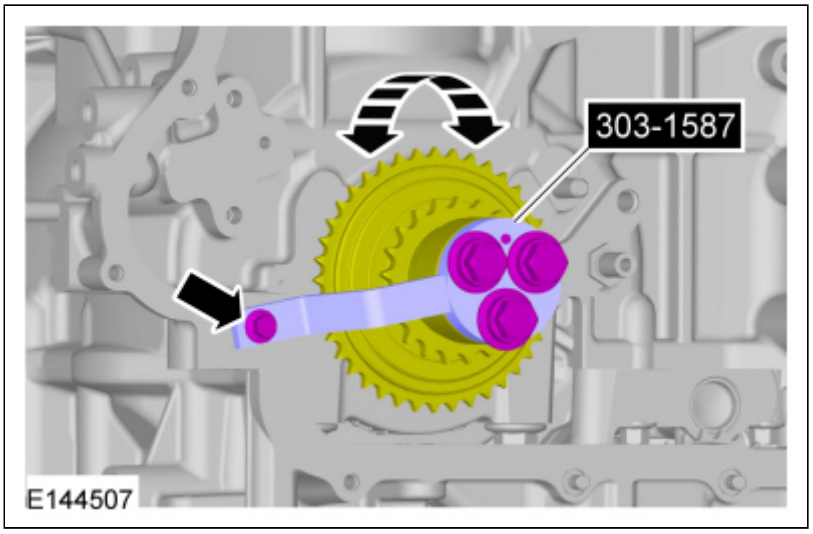
43.



44. *Torque*: 23 Nm

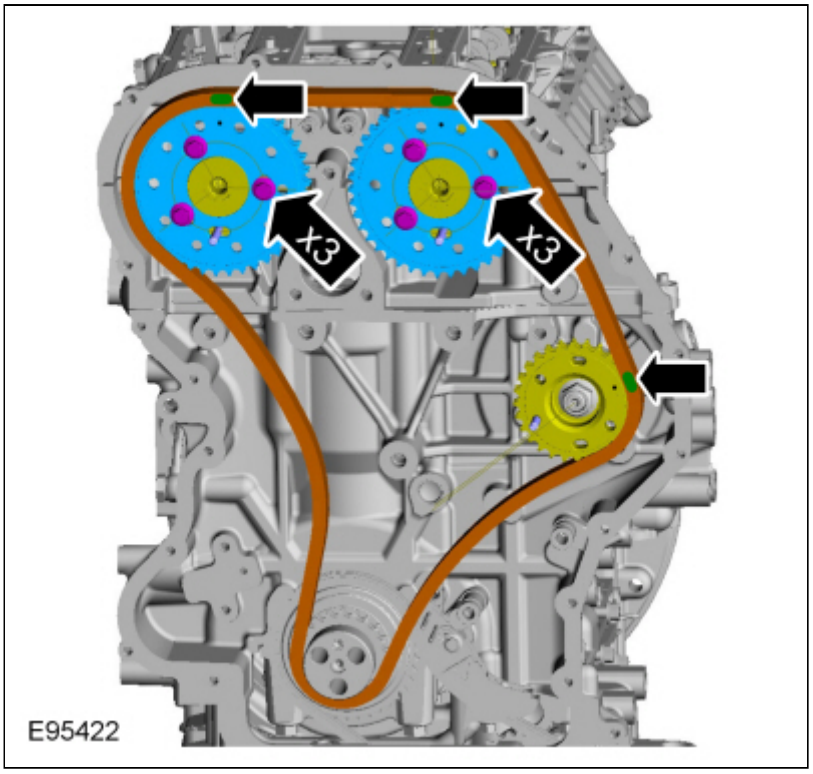


45. *Torque*: 23 Nm



46. *Torque*: 45 Nm

47.

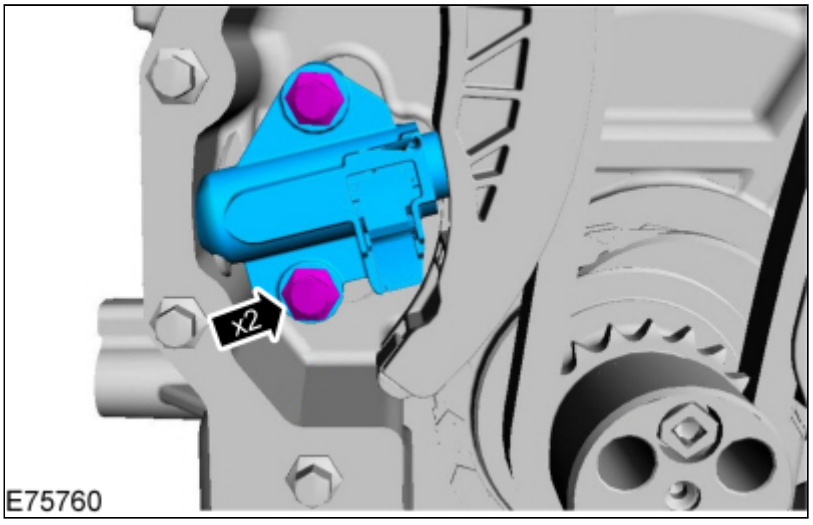


48. Install Special Service Tool: 303-1587 Timing Tool, Crankshaft.

49. **NOTE:** *Make sure that the installation marks are aligned.*

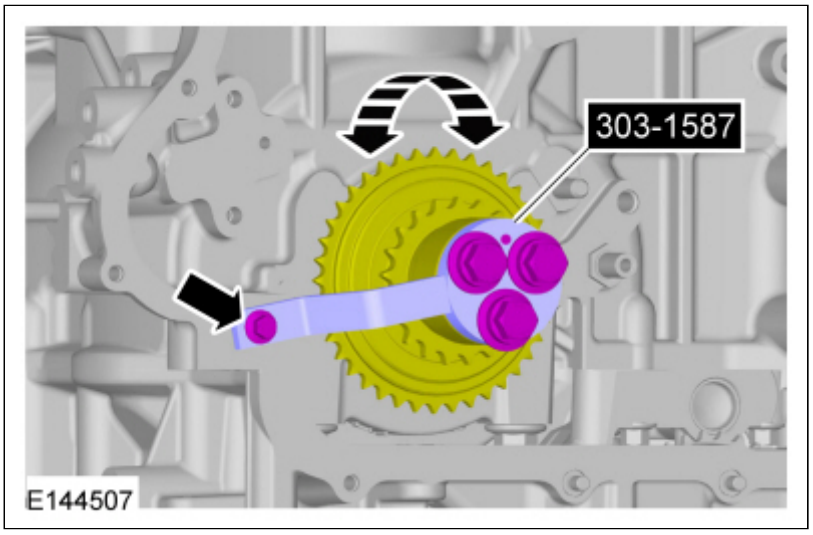
    Use the General Equipment: 6 mm Drill Bit
    Torque:
    stage 1: 12 Nm
    stage 2: 33 Nm

50. Remove the 6 mm drill bits.



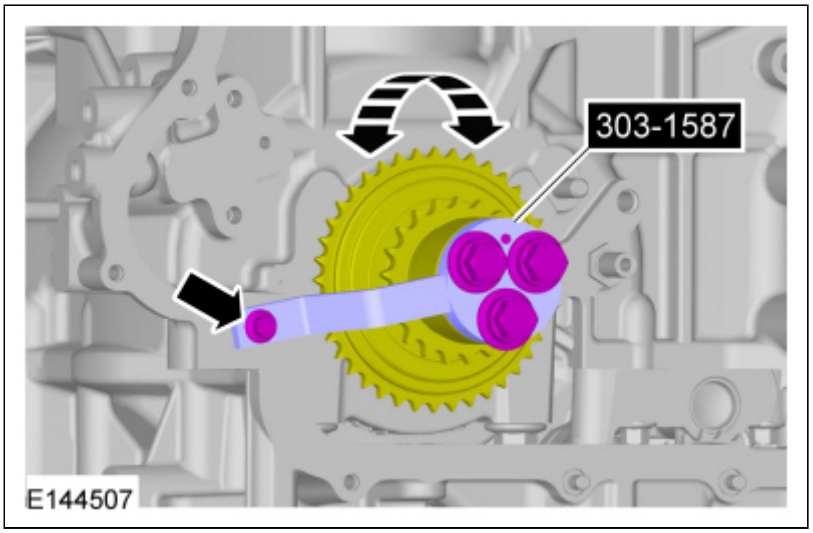
51. **NOTICE: Make sure that new bolts are installed.**

    1. *Torque*: 14 Nm
    2. *Torque*: 31 Nm
    3. *Torque*: 15 Nm

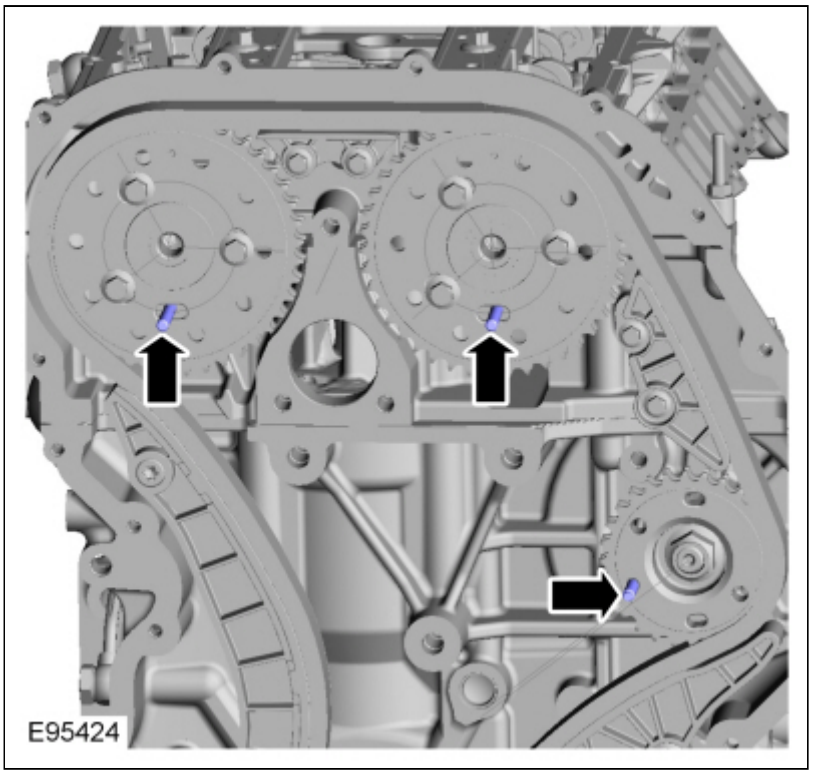


52. **NOTE:** *Make sure that a new component is installed.*

    Torque: 15 Nm

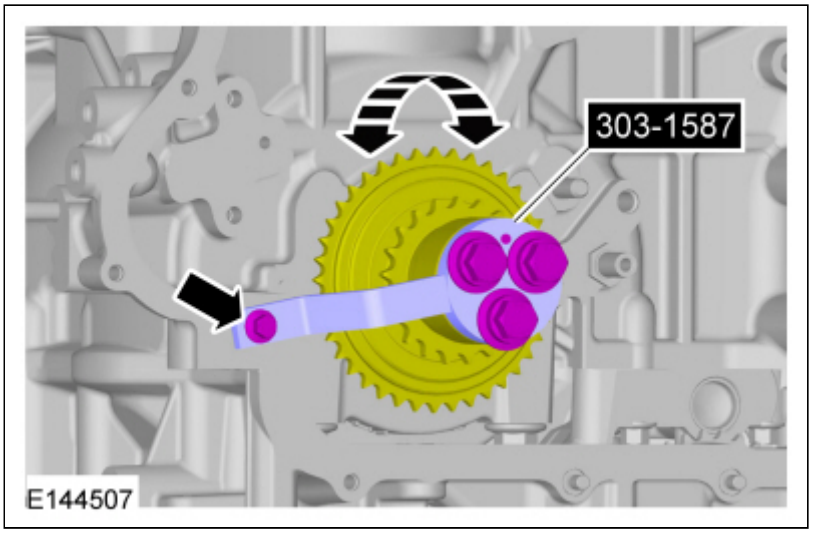


53. Remove Special Service Tool: 303-1587 Timing Tool, Crankshaft.

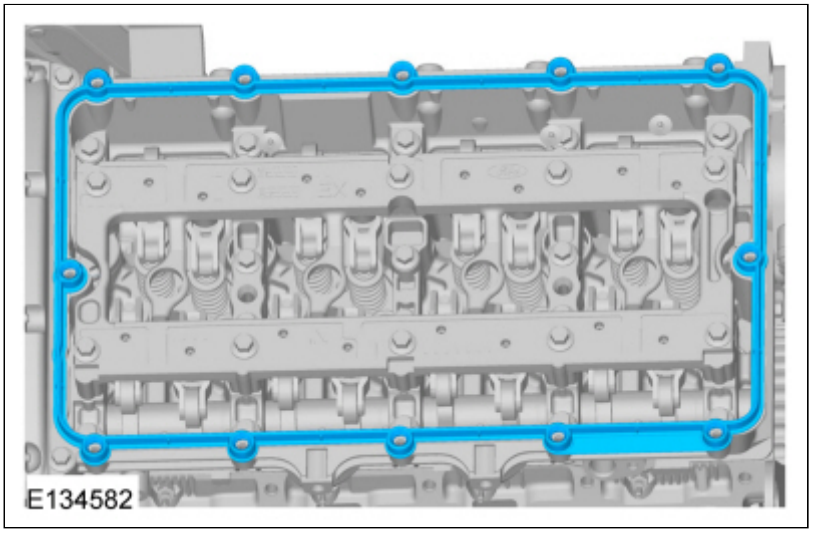


54. Rotate the engine two revolutions.

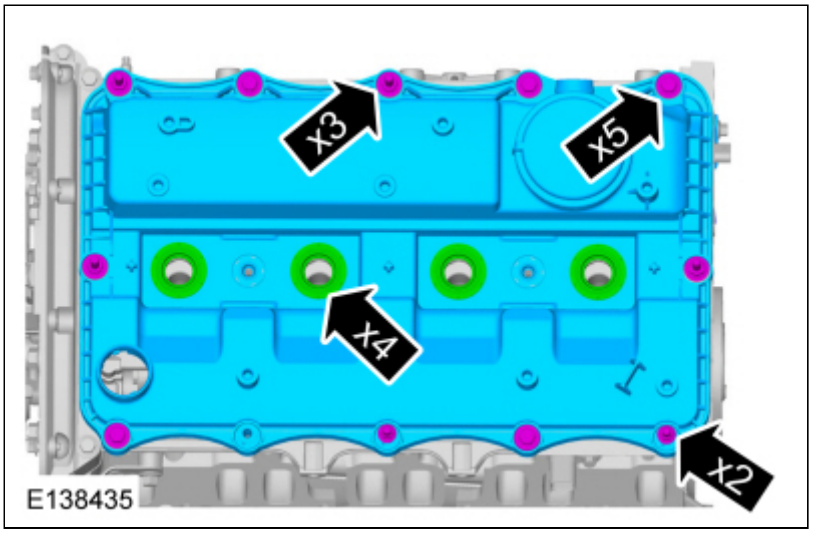
55. Install Special Service Tool: 303-1587 Timing Tool, Crankshaft.



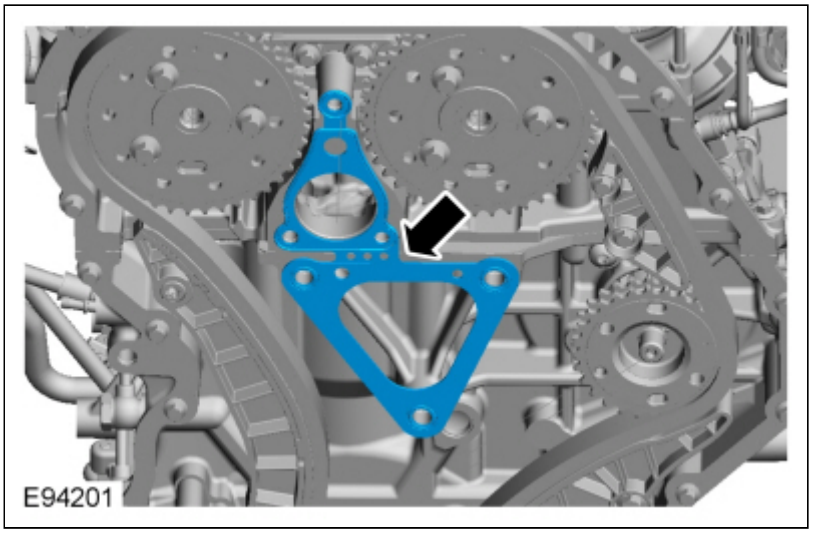
56. Check the position of the timing marks and correct if necessary.



57. Remove the 6 mm drill bits.

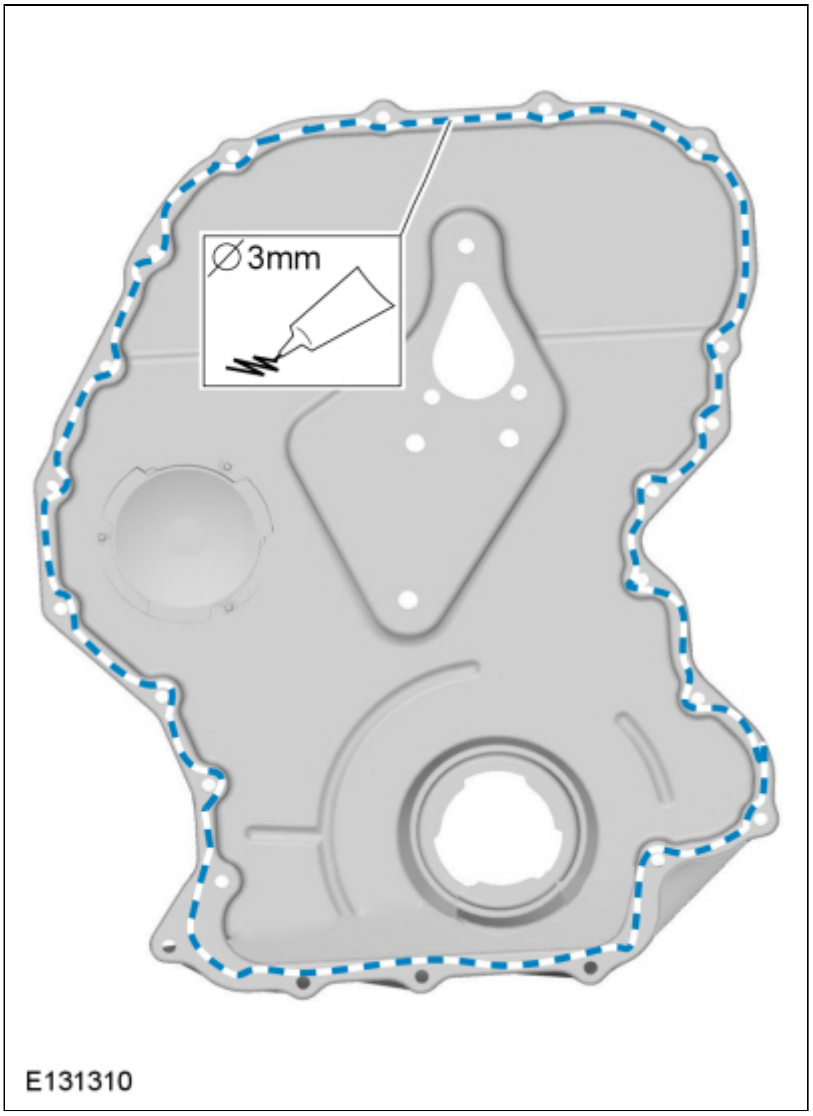


58. Remove Special Service Tool: 303-1587 Timing Tool, Crankshaft.

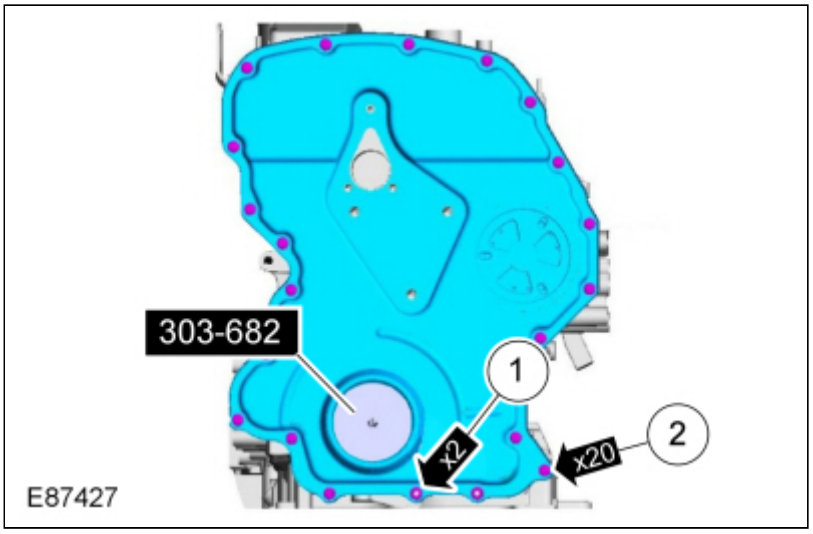


59.

60. *Torque*: 10 Nm



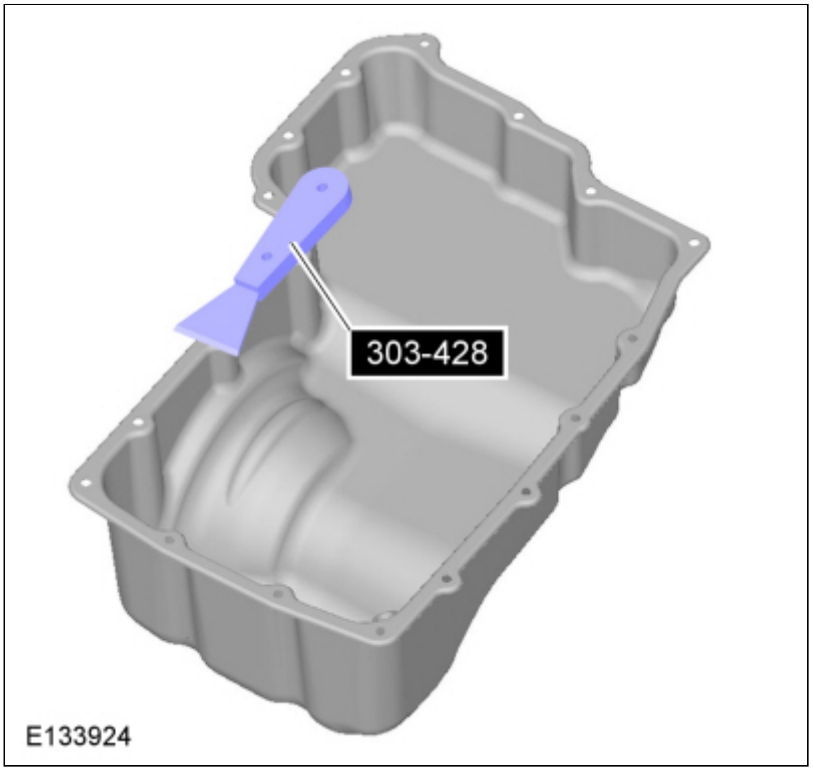
61. **NOTE:** *Make sure that a new component is installed.*



62. **NOTE:** *The component must be installed within 5 minutes of applying the sealant.*

    NOTE: *Make sure that a new component is installed.*

    Material: Silicone Sealant (WSE-M4G323-A4)



63. Use Special Service Tool: 303-682 Aligner, Engine Front Cover.
    Torque:
    1: 5 Nm
    2: 10 Nm

64. **NOTE:** *Do not damage the mating faces.*

    Use Special Service Tool: 303-428 Separator, Oil Pan.

65. **NOTICE: Install the oil pan within five minutes of applying the sealer.**

    NOTE: *Do not damage the mating faces.*

    Material: Silicone Sealant (WSE-M4G323-A4)

66. **NOTE:** *The seal is to be reused unless damaged.*

Torque:
Fastners:
Stage 1: 6 Nm
Stage 2: 13 Nm
Seal: 35 Nm

Materials

Name	Specification
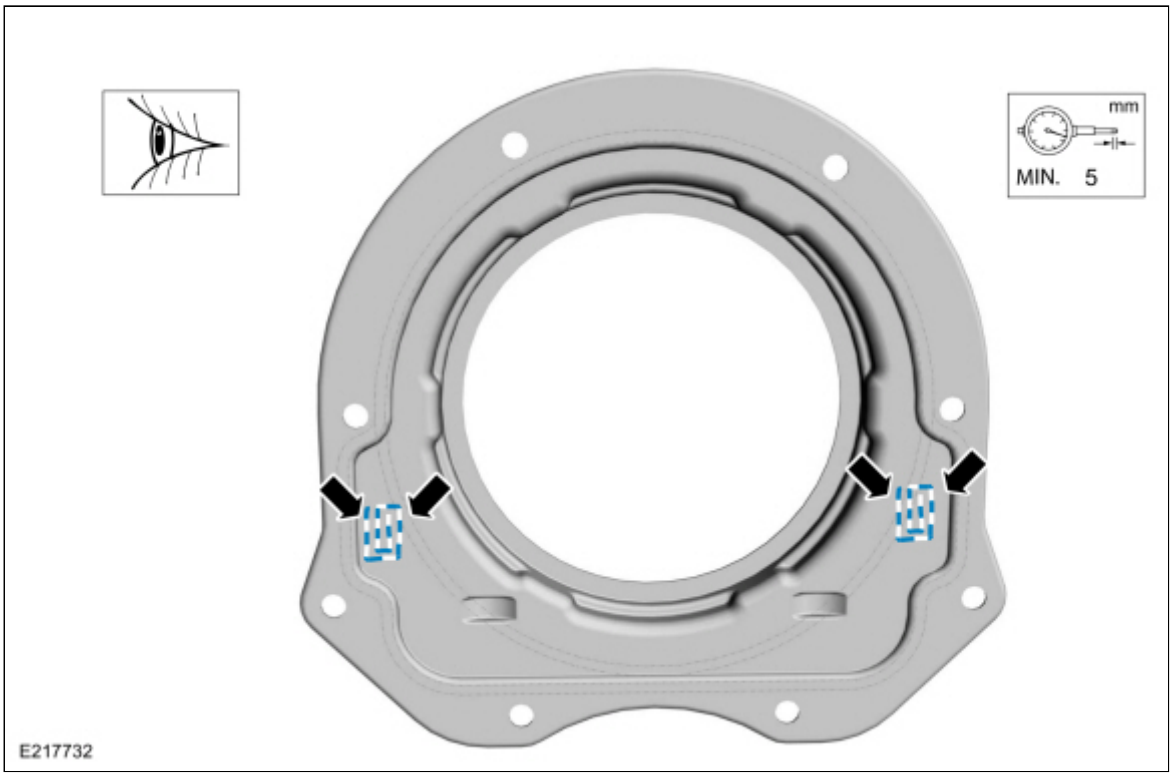
Silicone Sealant	WSE-M4G323-A4

1.

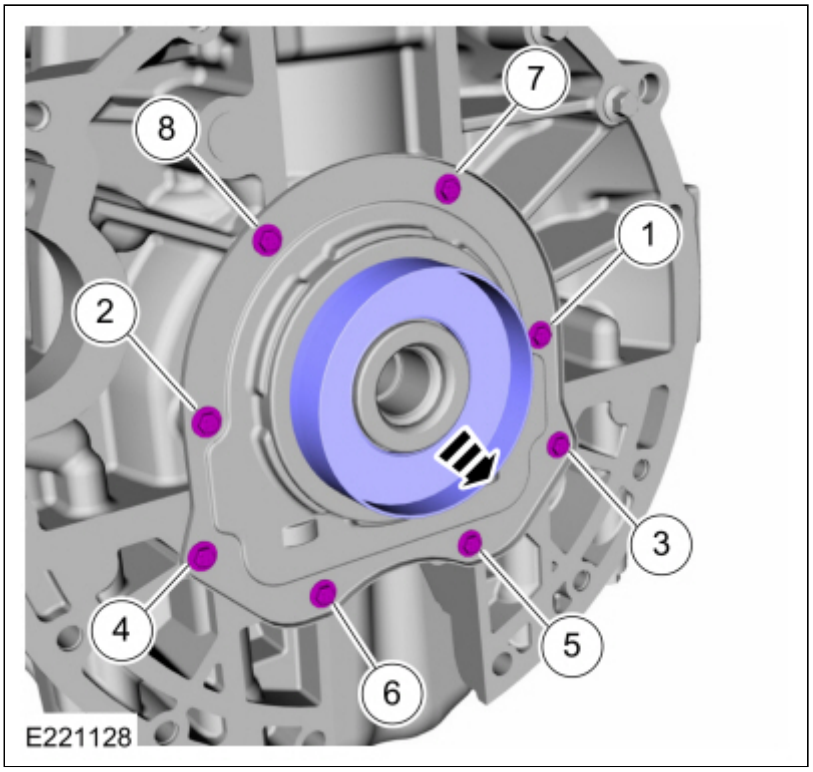


2. **NOTE:** *Install the new crankshaft rear seal carrier within five minutes of applying the recommended sealant.*

   NOTE: *Do not add any more than the specified quantity of sealant or add the sealant anywhere other than the area shown.*

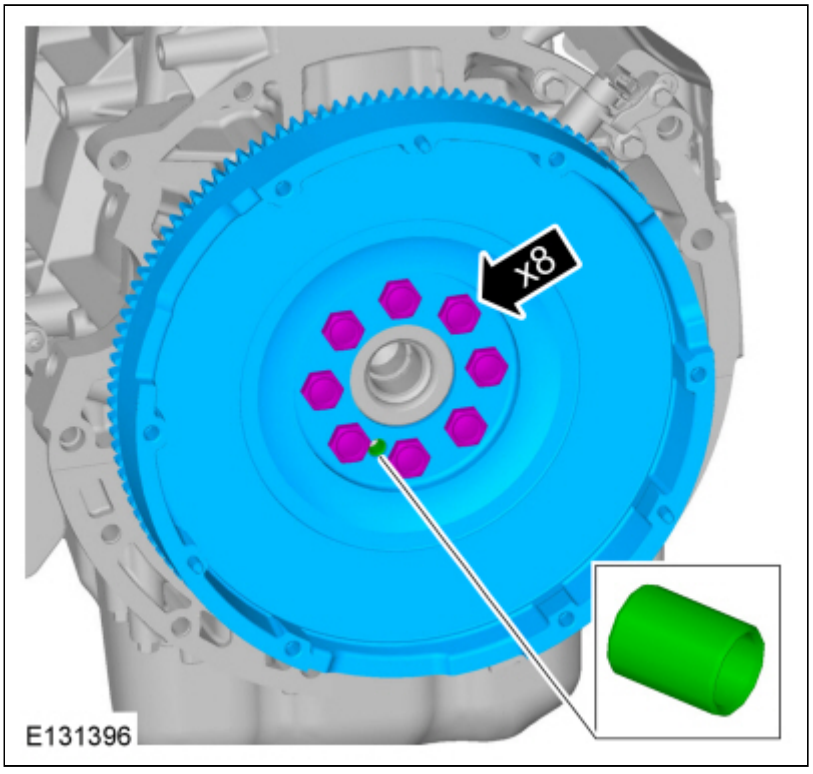
   NOTE: *If the foam pads are not present on inspection, fill the square areas shown with 75% of sealant.*

   Material: Silicone Sealant (WSE-M4G323-A4)



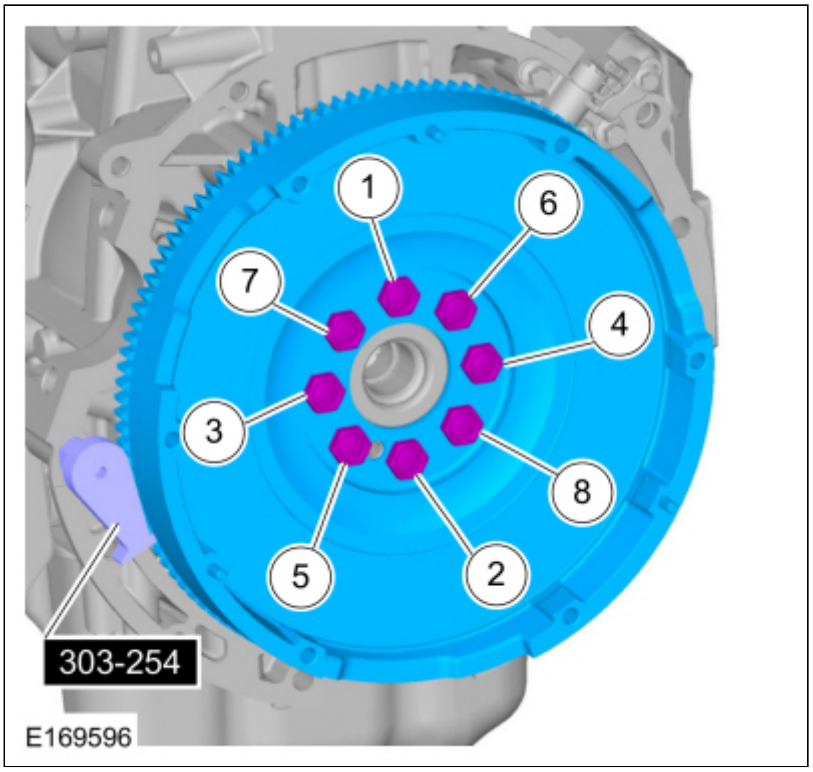
3. **NOTICE: A new crankshaft rear seal carrier is supplied with an alignment sleeve that must not be removed until the crankshaft rear seal is fully installed. Failure to follow this instruction may result in damage to the vehicle.**

   Initially hand tighten the fasteners.



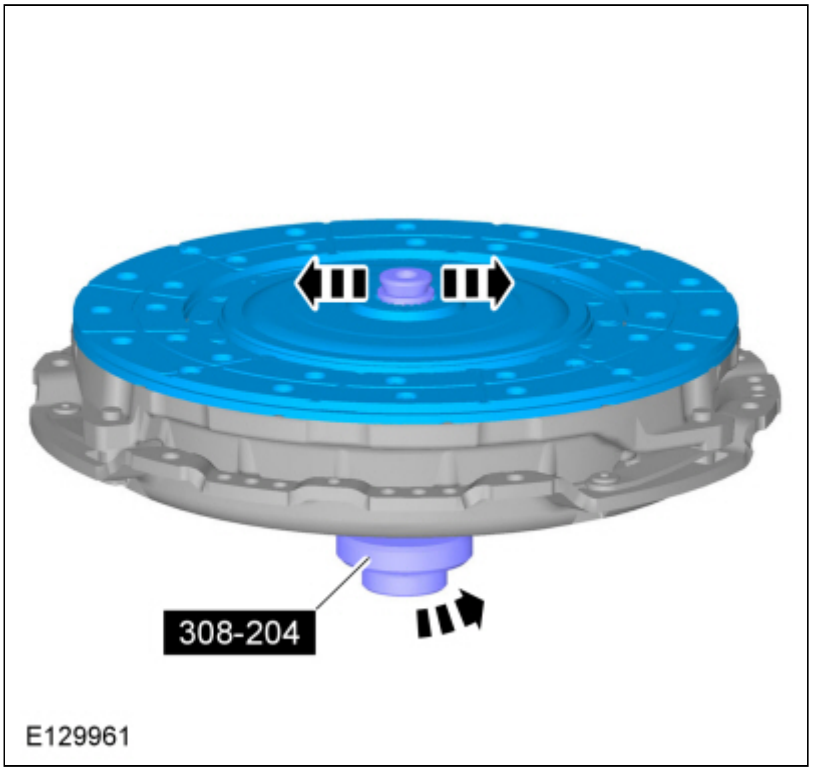
4. **NOTE:** *New crankshaft rear seal carriers are supplied with an alignment sleeve which must be removed after installation.*

   Torque:
   Stage 1: 5 Nm
   Stage 2: 10 Nm

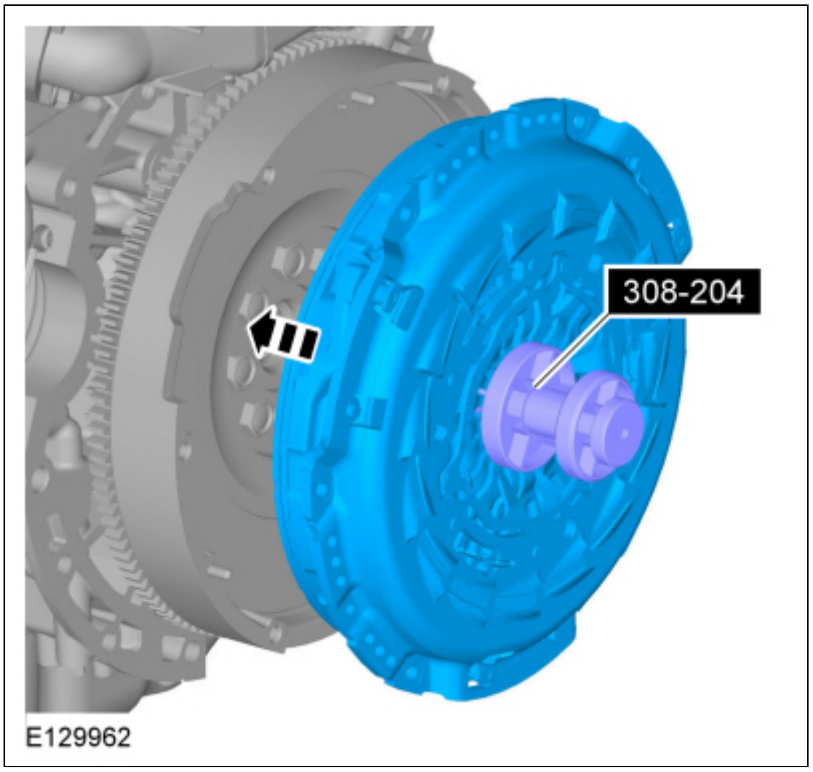


5. **NOTE:** *Make sure that the flywheel is in full contact with the crankshaft flange before installing the flywheel bolts.*

   Initially hand tighten the fasteners.

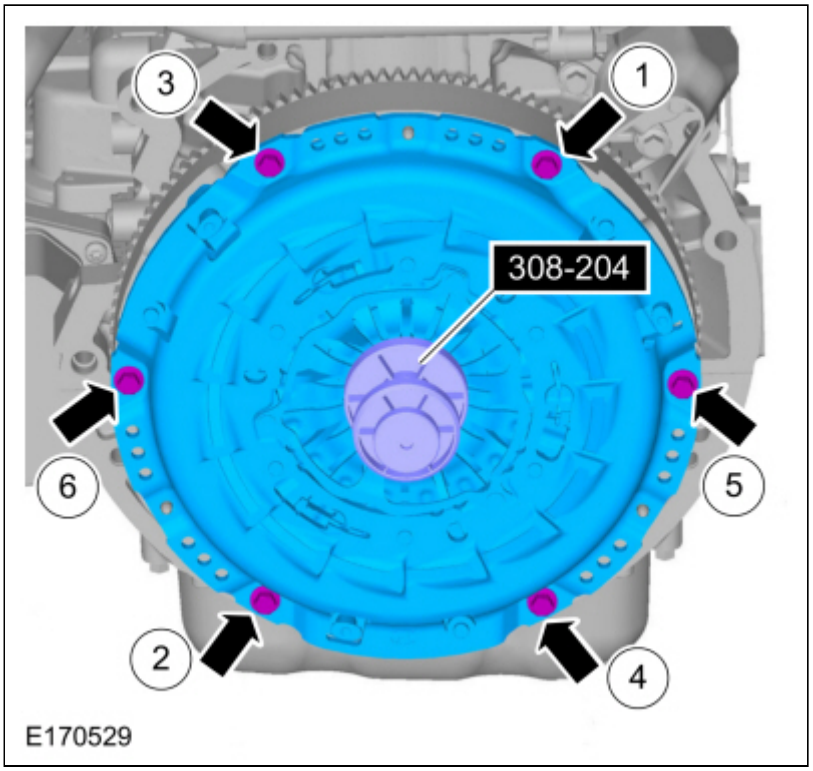


6. Use Special Service Tool: 303-254 Locking Tool, Flywheel.
   Torque:
   Stage 1: 25 Nm
   Stage 2: 45 Nm
   Stage 3: 45°



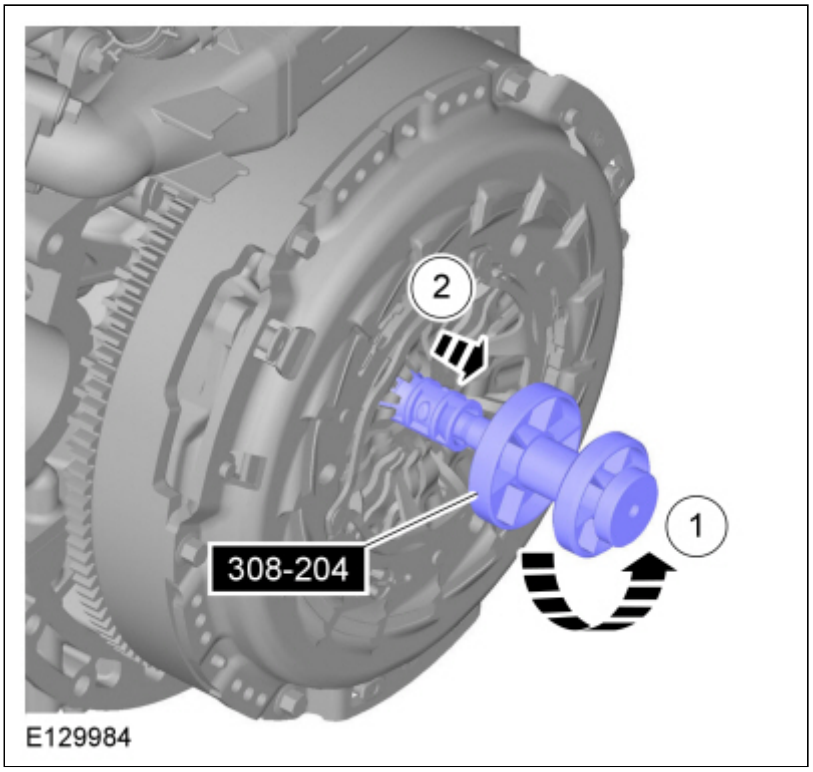
7. **NOTE:** *The cone on the special tool must only be tightened finger tight to prevent damage to the clutch disc.*

   Use Special Service Tool: 308-204 Aligner, Clutch Disc.



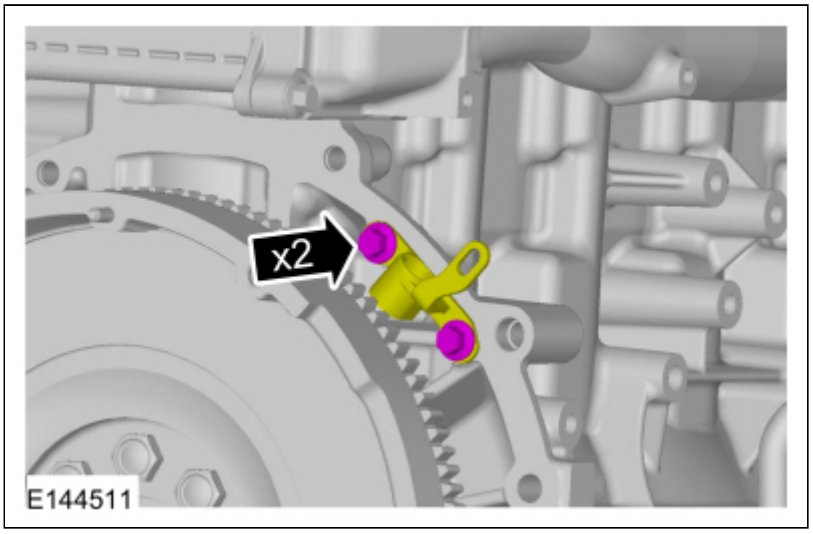
8. **NOTE:** *Only tighten the bolt finger tight at this stage.*

   Use Special Service Tool: 308-204 Aligner, Clutch Disc.

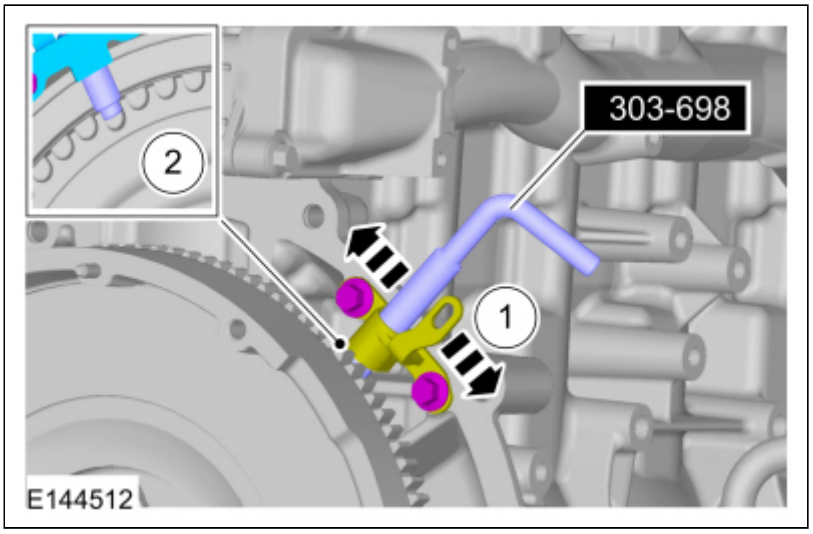


9. **NOTICE: Tighten the clutch pressure plate retaining bolts by two turns at a time in the sequence shown.**

   Use Special Service Tool: 308-204 Aligner, Clutch Disc.
   Torque:
   Stage 1: 6 Nm
   Stage 2: 25 Nm
   Stage 3: 30 Nm

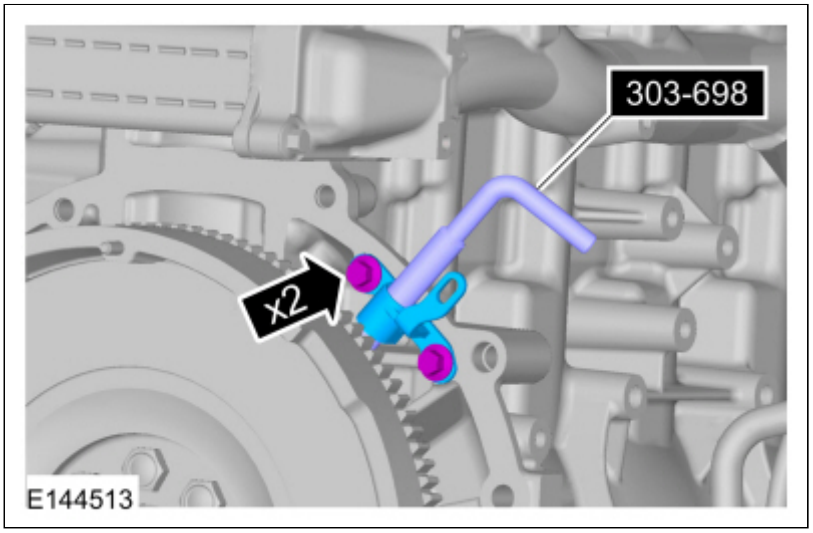


10. Remove Special Service Tool: 308-204 Aligner, Clutch Disc.



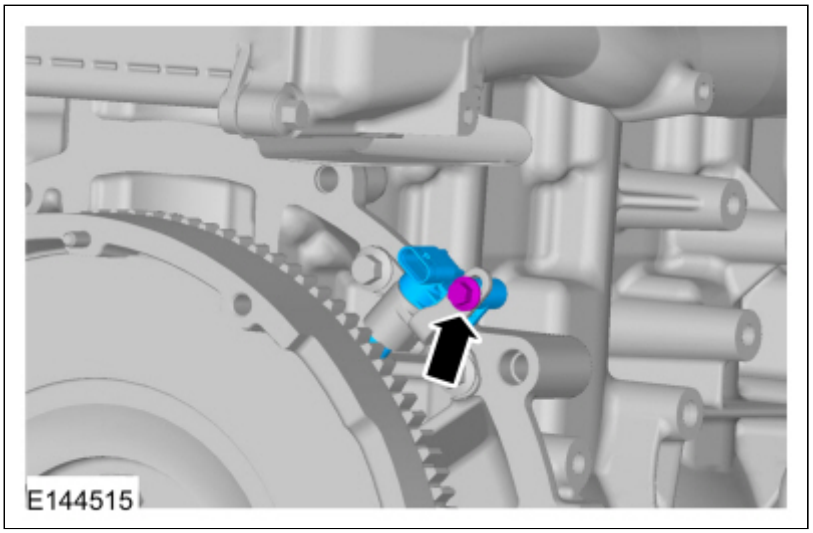
Vehicles with manual transmission

11. Initially hand tighten the fasteners.

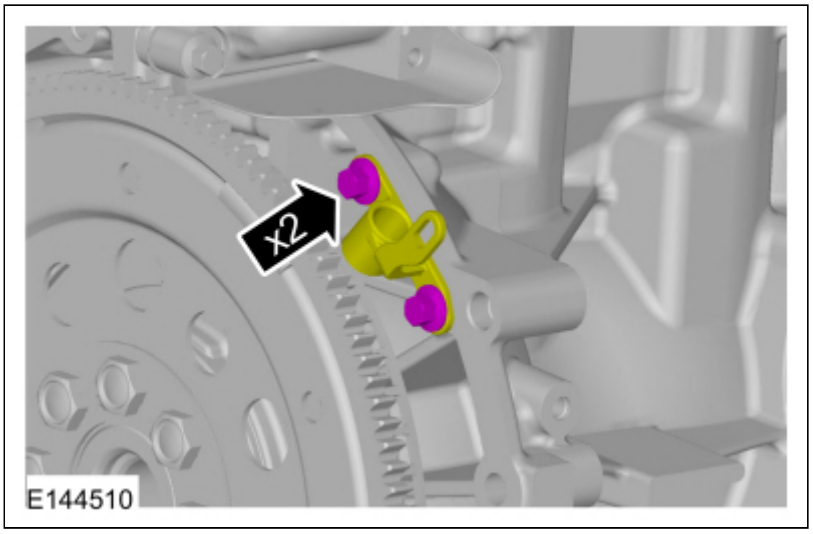


12. **NOTE:** *Make sure that the special tool is located in the flywheel timing slot.*

    Use Special Service Tool: 303-698 Timing Tool, Crankshaft.

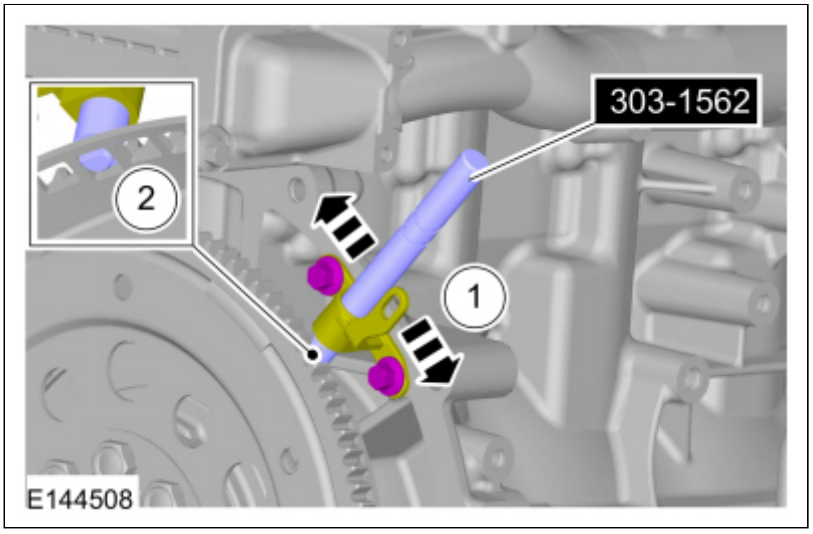


13. Tighten bolts before removing tool.
    Remove Special Service Tool: 303-698 Timing Tool, Crankshaft.
    Torque: 25 Nm



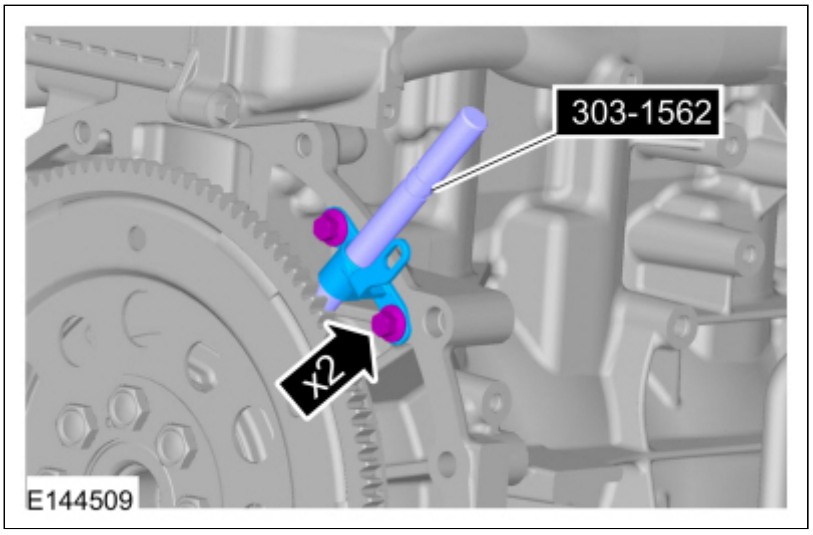
14. **NOTE:** *Make sure that a new component is installed.*

    Torque: 8 Nm



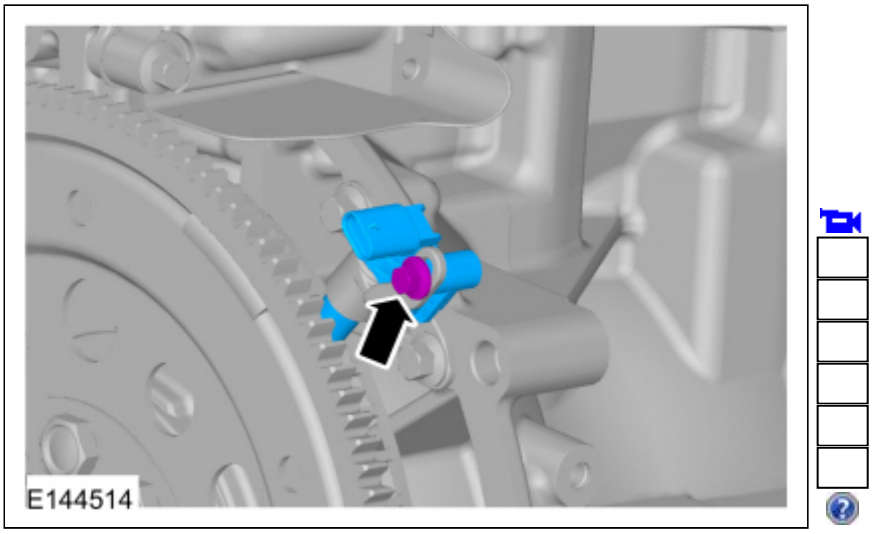
6-Speed Automatic Transmission - 6R80

15. Initially hand tighten the fasteners.

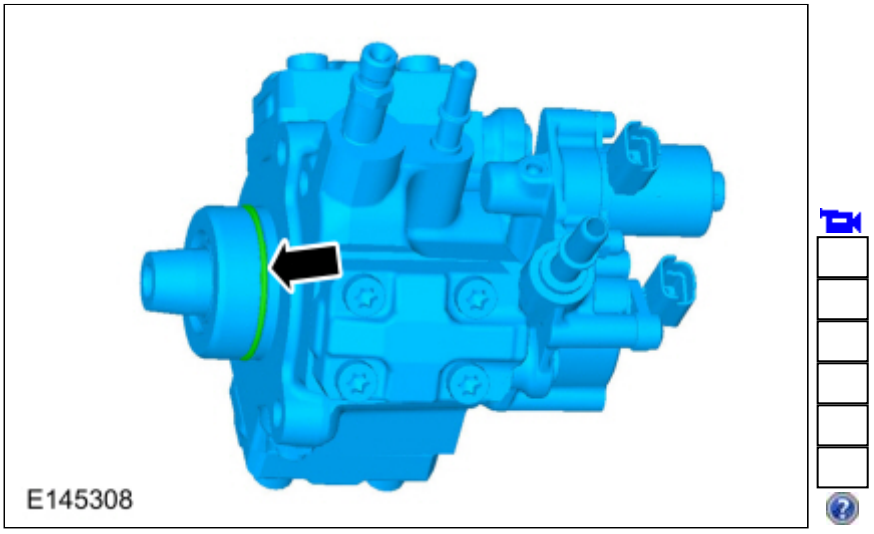


16. **NOTE:** *Make sure that the special tool is located in the flexplate timing slot.*

    Use Special Service Tool: 303-1562 Timing Tool.

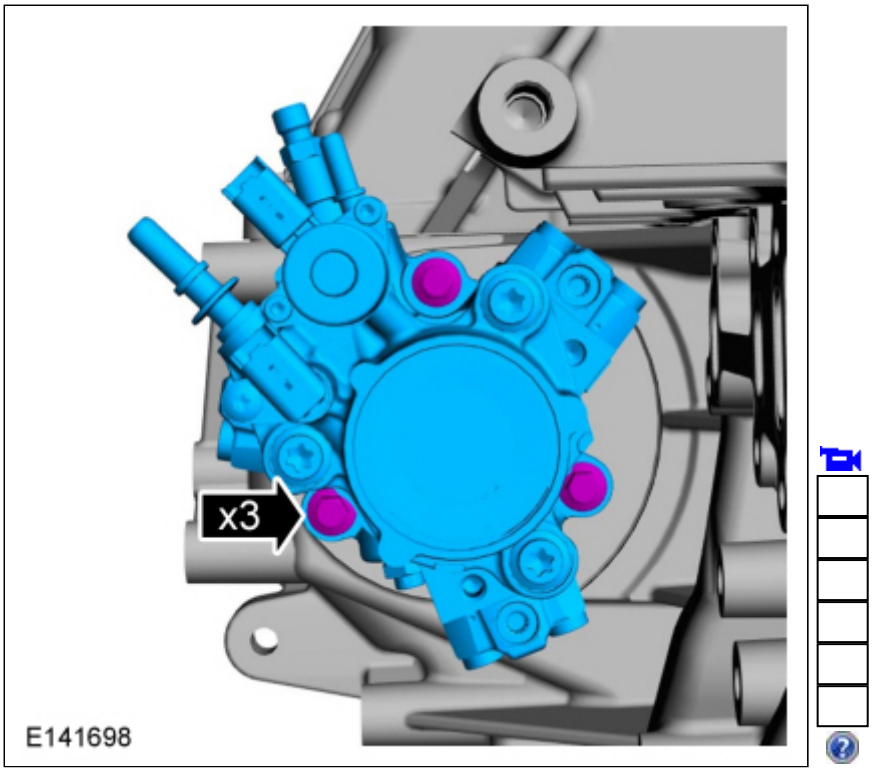


17. Tighten bolts before removing tool.
    Remove Special Service Tool: 303-1562 Timing Tool.
    Torque: 20 Nm

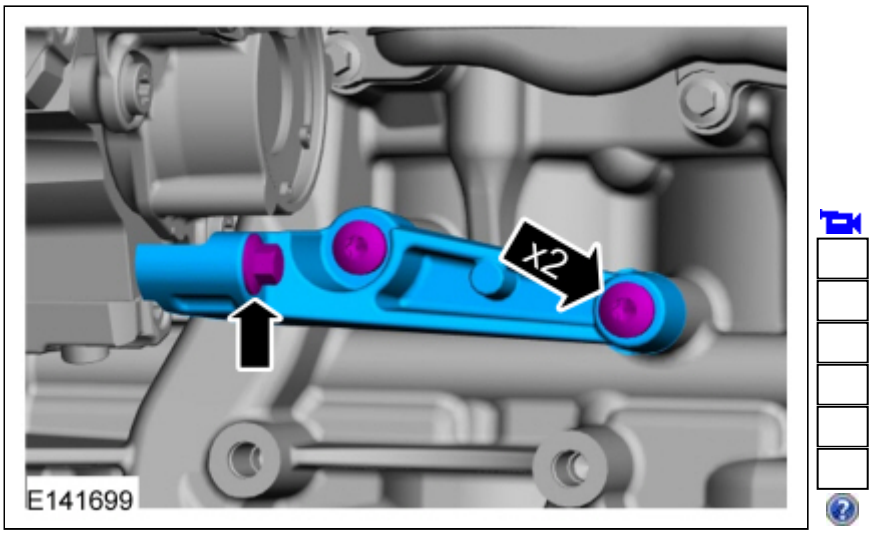


18. **NOTE:** *Make sure that a new component is installed.*

    Torque: 8 Nm

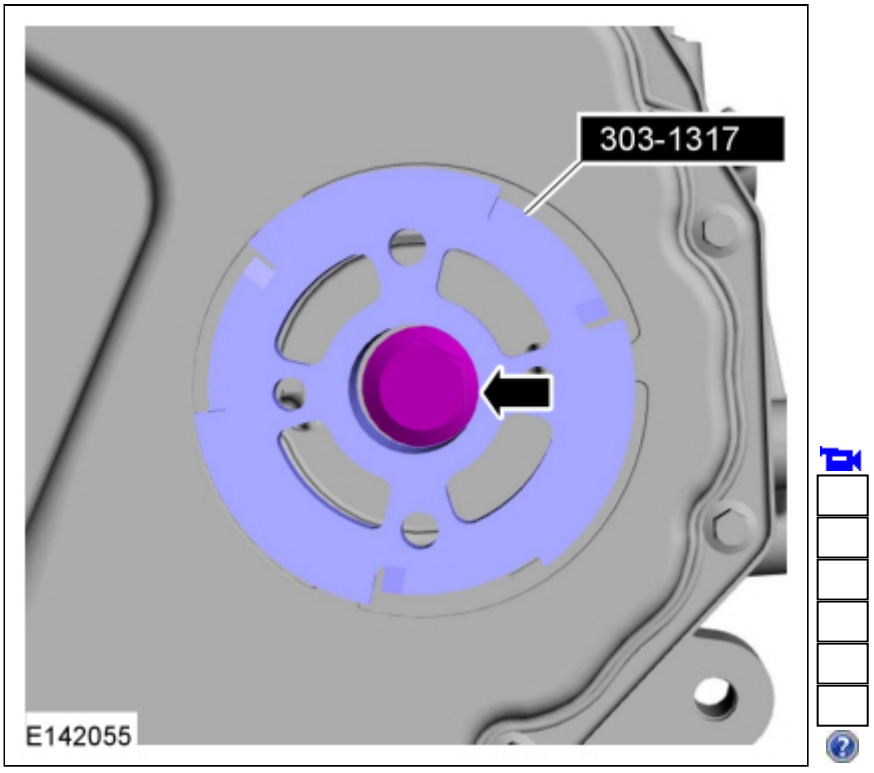


All vehicles

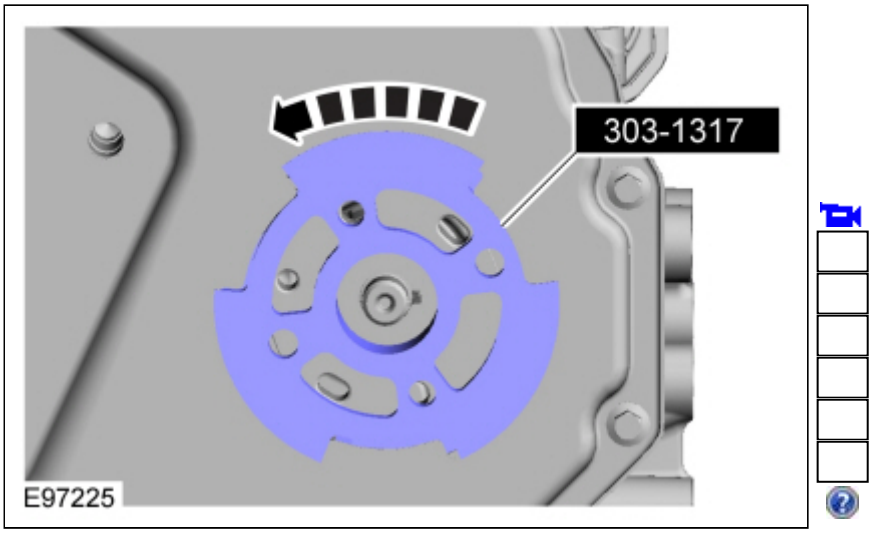


19.

20. *Torque*: 23 Nm

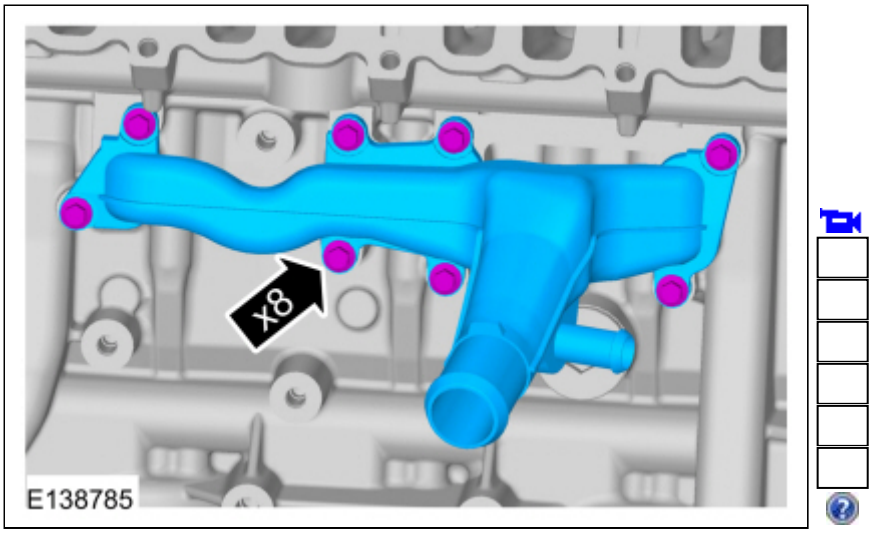


21. *Torque*: 23 Nm

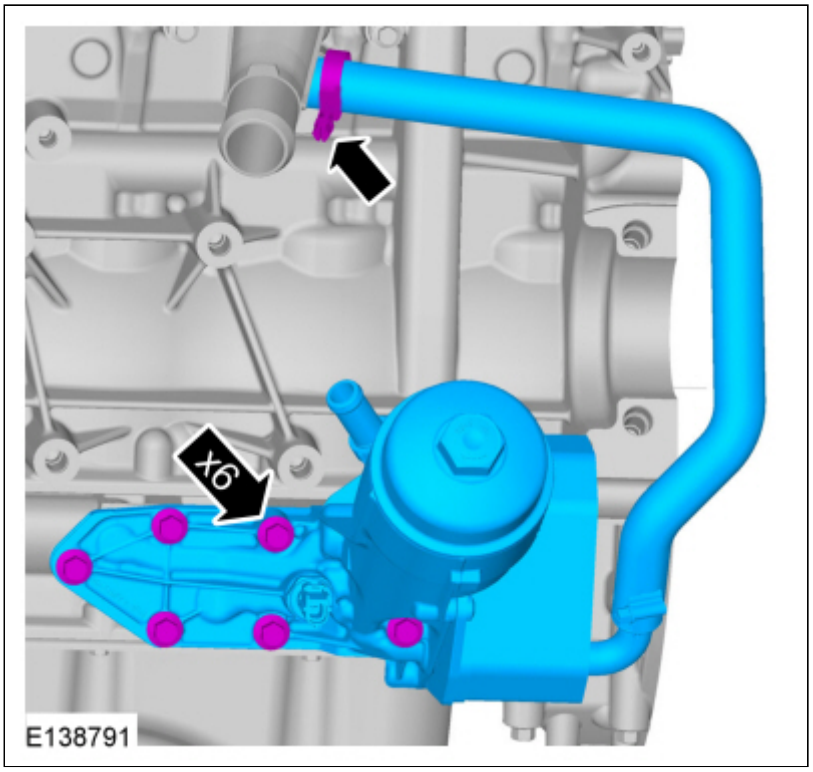


22. **NOTE:** *The component has a left-hand thread.*

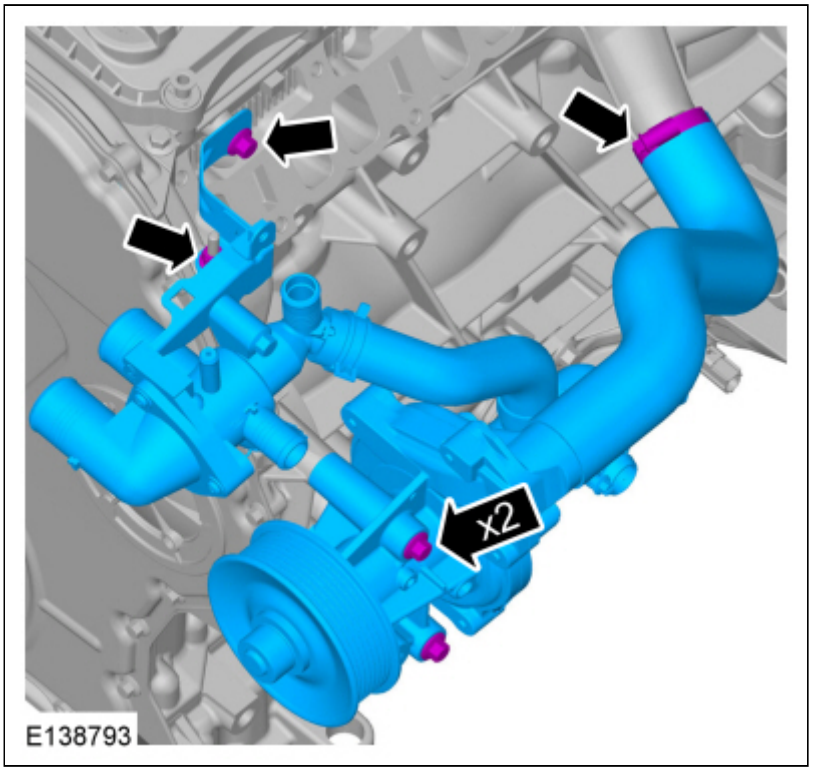
    Torque: 55 Nm



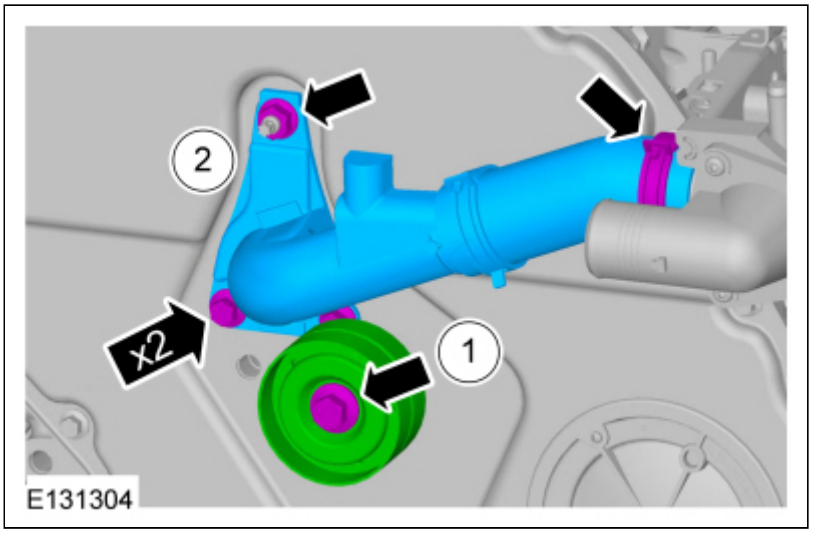
23. Remove Special Service Tool: 303-1317 Locking Tool, Fuel Injection Pump Sprocket.



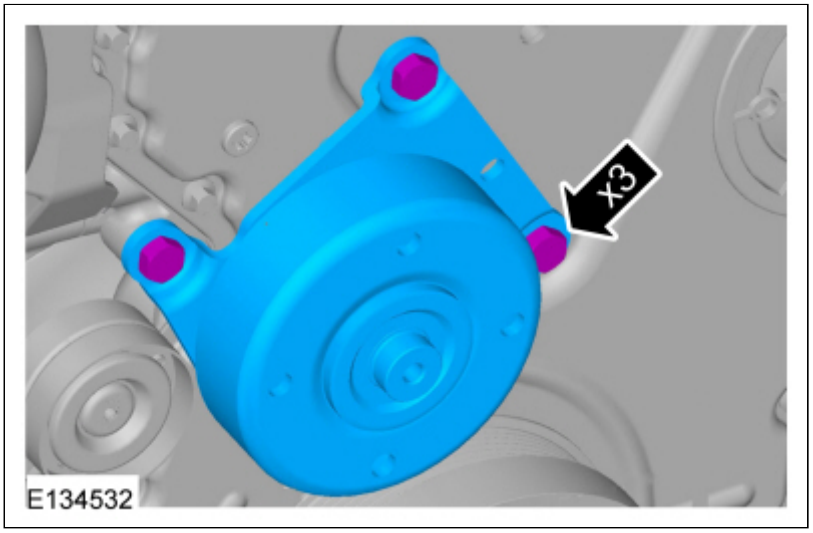
24. Remove Special Service Tool: 303-679A Remover/Installer, Engine Front Cover Inspection Plate.



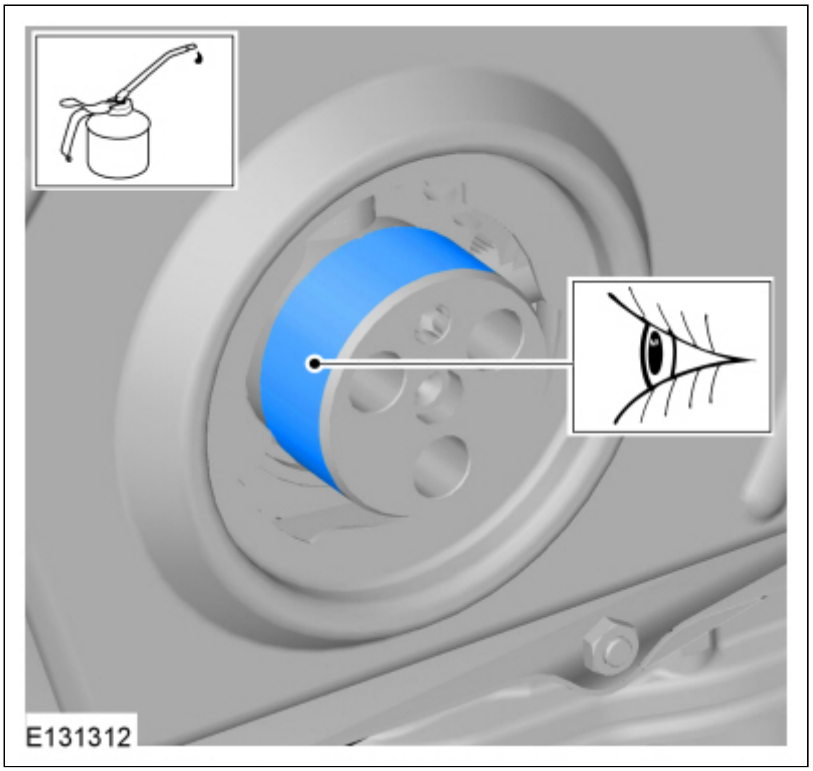
25. *Torque*: 10 Nm



26. *Torque*: 23 Nm



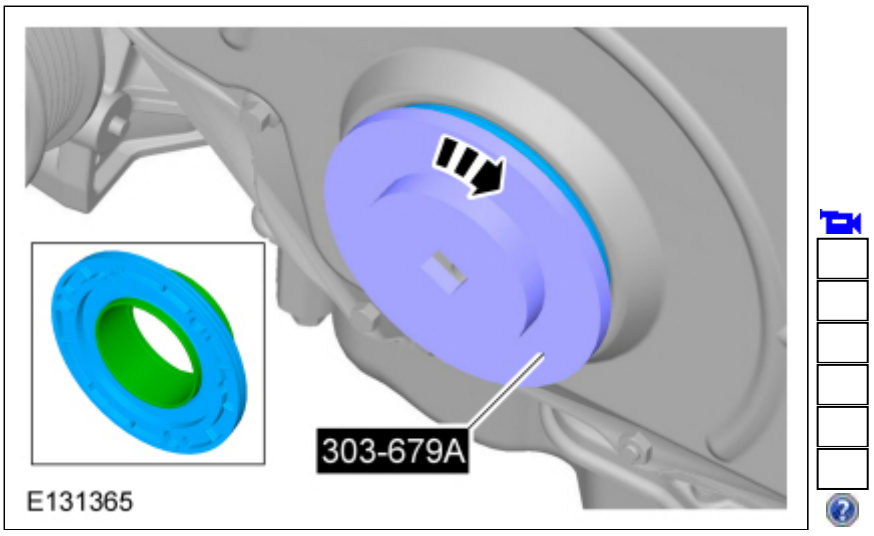
27. *Torque*: 23 Nm



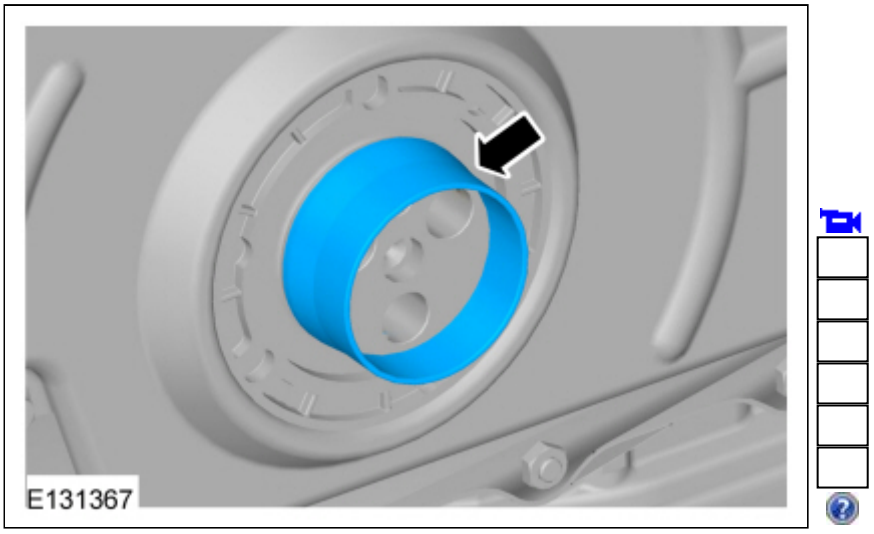
1. *Torque*: 23 Nm
2. *Torque*: 23 Nm

29. *Torque*: 48 Nm

30. **NOTE:** *Make sure that the mounting face is clean and lubricated.*



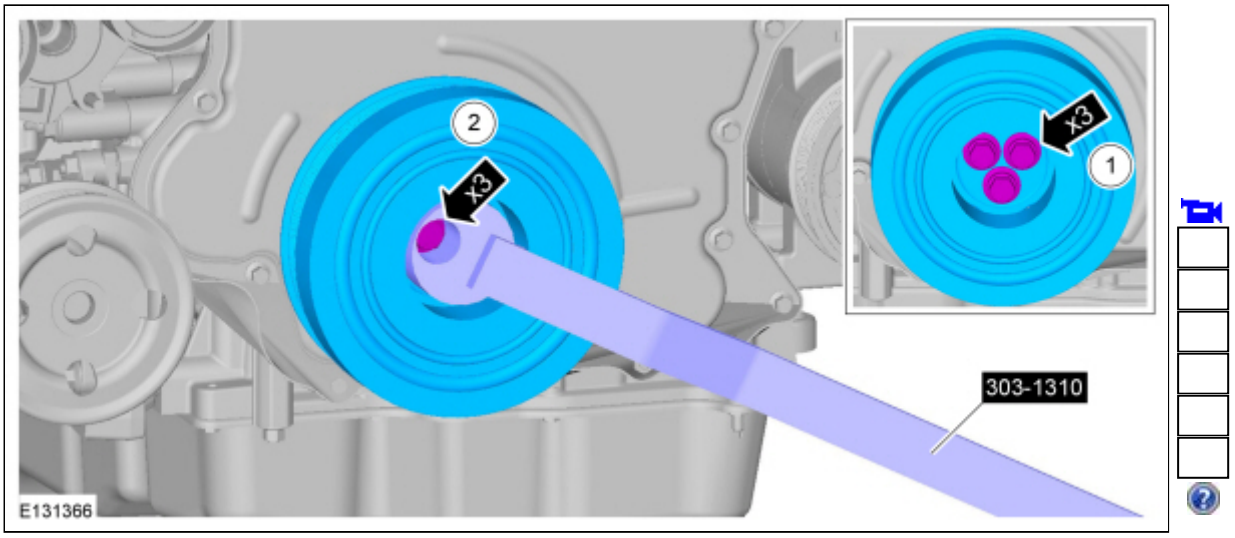
31. **NOTICE: Rotate the seal assembly until it locks. Failure to follow this instruction may result in damage**



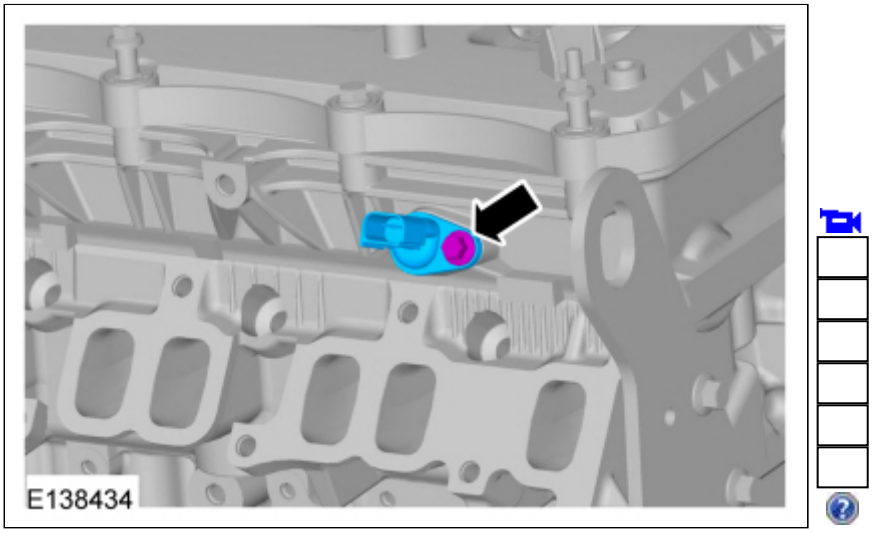
to the seal assembly.

NOTE: *A new crankshaft front seal carrier is supplied with an alignment sleeve that must not be removed until the crankshaft rear seal is fully installed.*

Use Special Service Tool: 303-679A Remover/Installer, Engine Front Cover Inspection Plate.

