• Engine cranks but does not start	• Inertia fuel shutoff (IFS) switch.	• RESET the IFS switch.
	• Low fuel system pressure.	• Check the fuel system pressure.
	• Fuel lines damaged or blocked.	• INSPECT the fuel lines. INSTALL new components as necessary. TEST the system for normal operation.
	• Fuel filter blocked.	• INSTALL a new fuel filter. REFER to: Fuel Filter (310-01A Fuel Tank and Lines - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
	• Fuel pump and sender unit.	• REFER to: Fuel Pump and Sender Unit (310-01A Fuel Tank and Lines - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
	• Crankshaft position (CKP) sensor.	• Carry out a full engine diagnosis using the guided diagnostic menu in the Ford approved diagnostic tool.
	• Camshaft position (CMP) sensor.	• Carry out a full engine diagnosis using the guided diagnostic menu in the Ford approved diagnostic tool.
	• PCM.	• Carry out a full engine diagnosis using the guided diagnostic menu in the Ford approved diagnostic tool.
	• Fuel rail pressure (FRP) sensor.	• Carry out a full engine diagnosis using the guided diagnostic menu in the Ford approved diagnostic tool.
	• Fuel injectors.	• INSPECT the fuel injectors. CLEAN the fuel injectors or INSTALL a new set of fuel injectors as required only after the checks have been carried out.
	• Incorrect valve timing.	• CHECK the valve timing.
	• Low cylinder compression.	• TEST the cylinder compression.
• Poor starting	• Low fuel system pressure.	• Check the fuel system pressure.
	• Fuel system leak.	• CHECK the system for fuel leak(s). REPAIR the system as necessary.
	• Fuel system restriction.	• INSPECT the fuel system. INSTALL new components as necessary. TEST the system for normal operation.
	• Fuel filter blocked.	• INSTALL a new fuel filter. REFER to: Fuel Filter (310-01A Fuel Tank and Lines - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
	• Air cleaner element blocked.	• INSTALL a new air cleaner element.
	• Incorrect engine oil.	• INSTALL a new engine oil filter and engine oil.
	• Incorrect power	• DRAIN and REFILL the power steering system with the correct fluid. REFER to:

	steering fluid.	(211-00 Steering System - General Information) Power Steering System Bleeding (General Procedures), Power Steering System Flushing (General Procedures), Power Steering System Filling (General Procedures).
	• CKP sensor.	• Carry out a full engine diagnosis using the guided diagnostic menu in the Ford approved diagnostic tool.
	• Engine coolant temperature (ECT) sensor.	• Carry out a full engine diagnosis using the guided diagnostic menu in the Ford approved diagnostic tool.
	• Fuel injector(s).	• INSPECT the fuel injectors. CLEAN the fuel injectors or INSTALL a new set of fuel injectors as required only after the checks have been carried out.
	• FRP sensor.	• Carry out a full engine diagnosis using the guided diagnostic menu in the Ford approved diagnostic tool.
	• Low cylinder compression.	• TEST the engine cylinder compression.
• Engine starts but immediately stops	• Air cleaner element blocked.	• INSTALL a new air cleaner element.
	• CKP sensor.	• Carry out a full engine diagnosis using the guided diagnostic menu in the Ford approved diagnostic tool.
	• CMP sensor.	• Carry out a full engine diagnosis using the guided diagnostic menu in the Ford approved diagnostic tool.
	• PCM.	• Carry out a full engine diagnosis using the guided diagnostic menu in the Ford approved diagnostic tool.
	• Low fuel system pressure.	• Check the fuel system pressure.
	• Fuel system restriction.	• INSPECT the fuel system. INSTALL new components as necessary. TEST the system for normal operation.
	• Fuel filter blocked.	• INSTALL a new fuel filter. REFER to: Fuel Filter (310-01A Fuel Tank and Lines - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
• Poor idling	• Air cleaner element blocked.	• INSTALL a new air cleaner element.
	• Incorrect or contaminated fuel.	• CHECK for signs of contamination such as strange odors from the fuel tank. • If contaminated fuel is found, DRAIN the complete fuel system. FLUSH the fuel system through with clean gasoline. INSTALL a new fuel filter. REFER to: Fuel Filter (310-01A Fuel Tank and Lines - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). • INSPECT the fuel injectors. CLEAN the fuel injectors or INSTALL a new set of

		fuel injectors as required only after the checks have been carried out. • INSTALL a new fuel rail. REFER to: Fuel Rail (303-04A Fuel Charging and Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
	• Low fuel system pressure.	• Check the fuel system pressure.

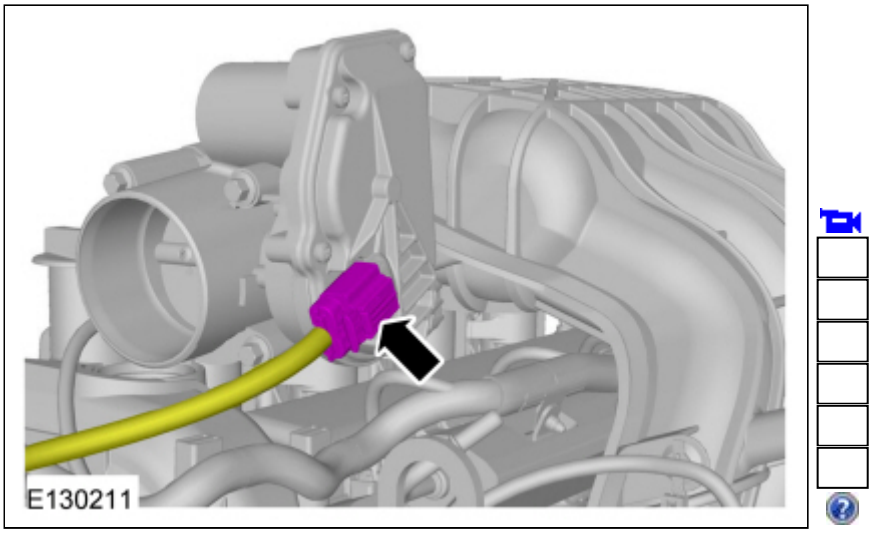
Throttle Body

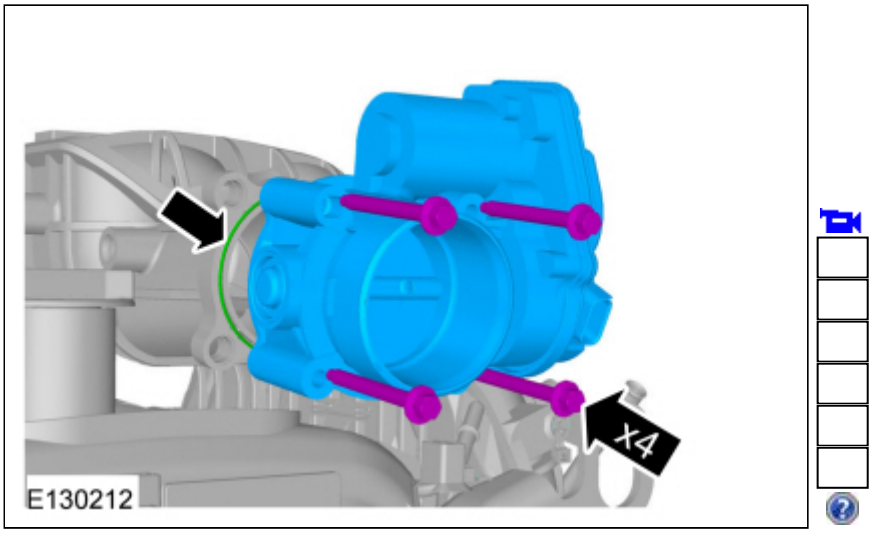
Base Part Number: 9F991



Removal

NOTE: *Removal steps in this procedure may contain installation details.*

1. *Torque*:
   Stage 1: 5 Nm
   Stage 2: 11 Nm

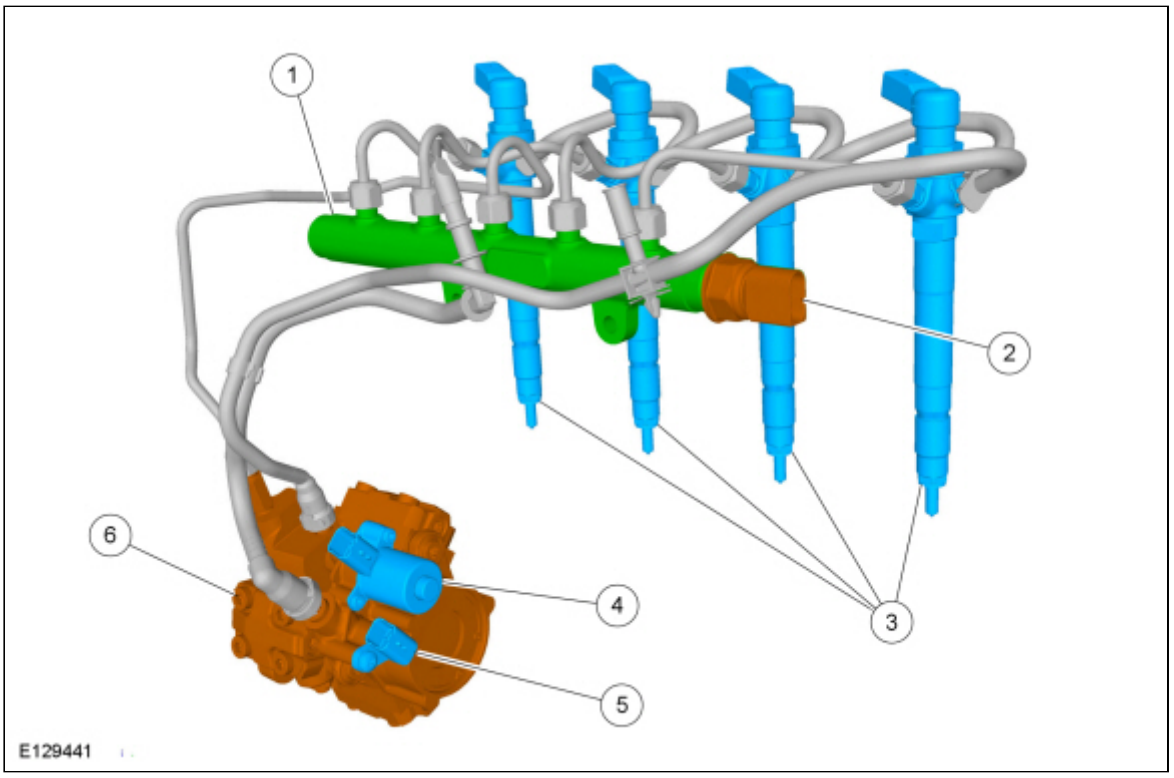


2.

3. **NOTE:** *The gasket is to be reused unless damaged.*

   Torque: 10 Nm

Installation



1. To install, reverse the removal procedure.
2. **NOTE:** *Make sure that the pedals remain in the rest position during the initialization.*

   Turn the ignition key to position II and wait for one minute to initialize the throttle body.
3. Turn the ignition key to the OFF position.

Fuel Charging and Controls

Overview

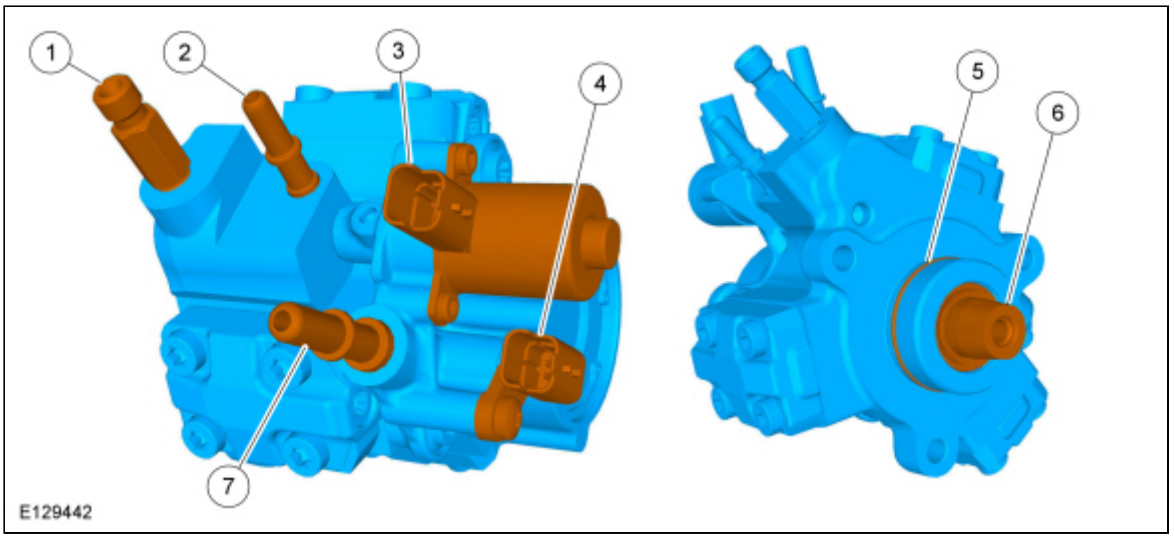
Item	Part Number	Description
1	—	Fuel rail
2	—	Fuel rail pressure (FRP) sensor
3	—	Fuel Injector(s)
4	—	Fuel metering valve
5	—	Fuel temperature sensor
6	—	Fuel pump

General

A continental common rail fuel injection system is used on the 2.2L Duratorq-TDCi (Puma) diesel engine.

Within the fuel pump there is an integral fuel transfer pump which draws the fuel from the fuel tank to the fuel pump.

A fuel metering valve is located in the supply port to the high-pressure chamber of the fuel pump. The fuel metering valve varies the quantity of fuel supplied to the fuel rail and fuel injector(s), in relation to the driving conditions.



The fuel is supplied at high-pressure to the fuel rail and to the fuel injectors ready for injection. Depending on engine operating conditions, the fuel injection pressure varies between 230 bar and 1800 bar.

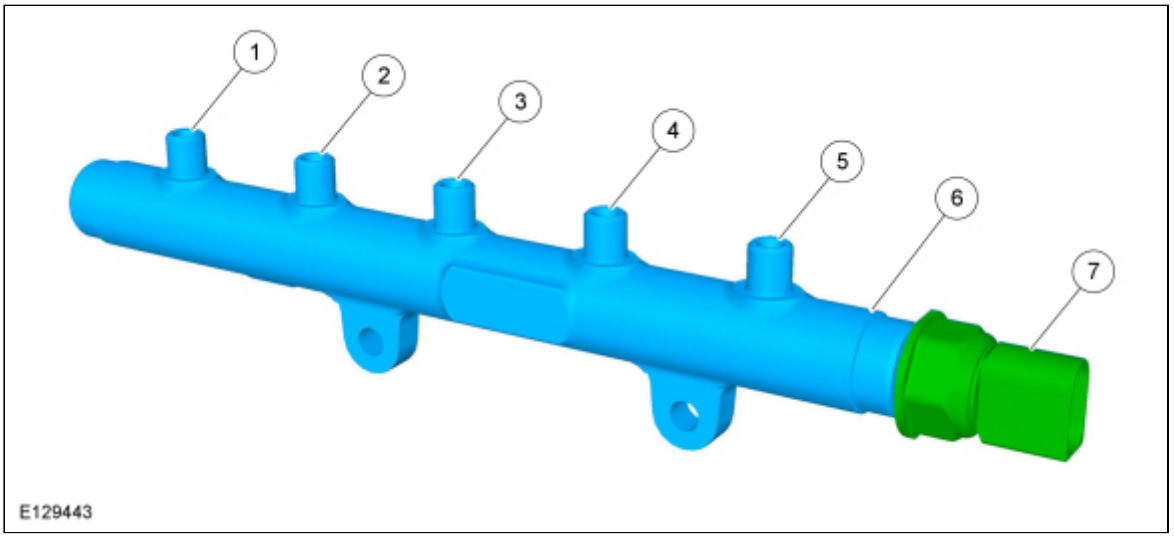
Fuel system pressure is measured using an FRP sensor located in the fuel rail. The FRP sensor converts the fuel system pressure into a voltage signal. This voltage signal acts as an input signal to the powertrain control module (PCM) for calculation of the fuel injection quantity.

The power train control module (PCM) calculates the time of fuel injection and the fuel injection quantity depending on various input variables. The specified quantity of fuel is injected into the respective combustion chamber through the solenoid actuated fuel injector(s). In doing so, a pre-injection and a main injection occur each time.

The excess fuel is returned to the fuel tank through the fuel return line.

Fuel pump

Item	Part Number	Description
1	—	Fuel pump high-pressure outlet union
2	—	Fuel pump fuel return union
3	—	Fuel metering valve
4	—	Fuel temperature sensor
5	—	Fuel pump O-ring seal
6	—	Fuel pump input drive
7	—	Fuel pump fuel supply union



The fuel pump is driven by the timing chain and is mounted on the LHS of the cylinder block.

The fuel pump has three pump elements, each offset from each other by 120 degrees.

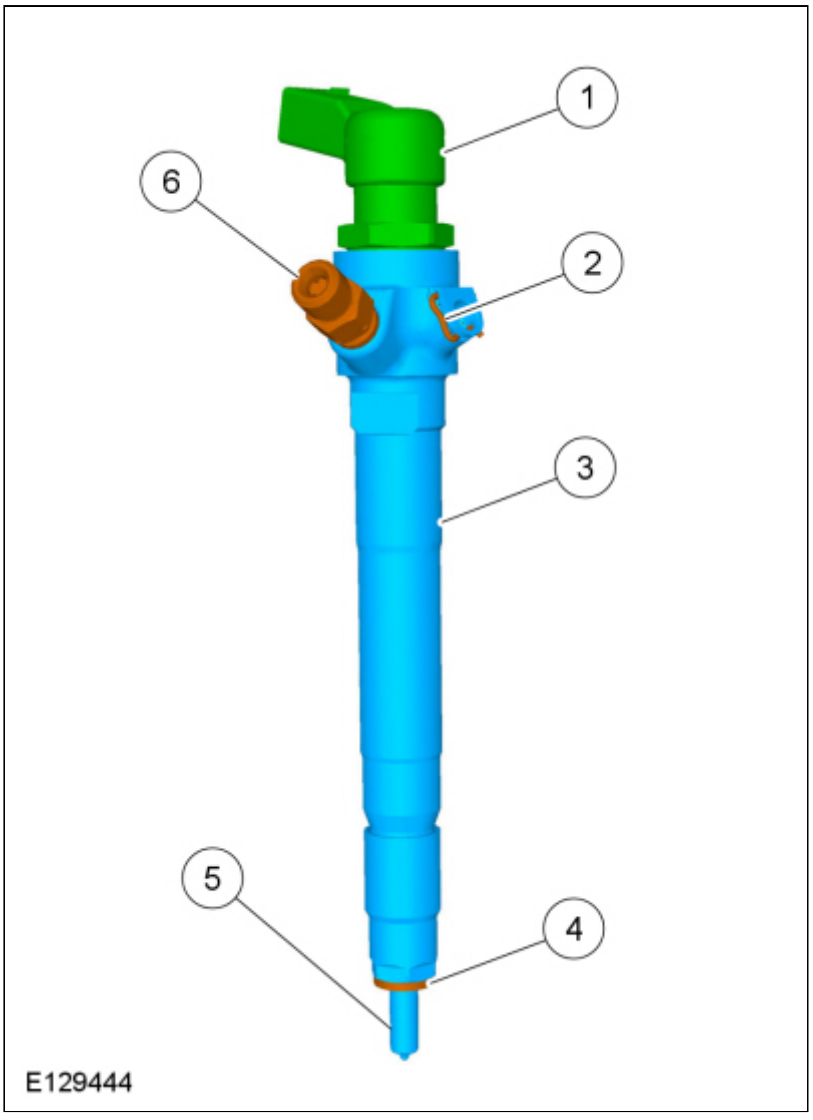
The fuel transfer pump is incorporated into the fuel pump and is located on the drive flange. The fuel transfer pump is a cycloid type pump.

The fuel metering valve is actuated by the PCM using pulse width modulation.

Fuel rail

Item	Part Number	Description

1	—	Fuel rail to fuel injector number 1 high-pressure fuel supply line union
2	—	Fuel rail to fuel injector number 2 high-pressure fuel supply line union
3	—	Fuel pump to fuel rail high-pressure fuel supply line union
4	—	Fuel rail to fuel injector number 3 high-pressure fuel supply line union
5	—	Fuel rail to fuel injector number 4 high-pressure fuel supply line union
6	—	Fuel rail
7	—	FRP sensor



NOTICE: The FRP sensor must not be detached or removed from the fuel rail.

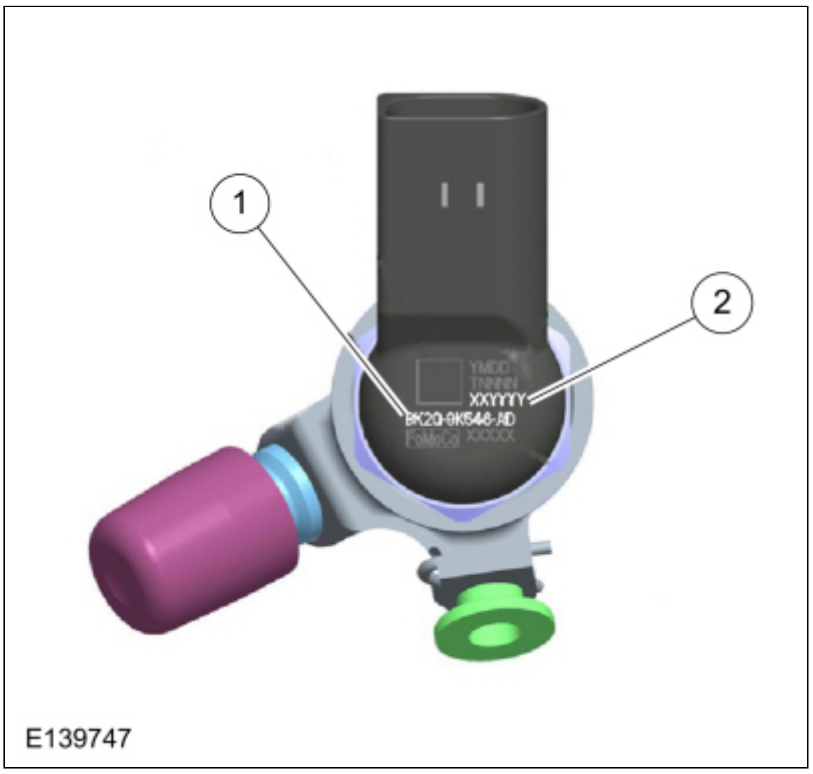
The fuel rail is made from forged steel and is retained by a support bracket located on the camshaft carrier .

The fuel is delivered by one high-pressure fuel supply line from the fuel pump to the fuel rail.

From the fuel rail, the fuel travels through high-pressure fuel supply line(s) to the fuel injector(s).

Fuel injectors

Item	Part Number	Description
1	—	Fuel injector electrical connector
2	—	Fuel injector fuel return line clip



3	—	Fuel injector
4	—	Fuel injector sealing washer
5	—	Fuel injector nozzle
6	—	Fuel injector high-pressure fuel supply line union

The fuel injector(s) are located centrally on the cylinder head upper section and are attached by means of retaining clamps.

The fuel injector(s) are sealed from the combustion chamber by means of a copper sealing washer located between the fuel injector and the cylinder head. A new sealing washer must always be installed when carrying out installation work.

The fuel injectors are controlled directly by the PCM.

The fuel return line(s) are attached to the top of the fuel injector and are connected in series.

Item	Part Number	Description
1	—	Ford part number
2	—	Injector correction factor number

When installing new fuel injectors, the injector correction factor from the new fuel injector(s) must be recorded and uploaded using the Worldwide Diagnostic System (WDS).

General Equipment

Ford diagnostic equipment
Pneumatic vacuum gun

Inspection and Verification

WARNING: Do not smoke or carry lighted tobacco of any type when working on or near any fuel related components. Highly flammable mixtures are always present and may ignite. Failure to follow these instructions may result in personal injury.

WARNING: This procedure involves fuel handling. Be prepared for fuel spillage at all times. Failure to follow this instruction may result in personal injury.

NOTICE: Diesel fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is therefore essential that absolute cleanliness is observed when working with these components. Always fit blanking plugs to any open orifices or lines.

NOTE: *As well as carrying out its normal function the glow plug indicator also acts as an engine check lamp which will flash continuously when a hard DTC is detected by the PCM. Soft DTCs are also stored by the PCM but will only be known if the system is checked for DTCs using the Ford diagnostic equipment.*

NOTE: *If a DTC is detected, all DTCs must be cleared after the concern is repaired. Failure to clear all DTCs may cause driveability concerns.*

NOTE: *If the fuel level in the fuel tank drops below approximately four liters, rough running will occur. This is to signal to the driver that the vehicle requires refuelling in order to prevent the fuel system from running dry.*

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
– Fuel leak(s) – Fuel filter – Air cleaner element – Vacuum line(s)/vacuum connectors – Hose(s)/hose connectors – Tube(s)/tube connectors – Contaminated fuel – Fuel supply line(s) – Fuel return line(s) – High-pressure fuel supply line(s) – Fuel injectors – Fuel rail – Fuel pump	– Fuse(s) – Relay(s) – Wiring harness – Electrical connector(s) – Fuel injectors – Fuel temperature sensor – Fuel rail pressure sensor – Fuel metering valve – Passive anti-theft system (PATS) LED operation – Glow plug indicator – PCM

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. **NOTE:** *A PCM calibration update should only be carried out if it is applicable to the symptoms exhibited by the vehicle.*

   If the cause is not visually evident, verify the symptom and refer to the Ford diagnostic equipment. Check for the availability of an applicable PCM calibration update. Continue using the Ford diagnostic equipment and retrieve the DTCs and refer to the DTC Index Chart.

DTC Index Chart

DTC	Description/Condition	Possible Source	Action
P1250	Fuel metering valve controllability failure (displayed in addition to DTC P0089)	Circuit(s), air ingress into the fuel lines, fuel metering valve	GO to Pinpoint Test B

5. If no DTCs related to the concern are retrieved, proceed to the Symptom Chart to continue diagnostics.

Symptom Chart

Symptom	Possible Sources	Action
• Engine does not crank and glow plug indicator is flashing	• DTC detected.	• REFER to the Ford diagnostic equipment.
• Engine does not crank	• Passive anti-theft system (PATS).	• CHECK the PATS LED extinguishes within 3 seconds when the ignition is turned on. Pinpoint Tests

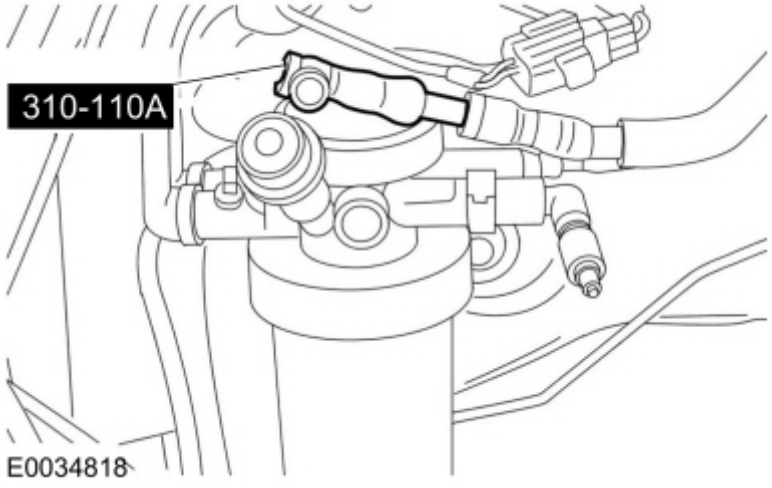
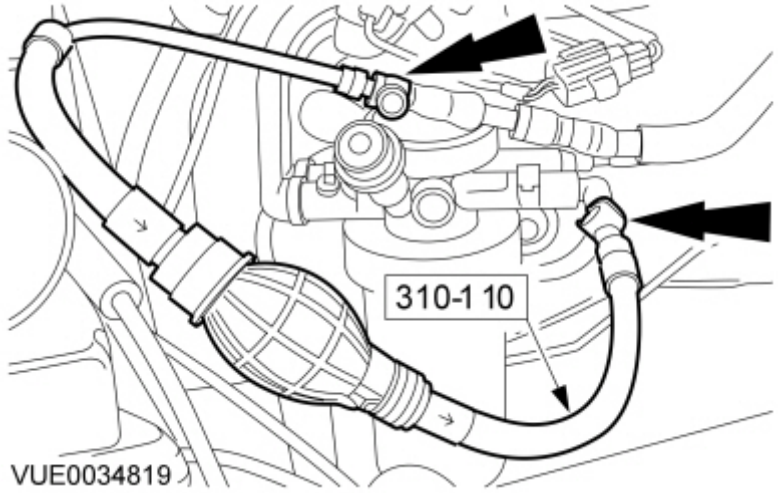
PINPOINT TEST A : FUEL PUMP FUEL SUPPLY TEST



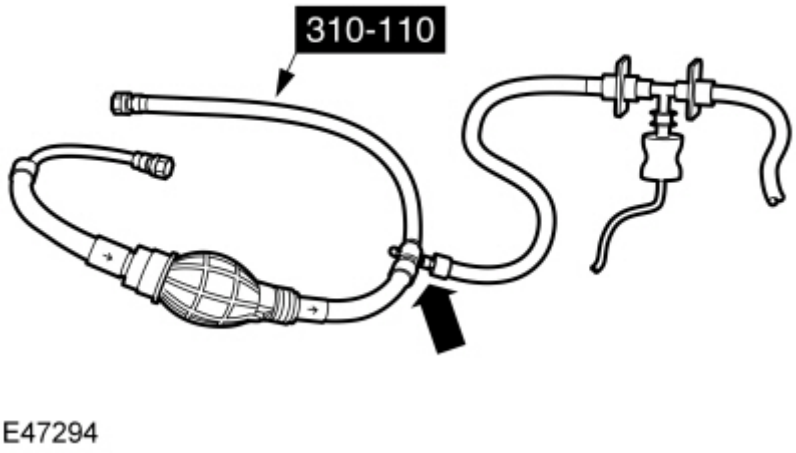
A1 CHECK THE FUEL PUMP FUEL SUPPLY PRESSURE

- **NOTE:** *The graphics used are for illustration purposes only.*

  Clean the area around the fuel filter quick release couplings.
  REFER to: Fuel Injection Component Cleaning (303-04B Fuel Charging and Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
- Disconnect the fuel tank to fuel filter fuel supply line quick release coupling.
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).



- Install the special tool adapter to the fuel tank to fuel filter fuel supply line.



- Install the special tool adapter to the fuel filter.

- **NOTE:** *Make sure that the hand primer arrow indicating the fuel flow is pointing towards the fuel filter.* Install the special tool between the special tool adapters.

- Connect the Ford diagnostic equipment pressure transducer to the special tool.

- Using the Ford diagnostic equipment, select the digital multi meter (DMM) function from the toolbox menu. Select the pressure vacuum transducer (PVT) function and configure the DMM to display pressure/vacuum.
- Start the engine.
- Allow the engine to idle for at least one minute.
- Make a note of the value displayed by the Ford diagnostic equipment.

Is the value displayed between -50 mB and -250 mB?

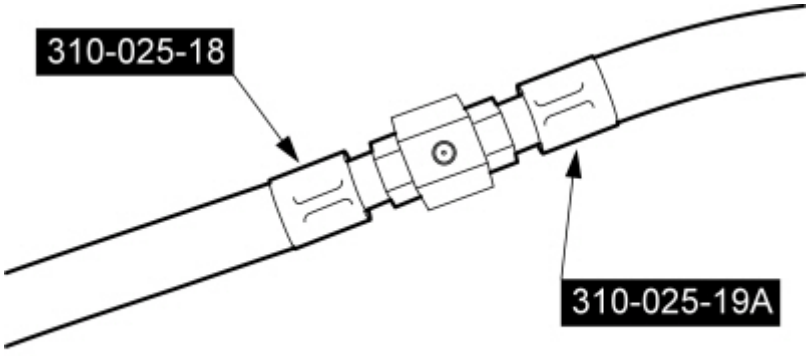
Yes	GO to A3
No	If the displayed value is between 0 mB and -50 mB, GO to A2

	If the displayed value is -250 mB or a greater negative value, GO to A4

A2 CHECK THE FUEL SYSTEM FOR AIR INGRESS

- **NOTE:** *A small amount of air bubbles in the fuel supply line is acceptable.*

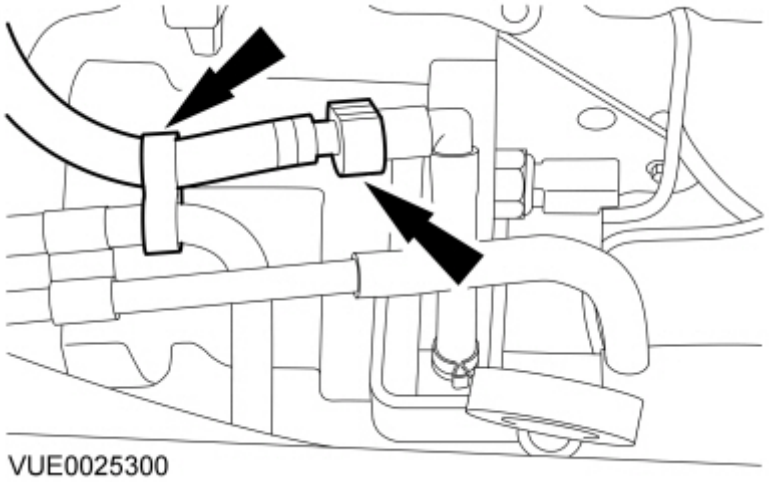
  Observe the flow of fuel through the clear plastic pipe of the hand pressure pump.



Is the hand pressure pump clear plastic pipe free from an excessive volume of air bubbles?

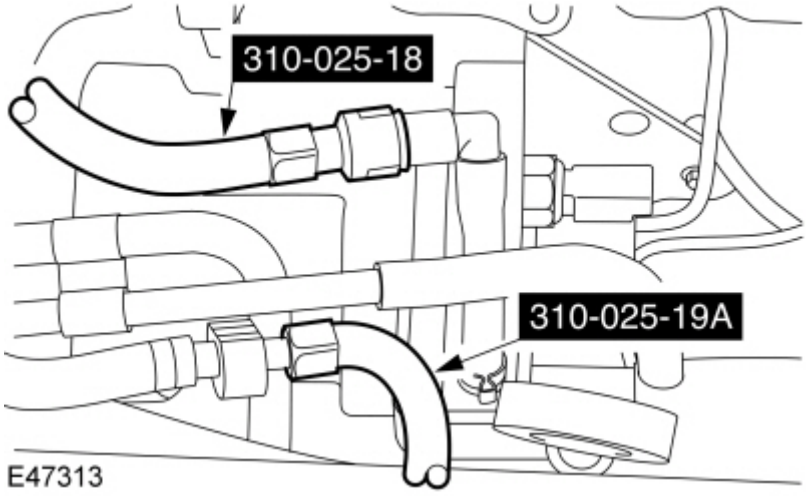
Yes	Using the Ford diagnostic equipment, guided diagnostic, run the fuel system pressure test, CHECK the fuel pump high-pressure fuel supply pressure.
No	CHECK for air ingress into the fuel lines. REFER to: Fuel System (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Diagnosis and Testing).

A3 CHECK THE FUEL PUMP FUEL RETURN PRESSURE



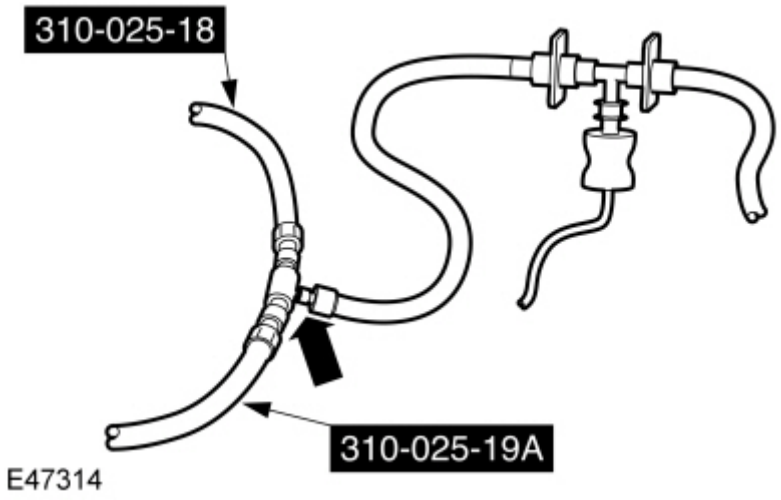
NOTE: *Before this test can be carried out, the latest calibration must be programmed into the PCM.*

- Clean the area around the fuel injector to fuel pump fuel return line quick release coupling.
  REFER to: Fuel Injection Component Cleaning (303-04B Fuel Charging and Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
- Connect special tools 310-025-18 and 310-025-19A to the Ford diagnostic equipment pressure transducer adaptor GV2323.



E46840

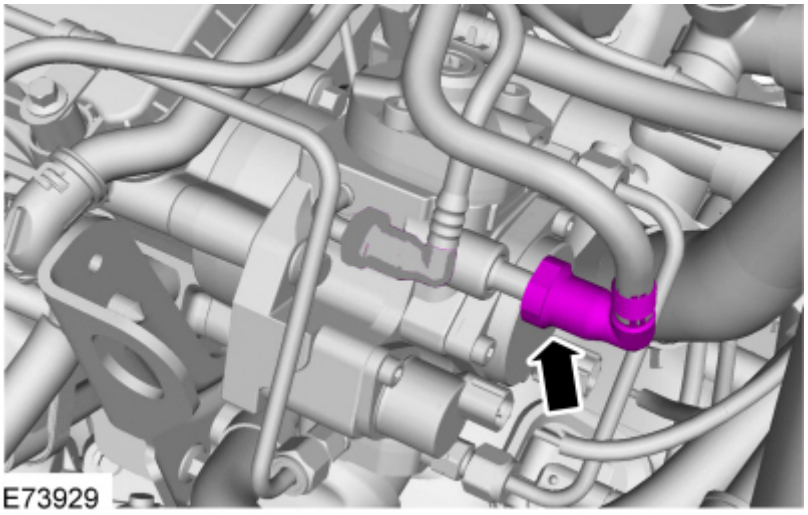
- Disconnect the fuel injector to fuel pump fuel return line quick release coupling.



VUE0025300

- Connect the special tools between the fuel injector to fuel pump fuel return line and the fuel pump.

- Start the engine.
- Using the Ford diagnostic equipment data logger function, monitor the fuel system temperature until a temperature of over 50°C is obtained.
- Stop the engine.
- Disconnect the Ford diagnostic equipment pressure transducer from the special tool 310-110.
- Connect the Ford diagnostic equipment pressure transducer to the Ford diagnostic equipment pressure transducer adaptor GV2323.



- Using the Ford diagnostic equipment, select the digital multimeter (DMM) function from the toolbox menu. Select the pressure vacuum transducer (PVT) function and configure the DMM to display pressure/vacuum.
- Start the engine.
- Make a note of the value displayed by the Ford diagnostic equipment with the engine at idle.

Is the value displayed less than 400mB at idle.

Yes	Using the Ford diagnostic equipment fuel system fuel pressure test. CHECK the fuel pump high-pressure fuel supply pressure. If no fault is indicated with the fuel pump high-pressure fuel supply pressure, RETURN to the Symptom Chart.
No	CHECK the fuel return system for damage or restriction. REPAIR or INSTALL new components as required. TEST the system for normal operation.

A4 CHECK THE FUEL PUMP FUEL SUPPLY SYSTEM FOR RESTRICTION

- Clean the area around the fuel pump fuel supply line quick release coupling.
  REFER to: Fuel Injection Component Cleaning (303-04B Fuel Charging and Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
- Disconnect the fuel pump fuel supply line.
  - Install a blanking plug to the open end of the fuel pump union.

- Place the open end of the fuel pump fuel supply line into a clean container.
- Operate the hand pressure pump at least three times in rapid succession and observe the value displayed by the Ford diagnostic equipment.

Does the fuel pressure indicated by the Ford diagnostic equipment when operating the hand pressure pump instantly fall to zero when the hand pressure pump is released?

Yes	CHECK the fuel level sensor and fuel tank fuel supply line for restriction. REPAIR or INSTALL new components as required.
No	INSTALL a new fuel filter element. REFER to: Fuel Filter Element (310-01B Fuel Tank and Lines - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). Test the system for normal operation.

PINPOINT TEST B : DTC P1250 - FUEL METERING VALVE CONTROLLABILITY FAILURE

B1 CHECK FOR AIR INGRESS INTO THE FUEL LINES

- Check for air ingress into the fuel system.
  REFER to: Fuel System (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Diagnosis and Testing).

Are there signs of air ingress into the fuel system?

Yes	REPAIR the system as recommended in the fuel system diagnostic. CLEAR the DTCs. TEST the system for normal operation.
No	GO to B2

B2 CHECK THE FUEL RAIL PRESSURE SENSOR CIRCUIT

- Using the wiring diagrams, CHECK the fuel rail pressure sensor circuit wiring harnesses and electrical connectors for electrical shorts or damage.

Is the fuel rail pressure sensor circuit shorted or damaged?

Yes	REPAIR the circuit as necessary. TEST the system for normal operation.

No	GO to B3

B3 CHECK THE FUEL METERING VALVE CIRCUIT

- Using the wiring diagrams, CHECK the fuel metering valve circuit wiring harnesses and electrical connectors for electrical shorts or damage.

Is the fuel metering valve circuit shorted or damaged?

Yes	REPAIR the circuit as necessary. TEST the system for normal operation.
No	GO to B4

B4 CHECK THE OPERATION OF THE FUEL METERING VALVE

NOTE: *This test requires the aid of another technician.*

- Connect the Ford diagnostic equipment.
- Start the engine.
- Using the Ford diagnostic equipment, DATALOGGER, set the parameters FRP, FRP_DSD, VSS, RPM, MFDES,SCV_DC, SCV_AMP.
- Carry out a road test.
- Select second gear.
- Release the accelerator pedal and allow the engine speed to decrease to idle while the vehicle is moving with second gear engaged.
- Rapidly apply full throttle until the engine speed reaches 4,000 RPM and then immediately release the accelerator pedal, allowing the engine speed to return to idle while the vehicle is moving with second gear engaged.
- Repeat step 7 approximately four times consecutively.
- Observe the recorded data from the tests.

Is the value for the FRP parameter data either staying constant or not changing with the FRP_DSD parameter data?

Yes	This indicates that the fuel metering valve is either stuck or not responding. INSTALL a new fuel metering valve. TEST the system for normal operation.
No	CLEAR the DTC and REPEAT the test. If the concern persists, INSTALL a new fuel metering valve. TEST the system for normal operation.

Fuel Injection Component Cleaning

General Equipment

Pneumatic vacuum gun

WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable mixtures are always present and may ignite. Failure to follow these instructions may result in personal injury.

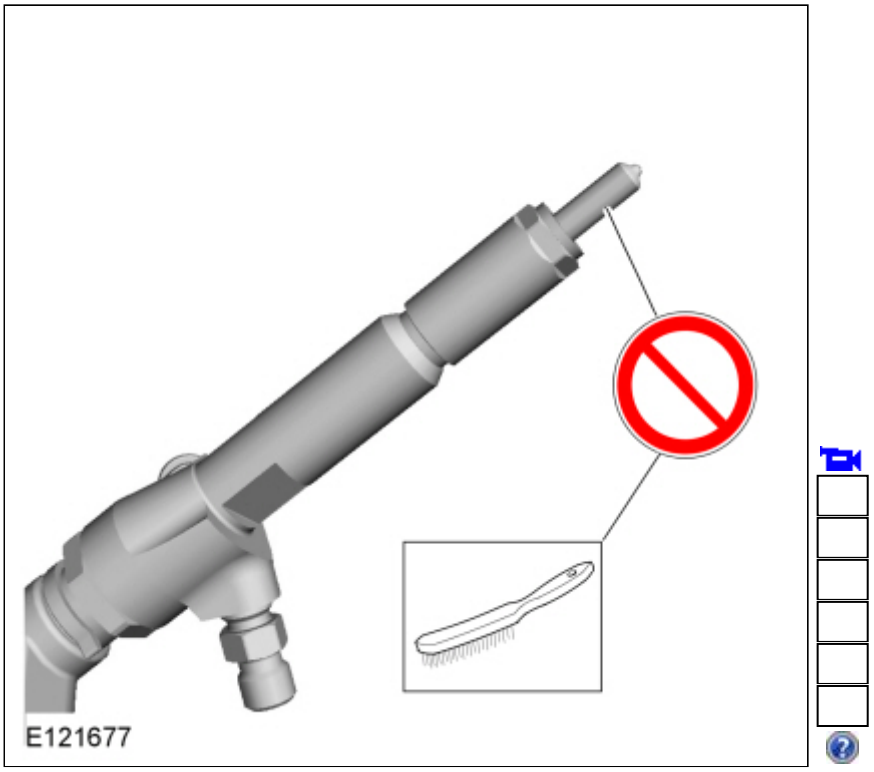
WARNING: Do not carry out any repairs to the fuel injection system with the engine running. The fuel pressure within the system can be as high as 1600 bar. Failure to follow this instruction may result in personal injury.

WARNING: Eye protection must be worn at all times when working on or near any fuel related components. Failure to follow this instruction may result in personal injury.

NOTICE: Make sure that the workshop area in which the vehicle is being worked on is as clean and dust-free as possible. Areas in which work on clutches, brakes or where welding or machining are carried out are not suitable in view of the risk of contamination to the fuel system.

NOTICE: Make sure that clean non-plated tools are used. Clean tools using a new brush that will not lose its bristles and fresh suitable evaporative cleaning agent, prior to starting work on the vehicle.

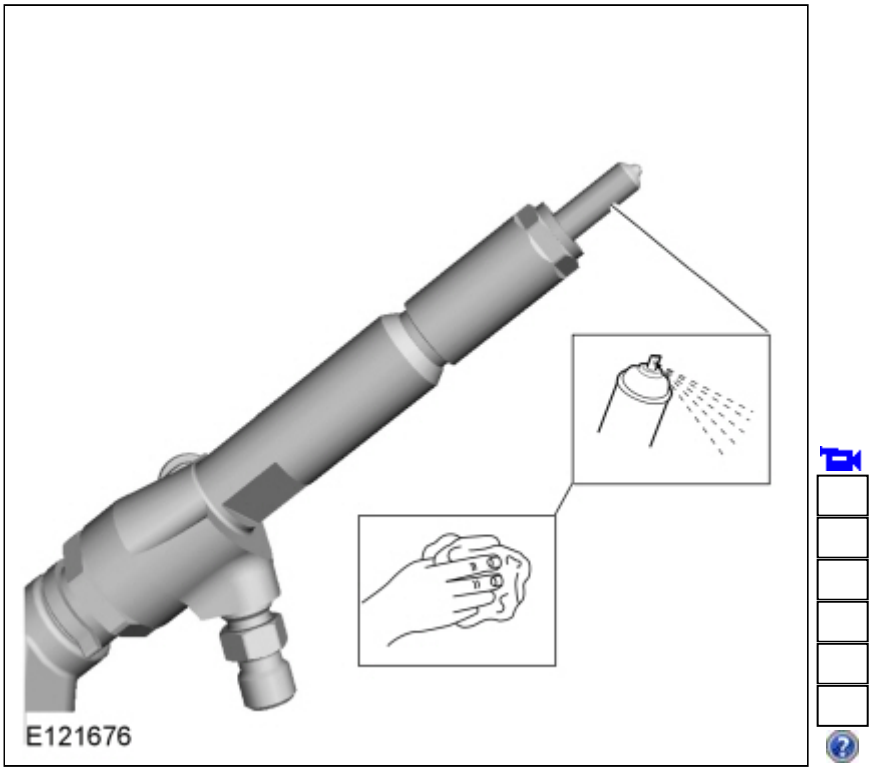
NOTICE: Use a steel topped workbench and cover it with clean, lint-free non-flocking material.



NOTICE: Make sure that all parts removed from the vehicle are placed on the lint-free non-flocking material.

NOTICE: Make sure that any protective clothing worn is clean and made from lint-free non-flocking material.

NOTICE: Make sure that any protective gloves worn are new and are of the non-powdered latex type.



NOTICE: Before using the suitable evaporative cleaning agent, protect all electrical components and connectors with lint-free non-flocking material.

1. For additional information, refer to: Solvents, Sealants and Adhesives (100-00 General Information, Description and Operation).
   For additional information, refer to: Diesel Fuel System Health and Safety Precautions (100-00 General Information, Description and Operation).
2.

NOTICE: Use lint free cloth.

3. Using Brake Cleaner: 3U7J-2C410-AA

4. Using a new brush that will not lose its bristles, brush a suitable evaporative cleaning agent onto the components being removed and onto the surrounding area.
5. Using the pneumatic vacuum gun, remove all traces of evaporative cleaning agent and foreign material.
6. Dispose of any unused evaporative cleaning agent and the brush after completing the repair.

Fuel Charging and Controls

Overview

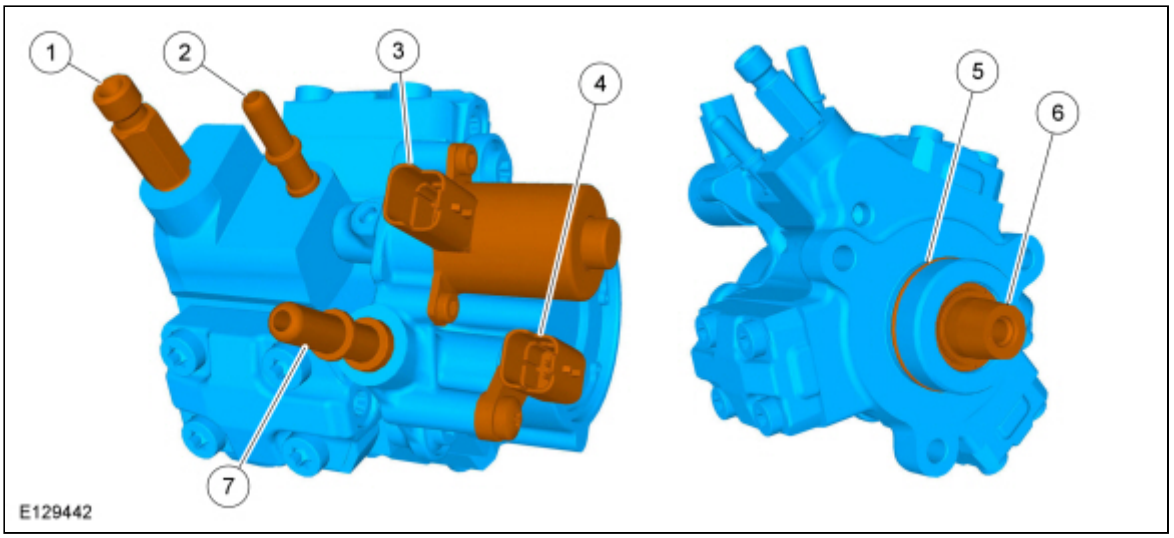
Item	Part Number	Description
1	—	Fuel rail
2	—	Fuel injector(s)
3	—	Fuel pressure (FRP) sensor
4	—	Fuel metering valve
5	—	Fuel temperature sensor
6	—	Fuel pump

General

A common rail fuel injection system is used on the 3.2L Duratorq-TDCi (Puma) diesel engine.

Within the fuel pump there is an integral fuel transfer pump which draws the fuel from the fuel tank to the fuel pump.

A fuel metering valve is located in the supply port to the high-pressure chamber of the fuel pump. The fuel metering valve varies the quantity of fuel supplied to the fuel rail and fuel injector(s), in relation to the driving conditions.



The fuel is supplied at high-pressure to the fuel rail and to the fuel injectors ready for injection. Depending on engine operating conditions, the fuel injection pressure varies between 230 bar and 1800 bar.

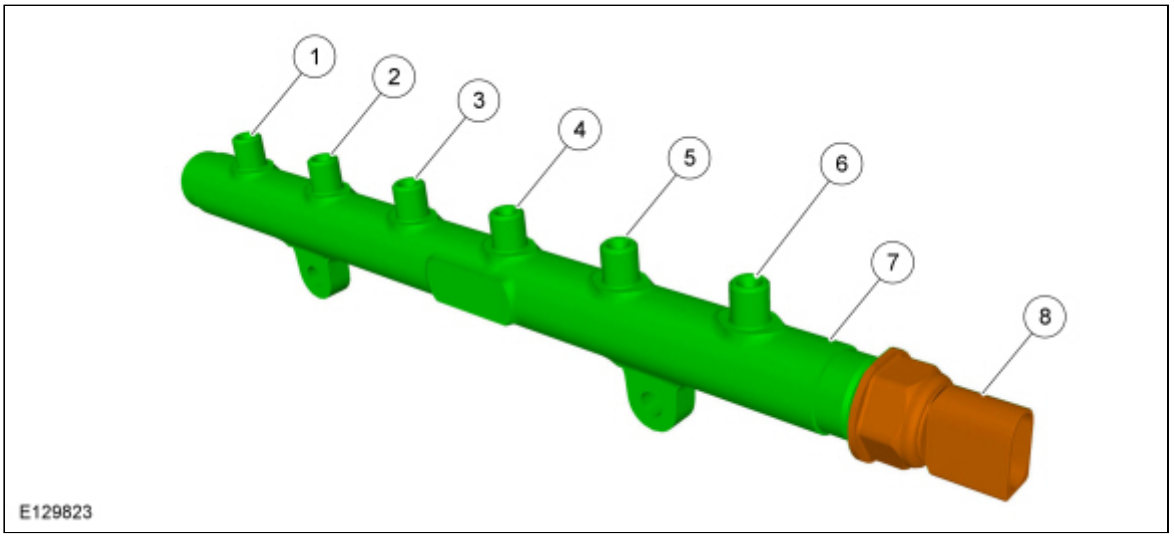
Fuel system pressure is measured using an FRP sensor located in the fuel rail. The FRP sensor converts the fuel system pressure into a voltage signal. This voltage signal acts as an input signal to the powertrain control module (PCM) for calculation of the fuel injection quantity.

The power train control module (PCM) calculates the time of fuel injection and the fuel injection quantity depending on various input variables. The specified quantity of fuel is injected into the respective combustion chamber through the solenoid actuated fuel injector(s). In doing so, a pre-injection and a main injection occur each time.

The excess fuel is returned to the fuel tank through the fuel return line.

Fuel pump

Item	Part Number	Description
1	—	Fuel pump high-pressure outlet union
2	—	Fuel pump fuel return union
3	—	Fuel metering valve
4	—	Fuel temperature sensor
5	—	Fuel pump O-ring seal
6	—	Fuel pump input drive
7	—	Fuel pump fuel supply union



The fuel pump is driven by the timing chain and is mounted on the LHS of the cylinder block.

The fuel pump has three pump elements, each offset from each other by 120 degrees.

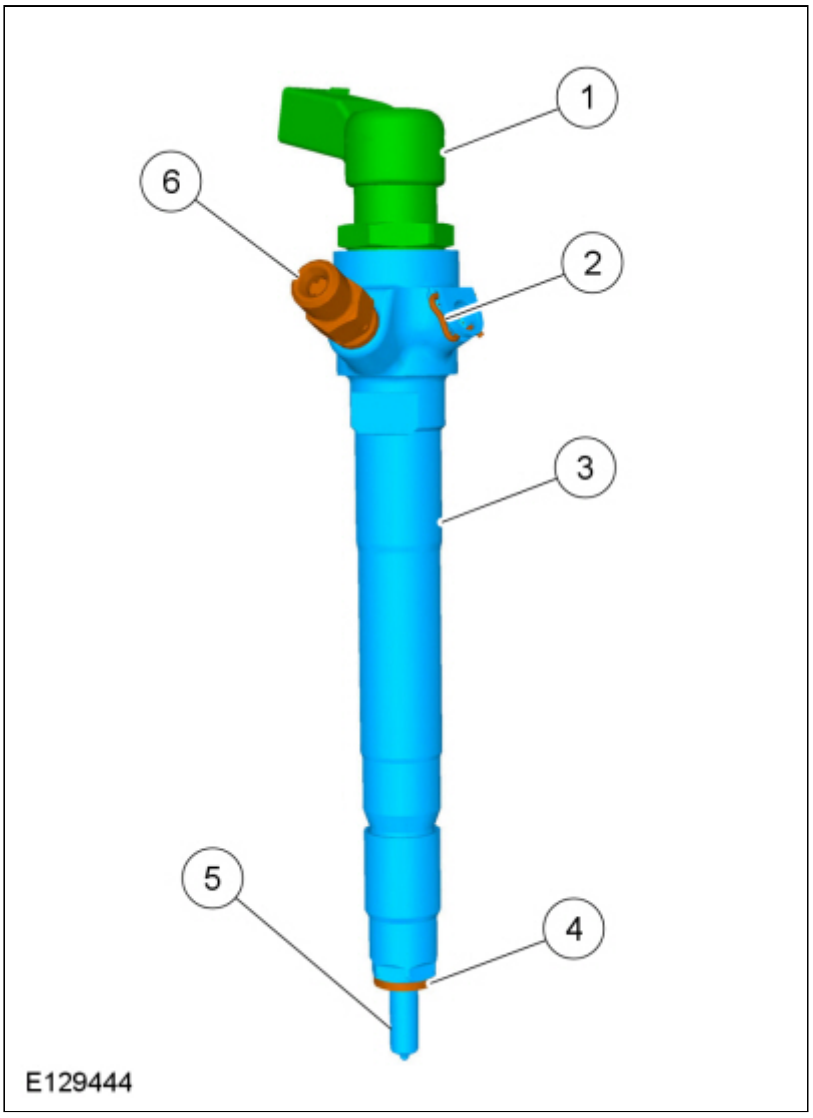
The fuel transfer pump is incorporated into the fuel pump and is located on the drive flange. The fuel transfer pump is a cycloid type pump.

The fuel metering valve is actuated by the PCM using pulse width modulation.

Fuel rail

Item	Part Number	Description
1	—	Fuel rail to fuel injector number 1 high-pressure fuel supply line union

2	—	Fuel rail to fuel injector number 2 high-pressure fuel supply line union
3	—	Fuel rail to fuel injector number 3 high-pressure fuel supply line union
4	—	Fuel pump to fuel rail high-pressure fuel supply line union
5	—	Fuel rail to fuel injector number 4 high-pressure fuel supply line union
6	—	Fuel rail to fuel injector number 5 high-pressure fuel supply line union
7	—	Fuel rail
8	—	FRP sensor



NOTICE: The FRP sensor must not be detached or removed from the fuel rail.

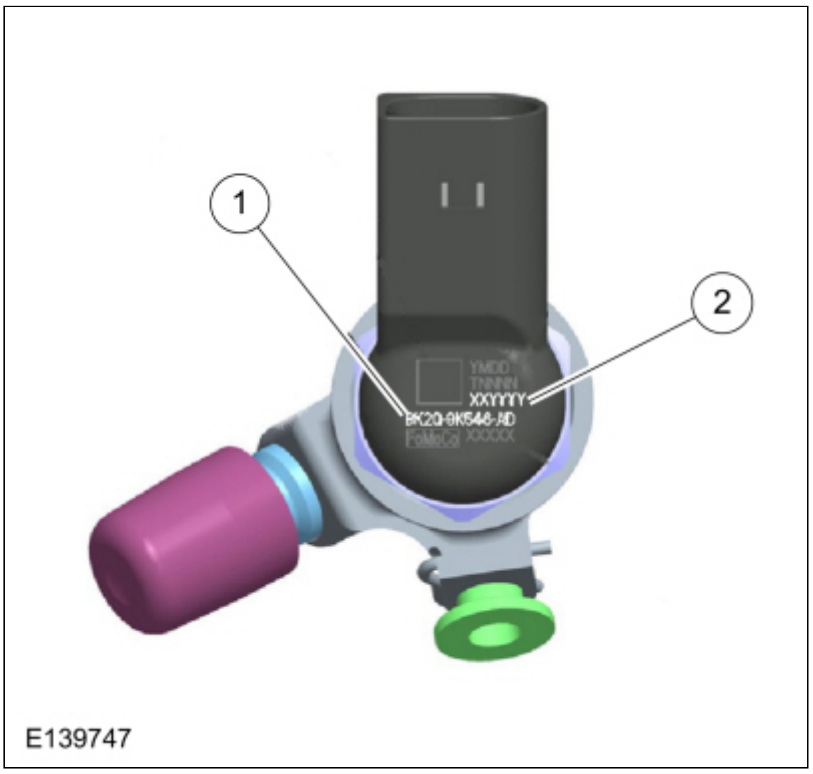
The fuel rail is made from forged steel and is retained by a support bracket located on the camshaft carrier.

The fuel is delivered by one high-pressure fuel supply line from the fuel pump to the fuel rail.

From the fuel rail, the fuel travels through the high-pressure fuel supply line(s) to the fuel injector(s).

Fuel injectors

Item	Part Number	Description
1	—	Fuel injector electrical connector
2	—	Fuel injector fuel return line clip



3	—	Fuel injector
4	—	Fuel injector sealing washer
5	—	Fuel injector nozzle
6	—	Fuel injector high-pressure fuel supply line union

The fuel injector(s) are located centrally on the cylinder head upper section and are attached by means of retaining clamps.

The fuel injector(s) are sealed from the combustion chamber by means of a copper sealing washer located between the fuel injector and the cylinder head. A new sealing washer must always be installed when carrying out installation work.

The fuel injectors are controlled directly by the PCM.

The fuel return line(s) are attached to the top of the fuel injector and are connected in series.

Item	Part Number	Description
1	—	Ford part number
2	—	Injector correction factor number

When installing new fuel injectors, the injector correction factor from the new fuel injector(s) must be recorded and uploaded using the Worldwide Diagnostic System (WDS).

Fuel Charging and Controls

Refer to Wiring Diagrams Section 303-14B for schematic and connector information.

Refer to Wiring Diagrams Section 310-00B for schematic and connector information.

Special Tool(s)

	Hand Pressure Pump with Adapter Kit 310-110
	Test Hose for 310-025 310-025-18
	Test Hose for 310-025 310-025-19A

General Equipment

Ford approved diagnostic tool
Pneumatic vacuum gun

Inspection and Verification

WARNING: Do not smoke or carry lighted tobacco of any type when working on or near any fuel related components. Highly flammable mixtures are always present and may ignite. Failure to follow these instructions may result in personal injury.

WARNING: This procedure involves fuel handling. Be prepared for fuel spillage at all times. Failure to follow this instruction may result in personal injury.

NOTICE: Diesel fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is therefore essential that absolute cleanliness is observed when working with these components. Always fit blanking plugs to any open orifices or lines.

NOTE: *As well as carrying out its normal function the glow plug indicator also acts as an engine check lamp which will flash continuously when a hard DTC is detected by the PCM. Soft DTCs are also stored by the PCM but will only be known if the system is checked for DTCs using the Ford diagnostic equipment.*

NOTE: *If a DTC is detected, all DTCs must be cleared after the concern is repaired. Failure to clear all DTCs may cause driveability concerns.*

NOTE: *If the fuel level in the fuel tank drops below approximately four liters, rough running will occur. This is to signal to the driver that the vehicle requires refuelling in order to prevent the fuel system from running dry.*

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
– Fuel leak(s) – Fuel filter – Air cleaner element – Vacuum line(s)/vacuum connectors – Hose(s)/hose connectors – Tube(s)/tube connectors – Contaminated fuel – Fuel supply line(s) – Fuel return line(s) – High-pressure fuel supply line(s) – Fuel injectors – Fuel rail – Fuel pump	– Fuse(s) – Relay(s) – Wiring harness – Electrical connector(s) – Fuel injectors – Fuel temperature sensor – Fuel rail pressure sensor – Fuel metering valve – Passive anti-theft system (PATS) LED operation – Glow plug indicator – PCM

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. **NOTE:** *A PCM calibration update should only be carried out if it is applicable to the symptoms exhibited by the vehicle.*

   If the cause is not visually evident, verify the symptom and refer to the Ford diagnostic equipment. Check for the availability of an applicable PCM calibration update. Continue using the Ford diagnostic equipment and retrieve the DTCs and refer to the DTC Index Chart.

DTC Index Chart

DTC	Description/Condition	Possible Source	Action
P1250	Fuel metering valve controllability failure (displayed in addition to DTC P0089)	Circuit(s), air ingress into the fuel lines, fuel metering valve	GO to Pinpoint Test B

5. If no DTCs related to the concern are retrieved, proceed to the Symptom Chart to continue diagnostics.

Symptom Chart

Symptom	Possible Sources	Action
• Engine does not crank and glow plug indicator is flashing	• DTC detected.	• REFER to the Ford diagnostic equipment.
• Engine does not crank	• Passive anti-theft system (PATS).	• CHECK the PATS LED extinguishes within 3 seconds when the ignition is turned on. REFER to: Passive Anti-Theft System (PATS) - System Operation and Component Description (419-01B Passive Anti-Theft System (PATS), Description and Operation).

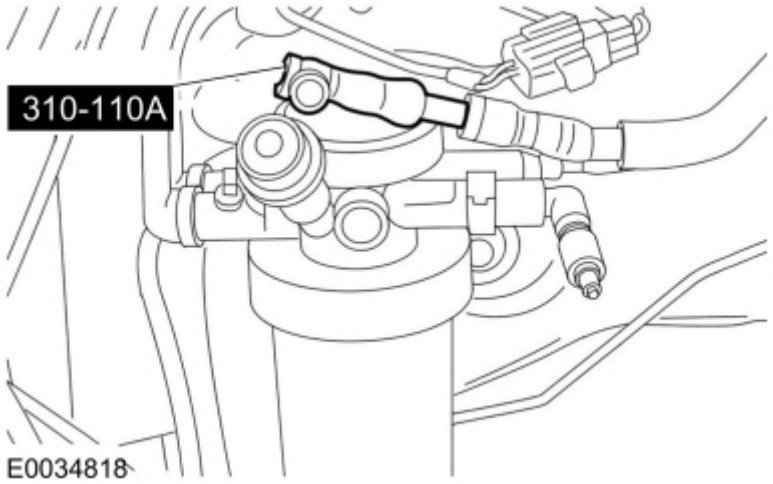
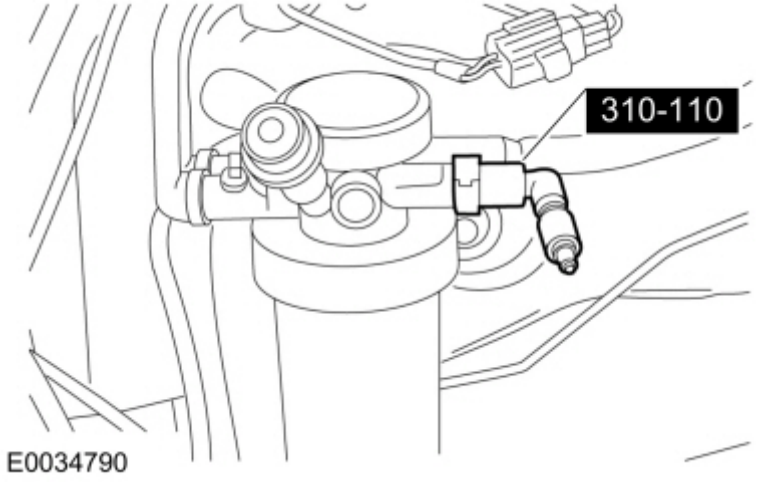
Pinpoint Tests

PINPOINT TEST A : FUEL PUMP FUEL SUPPLY TEST

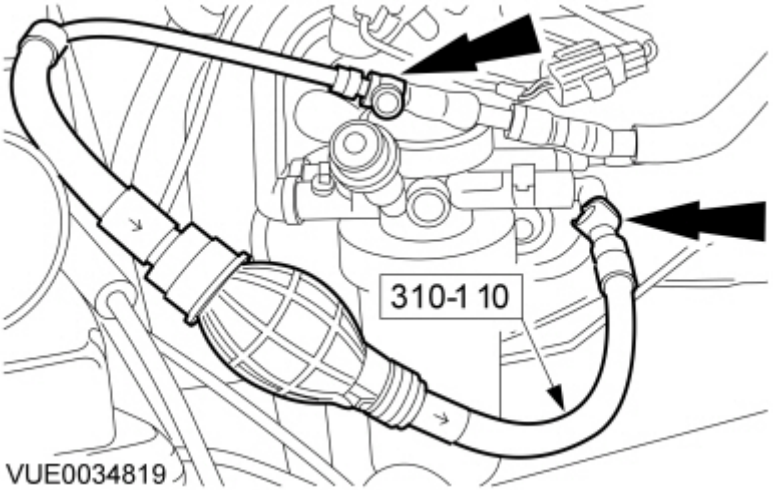


A1 CHECK THE FUEL PUMP FUEL SUPPLY PRESSURE
• **NOTE:** *The graphics used are for illustration purposes only.* Clean the area around the fuel filter quick release couplings.

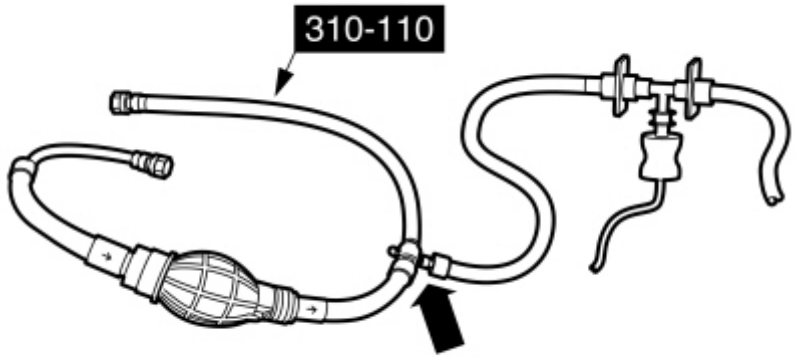
REFER to: Fuel Injection Component Cleaning (303-04C Fuel Charging and Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, General Procedures).



- Disconnect the fuel tank to fuel filter fuel supply line quick release coupling.
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).



- Install the special tool adapter to the fuel tank to fuel filter fuel supply line.



- Install the special tool adapter to the fuel filter.

- **NOTE:** *Make sure that the hand primer arrow indicating the fuel flow is pointing towards the fuel filter.*
  Install the special tool between the special tool adapters.

- Connect the Ford diagnostic equipment pressure transducer to the special tool.

- Using the Ford diagnostic equipment, select the digital multi meter (DMM) function from the toolbox menu. Select the pressure vacuum transducer (PVT) function and configure the DMM to display pressure/vacuum.
- Start the engine.
- Allow the engine to idle for at least one minute.
- Make a note of the value displayed by the Ford diagnostic equipment.

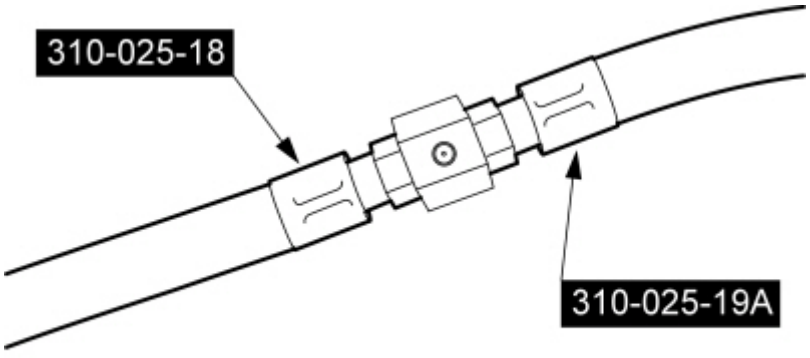
Is the value displayed between -50 mB and -250 mB?

Yes	GO to A3
No	If the displayed value is between 0 mB and -50 mB, GO to A2 If the displayed value is -250 mB or a greater negative value, GO to A4

A2 CHECK THE FUEL SYSTEM FOR AIR INGRESS

- **NOTE:** *A small amount of air bubbles in the fuel supply line is acceptable.*

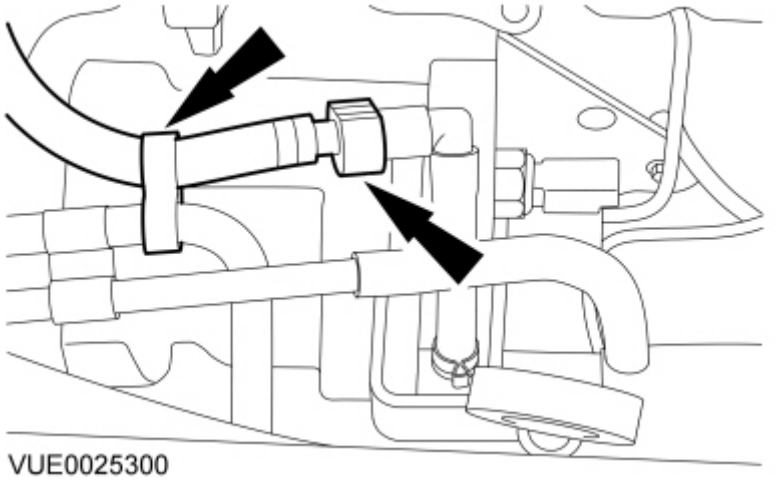
  Observe the flow of fuel through the clear plastic pipe of the hand pressure pump.



Is the hand pressure pump clear plastic pipe free from an excessive volume of air bubbles?

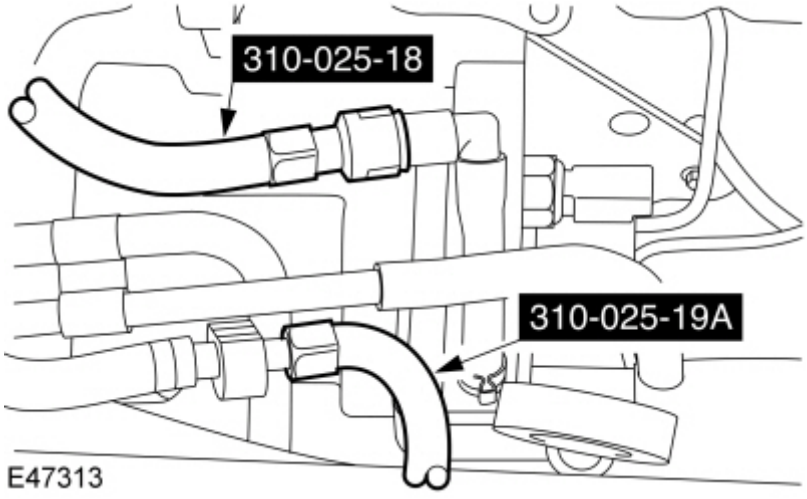
Yes	Using the Ford diagnostic equipment, guided diagnostic, run the fuel system pressure test, CHECK the fuel pump high-pressure fuel supply pressure.
No	CHECK for air ingress into the fuel lines. REFER to: Fuel System (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Diagnosis and Testing).

A3 CHECK THE FUEL PUMP FUEL RETURN PRESSURE



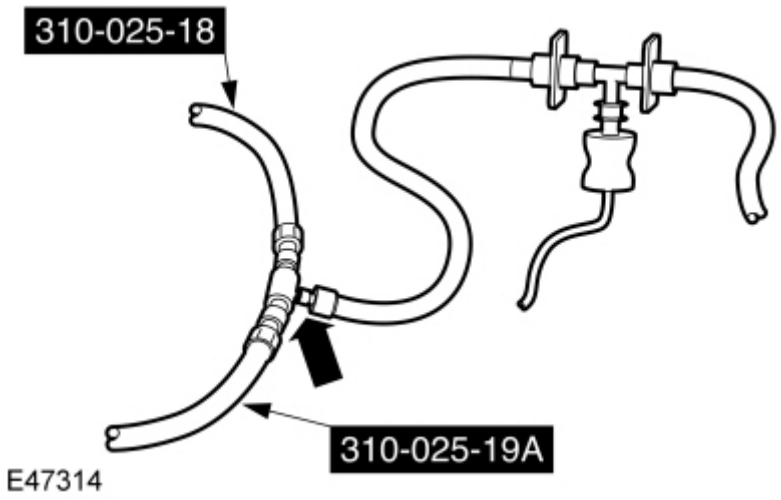
NOTE: *Before this test can be carried out, the latest calibration must be programmed into the PCM.*

- Clean the area around the fuel injector to fuel pump fuel return line quick release coupling. REFER to: Fuel Injection Component Cleaning (303-04C Fuel Charging and Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, General Procedures).
- Connect special tools 310-025-18 and 310-025-19A to the Ford diagnostic equipment pressure transducer adaptor GV2323.



E46840

- Disconnect the fuel injector to fuel pump fuel return line quick release coupling.

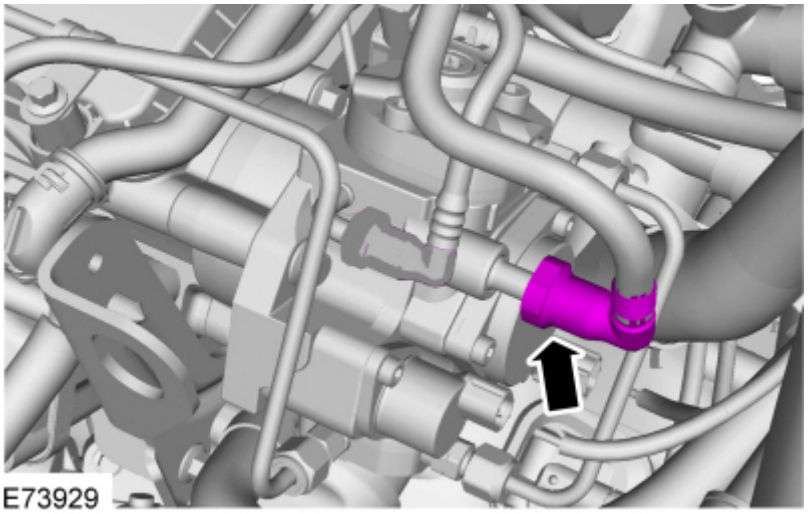


VUE0025300

- Connect the special tools between the fuel injector to fuel pump fuel return line and the fuel pump.

E47313

- Start the engine.
- Using the Ford diagnostic equipment data logger function, monitor the fuel system temperature until a temperature of over 50°C is obtained.
- Stop the engine.
- Disconnect the Ford diagnostic equipment pressure transducer from the special tool 310-110.
- Connect the Ford diagnostic equipment pressure transducer to the Ford diagnostic equipment pressure transducer adaptor GV2323.



- Using the Ford diagnostic equipment, select the digital multimeter (DMM) function from the toolbox menu. Select the pressure vacuum transducer (PVT) function and configure the DMM to display pressure/vacuum.
- Start the engine.
- Make a note of the value displayed by the Ford diagnostic equipment with the engine at idle.

Is the value displayed less than 400mB at idle.

Yes	Using the Ford diagnostic equipment fuel system fuel pressure test. CHECK the fuel pump high-pressure fuel supply pressure. If no fault is indicated with the fuel pump high-pressure fuel supply pressure, RETURN to the Symptom Chart.
No	CHECK the fuel return system for damage or restriction. REPAIR or INSTALL new components as required. TEST the system for normal operation.

A4 CHECK THE FUEL PUMP FUEL SUPPLY SYSTEM FOR RESTRICTION

- Clean the area around the fuel pump fuel supply line quick release coupling.
  REFER to: Fuel Injection Component Cleaning (303-04C Fuel Charging and Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, General Procedures).
- Disconnect the fuel pump fuel supply line.
  - Install a blanking plug to the open end of the fuel pump union.

- Place the open end of the fuel pump fuel supply line into a clean container.
- Operate the hand pressure pump at least three times in rapid succession and observe the value displayed by the Ford diagnostic equipment.

Does the fuel pressure indicated by the Ford diagnostic equipment when operating the hand pressure pump instantly fall to zero when the hand pressure pump is released?

Yes	CHECK the fuel level sensor and fuel tank fuel supply line for restriction. REPAIR or INSTALL new components as required.
No	INSTALL a new fuel filter element. REFER to: Fuel Filter Element (310-01B Fuel Tank and Lines - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). Test the system for normal operation.

PINPOINT TEST B : DTC P1250 - FUEL METERING VALVE CONTROLLABILITY FAILURE

B1 CHECK FOR AIR INGRESS INTO THE FUEL LINES

- Check for air ingress into the fuel system.
  REFER to: Fuel System (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Diagnosis and Testing).

Are there signs of air ingress into the fuel system?

Yes	REPAIR the system as recommended in the fuel system diagnostic. CLEAR the DTCs. TEST the system for normal operation.
No	GO to B2

B2 CHECK THE FUEL RAIL PRESSURE SENSOR CIRCUIT

- Using the wiring diagrams, CHECK the fuel rail pressure sensor circuit wiring harnesses and electrical connectors for electrical shorts or damage.

Is the fuel rail pressure sensor circuit shorted or damaged?

Yes	REPAIR the circuit as necessary. TEST the system for normal operation.
No	GO to B3

B3 CHECK THE FUEL METERING VALVE CIRCUIT

- Using the wiring diagrams, CHECK the fuel metering valve circuit wiring harnesses and electrical connectors for electrical shorts or damage.

Is the fuel metering valve circuit shorted or damaged?

Yes	REPAIR the circuit as necessary. TEST the system for normal operation.
No	GO to B4

B4 CHECK THE OPERATION OF THE FUEL METERING VALVE

NOTE: *This test requires the aid of another technician.*

- Connect the Ford diagnostic equipment.
- Start the engine.
- Using the Ford diagnostic equipment, DATALOGGER, set the parameters FRP, FRP_DSD, VSS, RPM, MFDES,SCV_DC, SCV_AMP.
- Carry out a road test.
- Select second gear.
- Release the accelerator pedal and allow the engine speed to decrease to idle while the vehicle is moving with second gear engaged.
- Rapidly apply full throttle until the engine speed reaches 4,000 RPM and then immediately release the accelerator pedal, allowing the engine speed to return to idle while the vehicle is moving with second gear engaged.
- Repeat step 7 approximately four times consecutively.
- Observe the recorded data from the tests.

Is the value for the FRP parameter data either staying constant or not changing with the FRP_DSD parameter data?

Yes	This indicates that the fuel metering valve is either stuck or not responding. INSTALL a new fuel metering valve. TEST the system for normal operation.
No	CLEAR the DTC and REPEAT the test. If the concern persists, INSTALL a new fuel metering valve. TEST the system for normal operation.

Fuel Injection Component Cleaning

General Equipment

Pneumatic vacuum gun

WARNING: Do not smoke or carry lighted tobacco or open flame of any type when working on or near any fuel related components. Highly flammable mixtures are always present and may ignite. Failure to follow these instructions may result in personal injury.

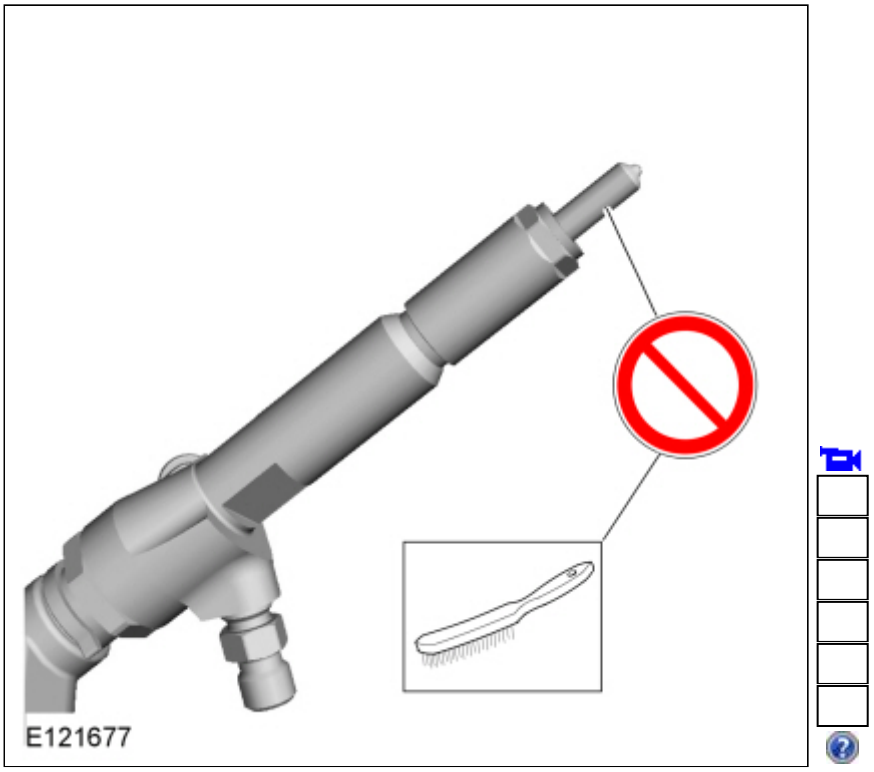
WARNING: Do not carry out any repairs to the fuel injection system with the engine running. The fuel pressure within the system can be as high as 1600 bar. Failure to follow this instruction may result in personal injury.

WARNING: Eye protection must be worn at all times when working on or near any fuel related components. Failure to follow this instruction may result in personal injury.

NOTICE: Make sure that the workshop area in which the vehicle is being worked on is as clean and dust-free as possible. Areas in which work on clutches, brakes or where welding or machining are carried out are not suitable in view of the risk of contamination to the fuel system.

NOTICE: Make sure that clean non-plated tools are used. Clean tools using a new brush that will not lose its bristles and fresh suitable evaporative cleaning agent, prior to starting work on the vehicle.

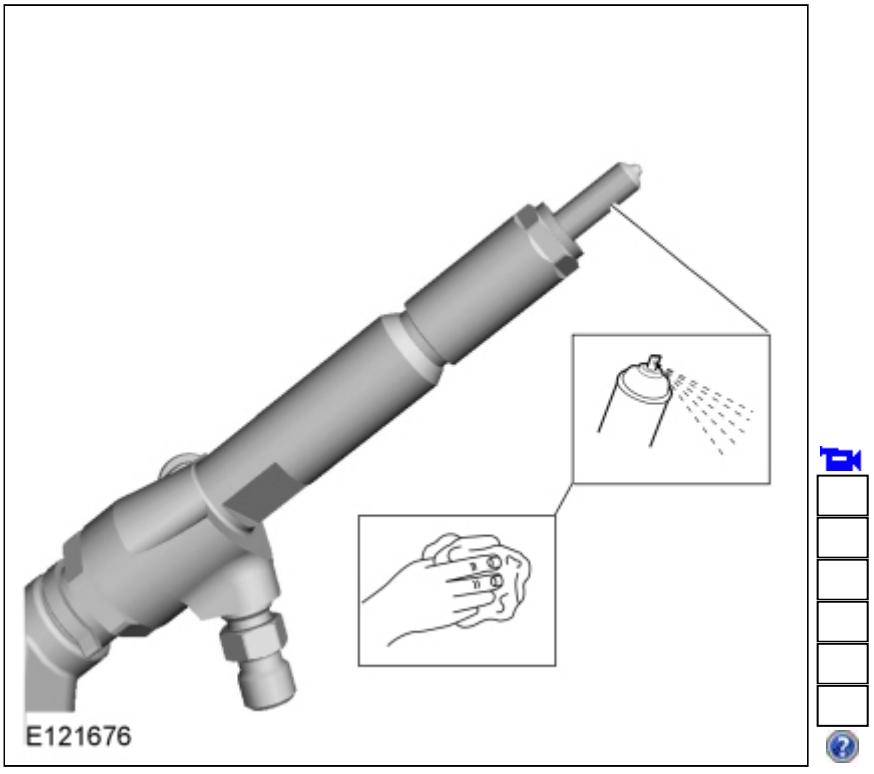
NOTICE: Use a steel topped workbench and cover it with clean, lint-free non-flocking material.



NOTICE: Make sure that all parts removed from the vehicle are placed on the lint-free non-flocking material.

NOTICE: Make sure that any protective clothing worn is clean and made from lint-free non-flocking material.

NOTICE: Make sure that any protective gloves worn are new and are of the non-powdered latex type.



NOTICE: Before using the suitable evaporative cleaning agent, protect all electrical components and connectors with lint-free non-flocking material.

1. For additional information, refer to: Solvents, Sealants and Adhesives (100-00 General Information, Description and Operation).
   For additional information, refer to: Diesel Fuel System Health and Safety Precautions (100-00 General Information, Description and Operation).
2.

NOTICE: Use lint free cloth.

3. Using Brake Cleaner: 3U7J-2C410-AA

4. Using a new brush that will not lose its bristles, brush a suitable evaporative cleaning agent onto the components being removed and onto the surrounding area.
5. Using the pneumatic vacuum gun, remove all traces of evaporative cleaning agent and foreign material.
6. Dispose of any unused evaporative cleaning agent and the brush after completing the repair.

Turbocharger - System Operation and Component Description

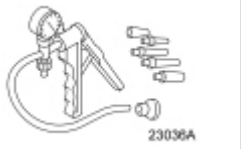
System Operation

For System Operation, Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual. See Section 1 Description and Operation.

Component Description

For Component Description, Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual. See Section 1 Description and Operation.

Copyright © 2016 Ford Motor Company



Turbocharger - Overview

All three versions of the 2.2L Duratorq TDCi engines have turbochargers. The 88kW and 96kW versions have turbochargers fitted with a wastegate, while the 118kW version has a variable vane turbocharger. Both these turbocharger features vary the pressure boost to the intake system. The variable vane type being more efficient. The charge air passes through an intercooler after leaving the turbocharger to improve volumetric efficiency by increasing air density.

Turbocharger

Special Tool(s)

 23036A	Hand Vacuum/Pressure Pump 416-D001 (23-036A)

General Equipment

Ford diagnostic equipment

Inspection and Verification

NOTE: *The turbocharger uses engine oil as a lubricant and coolant. Due to the high operating temperatures of the turbocharger and with the expansion and contraction of the internal components a proportion of engine oil may enter the air intake system. This is not an indication that the turbocharger oil seal has failed. The turbocharger oil seal will not fail unless the bearings fail first, which will cause the turbocharger to become noisy. Do not install a new turbocharger due to oil inside the turbocharger or the air intake components. If a leak is detected in the supply or return tubes or connections, locate and rectify the source. Do not install a new turbocharger due to an oil leak.*

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

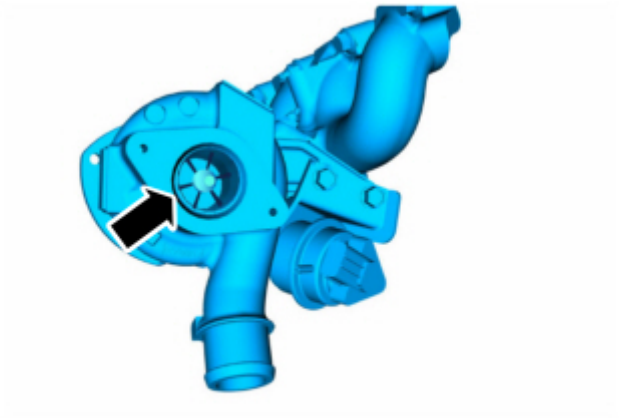
Visual Inspection Chart

Mechanical	Electrical
− Oil leak(s) − Air cleaner element − Air cleaner outlet pipe − Air cleaner intake pipe − Turbocharger oil supply tube − Turbocharger oil return tube − Wastegate control valve - vehicles with fixed vane turbocharger − Turbocharger housing − Charge air cooler − Charger air cooler intake pipe − Charger air cooler outlet pipe	− Wiring harness(es) − Electrical connector(s) − Variable vane electric actuator − PCM

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

NOTICE: The variable vane electric actuator must not be transferred between the old and new turbochargers. Failure to follow this instruction may result in incorrect calibration, exhaust emissions and engine operation.



NOTICE: On vehicles with a fixed vane turbocharger the wastegate control valve and actuator rod are fixed parts of the turbocharger and must not be adjusted or renewed separately.

Symptom	Possible Sources	Action
• Blue smoke with excessive turbocharger noise	• Turbocharger compressor rubbing on housing walls. • Turbocharger turbine rubbing on housing walls. • Turbocharger bearings and oil seal(s). • Turbocharger oil supply tube blocked or damaged.	• Vehicles with fixed vane turbocharger. GO to Pinpoint Test A Vehicles with variable vane turbocharger. GO to Pinpoint Test B
• Blue smoke without excessive turbocharger noise	• Turbocharger oil return tube blocked or damaged.	• GO to Pinpoint Test C
• Poor engine performance	• Charge air cooler system.	• CHECK the charge air cooler and charge air cooler pipe(s) for leaks and obstructions. REPAIR as necessary.
	• Air cleaner intake pipe.	• CHECK the air cleaner intake pipe for obstructions. REPAIR as necessary.
	• Unauthorized adjustment of the wastegate control valve actuator rod - vehicles with fixed vane turbocharger.	• The wastegate control valve actuator rod is factory set and must not be adjusted. CHECK the paint seal on the wastegate control valve actuator rod has not been broken. If the paint seal has been broken, INSTALL a new turbocharger. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation).
	• Wastegate control valve actuator - vehicles with fixed vane turbocharger.	• GO to Pinpoint Test D
	• Variable vane electric actuator.	• REFER to the Ford diagnostic equipment.

Pinpoint Tests

PINPOINT TEST A : BLUE SMOKE WITH EXCESSIVE TURBOCHARGER NOISE - VEHICLES WITH FIXED VANE TURBOCHARGER

A1 INSPECT THE TURBOCHARGER ROTOR VANES FOR DAMAGE
• Disconnect the air cleaner outlet pipe from the turbocharger. • Inspect the turbocharger rotor vanes for damage.

E201976

Is there visible damage to the rotor vanes?

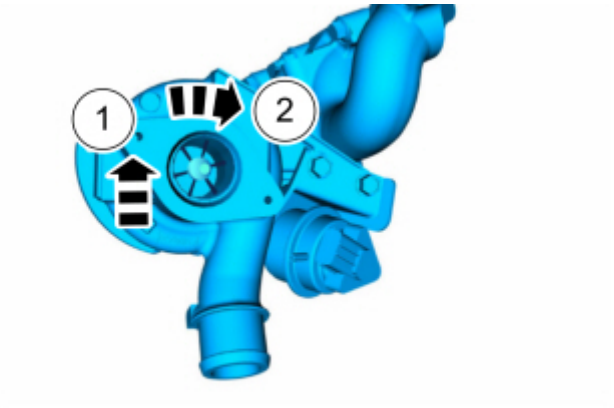
Yes	GO to A2
No	GO to A3

A2 CHECK FOR FOREIGN MATERIAL IN THE INTAKE AIR SYSTEM COMPONENTS

- Check the intake air system components for signs of foreign material.

Are there any signs of foreign material?

Yes	CLEAN the intake air system components. INSTALL a new turbocharger. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.
No	GO to A4



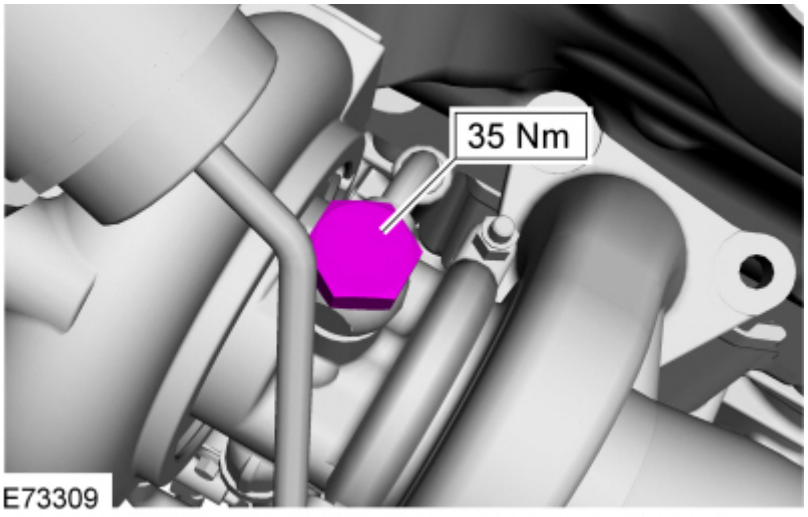
A3 CHECK THE TURBOCHARGER BEARINGS FOR EXCESSIVE MOVEMENT

NOTE: *A small amount of movement in the bearings is normal.*

NOTE: *The initial rotor rotation of a cold turbocharger may feel rough and uneven but should rotate freely after a few turns.*

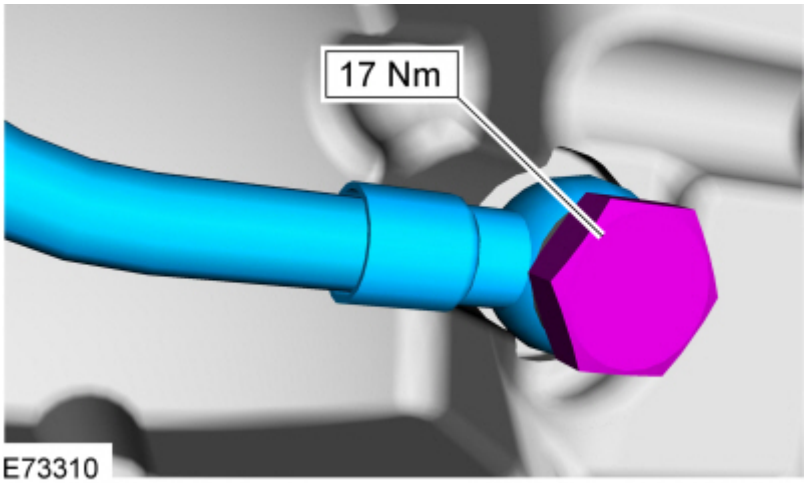
- **NOTE:** *Make sure that the turbocharger rotor should be rotated by fingertips only and not any other tool.*

  Make sure that the turbocharger rotor spins freely within the housing.
  - 1. With the turbocharger stationary, gently lift the shaft (the shaft will naturally lay in the bottom of the bearings).
  - 2. Make sure that the rotor spins freely within the housing.



E201977

Does the rotor spin freely within the housing?



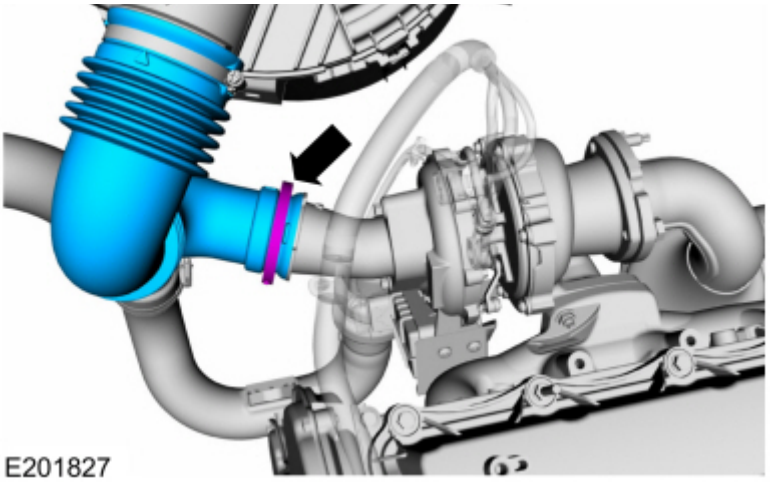
Yes	GO to A4
No	INSTALL a new turbocharger. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.

A4 CHECK THE TURBOCHARGER OIL SUPPLY TUBE FOR BLOCKAGE

- Disconnect the turbocharger oil supply tube from the turbocharger.

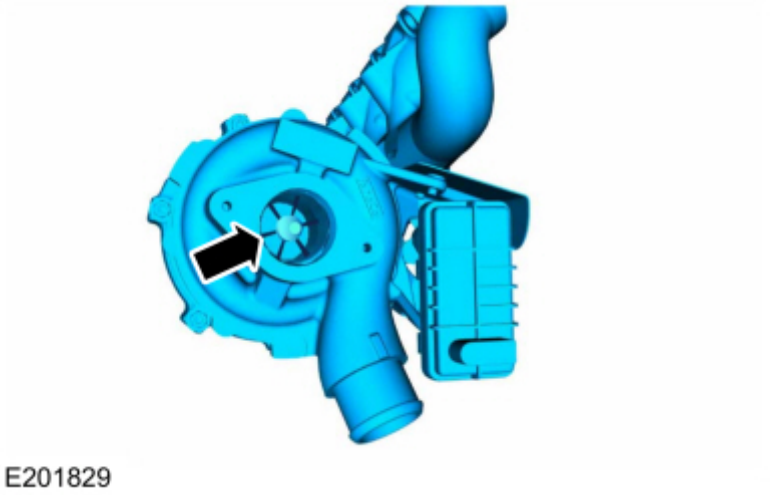
- Remove the turbocharger oil supply tube.

- Using workshop compressed air and a compressed air nozzle, check the oil supply tube for blockage.



Is the oil supply tube free from blockage?

Yes	INSTALL a new turbocharger. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.
No	INSTALL a new turbocharger and turbocharger oil supply tube. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.



PINPOINT TEST B : BLUE SMOKE WITH EXCESSIVE TURBOCHARGER NOISE - VEHICLES WITH VARIABLE VANE TURBOCHARGER

B1 INSPECT THE TURBOCHARGER ROTOR VANES FOR DAMAGE

- Disconnect the air cleaner outlet pipe from the turbocharger.

- Inspect the turbocharger rotor vanes for damage.

Is there visible damage to the rotor vanes?

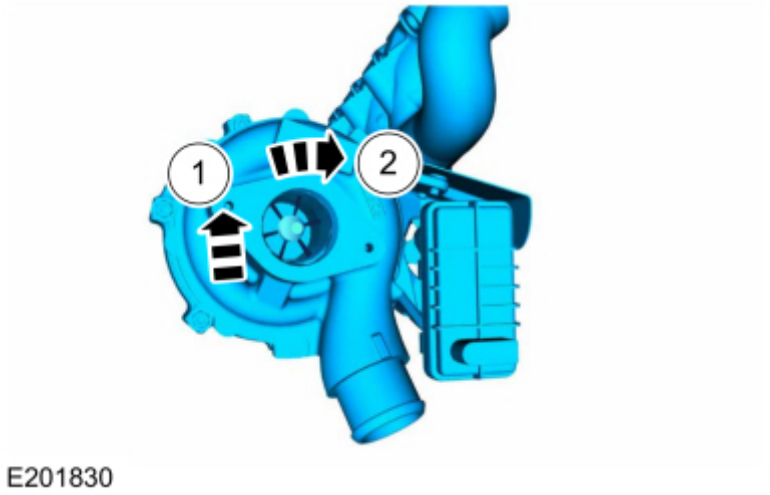
Yes	GO to B2
No	GO to B3

B2 CHECK FOR FOREIGN MATERIAL IN THE INTAKE AIR SYSTEM COMPONENTS

- Check the intake air system components for signs of foreign material.

Are there any signs of foreign material?

Yes	CLEAN the intake air system components. INSTALL a new turbocharger. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.
No	GO to B4



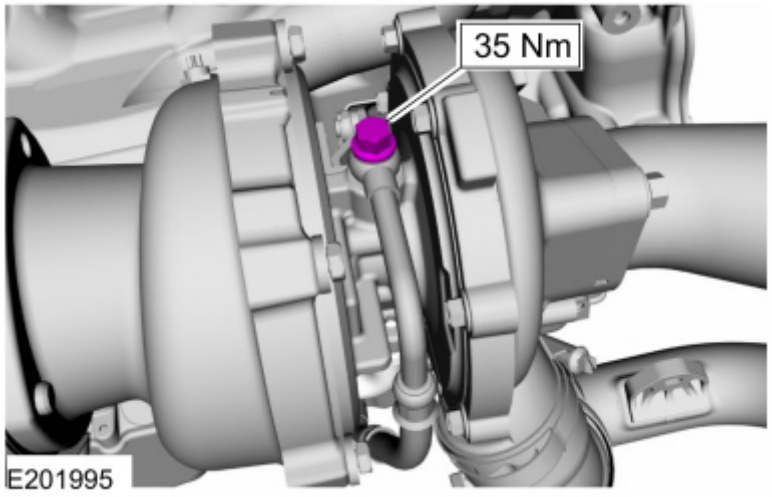
B3 CHECK THE TURBOCHARGER BEARINGS FOR EXCESSIVE MOVEMENT

NOTE: *A small amount of movement in the bearings is normal.*

NOTE: *The initial rotor rotation of a cold turbocharger may feel rough and uneven but should rotate freely after a few turns.*

- **NOTE:** *Make sure that the turbocharger rotor should be rotated by fingertips only and not any other tool.*

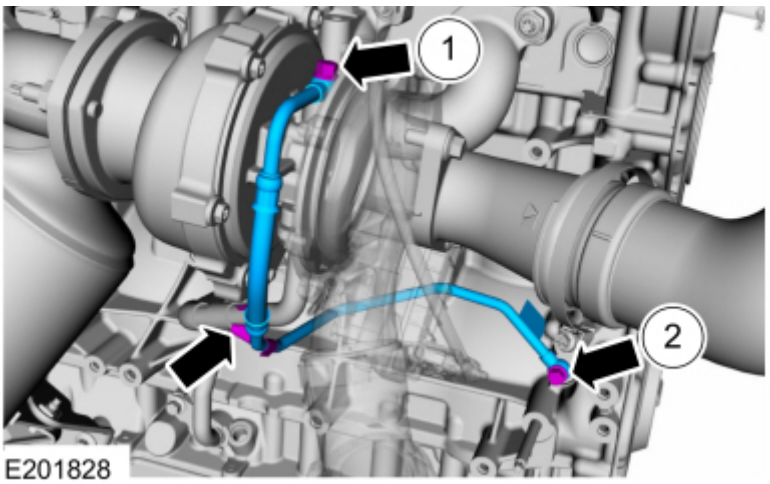
  Make sure the turbocharger rotor spins freely within the housing.
  - 1. With the turbocharger stationary, gently lift the shaft (the shaft will naturally lay in the bottom of the bearings).
  - 2. Make sure the rotor spins freely within the housing.



E201830

Does the rotor spin freely within the housing?

Yes	GO to B4
No	INSTALL a new turbocharger. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.



B4 CHECK THE TURBOCHARGER OIL SUPPLY TUBE FOR BLOCKAGE

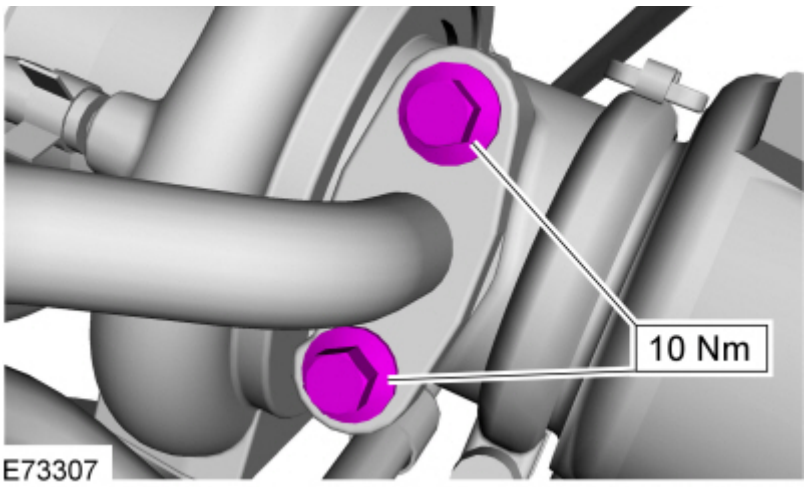
- Disconnect the turbocharger oil supply tube from the turbocharger.

E201995

- Remove the turbocharger oil supply tube.

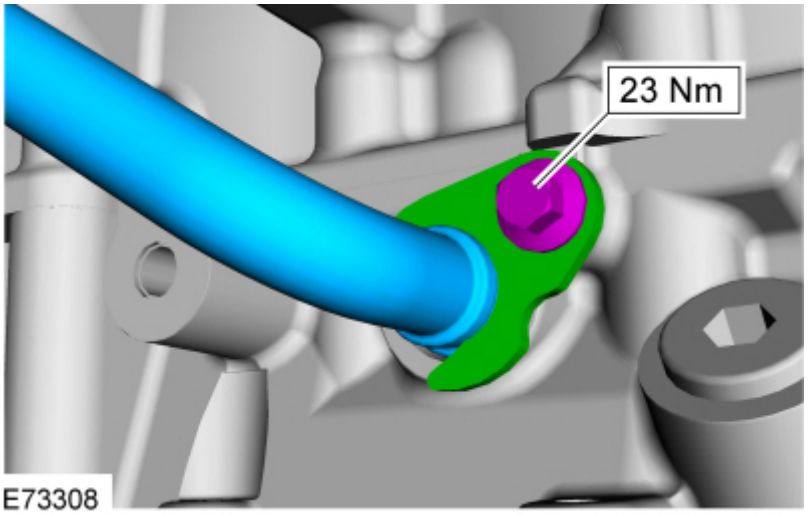
- Using workshop compressed air and a compressed air nozzle, check the oil supply tube for blockage.

Is the oil supply tube free from blockage?



Yes	INSTALL a new turbocharger. REFER to: Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
No	INSTALL a new turbocharger and turbocharger oil supply tube. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.

PINPOINT TEST C : BLUE SMOKE WITHOUT EXCESSIVE TURBOCHARGER NOISE

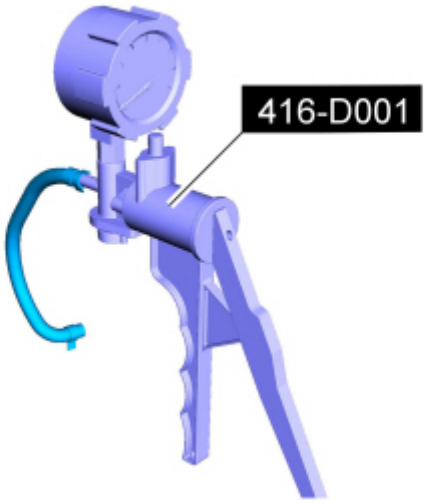


C1 CHECK THE TURBOCHARGER OIL RETURN TUBE

- Disconnect the turbocharger oil return tube from the turbocharger.

- Remove the turbocharger oil return tube.

- Check the turbocharger oil return tube for a blockage or signs of damage.



Is the turbocharger oil return tube blocked?

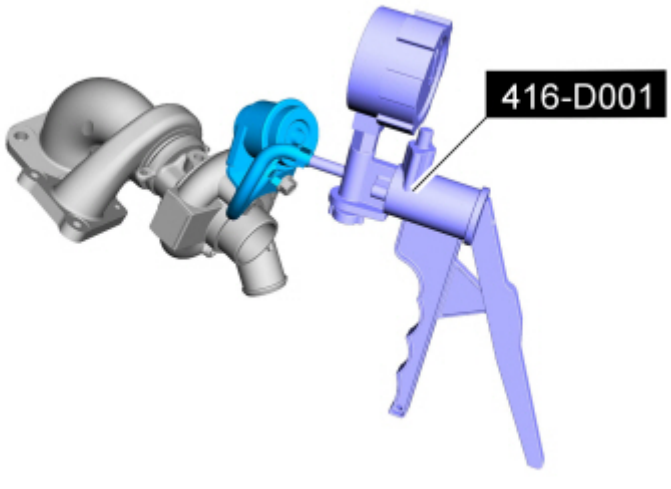
Yes	GO to Fuel Charging and Controls for further blue smoke diagnostics. REFER to: (303-04C Fuel Charging and Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) Fuel Charging and Controls (Diagnosis and Testing).
No	INSTALL a new turbocharger oil return tube. TEST the system for normal operation.

PINPOINT TEST D : POOR ENGINE PERFORMANCE - VEHICLES WITH FIXED VANE TURBOCHARGER.

D1 CHECK THE WASTEGATE ACTUATOR CONTROL LINE FOR BLOCKAGE

- Remove the wastegate actuator control line.
- Install the special tool to one end of the wastegate actuator control line.

E73312



- Operate the hand vacuum pump and observe the reading.

Is a reading present?

Yes	INSTALL a new wastegate actuator control line. TEST the system for normal operation.
No	GO to D2

D2 CHECK THE WASTEGATE ACTUATOR DIAPHRAGM FOR LEAKS

- Connect the free end of the wastegate control line to the wastegate actuator.

E73311

- Operate the hand vacuum pump and observe the reading.

Does the pump hold vacuum?

Yes	GO to Fuel Charging and Controls for further diagnostics. REFER to: (303-04B Fuel Charging and Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma) Fuel Charging and Controls (Diagnosis and Testing).
No	INSTALL a new turbocharger. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.

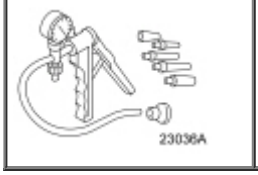
Turbocharger - Overview

Overview

NOTICE: Whenever turbocharger air intake system components are removed, always cover open ports to protect from debris. It is important that no foreign material enter the system. The turbocharger compressor vanes are susceptible to damage from even small particles. All components should be inspected and cleaned, if necessary, prior to installation or reassembly.



The turbocharger is an exhaust-driven centrifugal air compressor used to increase power output by supplying compressed air to the engine. The internal components are oil and air cooled. Engine oil and coolant are circulated through the center housing which acts as a heat barrier between the hot turbine and the cold compressor. Bearings are semi-floating journal and lubricated by engine oil. Oil is circulated to the turbocharger center housing and returned to the sump through an oil drain attached to the center housing.

The expanding exhaust gases drive the turbine shaft assembly to speeds up to 200,000 rpm. Filtered air entering the compressor side of the turbocharger is compressed and delivered through a CAC. The very hot compressed air is cooled by the CAC, then continues on to fill the intake manifold at a higher pressure than atmospheric pressure. Because more air is forced into the intake manifold, the results are increased power, fuel efficiency and the ability to maintain power at higher altitudes.

Inspection and Verification

NOTE: *The turbocharger uses engine oil as a lubricant and coolant. Due to the high operating temperatures of the turbocharger and with the expansion and contraction of the internal components a proportion of engine oil may enter the air intake system. This is not an indication that the turbocharger oil seal has failed. The turbocharger oil seal will not fail unless the bearings fail first, which will cause the turbocharger to become noisy. Do not install a new turbocharger due to oil inside the turbocharger or the air intake components. If a leak is detected in the supply or return tubes or connections, locate and rectify the source. Do not install a new turbocharger due to an oil leak.*

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

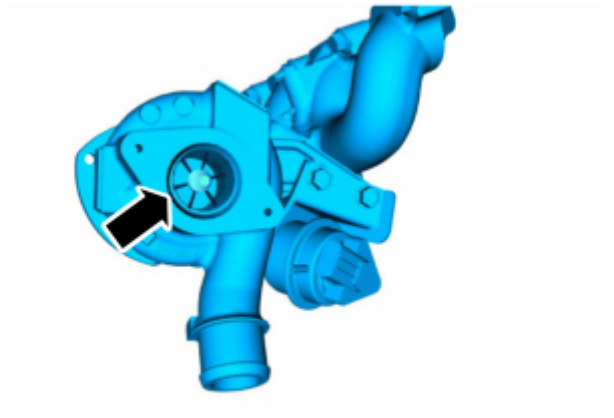
Visual Inspection Chart

Mechanical	Electrical
− Oil leak(s) − Air cleaner element − Air cleaner outlet pipe − Air cleaner intake pipe − Turbocharger oil supply tube − Turbocharger oil return tube − Wastegate control valve - vehicles with fixed vane turbocharger − Turbocharger housing − Charge air cooler − Charger air cooler intake pipe − Charger air cooler outlet pipe	− Wiring harness(es) − Electrical connector(s) − Variable vane electric actuator − PCM

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

NOTICE: The variable vane electric actuator must not be transferred between the old and new turbochargers. Failure to follow this instruction may result in incorrect calibration, exhaust emissions and engine operation.



NOTICE: On vehicles with a fixed vane turbocharger the wastegate control valve and actuator rod are fixed parts of the turbocharger and must not be adjusted or renewed separately.

Symptom	Possible Sources	Action
• Blue smoke with excessive turbocharger noise	• Turbocharger compressor rubbing on housing walls. • Turbocharger turbine rubbing on housing walls. • Turbocharger bearings and oil seal(s). • Turbocharger oil supply tube blocked or damaged.	• Vehicles with fixed vane turbocharger. GO to Pinpoint Test A Vehicles with variable vane turbocharger. GO to Pinpoint Test B
• Blue smoke without excessive turbocharger noise	• Turbocharger oil return tube blocked or damaged.	• GO to Pinpoint Test C
• Poor engine performance	• Charge air cooler system.	• CHECK the charge air cooler and charge air cooler pipe(s) for leaks and obstructions. REPAIR as necessary.
	• Air cleaner intake pipe.	• CHECK the air cleaner intake pipe for obstructions. REPAIR as necessary.
	• Unauthorized adjustment of the wastegate control valve actuator rod - vehicles with fixed vane turbocharger.	• The wastegate control valve actuator rod is factory set and must not be adjusted. CHECK the paint seal on the wastegate control valve actuator rod has not been broken. If the paint seal has been broken, INSTALL a new turbocharger. 	• Wastegate control valve actuator - vehicles with fixed vane turbocharger.	• GO to Pinpoint Test D
	• Variable vane electric actuator.	• REFER to the Ford diagnostic equipment.

Pinpoint Tests

PINPOINT TEST A : BLUE SMOKE WITH EXCESSIVE TURBOCHARGER NOISE - VEHICLES WITH FIXED VANE TURBOCHARGER

A1 INSPECT THE TURBOCHARGER ROTOR VANES FOR DAMAGE
• Disconnect the air cleaner outlet pipe from the turbocharger. • Inspect the turbocharger rotor vanes for damage.

E201976

Is there visible damage to the rotor vanes?

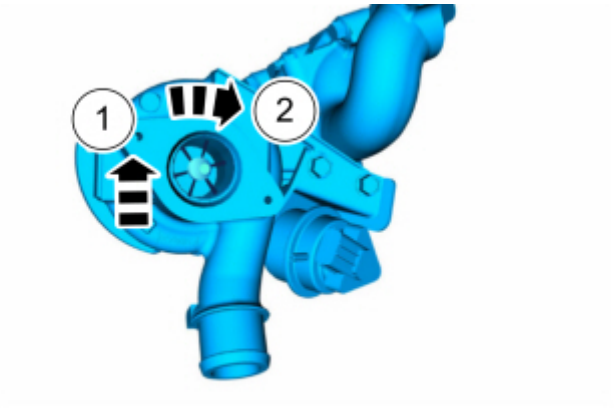
Yes	GO to A2
No	GO to A3

A2 CHECK FOR FOREIGN MATERIAL IN THE INTAKE AIR SYSTEM COMPONENTS

- Check the intake air system components for signs of foreign material.

Are there any signs of foreign material?

Yes	CLEAN the intake air system components. INSTALL a new turbocharger. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.
No	GO to A4



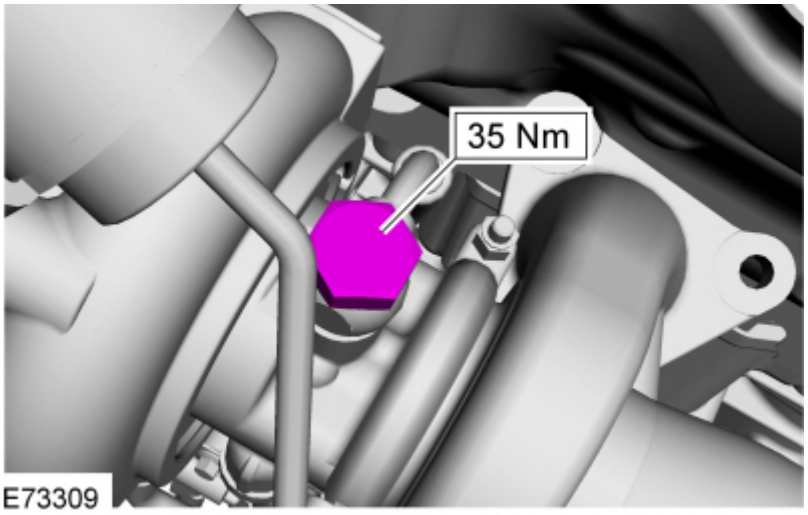
A3 CHECK THE TURBOCHARGER BEARINGS FOR EXCESSIVE MOVEMENT

NOTE: *A small amount of movement in the bearings is normal.*

NOTE: *The initial rotor rotation of a cold turbocharger may feel rough and uneven but should rotate freely after a few turns.*

- **NOTE:** *Make sure that the turbocharger rotor should be rotated by fingertips only and not any other tool.*

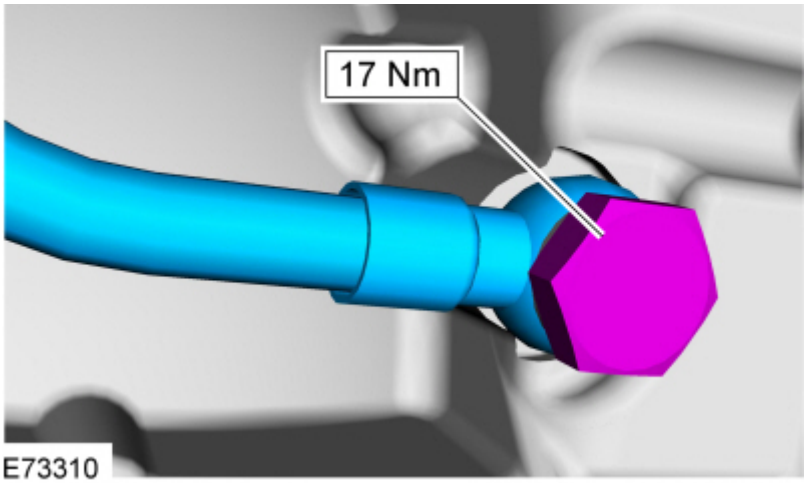
  Make sure that the turbocharger rotor spins freely within the housing.
  - 1. With the turbocharger stationary, gently lift the shaft (the shaft will naturally lay in the bottom of the bearings).
  - 2. Make sure that the rotor spins freely within the housing.



E201977

Does the rotor spin freely within the housing?

Yes	GO to A4
No	INSTALL a new turbocharger. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.



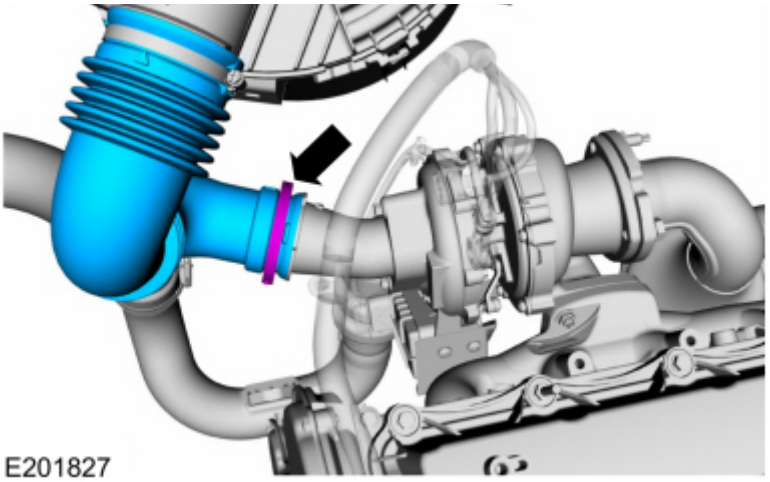
A4 CHECK THE TURBOCHARGER OIL SUPPLY TUBE FOR BLOCKAGE

- Disconnect the turbocharger oil supply tube from the turbocharger.

E73309

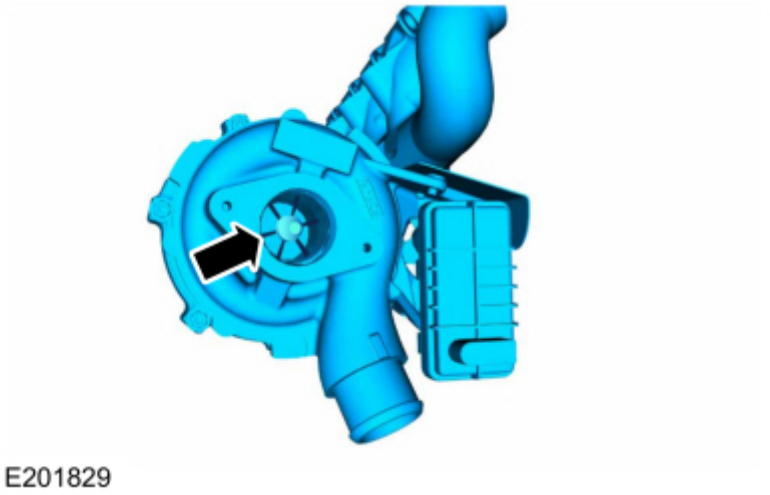
- Remove the turbocharger oil supply tube.

- Using workshop compressed air and a compressed air nozzle, check the oil supply tube for blockage.



Is the oil supply tube free from blockage?

Yes	INSTALL a new turbocharger. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.
No	INSTALL a new turbocharger and turbocharger oil supply tube. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.



PINPOINT TEST B : BLUE SMOKE WITH EXCESSIVE TURBOCHARGER NOISE - VEHICLES WITH VARIABLE VANE TURBOCHARGER

B1 INSPECT THE TURBOCHARGER ROTOR VANES FOR DAMAGE

- Disconnect the air cleaner outlet pipe from the turbocharger.

- Inspect the turbocharger rotor vanes for damage.

Is there visible damage to the rotor vanes?

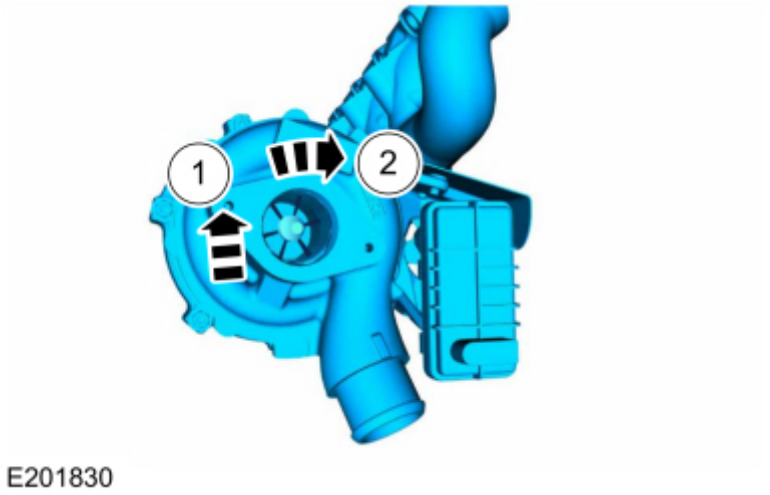
Yes	GO to B2
No	GO to B3

B2 CHECK FOR FOREIGN MATERIAL IN THE INTAKE AIR SYSTEM COMPONENTS

- Check the intake air system components for signs of foreign material.

Are there any signs of foreign material?

Yes	CLEAN the intake air system components. INSTALL a new turbocharger. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.
No	GO to B4



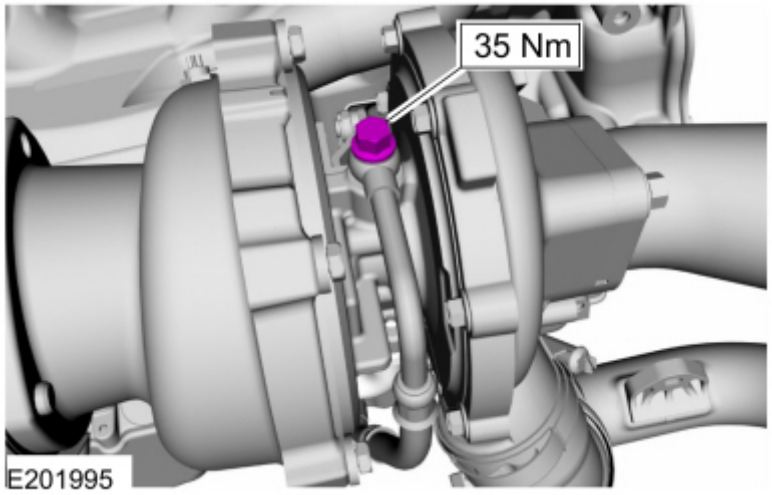
B3 CHECK THE TURBOCHARGER BEARINGS FOR EXCESSIVE MOVEMENT

NOTE: *A small amount of movement in the bearings is normal.*

NOTE: *The initial rotor rotation of a cold turbocharger may feel rough and uneven but should rotate freely after a few turns.*

- **NOTE:** *Make sure that the turbocharger rotor should be rotated by fingertips only and not any other tool.*

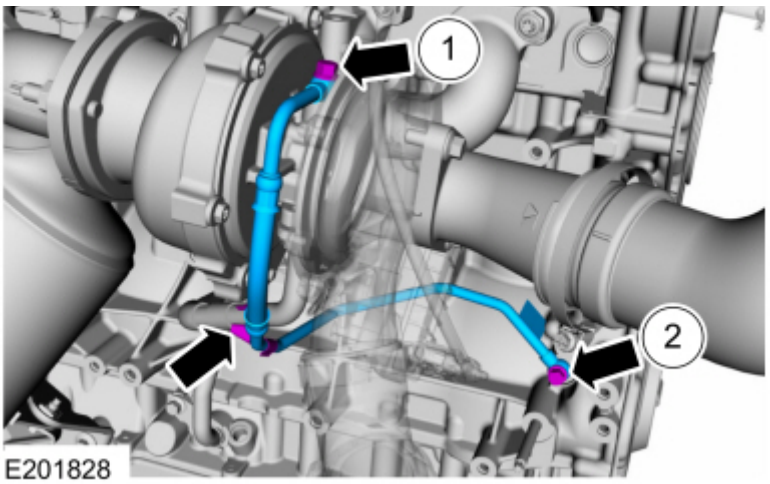
  Make sure the turbocharger rotor spins freely within the housing.
  - 1. With the turbocharger stationary, gently lift the shaft (the shaft will naturally lay in the bottom of the bearings).
  - 2. Make sure the rotor spins freely within the housing.



E201830

Does the rotor spin freely within the housing?

Yes	GO to B4
No	INSTALL a new turbocharger. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.



B4 CHECK THE TURBOCHARGER OIL SUPPLY TUBE FOR BLOCKAGE

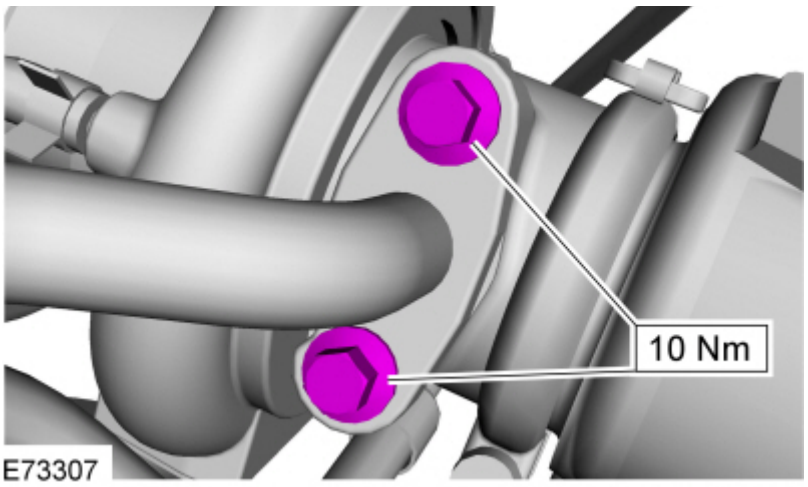
- Disconnect the turbocharger oil supply tube from the turbocharger.

E201995

- Remove the turbocharger oil supply tube.

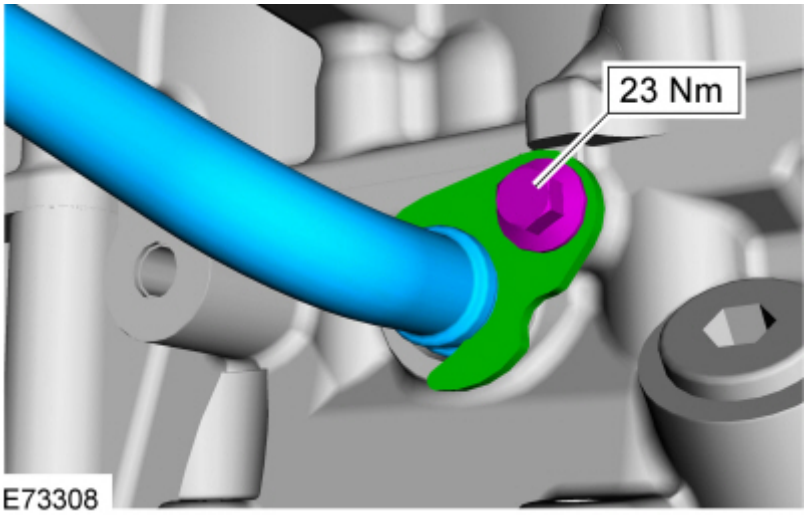
- Using workshop compressed air and a compressed air nozzle, check the oil supply tube for blockage.

Is the oil supply tube free from blockage?



Yes	INSTALL a new turbocharger. REFER to: Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
No	INSTALL a new turbocharger and turbocharger oil supply tube. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.

PINPOINT TEST C : BLUE SMOKE WITHOUT EXCESSIVE TURBOCHARGER NOISE

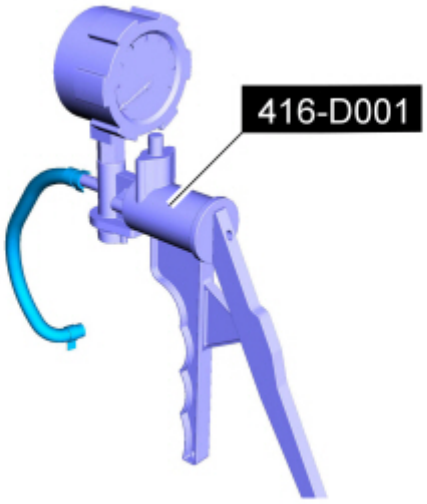


C1 CHECK THE TURBOCHARGER OIL RETURN TUBE

- Disconnect the turbocharger oil return tube from the turbocharger.

- Remove the turbocharger oil return tube.

- Check the turbocharger oil return tube for a blockage or signs of damage.



Is the turbocharger oil return tube blocked?

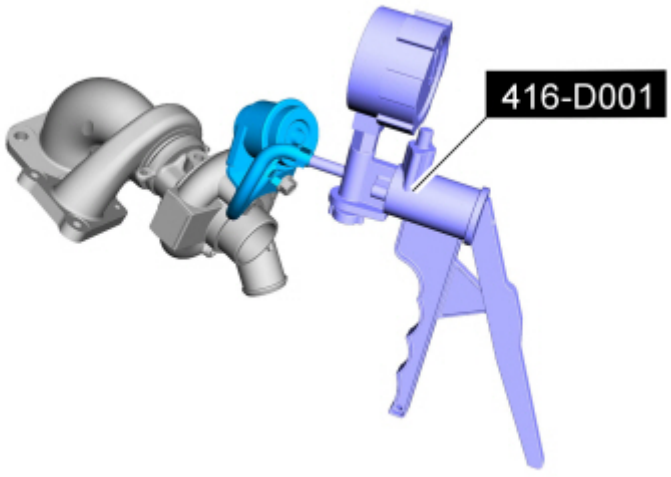
Yes	GO to Fuel Charging and Controls for further blue smoke diagnostics. REFER to: (303-04C Fuel Charging and Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) Fuel Charging and Controls (Diagnosis and Testing).
No	INSTALL a new turbocharger oil return tube. TEST the system for normal operation.

PINPOINT TEST D : POOR ENGINE PERFORMANCE - VEHICLES WITH FIXED VANE TURBOCHARGER.

D1 CHECK THE WASTEGATE ACTUATOR CONTROL LINE FOR BLOCKAGE

- Remove the wastegate actuator control line.
- Install the special tool to one end of the wastegate actuator control line.

E73312



- Operate the hand vacuum pump and observe the reading.

Is a reading present?

Yes	INSTALL a new wastegate actuator control line. TEST the system for normal operation.
No	GO to D2

D2 CHECK THE WASTEGATE ACTUATOR DIAPHRAGM FOR LEAKS

- Connect the free end of the wastegate control line to the wastegate actuator.

E73311

- Operate the hand vacuum pump and observe the reading.

Does the pump hold vacuum?

Yes	GO to Fuel Charging and Controls for further diagnostics. REFER to: (303-04B Fuel Charging and Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma) Fuel Charging and Controls (Diagnosis and Testing).
No	INSTALL a new turbocharger. REFER to: (303-04D Fuel Charging and Controls - Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma) Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma (Removal and Installation), Turbocharger - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Emission Requirements: EURO Stage V LDT (Removal and Installation). TEST the system for normal operation.

Accessory Drive

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical damage.

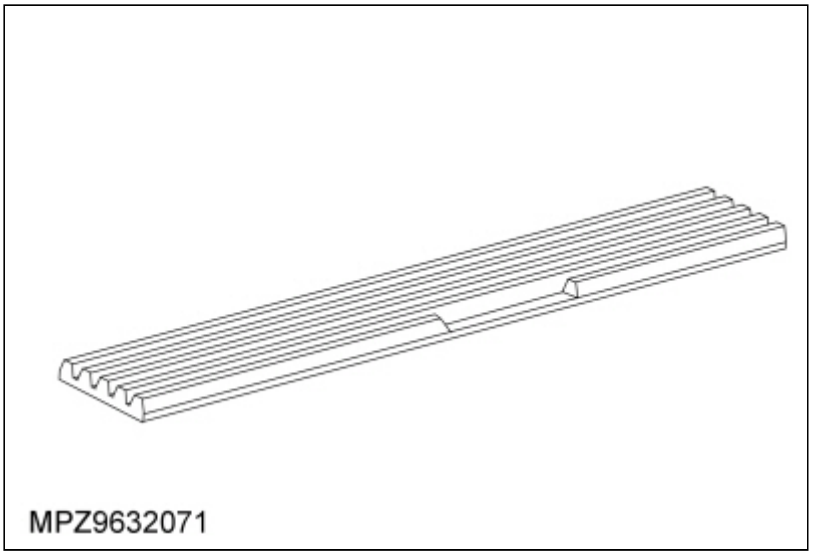
Visual Inspection Chart

Mechanical
– Damaged or contaminated accessory drive belt – Damaged or contaminated pulley(s) – Incorrect accessory drive belt – Incorrect installation of the accessory drive belt – Accessory drive belt tensioner – Accessory drive belt idler pulley(s) – Generator – Coolant pump – Power steering pump – Power steering pump leakage – Air conditioning (A/C) compressor – Pulley(s) – Loose hardware

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

Accessory Drive Belt Concerns

NOTICE: Do not lubricate the accessory drive belt, accessory drive belt tensioner or idler pulley(s) as potential damage to the accessory drive belt material construction, accessory drive belt tensioner damping mechanism, accessory drive belt tensioner pulley bearing and idler pulley(s) bearing may occur.

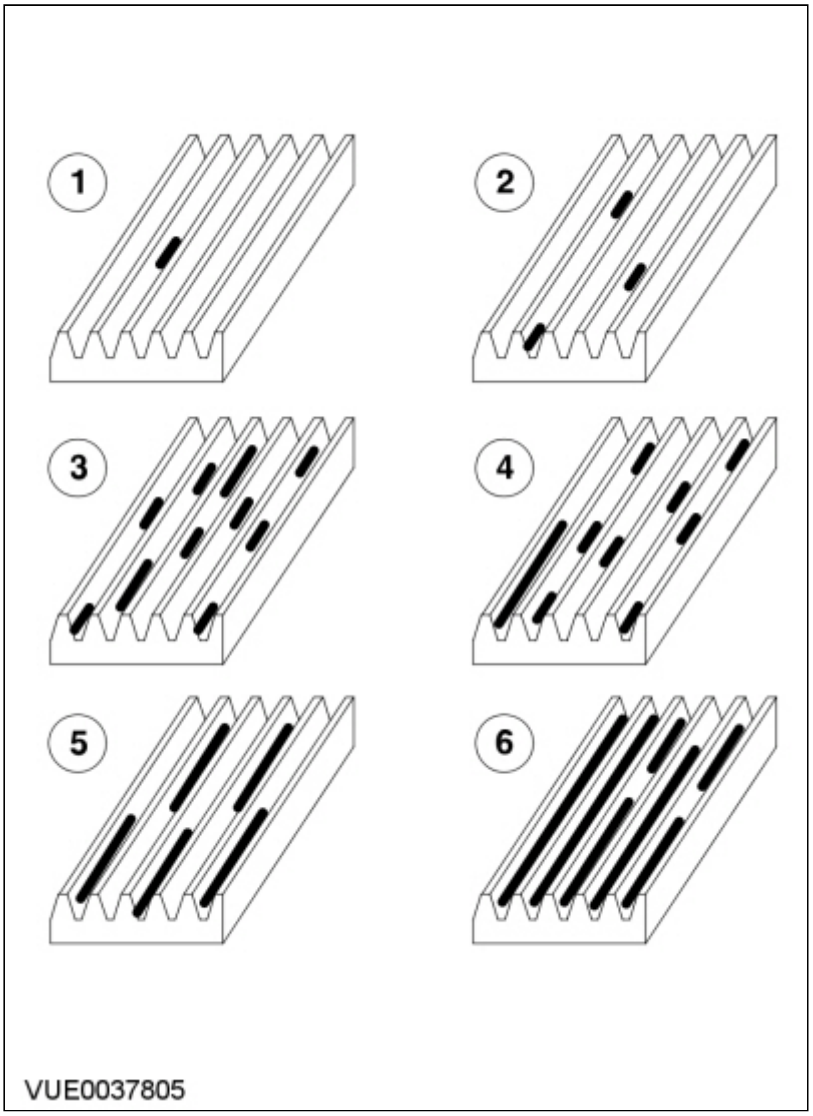


Cracking

Accessory drive belts are made from rubber which hardens with time and can develop cracks. As the accessory drive belt runs on the back of some of the pulleys, the cracks are opened up. Small cracks are not considered to be a failure of the accessory drive belt. Only if the crack is deep enough to reach the bottom of the groove to expose the cord or any chunks are found to be missing from the accessory drive belt, is the accessory drive belt condition considered to be unacceptable.

1. Check the accessory drive belt for cracks. If the damage exceeds the acceptable limit, install a new accessory drive belt.
   REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

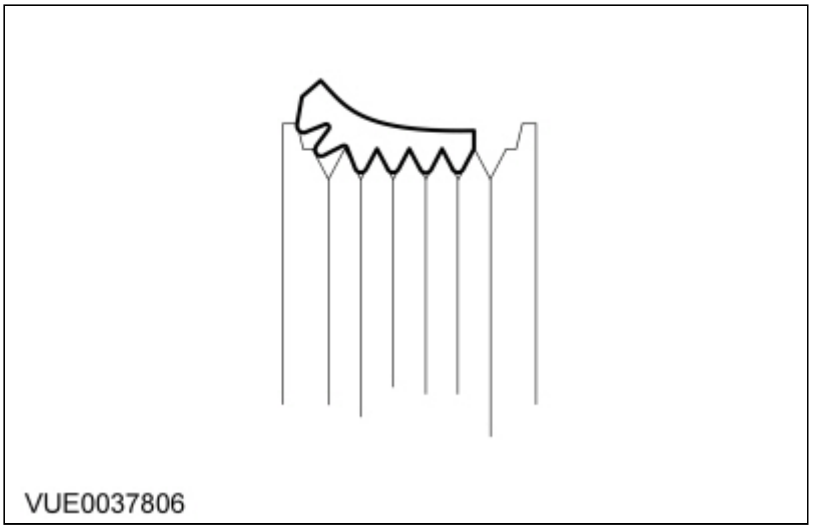
Chunking



Chunking describes the condition where long lengths of rubber become detached from the ribs of the accessory drive belt. This is considered to be a failure of the accessory drive belt.

2. Check the accessory drive belt for damage. If any chunks are found to be missing, install a new accessory drive belt.
   REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

Pilling



Pilling is dust that forms in between the ribs of the accessory drive belt from rubber that is worn off the accessory drive belt when it is new. There may also be loose particles left on the accessory drive belt during the manufacturing process. These are worn off and form into small balls of rubber that then get trapped in the grooves of the accessory drive belt. This condition will usually clear itself within 4800 km - 8000 km (3000 miles - 5000 miles) of normal driving.

3. Check the accessory drive belt for pilling. The condition of the accessory drive belt should be compared against the illustration.
    1. Small scattered pills. Not considered a concern. No action required.
    2. Small scattered pills. Not considered a concern. No action required.
    3. Longer pills up to 50% of the rib height. Possible noise concern. INSTALL a new accessory drive belt if noise is apparent.
       REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
    4. Longer pills up to 50% of the rib height. Possible noise concern. INSTALL a new accessory drive belt if noise is apparent.
       REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
    5. Heavy deposits in the grooves. Possible noise and stability concern. INSTALL a new accessory drive belt.
       REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
    6. Heavy deposits in the grooves. Possible noise and stability concern. INSTALL a new accessory drive belt.
       REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

Incorrect installation

Accessory drive belt noise can be generated by the accessory drive belt being incorrectly fitted on the pulley as shown in the following illustration. Make sure that all the V grooves on the accessory drive belt contact correctly with the pulley.

4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Sources	Action
• Accessory drive belt noise	• Accessory drive system	• CHECK the system with the engine running and the accessory drive belt removed (only run the engine for a very short period). If a noise is apparent, the cause is not the accessory drive system. If a noise is not apparent, the cause is the accessory drive system. CHECK where the noise is coming from. Use a stethoscope or other listening device to determine the source of

		the noise. INSTALL new components as necessary. TEST the system for normal operation.
	• Accessory drive belt incorrectly installed.	• CHECK the accessory drive belt is correctly installed in the pulley grooves. INSTALL a new accessory drive belt as necessary. REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). TEST the system for normal operation.
	• Pulley(s).	• CHECK the pulley(s) for damage, freedom of rotation, stone entrapment and alignment. INSTALL new components as necessary. TEST the system for normal operation.
	• Lubricant or other contamination.	• CHECK the accessory drive belt for contamination or damage. RECTIFY the source of the leak and INSTALL a new accessory drive belt. REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). TEST the system for normal operation.
• **NOTE:** *Squeal is defined as a continuous shriek, most noticeable when the engine is being accelerated or with electrical load.* • Accessory drive belt squeal	• Accessory drive belt tensioner worn, damaged or contaminated with oil.	• CHECK the accessory drive belt tensioner for correct operation, damage or contamination. REFER to the Accessory Drive Belt Tensioner Component Test in this procedure. INSTALL a new accessory drive belt tensioner as necessary. REFER to: Accessory Drive Belt Tensioner (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). TEST the system for normal operation.
• **NOTE:** *Whine is defined as a continuous noise at the same frequency, generally associated with plastic pulleys.* • Accessory drive belt whine	• Poor surface finish on accessory drive belt idler pulley flat surface(s).	• REMOVE the accessory drive belt. REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). INSPECT the idler pulley(s) for surface finish. INSTALL a new idler pulley(s) as necessary. TEST the system for normal operation.
	• Accessory drive belt idler pulley bearing failure.	• REMOVE the accessory drive belt. REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). INSPECT the idler pulley(s) for smooth rotation. INSTALL a new idler pulley(s) as necessary. TEST the system for normal operation.
• **NOTE:** *Chirp is defined as a twittering noise, often intermittent* • Accessory drive belt chirp	• Pulley misalignment (usually evident at idle).	• CHECK that the accessory drive belt is running centrally on the flat pulleys. TEST the system for normal operation. • CHECK the pulleys for excessive end float and bent flanges. • With the engine running at idle, use a stethoscope to identify the source of the noise. INSTALL new components as necessary. TEST the system for normal operation.
• **NOTE:** *Rattle is*	• Accessory	• CHECK the accessory drive belt tensioner for correct operation

defined as a metallic knocking noise • Accessory drive belt rattle	drive belt tensioner hitting the end stops.	or damage. REFER to the Accessory Drive Belt Tensioner Component Test in this procedure. INSTALL a new accessory drive belt tensioner as necessary. REFER to: Accessory Drive Belt Tensioner (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). TEST the system for normal operation.
	• Loose components or hardware.	• CHECK the components or hardware for correct installation and tighten as necessary. TEST the system for normal operation.

Component Tests

Accessory Drive Belt Tensioner - Static Check

The accessory drive belt tensioner may be checked statically as follows:

1. Inspect the area surrounding the accessory drive belt tensioner for lubricant or other contamination. Rectify any leaks before installing a new accessory drive belt tensioner. If the accessory drive belt tensioner is contaminated, do not attempt to clean it as the damping mechanism inside may be damaged. INSTALL a new accessory drive belt tensioner as necessary.
   REFER to: Accessory Drive Belt Tensioner (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
   TEST the system for normal operation.

2. Detach the accessory drive belt in the area of the accessory drive belt tensioner.

3. **NOTE:** *The accessory drive belt tensioner has a damping feature, which is usually a friction device, therefore some friction within the system is normal.*

   Using the correct tool, move the accessory drive belt tensioner from its relaxed position through its full stroke and back to the relaxed position to make sure there is no excessive stick, grab or bind, and to make sure there is tension on the accessory drive belt tensioner spring.

4. Rotate the accessory drive belt tensioner pulley and check for damage, freedom of rotation and alignment. INSTALL a new accessory drive belt tensioner as necessary.
   REFER to: Accessory Drive Belt Tensioner (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
   TEST the system for normal operation.

5. If the accessory drive belt tensioner meets the above criteria, proceed to test the accessory drive belt tensioner dynamically. If the accessory drive belt tensioner does not meet the above criteria, INSTALL a new accessory drive belt tensioner.
   REFER to: Accessory Drive Belt Tensioner (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
   TEST the system for normal operation.

Accessory Drive Belt Tensioner - Dynamic Check

The accessory drive belt tensioner may be checked dynamically as follows:

1. With the engine running, observe the accessory drive belt tensioner movement. The accessory drive belt tensioner should move (respond) when the engine is accelerated rapidly or when the A/C clutch cycles ON and OFF (the degree of movement can be up to 4 mm). If the accessory drive belt tensioner movement is not constant without engine acceleration or A/C clutch cycling, a pulley or shaft is possibly bent, out of round, or the damping mechanism inside the accessory drive belt tensioner may be damaged. INSTALL a new accessory drive belt tensioner as necessary.
   REFER to: Accessory Drive Belt Tensioner (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
   TEST the system for normal operation.

2. Excessive accessory drive belt rideout (uneven depth of grooves in the accessory drive belt) may cause excessive accessory drive belt tensioner movement. Check the condition by installing a new accessory drive

belt.
REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
TEST the system for normal operation.

Accessory Drive

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical damage.

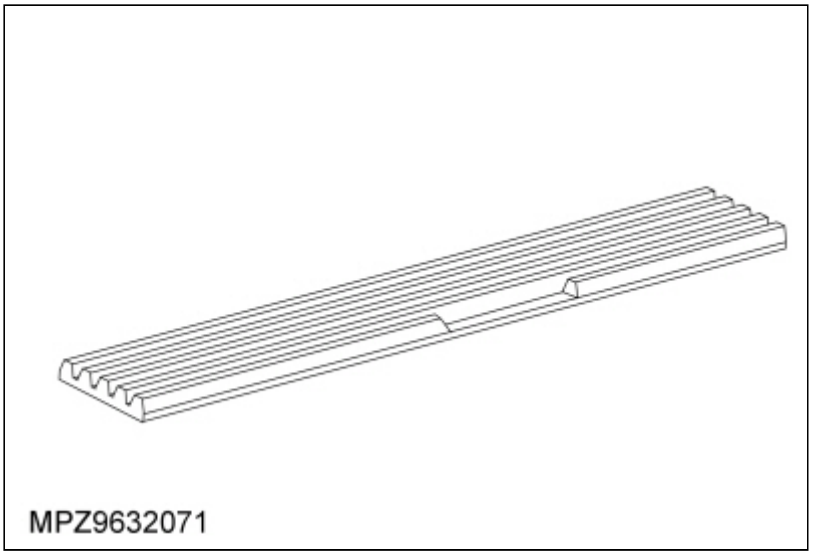
Visual Inspection Chart

Mechanical
– Damaged or contaminated accessory drive belt – Damaged or contaminated pulley(s) – Incorrect accessory drive belt – Incorrect installation of the accessory drive belt – Accessory drive belt tensioner – Accessory drive belt idler pulley(s) – Generator – Coolant pump – Power steering pump – Power steering pump leakage – Air conditioning (A/C) compressor – Pulley(s) – Loose hardware

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

Accessory Drive Belt Concerns

NOTICE: Do not lubricate the accessory drive belt, accessory drive belt tensioner or idler pulley(s) as potential damage to the accessory drive belt material construction, accessory drive belt tensioner damping mechanism, accessory drive belt tensioner pulley bearing and idler pulley(s) bearing may occur.

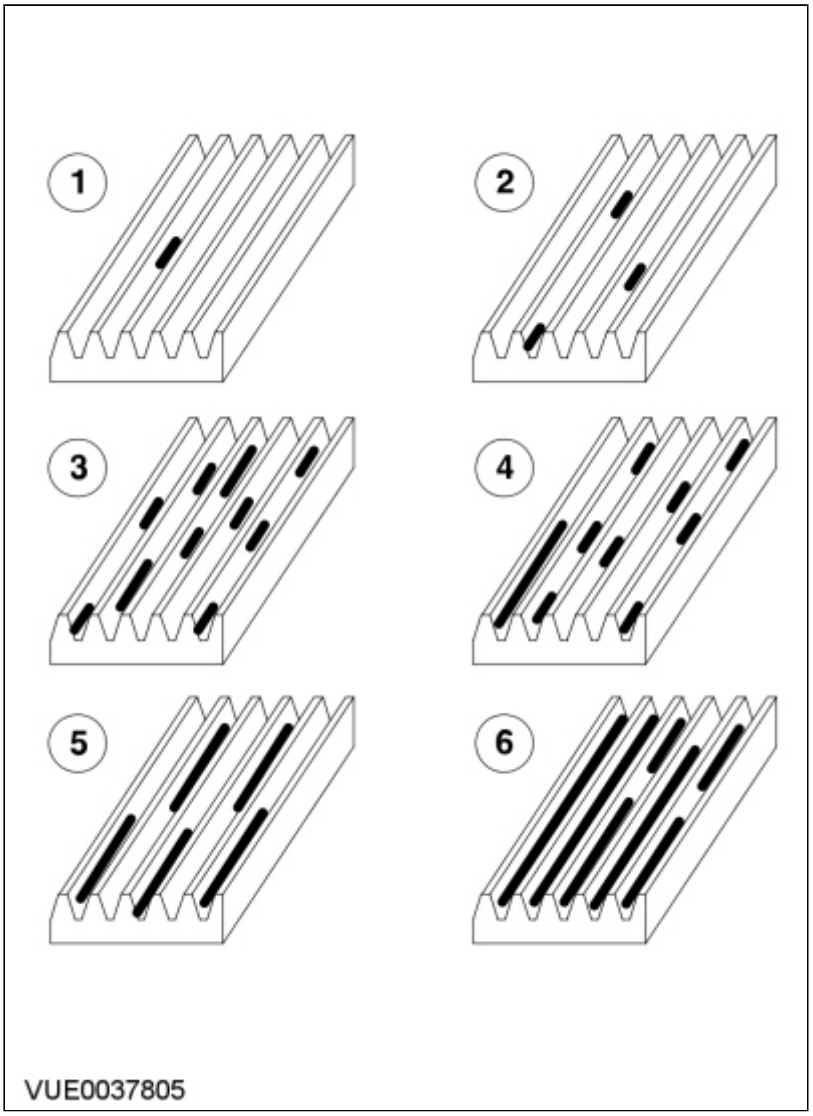


Cracking

Accessory drive belts are made from rubber which hardens with time and can develop cracks. As the accessory drive belt runs on the back of some of the pulleys, the cracks are opened up. Small cracks are not considered to be a failure of the accessory drive belt. Only if the crack is deep enough to reach the bottom of the groove to expose the cord or any chunks are found to be missing from the accessory drive belt, is the accessory drive belt condition considered to be unacceptable.

1. Check the accessory drive belt for cracks. If the damage exceeds the acceptable limit, install a new accessory drive belt.
   REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

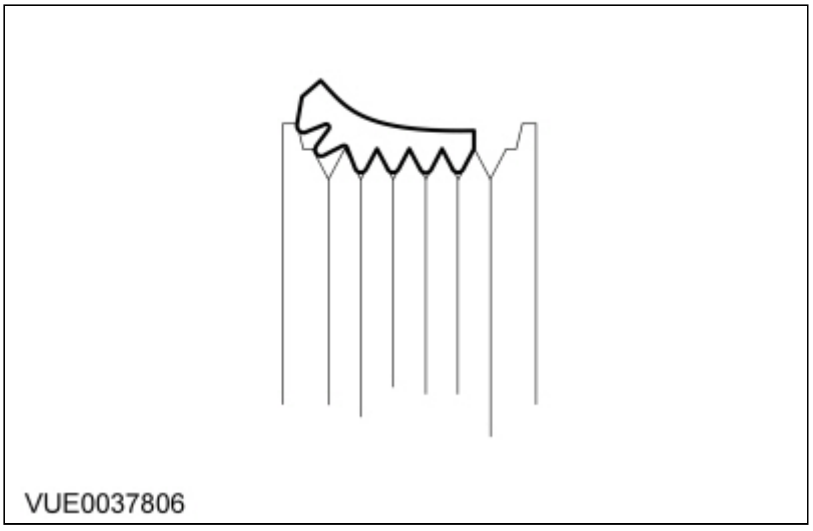
Chunking



Chunking describes the condition where long lengths of rubber become detached from the ribs of the accessory drive belt. This is considered to be a failure of the accessory drive belt.

2. Check the accessory drive belt for damage. If any chunks are found to be missing, install a new accessory drive belt.
   REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

Pilling



Pilling is dust that forms in between the ribs of the accessory drive belt from rubber that is worn off the accessory drive belt when it is new. There may also be loose particles left on the accessory drive belt during the manufacturing process. These are worn off and form into small balls of rubber that then get trapped in the grooves of the accessory drive belt. This condition will usually clear itself within 4800 km - 8000 km (3000 miles - 5000 miles) of normal driving.

3. Check the accessory drive belt for pilling. The condition of the accessory drive belt should be compared against the illustration.
    1. Small scattered pills. Not considered a concern. No action required.
    2. Small scattered pills. Not considered a concern. No action required.
    3. Longer pills up to 50% of the rib height. Possible noise concern. INSTALL a new accessory drive belt if noise is apparent.
       REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
    4. Longer pills up to 50% of the rib height. Possible noise concern. INSTALL a new accessory drive belt if noise is apparent.
       REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
    5. Heavy deposits in the grooves. Possible noise and stability concern. INSTALL a new accessory drive belt.
       REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
    6. Heavy deposits in the grooves. Possible noise and stability concern. INSTALL a new accessory drive belt.
       REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

Incorrect installation

Accessory drive belt noise can be generated by the accessory drive belt being incorrectly fitted on the pulley as shown in the following illustration. Make sure that all the V grooves on the accessory drive belt contact correctly with the pulley.

4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Sources	Action
• Accessory drive belt noise	• Accessory drive system	• CHECK the system with the engine running and the accessory drive belt removed (only run the engine for a very short period). If a noise is apparent, the cause is not the accessory drive system. If a noise is not apparent, the cause is the accessory drive system. CHECK where the noise is coming from. Use a stethoscope or other listening device to determine the source of

		the noise. INSTALL new components as necessary. TEST the system for normal operation.
	• Accessory drive belt incorrectly installed.	• CHECK the accessory drive belt is correctly installed in the pulley grooves. INSTALL a new accessory drive belt as necessary. REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). TEST the system for normal operation.
	• Pulley(s).	• CHECK the pulley(s) for damage, freedom of rotation, stone entrapment and alignment. INSTALL new components as necessary. TEST the system for normal operation.
	• Lubricant or other contamination.	• CHECK the accessory drive belt for contamination or damage. RECTIFY the source of the leak and INSTALL a new accessory drive belt. REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). TEST the system for normal operation.
• **NOTE:** *Squeal is defined as a continuous shriek, most noticeable when the engine is being accelerated or with electrical load.* • Accessory drive belt squeal	• Accessory drive belt tensioner worn, damaged or contaminated with oil.	• CHECK the accessory drive belt tensioner for correct operation, damage or contamination. REFER to the Accessory Drive Belt Tensioner Component Test in this procedure. INSTALL a new accessory drive belt tensioner as necessary. REFER to: Accessory Drive Belt Tensioner (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). TEST the system for normal operation.
• **NOTE:** *Whine is defined as a continuous noise at the same frequency, generally associated with plastic pulleys.* • Accessory drive belt whine	• Poor surface finish on accessory drive belt idler pulley flat surface(s).	• REMOVE the accessory drive belt. REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). INSPECT the idler pulley(s) for surface finish. INSTALL a new idler pulley(s) as necessary. TEST the system for normal operation.
	• Accessory drive belt idler pulley bearing failure.	• REMOVE the accessory drive belt. REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). INSPECT the idler pulley(s) for smooth rotation. INSTALL a new idler pulley(s) as necessary. TEST the system for normal operation.
• **NOTE:** *Chirp is defined as a twittering noise, often intermittent* • Accessory drive belt chirp	• Pulley misalignment (usually evident at idle).	• CHECK that the accessory drive belt is running centrally on the flat pulleys. TEST the system for normal operation. • CHECK the pulleys for excessive end float and bent flanges. • With the engine running at idle, use a stethoscope to identify the source of the noise. INSTALL new components as necessary. TEST the system for normal operation.
• **NOTE:** *Rattle is*	• Accessory	• CHECK the accessory drive belt tensioner for correct operation

defined as a metallic knocking noise • Accessory drive belt rattle	drive belt tensioner hitting the end stops.	or damage. REFER to the Accessory Drive Belt Tensioner Component Test in this procedure. INSTALL a new accessory drive belt tensioner as necessary. REFER to: Accessory Drive Belt Tensioner (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). TEST the system for normal operation.
	• Loose components or hardware.	• CHECK the components or hardware for correct installation and tighten as necessary. TEST the system for normal operation.

Component Tests

Accessory Drive Belt Tensioner - Static Check

The accessory drive belt tensioner may be checked statically as follows:

1. Inspect the area surrounding the accessory drive belt tensioner for lubricant or other contamination. Rectify any leaks before installing a new accessory drive belt tensioner. If the accessory drive belt tensioner is contaminated, do not attempt to clean it as the damping mechanism inside may be damaged. INSTALL a new accessory drive belt tensioner as necessary.
   REFER to: Accessory Drive Belt Tensioner (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
   TEST the system for normal operation.

2. Detach the accessory drive belt in the area of the accessory drive belt tensioner.

3. **NOTE:** *The accessory drive belt tensioner has a damping feature, which is usually a friction device, therefore some friction within the system is normal.*

   Using the correct tool, move the accessory drive belt tensioner from its relaxed position through its full stroke and back to the relaxed position to make sure there is no excessive stick, grab or bind, and to make sure there is tension on the accessory drive belt tensioner spring.

4. Rotate the accessory drive belt tensioner pulley and check for damage, freedom of rotation and alignment. INSTALL a new accessory drive belt tensioner as necessary.
   REFER to: Accessory Drive Belt Tensioner (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
   TEST the system for normal operation.

5. If the accessory drive belt tensioner meets the above criteria, proceed to test the accessory drive belt tensioner dynamically. If the accessory drive belt tensioner does not meet the above criteria, INSTALL a new accessory drive belt tensioner.
   REFER to: Accessory Drive Belt Tensioner (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
   TEST the system for normal operation.

Accessory Drive Belt Tensioner - Dynamic Check

The accessory drive belt tensioner may be checked dynamically as follows:

1. With the engine running, observe the accessory drive belt tensioner movement. The accessory drive belt tensioner should move (respond) when the engine is accelerated rapidly or when the A/C clutch cycles ON and OFF (the degree of movement can be up to 4 mm). If the accessory drive belt tensioner movement is not constant without engine acceleration or A/C clutch cycling, a pulley or shaft is possibly bent, out of round, or the damping mechanism inside the accessory drive belt tensioner may be damaged. INSTALL a new accessory drive belt tensioner as necessary.
   REFER to: Accessory Drive Belt Tensioner (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
   TEST the system for normal operation.

2. Excessive accessory drive belt rideout (uneven depth of grooves in the accessory drive belt) may cause excessive accessory drive belt tensioner movement. Check the condition by installing a new accessory drive

belt.
REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
TEST the system for normal operation.

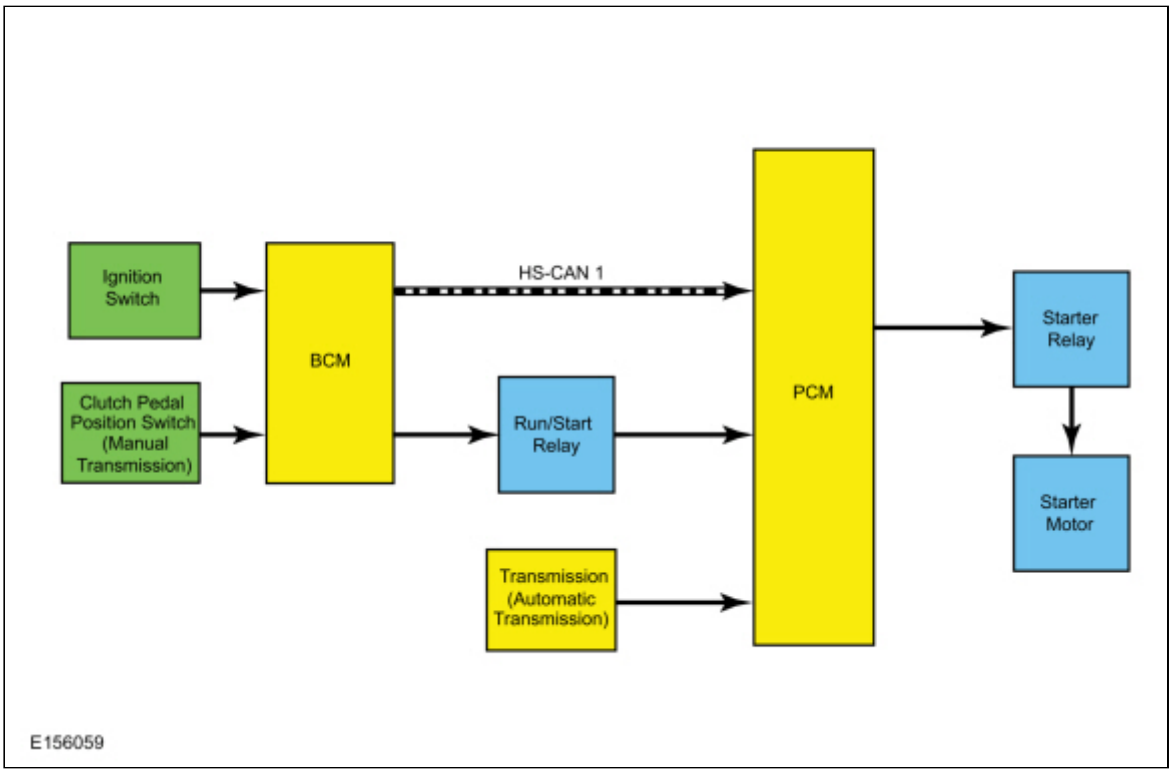
Starting System - Overview

Starting System



The starting system controls the cranking of the engine. The starter motor is enabled by the starter relay when the relay is activated by the PCM. The PCM receives inputs from the ignition switch, transmission and the BCM before activating the starter relay to initiate cranking of the engine.

Copyright © 2016 Ford Motor Company

Starting System - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

Module Network Input Messages Powertrain Control Module (PCM)

Broadcast Message	Originating Module	Message Purpose
Ignition status	BCM	Provides the PCM with ignition mode.

Starting System

This vehicle is equipped with a PATS that disables the engine from starting if an unprogrammed PATS key is used or an invalid PCM ID is received. The PATS is controlled by the BCM. If there is a PATS concern that disables the engine, the IPC displays the corresponding message in the message center.
Refer to: Perimeter Anti-Theft Alarm - System Operation and Component Description (419-01A Perimeter Anti-Theft Alarm, Description and Operation).

Under normal operation, when the ignition is turned to START, the PCM receives the following inputs:

- Request to crank engine message from the BCM
- PATS enable message from the BCM
- Voltage from the run/start relay
- Correct transmission park or neutral input from the automatic transmission

When the PCM receives the correct inputs, voltage and ground is supplied to the starter relay coil. When the starter relay coil is energized, it provides voltage to the starter solenoid, allowing the starter motor to crank the engine.

The PCM disengages the starter once an engine Revolutions Per Minute (RPM) threshold is reached, a set crank time is exceeded or the ignition is turned OFF.

Component Description

Integrated Keyhead Transmitter (IKT)

Refer to: Perimeter Anti-Theft Alarm - System Operation and Component Description (419-01A Perimeter Anti-Theft Alarm, Description and Operation).

Passive Anti-Theft Transceiver

Refer to: Passive Anti-Theft System (PATS) - System Operation and Component Description (419-01B Passive Anti-Theft System (PATS), Description and Operation).

Ignition Switch

Refer to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches) .

Powertrain Control Module (PCM)

The PCM provides power and ground to the starter relay to initiate cranking of the engine.

Inspection and Verification

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

1. Verify the customer concern.
2. Check the battery for loose, damaged or corroded connections.
3. Check the starter for loose, damaged or corroded connections.
4. Check the battery condition and state of charge.
   REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).
5. Remove the accessory drive belt.
   REFER to: Accessory Drive Belt (303-05A Accessory Drive - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
   Verify the crankshaft and each of the components driven by the accessory drive belt rotate and are not seized or damaged.
6. If any aftermarket accessories have been added to the vehicle, make sure they are properly wired.
7. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding.

DTC Charts

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

PCM DTC Chart

DTC	Description	Action
P06E9	Engine Starter Performance	If the engine cranks, Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual. If the engine does not crank, GO to Pinpoint Test A
P0830	Clutch Pedal "A" Circuit	GO to Pinpoint Test A
P162F	Starter Motor Disabled - Engine Crank Time Too Long	This DTC sets in the PCM when the engine has been cranked for more than a total of 60 seconds without allowing sufficient time for the starter to cool. Diagnose all other DTCs and symptoms. Check the charging system voltage and correct as necessary. Clear the DTC.
P2535	Ignition Switch Run/Start Position Circuit High	GO to Pinpoint Test C
All Other DTCs	-	REFER to: Electronic Engine Controls - Vehicles Built From: 17-08-2015 (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) .

BCM DTC Chart

DTC	Description	Action
C113A:11	PCM Wake-up Signal: Circuit Short to Ground	REFER to: Passive Anti-Theft System (PATS) (419-01B Passive Anti-Theft System (PATS), Diagnosis and Testing).
C113A:15	PCM Wake-up Signal: Circuit Short to Battery or Open	REFER to: Passive Anti-Theft System (PATS) (419-01B Passive Anti-Theft System (PATS), Diagnosis and Testing).
All Other DTCs	-	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).

Symptom Chart(s)

Symptom Chart: Starting System

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
The engine does not crank	Refer to the Pinpoint Test.	GO to Pinpoint Test A
The engine cranks slowly	Refer to the Pinpoint	PERFORM the starter system component test. REFER to Starter Motor - Positive Circuit Test in this

The engine cranks slowly	Refer to the Pinpoint Test.	PERFORM the starter system component test. REFER to Starter Motor - Positive Circuit Test in this section.
The engine cranks but will not start	• Fuses • PCM • Fuel pump • Fuel pump relay • Run/start relay • Starter • Wiring	Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
Unusual starter noise	Refer to the Pinpoint Test.	GO to Pinpoint Test B
The starter spins but the engine does not crank	Starter motor	INSPECT the starter motor mounting and engagement. REPAIR as necessary.
	Damaged flexplate	INSPECT the flexplate for damaged, missing or worn teeth. REPAIR as necessary.
The starter does not disengage from the flexplate	• Starter relay • Wiring, terminals or connectors	REMOVE the starter relay. If the engine stops cranking, INSTALL a new relay. If the engine continues to crank, REPAIR circuit CBB13 (GY/BN) for a short to voltage.

Pinpoint Test(s)

Engine Does Not Crank

Refer to Wiring Diagrams Cell 20 for schematic and connector information.

Normal Operation and Fault Conditions

REFER to: Starting System - System Operation and Component Description (303-06A Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P06E9	Engine Starter Performance	No engine rotation detected during crank event.
P0830	Clutch Pedal "A" Circuit	Sets when the PCM receives vehicle speed input, indicating vehicle movement and does not detect the switching input from the clutch pedal position switch.

Possible Sources

- Battery
- Battery cables
- Starter motor
- BJB starter relay

Visual Inspection and Diagnostic Pre-checks

- Inspect the Run/start relay.
- Inspect the high current BJB connections.
- Verify the BJB fuse 13 (20A).
- Verify the BCM fuse 78 (5A).
- Inspect the Integrated Keyhead Transmitter (IKT).

PINPOINT TEST A : ENGINE DOES NOT CRANK

NOTE: *Make sure battery voltage is greater than 12.2 volts prior to and during this pinpoint test.*

NOTE: *Do not have a battery charger attached during vehicle testing.*

A1 PERFORM INSPECTION AND VERIFICATION

- Perform Inspection and Verification procedure in this section.

Was an obvious cause for an observed or reported concern found?

Yes	Correct the cause as necessary.
No	GO to A2

A2 VERIFY THE BCM (BODY CONTROL MODULE) AND PCM (POWERTRAIN CONTROL MODULE) PASS THE NETWORK TEST

- Ignition ON.
- Using a diagnostic scan tool, perform the Network Test.

Did the BCM and PCM pass the Network Test?

Yes	GO to A3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

A3 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, perform BCM and PCM self-tests.

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	For all BCM Diagnostic Trouble Codes (DTCs), refer to the BCM DTC Chart in this section. For PCM DTC P06E9, GO to A4 For PCM DTC P0830, GO to A17 For all other PCM Diagnostic Trouble Codes (DTCs), REFER to: Electronic Engine Controls - Vehicles Built From: 17-08-2015 (303-14 Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4) .
No	GO to A4

A4 CHECK BCM (BODY CONTROL MODULE) IGN_SW_STATE PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view the BCM Parameter Identifications (PIDs).
- Monitor the BCM PID IGN_SW_STATE while turning the ignition switch from OFF to START.

Does the PID change from Off to Start when the ignition switch is turned from OFF to START?

Yes	GO to A5
No	DIAGNOSE No power in Start. REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches, Diagnosis and Testing).

A5 CHECK THE PCM (POWERTRAIN CONTROL MODULE) IN GEAR-TRANSMISSION IS APPLYING A LOAD TO ENGINE (IN_GEAR) PID (PARAMETER IDENTIFICATION)

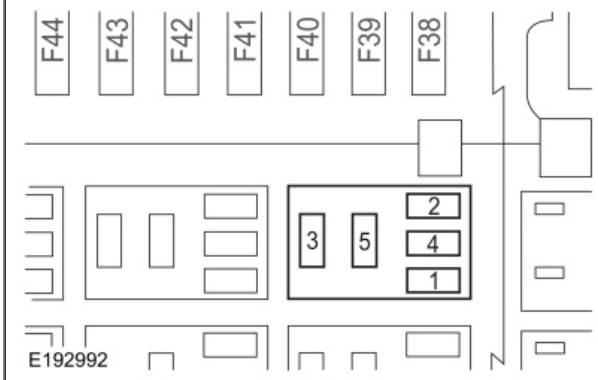
- Using a diagnostic scan tool, view the PCM Parameter Identifications (PIDs).
- Monitor the PCM PID IN_GEAR, while placing the gear selector in PARK and then NEUTRAL.

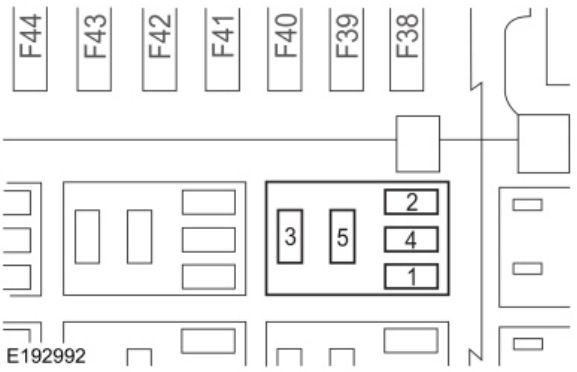
Does the PID read No in both positions?

Yes	GO to A6
No	REFER to: Diagnostic Trouble Code Charts (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).

A6 CHECK THE PCM (POWERTRAIN CONTROL MODULE) ENGINE CRANKING (ENG_CRANK) PID (PARAMETER IDENTIFICATION)

- Make sure the transmission is in PARK or NEUTRAL.
- Using a diagnostic scan tool, view the PCM Parameter Identifications (PIDs).
- Monitor the PCM PID ENG_CRANK while turning the ignition switch to the START position.





Does the PID change from Inactive to Active?

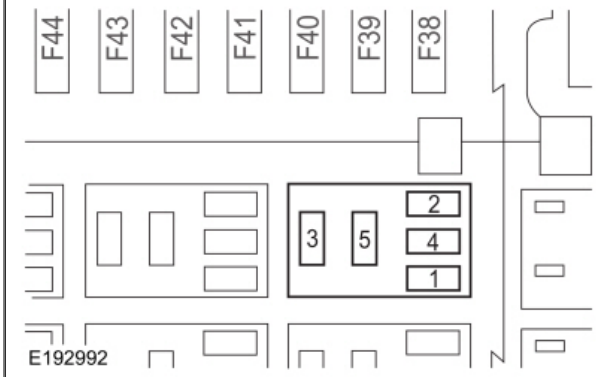
Yes	GO to A7
No	GO to A20

A7 CHECK THE STARTER RELAY CONTROL OPERATION

NOTICE: The following step uses a test light to simulate normal circuit loads. Use only the test light recommended in the Special Tools table at the beginning of this section. To avoid connector terminal damage, use the Flex Probe Kit for the test light probe connection to the vehicle. Do not use the test light probe directly on any connector.

- Remove the BJB starter relay.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
 BJB starter relay pin 1		 BJB starter relay pin 2



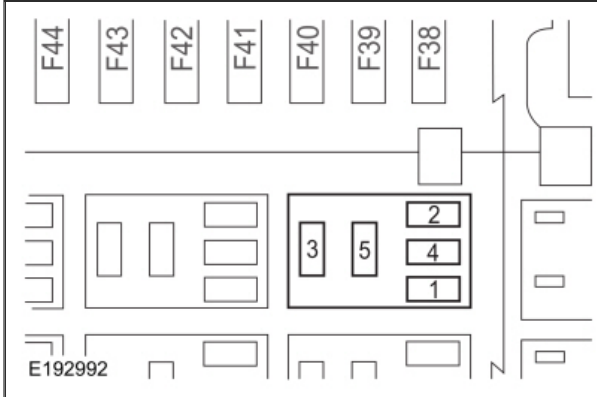
- For automatic transmission, make sure the transmission is in PARK or NEUTRAL.
- For manual transmission, fully apply the clutch pedal.
- While holding the key in the START position, observe the test light.

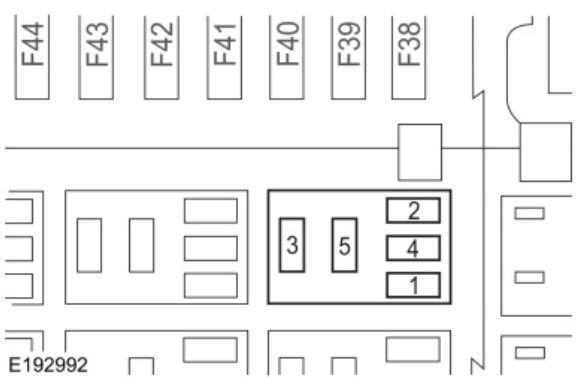
Does the test light illuminate when the key is in the START position?

Yes	GO to A8
No	GO to A15

A8 CHECK THE VOLTAGE TO THE STARTER RELAY

- Measure:





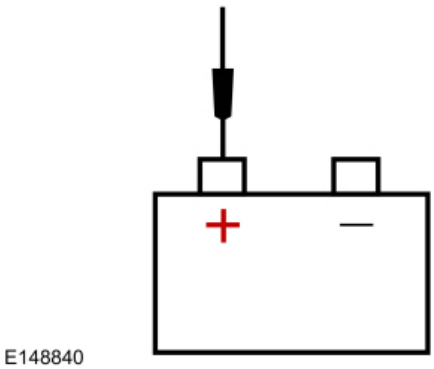
Positive Lead	Measurement / Action	Negative Lead
 BJB starter relay pin 3		Ground

Is the voltage greater than 11 volts?

Yes	GO to A9
No	VERIFY the BJB fuse 13 (20A) is OK. If OK, REPAIR the circuit for an open. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

A9 CHECK THE STARTER MOTOR OPERATION AT THE STARTER RELAY

- Ignition OFF.
- With the transmission in PARK or NEUTRAL, momentarily connect a fused jumper wire:



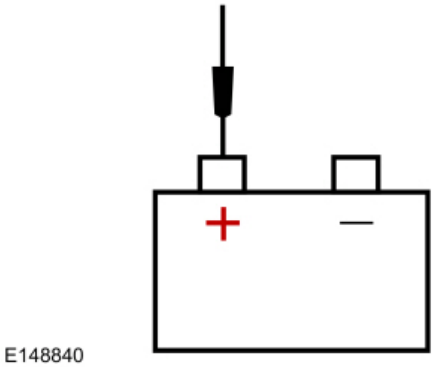
Positive Lead	Measurement / Action	Negative Lead
 BJB starter relay pin 3		 BJB starter relay pin 5

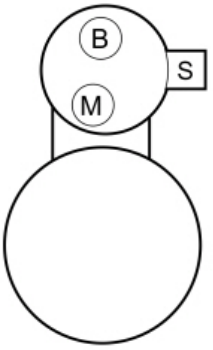
Did the starter engage and the engine crank?

Yes	INSTALL a new starter relay.
No	GO to A10

A10 CHECK THE BATTERY GROUND CABLES

- Measure:





Positive Lead	Measurement / Action	Negative Lead
 E148840		Ground C1100G

Are the voltages greater than 11 volts?

Yes	GO to A11
No	CLEAN or INSTALL new negative battery cables as necessary. Refer to Battery Cables

A11 CHECK THE STARTER MOTOR GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
 E148840		 E148837 Starter motor case

Is the voltage greater than 11 volts?

Yes	GO to A12
No	CLEAN the starter motor mounting flange and MAKE SURE the starter motor is correctly mounted.

A12 CHECK THE VOLTAGE TO THE STARTER MOTOR

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C197A ("B" terminal)		Ground

Is the voltage greater than 11 volts?

Yes	GO to A13
No	INSTALL a new positive battery cable. Refer to Battery Cables

A13 CHECK THE STARTER MOTOR FOR CORRECT OPERATION

- Perform Starter Motor - Positive Circuit Test in this section.

Was an obvious cause found?

Yes	Correct the cause as necessary.
No	GO to A14

A14 CHECK FOR START INPUT AT THE STARTER

- Connect BJB starter relay.
- Disconnect Starter solenoid C197C.
- **NOTE:** *For manual transmission, fully apply the clutch pedal.*

While holding the key in the START position, measure:

Positive Lead	Measurement / Action	Negative Lead
C197C-1 ("S" terminal)		Ground

Is the voltage greater than 11 volts?

Yes	CLEAN the starter solenoid "S" terminal and starter solenoid connector. CHECK the wiring and the starter motor for a loose or intermittent connection.
No	REPAIR the circuit for an open.

A15 CHECK THE PCM (POWERTRAIN CONTROL MODULE) STARTER RELAY CONTROL CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect PCM C175B.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C175B-24	Ω	Ground
C175B-9	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A16
No	REPAIR the affected circuit.

A16 CHECK THE PCM (POWERTRAIN CONTROL MODULE) STARTER RELAY CONTROL CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C175B-24	Ω	BJB starter relay pin 1
C175B-9	Ω	BJB starter relay pin 2

Are the resistances less than 3 ohms?

Yes	GO to A20
No	REPAIR the affected circuit.

A17 CHECK THE CPP (CLUTCH PEDAL POSITION) SWITCH

- Ignition OFF.
- Disconnect PCM C175B.
- While fully applying the clutch pedal, measure:

Positive Lead	Measurement / Action	Negative Lead
C175B-7	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to A20
No	GO to A18

A18 CHECK THE CPP (CLUTCH PEDAL POSITION) GROUND CIRCUIT FOR AN OPEN

- Disconnect CPP switch C2353..
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2353-2	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to A19
No	REPAIR the circuit.

A19 CHECK THE CPP (CLUTCH PEDAL POSITION) SWITCH CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C175B-7	Ω	C2353-1

Is the resistance less than 3 ohms?

Yes	INSTALL a new CPP switch.
No	REPAIR the circuit.

A20 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Unusual Starter Noise

Normal Operation and Fault Conditions

Correct starter operation relies on correct mounting of the starter to the engine, alignment of the starter ring gear to the flexplate and correct functioning of the starter assembly (internal gears, bearings).

Possible Sources

- Engine
- Starter motor
- Starter motor mounting

Visual Inspection and Diagnostic Pre-checks

- Inspect the starter motor.
- Inspect the starter motor mounting.

PINPOINT TEST B : UNUSUAL STARTER NOISE

B1 CHECK THE STARTER MOUNTING

- Inspect the starter mounting bolts for looseness.

Is the starter motor mounted correctly?

Yes	GO to B2
No	INSTALL the starter motor correctly. REFER to: Starter Motor (303-06A Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).

B2 CHECK FOR STARTER NOISE

- Ignition OFF.
- Connect a remote starter switch between the starter solenoid C197A ("B" terminal) and C197C-1 ("S" terminal).
- Engage the starter and verify the noise is due to starter operation.

Is the noise due to the starter engagement?

Yes	REFER to: Starter Motor Drive Gear and Flywheel Ring Gear Inspection (303-06A Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4, General Procedures).
No	REFER to: Engine (303-00 Engine System - General Information, Diagnosis and Testing). to continue diagnosis.

P2535

Refer to Wiring Diagrams Cell 20 for schematic and connector information.

Normal Operation and Fault Conditions

When the ignition is turned to the START position the PCM receives a voltage signal on the crank detect circuit. The PCM then supplies voltage and ground to the starter relay coil when the required inputs have been received.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P2535	Ignition Switch Run/Start Position Circuit High	This DTC sets when the PCM detects voltage on the crank detect circuit while the engine is running.

Possible Sources

- BCM
- Ignition switch
- PCM
- Wiring, terminals or connectors

PINPOINT TEST C : DTC P2535

C1 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform PCM self-tests.

Is DTC P2535 recorded?

Yes	GO to C2
No	For all PCM Diagnostic Trouble Codes (DTCs), refer to the PCM DTC Chart in this section.

C2 CHECK THE CRANK DETECT CIRCUIT FOR A SHORT TO VOLTAGE WITH PCM (POWERTRAIN CONTROL MODULE) DISCONNECTED

- Ignition OFF.
- Disconnect PCM C175B.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C175B-9	V	Ground

Is any voltage present?

Yes	GO to C3
No	GO to C5

C3 CHECK THE CRANK DETECT CIRCUIT FOR A SHORT TO VOLTAGE WITH IGNITION SWITCH DISCONNECTED

- Ignition OFF.
- Disconnect Ignition switch C250.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C175B-9		Ground

Is any voltage present?

Yes	GO to C4
No	INSTALL a new ignition switch. REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).

C4 CHECK THE CRANK DETECT CIRCUIT FOR A SHORT TO VOLTAGE WITH BCM (BODY CONTROL MODULE) DISCONNECTED

- Ignition OFF.
- Disconnect BCM C2280F.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C175B-9		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to C6

C5 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect all connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

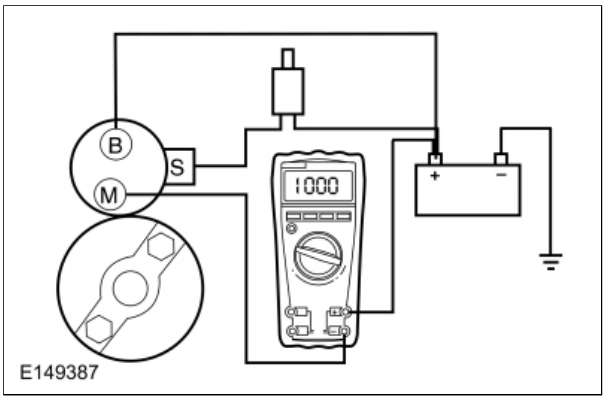
C6 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect all connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Component Test(s)



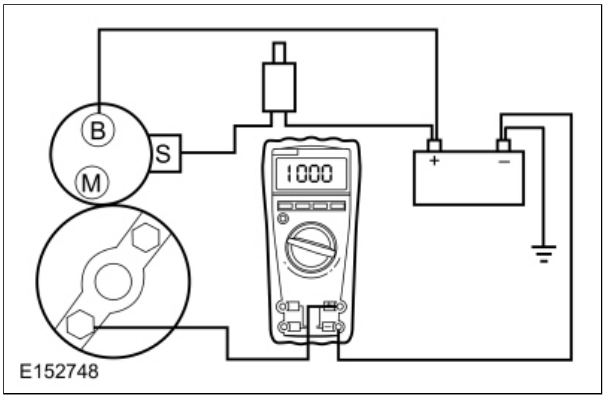
Starter Motor - Positive Circuit Test

NOTE: *Always make the multimeter connection at the component terminal rather than at the wiring end of the connector. Making a connection at the wiring end of the connector could result in false readings because the meter will not pick up a high resistance between the wiring connector and component.*

1. Make sure the battery is fully charged.
   REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).

2. Perform a battery drain test.

3. Connect a remote starter switch between starter solenoid “S” terminal and the battery positive terminal.
4. Connect the multimeter positive lead to the battery positive post. Connect the negative lead to the starter solenoid "M" terminal.



5. Place gear selector lever in Park or Neutral.
6. Engage the remote starter switch. Read and record the voltage. The voltage reading should be 0.5 volt or less.
7. If the voltage reading is 0.5 volt or less, perform Starter Motor - Ground Circuit Test in this section.
8. A voltage reading greater than 0.5 volt is an indication of excessive resistance in the connections, the positive battery cable or in the starter solenoid. Remove the cables from the solenoid "B", "S" and "M" terminals. Clean the cables and connections and reinstall the cables to the correct terminals. Repeat Steps 3 through 6.
9. If the voltage reading is still greater than 0.5 volt when checked at the "M" terminal, move the multimeter negative lead to the starter solenoid “B” terminal.
10. With the gear selector lever in Park or Neutral, engage the remote starter switch. Read and record the voltage.
11. If the voltage reading at the "B" terminal is lower than 0.5 volt, the concern is in the connections at the starter solenoid or in the solenoid contacts. Install a new starter motor.
REFER to: Starter Motor (303-06A Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
12. If the voltage reading taken at the solenoid "B" terminal is greater than 0.5 volt after cleaning the cables and connections at the solenoid, the concern is in the positive battery cable connection or in the positive battery cable itself. Clean the positive battery cable connection. If this does not resolve the concern, install a new positive battery cable.

Starter Motor - Ground Circuit Test

A slow cranking condition can be caused by resistance in the ground or return portion of the cranking circuit. This procedure checks the voltage drop in the ground circuit.

1. Connect a remote starter switch between starter solenoid "S" terminal and the battery positive terminal.
2. Connect the multimeter positive lead to the starter motor housing (the connection must be clean and free of rust or grease). Connect the negative lead to the negative battery terminal.
3. Place gear selector lever in Park or Neutral.
4. Engage the remote starter switch and crank the engine. Read and record the voltage reading. The reading should be 0.5 volt or less.

5. If the voltage reading is greater than 0.5 volt, clean the negative cable connections at the battery, the body ground connections and the starter ground connection. Retest.
6. If the voltage reading is greater than 0.5 volt, install a new negative battery cable.
7. If the voltage reading is less than 0.5 volt and the engine still cranks slowly, install a new starter motor.
REFER to: Starter Motor (303-06A Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).

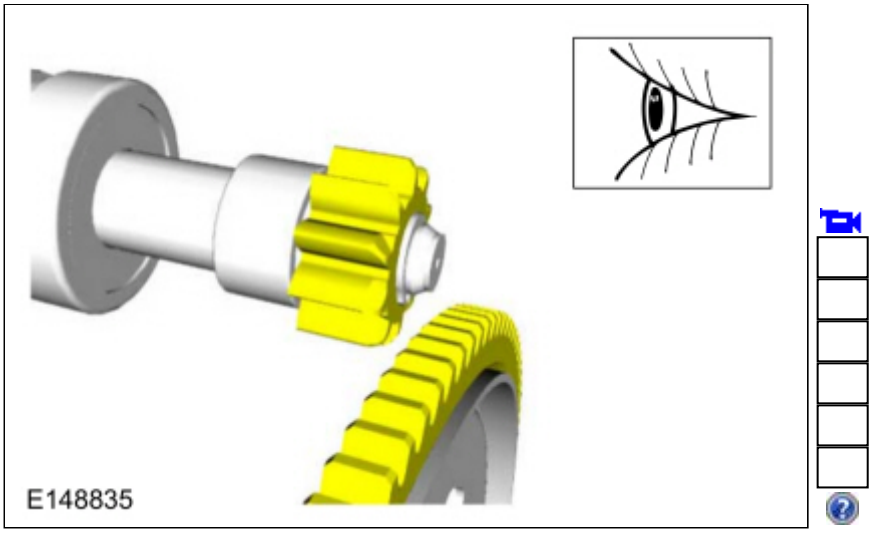
Starter Motor Drive Gear and Flywheel Ring Gear Inspection



Activation

1. **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. Refer to: Starter Motor (303-06A Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).

3. Check the wear patterns on the starter drive gear and the flywheel or flexplate ring gear. If the wear pattern is normal, install the starter motor.
   Refer to: Starter Motor (303-06A Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).

4. If the starter drive gear and the flywheel or flexplate ring gear are not fully meshing and the gears are scored or damaged, install a new starter motor.
   Refer to: Starter Motor (303-06A Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).

5. If necessary, install a new flywheel or flexplate.

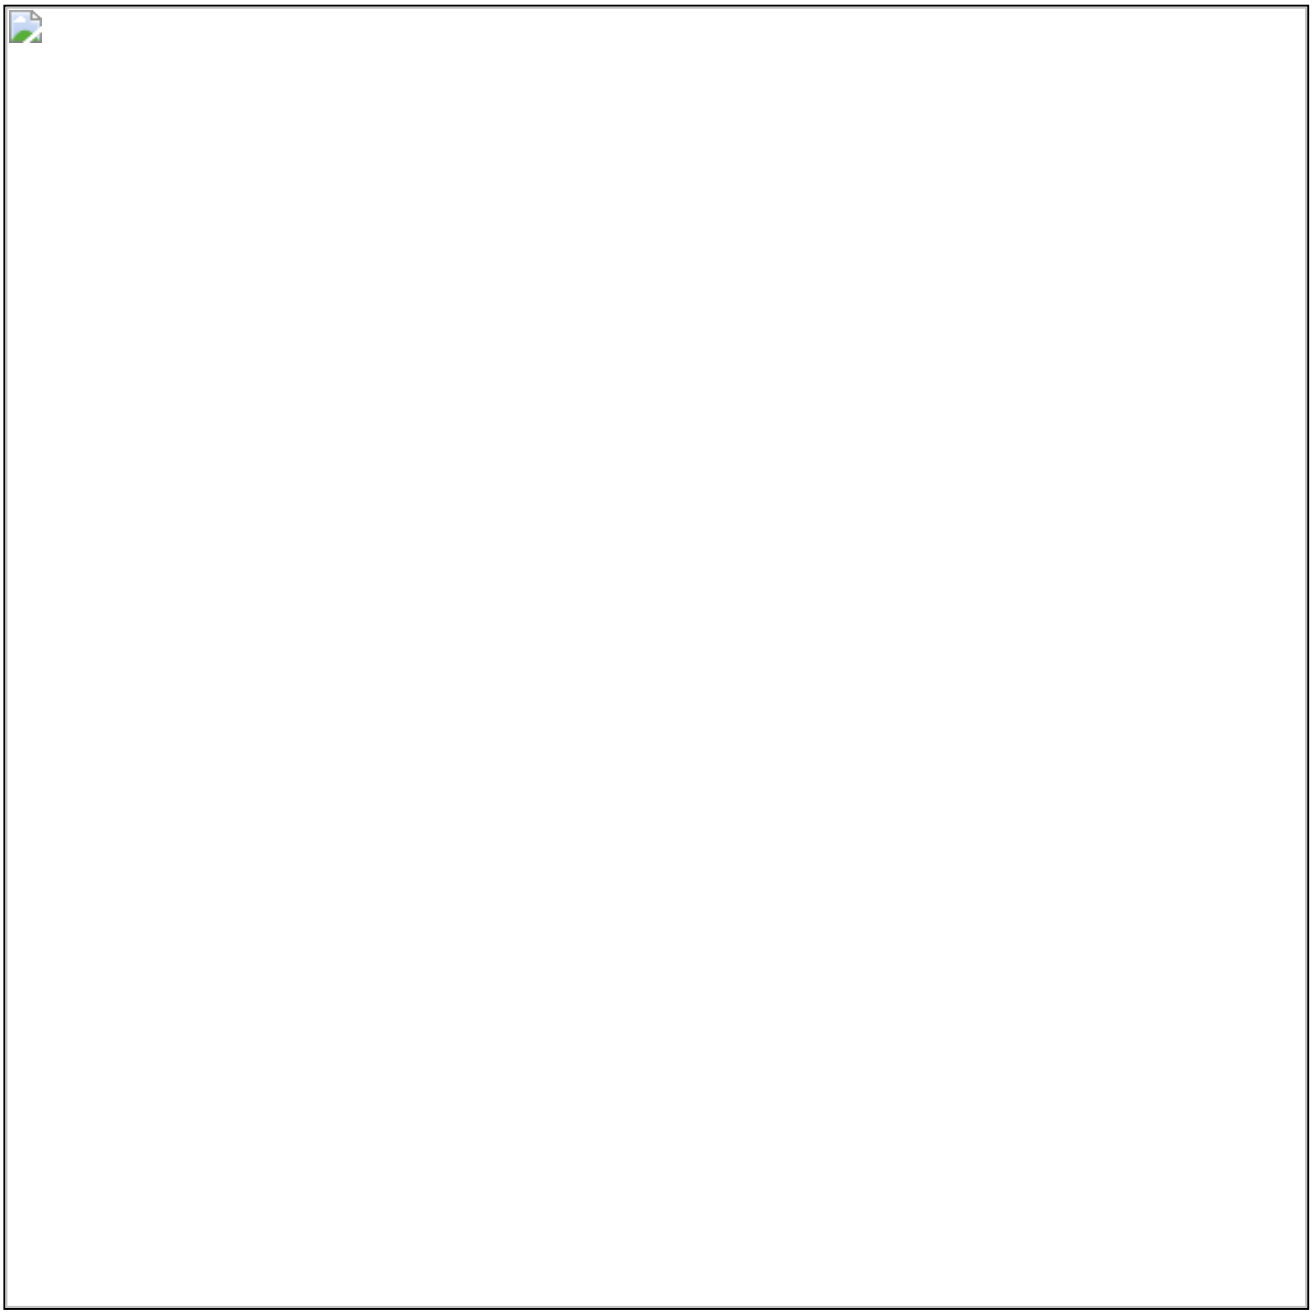
Starting System - Overview

Starting System

The starting system controls the cranking of the engine. The starter motor is enabled by the starter relay when the relay is activated by the PCM. The PCM receives inputs from the ignition switch, TCM automatic transmission, CPP manual transmission and the BCM before activating the starter relay to initiate cranking of the engine.

Starting System-with Auto-Start-Stop



The Auto-Start-Stop system helps reduce fuel consumption by automatically shutting off the vehicle’s engine while the vehicle is at a complete stop and restarting the engine when the clutch pedal is pressed. The Auto-Start-Stop system is automatically enabled whenever the ignition is turned on. The vehicle may restart automatically in order to maintain interior comfort or to recharge the battery. Refer to the Owner's Literature for additional information.

Starting System - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

Module Network Input Messages Powertrain Control Module (PCM)

Broadcast Message	Originating Module	Message Purpose
Ignition status	BCM	Provides the PCM with ignition mode.

Starting System

The starting system controls the cranking of the engine. Under normal operation, when the ignition is turned to START, the PCM receives the following inputs:

- Request to crank engine message from the BCM .
- Voltage signal on the crank detect circuit from the ignition switch.
- PATS enable message from the BCM .
- Correct transmission park or neutral input from the automatic transmission
- Correct bottom of travel input from the CPP switch (manual transmission).

When the PCM receives the correct inputs, voltage and ground is supplied to the starter relay coil. When the starter relay coil is energized, it provides voltage to the starter solenoid, allowing the starter motor to crank the engine.

The PCM disengages the starter once an engine Revolutions Per Minute (RPM) threshold is reached, a set crank time is exceeded or the ignition is turned OFF.

Auto-Start-Stop System

The Auto-start-stop system helps reduce fuel consumption by automatically shutting off the vehicle's engine while the vehicle is idling at a complete stop, and restarting the engine when the clutch pedal is pressed. The system can be disabled through the auto-start-stop control switch. The Auto-start-stop system is automatically enabled whenever the ignition is turned on.

The engine automatically **stops** when:

- the vehicle is stopped, and
- the transmission is in neutral, and
- the clutch pedal and accelerator pedals are released.

The engine automatically **restarts** when:

- the clutch pedal is pressed.
- the Auto-start-stop system is disabled through the auto-start-stop control switch.
- the battery has a low state of charge.
- it is necessary to maintain interior comfort.
- the blower fan speed is increased or the climate control temperature is changed.
- an electrical accessory is turned on or plugged in.
- there is low brake vacuum.

The Auto-start-stop system may **not** turn the engine off under these conditions:

- the HVAC system is in A/C, heat or defrost modes.
- the rear defroster is on.
- the battery has a low state of charge.
- the battery temperature is below 5°C (41°F) or above 60°C (140°F).
- the engine temperature is below 46°C (115°F).
- the engine temperature is below 60°C (140°F) and the HVAC system is in heat mode.
- the steering wheel is turned rapidly or is at a sharp angle.
- vehicle speed of greater than 4 km/h (2.5 mph) for more than 2 seconds has not occurred.
- the vehicle is on a steep road grade.
- elevation is approximately above 3,048 meters (10,000 feet).

If the system detects a malfunction, it turns off and the OFF lamp on the auto-start-stop control switch illuminates continuously. If the OFF lamp remains on after an ignition cycle, a malfunction is indicated.

Refer to the Owner's Literature for additional information.

Passive Anti-theft System (PATS)

This vehicle may be equipped with PATS. PATS disables the engine from starting if an unprogrammed PATS key is used or an invalid PCM ID is received. The PATS is controlled by the BCM. If there is a PATS concern that disables the engine, the IPC displays a corresponding message in the message center.
Refer to: Passive Anti-Theft System (PATS) - System Operation and Component Description (419-01B Passive Anti-Theft System (PATS), Description and Operation).

Component Description

Body Control Module (BCM)

Refer to: Module Controlled Functions - Component Location (419-10 Multifunction Electronic Modules, Description and Operation).

Passive Anti-Theft Transceiver

If equipped with PATS,
Refer to: Passive Anti-Theft System (PATS) - System Operation and Component Description (419-01B Passive Anti-Theft System (PATS), Description and Operation).

Integrated Keyhead Transmitter (IKT)

If equipped with PATS,
Refer to: Passive Anti-Theft System (PATS) - System Operation and Component Description (419-01B Passive Anti-Theft System (PATS), Description and Operation).

Ignition Switch

Refer to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches, Diagnosis and Testing).

Powertrain Control Module (PCM)

The PCM provides power and ground to the starter relay to initiate cranking of the engine.

Starting System

Inspection and Verification

1. Verify the customer concern by operating the starting system.
2. Before diagnosing or repairing the starting system inspect the following items:

- Check the battery for loose, damaged or corroded connections.
- Check the generator for loose, damaged or corroded connections.
- Check engine and battery grounds for loose, damaged or corroded connections.
- Check high current BJB for loose or corroded connections.
- Verify fuses or fusible links.
- Inspect wiring, terminals and connectors.

3. Check the battery condition and state of charge.
   REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).
4. Check for abnormal ignition-off current drain(s). Refer to section 414-01 Battery Drain Check
5. Remove the accessory drive belt.
   REFER to: Accessory Drive Belt (303-05C Accessory Drive - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
   Verify the crankshaft and each of the components driven by the accessory drive belt rotate and are not seized or damaged.
6. If any aftermarket accessories have been added to the vehicle, make sure they are properly wired.
7. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding.
8. Using the diagnostic scan tool, retrieve all Diagnostic Trouble Codes (DTCs). Refer to the appropriate DTC Chart in this section.

DTC Charts

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

PCM DTC Chart

DTC	Description	Action
P06E9	Engine Starter Performance	If the engine cranks, Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual. GO to Pinpoint Test A
P0850	Park / Neutral Switch Input Circuit	GO to Pinpoint Test A
All Other DTCs	—	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .

BCM DTC Chart

DTC	Description	Action
B10E5:11	PCM Wake-up Signal: Circuit Short to Ground	GO to Pinpoint Test C
All Other DTCs	—	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).

Symptom Chart(s)

Symptom Chart: Starting System

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
The engine does not crank	Refer to the Pinpoint Test	GO to Pinpoint Test A
The engine cranks slowly	Refer to the Pinpoint Test	CARRY OUT the starter system component test. Refer to Starter Motor - Positive Circuit Test in this section.
The engine cranks but will not start	Ignition fault	Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Unusual starter noise	Refer to the Pinpoint Test	GO to Pinpoint Test B
The starter spins but the engine does not crank	Starter motor	INSPECT the starter motor mounting and engagement. REPAIR as necessary.
	Damaged flexplate	INSPECT the flexplate for damaged, missing or worn teeth. REPAIR as necessary.
The starter does not disengage from the flexplate	• Starter relay • Wiring, terminals or connectors	REMOVE the starter relay. If the engine stops cranking, INSTALL a new relay. If the engine continues to crank, REPAIR circuit CDC25AB (BN/GN) for a short to voltage.

Pinpoint Tests

Engine Does Not Crank

Refer to Wiring Diagrams Cell 20 for schematic and connector information.

Normal Operation and Fault Conditions

For more information,
REFER to: Starting System - System Operation and Component Description (303-06B Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P06E9	Engine Starter Performance	This DTC sets in the PCM when no engine rotation is detected during crank event.

Possible Sources

- Battery
- Battery cables
- Starter motor
- BJB starter relay

Visual Inspection and Diagnostic Pre-checks

- Verify the BJB fuse 84 (30A).
- Verify the high current BJB fuse 1 (470A).
- Verify the BCM fuse 3 (15A).

PINPOINT TEST A : ENGINE DOES NOT CRANK

A1 PERFORM INSPECTION AND VERIFICATION

NOTE: *Make sure battery voltage is greater than 12.2 volts prior to and during this pinpoint test.*

NOTE: *If it is necessary to leave the battery charger connected during testing, do not leave it on its highest or boost setting. The highest settings can exceed 16 volts, resulting in false test results and setting of Diagnostic Trouble Codes (DTCs).*

- Perform Inspection and Verification procedure in this section.

Was an obvious cause for an observed or reported concern found?

Yes	Correct the cause as necessary.
No	GO to A2

A2 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform self-tests for:
  - BCM
  - TCM
  - PCM

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	For all TCM Diagnostic Trouble Codes (DTCs), REFER to: Diagnostic Trouble Code Charts (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). For all PCM Diagnostic Trouble Codes (DTCs), GO to A3 For all BCM Diagnostic Trouble Codes (DTCs), REFER to the BCM DTC Chart in this section.
No	GO to A3

A3 CHECK THE PCM (POWERTRAIN CONTROL MODULE) ENGINE CRANKING (ENG_CRANK) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view the PCM Parameter Identifications (PIDs).
- Make sure the transmission is in PARK or NEUTRAL.
- Using a diagnostic scan tool, view the PCM PID ENG_CRANK, with the key in the START position.

Does the PCM PID ENG_CRANK change from Inactive to Active?

Yes	GO to A6
No	GO to A4

A4 CHECK THE CRANK DETECT CIRCUIT FOR VOLTAGE AT THE PCM (POWERTRAIN CONTROL MODULE)

- Ignition OFF.
- Disconnect PCM C1232A.
- With the key in the START position, measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-47		Ground

Is the voltage greater than 11 volts?

Yes	GO to A19
No	GO to A5

A5 CHECK THE IGNITION SWITCH

- Ignition OFF.
- Carry out the Ignition Switch Component Test.
  Refer to Wiring Diagrams Cell 149 for schematic and connector information.

Did the ignition switch pass the component test?

Yes	REPAIR circuit CDC35DA (BU/WH) for an open.
No	INSTALL a new ignition switch. REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).

A6 CHECK THE TCM (TRANSMISSION CONTROL MODULE) TR_CRANK PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, while viewing the TCM PID TR_CRANK, place the gear selector in PARK and then NEUTRAL.

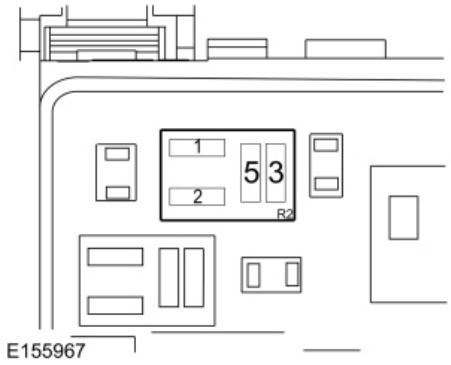
Does the TCM PID TR_CRANK read YES in both positions?

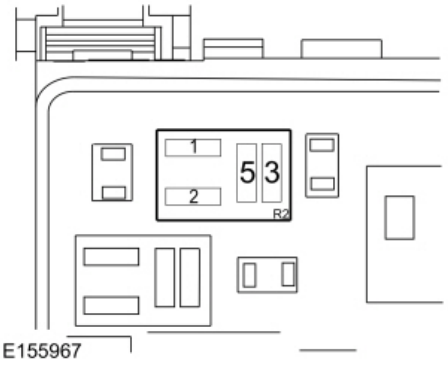
Yes	GO to A8
No	DIAGNOSE the TR sensor, REFER to: Diagnostic Trouble Code Charts (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).

A7 CHECK THE PCM (POWERTRAIN CONTROL MODULE) IN_GEAR PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view the PCM Parameter Identifications (PIDs).
- While observing the PCM PID IN_GEAR, place the gear selector in PARK and then NEUTRAL.

Does the PID read No in both positions?





Yes	GO to A8
No	Diagnose the TR sensor, REFER to: Diagnostic Trouble Code Charts (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).

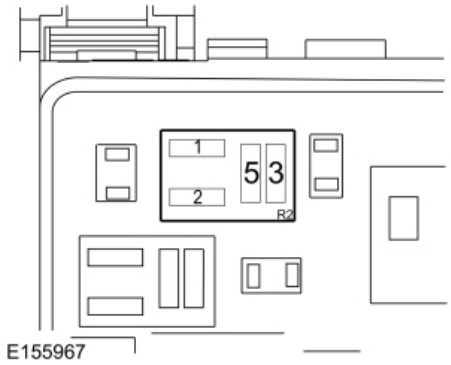
A8 CHECK THE STARTER RELAY CONTROL OPERATION

NOTICE: The following step uses a test light to simulate normal circuit loads. Use only the test light recommended in the Special Tools table at the beginning of this section. To avoid connector terminal damage, use the Flex Probe Kit for the test light probe connection to the vehicle. Do not use the test light probe directly on any connector.

- Remove the BJB starter relay.
- Measure:

Positive Lead	Measurement / Action	Negative Lead

 BJB starter relay pin 1		 BJB starter relay pin 2



- Make sure the transmission is in PARK or NEUTRAL.
- With the key in the START position, observe the test light.

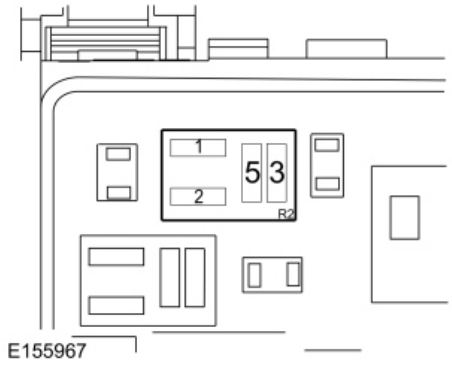
Does the test light illuminate when the key is in the START position?

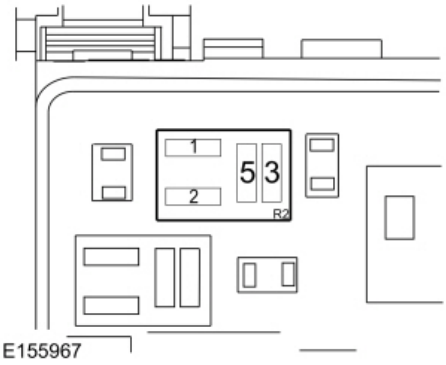
Yes	GO to A9
No	GO to A16

A9 CHECK THE VOLTAGE TO THE STARTER RELAY

- Measure:

Positive Lead	Measurement / Action	Negative Lead
 BJB starter relay pin 3		Ground





Is the voltage greater than 11 volts?

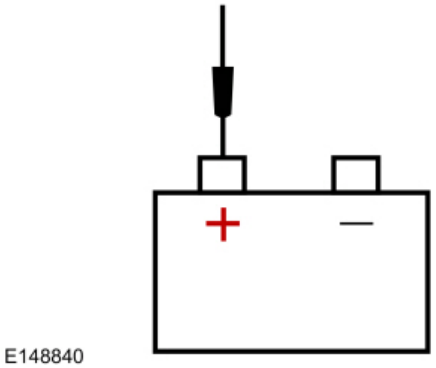
Yes	GO to A10
No	VERIFY BJB fuse 84 (30A) is OK. If OK, REPAIR the circuit for an open. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

A10 CHECK THE STARTER MOTOR OPERATION AT THE STARTER RELAY

- Ignition OFF.
- With the transmission in PARK or NEUTRAL, momentarily connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead

 BJB starter relay pin 3		 BJB starter relay pin 5



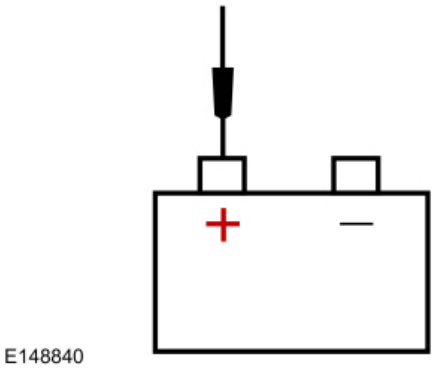
-

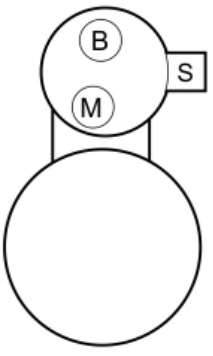
Did the starter engage and the engine crank?

Yes	INSTALL a new starter relay.
No	GO to A11

A11 CHECK THE BATTERY GROUND CABLE

- Measure:





Positive Lead	Measurement / Action	Negative Lead
		Ground C1100

Are the voltages greater than 11 volts?

Yes	GO to A12
No	CLEAN or INSTALL a new negative battery cable as necessary.

A12 CHECK THE STARTER MOTOR GROUND

- Measure:

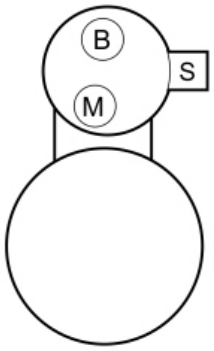
Positive Lead	Measurement / Action	Negative Lead
		 Starter motor case

Is the voltage greater than 11 volts?

Yes	GO to A13
No	CLEAN the starter motor mounting flange and MAKE SURE the starter motor is correctly mounted.

A13 CHECK THE VOLTAGE TO THE STARTER MOTOR

- Measure:



Positive Lead	Measurement / Action	Negative Lead
C197C	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to A14
No	CLEAN the high current BJB connection to the battery post. CLEAN or REPAIR a positive battery cable as necessary.

A14 CHECK THE STARTER MOTOR FOR CORRECT OPERATION

- Ignition OFF.
- Connect a remote starter switch between the starter solenoid C1715A-1 ("B" terminal) and C1715B-1 ("S" terminal).

E148837

- With the transmission in PARK or NEUTRAL, momentarily engage the starter.

Did the starter engage and the engine crank?

Yes	GO to A15
No	INSTALL a new starter, REFER to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

A15 CHECK FOR START INPUT AT THE STARTER

- Connect BJB starter relay.
- Disconnect Starter solenoid C197C.
- With the key in the START position, measure:

Positive Lead	Measurement / Action	Negative Lead
C197C-1	V	Ground

Is the voltage greater than 11 volts?

Yes	CLEAN the starter solenoid "S" terminal and starter solenoid connector. CHECK the wiring and the starter motor for a loose or intermittent connection.
No	REPAIR the circuit for an open.

A16 CHECK THE PCM (POWERTRAIN CONTROL MODULE) STARTER RELAY CIRCUITS FOR A SHORT TO POWER

- Ignition OFF.
- Disconnect PCM C1232A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-37	V	Ground

C1232A-25		Ground

Is any voltage present?

Yes	REPAIR the affected circuit.
No	GO to A17

A17 CHECK THE PCM (POWERTRAIN CONTROL MODULE) STARTER RELAY CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-37	Ω	Ground
C1232A-25	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A18
No	REPAIR the affected circuit.

A18 CHECK THE PCM (POWERTRAIN CONTROL MODULE) STARTER RELAY CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-37	Ω	BJB start relay pin 1
C1232A-25	Ω	BJB start relay pin 2

Are the resistances less than 3 ohms?

Yes	GO to A19
No	REPAIR the affected circuit.

A19 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Unusual Starter Noise

Normal Operation and Fault Conditions

Correct starter operation relies on correct mounting of the starter to the engine, alignment of the starter ring gear to the flexplate and correct functioning of the starter assembly (internal gears, bearings).

Possible Sources

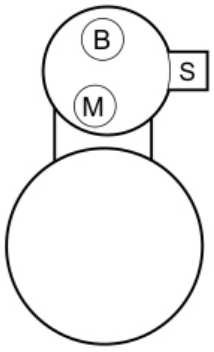
- Engine
- Starter motor
- Starter motor mounting

Visual Inspection and Diagnostic Pre-checks

- Inspect the starter motor.
- Inspect the starter motor mounting.

PINPOINT TEST B : UNUSUAL STARTER NOISE

B1 CHECK THE STARTER MOUNTING



- Inspect the starter mounting bolts for looseness.

Is the starter motor mounted securely?

Yes	GO to B2
No	INSTALL the starter motor securely. REFER to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

B2 CHECK FOR ENGINE NOISE

- Ignition OFF.
- Connect a remote starter switch between the starter solenoid C197C ("B" terminal) and C197C-1 ("S" terminal).

E148837

- Engage the starter and verify the noise is due to starter operation.

Is the noise due to the starter engagement?

Yes	REFER to: Starter Motor Drive Gear and Flywheel Ring Gear Inspection (303-06B Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
No	REFER to: Engine (303-00 Engine System - General Information, Diagnosis and Testing). to continue diagnosis.

B10E5:11

Refer to Wiring Diagrams Cell 23 for schematic and connector information.

Normal Operation and Fault Conditions

The wake-up control circuit wakes up the PCM prior to engine cranking to allow it time to initialize. The wake-up control circuit is activated by the BCM when the driver door is opened, a key is inserted into the ignition, or when the ignition is in the ON or START position.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10E5:11	PCM Wake-up Signal: Circuit Short to Ground	This DTC sets in the BCM when a short to ground is detected on the wake-up control circuit.

Possible Sources

- BCM
- PCM
- Wiring, terminals or connectors

PINPOINT TEST C : B10E5:11

C1 CHECK THE PCM (POWERTRAIN CONTROL MODULE) FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect PCM C1232A.
- Ignition ON.
- Using a diagnostic scan tool, clear the BCM Continuous Diagnostic Trouble Codes (DTCs).
- Using a diagnostic scan tool, perform BCM self-test.

Is BCM DTC B10E5:11 present?

Yes	GO to C2
No	GO to C6

C2 CHECK THE PCM (POWERTRAIN CONTROL MODULE) WAKE-UP SIGNAL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280C.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-28		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to C3

C3 CHECK THE PCM (POWERTRAIN CONTROL MODULE) WAKE-UP SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-28	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to C4
No	REPAIR the circuit.

C4 CHECK THE PCM (POWERTRAIN CONTROL MODULE) WAKE-UP SIGNAL CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-28	Ω	C2280C-18

Is the resistance less than 3 ohms?

Yes	GO to C5
No	REPAIR the circuit.

C5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

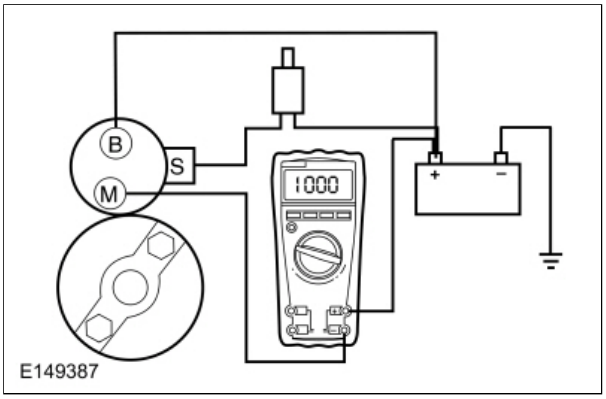
Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

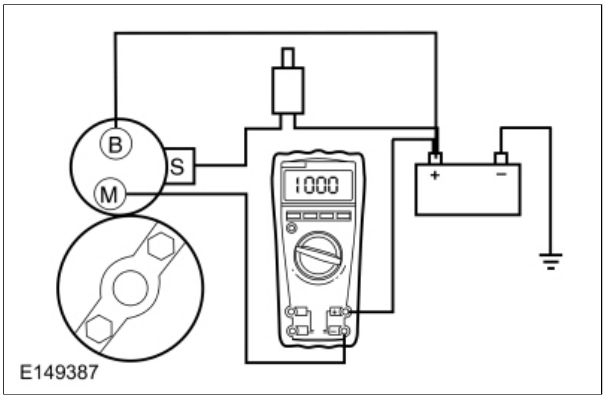


Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Component Test(s)

Starter Motor - Positive Circuit Test

NOTE: *Always make the multimeter connection at the component terminal rather than at the wiring end of the connector. Making a connection at the wiring end of the connector could result in false readings because the meter will not pick up a high resistance between the wiring connector and component.*

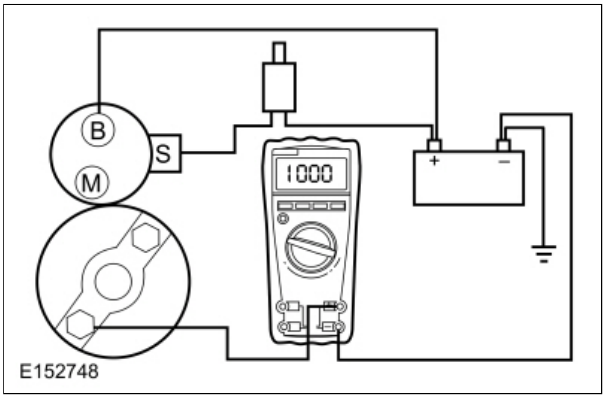


1. Make sure the battery is fully charged. Refer to 414-01
2. Perform a battery drain test. Refer to 414-01
3. Connect a remote starter switch between starter solenoid “S” terminal and the battery positive terminal.
4. Connect the multimeter positive lead to the battery positive post. Connect the negative lead to the starter solenoid "M" terminal.

5. Place gear selector lever in Park or Neutral.
6. Engage the remote starter switch. Read and record the voltage. The voltage reading should be 0.5 volt or less.
7. If the voltage reading is 0.5 volt or less, perform Starter Motor - Ground Circuit Test in this section.
8. A voltage reading greater than 0.5 volt is an indication of excessive resistance in the connections, the positive battery cable or in the starter solenoid. Remove the cables from the solenoid "B", "S" and "M" terminals. Clean the cables and connections and reinstall the cables to the correct terminals. Repeat Steps 3 through 6.
9. If the voltage reading is still greater than 0.5 volt when checked at the "M" terminal, move the multimeter negative lead to the starter solenoid “B” terminal.
10. With the gear selector lever in Park or Neutral, engage the remote starter switch. Read and record the voltage.
11. If the voltage reading at the "B" terminal is lower than 0.5 volt, the concern is in the connections at the starter solenoid or in the solenoid contacts. Install a new starter motor.
    REFER to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
12. If the voltage reading taken at the solenoid "B" terminal is greater than 0.5 volt after cleaning the cables and connections at the solenoid, the concern is in the positive battery cable connection or in the positive battery cable itself. Clean the positive battery cable connections. If this does not resolve the concern, install a new positive battery cable. 414–01

Starter Motor - Positive Circuit Test

1. Connect the multimeter positive lead to the battery positive post. Connect the negative lead to the starter solenoid "M" terminal.



2. Place gear selector lever in Park or Neutral.
3. Engage the remote starter switch. Read and record the voltage. The voltage reading should be 0.5 volt or less.
4. If the voltage reading is 0.5 volt or less, perform Starter Motor - Ground Circuit Test in this section.
5. A voltage reading greater than 0.5 volt is an indication of excessive resistance in the connections, the positive battery cable or in the starter solenoid. Remove the cables from the solenoid "B", "S" and "M" terminals. Clean the cables and connections and reinstall the cables to the correct terminals. Repeat Steps 3 through 6.
6. If the voltage reading is still greater than 0.5 volt when checked at the "M" terminal, move the multimeter negative lead to the starter solenoid “B” terminal and repeat Step 5.
7. If the voltage reading at the "B" terminal is lower than 0.5 volt, the concern is in the connections at the starter solenoid or in the solenoid contacts. Install a new starter motor.
   REFER to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
8. If the voltage reading taken at the solenoid "B" terminal is greater than 0.5 volt after cleaning the cables and connections at the solenoid, the concern is in the positive battery cable connection or in the positive battery cable itself. Clean the positive battery cable connections. If this does not resolve the concern, install a new positive battery cable.

Starter Motor - Ground Circuit Test

A slow cranking condition can be caused by resistance in the ground or return portion of the cranking circuit. This procedure checks the voltage drop in the ground circuit.

1. Connect a remote starter switch between starter solenoid "S" terminal and the battery positive terminal.
2. Connect the multimeter positive lead to the starter motor housing (the connection must be clean and free of rust or grease). Connect the negative lead to the negative battery terminal.
3. Place gear selector lever in Park or Neutral.
4. Engage the remote starter switch and crank the engine. Read and record the voltage reading. The reading should be 0.5 volt or less.

5. If the voltage reading is greater than 0.5 volt, clean the negative cable connections at the battery, the body ground connections and the starter ground connections. Retest.
6. If the voltage reading is greater than 0.5 volt, install a new negative battery cable.
7. If the voltage reading is less than 0.5 volt and the engine still cranks slowly, install a new starter motor.
   REFER to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

Starter Motor Drive Gear and Flywheel Ring Gear Inspection

Inspection

1. Remove the starter motor.
   Refer to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

2. Check the wear patterns on the starter drive gear and the flywheel or flexplate ring gear. If the wear pattern is normal, then install the starter motor.
   Refer to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

3. If the starter motor drive gear and the flywheel or flexplate ring gear are not fully engaging and the starter motor drive gear is scored or damaged, then install a new starter motor.
   Refer to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

4. If the teeth on the flywheel or flexplate ring gear are scored or damaged, then install a new flywheel or flexplate.

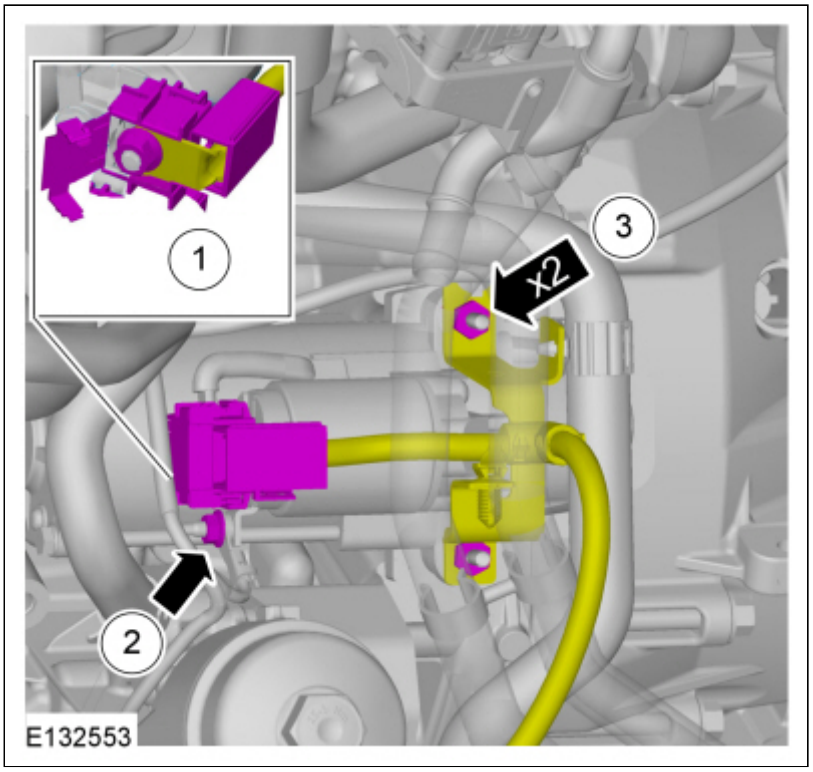
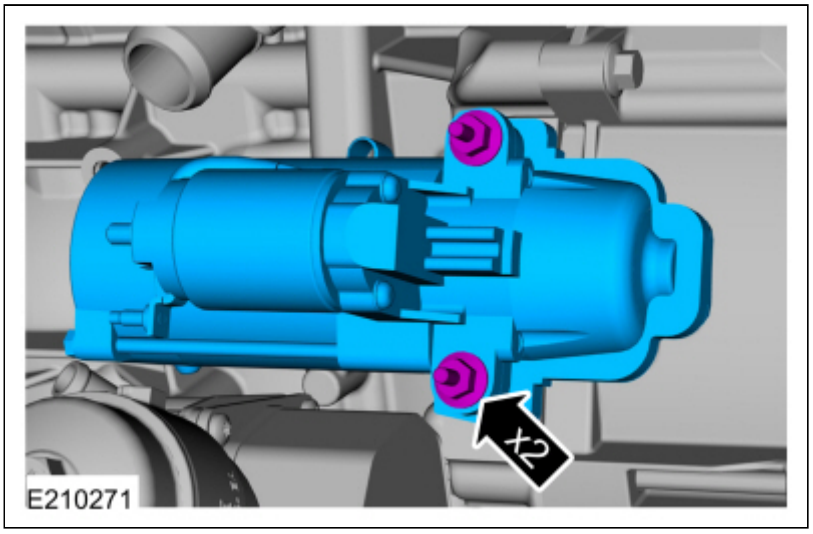
Starter Motor

Base Part Number: 11000



Removal

NOTE: *Removal steps in this procedure may contain installation details.*



1. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
2. Remove Front LH Wheel only.
   Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).
3. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
4.

1. *Torque*: 10 Nm
2. *Torque*: 10 Nm
3. *Torque*: 10 Nm

6. *Torque*: 35 Nm

7. Inspect the starter motor drive gear and flywheel ring gear.
   Refer to: Starter Motor Drive Gear and Flywheel Ring Gear Inspection (303-06B Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).

Installation

1. To install, reverse the removal procedure.

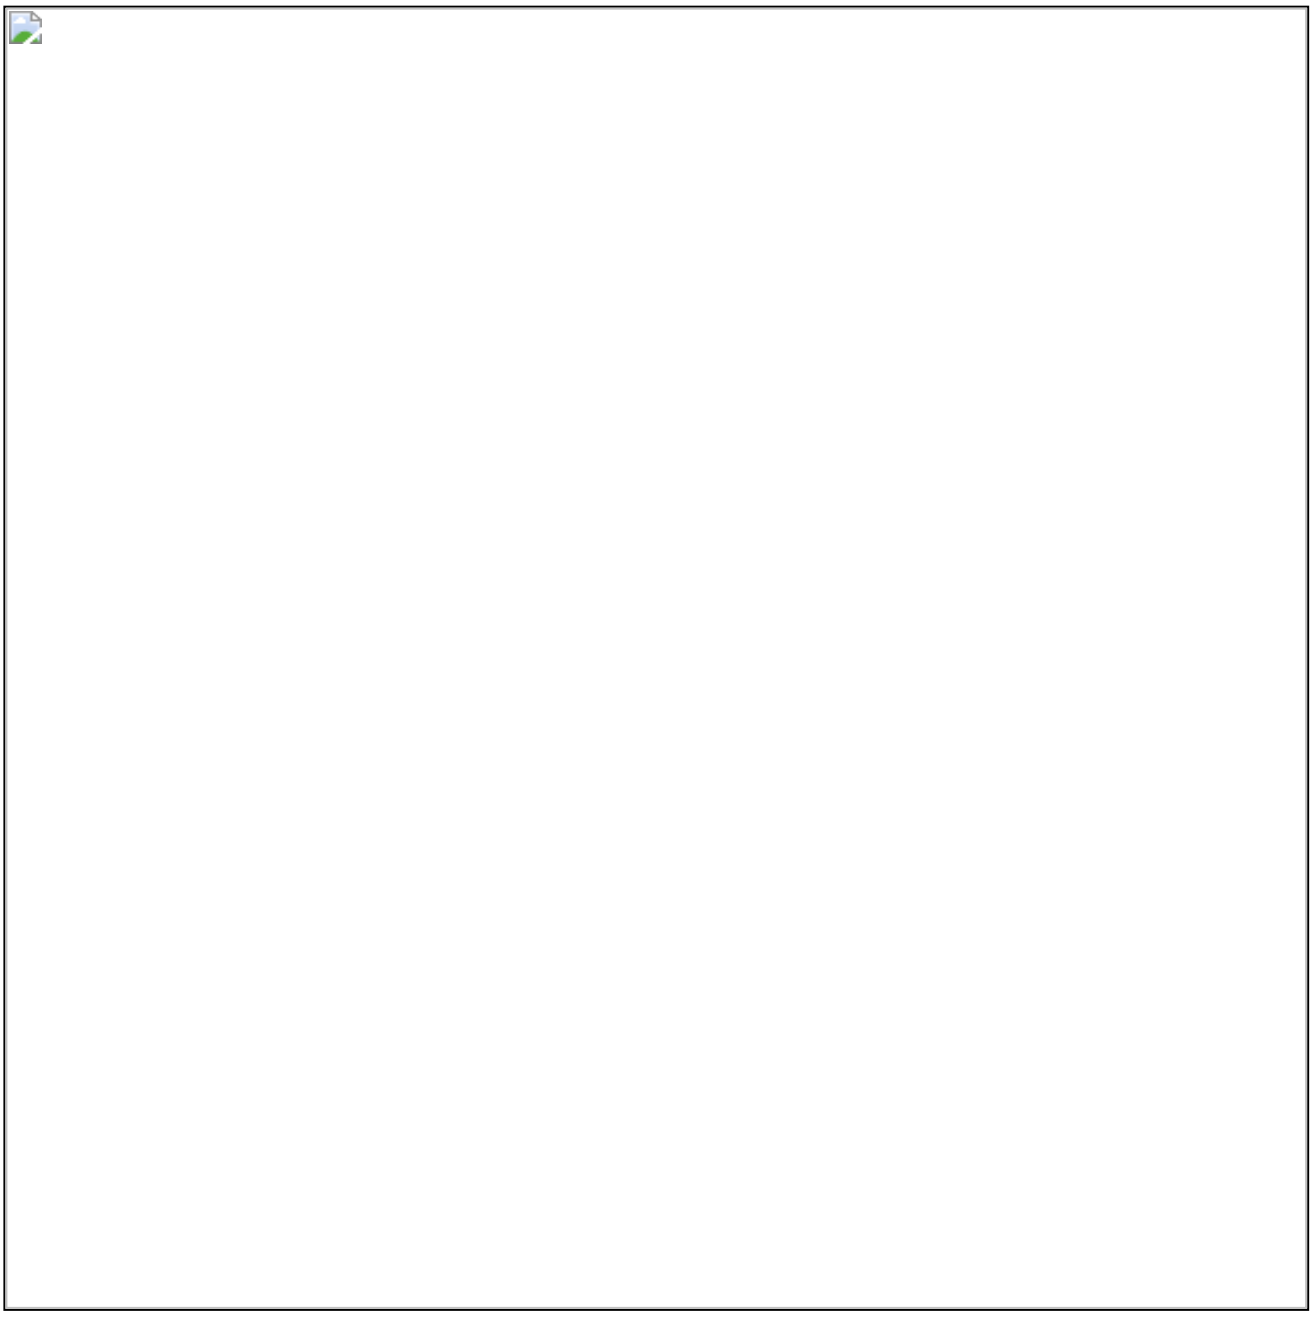
Starting System - Overview

Starting System

The starting system controls the cranking of the engine. The starter motor is enabled by the starter relay when the relay is activated by the PCM. The PCM receives inputs from the ignition switch, TCM automatic transmission, CPP manual transmission and the BCM before activating the starter relay to initiate cranking of the engine.

Starting System-with Auto-Start-Stop



The Auto-Start-Stop system helps reduce fuel consumption by automatically shutting off the vehicle’s engine while the vehicle is at a complete stop and restarting the engine when the clutch pedal is pressed. The Auto-Start-Stop system is automatically enabled whenever the ignition is turned on. The vehicle may restart automatically in order to maintain interior comfort or to recharge the battery. Refer to the Owner's Literature for additional information.

Copyright © 2016 Ford Motor Company

Starting System - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

Module Network Input Messages Powertrain Control Module (PCM)

Broadcast Message	Originating Module	Message Purpose
Ignition status	BCM	Provides the PCM with ignition mode.

Starting System

The starting system controls the cranking of the engine. Under normal operation, when the ignition is turned to

START, the PCM receives the following inputs:

- Request to crank engine message from the BCM .
- Voltage signal on the crank detect circuit from the ignition switch.
- PATS enable message from the BCM .
- Correct transmission park or neutral input from the automatic transmission
- Correct bottom of travel input from the CPP switch (manual transmission).

When the PCM receives the correct inputs, voltage and ground is supplied to the starter relay coil. When the starter relay coil is energized, it provides voltage to the starter solenoid, allowing the starter motor to crank the engine.

The PCM disengages the starter once an engine Revolutions Per Minute (RPM) threshold is reached, a set crank time is exceeded or the ignition is turned OFF.

Auto-Start-Stop System

The Auto-start-stop system helps reduce fuel consumption by automatically shutting off the vehicle's engine while the vehicle is idling at a complete stop, and restarting the engine when the clutch pedal is pressed. The system can be disabled through the auto-start-stop control switch. The Auto-start-stop system is automatically enabled whenever the ignition is turned on.

The engine automatically **stops** when:

- the vehicle is stopped, and
- the transmission is in neutral, and
- the clutch pedal and accelerator pedals are released.

The engine automatically **restarts** when:

- the clutch pedal is pressed.
- the Auto-start-stop system is disabled through the auto-start-stop control switch.
- the battery has a low state of charge.
- it is necessary to maintain interior comfort.
- the blower fan speed is increased or the climate control temperature is changed.
- an electrical accessory is turned on or plugged in.
- there is low brake vacuum.

The Auto-start-stop system may **not** turn the engine off under these conditions:

- the HVAC system is in A/C, heat or defrost modes.
- the rear defroster is on.
- the battery has a low state of charge.
- the battery temperature is below 5°C (41°F) or above 60°C (140°F).
- the engine temperature is below 46°C (115°F).
- the engine temperature is below 60°C (140°F) and the HVAC system is in heat mode.
- the steering wheel is turned rapidly or is at a sharp angle.
- vehicle speed of greater than 4 km/h (2.5 mph) for more than 2 seconds has not occurred.
- the vehicle is on a steep road grade.
- elevation is approximately above 3,048 meters (10,000 feet).

If the system detects a malfunction, it turns off and the OFF lamp on the auto-start-stop control switch illuminates continuously. If the OFF lamp remains on after an ignition cycle, a malfunction is indicated.

Refer to the Owner's Literature for additional information.

Passive Anti-theft System (PATS)

This vehicle may be equipped with PATS. PATS disables the engine from starting if an unprogrammed PATS key is used or an invalid PCM ID is received. The PATS is controlled by the BCM. If there is a PATS concern that disables the engine, the IPC displays a corresponding message in the message center.
Refer to: Passive Anti-Theft System (PATS) - System Operation and Component Description (419-01B Passive Anti-Theft System (PATS), Description and Operation).

Component Description

Body Control Module (BCM)

Refer to: Module Controlled Functions - Component Location (419-10 Multifunction Electronic Modules, Description and Operation).

Passive Anti-Theft Transceiver

If equipped with PATS,
Refer to: Passive Anti-Theft System (PATS) - System Operation and Component Description (419-01B Passive Anti-Theft System (PATS), Description and Operation).

Integrated Keyhead Transmitter (IKT)

If equipped with PATS,
Refer to: Passive Anti-Theft System (PATS) - System Operation and Component Description (419-01B Passive Anti-Theft System (PATS), Description and Operation).

Ignition Switch

Refer to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches, Diagnosis and Testing).

Powertrain Control Module (PCM)

The PCM provides power and ground to the starter relay to initiate cranking of the engine.

Copyright © 2016 Ford Motor Company

Starting System

Inspection and Verification

1. Verify the customer concern by operating the starting system.
2. Before diagnosing or repairing the starting system inspect the following items:

- Check the battery for loose, damaged or corroded connections.
- Check the generator for loose, damaged or corroded connections.
- Check engine and battery grounds for loose, damaged or corroded connections.
- Check high current BJB for loose or corroded connections.
- Verify fuses or fusible links.
- Inspect wiring, terminals and connectors.

3. Check the battery condition and state of charge.
   REFER to: Battery (414-01 Battery, Mounting and Cables, Diagnosis and Testing).
4. Check for abnormal ignition-off current drain(s). Refer to section 414-01 Battery Drain Check
5. Remove the accessory drive belt.
   REFER to: Accessory Drive Belt (303-05C Accessory Drive - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
   Verify the crankshaft and each of the components driven by the accessory drive belt rotate and are not seized or damaged.
6. If any aftermarket accessories have been added to the vehicle, make sure they are properly wired.
7. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding.
8. Using the diagnostic scan tool, retrieve all Diagnostic Trouble Codes (DTCs). Refer to the appropriate DTC Chart in this section.

DTC Charts

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

PCM DTC Chart

DTC	Description	Action
P06E9	Engine Starter Performance	If the engine cranks, Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual. GO to Pinpoint Test A
P0850	Park / Neutral Switch Input Circuit	GO to Pinpoint Test A
All Other DTCs	—	REFER to: Electronic Engine Controls (303-14 Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma) .

BCM DTC Chart

DTC	Description	Action
B10E5:11	PCM Wake-up Signal: Circuit Short to Ground	GO to Pinpoint Test C
All Other DTCs	—	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).

Symptom Chart(s)

Symptom Chart: Starting System

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

Symptom Chart

Condition	Possible Sources	Actions
The engine does not crank	Refer to the Pinpoint Test	GO to Pinpoint Test A
The engine cranks slowly	Refer to the Pinpoint Test	CARRY OUT the starter system component test. Refer to Starter Motor - Positive Circuit Test in this section.
The engine cranks but will not start	Ignition fault	Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
Unusual starter noise	Refer to the Pinpoint	GO to Pinpoint Test B

	Test	
The starter spins but the engine does not crank	Starter motor	INSPECT the starter motor mounting and engagement. REPAIR as necessary.
	Damaged flexplate	INSPECT the flexplate for damaged, missing or worn teeth. REPAIR as necessary.
The starter does not disengage from the flexplate	• Starter relay • Wiring, terminals or connectors	REMOVE the starter relay. If the engine stops cranking, INSTALL a new relay. If the engine continues to crank, REPAIR circuit CDC25AB (BN/GN) for a short to voltage.

Pinpoint Tests

Engine Does Not Crank

Refer to Wiring Diagrams Cell 20 for schematic and connector information.

Normal Operation and Fault Conditions

For more information,
REFER to: Starting System - System Operation and Component Description (303-06B Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Description and Operation).

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P06E9	Engine Starter Performance	This DTC sets in the PCM when no engine rotation is detected during crank event.

Possible Sources

- Battery
- Battery cables
- Starter motor
- BJB starter relay

Visual Inspection and Diagnostic Pre-checks

- Verify the BJB fuse 84 (30A).
- Verify the high current BJB fuse 1 (470A).
- Verify the BCM fuse 3 (15A).

PINPOINT TEST A : ENGINE DOES NOT CRANK

A1 PERFORM INSPECTION AND VERIFICATION

NOTE: *Make sure battery voltage is greater than 12.2 volts prior to and during this pinpoint test.*

NOTE: *If it is necessary to leave the battery charger connected during testing, do not leave it on its highest or boost setting. The highest settings can exceed 16 volts, resulting in false test results and setting of Diagnostic Trouble Codes (DTCs).*

- Perform Inspection and Verification procedure in this section.

Was an obvious cause for an observed or reported concern found?

Yes	Correct the cause as necessary.
No	GO to A2

A2 RETRIEVE DIAGNOSTIC TROUBLE CODES (DTCS)

- Ignition ON.
- Using a diagnostic scan tool, perform self-tests for:
  - BCM
  - TCM
  - PCM

Are any Diagnostic Trouble Codes (DTCs) present?

Yes	For all TCM Diagnostic Trouble Codes (DTCs), REFER to: Diagnostic Trouble Code Charts (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). For all PCM Diagnostic Trouble Codes (DTCs), GO to A3 For all BCM Diagnostic Trouble Codes (DTCs), REFER to the BCM DTC Chart in this section.
No	GO to A3

A3 CHECK THE PCM (POWERTRAIN CONTROL MODULE) ENGINE CRANKING (ENG_CRANK) PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view the PCM Parameter Identifications (PIDs).
- Make sure the transmission is in PARK or NEUTRAL.
- Using a diagnostic scan tool, view the PCM PID ENG_CRANK, with the key in the START position.

Does the PCM PID ENG_CRANK change from Inactive to Active?

Yes	GO to A6
No	GO to A4

A4 CHECK THE CRANK DETECT CIRCUIT FOR VOLTAGE AT THE PCM (POWERTRAIN CONTROL MODULE)

- Ignition OFF.
- Disconnect PCM C1232A.
- With the key in the START position, measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-47		Ground

Is the voltage greater than 11 volts?

Yes	GO to A19
No	GO to A5

A5 CHECK THE IGNITION SWITCH

- Ignition OFF.
- Carry out the Ignition Switch Component Test.
  Refer to Wiring Diagrams Cell 149 for schematic and connector information.

Did the ignition switch pass the component test?

Yes	REPAIR circuit CDC35DA (BU/WH) for an open.
No	INSTALL a new ignition switch. REFER to: Ignition Switch (211-05 Steering Column Switches, Removal and Installation).

A6 CHECK THE TCM (TRANSMISSION CONTROL MODULE) TR_CRANK PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, while viewing the TCM PID TR_CRANK, place the gear selector in PARK and then NEUTRAL.

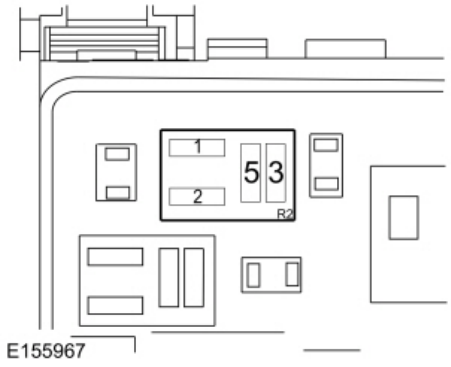
Does the TCM PID TR_CRANK read YES in both positions?

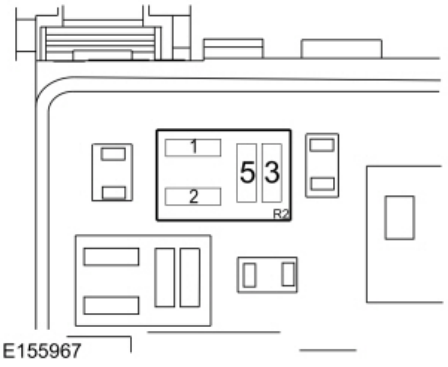
Yes	GO to A8
No	DIAGNOSE the TR sensor, REFER to: Diagnostic Trouble Code Charts (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).

A7 CHECK THE PCM (POWERTRAIN CONTROL MODULE) IN_GEAR PID (PARAMETER IDENTIFICATION)

- Using a diagnostic scan tool, view the PCM Parameter Identifications (PIDs).
- While observing the PCM PID IN_GEAR, place the gear selector in PARK and then NEUTRAL.

Does the PID read No in both positions?





Yes	GO to A8
No	Diagnose the TR sensor, REFER to: Diagnostic Trouble Code Charts (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).

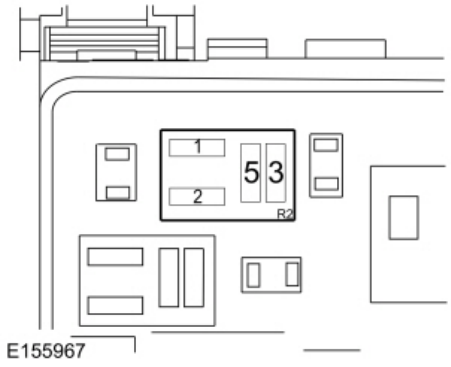
A8 CHECK THE STARTER RELAY CONTROL OPERATION

NOTICE: The following step uses a test light to simulate normal circuit loads. Use only the test light recommended in the Special Tools table at the beginning of this section. To avoid connector terminal damage, use the Flex Probe Kit for the test light probe connection to the vehicle. Do not use the test light probe directly on any connector.

- Remove the BJB starter relay.
- Measure:

Positive Lead	Measurement / Action	Negative Lead

 BJB starter relay pin 1		 BJB starter relay pin 2



- Make sure the transmission is in PARK or NEUTRAL.
- With the key in the START position, observe the test light.

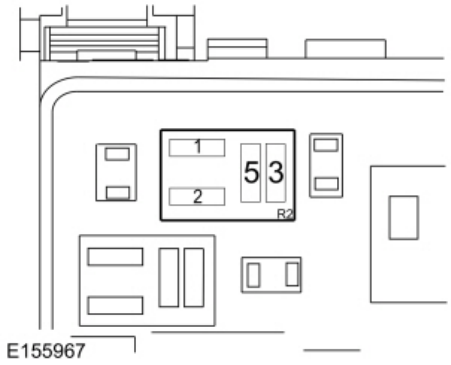
Does the test light illuminate when the key is in the START position?

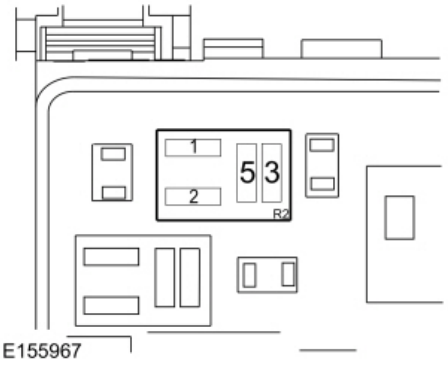
Yes	GO to A9
No	GO to A16

A9 CHECK THE VOLTAGE TO THE STARTER RELAY

- Measure:

Positive Lead	Measurement / Action	Negative Lead
 BJB starter relay pin 3		Ground





Is the voltage greater than 11 volts?

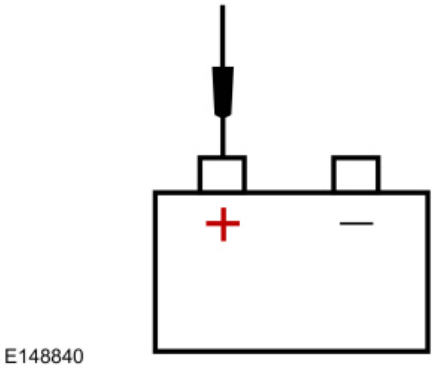
Yes	GO to A10
No	VERIFY BJB fuse 84 (30A) is OK. If OK, REPAIR the circuit for an open. If not OK, REFER to the Wiring Diagrams manual to identify the possible causes of the circuit short.