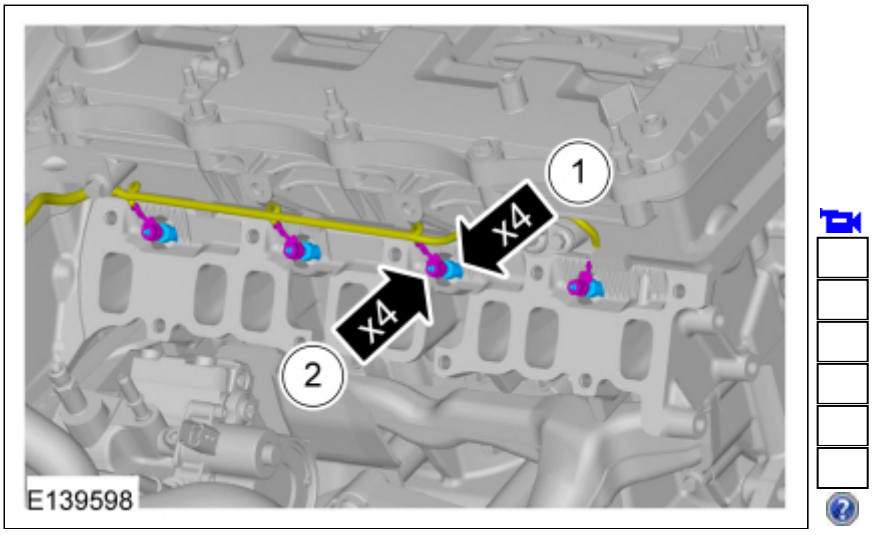


32. Remove the alignment sleeve after the seal is fully installed.

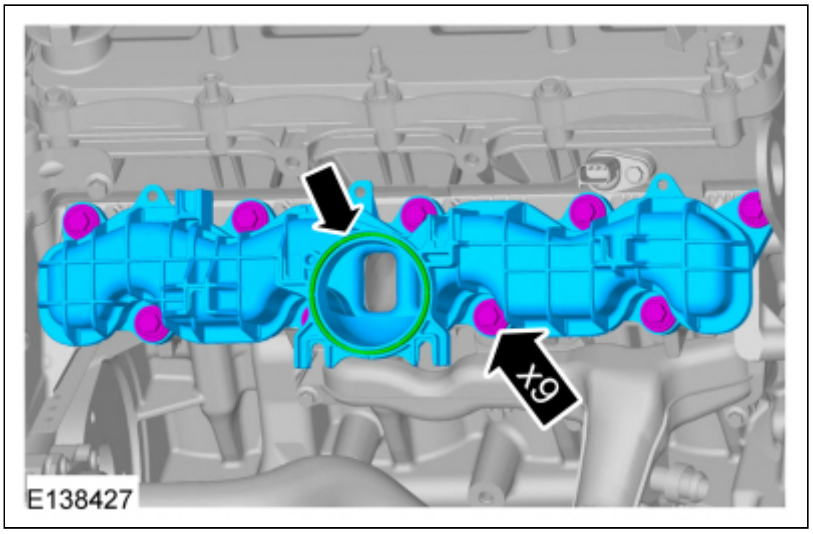


33. **NOTICE: Crankshaft pulley retaining bolts must only be used three times.**

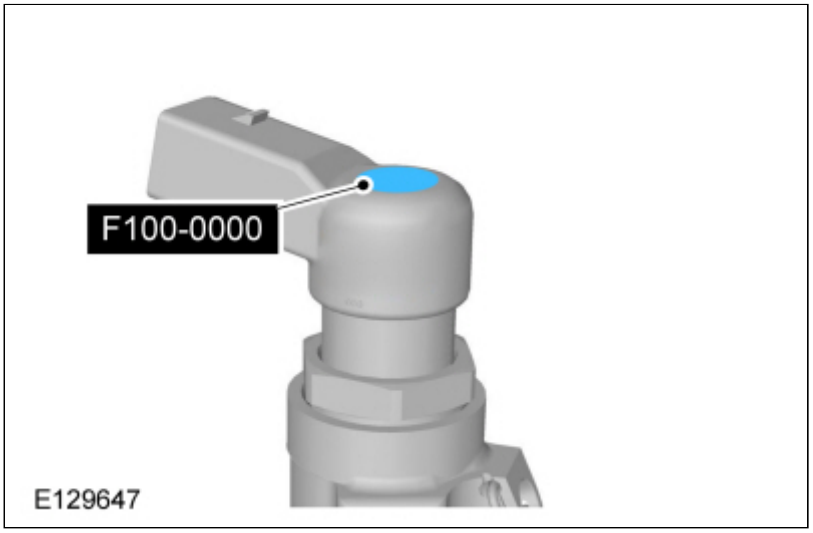
NOTE: *Initially hand tighten the fasteners.*



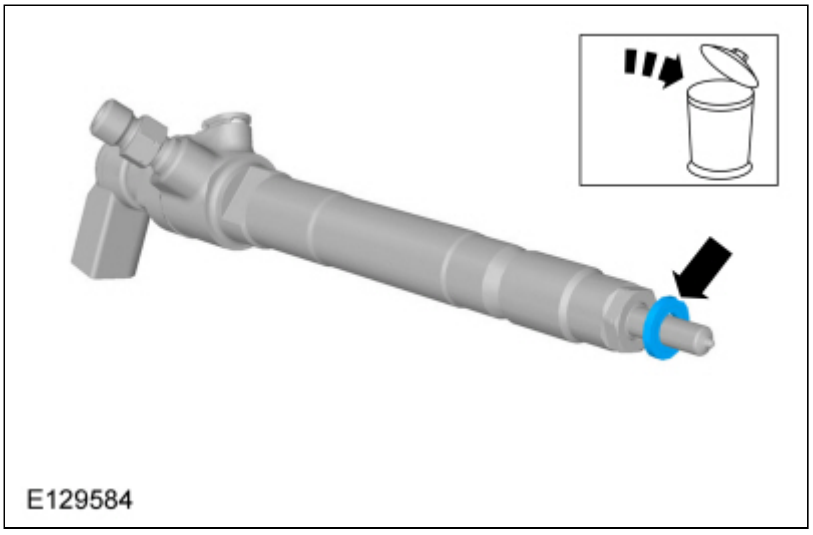
Use Special Service Tool: 303-1310 Holding Wrench, Crankshaft.
Torque:
Stage 1: 20 Nm
Stage 2: 45 Nm
Stage 3: 90 Nm
Stage 4: 45°



34. *Torque*: 9 Nm

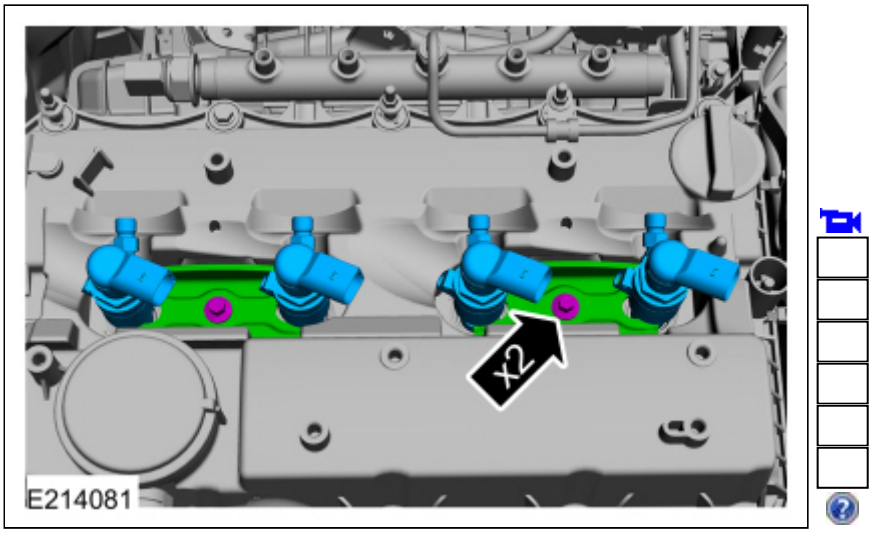


1. *Torque*: 13 Nm
2. *Torque*: 3 Nm

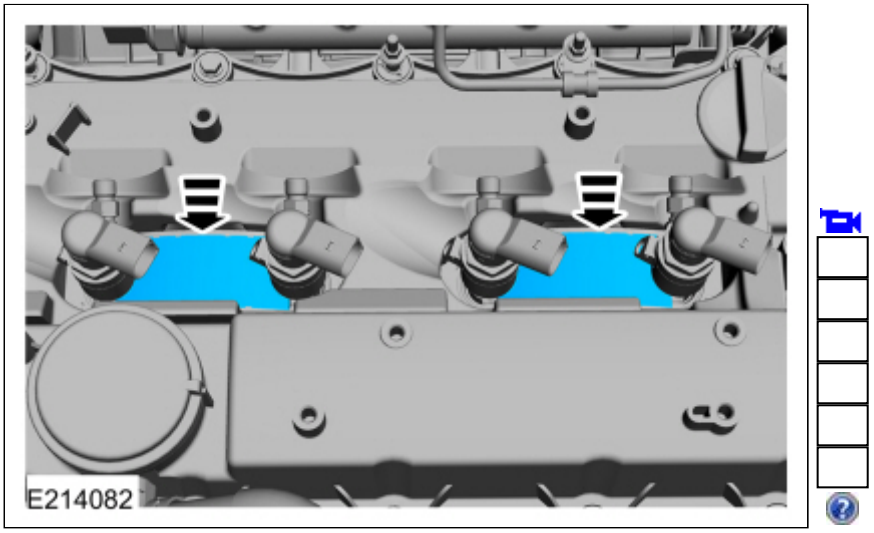


36. *Torque*:
    Stage 1: 5 Nm
    Stage 2: 13 Nm
    Stage 3: 16 Nm

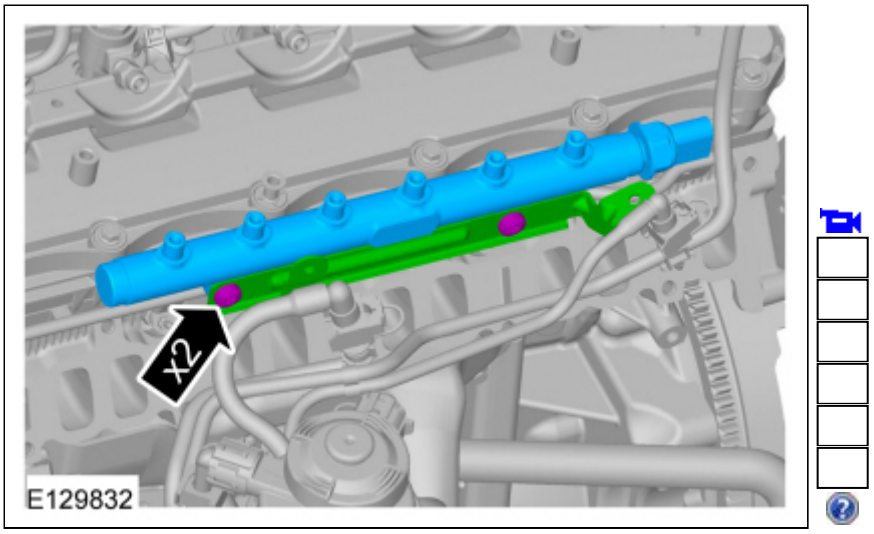
37. Record the new fuel injector correction factor code.



38. **NOTE:** *Using a socket (or similar), press the new fuel injector copper seals onto the fuel injectors making sure that the copper seals are pushed fully home to prevent uneven clamping.*



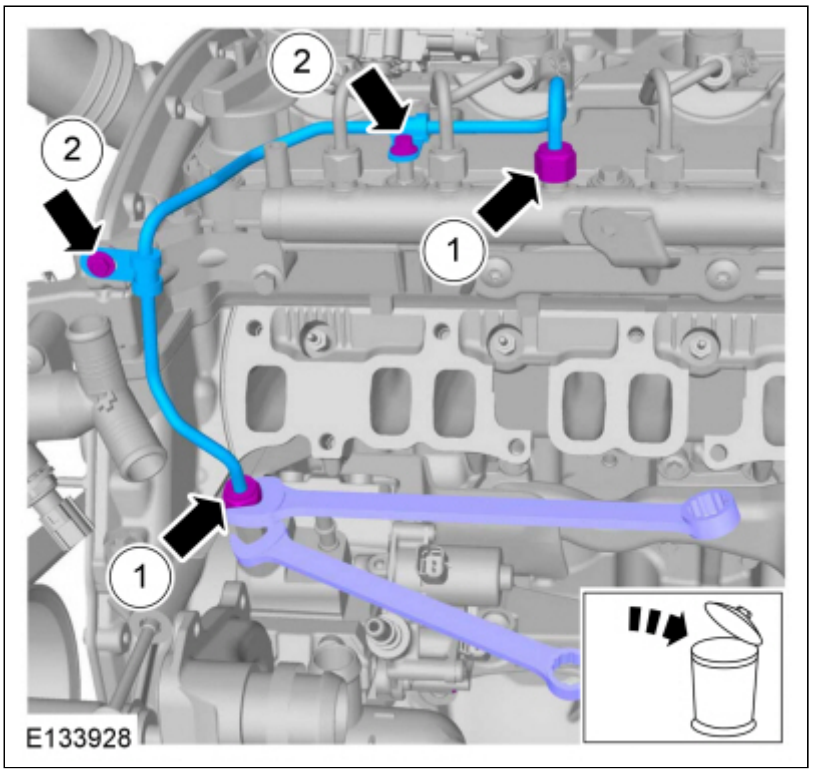
39. **NOTICE: Make sure that new bolts are installed.**



Torque:
Stage 1: 6 Nm
Stage 2: 360°

40. *Torque*: 23 Nm

41. *Torque*: 23 Nm

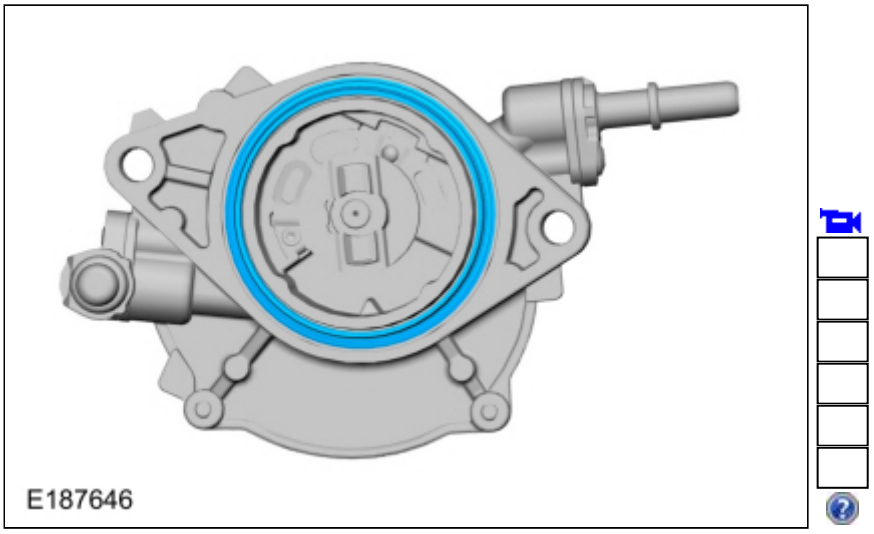


42. **NOTICE: Make sure that the fuel line remains in contact at both ends until both unions nuts have been unscrewed and the area around the joints thoroughly cleaned.**

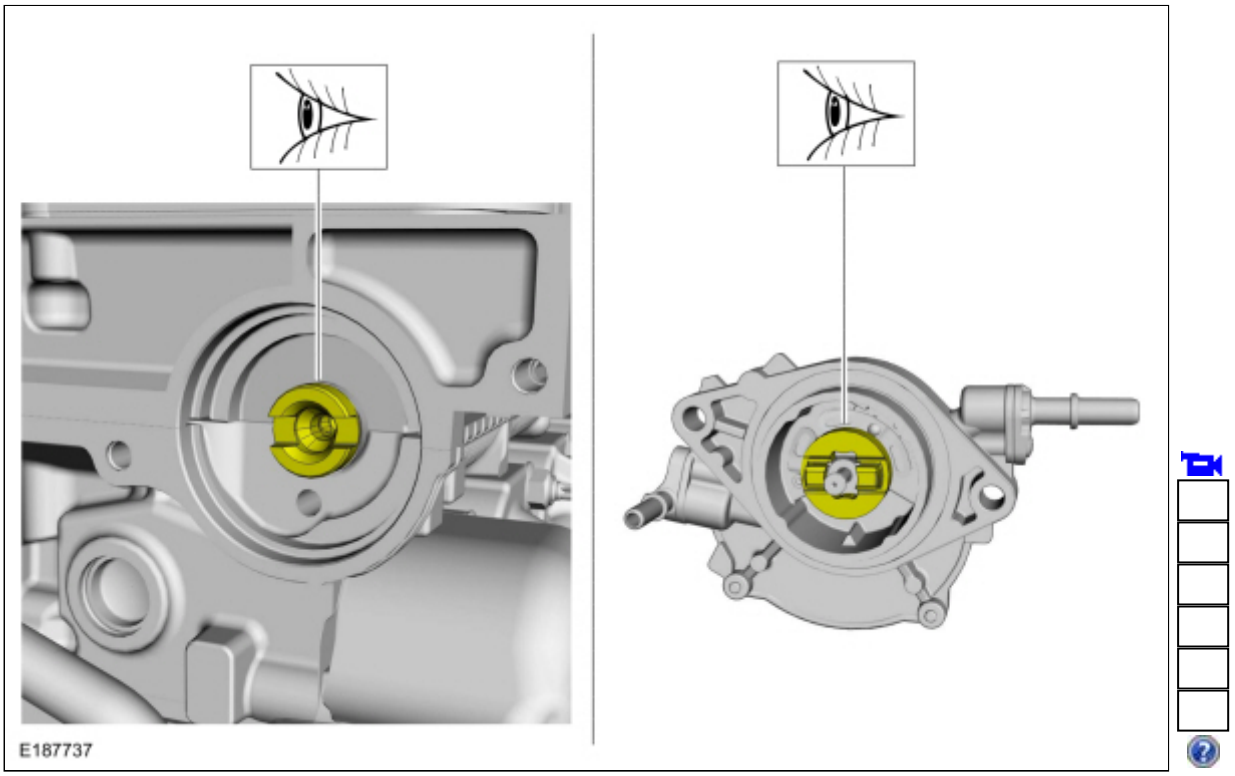
    NOTICE: Make sure that all openings are sealed. Use new blanking caps.

    NOTE: *Vacuum foreign material from the high-pressure fuel supply line, the fuel pump and the fuel rail.*

    1. *Torque*:
       Stage 1: 15 Nm
       Stage 2: 30 Nm



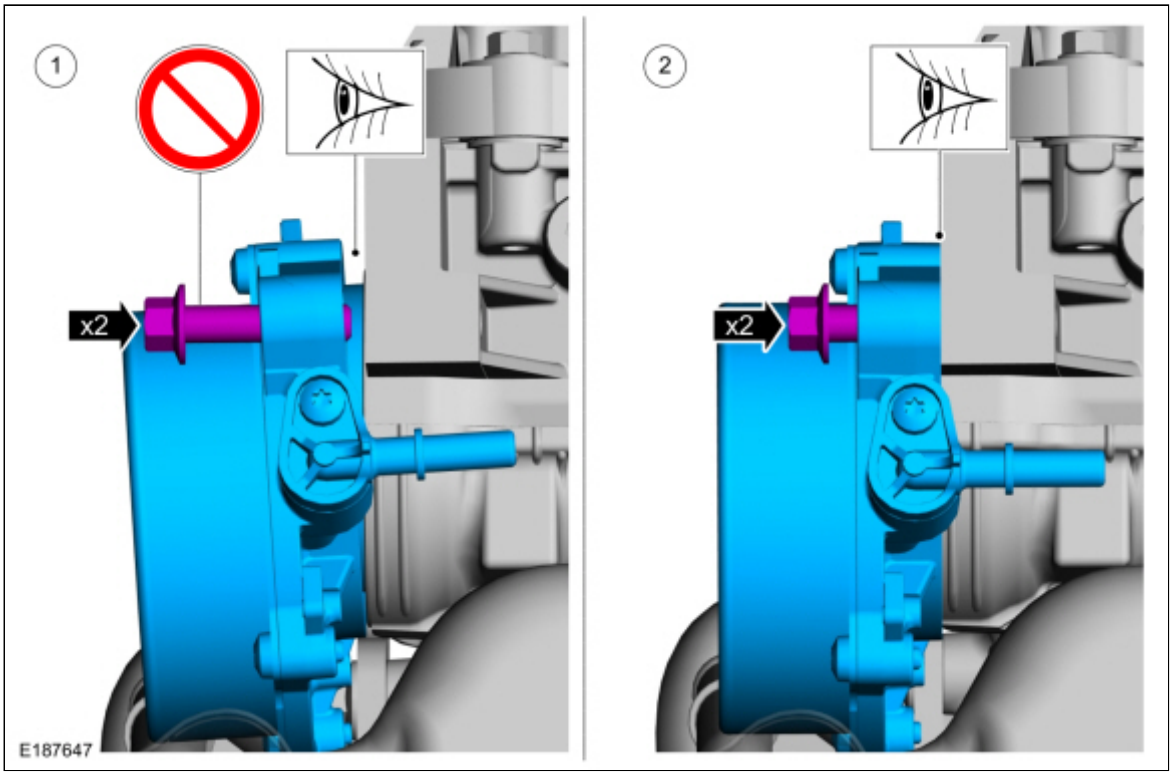
2. Refer to: Fuel Injection Component Cleaning (303-04B Fuel Charging and Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
Torque: 10 Nm



43. *Torque*:
Stage 1: 15 Nm
Stage 2: 30 Nm

44.

45. **NOTICE: Align the camshaft and vacuum pump couplings correctly or damage to the camshaft or vacuum pump may occur.**

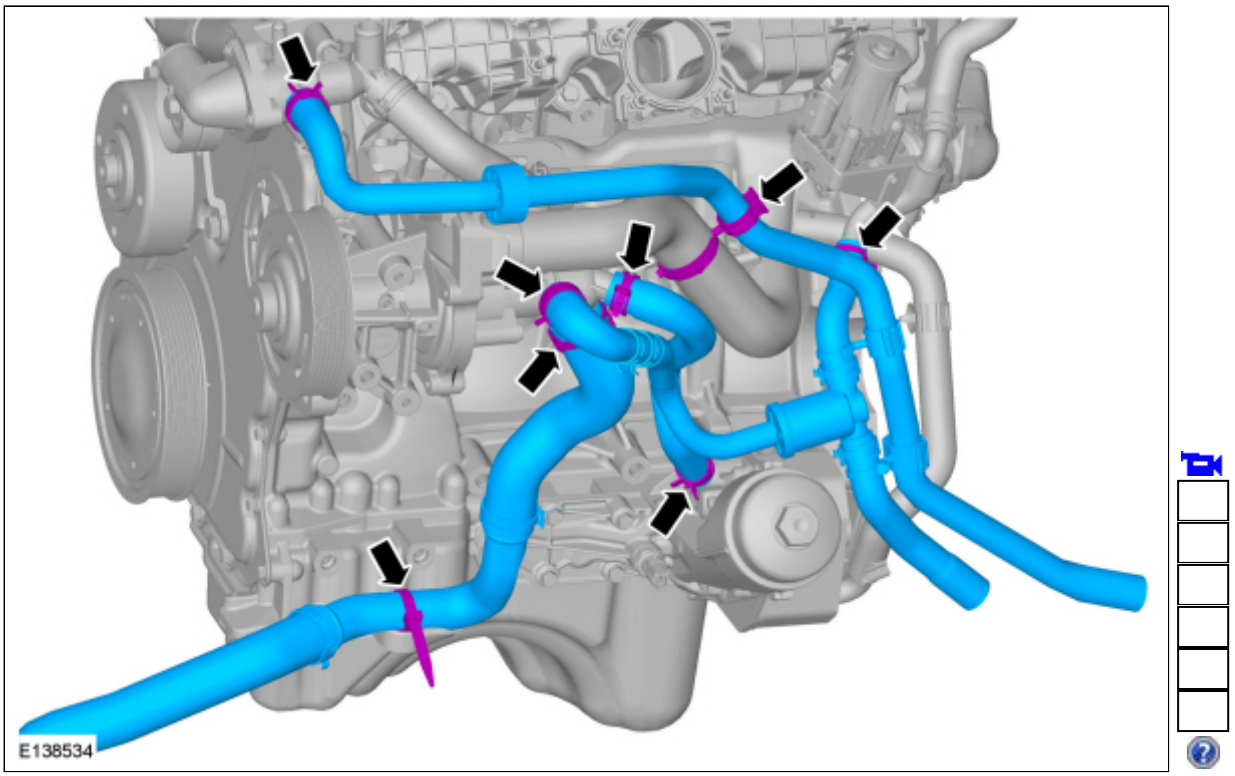


46. **NOTE:** *Make sure that the mating faces are clean and free of foreign material.*

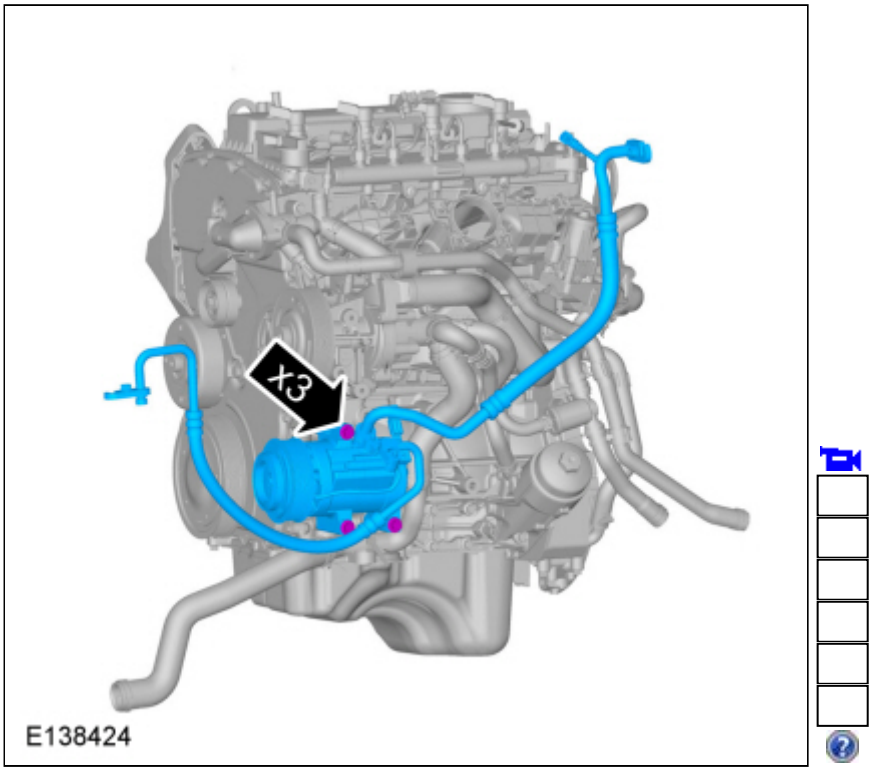
    1. **NOTE:** *Before fitting bolts, check that the vacuum pump couple drive and camshaft keyway are aligned. If a gap is present between vacuum pump and cylinder head, do not fit and run bolts.*

       NOTE: *Under no circumstances should the retaining bolts be tightened if a gap between pump and head faces is present.*

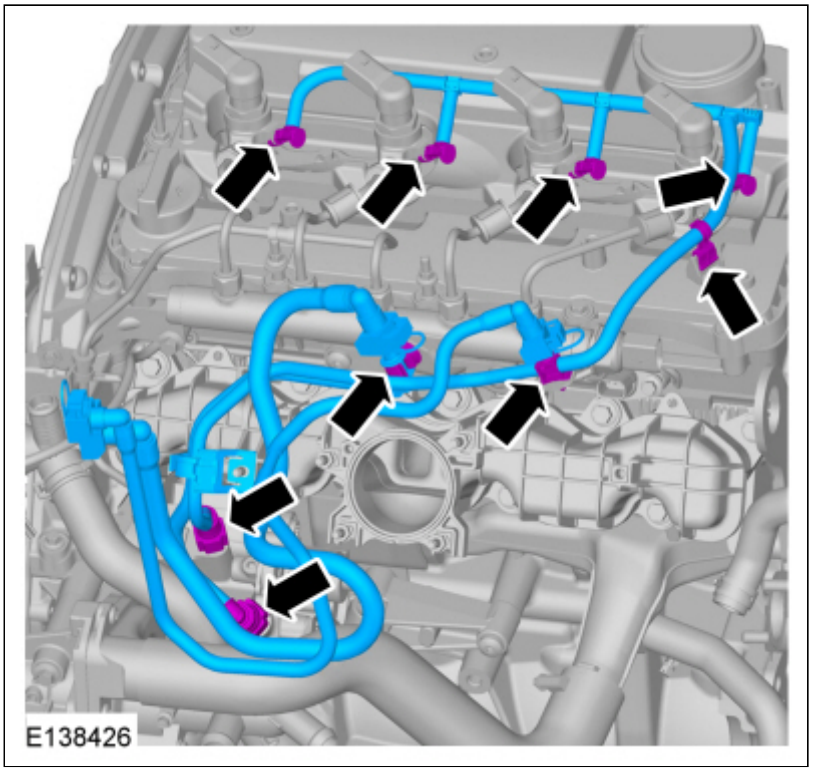
    2. **NOTE:** *Only tighten the bolts finger tight at this stage.*



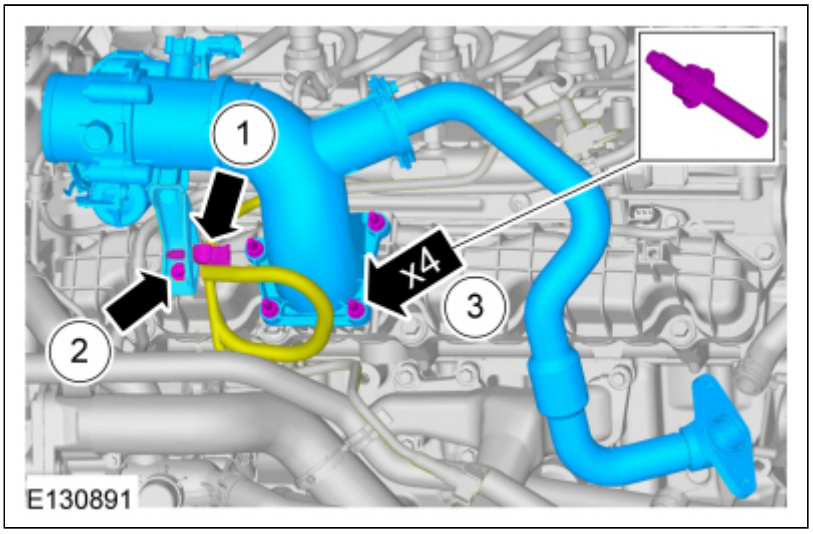
47. *Torque*: 23 Nm



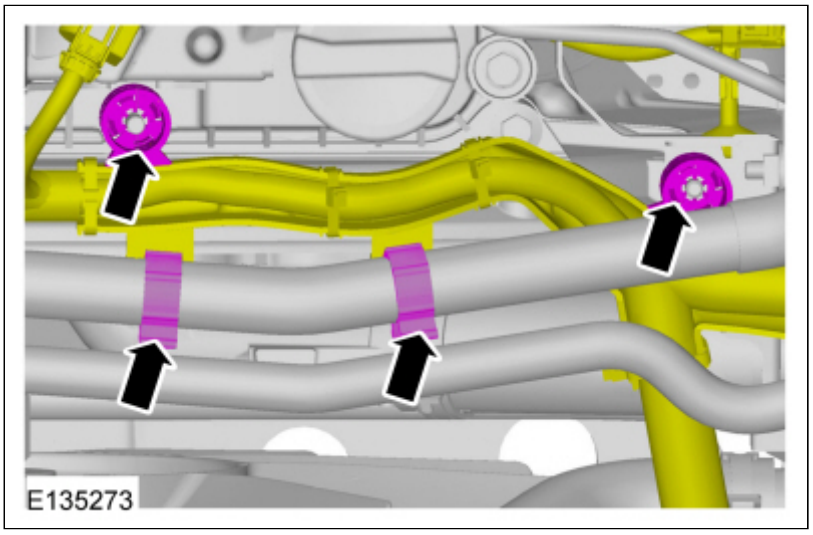
48. *Torque*:
    Stage 1: 5 Nm
    Stage 2: 10 Nm



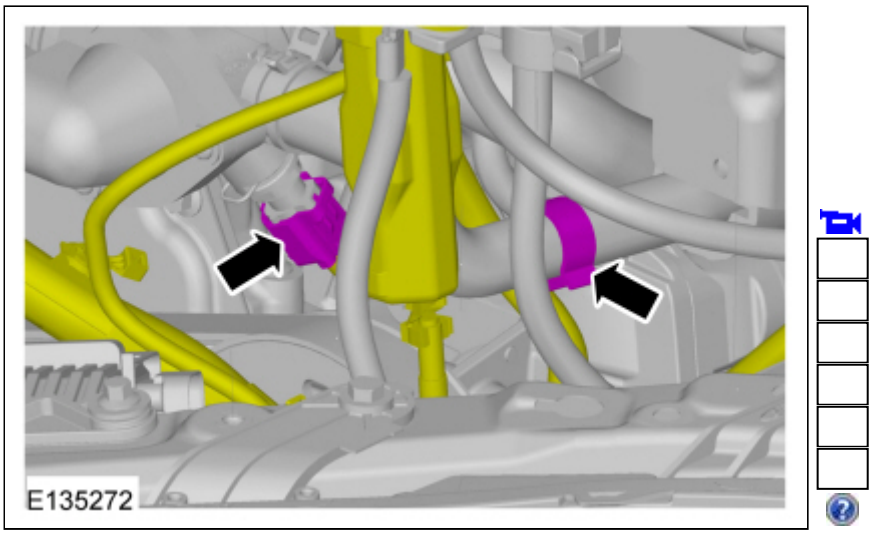
49.



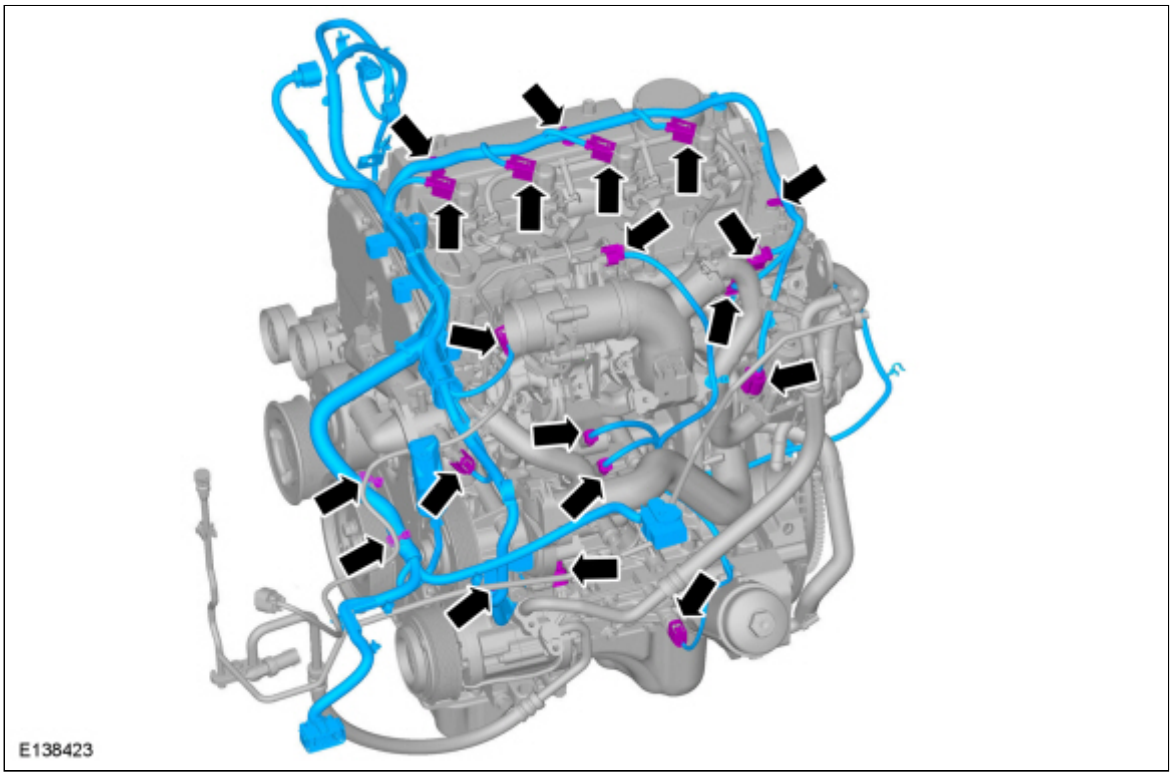
50. *Torque*: 25 Nm



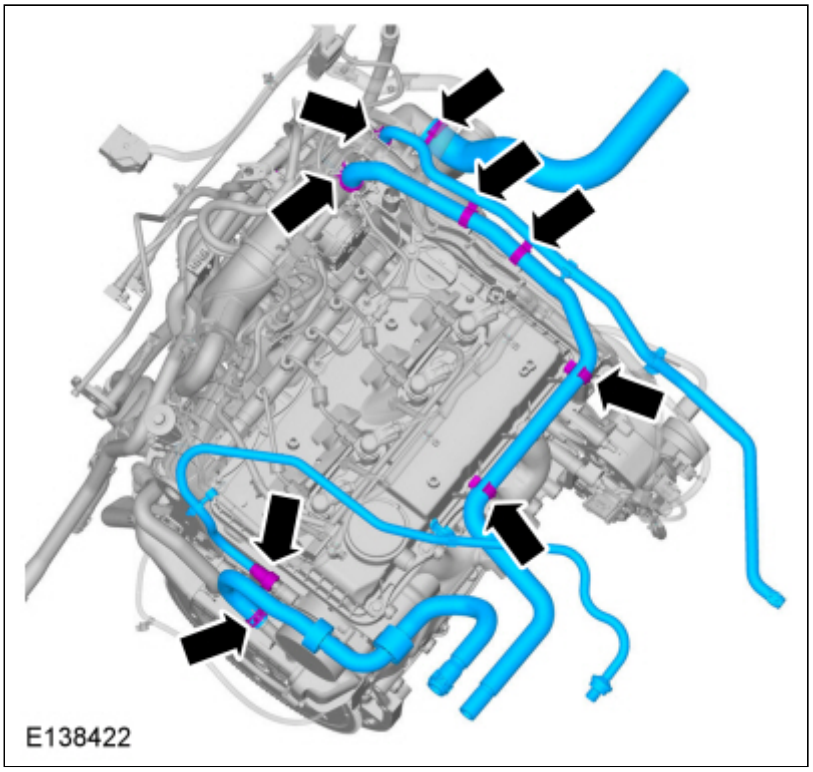
51. **NOTICE: Make sure that all openings are sealed. Use new blanking caps.**



2. *Torque*: 10 Nm
3. *Torque*: 10 Nm

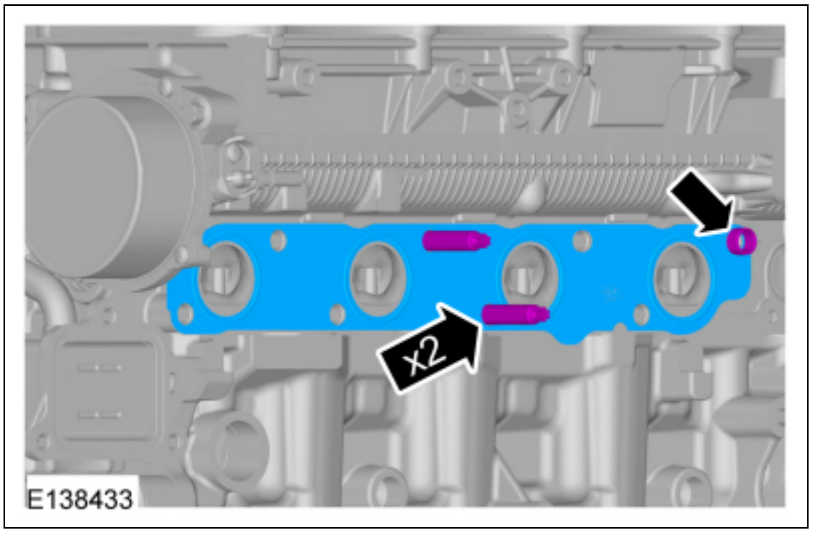


53.

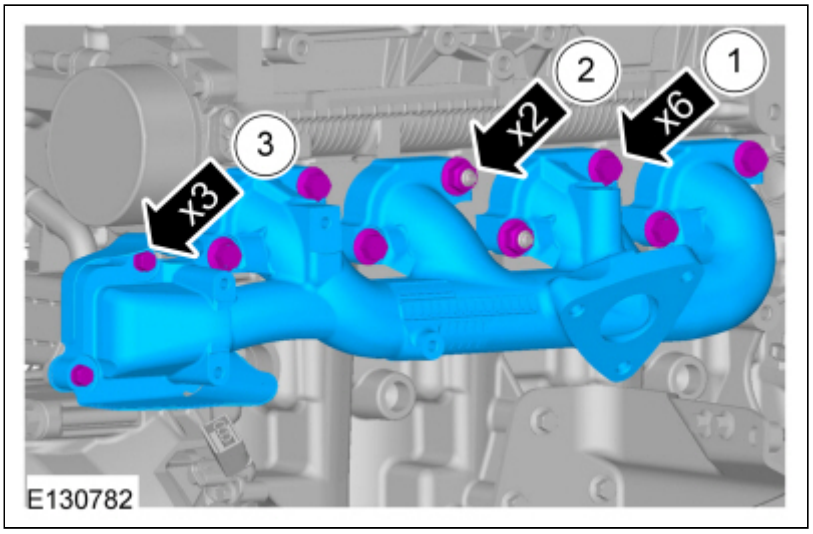


54.

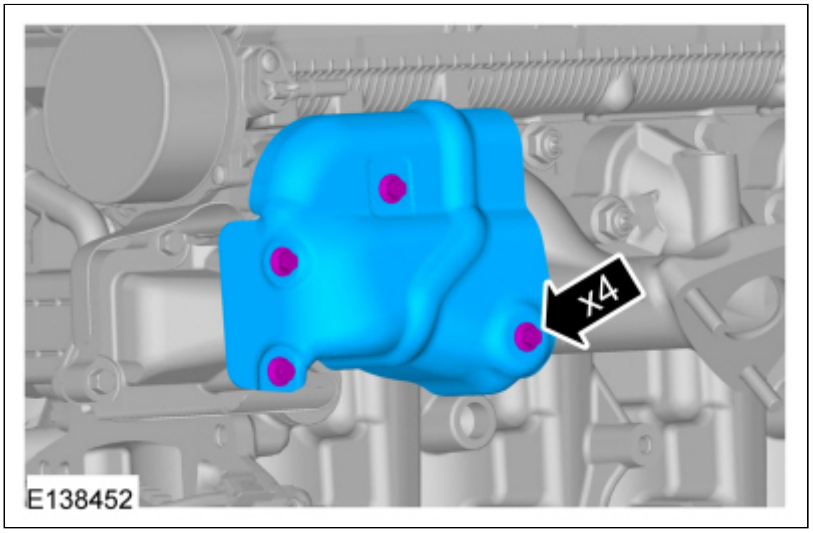
55.



56.



57. **NOTE:** *The gasket is to be reused unless damaged.*



NOTE: *The studs are to be reused unless damaged.*

Specifications

Engine Data

Description	
Code	ENSA
Firing order	1-2-4-5-3
Bore diameter	89.9 mm
Stroke	100.76 mm
Displacement	3198 cc
Compression ratio	15.6:1
Power output at 3000 rpm	143.5 KW (194 PS)
Torque between 1750 to 2500 rpm	470 Nm
Idle speed	700 rpm
Maximum oil consumption	0.1L / 1000 Km

Engine Oil Capacity

Description	Liters
Initial fill including oil filter	10.1
Service fill including oil filter	9.8
Service fill without oil filter	9.4

Cylinder Block Dimensions

Description	mm
Cylinder bore diameter — Class 1	89.900 - 89.910
Cylinder bore diameter — Class 2	89.910 - 89.920
Cylinder bore diameter — Class 3	89.920 - 89.930
Main bearing shells 1 to 5 inner diameter — bearings installed	64.994 - 65.022
Main bearing shell 6 inner diameter — bearings installed	69.994- 70.022
Main bearings 1 to 5 radial clearance	0.028 - 0.072
Main bearing 6 radial clearance	0.028 - 0.072
Main bearings 1 to 5 parent bore diameter — vertical measurement	69.504 - 64.520
Main bearing 6 parent bore diameter — vertical measurement	74.504 - 74.520
Main bearings 1 to 5 parent bore diameter — horizontal measurement	69.502 - 69.525
Main bearing 6 parent bore diameter — horizontal measurement	74.502 - 74.525

Piston Dimensions

Description	mm
Piston diameter	89.850 - 89.934
Piston clearance in cylinder	0.05-0.086
Piston ring end gaps	
— upper compression ring	0.25-0.35
— lower compression ring	0.50 - 0.75
— oil control ring	0.25 - 0.50

Piston ring gap position: The piston ring end gaps must be distributed evenly around the circumference of the piston. This also applies to the oil control ring elements. Align the piston ring end gaps at 120 degrees to each other.

Crankshaft Dimensions

Description	mm
Main bearing journal end float	0.090 - 0.305
Main bearing journals 1 to 5 diameter	64.950 - 64.970
Main bearing journal 6 diameter	69.950 - 69.970
Connecting rod bearing journal diameter	52.980 - 53.000

Connecting Rod Dimensions

Description	mm
Bearing clearance	0.04-0.09
Large end bore diameter	55.996 - 56.016
Small end bore diameter	32.010 - 32.018
Connecting rod bearing shell inner diameter — bearings installed	53.016 - 53.046
Connecting rod bearing radial clearance	0.026 - 0.084
Connecting rod bearing axial clearance	0.100 - 0.320

Connecting Rod Grade Selection

Crank Pin to Cylinder Head Face 'X' (mm)	Connecting Rod Grade	Connecting Rod Length (mm)
173.180-173.209	A	151.915-151.964 (151.94)
173.210-173.255	B	151.965-152.035 (152.00)
173.256-173.259	A	151.915-151.964 (151.94)
173.260-173.330	B	151.965-152.035 (152.00)
173.331-173.335	C	152.036-152.095 (152.06)
173.336-173.380	B	151.965-152.035 (152.00)
173.381-173.415	C	152.036-152.095 (152.06)

173.381-173.415	C	152.036-152.095 (152.06)

Piston Pin Dimensions

Description	mm
Piston pin length	73.8-74.1
Piston pin diameter	31.995-32.001
Piston pin slide clearance	0.012-0.023

Camshaft Dimensions

Description	mm
Camshaft end float	0.014 - 0.200
Camshaft bearing journal diameter	26.440 - 26.465
Camshaft bearing clearance — radial measurement	0.04 - 0.09

Valve Dimensions

Description	mm
Valve stem to valve guide clearance — intake valve	0.0625 - 0.0275
Valve stem to valve guide clearance — exhaust valve	0.0725 - 0.0375
Valve seat width	26

Cylinder Head Dimensions

Description	mm
Maximum distortion over 25 mm — measured longitudinally and diagonally	0.025
Maximum distortion over 150 mm — measured longitudinally and diagonally	0.050
Maximum distortion over distance in excess of 150 mm — measured longitudinally and diagonally	0.10
Peak to valley height of mating surface	0.01
Cylinder head gasket thickness Piston protrusion of 0.430 - 0.520 mm Piston protrusion of 0.521 - 0.570 mm	 1.1 (one hole/tooth) 1.15 (two holes/teeth)
Piston protrusion of 0.571-0.620 mm	1.2 (three holes/teeth)

Oil Pressure Specifications

Description	bar
Minimum oil pressure at idle speed	1.25
Minimum oil pressure at 2000 rpm	2.5

Lubricants, Fluids, Sealers and Adhesives (for markets with low sulphur content less than 350 ppm)

Item	Specification
Engine Oil	WSS-M2C913-C
Engine Oil	WSS-M2C913-D
Sealer — oil pan, camshaft carrier and engine front cover	WSE-M4G323-A4

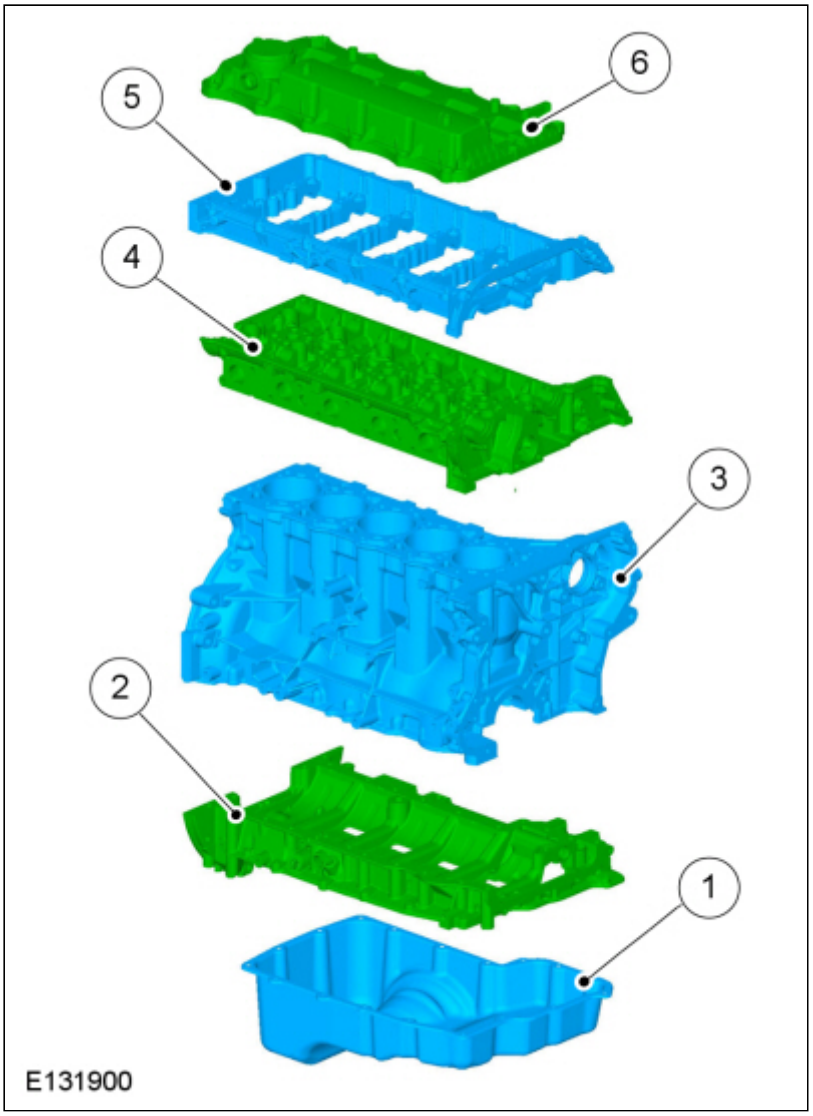
Engine - Overview

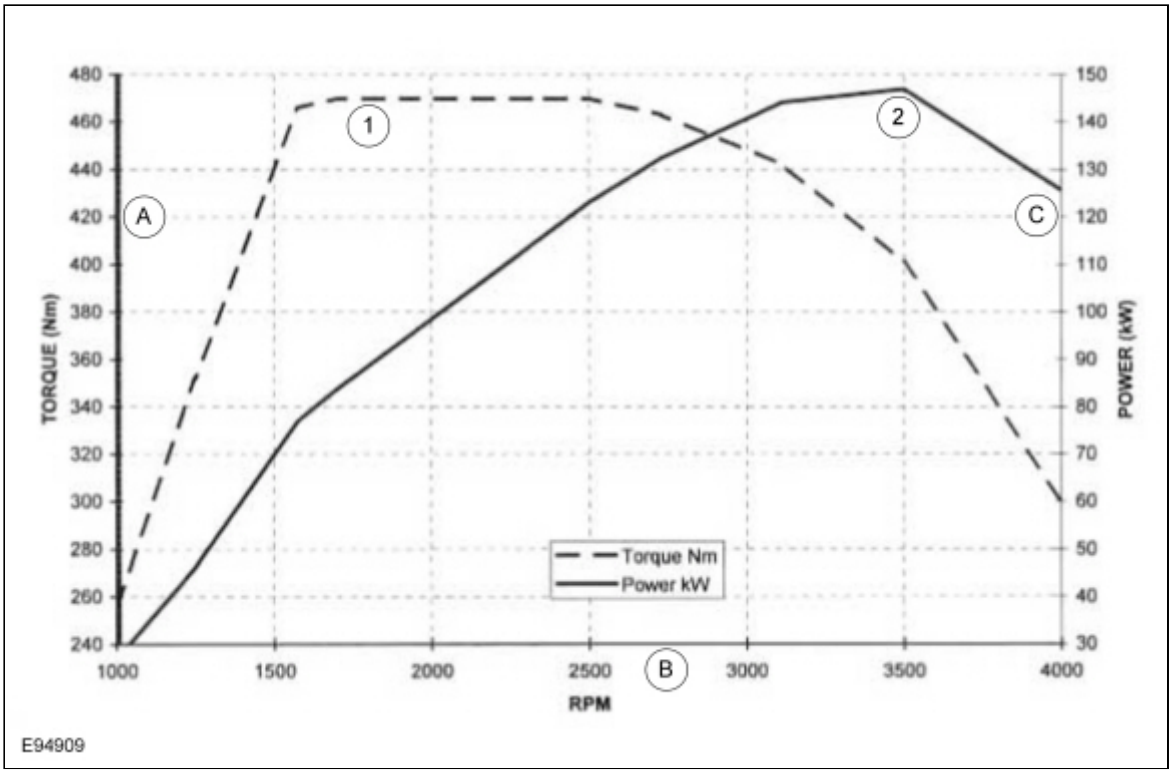
Base Part Number: 6L084



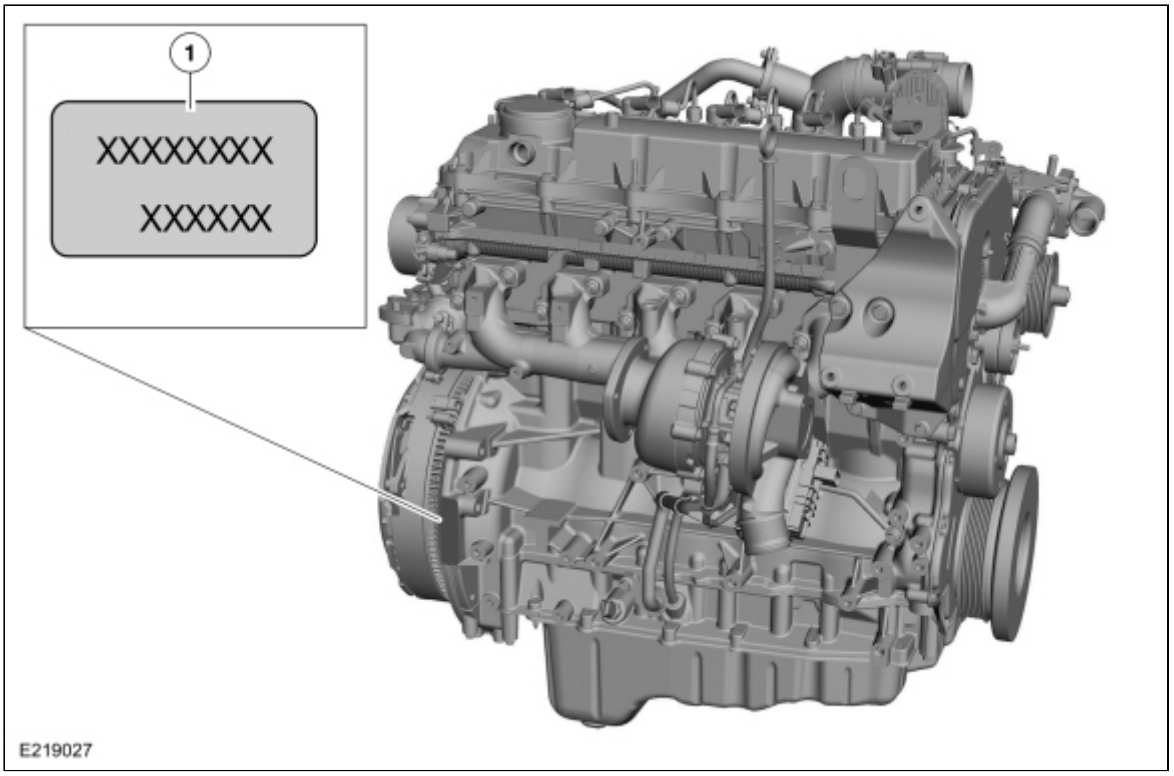
General View

- The 3.2L Duratorq-TDCi (Puma) diesel engine is a five-cylinder inline engine which delivers a power of 147kW (200 PS).
- The engine is additionally equipped with an oil level/oil temperature sensor .
- The cylinder head consists of two parts and is made of aluminum. Both parts are bolted to each other.
- The lower part contains four valves for each combustion chamber and the two camshafts.
- The upper part houses the rocker arm frame with the roller rocker arms. The hydraulic valve clearance adjustment is integrated in the roller rocker arms.
- The camshafts and the fuel injection pump are driven by the crankshaft via the timing chain.
- The oil pump is located inside the oil pan and is driven by the crankshaft via a chain.

NOTE: *Cylinder 1 is located on the timing chain end.*



Engine overview

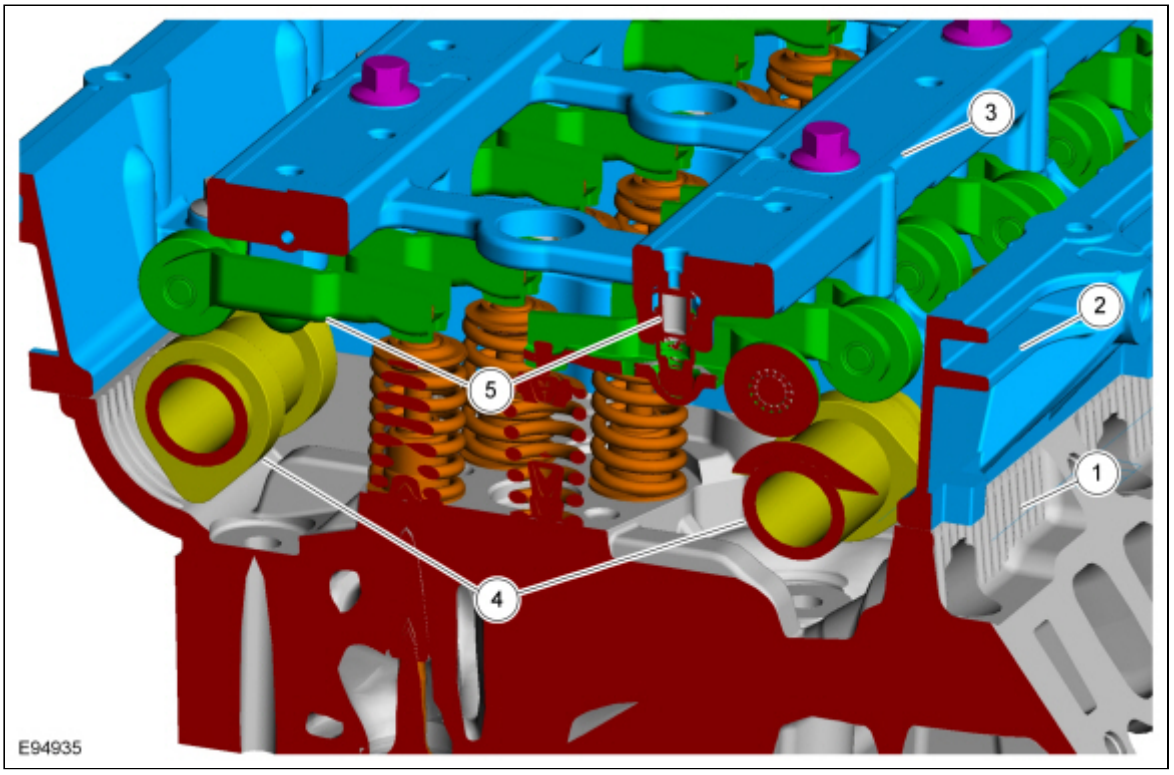


Item	Description
1	Oil pan
2	Oil pan extension
3	Cylinder block
4	Cylinder head lower part
5	Cylinder head upper part
6	Valve cover

Power and torque curves

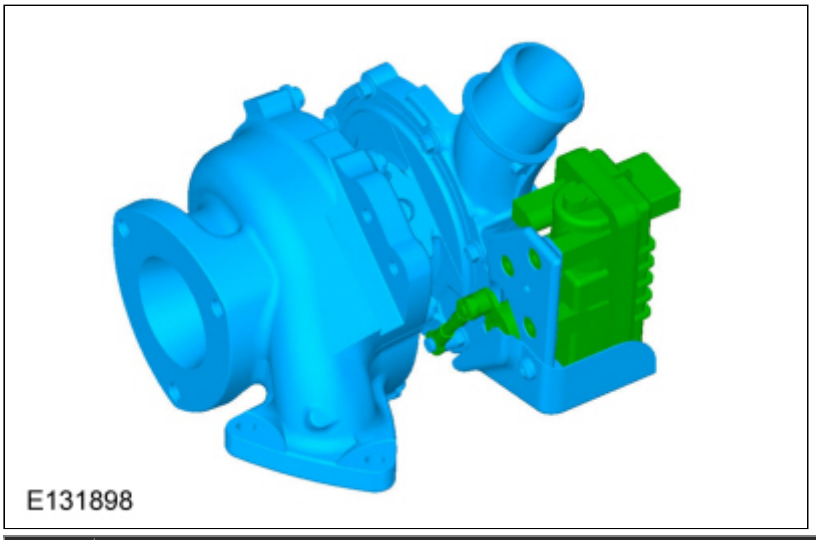
Item	Description
A	Torque (Nm)
B	Engine speed (rpm)
C	Power (kW)
1	Torque curve for the 147 kW engine (200 PS)
2	Power curve for the 147 kW engine (200 PS)

Engine type identification



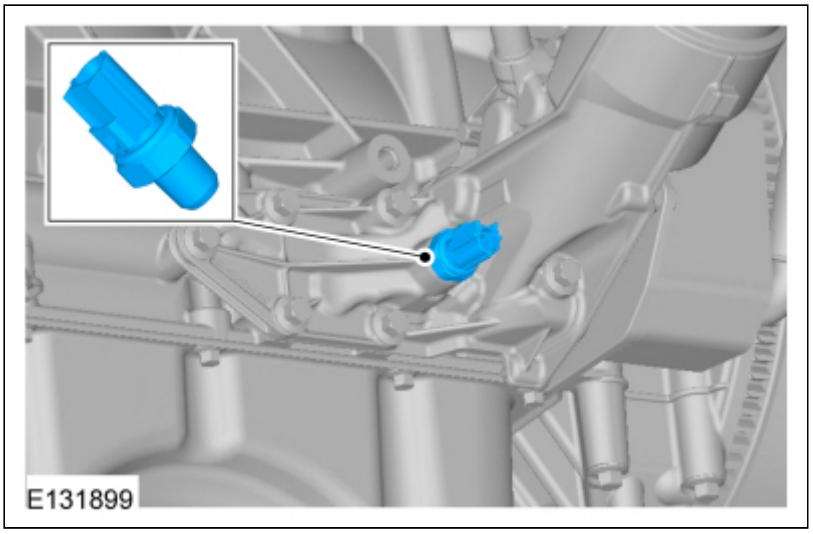
Item	Description
1	VIN (Vehicle identification number)

On the 3.2L engine the engine code (4 digits) and the engine serial number (2 letters for the year and month and 5 figures for the serial number) are stamped in the cylinder block on the exhaust side (in line with cylinder no. 5).



If the engine or cylinder block is changed, the vehicle identification number must be stamped in the indicated location.

Cylinder head



Item	Description
1	Cylinder head lower part
2	Cylinder head upper part
3	Rocker arm frame
4	Camshafts
5	Roller rocker arms with hydraulic valve clearance adjustment

Electronic turbocharger guide vane adjustment

Item	Description
1	Electric actuator for turbocharger guide vane adjustment

Oil level/temperature sensor

An oil level/temperature sensor located on the front of the engine directly beside the engine oil dipstick is provided for the service interval indicator.

A wire coil that is fitted inside the sensor and continuously supplied with current is used to measure the oil level.

The resistance of the wire coil changes according to how deeply the sensor is immersed in the oil. The measurement values are registered by the Powertrain Control Module (PCM).

The change in the voltage drop serves as an input variable for calculating the oil level. The oil temperature is sensed simultaneously via the integrated temperature sensor. The temperature is used as a corrective factor in the calculation.

The PCM calculates the next oil change on the basis of an integrated strategy (which also takes into consideration the mileage and engine operating conditions) and displays it in the instrument panel.

In addition, a separate indicator in conjunction with a corresponding message in the instrument cluster display warns the driver when the oil quantity falls below the minimum level.

Service instruction

The interval indicator must be reset after an oil change on all vehicles with a diesel engine.

It must be ensured that the vehicle is standing on level ground.

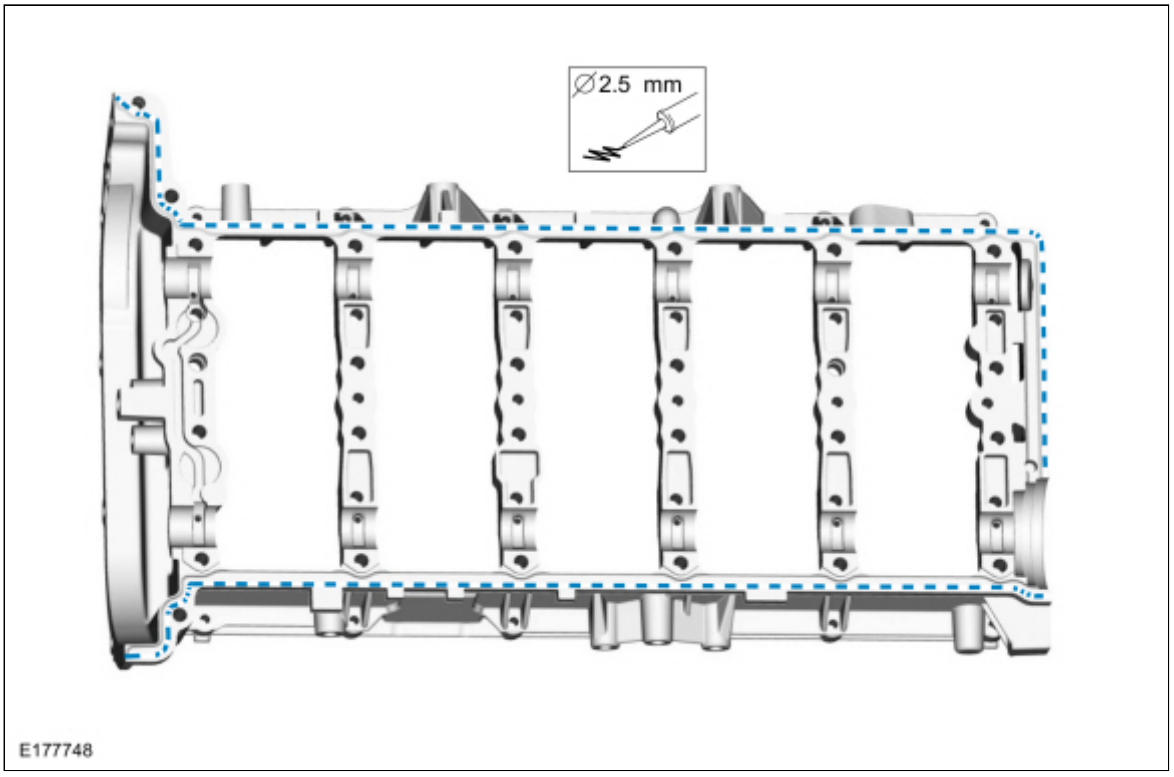
9. **NOTICE: Do not use wire brushes, power abrasive discs or 3M™ Roloc® Bristle Disk (2-in white, part number 07528) to clean the sealing surfaces. These tools cause scratches and gouges which make leak paths. They also cause contamination that causes premature engine failure. Remove all traces of the gasket.**

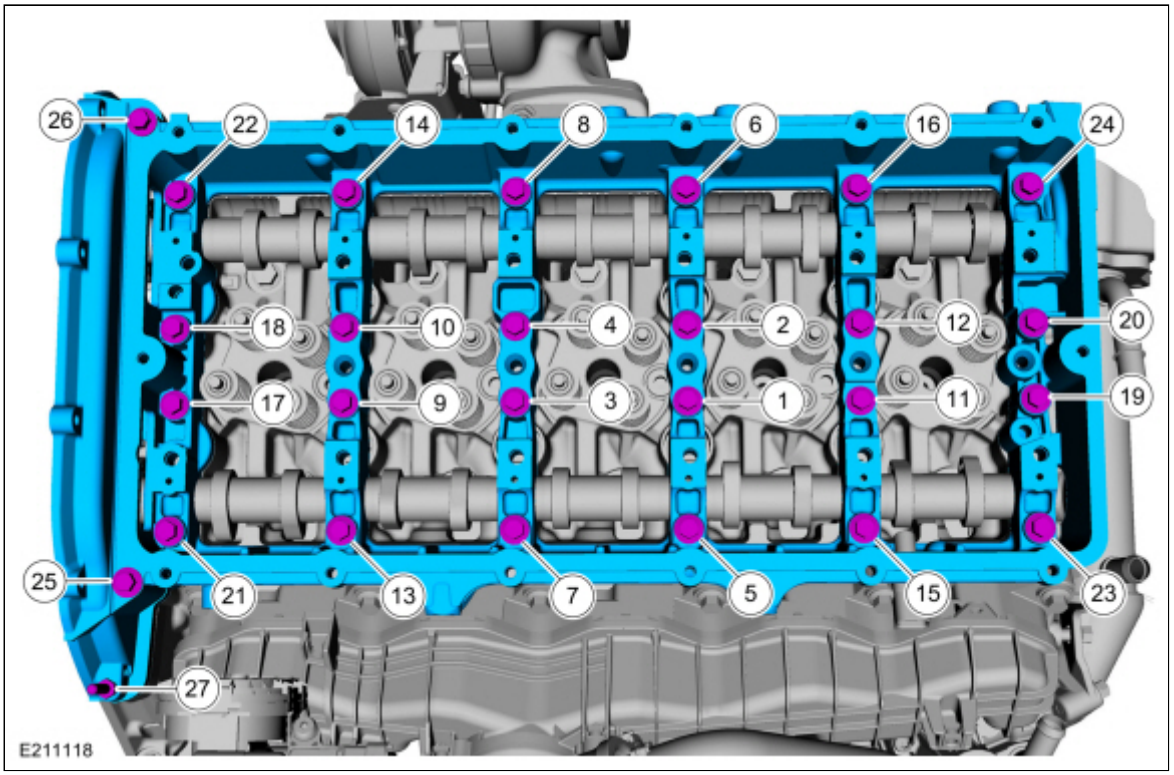
   Make sure that the mating surface is clean and free of foreign material.
   Use the General Equipment: Plastic Scraper
   Material: Gasket Remover
   Material: Brake Cleaner
   Material: Primer

Installation



1. **NOTE:** *The camshafts need to be installed with the slots down aligning with the timing pin holes in the cylinder head.*

   Lubricate the camshafts with clean engine oil and install the camshafts.
   Material: Engine Oil - SAE 5W-40 (WSS-M2C171-E)

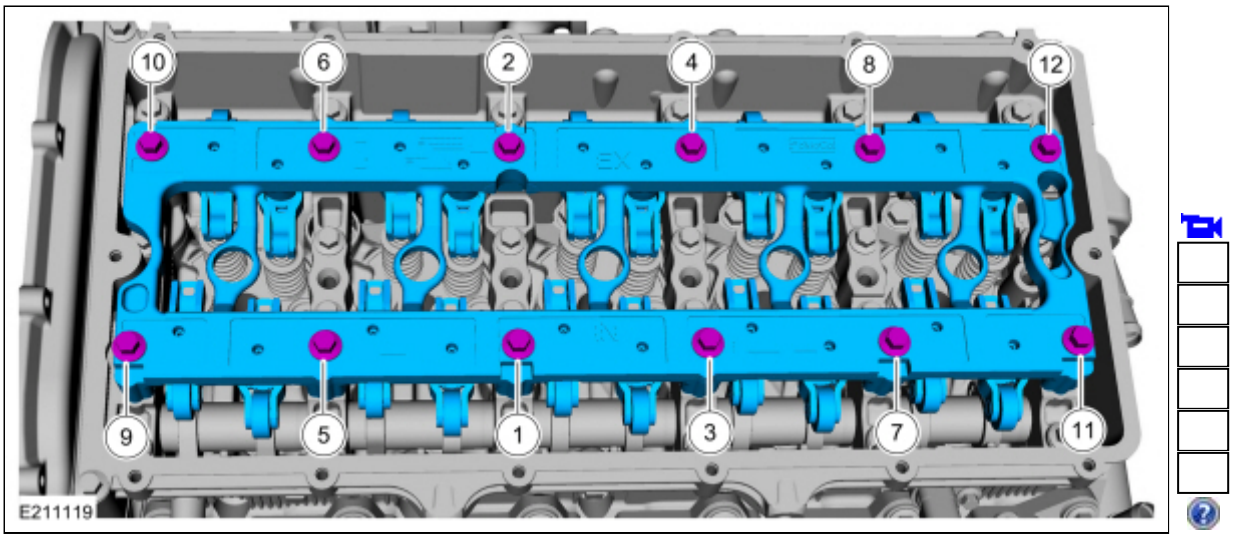


2. **NOTE:** *If the upper cylinder head is not secured within 5 minutes of sealant application, the sealant must be removed and the sealing area cleaned with metal surface prep. Allow to dry until there is no sign of wetness, or 10 minutes, whichever is longer. Failure to follow this procedure can cause future oil leakage.*

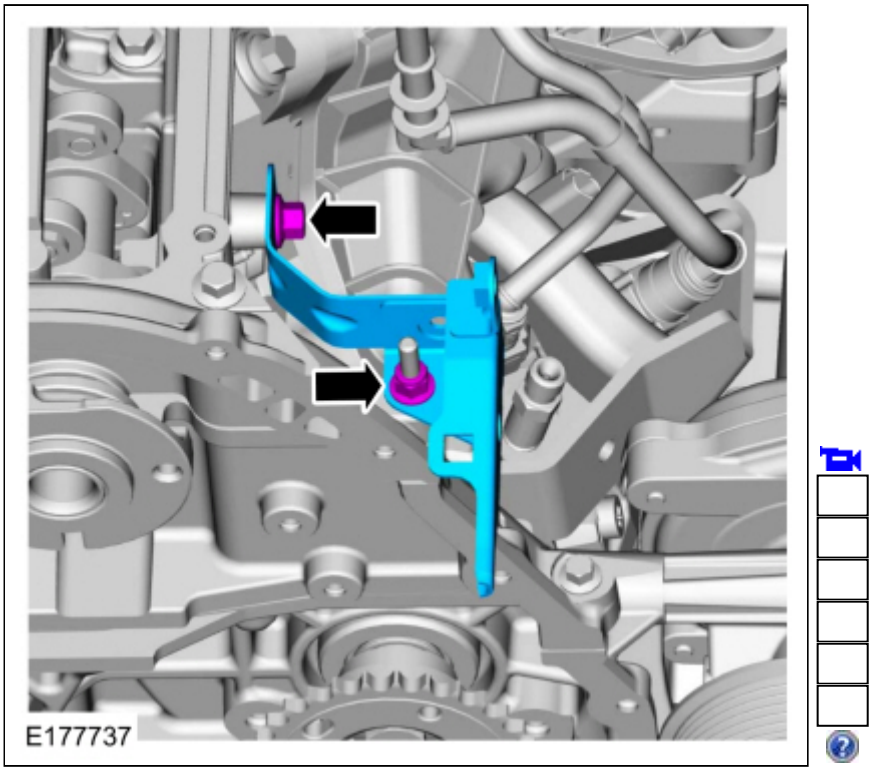
   Apply a 2 mm bead of silicone sealant on the upper cylinder head.
   Material: Silicone Sealant (WSE-M4G323-A4)
   Material: Primer

3. **NOTE:** *The component must be installed within 5 minutes of applying the sealant.*

Torque:
Stage 1: 1 - 26 : 7 Nm
Stage 2: 27 : 4 Nm
Stage 3: 1 - 26 : 15 Nm
Stage 4: 27 : 6 Nm
Stage 5: 1 - 26 : 23 Nm
Stage 6: 27 : 10 Nm

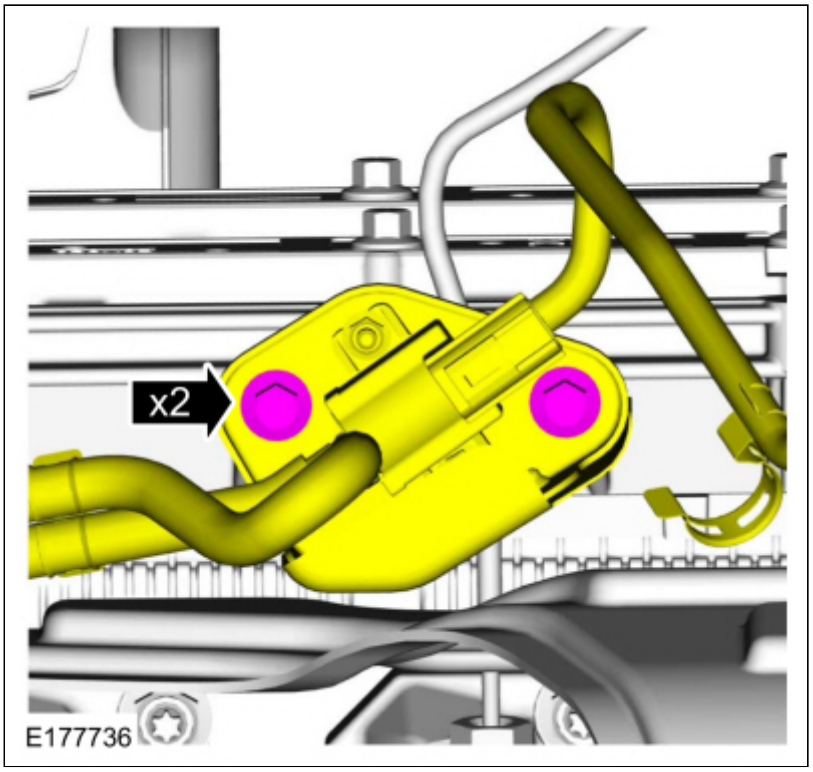


4. **NOTE:** *Make sure that the rocker arms do not separate.*

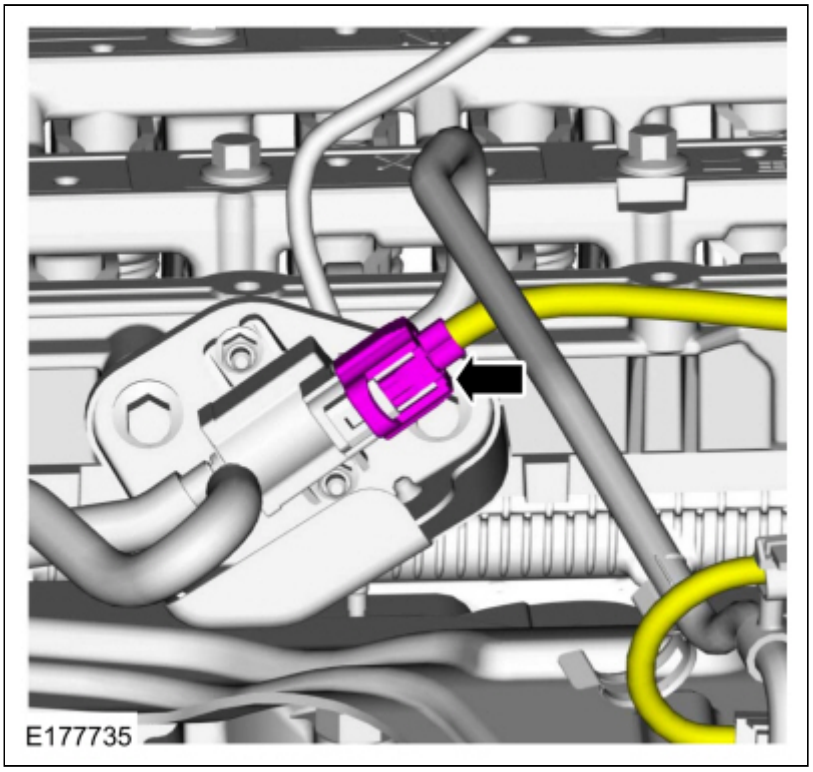


NOTE: *After the rocker arm assembly is installed, verify that the rocker arms are properly aligned with the camshafts and the valve stems.*

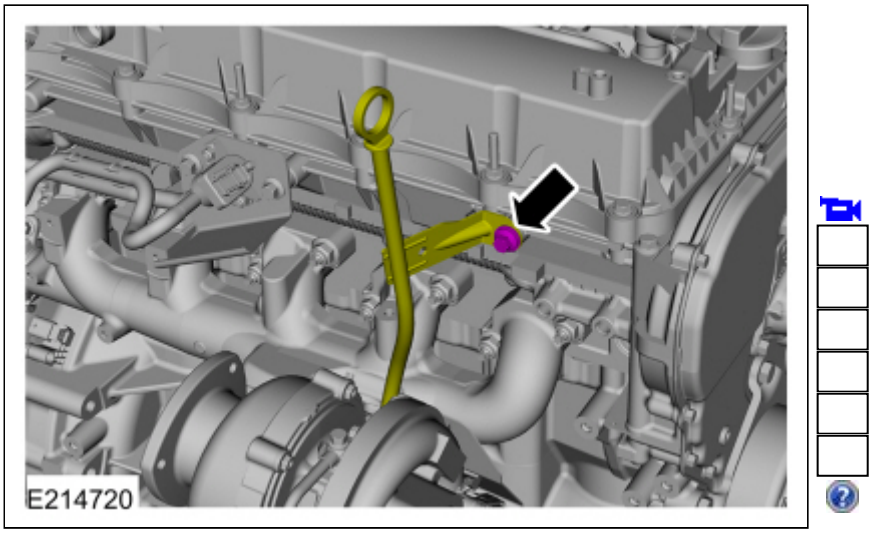
Torque:



Stage 1: 5 Nm
Stage 2: 8 Nm
Stage 3: 10 Nm
Stage 4: 45 °



5. *Torque*:
   M8 bolt : 23 Nm
   M6 nut : 10 Nm



6. *Torque*: 25 Nm

7.