A10 CHECK THE STARTER MOTOR OPERATION AT THE STARTER RELAY

- Ignition OFF.
- With the transmission in PARK or NEUTRAL, momentarily connect a fused jumper wire:

Positive Lead	Measurement / Action	Negative Lead

 BJB starter relay pin 3		 BJB starter relay pin 5



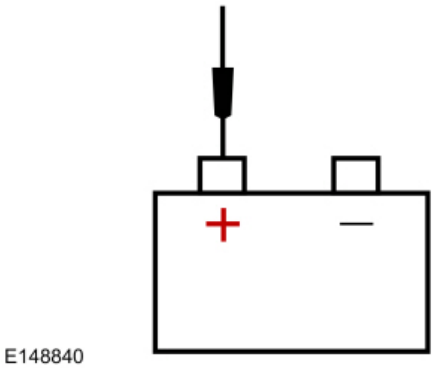
-

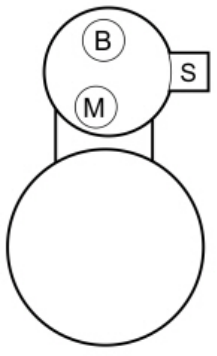
Did the starter engage and the engine crank?

Yes	INSTALL a new starter relay.
No	GO to A11

A11 CHECK THE BATTERY GROUND CABLE

- Measure:





Positive Lead	Measurement / Action	Negative Lead
		Ground C1100

Are the voltages greater than 11 volts?

Yes	GO to A12
No	CLEAN or INSTALL a new negative battery cable as necessary.

A12 CHECK THE STARTER MOTOR GROUND

- Measure:

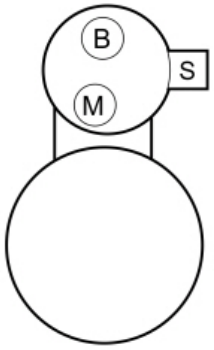
Positive Lead	Measurement / Action	Negative Lead
		 Starter motor case

Is the voltage greater than 11 volts?

Yes	GO to A13
No	CLEAN the starter motor mounting flange and MAKE SURE the starter motor is correctly mounted.

A13 CHECK THE VOLTAGE TO THE STARTER MOTOR

- Measure:



Positive Lead	Measurement / Action	Negative Lead
C197C	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to A14
No	CLEAN the high current BJB connection to the battery post. CLEAN or REPAIR a positive battery cable as necessary.

A14 CHECK THE STARTER MOTOR FOR CORRECT OPERATION

- Ignition OFF.
- Connect a remote starter switch between the starter solenoid C1715A-1 ("B" terminal) and C1715B-1 ("S" terminal).

E148837

- With the transmission in PARK or NEUTRAL, momentarily engage the starter.

Did the starter engage and the engine crank?

Yes	GO to A15
No	INSTALL a new starter, REFER to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

A15 CHECK FOR START INPUT AT THE STARTER

- Connect BJB starter relay.
- Disconnect Starter solenoid C197C.
- With the key in the START position, measure:

Positive Lead	Measurement / Action	Negative Lead
C197C-1	V	Ground

Is the voltage greater than 11 volts?

Yes	CLEAN the starter solenoid "S" terminal and starter solenoid connector. CHECK the wiring and the starter motor for a loose or intermittent connection.
No	REPAIR the circuit for an open.

A16 CHECK THE PCM (POWERTRAIN CONTROL MODULE) STARTER RELAY CIRCUITS FOR A SHORT TO POWER

- Ignition OFF.
- Disconnect PCM C1232A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-37	V	Ground

C1232A-25		Ground

Is any voltage present?

Yes	REPAIR the affected circuit.
No	GO to A17

A17 CHECK THE PCM (POWERTRAIN CONTROL MODULE) STARTER RELAY CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-37	Ω	Ground
C1232A-25	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to A18
No	REPAIR the affected circuit.

A18 CHECK THE PCM (POWERTRAIN CONTROL MODULE) STARTER RELAY CIRCUITS FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-37	Ω	BJB start relay pin 1
C1232A-25	Ω	BJB start relay pin 2

Are the resistances less than 3 ohms?

Yes	GO to A19
No	REPAIR the affected circuit.

A19 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Unusual Starter Noise

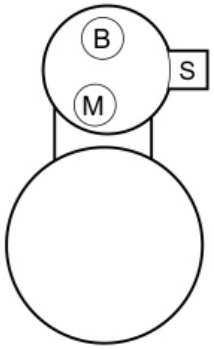
Normal Operation and Fault Conditions

Correct starter operation relies on correct mounting of the starter to the engine, alignment of the starter ring gear to the flexplate and correct functioning of the starter assembly (internal gears, bearings).

Possible Sources

- Engine
- Starter motor
- Starter motor mounting

Visual Inspection and Diagnostic Pre-checks



- Inspect the starter motor.
- Inspect the starter motor mounting.

PINPOINT TEST B : UNUSUAL STARTER NOISE

B1 CHECK THE STARTER MOUNTING
• Inspect the starter mounting bolts for looseness. **Is the starter motor mounted securely?**

Yes	GO to B2
No	INSTALL the starter motor securely. REFER to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

B2 CHECK FOR ENGINE NOISE
• Ignition OFF. • Connect a remote starter switch between the starter solenoid C197C ("B" terminal) and C197C-1 ("S" terminal).

E148837

- Engage the starter and verify the noise is due to starter operation.

Is the noise due to the starter engagement?

Yes	REFER to: Starter Motor Drive Gear and Flywheel Ring Gear Inspection (303-06B Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
No	REFER to: Engine (303-00 Engine System - General Information, Diagnosis and Testing). to continue diagnosis.

B10E5:11

Refer to Wiring Diagrams Cell 23 for schematic and connector information.

Normal Operation and Fault Conditions

The wake-up control circuit wakes up the PCM prior to engine cranking to allow it time to initialize. The wake-up control circuit is activated by the BCM when the driver door is opened, a key is inserted into the ignition, or when the ignition is in the ON or START position.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B10E5:11	PCM Wake-up Signal: Circuit Short to Ground	This DTC sets in the BCM when a short to ground is detected on the wake-up control circuit.

Possible Sources

- BCM
- PCM
- Wiring, terminals or connectors

PINPOINT TEST C : B10E5:11

C1 CHECK THE PCM (POWERTRAIN CONTROL MODULE) FOR A SHORT TO GROUND
• Ignition OFF. • Disconnect PCM C1232A. • Ignition ON. • Using a diagnostic scan tool, clear the BCM Continuous Diagnostic Trouble Codes (DTCs). • Using a diagnostic scan tool, perform BCM self-test. **Is BCM DTC B10E5:11 present?**

Yes	GO to C2
No	GO to C6

C2 CHECK THE PCM (POWERTRAIN CONTROL MODULE) WAKE-UP SIGNAL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect BCM C2280C.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-28		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to C3

C3 CHECK THE PCM (POWERTRAIN CONTROL MODULE) WAKE-UP SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-28	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to C4
No	REPAIR the circuit.

C4 CHECK THE PCM (POWERTRAIN CONTROL MODULE) WAKE-UP SIGNAL CIRCUIT FOR AN OPEN

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-28	Ω	C2280C-18

Is the resistance less than 3 ohms?

Yes	GO to C5
No	REPAIR the circuit.

C5 CHECK FOR CORRECT BCM (BODY CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all BCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the BCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

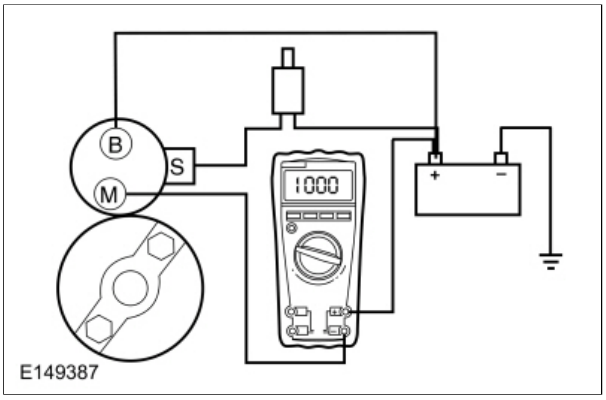
Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no TSB addresses this concern, INSTALL a new BCM. REFER to: Body Control Module (BCM) - RHD (419-10 Multifunction Electronic Modules, Removal and Installation). REFER to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

C6 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connectors or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Reconnect the PCM connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

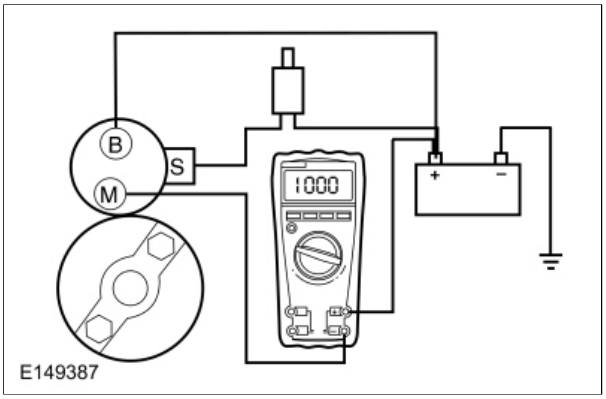


Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW the TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Component Test(s)

Starter Motor - Positive Circuit Test

NOTE: *Always make the multimeter connection at the component terminal rather than at the wiring end of the connector. Making a connection at the wiring end of the connector could result in false readings because the meter will not pick up a high resistance between the wiring connector and component.*

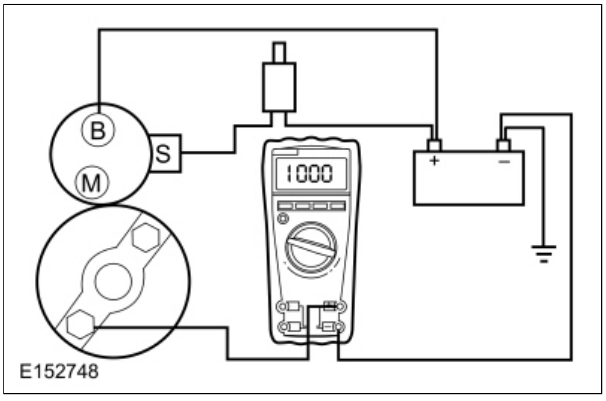


1. Make sure the battery is fully charged. Refer to 414-01
2. Perform a battery drain test. Refer to 414-01
3. Connect a remote starter switch between starter solenoid “S” terminal and the battery positive terminal.
4. Connect the multimeter positive lead to the battery positive post. Connect the negative lead to the starter solenoid "M" terminal.

5. Place gear selector lever in Park or Neutral.
6. Engage the remote starter switch. Read and record the voltage. The voltage reading should be 0.5 volt or less.
7. If the voltage reading is 0.5 volt or less, perform Starter Motor - Ground Circuit Test in this section.
8. A voltage reading greater than 0.5 volt is an indication of excessive resistance in the connections, the positive battery cable or in the starter solenoid. Remove the cables from the solenoid "B", "S" and "M" terminals. Clean the cables and connections and reinstall the cables to the correct terminals. Repeat Steps 3 through 6.
9. If the voltage reading is still greater than 0.5 volt when checked at the "M" terminal, move the multimeter negative lead to the starter solenoid “B” terminal.
10. With the gear selector lever in Park or Neutral, engage the remote starter switch. Read and record the voltage.
11. If the voltage reading at the "B" terminal is lower than 0.5 volt, the concern is in the connections at the starter solenoid or in the solenoid contacts. Install a new starter motor.
    REFER to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
12. If the voltage reading taken at the solenoid "B" terminal is greater than 0.5 volt after cleaning the cables and connections at the solenoid, the concern is in the positive battery cable connection or in the positive battery cable itself. Clean the positive battery cable connections. If this does not resolve the concern, install a new positive battery cable. 414–01

Starter Motor - Positive Circuit Test

1. Connect the multimeter positive lead to the battery positive post. Connect the negative lead to the starter solenoid "M" terminal.



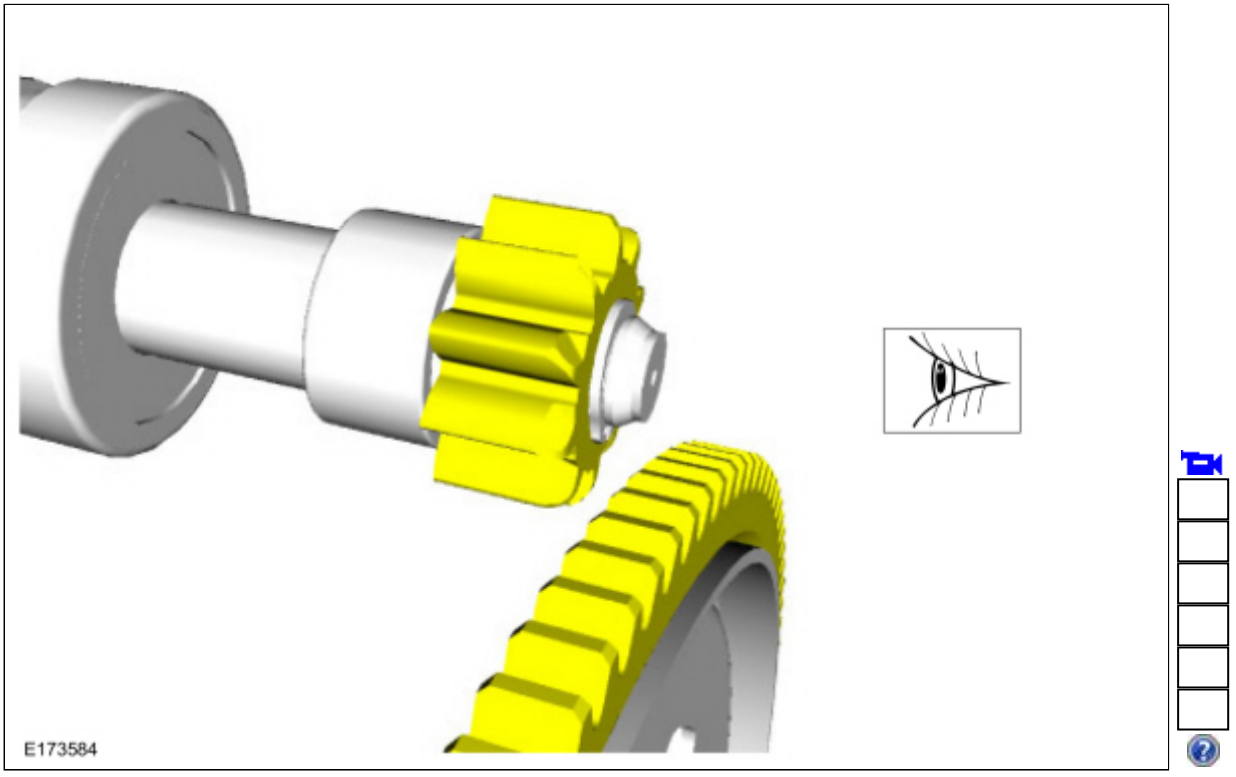
2. Place gear selector lever in Park or Neutral.
3. Engage the remote starter switch. Read and record the voltage. The voltage reading should be 0.5 volt or less.
4. If the voltage reading is 0.5 volt or less, perform Starter Motor - Ground Circuit Test in this section.
5. A voltage reading greater than 0.5 volt is an indication of excessive resistance in the connections, the positive battery cable or in the starter solenoid. Remove the cables from the solenoid "B", "S" and "M" terminals. Clean the cables and connections and reinstall the cables to the correct terminals. Repeat Steps 3 through 6.
6. If the voltage reading is still greater than 0.5 volt when checked at the "M" terminal, move the multimeter negative lead to the starter solenoid “B” terminal and repeat Step 5.
7. If the voltage reading at the "B" terminal is lower than 0.5 volt, the concern is in the connections at the starter solenoid or in the solenoid contacts. Install a new starter motor.
   REFER to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
8. If the voltage reading taken at the solenoid "B" terminal is greater than 0.5 volt after cleaning the cables and connections at the solenoid, the concern is in the positive battery cable connection or in the positive battery cable itself. Clean the positive battery cable connections. If this does not resolve the concern, install a new positive battery cable.

Starter Motor - Ground Circuit Test

A slow cranking condition can be caused by resistance in the ground or return portion of the cranking circuit. This procedure checks the voltage drop in the ground circuit.

1. Connect a remote starter switch between starter solenoid "S" terminal and the battery positive terminal.
2. Connect the multimeter positive lead to the starter motor housing (the connection must be clean and free of rust or grease). Connect the negative lead to the negative battery terminal.
3. Place gear selector lever in Park or Neutral.
4. Engage the remote starter switch and crank the engine. Read and record the voltage reading. The reading should be 0.5 volt or less.

5. If the voltage reading is greater than 0.5 volt, clean the negative cable connections at the battery, the body ground connections and the starter ground connections. Retest.
6. If the voltage reading is greater than 0.5 volt, install a new negative battery cable.
7. If the voltage reading is less than 0.5 volt and the engine still cranks slowly, install a new starter motor.
   REFER to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).



Copyright © 2016 Ford Motor Company

Starter Motor Drive Gear and Flywheel Ring Gear Inspection - 3.2L Duratorq-TDCi (148kW/200PS) - Puma

Inspection

1. Remove the starter motor.
   Refer to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

2. Check the wear patterns on the starter drive gear and the flywheel or flexplate ring gear. If the wear pattern is normal, then install the starter motor.
   Refer to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

3. If the starter motor drive gear and the flywheel or flexplate ring gear are not fully engaging and the starter motor drive gear is scored or damaged, then install a new starter motor.
   Refer to: Starter Motor (303-06C Starting System - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

4. If the teeth on the flywheel or flexplate ring gear are scored or damaged, then install a new flywheel or flexplate.

Engine Ignition

Refer to Wiring Diagrams Section 303-14A for schematic and connector information.

General Equipment

Ford diagnostic equipment

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of electrical damage.

Visual Inspection Chart

Electrical
• Circuit(s) • Wiring harness • Electrical connector(s) • Spark plug(s) • Ignition coil-on-plug(s) • Powertrain control module (PCM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Sources	Action
• Engine misfire	• Spark plug(s). • Ignition coil-on-plug(s) • PCM. • PCM calibration.	• REFER to the Ford diagnostic equipment.
	• Low cylinder compression.	• CARRY OUT an engine compression test. REFER to: Engine (303-01A) .
	• Worn or damaged valve(s), tappet(s) or camshaft(s).	• REMOVE the cylinder head. REFER to: Cylinder Head (303-01A) . INSPECT the cylinder head, valves, tappets and camshafts for signs of wear or damage.
	• Low fuel pressure. • Fuel injector(s) • Fuel rail. • Fuel pressure sensor.	• REFER to: Fuel Charging and Controls (303-04A) .
• Engine stumbling	• Spark plug(s). • Ignition coil-on-plug(s) • PCM. • PCM calibration.	• REFER to the Ford diagnostic equipment.
	• Low cylinder compression.	• CARRY OUT a engine compression test. REFER to: Engine (303-01A) .
	• Worn or damaged valve(s),	• REMOVE the cylinder head.

	tappet(s) or camshaft(s).	REFER to: Cylinder Head (303-01A) . INSPECT the cylinder head, valves, tappets and camshafts for signs of wear or damage.
	• Low fuel pressure. • Fuel injector(s) • Fuel rail. • Fuel pressure sensor.	• REFER to: Fuel Charging and Controls (303-04A) .
• Engine lacks power	• Spark plug(s). • Ignition coil-on-plug(s)	• REFER to the Ford diagnostic equipment.
	• Low cylinder compression.	• CARRY OUT an engine compression test. REFER to: Engine (303-01A) .
	• Worn or damaged valve(s), tappet(s) or camshaft(s).	• REMOVE the cylinder head. REFER to: Cylinder Head (303-01A) . INSPECT the cylinder head, valves, tappets and camshafts for signs of wear or damage.

Removal

WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.

NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Ignition Coil-On-Plug (303-07A Engine Ignition - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
3. **NOTICE: Do not remove the spark plugs when the engine is hot or cold soaked. Spark plug thread or cylinder head damage can occur. Make sure the engine is warm (hand touch after cooling down) prior to spark plug removal.**

   NOTICE: Only use hand tools when removing or installing the spark plugs, or damage can occur to the cylinder head or spark plug.

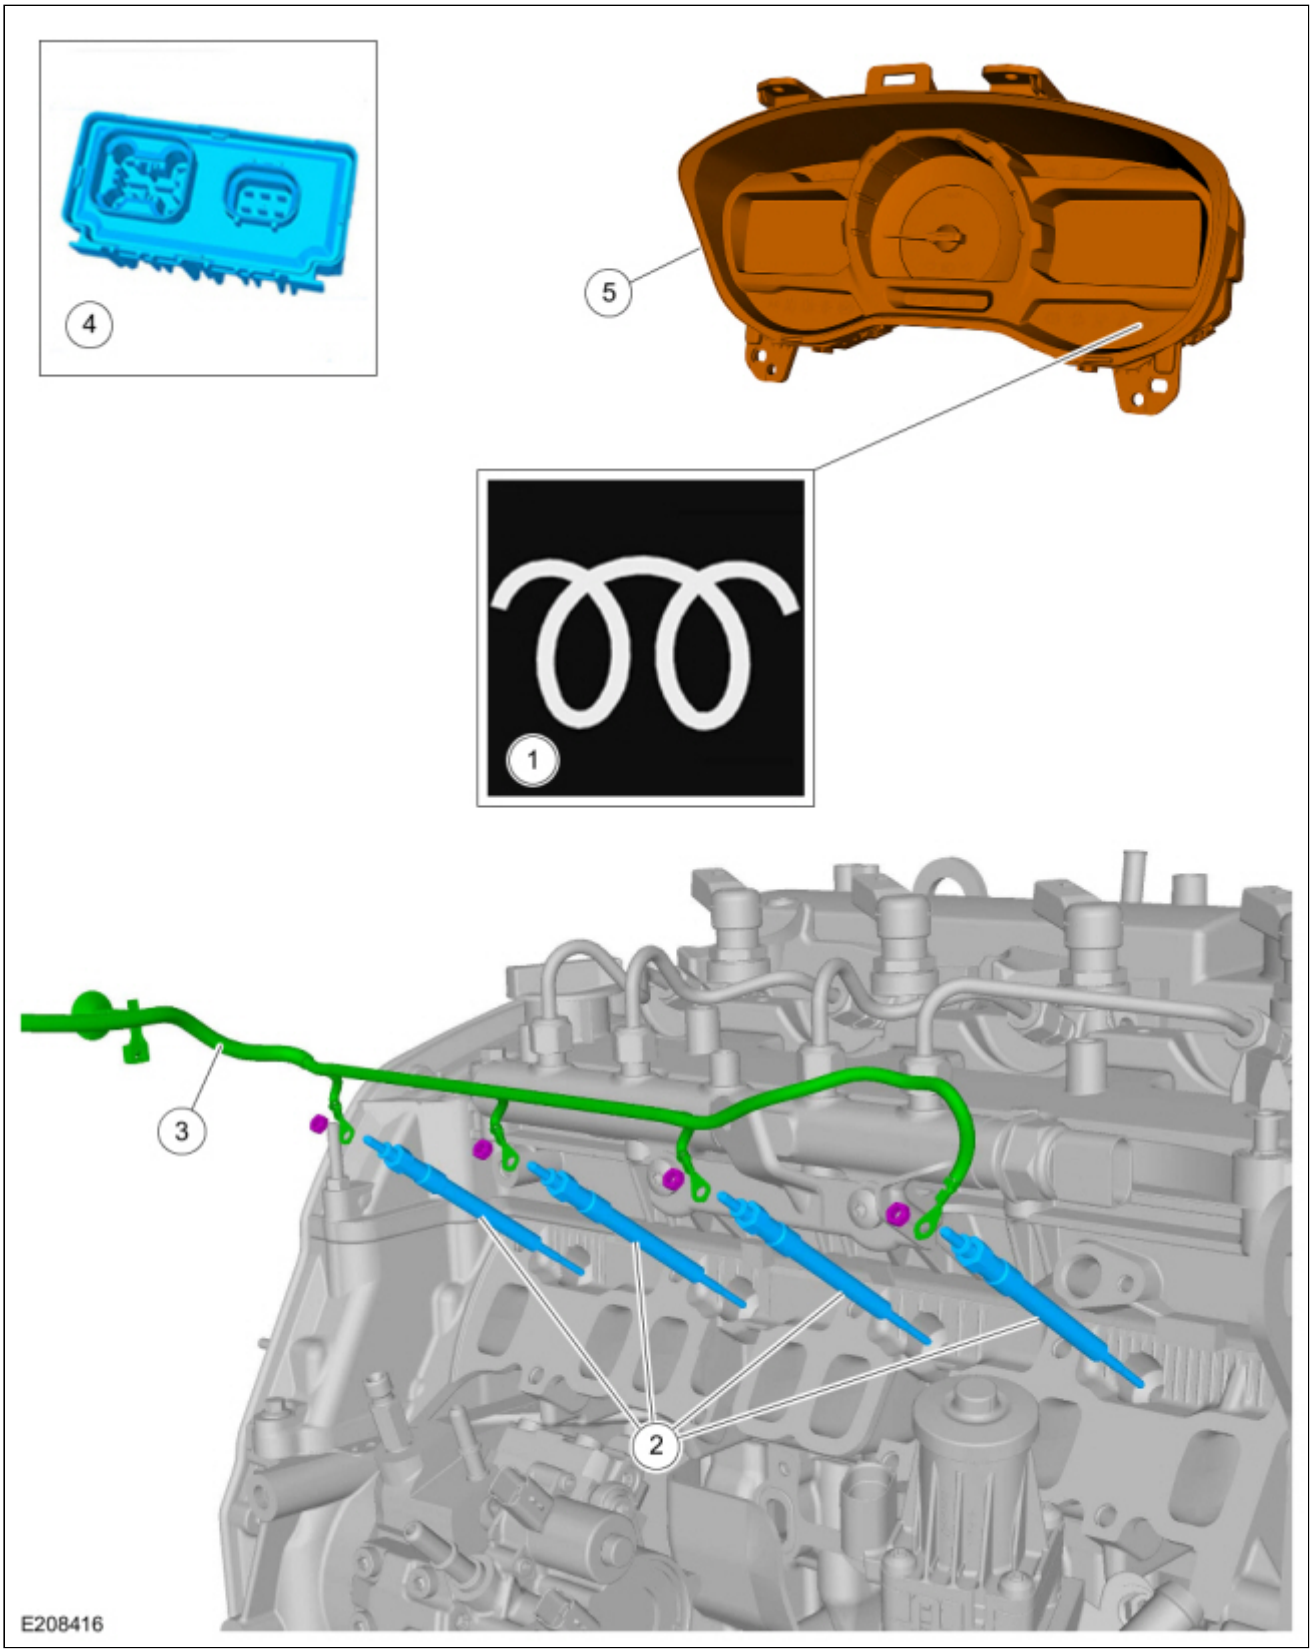
   NOTICE: The spark plug procedure must be followed exactly or damage to the cylinder head and spark plug will result.

   NOTICE: The spark plug must be securely held in an assembly aid or tool to prevent the spark plug from falling into the spark plug well which may damage the spark plug or the cylinder head.

   NOTICE: If a spark plug is dropped, internal damage may result and the spark plug must be discarded. The use of a damaged spark plug may cause engine damage to occur.

   NOTE: *Use compressed air to remove any foreign material in the spark plug well before removing the spark plugs.*

   Torque: 12 Nm



Installation

1. To install, reverse the removal procedure.

Glow Plug System - Component Location

Item	Part Number	Description

1	—	Glow plug indicator lamp
2	—	Glow plug(s)
3	—	Glow plug wire
4	—	Glow plug relay
5	—	Instrument cluster

Glow Plugs

The glow plugs are located in the side of the cylinder head and aid engine starting and efficiency. The glow plugs and the glow plug indicator lamp are controlled by the powertrain control module (PCM).

The glow plugs preheat the combustion chambers, which aids cold starting. During the preheat stage, the PCM receives an engine temperature signal from the cylinder head temperature (CHT) sensor and this determines the preheat time. The lower the temperature, the longer the preheat time. There is a maximum preheat time of 8 seconds at -20°C or lower. At temperatures above 80°C there is no preheat phase.

Once the engine has started, the glow plugs enter an after-glow phase. The after-glow phase helps to improve idling and reduce hydrocarbon emissions through more efficient combustion just after starting. The after-glow phase only operates at engine speeds below 2500 RPM, above that, the after-glow phase is interrupted to increase the durability of the glow plugs. There is a maximum after-glow time of 30 seconds at -20°C or lower. At temperatures above 50°C there is no after-glow phase.

Engine Emission Control

Vehicles with 2.5L Duratec-HE engine

Item	Part Number	Description
1	—	Valve cover
2	—	Air cleaner assembly
3	—	Valve cover to air cleaner outlet pipe positive crankcase ventilation (PCV) hose

Item	Part Number	Description
1	—	PCV valve to intake manifold PCV hose
2	—	Crankcase vent oil separator
3	—	Crankcase vent oil separator gasket
4	—	PCV valve

PCV System

The PCV system consists of a valve mounted in the crankcase vent oil separator (attached to the cylinder block) and two hoses. One PCV hose connects the PCV valve to the intake manifold, the other PCV hose connects the valve cover to the air cleaner outlet pipe.

Under idle and part throttle conditions, the crankcase vapor flows from the crankcase vent oil separator to the intake manifold and into the combustion chambers where the vapor is burnt during combustion.

Under full throttle conditions, the crankcase vapor flows from the valve cover into the air cleaner outlet pipe through the PCV hose.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Exhaust gas recirculation (EGR) valve • EGR valve outlet tube • EGR cooler • Gaskets/seals • Hose(s)/hose joints	• Fuse(s) • Wiring harness • Electrical connector(s) • Relay(s) • Sensor(s) • Powertrain control module (PCM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and refer to the Ford diagnostic equipment to diagnose the system.

Intake Air Distribution and Filtering - Overview

Overview

The air intake system cleans intake air with a replaceable, dry-type engine Air Cleaner (ACL) element made of treated, pleated paper. A new Air Cleaner (ACL) element must be installed periodically as scheduled. Engine performance and fuel economy are adversely affected when maximum restriction of the Air Cleaner (ACL) element is reached.

The air intake system measures airflow with the MAF sensor.

Charge Air Cooler (CAC) Cleaning

Activation

1. **WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.**

   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).

2. **NOTE:** *Do not use a high-pressure power washer to clean the CAC (Charge Air Cooler) or damage to the CAC may occur.*

   NOTE: *Drain all contaminates such as coolant, fuel and oil prior to cleaning the CAC.*

   NOTE: *Thoroughly clean the joint clamp areas as well as the turbocharger connection, engine connection and the CAC connections, using metal brake parts cleaner.*

   Lay the CAC flat with the inlet and outlet ports pointing up.

3. **NOTE:** *Plug or cap the CAC openings prior to agitating.*

4. Add an appropriate amount of commercially available detergent cleaner such as Simple Green Pro HD, or equivalent to the CAC. Follow the manufacturer's directions for cleaning. Fill the CAC to 40% of its volume with water.

5. Raise one end of the CAC and agitate it by hand for at least 5 minutes.

6. Raise the opposite end of the CAC and agitate it by hand for at least 5 minutes.

7. Drain the CAC.

8. Flush the CAC thoroughly with clean water.

9. Repeat Steps 2 through 7 until no contaminates are found in the flush water.

10. Allow the CAC to air dry.

11. **NOTE:** *The following leak test steps must be performed prior to installing the CAC.*

    NOTE: *Use a commercially available kit, such as the Johnson Manufacturing Company Charge Air Cooler Test Set Part No. 351-CAS, or equivalent.*

    Install the commercially available CAC cooler tester on the CAC following the manufacturer's installation instructions.

12. Tighten the clamps to 5 Nm (44 lb-in).

13. **WARNING: Never exceed the specified pressure. Excessive pressure may cause the test adapter to blow off or may damage the charge air cooler (CAC). Failure to follow this instruction may result in serious personal injury.**

    Slowly apply air pressure to 150 kPa (22 psi).

14. Let the CAC stand for a few minutes and note any loss in pressure.

15. Release the air pressure.

16. Repeat Steps 13 through 15 as many times as necessary to verify the readings. The reading is considered verified when 3 consecutive tests show approximately the same pressure drop.

17. If the pressure loss exceeds 10 kPa (1.5 psi) per minute, install a new CAC.

Refer to: Charge Air Cooler (CAC) (303-12B Intake Air Distribution and Filtering - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

Intake Air Distribution and Filtering - Overview

Overview

The air intake system cleans intake air with a replaceable, dry-type engine air cleaner element made of treated, pleated paper. A new air cleaner element must be installed periodically as scheduled. Engine performance and fuel economy are adversely affected when maximum restriction of the air cleaner element is reached.

The CAC subsystem cools and increases the density of the compressed turbocharged air.

The air intake system measures air flow and air temperature into the engine with the MAF and IAT sensor.

Intake Air Distribution and Filtering

Refer to Wiring Diagrams Section 303-14B for schematic and connector information.

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
− Air cleaner intake pipe − Air cleaner outlet pipe − Air cleaner − Air cleaner element − Charge air cooler intake pipe − Charge air cooler outlet pipe − Charge air cooler	− Fuse(s) − Wiring harness − Electrical connector(s) − Mass air flow and temperature (MAFT) sensor − Powertrain control module (PCM)

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and refer to the Ford diagnostic equipment to diagnose the system.

Electronic Engine Controls - Overview

Overview

The EEC system provides optimum control of the engine through the enhanced capability of the powertrain control module (PCM). The EEC system also has an on board diagnostic (OBD) monitoring system with features and functions to meet government regulations on exhaust emissions.

The EEC system has two major divisions: hardware and software. The hardware includes the PCM, sensors, switches, actuators, solenoids, and interconnecting terminals. The software in the PCM provides the strategy control for outputs (engine hardware) based on the values of the inputs to the PCM.

The PCM receives information from a variety of sensor and switch inputs. Based on the strategy and calibration stored within the PCM, the PCM generates the appropriate output. The system is designed to minimize emissions and optimize fuel economy and driveability. The software strategy controls the basic operation of the engine, provides the OBD strategy, controls the malfunction indicator lamp (MIL), communicates to the scan tool over the data link connector (DLC), allows for flash electrically erasable programmable read only memory (EEPROM), provides idle air and fuel trim, and controls failure mode effects management (FMEM).

P1829	Transfer Case Counter Clockwise Shift Relay Coil Open Circuit	REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
P1830	Transfer Case Counter Clockwise Shift Relay Coil Short Circuit To Battery	REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
P1831	Transfer Case Counter Clockwise Shift Relay Coil Short Circuit To Ground	REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
P184A	Transfer Case Unable To Transition Between 4x2 and 4x4 Mode	REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
P184B	Transfer Case Unable To Transition Between 4x4	REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems,

	High and 4x4 Low Range	Diagnosis and Testing).
P1870	Mechanical Transfer Case 4x4 Switch Circuit Failure	REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
P1871	Mechanical Transfer Case 4x4 Switch Circuit Short To Battery	REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
P1874	Transfer Case Hall Effect Sensor Power Circuit Failure	REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
P1875	Transfer Case Hall Effect Sensor Power Circuit Short To Battery	REFER to: Four-Wheel Drive Systems (308-07A Four-Wheel Drive Systems, Diagnosis and Testing).
P193E	A/C Clutch Request Signal	• With EATC, REFER to: Climate Control System - Vehicles With: Electronic Automatic Temperature Control (EATC) (412-00 Climate Control System - General Information, Diagnosis and Testing). • With EMTC, REFER to: Climate Control System - Vehicles With: Electronic Manual Temperature Control (EMTC) (412-00 Climate Control System - General Information, Diagnosis and Testing).
P2535	Ignition Switch Run/Start Position Circuit High	REFER to: Starting System (303-06A Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4, Diagnosis and Testing).
U0104	Lost Communication With Cruise Control Module	REFER to: Cruise Control (419-03B Cruise Control - Vehicles With: Adaptive Cruise Control, Diagnosis and Testing).
U0121	Lost Communication With Anti-Lock Brake System (ABS) Control Module	GO to Pinpoint Test A
U012D	Lost Communication With Generator Control Module	REFER to: Charging System - 2.5L Duratec-HE (122kW/165PS) - MI4 (414-00 Charging System - General Information, Diagnosis and Testing).
All Other DTCs	—	Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual. Section 3 Symptom Charts.

Pinpoint Tests

U0121

DTC Fault Trigger Condition-PCM

DTC	Description	Fault Trigger Conditions
U0121	Lost Communication With Anti-Lock Brake System (ABS) Control Module	The PCM sets this DTC if data messages received from the ABS module through the GWM are missing.

Normal Operation and Fault Conditions

REFER to: Communications Network - Overview (418-00 Module Communications Network, Description and Operation).

Possible Sources

- Communications network concern
- ABS module
- BCM
- PCM

PINPOINT TEST A : U0121

A1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to A2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

A2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Did the ABS module pass the network test?

Yes	GO to A3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

A3 PERFORM ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST

- Using a diagnostic scan tool, perform a ABS module self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	GO to A4

A4 CHECK THE BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, retrieve the BCM Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	GO to A5

A5 PERFORM THE PCM (POWERTRAIN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PCM self-test.

Is DTC P0562 or DTC P0563 recorded?

Yes	REFER to PCM DTC Chart in this section.

No	GO to A6

A6 RECHECK THE PCM (POWERTRAIN CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI, or the PMI may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the PCM self-test.

Is DTC U0121 still present?

Yes	GO to A7
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

A7 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0121 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0121:00 set in any other module?

Yes	GO to A8
No	GO to A9

A8 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect and inspect all ABS module connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all the ABS module connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

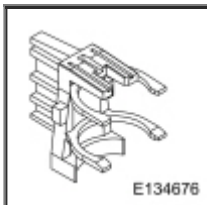
Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS module. REFER to: Anti-Lock Brake System (ABS) Module (206-09 Anti-Lock Brake System (ABS) and Stability Control, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

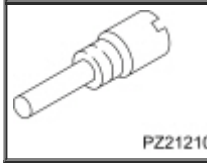
A9 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect PCM connector.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)

- damaged or bent pins – install new terminals/pins
- pushed-out pins – install new pins as necessary

- Reconnect the PCM connector. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.





Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

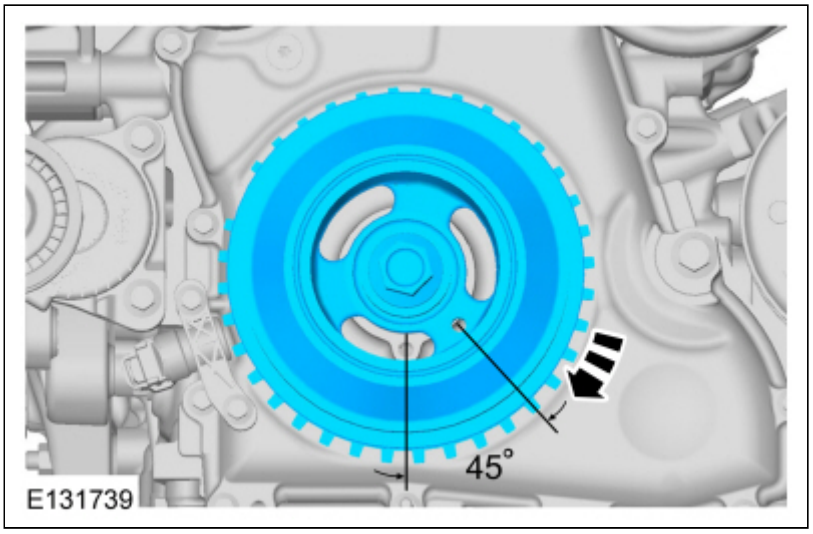
Crankshaft Position (CKP) Sensor

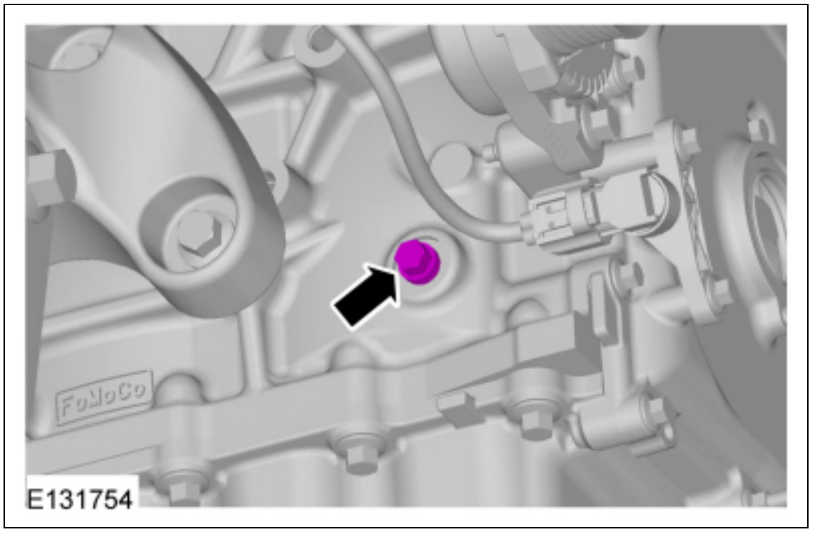
Special Tool(s) / General Equipment

 E134676	303-1417 Tool, Crank Sensor Alignment
 PZ21210	303-507 Timing Peg, Crankshaft TDC



Removal

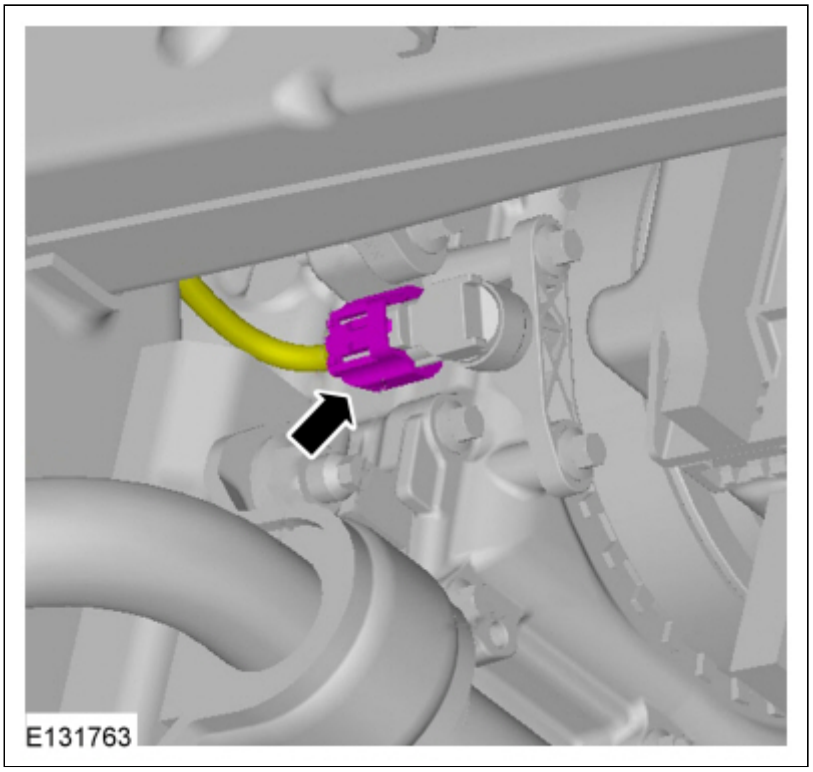
NOTE: *Removal steps in this procedure may contain installation details.*



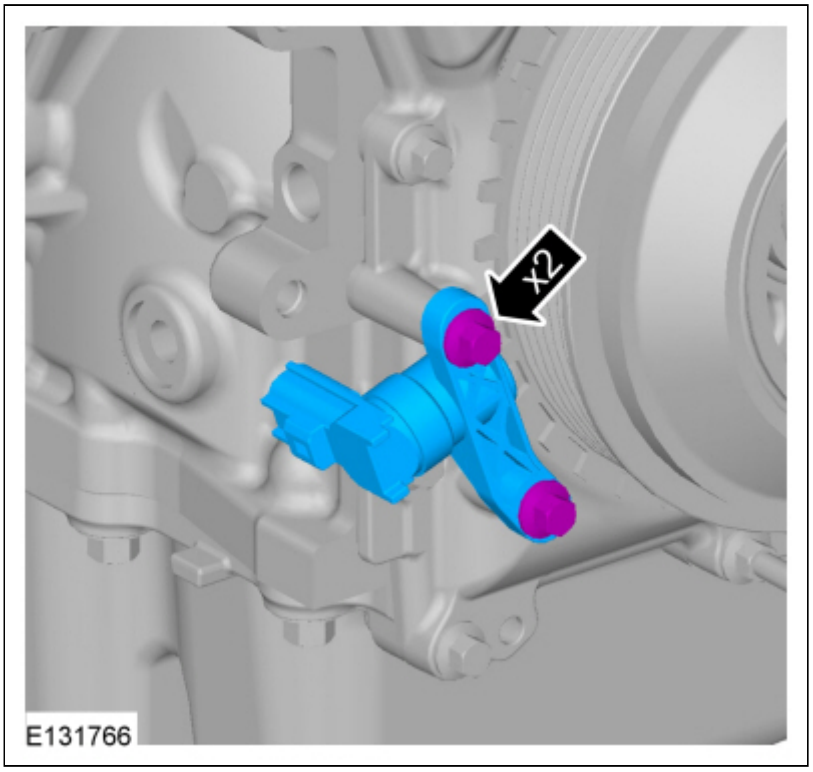
1. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
2. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
3. 

4. **WARNING: Only rotate the crankshaft clockwise.**

   Turn the crankshaft until no. 1 piston is at about 45° before TDC.

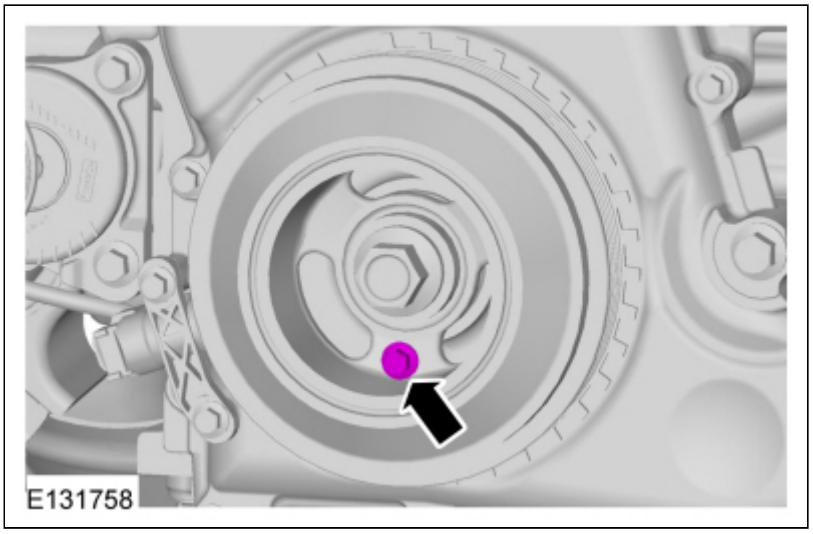


5.

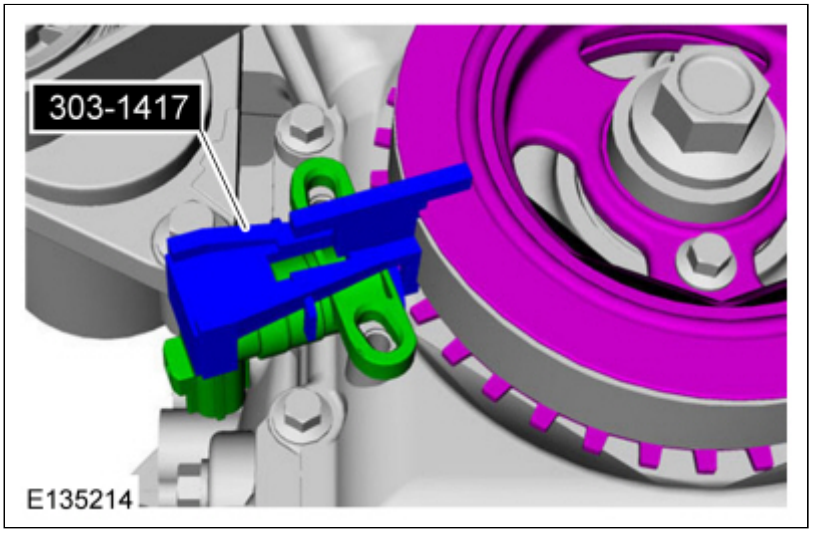


6. Use Special Service Tool: 303-507 Timing Peg, Crankshaft TDC.

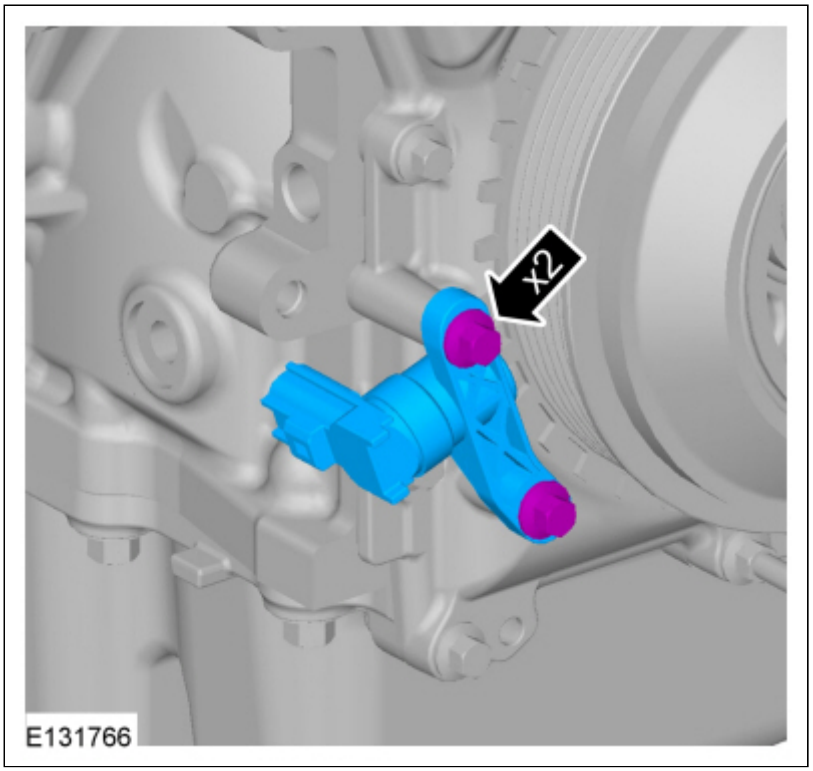
7.



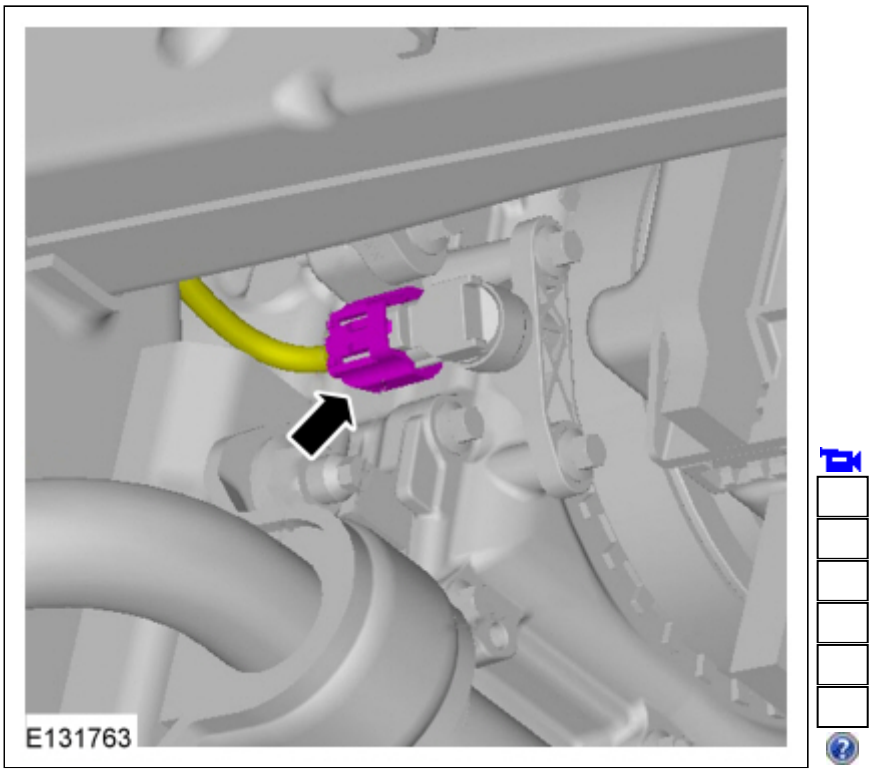
8.



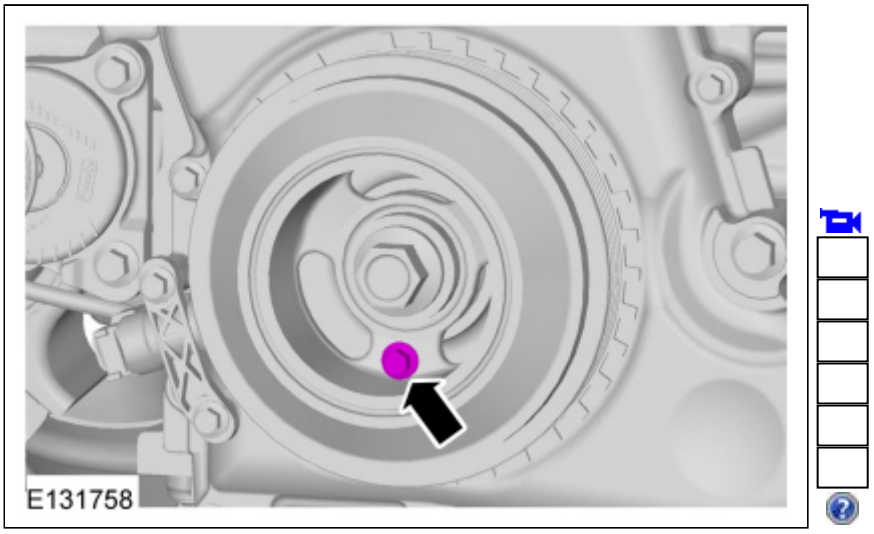
Installation



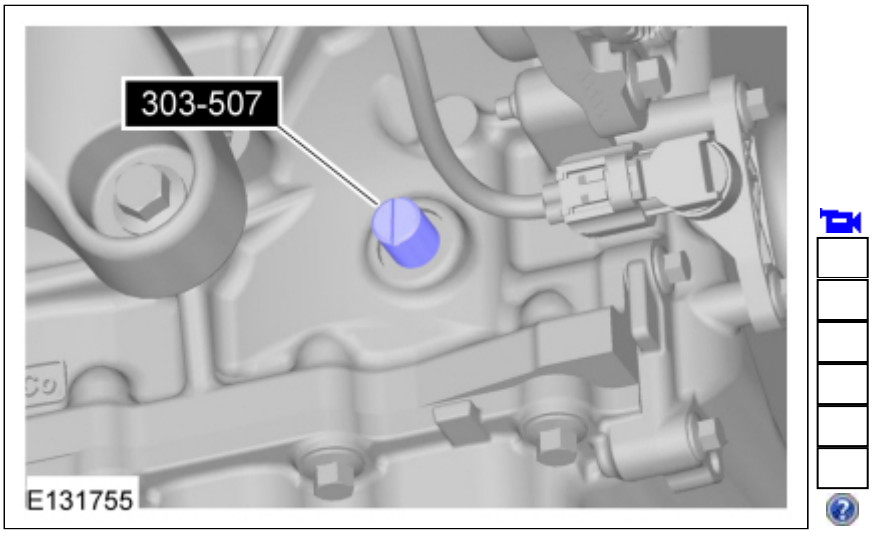
1. Install the bolt M6 x 18 mm.



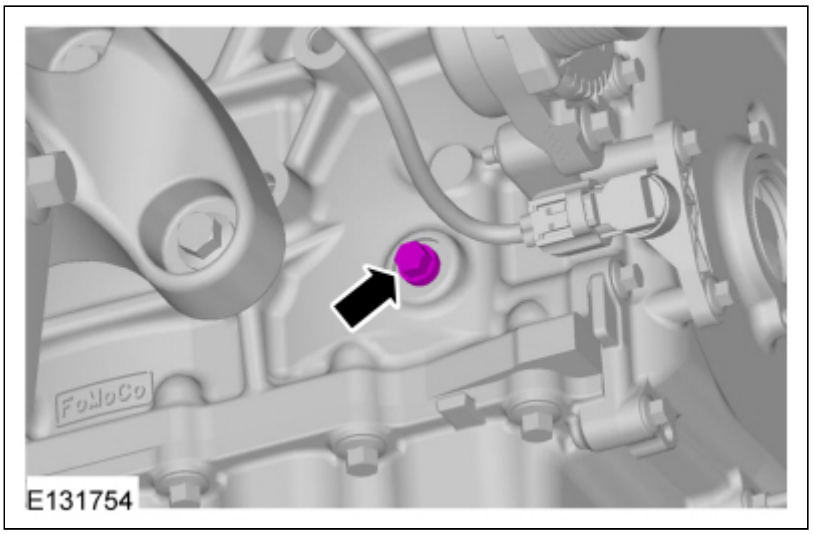
2. Use Special Service Tool: 303-1417 Tool, Crank Sensor Alignment.



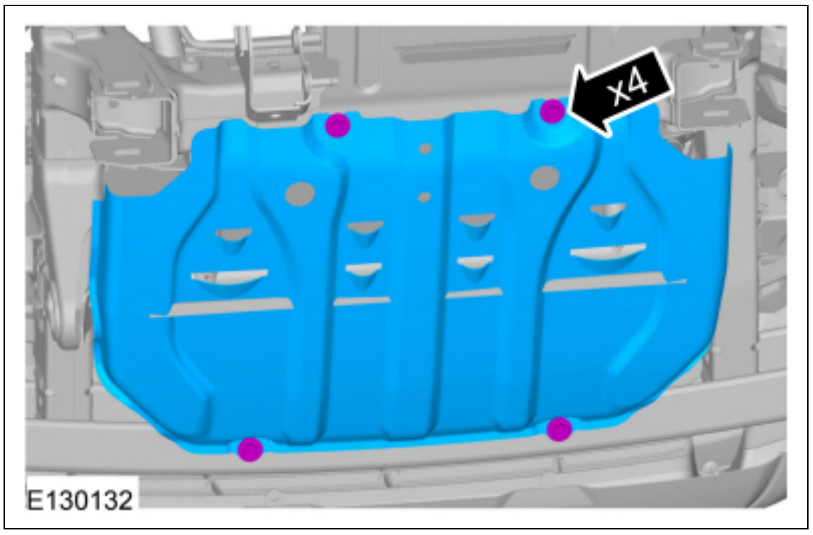
3. *Torque*: 7 Nm



4.



5. Remove the bolt M6 x 18 mm.



6. Remove Special Service Tool: 303-507 Timing Peg, Crankshaft TDC.

7. *Torque*: 20 Nm

8. *Torque*: 30 Nm

Powertrain Control Module (PCM)

Base Part Number: 12A650

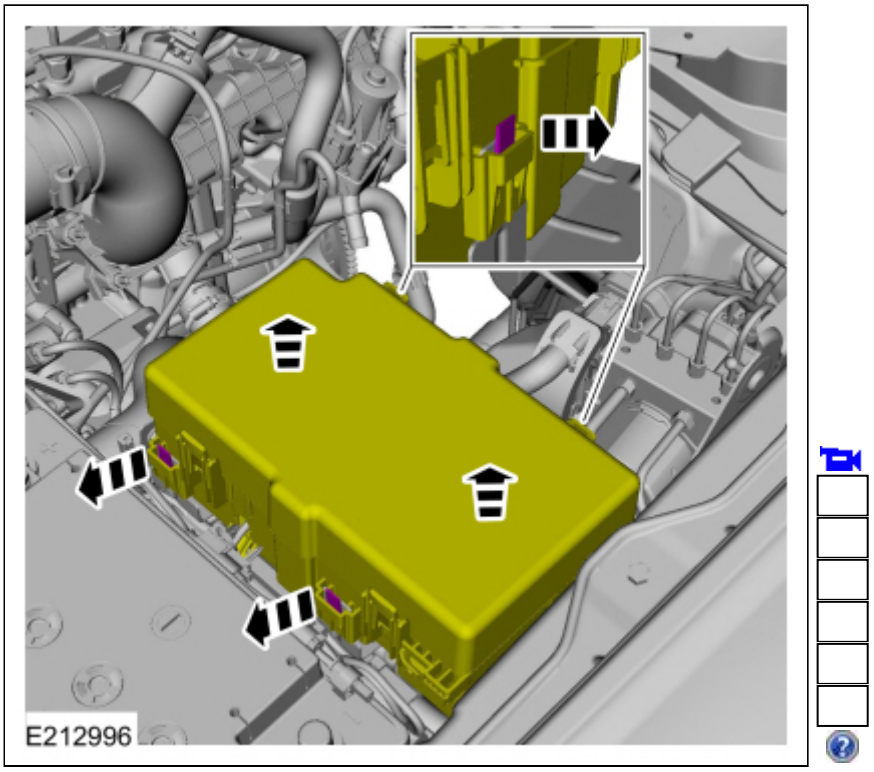
Special Tool(s) / General Equipment

Ford Diagnostic Equipment

Removal

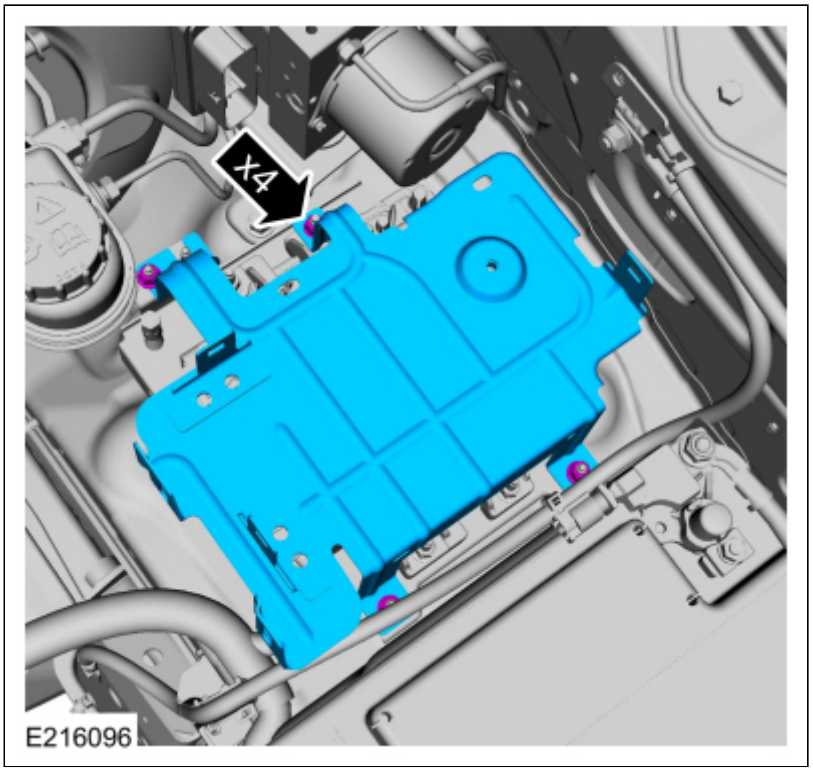
NOTICE: If a new PCM is to be installed, upload the PCM configuration information using the Programmable Modules Installation Routine, prior to commencing the removal of the PCM.

NOTE: *Removal steps in this procedure may contain installation details.*



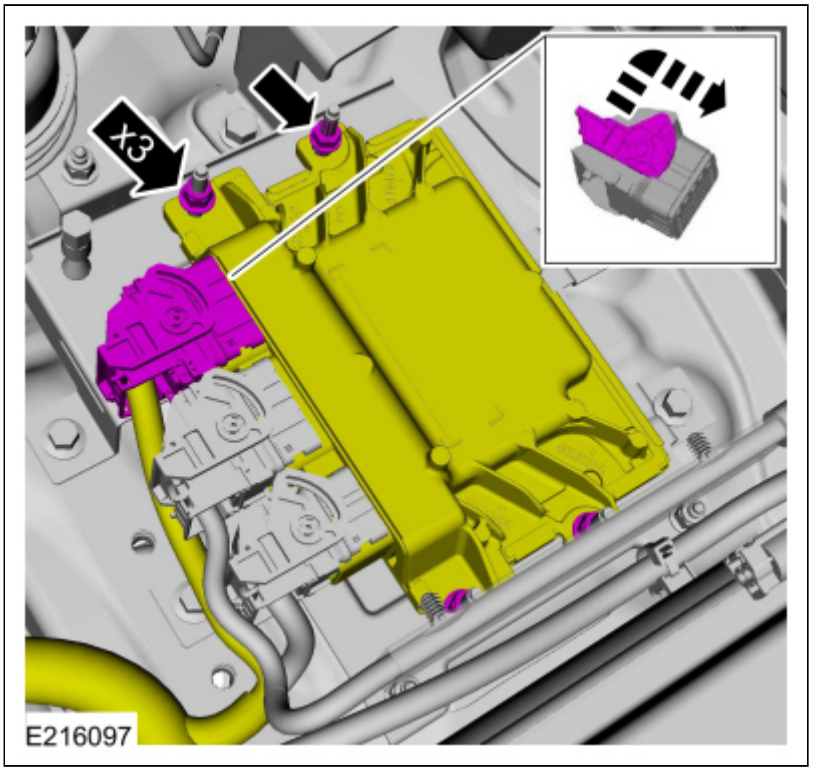
1. **NOTE:** *NOTE: This step is only necessary when installing a new component.*

   Download the PCM configuration information into the diagnostic tool, using the Programmable Modules Installation routine.
   Use the General Equipment: Ford Diagnostic Equipment



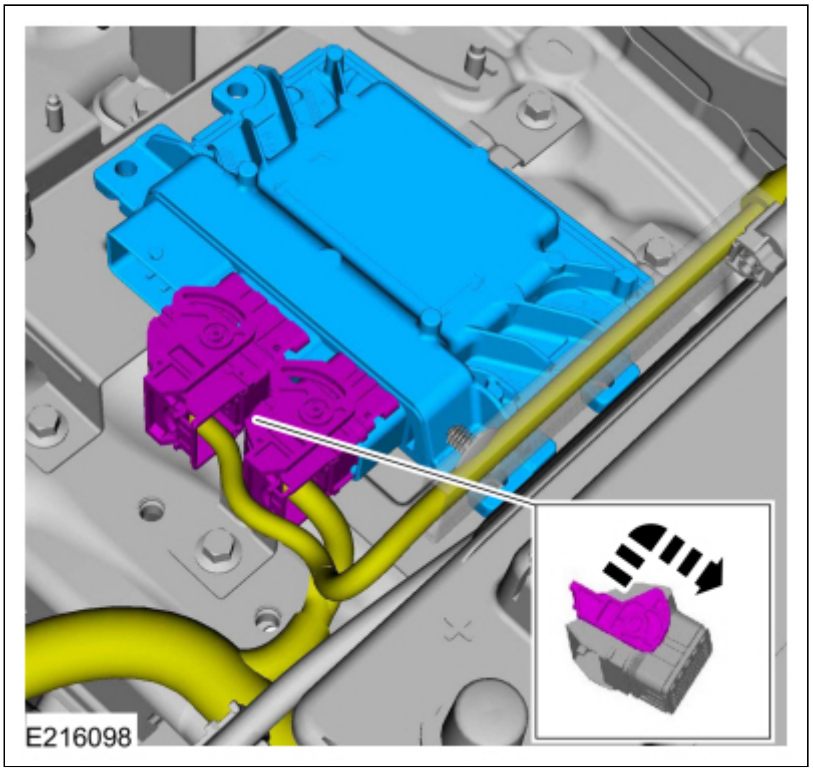
2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).

3. Refer to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation).



4. Refer to: Battery Tray (414-01 Battery, Mounting and Cables, Removal and Installation).

5. 



6. *Torque*: 25 Nm

7. *Torque*: 11 Nm

8.

Installation

1. To install, reverse the removal procedure.
2. Carry out the Injector Correction Factors procedure using the following menu options: ToolBox/Powertrain/Service Functions.
   Use the General Equipment: Ford Diagnostic Equipment
3. Carry out the Oil Quality History function using the following menu options: ToolBox/Powertrain/Service Functions.
   Use the General Equipment: Ford Diagnostic Equipment
4. Carry out the Stored Speed Limit function using the following menu options: ToolBox/Powertrain/Service Functions.
   Use the General Equipment: Ford Diagnostic Equipment
5. Carry out the Pump Learn procedure using the following menu options: ToolBox/Powertrain/Service Functions.
   Use the General Equipment: Ford Diagnostic Equipment
6. Carry out the Pilot Correction Learn procedure using the following menu options: ToolBox/Powertrain/Service Functions.
   Use the General Equipment: Ford Diagnostic Equipment
7. Change the engine oil and the oil filter.
8. Carry out the oil reset procedure.
9. **NOTE:** *This step is only necessary when installing a new component.*

   Upload the PCM configuration information into the PCM, using the Programmable Modules Installation routine.
   Use the General Equipment: Ford Diagnostic Equipment

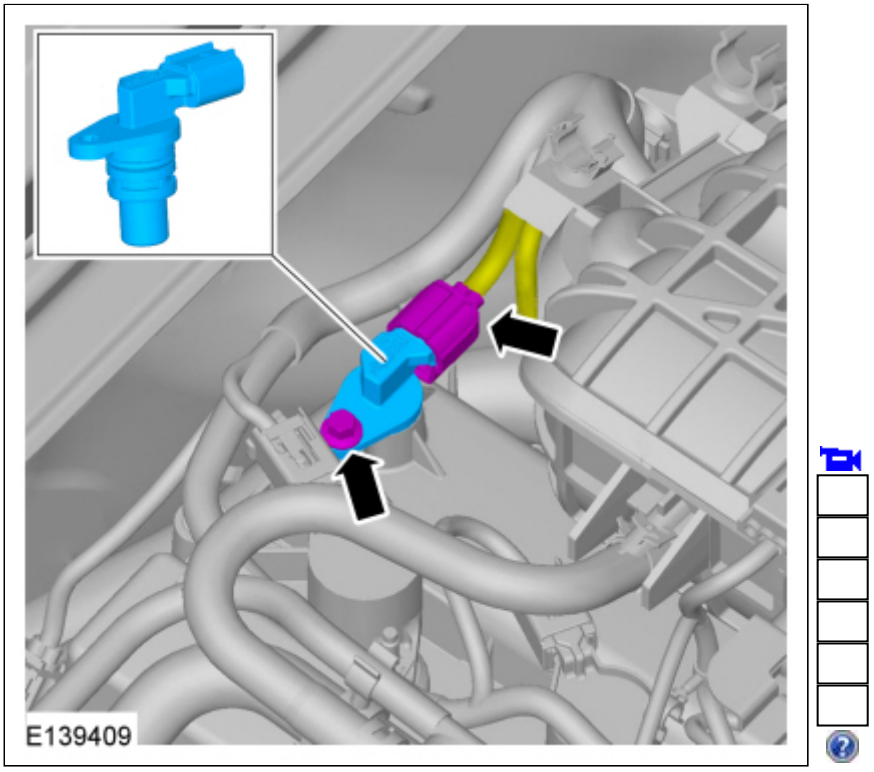
Camshaft Position (CMP) Sensor



Base Part Number: 12K073

Removal

NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
2. **NOTE:** *Lubricate the O-ring seal with clean engine oil.*

   Torque: 7 Nm

Installation

1. To install, reverse the removal procedure.

Electronic Engine Controls - Overview

Overview

The EEC system provides optimum control of the engine through the enhanced capability of the powertrain control module (PCM). The EEC system also has an on board diagnostic (OBD) monitoring system with features and functions to meet government regulations on exhaust emissions.

The EEC system has two major divisions: hardware and software. The hardware includes the PCM, sensors, switches, actuators, solenoids, and interconnecting terminals. The software in the PCM provides the strategy control for outputs (engine hardware) based on the values of the inputs to the PCM.

The PCM receives information from a variety of sensor and switch inputs. Based on the strategy and calibration stored within the PCM, the PCM generates the appropriate output. The system is designed to minimize emissions and optimize fuel economy and driveability. The software strategy controls the basic operation of the engine, provides the OBD strategy, controls the malfunction indicator lamp (MIL), communicates to the scan tool over the data link connector (DLC), allows for flash electrically erasable programmable read only memory (EEPROM), provides idle air and fuel trim, and controls failure mode effects management (FMEM).

P2760	Torque Converter Clutch Pressure Control Solenoid Intermittent	REFER to: Diagnostic Trouble Code Charts (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
U0104	Lost Communication With Cruise Control Module	REFER to: Cruise Control (419-03B Cruise Control - Vehicles With: Adaptive Cruise Control, Diagnosis and Testing).
U0121	Lost Communication With Anti-Lock Brake System (ABS) Control Module	GO to Pinpoint Test A
All Other DTCs	—	Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual. Section 3 Symptom Charts.

Pinpoint Tests

U0121

DTC Fault Trigger Condition-PCM

DTC	Description	Fault Trigger Conditions
U0121	Lost Communication With Anti-Lock Brake System (ABS) Control Module	The PCM sets this DTC if data messages received from the ABS module through the GWM are missing.

Normal Operation and Fault Conditions

REFER to: Communications Network - Overview (418-00 Module Communications Network, Description and Operation).

Possible Sources

- Communications network concern
- Communications network concern
- ABS module
- BCM
- PCM

PINPOINT TEST A : U0121

A1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to A2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

A2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Did the ABS module pass the network test?

Yes	GO to A3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

A3 PERFORM ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST

- Using a diagnostic scan tool, perform a ABS module self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	GO to A4

A4 CHECK THE BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, retrieve the BCM Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	GO to A5

A5 PERFORM THE PCM (POWERTRAIN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PCM self-test.

Is DTC P0562 or DTC P0563 recorded?

Yes	REFER to PCM DTC Chart in this section.
No	GO to A6

A6 RECHECK THE PCM (POWERTRAIN CONTROL MODULE) DIAGNOSTIC TROUBLE CODES

(DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI, or the PMI may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the PCM self-test.

Is DTC U0121 still present?

Yes	GO to A7
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

A7 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0121 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0121:00 set in any other module?

Yes	GO to A8
No	GO to A9

A8 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect and inspect all ABS MODULE connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all the ABS MODULE connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS MODULE. REFER to: Anti-Lock Brake System (ABS) Module - Vehicles With: Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A9 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect PCM connector.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PCM connector. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Gear Neutral Sensor Circuit Faults

Refer to Wiring Diagrams Cell 25 for schematic and connector information.

Normal Operation and Fault Conditions

The gear neutral position sensor provides an input to the PCM. The PCM uses this input when controlling the auto-start-stop system. For more information on the auto-start-stop system refer to the owner's literature and
REFER to: Starting System - System Operation and Component Description (303-06B Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Description and Operation).

Diagnostic Trouble Code (DTC) Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0820	Gear Lever X-Y Position Sensor Circuit	Sets in the PCM when the PCM senses higher than expected voltage on the gear neutral position sensor feedback circuit, indicating a short directly to voltage.
P0825	Gear Lever Push/Pull Switch Circuit (Shift Anticipate)	Sets in the PCM when the PCM senses higher than expected voltage on the gear neutral position sensor feedback circuit, indicating a short directly to voltage.
P082A	Gear Lever "X" Position Sensor 1 Circuit Range/Performance	Sets in the PCM when the PCM senses higher than expected voltage on the gear neutral position sensor feedback circuit, indicating a short directly to voltage.
P082D	Gear Lever Y Position Sensor 1 Circuit Range/Performance	Sets in the PCM when the PCM senses higher than expected voltage on the gear neutral position sensor feedback circuit, indicating a short directly to voltage.
P082E	Gear Lever Y Position Sensor 1 Circuit Low	Sets in the PCM when the PCM senses lower than expected voltage on the gear neutral position sensor feedback circuit, indicating an open or a short directly to ground.
P086E	Neutral Position Sensor "A" Circuit Intermittent/Erratic	Sets in the PCM when the PCM does not detect current through the gear neutral position sensor and there are no other gear neutral position sensor circuit DTC set.
P08B1	Neutral Position Sensor "B" Circuit Intermittent/Erratic	Sets in the PCM when the PCM senses higher than expected voltage on the gear neutral position sensor feedback circuit, indicating a short directly to voltage.

Possible Sources

- Gear neutral position sensor
- PCM

- Wiring, terminals or connectors

Visual Inspection and Diagnostic Pre-checks

- Gear neutral position sensor.
- Gear neutral position sensor connector.

PINPOINT TEST B : GEAR NEUTRAL POSITION SENSOR CIRCUIT FAULTS

B1 CHECK THE GEAR NEUTRAL POSITION SENSOR

- Perform the gear neutral position sensor component test in this section:

Were any conditions found during inspection?

Yes	REPAIR as necessary.
No	GO to B2

B2 CHECK THE GEAR NEUTRAL POSITION SENSOR REFERENCE VOLTAGE CIRCUIT

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1738-2		Ground

Is the voltage between 4.8 and 5.2 volts?

Yes	GO to B3
No	If the voltage is less than 4.8 volts, REPAIR the circuit for an open or high resistance. If the voltage is greater than 5.2 volts, REPAIR the circuit for a short to voltage.

B3 CHECK THE GEAR NEUTRAL POSITION SENSOR GROUND CIRCUIT

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1738-2		C1738-4

Is the voltage between 4.8 and 5.2 volts?

Yes	GO to B4
No	If the voltage is less than 4.8 volts, REPAIR the circuit for an open or high resistance. If the voltage is greater than 5.2 volts, REPAIR the circuit for a short to voltage.

B4 CHECK THE GEAR NEUTRAL POSITION SENSOR FEEDBACK CIRCUITS FOR SHORTS TO VOLTAGE

- Disconnect PCM C1232A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1738-1		Ground
C1738-3		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to B5

B5 CHECK THE GEAR NEUTRAL POSITION SENSOR FEEDBACK CIRCUITS FOR SHORTS TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1738-1	Ω	Ground
C1738-3	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B6
No	REPAIR the circuit.

B6 CHECK THE GEAR NEUTRAL POSITION SENSOR FEEDBACK CIRCUITS FOR OPENS

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1738-1	Ω	C1232A-16
C1738-3	Ω	C1232A-34

Is the resistance less than 3 ohms?

Yes	GO to B7
No	REPAIR the circuit.

B7 CHECK THE GEAR NEUTRAL POSITION SENSOR FOR CORRECT OPERATION

- Install a new gear neutral sensor. Refer to section 308-03A
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the PCM self-test.

Is the DTC still present?

Yes	GO to B8

No	The system has been repaired and is operating correctly at this time.

B8 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect PCM connector.
- Repair:
  - corrosion (install new connector or terminals â€“ clean module pins)
  - damaged or bent pins â€“ install new terminals/pins
  - pushed-out pins â€“ install new pins as necessary
- Connect **all** connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

P086E

Refer to Wiring Diagrams Cell 25 for schematic and connector information.

Normal Operation and Fault Conditions

The gear neutral position sensor provides an input to the PCM. The PCM uses this input when controlling the auto-start-stop system. For more information on the auto-start-stop system refer to the owner's literature and
REFER to: Starting System - System Operation and Component Description (303-06B Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Description and Operation).

Diagnostic Trouble Code (DTC) Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P086E	Neutral Position Sensor "A" Circuit Intermittent/Erratic	Sets in the PCM when the gear neutral position sensor "A" intermittently indicates a different gear than gear neutral position sensor "B".

Possible Sources

- Gear neutral position sensor
- PCM
- Wiring, terminals or connectors

Visual Inspection and Diagnostic Pre-checks

- Gear neutral position sensor.
- Gear neutral position sensor connector.

PINPOINT TEST C : P086E

C1 CHECK THE GEAR NEUTRAL POSITION SENSOR

- Perform the gear neutral position sensor component test in this section:

Were any conditions found during inspection?

Yes	REPAIR as necessary.
No	GO to C2

C2 CHECK ENGINE HARNESS

- Inspect the engine harness for damage. Refer to the wiring diagram manual for component location and harness routing.
- Inspect engine harness for the following:
  - physical damage
  - corrosion
  - disconnected or loose electrical connectors
  - chaffing
  - pinch points

Are any of these conditions found during inspection?

Yes	REPAIR as necessary.
No	GO to C3

C3 CHECK THE GEAR NEUTRAL POSITION SENSOR

- CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new neutral position sensor. Refer to section 308-03A
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Perform a wiggle test of the engine wiring, gear neutral position sensor, and PCM connections.
- Repeat the PCM self-test.

Did the DTC return?

Yes	INSPECT and REPAIR the wiring harness as necessary. If no concerns are found, CHECK sensor magnet. REPAIR as necessary.
No	The system is operating normally at this time.

Component Test - Gear Neutral Position Sensor

Refer to Wiring Diagrams Cell 25 for schematic and connector information.

1. Inspect the gear neutral position sensor for the following:

- physical damage
- incorrect or loose mounting. Refer to section 308-03A Neutral Position Sensor
- disconnected or loose electrical connector
- corrosion

2. REPAIR as necessary or INSTALL a new neutral position sensor. Refer to section 308-03A Neutral Position Sensor

3. Disconnect the gear neutral position sensor connector C1738

4. Inspect the gear neutral position sensor and gear neutral position sensor connector for the following:

- physical damage
- corrosion (install new connector or terminals- clean module pins)
- damaged or bent pins- install new terminals/pins
- pushed-out pins- install new pins as necessary

5. REPAIR as necessary.

6. Connect and correctly seat the gear neutral position sensor connector C1738

7. Using a diagnostic scan tool, view the PCM Parameter Identifications (PIDs) **TR_NTRL_RAW** and **TR_NTRL_RAW2**.

8. While viewing the Parameter Identifications (PIDs), place the shift lever into each position.

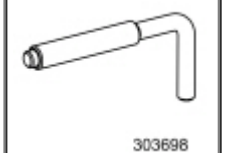
9. Record the readings and compare:

Gear Position	TR_NTRL_RAW	TR_NTRL_RAW2
Neutral	47 % to 53 %	37% to 42%
1st	13% to 23 %	12% to 20%
2nd	76% to 86%	59% to 67%
3rd	14% to 24%	13% to 20%
4th	76% to 85%	59% to 67%
5th	14% to 24%	13% to 20%
6th	76% to 86%	59% to 67%
Reverse	14% to 24%	13% to 20%

10. If the readings did not change or were out of specification, continue with inspection.

The gear neutral position sensor reads a magnet attached to the selector mechanism inside the transmission. If this magnet is loose or missing the sensor will not read correctly

11. Inspect the selector mechanism for incorrect or loose mounting or excessive play. Correct installation or replace as necessary.



12. If the readings did not change the magnet may be missing or broken. Remove the selector mechanism and inspect the magnet. Repair as necessary.

13. If, after inspecting the selector mechanism, it is suspected the magnet has broken off of the selector shaft, transmission disassembly may be required.

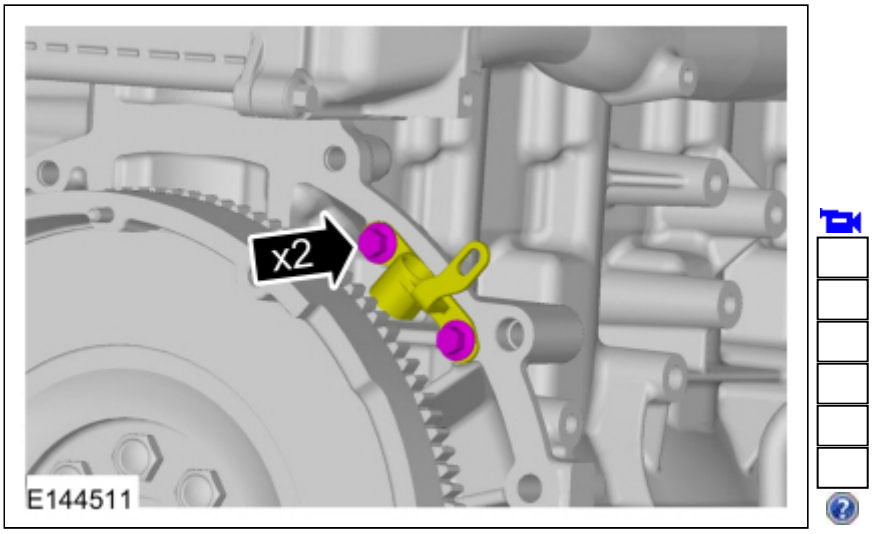
Crankshaft Position (CKP) Sensor Bracket Adjustment - Diesel

Special Tool(s) / General Equipment

 E131853	303-1562 Timing Tool
 E139146	303-1587 Timing Tool, Crankshaft
 303698	303-698 Timing Tool, Crankshaft

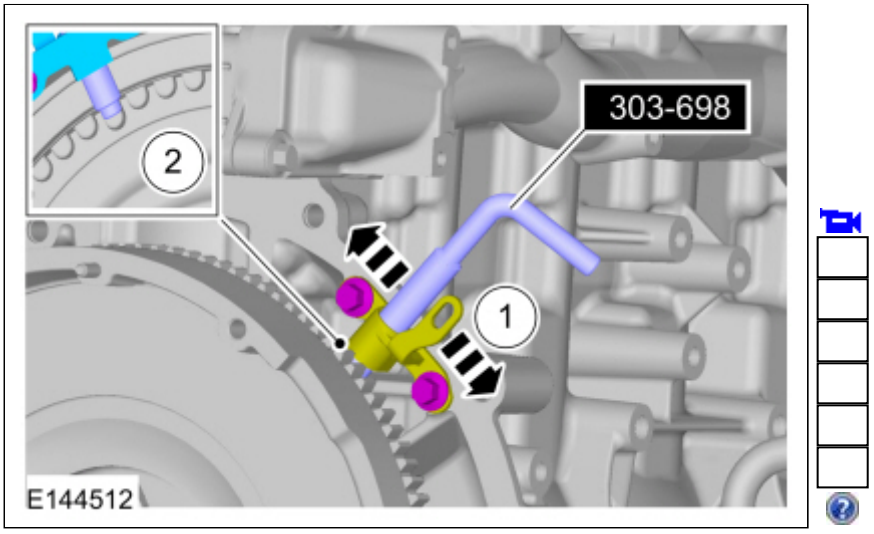
Adjustment

1. Refer to: Timing Cover (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).



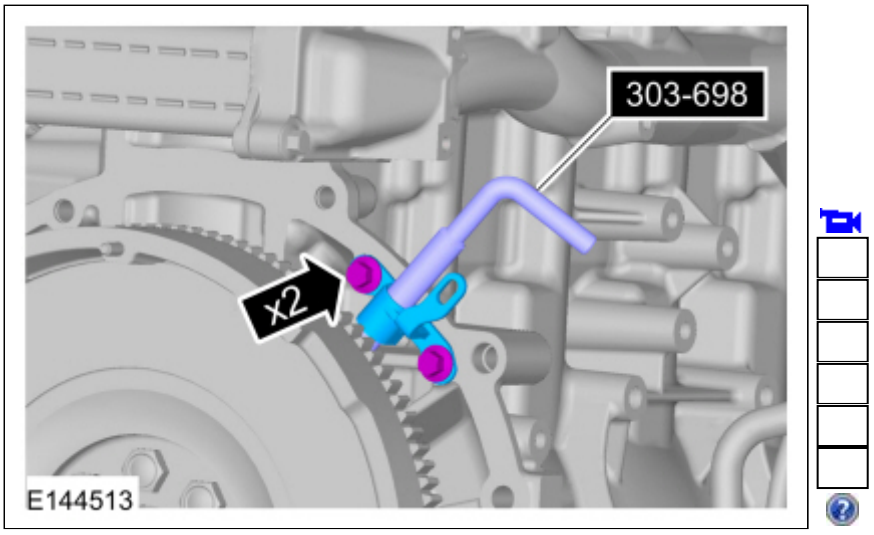
2. Refer to: Crankshaft Position (CKP) Sensor - 2.2L Duratorq-TDCi (Puma) Diesel (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
   Refer to: Crankshaft Position (CKP) Sensor - 2.2L Duratorq-TDCi (Puma) Diesel (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

3. Use Special Service Tool: 303-1587 Timing Tool, Crankshaft.



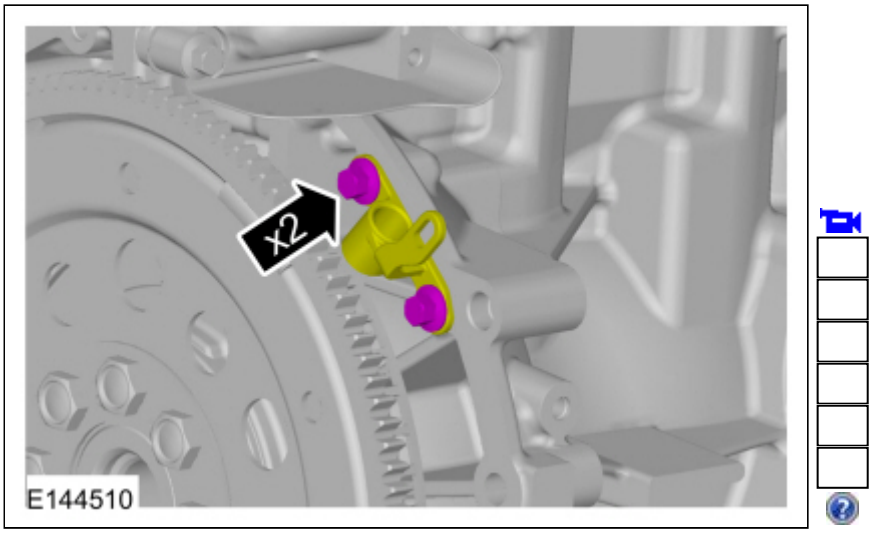
Vehicles with manual transmission

4. Loosen the bolts.

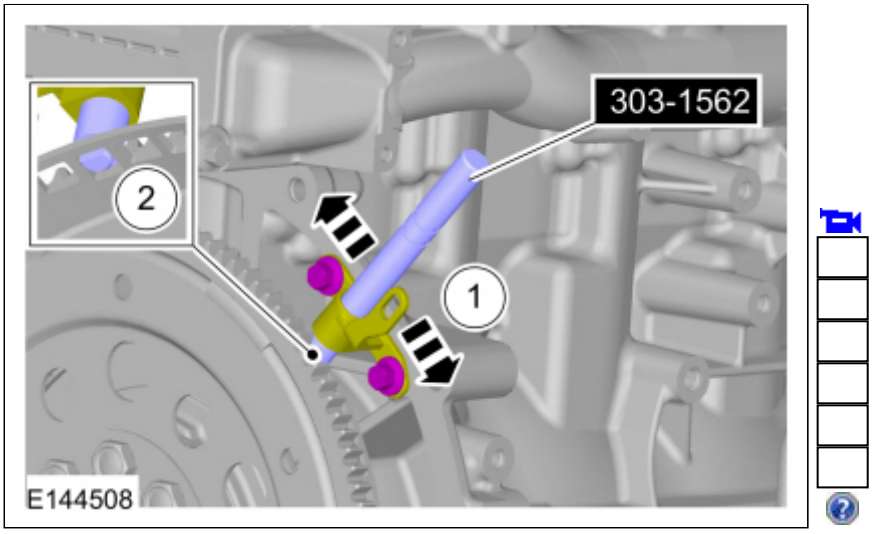


5. **NOTE:** *Make sure that the special tool is located in the flywheel timing slot.*

   Use Special Service Tool: 303-698 Timing Tool, Crankshaft.

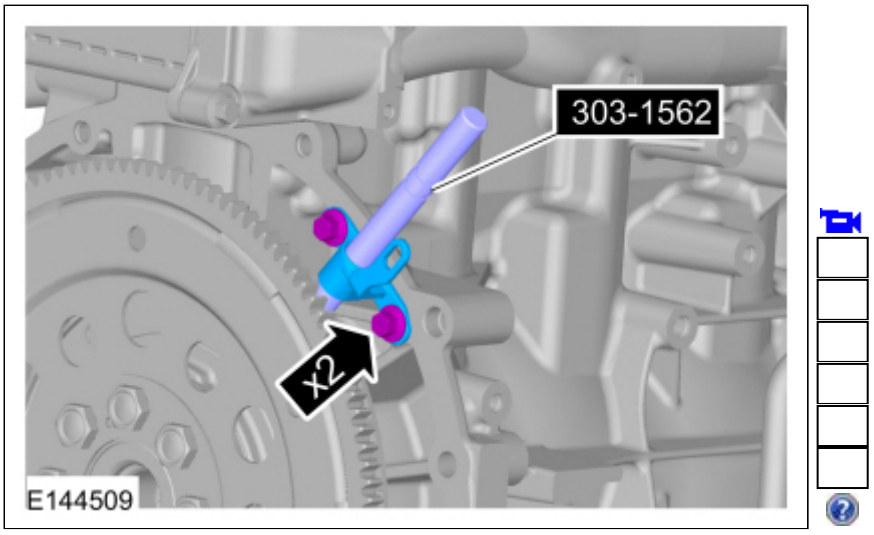


6. Tighten bolts before removing tool.
   Remove Special Service Tool: 303-698 Timing Tool, Crankshaft.
   Torque: 25 Nm



Vehicles with automatic transmission

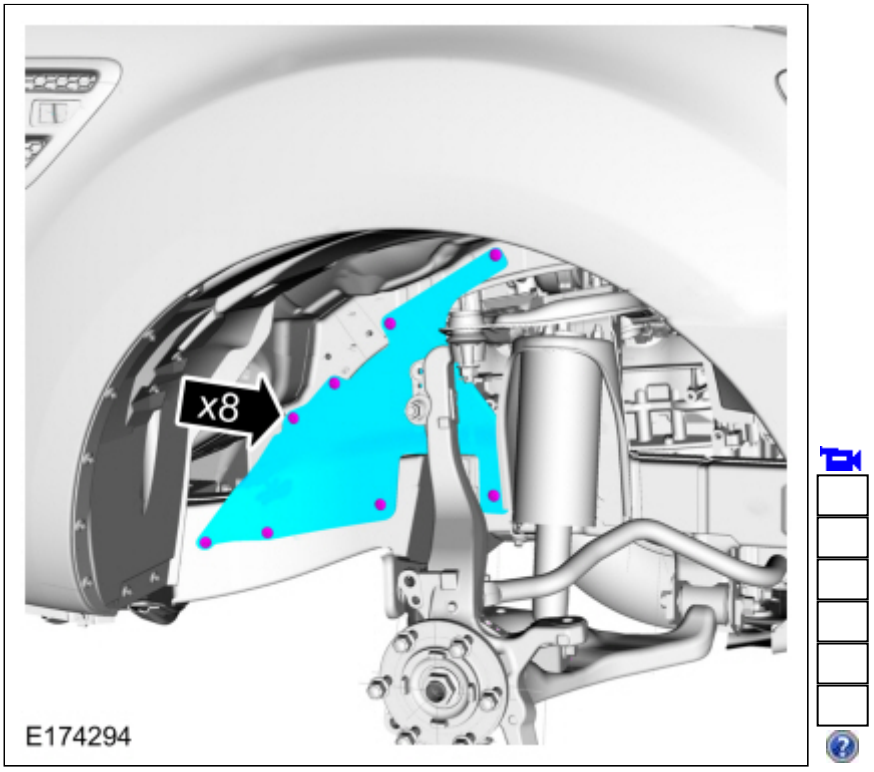
7. Loosen the bolts.



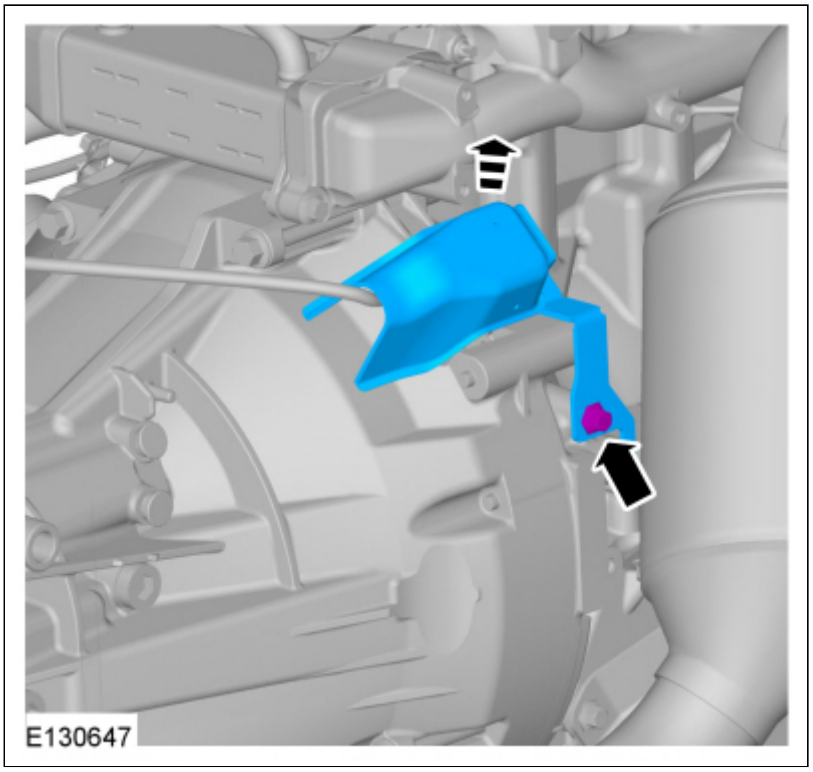
8. **NOTE:** *Make sure that the special tool is located in the flexplate timing slot.*

   Use Special Service Tool: 303-1562 Timing Tool.

9. Tighten bolts before removing tool.
   Remove Special Service Tool: 303-1562 Timing Tool.
   Torque: 25 Nm

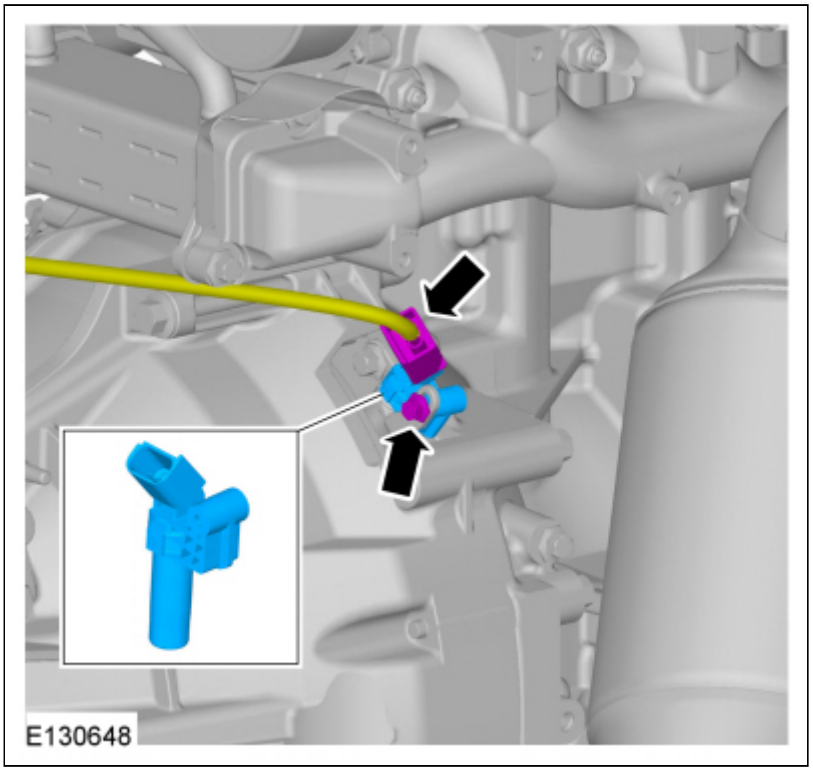


Copyright © 2016 Ford Motor Company



Crankshaft Position (CKP) Sensor - 2.2L Duratorq-TDCi (Puma) Diesel

Removal



NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
2. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
3. Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).
4. 

5.

6. *Torque*: 7 Nm

Installation

1. **NOTICE: Only rotate the crankshaft clockwise.**

   Rotate the crankshaft until a flywheel tooth is visible through the CKP sensor housing.

2. **NOTICE: The tip of the sensor must rest on a flywheel tooth.**

   NOTE: *Make sure that a new component is installed.*

   To install, reverse the removal procedure.

Powertrain Control Module (PCM)

Base Part Number: 12A650

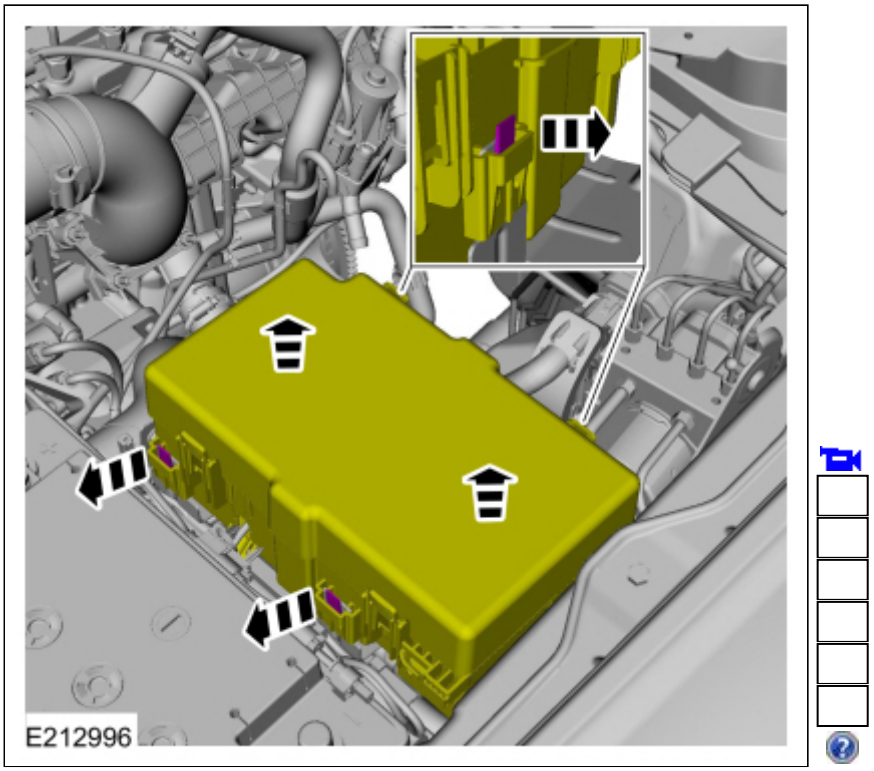
Special Tool(s) / General Equipment

Ford Diagnostic Equipment

Removal

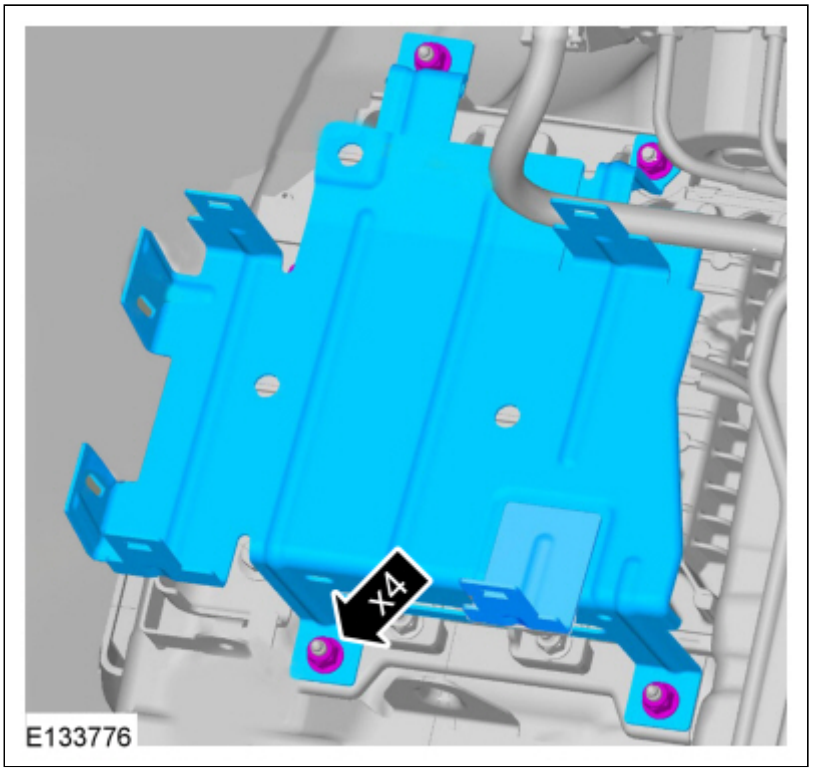
NOTICE: If a new PCM is to be installed, upload the PCM configuration information using the Programmable Modules Installation Routine, prior to commencing the removal of the PCM.

NOTE: *Removal steps in this procedure may contain installation details.*



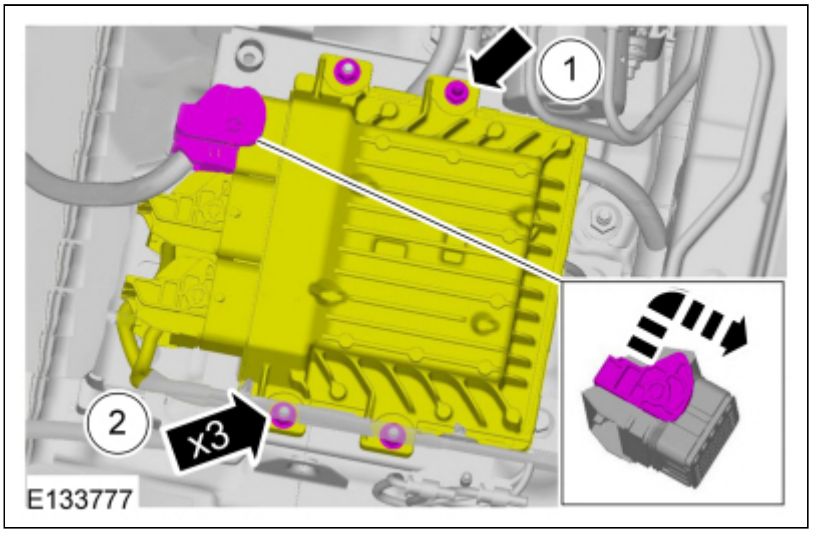
1. **NOTE:** *NOTE: This step is only necessary when installing a new component.*

   Download the PCM configuration information into the diagnostic tool, using the Programmable Modules Installation routine.
   Use the General Equipment: Ford Diagnostic Equipment



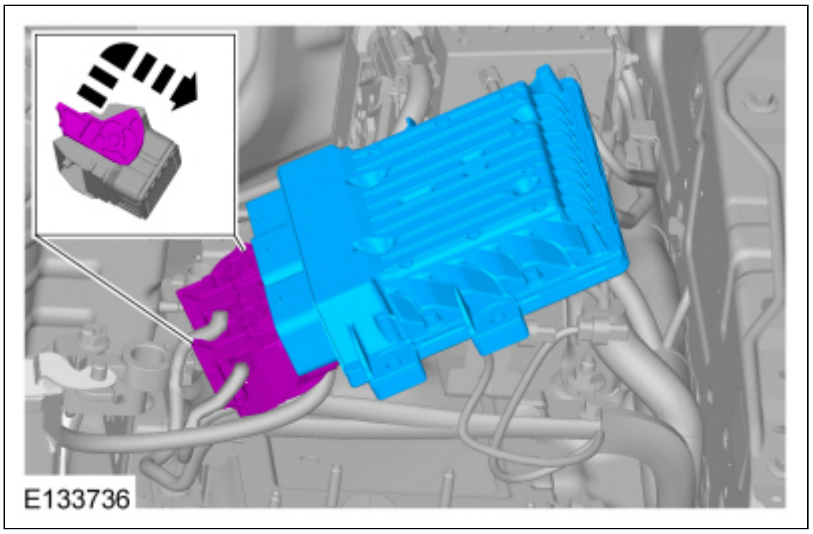
2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).

3. Refer to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation).



4. Refer to: Battery Tray (414-01 Battery, Mounting and Cables, Removal and Installation).

5. 



6. *Torque*: 25 Nm

7. *Torque*: 11 Nm

8.

Installation

1. To install, reverse the removal procedure.

2. Carry out the Injector Correction Factors procedure using the following menu options: ToolBox/Powertrain/Service Functions.
   Use the General Equipment: Ford Diagnostic Equipment

3. Carry out the Oil Quality History function using the following menu options: ToolBox/Powertrain/Service Functions.
   Use the General Equipment: Ford Diagnostic Equipment

4. Carry out the Stored Speed Limit function using the following menu options: ToolBox/Powertrain/Service Functions.
   Use the General Equipment: Ford Diagnostic Equipment

5. Carry out the Pump Learn procedure using the following menu options: ToolBox/Powertrain/Service Functions.
   Use the General Equipment: Ford Diagnostic Equipment

6. Carry out the Pilot Correction Learn procedure using the following menu options: ToolBox/Powertrain/Service Functions.
   Use the General Equipment: Ford Diagnostic Equipment

7. Change the engine oil and the oil filter.

8. Carry out the oil reset procedure.

9. **NOTE:** *This step is only necessary when installing a new component.*

   Upload the PCM configuration information into the PCM, using the Programmable Modules Installation routine.
   Use the General Equipment: Ford Diagnostic Equipment

Fuel Temperature Sensor

Materials

Name	Specification
Brake Cleaner	-

Removal

NOTE: *Removal steps in this procedure may contain installation details.*

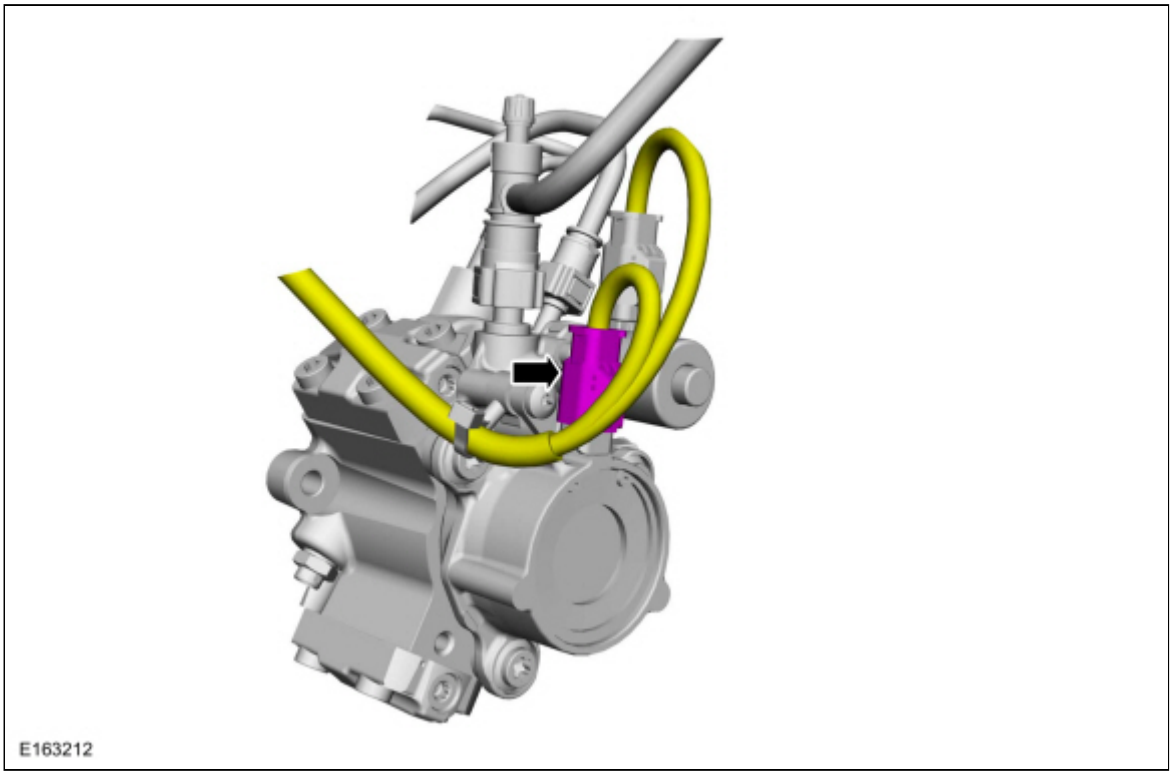
1. **WARNING: Make sure that the engine is switched off.**

   WARNING: Make sure that the fuel pressure has dropped to zero and that the fuel temperature is at ambient air temperature.

   WARNING: Wait for a minimum of 1 minute after the engine has stopped before carrying out any repair to the fuel injection system.

   Refer to: Diesel Fuel System Health and Safety Precautions (100-00 General Information, Description and Operation).

2. Refer to: Intake Manifold - Emission Requirements: EURO Stage V LDT (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
   Refer to: Intake Manifold (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).

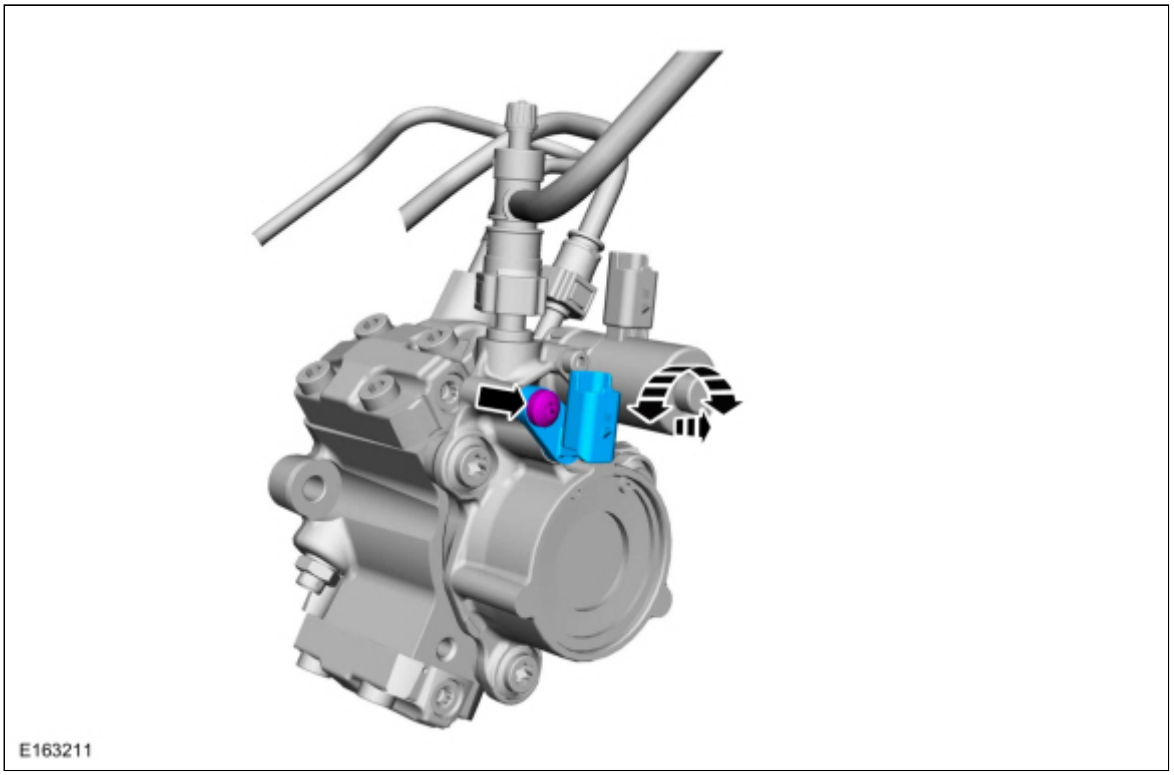


3. 
   

   NOTICE: Extreme cleanliness must be exercised when handling the components.

   Material: Brake Cleaner

4.



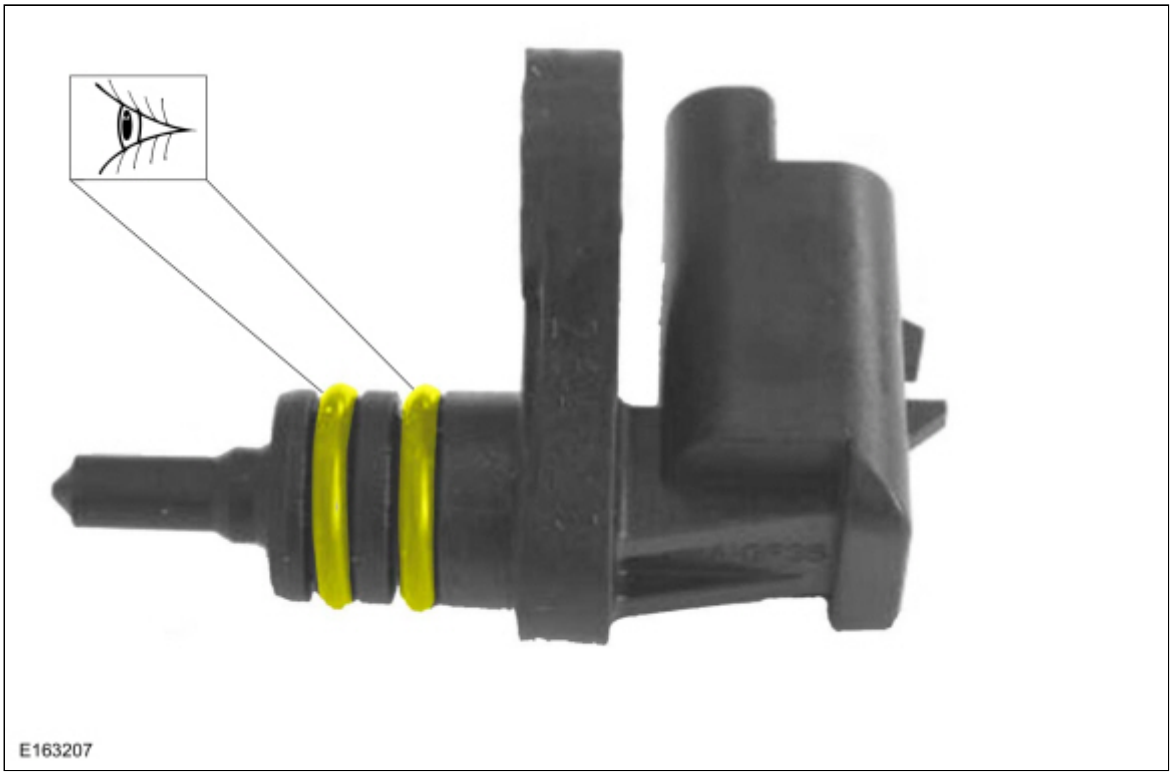
5. **NOTICE: Take extra care when handling the component.**

   NOTICE: Extreme cleanliness must be exercised when handling the component.

   NOTICE: The component must be removed by hand, the use of tools is prohibited.

   NOTE: *Make sure that a new component is installed.*

   Torque: 8 Nm



Installation

1. To install, reverse the removal procedure.
2. **NOTICE: Extreme cleanliness must be exercised when handling the component.**

   NOTICE: Take extra care when handling the component.

   NOTE: *Make sure that the seal is correctly located.*

Electronic Engine Controls - Component Location

Vehicles with 3.2L Duratorq-TDCi (Puma) diesel engine

Item	Part Number	Description
1	—	Intake air temperature (IAT)
2	—	Camshaft position (CMP) sensor
3	—	Crankshaft position (CKP) sensor
4	—	Engine coolant temprature (ECT) sensor
5	—	Engine oil pressure switch
6	—	Manifold absolute pressure (MAP) sensor

Electronic Engine Controls - Overview

Overview

The EEC system provides optimum control of the engine through the enhanced capability of the powertrain control module (PCM). The EEC system also has an on board diagnostic (OBD) monitoring system with features and functions to meet government regulations on exhaust emissions.

The EEC system has two major divisions: hardware and software. The hardware includes the PCM, sensors, switches, actuators, solenoids, and interconnecting terminals. The software in the PCM provides the strategy control for outputs (engine hardware) based on the values of the inputs to the PCM.

The PCM receives information from a variety of sensor and switch inputs. Based on the strategy and calibration stored within the PCM, the PCM generates the appropriate output. The system is designed to minimize emissions and optimize fuel economy and driveability. The software strategy controls the basic operation of the engine, provides the OBD strategy, controls the malfunction indicator lamp (MIL), communicates to the scan tool over the data link connector (DLC), allows for flash electrically erasable programmable read only memory (EEPROM), provides idle air and fuel trim, and controls failure mode effects management (FMEM).

U0104	Lost Communication With Cruise Control Module	REFER to: Cruise Control (419-03B Cruise Control - Vehicles With: Adaptive Cruise Control, Diagnosis and Testing).
U0121	Lost Communication With Anti-Lock Brake System (ABS) Control Module	GO to Pinpoint Test A
All Other DTCs	—	Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual. Section 3 Symptom Charts.

Pinpoint Tests

U0121

DTC Fault Trigger Condition-PCM

DTC	Description	Fault Trigger Conditions
U0121	Lost Communication With Anti-Lock Brake System (ABS) Control Module	The PCM sets this DTC if data messages received from the ABS module through the GWM are missing.

Normal Operation and Fault Conditions

REFER to: Communications Network - Overview (418-00 Module Communications Network, Description and Operation).

Possible Sources

- Communications network concern
- Communications network concern
- ABS module
- BCM
- PCM

PINPOINT TEST A : U0121

A1 VERIFY THE CUSTOMER CONCERN

- Ignition ON.
- Verify there is an observable symptom present.

Is an observable symptom present?

Yes	GO to A2
No	The system is operating normally at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

A2 CHECK THE COMMUNICATION NETWORK

- Using a diagnostic scan tool, perform a network test.

Did the ABS module pass the network test?

Yes	GO to A3
No	REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

A3 PERFORM ABS (ANTI-LOCK BRAKE SYSTEM) MODULE SELF-TEST

- Using a diagnostic scan tool, perform a ABS module self-test.

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).
No	GO to A4

A4 CHECK THE BCM (BODY CONTROL MODULE) DIAGNOSTIC TROUBLE CODES (DTCS)

- Using a diagnostic scan tool, retrieve the BCM Diagnostic Trouble Codes (DTCs).

Are any Diagnostic Trouble Codes (DTCs) recorded?

Yes	REFER to: Body Control Module (BCM) (419-10 Multifunction Electronic Modules, Diagnosis and Testing).
No	GO to A5

A5 PERFORM THE PCM (POWERTRAIN CONTROL MODULE) SELF-TEST

- Using a diagnostic scan tool, perform the PCM self-test.

Is DTC P0562 or DTC P0563 recorded?

Yes	REFER to PCM DTC Chart in this section.
No	GO to A6

A6 RECHECK THE PCM (POWERTRAIN CONTROL MODULE) DIAGNOSTIC TROUBLE CODES

(DTCS)

NOTE: *If new modules were installed prior to the DTC being set, the module configuration may be incorrectly set during the PMI, or the PMI may not have been carried out.*

- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the PCM self-test.

Is DTC U0121 still present?

Yes	GO to A7
No	The system is operating correctly at this time. The DTC may have been set due to high network traffic or an intermittent fault condition.

A7 CHECK FOR DTC (DIAGNOSTIC TROUBLE CODE) U0121 SET IN OTHER MODULES

- Using a diagnostic scan tool, clear all Diagnostic Trouble Codes (DTCs).
- Ignition OFF.
- Ignition ON.
- Wait 10 seconds.
- Using a diagnostic scan tool, retrieve all Continuous Memory Diagnostic Trouble Codes (CMDTCs) from all modules.

Is DTC U0121:00 set in any other module?

Yes	GO to A8
No	GO to A9

A8 CHECK FOR CORRECT ABS (ANTI-LOCK BRAKE SYSTEM) MODULE OPERATION

- Ignition OFF.
- Disconnect and inspect all ABS MODULE connectors.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect all the ABS MODULE connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new ABS MODULE. REFER to: Anti-Lock Brake System (ABS) Module - Vehicles With: Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control) .
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

A9 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect PCM connector.
- Repair:
  - corrosion (install new connector or terminals – clean module pins)
  - damaged or bent pins – install new terminals/pins
  - pushed-out pins – install new pins as necessary
- Reconnect the PCM connector. Make sure it seats and latches correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

Gear Neutral Sensor Circuit Faults

Refer to Wiring Diagrams Cell 25 for schematic and connector information.

Normal Operation and Fault Conditions

The gear neutral position sensor provides an input to the PCM. The PCM uses this input when controlling the auto-start-stop system. For more information on the auto-start-stop system refer to the owner's literature and
REFER to: Starting System - System Operation and Component Description (303-06B Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Description and Operation).

Diagnostic Trouble Code (DTC) Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0820	Gear Lever X-Y Position Sensor Circuit	Sets in the PCM when the PCM senses higher than expected voltage on the gear neutral position sensor feedback circuit, indicating a short directly to voltage.
P0825	Gear Lever Push/Pull Switch Circuit (Shift Anticipate)	Sets in the PCM when the PCM senses higher than expected voltage on the gear neutral position sensor feedback circuit, indicating a short directly to voltage.
P082A	Gear Lever "X" Position Sensor 1 Circuit Range/Performance	Sets in the PCM when the PCM senses higher than expected voltage on the gear neutral position sensor feedback circuit, indicating a short directly to voltage.
P082D	Gear Lever Y Position Sensor 1 Circuit Range/Performance	Sets in the PCM when the PCM senses higher than expected voltage on the gear neutral position sensor feedback circuit, indicating a short directly to voltage.
P082E	Gear Lever Y Position Sensor 1 Circuit Low	Sets in the PCM when the PCM senses lower than expected voltage on the gear neutral position sensor feedback circuit, indicating an open or a short directly to ground.
P086E	Neutral Position Sensor "A" Circuit Intermittent/Erratic	Sets in the PCM when the PCM does not detect current through the gear neutral position sensor and there are no other gear neutral position sensor circuit DTC set.
P08B1	Neutral Position Sensor "B" Circuit Intermittent/Erratic	Sets in the PCM when the PCM senses higher than expected voltage on the gear neutral position sensor feedback circuit, indicating a short directly to voltage.

Possible Sources

- Gear neutral position sensor
- PCM

- Wiring, terminals or connectors

Visual Inspection and Diagnostic Pre-checks

- Gear neutral position sensor.
- Gear neutral position sensor connector.

PINPOINT TEST B : GEAR NEUTRAL POSITION SENSOR CIRCUIT FAULTS

B1 CHECK THE GEAR NEUTRAL POSITION SENSOR

- Perform the gear neutral position sensor component test in this section:

Were any conditions found during inspection?

Yes	REPAIR as necessary.
No	GO to B2

B2 CHECK THE GEAR NEUTRAL POSITION SENSOR REFERENCE VOLTAGE CIRCUIT

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1738-2		Ground

Is the voltage between 4.8 and 5.2 volts?

Yes	GO to B3
No	If the voltage is less than 4.8 volts, REPAIR the circuit for an open or high resistance. If the voltage is greater than 5.2 volts, REPAIR the circuit for a short to voltage.

B3 CHECK THE GEAR NEUTRAL POSITION SENSOR GROUND CIRCUIT

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1738-2		C1738-4

Is the voltage between 4.8 and 5.2 volts?

Yes	GO to B4
No	If the voltage is less than 4.8 volts, REPAIR the circuit for an open or high resistance. If the voltage is greater than 5.2 volts, REPAIR the circuit for a short to voltage.

B4 CHECK THE GEAR NEUTRAL POSITION SENSOR FEEDBACK CIRCUITS FOR SHORTS TO VOLTAGE

- Disconnect PCM C1232A.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1738-1		Ground
C1738-3		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to B5

B5 CHECK THE GEAR NEUTRAL POSITION SENSOR FEEDBACK CIRCUITS FOR SHORTS TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1738-1	Ω	Ground
C1738-3	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B6
No	REPAIR the circuit.

B6 CHECK THE GEAR NEUTRAL POSITION SENSOR FEEDBACK CIRCUITS FOR OPENS

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1738-1	Ω	C1232A-16
C1738-3	Ω	C1232A-34

Is the resistance less than 3 ohms?

Yes	GO to B7
No	REPAIR the circuit.

B7 CHECK THE GEAR NEUTRAL POSITION SENSOR FOR CORRECT OPERATION

- Install a new gear neutral sensor. Refer to section 308-03A
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Repeat the PCM self-test.

Is the DTC still present?

Yes	GO to B8

No	The system has been repaired and is operating correctly at this time.

B8 CHECK FOR CORRECT PCM (POWERTRAIN CONTROL MODULE) OPERATION

- Ignition OFF.
- Disconnect and inspect PCM connector.
- Repair:
  - corrosion (install new connector or terminals â€“ clean module pins)
  - damaged or bent pins â€“ install new terminals/pins
  - pushed-out pins â€“ install new pins as necessary
- Connect **all** connectors. Make sure they seat and latch correctly.
- Operate the system and determine if the concern is still present.

Is the concern still present?

Yes	CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14C Electronic Engine Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation). REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
No	The system is operating correctly at this time. The concern may have been caused by module connections. ADDRESS the root cause of any connector or pin issues.

P086E

Refer to Wiring Diagrams Cell 25 for schematic and connector information.

Normal Operation and Fault Conditions

The gear neutral position sensor provides an input to the PCM. The PCM uses this input when controlling the auto-start-stop system. For more information on the auto-start-stop system refer to the owner's literature and
REFER to: Starting System - System Operation and Component Description (303-06B Starting System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Description and Operation).

Diagnostic Trouble Code (DTC) Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P086E	Neutral Position Sensor "A" Circuit Intermittent/Erratic	Sets in the PCM when the gear neutral position sensor "A" intermittently indicates a different gear than gear neutral position sensor "B".

Possible Sources

- Gear neutral position sensor
- PCM
- Wiring, terminals or connectors

Visual Inspection and Diagnostic Pre-checks

- Gear neutral position sensor.
- Gear neutral position sensor connector.

PINPOINT TEST C : P086E

C1 CHECK THE GEAR NEUTRAL POSITION SENSOR

- Perform the gear neutral position sensor component test in this section:

Were any conditions found during inspection?

Yes	REPAIR as necessary.
No	GO to C2

C2 CHECK ENGINE HARNESS

- Inspect the engine harness for damage. Refer to the wiring diagram manual for component location and harness routing.
- Inspect engine harness for the following:
  - physical damage
  - corrosion
  - disconnected or loose electrical connectors
  - chaffing
  - pinch points

Are any of these conditions found during inspection?

Yes	REPAIR as necessary.
No	GO to C3

C3 CHECK THE GEAR NEUTRAL POSITION SENSOR

- CHECK OASIS for any applicable Technical Service Bulletins (TSBs). If a TSB exists for this concern, DISCONTINUE this test and FOLLOW TSB instructions. If no Technical Service Bulletins (TSBs) address this concern, INSTALL a new neutral position sensor. Refer to section 308-03A
- Using a diagnostic scan tool, clear the Diagnostic Trouble Codes (DTCs).
- Wait 10 seconds.
- Perform a wiggle test of the engine wiring, gear neutral position sensor, and PCM connections.
- Repeat the PCM self-test.

Did the DTC return?

Yes	INSPECT and REPAIR the wiring harness as necessary. If no concerns are found, CHECK sensor magnet. REPAIR as necessary.
No	The system is operating normally at this time.

Component Test - Gear Neutral Position Sensor

Refer to Wiring Diagrams Cell 25 for schematic and connector information.

1. Inspect the gear neutral position sensor for the following:

- physical damage
- incorrect or loose mounting. Refer to section 308-03A Neutral Position Sensor
- disconnected or loose electrical connector
- corrosion

2. REPAIR as necessary or INSTALL a new neutral position sensor. Refer to section 308-03A Neutral Position Sensor

3. Disconnect the gear neutral position sensor connector C1738

4. Inspect the gear neutral position sensor and gear neutral position sensor connector for the following:

- physical damage
- corrosion (install new connector or terminals- clean module pins)
- damaged or bent pins- install new terminals/pins
- pushed-out pins- install new pins as necessary

5. REPAIR as necessary.

6. Connect and correctly seat the gear neutral position sensor connector C1738

7. Using a diagnostic scan tool, view the PCM Parameter Identifications (PIDs) **TR_NTRL_RAW** and **TR_NTRL_RAW2**.

8. While viewing the Parameter Identifications (PIDs), place the shift lever into each position.

9. Record the readings and compare:

Gear Position	TR_NTRL_RAW	TR_NTRL_RAW2
Neutral	47 % to 53 %	37% to 42%
1st	13% to 23 %	12% to 20%
2nd	76% to 86%	59% to 67%
3rd	14% to 24%	13% to 20%
4th	76% to 85%	59% to 67%
5th	14% to 24%	13% to 20%
6th	76% to 86%	59% to 67%
Reverse	14% to 24%	13% to 20%

10. If the readings did not change or were out of specification, continue with inspection.

The gear neutral position sensor reads a magnet attached to the selector mechanism inside the transmission. If this magnet is loose or missing the sensor will not read correctly

11. Inspect the selector mechanism for incorrect or loose mounting or excessive play. Correct installation or replace as necessary.

12. If the readings did not change the magnet may be missing or broken. Remove the selector mechanism and inspect the magnet. Repair as necessary.

13. If, after inspecting the selector mechanism, it is suspected the magnet has broken off of the selector shaft, transmission disassembly may be required.

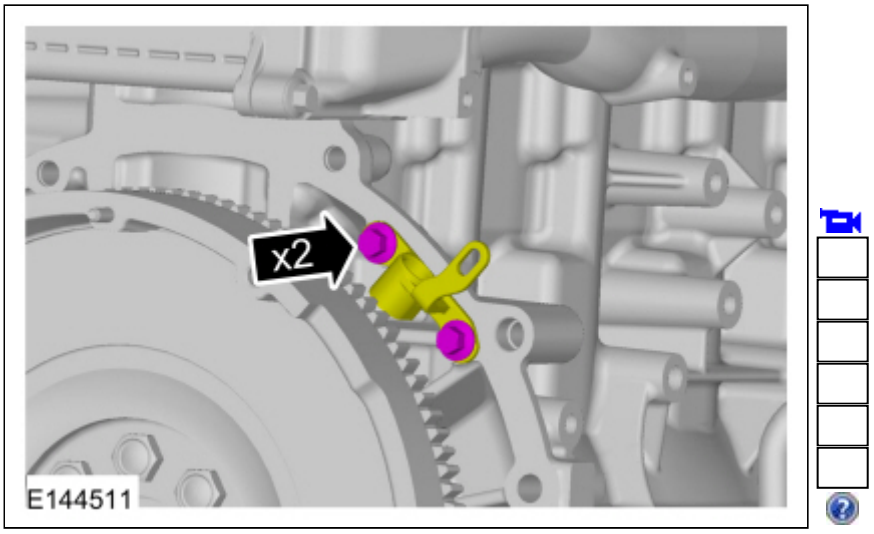
Crankshaft Position (CKP) Sensor Bracket Adjustment - Diesel

Special Tool(s) / General Equipment

 E131853	303-1562 Timing Tool
 E139146	303-1587 Timing Tool, Crankshaft
 303698	303-698 Timing Tool, Crankshaft

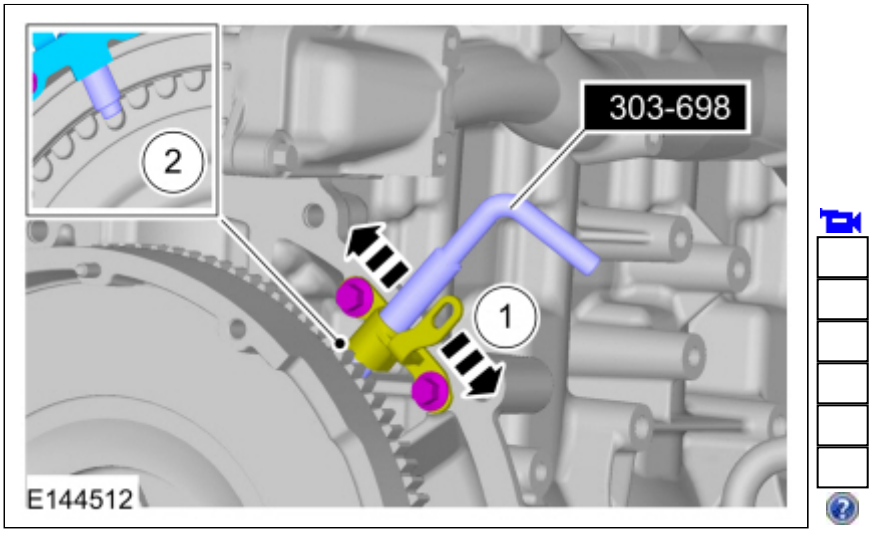
Adjustment

1. Refer to: Timing Cover (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal and Installation).



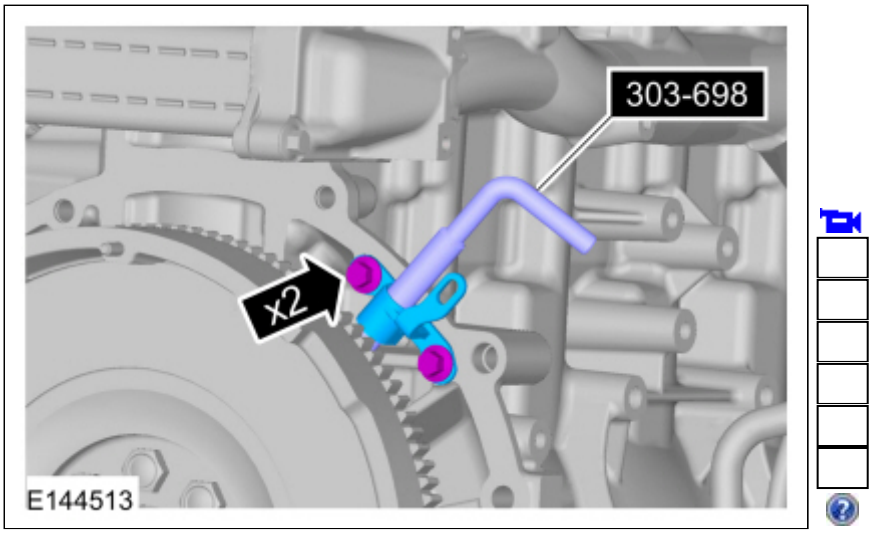
2. Refer to: Crankshaft Position (CKP) Sensor - 2.2L Duratorq-TDCi (Puma) Diesel (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
   Refer to: Crankshaft Position (CKP) Sensor - 2.2L Duratorq-TDCi (Puma) Diesel (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

3. Use Special Service Tool: 303-1587 Timing Tool, Crankshaft.



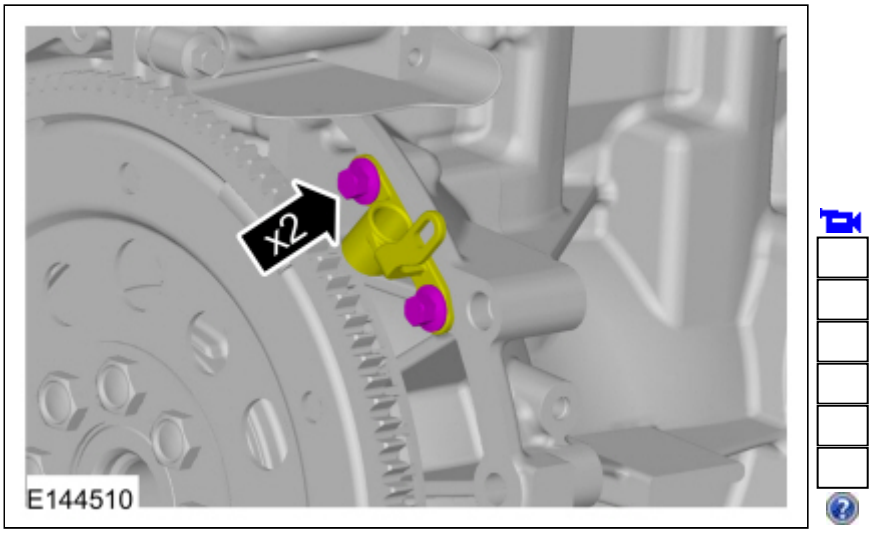
Vehicles with manual transmission

4. Loosen the bolts.

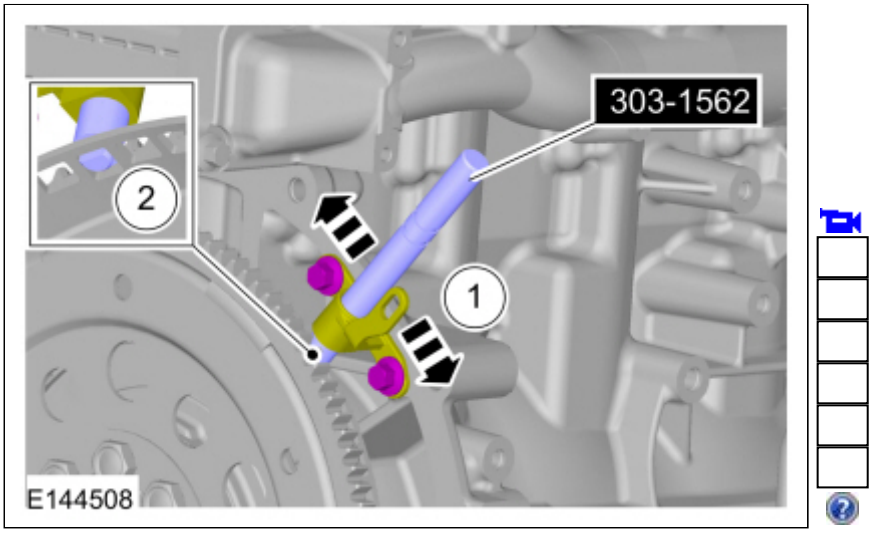


5. **NOTE:** *Make sure that the special tool is located in the flywheel timing slot.*

   Use Special Service Tool: 303-698 Timing Tool, Crankshaft.

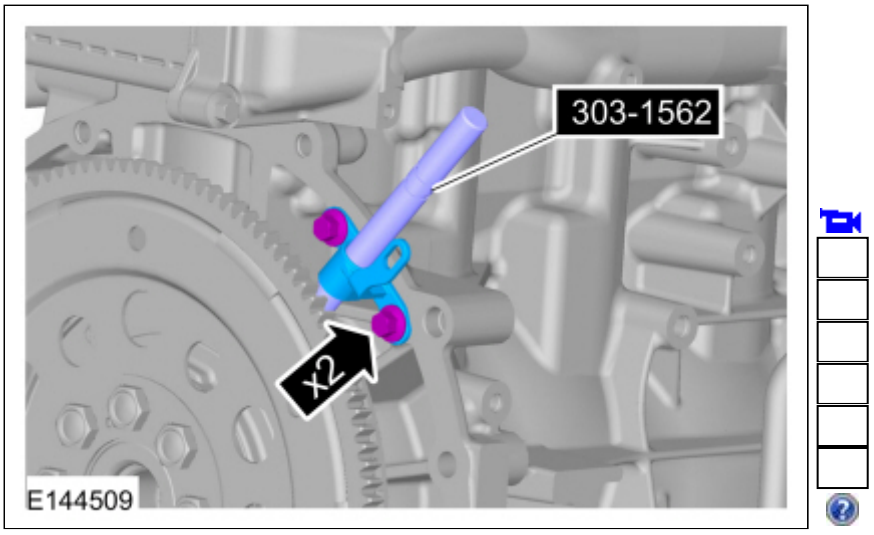


6. Tighten bolts before removing tool.
   Remove Special Service Tool: 303-698 Timing Tool, Crankshaft.
   Torque: 25 Nm



Vehicles with automatic transmission

7. Loosen the bolts.



8. **NOTE:** *Make sure that the special tool is located in the flexplate timing slot.*

   Use Special Service Tool: 303-1562 Timing Tool.

9. Tighten bolts before removing tool.
   Remove Special Service Tool: 303-1562 Timing Tool.
   Torque: 25 Nm

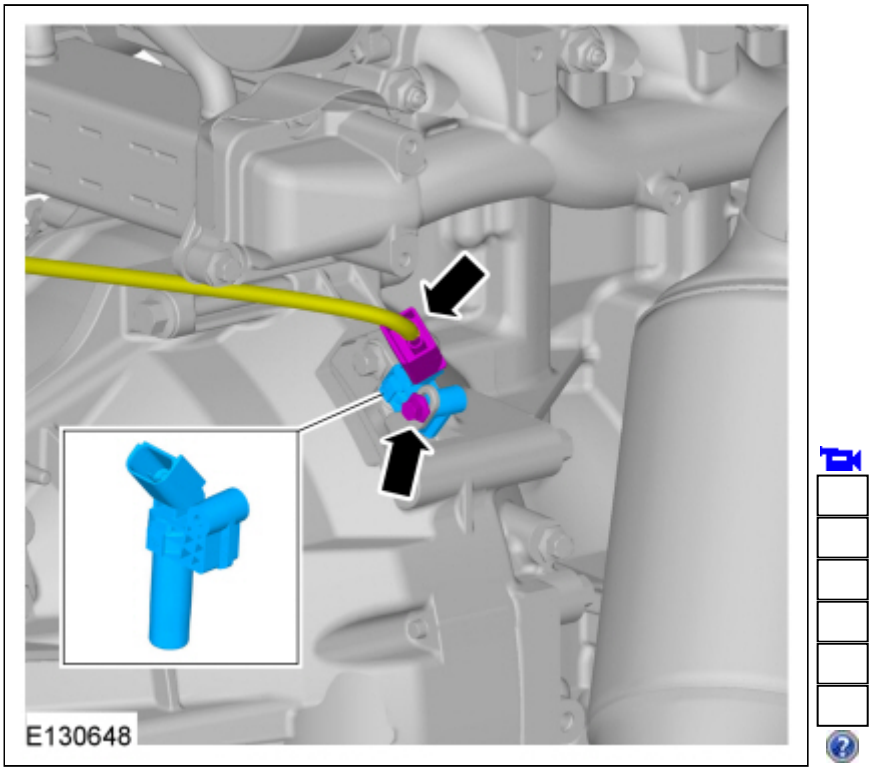
Crankshaft Position (CKP) Sensor - 3.2L Duratorq-TDCi (148kW/200PS) - Puma

Removal



NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
2. Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).
3. 

4. *Torque*: 25 Nm

5. *Torque*: 7 Nm

Installation

1. **NOTICE: Only rotate the crankshaft clockwise.**

   Rotate the crankshaft until a flywheel tooth is visible through the CKP sensor housing.

2. **NOTICE: The tip of the sensor must rest on a flywheel tooth.**

   NOTE: *Make sure that a new component is installed.*

   To install, reverse the removal procedure.

Powertrain Control Module (PCM)

Base Part Number: 12A650

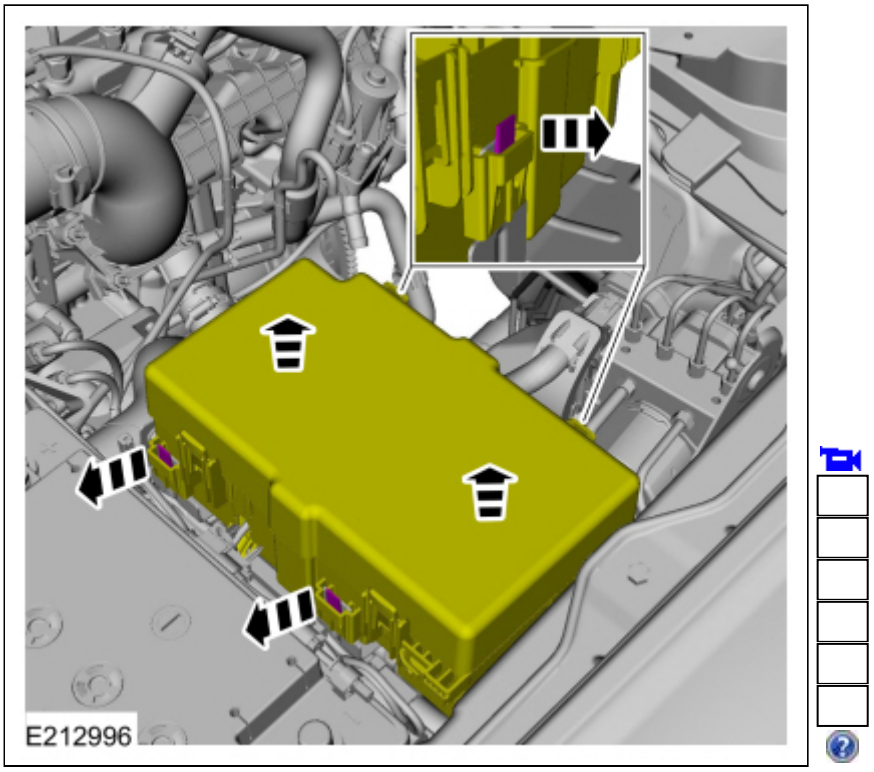
Special Tool(s) / General Equipment

Ford Diagnostic Equipment

Removal

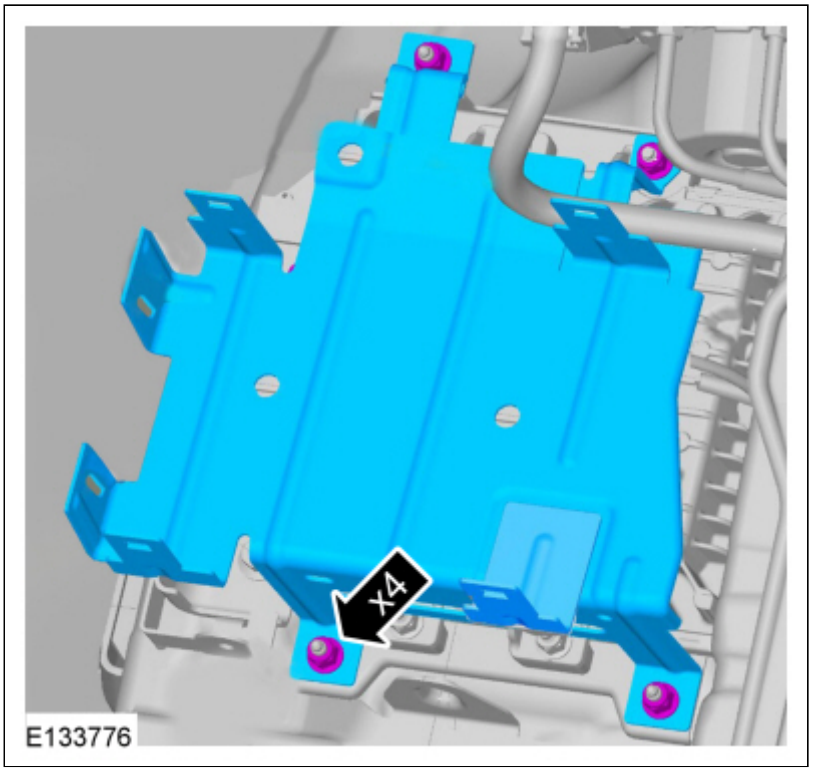
NOTICE: If a new PCM is to be installed, upload the PCM configuration information using the Programmable Modules Installation Routine, prior to commencing the removal of the PCM.

NOTE: *Removal steps in this procedure may contain installation details.*



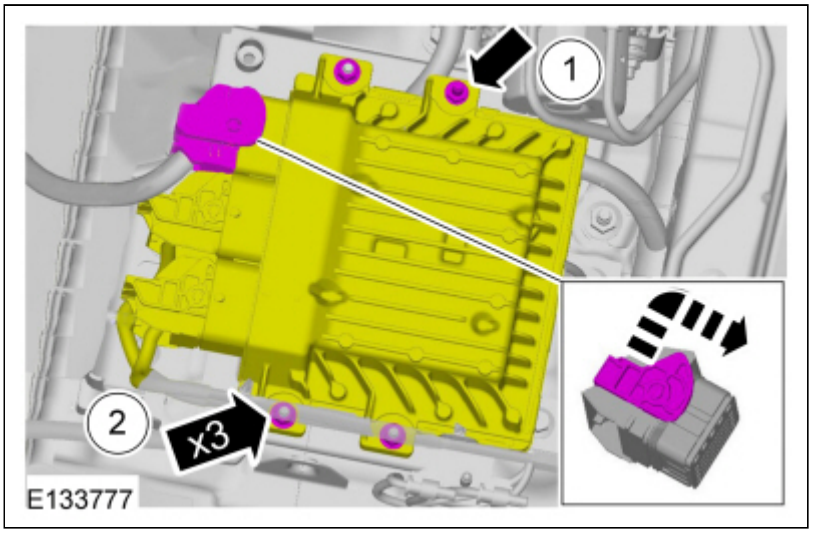
1. **NOTE:** *NOTE: This step is only necessary when installing a new component.*

   Download the PCM configuration information into the diagnostic tool, using the Programmable Modules Installation routine.
   Use the General Equipment: Ford Diagnostic Equipment



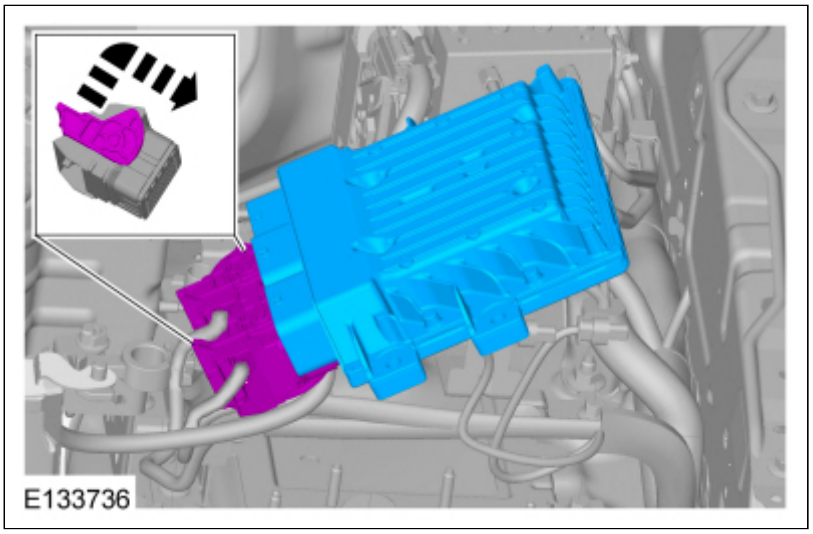
2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).

3. Refer to: Battery (414-01 Battery, Mounting and Cables, Removal and Installation).



4. Refer to: Battery Tray (414-01 Battery, Mounting and Cables, Removal and Installation).

5. 



6. *Torque*: 25 Nm

7. *Torque*: 11 Nm

8.

Installation

1. To install, reverse the removal procedure.

2. Carry out the Injector Correction Factors procedure using the following menu options: ToolBox/Powertrain/Service Functions.
   Use the General Equipment: Ford Diagnostic Equipment

3. Carry out the Oil Quality History function using the following menu options: ToolBox/Powertrain/Service Functions.
   Use the General Equipment: Ford Diagnostic Equipment

4. Carry out the Stored Speed Limit function using the following menu options: ToolBox/Powertrain/Service Functions.
   Use the General Equipment: Ford Diagnostic Equipment

5. Carry out the Pump Learn procedure using the following menu options: ToolBox/Powertrain/Service Functions.
   Use the General Equipment: Ford Diagnostic Equipment

6. Carry out the Pilot Correction Learn procedure using the following menu options: ToolBox/Powertrain/Service Functions.
   Use the General Equipment: Ford Diagnostic Equipment

7. Change the engine oil and the oil filter.

8. Carry out the oil reset procedure.

9. **NOTE:** *This step is only necessary when installing a new component.*

   Upload the PCM configuration information into the PCM, using the Programmable Modules Installation routine.
   Use the General Equipment: Ford Diagnostic Equipment

Transmission Description - Overview

6R80 Transmission

This transmission has an internal thermal bypass valve contained within the case.

This transmission uses planetary gears with hydraulic electronic controls.

This transmission has the following features:

- Six forward speeds
- Torque converter with an integral converter clutch
- Electronic shift and pressure controls
- Single planetary gear set
- Double planetary gear set
- Two fixed multi-disc clutches
- Three multi-plate clutches

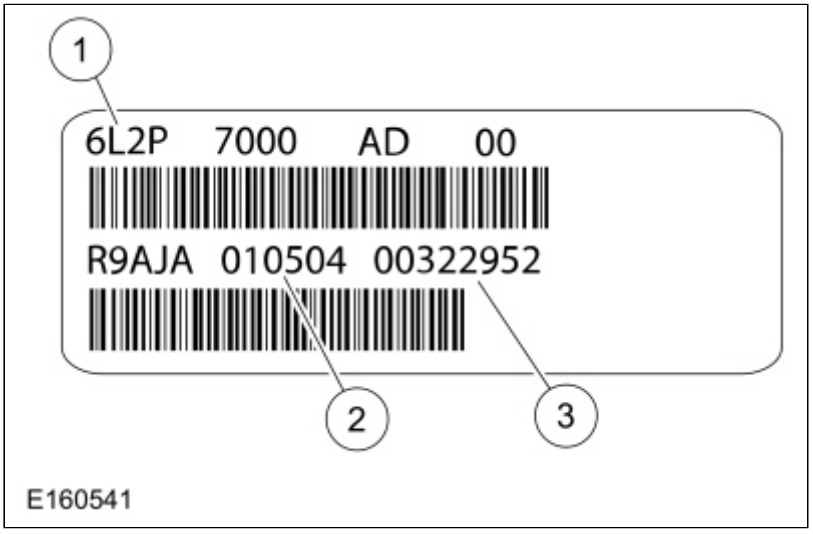
All hydraulic functions are directed by electronic solenoids to control the following:

- Engagement feel
- Shift feel
- Shift scheduling
- Modulated Torque Converter Clutch (TCC) applications

This transmission has a mechatronic unit which contains:

- Turbine Shaft Speed (TSS) sensor
- Output Shaft Speed (OSS) sensor
- An internal P, R, N, D selector shaft position sensor
- Transmission Fluid Temperature (TFT) sensor

Engine power reaches the transmission by a torque converter with an integral clutch. The 6 forward gears and one reverse gear are obtained from 2 planetary gearsets.



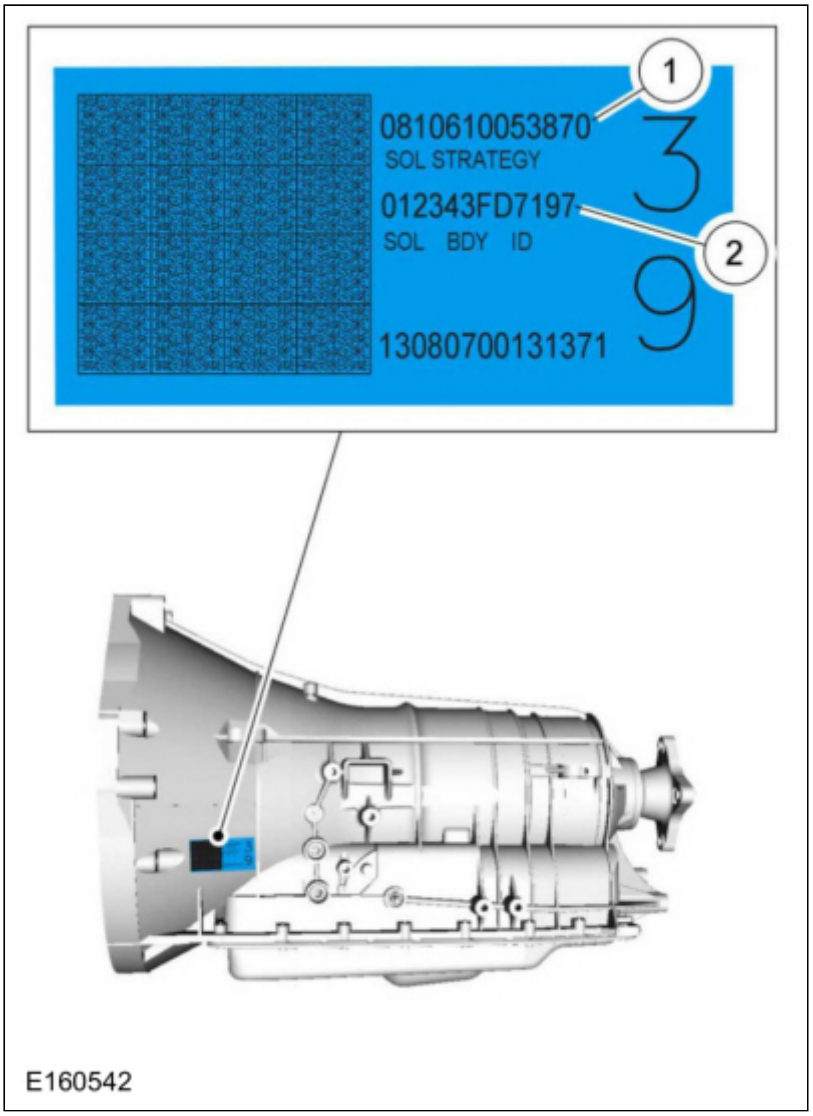
This automatic transmission is a 6-speed electronically controlled transmission comprising the basic elements, main control valve body unit, torque converter, 1 solenoid valve and 6 pressure regulators. Gear selection is achieved by the control of automatic transmission fluid flow to operate various internal clutches. The TCM operates the electrical

components and provides for the control of gear selection shift pressure, which increases refinement and torque converter slip.

In the event of a system fault, the TCM also provides for Failure Mode Effect Management to maintain maximum functional operation of the transmission with a minimum reduction in driver, passenger or vehicle safety. In the event of a total loss of control or electrical power, the basic transmission functions P, R, N and D are retained. Also 3rd or 5th gear is retained by the hydraulic system. The gear retained is dependent upon the gear selected at the time of the failure.

Identification Tags

All vehicles come equipped with a Safety Compliance Certification Label. The location on the label marked TR is reserved for the transmission code. To determine the correct transmission for this vehicle, refer to the Owner's Literature, Transmission Code Designations. All transmissions are equipped with an identification tag located on the transmission case. For transmission part number, serial number and build date, refer to the transmission identification tag located on the transmission case.

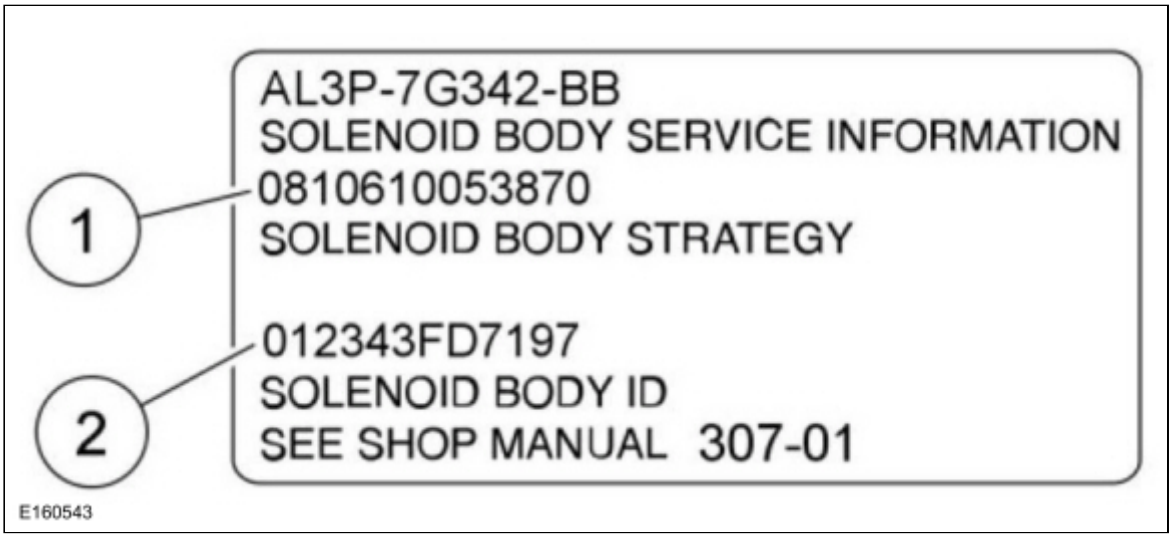


Item	Description
1	Part number
2	Build date
3	Serial number

Solenoid Strategy Identification Tag

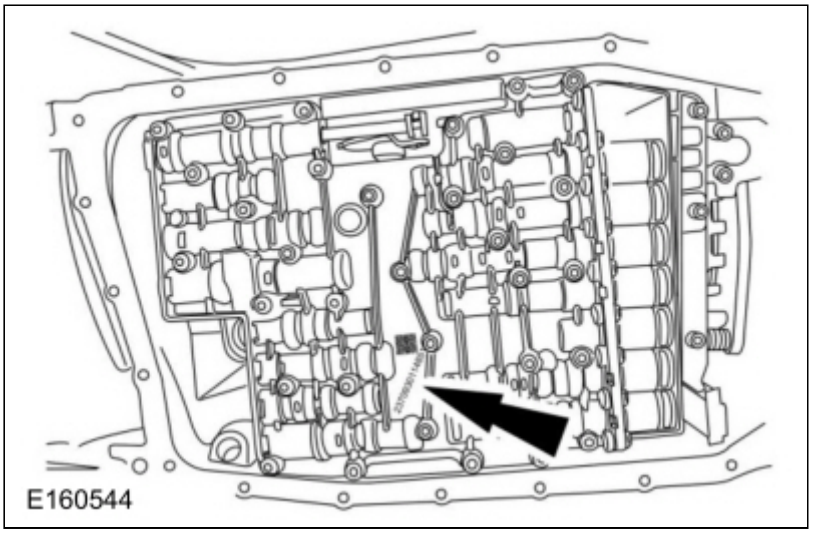
NOTE: *Letters are not used in the 13 digit solenoid body strategy. The characters consist of all numbers.*

PCM controlled transmissions have a solenoid strategy identification tag located on the left side of the transmission case. Compare the 13 digit number on the tag with the 13 digit number displayed on the scan tool to determine the correct solenoid strategy for the transmission. If the scan tool matches the service tag then the solenoid strategy is correct. If the solenoid strategy retrieved from the scan tool does not match the solenoid strategy identification tag, the transmission fluid pan must be removed to compare what the scan tool displays to the solenoid strategy number etched on the main control. Refer to Fluid Pan, Gasket and Filter in this section. If the solenoid strategy identification etched on the main control matches what the scan tool displays, then the solenoid strategy is correct. If the solenoid strategy identification etched on the main control does not match the scan tool, then a Solenoid Strategy Data Download is required. Refer to Solenoid Body Strategy for the download procedure in this section.



Original Solenoid Body Tag

Item	Description
1	13 Digit Solenoid Strategy
2	12 Digit Solenoid body identification



A replacement solenoid body tag is provided when the main control is serviced. The replacement solenoid body tag is placed over the original solenoid body tag.

Replacement Solenoid Body Tag

Item	Description
1	13 Digit Solenoid Strategy

Main Control Solenoid Body Strategy Identification

If the solenoid body strategy etched on the main control does not match what the scan tool displays, the solenoid body strategy must be downloaded into the PCM or harsh shifts will result.

Major Components

This transmission has the following major components:

- Transmission case with integral torque converter housing and extension housing
- Torque converter
- Fluid pump
- Three drive clutches:
  - Forward clutch (A)
  - Direct clutch (B)
  - Overdrive (O/D) clutch (E)
- Three brake clutches:
  - Intermediate clutch (C)
  - Low/reverse clutch (D)
  - One-Way Clutch (OWC)
- Two planetary gearsets:
  - Front single planetary gearset (1 sun gear, 1 carrier, 1 ring gear)
  - Rear Ravigenaux planetary gearset (2 sun gears, 1 carrier with 2 sets of pinion gears and 1 ring gear)
- Main control (mechatronic assembly):
  - Upper valve body
  - Lower valve body
  - Transmission Range (TR) sensor
  - Turbine Shaft Speed (TSS) sensor
  - Output Shaft Speed (OSS) sensor
  - Transmission Fluid Temperature (TFT) sensor
  - Line Pressure Control (LPC) solenoid
  - Torque Converter Clutch (TCC) solenoid
  - Five electronically controlled shift solenoids

In addition to the torque converter, the other shift elements are:

- three rotating multi-plate clutches: forward (A), direct (B) and overdrive (E).
- two fixed multi-disc brakes: intermediate (C) and low/reverse (D).

All gear shifts from 1st to 6th or from 6th to 1st are power-on overlapping shifts. That is, during the shift, one of the clutches must continue to transmit the drive at lower main pressure until the other clutch is able to accept the input torque.

The shift elements, clutches or brakes are engaged hydraulically. The transmission fluid pressure builds up between the cylinder and the piston, pressing the clutches together.

The purpose of these shift elements is to carry out in-load shifts with no interruption to traction.

Multi-plate clutches; forward, direct and overdrive, supply power from the engine to the planetary geartrain. Multi-disc

brakes, intermediate and low/reverse, press against the transmission housing in order to achieve a torque reaction effect.

Multi-Plate Clutch

Clutches; O/D (E), forward (A) and direct (B) are balanced in terms of dynamic pressure. That is, their pistons are exposed to the transmission fluid flow on both sides, in order to prevent pressure buildup in the clutch as speed increases. This equalization process is achieved by a baffle plate and pressure-free transmission fluid supply by a lubricating passage, through which the space between piston and baffle plate is filled with transmission fluid.

The advantages of this dynamic pressure equalization are:

- Reliable clutch engagement and release in all speed ranges.
- Improved shift refinement.

Shift Overlap Control

The electro-hydraulic shift action is obtained by means of various valves in the TCM and main control valve body, actuated by pressure regulators. They engage or disengage the relevant clutches or brakes at the correct moments.

Hydraulic Systems

Fluid Pump

The torque converter is supported in the fluid pump by a needle roller bearing. The fluid pump is driven directly from the engine by the torque converter shell and supplies transmission fluid to the transmission and the hydraulic control unit.

The fluid pump draws in transmission fluid through a transmission fluid filter and delivers it at high pressure to the main pressure valve in the main control valve body unit. The valve adjusts the pressure and returns excess transmission fluid to the transmission fluid pan.

Fluid Filter

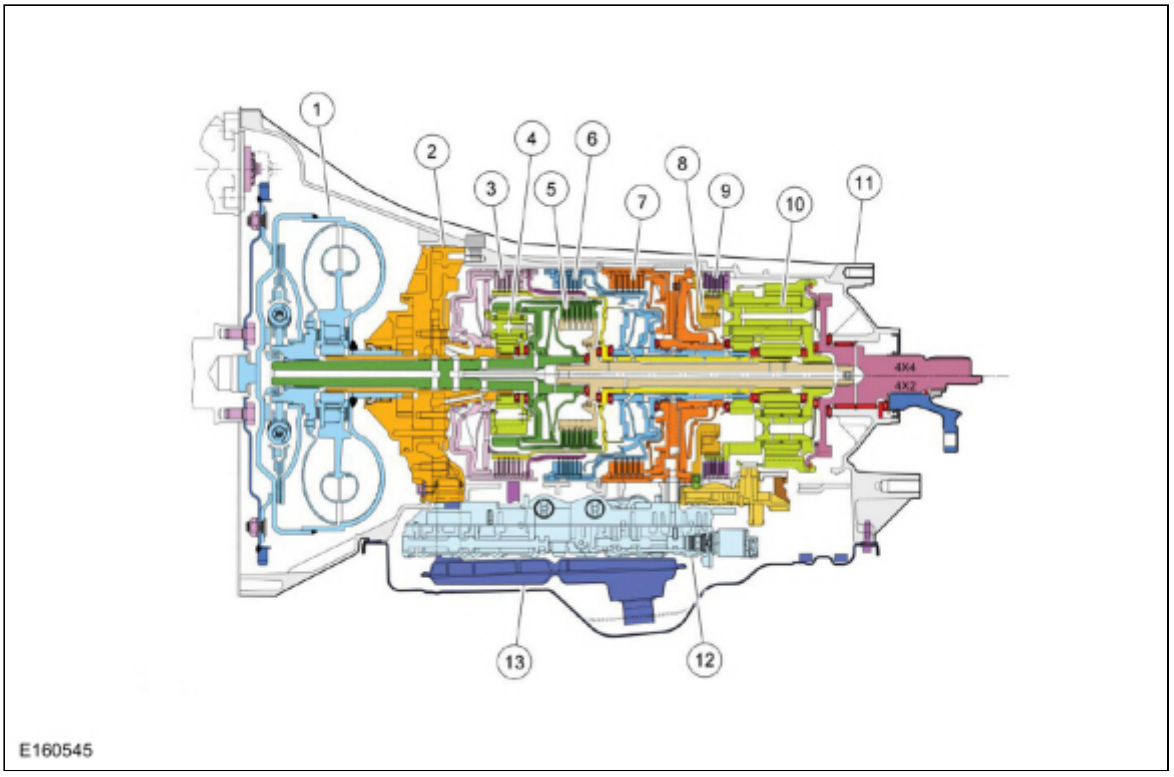
All transmission fluid that is picked up from the transmission fluid pan passes through the transmission fluid filter. The transmission fluid filter and its accompanying seal are part of the transmission fluid path from the pan to the transmission fluid pump.

Single Planetary Gearset

The single planetary gear O/D carrier is driven by the input shaft. The single planetary gear set consists of the following components:

- One sun gear
- Four planetary gears meshing with the sun gear
- One planetary carrier
- One ring gear

Ravigenaux Planetary Gearset



The Ravigenaux planetary gearset is splined to the output shaft and consists of the following components:

- Two sun gears of different sizes
- Three short planetary gear pinions meshing with the sun gears
- Three long planetary gear pinions meshing with the sun gears
- One planetary carrier
- One ring gear

Output Shaft

The output shaft provides torque to the driveshaft and rear axle assembly. It is driven by the ring gear of the planetary gearset.

Gear Ratios

Power is transmitted from the torque converter to the planetary gearsets through the input shaft. Clutches are used to hold and drive certain combinations of gearsets. This results in 6 forward ratios and one reverse ratio which are transmitted to the rear planetary ring gear (output shaft). The planetary gearsets of this transmission provide the following ratios:

- Reverse:
  - Front planetary gearset ratio of 1.52:1
  - Rear planetary gearset ratio of 2.24:1 (reverse direction)
  - Total ratio of 3.40:1 (reverse direction)
- 1st gear:
  - Front planetary gearset ratio of 1.52:1
  - Rear planetary gearset ratio of 2.74:1
  - Total ratio of 4.17:1
- 2nd gear:
  - Front planetary gearset ratio of 1.52:1
  - Rear planetary gearset ratio of 1.54:1
  - Total ratio of 2.34:1
- 3rd gear:

  - Front planetary gearset ratio of 1.52:1
  - Rear planetary gearset ratio of 1:1
  - Total ratio of 1.52:1
- 4th gear:
  - Front planetary gearset provides ratios of 1:1 and 1.52:1 to different rear planetary gearset members
  - Rear planetary gearset ratio of 1.14:1
  - Total ratio of 1.14:1
- 5th gear:
  - Front planetary gearset provides ratios of 1:1 and 1.52:1 to different rear planetary gearset members
  - Rear planetary gearset ratio of 0.87:1
  - Total ratio of 0.87:1
- 6th gear:
  - Front planetary gearset ratio of 1:1
  - Rear planetary gearset ratio of 0.69:1
  - Total ratio of 0.69:1

Range Selection

The transmission has 5 range positions: P, R, N, D, and S.

Park

- In the PARK position:
  - There is no power flow through the transmission.
  - The park pawl locks the output shaft to the case.
  - The engine can be started.
  - The ignition key can be removed.

Reverse

- In the REVERSE position:
  - The vehicle can be operated in a rearward direction, at a reduced gear ratio.
  - Backup lamps are illuminated.

Neutral

- In the NEUTRAL position:
  - There is no power flow through the transmission.
  - The output shaft is not held and is free to turn.
  - The engine can be started.

D Position

The D is the normal position for most forward driving.

- The D position provides:
  - Automatic shifts 1-6 and 6-1.
  - Apply and release of the torque converter clutch.
  - Maximum fuel economy during normal operation.
  - Engine braking in all gears.

Position S — Sport mode with manual shifting™

- This position provides:
  - Manual control of the transmission.
  - Engine braking.

Torque Converter

The torque converter is a 4-element unit containing a 2-plate clutch. The clutch can be controlled and engaged in any gear, 2nd through 6th. Calibration parameters may be set to allow lockup in a higher gear only. The clutch is applied by removing fluid pressure from one side of the plate. The torque converter transmits and multiplies torque. The torque converter includes the following 4 elements:

- Impeller assembly
- Turbine assembly
- Reactor assembly
- Torque Converter Clutch (TCC)

Rotation of the torque converter housing and impeller set the transmission fluid in motion by driving the impeller blades and pump.

The turbine is driven by the transmission fluid from the impeller and transmits power to the input shaft.

The reactor redirects transmission fluid flow returned from the turbine to the impeller so that it rotates in the same direction as the impeller. This action assists in torque multiplication.

The reactor has a One-Way Clutch (OWC) to hold it stationary during torque multiplication and allows it to rotate at higher vehicle speeds.

Torque Converter Clutch (TCC)

The TCC has a cover assembly with a 2-plate clutch and a turbine and damper assembly that connects to the transmission input shaft.

The TCC connects the cover to the turbine when the TCC is applied.

During TCC release, transmission fluid flows through the torque converter in one direction to release the 2-plate clutch.

During TCC apply, transmission fluid flows through the torque converter in the opposite direction to apply the 2-plate clutch.

- The TCC operates in 3 stages:
  - Full release
  - Controlled modulation
  - Full apply

The TCM controls TCC operation using the TCC solenoid. TCC solenoid operation provides the modulation of hydraulic pressure to change the position of the bypass clutch control regulator valve. The valve changes the pressure and direction of transmission fluid flow in the torque converter. TCC may be applied in forward gears, 2nd through 6th.

Shift Patterns

Downshifts

Under certain conditions, the transmission will downshift automatically to a lower gear range (without moving the range selector lever). There are 3 categories of automatic downshifts:

- Coastdown
- Torque demand
- Forced or kickdown shifts

Coastdown

The coastdown downshift occurs when the vehicle is coasting down to a stop.

Torque Demand

The torque demand downshift occurs (automatically) during part throttle acceleration when the demand for torque is greater than the engine can provide at that gear ratio.

Kickdown

For maximum acceleration, the driver can force a downshift by pressing the accelerator pedal to the floor. A forced downshift into a lower gear is possible below calibrated speeds. Specifications for downshift speeds are subject to variations due to tire size, engine and transmission calibration requirements.

Mechanical Components and Functions

Planetary Gearset

This transmission has 2 planetary gearsets (front and rear) to provide operation in reverse and 6 forward speeds.

The front planetary gearset is a single planetary gearset and has the following components:

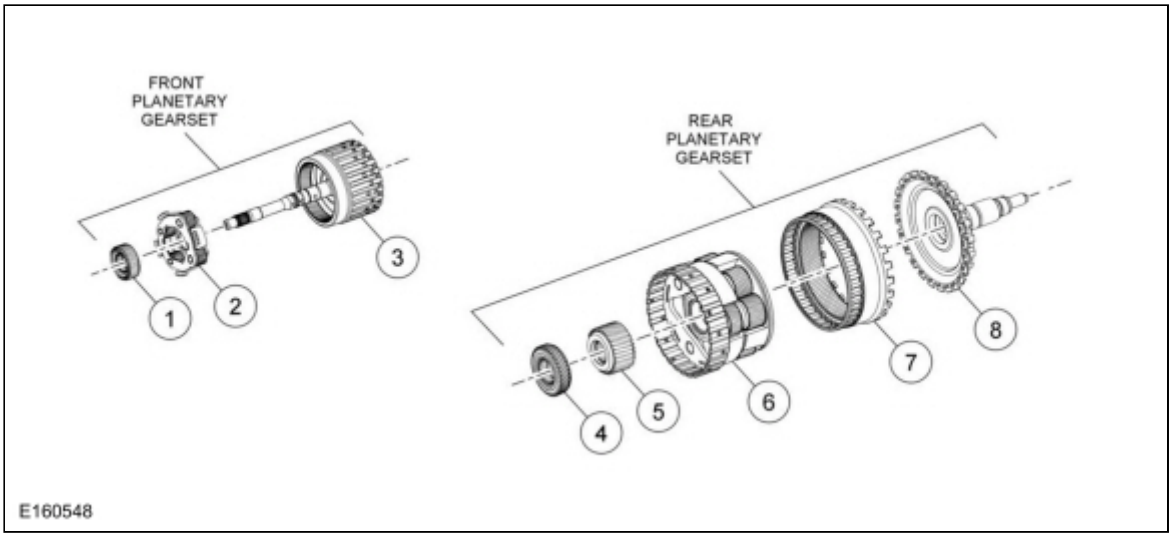
- Front planetary No. 1 sun gear
- Front planetary carrier
- Front planetary ring gear (part of the input shaft assembly)

The input shaft rotates the front ring gear as a driving member. The front sun gear is connected to the fluid pump and is held stationary. The front ring gear rotates the front planetary carrier assembly with a reduction ratio of 1.52:1

The front planetary carrier assembly is the only output member of the front planetary gearset in reverse, 1st gear, 2nd gear and 3rd gear. The front planetary gearset provides a 1.52:1 gear ratio to the rear planetary gearset.

In 4th gear and 5th gear, both the front ring gear and front planetary carrier assembly are output members of the front planetary gearset. The front planetary gearset provides both a 1:1 and 1.52:1 gear ratio to different members of the rear planetary gearset.

In 6th gear, the front ring gear is the only output member of the front planetary gearset. The front planetary gearset provides a 1:1 gear ratio to the rear planetary gearset.



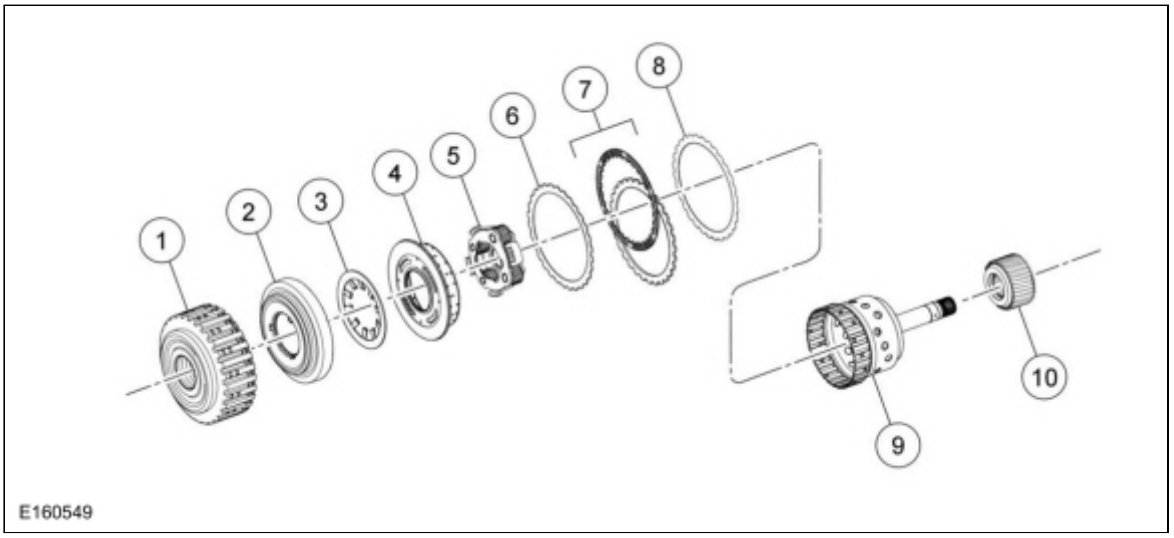
The rear planetary gearset is a ravigenaux planetary gearset and has the following components:

- Rear planetary No. 2 sun gear
- Rear planetary No. 3 sun gear
- Rear planetary carrier assembly (2 sets of pinion gears)
- Rear planetary ring gear assembly

Powerflow through the rear planetary gearset is as follows:

- In reverse, rear sun gear No. 2 is driven, the rear planetary carrier is held and the ring gear is the output (2.24:1 with reverse direction)
- In 1st gear, sun gear No. 3 is driven, the rear planetary carrier is held and the ring gear is the output (2.74:1)
- In 2nd gear, sun gear No. 3 is driven, sun gear No. 2 is held and the ring gear is the output (1.54:1)
- In 3rd gear, sun gear No. 3 and sun gear No. 2 are driven and the ring gear is the output (1:1)
- In 4th gear, sun gear No. 3 and the rear planetary carrier are driven and the ring gear is the output (1.14:1)
- In 5th gear, sun gear No. 2 and the rear planetary carrier are driven and the ring gear is the output (0.87:1)
- In 6th gear, the rear planetary carrier is driven, sun gear No. 2 is held and the ring gear is the output (0.69:1)

Planetary Gearset Exploded View



Item	Description

Forward Clutch (A)

The forward clutch (A) connects the front planetary carrier to the rear No. 3 sun gear. This provides a reduction gear ratio of 1.52:1 from the input shaft to rear sun gear No. 3. The forward (A) is applied in 1st, 2nd, 3rd and 4th gears.

Regulated hydraulic pressure from the regulator valve in the valve body pushes the forward (A) clutch piston against the forward (A) clutch pack to apply the clutch. The front planetary carrier and the rear No. 3 sun gear are connected as a result of the clutch being applied.

10	Rear planetary No. 3 sun gear

Direct Clutch (B)

The direct clutch (B) connects the front planetary carrier to the rear No. 2 sun gear. This provides a reduction gear ratio of 1.52:1 from the input shaft to rear sun gear No. 2. The direct clutch (B) is applied in reverse, 3rd and 5th gears.

Regulated hydraulic pressure from the regulator valve in the valve body pushes the direct clutch (B) piston against the direct clutch (B) pack to apply theb clutch. The front planetary carrier and the rear No. 2 sun gear are connected as a result of the clutch being applied.

Direct Clutch (B) Exploded View

12	Rear planetary sun gear No. 2

Intermediate Clutch (C)

The intermediate clutch (C) holds the rear planetary No. 2 sun gear stationary to the transmission case. The intermediate clutch (C) is applied in 2nd and 6th gears.

Regulated hydraulic pressure from the regulator valve in the valve body pushes the intermediate clutch (C) piston against the intermediate clutch (C) pack to apply the clutch.

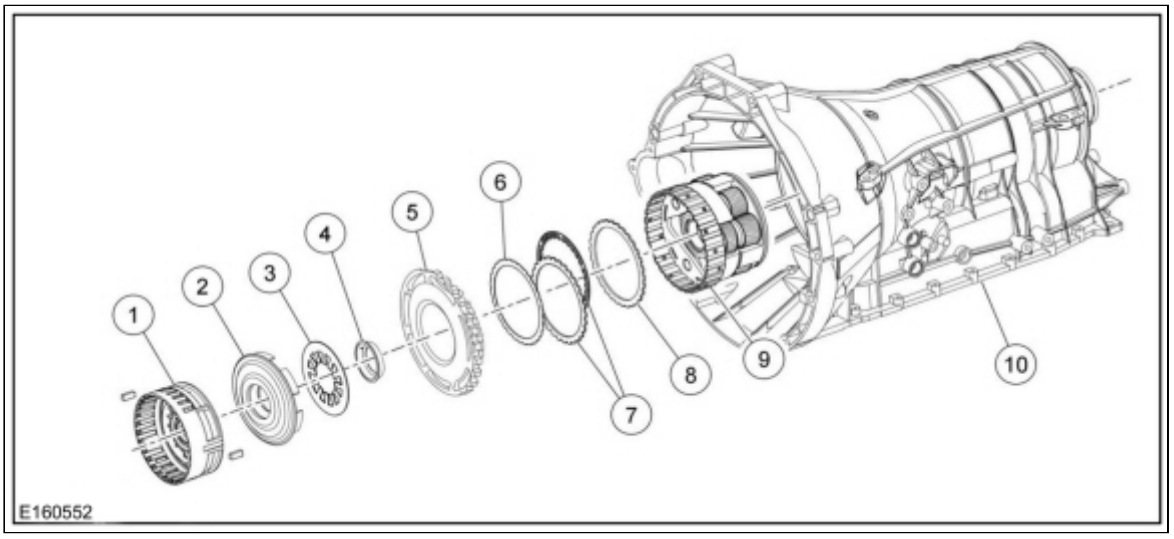
9	Transmission case



Low/Reverse Clutch (D) and Low/One-Way Clutch (OWC)

The low/reverse clutch (D) holds the rear planetary carrier stationary to the transmission case. The low/ reverse clutch (D) is applied in park, reverse, neutral and 1st gear below 5 kph (3 mph).

Regulated hydraulic pressure from the regulator valve in the valve body pushes the low/reverse clutch (D) piston against the low/reverse clutch (D) pack to apply the clutch.

The low/One-Way Clutch (OWC) is a brake clutch that holds the rear planetary carrier in one direction and allows it to freewheel in the opposite direction eliminating engine braking in 1st gear when the transmission is in drive, above 5 kph (3 mph) only.

7	Low/reverse clutch friction and steel plates
8	Low/reverse clutch pressure plate
9	Rear planetary carrier assembly
10	Transmission case assembly

Overdrive (O/D) Clutch (E)

The O/D clutch (E) connects the input shaft with the rear planetary carrier. The O/D clutch (E) is applied in 4th, 5th and 6th gears.

Regulated hydraulic pressure from the regulator valve in the valve body pushes the overdrive clutch (E) piston against the overdrive clutch (E) pack to apply the clutch.

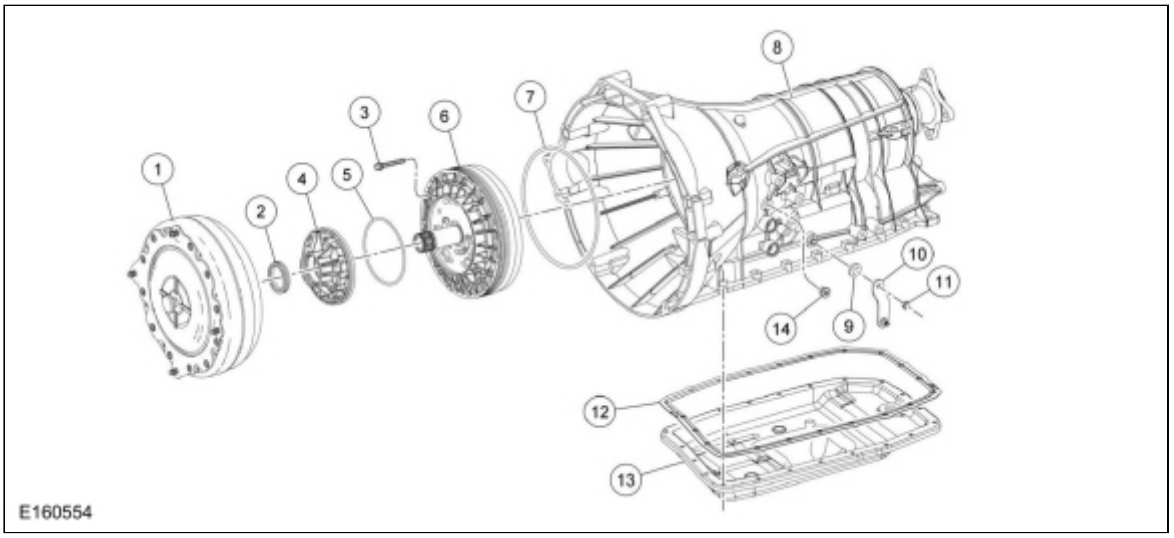
External Sealing

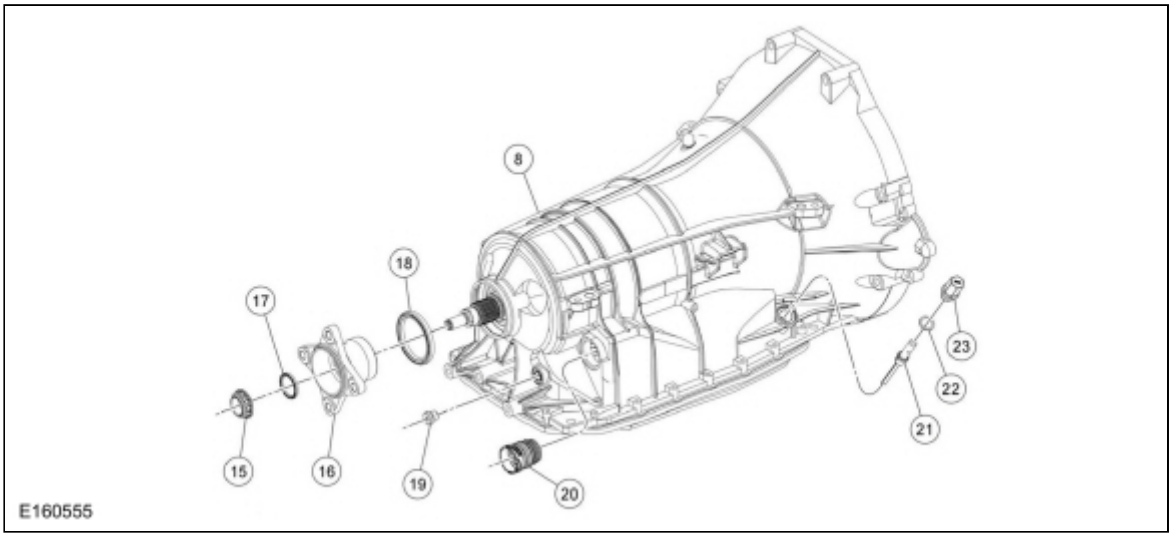
The pump assembly has a lip-type seal for the torque converter impeller hub. The pump assembly uses a large O-ring to seal the transmission case. The pump bolts also seal the pump to the transmission case.

The manual control lever shaft has a lip seal for its bore in the transmission case.

The transmission fluid pan uses a reusable gasket.



The output shaft flange has a lip-type seal that seals the flange to the transmission case.



The transmission case plug provides access to the park pawl shaft. The plug has a seal that is serviced as an assembly with the plug.

The main control leadframe connector sleeve has a seal for the transmission case bore. The seal is serviced as an assembly with the bulkhead connector sleeve.

The plug for the fluid level indicator uses an O-ring seal.

Bushings, Bearings and Thrust Washer Locations

This transmission supports the rotating components of the transmission with bushings, bearings and thrust washers.

The pump assembly support thrust washer controls the amount of end play for components between the pump assembly and the center support (forward/ Overdrive (O/D) clutch assembly, direct clutch cylinder).

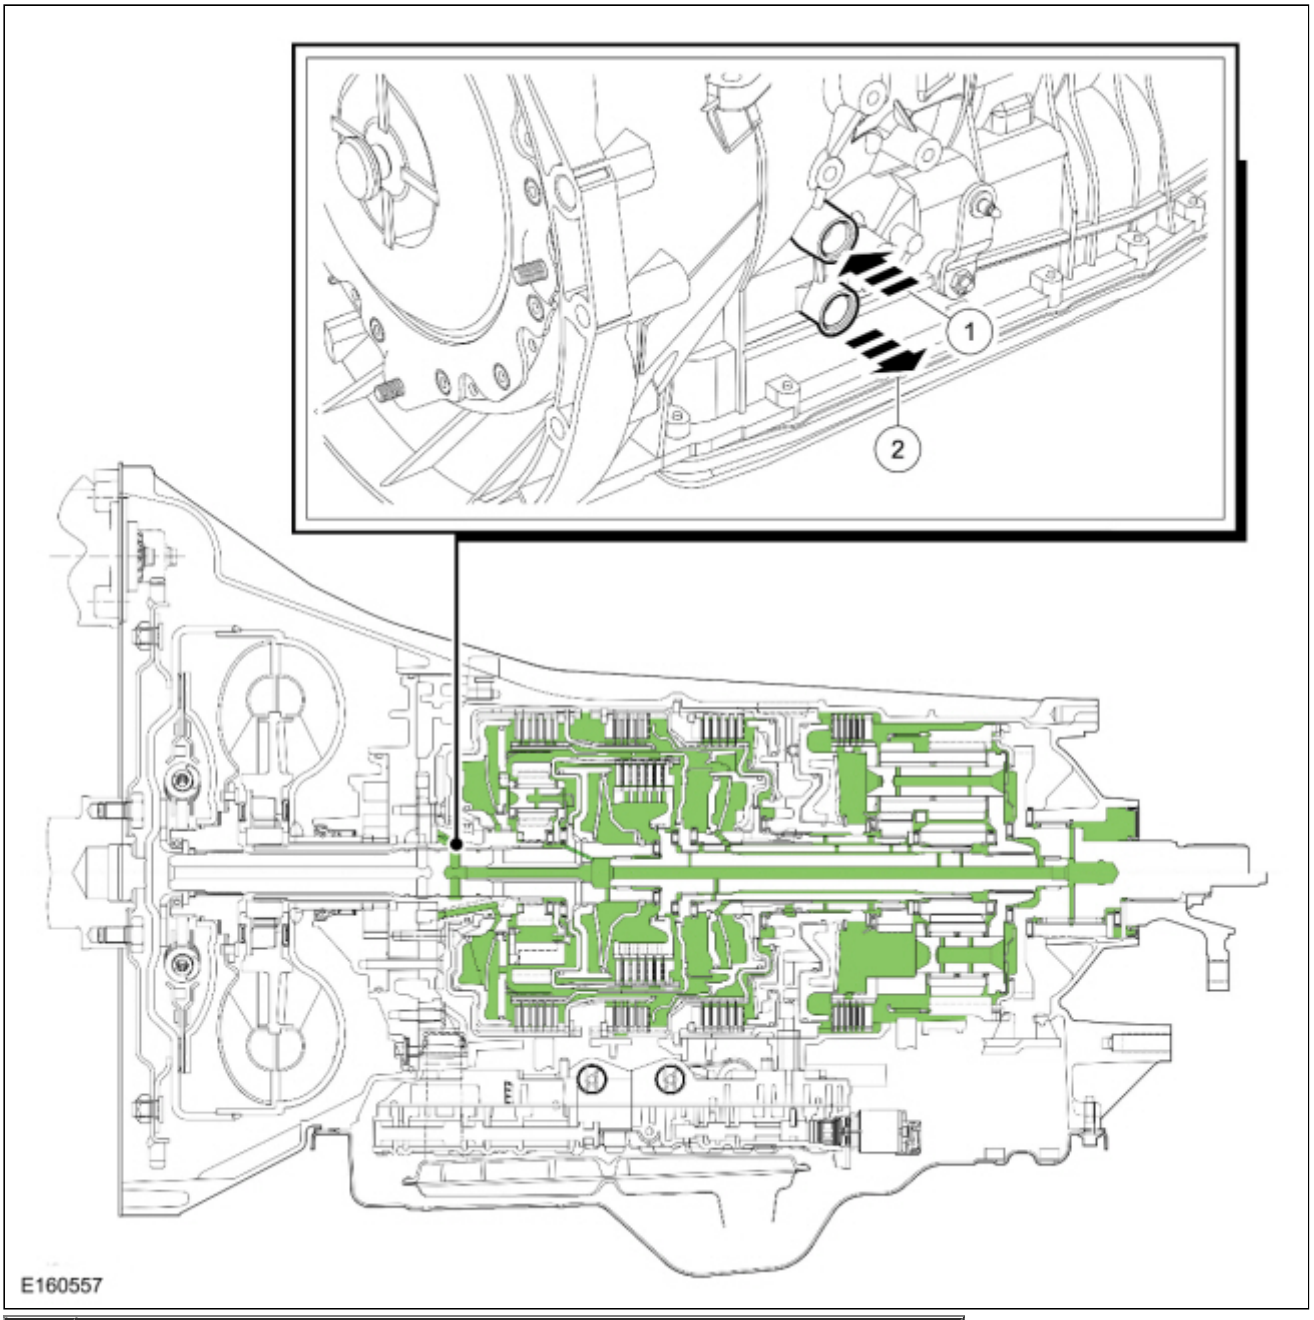
The T8 thrust bearing outer race controls the amount of end play for components between the center support and the rear of the transmission case (rear planetary gearset assembly, output shaft assembly).

Item	Description
1	Front pump selective washer
2	Bearing T1
3	Bearing T3
4	Bearing T6
5	Thrust bearing outer race
6	Roller bearing T8
7	Thrust bearing T10
8	Output shaft bearing assembly (Four-Wheel Drive (4WD) vehicles)

9	Output shaft bearing assembly (Rear Wheel Drive (RWD) vehicles)
10	Front oil pump bushing assembly (part of pump assembly)
11	Input shaft bushing (part of pump assembly)
12	Bearing T2
13	Bearing T4
14	Roller bearing T5
15	Rear planetary carrier selective washer
16	Thrust bearing T7
17	Roller bearing T9
18	Outer race bearing T9
19	Bearing T11
20	Thrust bearing T12 (RWD only)

Lubrication

This transmission provides lubrication for rotating mechanical components through one main hydraulic circuit. The general flow of lubrication moves from the front of the transmission, through the input and intermediate shafts, to the rear of the transmission.



Transmission fluid from the pump assembly and the torque converter exit the transmission case to go to the transmission fluid cooler through the bottom of the transmission fluid cooler tube and returns to the transmission through the top of the transmission fluid cooler tube.

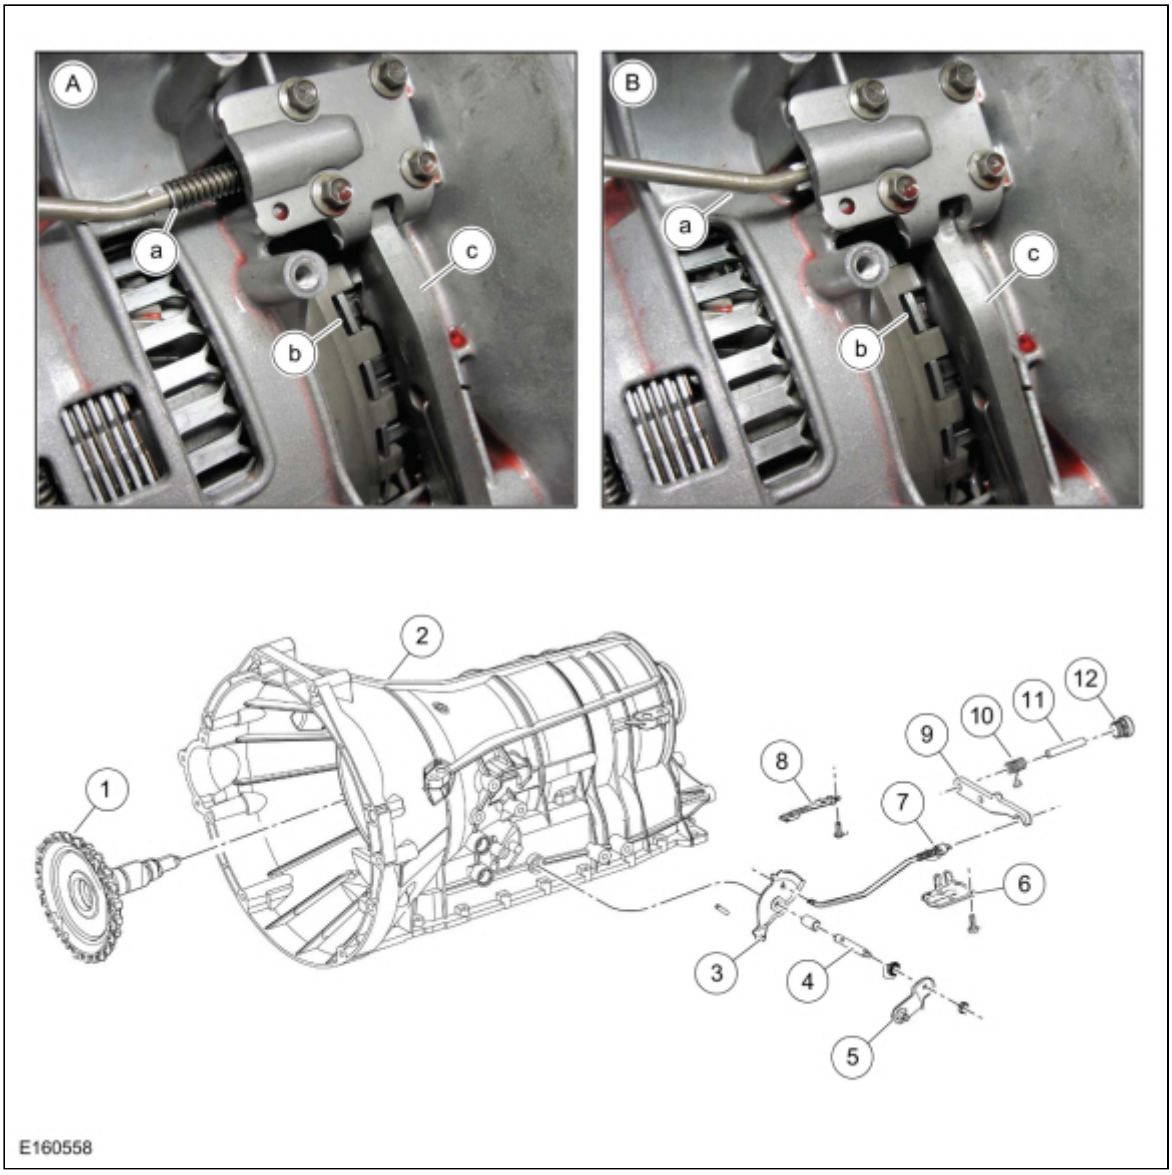
With lower transmission fluid temperatures, the thermal bypass valve in the transmission case bypasses the transmission fluid cooler tubes and redirects the fluid to the lubrication circuit. As transmission fluid temperature increases, the thermal bypass valve directs the fluid to the transmission fluid cooler.

Transmission fluid from the transmission fluid cooler or the thermal bypass valve enters the main lubrication circuit from the top of the transmission fluid cooler tube port.

Transmission fluid in the lubrication circuit flows to each of the balance pistons for the forward (A), direct (B) and overdrive (E) clutches. The balance pistons prevent unwanted clutch application when the clutch cylinder rotates at high speeds and hydraulic controls have released the clutch.

Lubrication Passages

Item	Description
1	Transmission fluid cooler return (inlet from the transmission fluid cooler)
2	Transmission fluid cooler pressure (outlet to the transmission fluid cooler)



Park

The park gear is part of the output shaft assembly. The park gear has lugs on its OD surface that the park pawl engages with to lock the output shaft.

The park lock prevents the vehicle wheels from rotating by allowing the output shaft to be held stationary by the transmission case through the park pawl. When the park pawl is engaged in the park gear, the output shaft is held stationary.

When the manual control lever is rotated to the PARK position, the park lock works as follows:

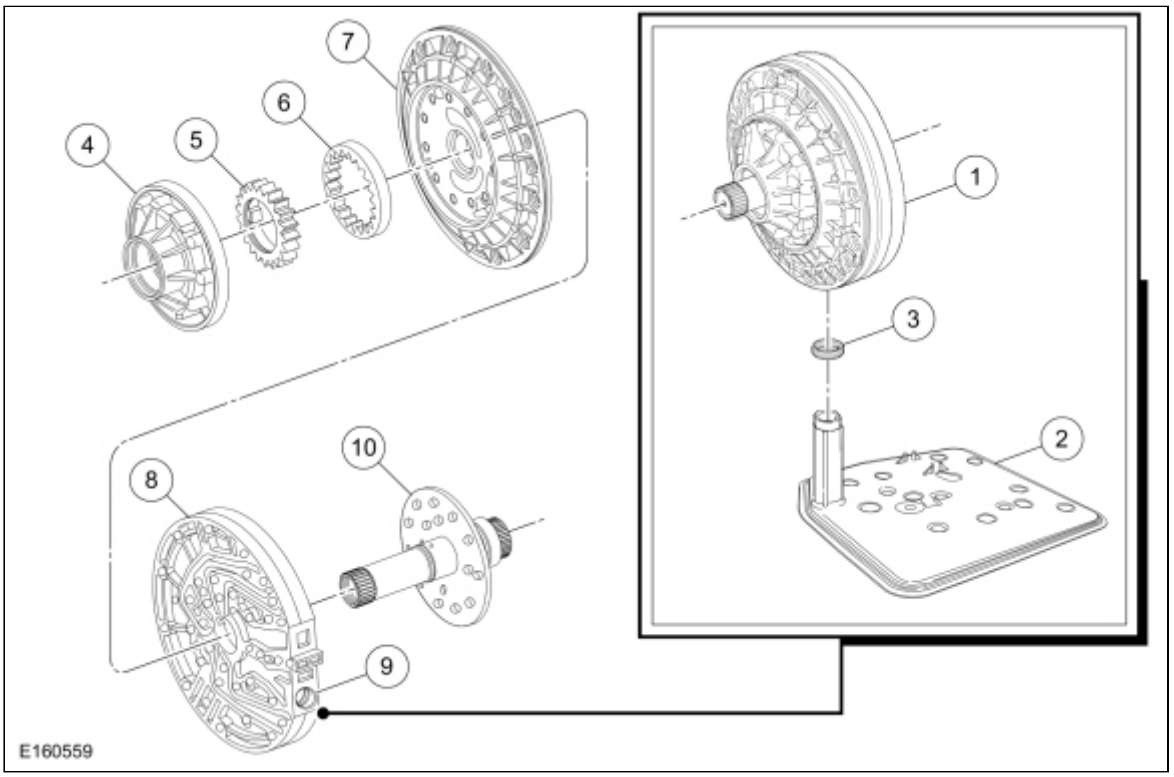
- The detent assembly (connected to the manual control shaft) rotates and pushes the park pawl actuator rod into the park pawl. The actuator rod is spring loaded.
- The actuator rod is guided into the park pawl by the park pawl abutment.
- When the park pawl actuator rod is pushed into the park pawl, the park pawl pivots into the park gear and engages with the lugs.
- The park pawl holds the output shaft to the transmission case.

Item	Description
1	Transmission case
2	Output shaft park gear assembly
3	Park pawl
4	Park pawl return spring
5	Park pawl pin
6	Plug — park pawl pin
7	Park pawl actuator rod
8	Manual valve detent spring
9	Manual valve detent lever assembly
10	Manual control lever shaft
11	Manual control lever (Manual control lever installation position is vehicle/model dependent.)
12	Park rod actuating plate

Hydraulic System

Pump Assembly and Transmission Fluid Filter

This transmission has a gear type pump that supplies transmission fluid pressure to the hydraulic system.



The inner (drive) gear is turned by the torque converter hub.

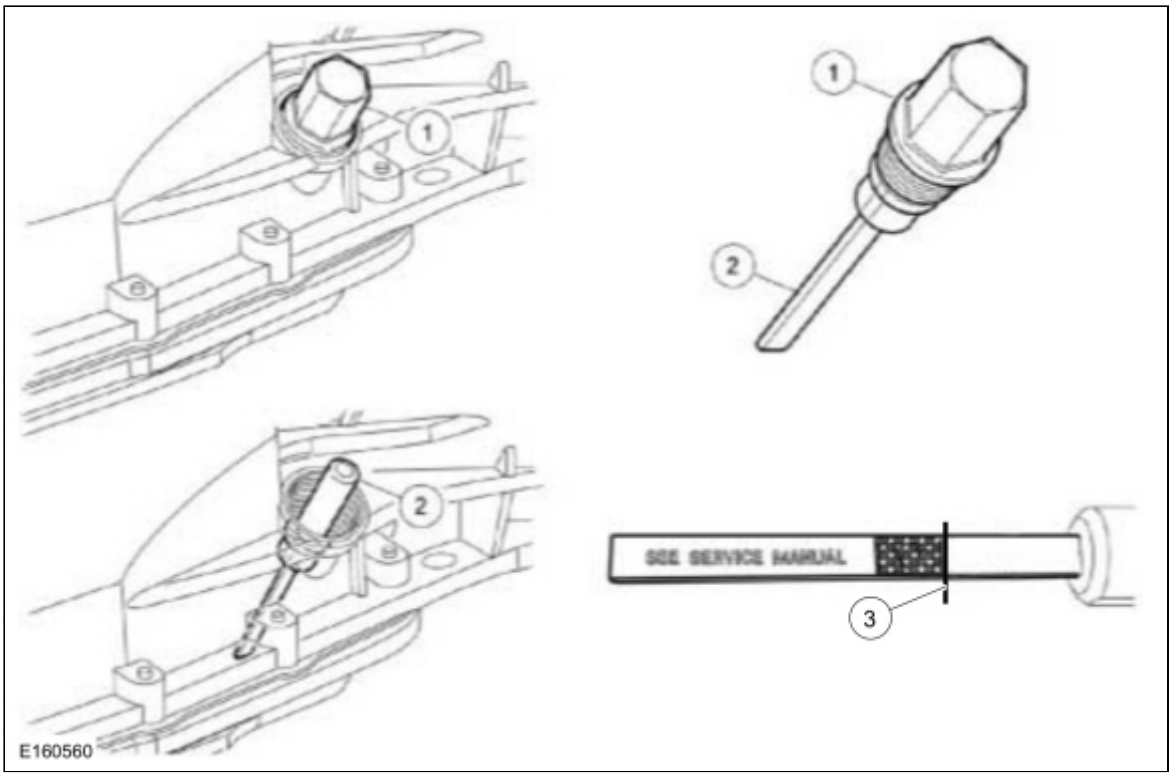
The transmission fluid pump has the following parts:

- Pump body, with inner (drive) and outer (driven) gears
- Centering plate
- Intermediate plate
- Stator shaft

The transmission fluid pump draws transmission fluid from the sump area, formed by the transmission fluid pan, through the transmission fluid filter, which is installed into the intermediate plate portion of the pump assembly and sealed by a rubber seal. A magnet attached to the transmission fluid pan collects any metallic material in the transmission fluid.

Pump Assembly and Transmission Fluid Filter Components

Item	Description
1	Transmission fluid pump assembly
2	Transmission fluid filter
3	Transmission fluid filter seal
4	Transmission fluid pump body
5	Inner (drive) gear
6	Outer (driven) gear
7	Centering plate
8	Intermediate plate
9	Filter suction port
10	Stator shaft



Transmission Fluid Level Indicator

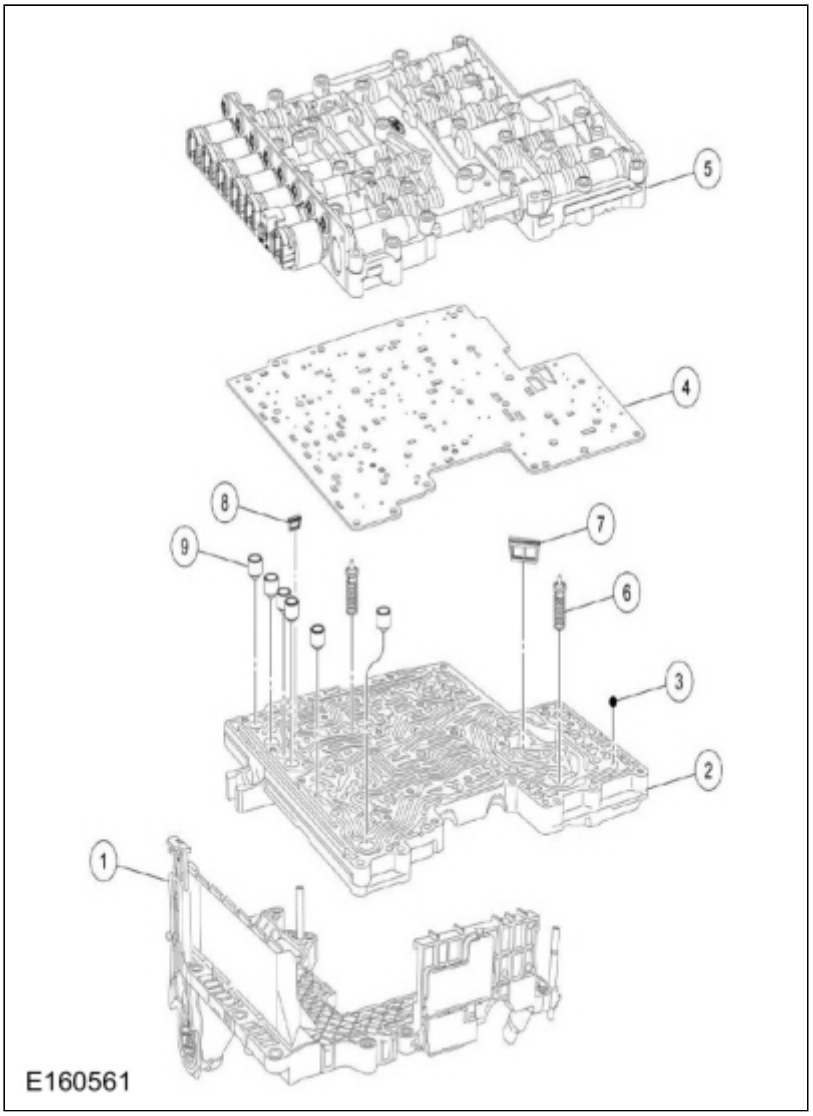
A removable dipstick-type fluid level indicator is located on the right front area of the transmission case. It is held in by an external fluid fill plug. The transmission fluid level indicator is removed with the transmission fluid fill plug. The transmission fluid level indicator is removed from the fill plug to check the transmission fluid level.

The transmission fluid level is correctly checked when the transmission is at normal operating temperature, 80ºC - 85ºC (176ºF - 185ºF), and the vehicle is on a level surface.

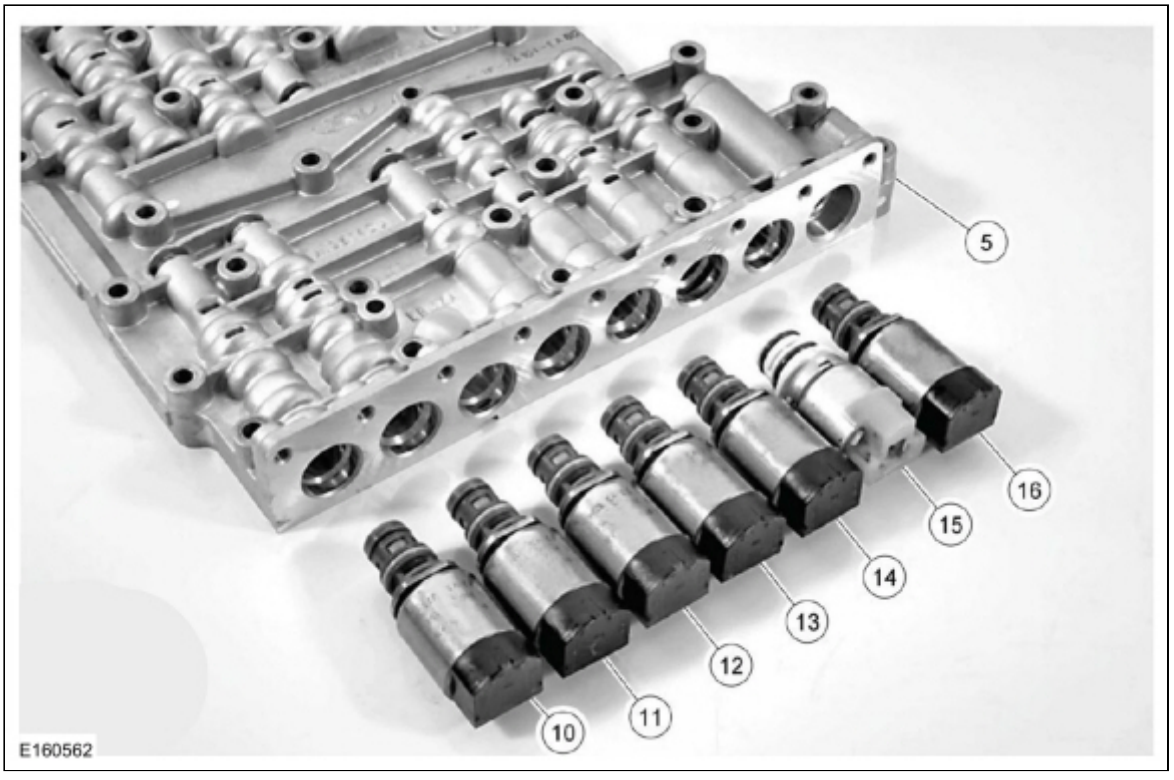
The correct transmission fluid level is at the upper level of the crosshatch marks on the transmission fluid level indicator.

Transmission Fluid Level Indicator

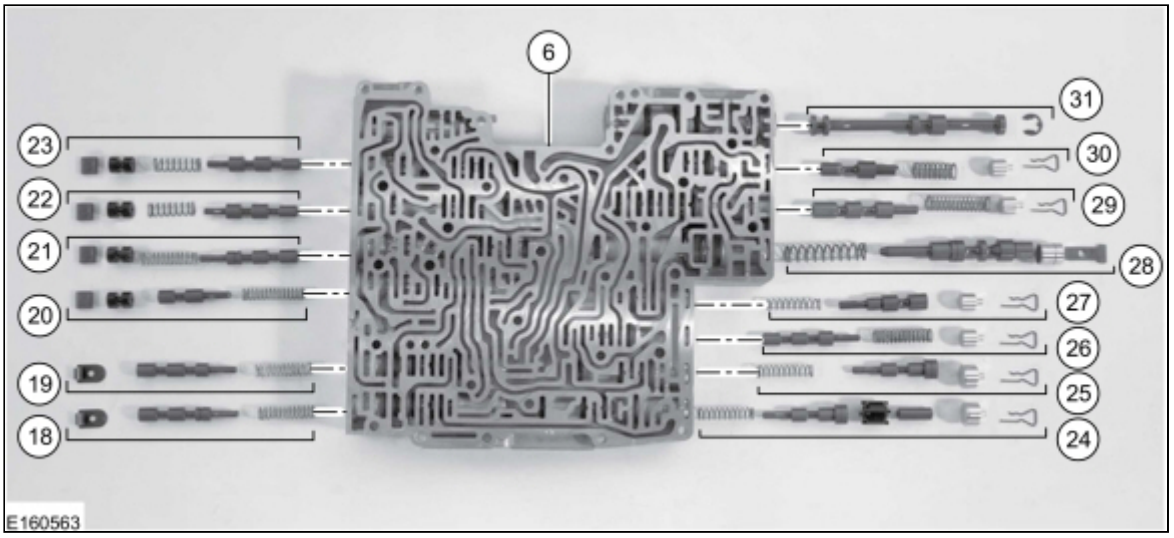
Item	Description
1	Transmission fluid fill plug
2	Transmission fluid level indicator
3	Transmission fluid level indicator FULL line



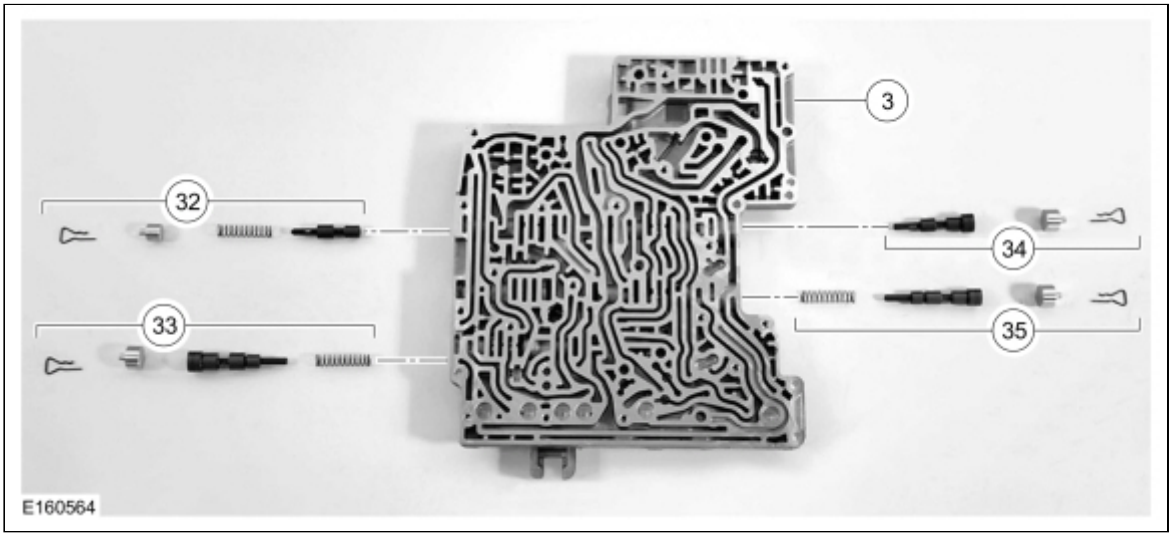
Main Control (Mechatronic) Assembly



The hydraulic system of this transmission includes the fluid pump, a main control assembly and fluid passages in the transmission case and center support to apply the clutches.



The main control assembly has an upper valve body assembly, a separator plate and a lower valve body assembly. The lower valve body assembly has 7 solenoids to control the valves in the main control.



TheTurbine Shaft Speed (TSS), Output Shaft Speed (OSS), Transmission Range (TR) and Transmission Fluid Temperature (TFT) sensors are all part of the main control assembly leadframe.

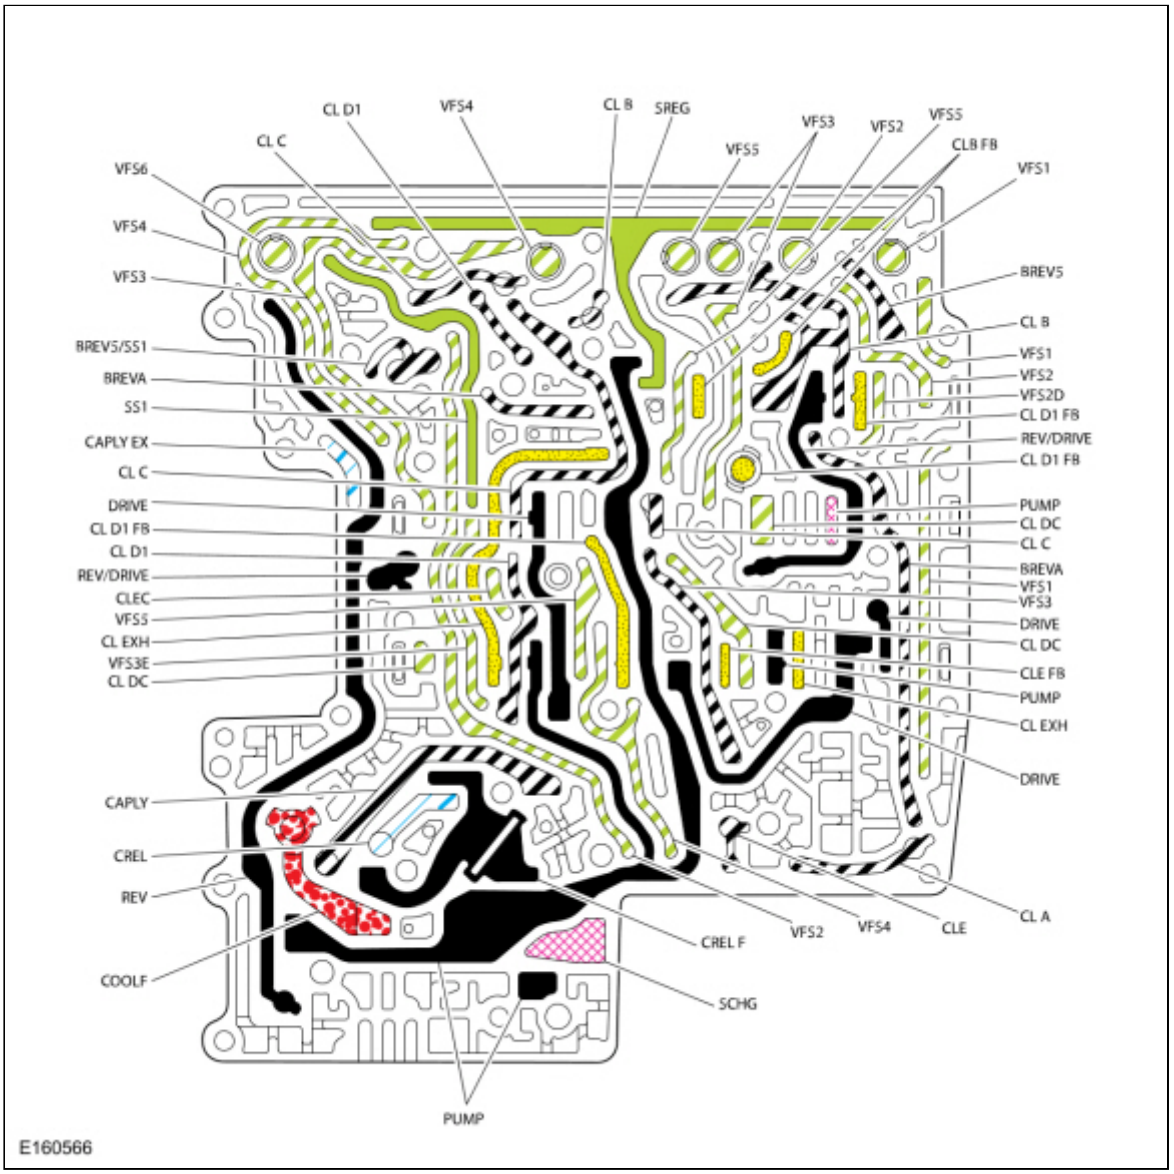
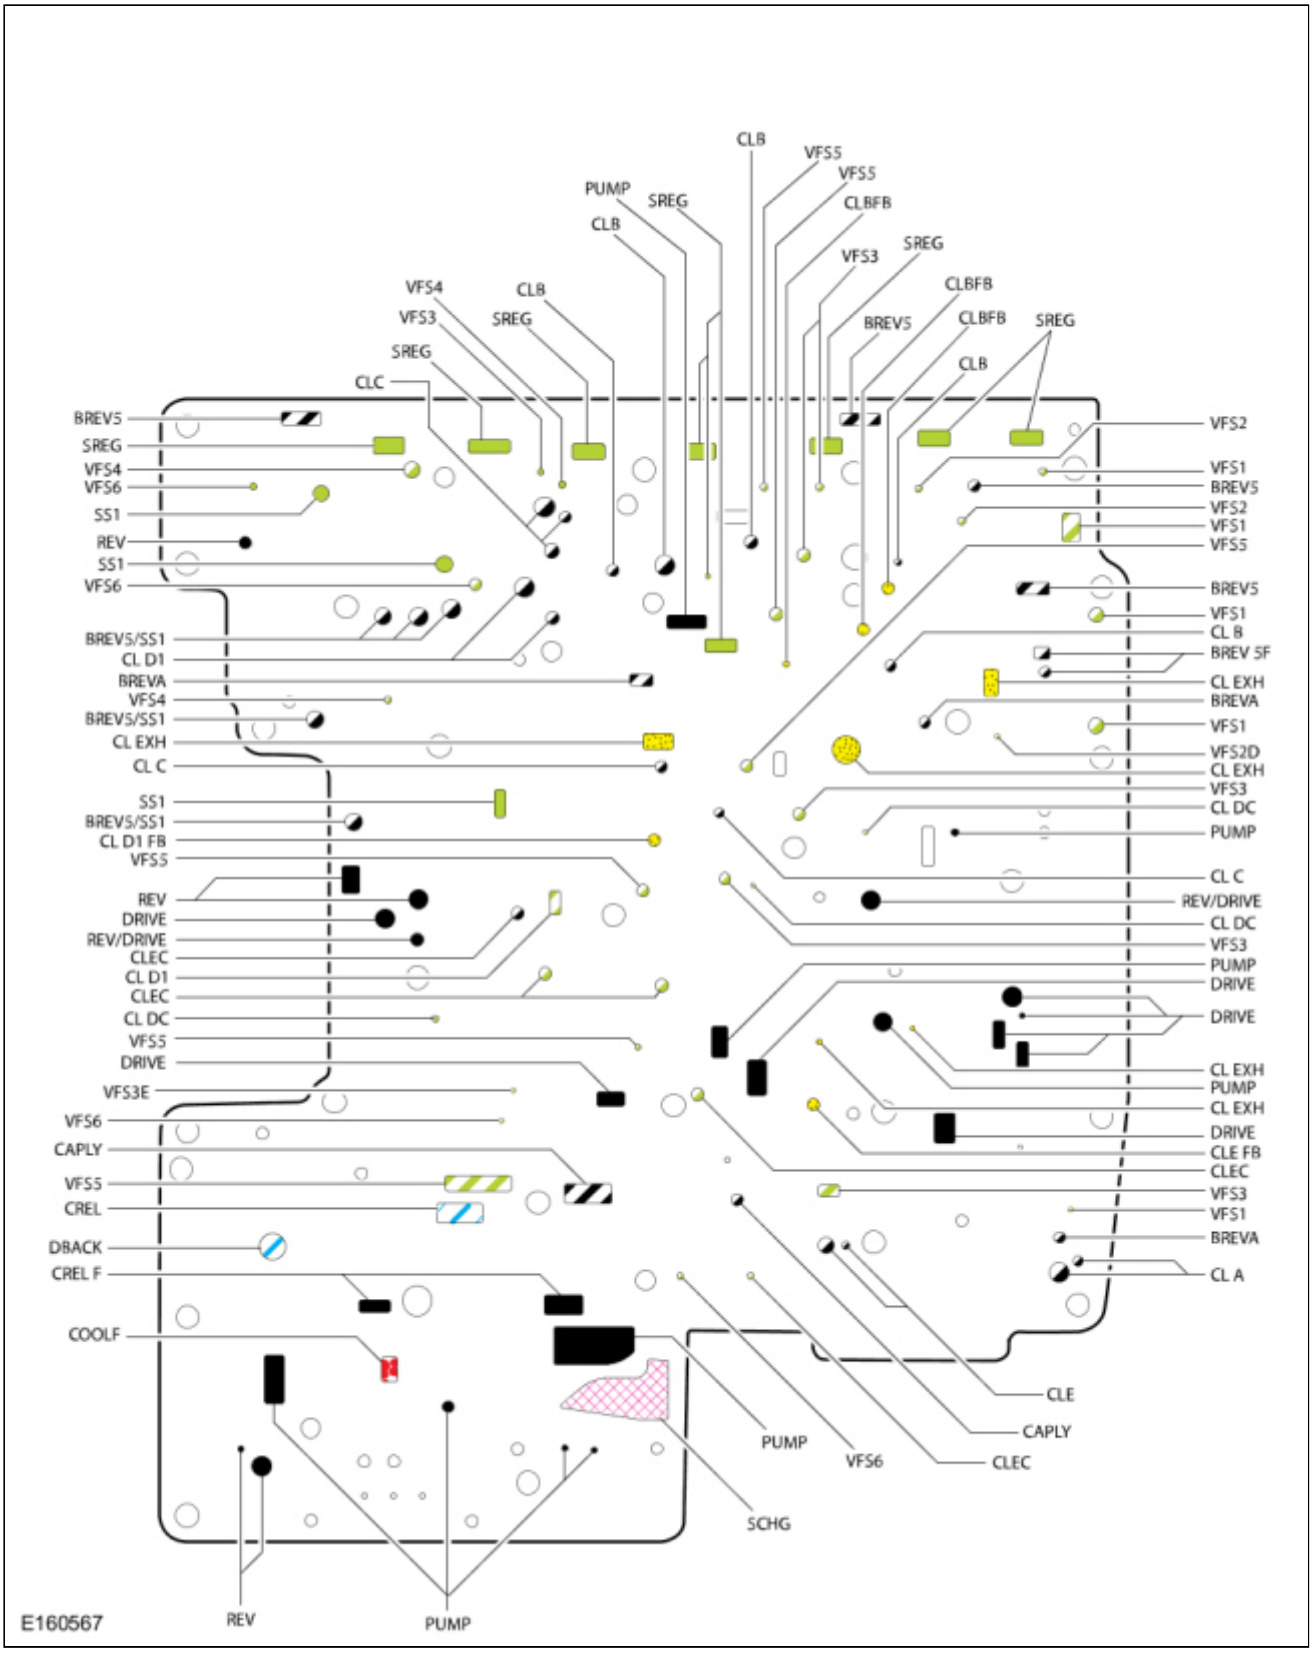
Hydraulic Circuits

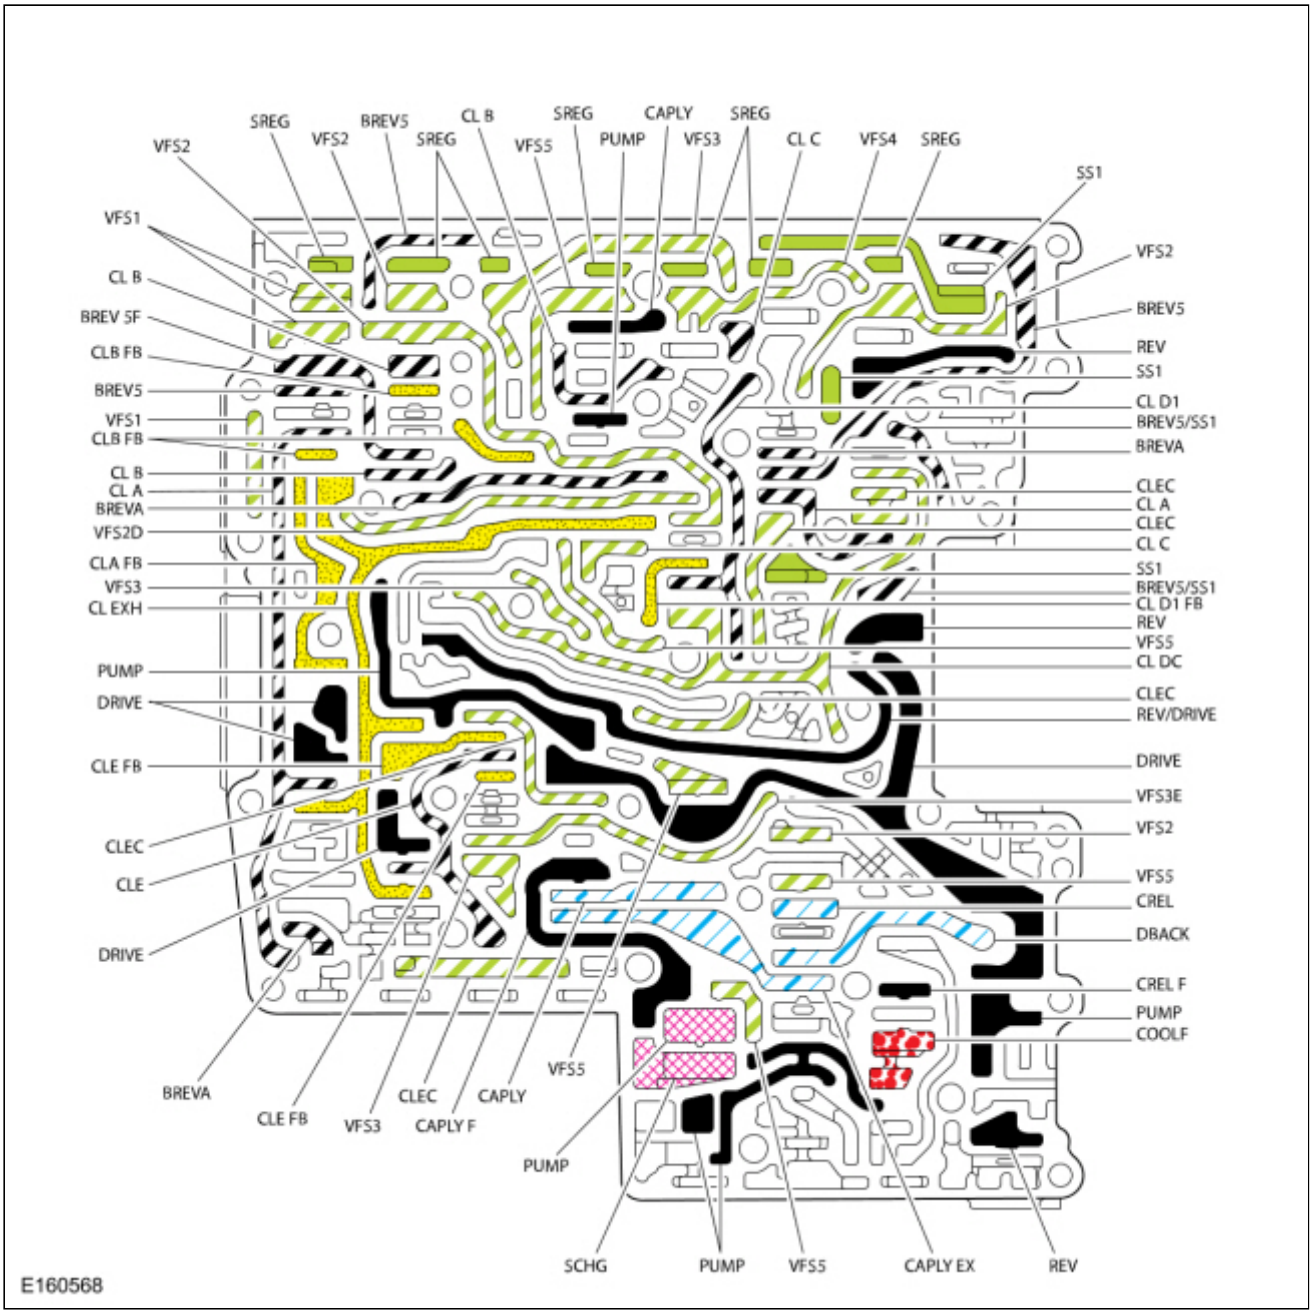
Hydraulic Circuit Identification and Function



Hydraulic Circuit Identification Chart



Circuit Name	Description
BREVA	BREV5 pressure from the drive enable valve to the clutch A regulator valve.
BREV5	BREV 5F pressure from the clutch A latch valve to the drive enable valve and the No. 2 shuttle ball.
BREV 5F	Regulated line pressure from the CL B circuit directed to the A clutch latch valve by the B clutch latch valve.
BREV5/SS1	BREV5 or SS1 pressure from the No. 2 shuttle ball to the solenoid multiplex valve.
CAPLY	Apply circuit to the torque converter, also the return circuit during Torque Converter Clutch (TCC) release.



CAPLY EX	TCC release pressure from the bypass clutch control regulator valve to the converter release regulator valve.
CAPLY F	Line pressure from the PUMP circuit directed to the bypass clutch control regulator valve by the main regulator valve.
CL A	Regulated line pressure from the clutch A regulator valve to the clutch A latch valve and the forward (A) clutch to apply the clutch.
CLA FB	Regulated line pressure from the clutch A latch valve that feeds back to the clutch A regulator valve.
CL B	Regulated line pressure from the clutch B regulator valve to the clutch B latch valve and the direct (B) clutch to apply the clutch.
CLB FB	Regulated line pressure from the clutch B latch valve that feeds back to the clutch B regulator valve.
CL C	Regulated line pressure from the clutch C regulator valve to the intermediate (C) clutch to apply the clutch.
CL D1	Regulated line pressure from the clutch D1 regulator valve to the clutch D1 latch valve and the low/reverse (D) clutch to apply the clutch.
CL D1 FB	Regulated line pressure from the clutch D1 latch valve that feeds back to the clutch D1 regulator valve.
CL D2	Regulated line pressure from the clutch D2 regulator valve to the low/reverse (D) clutch to apply the clutch.
CL DC	Regulated solenoid output pressure from Shift Solenoid D (SSD) directed by the solenoid multiplex valve to the D1 and D2 regulator and latch valves to apply the low/reverse (D) clutch.
CLE	Regulated line pressure from the clutch E regulator valve to the clutch E latch valve and the Overdrive (O/D) (E) clutch to apply the clutch.
CLEC	Regulated solenoid output pressure from the CLEC F circuit directed by the drive enable valve to the clutch E regulator and latch valves to apply the clutch.
CLEC F	Regulated solenoid output pressure from the VFS4 circuit directed to the drive enable valve by the solenoid multiplex valve to move the clutch E regulator and latch valves to apply the O/D (E) clutch.
CLE FB	Regulated line pressure from the clutch E latch valve that feeds back to the clutch E regulator valve.
CL EXH	Line pressure regulated to approximately 21 kPa (3 psi) by the D2 latch valve that supplies exhaust pressure to the A, B, C, D1 and E clutch when the clutches are released.
COOLF	Pressure from the lubrication control valve to the oil cooler or the thermal bypass valve that feeds the lubrication circuit.
CREL	Pressure supplied to the torque converter by the converter release regulator valve to release the TCC.
CREL F	Line pressure from the main regulator valve that supplies the converter release regulator valve and the lubrication control valve.
DBACK	CAPLY EX pressure directed to the drain back valve by the converter release regulator valve.
DRIVE	Line pressure directed by the manual valve to the A, C and E clutch regulator valves and the No. 1 shuttle ball.
LUBE	Transmission lubrication circuit supplied by the COOLF circuit after the fluid circulates the transmission fluid cooler or is returned by the cooler bypass valve.
PUMP	Line pressure supplied by the pump to the manual valve, solenoid pressure regulator valve, main regulator valve, clutch D1 regulator valve, clutch D2 regulator valve and clutch D2 latch valve.
REV	Line pressure from the manual valve to the No. 1 shuttle ball and the solenoid multiplex valve.
REV/DRIVE	REV or DRIVE pressure from the No. 1 shuttle ball to the clutch B regulator valve.
SCHG	Line pressure from the main regulator valve to the pump suction port.
SREG	Solenoid output pressure from SSE to the drive enable valve and to shuttle ball No. 2. to direct SSD output pressure to clutch E regulator and latch valves to apply the O/D (E) clutch.
SS1	Solenoid output pressure from SSE to the drive enable valve and to shuttle ball No. 2. to direct SSD output pressure to clutch E regulator and latch valves to apply the O/D (E) clutch.
VFS1	Solenoid output pressure from SSA to the A clutch regulator and latch valve to apply the forward (A) clutch.
VFS2	Solenoid output pressure from SSB to the B clutch regulator and latch valve to apply the direct (B) clutch and is also routed to the D1 latch valve.
VFS2D	SSB output pressure from the VFS2 circuit directed to the clutch B regulator valve by the D1 latch

	valve.
VFS3	Solenoid output pressure from SSC to the C clutch regulator valve to apply the intermediate (C) clutch and is also routed to the clutch E latch valve.
VFS3E	SSC output pressure from the VFS3 circuit directed to the clutch C regulator valve by the clutch E latch valve.
VFS4	Solenoid output pressure from SSD to the solenoid multiplex valve to apply either the D or E clutch.
VFS5	Solenoid output pressure from the LPC solenoid to the main regulator valve to control line pressure.
VFS6	Solenoid output pressure from the TCC solenoid to the bypass clutch control regulator valve and the converter release regulator valve to control the TCC.

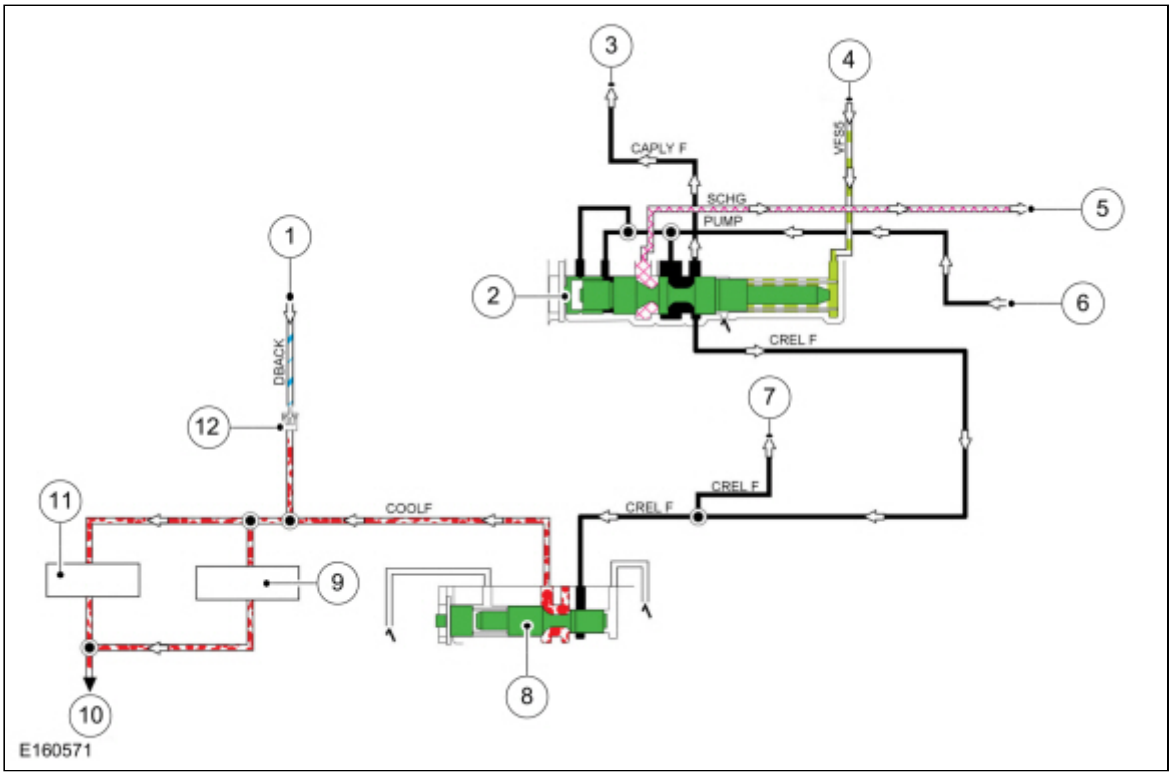
Line Pressure Hydraulic Circuits

The Transmission Control Module (TCM) controls line pressure with the Line Pressure Control (LPC) solenoid. Varying pressure from the LPC solenoid effects shift feel while allowing sufficient pressure for clutch application.

When the engine is running, the pump supplies pressure to the main regulator valve through the PUMP circuit. The position of the main regulator valve controls line pressure (in the PUMP circuit). Pressure from the LPC solenoid through the VFS5 circuit controls the position of the main regulator valve.

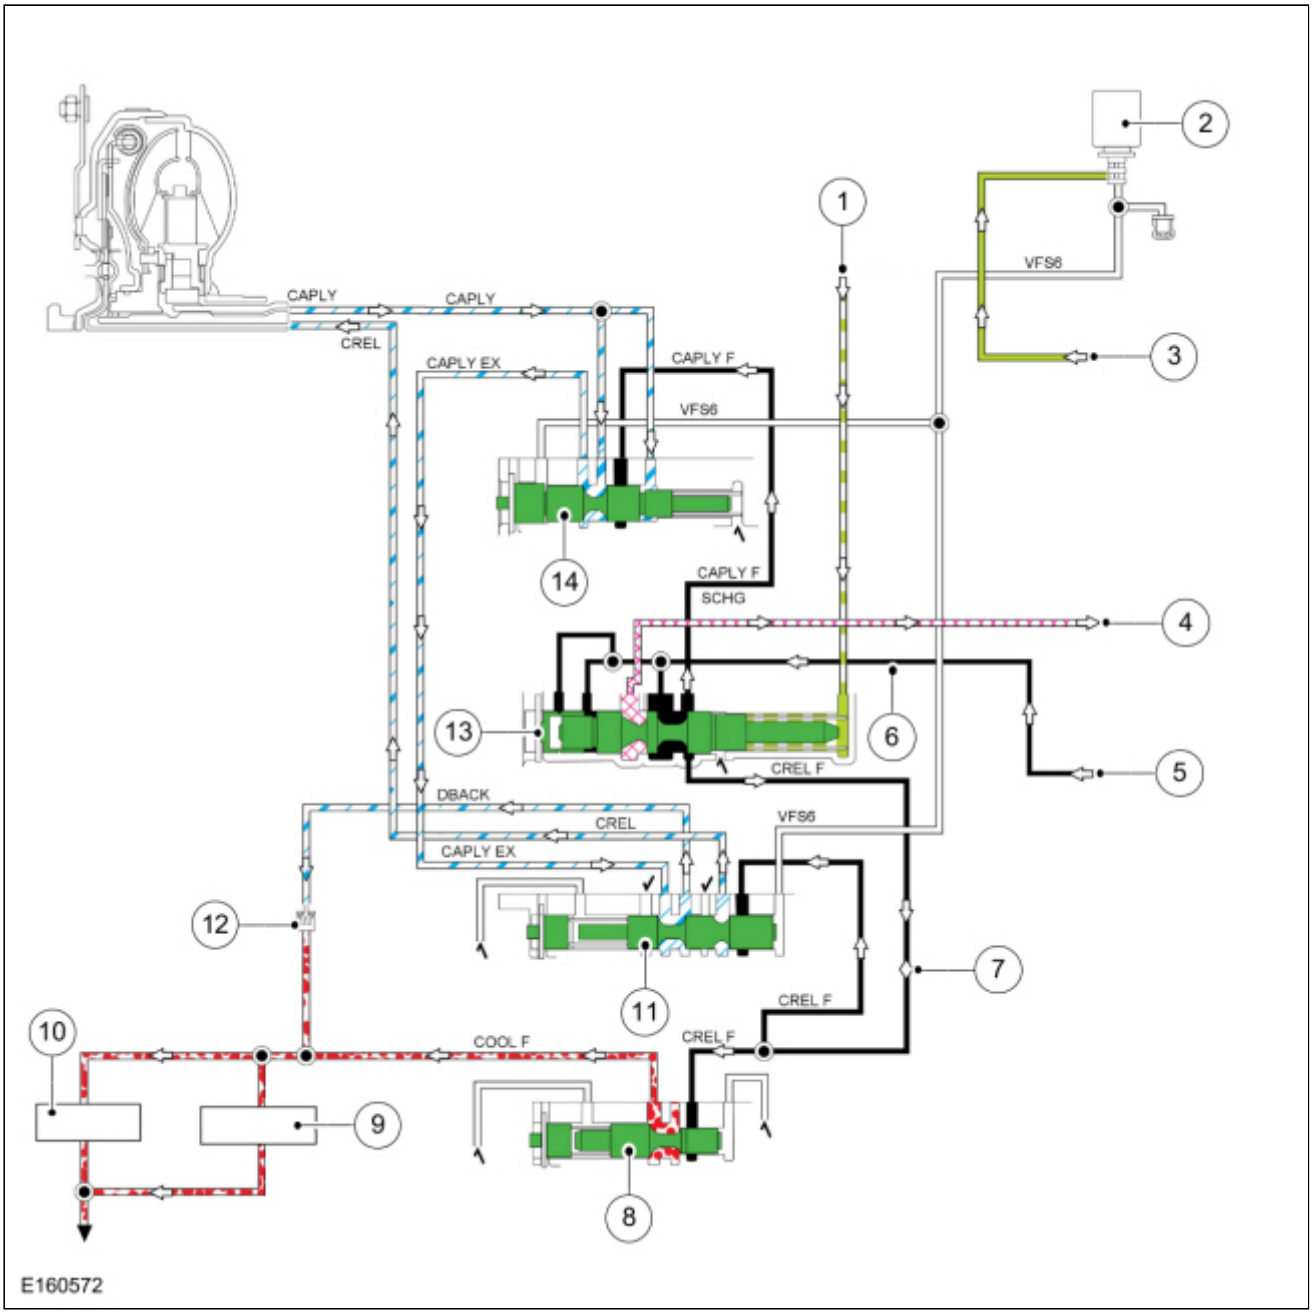
The main regulator valve varies pressure in the SCHG circuit. The higher the pressure in the SCHG circuit, the lower the line pressure (PUMP circuit) is. As SCHG pressure decreases, line pressure (PUMP circuit) increases.



Lubrication Hydraulic Circuits

The main regulator valve supplies pressure to the lubrication control valve through the CREL F circuit. When the Torque Converter Clutch (TCC) is applied, the lubrication control valve supplies the transmission lubrication through the COOLF circuit to the LUBE circuit.

When the TCC is released, return fluid from the torque converter is supplied to the LUBE circuit through the CAPLY, CAPLY EX and DBACK circuits.

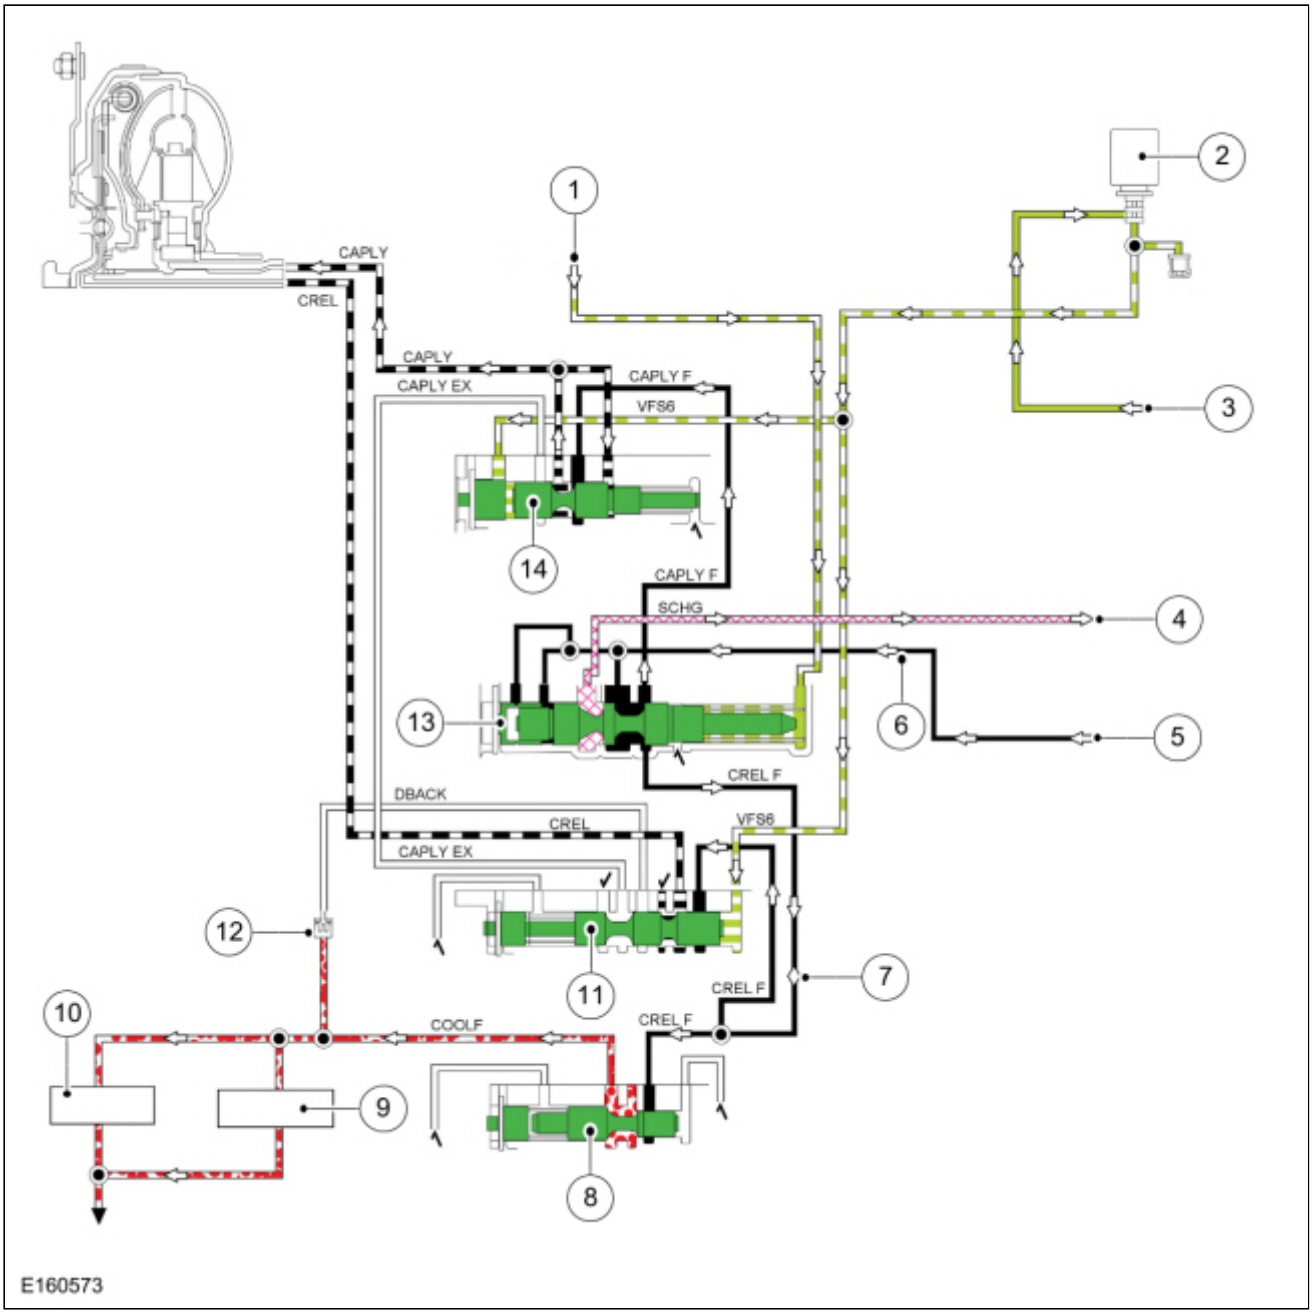


Pressure in the LUBE circuit either circulates through the thermal bypass valve when Transmission Fluid Temperature (TFT) is below operating temperature or through the transmission fluid cooler when the transmission fluid is at or above operating temperature. Return fluid from the thermal bypass valve or the transmission fluid cooler enters the input shaft through the pump assembly and flows through passages in the input shaft, intermediate shaft and output shaft to provide lubrication for the transmission.

Torque Converter Hydraulic Circuits

When the TCC is released, line pressure is supplied to the converter release regulator valve from the lubrication control valve through the CREL F circuit. The converter release regulator valve supplies pressure to the torque converter through the CREL circuit to release the torque converter.

CREL pressure exits the torque converter through the CAPLY circuit and goes to the bypass clutch control regulator valve. The bypass clutch control regulator valve directs the fluid back to the converter release regulator valve through the CAPLY EX circuit. The converter release regulator valve directs the fluid to the DBACK circuit where it supplies lubrication in the LUBE circuit.



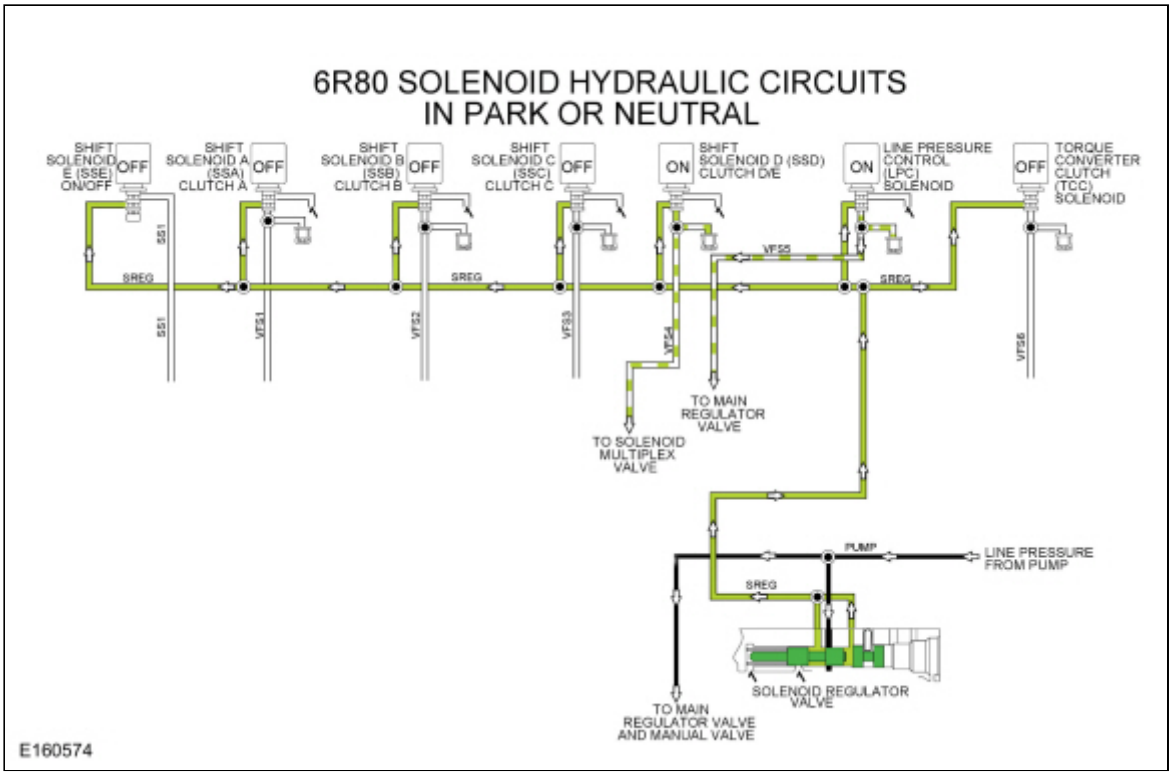
Torque Converter Hydraulic Circuits

When the TCC is applied, the TCC solenoid applies hydraulic pressure to the bypass clutch control regulator valve and the converter release regulator valve through the VFS6 circuit to position the valves to apply the TCC.

Line pressure is supplied to the bypass clutch control regulator valve from the main regulator valve. The bypass clutch control regulator valve directs regulated line pressure to the TCC through the CAPLY circuit to apply the TCC.

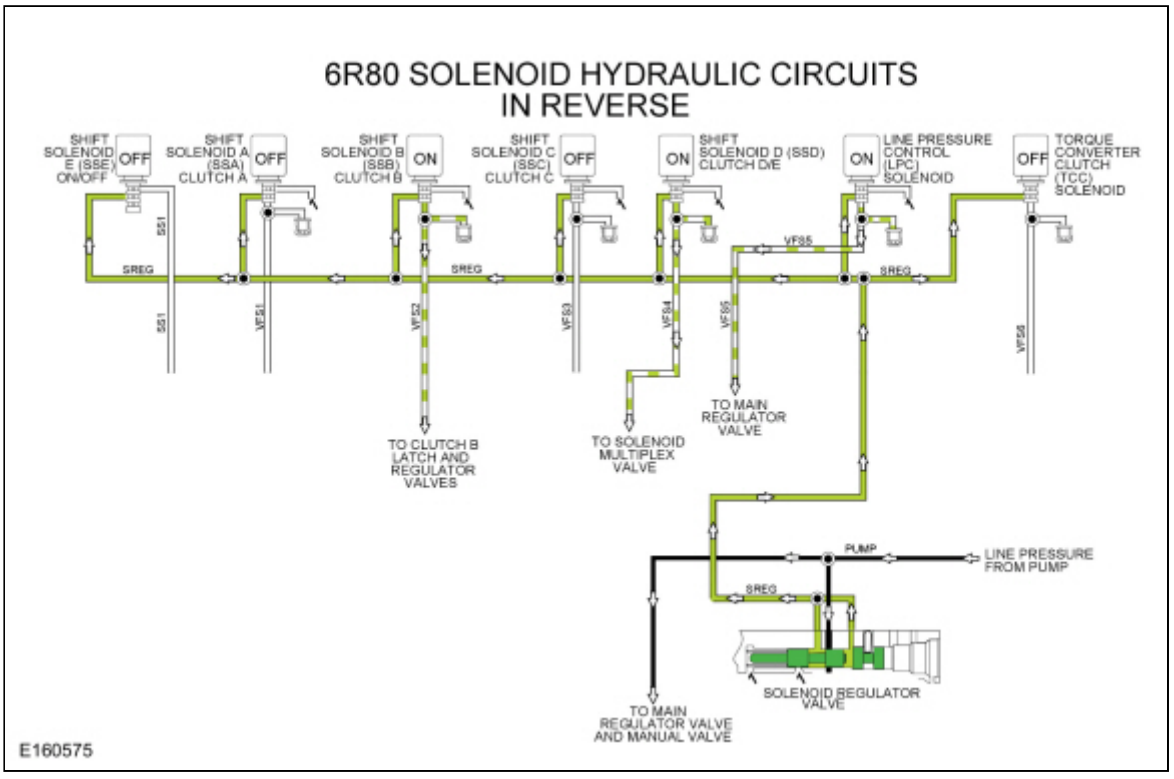
CAPLY pressure exits the torque converter through the CREL circuit and goes to the converter release regulator valve.

For torque converter description and function, refer to Torque Converter in this section.



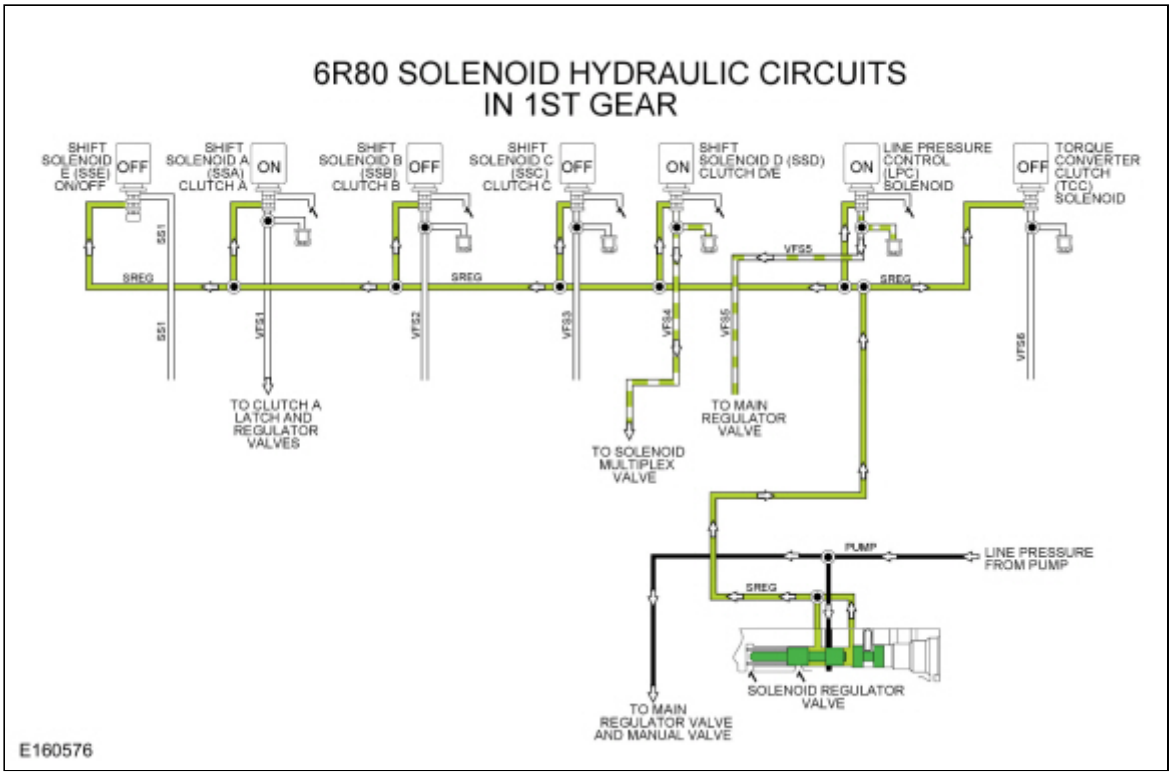
Solenoid Hydraulic Circuits

LINE pressure from the pump is directed to the individual shift, TCC and LPC solenoids by the solenoid regulator valve through the SREG circuit. The solenoids, controlled by the TCM, direct full or regulated SREG pressure to the valves that they control.

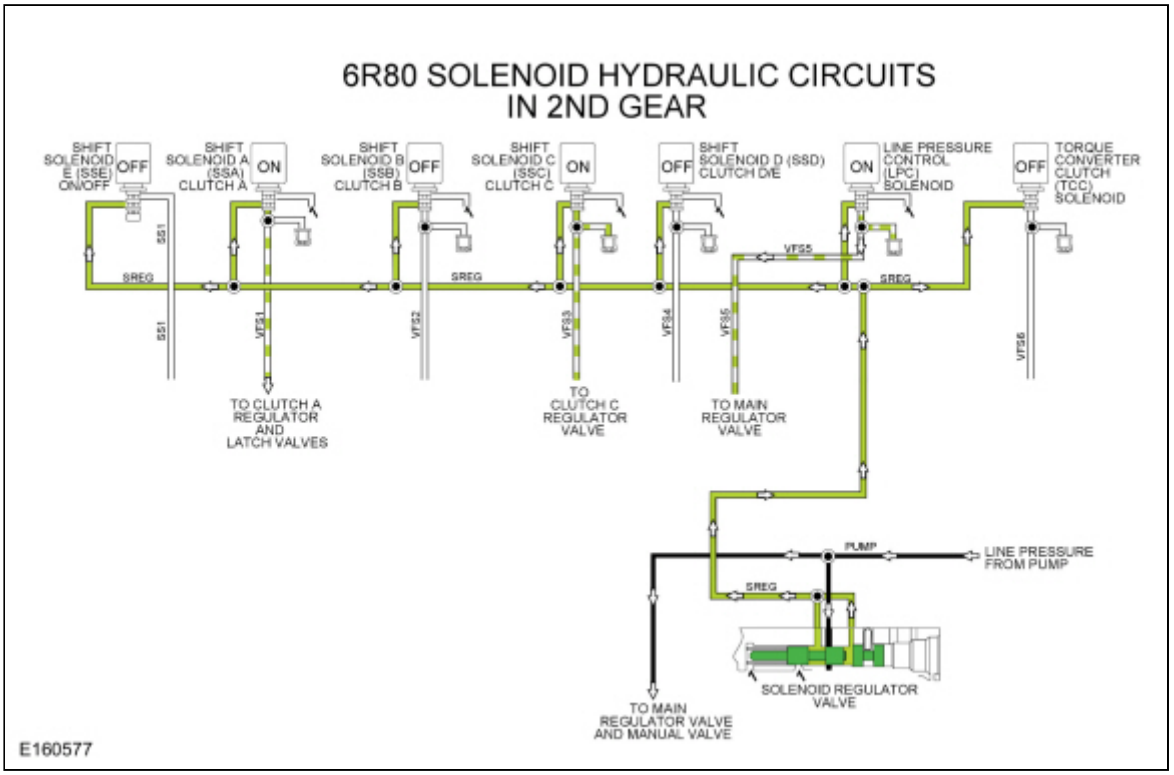


For electrical operation of the solenoids, refer to Transmission Electronic Control System in this section.

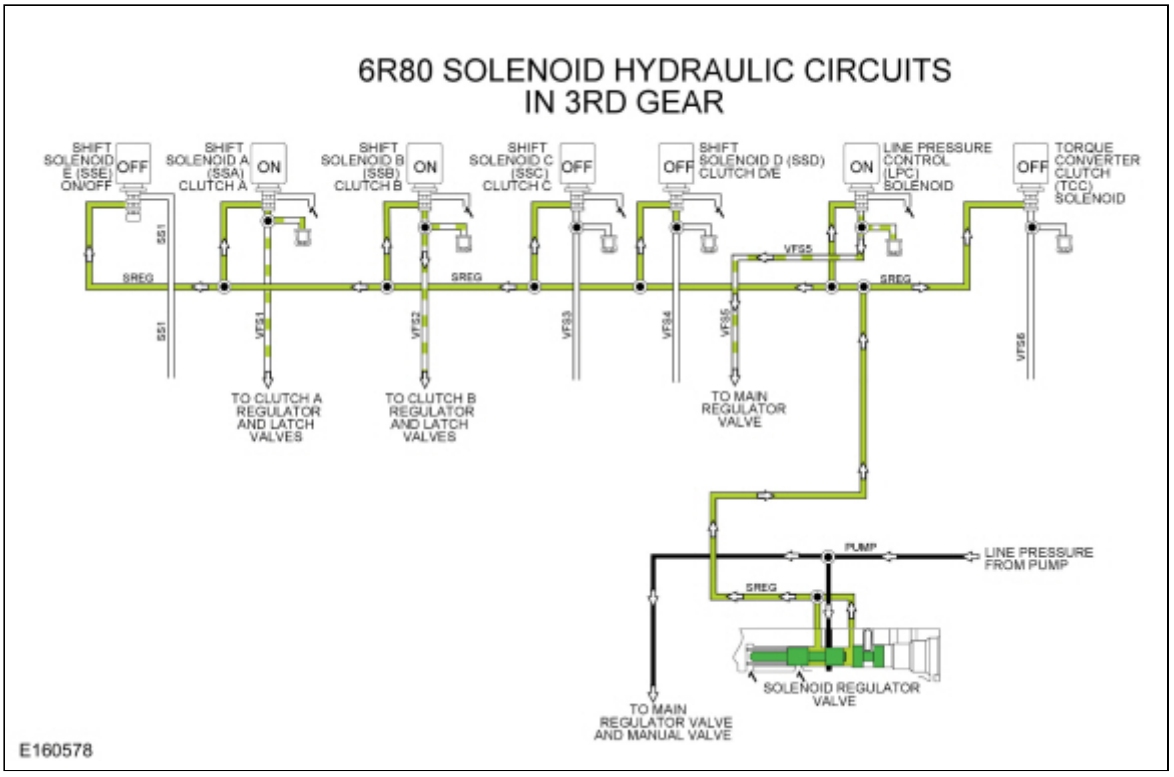
The LPC solenoid sends varying pressure to the main regulator valve to control line pressure.



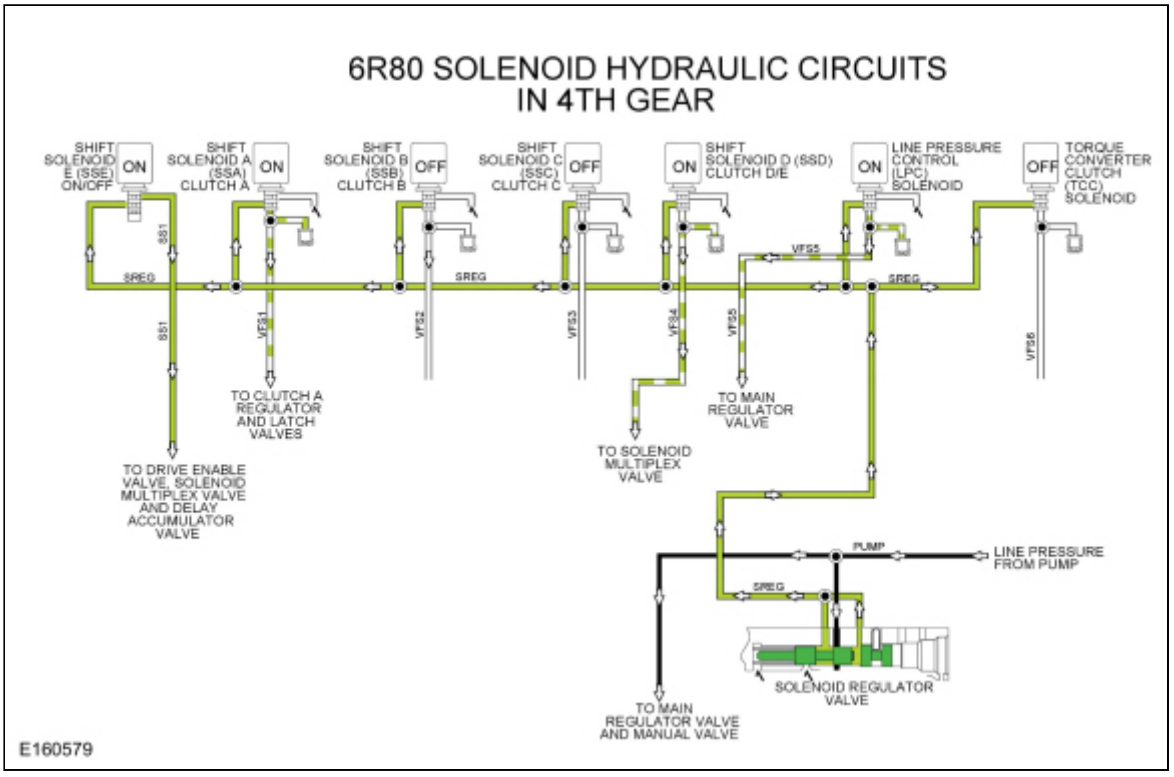
In the PARK and NEUTRAL position, the TCM supplies low amperage to Shift Solenoid D (SSD) to apply highregulated pressure to the solenoid multiplex valve which directs the pressure to the D1 and D2 regulator and latch valves to apply the low/reverse clutch (D).



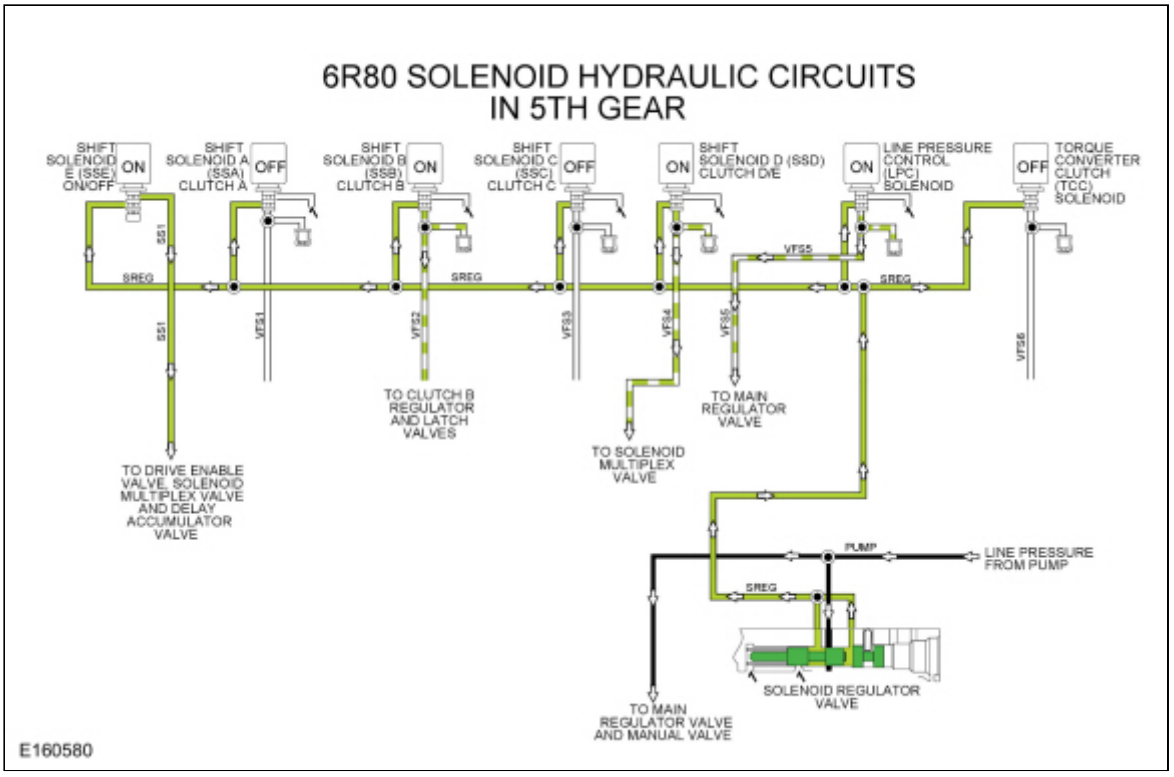
In the REVERSE position, the TCM supplies low amperage to Shift Solenoid B (SSB) to apply high-regulated pressure to the clutch B regulator and latch valves to apply the direct clutch (B). The TCM also supplies low amperage to SSD to apply high-regulated pressure to the solenoid multiplex valve which directs the pressure to the D1 and D2 regulator and latch valves to apply the low/reverse clutch (D).



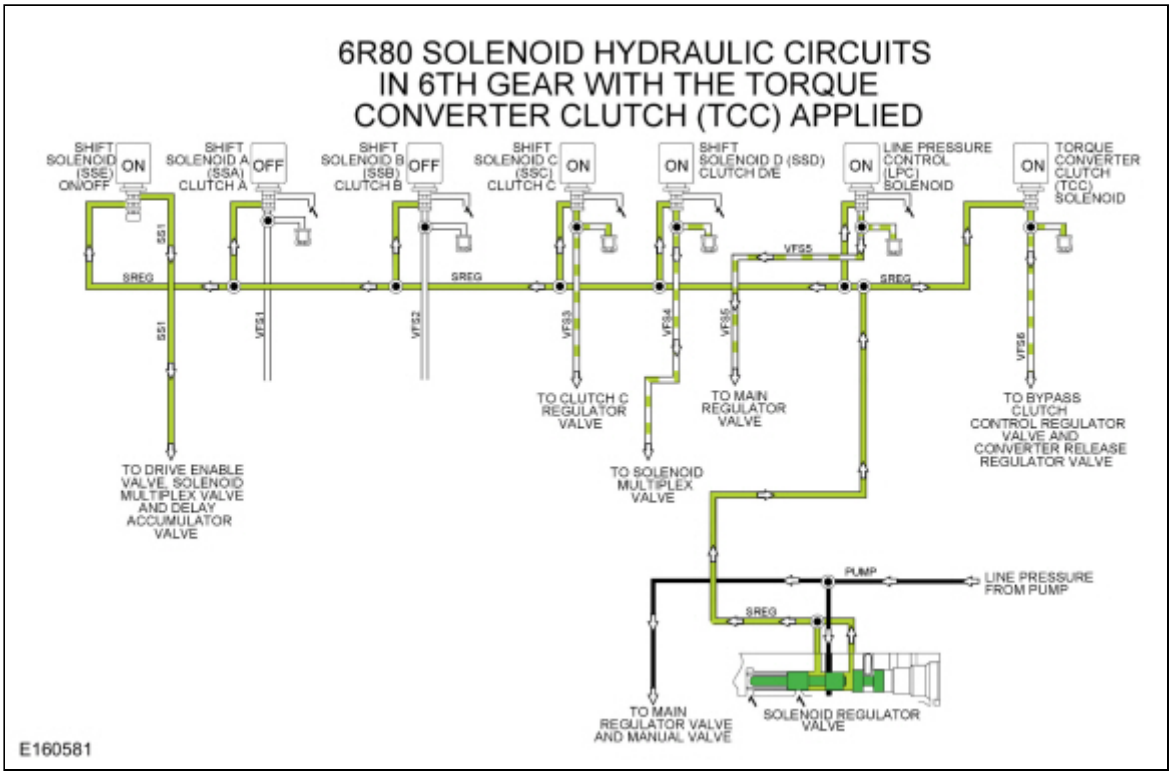
In 1st gear, the TCM supplies high amperage to Shift Solenoid A (SSA) to apply high-regulated pressure to the clutch A regulator and latch valves to apply the forward clutch (A). The TCM also supplies low amperage to SSD to apply high-regulated pressure to the solenoid multiplex valve which directs the pressure to the D1 and D2 regulator and latch valves to apply the low/reverse clutch (D).



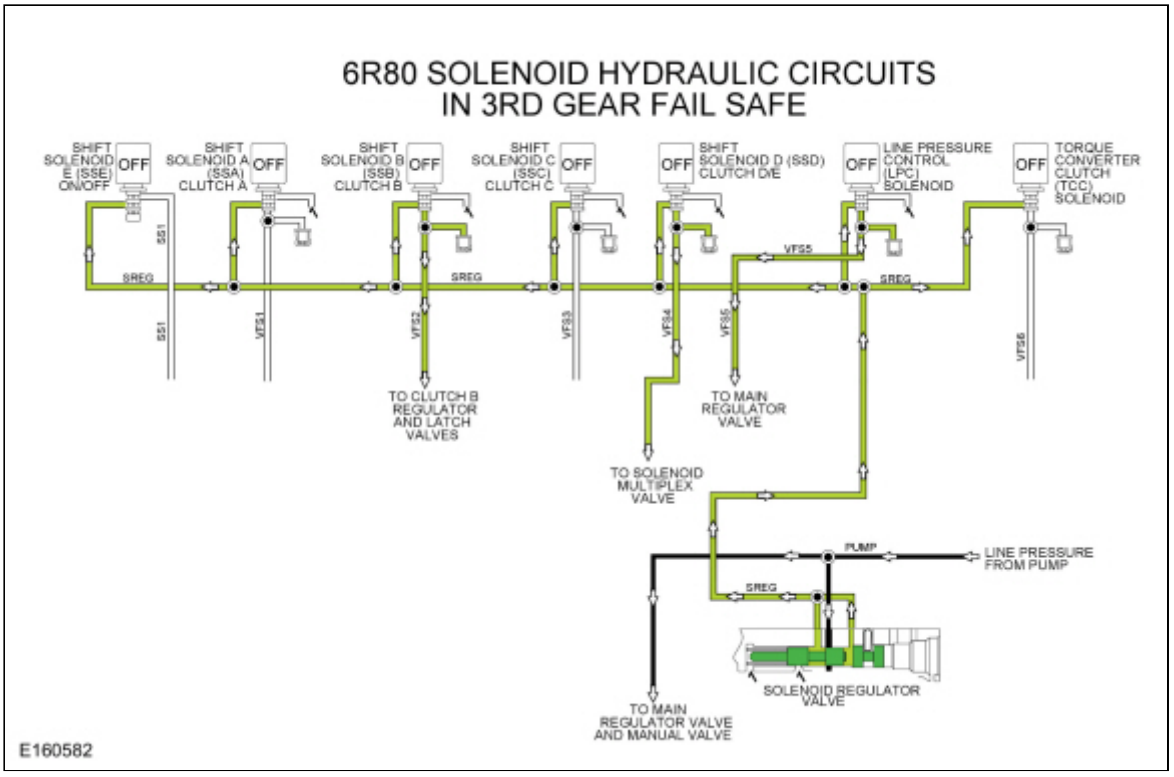
In 2nd gear, the TCM supplies high current to SSA to apply high-regulated pressure to the clutch A regulator and latch valves to apply the forward clutch (A). The PCM also supplies high current to Shift Solenoid C (SSC) to apply high-regulated pressure to the clutch C regulator valve to apply the intermediate clutch (C).



In 3rd gear, the TCM supplies high current to SSA to apply high-regulated pressure to the clutch A regulator and latch valves to apply the forward clutch (A). The TCM also supplies low current to Shift Solenoid B (SSB) to apply high-regulated pressure to the clutch B regulator and latch valves to apply the direct clutch (B).



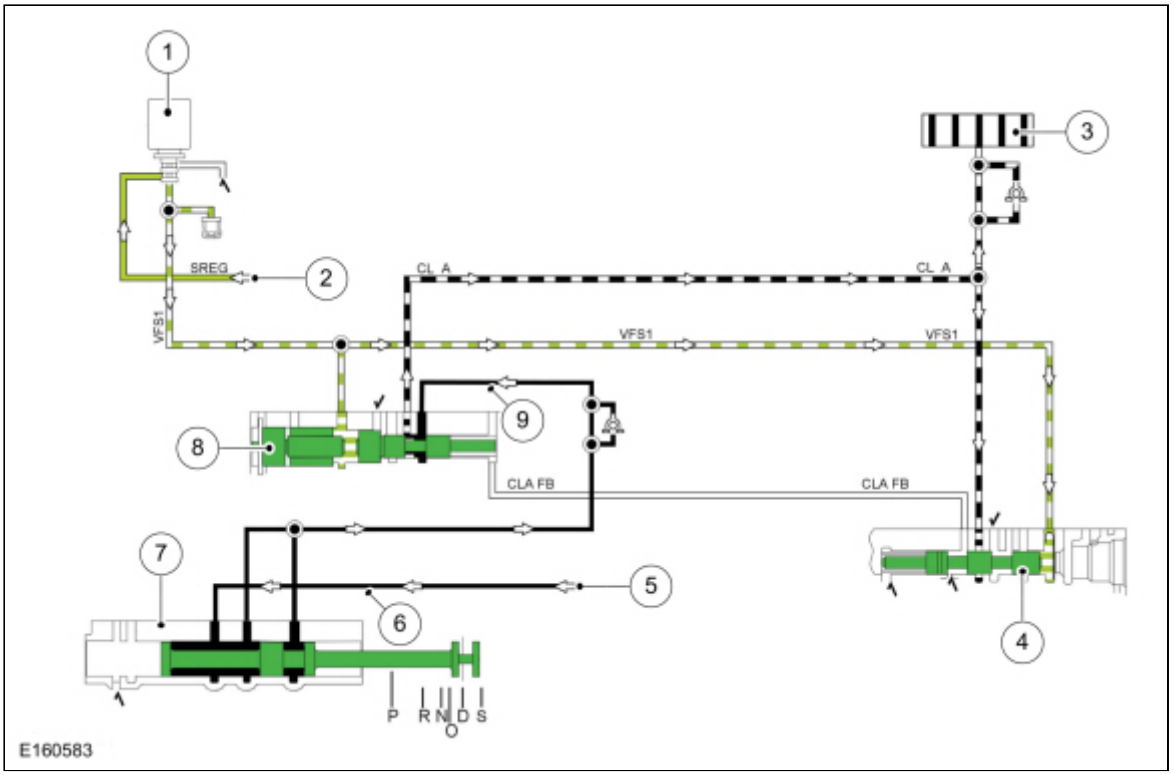
In 4th gear, the TCM supplies high current to SSA to apply high-regulated pressure to the clutch A regulator and latch valves to apply the forward clutch (A). The TCM also supplies low current to SSD to apply highregulated pressure to the solenoid multiplex valve which directs the pressure to the clutch E regulator and latch valves to apply the overdrive clutch (E). The TCM turns on Shift Solenoid E (SSE) to apply pressure to the solenoid multiplex valve and the drive enable valve to direct SSD pressure to the clutch E regulator and latch valves.



In 5th gear, the TCM supplies low current to SSD to apply high-regulated pressure to the solenoid multiplex valve which directs the pressure to the clutch E regulator and latch valves to apply the overdrive clutch (E). The TCM turns on SSE to apply pressure to the solenoid multiplex valve and the drive enable valve to direct SSD pressure to the clutch E regulator and latch valves. The TCM also supplies low current to SSB to apply high-regulated pressure to the clutch B regulator and latch valves to apply the direct clutch (B).

In 6th gear, the TCM supplies low current to SSD to apply high-regulated pressure to the solenoid multiplex valve which directs the pressure to the clutch E regulator and latch valves to apply the overdrive clutch (E). The TCM turns on SSE to apply pressure to the solenoid multiplex valve and the drive enable valve to direct SSD pressure to the clutch E regulator and latch valves. The TCM also supplies high current to SSC to apply high-regulated pressure to the clutch C regulator valve to apply the intermediate clutch (C). To apply the TCC, the TCM supplies high current to the TCC solenoid to apply high-regulated pressure to the converter release regulator valve and the bypass clutch control regulator valve to apply the TCC.

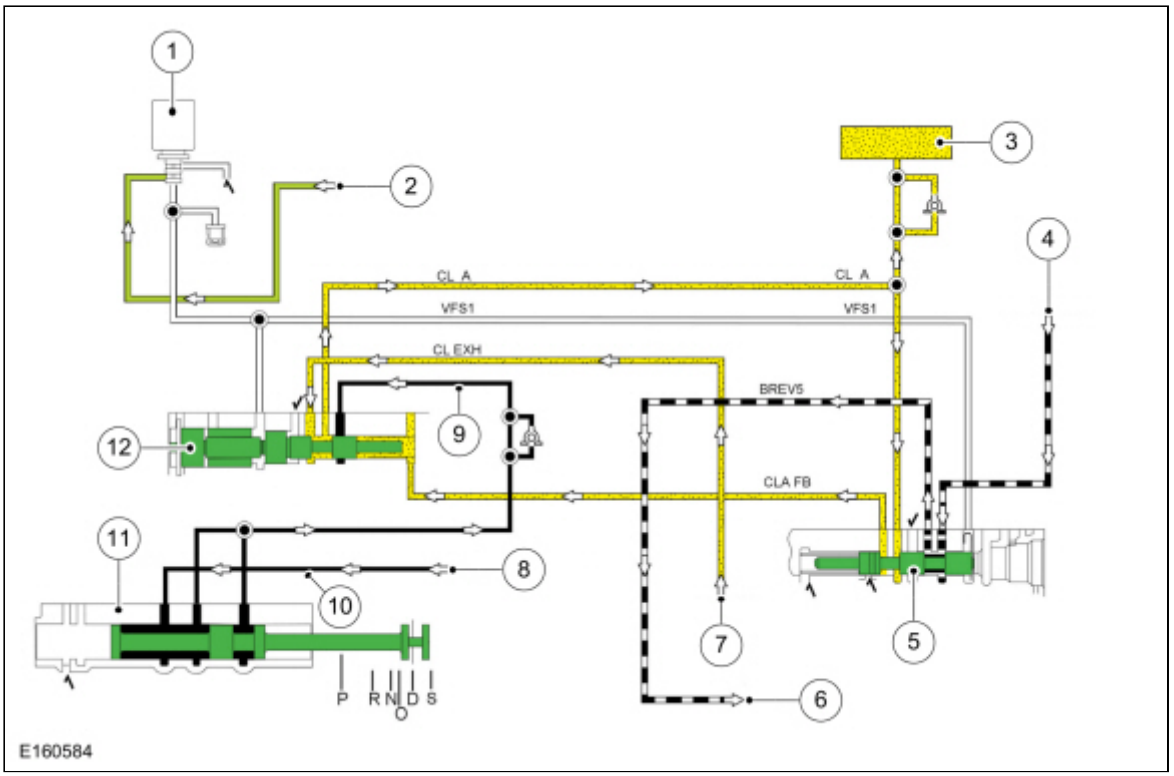
In 3rd gear fail safe, all solenoids are off. SSB, in the off position, applies high pressure to the clutch B regulator and latch valves to apply the direct clutch (B). The forward clutch (A) is hydraulically applied in 3rd gear fail safe. The LPC solenoid provides maximum solenoid pressure to the main regulator valve for maximum line pressure. Also, SSD is on which applies high pressure to the solenoid multiplex valve which is directed to the drive enable valve where it is blocked.



Forward Clutch (A) Hydraulic Circuits

To apply the forward clutch (A), the manual valve must be in the DRIVE, 3, 2 or 1 position to provide line pressure to the clutch A regulator valve through the DRIVE circuit.

For the forward clutch (A) to apply, SSA provides regulated solenoid pressure from the SREG circuit to the clutch A regulator and latch valves through the VFS1 circuit to position the valves to apply the forward clutch (A). As the forward clutch is applied, SSA increases pressure to the clutch A regulator and latch valves.

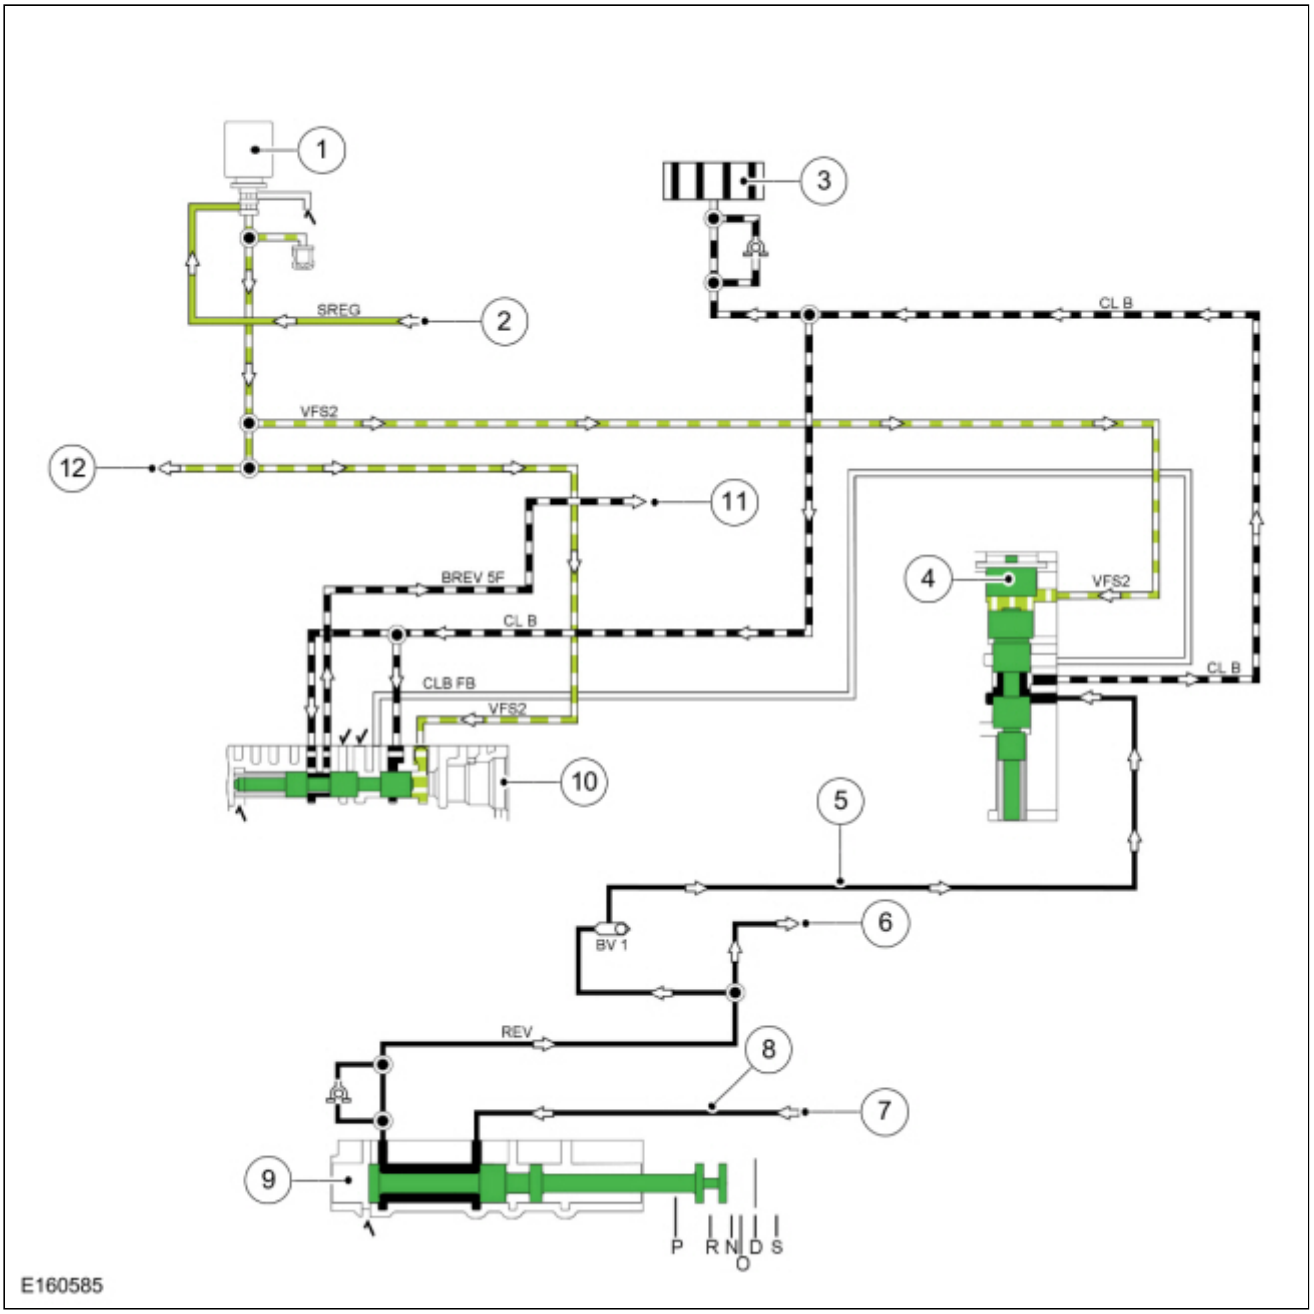


The clutch A regulator valve provides regulated line pressure to the CL A circuit to apply the forward clutch (A).

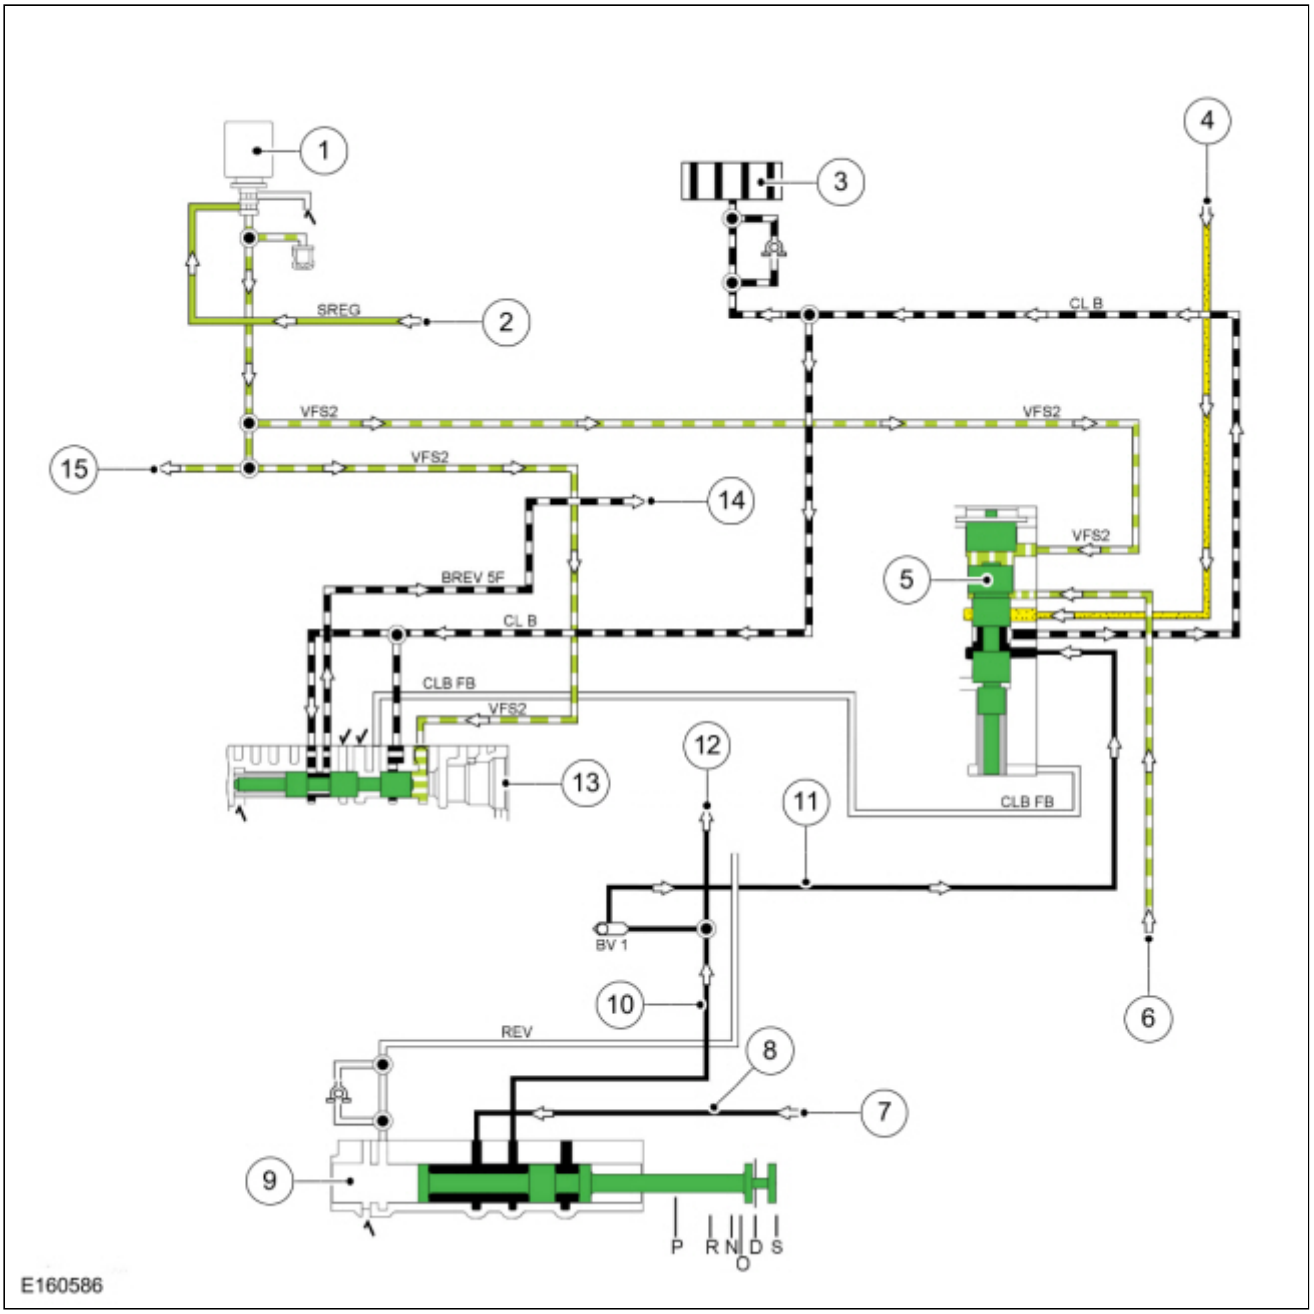
The forward clutch (A) is released when the manual valve is in the NEUTRAL, REVERSE or PARK position or the when the manual valve is in the DRIVE position with the transmission in 5th or 6th gear.

SSA lowers pressure to the clutch A regulator and latch valve to position the valves to lower the regulated line pressure in the CL A circuit to release the clutch.

When the forward clutch (A) is released, the clutch A regulator valve directs exhaust circuit pressure from the CL EXH circuit to the CL A circuit to fill the circuit and the forward clutch (A) with fluid at low pressure, approximately 21 kPa (3 psi).



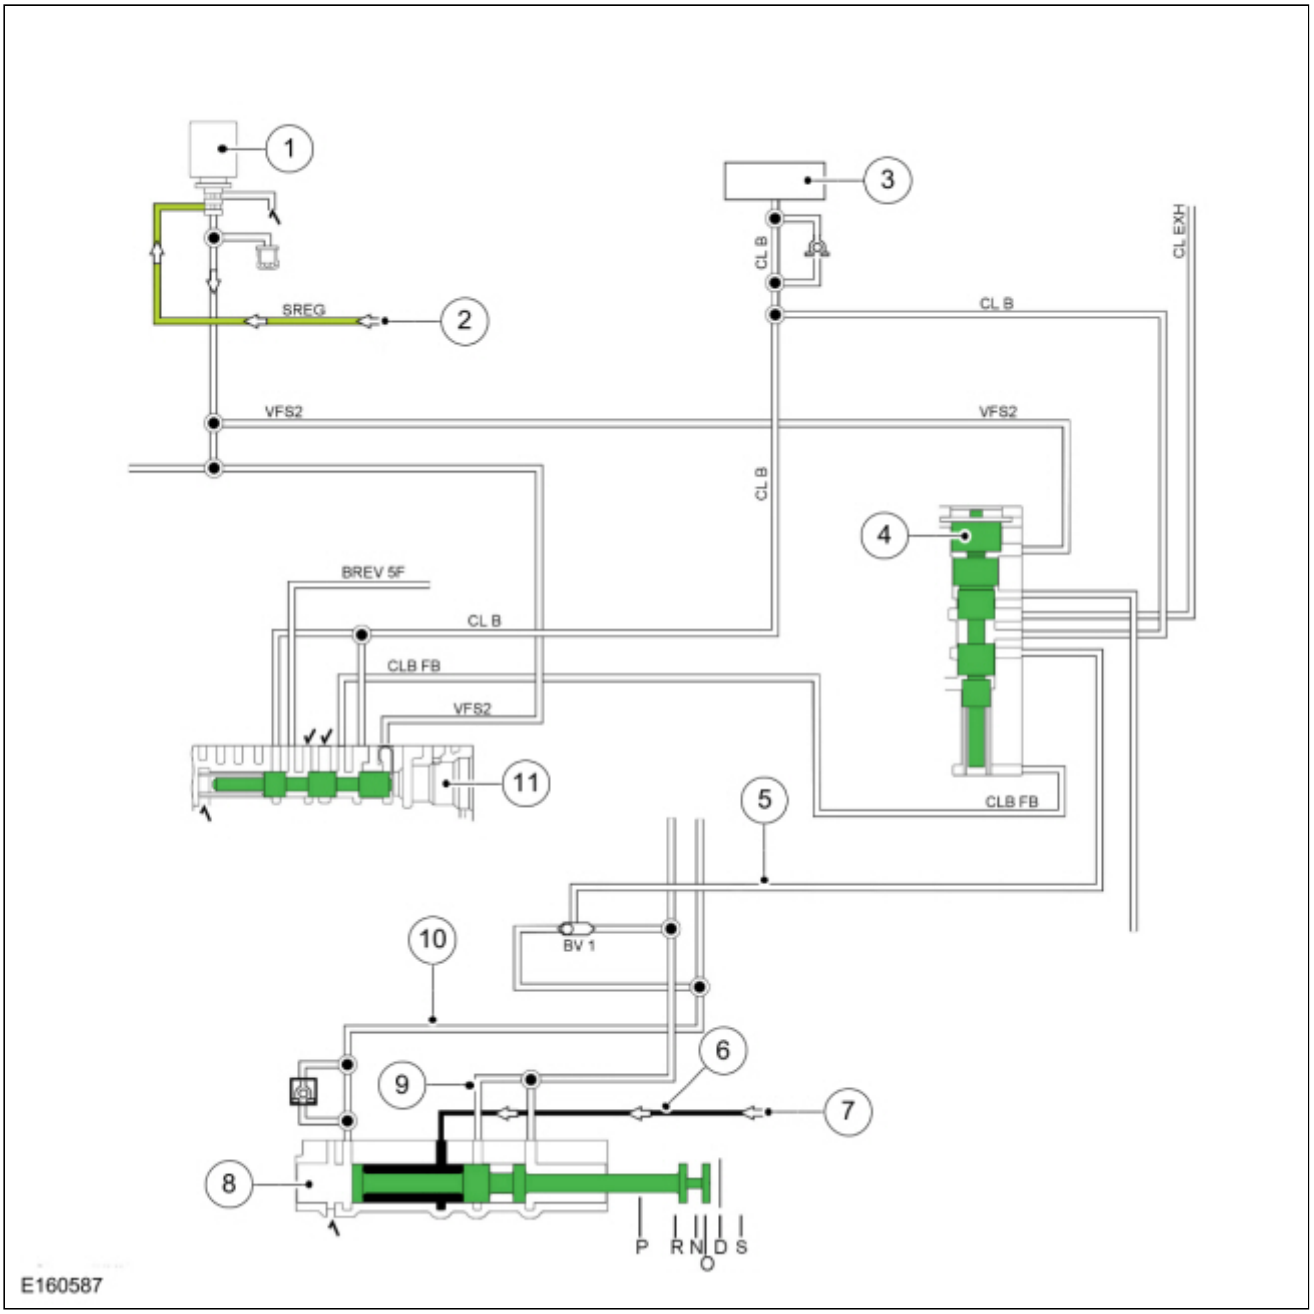
Direct Clutch (B) Hydraulic Circuits



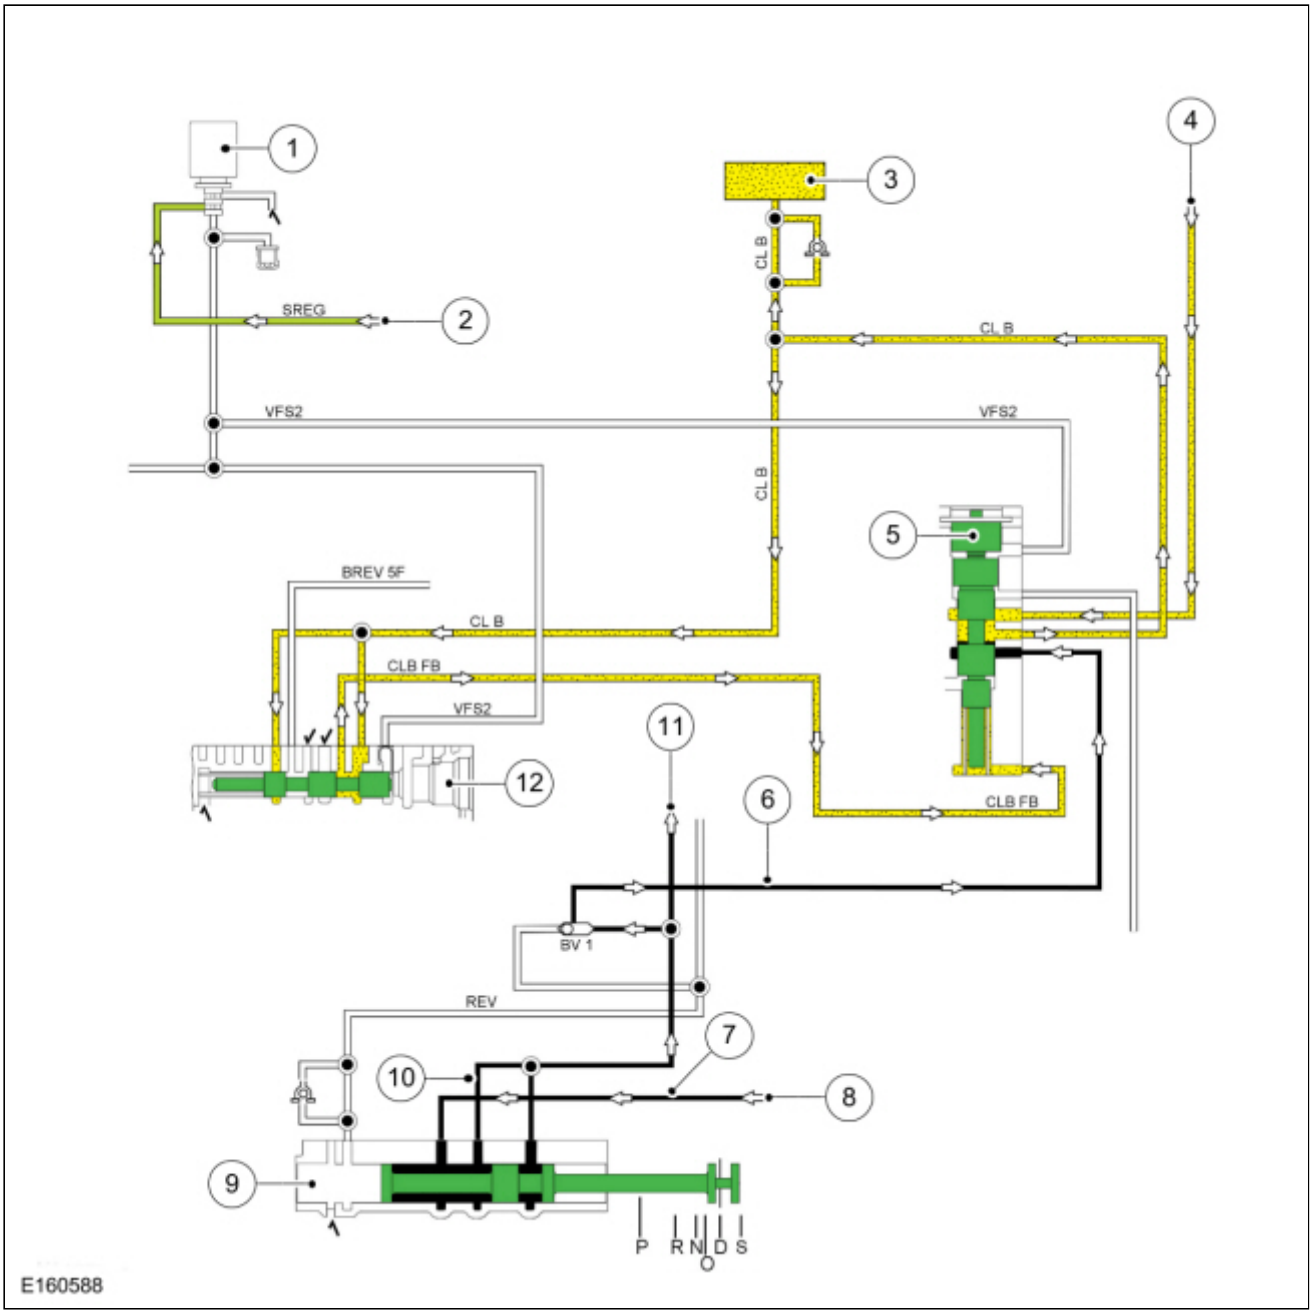
To apply the direct clutch (B), the manual valve can be in the REVERSE, DRIVE, 3, 2 or 1 position to provide line pressure to the clutch B regulator valve through the REV/DRIVE circuit.

For the direct clutch (B) to apply in reverse, SSB provides regulated solenoid pressure from the SREG circuit to the clutch B regulator and latch valves through the VFS2 circuit to position the valves to apply the direct clutch (B). As the direct clutch is applied, SSB increases pressure to the clutch B regulator and latch valves.

The clutch B regulator valve provides regulated line pressure to the CL B circuit to apply the direct clutch (B).



When the direct clutch (B) is applied in 3rd and 5th gear, regulated solenoid pressure from the D1 latch valve is supplied to the clutch B regulator valve through the VFS2D circuit and opposes pressure from the VFS2 circuit for clutch B valve positioning.

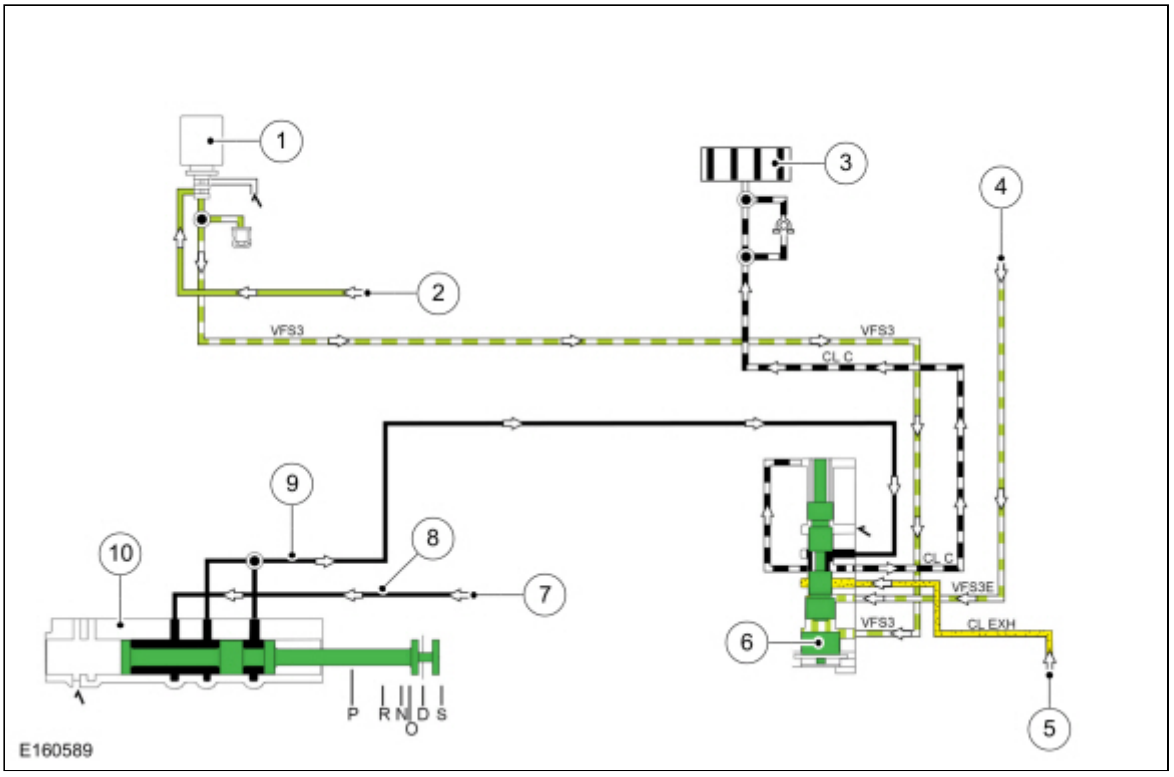


The direct clutch (B) is released when the manual valve is in the PARK or NEUTRAL position or when the manual valve is in the DRIVE position with the transmission in 1st, 2nd, 4th or 6th gear.

In NEUTRAL or PARK, the manual valve does not supply line pressure to the clutch B regulator valve. SSB lowers pressure to the clutch B regulator and latch valve to position the valves to lower the regulated line pressure in the CL B circuit to release the clutch.

In 1st, 2nd, 4th or 6th gear, the manual valve supplies line pressure to the clutch B regulator valve. SSB lowers pressure to the clutch B regulator and latch valve to position the valves to lower the regulated line pressure in the CL B circuit to release the clutch.

When the direct clutch (B) is released in 1st, 2nd, 4th or 6th gear, the clutch (B) regulator valve directs exhaust circuit pressure from the CL EXH circuit to the CL B circuit to fill the circuit and the direct clutch (B) with fluid at low pressure, approximately 21 kPa (3 psi).

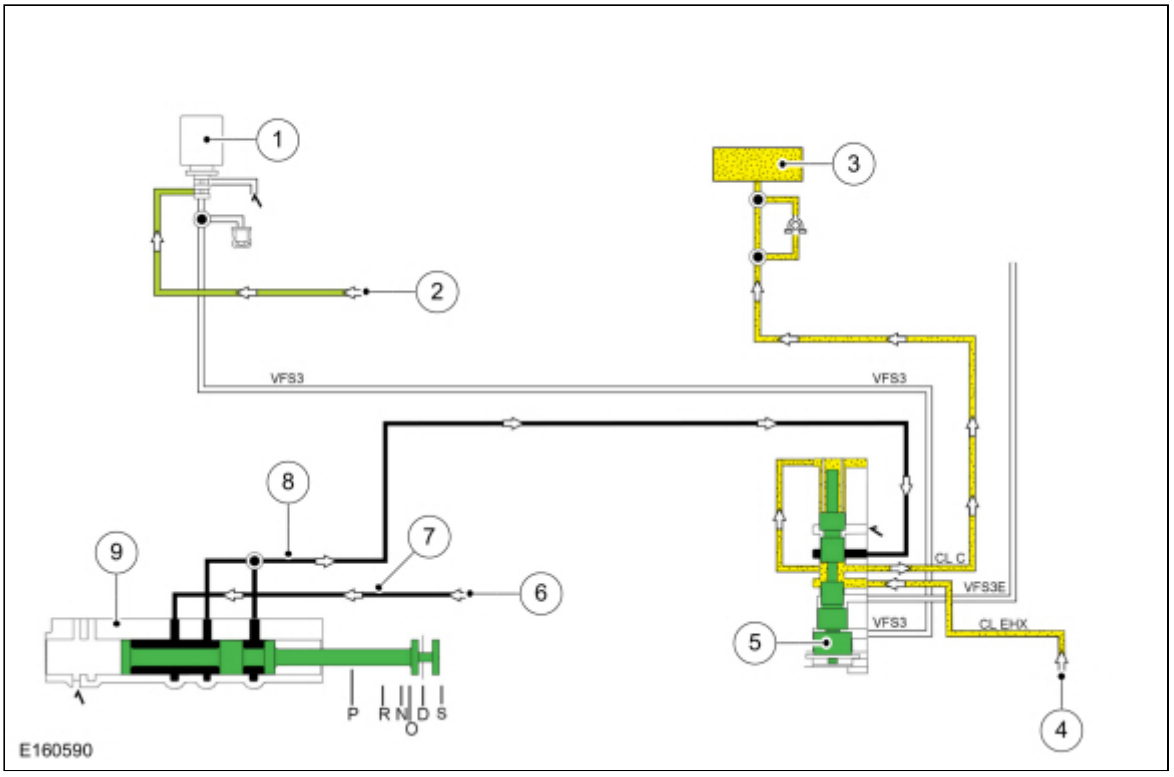


Intermediate Clutch (C) Hydraulic Circuits

To apply the intermediate clutch (C), the manual valve can be in the DRIVE, 3, 2 or 1 position to provide line pressure to the clutch C regulator valve through the DRIVE circuit.

SSC provides regulated solenoid pressure from the SREG circuit to the clutch C regulator valve through the VFS3 circuit to position the valve to apply the intermediate clutch (C). As the intermediate clutch (C) is applied, SSC increases pressure to the clutch C regulator valve.

The clutch C regulator valve provides regulated line pressure to the CL C circuit to apply the intermediate clutch (C).

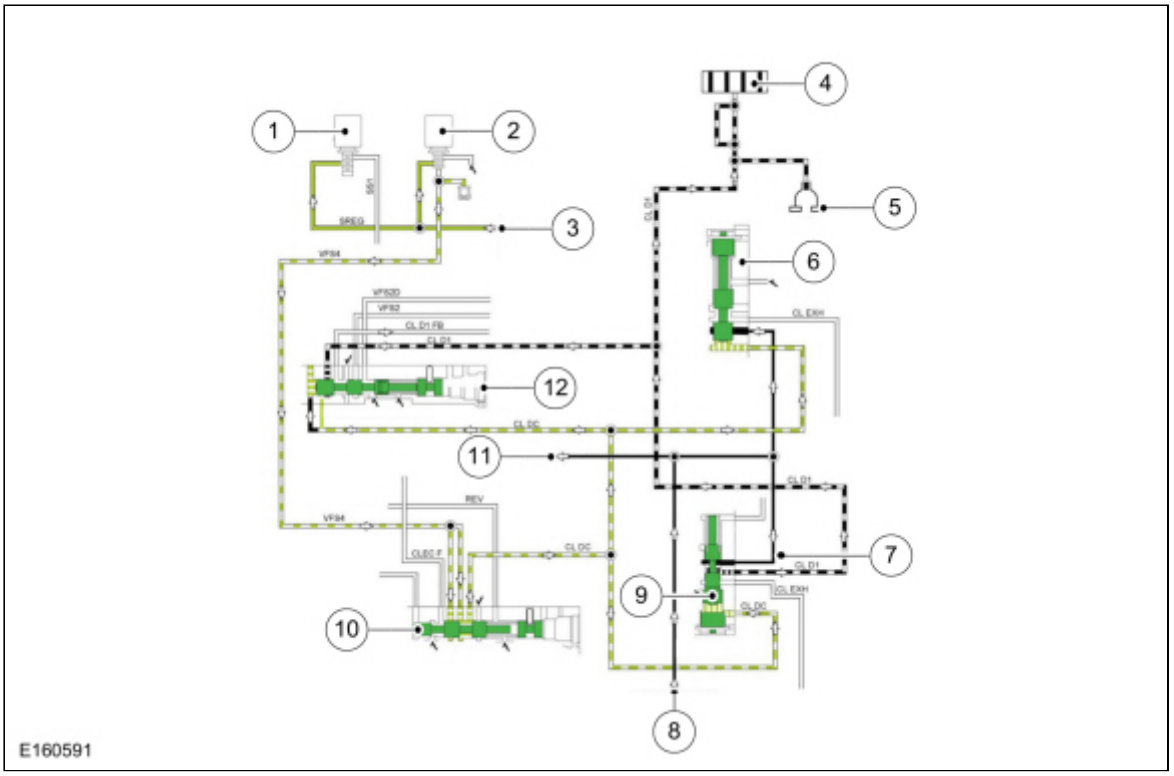


Regulated solenoid pressure from the clutch E latch valve is supplied to the clutch C regulator valve through the VFS3E circuit and opposes VFS3 pressure for clutch C regulator valve positioning in 6th gear only.

To release the intermediate clutch (C) when the manual valve is in the DRIVE, 3, 2 or 1 position SSC lowers pressure to the clutch C regulator valve to position the valve to lower the regulated line pressure in the CL C circuit to release the clutch.

When the intermediate clutch (C) is released, the clutch C regulator valve directs exhaust circuit pressure from the CL EXH circuit to the CL C circuit to fill the CL C circuit and the intermediate clutch (C) with fluid at low pressure, approximately 21 kPa (3 psi).

In PARK, REVERSE or NEUTRAL, the manual valve does not supply line pressure to the clutch C regulator valve.

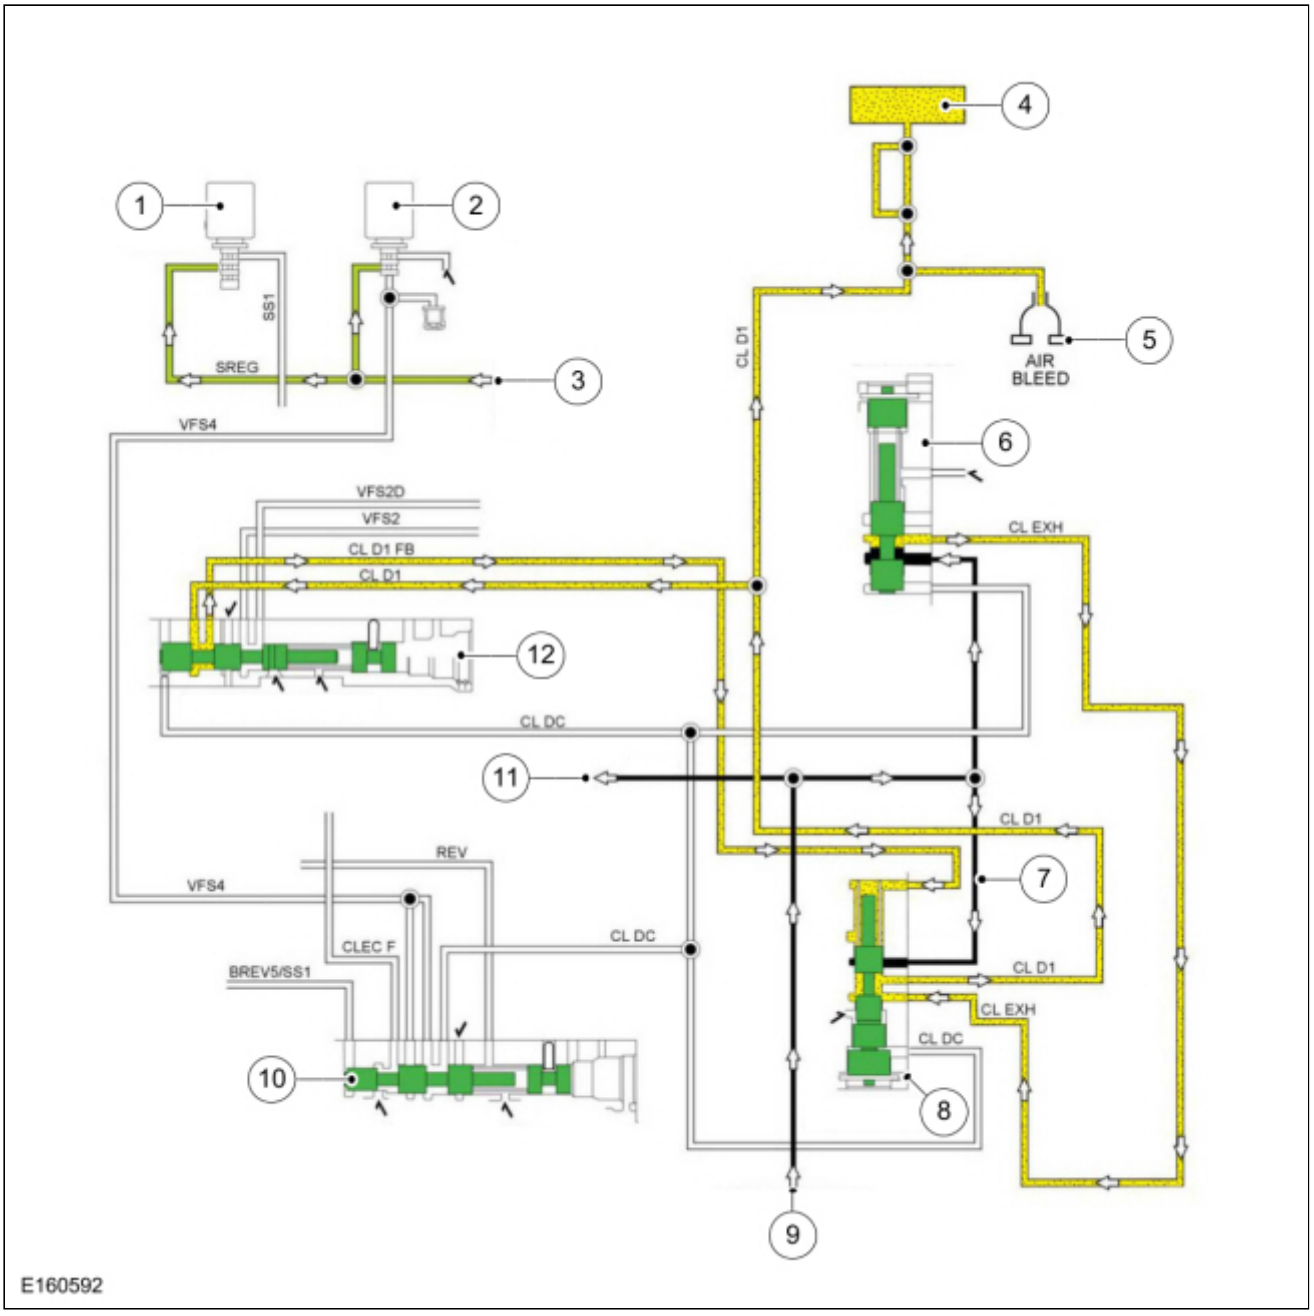


Low/Reverse Clutch (D) Hydraulic Circuits

To apply the low/reverse clutch (D), the manual valve can be in any position. Line pressure is supplied to the D1 and D2 regulator and latch valves by the pump through the PUMP circuit.

SSD provides regulated solenoid pressure from the SREG circuit to the solenoid multiplex valve through the VFS4 circuit where it is directed to the D1 and D2 regulator and latch valves through the CL DC circuit to position the

valves to apply the low/reverse clutch (D). As the low/reverse clutch (D) is applied, SSD increases pressure to the D1 and D2 clutch regulator and latch valves.

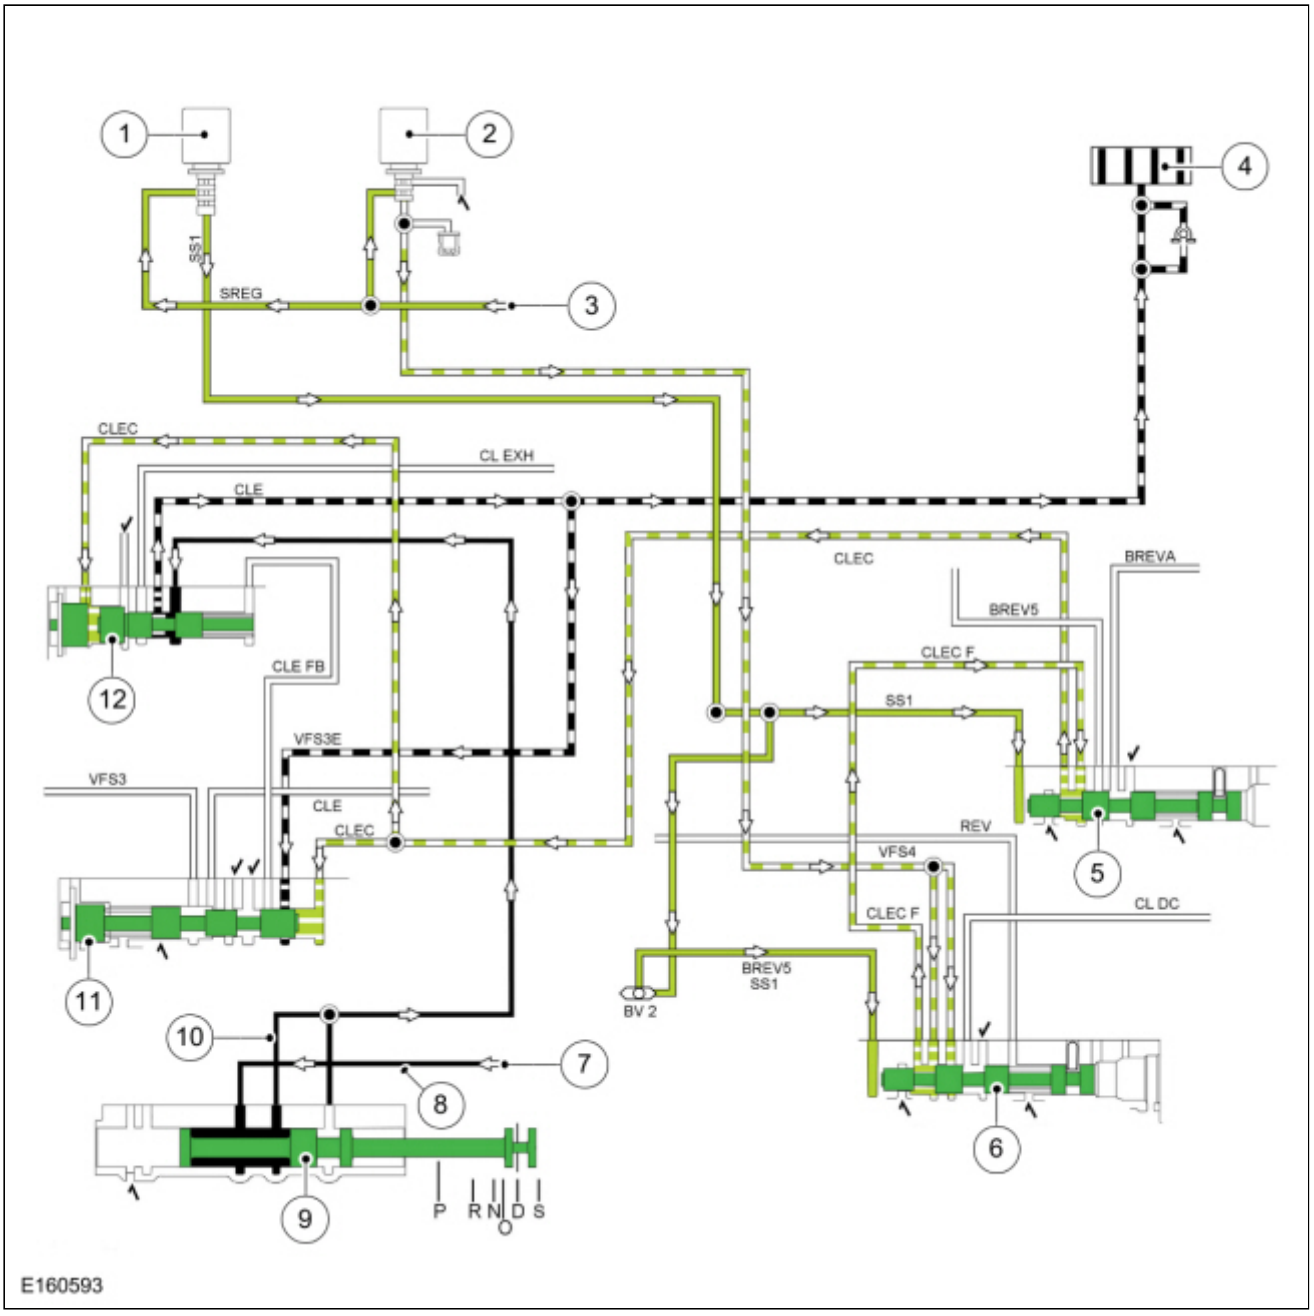


The clutch D1 and D2 regulator valves provide regulated line pressure from the PUMP circuit to the CL D1 and CL D2 circuits to apply the low/reverse clutch (D).

To release the low/reverse clutch (D), the manual valve can be in the DRIVE, 3 or 2 position. SSD lowers pressure to the VFS4 circuit which lowers pressure in the CL DC circuit to position the D clutch regulator and latch valves to lower pressure in the CL D1 circuit and release the low/reverse clutch (D).

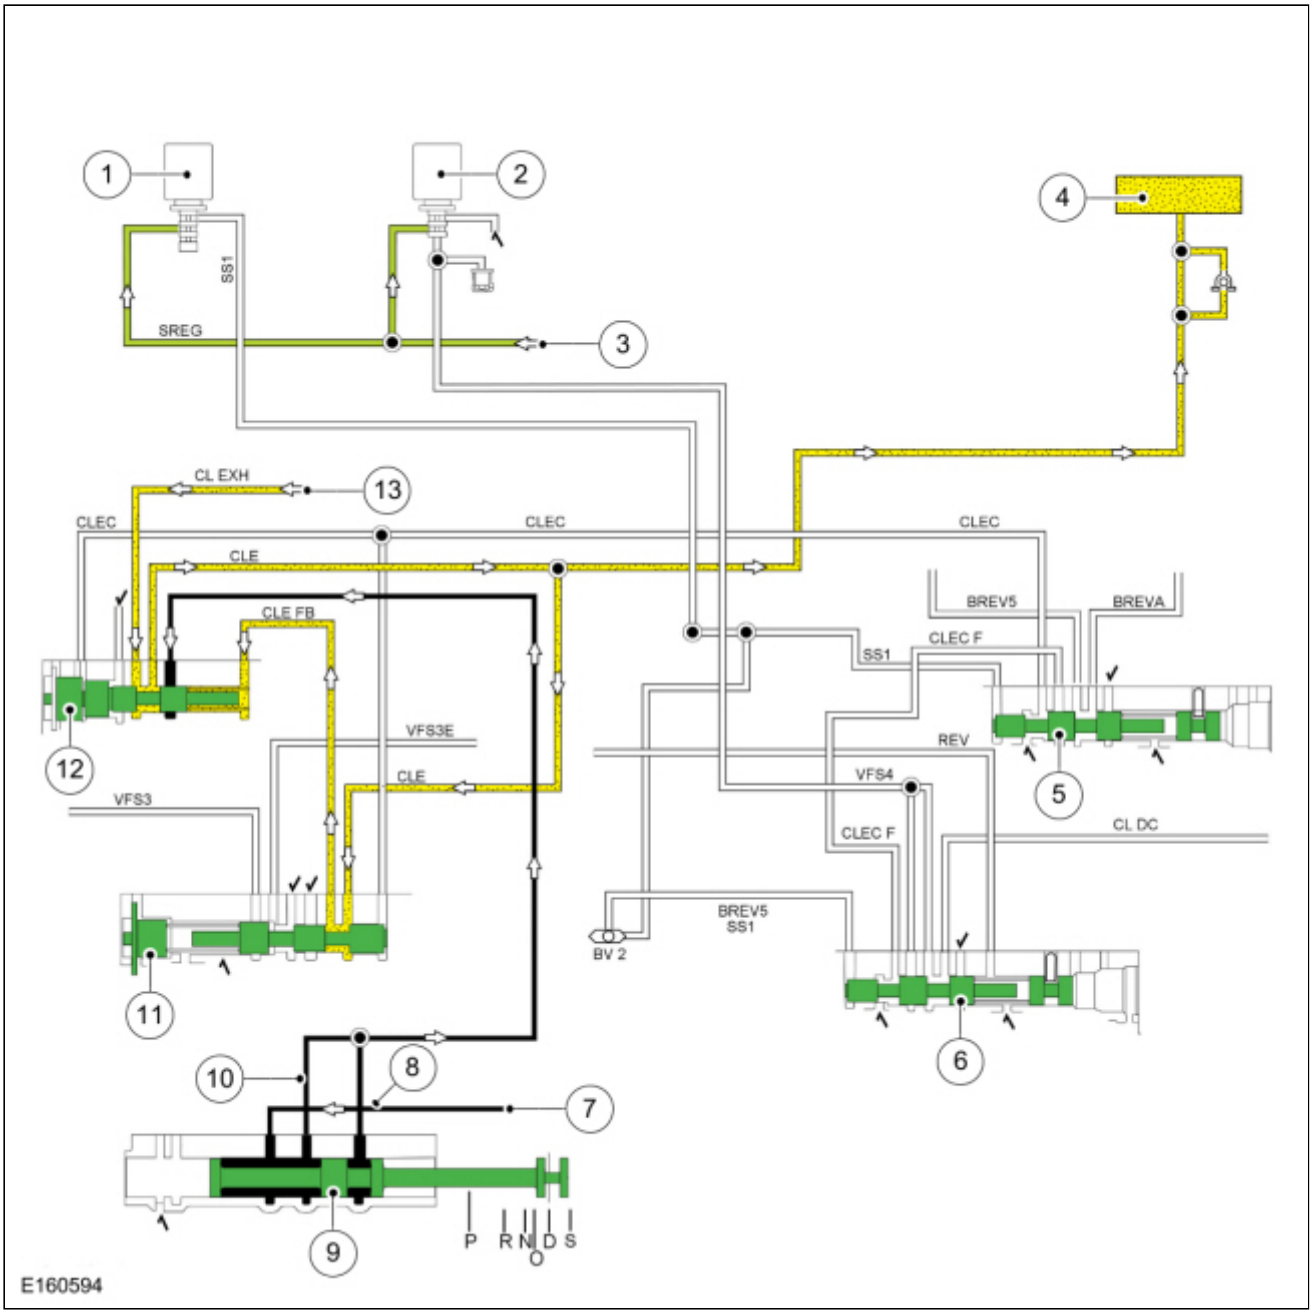
When the low/reverse clutch (D) is released, the clutch D2 latch valve directs line pressure regulated to approximately 21 kPa (3 psi) to the CL EXH circuit which fills the volume of the unused clutches and circuits.

When the low/reverse clutch (D) is released, the CL EXH circuit supplies the D1 regulator valve which fills the CL D1 circuit and the low/reverse (D) clutch.



Overdrive Clutch (E) Hydraulic Circuits

To apply the overdrive clutch (E), the manual valve must be in the DRIVE position. Line pressure is supplied to the clutch E regulator valve.



SSD provides regulated solenoid pressure from the SREG circuit to the solenoid multiplex valve through the VFS4 circuit. SSE supplies pressure to the solenoid multiplex valve and the drive enable valve to position the valves to direct pressure from the VFS4 circuit to the CLEC F and CLEC circuits to position the clutch E regulator and latch valves to apply the overdrive clutch (E). As the overdrive clutch (E) is applied, SSD increases pressure to the clutch E regulator and latch valve.

The clutch E regulator valve provides regulated line pressure from the DRIVE circuit to the CLE circuit to apply the overdrive clutch (E).

To release the O/D clutch (E), the manual valve can be in any position. SSD lowers pressure to the VFS4 circuit which lowers pressure in the CLEC and CLEC F circuits and releases the O/D clutch (E). SSE blocks SREG pressure to the solenoid multiplex valve and the drive enable valve to allow SSD to control low/reverse clutch (D) operation.

When the O/D clutch (E) is released, the clutch E regulator valve directs exhaust circuit pressure from the CL EXH circuit to the CL E circuit to fill the circuit and the clutch with fluid at low pressure, approximately 21 kPa (3 psi).

Transmission Electronic Control System

Powertrain Control System

The TCM controls the electronic functions of this transmission. The TCM is located under the instrument panel in the cabin. A plastic molded leadframe is bolted to the main control assembly. The leadframe contains the Turbine Shaft Speed (TSS), Output Shaft Speed (OSS), Transmission Fluid Temperature (TFT) and Transmission Range (TR) sensors.

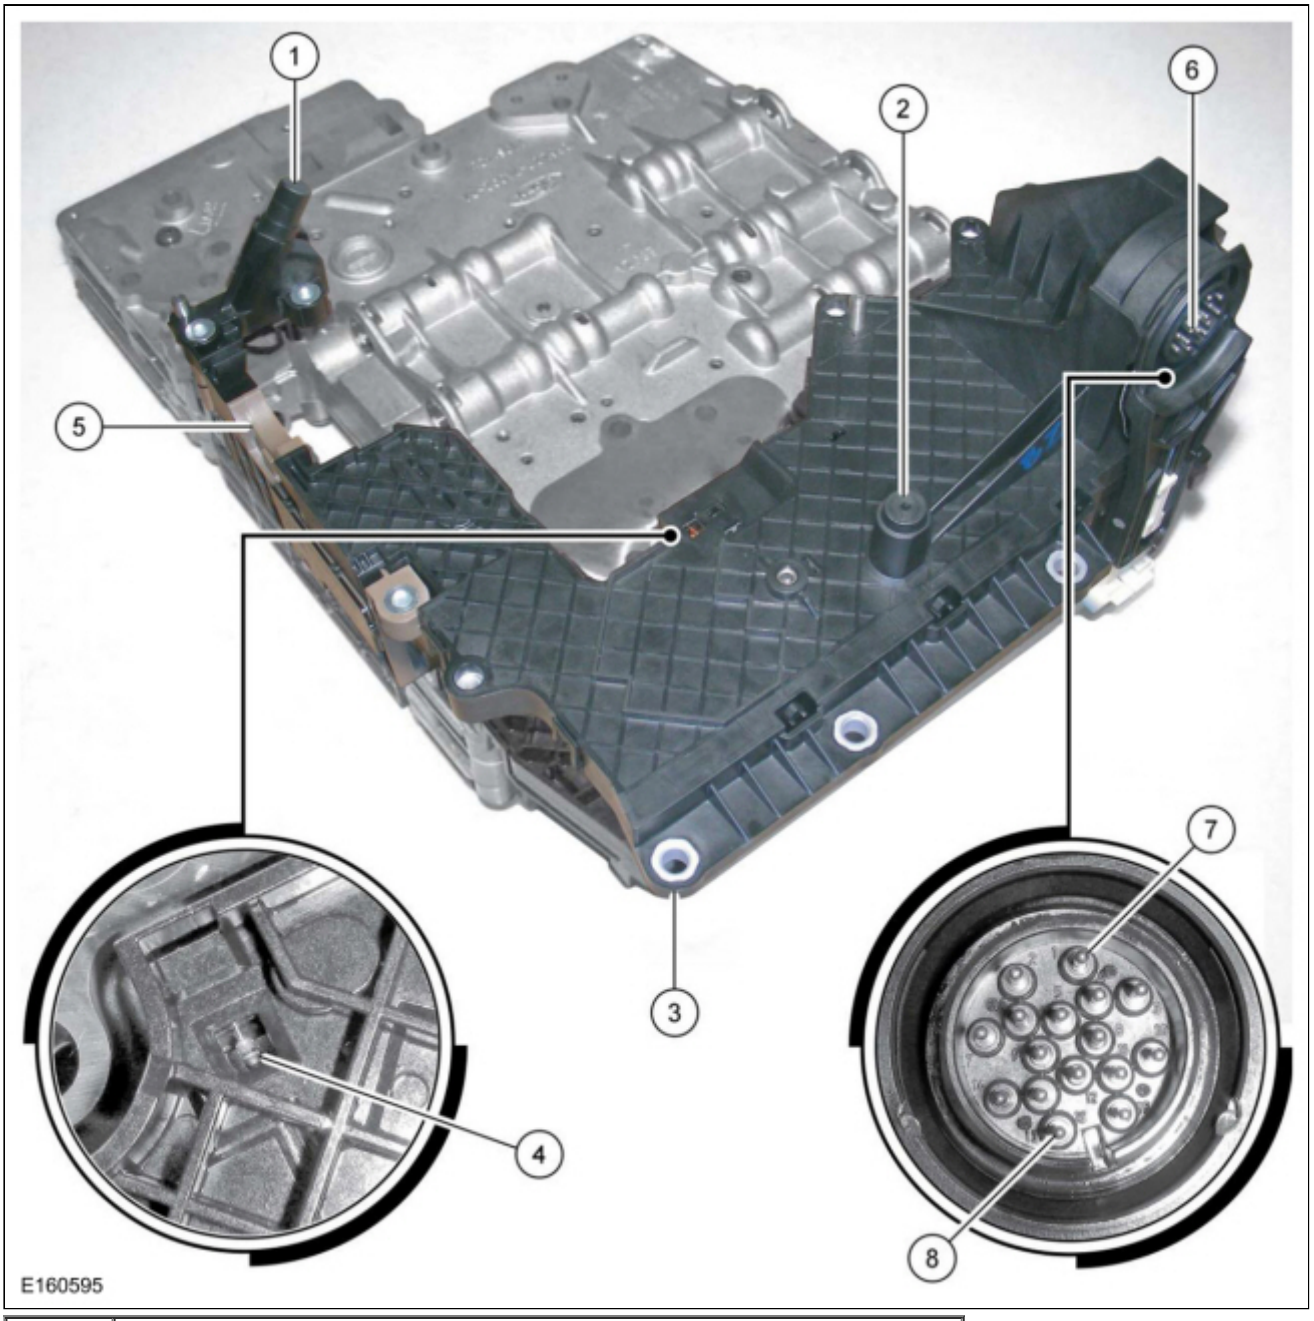
The TCM receives input signals from engine and transmission sensors and uses these inputs to control line pressure, shift time, Torque Converter Clutch (TCC), and shift solenoids. The TCM also provides power and ground for the reverse lamp relay coil and provides a PARK/NEUTRAL start enable signal.

The following is a list of direct engine and driver inputs to the TCM along with module information from the vehicle Controller Area Network (CAN):

- Engine speed
- Engine torque
- Engine Coolant Temperature (ECT)
- Engine Oil Temperature (EOT)
- Throttle Position (TP)
- Accelerator Pedal Position (APP)
- Brake Pedal Position (BPP)
- ABS wheel speed
- Traction Control (ATC) status

The TCM also:

- Monitors inputs and outputs for the presence of faults.
- Stores DTCs related to detected faults.
- Provides outputs on the CAN for transmission range, output shaft speed, turbine shaft speed, transmission fluid temperature, current gear and A/C inhibit.
- Provides On-Board Diagnostic (OBD) information using the CAN to illuminate the Malfunction Indicator Lamp (MIL) or Transmission Control Indicator Lamp (TCIL).
- Provides diagnostic information to a scan tool through the Data Link Connector (DLC).



If the TCM detects a system or component fault, it substitutes a default value or signal using Failure Mode and Effect Management strategies.

The TCM also uses Failure Mode and Effect Management strategies to compensate for electrical or mechanical shift solenoid and apply component faults that result in alternate shift patterns.

If the transmission loses complete electronic control, it operates in a fail-safe mode with:

- Maximum line pressure in all transmission ranges
- Functional PARK, REVERSE and NEUTRAL positions
- Operation in 3rd or 5th gear (depending on the failure conditions) when the selector lever is in the DRIVE, 3, 2 or 1 position
- TCC is released in all transmission ranges and gears

CB = Clutch brake

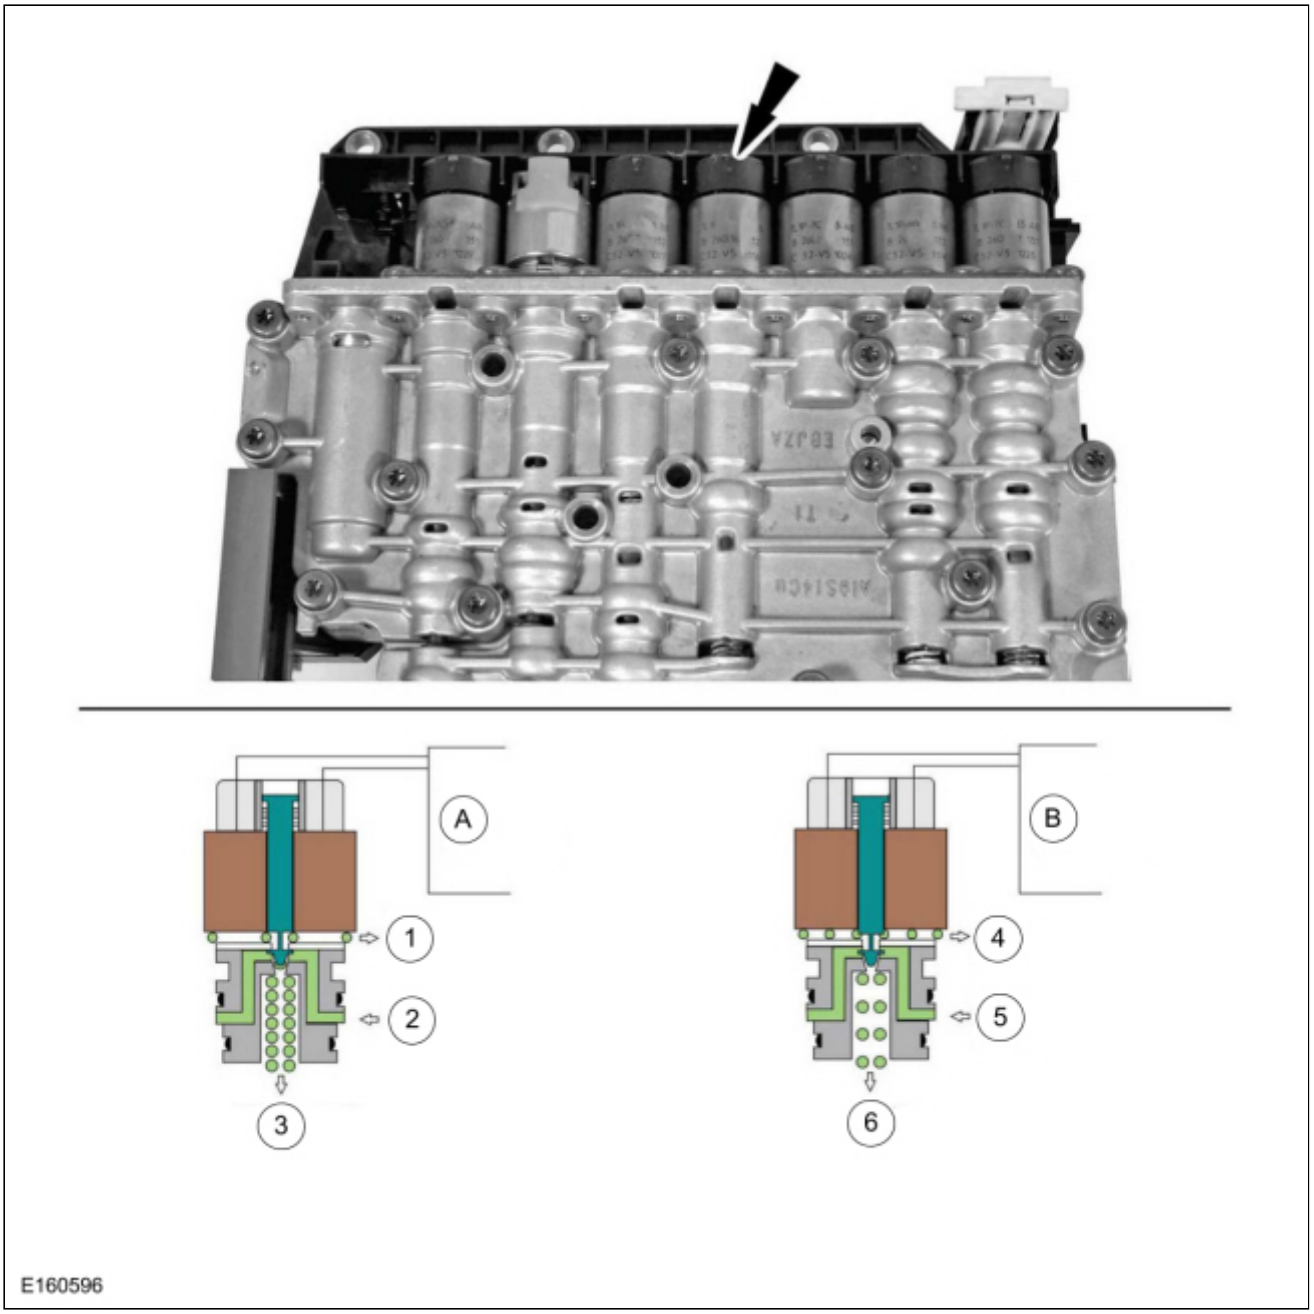
NC = Normally closed

NH = Normally high

NL = Normally low

The following are brief descriptions of the sensors and actuators used to control transmission operation.

Line Pressure Control (LPC) Solenoid



The Line Pressure Control (LPC) solenoid, is a Variable Force Solenoid (VFS) that varies hydraulic pressure by actuating a hydraulic valve.

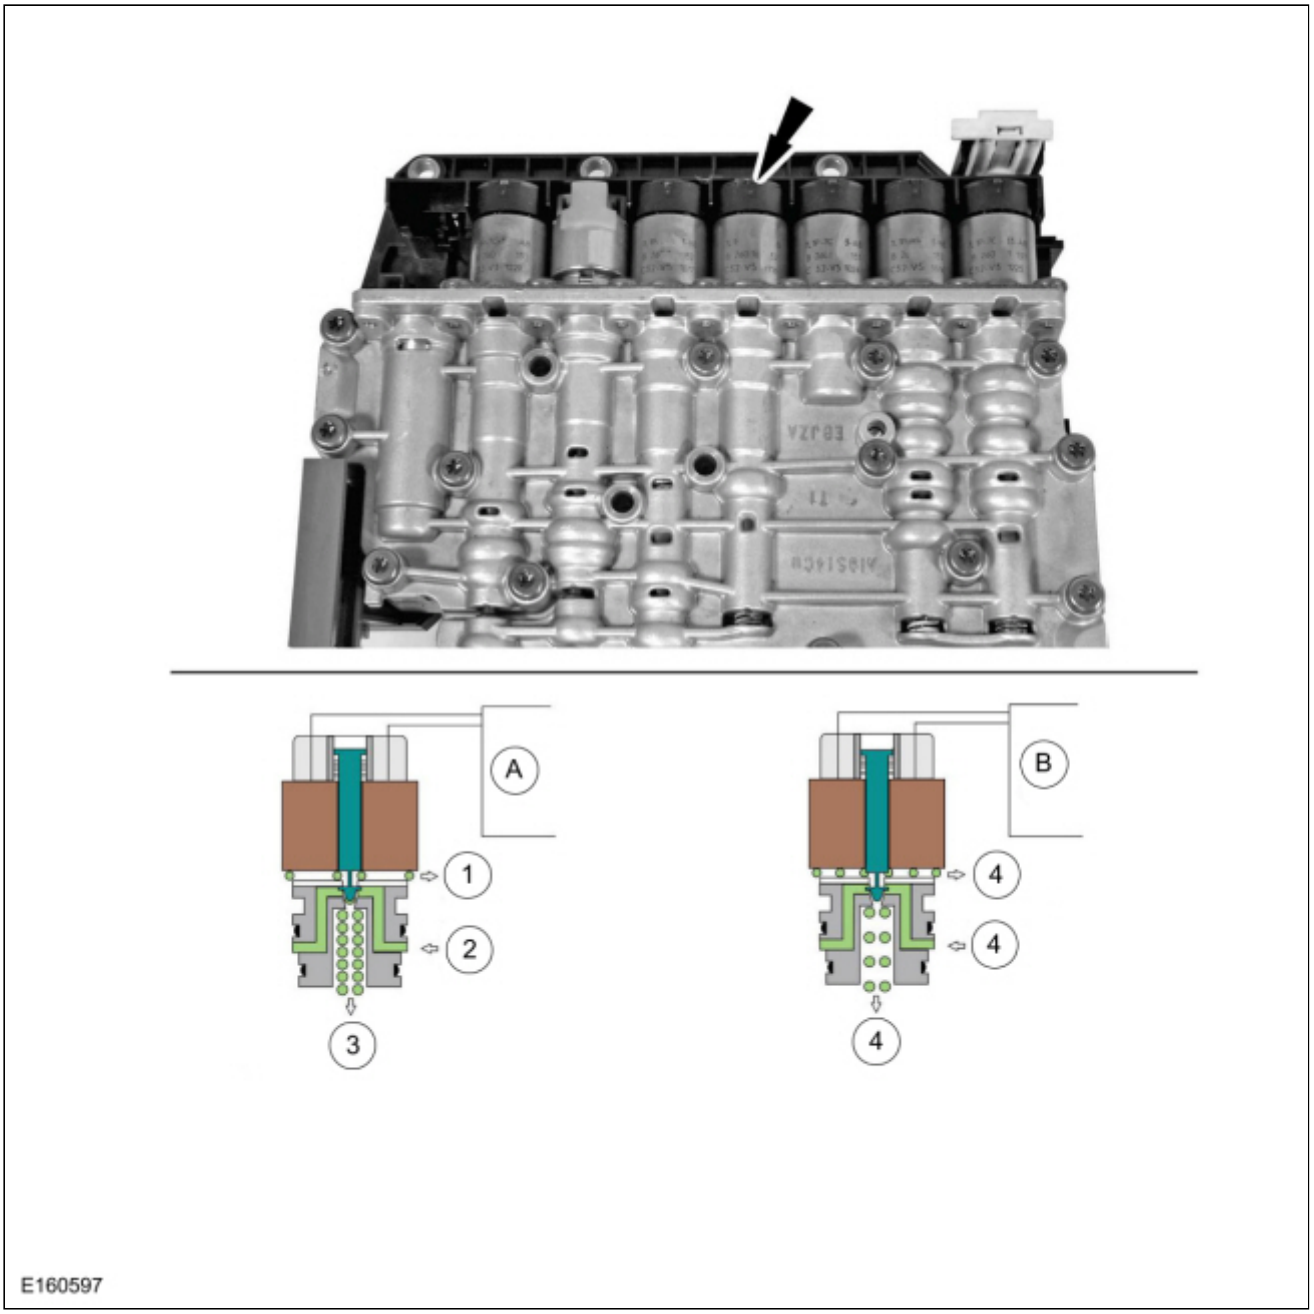
The TCM applies variable current to the LPC solenoid which varies pressure in the VFS5 hydraulic circuit to the main regulator valve. Refer to Hydraulic Circuits in this section.

The LPC solenoid uses inversely proportional operation. As the current from the TCM decreases, the pressure from the solenoid increases. As the current from the TCM increases, the pressure from the solenoid decreases. The LPC solenoid is supplied hydraulic pressure from the SREG circuit.

With zero current, the LPC solenoid fully opens the hydraulic valve which applies the maximum amount of hydraulic pressure to the main regulator valve through the VFS5 hydraulic circuit and applies maximum line pressure in the PUMP hydraulic circuit. With maximum current to the solenoid, the hydraulic valve fully closes the outlet port for minimum pressure to the VFS5 hydraulic circuit, lowering the line pressure in the PUMP hydraulic circuit.

LPC Inversely Proportional VFS

Torque Converter Clutch (TCC) Solenoid



The TCC solenoid is a VFS that varies hydraulic pressure by actuating a hydraulic valve.

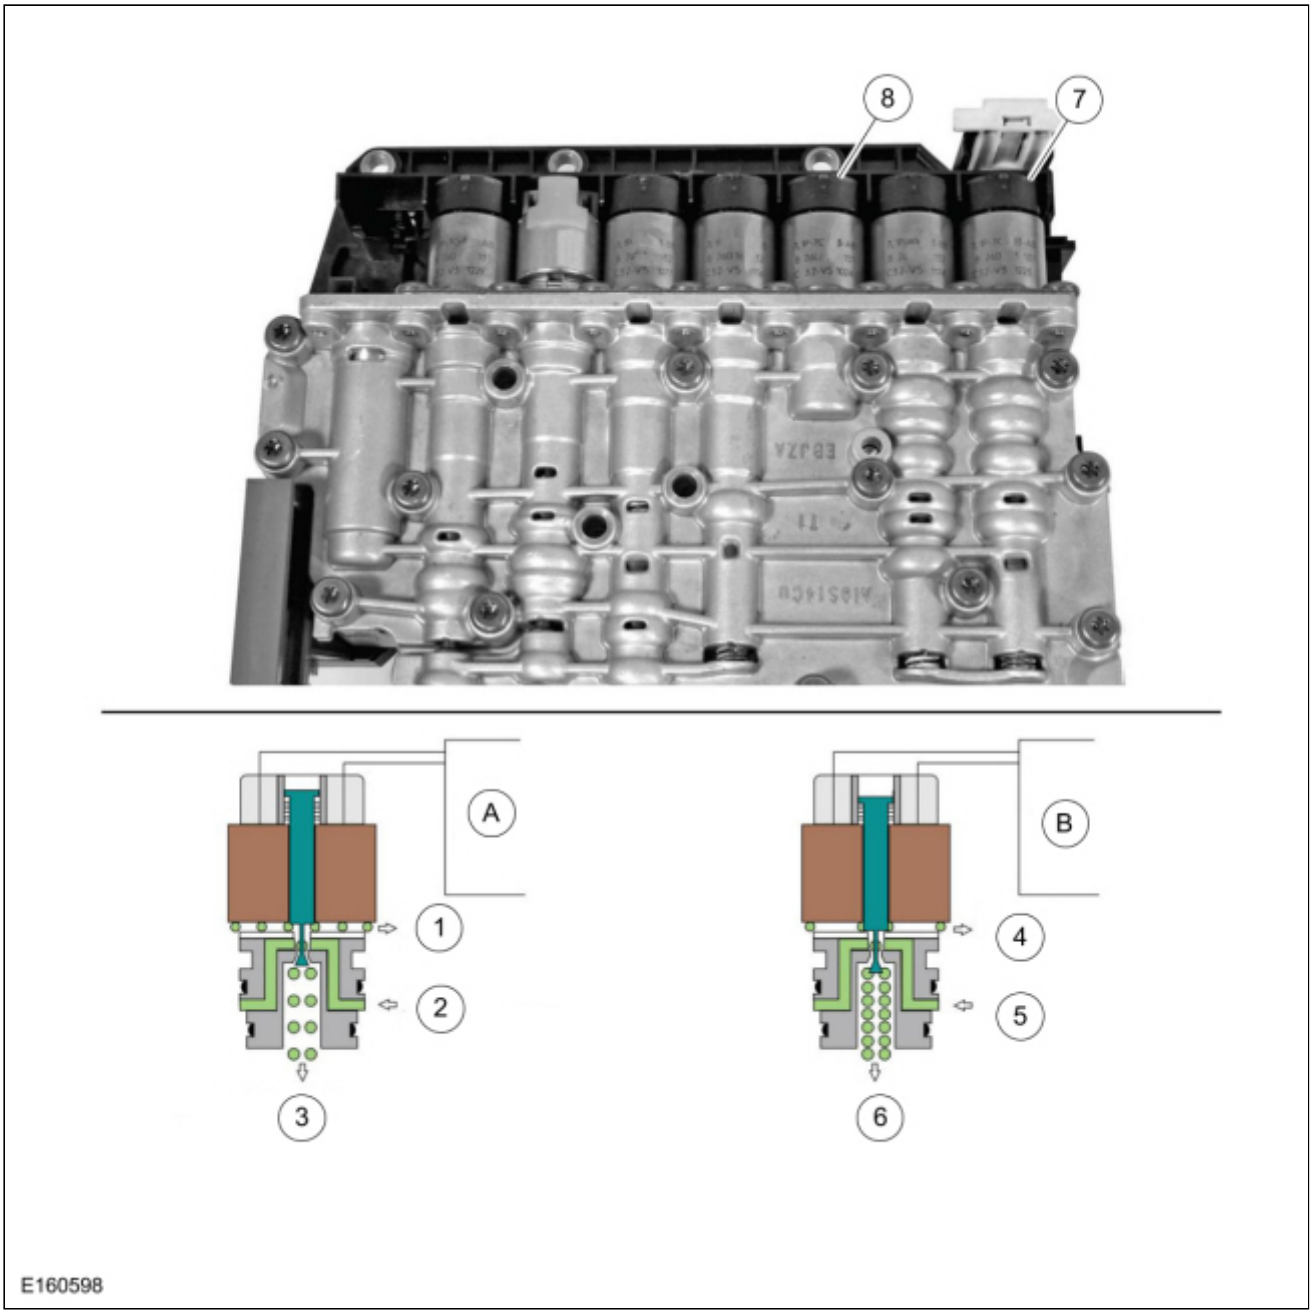
The TCM applies variable current to the TCC solenoid which varies pressure in the VFS6 hydraulic circuit to the Converter Release Regulator Valve and the Bypass Clutch Control Regulator Valve. Refer to Hydraulic Circuits in this section.

The TCC solenoid uses proportional operation. As the current from the TCM decreases, the pressure from the solenoid decreases. As the current from the TCM increases, the pressure from the solenoid increases. The TCC solenoid is supplied hydraulic pressure from the SREG circuit.

With zero current, the TCC solenoid fully closes the hydraulic valve which applies the minimum amount of hydraulic pressure to the Converter Release Regulator Valve and the Bypass Clutch Control Regulator Valve through the VFS6 hydraulic circuit and releases the TCC. With maximum current to the solenoid, the hydraulic valve fully opens the outlet port for maximum pressure to the VFS6 hydraulic circuit to apply the TCC.

Torque Converter Clutch (TCC) Proportional (VFS)

Shift Solenoid A (SSA), Shift Solenoid B (SSB), Shift Solenoid C (SSC) and Shift Solenoid D (SSD)



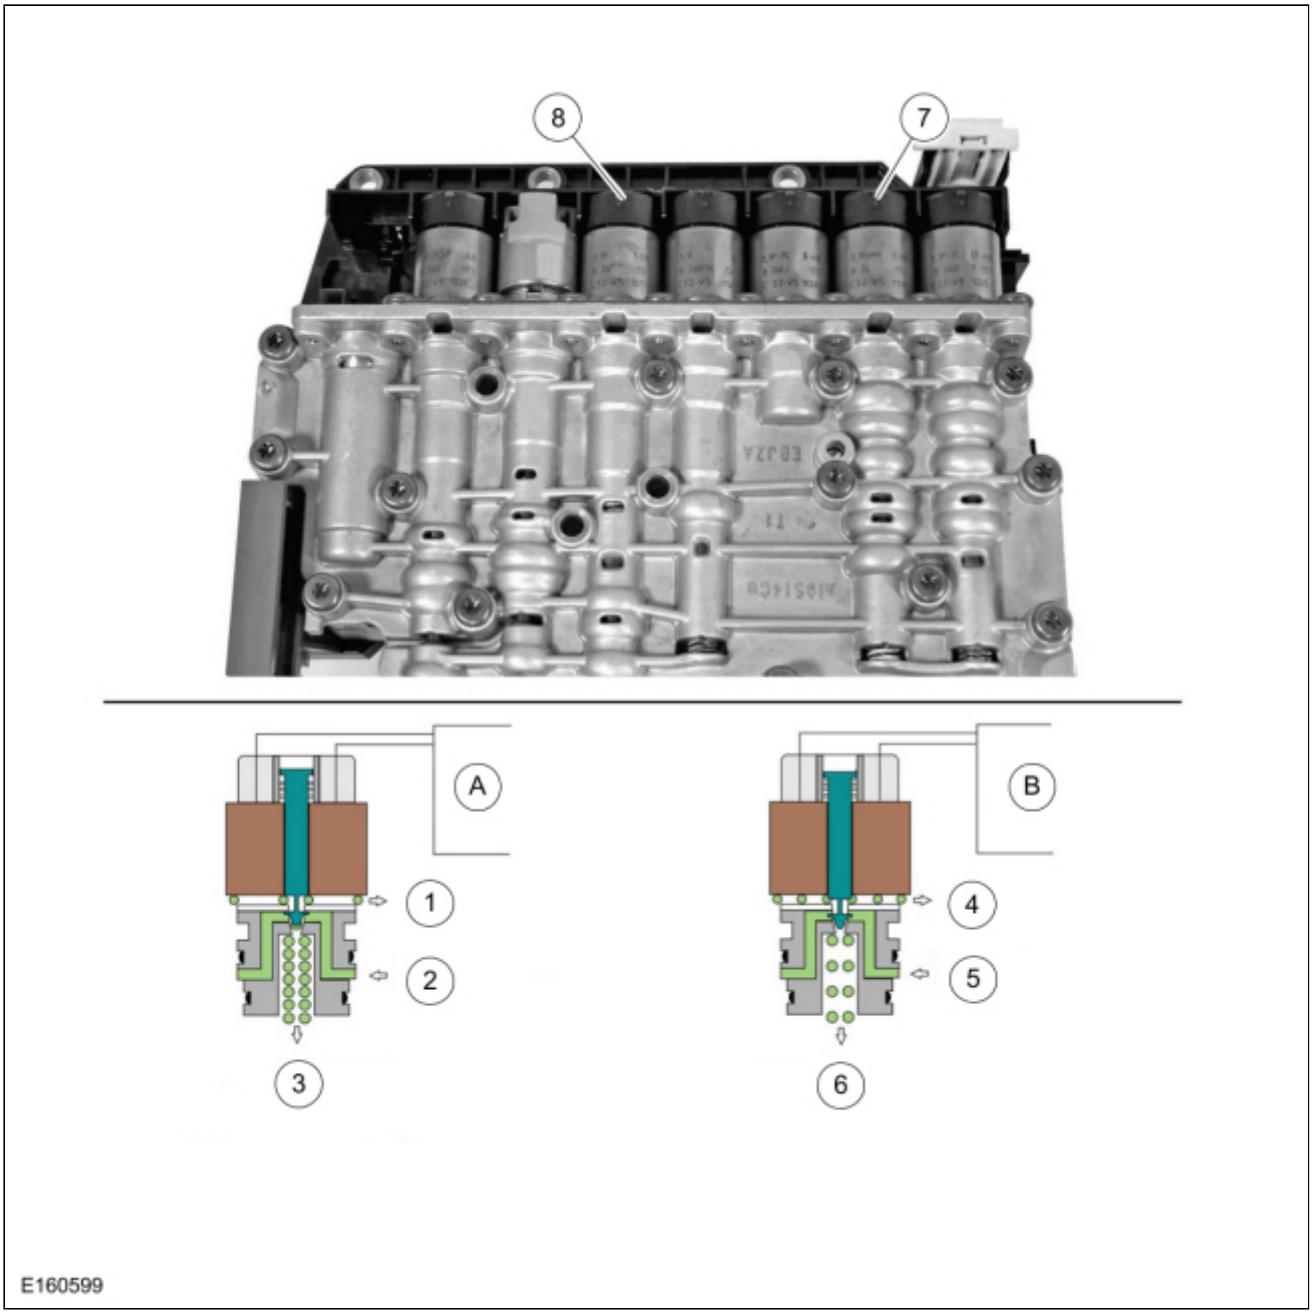
Shift solenoids A through D are VFS that vary hydraulic pressure by actuating a hydraulic valve.

The TCM applies variable current to the shift solenoids which varies pressure in the hydraulic circuit to the regulator and latch valves of the clutch that it controls. Refer to Hydraulic Circuits in this section.

SSA and SSC use proportional operation. As the current from the TCM decreases, the pressure from the solenoid decreases. As the current from the TCM increases, the pressure from the solenoid increases. SSA and SSC are supplied hydraulic pressure from the SREG circuit.

With zero current, SSA and SSC fully close the hydraulic valves which applies zero amount of hydraulic pressure to the regulator and latch valves of the clutch that it controls and releases the clutch. With maximum current to the solenoids, the hydraulic valves fully open for maximum pressure to the regulator and latch valves to apply the clutch.

Shift Solenoid A (SSA) and Shift Solenoid C (SSC) Proportional Solenoids

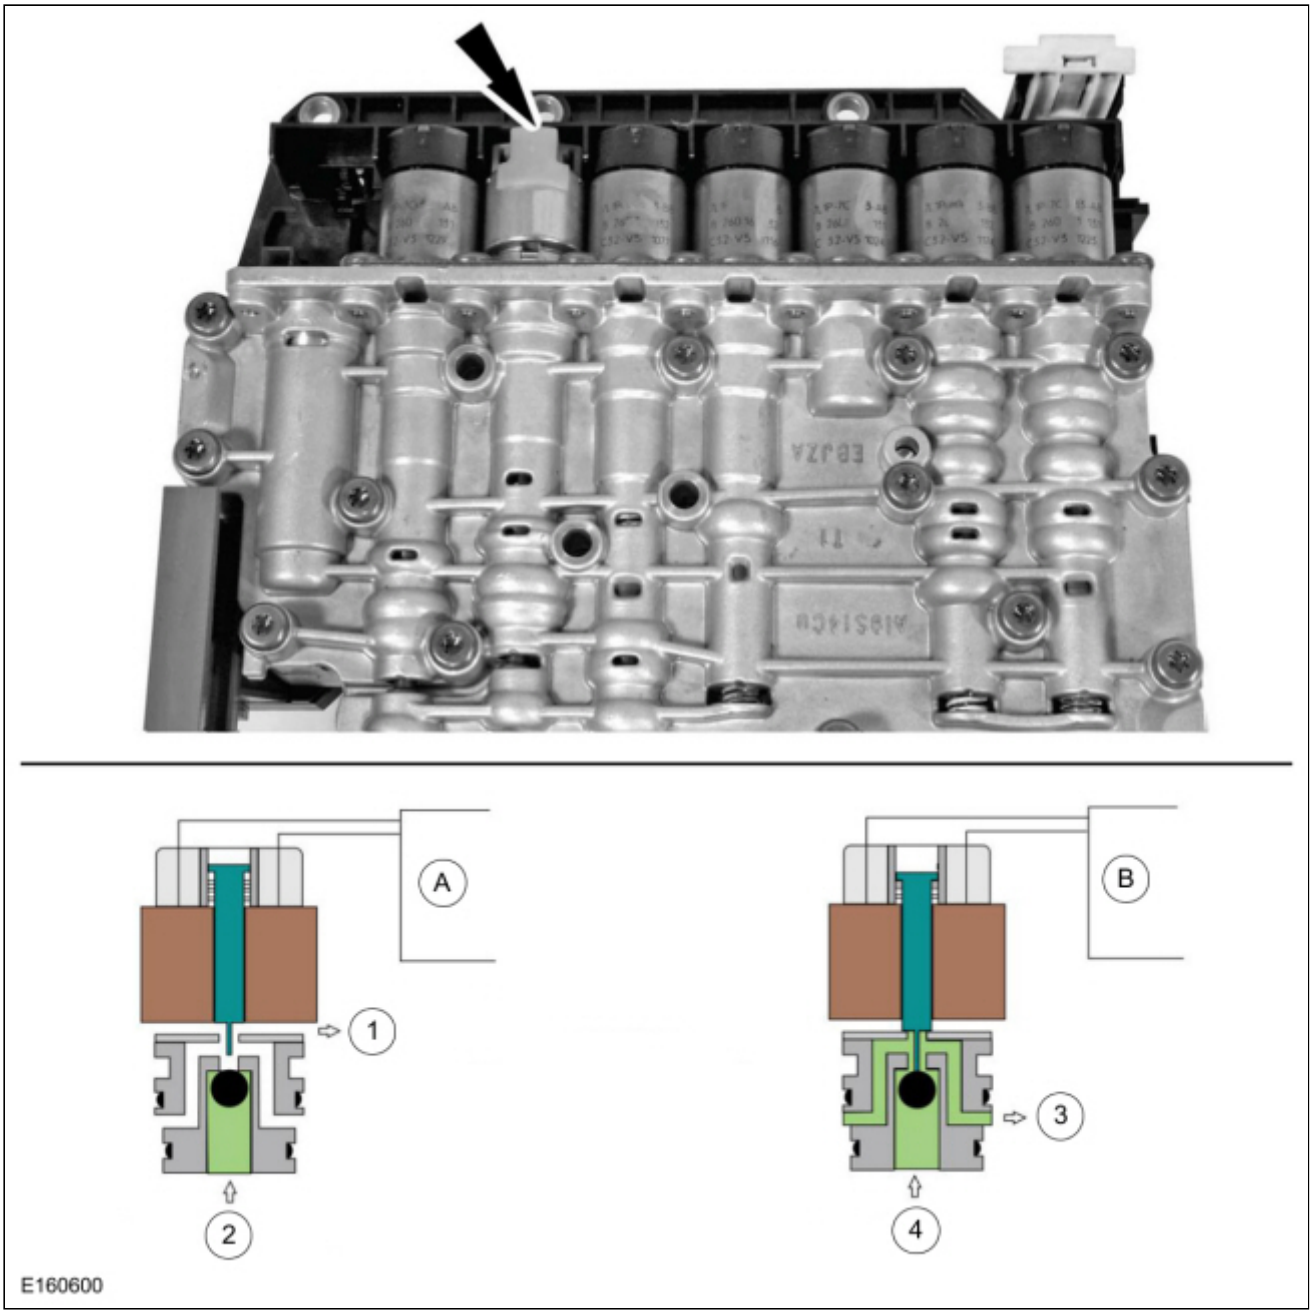


Item	Description
1	Shift Solenoid A (SSA) Variable Force Solenoid (VFS)
2	Shift Solenoid C (SSC) VFS

SSB and SSD use inverse proportional operation. As the current from the TCM decreases, the pressure from the solenoid increases. As the current from the TCM increases, the pressure from the solenoid decreases. SSB and SSD are supplied hydraulic pressure from the SREG circuit.

With zero current, SSB and SSD fully open the hydraulic valves which applies maximum hydraulic pressure to the regulator and latch valves to apply the clutch that it controls. With maximum current to the solenoids, the hydraulic valve fully closes to apply zero amount of hydraulic pressure to the regulator and latch valves of the clutch that it controls and releases the clutch.

Shift Solenoid B (SSB) and Shift Solenoid D (SSD) Inverse Proportional Variable VFS



Item	Description
1	Shift Solenoid B (SSB) Variable Force Solenoid (VFS)
2	Shift Solenoid D (SSD) VFS

Shift Solenoid E (SSE)

SSE is an ON/OFF solenoid. When SSE is in the OFF position, SSD controls the regulator and latch valves to apply the low/reverse clutch. When SSE is in the ON position, SSD controls the regulator and latch valves to apply the overdrive (456) clutch. Refer to Hydraulic Circuits in this section.

SSE is supplied hydraulic pressure from the SREG circuit. When SSE is OFF, the solenoid supply is blocked and the outlet port (SS1 circuit) is connected to the exhaust port. When SSE is ON, the exhaust port is blocked and the solenoid supply is connected to the outlet port (SS1 circuit).

Shift Solenoid E (SSE) ON/OFF Solenoid

Turbine Shaft Speed (TSS) Sensor

The TSS sensor is a Hall-effect type sensor that provides a signal to the TCM that changes in frequency as the rotating speed of the forward (1,2,3,4) clutch cylinder varies.

The TCM compares the TSS sensor signal with the engine speed information to determine the amount of slip occurring in the torque converter.

The TCM also compares the TSS sensor signal with the OSS sensor signal to determine the gear ratio provided by the rear planetary gearset.

The TCM uses the TSS sensor signal as an input for its strategies for shifts and TCC operation. The TCM also uses the TSS sensor signal for transmission fault detection and diagnostics.

Refer to the component illustration at the beginning of this procedure for the location of the TSS sensor.

Output Shaft Speed (OSS) Sensor

The OSS sensor is a Hall-effect type sensor that provides a signal to the TCM that changes in frequency as the rotating speed of the output shaft ring gear varies.

The TCM also compares the OSS sensor signal with the TSS sensor signal to determine the gear ratio provided by the rear planetary gearset.

The TCM uses the OSS sensor signal as an input for its strategies for shifts and TCC operation. The TCM also uses the OSS sensor signal for transmission fault detection and diagnostics.

Refer to the component illustration at the beginning of this procedure for the location of the OSS sensor.

Transmission Fluid Temperature (TFT) Sensor

The TFT sensor is a temperature dependent resistor that is in contact with transmission fluid in the transmission sump area.

The TCM monitors the voltage across the TFT sensor, which changes as transmission fluid temperature varies.

The TCM uses the TFT sensor signal as an input for its strategy for shifting and TCC operation. The TCM also uses the TFT sensor signal for transmission fault detection and diagnostics.

Refer to the component illustration at the beginning of this procedure for the location of the TFT sensor.

Transmission Range (TR) Sensor

The TR sensor has a set of Hall-effect sensors that have a pattern of ON/OFF states which are dependant on the PARK, REVERSE, NEUTRAL, DRIVE, 3,

2 or 1 position of the manual valve.

The TR sensor also provides signals for the starting system and the reverse lights.

The TCM uses the TR sensor signal as an input for its strategy for shifting and TCC operation. The TCM also uses the TR sensor signal for transmission fault detection and diagnostics.

Refer to the component illustration at the beginning of this procedure for the location of the TR sensor.

Transmission Operation

Transmission Operation Overview

Torque Converter

This transmission uses a torque converter with the following elements:

- Impeller
- Turbine
- Reactor
- Torque Converter Clutch (TCC)

For component information, refer to Torque Converter Contamination Inspection in this section.

Planetary Gearsets

Operation of this transmission involves the use of 2 planetary gearsets that have the following components:

- Front (single planetary gearset)
  - One sun gear
  - One planetary carrier with 4 gears
  - One ring gear
- Rear (ravigenaux planetary gearset)
  - Two sun gears of different sizes
  - Three short planetary gear pinions meshing with the sun gears
  - Three long planetary gear pinions meshing with the sun gears
  - One planetary carrier
  - One ring gear

Apply Clutches

NOTE: *Friction and steel plate quantity will vary based on engine displacement. Refer to the Clutch Plate Quantity Chart in the Specifications portion of this section.*

This transmission uses the following clutches to operate the 2 planetary gearsets:

- Forward clutch (A)
- Direct clutch (B)
- Intermediate clutch (C)
- Low/reverse clutch (D)
- Overdrive clutch (E)
- Low One-Way Clutch (OWC)

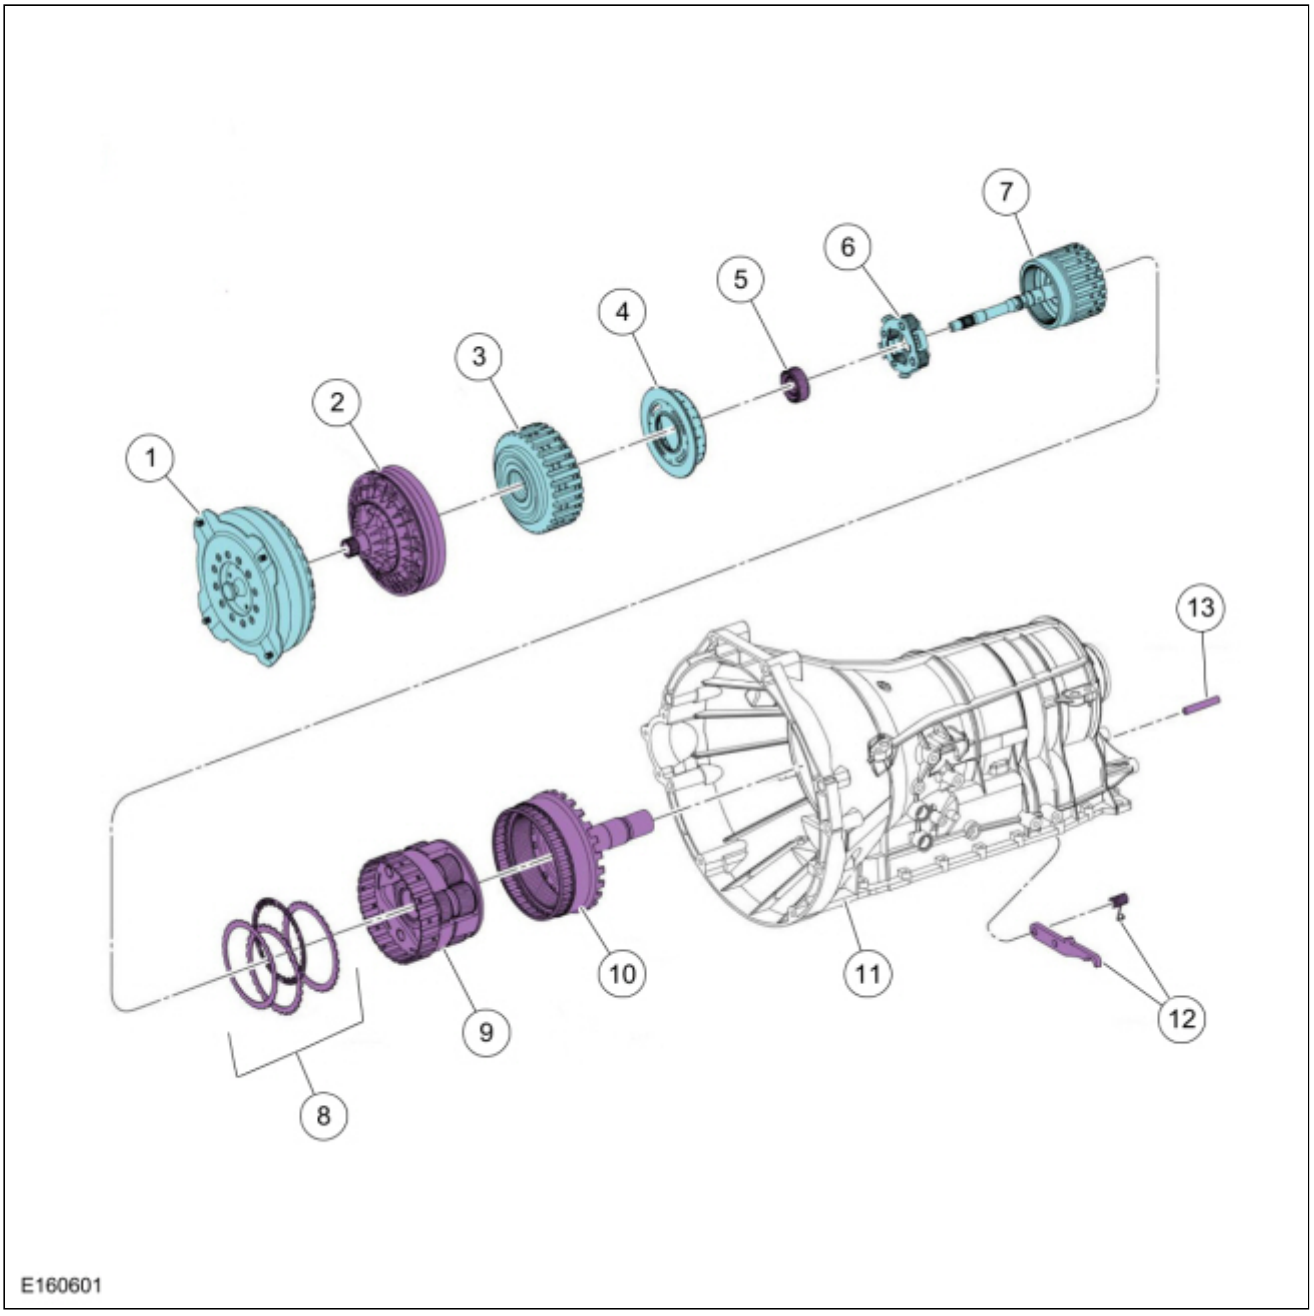
For information about planetary gearsets or the apply clutches, refer to Mechanical Components and Functions in this section.

Hydraulic System

The hydraulic operation of this transmission includes the following components:

- Main control (mechatronic) assembly
- Pump assembly with filter
- Torque converter
- Apply components (clutches)

For component information, refer to Hydraulic System in this section.



Electronic Operation

The TCM controls the operation of this transmission with the following solenoids:

- Line Pressure Control (LPC) solenoid
- Shift Solenoid A (SSA)
- Shift Solenoid B (SSB)
- Shift Solenoid C (SSC)
- Shift Solenoid D (SSD)
- Shift Solenoid E (SSE)
- TCC solenoid

For solenoid information, refer to Transmission Electronic Control System in this section.

Park Position

Mechanical Operation

Apply components:

- Park pawl engaged holding the park gear (output shaft) stationary
- Low/reverse clutch (D) applied

Planetary Gearset Operation

Front planetary gearset driving components:

- Ring gear (input shaft)

Front planetary gearset driven components:

- Planetary carrier

Front planetary gearset held components:

- Sun gear (splined to pump assembly)

Rear planetary gearset driving components:

- None

Rear planetary gearset driven components:

Park Position Power Flow

Hydraulic Operation

Line pressure hydraulic circuits:

- The position of the main regulator valve controls line pressure. The position of the main regulator valve is dependent on the pressure applied to it by the LPC solenoid through the VFS5 circuit.
- The main regulator valve varies pressure in the PUMP circuit by controlling hydraulic flow from the SCHG circuit into the pump suction circuit.
- Line pressure is supplied to the:
  - Manual valve.
  - Lubrication control valve.
  - Converter release regulator valve.
  - Bypass clutch control regulator valve.
  - Solenoid pressure regulator valve.
  - D1 latch and regulator valves.
- In reverse, the manual valve directs line pressure to the No. 1 shuttle valve and the solenoid multiplex valve through the REV circuit.
- The No. 1 shuttle ball directs line pressure to the clutch B regulator valve.

Torque converter circuits:

- When the TCC is released, the converter release regulator valve applies pressure to the torque converter through the CREL circuit to release the TCC.

- CREL pressure exits the torque converter through the CAPLY circuit to the bypass clutch control regulator valve.
- The bypass clutch control regulator valve directs the pressure from the CAPLY circuit back to the converter release regulator valve through the CAPLY EX circuit.
- The converter release regulator valve directs the pressure from the CAPLY EX circuit to the drain back valve through the DBACK circuit.

Cooler and lubrication hydraulic circuits:

- The lubrication control valve directs line pressure to the transmission fluid cooler or the thermal bypass valve through the COOLF circuit.
- When the transmission fluid exits the transmission fluid cooler or thermal bypass valve, it provides lubrication to the transmission through the LUBE circuit. For information about transmission lubrication, refer to Mechanical Components and Functions in this section.

Solenoid hydraulic circuits:

- The solenoid pressure regulator valve supplies regulated line pressure to the shift, LPC and TCC solenoid through the SREG hydraulic circuit.
- The LPC solenoid applies varying pressure to the main regulator valve through the VFS5 hydraulic circuit. The LPC solenoid regulates line pressure by controlling the position of the main regulator valve.
- SSD supplies pressure to the solenoid multiplex valve through the VFS4 circuit.
- The position of the solenoid multiplex valve allows pressure from the VFS4 circuit to be directed to the D1 and D2 latch and regulator valves throught the CLDC circuit to position the valves for low/reverse clutch (D) application.
- SSB supplies pressure to the clutch B regulator and latch valves to position the valves for direct clutch (B) application.

Clutch hydraulic circuits:

- Line pressure is supplied by the pump to the D1 latch and regulator valves.
- Regulated line pressure from the D1 regulator valve is supplied to the low/reverse clutch (D) to apply the clutch.
- Line pressure is supplied by the manual valve to the clutch B latch and regulator valves.
- Regulated line pressure from the clutch B regulator valve is supplied to the direct clutch (B) to apply the clutch.

For hydraulic circuit information, refer to Hydraulic Circuits in this section.

Reverse Position Power Flow

Hydraulic Operation

Line pressure hydraulic circuits:

- The position of the main regulator valve controls line pressure. The position of the main regulator valve is dependent on the pressure applied to it by the LPC solenoid through the VFS5 circuit.
- The main regulator valve varies pressure in the PUMP circuit by controlling hydraulic flow from the SCHG circuit into the pump suction circuit.
- Line pressure is supplied to the:
  - Manual valve.
  - Lubrication control valve.
  - Converter release regulator valve.
  - Bypass clutch control regulator valve.
  - Solenoid pressure regulator valve.
  - D1 and D2 latch and regulator valves.
- In reverse, the manual valve directs line pressure to the No. 1 shuttle valve and the solenoid multiplex valve through the REV circuit.
- The No. 1 shuttle ball directs line pressure to the clutch B regulator valve.

Torque converter circuits:

- When the TCC is released, the converter release regulator valve applies pressure to the torque converter through the CREL circuit to release the TCC.

- CREL pressure exits the torque converter through the CAPLY circuit to the bypass clutch control regulator valve.
- The bypass clutch control regulator valve directs the pressure from the CAPLY circuit back to the converter release regulator valve through the CAPLY EX circuit.
- The converter release regulator valve directs the pressure from the CAPLY EX circuit to the drain back valve through the DBACK circuit.

Cooler and lubrication hydraulic circuits:

- The lubrication control valve directs line pressure to the transmission fluid cooler or the thermal bypass valve through the COOLF circuit.
- When the transmission fluid exits the transmission fluid cooler or thermal bypass valve, it provides lubrication to the transmission through the LUBE circuit. For information about transmission lubrication, refer to Mechanical Components and Functions in this section.

Solenoid hydraulic circuits:

- The solenoid pressure regulator valve supplies regulated line pressure to the shift, LPC and TCC solenoids through the SREG hydraulic circuit.
- The LPC solenoid applies varying pressure to the main regulator valve through the VFS5 hydraulic circuit. The LPC solenoid regulates line pressure by controlling the position of the main regulator valve.
- SSD supplies pressure to the solenoid multiplex valve through the VFS4 circuit.
- The position of the solenoid multiplex valve allows pressure from the VFS4 circuit to be directed to the D1 and D2 latch and regulator valves through the CLDC circuit to position the valves for low/reverse clutch (D) application.
- SSB supplies pressure to the clutch B regulator and latch valves to position the valves for direct clutch (B) application.

Clutch hydraulic circuits:

- Line pressure is supplied by the pump to the D1 and D2 latch and regulator valves.
- Regulated line pressure from the D1 and D2 regulator valves is supplied to the low/reverse clutch (D) to apply the clutch.
- Line pressure is supplied by the manual valve to the clutch B latch and regulator valves.
- Regulated line pressure from the clutch B regulator valve is supplied to the direct clutch (B) to apply the clutch.

For hydraulic circuit information, refer to Hydraulic Circuits in this section.

Hydraulic Operation

Line pressure hydraulic circuits:

The position of the main regulator valve controls line pressure. The position of the main regulator valve is dependent on the pressure applied to it by the LPC solenoid through the VFS5 circuit.

The main regulator valve varies pressure in the PUMP circuit by controlling hydraulic flow from the SCHG circuit into the pump suction circuit.

Line pressure is supplied to the:

- Manual valve.
- Manual valve.
- Converter release regulator valve.
- Bypass clutch control regulator valve.
- Solenoid pressure regulator valve.
- D1 latch and regulator valves.

Torque converter circuits:

- When the TCC is released, the converter release regulator valve applies pressure to the torque converter through the CREL circuit to release the TCC.
- CREL pressure exits the torque converter through the CAPLY circuit to the bypass clutch control regulator valve.
- The bypass clutch control regulator valve directs the pressure from the CAPLY circuit back to the converter release regulator valve through the CAPLY EX circuit.
- The converter release regulator valve directs the pressure from the CAPLY EX circuit to the drain back valve

through the DBACK circuit.

Cooler and lubrication hydraulic circuits:

- The lubrication control valve directs line pressure to the transmission fluid cooler or the thermal bypass valve through the COOLF circuit.
- When the transmission fluid exits the transmission fluid cooler or thermal bypass valve, it provides lubrication to the transmission through the LUBE circuit. For information about transmission lubrication, refer to Mechanical Components and Functions in this section.

Solenoid hydraulic circuits:

- The solenoid pressure regulator valve supplies regulated line pressure to the shift, LPC and TCC solenoid through the SREG hydraulic circuit.
- LPC solenoid applies varying pressure to the main regulator valve through the VFS5 hydraulic circuit. LPC solenoid regulates line pressure by controlling the position of the main regulator valve.
- SSD supplies pressure to the solenoid multiplex valve through the VFS4 circuit.
- The position of the solenoid multiplex valve allows pressure from the VFS4 circuit to be directed to the D1 latch and regulator valves through the CL DC circuit to position the valves for low/reverse clutch (D) application.

Clutch hydraulic circuits:

- Line pressure is supplied by the pump to the D1 latch and regulator valves.
- Regulated line pressure from the D1 regulator valve is supplied to the low/reverse clutch (D) to apply the clutch.

For hydraulic circuit information, refer to Hydraulic Circuits in this section.

Power Flow

Hydraulic Operation

Line pressure hydraulic circuits:

- The position of the main regulator valve controls line pressure. The position of the main regulator valve is dependent on the pressure applied to it by the LPC solenoid through the VFS5 circuit.
- The main regulator valve varies pressure in the PUMP circuit by controlling hydraulic flow from the SCHG circuit into the pump suction circuit.
- Line pressure is supplied to the:
  - Manual valve.
  - Lubrication control valve.
  - Converter release regulator valve.
  - Bypass clutch control regulator valve.
  - Solenoid pressure regulator valve.
  - D1 latch and regulator valves.
- In drive, the manual valve directs line pressure to the No. 1 shuttle valve and clutch A, C and E regulator valves.
- The No. 1 shuttle ball directs line pressure to the clutch B regulator valve.

Torque converter circuits:

- When the TCC is released, the converter release regulator valve applies pressure to the torque converter through the CREL circuit to release the TCC.
- CREL pressure exits the torque converter through the CAPLY circuit to the bypass clutch control regulator valve.
- The bypass clutch control regulator valve directs the pressure from the CAPLY circuit back to the converter release regulator valve through the CAPLY EX circuit.

- The converter release regulator valve directs the pressure from the CAPLY EX circuit to the drain back valve through the DBACK circuit.

Cooler and lubrication hydraulic circuits:

- The lubrication control valve directs line pressure to the transmission fluid cooler or the thermal bypass valve through the COOLF circuit.
- When the transmission fluid exits the transmission fluid cooler or thermal bypass valve, it provides lubrication to the transmission through the LUBE circuit. For information about transmission lubrication, refer to Mechanical Components and Functions in this section.

Solenoid hydraulic circuits:

- The solenoid pressure regulator valve supplies regulated line pressure to the shift, LPC andTCC solenoid through the SREG hydraulic circuit.
- The LPC solenoid applies varying pressure to the main regulator valve through the VFS5 hydraulic circuit. The LPC solenoid regulates line pressure by controlling the position of the main regulator valve.
- Below 5 kph (3 mph), SSD supplies pressure to the solenoid multiplex valve through the VFS4 circuit. Above 5 kph (3 mph), amperage to SSD is increased to decrease pressure to the solenoid multiplex valve and clutch D1 regulator valve to release the low/reverse clutch (D).
- The position of the solenoid multiplex valve allows pressure from the VFS4 circuit to be directed to the D1 latch and regulator valves through the CLDC circuit to position the valves for low/reverse clutch (D) application.
- SSA supplies pressure to the clutch A regulator and latch valves to position the valves for forward clutch (A) application.

Clutch hydraulic circuits:

- Line pressure is supplied by the pump to the D1 latch and regulator valves.
- Below 5 kph (3 mph), regulated line pressure from the D1 regulator valve is supplied to the low/reverse clutch (D) to apply the clutch. Above 5 kph (3mph) the D1 regulator valve exhausts to release the low/ reverse clutch and the Low/OWC continues to hold the rear planetary carrier with no engine braking.
- Regulated line pressure from the clutch A regulator valve is supplied to the forward clutch (A) to apply the clutch.

For hydraulic circuit information, refer to Hydraulic Circuits in this section.

Power Flow

Hydraulic Operation

Line Pressure Hydraulic Circuits:

- The position of the main regulator valve controls line pressure. The position of the main regulator valve is dependent on the pressure applied to it by the LPC solenoid through the VFS5 circuit.
- The main regulator valve varies pressure in the PUMP circuit by controlling hydraulic flow from the SCHG circuit into the pump suction circuit.
- Line pressure is supplied to the:
  - Manual valve.
  - Lubrication control valve.
  - Converter release regulator valve.
  - Bypass clutch control regulator valve.
  - Solenoid pressure regulator valve.
  - D1 latch and regulator valves.
- In drive, the manual valve directs line pressure to the No. 1 shuttle valve and clutch A, C and E regulator valves.
- The No. 1 shuttle ball directs line pressure to the clutch B regulator valve.

Torque converter circuits:

- When the TCC is released, the converter release regulator valve applies pressure to the torque converter through the CREL circuit to release the TCC.
- CREL pressure exits the torque converter through the CAPLY circuit to the bypass clutch control regulator valve.
- The bypass clutch control regulator valve directs the pressure from the CAPLY circuit back to the converter release regulator valve through the CAPLY EX circuit.
- The converter release regulator valve directs the pressure from the CAPLY EX circuit to the drain back valve through the DBACK circuit.

Cooler and lubrication hydraulic circuits:

- The lubrication control valve directs line pressure to the transmission fluid cooler or the thermal bypass valve through the COOLF circuit.
- When the transmission fluid exits the transmission fluid cooler or thermal bypass valve, it provides lubrication to the transmission through the LUBE circuit. For information about transmission lubrication, refer to Mechanical Components and Functions in this section.

Solenoid hydraulic circuits:

- The solenoid pressure regulator valve supplies regulated line pressure to the shift, LPC and TCC solenoid through the SREG hydraulic circuit.
- The LPC solenoid applies varying pressure to the main regulator valve through the VFS5 hydraulic circuit. The LPC solenoid regulates line pressure by controlling the position of the main regulator valve.
- SSA supplies pressure to the clutch A regulator and latch valves to position the valves for forward clutch (A) application.
- SSC supplies pressure to the clutch C regulator valve to position the valve for intermediate clutch (C) application.

Clutch hydraulic circuits:

- Regulated line pressure from the clutch A regulator valve is supplied to the forward clutch (A) to apply the clutch.
- Regulated line pressure from the clutch C regulator valve is supplied to the intermediate clutch (C) to apply the clutch.

For hydraulic circuit information, refer to Hydraulic Circuits in this section.

Power Flow

Hydraulic Operation

Line pressure hydraulic circuits:

- The position of the main regulator valve controls line pressure. The position of the main regulator valve is dependent on the pressure applied to it by the LPC solenoid through the VFS5 circuit.
- The main regulator valve varies pressure in the PUMP circuit by controlling hydraulic flow from the SCHG circuit into the pump suction circuit.

- Line pressure is supplied to the:
  - Manual valve.
  - Lubrication control valve.
  - Converter release regulator valve.
  - Bypass clutch control regulator valve.
  - Solenoid pressure regulator valve.
  - D1 latch and regulator valves.
- In drive, the manual valve directs line pressure to the No. 1 shuttle valve and clutch A, C and E regulator valves.
- The No. 1 shuttle ball directs line pressure to the clutch B regulator valve.

Torque converter circuits:

- When the TCC is released, the converter release regulator valve applies pressure to the torque converter

through the CREL circuit to release the TCC.
    - CREL pressure exits the torque converter through the CAPLY circuit to the bypass clutch control regulator valve.
- The bypass clutch control regulator valve directs the pressure from the CAPLY circuit back to the converter release regulator valve through the CAPLY EX circuit.
- The converter release regulator valve directs the pressure from the CAPLY EX circuit to the drain back valve through the DBACK circuit.

Cooler and lubrication hydraulic circuits:

- The lubrication control valve directs line pressure to the transmission fluid cooler or the thermal bypass valve through the COOLF circuit.
- When the transmission fluid exits the transmission fluid cooler or thermal bypass valve, it provides lubrication to the transmission through the LUBE circuit. For information about transmission lubrication, refer to Mechanical Components and Functions in this section.

Solenoid hydraulic circuits:

- The solenoid pressure regulator valve supplies regulated line pressure to the shift, LPC and TCC solenoid through the SREG hydraulic circuit.
- The LPC solenoid applies varying pressure to the main regulator valve through the VFS5 hydraulic circuit. The LPC solenoid regulates line pressure by controlling the position of the main regulator valve.
- SSA supplies pressure to the clutch A regulator and latch valves to position the valves for forward clutch (A) application.
- SSB supplies pressure to the clutch B regulator valve to position the valve for direct clutch (B) application.

Clutch hydraulic circuits:

- Regulated line pressure from the clutch A regulator valve is supplied to the forward clutch (A) to apply the clutch.
- Regulated line pressure from the clutch B regulator valve is supplied to the direct clutch (B) to apply the clutch.

For hydraulic circuit information, refer to Hydraulic Circuits in this section.

Power Flow

Hydraulic Operation

Line pressure hydraulic circuits:

- The position of the main regulator valve controls line pressure. The position of the main regulator valve is dependent on the pressure applied to it by the LPC solenoid through the VFS5 circuit.
- The main regulator valve varies pressure in the PUMP circuit by controlling hydraulic flow from the SCHG circuit into the pump suction circuit.

- Line pressure is supplied to the:
  - Manual valve.
  - Lubrication control valve
  - Converter release regulator valve.
  - Bypass clutch control regulator valve.
  - Solenoid pressure regulator valve.
  - D1 latch and regulator valves.

- In drive, the manual valve directs line pressure to the No. 1 shuttle valve and clutch A, C and E regulator valves.
- The No. 1 shuttle ball directs line pressure to the clutch B regulator valve.

Torque converter circuits:

- When the TCC is released, the converter release regulator valve applies pressure to the torque converter through the CREL circuit to release the TCC.
- CREL pressure exits the torque converter through the CAPLY circuit to the bypass clutch control regulator valve.
- The bypass clutch control regulator valve directs the pressure from the CAPLY circuit back to the converter release regulator valve through the CAPLY EX circuit.
- The converter release regulator valve directs the pressure from the CAPLY EX circuit to the drain back valve through the DBACK circuit.

Cooler and lubrication hydraulic circuits:

- The lubrication control valve directs line pressure to the transmission fluid cooler or the thermal bypass valve through the COOLF circuit.
- When the transmission fluid exits the transmission fluid cooler or thermal bypass valve, it provides lubrication to the transmission through the LUBE circuit. For information about transmission lubrication, refer to Mechanical Components and Functions in this section.

Solenoid hydraulic circuits:

- The solenoid pressure regulator valve supplies regulated line pressure to the shift, LPC and TCC solenoid through the SREG hydraulic circuit.
- The LPC applies varying pressure to the main regulator valve through the VFS5 hydraulic circuit. The LPC solenoid regulates line pressure by controlling the position of the main regulator valve.
- SSA supplies pressure to the clutch A regulator and latch valves to position the valves for forward clutch (A) application.
- SSD supplies pressure to the solenoid multiplex valve through the VFS4 circuit.
- SSE supplies pressure to the solenoid multiplex valve and the drive enable valve through the SS1 circuit to move the valves.
- The position of the solenoid multiplex valve and the drive enable valve allows pressure from the VFS4 circuit to be directed to the clutch E latch and regulator valves through the CLEC circuit to position the valves for overdrive clutch (E) application.

Clutch hydraulic circuits:

- Regulated line pressure from the clutch A regulator valve is supplied to the forward clutch (A) to apply the clutch.
- Regulated line pressure from the clutch E regulator valve is supplied to the overdrive clutch (E) to apply the clutch.

For hydraulic circuit information, refer to Hydraulic Circuits in this section.

Power Flow

Hydraulic Operation

Line pressure hydraulic circuits:

The position of the main regulator valve controls line pressure. The position of the main regulator valve is dependent on the pressure applied to it by the LPC solenoid through the VFS5 circuit.

The main regulator valve varies pressure in the PUMP circuit by controlling hydraulic flow from the SCHG circuit into the pump suction circuit.

- Line pressure is supplied to the:
  - Manual valve.
  - Lubrication control valve.
  - Converter release regulator valve.
  - Bypass clutch control regulator valve.
  - Solenoid pressure regulator valve.
  - D1 latch and regulator valves.

- In drive, the manual valve directs line pressure to the No. 1 shuttle valve and clutch A, C and E regulator valves.
- The No. 1 shuttle ball directs line pressure to the clutch B regulator valve.

Torque converter circuits:

- When the TCC is released, the converter release regulator valve applies pressure to the torque converter through the CREL circuit to release the TCC.

- CREL pressure exits the torque converter through the CAPLY circuit to the bypass clutch control regulator valve.
- The bypass clutch control regulator valve directs the pressure from the CAPLY circuit back to the converter release regulator valve through the CAPLY EX circuit.
- The converter release regulator valve directs the pressure from the CAPLY EX circuit to the drain back valve through the DBACK circuit.

Cooler and lubrication hydraulic circuits:

- The lubrication control valve directs line pressure to the transmission fluid cooler or the thermal bypass valve through the COOLF circuit.
- When the transmission fluid exits the transmission fluid cooler or thermal bypass valve, it provides lubrication to the transmission through the LUBE circuit. For information about transmission lubrication, refer to Mechanical Components and Functions in this section.

Solenoid hydraulic circuits:

- The solenoid pressure regulator valve supplies regulated line pressure to the shift, LPC and TCC solenoid through the SREG hydraulic circuit.

- The PCA applies varying pressure to the main regulator valve through the VFS5 hydraulic circuit. LPC solenoid regulates line pressure by controlling
- The position of the main regulator valve.
- SSB supplies pressure to the clutch B regulator valve to position the valve for direct clutch (B) application.
- SSD supplies pressure to the solenoid multiplex valve through the VFS4 circuit.
- SSE supplies pressure to the solenoid multiplex valve and the drive enable valve through the SS1 circuit to move the valves.
- The position of the solenoid multiplex valve and the drive enable valve allows pressure from the VFS4 circuit to be directed to the clutch E latch and regulator valves through the CLEC circuit to position the valves for overdrive clutch (E) application.

Clutch hydraulic circuits:

- Regulated line pressure from the clutch B regulator valve is supplied to the direct clutch (B) to apply the clutch.
- Regulated line pressure from the clutch E regulator valve is supplied to the overdrive clutch (E) to apply the clutch.

For hydraulic circuit information, refer to Hydraulic Circuits in this section.

Power Flow

Hydraulic Operation

Line pressure hydraulic circuits:

- The position of the main regulator valve controls line pressure. The position of the main regulator valve is dependent on the pressure applied to it by the LPC solenoid through the VFS5 circuit.
- The main regulator valve varies pressure in the PUMP circuit by controlling hydraulic flow from the SCHG circuit into the pump suction circuit.
- Line pressure is supplied to the:
  - Manual valve.
  - Lubrication control valve.
  - Converter release regulator valve.
  - Bypass clutch control regulator valve.
  - Solenoid pressure regulator valve.
  - D1 latch and regulator valves.
- In drive, the manual valve directs line pressure to the No. 1 shuttle valve and clutch A, C and E regulator valves
- The No. 1 shuttle ball directs line pressure to the clutch B regulator valve.

Torque converter circuits:

- When the TCC is applied, the bypass clutch control regulator valve applies pressure to the torque converter through the CAPLY circuit to apply the TCC.

- CAPLY pressure exits the torque converter through the CREL circuit to the converter release regulator valve.

Cooler and lubrication hydraulic circuits:

- The lubrication control valve directs line pressure to the transmission fluid cooler or the thermal bypass valve through the COOLF circuit.
- When the transmission fluid exits the transmission fluid cooler or thermal bypass valve, it provides lubrication to the transmission through the LUBE circuit.

For information about transmission lubrication, refer to Mechanical Components and Functions in this section.

Solenoid hydraulic circuits:

- The solenoid pressure regulator valve supplies regulated line pressure to the shift, LPC and TCC solenoids through the SREG hydraulic circuit.
- The LPC solenoid applies varying pressure to the main regulator valve through the VFS5 hydraulic circuit. The LPC solenoid regulates line pressure by controlling the position of the main regulator valve.
- The TCC solenoid supplies pressure to the converter release regulator valve and the bypass clutch control regulator valve to move the position of the valves for TCC application.
- SSC supplies pressure to the clutch C regulator valve to position the valve for intermediate clutch (C) application.
- SSD supplies pressure to the solenoid multiplex valve through the VFS4 circuit.
- SSE supplies pressure to the solenoid multiplex valve and the drive enable valve through the SS1 circuit to move the valves.
- The position of the solenoid multiplex valve and the drive enable valve allows pressure from the VFS4 circuit to be directed to the clutch E latch and regulator valves through the CLEC circuit to position the valves for overdrive clutch (E) application.

Clutch hydraulic circuits:

- Regulated line pressure from the clutch C regulator valve is supplied to the intermediate clutch (C) to apply the clutch.
- Regulated line pressure from the clutch E regulator valve is supplied to the overdrive clutch (E) to apply the clutch.
- For hydraulic circuit information, refer to Hydraulic Circuits in this section.

Power Flow

Hydraulic Operation

Line pressure hydraulic circuits:

- The position of the main regulator valve controls line pressure. The position of the main regulator valve is dependent on the pressure applied to it by the LPC solenoid through the VFS5 circuit.
- The main regulator valve varies pressure in the PUMP circuit by controlling hydraulic flow from the SCHG circuit into the pump suction circuit.

- Line pressure is supplied to the:
  - Manual valve.
  - Lubrication control valve.
  - Converter release regulator valve.
  - Bypass clutch control regulator valve.
  - Solenoid pressure regulator valve.
  - D1 latch and regulator valves.
- In drive, the manual valve directs line pressure to the No. 1 shuttle valve and clutch A, C and E regulator valves.
- The No. 1 shuttle ball directs line pressure to the clutch B regulator valve.

Torque converter circuits:

- When the TCC is released, the converter release regulator valve applies pressure to the torque converter through the CREL circuit to release the TCC.
- CREL pressure exits the torque converter through the CAPLY circuit to the bypass clutch control regulator valve.
- The bypass clutch control regulator valve directs the pressure from the CAPLY circuit back to the converter release regulator valve through the CAPLY EX circuit.
- The converter release regulator valve directs the pressure from the CAPLY EX circuit to the drain back valve through the DBACK circuit.

Cooler and lubrication hydraulic circuits:

- The lubrication control valve directs line pressure to the transmission fluid cooler or the thermal bypass valve through the COOLF circuit.
- When the transmission fluid exits the transmission fluid cooler or thermal bypass valve, it provides lubrication to the transmission through the LUBE circuit. For information about transmission lubrication, refer to Mechanical Components and Functions in this section.

Solenoid hydraulic circuits:

- The solenoid pressure regulator valve supplies line pressure to the shift, LPC and TCC solenoid through the SREG hydraulic circuit.
- The LPC solenoid applies full solenoid output pressure to the main regulator valve through the VFS5 hydraulic circuit. With full solenoid output pressure, the main regulator valve provides maximum line pressure during fail safe.
- SSB supplies maximum solenoid output pressure to the clutch B regulator valve to position the valve for direct clutch (B) application.

Clutch hydraulic circuits:

- Regulated line pressure from the clutch B regulator valve is supplied to the direct clutch (B) to, apply the clutch. Regulated line pressure from the clutch B regulator valve is also supplied to the clutch A latch valve from the clutch B latch valve through the BREV 5F circuit.
- The clutch A latch valve directs the regulated line pressure to the drive enable valve through the BREV5 circuit.
- The drive enable valve directs the BREV5 pressure to the BREVA circuit which supplies the clutch A regulator valve to position the valve to apply the forward clutch (A) with 81% of line pressure.

For hydraulic circuit information, refer to Hydraulic Circuits in this section.

Electrical Operation

Solenoid operation: In failsafe, voltage is removed from all solenoids and the solenoids default to their normal position. If a solenoid is a normally low (NL)solenoid, the solenoid will not supply pressure to the regulator valve, releasing the clutch that it controls. If a solenoid is a normally high (NH) solenoid, the solenoid will provide high pressure to the regulator valve, applying the clutch that it controls.

Diagnostic Strategy

Diagnostic Strategy

Troubleshooting an electronically controlled automatic transmission is simplified by using the proven method of diagnosis. One of the most important things to remember is that there is a definite procedure to follow.

NOTE: *Do not take short cuts or assume that critical checks or adjustments have already been made.*

Follow the procedures as written to avoid missing critical components or steps.

To correctly diagnose a concern, have the following publications available:

- Powertrain Control/Emissions Diagnosis (PC/ED) manual
- On-Line Automotive Service Information System (OASIS)
- TSBs
- Wiring Diagrams manual

These publications provide the information required when diagnosing transmission concerns.

Use the Diagnostic Flow Chart as a guide and follow the steps as indicated.

Preliminary Inspection

1. Know and understand the customer concern.
2. Verify the concern by operating the vehicle.
3. Check the transmission fluid level and condition.
4. ICheck for non-factory add-on items.
5. Check selector lever cable for correct adjustment.
6. Check TSBs regarding the concern.

Diagnostics

1. Carry out On-Board Diagnostic (OBD) procedures, Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER).
2. Record all DTCs.
3. Repair all non-transmission codes first.
4. Repair all transmission codes second.
5. Clear all continuous codes and attempt to repeat them.
6. Repair all continuous codes.
7. If only pass codes are obtained, refer to Diagnosis By Symptom in this section for additional information and diagnosis.

Follow the diagnostic sequence to diagnose and repair the concern the first time.

Copyright © 2016 Ford Motor Company

Preliminary Inspection

General Equipment

Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool.

Material

Item	Specification
Motorcraft® MERCON® LV Automatic Transmission Fluid XT-10-QLV	MERCON® LV

Check the following items prior to beginning the diagnostic procedure.

Know and Understand the Concern

To correctly diagnose a concern, first understand the customer concern or condition. Customer contact may be required to understand the conditions, including when the concern occurs. For example:

- Hot or cold vehicle temperature
- Hot or cold ambient temperature
- Vehicle driving conditions
- Vehicle loaded/unloaded

After understanding when and how the concern occurs, proceed to Verification of Condition.

Verification of Condition

This section provides information that must be used in both determining the actual cause of customer concerns and carrying out the appropriate procedures.

Use following procedures when verifying customer concerns for the transmission.

Determine Customer Concern

Determine customer concerns relative to vehicle use and dependent driving conditions, paying attention to the following items:

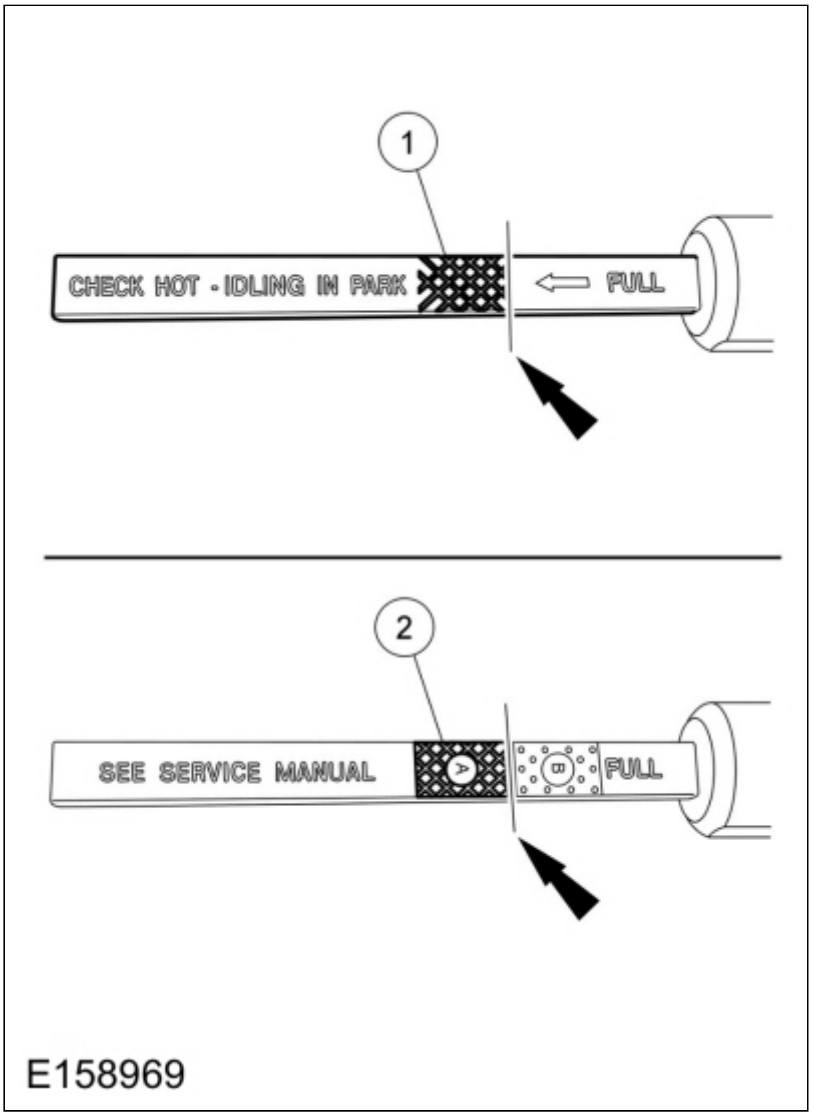
- Hot or cold vehicle operating temperature
- Hot or cold ambient temperature
- Type of terrain
- Vehicle loaded/unloaded
- City/highway driving
- Upshifting
- Downshifting
- Coasting
- Engagement
- Noise/vibration - check for engine rpm, vehicle speed, shift, gear, range or temperature dependencies.

Check Transmission Fluid Level and Condition

Transmission Fluid Level Check

NOTE: *The vehicle should not be driven if the transmission fluid level is low as internal transmission failure could result.*

NOTE: *The transmission fluid fill plug is located near the exhaust system. The exhaust will be extremely hot during this procedure.*



NOTE: *If the vehicle has been operated for an extended period at high highway speeds, in city traffic, during hot*

weather or while pulling a trailer, the transmission fluid must cool down to obtain an accurate reading.

NOTE: *If the transmission starts to slip, shifts slowly or shows signs of transmission fluid leaking, the transmission fluid level should be checked.*

This transmission is equipped with an internal thermal bypass located in the case. This internal thermal bypass valve will shut off transmission fluid flowing to the transmission fluid cooler if the transmission fluid temperature falls below normal operating temperature. Refer to Transmission Fluid Level Check in this section.

The transmission can have 2 types of transmission fluid level, a crosshatched (labeled A) area and a dotted (labelled B) area. Use the dotted (labeled B) area when checking the transmission fluid level. The correct transmission fluid level is at the upper level of the crosshatch marks on the transmission fluid level indicator.

Item	Description
1	Original transmission fluid level indicator
2	Replacement transmission fluid level indicator

High Transmission Fluid Level

NOTE: *Transmission fluid level that is too high can cause the transmission fluid to become aerated due to the churning action of the rotating internal parts. This will cause erratic control pressure, foaming, loss of transmission fluid through the vent tube and possible transmission failure.*

If an overfill reading is indicated, remove any excessive transmission fluid. Refer to Transmission Fluid Level Check in this section.

Low Transmission Fluid Level

Low transmission fluid level can result in poor transmission engagement, slipping or failure. This may also indicate a leak in one of the transmission seals or gaskets.

Adding Transmission Fluid

NOTE: *The use of any type of transmission fluid other than specified can result in transmission failure.*

NOTE: *The transmission fluid fill plug is located near the exhaust system. The exhaust will be extremely hot during this procedure.*

NOTE: *The vehicle should not be driven if the transmission fluid level is low as internal failure could result.*

Add transmission fluid using the refill procedure. Refer to Transmission Fluid Drain and Refill in this section.

Transmission Fluid Condition Check

1. Check the transmission fluid level.
2. Remove the transmission fluid fill plug and transmission fluid level indicator allowing the transmission fluid to drip onto a facial tissue and examine the stain.
3. Observe the colour and the odour.
4. If evidence of solid material is found, remove the transmission fluid pan for further inspection.
5. If the stain is a foamy pink colour, this may indicate coolant in the transmission. Inspect the engine cooling system at this time.
6. If transmission fluid contamination or transmission failure is confirmed by the sediment in the bottom of the transmission fluid pan, disassemble and completely clean the transmission. This includes the torque converter and transmission fluid cooler tubes. Install a new auxiliary transmission fluid cooler.

Water in Transmission Fluid

To correctly repair an automatic transmission that had water or coolant introduced into the system, completely disassemble, clean and replace the following parts:

- All internal and external seals
- All friction material
- Torque converter
- All parts with bonded seals
- All solenoids
- All transmission fluid filters

Prior to installing the transmission, the transmission fluid cooler(s), transmission fluid cooler tubes and hoses need to be flushed and cleaned.

Copyright © 2016 Ford Motor Company

Visual Inspection

A visual inspection will identify modifications or additions to the vehicle operating system that may affect diagnosis. Inspect the vehicle for non-Ford factory add-on devices such as:

- Electronic add-on items:
- Vehicle modification:

PCM or transmission function is affected if add on devices, wiring splices, abnormal tire size or axle ratio changes are made.

- If leaks are present; refer to Leakage Inspection in this section.
- Correct selector lever adjustments; refer to Section 307-05.

Selector Lever Check

Check for mis-adjustment in the selector lever by matching the detents in the selector lever with those of the manual control lever in the transmission. Refer to Section 307-01B for selector lever cable adjustment.

Hydraulic leakage at the manual control valve can cause delay in engagements and/or slipping while operating if the linkage is not correctly adjusted. Refer to Section 307-01B for selector lever cable adjustment.

Check TSBs and On-Line Automotive Service Information System (OASIS)

Refer to all TSB and On-Line Automotive Service Information System (OASIS) messages that pertain to the transmission concern and follow the procedure as described.

Carry Out On-Board Diagnostic (OBD) Key ON Engine OFF (KOEO), Key ON Engine Running (KOER)

After a road test, with the engine and transmission warm and before disconnecting any connectors, use the scan tool and perform a self-test.

Copyright © 2016 Ford Motor Company

Shift Point Road Test

General Equipment

Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool.

NOTE: *Always drive the vehicle in a safe manner according to driving condition and obey all the traffic laws.*

This test verifies that the shift control system is operating correctly.

1. Bring engine and transmission up to normal operating temperature.
2. Operate vehicle with the selector lever in (D) position.
3. Apply minimum throttle and observe speeds at which upshift occurs and the torque converter engages. Refer to the Shift Speeds chart in this section.
4. With the transmission in (D), move the selector lever into the manual 3 position. The transmission should downshift to 4th gear. Release the accelerator pedal; engine braking should occur.
5. Press the accelerator pedal to floor, Wide Open Throttle (WOT). Transmission should shift from 4th to 3rd, depending on vehicle speed. The Torque Converter should disengage and then reapply.
6. With the transmission in (D) position and speed above 80 km/h (50 mph) and less than half throttle, move the selector lever from (D) position to manual 2 position and release the accelerator pedal. The transmission should downshift into 2nd gear. With the transmission remaining in the manual 2 position, move the selector lever into the manual 1 position and release the accelerator pedal. The transmission should downshift into 1st gear at speeds below approximately 45-56 km/h (28-35 mph).
7. If the transmission fails to upshift/downshift or the torque converter does not apply and release, refer to Diagnosis By Symptom in this section.

Shift Speeds

NOTE: *Shift speed ranges are approximate for all applications. For specific applications (engine, axle ratio, tire size and application), refer to the Automatic Transmission Specification booklet. Always drive the vehicle in a safe manner according to driving conditions and obey all traffic laws.*

Throttle Position	Shift	Km/H
Light Throttle Position (APP1 ~ 20%)	1-2	13-21
	2-3	30-38
	3-4	51-59
	4-5	57-65
	5-6	79-87
Closed Throttle	6-5	72-80
	5-4	52-60
	4-3	38-46
	3-2	12-18
	2-1	6-10
Wide Open Throttle (APP1 ~100%)	1-2	33-41
	2-3	62-70
	3-4	104-112

Road Test — Adaptive Drive Cycle

This test verifies the shift control system is operating correctly.

NOTE: *Always drive the vehicle in a safe manner according to driving conditions and obey all traffic laws.*

1. Connect the scan tool to the Data Link Connector (DLC).

NOTE: *Disconnecting the battery will not clear the Keep Alive Memory (KAM).*

NOTE: *Do not clear the PCM KAM.*

2. Using the scan tool, clear the adaptive table before conducting an adaptive drive cycle test.

3. Verify that the transmission fluid is at normal operating temperature, between 91°C-102°C (195°F-215°F). If the transmission fluid is not at operating temperature, drive the vehicle until the operating temperature is reached

NOTE: *The transmission fluid must be at operating temperature before proceeding to this step.*

NOTE: *Drive the vehicle on a level road surface performing the adaptive drive cycle.*

4. Drive the vehicle on a level road surface performing the adaptive drive cycle.
    1. Accelerate from a stop with light throttle to 24 km/h (15 mph) then release the accelerator pedal.
    2. Gently brake and bring the vehicle to a stop and hold the brake for 6 seconds.
    3. Repeat substeps 1 and 2 an additional 5 times.
    4. Accelerate from a stop with light throttle so the 1-2, 2-3 and 3-4 shifts occur with engine rpm between 1,700-2,000.
    5. Continue accelerating until the vehicle speed reaches 80 km/h (50 mph) or the 5-6 upshift is reached
    6. Gently brake and bring the vehicle to a stop and hold the brake for 10 seconds.
    7. Repeat substeps 4, 5 and 6 an additional 3 times.

Copyright © 2016 Ford Motor Company

Transmission Drive Cycle Test

General Equipment

Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool.

Material

Item	Specification
Motorcraft® MERCON® LV Automatic Transmission Fluid XT-10-QLV	MERCON® LV

NOTE: *Always drive the vehicle in a safe manner according to driving conditions and obey all traffic laws.*

NOTE: *The Transmission Drive Cycle Test must be followed exactly. Malfunctions must occur 4 times consecutively for a shift error DTC to set, and 5 times consecutively for continuous Torque Converter Clutch (TCC) DTCs to set.*

NOTE: *Refer to the Solenoid Application Chart for solenoid operation while performing the Transmission Drive Cycle Test.*

After performing the self-test, follow the transmission drive cycle test for checking codes.

1. Record then clear the DTCs.
2. Warm the engine to normal operating temperature.
3. Make sure the transmission fluid level is correct.
4. With the selector lever in D, moderately accelerate from stop to 80 km/h (50 mph) allowing the transmission to shift into 6th gear. Keep vehicle speed and throttle steady for a minimum of 15 seconds.
5. With the transmission in 6th gear and maintaining steady speed and throttle, lightly apply and release the brake to operate the stop lamps. Then, hold vehicle speed and throttle steady for a minimum of 5 seconds.
6. Brake to a stop and remain stopped for a minimum of 20 seconds.
7. Repeat steps 4 through 6 at least 5 times.
8. Perform a self-test and record DTCs.
    1. If DTCs are present, refer to the DTC Chart. Repair all non-transmission DTCs first as they can directly affect the operation of the transmission. Repeat the self-test and the road test to verify the correction. Clear the DTCs. Perform the transmission drive cycle test and repeat the self-test after completing the repair
    2. If the tests pass and a concern is present, refer to Diagnosis By Symptom in this section, OASIS messages and TSBs for concerns.

After On-Board Diagnostic (OBD)

NOTE: *The vehicle wiring harness, PCM and nontransmission sensors may affect transmission operations. Repair these concerns first.*

Repair all DTCs after the On-Board Diagnostic (OBD) test procedures are completed.

Begin with non-transmission related DTCs, then repair transmission related DTCs. Use the DTC Chart for information on condition and symptoms. This chart will be helpful in referring to the correct manual(s) and aids in diagnosing internal transmission concerns and external non-transmission inputs. The pinpoint tests are used in diagnosing transmission electrical concerns. Diagnosis the vehicle wiring harness and the PCM as well. The Powertrain Control/ Emissions Diagnosis (PC/ED) manual aids in diagnosing non-transmission electronic components.

Copyright © 2016 Ford Motor Company

Diagnostics

General Equipment

Fluke 77-IV Digital Multimeter or equivalent
Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Diagnosing an electronically controlled automatic transmission is simplified by using the following procedures. The most important things to remember is there is a definite procedure to follow. Do not take shortcuts or assume that critical checks or adjustments have already been made. Follow the procedures as written to avoid missing critical components or steps. By following the diagnostic sequence, the technician will be able to diagnose and repair the concern the first time.

On-Board Diagnostic (OBD) with Scan Tool

These self-tests should be used to diagnose the PCM and should be carried out in order.

NOTE: *Make sure the latest software version is loaded on the scan tool.*

1. If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).

NOTE: *The Vehicle Communication Module (VCM) LED prove-out confirms power and ground from the DLC to the VCM.*

2. If the scan tool does not communicate with the VCM:

- Check the VCM connection to the vehicle.
- Check the scan tool connection to the VCM.
- No power to the scan tool.

3. If the scan tool does not communicate with the vehicle:

- Verify the ignition is in the RUN position.
- Verify scan tool operation with a known good vehicle.
- The PCM does not respond to the scan tool.

4. Carry out the network test:

- If the scan tool responds with no communication from one or more modules, No High Speed Controller Area Network (CAN) communication, all modules are not responding.
- If the network test passes, retrieve and record the continuous memory DTCs.

5. Clear the continuous DTCs and carry out the PCM self-test.

6. If DTCs retrieved are related to the concern, GO to the DTC Chart.

7. If no DTCs related to the concern are retrieved, Refer to Diagnosis By Symptom in this section.

Copyright © 2016 Ford Motor Company

Torque Converter Diagnosis

General Equipment

Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

NOTE: *If the torque converter is replaced, use the scan tool and follow the on-screen instructions and perform the Misfire Monitor Neutral Profile Correction procedure.*

Perform all diagnostic procedures prior to torque converter installation. This prevents the unnecessary installation of new or remanufactured torque converters. Only after a complete diagnostic evaluation can the decision be made to install a new torque converter.

Torque Converter Operation Test

NOTE: *Always drive the vehicle in a safe manner according to driving conditions and obey all traffic laws.*

The Torque Converter Operation Test verifies that the Torque Converter Clutch (TCC) control system and the torque converter are operating correctly.

1. Connect a scan tool to the vehicle.
2. Perform a self-test and check for DTCs.
3. Bring the engine to normal operating temperature by driving the vehicle at highway speeds in the (D) position.
4. After normal operating temperature is reached, maintain a constant speed of about 56 km/h (35 mph) in 5th gear for 10 seconds.
5. Release the accelerator pedal and monitor the scan tool TP1 PID voltage to approximately 1.25 volts or 25% throttle.
6. Monitor the TCC_OSC# and RPM# PID. The torque converter should release and engine rpm should increase before the 5-4 shift occurs.

Copyright © 2016 Ford Motor Company

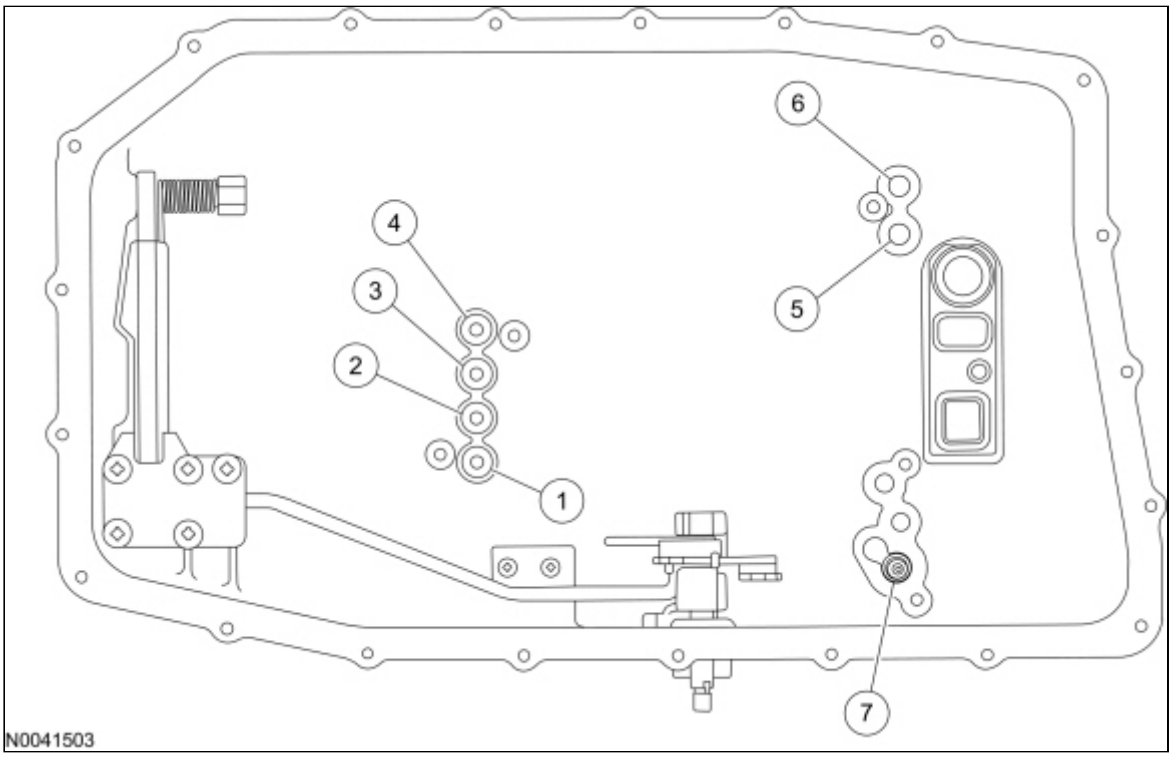
Output State Control (OSC) Mode

On-Board Diagnostic (OBD)

Output state control allows the technician to take control of certain parameters to function the transmission

Output state control allows the technician to shift the transmission when commanding a gear change.

Another example of the output state control features is, the technician can command the torque converter ON or OFF to check operation.



This transmission output state control has one mode of operation; DRIVE. This mode has a unique set of operating requirements that the technician must meet before allowed to operate the torque converter or select gears.

Copyright © 2016 Ford Motor Company

Special Testing Procedures

The special tests are designed to aid the technician in diagnosing the hydraulic and mechanical portions of the transmission.

Air Pressure Test

Item	Description
1	Intermediate clutch (C) port
2	Low/reverse clutch (D1) port
3	Not used
4	Direct clutch (B) port
5	Overdrive clutch (E) port
6	Forward clutch (A) port
7	Cooler bypass valve

A no-drive condition can exist with correct transmission fluid pressure because of inoperative clutches. Refer to the Clutch Application Chart to determine the appropriate elements. A clutch concern can be located through a series of checks by substituting air pressure for fluid pressure to determine the location of the concern.

Example: When the selector lever is in a forward gear range, a no-drive condition may be caused by an inoperative clutch.

1. Drain the transmission fluid. Remove the transmission fluid pan.
2. Remove the transmission fluid filter, seal assembly and mechatronic unit.
3. Locate the inoperative clutches by applying air pressure into the appropriate clutch port.
4. Apply air pressure to the appropriate clutch port. A dull thud may be heard or movement felt when a clutch piston is applied. If the clutch seals or check ball are leaking, a hissing sound may be heard.

5. If the clutches fail to operate during the air check:

- The piston seals are not seated, damaged or installed incorrectly.
- Plugged feed holes for clutch apply in the case and/or clutch cylinder.
- Damaged piston and/or clutch cylinder.

6. Service as required and recheck.

Copyright © 2016 Ford Motor Company

Solenoid Body

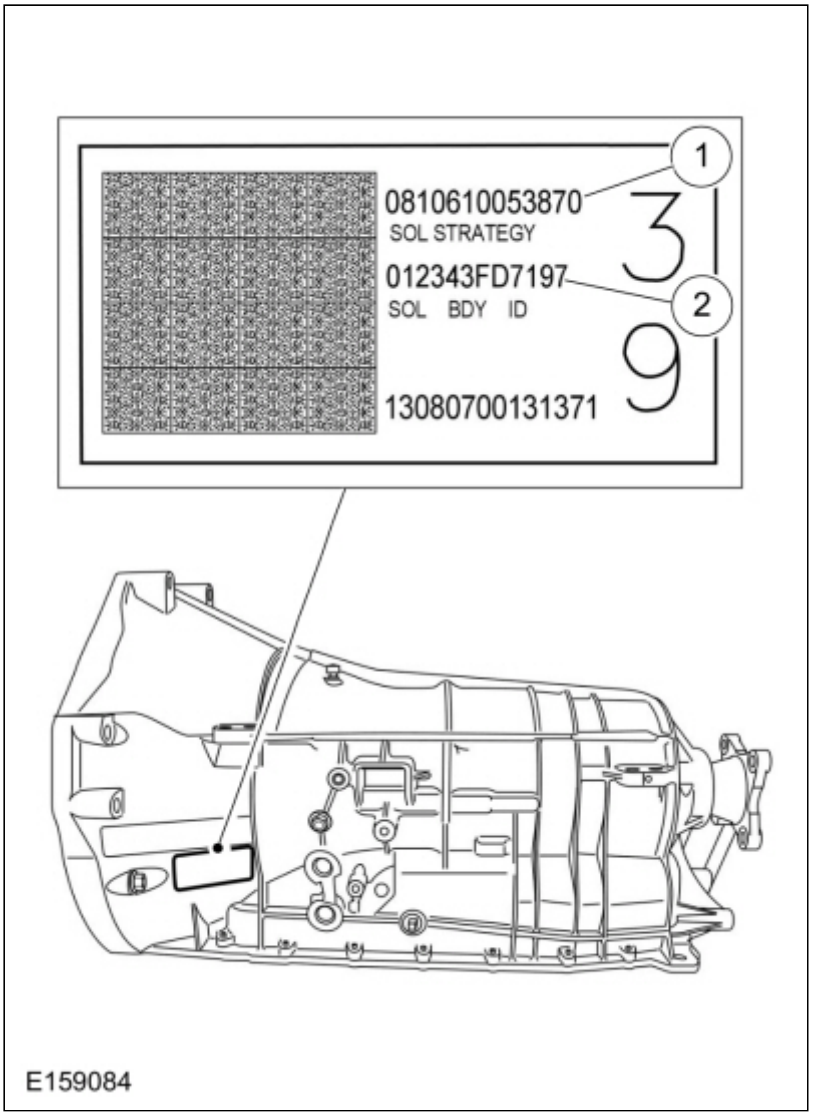
Base Part Number: 7G391

General Equipment

Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Solenoid Body Identification Procedure

1. Using the scan tool, select Powertrain, Transmission and Transmission Solenoid Body Identification from the toolbox icon and follow the instructions displayed on the scan tool. The solenoid body identification screen displays solenoid body identification information:

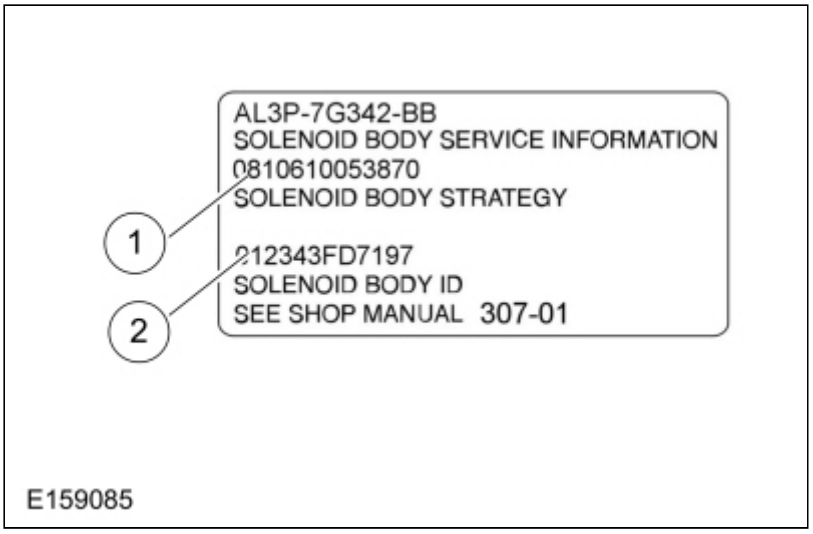


- Solenoid body strategy 13-digits
- Solenoid body identification 12-digits

The next screen displays the current solenoid body identification and strategy data file stored in the PCM. If the solenoid body strategy field is blank, the module contains a partial transmission solenoid body strategy. This is due to a corrupt or missing file at the time the programmable parameters were completed.

NOTE: *The 13-digit solenoid body strategy number consists of only numbers. Letters are not used.*

2. Compare the solenoid body identification and strategy to the solenoid body identification tag located on the left side of the transmission case.

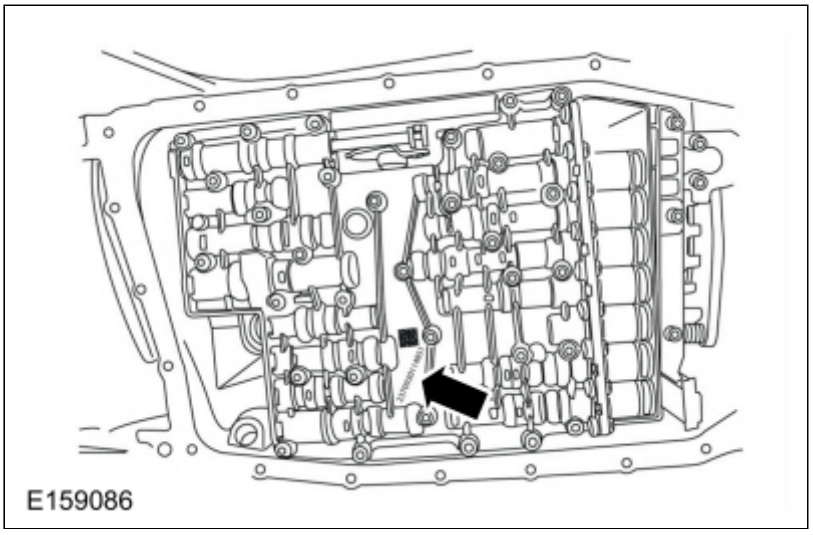


Solenoid Strategy Identification Tag

Item	Description
1	13-digit solenoid body strategy
2	12-digit solenoid body identification

3. If the solenoid body identification and strategy displayed on the scan tool match the solenoid body identification tag or replacement tag, then the solenoid body identification and strategy are correct for this transmission and a solenoid body strategy data download is not required. If the solenoid body identification tag or replacement tag is missing or damaged so it is not readable or does not match the identification or strategy displayed on the scan tool, remove the transmission fluid pan and filter and locate the 13-digit solenoid body strategy etched on the main control casting. For additional information, refer to Fluid Pan, Gasket and Filter in this section.

Replacement Solenoid Strategy Identification Tag



Item	Description
1	13-digit solenoid body strategy
2	12-digit solenoid body identification

NOTE: *The 13-digit solenoid body strategy number displayed on the scan tool must match the solenoid body strategy number etched on the main control. If the numbers do not match, damage to the transmission or driveability concerns can occur.*

NOTE: *If the new main control was not supplied with a replacement solenoid strategy identification tag, DO NOT INSTALL the main control as all required programming information will be missing.*

4. Compare the solenoid body strategy identification etched on the main control to the solenoid strategy identification tag on the transmission case. If the solenoid body strategy identification etched on the main control does not match the solenoid strategy identification tag then a solenoid body strategy data download is required. If the solenoid body strategy etched on the main control does match the solenoid strategy identification tag on the transmission case but does not match the solenoid body identification and strategy displayed on the scan tool, then a solenoid body strategy data download is also required.

Main Control Solenoid Body Strategy

Solenoid Body Strategy Data Download

1. Using the scan tool, select Module Programming and Programmable Parameters under the toolbox icon then select transmission. Follow the instructions displayed on the scan tool. There are fields to enter the 12-digit solenoid body identification and 13-digit solenoid body strategy recorded from the solenoid body.

NOTE: *If the solenoid body information is not correct, transmission damage or driveability concerns can occur.*

2. Enter the solenoid body identification and strategy. The scan tool verifies the numbers entered are valid and displays a message if the information is not valid. The scan tool checks to see if the file is present on the scan tool. If the file is present, the technician may proceed with downloading the file to the PCM. If the file is not present, the scan tool will need to be connected to the Professional Technician Society (PTS) server to download the file onto the scan tool.

3. Verify the file is present on the scan tool. If the file is present, go to Step 8. If the file is not present, continue with this procedure.

4. Connect the scan tool to the PTS server.

5. Follow the instructions on the network to download the strategy file to the scan tool.

6. If the scan tool cannot connect to the PTS server, download the file from www.motorcraft.com. If the scan tool cannot download a strategy from the web site, a partial strategy will automatically be downloaded.

7. Reconnect the scan tool to the vehicle.

8. Follow the instructions displayed on the scan tool.

9. If a new solenoid body was installed, compare the 12-digit identification and the 13-digit strategy fields from the solenoid body to the replacement solenoid body tag provided with the solenoid body service kit and place it over the existing identification tag.

10. The scan tool automatically downloads the strategy file or partial strategy file to the PCM. The scan tool displays a message when it is finished downloading the data that states that the file was downloaded successfully.

NOTE: *The customer may feel erratic shifts and driveability concerns if the adaptive drive cycle has not been performed.*

Road test the vehicle following the Adaptive Drive Cycle. For additional information, refer to Shift Point Road Test in this section.

Leakage Inspection

General Equipment

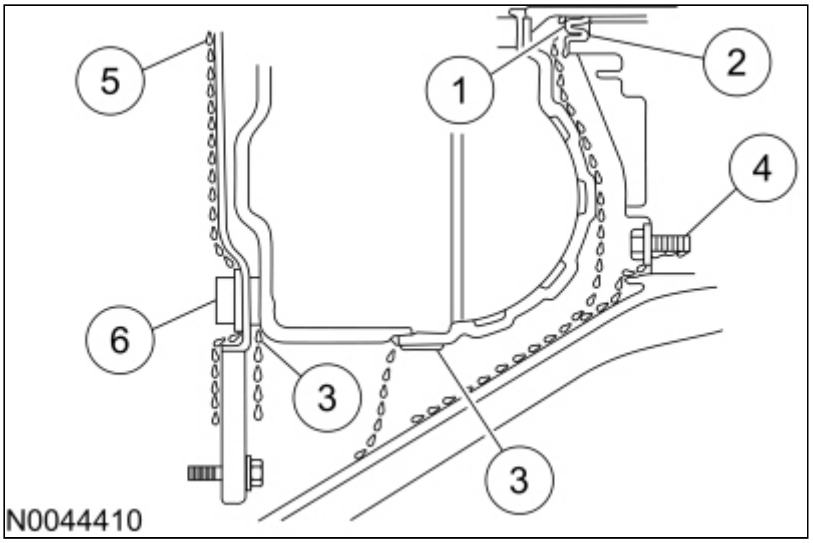
Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Material

Item	Specification
Dye-Lite® ATF/Power Steering Fluid Leak Detection Dye 164-R3701 (Rotunda)	—
Motorcraft® MERCON® LV Automatic Transmission Fluid XT-10-QLV	MERCON® LV

The transmission has the following parts to prevent external fluid leakage:

- Gaskets
- Lip-type seals
- O-ring seals
- Seal rings
- Seal grommets
- Seal washers
- Thread sealant



Leakage at the transmission pan-to-case gasket can often be stopped by tightening the bolts to specification. Refer to Torque Specifications in this section.

When transmission fluid is found to be leaking between the case and the cooler tube fitting, tighten the bolt to maximum specification.

If leakage is found at the manual control lever shaft, install a new seal.

Check for transmission fluid leaking from the end of the extension housing. Leakage can result from a damaged seal.Fluid Leakage in Torque Converter Area

Transmission fluid leaks at the front of the transmission, as evidenced by transmission fluid around the torque converter housing part of the case, may have several sources. By careful observation it is possible, in many instances, to pinpoint the source of the transmission fluid leak before removing the transmission from the vehicle. The paths which the transmission fluid takes to reach the bottom of the torque converter housing are shown in the illustration. The 6 numbers in the illustration correspond with the 6 flow path steps.

Leak Path	Symptom	Possible Source
1, 2 and 4	Leak at front of transmission	Pump lip seal
1, 2 and 4	Leak at front of transmission	Vent
1, 2 and 4	Leak at front of transmission	Converter hub weld
1, 2 and 4	Leak at front of transmission	External pump seal (large)
1, 2 and 4	Leak at front of transmission	Pump-to-case fasteners
1, 2 and 4	Leak at front of transmission	Pump body seal
3	Leak at front of transmission	Torque converter seal weld
5	Leak at front of transmission	Engine oil leak; rear main seal
5	Leak at front of transmission	Engine valve cover
5	Leak at front of transmission	Oil galley
5	Leak at front of transmission	Pump lip seal
5	Leak at front of transmission	Engine oil pressure sensor
6	Leak at front of transmission	Torque converter rivet

Leak Check Test with A Black Light

NOTE: *Use Dye-Lite® ATF/Power Steering Fluid Leak Detection Dye 164-R3701 to detect a transmission fluid leak. Add dye to the transmission fluid. Use one 30 ml (1 oz) of dye solution for every 3.8L of transmission fluid. Add additional transmission fluid until it is at the correct level. Such dyes are used to determine whether an engine fluid or transmission fluid leak is present, or if the fluid in the transmission fluid cooler leaks into the engine coolant system. Use an ultraviolet light to detect the fluorescent dye solution.*

1. Remove the transmission fluid level fill plug and note the color of the transmission fluid that drips out.
2. Clean off any transmission fluid from the top and bottom of the torque converter housing, front of the case and rear face of the engine and oil pan. Clean the torque converter area by washing with a suitable non-flammable solvent and blow-dry with compressed air.
3. Wash the torque converter housing and the front of the flexplate using clean solvent and a squirttype oil can. Blow-dry all washed areas with compressed air.
4. Using the scan tool, start and run the engine until the transmission reaches its normal operating temperature. Shift the transmission through all the gear ranges to make sure that the dye has circulated through the transmission. Using the 110W/12 Volt DC UV Lamp, observe the back of the cylinder block and top of the torque converter housing for evidence of transmission fluid leakage. Observe the front of the flexplate, back of the cylinder block (in as far as possible) and inside the torque converter housing and front of the case. Run the engine until transmission fluid leakage is evident and the probable source of leakage can be determined. Repair as required.

Description	Possible Source
Leaks at the transmission fluid pan-to-case	Transmission fluid pan bolts not tightened to specificationTransmission fluid pan gasket damagedCase transmission fluid pan rail damaged
Transmission fluid cooler tubes or O-rings leaking	Transmission fluid cooler tube(s), transmission fluid cooler tube O-rings damagedTransmission fluid cooler tube hold-down plate damaged
Leaks at the transmission fluid cooler	Transmission fluid cooler damagedTransmission fluid cooler tube O-rings damaged
Leaks at the manual control lever	Manual control lever seal missing or damaged
Mechatronic harness connector	O-ring on connector missing or damaged

Copyright © 2016 Ford Motor Company

Diagnosis By Symptom

Principles of Operation

The Diagnosis by Symptom[1] gives the technician diagnostic information and direction, and suggests possible components using a symptom as a starting point. All routines start out with any potential electrical components that can cause or contribute to the symptom described. The routines then list all possible hydraulic or mechanical components that can cause or contribute the symptom described.

Diagnosis by Symptom Chart Directions

1. Using the Diagnosis by Symptom, select the condition that best describes the condition.
2. Refer to the routine indicated in the Diagnosis by Symptom Index.
3. Always begin diagnosis of a symptom with:
    1. preliminary inspections.
    2. verifications of condition.
    3. checking the fluid levels.
    4. carrying out other test procedures as directed.[3]
4.

NOTE: *Not all concerns and conditions with electrical components will set a DTC. Be aware that the components listed may still be the cause. Verify correct function of these components prior to proceeding to the Hydraulic/Mechanical Routine listed.*

NOTE: *When the battery is disconnected or a new battery is installed, certain transmission operating parameters can be lost. The PCM must relearn these parameters. During this learning process, the vehicle may exhibit slightly firm shifts, delayed or early shifts. This operation is considered normal and will not affect the function of the transmission. Normal operation will return once these parameters are stored by the PCM.*

NOTE: *Begin Diagnosis by Symptoms with the Routines, if indicated. Follow the reference or action required statements. Always perform the self-tests as required. Never skip steps. Repair as required. If the concern is still present after electrical diagnosis, proceed to the Hydraulic/Mechanical Routine listed.*

5. The list contains only possible hydraulic or mechanical components that may cause or contribute to the concern. These components are listed in the removal sequence and by most probable cause. All components listed must be inspected to make sure that repairs are complete.

Engagement Concerns: No Forward in D

Symptom	Possible Sources	Action
• No Forward in D	• Incorrect transmission fluid level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Fluid filter and seal assembly - plugged, damaged	• INSTALL a new filter assembly. REFER to: Transmission Fluid Filter (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Selector lever linkage - damaged or incorrectly adjusted	• INSPECT and REPAIR as required. Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.VERIFY transmission selector lever cable adjustment. REFER to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures). ADJUST transmission selector lever cable as necessary.
	• PCM, external vehicle harness, main control molded leadframe or Shift Solenoid A (SSA)	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01

		Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Main control - defective manual valve	• INSPECT the manual valve linkage.
	• Main control - defective clutch (A) regulator valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Main control - front pump adapter seal - cracked, leaking or damaged.	• INSTALL a new front pump adapter seal.
	• Forward clutch plate (A) friction and steel plate - failure	• INSPECT the forward clutch assembly for damage. REPAIR as required. REFER to: Forward Clutch Assembly (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Disassembly and Assembly of Subassemblies).
	• Direct clutch plate (B) friction and steel plate - failure	• INSPECT the direct clutch assembly for damage. REPAIR as required. REFER to: Direct Clutch Assembly (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Disassembly and Assembly of Subassemblies).
	• Low One-Way Clutch assembly - failure	• INSPECT the One-Way Clutch assembly for damage. The One-Way Clutch must rotate counterclockwise and lock clockwise. REFER to: Transmission (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Disassembly).
	• Pump gear - failure	• Install a new pump assembly. REFER to: Pump Assembly (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Disassembly and Assembly of Subassemblies).

Engagement Concerns: No Reverse

Symptom	Possible Sources	Action
• No Reverse	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• PCM, external vehicle harness, main control leadframe or Shift Solenoid B (SSB).	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Direct clutch (B) friction and steel plate — failure	• INSPECT the direct clutch assembly for damage. REPAIR as required. REFER to: Direct Clutch Assembly (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Disassembly and Assembly of Subassemblies).
	• Pump gear — failure	• Install a new pump assembly. REFER to: Pump Assembly (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Disassembly and Assembly of Subassemblies).

Engagement Concerns: Harsh Reverse

Symptom	Possible Sources	Action
• Harsh Reverse	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Engine driveline looseness in the driveshaft, U-joints or the engine mounts	• REPAIR as required.
	• PCM, external vehicle harness, main control leadframe or Shift Solenoid B (SSB).	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Defective clutch (B) regulator valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Direct clutch (B) friction and steel plate — failure	• INSPECT the direct clutch assembly for damage. REPAIR as required. REFER to: Direct Clutch Assembly (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Disassembly and Assembly of Subassemblies).

Engagement Concerns: Harsh Forward

Symptom	Possible Sources	Action
• Harsh Forward	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Engine driveline looseness in the driveshaft, U-joints or the engine mounts	• REPAIR as required.
	• PCM, external vehicle harness, main control leadframe or Shift Solenoid B (SSB).	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Defective clutch (A) regulator valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (A) latch valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80,

		Removal and Installation).
	• Defective clutch (A) latch valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).

Engagement Concerns: Delayed/Soft Reverse

Symptom	Possible Sources	Action
• Delayed/Soft Reverse	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Fluid filter and seal assembly - plugged, damaged	• INSTALL a new filter assembly. REFER to: Transmission Fluid Filter (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• PCM, external vehicle harness, main control leadframe or Shift Solenoid B (SSB).	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Defective clutch (B) regulator valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Front pump adapter seal — cracked, leaking or damaged	• INSTALL a new front pump adapter seal.
	• Direct clutch (B) friction and steel plate — failure	• INSPECT the direct clutch assembly for damage. REPAIR as required. REFER to: Direct Clutch Assembly (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Disassembly and Assembly of Subassemblies).

Engagement Concerns: Delayed/Soft Forward

Symptom	Possible Sources	Action
• Delayed/Soft Forward	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Fluid filter and seal assembly - plugged, damaged	• INSTALL a new filter assembly. REFER to: Transmission Fluid Filter (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• PCM, external vehicle harness, main control leadframe or Shift Solenoid A (SSA).	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6- Speed Automatic Transmission - 6R80) .

	• Defective clutch (A) latch valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Front pump adapter seal — cracked, leaking or damaged	• INSTALL a new front pump adapter seal.
	• Forward clutch (A) friction and steel plate — failure	• INSPECT the forward clutch assembly for damage. REPAIR as required. REFER to: Forward Clutch Assembly (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Disassembly and Assembly of Subassemblies).

Engagement Concerns: No Forward and No Reverse

Symptom	Possible Sources	Action
• No Forward and No Reverse	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Damaged, out of aadjustment	• INSPECT for damage, repair as required.
	• Not seated, damaged or plugged	• INSPECT for crack or damage. INSTALL new as required.
	• Pump adapter Seal	• INSPECT for crack or damage. INSTALL new as required.
	• Manual Valve	• INSPECT for damage. Replace as required.
	• Mounting bolt torque	• INSPECT for loose main control to transmission bolts. Tighten to specification.
	• Solenoid Pressure Regulator Valve	• NSPECT for valve stuck in spring compressed position or broken spring. CLEAN or REPLACE main control as required. Main Control
	• Gear	• INSPECT for damage. REPLACE as required.
	• Sun gear hub/splines	• INSPECT for damage. REPLACE as required.
	• Turbine shaft	• INSPECT for damage. REPAIR as required.
	• Front planetary gear set	• INSPECT for damage. REPAIR as required.
	• Forward clutch drum	• INSPECT for damage. REPAIR as required.
	• Output shaft/ring gear	• INSPECT for damage. REPAIR as required.

Engagement Concerns: Harsh Forward and Harsh Reverse

Symptom	Possible Sources	Action
• Harsh Forward and Harsh Reverse	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Fluid filter and seal assembly - plugged, damaged	• INSTALL a new filter assembly. REFER to: Transmission Fluid Filter (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• PCM electrical inputs/outputs, external vehicle wiring	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine

	harnesses, main control molded leadframe, Transmission Range (TR) sensor, Shift Solenoid A (SSA) or Line Pressure Control (LPC)	Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A. If engine control DTCs return, Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
	• Multiple shift missing (more than one gear)	• If some shifts are missing, DETERMINE which shifts do not occur. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . MONITOR appropriate PIDs as listed in Diagnostic Parameters Identification (PID) Chart. REFER to Routine 210.
	• Gears 4-6 default to 5th gear and gears 1-3 default to 3rd gear	• RETRIEVE DTCs.

Engagement Concerns: Delayed Forward and Delayed Reverse

Symptom	Possible Sources	Action
• Delayed Forward and Delayed Reverse	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Fluid filter and seal assembly - plugged, damaged	• INSTALL a new filter assembly. REFER to: Transmission Fluid Filter (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• PCM, external vehicle wiring harnesses or molded leadframe	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination, REFER to Shift Solenoids (SS) in this section.
	• Front pump adapter seal — cracked, leaking or damaged	• INSTALL a new front pump adapter seal.

Shift Concerns: Some/All Shifts Missing

Symptom	Possible Sources	Action
• Some/All Shifts Missing	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Fluid filter and seal assembly - plugged, damaged	• INSTALL a new filter assembly. REFER to: Transmission Fluid Filter (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Selector lever cable	• INSPECT and REPAIR as required. VERIFY selector lever cable adjustment. REFER to Section 307-05. ADJUST selector lever cable as necessary.
	• PCM electrical inputs/outputs, external vehicle wiring harnesses, main control molded leadframe, Transmission Range (TR) sensor, Shift Solenoid A (SSA) or Line	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A. If engine control DTCs return, REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Pressure Control (LPC)	
• Multiple shift missing (more than one gear)	• If some shifts are missing, DETERMINE which shifts do not occur. REFER to clutch and solenoid application charts in this section. MONITOR appropriate PIDs as listed in Diagnostic Parameters Identification (PID) Chart.
• Leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination, REFER to Shift Solenoids (SS) in this section. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A.
• Defective clutch (A) regulator valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
• Defective clutch (A) latch valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
• Defective clutch (B) regulator valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
• Defective clutch (B) latch valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
• Defective clutch (C) regulator valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
• Defective clutch (E) regulator valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
• Defective clutch (E) latch valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
• Forward clutch (A) friction and steel plate — failure or Low One- Way Clutch (OWC) assembly — failure	• For 1st, 2nd, 3rd or 4th gear concerns, INSPECT the forward clutch assembly for damage. REPAIR as required. REFER to Forward Clutch Assembly in this section. For the One-Way Clutch (OWC), INSPECT for damage. One-Way Clutch (OWC) must rotate counterclockwise and lock clockwise. REFER to Transmission in this section.
• Direct clutch (B) friction and steel plate — failure	• For 3rd or 5th gear concerns, INSPECT the direct clutch assembly for damage. REPAIR as required. REFER to Direct Clutch Assembly in this section.
• Intermediate clutch (C) friction and steel plate — failure	• For 2nd or 6th gear concerns, INSPECT the intermediate clutch assembly for damage. REPAIR as required. REFER to Intermediate Clutch Assembly in this section.
• Overdrive clutch (E)	• For 4th, 5th or 6th gear concerns, INSPECT the

	assembly — failure	overdrive clutch for damage. REPLACE the overdrive clutch. REFER to Overdrive Clutch Assembly in this section.

Shift Concerns: Timing — Early/Late

Symptom	Possible Sources	Action
• Early/Late	• PCM electrical inputs/outputs, external vehicle wiring harnesses or main control molded leadframe	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If engine control DTCs return, REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination, REFER to Shift Solenoids (SS) in this section.
	• Engine driveability concerns	•
	• Bolts not tightened to specification	• TIGHTEN to specification.
	• Main control unit contaminated, solenoid(s) damaged, stuck or bore damaged. Manual valve damaged, stuck or bore damaged	• REFER to Main Control in this section.
	• Application pressures are incorrect	• Incorrect application pressures may be due to non-transmission components, main control assembly or internal transmission damage. REPAIR all non-transmission components then continue with this routine.
	• Tire size change, axle ratio change	• VERIFY the vehicle has the original equipment. REFER to the certification label. Changes in tire size and axle ratio will affect shift timing.

Shift Concerns: Timing — Erratic/Hunting

Symptom	Possible Sources	Action
• Erratic/Hunting	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Fluid filter and seal assembly - plugged, damaged	• INSTALL a new filter assembly. REFER to: Transmission Fluid Filter (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• PCM electrical inputs/outputs, external vehicle wiring harnesses or main control leadframe	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If engine control DTCs return, REFER to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
	• Torque converter	• REFER to torque converter operation concern: Cycling/Chatter.

Feel Concerns: Soft/Slipping (Some or All)

Symptom	Possible Sources	Action
• Soft/Slipping (Some or All)	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Fluid filter and seal assembly - plugged,	• INSTALL a new filter assembly. REFER to: Transmission Fluid Filter (307-01 Automatic

	damaged	Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• PCM electrical inputs/outputs, external vehicle wiring harnesses, main control molded leadframe or Transmission Fluid Temperature (TFT) sensor.	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test B.
	• Main control molded leadframe	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination, REFER to Shift Solenoids (SS) in this section. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A.
	• Front pump adapter seal — cracked, leaking or damaged	• INSTALL a new front pump adapter seal.
	• Bolts not tightened to specification	• TIGHTEN to specification.
	• Main control contaminated, solenoid(s) damaged, stuck or bore damaged. Manual valve damaged, stick or bore damaged	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to Main Control in this section.

Feel Concerns: Harsh (Some or All)

Symptom	Possible Sources	Action
• Harsh (Some or All)	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Fluid filter and seal assembly - plugged, damaged	• INSTALL a new filter assembly. REFER to: Transmission Fluid Filter (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• PCM electrical inputs/outputs, external vehicle wiring harnesses, main control molded leadframe or solenoid body information does not match PCM information	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If solenoid body and PCM information does not match, REPROGRAM the PCM with the latest calibration. PERFORM the Solenoid Body Strategy Data Download. REFER to Solenoid Body Strategy in this section. PERFORM Road Test — Adaptive Drive Cycle, REFER to Shift Point Road Test in this section. ROAD TEST and CHECK for DTCs.
	• Bolts not tightened to specification	• TIGHTEN bolts to specification.
	• Main control contaminated, solenoid(s) damaged, solenoids stuck or bore damaged	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Manual valve damaged, stuck or bore damaged	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).

Feel Concerns: No 1st Gear, Engages in a Higher Gear

Symptom	Possible Sources	Action
• No 1st Gear, Engages in a Higher Gear	• PCM, external vehicle wiring harnesses or main control molded leadframe	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs.
	• Low One-Way Clutch (OWC) assembly — failure	• INSPECT the OWC assembly for damage. The OWC must rotate counterclockwise and lock clockwise. REPLACE the OWC. REFER to Transmission in this section.
	• Transmission failure	• DETERMINE which gear the transmission is in. REFER to the Clutch and Solenoid Application Charts in this section.

Feel Concerns: No Manual 1st Gear

Symptom	Possible Sources	Action
• No Manual 1st Gear	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Fluid filter and seal assembly - plugged, damaged	• INSTALL a new filter assembly. REFER to: Transmission Fluid Filter (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Selector lever cable system — damaged, misaligned	• INSPECT and REPAIR as necessary. VERIFY selector lever cable adjustment. REFER to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures).
	• PCM, external vehicle harness, main control molded leadframe or Shift Solenoid A (SSA).	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination., REFER to Shift Solenoids (SS) in this section. INSTALL the main control assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A.
	• Forward clutch (A) friction and steel plate — failure	• INSPECT the forward clutch assembly for damage. REPAIR as required. REFER to Forward Clutch Assembly in this section.
	• Low/reverse clutch (D) friction and steel plate — failure	• INSPECT the low/reverse clutch assembly for damage. REPAIR as required. REFER to Low/Reverse Clutch Assembly in this section.
	• Low One-Way Clutch (OWC) assembly — failure	• If no 1st gear above 3 mph, INSPECT the OWC assembly for damage. The OWC must rotate counterclockwise and lock clockwise. REPLACE the OWC. REFER to Transmission in this section.
	• Pump gear — failure	• INSTALL a new pump assembly. REFER to Pump Assembly in this section.

Feel Concerns: No Manual 2nd Gear

Symptom	Possible	Action

	Sources	
• No Manual 2nd Gear	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Fluid filter and seal assembly - plugged, damaged	• INSTALL a new filter assembly. REFER to: Transmission Fluid Filter (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Selector lever cable system — damaged, misaligned	• INSPECT and REPAIR as necessary. VERIFY selector lever cable adjustment. REFER to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures).
	• PCM, external vehicle harness, main control molded leadframe or Shift Solenoid A (SSA).	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination., REFER to Shift Solenoids (SS) in this section. INSTALL the main control assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A.
	• Forward clutch (A) friction and steel plate — failure	• INSPECT the forward clutch assembly for damage. REPAIR as required. REFER to Forward Clutch Assembly in this section.
	• Intermediate clutch (C) friction and steel plate — failure	• INSPECT the intermediate clutch assembly for damage. REPAIR as required. REFER to Intermediate Clutch Assembly in this section.
	• Pump gear — failure	• INSTALL a new pump assembly. REFER to Pump Assembly in this section.

Feel Concerns: No Manual 3rd Gear

Symptom	Possible Sources	Action
• No Manual 3rd Gear	• Selector lever cable system — damaged, misaligned	• INSPECT and REPAIR as necessary. VERIFY selector lever cable adjustment. REFER to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures).
	• PCM, external vehicle wiring harnesses, main control molded leadframe or Shift Solenoid B (SSB).	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination., REFER to Shift Solenoids (SS) in this section. INSTALL the main control

		assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A.
	• Forward clutch (A) friction and steel plate — failure	• INSPECT the forward clutch assembly for damage. REPAIR as required. REFER to Forward Clutch Assembly in this section.
	• Direct clutch (B) friction and steel plate — failure	• INSPECT the direct clutch assembly for damage. REPAIR as required. REFER to Direct Clutch Assembly in this section.
	• Pump gear — failure	• INSTALL a new pump assembly. REFER to Pump Assembly in this section.

Feel Concerns: No 1-2 Shift

Symptom	Possible Sources	Action
• No 1-2 Shift	• Selector lever cable system — damaged, misaligned	• INSPECT and REPAIR as necessary. VERIFY selector lever cable adjustment. REFER to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures).
	• PCM, external vehicle wiring harnesses, main control molded leadframe, Shift Solenoid C (SSC) or Shift Solenoid D (SSD).	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination., REFER to Shift Solenoids (SS) in this section. INSTALL the main control assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A.
	• Defective clutch (B) regulator valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (B) latch valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (C) regulator valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Intermediate clutch (C) friction and steel plate — failure	• INSPECT the intermediate clutch assembly for damage. REPAIR as required. REFER to Intermediate Clutch Assembly in this section.
	• Low/reverse clutch (D) friction and steel plate — failure	• INSPECT the low/reverse clutch assembly for damage. REPAIR as required. REFER to Low/Reverse Clutch Assembly in this section.
	• Low One-Way Clutch (OWC) assembly — failure	• INSPECT the OWC assembly for damage. The OWC must rotate counterclockwise and lock clockwise. REPLACE the OWC. REFER to Transmission in this section.

Feel Concerns: No 2-3 Shift

Symptom	Possible Sources	Action
• No 2-3 Shift	• Selector lever cable system —	• INSPECT and REPAIR as necessary. VERIFY selector lever cable adjustment.

	damaged, misaligned	REFER to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures).
	• PCM, external vehicle wiring harnesses, main control molded leadframe, Shift Solenoid B (SSB) or Shift Solenoid C (SSC).	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination., REFER to Shift Solenoids (SS) in this section. INSTALL the main control assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A.
	• Defective clutch (B) regulator valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (B) latch valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (C) regulator valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Direct clutch (B) friction and steel plate — failure	• INSPECT the direct clutch assembly for damage. REPAIR as required. REFER to Direct Clutch Assembly in this section.
	• Intermediate clutch (C) friction and steel plate — failure	• INSPECT the intermediate clutch assembly for damage. REPAIR as required. REFER to Intermediate Clutch Assembly in this section.

Feel Concerns: No 3-4 Shift

Symptom	Possible Sources	Action
• No 3-4 Shift	• PCM, external vehicle wiring harnesses, main control molded leadframe, Shift Solenoid B (SSB), Shift Solenoid D (SSD) or Shift Solenoid E (SSE).	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination., REFER to Shift Solenoids (SS) in this section. INSTALL the main control assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A.
	• Defective clutch (B) regulator valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80,

		Removal and Installation).
	• Defective clutch (B) latch valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (E) regulator valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective solenoid multiplex valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Direct clutch (B) friction and steel plate — failure	• INSPECT the direct clutch assembly for damage. REPAIR as required. REFER to Direct Clutch Assembly in this section.
	• Overdrive clutch (E) friction and steel plate — failure	• INSPECT the overdrive clutch assembly for damage. REPAIR as required. REFER to Overdrive Clutch Assembly in this section.

Feel Concerns: No 4-3 Shift

Symptom	Possible Sources	Action
• No 4-3 Shift	• PCM, external vehicle wiring harnesses, main control molded leadframe, Shift Solenoid B (SSB) or Shift Solenoid D (SSD).	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination., REFER to Shift Solenoids (SS) in this section. INSTALL the main control assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A.
	• Defective clutch (E) regulator valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (E) latch valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (B) regulator valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective solenoid multiplex valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Solenoid multiplex	• INSPECT for damage. If damaged, INSTALL a new main control

	valve	assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Drive enable valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Direct clutch (B) friction and steel plate — failure	• INSPECT the direct clutch assembly for damage. REPAIR as required. REFER to Direct Clutch Assembly in this section.
	• Overdrive clutch (E) friction and steel plate — failure	• INSPECT the overdrive clutch assembly for damage. REPAIR as required. REFER to Overdrive Clutch Assembly in this section.

Feel Concerns: No 3-2 Shift

Symptom	Possible Sources	Action
• No 3-2 Shift	• PCM, external vehicle wiring harnesses, main control molded leadframe, Shift Solenoid B (SSB) or Shift Solenoid C (SSC).	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination., REFER to Shift Solenoids (SS) in this section. INSTALL the main control assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A.
	• Defective clutch (B) regulator valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (B) latch valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (C) regulator valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Direct clutch (B) friction and steel plate — failure	• INSPECT the direct clutch assembly for damage. REPAIR as required. REFER to Direct Clutch Assembly in this section.
	• Intermediate clutch (C) friction and steel plate — failure	• INSPECT the intermediate clutch assembly for damage. REPAIR as required. REFER to Intermediate Clutch Assembly in this section.

Symptom	Possible Sources	Action
	• PCM, external vehicle wiring harnesses, main control molded leadframe or Shift Solenoid C (SSC).	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .

		. INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination., REFER to Shift Solenoids (SS) in this section. INSTALL the main control assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A.
	• Defective clutch (C) regulator valve	• INSPECT for damage. If damaged, INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Direct clutch (C) friction and steel plate — failure	• INSPECT the direct clutch assembly for damage. REPAIR as required. REFER to Direct Clutch Assembly in this section.
	• Low/reverse clutch (D) friction and steel plate — failure	• INSPECT the low/reverse clutch assembly for damage. REPAIR as required. REFER to Low/Reverse Clutch Assembly in this section.
	• Low One-Way Clutch (OWC) assembly — failure	• INSPECT the OWC assembly for damage. The OWC must rotate counterclockwise and lock clockwise. REPLACE the OWC. REFER to Transmission in this section.

Torque Converter Operation Concerns: No Apply

Symptom	Possible Sources	Action
• No Apply	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Fluid filter and seal assembly - plugged, damaged	• INSTALL a new filter assembly. REFER to: Transmission Fluid Filter (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• PCM, external vehicle wiring harnesses, main control molded leadframe or Torque Converter Clutch (TCC) solenoid.	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination., REFER to Shift Solenoids (SS) in this section. INSTALL the main control assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A.
	• Main control assembly contaminated, solenoid(s) damaged, stuck or bore damaged. Manual valve damaged, stuck or bore damaged	• INSPECT for damage. If damaged, install a new main control assembly. REFER to Main Control in this section.
	• Defective torque	• INSPECT main control assembly for stuck valves or

	converter apply regulator valve	contamination. REFER to Main Control in this section.
	• Defective torque converter release regulator valve	• INSPECT main control assembly for stuck valves or contamination. REFER to Main Control in this section.
	• Main control assembly bolts — not tightened to specification	• TIGHTEN to specification.
	• Torque converter components	• REMOVE the transmission. INSPECT for damage. INSTALL a new or remanufactured torque converter. REFER to Transmission — Four Wheel Drive (4WD) or Transmission — Rear Wheel Drive (RWD) in this section.

Torque Converter Operation Concerns: Cycling/Chatter

Symptom	Possible Sources	Action
• Cycling/Chatter	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Fluid filter and seal assembly - plugged, damaged	• INSTALL a new filter assembly. REFER to: Transmission Fluid Filter (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• PCM, vehicle wiring harnesses, main control molded leadframe, Torque Converter Clutch (TCC) solenoid or Transmission Fluid Temperature (TFT) sensor	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the TCC solenoid terminals on the main control molded leadframe for metallic contamination, REFER to Shift Solenoids (SS) in this section. INSTALL the main control assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A to diagnosis the Torque Converter Clutch (TCC) or GO to Pinpoint Test B to diagnosis the Transmission Fluid Temperature (TFT) sensor.
	• Main control assembly contaminated, solenoid(s) damaged, stuck or bore damaged. Manual valve damaged, stuck or bore damaged	• INSPECT for damage. If damaged, install a new main control assembly. REFER to Main Control in this section.
	• Defective torque converter apply regulator valve	• INSPECT main control assembly for stuck valves or contamination. REFER to Main Control in this section.
	• Main control assembly bolts — not tightened to specification	• TIGHTEN to specification.

	• Torque converter components	• REMOVE the transmission. INSPECT for damage. INSTALL a new or remanufactured torque converter. REFER to Transmission — Four Wheel Drive (4WD) or Transmission — Rear Wheel Drive (RWD) in this section.

Torque Converter Operation Concerns: Always Applied/Stalls Vehicle

Symptom	Possible Sources	Action
• Always Applied/Stalls Vehicle	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Fluid filter and seal assembly - plugged, damaged	• INSTALL a new filter assembly. REFER to: Transmission Fluid Filter (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• PCM, vehicle wiring harnesses, main control molded leadframe, Torque Converter Clutch (TCC) solenoid or Transmission Fluid Temperature (TFT) sensor	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the TCC solenoid terminals on the main control molded leadframe for metallic contamination, REFER to Shift Solenoids (SS) in this section. INSTALL the main control assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A to diagnosis the Torque Converter Clutch (TCC) or GO to Pinpoint Test B to diagnosis the Transmission Fluid Temperature (TFT) sensor.
	• Main control assembly contaminated, solenoid(s) damaged, stuck or bore damaged. Manual valve damaged, stuck or bore damaged	• INSPECT for damage. If damaged, install a new main control assembly. REFER to Main Control in this section.
	• Main control assembly bolts — not tightened to specification	• TIGHTEN to specification.
	• Torque converter components	• REMOVE the transmission. INSPECT for damage. INSTALL a new or remanufactured torque converter. REFER to Transmission — Four Wheel Drive (4WD) or Transmission — Rear Wheel Drive (RWD) in this section.

Other Concerns: External Leaks

Symptom	Possible Sources	Action
• External Leaks	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to Transmission Fluid Level Check in this section.
	• Transmission case vent — damaged,	• REPAIR as necessary.

	case porosity	
	• Leakage at gaskets, seals, electrical connector	• REFER to Leakage Inspection, Fluid Leakage in Torque Converter Area and Leak Check Test with A Black Light in this section. REMOVE all traces of lubricant on exposed surface of the transmission. REPAIR as necessary.
	• Cooler tube fittings	• LOCATE leak source. REPAIR as required. REFER to Section 307-02.
	• Cooler tube O-rings, cooler tubes	• LOCATE leak source. REPAIR as required. REFER to Section 307-02.
	• Torque converter studs	• INSTALL a new torque converter. If a new or remanufactured torque converter is installed, use the scan tool and follow the on-screen instructions and perform the Misfire Monitor Neutral Profile Correction procedure.
	• Torque converter hub seal	• INSTALL a new torque converter hub seal.
	• Torque converter weld	• INSTALL a new torque converter. If a new or remanufactured torque converter is installed, use the scan tool and follow the on-screen instructions and perform the Misfire Monitor Neutral Profile Correction procedure.
	• Case — leaking	• INSTALL a new transmission case. REFER to Transmission in this section.
	• Transmission vehicle harness connector	• INSTALL a new transmission vehicle harness connector O-ring.
	• Transmission fluid fill plug	• INSTALL a new transmission fluid fill plug.
	• Output shaft seal	• INSTALL a new seal. REFER to Output Shaft Seal in this section.
	• Manual control lever seal	• INSTALL a new seal.
	• Transmission fluid pan gasket	• INSTALL a new gasket.
	• Fluid pump O-ring	• INSTALL a new O-ring. REFER to Pump Assembly in this section.
	• Fluid pump seal ring	• INSTALL a new seal ring. REFER to Pump Assembly in this section.

NOTE: *NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04. Since it is possible any one of multiple systems may be the cause of a symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to Section 100-04 for the next likely system and continue diagnosis.*

Other Concerns: Noise/Vibration in Forward or Reverse

Symptom	Possible Sources	Action
• Noise/Vibration in Forward or Reverse	• Incorrect level (low) pump cavitation	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to Transmission Fluid Level Check in this section.
	• Cooler tubes grounding out	• ADJUST or REPOSITION cooler tubes.
	• Check the torque converter components/balance weight	• LOCATE source of disturbance. REPAIR as required. If a new or remanufactured torque converter is installed, use the scan tool and follow the on-screen instructions and perform the Misfire Monitor Neutral Profile Correction procedure.

	• Engine drive accessories	• REFER to: Specifications (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Specifications), Specifications (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Specifications), Specifications (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Specifications).

Other Concerns: Engine Will Not Crank

Symptom	Possible Sources	Action
• Engine Will Not Crank	• Selector lever cable system — damaged, misaligned	• INSPECT and REPAIR as necessary. REFER to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures).
	• PCM, vehicle wiring harnesses, engine starting and charging system, main control molded leadframe or Transmission Range (TR) sensor	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Flexplate — damaged	• REPAIR as necessary.
	• Starter system concerns	• INSPECT and REPAIR as necessary. REFER to: Starter Motor (303-06A Starting System - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
	• TR sensor assembly — damaged	• INSPECT and REPAIR as necessary.
	• Internal parts seized	• REPAIR as necessary.

Other Concerns: No Park (P) Range

Symptom	Possible Sources	Action
• No Park (P) Range	• Selector lever cable system — damaged, misaligned	• INSPECT and REPAIR as necessary. REFER to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures).
	• Manual control lever assembly damaged, manual valve inner lever pin bent, manual valve inner lever damaged, spring rod damaged, park pawl pin loose or damaged, park rod actuating plate loose, damaged or missing	• INSPECT for damage. REPAIR as necessary.
	• Transmission case	• INSPECT for damage. If damaged, REPAIR as necessary.
	• Park gear, park pawl, park pawl return spring, part or guide, park actuating rod, park pawl shaft, manual lever	• INSPECT for damage. If damaged, REPAIR as necessary.
	• External linkages/brackets — damaged	• INSPECT for damage. REPAIR as necessary.
	• PCM, vehicle wiring harnesses, main control molded leadframe or Transmission Range (TR) sensor	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A,

		REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Manual lever detent spring	• INSPECT for damage. REPAIR as necessary.
	• TR sensor assembly	• INSTALL a new main control assembly. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).

Other Concerns: Transmission Overheating

Symptom	Possible Sources	Action
• Transmission Overheating	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Fluid condition	• CHECK transmission fluid condition. REFER to Preliminary Inspection in this section.
	• PCM, vehicle wiring harnesses, main control molded leadframe, Torque Converter Clutch (TCC) solenoid or Transmission Fluid Temperature (TFT) sensor	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A for TCC solenoid diagnosis and GO to Pinpoint Test B for TFT sensor diagnosis.
	• Torque converter	• INSTALL a new torque converter. If a new or remanufactured torque converter is installed, use the scan tool and follow the on-screen instructions and perform the Misfire Monitor Neutral Profile Correction procedure.
	• Transmission case	• INSPECT for damage. If damaged, REPAIR as necessary.
	• Restriction in transmission cooling system	• CHECK transmission cooling system efficiency. REFER to Section 307-02 for automatic transmission cooling system diagnostic procedures.
	• Excessive trailer tow load	• REFER to the Owner's Literature for specifications on trailer towing.
	• Vehicle heat shield — missing or damaged	• INSPECT for damage. REPAIR as necessary.
	• Vehicle airflow is restricted	• INSPECT for damage. REPAIR as necessary.
	• Thermal bypass valve — missing or damaged	• INSPECT for damage. REPAIR as necessary. REFER to Main Control in this section.

Other Concerns: Fluid Venting/Foaming

Symptom	Possible Sources	Action
• Fluid Venting/Foaming	• Incorrect level	• CHECK the transmission fluid level. ADJUST transmission fluid to correct level. REFER to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Transmission case	• INSPECT for damage. If damaged, REPAIR as necessary.

Feel Concerns: Shift Concerns: No 4-5 Shift

Symptom	Possible Sources	Action
• Shift Concerns: No 4-5 Shift	• PCM, vehicle wiring harnesses, main control molded leadframe, Shift Solenoid A (SSA) solenoid or Shift Solenoid B (SSB) sensor	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination, REFER to Shift Solenoids (SS) in this section. INSTALL the main control assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Defective clutch (A) regulator valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (A) latch valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (B) regulator valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Forward clutch (A) friction and steel plate — failure	• INSPECT the forward clutch assembly for damage. REPAIR as required. REFER to Forward Clutch Assembly in this section.
	• Direct clutch (B) friction and steel plate — failure	• INSPECT the direct clutch assembly for damage. REPAIR as required. REFER to Direct Clutch Assembly in this section.

Feel Concerns: No 5-4 Shift (Automatic)

Symptom	Possible Sources	Action
• No 5-4 Shift (Automatic)	• PCM, vehicle wiring harnesses, main control molded leadframe or Shift Solenoid B (SSB)	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination, REFER to Shift Solenoids (SS) in this section. INSTALL the main control assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A.

		REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Defective clutch (B) regulator valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (B) latch valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (A) regulator valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Direct clutch (B) friction and steel plate — failure	• INSPECT the direct clutch assembly for damage. REPAIR as required. REFER to Direct Clutch Assembly in this section.
	• Forward clutch (A) friction and steel plate — failure	• INSPECT the forward clutch assembly for damage. REPAIR as required. REFER to Forward Clutch Assembly in this section.

Feel Concerns: No 5-6 Shift (Automatic)

Symptom	Possible Sources	Action
• No 5-6 Shift (Automatic)	• PCM, vehicle wiring harnesses, main control molded leadframe, Shift Solenoid B (SSB) or Shift Solenoid C (SSC)	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination, REFER to Shift Solenoids (SS) in this section. INSTALL the main control assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Defective clutch (B) regulator valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (B) latch valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (C) regulator	• INSPECT the main control assembly for stuck valves or contamination.

	valve	REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Direct clutch (B) friction and steel plate — failure	• INSPECT the direct clutch assembly for damage. REPAIR as required. REFER to Direct Clutch Assembly in this section.
	• Intermediate clutch (C) friction and steel plate — failure	• INSPECT the intermediate clutch assembly for damage. REPAIR as required. REFER to Intermediate Clutch Assembly in this section.

Feel Concerns: No 6-5 Shift (Automatic)

Symptom	Possible Sources	Action
• No 6-5 Shift (Automatic)	• PCM, vehicle wiring harnesses, main control molded leadframe, Shift Solenoid B (SSB) or Shift Solenoid C (SSC)	• If DTCs are set, CLEAR the DTCs. CARRY OUT the Key ON Engine OFF (KOEO) and Key ON Engine Running (KOER) self-test. ROAD TEST the vehicle and CHECK for DTCs. If the DTCs return, GO to Pinpoint Test A, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) . . INSPECT and CLEAN the shift solenoid terminals on the molded leadframe for metallic contamination. REFER to: Solenoid (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Molded leadframe — contamination	• REMOVE the main control assembly, REFER to Main Control in this section. INSPECT and CLEAN the shift solenoid terminals on the main control molded leadframe for metallic contamination, REFER to Shift Solenoids (SS) in this section. INSTALL the main control assembly. CLEAR the DTCs. ROAD TEST the vehicle. If the symptom returns, GO to Pinpoint Test A. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
	• Defective clutch (B) regulator valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (B) latch valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Defective clutch (C) regulator valve	• INSPECT the main control assembly for stuck valves or contamination. REFER to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).
	• Direct clutch (B) friction and steel plate — failure	• INSPECT the direct clutch assembly for damage. REPAIR as required. REFER to Direct Clutch Assembly in this section.
	• Intermediate clutch (C) friction and steel plate — failure	• INSPECT the intermediate clutch assembly for damage. REPAIR as required. REFER to Intermediate Clutch Assembly in this section.

Diagnostic Trouble Code Charts

General Equipment

Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool

Using a scan tool to retrieve Diagnostic Trouble Codes (DTCs), begin with and repair all non-transmission related DTCs. Start with the U- DTCs (communication link codes) then repair transmission related DTCs.

The Powertrain Control Module (PCM) will command a default gear to protect the engine and transmission when certain faults occur. Default or (limp-home mode) depends on the actual gear the vehicle was in when the fault occurred.

- For gears 1-3, the default will be 3rd gear.
- For gears 4-6, the default will be 5th gear.

The default gear is held until the vehicle is placed in reverse, park or the vehicle is restarted. After these action(s) the vehicle will default to 3rd gear.

DTC Chart

DTC	Component	Description	Condition	Symptom	Action
B2572	Brake Shift Interlock Actuator (BSIA)	BSIA open or shorted circuit	The BSIA system a malfunction.	• BSIA inoperative.	Refer to REFER to: External Controls (307-05 Automatic Transmission External Controls, Diagnosis and Testing).
P0604	PCM	PCM Random Access Memory (RAM) Error	PCM RAM has been corrupted	--------	Refer to Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P0605	PCM	PCM Read Only Memory (ROM) Error	PCM ROM has been corrupted	--------	Refer to Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P0657	PCM	Actuator supply voltage A circuit open	The Transmission Solenoid Power Control (TSPC) relay failed open.	• Malfunction Indicator Lamp (MIL) ON • Maximum line pressure • Default to 5th gear	Power is routed through the transmission solenoid power control (TSPC) relay (inside the PCM) to all solenoids. If the power circuit to the transmission solenoids or the TSPC relay fails open, then all solenoids are failed electrically off. CHECK for open, short to ground or the transmission connector disconnected. The TSPC relay also disables power to the transmission solenoids when certain transmission DTCs are set. REPAIR as required. CLEAR the DTC. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.