8. *Torque*: 23 Nm

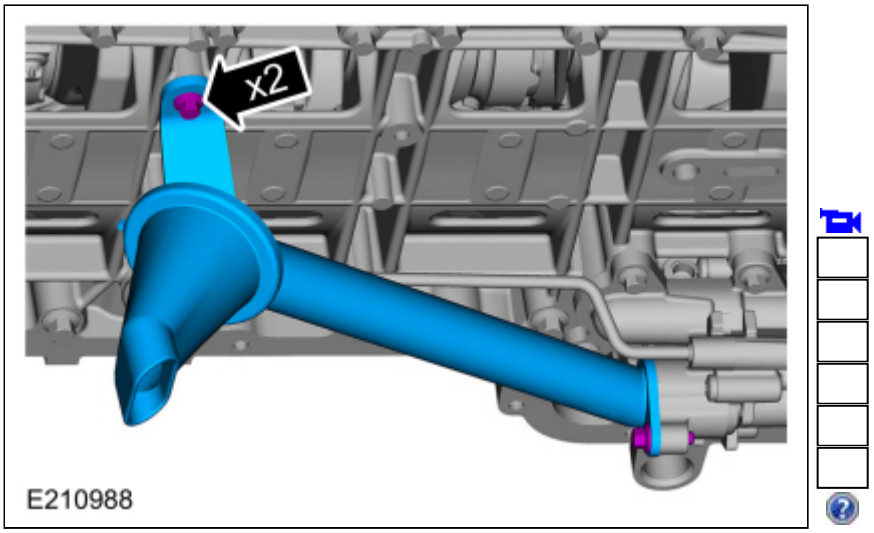
Oil Pump

Base Part Number: 6621

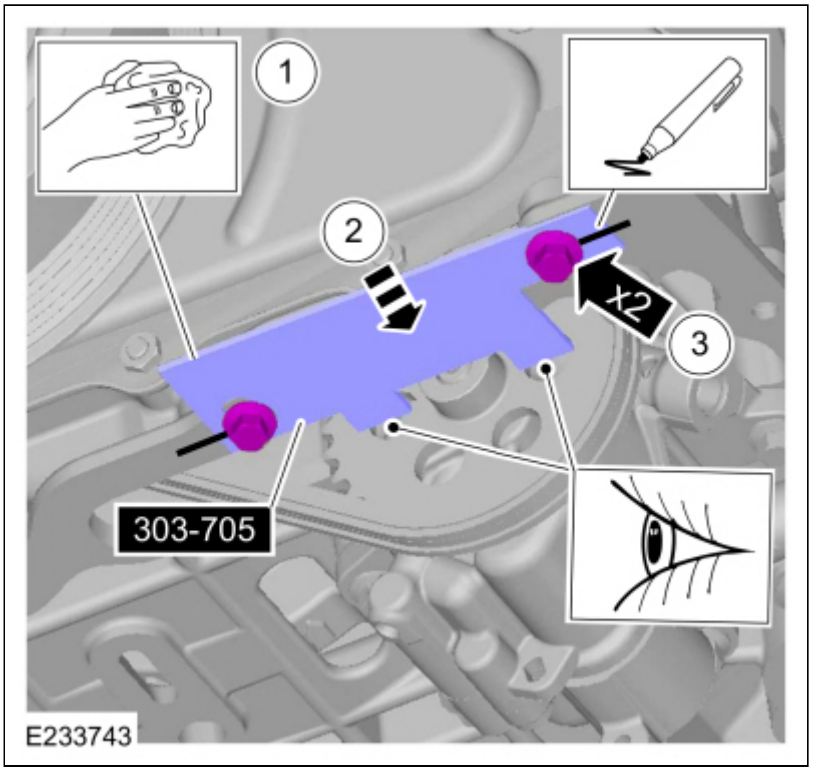


Special Tool(s) / General Equipment

	303-705 Aligner, Oil Pump

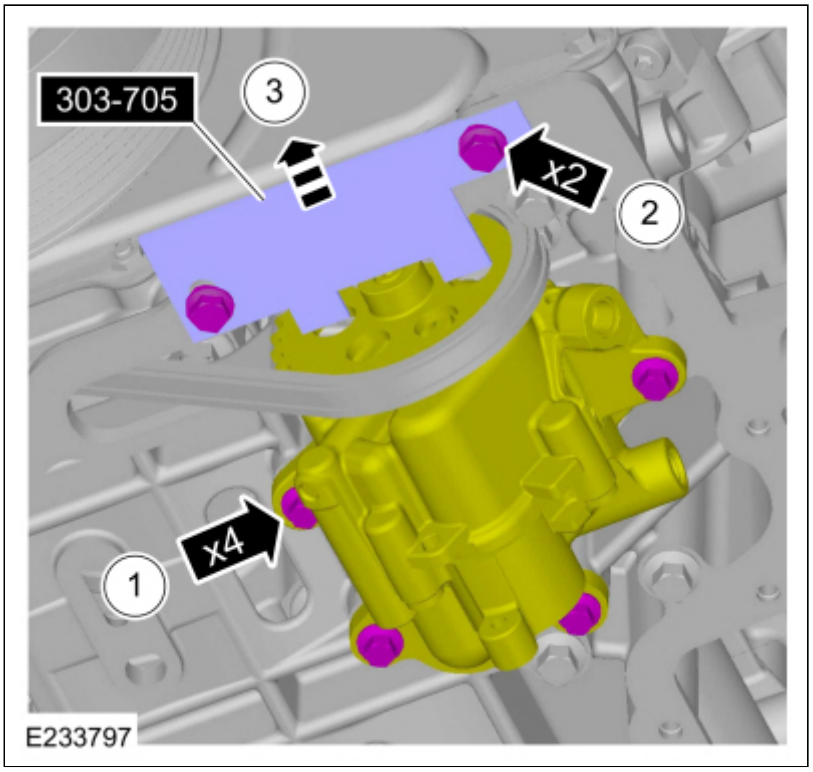
Materials

Name	Specification
Engine Oil - SAE 5W-30	WSS-M2C913-C



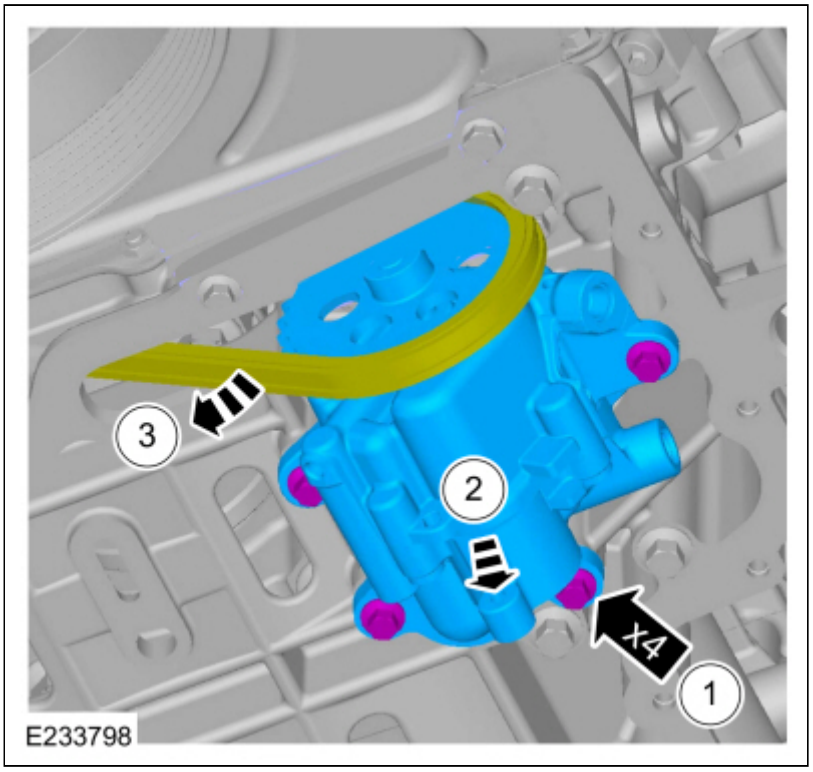
Removal

1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Oil Pan - 4WD (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
   Refer to: Oil Pan - 4x2 (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
3. 
4. **WARNING: Be prepared to collect escaping fluids.**



1. **NOTE:** *Make sure that the surface is clean and free of foreign material.*

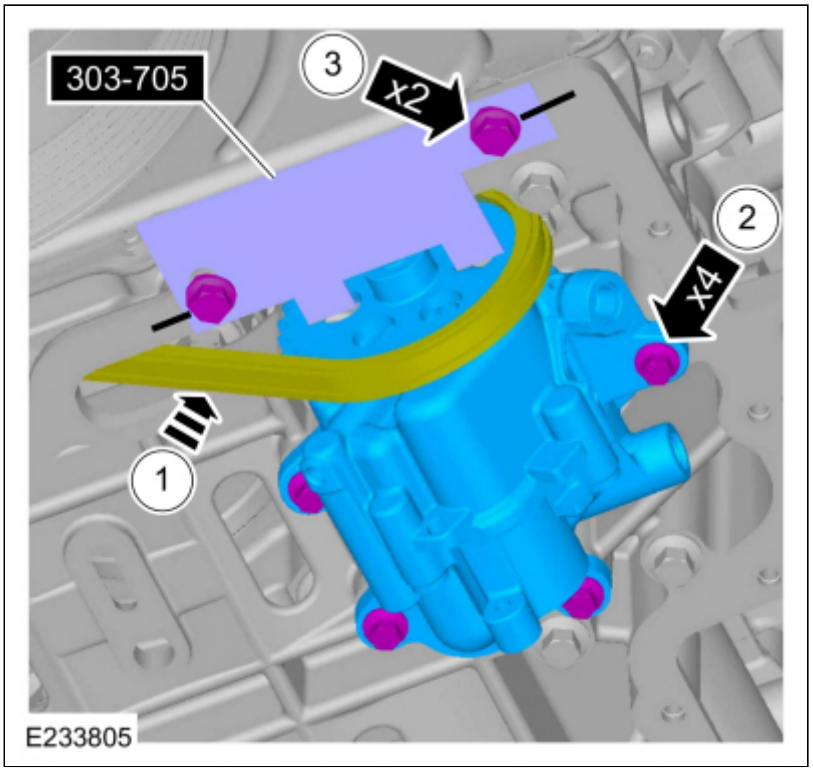
2. Install Special Service Tool: 303-705 Aligner, Oil Pump.
3. *Torque*: 15 Nm



6. **NOTE:** *Do not completely loosen the bolt at this stage.*

   Remove Special Service Tool: 303-705 Aligner, Oil Pump.

7.



Installation

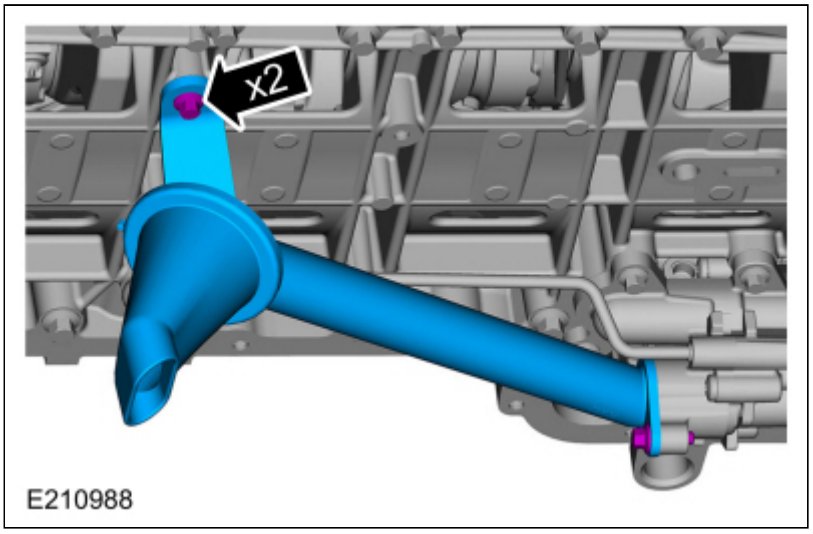
1. **NOTE:** *Only tighten the bolts finger tight at this stage.*

   NOTE: *Make sure that the installation marks are aligned.*

   Use Special Service Tool: 303-705 Aligner, Oil Pump.

2. **NOTE:** *The profile of the special tool must be in contact with the component.*

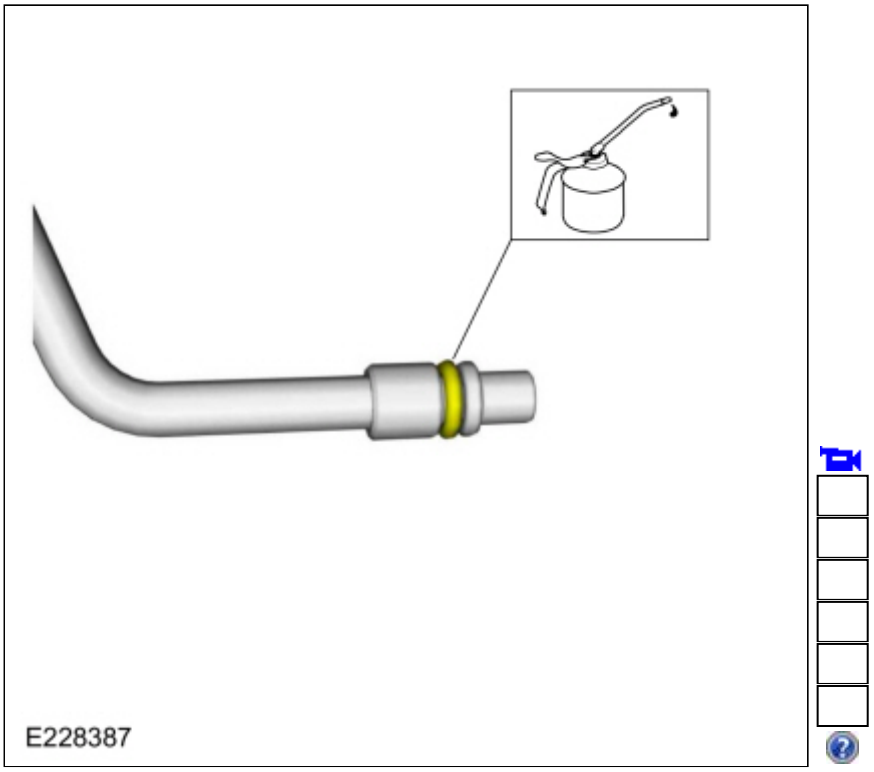
   Remove Special Service Tool: 303-705 Aligner, Oil Pump.
   Torque: 10 Nm



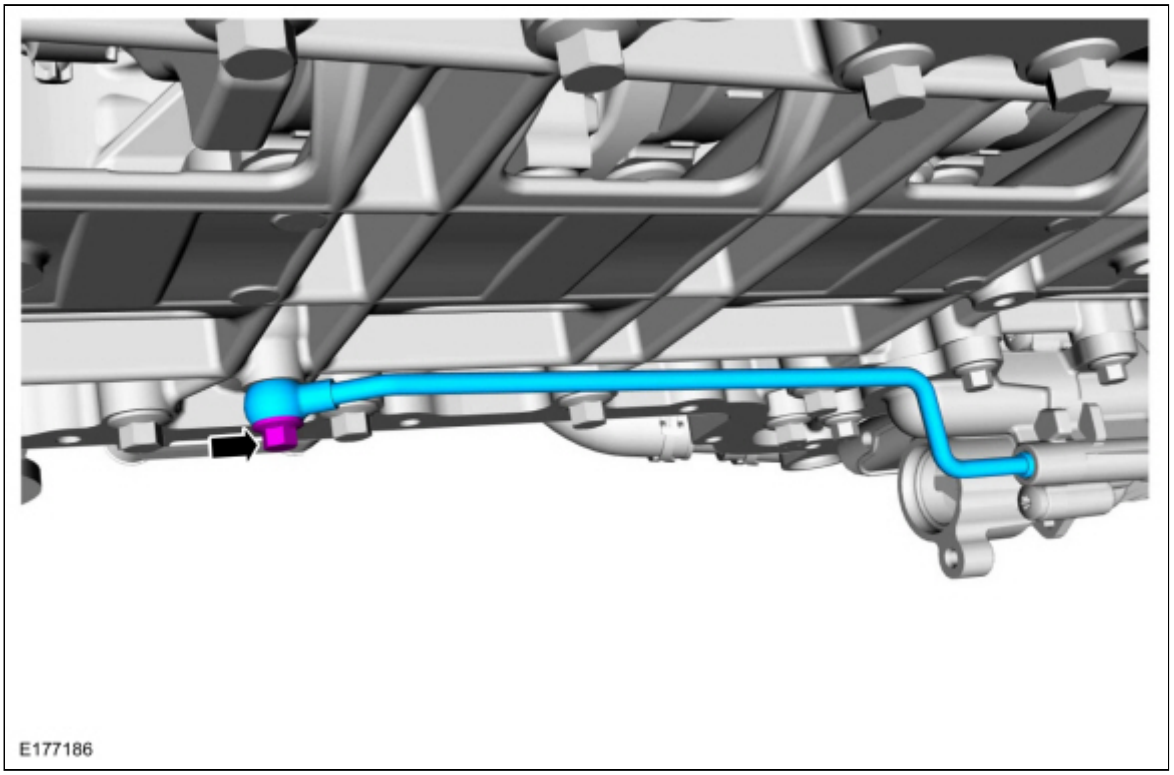
3. **NOTE:** *Lubricate the "O" ring before installing.*

   NOTE: *Make sure that a new component is installed if the O-ring is damaged.*

   Inspect the O-ring before installation.
   Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)



4. *Torque*: 10 Nm

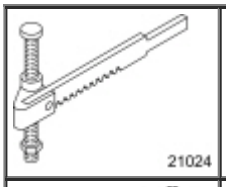


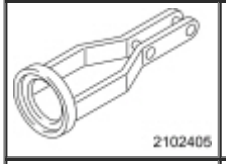
5. **NOTE:** *Lubricate the "O" ring before installing.*

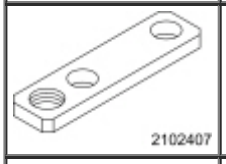
   NOTE: *Make sure that a new component is installed if the O-ring is damaged.*

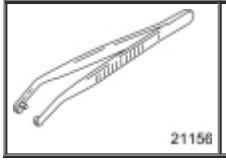
   Inspect the O-ring before installation.
   Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)

6. *Torque*: 13 Nm









7. Refer to: Oil Pan - 4WD (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
   Refer to: Oil Pan - 4x2 (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

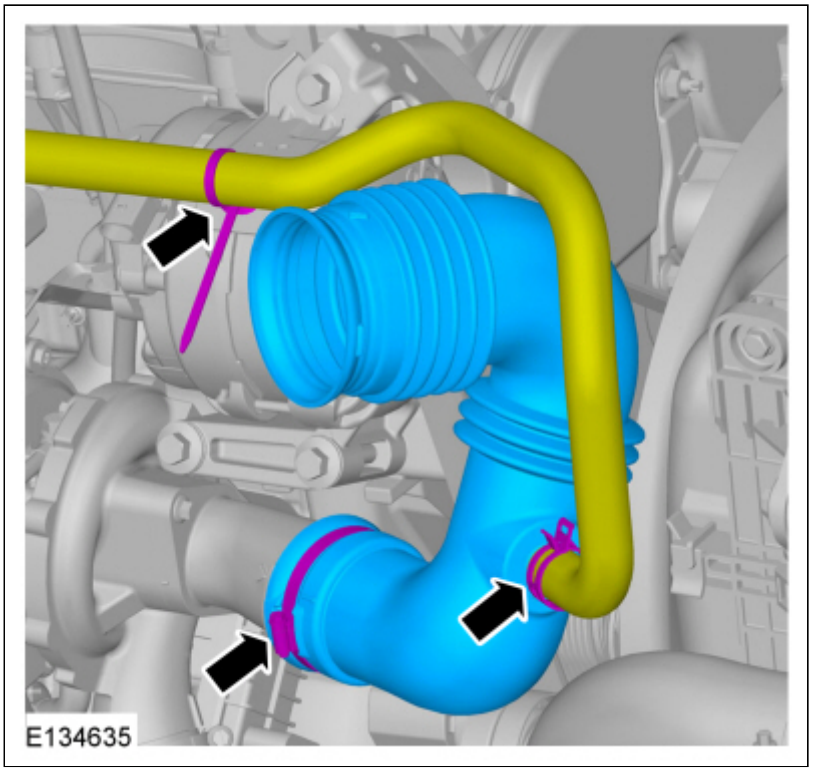
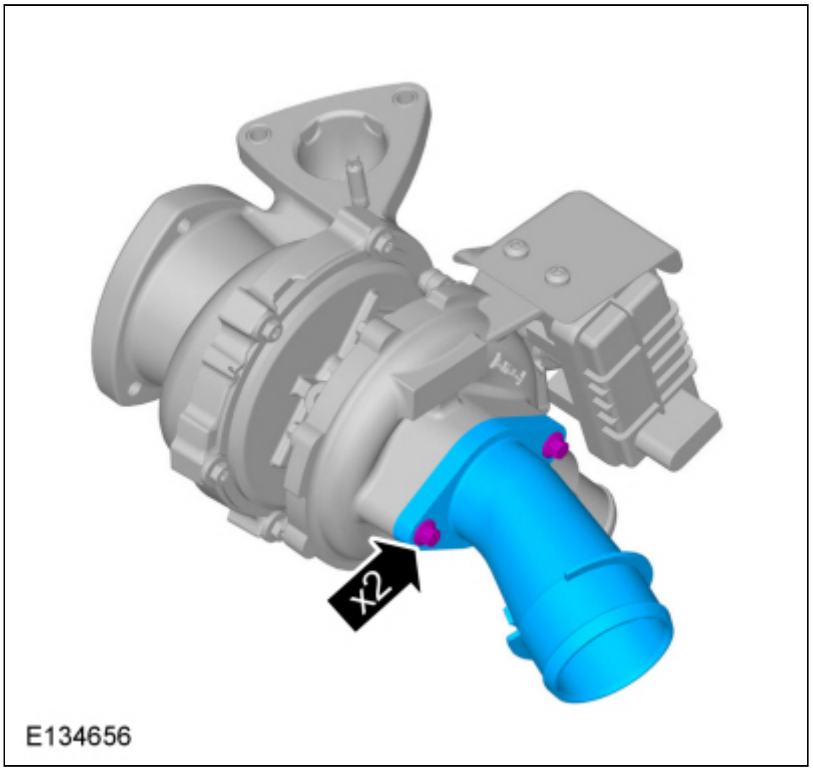
 303682	303-682 Aligner, Engine Front Cover



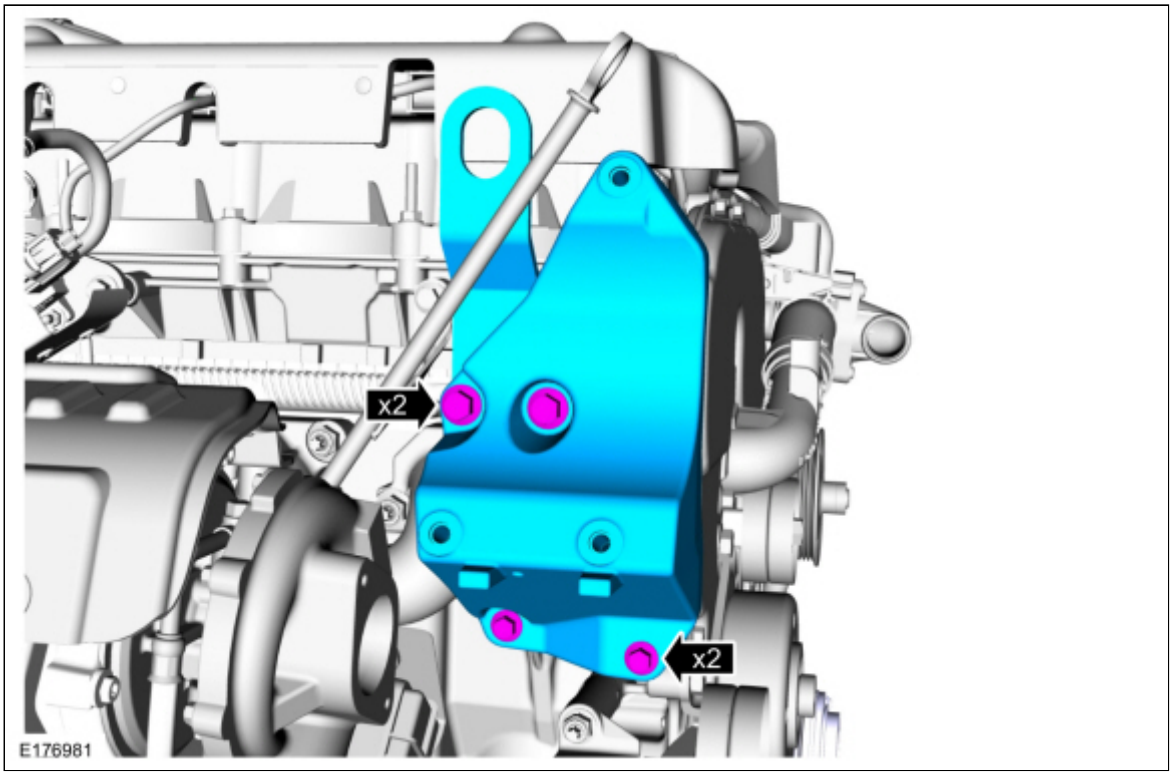
Materials

Name	Specification
Silicone Sealant	WSE-M4G323-A4

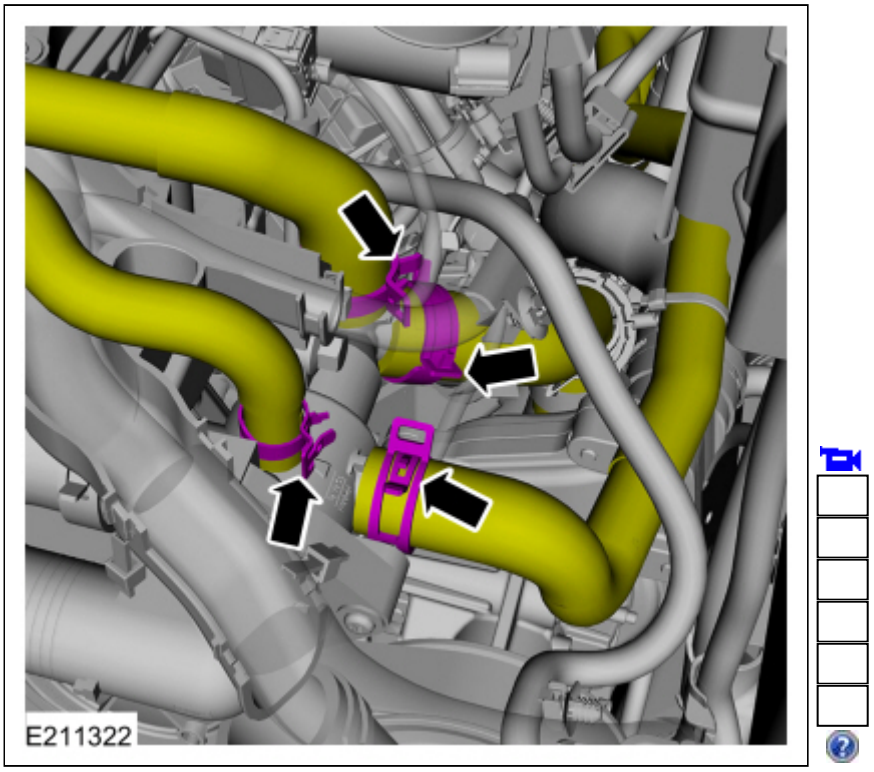


Removal

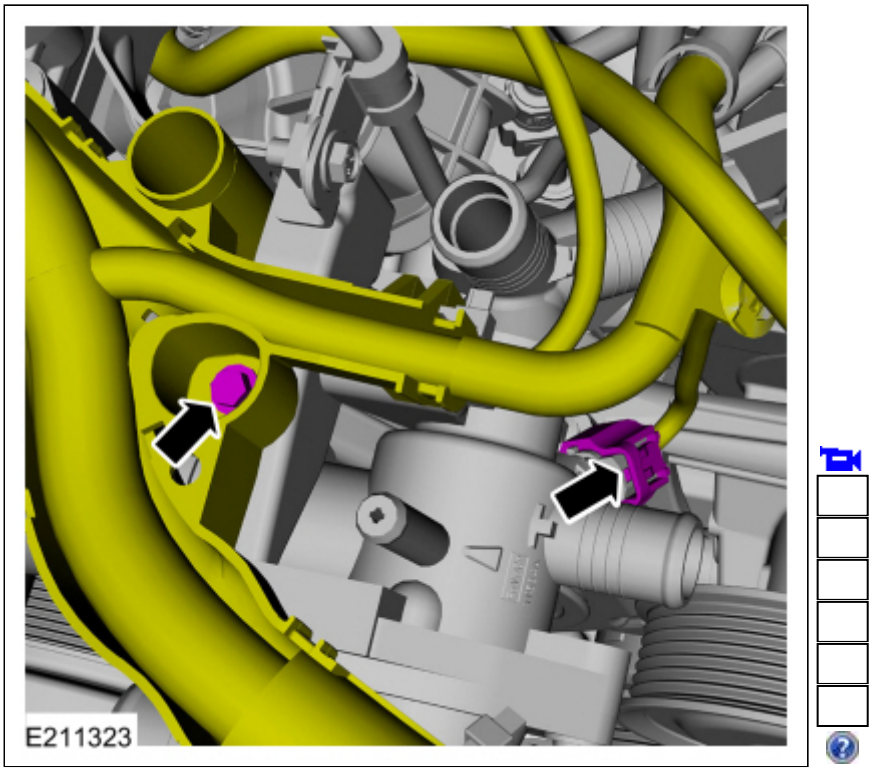
NOTE: *Removal steps in this procedure may contain installation details.*



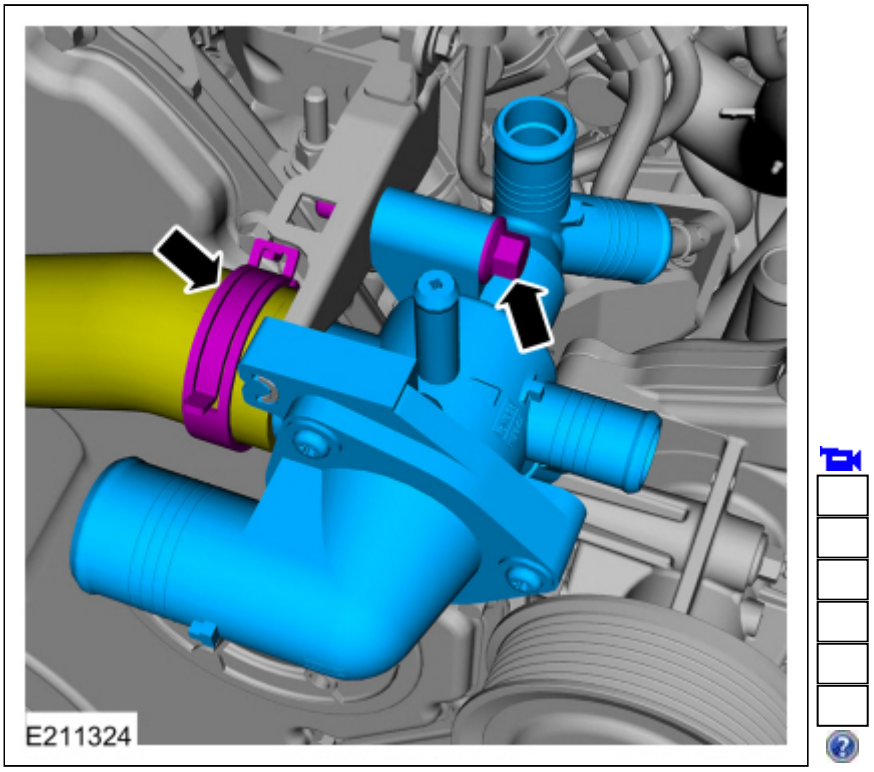
1. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
3. Refer to: Air Cleaner - 3.2L Duratorq-TDCi (Puma) Diesel (303-12C Intake Air Distribution and Filtering - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
4. Refer to: Generator - 3.2L Duratorq-TDCi (Puma) Diesel (414-02 Generator and Regulator, Removal and Installation).
5. Refer to: Engine Front Seal (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
6.



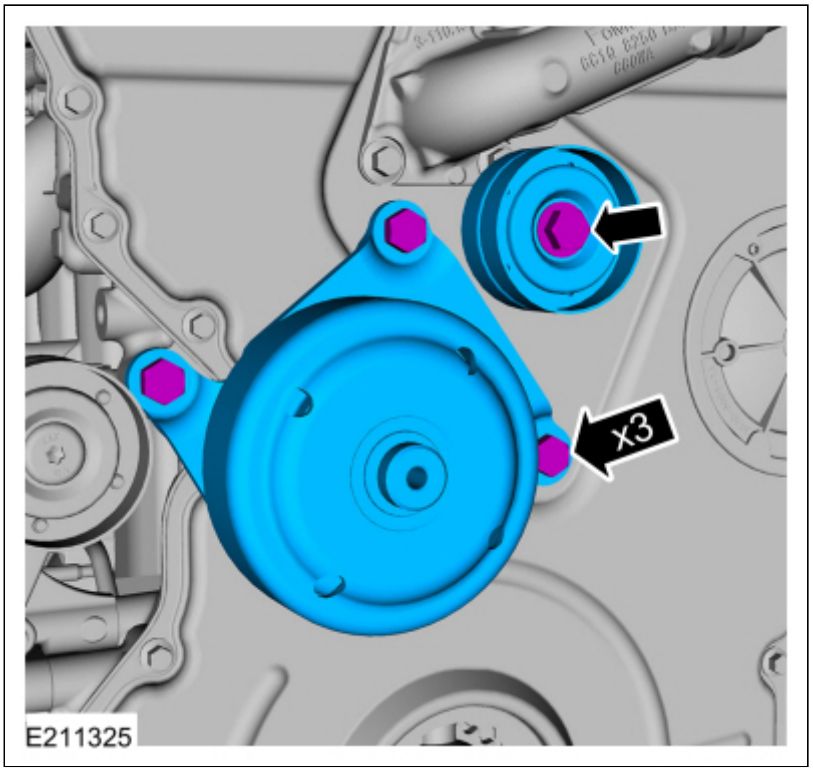
7.



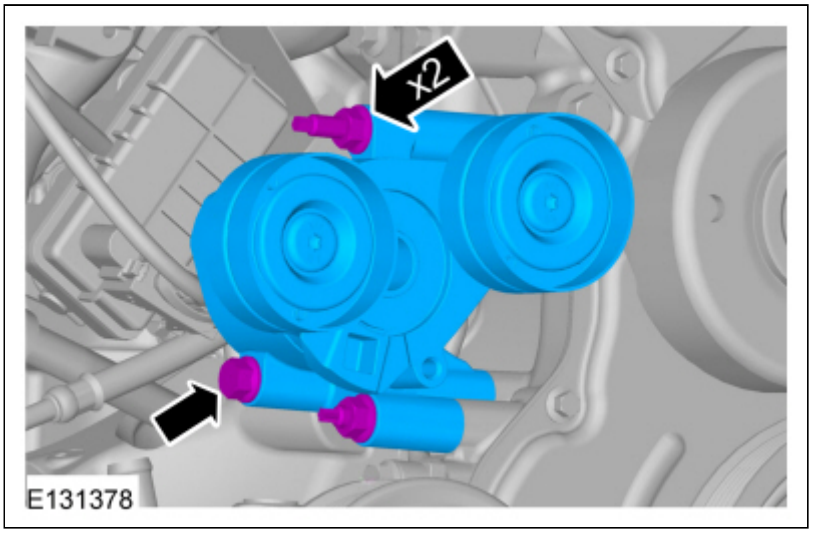
8.



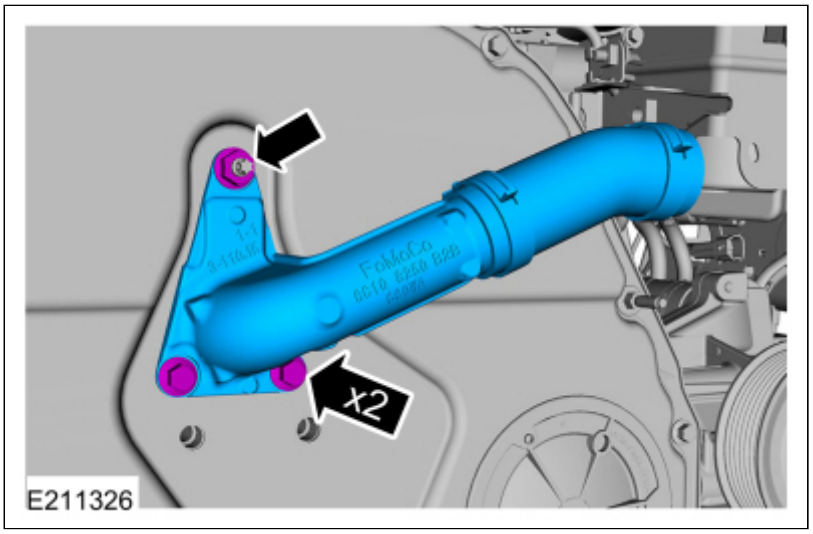
9.



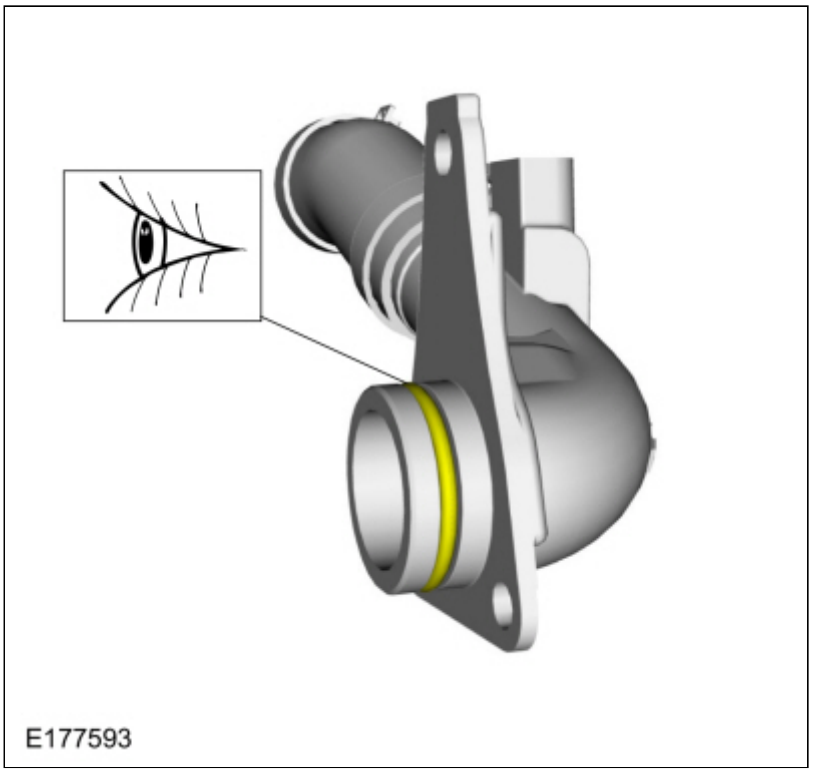
10.



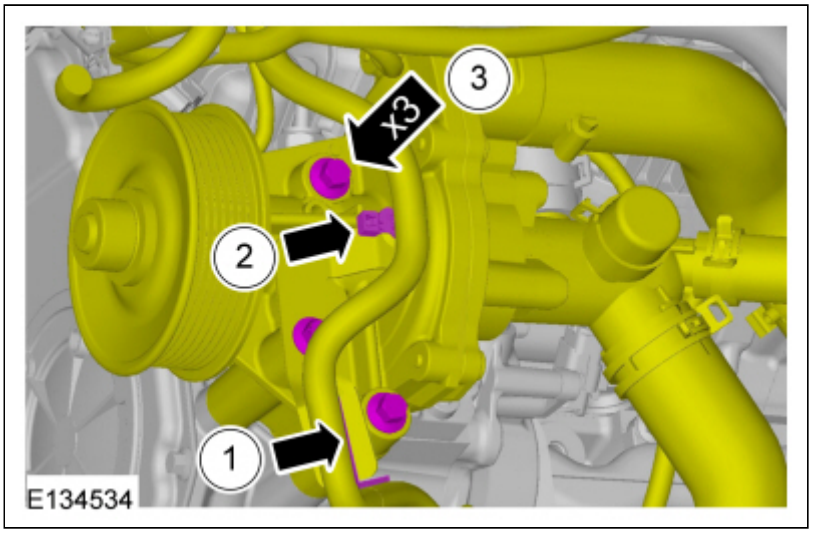
11. *Torque*: 23 Nm



12. *Torque*: 48 Nm

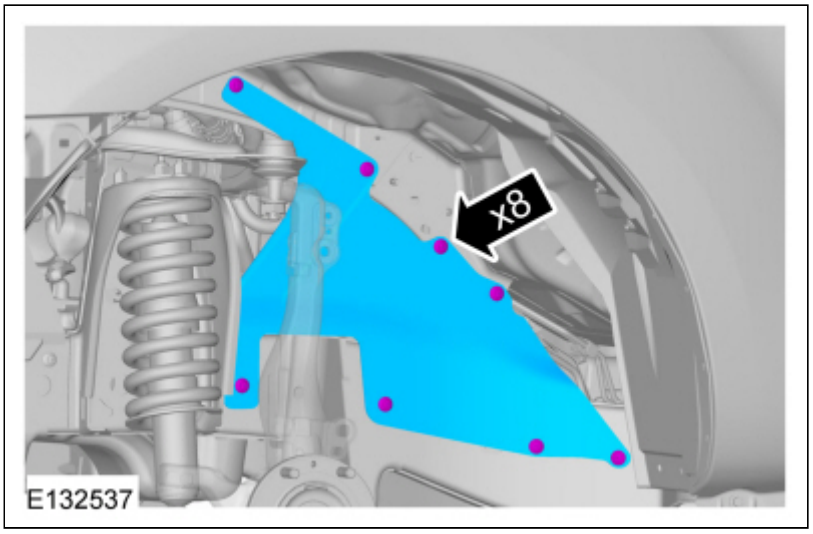


13.

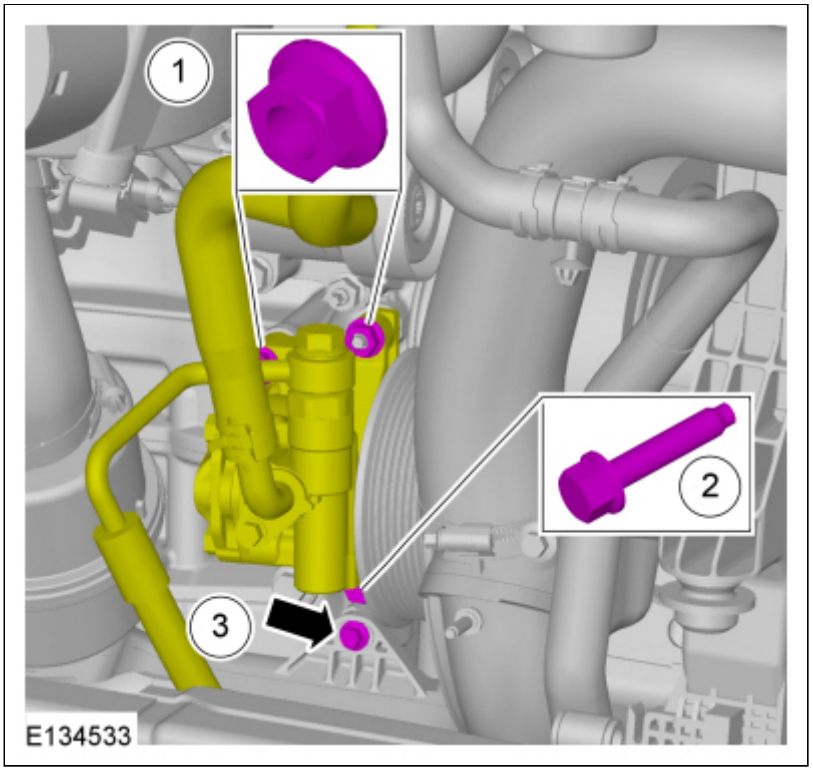


14. *Torque*: 23 Nm

15.

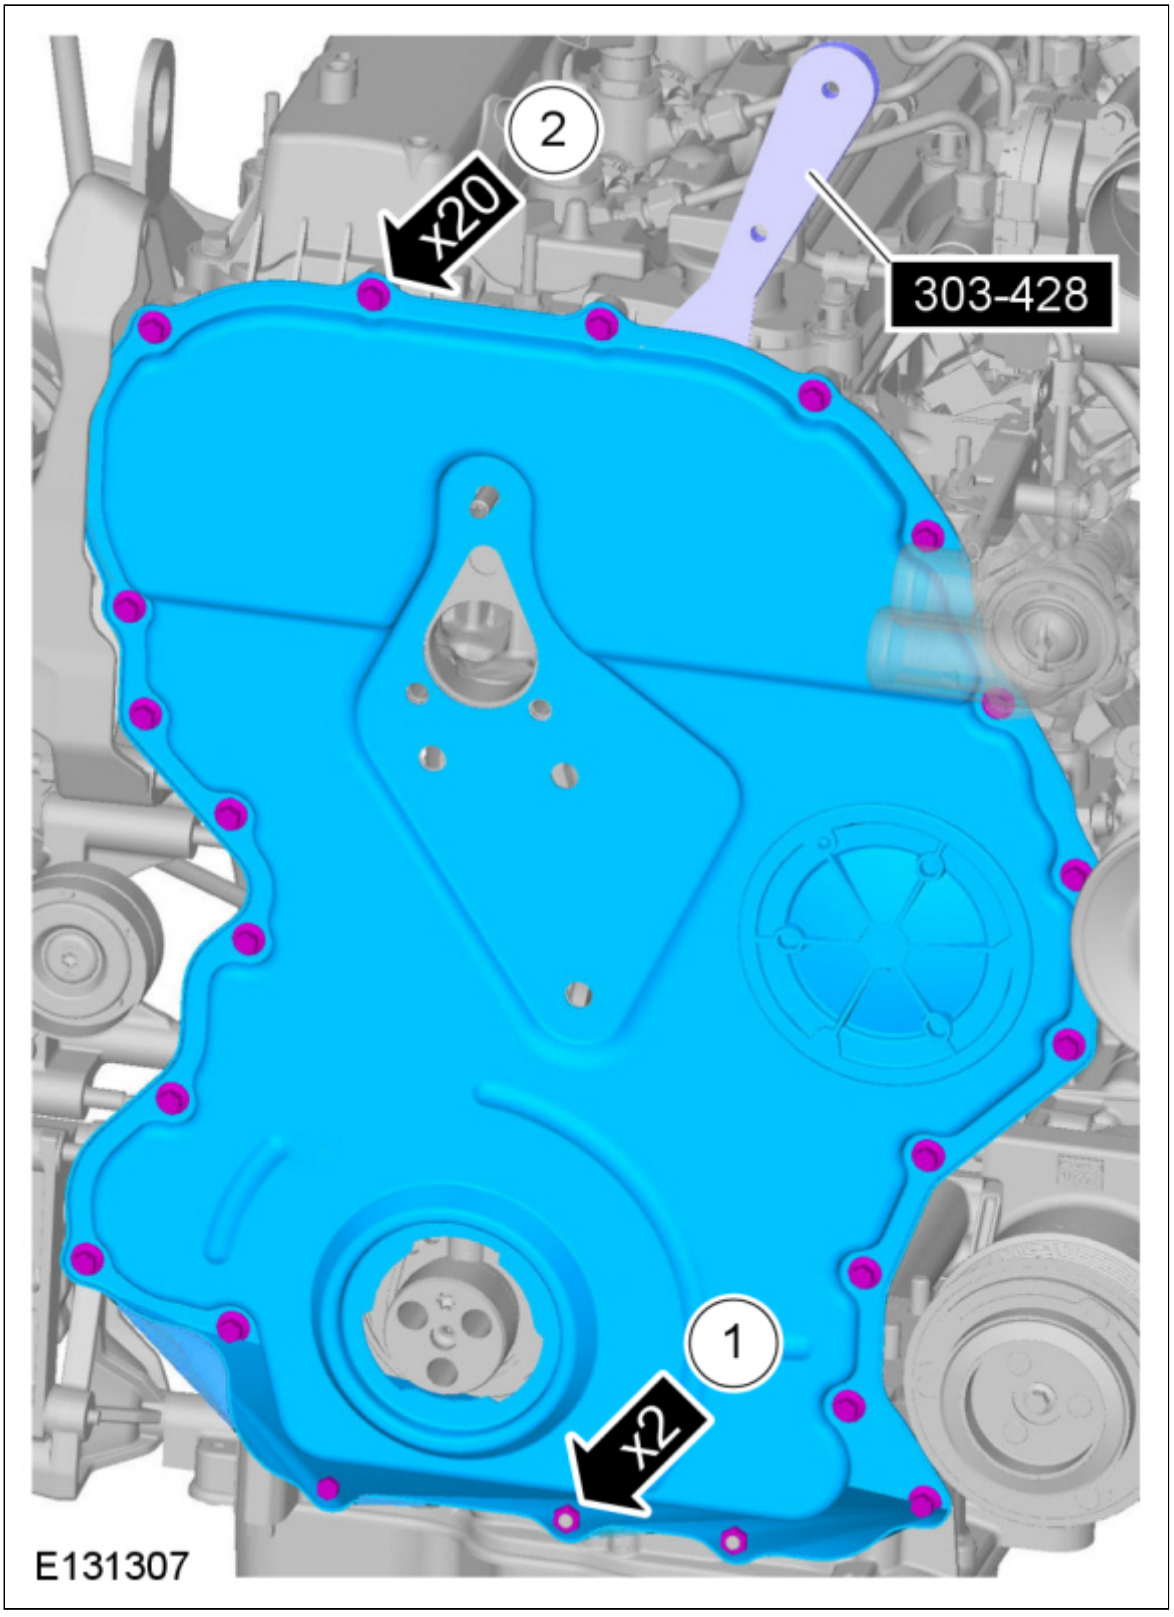


16. *Torque*:
    1: Nm
    2: Nm
    3: 23 Nm

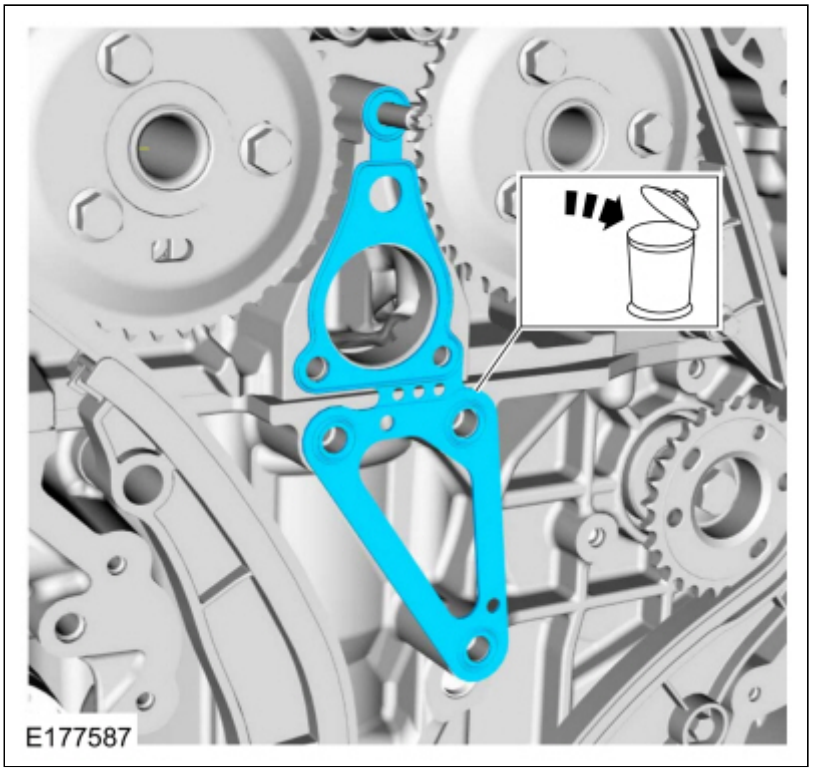


17. **NOTE:** *Remove RH side wheel only.*

    Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).



18.



19. *Torque*:
    - : 20 Nm
    - : 20 Nm
    - : 10 Nm

20. Use Special Service Tool: 303-428 Separator, Oil Pan.

21.

Installation

1. **NOTICE: Install the timing cover within five minutes of applying the sealer.**

   NOTE: *Do not damage the mating faces.*

   NOTE: *To remove oil from the cylinder block flange bonderite 1455-w wipes must be used*

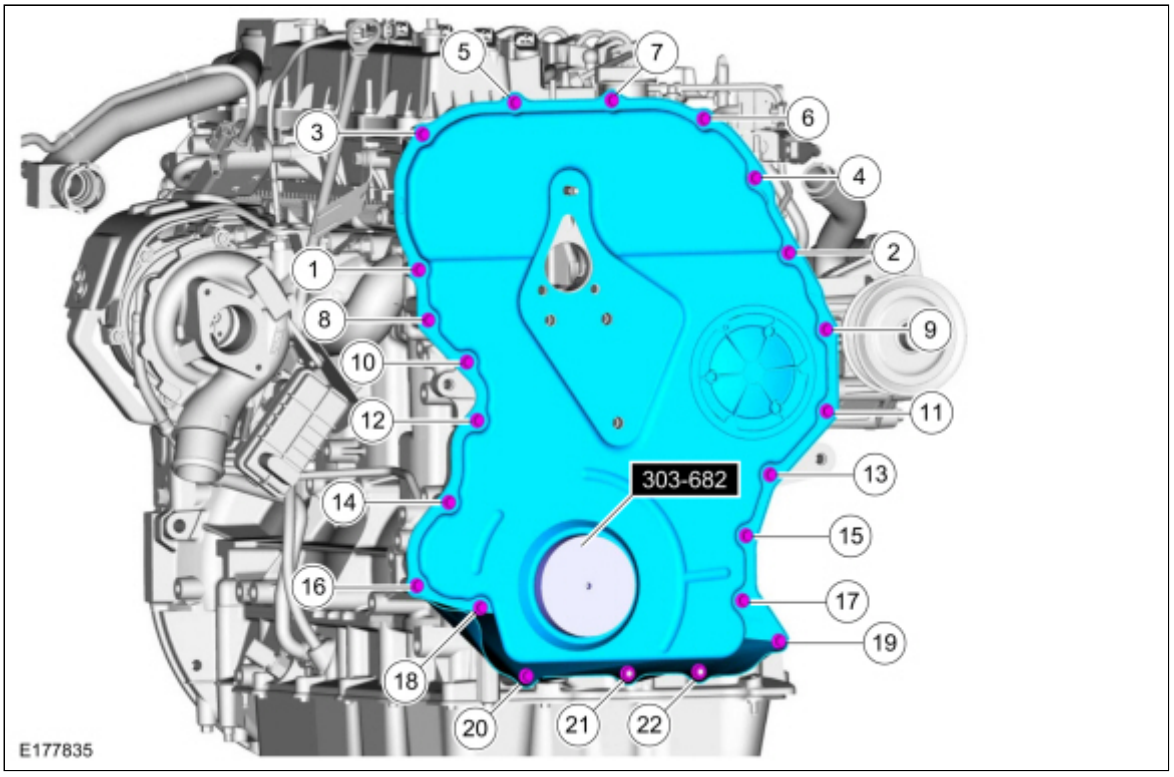
   NOTE: *Loctite 7070 or other de-contaminator must not be used on cylinder block flanges.*

   NOTE: *Always apply bonderite 1455 wipes to (4) x t-joints(block/head, block/ladderframe)*

   NOTE: *Apply bonderite 1455-w wipes to (2) x t-joints(head/cam-carrier interfaces)*

   NOTE: *One minute flash time is recommended after bonderite 1455-w application. apply different section of wipes to each t-joints and do not re-use.*

   Material: Silicone Sealant (WSE-M4G323-A4)

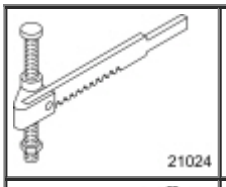


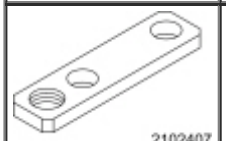
2. **NOTE:** *The component must be installed within 5 minutes of applying the sealant.*

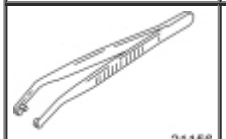
   Install a 3 mm bead of silicone sealant to the T-joints .
   Material: Silicone Sealant (WSE-M4G323-A4)

3. Using the special tool to align the engine front cover. Install the engine front cover, nuts and bolts.
   Use Special Service Tool: 303-682 Aligner, Engine Front Cover.

4. Use Special Service Tool: 303-682 Aligner, Engine Front Cover.
   Torque:
   Stage 1: 5 Nm
   Stage 2: 10 Nm
   Stage 3: 10 Nm







5. To install, reverse the removal procedure.

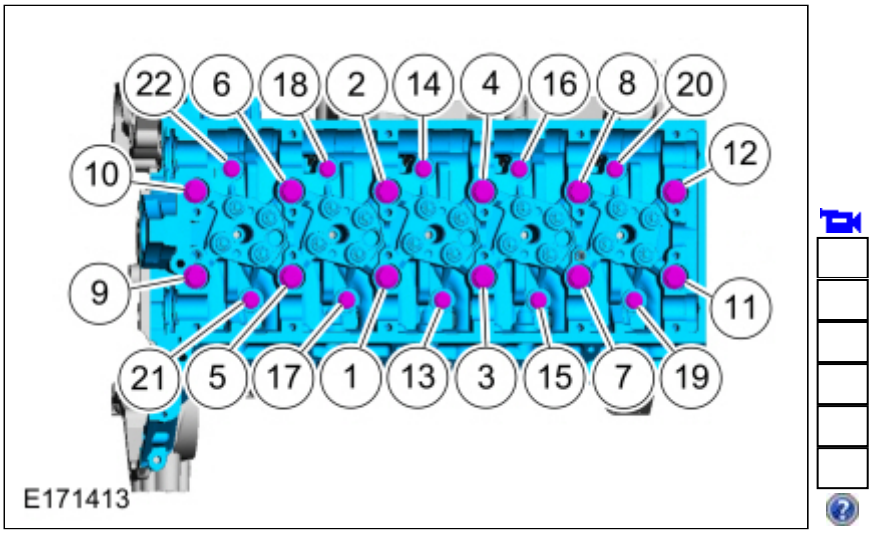
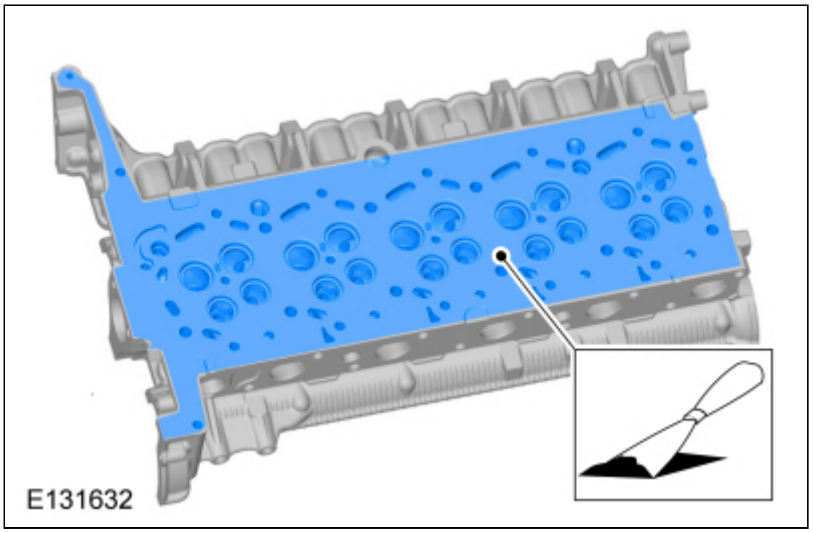
Cylinder Head



Base Part Number: 6051

Special Tool(s) / General Equipment

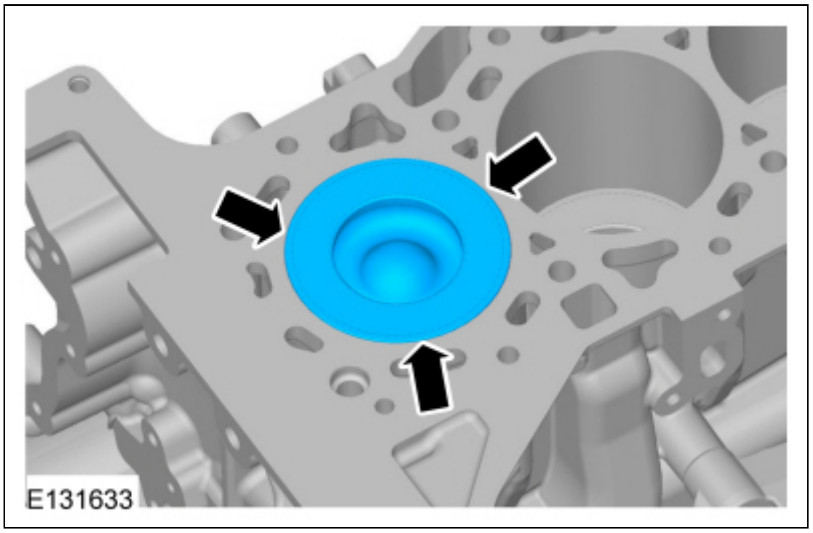
 15046	205-069 Dial Indicator Gauge (Metric)
 15022a	205-070 Holding Fixture, Dial Indicator Gauge
 21183	303-432 Holding Fixture, Dial Indicator Gauge (Cylinder Liner Protrusion)



Removal

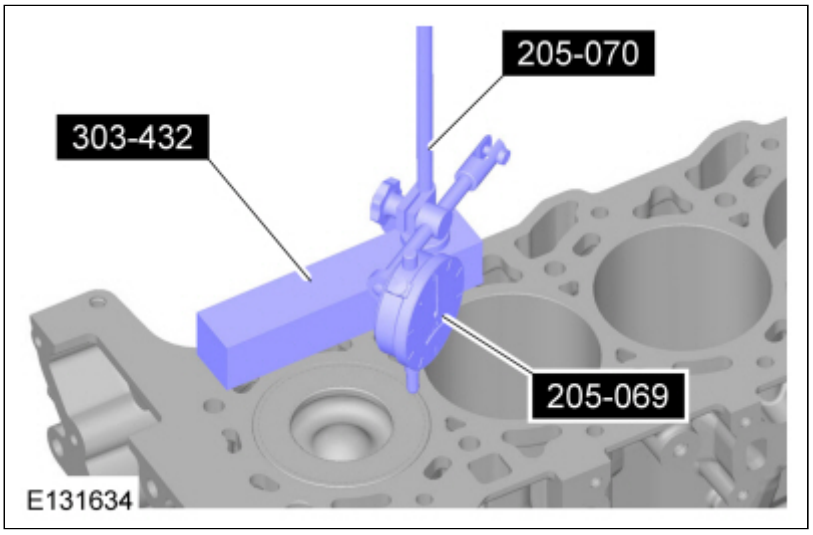
NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Intake Manifold (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
   Refer to: Brake Vacuum Pump - RHD (206-07 Power Brake Actuation, Removal and Installation).
   Refer to: Exhaust Gas Recirculation (EGR) Cooler - 2.2L Duratorq-TDCi (118kW/160PS) - Puma (303-08B Engine Emission Control - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
   Refer to: Exhaust Manifold (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
   Refer to: Camshafts (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
2. 



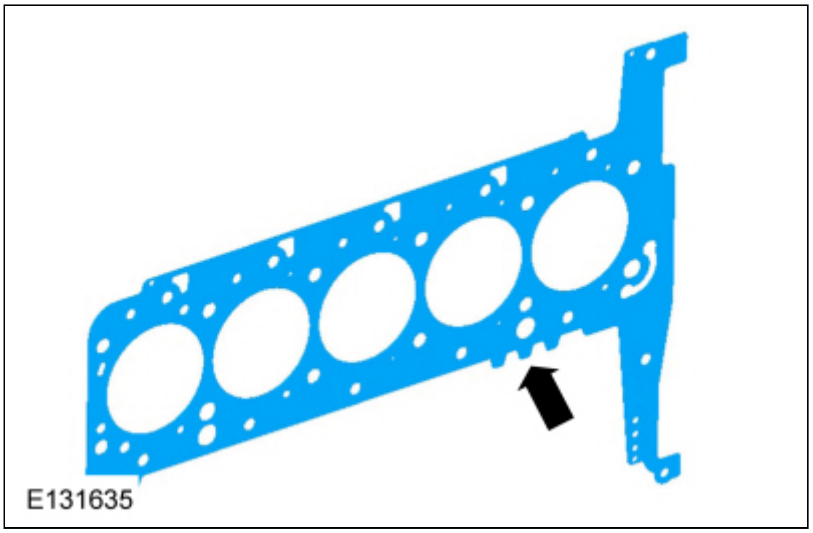
Installation

1. **WARNING: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges that make leak paths. Use a plastic scraping tool to remove all traces of the head gasket.**



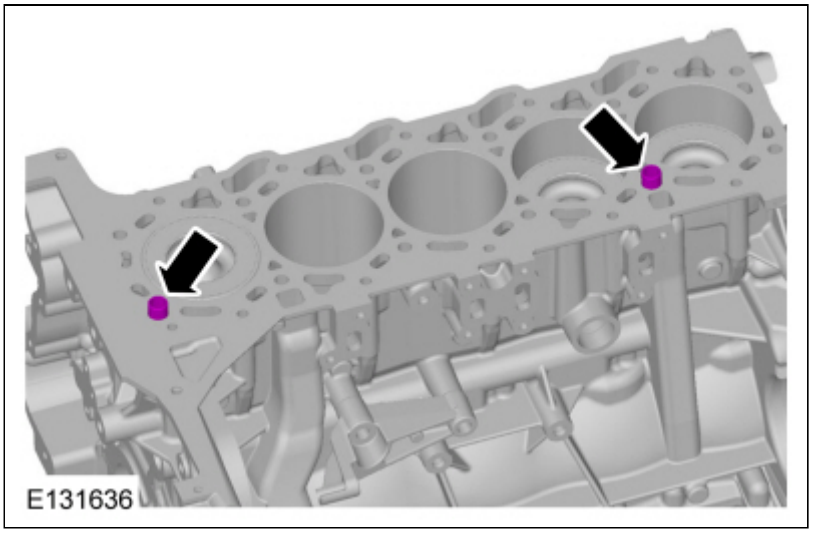
2. **NOTE:** *Measure the piston protrusion of each cylinder at top dead center (TDC).*

   Measure the distance between the piston crown and the cylinder block at the points indicated.



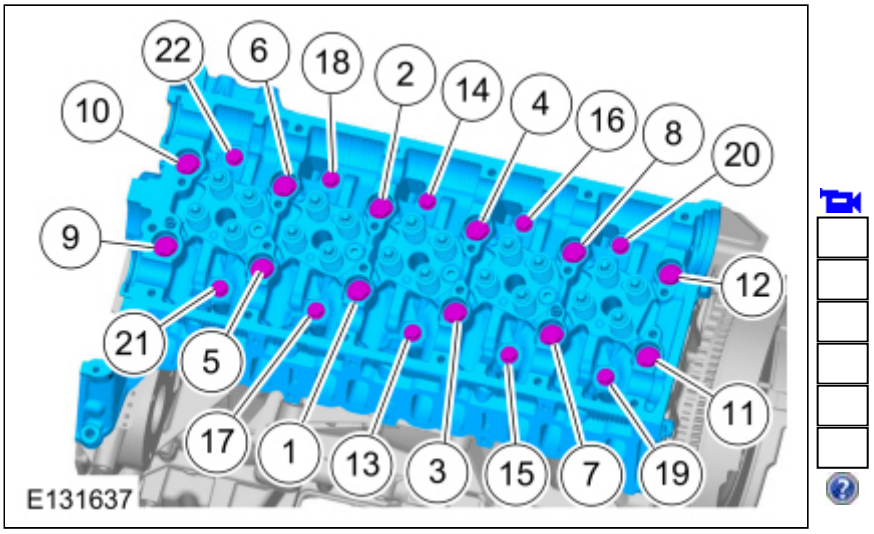
3. **NOTE:** *The largest measurement determines the choice of the cylinder head gasket.*

   Use Special Service Tool: 205-069 Dial Indicator Gauge (Metric). , 205-070 Holding Fixture, Dial Indicator Gauge. , 303-432 Holding Fixture, Dial Indicator Gauge (Cylinder Liner Protrusion).



4. **NOTE:** *Note the thickness of the gasket.*

   NOTE: *Make sure that a new component is installed.*

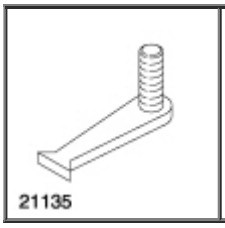


5.

6. **NOTICE: Make sure that new cylinder head bolts are installed.**

   NOTE: *Install all the bolts finger tight before final tightening.*

   Torque:
   Bolts 1 to 12: 10 Nm
   Bolts 13 to 22: 5 Nm
   Bolts 1 to 12: 20 Nm
   Bolts 13 to 22: 10 Nm
   Bolts 1 to 12: 35 Nm
   Bolts 13 to 22: 20 Nm
   Bolts 1 to 12: 45 Nm
   Bolts 13 to 22: 26 Nm
   Bolts 1 to 12: 90°
   Bolts 13 to 22: 90°
   Bolts 1 to 12: 90°
   Bolts 13 to 22: 90°



7. Refer to: Camshafts (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

Crankshaft Rear Seal

Base Part Number: 6701

Special Tool(s) / General Equipment

 21135	303-254 Locking Tool, Flywheel

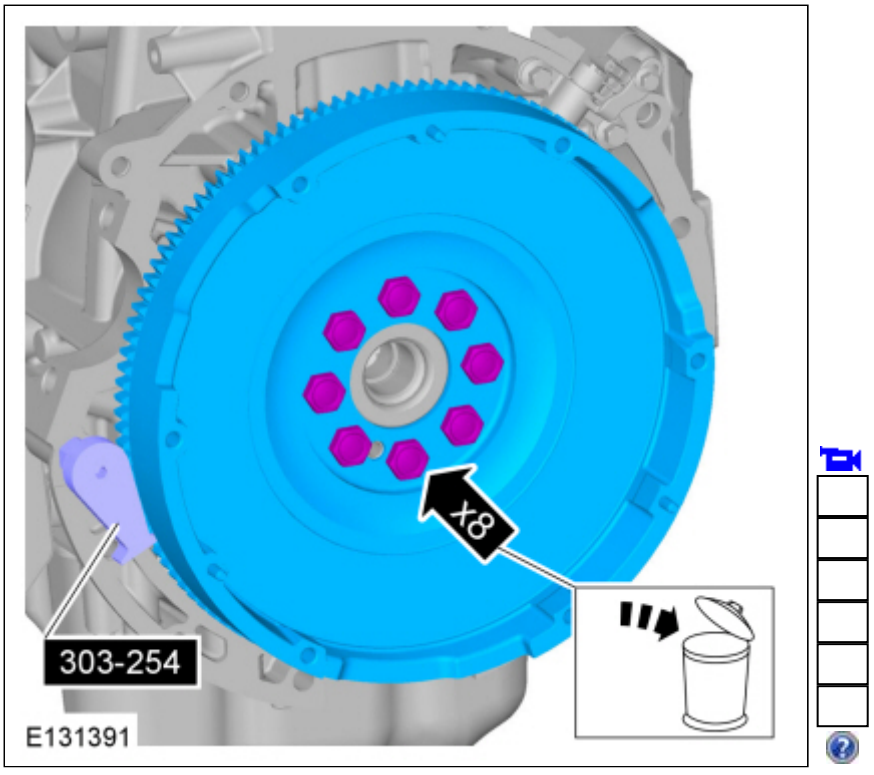
Materials

Name	Specification
Silicone Sealant	WSE-M4G323-A4

Removal

NOTE: *Removal steps in this procedure may contain installation details.*

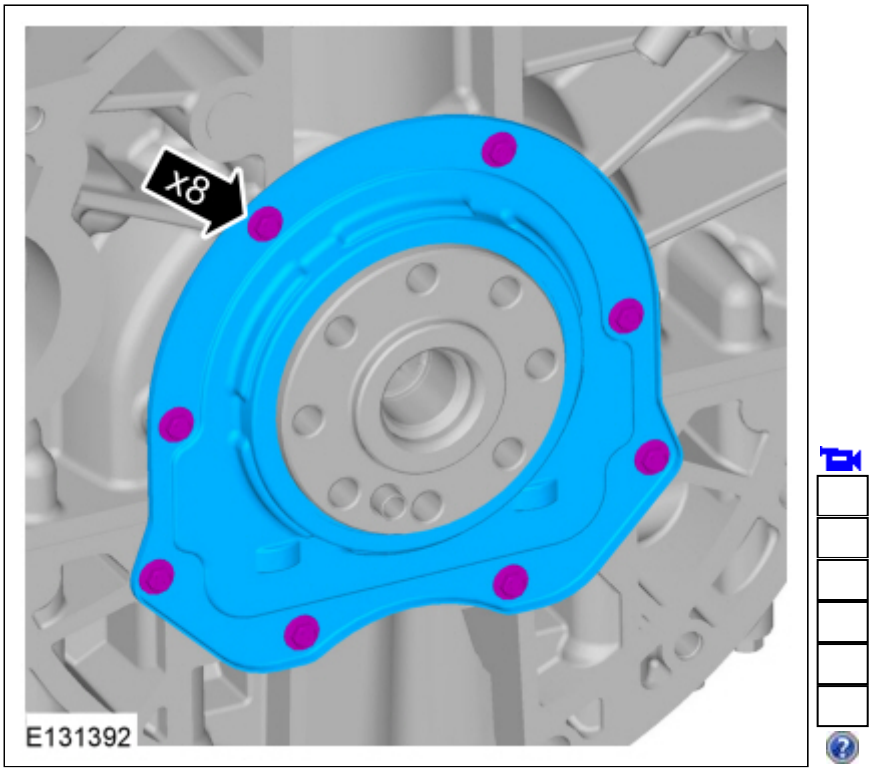
1. With the vehicle in NEUTRAL, position it on a hoist.
   Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).



Vehicles with automatic transmission

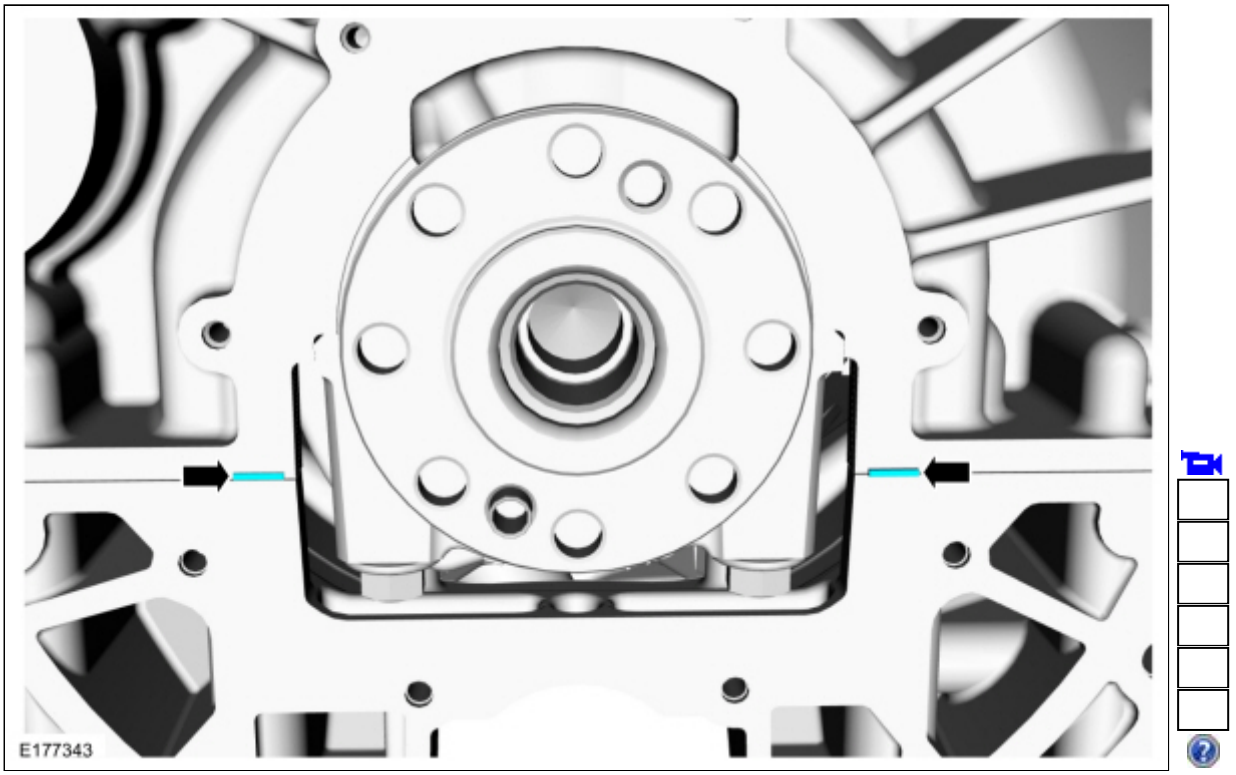
2. Refer to: Flexplate (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

Vehicles with manual transmission



3. Refer to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).

4. Use Special Service Tool: 303-254 Locking Tool, Flywheel.

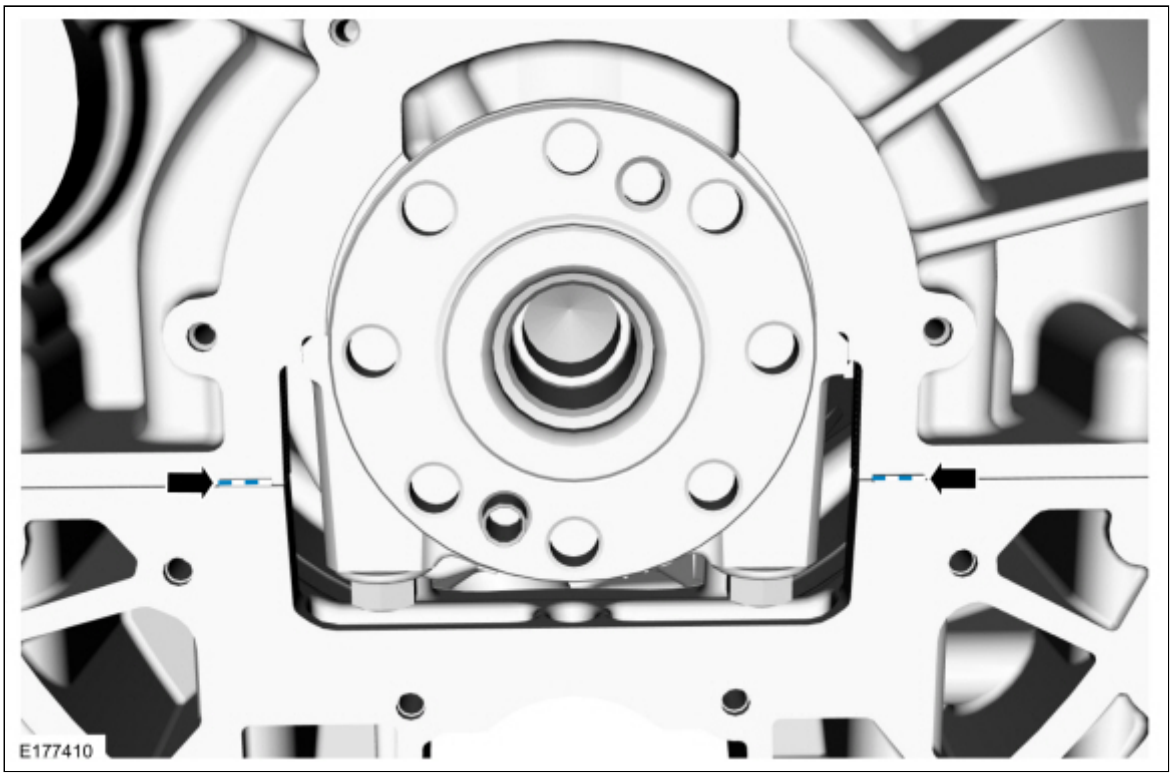


All vehicles

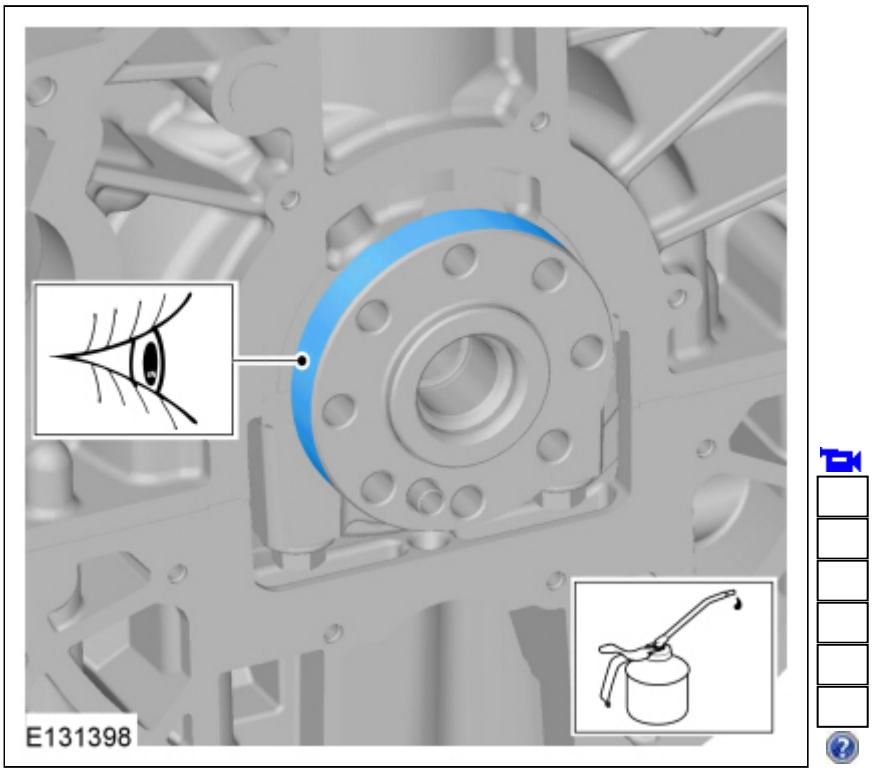
5.

6. **NOTICE: Use care when cleaning the sealing surfaces or damage to the foam pads can occur.**

   Inspect the two foam pads on the ladder frame gaskets.



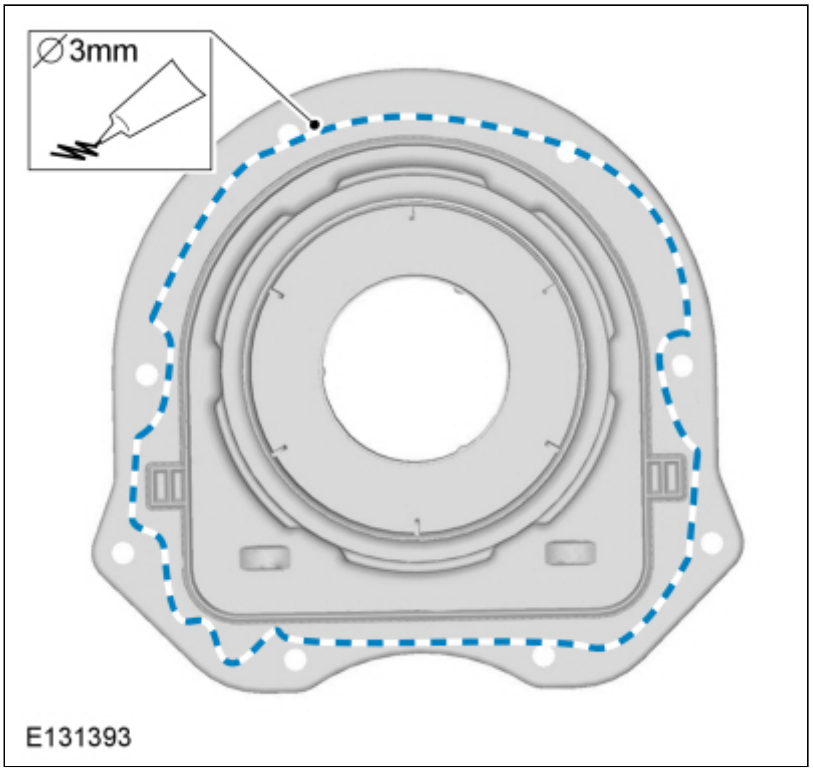
Installation



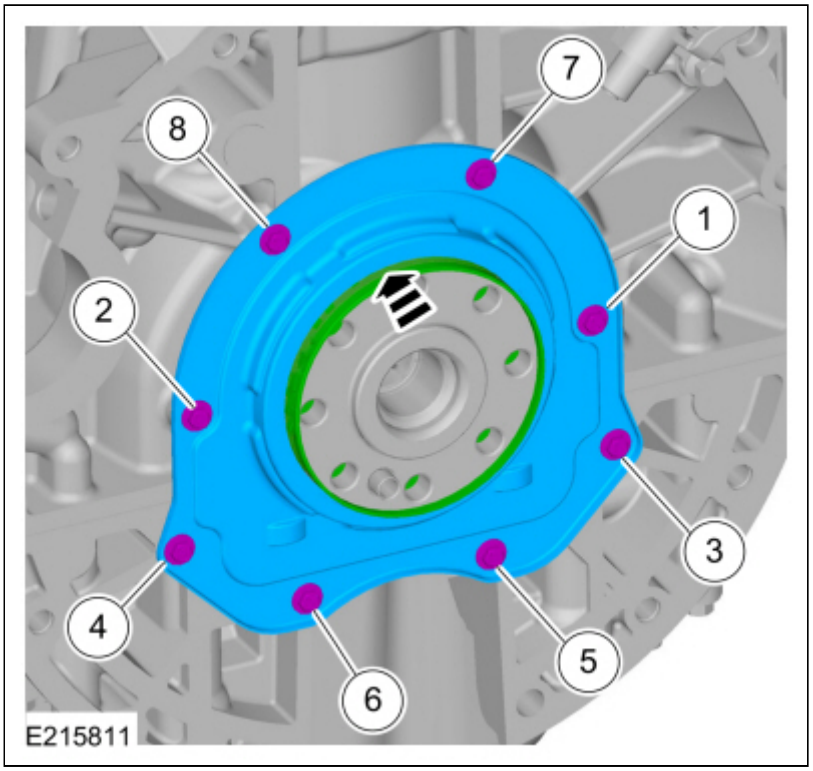
All vehicles

1. **NOTE:** *Make sure that the mating faces are clean and free of foreign material.*

   If the foam pads are not present on inspection, apply a bead of Silicone Sealant in the location.
   Material: Silicone Sealant (WSE-M4G323-A4)

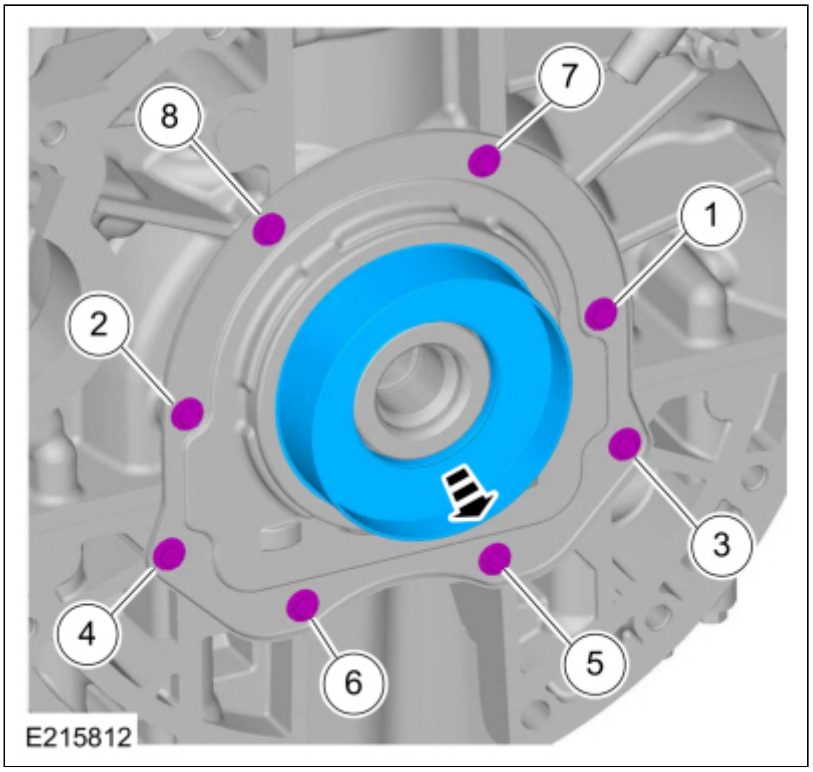


2.



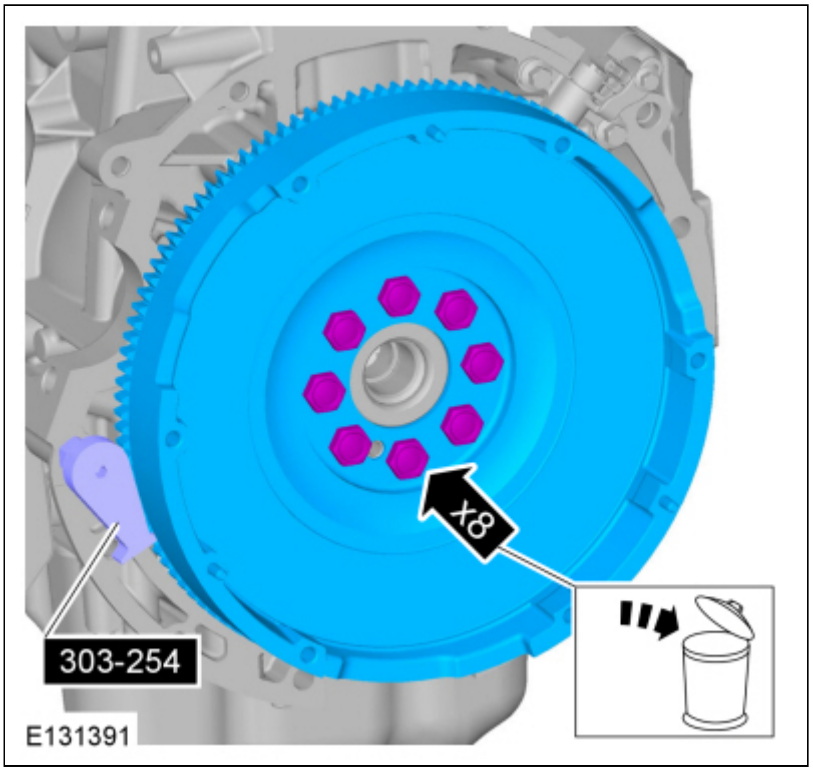
3. **NOTE:** *Install the new crankshaft rear seal carrier within five minutes of applying the recommended sealant.*

   Material: Silicone Sealant (WSE-M4G323-A4)



4. **NOTICE: A new crankshaft rear seal carrier is supplied with an alignment sleeve that must not be removed until the crankshaft rear seal is fully installed. Failure to follow this instruction may result in damage to the vehicle.**

   Hand tighten the bolts at this stage.



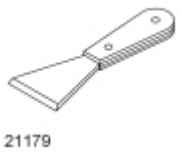
5. **NOTE:** *New crankshaft rear seal carriers are supplied with an alignment sleeve which must be removed after installation.*

   Torque: 10 Nm

Vehicles with manual transmission

6. Refer to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
7. Use Special Service Tool: 303-254 Locking Tool, Flywheel.

Vehicles with automatic transmission



8. Refer to: Flexplate (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

Oil Pan - 4WD

Base Part Number: 6675

Special Tool(s) / General Equipment

 2114001	303-290-01 Adapter for 303-290A
 30329003A	303-290-03A Adapter for 303-290A
 E63421	303-290B Support Bar, Engine
 21179	303-428 Separator, Oil Pan
Plastic Scraper	
Transmission Jack	
Interior Trim Remover	

Materials

Name	Specification
Silicone Sealant	WSE-M4G323-A4
Silicone Sealant	WSS-M4G323-A8

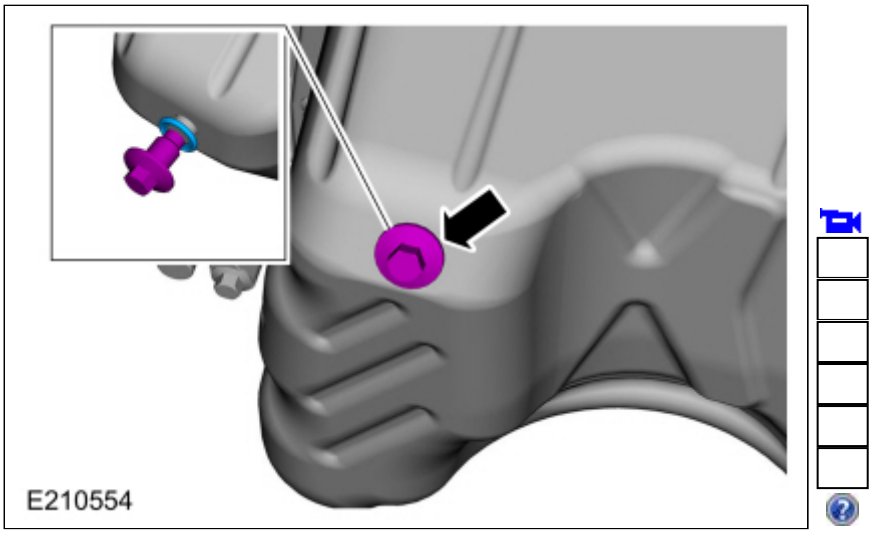
Removal

1. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
2. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

Vehicles With: Electronic Power Assist Steering (EPAS)

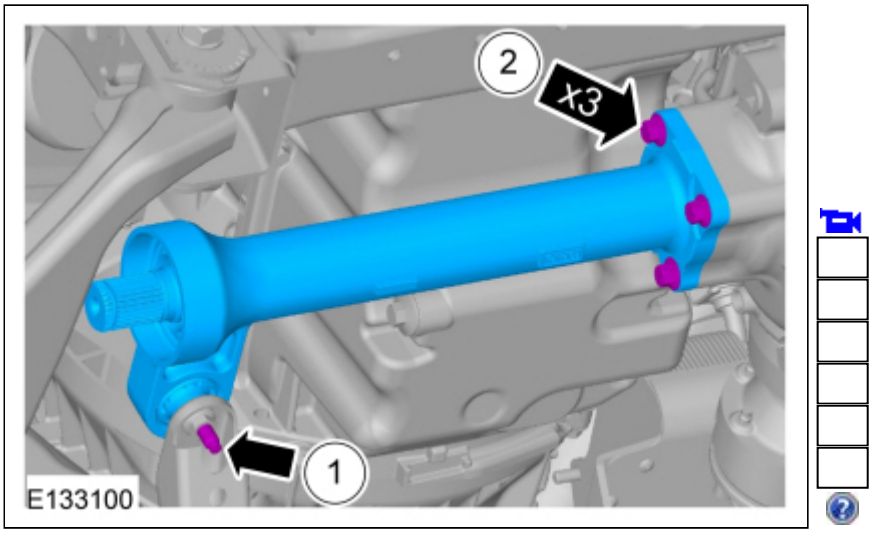
3. Refer to: Steering Gear - RHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
   Refer to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).

Vehicles With: Hydraulic Power Assist Steering (HPAS)



4. Refer to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).

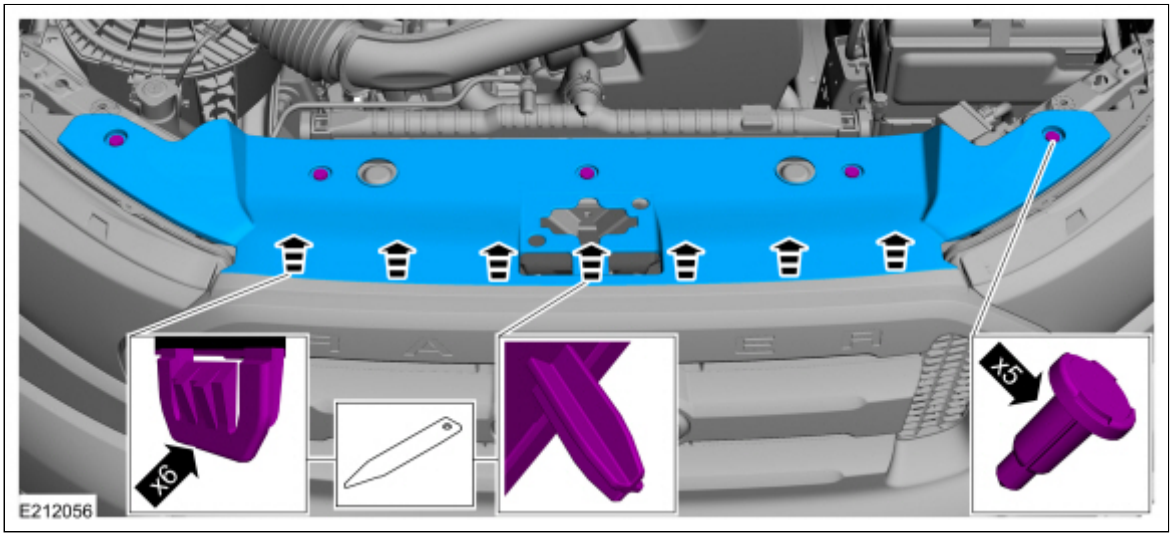
Refer to: Steering Gear - RHD 4WD/RHD RWD/RHD (211-02A Power Steering, Removal and Installation).



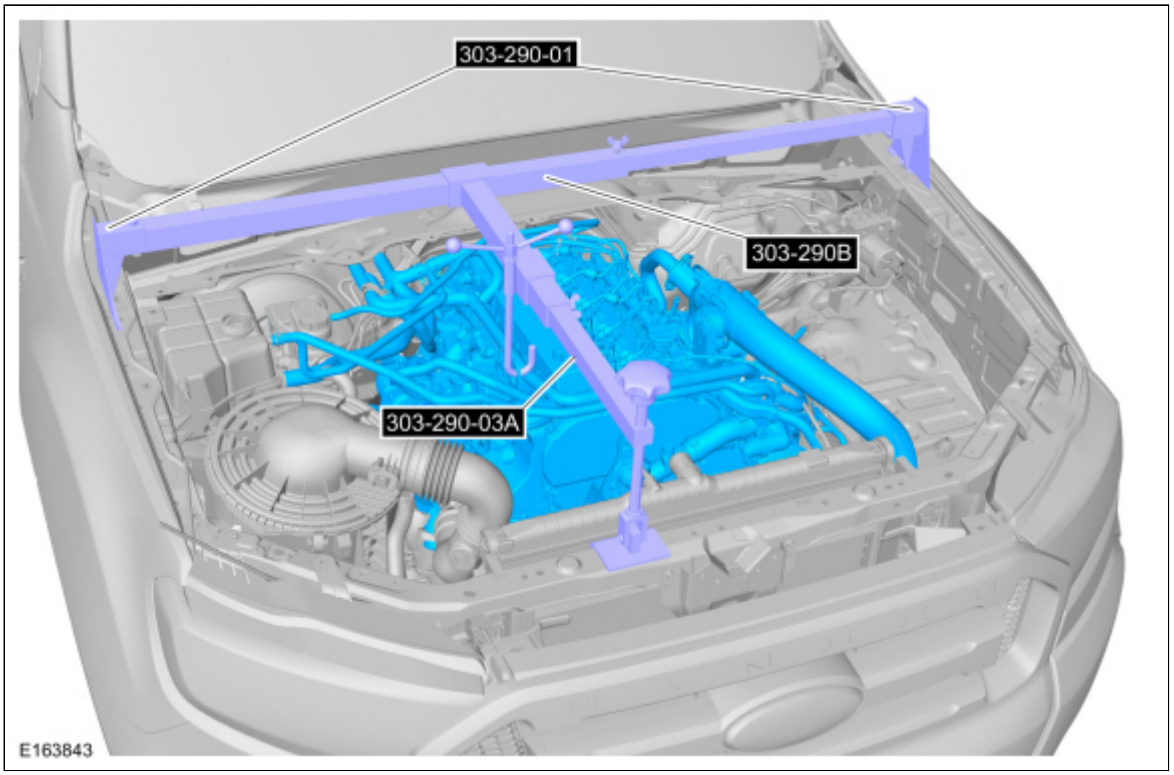
All vehicles

5. Raise the vehicle.
6. Refer to: Differential Draining and Filling (205-03 Front Drive Axle/Differential, General Procedures).
7. **WARNING: Be prepared to collect escaping fluids.**

   Drain the oil pan into a suitable container.

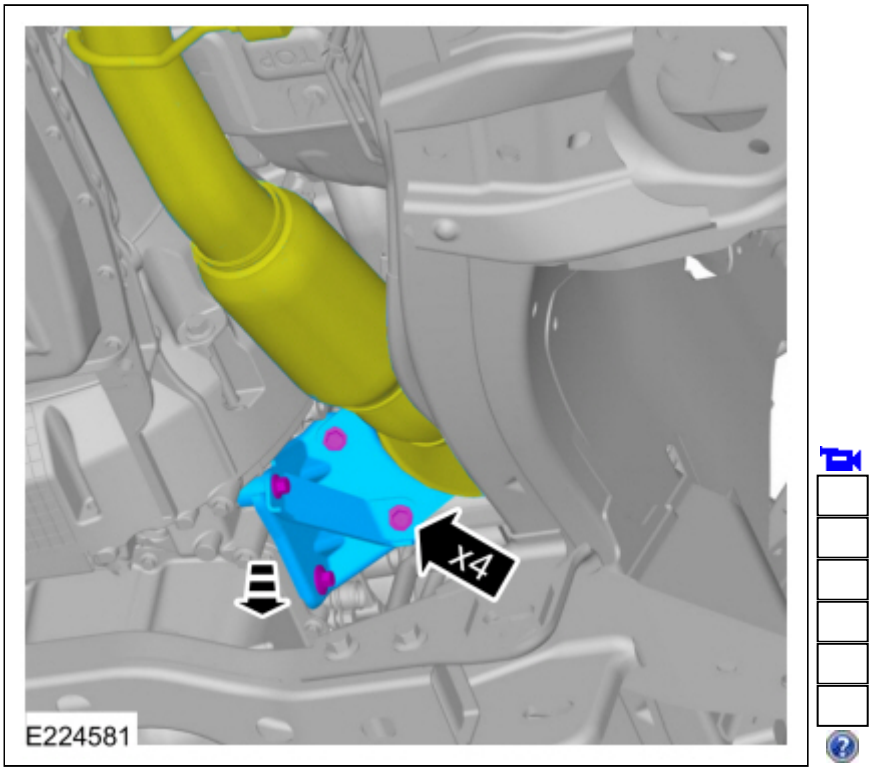


8. Refer to: Front Halfshaft RH (205-04 Front Drive Halfshafts, Removal and Installation).
9.

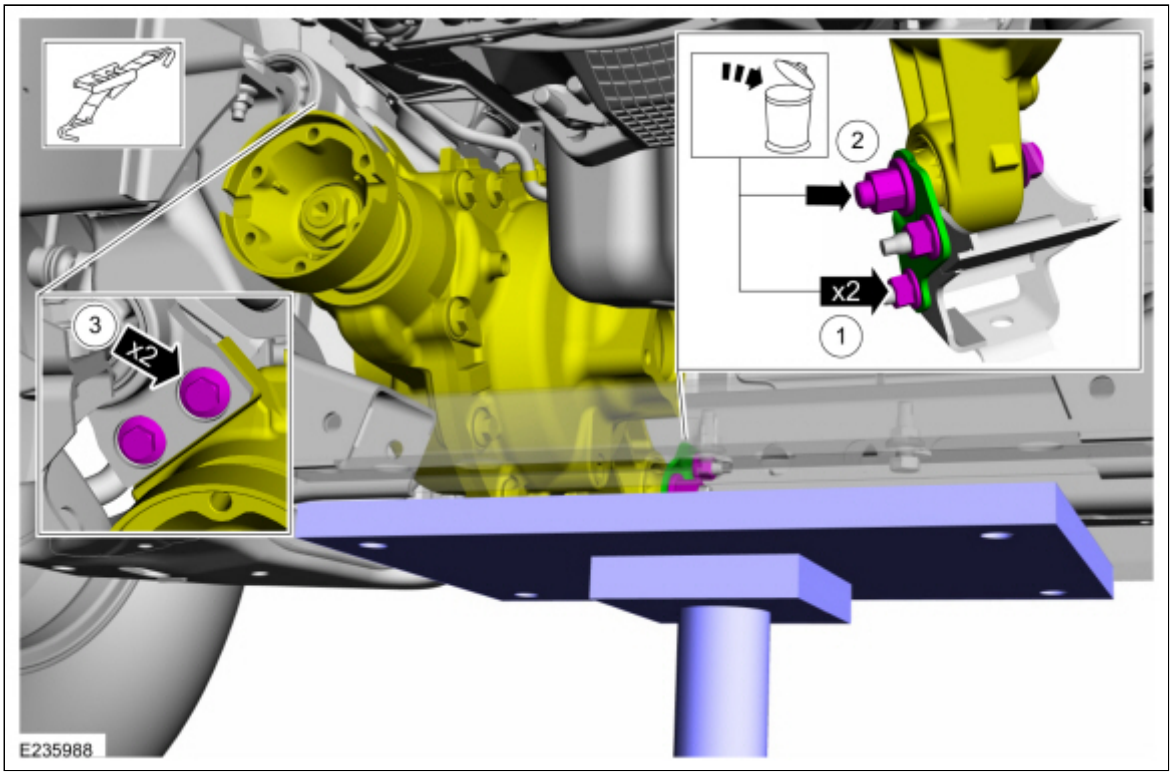


10. On both sides.

11. Lower the vehicle.
12. Use the General Equipment: Interior Trim Remover

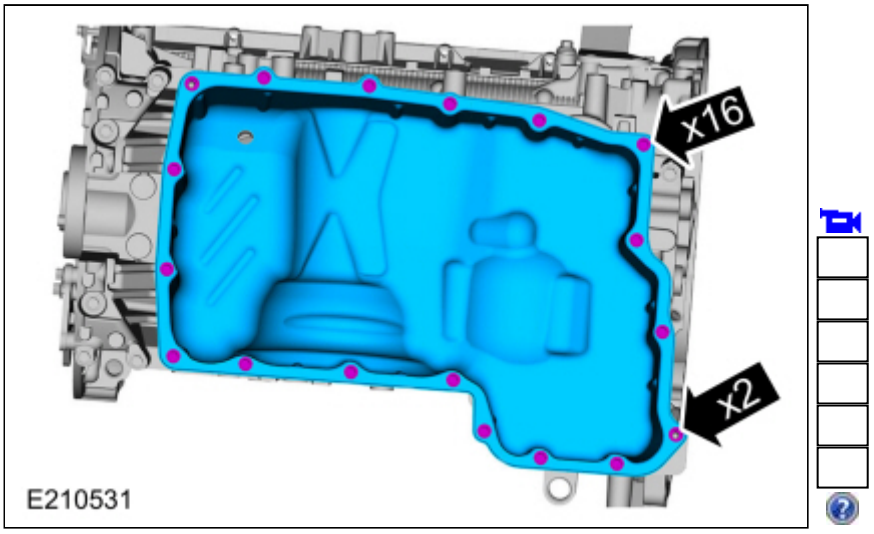


13. Refer to: Cooling Fan (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
14. Install the special tools and lift the engine to 60mm approximately.
    Use Special Service Tool: 303-290-01 Adapter for 303-290A. , 303-290B Support Bar, Engine. , 303-290-03A Adapter for 303-290A.



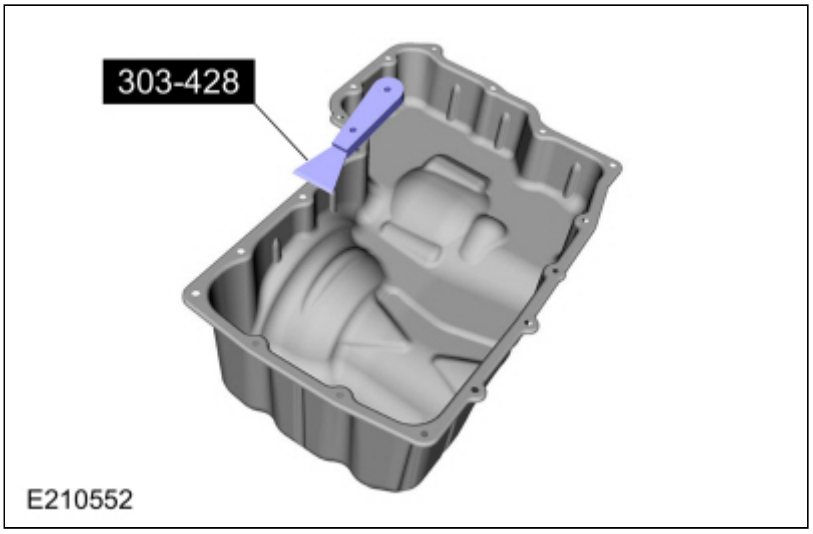
15. Raise the vehicle.

16.



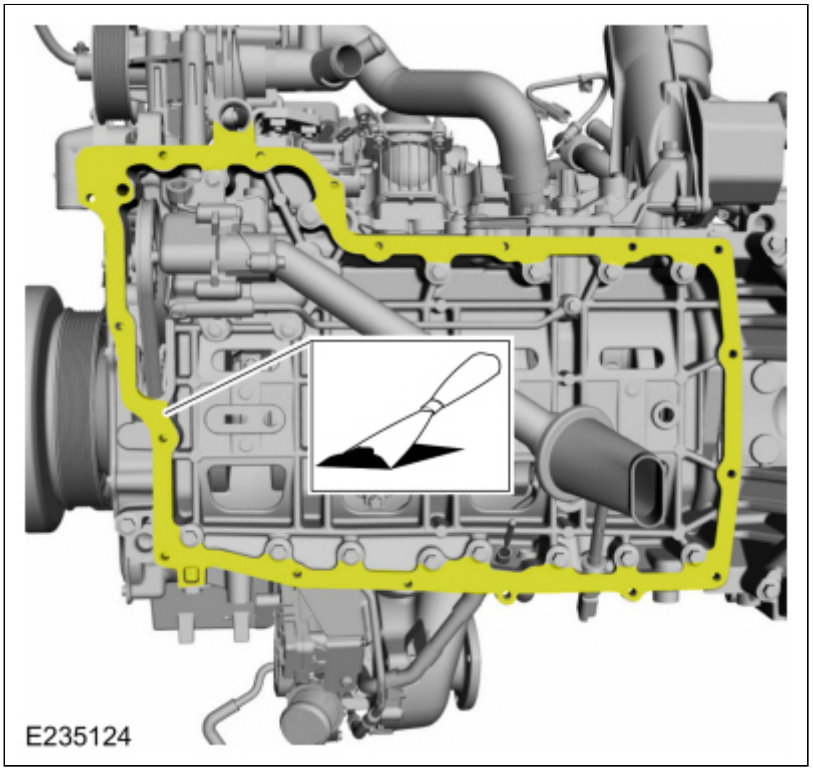
17. **WARNING: Always secure engines, transmissions, or other heavy components to the support fixture with straps and wooden support blocks. Improperly secured assemblies could fall off the fixture, resulting in serious personal injury.**

    Use the General Equipment: Transmission Jack



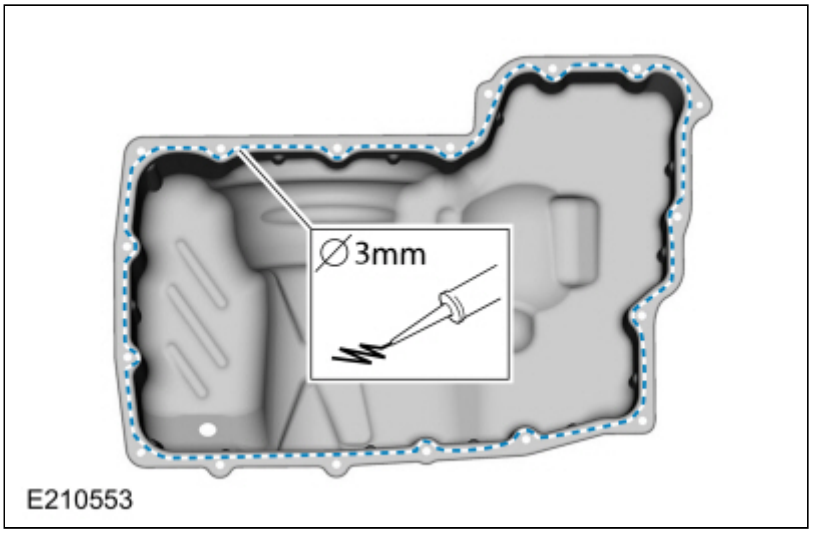
18.

Installation



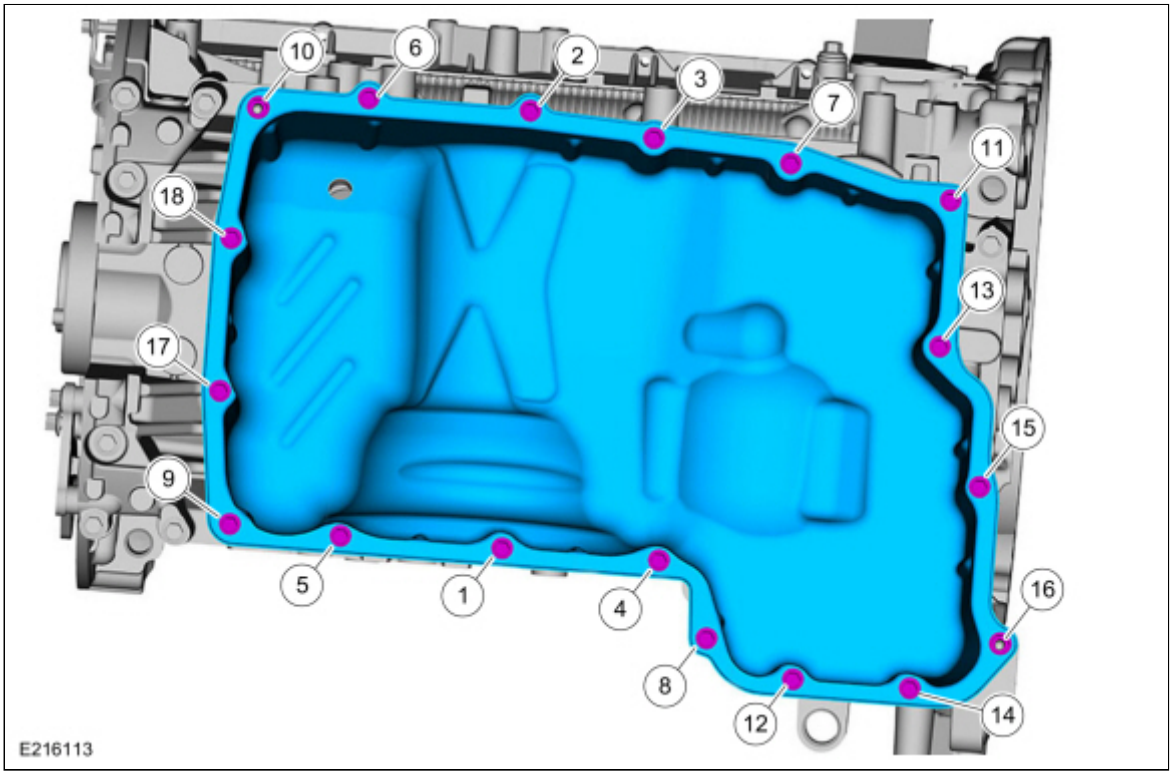
1. **NOTE:** *Do not damage the mating faces.*

   Use Special Service Tool: 303-428 Separator, Oil Pan.



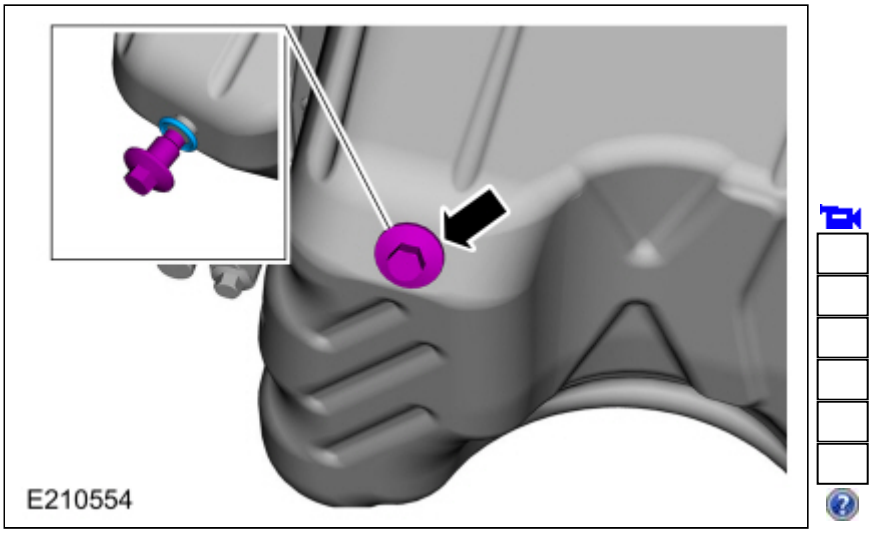
2. **NOTE:** *Make sure that the mating faces are clean and free of foreign material.*

   Use the General Equipment: Plastic Scraper

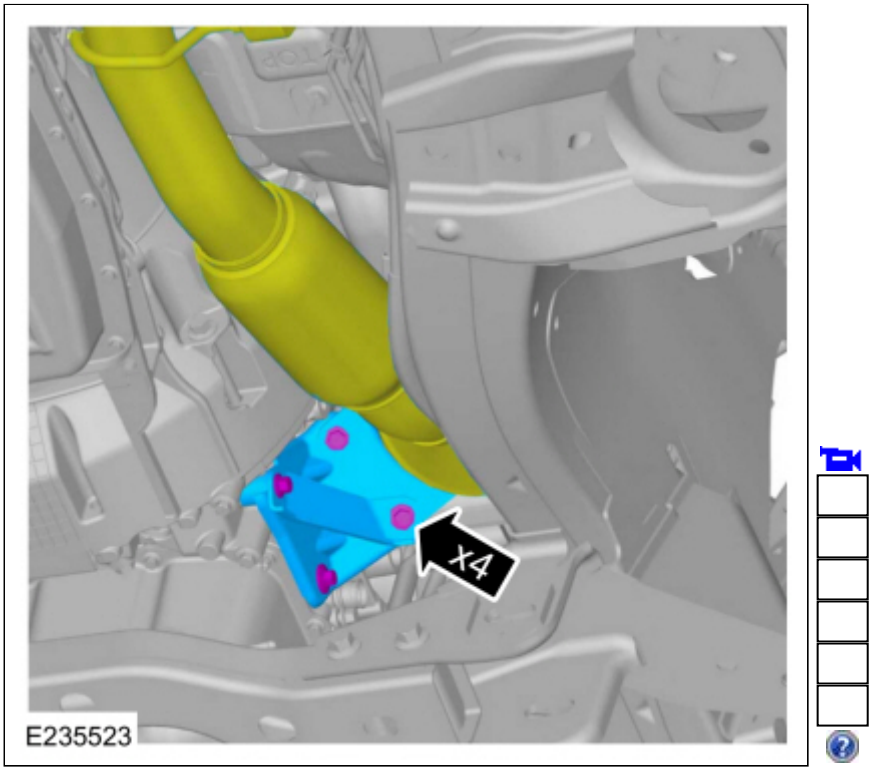


3. **NOTE:** *Do not damage the mating faces.*

   Install the oil pan within five minutes of applying the sealer.
   Material: Silicone Sealant (WSE-M4G323-A4)



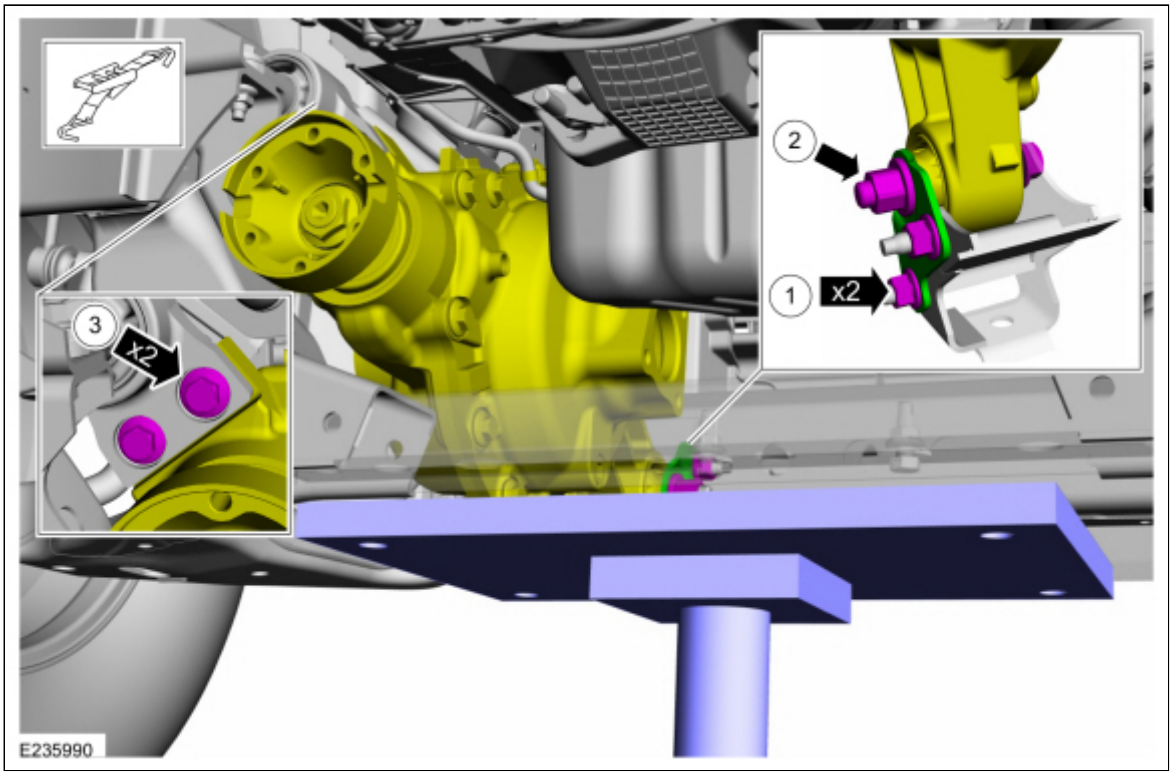
4. *Torque*:
   Stage 1: 7 Nm
   Stage 2: 14 Nm



5. **NOTE:** *The seal is to be reused unless damaged.*

   Torque: 39 Nm

6. *Torque*: 25 Nm

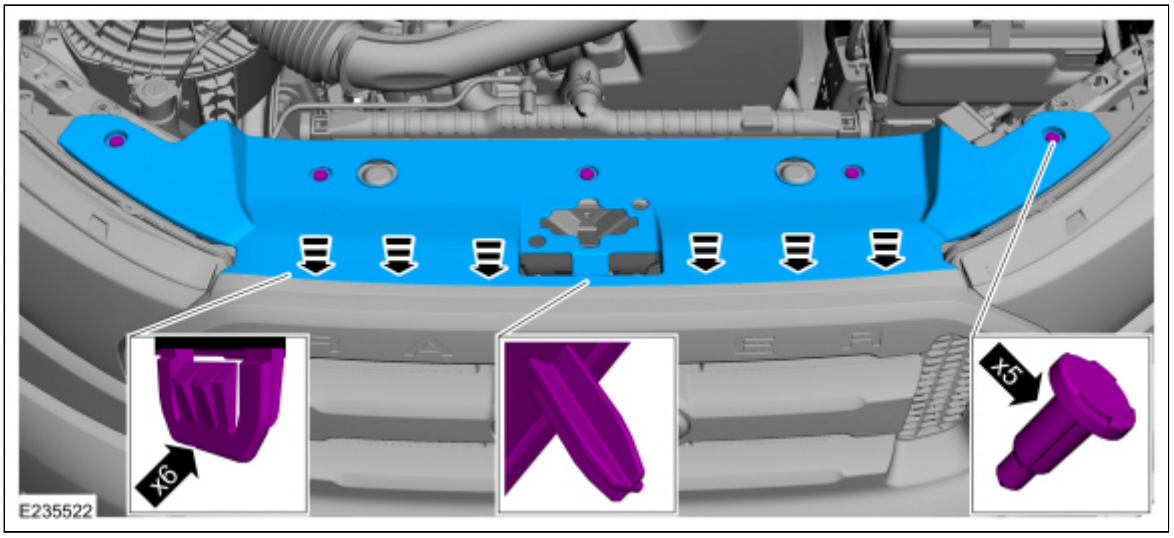


7. **WARNING: Always secure engines, transmissions, or other heavy components to the support fixture with straps and wooden support blocks. Improperly secured assemblies could fall off the fixture, resulting in serious personal injury.**

   NOTE: *Make sure that new nuts are installed.*

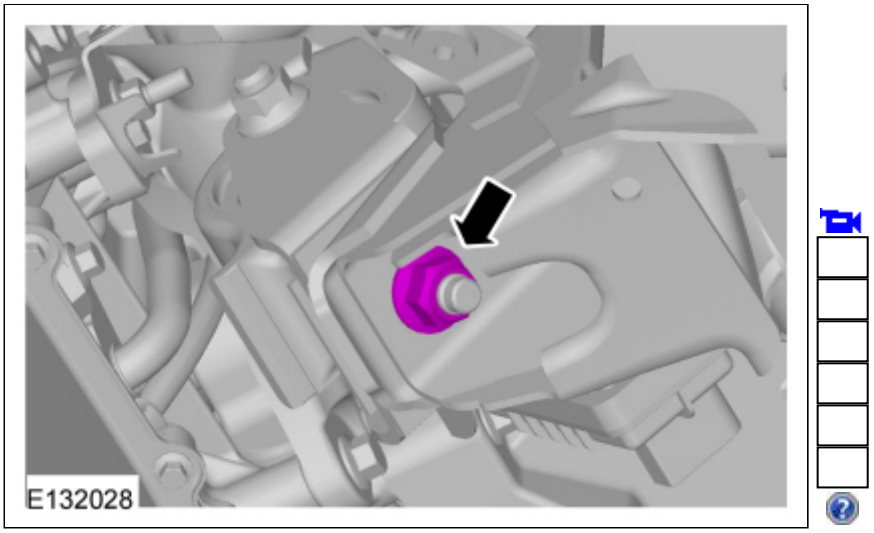
   NOTE: *Make sure that new bolts are installed.*

   Remove the transmission jack.
   Torque:
   1.: 90 Nm
   2.: 265 Nm
   3.: 110 Nm

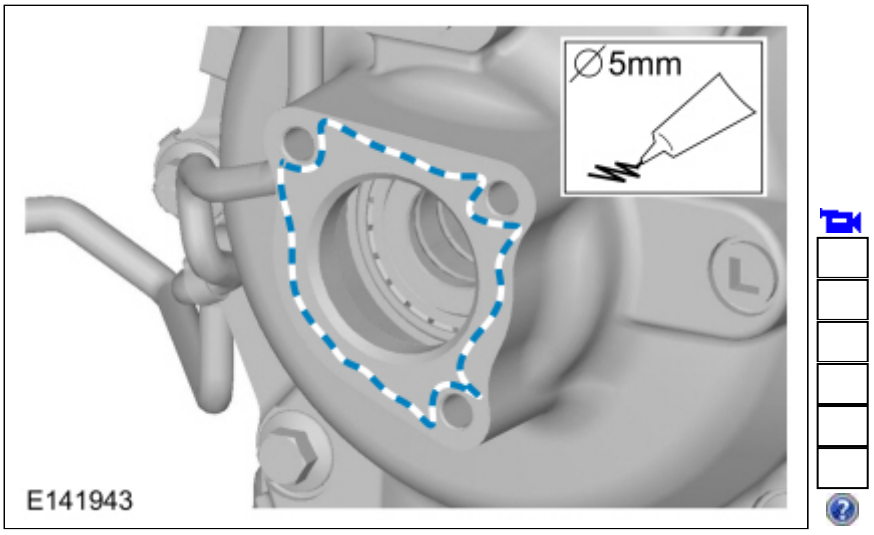


8. Lower the vehicle.

9. Remove the special tools.
   Use Special Service Tool: 303-290-01 Adapter for 303-290A. , 303-290B Support Bar, Engine. , 303-290-03A Adapter for 303-290A.

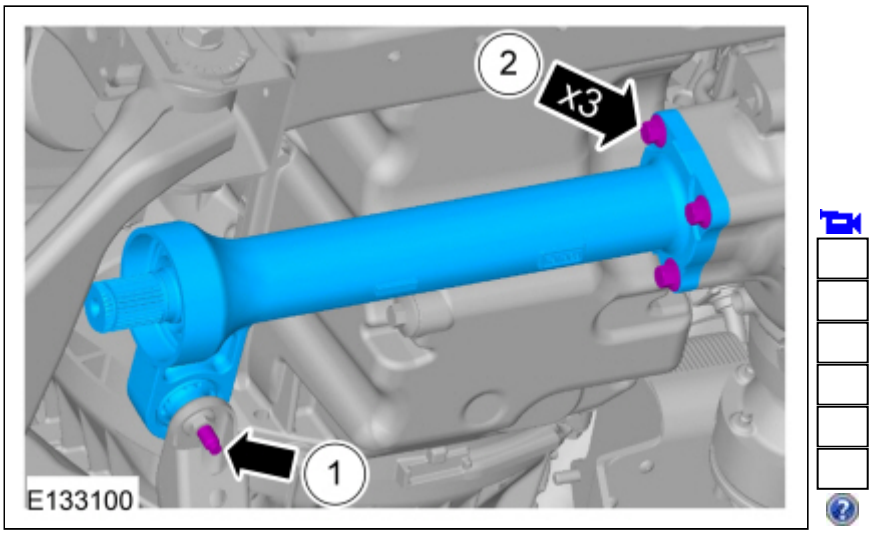


10.



11. Raise the Vehicle.

12. On both sides.
    Torque: 175 Nm



13. **NOTE:** *Do not damage the mating faces.*

    Install the Front axle tube within five minutes of applying the sealer.
    Material: Silicone Sealant (WSS-M4G323-A8)

1. *Torque*: 70 Nm
2. *Torque*: 40 Nm

15. Refer to: Front Halfshaft RH (205-04 Front Drive Halfshafts, Removal and Installation).

16. Refer to: Differential Draining and Filling (205-03 Front Drive Axle/Differential, General Procedures).

Vehicles With: Electronic Power Assist Steering (EPAS)

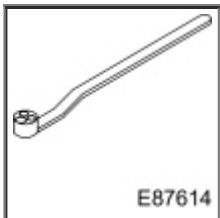
17. Refer to: Steering Gear - RHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).
    Refer to: Steering Gear - LHD 4WD (211-02B Power Steering - Vehicles With: Electronic Power Assist Steering (EPAS), Removal and Installation).

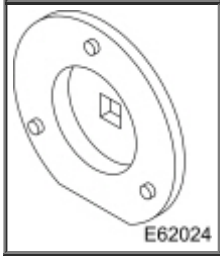
Vehicles With: Hydraulic Power Assist Steering (HPAS)

18. Refer to: Steering Gear - LHD 4WD/LHD RWD (211-02A Power Steering, Removal and Installation).
    Refer to: Steering Gear - RHD 4WD/RHD RWD/RHD (211-02A Power Steering, Removal and Installation).

All vehicles

19. Lower the vehicle.





20. Fill the oil pan with clean engine oil.
    Refer to: Specifications (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Specifications).

21. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).

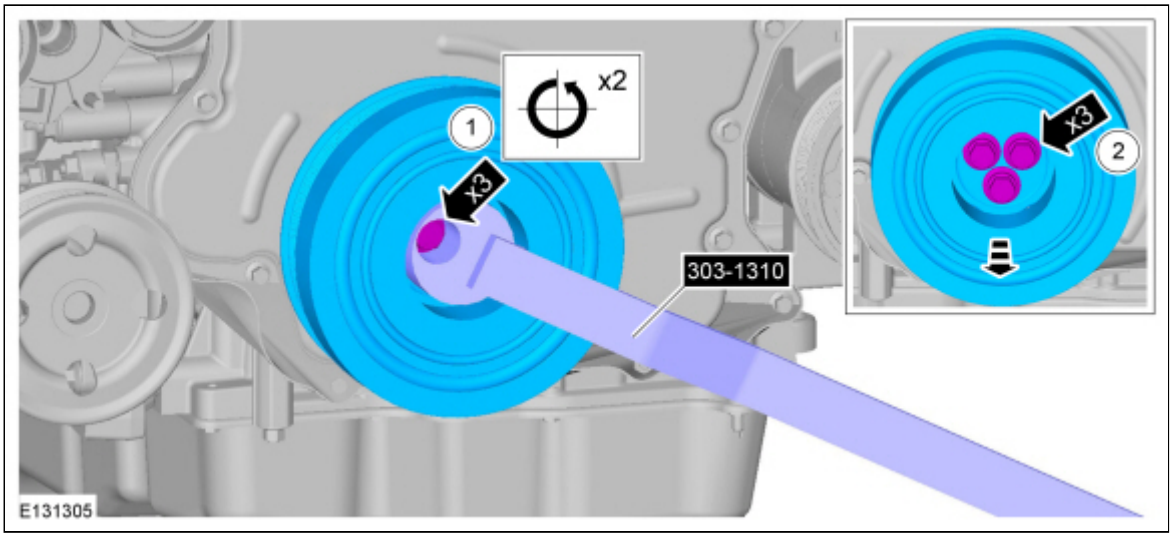
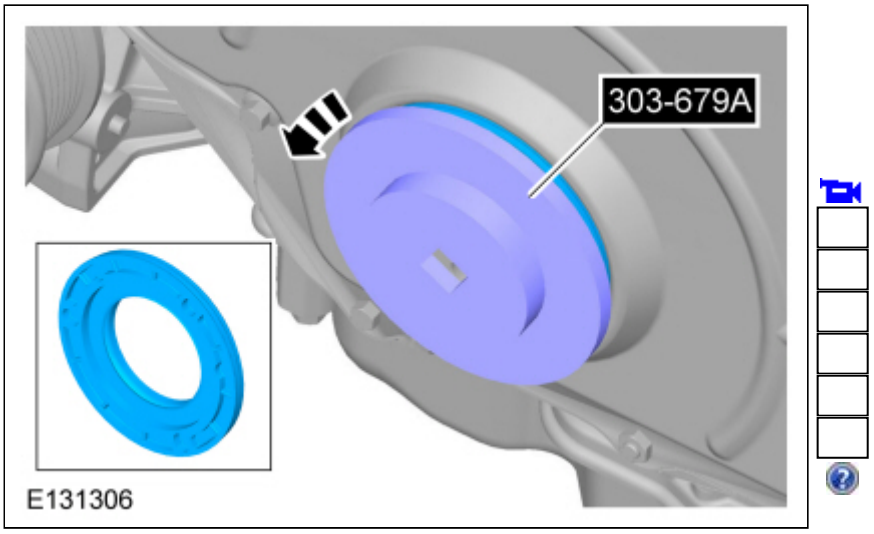
Engine Front Seal



Special Tool(s) / General Equipment

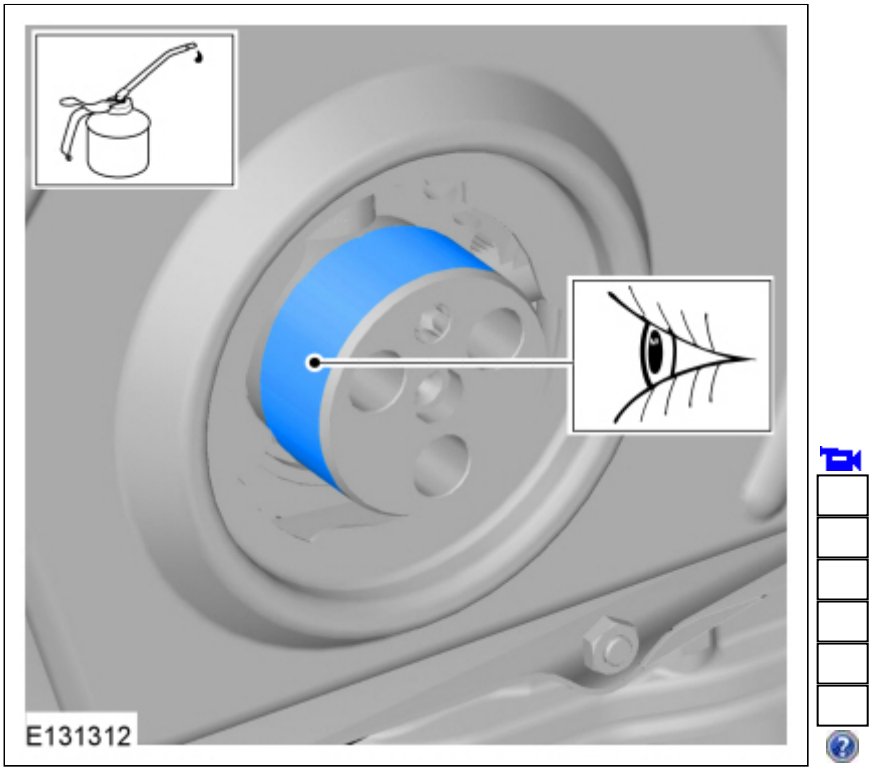
 E87614	303-1310 Holding Wrench, Crankshaft
 E62024	303-679A Remover/Installer, Engine Front Cover Inspection Plate

Removal



NOTE: *Removal steps in this procedure may contain installation details.*

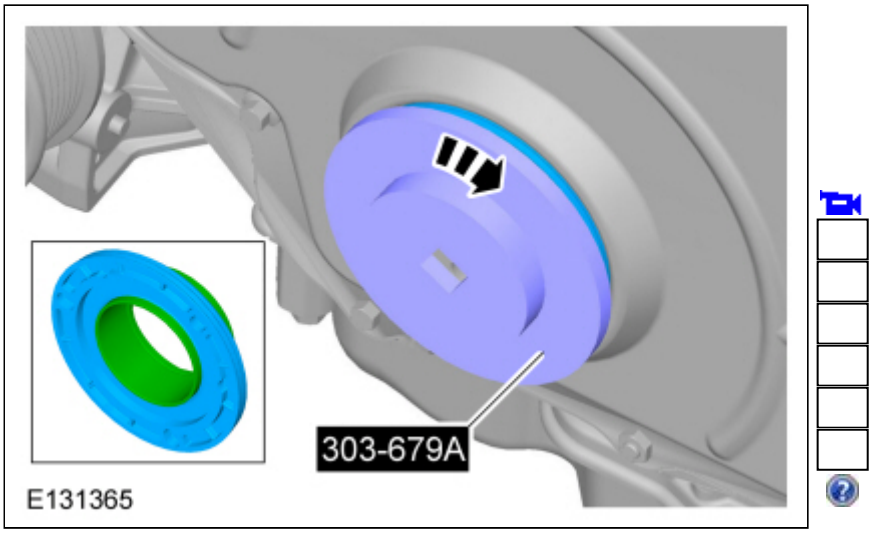
1. Refer to: Cooling Fan (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
2. 1.Do not completely loosen the crankshaft pulley bolts.
   Use Special Service Tool: 303-1310 Holding Wrench, Crankshaft.



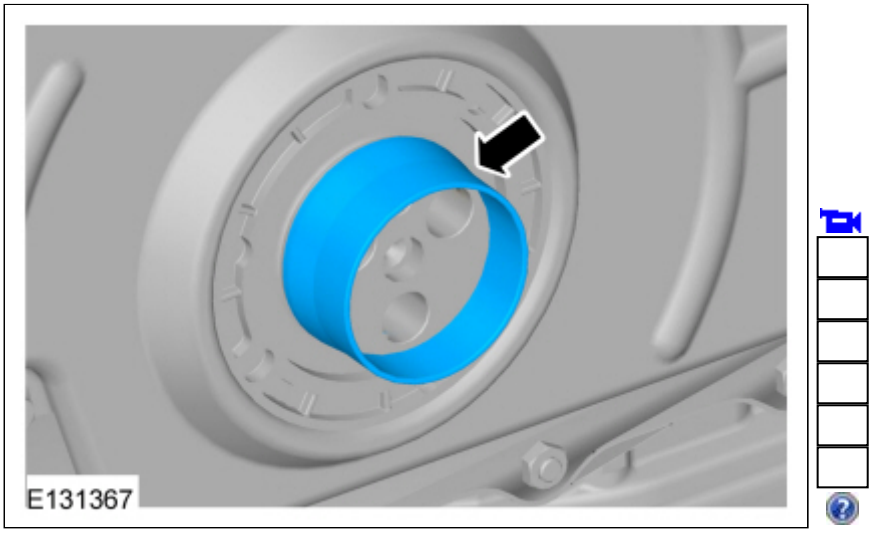
3. **NOTICE: Rotate the seal assembly until it releases. Failure to follow this instruction may result in damage to the seal assembly.**

   Use Special Service Tool: 303-679A Remover/Installer, Engine Front Cover Inspection Plate.

Installation



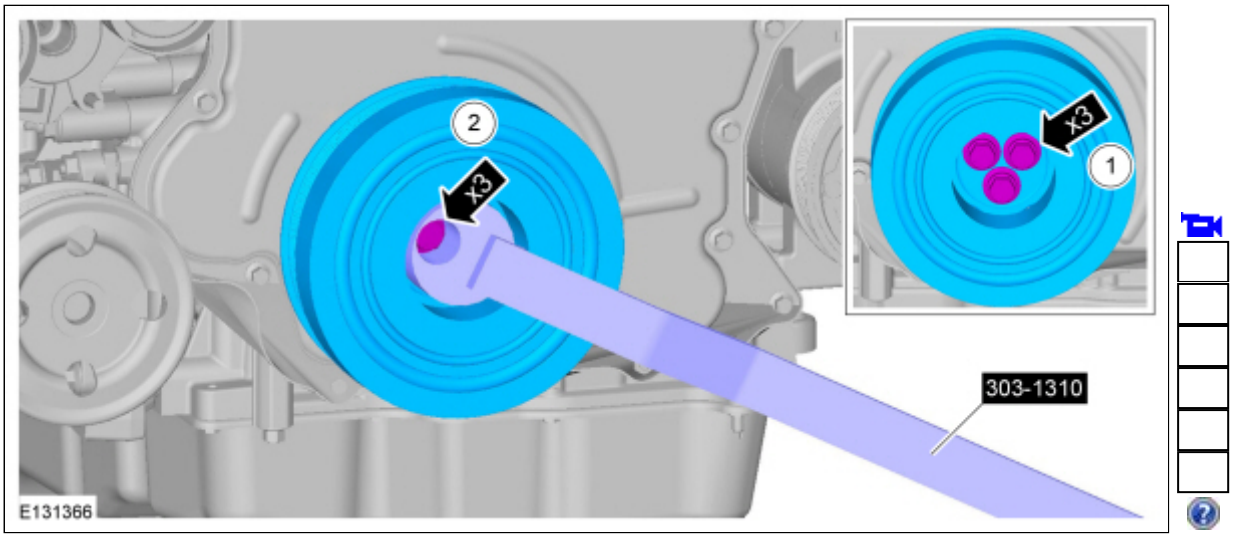
1. **NOTE:** *Make sure that the mounting face is clean and lubricated.*



2. **NOTICE: Rotate the seal assembly until it locks. Failure to follow this instruction may result in damage to the seal assembly.**

   NOTE: *A new crankshaft front seal carrier is supplied with an alignment sleeve that must not be removed until the crankshaft rear seal is fully installed.*

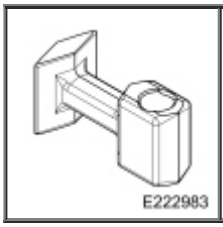
   Use Special Service Tool: 303-679A Remover/Installer, Engine Front Cover Inspection Plate.



3. Remove the alignment sleeve after the seal is fully installed.

4. **NOTICE: The crankshaft pulley bolts must not be used more than 3 times.**

   Use Special Service Tool: 303-1310 Holding Wrench, Crankshaft.
   Torque:
   Stage 1: 20 Nm
   Stage 2: 45 Nm
   Stage 3: 90 Nm
   Stage 4: 45°
   Stage 5: 45°



5. Refer to: Cooling Fan (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and

Installation).

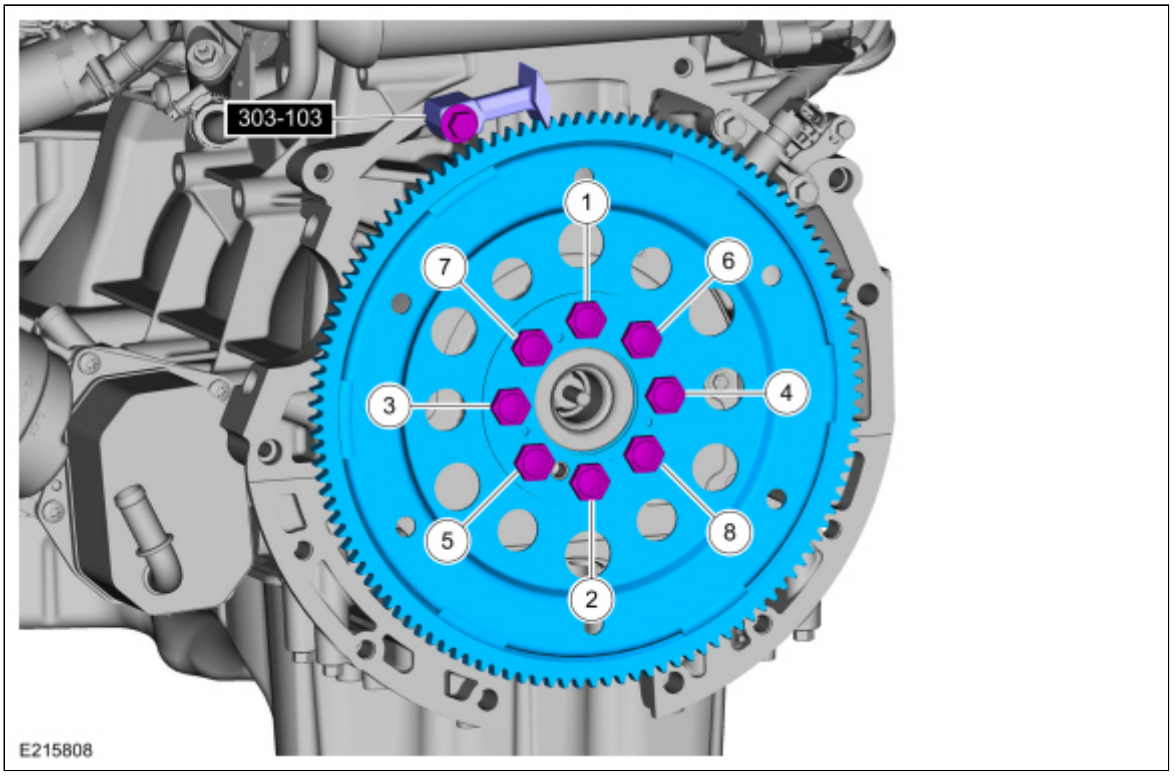
Flexplate

Special Tool(s) / General Equipment

 E222983	303-103 (T74P-6375-A) Holding Tool, Flywheel

Removal

1. With the vehicle in NEUTRAL, position it on a hoist.
   Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

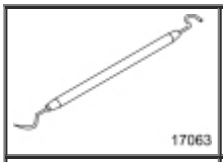


2. Refer to: Transmission - 4x2 (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal).
   Refer to: Transmission - 4x4 (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal).

- Install Special Service Tool: 303-103 (T74P-6375-A) Holding Tool, Flywheel.

Installation

- Install the flexplate and the new bolts. Tighten in the sequence shown in 3 stages.
  Torque:
  Stage 1: 25 Nm
  Stage 2: 45 Nm
  Stage 3: 45 °
- Remove Special Service Tool: 303-103 (T74P-6375-A) Holding Tool, Flywheel.



2. Refer to: Transmission - 4x2 (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Installation).
   Refer to: Transmission - 4x4 (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Installation).

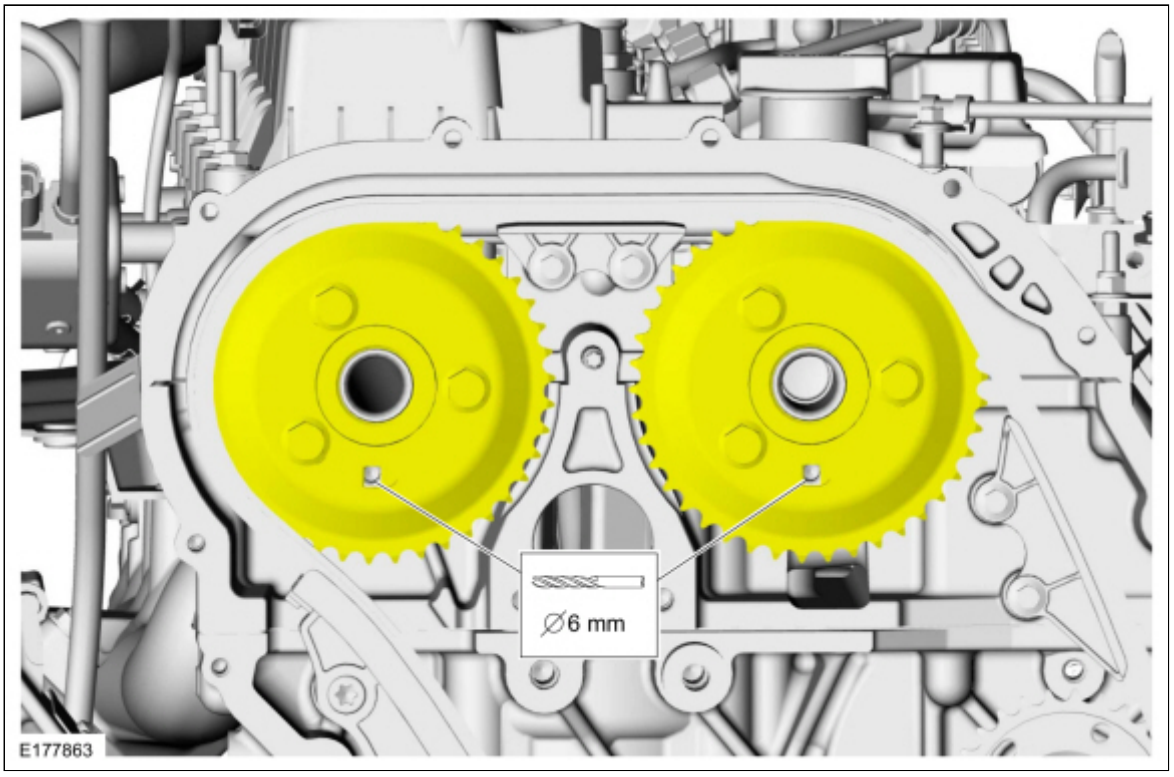
Timing Chain

Special Tool(s) / General Equipment

 17063	100-010 Remover, O-Ring Seal
 E139146	303-1587 Timing Tool, Crankshaft
6 mm Drill Bit	
2 mm Punch	

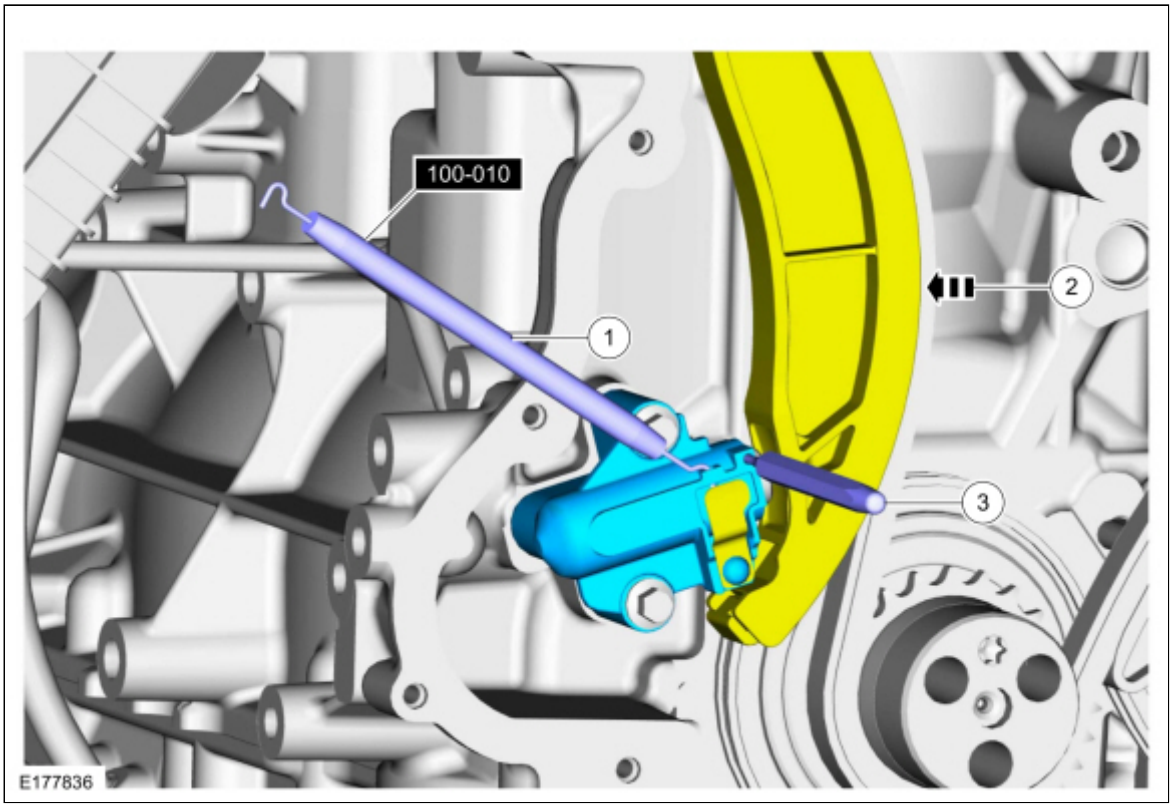
Removal



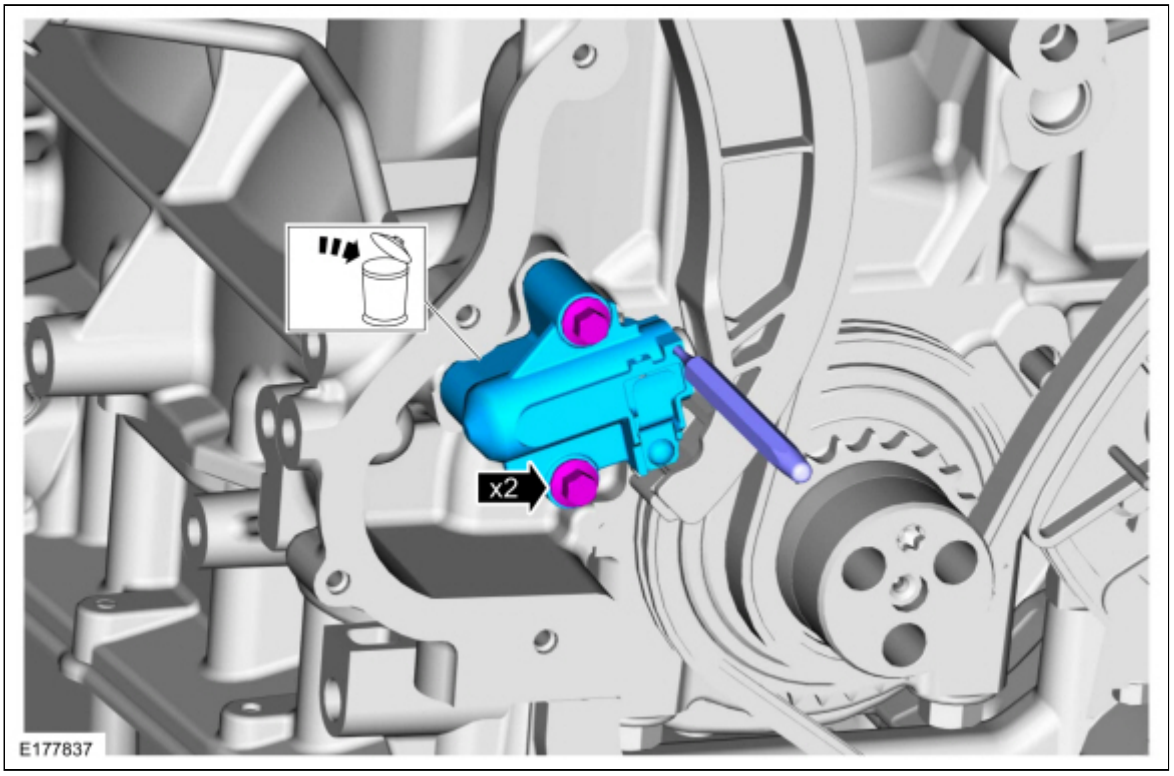
1. Refer to: Timing Cover (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

2. **NOTE:** *When the tool is properly installed, the locating pin will be approximately at the 10 o'clock position.*

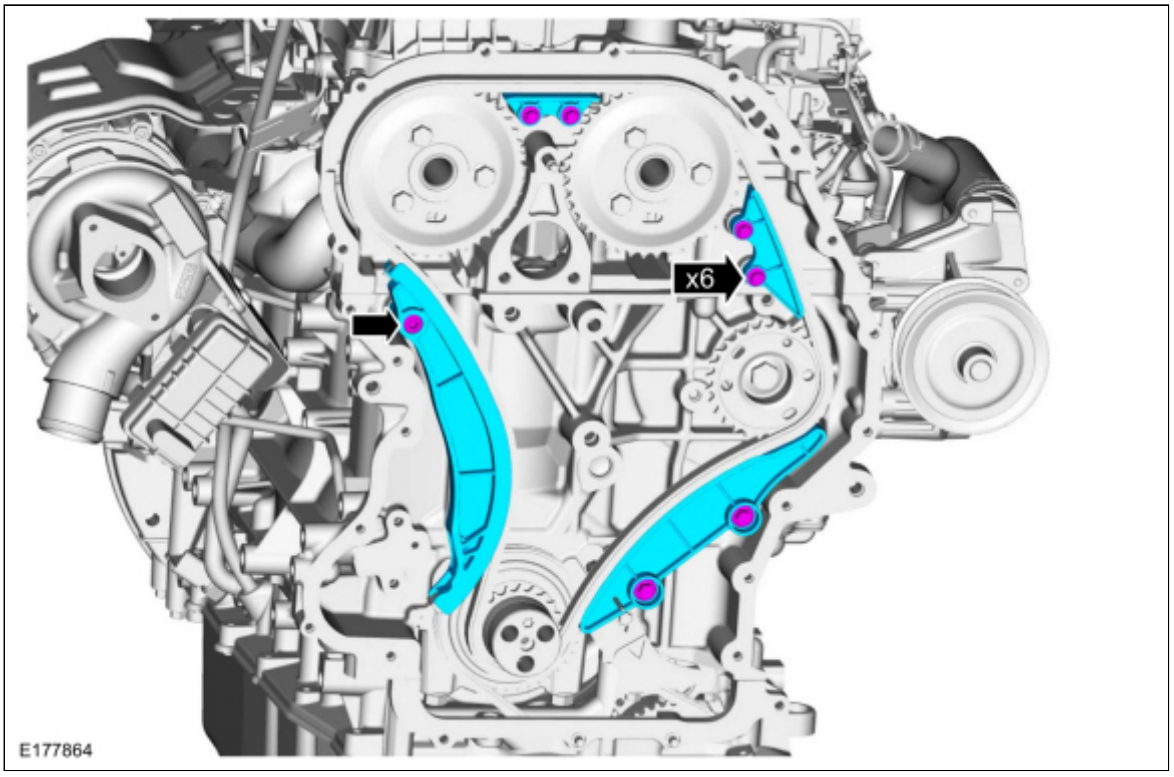
   Using the special tool, set the crankshaft and camshaft positions.
   Install Special Service Tool: 303-1587 Timing Tool, Crankshaft.



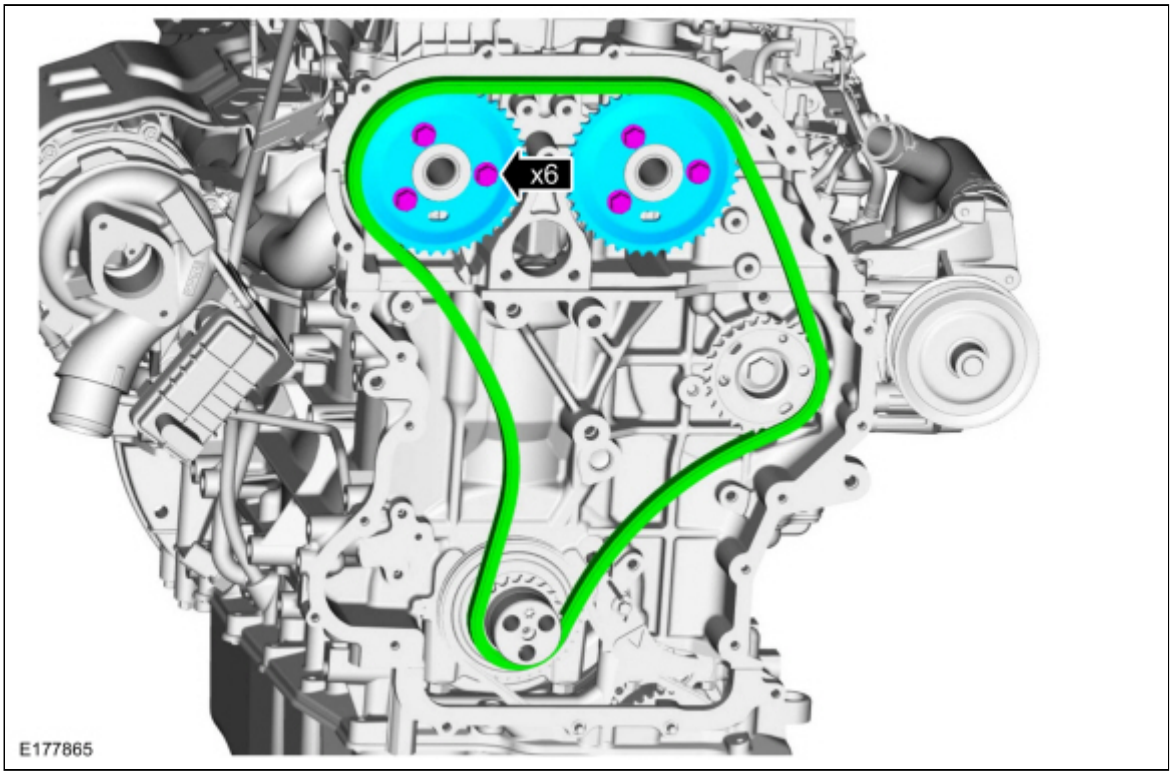
3. Check the valve timing by inserting the end of 2 drill bits through the sprocket holes into the timing pin holes in the cylinder head.
   Use the General Equipment: 6 mm Drill Bit



4. Remove Special Service Tool: 303-1587 Timing Tool, Crankshaft.



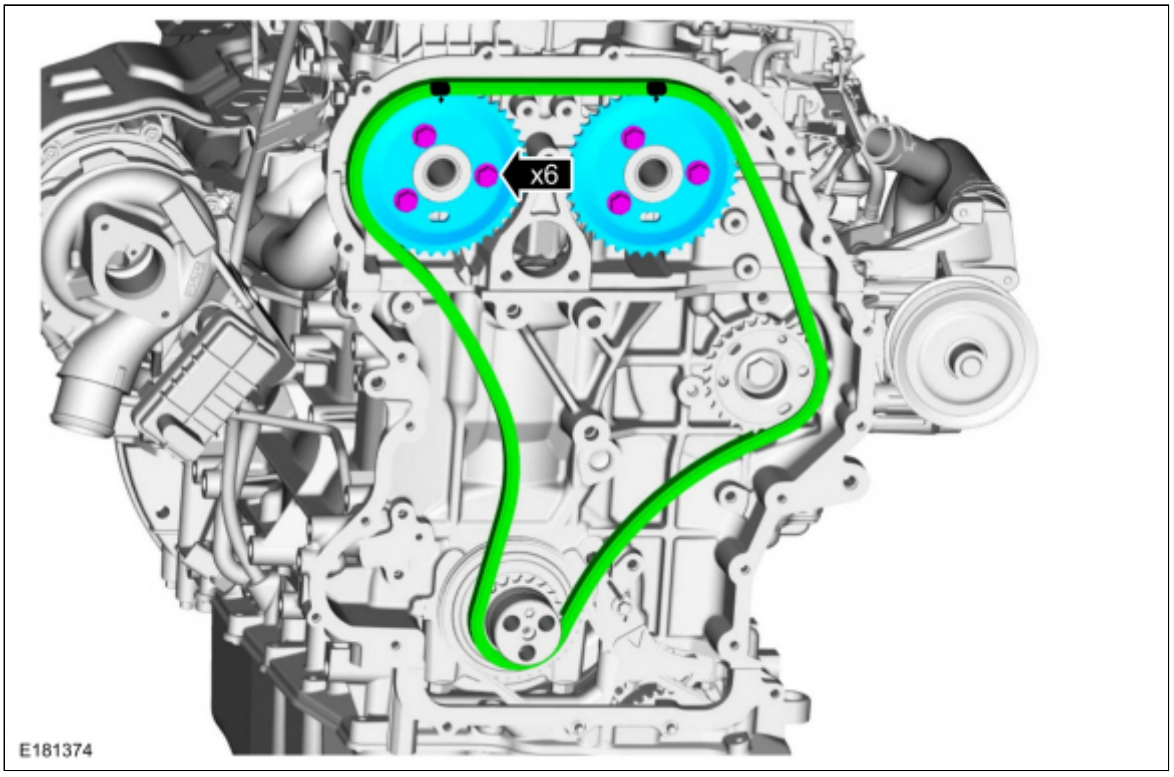
1. Using the special tool, release and hold the ratchet mechanism.
   Use Special Service Tool: 100-010 Remover, O-Ring Seal.
2. Compress the tensioner by pushing the timing chain tensioner arm toward the tensioner.
3. Insert the punch into the hole to retain the tensioner.
   Use the General Equipment: 2 mm Punch



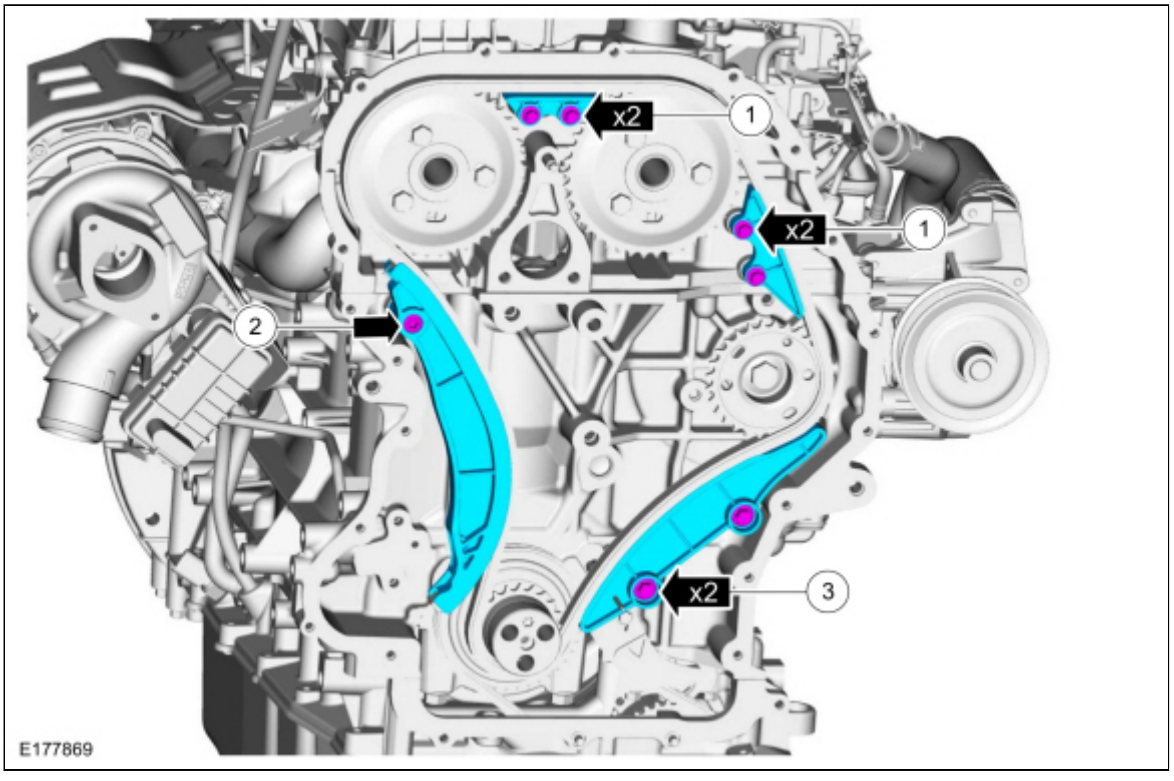
6. Remove the bolts and the timing chain tensioner. Discard the timing chain tensioner.