P06B8	PCM	PCM Non-Volatile Random Access Memory (NVRAM) Error	Ability of the PCM to correctly store permanent DTCs is present.	--------	Refer to Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P0701	PCM	Transmission control system range performance	The PCM detected an intermittent clutch ON fault	• Vehicle decelerates during upshift or hangs in gear • DTCs P2700 (A) clutch • P2701 (B) clutch, • P2702 (C) clutch, • P2703 (D) clutch and/or • P2704 (E) clutch may set	CLEAR the DTCs. TEST the system for normal operation. If the DTCs return, REPAIR the more specific DTC first. REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0702	Battery	Battery voltage out of range	The PCM detected a voltage level above or below the accepted voltage range	• Wrench light illuminated • Maximum line pressure • DTCs P0882 and/or P0883 may set	REPAIR the more specific DTC first. CLEAR the DTCs. TEST the system for normal operation.
P0705	Transmission Range (TR) sensor	TR sensor failure	The PCM detected a TR sensor signal duty cycle is within range but does not match the calibrated bit pattern.	• MIL ON • Engine will not crank • Default to 3rd or 5th gear if DTC sets after engine running • Maximum line pressure DTC • P1702 may set	REPAIR the more specific DTC first. CLEAR the DTCs. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test C.
P0706	TR sensor	TR sensor A circuit range performance	The PCM detected a TR sensor signal duty cycle is out of range	• MIL ON • Engine will not crank • Default to 3rd or 5th gear if DTC sets after engine running • Maximum line pressure • DTC P1705 may set	The TR sensor outputs a duty cycle indicating manual lever position. This DTC sets when the duty cycle is greater or less than commanded by 50Hz. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test C.
P0707	TR sensor	TR sensor A circuit low	The PCM detected a TR sensor signal duty cycle is out of range.	• MIL ON • Engine will not crank • Default to 5th gear if DTC sets	The TR sensor outputs a duty cycle indicating manual lever position. This DTC sets when the duty cycle is 8% less than commanded. REFER to: Pinpoint Tests - OSC

				after engine is running • Maximum line pressure • DTC P1702 may set	Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test C.
P0708	TR sensor	TR sensor A circuit high	The PCM detected a TR sensor signal duty cycle is out of range	• MIL ON • Engine will not crank • Default to 5th gear if DTC sets after engine running • Maximum line pressure • DTC P1702 may set	The TR sensor outputs a duty cycle indicating manual lever position. This DTC sets when the duty cycle is 92% greater than commanded. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test C.
P0709	TR sensor	TR sensor A circuit intermittent	The PCM detected a TR sensor signal duty cycle is not out of range but is invalid	• Wrench light illuminated • Engine may not crank • Default to 5th gear if DTC sets after engine running • Maximum line pressure • DTC P1702 may set	The TR sensor outputs a duty cycle indicating manual lever position. This DTC sets when the duty cycle is within range but is in the dead band between the design position, an in-range but invalid duty cycle. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test C.
P0710	Transmission Fluid Temperature (TFT) sensor	TFT sensor A circuit	The PCM detected a voltage drop across the TFT sensor exceeds scale.	• Wrench light illuminated • DTC P0712 and/or P0713 may set	REPAIR the more specific DTC first. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test B.
P0711	TFT sensor	TFT sensor A circuit range / performance	The PCM detected no TFT sensor change during operation. The TFT sensor is stuck below 21°C (70°F) or above 107°C (225°F) or the temperature did not change by 8°F during a drive cycle.	• MIL ON • Default to 1st or 3rd gear	CLEAR the DTC. If the DTC returns, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test B.
P0712	TFT sensor	TFT sensor A circuit low	The PCM detected a temperature greater than 171°C (340°F) for at least 2.5 seconds (grounded circuit).	• MIL ON • Default to 1st gear • DTC P0710 may set	REPAIR the more specific DTC first. CLEAR the DTCs. If the DTC returns, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test B.
P0713	TFT sensor	TFT sensor A	The PCM	• MIL ON	CLEAR the DTC. If the DTC

		circuit high	detected a temperature less than -45°C (-50°F) for at least 2.5 seconds (open circuit).	• Default to 1st gear • DTC P0710 may set	returns, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test B
P0715	Turbine Shaft Speed (TSS) sensor	TSS sensor A circuit	The PCM indicated no rpm input from the TSS sensor when the Output Shaft Speed (OSS) sensor indicated rpm greater than 0	• MIL ON • Default to 5th gear • Maximum line pressure • DTC P0717 may set	REPAIR the more specific DTC first. CLEAR the DTCs. If the DTC returns, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test D
P0717	TSS sensor	TSS sensor A circuit no signal	The PCM has not detected a TSS sensor signal during operation	• Wrench light illuminated • Default to 5th gear • Maximum line pressure • DTC P0715 may set	This DTC sets when DTC P0715 is set. REFER to DTC P0715
P0718	TSS sensor	TSS sensor A circuit intermittent	The PCM has detected an intermittent (noise) in the TSS sensor signal during operation	• Wrench light illuminated • Poor shift quality	CLEAR the DTC. If the DTC returns, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test D.
P0720	OSS sensor	OSS sensor circuit	The PCM indicated no rpm input from the OSS sensor when the TSS sensor indicated rpm greater than 0	• MIL ON • Default to 5th gear • Maximum line pressure • DTC P0722 may set	REPAIR the more specific DTC first. CLEAR the DTCs. If the DTC returns, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test E.
P0721	OSS sensor	OSS sensor circuit intermittent	The PCM has detected and unrealistic rpm change in the OSS sensor	• Wrench light illuminated • Poor shift quality	CLEAR the DTC. If the DTC returns, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test E
P0722	OSS sensor	OSS sensor no signal	The PCM indicated no rpm input from the OSS sensor when the TSS sensor indicated rpm greater than 0	• Wrench light illuminated • Default to 5th gear • Maximum line pressure • DTC P0720 may set	This DTC sets when DTC P0720 is set. REFER to DTC P0720.
P0729	Transmission	Gear 6 incorrect ratio	The PCM did not detect a 6th gear ratio when commanded.	• Wrench light illuminated • No 6th gear • Flair or	Intermediate clutch (C) or overdrive clutch (E) failed to apply. REFER to: Specifications (307-01 Automatic Transmission - 6-Speed

				• neutral condition • Hangs in gear	Automatic Transmission - 6R80, Specifications). GO to the Clutch Application Chart. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0731	Transmission	Gear 1 incorrect ratio	The PCM did not detect a 1st gear ratio when commanded.	• Wrench light illuminated • No 1st gear • Flair or neutral condition • Hangs in gear	Forward clutch (A) or low / reverse clutch (D) slip of clutch (D) failed to apply or OWC failed to hold. REFER to: Specifications (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Specifications). GO to the Clutch Application Chart. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0732	Transmission	Gear 2 incorrect ratio	The PCM did not detect a 2nd gear ratio when commanded.	• Wrench light illuminated • No 2nd gear • Flair or neutral condition • Hangs in gear	Forward clutch (A) or intermediate clutch (C) slip or clutch (C) failed to apply. REFER to: Specifications (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Specifications). GO to the Clutch Application Chart. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0733	Transmission	Gear 3 incorrect ratio	The PCM did not detect a 3rd gear ratio when commanded	• Wrench light illuminated • No 3rd gear • Flair or neutral condition • Hangs in gear	Forward clutch (A) or direct clutch (B) slip or clutch (B) failed to apply. REFER to: Specifications (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Specifications). GO to the Clutch Application Chart. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0734	Transmission	Gear 4 incorrect ratio	The PCM did not detect a 4th gear ratio when commanded	• Wrench light illuminated • No 4th gear • Flair or neutral condition • Hangs in gear	Forward clutch (A) or overdrive clutch (E) slip or clutch (A) or (E) failed to apply. REFER to: Specifications (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Specifications). GO to the Clutch Application

					Chart. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0735	Transmission	Gear 5 incorrect ratio	The PCM did not detect a 5th gear ratio when commanded.	• Wrench light illuminated • No 5th gear • Flair or neutral condition • Hangs in gear	Direct clutch (B) or overdrive clutch (E) slip or clutch (B) or (E) failed to apply. REFER to: Specifications (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Specifications). GO to the Clutch Application Chart. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0740	Torque Converter Clutch (TCC) solenoid	TCC solenoid circuit/open	The PCM detected that the TCC solenoid control circuit failed open	• MIL ON • TCC is disabled • DTC P0743 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0741	TCC solenoid	TCC solenoid circuit performance / stuck OFF	The TCC failed to apply after 3 consecutive commands from the PCM.	• MIL ON • TCC is disabled • TCC regulator apply valve stuck in the release position • TCC control valve stuck in the release position • DTC P0751 may set	DTC P0741 is a nonelectrical DTC. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). GO to Torque Converter Operation Concerns, No Apply
P0742	TCC solenoid	TCC solenoid circuit stuck ON	The PCM detected the TCC solenoid control circuit is shorted to ground	• MIL ON • TCC is disabled • poor launch performance • Default to 3rd or 5th gear • DTC P0743 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A
P0743	TCC solenoid	TCC solenoid circuit electrical	The PCM detected that the TCC solenoid circuit is open, shorted to ground or an intermittent	• Wrench light illuminated • TCC is disabled • Poor launch performance • Default to 5th gear • DTCs	REPAIR the more specific DTC first. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.

				P0740, P0742 and / or P0744 may set	
P0744	TCC solenoid	TCC solenoid circuit intermittent	The PCM detected that the TCC solenoid control circuit is shorted to power	• MIL ON • TCC is disabled • DTC P0743 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0748	Line Pressure Control (LPC)	LPC electrical	The PCM sets this DTC along with one or more specific electrical DTCs	• Wrench light illuminated • Maximum line pressure • May default to 5th gear • DTCs P0960, P0962 and/or P0963 may set	REPAIR the more specific DTC first. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0750	Shift Solenoid A (SSA)	SSA	The PCM detected that the SSA circuit failed open or shorted to power	• MIL ON • 5th and 6th gear only • DTC P0753 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A
P0751	SSA	SSA performance/ stuck OFF	The PCM commanded SSA ON but detected a ratio error. Forward clutch (A) failed OFF	• MIL ON • 5th and 6th gear only • Harsh reverse engagement • Neutral or flair condition • Clutch A regulator valve stuck in default position • Clutch A latch valve stuck in default position • DTC P2700 may set	DTC P0751 is a nonelectrical DTC. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0752	SSA	SSA stuck ON	The PCM commanded SSA OFF but detected a ratio error. Forward clutch (A) stuck ON.	• MIL ON • Disable 5th and 6th gear • Erratic shifts • Stuck in 4th gear • Clutch A regulator valve stuck in spring compressed position • DTC P2700 may set	DTC P0752 is a non-electrical DTC. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).

P0753	SSA	SSA electrical	The PCM sets this DTC along with one or more specific electrical DTCs	• Wrench light illuminated • 5th and 6th gear only • DTCs P0750, P0973 and/or P0974 may set	REPAIR the more specific DTC first. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0754	SSA	SSA intermittent	The PCM sets this DTC when an intermittent condition (open, short to power or ground) occurs 3 times for less than 5 seconds with each occurrence	• Unexpected upshifts, downshifts, flairs or neutral conditions	CLEAR the DTC. TEST the system for normal operation. If the DTC returns, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0755	Shift Solenoid B (SSB)	SSB	The PCM detected that the SSB circuit failed open or shorted to power	• MIL ON • Default to 3rd or 5th gear • Harsh 1-3 shift • DTC P0756 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0756	SSB	SSB performance/ stuck OFF	The PCM commanded SSB ON but detected a ratio error. Direct clutch (B) failed OFF	• MIL ON • Default to 3rd or 5th gear • Neutral or flair condition • Transmission hangs in 2nd gear on acceleration • Clutch B regulator valve stuck in default position • Clutch B latch valve stuck in default position • DTC P0757 may set	DTC P0756 is a nonelectrical DTC. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0757	SSB	SSB stuck ON	The PCM commanded SSB OFF but detected a ratio error. Direct clutch (B) stuck ON	• MIL ON • Default to 3rd or 5th gear • Harsh 1-3 shift • Erratic shifts • Clutch B regulator valve stuck in spring compressed position • DTC P0758	DTC P0757 is a nonelectrical DTC. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).

				may set	
P0758	SSB	SSB electrical	The PCM sets this DTC along with one or more specific electrical DTCs	• Wrench light illuminated • Default to 3rd or 5th gear • Maximum line pressure • DTCs P0755, P0976 and/or P0977 may set	REPAIR the more specific DTC first. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A
P0759	SSB	SSB intermittent	The PCM sets this DTC when an intermittent condition (open, short to power or ground) occurs 3 times for less than 5 seconds with each occurrence	• Unexpected upshifts, downshifts, flairs or neutral conditions	CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0760	Shift Solenoid C (SSC)	SSC	The PCM detected the SSC circuit has failed open	• MIL ON • Disable 2nd and 6th gear • Erratic or harsh 1-3 shift • DTC P0763 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A
P0761	SSC	SSC performance/ stuck OFF	The PCM commanded SSC ON but detected a ratio error. Intermediate clutch (C) failed OFF	• MIL ON • Disable 2nd and 6th gear • Neutral or flair condition • Clutch C regulator valve stuck in default position • DTC P2702 may set	DTC P0761 is a nonelectrical DTC. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0762	SSC	SSC stuck ON	The PCM commanded SSC OFF but detected a ratio error. Intermediate clutch (C) stuck ON.	• MIL ON • 2nd and 6th upshift only • Harsh reverse engagement • Erratic shift or stuck in 6th • Clutch C regulator valve stuck in spring compressed position • DTC P2702 may set	DTC P0762 is a nonelectrical DTC. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0763	SSC	SSC electrical	The PCM sets	• Wrench light	REPAIR the more specific DTC

			this DTC along with one or more specific electrical DTCs.	• illuminated • Disable 2nd and 6th gear • DTCs P0760, P0979 and/or P0980 may set	first. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A
P0764	SSC	SSC intermittent	The PCM sets this DTC when an intermittent condition (open, short to power or ground) occurs 3 times for less than 5 seconds with each occurrence.	Unexpected upshifts, downshifts, flairs or neutral conditions	CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0765	Shift Solenoid D (SSD)	SSD	The PCM detected that SSD circuit has failed open	• MIL ON • Disable 1st, 2nd and 3rd gears • Poor launch performance • DTC P0768 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A
P0766	SSD	SSD performance/ stuck OFF	The PCM commanded SSD ON but detected a ratio error. The low/reverse clutch (D) and overdrive clutch (E) have both failed OFF	• MIL ON • 3rd gear only • Delayed or no reverse engagement • Neutral or flair condition • DTCs P2703 and/or P2704 may set	REPAIR the more specific DTC first. DTC P0766 is a nonelectrical DTC. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0767	SSD	SSD stuck ON	The PCM commanded SSD OFF but detected a ratio error. Overdrive clutch (E) failed to release	• MIL ON • 4th, 5th and 6th gear only • Early upshifts • Stuck in 4th • DTC P2704 may set	DTC P0767 is a nonelectrical DTC. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0768	SSD	SSD electrical	The PCM sets this DTC along with one or more specific electrical DTCs	• Wrench light illuminated • Default to 3rd gear • DTCs P0765, P0982 and/or P0983 may set	REPAIR the more specific DTC first. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A
P0769	SSD	SSD intermittent	The PCM sets this DTC when an intermittent condition (open, short to power or ground) occurs 3 times	• The PCM sets this DTC when an intermittent condition (open, short	CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80,

			for less than 5 seconds with each occurrence	to power or ground) occurs 3 times for less than 5 seconds with each occurrence	Diagnosis and Testing). Pinpoint Test A.
P0770	Shift Solenoid E (SSE)	SSE	The PCM detected that the SSE circuit failed open, shorted to ground or shorted to power	• MIL ON • No TCC • If 1st, 2nd and 3rd gears are achieved than circuit is open or shorted to power (no pressure) • If 5th gear launch than circuit is shorted to ground (pressure) • DTC P0773 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0771	SSE	SSE performance/ stuck OFF	The PCM commanded SSE ON but detected a ratio error (mechanical failure).	• MIL ON • 1st, 2nd and 3rd gear only • Solenoid multiplex valve stuck in default position • DTC P0984 may set	DTC P0771 is a nonelectrical DTC. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0772	SSE	SSE stuck ON	The PCM commanded SSE OFF but detected a ratio error (mechanical failure)	• MIL ON • No 1st gear • 4th gear launch • Solenoid multiplex valve stuck in spring compressed position • DTC P0984 may set	DTC P0772 is a nonelectrical DTC. CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0773	SSE	SSE electrical	The PCM sets this DTC along with one other specific electrical DTC. SSE circuit may be open, short to power or ground.	• Wrench light illuminated • If 1st, 2nd and 3rd gears are achieved than circuit is open or shorted to power (no pressure) • If 5th gear launch than circuit is	REFER to DTC P0770.

				shorted to ground (pressure) • DTC P0770 may set	
P0774	SSE	SSE intermittent	The PCM sets this DTC when an intermittent condition (open, short to power or ground) occurs but does not set DTC P0770.	• Wrench light illuminated • Transmission hangs in 1st gear or may be stuck in 3rd gear	CLEAR the DTCs. TEST the system for normal operation. If the DTC returns, REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P07A8	Transmission	Transmission friction element D performance stuck OFF	The low/reverse clutch failed OFF.	• Wrench light illuminated • Delay or no reverse engagement • Disable 1st gear • Erratic shifts	DTC P07A8 is a nonelectrical DTC. CLEAR the DTC. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P07A9	Transmission	Transmission friction element D stuck ON	The low/reverse One-Way Clutch (OWC) is failed ON.	• Wrench light illuminated • No TCC • 1st gear only • High engine rpm	DTC P07A9 is a nonelectrical DTC. CLEAR the DTC. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P07AA	Transmission	Transmission friction element E performance stuck off	The PCM detected a ratio error. Overdrive clutch (E) failed OFF.	• Wrench light illuminated • 1st, 2nd and 3rd gears only • Neutral or flair condition • High engine rpm • Erratic shifts	DTC P07AA is a nonelectrical DTC. CLEAR the DTC. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P0815	SelectShift™ switch	Upshift switch circuit	The upshift and downshift switches are open in PARK, REVERSE and NEUTRAL. The PCM sets this DTC when it detects an upshift switch is closed (short to ground).	--------	CLEAR the DTC. If DTC P0815 returns, REFER to: External Controls (307-05 Automatic Transmission External Controls, Diagnosis and Testing).
P0816	SelectShift™ switch	Downshift switch circuit	The upshift and downshift switches are open in PARK, REVERSE and NEUTRAL. The PCM sets this DTC when it detects a downshift	--------	CLEAR the DTC. If DTC P0815 returns, REFER to: External Controls (307-05 Automatic Transmission External Controls, Diagnosis and Testing).

			switch is closed (short to ground).		
P0882	Battery	PCM power input signal low	The battery voltage is out of range low. At low volts the solenoid drivers may no longer be able to achieve desired current so the transmission solenoid power control relay will be turned OFF.	• MIL ON • Default to 3rd or 5th gear depending vehicle speed and gear • Battery voltage below 9 volts • Maximum line pressure	INSPECT the PCM power and ground circuits for opens or short to ground. INSPECT the PCM connector for damaged or pushed-out terminals, corrosion or loose wires. CLEAR the DTC. If DTC P0882 returns, REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
P0883	Battery	PCM power input signal high	The battery voltage is out of range high. Greater than 21 volts.	• MIL ON • Default to 3rd or 5th gear depending vehicle speed and gear • Battery voltage above 21 volts • Maximum line pressure • May set DTC P0702	INSPECT the PCM power and ground circuits for opens or short to ground. INSPECT the PCM connector for damaged or pushed-out terminals, corrosion or loose wires. CLEAR the DTC. If DTC P0882 returns, REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
P0884	Battery	PCM power input signal intermittent	The battery voltage is out intermittently out of range.	• MIL ON • Default to 3rd or 5th gear depending vehicle speed and gear • Battery voltage above 21 volts or below 9 volts intermittently • Maximum line pressure	INSPECT the PCM power and ground circuits for opens or short to ground. INSPECT the PCM connector for damaged or pushed-out terminals, corrosion or loose wires. CLEAR the DTC. If DTC P0882 returns, REFER to: Charging System (414-00 Charging System - General Information, Diagnosis and Testing).
P0960	Line Pressure Control (LPC)	LPC control circuit/open	The PCM detected 0 volts on the LPC circuit.	• MIL ON • Maximum line pressure • May default to 5th gear • DTC P0748 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0961	LPC	LPC control circuit range / performance	The PCM detected that the LPC control circuit is shorted to ground but not long enough to set DTC	• Intermittent condition • Minimum line pressure	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.

			P0962.		
P0962	LPC	LPC control circuit low	The PCM detected 0 volts on the LPC circuit. Short to ground detected.	• MIL ON • Default to 5th gear • Maximum line pressure • DTC P0748 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0963	LPC	LPC control circuit high	The PCM detected voltage on the LPC circuit. Short to power detected.	• MIL ON • Maximum line pressure • DTC P0748 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0973	SSA	SSA control circuit low	The PCM detected 0 volts on the SSA circuit. Short to ground detected.	• MIL ON • Default to 5th gear • Default to 3rd only, when the selector lever is shifted into Reverse then back into Drive • Maximum line pressure • DTC P0753 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0974	SSA	SSA control circuit high	The PCM detected voltage on the SSA circuit. Short to power or open circuit detected.	• MIL ON • 5th and 6th gear only • DTC P0753 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0976	SSB	SSB control circuit low	The PCM detected 0 volts on the SSB circuit. Short to ground detected.	• MIL ON • Default to 5th gear • Default to 3rd only, when the selector lever is shifted into REVERSE then back into DRIVE • Maximum line pressure • DTC P0753 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0977	SSB	SSB control circuit high	The PCM detected voltage on the SSB circuit. Short to power or open circuit.	• MIL ON • Default to 3rd and 5th gear • Harsh 1st to 3rd shift • Maximum line pressure • DTC P0758 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.

P0979	SSC	SSC control circuit low	The PCM detected 0 volts on the SSC circuit. Short to ground detected.	• MIL ON • Default to 5th gear • Maximum line pressure • DTC P0763 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0980	SSC	SSC control circuit high	The PCM detected voltage on the SSC circuit. Short to power detected	• MIL ON • 2nd and 6th gears disabled • Harsh 1st to 3rd shift • Maximum line pressure • DTC P0763 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0982	SSD	SSD control circuit low	The PCM detected 0 volts on the SSD circuit. Short to ground detected.	• MIL ON • Default to 5th gear • Default to 3rd only, when the selector lever is shifted into REVERSE then back into DRIVE • Maximum line pressure • DTC P0768 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0983	SSD	SSD control circuit high	The PCM detected voltage on the SSD circuit. Short to power detected	• MIL ON • Disable 1st, 2nd and 3rd gear • Poor launch performance • Maximum line pressure • DTC P0768 may set	REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.
P0984	SSE	SSE control circuit range / performance	The PCM commanded SSE ON or OFF but detected a ratio error (mechanical failure).	• Wrench light illuminated • DTC P0771 and/or P0772 will set	DTC P0984 is a nonelectrical DTC. CLEAR the DTCs. REPAIR the more specific DTC first. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P1001	PCM	Key ON Engine Running (KOER) not able to complete, KOER aborted	The KOER self test was unable to complete and aborted.	--------	Refer to Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1397	PCM	System voltage out of self-test range	The PCM detected that system voltage is out of self	--------	CLEAR the DTC. RERUN the KOEO and KOER self test. If the DTC returns.

			test range of 11 to 18 volts, during the Key ON Engine OFF (KOEO) or KOER		
P1501	PCM	Vehicle Speed Sensor (VSS) out of self-test range	The PCM detected a VSS signal during the self-test.	• Self-test aborted	CLEAR the DTC. With the selector lever in the Park position, RERUN the self test. If the DTC returns, Refer to Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1502	PCM	VSS intermittent	Intermittent VSS fault keeps disabling engine monitors.	• Can not complete engine monitors	Refer to Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1635	PCM	Tire/Axle out of acceptable range	The tire, axle or the combination of tire and axle are out of the certified range. Calibration was not updated.	• MIL ON • PCM will use a default tire and axle calibration	Refer to Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.
P1636	PCM	Inductive signature chip communication error	The PCM lost communication with an internal chip that controls the solenoid states and fault reporting.	• MIL ON • Default to 3rd or 5th gear • Maximum line pressure • Poor launch performance	REPLACE the PCM. After installing the new PCM, PROGRAM it with the latest calibration and PERFORM the Solenoid Body Strategy Data Download. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). ROAD TEST the vehicle and PERFORM the Adaptive Drive Cycle. REFER to: Shift Point Road Test (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P163E	PCM	PCM programming error	The PCM has detected an invalid checksum.	• MIL ON • Default to 1st or 3rd gear • Maximum line pressure	REPROGRAM the original PCM with the latest calibration. CLEAR the DTC. TEST the system for normal operation. If the DTC returns, REPLACE the PCM. After installing the new PCM, PROGRAM it with the latest calibration and PERFORM the Solenoid Body Strategy Data Download. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). ROAD TEST the vehicle and PERFORM the Adaptive Drive Cycle. REFER to: Shift Point Road Test (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P163F	PCM	Transmission ID block corrupted, not programmed	The PCM has detected an invalid transmission	• MIL ON • Default to 1st or 3rd gear	REPROGRAM the original PCM with the latest calibration. CLEAR the DTC. TEST the system for normal operation. If the DTC

			identification.	• Maximum line pressure	returns, REPLACE the PCM. After installing the new PCM, PROGRAM it with the latest calibration and PERFORM the Solenoid Body Strategy Data Download. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). ROAD TEST the vehicle and PERFORM the Adaptive Drive Cycle. REFER to: Shift Point Road Test (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P1700	Transmission	Transmission intermittent failure (failed to neutral)	Main control body issue where the multiplex valve reverse pressure bleeds off to slow and causes the multiplex valve to get stuck in the wrong state.	• Wrench light illuminated • Neutral condition when 1st gear commanded	DTC P1700 is a nonelectrical DTC. CLEAR the DTC. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P1702	TR sensor	TR sensor circuit intermittent	The PCM detected a TR sensor signal duty cycle is not out of range but is invalid.	• Wrench light illuminated • DTC P0705, P0706, P0707, P0708 and/or P0709 may set	REPAIR the more specific DTC first. REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test C
P1705	TR sensor	TR sensor circuit did not indicate PARK/NEUTRAL during the self test.	The TR sensor circuit did not indicate PARK / NEUTRAL during KOEO or KOER self test.	--------	CLEAR the DTC. RERUN the KOEO and KOER self test. If DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test C.
P1711	TFT sensor	TFT sensor out of self-test range	The PCM did not receive a TFT sensor input during the KOEO or KOER self test that was within -1.11°C to 104°C (30°F to 220°F) during the self test	--------	CLEAR the DTC. RERUN the KOEO and KOER self test. If DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test B.
P1744	TCC	TCC solenoid circuit	The PCM detected that the TCC solenoid is stuck ON or stuck OFF.	• Wrench light illuminated • DTC P0741 and/or P2758 may set	DTC P1744 is a nonelectrical DTC. REPAIR the more specific DTC first. CLEAR the DTCs. TEST the system for normal operation. If the DTCs return, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).

P1780	Transmission Control Switch (TCS)	TCS (Tow/Haul) circuit out of self test range	The PCM did not receive a TCS input during the KOER self-test	• Disable Tow / Haul function	CLEAR the DTC. RERUN KOER self-test. If DTC returns, REFER to: External Controls (307-05 Automatic Transmission External Controls, Diagnosis and Testing).
P1783	Transmission	Transmission overtemperature condition	The PCM detected a transmission temperature greater than 135°C (275°F) for more than 5 seconds.	• Wrench light illuminated • TCC commanded on early	CLEAR the DTC. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P1921	TR sensor	TR signal	The PCM detected a TR sensor signal duty cycle out of range	• Engine will not crank • DTCs P1705, P0706, P0707, P0708 and/or P0709 may set	REPAIR the more specific DTC first. REFER to: Pinpoint Tests - OSC Equipped Vehicle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test C.
P2700	Transmission	Transmission friction element A apply time range/ performance	The PCM commanded SSA ON or OFF but detected a ratio error (mechanical failure)	• Wrench light illuminated • DTC P0751 and/or P0752 will set	DTC P2700 is a nonelectrical DTC. REPAIR the more specific DTC first. REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P2701	Transmission	Transmission friction element B apply time range / performance	The PCM commanded SSB ON or OFF but detected a ratio error (mechanical failure)	• Wrench light illuminated • DTC P0756 and/or P0757 will set	DTC P2701 is a nonelectrical DTC. REPAIR the more specific DTC first. REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P2702	Transmission	Transmission friction element C apply time range / performance	The PCM commanded SSC ON or OFF but detected a ratio error (mechanical failure).	• Wrench light illuminated • DTC P0761 and/or P0762 will set	DTC P2702 is a nonelectrical DTC. REPAIR the more specific DTC first. REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P2703	Transmission	Transmission friction element D apply time range / performance	The PCM commanded SSD ON or OFF but detected a ratio error (mechanical failure).	• Wrench light illuminated • DTC P0766 and/or P2704 will set	DTC P2703 is a nonelectrical DTC. REPAIR the more specific DTC first. REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P2704	Transmission	Transmission friction element E apply time range / performance	The PCM commanded SSE ON or OFF but detected a ratio error (mechanical failure).	• Wrench light illuminated • DTC P0766 and/or P0767 will set	DTC P2704 is a nonelectrical DTC. REPAIR the more specific DTC first. REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P2705	Transmission	Transmission	The One-Way	• Wrench light	DTC P2704 is a nonelectrical

		friction element F apply time range / performance	Clutch (OWC) failed OFF (OWC failure).	illuminated • Neutral condition when 1st gear is commanded • Poor launch performance • Harsh engagements	DTC. REPAIR the more specific DTC first. REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P2758	TCC	TCC pressure control solenoid stuck ON	The PCM commanded the TCC solenoid OFF but the TCC did not release (mechanical error).	• Wrench light illuminated • Engine stalls or is lugging • DTC P1744 may set	DTC P2758 is a nonelectrical DTC. REPAIR the more specific DTC first. REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
P2760	TCC	TCC pressure control solenoid intermittent	The TCC solenoid control circuit shorted to ground 3 times without setting DTC P0742.	• TCC disabled • Poor launch performance • Default to 5th gear	CLEAR the DTC. TEST the system for normal operation. If the DTC returns, REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). Pinpoint Test A.

Parameter Identification (PID) Chart

The following is a list of output state control parameters and their corresponding PIDs:

Diagnostic PID Chart

PID Name	PID Description	Units
4X4L	4x4 Low	On/Off
AXLE	Axle Ratio	Ratio
APP 1	Accelerator Pedal Position	Percentage
BOO	Brake Switch Input Status	On/Off
CLRDIST	Distance since DTC cleared	Distance driven since PCM DTCs were cleared
DTC	Continuous Codes	Number
ENGLOAD	Engine Load	Percentage
GEAR_CMD	Gear Commanded by Module	Mode
GEAR_OSC#	Gear Commanded by Output State Control	Mode
GEAR_RAT	Gear Ratio Commanded	Ratio
HRSH_SHFT#	Firm Shift	On/Off
IN_GEAR	In Gear-Transmission is Applying a Load to Engine	In Gear
ISS_F	Input Shaft Speed Sensor Fault	No Fault/Yes Fault
ISS_SRC	Input Shaft Speed Sensor	rpm
LINEDSD#	Line Pressure Control Desired	Pressure
MIL_DIS	The distance travelled since the MIL was activated	The distance travelled since the MIL was activated
OSS_F	Output Shaft Speed Reliable	No Fault/Yes Fault
OSS_SRC	Unfiltered Output Shaft Speed	rpm
RLC_F	Reverse Control Lamp Status	No Fault/Yes Fault
RPM#	Engine Revolutions Per Minute	rpm
SHFT_DROP	Shift rpm Drop in Input Shaft Speed Below Expected	rpm
SHFT_FLRE	Shift rpm Rise in Input Shaft Speed Above Expected	rpm
SHFT_ID	Shift Identification of Shift PIDs Lag, Time, Flair and Drop	rpm
SHFT_LAG	Shift Time Elapsed From 1% to 9% Complete	Time
SHFT_TIME	Shift Time From Commanded to 10% Complete	Time
SHFT_TYP	Shift Type	Type
SSA_AMP#	Shift Solenoid Pressure Control A (SSPCA)	Current
SSB_AMP#	Shift Solenoid Pressure Control B (SSPCB)	Current
SSC_AMP#	Shift Solenoid Pressure Control C (SSPCC)	Current
SSD_AMP#	Shift Solenoid Pressure Control D (SSPCD)	Current
SSE_AMP#	Shift Solenoid Pressure Control E (SSPCE)	Current
SSPCA	SSPCA	Pressure

SSPCA_F	SSPCA Status	No Fault/Yes Fault
SSPCB	SSPCB	Pressure
SSPCB_F	SSPCB Status	No Fault/Yes Fault
SSPCC	SSPCC	Pressure
SSPCC_F	SSPCC Status	No Fault/Yes Fault
SSPCD	SSPCD	Pressure
SSPCD_F	SSPCD Status	No Fault/Yes Fault
SSPCE_F	SSPCE Status	No Fault/Yes Fault
TCCC	Torque Converter Clutch (TCC) Solenoid	Pressure
TCC AMP#	Converter Pressure Control	Current
TCC_F	TCC Fault	No Fault/Yes Fault
TCC_OSC#	Output State Control of Torque Converter	Locked/Unlocked
TCC_RAT	Transmission Slip Ratio	Ratio
TCIL	Transmission Control Indicator Lamp (TCIL)	On/Off
TCS_DEPRES	Transmission Control Switch (TCS) Pressed	Yes/No
TCS_STATE	TCS Requested State	On/Off
TC_SLIPACT	Torque Converter Slip Actual	rpm
TC_SLIPDSD	Torque Converter Slip Desired	rpm
TFT	Transmission Fluid Temperature (TFT)	Temperature
TFTV	TFT Volts	Volts
TFT_F	TFT Status	No Fault/Yes Fault
TIRESIZE	Tire Size	Rev Per Mile
TP	Throttle Position (TP) Sensor	Percentage
TR	Transmission Range (TR)	Mode
TRANS_VOLT_A	Transmission Supply Voltage Control State	On/Off
TRAN_RAT	Transmission Gear ratio	Ratio
TRO_N_F	Neutral Output Status	On/Off
TRO_P_F	Park Output Status	On/Off
TR_CRANK	TR Input Allowing Input Start	Yes/No
TR_DC	TR Duty Cycle	Percentage
TR_F	TR Status	No Fault/Yes Fault
TR_FREQ	TR Frequency	Frequency
TSS	Turbine Shaft Speed	rpm
TSS_F	Turbine Shaft Speed (TSS) Reliable	No Fault/Yes Fault
VPWR	Module Supply Voltage	Volts
VSOUT_F	Vehicle Speed Output Status	No Fault/Yes Fault
VSS	Vehicle Speed Sensor (VSS)	Speed

Pinpoint Tests - OSC Equipped Vehicle

General Equipment

Fluke 77-IV Digital Multimeter FLU77-4 or equivalent
Vehicle Communication Module (VCM) and Integrated Diagnostic System (IDS) software with appropriate hardware, or equivalent scan tool)

When the electrical connector or solenoid body is disconnected, inspect the connector for terminal condition, corrosion and contamination. Also inspect the connector seal for damage. Clean, repair or install new components as required.

Power is routed through the Transmission Solenoid Power Control (TSPC) relay, located inside the Transmission Control Module (TCM), to all transmission solenoids. If the power circuit to the transmission solenoids or the TSPC relay fails to open, then all solenoids are failed electrically OFF. CHECK for open, short to ground or the transmission connector disconnected. The TSPC relay will disable power to the transmission solenoids when certain transmission DTCs are set.

Shift Solenoid Pre-Diagnosis

Selector Lever Position	TCM Commanded Gear	Shift Solenoid					TCC NL
		SSA NL TCC NL (1,2,3,4)	SSB NH (3,5,R)	SSC NL (CB 2,6)	SSD NH (CB L,R/C 4,5,6)	SSE NC	
P	P	Off	On	Off	Off	Off	Off
R	R	Off	Off	Off	Off	Off	Off
N	N	Off	On	Off	Offa	Off	Off
D	1	On	On	Off	Offb	Off	Off
	2	On	On	On	On	Off	Off
	3	On	Off	Off	On	On	On/Off
	4	On	On	Off	Off	On	On/Off
	5	Off	Off	Off	Off	On	On/Off
	6	Off	On	On	Off	On	On/Off
M c	--	--	--	--	--	--	--
2	2	On	On	On	On	Off	Off
1	1	On	On	Off	Off	On	Off

a Solenoid state will change if vehicle is moving forward with the selector lever in the NEUTRAL position.

b Solenoid is On when vehicle is above 3 mph.

c All gears available upon driver request.

CB = Clutch brake.

NC = Normally closed.

NH = Normally high

NL = Normally low

Pinpoint Tests

Refer to Wiring Diagrams section for schematic and connector information.

NOTE: *Refer to all TSBs and On-Line Automotive Service Information System (OASIS) messages that pertain to the transmission concern and follow the procedure as described.*

PINPOINT TEST A: TRANSMISSION CONTROL SOLENOIDS

NOTE: *Refer to the Transmission Vehicle Harness Connector illustration within the Transmission Connector Layouts procedure in this section.*

NOTE: *Refer to the Transmission Leadframe Connector illustration within the Transmission Connector Layouts procedure in this section.*

NOTE: *If the scan tool is unable to access the transmission PIDs, refer to Powertrain Control management section of the workshop manual.*

NOTE: *Read and record all DTCs.*

NOTE: *Without a voltage signal return to the TCM, the Transmission Solenoid Power Control (TSPC) relay is commanded OFF. By using a fused jumper between a transmission solenoid control circuit and the signal return circuit, the TSPC relay circuit will supply power to the transmission solenoids when the ignition is cycled from OFF to ON. Do not use a solenoid control circuit that may be at fault, refer to Diagnostic Trouble Code (DTC) Charts in this section for a fault listing.*

PINPOINT TEST A :

A1 CHECK THE SOLENOID POWER CIRCUIT FOR VOLTAGE

- Ignition OFF.
- Disconnect Transmission C1575.
- Inspect the connector for damaged or pushed out terminals, corrosion, loose wires and missing or damaged seals.
- **NOTE:** *Do not use a solenoid control circuit that may be at fault. Failure to jump pin 5 to a known good solenoid control circuit can cause incorrect diagnostic results. For additional information, refer to Diagnostic Trouble Code (DTC) Charts in this section for a fault listing.*

  Connect a fused jumper between one of the following:

Positive Lead	Measurement / Action	Negative Lead
C1575-9		C1575-5
C1575-14		C1575-5
C1575-13		C1575-5
C1575-10		C1575-5
C1575-8		C1575-5
C1575-16		C1575-5
C1575-3		C1575-5

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-7		Ground

Is the voltage greater than 10 volts?

Yes	Remove fused jumper GO to A4
No	Remove fused jumper GO to A2

A2 CHECK THE SOLENOID POWER CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect TCM C2391.
- Inspect the connector for damaged or pushed out terminals, corrosion, loose wires and missing or damaged seals.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2391-2	Ω	C1575-7

Is the resistance less than 5 ohms?

Yes	GO to A3
No	REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation. If DTC P0657 returns, REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). TEST the system for normal operation.

A3 CHECK THE SOLENOID POWER CIRCUIT FOR VOLTAGE

- Connect TCM C2391.
- Disconnect Transmission C1575.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-7	V	Ground

Is voltage greater than 3 volts?

Yes	GO to A5
No	REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation. If DTC P0657 returns, REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). TEST the system for normal operation.

A4 CHECK SOLENOID CONTROL CIRCUITS FOR AN OPEN

- Ignition OFF.
- Disconnect TCM C2391.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2391-42	Ω	C1575-9
C2391-7	Ω	C1575-14
C2391-6	Ω	C1575-13
C2391-43	Ω	C1575-10
C2391-11	Ω	C1575-8
C2391-4	Ω	C1575-16
C2391-3	Ω	C1575-3

Is the resistance less than 5 ohms on each circuit?

Yes	GO to A5
No	REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation.

A5 CHECK SOLENOID CONTROL CIRCUITS FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-7	Ω	Ground
C1575-9	Ω	Ground
C1575-14	Ω	Ground
C1575-13	Ω	Ground
C1575-10	Ω	Ground
C1575-8	Ω	Ground
C1575-16	Ω	Ground
C1575-3	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to A6
No	REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation.

A6 CHECK SOLENOID CONTROL CIRCUITS FOR A SHORT TO POWER

- Connect TCM C2391.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-9	V	Ground
C1575-14	V	Ground
C1575-13	V	Ground

C1575-10		Ground
C1575-8		Ground
C1575-16		Ground
C1575-3		Ground

Is voltage greater than 3 volts?

Yes	REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation.
No	GO to A7

A7 CHECK COMPONENT RESISTANCE

- Measure resistance of the solenoid between the transmission molded leadframe C14, component side using the following chart:

C14 @ trans.	Solenoid	C14 @ trans.	Ohms
C1575-7	PC1	C1575-9	4.8 to 5.6
C1575-7	PC2	C1575-14	4.8 to 5.6
C1575-7	PC3	C1575-13	4.8 to 5.6
C1575-7	PC4	C1575-10	4.8 to 5.6
C1575-7	SSI	C1575-8	17.5 to 18.6
C1575-7	PC5	C1575-16	4.8 to 5.6
C1575-7	PC6	C1575-3	4.8 to 5.6

Is the resistance within specifications?

Yes	REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). TEST the system for normal operation.
No	GO to A8

A8 CHECK COMPONENT RESISTANCE

- Remove the molded leadframe from the main control. Inspect for metallic contamination and clean the solenoid and molded leadframe terminals.
- Measure and record the resistance of the suspected solenoid. Compare the recorded value with the chart below:

Solenoid	Ohms
PC1	4.8 to 5.6
PC2	4.8 to 5.6
PC3	4.8 to 5.6
PC4	4.8 to 5.6

SSI	17.5 to 18.6
PC5	4.8 to 5.6
PC6	4.8 to 5.6

Is the solenoid resistance within specification?

Yes	INSTALL a new molded leadframe. CLEAR the DTCs. TEST the system for normal operation.
No	REPLACE the suspected solenoid which failed the resistance check. REFER to: Solenoid (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80) . CLEAR the transmission adaptive tables and perform the adaptive drive cycle. REFER to: Shift Point Road Test (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). TEST the system for normal operation.

PINPOINT TEST B: TFT SENSOR

NOTE: *Refer to the Transmission Vehicle Harness Connector illustration within the Transmission Connector Layouts procedure in this section.*

NOTE: *Refer to the Transmission Leadframe Connector illustration within the Transmission Connector Layouts procedure in this section.*

NOTE: *If the scan tool is unable to access the transmission PIDs, refer to Powertrain Control/ Emissions Diagnosis (PC/ED) manual.*

NOTE: *Read and record all DTCs.*

PINPOINT TEST B :

B1 CHECK TFT INPUT SIGNAL

- Ignition OFF.
- Disconnect Transmission C1575.
- Inspect the connector for damaged or pushed out terminals, corrosion, loose wires and missing or damaged seals.
- Enter the following diagnostic mode on the scan tool: Self-Test — TCM.
- Ignition ON.

Does the TFT PID display -40°C (-40°F) and the TFTV PID display 4.96 to 5.10 volts?

Yes	GO to B2
No	REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation.

B2 CHECK TFT SIGNAL INPUT CIRCUIT FOR VOLTAGE

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-6		Ground

Is the voltage between 4.8 and 5.1 volts?

Yes	GO to B3
No	INSPECT and REPAIR the circuit. If an open circuit is not found, REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). TEST the system for normal operation.

B3 CHECK TFT SIGNAL RETURN CIRCUIT

- Ignition OFF.
- Connect:

Positive Lead	Measurement / Action	Negative Lead
C1575-5		C1575-6

- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self-Test — TCM.

Does the TFT PID display 190°-195°C and the TFTV PID display 0 volts?

Yes	GO to B4
No	INSPECT and REPAIR the circuit. If an open circuit is not found, REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). TEST the system for normal operation

B4 CHECK TFT SENSOR RESISTANCE

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-5	Ω	C1575-6

- Compare the resistance value to the transmission fluid temperature (TFT) value side using the following chart.
  - TRANSMISSION FLUID TEMPERATURE (TFT)

°C	°F	Resistance
-40 to -20	40 to -4	967K-284K
-19 to -1	-3 to 31	284K-100K
0-20	32-68	100K-37K
21-40	69-104	37K-16K
41-70	105-158	16K-5K
71-90	159-194	5K-2.7K
91-110	195-230	2.7K-1.5K

111-130	231-266	1.5K-0.8K
131-150	267-302	0.8K-0.54K

Does the temperature to resistance specifications match?

Yes	REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
No	INSPECT and CLEAN the TFT sensor on the molded leadframe for metallic contamination. INSTALL a new molded leadframe if no debris was found. CLEAR the DTCs. TEST the system for normal operation.

PINPOINT TEST C: TR SENSOR

NOTE: *Refer to the Transmission Vehicle Harness Connector illustration within the Transmission Connector Layouts procedure in this section.*

NOTE: *Refer to the Transmission Leadframe Connector illustration within the Transmission Connector Layouts procedure in this section.*

NOTE: *If the scan tool is unable to access the transmission PIDs, refer to Powertrain Control/ Emissions Diagnosis (PC/ED) manual.*

NOTE: *Read and record all DTCs.*

PINPOINT TEST C :

C1 VERIFY DTCS

- Ignition OFF.
- Select PARK.
- With the scan tool, carry out the Key ON Engine OFF (KOEO) then the Key ON Engine Running (KOER) test. DTCs P0705, P0706, P0707, P0708, P0709, P1702, P1705 and P1921 cannot be set by an incorrectly adjusted selector lever cable.

Are Transmission Range (TR) sensor DTCs present?

Yes	GO to C3
No	GO to C2

C2 VERIFY SELECTOR LEVER CABLE/LINKAGE ADJUSTMENT

- Verify the selector lever cable is correctly adjusted.

Is the selector lever cable correctly adjusted?

Yes	GO to C3
No	ADJUST the selector lever cable. REFER to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures).

C3 CHECK TR SENSOR ELECTRICAL OPERATION

- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self-Test — TCM.
- Move the selector lever into each range and stop.
- Observe the following PIDs: TR_DC and TR_FREQ while wiggling the harness or driving the vehicle.

- Compare the TR_DC PID to the selector lever position duty cycle, using the following chart.

Selector Lever Position	Range (% Duty Cycle)
P	8.0 — 25.8
R	30.50 — 39.31
N	40.54 — 52.49
D	54.35 — 71.15

Is the TR_FREQ between 100 to 150 Hz?

Is the TR_DC within range?

Does the TR_DC and TR_FREQ remain steady when the harness is wiggled or the vehicle driven?

Yes	The problem is not in the TR sensor system. REFER to: Diagnosis By Symptom (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
No	GO to C4

C4 CHECK TR SENSOR VPWR CIRCUIT FOR POWER

- Ignition OFF.
- Disconnect Transmission C1575.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-12		Ground

Is the voltage less than 9.5 volts?

Yes	INSPECT and REPAIR the circuit. If an open circuit is not found, REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). CLEAR the DTCs. TEST the system for normal operation.
No	GO to C5

C5 CHECK TR SENSOR SIGNAL CIRCUIT

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-4		Ground

Is the voltage greater than 4.8 volts?

Yes	GO to C6
No	INSPECT and REPAIR the circuit. If an open circuit is not found, REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). CLEAR the DTCs. TEST the system for normal operation.

C6 CHECK TR SENSOR GROUND CIRCUIT

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-4		C1575-11

Is the voltage greater than 4.8 volts?

Yes	GO to C7
No	INSPECT and REPAIR the circuit. If an open circuit is not found, REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). CLEAR the DTCs. TEST the system for normal operation.

C7 CHECK TR SENSOR POWER CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect TCM C1822.
- Inspect the connector for damaged or pushed out terminals, corrosion, loose wires and missing or damaged seals.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-4	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to C8
No	REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation.

C8 CHECK TR SENSOR CIRCUITS FOR A SHORT TO POWER

- Connect TCM C1822.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-4		Ground
C1575-11		Ground

Is voltage greater than 9.8 volts?

Yes	REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation.
No	GO to C9

C9 CHECK TR SENSOR TO MANUAL VALVE

- Drain the transmission fluid and remove the transmission fluid pan.
- Check the connection between the TR sensor and the manual control valve.
- Inspect the molded leadframe for metallic contamination.

Is the TR sensor connected to the manual control valve shaft?

Yes	REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). TEST the system for normal operation.
No	CONNECT the TR sensor to the manual control valve. CLEAN any debris from the molded leadframe. RUN the Key ON Engine OFF (KOEO) self-test. If DTCs return, REPLACE the molded leadframe.

PINPOINT TEST D: TSS SENSOR

NOTE: *Refer to the Transmission Vehicle Harness Connector illustration within the Transmission Connector Layouts procedure in this section.*

NOTE: *Refer to the Transmission Leadframe Connector illustration within the Transmission Connector Layouts procedure in this section.*

NOTE: *If the scan tool is unable to access the transmission PIDs, refer to Powertrain Control/ Emissions Diagnosis (PC/ED) manual.*

NOTE: *Always drive the vehicle in a safe manner according to driving conditions and obey all traffic laws.*

NOTE: *Read and record all DTCs.*

NOTE: *If DTCs P0705, P0706, P0707, P0708, P0709, P1702, P1705 and/or P1921 are set, diagnose those DTCs first.*

PINPOINT TEST D :

D1 DRIVE CYCLE TEST

- Connect the scan tool.
- Enter the following diagnostic mode on the scan tool: Self-Test — TCM.
- Monitor the TSS PID while road testing the vehicle.

Does the TSS sensor rpm increase and decrease with engine rpm and vehicle speed?

Yes	

	REFER to: Shift Point Road Test (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
No	GO to D2

D2 CHECK TSS SENSOR SIGNAL CIRCUIT FOR POWER

- Ignition OFF.
- Disconnect Transmission C1575.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-1		Ground

Is the voltage less than 4.8 volts?

Yes	GO to D3
No	GO to D6

D3 CHECK THE TSS SENSOR SIGNAL CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect TCM C2391.
- Inspect the connector for damaged or pushed out terminals, corrosion, loose wires and missing or damaged seals.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2391-50	Ω	C1575-1

Is the resistance less than 5 ohms?

Yes	GO to D4
No	INSPECT and REPAIR the circuit. If an open circuit is not found, REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). TEST the system for normal operation.

D4 CHECK THE TSS SENSOR SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-1	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to D5
No	INSPECT and REPAIR the circuit. If a short to ground is not found, REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). TEST the system for normal operation.

D5 CHECK THE TSS SENSOR SIGNAL CIRCUIT FOR A SHORT TO POWER

- Connect TCM C2391.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-1		Ground

Is voltage greater than 5.1 volts?

Yes	INSPECT and REPAIR the circuit. If a short to power is not found, REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). TEST the system for normal operation.
No	GO to D6

D6 CHECK THE TSS SENSOR GROUND CIRCUIT

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-1		C1575-5

Is voltage less than 4.8 volts?

Yes	REPAIR the transmission vehicle harness signal return circuit for an open. If an open is not found, REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). TEST the system for normal operation.
No	REPLACE the molded leadframe. CLEAR the DTCs. TEST the system for normal operation.

PINPOINT TEST E: OSS SENSOR

NOTE: *Refer to the Transmission Vehicle Harness Connector illustration within the Transmission Connector Layouts procedure in this section.*

NOTE: *Refer to the Transmission Leadframe Connector illustration within the Transmission Connector Layouts procedure in this section.*

NOTE: *If the scan tool is unable to access the transmission PIDs, refer to Powertrain Control/ Emissions Diagnosis (PC/ED) manual.*

Always drive the vehicle in a safe manner according to driving conditions and obey all traffic laws.

NOTE: *Read and record all DTCs.*

NOTE: *If DTCs P0705, P0706, P0707, P0708, P0709, P1702, P1705 and/or P1921 are set, diagnose those DTCs first.*

PINPOINT TEST E :

E1 DRIVE CYCLE TEST

- Connect the scan tool.
- Enter the following diagnostic mode on the scan tool: Self-Test — TCM.
- Monitor the OSS_SRC PID while road testing the vehicle. Drive the vehicle so the transmission upshifts and downshifts through all the gears.

Does the OSS sensor rpm increase and decrease with engine rpm and vehicle speed?

Yes	REFER to: Shift Point Road Test (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
No	GO to E2

E2 CHECK OSS SENSOR SIGNAL CIRCUIT FOR POWER

- Ignition OFF.
- Disconnect Transmission C1575.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-15		Ground

Is the voltage less than 4.8 volts?

Yes	GO to E3
No	GO to E6

E3 CHECK THE OSS SENSOR SIGNAL CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect TCM C2391.
- Inspect the connector for damaged or pushed out terminals, corrosion, loose wires and missing or damaged seals.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C2391-51	Ω	C1575-15

Is the resistance less than 5 ohms?

Yes	GO to E4
No	INSPECT and REPAIR the circuit. If an open circuit is not found, REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). TEST the system for normal operation.

E4 CHECK THE OSS SENSOR SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-15	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to E5
No	INSPECT and REPAIR the circuit. If a short to ground is not found, REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). TEST the system for normal operation.

E5 CHECK THE OSS SENSOR SIGNAL CIRCUIT FOR A SHORT TO POWER

- Connect TCM C2391.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-15	V	Ground

Is voltage greater than 5.1 volts?

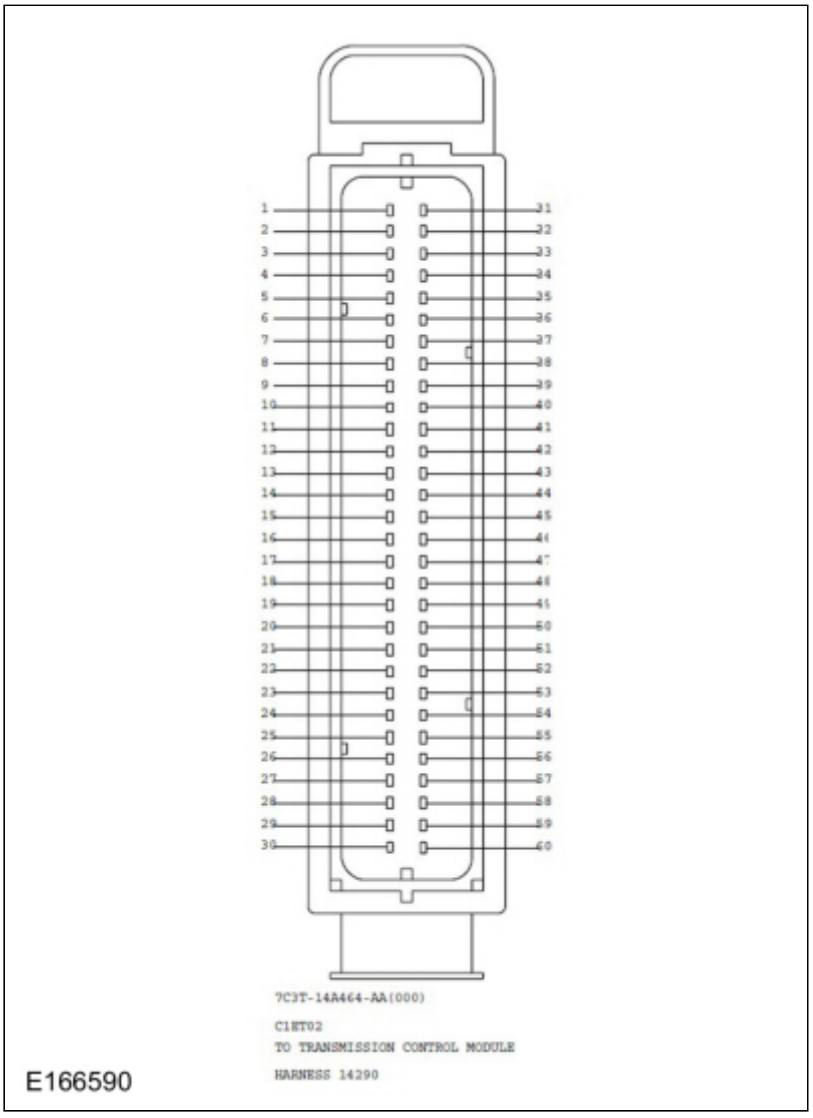
Yes	INSPECT and REPAIR the circuit. If a short to power is not found, REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).

	TEST the system for normal operation.
No	GO to E6

E6 CHECK THE OSS SENSOR GROUND CIRCUIT

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C1575-15		C1575-5



Is voltage less than 4.8 volts?

Yes	REPAIR the circuit. If an open is not found, REPLACE the TCM. REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the TCM with the latest calibration level. PERFORM the Solenoid Body Strategy Data Download procedure. REFER to: Solenoid Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). TEST the system for normal operation.
No	REPLACE the molded leadframe. CLEAR the DTCs. TEST the system for normal operation.

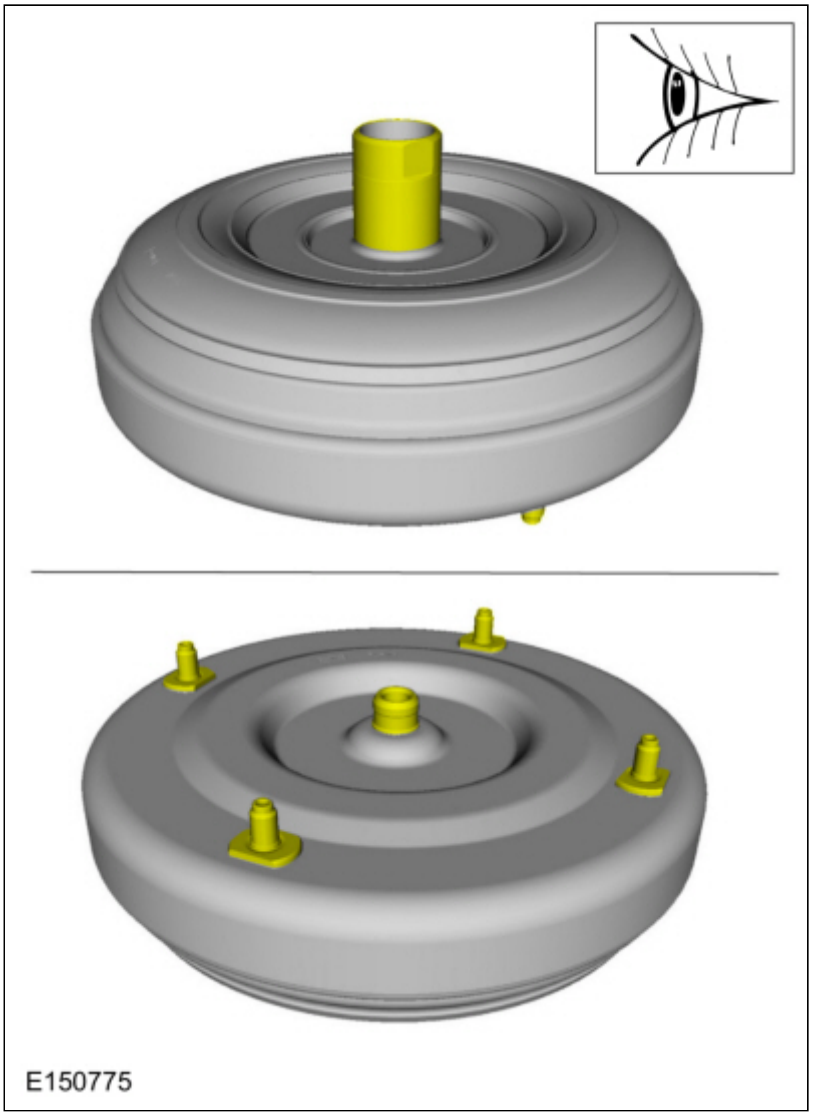
Torque Converter Contamination Inspection

Special Tool(s) / General Equipment

 E239703	307-691 Tester, Torque Convertor Leak
 E233333	307-732 Tool Kit, Torque Converter Flusher



Materials

Name	Specification
Automatic Transmission Fluid	MERCON® LV WSS-M2C938-A

Flushing

All vehicles

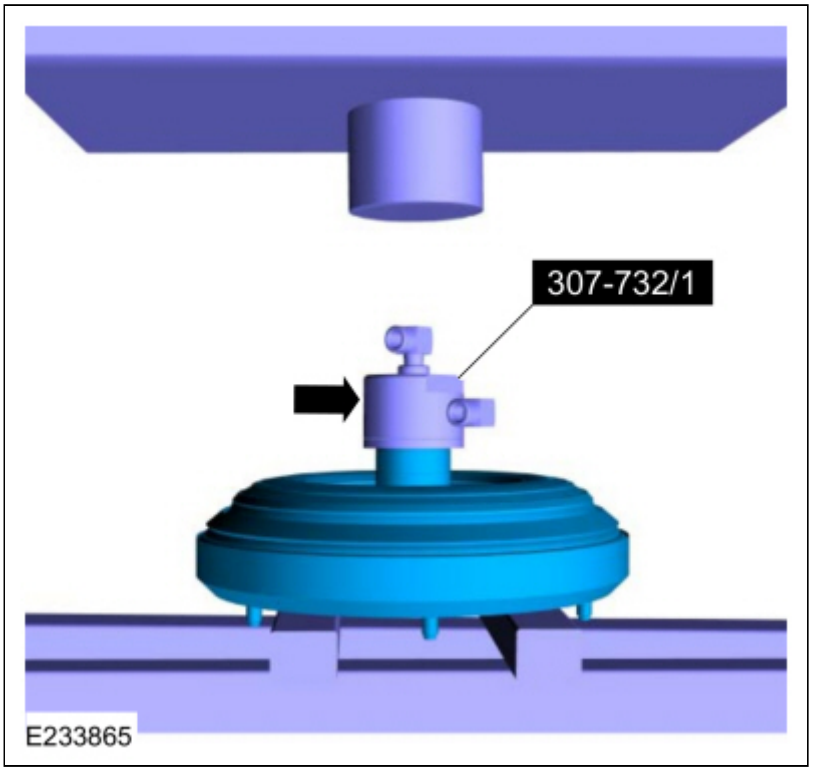
1. A new or remanufactured torque converter must be installed if one or more of the following statements are true:
   - The sealing surface has a groove worn from the seal.
   - A torque converter malfunction has been determined based on complete diagnostic procedures.
   - The torque converter stud or studs, threaded pads, impeller hub or bushing are damaged.
   - The torque converter exhibits external discoloration (due to overheating).
   - There is evidence of water or antifreeze contamination.

Flush The Torque Converter With The Transmission Cooling System Heated Flusher

2. **NOTE:** *Use transmission fluid specified for this transmission. Do not use any supplemental transmission fluid additives or cleaning agents. The use of these products could cause internal transmission components to fail, which will affect the operation of the transmission.*

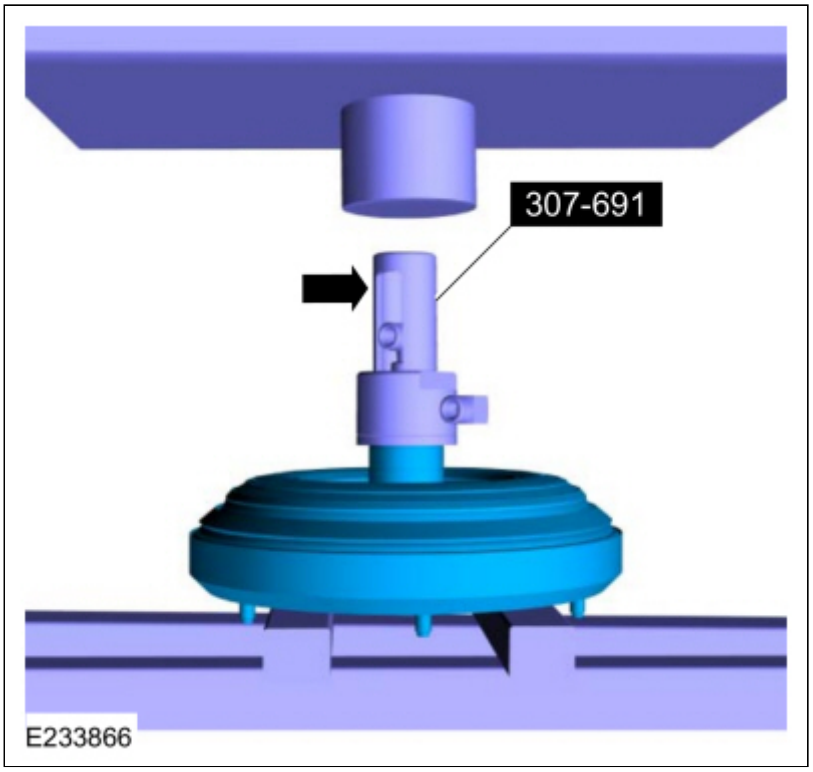
   The torque converter must be flushed every time the transmission is overhauled. It is mandatory that proper equipment and procedures be followed when flushing the torque converter. The flushing equipment used MUST:
   - Maintain the transmission fluid at 140°F or above
   - Pulsate the transmission fluid during cleaning
   - Have a GPM flow meter
   - Have a filter with a rating of 100 micron or less
   - Have air purge capability before and after flushing

3. If equipment meeting the specifications above is not available, the torque converter must be flushed by hand. Go to Flush The Torque Converter By Hand steps later in this procedure.

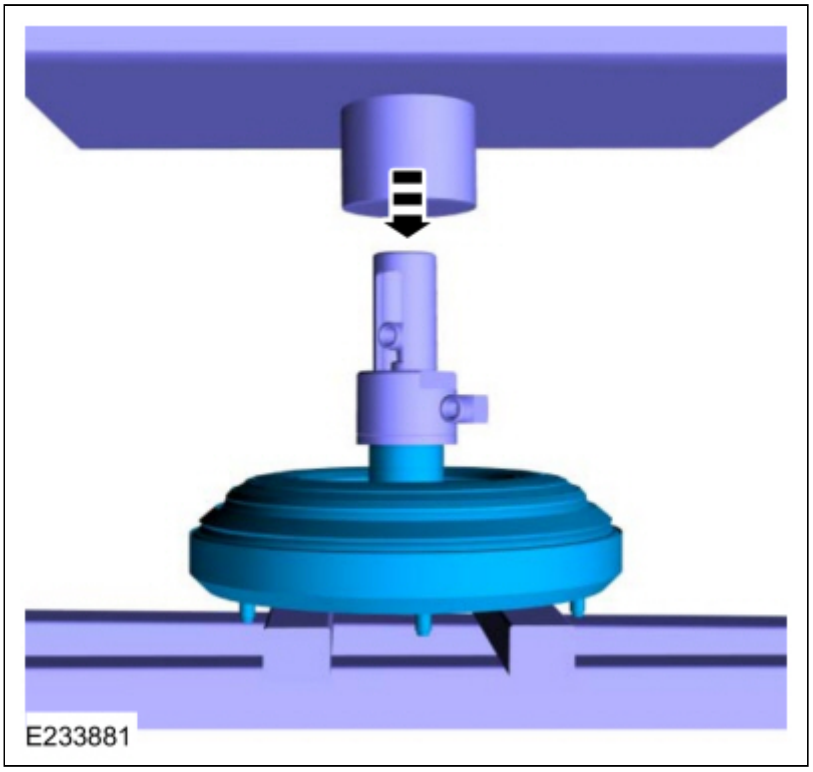


4. Check and top off the transmission fluid level of the transmission cooling system heated flusher with transmission fluid.

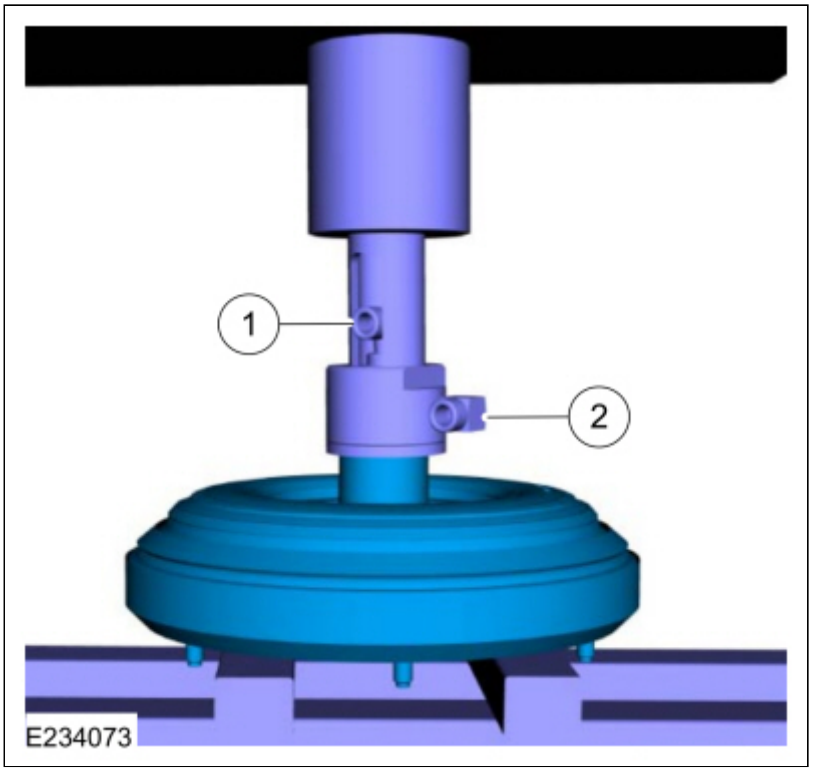
5. Turn on the heater and allow the transmission fluid in the transmission cooling system heated flusher 15-30 minutes to heat up to 60°C (140°F) before using.



6. Place the torque converter in an arbor press. Support the torque converter on the mounting pads.



7. Using the special tools, assemble the correct turbine shaft simulator to the torque converter flush main hub and place it on the torque converter hub.
   Use Special Service Tool: 307-732 Tool Kit, Torque Converter Flusher.



8. Using the special tool, install the slotted cap.
   Use Special Service Tool: 307-691 Tester, Torque Convertor Leak.

9. Apply enough force from the press to seal the torque converter flush main hub to the torque converter hub.

10. Connect the flush machine to the main hub.
    1. Red hose on top.
    2. Blue hose on bottom.

11. Follow the equipment instructions to purge transmission fluid from the torque converter prior to starting the flushing procedure.

12. **WARNING: The torque converter, adaptor 307-732, and the hoses will be hot.**

    NOTE: *Maintain visual contact with torque converter during the entire flush procedure. Immediately stop the flush machine if a leak develops. Repeat set up steps to reseal the tool to the converter hub and continue flushing.*

    Forward flush the converter for 15 minutes.

13. Monitor GPM flow meter periodically during the flush procedure. Flow rate above 2.0 gallons per minute is required to break up and dislodge any contamination trapped behind the TCC plate. Service flush machine filter(s) if flow rate drops below 2 GPM.

14. Follow the equipment instructions to purge the torque converter.

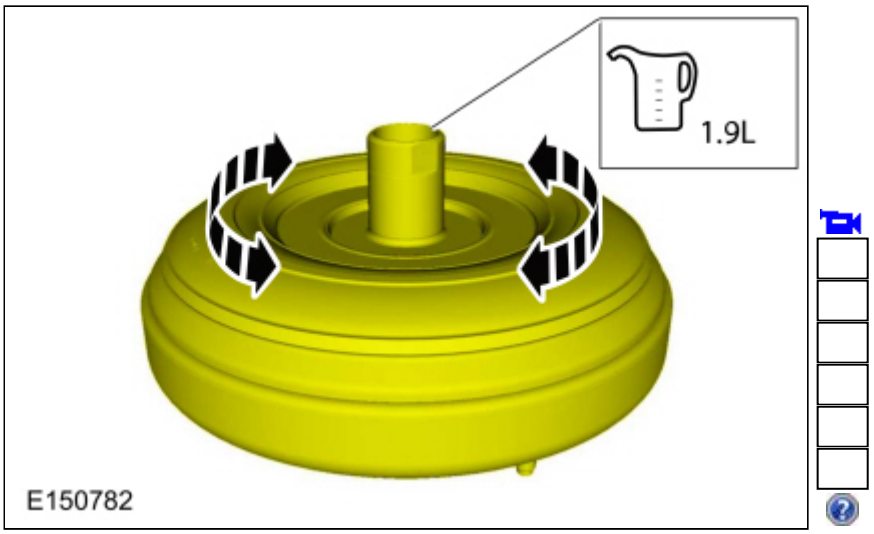
15. **WARNING: The torque converter, adaptor 307-732, and the hoses will be hot.**

    Allow torque converter and equipment to cool for 30 minutes before handling.

16. Disconnect the hoses and remove the special tools.

Flush The Torque Converter By Hand

NOTICE: Do not use water-based cleaners or mineral spirits to clean or flush the torque converter or transmission damage will occur. Use only clean transmission fluid designated for the transmission and torque converter being serviced.



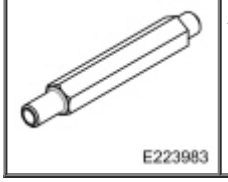
NOTE: *Only flush the torque converter by hand when the transmission cooling system heated flusher is not available.*

17. Pour a small amount of transmission fluid from the torque converter onto an absorbent white tissue or through a paper filter.

18. Examine the transmission fluid for contaminants. The transmission fluid must be free of metallic contaminants. If metallic contaminants are present, do not continue with hand flushing. The torque converter must be flushed with the transmission cooling system heated flusher.

19. Drain the remaining transmission fluid from the torque converter.

20. Using only the recommended transmission fluid, add 1.9L (2 qt) of clean transmission fluid into the converter and agitate by hand.
    Material: Automatic Transmission Fluid (MERCON® LV) (WSS-M2C938-A)



21. Thoroughly drain the transmission fluid.

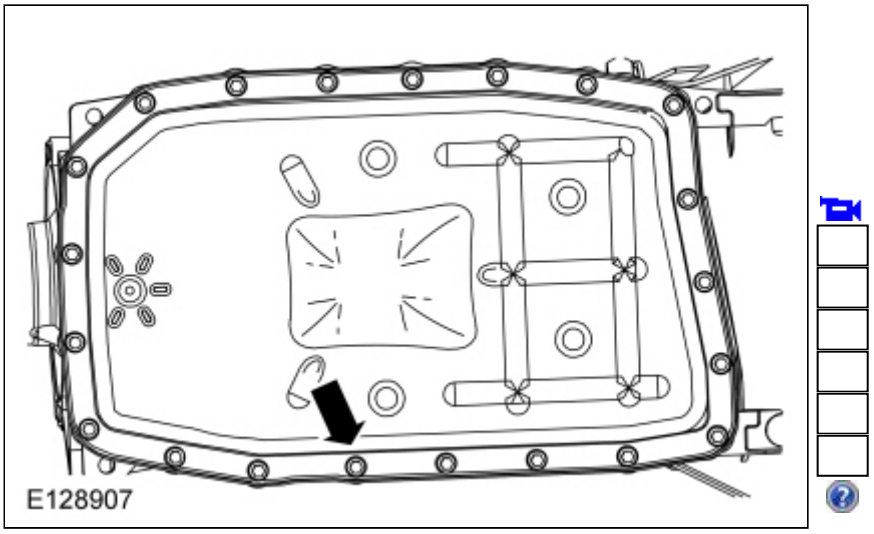
Copyright © 2016 Ford Motor Company

Transmission Fluid Drain and Refill - Emission Requirements: EURO Stage V LDT

Special Tool(s) / General Equipment

 E223981	307-730 Filling Tool, Transmission Fluid
 E223983	307-730-01 Adapter, Fluid Filling

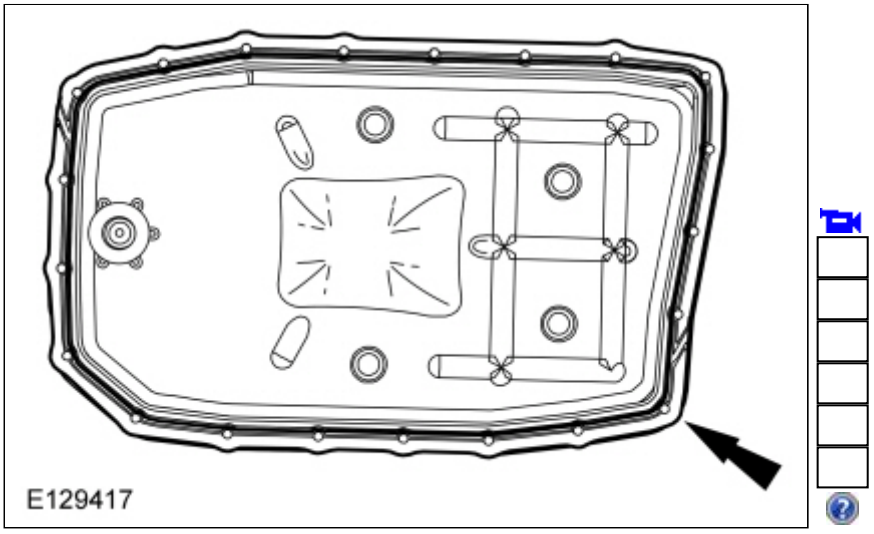
Draining



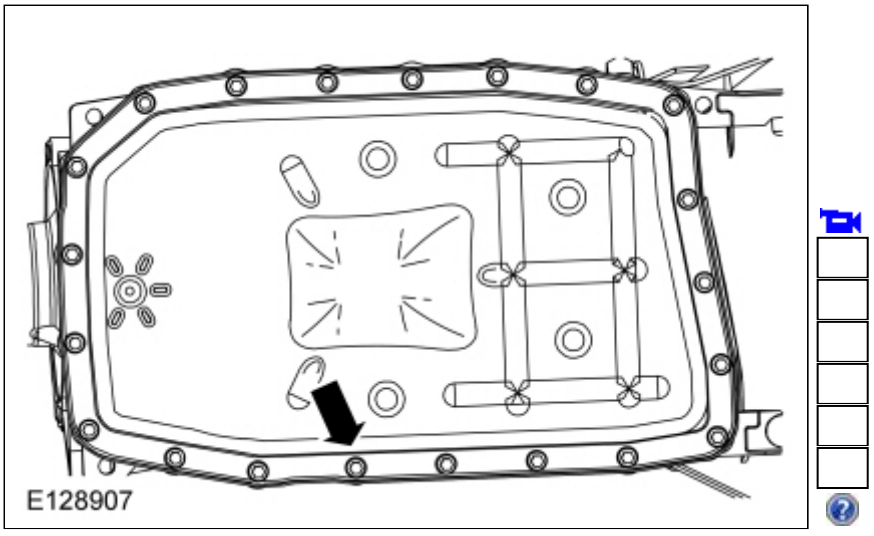
1. With the vehicle in NEUTRAL, position it on a hoist.
   Refer to: Lifting - Vehicles Built Up To: 16-08-2015 (100-02 Jacking and Lifting) .

2. **NOTE:** *Be prepared to collect escaping fluid.*

   Remove the transmission fluid fill plug fluid level indicator assembly located on the front portion of the transmission case. Removal of the transmission fluid fill plug will relieve any vacuum that might have built up in the transmission. This will aid in allowing the transmission fluid pan to be easily removed when the bolts are removed.



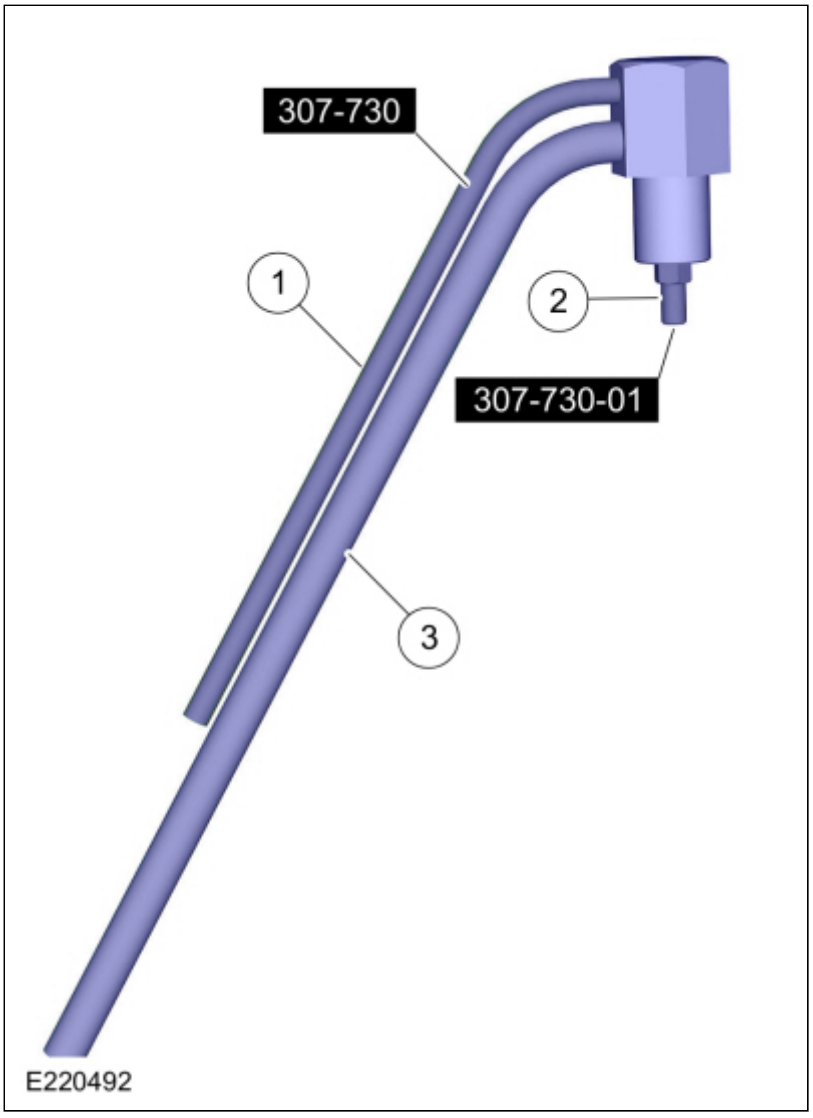
3. Remove the transmission fluid pan and allow the transmission fluid to drain.



4. **NOTE:** *The gasket is to be reused unless damaged.*

   Install a new transmission fluid pan gasket, if required.

5. Install the transmission fluid pan and tighten the bolts in a crisscross pattern.
   Torque: 12 Nm



Filling

1. **NOTICE: Only use the specified special tool.**

Component	Description
1	Return pipe
2	Return pipe inside transmission (set depth)
3	Fill pipe

Use Special Service Tool: 307-730 Filling Tool, Transmission Fluid. , 307-730-01 Adapter, Fluid Filling.

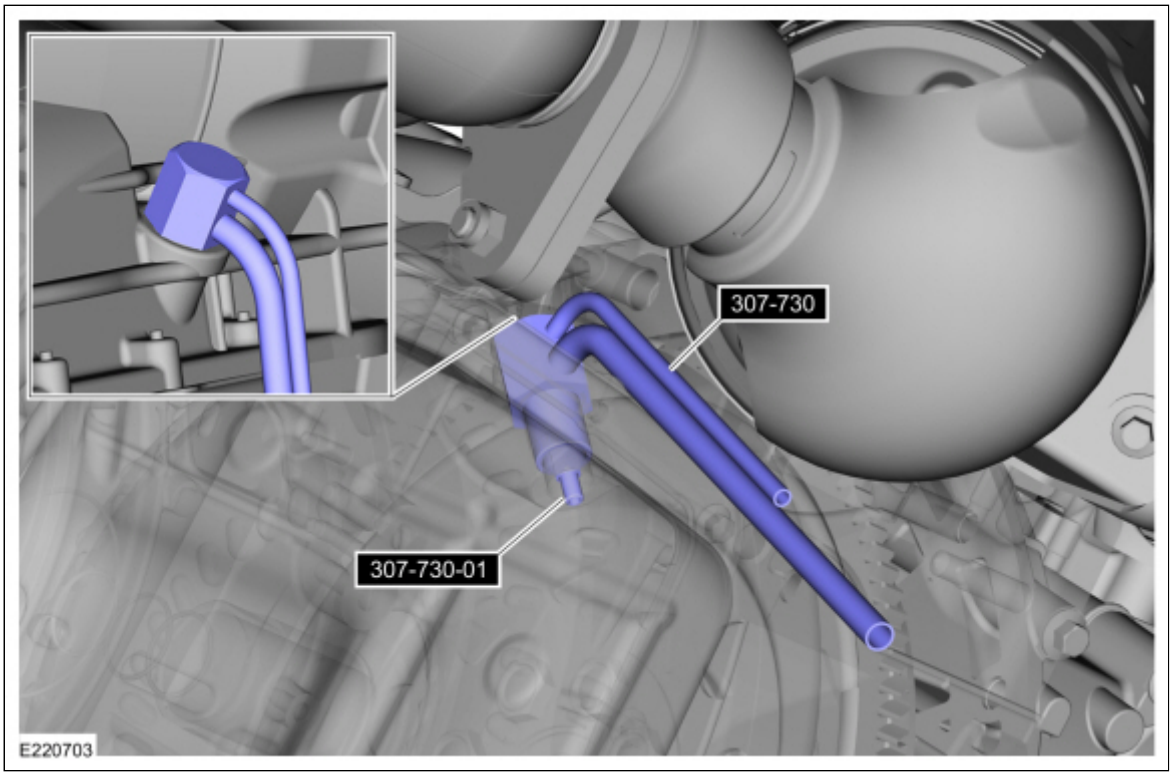
NOTICE: The transmission fluid fill port is located near the exhaust pipe. The exhaust will be extremely hot during this procedure. Make sure you wear the appropriate Personal Protection Equipment (PPE) for hand and arm protection.

NOTE: *Use an appropriate tool to refill the fluid.*

2. To add fluid or fill the transmission the transmission filling tool must be inserted into the fluid fill port.The transmission filling tool has a fill and return pipe.
    - **Fill pipe** - Used to pump transmission fluid into the transmission
    - **Return pipe** - Used to return the excess fluid from the transmission. The return line is under vacuum.

3. **NOTE:** *Airlock must be released from the filling tube and vacuum must be removed from the return pipe prior to removing the transmission filling tool.*

    - If filling and draining separately, transmission fluid should be added until the transmission is in an overfill state. Air lock on fill line should be released and the fill tube disconnected. Fluid should then be vacuumed out until no more fluid is drawn. At this point the correct fill level had been achieved.
    - The correct fill level is achieved when the fluid in the transmission reaches the return pipe (set depth) draining out while the fluid temperature is at the correct operating temperature.



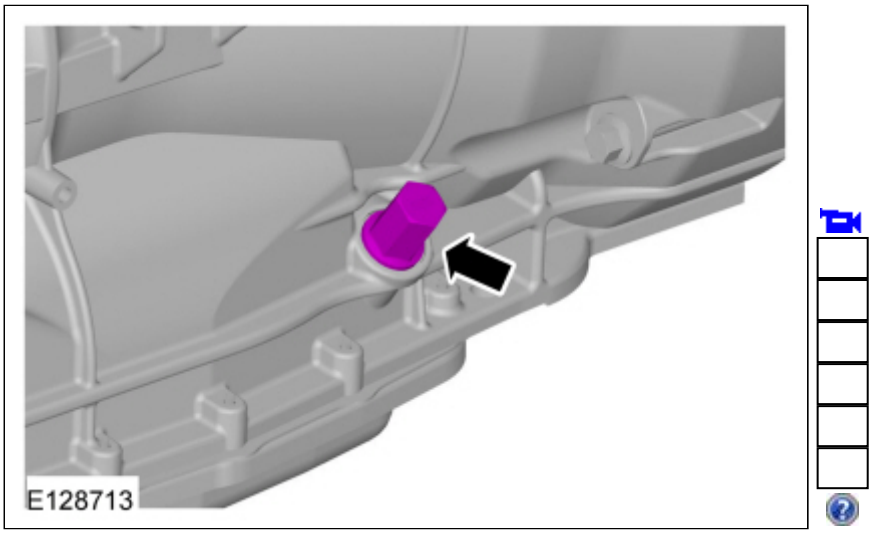
4. With the engine running monitor the transmission temperature (between 96.7°C and 102°C) while filling the transmission as the temperature may drop due to the cold fluid entering the transmission. If transmission

temperature drops below the specified requirement during fill, the transmission should be stalled until the temperature climbs within the required range.

5. **NOTICE: Only use the specified special tool.**

   NOTE: *Take extra care not to spill fluid onto the exhaust system.*

   When the fluid is seen returning to the container via the return line, the fluid is at the correct fluid level and the filling tool can be removed.
   Use Special Service Tool: 307-730 Filling Tool, Transmission Fluid. , 307-730-01 Adapter, Fluid Filling.



6. **NOTE:** *Use the transmission filling tool to add or remove transmission fluid.*

   Using the fluid level indicator check the level of the fluid (fluid temperature between 96.7°C and 102°C).
   Refer to: Transmission Fluid Level Check - Emission Requirements: EURO Stage V LDT (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80) .

7. Refit the dipstick plug to the transmission when the correct level is reached.

8. **NOTICE: Make sure you wear the appropriate Personal Protection Equipment (PPE) for hand and arm protection..**

   After the correct level is reached refit the dipstick to the plug and refit plug to the transmission.
   Torque: 35 Nm

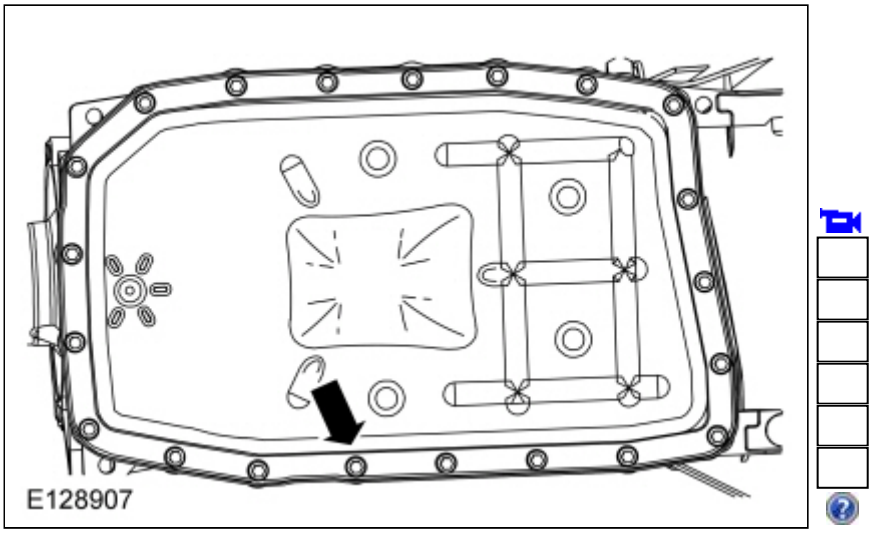
Transmission Fluid Drain and Refill

Special Tool(s) / General Equipment

 100-D009	100-D009 (D93L-7000-A) Rubber Tip Air Nozzle
	307-570 Tube, Transmission Fill
	307-D465 Transporter Fluid Evacuator/Injector
 23036A	416-D001 Hand Vacuum Pump/Pressure Pump
Ford Diagnostic Equipment	

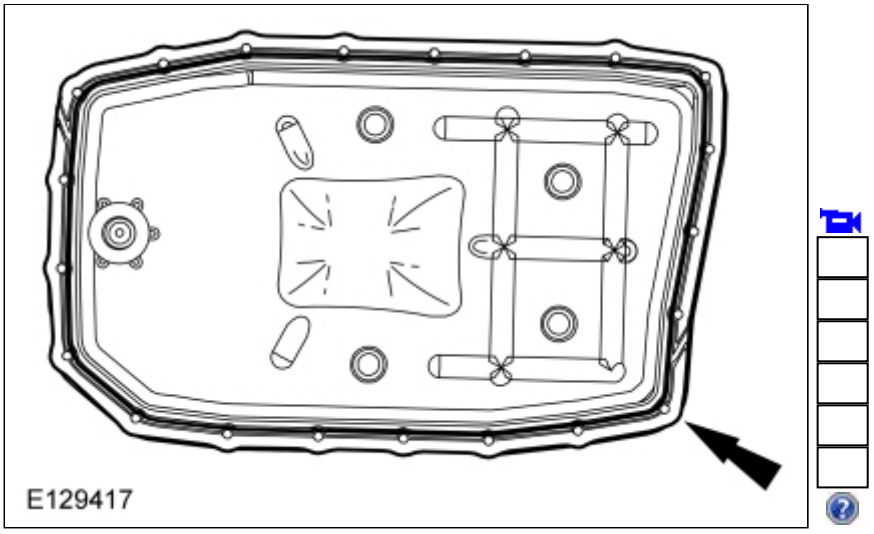
Draining



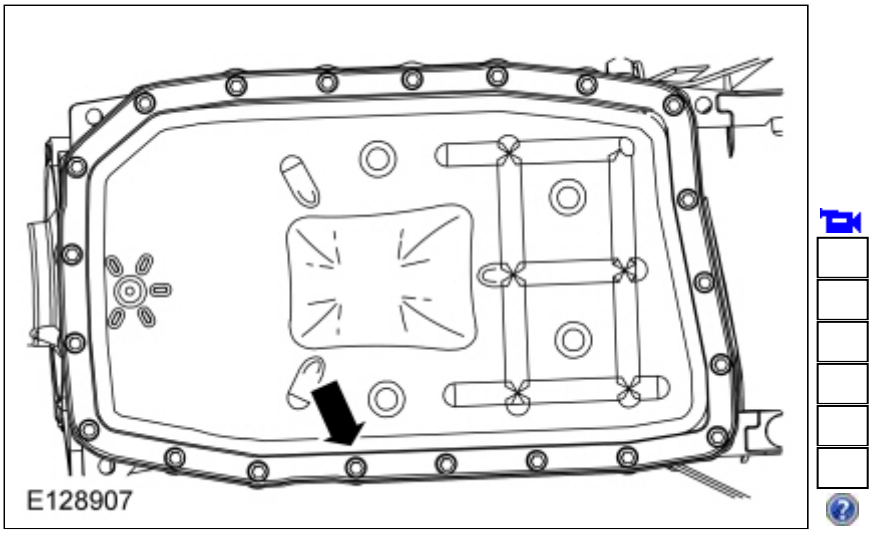
1. With the vehicle in NEUTRAL, position it on a hoist.
   Refer to: Jacking and Lifting (100-02 Jacking and Lifting) .

2. **NOTE:** *Some transmission fluid leakage may occur when removing the transmission fluid fill plug.*

   Remove the transmission fluid fill plug fluid level indicator assembly located on the front portion of the transmission case. Removal of the transmission fluid fill plug will relieve any vacuum that might have built up in the transmission. This will aid in allowing the transmission fluid pan to be easily removed when the bolts are removed.



3. Remove the transmission fluid pan and allow the transmission fluid to drain.



4. **NOTE:** *The transmission fluid pan gasket can be reused if not damaged.*

   Install a new transmission fluid pan gasket, if required.

5. Install the transmission fluid pan and tighten the bolts in a crisscross pattern.
   Torque: 12 Nm

Filling

WARNING: The transmission fluid fill plug is located near the exhaust pipe. The exhaust will be extremely hot during this procedure.

NOTICE: This procedure contains the air purge steps required to purge air from the transmission fluid cooling

system. This procedure is NOT intended for use with the Transmission Fluid Level Check.

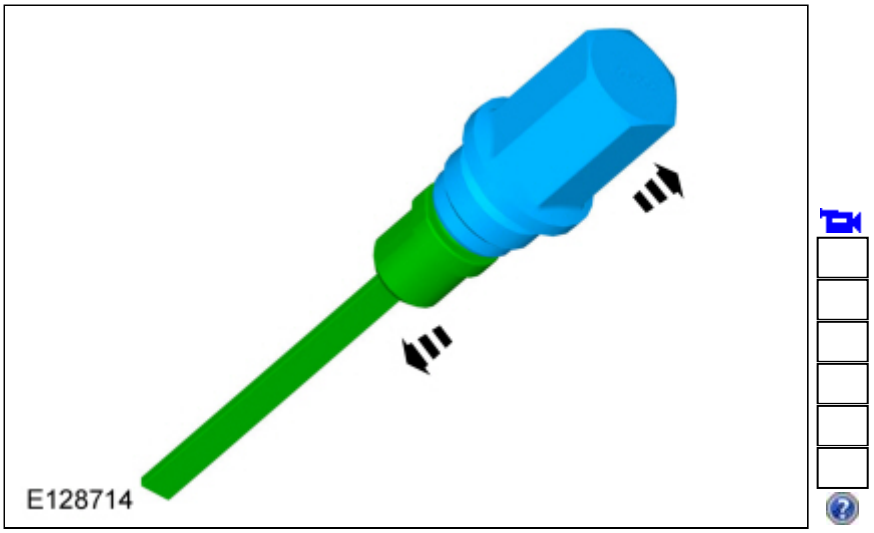
NOTICE: The vehicle should not be driven if the transmission fluid level is low as internal failure could result.

NOTICE: The use of any other transmission fluid than specified can result in the transmission failing to operate in a normal manner or transmission failure.

NOTE: *If the transmission starts to slip, shifts slowly or shows signs of transmission fluid leaking, the transmission fluid level should be checked.*

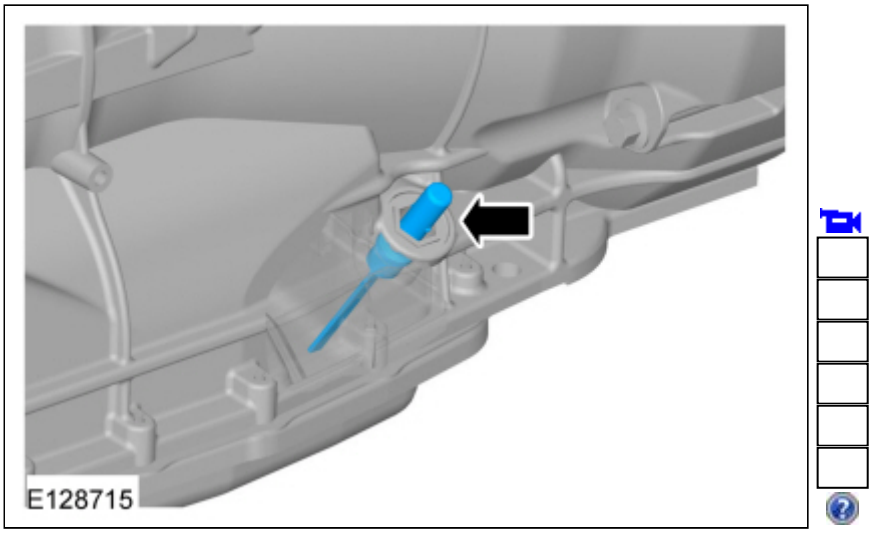
NOTE: *Here is an overview of the Transmission Fluid Drain and Refill procedure.*

- *Adding 3.3L (3.5 qt) of transmission fluid to the transmission is an initial fill enabling the engine to be started.*
- *The cold level range shown in the procedure allows the vehicle to be driven.*
- *The vehicle should be driven to allow the Transmission Fluid Temperature (TFT) to reach 97–102°C in order to purge the air from the transmission fluid cooling system.*
- *Fill the transmission fluid to the fill range on the transmission fluid level indicator at the normal operating range 97–102°C.*



NOTE: *The transmission will need 3.3L (3.5 qt) of transmission fluid added to the transmission as an initial fill if:*

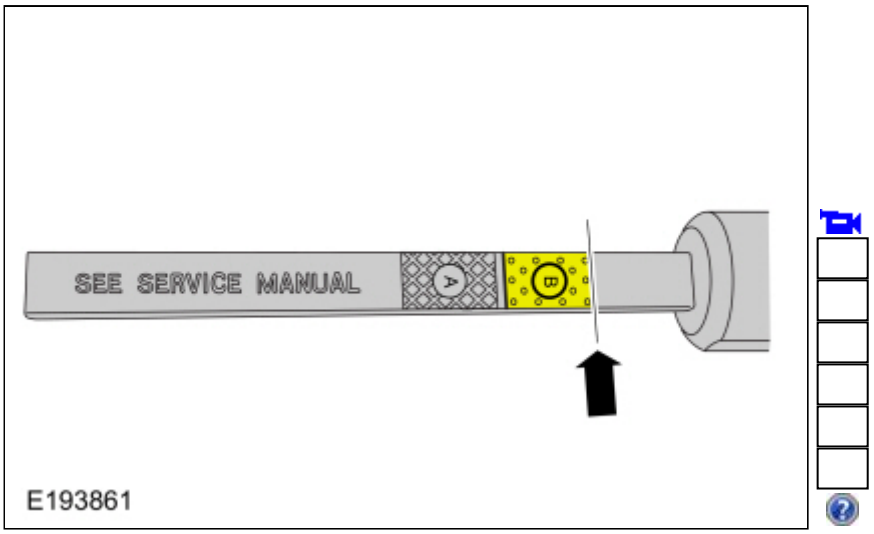
- *If the transmission has been overhauled.*
- *A new mechatronic assembly has been installed.*
- *The transmission fluid pan or transmission fluid filter have been removed.*



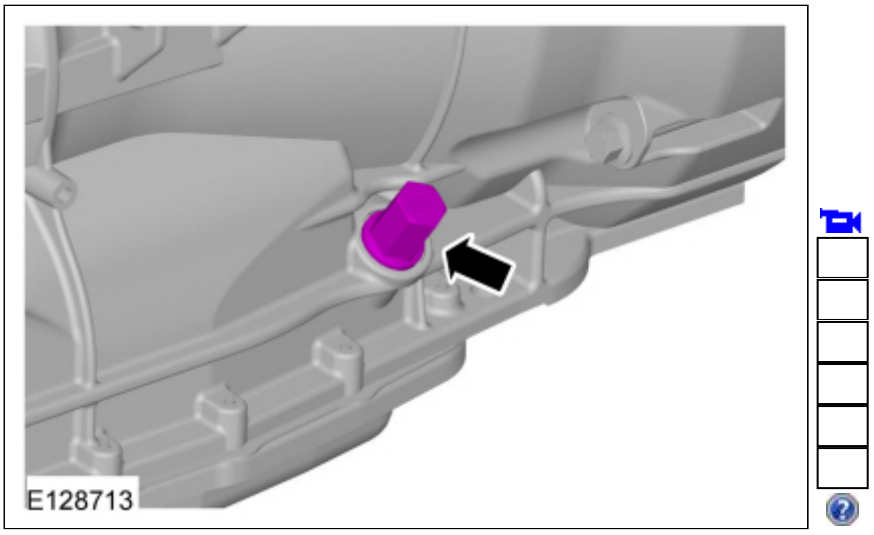
1. Using the Transmission Fluid Fill Tube, add 3.3L (3.5 qt) of transmission fluid to the transmission through the transmission fluid fill hole. For additional information, refer to Adding Additional Transmission Fluid in this procedure.
   Refer to: Specifications (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80) .

2. Check the transmission fluid level cold.
   - The vehicle is safe to drive if the transmission fluid is in the cold level range 32°C-43°C (90°F-110°F).
   - Using the ford diagnostic equipment and with the engine running, place the selector lever in each gear position and hold approximately 5 seconds. Place the selector lever in PARK, with the engine at idle (600-750 rpm).
     Use the General Equipment: Ford Diagnostic Equipment

3. Separate the transmission fluid level indicator from the transmission fluid fill plug.



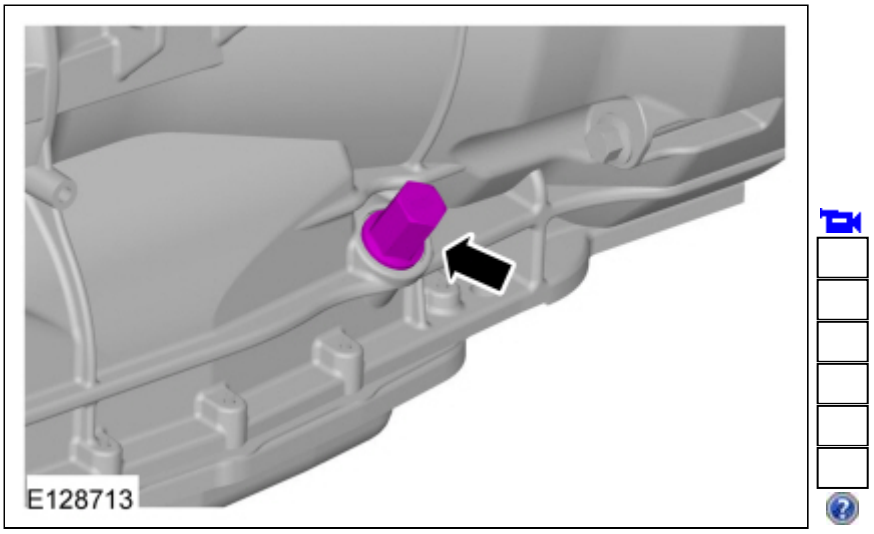
4. Wipe the transmission fluid level indicator clean. Reinstall the transmission fluid level indicator (with the A and B markings toward drivers left) only back into the transmission fluid fill plug hole to check the transmission fluid level. Repeat this until a consistent reading is established.



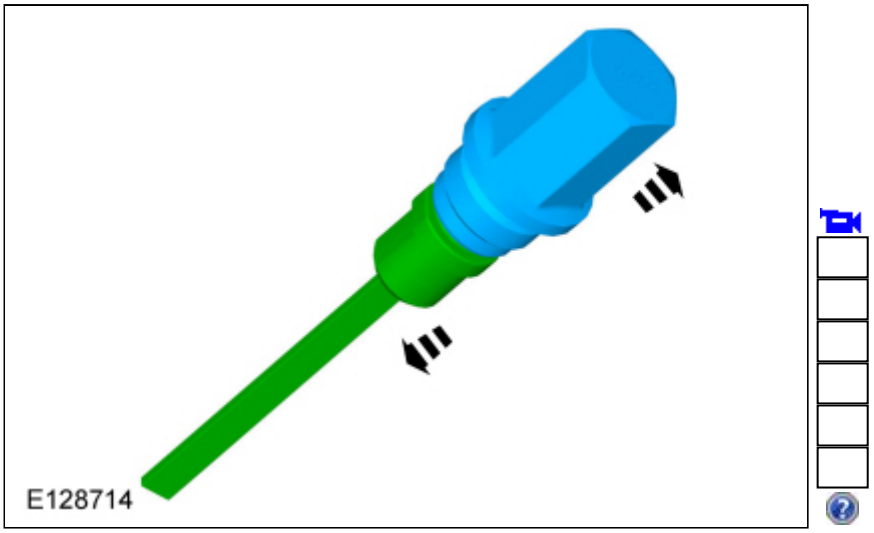
5. **NOTE:** *The transmission has 2 areas for the fluid level, a crosshatched (labeled A) area and a dotted (labeled B) area. Use the dotted area to check the transmission fluid level.*

   Using the ford diagnostic equipment, verify that the TFT is between 97°C - 102°C. Do not overfill the transmission. The transmission fluid level must be at the upper level of the dotted (B) marked area on the transmission fluid level indicator.l
   Use the General Equipment: Ford Diagnostic Equipment

6. Install the transmission fluid fill plug.
   Torque: 35 Nm

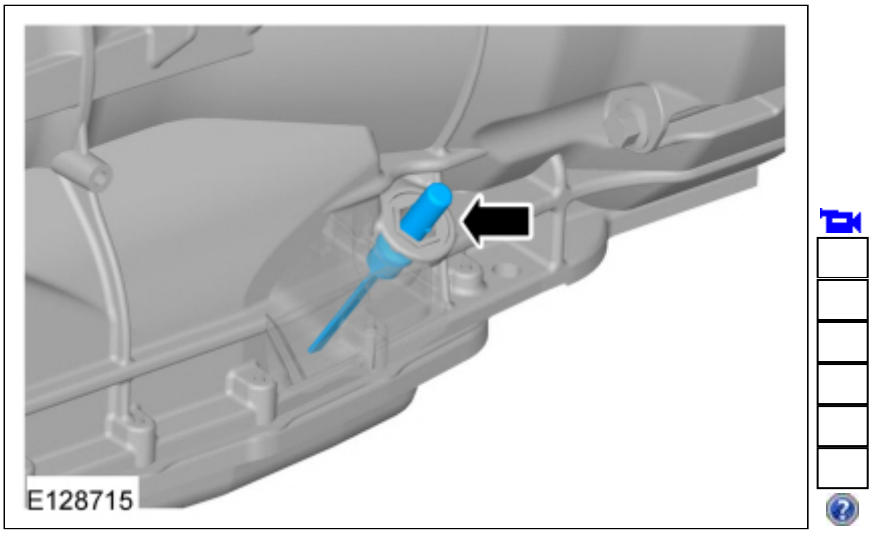


7. While driving the vehicle, use the Ford diagnostic equipment to verify that the TFT has reached a temperature of 97°C . This will circulate the transmission fluid through the torque converter and the transmission fluid



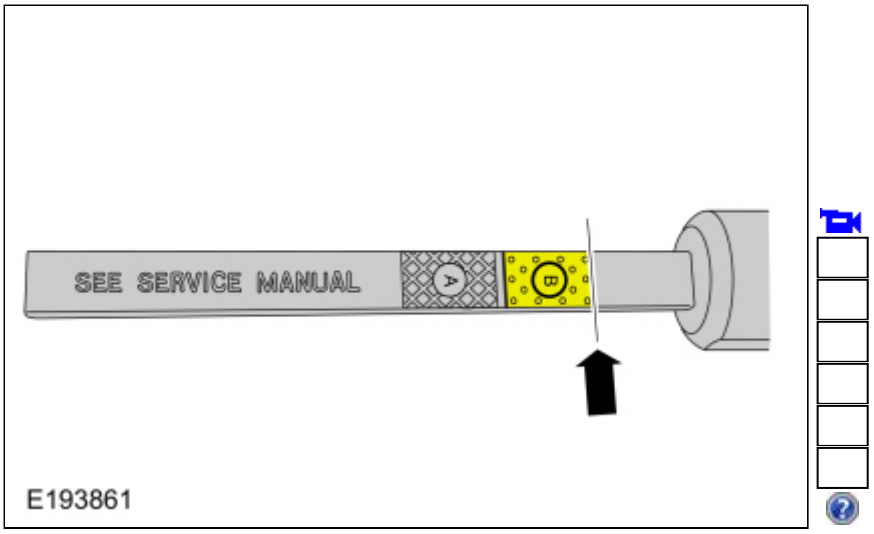
cooling system, eliminating any trapped air in the transmission fluid cooling system.

- With the engine idling (600-750 rpm) in PARK, verify that theTFTis between 97°C - 102°C.



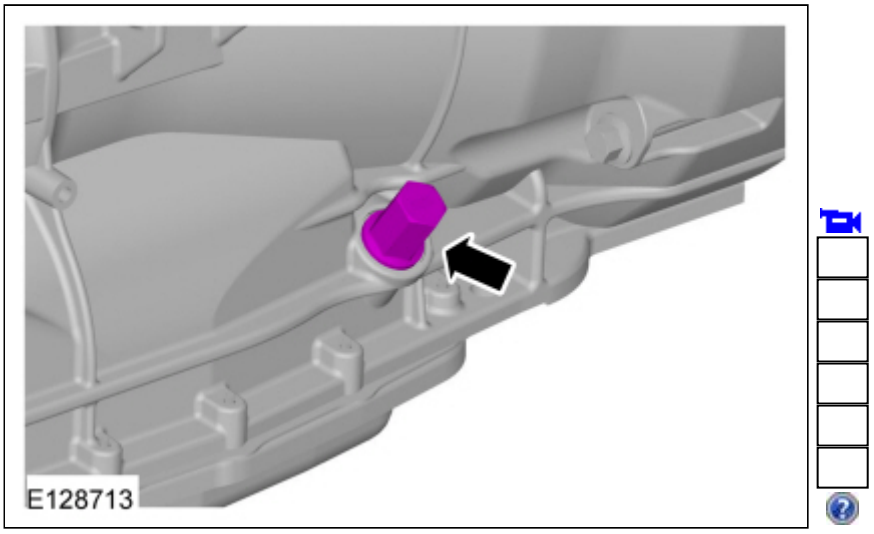
8. Remove the transmission fluid fill plug transmission fluid level indicator assembly located on the front portion of the transmission case.

9. Separate the transmission fluid level indicator from the transmission fluid fill plug.



10. Wipe the transmission fluid level indicator clean. Reinstall the transmission fluid level indicator (with the A and B markings toward drivers left) only back into the transmission fluid fill plug hole to check the transmission fluid level. Repeat this until a consistent reading is established.

11. **NOTE:** *The transmission has 2 areas for the fluid level, a crosshatched (labeled A) area and a dotted (labeled*

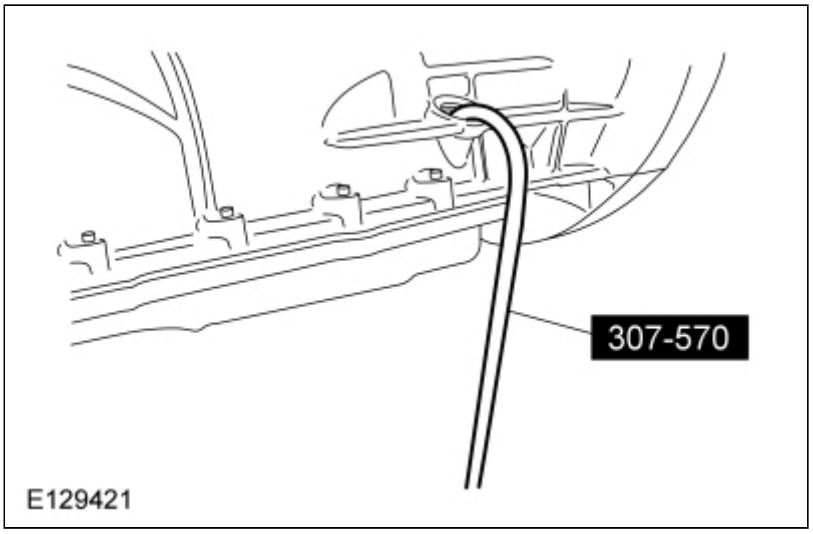


B) area. Use the dotted area to check the transmission fluid level.

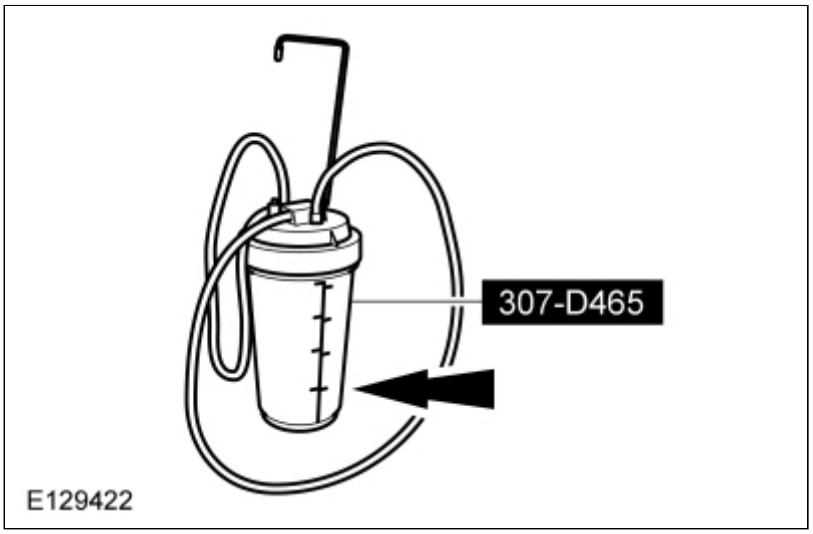
Using the Ford diagnostic equipment, verify that the TFT is between 97°C - 102°C. Do not overfill the transmission. The transmission fluid level must be at the upper level of the dotted (B) marked area on the transmission fluid level indicator.

12. **NOTE:** *If the transmission fluid is not at the correct level, follow the steps for Adding Additional Transmission Fluid or Removing Transmission Fluid in this procedure.*

    Install the transmission fluid fill plug.
    Torque: 35 Nm



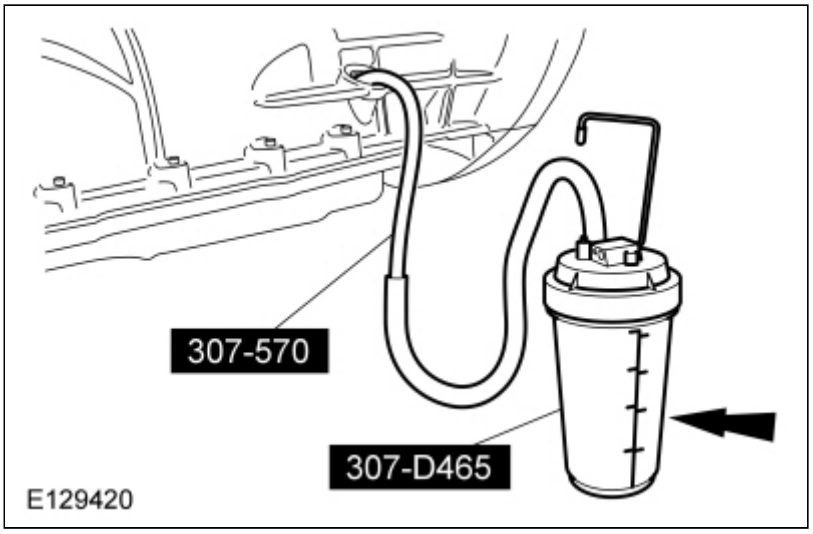
Filling



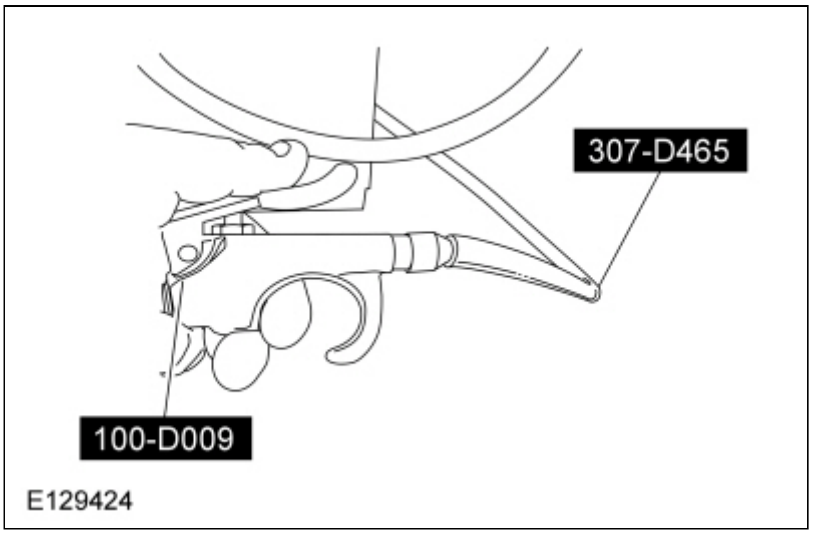
NOTE: ***Adding additional transmission fluid***

1. **NOTE:** *To get an accurate transmission fluid level reading the engine should be idling in PARK.*

   Install the Transmission Fluid Fill Tube into the transmission fluid fill hole.
   Use Special Service Tool: 307-570 Tube, Transmission Fill.

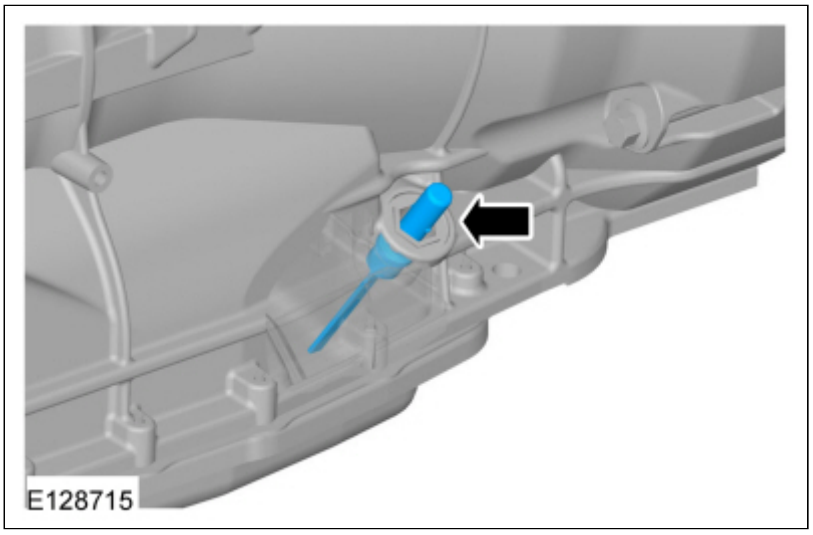


2. Fill the Transporter Fluid Evacuator/Injector with approximately 0.47L of transmission fluid.
   Use Special Service Tool: 307-D465 Transporter Fluid Evacuator/Injector.

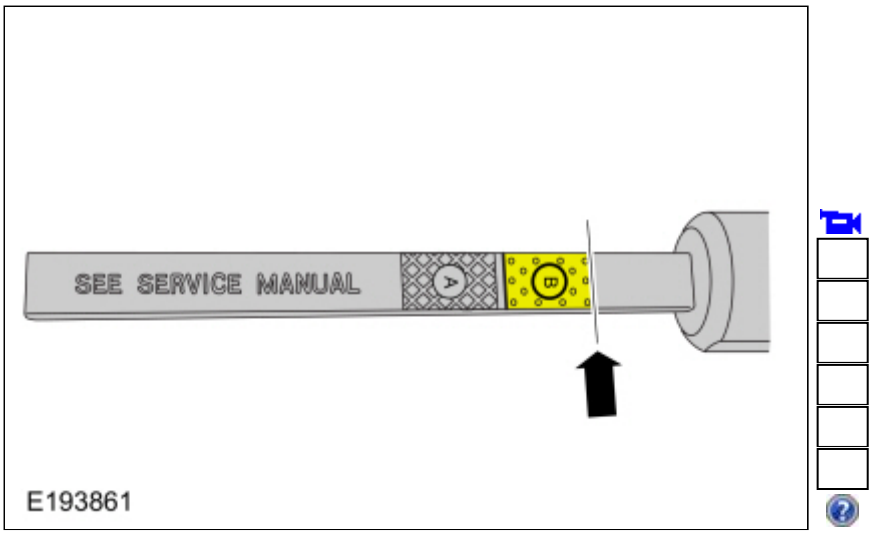


3. Hang the Transporter Fluid Evacuator/Injector under the vehicle, upright and close to the transmission.
   Use Special Service Tool: 307-D465 Transporter Fluid Evacuator/Injector.

4. Connect the Transporter Fluid Evacuator/Injector and Transmission Fluid Fill Tube.
   - Connect the open end of the fluid hose from the Transporter Fluid Evacuator/Injector onto the Transmission Fluid Fill Tube from the transmission case.
     Use Special Service Tool: 307-570 Tube, Transmission Fill. , 307-D465 Transporter Fluid Evacuator/Injector.

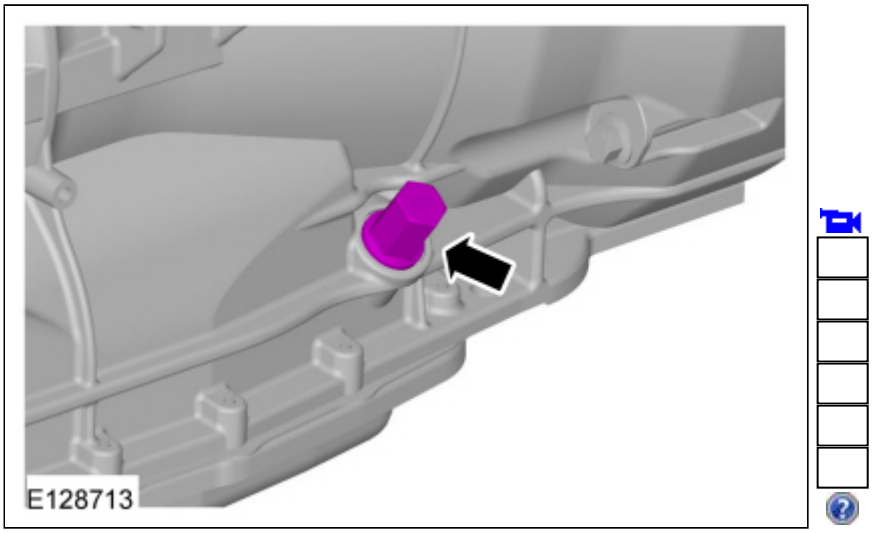


5. Use a Rubber Tip Air Nozzle to apply a maximum of 206.85 kPa to the open end of the vacuum/pressure hose from the Transporter Fluid Evacuator/Injector. Transmission fluid will immediately start flowing out of the Transporter Fluid Evacuator/Injector into the transmission.
   Use Special Service Tool: 100-D009 (D93L-7000-A) Rubber Tip Air Nozzle. , 307-D465 Transporter Fluid Evacuator/Injector.



6. **NOTE:** *Do not overfill the transmission. The transmission fluid level must be at the upper level of the dotted (labeled B) mark.*

   Reinstall the transmission fluid level indicator only back into the transmission fluid fill plug hole (with the A and B markings toward drivers left) to check the transmission fluid level. Repeat this until a consistent reading is established.

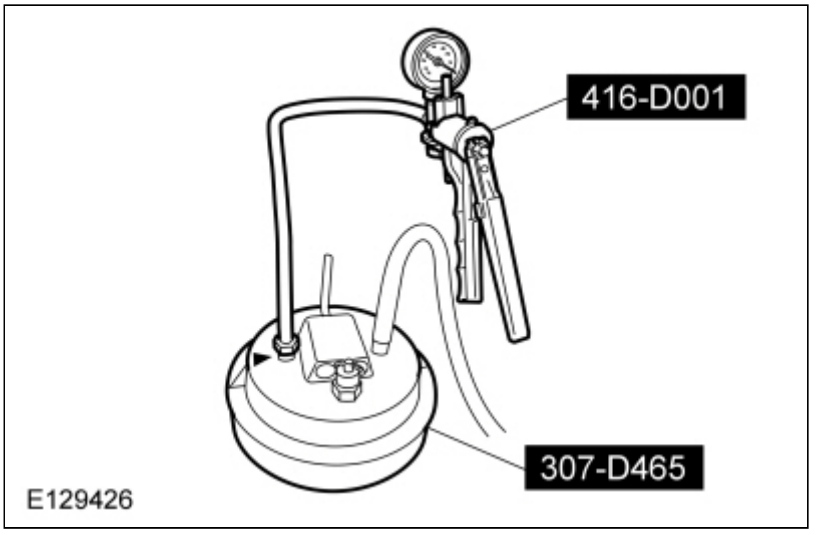


7. **NOTE:** *The transmission has 2 areas for the fluid level, a crosshatched (labeled A) area and a dotted (labeled B) area. Use the dotted area to check the transmission fluid level.*

   Using the Ford diagnostic equipment, verify that the TFT is between 97ºC-102ºC. Do not overfill the transmission. The transmission fluid level must be at the upper level of the dotted (B) marked area on the transmission fluid level indicator.
   Use the General Equipment: Ford Diagnostic Equipment

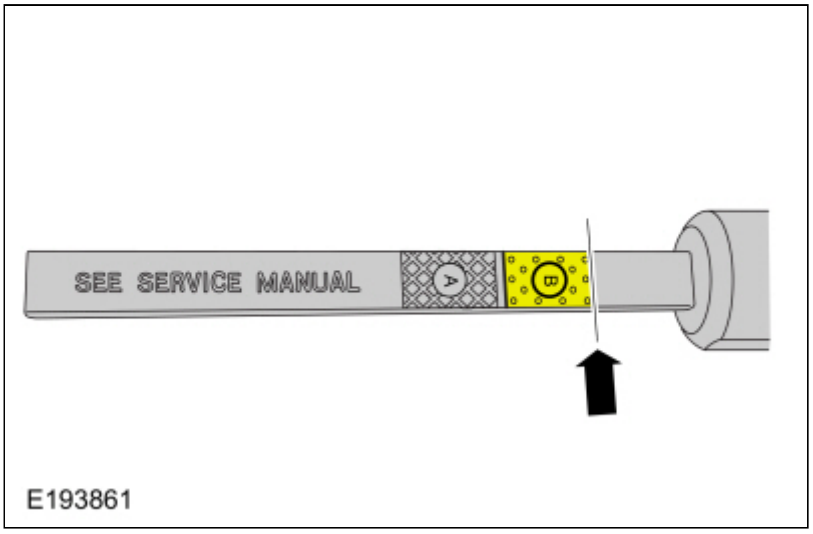
8. **NOTE:** *If the transmission fluid is over full, follow the steps for Removing Transmission Fluid in this procedure.*

   Install the transmission fluid fill plug.
   Torque: 35 Nm



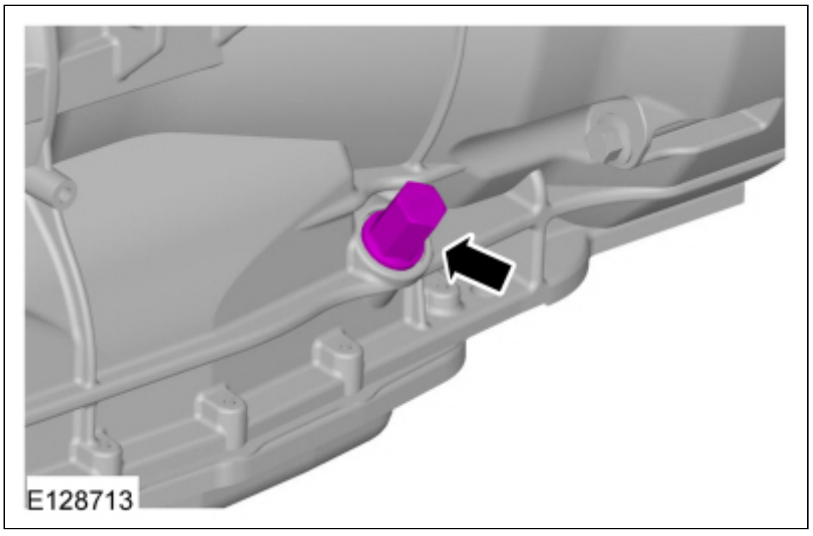
Draining

NOTE: ***Removing transmission fluid***



1. **NOTE:** *To get an accurate transmission fluid level reading the engine should be idling in PARK.*

   If the transmission is overfilled, transmission fluid must be removed to the correct level. Use the Transporter Fluid Evacuator/Injector and the Vacuum Pump Kit to extract any excessive transmission fluid.
   Use Special Service Tool: 307-D465 Transporter Fluid Evacuator/Injector. , 416-D001 Hand Vacuum Pump/Pressure Pump.



2. **NOTE:** *The transmission has 2 areas for the fluid level, a crosshatched (labeled A) area and a dotted (labeled B) area. Use the dotted area to check the transmission fluid level.*

   Using the Ford diagnostic equipment, verify that the TFT is between 97ºC-102ºC. Do not overfill the transmission. The transmission fluid level must be at the upper level of the dotted (B) marked area on the transmission fluid level indicator with the A and B markings toward drivers left when inserted into the oil fill hole.
   Use the General Equipment: Ford Diagnostic Equipment

3. Install the transmission fluid fill plug.
   Torque: 35 Nm

Transmission Fluid Level Check - Emission Requirements: EURO Stage V LDT

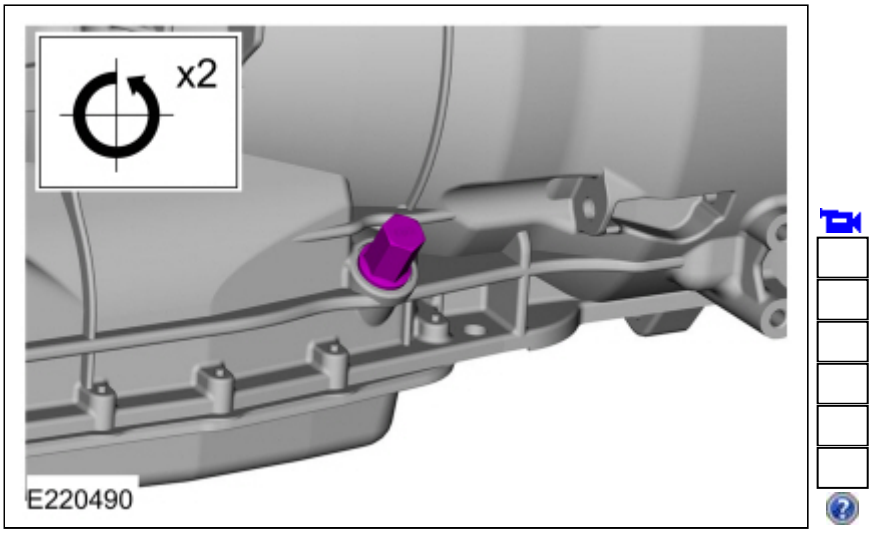
Special Tool(s) / General Equipment

	307-731 Holder, Dip Stick 6R80 Transmission
Ford Diagnostic Equipment	

Check

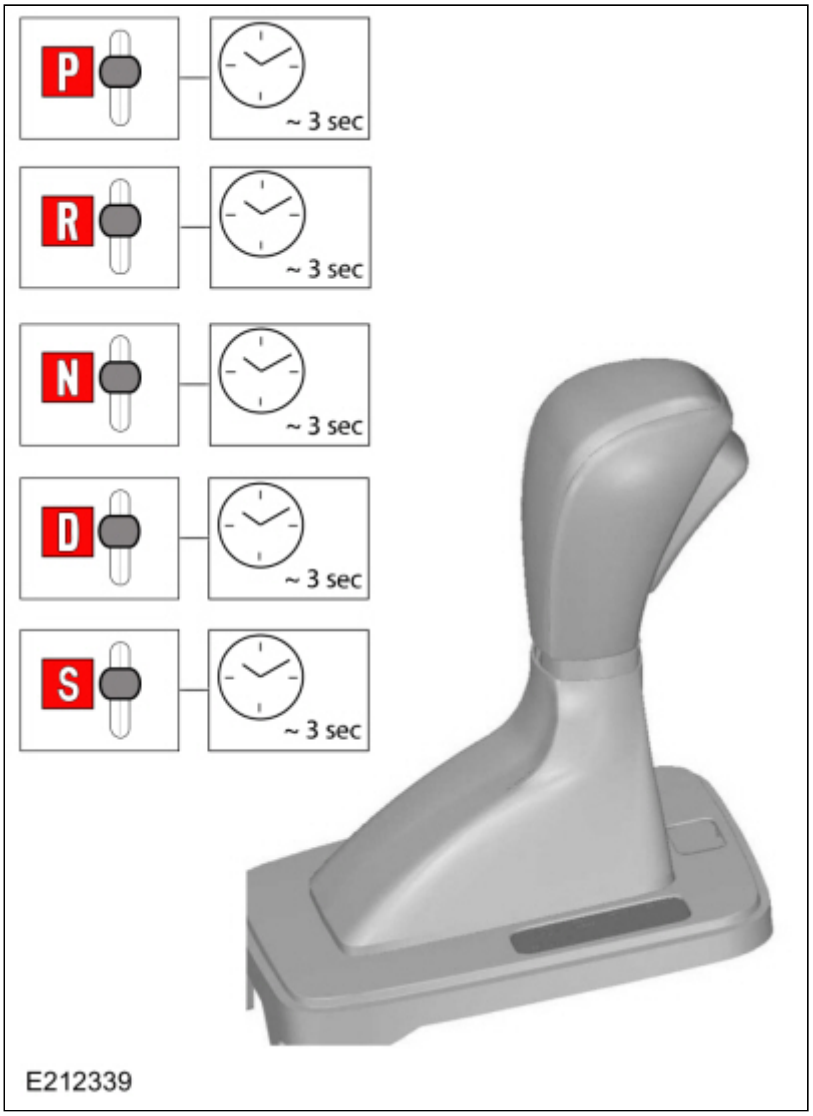
NOTICE: The transmission fluid fill port is located near the exhaust pipe. The exhaust will be extremely hot during this procedure. Make sure you wear the appropriate Personal Protection Equipment (PPE) for hand and arm protection.

NOTICE: Do not drive the vehicle if the fluid levels are low.



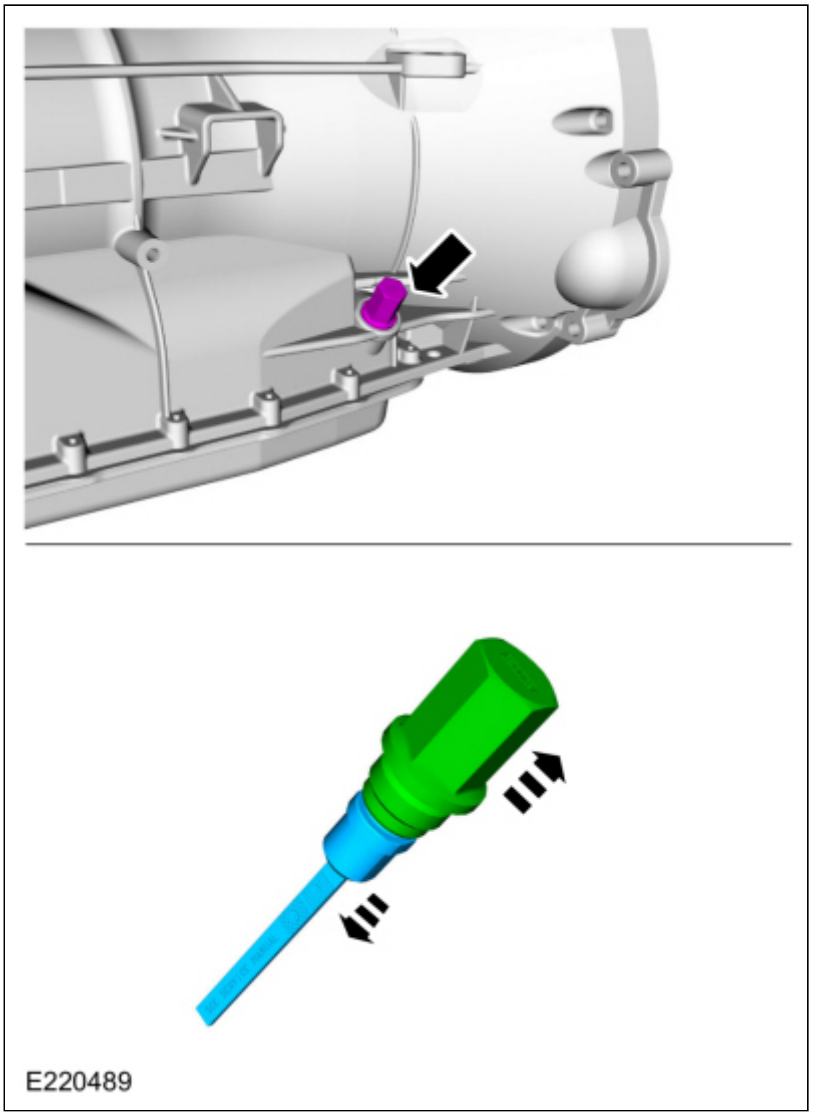
NOTE: *Check the transmission fluid level if the transmission slips, shifts slowly or shows any sign of leaking.*

NOTE: *Make sure that the transmission fluid is cool before attempting to obtain an accurate reading.*



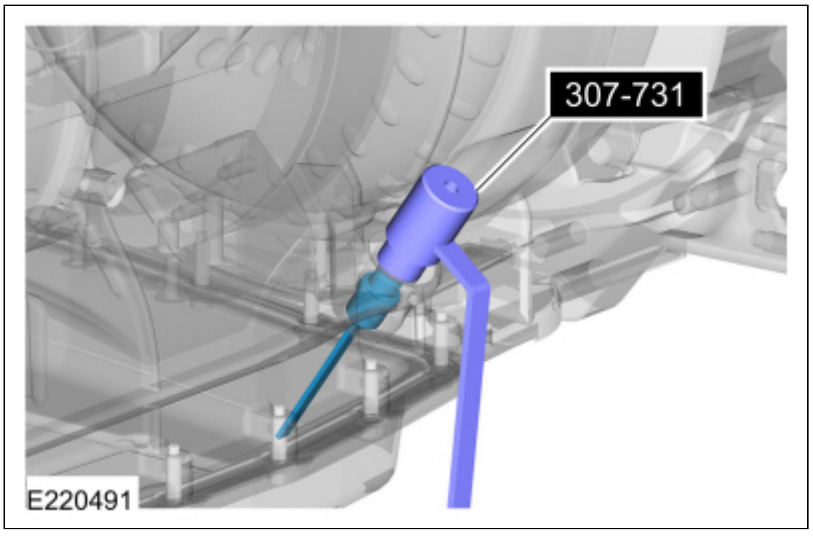
NOTE: *Do not overfill the transmission. The transmission fluid level must be at the upper level of the dotted mark.*

NOTE: *If a new transmission fluid cooler or transmission fluid cooler tubes have been installed, purge the air from the fluid cooling system by driving the vehicle.*

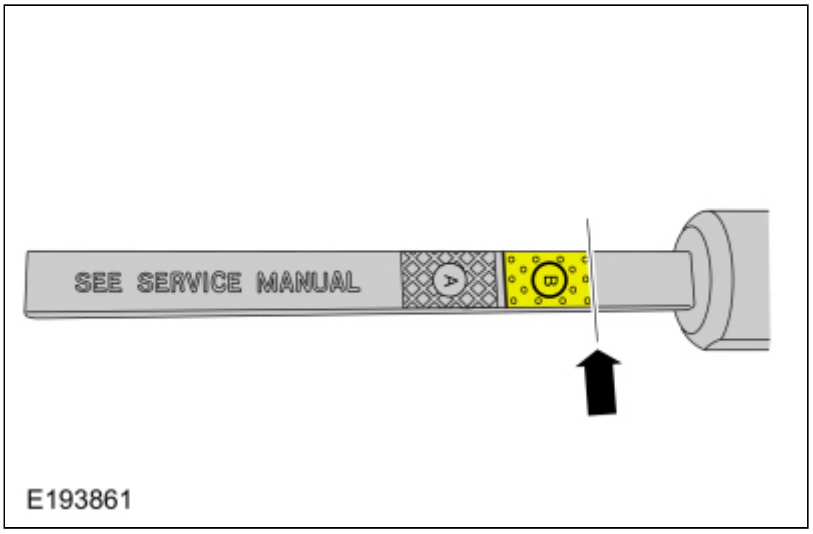


1. Connect the diagnostic scan tool and position the vehicle on a hoist.
2. Loosen the transmission fluid fill plug prior to starting the vehicle to ensure easier removal.

3. With the engine running, place the transmission selector lever in each gear position holding approximately 3 seconds in each position.



4. Place the transmission selector lever in park
5. Ensure the transmission fluid temperature is between 96.7°C and 102°C.
   Use the General Equipment: Ford Diagnostic Equipment
6. Remove the transmission fluid fill plug and remove the transmission fluid level indicator from the plug.



7. **NOTICE: Only use the specified special tool.**

   NOTE: *The marking side of the dipstick should be facing upwards against the angle of installation, and the flat sides of the disptick aligned with the flat markings on tool 307-731.*

   Check the transmission fluid level by inserting the fluid level indicator into the transmission using the special tool (fluid level indicator holder).
   Use Special Service Tool: 307-731 Holder, Dip Stick 6R80 Transmission.

8. **NOTE:** *Do not overfill the transmission. The transmission fluid level must be at the upper level of the dotted mark.*

9. If the transmission fluid is not at the correct level, follow the steps for adding or removing transmission fluid. Refer to: Transmission Fluid Drain and Refill - Emission Requirements: EURO Stage V LDT (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, General Procedures).
10. *Torque*: 35 Nm

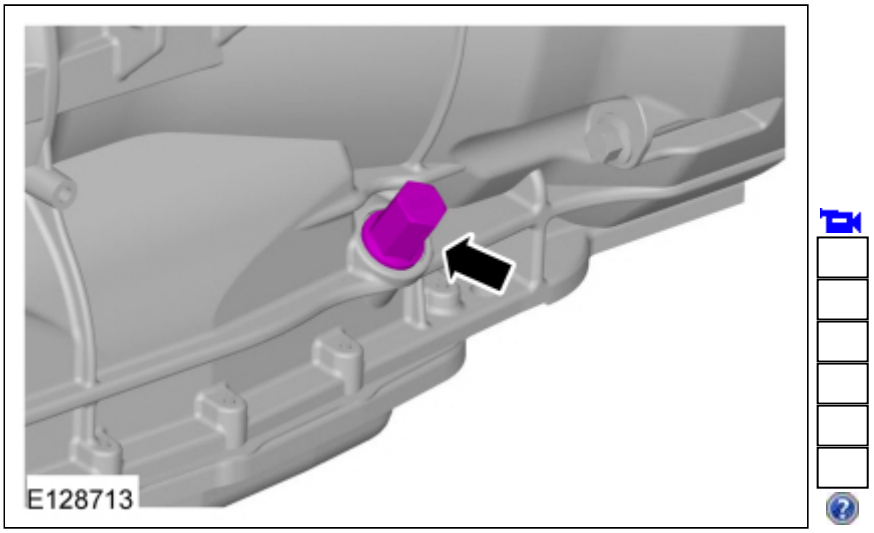
Transmission Fluid Level Check

Inspection

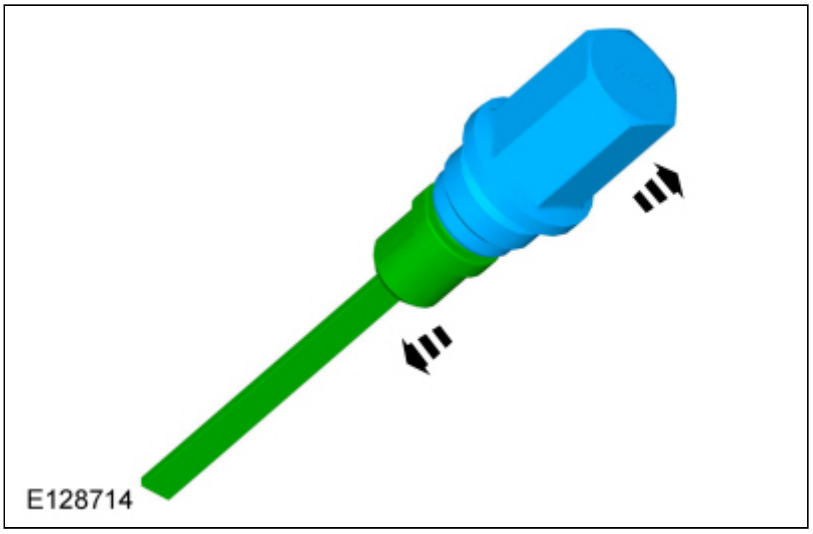
WARNING: Do not drive the vehicle if the fluid levels are low.

NOTICE: Take extra care when removing the transmission fluid fill plug situated near the exhaust pipe. Failure to follow this instruction may result in personal injury. .



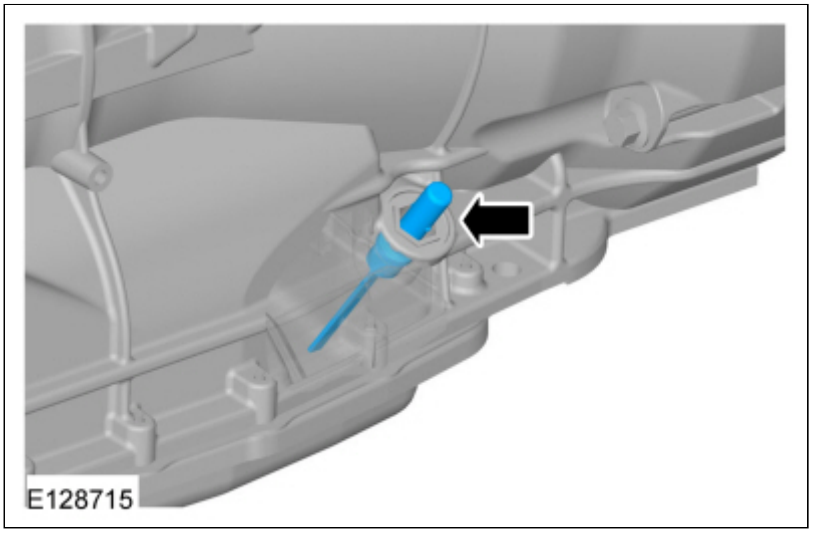
NOTE: *Make sure that the transmission fluid is cool before attempting to obtain an accurate reading.*

NOTE: *Check the transmission fluid level if the transmission slips, shifts slowly or shows any sign of leaking.*



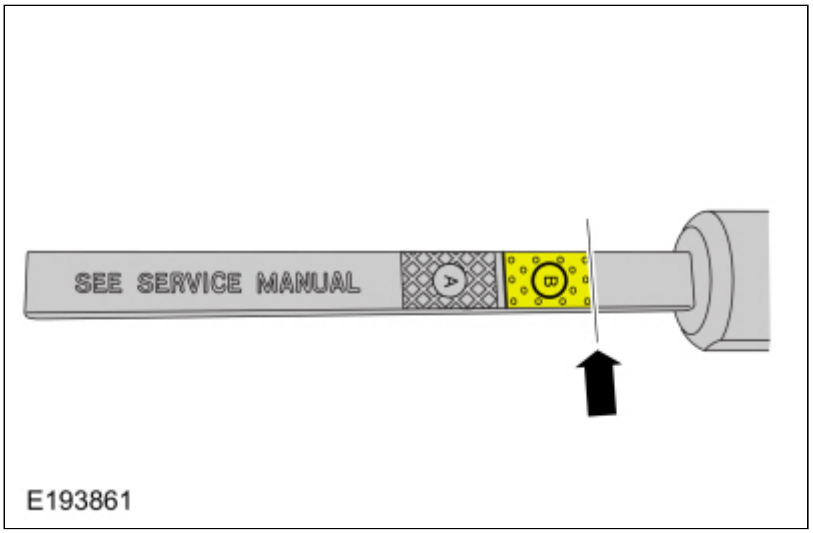
NOTE: *Do not overfill the transmission. The transmission fluid level must be at the upper level of the dotted mark.*

NOTE: *If a new transmission fluid cooler or transmission fluid cooler tubes have been installed, purge the air from the fluid cooling system by driving the vehicle..*

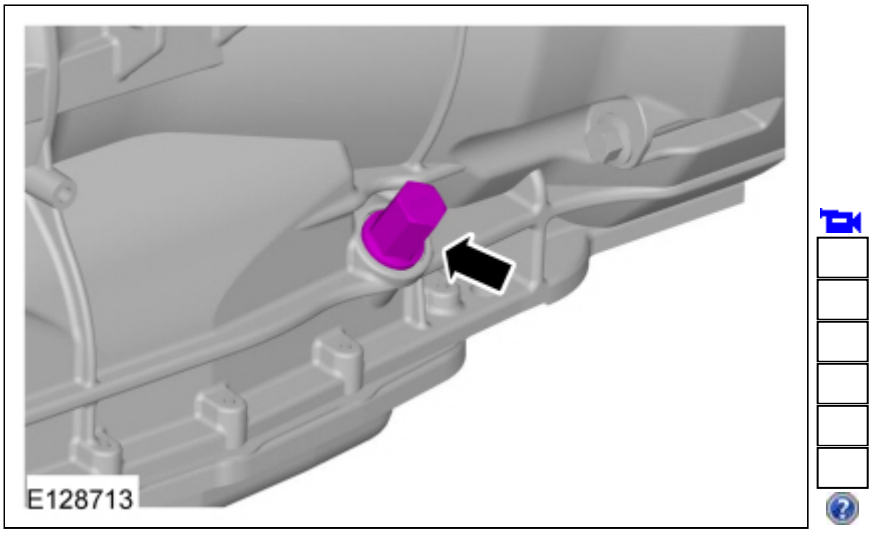


1. With the engine running, place the transmission selector lever in each gear position and hold approximately 5 seconds. Place the transmission selector lever in PARK.
2. With the engine idling in PARK, position it on a hoist.
   Refer to: Jacking and Lifting (100-02 Jacking and Lifting) .
3. Remove the transmission fluid fill plug transmission fluid level indicator assembly, located on the right side of the transmission case.

4. Separate the transmission fluid level indicator from the transmission fluid fill plug.



5. Wipe the transmission fluid level indicator clean. Reinstall the transmission fluid level indicator (with the A and B markings toward drivers left) only back into the transmission fluid fill plug hole to check the transmission fluid level.



6. **NOTE:** *Do not overfill the transmission. The transmission fluid level must be at the upper level of the dotted mark..*

   Using the ford diagnostic equipment, verify that the Transmission Fluid Temperature (TFT) is between 97ºC-102ºC. Do not overfill the transmission. The transmission fluid level must be at the upper level of the dotted (labeled B) mark.

7. If the transmission fluid is not at the correct level, follow the steps for Adding Additional Transmission Fluid or Removing Transmission Fluid.

Refer to: Transmission Fluid Drain and Refill (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, General Procedures).
Torque: 35 Nm

Transmission Strategy Download

Programming

1. If a new main control was installed, record the 12-digit solenoid body identification and 13-digit solenoid body strategy from the replacement solenoid body tag provided with the main control service kit. Place the replacement tag over the existing identification tag.
   - 13 - digit solenoid body strategy
   - 12 - digit solenoid body identification

2. Using the scan tool, select module Programming and Programmable Parameters under the toolbox icon and select transmission. Follow the instructions displayed on the scan tool. There are fields to enter the solenoid body 12-digit identification and 13-digit strategy recorded from the solenoid body.
3. **NOTICE: If the solenoid body information is not correct, transmission damage or driveability concerns can occur.**

   Enter the solenoid body 13-digit strategy. The scan tool verifies the numbers entered are valid and display a message if the information is not valid. The scan tool will check to verify the file is present on the scan tool. If the file is present, the technician may proceed with downloading the file to the module. If the file is not present, the scan tool will need to be connected to the Professional Technician Society (PTS) server to download the file onto the scan tool.
4. Verify the file is present on the scan tool. If the file is present, go to Step 8. If the file is not present, continue with this procedure.
5. Connect the scan tool to the Professional Technician Society (PTS) server.
6. Follow the instructions on the network to download the strategy file to the scan tool.
7. If the scan tool cannot connect to the Professional Technician Society (PTS) server, download the file from Professional Technician Society (PTS) using the OASIS tab and select the transmission strategy. If the scan tool cannot download a strategy from the web site, a partial strategy will automatically be downloaded.
8. Reconnect the scan tool to the vehicle.
9. Follow the instructions displayed on the scan tool.
10. The scan tool automatically downloads the strategy file or partial strategy file to the module. The scan tool displays a message when it is finished downloading the data that states that the file was downloaded successfully.
11. **NOTICE: If a drive cycle is not completed, erratic shifts and driveability concerns may occur.**

    Road test the vehicle following the Adaptive Learning Drive Cycle.
    Refer to: Adaptive Learning Drive Cycle (307-01 Automatic Transmission) .

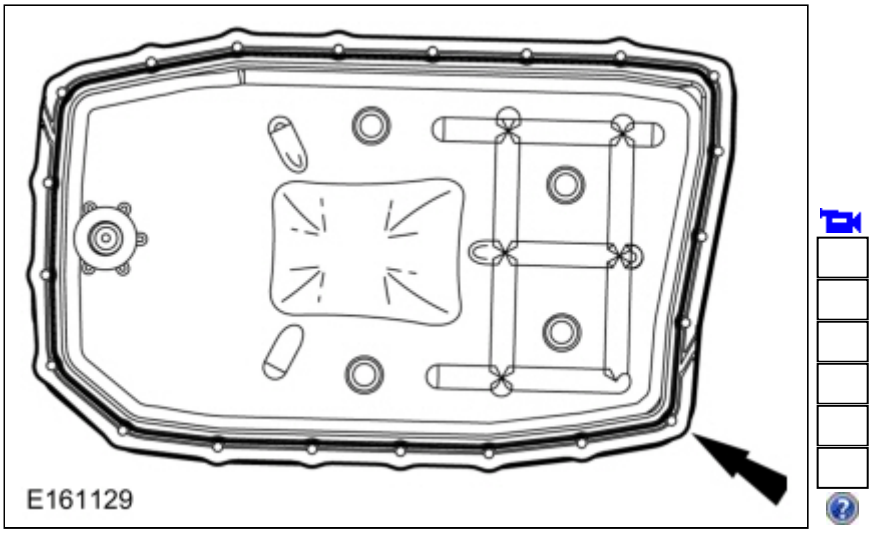
Transmission Fluid Pan

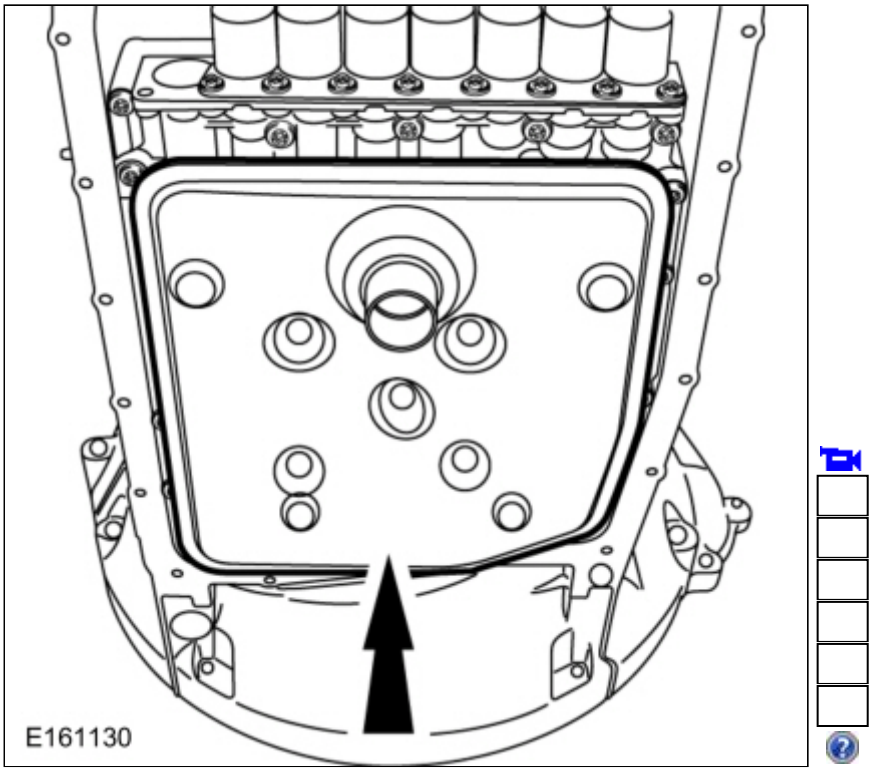
Removal



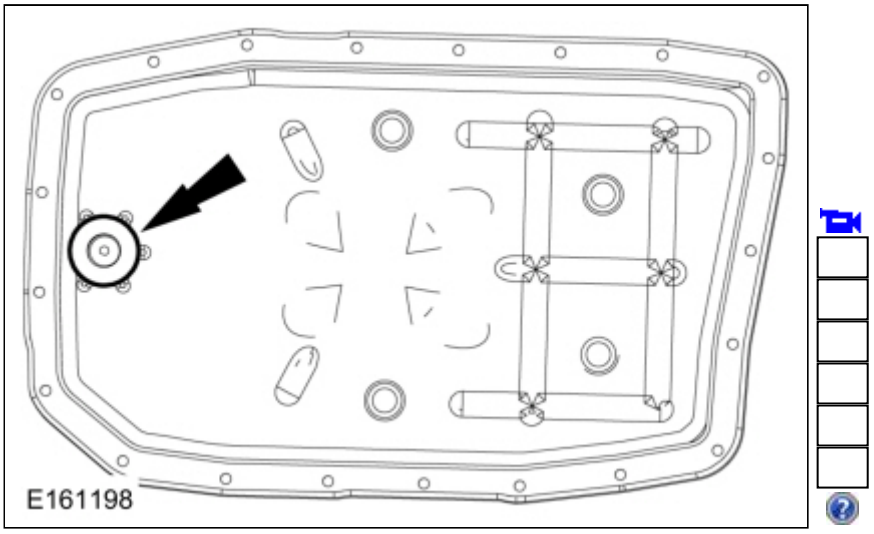
NOTE: *The use of any transmission fluid other than specified can result in the transmission failing to operate in a normal manner or transmission failure.*

1. With the vehicle in NEUTRAL, position it on a hoist.
   Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
   Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

2. Remove the transmission fluid pan and allow the transmission fluid to drain.

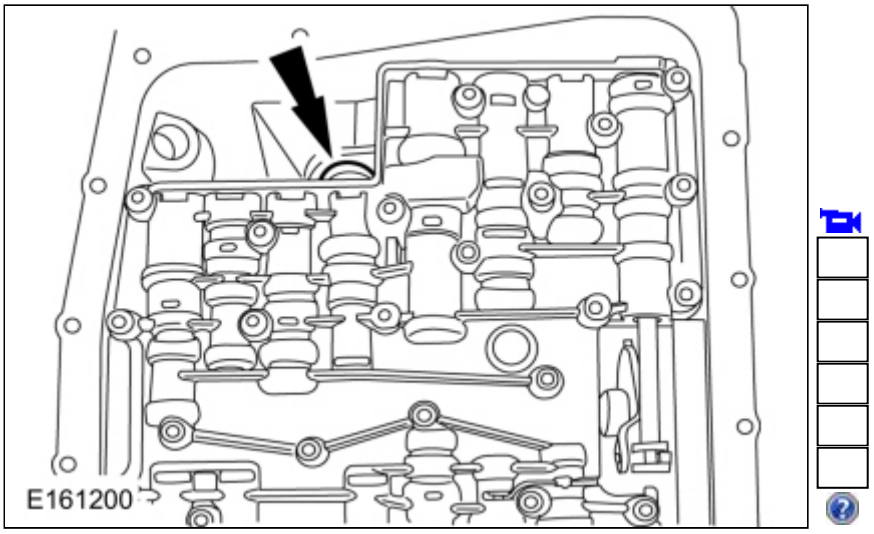


3. Remove the transmission fluid pan gasket.

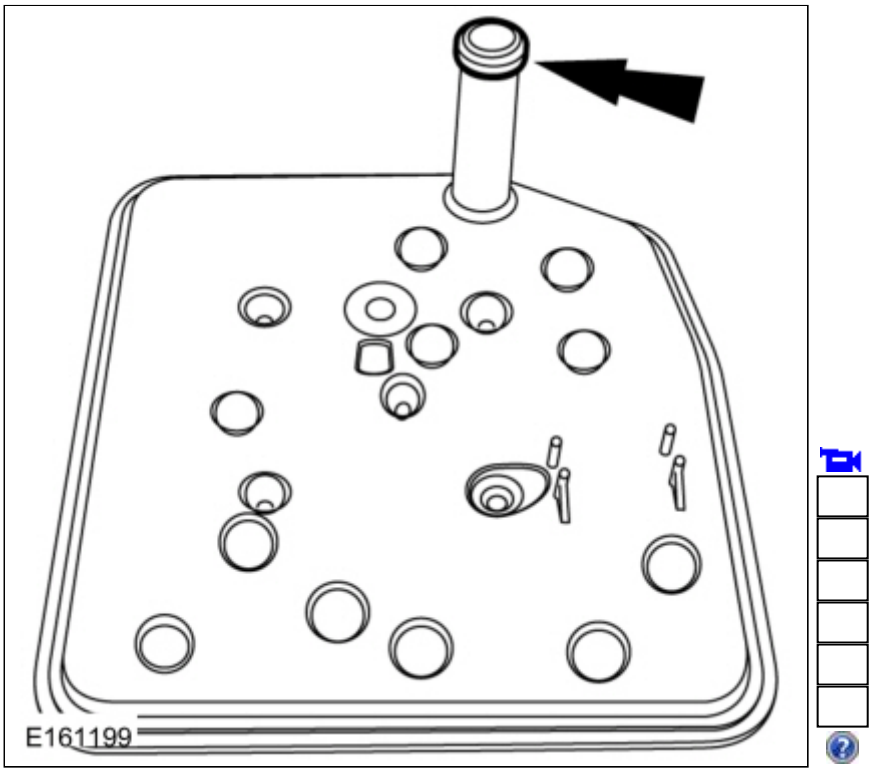


4. **NOTE:** *The transmission fluid filter may be reused if no excessive contamination is indicated.*

   Remove and discard the transmission fluid filter.



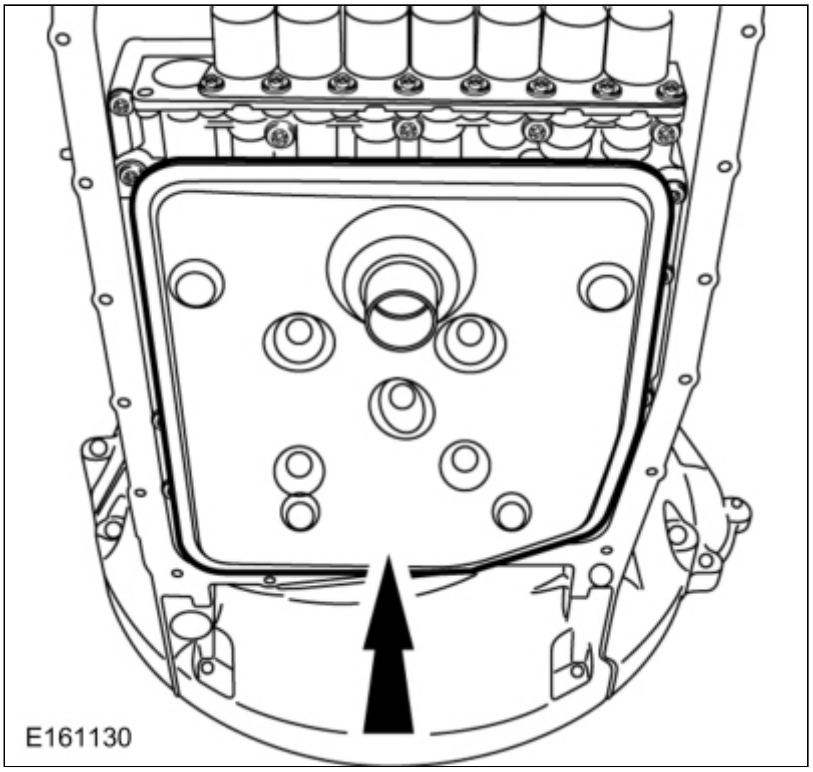
5. Clean and inspect the transmission fluid pan and magnet.



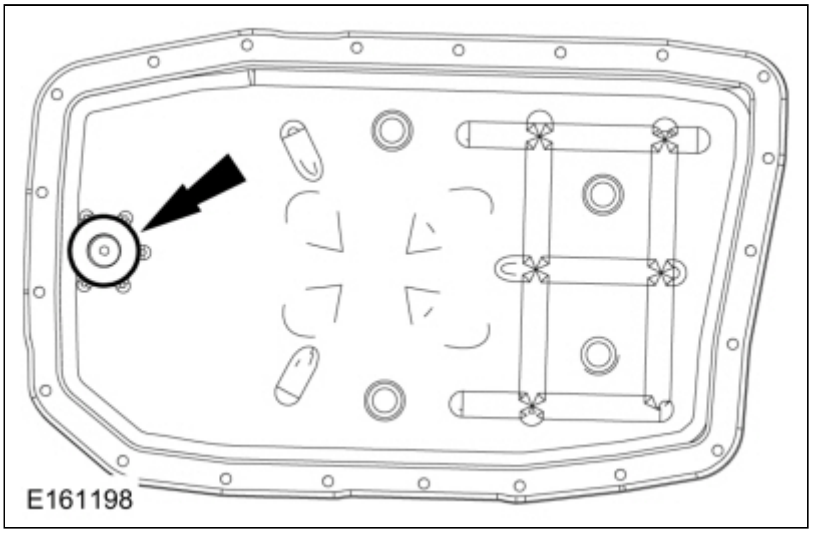
Installation

NOTE: *If the transmission is being repaired for a contamination-related failure, install a new transmission fluid filter and seal assembly. The transmission fluid filter may be reused if no excessive contamination is indicated.*

1. Inspect the transmission case for the transmission fluid filter seal. If the seal is in the case, carefully remove the seal without scratching the case.

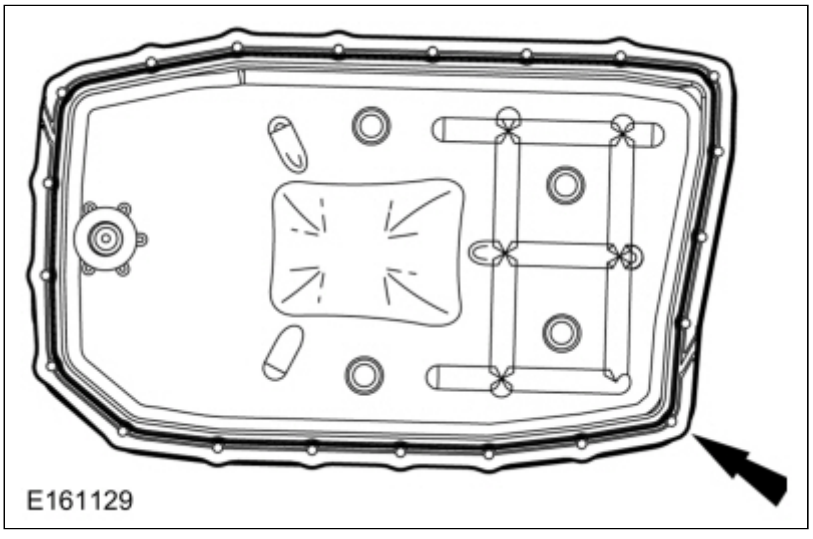


2. Make sure that the seal is on the transmission fluid filter and lubricate the seal with automatic transmission fluid.

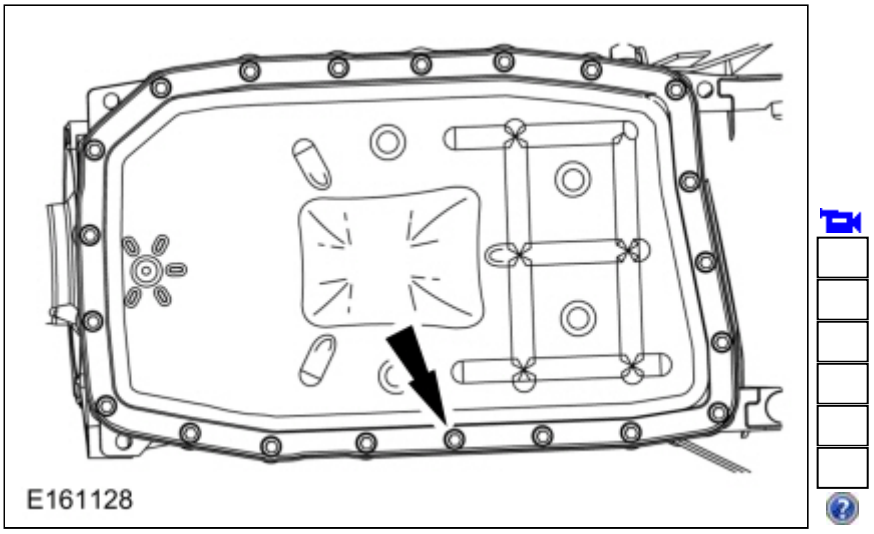


3. **NOTE:** *The transmission fluid filter may be reused if no excessive contamination is indicated.*

   If required, install a new transmission fluid filter.



4. Position the magnet in the transmission fluid pan.



5. **NOTE:** *The transmission fluid pan gasket can be reused if not damaged.*

   Install a new transmission fluid pan gasket if required.

6. Install the transmission fluid pan and tighten the bolts in a crisscross pattern.
   Torque: 12 Nm

7. Using the Adding Additional Transmission Fluid procedure, fill and check the transmission fluid.
   Refer to: Transmission Fluid Drain and Refill (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .

Copyright © 2016 Ford Motor Company

Transmission Fluid Filter

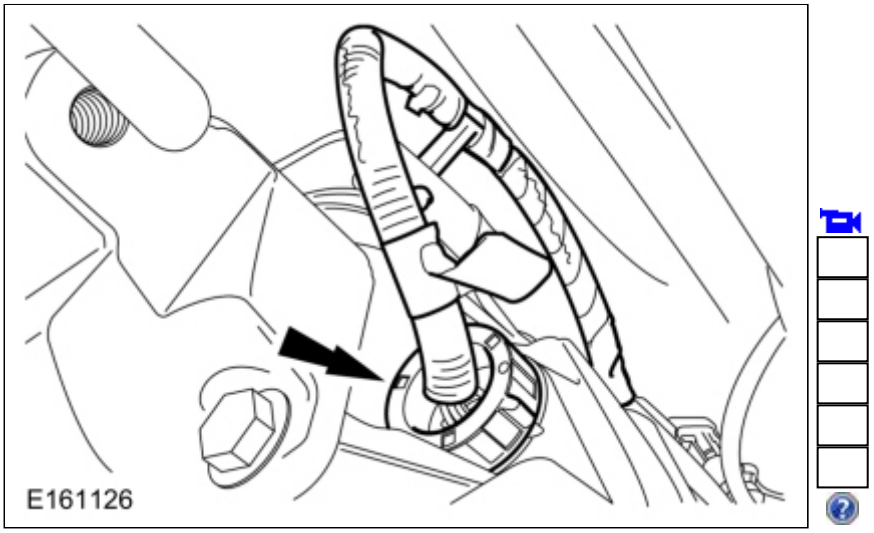
Removal and Installation

1. Refer to: Transmission Fluid Pan (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).

Copyright © 2016 Ford Motor Company

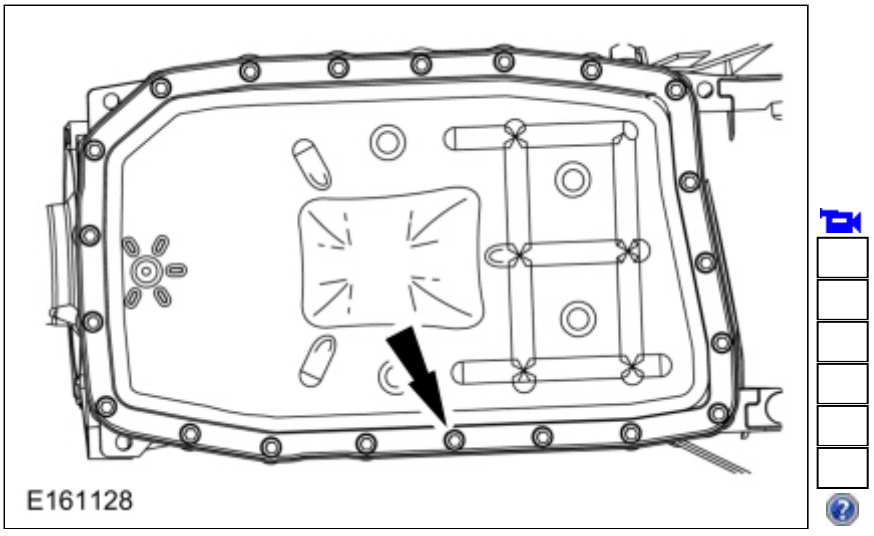
Main Control Valve Body

Base Part Number: 7A100



Removal

NOTE: *The Solenoid Body Strategy Data Download procedure must be performed if a new main control assembly is installed.*

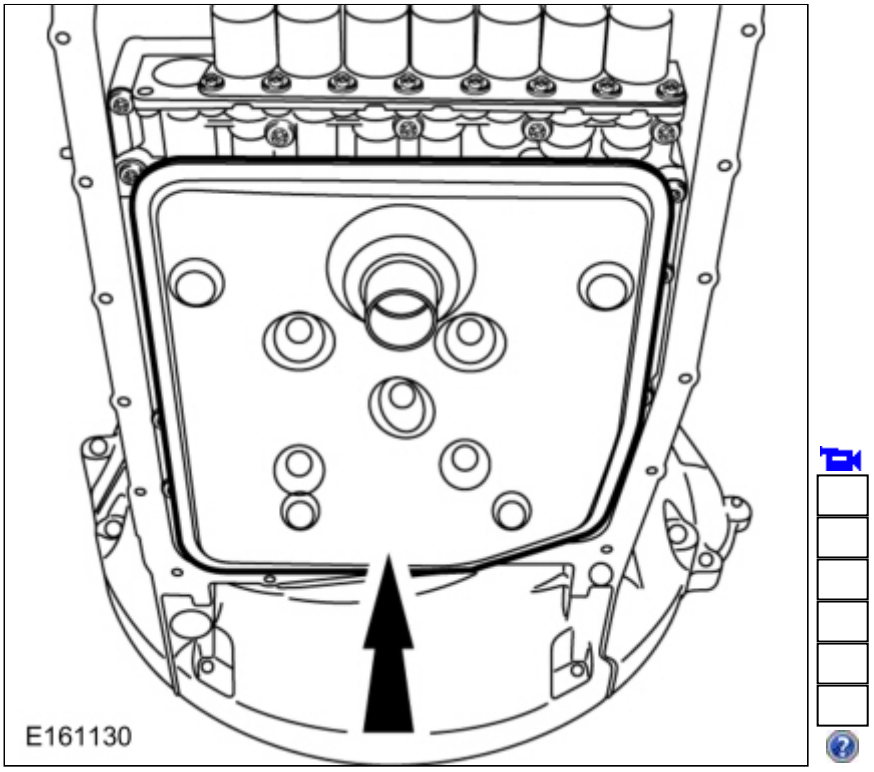


1. With the vehicle in NEUTRAL, position it on a hoist
   Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
   Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

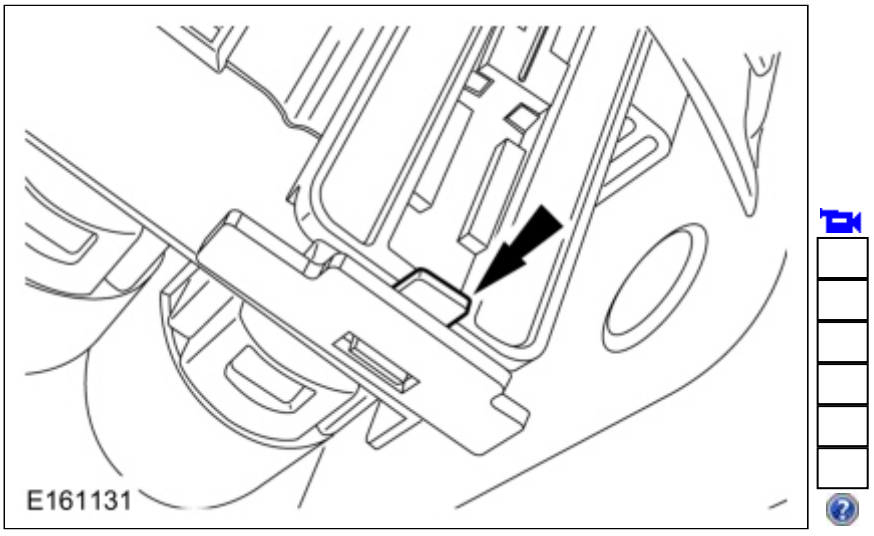
2. **NOTE:** *Do not pull on the wire harness to disconnect the connector or damage to the connector will occur.*

   Disconnect the transmission vehicle harness connector by twisting the outer shell and pulling back on the connector.

3. Remove the transmission fluid pan and allow the transmission fluid to drain.

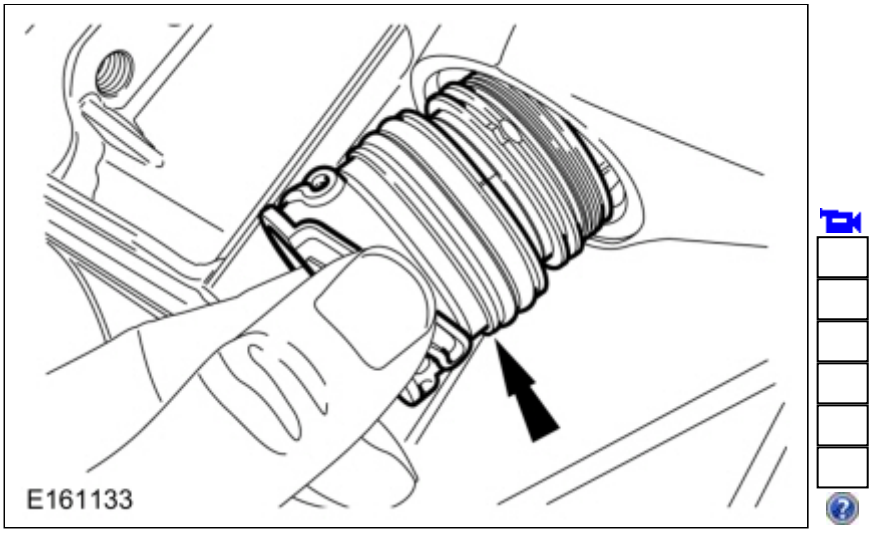


4. Remove the transmission fluid pan gasket.



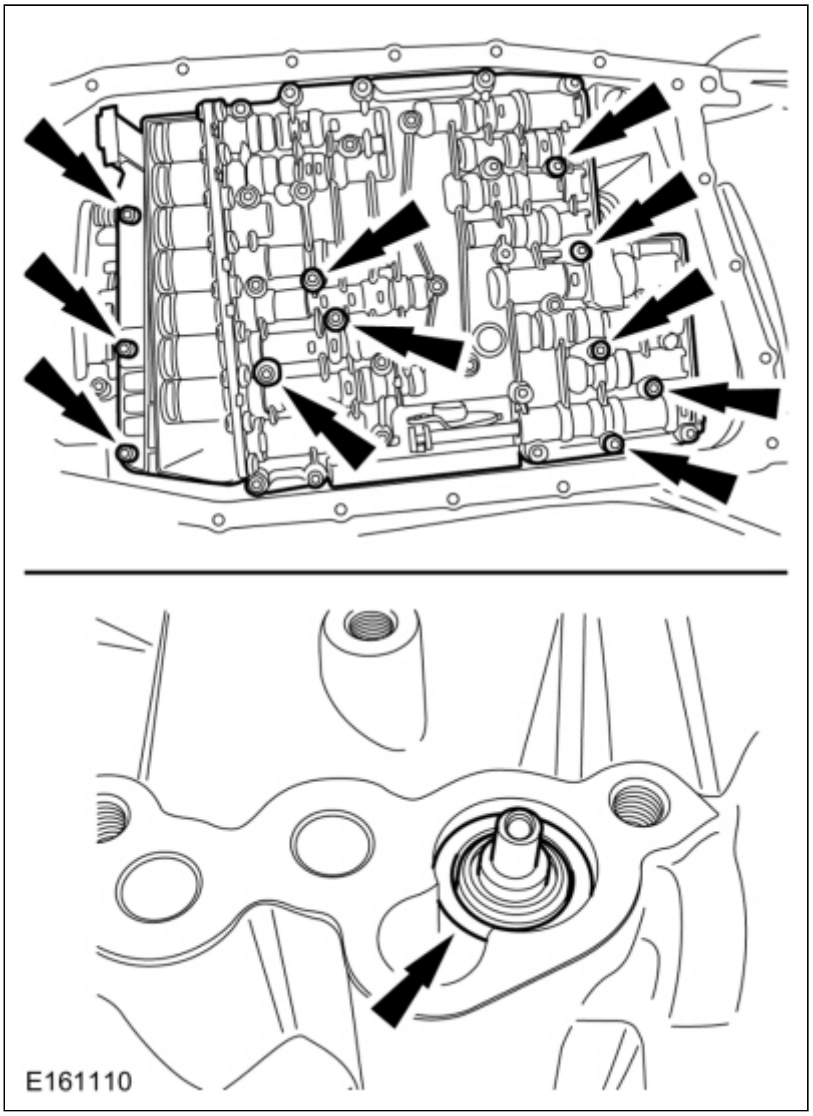
5. **NOTE:** *The transmission fluid filter may be reused if no excessive contamination is indicated.*

   Remove and discard the transmission fluid filter.

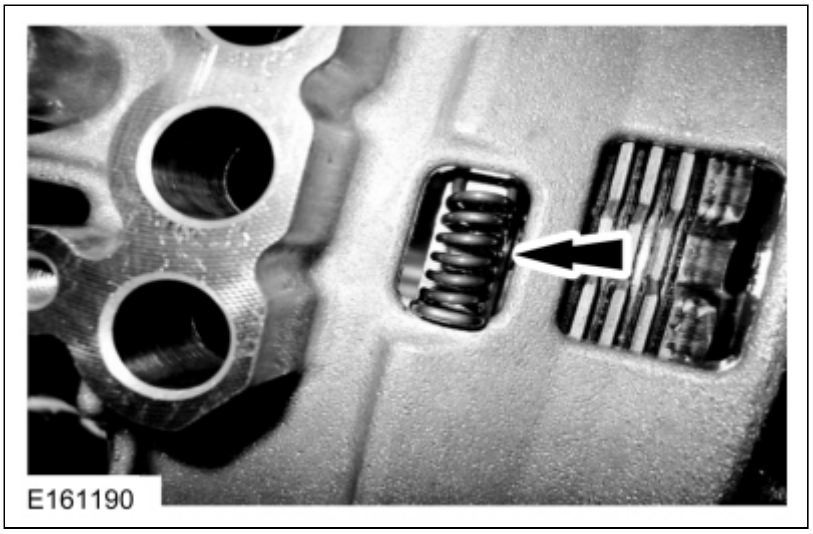


6. Pull the release tab and pull down on the main control electrical connector retainer.

7. With the release tab down, pull the outer shell of the main control electrical connector out of the main control assembly.



8. Pull the main control electrical connector out of the transmission case

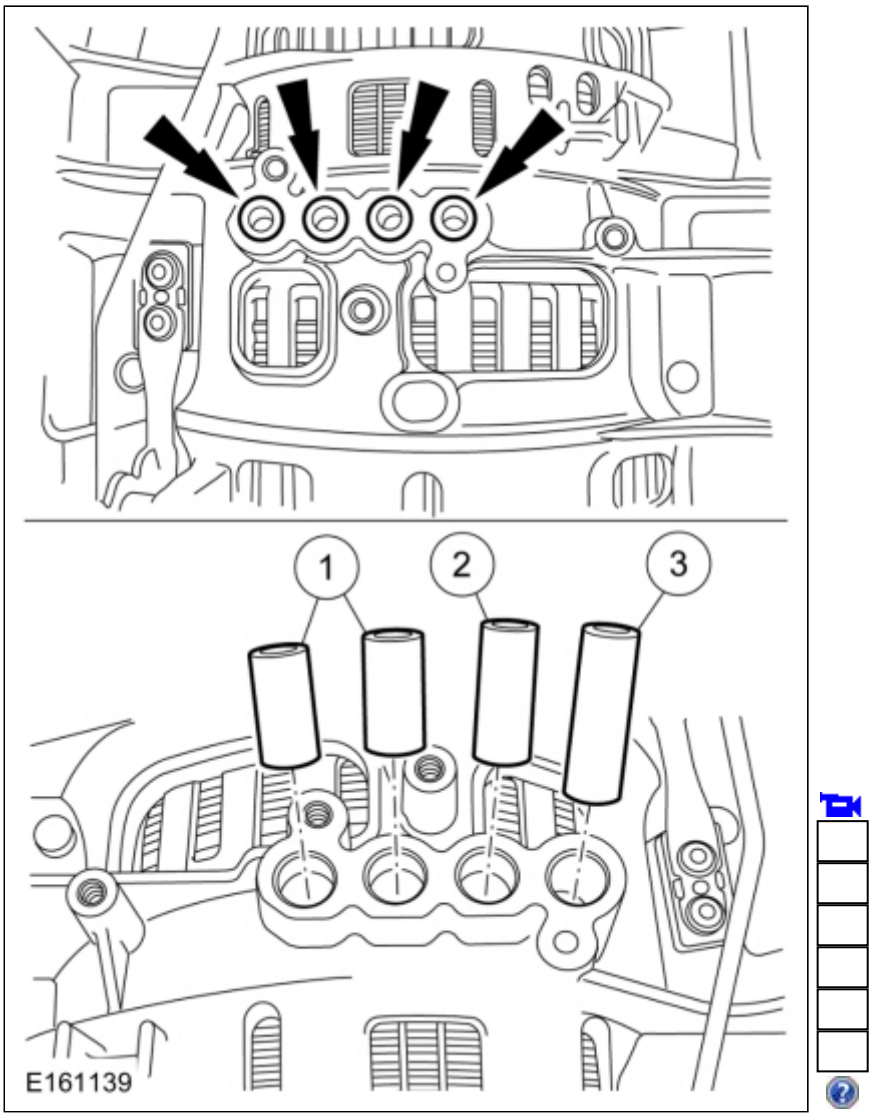


9. **NOTE:** *During removal of the main control assembly, the thermal bypass valve may fall out of the transmission case. Damage to the valve may occur if the valve falls out.*

   Remove the 11 bolts from the main control assembly and remove the main control assembly and the bypass valve.

Installation

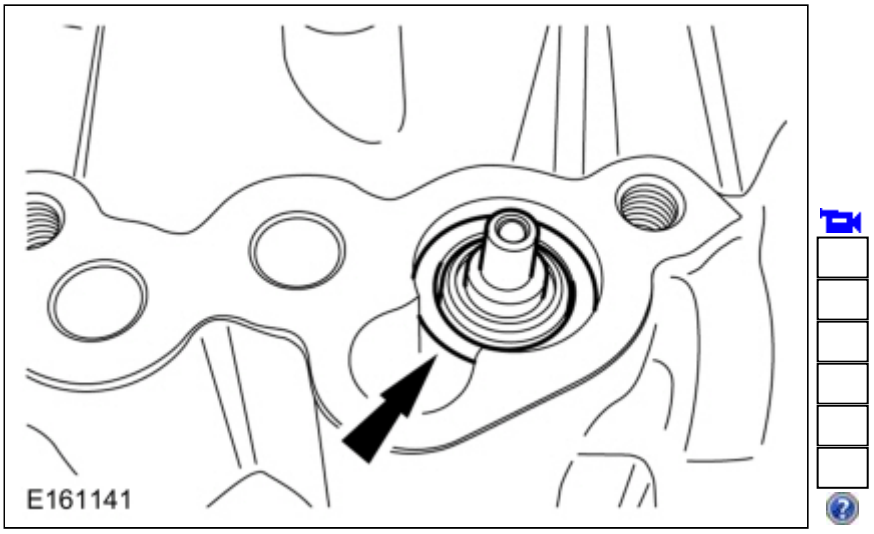
1. Inspect the bias spring to make sure it is positioned correctly in the transmission case.



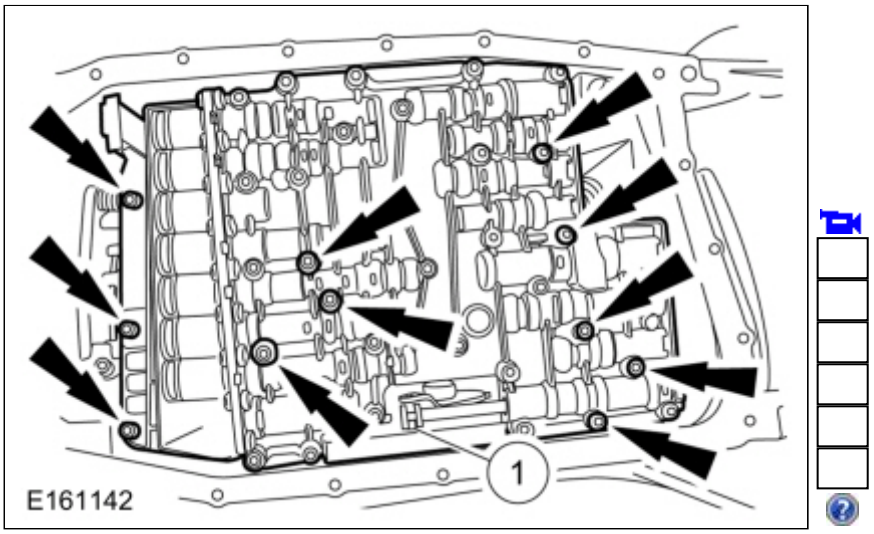
2. **NOTE:** *Before installing the main control assembly into the transmission case, verify the presence and orientation of the thermal bypass valve, pump adapter seal and center support seals. Also note that one or more of the center support seals may have remained in the main control assembly during removal and should be installed into the transmission case at this time.*

   NOTE: *Verify the 4 rubber feed tubes for the center support are in place.*

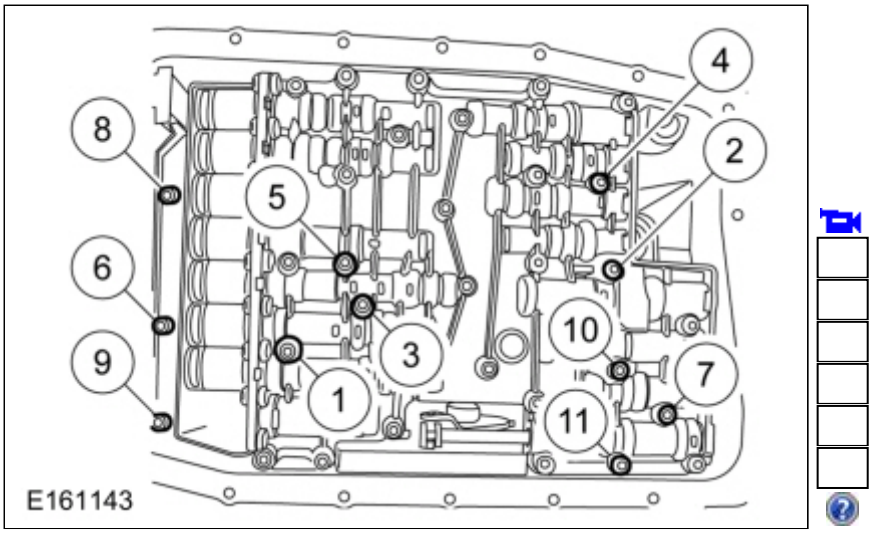
   1. Black feed tubes
   2. Green feed tubes



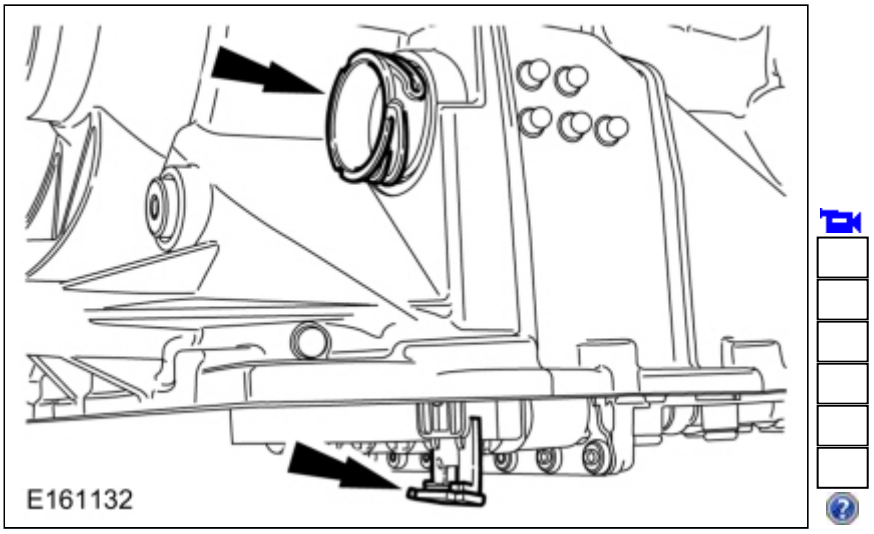
3. Blue feed tubes



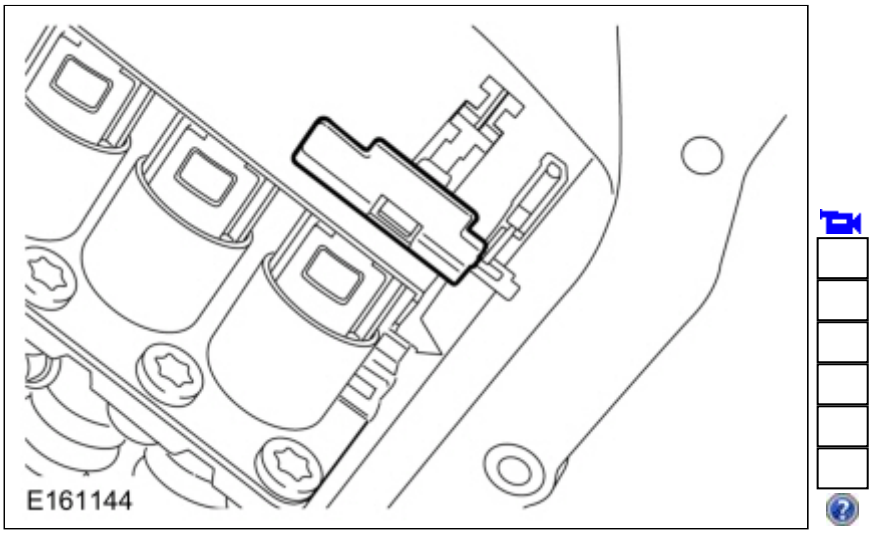
3. Verify the rubber adapter is in place.



4. Coat the thermal bypass valve with petroleum jelly to hold it in place and install the thermal bypass valve into the transmission case.

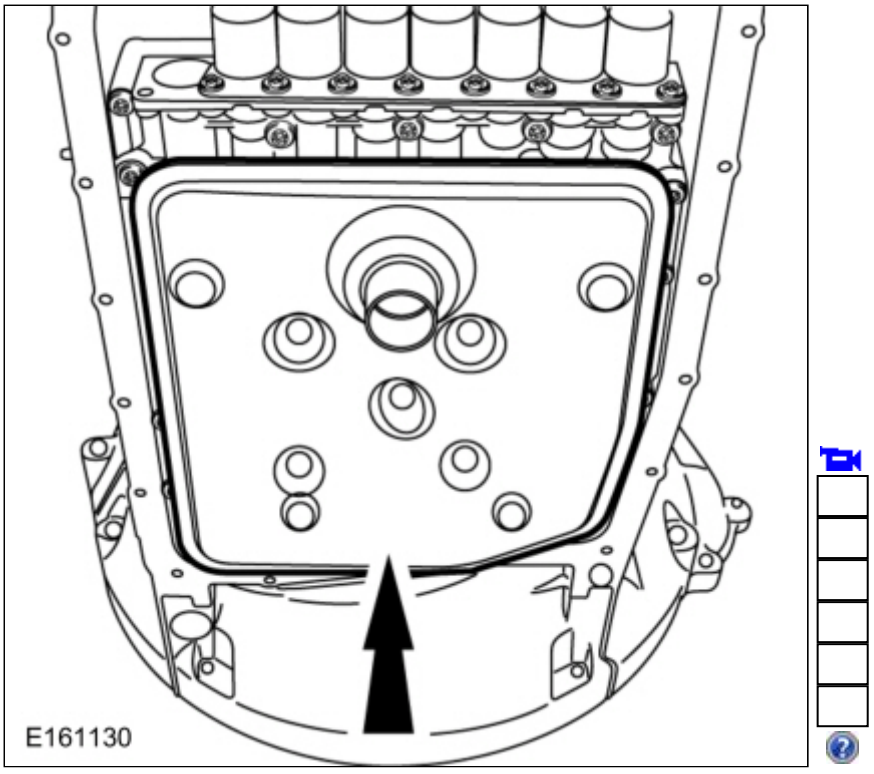


5. Position the main control assembly in place and loosely install the 11 bolts. Align the manual valve and control lever linkage.

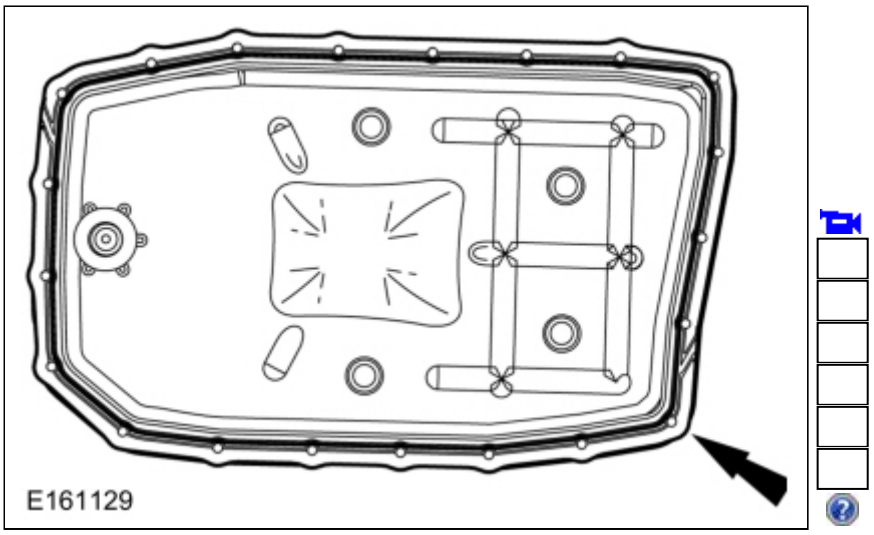


6. Tighten the main control bolts in the sequence shown.
   Torque: 8 Nm

7. With the release tab down and unlocked, push the outer shell of the main control electrical connector into the transmission. Make sure that the main control electrical connector is fully seated into the main control assembly.

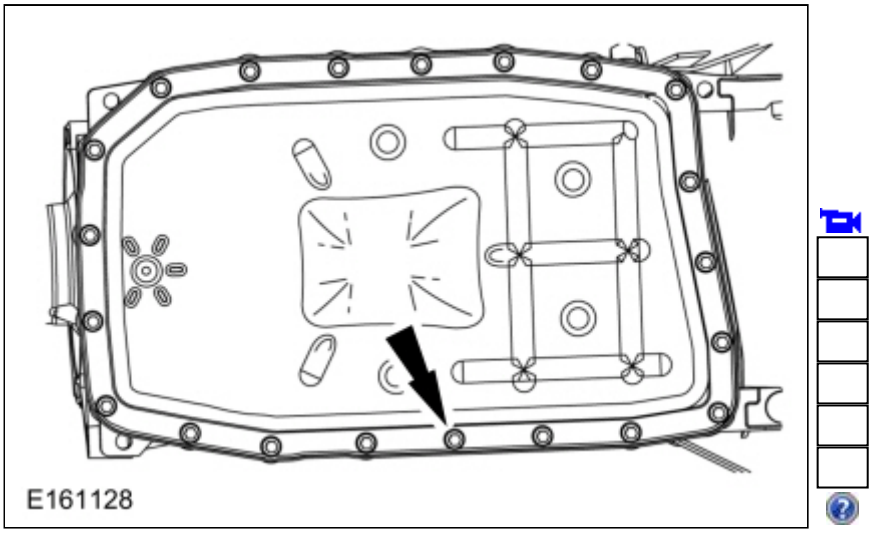


8. Press up on the tab and lock the outer shell of the main control electrical connector in place. Make sure that the locking tab is securely locked.



9. **NOTE:** *The transmission fluid filter may be reused if no excessive contamination is indicated.*

   If required, install a new transmission fluid filter.



10. **NOTE:** *The transmission fluid pan gasket can be reused if not damaged.*

    Install a new transmission fluid pan gasket, if required.

11. Install the transmission fluid pan and tighten the transmission fluid pan bolts in a crisscross pattern.
    Torque: 12 Nm

12. Connect the transmission vehicle harness connector by pushing it in and twisting the outer shell to lock it in place.

13. Make sure the transmission fluid is at the correct level.
    Refer to: Transmission Fluid Drain and Refill (307-01 Automatic Transmission - Vehicles With: 6-Speed

Automatic Transmission - 6R80) .

14. **NOTE:** *If an individual solenoid was replaced clear the adaptive strategy.*

    Perform a Road Test — Adaptive Drive Cycle after the adaptive strategy is cleared.
    Refer to: Shift Point Road Test (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).

15. **NOTE:** *If the main control assembly was replaced, perform the Solenoid Body Strategy Data Download.*

    Perform a Road Test — Adaptive Drive Cycle after the Solenoid Body Strategy Data Download.
    Refer to: Shift Point Road Test (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).

Output Shaft Seal

Base Part Number: 7B215

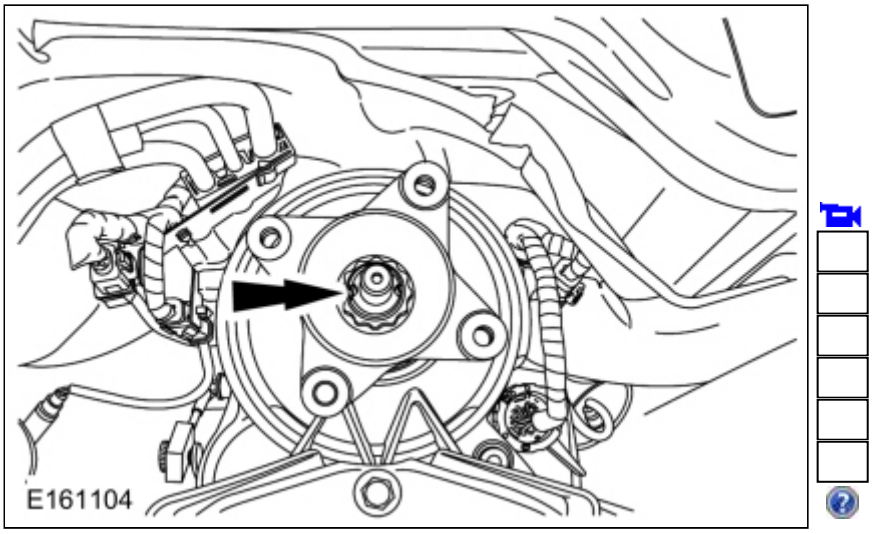
Special Tool(s) / General Equipment

 E129694	100-001 (T50T-100-A) Slide Hammer
 E142023	307-637 Installer, Rear Seal, 4x4
 E142024	307-638 Installer, Rear Seal, 4x2
 308-375	308-375 Remover, Input Shaft Seal

Removal

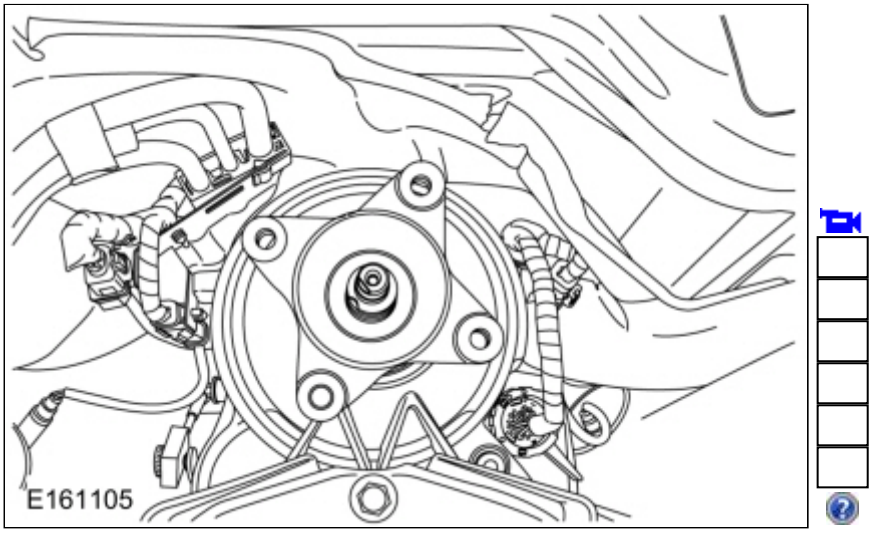
All vehicles

1. With the vehicle in NEUTRAL position it on a hoist.
   Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
   Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).



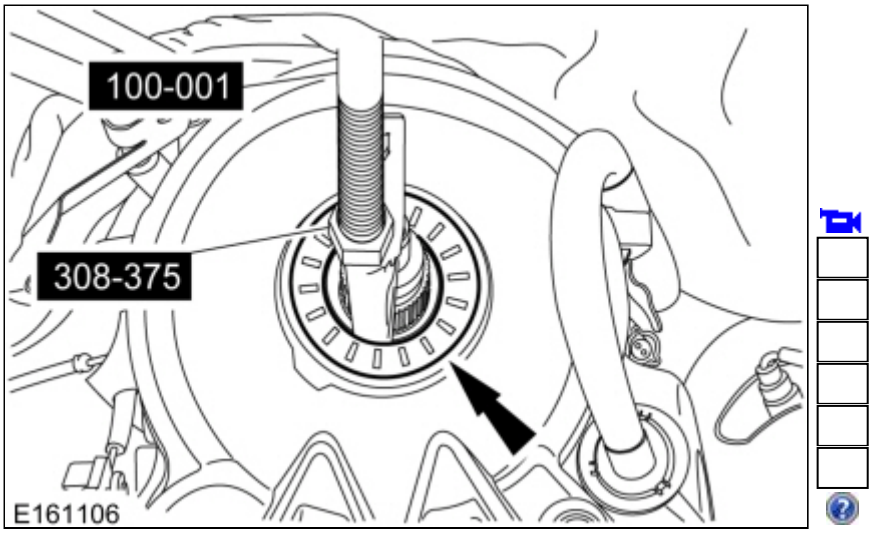
2. Refer to: Transmission Fluid Drain and Refill (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .

Vehicles with rear wheel drive (RWD)



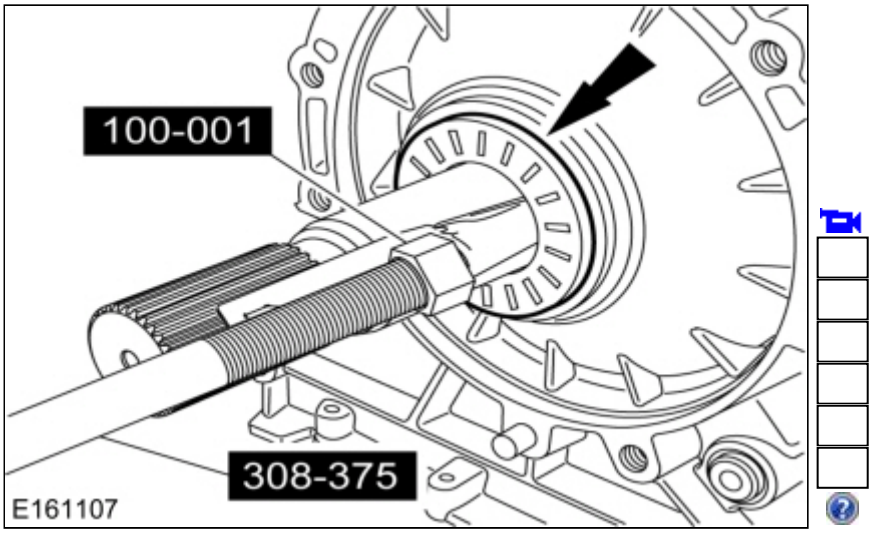
3. **NOTE:** *The Output shaft flange nut has been staked to prevent it from coming loose. Prior to removing the nut, remove the stake to prevent damage to the output shaft*

   Remove the rear drive shaft.
   Refer to: Front Driveshaft - 4WD (205-01 Driveshaft, Removal and Installation).



4. Remove and discard the output shaft flange nut.

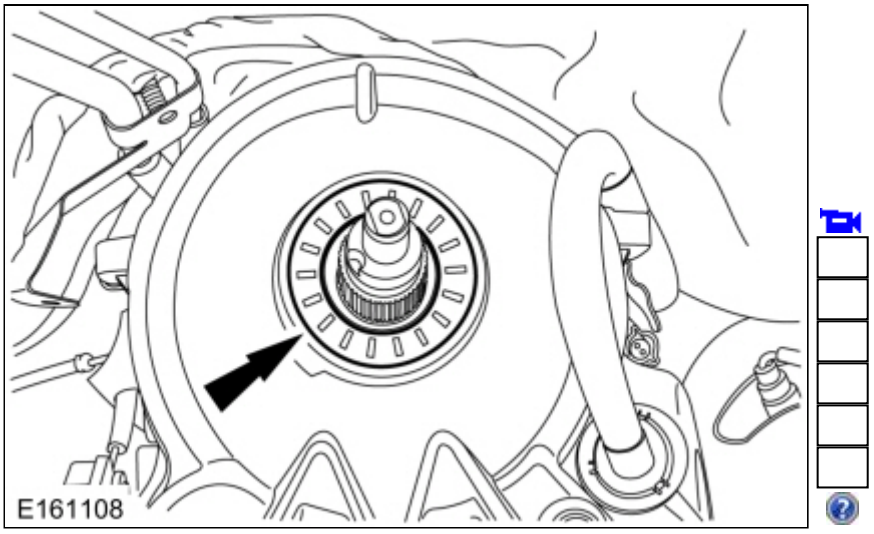
5. Remove the extension housing flange seal and the output shaft flange



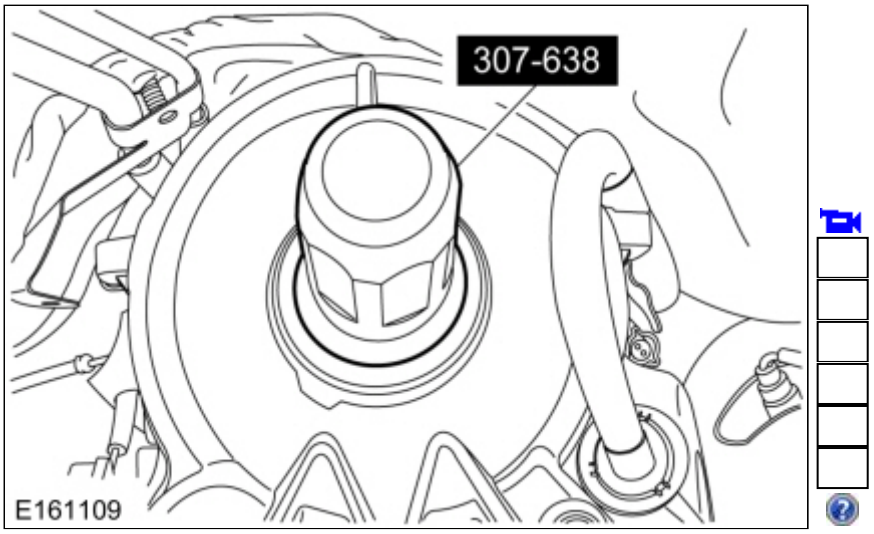
6. Using the input shaft oil seal remover and slide Hammer, remove the output shaft seal
   Use Special Service Tool: 100-001 (T50T-100-A) Slide Hammer. , 308-375 Remover, Input Shaft Seal.

4x4

7. Remove the transfer case
   Refer to: Transfer Case (308-07B Transfer Case - 5-Speed Manual Transmission - MT75/6-Speed Manual Transmission - MT82, Removal).

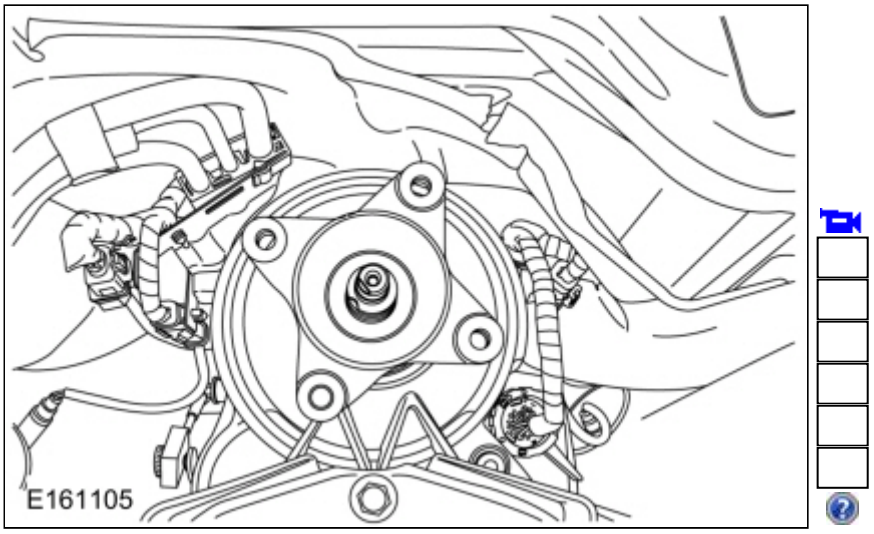


8. Using the input shaft oil seal remover and slide Hammer, remove the output shaft seal
   Use Special Service Tool: 100-001 (T50T-100-A) Slide Hammer. , 308-375 Remover, Input Shaft Seal.



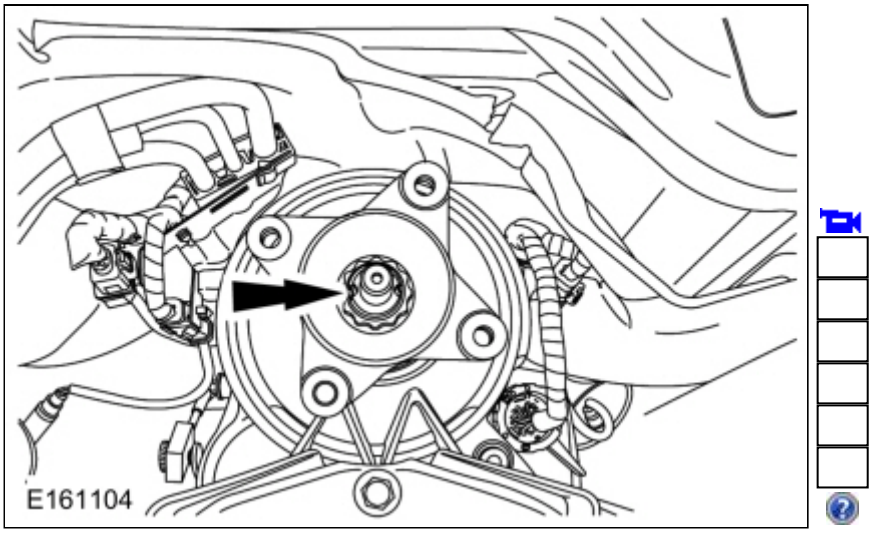
Installation

Vehicles with rear wheel drive (RWD)



1. Position a new output shaft seal

2. Using the Rear seal 4×2 Installer, Install the output shift seal.
   Use Special Service Tool: 307-638 Installer, Rear Seal, 4x2.

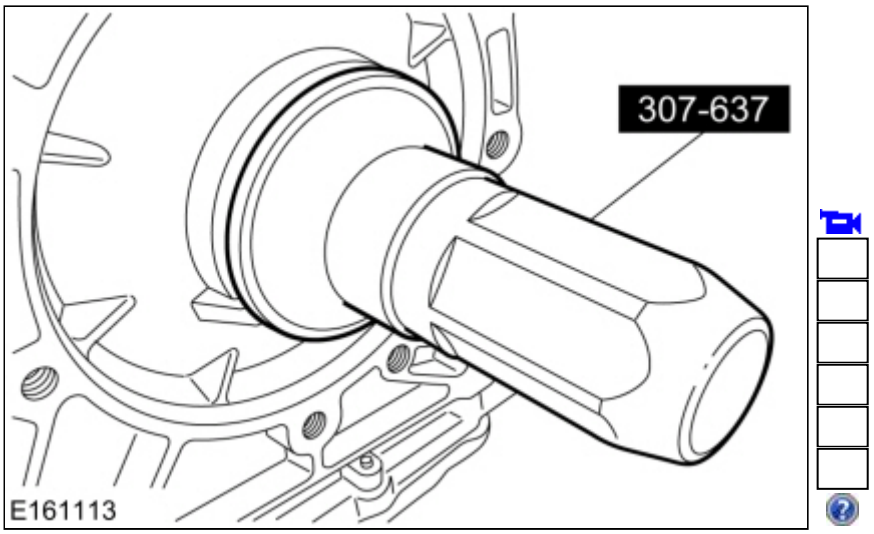


3. Install the output shaft flange

4. **NOTE:** *After installing the new output shaft flange nut, it must be staked at the slots to prevent it from coming loose.*

   Install the extension housing flange seal and a new output shaft flange nut.
   Torque: 80 Nm

5. Install the rear drive shaft
   Refer to: Front Driveshaft - 4WD (205-01 Driveshaft, Removal and Installation).



4x4

6. Position the output shaft seal

7. Using the Rear seal 4×4 Installer, Install a output shaft seal

Use Special Service Tool: 307-637 Installer, Rear Seal, 4x4.

8. Install the transfer case
   Refer to: Transfer Case (308-07B Transfer Case - 5-Speed Manual Transmission - MT75/6-Speed Manual Transmission - MT82, Installation).

All vehicles

9. Fill and check the transmission fluid.
   Refer to: Transmission Fluid Level Check (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .

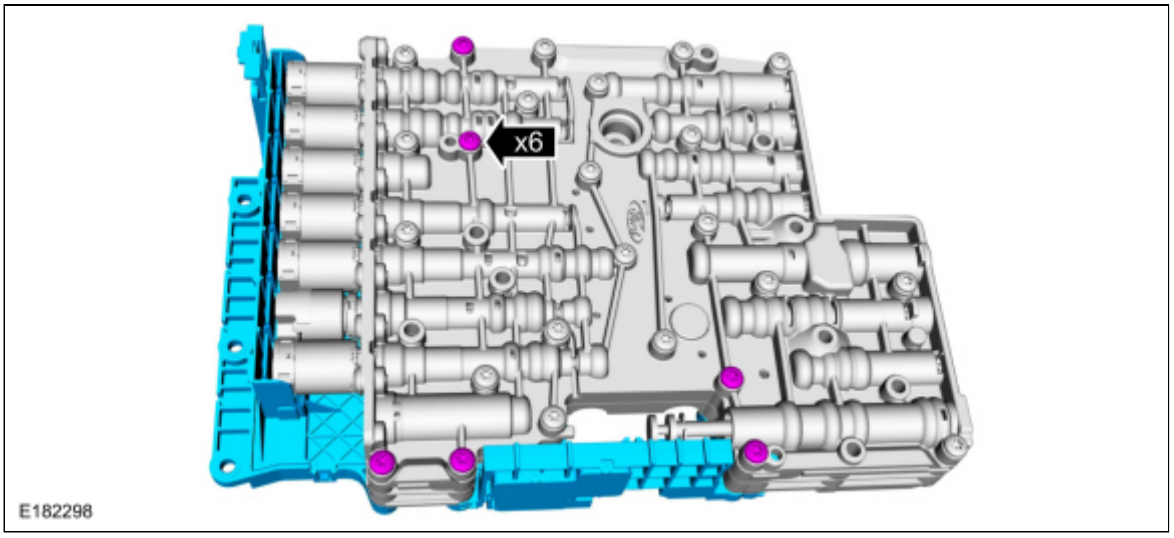
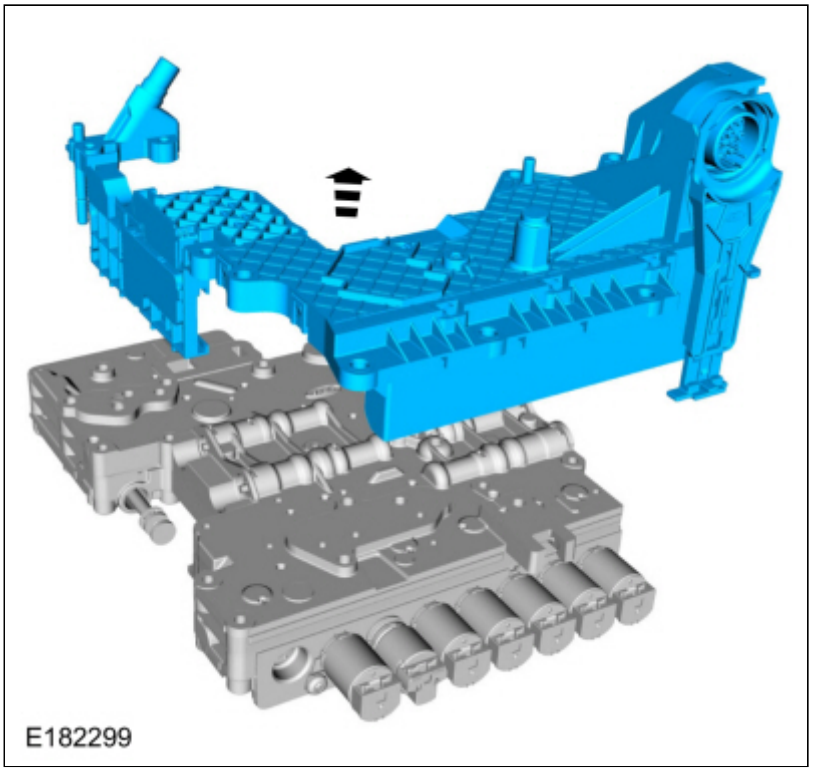
Shift Solenoids (SS)



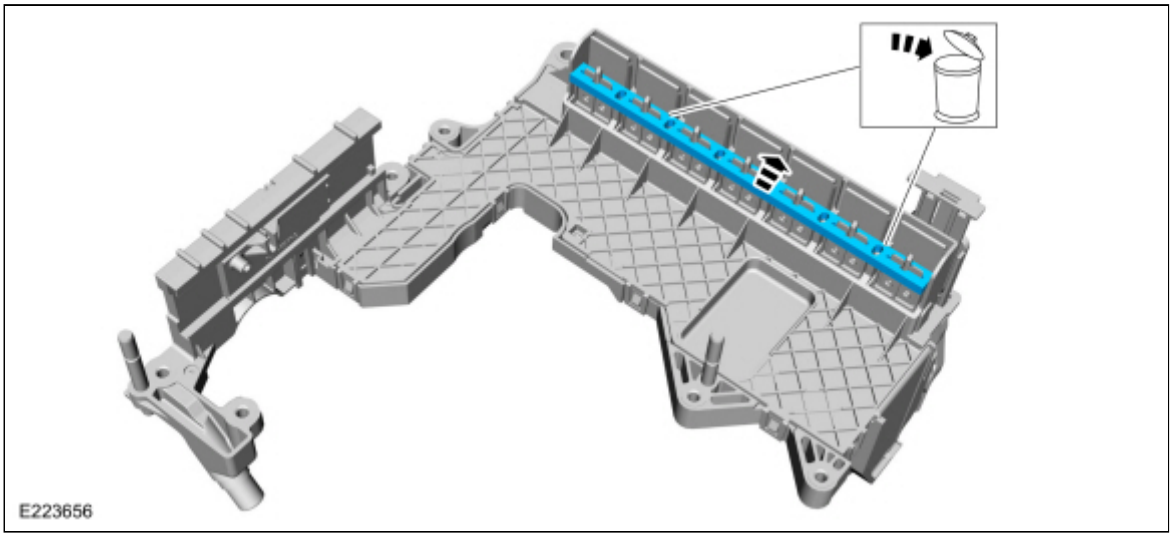
Materials

Name	Specification
Automatic Transmission Fluid	MERCON® LV WSS-M2C938-A

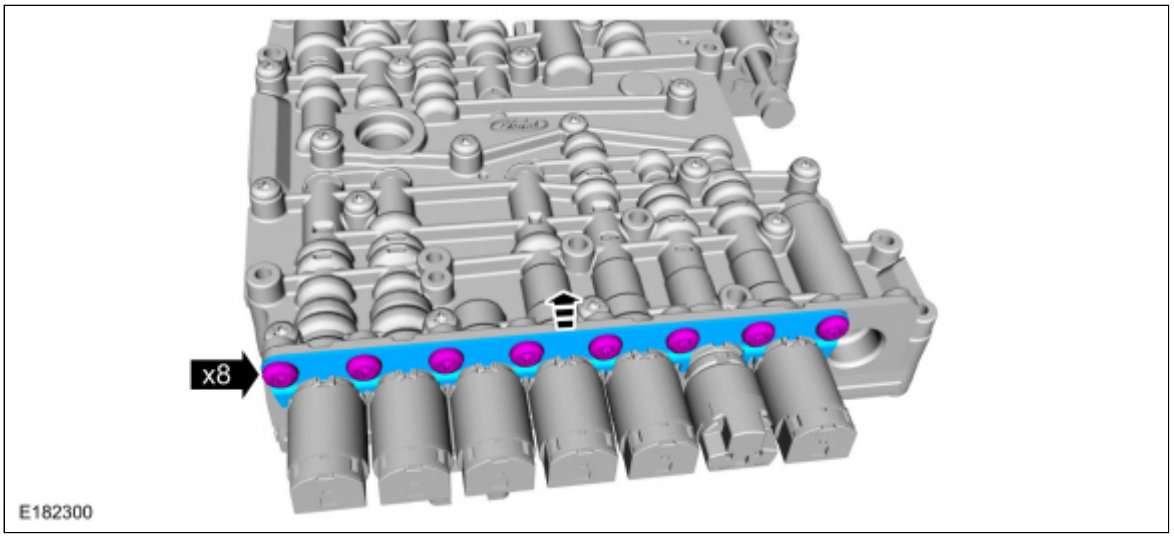


Removal

1. Remove the main control valve body.
   Refer to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R100) .
   Refer to: Main Control Valve Body - 2.7L EcoBoost (238kW/324PS) (307-01 Automatic Transmission) .

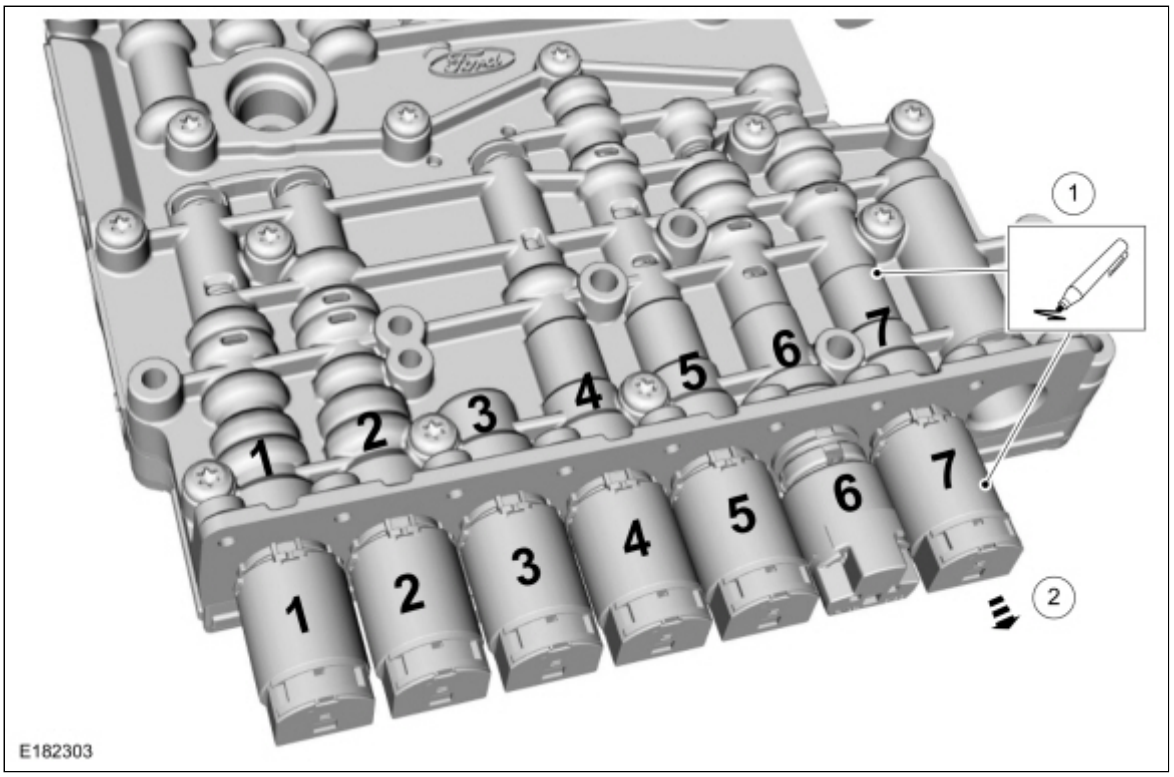


2. Remove the long bolts from the molded leadframe.



3. Carefully separate the molded leadframe from the main control valve body assembly.

4. If equipped, remove and discard the foam strip seal.

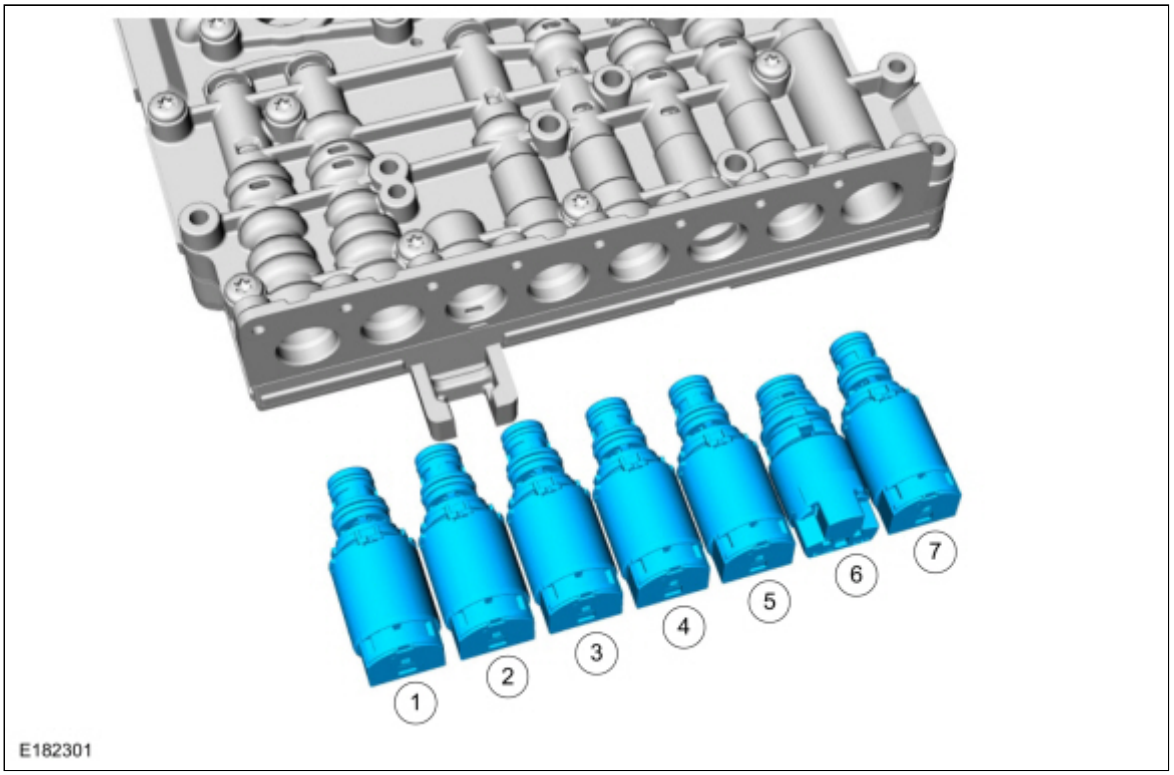


5. Remove the solenoid bracket bolts and the solenoid bracket.

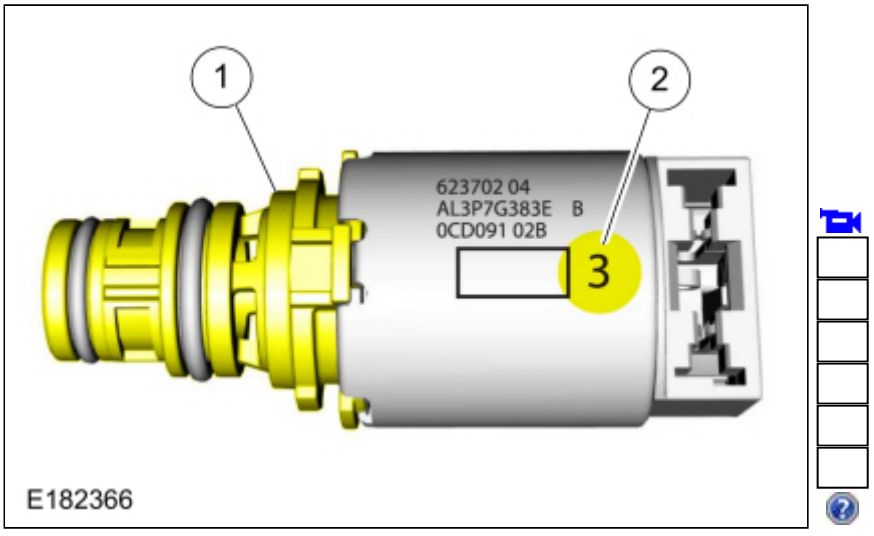
6. **NOTICE: A Variable Force Solenoid (VFS) is calibrated from the factory and are not all the same. To**

replace a Variable Force Solenoid (VFS), match the replacement solenoid nozzle color and the band number with the original solenoid or harsh/erratic shifts, harsh/soft engagement or damage to the transmission can occur.

1. If replacing more then one solenoid, number the solenoids and number the main control valve body solenoid ports to correspond to the solenoid.
2. Pull the solenoid(s) out of the main control valve body.

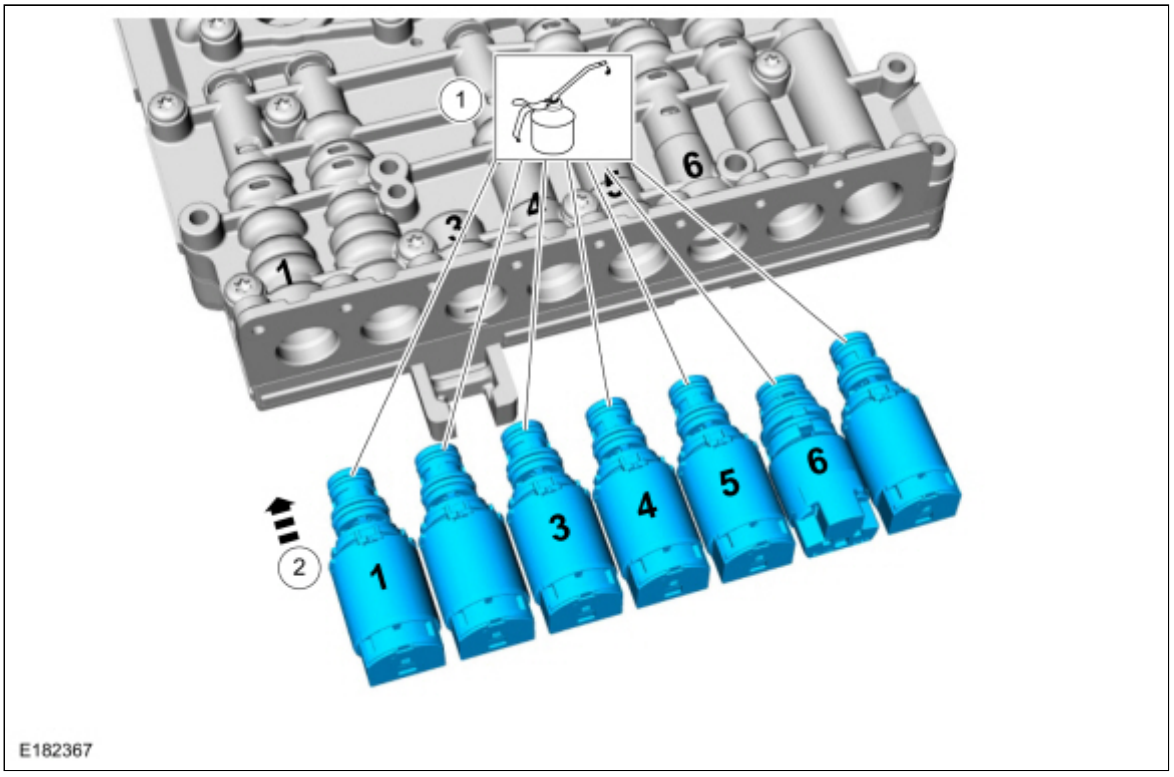


Installation

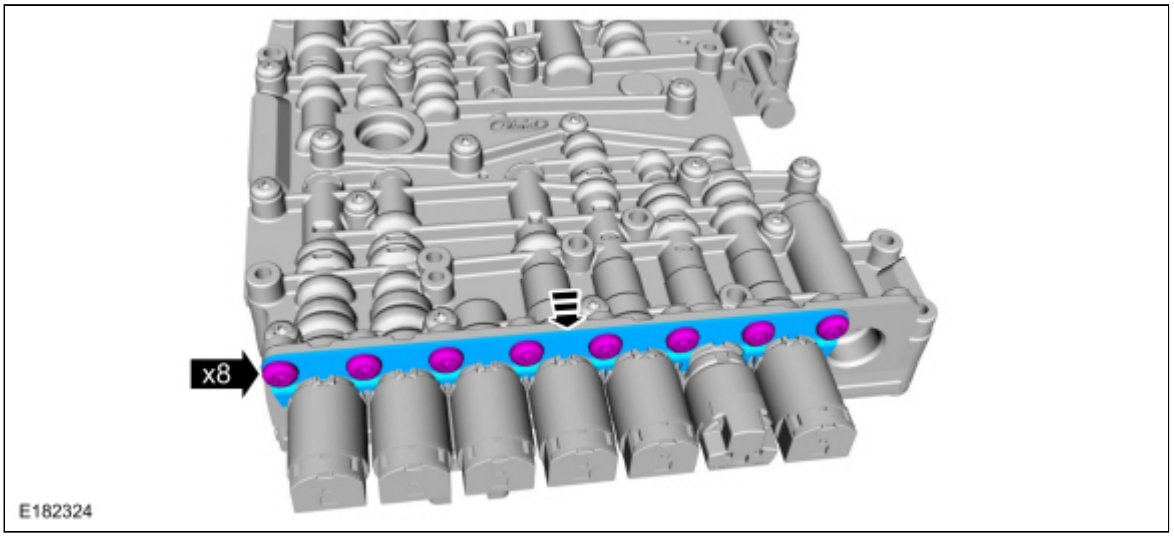


NOTICE: A Variable Force Solenoid (VFS) is calibrated from the factory and are not all the same. To replace a Variable Force Solenoid (VFS), match the replacement solenoid nozzle color and the band number with the original solenoid or harsh/erratic shifts, harsh/soft engagement or damage to the transmission can occur.

NOTE: *Identify what type of solenoid is being replaced. The solenoid can be a normally high Variable Force Solenoid (VFS) with a black nozzle, normally low Variable Force Solenoid (VFS) with a brown nozzle or an ON/OFF solenoid.*

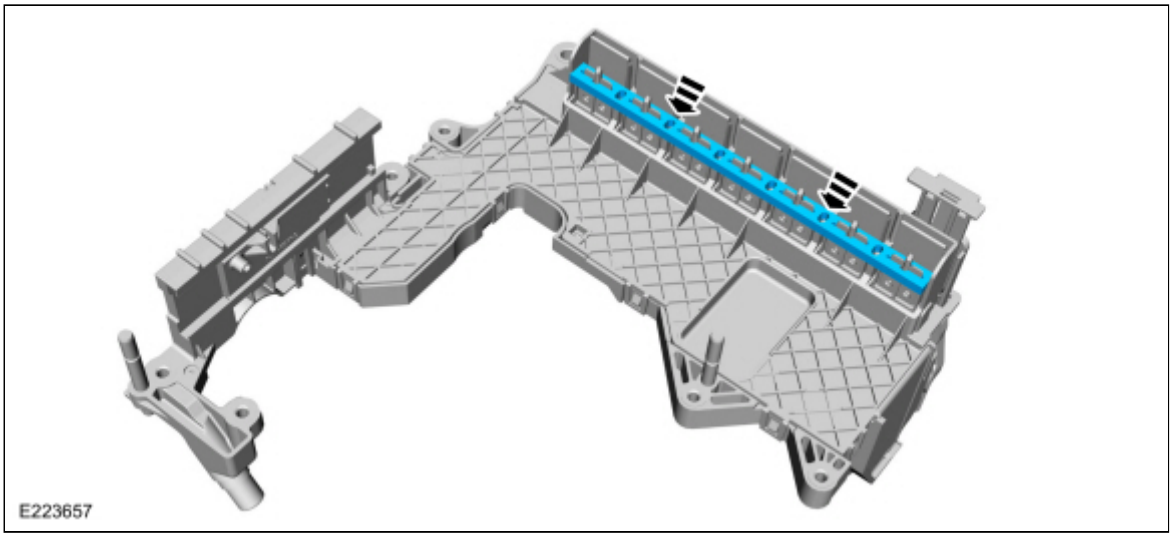


1. 7G383, SSA, Forward (1,2,3,4) clutch, normally low solenoid (brown nozzle).
2. 7G383, SSB, Direct (3,5,R) clutch, normally high solenoid (black nozzle).
3. 7G383, SSC, Intermediate (2,6) clutch, normally low solenoid (brown nozzle).
4. 7G383, LPC solenoid, normally high solenoid (black nozzle).
5. 7G383, SSD, low/reverse/overdrive clutch, normally high solenoid (black nozzle).
6. 7G484, SSE, normally off ON/OFF solenoid.
7. 7G383, TCC solenoid, normally low solenoid (brown nozzle).

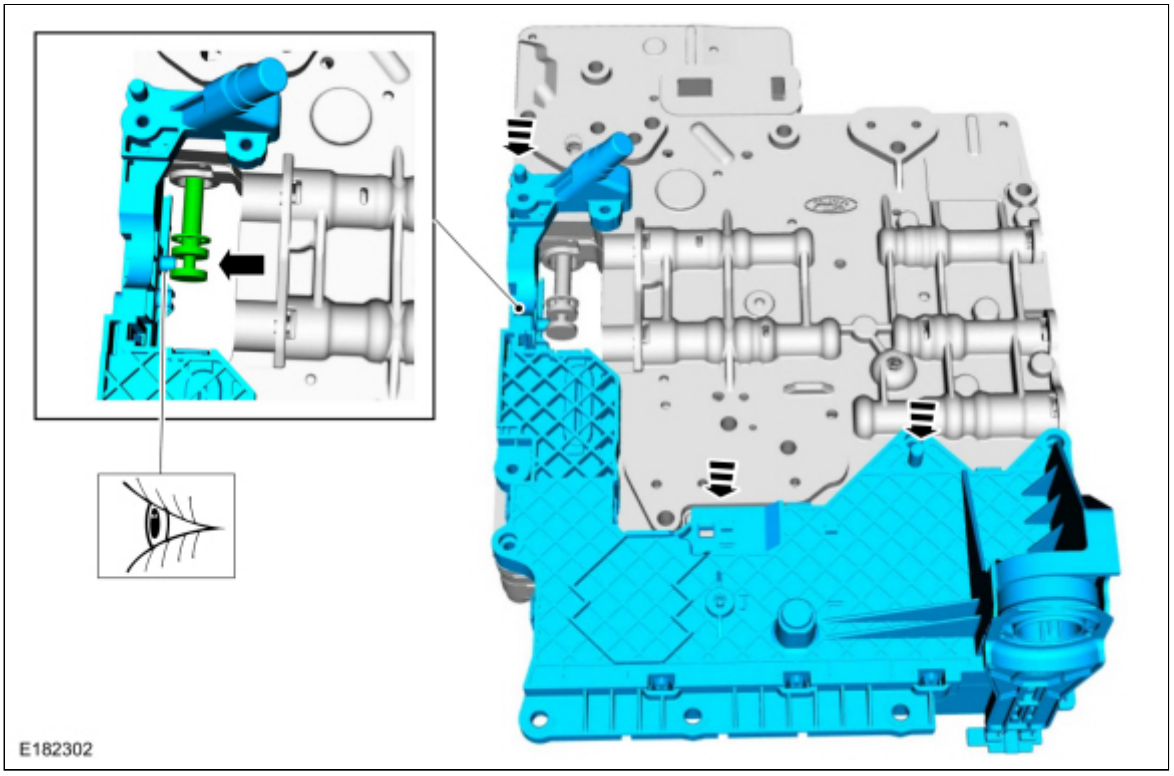


1. If replacing a Variable Force Solenoid (VFS), record the solenoid nozzle color to get the correct part number for the solenoid.
2. If replacing a Variable Force Solenoid (VFS), record the band number to get the correct part number for the solenoid.

3. Lubricate the solenoid O-rings and position the solenoid(s) in the main control valve body in the correct port(s) as marked during removal.
   Material: Automatic Transmission Fluid (MERCON® LV) (WSS-M2C938-A)

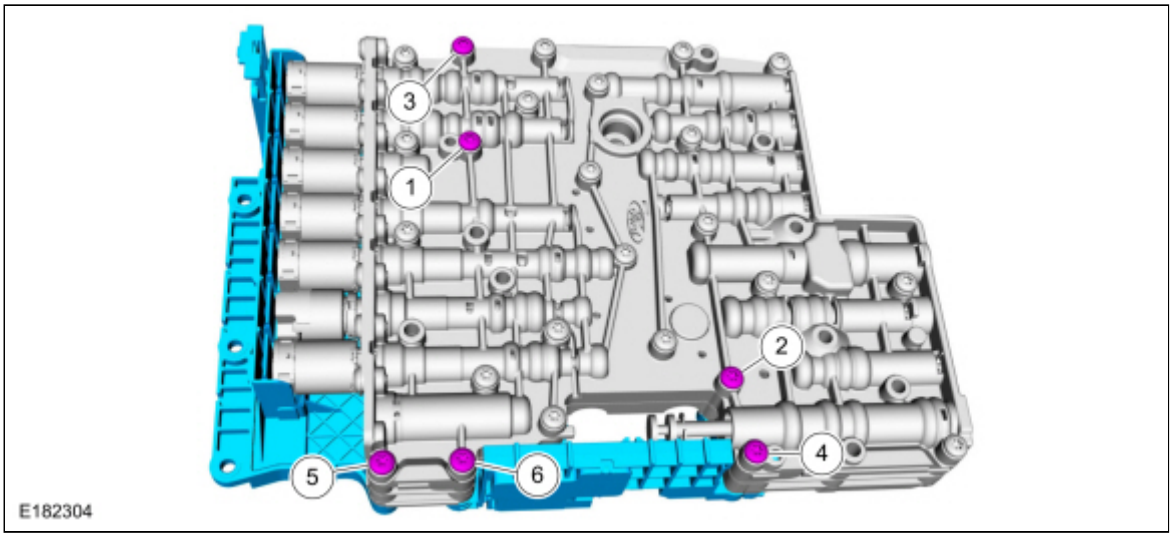


4. Position the solenoid bracket in place and install the bolts.
   Torque: 6 Nm



5. **NOTE:** *Some vehicles may not have been built with a foam strip seal. A new foam strip seal should be installed on all molded leadframes.*

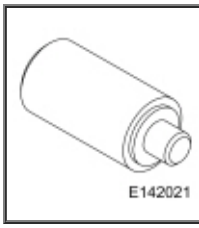
   Install a new foam strip seal on the molded leadframe.



6. **NOTE:** *The TR sensor pin must be aligned with the manual control valve during installation.*

   Position the molded leadframe on the main control valve body and align the TR sensor pin with the manual control valve.

7. Install the long bolts into the molded leadframe. Tighten the bolts in the sequence shown.
   Torque: 6 Nm



8. Install the main control valve body.
   Refer to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R100) .
   Refer to: Main Control Valve Body - 2.7L EcoBoost (238kW/324PS) (307-01 Automatic Transmission) .

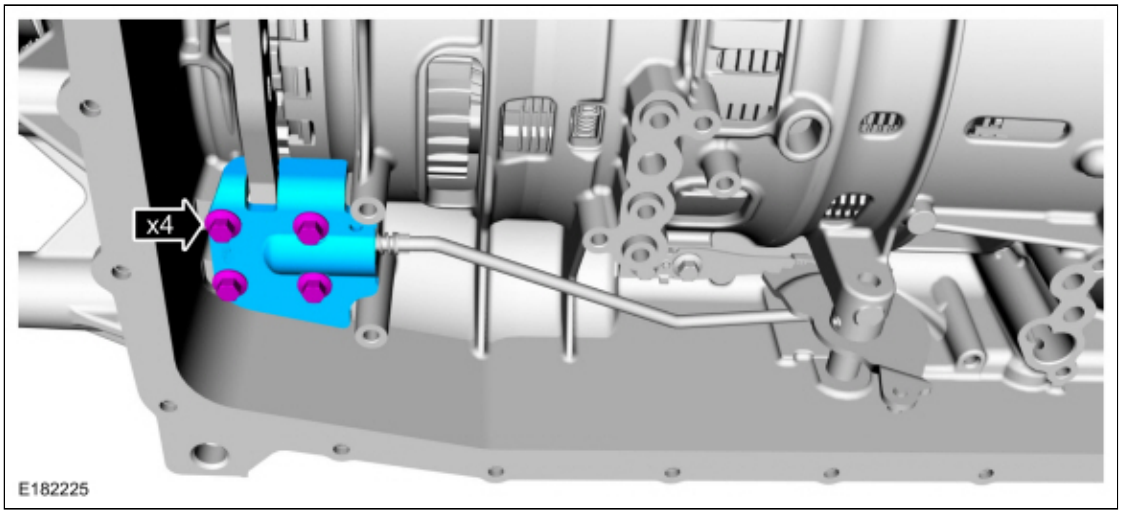
Selector Shaft Seal

Special Tool(s) / General Equipment

 E142021	307-559 Installer, Shifter Fluid Seal

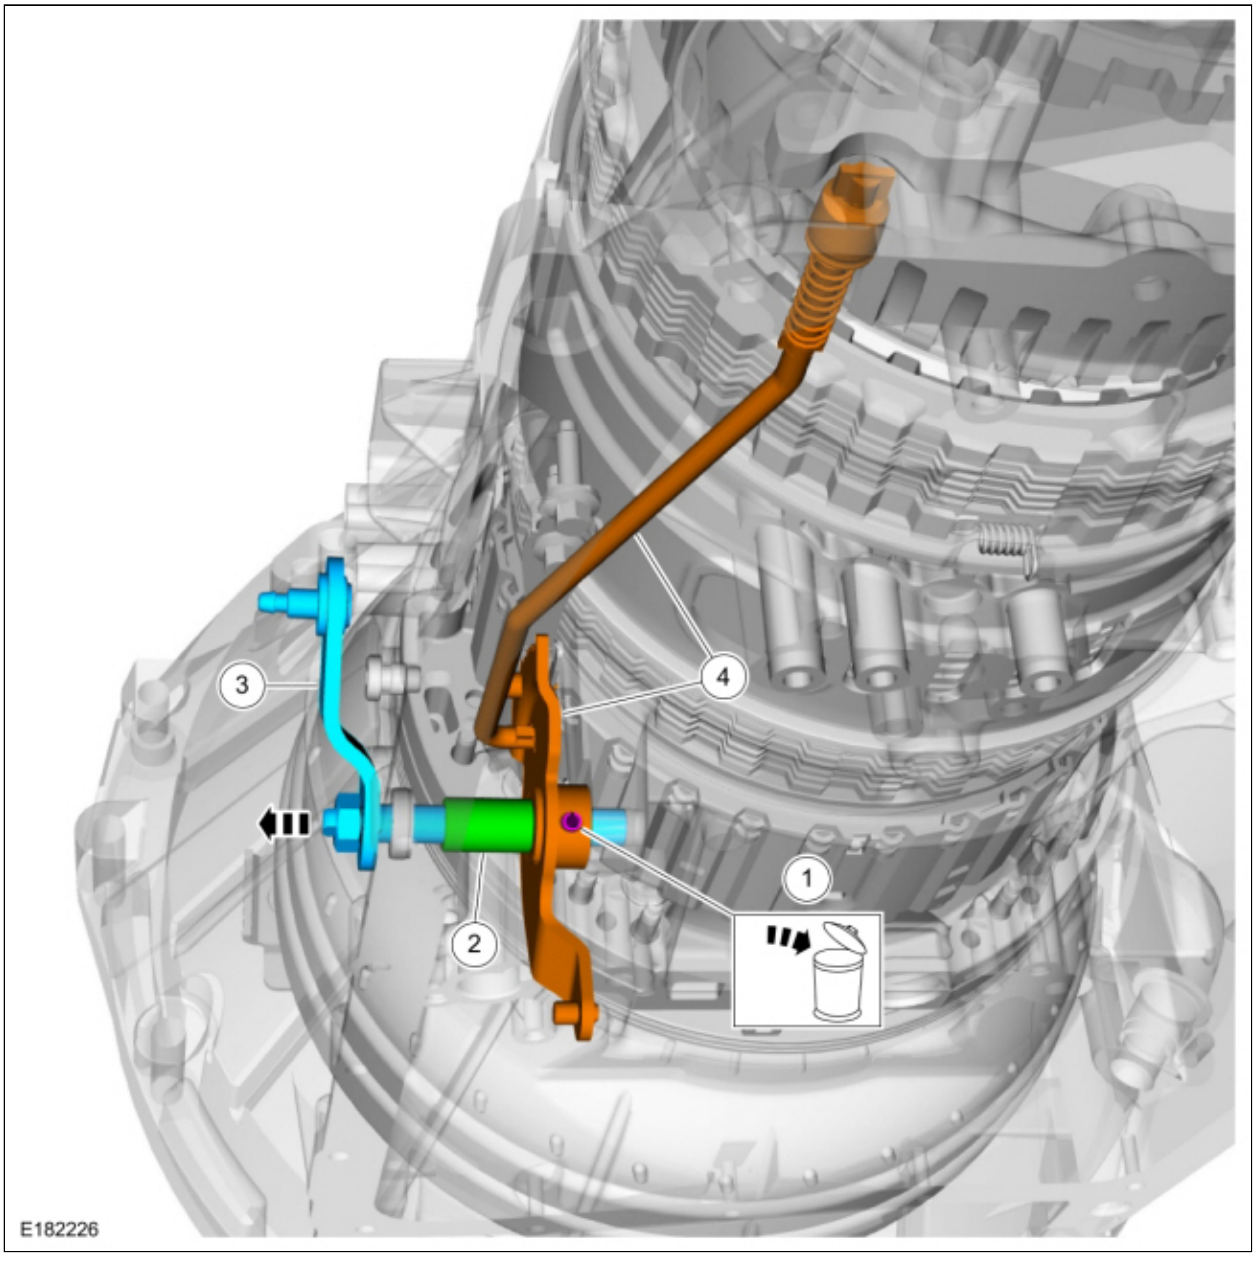
Removal

1. With the vehicle in NEUTRAL, position it on a hoist.
   Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

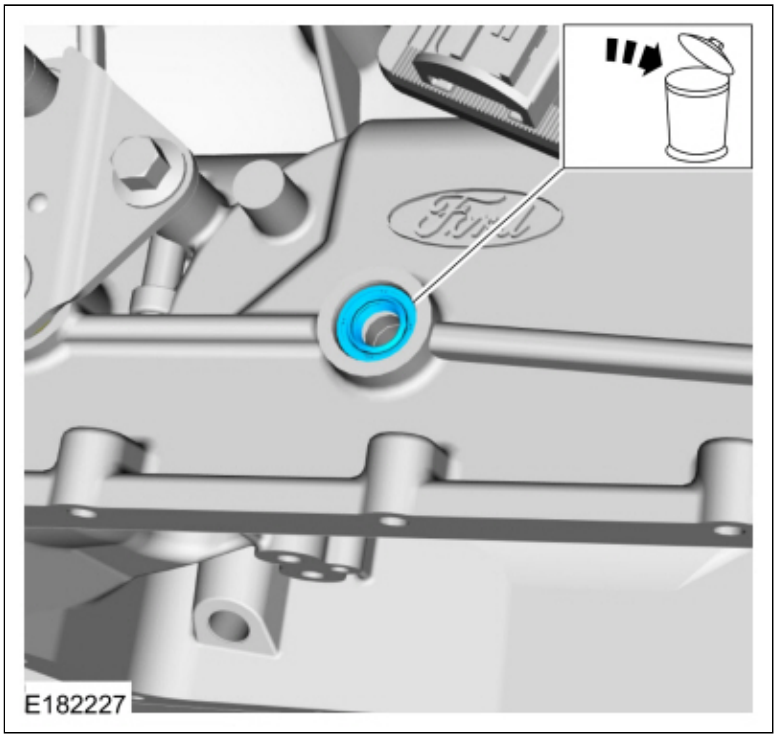


2. **NOTICE: Take extra care not to damage the components.**

   Disconnect the transmission selector lever cable end from the selector lever.

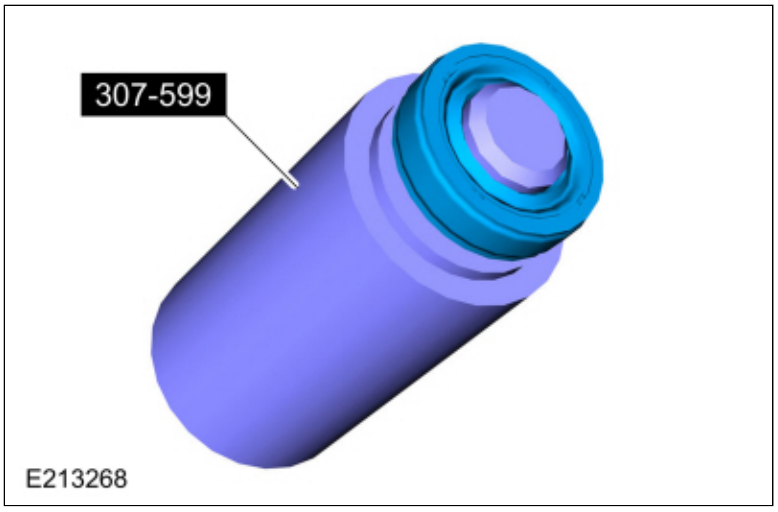


3. Refer to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).

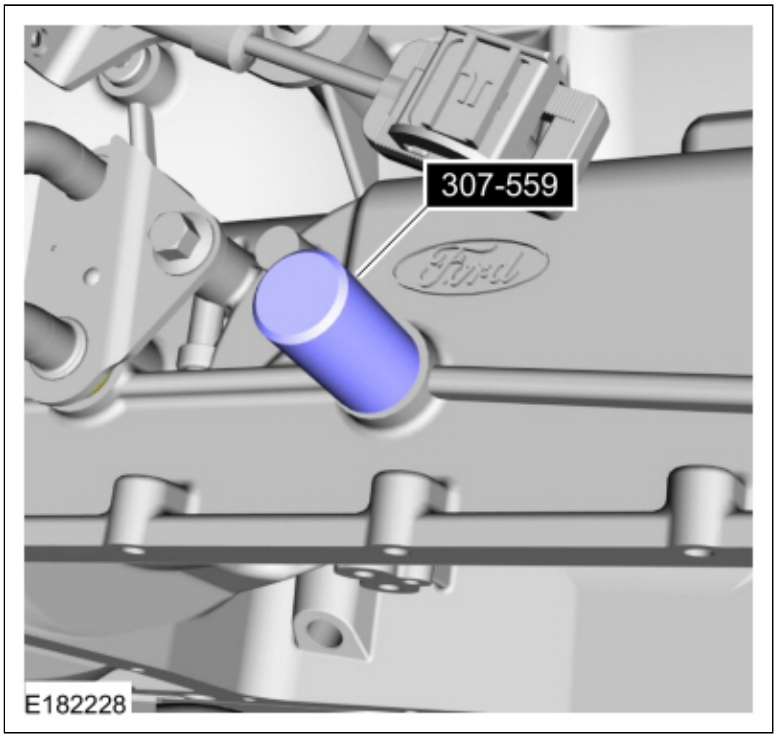


4.

1. Remove and discard the roll pin.
2. Hold the selector lever spacer to keep it from falling.
3. Slide the selector lever shaft out of the case.
4. Remove the manual valve detent lever and park pawl actuator rod as an assembly.

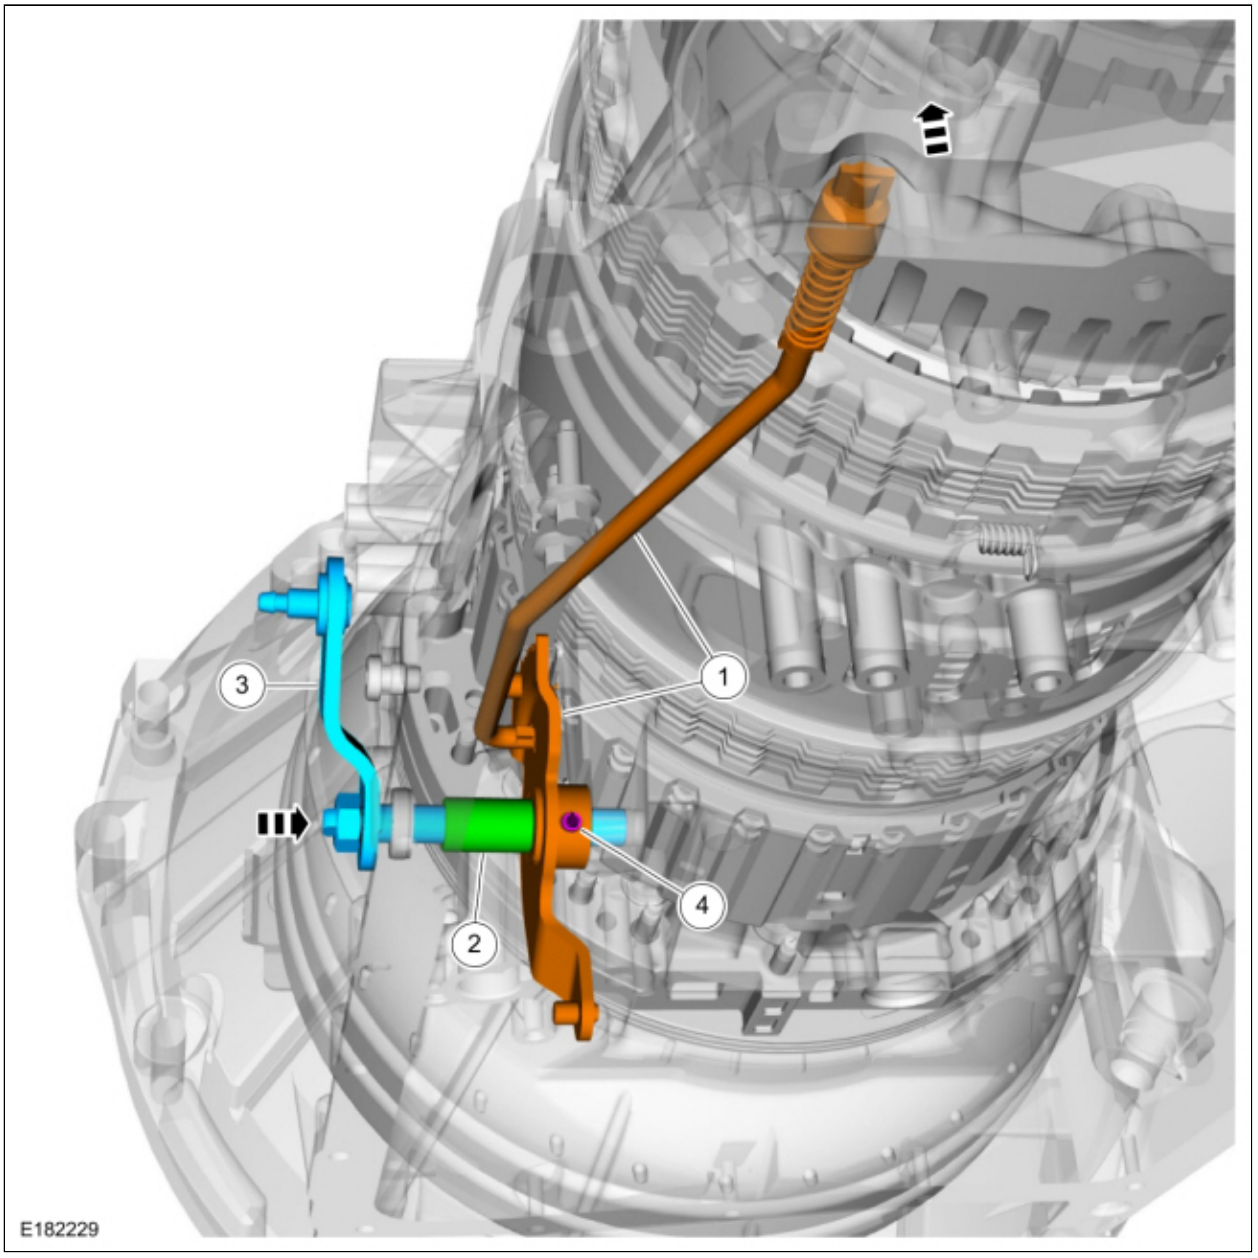


6.

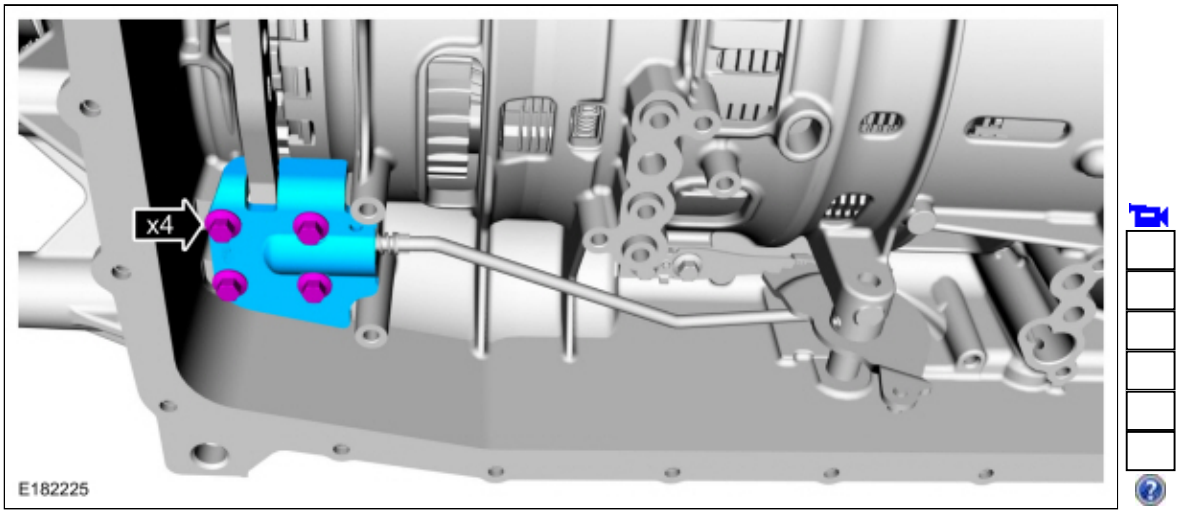


Installation

1. Install a new selector shaft seal on the special tool.
   Use Special Service Tool: 307-559 Installer, Shifter Fluid Seal.

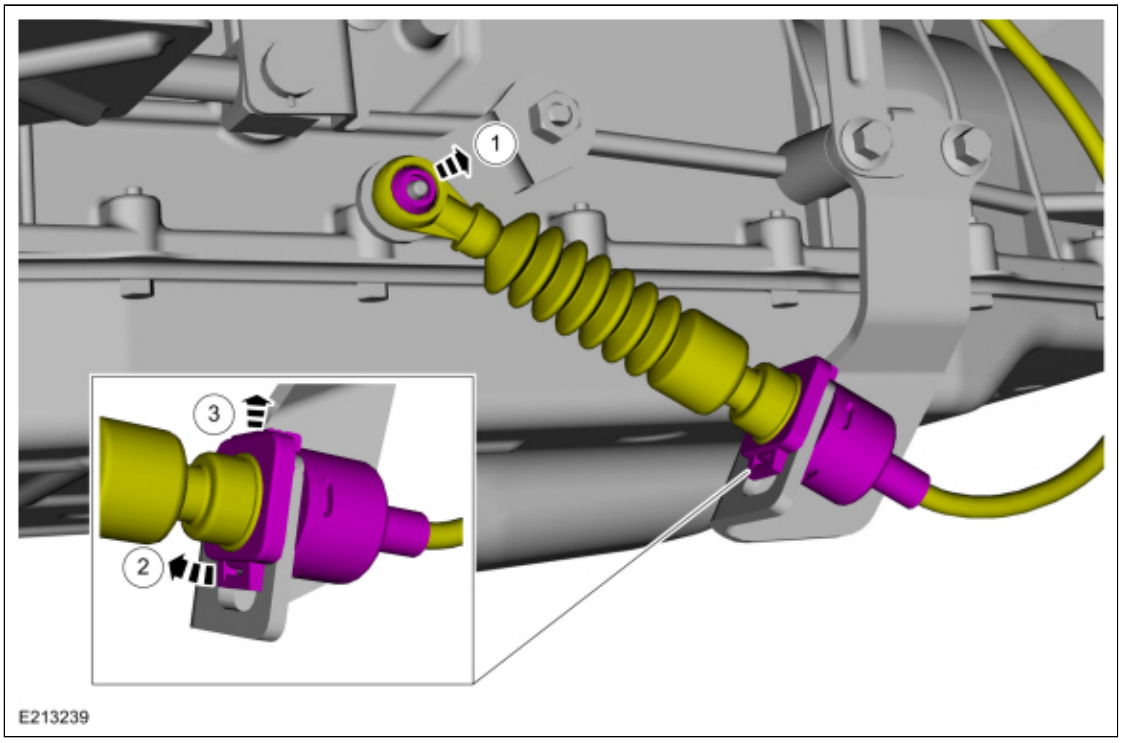


2. Using the special tool, install the selector shaft seal.
   Use Special Service Tool: 307-559 Installer, Shifter Fluid Seal.



1. **NOTE:**

   Install the manual valve detent lever and park pawl actuator rod as an assembly.
2. Position the selector lever spacer in place.
3. Slide the selector lever shaft into the case and line up the roll pin hole.
4. Install the new roll pin.



4. *Torque*: 12 Nm

5. Refer to: Main Control Valve Body (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation).

6. **NOTICE: Take extra care not to damage the components.**

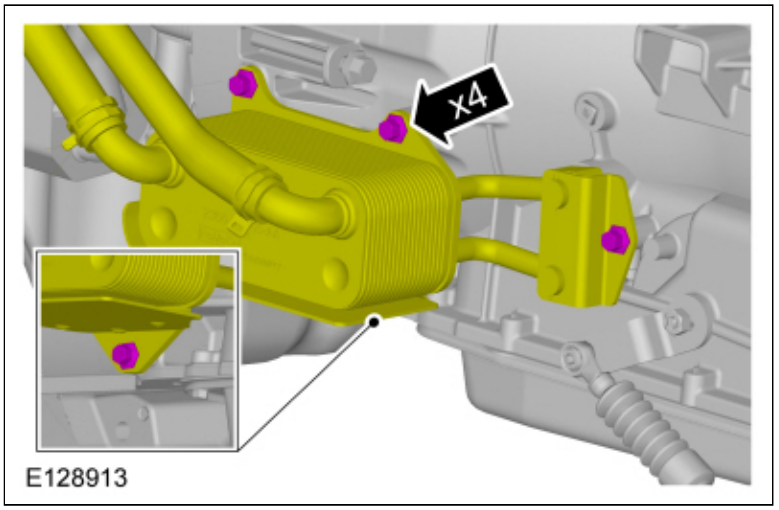
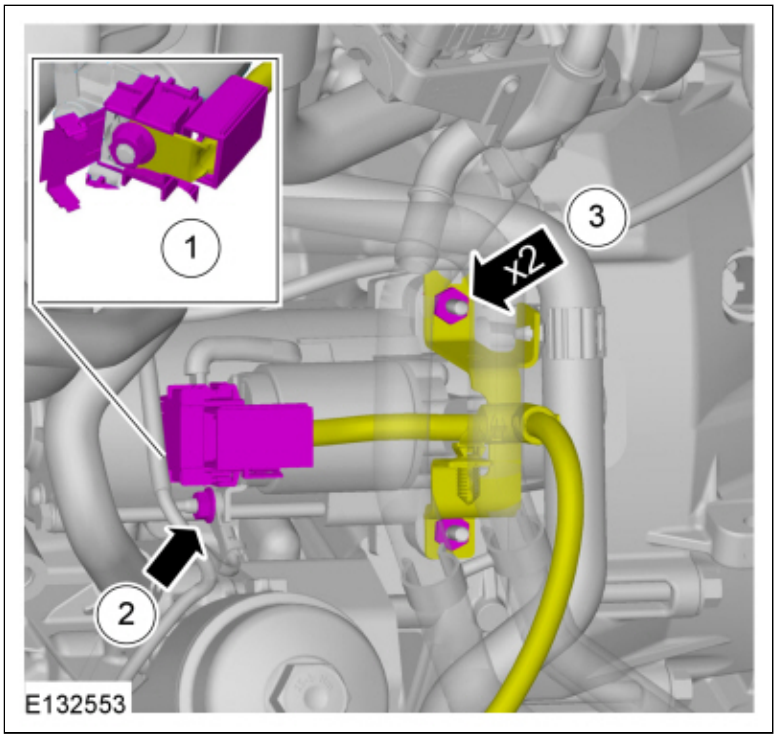
Transmission - LHD RWD/RHD RWD

Base Part Number: 7000



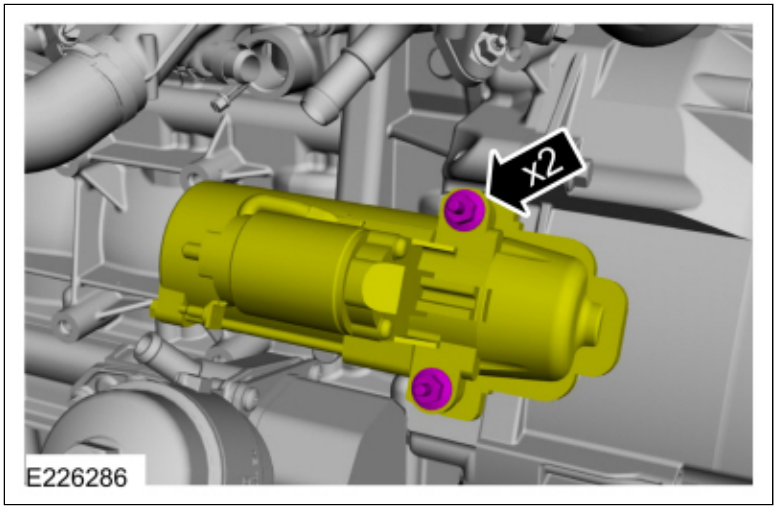
Special Tool(s) / General Equipment

 E87614	303-1310 Holding Wrench, Crankshaft
 307-346	307-346 (T97T-7902-A) Retainer, Torque Converter
Transmission Jack	

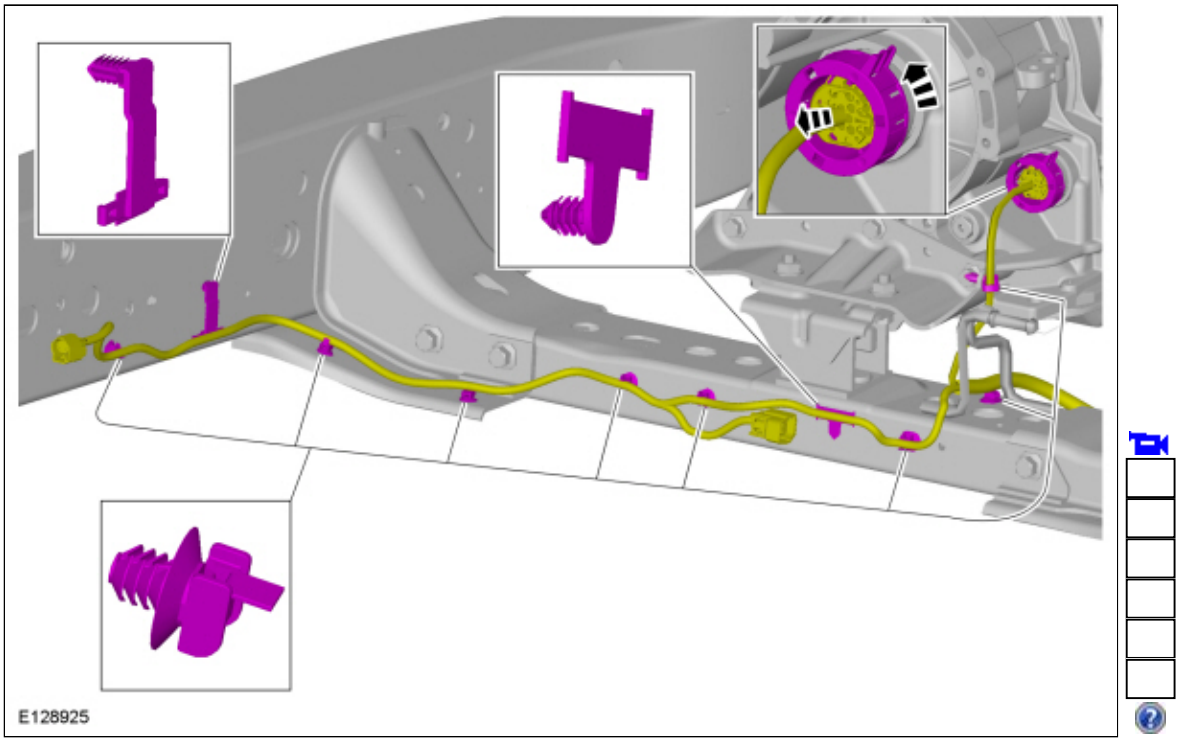


Removal

1. Remove the battery negative terminal.
   Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
2. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
3. Remove the rear driveshaft.
   Refer to: Rear Driveshaft (205-01 Driveshaft, Removal and Installation).
4. Drain the transmission fluid.
   Refer to: Transmission Fluid Drain and Refill (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, General Procedures).
5. 

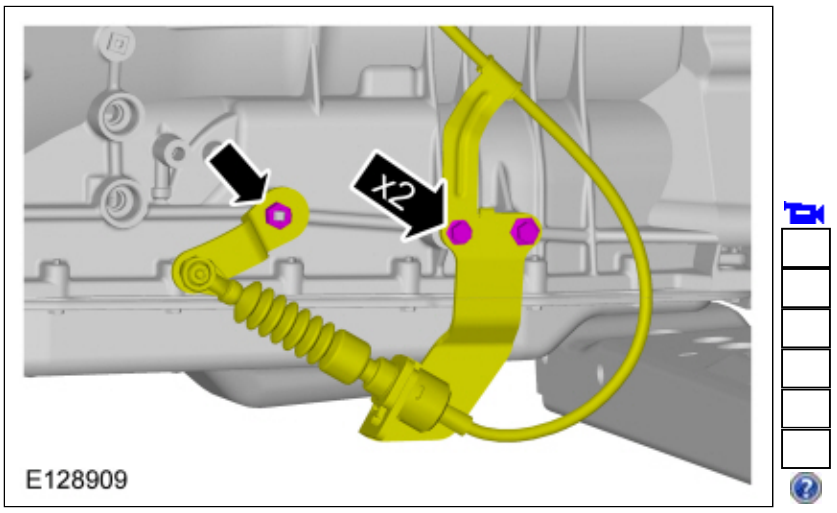


6. **NOTE:** *Be prepared to collect escaping fluid.*

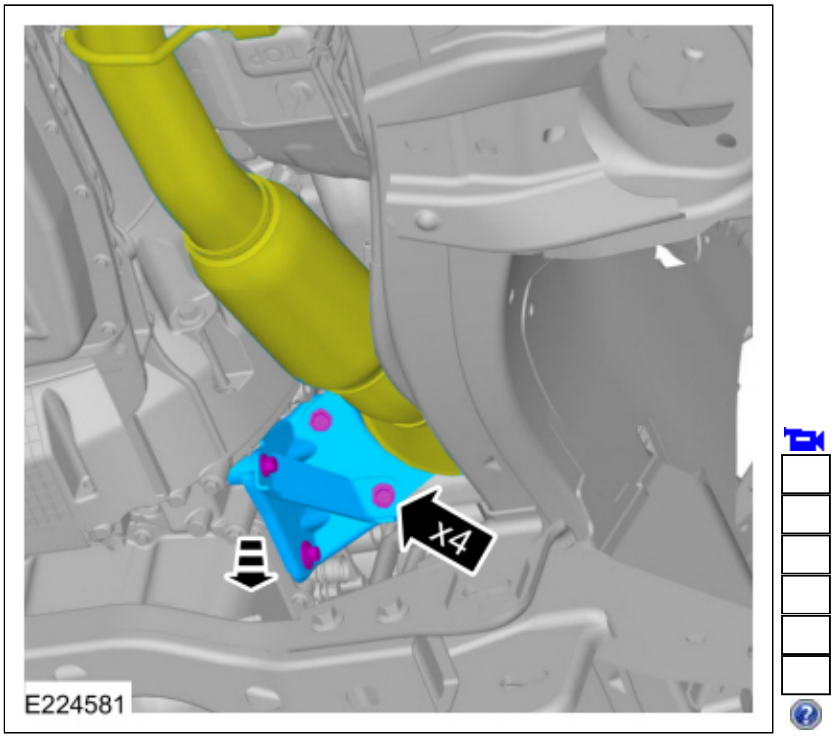


7.

8.

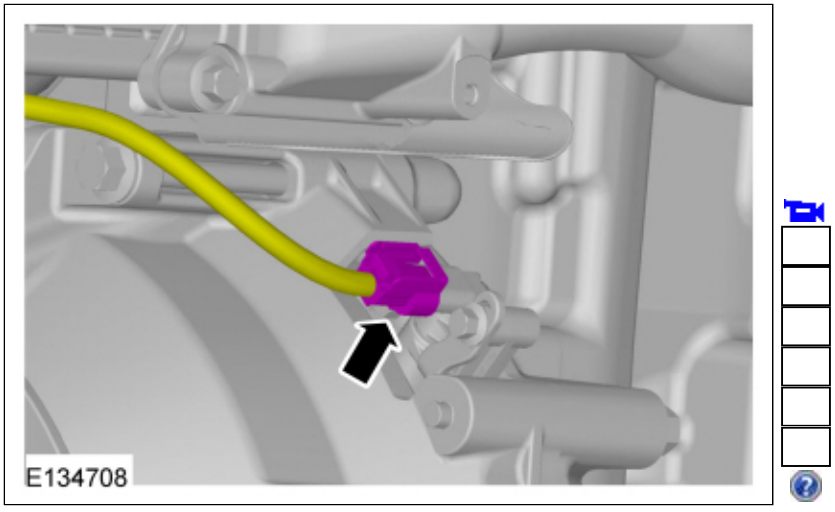


9.

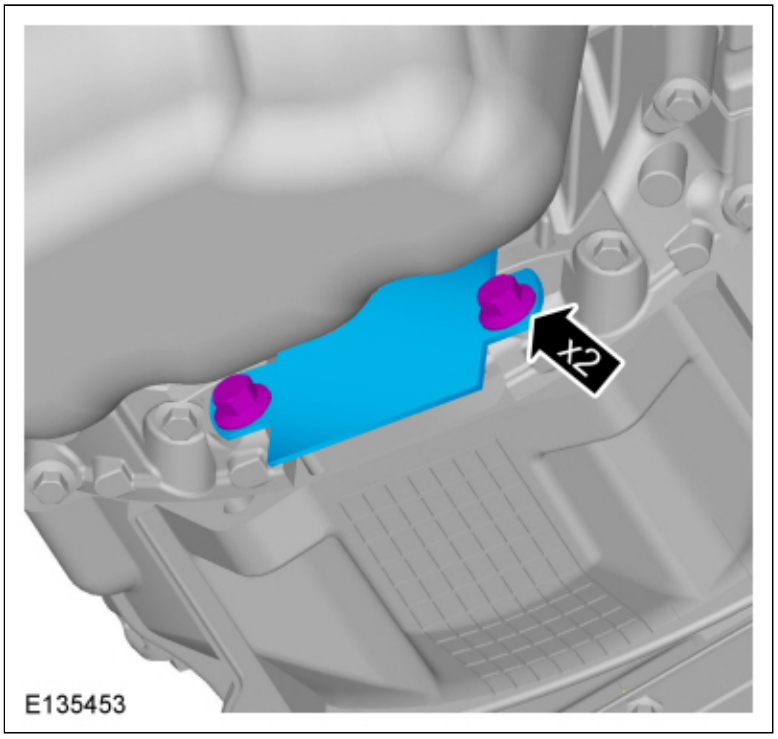


10. **NOTICE: Take extra care when handling selector lever cable.**

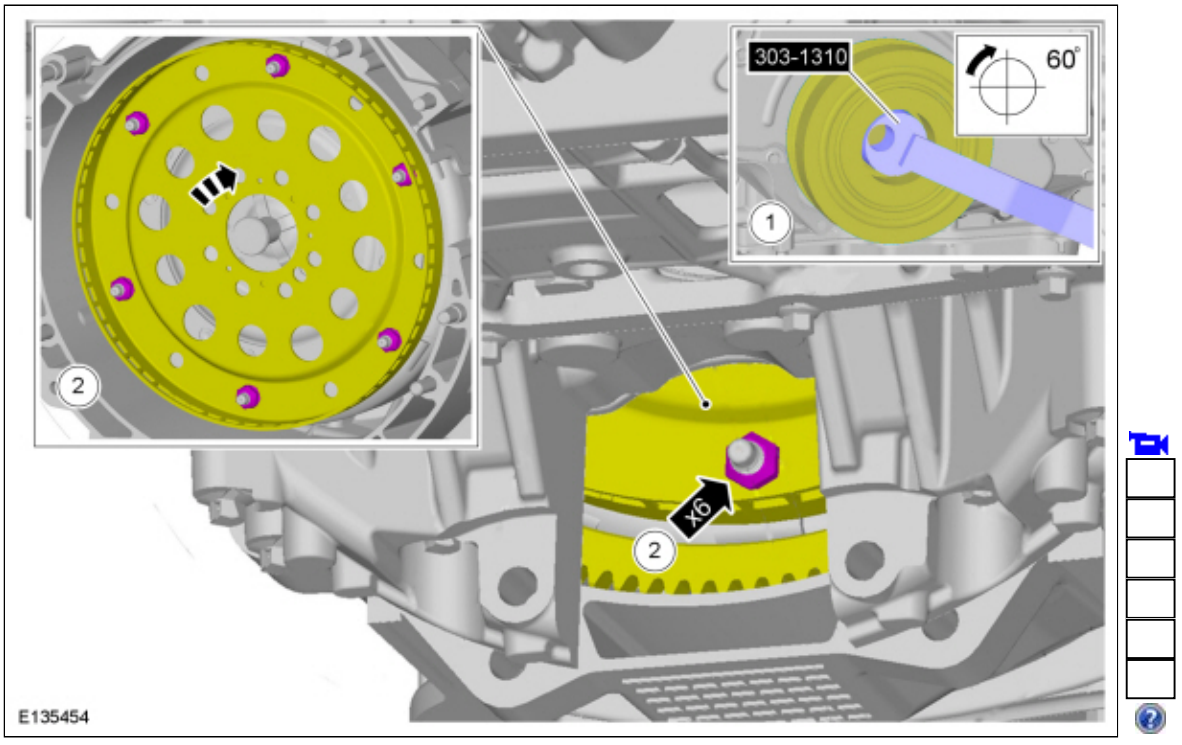
    NOTE: *Note the position of the component before removal.*



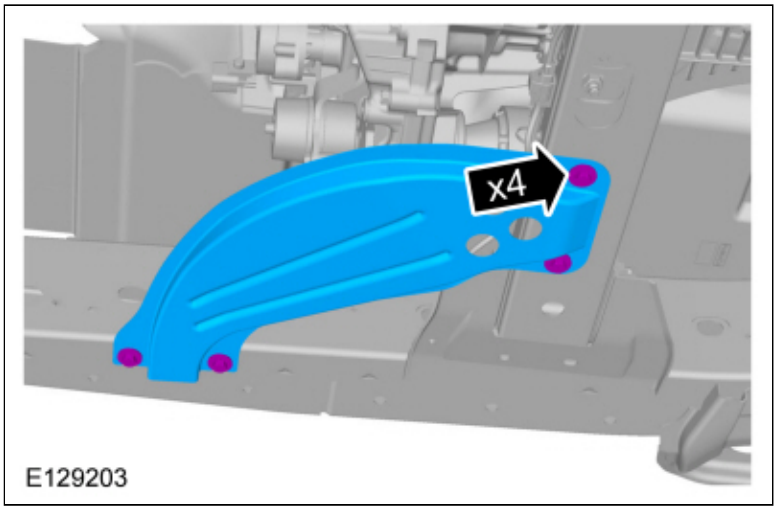
11.



12.

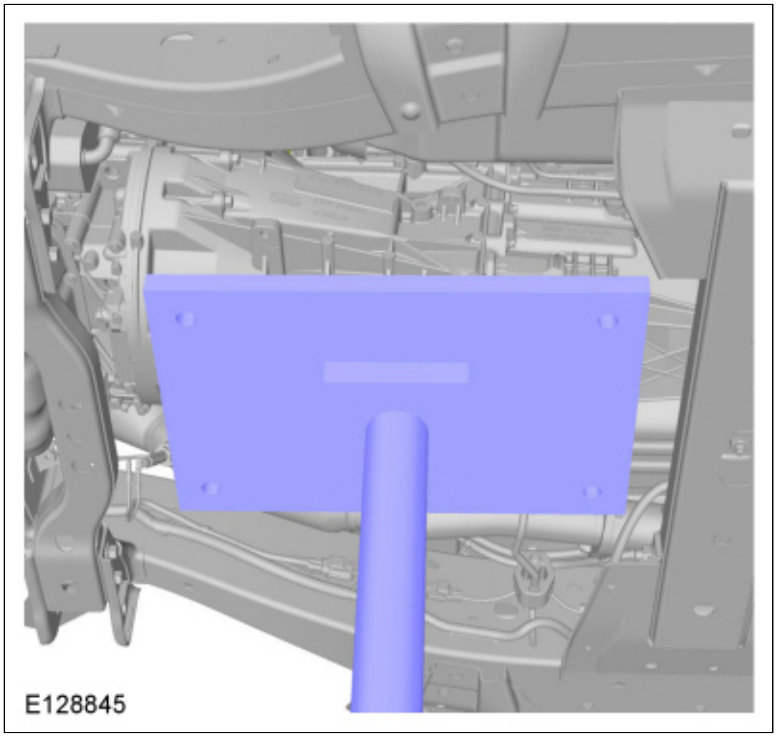


13.

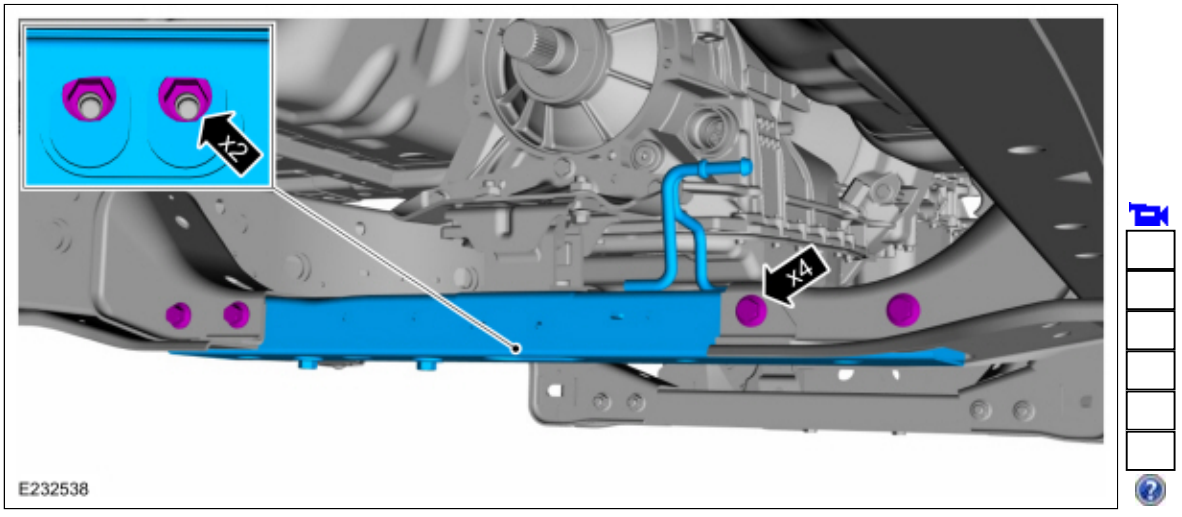


14.

15. Use Special Service Tool: 303-1310 Holding Wrench, Crankshaft.

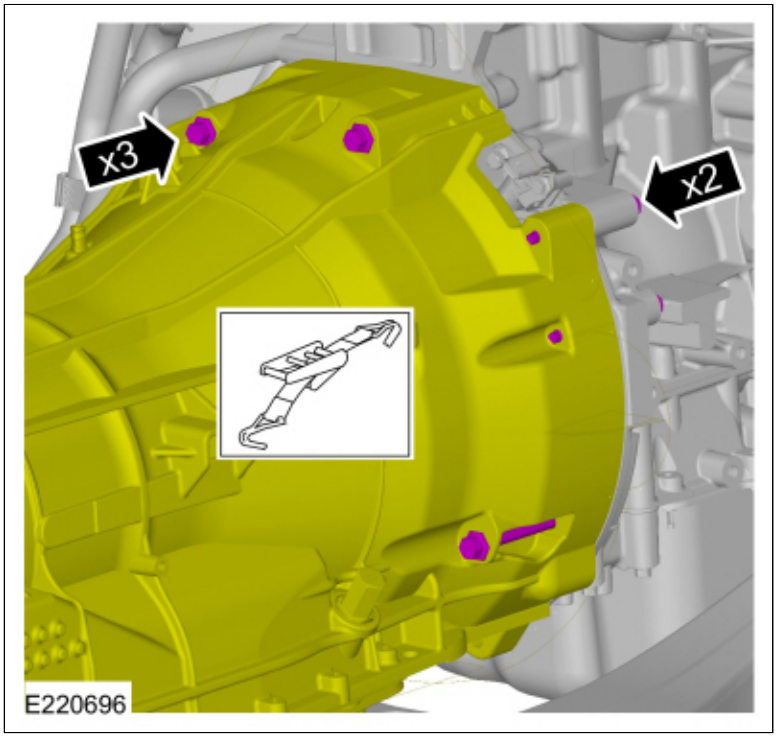


16. If equipped.

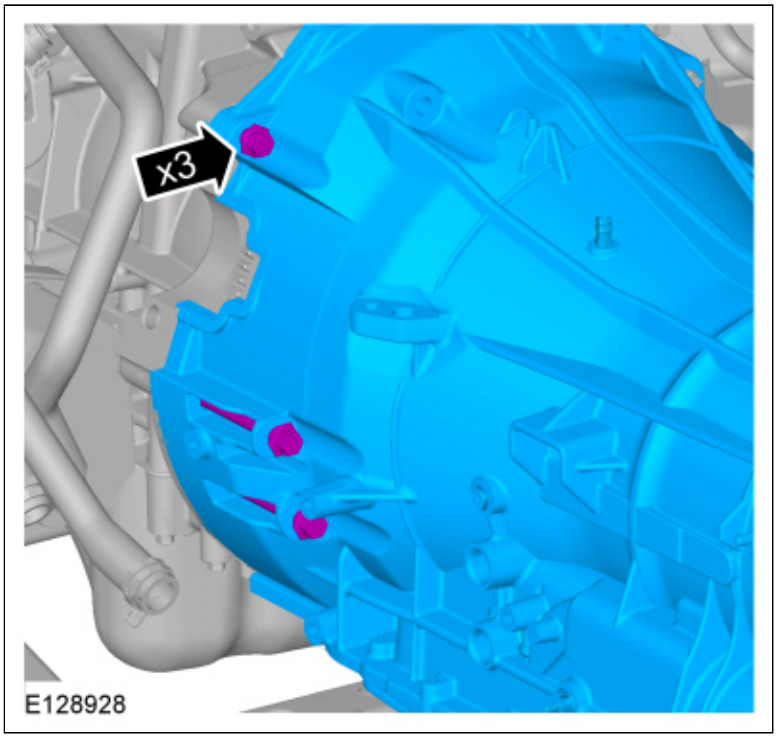


17. **WARNING: Always secure engines, transmissions, or other heavy components to the support fixture with straps and wooden support blocks. Improperly secured assemblies could fall off the fixture, resulting in serious personal injury.**

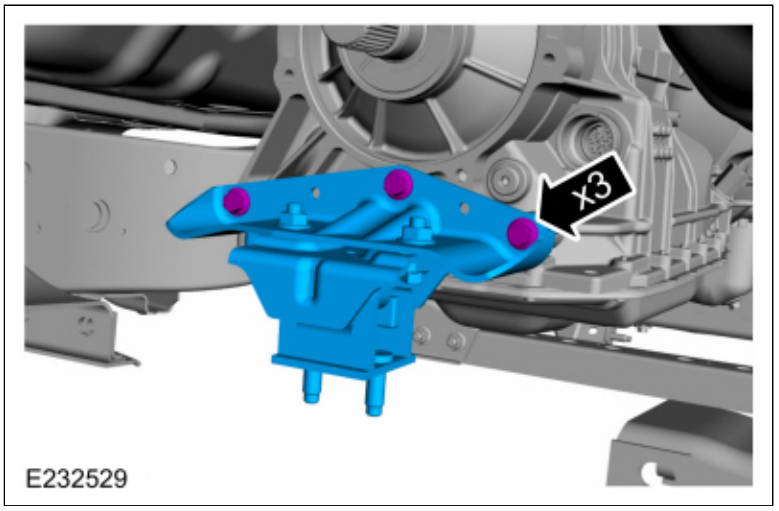
    Use the General Equipment: Transmission Jack



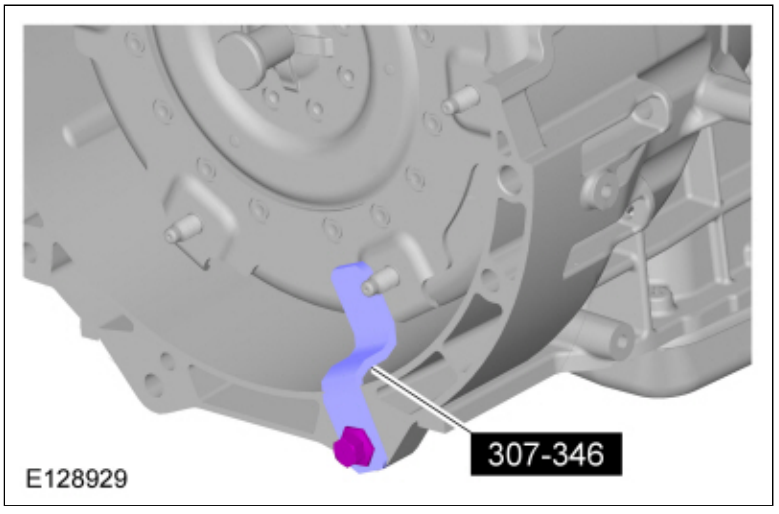
18.



19.

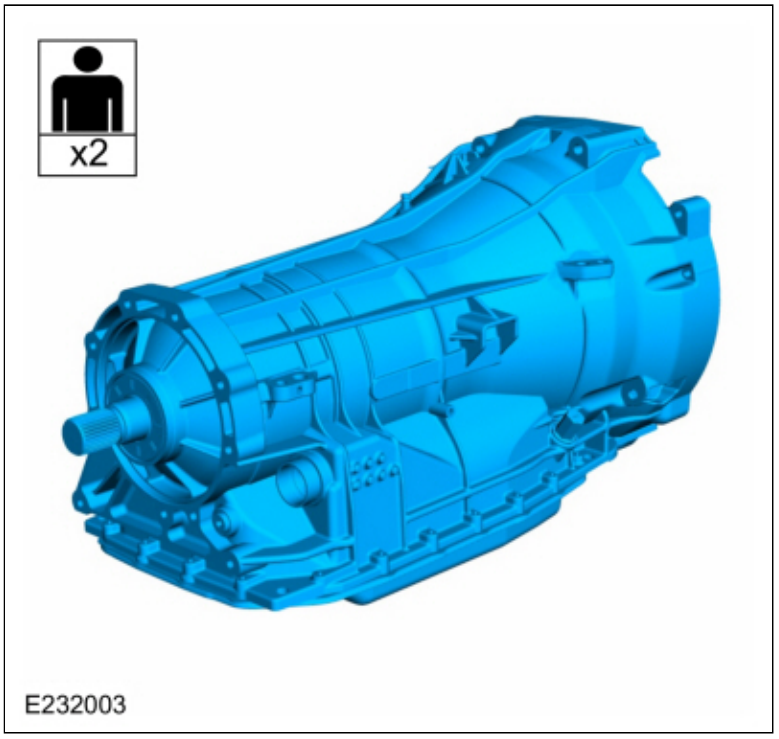


20.

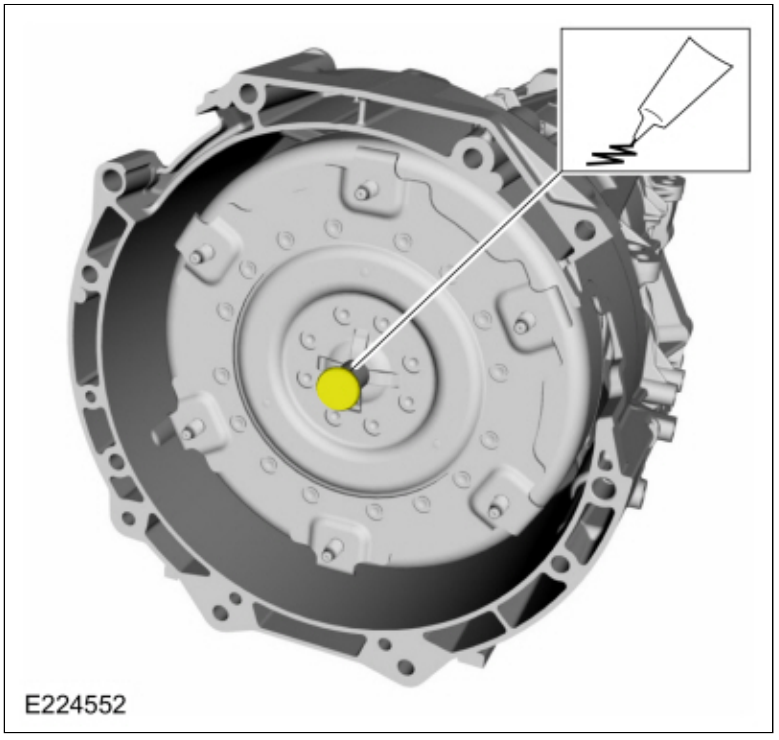


21.

22.

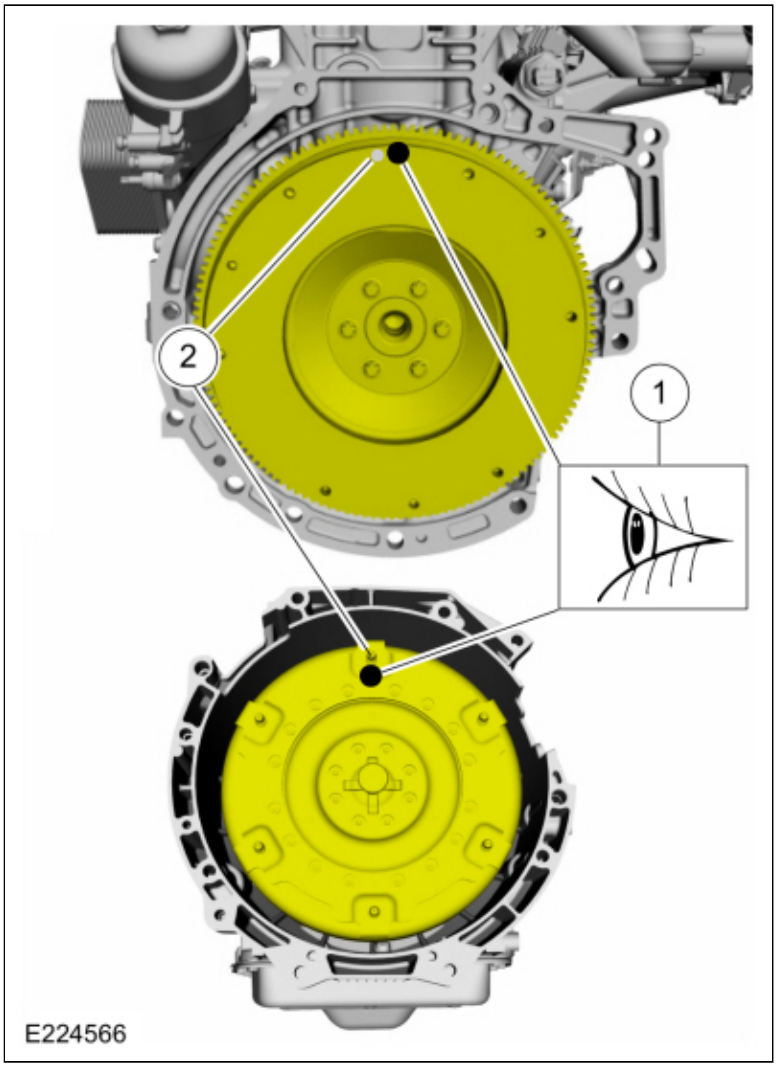


23. Slide the transmission back far enough to install the Torque Converter Retainer. Use Special Service Tool: 307-346 (T97T-7902-A) Retainer, Torque Converter.



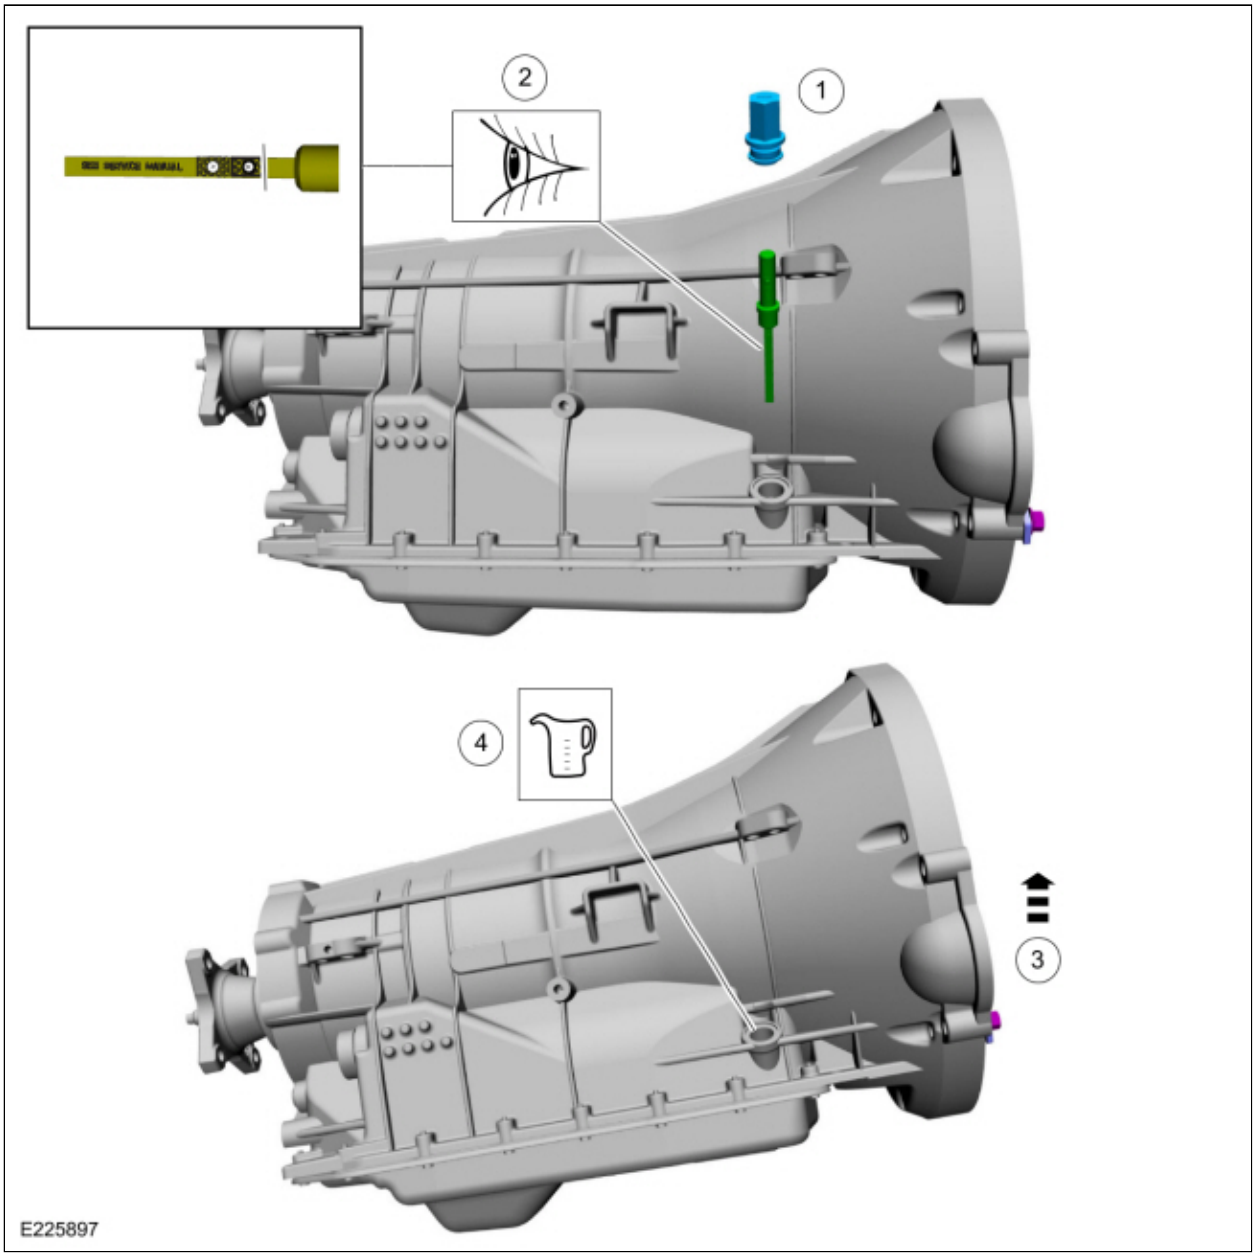
24. **NOTE:** *This step requires the aid of another technician.*

    Remove the transmission assembly from the vehicle.



Installation

1. Lubricate the torque converter pilot hub with multipurpose grease.

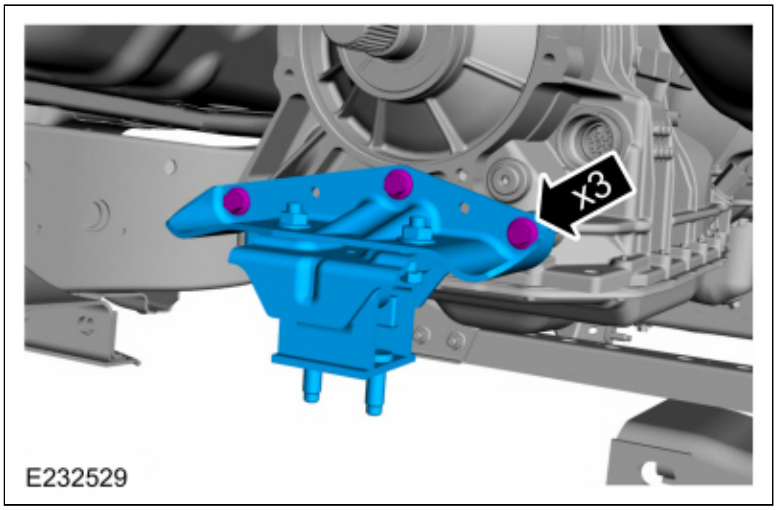


1. Inspect the torque converter stud and flexplate for paint marks.
2. Align the torque converter stud and flexplate hole near the paint marks to the 12 o'clock position.

3. **NOTICE: If a new transmission is installed, the fluid level must be checked after installation.**

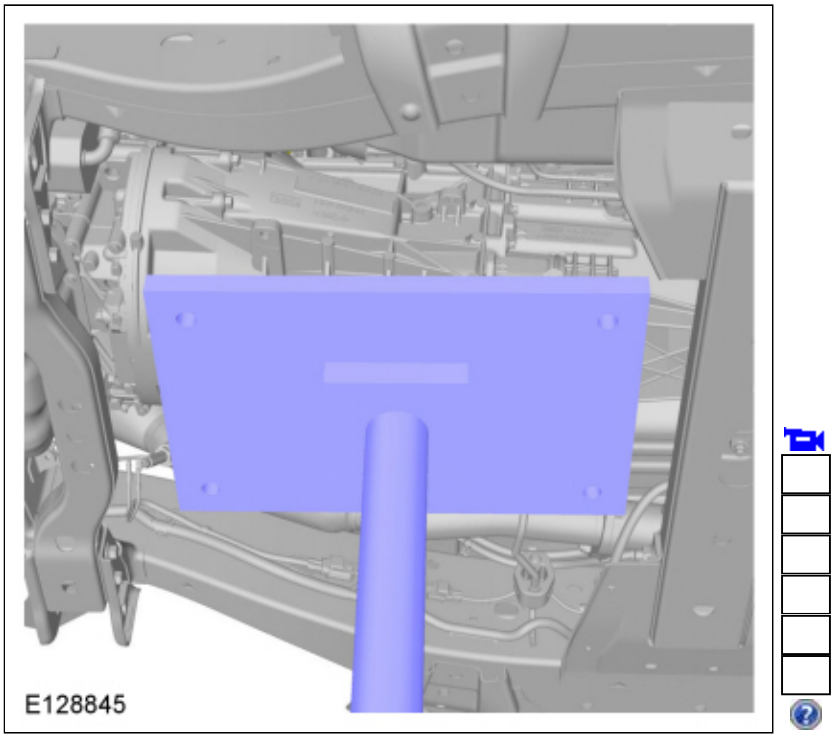
   NOTE: *If transmission was disassembled, add transmission fluid to the transmission.*

   1. Remove the transmission fluid fill plug transmission fluid level indicator assembly.
      Torque: 26 Nm
   2. Verify transmission is filled with transmission fluid.
   3. Slightly tilt the transmission rearward.
   4. Refer to: Transmission Fluid Drain and Refill (307-01A) .

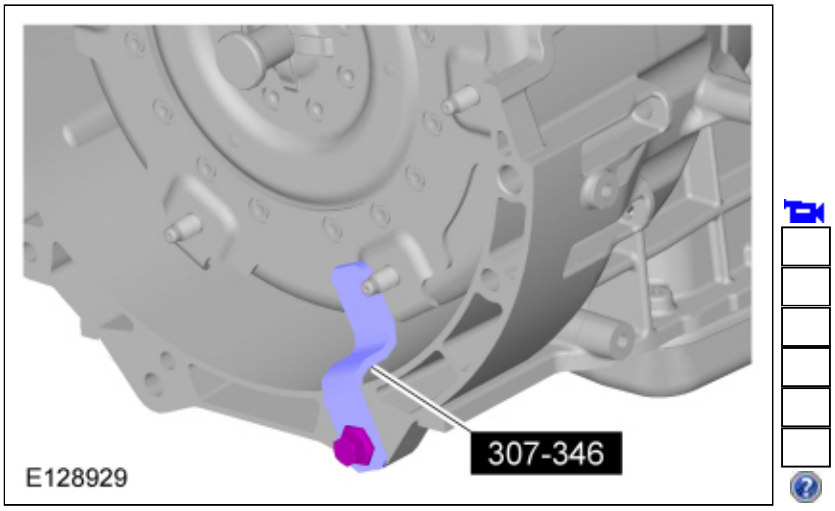


4. **NOTE:** *This step requires the aid of another technician.*

    1. Position the transmission assembly on jack.
       Use the General Equipment: Transmission Jack
    2. Secure the transmission to the transmission jack with a safety strap.



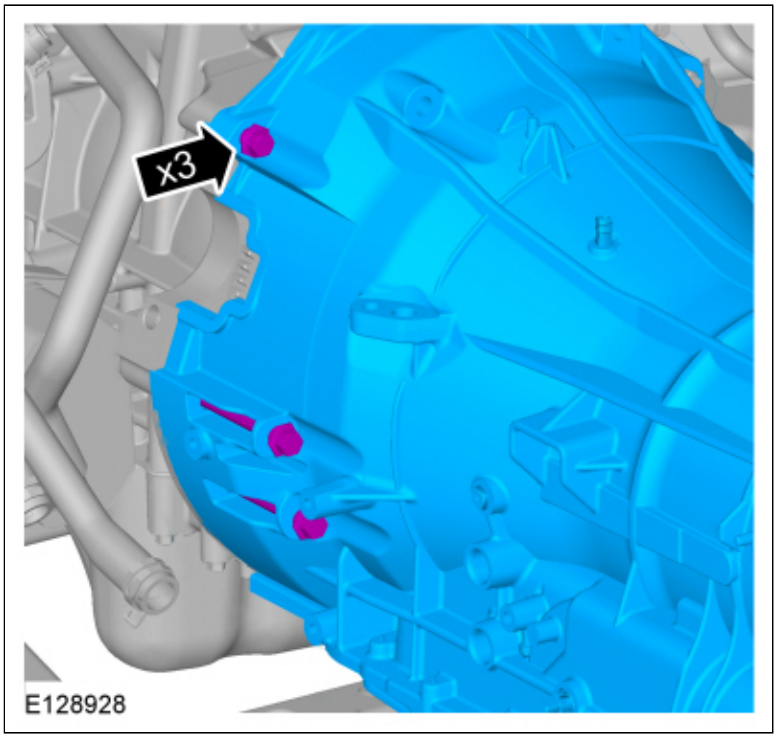
5. *Torque*: 48 Nm



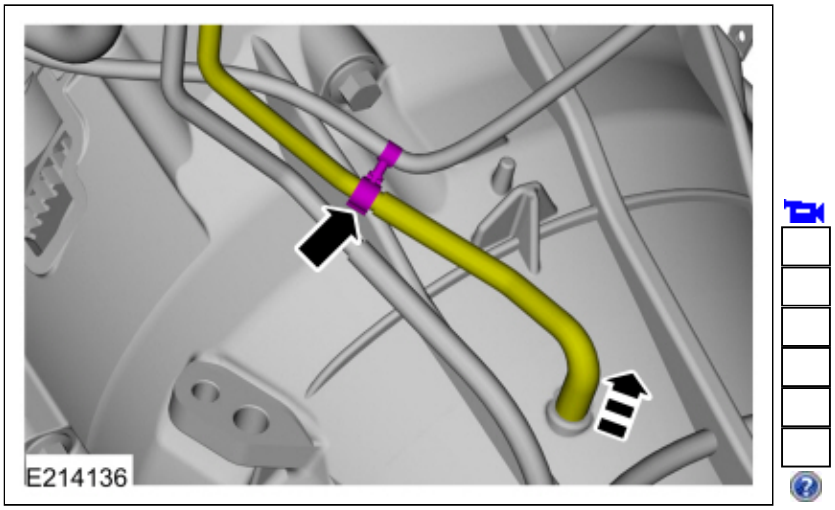
6. **WARNING: Always secure engines, transmissions, or other heavy components to the support fixture with straps and wooden support blocks. Improperly secured assemblies could fall off the fixture, resulting in serious personal injury.**

   NOTE: *Make sure that the transmission jack makes contact on the outer ribs of the fluid pan.*

   Position and secure the transmission on the high-lift transmission jack. Raise and position the transmission into the vehicle.
   Use the General Equipment: Transmission Jack

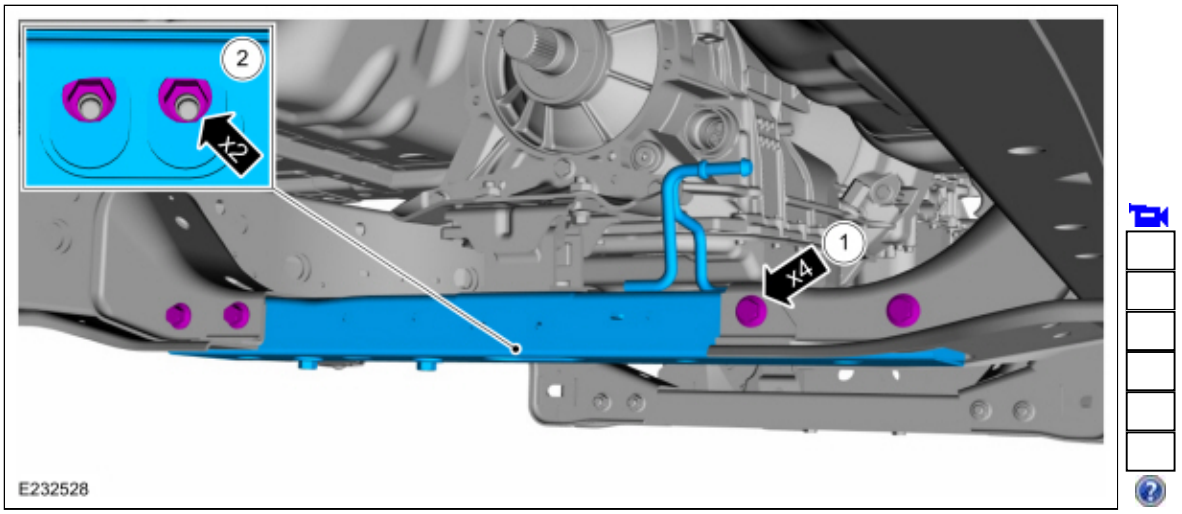


7. Remove Special Service Tool: 307-346 (T97T-7902-A) Retainer, Torque Converter.

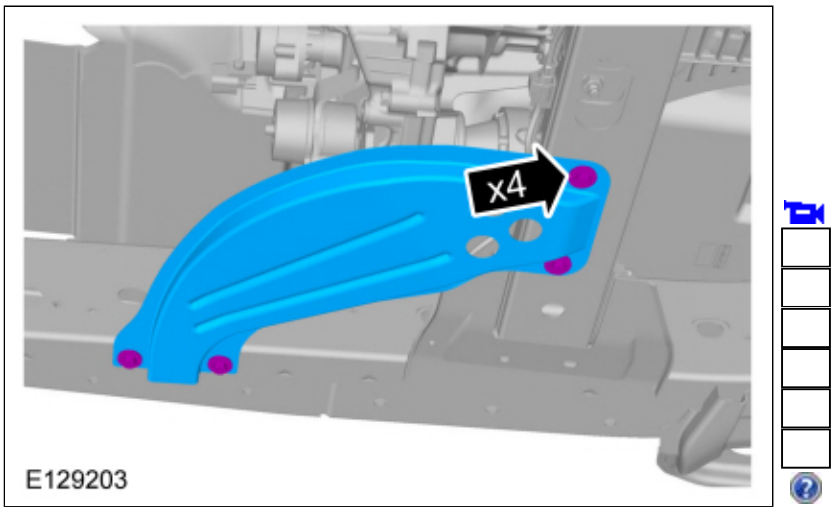


8. *Torque*: 48 Nm

9. *Torque*: 48 Nm

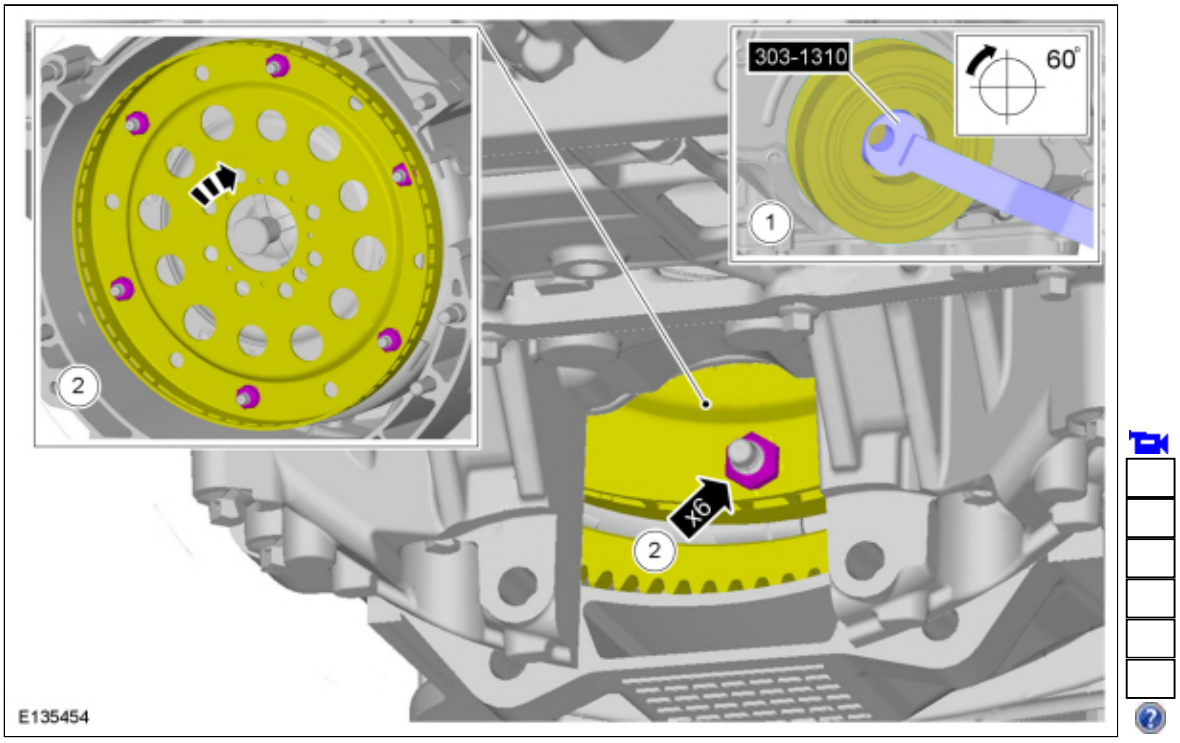


10.

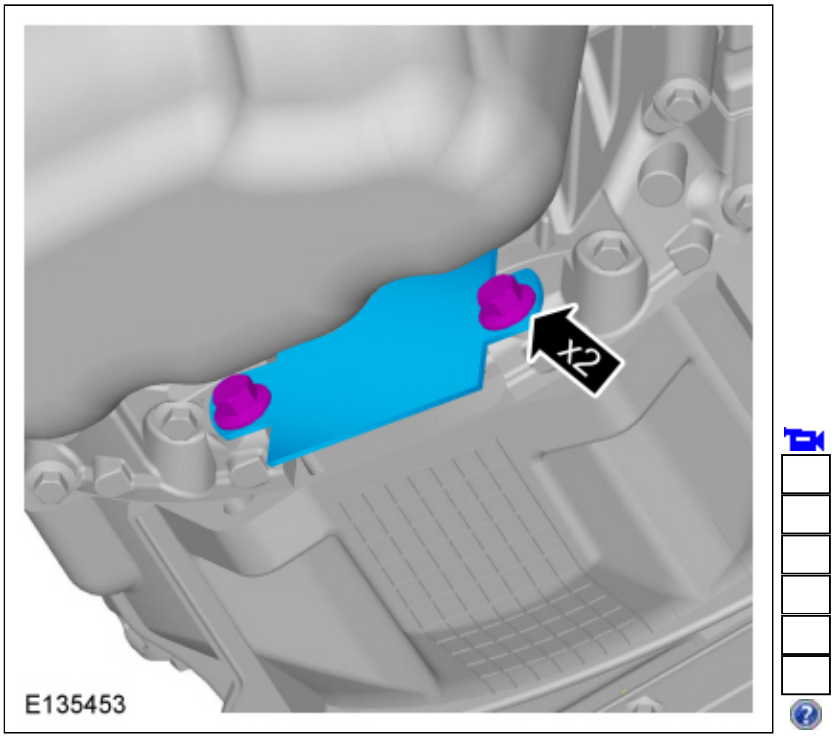


11. **NOTE:** *Install all the bolts and nuts finger tight before final tightening.*

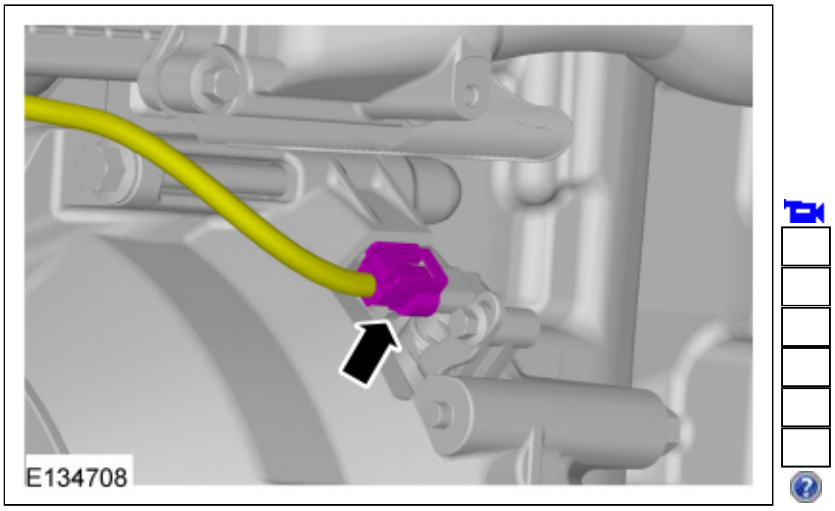
    Torque:
    1: 90 Nm
    2: 90 Nm



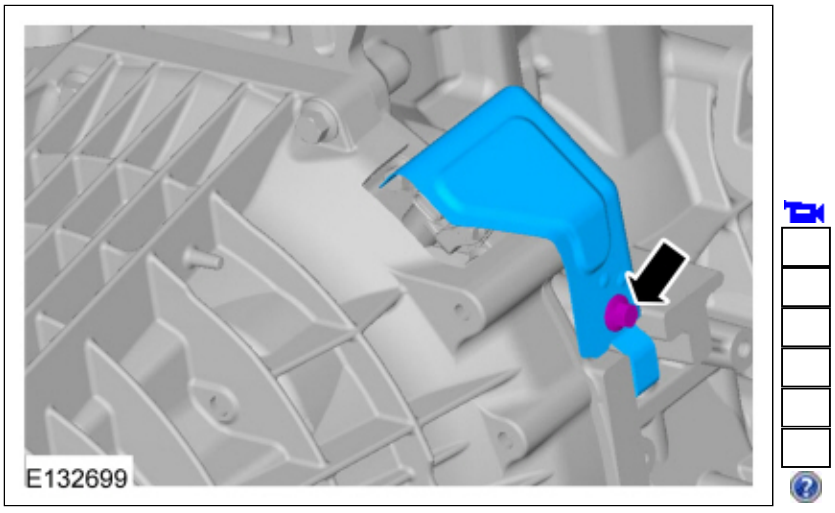
12. If equipped.
    Torque: 48 Nm



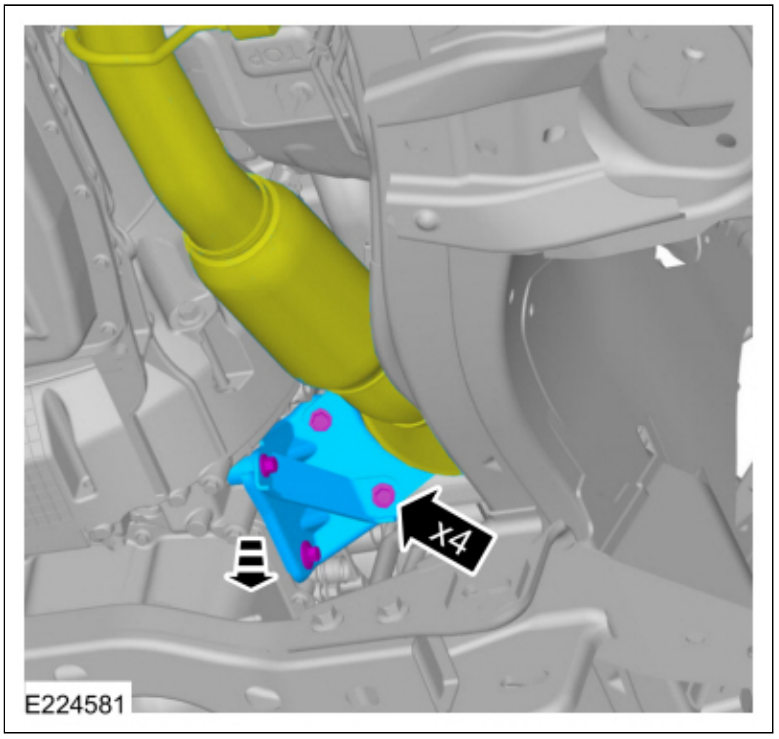
13. Remove the transmission jack.



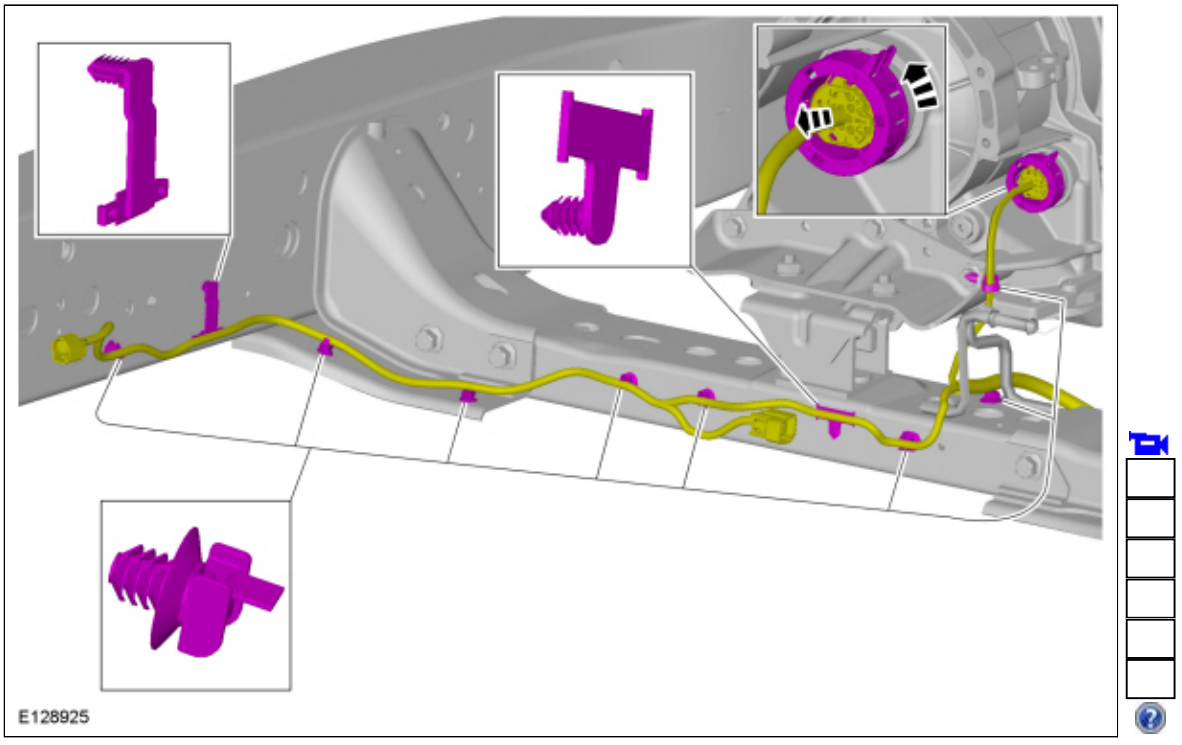
14. Remove Special Service Tool: 303-1310 Holding Wrench, Crankshaft.
    Torque: 48 Nm



15. *Torque*: 48 Nm

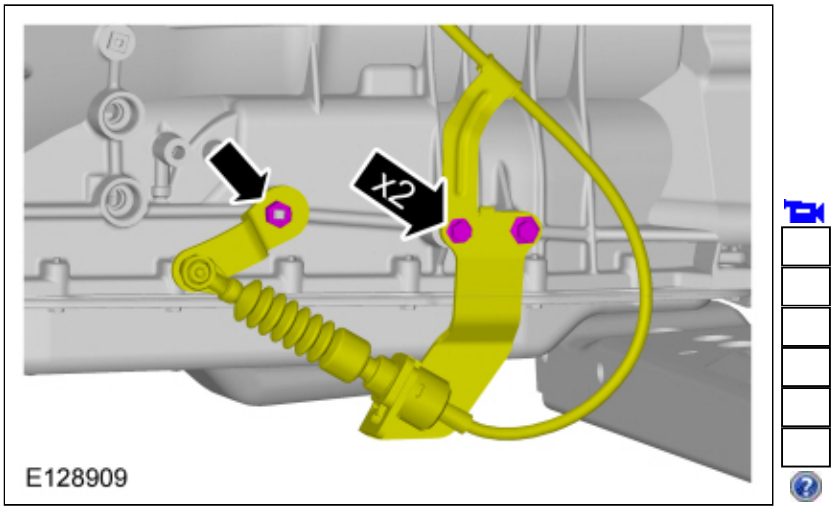


16.



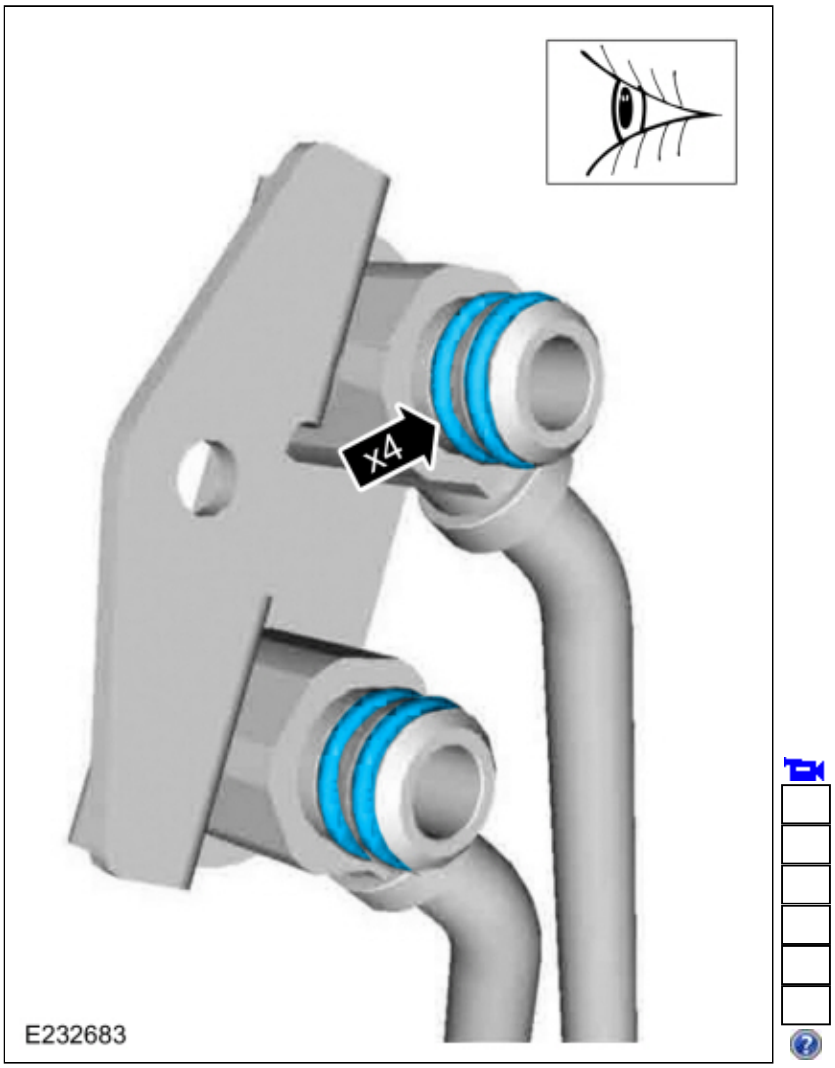
17. *Torque*: 25 Nm

18. *Torque*: 25 Nm



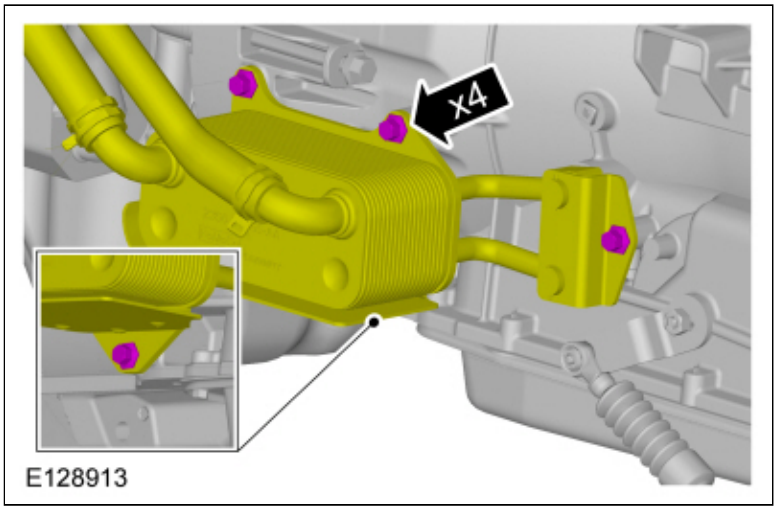
19.

20. **NOTICE: Take extra care when handling selector lever cable.**



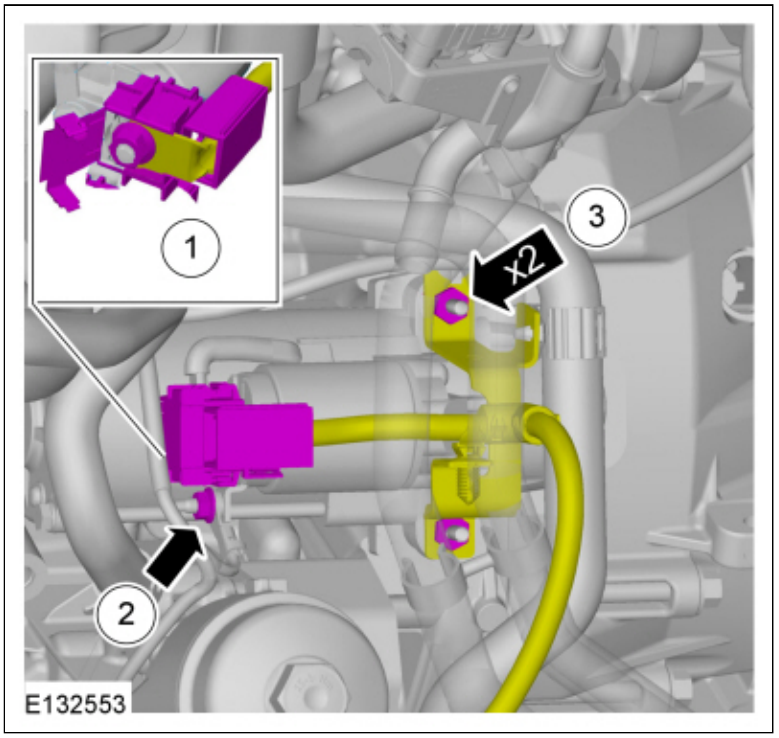
NOTE: *Make sure that the component is installed to the position noted before removal.*

Torque: 25 Nm



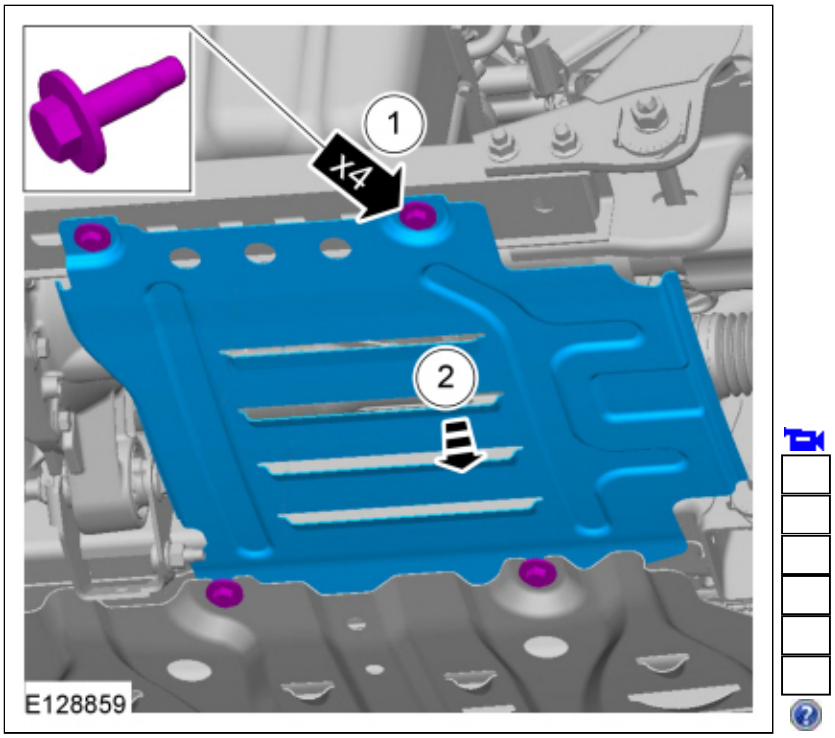
21. **NOTE:** *Make sure that a new component is installed if the O-ring is damaged.*

    NOTE: *Inspect the case to make sure that the old transmission fluid cooler tube O-rings are not stuck in the case.*



22. *Torque*: 20 Nm

23. *Torque*: 35 Nm



24. *Torque*:
    1: 10 Nm
    2: 10 Nm
    3: 10 Nm

25. Install the rear driveshaft.
    Refer to: Driveshaft (205-01) .

26. *Torque*: 30 Nm

27. Connect the battery ground cable.
    Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables) .

28. Verify that the selector lever cable is correctly adjusted.
    Refer to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures).

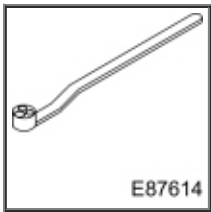
29. After completing the repairs, perform the Misfire Monitor Neutral Profile Correction procedure using a diagnostic scan tool.

30. If a new transmission or a new main control was installed, the solenoid body strategy must be updated.
    Refer to: Transmission Strategy Download (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, General Procedures).

31. If the transmission was overhauled, the adaptive drive cycle must be updated.
    Refer to: Adaptive Learning Drive Cycle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80) .

32. Program the TCM with the latest calibration.

33. While driving the vehicle, use the scan tool to verify that the TFT has reached a temperature of 96.7ºC-102ºC (206ºF-215ºF). This will circulate the transmission fluid through the torque converter and the transmission fluid cooling system, eliminating any trapped air in the transmission fluid cooling system.



34. Check the transmission fluid level.
    Refer to: Transmission Fluid Level Check (307-01A) .

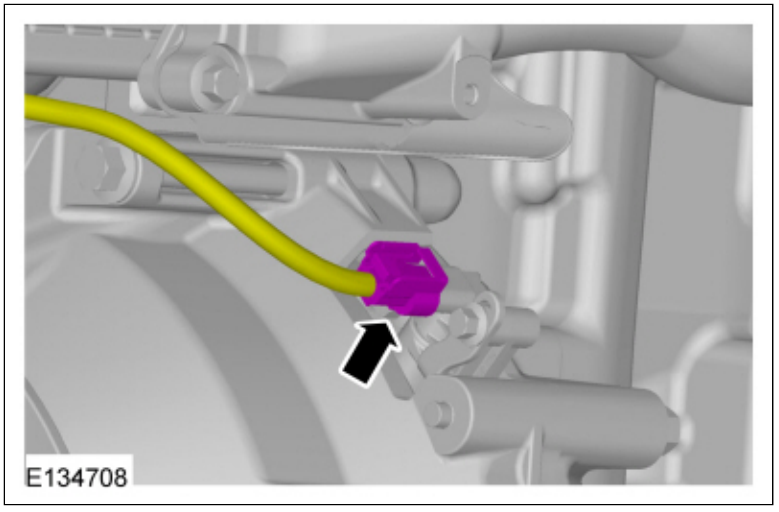
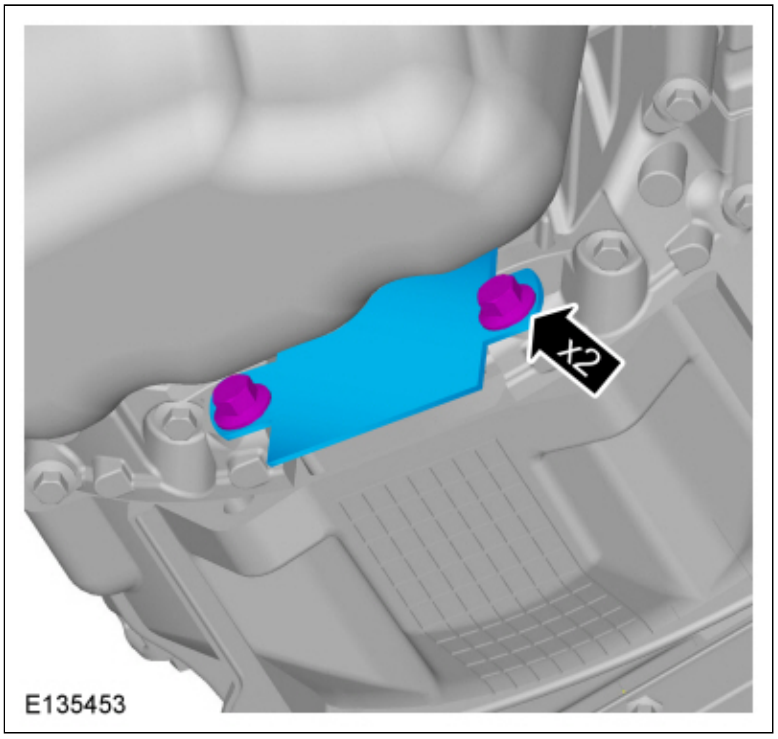
11. **NOTICE: Take extra care when handling selector lever cable.**

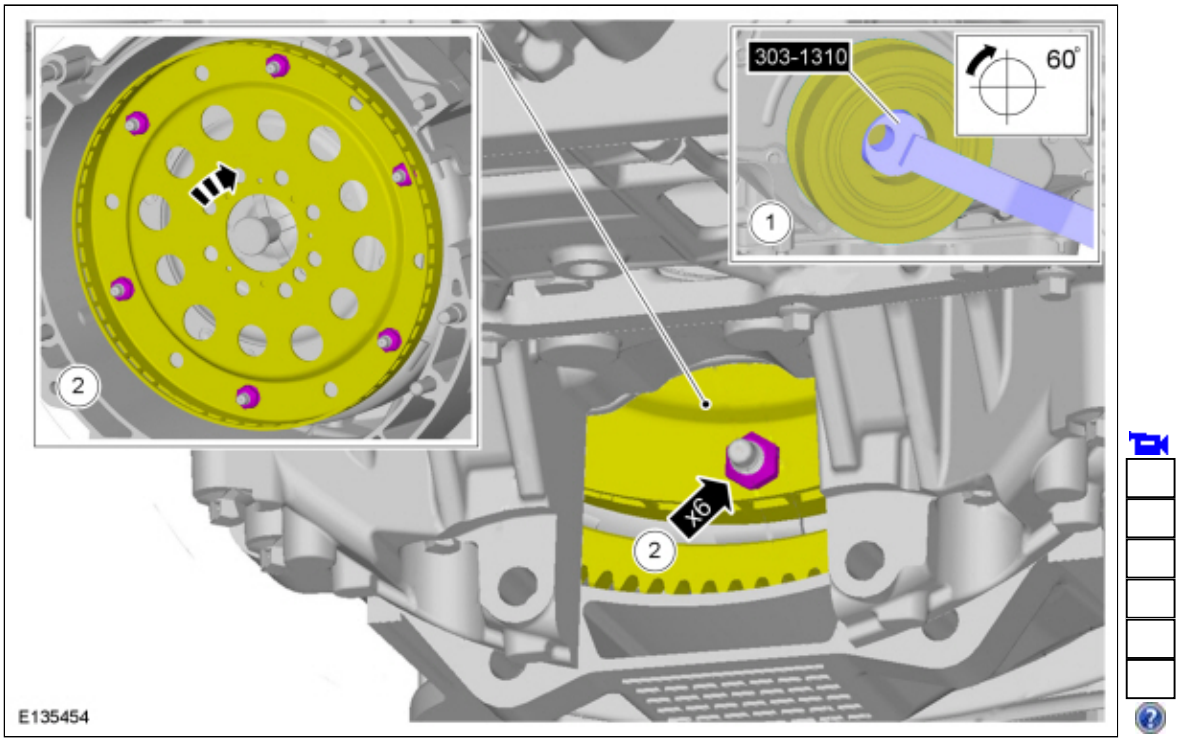
    NOTE: *Note the position of the component before removal.*



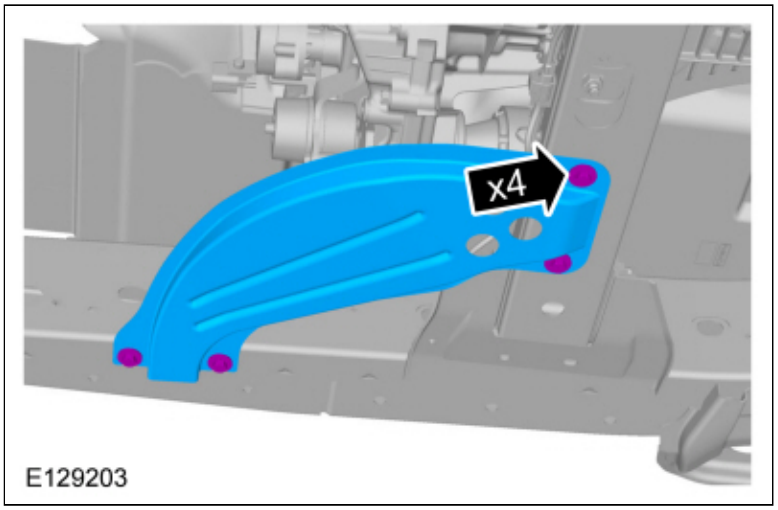
12.



13.

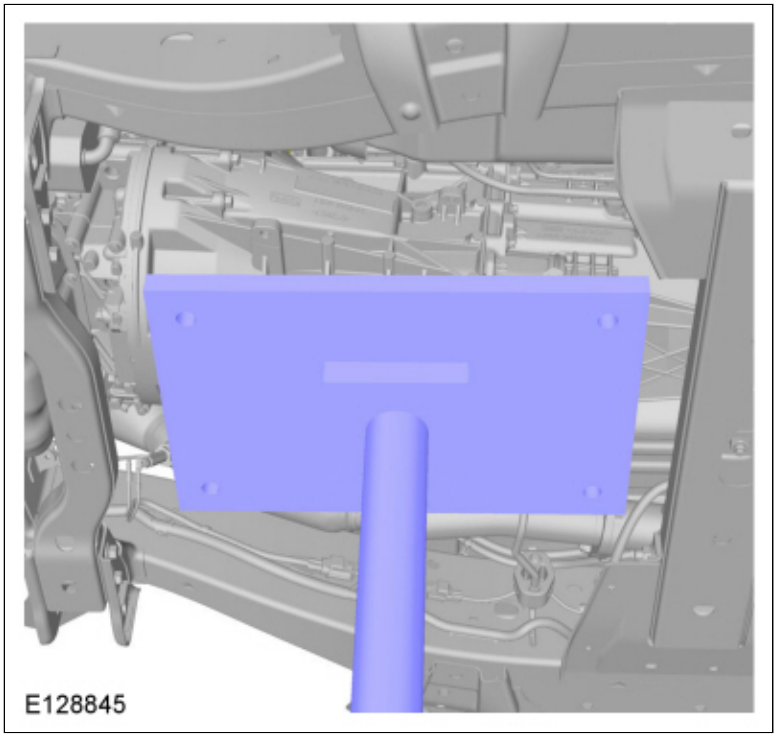


14.

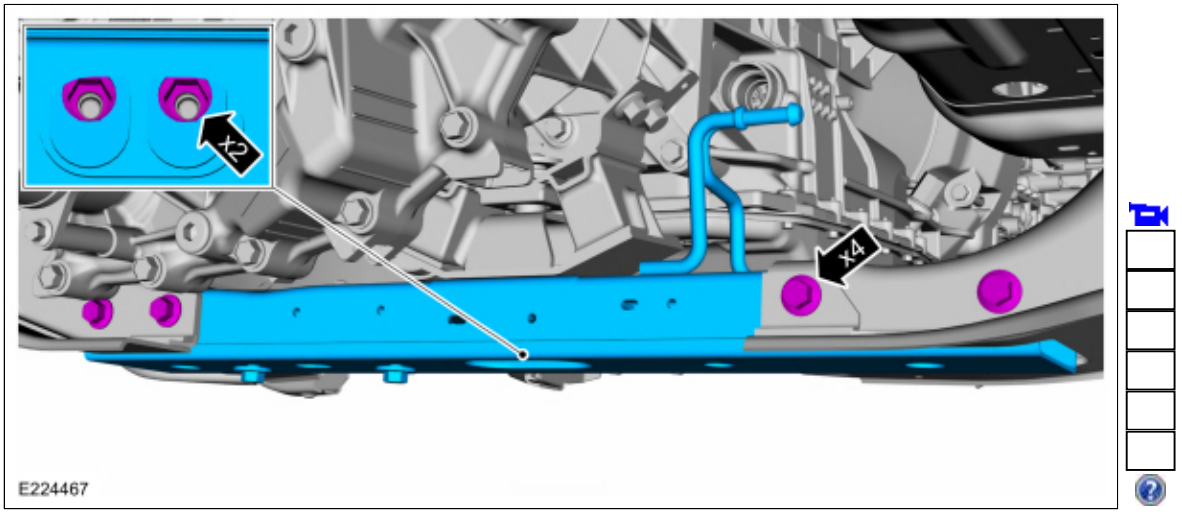


15.

16. Use Special Service Tool: 303-1310 Holding Wrench, Crankshaft.

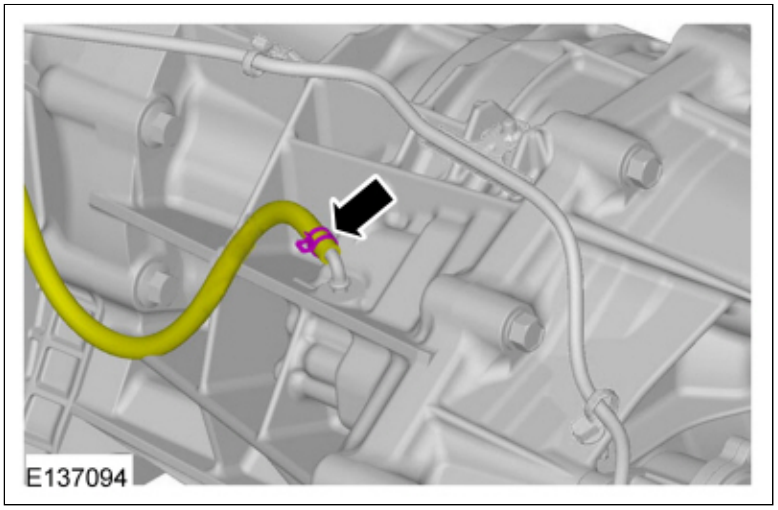


17. If equipped.

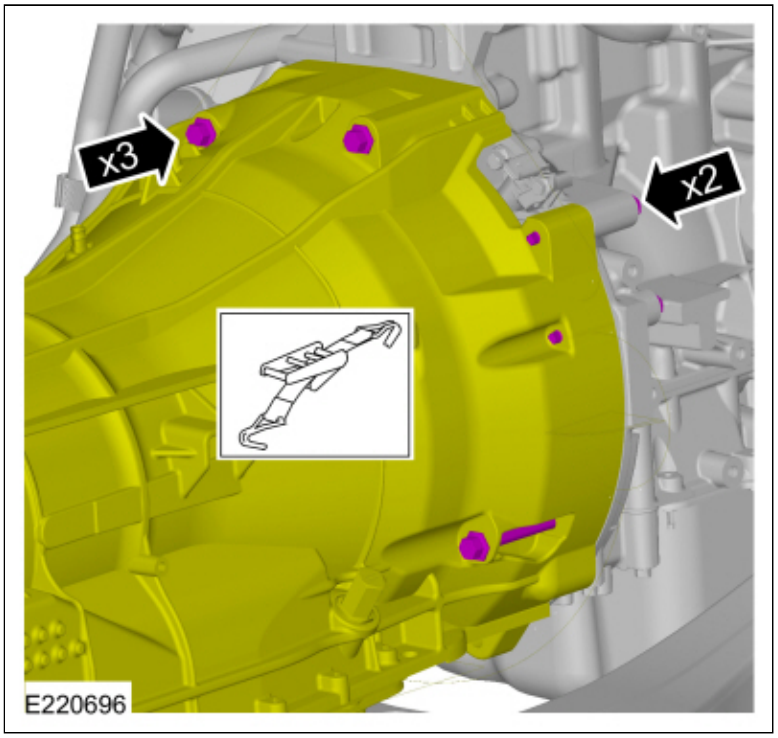


18. **WARNING: Always secure engines, transmissions, or other heavy components to the support fixture with straps and wooden support blocks. Improperly secured assemblies could fall off the fixture, resulting in serious personal injury.**

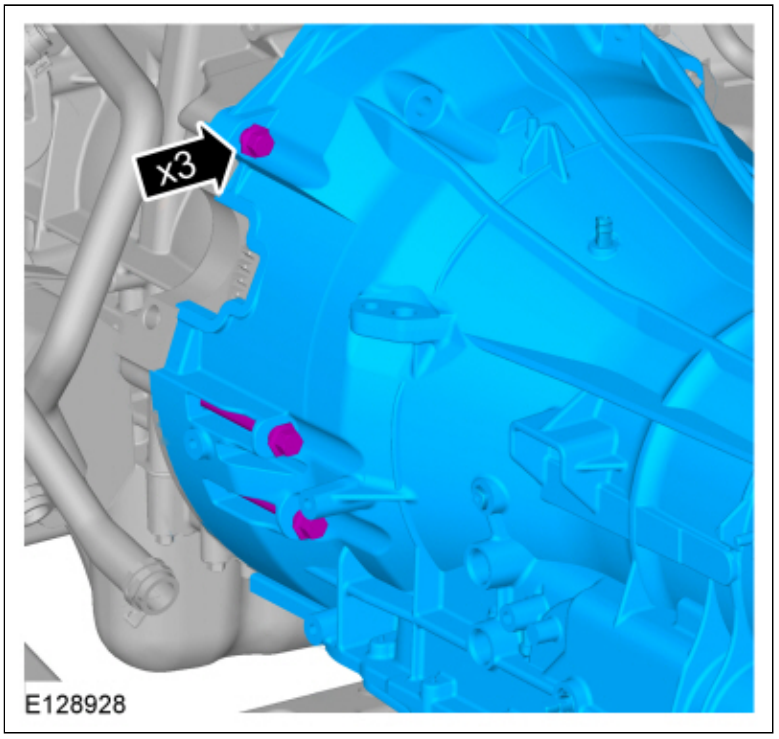
    Use the General Equipment: Transmission Jack



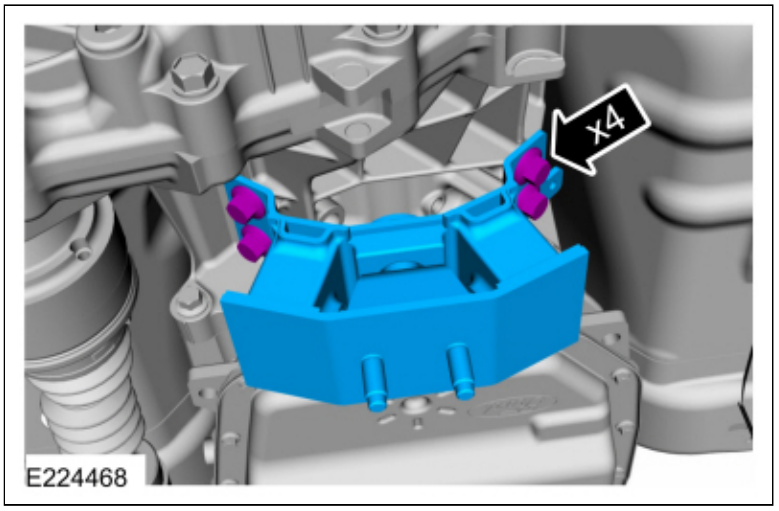
19.



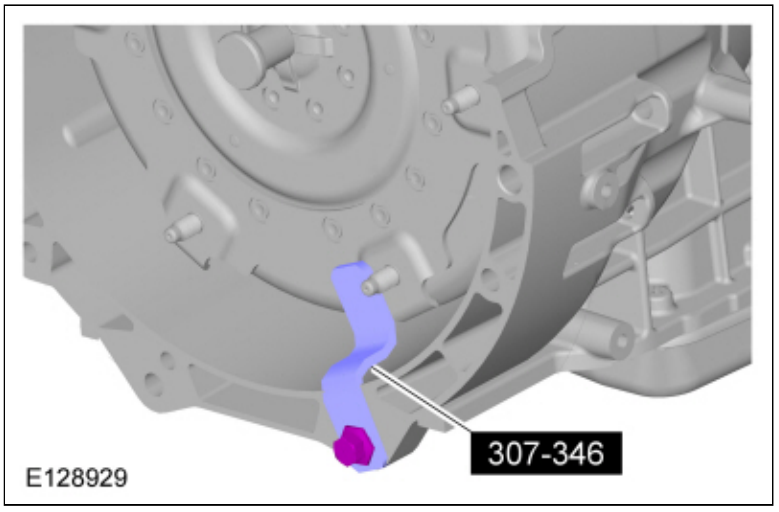
20.



21.

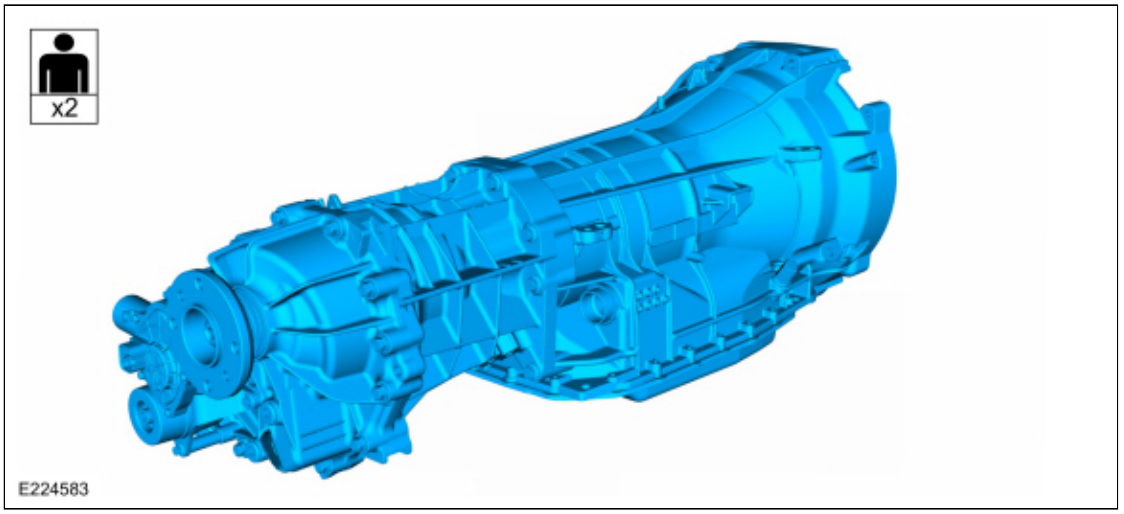


22.

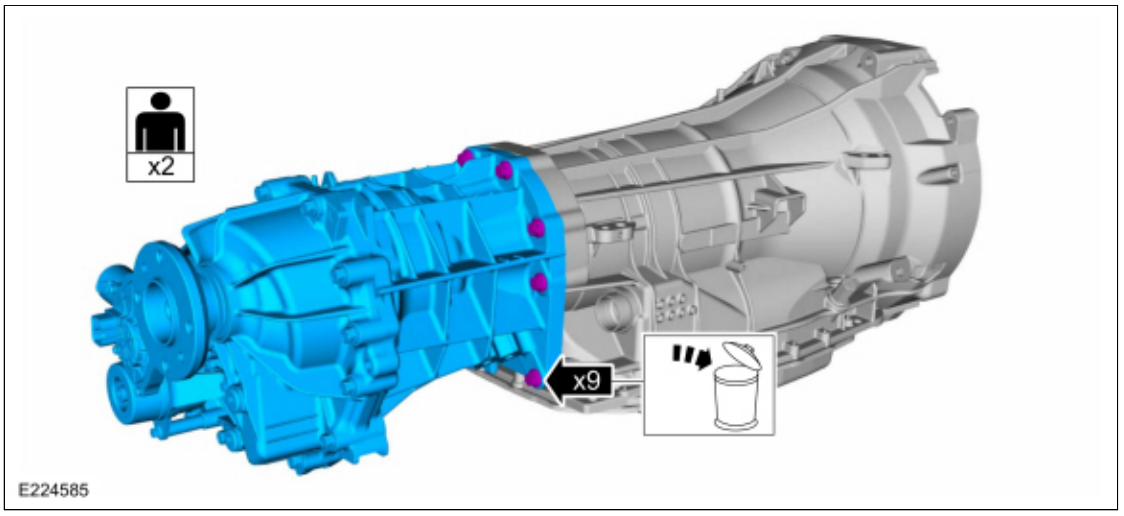


23.

24.

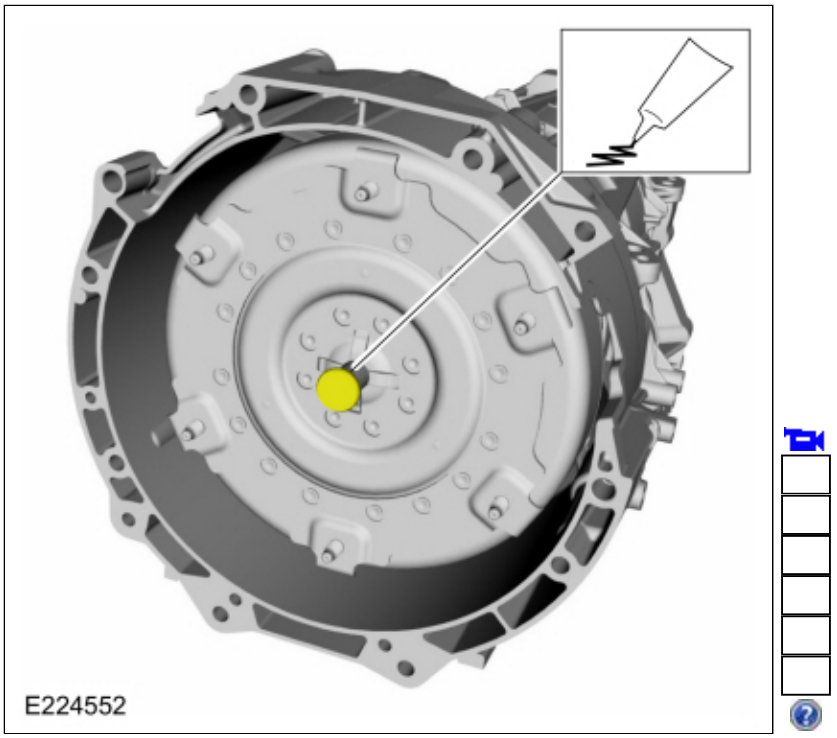


25. Slide the transmission back far enough to install the Torque Converter Retainer.
Use Special Service Tool: 307-346 (T97T-7902-A) Retainer, Torque Converter.



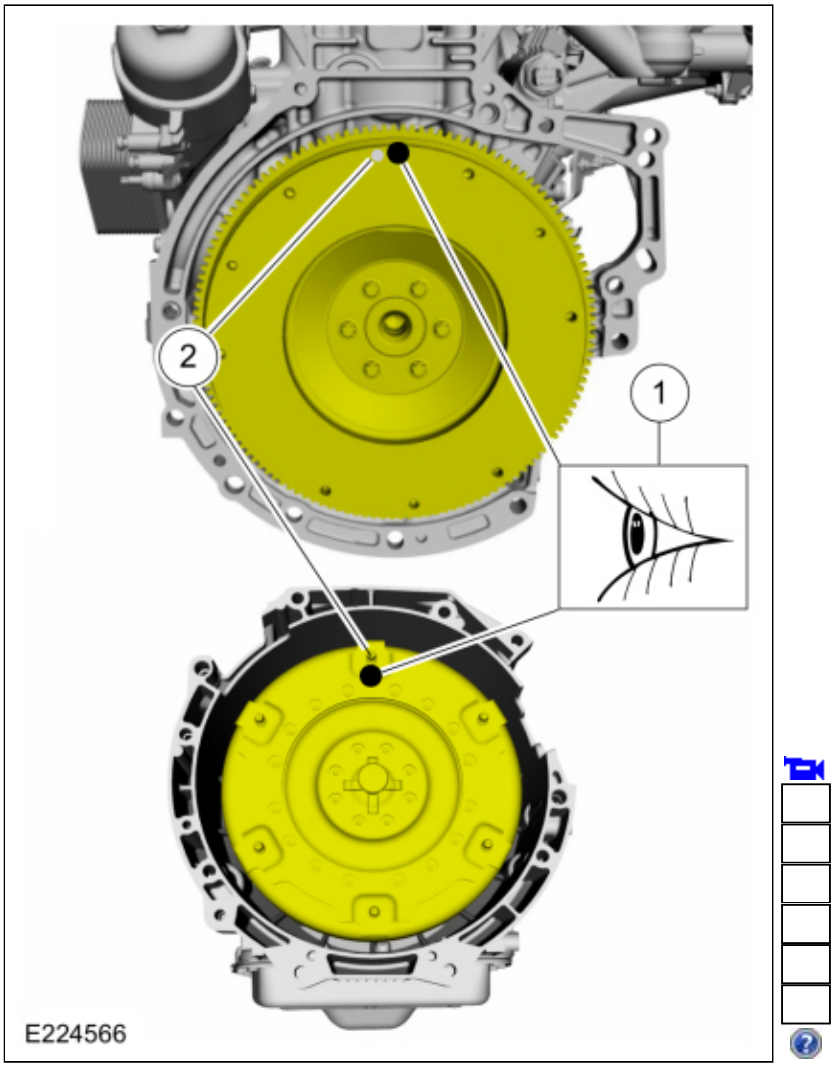
26. **NOTE:** *This step requires the aid of another technician.*

Remove the transmission and transfer case assembly from the vehicle.



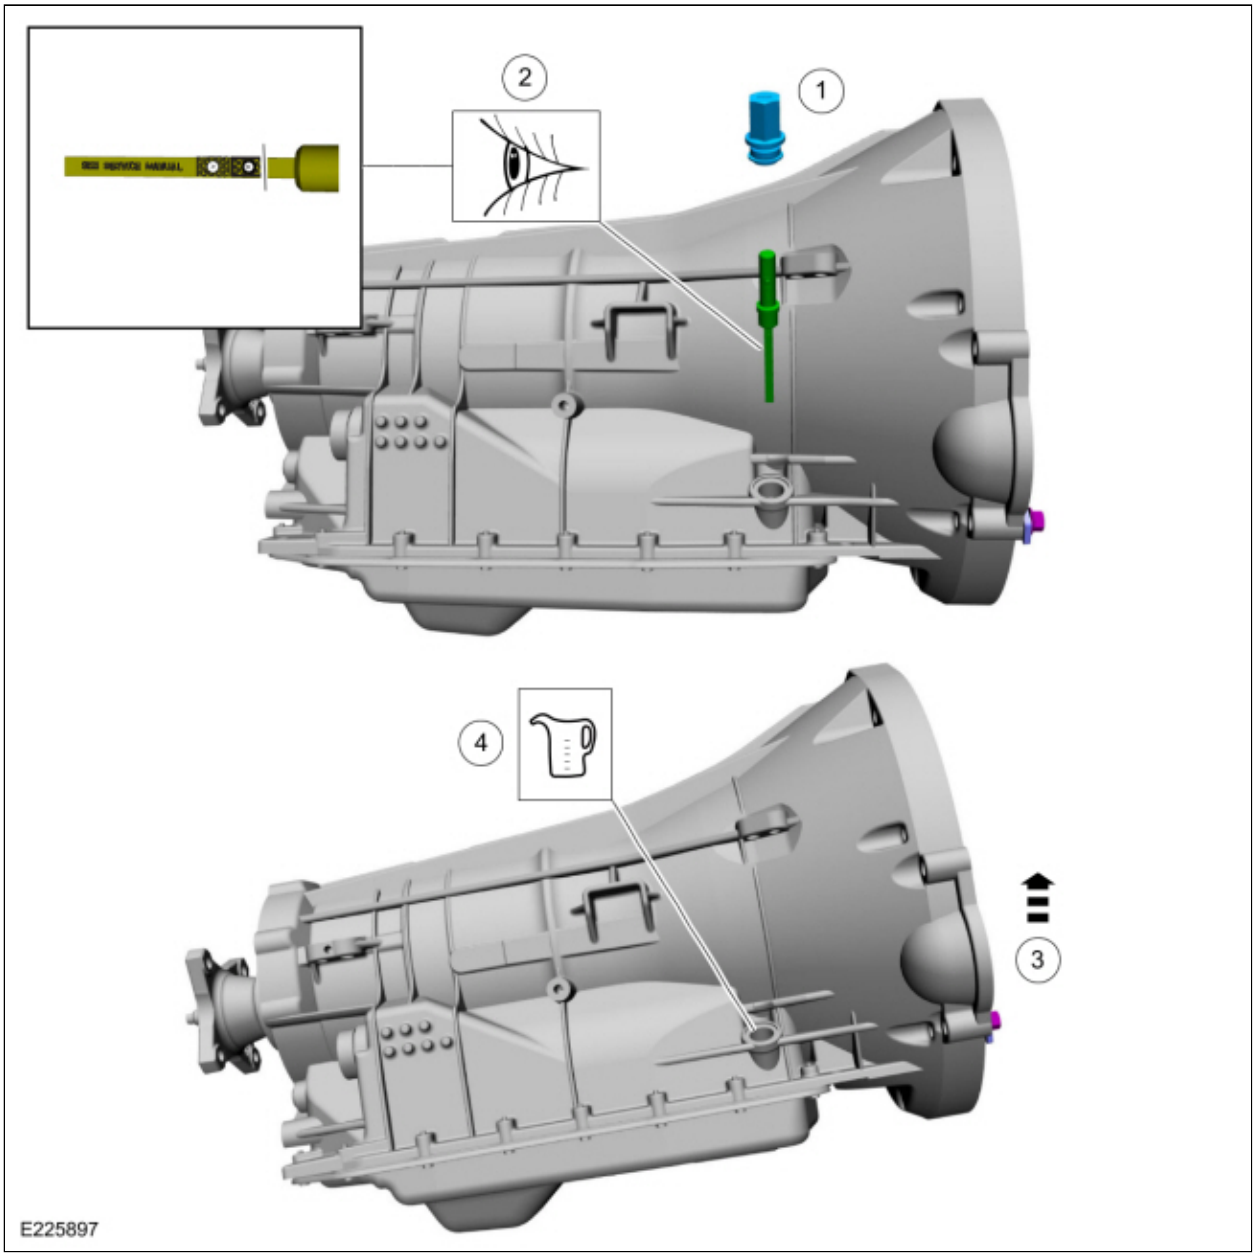
27. **NOTE:** *This step requires the aid of another technician.*

    Separate the transfer case assembly from the transmission and remove the transmission jack.



Installation

1. Lubricate the torque converter pilot hub with multipurpose grease.



1. Inspect the torque converter stud and flexplate for paint marks.
2. Align the torque converter stud and flexplate hole near the paint marks to the 12 o'clock position.

3. **NOTICE: If a new transmission is installed, the fluid level must be checked after installation.**

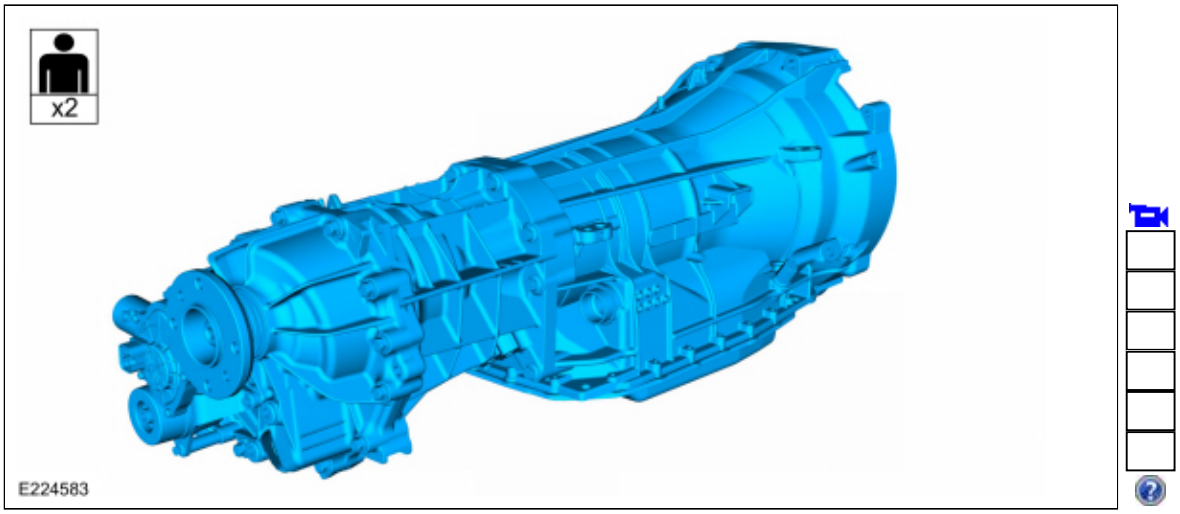
   NOTE: *If transmission was disassembled, add transmission fluid to the transmission.*

   1. Remove the transmission fluid fill plug transmission fluid level indicator assembly.
      Torque: 26 Nm
   2. Verify transmission is filled with transmission fluid.
   3. Slightly tilt the transmission rearward.
   4. Refer to: Transmission Fluid Drain and Refill (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, General Procedures).

4. **NOTE:** *This step requires the aid of another technician.*

   NOTE: *Make sure that new bolts are installed.*

   Torque: 48 Nm



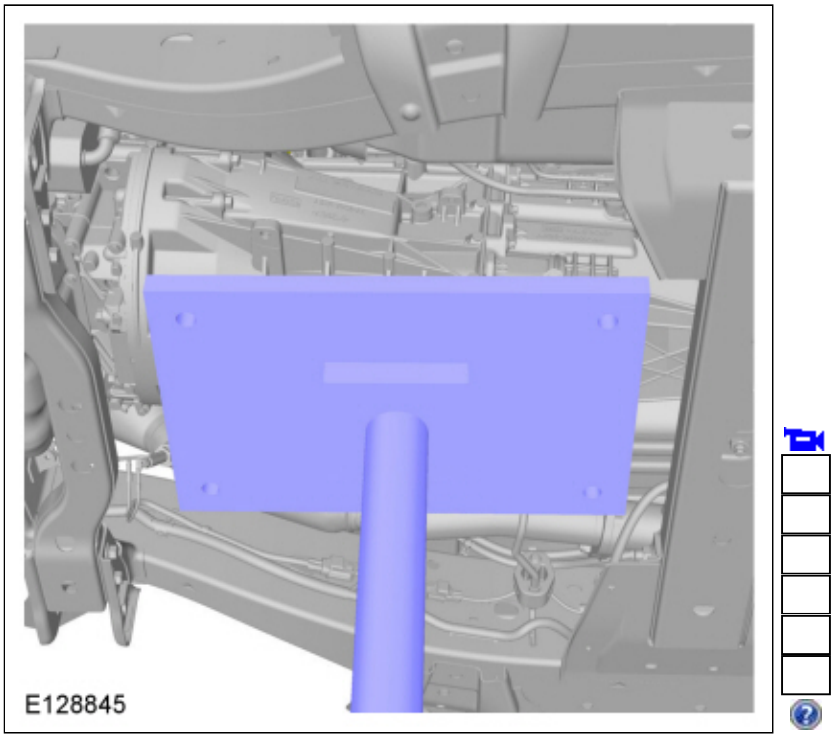
5. **NOTE:** *This step requires the aid of another technician.*

   1. Position the transmission assembly on jack.

Use the General Equipment: Transmission Jack

2. Secure the transmission to the transmission jack with a safety strap.

6. *Torque*: 90 Nm

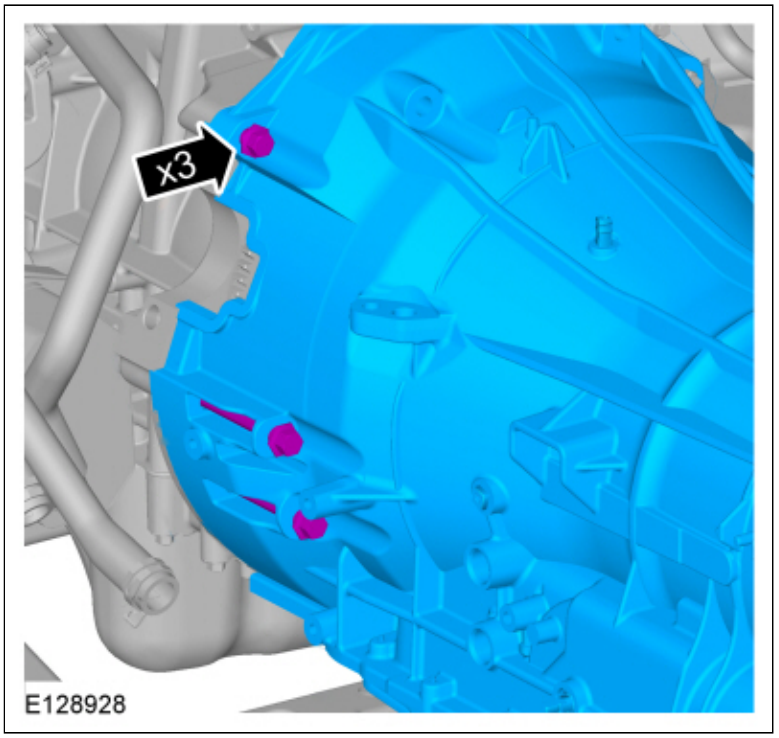


7. **WARNING: Always secure engines, transmissions, or other heavy components to the support fixture with straps and wooden support blocks. Improperly secured assemblies could fall off the fixture, resulting in serious personal injury.**

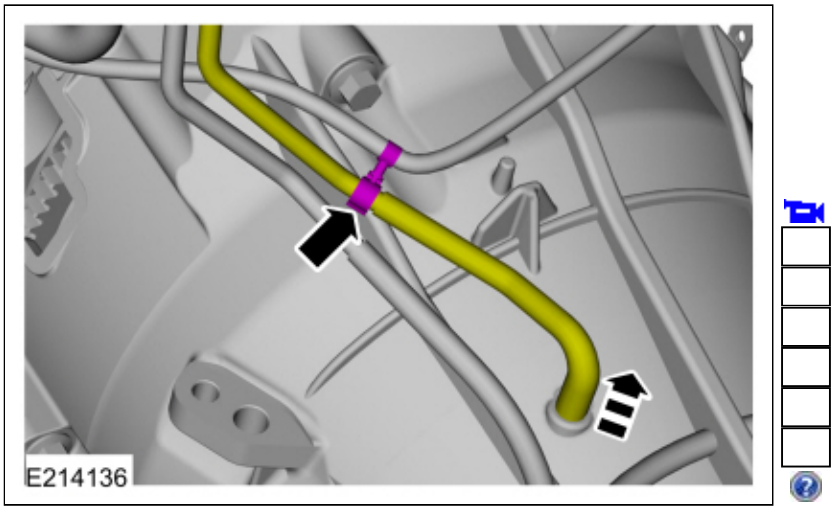
   NOTICE: The converter housing is piloted into position by dowels in the rear of the engine block. The torque converter must rest squarely against the flexplate. This indicates that the converter pilot is not binding in the engine crankshaft.

   NOTE: *Make sure that the transmission jack makes contact on the outer ribs of the fluid pan.*

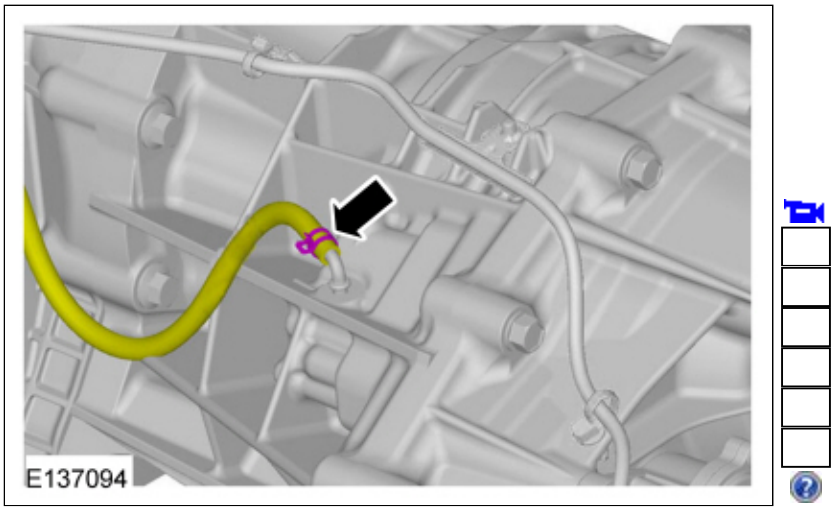
   Position and secure the transmission on the high-lift transmission jack. Raise and position the transmission into the vehicle.



8. Remove Special Service Tool: 307-346 (T97T-7902-A) Retainer, Torque Converter.

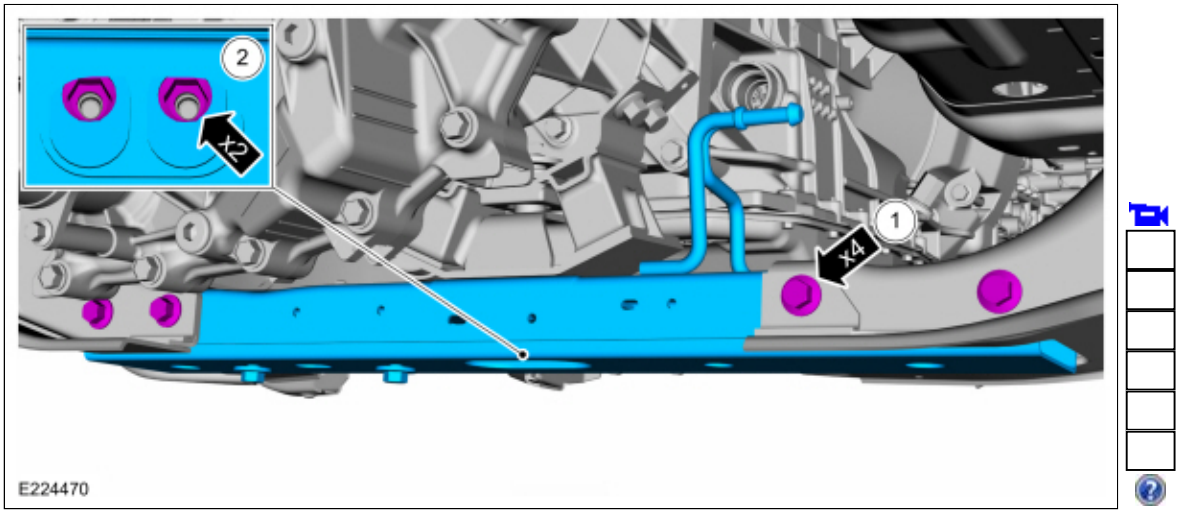


9. *Torque*: 48 Nm

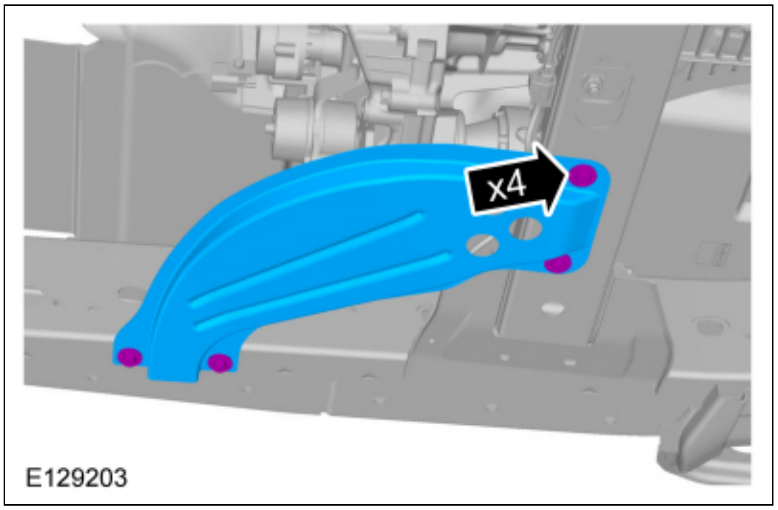


10. *Torque*: 48 Nm

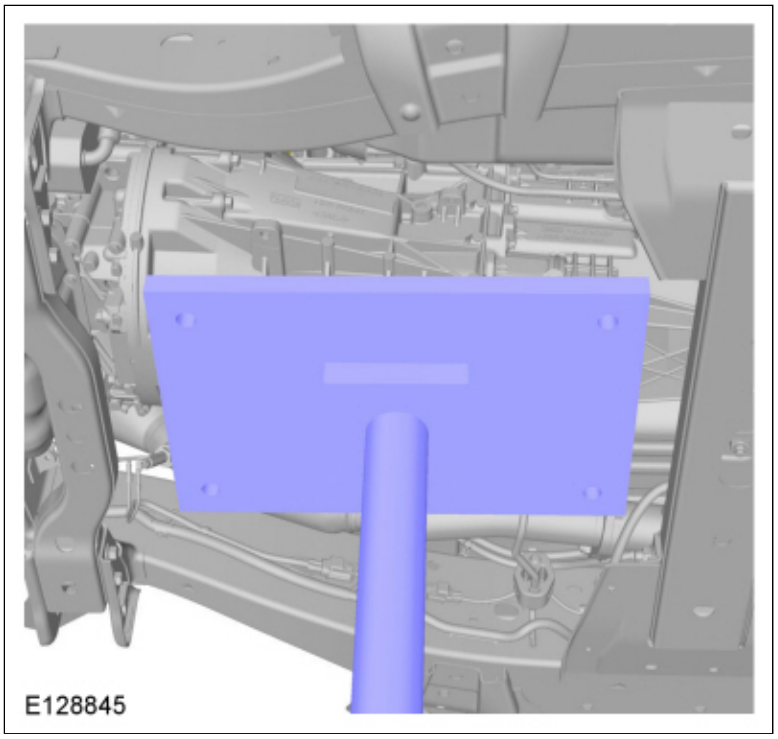
11.



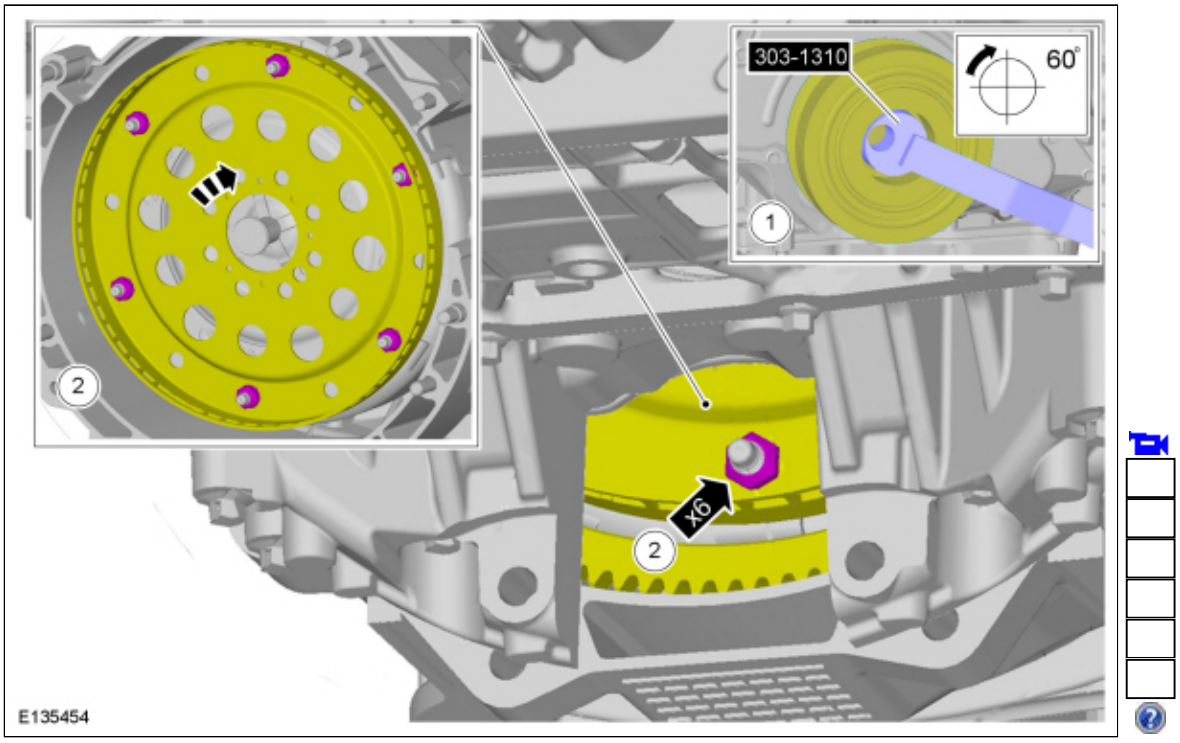
12.



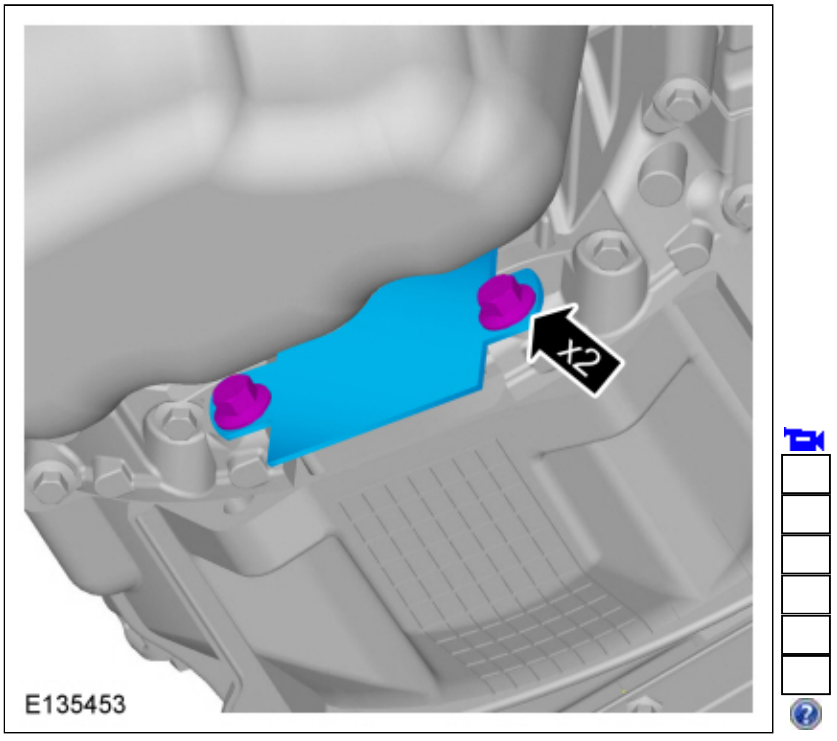
13. **NOTE:** *Install all the bolts and nuts finger tight before final tightening.*



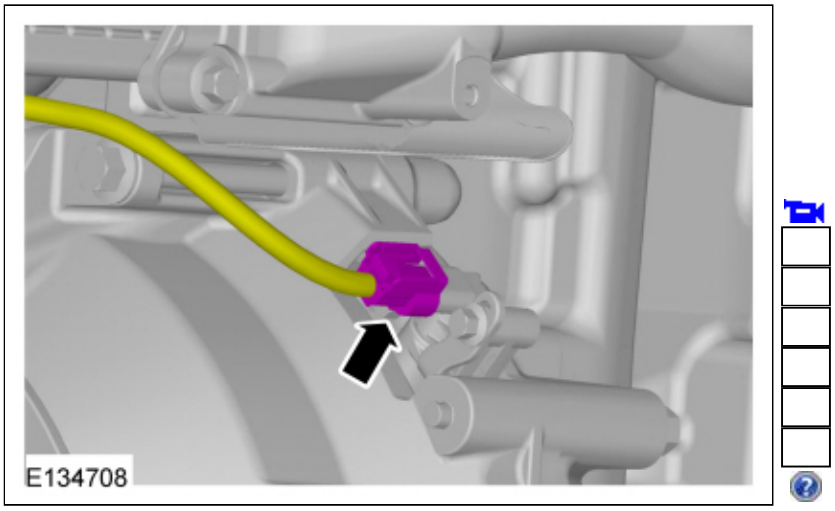
Torque:
1: 90 Nm
2: 90 Nm



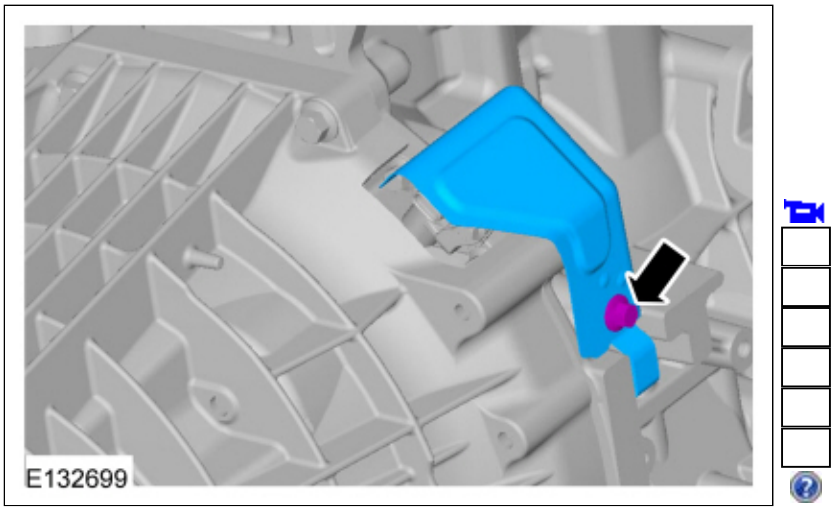
14. If equipped.
Torque: 48 Nm



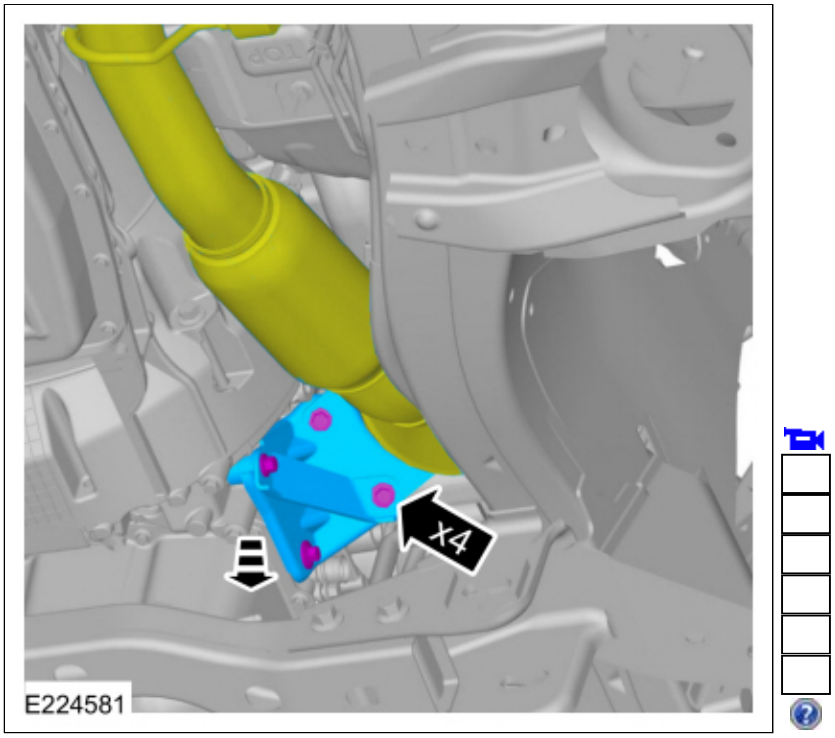
15. Remove the transmission jack.



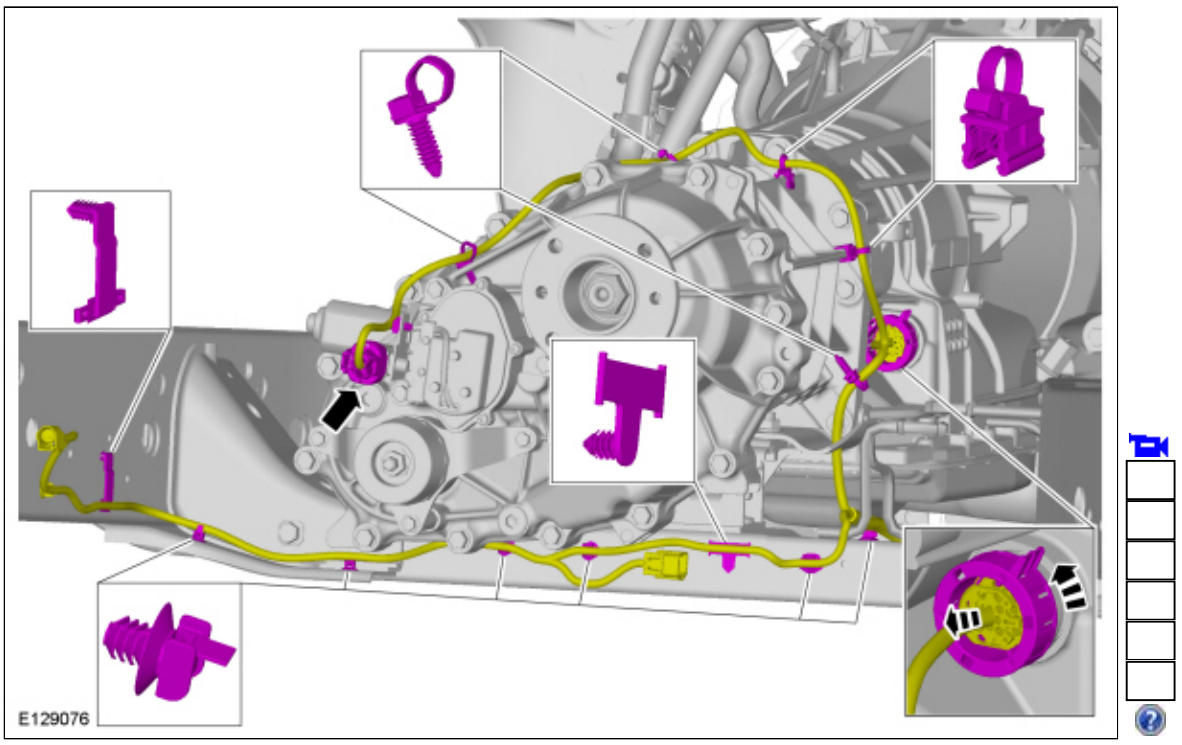
16. Remove Special Service Tool: 303-1310 Holding Wrench, Crankshaft.
Torque: 48 Nm



17. *Torque*: 48 Nm

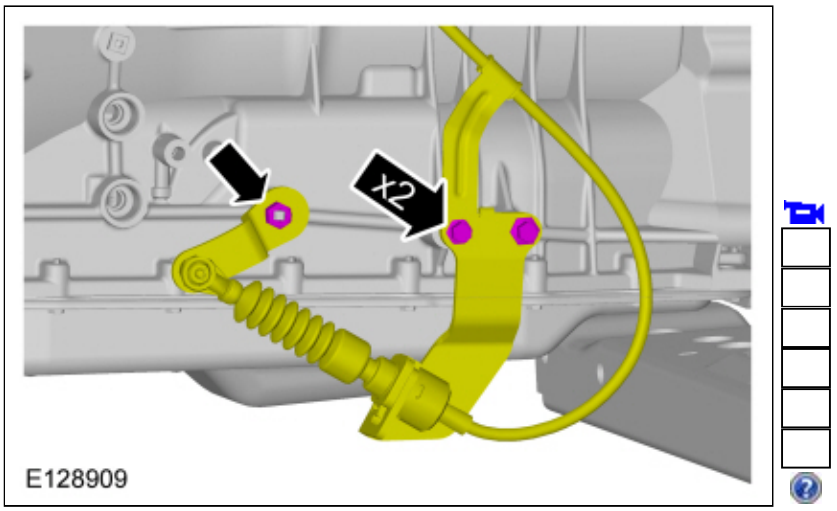


18.



19. *Torque*: 25 Nm

20. *Torque*: 25 Nm

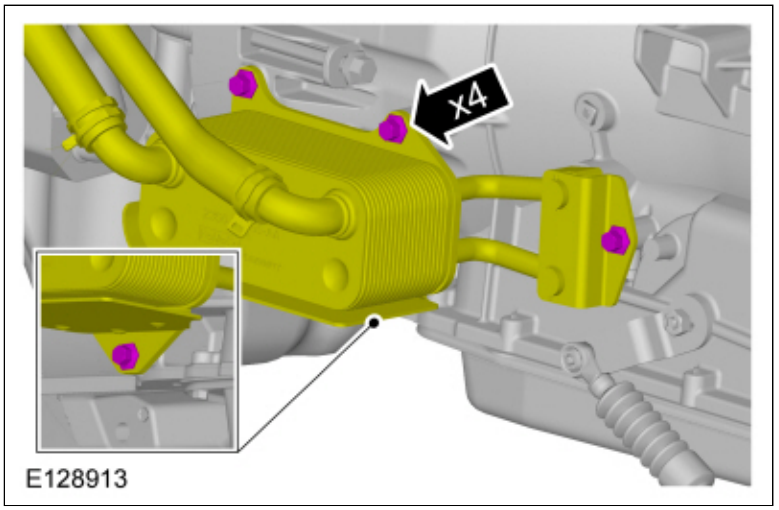


21.

22. **NOTICE: Take extra care when handling selector lever cable.**

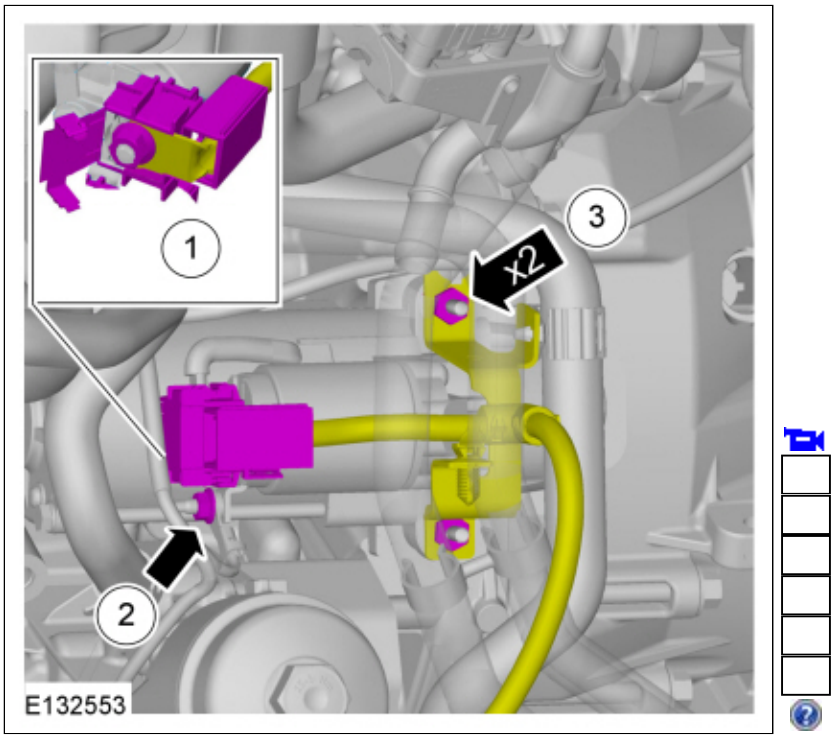
    NOTE: *Make sure that the component is installed to the position noted before removal.*

    Torque: 25 Nm



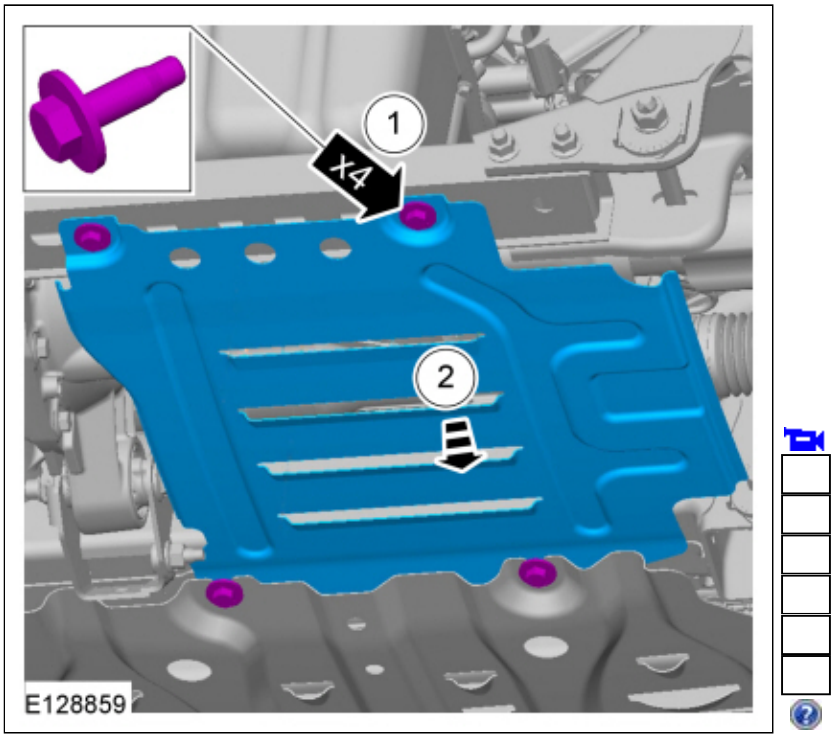
23. **NOTE:** *Make sure that a new component is installed if the O-ring is damaged.*

    NOTE: *Inspect the case to make sure that the old transmission fluid cooler tube O-rings are not stuck in the case.*



24. *Torque*: 20 Nm

25. *Torque*: 35 Nm



26. *Torque*:
    1: 10 Nm
    2: 10 Nm
    3: 10 Nm

27. Install the rear driveshaft.
    Refer to: Rear Driveshaft (205-01 Driveshaft, Removal and Installation).

28. Install the front driveshaft.
    Refer to: Front Driveshaft - 4WD (205-01 Driveshaft, Removal and Installation).

29. *Torque*: 30 Nm

30. Connect the battery ground cable.
    Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).

31. Verify that the selector lever cable is correctly adjusted.
    Refer to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures).

32. After completing the repairs, perform the Misfire Monitor Neutral Profile Correction procedure using a diagnostic scan tool.

33. If a new transmission or a new main control was installed, the solenoid body strategy must be updated.
    Refer to: Transmission Strategy Download (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, General Procedures).

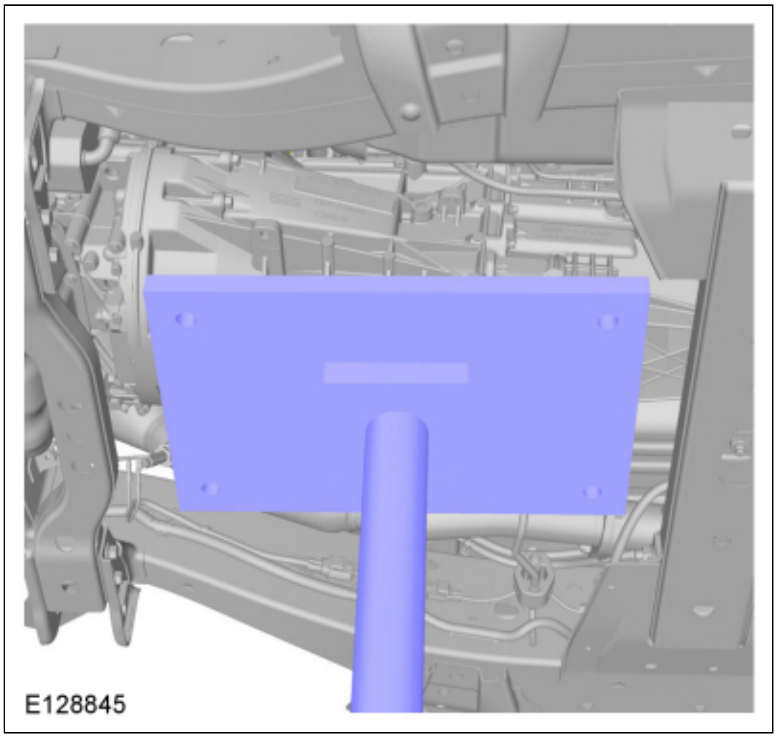
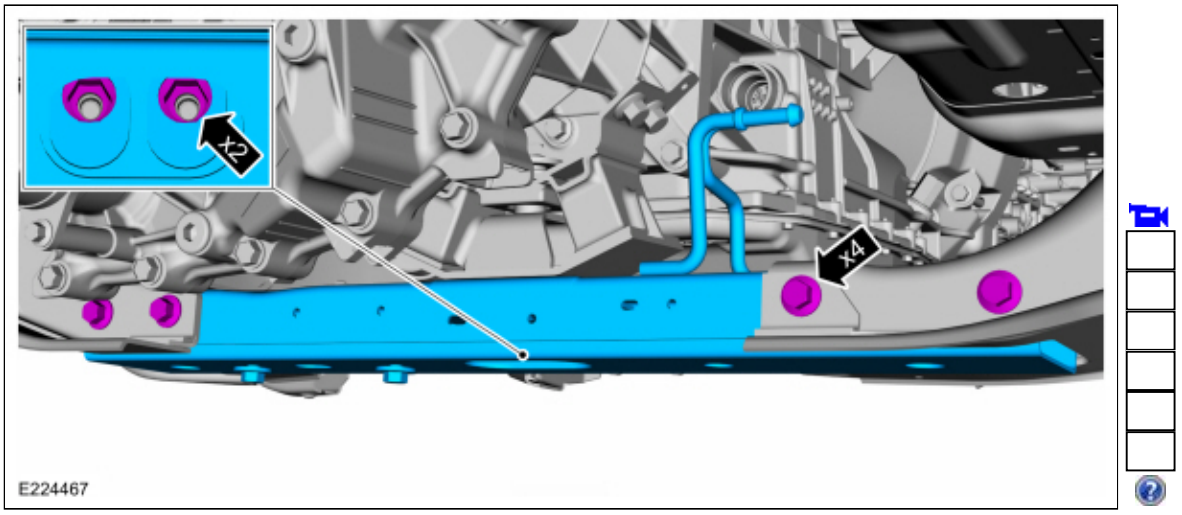
16. Use Special Service Tool: 303-1310 Holding Wrench, Crankshaft.

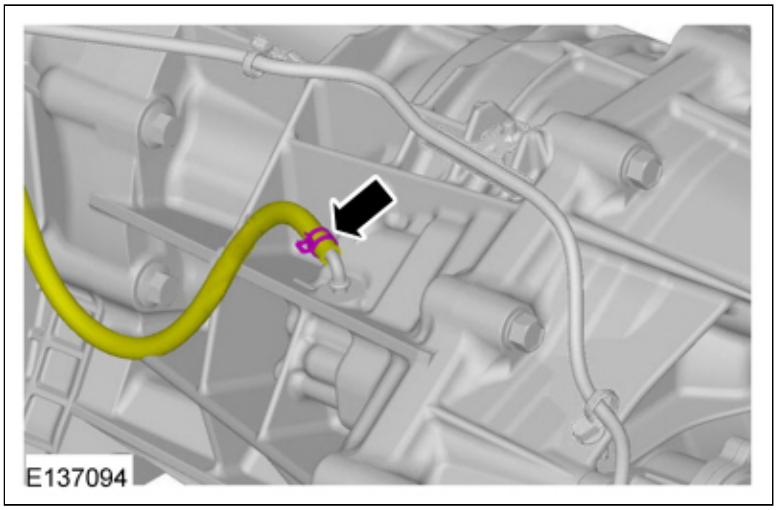


17. If equipped.

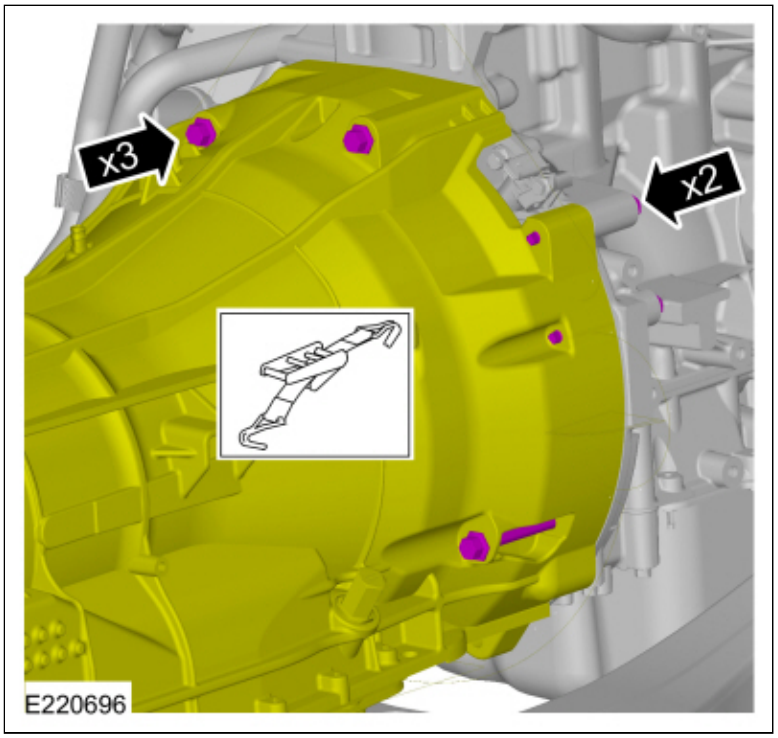


18. **WARNING: Always secure engines, transmissions, or other heavy components to the support fixture with straps and wooden support blocks. Improperly secured assemblies could fall off the fixture, resulting in serious personal injury.**

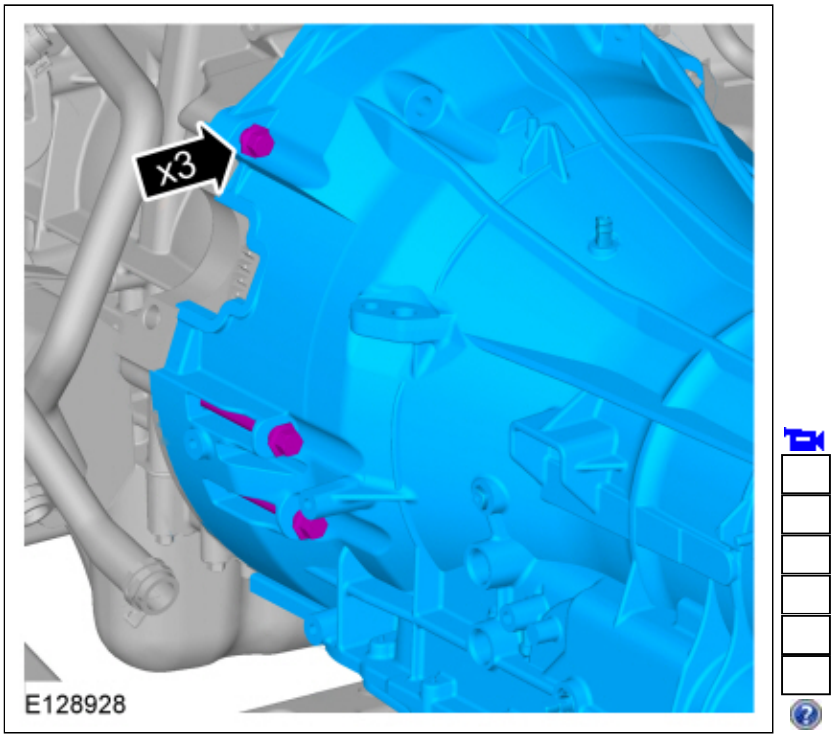
    Use the General Equipment: Transmission Jack



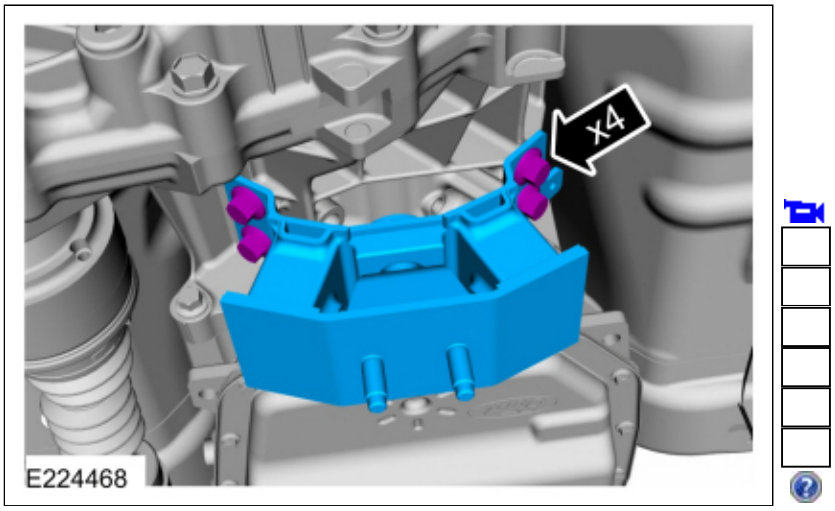
19.



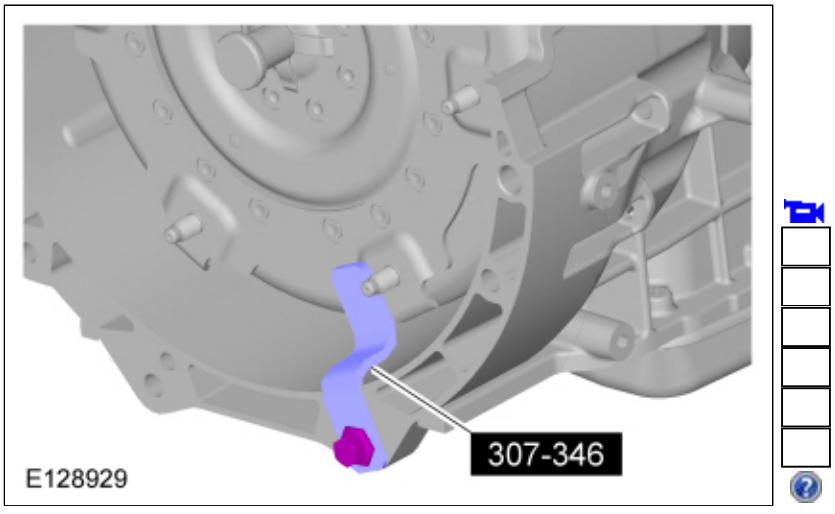
20.



21.

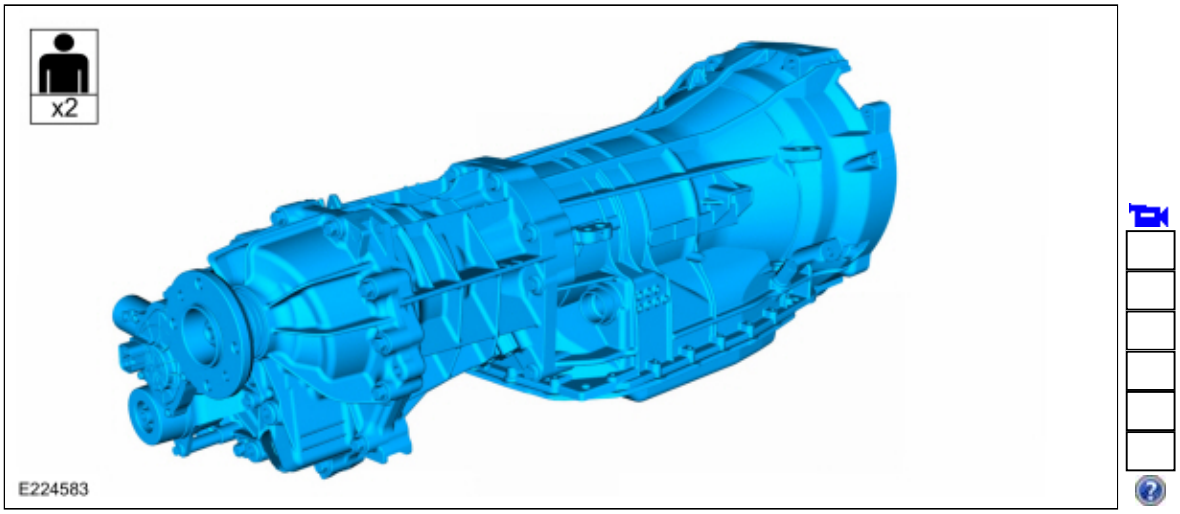


22.

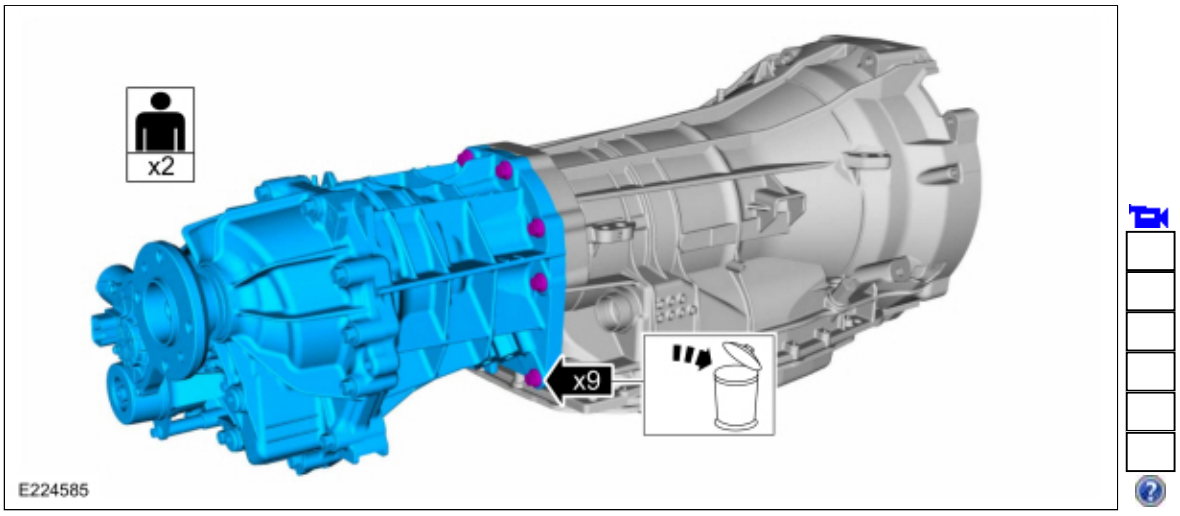


23.

24.

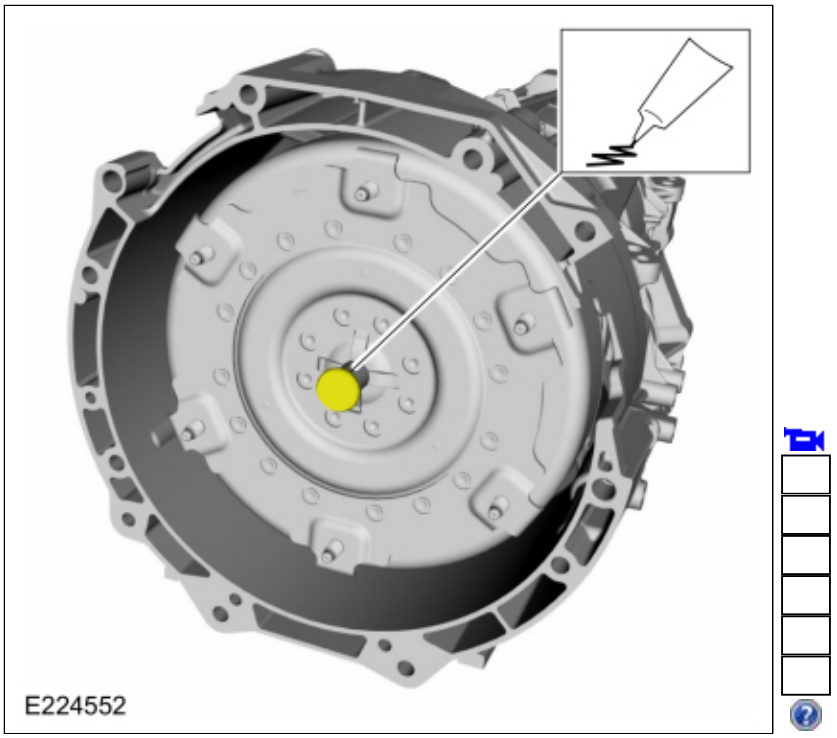


25. Slide the transmission back far enough to install the Torque Converter Retainer.
Use Special Service Tool: 307-346 (T97T-7902-A) Retainer, Torque Converter.



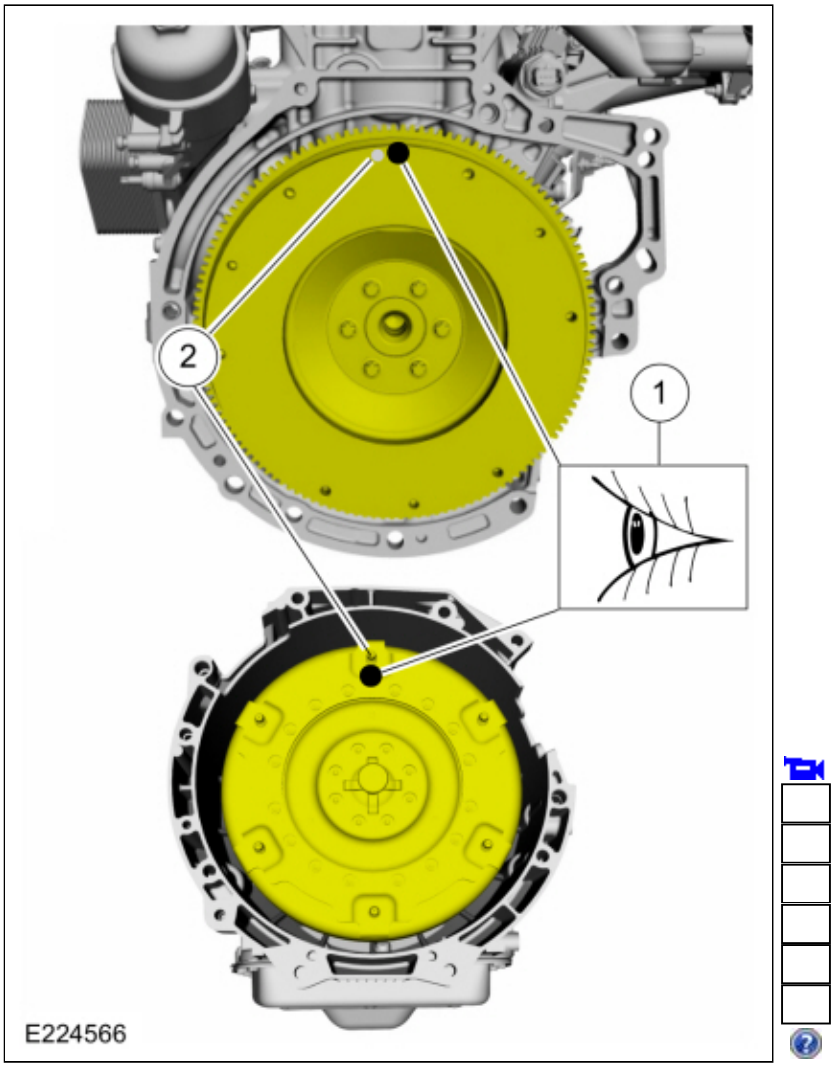
26. **NOTE:** *This step requires the aid of another technician.*

Remove the transmission and transfer case assembly from the vehicle.



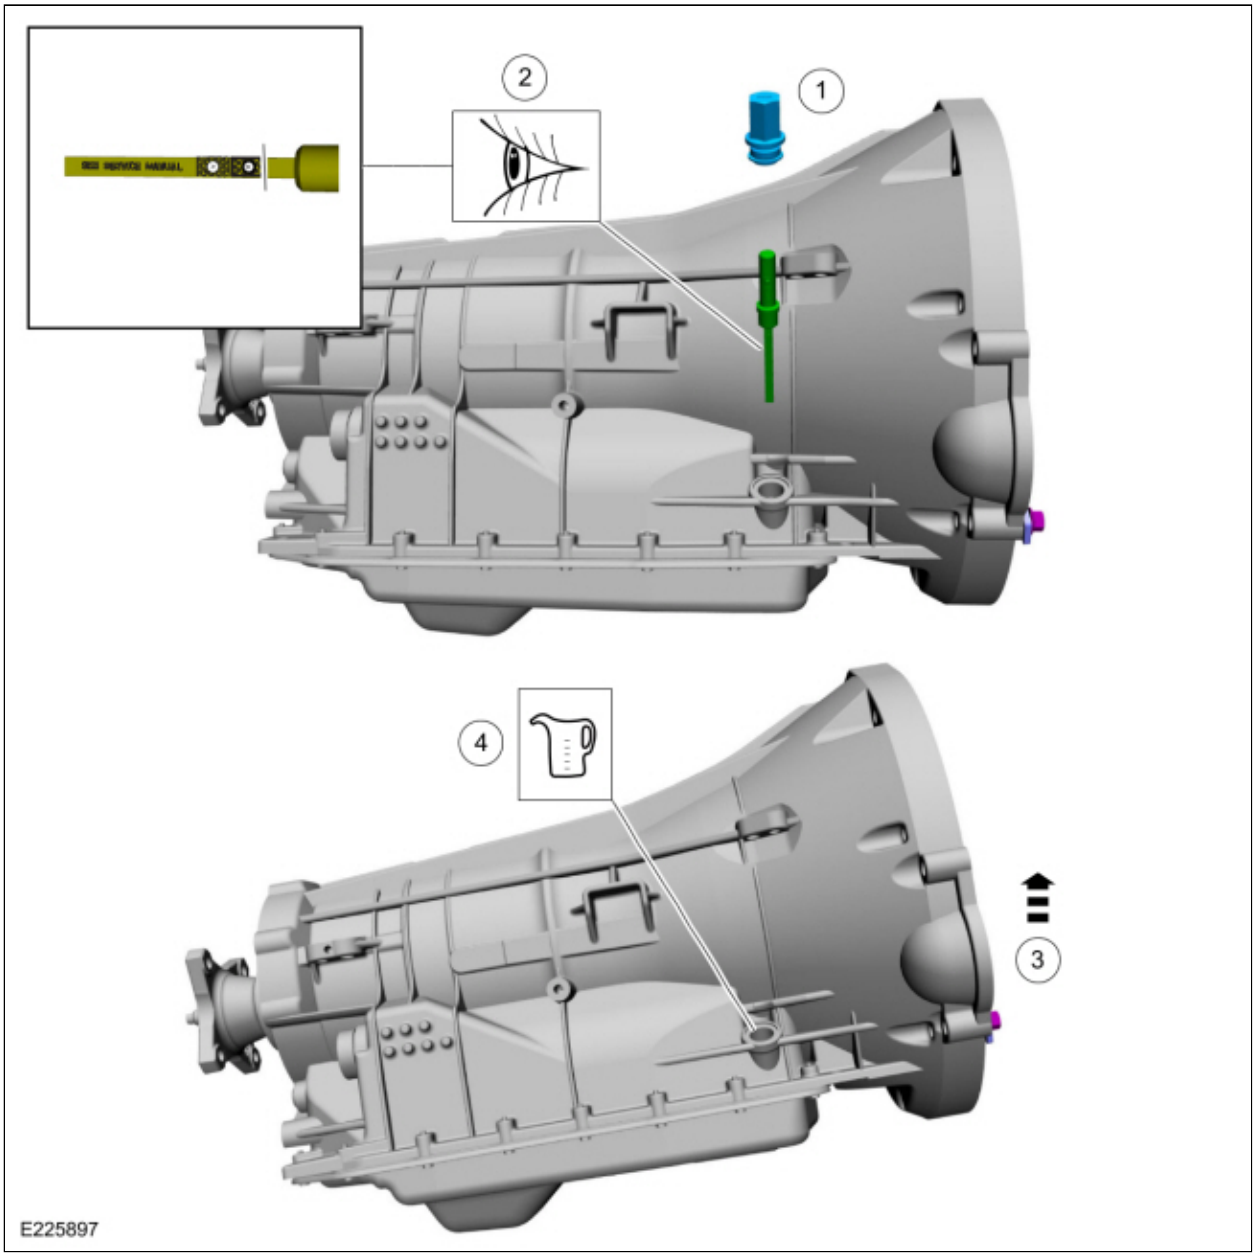
27. **NOTE:** *This step requires the aid of another technician.*

    Separate the transfer case assembly from the transmission and remove the transmission jack.



Installation

1. Lubricate the torque converter pilot hub with multipurpose grease.



1. Inspect the torque converter stud and flexplate for paint marks.
2. Align the torque converter stud and flexplate hole near the paint marks to the 12 o'clock position.

3. **NOTICE: If a new transmission is installed, the fluid level must be checked after installation.**

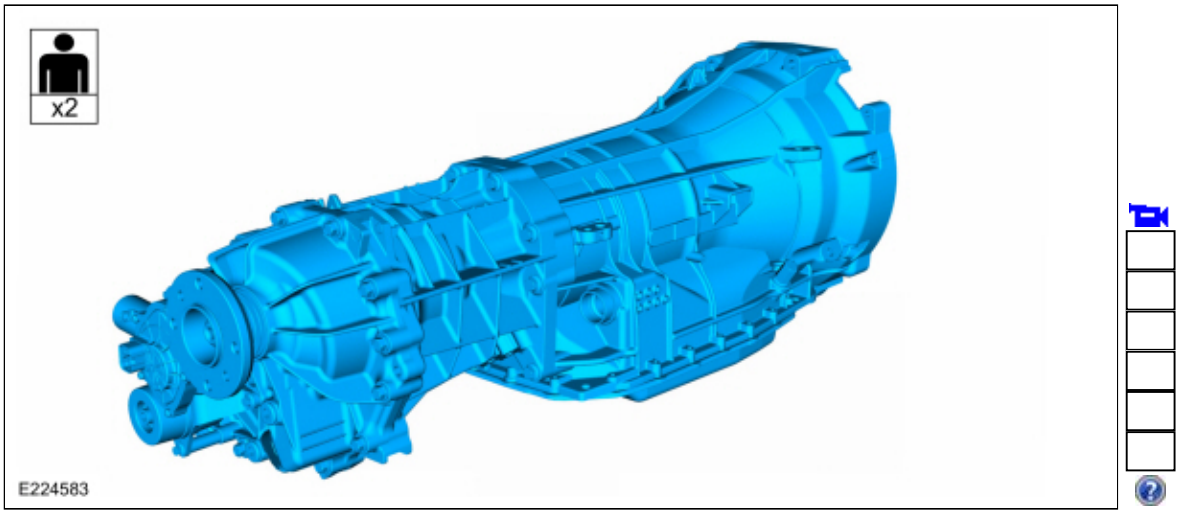
   NOTE: *If transmission was disassembled, add transmission fluid to the transmission.*

   1. Remove the transmission fluid fill plug transmission fluid level indicator assembly.
      Torque: 26 Nm
   2. Verify transmission is filled with transmission fluid.
   3. Slightly tilt the transmission rearward.
   4. Refer to: Transmission Fluid Drain and Refill (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, General Procedures).

4. **NOTE:** *This step requires the aid of another technician.*

   NOTE: *Make sure that new bolts are installed.*

   Torque: 48 Nm



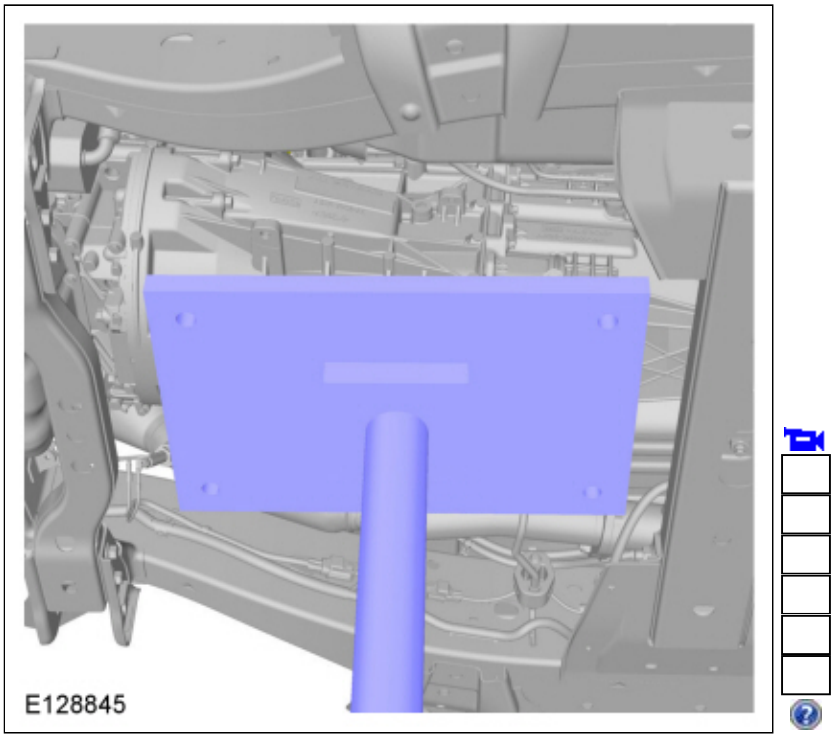
5. **NOTE:** *This step requires the aid of another technician.*

   1. Position the transmission assembly on jack.

Use the General Equipment: Transmission Jack

2. Secure the transmission to the transmission jack with a safety strap.

6. *Torque*: 90 Nm

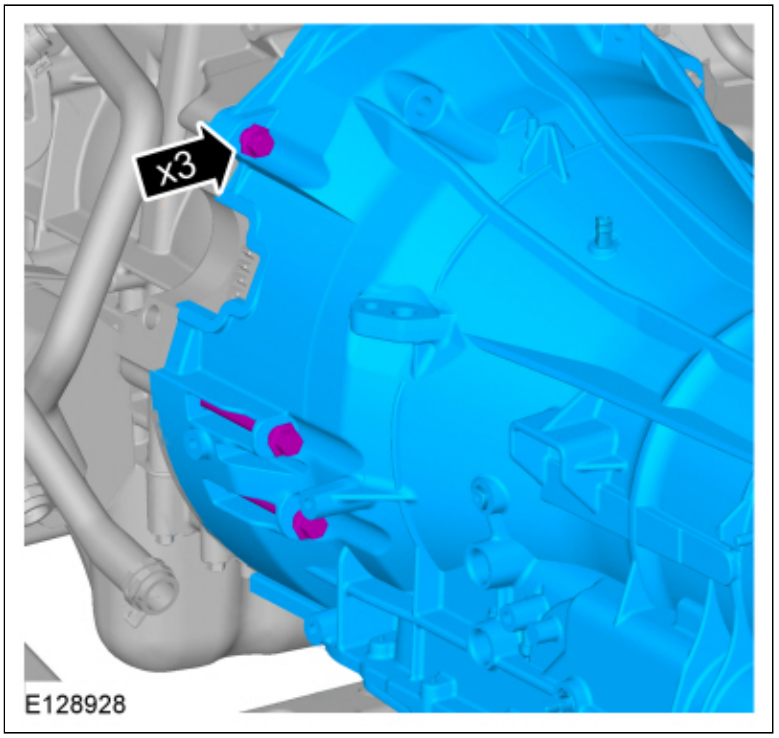


7. **WARNING: Always secure engines, transmissions, or other heavy components to the support fixture with straps and wooden support blocks. Improperly secured assemblies could fall off the fixture, resulting in serious personal injury.**

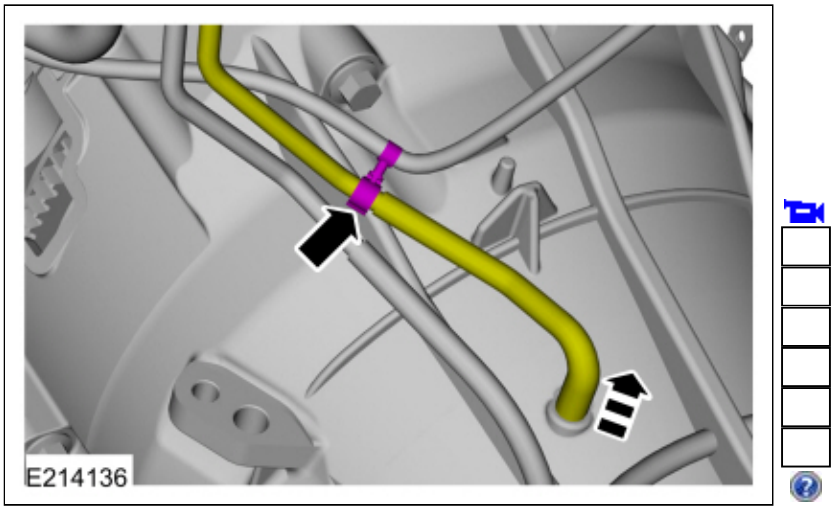
   NOTICE: The converter housing is piloted into position by dowels in the rear of the engine block. The torque converter must rest squarely against the flexplate. This indicates that the converter pilot is not binding in the engine crankshaft.

   NOTE: *Make sure that the transmission jack makes contact on the outer ribs of the fluid pan.*

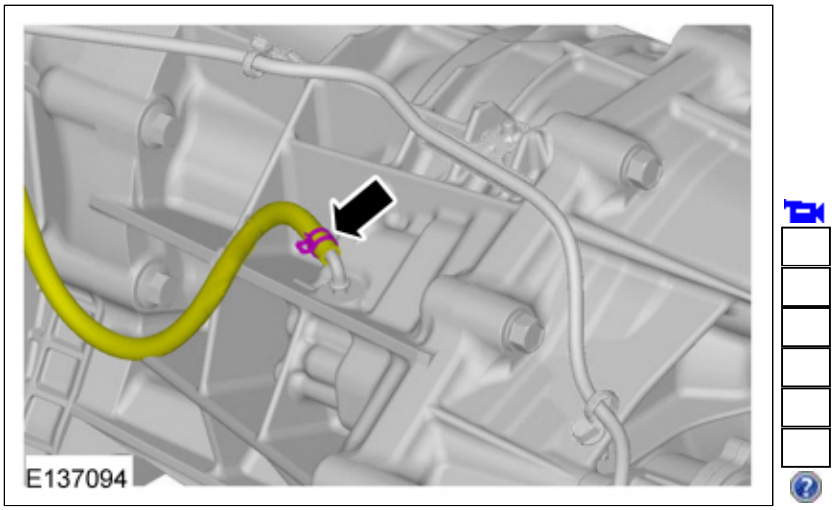
   Position and secure the transmission on the high-lift transmission jack. Raise and position the transmission into the vehicle.



8. Remove Special Service Tool: 307-346 (T97T-7902-A) Retainer, Torque Converter.

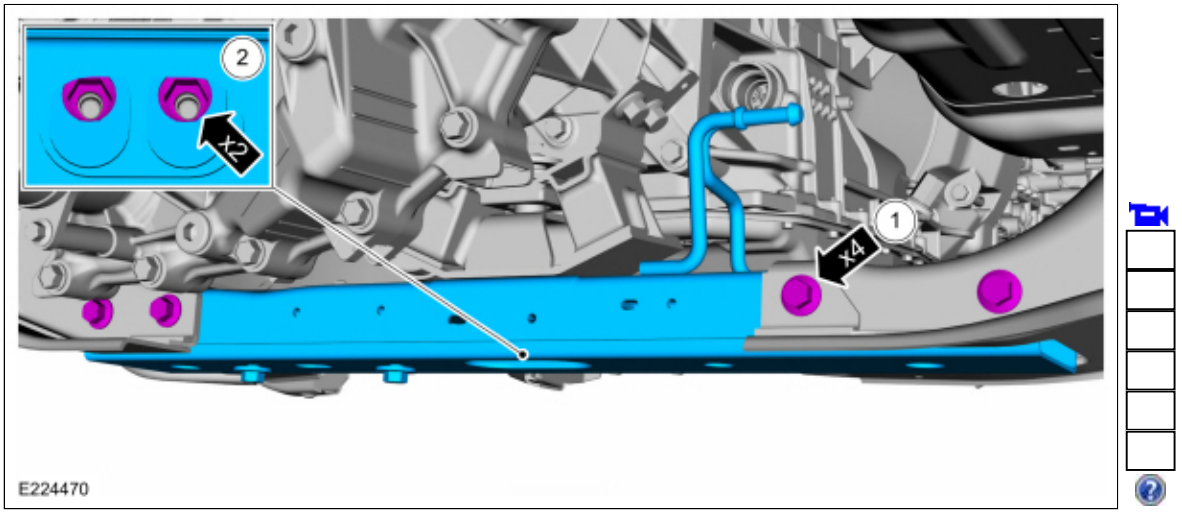


9. *Torque*: 48 Nm

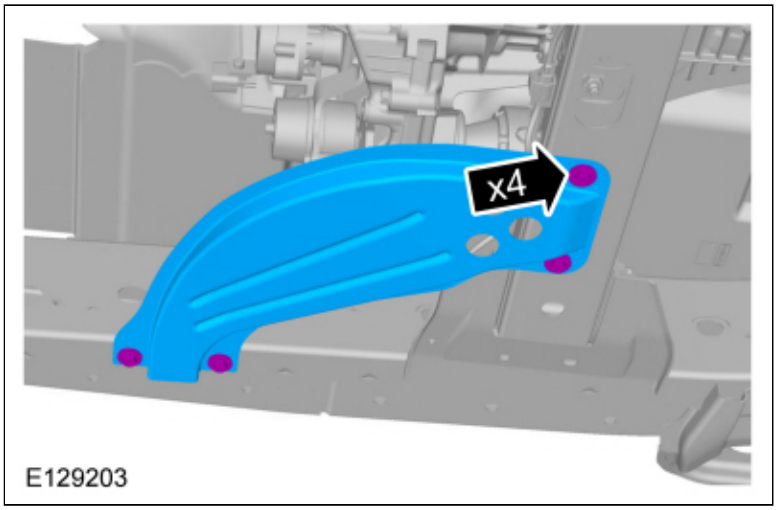


10. *Torque*: 48 Nm

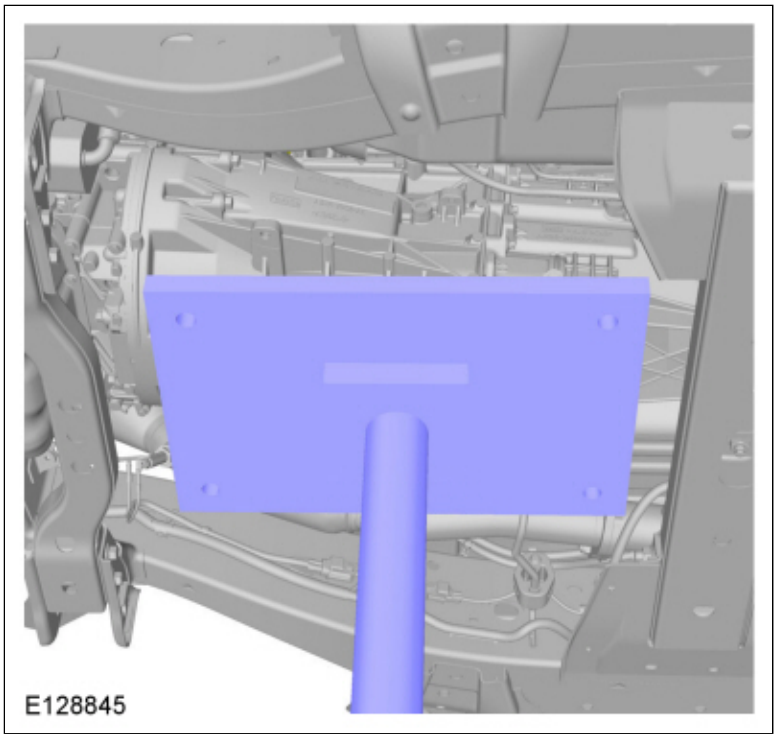
11.



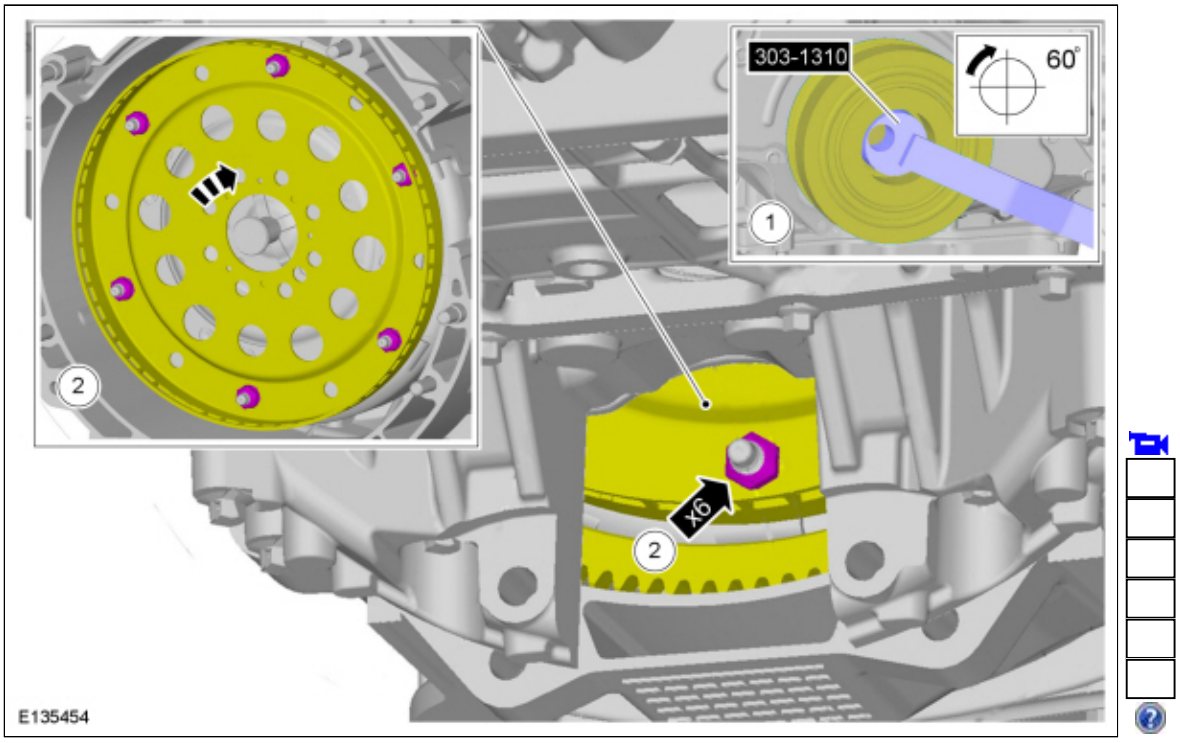
12.



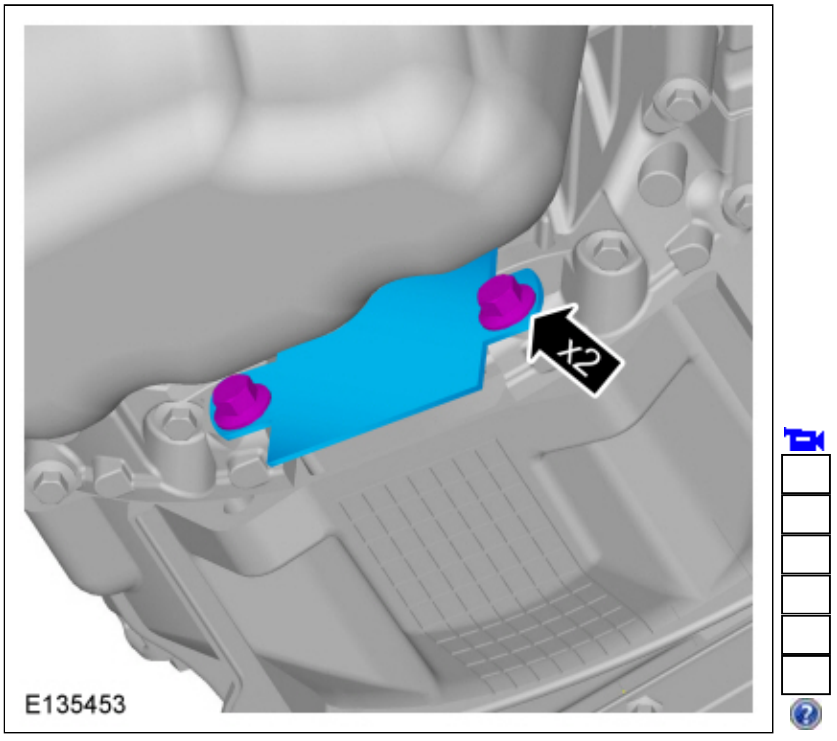
13. **NOTE:** *Install all the bolts and nuts finger tight before final tightening.*



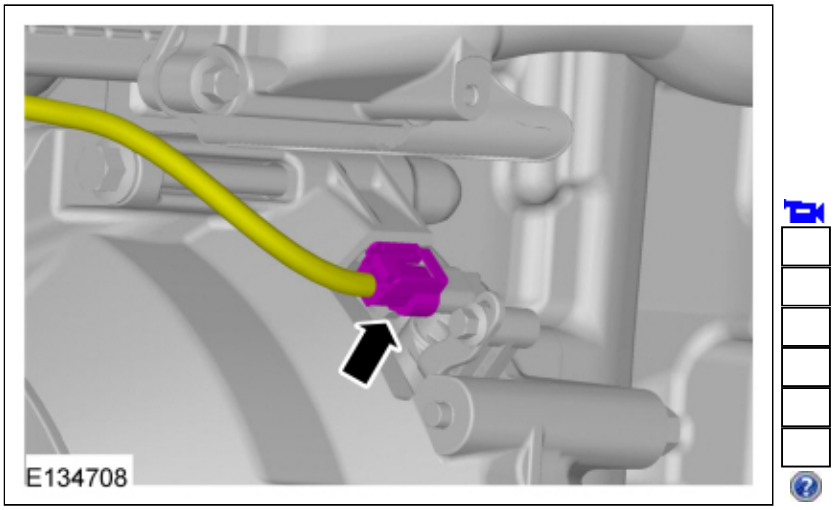
Torque:
1: 90 Nm
2: 90 Nm



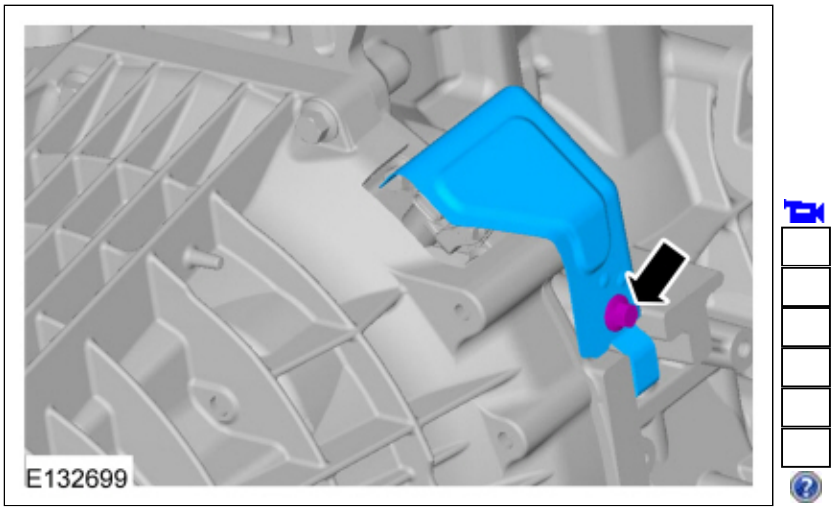
14. If equipped.
Torque: 48 Nm



15. Remove the transmission jack.

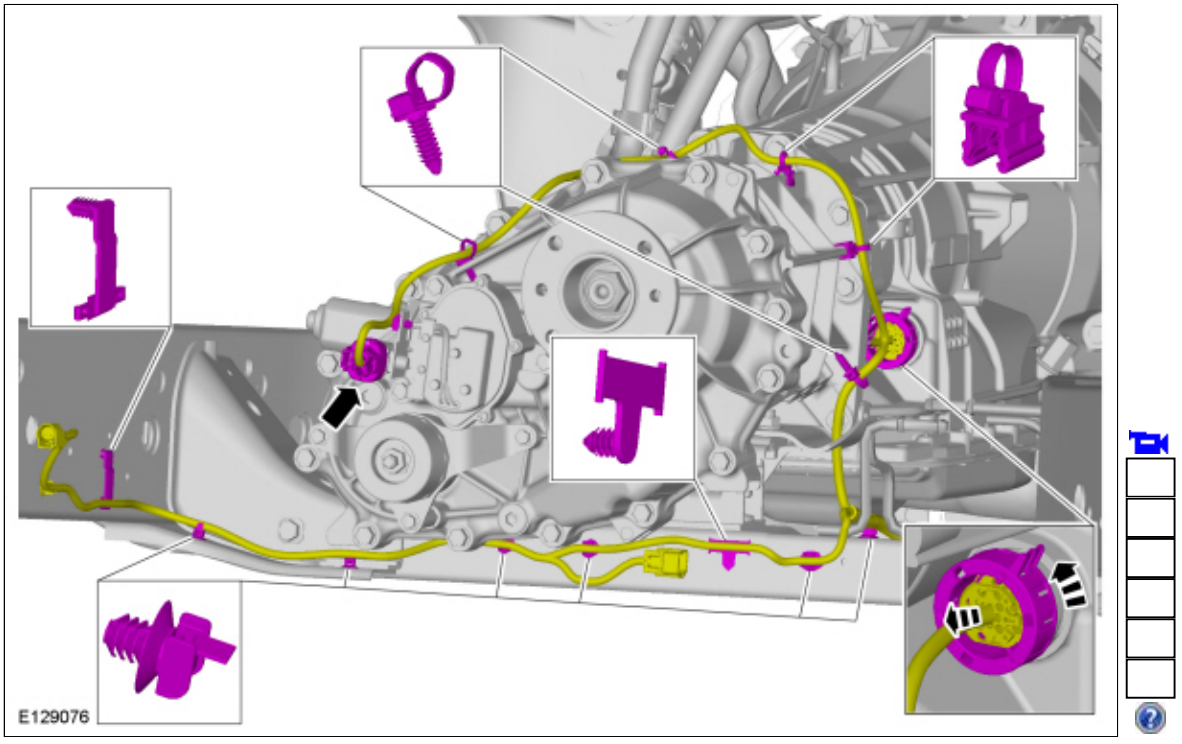


16. Remove Special Service Tool: 303-1310 Holding Wrench, Crankshaft.
Torque: 48 Nm



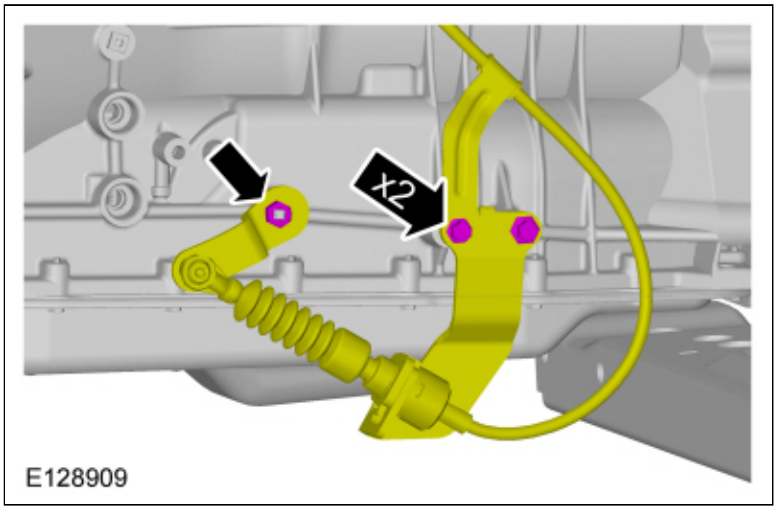
17. *Torque*: 48 Nm

18.



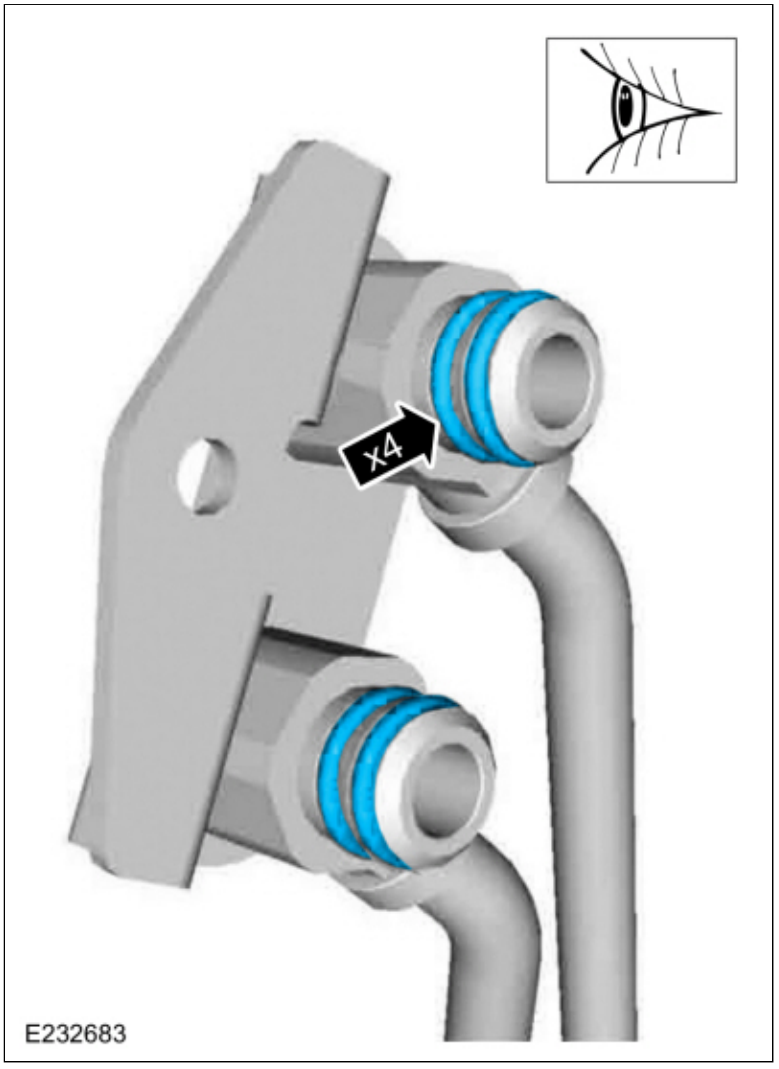
19. *Torque*: 25 Nm

20. Refer to: Diesel Particulate Filter (DPF) - Emission Requirements: EURO Stage V LDT (309-00B Exhaust System - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).



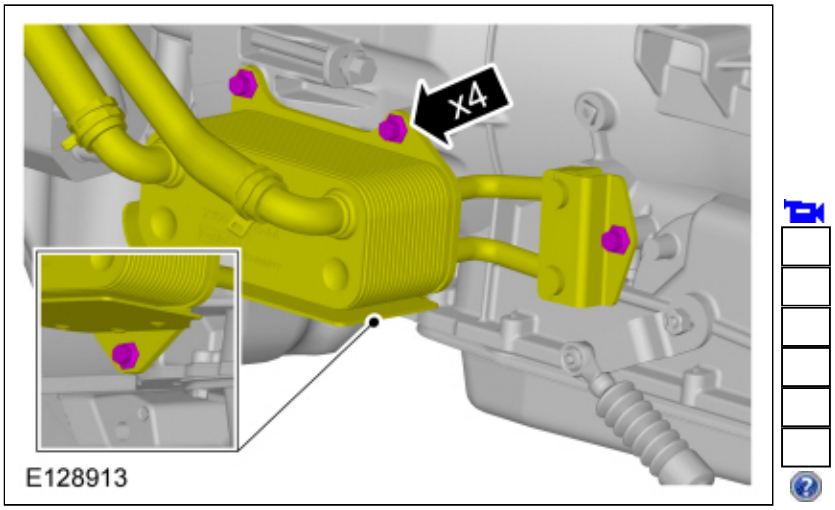
21.

22. **NOTICE: Take extra care when handling selector lever cable.**



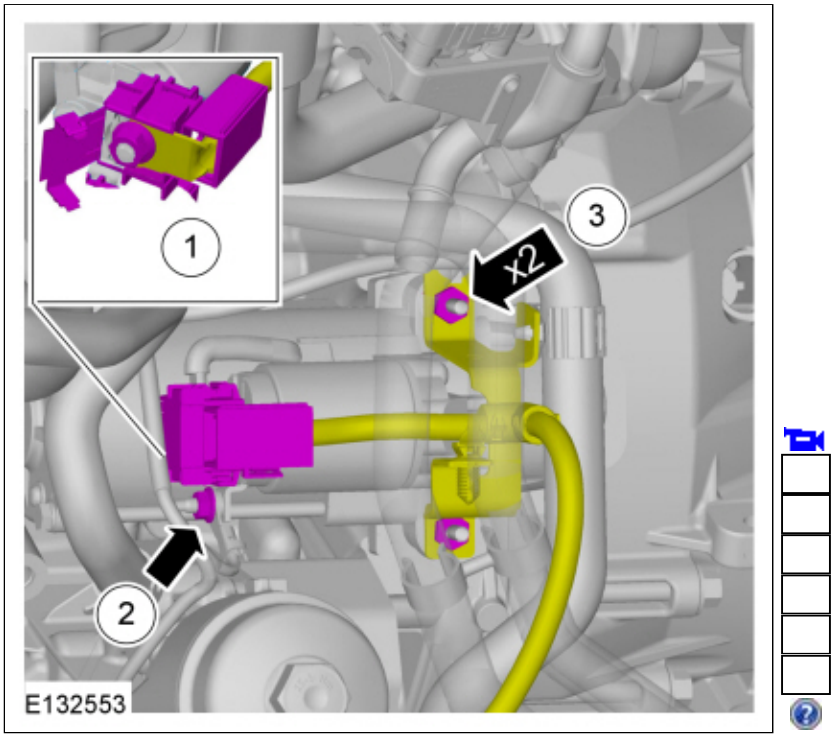
NOTE: *Make sure that the component is installed to the position noted before removal.*

Torque: 25 Nm



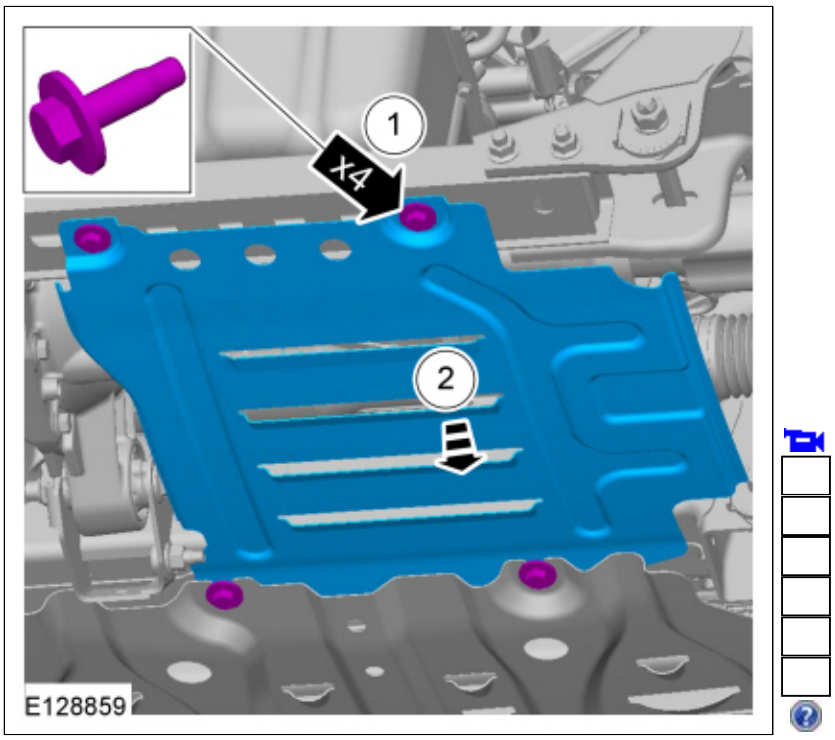
23. **NOTE:** *Make sure that a new component is installed if the O-ring is damaged.*

    NOTE: *Inspect the case to make sure that the old transmission fluid cooler tube O-rings are not stuck in the case.*



24. *Torque*: 20 Nm

25. *Torque*: 35 Nm



26. *Torque*:
    1: 10 Nm
    2: 10 Nm
    3: 10 Nm

27. Install the rear driveshaft.
    Refer to: Rear Driveshaft (205-01 Driveshaft, Removal and Installation).

28. Install the front driveshaft.
    Refer to: Front Driveshaft - 4WD (205-01 Driveshaft, Removal and Installation).

29. *Torque*: 30 Nm

30. Connect the battery ground cable.
    Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).

31. Verify that the selector lever cable is correctly adjusted.
    Refer to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures).

32. After completing the repairs, perform the Misfire Monitor Neutral Profile Correction procedure using a diagnostic scan tool.

33. If a new transmission or a new main control was installed, the solenoid body strategy must be updated.
    Refer to: Transmission Strategy Download (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, General Procedures).

34. If the transmission was overhauled, the adaptive drive cycle must be updated.
    Refer to: Adaptive Learning Drive Cycle (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80)
    .

35. Program the TCM with the latest calibration.

36. While driving the vehicle, use the scan tool to verify that the TFT has reached a temperature of 96.7ºC-102ºC (206ºF-215ºF). This will circulate the transmission fluid through the torque converter and the transmission fluid cooling system, eliminating any trapped air in the transmission fluid cooling system.

37. Check the transmission fluid level.
    Refer to: Transmission Fluid Drain and Refill (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, General Procedures).

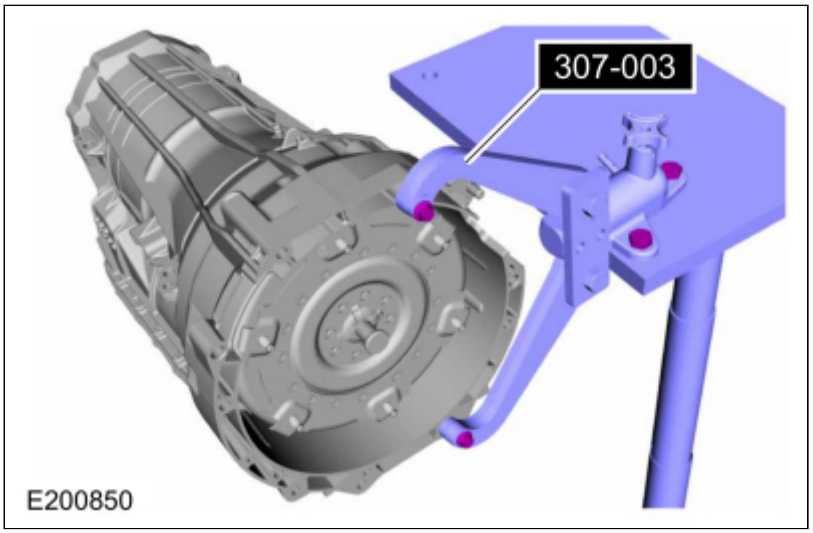
Transmission

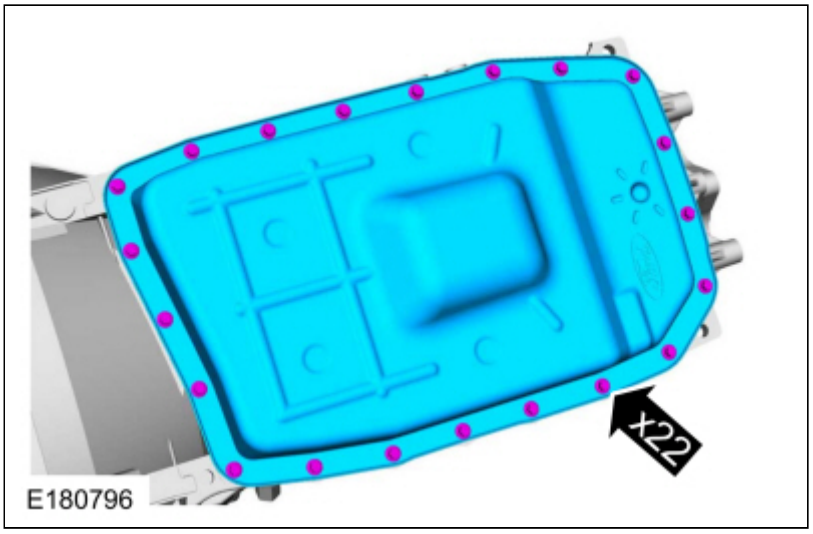


Base Part Number: 7000

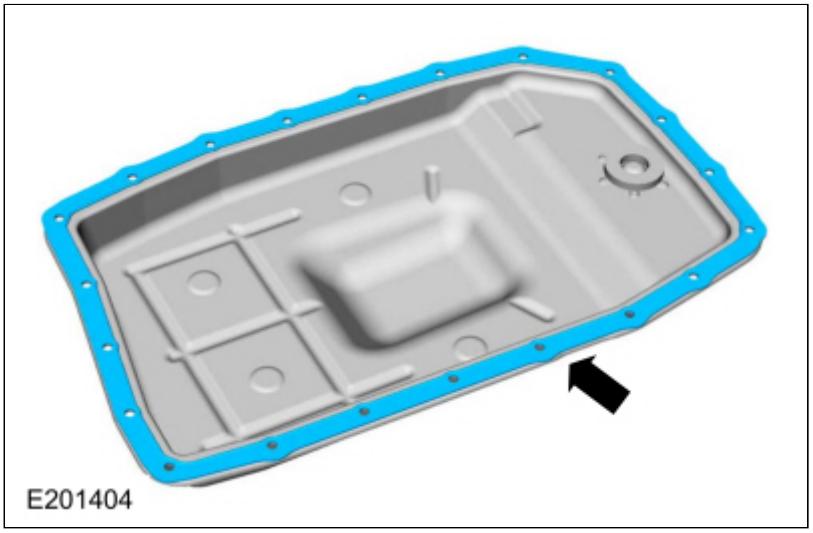
Special Tool(s) / General Equipment

 E129694	100-001 (T50T-100-A) Slide Hammer
 14046	205-256 Installer, Front Wheel Hub Seal
 307-003	307-003 (T57L-500-B) Holding Fixture, Transmission
 E142010	307-091 Handle, Torque Converter
 E142013	307-343 Retaining Ring Pliers
 E142017	307-553 Remover, Transmission Fluid Pump
 E142022	307-562 Remover, Needle Bearing
 E173280	307-717 Remover, Kostal Sleeve
	308-375 Remover, Input Shaft Seal

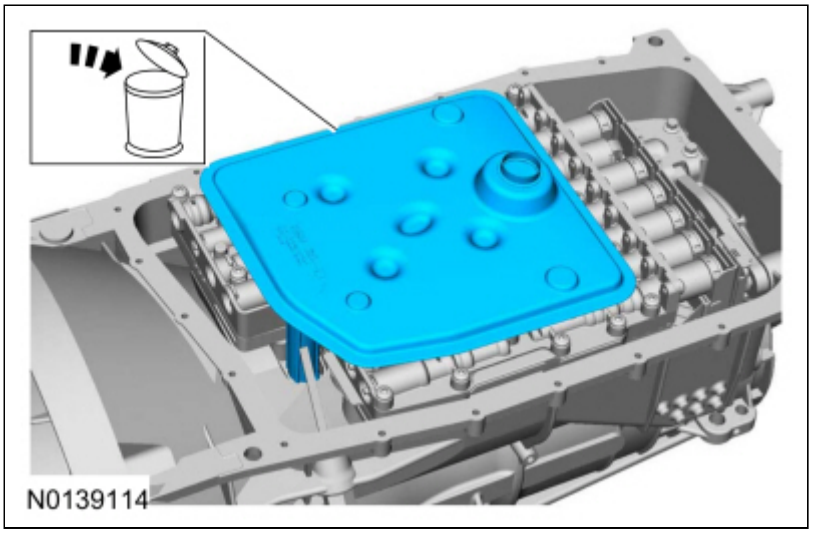
	
Punch	



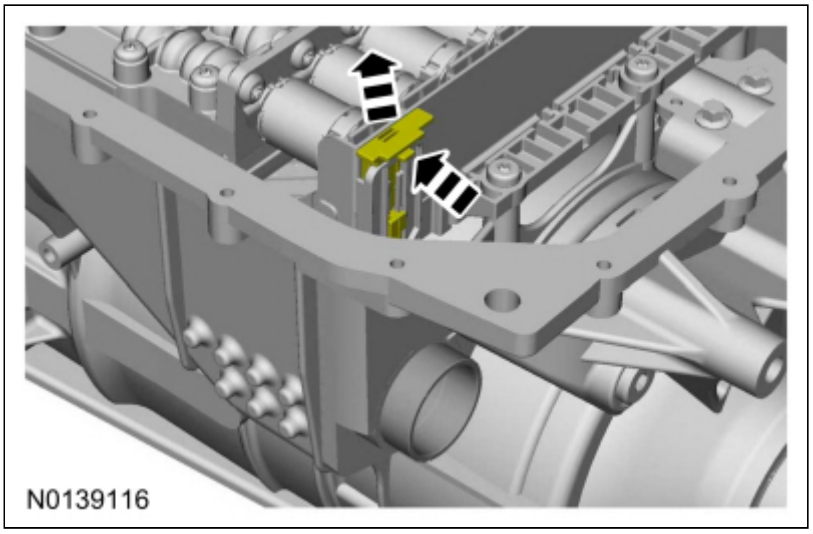
1. Install Transmission Holding Fixture on the torque converter housing and install the transmission on a bench.
   Use Special Service Tool: 307-003 (T57L-500-B) Holding Fixture, Transmission.



2. Using the Torque Converter Handle, remove the torque converter.
   Use Special Service Tool: 307-091 Handle, Torque Converter.

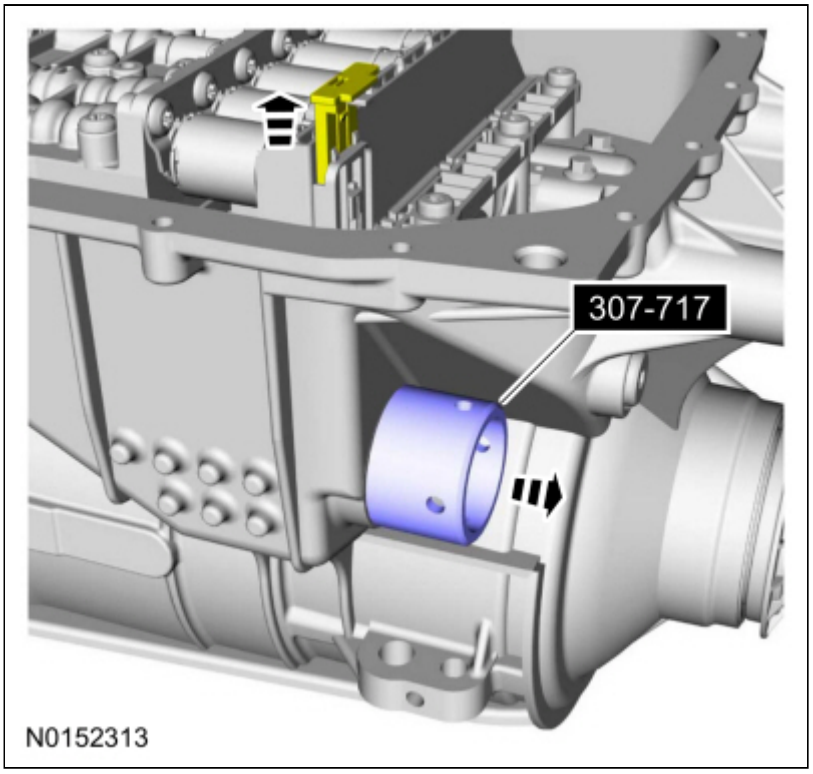


3. Remove the transmission fluid pan bolts and the pan.

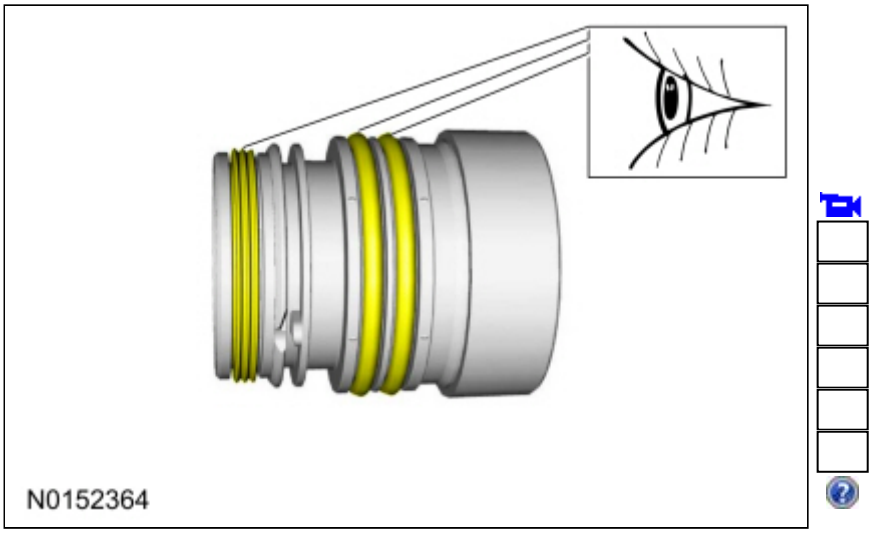


4. Remove the transmission fluid pan gasket.

5. Remove and discard the transmission fluid filter.

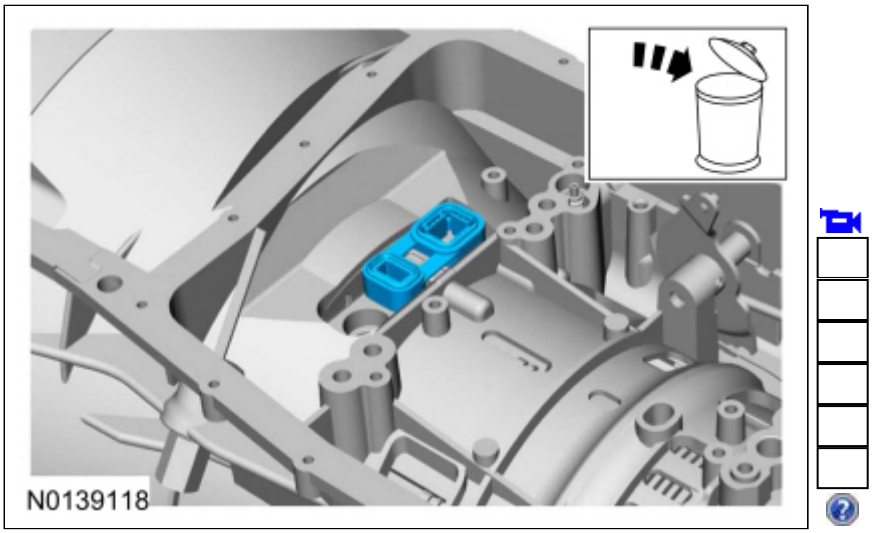


6. Press the release tab and lift up on the bulkhead connector retainer to release the bulkhead connector shell.



7. **NOTICE: Do not touch the electrical connector pins or the exposed solenoid tabs on the Transmission Control Module (TCM). Electrostatic discharge may occur and cause damage to the mechatronic unit.**

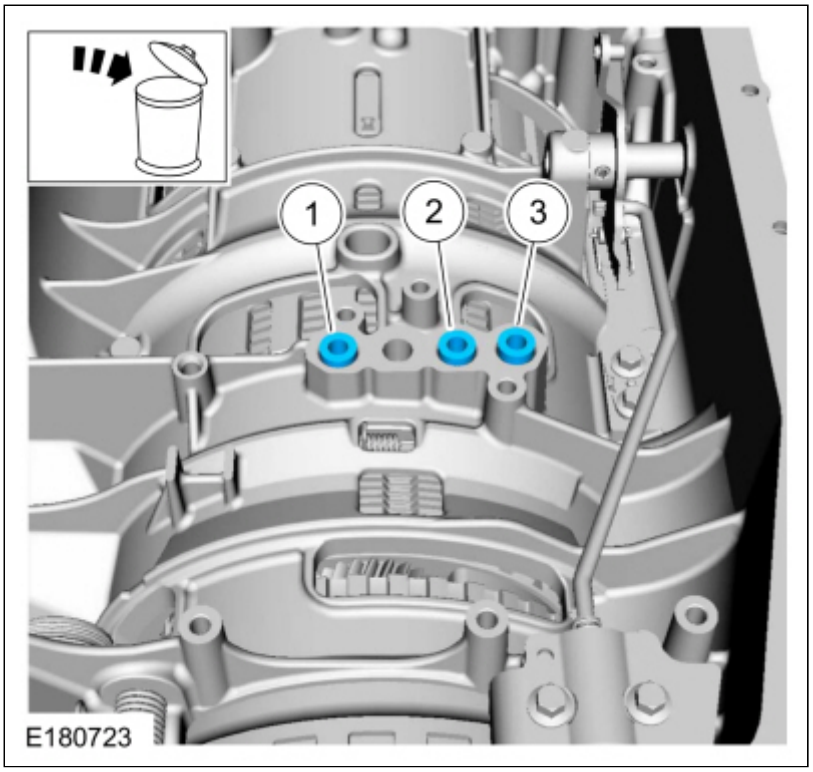
   With the transmission bulkhead connector sleeve retainer released, use the special tool to pull the outer shell of the bulkhead connector sleeve out of the transmission.
   Use Special Service Tool: 307-717 Remover, Kostal Sleeve.



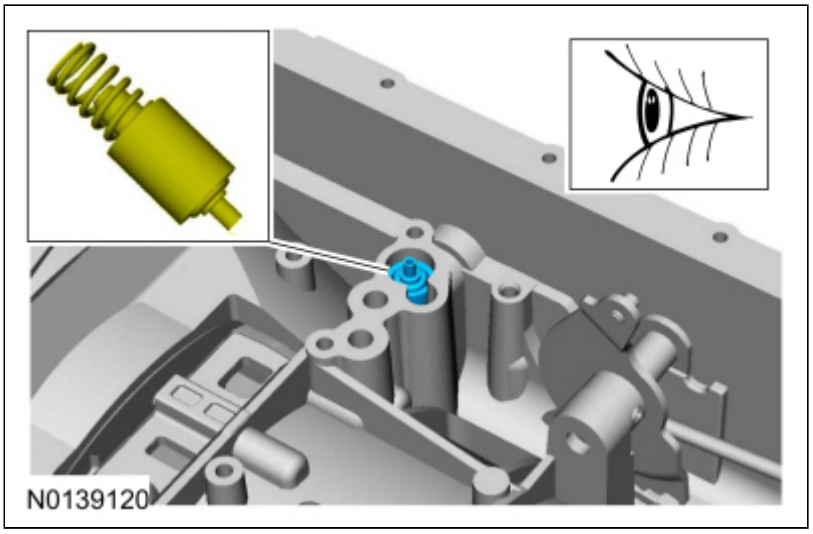
8. Inspect the bulkhead connector sleeve seals. If necessary, replace the seals.

9. Remove the bolts from the main control assembly and remove the main control assembly.

10. Remove the rubber adapter and the fluid filter seal. Inspect for crack or damages.

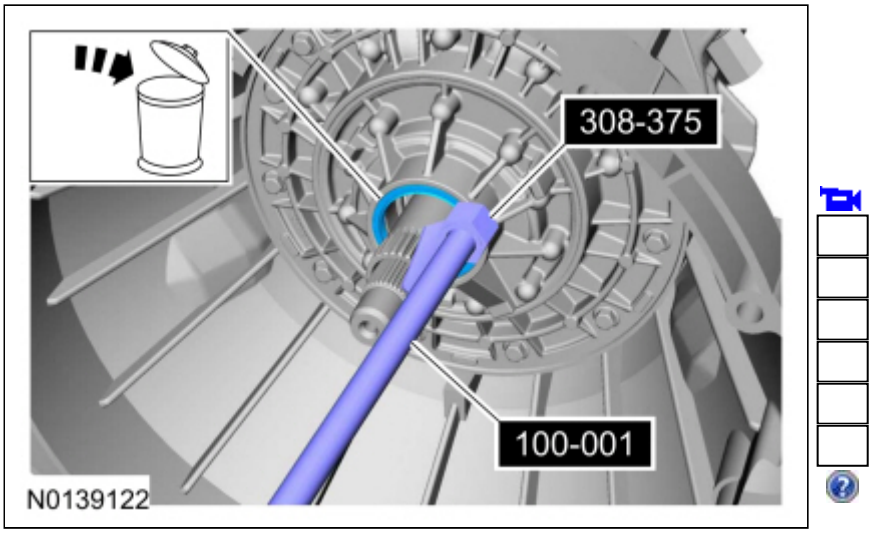


11. **NOTE:** *The green (7G087) center support feed tube seal may be replaced with an orange (7G087) center*

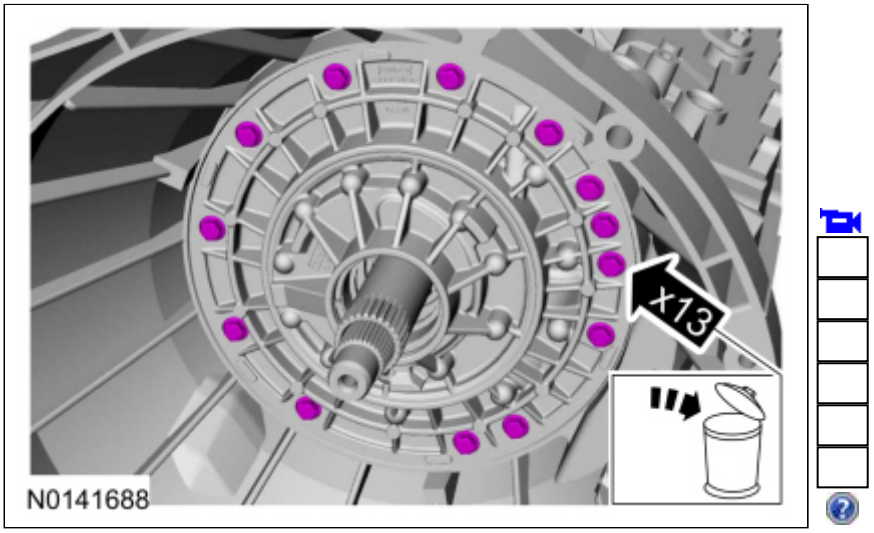


support feed tube seal.

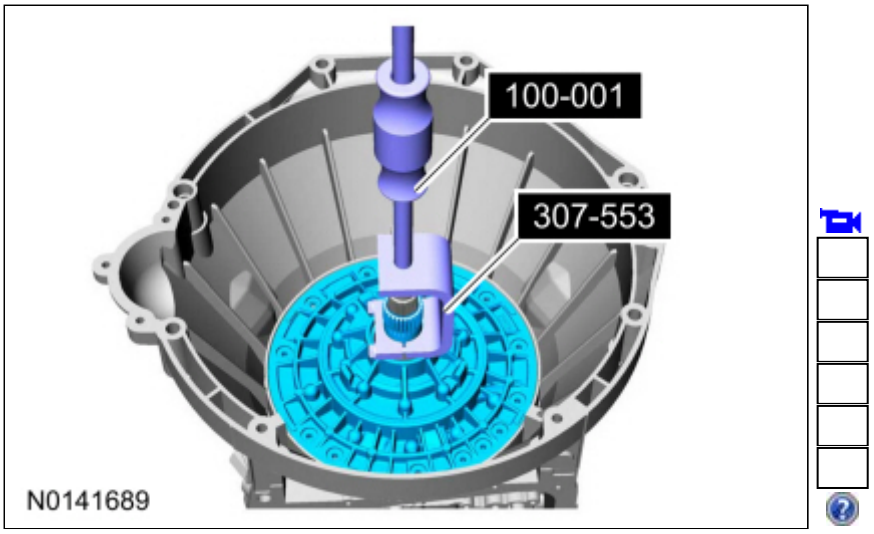
1. Center support feed tube seal (7G199 Black)
2. Center support feed tube seal (7G087 Green or Orange)
3. Center support feed tube seal (7G084 Blue)



- Remove and discard the feed tubes.

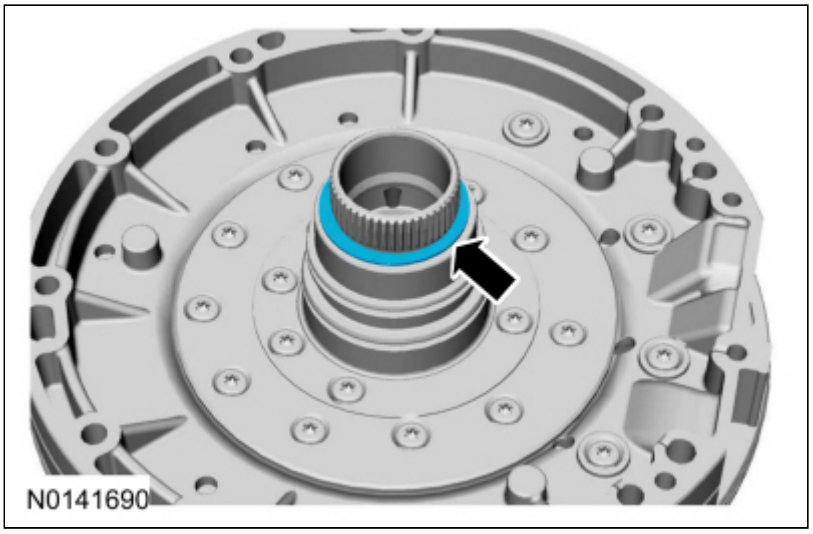


12. Remove the thermal bypass valve from the case. Inspect the thermal bypass valve for damage and discard the valve if damaged.

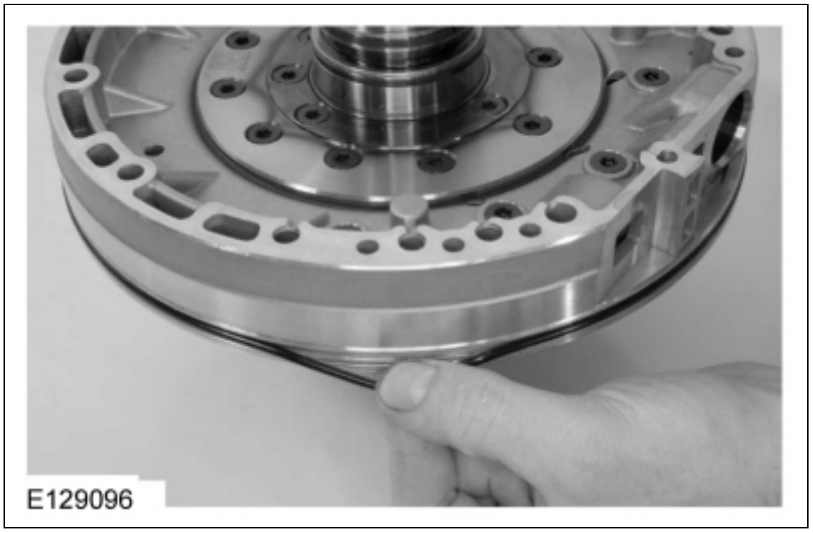


13. Using the Input Shaft Oil Seal Remover and Slide Hammer, remove and discard the front pump seal.
    Use Special Service Tool: 308-375 Remover, Input Shaft Seal. , 100-001 (T50T-100-A) Slide Hammer.

14. Remove and discard the 13 front pump bolts.

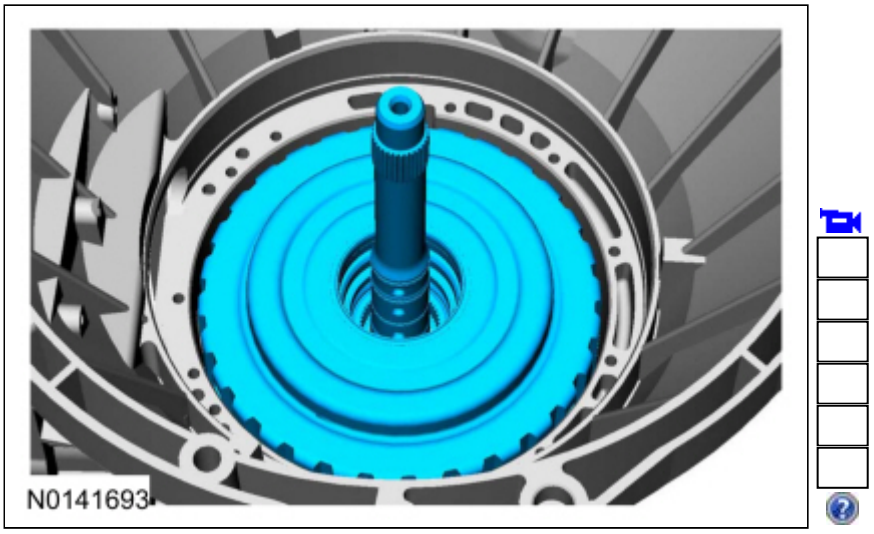


15. Using the Transmission Fluid Pump Remover and Slide Hammer, remove the front pump support.
    Use Special Service Tool: 307-553 Remover, Transmission Fluid Pump. , 100-001 (T50T-100-A) Slide Hammer.