7. Remove the bolts, timing chain tensioner arm and the timing chain guides.

8. Remove the bolts, camshaft sprockets and the timing chain.



Installation

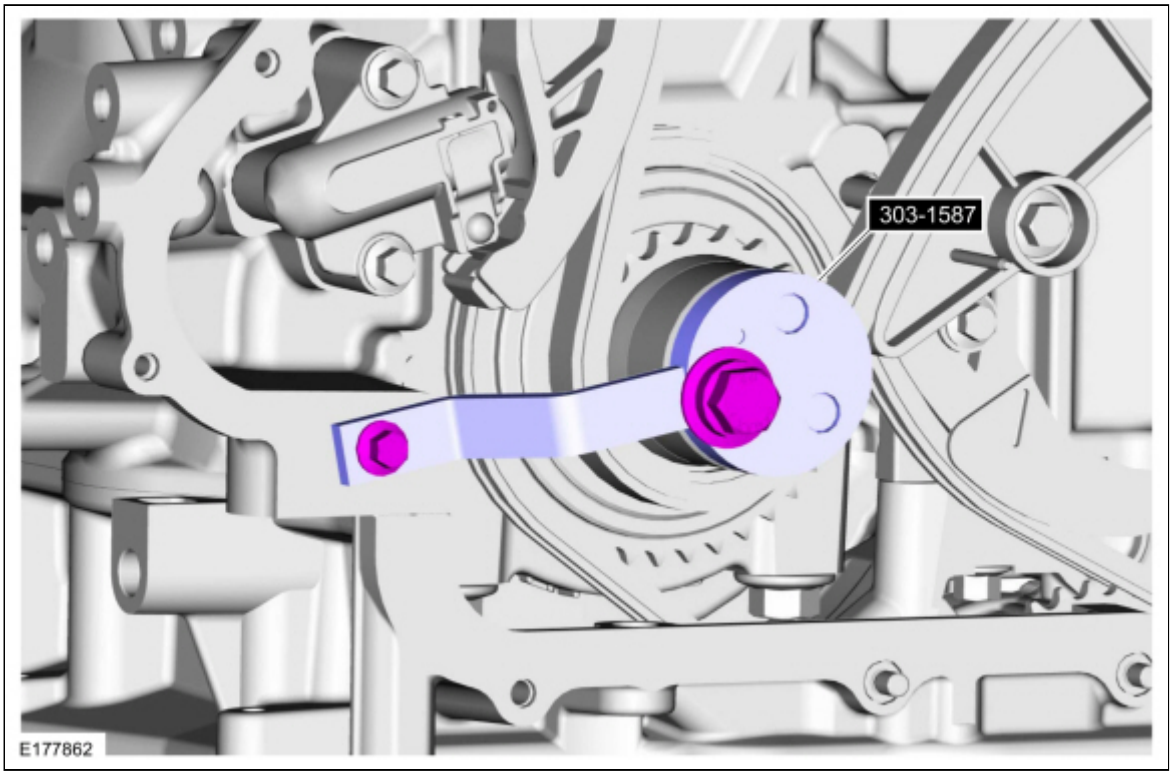


1. **NOTE:** *Make sure that the timing marks are aligned.*

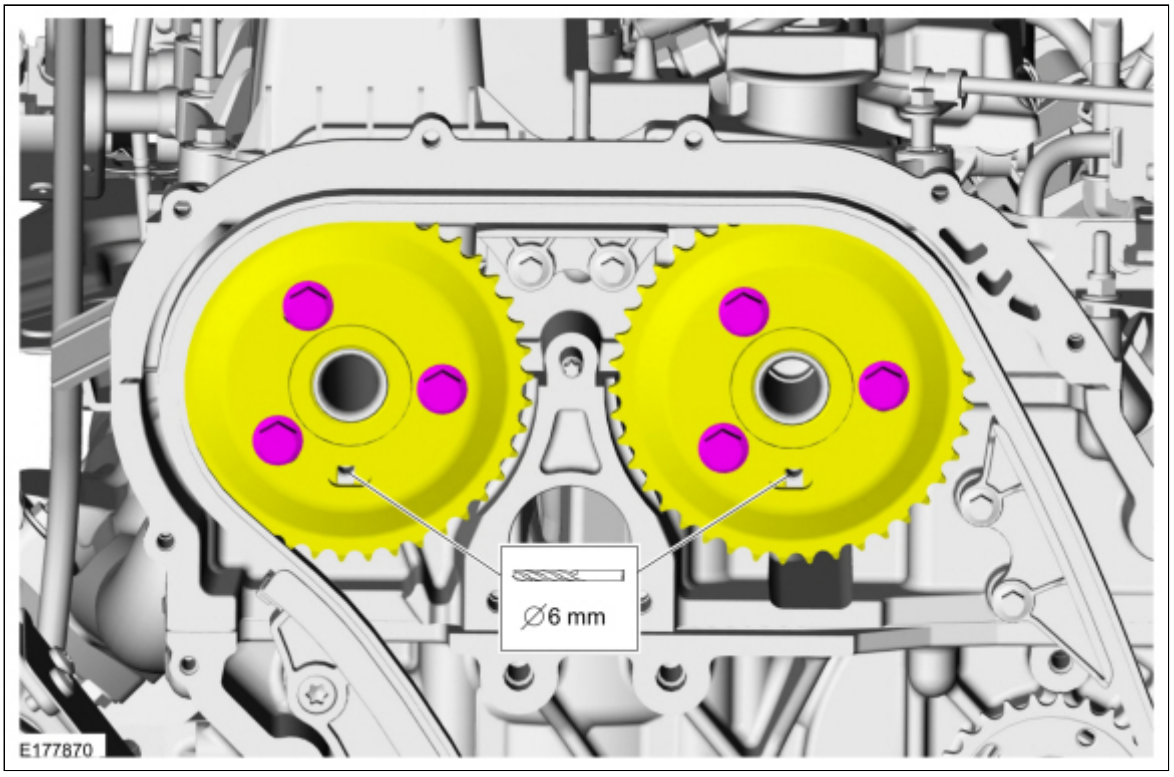
   NOTE: *Do not tighten the bolts at this time.*

   Install the timing chain, camshaft sprockets and the bolts.

2. Install the timing chain tensioner arm and the timing chain guides and the bolts.
   Torque:
   1: 14 Nm
   2: 31 Nm
   3: 40 Nm



3. Install the timing chain tensioner and bolts. Remove the retaining pin.
   Torque: 15 Nm

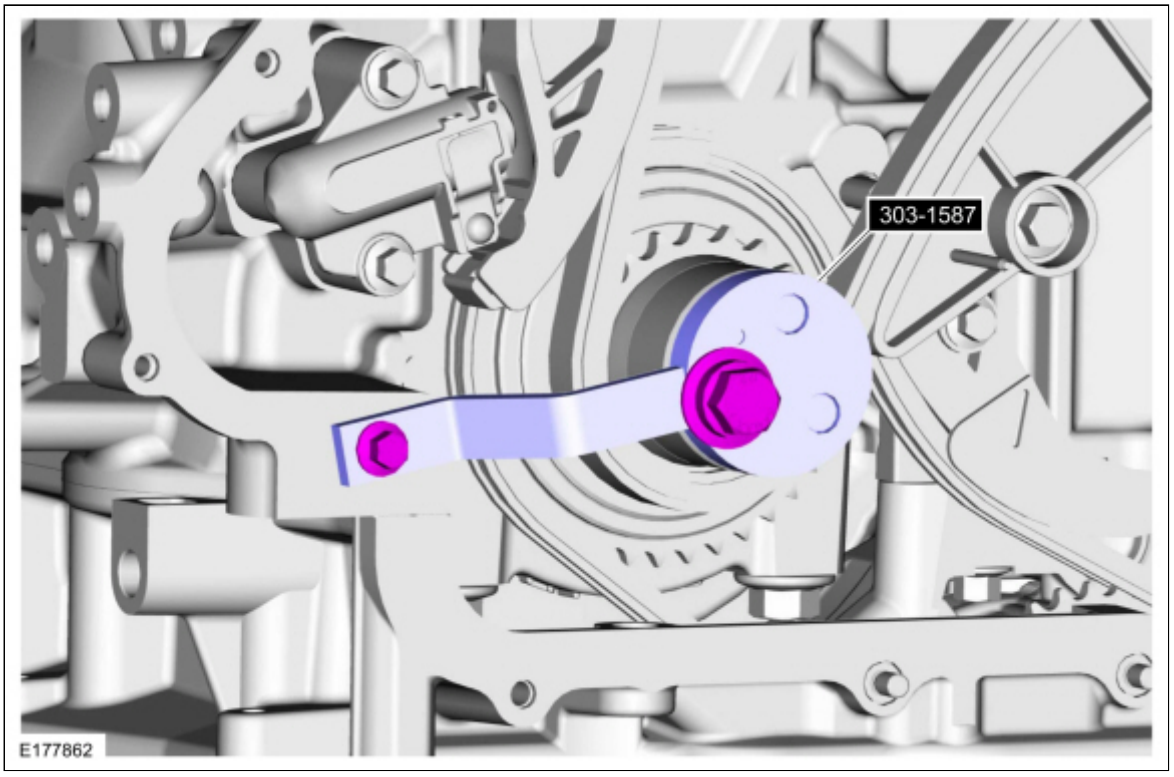


4. **NOTE:** *When the tool is properly installed, the locating pin will be approximately at the 10 o'clock position.*

   Install Special Service Tool: 303-1587 Timing Tool, Crankshaft.

5. Check the valve timing by inserting the end of 2 drill bits through the sprocket holes into the timing pin holes in the cylinder head. Tighten the bolts for the camshaft sprockets.
   Use the General Equipment: 6 mm Drill Bit
   Torque:
   Stage 1: 12 Nm
   Stage 2: 33 Nm

6. Remove Special Service Tool: 303-1587 Timing Tool, Crankshaft.



7. **NOTICE: Only rotate the crankshaft clockwise.**

   Rotate the engine two revolutions.

8. **NOTE:** *When the tool is properly installed, the locating pin will be approximately at the 10 o'clock position.*

   Install Special Service Tool: 303-1587 Timing Tool, Crankshaft.

9. Check the valve timing by inserting the end of 2 drill bits through the sprocket holes into the timing pin holes in the cylinder head. If the drill bit ends can not be inserted repeat the timing steps.
   Use the General Equipment: 6 mm Drill Bit

10. Remove Special Service Tool: 303-1587 Timing Tool, Crankshaft.

11. Refer to: Timing Cover (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

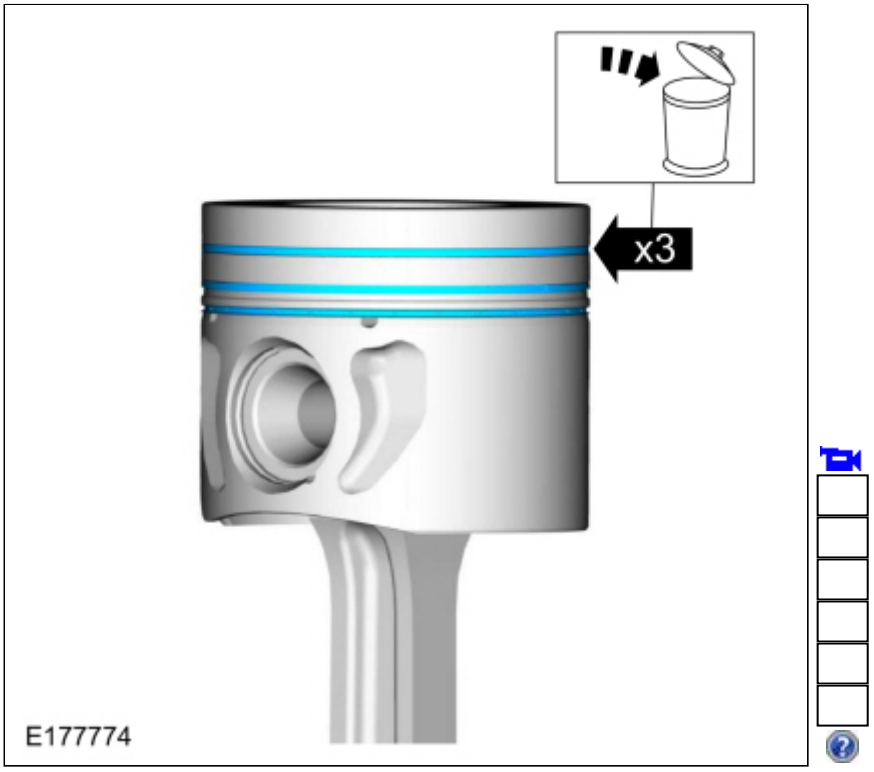
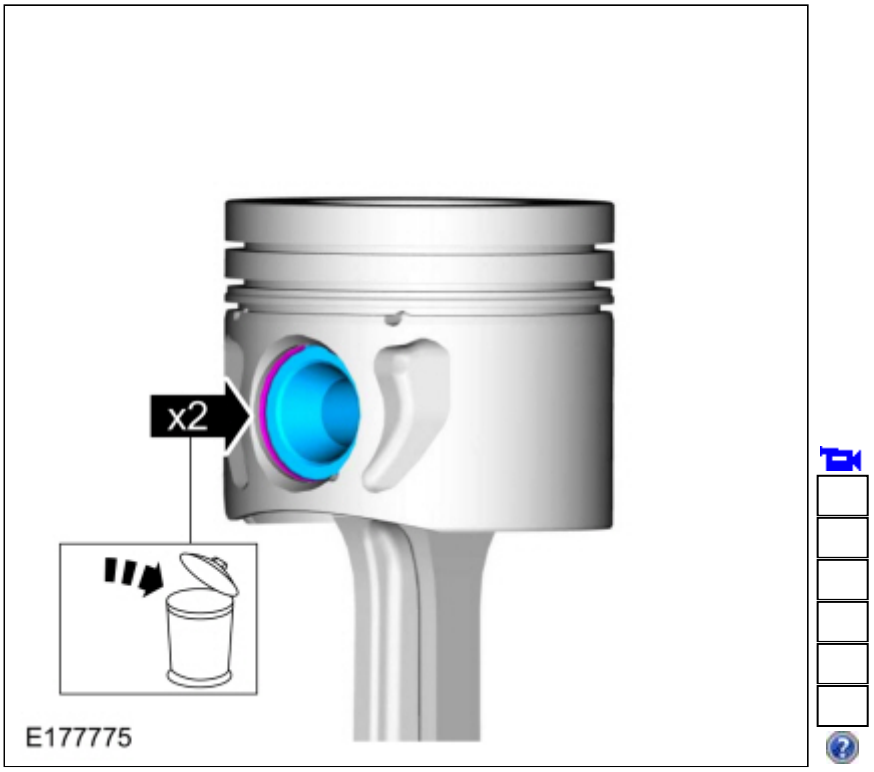
Piston



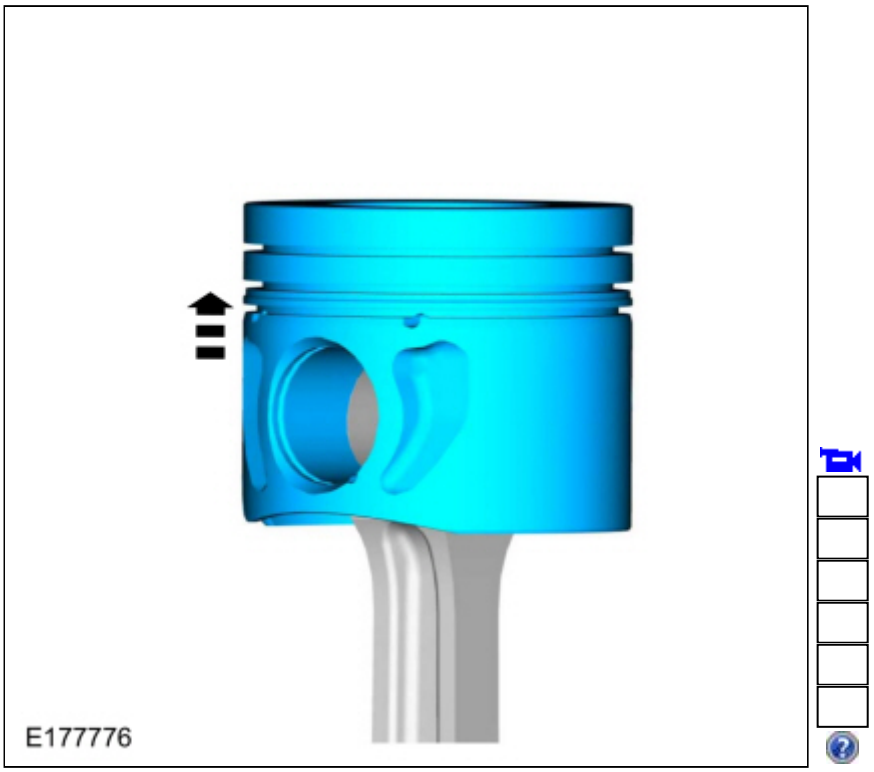
Materials

Name	Specification
Engine Oil - SAE 5W-30	WSS-M2C913-C



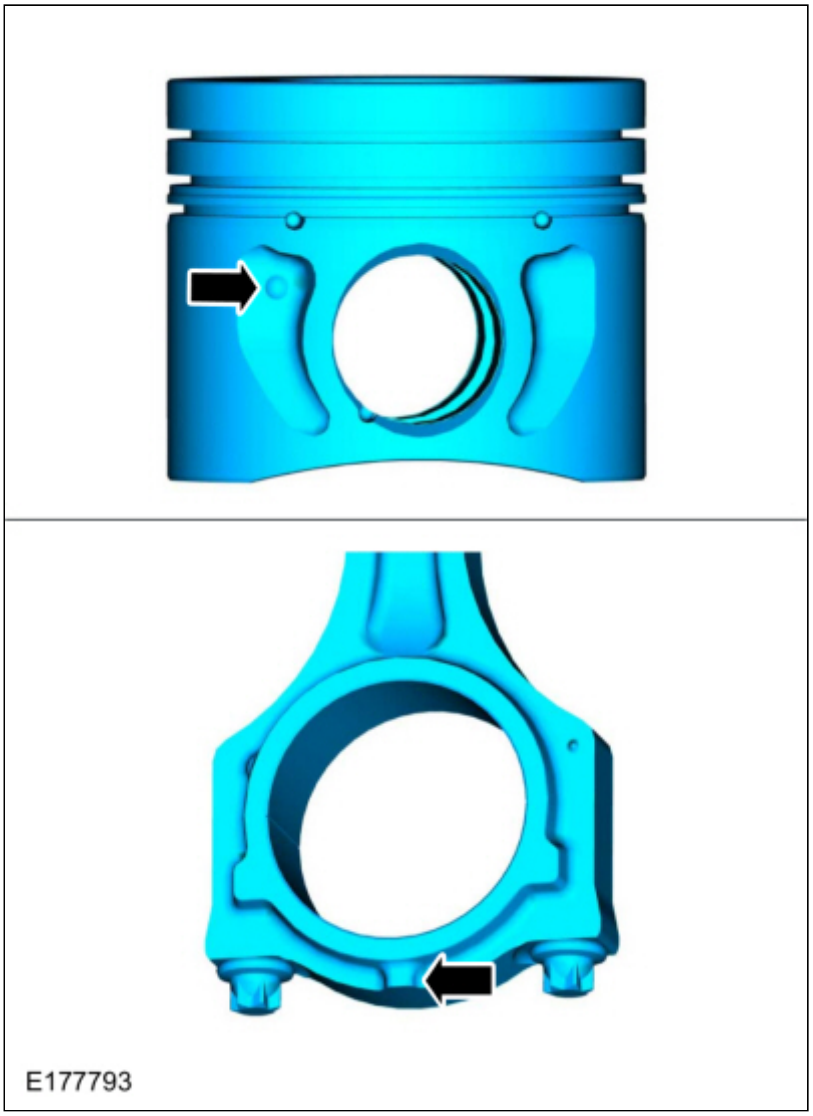
DISASSEMBLY

NOTE: *If the piston and connecting rod are to be reinstalled, they must be assembled in the same orientation. Mark the piston orientation to the connecting rod for reassembly.*

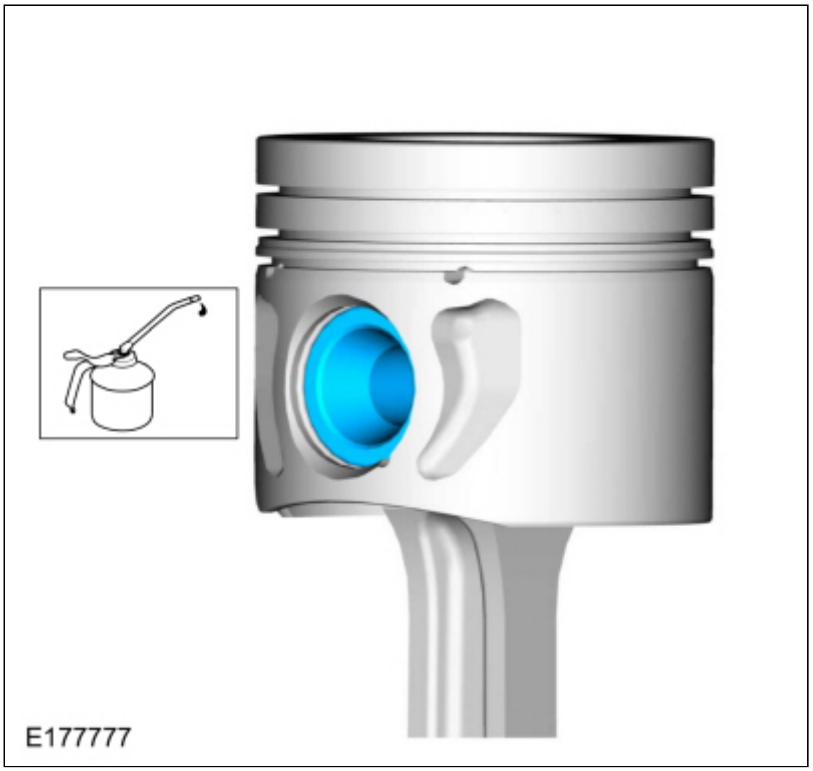


1. Remove and discard the piston rings.

2. Remove and discard the piston pin retainers. Remove the piston pin.



3. Separate the piston from the connecting rod. Clean and inspect the piston.
   Refer to: Piston Inspection (303-00 Engine System - General Information, General Procedures).



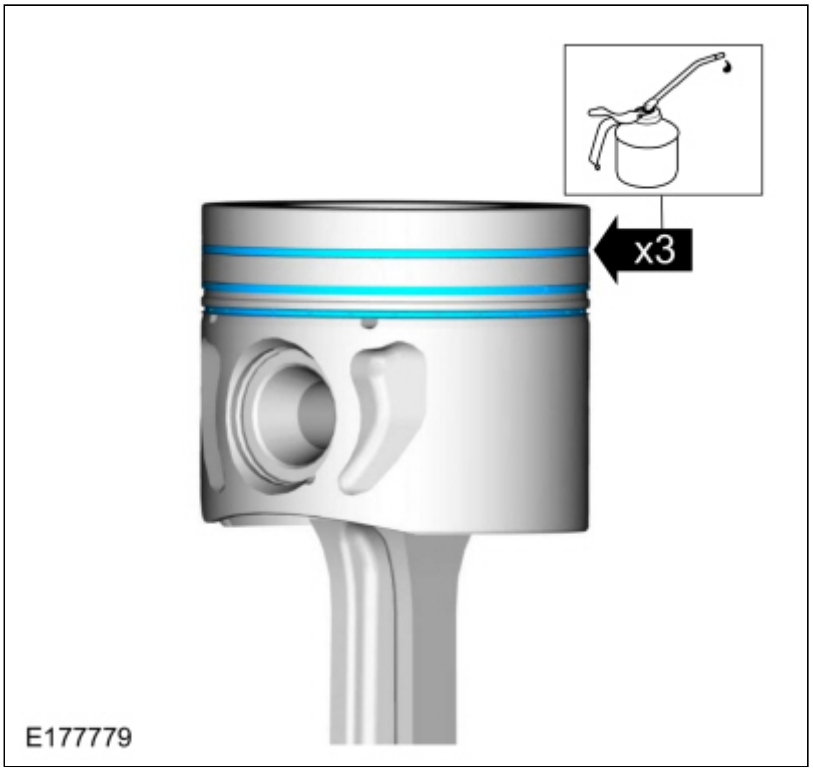
ASSEMBLY

1. **NOTE:** *Align the piston-to-connnecting rod orientation marks made during disassembly.*

   Align the front of the piston and connecting rod. Assembly the piston and the connecting rod.

2. Lubricate with clean engine oil and install the piston pin.
   Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)

3. Install the piston pin retainers.



4. **NOTE:** *The rings are to be fitted with the paint mark to the left of the piston ring gap.*

   NOTE: *The upper and lower compression ring gaps are the be installed 180 degrees apart.*

   NOTE: *The oil control ring position is not controlled.*

   Lubricate with clean engine oil and install the piston rings.
   Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)

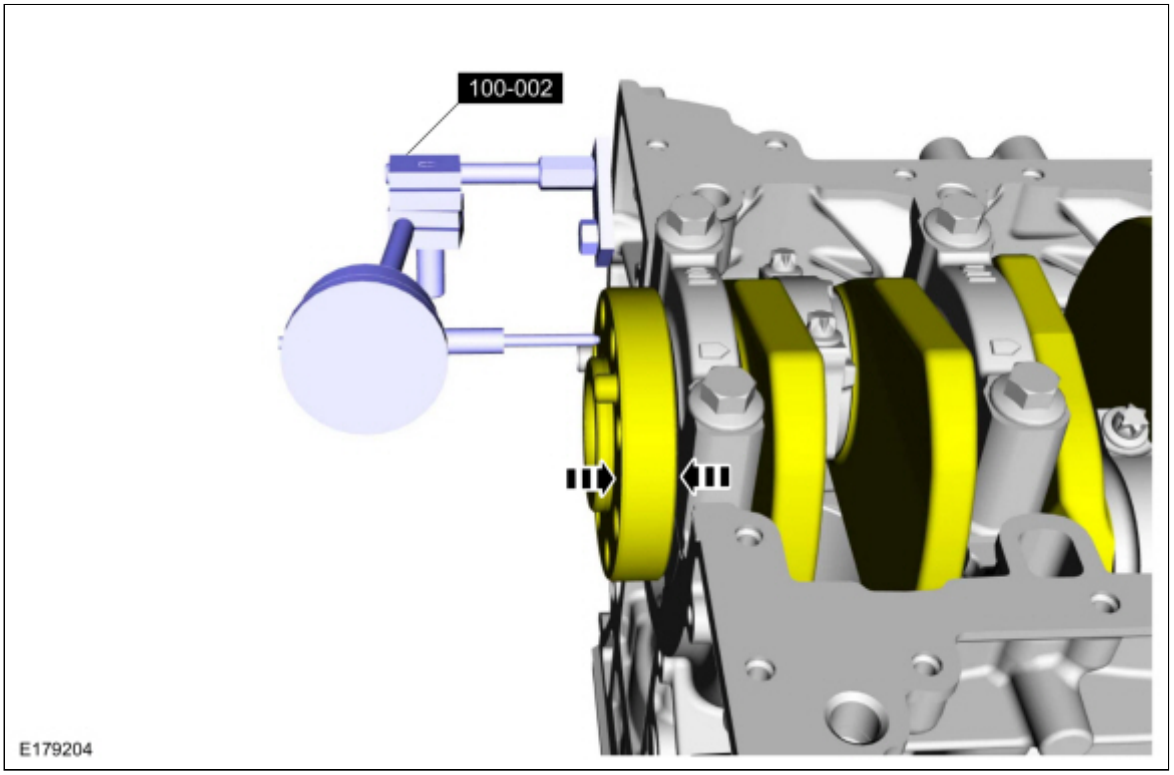
5. **NOTE:** *Make sure that these components are installed to the noted removal position.*

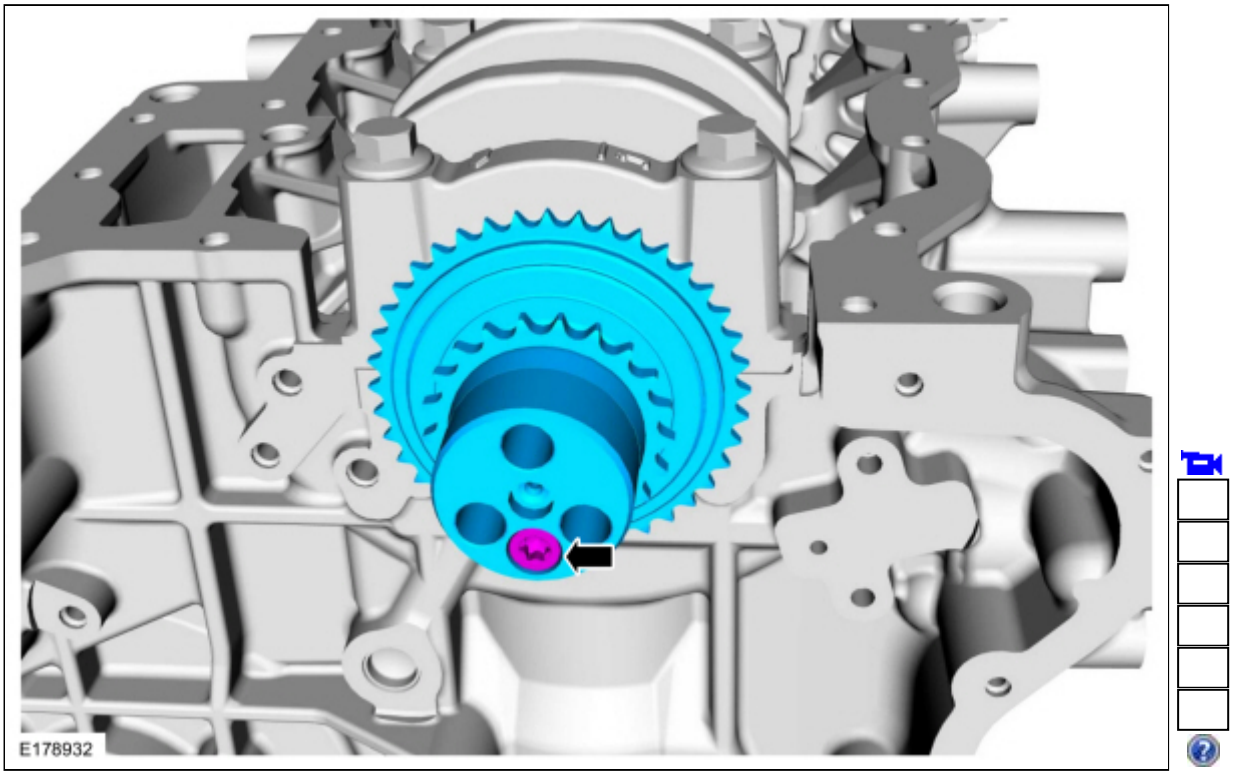
   Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)



6. **NOTE:** *Make sure that these components are installed to the noted removal position.*

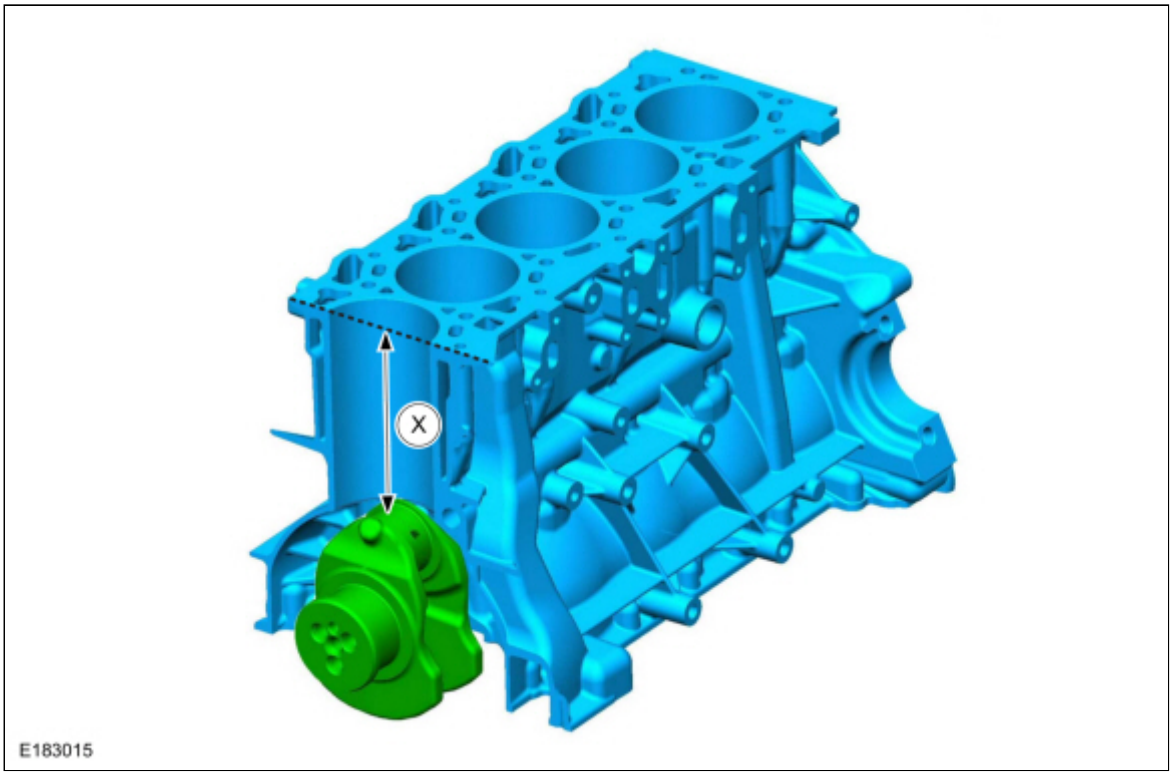
   NOTE: *Install all the bolts finger tight before final tightening.*

   Torque:
   Stage 1: 6 Nm
   Stage 2: 15 Nm
   Stage 3: 20 Nm
   Stage 4: 35 Nm
   Stage 5: 80 Nm
   Stage 6: 90°



7. Using the special tool, check the crankshaft end play.
   Refer to: Specifications (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Specifications).
   Use Special Service Tool: 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.

8. If necessary, position the crankshaft sprocket washer.

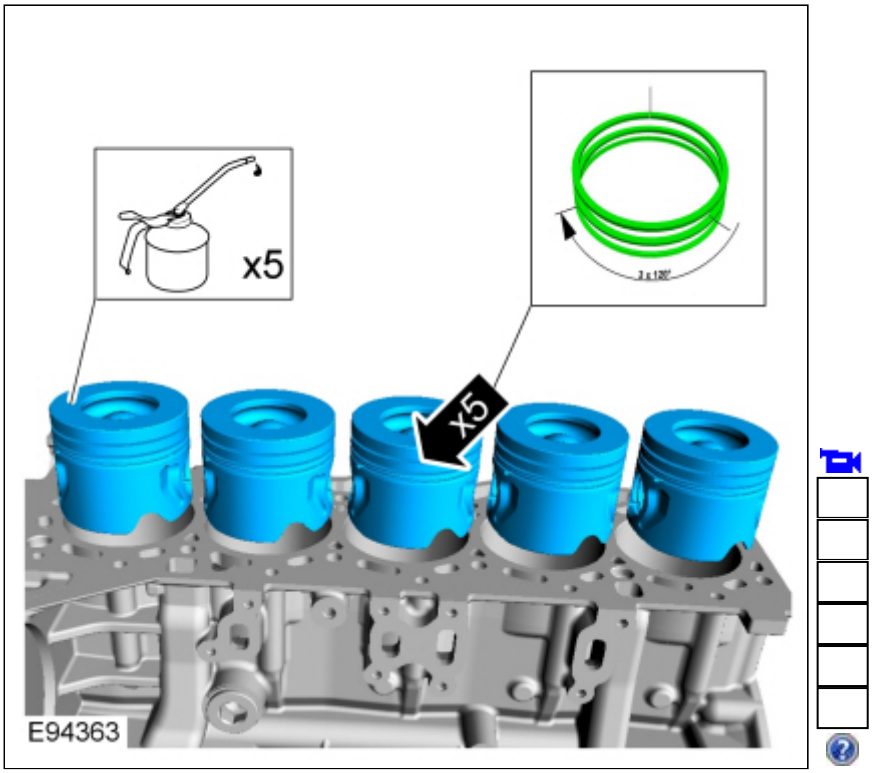


9. If necessary, install the crankshaft sprocket and bolt.
   Torque: 36 Nm

10. **NOTE:** *Care must be taken not to damage the piston cooling nozzles while doing the measuring.*

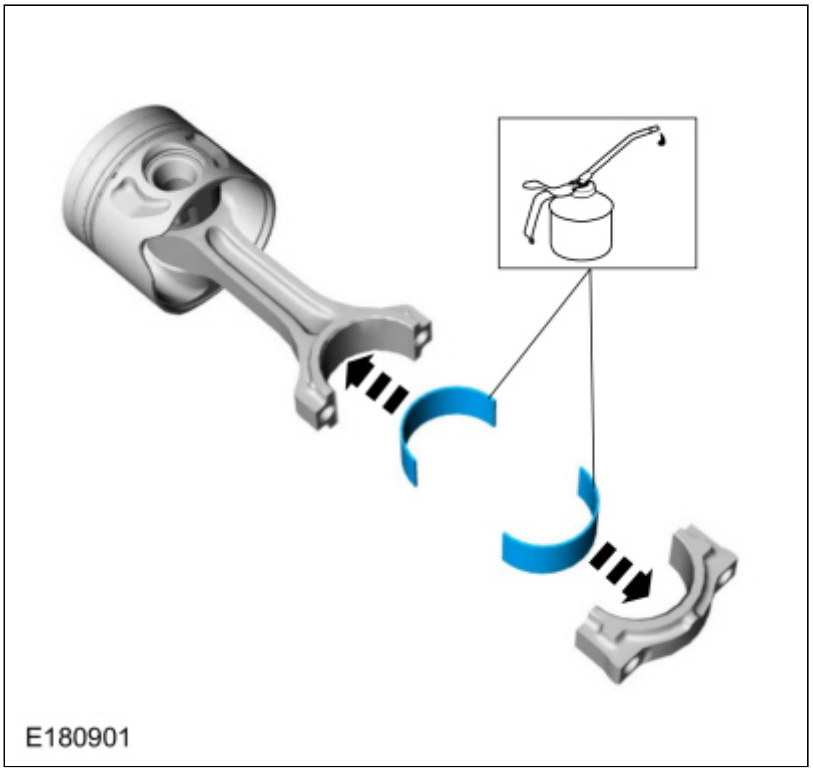
    NOTE: *Failure to have the crankshaft connecting rod journal at TDC (top dead center) may result in the incorrect selection of connecting rod.*

    Position the crankshaft connecting rod journal at TDC for the cylinder that is being measured. Using a commercially available Depth Gauge, measure the crankshaft connecting rod journal to cylinder block deck measurement on all cylinder bores.



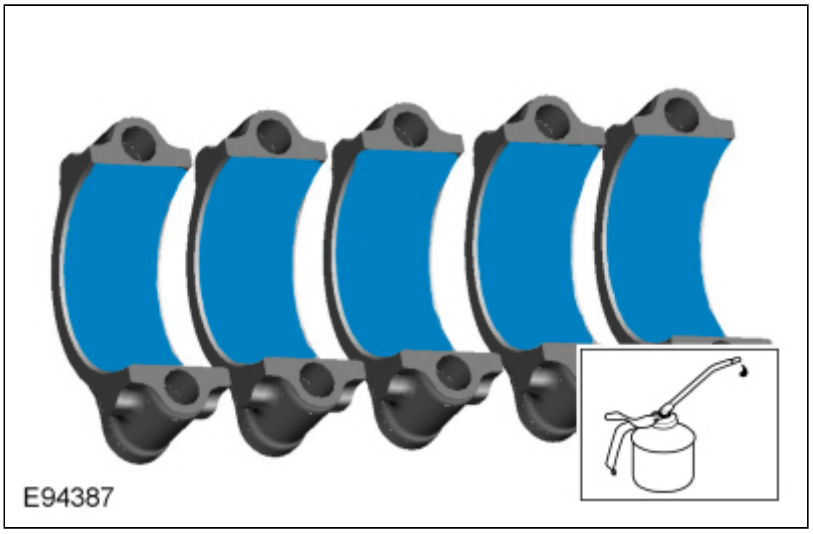
11. Select the appropriate connecting rod grade using the crank pin to cylinder head face value 'X' from the Connecting Rod Grade Selection table.
    Refer to: Specifications (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Specifications).

12. If any of the connecting rods need to be replaced.
    Refer to: Piston (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Disassembly and Assembly of Subassemblies).



13. **NOTE:** *Make sure that these components are installed to the noted removal position.*

    Use the General Equipment: Piston Ring Compressor
    Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)

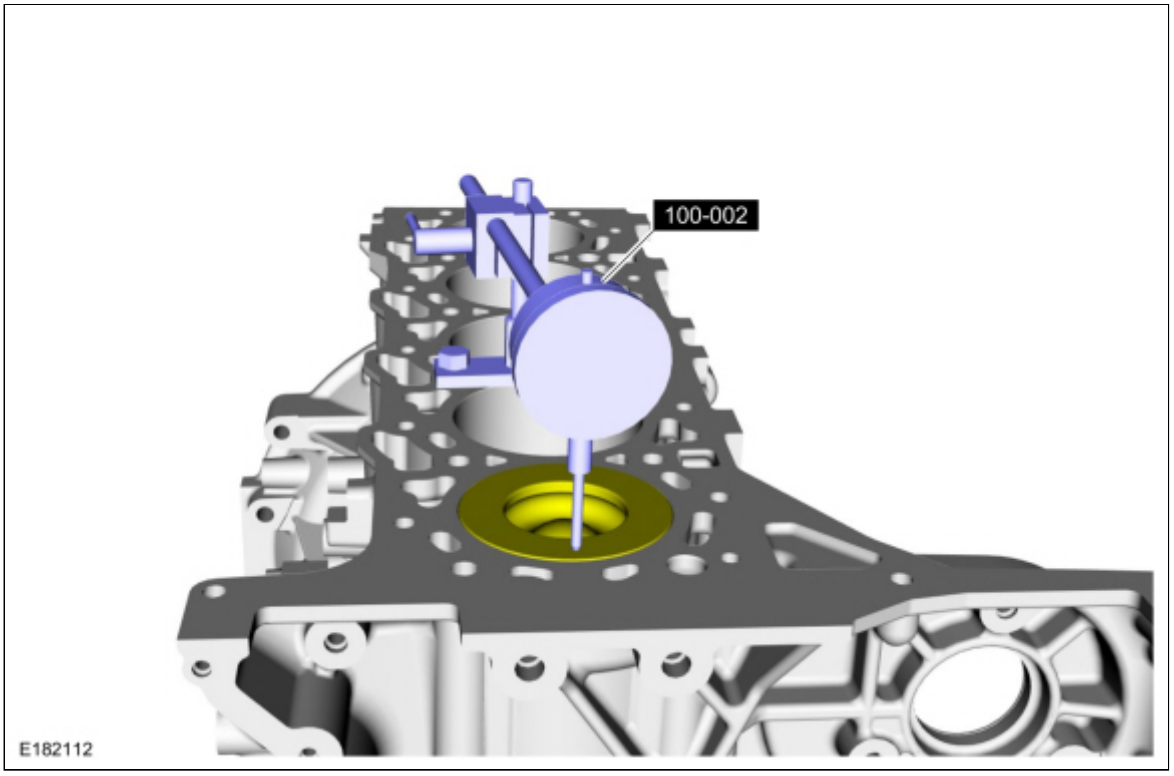


14. **NOTE:** *If reusing the connecting rod bearings, install them in their original positions and orientation as noted during disassembly.*

Install the connecting rod bearings. Lubricate with clean engine oil.
Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)

15. **NOTE:** *Make sure that these components are installed to the noted removal position.*

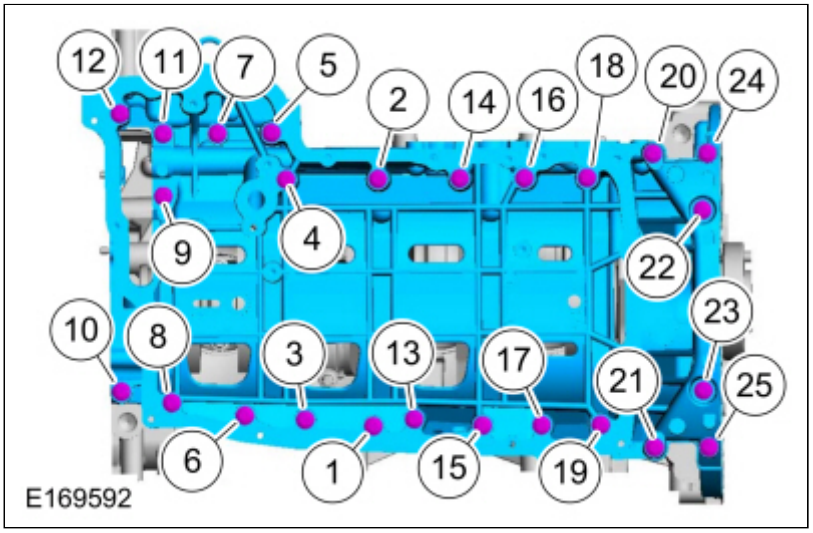
    Material: Engine Oil - SAE 5W-30 (WSS-M2C913-C)



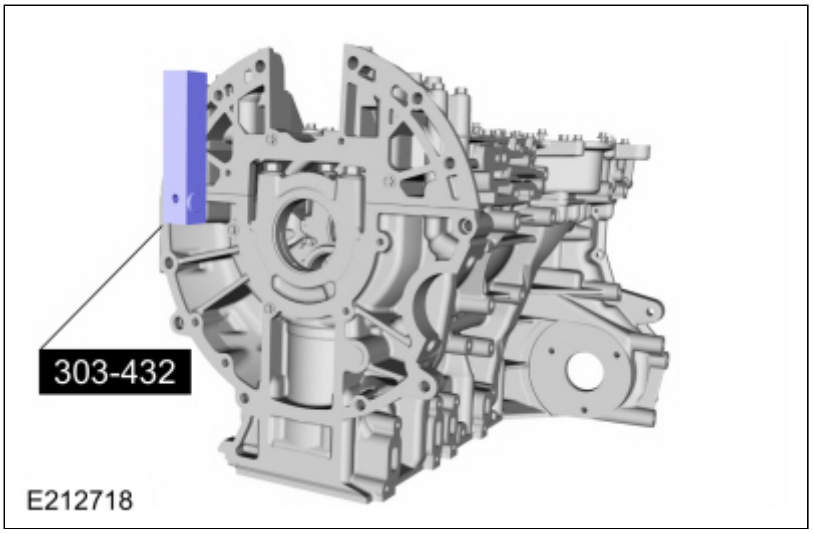
16. **NOTE:** *Make sure that these components are installed to the noted removal position.*

    NOTE: *Install all the bolts finger tight before final tightening.*

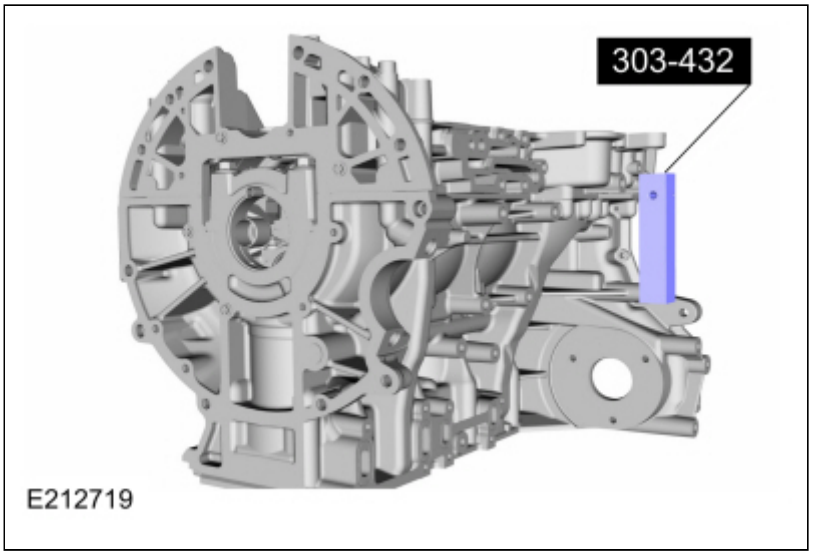
    Torque:
    Stage 1: 8 Nm
    Stage 2: 25 Nm
    Stage 3: 60 Nm
    Stage 4: 90°



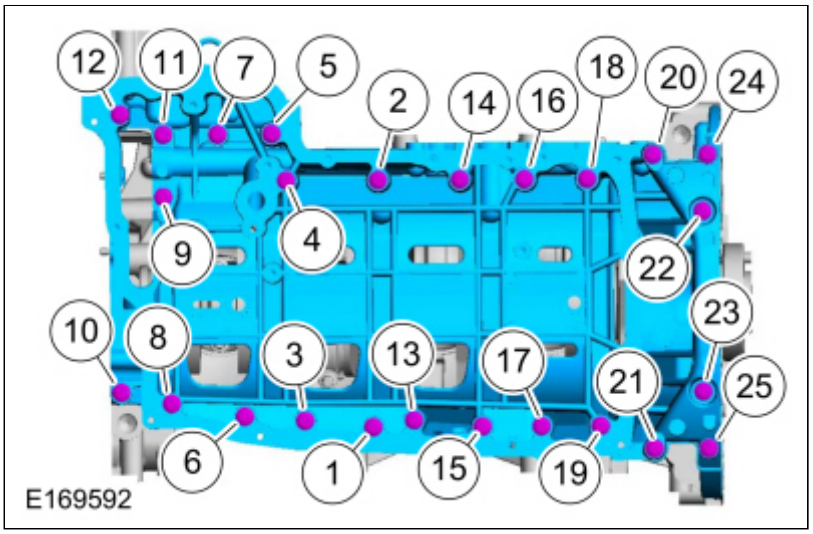
17. Using the special tool, check the piston protrusion. If not within specifications, repeat the connecting rod length calculation.
    Refer to: Specifications (303-01B) .
    Use Special Service Tool: 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.



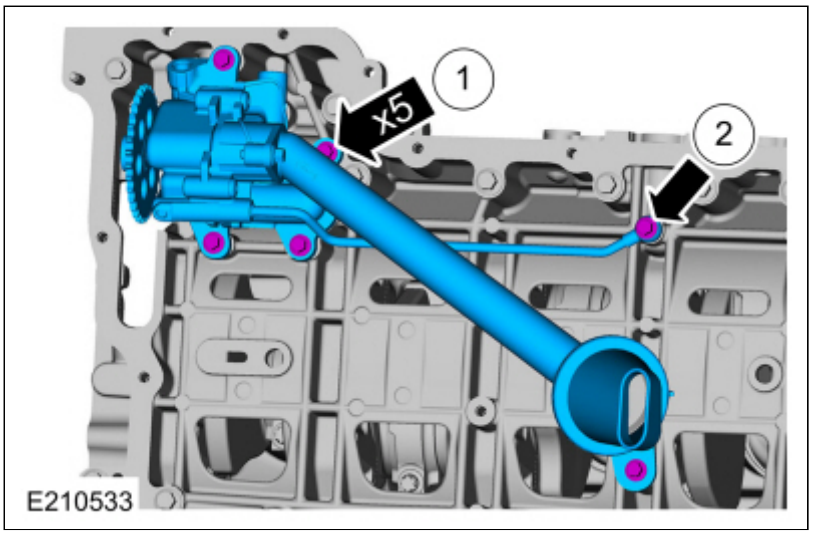
18.



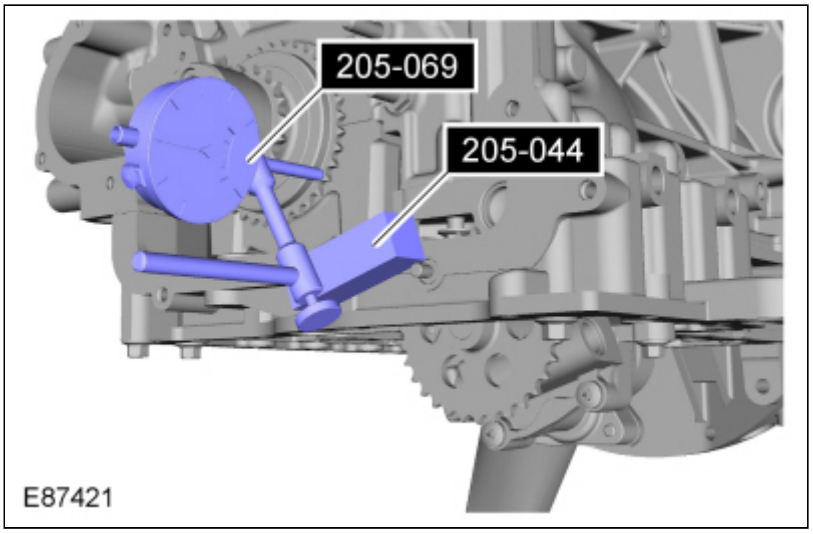
19. **NOTE:** *Only tighten the bolts finger tight at this stage.*



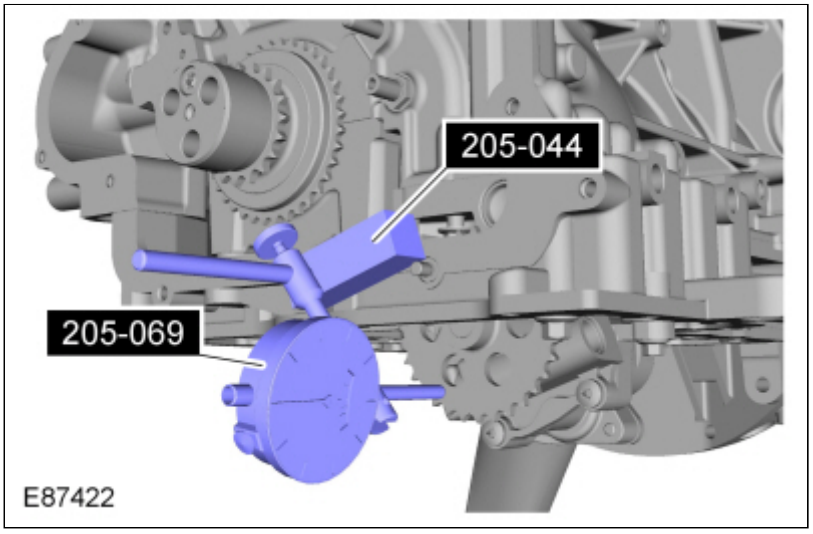
20. Using a straight edge, align the rear surface of the ladderframe with the rear surface of the engine block. The rear clearance does not exceed 0.05 mm gap.
    Use Special Service Tool: 303-432 Holding Fixture, Dial Indicator Gauge (Cylinder Liner Protrusion).



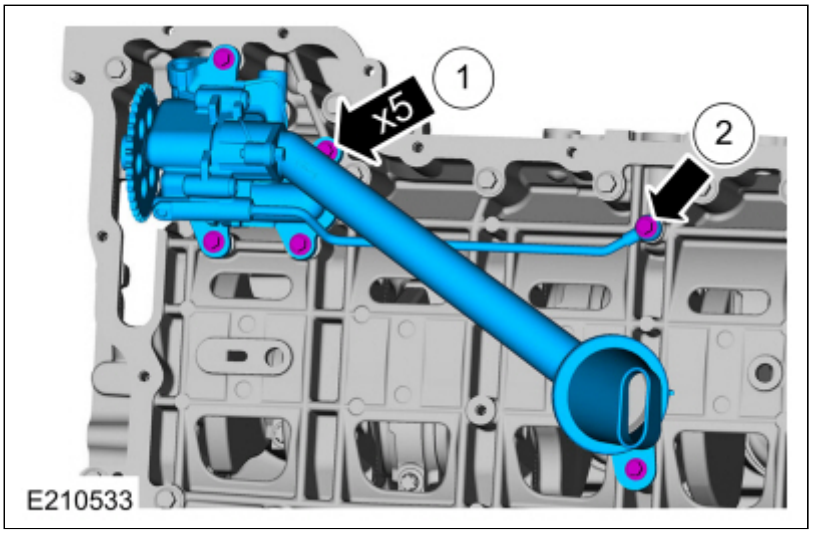
21. Using a straight edge, align the side surface of the ladderframe with the side surface of the engine block. The side clearance does not exceed 0.01mm overlap.
    Use Special Service Tool: 303-432 Holding Fixture, Dial Indicator Gauge (Cylinder Liner Protrusion).



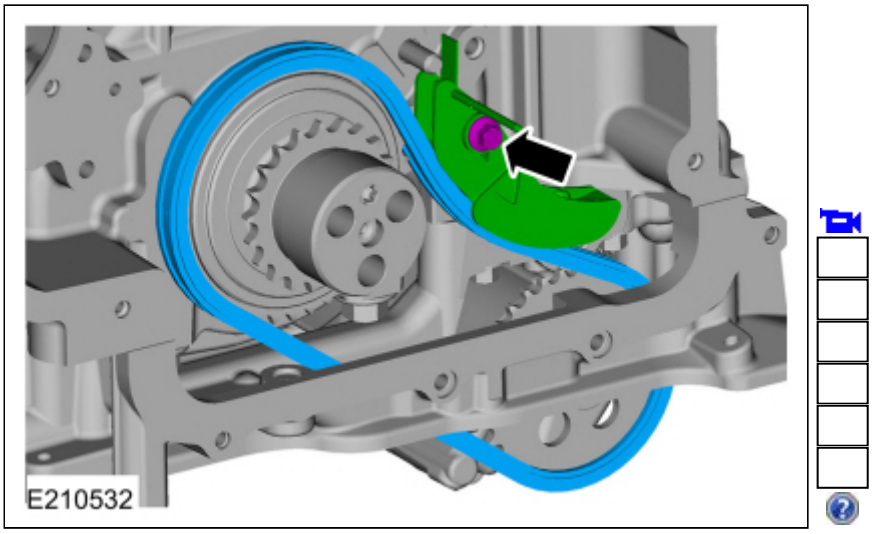
22. *Torque*:
    Stage 1: 6 Nm
    Stage 2: 23 Nm



23. **NOTE:** *Only tighten the bolts finger tight at this stage.*

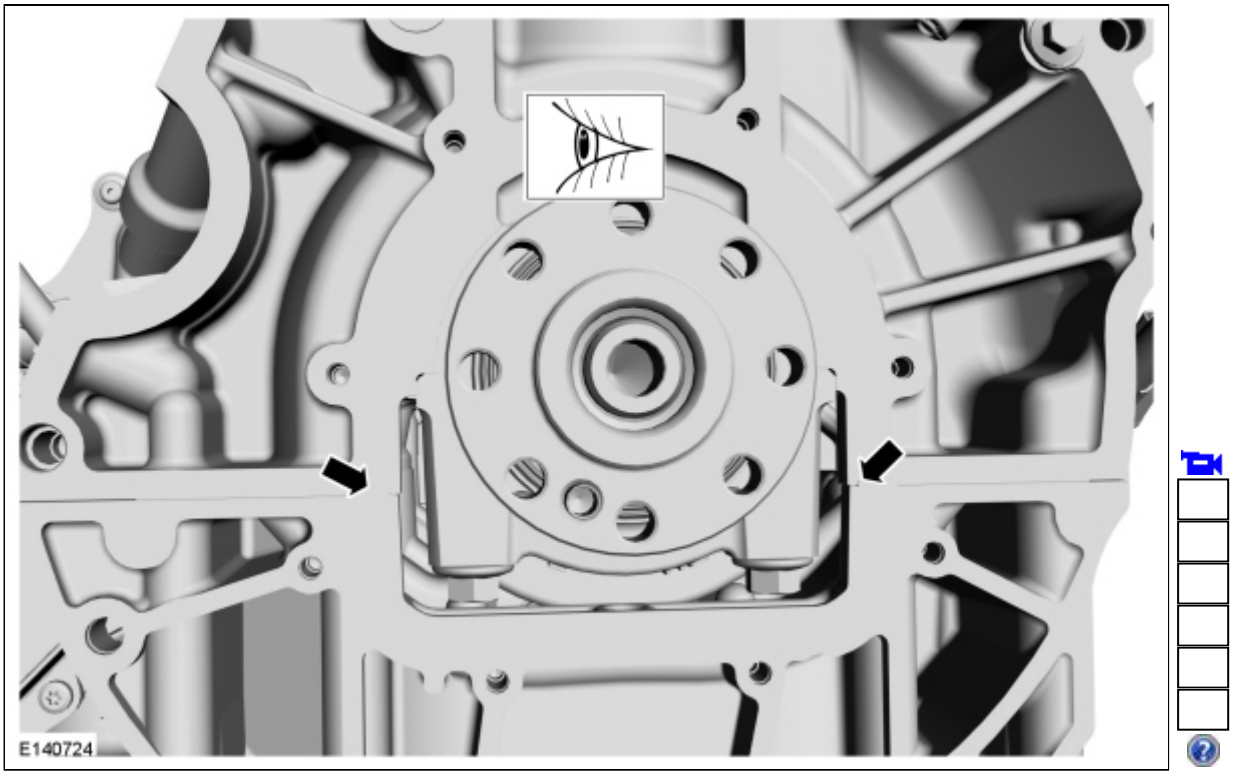


24. Take a reference measurement from the front face of the crankshaft sprocket.
    Use Special Service Tool: 205-044 Holding Fixture, Dial Indicator Gauge. , 205-069 Dial Indicator Gauge (Metric).

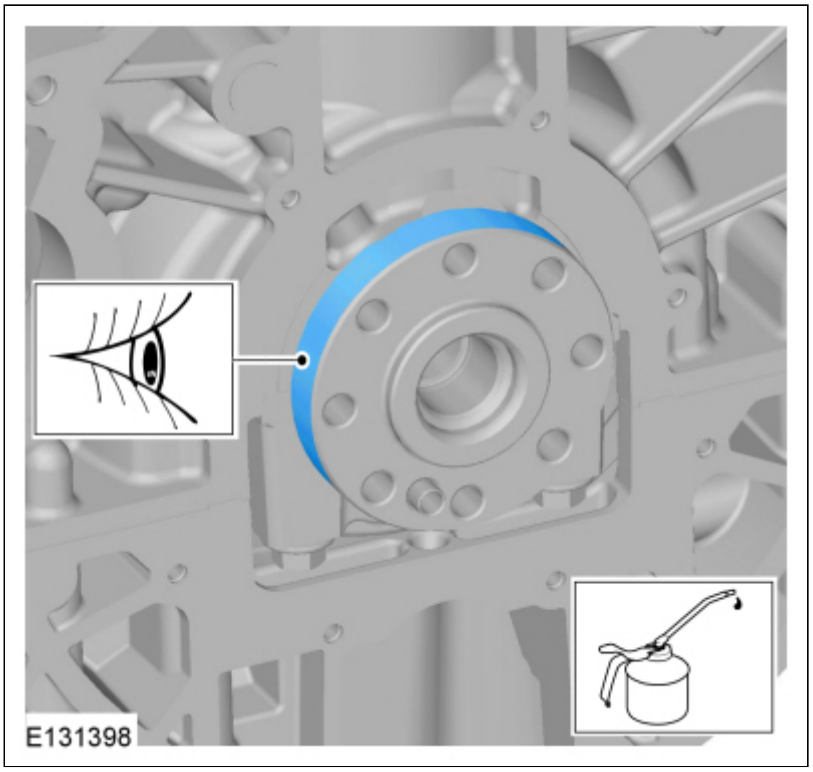


25. Take measurements at two different points on the oil pump sprocket and align the oil pump sprocket.
    Use Special Service Tool: 205-044 Holding Fixture, Dial Indicator Gauge. , 205-069 Dial Indicator Gauge (Metric).

26. *Torque*:
    1: 10 Nm
    2: 13 Nm



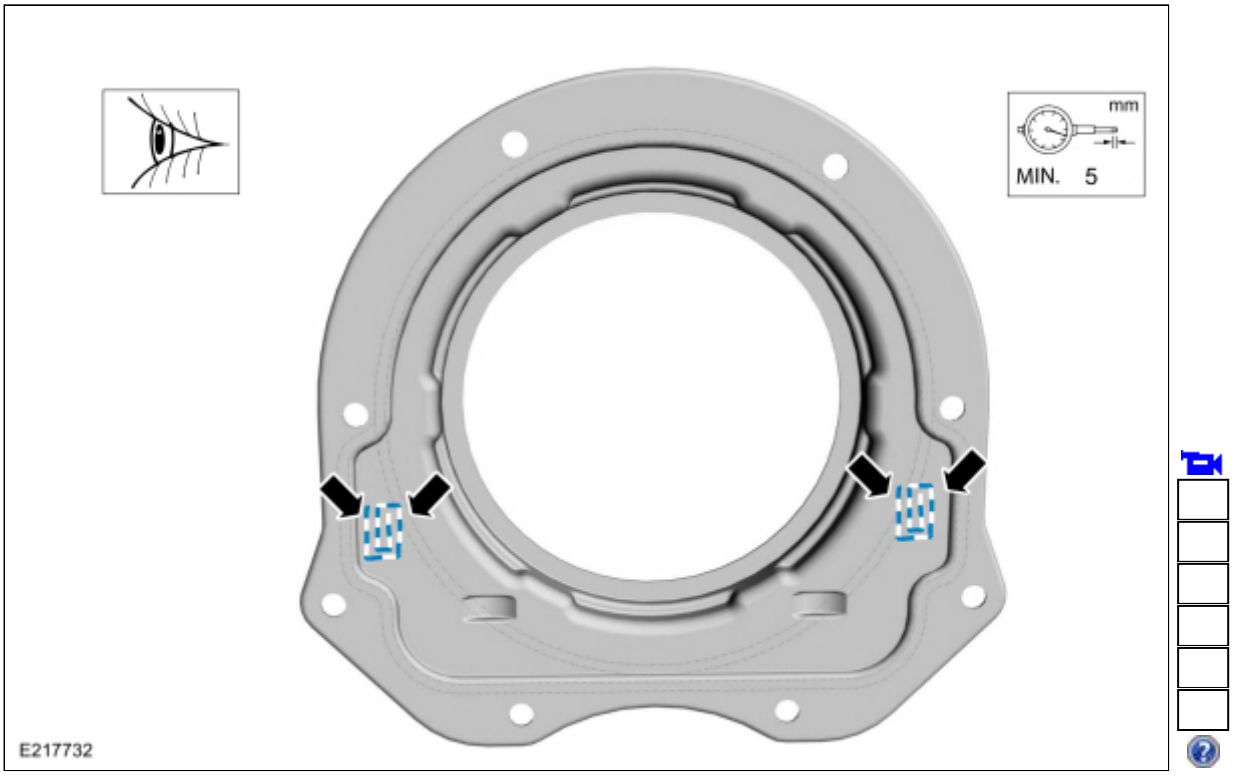
27. *Torque*: 10 Nm



28. **NOTE:** *A new crankshaft rear seal carrier is supplied with an alignment sleeve that must not be removed until the crankshaft rear seal is fully installed. Failure to follow this instruction may result in damage to the vehicle.*

    - Clean the area on the engine before installing a new crankshaft rear seal carrier.
    - Check the two foam pads are located as shown on the ladder frame gasket.

29. *Material*: Engine Oil - SAE 5W-30 (WSS-M2C913-C)

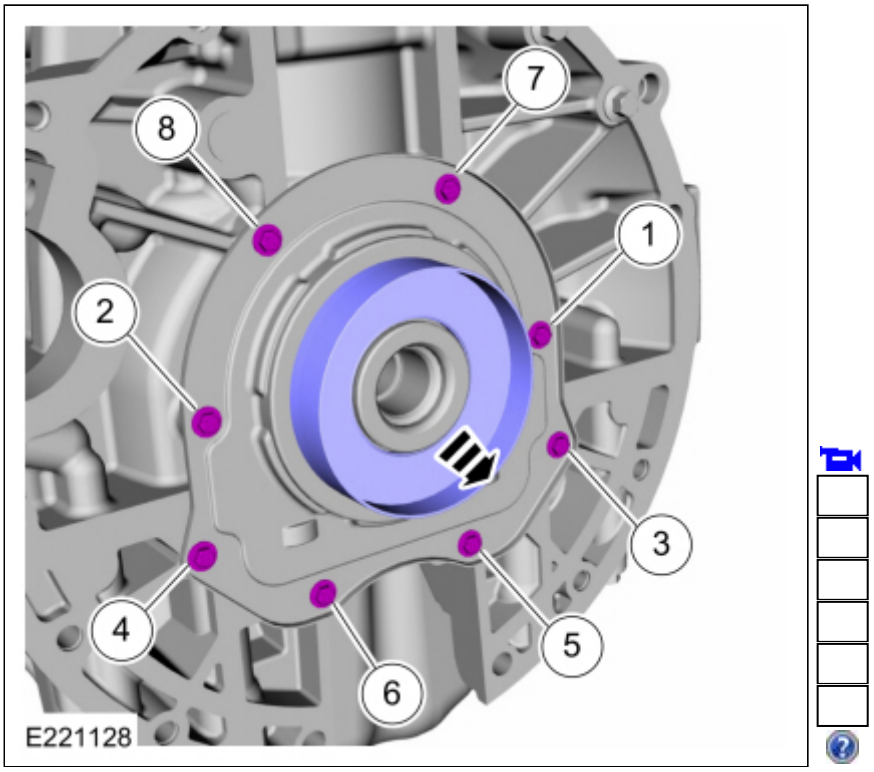


30. **NOTE:** *Install new crankshaft rear seal carrier with in five minutes after applying the recomended sealent. Failure to follow this instruction may result in damage to the vehicle.*

    NOTE: *Do not add any more than the specified quantity of sealant or add the sealant anywhere other than the area shown.*

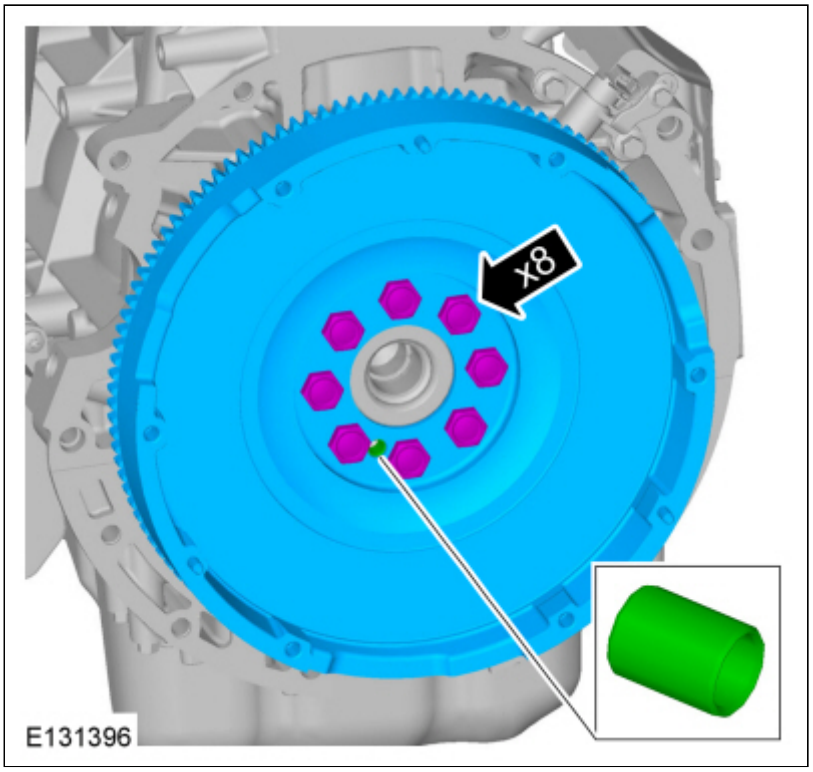
    NOTE: *If the foam pads are not present on inspection, fill the square areas shown with 75% of sealant.*

    Material: Silicone Sealant (WSE-M4G323-A4)



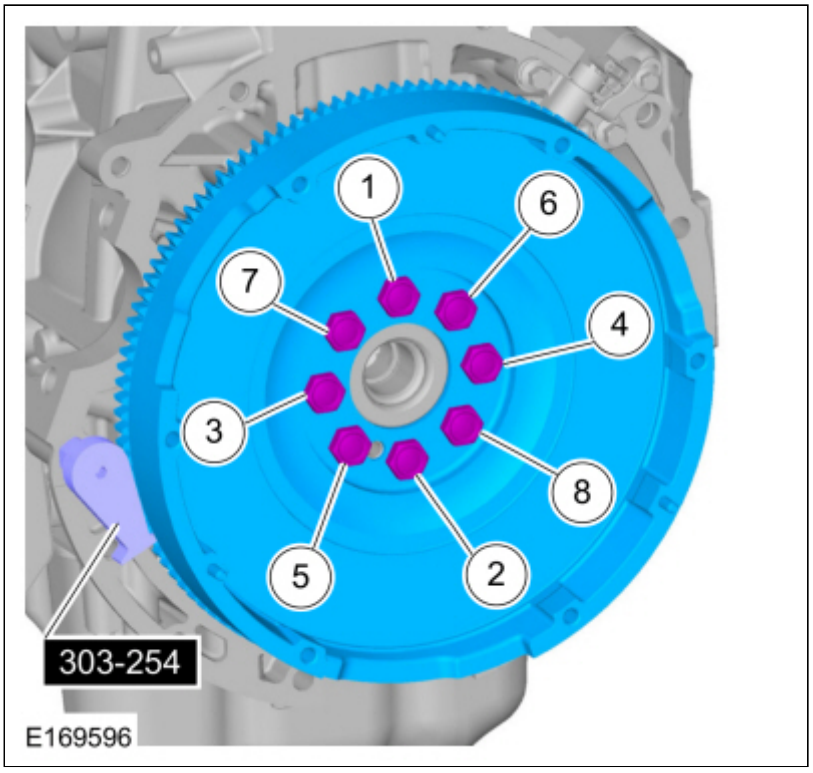
31. **NOTICE: A new crankshaft rear seal carrier is supplied with an alignment sleeve that must not be removed until the crankshaft rear seal is fully installed. Failure to follow this instruction may result in damage to the vehicle.**

    NOTE: *Initially hand tighten the fasteners.*



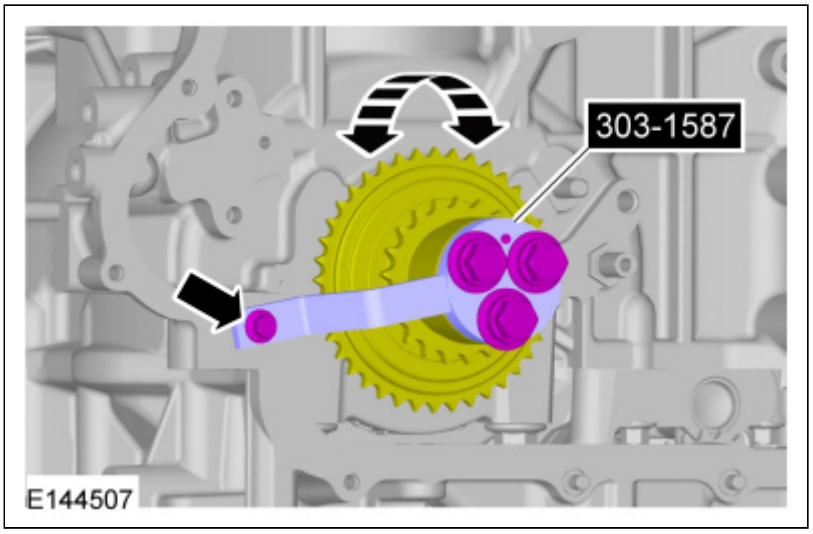
32. **NOTE:** *New crankshaft rear seal carriers are supplied with an alignment sleeve which must be removed after installation.*

Torque:
:
Stage 1: 5 Nm
Stage 2: 10 Nm



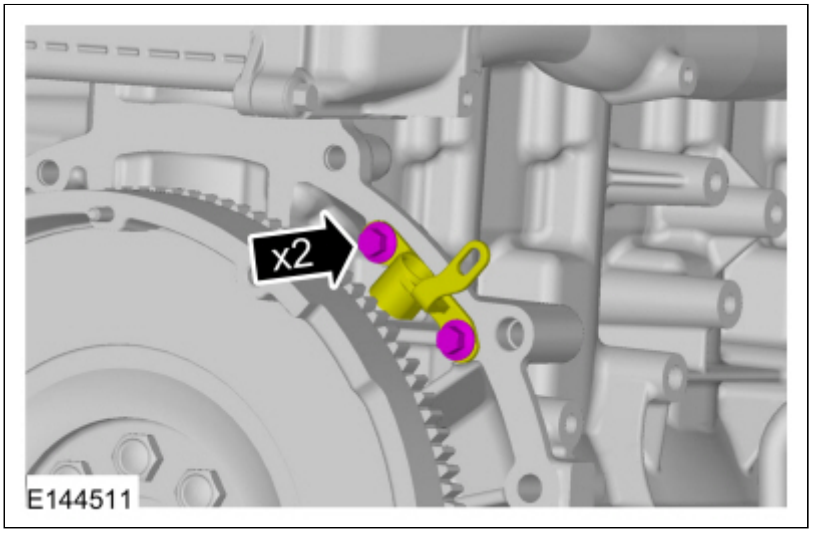
33. **NOTE:** *Make sure that the flywheel is in full contact with the crankshaft flange before installing the flywheel bolts.*

Initially hand tighten the fasteners.