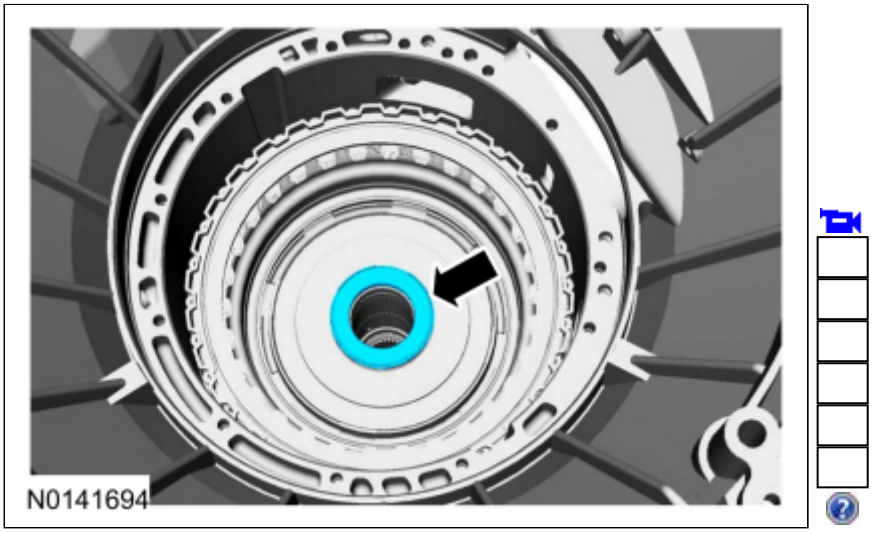


16. **NOTE:** *The selective shim may come out while removing the front pump.*

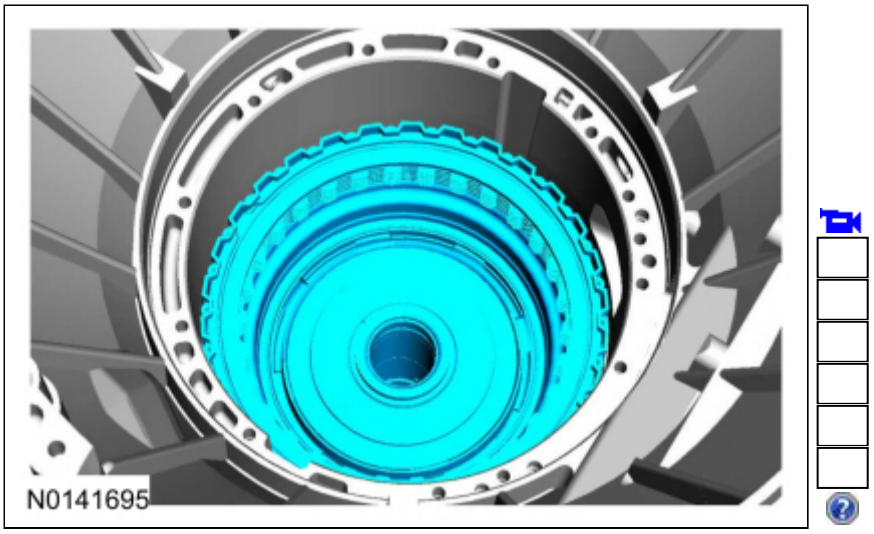
    Inspect the back of the front pump to check if the selective shim is on the pump. If the selective shim is on the pump, remove it from the pump.



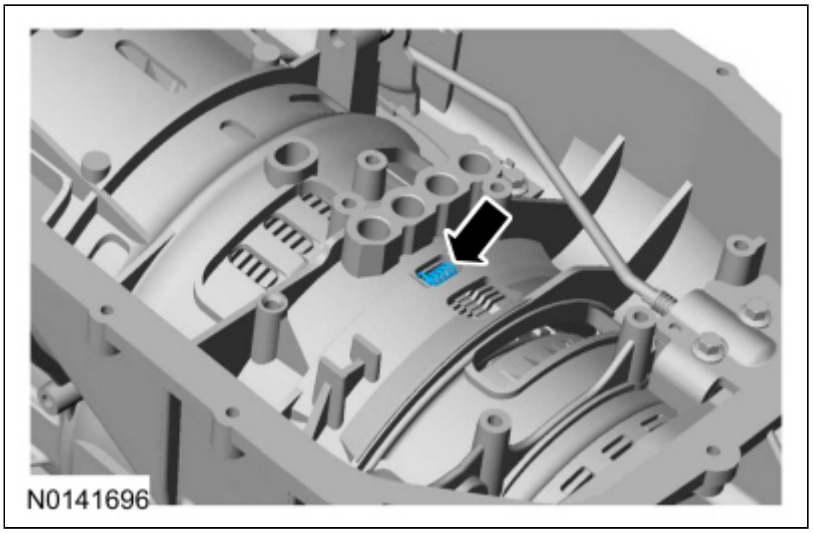
17. Remove and discard the front pump O-ring seal.



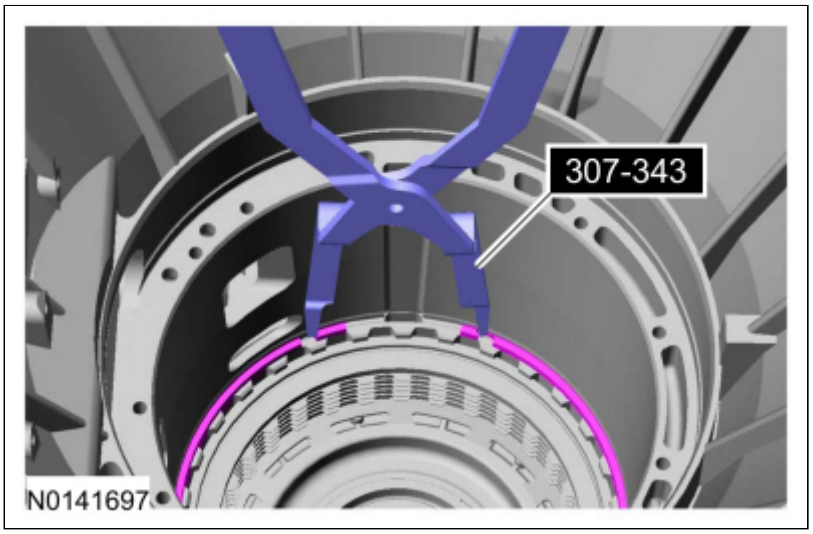
18. If the selective shim is not on the pump, using a magnet, remove it from the forward (A)/overdrive (E) clutch assembly.



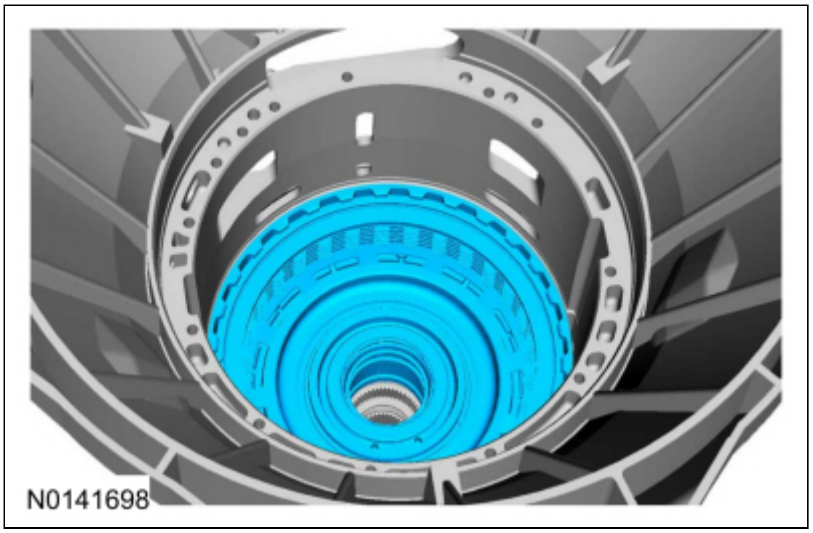
19. Remove the forward (clutch A)/overdrive (clutch E) clutch assembly.



20. Remove the caged T5 roller bearing from the direct (B) clutch assembly.

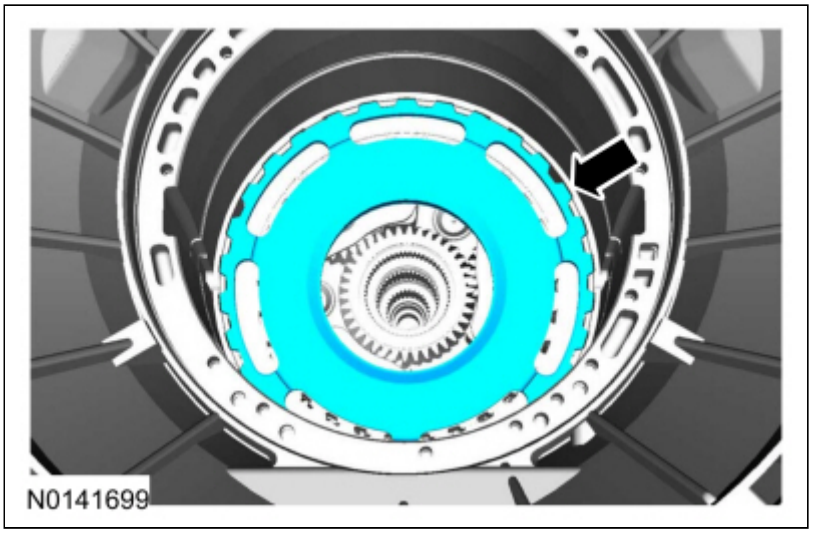


21. Remove the direct (B) clutch assembly.



22. Remove the bias spring.

23. Using the Retaining Ring Pliers, remove the center support snap ring.
    Use Special Service Tool: 307-343 Retaining Ring Pliers.

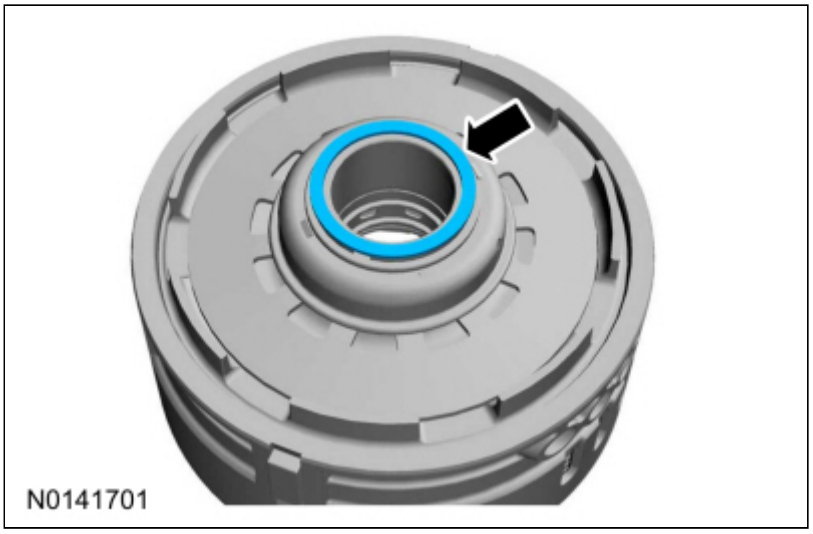


24. Remove the center support and T6 bearing.

25. **NOTE:** *If the thrust bearing stuck to the back of the center support during removal, remove the thrust bearing from the center support.*

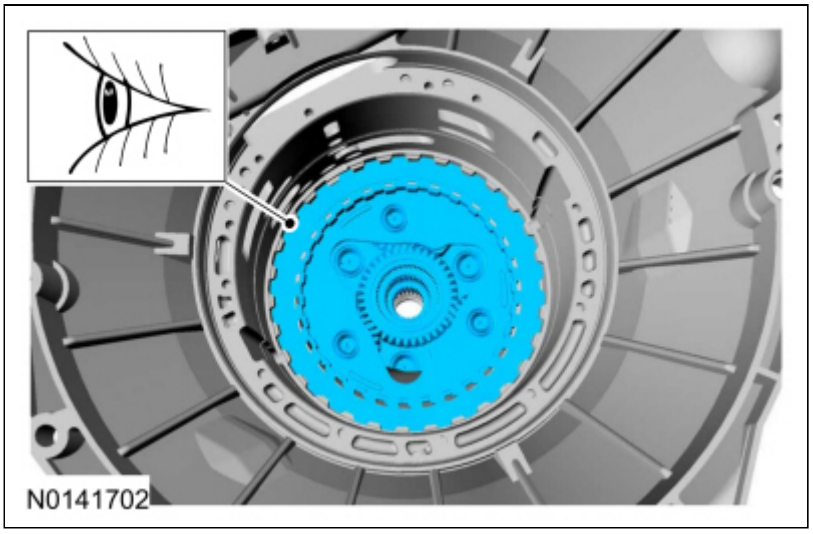
    When Removing the selective shim, note the position for assembly.

    Remove the selective shim from the center support.



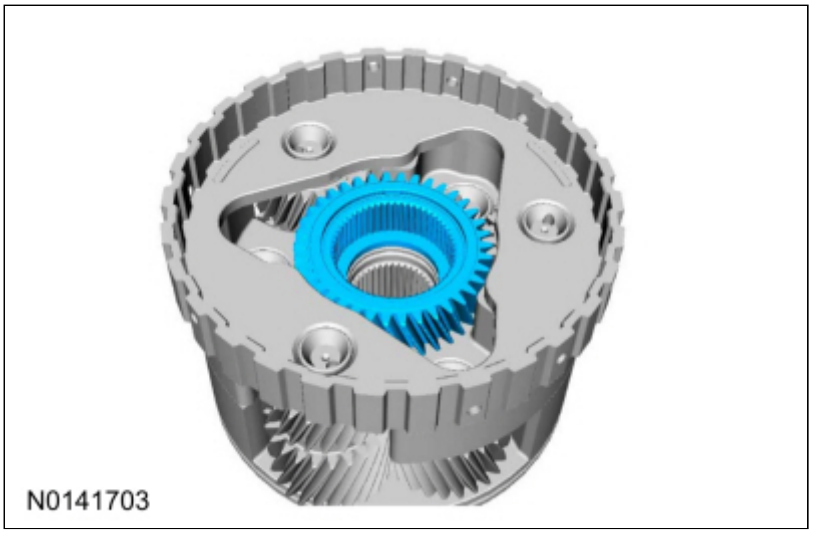
26. **NOTE:** *The selective shim might stick to the T7 thrust bearing during removal of the center support.*

    Remove the selective shim and the T7 thrust bearing.



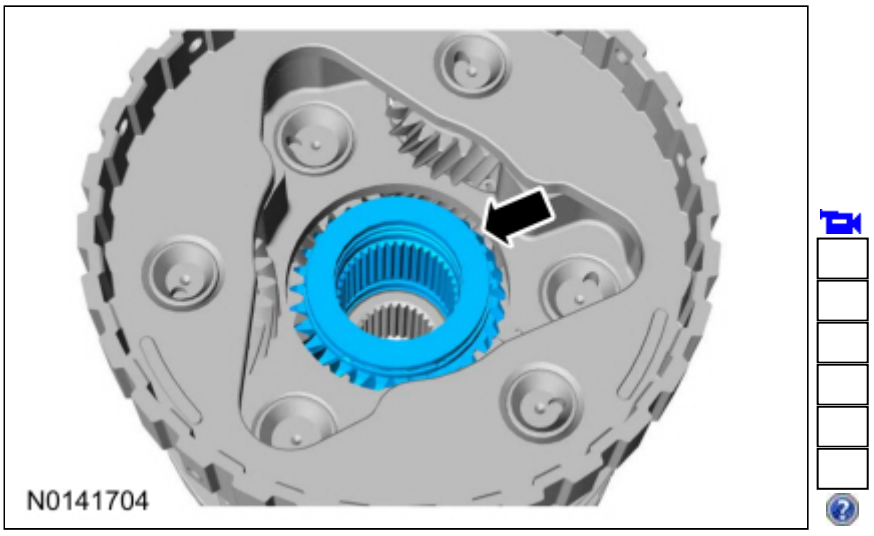
27. **NOTE:** *The selective shim might stick to the back of the center support assembly during removal.*

    Remove the selective shim from the center support assembly.

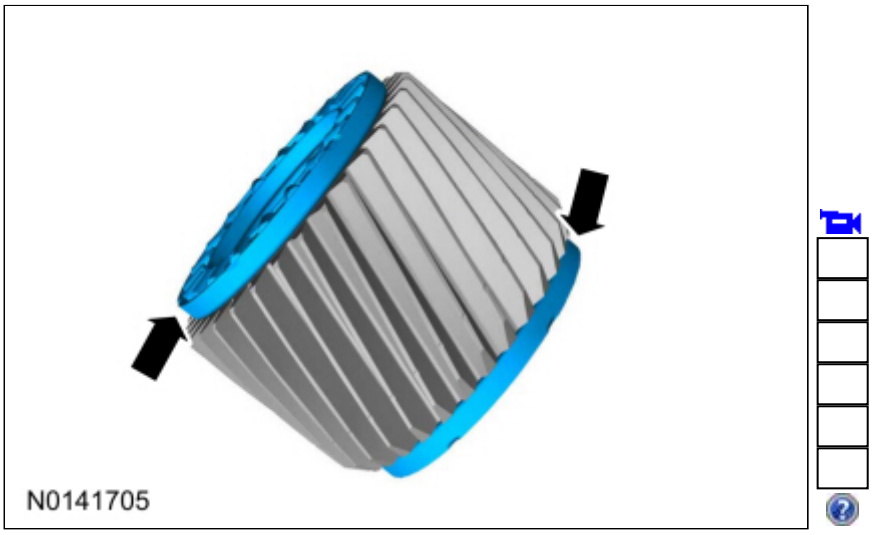


28. **NOTE:** *Some of the clutch plates may stay in the case when removing the planetary carrier and the low/reverse clutch pack. Remove any clutch plates from the transmission that were not removed with the carrier and keep the clutch plates together.*

    Remove the planetary carrier and the low/reverse clutch pack as an assembly.



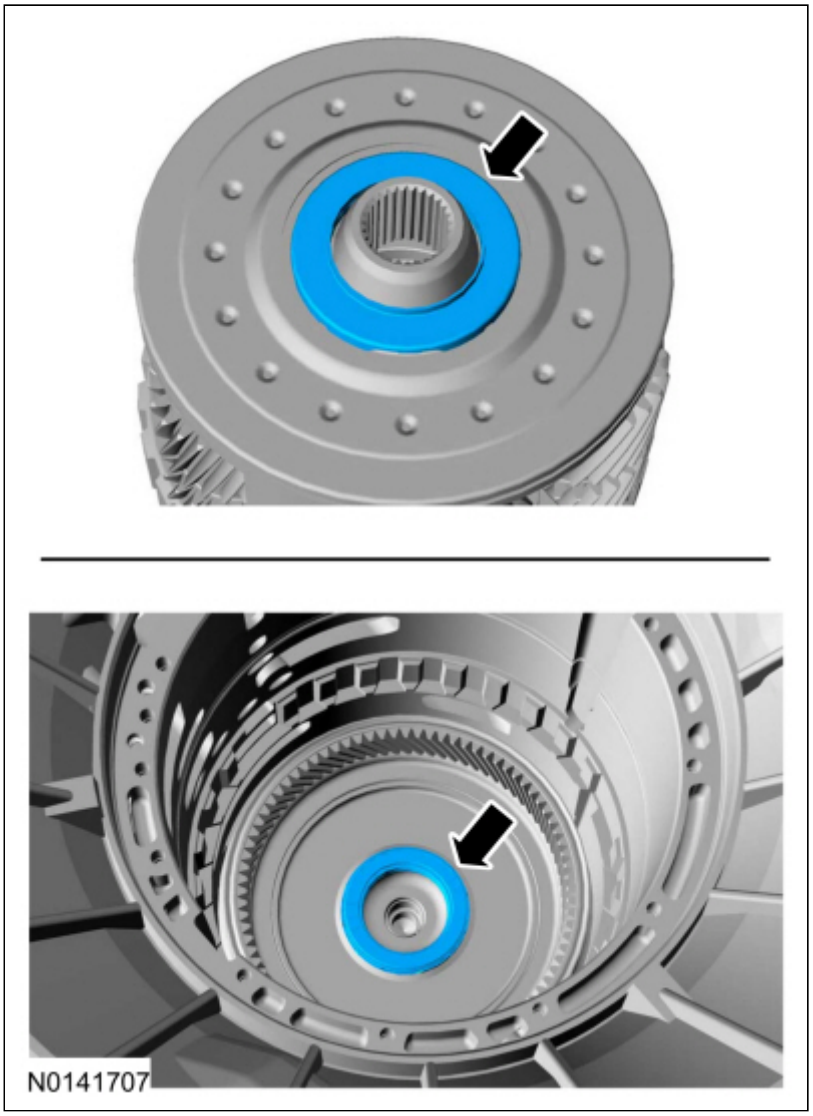
29. Remove the No. 2 sun gear and race.



30. **NOTE:** *Remove the bearings with the sun gear.*

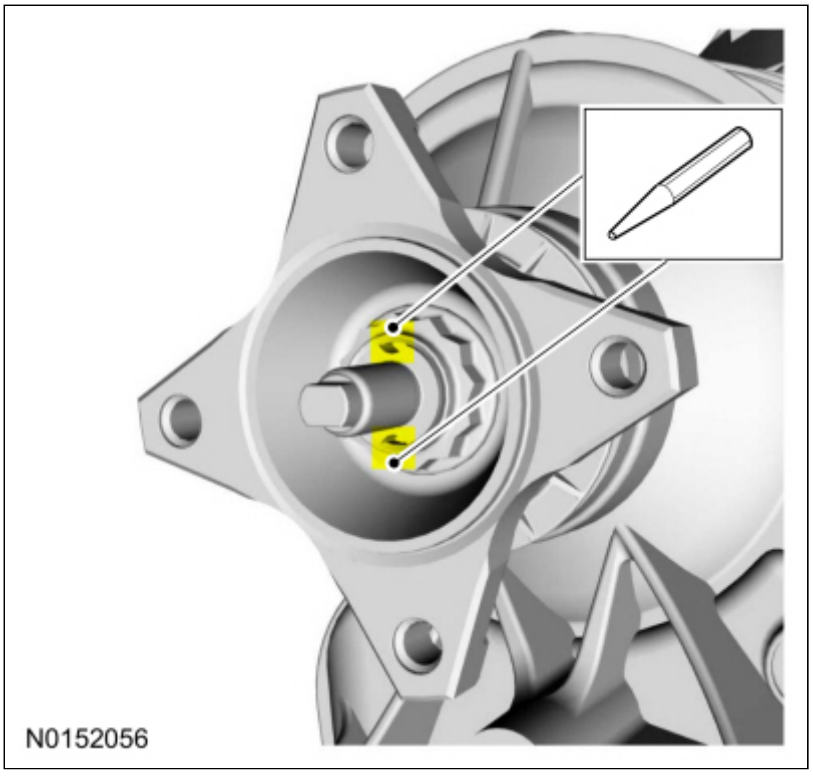
    NOTE: *When removing the sun gear, note that the tapered edge is facing up toward the torque converter housing.*

    Remove the No. 3 sun gear from the planetary assembly.

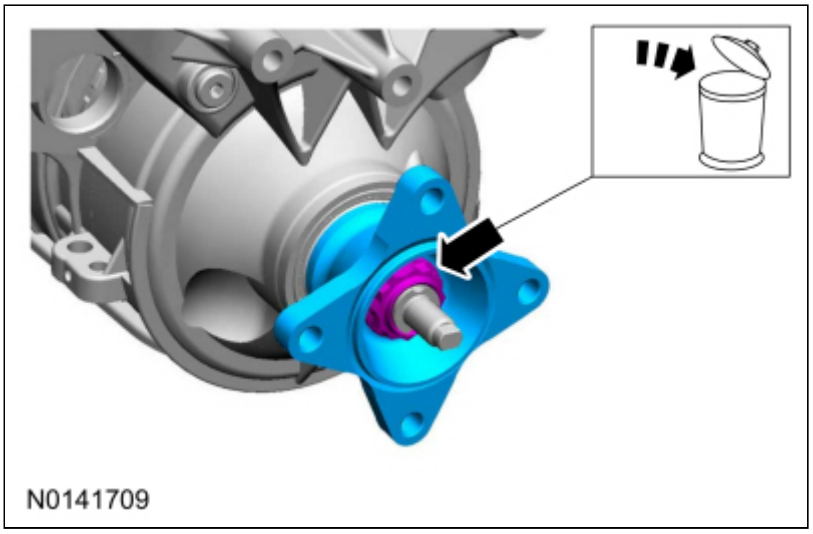


31. Remove the top T8 and the bottom T9 roller bearings from the sun gear.

32. Remove the T9 roller bearing race in the bottom of the carrier.

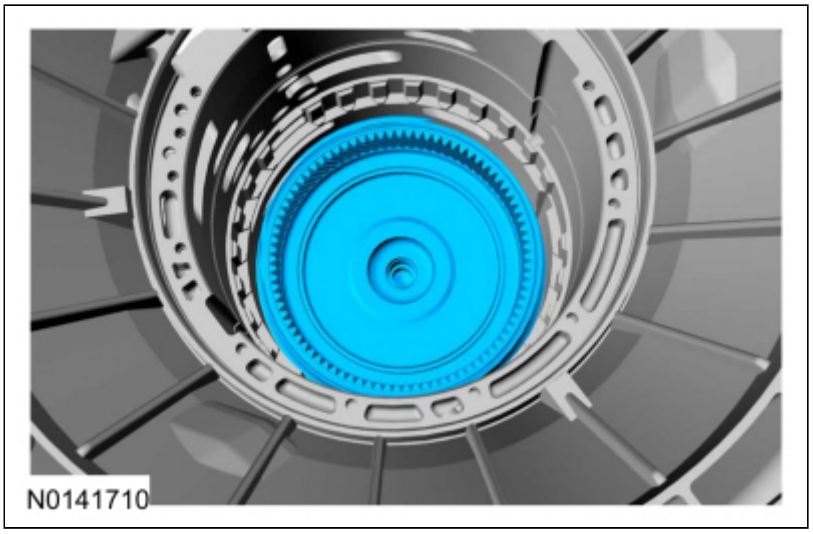


33. Remove the T10 thrust bearing from either the rear planetary carrier or the output shaft assembly.

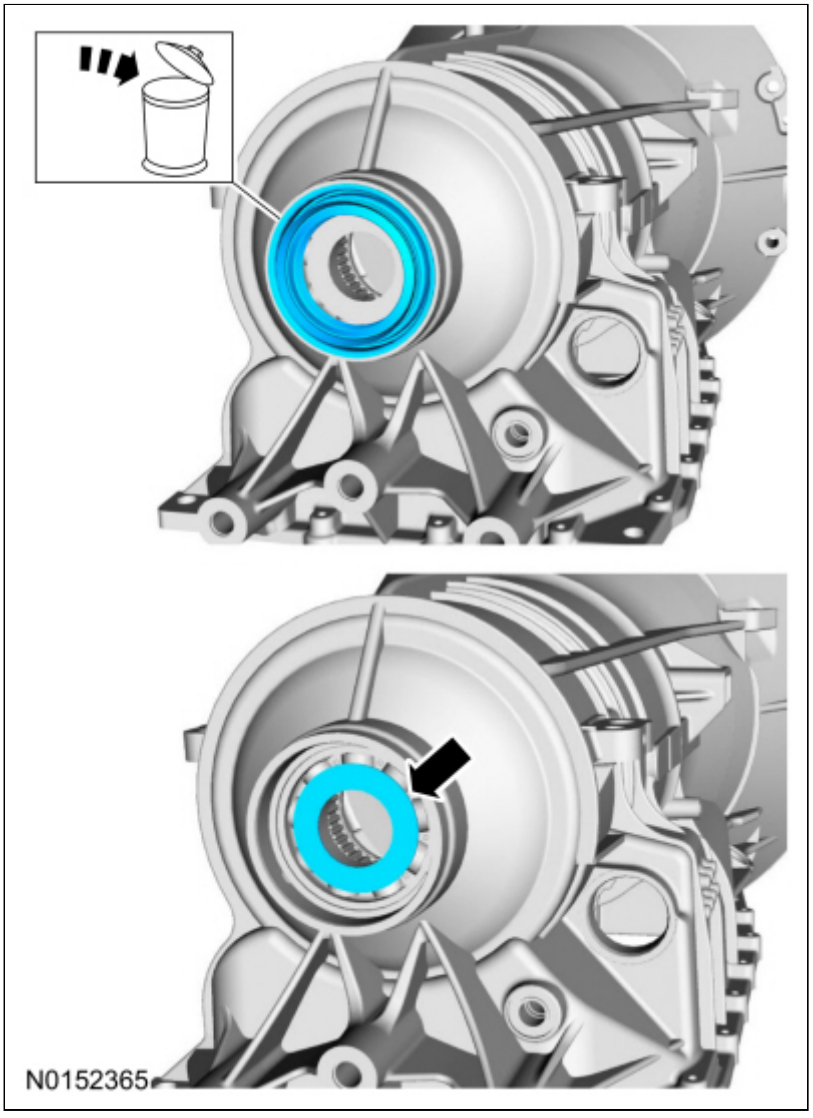


34. **NOTICE: The output shaft flange retaining nut has been staked to prevent it from coming loose. Prior to removing the nut, remove the stake to prevent damage to the output shaft.**

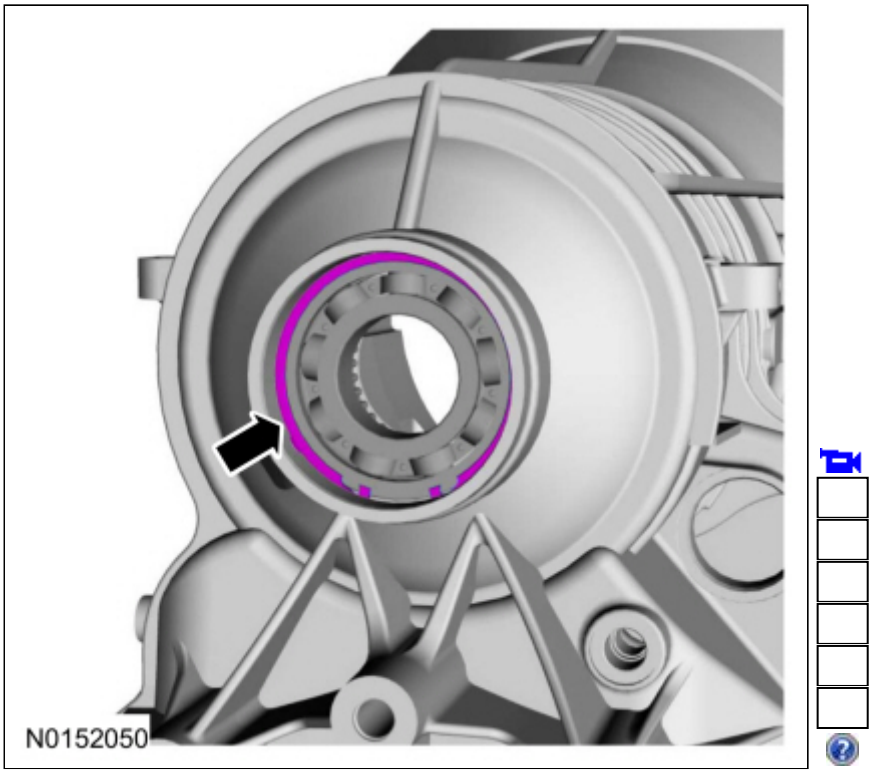
    Remove the stakes from the output shaft flange retaining nut.
    Use the General Equipment: Punch



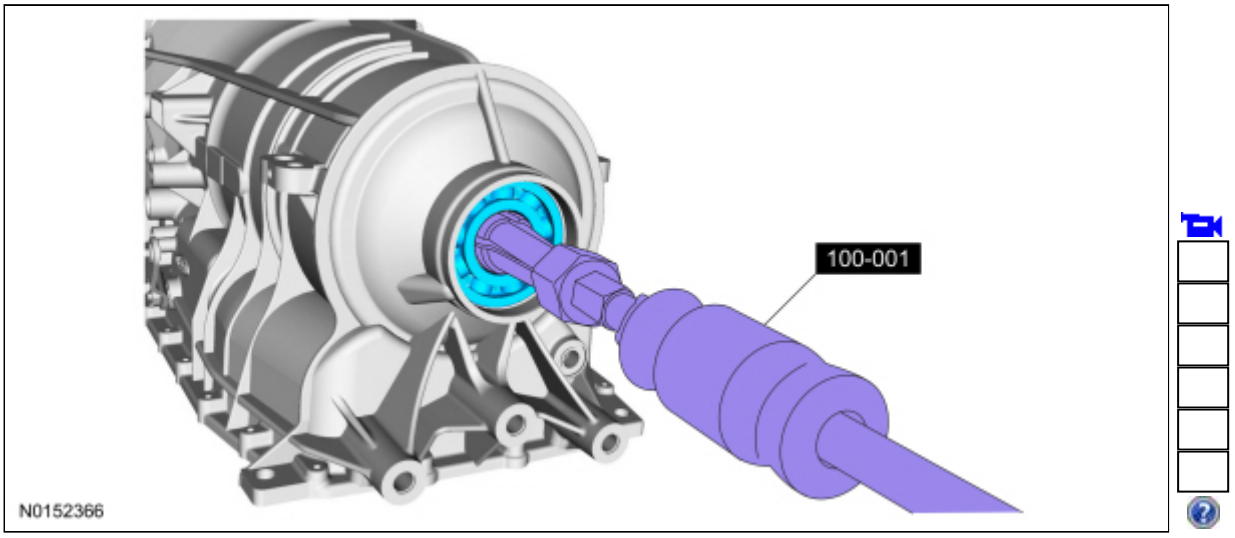
35. Place the manual control lever in the PARK position and remove and discard the output shaft flange retaining nut.



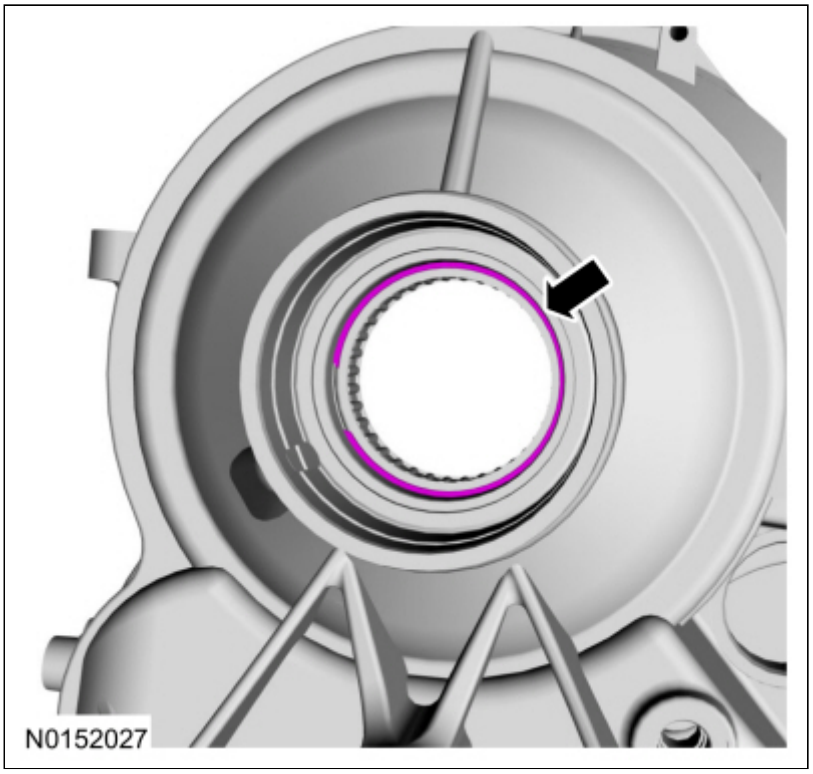
36. Remove the output shaft flange seal and flange.



37. Remove the planet carrier hub, output shaft assembly and T11 bearing.

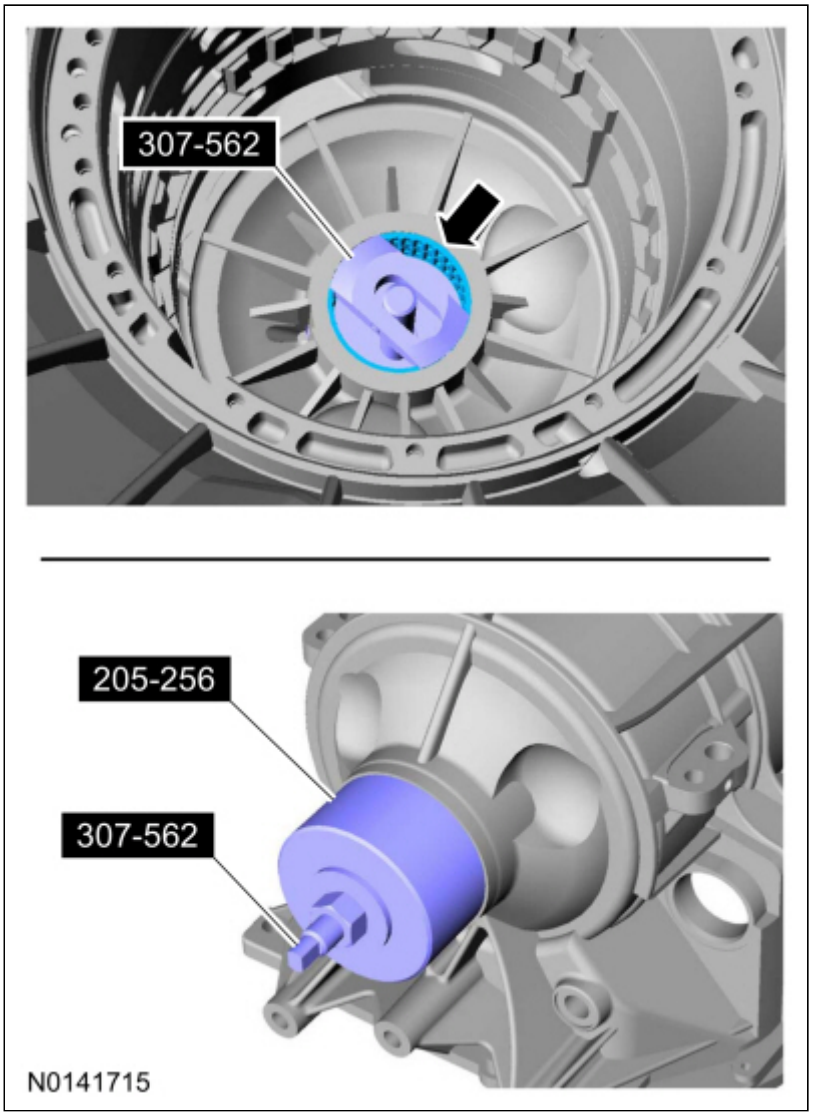


38. Remove and discard the output shaft seal and remove the slip plane washer.

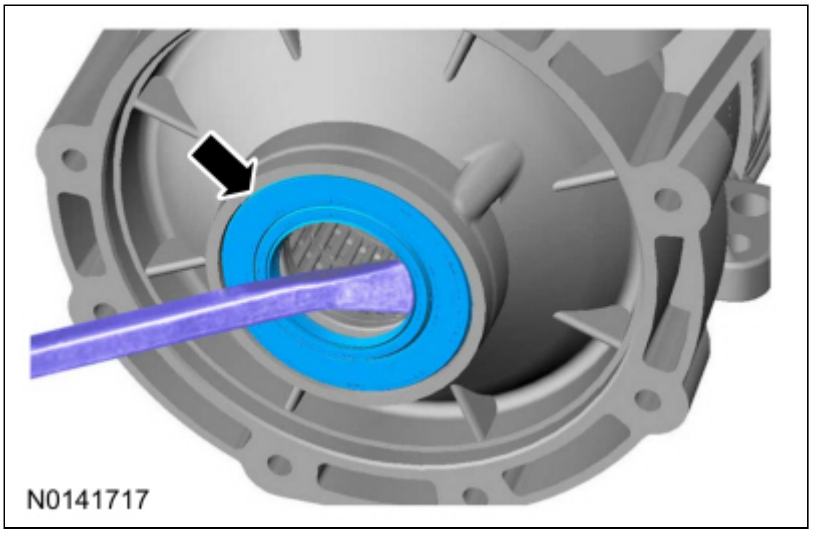


39. Remove the T12 thrust bearing.

40. Using the Slide Hammer, Actuator Pin 303-D012, Collet, 1 1/4 Inch to 1 1/2 Inch 303-D022, remove the output shaft ball bearing.

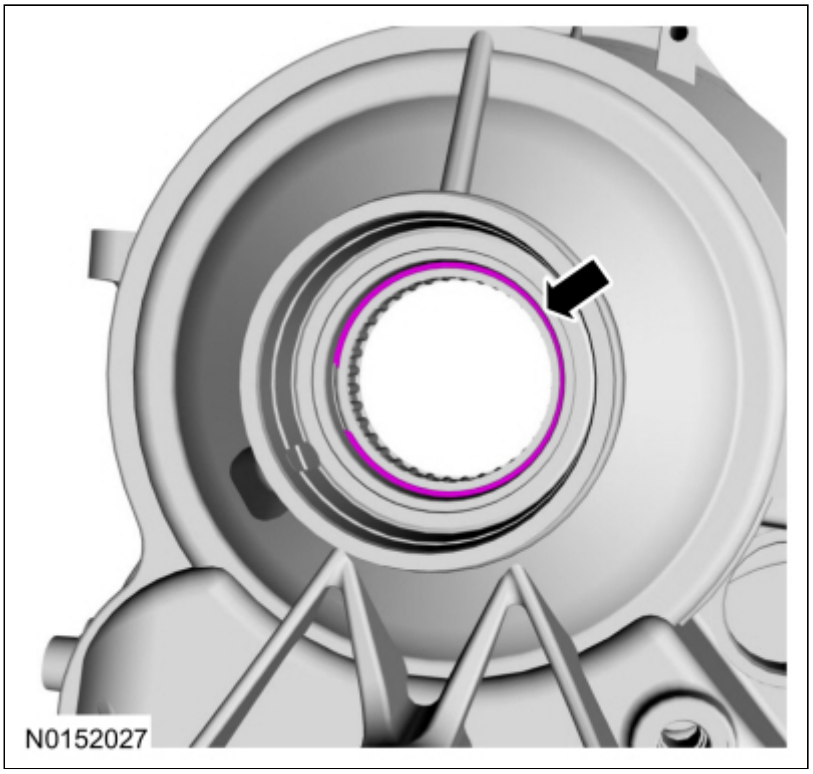


41. If equipped.
    - Remove the snap ring.



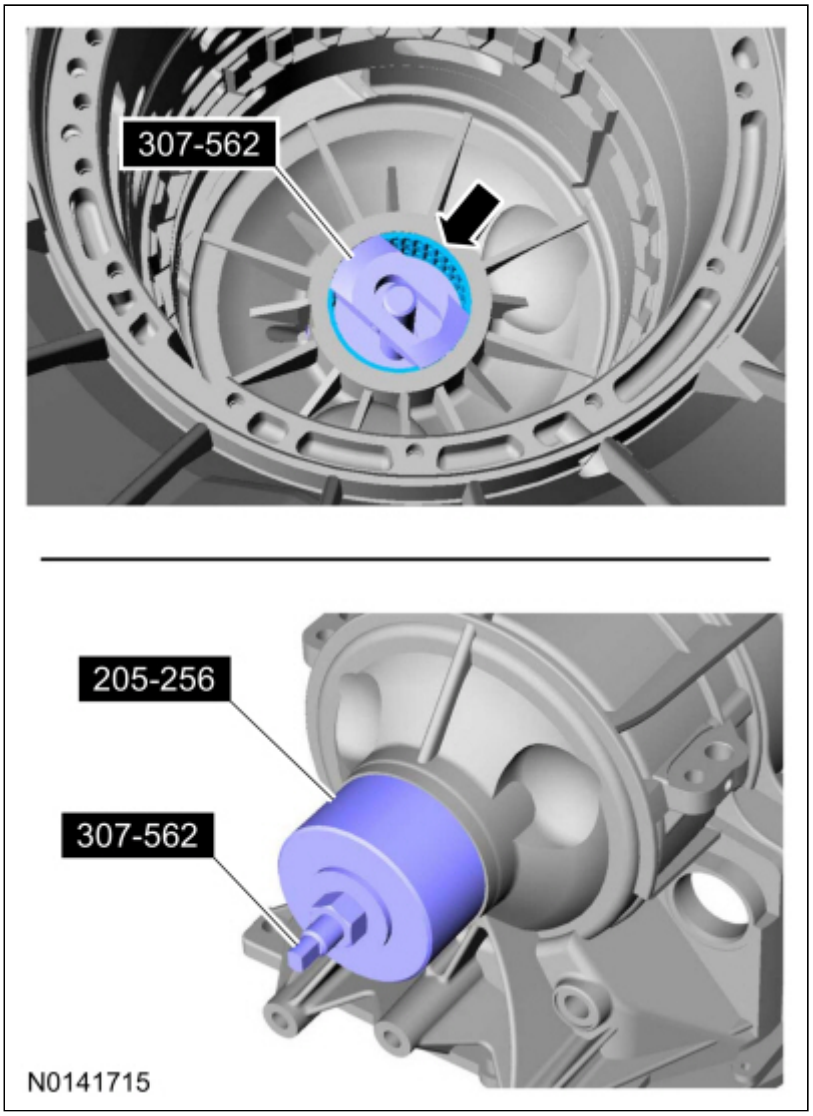
42. **NOTICE: Use care when installing the Needle Bearing Remover. Look inside the transmission case to make sure that the Needle Bearing Remover contacts the bearing only and not the lip of the case, or damage to the case will occur.**

    Install the special tools on the bearing and remove the bearing.
    Use Special Service Tool: 205-256 Installer, Front Wheel Hub Seal. , 307-562 Remover, Needle Bearing.

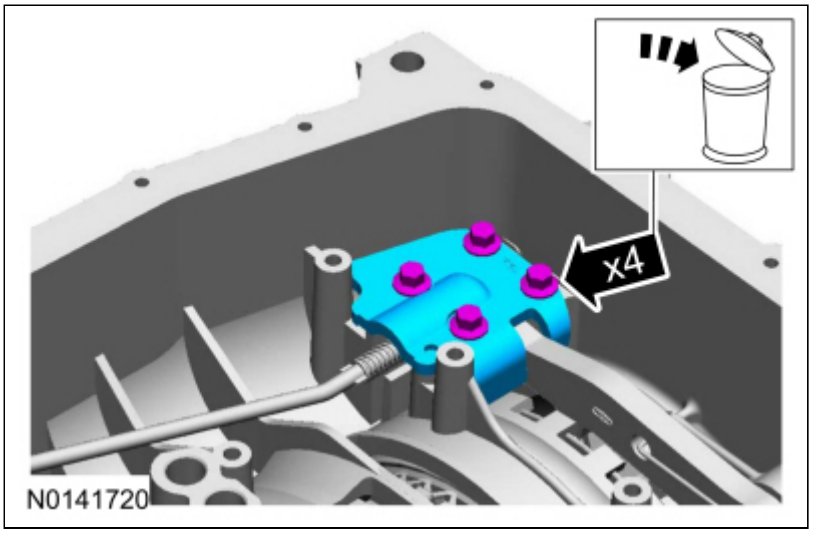


4x4

43. Remove and discard the output shaft seal.

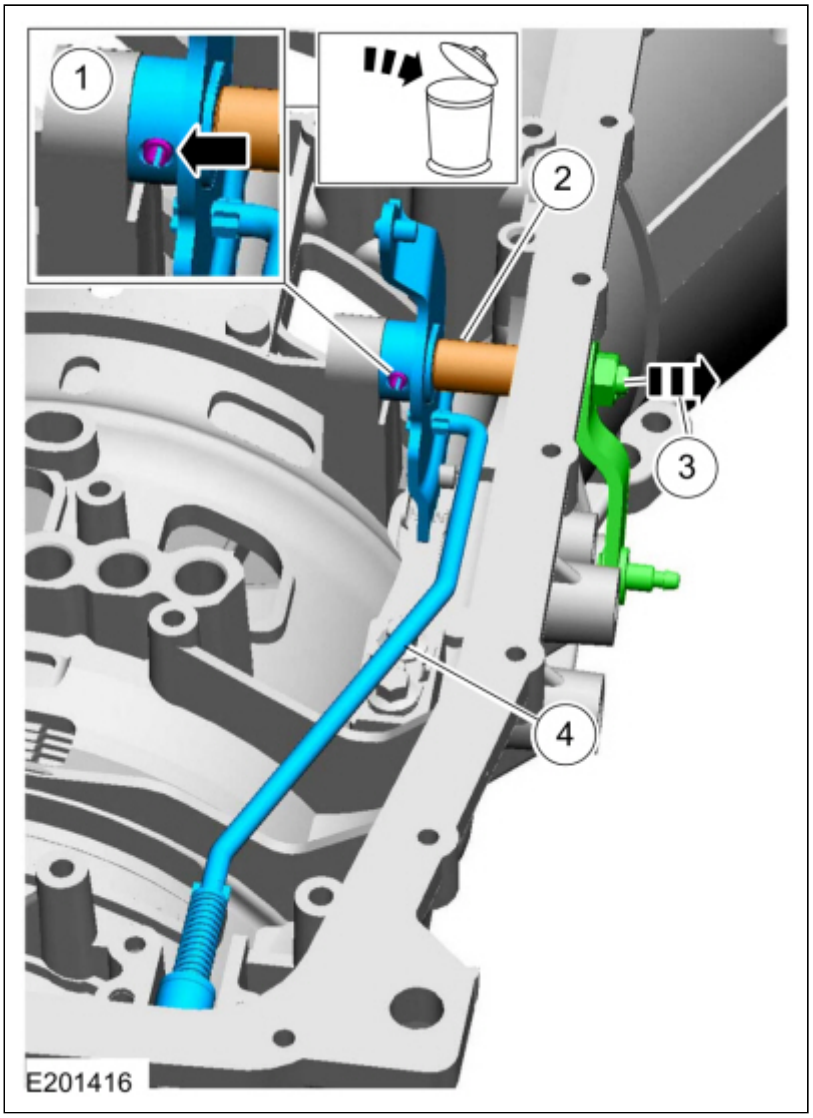


44. Remove the snap ring.

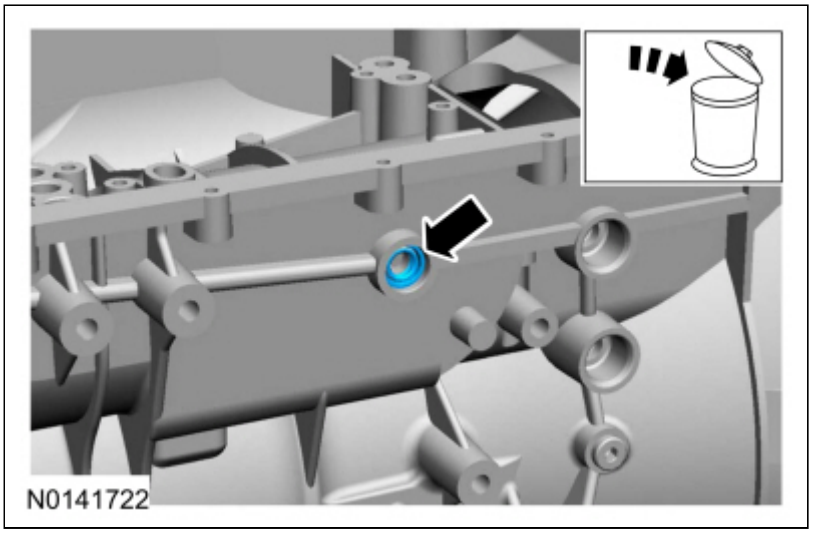


45. **NOTICE: Use care when installing the Needle Bearing Remover. Look inside the transmission case to make sure that the Needle Bearing Remover contacts the bearing only and not the lip of the case, or damage to the case will occur.**

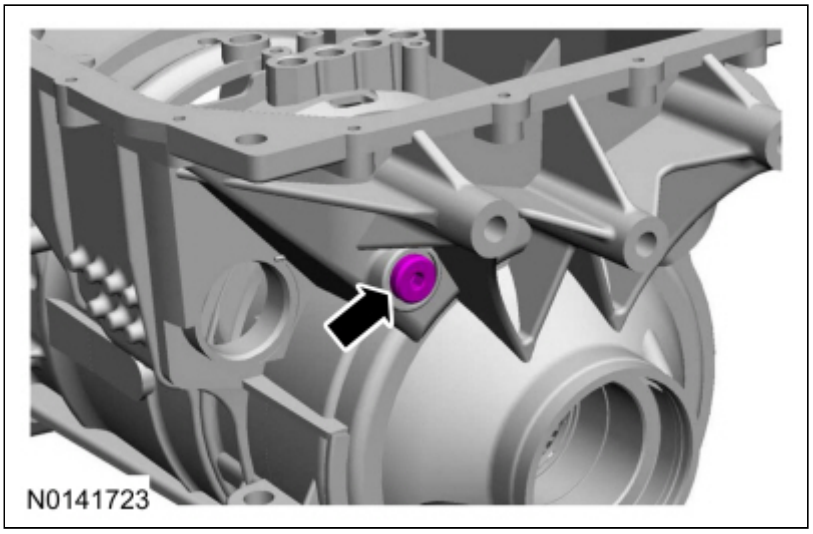
    Using the Needle Bearing Remover and the Front Wheel Hub Oil Seal Installer, remove the bearing assembly. Use Special Service Tool: 307-562 Remover, Needle Bearing. , 205-256 Installer, Front Wheel Hub Seal.



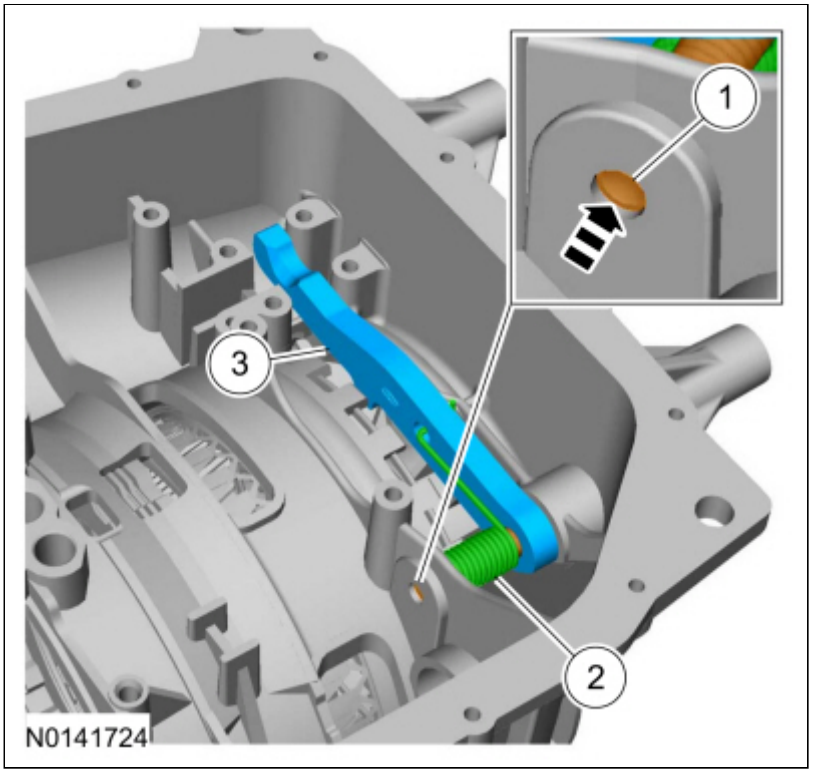
All vehicles



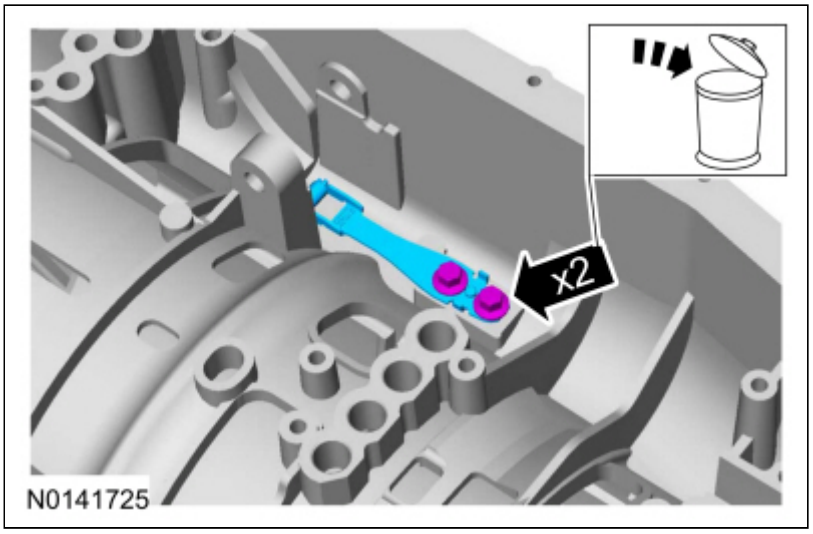
46. Remove and discard the 4 park rod actuating plate bolts and the park rod actuating plate.



1. Remove and discard the roll pin.
2. Hold the manual control lever spacer to keep it from falling into the case.
3. Slide the manual control lever shaft out of the case.
4. Remove the manual valve detent lever and park pawl actuator rod as an assembly.



48. Using a suitable tool, remove and discard the manual control lever shaft seal.



49. Remove the bolt from the back of the case to gain access to the park pawl pin.

1. Push the park pawl pin out toward the back side of the case and remove the pin.
2. Remove the park pawl return spring.
3. Remove the park pawl.

51. Remove and discard the 2 bolts and remove the park detent spring.

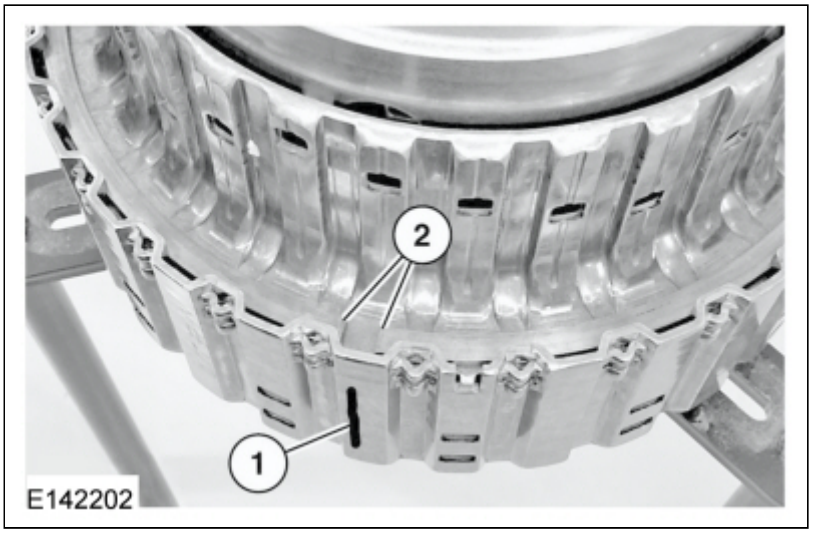
Forward/Overdrive Clutch Assembly

Special Tool(s) / General Equipment

	307-555 End Play Gauge, Clutch

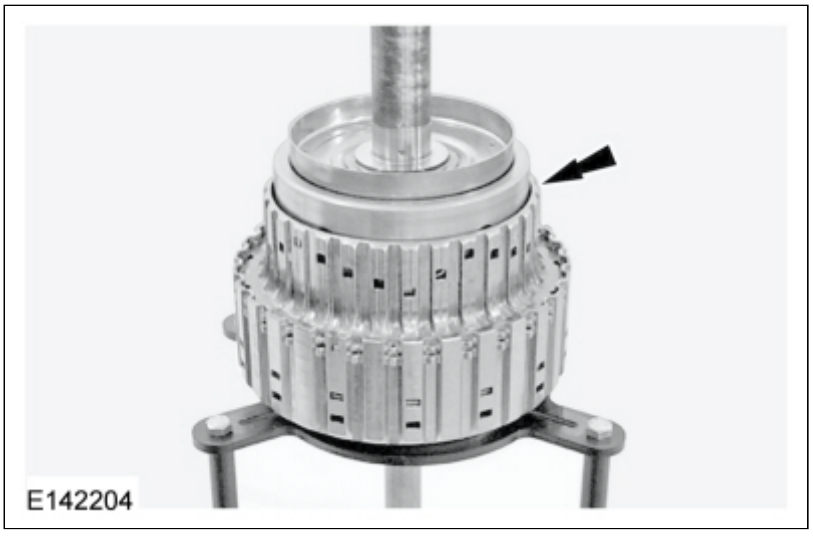


DISASSEMBLY

1. Position the forward/overdrive clutch assembly in the Clutch End Play Gauge.
   Use Special Service Tool: 307-555 End Play Gauge, Clutch.

2. **NOTE:** *Index-mark the direct clutch outer shell snap ring gap location to the side of the forward clutch hub using a suitable paint marker.*

   - Index mark
   - Snap ring gap

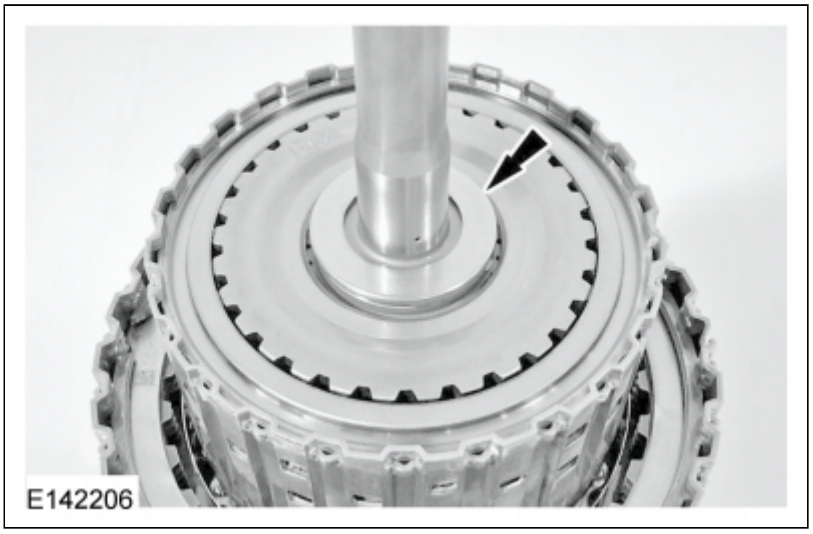


3. **NOTICE: Compress the snap ring out of the groove 180° from the snap ring gap or damage to the forward clutch hub can occur.**

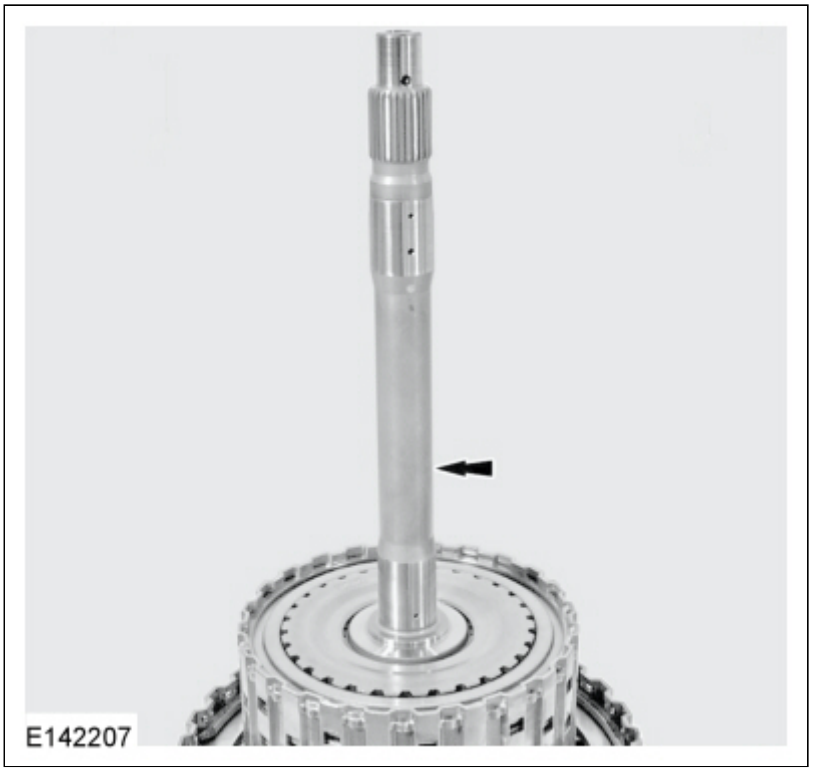
   NOTE: *Using a suitable tool, remove and discard the direct clutch outer shell retaining ring by compressing the snap ring 180° from the snap ring gap.*

   - Snap ring gap
   - 180° from the snap ring gap

4. Remove and discard the direct clutch hub.

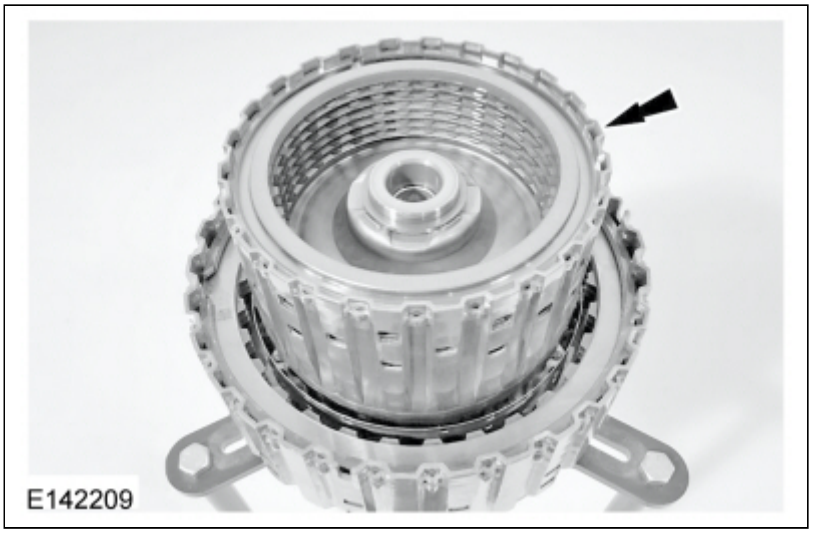


5. Remove the forward clutch and sun shaft assembly.



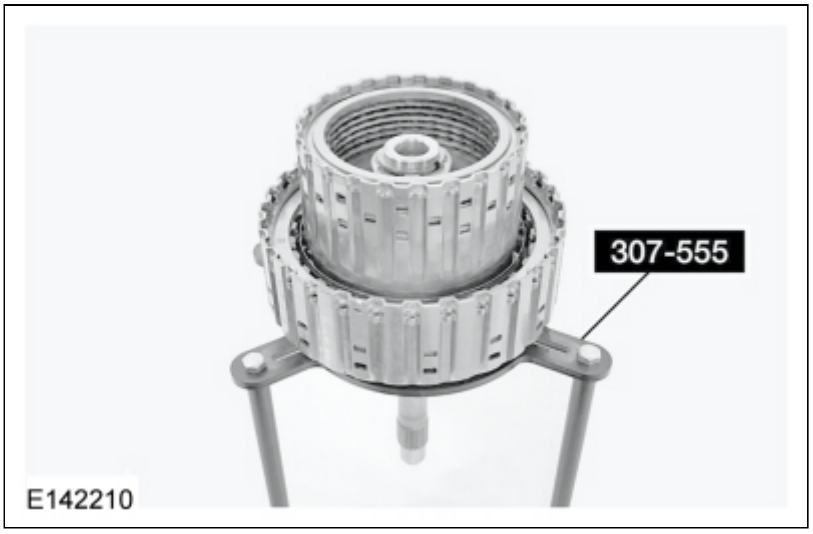
6. **NOTE:** *The bearing may stick in the forward clutch drum.*

   Remove the intermediate shaft bearing.

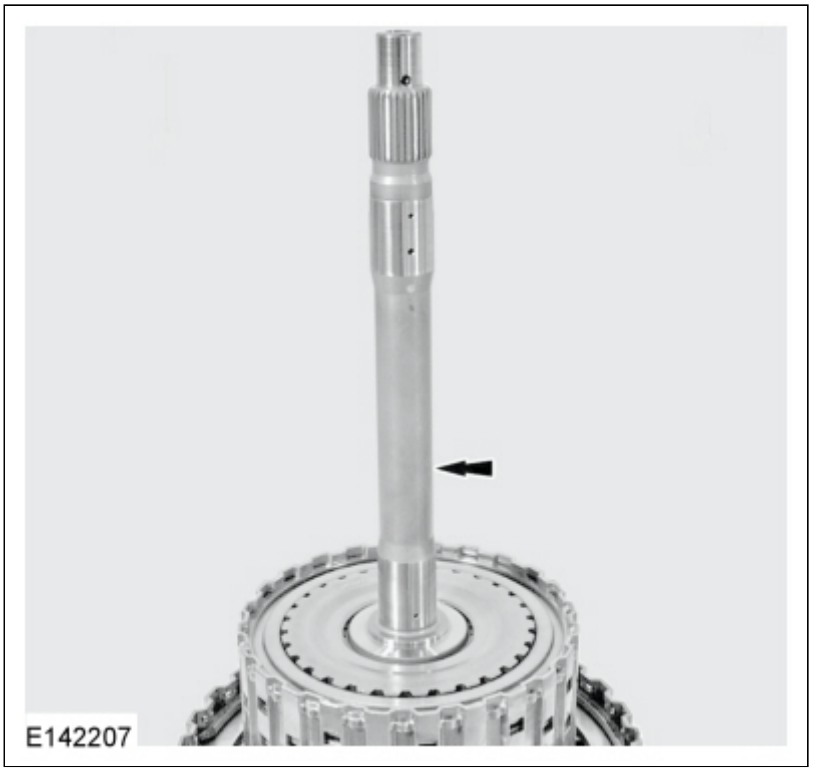


7. Remove the intermediate shaft assembly.

8. If the T3 thrust bearing stuck to the intermediate shaft assembly, remove it from the intermediate shaft assembly. If the T3 thrust bearing is on

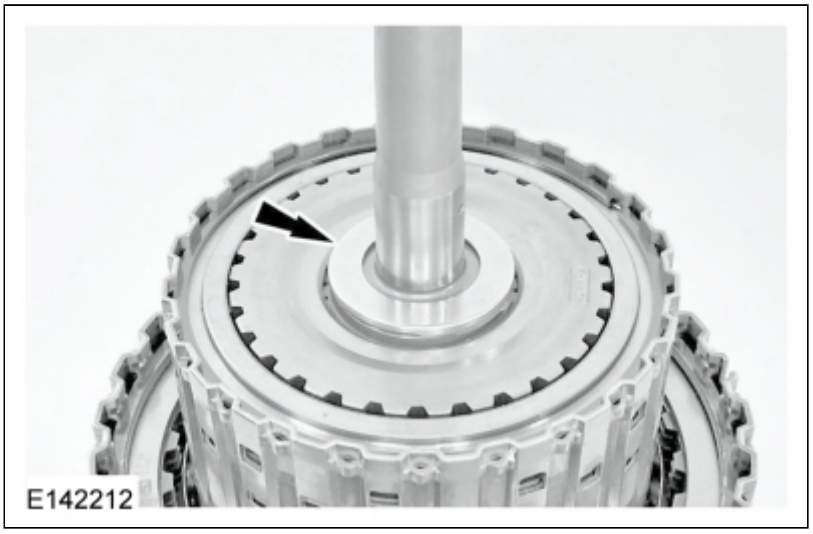


9. Remove the overdrive clutch pack from the forward clutch pack.



ASSEMBLY

1. Position the forward clutch assembly in the Clutch End Play Gauge and install the overdrive clutch pack onto the forward clutch and planetary gear set.
   Use Special Service Tool: 307-555 End Play Gauge, Clutch.

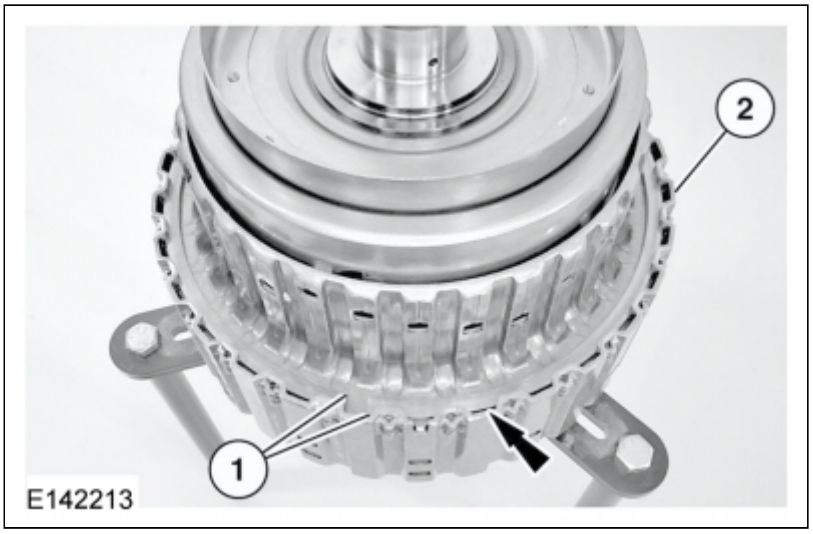


2. Install the intermediate shaft assembly.

3. **NOTE:** *Inspect and install new thrust bearings as required.*

   Install the T4 intermediate shaft bearing.

4. Install the forward clutch hub and sun shaft assembly.



5. Install a new the direct clutch hub.

WARNING: Do not install the snap ring on the forward clutch hub with the snap ring gap in the same position as the original snap ring or damage to the transmission can occur.

6. **NOTE:** *Install a new direct clutch outer shell retaining ring with the snap ring gap positioned approximately 120° from the index mark made on the forward clutch hub during disassembly.*

    - New snap ring gap
    - Index mark from original snap ring gap

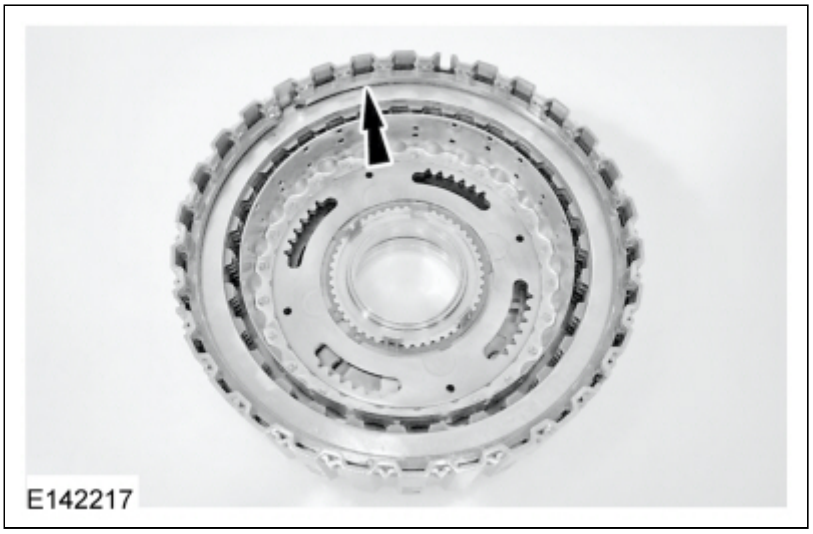
Forward Clutch Assembly

Special Tool(s) / General Equipment

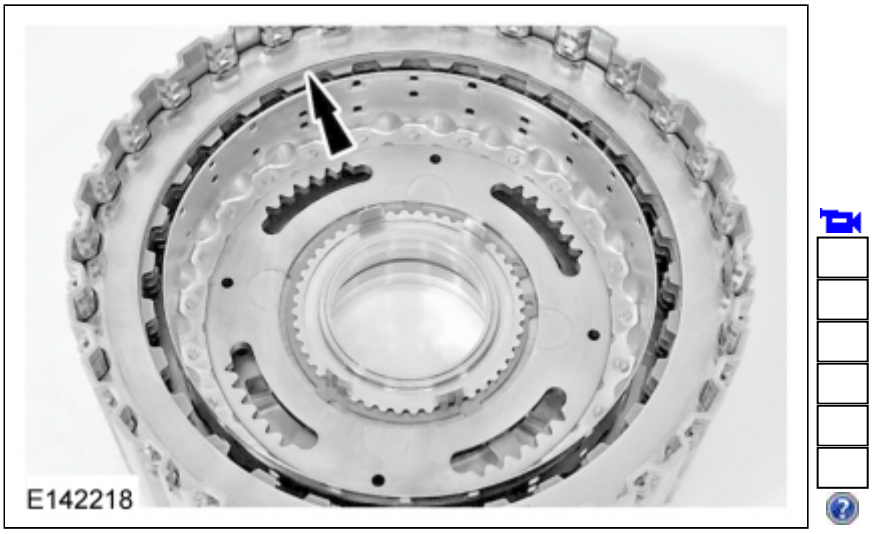
 E139373	100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge
 E142014	307-525 Compressor, Clutch Spring
 E142019	307-555 End Play Gauge, Clutch
Flat Headed Screw Driver	

DISASSEMBLY



1. If the T2 thrust bearing is on the forward clutch assembly, remove it from the forward clutch assembly.

2. Remove the front planetary carrier and sun gear from the forward clutch assembly. With a small screwdriver or a suitable pick inserted into the front planetary assembly, push on the retaining ring in 4 places while lifting up on the front planetary assembly.
   Use the General Equipment: Flat Headed Screw Driver

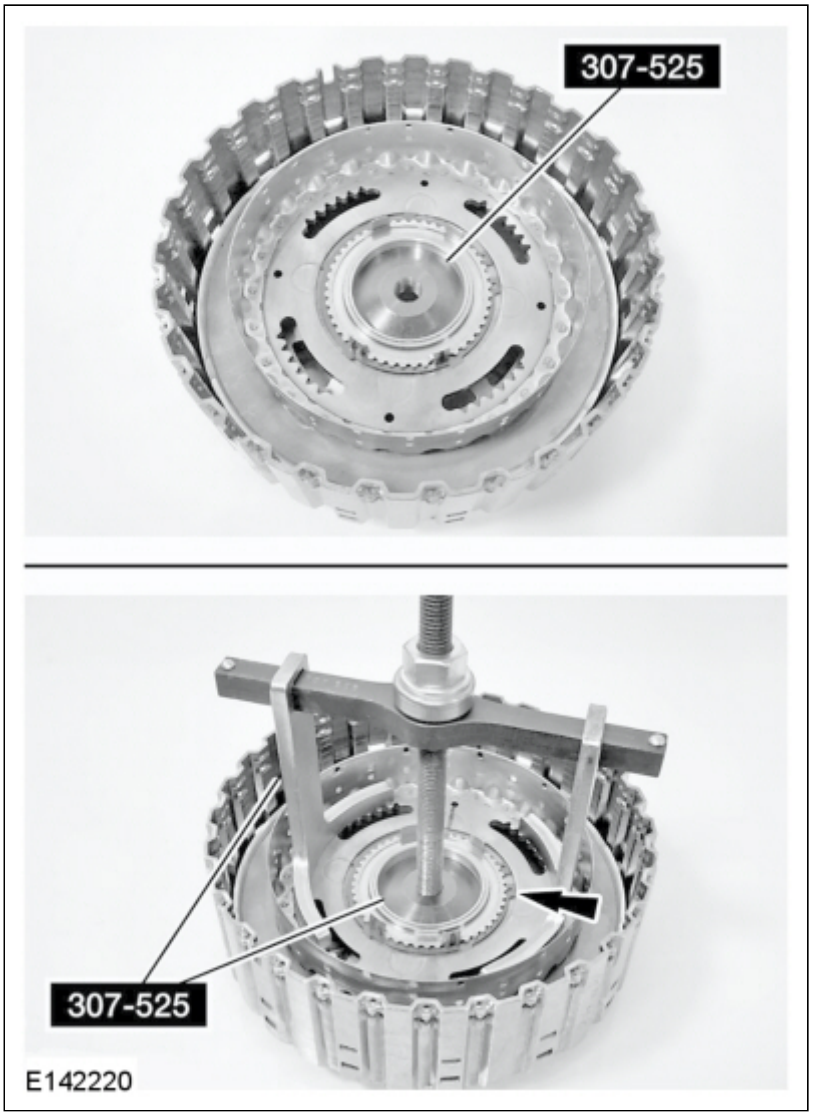


3. Remove the forward clutch pack snap ring.

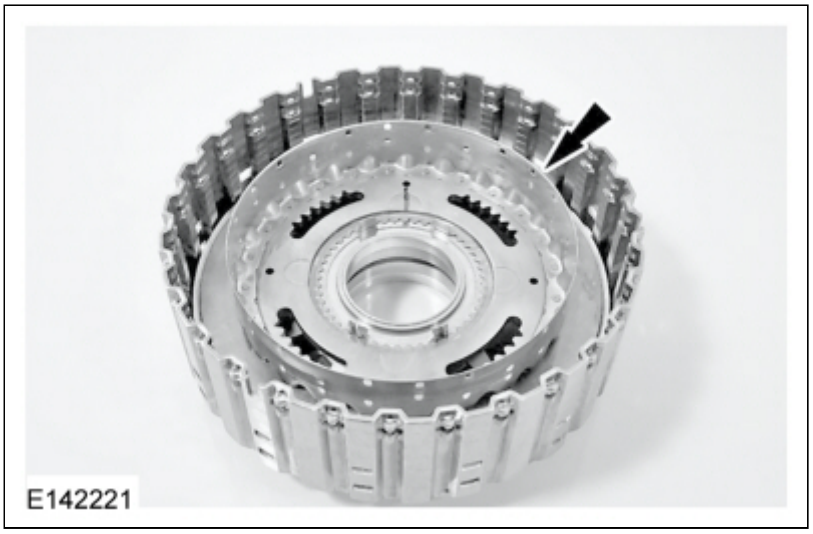
NOTE: *Inspect the forward clutch drum and the friction and steel plates for damage. Install new components as necessary.*

4. **NOTE:** *Remove and inspect the forward clutch steel and friction plates.*

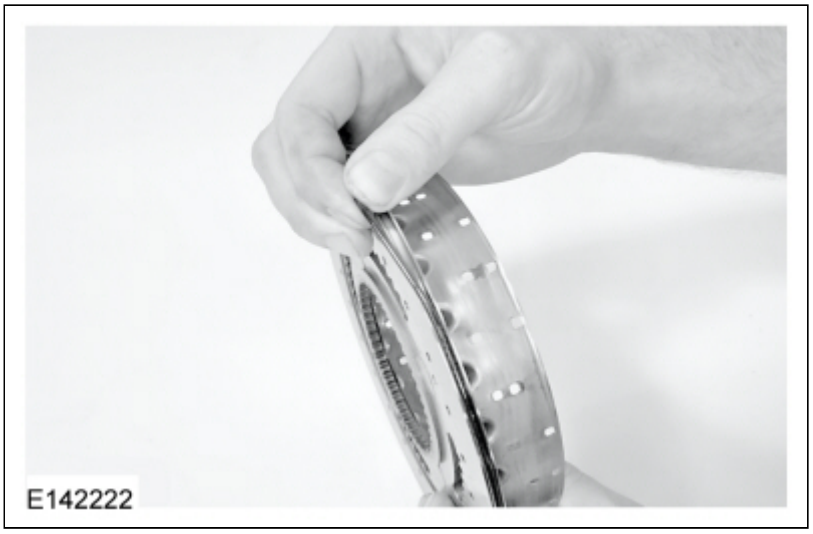
   - If the plates are damaged, install a new forward clutch assembly.
   - If no damage is indicated, the forward clutch may be reassembled.



5. For correct alignment during assembly, make an identifying mark on the balance dam and the center part of the housing.

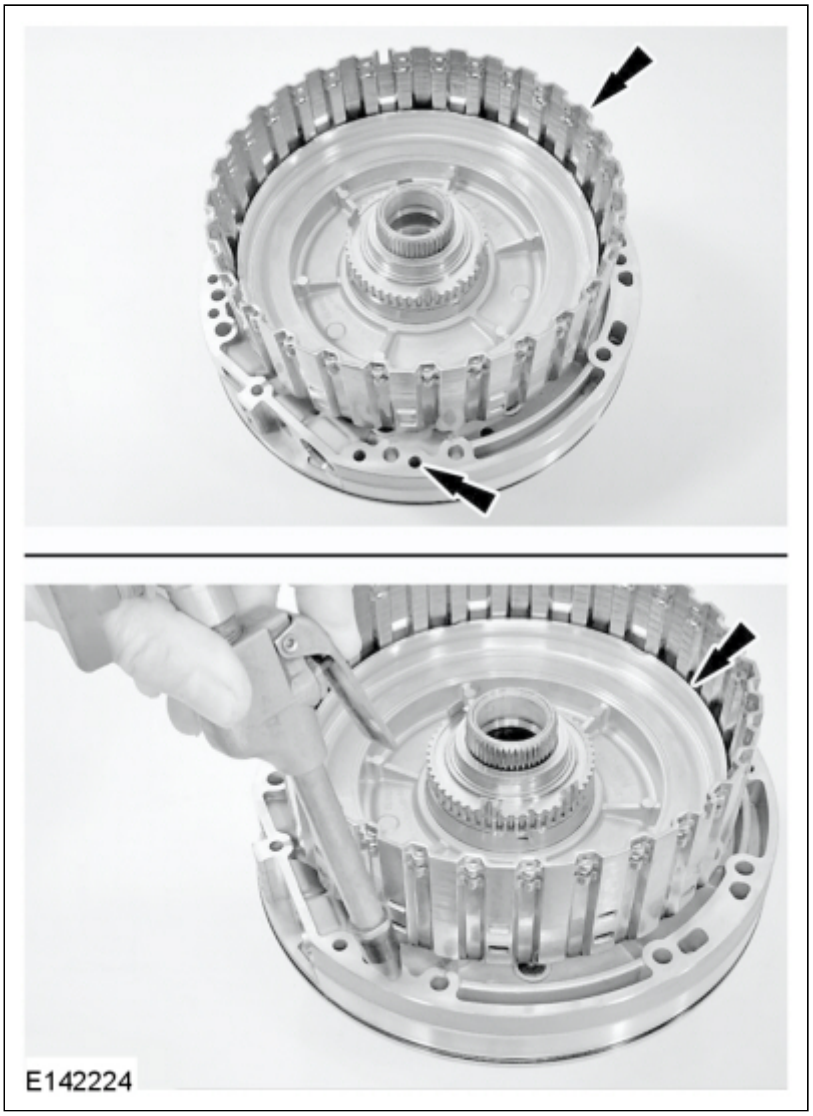


NOTE: *The bottom of the Clutch Spring Compressor will need to be installed from the back side of the forward clutch assembly.*



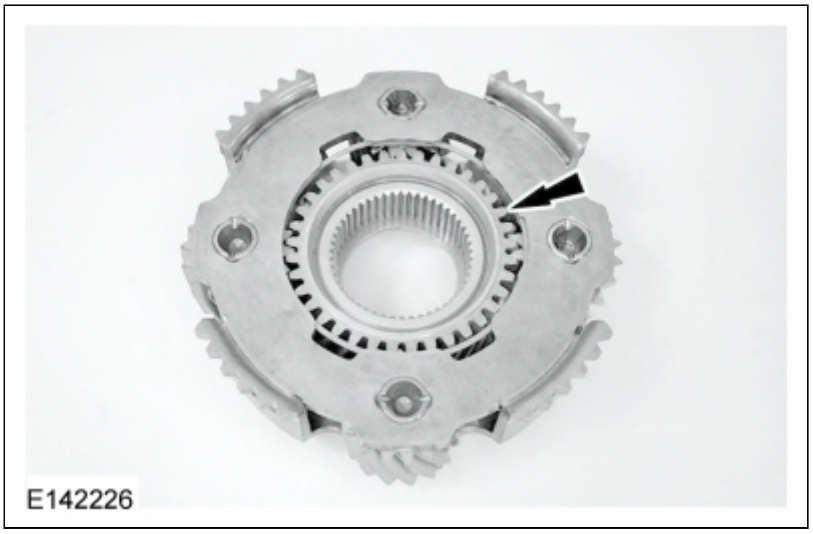
6. Using the Clutch Spring Compressor, slightly collapse the balance dam to gain access to the retaining ring and remove the retaining ring.
   Use Special Service Tool: 307-525 Compressor, Clutch Spring.

7. Remove the balance dam.



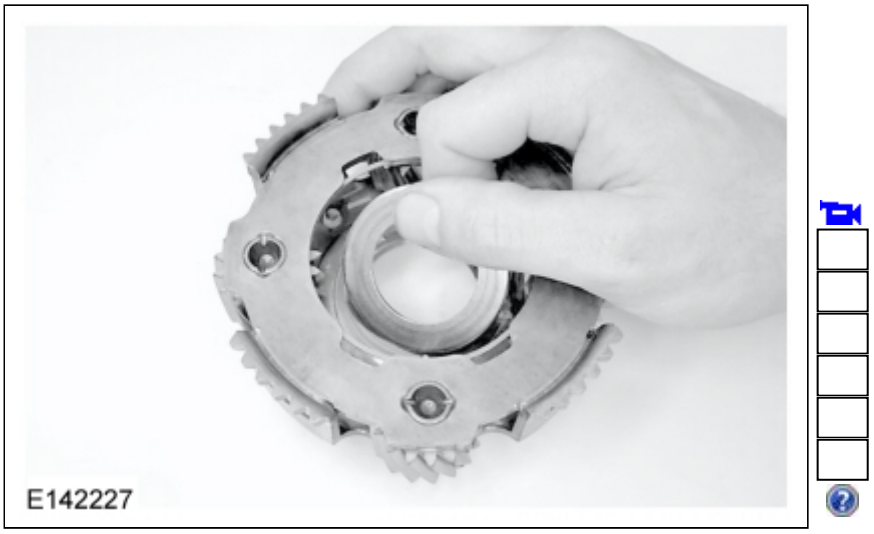
8. Remove and discard the O-ring seal from the balance dam.

9. Remove the forward clutch return spring.

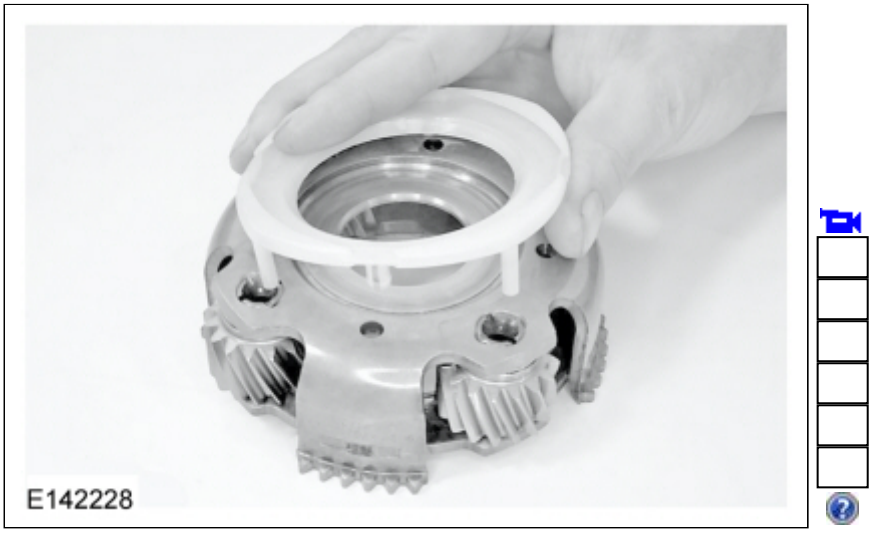


10. Install the forward clutch on the front pump to remove the forward clutch piston. Apply a small amount of shop air to remove the piston.

11. Remove and discard the inner and outer piston O-ring seals.



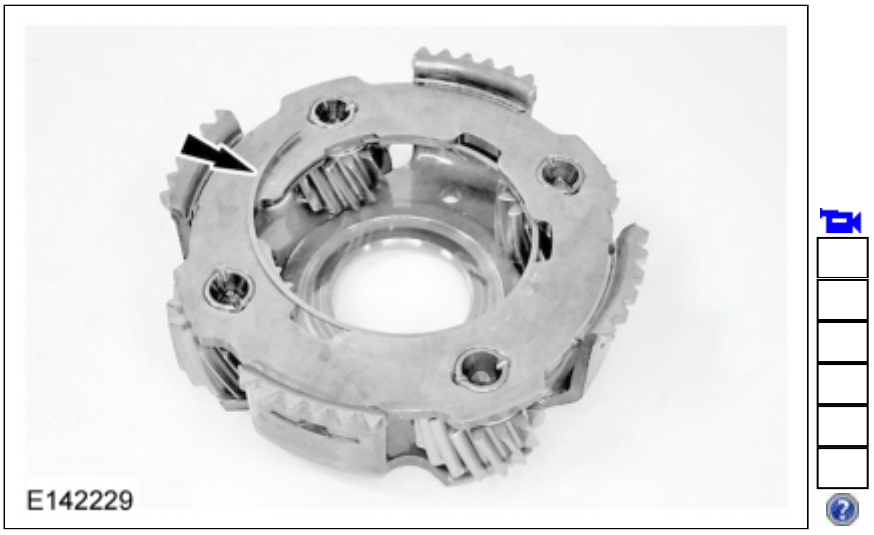
12. Remove the sun gear from the planet assembly.



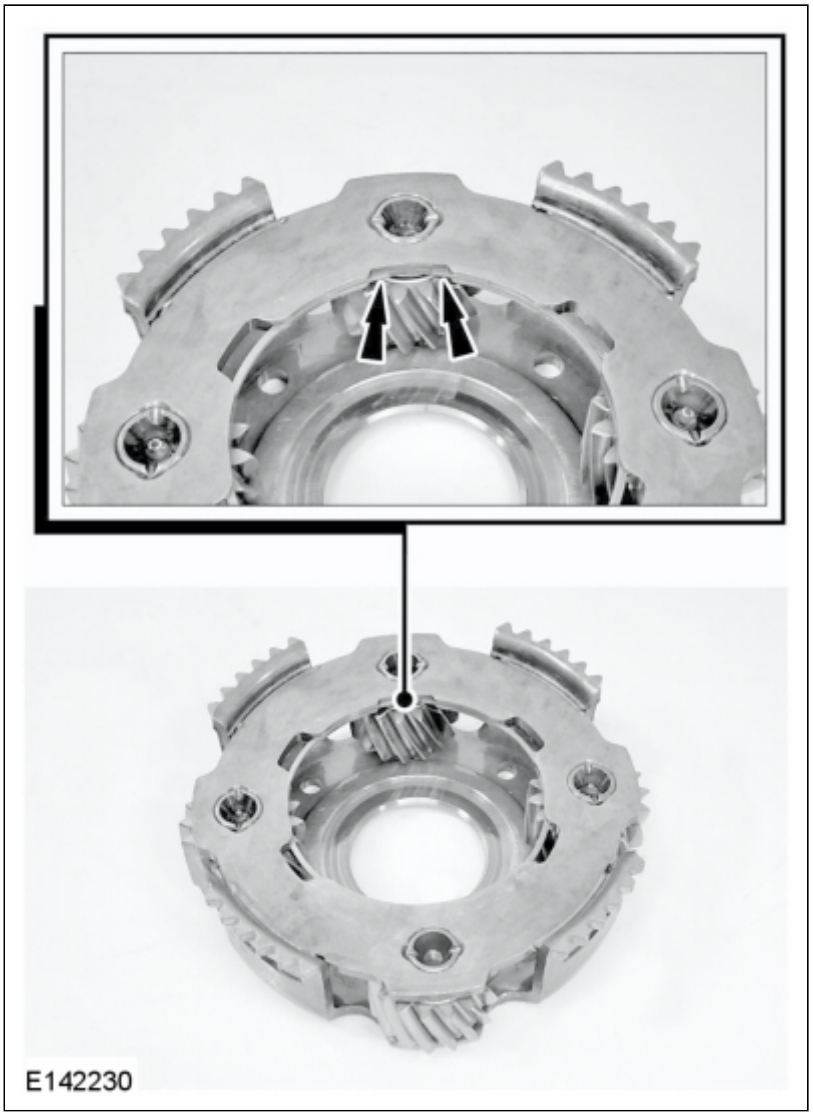
NOTE: *The T1 thrust bearing may have stuck to the sun gear when it was removed.*

13. Remove the T1 bearing from the planetary carrier.

14. Remove the transmission fluid collector plate from the front planetary carrier.

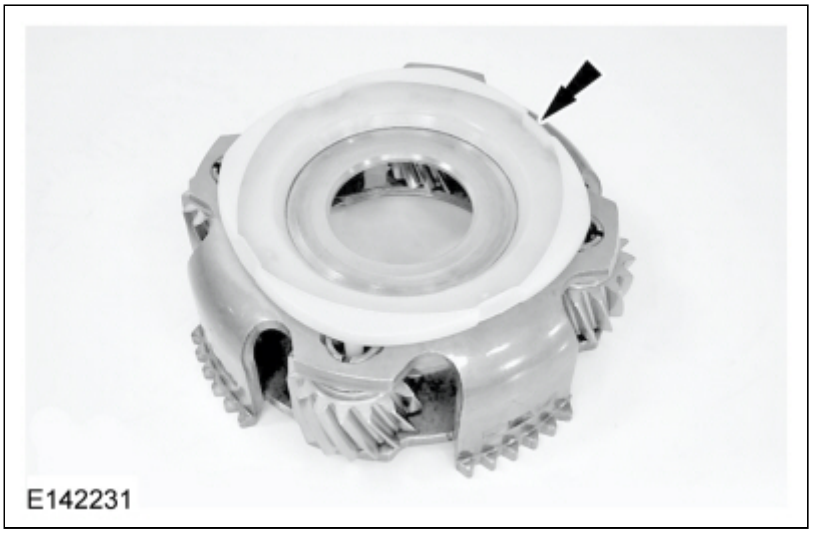


15. Clean and inspect the components of the forward clutch assembly for damage and install new components as necessary.

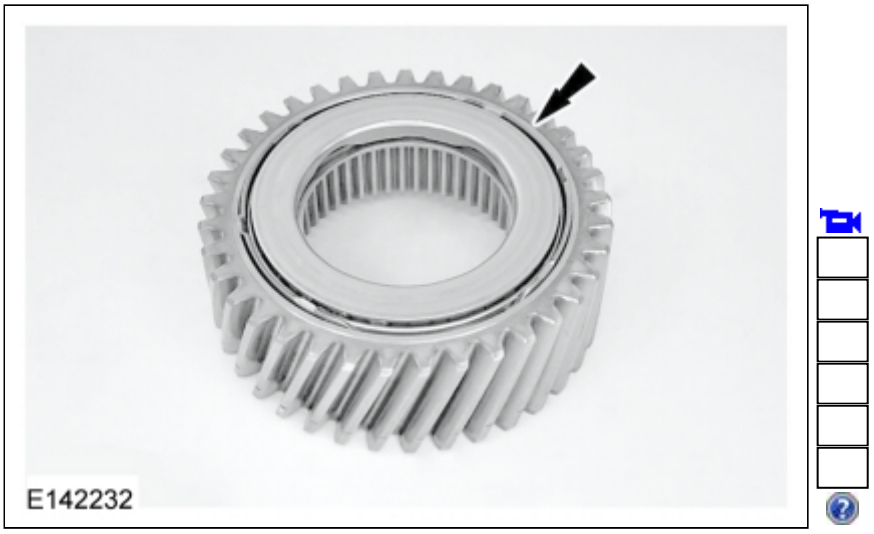


ASSEMBLY

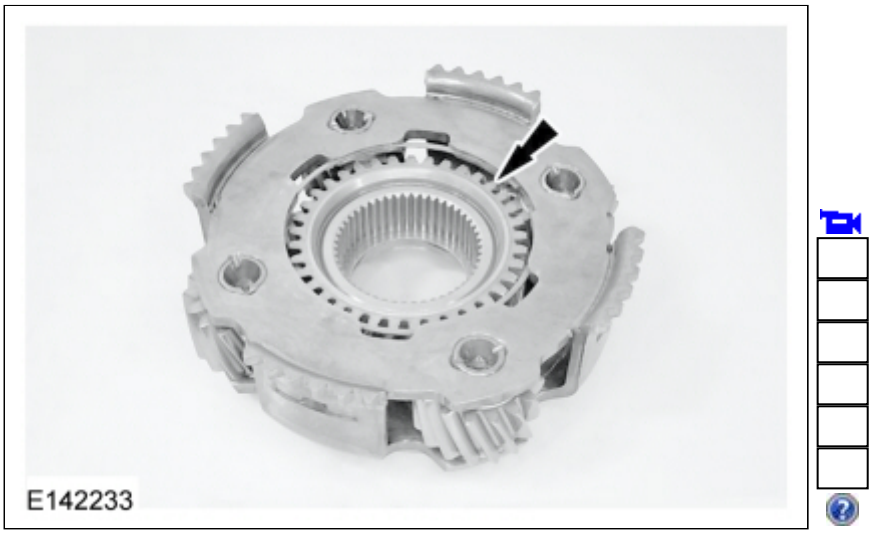
NOTE: *If a new planetary assembly is being installed, the new planetary assembly may not come with the snap ring installed.*



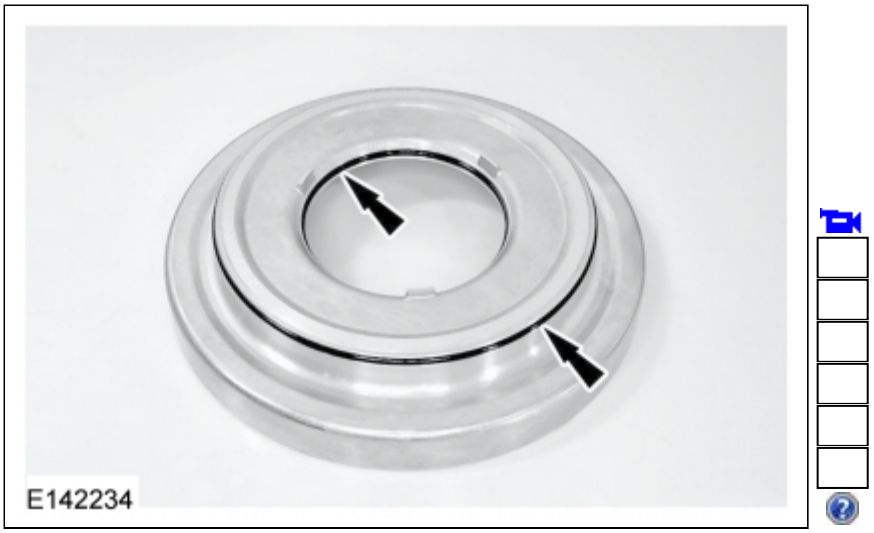
1. Install the planetary assembly snap ring, if necessary.



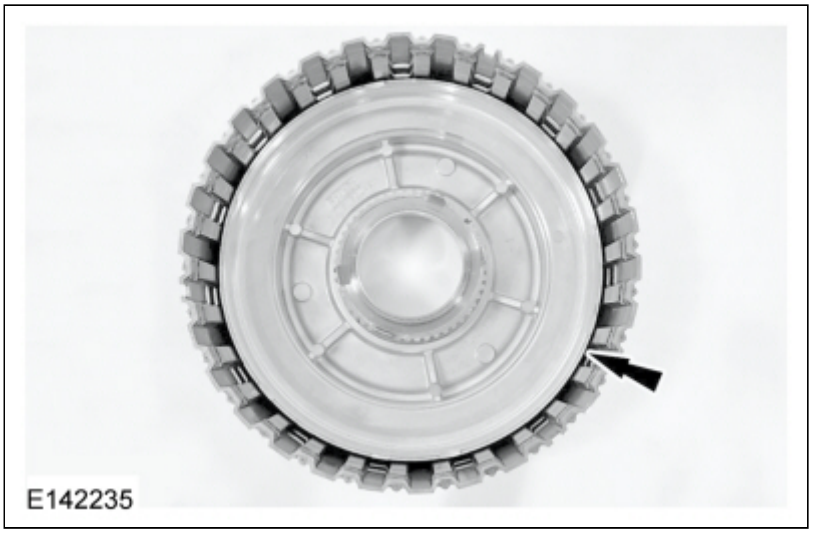
2. Make sure the planetary snap ring is oriented as shown.



3. Install the transmission fluid collector plate on the front planetary carrier.

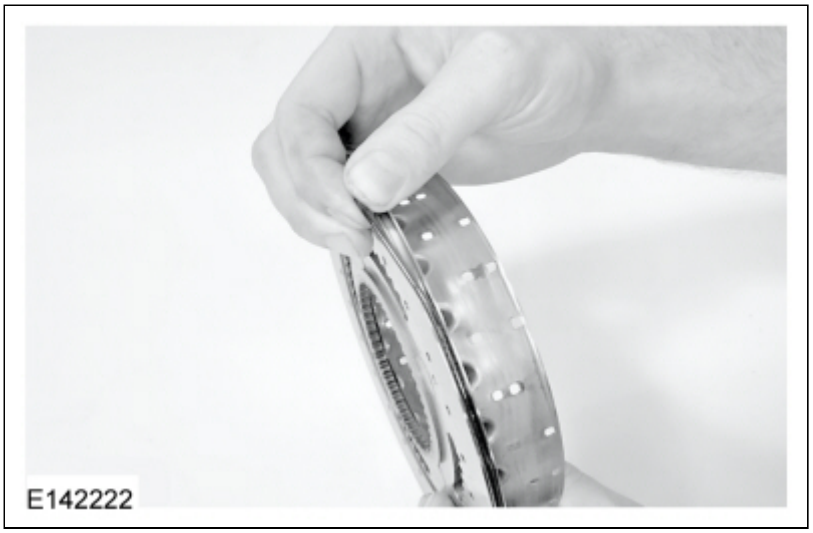


4. Install the T1 bearing onto the sun gear.

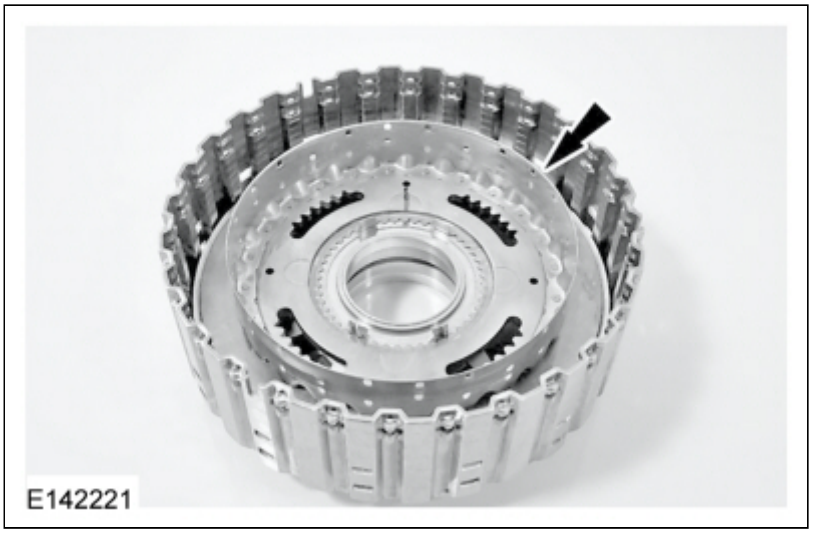


5. Install the sun gear into the planet assembly with the T1 bearing facing down and the recessed part of the gear up.

6. Install new O-ring seals onto the forward clutch piston.

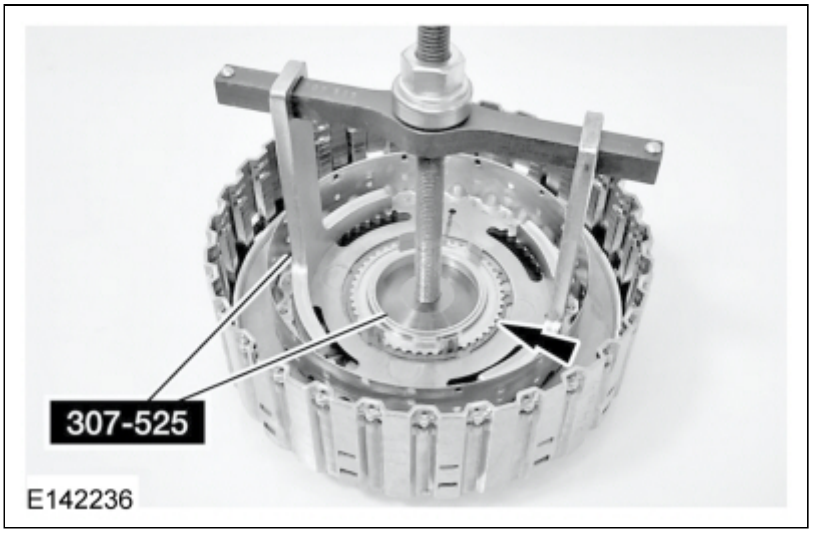


7. Lightly coat the O-ring seals with clean transmission fluid and install the forward clutch piston into the forward clutch drum.

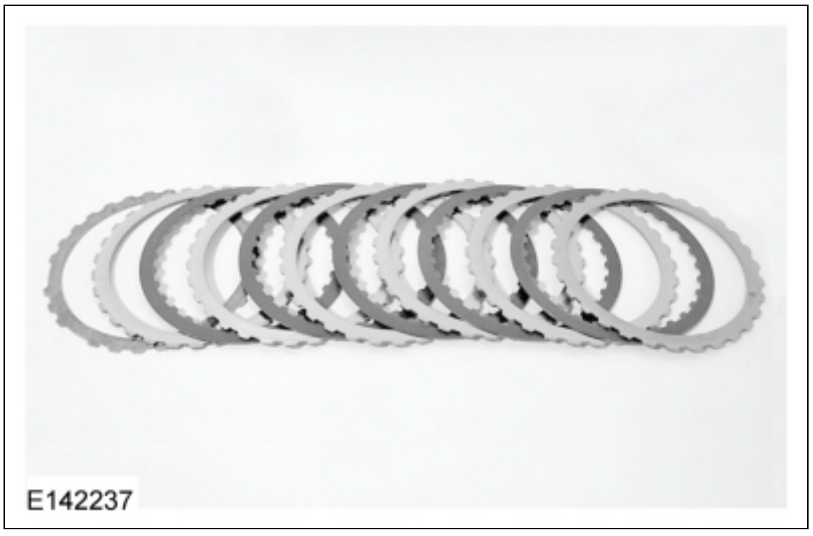


8. Install the forward clutch return spring.

9. Install a new O-ring seal onto the forward clutch balance dam. Lightly coat the O-ring seal with clean transmission fluid.

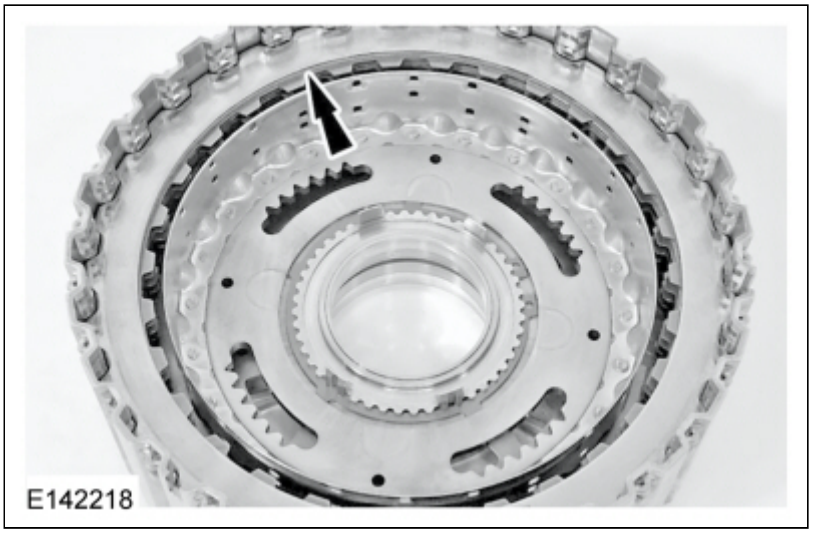


10. Align the marks made during disassembly and install the balance dam into the forward clutch drum.



NOTE: *Prior to releasing the Clutch Spring Compressor, make sure that the snap ring is fully seated.*

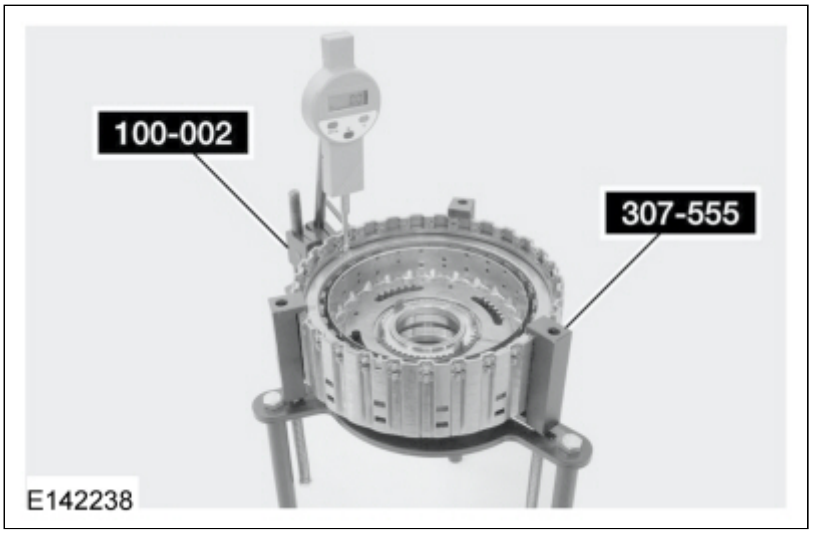
11. Using the Clutch Spring Compressor, slightly collapse the balance dam to install the retaining ring. Install the retaining ring.
    Use Special Service Tool: 307-525 Compressor, Clutch Spring.



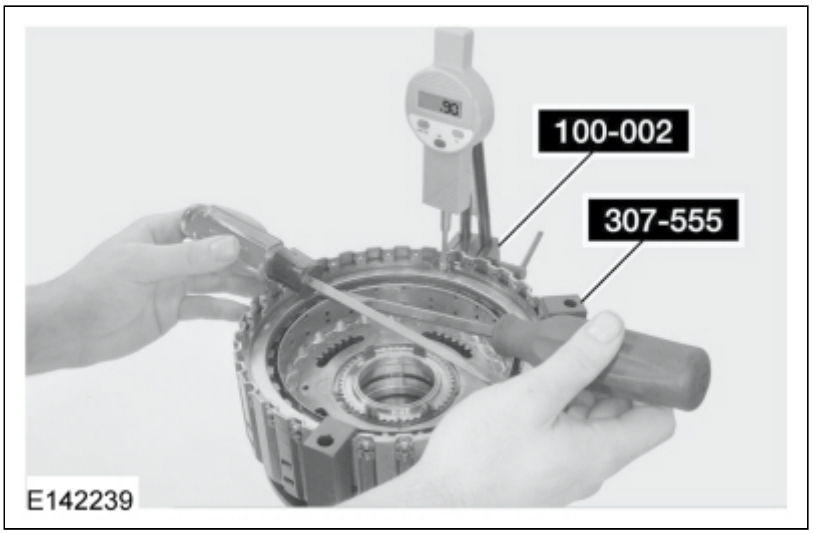
NOTE: *Friction and steel plate quantity will vary based on engine displacement. For additional information, refer to the Clutch Plate Quantity chart in the Specifications portion of this section.*

12. Soak the new forward clutch plates in clean transmission fluid.

13. Install the new forward clutch plates, starting with the wave spring then a steel plate and alternating between friction and steel plates and install the pressure plate.



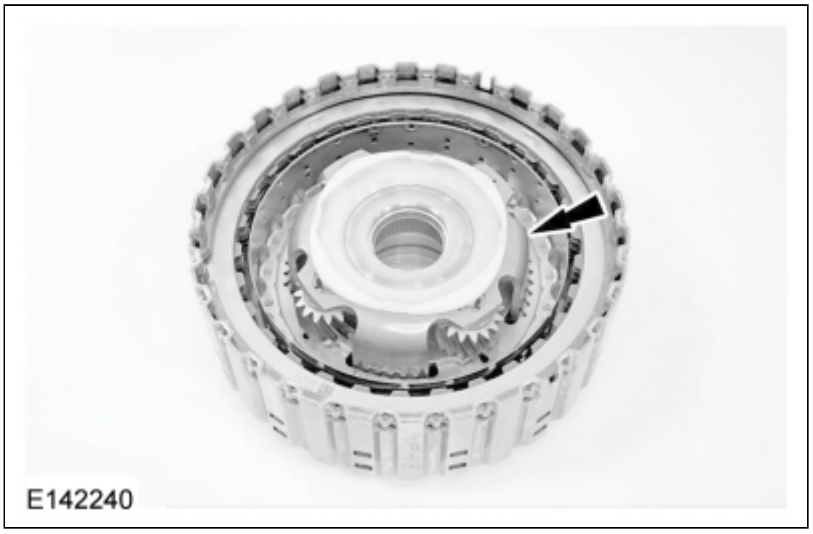
14. Install the forward clutch plate snap ring.



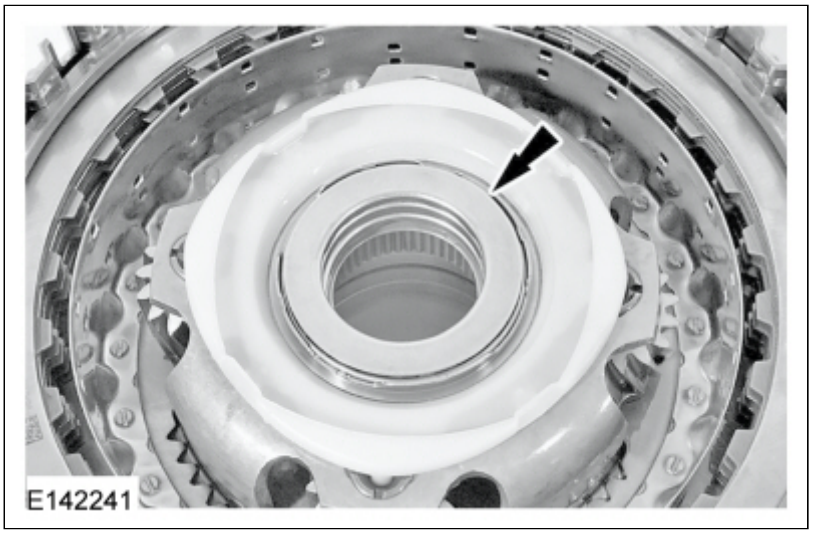
NOTE: *All forward clutch plates, friction and steel are of a wave-type design.*

15. Install the forward clutch assembly into the Clutch End Play Gauge and install the Dial Indicator Gauge with Holding Fixture and position the plunger so it fits into the opening of the snap ring.
Use Special Service Tool: 307-555 End Play Gauge, Clutch. , 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.

16. With the Dial Indicator Gauge set at zero, lift up on the steel pressure plate so it is against the select fit snap ring. Record this reading as reading A.
Use Special Service Tool: 307-555 End Play Gauge, Clutch. , 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.



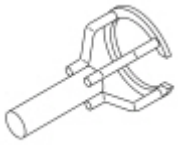
17. Rotate the forward clutch assembly 180° from the opening of the snap ring, take a second reading and record this reading as reading B.



18. If the free pack end clearance between the bottom of the snap ring and the top of the pressure plate is high, remeasure using a thicker select fit snap ring. If the free pack end clearance between the bottom of the snap ring and the top of the pressure plate is low, remeasure using a thinner select fit snap ring.

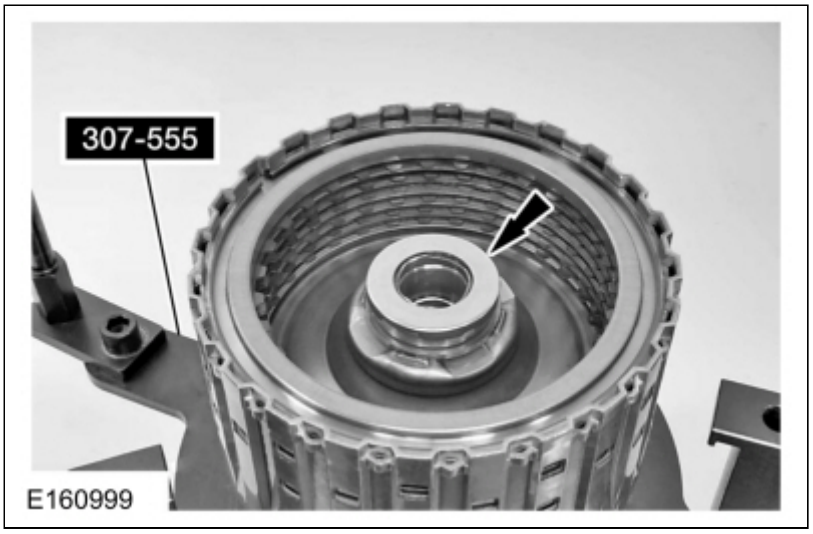
NOTE: *If the final measurement is not within specification, install a new snap ring until the correct specification is achieved. 0.71-1.10 mm*

19. Install the sun gear and planetary gearset into the forward clutch drum. Make sure it snaps and locks in place.



20. Install the T2 thrust bearing.

Copyright © 2016 Ford Motor Company

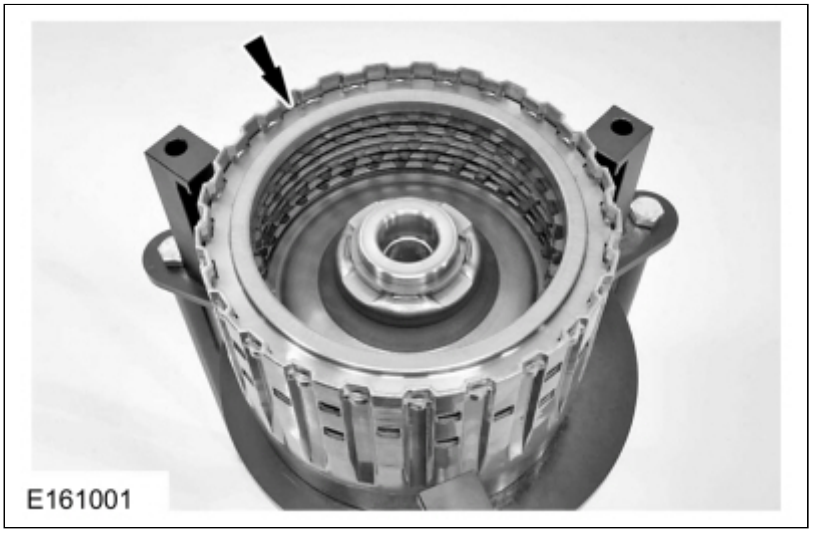


Overdrive Clutch Assembly

Special Tool(s) / General Equipment

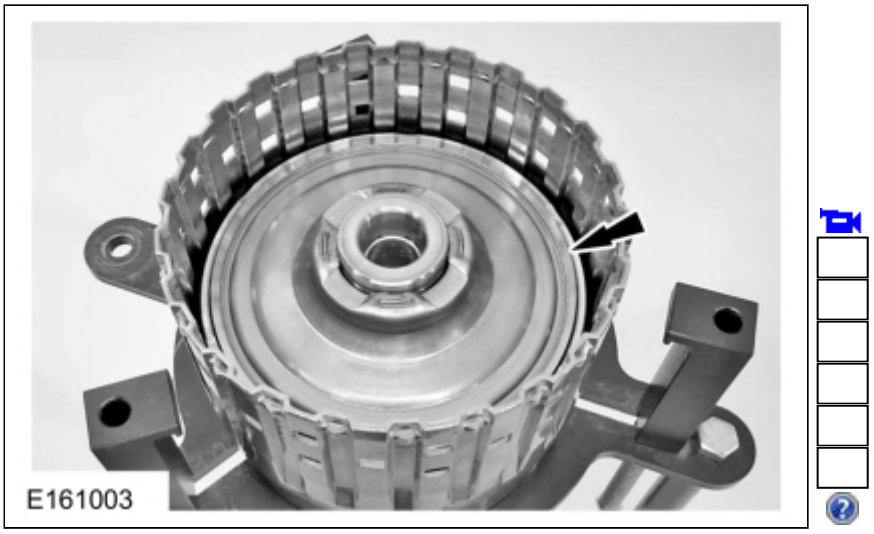
 E139373	100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge
 17040	307-209 Compressor, Spring Washer
 E142019	307-555 End Play Gauge, Clutch

DISASSEMBLY

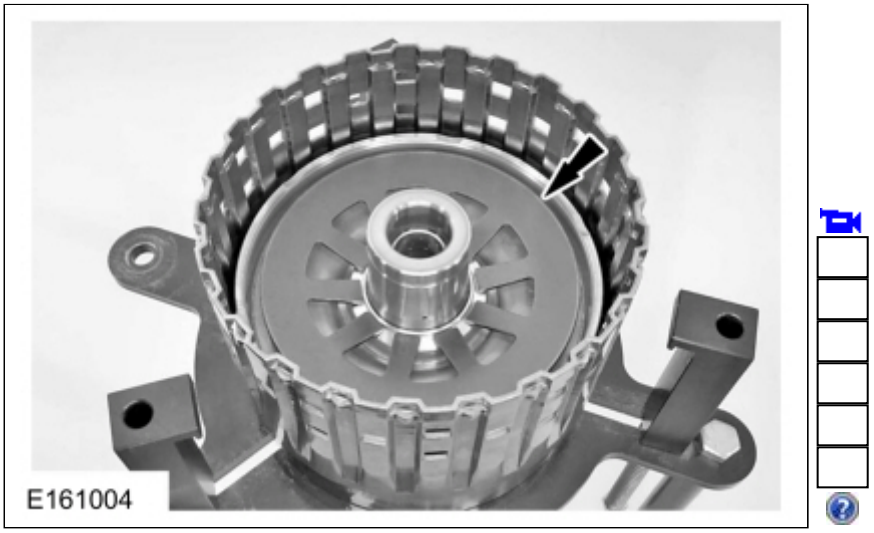


1. Position the Overdrive (O/D) clutch assembly in the Clutch End Play Gauge and remove the T3 thrust bearing. Use Special Service Tool: 307-555 End Play Gauge, Clutch.

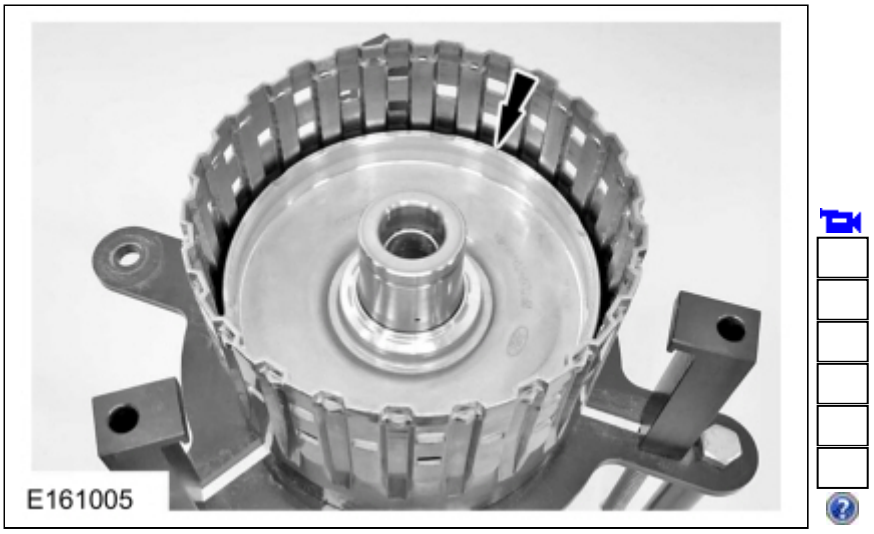
2. Remove the O/D clutch pack snap ring.



3. Remove the O/D clutch pack.

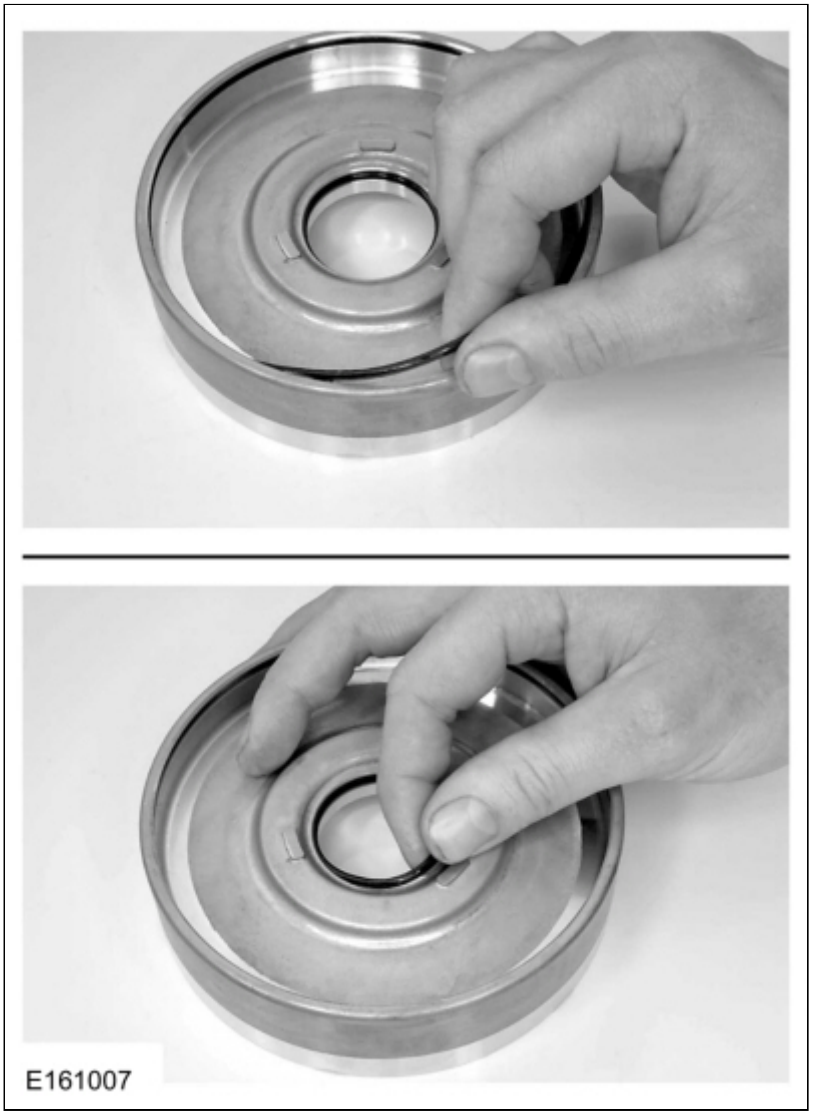


4. Using the Spring Washer Compressor and a press, remove and discard the O/D clutch balance piston retaining ring.
   Use Special Service Tool: 307-209 Compressor, Spring Washer.

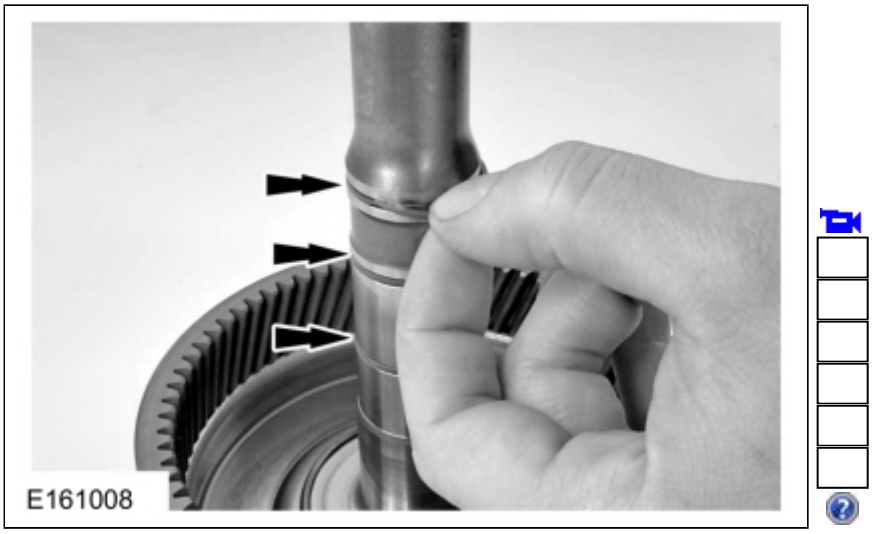


5. Remove the O/D clutch balance piston.

6. Remove the O/D clutch return spring.

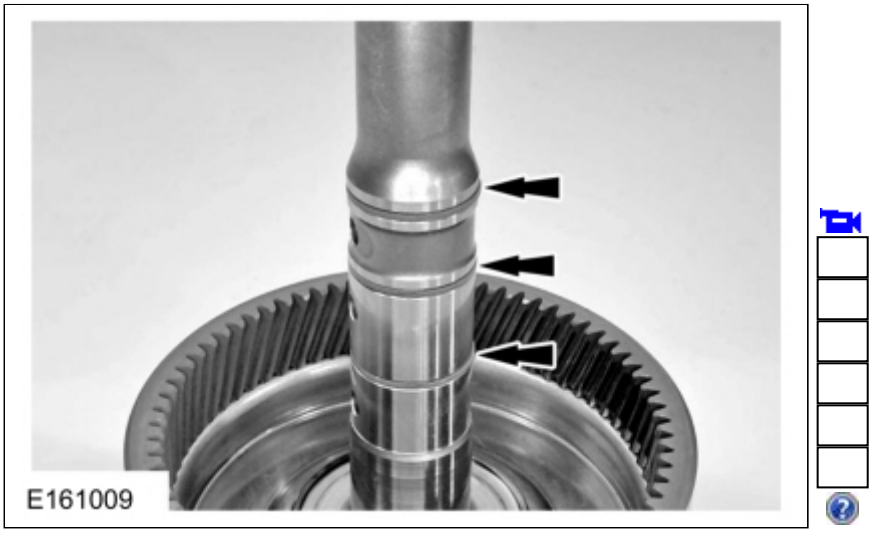


7. Remove the O/D clutch apply piston.



8. Remove and discard the outer O-ring seal on the O/D clutch balance piston.

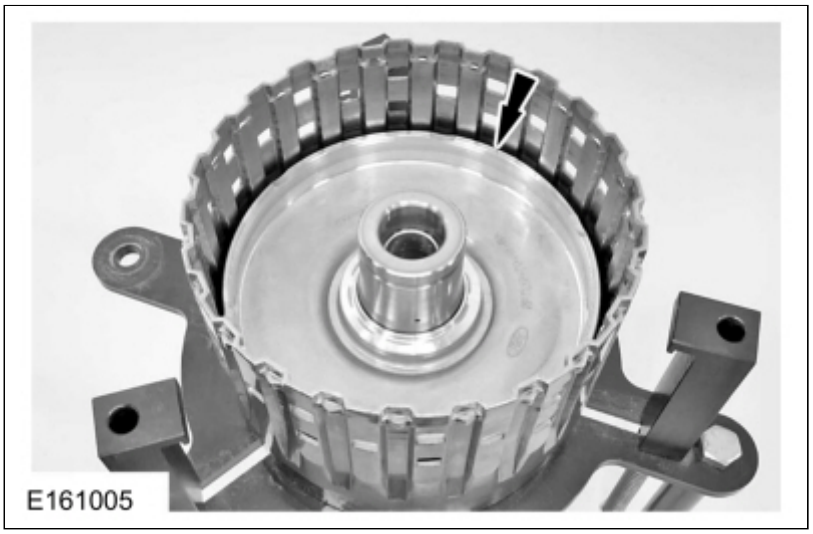
9. Remove and discard both the inner (one large and one small) O-ring seals on the O/D clutch apply piston.



10. Remove and discard the 3 scarf cut seals.

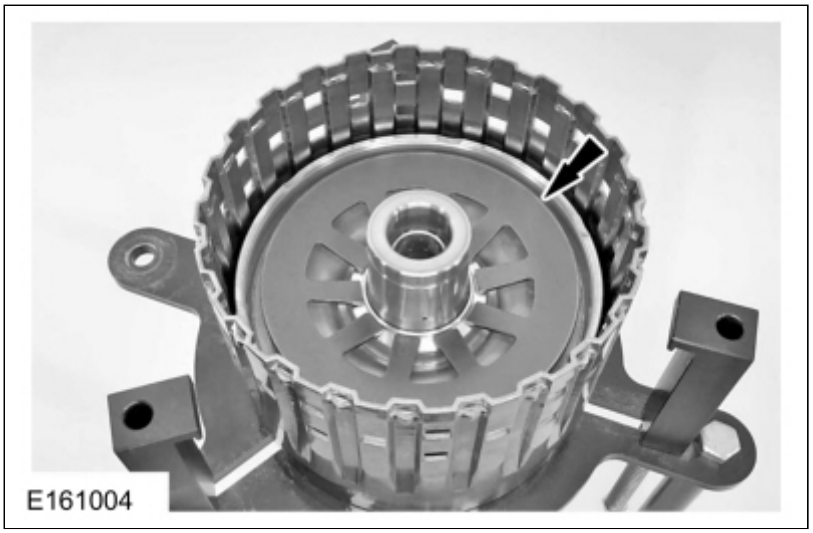
ASSEMBLY

1. Install the 3 new scarf cut seals and the roller bearing.

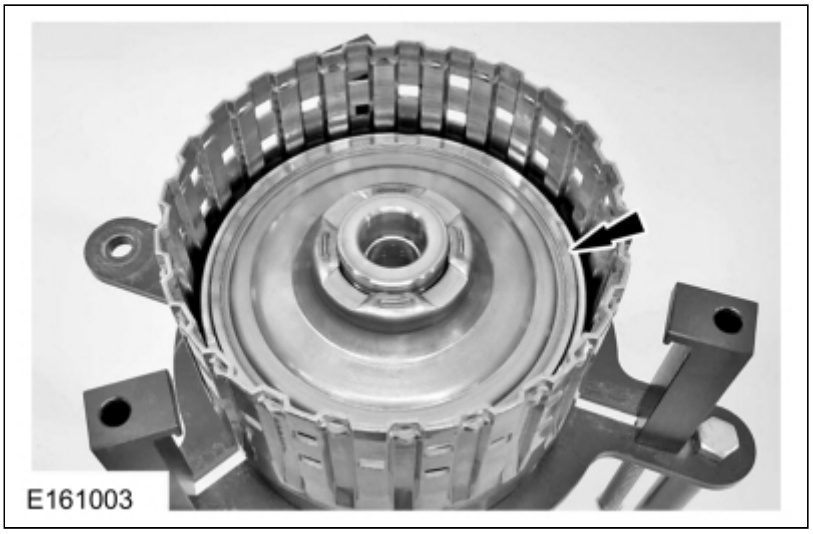


2. Install a new outer O-ring seal on the O/D clutch balance piston.

3. Install 2 new inner O-ring seals on the O/D clutch apply piston.

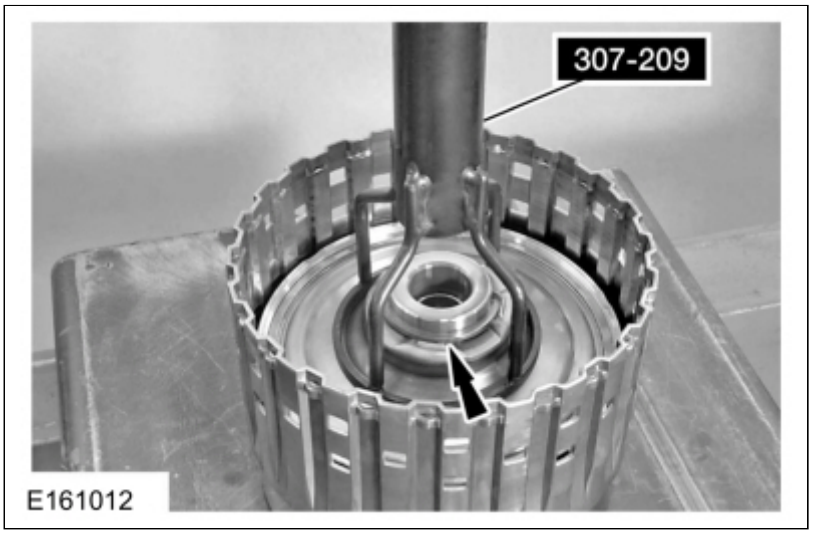


4. Lubricate all the O-ring seals with clean transmission fluid. Install the O/D clutch apply piston into the drum with the O-ring seals and the 3 pads facing down toward the drum.



5. **NOTE:** *The fingers on the return spring are facing down toward the piston.*

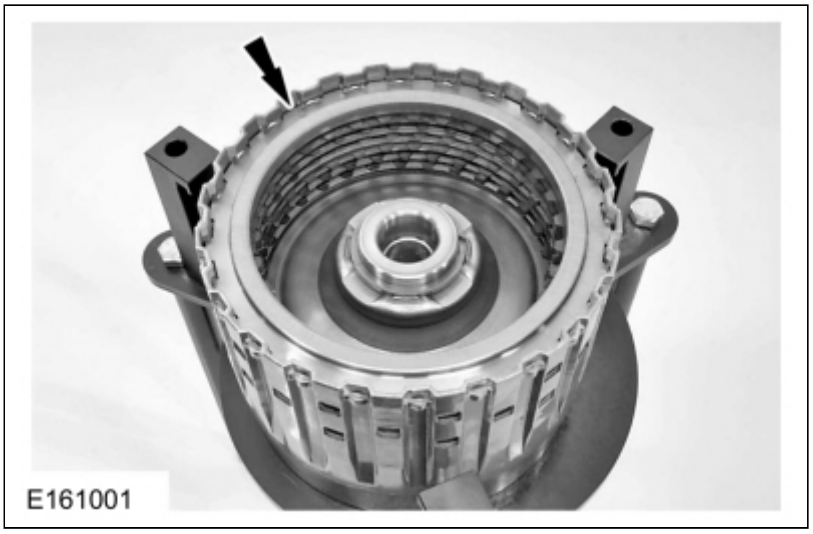
   Install the O/D clutch return spring.



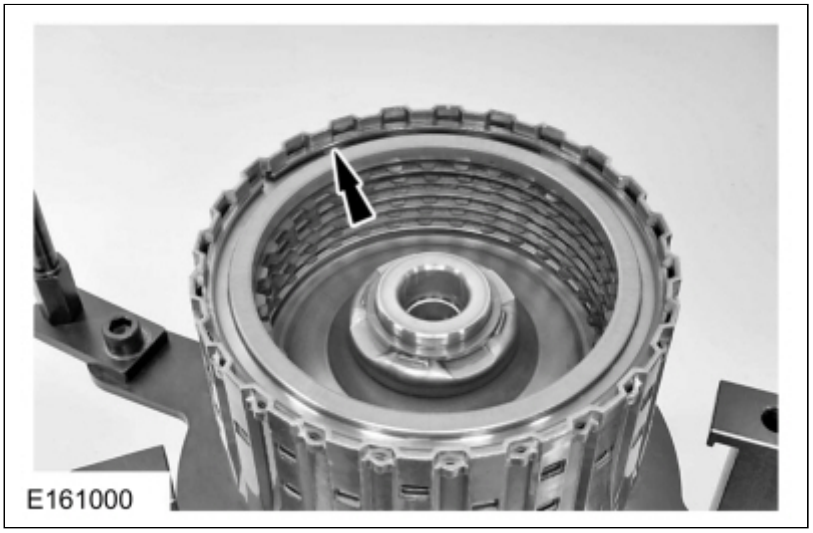
6. **NOTE:** *The cone shape of the balance piston must face up when installed correctly.*

   Lubricate all the O-ring seals with clean transmission fluid. Install the O/D clutch balance piston.

7. Using the Spring Washer Compressor, install a new O/D clutch balance piston retaining ring.
   Use Special Service Tool: 307-209 Compressor, Spring Washer.



8. Soak the new O/D clutch plates in clean transmission fluid.



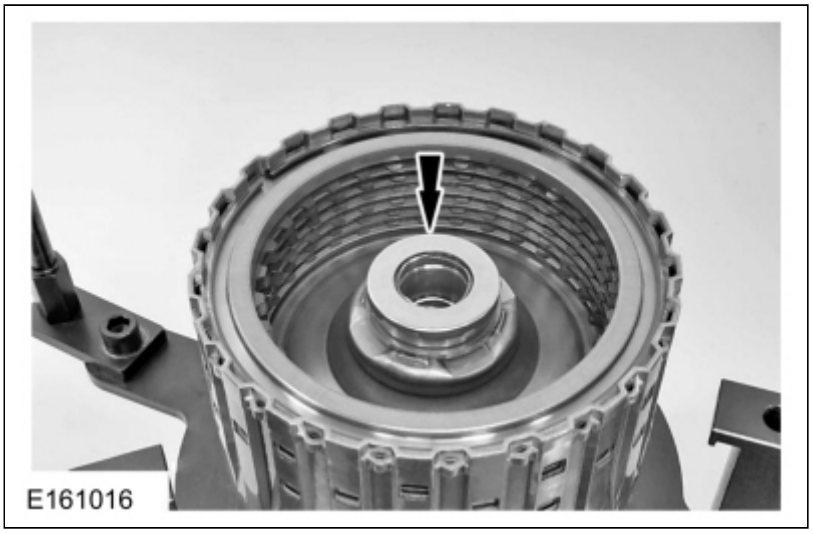
9. **NOTE:** *Friction and steel plate quantity will vary based on engine displacement. For additional information, refer to the Clutch Plate Quantity chart in the Specifications portion of this section*

   Install the new O/D clutch plates, starting with a steel plate and alternating between friction and steel plates, and ending with the pressure plate on the top.

10. Install the O/D clutch pack snap ring.

11. **NOTE:** *All O/D clutch plates, friction and steel are of a wave-type design.*

    Install the O/D clutch assembly into the Clutch End Play Gauge and install the Dial Indicator Gauge with Holding Fixture and position the plunger so it fits into the opening of the snap ring.
    Use Special Service Tool: 307-555 End Play Gauge, Clutch. , 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.



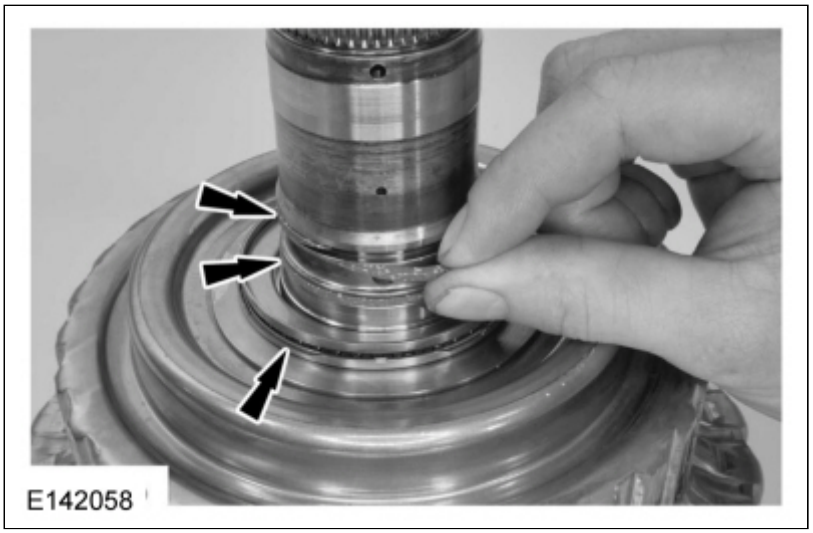
12. With the Dial Indicator Gauge set at zero, lift up on the steel pressure plate so it is against the select fit snap ring. Record this reading as reading A.

13. Rotate the O/D clutch assembly 180 degrees from the opening of the snap ring, take a second reading and record this reading as reading B.
14. **NOTE:** *If the final measurement is not within specification, install a new snap ring until the correct specification is achieved.*

    If the free pack end clearance between the bottom of the snap ring and the top of the pressure plate is high, remeasure using a thicker select fit snap ring. If the free pack end clearance between the bottom of the snap ring and the top of the pressure plate is low, remeasure using a thinner select fit snap ring.
15. **NOTE:** *Inspect and install new thrust bearings as required.*

    Install the T3 thrust bearing.

Copyright © 2016 Ford Motor Company

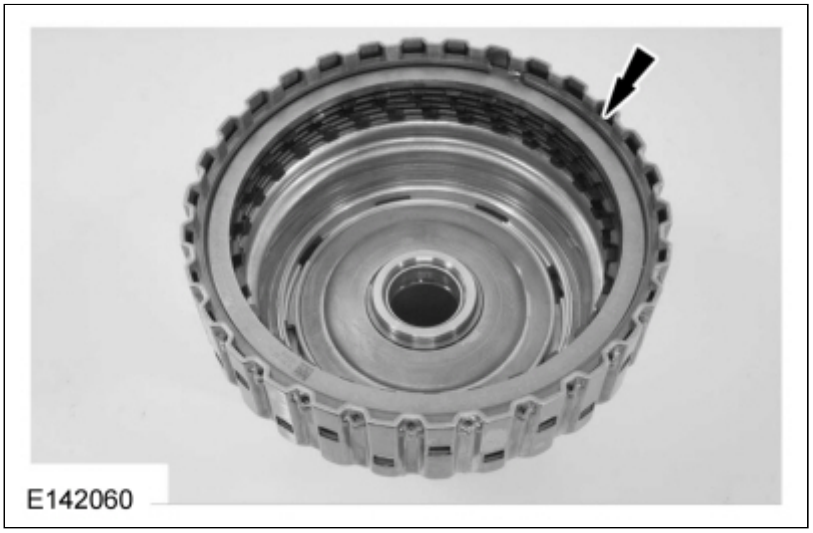


Direct Clutch Assembly

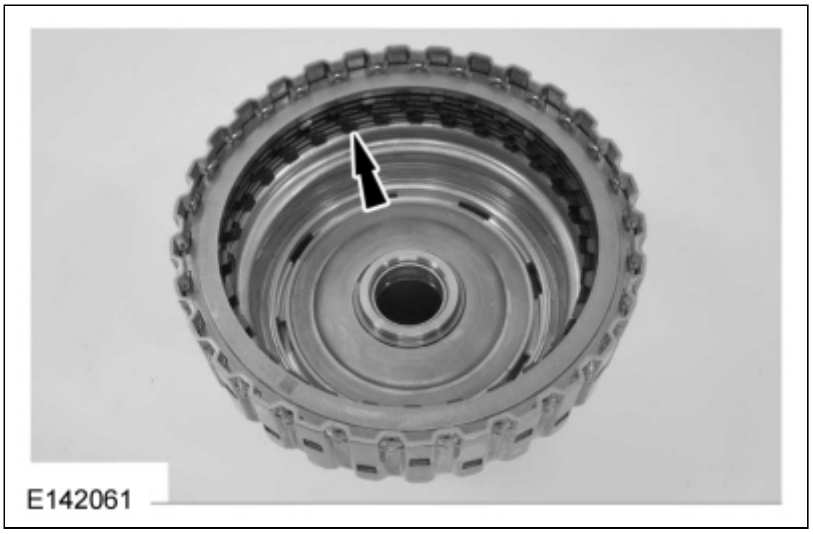
Special Tool(s) / General Equipment

 E139373	100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge
 17058	307-015 Compressor, Clutch Spring
 E142016	307-552 Compressor, Clutch Spring
 E142019	307-555 End Play Gauge, Clutch

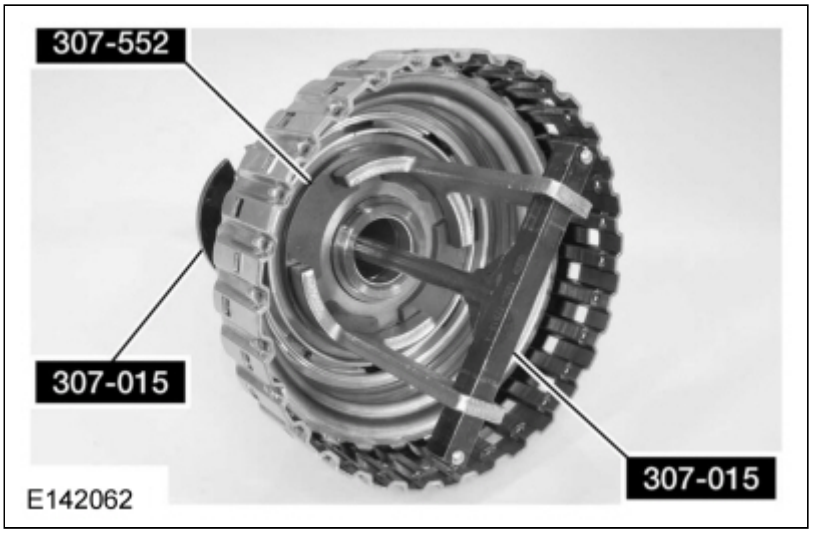
DISASSEMBLY



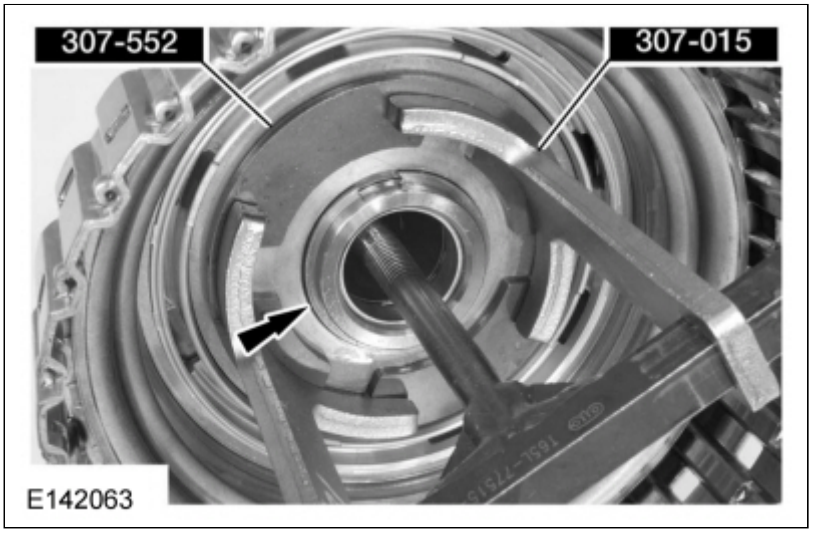
1. Remove and discard the 2 scarf cut seals and the roller bearing.



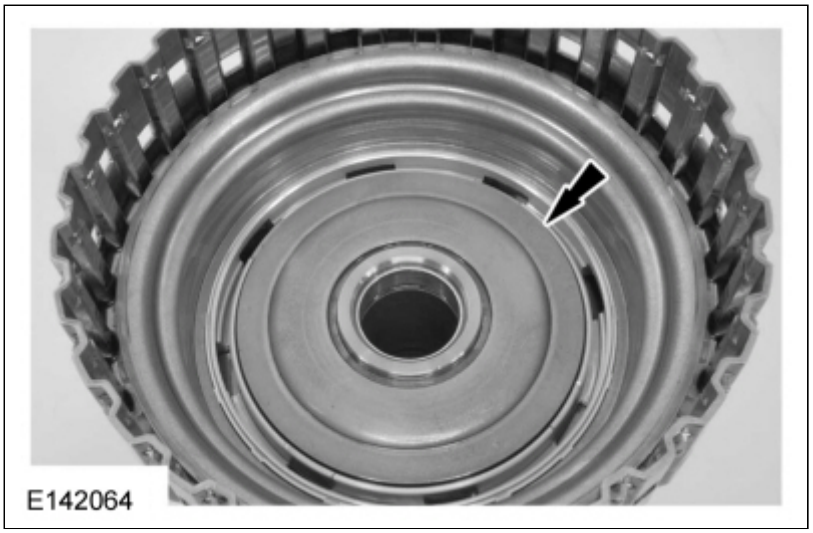
2. Remove the T5 thrust bearing.



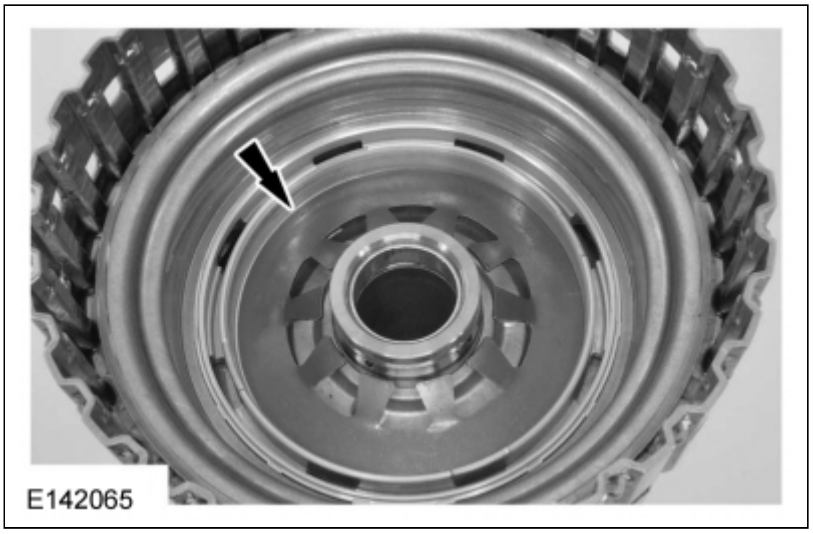
3. Remove the direct clutch snap ring.



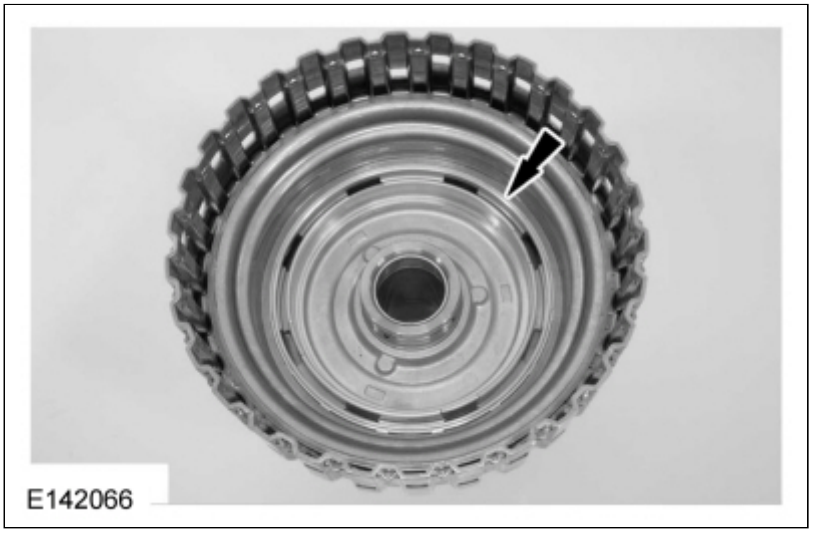
4. Remove the direct clutch steel and friction plates.



5. Install the Clutch Spring Compressors onto the direct clutch assembly.
   Use Special Service Tool: 307-552 Compressor, Clutch Spring. , 307-015 Compressor, Clutch Spring.

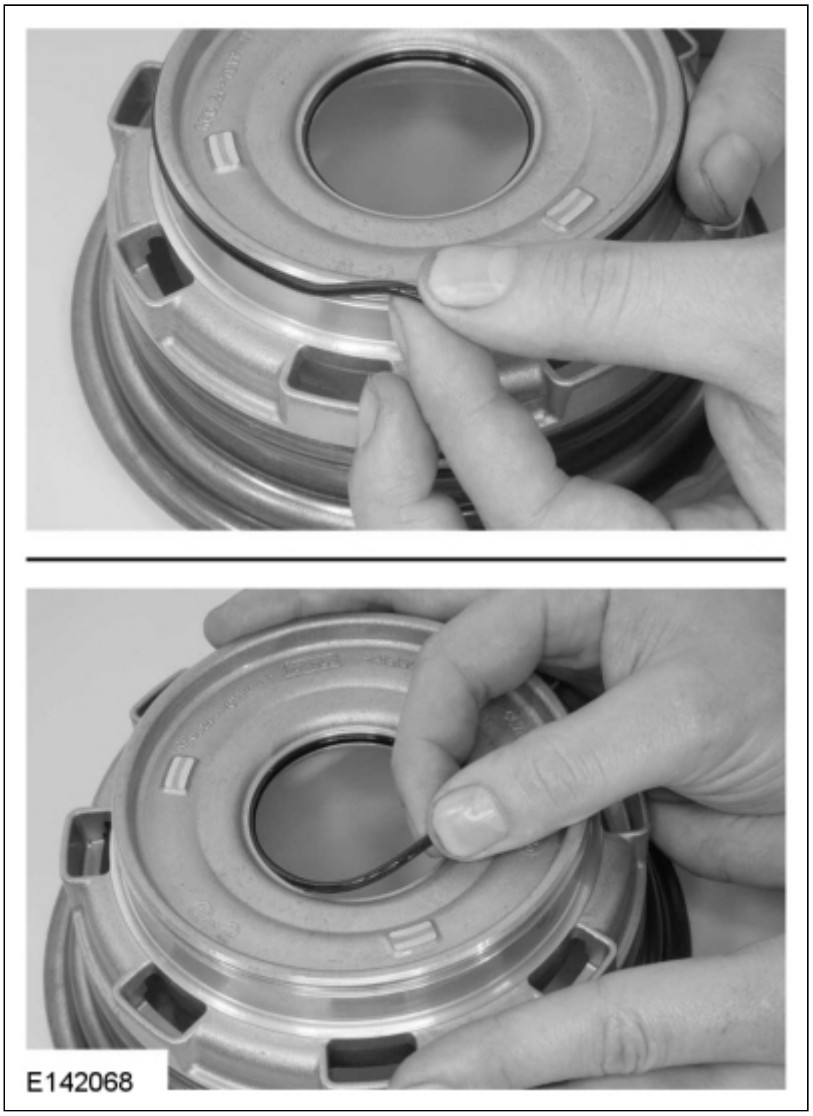


6. Using the Clutch Spring Compressors, compress the direct clutch return spring and remove the direct clutch return spring retainer.
   Use Special Service Tool: 307-552 Compressor, Clutch Spring. , 307-015 Compressor, Clutch Spring.



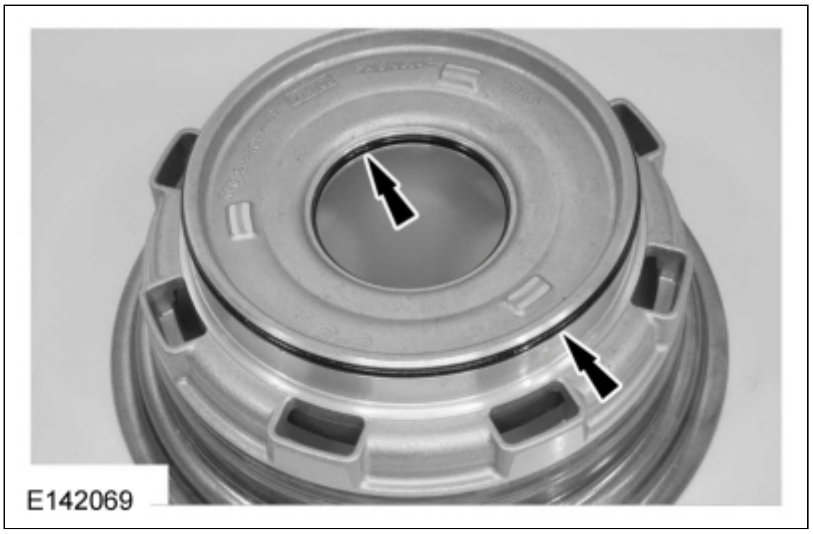
7. Remove the balance piston.

8. Remove the balance piston.



9. Remove the direct clutch piston.

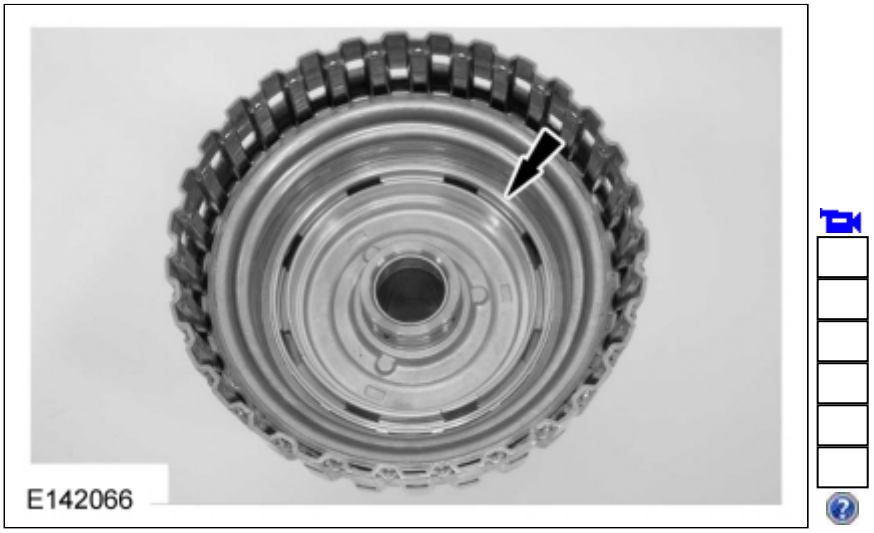
10. Remove and discard the outer O-ring seal from the balance piston.



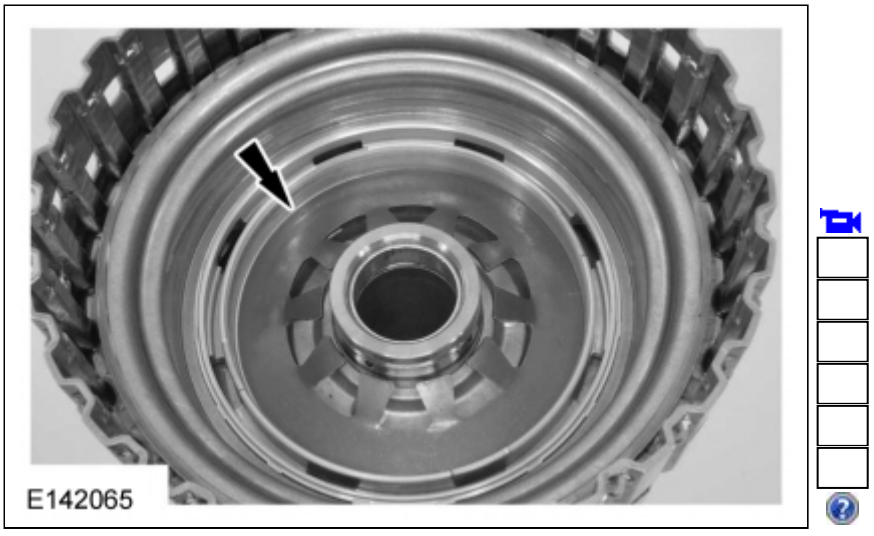
11. Remove and discard the outer and inner O-ring seals from the apply piston.

12. Inspect the components of the direct clutch for damage. If damage is indicated, install new components as necessary.

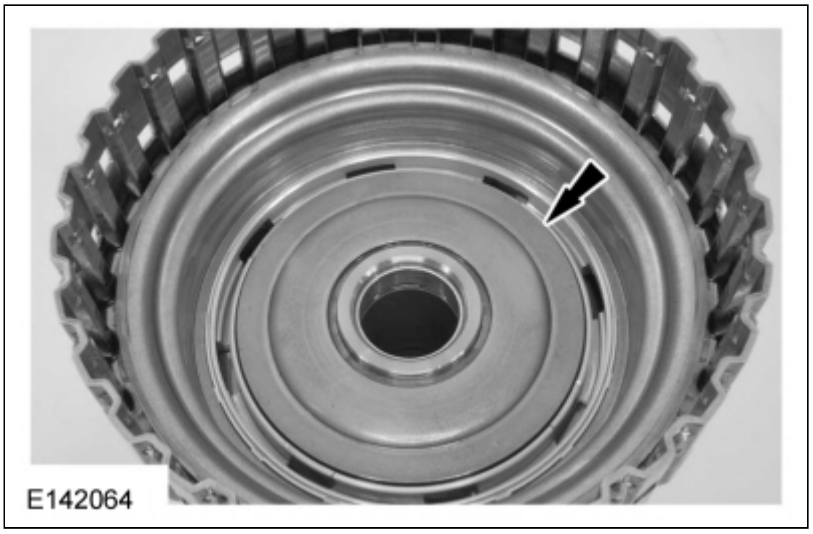
ASSEMBLY



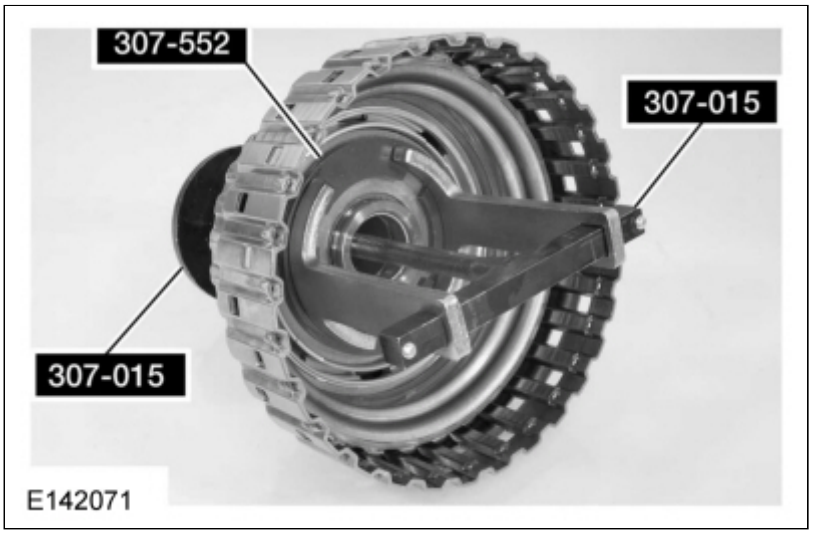
1. Install a new inner and outer O-ring seal on the apply piston.



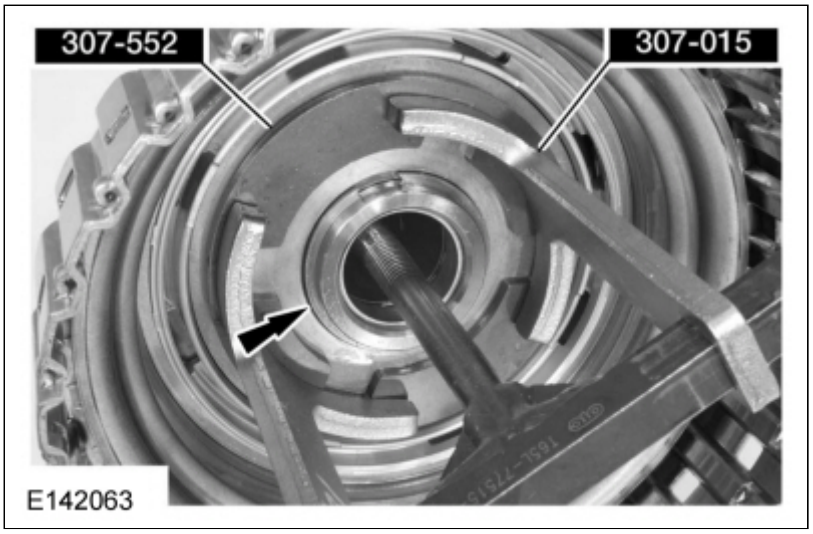
2. Install a new outer O-ring seal on the balance piston.



3. Lightly coat the O-ring seals in clean transmission fluid and install the direct clutch piston.

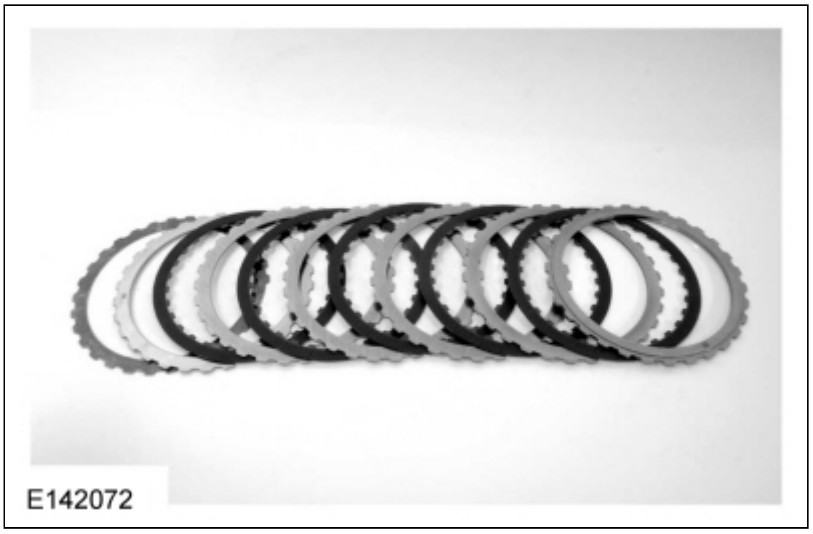


4. Install the direct clutch return spring.

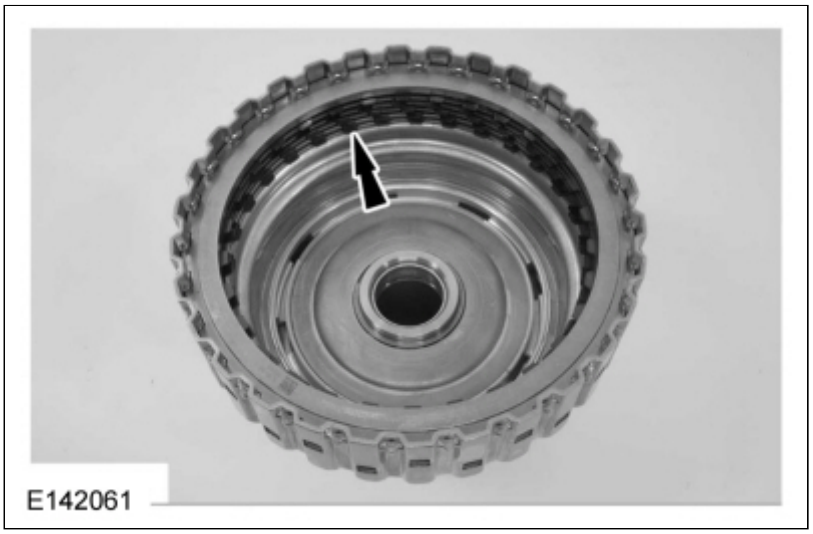


5. Install the balance piston.

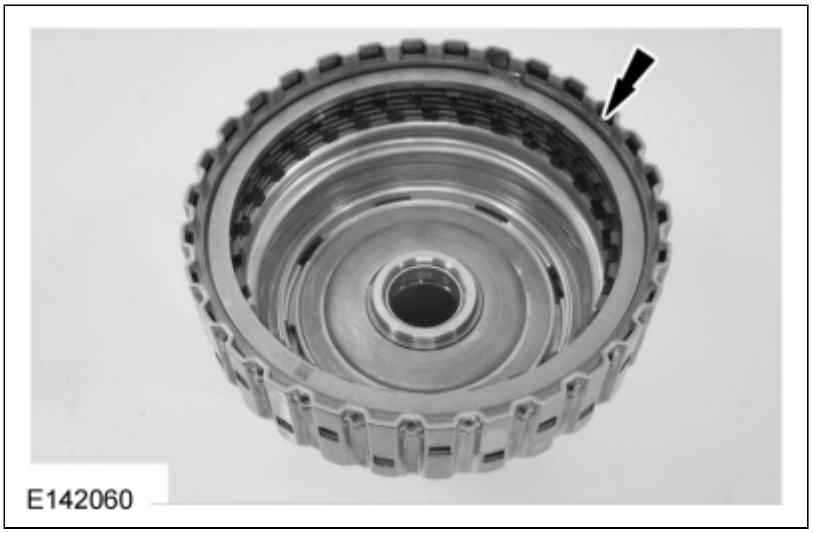
6. Install the Clutch Spring Compressors onto the direct clutch assembly.
   Use Special Service Tool: 307-552 Compressor, Clutch Spring. , 307-015 Compressor, Clutch Spring.



7. Using the Clutch Spring Compressors, compress the direct clutch return spring and install the direct clutch return spring retainer.
   Use Special Service Tool: 307-552 Compressor, Clutch Spring. , 307-015 Compressor, Clutch Spring.

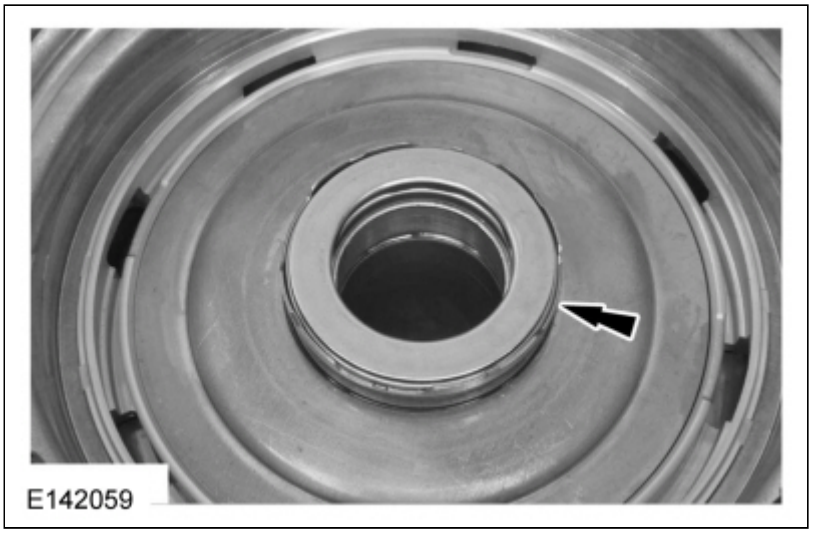


NOTE: *Friction and steel plate quantity will vary based on engine displacement. For additional information, refer to the Clutch Plate Quantity Chart in the Specifications portion of this section.*

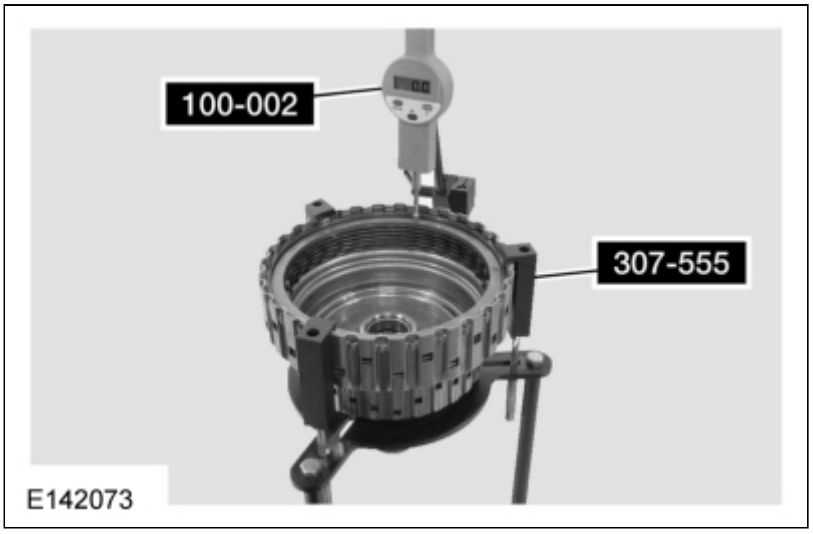


8. Soak the new direct clutch in clean transmission fluid.

9. Install the new direct clutch plates, starting with the wave spring then a steel plate and alternating between steel and friction plates, and ending with the pressure plate on the top.

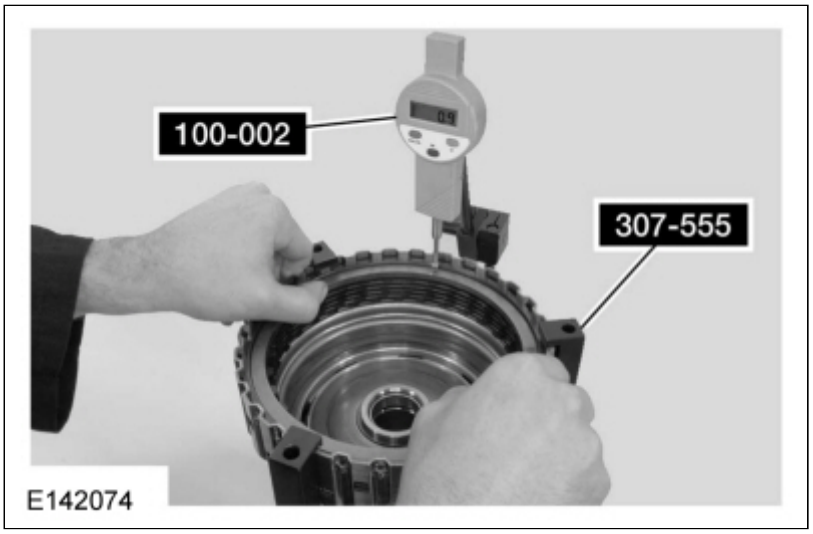


10. Install the direct clutch snap ring.



NOTE: *Inspect and install a new thrust bearing as required.*

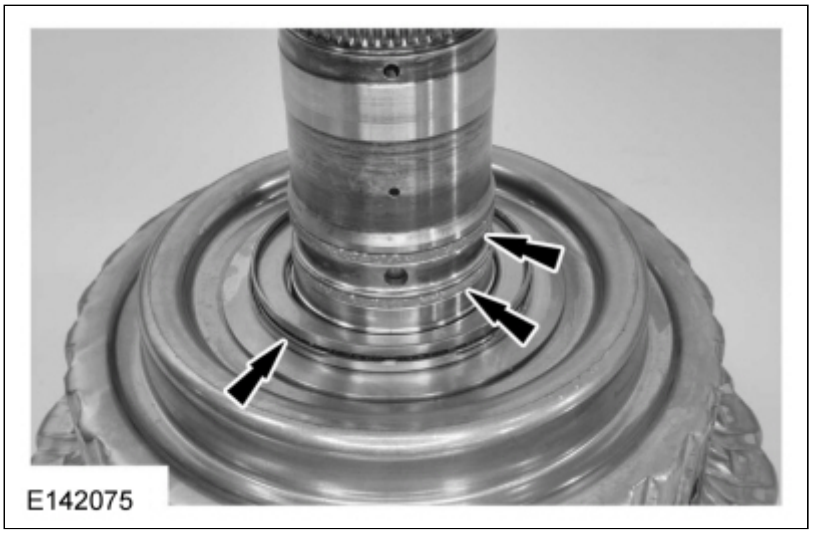
11. Install the T5 thrust bearing.



NOTE: *All direct clutch plates, friction and steel are of a wave-type design.*

12. Install the direct clutch assembly into the Clutch End Play Gauge and install the Dial Indicator Gauge with Holding Fixture and position the plunger so it fits into the opening of the snap ring.
    Use Special Service Tool: 307-555 End Play Gauge, Clutch. , 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.

13. With the Dial Indicator Gauge set at zero, lift up on the steel pressure plate so it is against the select fit snap ring. Record this reading as reading A.
    Use Special Service Tool: 307-555 End Play Gauge, Clutch. , 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.

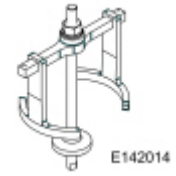


14. Rotate the direct clutch assembly 180° from the opening of the snap ring, take a second reading and record

this reading as reading B.

NOTE: *If the final measurement is not within specification, install a new snap ring until the correct specification is achieved. 0.5-1.3 mm*

15. If the free pack end clearance between the bottom of the snap ring and the top of the pressure plate is high, remeasure using a thicker select fit snap ring. If the free pack end clearance between the bottom of the snap ring and the top of the pressure plate is low, remeasure using a thinner select fit snap ring.



16. Install 2 new scarf cut seals and the roller bearing.

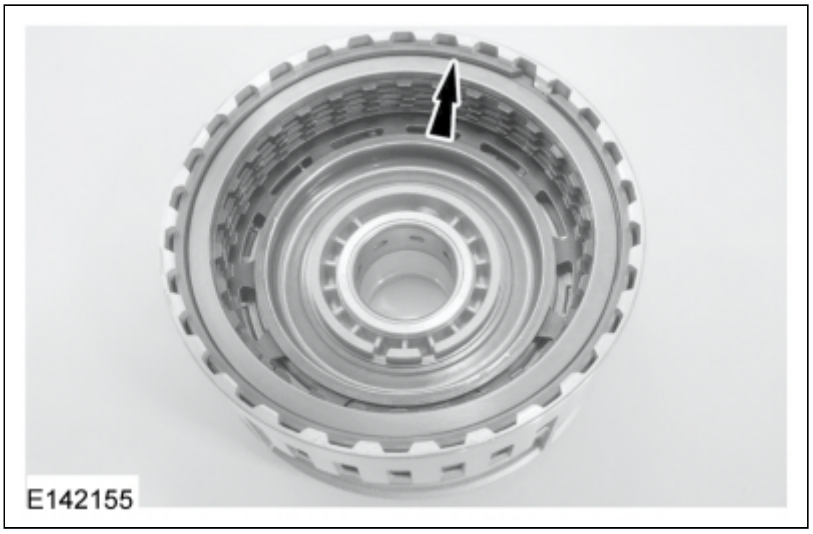
Intermediate Clutch Assembly

Special Tool(s) / General Equipment

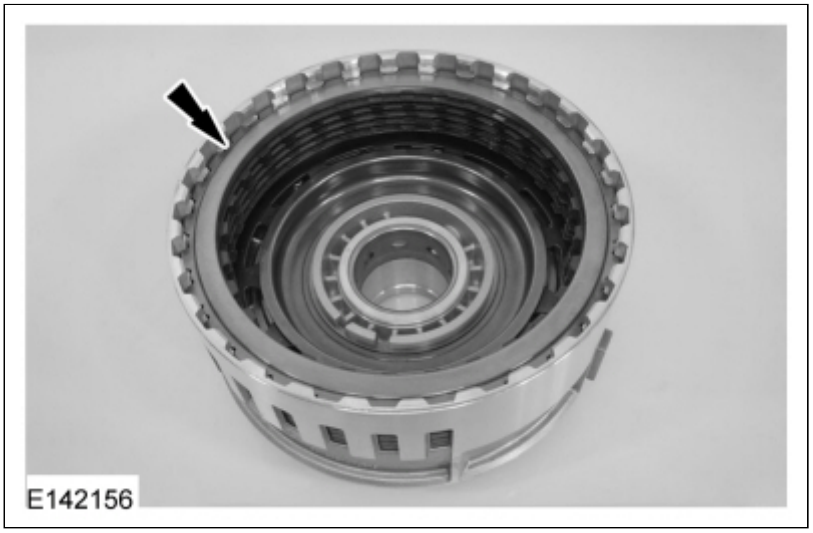
 E139373	100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge
 E142014	307-525 Compressor, Clutch Spring
 E142019	307-555 End Play Gauge, Clutch

DISASSEMBLY

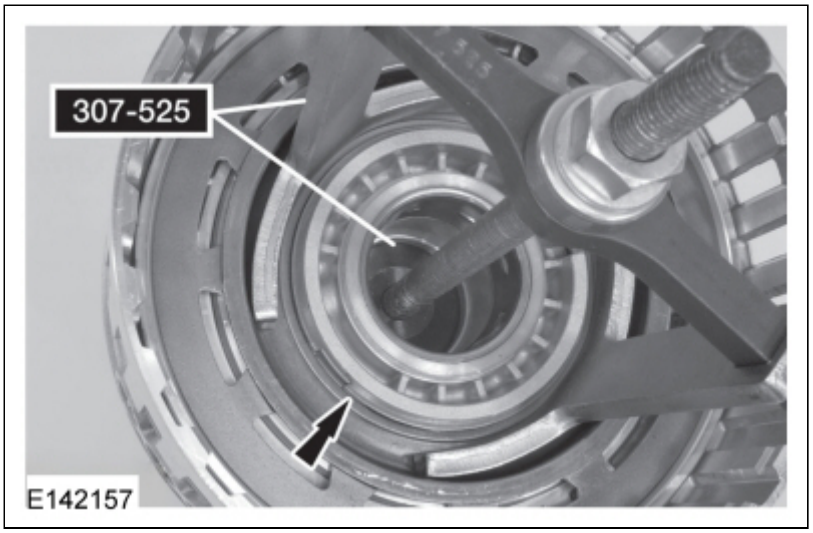


NOTE: *The intermediate clutch plate quantity is model dependent on engine size. Check the clutch plate quantity charts in specifications for the correct clutch plate quantity. Failure to install the correct clutch plate quantity will result in transmission failure.*

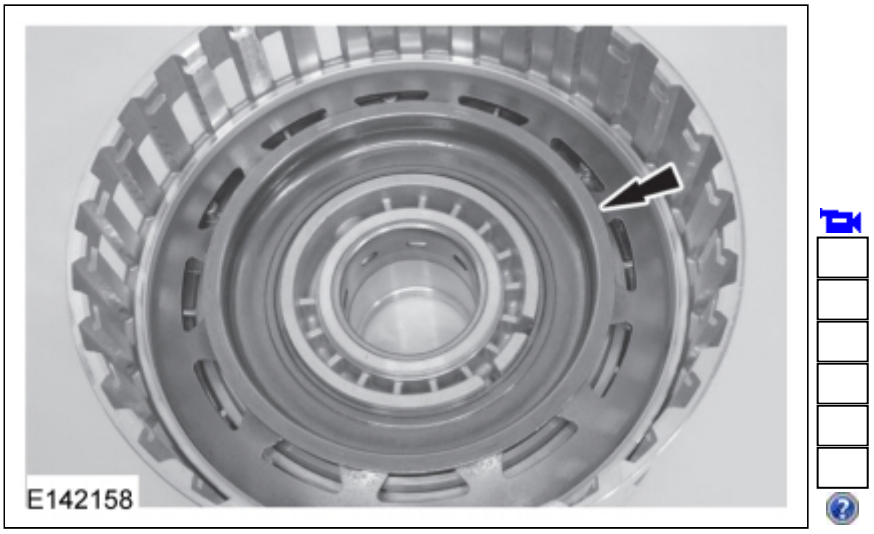
NOTE: *The intermediate clutch piston is model dependent on engine size due to the different quantity of intermediate clutch plates. If installing a new intermediate clutch piston, check to make sure the height of the new piston is the same as the original piston. Failure to install the correct piston*



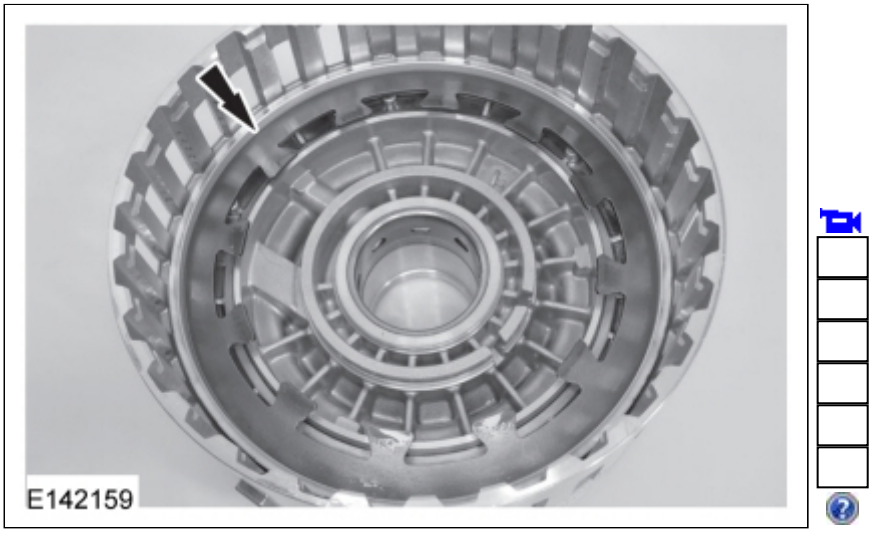
1. Remove the T6 thrust bearing.



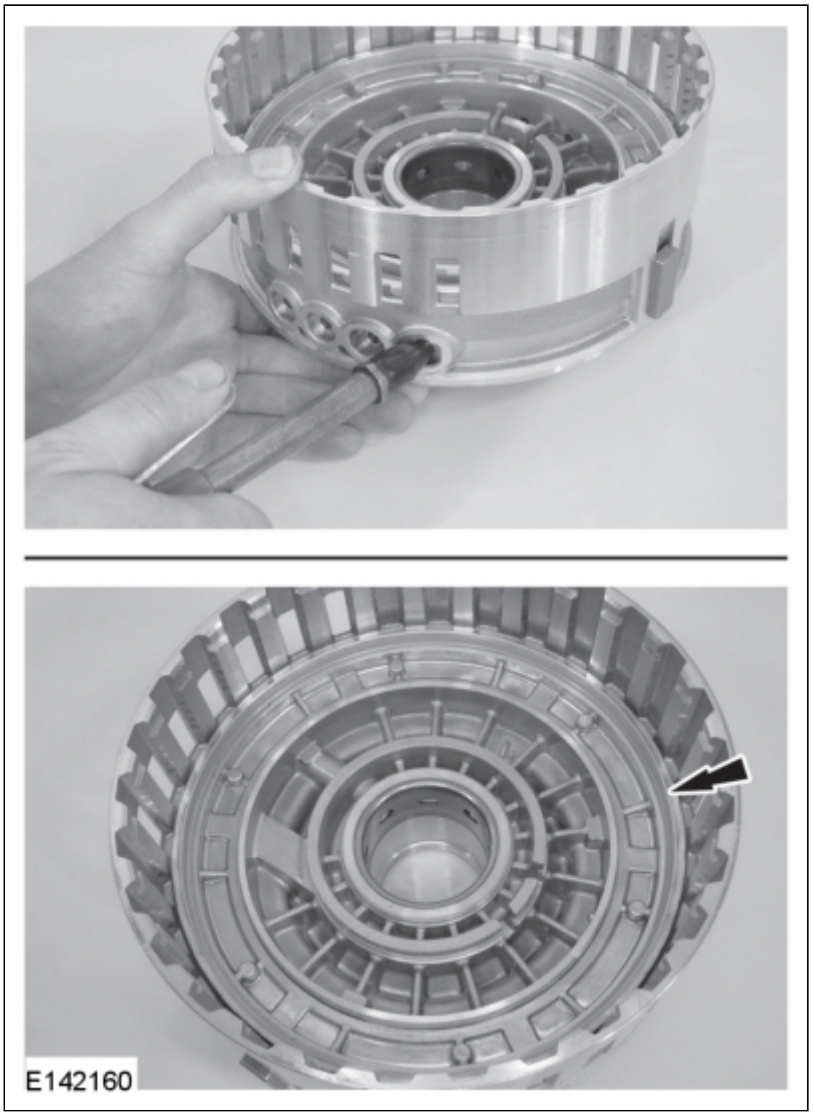
2. Remove the intermediate clutch plate snap ring.



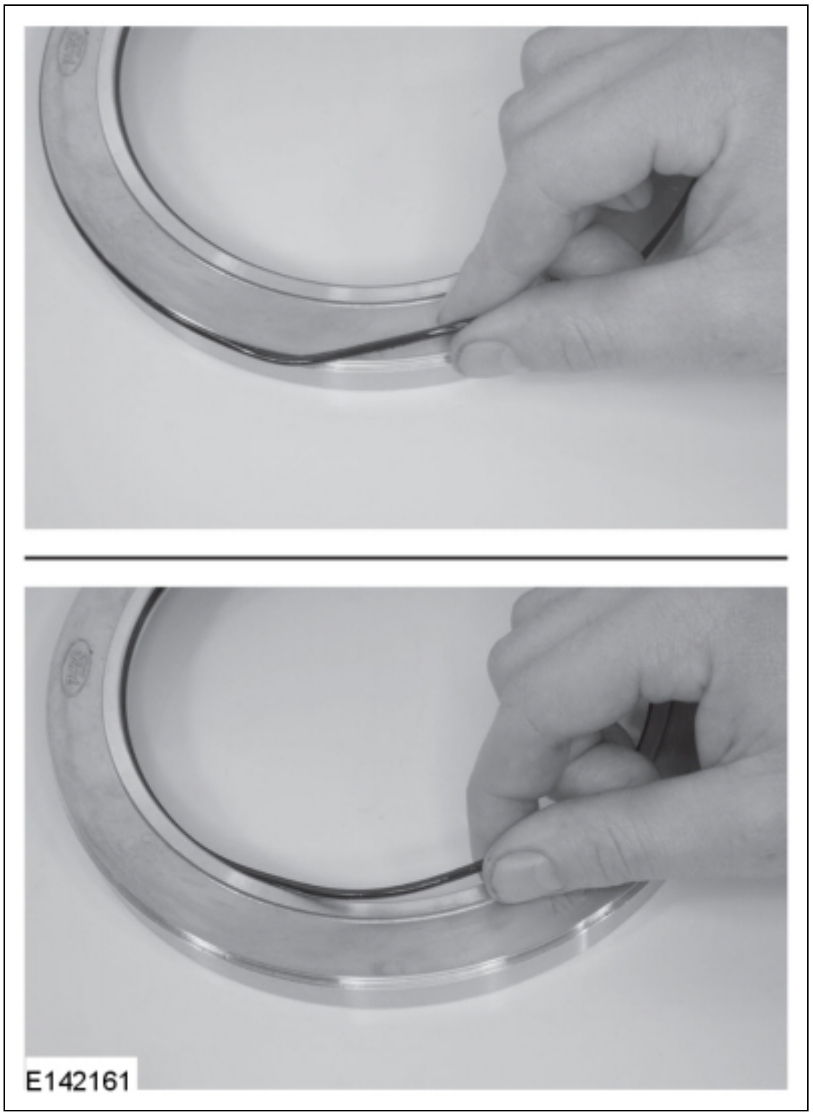
3. Remove the intermediate clutch plates.



4. Using the Clutch Spring Compressor, remove and discard the intermediate clutch return spring retainer.
   Use Special Service Tool: 307-525 Compressor, Clutch Spring.

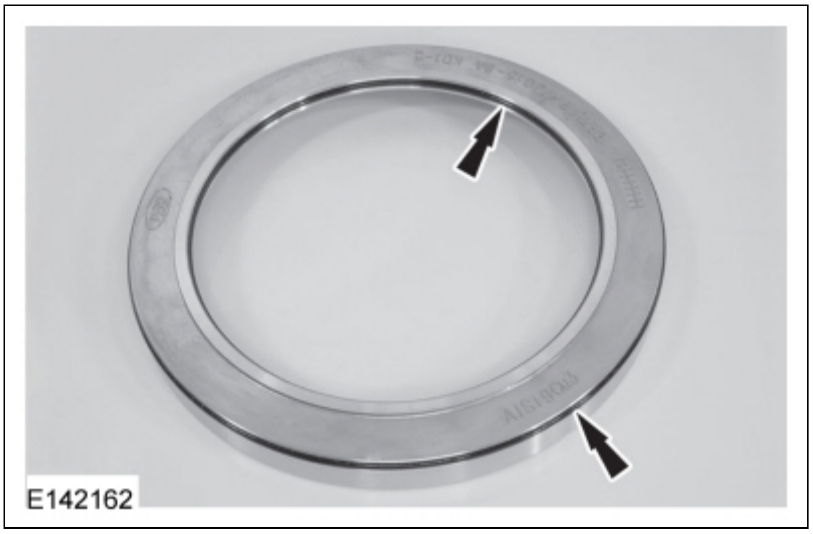


5. Remove the intermediate clutch return spring top plate.

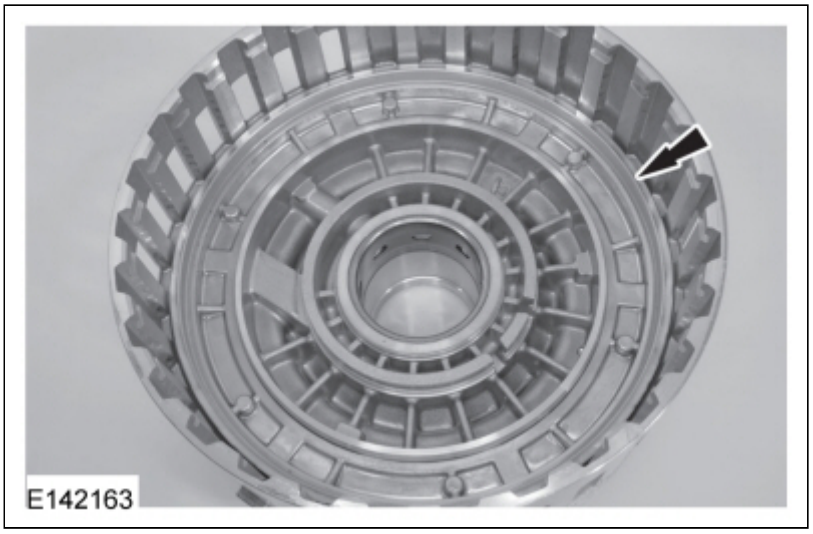


6. Remove the intermediate clutch return spring.

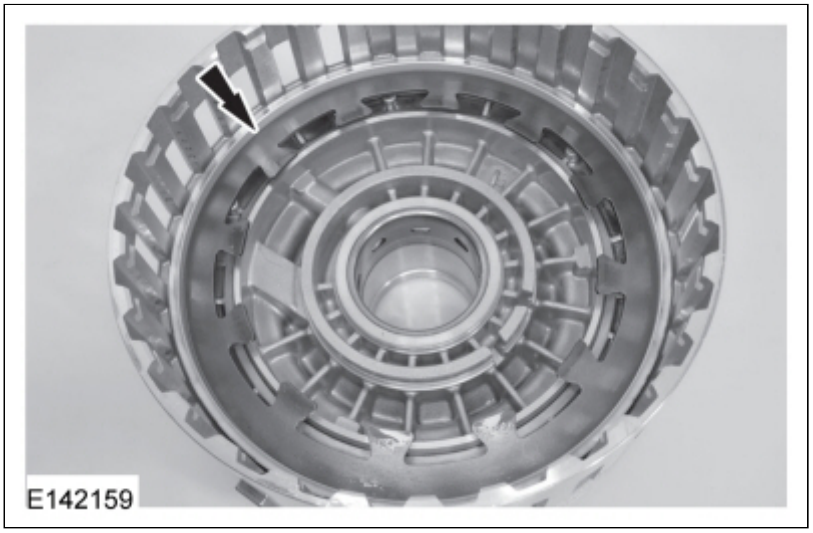
7. Applying a slight amount of air to the port, remove the intermediate clutch piston.



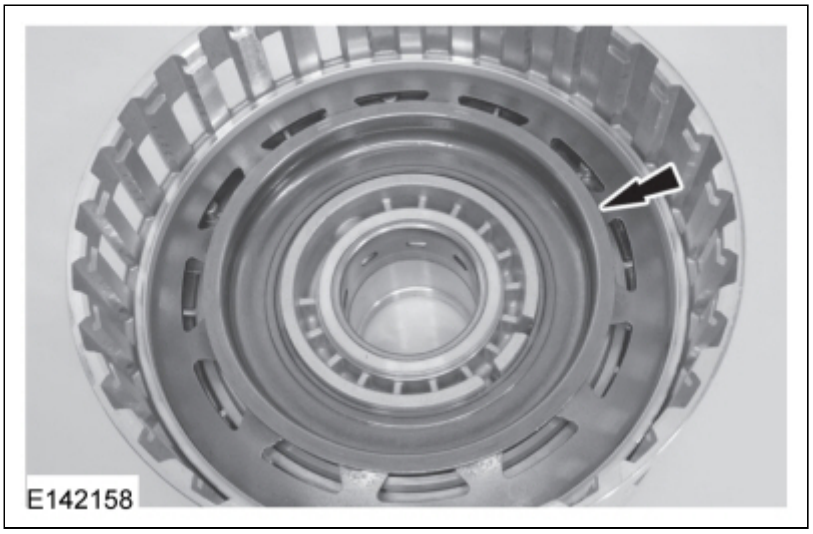
8. Remove and discard the inner and outer intermediate clutch piston O-ring seals.



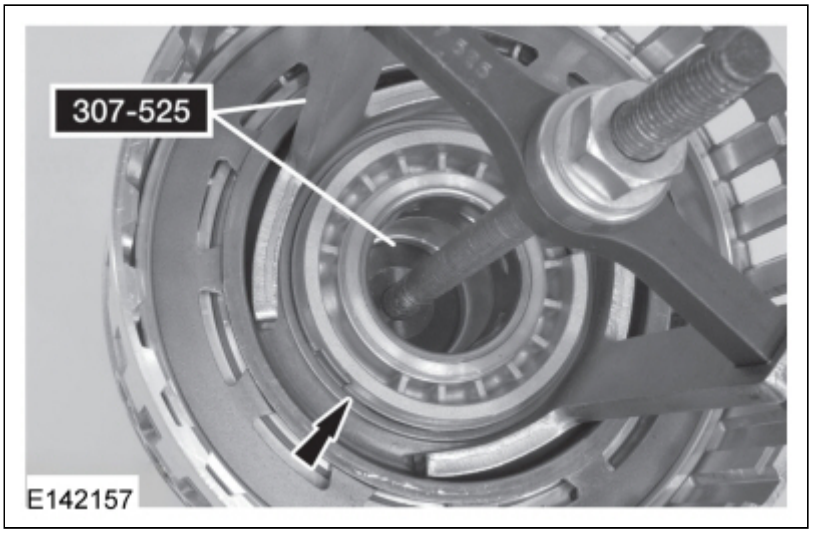
ASSEMBLY



1. Install new inner and outer intermediate clutch piston O-ring seals.

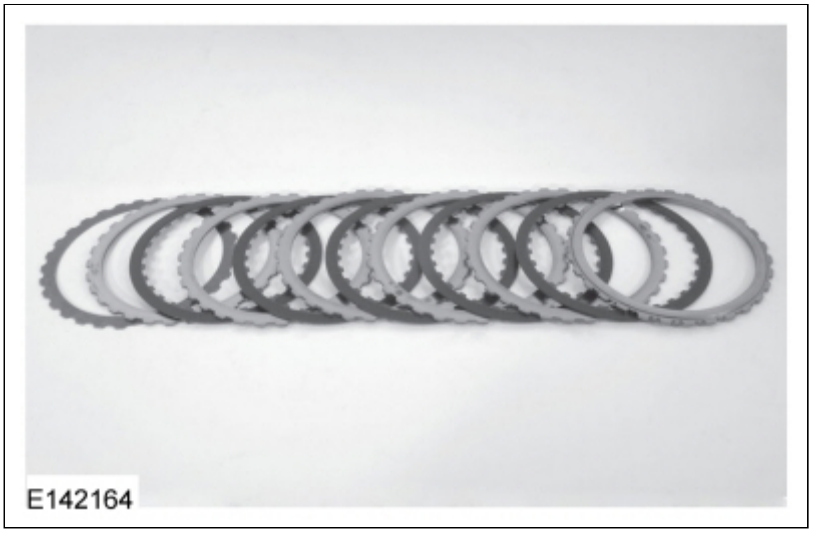


2. Lightly coat the O-ring seals in clean automatic transmission fluid and install the intermediate clutch piston.

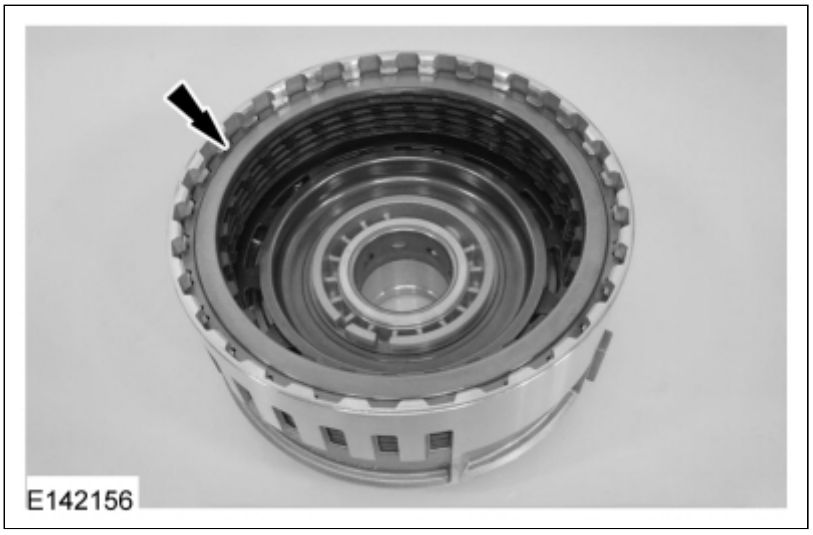


3. Install the intermediate clutch return spring.

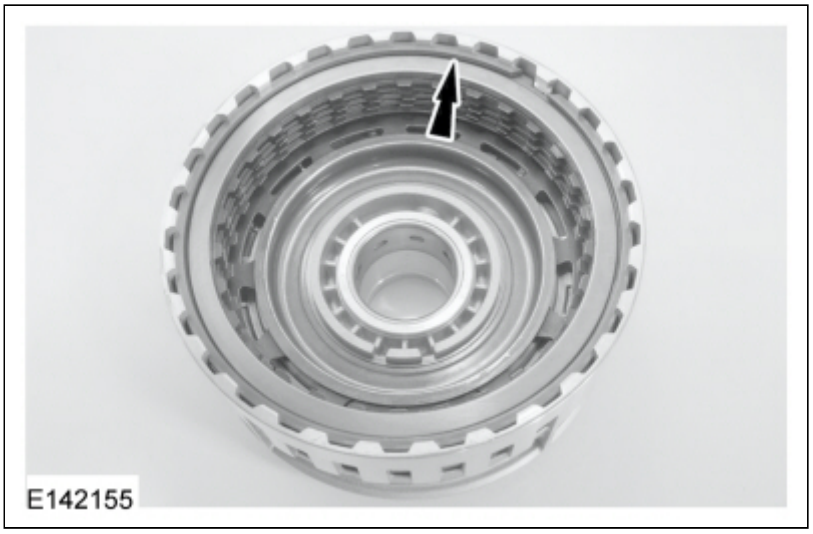
4. Install the intermediate clutch return spring top plate.



5. Using the Clutch Spring Compressor, install a new intermediate clutch return spring retainer.
   Use Special Service Tool: 307-525 Compressor, Clutch Spring.

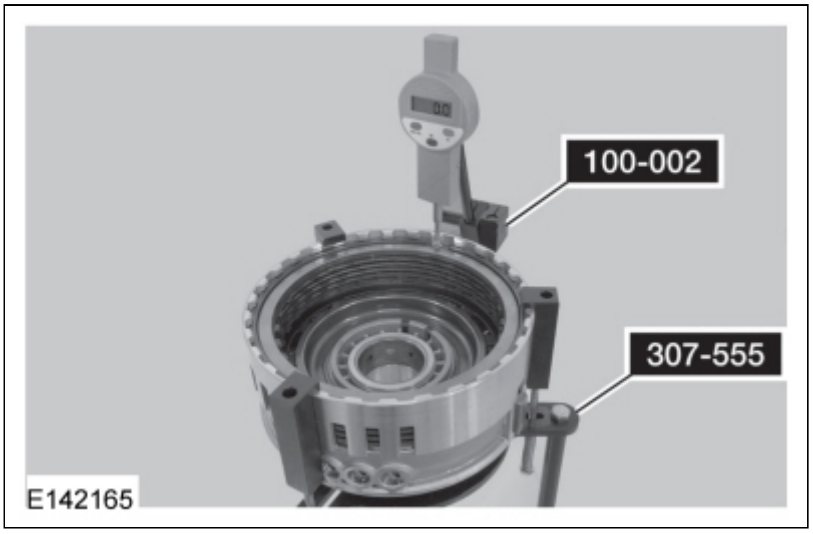


NOTE: *Friction and steel plate quantity will vary based on engine displacement. For additional information, refer to the Clutch Plate Quantity Chart in the Specifications portion of this section.*



6. Soak the new intermediate clutch plates in clean automatic transmission fluid.

7. Install the new intermediate clutch plates, starting with the wave spring then a steel plate and alternating between friction and steel plates, and ending with the pressure plate.

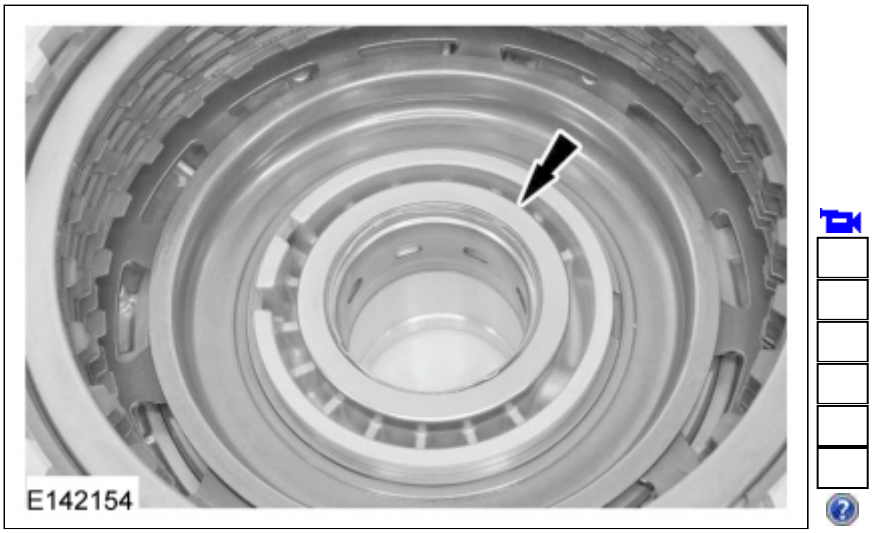


8. Install the intermediate clutch plate snap ring.

NOTE: *All intermediate clutch plates, friction and steel are of a wave-type design.*

9. Install the intermediate clutch assembly into the Clutch End Play Gauge and install the Dial Indicator Gauge with Holding Fixture and position the plunger so it fits into the opening of the snap ring.
   Use Special Service Tool: 307-555 End Play Gauge, Clutch. , 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.

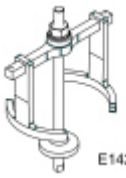
10. With the Dial Indicator Gauge set at zero, lift up on the steel pressure plate so it is against the select fit snap ring. Record this reading as reading A.
    Use Special Service Tool: 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.

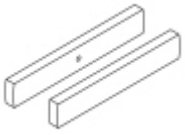


11. Rotate the intermediate clutch assembly 180° from the opening of the snap ring, take a second reading and record this reading as reading B.

NOTE: *If the final measurement is not within specification, install a new snap ring until the correct specification is achieved. 0.7-1.1 mm*

12. If the free pack end clearance between the bottom of the snap ring and the top of the pressure plate is high, remeasure using a thicker select fit snap ring. If the free pack end clearance between the bottom of the snap ring and the top of the pressure plate is low, remeasure using a thinner select fit snap ring.





13. Install the T6 thrust bearing.

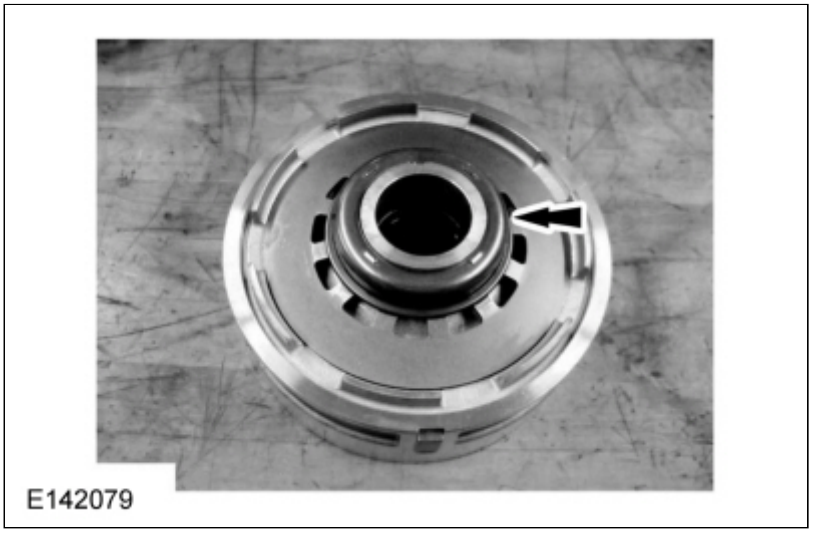
Low/Reverse Clutch Assembly

Special Tool(s) / General Equipment

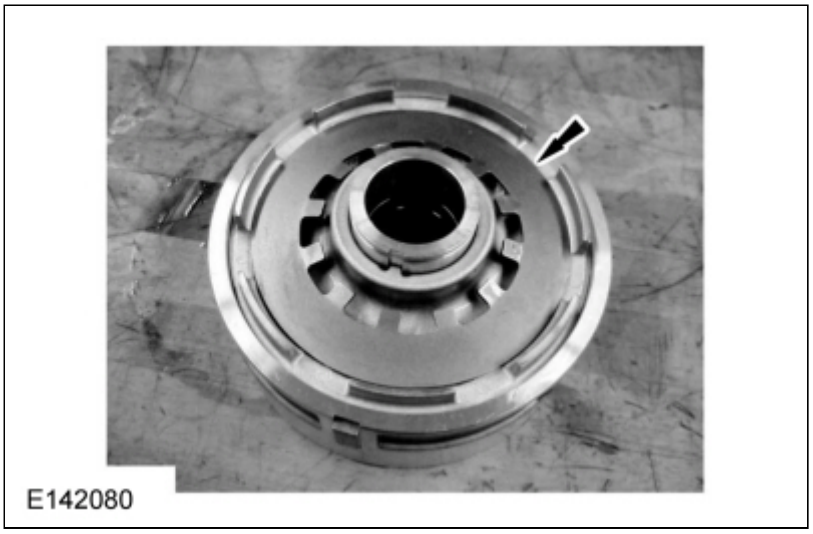
 E139373	100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge
 E142009	303-D075 Depth Micrometer
 E142014	307-525 Compressor, Clutch Spring
 E142018	307-554 Gauge, D-Clutch Measurement
 E142019	307-555 End Play Gauge, Clutch

DISASSEMBLY

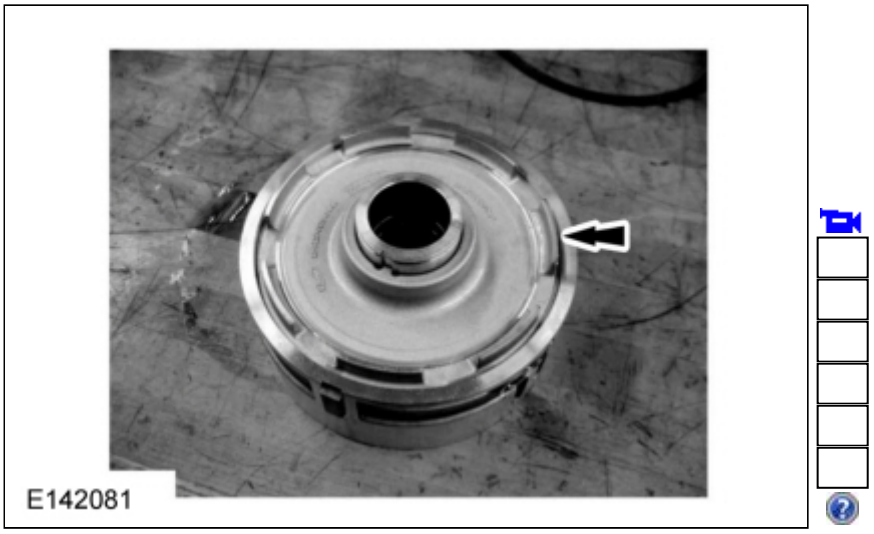


NOTICE: The low/reverse clutch plate quantity is model dependent on engine size. Check the clutch plate quantity charts in specifications for the correct clutch plate quantity. Failure to install the correct clutch plate quantity will result in transmission failure.

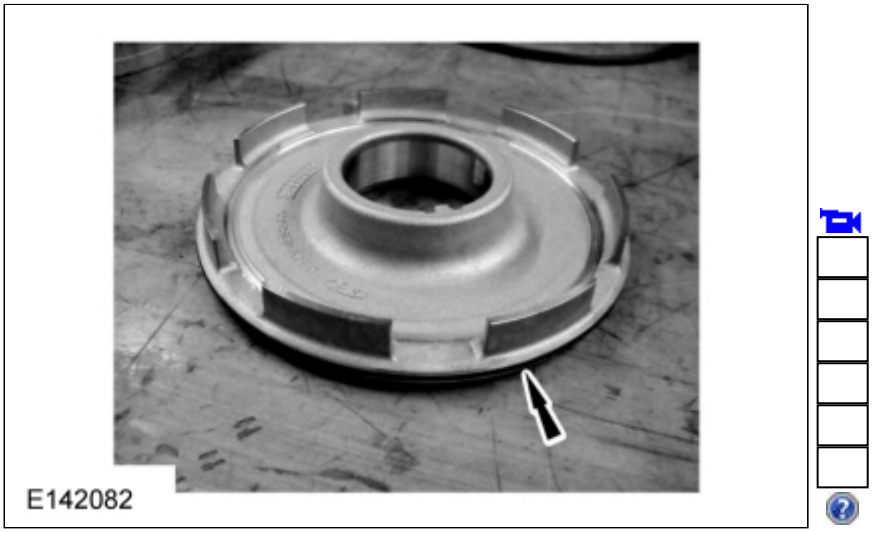
NOTE: *The low/reverse clutch plates are installed in the case during the transmission assembly procedure.*



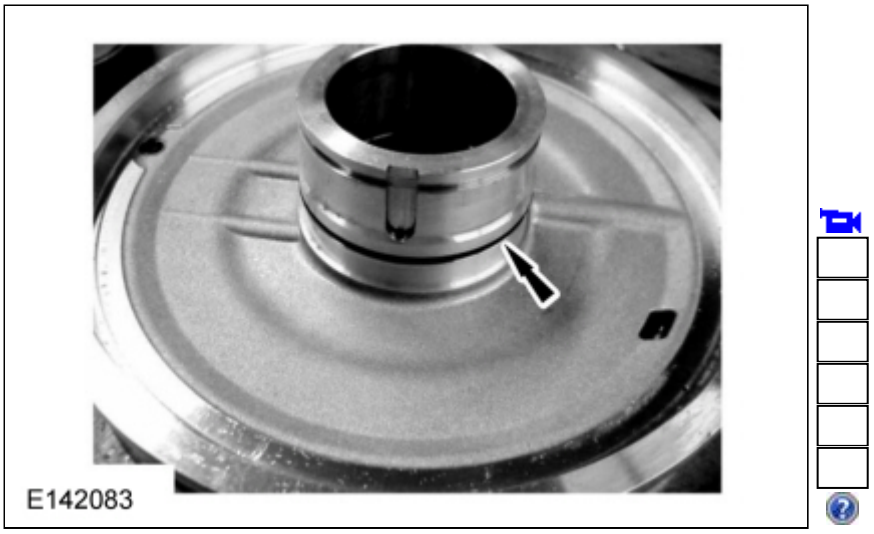
1. Using the Clutch Spring Compressor, remove and discard the low/reverse clutch return spring retainer.
   Use Special Service Tool: 307-525 Compressor, Clutch Spring.



2. Remove and discard the low/reverse clutch return spring retainer.

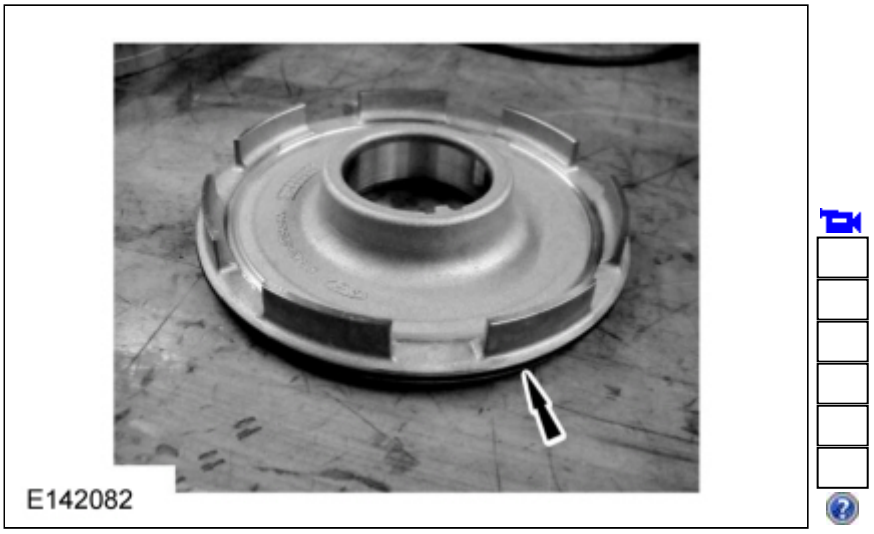


3. Remove the low/reverse clutch return spring.

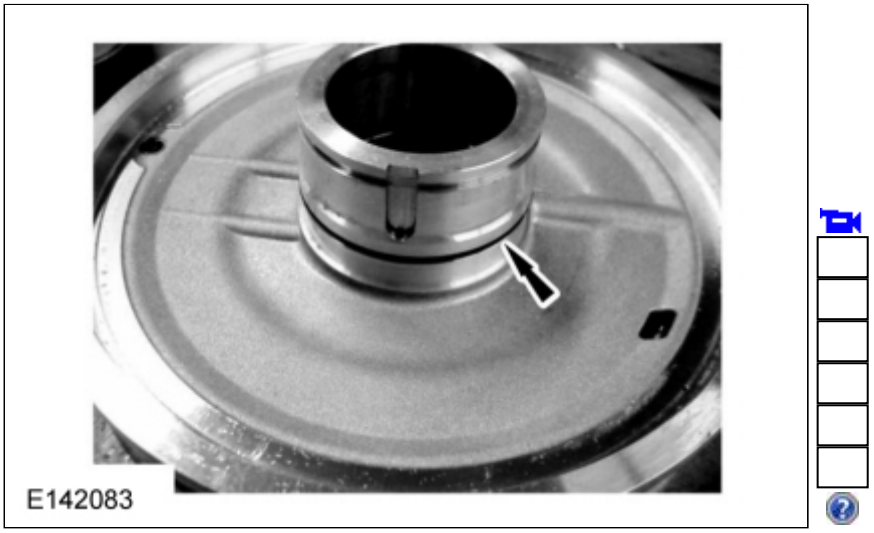


4. Apply a slight amount of air to the port, remove the low/reverse clutch piston from the low/reverse clutch drum.

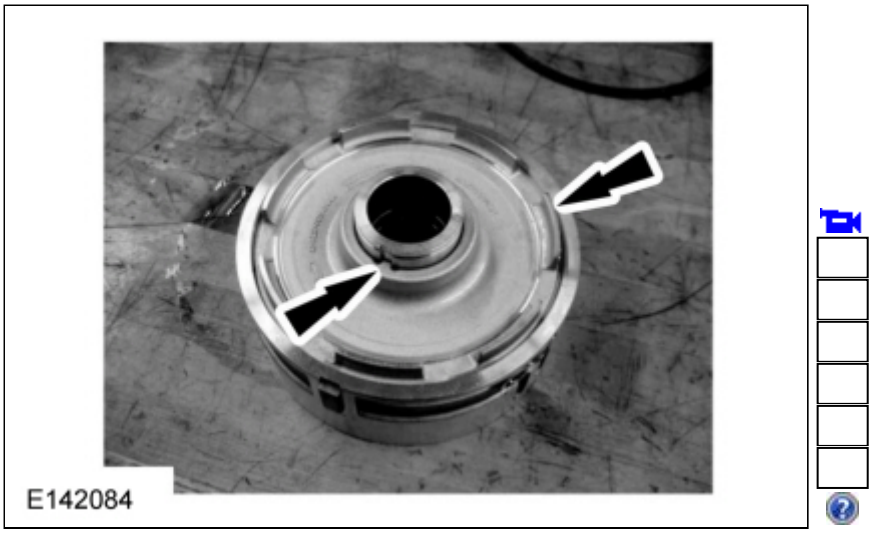
5. Remove and discard the low/reverse outer piston O-ring seal.



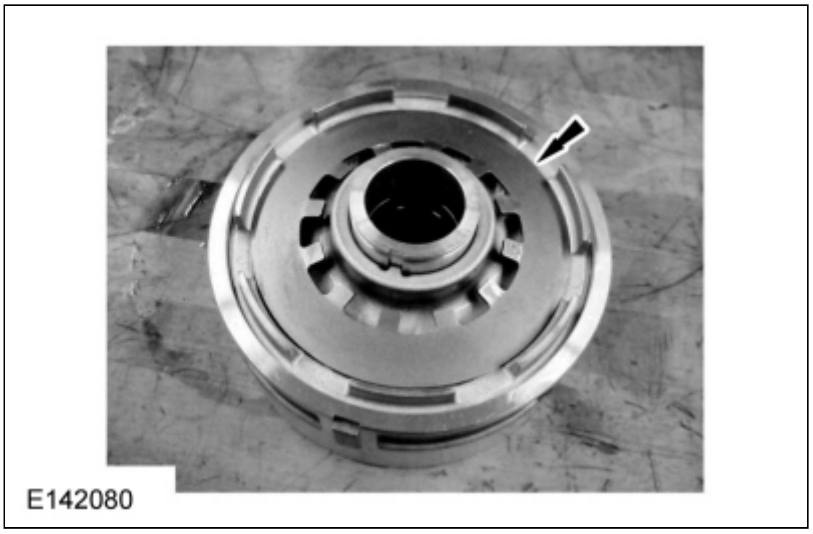
6. Remove and discard the low/reverse drum O-ring seal.



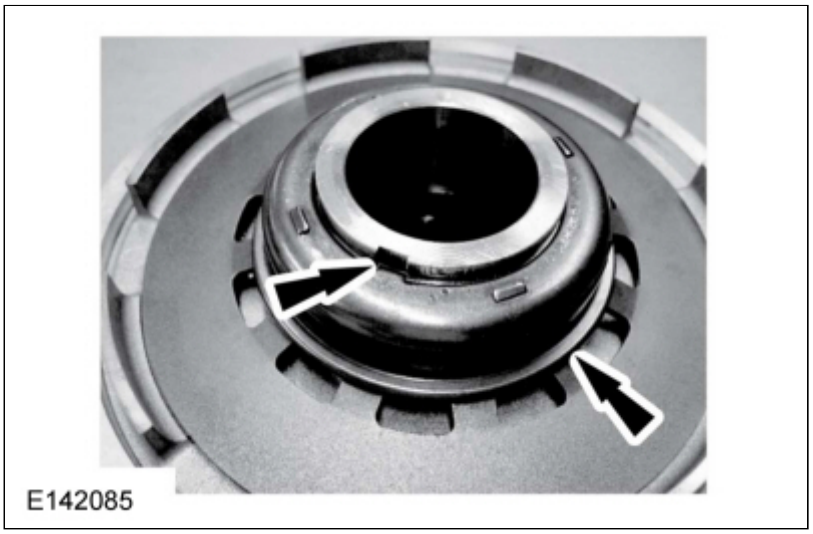
ASSEMBLY



1. Install new low/reverse outer piston O-ring seal.



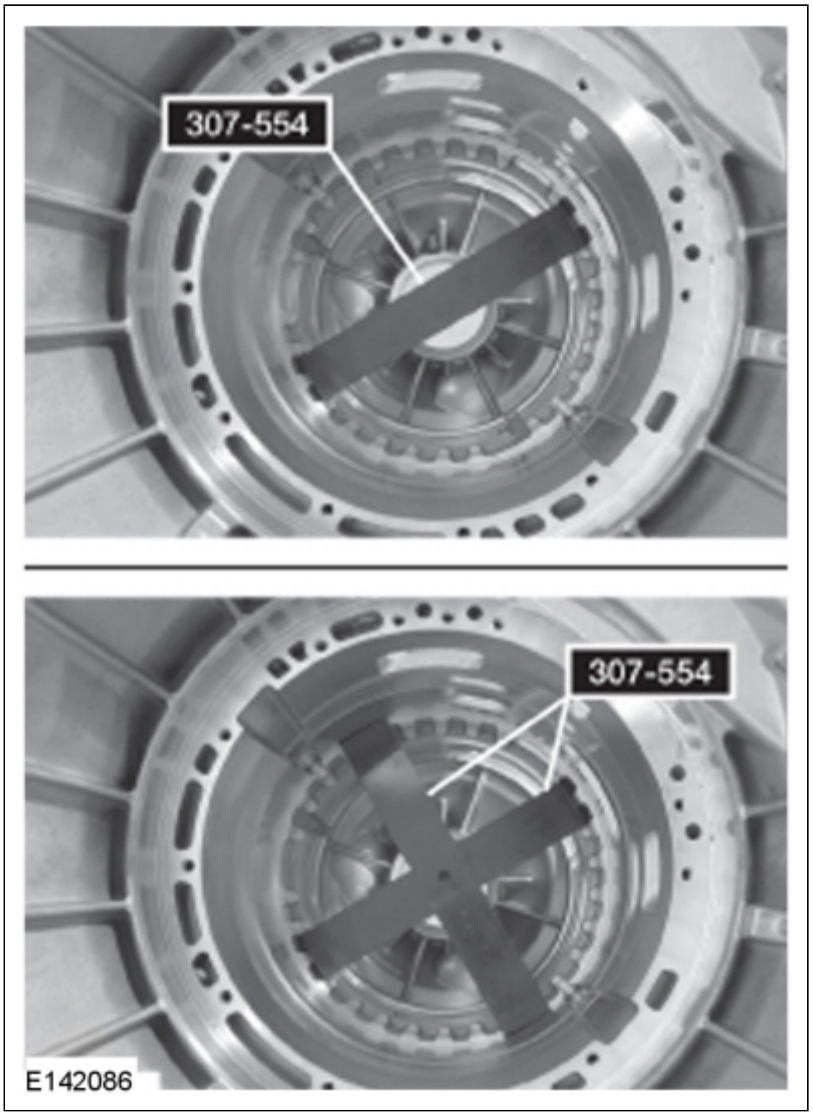
2. Install new low/reverse drum O-ring seal.



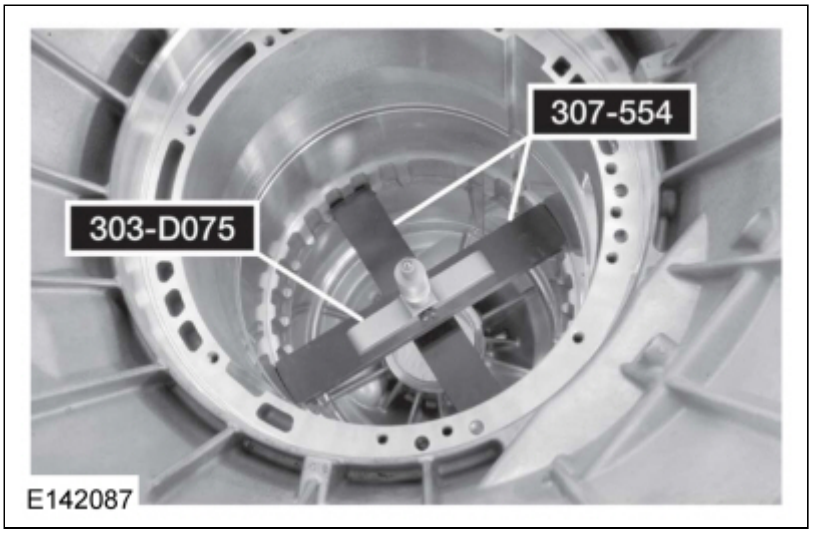
3. Lubricate the O-ring seal with clean transmission fluid. Align the alignment tab on the piston with the groove in the center support and install the low/ reverse piston.

4. Install the low/reverse clutch return spring.

5. Install a new low/reverse clutch return spring retainer. Align the alignment tab on the retainer with the groove in the center support and install the low/ reverse piston return spring retainer.

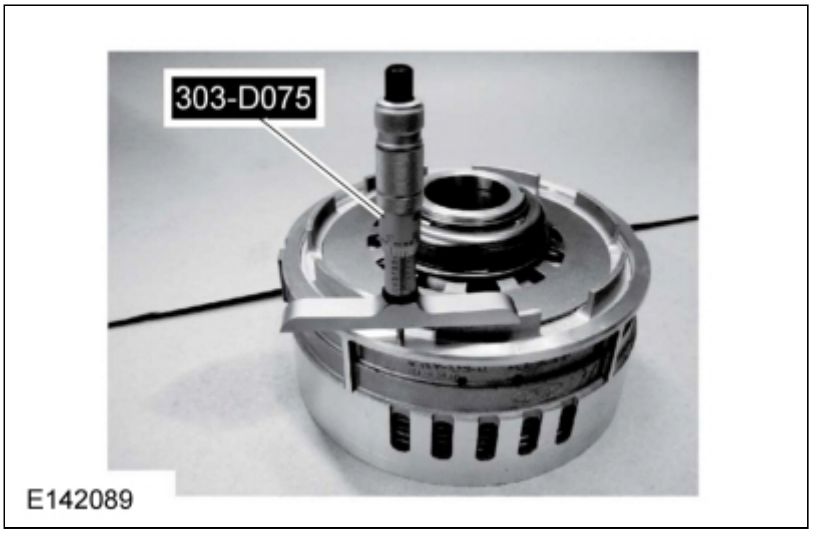


6. Using the Clutch Spring Compressor, compress the low/reverse clutch return spring and install the retaining ring.
   Use Special Service Tool: 307-525 Compressor, Clutch Spring.



NOTE: *All low/reverse clutch plates, friction and steel are of a wave-type design.*

7. Install the D-Clutch Measurement Gauge into the case.
   Use Special Service Tool: 307-554 Gauge, D-Clutch Measurement.



8. With the D-Clutch Measurement Gauge positioned in the case, use the Depth Micrometer to measure the case stop depth.
   Use Special Service Tool: 307-554 Gauge, D-Clutch Measurement. , 303-D075 Depth Micrometer.

9. Measure the clutch pack height. With the D-Clutch Measurement Gauge and install the Dial Indicator Gauge with Holding Fixture.
   Use Special Service Tool: 307-555 End Play Gauge, Clutch. , 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.

10. Using the Depth Micrometer, measure the piston to center support shoulder height.
    Use Special Service Tool: 303-D075 Depth Micrometer.

11. Calculate the end clearance. **End clearance specification 1.0-1.6 mm (0.039- 0.062 in)**

12. Compare the end clearance to the specification. If the end clearance is out of specification, select the next thinner or thicker plate as required and repeat Steps 10, 11 and 12.

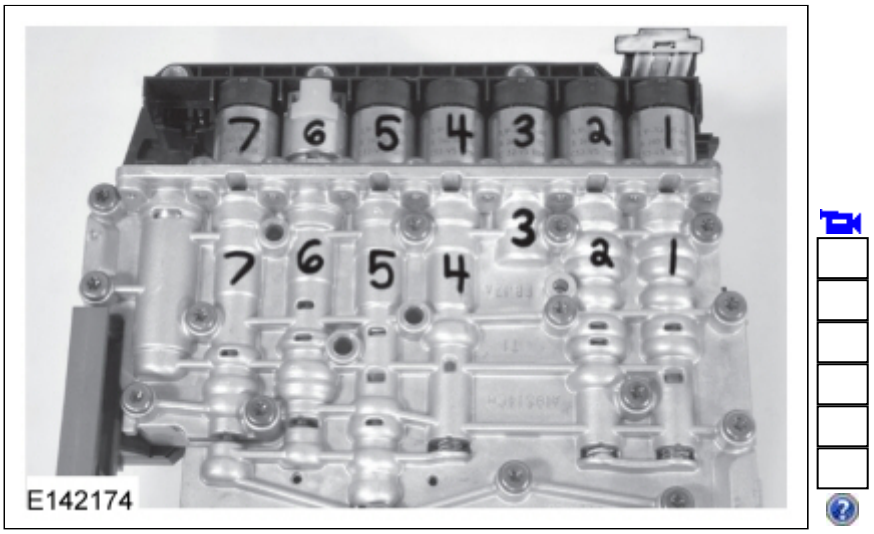
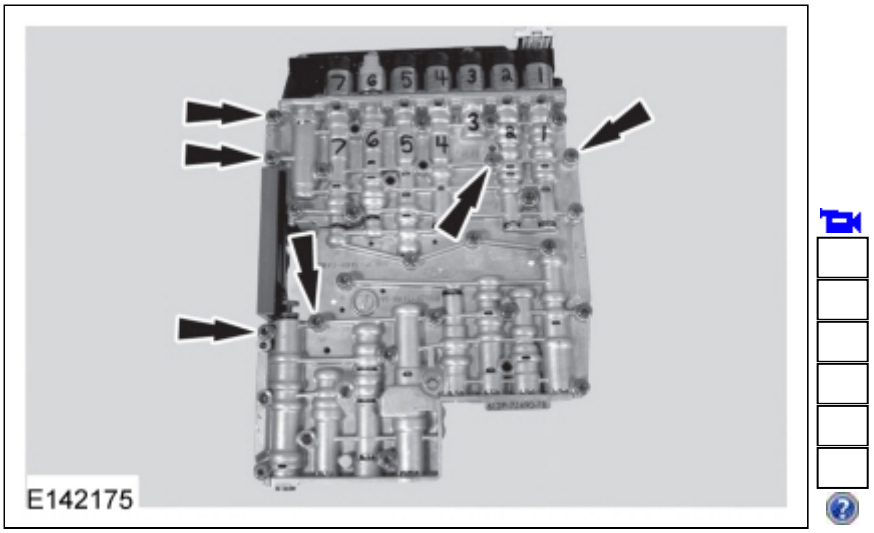
Main Control Valve Body

Base Part Number: 7A100



DISASSEMBLY

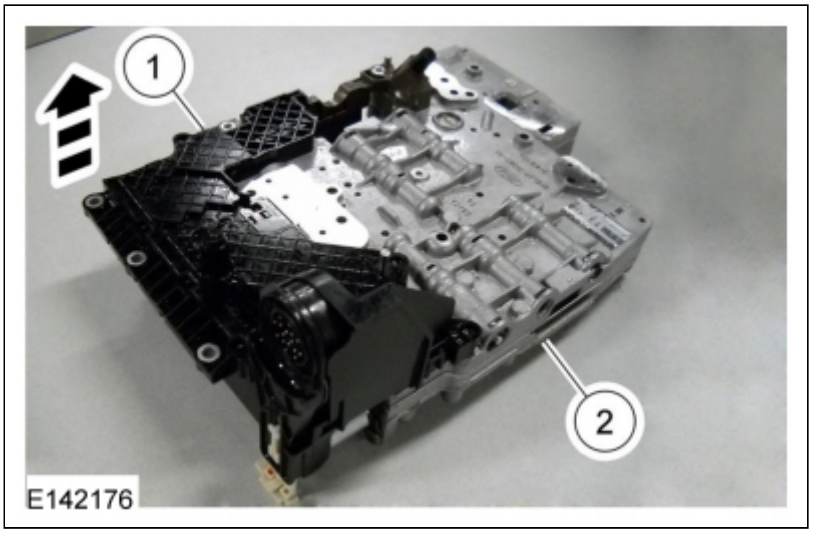
NOTE: *Make an identifying mark on each solenoid and the corresponding bore for correct assembly.*



NOTE: *Solenoids may visually appear the same but their designs/functions are different. Use care not to assemble the main control assembly incorrectly. Incorrect solenoid installation results in poor transmission shift quality.*

NOTE: *Note the location of the 8 check balls, 6 solenoid dampers, 2 internal valves and springs and 2 filter screens for reassembly.*

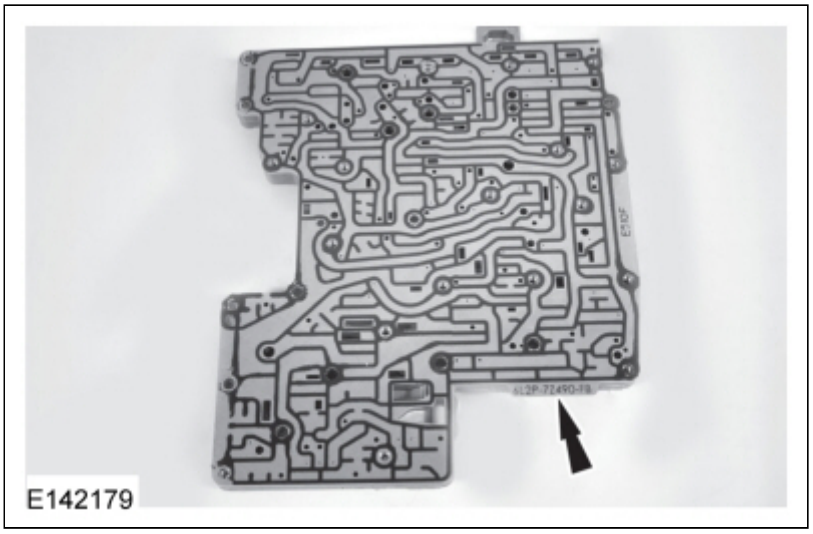
1. Make an identifying mark on each solenoid and the corresponding bore for correct assembly.



2. Remove the 6 long molded leadframe to valve body bolts from the molded leadframe.

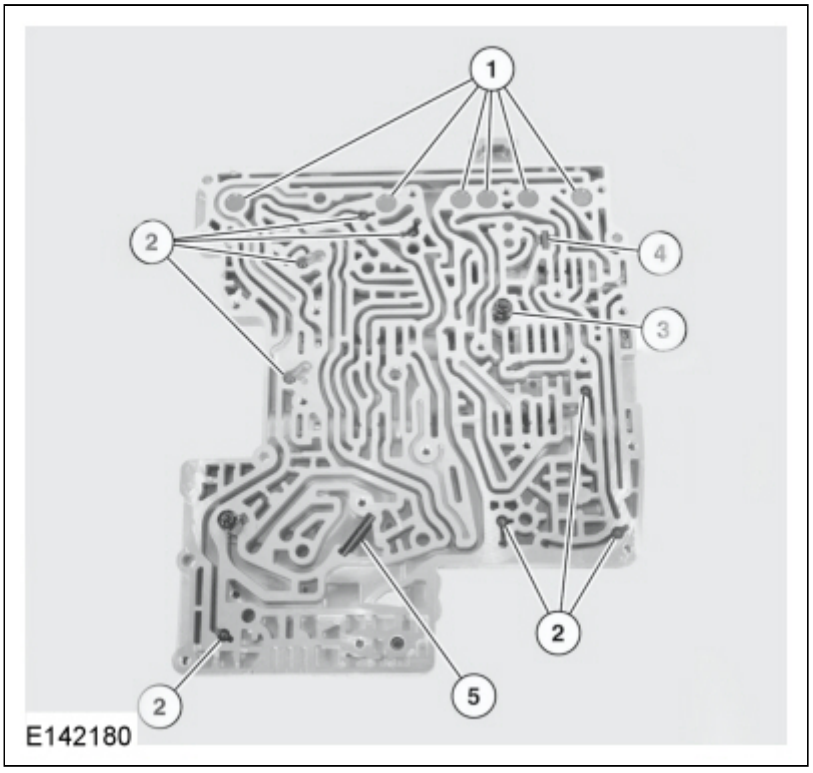
3. **NOTE:** *Carefully separate the molded leadframe from the main control assembly.*

    1. Molded leadframe
    2. Main control assembly

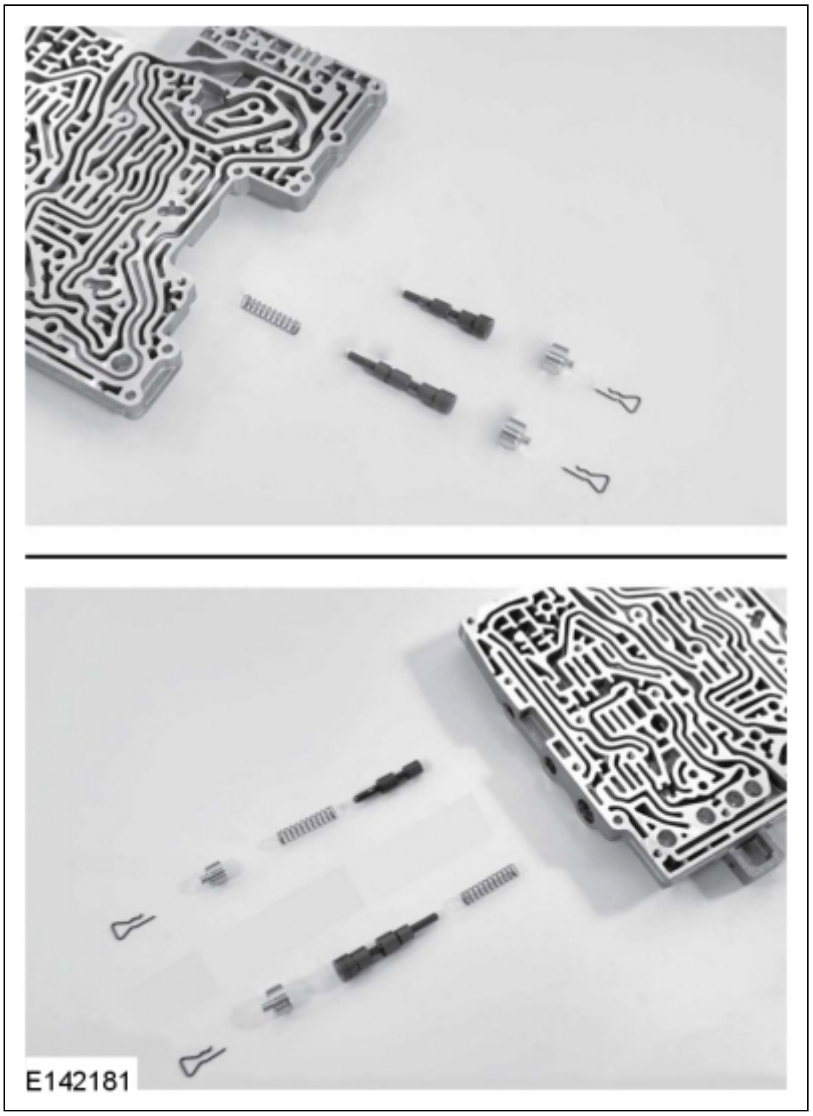


4. Remove 19 short molded leadframe to valve body bolts from the main control assembly.

5. Separate the lower half of the main control assembly from the upper half of the main control assembly.

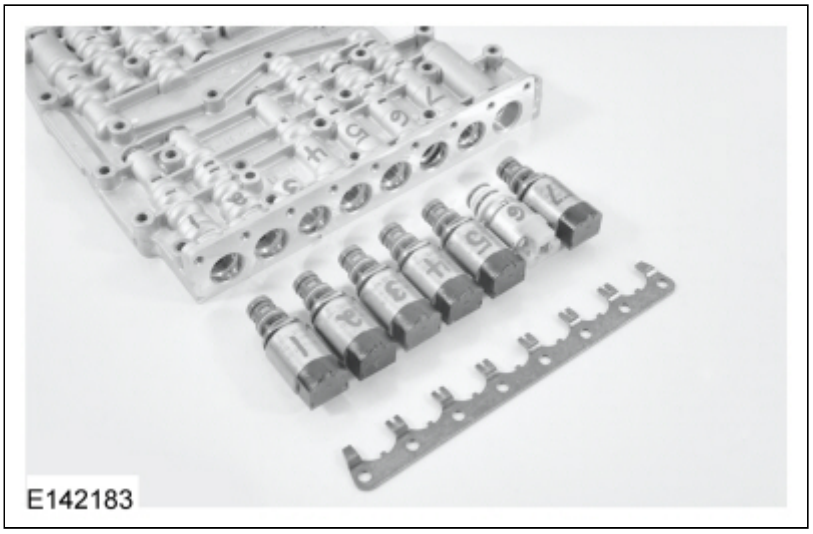


6. Remove and discard the main control valve body separator plate.

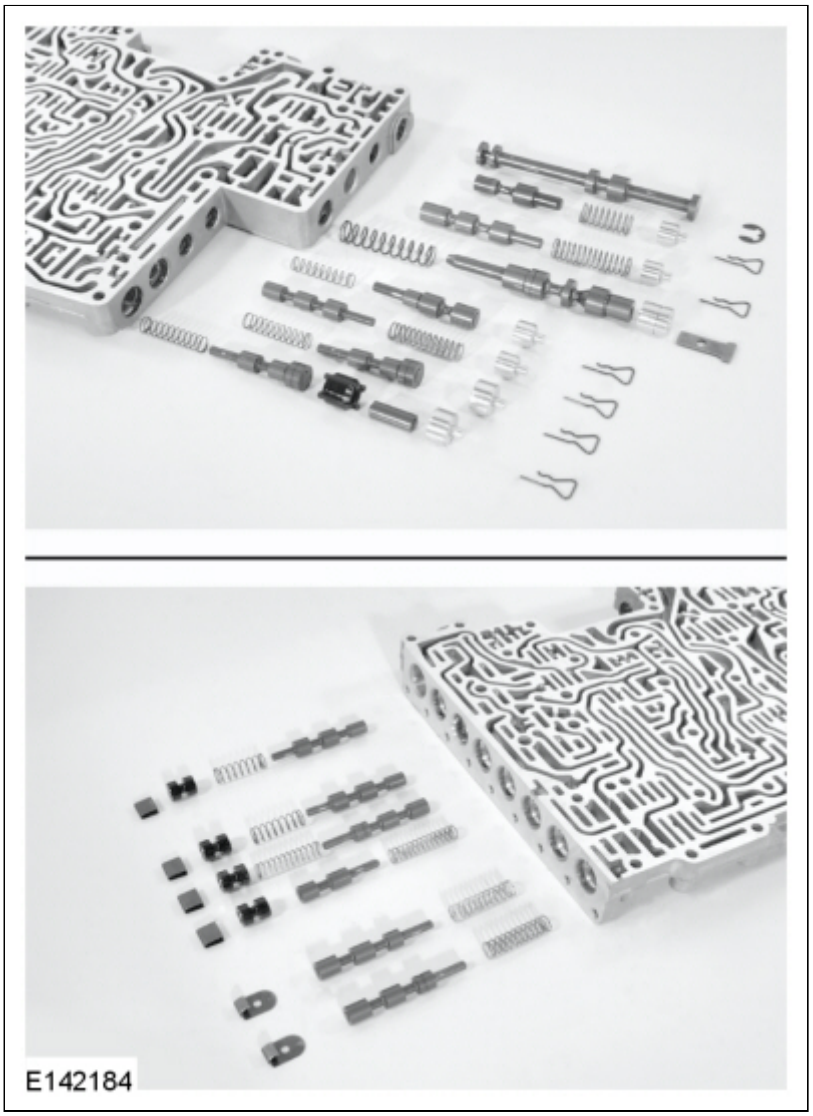


7. **NOTE:** *Remove the solenoid dampers, check balls, converter drain back valve and filter screens from the main control assembly. Note the location for assembly.*

    1. Solenoid dampers
    2. Check balls
    3. Converter drain back valve
    4. Small filter screen
    5. Large filter screen



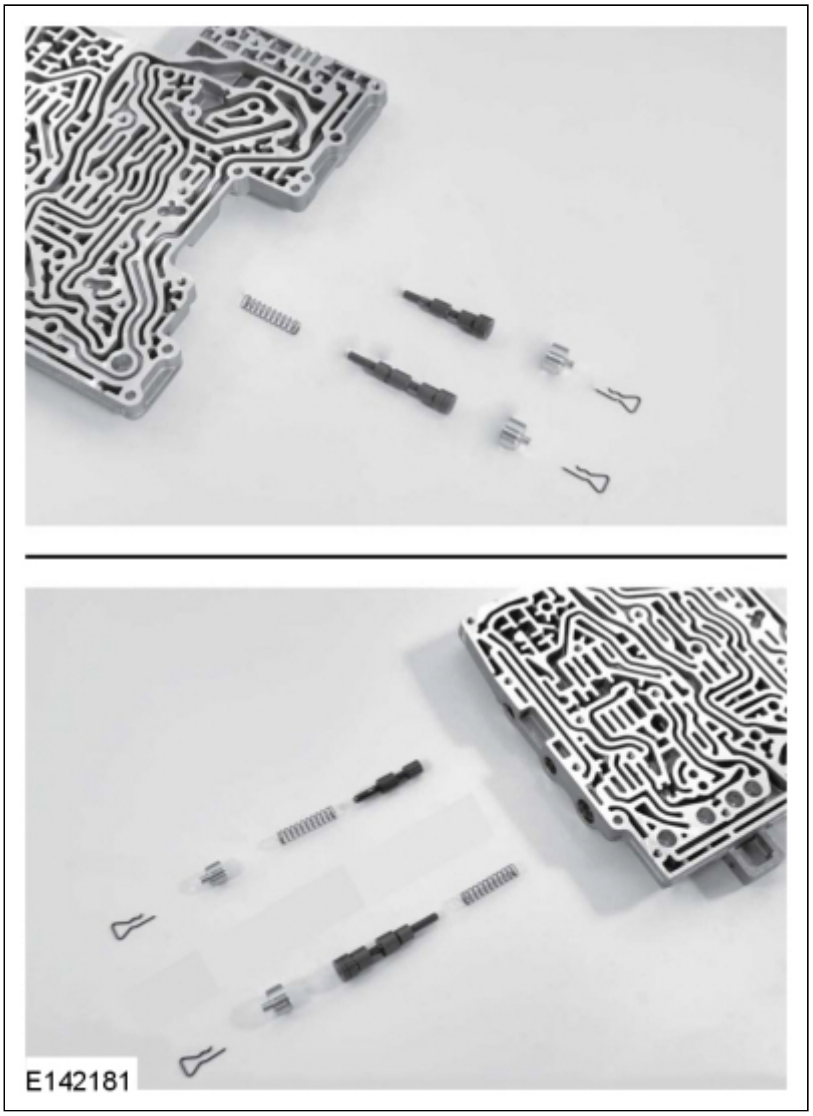
8. Remove the retaining clips, caps, valves and valve springs from each bore of the main control assembly. Note the location and order for assembly.



9. Using clean mineral spirits, clean the upper half of the main control assembly.
10. Remove the 8 solenoid hold down bracket bolts and the solenoid hold down bracket.

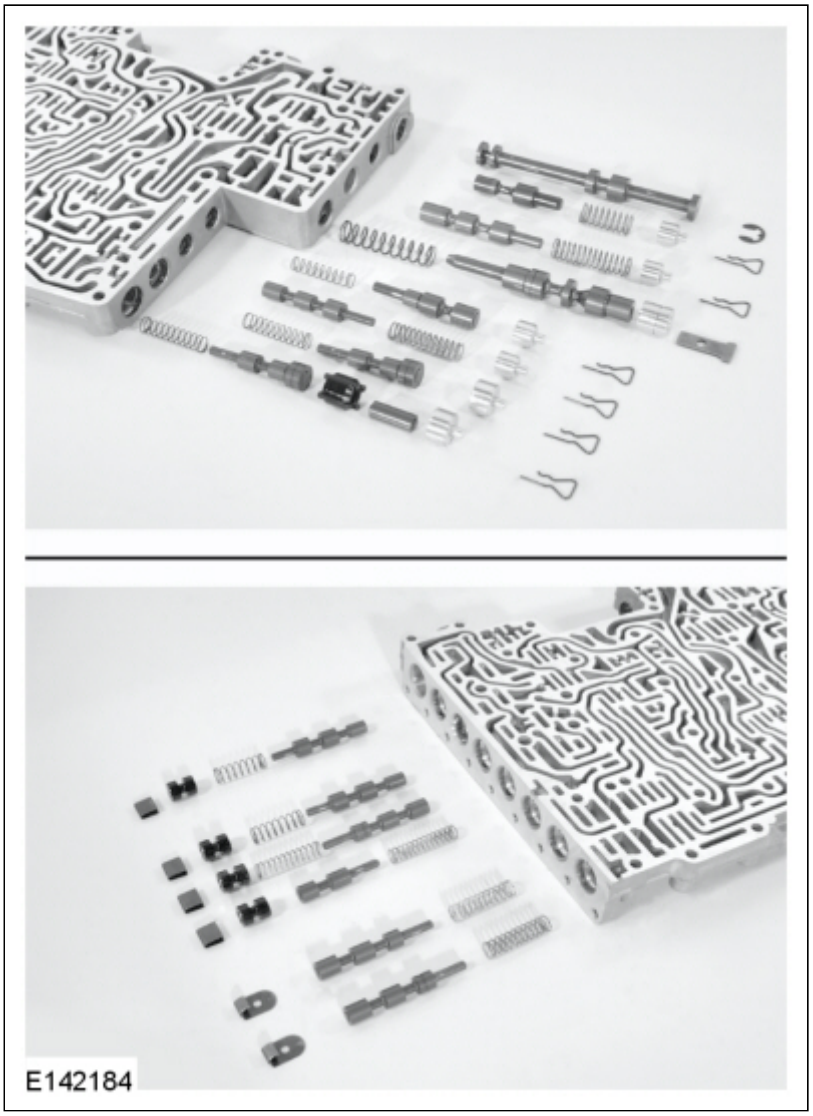
11. Remove the solenoids.

12. Remove the retaining clips, caps, valves and valve springs from each bore of the main control assembly. Note the location and order for assembly.



13. Using clean mineral spirits, clean the lower half of the main control assembly.

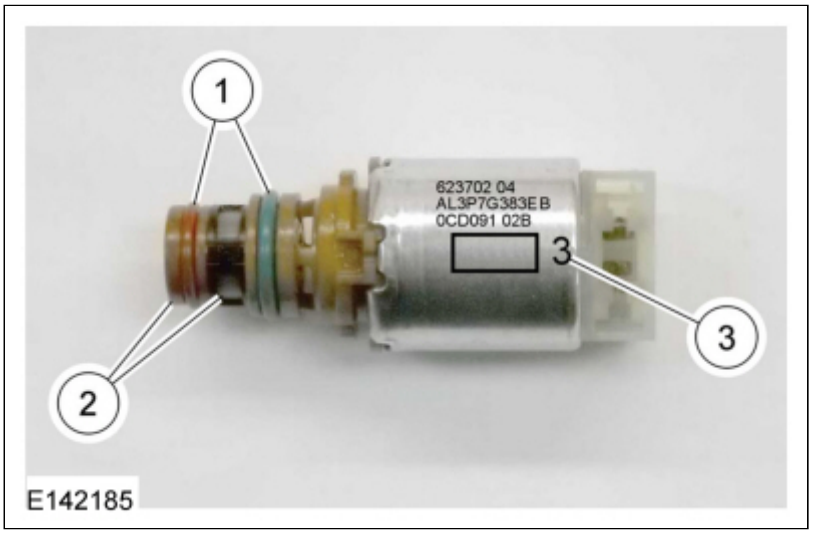
ASSEMBLY



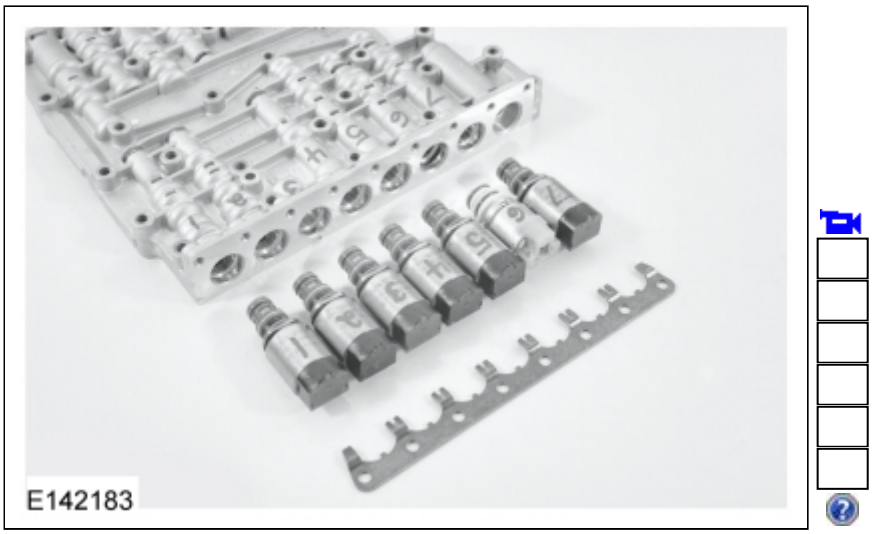
NOTE: *Many components and surfaces in the main control valve body are precision machined. Careful handling during disassembly, cleaning, inspection and assembly prevents unnecessary damage to machined surfaces.*

1. Install the retaining clips, caps, valves and valve spring into each bore.

NOTE: *Many components and surfaces in the main control valve body are precision machined. Careful handling during disassembly, cleaning, inspection and assembly prevents unnecessary damage to machined surfaces.*



2. Install the retaining clips, caps, valves and valve spring into each bore.

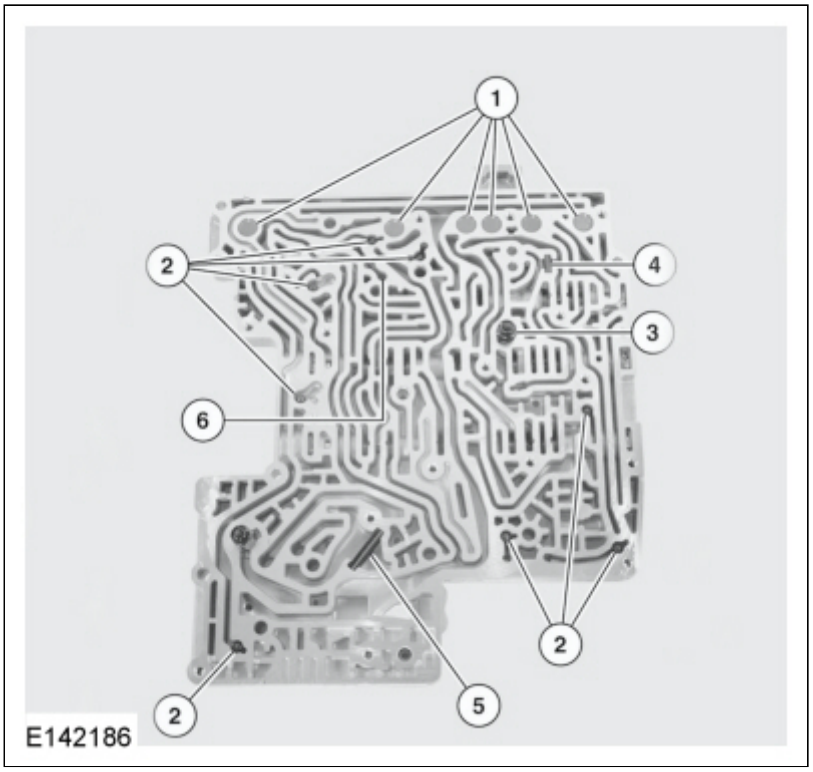


NOTICE: A Variable Force Solenoid is calibrated from the factory and are not all the same. If replacing a Variable Force Solenoid, match the replacement solenoid type (normally high/normally low) and the band number with the original solenoid or harsh shifts or damage to the transmission can occur.

3. **NOTE:** *Inspect the solenoid screens for contamination and install new solenoids if needed. Lubricate the solenoid O-rings with clean transmission fluid. If replacing a solenoid, use the solenoid exploded view at the beginning of this procedure to identify what type of solenoid is being replaced. The solenoid can be a normally high Variable Force Solenoid, normally low Variable Force Solenoid or an ON/OFF solenoid. If replacing a Variable Force Solenoid, record the band number to get the correct part number for the solenoid.*

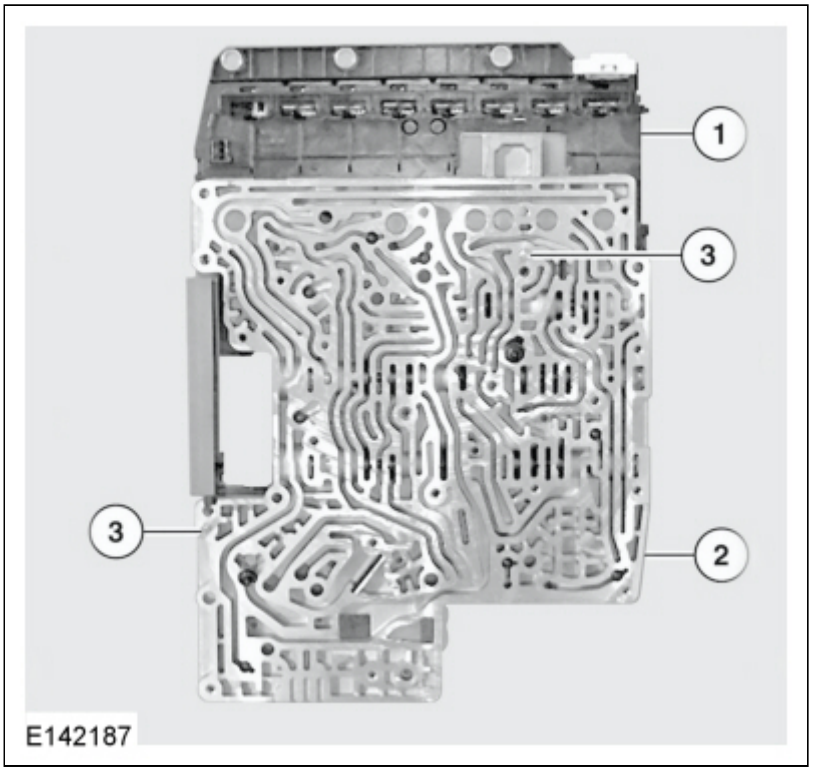
    1. O-rings
    2. Screens
    3. Solenoid band number

4. Install the solenoids into their correct bores as indicated during disassembly.



5. Install the shift control solenoid hold down bracket and the 8 hold down bracket bolts.
   Torque: 6 Nm

NOTICE: Toward the back of the upper valve body there is a hydraulic passage that is shaped as though it receives a check ball. This passage does not require a check ball. Be sure not to mistake this hydraulic passage for a passage that does require a check ball or damage to the transmission can occur.



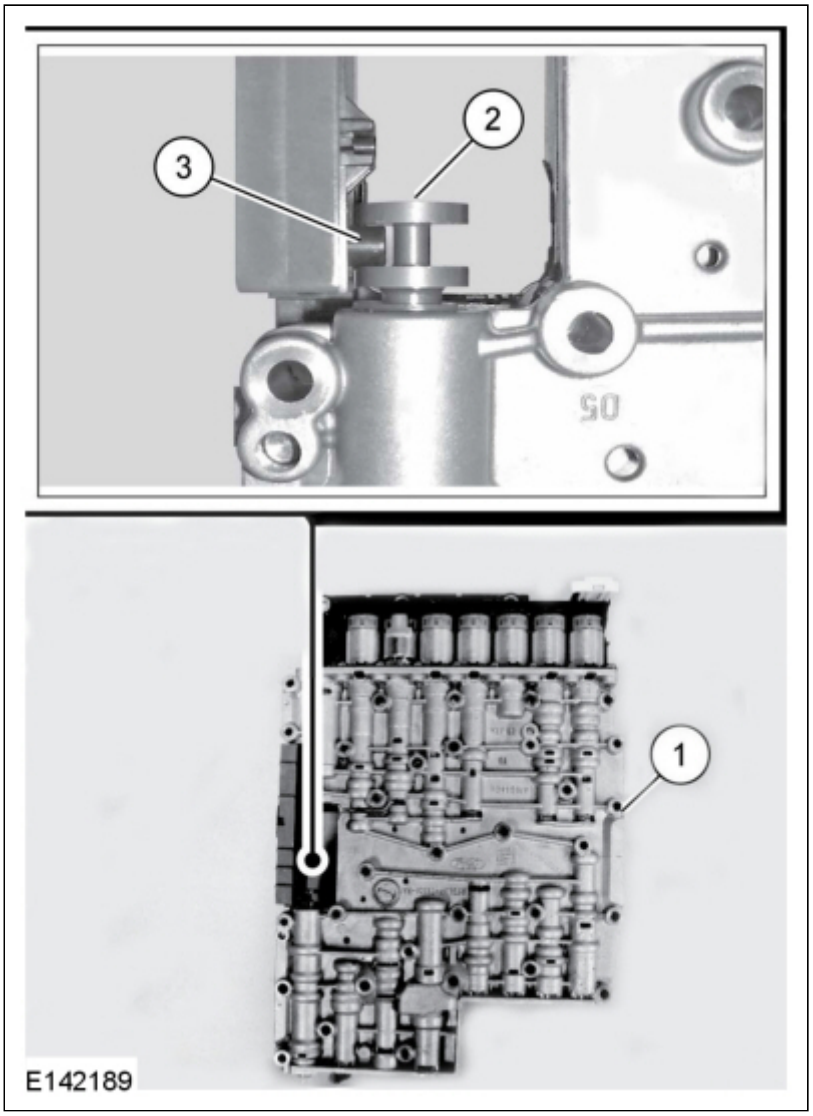
6. **NOTE:** *Install the solenoid dampers, check balls, converter drain back valve and filter screens.*

    1. Solenoid dampers
    2. Check balls
    3. Converter drain back valve
    4. Small filter screen
    5. Large filter screen
    6. Empty hydraulic passage (no check ball)

7. **NOTE:** *Align the guide pins on the molded leadframe with the holes in the main control upper valve body and install the valve body onto the molded leadframe.*

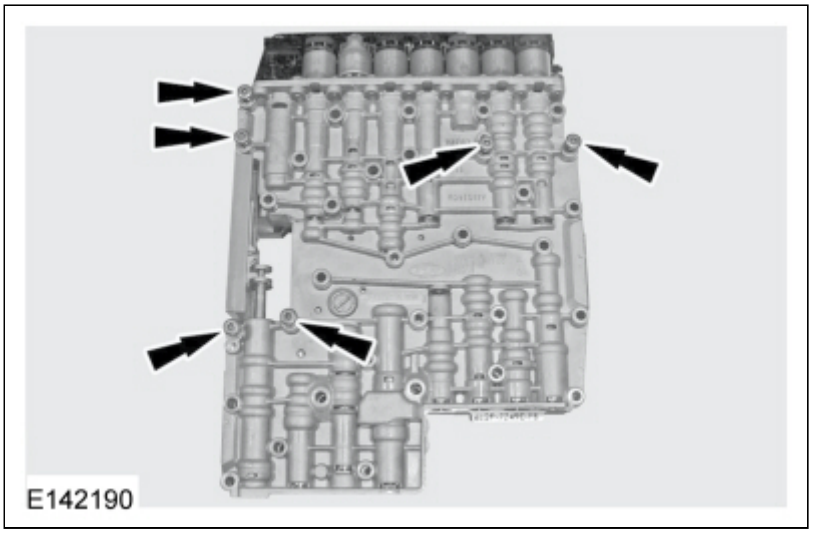
    1. Molded leadframe
    2. Main control upper valve body
    3. Guide pins

NOTICE: If the drain back valves are not installed correctly in the separator plate, damage to the transmission can occur.



8. **NOTE:** *Position the new main control separator plate on the main control upper valve body. Check the 2 drain back valves to be sure they are correctly positioned in the separator plate when the separator plate is pressed flush against the main control upper valve body.*

    1. Main control separator plate
    2. Drain back valves



9. **NOTE:** *Position the main control lower valve body on the 2 molded leadframe alignment studs, align the manual valve with the Transmission Range (TR) sensor on the molded leadframe and install the main control lower valve body.*

    1. Main control lower valve body
    2. Manual valve
    3. TR sensor

10. Install the 6 long molded leadframe-to-valve body bolts hand-tight.

11. Install the 19 short main control assembly lower-to-upper valve body bolts. Tighten the bolts in the sequence shown.
    Torque:
    :
    Stage 1: 6 Nm
    Stage 2: 7 Nm

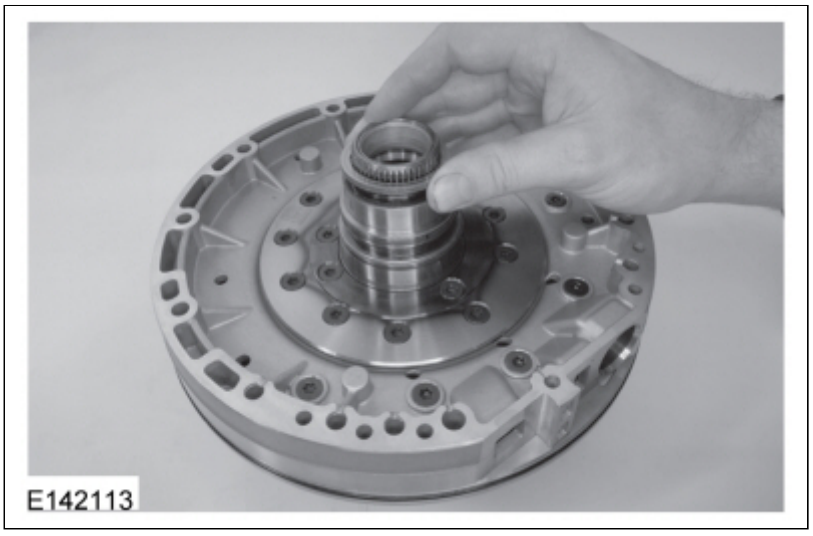
Pump Assembly

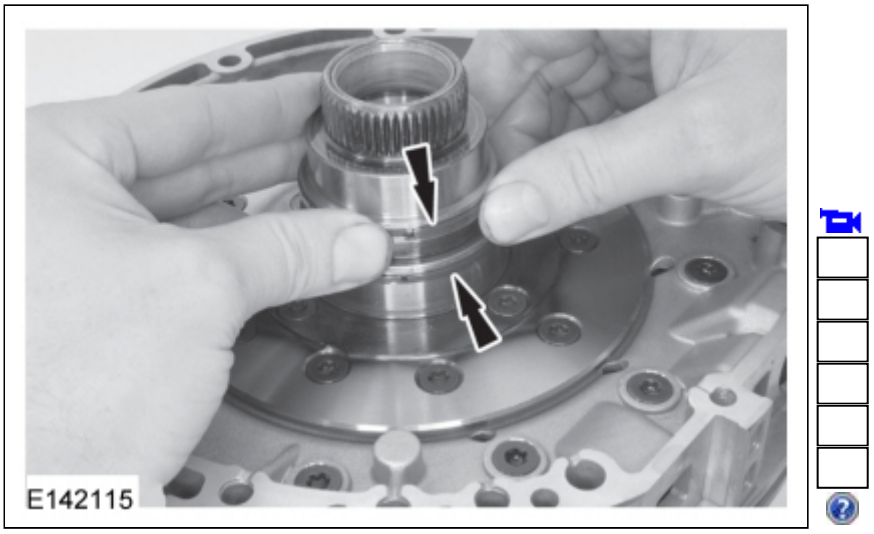


Base Part Number: 7A103

Special Tool(s) / General Equipment

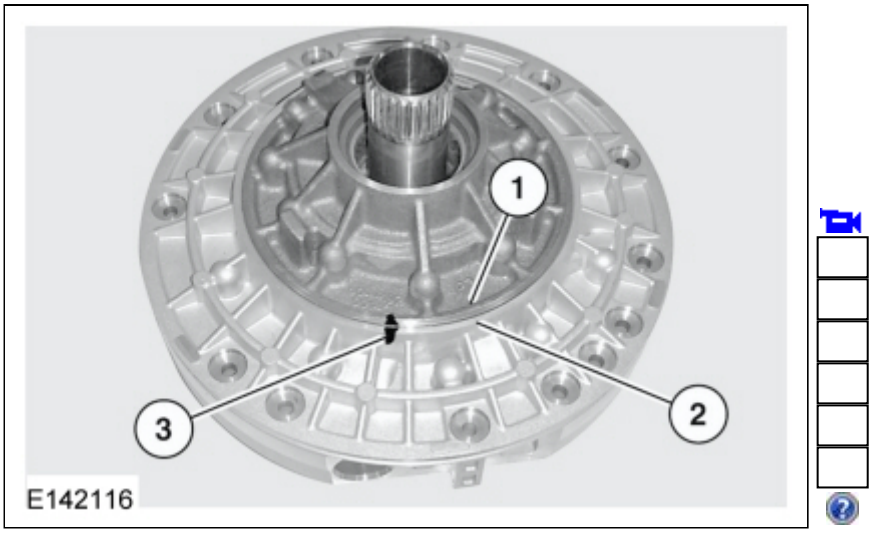
 E142020	307-556 Installer, Fluid Pump Seal

DISASSEMBLY

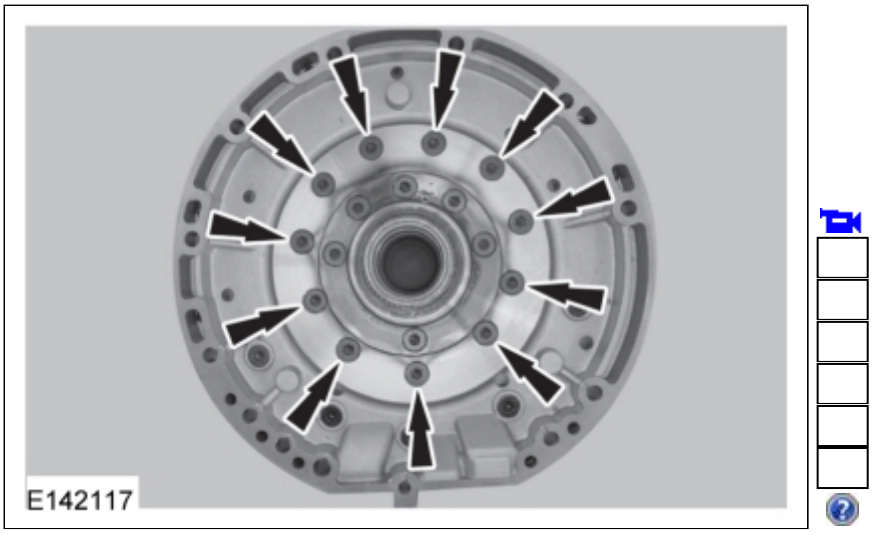


1. Remove the front pump washer.

2. If the O-ring seal was not removed during disassembly, remove and discard the front pump O-ring seal from the pump assembly.

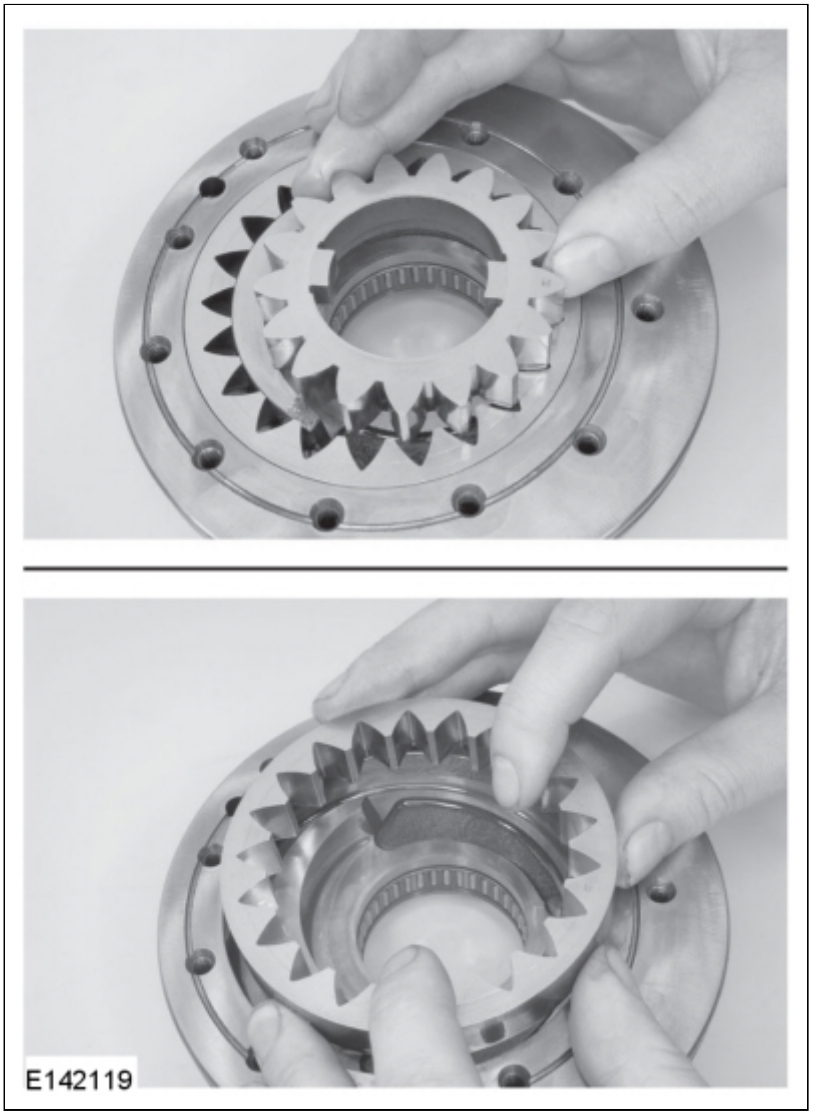


3. Remove and discard the front pump seal rings from the stator support.

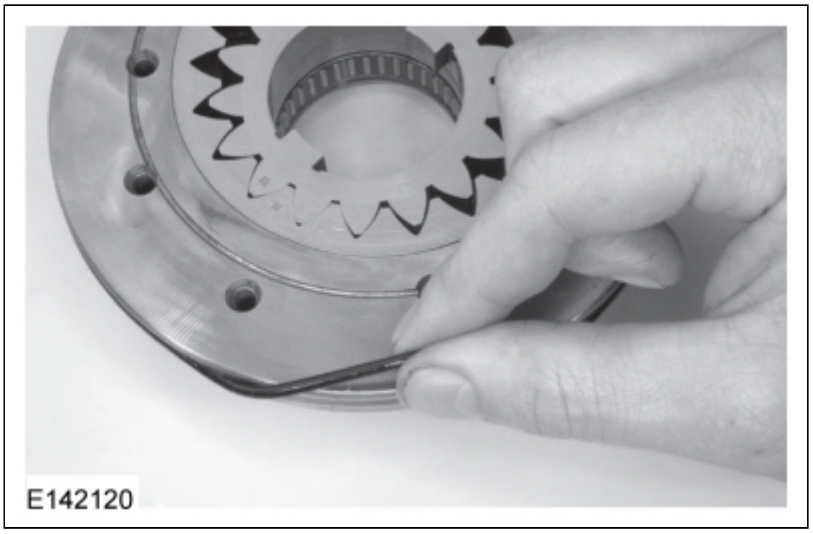


4. **NOTE:** *Index-mark the pump body to the pump plate assembly.*

    1. Pump body
    2. Pump plate assembly
    3. Index mark

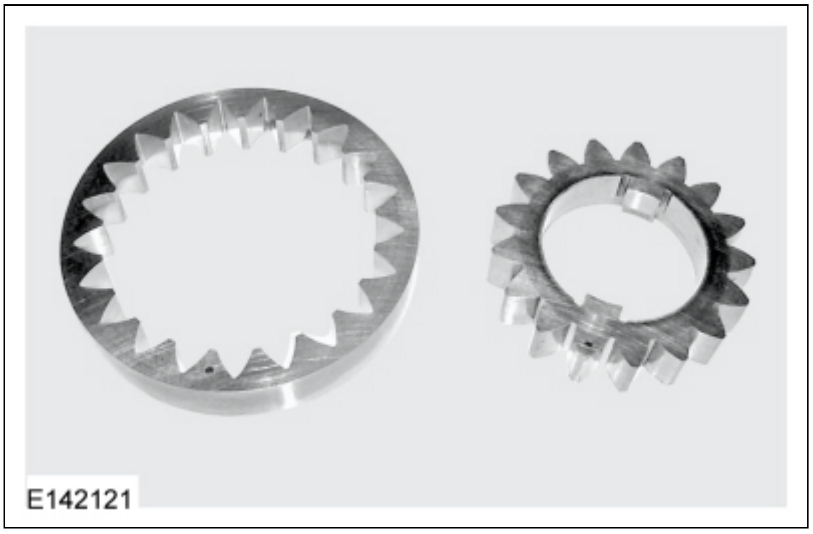


5. Remove the 11 pump plate assembly-to-pump body bolts.

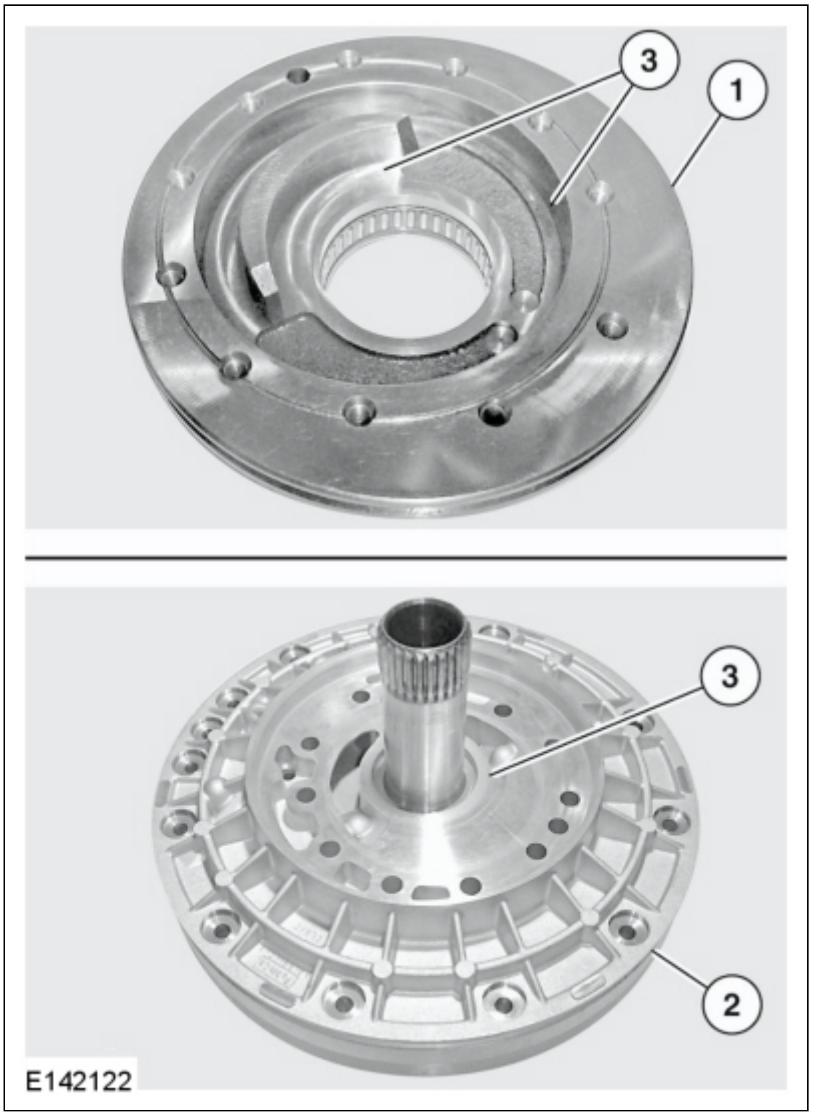


6. Push down on the loose pump plate assembly-to-pump body bolts to remove the pump body from the pump plate assembly and remove the 11 bolts.

7. Remove the fluid pump gears.

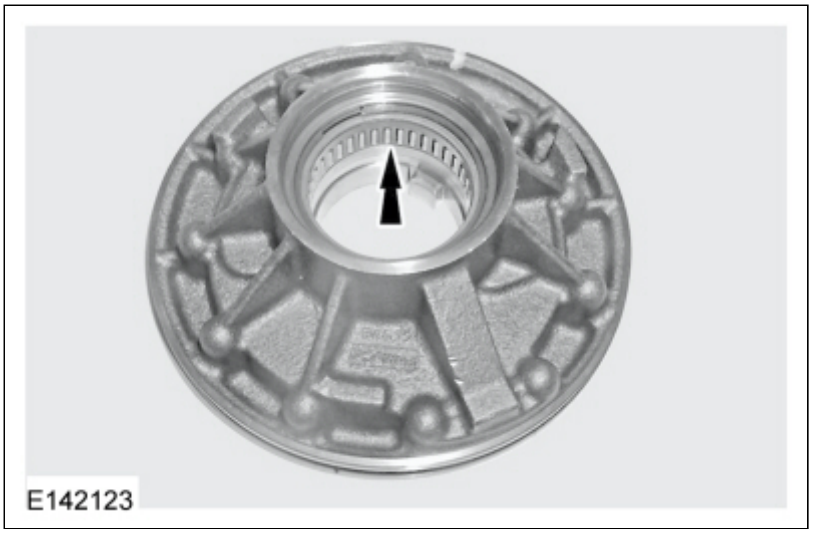


8. Remove and discard the pump body outer seal.



9. **NOTE:** *Inspect the inner and the outer pump gears for damage.*

    1. Clean all pump components in solvent.
    2. Dry the parts with compressed air.
    3. Inspect the pump gears, faces, gear teeth and mating surfaces for damage or scoring.
    4. Install a new pump as necessary.

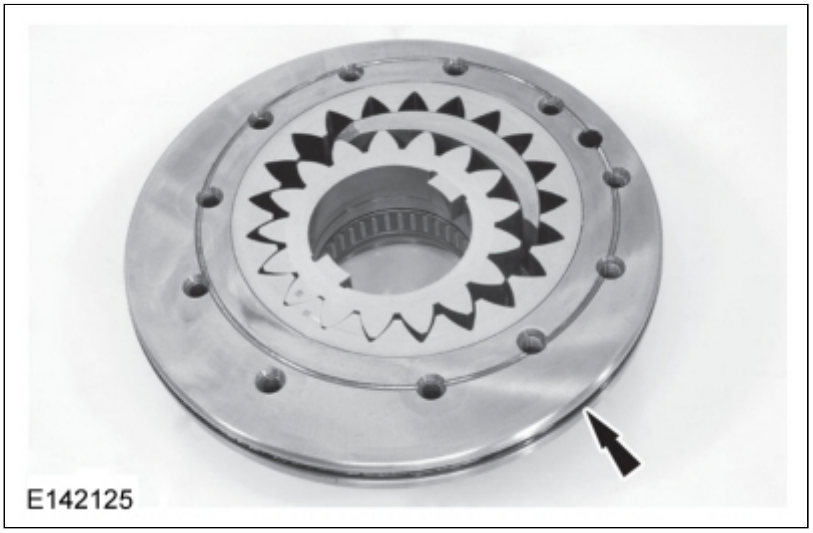


10. **NOTE:** *Inspect the pump body and pump plate thrust surfaces for damage or scoring.*

    1. Pump body
    2. Pump plate assembly
    3. Pump gear thrust surfaces

NOTE: *Bearing shown, bushing similar.*

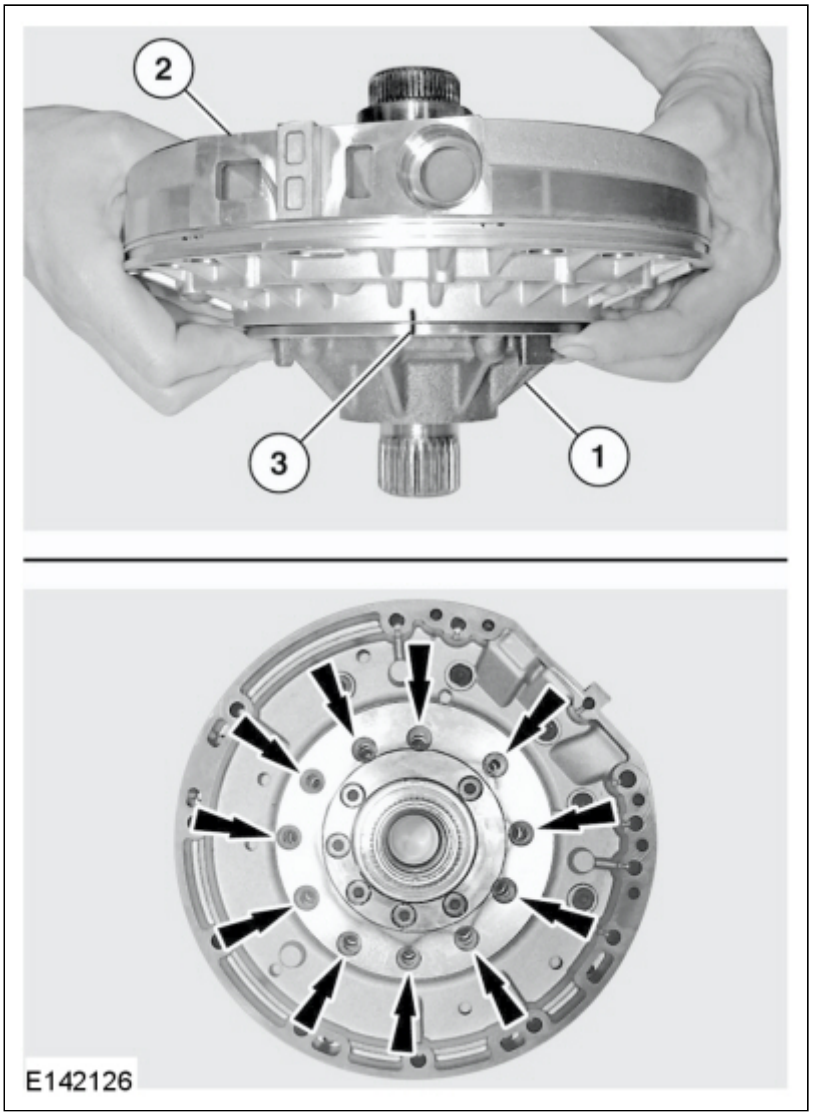
11. Inspect the torque converter hub bearing or bushing. If equipped with a bearing, make sure that the bearing rotates smoothly and is not damaged. If equipped with a bushing, check the bushing for damage or scoring.



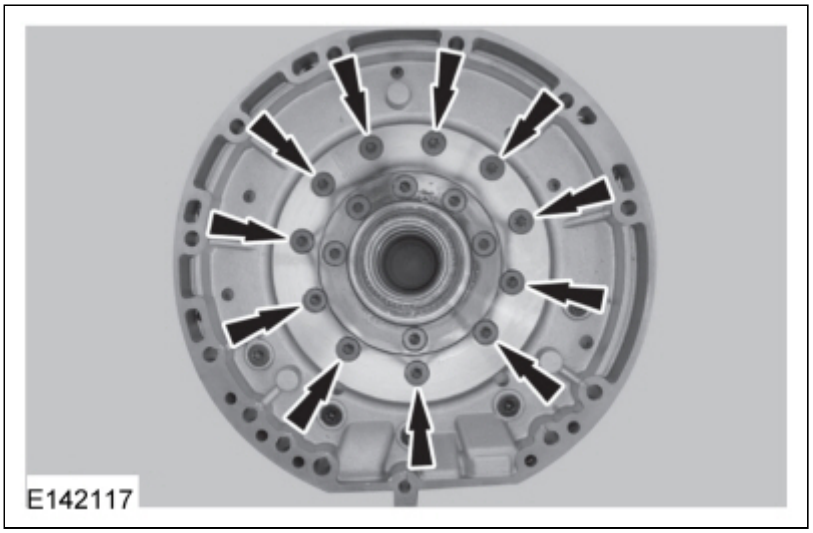
ASSEMBLY

NOTE: *Prior to installation, lightly lubricate the pump gears with clean automatic transmission fluid.*

1. Install the pump gears with the dot facing the pump plate assembly.

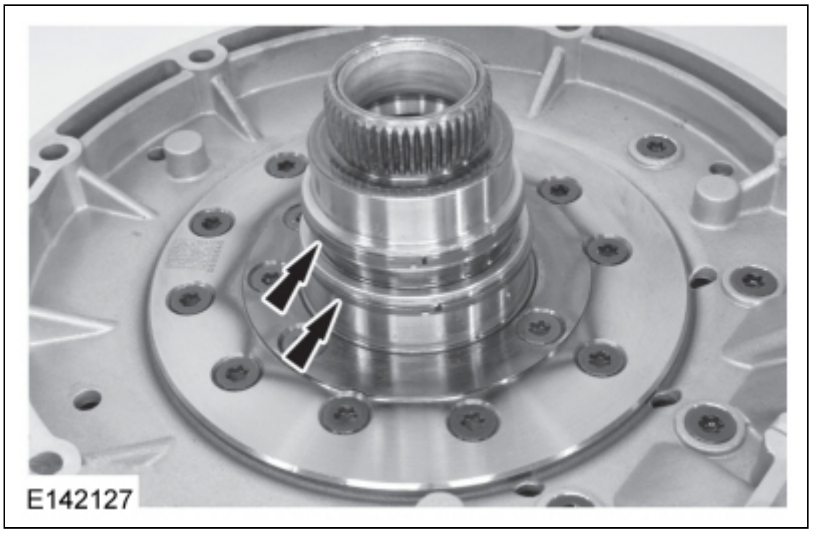


2. Install a new pump body outer seal.

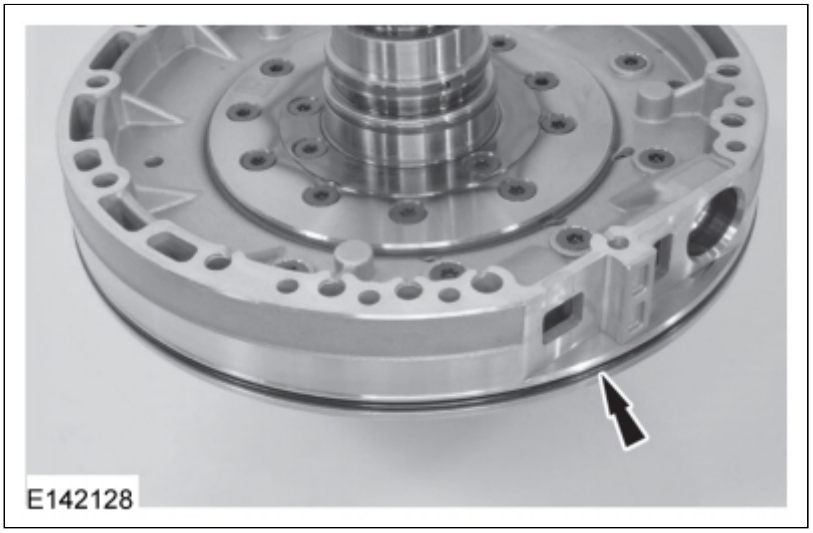


3. **NOTE:** *Align the marks made during disassembly to correctly assemble the pump. Press the pump body into the pump plate assembly. Visually inspect the pump body-to-pump plate assembly bolt holes to be sure that the pump body and pump plate are correctly aligned.*

    1. Pump body
    2. Pump plate assembly
    3. Pump gear thrust surfaces

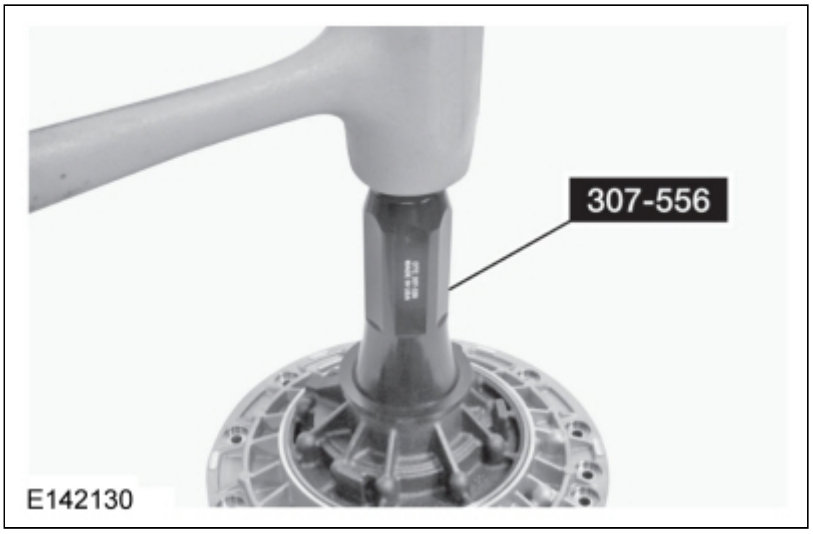


4. Install the pump plate assembly-to-front pump body bolts.
   Torque: 15 Nm



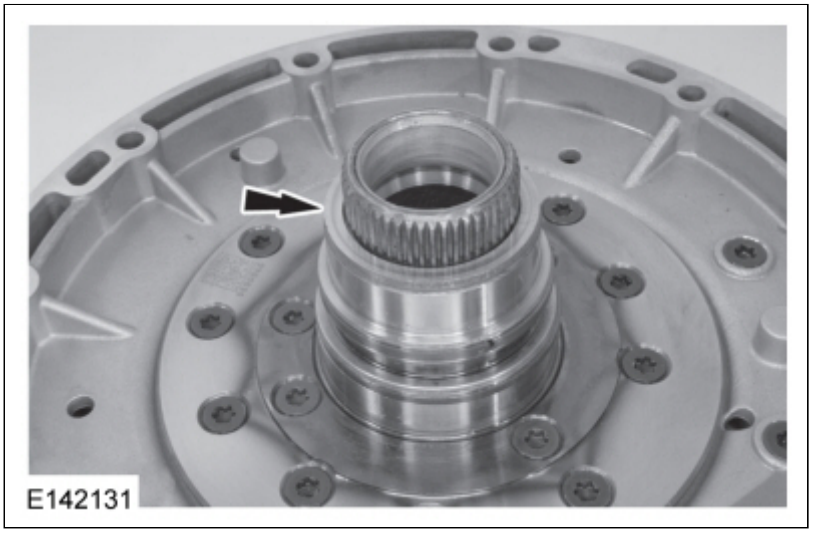
NOTICE: Make sure that the seal ends of each seal ring are hooked together or fluid leakage can occur.

5. Install the 2 front pump seal rings onto the stator support. Make sure the seals are fully seated in the stator support seal grooves and the seal ends are oriented 180° apart.



6. Install the pump outer diameter front pump O-ring seal.

7. Install a new front pump seal on the Fluid Pump Seal Installer.
   Use Special Service Tool: 307-556 Installer, Fluid Pump Seal.



8. Using the Fluid Pump Seal Installer, install the front pump seal.
   Use Special Service Tool: 307-556 Installer, Fluid Pump Seal.

NOTE: *Lightly lubricate the thrust washer with petroleum jelly to hold it in place during assembly.*

9. Install the pump thrust washer.

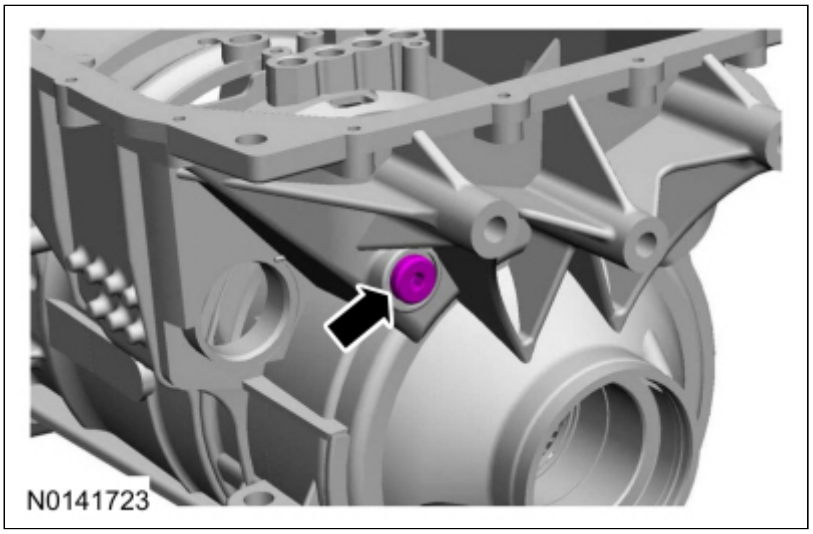
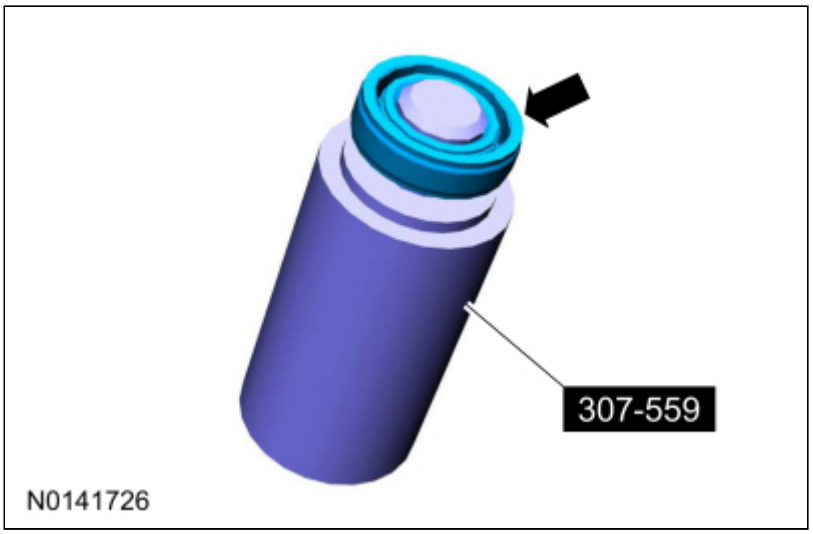
Materials

Name	Specification
Automatic Transmission Fluid	MERCON® LV WSS-M2C938-A

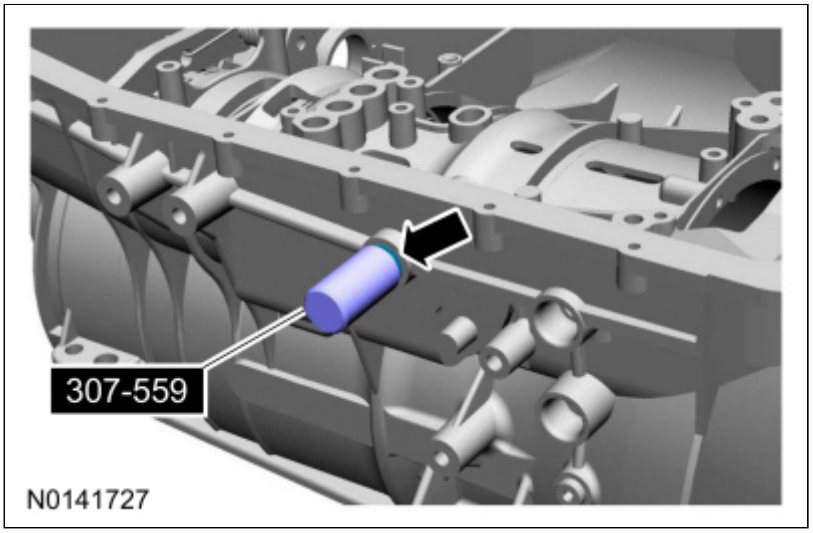


1. *Torque*: 12 Nm

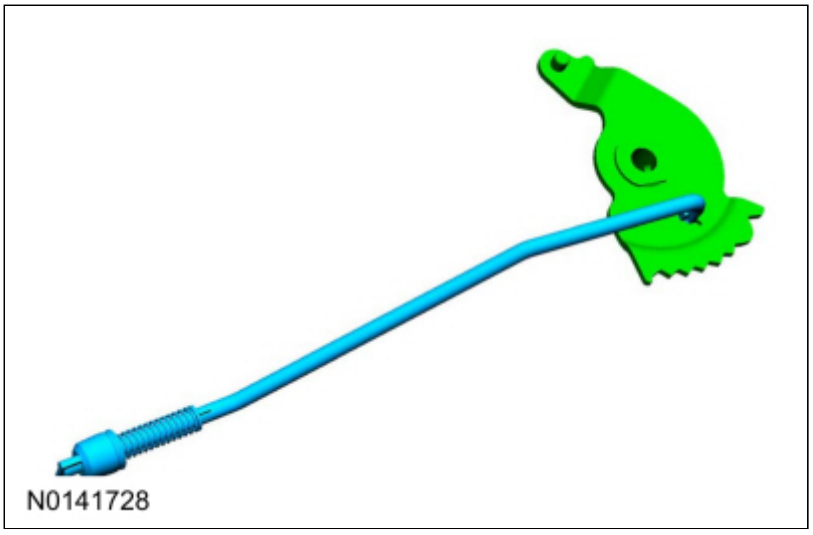
2.



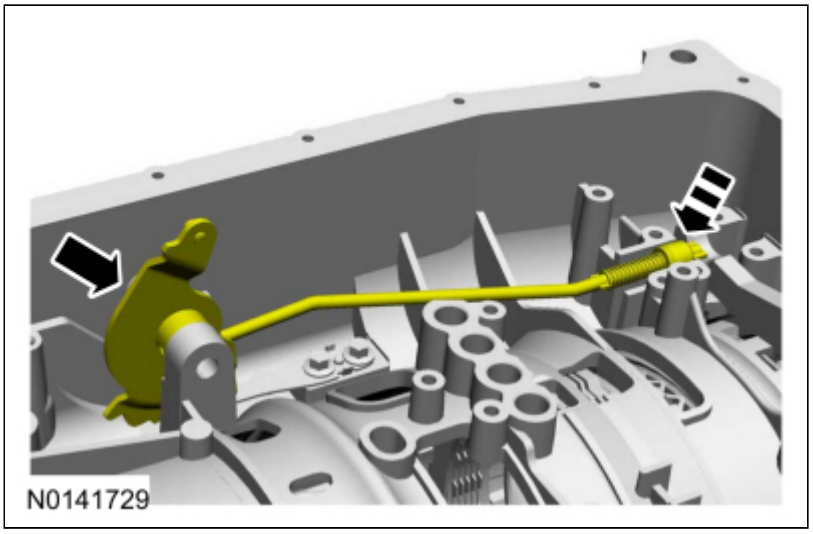
3. *Torque*: 23 Nm



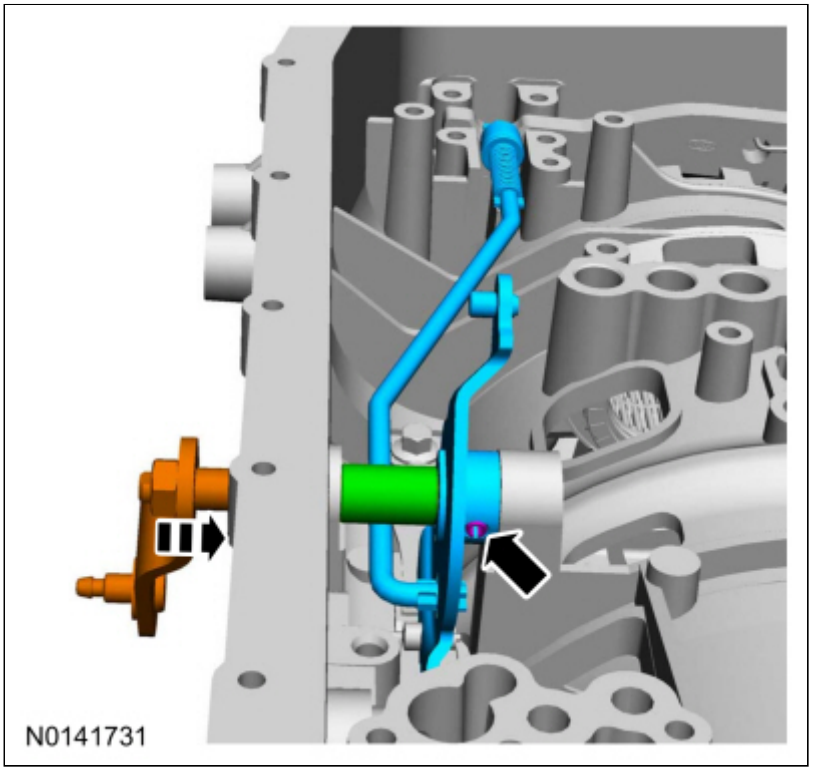
4. Install a new manual control lever shaft seal on the Shifter Fluid Seal Installer.



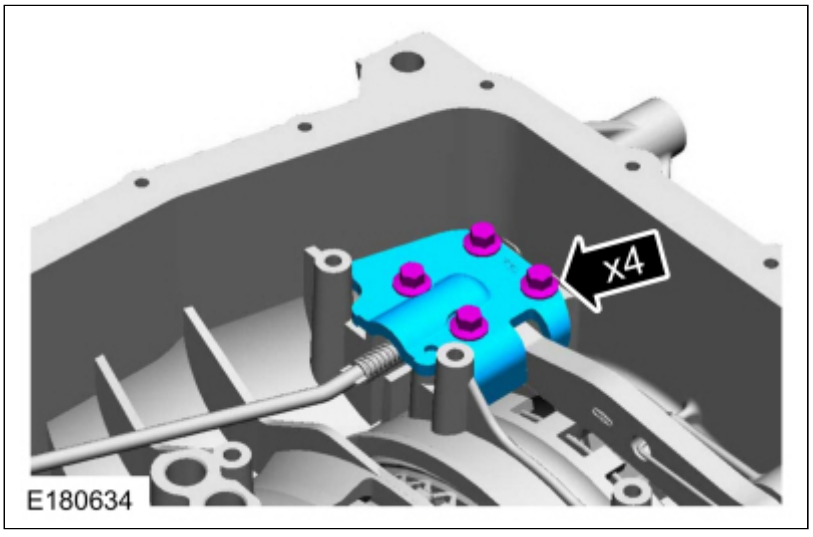
Use Special Service Tool: 307-559 Installer, Shifter Fluid Seal.



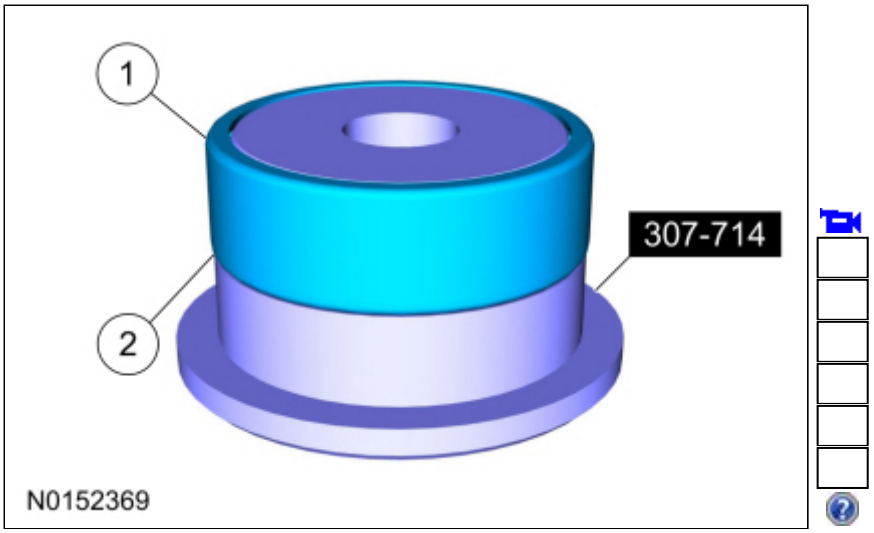
5. Use Special Service Tool: 307-559 Installer, Shifter Fluid Seal.



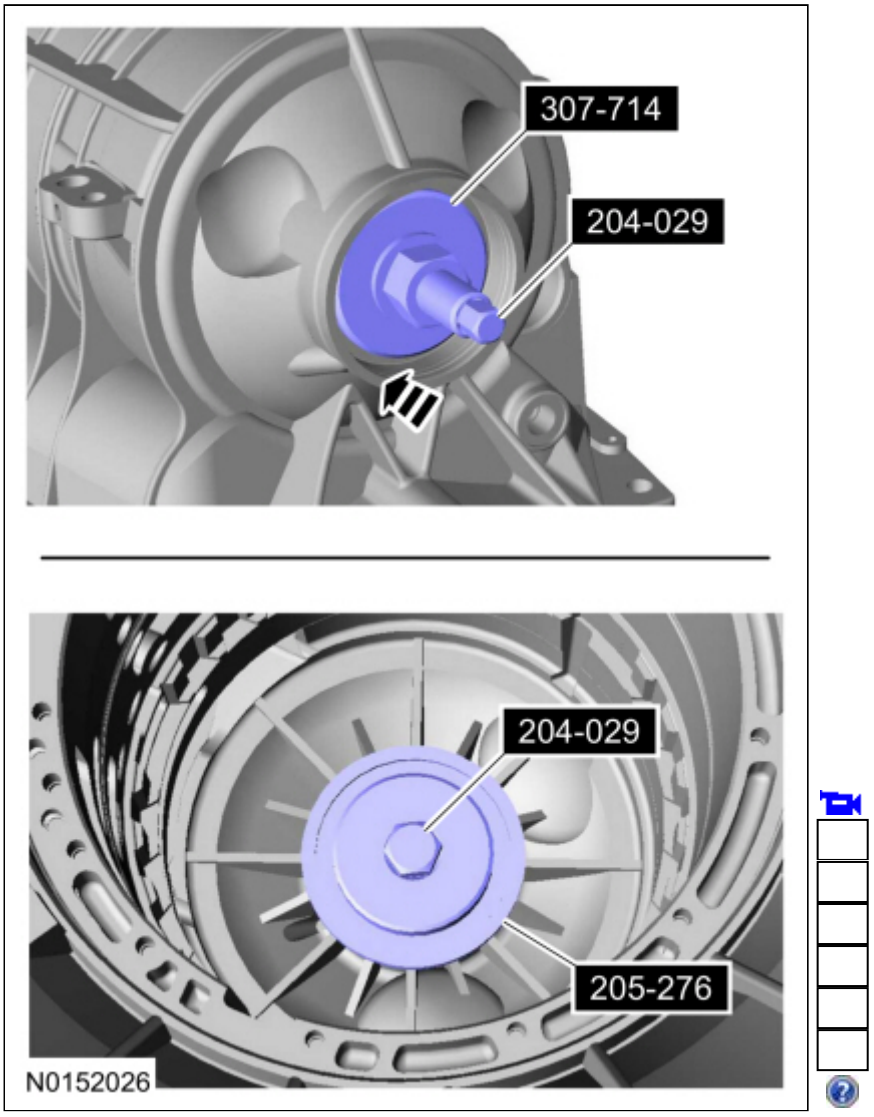
6. Assemble the manual control lever detent plate assembly and park pawl actuator rod.



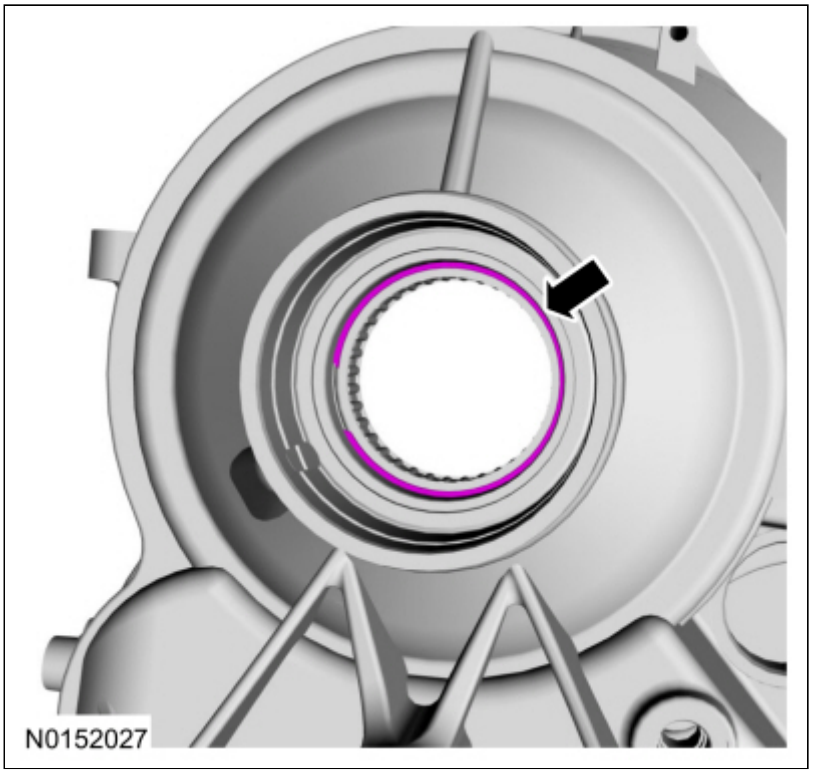
7.



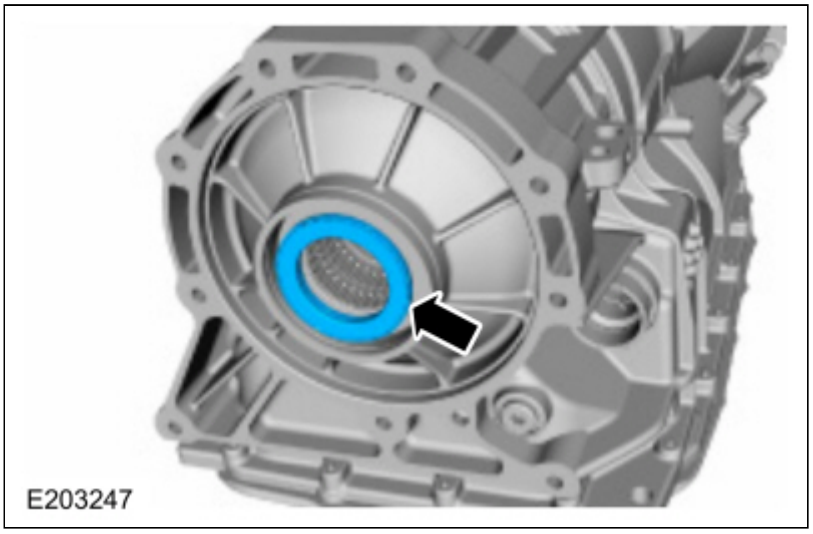
8. Position the manual control lever spacer in place and slide the manual control lever shaft into the case and the manual lever detent plate. Align the roll pin hole in the manual control lever detent plate with the roll pin hole in the manual control lever shaft and install a new roll pin.



9. *Torque*: 12 Nm

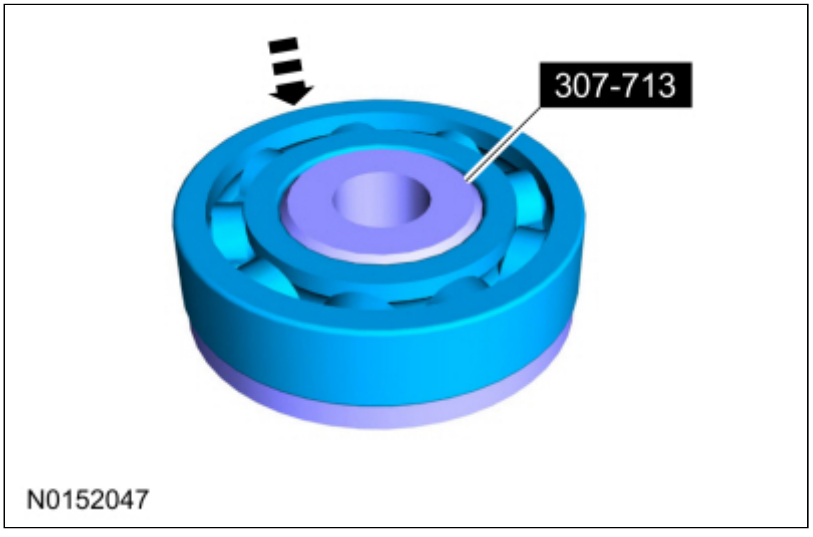


1. Install the needle bearing on the special tool so that the rounded end faces up.
2. Flat bearing surface (snap ring side) facing down.
   Use Special Service Tool: 307-714 Installer, Needle Bearing.

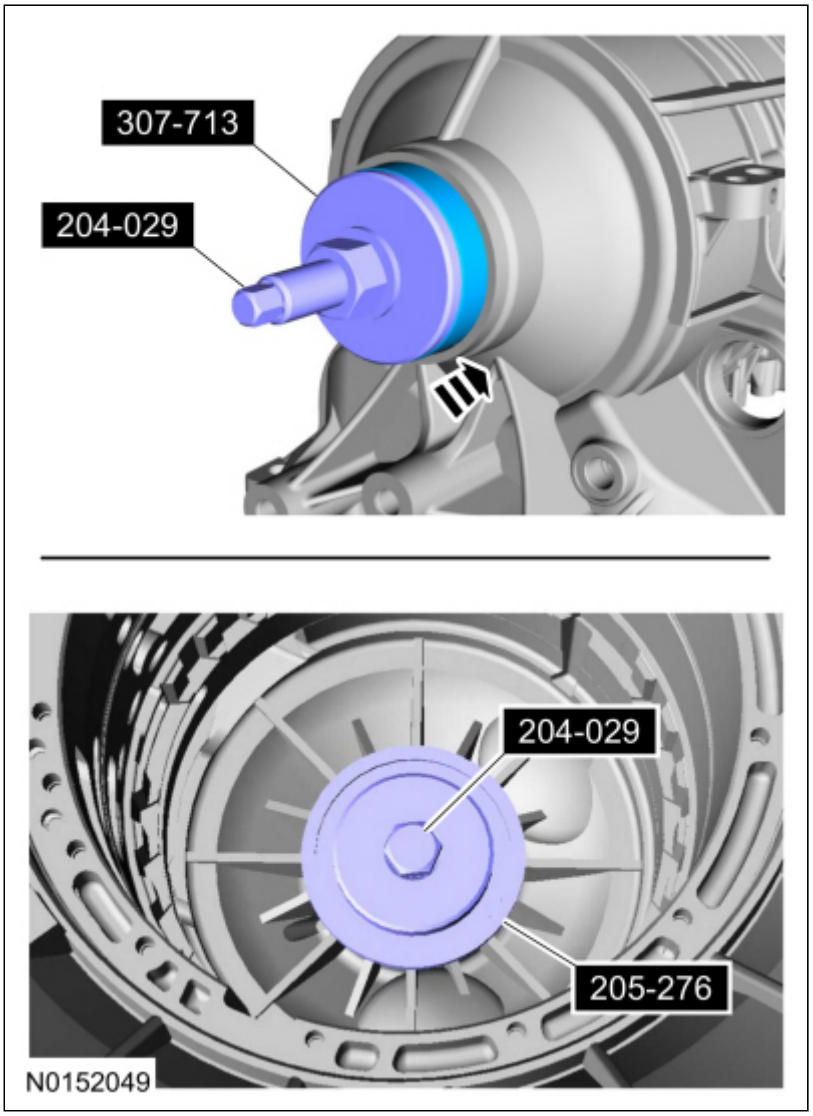


11. Assemble the special tools and install the bearing in the transmission case.
    Use Special Service Tool: 204-029 Drawbar. , 205-276 Installer, Front Wheel Hub Seal. , 307-714 Installer, Needle Bearing.

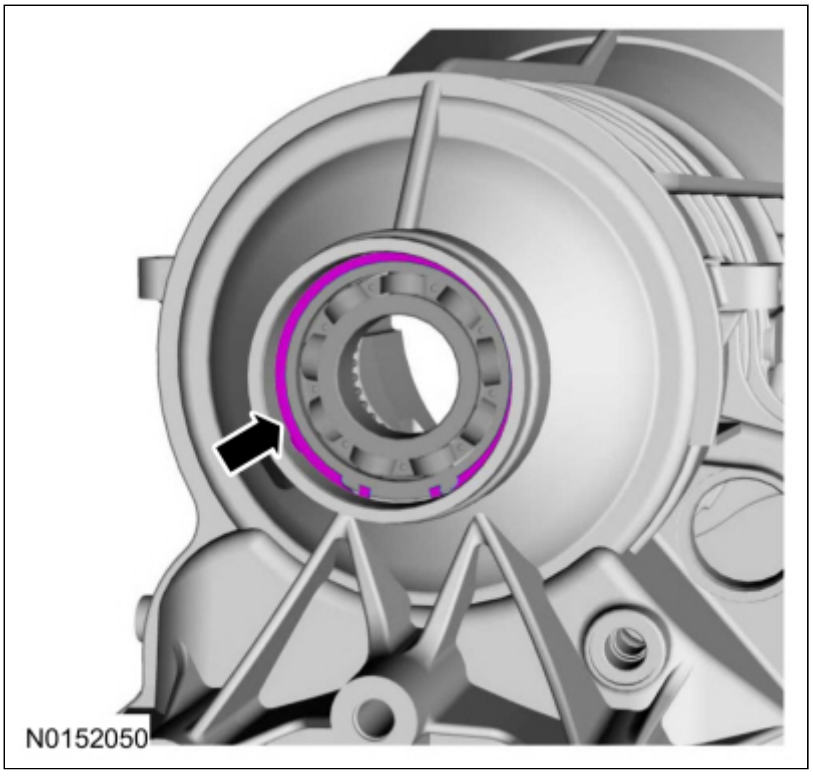
12.



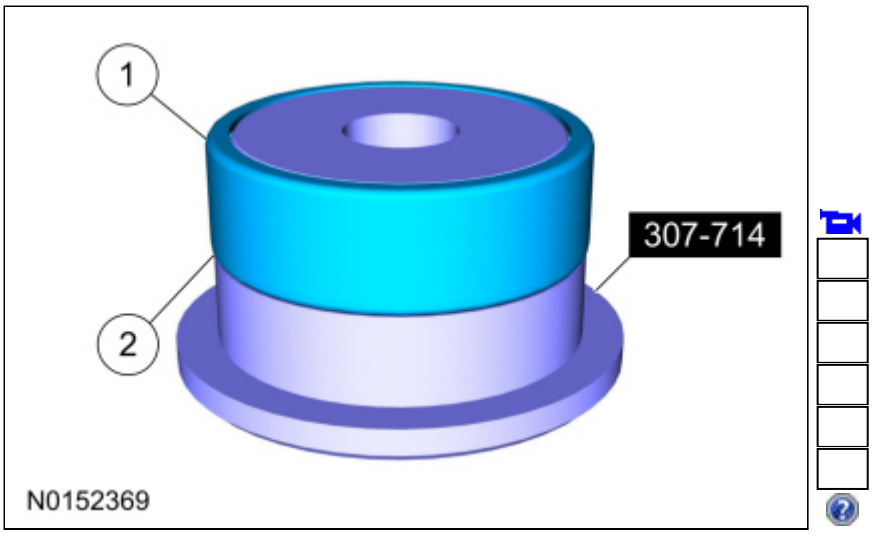
13.



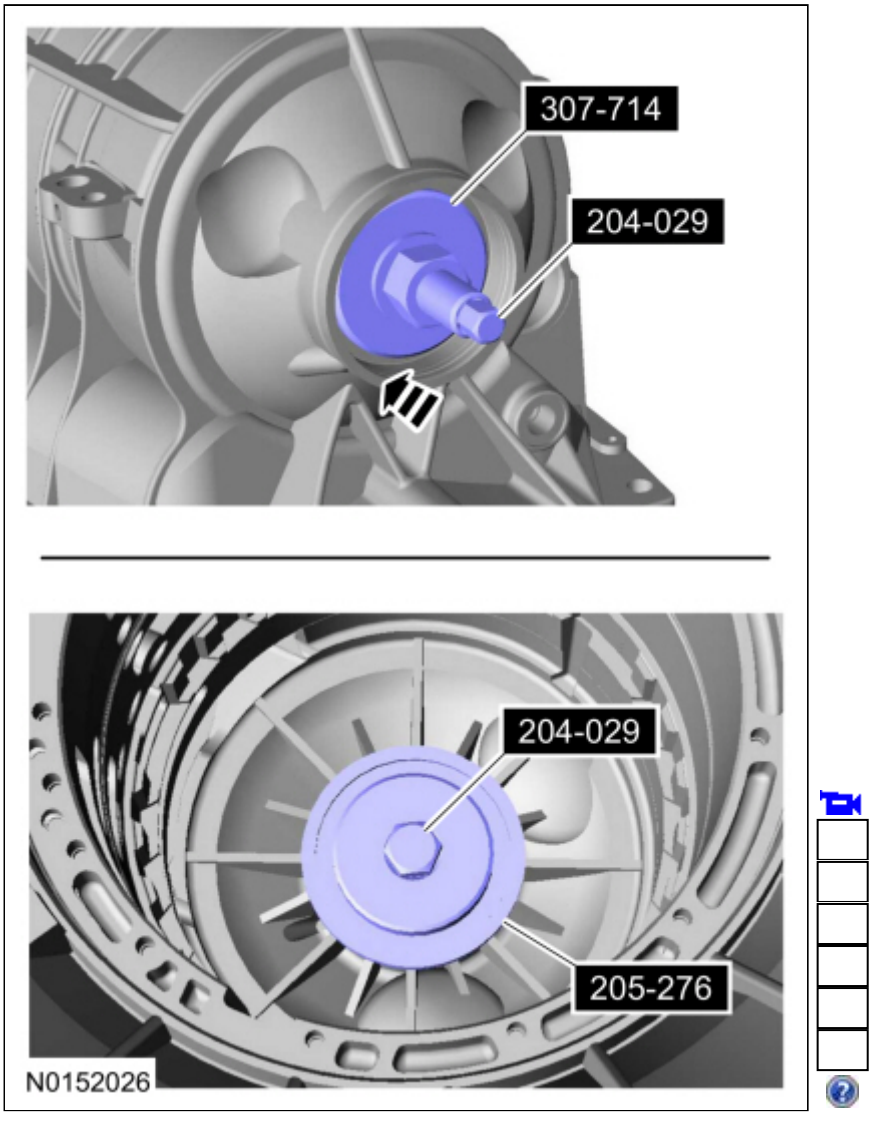
4x2



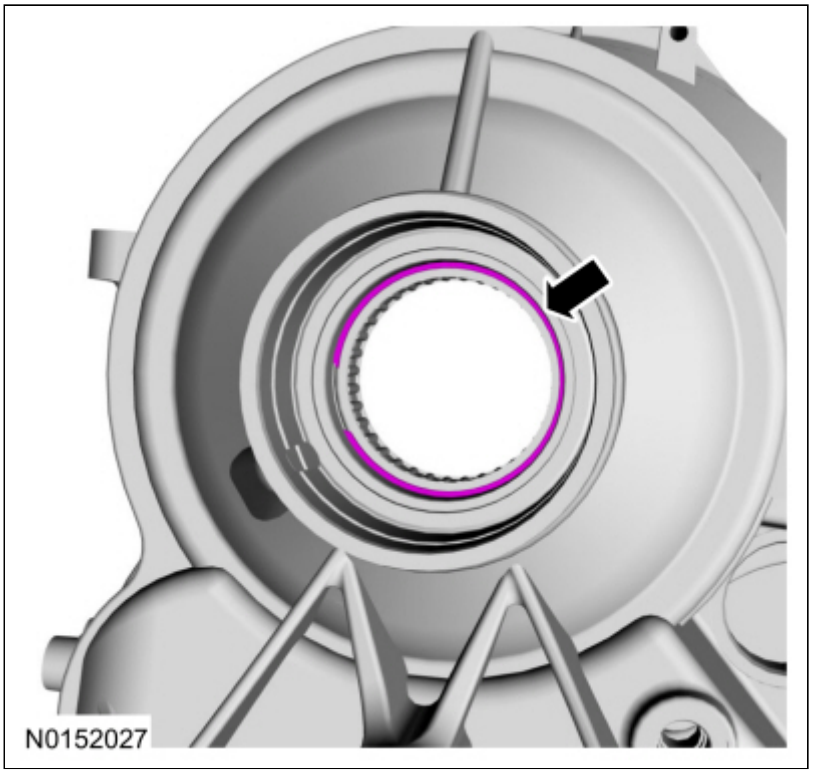
14. Install the bearing on the special tool.
    Use Special Service Tool: 307-713 Installer, Roller Bearing.



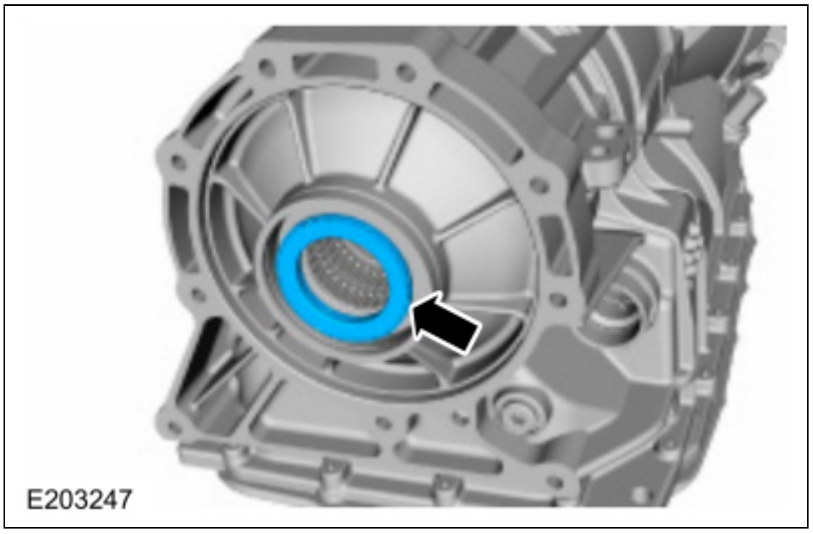
15. Use Special Service Tool: 204-029 Drawbar. , 205-276 Installer, Front Wheel Hub Seal. , 307-713 Installer, Roller Bearing.



16. Position the thrust bearing spacer in place.

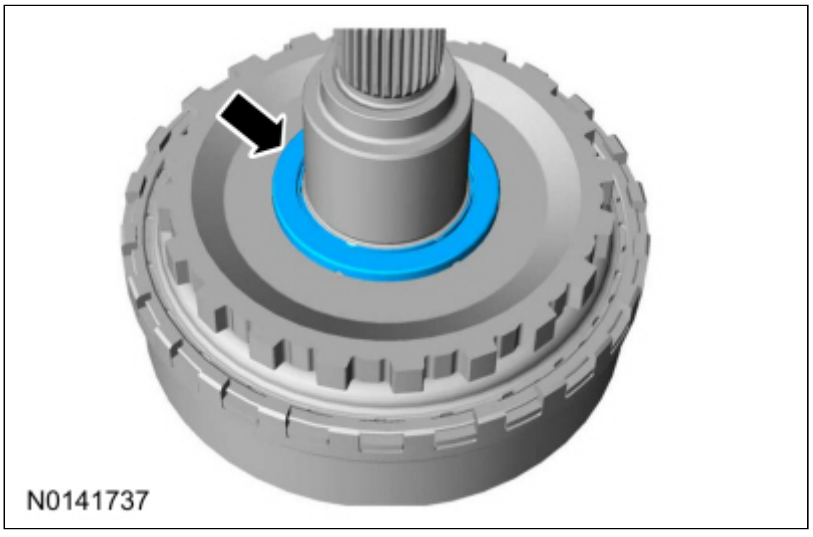


17. If equipped.
    - Install the needle bearing on the special tool so that the rounded end faces up.
    - Flat bearing surface (snap ring side) facing down.
      Use Special Service Tool: 307-714 Installer, Needle Bearing.

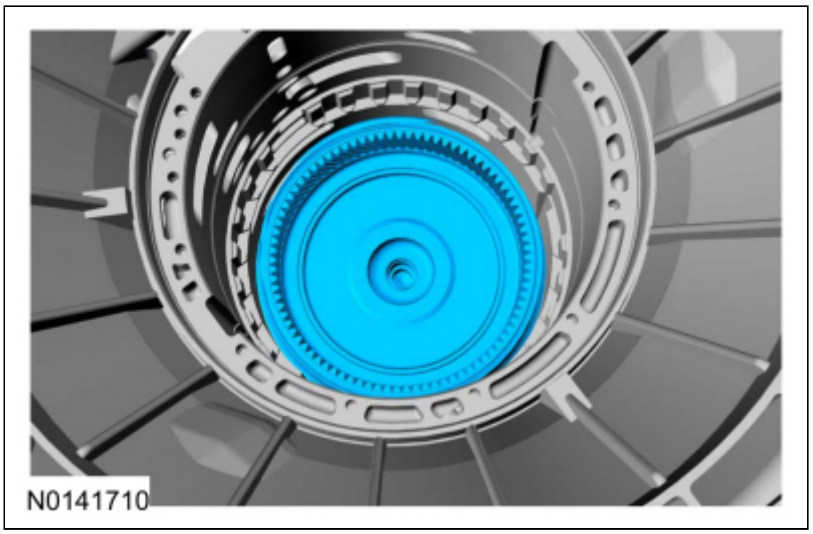


18. Assemble the special tools and install the bearing in the transmission case.
    Use Special Service Tool: 204-029 Drawbar. , 205-276 Installer, Front Wheel Hub Seal. , 307-714 Installer, Needle Bearing.

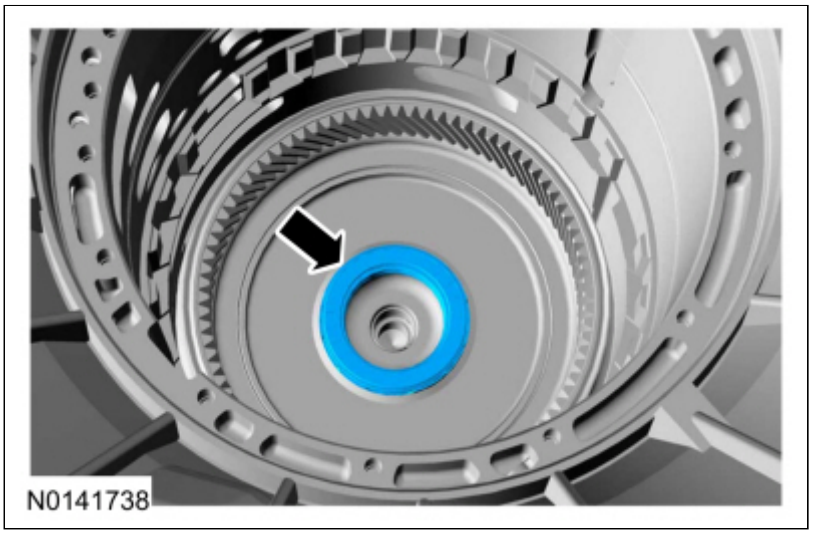
19.



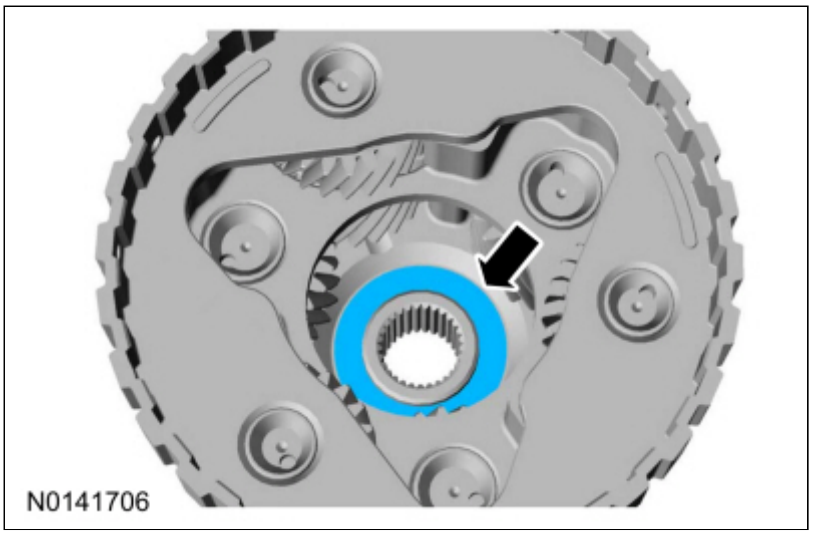
20.



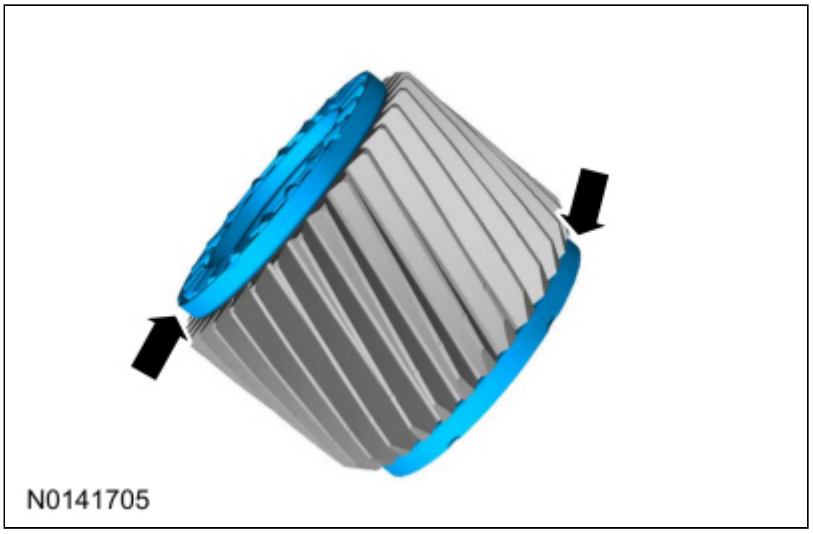
All vehicles



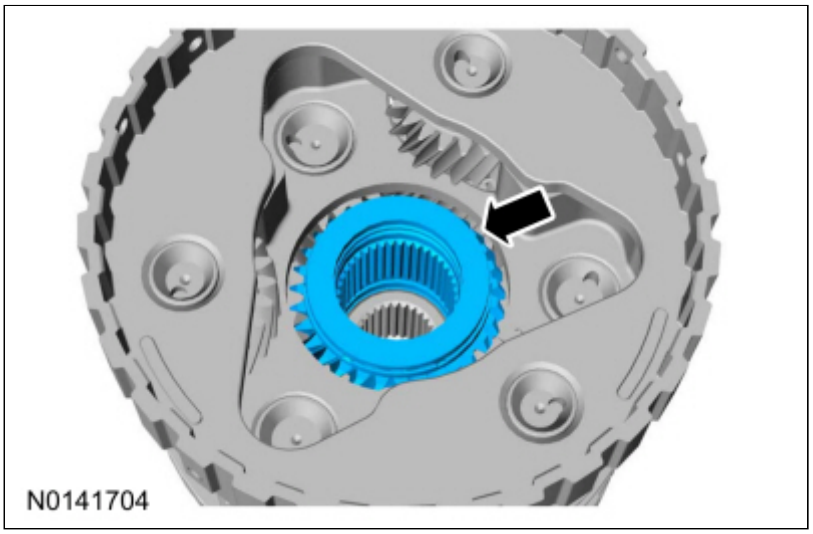
21.



22. Install the rear planetary ring gear and output shaft assembly.

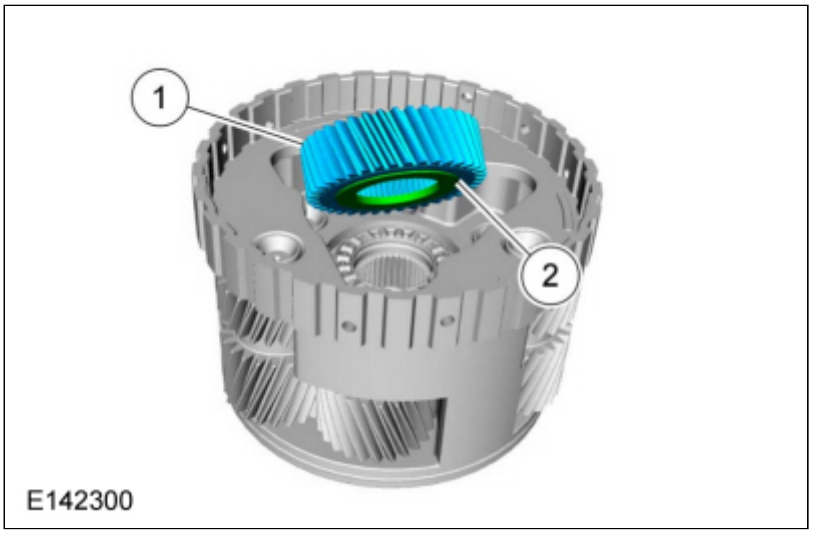


23.



24.

25.

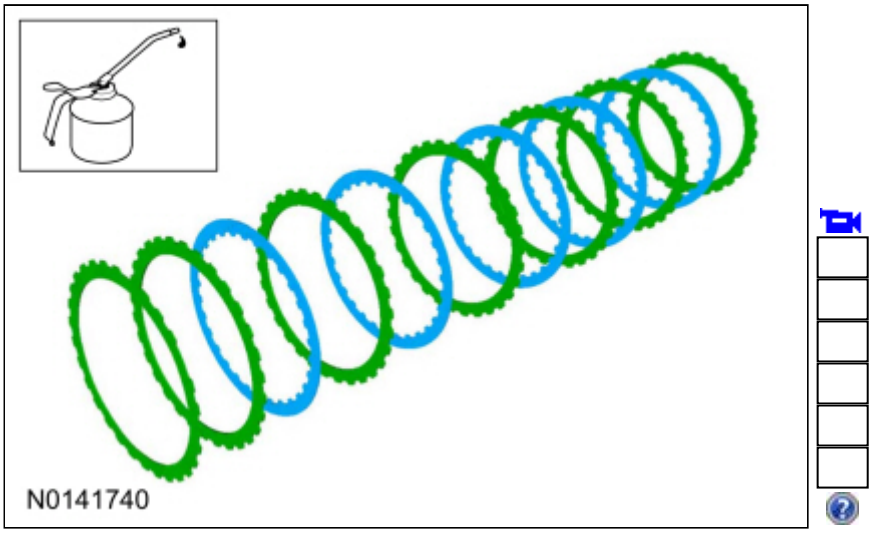


26. **NOTE:** *When installing the sun gear, make sure that the taper edge is facing up toward the torque converter housing.*

27. **NOTE:** *Make sure that the bearing race is installed in the sun gear.*

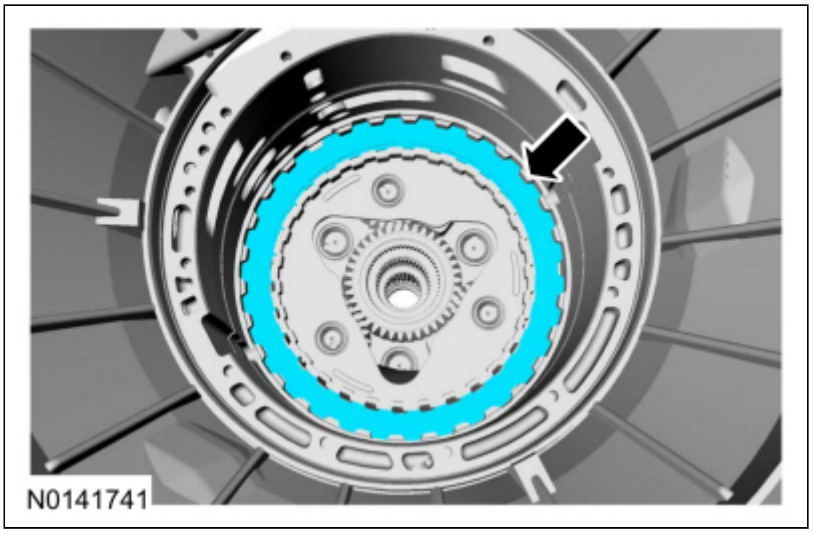
    NOTE: *Install the low/reverse sun gear and bearing race into the planetary carrier with the race side facing down.*

    Install the following items:
    1. Low/reverse sun gear
    2. Bearing race



28. **NOTE:** *Place the manual control lever in PARK when installing the rear planetary gearset to hold the rear ring gear stationary.*

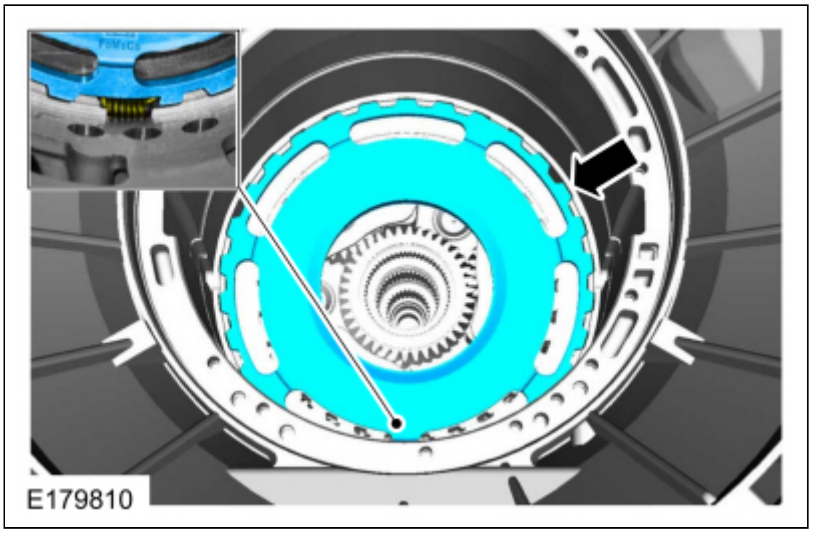
Install the planet carrier.



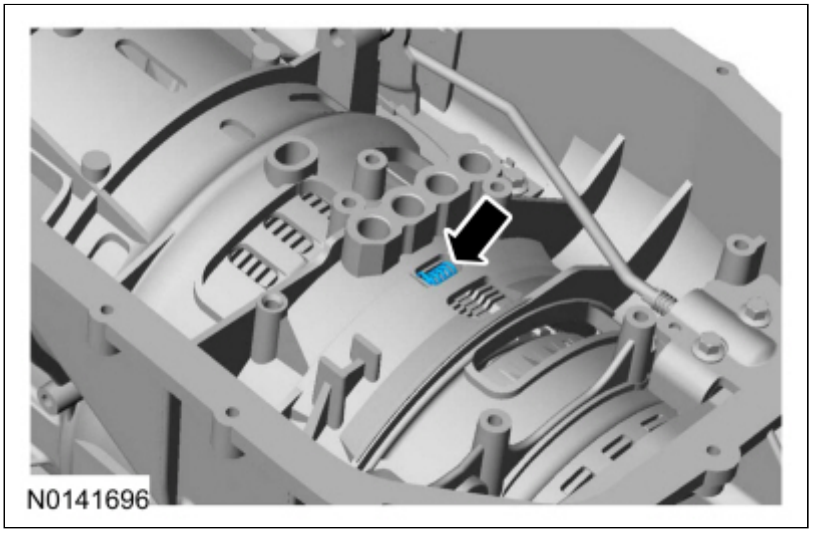
29. **NOTE:** *Friction and steel plate quantity are model dependent and vary based on engine displacement. For additional information, refer to the Clutch Plate Quantity Chart in the Specifications portion of this section.*

    Soak the new low/reverse clutch plates in clean automatic transmission fluid.
    Refer to: Specifications (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Specifications).
    Material: Automatic Transmission Fluid (MERCON® LV) (WSS-M2C938-A)

30. Install the low/reverse clutch plates, starting with the pressure plate and alternating between the friction and steel plates and ending with the wave spring plate on the top.
    Refer to: Specifications (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Specifications).



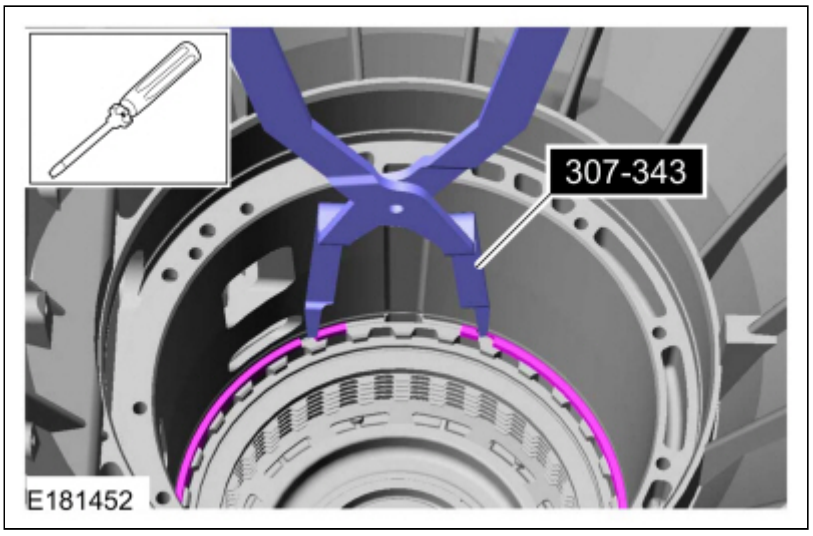
31. **NOTE:** *Inspect the T7 thrust bearing and selective shim for damage or scoring.*



32. **NOTE:** *Align the One-Way Clutch in the transmission case so the bias spring fits into the transmission case.*

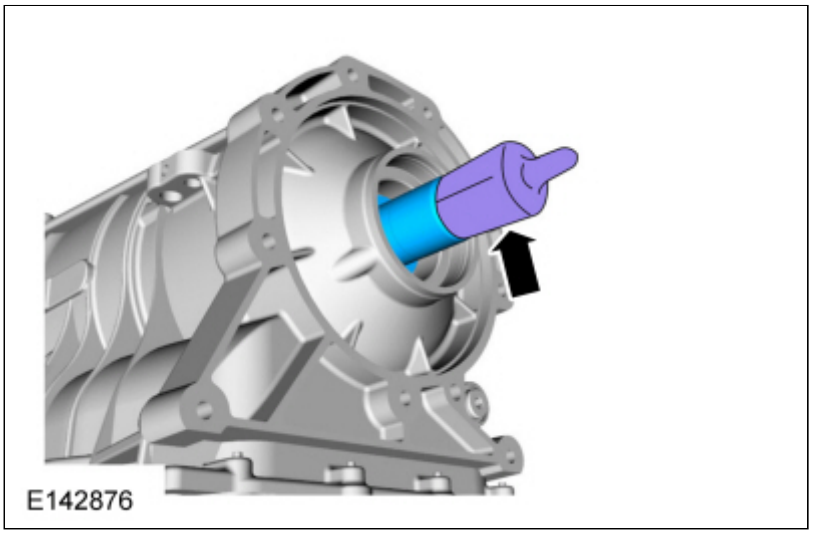
    Install the One-Way Clutch as shown so the bias spring can be installed as shown.

33.



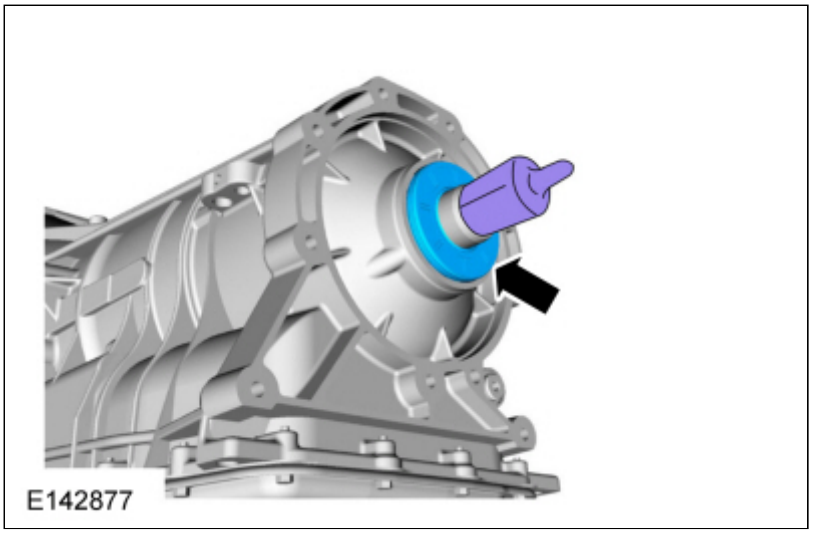
34. **NOTE:** *Make sure that when installing the center support the feed holes on the center support are lined up with the feed holes in the case.*

35. **NOTE:** *Install the snap ring with the beveled surface facing up and the snap ring gap in the 3 o'clock or the 9 o'clock position.*

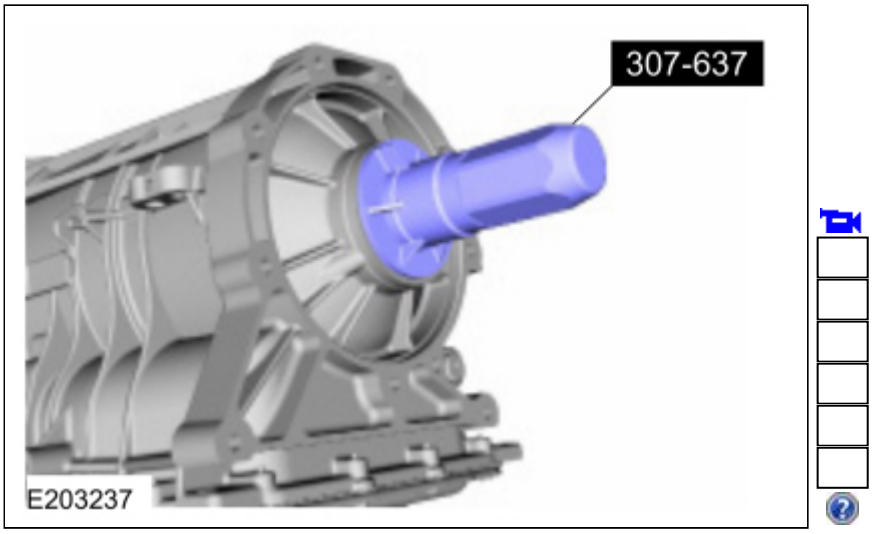


NOTE: *Rotate the component to a horizontal position.*

Using the Retaining Ring Pliers, install the center support snap ring. Using a suitable tool, be sure the snap ring is fully seated.
Use Special Service Tool: 307-343 Retaining Ring Pliers.
Use the General Equipment: Flat Headed Screw Driver

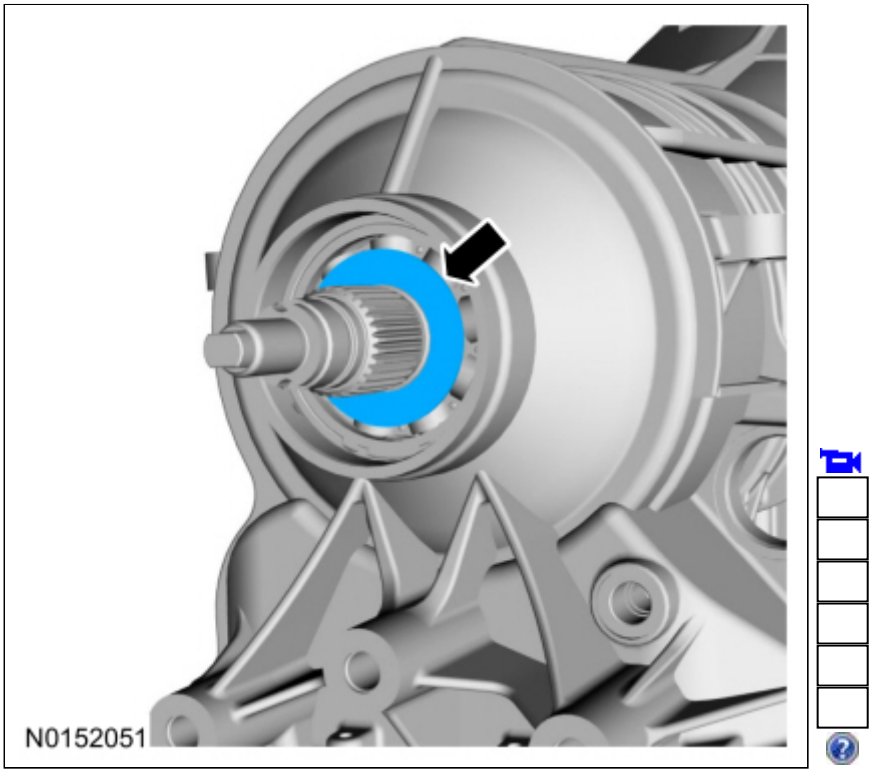


4x4

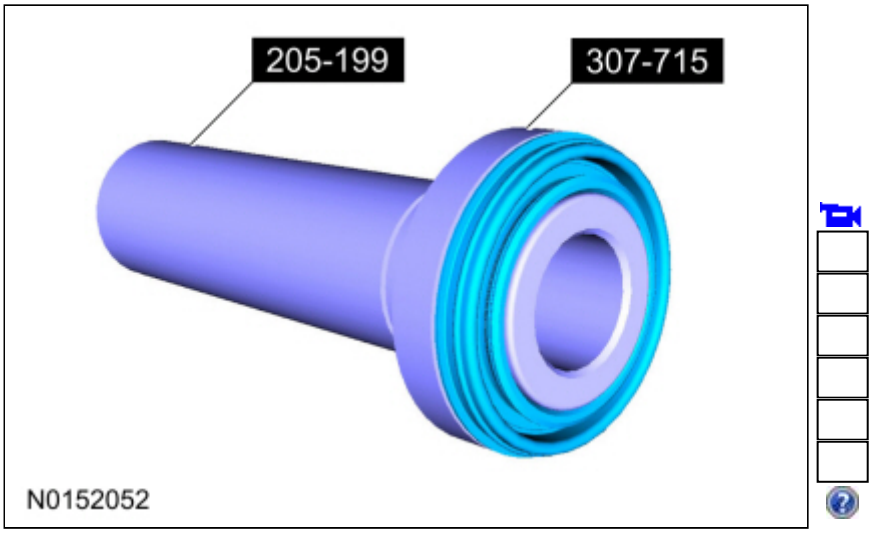


36. Install the seal protector provided with the new output shaft seal on the output shaft.

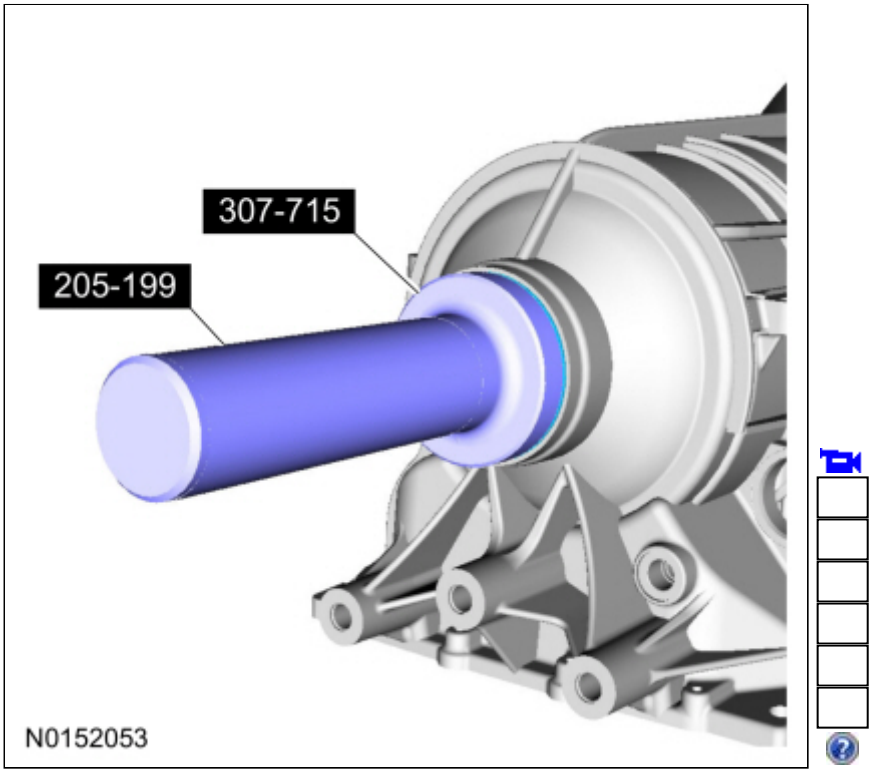
37. Slide the output shaft seal over the output shaft seal protector onto the output shaft. Remove the output shaft seal protector.



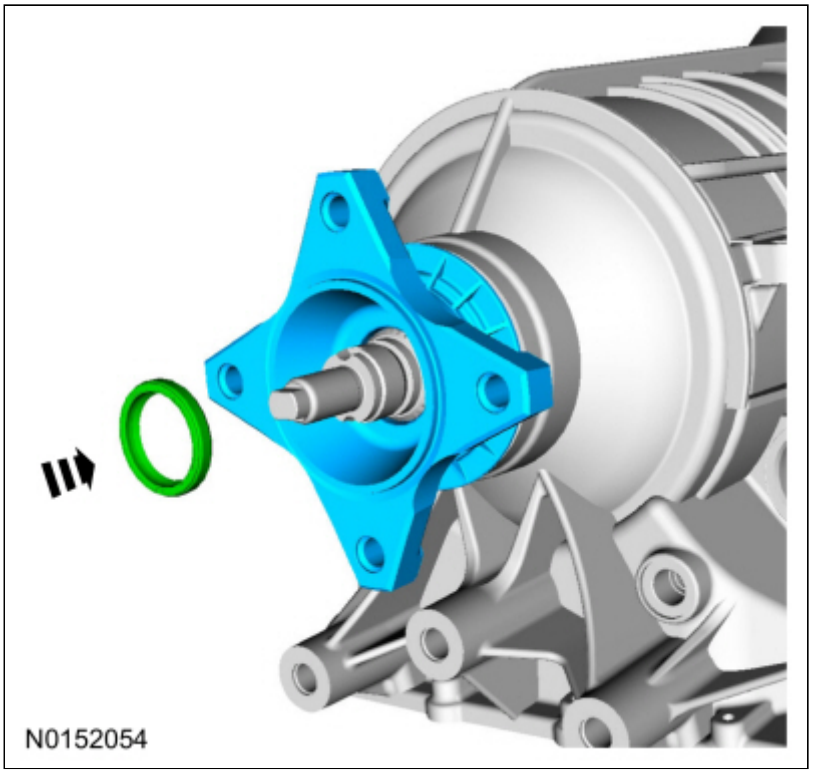
38. Use Special Service Tool: 307-637 Installer, Rear Seal, 4x4.



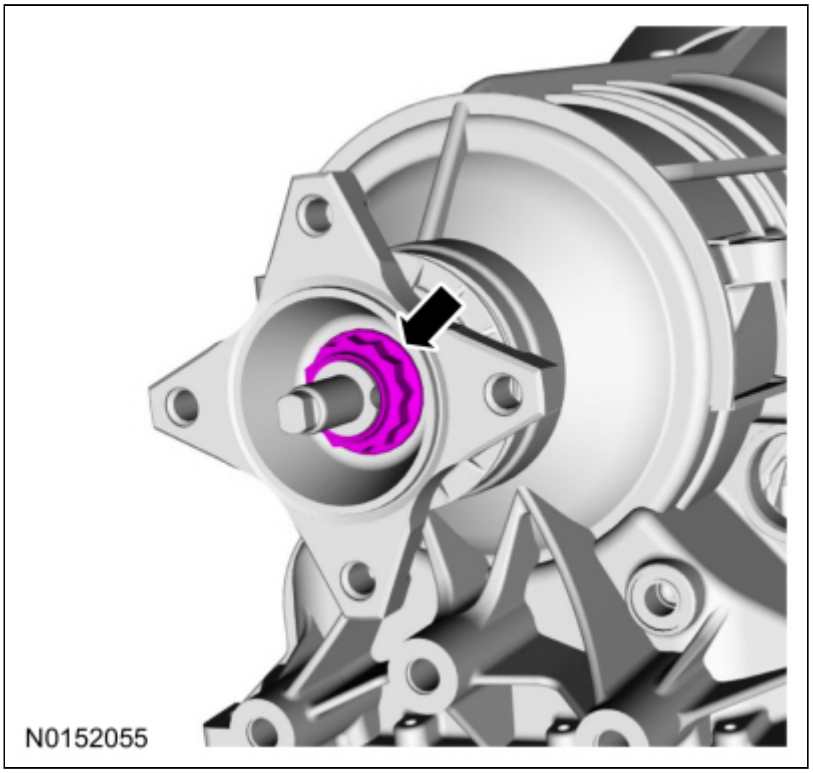
4x2



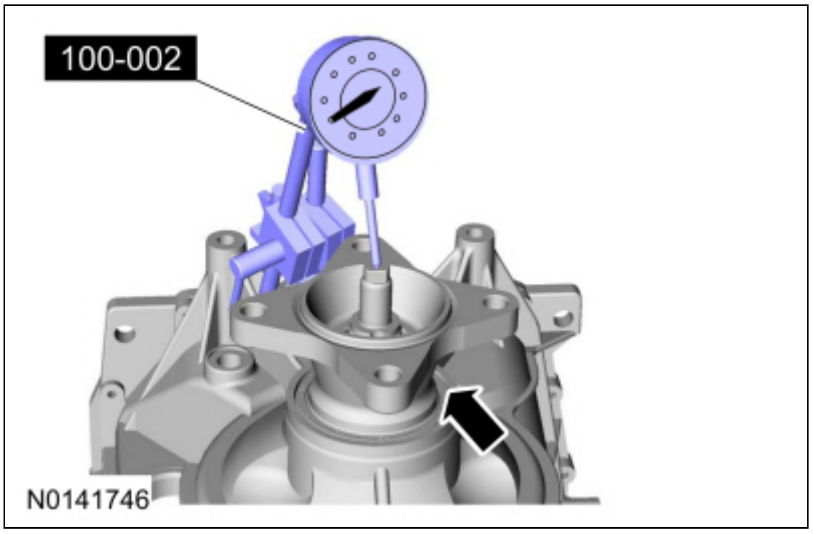
39. Rotate the transmission to the vertical position and install the slip plane washer.



40. Position a new output shaft seal on the special tool.
    Use Special Service Tool: 205-199 (T83T-3132-A1) Installer, Spindle/Axle Shaft. , 307-715 Installer, Output Seal (4X2).

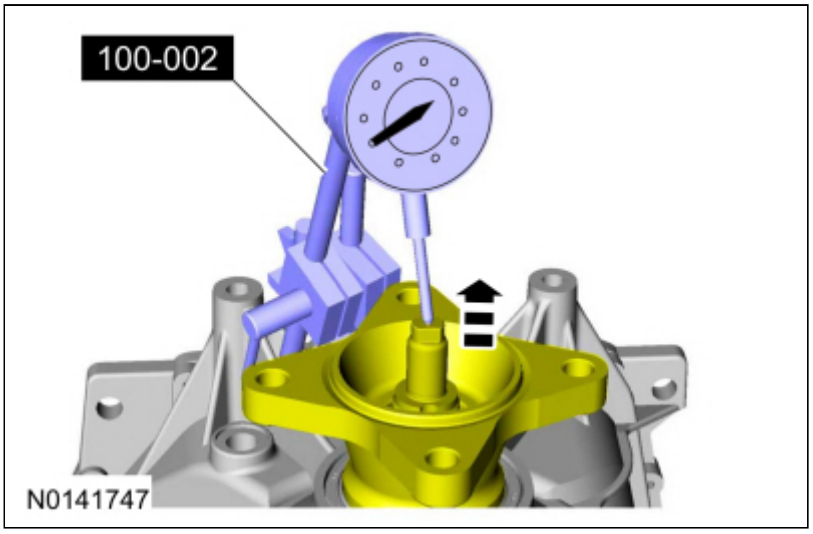


41. Using the special tools, install the output shaft seal.
    Use Special Service Tool: 205-199 (T83T-3132-A1) Installer, Spindle/Axle Shaft. , 307-715 Installer, Output Seal (4X2).

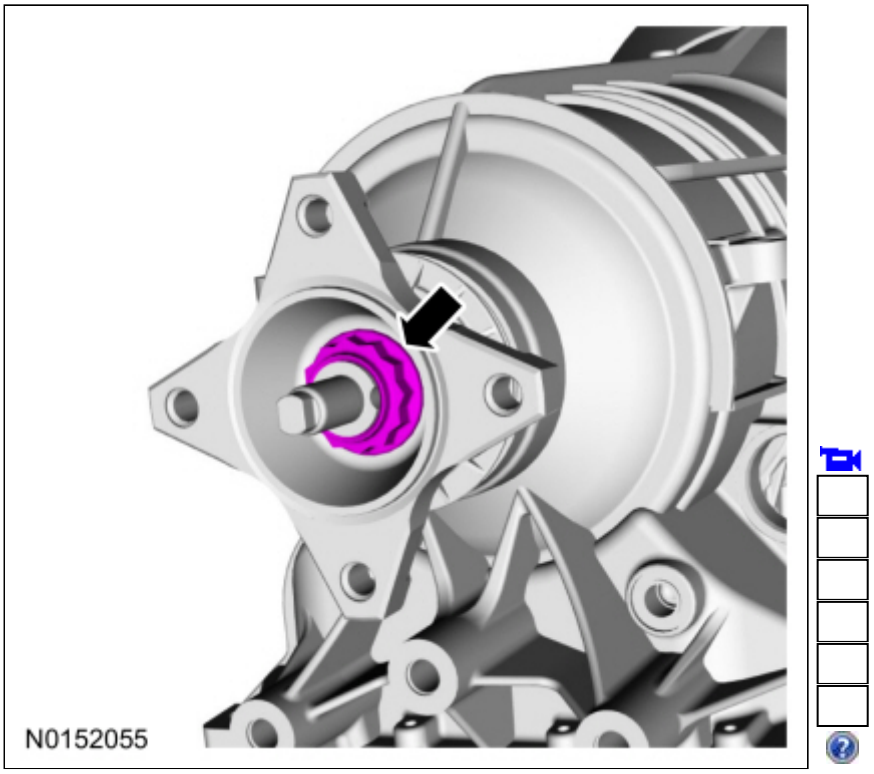


42.

43. **NOTE:** *Only tighten the nut finger tight at this stage.*



44. Install the Dial Indicator Gauge with Holding Fixture on the transmission case and position the plunger on the output shaft flange.
    Use Special Service Tool: 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.

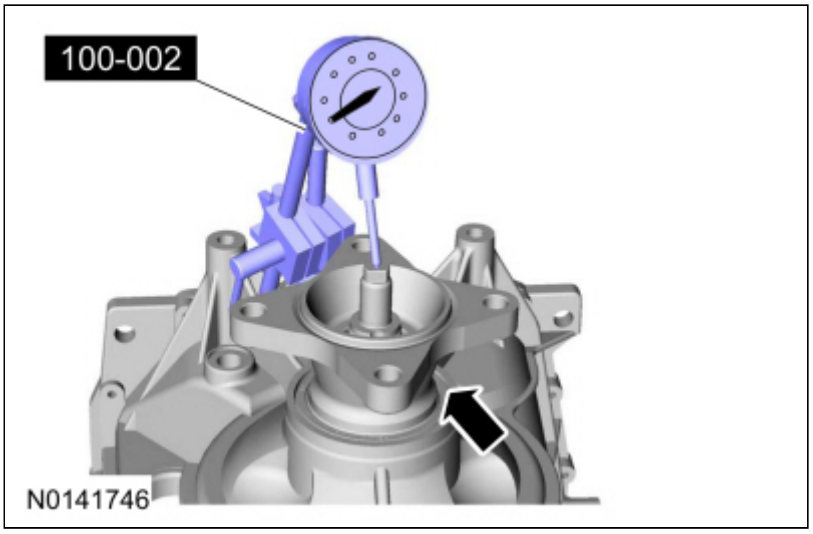


45. **NOTE:** *Only tighten the nut finger tight at this stage.*

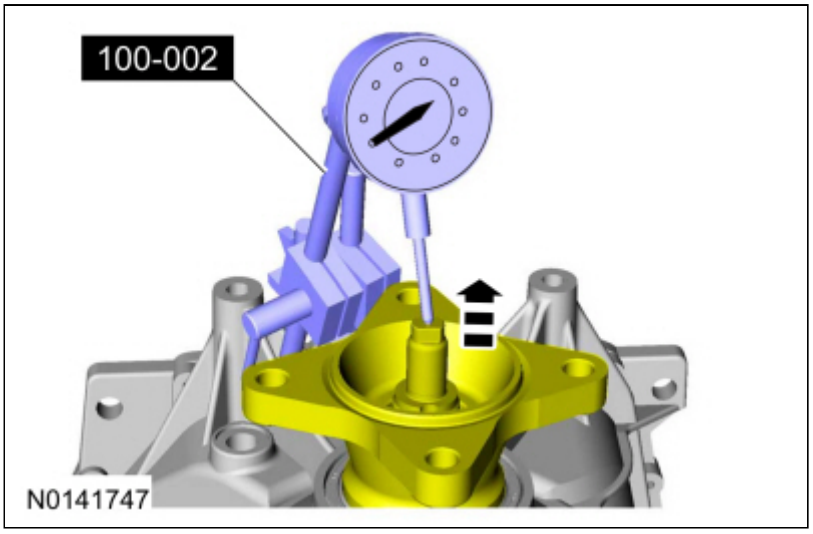
    NOTE: *If the reading is not within the specification, install a different (either thinner or thicker) select fit thrust gear shim.*

    Using the Dial Indicator Gauge with Holding Fixture, lift up on the output shaft flange and record the reading. .
    The reading should be within 0.6-0.9 mm.
    Use Special Service Tool: 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.

46. *Torque*: 80 Nm

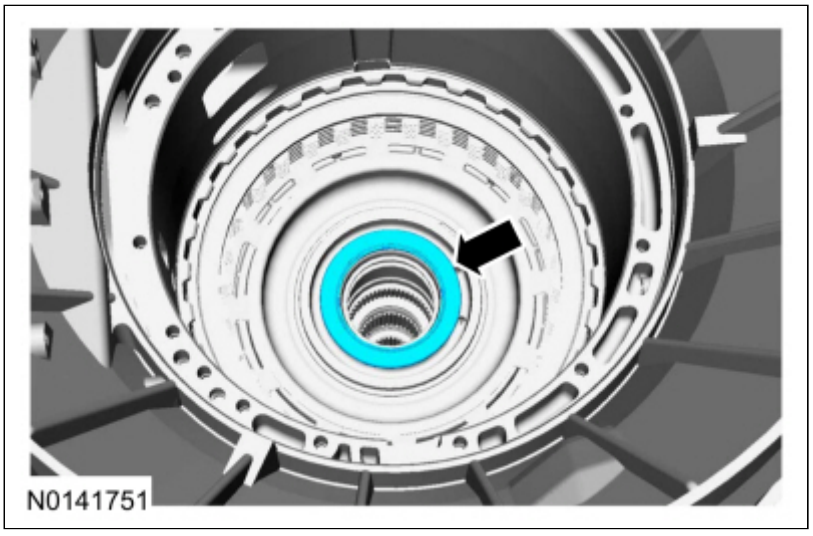


47. After installing the new output shaft flange retaining nut, stake the slots to prevent it from coming loose.
    Use the General Equipment: Punch



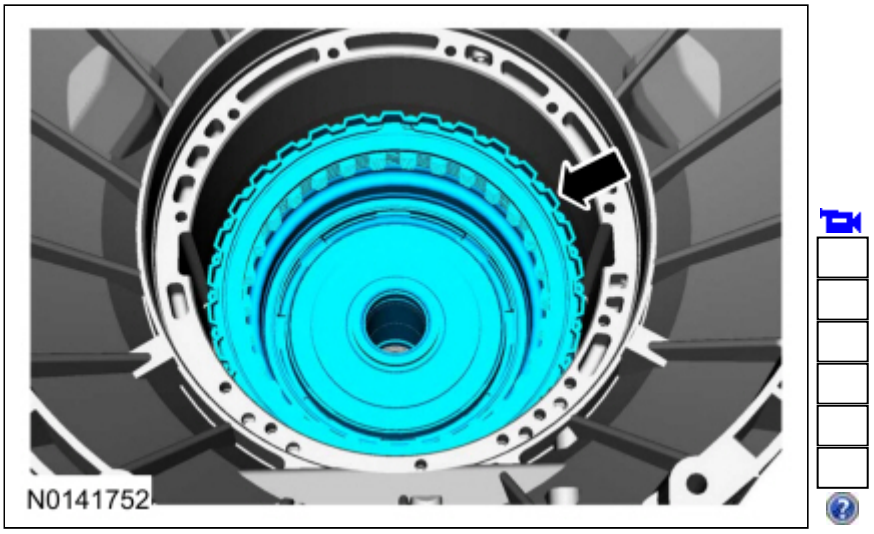
4x4

48. Install the Dial Indicator Gauge with Holding Fixture on the transmission case and position the plunger on the output shaft.
    Use Special Service Tool: 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.

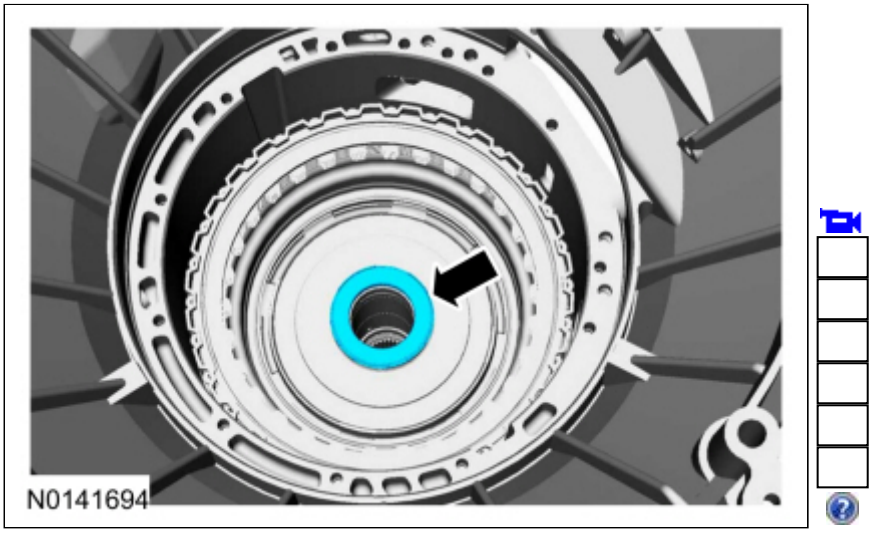


49. **NOTE:** *Loosely install the flange nut or an inaccurate reading may be recorded.*

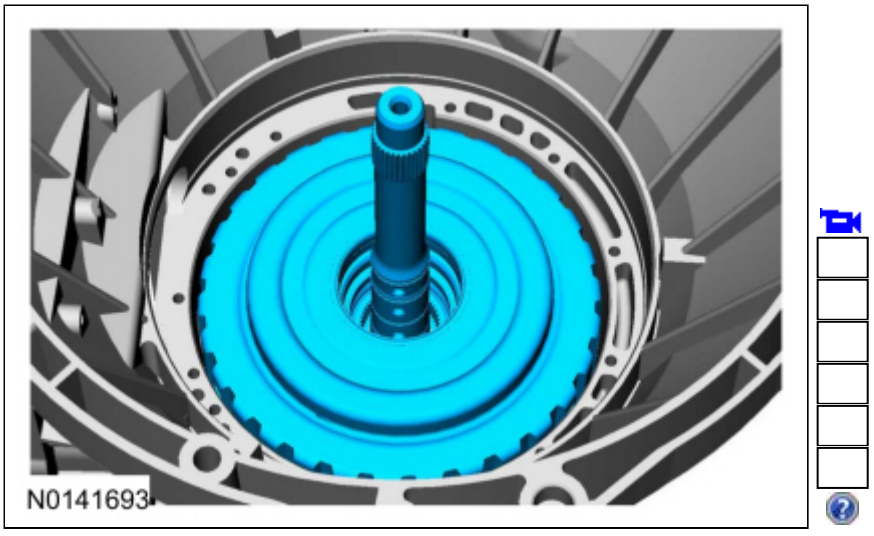
    Lift up on the output shaft flange and record the reading. The reading should be within 0.6-0.9 mm (0.024-0.035 in). If the reading is not within specification, install a different (either thinner or thicker) rear planetary gearset selective shim.
    Use Special Service Tool: 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge.



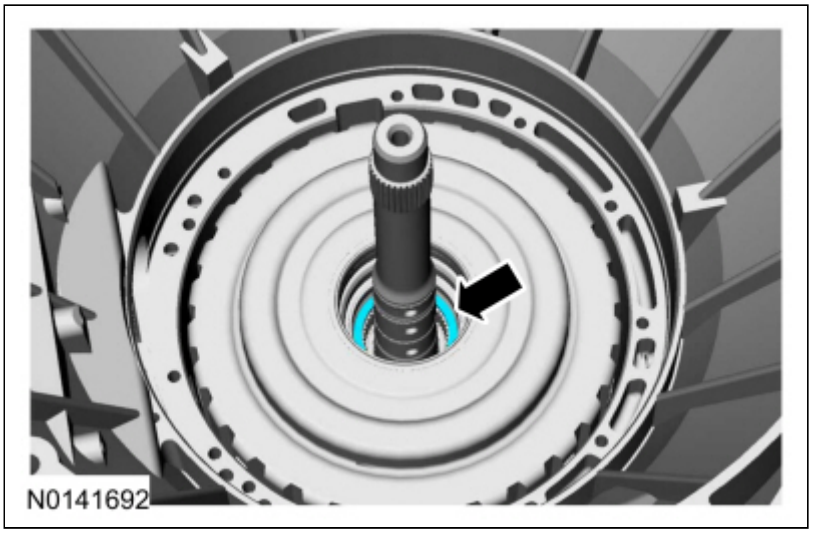
All vehicles



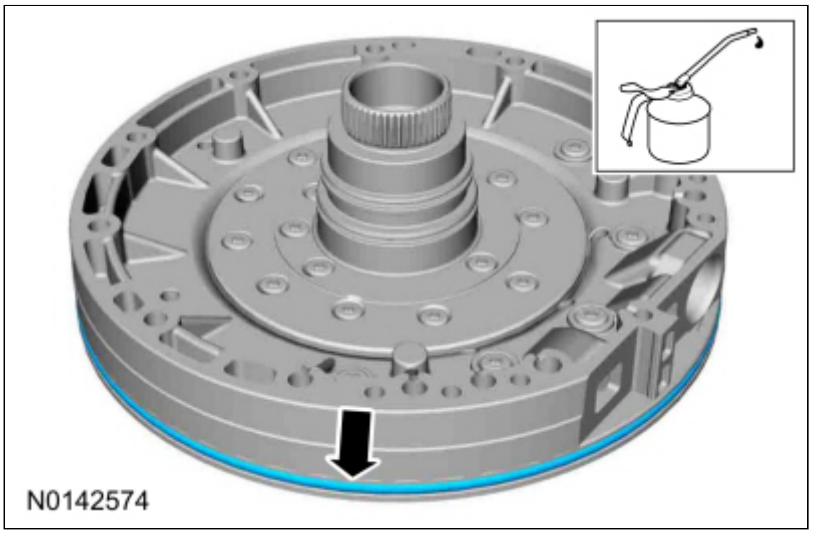
50. Rotate the transmission in the vertical position with the torque converter housing facing up and install the T6 bearing.



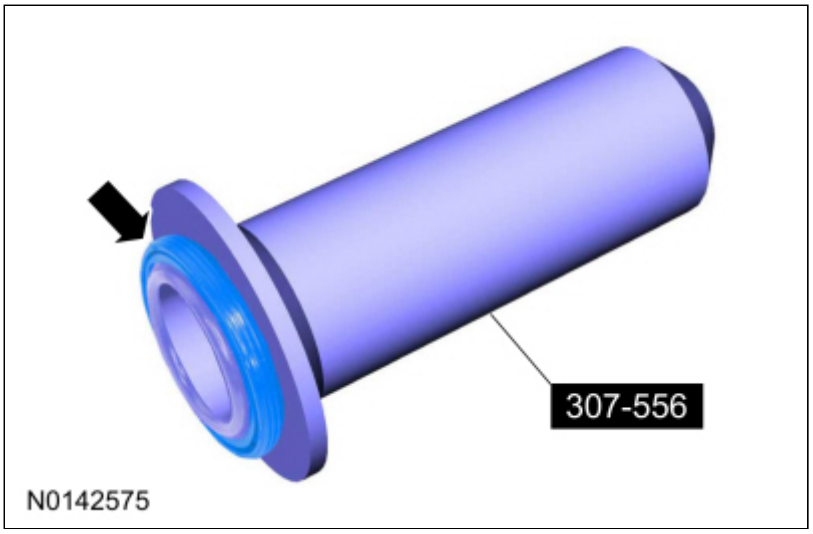
51. Install the direct (B) clutch assembly.



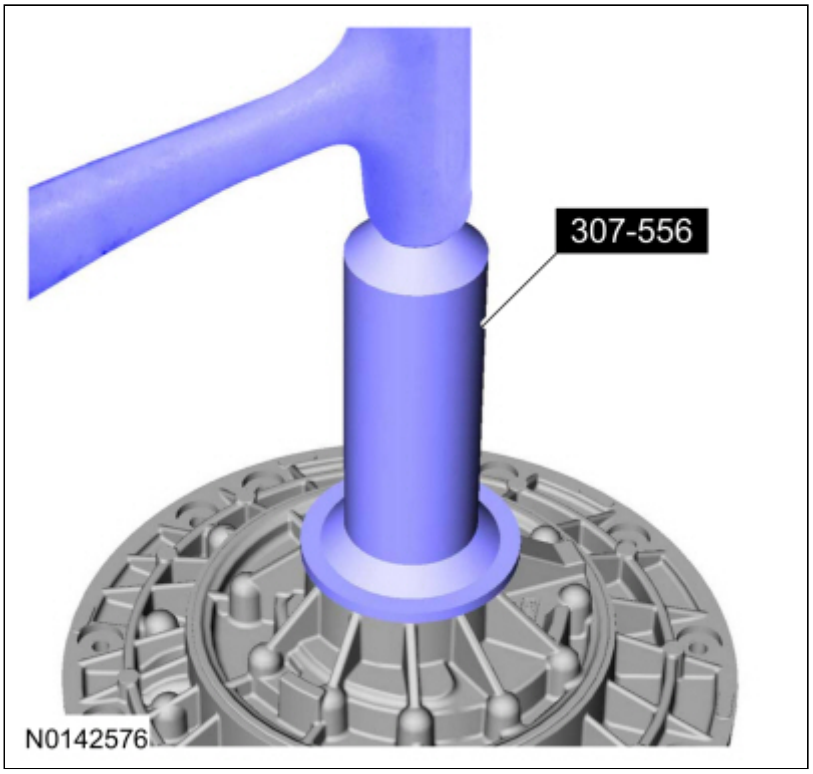
52. Install the T5 roller bearing on the direct (B) clutch assembly.



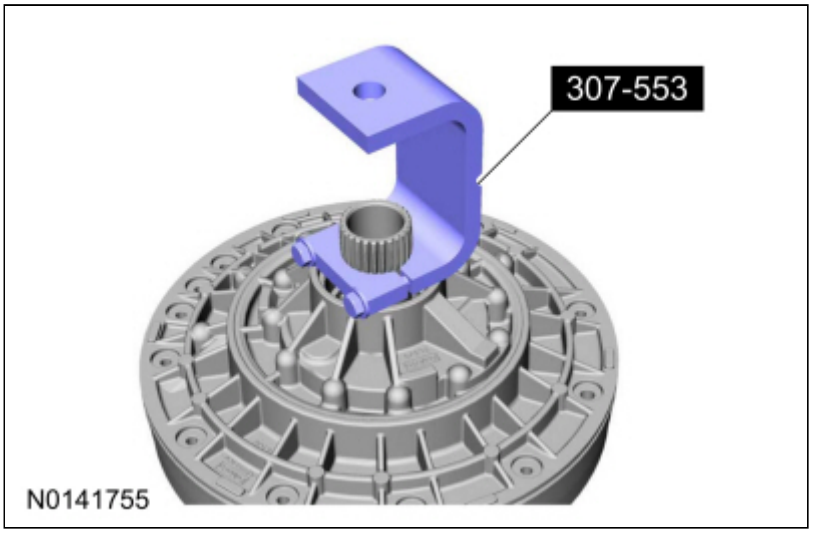
53. Install the forward (A)/overdrive (E) clutch assembly.



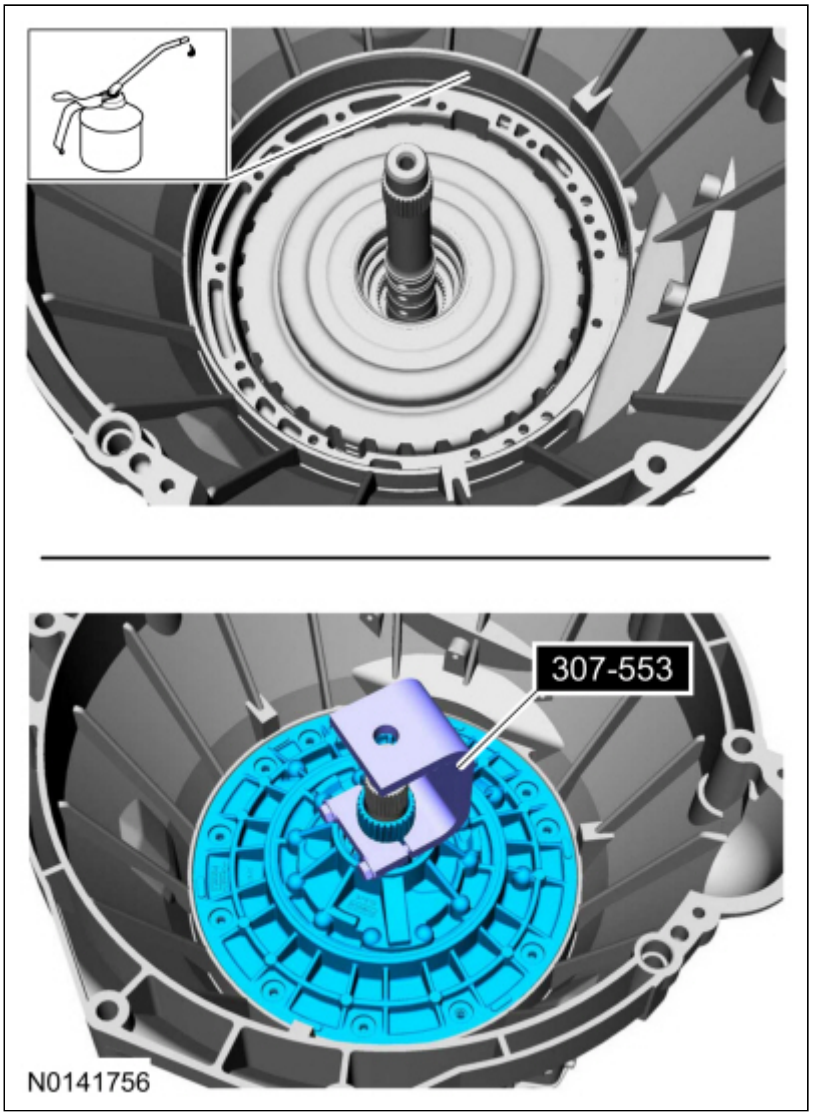
54. Install the selective shim.



55. If the front pump was not disassembled and assembled, install a new front pump O-ring seal and lubricate it with petroleum jelly.

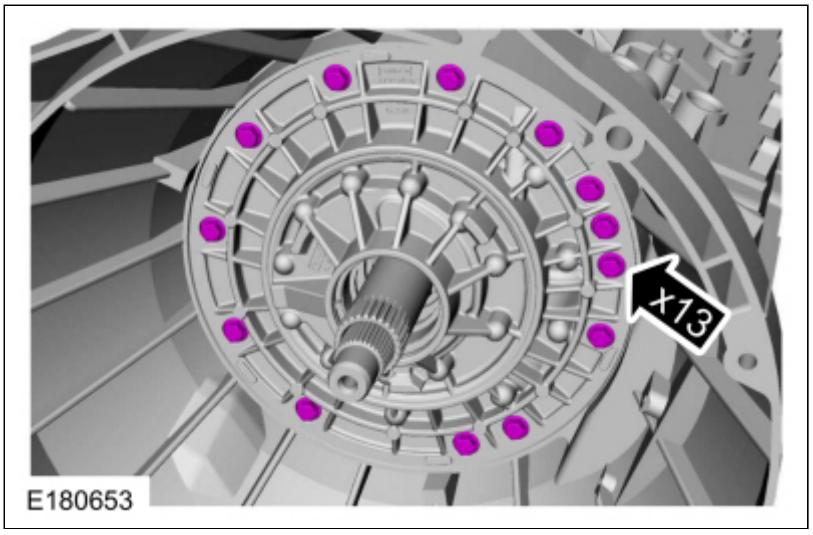


56. Install a new front pump seal on the Fluid Pump Seal Installer.
Use Special Service Tool: 307-556 Installer, Fluid Pump Seal.

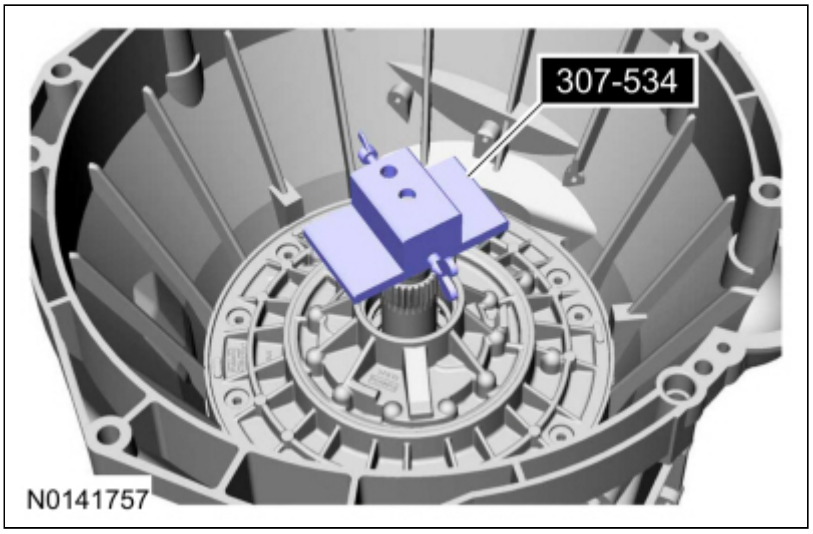


57. Using the Fluid Pump Seal Installer, install the front pump seal.
Use Special Service Tool: 307-556 Installer, Fluid Pump Seal.

58. Install the Transmission Fluid Pump Remover on the front pump.
    Use Special Service Tool: 307-553 Remover, Transmission Fluid Pump.

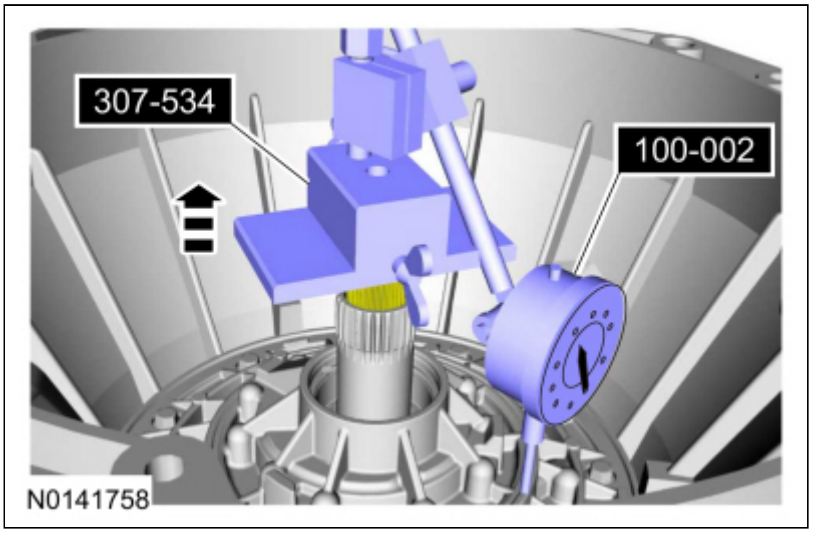


59. Lubricate the transmission case pump bore with petroleum jelly. Using the Transmission Fluid Pump Remover, position the pump assembly in the case and rotate the pump to insert the pump splines into the front planetary sun gear. Rotate the pump to align the pump-to-case bolts and push the pump into the case.
    Use Special Service Tool: 307-553 Remover, Transmission Fluid Pump.

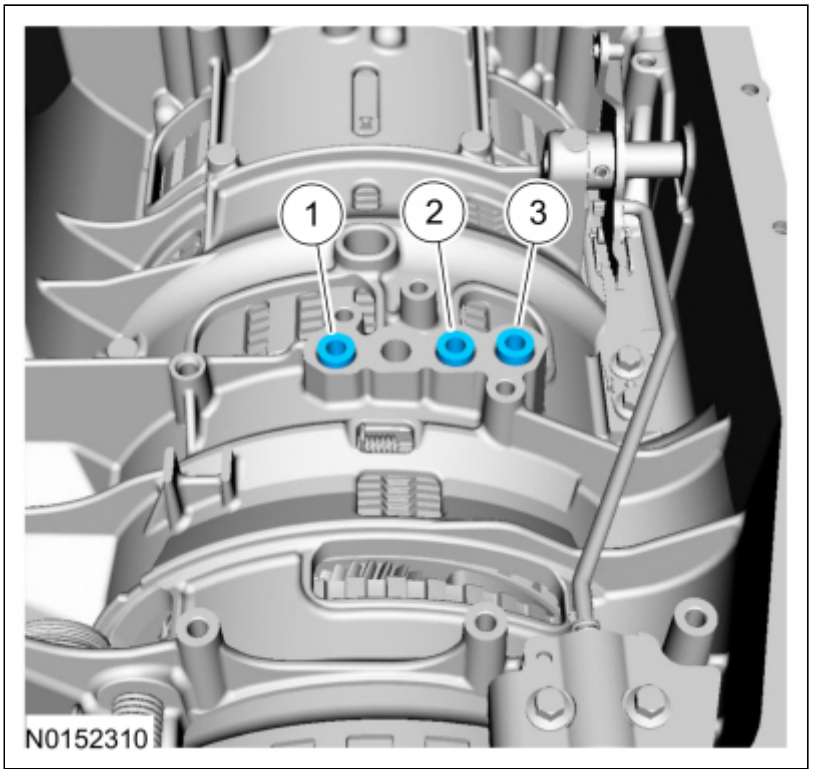


60. **NOTICE: Failure to replace the fasteners will result in transmission fluid leakage.**

    Install new front pump-to-case bolts and washers. Tighten in a crisscross pattern.
    Torque: 10 Nm



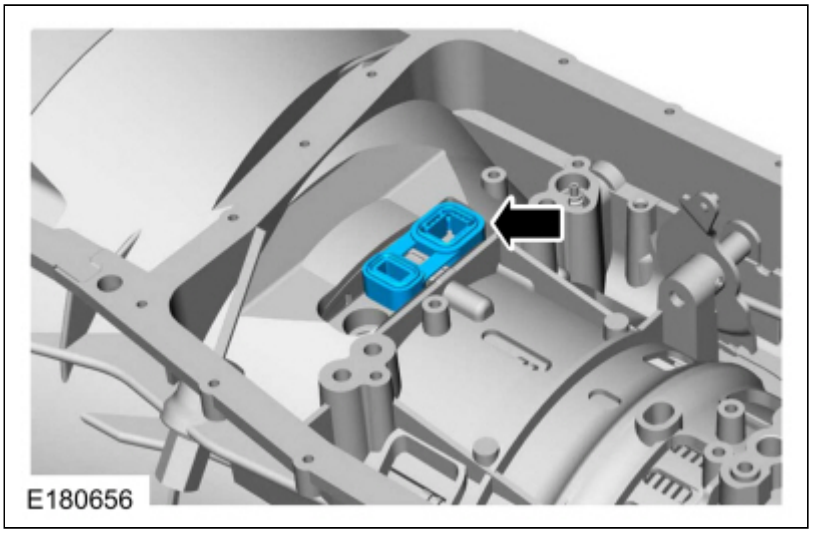
61. Install the special tool on the input shaft.
    Use Special Service Tool: 307-534 End Play Gauge, Transmission.



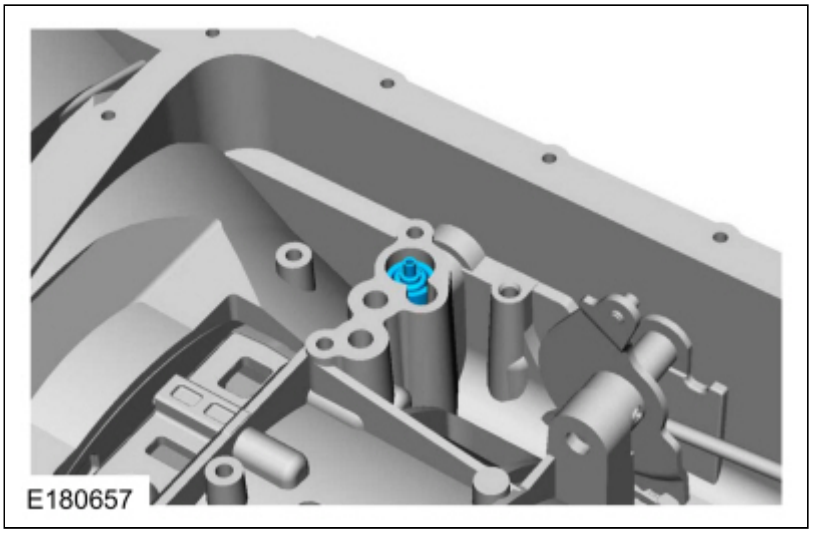
62. **NOTE:** *Install the Dial Indicator Gauge with Holding Fixture on the Transmission End Play Gauge.*

- Push down on the Transmission End Play Gauge and zero the Dial Indicator Gauge.
- Lift up on the Transmission End Play Gauge and record the measurement on the Dial Indicator Gauge. The measurement should be between 0.2-0.4 mm (0.008-0.015 in). If the measurement is not within specification, install a new selective front pump shim.
- Measure the original shim, install a thinner or a thicker shim to achieve the correct measurement. Use Special Service Tool: 100-002 (TOOL-4201-C) Holding Fixture with Dial Indicator Gauge. , 307-534 End Play Gauge, Transmission.

63. **NOTE:** *The green (7G087) center support feed tube seal may be replaced with an orange (7G087) center support feed tube seal.*



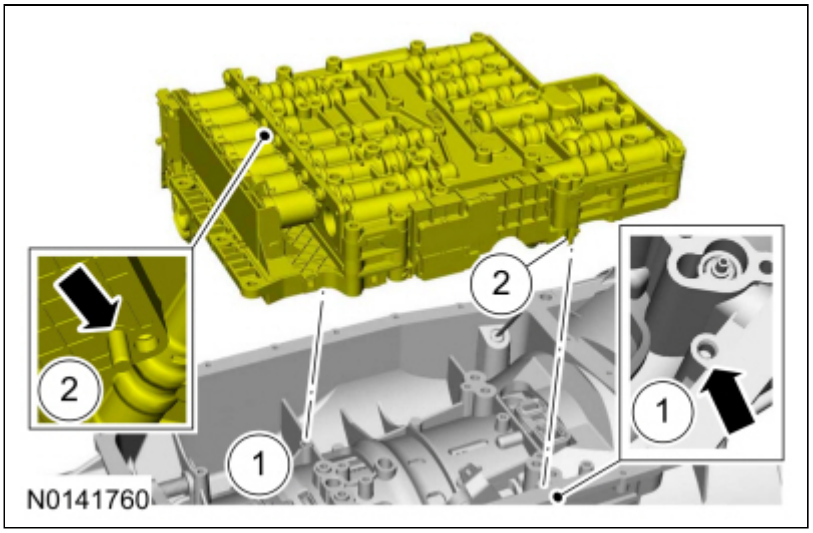
1. Install a new center support feed tube seal (7G199 Black).
2. Install a new center support feed tube seal (7G087 Green or Orange).
3. Install a new center support feed tube seal (7G084 Blue).



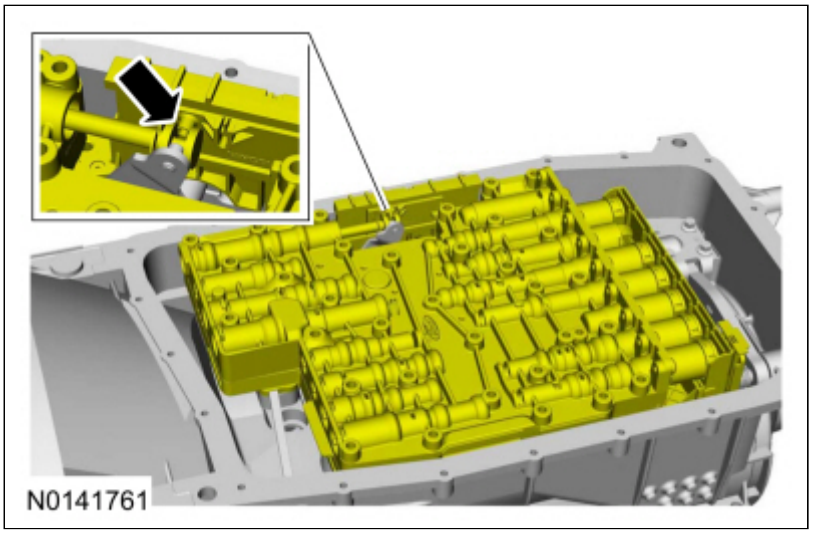
64. **NOTE:** *Make sure the transmission fluid filter seal has been removed. If it has not, use a suitable pick and remove the seal.*

    NOTE: *Add 0.118L (4 oz) of clean transmission fluid to prime the pump.*

    Install the front pump adapter seal and prime the fluid pump.

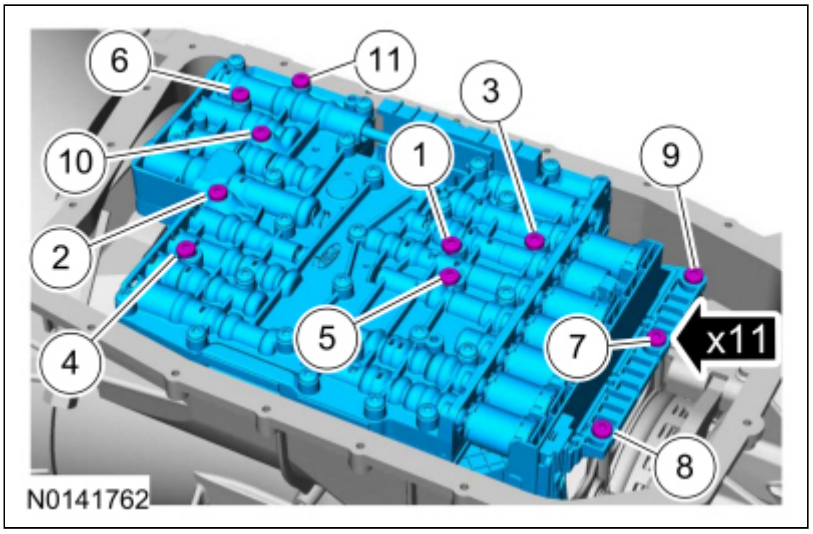


65. Install the thermal bypass valve into the case.



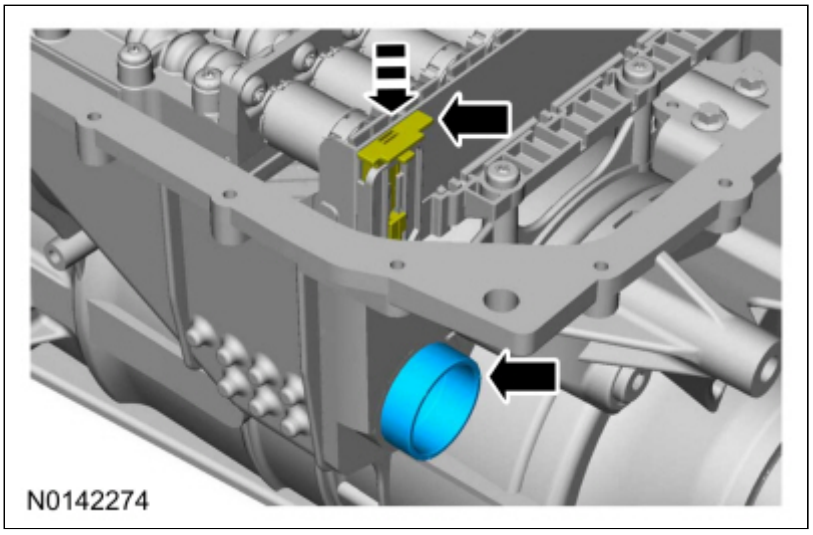
66. **NOTE:** *Align the guide pins in the alignment holes in the transmission case and position the mechatronic assembly in place.*

    1. Alignment holes
    2. Guide pins

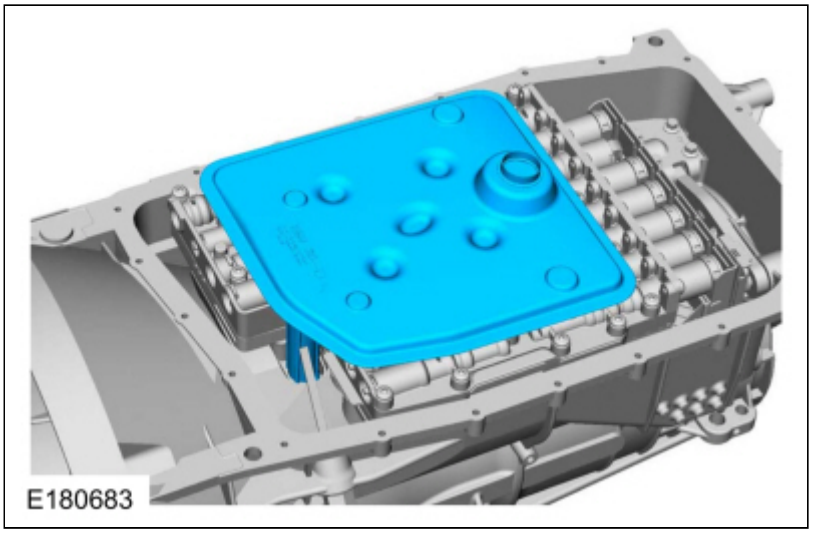


67. **NOTE:** *Tightening the bolts will pull the mechatronic assembly toward the case.*

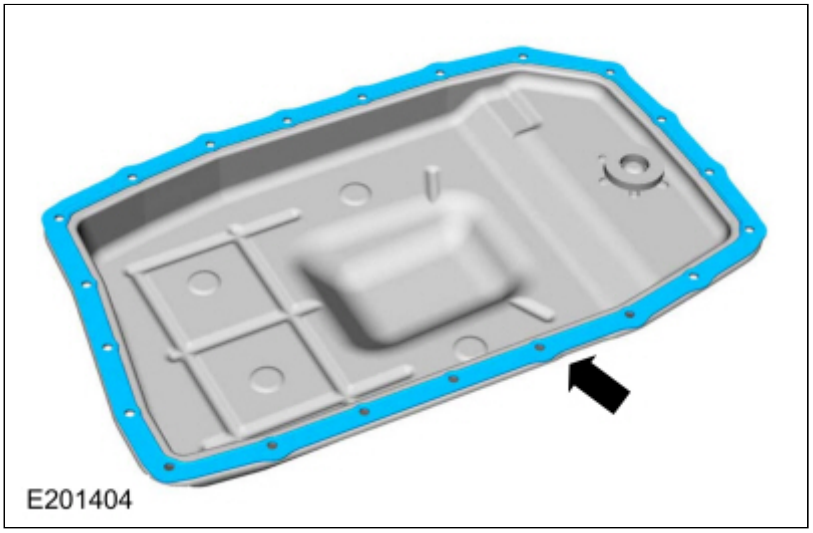
    Slightly lift the mechatronic assembly and align the manual valve in the manual valve linkage and position the mechatronic assembly in place.



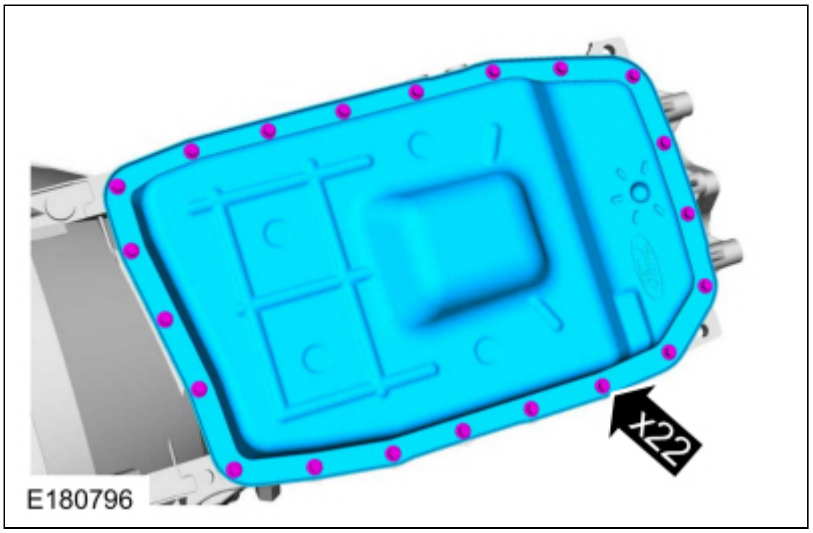
68. Install the mechatronic assembly bolts and tighten in the sequence shown.
    Torque: 8 Nm



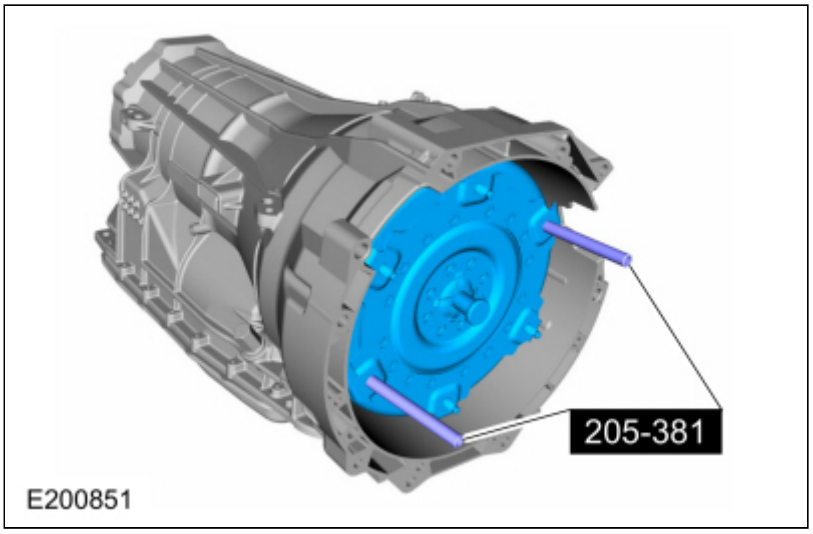
69. If removed, install the bulkhead connector sleeve seals.



70. With the release tab up and unlocked, push the outer shell of the bulkhead electrical connector into the transmission. Make sure the bulkhead connector is fully seated into the molded leadframe. Press down on the tab and lock the outer shell of the bulkhead electrical connector in place. Make sure the locking tab is securely locked.
Torque: 8 Nm



71. Install a new transmission fluid filter.



72. **NOTE:** *The fluid pan gasket can be reused if not damaged.*

73. Install the transmission fluid pan and transmission fluid pan bolts. Tighten in a crisscross pattern.
    Torque: 12 Nm

74. Use Special Service Tool: 307-091 Handle, Torque Converter.

Transmission Cooling - Overview

6R80 Automatic Transmission Cooling

Vehicles with an automatic transmission are equipped with an external transmission fluid cooler. The transmission fluid cooler is an oil to water fluid cooler which is mounted to the side of the transmission. The transmission fluid travels from the transmission into cooler and back in the transmission. The transmission fluid cooler transfers heat from the transmission fluid to coolant passing through the cooler from the engine cooling system via two coolant hoses. This is the same setup with all the engine types.

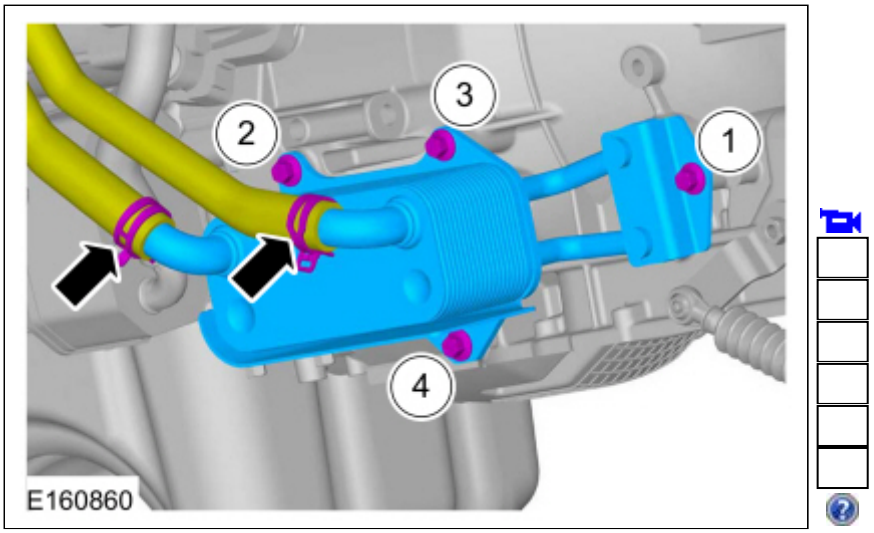
Transmission Fluid Cooler

Base Part Number: 7A095

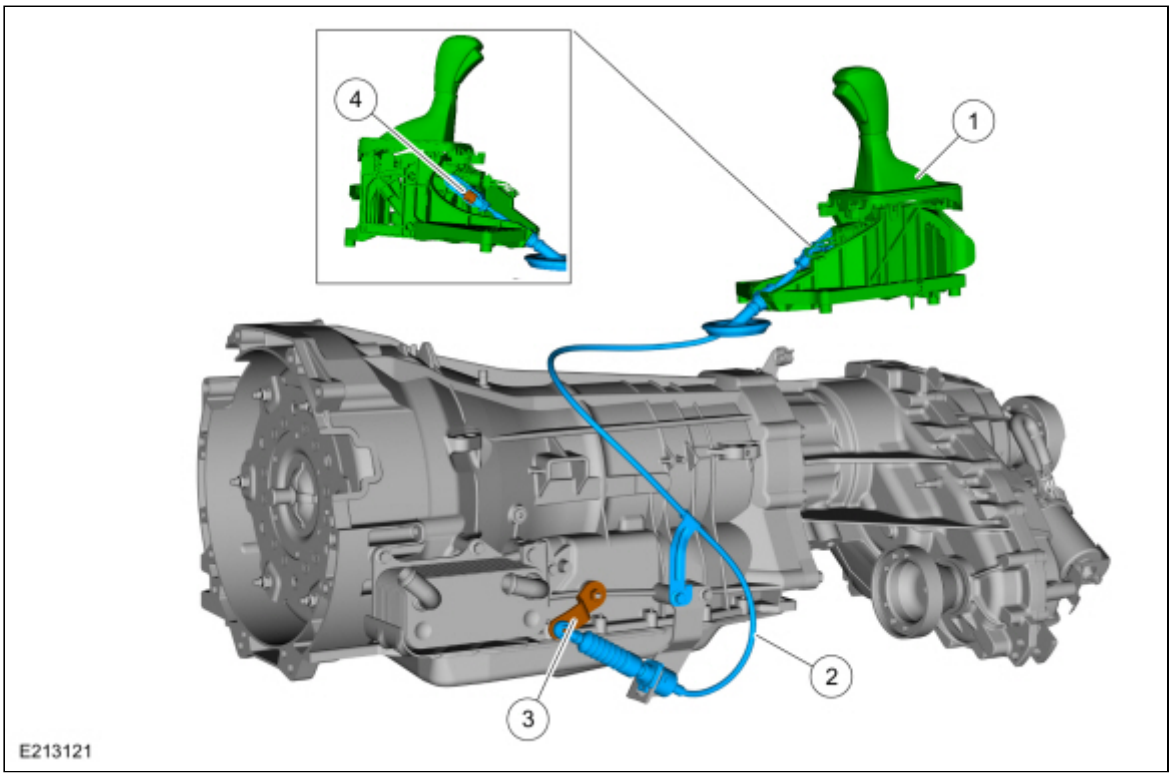


Removal

1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. **NOTICE: Make sure that all openings are sealed.**

   Refer to: Cooling System Draining, Filling and Bleeding (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, General Procedures).
   Refer to: Transmission Fluid Drain and Refill (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .
3. 

Installation



1. *Torque*: 20 Nm

2. Refer to: Cooling System Draining, Filling and Bleeding (303-03C Engine Cooling - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, General Procedures).
   Refer to: Transmission Fluid Drain and Refill (307-01 Automatic Transmission - Vehicles With: 6-Speed Automatic Transmission - 6R80) .

External Controls - Overview

Automatic Transmission External Controls

Vehicles with automatic transmissions are equipped with a floor shift selector lever.

The transmission selector lever linkage consists of:

- Selector lever cable that connects the transmission manual control lever to the selector lever assembly
- Brake shift interlock actuator that is integral to the selector lever assembly

The selector lever assembly:

- Locks the transmission selector lever in the P (Park) position when the ignition switch is in the LOCK position
- Requires the transmission selector lever to be in the P position to turn the ignition switch to the LOCK position

Copyright © 2016 Ford Motor Company

External Controls - System Operation and Component Description

System Operation

The transmission has 7 range positions P, R, N, D, side movement to S, then '+' or '-' SelectShift™ to select desired gear 1 to 6.

Park

In the PARK position:

- there is no powerflow through the transmission.
- the parking pawl locks the output shaft
- the engine may be started.
- the ignition key may be removed.

Reverse

In the REVERSE position:

- the vehicle may be operated in a rearward direction, at a reduced gear ratio.
- engine braking will occur.

Neutral

In the NEUTRAL position:

- there is no powerflow through the transmission.
- the output shaft is not held and is free to turn.
- the engine may be started.

Drive

DRIVE is the normal position for most forward driving.

DRIVE position provides:

- automatic shifts - 1st through 6th gears.
- maximum fuel economy during normal operation.

Sports

The SPORTS position provides:

- automatic shifts - 1st through 6th gears.
- maximum performance during Sports operation.
- optimised engine braking is provided.

SelectShift™ Mode

In the SelectShift™ mode:

- the driver can manually shift the transmission to gears 1 through 6 by pushing the selector lever to the '+' and '-' positions.
- downshifts will happen automatically when road speed is too low.

Brake Shift Interlock Operation

The brake shift interlock actuator inhibits the selector lever movement from the PARK position by mechanically blocking the detent pawl of the selector lever mechanism. When the brake pedal is pressed (BPP switch closed) with the ignition key in the RUN position and the transmission in PARK, the brake shift interlock actuator is energized by the BCM, allowing the selector lever to be moved out of the PARK position.

The brake shift interlock system consists of:

- a brake shift interlock actuator that is integral to the selector lever assembly.

- an ignition switch.
- a BPP switch.
- a BCM.

Selector Lever Cable

The selector lever cable consists of:

- a cable that connect the transmission manual control lever to the selector lever assembly.
- a cable grommet that is fastened to the floor pan.
- an adjuster locking tab at the transmission manual control lever.

Selector Lever

The selector lever consists of:

- a selector lever knob (floor shift only).
- a brake shift interlock actuator that is integral to the selector lever assembly.

External Controls

Principles of Operation

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.
3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step
4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Mechanical	Electrical
Transmission selector lever cable	Brake Shift Interlock Actuator (BSIA)
Manual control lever	Wiring harness
Selector lever	Terminals
Selector lever knob	Connectors
	SelectShift™ switch

DTC Chart - BCM

DTC	Description	Action
B1319:11	Brake Shift Interlock (BSI) Output Circuit Short To Ground	GO to Pinpoint Test A
B1319:15	Brake Shift Interlock (BSI) Output Circuit Short To Battery or Open	GO to Pinpoint Test A

DTC Chart - PCM (2.5L)

DTC	Description	Action
P0815	Upshift Switch Circuit	GO to Pinpoint Test B
P0816	Downshift Switch Circuit	GO to Pinpoint Test B

DTC Chart - TCM (2.2L, 3.2L)

DTC	Description	Action
P0815	Upshift Switch Circuit	GO to Pinpoint Test B
P0816	Downshift Switch Circuit	GO to Pinpoint Test B
P0826	Up and Down Switch Circuit	GO to Pinpoint Test B

Symptom Chart

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).

In most circumstances the PCM sets a DTC to help guide diagnostics. Refer to the DTC charts before using the Symptom Chart. The Symptom column lists the vehicle condition. The Possible Sources column lists a detailed vehicle condition. The Action column lists the action to be performed to determine the cause of the condition. Each action lists the components that can cause the symptom and the individual components in that system. The components are listed in order of disassembly. Use the list of components and the required action to focus on disassembly inspections for the root cause of the concern.

Symptom	Possible Sources	Action
• Brake shift interlock system does not release/lock correctly	• Circuitry open, shorted to ground or shorted to power	• GO to Pinpoint Test A
	• Brake Shift Interlock Actuator (BSIA) solenoid	• INSTALL a new selector lever assembly. REFER to: Selector Lever Assembly (307-05 Automatic Transmission External Controls, Removal and Installation).
• SelectShift™	• Selector lever not fully engaging in S position • Selector lever damaged	• GO to Pinpoint Test B
• Selector lever linkage is out of correct gear relationship	• Selector lever linkage out of adjustment	• REFER to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures).
	• Loose selector lever cable bracket	• CHECK the selector lever cable bracket. TIGHTEN as necessary.
	• Loose or out of alignment selector lever bezel	• CHECK the selector lever bezel alignment. ALIGN or INSTALL a new selector lever bezel if necessary. REFER to: Selector Lever Assembly (307-05 Automatic Transmission External Controls, Removal and Installation).
• Selector lever binding	• Selector lever bezel damaged	• CHECK the selector lever bezel for damage. If necessary, INSTALL a new selector lever bezel. REFER to: Selector Lever Assembly (307-05 Automatic Transmission External Controls, Removal and Installation).
	• Selector lever damaged	• CHECK the selector lever for damage. If necessary, INSTALL a new selector lever assembly. REFER to: Selector Lever Assembly (307-05 Automatic Transmission External Controls, Removal and Installation).
	• Selector lever cable damaged	• CHECK the selector lever cable for damage. If necessary, INSTALL a new selector lever cable. REFER to: Selector Lever Cable (307-05 Automatic Transmission External Controls, Removal and Installation).
	• Internal transmission components damaged	• CHECK the manual control lever and internal transmission components for damage. REFER to: Transmission (307-01 Automatic Transmission - 6-Speed

		Automatic Transmission - 6R80, Assembly).
• Brake shift interlock override does not release the selector lever	• Brake shift interlock override damaged	• INSPECT the selector lever for damage. If necessary, INSTALL a new selector lever. REFER to: Selector Lever Assembly (307-05 Automatic Transmission External Controls, Removal and Installation).
• Vibration — a high frequency (20-80 Hz) that is felt through the seat or selector lever. Changes with engine speed	• Selector lever cable incorrectly routed, grounded out or loose	• CHECK the selector lever cable. REFER to: Selector Lever Assembly (307-05 Automatic Transmission External Controls, Removal and Installation). REPAIR as necessary.
• The ignition key cannot be returned to the OFF position or the ignition key can be turned to the OFF position when the selector lever is not in P	• Wiring, terminals or connectors • Ignition lock cylinder • Key removal inhibit solenoid (part of the ignition switch) • Park detect switch (part of the selector lever) • Selector lever cable • Mechanical damage to the selector lever, selector lever cable or selector lever knob	• REFER to: Steering Wheel and Column Electrical Components (211-05 Steering Column Switches, Diagnosis and Testing).
• The PRNDS indicator does not illuminate P	• Wiring, terminals or connectors • PCM concern or TCM • IPC • Park detect switch (part of the selector lever assembly)	• REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).

Pinpoint Tests

DTCs B1319:11, B1319:15

Refer to Wiring Diagrams Cell 37 for schematic and connector information.

Normal Operation and Fault Conditions

The BCM provides power to the Brake Shift Interlock Actuator (BSIA). When the BCM receives a brake pedal applied input, voltage is applied to the brake shift interlock actuator. When the actuator is energized, the plunger is pulled inward allowing the selector lever to move from the park position.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
B1319:11	Brake Shift Interlock Output Circuit Short To Ground	Short to ground in the Brake Shift Interlock Actuator (BSIA) circuitry.
B1319:15	Brake Shift Interlock Output Circuit Short To Battery or Open	Short to power or open in the Brake Shift Interlock Actuator (BSIA) circuitry.

Possible Sources

- Connectors damaged or pushed-out terminals, corrosion, loose wires and missing or damaged seals
- Brake Shift Interlock Actuator (BSIA)
- BCM

PINPOINT TEST A : DTCS B1319:11, B1319:15

A1 RETRIEVE AND RECORD ALL DTCS

- Using the diagnostic scan tool, retrieve all DTCs.

Is DTC B1319:11 or B1319:15 present?

Yes	CLEAR the DTC. Using the diagnostic scan tool, perform the BCM self-test. If the DTC returns, GO to A2
No	The concern may not be in the brake shift interlock (BSI) system. REFER to: External Controls (307-05 Automatic Transmission External Controls, Diagnosis and Testing).

A2 CHECK THE BRAKE SHIFT INTERLOCK ACTUATOR POWER CIRCUIT FOR AN OPEN

- Disconnect Floor Shifter C3245.
- Disconnect BCM C2280G.
- Inspect for damaged or pushed-out terminals.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3245-3	Ω	C2280G-12

Is the resistance less than 3 ohms?

Yes	GO to A3
No	REPAIR the circuit.

A3 CHECK THE BRAKE SHIFT INTERLOCK ACTUATOR GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3245-9	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to A4
No	REPAIR the circuit.

A4 CHECK THE BRAKE SHIFT INTERLOCK ACTUATOR POWER CIRCUIT FOR VOLTAGE

- Ignition ON.

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3245-3		Ground

Is any voltage present?

Yes	REPAIR the circuit.
No	GO to A5

A5 CHECK THE BRAKE SHIFT INTERLOCK ACTUATOR POWER CIRCUIT FOR SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3245-3	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	INSTALL a new selector lever. REFER to: Selector Lever Assembly (307-05 Automatic Transmission External Controls, Removal and Installation).
No	REPAIR the circuit.

DTCs P0815, P0816, P0826

Refer to Wiring Diagrams Cell 30 for schematic and connector information.

Normal Operation and Fault Conditions

When the selector lever is placed in the manual shift position, the upshift/downshift feature is activated. Install a new selector lever assembly if a new switch is required.

DTC Fault Trigger Conditions

DTC	Description	Fault Trigger Conditions
P0815	Upshift Switch Circuit	The PCM detects a voltage high signal when an upshift is requested.
P0816	Downshift Switch Circuit	The PCM detects a voltage high signal when a downshift is requested.
P0826 (3.2L diesel only)	Up and Down Switch Circuit	The TCM detects a mismatch between the requested up or downshift and the actual lever state.

Possible Sources

- Circuitry open/shorted
- Selector lever assembly
- PCM (2.5L)
- TCM (2.2.L, 3.2L)

PINPOINT TEST B : DTCS P0815, P0816, P0826

B1 RETRIEVE AND RECORD ALL DTC (DIAGNOSTIC TROUBLE CODE) S

- Using the diagnostic scan tool, retrieve all DTCs.

Are DTCs P0815, P0816, or P0826 present?

Yes	CLEAR the DTC. Using the diagnostic scan tool, perform the KOER self-test. If DTC P0815 returns, GO to B2 If DTC P0816 returns, GO to B6
No	The system is operating correctly at this time. The concern may have been caused by a loose connector. ADDRESS the root cause of any connector or terminal issues.

B2 CHECK THE UPSHIFT SIGNAL CIRCUIT FOR VOLTAGE

- Disconnect Floor Shifter C3245.
- Inspect for damaged or pushed-out terminals.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3245-7	V	Ground

Is the voltage greater than 11 volts?

Yes	GO to B5
No	GO to B3

B3 CHECK THE UPSHIFT SIGNAL CIRCUIT FOR AN OPEN

- Ignition OFF.
- Inspect for damaged or pushed-out terminals.
- Disconnect TCM C1822 for 2.2L, 3.2L Diesel.
- For 2.2L, 3.2L Diesel measure:

Positive Lead	Measurement / Action	Negative Lead
C3245-7	Ω	C1822-58

- Disconnect PCM C175B for 2.5L engine.
- For 2.5L engine measure:

Positive Lead	Measurement / Action	Negative Lead
C3245-7	Ω	C175B-23

Is the resistance less than 3 ohms?

Yes	GO to B4
No	REPAIR the circuit.

B4 CHECK THE UPSHIFT SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3245-7	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B5
No	REPAIR the circuit.

B5 CHECK THE SIGNAL RETURN CIRCUIT FOR AN OPEN

- Disconnect TCM C1822 for 2.2L, 3.2L diesel.
- Disconnect PCM C175B for 2.5L engine.
- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3245-2	Ω	C1822-40

Is the resistance less than 3 Ohms?

Yes	REFER to: Selector Lever Assembly (307-05 Automatic Transmission External Controls, Removal and Installation).
No	REPAIR the circuit. If an open circuit is not found, INSTALL a new PCM if equipped with a 2.5L engine REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). , or a new TCM if equipped with the 2.2L or 3.2L diesel. REFER to: Powertrain Control Module (PCM) (303-14B Electronic Engine Controls - 2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the PCM or TCM with the latest calibration level. PERFORM the Transmission Strategy Download procedure.

B6 CHECK THE DOWNSHIFT SIGNAL CIRCUIT FOR VOLTAGE

- Disconnect Shifter C3245.
- Inspect for damaged or pushed-out terminals.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead

C3245-8		Ground

Is the voltage greater than 11 volts?

Yes	GO to B9
No	GO to B7

B7 CHECK THE DOWNSHIFT SIGNAL CIRCUIT FOR AN OPEN

- Ignition OFF.
- Disconnect TCM C1822 for 2.2L or 3.2L Diesel.
- Inspect for damaged or pushed-out terminals.
- For 2.2L or 3.2L Diesel measure:

Positive Lead	Measurement / Action	Negative Lead
C3245-8	Ω	C1822-59

- Disconnect PCM C175B for 2.5L engine.
- For the 2.5L engine measure:

Positive Lead	Measurement / Action	Negative Lead
C3245-8	Ω	C175B-24

Is the resistance less than 3 ohms?

Yes	GO to B8
No	REPAIR the circuit.

B8 CHECK THE DOWNSHIFT SIGNAL CIRCUIT FOR A SHORT TO GROUND

- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3245-8	Ω	Ground

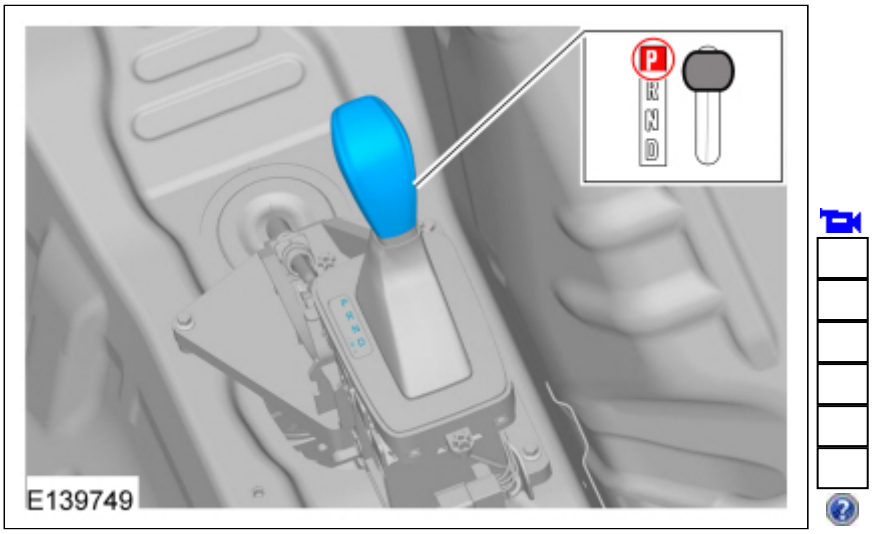
Is the resistance greater than 10,000 ohms?

Yes	GO to B9
No	REPAIR the circuit.

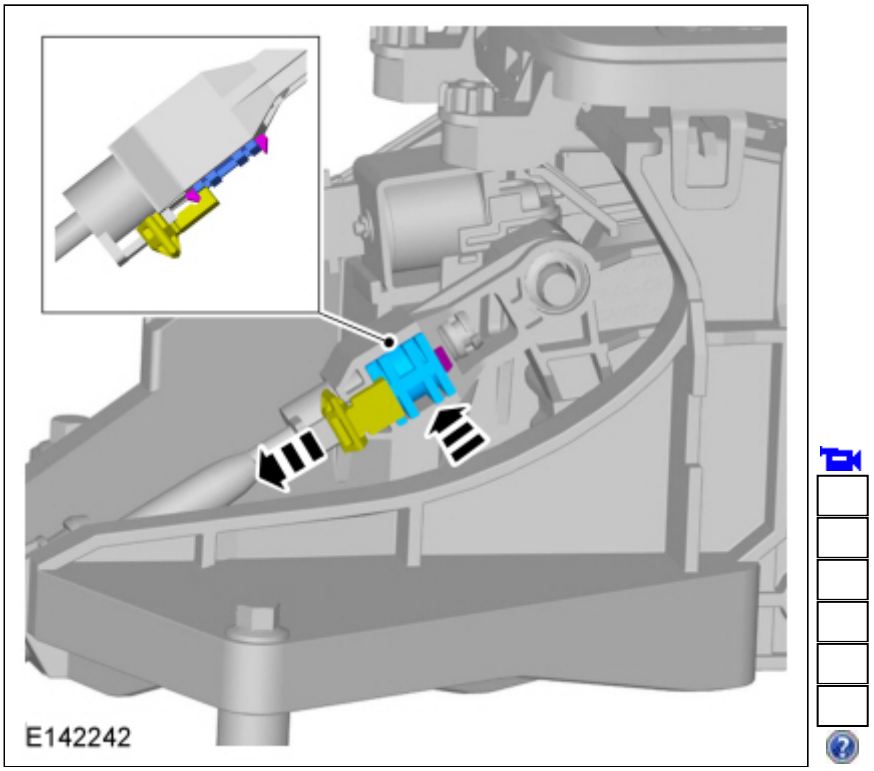
B9 CHECK THE SIGNAL RETURN CIRCUIT FOR AN OPEN

- Connect TCM C1822 for 2.2L or 3.2L diesel.
- Connect PCM C175B for 2.5L engine.
- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C3245-2	Ω	C1822-40



Is the resistance less than 3 ohms?



Yes	REFER to: Selector Lever Assembly (307-05 Automatic Transmission External Controls, Removal and Installation).
No	REPAIR the circuit. If an open circuit is not found, INSTALL a new PCM if equipped with a 2.5L or a new TCM if equipped with the 2.2L or 3.2L. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Transmission Control Module (TCM) (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Removal and Installation). PROGRAM the PCM or TCM with the latest calibration level. PERFORM the Transmission Strategy Download procedure.

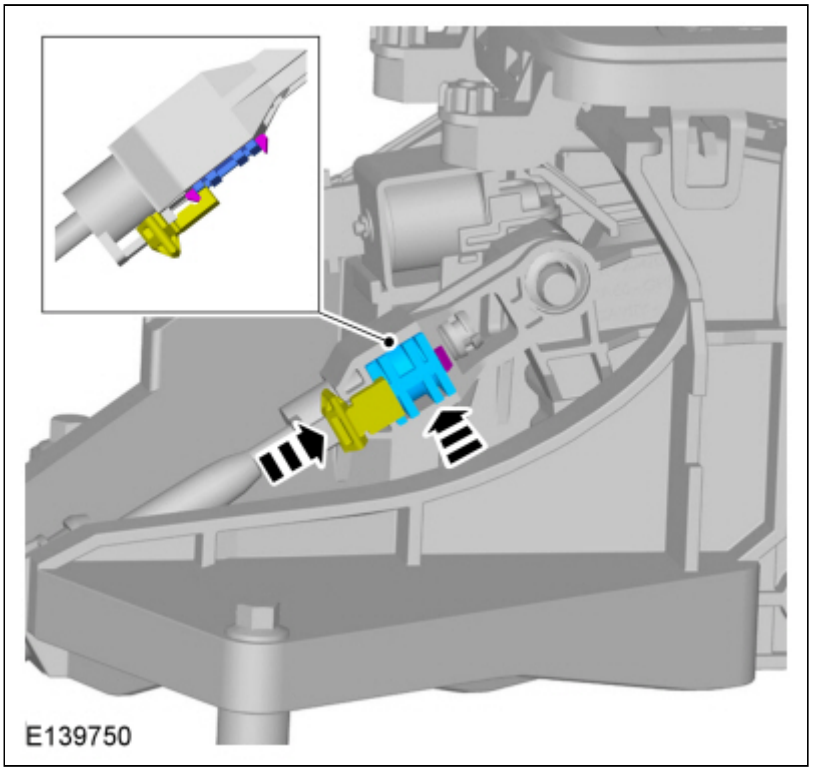
Selector Lever Cable Adjustment

Adjustment



1. Refer to: Floor Console - Single Cab (501-12 Instrument Panel and Console, Removal and Installation).
   Refer to: Floor Console - Double Cab (501-12 Instrument Panel and Console, Removal and Installation).
2. 

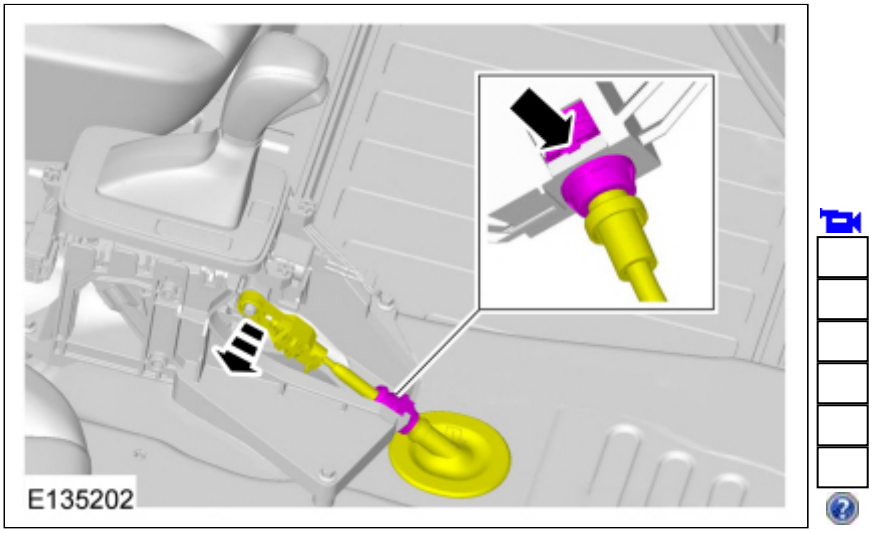
3. 

4.

5. **NOTE:** *NOTE: Ensure that the selector lever cable adjustment mechanism is locked.*

6. Start the engine and move the selector lever through all the gear positions. Wait until each gear engages when moving through the gear positions.
7. Check that the selector lever position indicator corresponds to the position of the selector lever, repeat the adjustment procedure if necessary.
8. Move the selector lever into the "P" (PARK) position and switch off the engine.

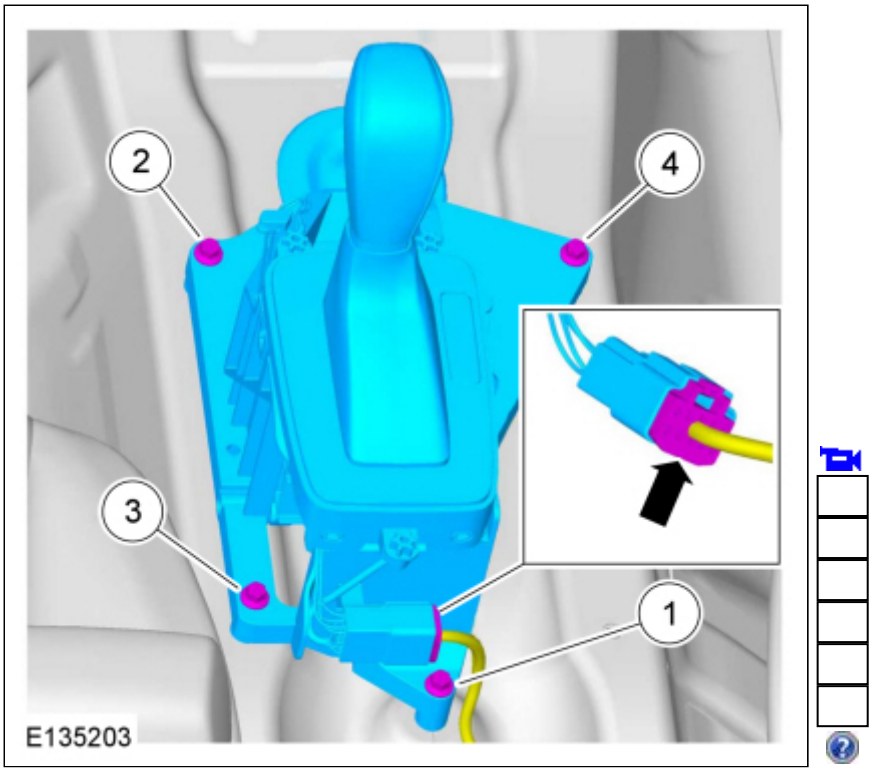
Copyright © 2016 Ford Motor Company



Selector Lever Assembly

Base Part Number: 7K004

Removal



NOTICE: Gearshift cables must not be kinked or bent.

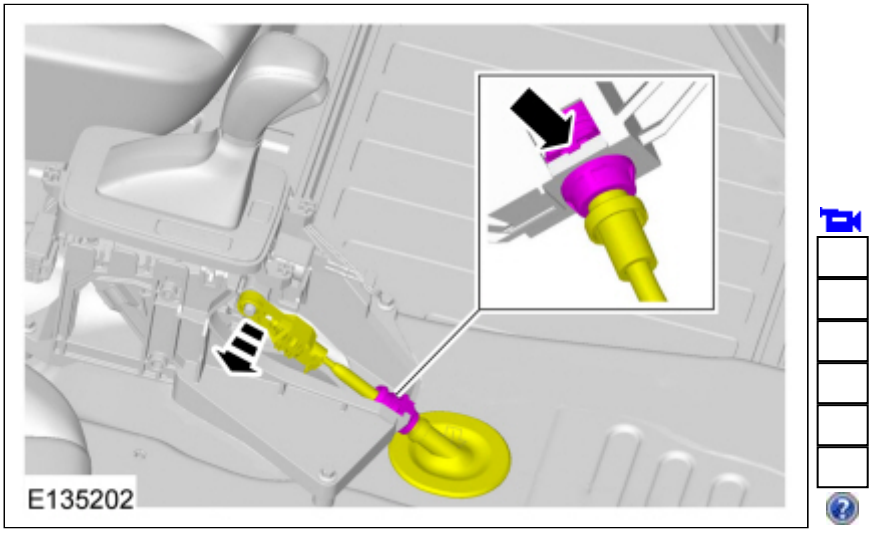
NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Floor Console - Single Cab (501-12 Instrument Panel and Console, Removal and Installation).
   Refer to: Floor Console - Double Cab (501-12 Instrument Panel and Console, Removal and Installation).
2. 

3. **NOTE:** *Make sure that the component is correctly located..*

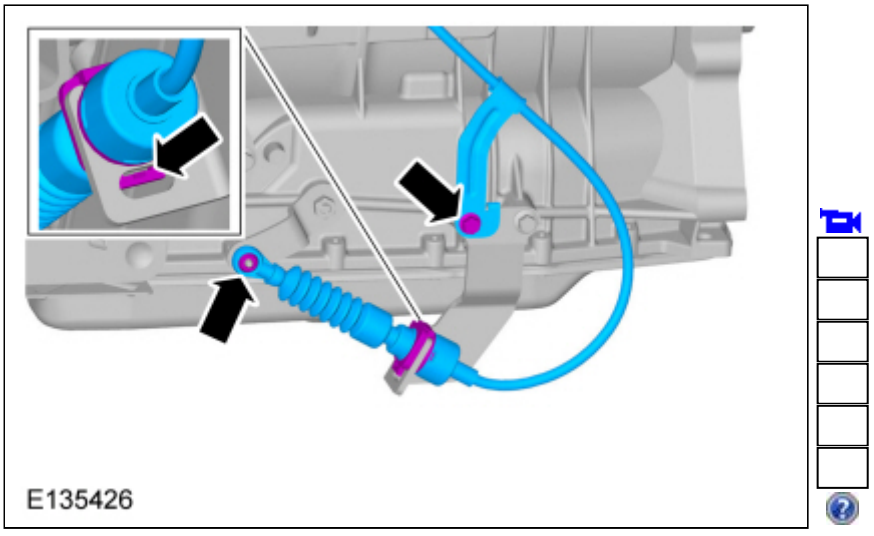
   Torque: 11 Nm

Installation



1. To Install, reverse the removal procedure.
2. Refer to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures).

Copyright © 2016 Ford Motor Company



Selector Lever Cable

Base Part Number: 7E395

Removal

1. Refer to: Floor Console - Single Cab (501-12 Instrument Panel and Console, Removal and Installation).
   Refer to: Floor Console - Double Cab (501-12 Instrument Panel and Console, Removal and Installation).
2. 

3. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
4. *Torque*: 25 Nm

Installation

1. To install, reverse the removal procedure.
2. Refer to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures).

Clutch

General Equipment

Ultraviolet fluid leak detection equipment

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical damage.

Visual Inspection Chart

Mechanical
• Oil leaks. • Visibly damaged or worn components. • Loose or missing nuts or bolts.

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

Symptom Chart

Symptom	Possible Sources	Action
• Clutch slippage	• Clutch master cylinder • Clutch slave cylinder • Clutch pressure plate • Clutch disc. • Engine or transmission housing oil or fluid leak(s)	• GO to Pinpoint Test A
• Clutch chatter or shudder	• Engine and transmission mounts • Clutch pressure plate • Clutch disc • Flywheel	• REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness, Diagnosis and Testing). • GO to Pinpoint Test B
• Clutch drag	• Insufficient brake fluid • Air in the clutch hydraulic system • Clutch pedal free travel • Clutch pressure plate	• FILL the brake master cylinder reservoir to the MAX mark. INSPECT the brake and clutch hydraulic systems for leaks. REPAIR as necessary. • BLEED the clutch system. REFER to: Clutch System Bleeding (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, General Procedures). • GO to Pinpoint Test C

	• Clutch disc • Crankshaft end play	
• Clutch pedal pulsation	• Clutch pressure plate • Clutch disc	• INSTALL a new clutch disc and pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).
	• Crankshaft end play	• CHECK the crankshaft end play.
• Hard shifting	• Clutch drag	• GO to Pinpoint Test C
	• Gearshift cable adjustment	• CHECK the gearshift cable adjustment. REFER to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures).
	• External controls	• REFER to: External Controls (308-06A Manual Transmission External Controls - 5-Speed Manual Transmission - MT75, Diagnosis and Testing).
	• Gear wheels	• REFER to: Manual Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Diagnosis and Testing).
	• Selector mechanism	• REFER to: Manual Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Diagnosis and Testing).
	• Synchronizer(s)	• REFER to: Manual Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Diagnosis and Testing).
• Excessive noise	• Clutch pedal • Clutch release bearing	• GO to Pinpoint Test D
• Fluid leakage	• Clutch master cylinder • Clutch slave cylinder • Clutch hydraulic lines	• INSPECT the brake and clutch hydraulic systems for leaks. REPAIR as necessary.

Pinpoint Tests

PINPOINT TEST A : CLUTCH SLIPPAGE

A1 TEST CLUTCH SLIPPAGE

- Lock the wheels and apply the parking brake.
- Start the engine and engage fourth gear.
- Run the engine at approximately 2000 rpm.
- Release the clutch pedal slowly.

Does the engine stall when the clutch pedal is fully released?

Yes	Clutch OK.
No	GO to A2

A2 CHECK THE CLUTCH PEDAL OPERATION

- Depress clutch pedal and allow it to return.

Does the pedal return to the initial position?

Yes	GO to A3

No	GO to A4

A3 CHECK THE CLUTCH DISC AND PRESSURE PLATE

- Remove the clutch disc and pressure plate.
  REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).

Is the clutch disc or pressure plate contaminated with oil or hydraulic fluid?

Yes	CHECK the engine and transmission for leaks. INSTALL new components as necessary. INSTALL a new clutch disc and pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.
No	GO to A4

A4 CHECK THE CLUTCH HYDRAULIC SYSTEM

- Release the clutch slave cylinder bleed nipple.

Does the pedal return to the initial position?

Yes	INSTALL a new clutch slave cylinder. REFER to: Clutch Slave Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.
No	INSTALL a new clutch master cylinder. REFER to: Clutch Master Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.

PINPOINT TEST B : CLUTCH CHATTER OR SHUDDER

B1 TEST FOR CLUTCH SHUDDER

- Start the engine.
- Engage the clutch and select fourth gear.
- Run the engine at approximately 2000 rpm.
- Release the clutch pedal slowly.

Does the clutch take up the drive smoothly?

Yes	Clutch is OK.
No	GO to B2

B2 CHECK THE CLUTCH DISC AND PRESSURE PLATE FOR OIL OR HYDRAULIC FLUID CONTAMINATION

- Remove the clutch disc and pressure plate.
  REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).

Is the clutch disc and pressure plate contaminated with oil or hydraulic fluid?

Yes	CHECK the engine and transmission for leaks. INSTALL new components as necessary. INSTALL a new clutch disc and pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission

	- MT75, Removal and Installation). TEST the system for normal operation.
No	GO to B3

B3 CHECK THE CLUTCH DISC AND PRESSURE PLATE

- Visually check the clutch disc and pressure plate.

Is the clutch disc and pressure plate worn or damaged?

Yes	INSTALL a new clutch disc and pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.
No	INSPECT the flywheel clutch surface. TEST the system for normal operation.

PINPOINT TEST C : CLUTCH DRAG

C1 CHECK THE OPERATION OF THE CLUTCH PEDAL

- Bleed the clutch system.
  REFER to: Clutch System Bleeding (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, General Procedures).

Does the clutch properly disengage after bleeding?

Yes	Clutch system is OK.
No	GO to C2

C2 CHECK THE CLUTCH DISC AND PRESSURE PLATE FOR OIL OR HYDRAULIC FLUID CONTAMINATION

- Remove the clutch disc and pressure plate.
  REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).

Is the clutch disc and pressure plate contaminated with oil or hydraulic fluid?

Yes	CHECK the engine and transmission for leaks. INSTALL new components as necessary. INSTALL a new clutch disc and pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.
No	GO to C3

C3 CHECK THE CLUTCH DISC AND PRESSURE PLATE

- Visually check the clutch disc and pressure plate.

Is the clutch disc and pressure plate worn or damaged?

Yes	INSTALL a new clutch disc and pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.
No	GO to C4

C4 CHECK THE INPUT SHAFT SPLINES

- Check that the clutch disc slides freely on the input shaft splines.

Does the clutch disc stick on the input shaft?

Yes	CHECK the clutch disc and input shaft splines for damage. INSTALL new components as necessary. TEST the system for normal operation.
No	MEASURE the crankshaft end play.

PINPOINT TEST D : EXCESSIVE NOISE

D1 STATIC CHECK

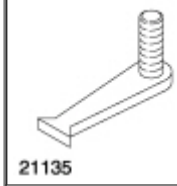
- Depress and release the clutch pedal.

Is the noise apparent when the clutch is operated?

Yes	LUBRICATE the clutch and brake pedal shaft. TEST the system for normal operation.
No	GO to D2

D2 DYNAMIC CHECK

- Start the engine.
- Depress the clutch pedal.



Is the noise apparent when the clutch pedal is depressed?

Yes	REFER to: Engine (303-00 Engine System - General Information, Diagnosis and Testing).
No	INSTALL a new clutch slave cylinder and release bearing assembly. REFER to: Clutch Slave Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.

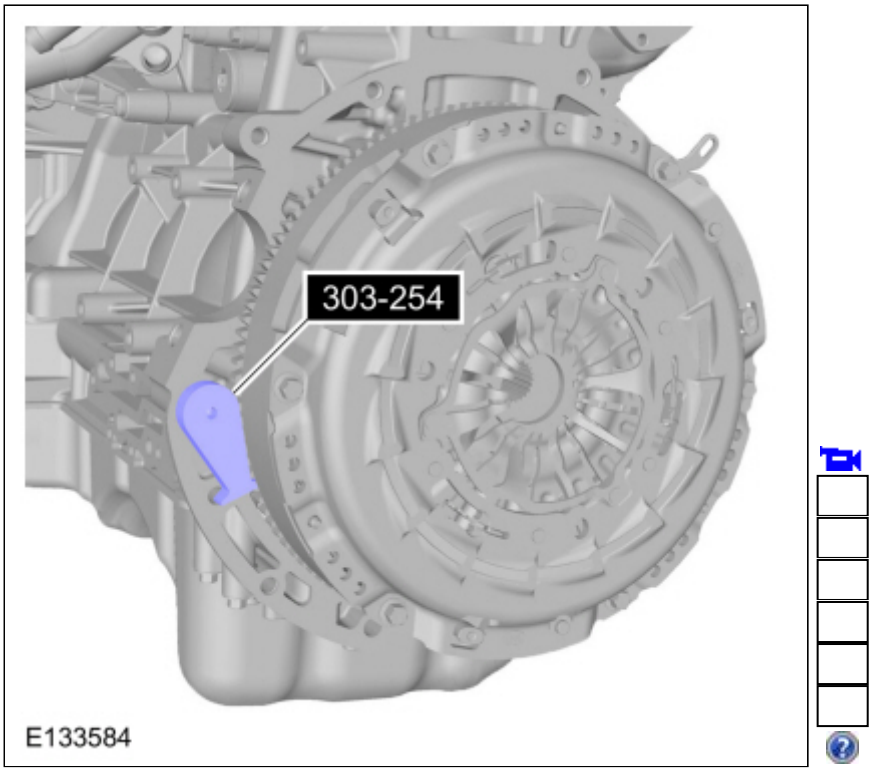
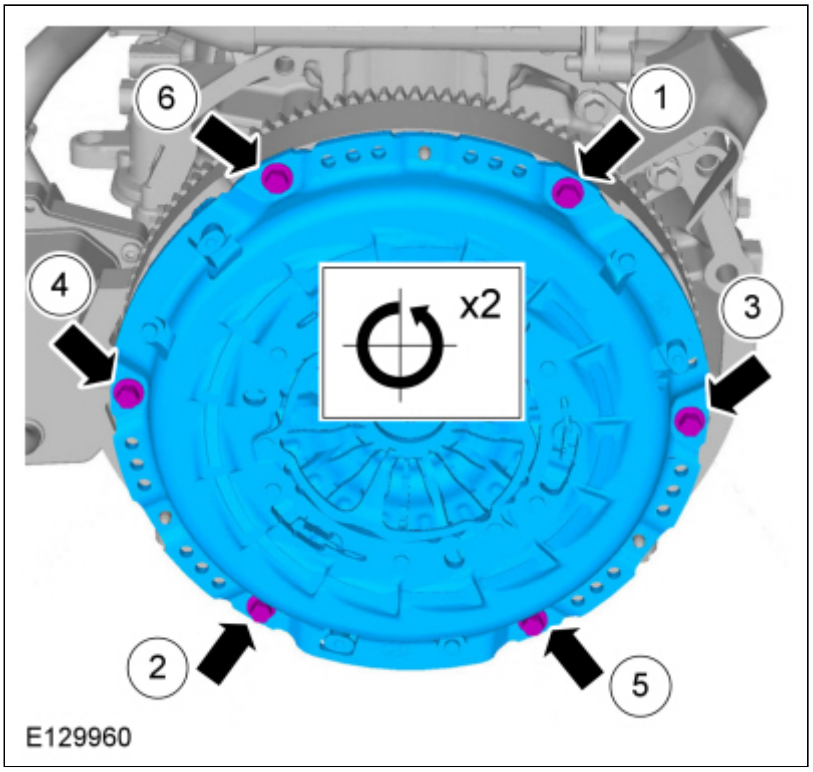
Clutch Disc and Pressure Plate



Special Tool(s) / General Equipment

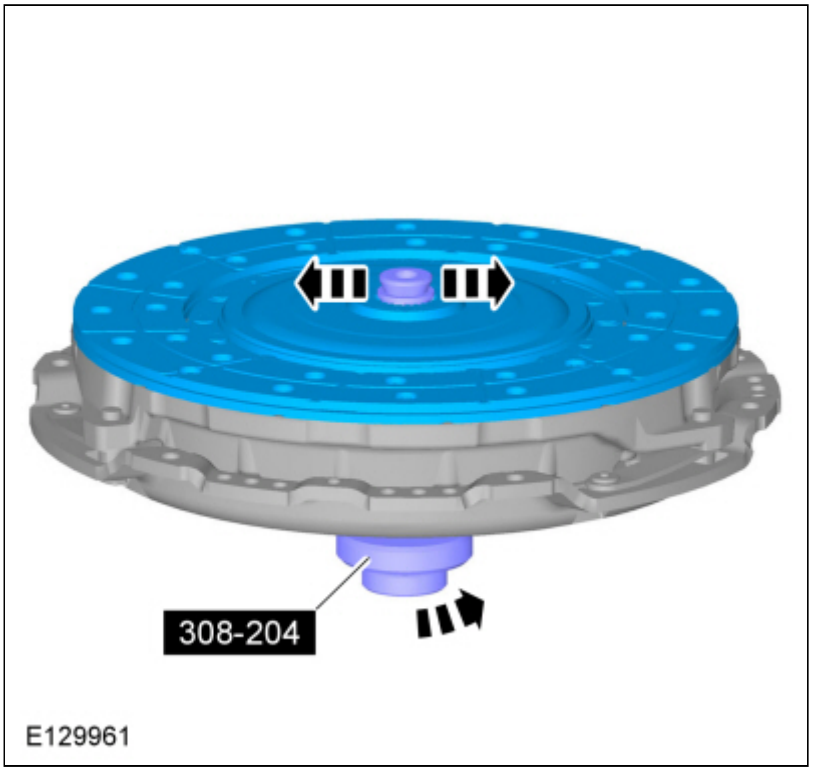
 21135	303-254 Locking Tool, Flywheel
 16067	308-204 Aligner, Clutch Disc



Removal

NOTE: *Removal steps in this procedure may contain installation details.*

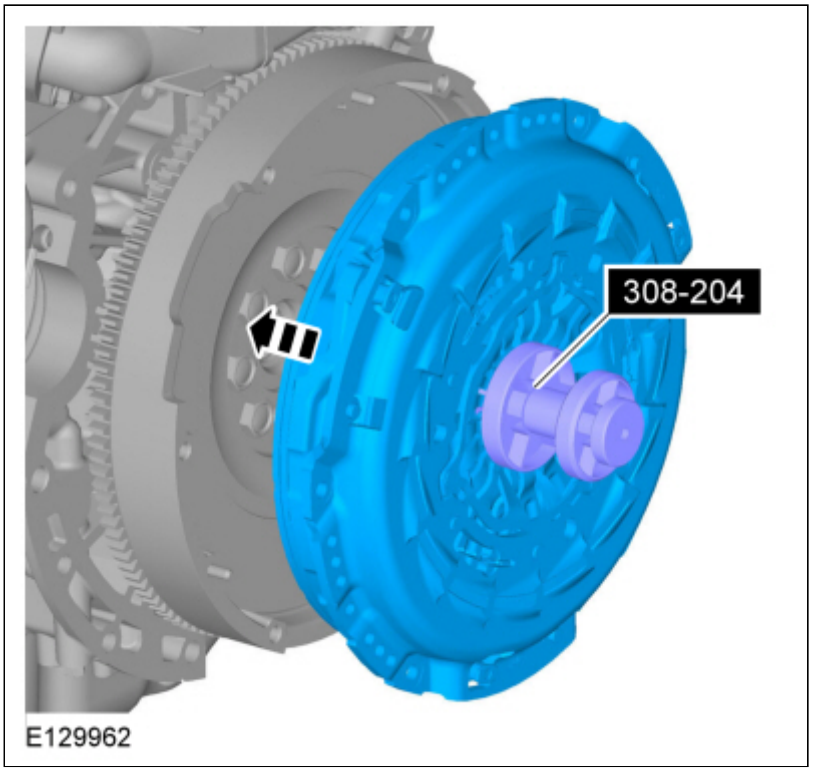
1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
3. Refer to: Transmission - 4x2 (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Removal).
   Refer to: Transmission - 4x4 (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Removal).
4. Use Special Service Tool: 303-254 Locking Tool, Flywheel.



5. **NOTICE: Loosen the clutch pressure plate retaining bolts by two turns at a time in the sequence shown.**

Installation

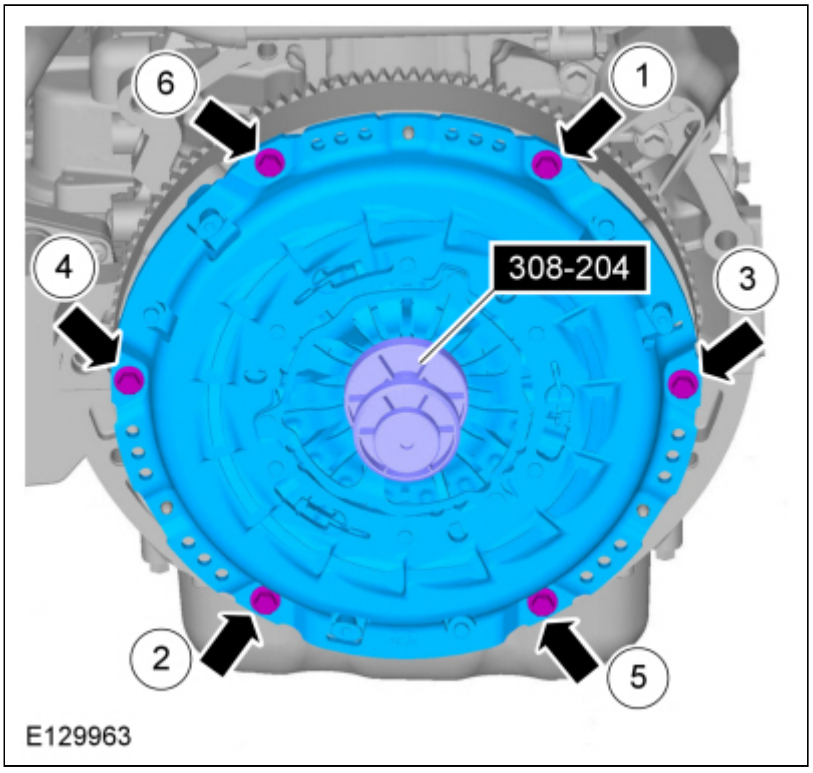
1. Using the special tool, centralize the clutch disc on the pressure plate.
   Use Special Service Tool: 308-204 Aligner, Clutch Disc.



2. **NOTE:** *Check the pilot bearing for damage. If damaged, install a new pilot bearing.*

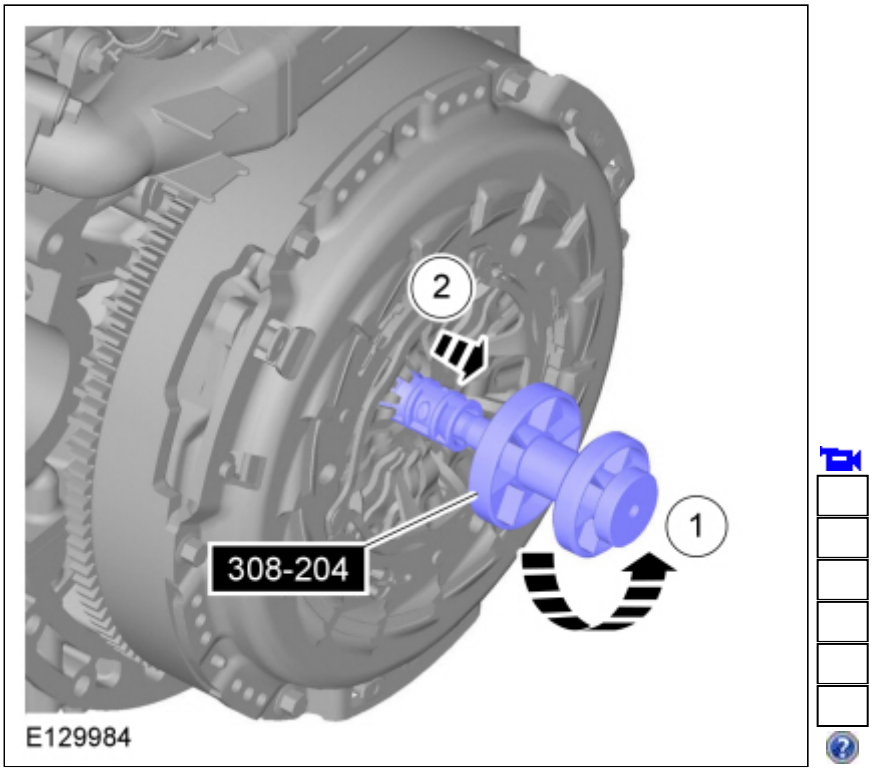
   NOTE: *Do not apply grease to a newly installed pilot bearing.*

   Refer to: Pilot Bearing - 2.5L Duratec-HE (122kW/165PS) - MI4 (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).



3. **NOTE:** *Hand tighten the bolts at this stage.*

   Use Special Service Tool: 308-204 Aligner, Clutch Disc.

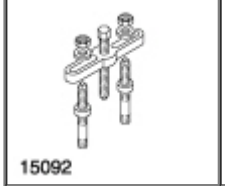


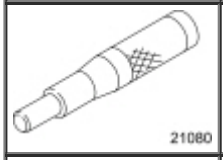
4. **NOTICE: Tighten the clutch pressure plate retaining bolts in the sequence shown to the specified torque.**

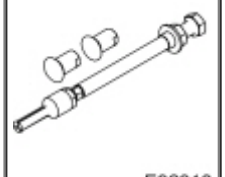
   Use Special Service Tool: 308-204 Aligner, Clutch Disc.
   Torque: 30 Nm

5. Remove Special Service Tool: 308-204 Aligner, Clutch Disc.

6. Remove Special Service Tool: 303-254 Locking Tool, Flywheel.







7. Refer to: Transmission - 4x2 (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Installation).
   Refer to: Transmission - 4x4 (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Installation).

Clutch

General Equipment

Ultraviolet fluid leak detection equipment

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical damage.

Visual Inspection Chart

Mechanical
• Oil leaks. • Visibly damaged or worn components. • Loose or missing nuts or bolts.

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.

Symptom Chart

Symptom	Possible Sources	Action
• Clutch slippage	• Clutch master cylinder • Clutch slave cylinder • Clutch pressure plate • Clutch disc. • Engine or transaxle housing oil or fluid leak(s)	• GO to Pinpoint Test A
• Clutch chatter or shudder	• Engine and transaxle mounts	• REFER to: Noise, Vibration and Harshness (NVH) (100-04 Noise, Vibration and Harshness, Diagnosis and Testing).
	• Clutch pressure plate • Clutch disc • Flywheel	• GO to Pinpoint Test B
• Clutch drag	• Insufficient brake fluid	• FILL the brake master cylinder reservoir to the MAX mark. INSPECT the brake and clutch hydraulic systems for leaks. REPAIR as necessary.
	• Air in the clutch hydraulic system	• BLEED the clutch system. REFER to: Clutch System Bleeding (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, General Procedures).
	• Clutch pedal free travel • Clutch pressure plate • Clutch disc	• GO to Pinpoint Test C

	• Crankshaft end play	
• Clutch pedal pulsation	• Clutch pressure plate • Clutch disc • Crankshaft end play	• INSTALL a new clutch disc and pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). • CHECK the crankshaft end play.
• Hard shifting	• Clutch drag • Gearshift cable adjustment • External controls • Gear wheels • Selector mechanism • Synchronizer(s)	• GO to Pinpoint Test C • CHECK the gearshift cable adjustment. REFER to: Selector Lever Cable Adjustment (307-05 Automatic Transmission External Controls, General Procedures). • REFER to: External Controls (308-06A Manual Transmission External Controls - 5-Speed Manual Transmission - MT75, Diagnosis and Testing). • REFER to: Manual Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Diagnosis and Testing). • REFER to: Manual Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Diagnosis and Testing). • REFER to: Manual Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Diagnosis and Testing).
• Excessive noise	• Clutch pedal • Clutch release bearing	• GO to Pinpoint Test D
• Fluid leakage	• Clutch master cylinder • Clutch slave cylinder • Clutch hydraulic lines	• INSPECT the brake and clutch hydraulic systems for leaks. REPAIR as necessary.

Pinpoint Tests

PINPOINT TEST A : CLUTCH SLIPPAGE

A1 TEST CLUTCH SLIPPAGE

- Lock the wheels and apply the parking brake.
- Start the engine and engage fourth gear.
- Run the engine at approximately 2000 rpm.
- Release the clutch pedal slowly.

Does the engine stall when the clutch pedal is fully released?

Yes	Clutch OK.
No	GO to A2

A2 CHECK THE CLUTCH PEDAL OPERATION

- Depress clutch pedal and allow it to return.

Does the pedal return to the initial position?

Yes	GO to A3
No	GO to A4

A3 CHECK THE CLUTCH DISC AND PRESSURE PLATE

- Remove the clutch disc and pressure plate.
  REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).

Is the clutch disc or pressure plate contaminated with oil or hydraulic fluid?

Yes	CHECK the engine and transaxle for leaks. INSTALL new components as necessary. INSTALL a new clutch disc and pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.
No	GO to A4

A4 CHECK THE CLUTCH HYDRAULIC SYSTEM

- Release the clutch slave cylinder bleed nipple.

Does the pedal return to the initial position?

Yes	INSTALL a new clutch slave cylinder. REFER to: Clutch Slave Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.
No	INSTALL a new clutch master cylinder. REFER to: Clutch Master Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.

PINPOINT TEST B : CLUTCH CHATTER OR SHUDDER

B1 TEST FOR CLUTCH SHUDDER

- Start the engine.
- Engage the clutch and select fourth gear.
- Run the engine at approximately 2000 rpm.
- Release the clutch pedal slowly.

Does the clutch take up the drive smoothly?

Yes	Clutch is OK.
No	GO to B2

B2 CHECK THE CLUTCH DISC AND PRESSURE PLATE FOR OIL OR HYDRAULIC FLUID CONTAMINATION

- Remove the clutch disc and pressure plate.
  REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).

Is the clutch disc and pressure plate contaminated with oil or hydraulic fluid?

Yes	CHECK the engine and transaxle for leaks. INSTALL new components as necessary. INSTALL a new clutch disc and pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.

No	GO to B3

B3 CHECK THE CLUTCH DISC AND PRESSURE PLATE

- Visually check the clutch disc and pressure plate.

Is the clutch disc and pressure plate worn or damaged?

Yes	INSTALL a new clutch disc and pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.
No	INSPECT the flywheel clutch surface. TEST the system for normal operation.

PINPOINT TEST C : CLUTCH DRAG

C1 CHECK THE OPERATION OF THE CLUTCH PEDAL

- Bleed the clutch system.
  REFER to: Clutch System Bleeding (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, General Procedures).

Does the clutch properly disengage after bleeding?

Yes	Clutch system is OK.
No	GO to C2

C2 CHECK THE CLUTCH DISC AND PRESSURE PLATE FOR OIL OR HYDRAULIC FLUID CONTAMINATION

- Remove the clutch disc and pressure plate.
  REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).

Is the clutch disc and pressure plate contaminated with oil or hydraulic fluid?

Yes	CHECK the engine and transaxle for leaks. INSTALL new components as necessary. INSTALL a new clutch disc and pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.
No	GO to C3

C3 CHECK THE CLUTCH DISC AND PRESSURE PLATE

- Visually check the clutch disc and pressure plate.

Is the clutch disc and pressure plate worn or damaged?

Yes	INSTALL a new clutch disc and pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.
No	GO to C4

C4 CHECK THE INPUT SHAFT SPLINES

- Check that the clutch disc slides freely on the input shaft splines.

Does the clutch disc stick on the input shaft?

Yes	CHECK the clutch disc and input shaft splines for damage. INSTALL new components as necessary. TEST the system for normal operation.
No	MEASURE the crankshaft end play.

PINPOINT TEST D : EXCESSIVE NOISE

D1 STATIC CHECK

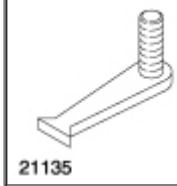
- Depress and release the clutch pedal.

Is the noise apparent when the clutch is operated?

Yes	LUBRICATE the clutch and brake pedal shaft. TEST the system for normal operation.
No	GO to D2

D2 DYNAMIC CHECK

- Start the engine.
- Depress the clutch pedal.



Is the noise apparent when the clutch pedal is depressed?

Yes	REFER to: Engine (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Diagnosis and Testing).
No	INSTALL a new clutch slave cylinder and release bearing assembly. REFER to: Clutch Slave Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.

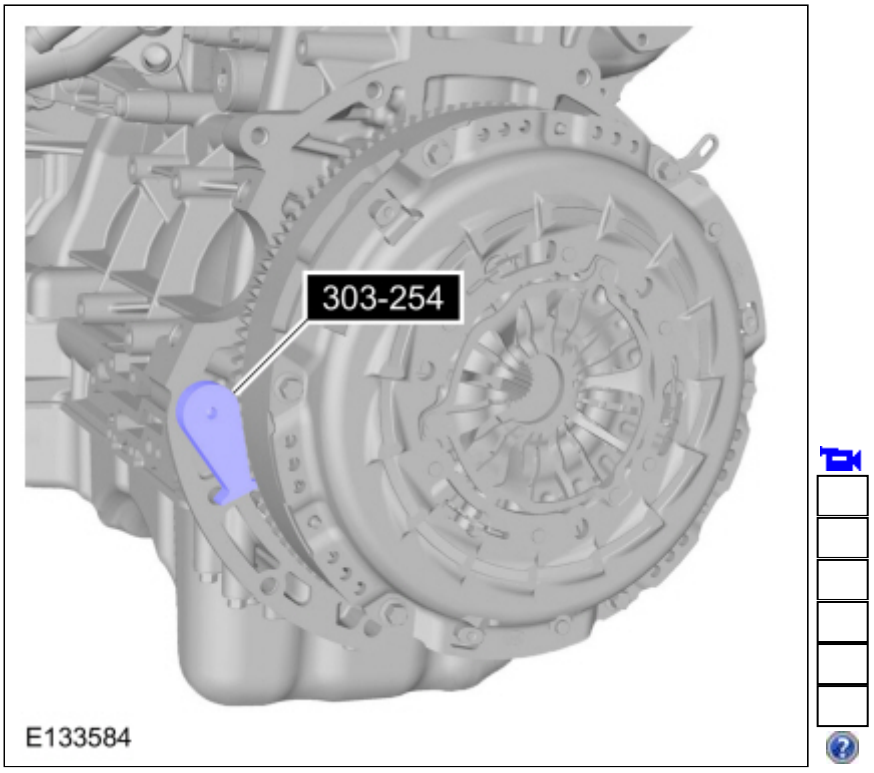
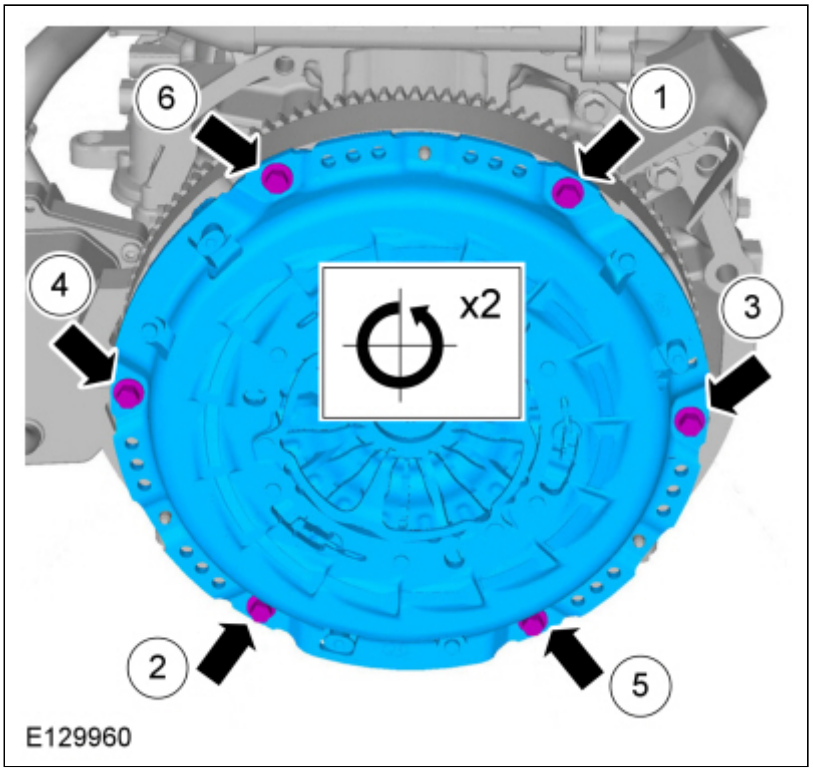
Clutch Disc and Pressure Plate



Special Tool(s) / General Equipment

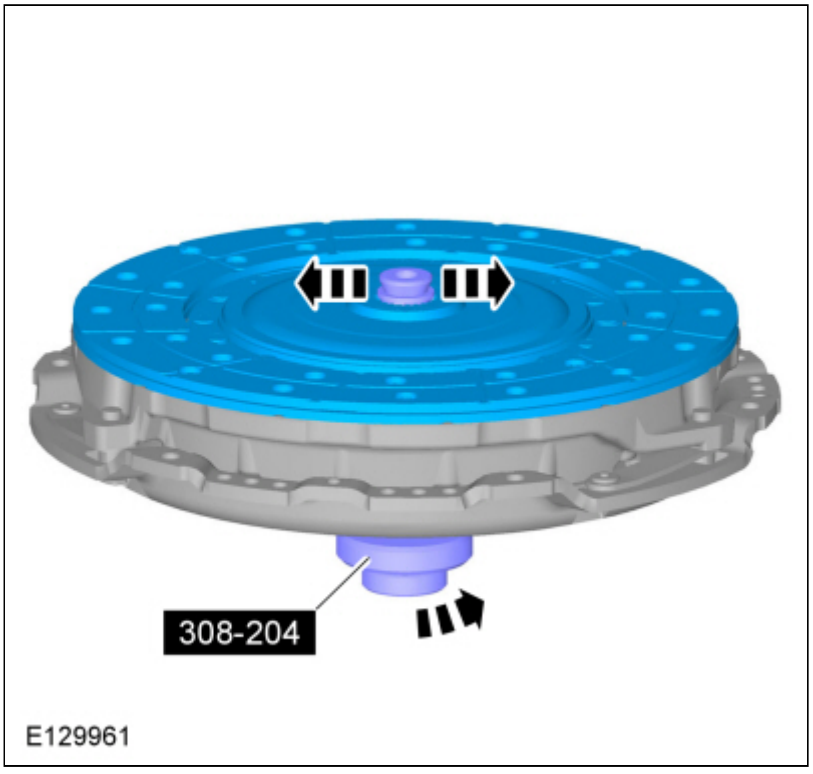
 21135	303-254 Locking Tool, Flywheel
 16067	308-204 Aligner, Clutch Disc



Removal

NOTE: *Removal steps in this procedure may contain installation details.*

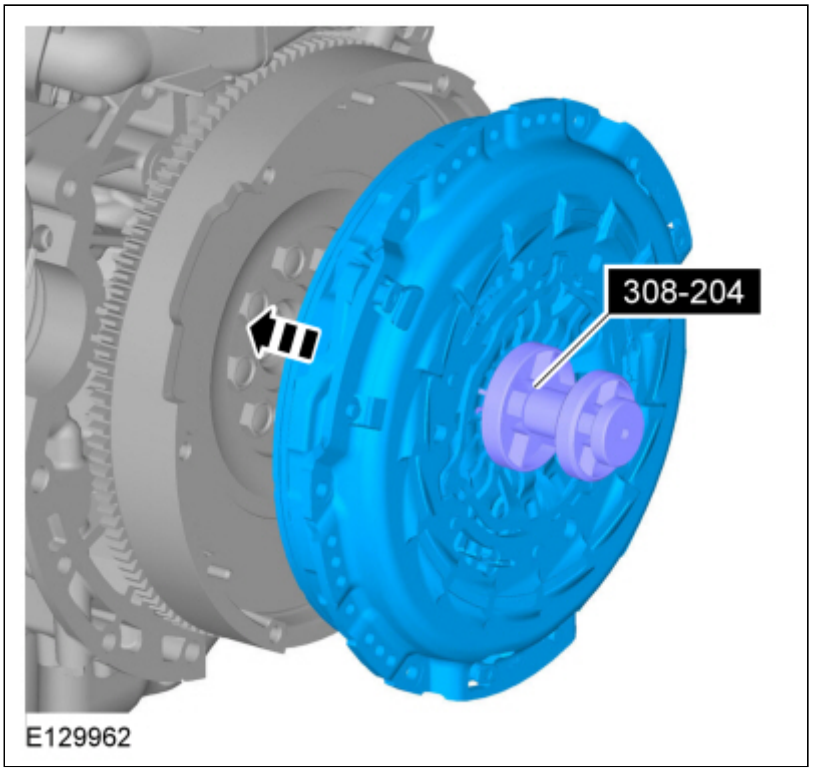
1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
3. Refer to: Transmission - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, 2.2L Duratorq-TDCi (Puma) Diesel, 4x2 (308-03B Manual Transmission - 6-Speed Manual Transmission - MT82, Removal).
   Refer to: Transmission - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, 2.2L Duratorq-TDCi (Puma) Diesel, 4x4 (308-03B Manual Transmission - 6-Speed Manual Transmission - MT82, Removal).
4. Use Special Service Tool: 303-254 Locking Tool, Flywheel.



5. **NOTICE: Loosen the clutch pressure plate retaining bolts by two turns at a time in the sequence shown.**

Installation

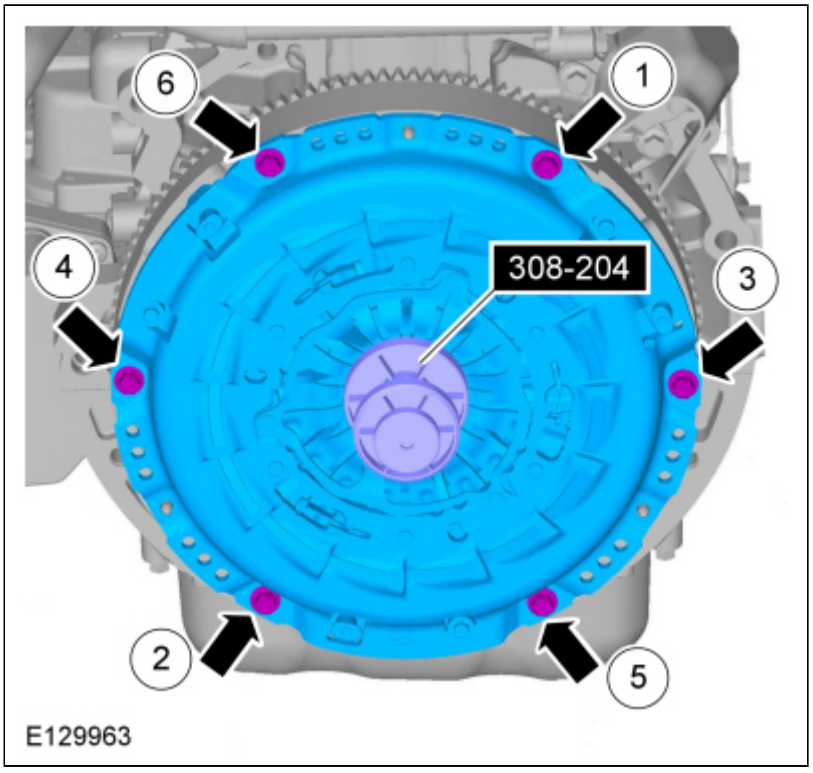
1. Using the special tool, centralize the clutch disc on the pressure plate.
   Use Special Service Tool: 308-204 Aligner, Clutch Disc.



2. **NOTE:** *Check the pilot bearing for damage. If damaged, install a new pilot bearing.*

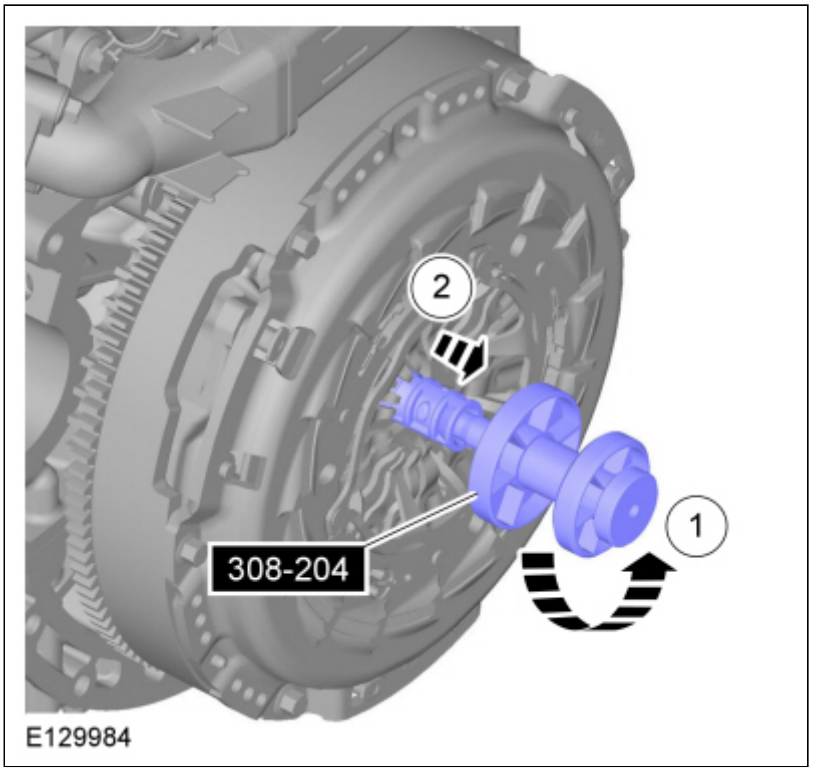
   NOTE: *Do not apply grease to a newly installed pilot bearing.*

   Refer to: Pilot Bearing - Diesel (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).



3. **NOTE:** *Hand tighten the bolts at this stage.*

   Use Special Service Tool: 308-204 Aligner, Clutch Disc.

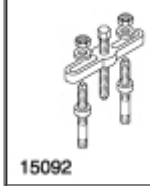


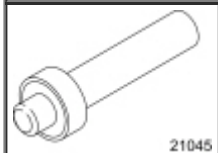
4. **NOTICE: Tighten the clutch pressure plate retaining bolts in the sequence shown to the specified torque.**

   Use Special Service Tool: 308-204 Aligner, Clutch Disc.
   Torque: 30 Nm

5. Remove Special Service Tool: 308-204 Aligner, Clutch Disc.

6. Remove Special Service Tool: 303-254 Locking Tool, Flywheel.





7. Refer to: Transmission - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, 2.2L Duratorq-TDCi (Puma) Diesel, 4x2 (308-03B Manual Transmission - 6-Speed Manual Transmission - MT82, Installation).
   Refer to: Transmission - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, 2.2L Duratorq-TDCi (Puma) Diesel, 4x4 (308-03B Manual Transmission - 6-Speed Manual Transmission - MT82, Installation).

Clutch Controls

Symptom Chart(s)

Symptom Chart: Clutch Controls

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.

Condition	Possible Sources	Actions
Clutch slippage	• Clutch pedal reserve • Worn or damaged pressure plate • Clutch disc facing • Hardened or oiled clutch disc facing surface • Flywheel	GO to Pinpoint Test A
Clutch chatter, rattle or shudder	• Loose or damaged engine or transmission mounts • Oil on clutch disc facing • Worn pressure plate • Clutch disc facing • Loose or damaged flywheel • Worn clutch disc	GO to Pinpoint Test B
Clutch drag	• Insufficient clutch hydraulic fluid • Air in hydraulic system • Clutch pedal reserve • Diaphragm springs • Clutch disc • Clutch disc splines • Oil on clutch disc facing	GO to Pinpoint Test C
Clutch pedal pulsation	• Clutch and brake pedal pivot shaft not correctly lubricated • Flywheel • Worn pressure plate springs	GO to Pinpoint Test B
Clutch related vibrations	• Engine component grounding against frame • Accessory drive belt • Flywheel bolts loose • Flywheel • Imbalanced clutch pressure plate	GO to Pinpoint Test B
Hard shifting	• Insufficient clutch hydraulic fluid • Clutch pedal reserve • Transmission concern	GO to Pinpoint Test C
Clutch system	• Clutch master cylinder	INSPECT the clutch master cylinder, the clutch slave cylinder

leakage	• Clutch slave cylinder • Clutch hydraulic tubes	and all hydraulic system tubes for leakage. REPAIR as necessary.

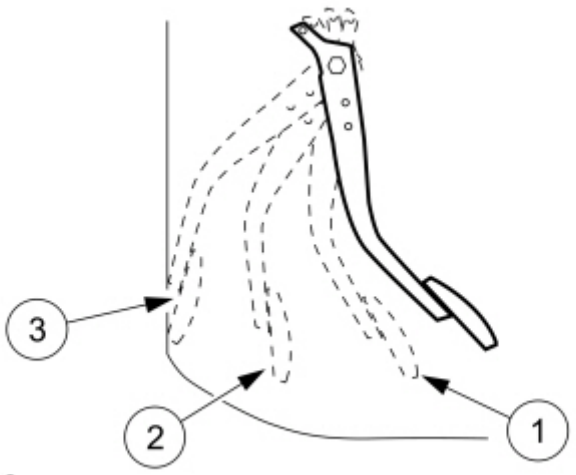
Pinpoint Test(s)

PINPOINT TEST A : CLUTCH SLIPPAGE

A1 TEST CLUTCH SLIPPAGE

- Apply the parking brake.
- Start engine and engage 4th gear.
- Run the engine at approximately 2,000 rpm.
- Slowly release clutch pedal.

Does the engine stall when the clutch pedal is fully released?



Yes	Clutch is OK.
No	GO to A2

A2 MEASURE THE CLUTCH RESERVE

NOTE: *If equipped, remove the floor mat to allow the clutch pedal to travel to the downstop.*

- Install a cable tie to the clutch pedal, than attach a tape measure to the cable tie.
- Pull the tape measure up to the steering wheel. Position it through the steering wheel opening. Put a piece of masking tape on the steering wheel and index mark the masking tape.
- Press the clutch pedal fully and start the vehicle.
- Shift the transmission into REVERSE gear, then move the gearshift lever forward to the position in between REVERSE gear and NEUTRAL. Slowly release the clutch pedal (if the vehicle creeps rearward, move the gearshift lever forward a little more). The transmission will work as if in NEUTRAL, but the reverse gear synchronizer will be bypassed.
- With the clutch pedal released, gently pull the gearshift lever toward the REVERSE gear position. Gear clash can now be heard.
- Slowly press the clutch pedal. Using the mark on the tape as a reference, note the measurement when the gear clash stops or the gearshift lever slides into REVERSE gear. Press the clutch pedal to the downstop. The difference between the measurement taken when the gear clash stopped and the measurement taken at the downstop is the clutch reserve.