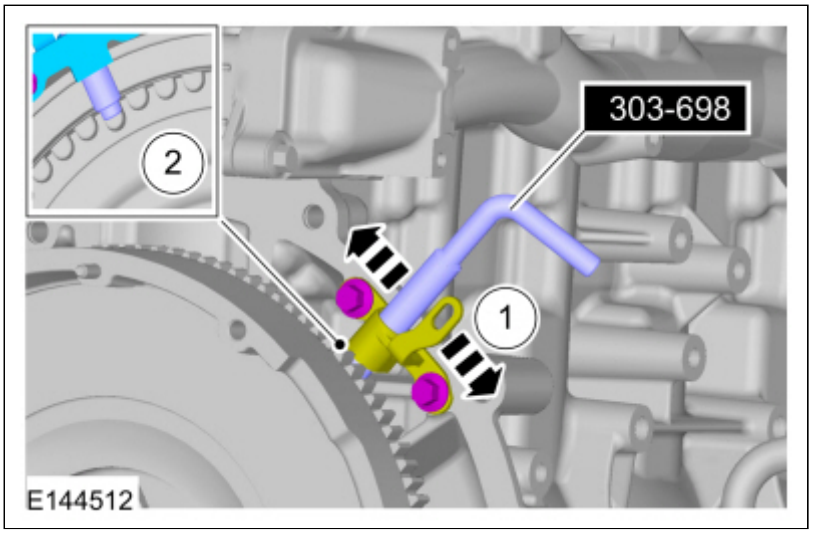


34. **NOTICE: Make sure that the flywheel is in full contact with the crankshaft flange before installing the flywheel bolts.**

    Use Special Service Tool: 303-254 Locking Tool, Flywheel.
    Torque:
    Stage 1: 25 Nm
    Stage 2: 40 Nm
    Stage 3: 45°

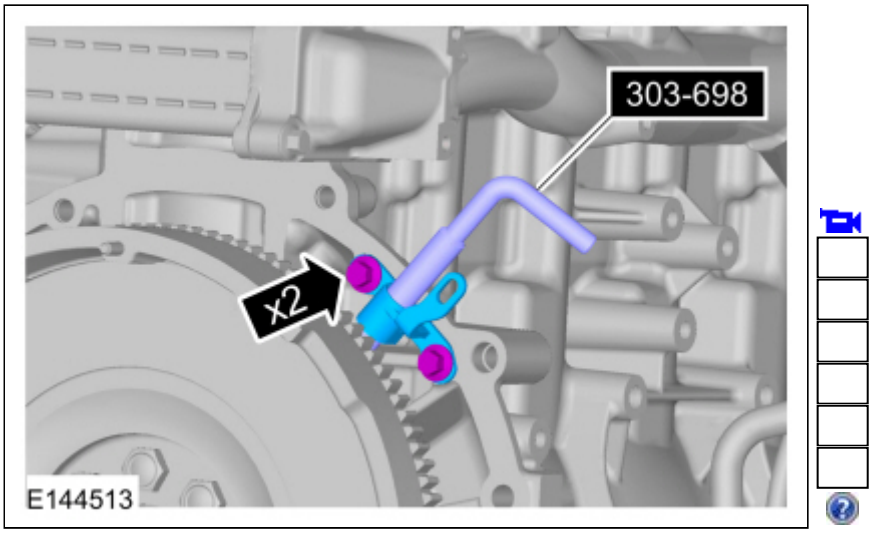


35. Use Special Service Tool: 303-1587 Timing Tool, Crankshaft.



Vehicles with manual transmission

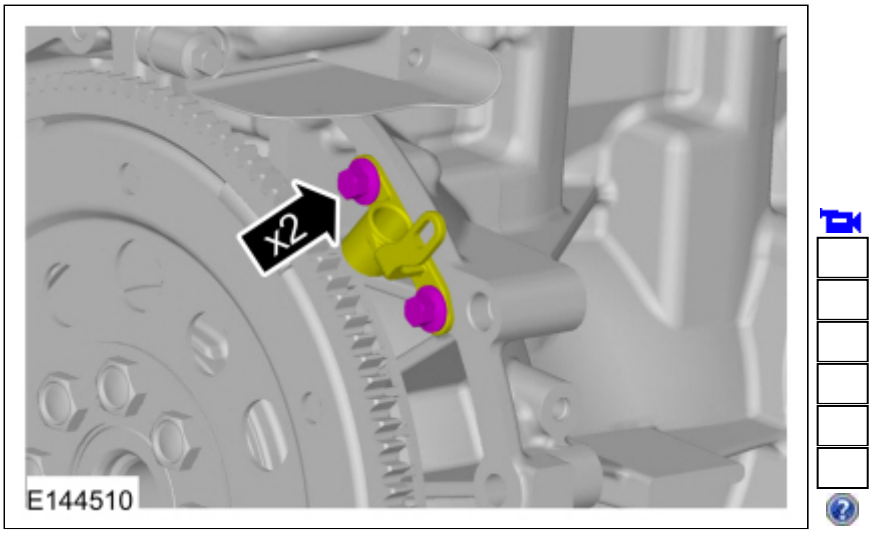
36. Initially hand tighten the fasteners.



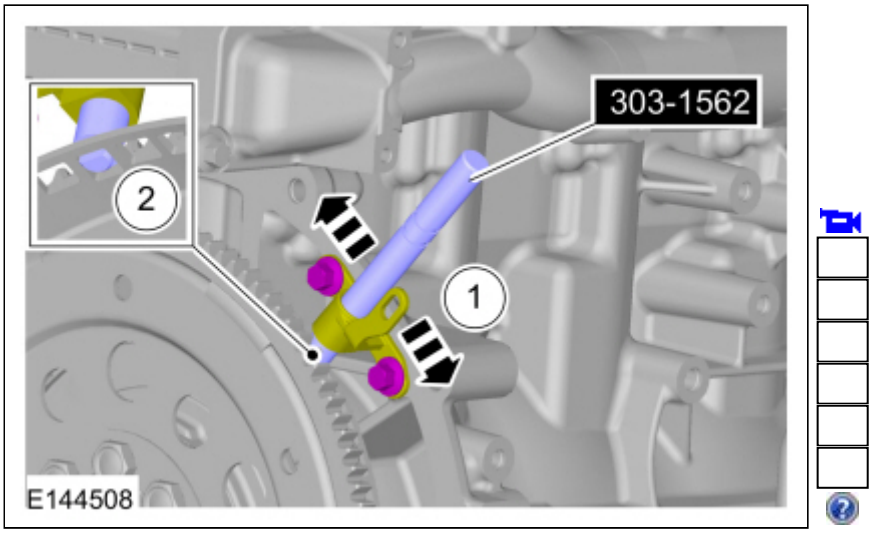
37. **NOTE:** *Make sure that the special tool is located in the flywheel timing slot.*

    Use Special Service Tool: 303-698 Timing Tool, Crankshaft.

38. Tighten bolts before removing tool.
    Remove Special Service Tool: 303-698 Timing Tool, Crankshaft.
    Torque: 20 Nm

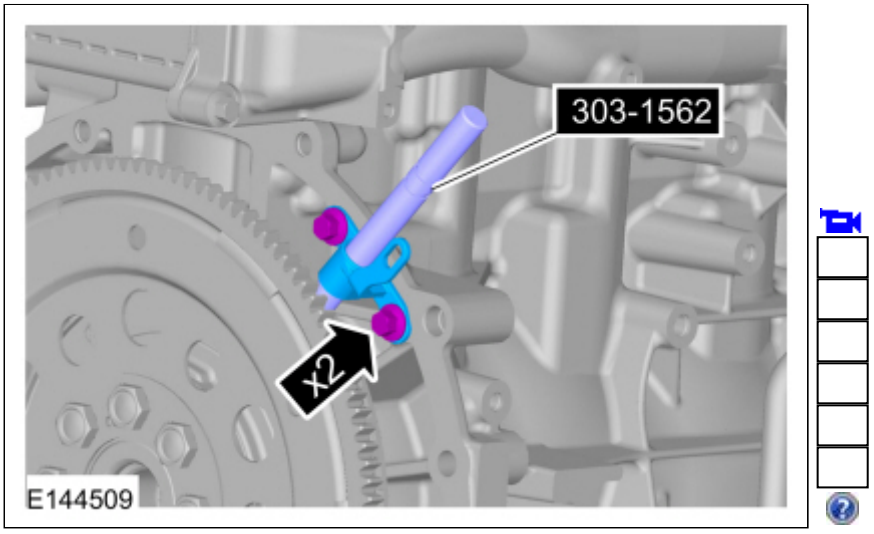


39. *Torque*: 8 Nm



Vehicles with automatic transmission

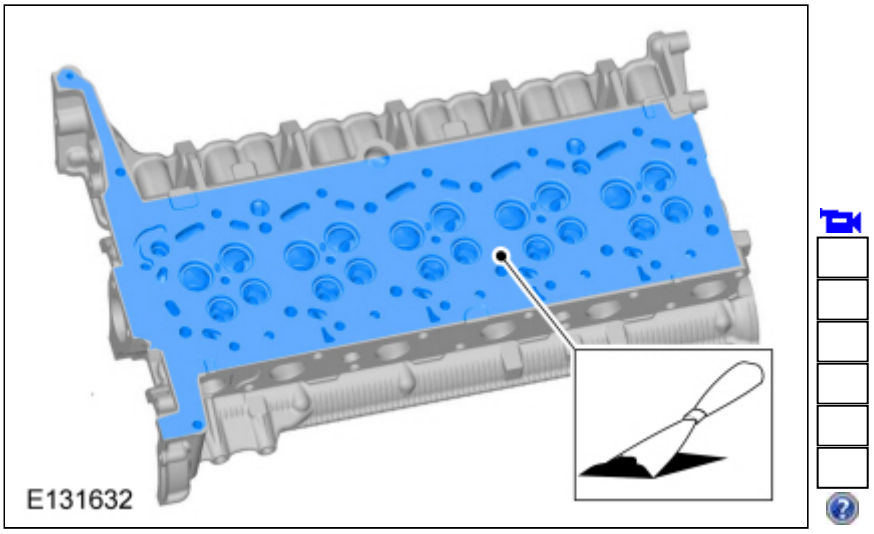
40. Initially hand tighten the fasteners.
    Use Special Service Tool: 303-698 Timing Tool, Crankshaft.



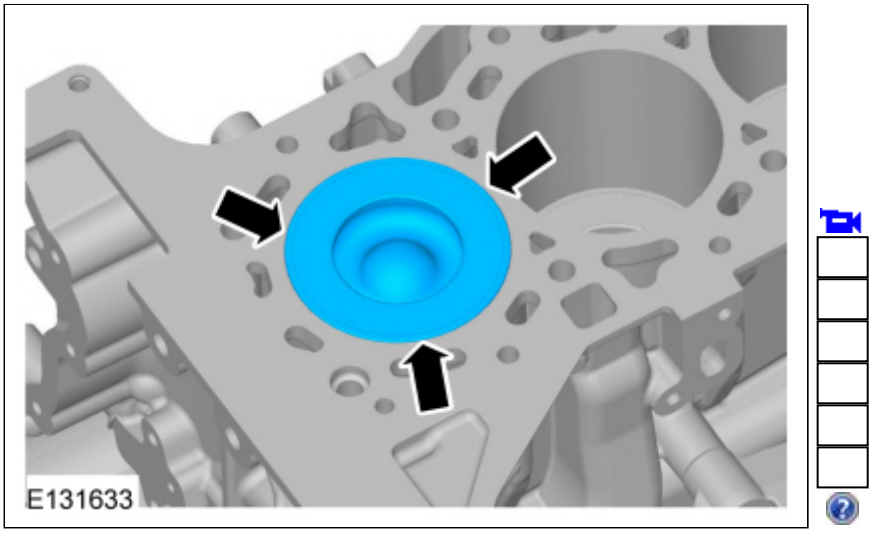
41. **NOTE:** *Make sure that the special tool is located in the flexplate timing slot.*

    Use Special Service Tool: 303-1562 Timing Tool.

42. Tighten bolts before removing tool.
    Remove Special Service Tool: 303-1562 Timing Tool.
    Torque: 20 Nm

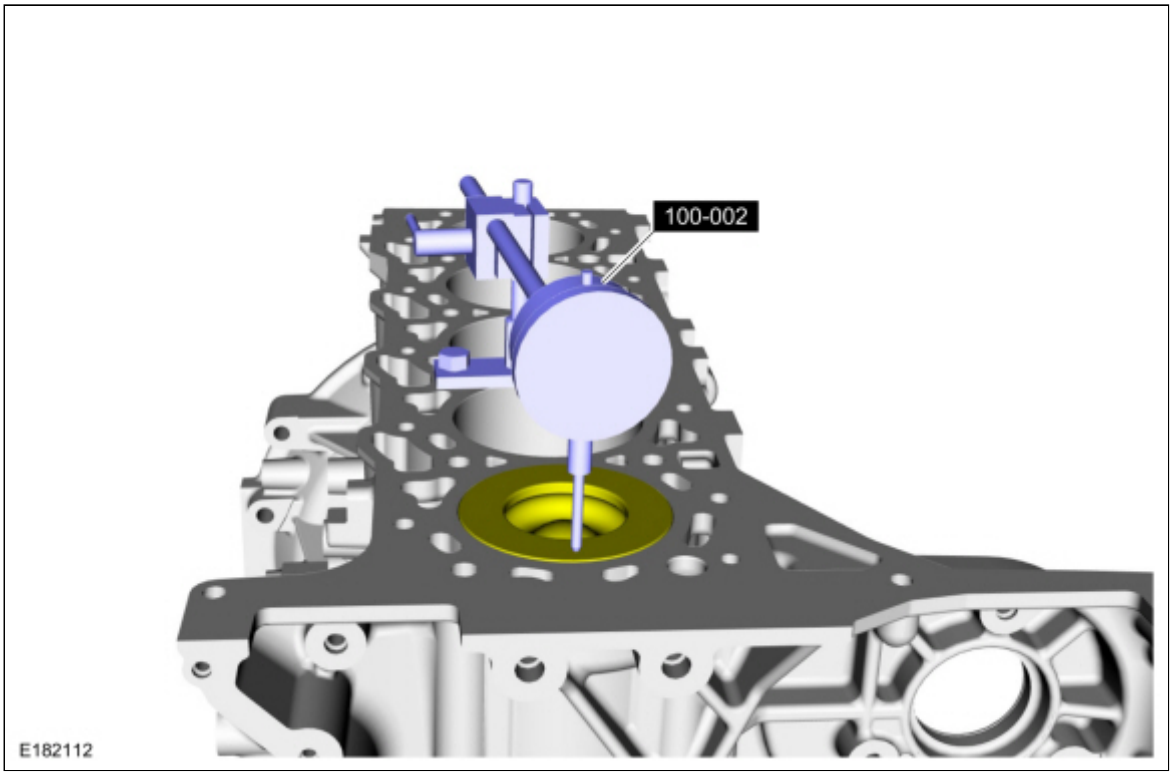


43. *Torque*: 8 Nm



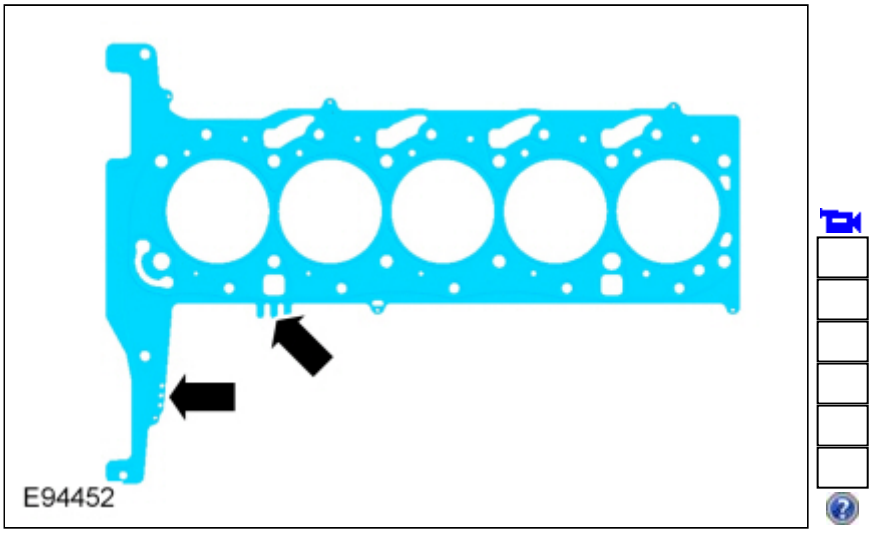
All vehicles

44. **WARNING: Do not use metal scrapers, wire brushes, power abrasive discs or other abrasive means to clean the sealing surfaces. These tools cause scratches and gouges that make leak paths. Use a plastic scraping tool to remove all traces of the head gasket.**



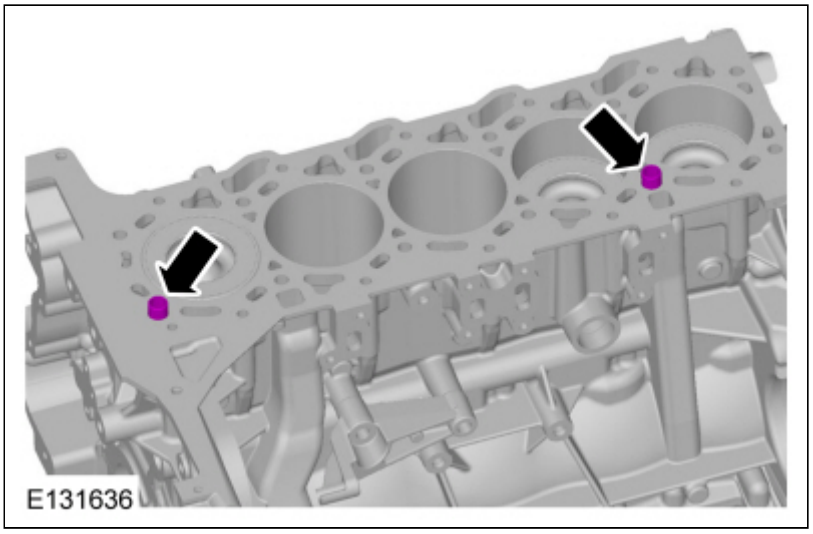
45. **NOTE:** *Measure the piston protrusion of each cylinder at top dead center (TDC).*

    Measure the distance between the piston crown and the cylinder block at the points indicated.



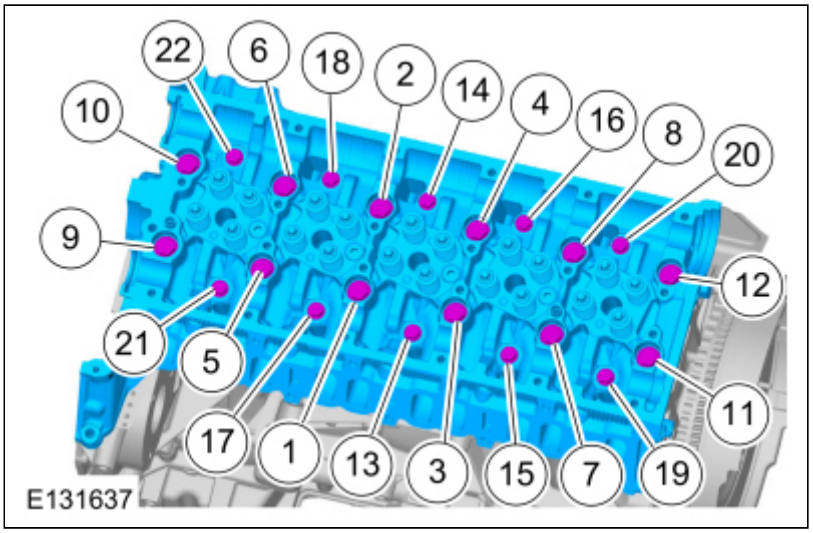
46. **NOTE:** *The largest measurement determines the choice of the cylinder head gasket.*

    - Using the special tools, measure the piston protrusion.
      Use Special Service Tool: 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.

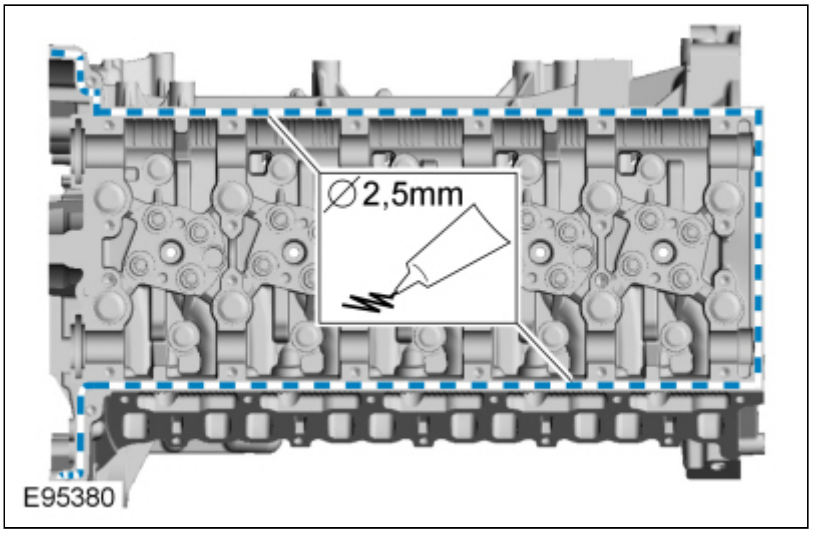


47. Determine the cylinder head gasket.
    Refer to: Specifications (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Specifications).

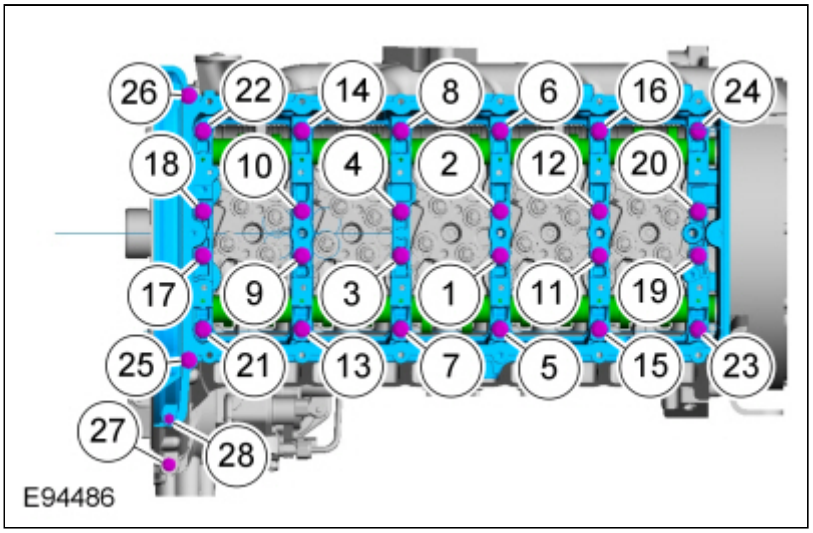
48. **NOTE:** *Make sure that a new component is installed.*



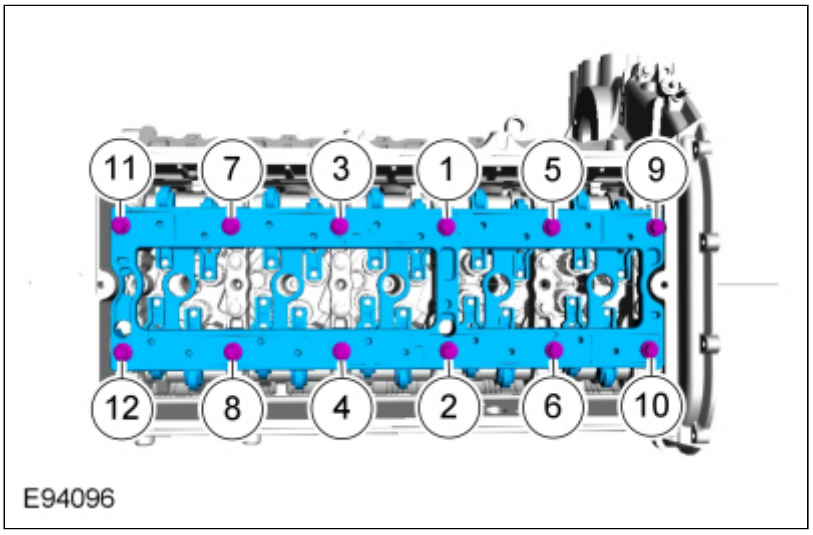
49.



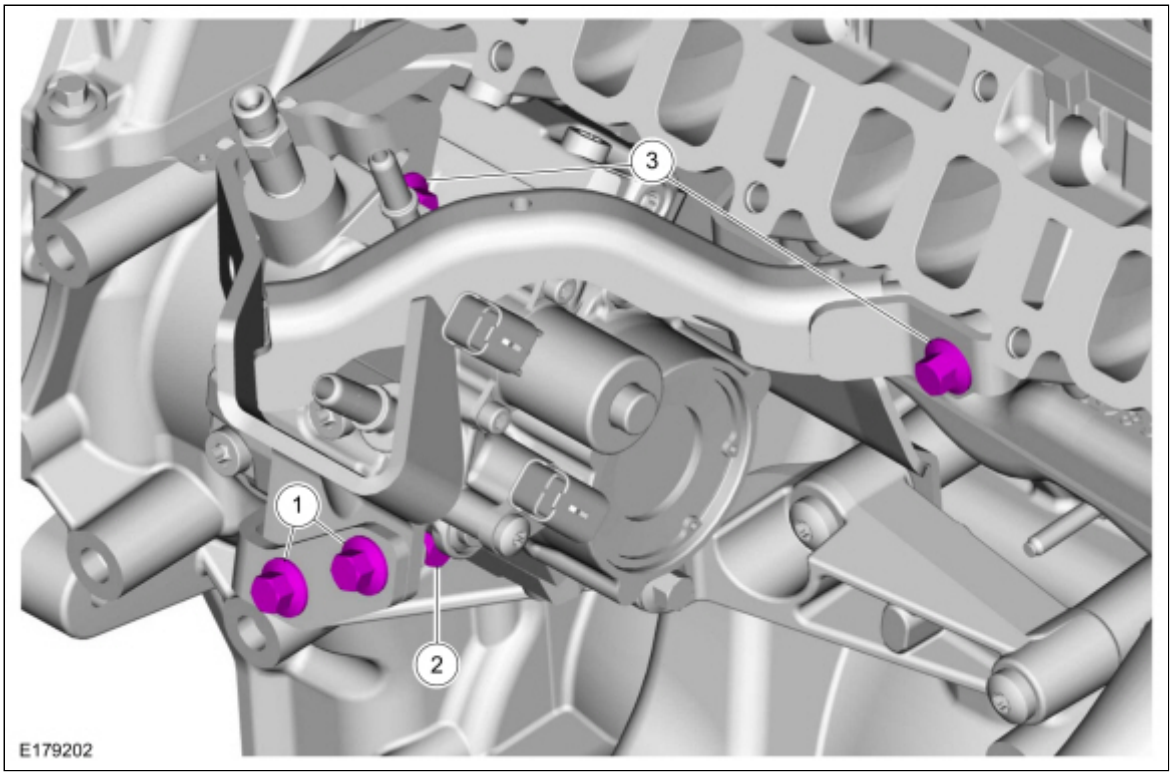
50. **NOTICE: Make sure that new cylinder head bolts are installed.**



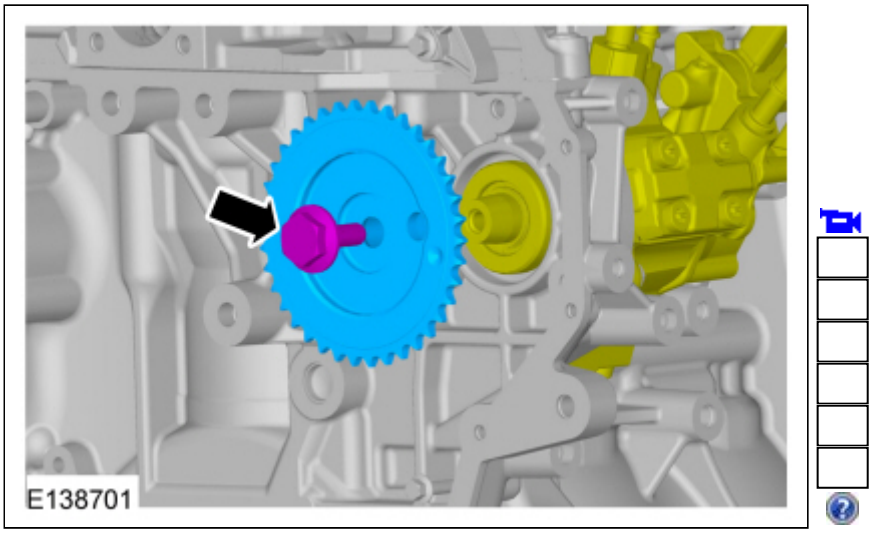
Torque:
Stage 1: 1-12: 10 Nm
Stage 2: 13-22: 5 Nm
Stage 3: 1-12: 20 Nm
Stage 4: 13-22: 10 Nm
Stage 5: 1-12: 35 Nm
Stage 6: 13-22: 20 Nm
Stage 7: 1-12: 45 Nm
Stage 8: 13-22: 26 Nm
Stage 9: 1-12: 90°
Stage 10: 13-22: 90°
Stage 11: 1-12: 90°
Stage 12: 13-22: 90°



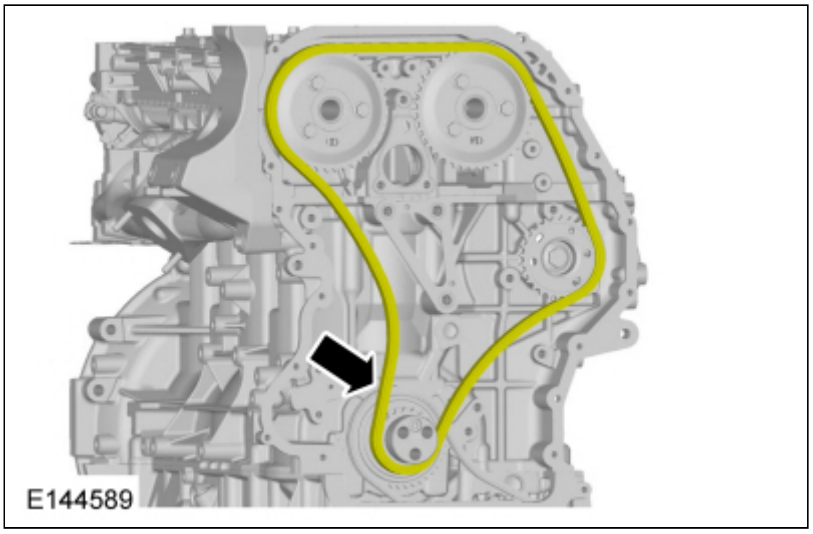
51. *Material*: Silicone Sealant (WSE-M4G323-A4)



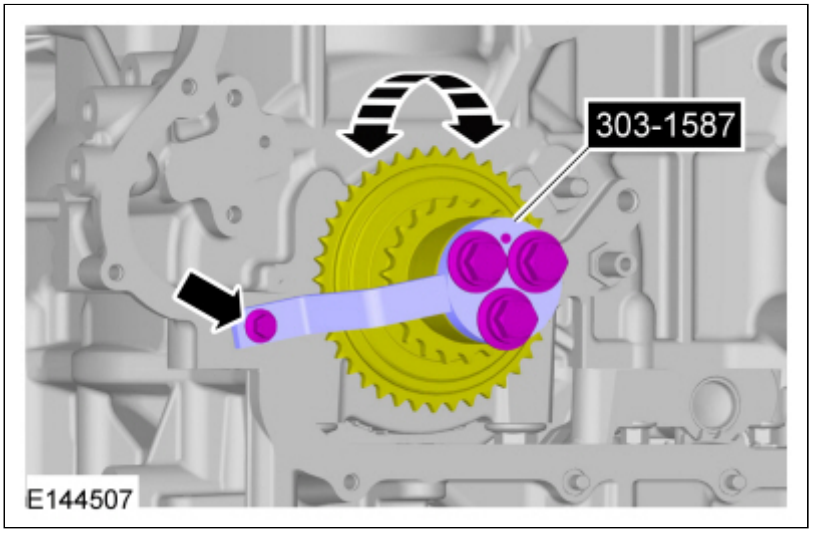
52. *Torque*:
    Stage 1: 1-26: 7 Nm
    Stage 2: 27-28: 4 Nm
    Stage 3: 1-26: 15 Nm
    Stage 4: 27-28: 6 Nm
    Stage 5: 1-26: 23 Nm
    Stage 6: 27-28: 10 Nm



53. *Torque*:
    Stage 1: 5 Nm
    Stage 2: 8 Nm
    Stage 3: 10 Nm
    Stage 4: 45°

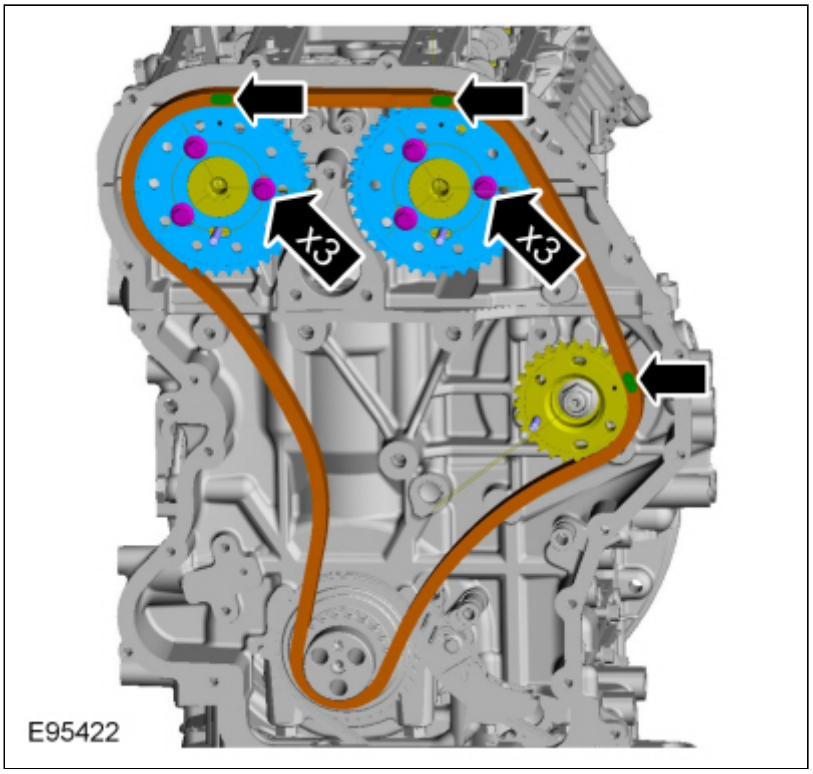


54. Tighten the fuel injection pump bracket nut and bolts. Tighten in the sequence shown.
Torque:
Stage 1: 22 Nm
Stage 2: 10 Nm
Stage 3: 22 Nm

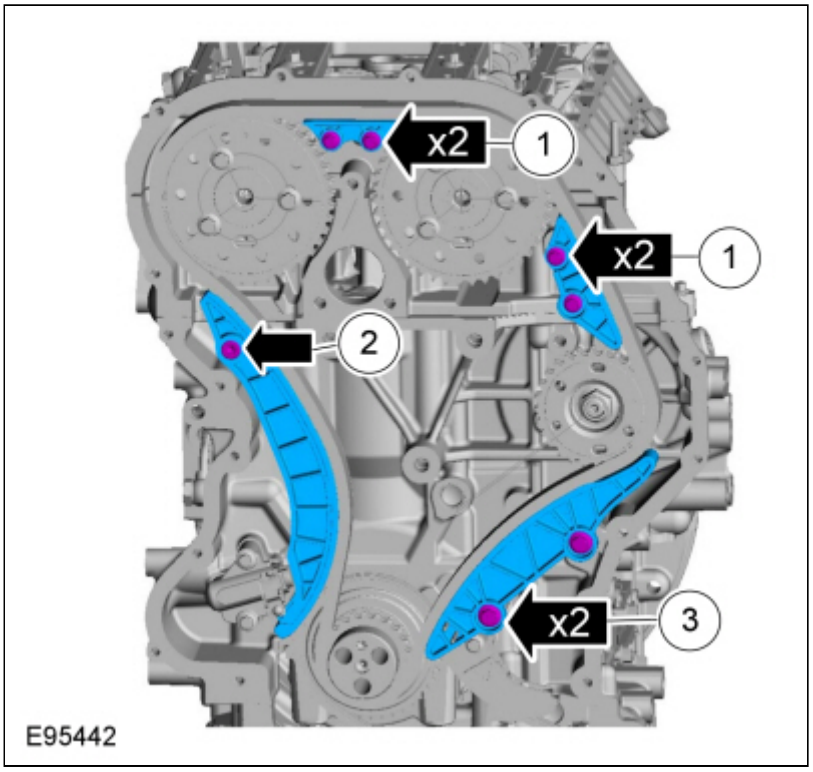


55. *Torque*: 45 Nm

56.

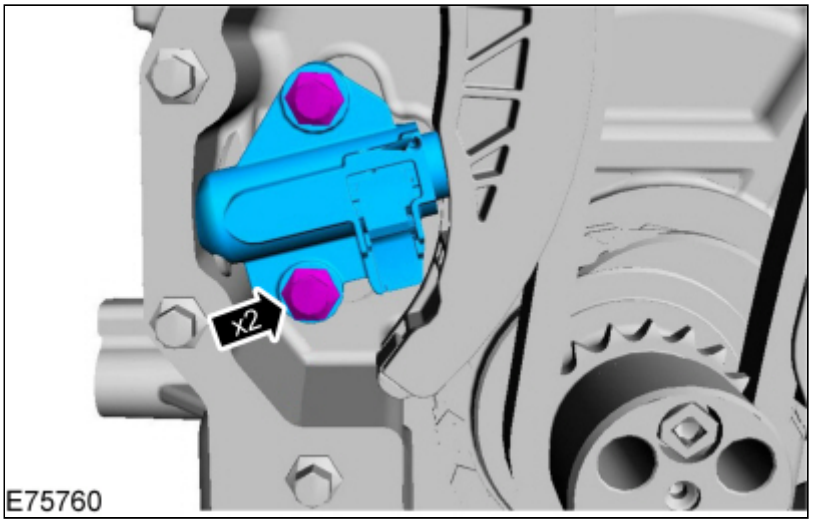


57. Install Special Service Tool: 303-1587 Timing Tool, Crankshaft.



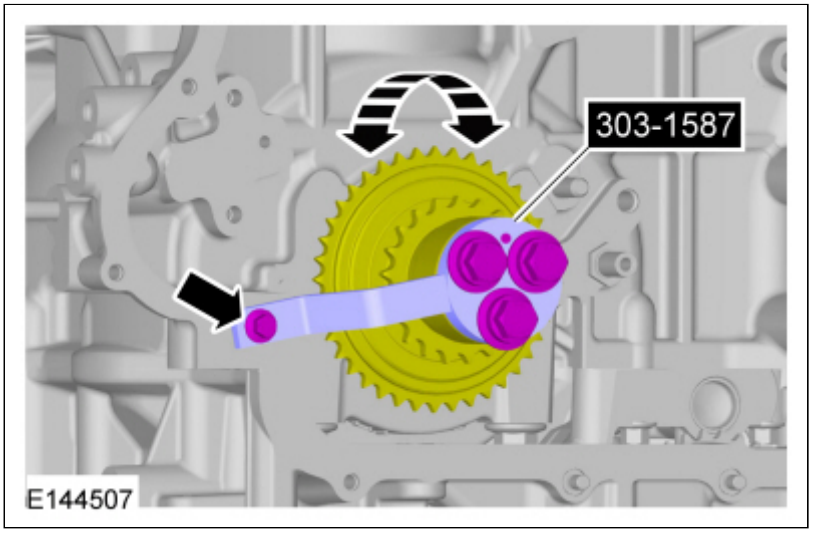
58. **NOTE:** *Make sure that the installation marks are aligned.*

Use the General Equipment: 6 mm Drill Bit
Torque:
Stage 1: 12 Nm
Stage 2: 24 Nm



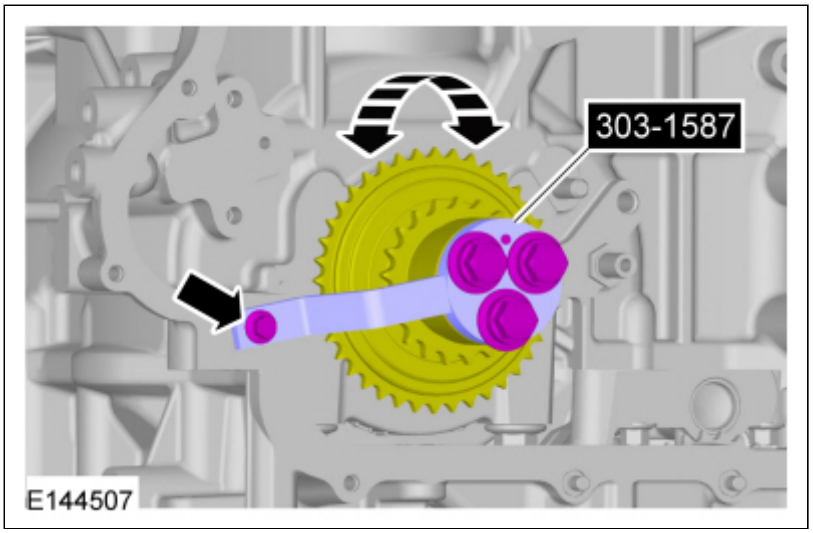
59. **NOTE:** *Make sure that new bolts are installed.*

Torque:
1: 14 Nm
2: 31 Nm
3: 15 Nm

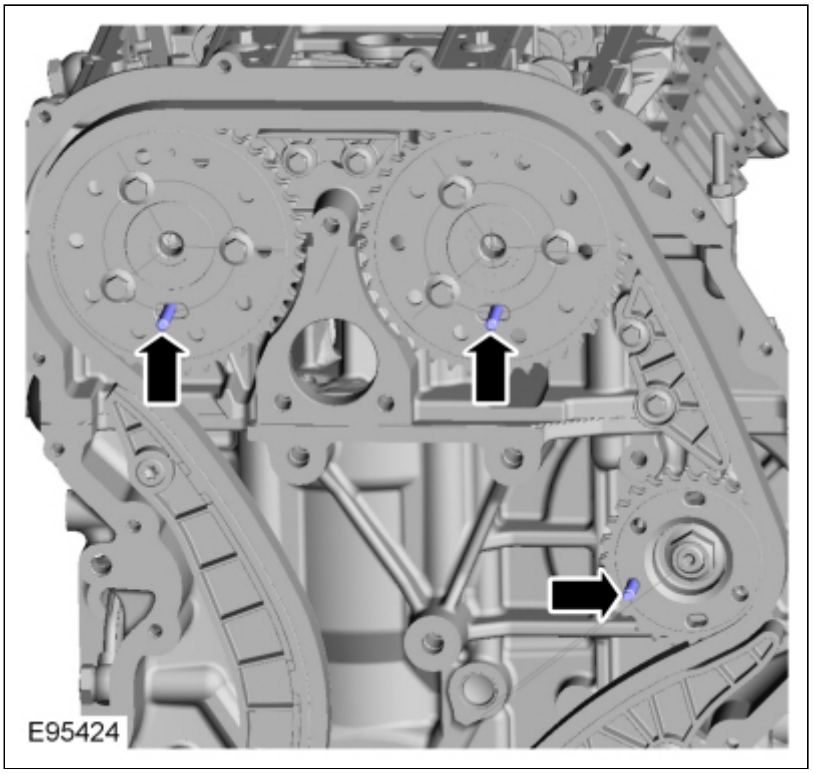


60. **NOTE:** *Make sure that a new component is installed.*

Torque: 15 Nm

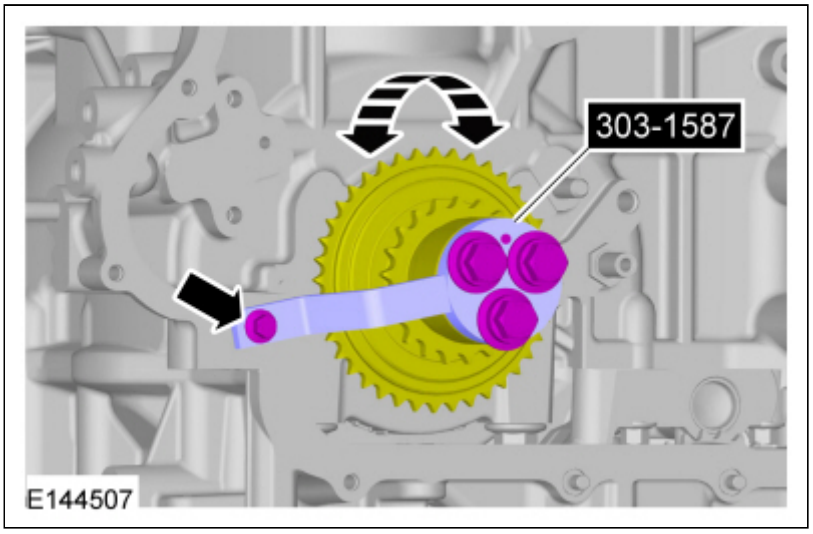


61. Remove Special Service Tool: 303-1587 Timing Tool, Crankshaft.

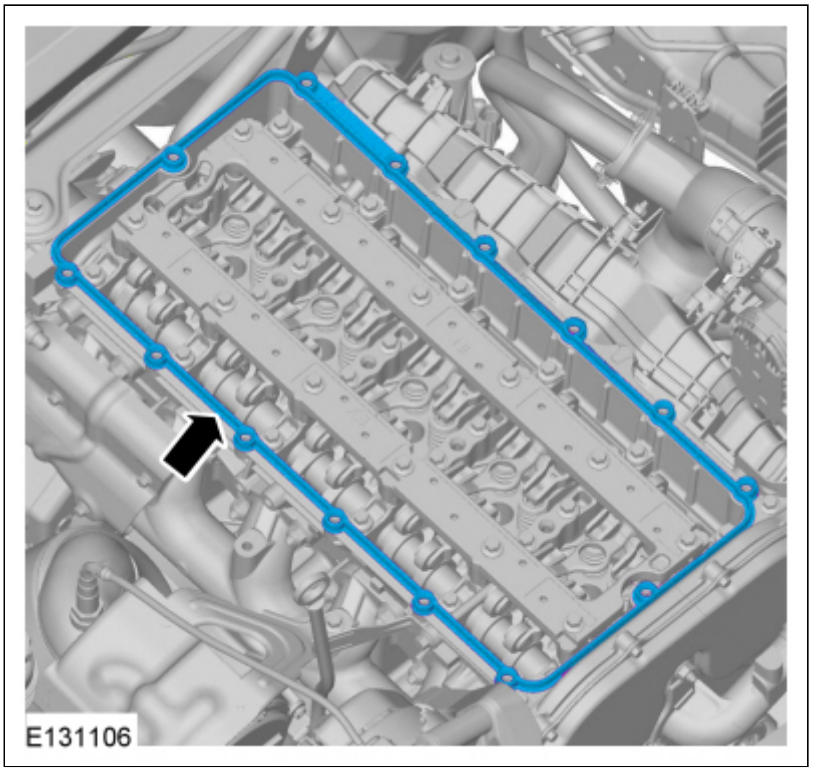


62. Rotate the engine two revolutions.

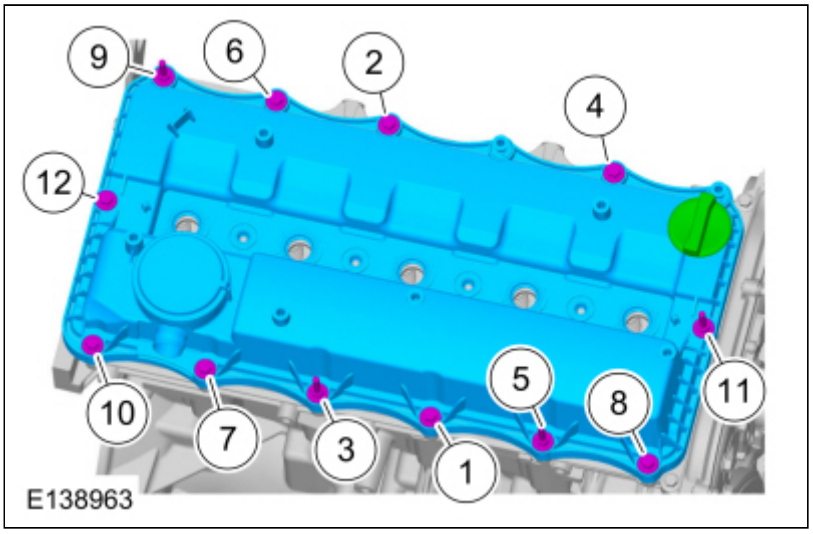
63. Install Special Service Tool: 303-1587 Timing Tool, Crankshaft.



64. Check the position of the timing marks and correct if necessary.

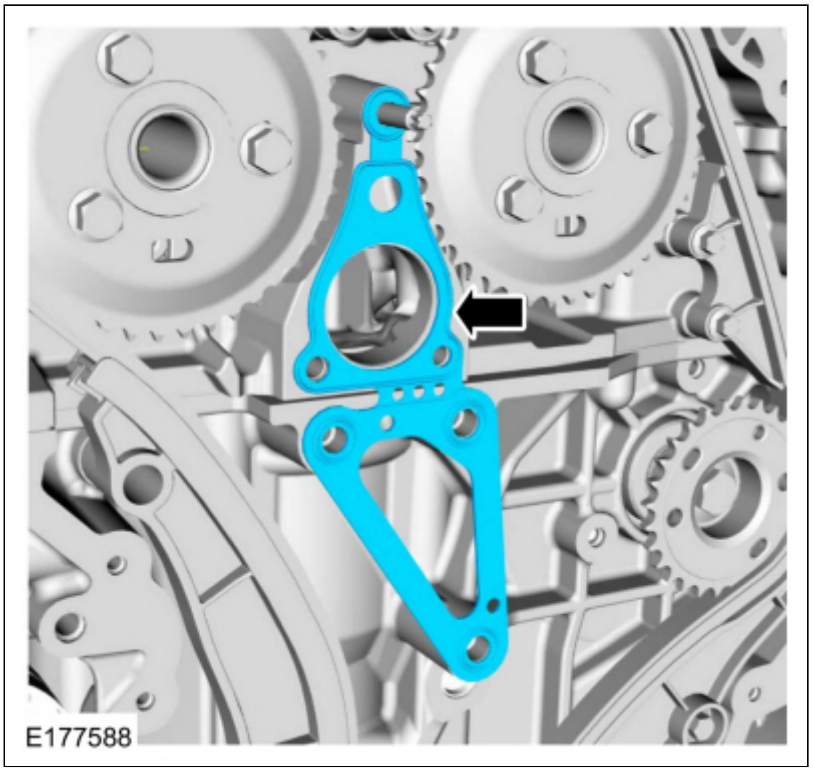


65. Remove the 6 mm drill bits.



66. Remove Special Service Tool: 303-1587 Timing Tool, Crankshaft.

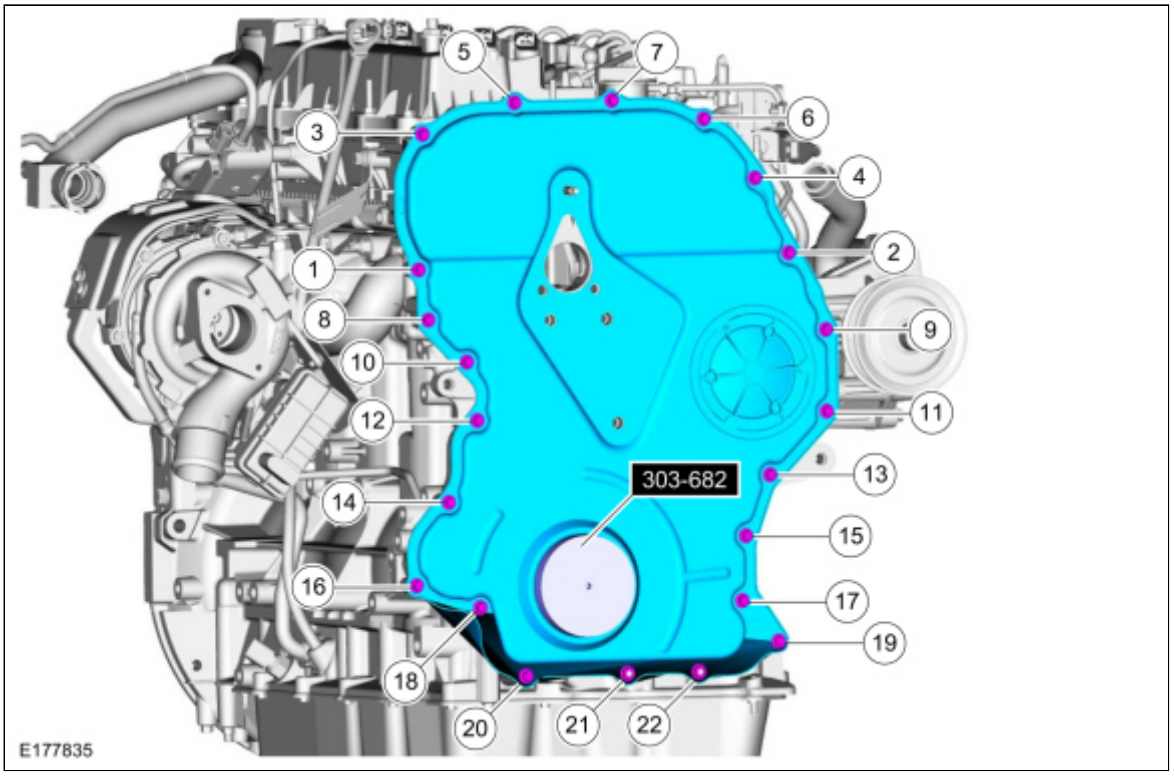
67.



68. *Torque*:
    stage 1: 4 Nm
    stage 2: 10 Nm

69. **NOTE:** *Make sure that a new component is installed.*

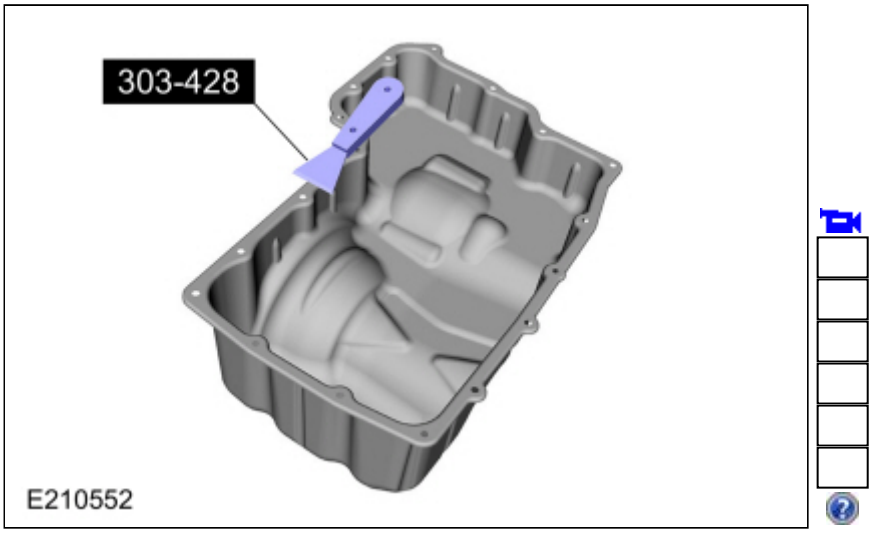
    Install the new engine front cover gasket.



70. **NOTE:** *The component must be installed within 5 minutes of applying the sealant.*

    NOTE: *Make sure that a new component is installed.*

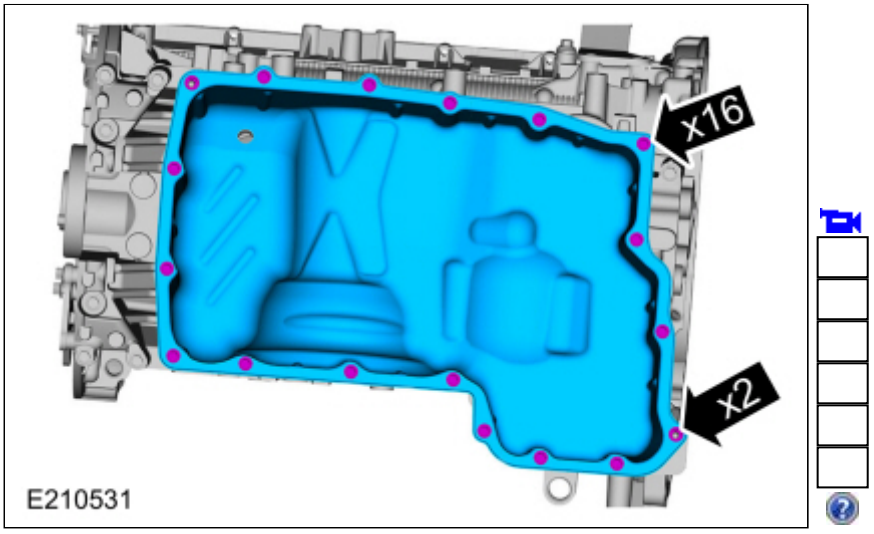
    Material: Silicone Sealant (WSE-M4G323-A4)



71. Use Special Service Tool: 303-682 Aligner, Engine Front Cover.
    Torque:
    Stage 1: 5 Nm
    Stage 2: 10 Nm

72. **NOTE:** *Do not damage the mating faces.*

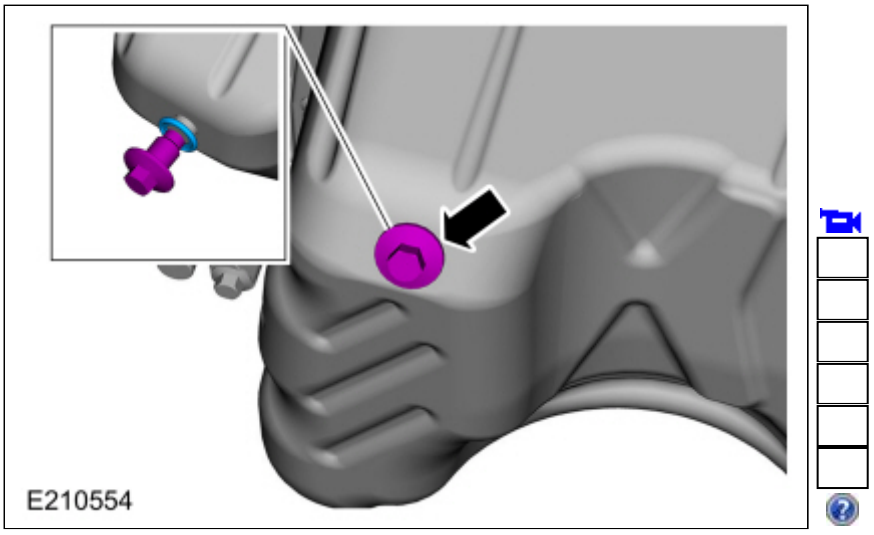
    Use Special Service Tool: 303-428 Separator, Oil Pan.



73. **NOTICE: Install the oil pan within five minutes of applying the sealer.**

    NOTE: *Do not damage the mating faces.*

    Material: Silicone Sealant (WSE-M4G323-A4)



74. *Torque*:
Stage 1: 6 Nm
Stage 2: 13 Nm

75. **NOTE:** *The seal is to be reused unless damaged.*

Torque: 35 Nm

76. Refer to: Engine Accessories (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Installation).

Special Tool(s) / General Equipment

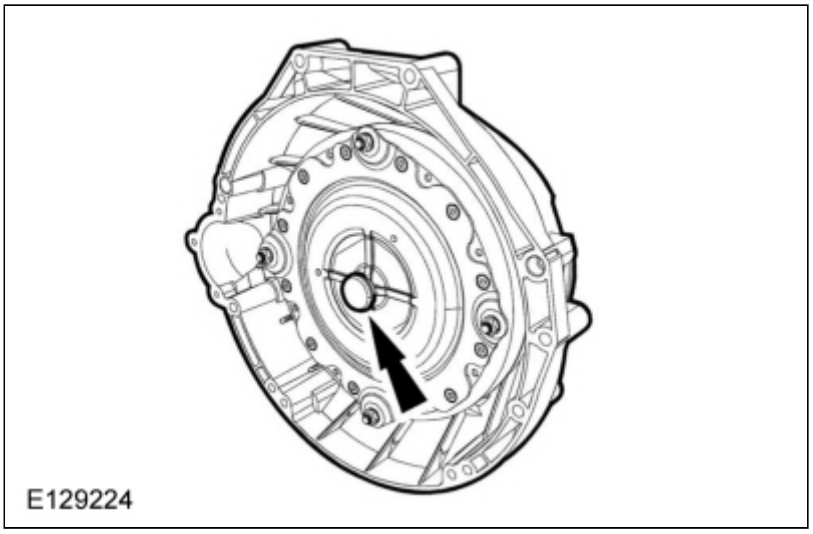
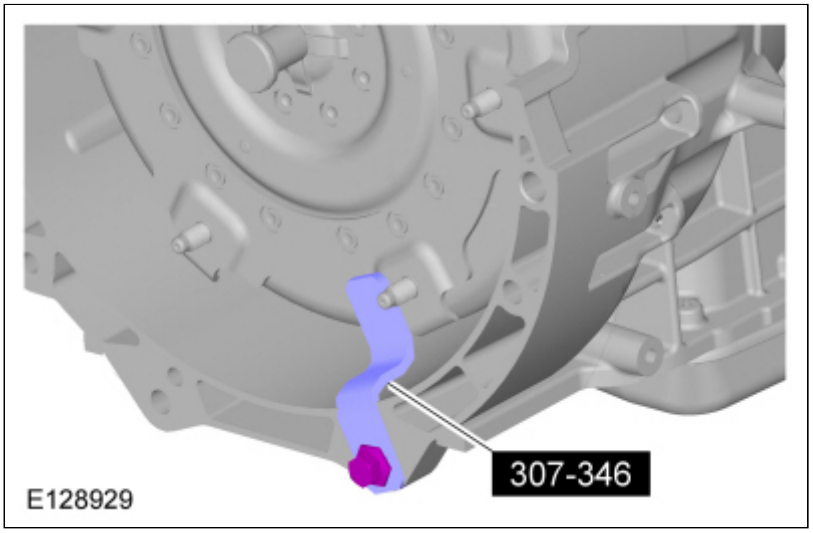
	303-122 Lifting Bracket, Engine
	307-346 (T97T-7902-A) Retainer, Torque Converter

Materials



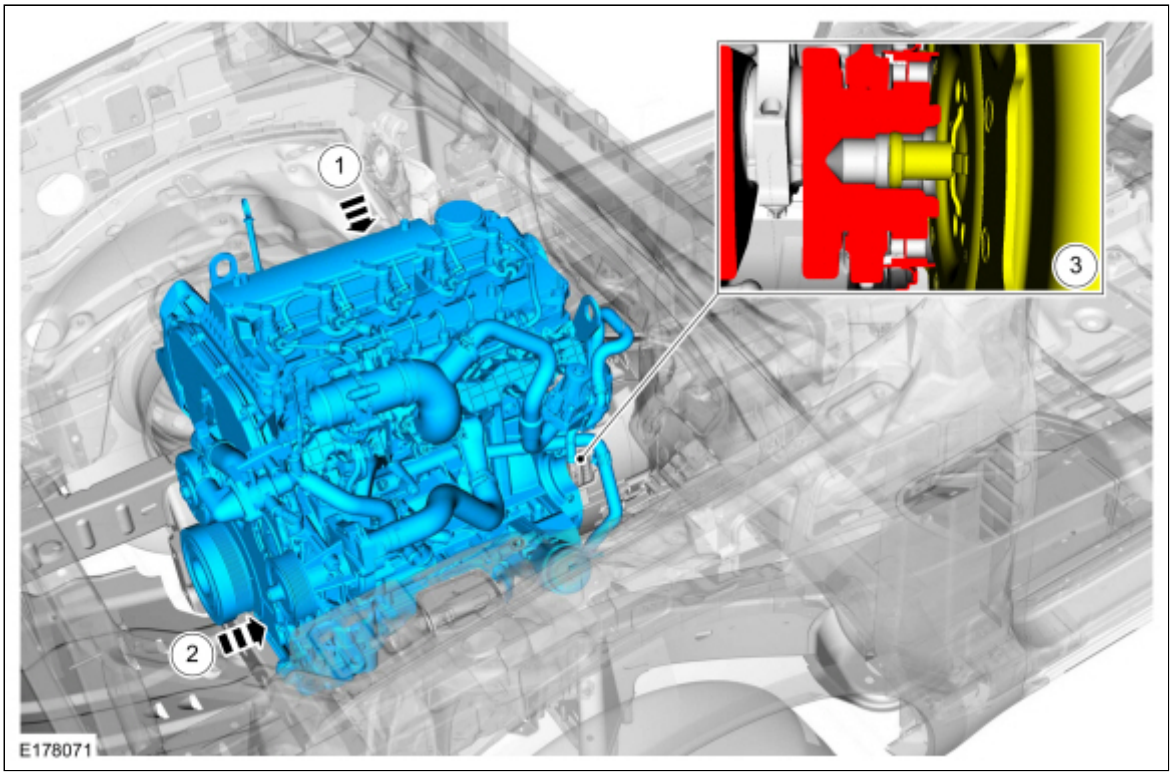
Name	Specification
Grease - Electrical Contact	WSB-M1C239-A

1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Use Special Service Tool: 303-122 Lifting Bracket, Engine.

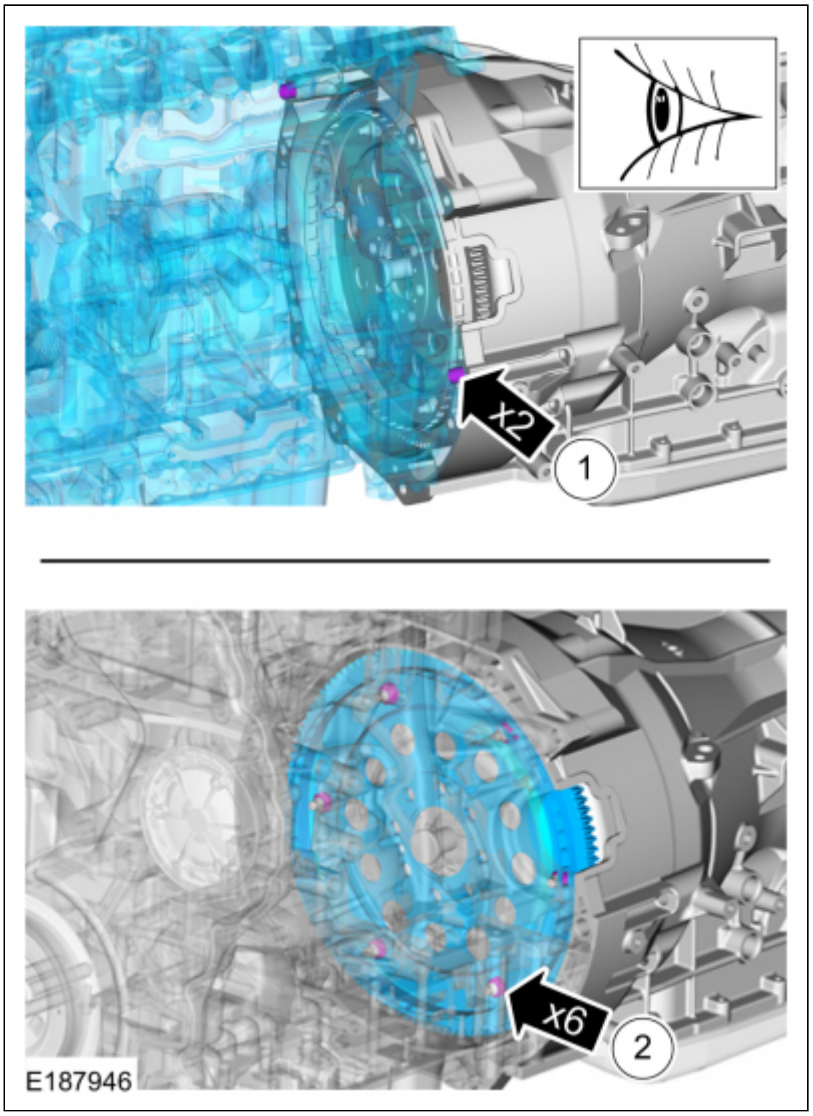


3. **NOTICE: Prior to installation of the engine, the torque converter pilot hub must be lubricated with multipurpose grease or damage to the torque converter or the engine crankshaft can occur.**

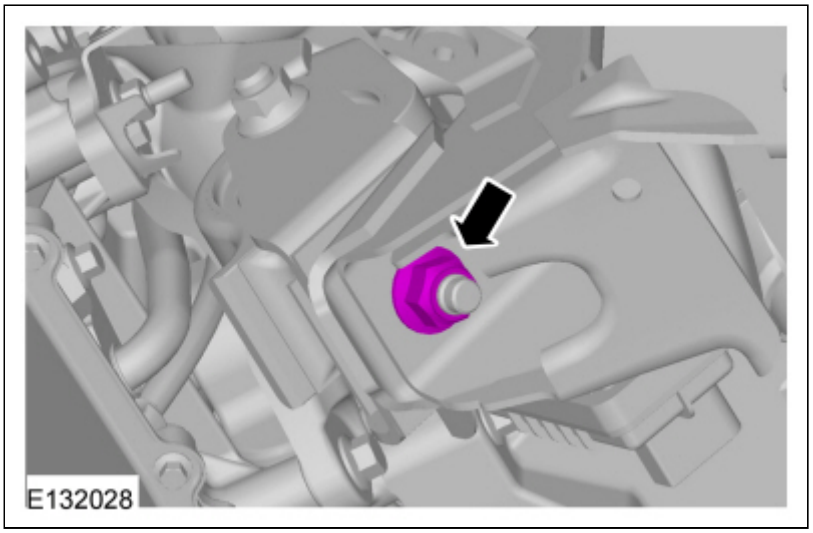
   Lubricate the torque converter pilot hub with multipurpose grease.
   Material: Grease - Electrical Contact (WSB-M1C239-A)



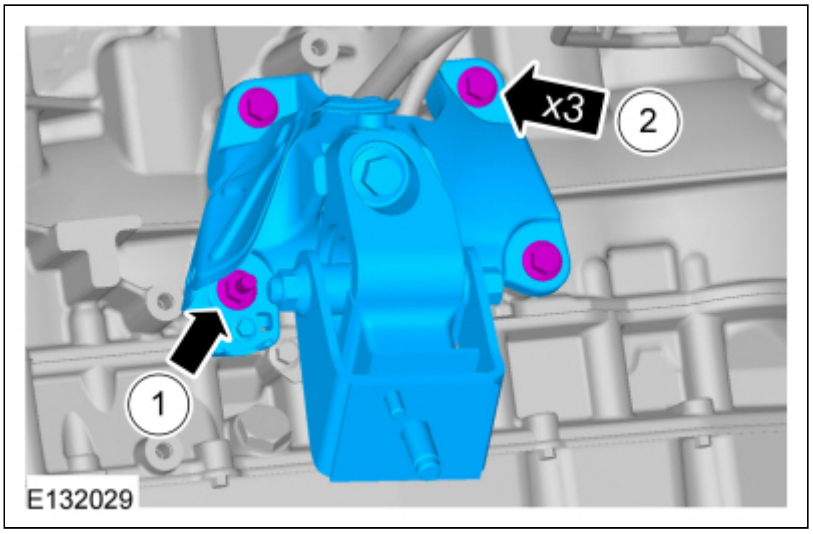
4. Remove Special Service Tool: 307-346 (T97T-7902-A) Retainer, Torque Converter.



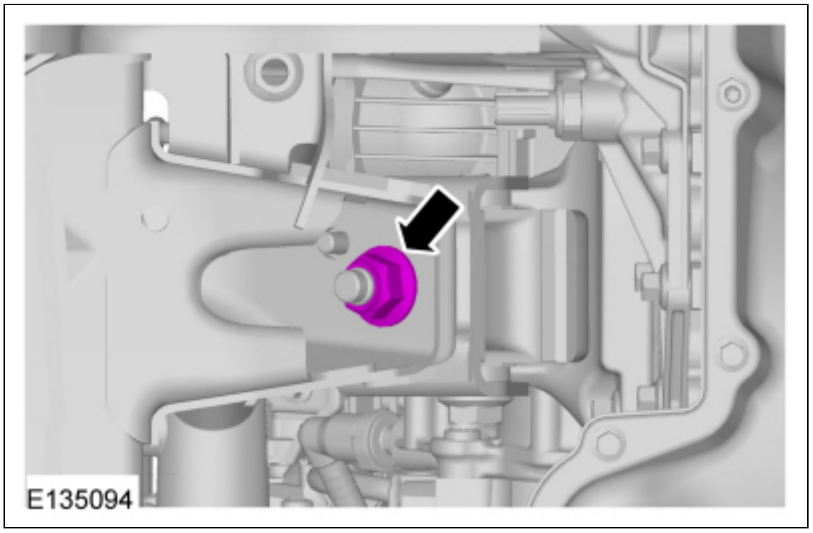
5. **NOTE:** *Make sure that the torque converter remains in the transmission.*



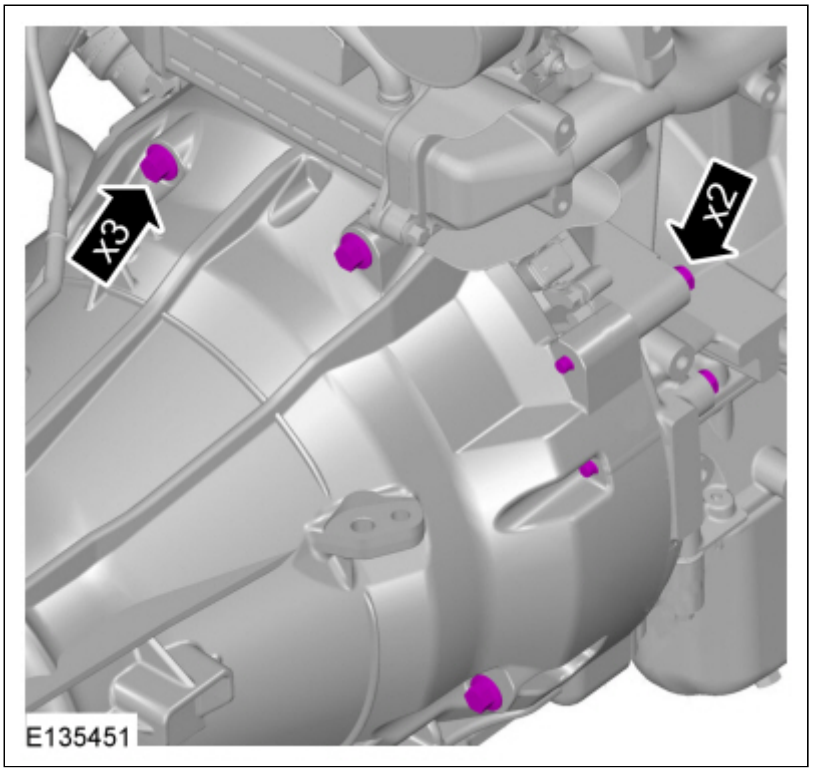
2. **NOTE:** *Make sure that the transmission is installed straight in relation to the engine to prevent damage to the pilot bearing.*



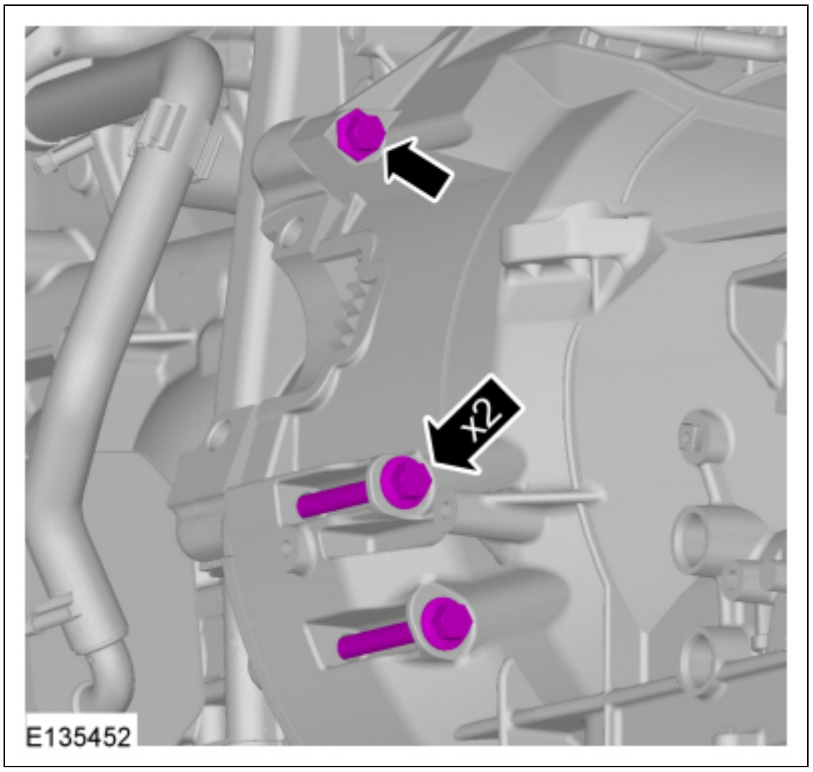
1. **NOTE:** *Make sure that the component is correctly located on the locating dowels.*
2. Only tighten the nut finger tight at this stage.



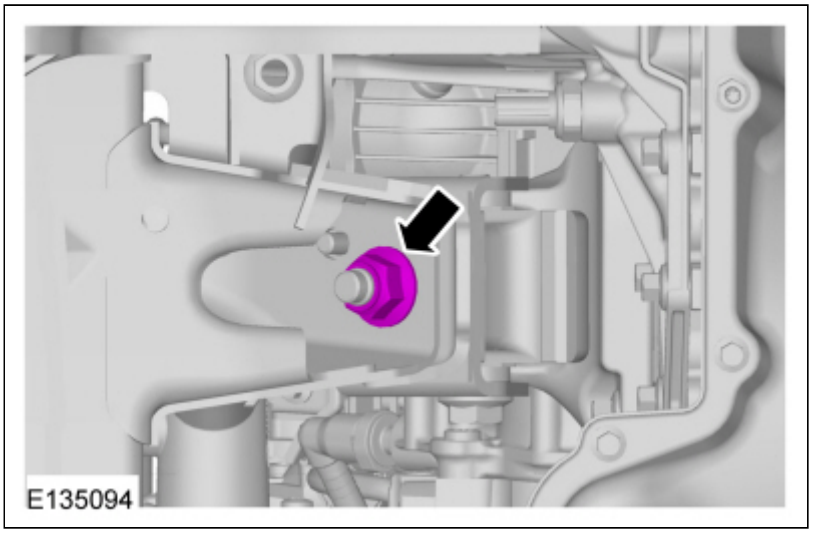
8. **NOTE:** *Only tighten the nut finger tight at this stage.*



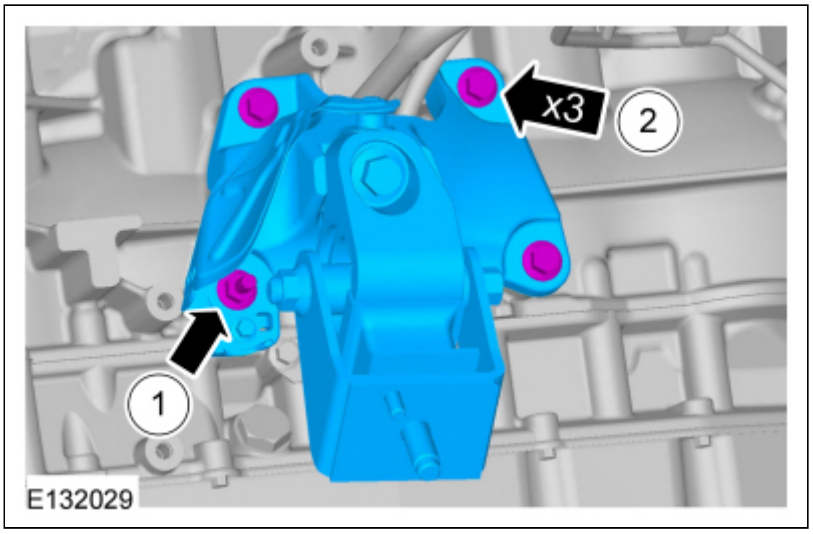
9. **NOTE:** *Only tighten the nut and bolts finger tight at this stage.*



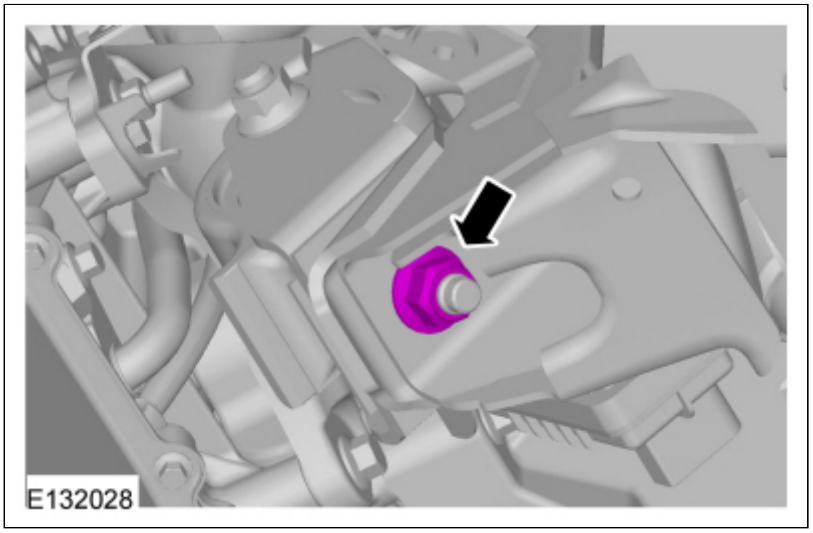
10. **NOTE:** *Only tighten the nut finger tight at this stage.*



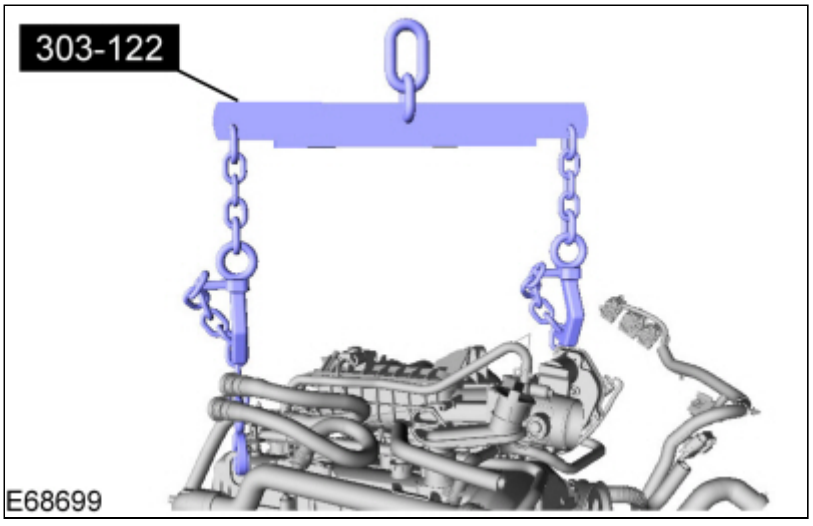
11. Initially hand tighten the fasteners.
    Torque: 48 Nm



12. Initially hand tighten the fasteners.
    Torque: 48 Nm



13. *Torque*: 80 Nm



1. *Torque*: 48 Nm
2. *Torque*: 48 Nm

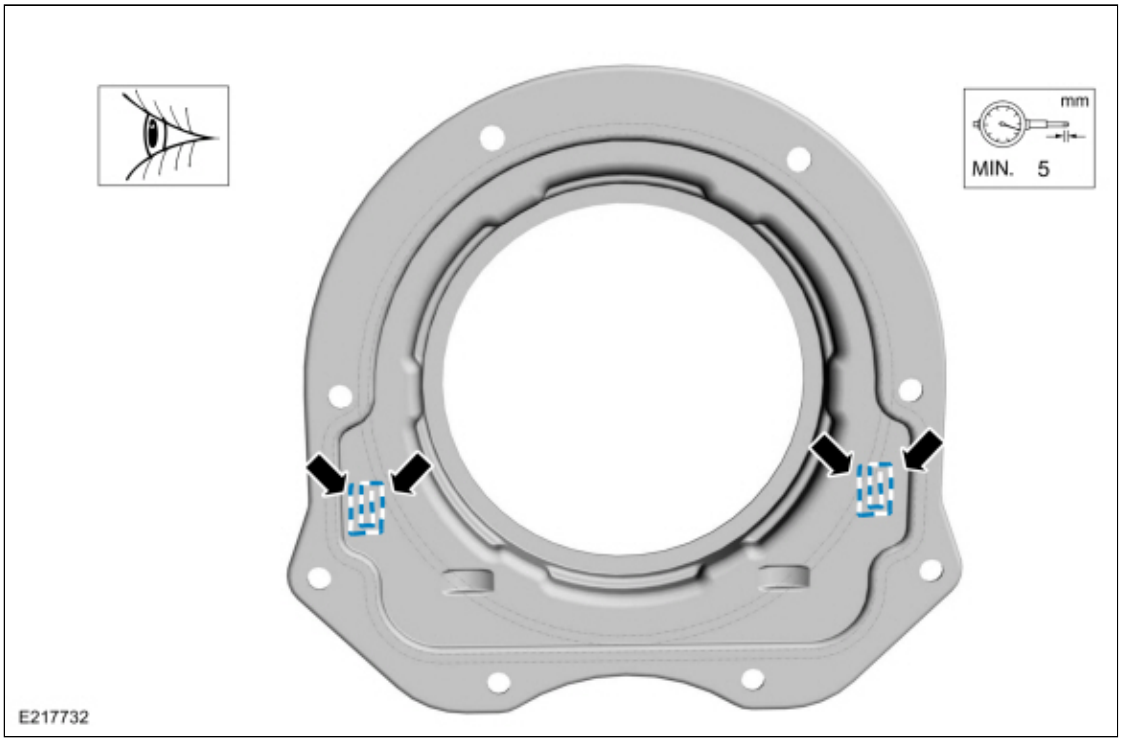
Dowel with a Diameter of 6 mm
1/2 Inch Square Drive Breaker Bar

Materials

Name	Specification
Silicone Sealant	WSE-M4G323-A4

1.

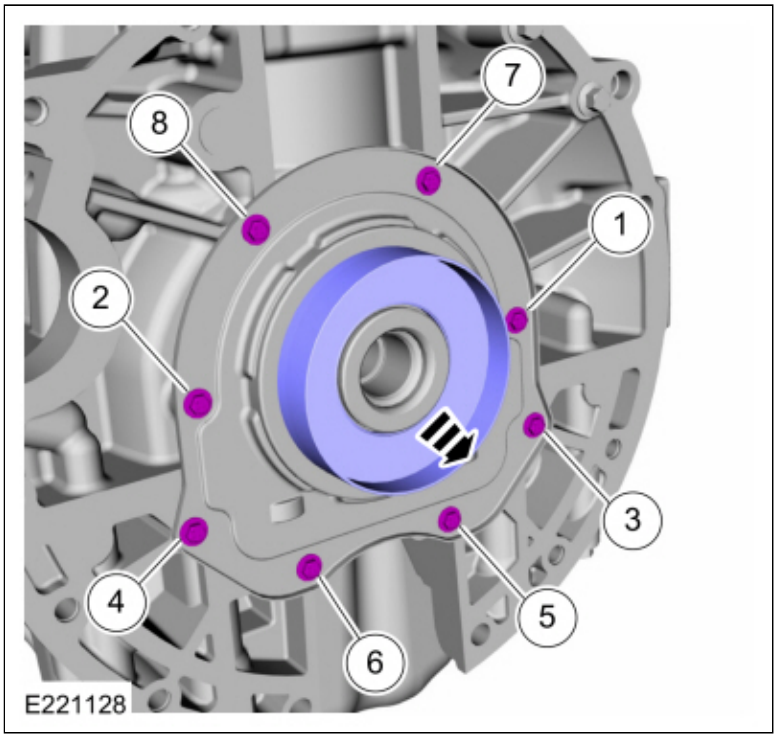


2. **NOTE:** *Install new crankshaft rear seal carrier with in five minutes after applying the recomended sealent. Failure to follow this instruction may result in damage to the vehicle.*

   NOTE: *Do not add any more than the specified quantity of sealant or add the sealant anywhere other than the area shown.*

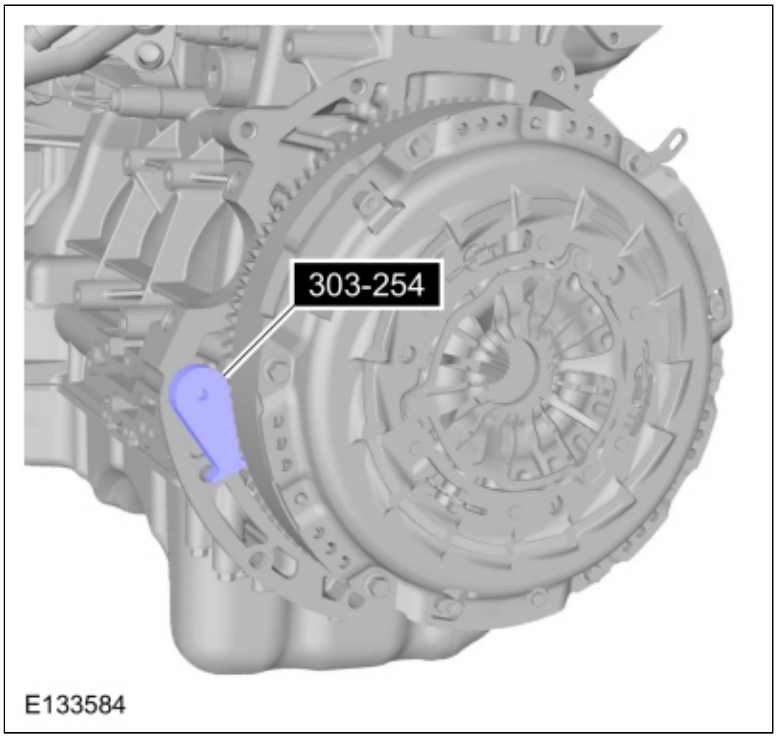
   NOTE: *If the foam pads are not present on inspection, fill the square areas shown with 75% of sealant.*

   Material: Silicone Sealant (WSE-M4G323-A4)



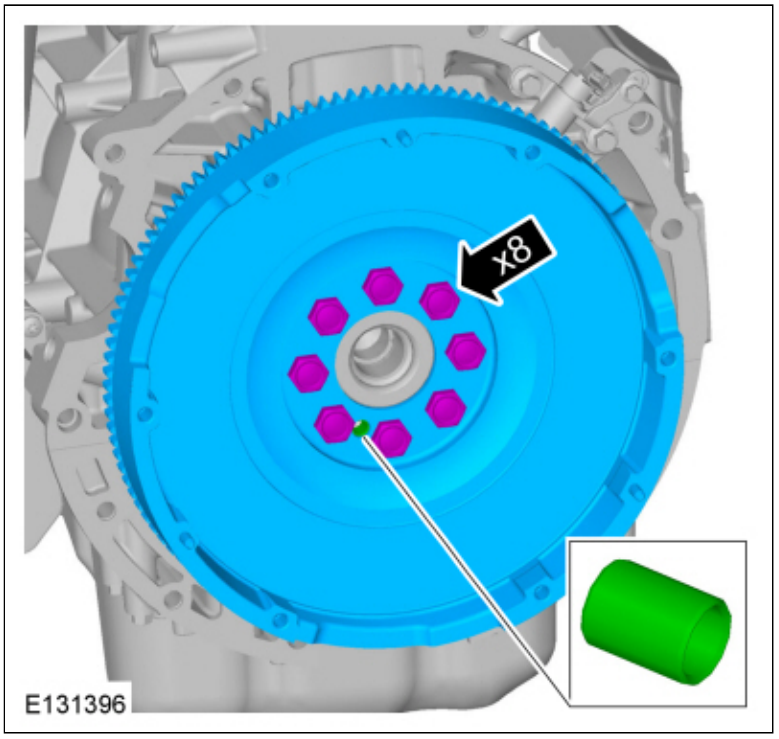
3. **NOTICE: A new crankshaft rear seal carrier is supplied with an alignment sleeve that must not be removed until the crankshaft rear seal is fully installed. Failure to follow this instruction may result in damage to the vehicle.**

   Initially hand tighten the fasteners.

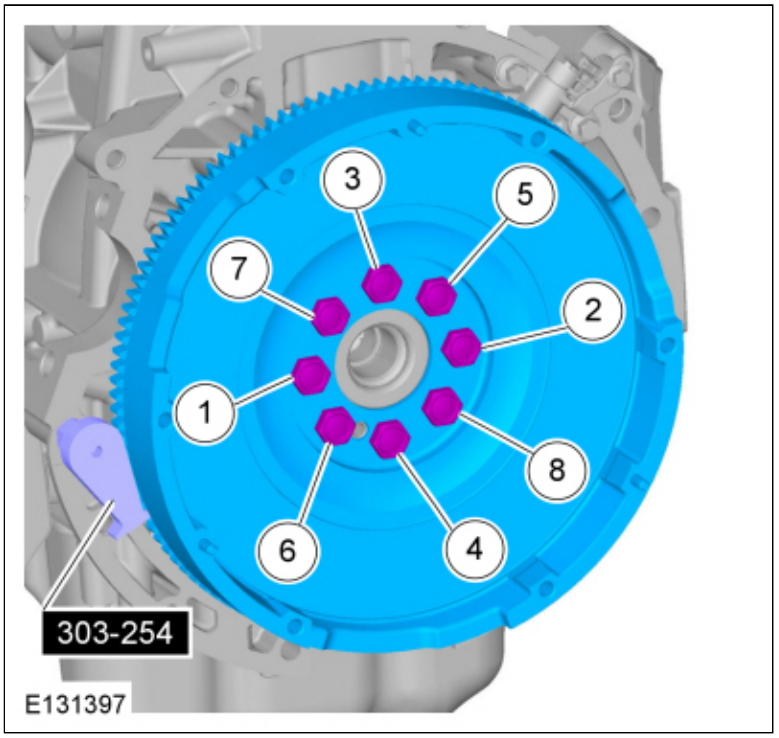


4. **NOTE:** *New crankshaft rear seal carriers are supplied with an alignment sleeve which must be removed after installation.*

   Torque:
   Stage 1: 5 Nm
   Stage 2: 10 Nm

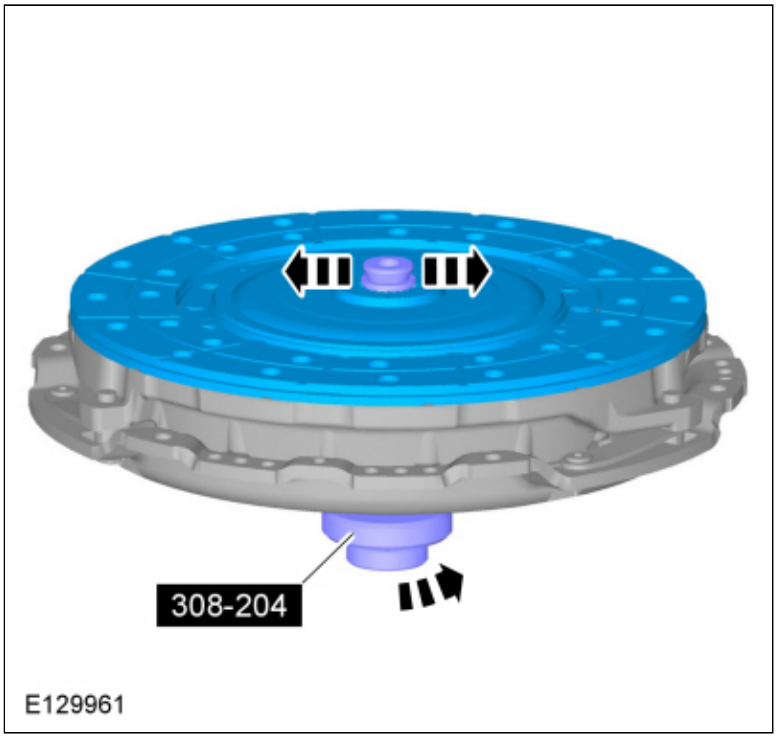


5. Use Special Service Tool: 303-254 Locking Tool, Flywheel.

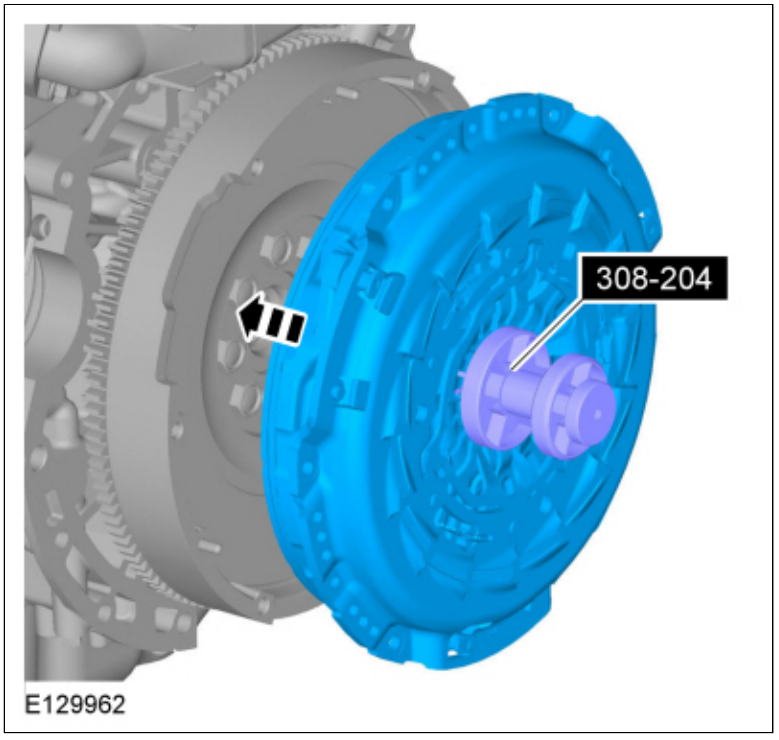


6. **NOTE:** *Make sure that the flywheel is in full contact with the crankshaft flange before installing the flywheel bolts.*

   Initially hand tighten the fasteners.

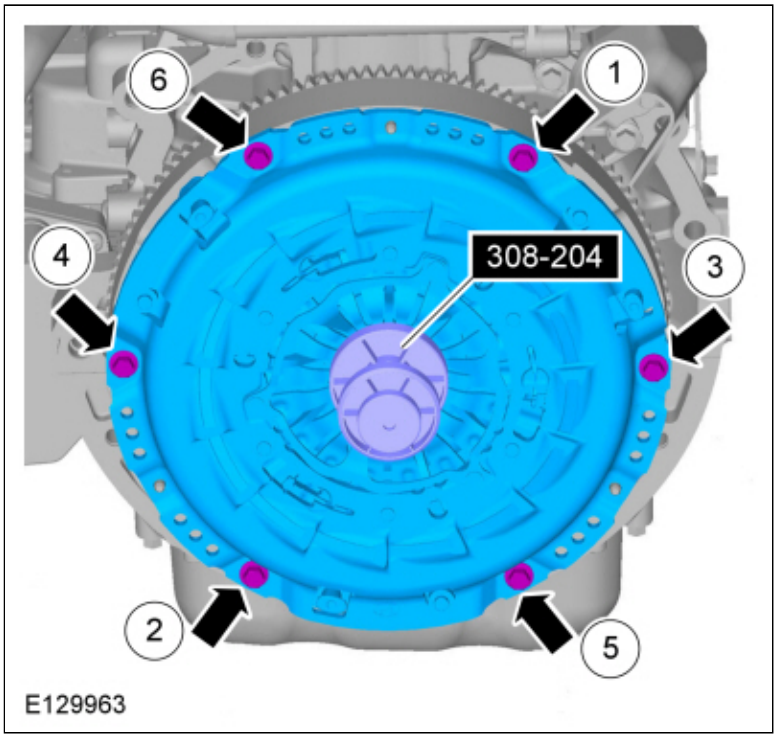


7. Use Special Service Tool: 303-254 Locking Tool, Flywheel.
   Torque:
   Stage 1: 25 Nm
   Stage 2: 45 Nm
   Stage 3: 45°



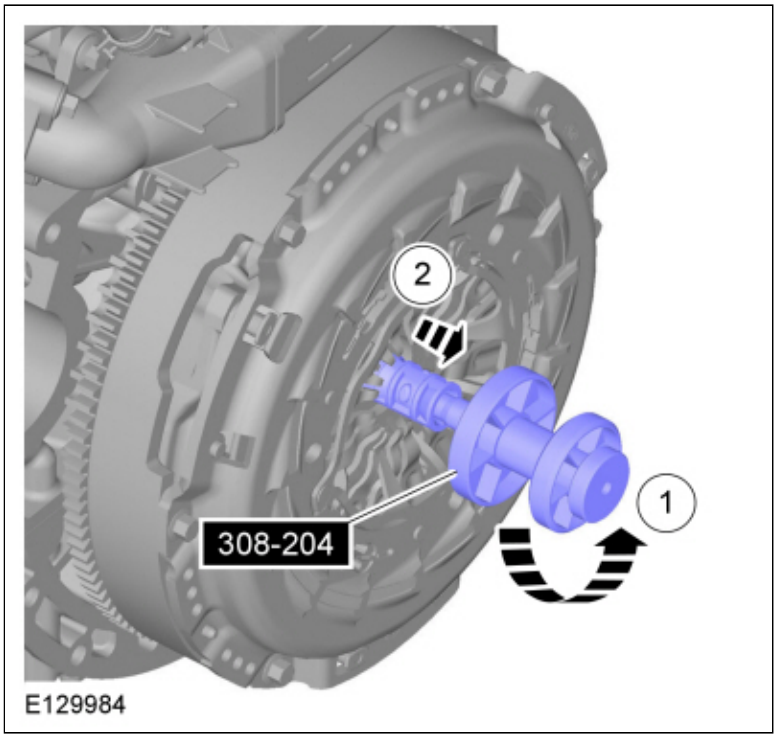
8. **NOTE:** *The cone on the special tool must only be tightened finger tight to prevent damage to the clutch disc.*

   Use Special Service Tool: 308-204 Aligner, Clutch Disc.



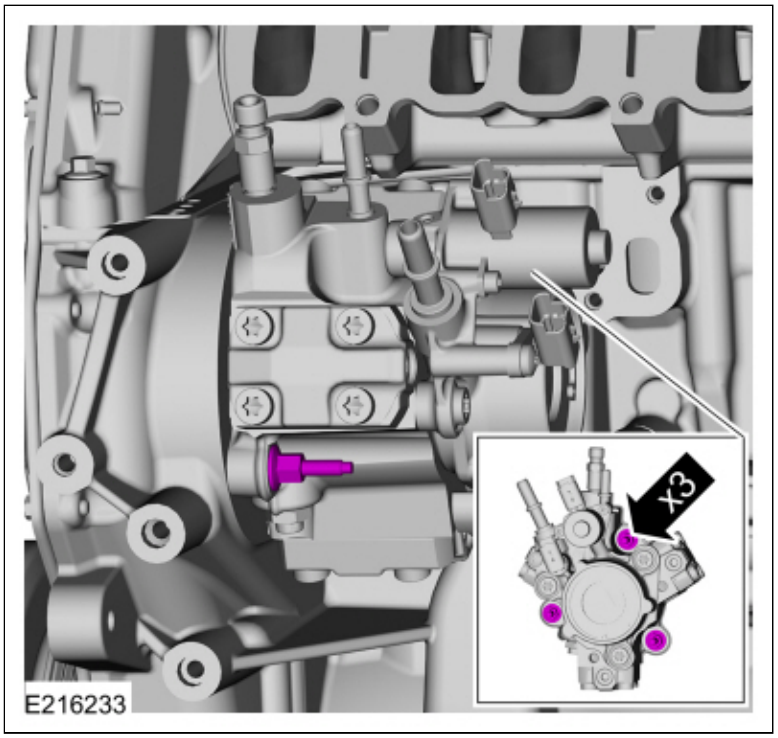
9. **NOTE:** *Only tighten the bolt finger tight at this stage.*

   Use Special Service Tool: 308-204 Aligner, Clutch Disc.

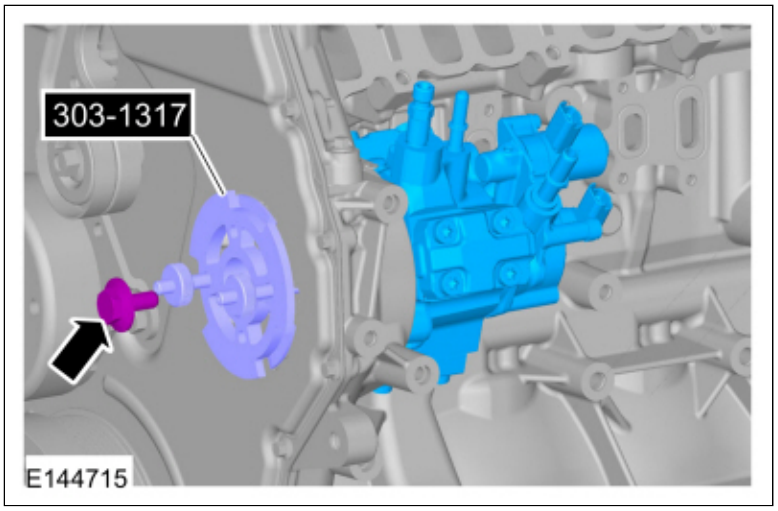


10. **NOTICE: Tighten the clutch pressure plate retaining bolts by two turns at a time in the sequence shown.**

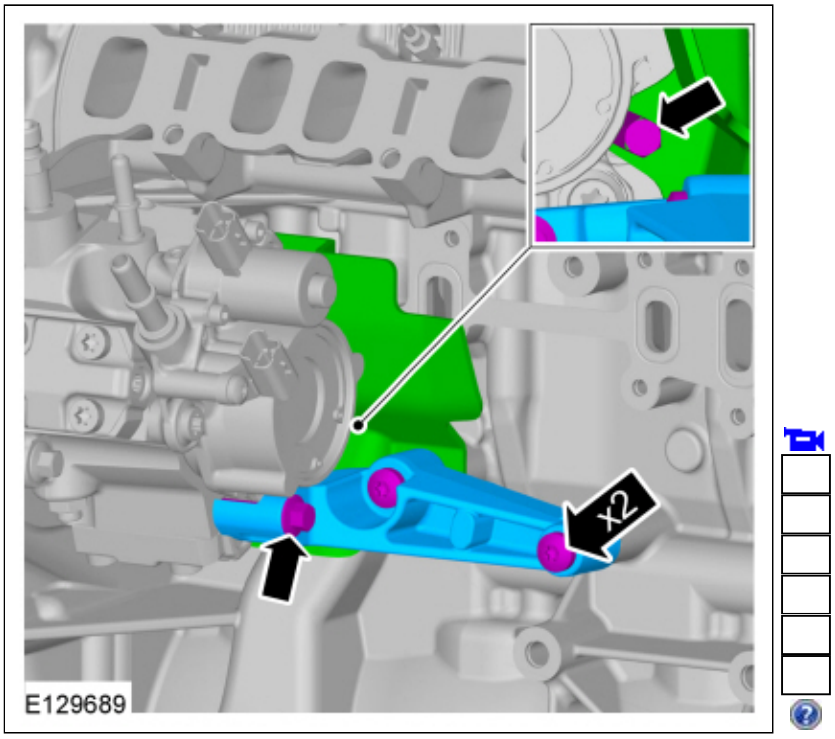
    Use Special Service Tool: 308-204 Aligner, Clutch Disc.
    Torque: 30 Nm



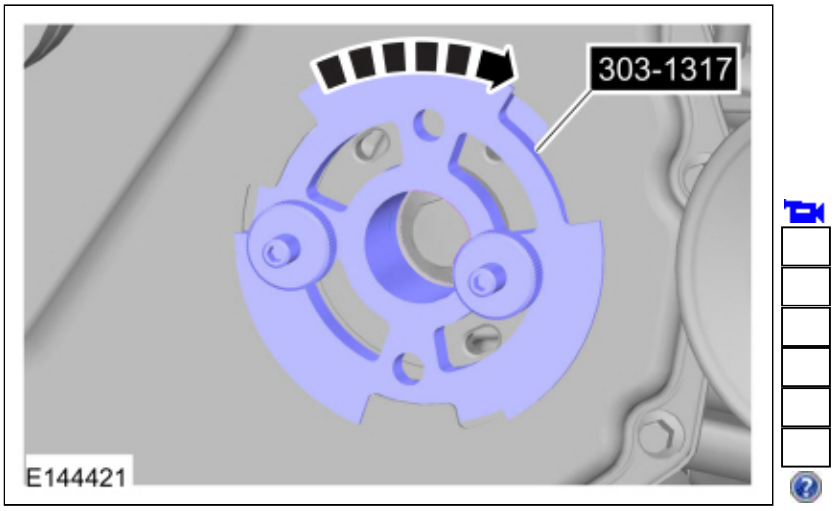
11. Remove Special Service Tool: 308-204 Aligner, Clutch Disc.



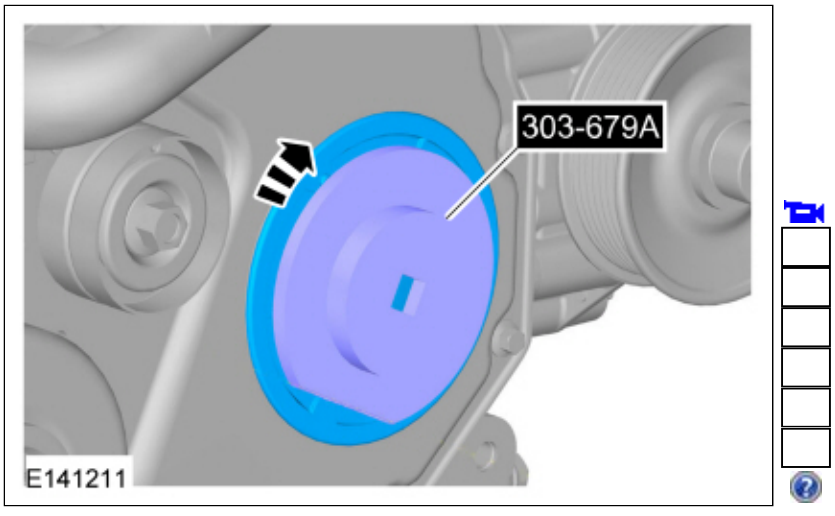
12.



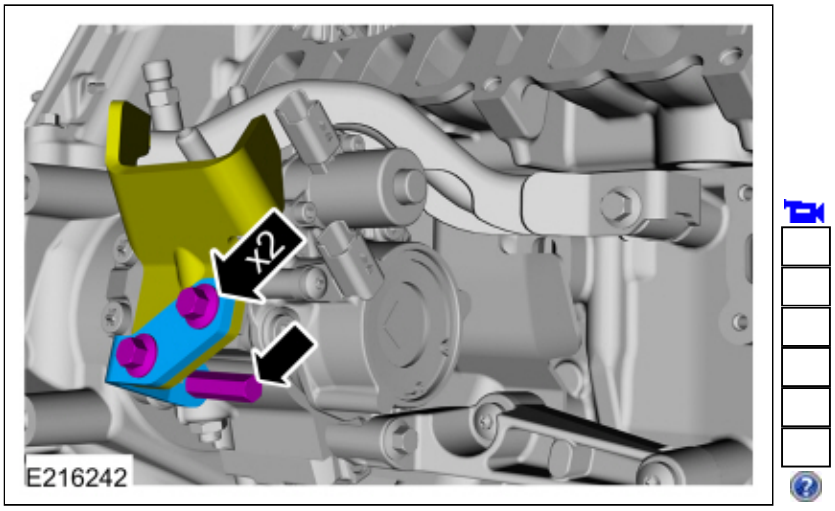
13. *Torque*: 23 Nm



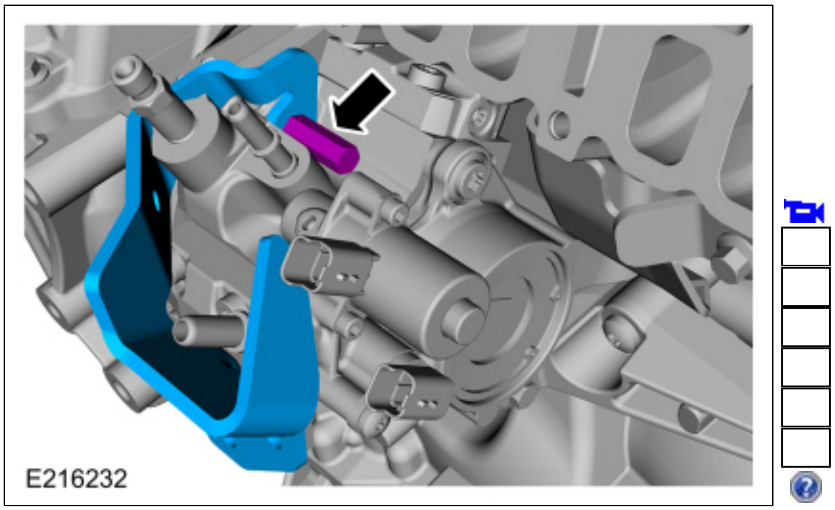
14.



15. *Torque*: 23 Nm



16. Remove Special Service Tool: 303-1317 Locking Tool, Fuel Injection Pump Sprocket.



17. Use Special Service Tool: 303-679A Remover/Installer, Engine Front Cover Inspection Plate.

Engine Cooling - System Operation and Component Description

System Operation

Fail Safe Cooling

A strategy called Fail Safe Cooling is built into the PCM that will control the engine if it starts to overheat.

Stage 1 of the strategy commences if the engine starts to overheat. The CHT sensor transmits a signal to the PCM, which moves the temperature gauge pointer into the red zone.

If the engine is not switched off and the temperature continues to rise, the Powertrain Check Lamp is illuminated. This indicates to the driver that the engine is approaching critical limits and should be stopped. At this point DTC P1285 is set in the PCM which can be retrieved using a scan tool.

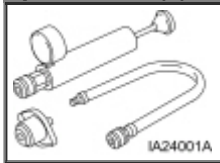
Stage 2 of the strategy commences if the lamp and temperature gauge are ignored by the driver. The PCM will start to control the engine by cutting out 2 cylinders and restricting the RPM to below 3,000 RPM. Simultaneously the MIL illuminates. This indicates that long term engine damage can occur and vehicle emissions will be affected. At this point DTC P1299 is set in the PCM which can be retrieved using a scan tool.

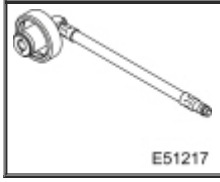
Air is drawn into the deactivated cylinders. This helps to control the temperature of the engine internal components. The deactivated cylinders are alternated to allow even cooling of all the cylinders.

NOTE: *If the driver is using a high percentage of throttle travel (for example, an overtaking maneuver) when the PCM starts engine deactivation (Stage 2), the deactivation will be delayed for 10 seconds.*

NOTE: *After 2-cylinder operation has begun, the engine will not revert to 4-cylinder operation, even if the temperature should fall, until the ignition is switched off and then on again.*

NOTE: *The MIL can only be extinguished by using a scan tool after the fault has been rectified and the DTC cleared.*





Stage 3 of the strategy will commence if the engine temperature continues to rise. This results in the engine being totally disabled before major engine damage or seizure occurs. The Powertrain Check Lamp will begin to flash, indicating to the driver that the engine will be switched off after 30 seconds. This allows the driver time to choose a suitable parking place.

Ford diagnostic equipment

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
− Coolant hose(s) − Gaskets/seals − Coolant expansion tank cap and seal − Coolant expansion tank − Radiator − Coolant pump − Thermostat − Thermostat housing − Cooling fan and cooling fan clutch − Accessory drive belt − Engine oil cooler	− Fuse(s) − Wiring harness − Electrical connector(s) − Engine coolant temperature (ECT) sensor − Engine cooling fan motor(s) − Powertrain control module (PCM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Sources	Action
• Loss of coolant	• Radiator.	• CARRY OUT the Pressure Test Component Test in this section. INSTALL a new radiator as necessary. REFER to: Radiator (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
	• Coolant pump.	• CARRY OUT the Pressure Test Component Test in this section.

		INSTALL a new coolant pump as necessary. REFER to: Coolant Pump (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
	• Thermostat housing.	• CARRY OUT the Pressure Test Component Test in this section. INSTALL a new thermostat housing as necessary. REFER to: Thermostat (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
	• Coolant expansion tank cap.	• CARRY OUT the Coolant Expansion Tank Cap Pressure Test Component Test in this section.
	• Coolant expansion tank.	• CHECK the coolant expansion tank for damage. INSTALL a new coolant expansion tank as necessary.
	• Engine oil cooler.	• CARRY OUT the Pressure Test Component Test in this section. INSTALL a new engine oil cooler as necessary.
	• Heater core.	• CHECK the heater core for leaks. REFER to: Heater Core (412-00 Climate Control System - General Information, Removal and Installation).
	• Engine.	• CHECK the engine, cylinder head, coolant manifold, cylinder block and cylinder head gasket.
• The engine overheats	• Cooling system does not hold pressure.	• CARRY OUT the Coolant Expansion Tank Cap Pressure Test Component Test in this section. • CHECK the coolant expansion tank for damage. INSTALL a new coolant expansion tank as necessary. • CHECK the coolant pump for damage. INSTALL a new coolant pump as necessary. REFER to: Coolant Pump (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). • CHECK the engine, cylinder head, coolant manifold, cylinder block and cylinder head gasket.
	• Air in system.	• BLEED the cooling system. REFER to: Cooling System Draining, Filling and Bleeding (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, General Procedures).
	• Coolant expansion tank cap.	• CARRY OUT the Coolant Expansion Tank Cap Pressure Test Component Test in this section.
	• Coolant expansion tank.	• CHECK the coolant expansion tank for damage. INSTALL a new coolant expansion tank as necessary.
	• Coolant level/condition.	• CHECK the coolant level/condition. REFER to: Cooling System Draining, Filling and Bleeding (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, General Procedures).
	• Coolant concentration.	• REFER to: Specifications (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, Specifications).
	• Radiator grille.	• CHECK the radiator grille for air restrictions/damage. REPAIR as necessary.
	• Coolant pump.	• CHECK the coolant pump for leaks. INSTALL a new coolant pump as necessary. REFER to: Coolant Pump (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
	• Thermostat.	• CARRY OUT the Thermostat Test Component Test in this section. INSTALL a new thermostat as necessary. REFER to: Thermostat (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
	• Accessory drive belt.	• CHECK the accessory drive belt for correct operation. REFER to: Accessory Drive Belt (303-05A Accessory Drive - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).

	• Cooling fan.	• CHECK operation of the cooling fan. INSTALL a new cooling fan as necessary. REFER to: Cooling Fan (303-03B Engine Cooling - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
	• Engine.	• CHECK the engine, cylinder head, coolant manifold, cylinder block and cylinder head gasket.
• The engine does not reach normal operating temperature.	• Thermostat.	• CARRY OUT the Thermostat Test Component Test in this section. INSTALL a new thermostat as necessary. REFER to: Thermostat (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
	• ECT sensor.	• CHECK the ECT sensor for correct operation. REFER to the Ford diagnostic equipment.
	• Circuit(s).	• CHECK the circuit(s). REFER to the Ford diagnostic equipment.

Component Tests

Pressure Test

WARNING: When releasing the system pressure, cover the coolant expansion tank cap with a thick cloth to prevent the possibility of coolant scalding. Failure to follow this instruction may result in personal injury.

1. Remove the coolant expansion tank cap.
2. Install the special tools to the coolant expansion tank.
3. Pressurize the system to the coolant expansion tank cap release pressure.
   REFER to: Specifications (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, Specifications).
4. Observe the cooling system pressure tester gauge reading for approximately two minutes. The pressure should not drop during this time. If the system holds pressure, proceed to step 7. If the system does not hold pressure, check it thoroughly for coolant leaks.
5. If a coolant leak cannot be found, check the EGR cooler (this may leak internally), engine oil cooler (this may produce oil in the coolant expansion tank) and the engine for cylinder leakage. Drain the cooling system, repair any coolant leaks found and fill and bleed the cooling system as necessary.
   REFER to: Cooling System Draining, Filling and Bleeding (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, General Procedures).
6. Recheck the system by repeating steps 3 and 4 at least twice.

Radiator Leak Test, Removed From Vehicle

NOTICE: Radiator internal pressure must not exceed 130 kpa (20 psi) or damage may result.

Clean the radiator thoroughly before leak testing it, to prevent contamination of the water in the test tank. Leak test the radiator in clean water with 138 kpa (20 psi) air pressure. Check it thoroughly for air leaks. INSTALL a new radiator if necessary.
REFER to: Radiator (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).

Coolant Expansion Tank Cap Pressure Test

WARNING: When releasing the system pressure, cover the coolant expansion tank cap with a thick cloth to prevent the possibility of coolant scalding. Failure to follow this instruction may result in personal injury.

1. Remove the coolant expansion tank cap.
2. Use water to clean the area of the rubber seal and pressure relief valve. Install the pressure tester and adapter and immerse the coolant expansion tank cap in water .

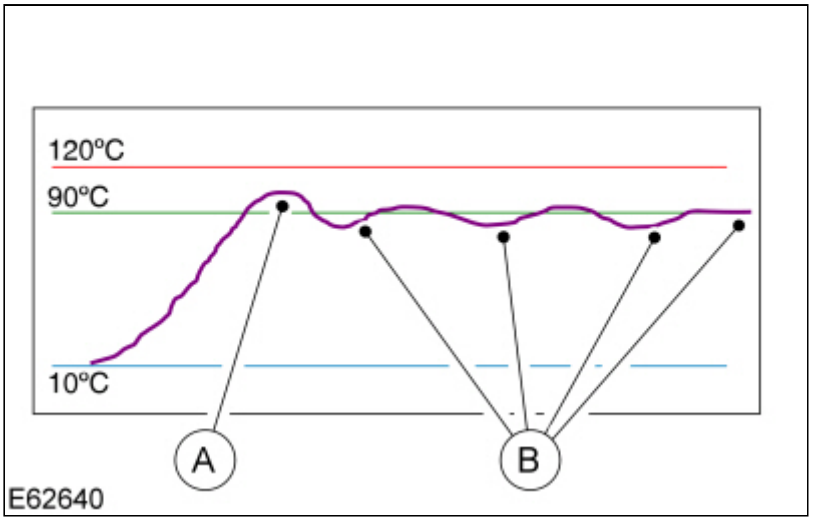
NOTE: *If the plunger of the pump is depressed too quickly, an erroneous pressure reading will result.*

3. Slowly depress the plunger of the pressure test pump until the pressure test gauge reading stops increasing, and note the highest pressure reading obtained.

4. Release pressure by turning the pressure relief screw counterclockwise. Tighten the pressure relief screw and repeat step 3 at least twice to make sure that the pressure test gauge reading is repeatable and within acceptable gauge reading limits of the coolant expansion tank cap.

5. If the pressure test gauge readings are not within the acceptable gauge reading limits, INSTALL a new coolant expansion tank cap.

Thermostat Test



1. Connect the Ford Diagnostic Equipment to the data link connector (DLC).

2. Using the datalogger function, SELECT the following sensors (as applicable to the application):

- IAT - intake air temperature (IAT) sensor
- ECT - engine coolant temperature (ECT) sensor
- LOAD - engine load
- VSS - vehicle speed sensor (VSS)
- RPM - engine speed
- DSRPM - desired engine speed

The IAT sensor output is useful if the engine being tested is cold or after an over-night cold soak. The ECT sensor and the IAT sensor should either indicate the same value or be within 1 to 2 degrees Celsius of each other.

The ECT sensor output is important to display as it indicates the engine warm-up and opening temperature for the thermostat. It will initially indicate a slightly higher reading just before the thermostat opens and then drops back before settling to a near flat line output (see graphic below).

Item	Part Number	Description
A	—	Thermostat opens
B	—	Thermostat settles into a cyclic open and closure pattern

NOTICE: If the ECT sensor output reaches the 120°C default line under normal cooling system pressure, internal damage may be caused to the engine and a diagnostic trouble code (DTC) will be set in the PCM. The test should be stopped and the cause located and corrected. If the cooling system does not pressurize, the coolant will boil at 100°C which may also damage the engine. CARRY OUT the Coolant Expansion Tank Cap Pressure Test Component Test in this section.

If the Ford diagnostic equipment only allows the ECT sensor to be displayed in volts, refer to the following table for corresponding Celsius values:

Volts	°Celsius
1.33	60
1.02	70
0.78	80

0.60	90
0.46	100
0.35	110
0.27	120

The LOAD display is used for reference as it is necessary to maintain a stable load line during the test. It is necessary to carry out the test under normal light throttle cruise driving conditions and average loads, typically 40% to 70% of the load value.

The VSS output is used for reference but can help to identify misfires and sensors which fail during the warm-up cycle.

The RPM display indicates the engine speed and can be compared with the DSRPM.

The DSRPM is the desired or calculated idle speed which the PCM commands the engine to reach. If the thermostat opens too early (before the correct opening temperature has been reached), the engine will not reach this value.

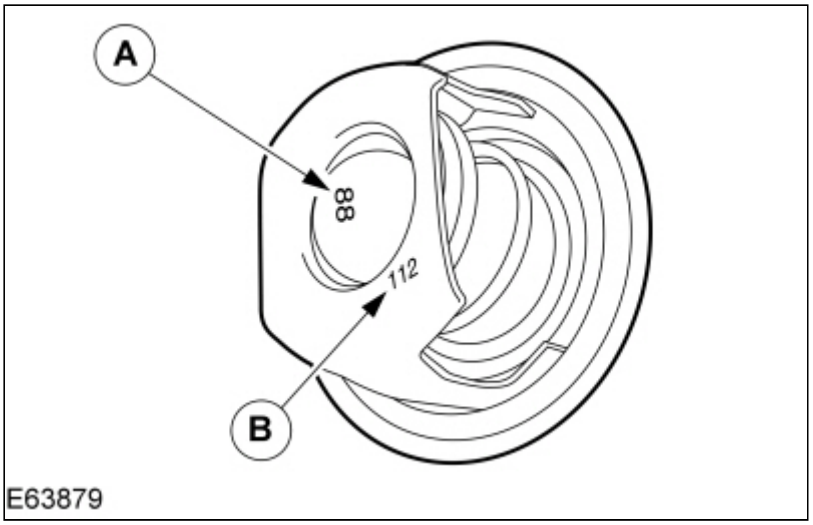
When using the Ford diagnostic equipment in data logger mode, the signals recorded should remain within the DEFAULT values set by the Ford diagnostic equipment.

3. **WARNING: Make sure that the Ford diagnostic equipment is placed in the vehicle so that it does not interfere with the safe operation of the vehicle. Do not place the Ford diagnostic equipment in the deployment path of any air bag. Failure to follow these instructions may result in personal injury.**

   NOTE: *The road test is best carried out with the aid of another technician in the vehicle to enable the vehicle to be driven safely while the sensor outputs are monitored within datalogger. If there is only one technician available, the Ford diagnostic equipment can be set up (using the record/capture mode camera icon) before leaving the workshop to record a 16 km (10 mile) test.*

   NOTE: *The results from the test are more conclusive if the engine is cold when the test is started.*

   Carry out a road test.



4. Drive the vehicle at a constant throttle opening and set speed until the ECT value settles into a shallow rise and fall signal, close to a straight line. This indicates that the thermostat is functioning correctly.

NOTE: *Some thermostats indicate the temperature(s) in Celsius and Fahrenheit.*

The graphic below shows the location and an example of the opening temperature (88ºC) and fully open temperature (102ºC) of a thermostat.

The graphic below shows an alternative method used to show the opening temperature (88ºC) and fully open temperature (112ºC) of a thermostat.

Item	Part Number	Description
A	—	Opening temperature
B	—	Fully open temperature

NOTE: *Generally, most thermostats maintain a coolant temperature between 88ºC (190ºF) and 92ºC (198ºF) although dual stage electric thermostats may increase the coolant temperature up to 100ºC (212ºF) under light engine load conditions.*

The engine should start cleanly and the ECT value will rise quite quickly with smooth progression. If the ECT signal appears unstable or erratic, the ECT sensor, electrical connector and wiring harness to the PCM need to be visually inspected for damage, chafing or water ingress.

The temperature should rise to approximately 90ºC for a thermostat that has an 88ºC value. The signal value will then fall as cooler coolant enters the engine.

If the ECT value fails to maintain a constant value and falls back to lower figures, typically between 60ºC (140ºF) and 70ºC (150ºF), the thermostat and its sealing function within the thermostat housing must be checked.

5. INSTALL a new thermostat.
   REFER to: Thermostat (303-03A Engine Cooling - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).

6. Carry out another road test from step 1 using the same criteria to confirm that the concern has been rectified.

7. Using the Ford diagnostic equipment, clear the PCM keep alive memory (KAM) or electrically erasable programmable read only memory (EEPROM) so that new drive values can be learnt.

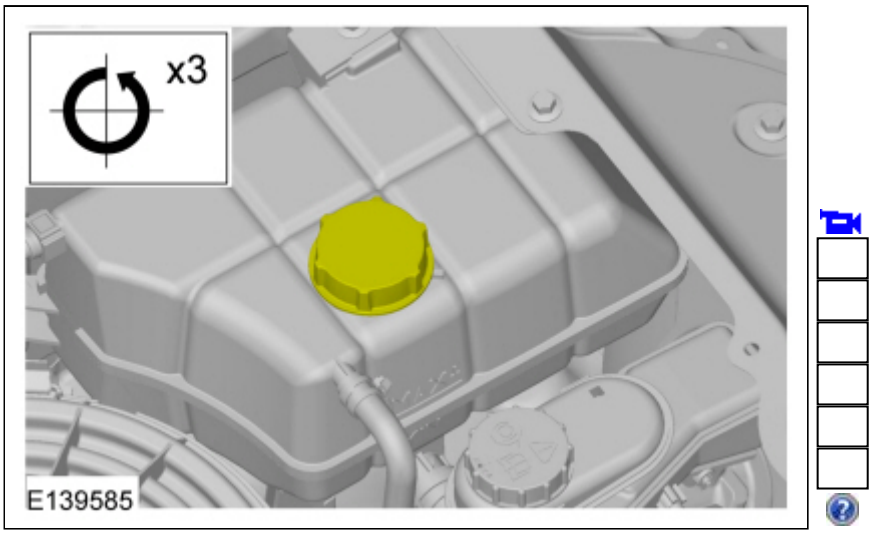
Cooling System Draining, Filling and Bleeding

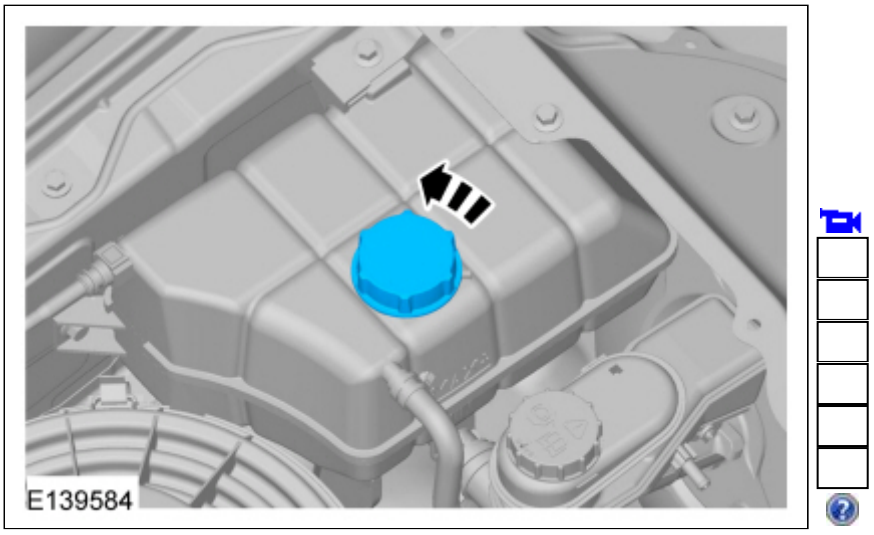
Special Tool(s) / General Equipment

Cooling System Vacuum Tester and Refiller



Materials

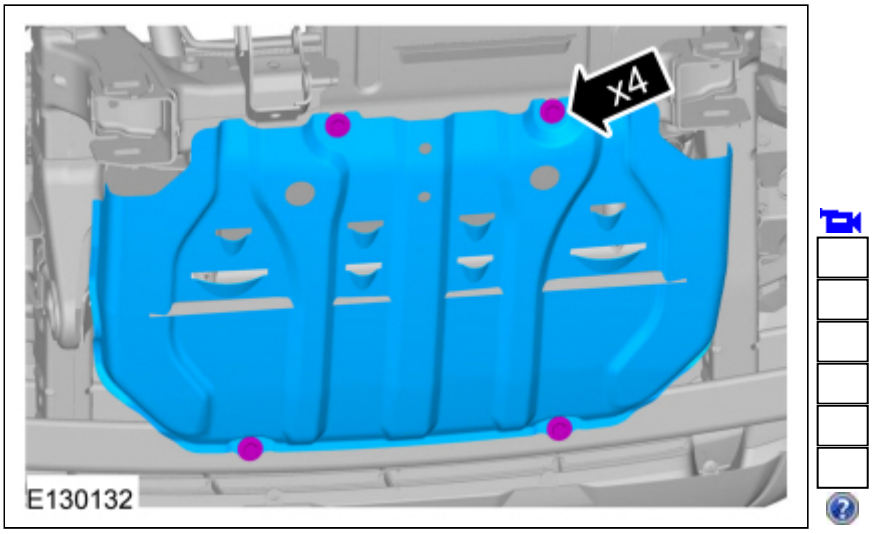
Name	Specification
Antifreeze	WSS-M97B44-D2



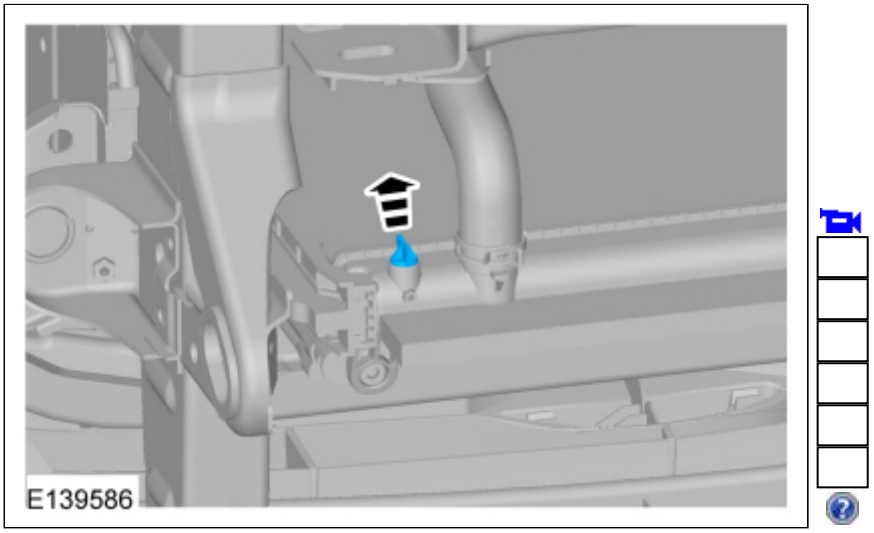
Draining

WARNING: When releasing the cooling system pressure, cover the coolant expansion tank cap with a thick cloth.

1. Release the cooling system pressure by slowly turning the coolant expansion tank cap between 2 and 3 turns.



2.

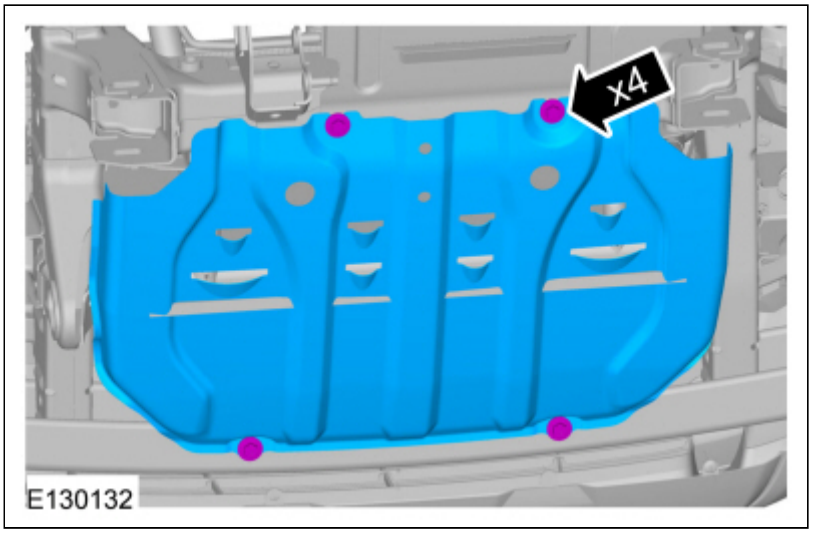


3. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

4.

5. Remove the radiator drain plug and drain the coolant.

6. Install the radiator drain plug.
7. Lower the vehicle.



Filling

1. Refill the coolant to the expansion tank to maximum line (+15mm).
   Use the General Equipment: Cooling System Vacuum Tester and Refiller
   Material: Antifreeze (WSS-M97B44-D2)

Bleeding

NOTICE: The fluid level must remain between the MAX and MIN marks.

1. Run the engine for 5 minutes at idle rpm.
2. Install the coolant expansion tank cap.
3. Run the engine speed to 2500 RPM and maintain it for approximately 15 minutes.
4. Run the engine for 5minutes at idle rpm.
5. Switch the engine off.
6. Check the cooling system for leaks.
7. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
8. *Torque*: 30 Nm

9. Lower the vehicle.
10. Allow the engine to cool and maintain close to room temperature.
11. Fill the coolant to the expansion tank max fill line, if required.
    Use the General Equipment: Cooling System Vacuum Tester and Refiller
    Material: Antifreeze (WSS-M97B44-D2)

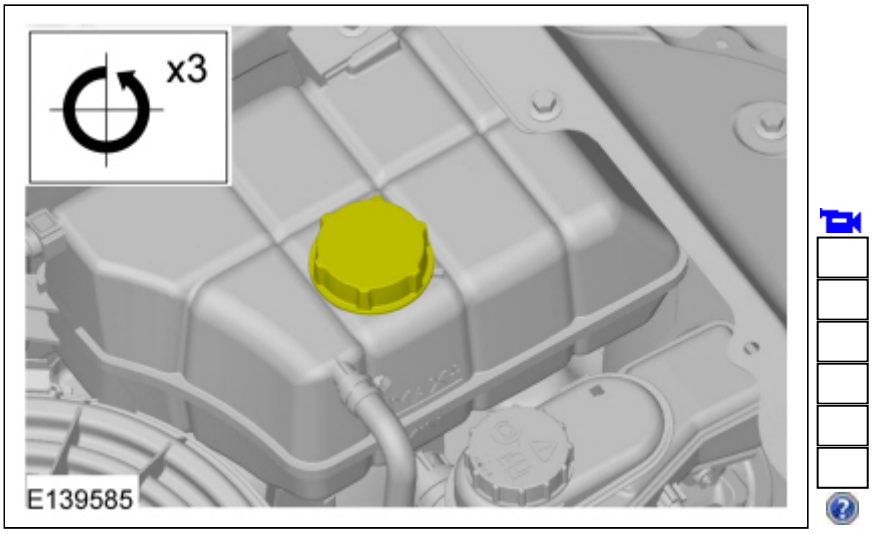
Copyright © 2016 Ford Motor Company

Cooling System Draining and Vacuum Filling

Special Tool(s) / General Equipment

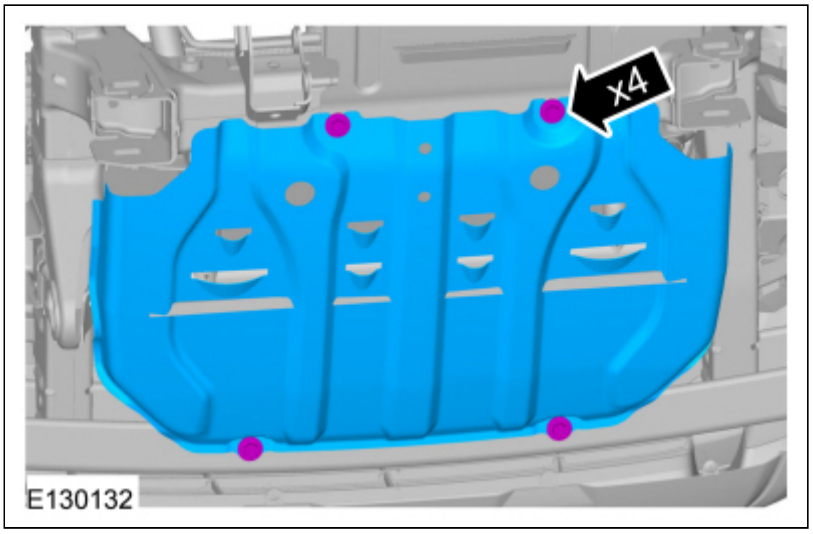
Fluid Container
Cooling System Vacuum Tester and Refiller

Materials



Name	Specification
Antifreeze	WSS-M97B44-D2

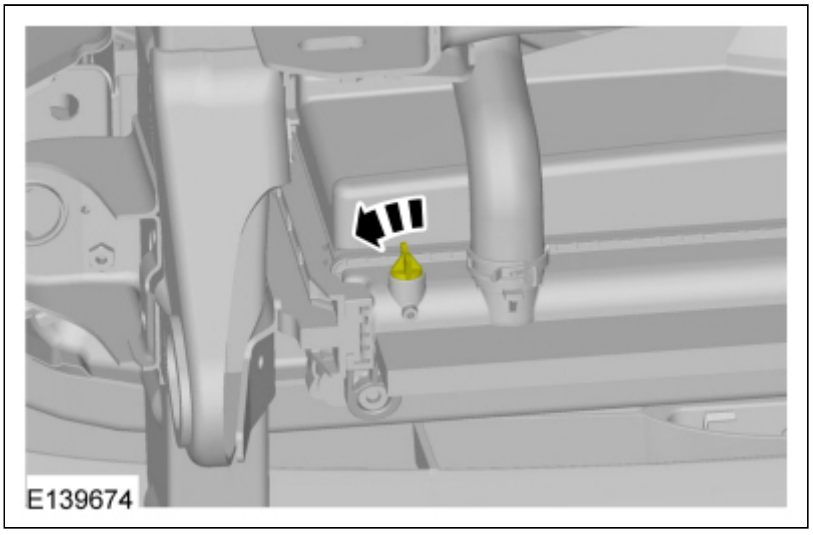
Draining



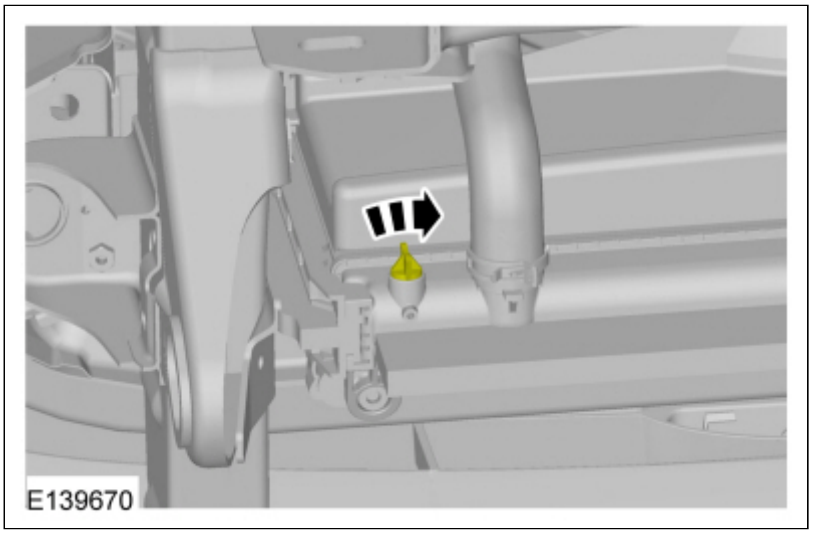
WARNING: When releasing the cooling system pressure, cover the coolant expansion tank cap with a thick cloth.

NOTE: *Always follow the manufacturer's instructions when handling the equipment.*

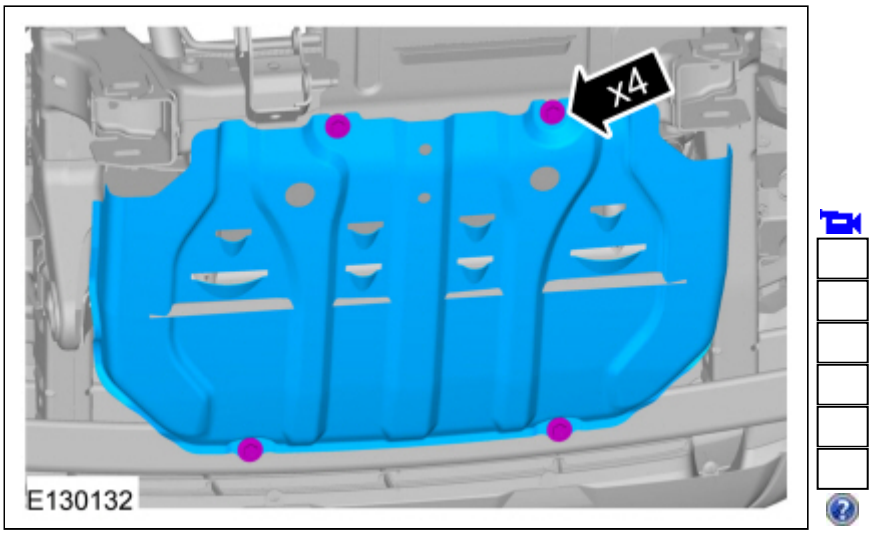
1. Refer to: Engine Cooling System Health and Safety Precautions (100-00 General Information, Description and Operation).
2. 
   Release the cooling system pressure by slowly turning the coolant expansion tank cap between 2 and 3 turns.



3. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
4.



5. 



WARNING: Be prepared to collect escaping fluid.

Connect a hose to drain the coolant. Open the radiator drain valve and drain the engine coolant in a suitable, clean container.
Use the General Equipment: Fluid Container
Loosen: 4 turn(s)

6. 

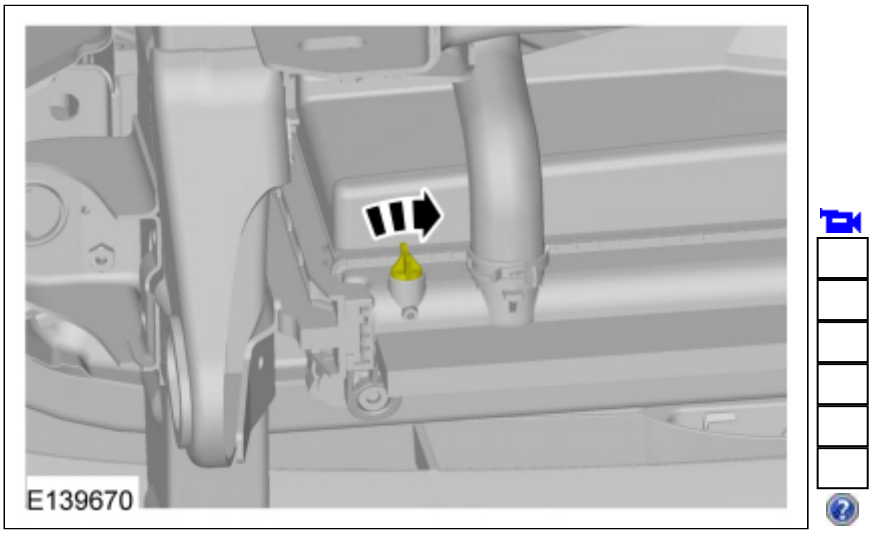
7. *Torque*: 30 Nm

Evacuating and Filling

NOTICE: The cooling system is filled with Motorcraft® Orange Antifreeze/Coolant. Do not mix coolant types. Mixing coolant types degrades the corrosion protection of the coolant. Failure to follow these instructions may damage the engine or cooling system.

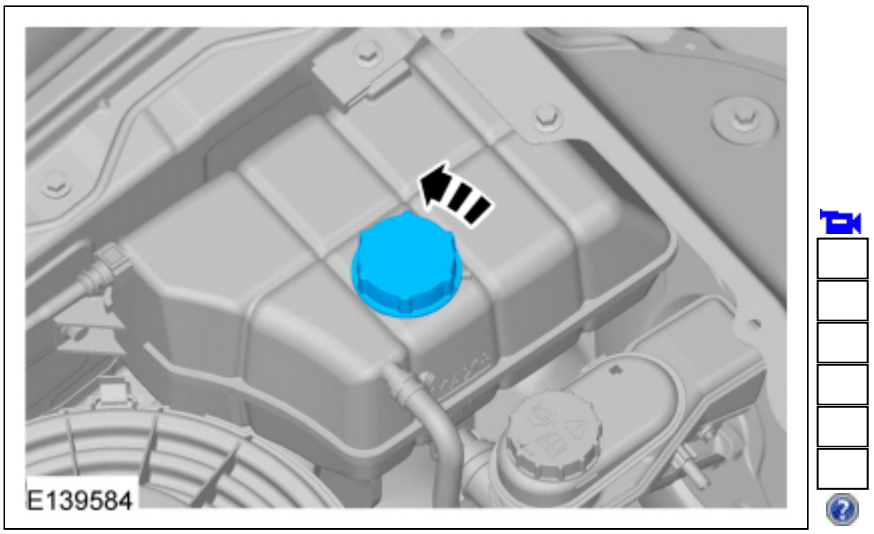
NOTICE: Engine coolant provides boil protection, corrosion protection, freeze protection, and cooling efficiency to the engine and cooling components. In order to obtain these protections, maintain the engine coolant at the correct concentration and fluid level in the degas bottle.

NOTE: *Add Motorcraft® Orange Antifreeze/Coolant or equivalent.*



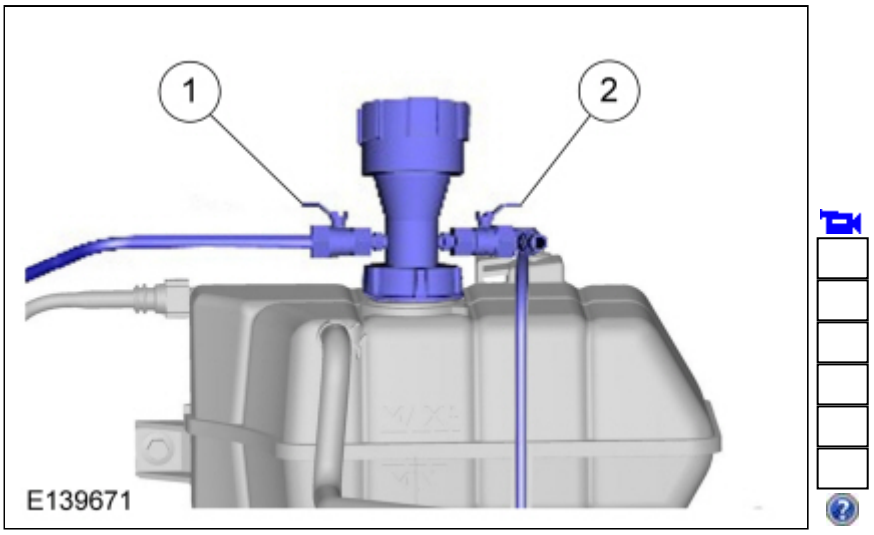
NOTE: *Do not add or mix with any other type of engine coolant. Mixing coolants may degrade the coolant's corrosion protection.*

NOTE: *Do not add alcohol, methanol, or brine, or any engine coolants mixed with alcohol or methanol antifreeze. These can cause engine damage from overheating or freezing.*

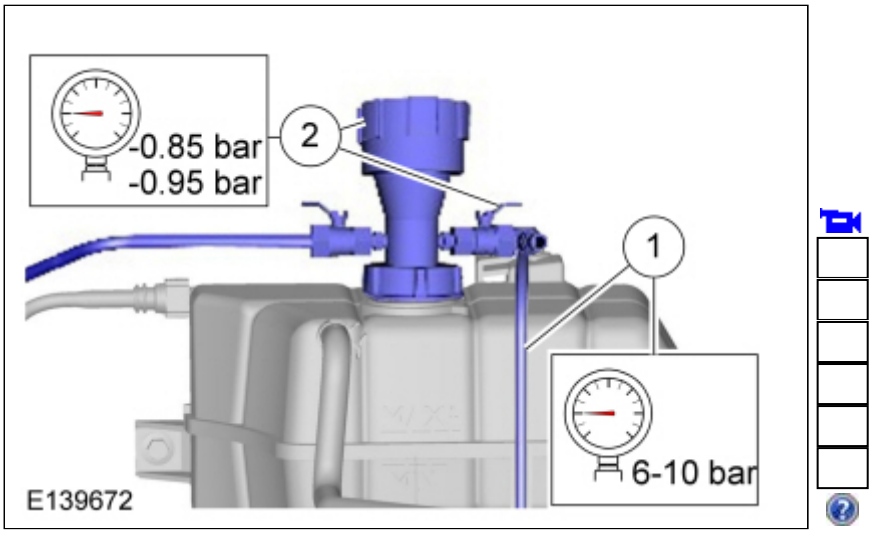


NOTE: *Ford Motor Company does NOT recommend the use of recycled engine coolant in vehicles originally equipped with Motorcraft® Orange Antifreeze/Coolant since a Ford-approved recycling process is not yet available.*

- If the cooling system was completely drained, fill the fluid container with the full cooling system fill capacity plus 0.5L of additional coolant.
  Material: Antifreeze (WSS-M97B44-D2)
- If the cooling system was partially drained, fill the fluid container with the removed and spilled amount of coolant plus 1.0L of additional coolant. When in doubt always use the full cooling system fill capacity plus 0.5L of additional coolant.
  Material: Antifreeze (WSS-M97B44-D2)

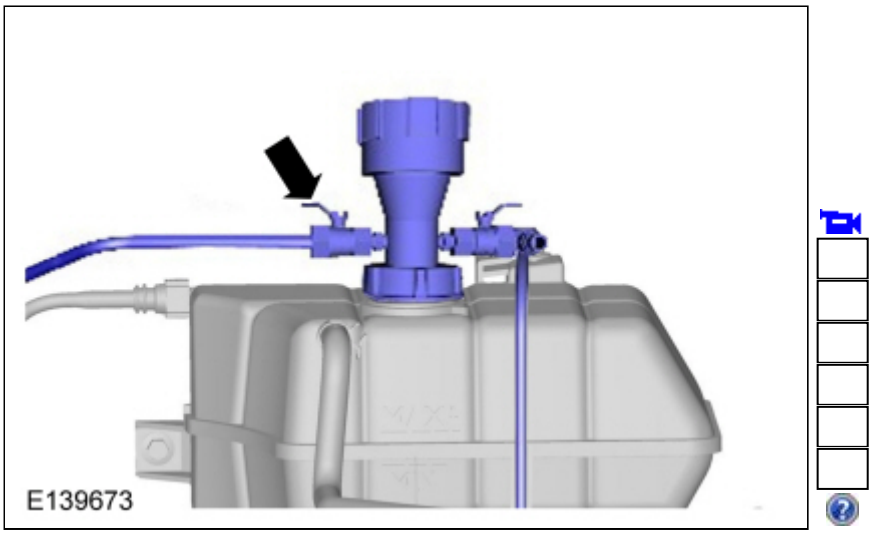


2. Close the radiator drain plug.

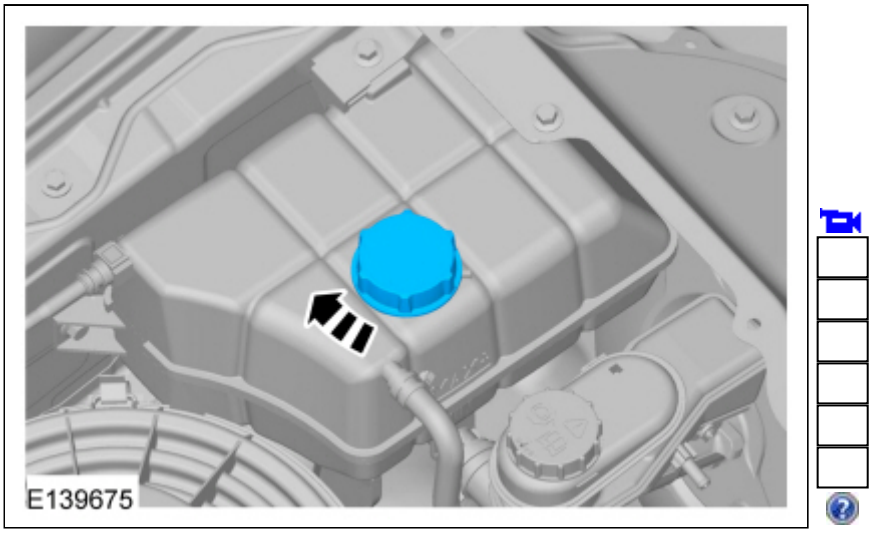


3. Remove the coolant expansion tank cap.

1. Close the valve, install the coolant hose and place it into the fluid container.
   Use the General Equipment: Cooling System Vacuum Tester and Refiller
2. Close the valve and connect the compressed air hose.



1. Use the General Equipment: Cooling System Vacuum Tester and Refiller
2. Open the valve until the specificied vacuum is achieved.



- Open the valve until the coolant reservoir fluid level is at the MAX mark.

Use the General Equipment: Cooling System Vacuum Tester and Refiller

- If no coolant is visible in the coolant expansion tank, add 2.0L of coolant to the fluid container and repeat the evacuating and filling procedure.
  Material: Antifreeze (WSS-M97B44-D2)

7. Install the pressure relief cap until it contacts the hard stop.

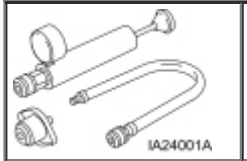
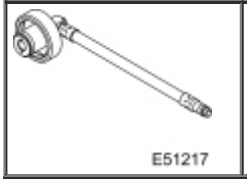
Engine Cooling - Overview

2.2L Duratorq

- Engine driven coolant pump
- Engine driven cooling fan with viscous coupling
- Maximum operating pressure 155 kPa

Engine coolant requires periodic replacement. It is important that when replaced or if the level is rectified after leak repair that the coolant type and concentration is correct. Incorrect coolant specification can lead to engine damage through; corrosion, freezing, or boiling.





NOTE: *Please consult the warranty and service information guide for engine coolant specification and quantites.*

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
− Coolant hose(s) − Gaskets/seals − Coolant expansion tank cap and seal − Coolant expansion tank − Radiator − Coolant pump − Thermostat − Thermostat housing − Cooling fan and cooling fan clutch − Accessory drive belt − Power steering pump belt − Exhaust gas recirculation (EGR) cooler − Engine oil cooler	− Fuse(s) − Wiring harness − Electrical connector(s) − Engine coolant temperature (ECT) sensor − Engine cooling fan motor(s) − Powertrain control module (PCM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Sources	Action

• Loss of coolant	• Radiator.	• CARRY OUT the Pressure Test Component Test in this section. INSTALL a new radiator as necessary. 	• ECT sensor.	• CHECK the ECT sensor for correct operation. REFER to the Ford diagnostic equipment.
	• Circuit(s).	• CHECK the circuit(s). REFER to the Ford diagnostic equipment.

Component Tests

Pressure Test

WARNING: When releasing the system pressure, cover the coolant expansion tank cap with a thick cloth to prevent the possibility of coolant scalding. Failure to follow this instruction may result in personal injury.

1. Remove the coolant expansion tank cap.

2. Install the special tools to the coolant expansion tank.

3. Pressurize the system to the coolant expansion tank cap release pressure.
   REFER to: Specifications (303-03B Engine Cooling - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Specifications).

4. Observe the cooling system pressure tester gauge reading for approximately two minutes. The pressure should not drop during this time. If the system holds pressure, proceed to step 7. If the system does not hold pressure, check it thoroughly for coolant leaks.

5. If a coolant leak cannot be found, check the EGR cooler (this may leak internally), engine oil cooler (this may produce oil in the coolant expansion tank) and the engine for cylinder leakage. Drain the cooling system, repair any coolant leaks found and fill and bleed the cooling system as necessary.
   REFER to: Cooling System Draining and Vacuum Filling (303-03B Engine Cooling - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, General Procedures).

6. Recheck the system by repeating steps 3 and 4 at least twice.

Radiator Leak Test, Removed From Vehicle

NOTICE: Radiator internal pressure must not exceed 130 kpa (20 psi) or damage may result.

Clean the radiator thoroughly before leak testing it, to prevent contamination of the water in the test tank. Leak test the radiator in clean water with 138 kpa (20 psi) air pressure. Check it thoroughly for air leaks. INSTALL a new radiator if necessary.
REFER to: Radiator (303-03B Engine Cooling - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

Coolant Expansion Tank Cap Pressure Test

WARNING: When releasing the system pressure, cover the coolant expansion tank cap with a thick cloth to prevent the possibility of coolant scalding. Failure to follow this instruction may result in personal injury.

1. Remove the coolant expansion tank cap.

2. Use water to clean the area of the rubber seal and pressure relief valve. Install the pressure tester and adapter and immerse the coolant expansion tank cap in water .

NOTE: *If the plunger of the pump is depressed too quickly, an erroneous pressure reading will result.*

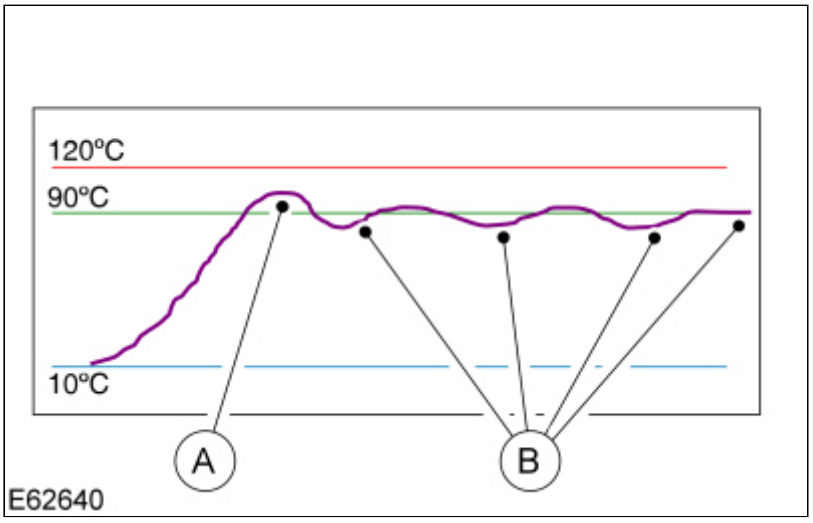
3. Slowly depress the plunger of the pressure test pump until the pressure test gauge reading stops increasing, and note the highest pressure reading obtained.

4. Release pressure by turning the pressure relief screw counterclockwise. Tighten the pressure relief screw and repeat step 3 at least twice to make sure that the pressure test gauge reading is repeatable and within acceptable gauge reading limits of the coolant expansion tank cap.

5. If the pressure test gauge readings are not within the acceptable gauge reading limits, INSTALL a new coolant expansion tank cap.

Thermostat Test

1. Connect the Ford Diagnostic Equipment to the data link connector (DLC).



2. Using the datalogger function, SELECT the following sensors (as applicable to the application):

- IAT - intake air temperature (IAT) sensor
- ECT - engine coolant temperature (ECT) sensor
- LOAD - engine load
- VSS - vehicle speed sensor (VSS)

- RPM - engine speed
- DSRPM - desired engine speed

The IAT sensor output is useful if the engine being tested is cold or after an over-night cold soak. The ECT sensor and the IAT sensor should either indicate the same value or be within 1 to 2 degrees Celsius of each other.

The ECT sensor output is important to display as it indicates the engine warm-up and opening temperature for the thermostat. It will initially indicate a slightly higher reading just before the thermostat opens and then drops back before settling to a near flat line output (see graphic below).

Item	Part Number	Description
A	—	Thermostat opens
B	—	Thermostat settles into a cyclic open and closure pattern

NOTICE: If the ECT sensor output reaches the 120°C default line under normal cooling system pressure, internal damage may be caused to the engine and a diagnostic trouble code (DTC) will be set in the PCM. The test should be stopped and the cause located and corrected. If the cooling system does not pressurize, the coolant will boil at 100°C which may also damage the engine. CARRY OUT the Coolant Expansion Tank Cap Pressure Test Component Test in this section.

If the Ford diagnostic equipment only allows the ECT sensor to be displayed in volts, refer to the following table for corresponding Celsius values:

Volts	°Celsius
1.33	60
1.02	70
0.78	80
0.60	90
0.46	100
0.35	110
0.27	120

The LOAD display is used for reference as it is necessary to maintain a stable load line during the test. It is necessary to carry out the test under normal light throttle cruise driving conditions and average loads, typically 40% to 70% of the load value.

The VSS output is used for reference but can help to identify misfires and sensors which fail during the warm-up cycle.

The RPM display indicates the engine speed and can be compared with the DSRPM.

The DSRPM is the desired or calculated idle speed which the PCM commands the engine to reach. If the thermostat opens too early (before the correct opening temperature has been reached), the engine will not reach this value.

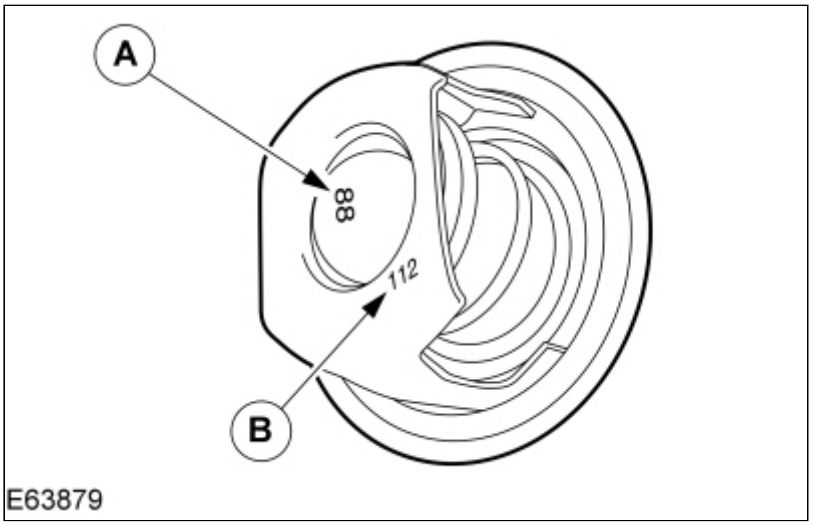
When using the Ford diagnostic equipment in data logger mode, the signals recorded should remain within the DEFAULT values set by the Ford diagnostic equipment.

3. **WARNING: Make sure that the Ford diagnostic equipment is placed in the vehicle so that it does not interfere with the safe operation of the vehicle. Do not place the Ford diagnostic equipment in the deployment path of any air bag. Failure to follow these instructions may result in personal injury.**

   NOTE: *The road test is best carried out with the aid of another technician in the vehicle to enable the vehicle to be driven safely while the sensor outputs are monitored within datalogger. If there is only one technician available, the Ford diagnostic equipment can be set up (using the record/capture mode camera icon) before leaving the workshop to record a 16 km (10 mile) test.*

   NOTE: *The results from the test are more conclusive if the engine is cold when the test is started.*

   Carry out a road test.



4. Drive the vehicle at a constant throttle opening and set speed until the ECT value settles into a shallow rise and fall signal, close to a straight line. This indicates that the thermostat is functioning correctly.

NOTE: *Some thermostats indicate the temperature(s) in Celsius and Fahrenheit.*

The graphic below shows the location and an example of the opening temperature (88ºC) and fully open temperature (102ºC) of a thermostat.

The graphic below shows an alternative method used to show the opening temperature (88ºC) and fully open temperature (112ºC) of a thermostat.

Item	Part Number	Description
A	—	Opening temperature

B	—	Fully open temperature

NOTE: *Generally, most thermostats maintain a coolant temperature between 88ºC (190ºF) and 92ºC (198ºF) although dual stage electric thermostats may increase the coolant temperature up to 100ºC (212ºF) under light engine load conditions.*

The engine should start cleanly and the ECT value will rise quite quickly with smooth progression. If the ECT signal appears unstable or erratic, the ECT sensor, electrical connector and wiring harness to the PCM need to be visually inspected for damage, chafing or water ingress.

The temperature should rise to approximately 90ºC for a thermostat that has an 88ºC value. The signal value will then fall as cooler coolant enters the engine.

If the ECT value fails to maintain a constant value and falls back to lower figures, typically between 60ºC (140ºF) and 70ºC (150ºF), the thermostat and its sealing function within the thermostat housing must be checked.

5. INSTALL a new thermostat.
   REFER to: Thermostat (303-03B Engine Cooling - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

6. Carry out another road test from step 1 using the same criteria to confirm that the concern has been rectified.

7. Using the Ford diagnostic equipment, clear the PCM keep alive memory (KAM) or electrically erasable programmable read only memory (EEPROM) so that new drive values can be learnt.

Fan Clutch Test

1. Turn the engine OFF and wait until the fan comes to a complete stop.

2. Spin the fan blade by hand. A light resistance should be felt. If there is no resistance or very high resistance, the minimum and maximum fan speeds must be checked. Carry out the following:

Fan Clutch Test — Minimum Speed Requirement

1. Use a suitable marker to mark the coolant pump or fan pulley and one of the fan blades.

2. Make sure the A/C is OFF, if equipped.

3. Start the engine and run it at approximately 2,000 rpm for 5 minutes or until there is a noticeable reduction in fan noise to allow the fan clutch to go into disengaged mode.

4. Aim a laser photo tachometer at the coolant pump or fan pulley. Run the engine to achieve 3,000 rpm at the coolant pump or fan pulley.

5. With the coolant pump or fan pulley at 3,000 rpm, aim the laser photo tachometer at the fan blade. Monitor and record fan speed.

6. The fan blade speed must be less than the specified rpm at 3,000 rpm coolant pump or fan pulley rpm.

7. Turn the engine off.

8. If the fan blade speed was greater than specified, install a new fan clutch.
   REFER to: Cooling Fan (303-03B Engine Cooling - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

Fan Clutch Test — Maximum Speed Requirement

1. Use a suitable marker to mark the coolant pump or fan pulley and one of the fan blades.

2. Block off areas on each side of the radiator in the engine compartment, the front of the radiator grille and the bumper. Close the hood. This will raise the temperature of the air striking the fan clutch and should cause the fan blade to operate at maximum speed.

3. Place the climate control function selector switch in the MAX A/C position and the blower motor switch in the HI position, if equipped.

4. **NOTE:** *Do not open the hood to check the coolant pump or fan pulley temperature. This will lower the*

temperature of the air reaching the fan clutch and void the test. Aim the infrared thermometer through the wheel well or from under the vehicle.

Start the engine and run it at approximately 2,000 rpm until normal operating temperature has been achieved. Using an infrared thermometer, monitor the coolant pump or fan pulley. Run the engine until the coolant pump or fan pulley is at least 96°C (205°F).

5. **NOTE:** *Do not open the hood to check the coolant pump or fan pulley or fan blade speed. This will lower the temperature of the air reaching the fan clutch and void the test. Aim the laser photo tachometer through the wheel well or from under the vehicle.*

   Aim a laser photo tachometer at the coolant pump or fan pulley. Run the engine to achieve 3,000 rpm at the coolant pump or fan pulley.

6. With the coolant pump or fan pulley at 3,000 rpm, aim the laser photo tachometer at the fan blade. Monitor and record fan blade speed.

7. The fan blade speed must be greater than the specified rpm at 3,000 rpm coolant pump or fan pulley rpm.

8. Open the hood and allow the engine to idle momentarily to lower engine temperature. Turn the engine off and remove the blocks from the radiator, grille and bumper.

9. If the fan blade speed is less than specified, install a new fan clutch.
   REFER to: Cooling Fan (303-03B Engine Cooling - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

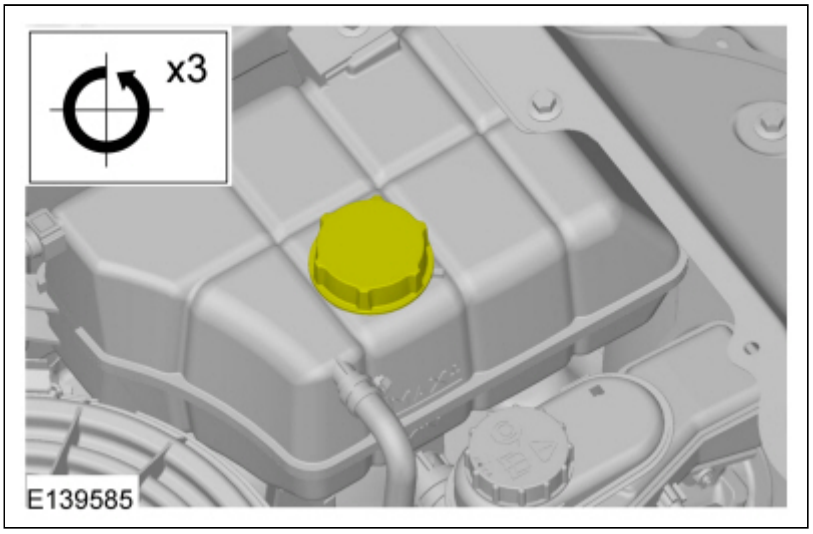
Cooling System Draining, Filling and Bleeding

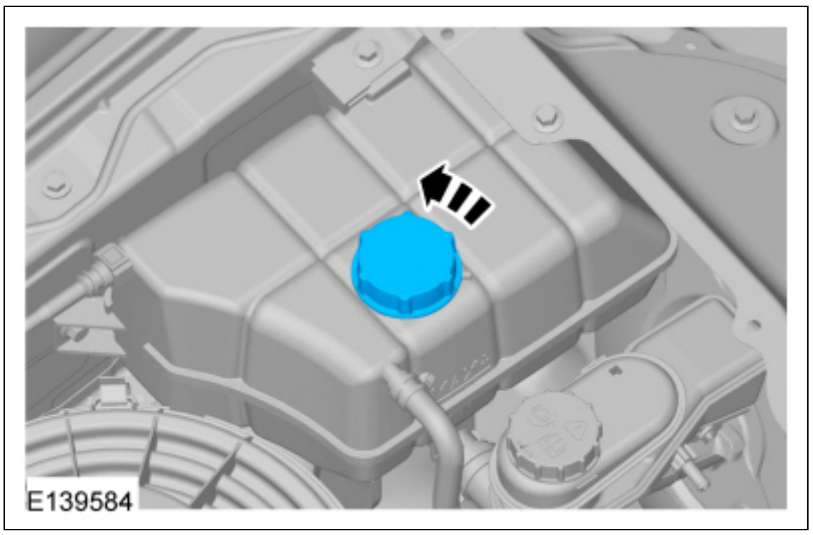
Special Tool(s) / General Equipment

Cooling System Vacuum Tester and Refiller



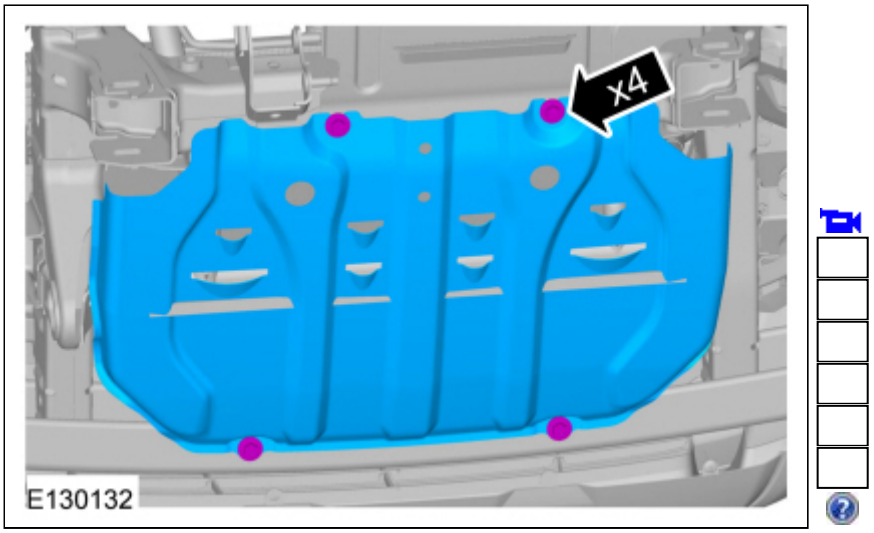
Materials

Name	Specification
Antifreeze	WSS-M97B44-D2

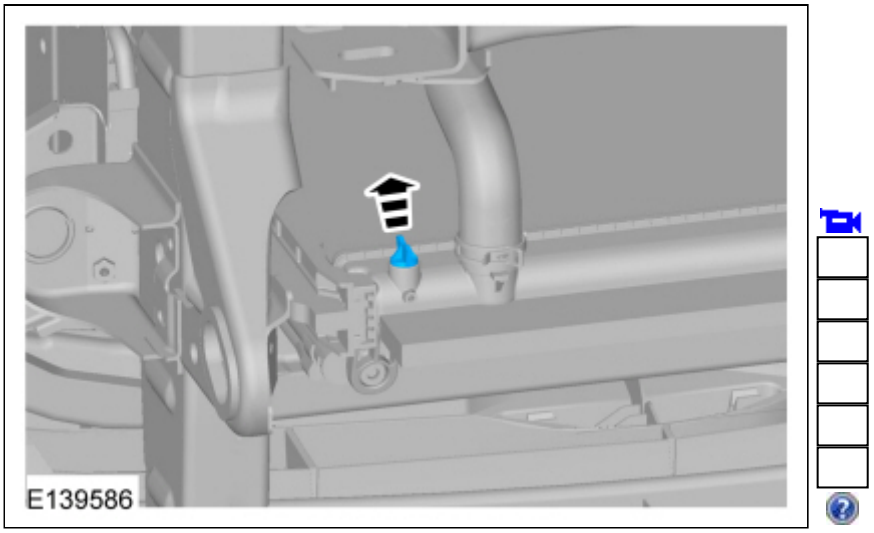


Draining

WARNING: When releasing the cooling system pressure, cover the coolant expansion tank cap with a thick cloth.



1. Release the cooling system pressure by slowly turning the coolant expansion tank cap between 2 and 3 turns.



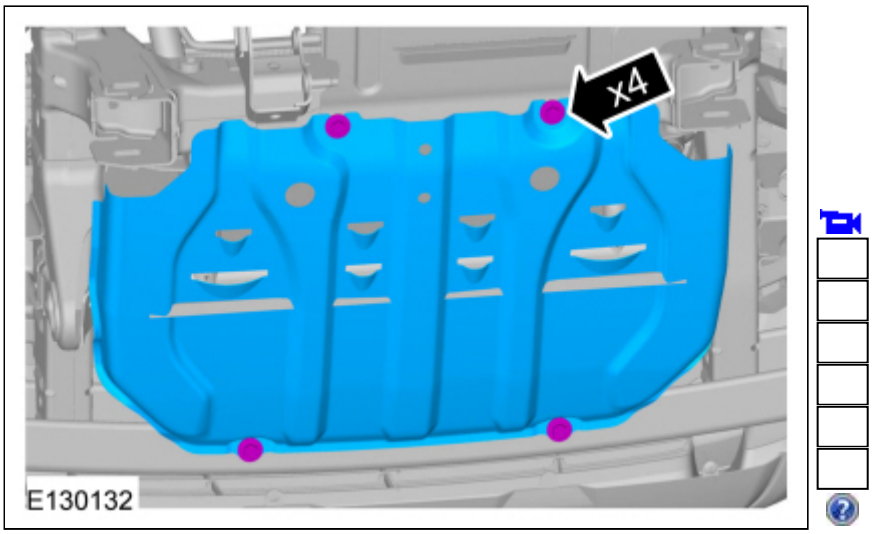
2.

3. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
4.

5. Remove the radiator drain plug and drain the coolant.

6. Install the radiator drain plug.
7. Lower the vehicle.

Filling



1. Refill the coolant to the expansion tank to maximum line (+15mm).
   Use the General Equipment: Cooling System Vacuum Tester and Refiller
   Material: Antifreeze (WSS-M97B44-D2)

Bleeding

NOTICE: The fluid level must remain between the MAX and MIN marks.

1. Run the engine for 5 minutes at idle rpm.
2. Install the coolant expansion tank cap.
3. Run the engine speed to 2500 RPM and maintain it for approximately 15 minutes.
4. Run the engine for 5minutes at idle rpm.
5. Switch the engine off.
6. Check the cooling system for leaks.
7. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

8. *Torque*: 30 Nm

9. Lower the vehicle.
10. Allow the engine to cool and maintain close to room temperature.
11. Fill the coolant to the expansion tank max fill line, if required.
    Use the General Equipment: Cooling System Vacuum Tester and Refiller
    Material: Antifreeze (WSS-M97B44-D2)

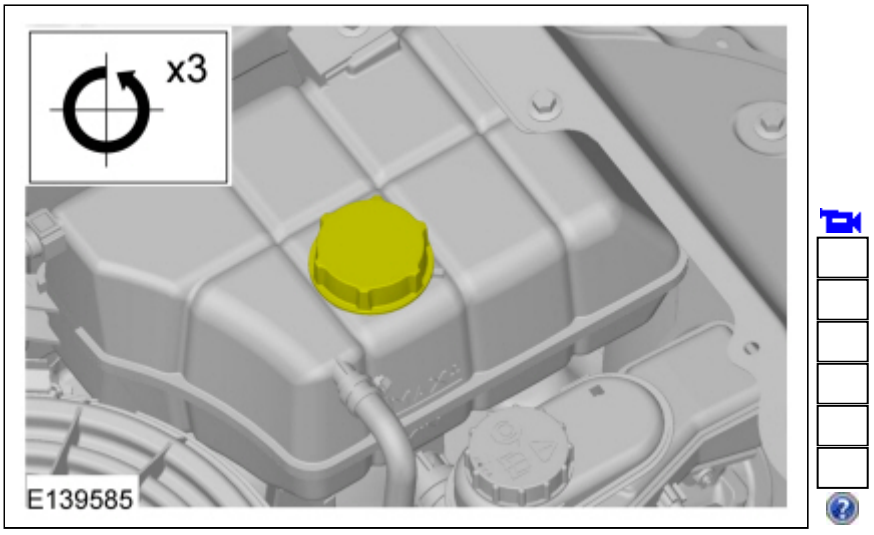
Cooling System Draining and Vacuum Filling

Special Tool(s) / General Equipment

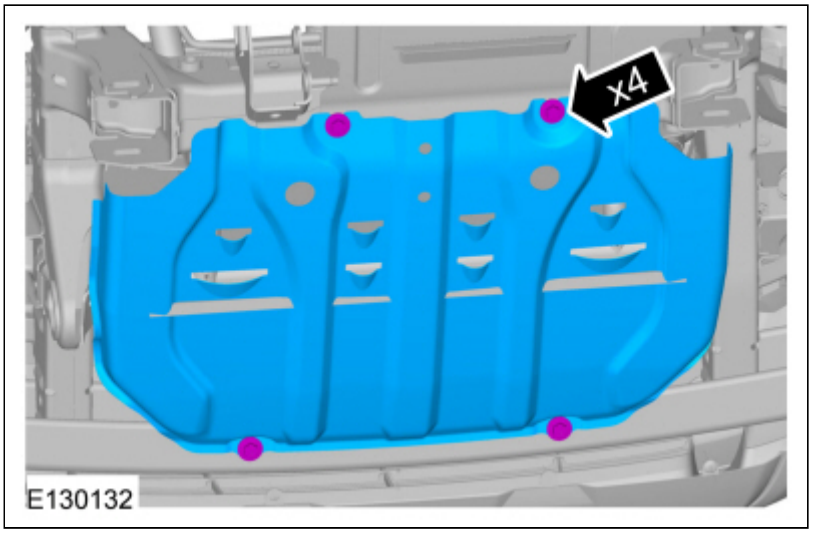
Fluid Container
Cooling System Vacuum Tester and Refiller

Materials



Name	Specification
Antifreeze	WSS-M97B44-D2

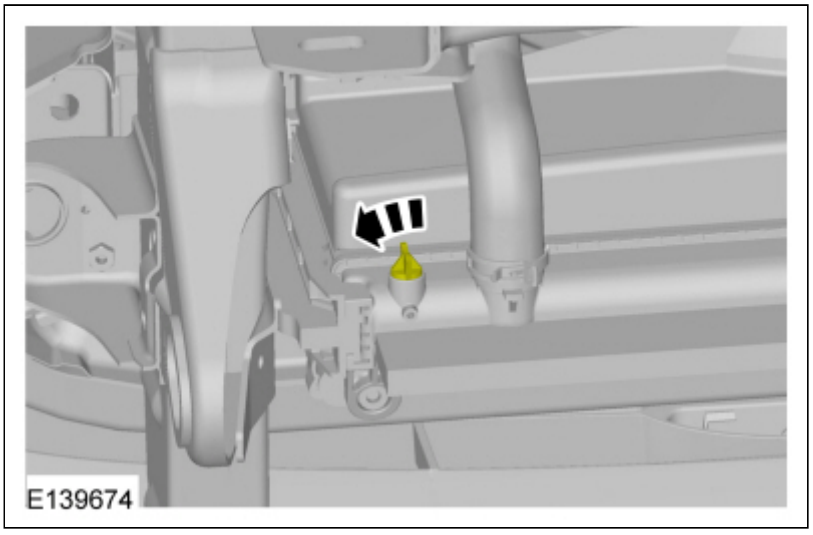
Draining



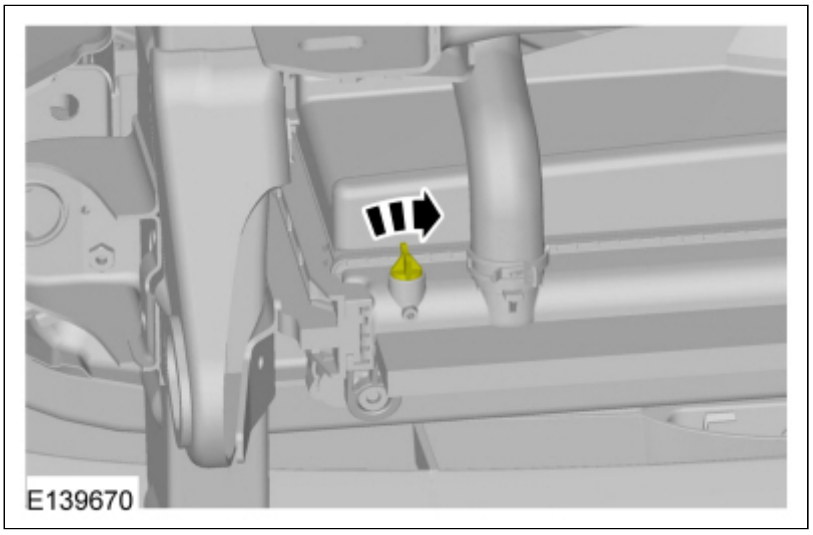
WARNING: When releasing the cooling system pressure, cover the coolant expansion tank cap with a thick cloth.

NOTE: *Always follow the manufacturer's instructions when handling the equipment.*

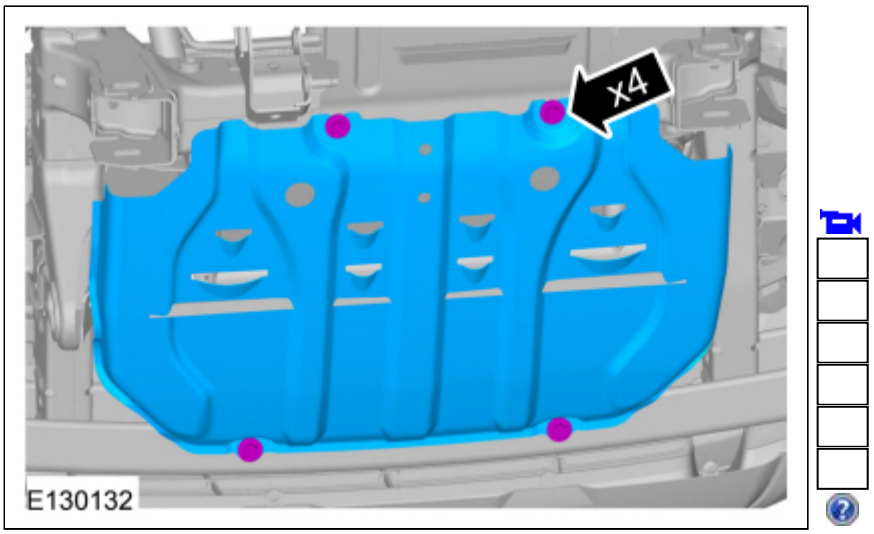
1. Refer to: Engine Cooling System Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Release the cooling system pressure by slowly turning the coolant expansion tank cap between 2 and 3 turns.



3. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
4.



5. 



WARNING: Be prepared to collect escaping fluid.

Connect a hose to drain the coolant. Open the radiator drain valve and drain the engine coolant in a suitable, clean container.
Use the General Equipment: Fluid Container
Loosen: 4 turn(s)

6. 

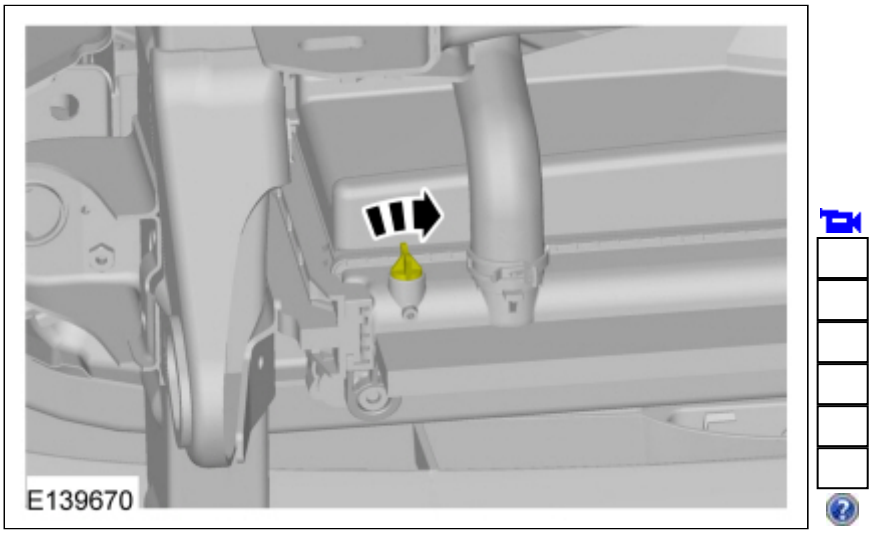
7. *Torque*: 30 Nm

Evacuating and Filling

NOTICE: The cooling system is filled with Motorcraft® Orange Antifreeze/Coolant. Do not mix coolant types. Mixing coolant types degrades the corrosion protection of the coolant. Failure to follow these instructions may damage the engine or cooling system.

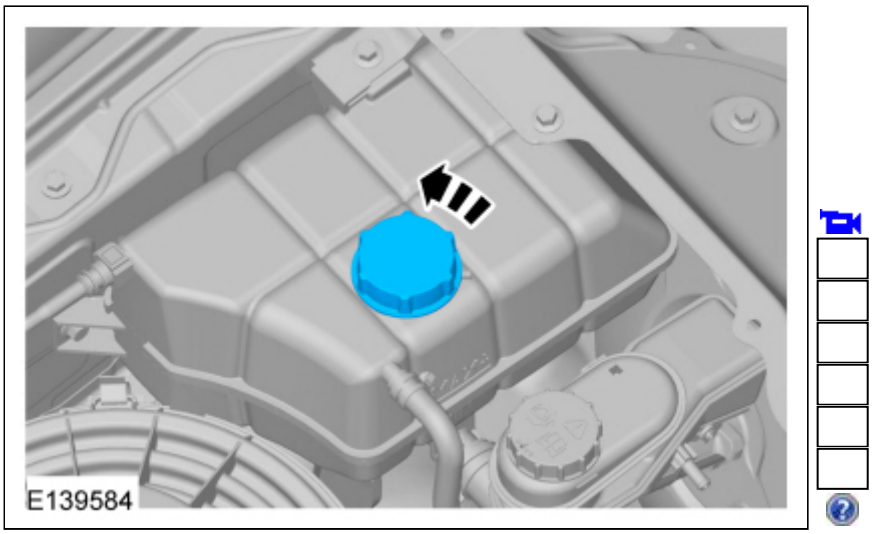
NOTICE: Engine coolant provides boil protection, corrosion protection, freeze protection, and cooling efficiency to the engine and cooling components. In order to obtain these protections, maintain the engine coolant at the correct concentration and fluid level in the degas bottle.

NOTE: *Add Motorcraft® Orange Antifreeze/Coolant or equivalent.*



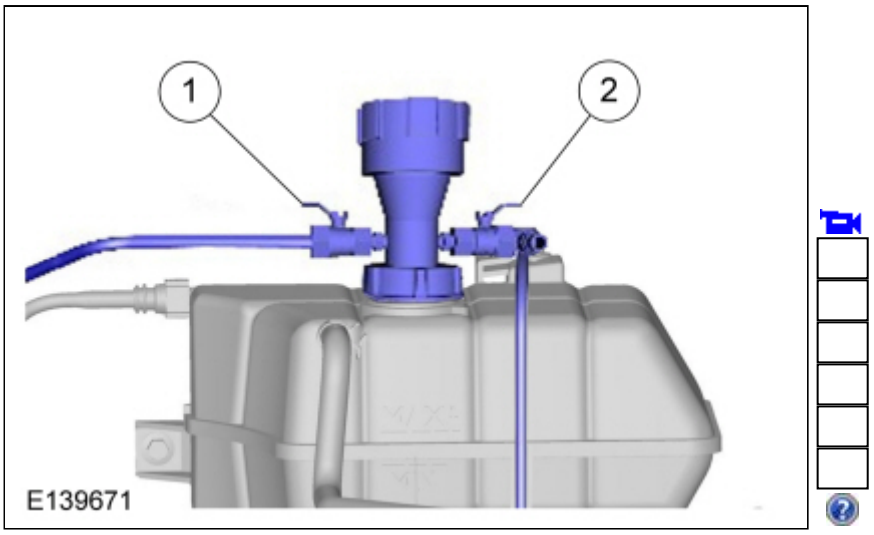
NOTE: *Do not add or mix with any other type of engine coolant. Mixing coolants may degrade the coolant's corrosion protection.*

NOTE: *Do not add alcohol, methanol, or brine, or any engine coolants mixed with alcohol or methanol antifreeze. These can cause engine damage from overheating or freezing.*

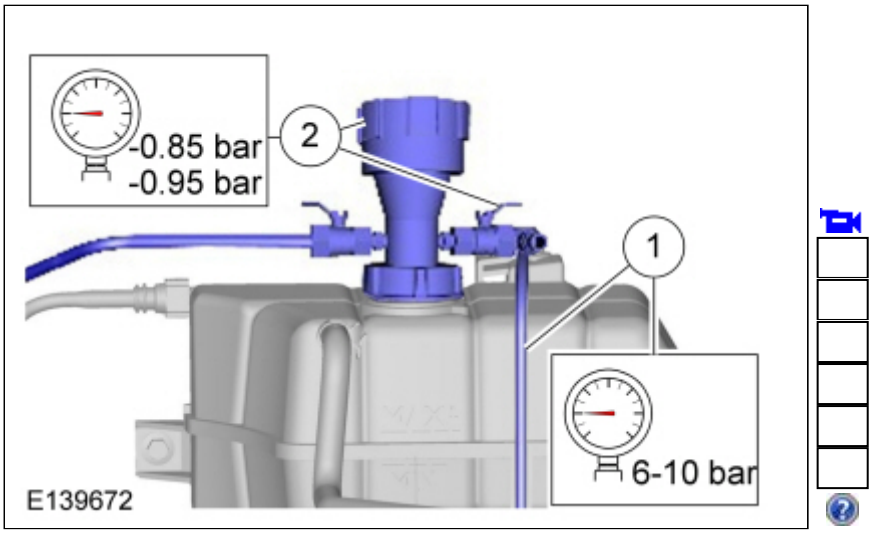


NOTE: *Ford Motor Company does NOT recommend the use of recycled engine coolant in vehicles originally equipped with Motorcraft® Orange Antifreeze/Coolant since a Ford-approved recycling process is not yet available.*

- If the cooling system was completely drained, fill the fluid container with the full cooling system fill capacity plus 0.5L of additional coolant.
  Material: Antifreeze (WSS-M97B44-D2)
- If the cooling system was partially drained, fill the fluid container with the removed and spilled amount of coolant plus 1.0L of additional coolant. When in doubt always use the full cooling system fill capacity plus 0.5L of additional coolant.
  Material: Antifreeze (WSS-M97B44-D2)

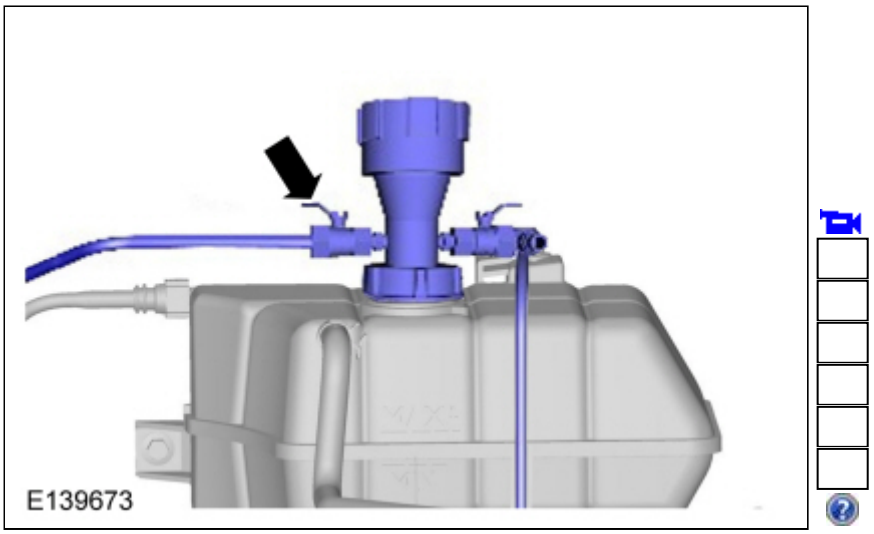


2. Close the radiator drain plug.

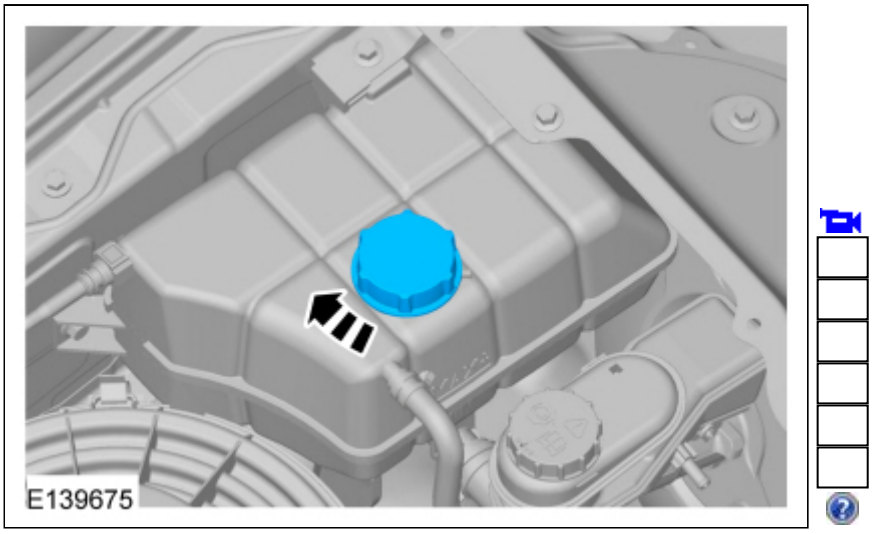


3. Remove the coolant expansion tank cap.

1. Close the valve, install the coolant hose and place it into the fluid container.
   Use the General Equipment: Cooling System Vacuum Tester and Refiller
2. Close the valve and connect the compressed air hose.



1. Use the General Equipment: Cooling System Vacuum Tester and Refiller
2. Open the valve until the specificied vacuum is achieved.



- Open the valve until the coolant reservoir fluid level is at the MAX mark.

Use the General Equipment: Cooling System Vacuum Tester and Refiller

- If no coolant is visible in the coolant expansion tank, add 2.0L of coolant to the fluid container and repeat the evacuating and filling procedure.
  Material: Antifreeze (WSS-M97B44-D2)

7. Install the pressure relief cap until it contacts the hard stop.

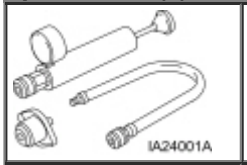
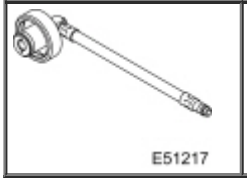
Engine Cooling - Overview

2.2L Duratorq

- Engine driven coolant pump
- Engine driven cooling fan with viscous coupling
- Maximum operating pressure 155 kPa

Engine coolant requires periodic replacement. It is important that when replaced or if the level is rectified after leak repair that the coolant type and concentration is correct. Incorrect coolant specification can lead to engine damage through; corrosion, freezing, or boiling.





NOTE: *Please consult the warranty and service information guide for engine coolant specification and quantites.*

Engine Cooling

Refer to Wiring Diagrams Section 303-14B for schematic and connector information.

Special Tool(s)

 IA24001A	Pressure Tester, Cooling System 303-396 (24-001A)
 E51217	Adapter for 303-396 303-396-08

General Equipment

Ford diagnostic equipment

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
– Coolant hose(s) – Gaskets/seals – Coolant expansion tank cap and seal – Coolant expansion tank – Radiator – Coolant pump – Thermostat – Thermostat housing – Cooling fan and cooling fan clutch – Accessory drive belt – Power steering pump belt – Exhaust gas recirculation (EGR) cooler – Engine oil cooler	– Fuse(s) – Wiring harness – Electrical connector(s) – Engine coolant temperature (ECT) sensor – Engine cooling fan motor(s) – Powertrain control module (PCM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Sources	Action
• Loss of coolant	• Radiator.	• CARRY OUT the Pressure Test Component Test in this section. INSTALL a new radiator as necessary. REFER to: Radiator (303-03C Engine Cooling - 3.2L Duratorq-TDCi

		(148kW/200PS) - Puma, Removal and Installation).
	• Coolant pump.	• CARRY OUT the Pressure Test Component Test in this section. INSTALL a new coolant pump as necessary. REFER to: Coolant Pump (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
	• Thermostat housing.	• CARRY OUT the Pressure Test Component Test in this section. INSTALL a new thermostat housing as necessary. REFER to: Thermostat Housing (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
	• Coolant expansion tank cap.	• CARRY OUT the Coolant Expansion Tank Cap Pressure Test Component Test in this section.
	• Coolant expansion tank.	• CHECK the coolant expansion tank for damage. INSTALL a new coolant expansion tank as necessary.
	• EGR cooler.	• CARRY OUT the Pressure Test Component Test in this section. INSTALL a new EGR cooler as necessary. REFER to: Exhaust Gas Recirculation (EGR) Cooler - 2.2L Duratorq-TDCi (118kW/160PS) - Puma (303-08B Engine Emission Control - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
	• Engine oil cooler.	• CARRY OUT the Pressure Test Component Test in this section. INSTALL a new engine oil cooler as necessary.
	• Heater core.	• CHECK the heater core for leaks. REFER to: Heater Core (412-00 Climate Control System - General Information, Removal and Installation).
	• Engine.	• CHECK the engine, cylinder head, coolant manifold, cylinder block and cylinder head gasket.
• The engine overheats.	• Cooling system does not hold pressure.	• CARRY OUT the Coolant Expansion Tank Cap Pressure Test Component Test in this section. • CHECK the coolant expansion tank for damage. INSTALL a new coolant expansion tank as necessary. • CHECK the coolant pump for damage. INSTALL a new coolant pump as necessary. REFER to: Coolant Pump (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation). • CHECK the engine, cylinder head, coolant manifold, cylinder block and cylinder head gasket.
	• Air in system.	• BLEED the cooling system. REFER to: Cooling System Draining, Filling and Bleeding (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, General Procedures).
	• Coolant expansion tank cap.	• CARRY OUT the Coolant Expansion Tank Cap Pressure Test Component Test in this section.
	• Coolant expansion tank.	• CHECK the coolant expansion tank for damage. INSTALL a new coolant expansion tank as necessary.
	• Coolant level/condition.	• CHECK the coolant level/condition. REFILL the cooling system. REFER to: Cooling System Draining, Filling and Bleeding (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, General Procedures).
	• Coolant concentration.	• REFER to: Specifications (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Specifications).
	• Radiator grille.	• CHECK the radiator grille for air restrictions/damage. REPAIR as necessary.
	• Coolant pump.	• CHECK the coolant pump for leaks. INSTALL a new coolant pump as necessary.

		as necessary. REFER to: Coolant Pump (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
	• Thermostat.	• CARRY OUT the Thermostat Test Component Test in this section. INSTALL a new thermostat as necessary. REFER to: Thermostat (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
	• Accessory drive belt.	• CHECK the accessory drive belt for correct operation. REFER to: Accessory Drive (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Diagnosis and Testing).
	• Power steering pump belt.	• CHECK the power steering pump belt for correct operation. REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
	• Cooling fan and cooling fan clutch.	• CHECK operation of the cooling fan and cooling fan clutch. INSTALL a new cooling fan and cooling fan clutch as necessary. REFER to: Cooling Fan (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
	• Engine.	• CHECK the engine, cylinder head, coolant manifold, cylinder block and cylinder head gasket.
• The engine does not reach normal operating temperature.	• Thermostat.	• CARRY OUT the Thermostat Test Component Test in this section. INSTALL a new thermostat as necessary. REFER to: Thermostat (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
	• ECT sensor.	• CHECK the ECT sensor for correct operation. REFER to the Ford diagnostic equipment.
	• Circuit(s).	• CHECK the circuit(s). REFER to the Ford diagnostic equipment.

Component Tests

Pressure Test

WARNING: When releasing the system pressure, cover the coolant expansion tank cap with a thick cloth to prevent the possibility of coolant scalding. Failure to follow this instruction may result in personal injury.

1. Remove the coolant expansion tank cap.
2. Install the special tools to the coolant expansion tank.
3. Pressurize the system to the coolant expansion tank cap release pressure.
   REFER to: Specifications (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Specifications).
4. Observe the cooling system pressure tester gauge reading for approximately two minutes. The pressure should not drop during this time. If the system holds pressure, proceed to step 7. If the system does not hold pressure, check it thoroughly for coolant leaks.
5. If a coolant leak cannot be found, check the EGR cooler (this may leak internally), engine oil cooler (this may produce oil in the coolant expansion tank) and the engine for cylinder leakage. Drain the cooling system, repair any coolant leaks found and fill and bleed the cooling system as necessary.
   REFER to: Cooling System Draining, Filling and Bleeding (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, General Procedures).
6. Recheck the system by repeating steps 3 and 4 at least twice.

Radiator Leak Test, Removed From Vehicle

NOTICE: Radiator internal pressure must not exceed 130 kpa (20 psi) or damage may result.

Clean the radiator thoroughly before leak testing it, to prevent contamination of the water in the test tank. Leak test the radiator in clean water with 138 kpa (20 psi) air pressure. Check it thoroughly for air leaks. INSTALL a new radiator if necessary.
REFER to: Radiator (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

Coolant Expansion Tank Cap Pressure Test

WARNING: When releasing the system pressure, cover the coolant expansion tank cap with a thick cloth to prevent the possibility of coolant scalding. Failure to follow this instruction may result in personal injury.

1. Remove the coolant expansion tank cap.

2. Use water to clean the area of the rubber seal and pressure relief valve. Install the pressure tester and adapter and immerse the coolant expansion tank cap in water .

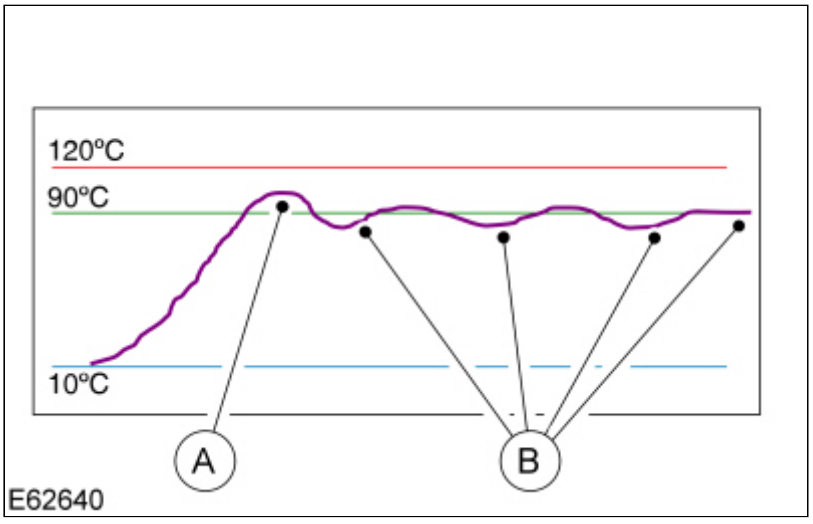
NOTE: *If the plunger of the pump is depressed too quickly, an erroneous pressure reading will result.*

3. Slowly depress the plunger of the pressure test pump until the pressure test gauge reading stops increasing, and note the highest pressure reading obtained.

4. Release pressure by turning the pressure relief screw counterclockwise. Tighten the pressure relief screw and repeat step 3 at least twice to make sure that the pressure test gauge reading is repeatable and within acceptable gauge reading limits of the coolant expansion tank cap.

5. If the pressure test gauge readings are not within the acceptable gauge reading limits, INSTALL a new coolant expansion tank cap.

Thermostat Test



1. Connect the Ford Diagnostic Equipment to the data link connector (DLC).

2. Using the datalogger function, SELECT the following sensors (as applicable to the application):

- IAT - intake air temperature (IAT) sensor
- LOAD - engine load
- VSS - vehicle speed sensor (VSS)
- RPM - engine speed
- DSRPM - desired engine speed

The IAT sensor output is useful if the engine being tested is cold or after an over-night cold soak. The ECT sensor and the IAT sensor should either indicate the same value or be within 1 to 2 degrees Celsius of each other.

The ECT sensor output is important to display as it indicates the engine warm-up and opening temperature for the thermostat. It will initially indicate a slightly higher reading just before the thermostat opens and then drops back before settling to a near flat line output (see graphic below).

Item	Part Number	Description
A	—	Thermostat opens

B	—	Thermostat settles into a cyclic open and closure pattern

NOTICE: If the ECT sensor output reaches the 120ºC default line under normal cooling system pressure, internal damage may be caused to the engine and a diagnostic trouble code (DTC) will be set in the PCM. The test should be stopped and the cause located and corrected. If the cooling system does not pressurize, the coolant will boil at 100ºC which may also damage the engine. CARRY OUT the Coolant Expansion Tank Cap Pressure Test Component Test in this section.

If the Ford diagnostic equipment only allows the ECT sensor to be displayed in volts, refer to the following table for corresponding Celsius values:

Volts	ºCelsius
1.33	60
1.02	70
0.78	80
0.60	90
0.46	100
0.35	110
0.27	120

The LOAD display is used for reference as it is necessary to maintain a stable load line during the test. It is necessary to carry out the test under normal light throttle cruise driving conditions and average loads, typically 40% to 70% of the load value.

The VSS output is used for reference but can help to identify misfires and sensors which fail during the warm-up cycle.

The RPM display indicates the engine speed and can be compared with the DSRPM.

The DSRPM is the desired or calculated idle speed which the PCM commands the engine to reach. If the thermostat opens too early (before the correct opening temperature has been reached), the engine will not reach this value.

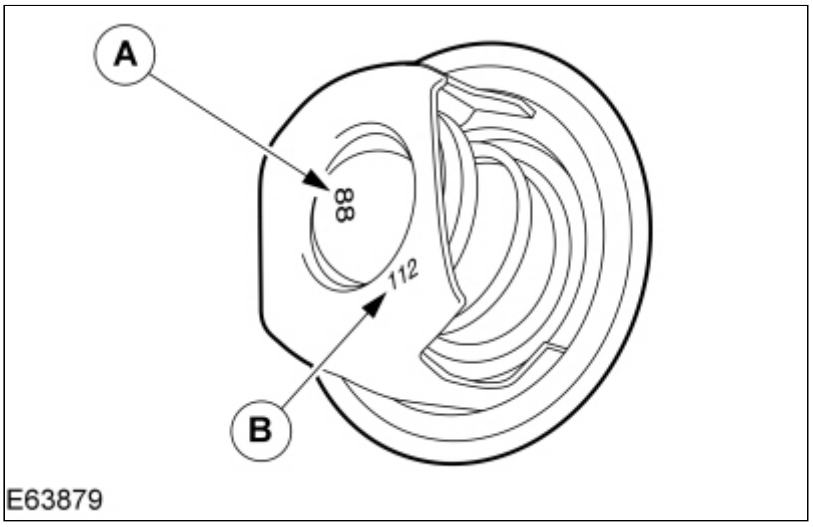
When using the Ford diagnostic equipment in data logger mode, the signals recorded should remain within the DEFAULT values set by the Ford diagnostic equipment.

3. **WARNING: Make sure that the Ford diagnostic equipment is placed in the vehicle so that it does not interfere with the safe operation of the vehicle. Do not place the Ford diagnostic equipment in the deployment path of any air bag. Failure to follow these instructions may result in personal injury.**

   NOTE: *The road test is best carried out with the aid of another technician in the vehicle to enable the vehicle to be driven safely while the sensor outputs are monitored within datalogger. If there is only one technician available, the Ford diagnostic equipment can be set up (using the record/capture mode camera icon) before leaving the workshop to record a 16 km (10 mile) test.*

   NOTE: *The results from the test are more conclusive if the engine is cold when the test is started.*

   Carry out a road test.



4. Drive the vehicle at a constant throttle opening and set speed until the ECT value settles into a shallow rise and fall signal, close to a straight line. This indicates that the thermostat is functioning correctly.

NOTE: *Some thermostats indicate the temperature(s) in Celsius and Fahrenheit.*

The graphic below shows the location and an example of the opening temperature (88ºC) and fully open temperature (102ºC) of a thermostat.

The graphic below shows an alternative method used to show the opening temperature (88ºC) and fully open temperature (112ºC) of a thermostat.

Item	Part Number	Description
A	—	Opening temperature
B	—	Fully open temperature

NOTE: *Generally, most thermostats maintain a coolant temperature between 88ºC (190ºF) and 92ºC (198ºF) although dual stage electric thermostats may increase the coolant temperature up to 100ºC (212ºF) under light engine load conditions.*

The engine should start cleanly and the ECT value will rise quite quickly with smooth progression. If the ECT signal appears unstable or erratic, the ECT sensor, electrical connector and wiring harness to the PCM need to be visually inspected for damage, chafing or water ingress.

The temperature should rise to approximately 90ºC for a thermostat that has an 88ºC value. The signal value will then fall as cooler coolant enters the engine.

If the ECT value fails to maintain a constant value and falls back to lower figures, typically between 60ºC (140ºF) and 70ºC (150ºF), the thermostat and its sealing function within the thermostat housing must be checked.

5. INSTALL a new thermostat.
   REFER to: Thermostat (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

6. Carry out another road test from step 1 using the same criteria to confirm that the concern has been rectified.

7. Using the Ford diagnostic equipment, clear the PCM keep alive memory (KAM) or electrically erasable programmable read only memory (EEPROM) so that new drive values can be learnt.

Fan Clutch Test

1. Turn the engine OFF and wait until the fan comes to a complete stop.
2. Spin the fan blade by hand. A light resistance should be felt. If there is no resistance or very high resistance, the minimum and maximum fan speeds must be checked. Carry out the following:

Fan Clutch Test — Minimum Speed Requirement

1. Use a suitable marker to mark the coolant pump or fan pulley and one of the fan blades.
2. Make sure the A/C is OFF, if equipped.
3. Start the engine and run it at approximately 2,000 rpm for 5 minutes or until there is a noticeable reduction in fan noise to allow the fan clutch to go into disengaged mode.
4. Aim a laser photo tachometer at the coolant pump or fan pulley. Run the engine to achieve 3,000 rpm at the coolant pump or fan pulley.
5. With the coolant pump or fan pulley at 3,000 rpm, aim the laser photo tachometer at the fan blade. Monitor and record fan speed.
6. The fan blade speed must be less than the specified rpm at 3,000 rpm coolant pump or fan pulley rpm.
7. Turn the engine off.
8. If the fan blade speed was greater than specified, install a new fan clutch.
   REFER to: Cooling Fan (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

Fan Clutch Test — Maximum Speed Requirement

1. Use a suitable marker to mark the coolant pump or fan pulley and one of the fan blades.
2. Block off areas on each side of the radiator in the engine compartment, the front of the radiator grille and the bumper. Close the hood. This will raise the temperature of the air striking the fan clutch and should cause the fan blade to operate at maximum speed.
3. Place the climate control function selector switch in the MAX A/C position and the blower motor switch in the HI position, if equipped.
4. **NOTE:** *Do not open the hood to check the coolant pump or fan pulley temperature. This will lower the temperature of the air reaching the fan clutch and void the test. Aim the infrared thermometer through the wheel well or from under the vehicle.*

   Start the engine and run it at approximately 2,000 rpm until normal operating temperature has been achieved. Using an infrared thermometer, monitor the coolant pump or fan pulley. Run the engine until the coolant pump or fan pulley is at least 96°C (205°F).
5. **NOTE:** *Do not open the hood to check the coolant pump or fan pulley or fan blade speed. This will lower the temperature of the air reaching the fan clutch and void the test. Aim the laser photo tachometer through the wheel well or from under the vehicle.*

   Aim a laser photo tachometer at the coolant pump or fan pulley. Run the engine to achieve 3,000 rpm at the coolant pump or fan pulley.
6. With the coolant pump or fan pulley at 3,000 rpm, aim the laser photo tachometer at the fan blade. Monitor and record fan blade speed.
7. The fan blade speed must be greater than the specified rpm at 3,000 rpm coolant pump or fan pulley rpm.
8. Open the hood and allow the engine to idle momentarily to lower engine temperature. Turn the engine off and remove the blocks from the radiator, grille and bumper.
9. If the fan blade speed is less than specified, install a new fan clutch.
   REFER to: Cooling Fan (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

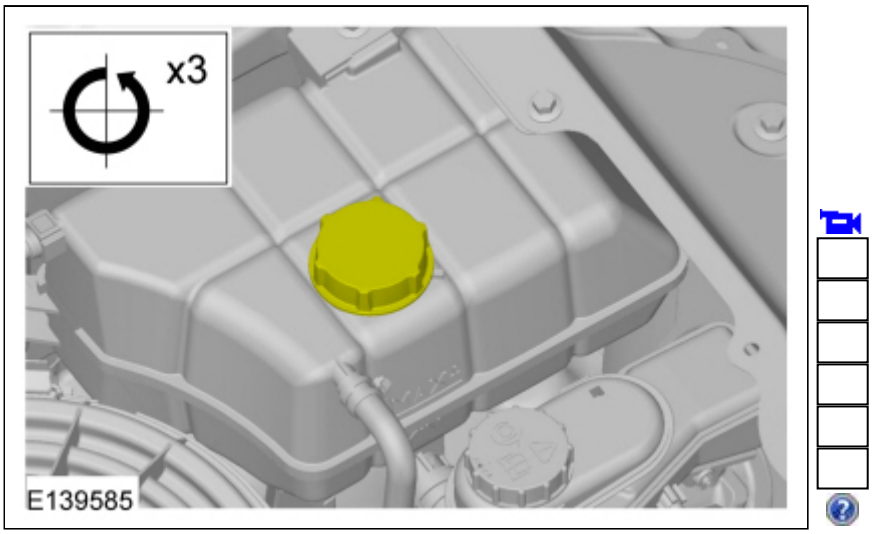
Cooling System Draining, Filling and Bleeding

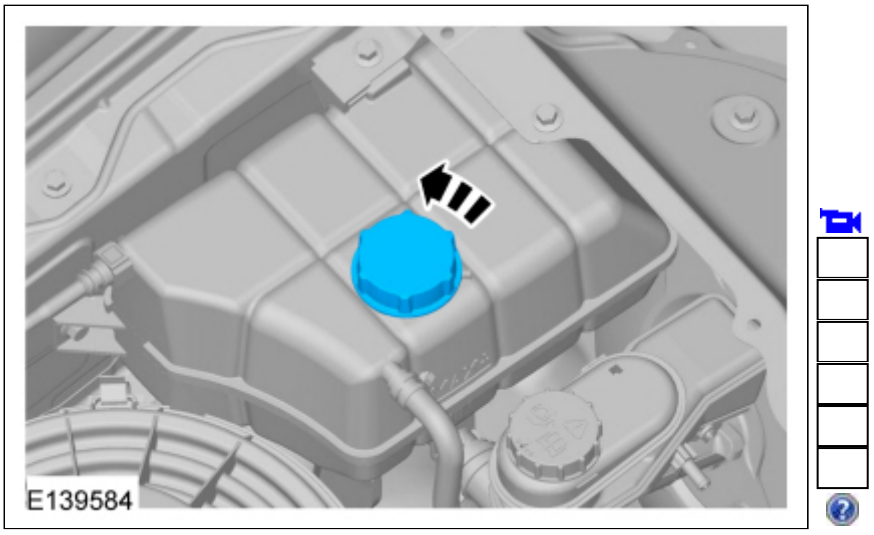
Special Tool(s) / General Equipment

Cooling System Vacuum Tester and Refiller



Materials

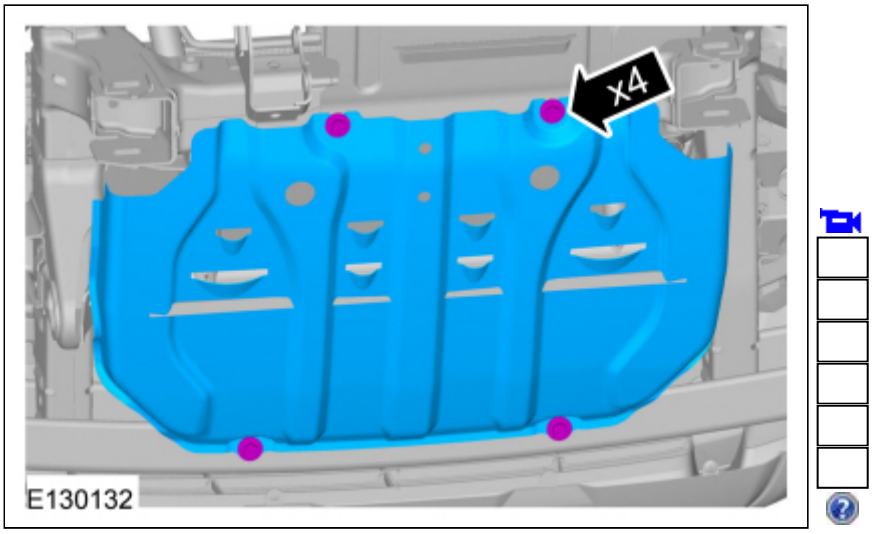
Name	Specification
Antifreeze	WSS-M97B44-D2



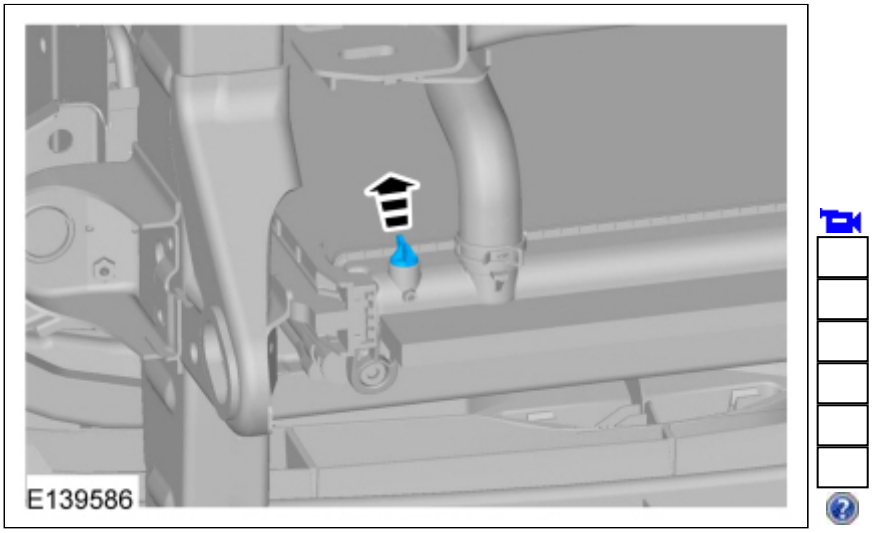
Draining

WARNING: When releasing the cooling system pressure, cover the coolant expansion tank cap with a thick cloth.

1. Release the cooling system pressure by slowly turning the coolant expansion tank cap between 2 and 3 turns.



2.

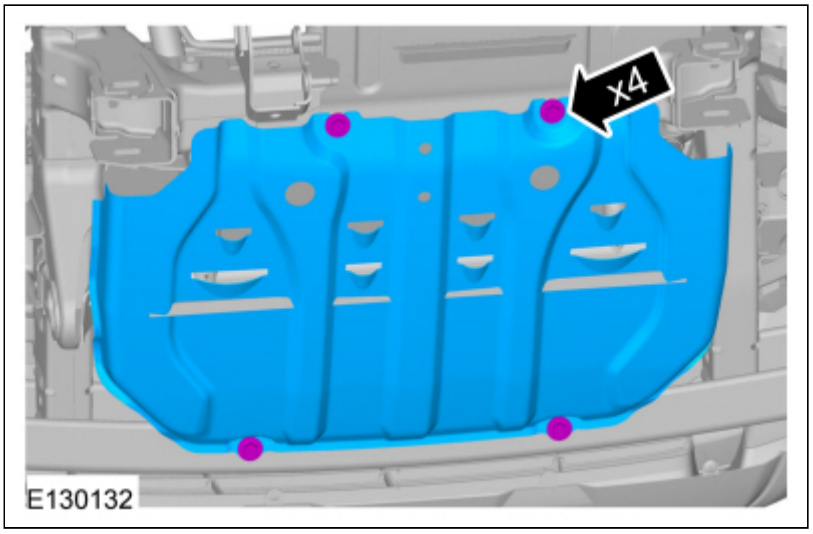


3. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

4.

5. Remove the radiator drain plug and drain the coolant.

6. Install the radiator drain plug.
7. Lower the vehicle.



Filling

1. Refill the coolant to the expansion tank to maximum line (+15mm).
   Use the General Equipment: Cooling System Vacuum Tester and Refiller
   Material: Antifreeze (WSS-M97B44-D2)

Bleeding

NOTICE: The fluid level must remain between the MAX and MIN marks.

1. Run the engine for 5 minutes at idle rpm.
2. Install the coolant expansion tank cap.
3. Run the engine speed to 2500 RPM and maintain it for approximately 15 minutes.
4. Run the engine for 5minutes at idle rpm.
5. Switch the engine off.
6. Check the cooling system for leaks.
7. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
8. *Torque*: 30 Nm

9. Lower the vehicle.
10. Allow the engine to cool and maintain close to room temperature.
11. Fill the coolant to the expansion tank max fill line, if required.
    Use the General Equipment: Cooling System Vacuum Tester and Refiller
    Material: Antifreeze (WSS-M97B44-D2)

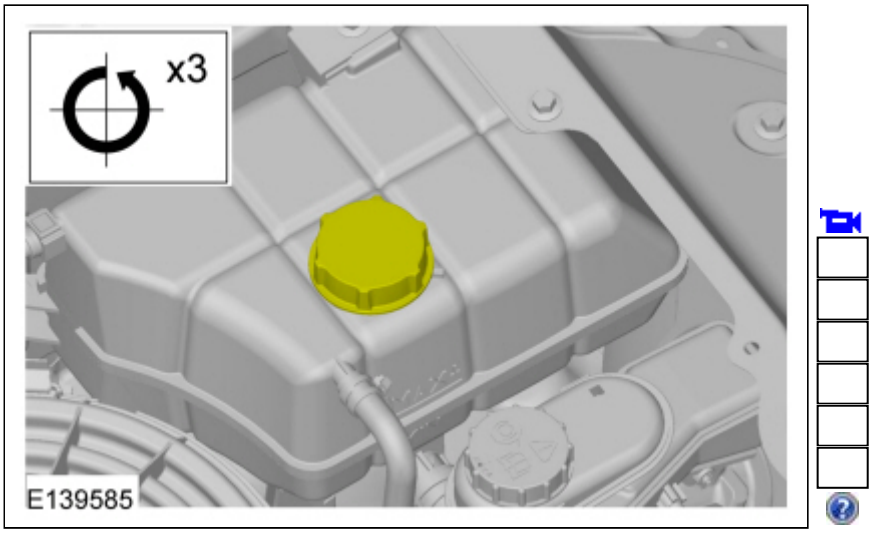
Cooling System Draining and Vacuum Filling

Special Tool(s) / General Equipment

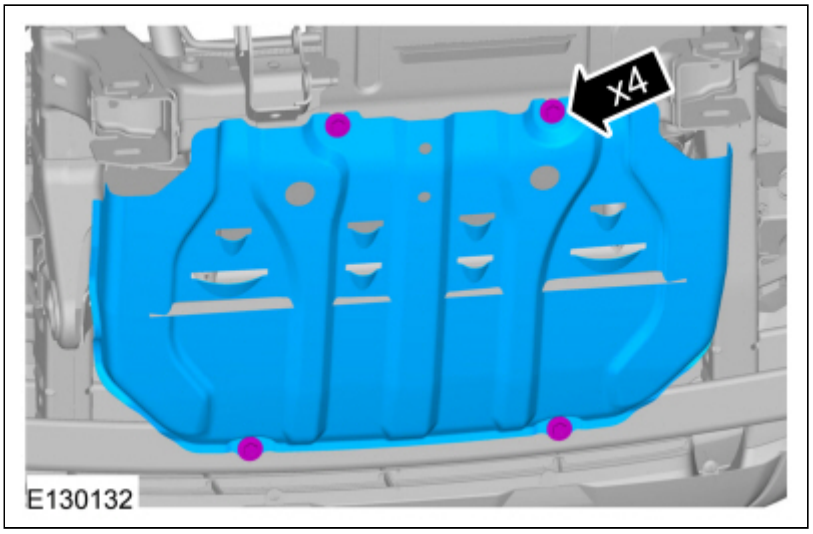
Fluid Container
Cooling System Vacuum Tester and Refiller

Materials



Name	Specification
Antifreeze	WSS-M97B44-D2

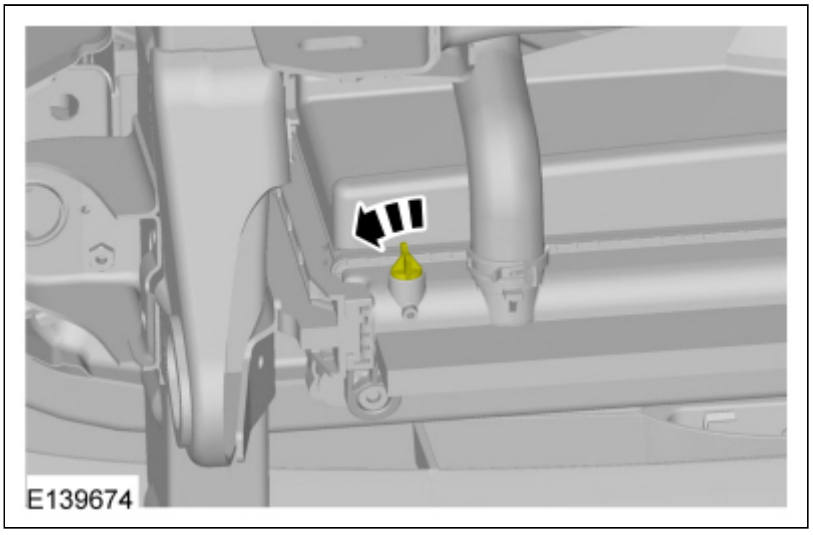
Draining



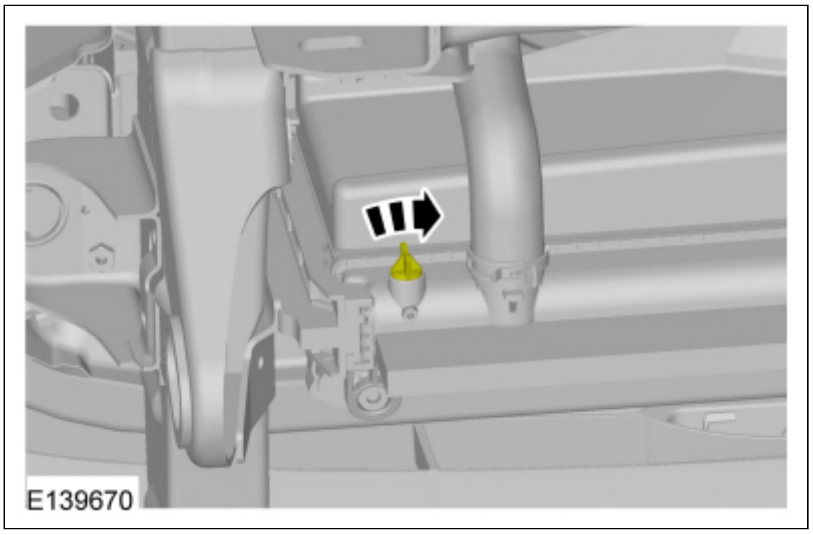
WARNING: When releasing the cooling system pressure, cover the coolant expansion tank cap with a thick cloth.

NOTE: *Always follow the manufacturer's instructions when handling the equipment.*

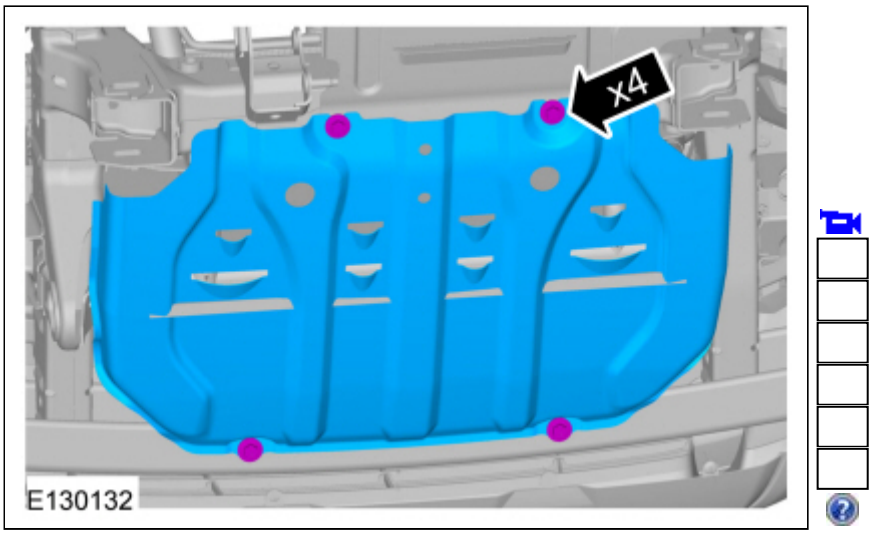
1. Refer to: Engine Cooling System Health and Safety Precautions (100-00 General Information, Description and Operation).
2. 
   Release the cooling system pressure by slowly turning the coolant expansion tank cap between 2 and 3 turns.



3. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
4.



5. 



WARNING: Be prepared to collect escaping fluid.

Connect a hose to drain the coolant. Open the radiator drain valve and drain the engine coolant in a suitable, clean container.
Use the General Equipment: Fluid Container
Loosen: 4 turn(s)

6. 

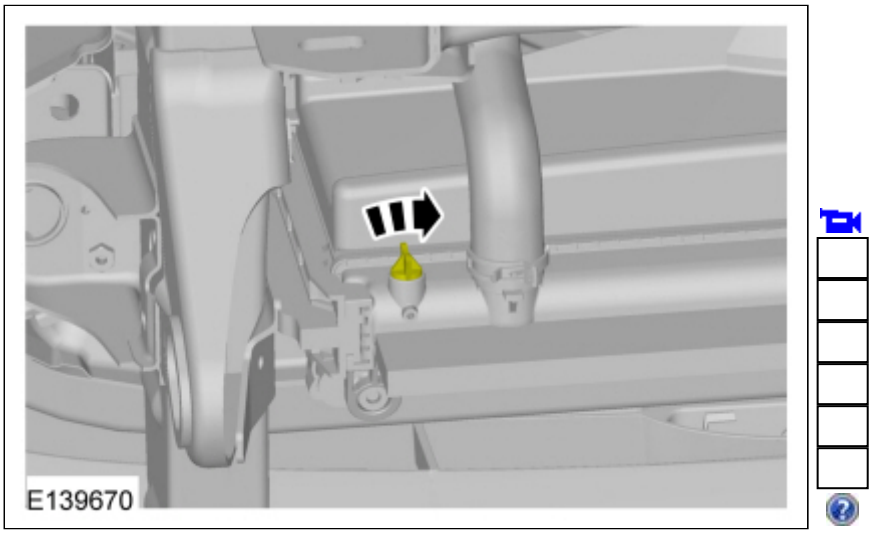
7. *Torque*: 30 Nm

Evacuating and Filling

NOTICE: The cooling system is filled with Motorcraft® Orange Antifreeze/Coolant. Do not mix coolant types. Mixing coolant types degrades the corrosion protection of the coolant. Failure to follow these instructions may damage the engine or cooling system.

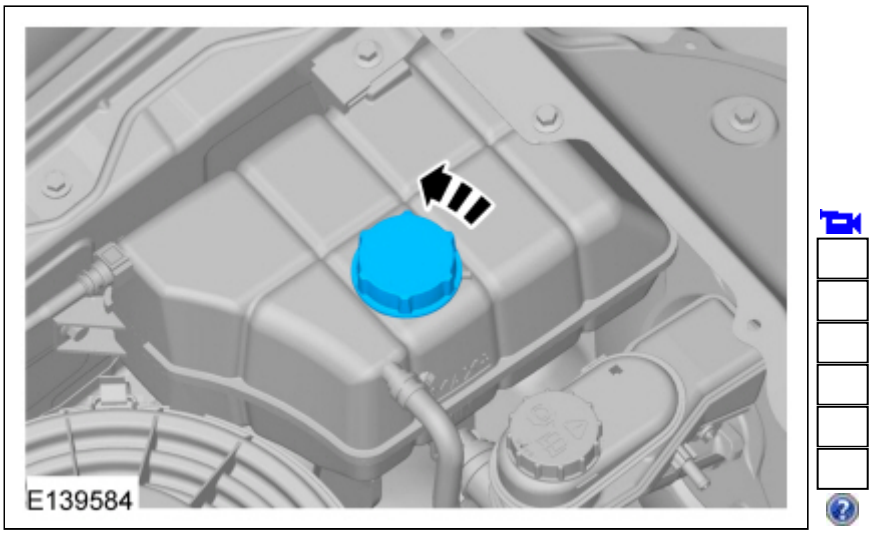
NOTICE: Engine coolant provides boil protection, corrosion protection, freeze protection, and cooling efficiency to the engine and cooling components. In order to obtain these protections, maintain the engine coolant at the correct concentration and fluid level in the degas bottle.

NOTE: *Add Motorcraft® Orange Antifreeze/Coolant or equivalent.*



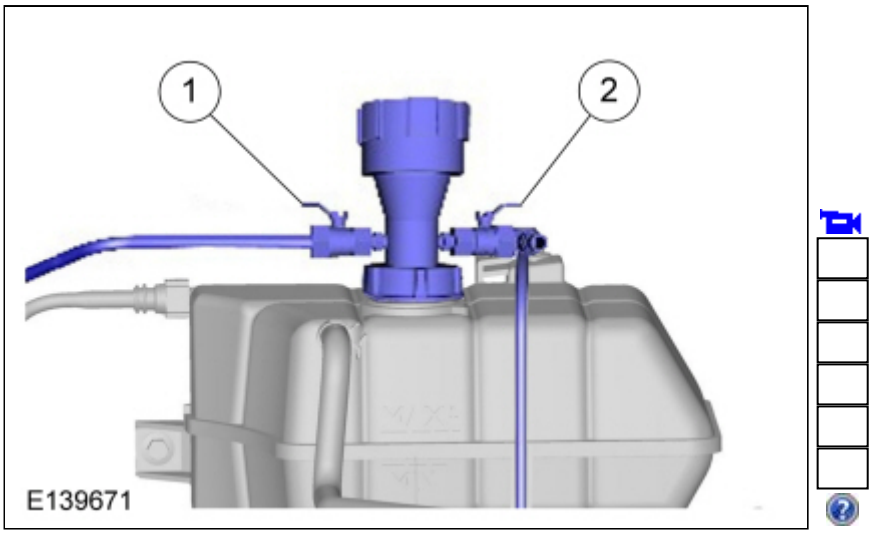
NOTE: *Do not add or mix with any other type of engine coolant. Mixing coolants may degrade the coolant's corrosion protection.*

NOTE: *Do not add alcohol, methanol, or brine, or any engine coolants mixed with alcohol or methanol antifreeze. These can cause engine damage from overheating or freezing.*

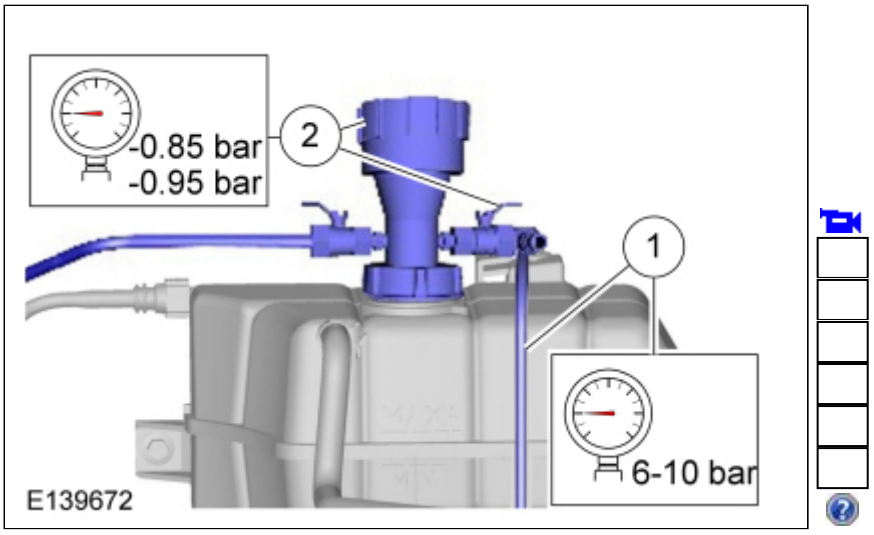


NOTE: *Ford Motor Company does NOT recommend the use of recycled engine coolant in vehicles originally equipped with Motorcraft® Orange Antifreeze/Coolant since a Ford-approved recycling process is not yet available.*

- If the cooling system was completely drained, fill the fluid container with the full cooling system fill capacity plus 0.5L of additional coolant.
  Material: Antifreeze (WSS-M97B44-D2)
- If the cooling system was partially drained, fill the fluid container with the removed and spilled amount of coolant plus 1.0L of additional coolant. When in doubt always use the full cooling system fill capacity plus 0.5L of additional coolant.
  Material: Antifreeze (WSS-M97B44-D2)

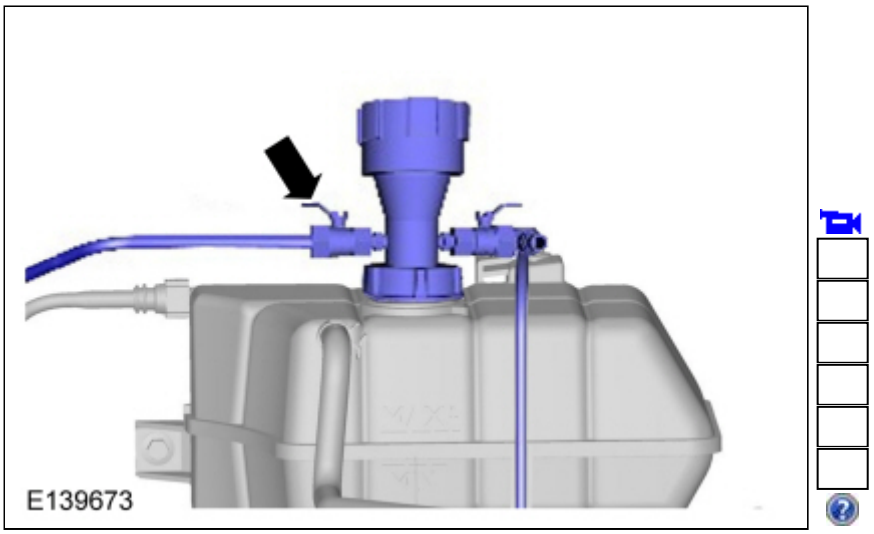


2. Close the radiator drain plug.

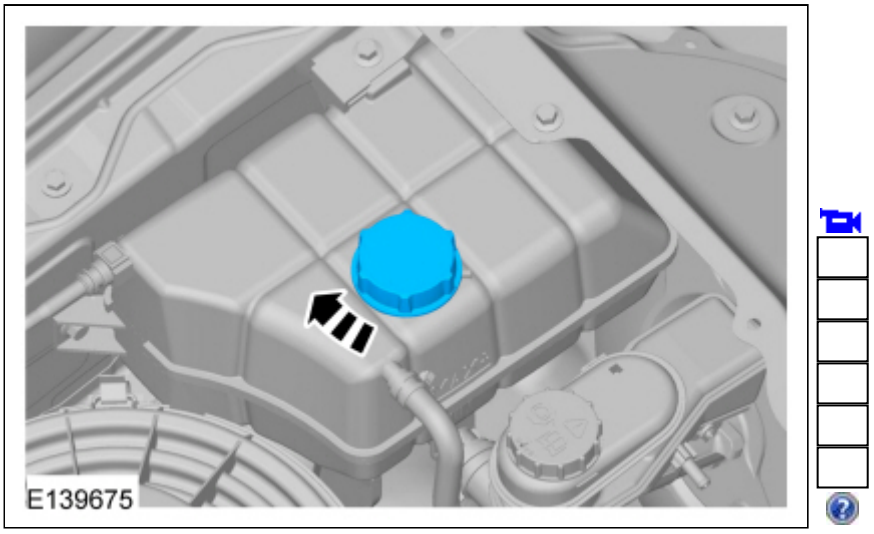


3. Remove the coolant expansion tank cap.

1. Close the valve, install the coolant hose and place it into the fluid container.
   Use the General Equipment: Cooling System Vacuum Tester and Refiller
2. Close the valve and connect the compressed air hose.



1. Use the General Equipment: Cooling System Vacuum Tester and Refiller
2. Open the valve until the specificied vacuum is achieved.



- Open the valve until the coolant reservoir fluid level is at the MAX mark.

Use the General Equipment: Cooling System Vacuum Tester and Refiller

- If no coolant is visible in the coolant expansion tank, add 2.0L of coolant to the fluid container and repeat the evacuating and filling procedure.
  Material: Antifreeze (WSS-M97B44-D2)

7. Install the pressure relief cap until it contacts the hard stop.

Fuel Charging and Controls - Component Location

Item	Part Number	Description
1	—	Fuel rail
2	—	Fuel injector

Item	Part Number	Description
1	—	Throttle body

Throttle Body

The throttle plate position is controlled by a signal from the powertrain control module (PCM) which receives an input from the accelerator pedal position (APP) sensor. The system is fully electronic and does not use any cables. The signal from the PCM is used to control a DC motor within the throttle body which is connected to the throttle plate through gears. The throttle body also gives inputs back to the PCM. This information allows the PCM to compensate for factors such as carbon build up within the throttle body and throttle body wear. The throttle body also provides information to the PCM to enable the flagging of a diagnostic trouble code (DTC).

Ford approved diagnostic tool

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Fuel leak(s) • Vacuum line(s) • Gasket(s) • Seal(s) • Fuel injector(s) • Fuel rail • Fuel supply line	• Fuse(s) • Wiring harness • Electrical connector(s) • Fuel injector(s) • Powertrain control module (PCM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.
5. For drivabilty symptoms without DTCs, Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.. For PCM DTCs,
   REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) .

Symptom Chart

Symptom	Possible Sources	Action
• Engine does not crank	• Passive anti-theft system (PATS).	• CHECK the PATS LED extinguishes within 3 seconds when the ignition is turned on. REFER to: Passive Anti-Theft System (PATS) (419-01B Passive Anti-Theft System (PATS), Diagnosis and Testing).
	• Starting system.	• REFER to: Starting System (303-06A Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4, Diagnosis and Testing).
	• Ignition switch.	• REFER to the Wiring Diagrams.
	• Powertrain control module (PCM).	• Carry out a full engine diagnosis using the guided diagnostic menu in the Ford approved diagnostic tool.