Item	Pedal Position
1	Gear clash begins
2	Gear clash ends
3	Clutch pedal downstop

Is the clutch reserve greater than or equal to 25 mm (0.984 in)?

Yes	Clutch pedal reserve is OK. VERIFY customer concern.
No	INSTALL a clutch disc and pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).

PINPOINT TEST B : CLUTCH EXCESSIVE NOISE OR VIBRATION

B1 CHECK THE ENGINE OR TRANSMISSION MOUNTS

- Inspect all the engine and transmission mounts for looseness or damage.

Are any of the engine or transmission mounts loose or damaged?

Yes	TIGHTEN or INSTALL new engine or transmission mounts. TEST the system for normal operation.
No	GO to B2

B2 INSPECT THE PRESSURE PLATE BOLTS

- Inspect the pressure plate-to-flywheel bolts.

Are any of the pressure plate-to-flywheel bolts loose?

Yes	TIGHTEN or INSTALL new bolts. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).
No	GO to B3

B3 INSPECT THE PRESSURE PLATE

- Remove the clutch pressure plate.
- Inspect the clutch pressure plate for wear or damage.

Are any signs of damage present on the clutch pressure plate?

Yes	INSTALL a new clutch pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). . TEST the system for normal operation.

No	GO to B4

B4 CHECK THE CLUTCH DISC

- NOTE: If the internal damper of the clutch disc is damaged or contaminated with grease or oil, it will sound similar to a "transmission rattle".
- Check the clutch disc for wear or damage.

Is the clutch disc OK?

Yes	GO to B5
No	INSTALL a new clutch disc. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). . TEST the system for normal operation.

B5 INSPECT THE FLYWHEEL

- Inspect the flywheel for wear or damage.

Is the flywheel OK?

Yes	GO to B6
No	REPAIR or INSTALL a new flywheel as necessary. REFER to: Engine Accessories (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal). REFER to: Engine Accessories (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Installation). REFER to: Engine Accessories (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal). REFER to: Engine Accessories (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Installation). TEST the system for normal operation.

B6 INSPECT THE INPUT SHAFT

- Inspect the input shaft for signs of wear, damage or corrosion.

Are any signs of wear damage, or corrosion present on the input shaft?

Yes	If wear or damage is found, INSTALL a new input shaft. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Assembly). If corrosion is found on the splines of the input shaft, apply a small amount of grease to the splines of the input shaft.
No	VERIFY the customer concern. Refer to Symptom Chart: Transmission REFER to: Manual Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Diagnosis and Testing).

PINPOINT TEST C : HARD TO SHIFT

C1 CHECK CLUTCH FLUID LEVEL

- Check clutch fluid level.

Is the clutch fluid level between the MAX and MIN marks on the brake fluid reservoir?

Yes	GO to C2
No	FILL reservoir to specification, CHECK the brake and clutch systems for leaks. TEST clutch system for normal operation.

C2 BLEED THE CLUTCH SYSTEM

- Bleed the clutch system.
  REFER to: Clutch System Bleeding (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, General Procedures).

Does the clutch pedal show improved disengaging characteristics after bleeding the clutch system?

Yes	Clutch OK.
No	GO to C3

C3 CHECK THE CLUTCH PEDAL FREE PLAY

- Measure the clutch pedal free play.
- Press the clutch pedal until resistance is felt, then release it.

Is the pedal travel approximately 10 mm?

Yes	GO to C4
No	Check that the clutch pedal moves freely, remove the clutch pedal if necessary.

C4 CHECK THE BELLEVILLE SPRING WASHER OF THE CLUTCH PRESSURE PLATE

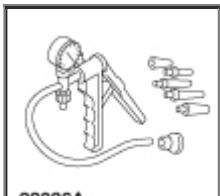
- Remove transmission.
  REFER to: Transmission - 4x2 (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Removal).
  REFER to: Transmission - 4x4 (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Removal).

Does the clutch pressure plate or the Belleville spring washer of the clutch pressure plate show signs of wear or damage?

Yes	INSTALL a new clutch pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). TEST the system for normal operation.
No	VERIFY the customer concern.

Component Test(s)

Clutch Hydraulic System



1. Verify the clutch hydraulic fluid reservoir is filled to the correct level.
2. If the fluid level is low, add fluid as necessary. Check the clutch hydraulic system for leaks and repair as necessary.
3. If the fluid is at the correct level, proceed to clutch check.
4. Apply and release the clutch pedal slowly to check for pedal binding. Make sure the clutch pedal can be fully applied and is not restricted by the floor mat. Verify the pedal return spring is present and functions correctly.
5. Measure the clutch reserve. GO to Pinpoint Test A

6. Set the park brake. The clutch pedal is in the up position and the engine idling, gently move the gearshift lever forward toward reverse gear until gear clash can be heard. Apply the clutch pedal slowly.
7. If the gears cease to clash (full disengage at to from the floor), hold the clutch pedal at the point of disengagement and increase engine speed to 4,000 rpm. The clutch should remain disengaged, clutch OK.
8. With the engine idling and the clutch pedal applied, move the gearshift lever into 4th gear. Increase the engine speed to 2,000 rpm and slowly release the clutch pedal.
9. If the engine does not stall, clutch is slipping. Repair as necessary.
   REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).
10. If the engine stalls, clutch is OK.

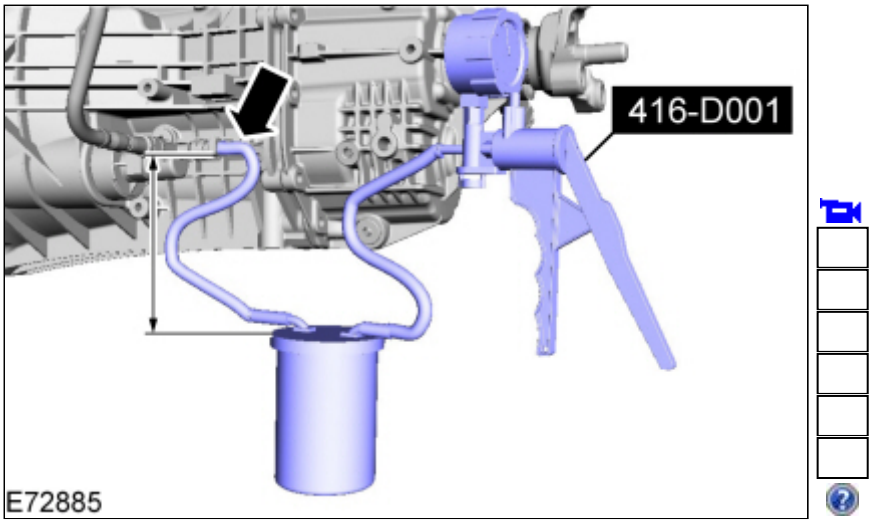
Clutch System Bleeding

Special Tool(s) / General Equipment

 23036A	416-D001 Hand Vacuum Pump/Pressure Pump

Activation

WARNING: Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with the eyes. Wash hands thoroughly after handling. If brake fluid contacts the eyes, flush the eyes for 15 minutes with cold running water. Get medical attention if irritation persists. If taken internally, drink water and induce vomiting. Get medical attention immediately. Failure to follow these instructions may result in personal injury.



NOTICE: If brake fluid is spilt on the paintwork, the affected area must be immediately washed down with cold water.

NOTE: *If proprietary brake bleeding equipment is available, this can be used to bleed the clutch system, following the method below. The maximum pressure must not exceed 1.5 bar.*

NOTE: *The clutch control system is self-venting. The components are arranged in such a way that small amounts of air trapped in the system are removed automatically during clutch operation.*

1. Fill the brake fluid reservoir.
2. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
3. Fill the reservoir of the special tool with approximately 100 ml of new brake fluid WSS-M6C65-A2 Super Dot4-14M.
4. **NOTE:** *Make sure that the special tool reservoir is positioned lower than the bleed nipple.*

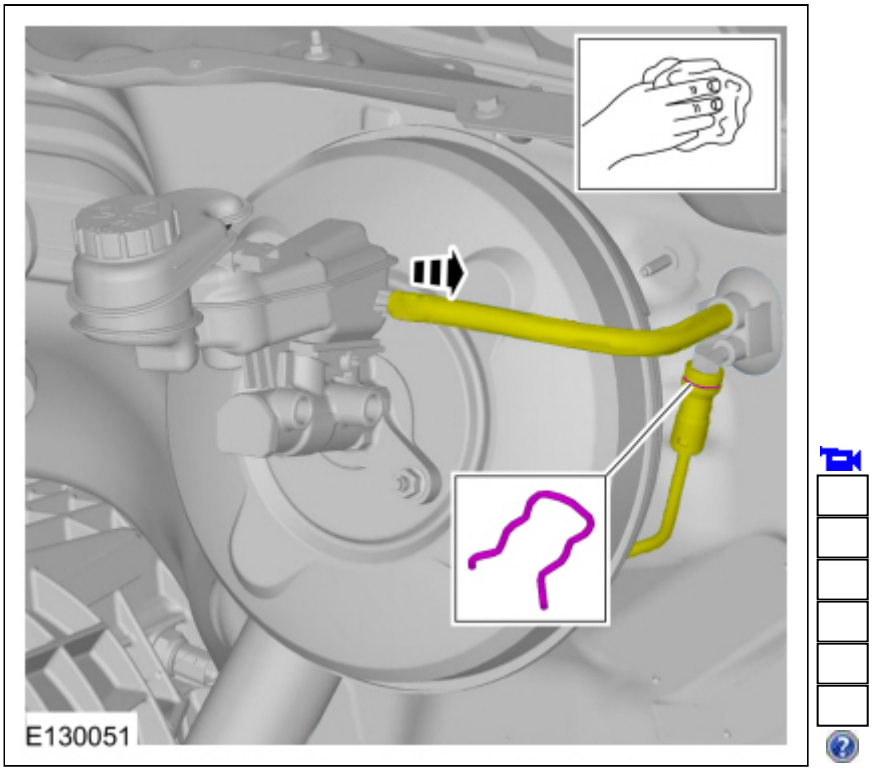
   Install Special Service Tool: 416-D001 Hand Vacuum Pump/Pressure Pump.

5. Open the bleed nipple.
6. Using the special tool, bleed the clutch system.
7. Close the bleed nipple.
8. Remove Special Service Tool: 416-D001 Hand Vacuum Pump/Pressure Pump.

9. Lower the vehicle. In order to remove any small amounts of trapped air remaining in the system, operate the clutch pedal several times (maximum five times), using the full clutch pedal travel.
10. Check the fluid level in the brake fluid reservoir and top up to the MAX mark with brake fluid WSS-M6C65-A2 Super Dot4-14M, if necessay.
11. Start the engine, depress the clutch pedal, wait for two seconds, then carefully engage reverse gear. If there are any abnormal noises, or reverse gear is difficult to engage, repeat the clutch system bleeding procedure.

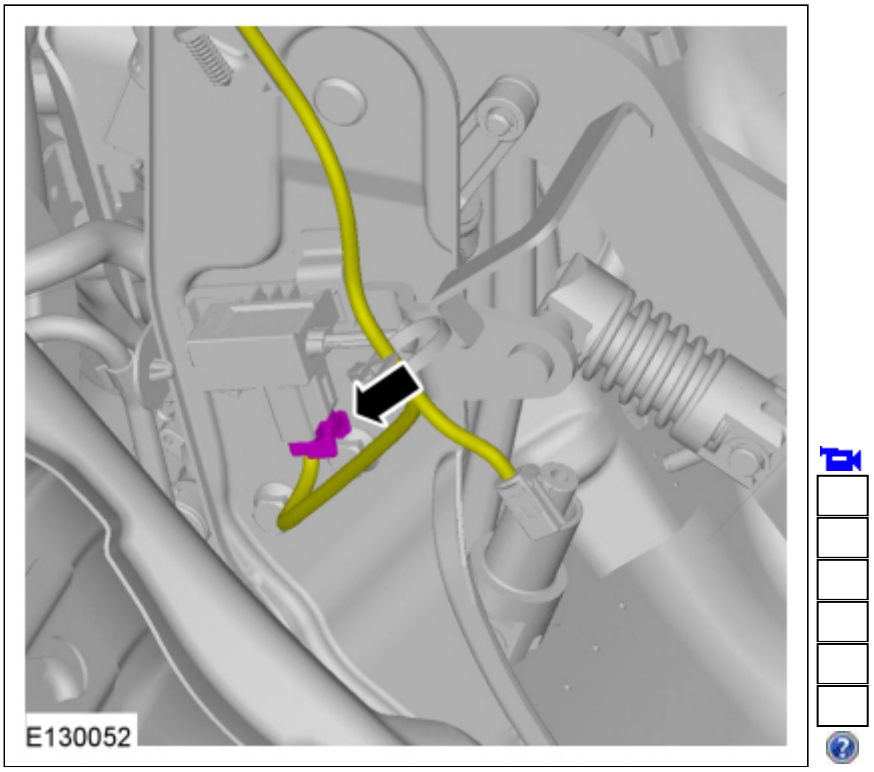
Copyright © 2016 Ford Motor Company

Clutch Master Cylinder



Removal

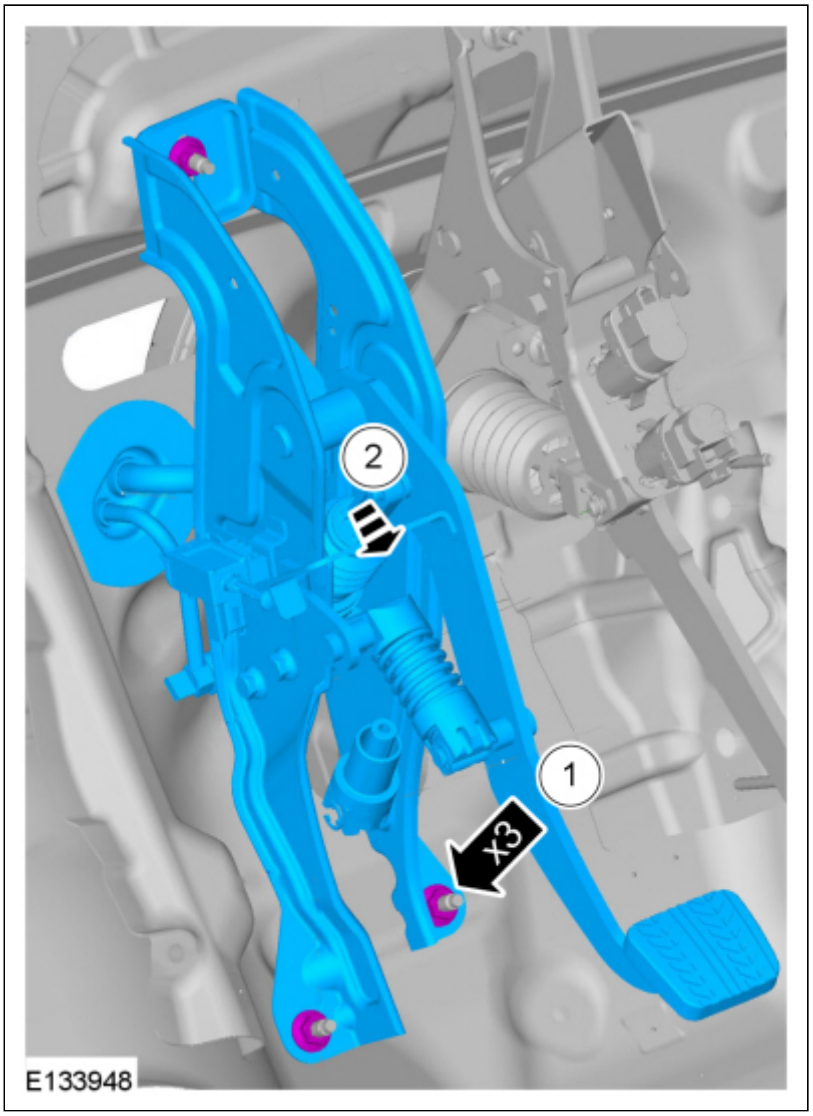
NOTICE: If brake fluid is spilt on the paintwork, the affected area must be immediately washed down with cold water.



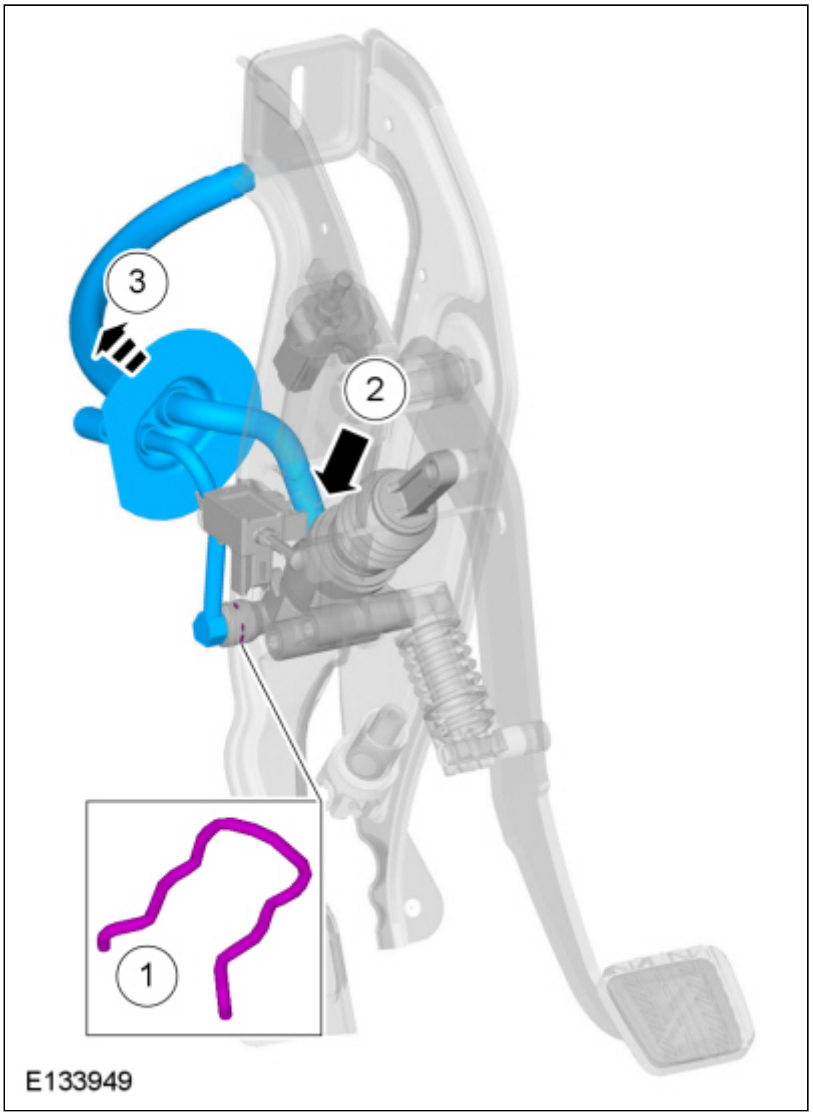
NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables) .
3. Refer to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
4. **WARNING: Be prepared to collect escaping fluids.**

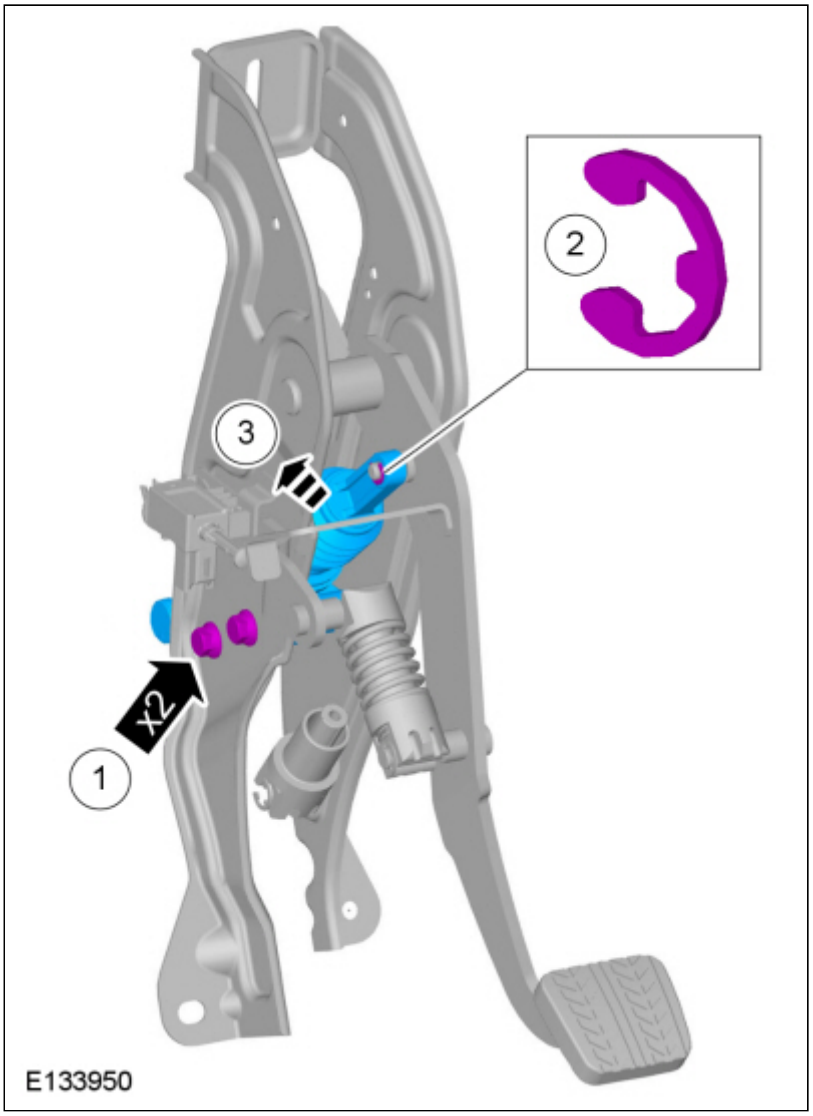
   NOTE: *Cap the clutch master cylinder supply hose to prevent fluid loss or dirt ingress.*



5.



6.



7. *Torque*: 15 Nm

8.

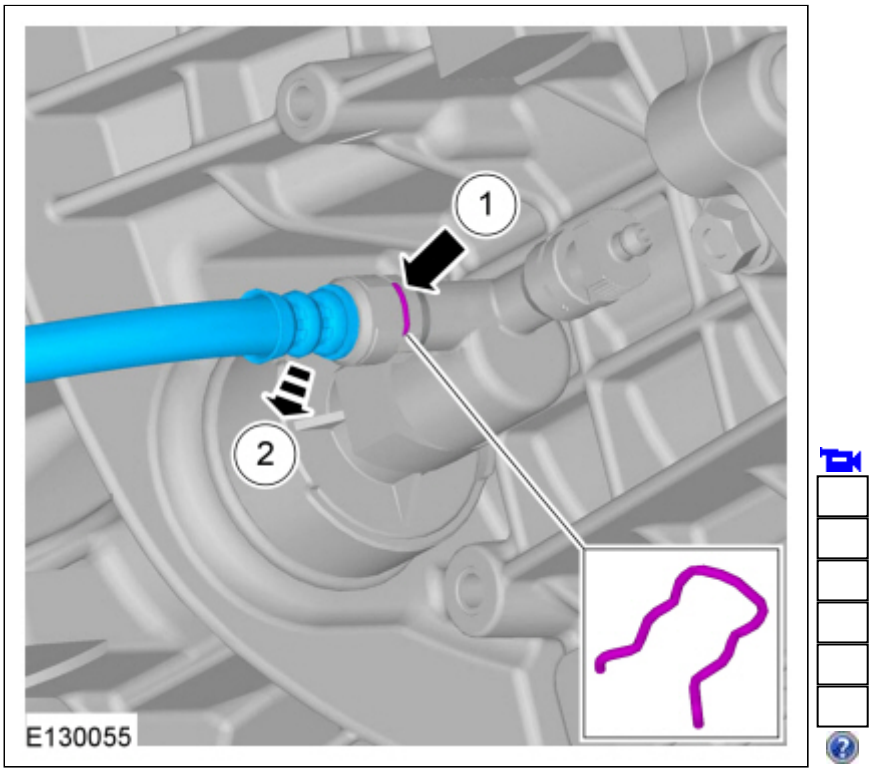
9. *Torque*: 23 Nm

Installation

1. To install, reverse the removal procedure.
2. Refer to: Clutch System Bleeding (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, General Procedures).
   Refer to: Clutch System Bleeding (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, General Procedures).

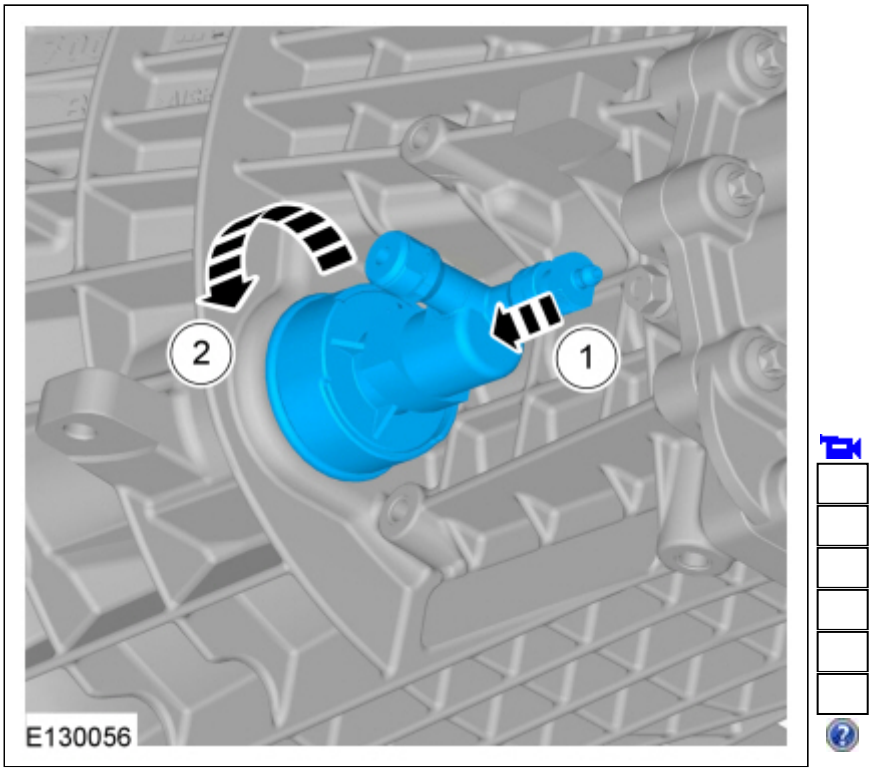
Copyright © 2016 Ford Motor Company

Clutch Slave Cylinder



Removal

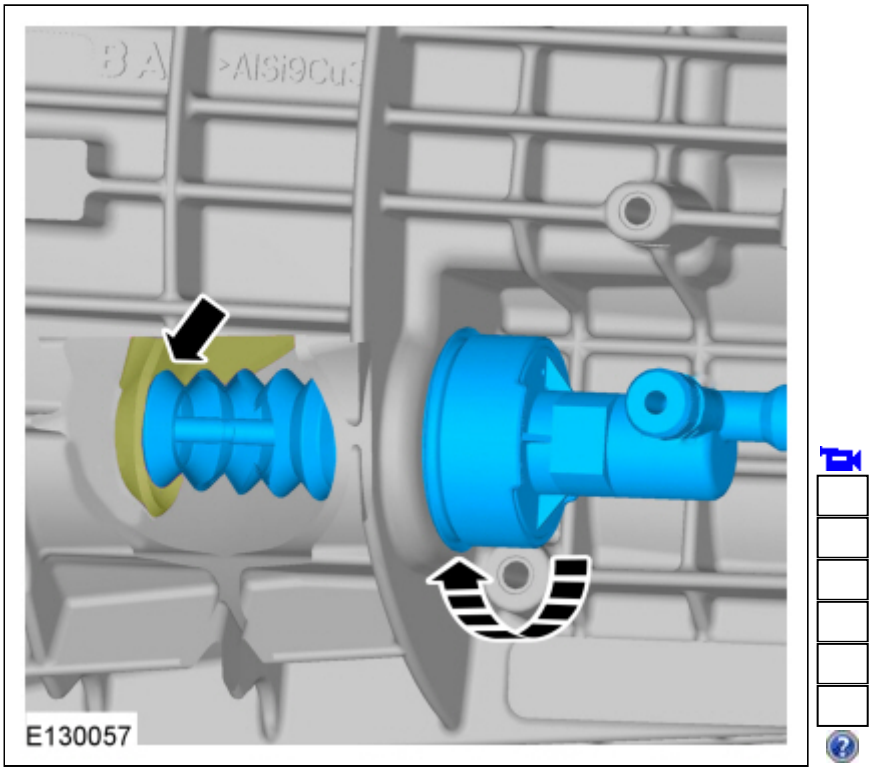
NOTICE: If the fluid is spilled on the paintwork, the affected area must be immediately washed down with cold water.



NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Clutch System Bleeding (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, General Procedures).

2.



3.

Installation

1. To install, reverse the removal procedure.
2. **NOTICE: Make sure that the clutch slave cylinder actuating rod is correctly engaged with the clutch release lever.**

3. Refer to: Clutch System Bleeding (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, General Procedures).

Clutch Controls

Symptom Chart(s)

Symptom Chart: Clutch Controls

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.

Condition	Possible Sources	Actions
Clutch slippage	• Clutch pedal reserve • Worn or damaged pressure plate • Clutch disc facing • Hardened or oiled clutch disc facing surface • Flywheel	GO to Pinpoint Test A
Clutch chatter, rattle or shudder	• Loose or damaged engine or transmission mounts • Oil on clutch disc facing • Worn pressure plate • Clutch disc facing • Loose or damaged flywheel • Worn clutch disc	GO to Pinpoint Test B
Clutch drag	• Insufficient clutch hydraulic fluid • Air in hydraulic system • Clutch pedal reserve • Diaphragm springs • Clutch disc • Clutch disc splines • Oil on clutch disc facing	GO to Pinpoint Test C
Clutch pedal pulsation	• Clutch and brake pedal pivot shaft not correctly lubricated • Flywheel • Worn pressure plate springs	GO to Pinpoint Test B
Clutch related vibrations	• Engine component grounding against frame • Accessory drive belt • Flywheel bolts loose • Flywheel • Imbalanced clutch pressure plate	GO to Pinpoint Test B
Hard shifting	• Insufficient clutch hydraulic fluid • Clutch pedal reserve • Transmission concern	GO to Pinpoint Test C
Clutch system	• Clutch master cylinder	INSPECT the clutch master cylinder, the clutch slave cylinder

leakage	• Clutch slave cylinder • Clutch hydraulic tubes	and all hydraulic system tubes for leakage. REPAIR as necessary.

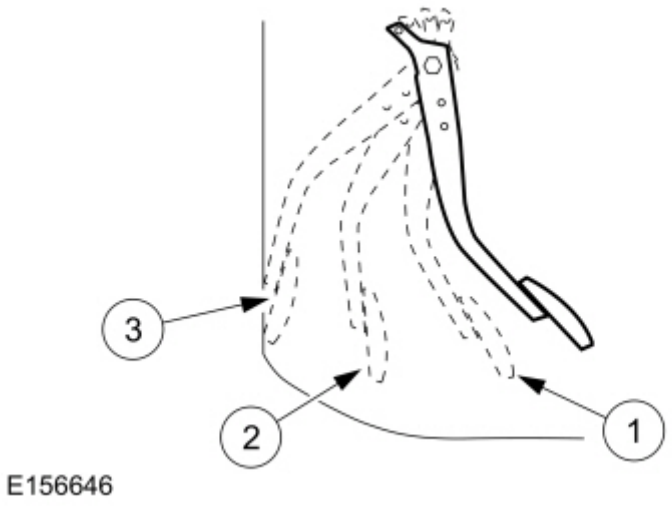
Pinpoint Test(s)

PINPOINT TEST A : CLUTCH SLIPPAGE

A1 TEST CLUTCH SLIPPAGE

- Apply the parking brake.
- Start engine and engage 4th gear.
- Run the engine at approximately 2,000 rpm.
- Slowly release clutch pedal.

Does the engine stall when the clutch pedal is fully released?



Yes	Clutch is OK.
No	GO to A2

A2 MEASURE THE CLUTCH RESERVE

NOTE: *If equipped, remove the floor mat to allow the clutch pedal to travel to the downstop.*

- Install a cable tie to the clutch pedal, than attach a tape measure to the cable tie.
- Pull the tape measure up to the steering wheel. Position it through the steering wheel opening. Put a piece of masking tape on the steering wheel and index mark the masking tape.
- Press the clutch pedal fully and start the vehicle.
- Shift the transmission into REVERSE gear, then move the gearshift lever forward to the position in between REVERSE gear and NEUTRAL. Slowly release the clutch pedal (if the vehicle creeps rearward, move the gearshift lever forward a little more). The transmission will work as if in NEUTRAL, but the reverse gear synchronizer will be bypassed.
- With the clutch pedal released, gently pull the gearshift lever toward the REVERSE gear position. Gear clash can now be heard.
- Slowly press the clutch pedal. Using the mark on the tape as a reference, note the measurement when the gear clash stops or the gearshift lever slides into REVERSE gear. Press the clutch pedal to the downstop. The difference between the measurement taken when the gear clash stopped and the measurement taken at the downstop is the clutch reserve.

Item	Pedal Position
1	Gear clash begins
2	Gear clash ends
3	Clutch pedal downstop

Is the clutch reserve greater than or equal to 25 mm (0.984 in)?

Yes	Clutch pedal reserve is OK. VERIFY customer concern.
No	INSTALL a clutch disc and pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).

PINPOINT TEST B : CLUTCH EXCESSIVE NOISE OR VIBRATION

B1 CHECK THE ENGINE OR TRANSMISSION MOUNTS

- Inspect all the engine and transmission mounts for looseness or damage.

Are any of the engine or transmission mounts loose or damaged?

Yes	TIGHTEN or INSTALL new engine or transmission mounts. TEST the system for normal operation.
No	GO to B2

B2 INSPECT THE PRESSURE PLATE BOLTS

- Inspect the pressure plate-to-flywheel bolts.

Are any of the pressure plate-to-flywheel bolts loose?

Yes	TIGHTEN or INSTALL new bolts. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
No	GO to B3

B3 INSPECT THE PRESSURE PLATE

- Remove the clutch pressure plate.
- Inspect the clutch pressure plate for wear or damage.

Are any signs of damage present on the clutch pressure plate?

Yes	INSTALL a new clutch pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation). TEST the system for normal operation.

No	GO to B4

B4 CHECK THE CLUTCH DISC

- NOTE: If the internal damper of the clutch disc is damaged or contaminated with grease or oil, it will sound similar to a "transmission rattle".
- Check the clutch disc for wear or damage.

Is the clutch disc OK?

Yes	GO to B5
No	INSTALL a new clutch disc. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation). TEST the system for normal operation.

B5 INSPECT THE FLYWHEEL

- Inspect the flywheel for wear or damage.

Is the flywheel OK?

Yes	GO to B6
No	REPAIR or INSTALL a new flywheel as necessary. REFER to: Engine Accessories (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal). REFER to: Engine Accessories (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Installation). REFER to: Engine Accessories (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Removal). REFER to: Engine Accessories (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Installation). TEST the system for normal operation.

B6 INSPECT THE INPUT SHAFT

- Inspect the input shaft for signs of wear, damage or corrosion.

Are any signs of wear damage, or corrosion present on the input shaft?

Yes	If wear or damage is found, INSTALL a new input shaft. REFER to: Transmission - 2WD (308-03B Manual Transmission - 6-Speed Manual Transmission - MT82, Disassembly). REFER to: Transmission - 4WD (308-03B Manual Transmission - 6-Speed Manual Transmission - MT82, Disassembly). REFER to: Transmission - 2WD (308-03B) . REFER to: Transmission - 4WD (308-03B) . If corrosion is found on the splines of the input shaft, apply a small amount of grease to the splines of the input shaft.
No	VERIFY the customer concern. REFER to: Manual Transmission (308-03B Manual Transmission - 6-Speed Manual Transmission - MT82, Diagnosis and Testing).

PINPOINT TEST C : HARD TO SHIFT

C1 CHECK CLUTCH FLUID LEVEL

- Check clutch fluid level.

Is the clutch fluid level between the MAX and MIN marks on the brake fluid reservoir?

Yes	GO to C2
No	FILL reservoir to specification, CHECK the brake and clutch systems for leaks. TEST clutch system for normal operation.

C2 BLEED THE CLUTCH SYSTEM

- Bleed the clutch system.
  REFER to: Clutch System Bleeding (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, General Procedures).

Does the clutch pedal show improved disengaging characteristics after bleeding the clutch system?

Yes	Clutch OK.
No	GO to C3

C3 CHECK THE CLUTCH PEDAL FREE PLAY

- Measure the clutch pedal free play.
- Press the clutch pedal until resistance is felt, then release it.

Is the pedal travel approximately 10 mm?

Yes	GO to C4
No	Check that the clutch pedal moves freely, remove the clutch pedal if necessary.

C4 CHECK THE BELLEVILLE SPRING WASHER OF THE CLUTCH PRESSURE PLATE

- Remove transmission.
  REFER to: Transmission - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, 2.2L Duratorq-TDCi (Puma) Diesel, 4x2 (308-03B Manual Transmission - 6-Speed Manual Transmission - MT82, Removal).
  REFER to: Transmission - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, 2.2L Duratorq-TDCi (Puma) Diesel, 4x4 (308-03B Manual Transmission - 6-Speed Manual Transmission - MT82, Removal).

Does the clutch pressure plate or the Belleville spring washer of the clutch pressure plate show signs of wear or damage?

Yes	INSTALL a new clutch pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation). TEST the system for normal operation.
No	VERIFY the customer concern.

Component Test(s)

Clutch Hydraulic System

1. Verify the clutch hydraulic fluid reservoir is filled to the correct level.
2. If the fluid level is low, add fluid as necessary. Check the clutch hydraulic system for leaks and repair as necessary.
3. If the fluid is at the correct level, proceed to clutch check.

4. Apply and release the clutch pedal slowly to check for pedal binding. Make sure the clutch pedal can be fully applied and is not restricted by the floor mat. Verify the pedal return spring is present and functions correctly.
5. Measure the clutch reserve. GO to Pinpoint Test A
6. Set the park brake. The clutch pedal is in the up position and the engine idling, gently move the gearshift lever forward toward reverse gear until gear clash can be heard. Apply the clutch pedal slowly.
7. If the gears cease to clash (full disengage at to from the floor), hold the clutch pedal at the point of disengagement and increase engine speed to 4,000 rpm. The clutch should remain disengaged, clutch OK.
8. With the engine idling and the clutch pedal applied, move the gearshift lever into 4th gear. Increase the engine speed to 2,000 rpm and slowly release the clutch pedal.
9. If the engine does not stall, clutch is slipping. Repair as necessary.
   REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
10. If the engine stalls, clutch is OK.

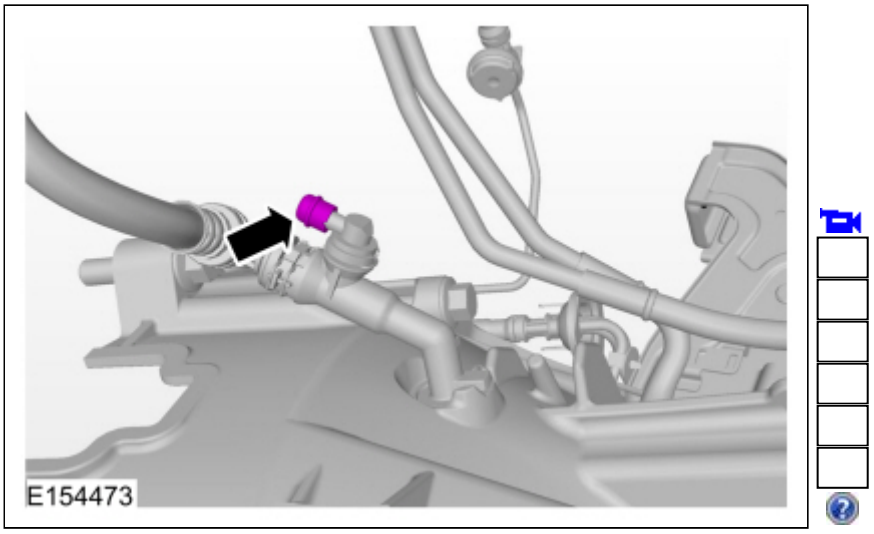
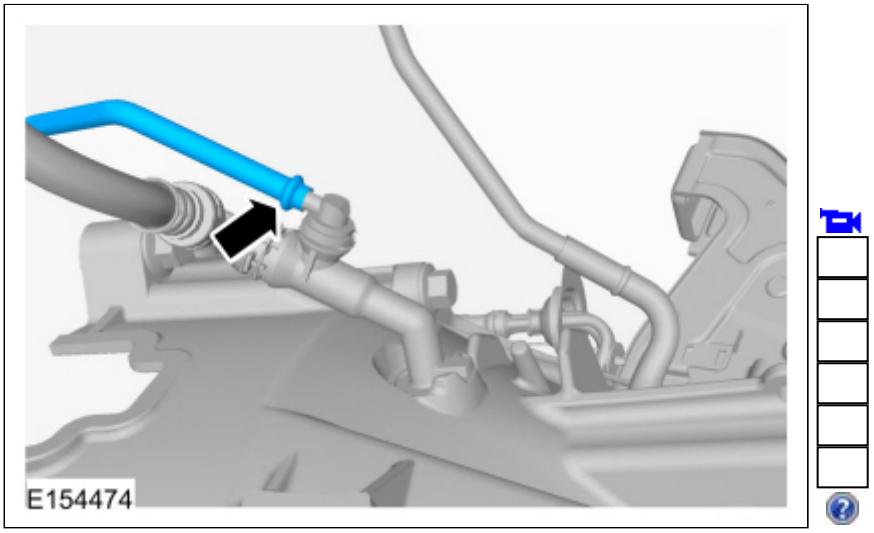
Clutch System Bleeding



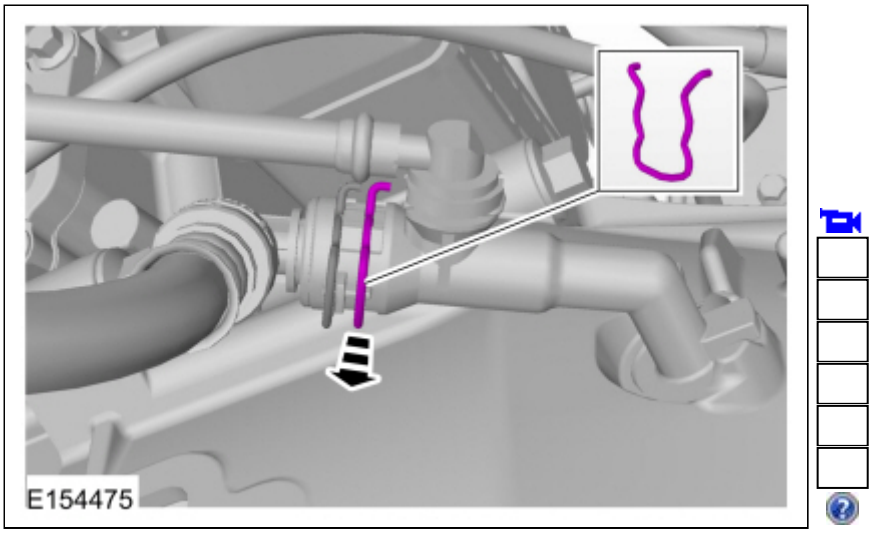
Activation

WARNING: Brake fluid contains polyglycol ethers and polyglycols. Avoid contact with the eyes. Wash hands thoroughly after handling. If brake fluid contacts the eyes, flush the eyes for 15 minutes with cold running water. Get medical attention if irritation persists. If taken internally, drink water and induce vomiting. Get medical attention immediately. Failure to follow these instructions may result in personal injury.

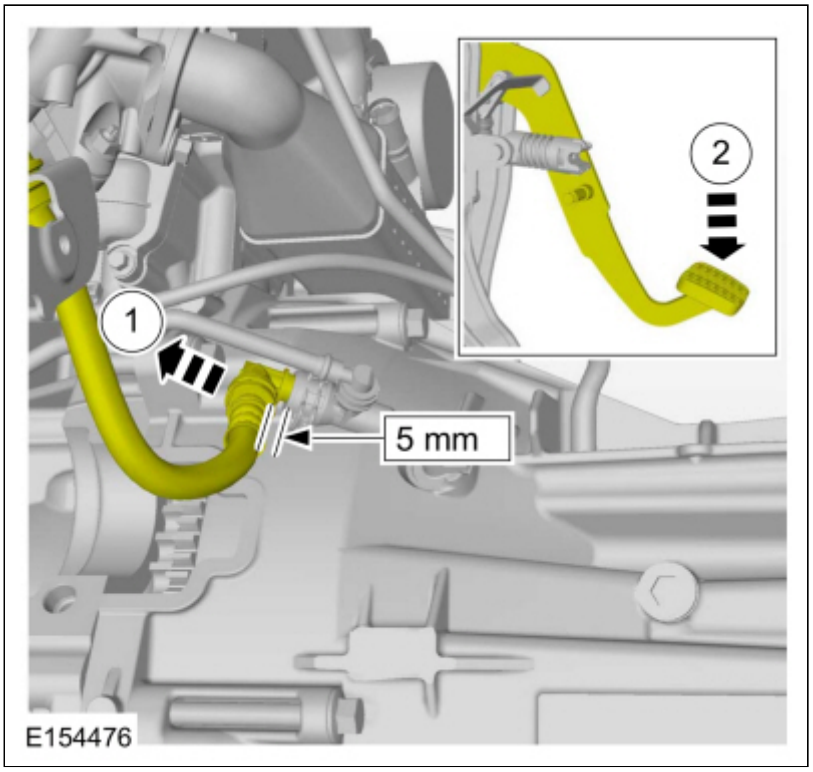


NOTICE: If brake fluid is spilt on the paintwork, the affected area must be immediately washed down with cold water.

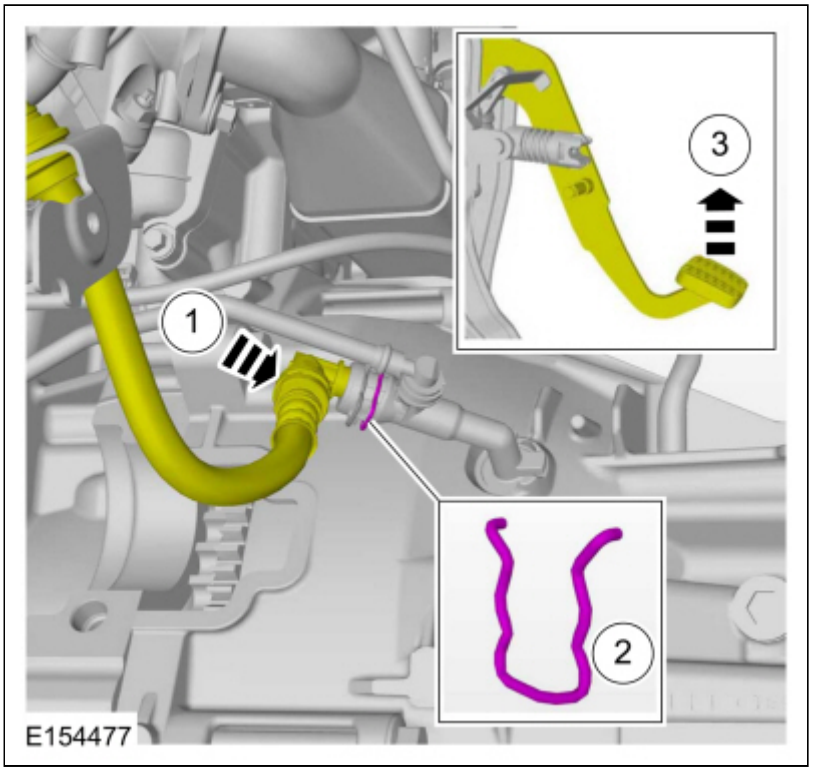
1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
3. 



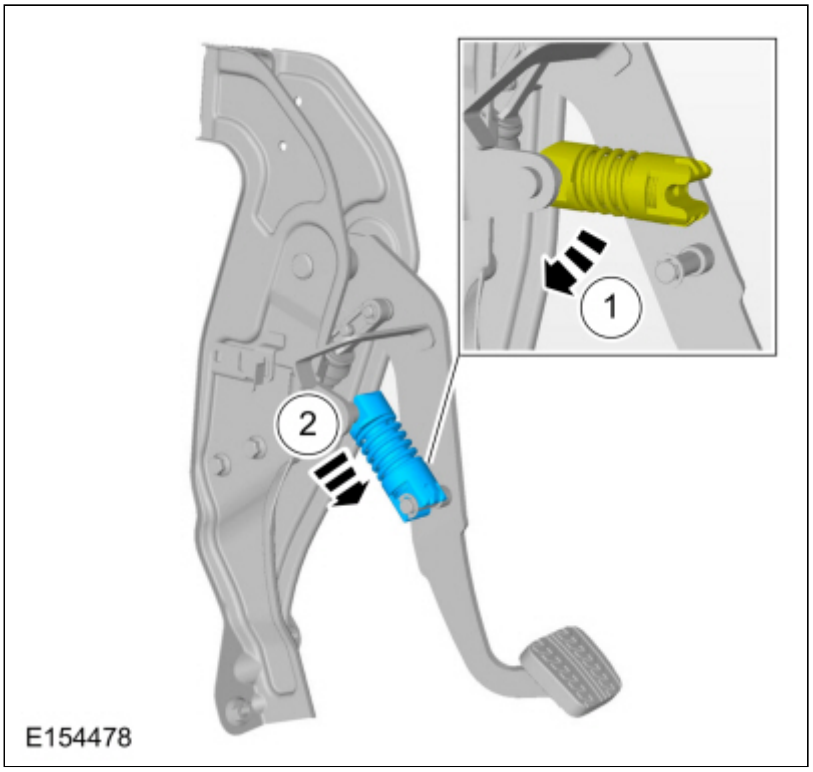
4.



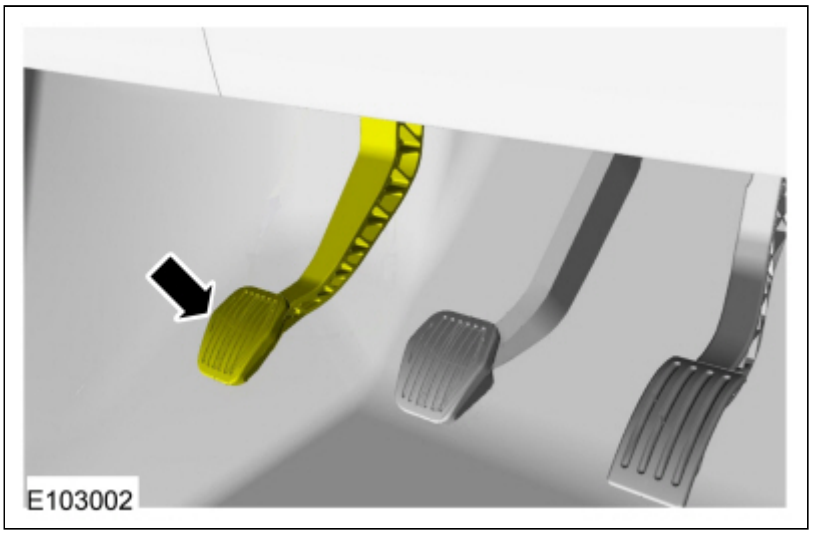
5.



6. Pull the pin out until it clicks into the out position.



1. Pull this clutch line connector partially out of the adapter and will it then allow fluid to exit the bleed port.
2. Fully depress the clutch pedal.



1. Push the clutch line connector back into the adapter.
2. Push the pin in until it clicks into the lock position.
3. Pull the clutch pedal fully up until it reaches it’s end-stop, then hold for 2 seconds to allow fluid to enter from the reservoir.

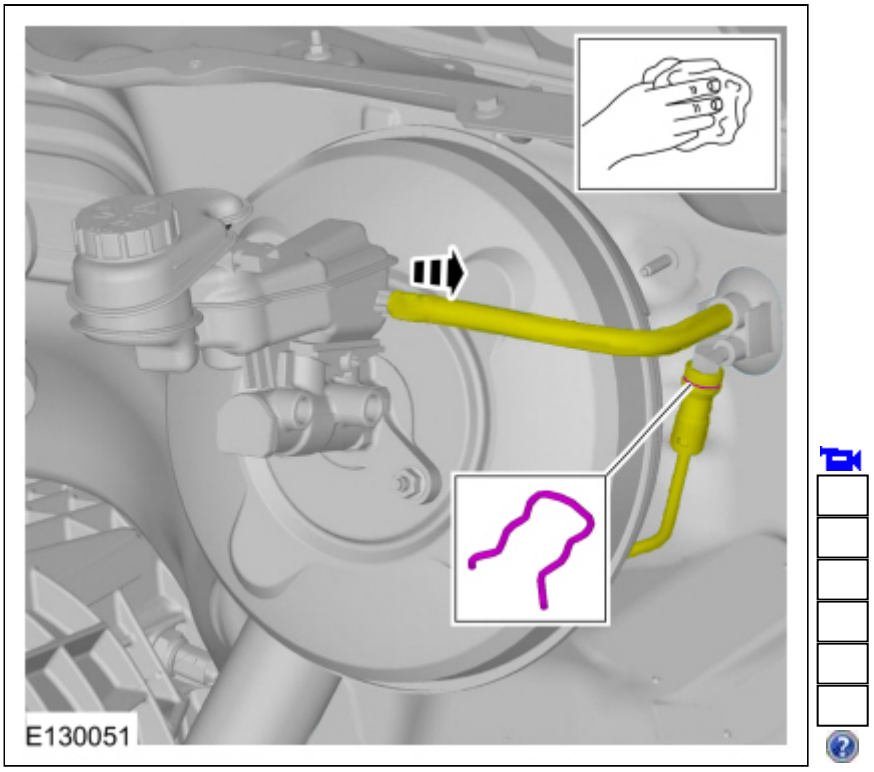
9. In order to remove any small amounts of trapped air remaining in the system, repeat steps 6 to 10, 15 times.
10.

11. Cycle the pedal from it's undepressed condition to depressed condition (fast upwards). Hold for 2 seconds each time in the fully undepressed condition.

12. Repeat this procedure for a minimum 20 times, until the pedal force builds up to a consistent level.

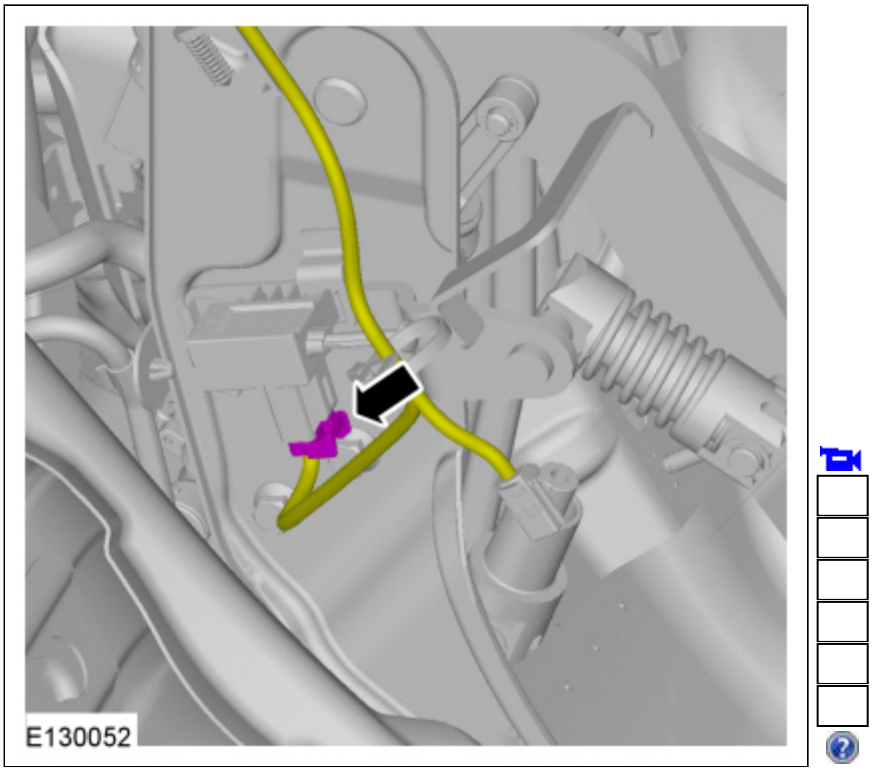
Copyright © 2016 Ford Motor Company

Clutch Master Cylinder



Removal

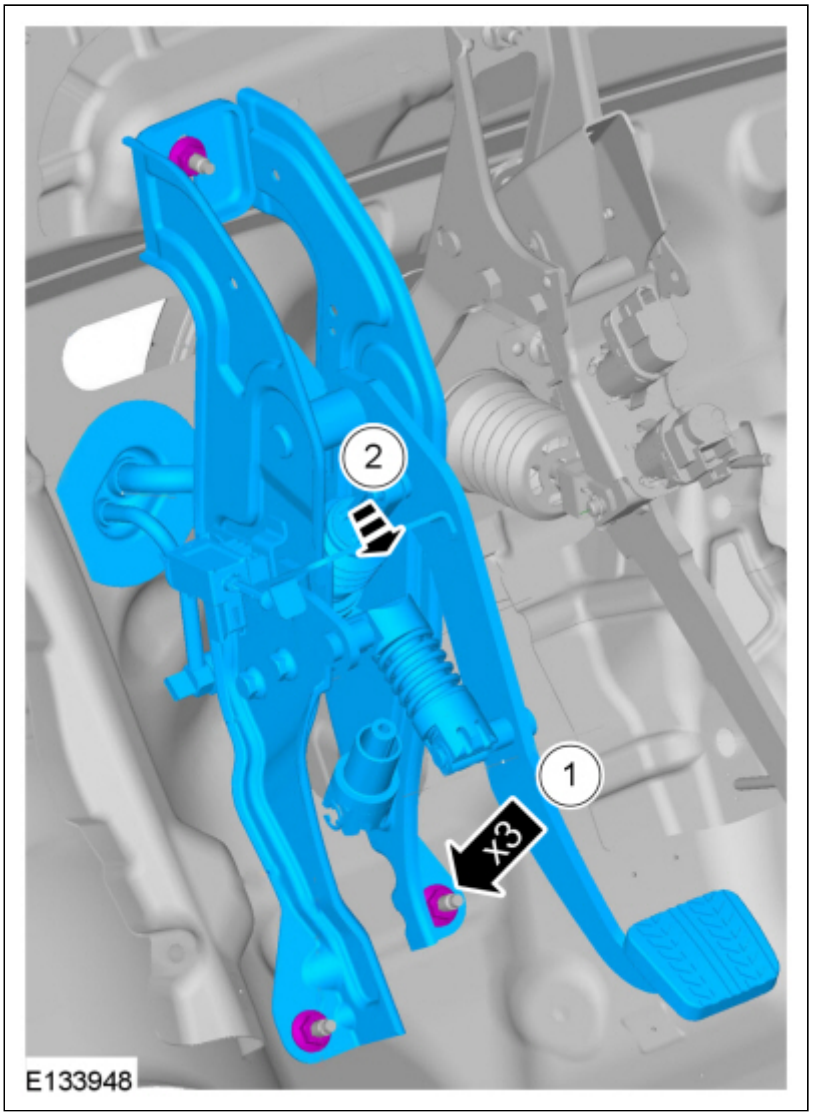
NOTICE: If brake fluid is spilt on the paintwork, the affected area must be immediately washed down with cold water.



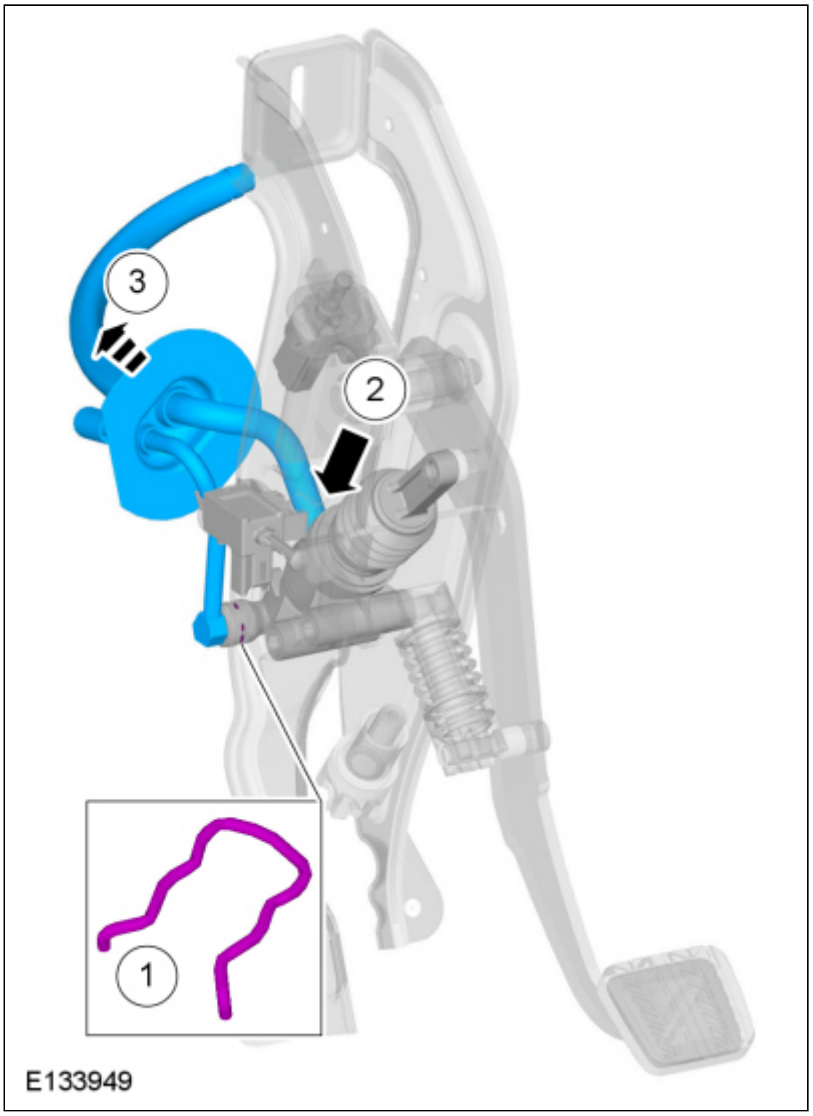
NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables) .
3. Refer to: Body Control Module (BCM) - LHD (419-10 Multifunction Electronic Modules, Removal and Installation).
4. **WARNING: Be prepared to collect escaping fluids.**

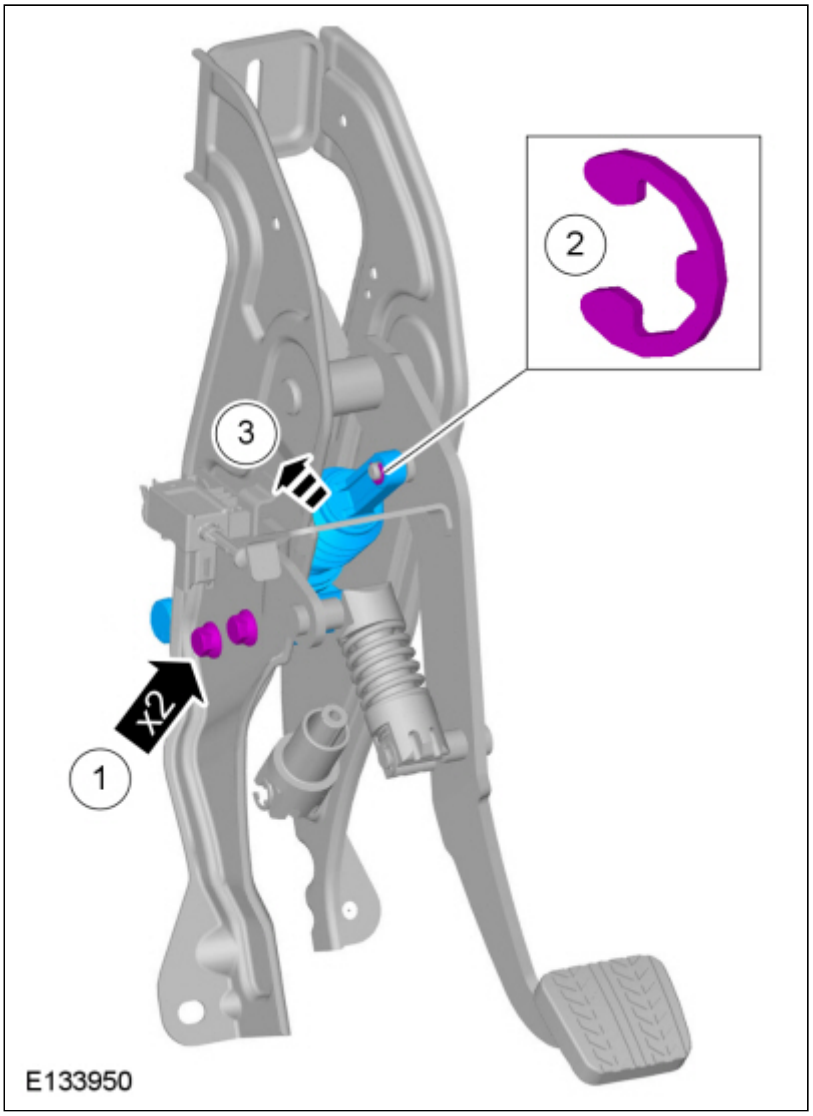
   NOTE: *Cap the clutch master cylinder supply hose to prevent fluid loss or dirt ingress.*



5.



6.

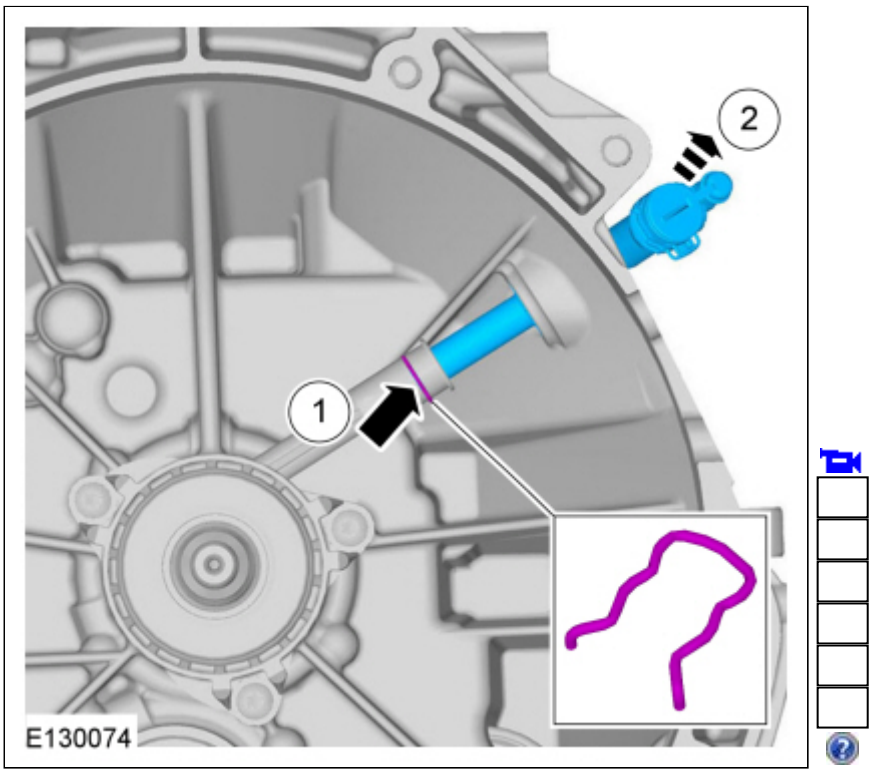


7. *Torque*: 15 Nm

8.

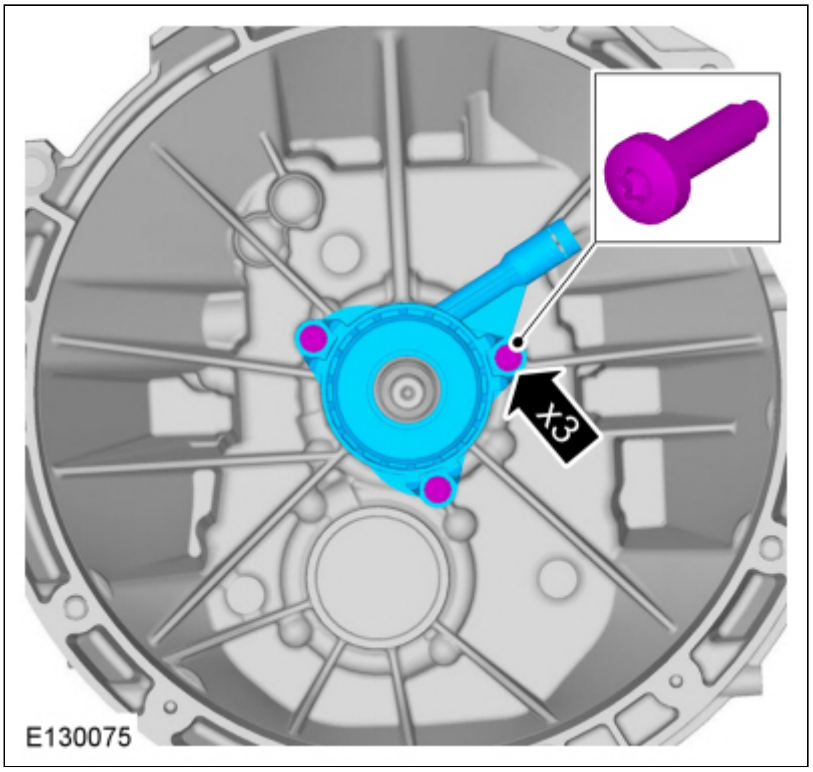
9. *Torque*: 23 Nm

Installation



1. To install, reverse the removal procedure.
2. Refer to: Clutch System Bleeding (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, General Procedures).
   Refer to: Clutch System Bleeding (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, General Procedures).

Copyright © 2016 Ford Motor Company



Clutch Slave Cylinder

Removal

NOTE: *Removal steps in this procedure may contain installation details.*

1. Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Transmission - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, 2.2L Duratorq-TDCi (Puma) Diesel, 4x2 (308-03B Manual Transmission - 6-Speed Manual Transmission - MT82, Removal).
   Refer to: Transmission - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, 2.2L Duratorq-TDCi (Puma) Diesel, 4x4 (308-03B Manual Transmission - 6-Speed Manual Transmission - MT82, Removal).
3. 

4. *Torque*: 10 Nm

Installation

1. To install, reverse the removal procedure.
2. Refer to: Clutch System Bleeding (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, General Procedures).

Manual Transmission - Overview

Transmission Overview

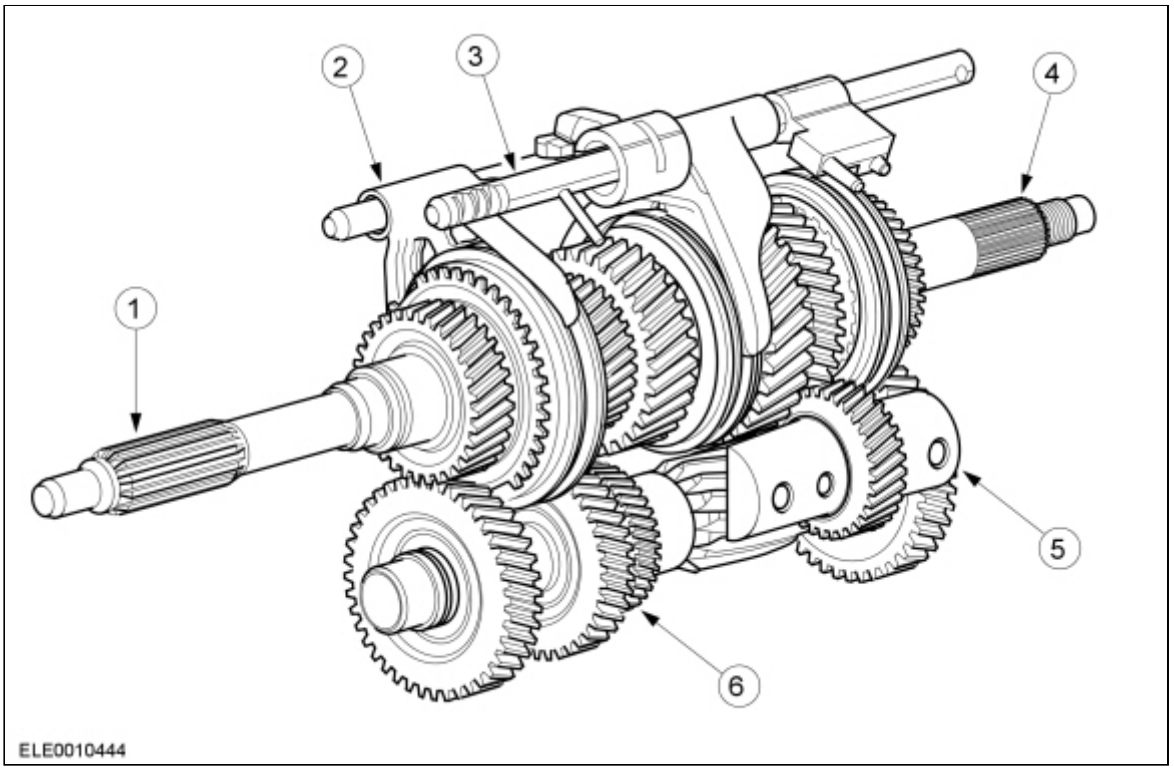
Item	Part Number	Description
1	—	Mainshaft — Input shaft/Output shaft
2	—	Transmission front case
3	—	Shifter fork third/fourth gear
4	—	Selector shaft
5	—	Transmission rear case
6	—	Output drive flange
7	—	Reverse gear idler
8	—	Counter shaft

The MT - 75 manual transmission is a ” three - shaft transmission".

MT - 75 means:

- M: Manual.
- T: Transmission
- 75: Distance between main shaft and counter shaft in mm.

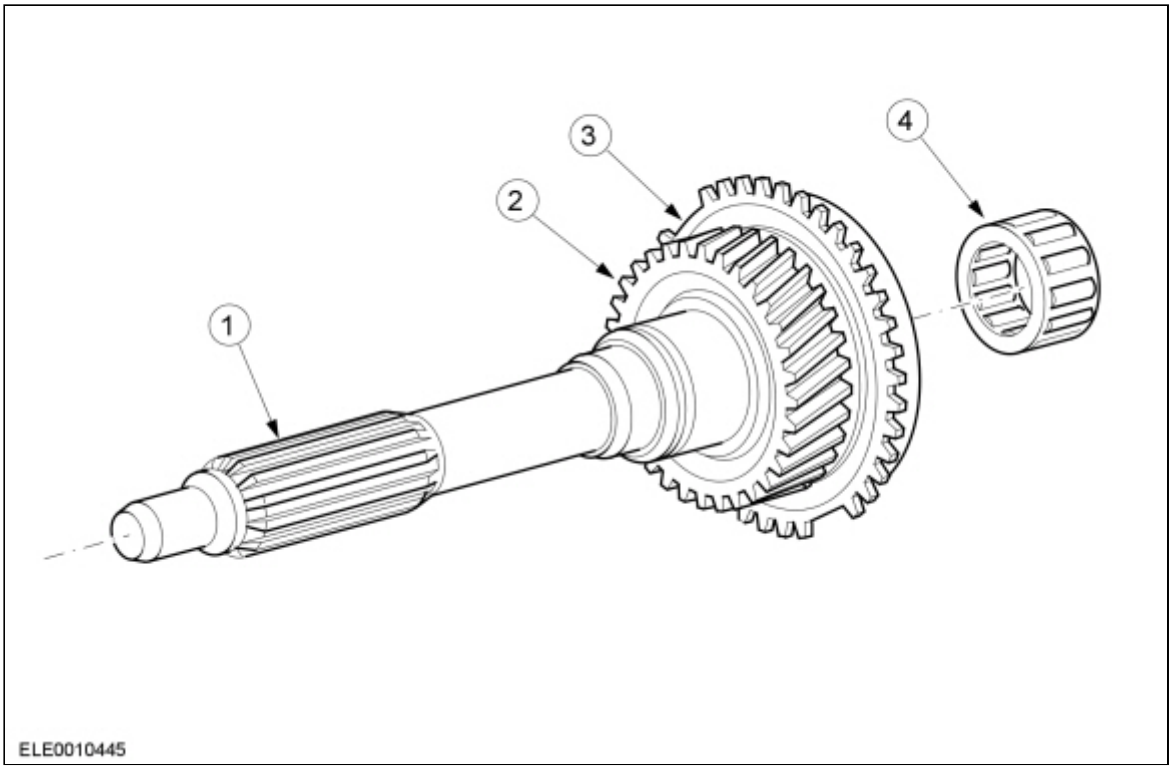
The aluminum transmission housing consists of two closed sections. The reinforcing ribs on the transmission housing have been revised to reduce noise and vibration.



With the ” three - shaft transmission", all the gears are in permanent mesh. In each gear the required transmission ratio is achieved by means of a pair of gears.

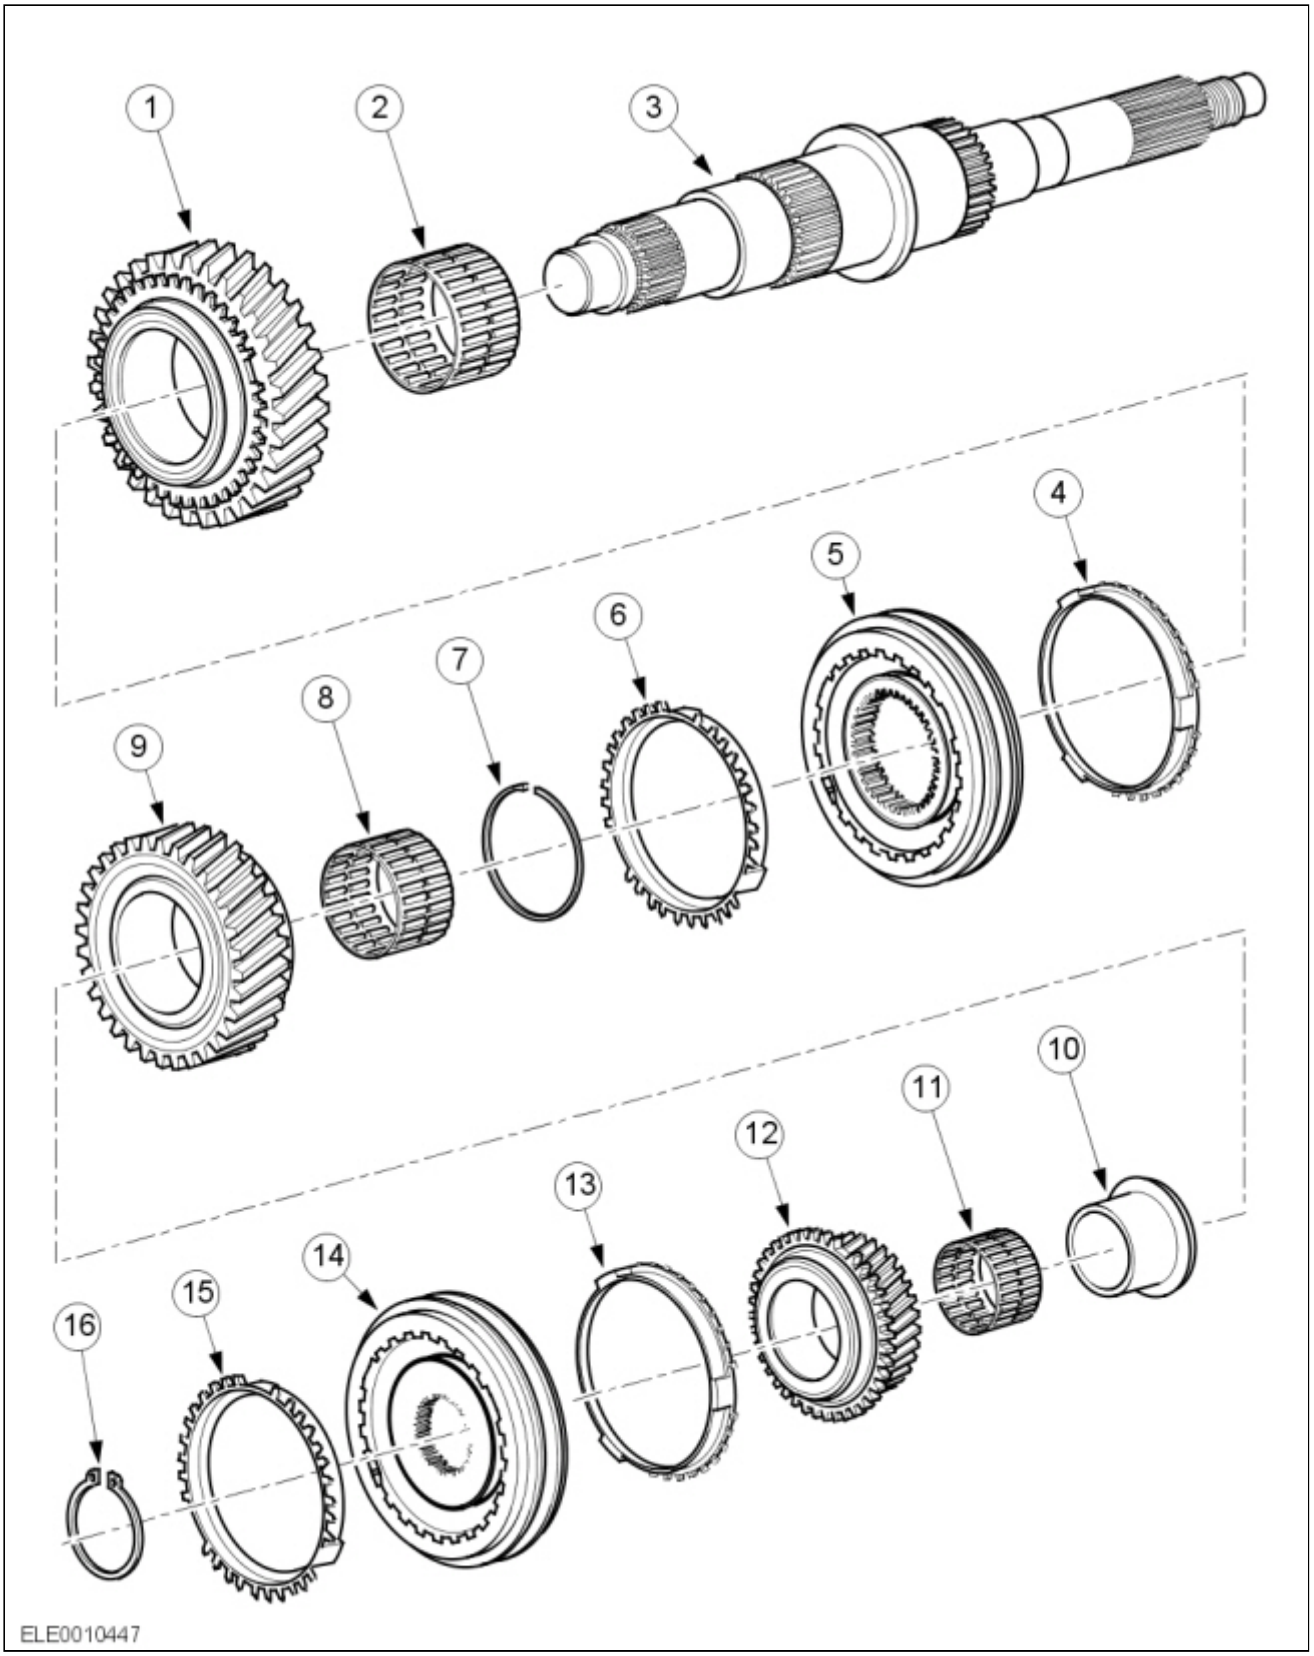
When the reverse gear is selected, the direction of the output shaft is changed by an idler gear.

The input and output shafts turn on taper roller bearings.



All the gears, including reverse, are bevel - cut, synchronized and turn on needle roller bearings.

Mainshaft and Counter Shaft



Item	Part Number	Description
1	—	Input shaft
2	—	Selector fork third/fourth gear
3	—	Selector fork fifth/reverse gear
4	—	Output shaft
5	—	Reverse gear idler

Manual Transmission

General Equipment

Ford diagnostic equipment

Inspection and Verification

NOTICE: If transmission noise is reported, first check the transmission fluid level. The vehicle should not be driven if the transmission fluid level is low. A low transmission fluid level will damage the transmission.

NOTE: *Before attempting to repair any concerns, road test the vehicle to determine which system the concern is in.*

NOTE: *If an observed or reported concern is found, correct the causes before proceeding.*

Gear driven units produce a certain level of noise. Some noise is acceptable and audible at certain speeds or under various driving conditions. Many conditions, such as road and weather can amplify normal vehicle noise.

The following overview is a guide to diagnose a transmission or clutch concern:

- Verify and document the customer concern.
  - During the customer interview, if a leak was noticed or if a leak is the concern, check the transmission fluid level. the vehicle should not be driven if the transmission fluid level is low.
- Check fluid level and condition.
- Evaluate the clutch hydraulic system.
- Evaluate the clutch.
- Inspect gearshift mechanism.
- Evaluate the transmission.
- Find the cause of the problem and correct it.

Verify Customer Concern

1. Verify and document the customer concern.
    1. When was it first noticed?
    2. Did it appear suddenly or gradually?
    3. Did anything unusual occur that would coincide with it or precede it?
    4. Identify when the condition occurs:
        - Hot or cold vehicle operating conditions.
        - Type of terrain.
        - City/highway driving.
        - Driving at a particular speed.
            - Coasting.
            - hard acceleration.
        - Shifting.
            - Upshifts.
            - downshifts.
            - in a particular gear.
            - in all gears.
        - Hot or cold ambient
    5. Has the transmission/clutch been repaired before or components installed?
        - Check the vehicle service record. Note any repairs.

Check Fluid Level and Condition

NOTICE: The vehicle should not be driven if the transmission fluid level is low or damage may occur.

NOTICE: Excessive temperatures may break down the transmission lubricant. If there is reason to believe the transmission has been subjected to temperatures exceeding 135°C (275°F) for an extended period (greater than 20 minutes), change the lubricant immediately.

An incorrect transmission fluid level may affect the transmission operation and can result in transmission damage. For transmission draining and filling.
REFER to: Transmission Draining and Filling (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, General Procedures).

A low transmission fluid level can result in poor transmission shifting, engagement or damage. It also indicated a leak in the transmission seals or gaskets.

1. Check the transmission fluid condition.
    - Observe the color and the odor of the fluid. Allow the transmission fluid to drip onto a white cloth and examine the stain. Check the transmission fluid for contamination or metal particles.
        - Transmission fluid should appear amber to dark amber in color for the MT75.

Evaluate Clutch Hydraulic System

1. Verify the clutch hydraulic fluid reservoir is filled to the correct level.
    - If the clutch hydraulic fluid is correct, proceed to clutch check.
    - If the clutch hydraulic fluid is low, add fluid as necessary. Check the clutch hydraulic system for leaks and repair as necessary.

Evaluate the Clutch

1. Apply and release the clutch pedal slowly to check pedal binding. Make sure the clutch pedal can be fully applied and is not restricted by the floor mat.

2. Measure the clutch reserve. GO to Pinpoint Test C

3. With the engine idling and the park brake applied, move the gearshift lever into 4th gear. Increase engine speed to 2,000 rpm and slowly release the clutch pedal.
    - If the engine stalls, the clutch is OK.
    - If the engine does not stall, the clutch is slipping. Repair as necessary.

4. Compare the clutch evaluation results with the following chart. The following list of conditions are typical clutch concerns.

Symptom Chart – Clutch Operation

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
for information about these practices.

Symptom	Possible Sources	Action
• Clutch slippage	• Clutch pedal reserve • Diaphragm springs • Clutch pressure plate • Clutch disc facing • Hardened or oiled clutch disc facing surface • Flywheel	• GO to Pinpoint Test A
• Clutch chatter or shudder	• Engine mounts • Oil on clutch disc facing • Diaphragm springs • Clutch pressure plate • Clutch disc facing • Flywheel • Clutch disc	• GO to Pinpoint Test B
• Clutch pedal feels spongy or has excessive travel. Clutch will not disengage	• Insufficient clutch fluid • Air in hydraulic system • Clutch pedal reserve • Diaphragm springs • Clutch disc • Clutch disc splines • Oil on clutch facing	• GO to Pinpoint Test C
• Clutch drag, also hard to shift	• Insufficient clutch fluid • Air in hydraulic system • Clutch pedal reserve • Diaphragm springs • Clutch disc • Transmission concern	• GO to Pinpoint Test D
• Clutch pedal pulsation	• Clutch and brake pedal pivot shaft not correctly lubricated	• GO to Pinpoint

	not correctly lubricated • Flywheel • Worn springs in pressure plate	Pinpoint Test E
• Clutch-related vibrations	• Engine component grounding against frame • Accessory drive belt • Flywheel bolts • Flywheel • Imbalanced clutch pressure plate	• GO to Pinpoint Test F
• Excessive noise	• Clutch pedal reserve • Clutch slave cylinder • Pilot bearing • Excessive crankshaft end play	• GO to Pinpoint Test G
• Clutch system leakage	• Clutch master cylinder • Clutch slave cylinder • Clutch hydraulic tubes	• GO to Pinpoint Test C

Inspect Gearshift Mechanism

1. Inspect the gearshift mechanism for:
   - signs of damage.
   - missing or loose fasteners.
   - binding.

2. Repair as necessary.

Evaluate Transmission

1. Road test the vehicle. Use the following methods to diagnose the concern.
   - Start the engine.
   - Evaluate the noise in NEUTRAL while vehicle is parked.
     - Check whether the noise is present with the clutch fully disengaged (clutch pedal applied). Check to see if the pedal pulsates abnormally (clutch diaphragm finger runout).
     - Check whether the noise is present with the gearshift in the NEUTRAL position and the clutch fully engaged (clutch pedal released). Apply the park brake and move the gearshift towards the 1st gear position. Apply very slight pressure and note if the gear noise level is reduced (gear rollover noise).
     - With the clutch fully engaged (clutch pedal released) check whether the noise is present as the engine speed is raised. If the noise reduces, note the engine speed at which this occurs.
   - Listen for any change in noise while applying and releasing the clutch pedal.
   - Listen for any change in noise while changing the engine rpm.
   - Drive the vehicle and shift through all the gears including REVERSE. Listen for any changes in noise.
   - Drive the vehicle in the gear in which the noise is most noticeable. Apply the clutch pedal and leave the gear engaged. Listen for any change in noise.
   - Drive the vehicle in the gear in which the noise is most noticeable. Apply the clutch pedal and shift the transmission into NEUTRAL. Release the clutch pedal and allow the vehicle to coast.
   - Compare the noise to another vehicle. Make sure the transmissions are the same.

2. Compare the road test results with the following symptom charts. The following list of conditions are typical transmission concerns:
   - GO to Symptom Chart — Transmission Operation or GO to Symptom Chart — NVH.

Symptom Chart — Transmission Operation

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation). for information about these practices.

Symptom	Possible Sources	Action
• Transmission difficult to shift	• Lubricant • Internal shift mechanism • Sliding gears, synchronizers • Housings, shaft	• ADD or DRAIN and FILL with specified lubricant. REFER to: Transmission Draining and

	• Loose pressure plate to flywheel bolts	Filling (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, General Procedures). • CHECK the internal shift mechanism for smooth operation. REPAIR or INSTALL a new mechanism as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • CHECK for free movement of gears and synchronizers. REPAIR or INSTALL new components as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • CHECK for binding condition between the input shaft and the engine crankshaft pilot bearing or bushing. REPAIR or INSTALL new components as necessary. REFER to: Pilot Bearing - 2.5L Duratec-HE (122kW/165PS) - MI4 (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). REFER to: Pilot Bearing - Diesel (308-01B Clutch - 6-Speed Manual

		Transmission - MT82, Removal and Installation). • CHECK for loose bolts at the pressure plate. INSTALL new components as necessary. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).
• Transmission will not shift — gearshift lever moves	• Gearshift lever damaged • Damaged or worn selector arm. Loose shift rail bushings	• INSTALL a new gearshift lever. REFER to: Gearshift Lever (308-06B Manual Transmission External Controls - 6-Speed Manual Transmission - MT82, Removal and Installation). REFER to: Gearshift Lever (308-06B Manual Transmission External Controls - 6-Speed Manual Transmission - MT82, Removal and Installation). • CHECK the internal shift components. INSTALL new component as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• **NOTE:** *While verifying the condition, determine whether the noise is gear rollover noise, release bearing rub or some other transmission-related noise. Gear rollover noise, inherent in manual transmissions, is caused by the constant mesh of gears turning at the engine idle speed while the clutch is engaged and the transmission is in NEUTRAL. Release bearing rub is sometimes mistaken for mainshaft bearing noise. Gear rollover noise will disappear when the clutch is disengaged or when the transmission is engaged in gear. Release bearing rub will disappear when the clutch is engaged. In the event that a bearing is damaged, the noise is more pronounced while*	• Lubricant • Components grounding out on the transmission • Components housing bolts • Bearings or gears	• ADD or DRAIN and FILL with specified lubricant. REFER to: Transmission Draining and Filling (308-03A Manual Transmission - 5-Speed Manual

bearing is damaged, the noise is more pronounced while engaged in gear under load or coast than in NEUTRAL. • Noisy in forward gears		5-Speed Manual Transmission - MT75, General Procedures). • CHECK for screws and bolts of body or other components grounding out. CORRECT as necessary. • CHECK the torque on the transmission-to-flywheel housing bolts and the flywheel housing-to-engine block bolts. TIGHTEN the bolts to specification. REFER to: Specifications (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Specifications). • INSPECT the bearings. INSPECT the gears and gear teeth for wear or damage. INSTALL new components as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Gears clash when shifting from one forward gear to another	• Pilot bearing • Gear teeth and/or synchronizer • Damaged shift forks or worn shift fork inserts	• CHECK for a binding condition between the input shaft and the engine crankshaft pilot bearing. INSTALL new components as necessary. REFER to: Pilot Bearing - 2.5L Duratec-HE (122kW/165PS) - MI4 (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal

		and Installation). REFER to: Pilot Bearing - Diesel (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation). • REPAIR or INSTALL new components as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • INSPECT for wear or damage. INSTALL new components as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Transmission jumps out of gear	• Transmission-to-engine mounting bolts • Crankshaft pilot bearing • Internal damage • Gear teeth	• TIGHTEN the bolts to specification. • INSTALL a new pilot bearing. REFER to: Pilot Bearing - 2.5L Duratec-HE (122kW/165PS) - MI4 (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). REFER to: Pilot Bearing - Diesel (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation). • INSPECT the synchronizer sleeves for free movement on their hubs. INSPECT the synchronizer blocking rings for widened

		index slots, rounded clutch teeth and smooth internal surface. REPAIR or INSTALL a new component as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • If worn or damaged, INSTALL new gears. REFER to: Countershaft (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly and Assembly of Subassemblies).
• Transmission will not shift into one gear — all others OK	• Manual shift linkage • Backup switch ball • Internal components	• REPAIR or INSTALL new components as necessary. • If REVERSE is the problem, CHECK reverse lamp switch for ball frozen in extended position. • INSPECT the shift rail and fork system, synchronizer system and the gear clutch teeth for restricted travel. REPAIR or INSTALL new components as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Transmission is locked in one gear and cannot be shifted out of that gear	• Internal components • Fork on rail or shift rail	• INSPECT the problem gears, shift rails, forks and the

	shift rail	and the synchronizer for wear or damage. REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • CHECK the shift rail interlock system. REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Transmission leaks	• Lubricant • Other component leaking • False report • Fill and drain plugs	• CHECK the level and type. • IDENTIFY leaking fluid as engine, power steering or transmission fluid. REPAIR as necessary. • REMOVE all traces of lube on the exposed transmission surfaces. CHECK the vent for free breathing. OPERATE the transmission and INSPECT for new leakage. REPAIR as necessary. • CHECK fill and drain plugs and bore threads. REPAIR as necessary. TIGHTEN plugs to specified torque value. REFER to: Transmission Draining and Filling (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, General

		Procedures).
• Bearing failure	• Other part failure • Raceways or rollers • Lubricant • Vibration break-up of retainer and brinelling of races • Bearing(s) • Shafts or bore • Overloading of vehicle • Incorrect preload • Input shaft oil dam • Oil baffle in the input bearing shim pack	• REMOVE, DISASSEMBLE and CLEAN the transmission. Inspect for damaged parts and install new components as necessary. (Note: RESET the bearing preload if any new tapered bearings are installed.) REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • DETERMINE the cause of vibration and CORRECT. Otherwise, PROCEED as above. • INSTALL new components as necessary and VERIFY the oil dam installation is correct. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). CHECK for correct installation of the snap ring on the mainshaft next to the oil dam. • INSTALL a new oil baffle, making sure it is not damaged during assembly. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75,

		Disassembly).

Symptom Chart — NVH

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Symptom	Possible Sources	Action
NOTE: *NOTE: NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04. Since it is possible any one of multiple systems may be the cause of a symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to Section 100-04 for the next likely system and continue diagnosis.*		
• Excessive noise	• Clutch disc damper damaged • Transmission input shaft pilot bearing worn or damaged • Crankshaft end play excessive • Release bearing worn or damaged	• REMOVE the clutch disc and pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). INSPECT the clutch disc for damage. INSPECT the transmission input shaft pilot bearing for wear and damage. REFER to Pilot Bearing Check. • CHECK the crankshaft end play. REFER to: Crankshaft End Play (303-00 Engine System - General Information, General Procedures). • CHECK the clutch release hub and bearing, and guide tube for wear and damage. REPAIR all components as necessary.
• Clutch rattling noise — occurs with clutch engaged, noise changes/disappears with clutch pedal pressed	• Flywheel bolts loose • Clutch housing bolts or clutch pressure plate bolts loose	• TIGHTEN the bolts to specifications. CHECK the bolts for damage. REFER to: Specifications (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Specifications). • TIGHTEN the bolts to specifications. CHECK the bolts for damage. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).
• Clutch squeaking noise — noise is heard when the clutch is operated. Vehicle moves slowly or creeps when the clutch is disengaged. Can also be difficult to shift into 1st and REVERSE gears	• Pilot bearing seized or damaged	• INSTALL a new pilot bearing. REFER to: Pilot Bearing - 2.5L Duratec-HE (122kW/165PS) - MI4 (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). REFER to: Pilot Bearing - Diesel (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
• Clutch squeaking noise — occurs with clutch pedal pressed/released	• Worn clutch pedal shaft or bushings	• INSPECT the clutch pedal for wear or damage. REPAIR as necessary. REFER to: Clutch Master Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation).
• Clutch whirring/rattle noise — occurs when clutch pedal is pressed	• Worn, damaged or misaligned clutch release bearing	• INSTALL a new clutch release bearing. REFER to: Clutch Slave Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation).
• Clutch grating/grinding noise — occurs when clutch pedal is	• Clutch pressure plate fingers bent	• INSPECT the clutch pressure plate release fingers. INSTALL a new

occurs when clutch pedal is pressed	plate fingers bent or worn • Contact surface of clutch release bearing worn or damaged	release fingers. INSTALL a new pressure plate as necessary. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). • INSTALL a new clutch release bearing. REFER to: Clutch Slave Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation).
• Clutch chatter — a small amount of noise when clutch pedal is released at initial take-off	• Clutch engagement	• Acceptable operating condition.
• Clutch chatter/grabs — in some cases a shudder is felt. Occurs with clutch pedal pressed/released	• Damaged or worn powertrain/driveline mounts • Binding or dragging plunger of the clutch master cylinder or slave cylinder • Grease or oil on the clutch disc facing • Clutch disc surface glazed or damaged • Damaged or worn clutch pressure plate • Flywheel surface damaged or glazed	• INSPECT the powertrain/drivetrain mounts. INSTALL new mounts as necessary. REFER to: Engine - 5-Speed Manual Transmission - MT75 (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal). REFER to: Engine - 5-Speed Manual Transmission - MT75 (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal). • CHECK the master and slave cylinder operation. INSPECT the components for damage or wear. INSTALL a new master or slave cylinder as necessary. REFER to: Clutch Master Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation). REFER to: Clutch Slave Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation). • CHECK the input shaft seal and rear main oil seal. REPAIR as necessary. INSTALL a new clutch disc. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). • INSPECT the clutch disc surface for a glazed, hardened or damage condition. CARRY OUT a disc check. INSTALL a new clutch disc as necessary. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). • INSPECT the clutch pressure plate for wear or damage. INSTALL a new clutch pressure plate as necessary. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). • INSPECT the flywheel for damage or wear. CARRY OUT a flywheel runout check. INSTALL a new flywheel as necessary.
• Clutch chatter noise — noise when	• Pilot bearing worn,	• INSPECT the clutch pressure plate

clutch pedal is released at initial take-off. Clutch is hard to engage and disengage	damaged or not correctly aligned in bore	release fingers for uneven wear, clutch components burnt or a seized pilot bearing. INSTALL a new pilot bearing as necessary. REFER to: Pilot Bearing - 2.5L Duratec-HE (122kW/165PS) - MI4 (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). REFER to: Pilot Bearing - Diesel (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
• Transmission rattling/clattering noise — occurs in NEUTRAL or in gear, at idle	• Incorrect fluid level or fluid quality	• COMPARE with other like vehicles. CHECK that the transmission is filled to the correct level and with the specified fluid. For the fluid type, REFER to: Transmission Draining and Filling (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, General Procedures).
• Transmission rattling/clattering noise — noise at idle in NEUTRAL	• Worn or rough reverse idler gear • Excessive backlash in gears • Worn countershaft gears	• CHECK the reverse idler gear. REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • CHECK the gear backlash. ADJUST as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Transmission whine — a mild whine at extreme speeds or high rpm	• Rotating gears/geartrain	• Acceptable noise.
• Transmission whine — a high pitched whine, also described as a squeal	• Transmission gears are worn (high mileage vehicle) • Mismatched gear sets • Damaged or worn transmission bearing	• Result of normal gear wear. REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • INSPECT the gear sets for an uneven wear pattern on the face of the gear teeth. REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • INSPECT the transmission bearings. INSTALL new bearings as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Transmission growling/humming — noise occurs in the forward gears. The noise is more prominent when the gear is loaded. The problem gear can be located as the noise occurs in a specific gear position	• Gear is cracked, chipped or rough	• INSPECT the transmission gears for damage or wear. INSTALL new gears as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Transmission hissing — noise in NEUTRAL or in forward gears. As bearings wear or break up, the noise changes to a thumping noise	• Damaged or worn bearings	• INSPECT the transmission bearings. INSTALL new bearings as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Transmission knocking/thudding —	• Bearings with	• INSPECT the transmission bearings.

noise at low speeds in forward gears	damaged balls or rollers or with pitted and spalled races	INSTALL new bearings as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Transmission rumble/growl — noise at higher speeds in forward gears, more pronounced in a coast/deceleration condition	• Incorrect driveline angle • Driveshaft out of balance or damaged	• CHECK the driveline angle. REPAIR as necessary. REFER to: Driveline System (205-00 Driveline System - General Information, Diagnosis and Testing). • CHECK the driveshaft for damage, missing balance weights or undercoating. REFER to: Driveline System (205-00 Driveline System - General Information, Diagnosis and Testing).
• Transmission rumble/growl — noise at all speeds in forward gears, more pronounced in a heavy acceleration condition	• Damaged or worn transmission bearing or gears (high mileage vehicles)	• CHECK transmission fluid for excessive metal particles. REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).

Pinpoint Tests

PINPOINT TEST A: CLUTCH SLIPPAGE

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation). for information about these practices.

Normal Operation and Fault Condition

The clutch is designed to transfer the power from the engine to the transmission, which may be stationary (starting) or rotating at a different speed (upshifting or downshifting). The clutch is functioning correctly when the engine and transmission are rotating at the same speed with the clutch engaged. Clutch pedal movement is transmitted by fluid pressure, which actuates the clutch release hub bearing. The clutch release hub and bearing pushes on the spring center towards the flywheel. The diaphragm spring pivots at the fulcrum, relieving the load on the clutch pressure plate. Steel spring straps riveted in the clutch pressure plate cover pull the clutch pressure plate from the clutch disc, disengaging the engine torque from the transmission.

This pinpoint test is intended to diagnose the following:

- Clutch pedal
- Clutch hydraulic system
- Clutch disc
- Clutch pressure plate

PINPOINT TEST A : CLUTCH SLIPPAGE

A1 INSPECT THE CLUTCH PEDAL

- Ignition OFF.
- Block the wheels and apply the park brake.
- Apply and slowly release the clutch pedal.

Does the clutch pedal release without binding?

Yes	GO to A2
No	INSPECT the clutch pedal.

A2 CHECK THE HYDRAULIC SYSTEM

- Ignition OFF.
- Apply and release the clutch pedal.

Is there residual hydraulic pressure at bleed screw?

Yes	INSTALL a new clutch master cylinder. REFER to: Clutch Master Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation).
No	GO to A3

A3 CARRY OUT A STALL TEST

- Start the engine.
- Block the wheels and apply the park brake.
- Place the transmission in 4th gear.
- Increase the speed to 2,000 rpm and slowly release the clutch pedal.

Does the engine stall within 5 seconds?

Yes	The clutch is not slipping. VERIFY the customer concern.
No	INSPECT the clutch components for damage.

PINPOINT TEST B: CLUTCH CHATTER OR SHUDDER

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
for information about these practices.

Normal Operation and Fault Condition

The clutch is designed to transfer the power from the engine to the transmission, which may be stationary (starting) or rotating at a different speed (upshifting or downshifting). The clutch is functioning correctly when the engine and transmission are rotating at the same speed with the clutch engaged. Clutch pedal movement is transmitted by fluid pressure, which actuates the clutch release hub bearing. The clutch release hub and bearing pushes on the spring center towards the flywheel. The diaphragm spring pivots at the fulcrum, relieving the load on the clutch pressure plate. Steel spring straps riveted in the clutch pressure plate cover pull the clutch pressure plate from the clutch disc, disengaging the engine torque from the transmission.

This pinpoint test is intended to diagnose the following:

This pinpoint test is intended to diagnose the following:

- Engine or transmission mounts
- Clutch disc
- Clutch pressure plate
- Flywheel
- Pilot bearing
- Input shaft

PINPOINT TEST B : CLUTCH CHATTER OR SHUDDER

B1 CHECK THE ENGINE AND TRANSMISSION MOUNTS

- Inspect all the engine and transmission mounts for loose fasteners or damage.

Are any of the engine or transmission mounts loose or damage?

Yes	TIGHTEN or INSTALL new engine mounts or transmission mounts as necessary.
No	GO to B2

B2 INSPECT THE PRESSURE PLATE BOLTS

- Inspect the pressure plate-to-flywheel bolts.

Are any of the pressure plate-to-flywheel bolt loose?

Yes	TIGHTEN or INSTALL new bolts as necessary. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).
No	GO to B3

B3 INSPECT THE PRESSURE PLATE

- Remove the clutch pressure plate.
  REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).
- Inspect the clutch pressure plate.

Are any signs of damage present on the clutch pressure plate?

Yes	INSTALL a new clutch pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).
No	GO to B4

B4 CHECK THE CLUTCH

- Inspect the clutch disc for wear or damage.

Is the clutch disc OK?

Yes	GO to B5
No	INSTALL a new clutch disc. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).

B5 INSPECT THE FLYWHEEL

- Inspect the flywheel for damage and runout.

Is the fly wheel OK?

Yes	GO to B6
No	TIGHTEN or INSTALL a new flywheel. REFER to: Engine Accessories (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal). REFER to: Engine Accessories (303-01A Engine - 2.5L Duratec-HE (122kW/165PS) - MI4, Installation). REFER to: Engine Accessories (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal). REFER to: Engine Accessories (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Installation).

B6 INSPECT THE PILOT BEARING

- Inspect the pilot bearing for wear or damage.

Are there signs of wear or damage?

Yes	INSTALL a new pilot bearing. REFER to: Pilot Bearing - 2.5L Duratec-HE (122kW/165PS) - MI4 (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). REFER to: Pilot Bearing - Diesel (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
No	GO to B7

B7 INSPECT THE INPUT SHIFT

- Inspect the input shaft for signs of wear or damage.

Are any signs of wear or damage present on the input shaft?

Yes	INSTALL a new input shaft. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
No	VERIFY the customer concerns. GO to Symptom Chart.

PINPOINT TEST C: CLUTCH PEDAL FEELS SPONGY OR HAS EXCESSIVE TRAVEL/CLUTCH WILL NOT DISENGAGE/CLUTCH SYSTEM LEAKAGE

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
for information about these practices.

Normal Operation and Fault Condition

The clutch is designed to transfer the power from the engine to the transmission, which may be stationary (starting) or rotating at a different speed (upshifting or downshifting). The clutch is functioning correctly when the engine and transmission are rotating at the same speed with the clutch engaged. Clutch pedal movement is transmitted by fluid pressure, which actuates the clutch release hub bearing. The clutch release hub and bearing pushes on the spring center towards the flywheel. The diaphragm spring pivots at the fulcrum, relieving the load on the clutch pressure plate. Steel spring straps riveted in the clutch pressure plate cover pull the clutch pressure plate from the clutch disc, disengaging the engine torque from the transmission.

This pinpoint test is intended to diagnose the following:

This pinpoint test is intended to diagnose the following:

- Internal operation
- Clutch pedal reserve
- Clutch slave cylinder travel
- Clutch disc
- Clutch pressure plate
- Clutch pedal free play

PINPOINT TEST C : CLUTCH PEDAL FEELS SPONGY OR HAS EXCESSIVE TRAVEL/CLUTCH WILL NOT DISENGAGE/CLUTCH SYSTEM LEAKAGE

C1 CHECK THE FLUID LEVEL

NOTE: *Do not check the hydraulic system after a road test. Allow the vehicle to cool down before carrying out the clutch hydraulic system check.*

- Remove the brake and clutch reservoir cap.
- Check the fluid level of the brake and clutch reservoir.

Is the fluid level at or above the step mark?

Yes	INSTALL the reservoir cap. GO to C2
No	ADD brake fluid to the specified level. GO to C2

C2 INSPECT THE HYDRAULIC SYSTEM FOR LEAKAGE

- Check the reservoir and reservoir tubes for leakage.
- Check the master cylinder and hydraulic tube for leakage.
- Check the clutch slave cylinder and the hydraulic tube connection for leakage.

Are there any signs of leakage?

Yes	INSTALL new components as necessary.
No	GO to C3

C3 CHECK INTERNAL OPERATION

- Remove the reservoir cap.
- Have an assistant slowly apply and release the clutch pedal.
- On the down stroke, the fluid level should not increase by more than 1.0 mm (0.039 in).

Does the fluid level increase more than 1 mm (0.039 in)?

Yes	INSTALL a new clutch master cylinder assembly. REFER to: Clutch Master Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation).
No	GO to C4

C4 CHECK THE CLUTCH PEDAL RESERVE

NOTE: *The clutch reserve is the distance between the clutch pedal when fully applied and the position when the vehicle starts to move forward.*

- Park the vehicle on a level surface.
- Verify the clutch hydraulic system is properly bled.
  REFER to: Clutch System Bleeding (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, General Procedures).
- Check for obstructions behind clutch pedal.
- Attach a cable tie to the lower clutch pedal.
- Attach a tape measure to the cable tie.
- Apply the clutch fully and start the vehicle.
- Shift the transmission into 1st gear.
- Use the seam on the steering wheel as a reference point.
- While observing the tape measure, slowly engage the clutch, noting when the vehicle starts to move forward or a noticeable engine rpm decrease occurs (noted on tachometer).

Is the clutch pedal reserve greater than or equal to 25 mm (0.984 in)?

Yes	The clutch hydraulic system is OK.
No	GO to C5

C5 CHECK THE CLUTCH PRESSURE PLATE

- Remove the clutch pressure plate.
  REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).
- Inspect the clutch pressure plate for wear or runout.

REFER to: Clutch (308-01A Clutch - 5-Speed Manual Transmission - MT75, Diagnosis and Testing).

Are there any signs of excessive wear or runout to the clutch pressure plate?

Yes	INSTALL a new clutch pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).
No	GO to C6

C6 INSPECT THE CLUTCH DISC

- Carry out the clutch disc inspection procedure.
  REFER to: Clutch (308-01A Clutch - 5-Speed Manual Transmission - MT75, Diagnosis and Testing).

Is the clutch disc OK?

Yes	GO to C7
No	INSTALL a new clutch disc. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).

C7 CHECK CLUTCH PEDAL FREE PLAY

NOTE: *The clutch pedal free play is the distance between the clutch pedal when fully released and the position when slight resistance is felt on downward motion.*

- Ignition OFF.
- Attach a tape measure to the cable tie.
- While observing the tape measure, slowly push downward on the clutch pedal until a slight resistance is felt.

Is the clutch pedal free play less than 13 mm (0.511 in) ?

Yes	The clutch hydraulic system is OK.
No	BLEED the clutch hydraulic system. REFER to Clutch System Bleeding.

PINPOINT TEST D: CLUTCH DRAG, ALSO HARD TO SHIFT

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
for information about these practices.

Normal Operation and Fault Condition

The clutch is designed to transfer the power from the engine to the transmission, which may be stationary (starting) or rotating at a different speed (upshifting or downshifting). The clutch is functioning correctly when the engine and transmission are rotating at the same speed with the clutch engaged. Clutch pedal movement is transmitted by fluid pressure, which actuates the clutch release hub bearing. The clutch release hub and bearing pushes on the spring center towards the flywheel. The diaphragm spring pivots at the fulcrum, relieving the load on the clutch pressure plate. Steel spring straps riveted in the clutch pressure plate cover pull the clutch pressure plate from the clutch disc, disengaging the engine torque from the transmission.

This pinpoint test is intended to diagnose the following:

- Internal operation
- Clutch pedal reserve
- Clutch slave cylinder travel
- Clutch disc
- Clutch pressure plate

- Clutch pedal free play

PINPOINT TEST D : CLUTCH DRAG, ALSO HARD TO SHIFT

D1 CHECK FLUID LEVEL

- Ignition OFF.
- Remove the reservoir cap.
- Inspect the fluid level in the brake and clutch reservoir.

Is the fluid level at or above the step mark?

Yes	INSTALL the reservoir cap. GO to D2
No	ADD brake fluid. GO to D2

D2 INSPECT THE CLUTCH HYDRAULIC SYSTEM FOR LEAKAGE

- Inspect the clutch master cylinder and the hydraulic tubes for leakage.
- Inspect the reservoir and reservoir tube for leakage.
- Inspect the clutch slave cylinder and the hydraulic tube connection for leakage.

Are there any signs of leakage?

Yes	INSTALL new component as necessary.
No	GO to D3

D3 CHECK INTERNAL OPERATION

- Remove the reservoir cap.
- Have an assistant slowly apply and release the clutch pedal.
- On the down stroke, the fluid level should not increase by more than 1 mm (0.039 in).

Does the fluid level increase more than 1 mm (0.039 in)?

Yes	INSTALL a new clutch master cylinder assembly. REFER to: Clutch Master Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation).
No	GO to D4

D4 CHECK THE CLUTCH PEDAL RESERVE

NOTE: *The clutch reserve is the distance between the clutch pedal when fully applied and the position when the vehicle starts to move forward.*

- Park the vehicle on a level surface.
- Check for obstructions behind the clutch pedal. Check the carpet for correct installation
- Attach a cable tie to the lower clutch pedal.
- Attach a tape measure to the cable tie.
- Apply the clutch fully and start the vehicle.
- Shift the transmission into 1st gear.
- Use the seam on the steering wheel as a reference point.
- While observing the tape measure, slowly engage the clutch, noting when the vehicle starts to move forward or a noticeable engine rpm decrease occurs (noted on tachometer).

Is the clutch pedal reserve greater than or equal to 25 mm (0.984 in)?

Yes	The clutch hydraulic system is OK.
No	GO to D5

D5 CHECK THE PEDAL FREE PLAY

NOTE: *The clutch pedal free play is the distance between the clutch pedal when fully released and the position when slight resistance is felt on downward motion.*

- Ignition OFF.
- Attach a tape measure to the cable tie.
- While observing the tape measure, slowly push downward on the clutch pedal until a slight resistance is felt.

Is the clutch pedal free play less than 13 mm (0.511 in)?

Yes	The clutch hydraulic system is OK.
No	GO to D6

D6 CHECK THE CLUTCH PRESSURE PLATE

- Remove the clutch pressure plate.
  REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).
- Inspect the clutch pressure plate for wear or runout. REFER to Clutch Pressure Plate Check.

Are there any signs of excessive wear or runout to the clutch pressure plate?

Yes	INSTALL a new clutch pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).
No	GO to D7

D7 INSPECT THE CLUTCH DISC

- Carry out the clutch disc inspection procedure.

Is the clutch disc OK.

Yes	GO to D8
No	INSTALL a new clutch disc. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).

D8 INSPECT THE TRANSMISSION

- Remove the transmission.
  REFER to: Transmission - 4x2 (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Removal).
  REFER to: Transmission - 4x4 (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Removal).
- Disassemble the transmission.
  REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
- Carry out the following:
  - Inspect all the shift rails for excessive scuffing or wear.
  - Check the interlock pins on the shift rail.
  - Make sure the interlock bolts are tightened to specifications.
  - Inspect the shift pads for wear or cracking.
  - Inspect the shift forks for wear or damage.
  - Check the synchronizer rings of the affected gear for wear or damage.
  - Check the synchronizer hubs of the affected gear for wear or damage.
  - Inspect the clutching teeth of the affected gear.

Are there any internal components worn or damaged?

Yes	INSTALL new components or REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Assembly).
No	ASSEMBLE and INSTALL the transmission. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Assembly).

PINPOINT TEST E: CLUTCH PEDAL PULSATION

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation). for information about these practices.

Normal Operation and Fault Conditions

The clutch is designed to transfer the power from the engine to the transmission, which may be stationary (starting) or rotating at a different speed (upshifting or downshifting). The clutch is functioning correctly when the engine and transmission are rotating at the same speed with the clutch engaged. Clutch pedal movement is transmitted by fluid pressure, which actuates the clutch release hub bearing. The clutch release hub and bearing pushes on the spring center towards the flywheel. The diaphragm spring pivots at the fulcrum, relieving the load on the clutch pressure plate. Steel spring straps riveted in the clutch pressure plate cover pull the clutch pressure plate from the clutch disc, disengaging the engine torque from the transmission.

This pinpoint test is intended to diagnose the following:

- Clutch disc
- Clutch pressure plate
- Flywheel

PINPOINT TEST E : CLUTCH PEDAL PULSATION

E1 CHECK THE CLUTCH PEDAL PULSATION

- Start the engine.
- With the transmission in NEUTRAL, slowly apply the clutch pedal.

Does the clutch pedal pulsate while being applied?

Yes	GO to E2
No	VERIFY the customer concern. GO to Symptom Chart.

E2 INSPECT THE PRESSURE PLATE BOLTS

- Inspect the pressure plate-to-flywheel bolts.

Are any of the pressure plate-to-flywheel bolts loose?

Yes	TIGHTEN or INSTALL new bolts. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).
No	GO to E3

E3 INSPECT THE CLUTCH PRESSURE PLATE

- Remove the clutch pressure plate.
  REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).

- Inspect the clutch pressure plate for damage.

Are there any signs of damage present on the clutch pressure plate?

Yes	INSTALL a new clutch pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).
No	GO to E4

E4 INSPECT THE CLUTCH DISC

- Carry out clutch disc inspection procedure. REFER to Clutch Disc Check.

Is the clutch disc OK?

Yes	GO to E5
No	INSTALL a new clutch disc. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).

E5 INSPECT THE FLYWHEEL

- Inspect the flywheel for damage and runout. REFER to Flywheel Runout Check.

Is flywheel OK?

Yes	VERIFY the customer concern. GO to Symptom Chart.
No	TIGHTEN or INSTALL a new flywheel.

PINPOINT TEST F - CLUTCH-RELATED VIBRATIONS

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation). for information about these practices.

Normal Operation and Fault Conditions

The clutch is designed to transfer the power from the engine to the transmission, which may be stationary (starting) or rotating at a different speed (upshifting or downshifting). The clutch is functioning correctly when the engine and transmission are rotating at the same speed with the clutch engaged. Clutch pedal movement is transmitted by fluid pressure, which actuates the clutch release hub bearing. The clutch release hub and bearing pushes on the spring center towards the flywheel. The diaphragm spring pivots at the fulcrum, relieving the load on the clutch pressure plate. Steel spring straps riveted in the clutch pressure plate cover pull the clutch pressure plate from the clutch disc, disengaging the engine torque from the transmission.

This pinpoint test is intended to diagnose the following:

- Engine components
- Accessory drive belts
- Release bearing
- Flywheel

PINPOINT TEST F : CLUTCH-RELATED VIBRATIONS

F1 CHECK FOR ENGINE COMPONENT GROUNDING

- With the vehicle in NEUTRAL, position it on a hoist.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- Check the engine and transmission mounts for grounding.

- Check for exhaust manifolds or other engine component grounding on the body or frame.

Is there evidence of grounding on the body or frame?

Yes	REPAIR the components as necessary.
No	GO to F2

F2 CHECK FOR ACCESSORY DRIVE VIBRATIONS

- Remove the accessory drive belt.
  REFER to: Accessory Drive Belt (303-05A Accessory Drive - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
  REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
- Start the engine.

Does the vibration stop when the accessory drive belt is removed from the engine?

Yes	INSTALL a new accessory drive belt. REFER to: Accessory Drive Belt (303-05A Accessory Drive - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
No	STOP the engine and INSTALL the drive belt. GO to F3

F3 CHECK FOR CLUTCH RELEASE BEARING NOISE

NOTE: *With the transmission in NEUTRAL, transmission rollover noise can be heard. Make sure to distinguish between rollover noise and clutch release bearing noise.*

- Start the engine.
- Apply and hold the clutch pedal.

Is a whirring, grating or grinding noise present only when pedal is pushed?

Yes	INSTALL a new clutch release bearing. REFER to: Clutch Slave Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation).
No	GO to F4

F4 INSPECT THE FLYWHEEL

- Ignition OFF.
- Remove the transmission.
  REFER to: Transmission - 4x2 (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Removal).
  REFER to: Transmission - 4x4 (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Removal).
- Carry out a flywheel check. REFER to Flywheel Runout Check.

Is the flywheel OK?

Yes	VERIFY the customer concern. GO to Symptom Chart.
No	TIGHTEN or INSTALL a new flywheel.

PINPOINT TEST G: EXCESSIVE NOISE

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation). for information about these practices.

Normal Operation and Fault Conditions

The clutch is designed to transfer the power from the engine to the transmission, which may be stationary (starting) or rotating at a different speed (upshifting or downshifting). The clutch is functioning correctly when the engine and transmission are rotating at the same speed with the clutch engaged. Clutch pedal movement is transmitted by fluid pressure, which actuates the clutch release hub bearing. The clutch release hub and bearing pushes on the spring center towards the flywheel. The diaphragm spring pivots at the fulcrum, relieving the load on the clutch pressure plate. Steel spring straps riveted in the clutch pressure plate cover pull the clutch pressure plate from the clutch disc, disengaging the engine torque from the transmission.

This pinpoint test is intended to diagnose the following:

This pinpoint test is intended to diagnose the following:

- Transmission
- Clutch slave cylinder
- Pilot bearing

PINPOINT TEST G : EXCESSIVE NOISE

G1 TRANSMISSION NEUTRAL GEAR ROLLOVER TEST

- Start the engine.
- With the engine at idle, the transmission in NEUTRAL and the clutch engaged (pedal up). If noise is excessive, apply the clutch pedal to stop the transmission input shaft from rotating.

Does the noise stop when the clutch pedal is applied?

Yes	INSPECT the clutch components for damage.
No	GO to G2

G2 CHECK THE CLUTCH SYSTEM

- Ignition OFF.
- Using slow, medium, then fast stroke, and release the clutch pedal.

Is there a squeak?

Yes	GO to G3
No	The clutch system is OK. VERIFY the customer concern.

G3 CHECK THE CPP SWITCH

- Remove the CPP switch. Using slow, medium, then fast stroke, apply and release the clutch pedal.

Is there a squeak?

Yes	REINSTALL the CPP switch. GO to G4
No	INSTALL a new CPP switch.

G4 CHECK THE CLUTCH SLAVE CYLINDER

- Remove the transmission.
  REFER to: Transmission - 4x2 (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Removal).
  REFER to: Transmission - 4x4 (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Removal).
- Inspect the clutch slave cylinder for wear or loss of lubrication.

Are there any signs of wear or loss of lubrication?

Yes	INSTALL a new clutch slave cylinder. REFER to: Clutch Slave Cylinder (308-02A Clutch Controls - 5-Speed Manual Transmission - MT75, Removal and Installation).
No	GO to G5

G5 CHECK THE PILOT BEARING

- Inspect the pilot bearing for wear or damage.

Is the pilot bearing OK?

Yes	GO to G6
No	INSTALL a new pilot bearing. REFER to: Pilot Bearing - 2.5L Duratec-HE (122kW/165PS) - MI4 (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation). REFER to: Pilot Bearing - Diesel (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).

G6 CHECK THE DAMPER SPRINGS

- Inspect the damper springs for fatigue or breakage.

Are there any signs of fatigue or breakage?

Yes	INSTALL a new clutch disc. REFER to: Clutch Disc and Pressure Plate (308-01A Clutch - 5-Speed Manual Transmission - MT75, Removal and Installation).
No	INSPECT the crankshaft end play.

Disassembly

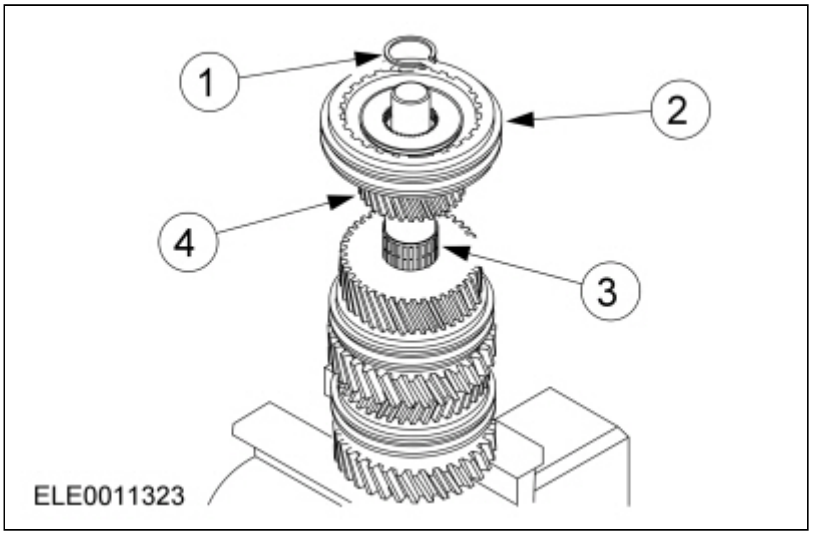
1. **NOTICE: Mark the position of the synchronizer rings in relation to the synchronizer units to aid installation.**

   Remove the input shaft and fourth gear synchronizer ring from the output shaft.
   - Remove the output shaft locating bearing.

2. Remove the fifth gear wheel and synchronizer ring from the output shaft.
   1. Remove the gear wheel.
   2. Remove the gear synchronizer ring.
   3. Remove the needle roller bearing.

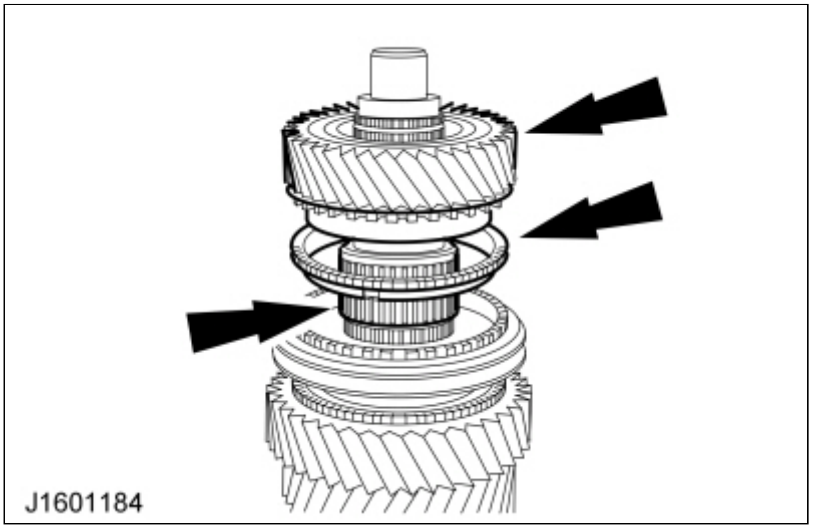


3. **WARNING: Do not allow the synchronizers to fall apart. Failure to follow these instructions may result in personal injury.**

   NOTICE: Use soft jaws for all operations in a vise.

   NOTE: *Clamp the output shaft in a vise with the output end.*

   Remove the third/fourth gear synchronizer unit together with the third gear wheel.
   1. Remove the circlip.
   2. Third/fourth gear synchronizer.
   3. Needle roller bearing.
   4. Third gear wheel.



4. Using the special tool, remove the third gear bearing ring.
   - Locate the special tool in the recesses off the bearing ring.

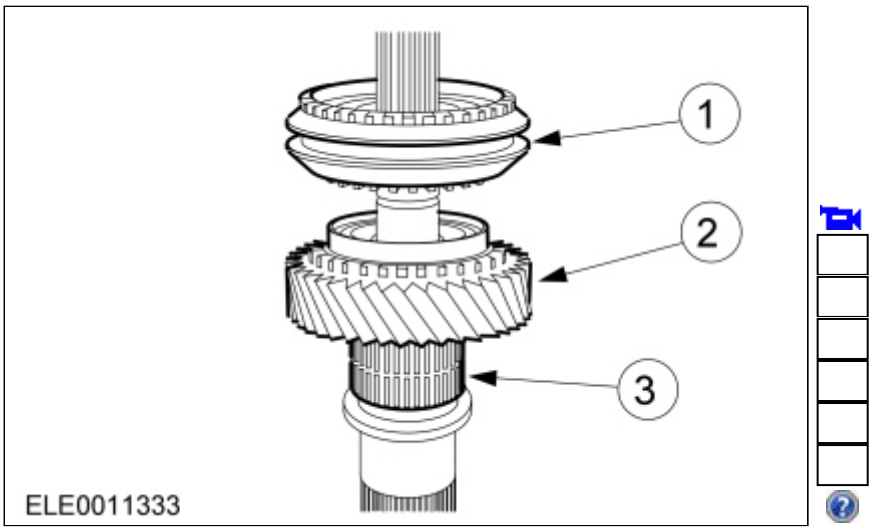
5. **NOTE:** *Mark the position of the second gear wheel in relation to the synchronizer ring to aid installation.*

   Remove the second gear wheel, the needle roller bearing and synchronizer ring.

6. **NOTE:** *Mark the position of the shift ring in relation to the first gear wheel to aid installation.. Components are paired.*

   NOTE: *Remove the circlip.*

   Remove the first/second gear synchronizer and the first gear wheel.
   1. First/second gear synchronizer.
   2. First gear wheel.
   3. Needle roller bearing.

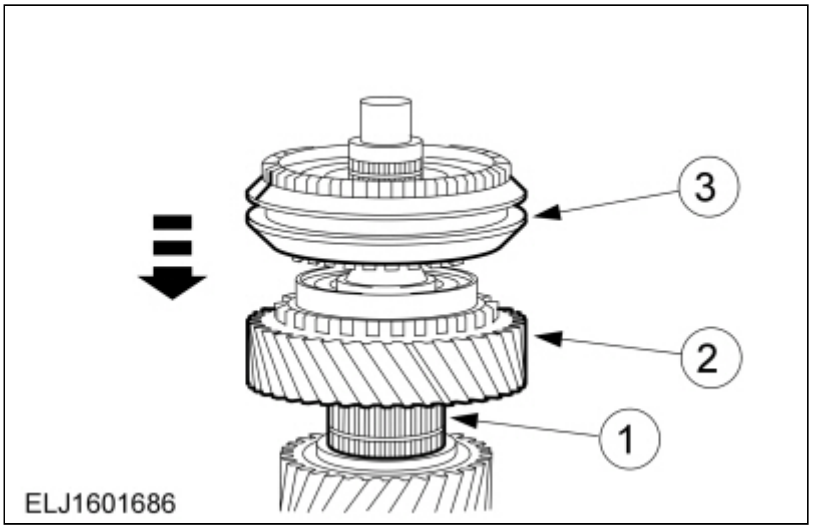


7. **NOTE:** *Mark the position of the shift ring in relation to the reverse gear wheel to aid installation. Components are paired.*

   NOTE: *Clamp the output shaft the other way round in the vise.*

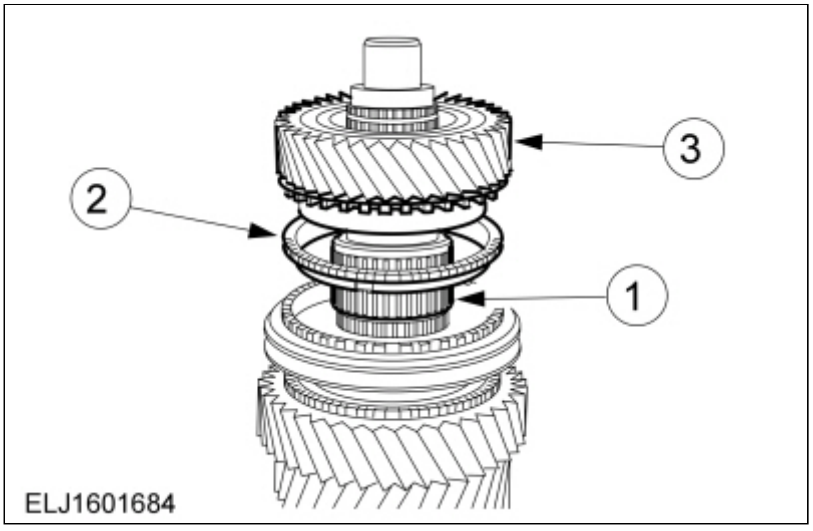
   NOTE: *Remove the circlip.*

   Remove the fifth/reverse gear synchronizer, the reverse gear wheel and needle roller bearing.
   1. Fifth/reverse gear synchronizer.
   2. Reverse gear wheel.
   3. Needle roller bearing.



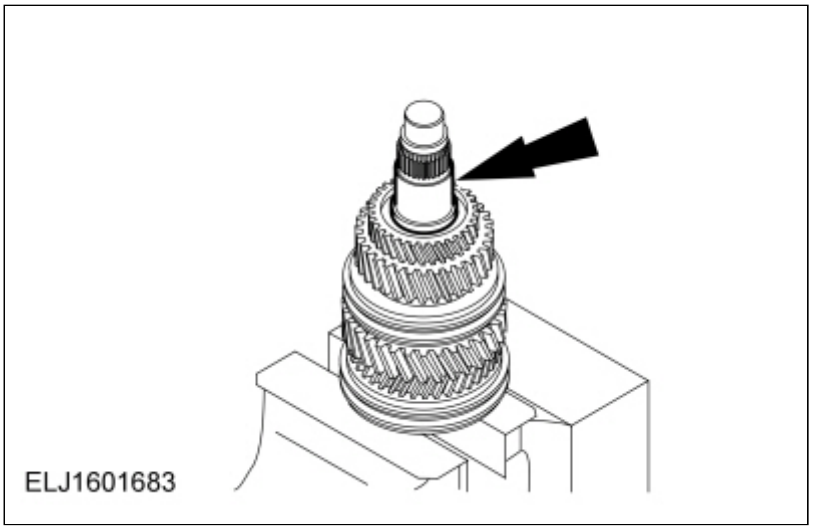
Assembly

1. Carefully clean and check all sliding parts and lubricate the synchronizer rings with Manual transmission fluid (WSD-M2C200-C) before assembly.



2. Install the needle roller bearing, reverse gear wheel and synchronizer unit.
   1. Install the reverse gear wheel.
   2. Install the synchronizer.
   3. Install the snap ring.

3. Install the first/second gear synchronizer unit.
   1. Install the needle roller bearing.
   2. Install the gear wheel.
   3. Install the synchronizer unit.
   - Install the circlip.

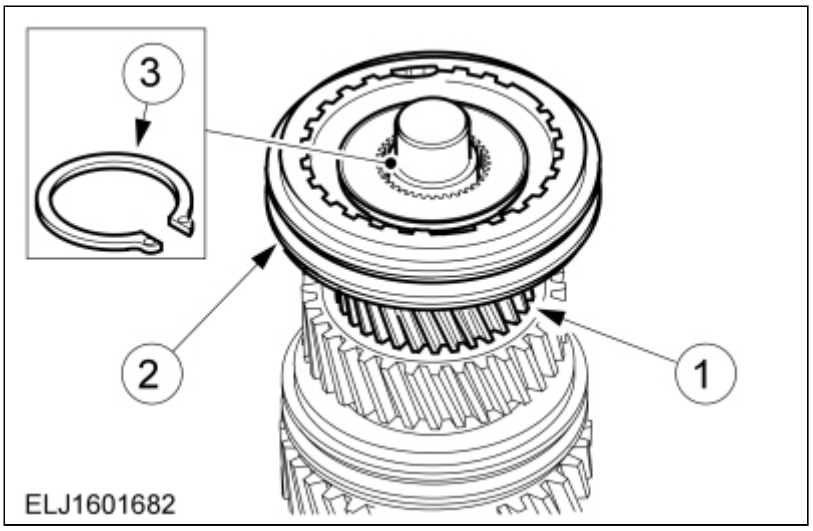


4. Install the synchronizer ring, needle roller bearing and second gear wheel.
    1. Install the needle roller bearing.
    2. Install the synchronizer ring.
    3. Install the gear wheel.

5. **NOTE:** *Slide the inner bearing ring onto the output shaft as far as the shoulder.*

   NOTE: *Install a new inner bearing ring and needle bearing.*

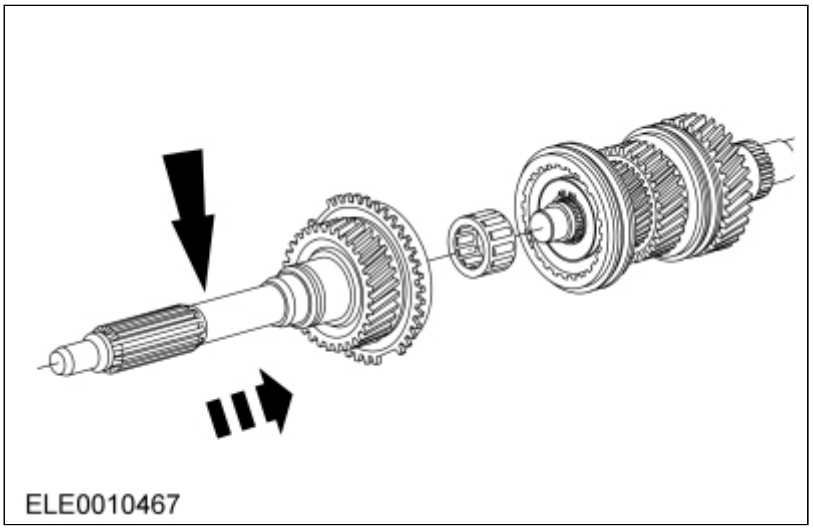
   Using a hot air gun heat the inner bearing ring to approximately 100 ° C and install it.



6. **NOTE:** *Install the synchronizer with the small collar upwards.*

   NOTE: *Install the needle roller bearing.*

Install the third/fourth gear synchronizer.



1. Install the gear wheel.
2. Install the synchronizer.
3. Install the circlip.

7. Install the fifth gear wheel.
    1. Install the needle roller bearing.
    2. Install the synchronizer ring.
    3. Install the gear wheel.

8. Install the output shaft locating bearing, synchronizer ring and the input shaft.

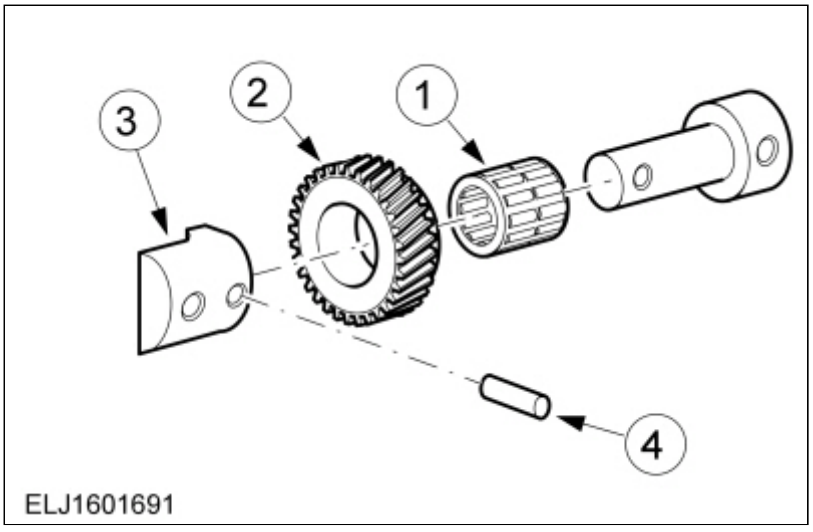
Reverse Idler Gear

Disassembly



1. Disassemble the reverse gear idler shaft.
    1. Drive out the roll pin.
    2. Remove the bearing housing.
    3. Remove the reverse idler gear.
    4. Remove the needle roller bearing.

Assembly

1. **NOTE:** *Do not install the bearing housing twisted. The threaded holes must line up with one another.*

   Assemble the reverse gear idler shaft.
    1. Install the needle roller bearing.
    2. Install the reverse idler gear.
    3. Install the bearing housing.
    4. Drive in the roll pin.

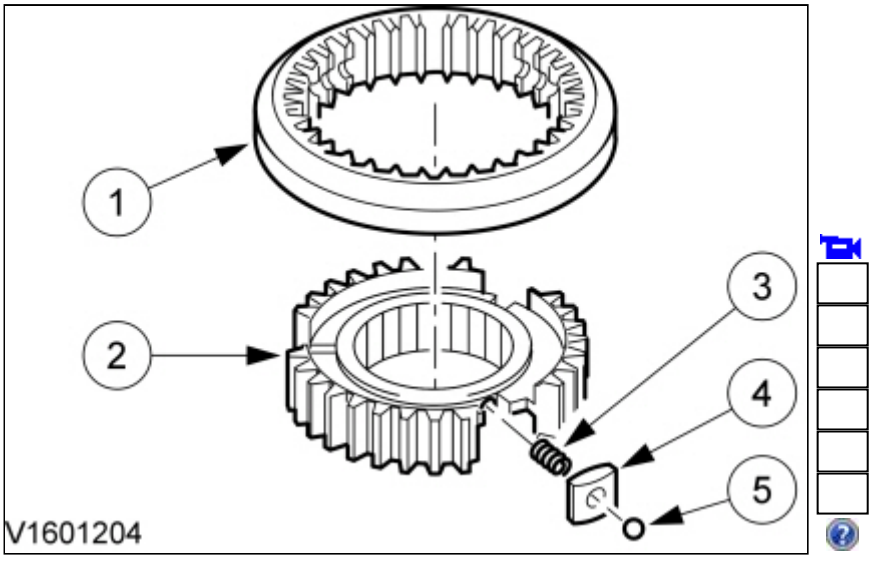
Synchronizers

Material



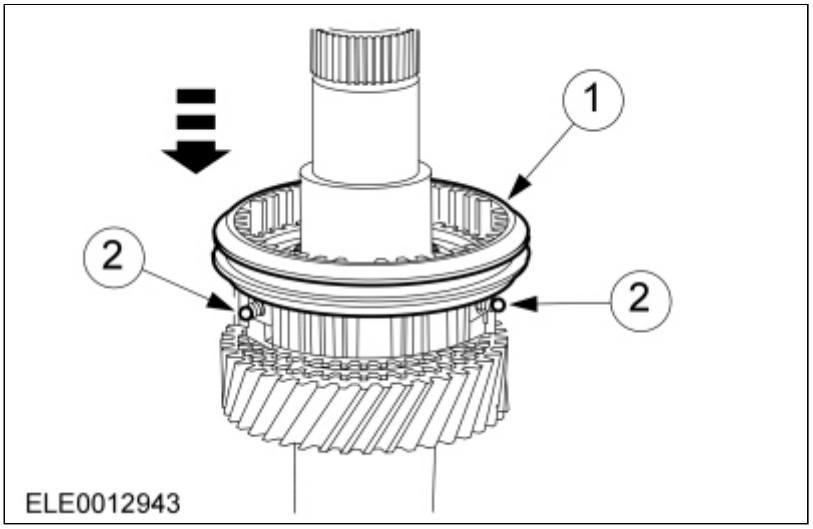
Item	Specification
Manual transmission fluid	WSD-M2C200-C

Disassembly

1. **NOTICE: Take care when pulling the selector ring off the synchronizer hub. The detent balls are spring-loaded.**

   NOTICE: Mark the synchronizers to the synchronizer hubs in relation to the selector rings.

   Disassemble the synchronizer.
   1. Selector ring.
   2. Synchronizer hub.
   3. Compression spring.
   4. Blocker bar.
   5. Detent ball.

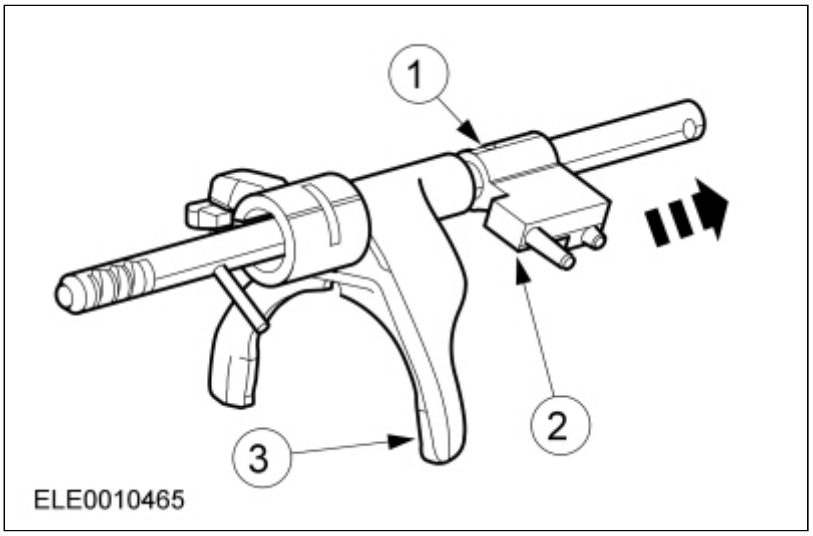


Assembly

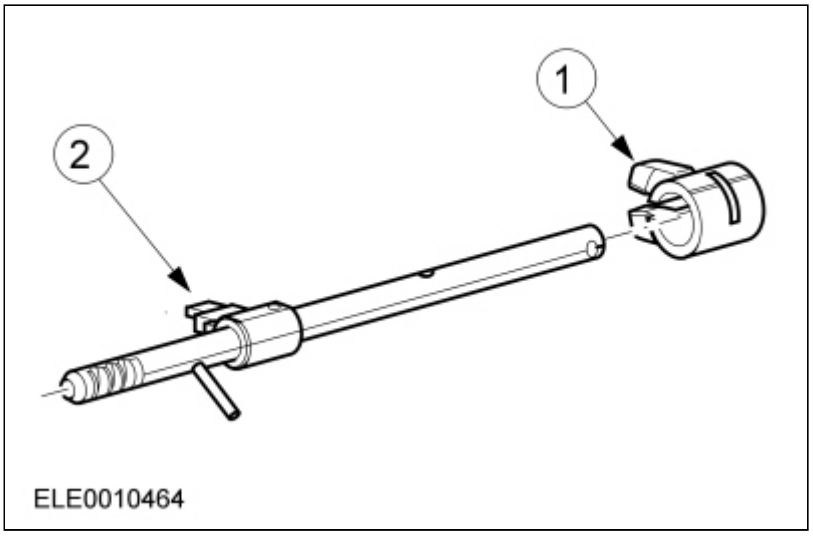
1. **NOTE:** *Carefully clean and check all sliding parts and lubricate them with Manuel transmission fluid before assembly.*

   Assemble the inner synchronizer.
   1. Synchronizer inner ring.
   2. Blocker bars.
   3. Compression springs.

2. Assemble the outer synchronizer.
    1. Synchronizer outer ring.
    2. Detent balls.



Copyright © 2016 Ford Motor Company



Gearshift Control Shaft

Disassembly

1. Disassemble the gearshift control shaft.
    1. Remove the roll pin.
    2. Remove the shift finger.
    3. Remove the selector fork.

2. Disassemble the gearshift control shaft (continued)
    1. Remove the locking sleeve.
    2. Remove the roll pin and the selector finger.

Assembly

1. **NOTE:** *Make sure that the roll pins do not protrude.*

    To assemble, reverse the disassembly procedure.

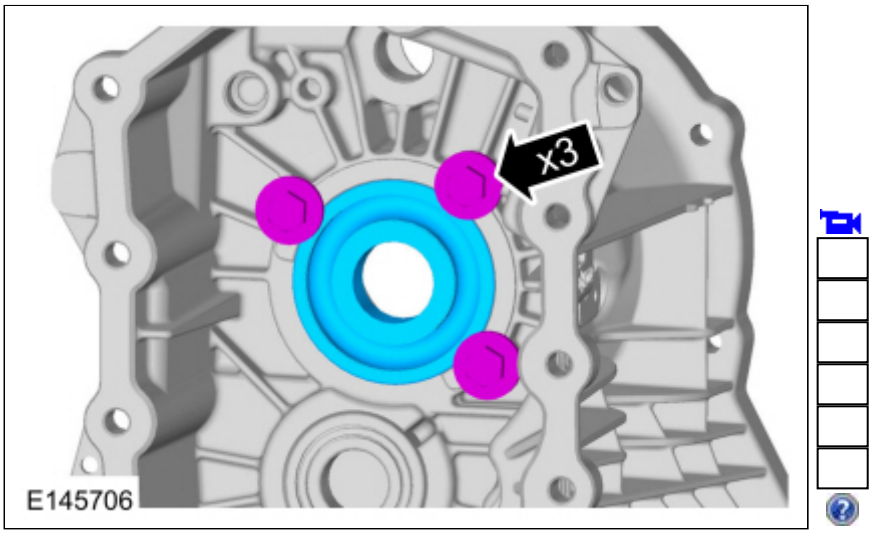
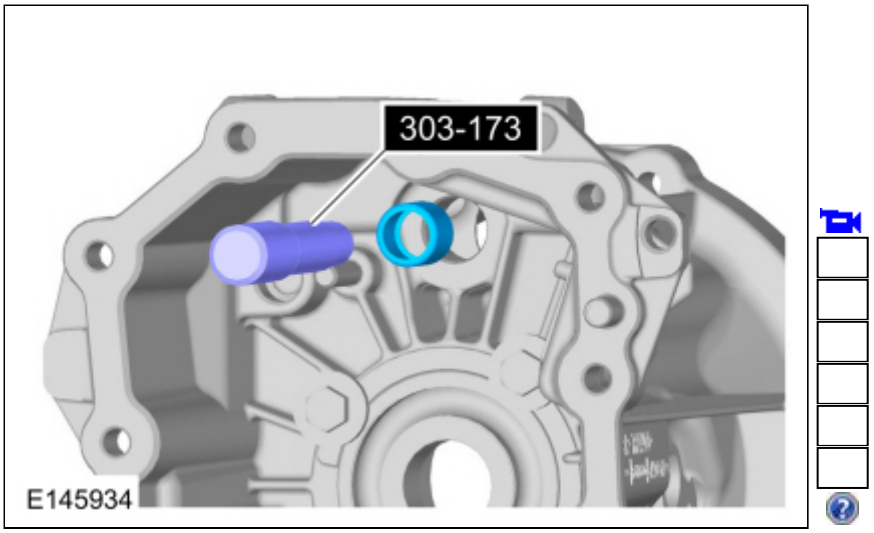
Name	Specification
Grease - High Temperature	ESD-M1C220-A
Gear/Transmission Fluid - SAE 75W-90	WSD-M2C200-C
Sealant	WSK-M2G348-A5
Thread Locking Adhesive	WSK-M2G349-A7

1. **NOTE:** *Lubricate all moving parts with manual transmission fluid during assembly.*

   NOTE: *Clean and check all parts for wear and damage. Install new parts as necessary.*

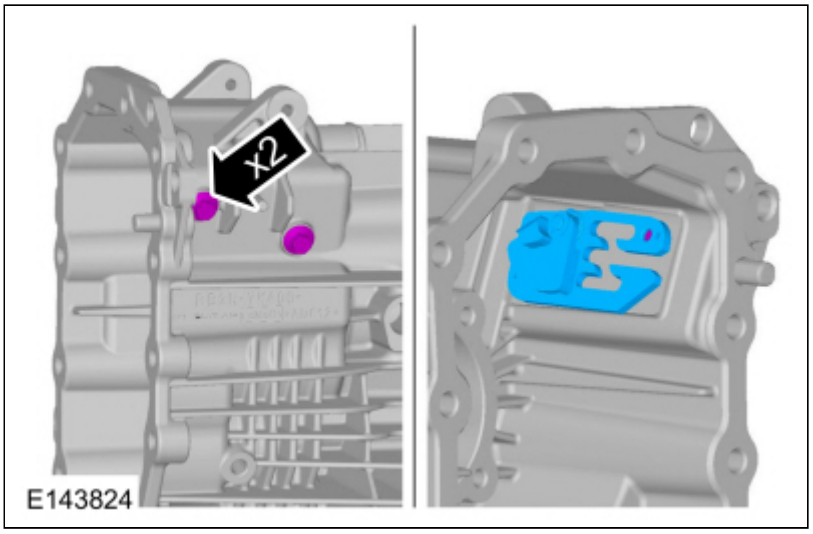


2. Use Special Service Tool: 308-095 Installer, Input Shaft Bearing.

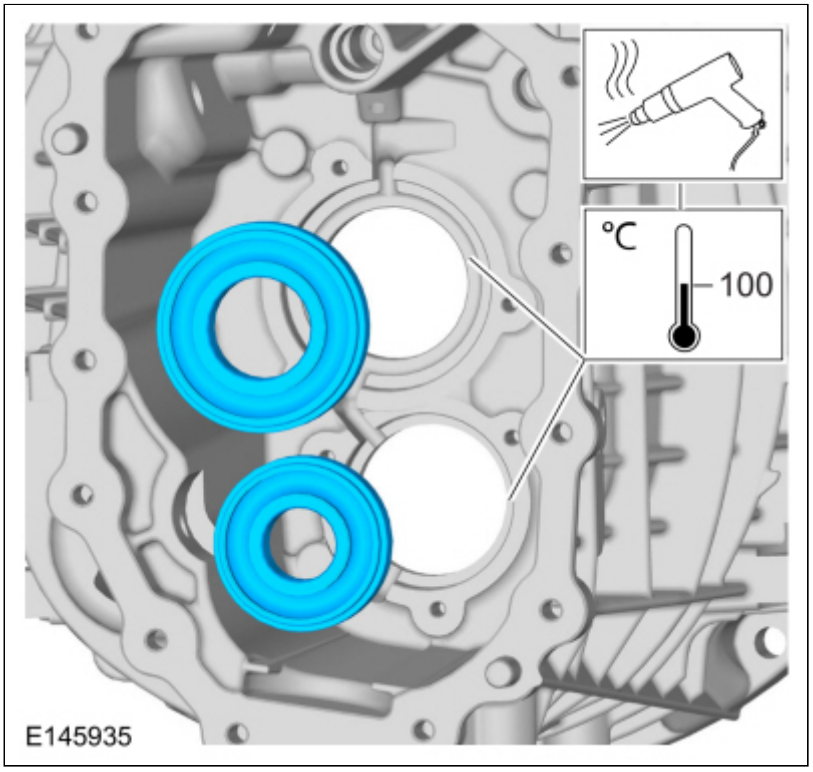


3. Use Special Service Tool: 308-095 Installer, Input Shaft Bearing.

4. *Material*: Thread Locking Adhesive (WSK-M2G349-A7)
   Torque: 24 Nm

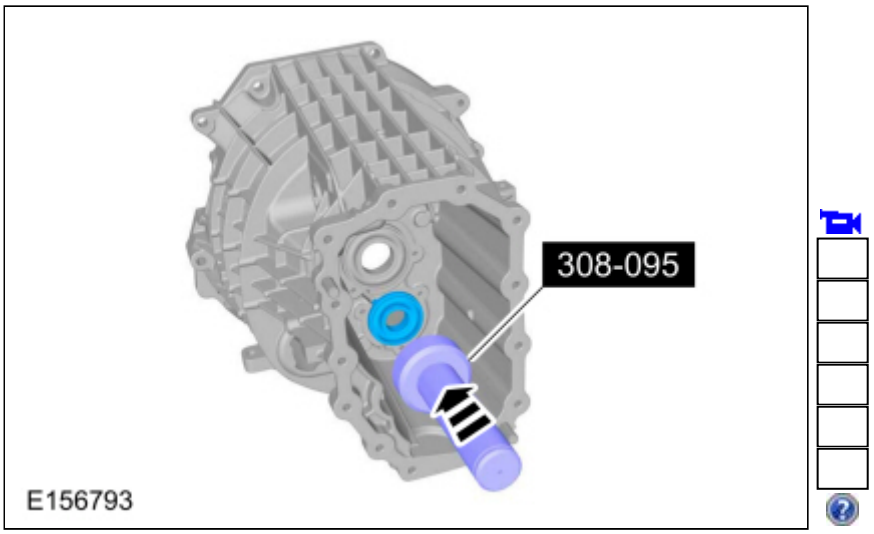


5. Use Special Service Tool: 303-173 Aligner, Clutch Plate.

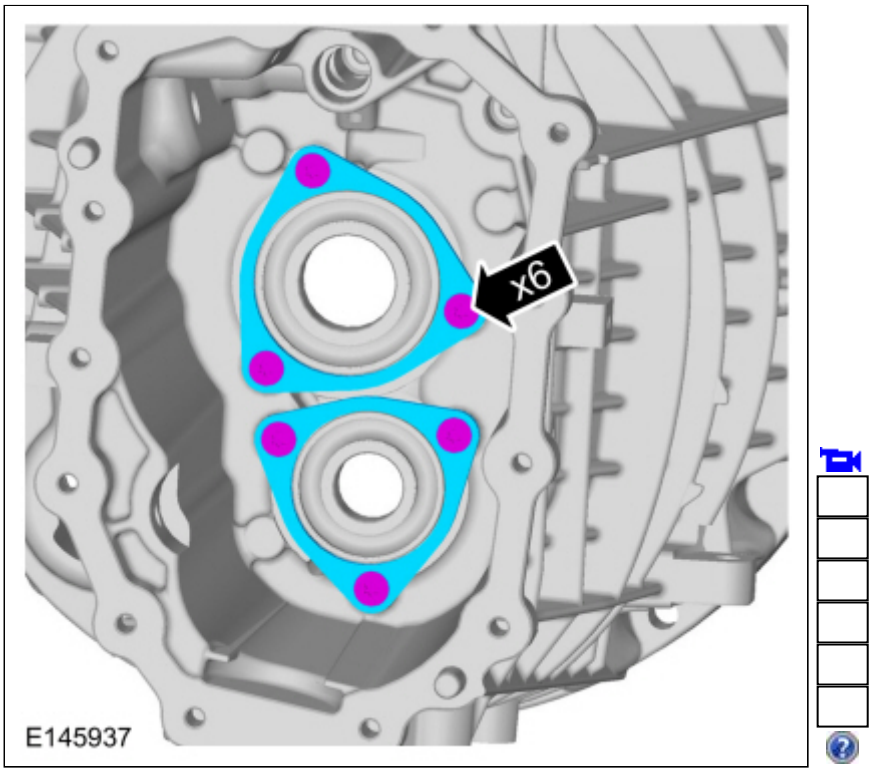


6. **NOTE:** *Install new selector gate retaining bolts.*

   Torque: 10 Nm



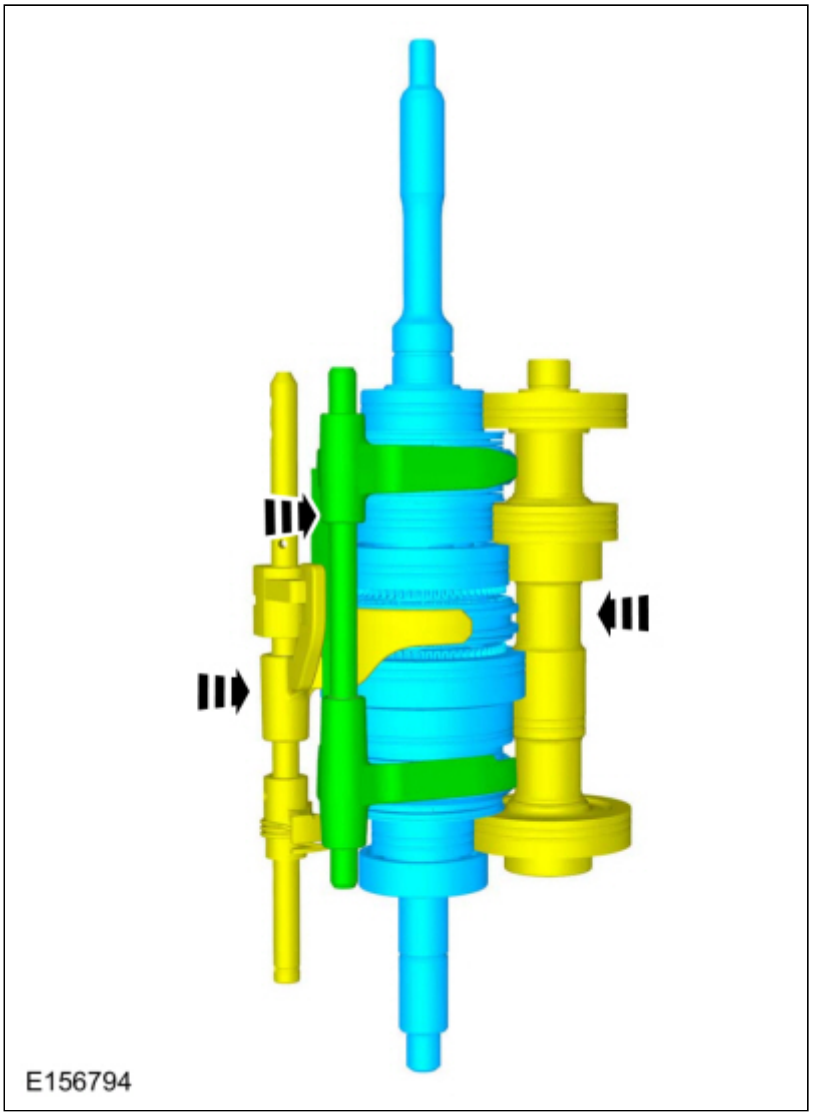
7.



8. Use Special Service Tool: 308-095 Installer, Input Shaft Bearing.

9. Use Special Service Tool: 308-095 Installer, Input Shaft Bearing.

10. *Torque*: 17 Nm



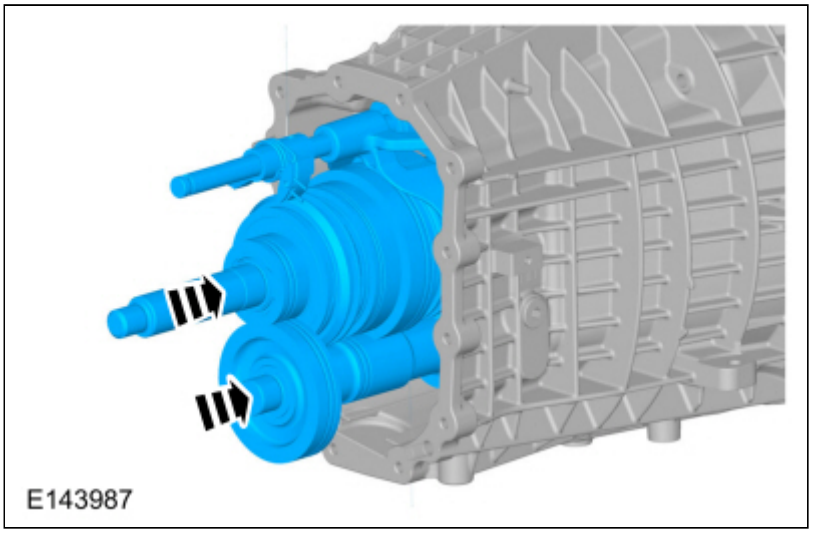
1. **NOTE:** *The first and second gear selector fork must engage in the middle of the first and second gear synchronizer unit.*

   Assemble the main selector shaft to the countershaft and output shaft assembly.

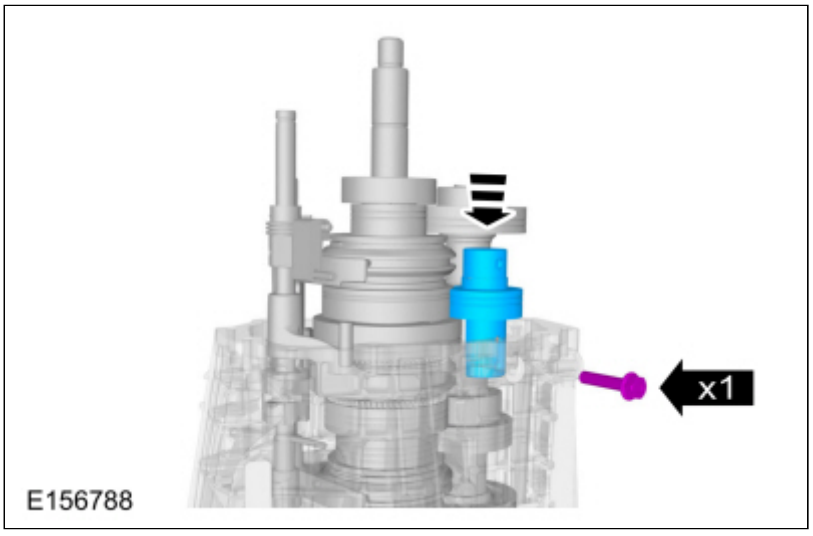
2. **NOTE:** *Make sure that the outrigger of the selector fork is facing upwards.*

   Attach the thrid and fouth gear selector fork to the synchronizer unit.

12. Install the General Equipment: Cable Ties

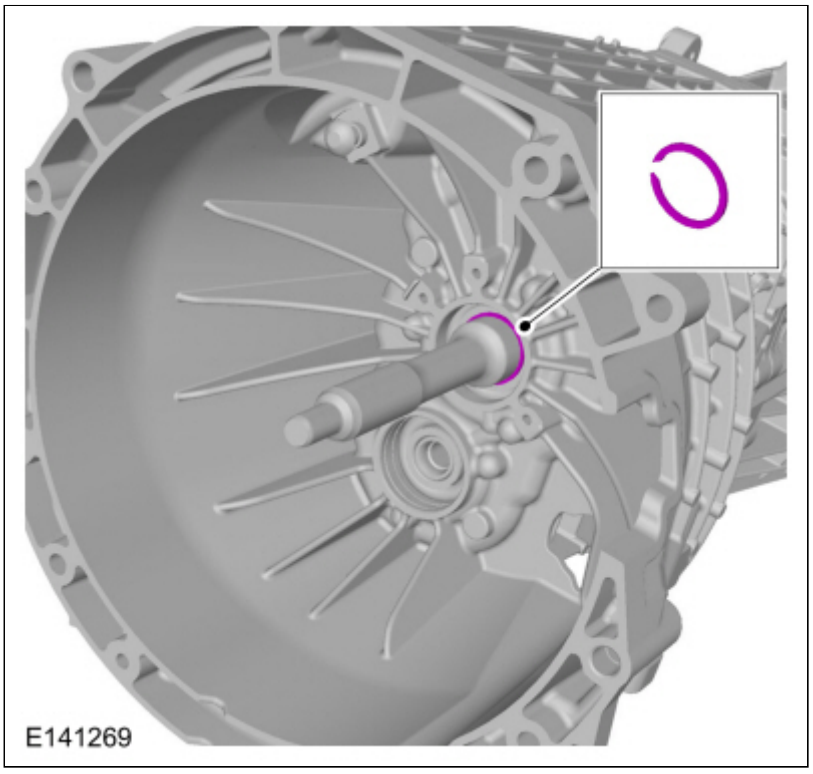


13.

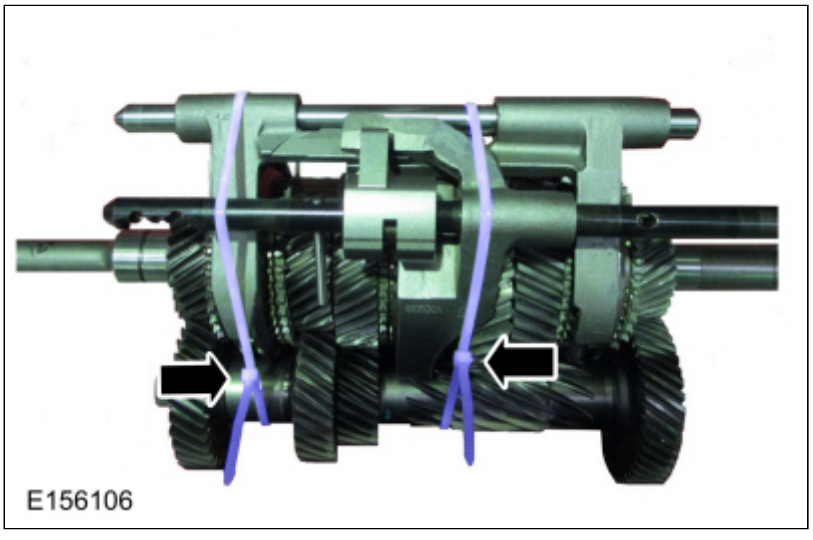


14. **NOTE:** *During installation, guide the selector shaft into the case bearing.*

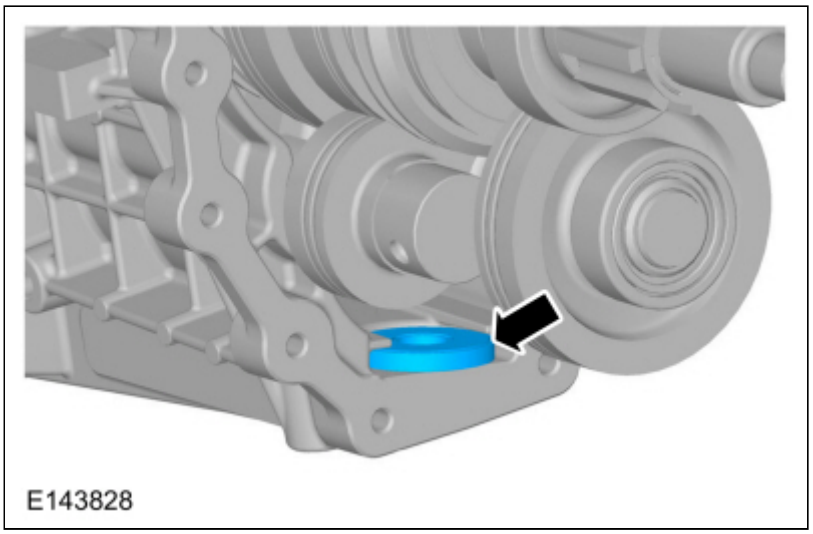
    NOTE: *Secure the input shaft to prevent it from falling down*



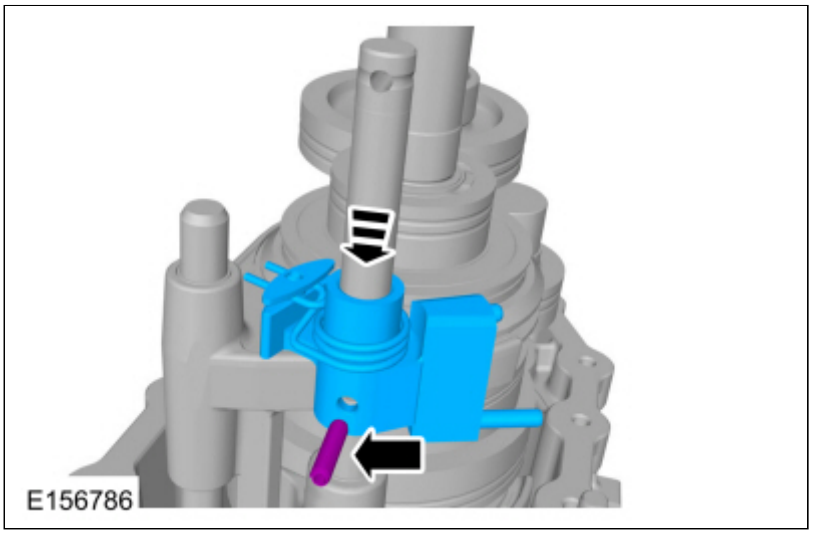
15. **NOTE:** *Make sure that the flat end of the reverse gear idler shaft is facing upwards.*



16. **NOTE:** *Only tighten the bolt finger tight at this stage.*

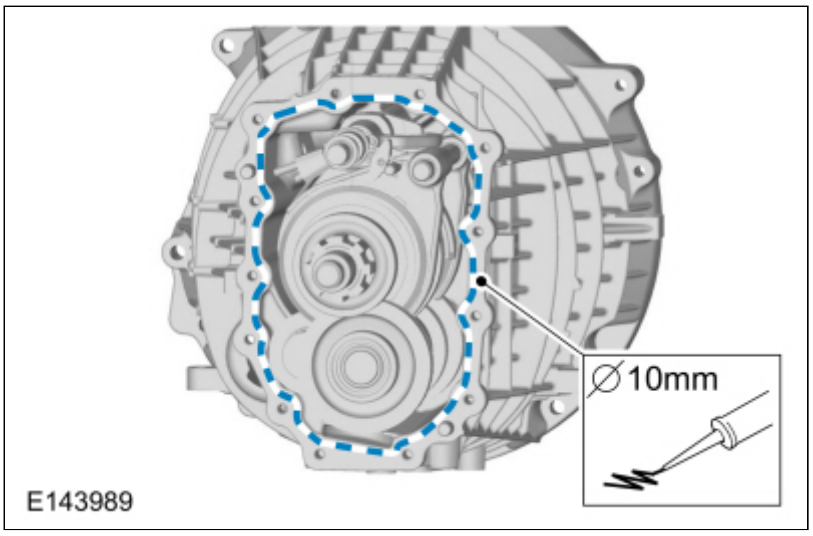


17. **NOTE:** *Make sure that a new component is installed.*



18. Remove the General Equipment: Cable Ties

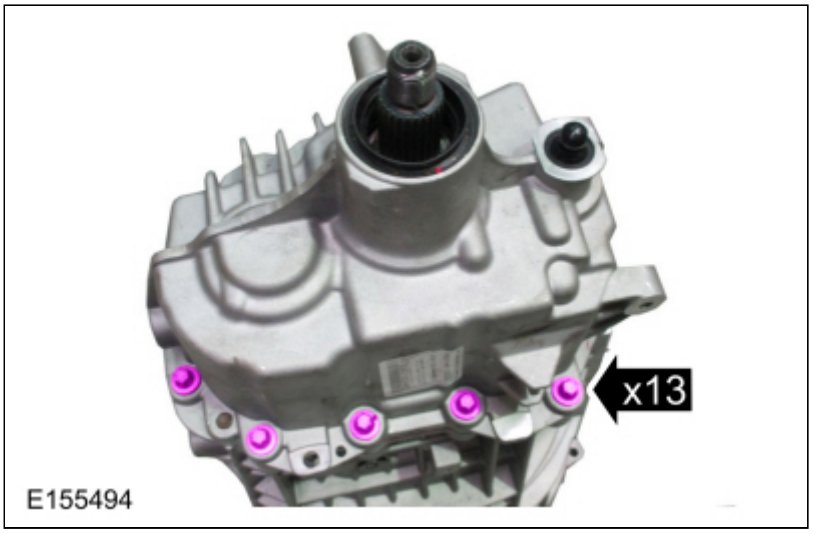
19.



20.

21. **NOTICE: Install the transmission rear housing within 15 minutes of applying the sealant.**

Material: Sealant (WSK-M2G348-A5)

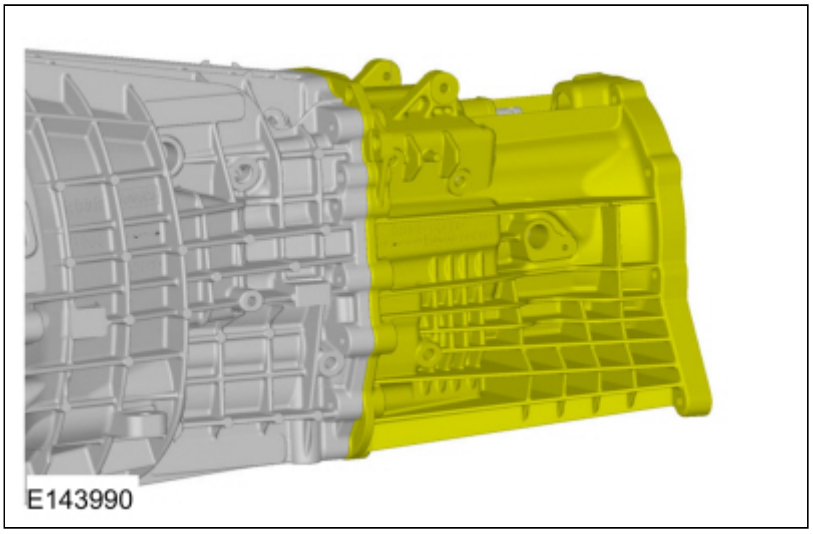


4x2

22. **NOTICE: Install the transmission rear housing carefully. Failure to follow this instruction may result in damage to the fifth gear synchronizer ring.**

NOTE: *When installing a new transmission rear housing, install the locating studs with a 15 mm protrusion.*

Install the transmission housing retaining bolts.
Torque: 24 Nm



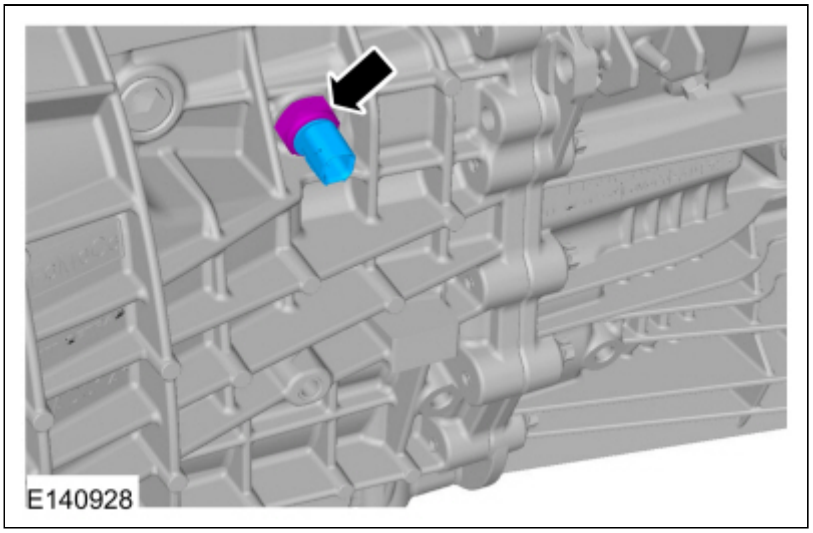
4x4

23. **NOTICE: Install the transmission rear housing carefully. Failure to follow this instruction may result in damage to the fifth gear synchronizer ring.**

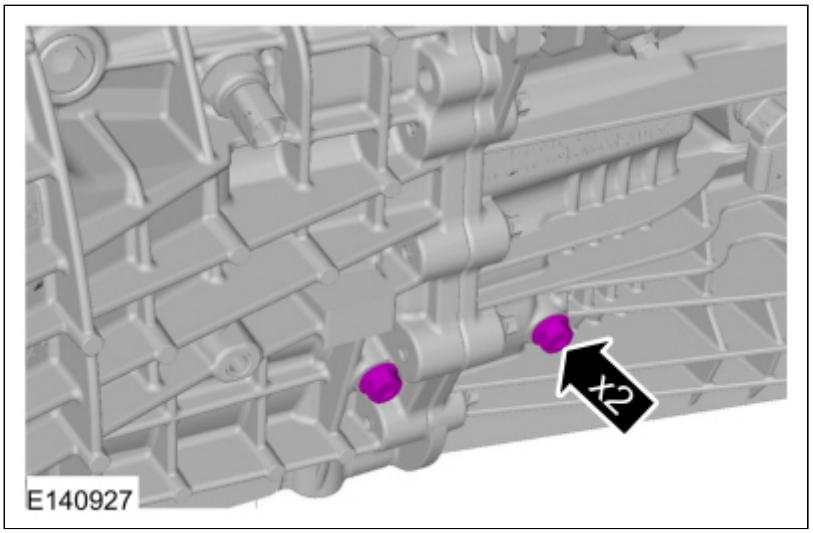
    NOTE: *When installing a new transmission rear housing, install the locating studs with a 15 mm protrusion.*

    NOTE: *Make sure that the pin of the select arm slides correctly into the gate.*

    Assemble the transmission rear housing to the transmission front housing.



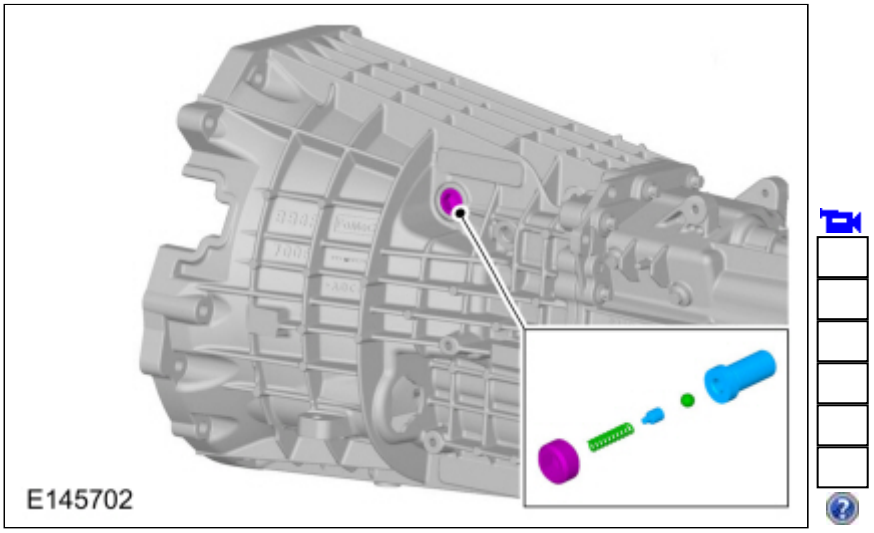
24. Install the transmission housing retaining bolts.
    Torque: 24 Nm



All vehicles

25. **NOTICE: Check the reversing lamp switch gasket. If the gasket is loose or damaged, discard the reversing lamp switch.**

    Torque: 20 Nm



26. *Torque*: 32 Nm

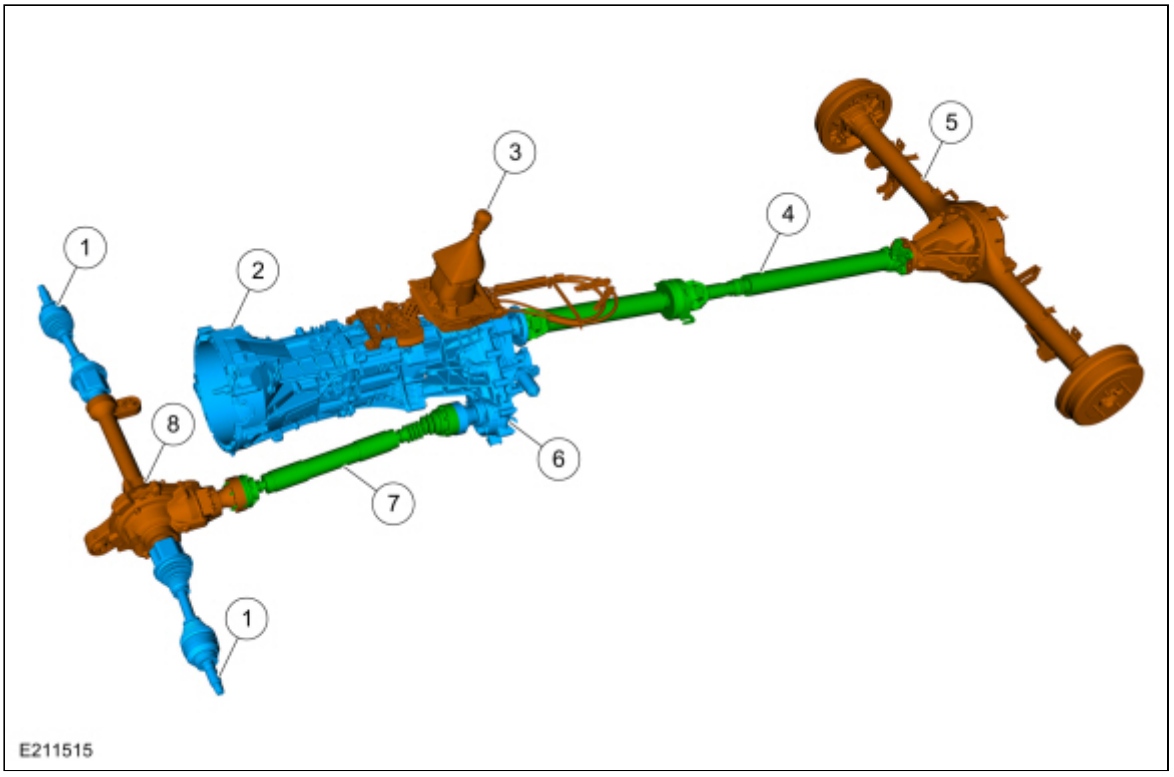
Manual Transmission - Overview

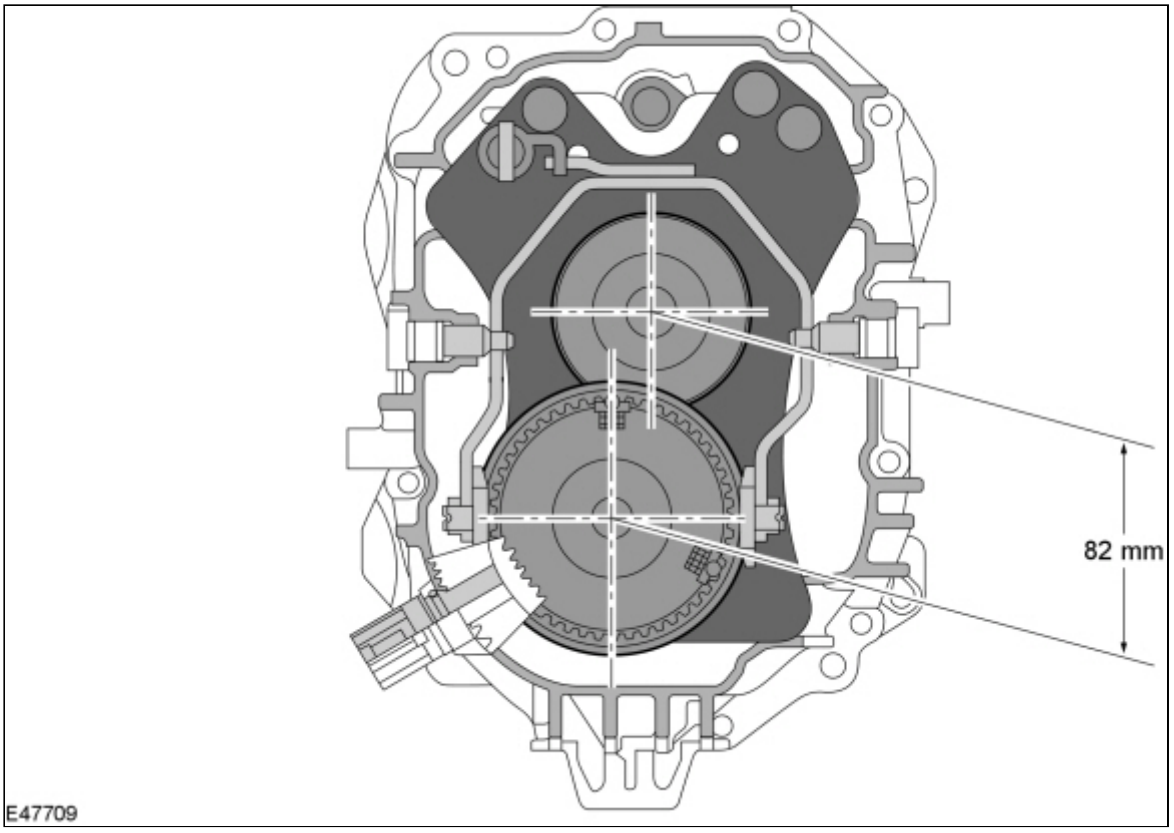


Component Location

4x2

Item	Description
1	MT82 transmission - 4X2
2	Gearshift lever
3	Rear driveshaft
4	Rear drive axle

4x4



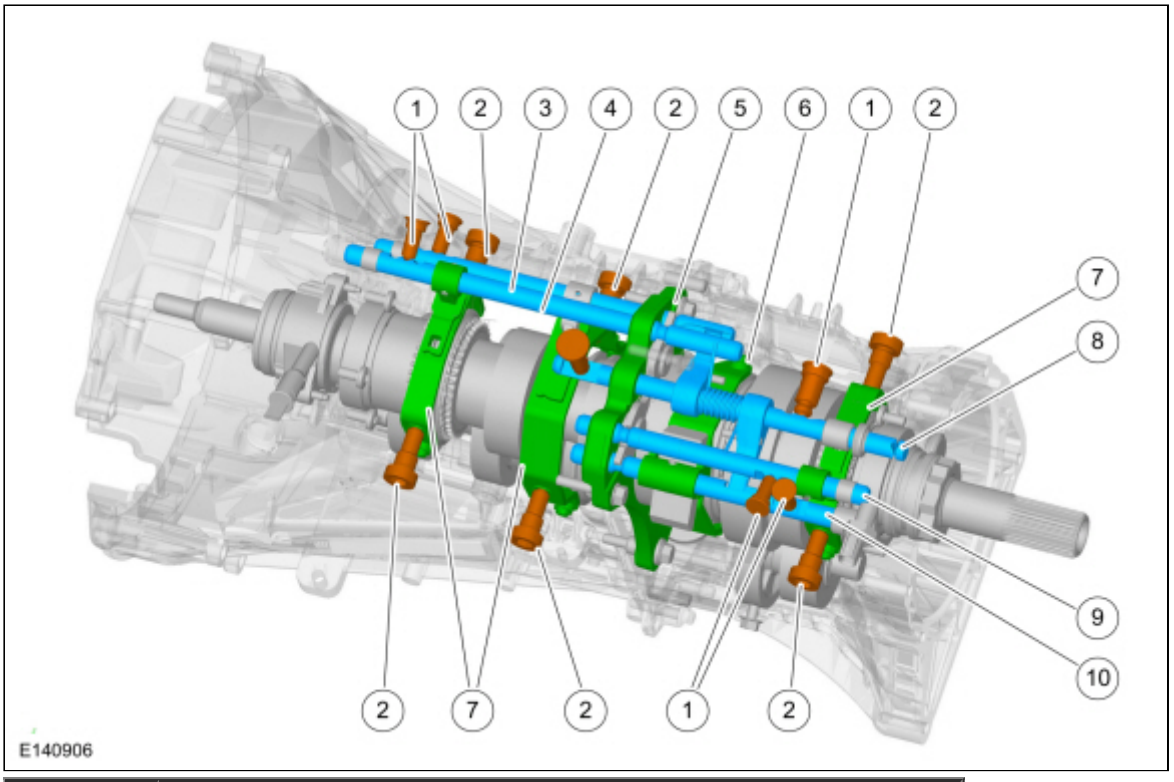
Item	Description
1	Front drive halfshafts
2	MT82 transmission - 4X4
3	Gearshift lever
4	Rear driveshaft
5	Rear drive axle
6	Transfer case
7	Front driveshaft
8	Front drive axle

Overview

The name of the 6-speed manual transaxle MT82 is derived from the distance between the two shafts in the transaxle:

- M stands for Manual
- T stands for Transaxle
- 82 is the distance between the two shafts in mm

Transaxles are designed for a torque of max. 480 Nm.

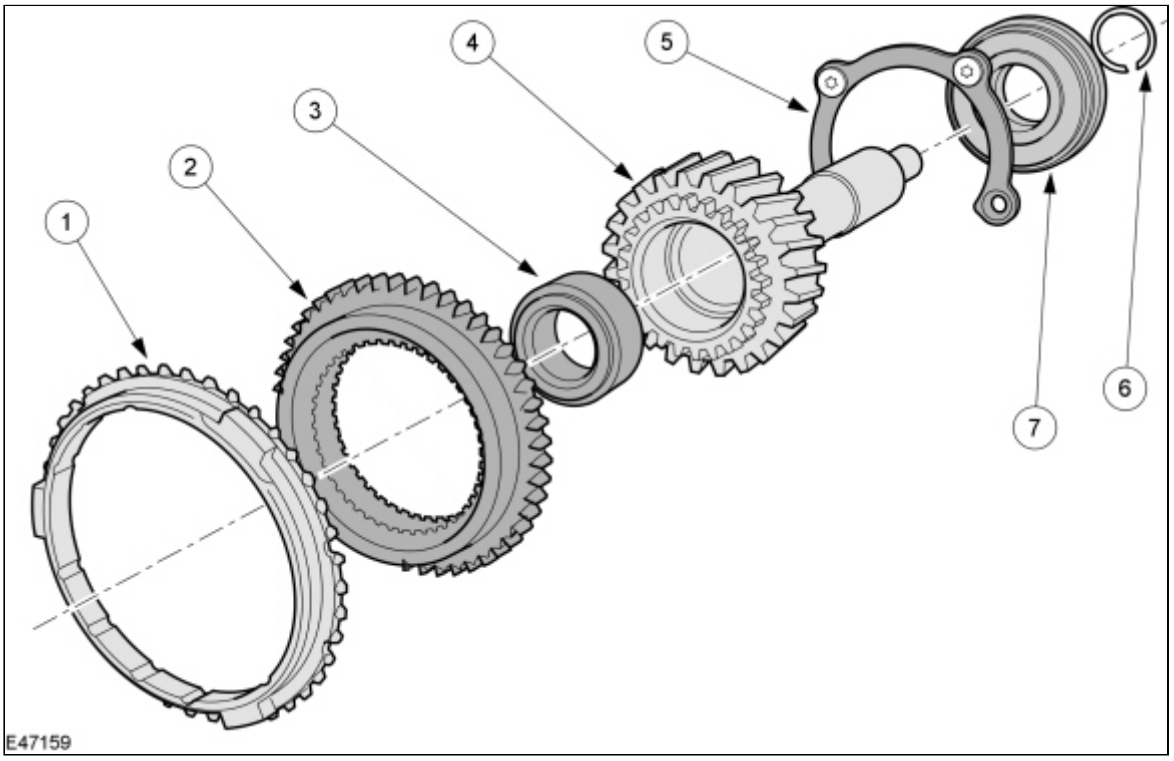


In order to ensure secure mounting of the selector rods, these are passed through a centre bearing mounting plate. The centre bearing mounting plate is in turn bolted to the housing.

All gear selector forks and shift forks are made of forged steel.

The sliding elements of the selector forks are made of a plastic material that exhibits high resistance to wear.

The main selector shaft is mounted in the centre bearing mounting plate.

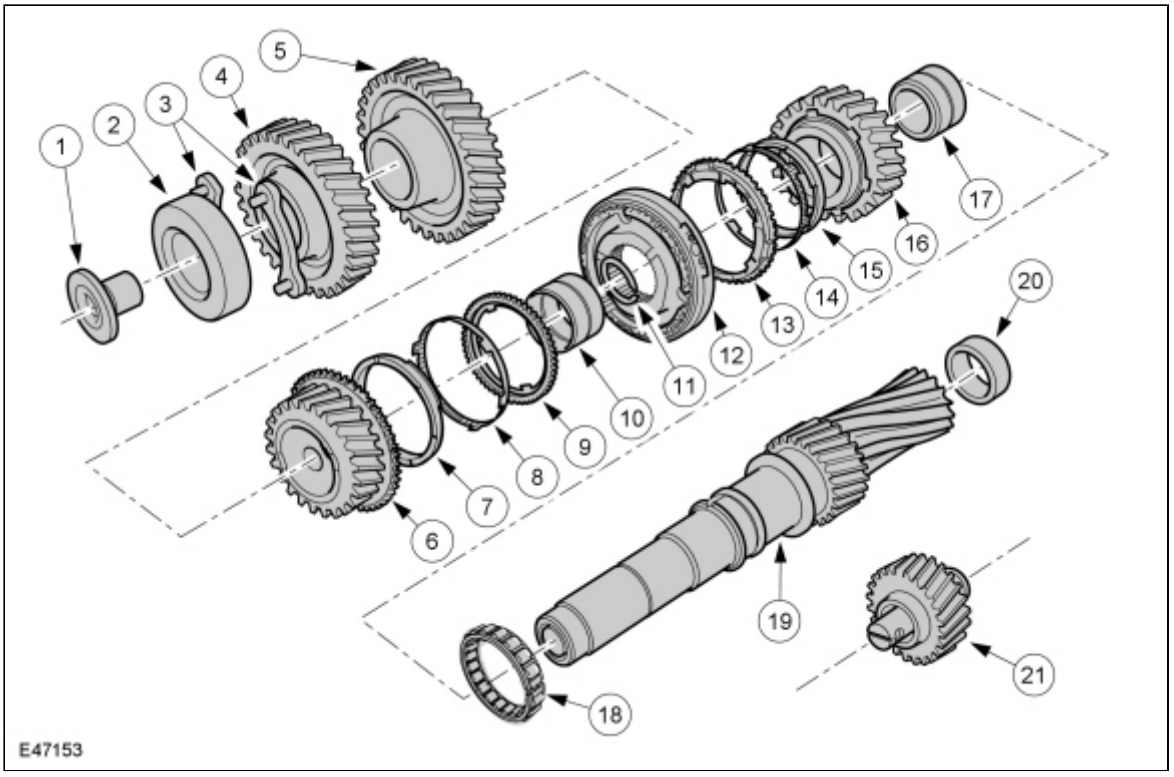


Internal gearshift mechanism

Item	Description
1	Selector rod detent

2	Shift fork bolt
3	3rd/4th gear selector rod
4	5th/6th gear selector rod
5	Centre bearing mounting plate
6	1st/2nd gear selector fork
7	Shift fork
8	Main shift rod
9	Reverse gear selector rod
10	1st/2nd gear selector rod

Input shaft



Item	Description
1	Synchronizer ring (5th gear)
2	5th gear Synchronizer teeth
3	Output shaft pilot bearing
4	Input shaft
5	Bearing retaining plate
6	Ball bearing circlip
7	Input shaft ball bearing

The output shaft is rotationally mounted in the input shaft on the pilot bearing.

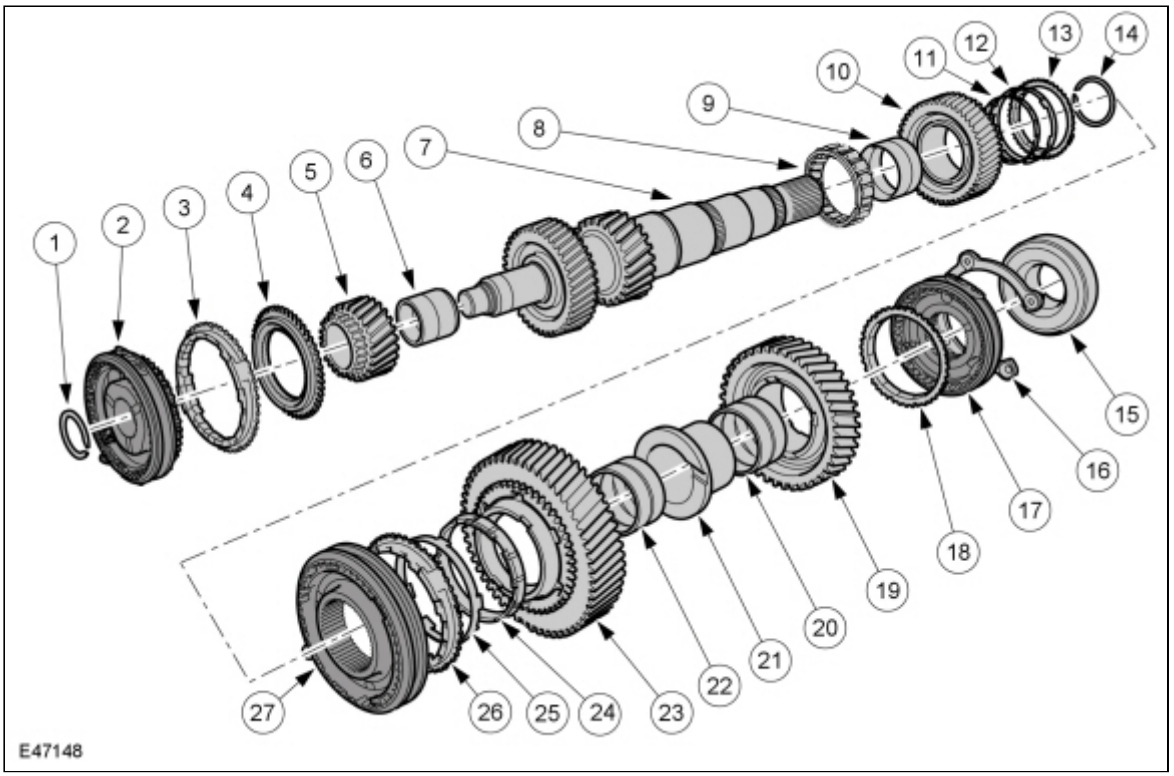
In order to absorb the axial forces, the input shaft ball bearing is additionally secured.

All the components of the input shaft can be detached and replaced separately.

Layshaft

Item	Description
1	Fixing bolt
2	Countershaft ball bearing
3	Bearing retaining plate
4	Countershaft input pinion
5	6th gear
6	3rd gear
7	Inner synchronizer ring
8	3rd gear synchronizer cone
9	3rd gear outer synchronizer ring
10	Needle bearing
11	Retaining ring
12	3rd/4th gear synchronizer clutch
13	4th gear outer synchronizer ring
14	4th gear synchronizer cone
15	Inner synchronizer ring
16	4th gear
17	Needle bearing
18	Countershaft centre bearing
19	Layshaft
20	Countershaft roller bearing
21	Reverse gear idler

The countershaft transfers the torque from the input shaft to the output shaft. Gear wheels, gears and the 3rd/4th gear synchronizer clutch are located on the shaft. The gears of the 1st, 2nd and reverse gears are an integral part of the shaft.



The Countershaft can be completely dismantled, i.e. faulty gear wheels or gears can be replaced singly. Because of improved tolerances, it is no longer necessary to replace the gears in pairs.

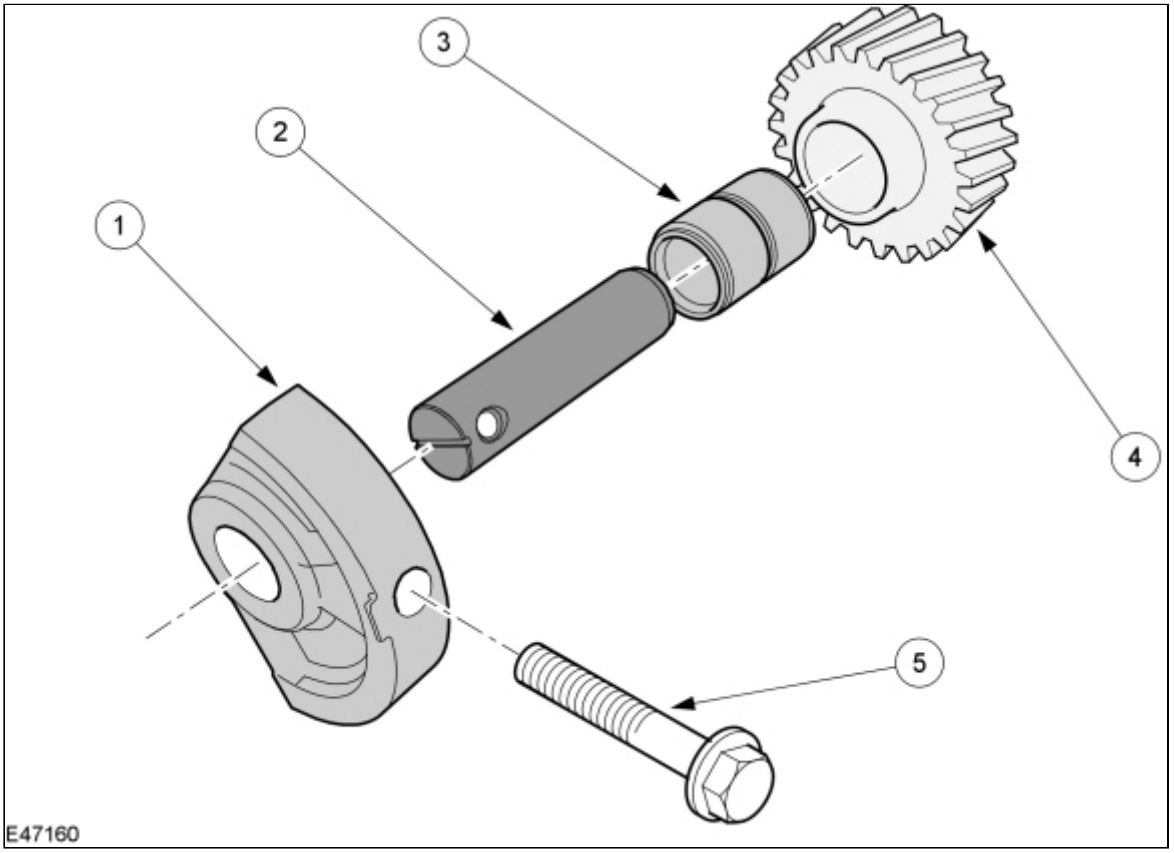
The countershaft is a solid shaft. In order to prevent the shaft from moving axially, it is additionally secured with a

retaining bolt and a bearing retaining plate.

The retaining bolts are installed with thread locking compound.

Output shaft

Item	Description
1	Retaining ring
2	5th/6th gear synchronizer clutch
3	6th gear synchronizer ring
4	6th gear synchronizer teeth
5	6th gear wheel
6	Needle bearing
7	Output shaft
8	Output shaft centre bearing
9	Needle bearing
10	2nd gear
11	2nd gear synchronizer cone
12	Inner synchronizer ring
13	2nd gear outer synchronizer ring
14	Retaining ring
15	Output shaft ball bearing
16	Bearing retaining plate
17	Reverse gear synchronizer clutch
18	Reverse gear synchronizer ring
19	Reverse gear
20	Needle bearing
21	Needle bearing inner ring
22	Needle bearing
23	1st gear
24	1st gear synchronizer cone



25	1st gear inner synchronizer ring
26	1st gear outer synchronizer ring
27	1st/2nd gear synchronizer clutch

The output shaft transfers the torque through the driveshaft output flange to the driveshaft and then to the rear axle. The 1st/2nd/6th and reverse gear wheels are located on the output shaft. The gears of the 3rd and 4th gear are an integral part of the output shaft.

Synchronizer teeth have place on the 6th gear wheel. This makes it possible to transfer the torque in 6th gear.

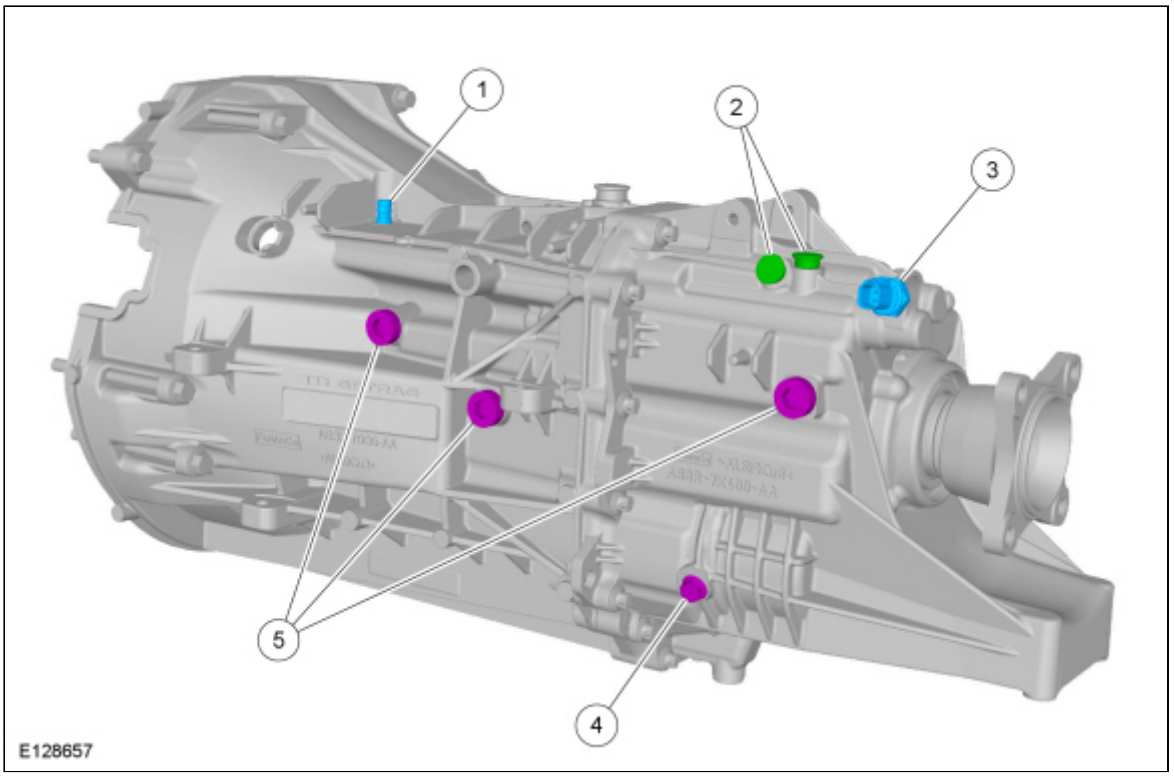
Output shaft can be completely dismantled. Damaged gear wheels and gears can be replaced individually.

Reverse gear idler

Item	Description
1	Mounting
2	Reverse gear idler shaft
3	Needle bearing
4	Reverse gear idler
5	Reverse gear mounting retaining bolt

The reverse idler gear turns on a needle bearing, which runs on the reverse gear idler shaft. The shaft is retained by the mounting and a locating bore in the transaxle housing.

The reverse gear mounting retaining bolt is secured with thread locking compound. For this reason, the reverse gear mounting retaining bolt may only be used once.



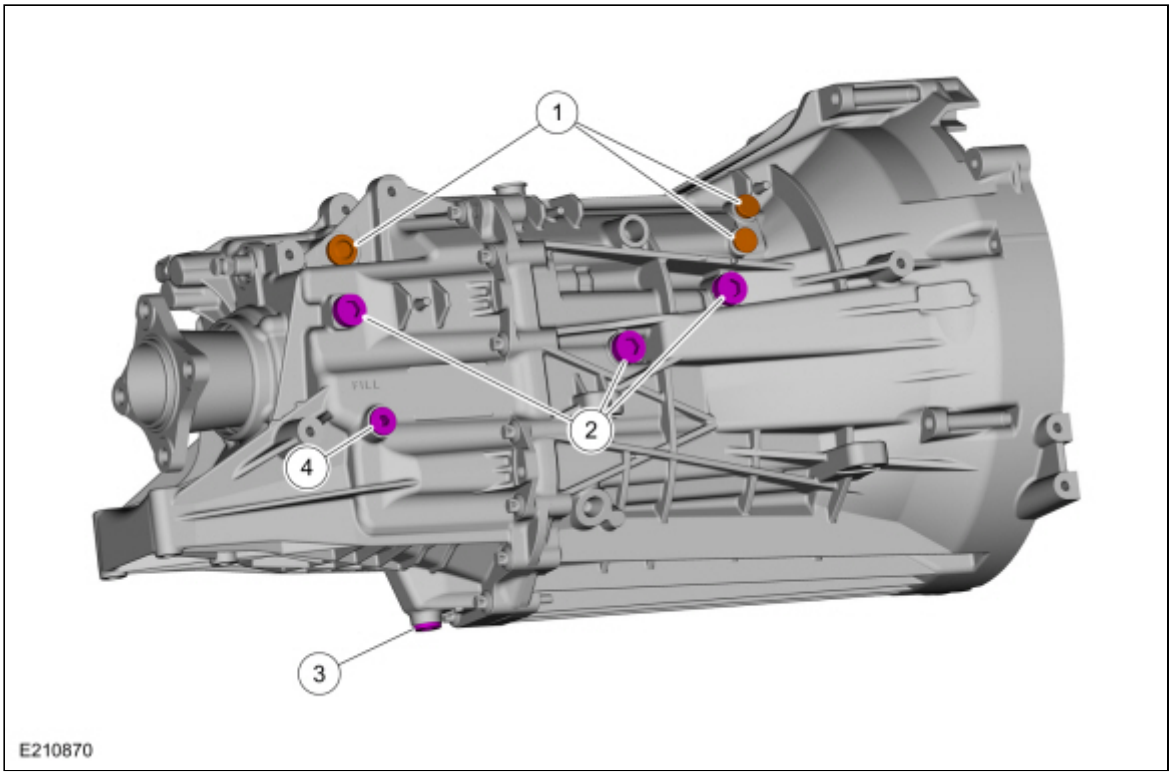
In order to absorb the radial forces, the reverse gear runs on an additional mounting.

If the reverse idler gear becomes damaged, it can be changed as an individual unit.

NOTE: *On transaxles used in combination with the 3.2L Duratorq TDCi engine, the first gear has been reinforced by means of a special shot blasting method.*

4x2

Side view - left-hand side



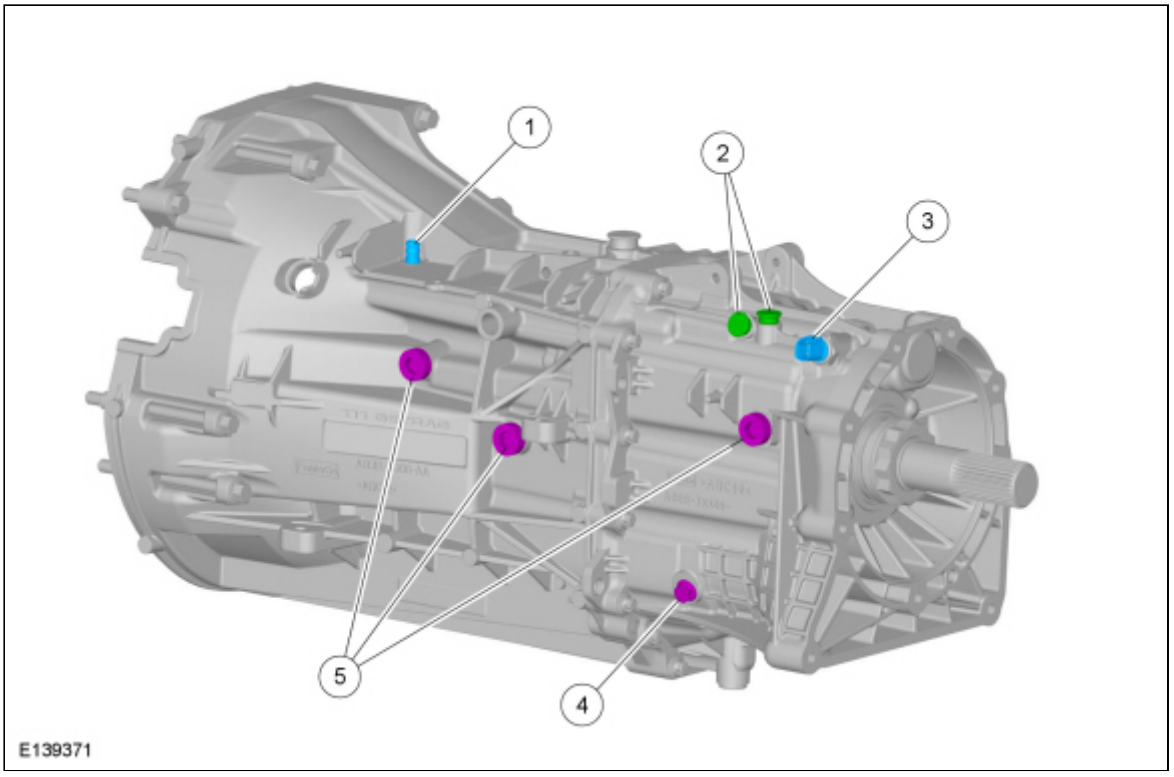
Item	Description
1	Transaxle breather
2	Selector rod detents
3	Reverse switch
4	Reverse gear mounting retaining bolt
5	Shift fork bolts

The reverse idler gear shaft is attached to the housing using the reverse gear mounting retaining bolt (4). This should not be mixed up with any other bolt on the transaxle.

NOTE: *The reverse gear mounting retaining bolt should only be removed to dismantle the transaxle.*

Side view - right-hand side

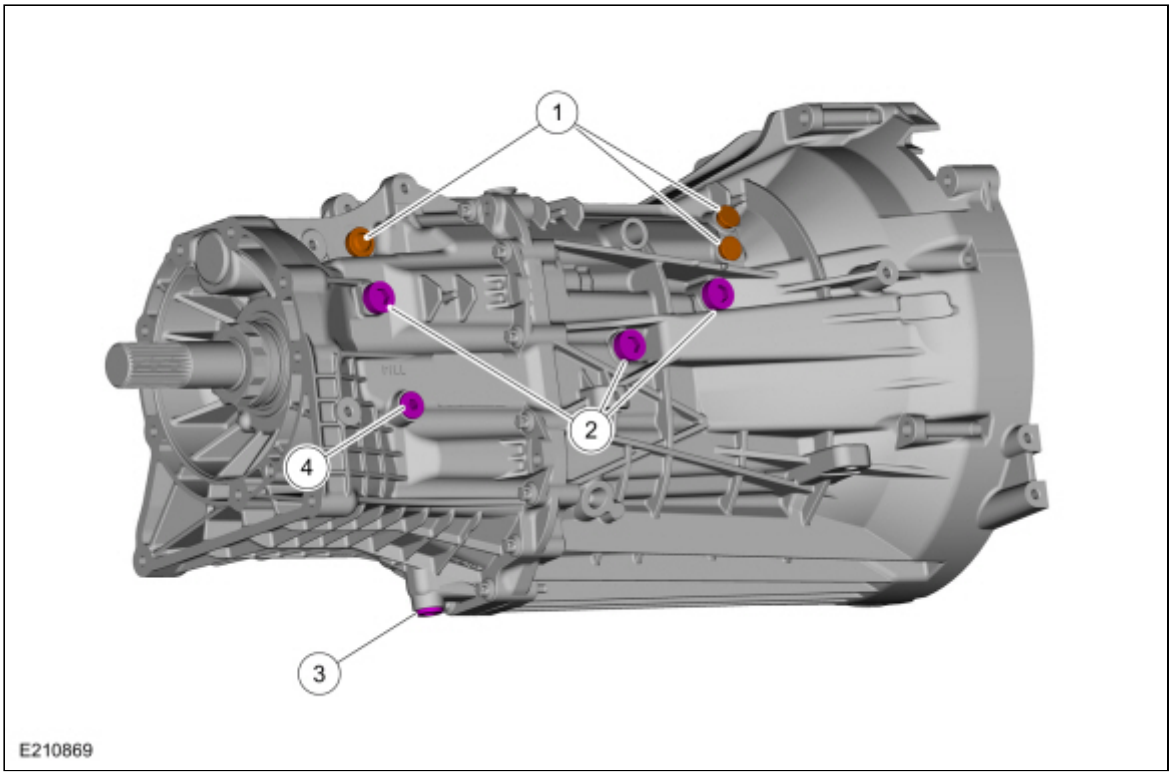
Item	Description
1	Shift fork bolts
2	Selector rod detents
3	Vehicle speed sensor
4	Oil drain plug
5	Oil filler plug / oil level check



The transmission oil in the MT82 6-speed transaxle does not need to be changed in service. Only before repair work on the transaxle should the transmission oil be drained by removing the oil drain plug (4).

NOTE: *The shift fork bolts (1) must only be removed during repair.*

The oil filler plug (5) also allows the oil level to be checked.



4x4

Side view - left-hand side

Item	Description
1	Transaxle breather
2	Selector rod detents
3	Reverse switch
4	Reverse gear mounting retaining bolt
5	Shift fork bolts

Manual Transmission

General Equipment

Ford diagnostic equipment

Inspection and Verification

NOTICE: If transmission noise is reported, first check the transmission fluid level. The vehicle should not be driven if the transmission fluid level is low. A low transmission fluid level will damage the transmission.

NOTE: *Before attempting to repair any concerns, road test the vehicle to determine which system the concern is in.*

NOTE: *If an observed or reported concern is found, correct the causes before proceeding.*

Gear driven units produce a certain level of noise. Some noise is acceptable and audible at certain speeds or under various driving conditions. Many conditions, such as road and weather can amplify normal vehicle noise.

The following overview is a guide to diagnose a transmission or clutch concern:

- Verify and document the customer concern.
  - During the customer interview, if a leak was noticed or if a leak is the concern, check the transmission fluid level. the vehicle should not be driven if the transmission fluid level is low.
- Check fluid level and condition.
- Evaluate the clutch hydraulic system.
- Evaluate the clutch.
- Inspect gearshift mechanism.
- Evaluate the transmission.
- Find the cause of the problem and correct it.

Verify Customer Concern

1. verify and document the customer concern.
    1. When was it first noticed?
    2. Did it appear suddenly or gradually?
    3. Did anything unusual occur that would coincide with it or precede it?
    4. Identify when the condition occurs:
        - Hot or cold vehicle operating conditions.
        - Type of terrain.
        - City/highway driving.
        - Driving at a particular speed.
            - Coasting.
            - hard acceleration.
        - Shifting.
            - Upshifts.
            - downshifts.
            - in a particular gear.
            - in all gears.
        - Hot or cold ambient
    5. Has the transmission/clutch been repaired before or components installed?
        - Check the vehicle service record. Note any repairs.

Check Fluid Level and Condition

NOTICE: The vehicle should not be driven if the transmission fluid level is low or damage may occur.

NOTICE: Excessive temperatures may break down the transmission lubricant. If there is reason to believe the transmission has been subjected to temperatures exceeding 135°C (275°F) for an extended period (greater than 20 minutes), change the lubricant immediately.

An incorrect transmission fluid level may affect the transmission operation and can result in transmission damage. For transmission draining and filling.
REFER to: Transmission Draining and Filling (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, General Procedures).

A low transmission fluid level can result in poor transmission shifting, engagement or damage. It also indicated a leak in the transmission seals or gaskets.

1. Check the transmission fluid condition.
    - Observe the color and the odor of the fluid. Allow the transmission fluid to drip onto a white cloth and examine the stain. Check the transmission fluid for contamination or metal particles.
        - Transmission fluid should appear amber to dark amber in color for the MT82.

Evaluate Clutch Hydraulic System

1. Verify the clutch hydraulic fluid reservoir is filled to the correct level.
    - If the clutch hydraulic fluid is correct, proceed to clutch check.
    - If the clutch hydraulic fluid is low, add fluid as necessary. Check the clutch hydraulic system for leaks and repair as necessary.

Evaluate the Clutch

1. Apply and release the clutch pedal slowly to check pedal binding. Make sure the clutch pedal can be fully applied and is not restricted by the floor mat.

2. Measure the clutch reserve. GO to Pinpoint Test C.

3. With the engine idling and the park brake applied, move the gearshift lever into 4th gear. Increase engine speed to 2,000 rpm and slowly release the clutch pedal.
    - If the engine stalls, the clutch is OK.
    - If the engine does not stall, the clutch is slipping. Repair as necessary.

4. Compare the clutch evaluation results with the following chart. The following list of conditions are typical clutch concerns.

Symptom Chart – Clutch Operation

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
for information about these practices.

Symptom	Possible Sources	Action
• Clutch slippage	• Clutch pedal reserve • Diaphragm springs • Clutch pressure plate • Clutch disc facing • Hardened or oiled clutch disc facing surface • Flywheel	• GO to Pinpoint Test A
• Clutch chatter or shudder	• Engine mounts • Oil on clutch disc facing • Diaphragm springs • Clutch pressure plate • Clutch disc facing • Flywheel • Clutch disc	• GO to Pinpoint Test B
• Clutch pedal feels spongy or has excessive travel. Clutch will not disengage	• Insufficient clutch fluid • Air in hydraulic system • Clutch pedal reserve • Diaphragm springs • Clutch disc • Clutch disc splines • Oil on clutch facing	• GO to Pinpoint Test C
• Clutch drag, also hard to shift	• Insufficient clutch fluid • Air in hydraulic system • Clutch pedal reserve • Diaphragm springs • Clutch disc • Transmission concern	• GO to Pinpoint Test D
• Clutch pedal pulsation	• Clutch and brake pedal pivot shaft not correctly lubricated	• GO to Pinpoint

	not correctly lubricated • Flywheel • Worn springs in pressure plate	Pinpoint Test E
• Clutch-related vibrations	• Engine component grounding against frame • Accessory drive belt • Flywheel bolts • Flywheel • Imbalanced clutch pressure plate	• GO to Pinpoint Test F
• Excessive noise	• Clutch pedal reserve • Clutch slave cylinder • Pilot bearing • Excessive crankshaft end play	• GO to Pinpoint Test G
• Clutch system leakage	• Clutch master cylinder • Clutch slave cylinder • Clutch hydraulic tubes	• GO to Pinpoint Test C

Inspect Gearshift Mechanism

1. Inspect the gearshift mechanism for:
   - signs of damage.
   - missing or loose fasteners.
   - binding.

2. Repair as necessary.

Evaluate Transmission

1. Road test the vehicle. Use the following methods to diagnose the concern.
   - Start the engine.
   - Evaluate the noise in NEUTRAL while vehicle is parked.
     - Check whether the noise is present with the clutch fully disengaged (clutch pedal applied). Check to see if the pedal pulsates abnormally (clutch diaphragm finger runout).
     - Check whether the noise is present with the gearshift in the NEUTRAL position and the clutch fully engaged (clutch pedal released). Apply the park brake and move the gearshift towards the 1st gear position. Apply very slight pressure and note if the gear noise level is reduced (gear rollover noise).
     - With the clutch fully engaged (clutch pedal released) check whether the noise is present as the engine speed is raised. If the noise reduces, note the engine speed at which this occurs.
   - Listen for any change in noise while applying and releasing the clutch pedal.
   - Listen for any change in noise while changing the engine rpm.
   - Drive the vehicle and shift through all the gears including REVERSE. Listen for any changes in noise.
   - Drive the vehicle in the gear in which the noise is most noticeable. Apply the clutch pedal and leave the gear engaged. Listen for any change in noise.
   - Drive the vehicle in the gear in which the noise is most noticeable. Apply the clutch pedal and shift the transmission into NEUTRAL. Release the clutch pedal and allow the vehicle to coast.
   - Compare the noise to another vehicle. Make sure the transmissions are the same.

2. Compare the road test results with the following symptom charts. The following list of conditions are typical transmission concerns:
   - GO to Symptom Chart — Transmission Operation or GO to Symptom Chart — NVH.

Symptom Chart — Transmission Operation

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation). for information about these practices.

Symptom	Possible Sources	Action
• Transmission difficult to shift	• Lubricant • Internal shift mechanism • Sliding gears, synchronizers • Housings, shaft	• ADD or DRAIN and FILL with specified lubricant. REFER to: Transmission Draining and

		• Loose pressure plate to flywheel bolts	Filling (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, General Procedures). • CHECK the internal shift mechanism for smooth operation. REPAIR or INSTALL a new mechanism as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • CHECK for free movement of gears and synchronizers. REPAIR or INSTALL new components as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • CHECK for binding condition between the input shaft and the engine crankshaft pilot bearing or bushing. REPAIR or INSTALL new components as necessary. REFER to: Pilot Bearing - Diesel (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation). • CHECK for loose bolts at the pressure plate. INSTALL new components as necessary.

		REFER to: Specifications (308-01B Clutch - 6-Speed Manual Transmission - MT82, Specifications).
• Transmission will not shift — gearshift lever moves	• Gearshift lever damaged • Damaged or worn selector arm. Loose shift rail bushings	• INSTALL a new gearshift lever. REFER to: Gearshift Lever (308-06B Manual Transmission External Controls - 6-Speed Manual Transmission - MT82, Removal and Installation). REFER to: Gearshift Lever (308-06B Manual Transmission External Controls - 6-Speed Manual Transmission - MT82, Removal and Installation). • CHECK the internal shift components. INSTALL new component as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• **NOTE:** *While verifying the condition, determine whether the noise is gear rollover noise, release bearing rub or some other transmission-related noise. Gear rollover noise, inherent in manual transmissions, is caused by the constant mesh of gears turning at the engine idle speed while the clutch is engaged and the transmission is in NEUTRAL. Release bearing rub is sometimes mistaken for mainshaft bearing noise. Gear rollover noise will disappear when the clutch is disengaged or when the transmission is engaged in gear. Release bearing rub will disappear when the clutch is engaged. In the event that a bearing is damaged, the noise is more pronounced while engaged in gear under load or coast than in NEUTRAL.* • Noisy in forward gears	• Lubricant • Components grounding out on the transmission • Components housing bolts • Bearings or gears	• ADD or DRAIN and FILL with specified lubricant. REFER to: Transmission Draining and Filling (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, General Procedures). • CHECK for screws and bolts of body or other components grounding out. CORRECT as

		necessary. • CHECK the torque on the transmission-to-flywheel housing bolts and the flywheel housing-to-engine block bolts. TIGHTEN the bolts to specification. REFER to: Specifications (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Specifications). • INSPECT the bearings. INSPECT the gears and gear teeth for wear or damage. INSTALL new components as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Gears clash when shifting from one forward gear to another	• Pilot bearing • Gear teeth and/or synchronizer • Damaged shift forks or worn shift fork inserts	• CHECK for a binding condition between the input shaft and the engine crankshaft pilot bearing. INSTALL new components as necessary. REFER to: Pilot Bearing - Diesel (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation). . • REPAIR or INSTALL new components as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual

		Transmission - MT75, Disassembly). • INSPECT for wear or damage. INSTALL new components as necessary. REFER to: Specifications (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Specifications).
• Transmission jumps out of gear	• Transmission-to-engine mounting bolts • Crankshaft pilot bearing • Internal damage • Gear teeth	• TIGHTEN the bolts to specification. • INSTALL a new pilot bearing. REFER to: Pilot Bearing - Diesel (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation). • INSPECT the synchronizer sleeves for free movement on their hubs. INSPECT the synchronizer blocking rings for widened index slots, rounded clutch teeth and smooth internal surface. REPAIR or INSTALL a new component as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • If worn or damaged, INSTALL new gears. REFER to: Countershaft (308-03B Manual Transmission - 6-Speed Manual Transmission -

		MT82, Disassembly and Assembly of Subassemblies).
• Transmission will not shift into one gear — all others OK	• Manual shift linkage • Backup switch ball • Internal components	• REPAIR or INSTALL new components as necessary. • If REVERSE is the problem, CHECK reverse lamp switch for ball frozen in extended position. • INSPECT the shift rail and fork system, synchronizer system and the gear clutch teeth for restricted travel. REPAIR or INSTALL new components as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Transmission is locked in one gear and cannot be shifted out of that gear	• Internal components • Fork on rail or shift rail	• INSPECT the problem gears, shift rails, forks and the synchronizer for wear or damage. REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • CHECK the shift rail interlock system. REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly)

		Disassembly).
• Transmission leaks	• Lubricant • Other component leaking • False report • Fill and drain plugs	• CHECK the level and type. REFER to: Transmission Fluid Level Check (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, General Procedures). • IDENTIFY leaking fluid as engine, power steering or transmission fluid. REPAIR as necessary. • REMOVE all traces of lube on the exposed transmission surfaces. CHECK the vent for free breathing. OPERATE the transmission and INSPECT for new leakage. REPAIR as necessary. • CHECK fill and drain plugs and bore threads. REPAIR as necessary. TIGHTEN plugs to specified torque value. REFER to: Transmission Draining and Filling (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, General Procedures).
• Bearing failure	• Other part failure • Raceways or rollers • Lubricant • Vibration break-up of retainer and brinelling of races • Bearing(s) • Shafts or bore • Overloading of vehicle • Incorrect	• REMOVE, DISASSEMBLE and CLEAN the transmission. Inspect for damaged parts and install new components as necessary. (Note: RESET the bearing preload if any new tapered bearings are installed.) REFER to: Transmission

	preload • Input shaft oil dam • Oil baffle in the input bearing shim pack	Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • DETERMINE the cause of vibration and CORRECT. Otherwise, PROCEED as above. • INSTALL new components as necessary and VERIFY the oil dam installation is correct. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). CHECK for correct installation of the snap ring on the mainshaft next to the oil dam. • INSTALL a new oil baffle, making sure it is not damaged during assembly. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).

Symptom Chart — NVH

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. Refer to Diagnostic Methods in Section 100-00 for information about these practices.

Symptom	Possible Sources	Action
NOTE: *NOTE: NVH symptoms should be identified using the diagnostic tools that are available. For a list of these tools, an explanation of their uses and a glossary of common terms, refer to Section 100-04. Since it is possible any one of multiple systems may be the cause of a symptom, it may be necessary to use a process of elimination type of diagnostic approach to pinpoint the responsible system. If this is not the causal system for the symptom, refer back to Section 100-04 for the next likely system and continue diagnosis.*		
• Excessive noise	• Clutch disc damper damaged • Transmission input	• REMOVE the clutch disc and pressure plate. REFER to: Clutch Disc and Pressure

	shaft pilot bearing worn or damaged • Crankshaft end play excessive • Release bearing worn or damaged	Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation). INSPECT the clutch disc for damage. INSPECT the transmission input shaft pilot bearing for wear and damage. REFER to Pilot Bearing Check. • CHECK the crankshaft end play. REFER to: Crankshaft End Play (303-00 Engine System - General Information, General Procedures). • CHECK the clutch release hub and bearing, and guide tube for wear and damage. REPAIR all components as necessary.
• Clutch rattling noise — occurs with clutch engaged, noise changes/disappears with clutch pedal pressed	• Flywheel bolts loose • Clutch housing bolts or clutch pressure plate bolts loose	• TIGHTEN the bolts to specifications. CHECK the bolts for damage. REFER to: Specifications (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Specifications). • TIGHTEN the bolts to specifications. CHECK the bolts for damage. REFER to: Specifications (308-01B Clutch - 6-Speed Manual Transmission - MT82, Specifications).
• Clutch squeaking noise — noise is heard when the clutch is operated. Vehicle moves slowly or creeps when the clutch is disengaged. Can also be difficult to shift into 1st and REVERSE gears	• Pilot bearing seized or damaged	• INSTALL a new pilot bearing. REFER to: Pilot Bearing - Diesel (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
• Clutch squeaking noise — occurs with clutch pedal pressed/released	• Worn clutch pedal shaft or bushings	• INSPECT the clutch pedal for wear or damage. REPAIR as necessary. REFER to: Clutch Master Cylinder (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, Removal and Installation).
• Clutch whirring/rattle noise — occurs when clutch pedal is pressed	• Worn, damaged or misaligned clutch release bearing	• INSTALL a new clutch release bearing. REFER to: Clutch Slave Cylinder (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, Removal and Installation).
• Clutch grating/grinding noise — occurs when clutch pedal is pressed	• Clutch pressure plate fingers bent or worn • Contact surface of clutch release bearing worn or damaged	• INSPECT the clutch pressure plate release fingers. INSTALL a new pressure plate as necessary. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation). • INSTALL a new clutch release bearing. REFER to: Clutch Slave Cylinder (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, Removal and Installation).
• Clutch chatter — a small amount of noise when clutch pedal is released at initial take-off	• Clutch engagement	• Acceptable operating condition.
• Clutch chatter/grabs — in some cases a shudder is felt. Occurs with clutch pedal pressed/released	• Damaged or worn powertrain/driveline mounts • Binding or dragging plunger of the clutch master cylinder or slave cylinder Grease or oil on	• INSPECT the powertrain/drivetrain mounts. INSTALL new mounts as necessary. REFER to: Engine - 6-Speed Manual Transmission - MT82 (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L

	• Grease or oil on the clutch disc facing • Clutch disc surface glazed or damaged • Damaged or worn clutch pressure plate • Flywheel surface damaged or glazed	TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Installation). • CHECK the master and slave cylinder operation. INSPECT the components for damage or wear. INSTALL a new master or slave cylinder as necessary. REFER to: Clutch Master Cylinder (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, Removal and Installation). REFER to: Clutch Slave Cylinder (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, Removal and Installation). • CHECK the input shaft seal and rear main oil seal. REPAIR as necessary. INSTALL a new clutch disc. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation). • INSPECT the clutch disc surface for a glazed, hardened or damage condition. CARRY OUT a disc check. INSTALL a new clutch disc as necessary. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation). • INSPECT the clutch pressure plate for wear or damage. INSTALL a new clutch pressure plate as necessary. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation). • INSPECT the flywheel for damage or wear. CARRY OUT a flywheel runout check. INSTALL a new flywheel as necessary.
• Clutch chatter noise — noise when clutch pedal is released at initial take-off. Clutch is hard to engage and disengage	• Pilot bearing worn, damaged or not correctly aligned in bore	• INSPECT the clutch pressure plate release fingers for uneven wear, clutch components burnt or a seized pilot bearing. INSTALL a new pilot bearing as necessary. REFER to: Pilot Bearing - Diesel (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
• Transmission rattling/clattering noise — occurs in NEUTRAL or in gear, at idle	• Incorrect fluid level or fluid quality	• COMPARE with other like vehicles. CHECK that the transmission is filled to the correct level and with the specified fluid. For the fluid type, REFER to: Transmission Draining and Filling (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, General Procedures).
• Transmission rattling/clattering noise — noise at idle in NEUTRAL	• Worn or rough reverse idler gear • Excessive backlash in gears • Worn countershaft gears	• CHECK the reverse idler gear. REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • CHECK the gear backlash. ADJUST as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly)

		• REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Transmission whine — a mild whine at extreme speeds or high rpm	• Rotating gears/geartrain	• Acceptable noise.
• Transmission whine — a high pitched whine, also described as a squeal	• Transmission gears are worn (high mileage vehicle) • Mismatched gear sets • Damaged or worn transmission bearing	• Result of normal gear wear. REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • INSPECT the gear sets for an uneven wear pattern on the face of the gear teeth. REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). • INSPECT the transmission bearings. INSTALL new bearings as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Transmission growling/humming — noise occurs in the forward gears. The noise is more prominent when the gear is loaded. The problem gear can be located as the noise occurs in a specific gear position	• Gear is cracked, chipped or rough	• INSPECT the transmission gears for damage or wear. INSTALL new gears as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Transmission hissing — noise in NEUTRAL or in forward gears. As bearings wear or break up, the noise changes to a thumping noise	• Damaged or worn bearings	• INSPECT the transmission bearings. INSTALL new bearings as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Transmission knocking/thudding — noise at low speeds in forward gears	• Bearings with damaged balls or rollers or with pitted and spalled races	• INSPECT the transmission bearings. INSTALL new bearings as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
• Transmission rumble/growl — noise at higher speeds in forward gears, more pronounced in a coast/deceleration condition	• Incorrect driveline angle • Driveshaft out of balance or damaged	• CHECK the driveline angle. REPAIR as necessary. REFER to: Driveline System (205-00 Driveline System - General Information, Diagnosis and Testing). • CHECK the driveshaft for damage, missing balance weights or undercoating. REFER to: Driveline System (205-00 Driveline System - General Information, Diagnosis and Testing).
• Transmission rumble/growl — noise at all speeds in forward gears, more pronounced in a heavy acceleration condition	• Damaged or worn transmission bearing or gears (high mileage vehicles)	• CHECK transmission fluid for excessive metal particles. REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).

Pinpoint Tests

PINPOINT TEST A: CLUTCH SLIPPAGE

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).

for information about these practices.

Normal Operation and Fault Condition

The clutch is designed to transfer the power from the engine to the transmission, which may be stationary (starting) or rotating at a different speed (upshifting or downshifting). The clutch is functioning correctly when the engine and transmission are rotating at the same speed with the clutch engaged. Clutch pedal movement is transmitted by fluid pressure, which actuates the clutch release hub bearing. The clutch release hub and bearing pushes on the spring center towards the flywheel. The diaphragm spring pivots at the fulcrum, relieving the load on the clutch pressure plate. Steel spring straps riveted in the clutch pressure plate cover pull the clutch pressure plate from the clutch disc, disengaging the engine torque from the transmission.

This pinpoint test is intended to diagnose the following:

- Clutch pedal
- Clutch hydraulic system
- Clutch disc
- Clutch pressure plate

PINPOINT TEST A : CLUTCH SLIPPAGE

A1 INSPECT THE CLUTCH PEDAL

- Ignition OFF.
- Block the wheels and apply the park brake.
- Apply and slowly release the clutch pedal.

Does the clutch pedal release without binding?

Yes	GO to A2
No	INSPECT the clutch pedal. REFER to: Clutch Controls (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, Diagnosis and Testing).

A2 CHECK THE HYDRAULIC SYSTEM

- Ignition OFF.
- Apply and release the clutch pedal.

Is there residual hydraulic pressure at bleed screw?

Yes	INSTALL a new clutch master cylinder. REFER to: Clutch Master Cylinder (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, Removal and Installation).
No	GO to A3

A3 CARRY OUT A STALL TEST

- Start the engine.
- Block the wheels and apply the park brake.
- Place the transmission in 4th gear.
- Increase the speed to 2,000 rpm and slowly release the clutch pedal.

Does the engine stall within 5 seconds?

Yes	The clutch is not slipping. VERIFY the customer concern.
No	INSPECT the clutch components for damage.

PINPOINT TEST B: CLUTCH CHATTER OR SHUDDER

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation). for information about these practices.

Normal Operation and Fault Condition

The clutch is designed to transfer the power from the engine to the transmission, which may be stationary (starting) or rotating at a different speed (upshifting or downshifting). The clutch is functioning correctly when the engine and transmission are rotating at the same speed with the clutch engaged. Clutch pedal movement is transmitted by fluid pressure, which actuates the clutch release hub bearing. The clutch release hub and bearing pushes on the spring center towards the flywheel. The diaphragm spring pivots at the fulcrum, relieving the load on the clutch pressure plate. Steel spring straps riveted in the clutch pressure plate cover pull the clutch pressure plate from the clutch disc, disengaging the engine torque from the transmission.

This pinpoint test is intended to diagnose the following:

This pinpoint test is intended to diagnose the following:

- Engine or transmission mounts
- Clutch disc
- Clutch pressure plate
- Flywheel
- Pilot bearing
- Input shaft

PINPOINT TEST B : CLUTCH CHATTER OR SHUDDER

B1 CHECK THE ENGINE AND TRANSMISSION MOUNTS

- Inspect all the engine and transmission mounts for loose fasteners or damage.

Are any of the engine or transmission mounts loose or damage?

Yes	TIGHTEN or INSTALL new engine mounts or transmission mounts as necessary.
No	GO to B2

B2 INSPECT THE PRESSURE PLATE BOLTS

- Inspect the pressure plate-to-flywheel bolts.

Are any of the pressure plate-to-flywheel bolt loose?

Yes	TIGHTEN or INSTALL new bolts as necessary. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
No	GO to B3

B3 INSPECT THE PRESSURE PLATE

- Remove the clutch pressure plate.
  REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
- Inspect the clutch pressure plate. REFER to Clutch Pressure Plate Check.

Are any signs of damage present on the clutch pressure plate?

Yes	INSTALL a new clutch pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
No	GO to B4

B4 CHECK THE CLUTCH

- Carry out the clutch disc inspection procedure. REFER to Clutch Disc Check.

Is the clutch disc OK?

Yes	GO to B5
No	INSTALL a new clutch disc. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).

B5 INSPECT THE FLYWHEEL

- Inspect the flywheel for damage and runout. REFER to Flywheel Run out Check.

Is the fly wheel OK?

Yes	GO to B6
No	TIGHTEN or INSTALL a new flywheel. REFER to: Engine (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Assembly). REFER to: Engine (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Assembly).

B6 INSPECT THE PILOT BEARING

- Inspect the pilot bearing for wear or damage. REFER to Pilot Bearing Check.

Are there signs of wear or damage?

Yes	INSTALL a new pilot bearing. REFER to: Pilot Bearing - Diesel (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
No	GO to B7

B7 INSPECT THE INPUT SHIFT

- Inspect the input shaft for signs of wear or damage.

Are any signs of wear or damage present on the input shaft?

Yes	INSTALL a new input shaft. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
No	VERIFY the customer concerns. GO to Symptom Chart.

PINPOINT TEST C: CLUTCH PEDAL FEELS SPONGY OR HAS EXCESSIVE TRAVEL/CLUTCH WILL NOT DISENGAGE/CLUTCH SYSTEM LEAKAGE

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
for information about these practices.

Normal Operation and Fault Condition

The clutch is designed to transfer the power from the engine to the transmission, which may be stationary (starting) or rotating at a different speed (upshifting or downshifting). The clutch is functioning correctly when the engine and transmission are rotating at the same speed with the clutch engaged. Clutch pedal movement is transmitted by fluid pressure, which actuates the clutch release hub bearing. The clutch release hub and bearing pushes on the spring center towards the flywheel. The diaphragm spring pivots at the fulcrum, relieving the load on the clutch pressure plate. Steel spring straps riveted in the clutch pressure plate cover pull the clutch pressure plate from the clutch disc, disengaging the engine torque from the transmission.

This pinpoint test is intended to diagnose the following:

This pinpoint test is intended to diagnose the following:

- Internal operation
- Clutch pedal reserve
- Clutch slave cylinder travel
- Clutch disc
- Clutch pressure plate
- Clutch pedal free play

PINPOINT TEST C : CLUTCH PEDAL FEELS SPONGY OR HAS EXCESSIVE TRAVEL/CLUTCH WILL NOT DISENGAGE/CLUTCH SYSTEM LEAKAGE

C1 CHECK THE FLUID LEVEL

NOTE: *Do not check the hydraulic system after a road test. Allow the vehicle to cool down before carrying out the clutch hydraulic system check.*

- Remove the brake and clutch reservoir cap.
- Check the fluid level of the brake and clutch reservoir.

Is the fluid level at or above the step mark?

Yes	INSTALL the reservoir cap. GO to C2
No	ADD brake fluid to the specified level. GO to C2

C2 INSPECT THE HYDRAULIC SYSTEM FOR LEAKAGE

- Check the reservoir and reservoir tubes for leakage.
- Check the master cylinder and hydraulic tube for leakage.
- Check the clutch slave cylinder and the hydraulic tube connection for leakage.

Are there any signs of leakage?

Yes	INSTALL new components as necessary.
No	GO to C3

C3 CHECK INTERNAL OPERATION

- Remove the reservoir cap.
- Have an assistant slowly apply and release the clutch pedal.
- On the down stroke, the fluid level should not increase by more than 1.0 mm (0.039 in).

Does the fluid level increase more than 1 mm (0.039 in)?

Yes	INSTALL a new clutch master cylinder assembly. REFER to: Clutch Master Cylinder (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, Removal and Installation).
No	GO to C4

C4 CHECK THE CLUTCH PEDAL RESERVE

C4 CHECK THE CLUTCH PEDAL RESERVE

NOTE: *The clutch reserve is the distance between the clutch pedal when fully applied and the position when the vehicle starts to move forward.*

- Park the vehicle on a level surface.
- Verify the clutch hydraulic system is properly bled.
  REFER to: Clutch System Bleeding (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, General Procedures).
- Check for obstructions behind clutch pedal.
- Attach a cable tie to the lower clutch pedal.
- Attach a tape measure to the cable tie.
- Apply the clutch fully and start the vehicle.
- Shift the transmission into 1st gear.
- Use the seam on the steering wheel as a reference point.
- While observing the tape measure, slowly engage the clutch, noting when the vehicle starts to move forward or a noticeable engine rpm decrease occurs (noted on tachometer).

Is the clutch pedal reserve greater than or equal to 25 mm (0.984 in)?

Yes	The clutch hydraulic system is OK.
No	GO to C5

C5 CHECK THE CLUTCH PRESSURE PLATE

- Remove the clutch pressure plate.
  REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
- Inspect the clutch pressure plate for wear or runout.
  REFER to: Clutch (308-01B Clutch - 6-Speed Manual Transmission - MT82, Diagnosis and Testing).

Are there any signs of excessive wear or runout to the clutch pressure plate?

Yes	INSTALL a new clutch pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
No	GO to C6

C6 INSPECT THE CLUTCH DISC

- Carry out the clutch disc inspection procedure.
  REFER to: Clutch (308-01B Clutch - 6-Speed Manual Transmission - MT82, Diagnosis and Testing).

Is the clutch disc OK?

Yes	GO to C7
No	INSTALL a new clutch disc. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).

C7 CHECK CLUTCH PEDAL FREE PLAY

NOTE: *The clutch pedal free play is the distance between the clutch pedal when fully released and the position when slight resistance is felt on downward motion.*

- Ignition OFF.
- Attach a tape measure to the cable tie.
- While observing the tape measure, slowly push downward on the clutch pedal until a slight resistance is felt.

Is the clutch pedal free play less than 13 mm (0.511 in) ?

Yes	The clutch hydraulic system is OK

No	BLEED the clutch hydraulic system. REFER to Clutch System Bleeding.

PINPOINT TEST D: CLUTCH DRAG, ALSO HARD TO SHIFT

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation). for information about these practices.

Normal Operation and Fault Condition

The clutch is designed to transfer the power from the engine to the transmission, which may be stationary (starting) or rotating at a different speed (upshifting or downshifting). The clutch is functioning correctly when the engine and transmission are rotating at the same speed with the clutch engaged. Clutch pedal movement is transmitted by fluid pressure, which actuates the clutch release hub bearing. The clutch release hub and bearing pushes on the spring center towards the flywheel. The diaphragm spring pivots at the fulcrum, relieving the load on the clutch pressure plate. Steel spring straps riveted in the clutch pressure plate cover pull the clutch pressure plate from the clutch disc, disengaging the engine torque from the transmission.

This pinpoint test is intended to diagnose the following:

- Internal operation
- Clutch pedal reserve
- Clutch slave cylinder travel
- Clutch disc
- Clutch pressure plate
- Clutch pedal free play

PINPOINT TEST D : CLUTCH DRAG, ALSO HARD TO SHIFT

D1 CHECK FLUID LEVEL

- Ignition OFF.
- Remove the reservoir cap.
- Inspect the fluid level in the brake and clutch reservoir.

Is the fluid level at or above the step mark?

Yes	INSTALL the reservoir cap. GO to D2
No	ADD brake fluid. GO to D2

D2 INSPECT THE CLUTCH HYDRAULIC SYSTEM FOR LEAKAGE

- Inspect the clutch master cylinder and the hydraulic tubes for leakage.
- Inspect the reservoir and reservoir tube for leakage.
- Inspect the clutch slave cylinder and the hydraulic tube connection for leakage.

Are there any signs of leakage?

Yes	INSTALL new component as necessary.
No	GO to D3

D3 CHECK INTERNAL OPERATION

- Remove the reservoir cap.
- Have an assistant slowly apply and release the clutch pedal.
- On the down stroke, the fluid level should not increase by more than 1 mm (0.039 in).

Does the fluid level increase more than 1 mm (0.039 in)?

Yes	INSTALL a new clutch master cylinder assembly. REFER to: Clutch Master Cylinder (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, Removal and Installation).
No	GO to D4

D4 CHECK THE CLUTCH PEDAL RESERVE

NOTE: *The clutch reserve is the distance between the clutch pedal when fully applied and the position when the vehicle starts to move forward.*

- Park the vehicle on a level surface.
- Check for obstructions behind the clutch pedal. Check the carpet for correct installation
- Attach a cable tie to the lower clutch pedal.
- Attach a tape measure to the cable tie.
- Apply the clutch fully and start the vehicle.
- Shift the transmission into 1st gear.
- Use the seam on the steering wheel as a reference point.
- While observing the tape measure, slowly engage the clutch, noting when the vehicle starts to move forward or a noticeable engine rpm decrease occurs (noted on tachometer).

Is the clutch pedal reserve greater than or equal to 25 mm (0.984 in)?

Yes	The clutch hydraulic system is OK.
No	GO to D5

D5 CHECK THE PEDAL FREE PLAY

NOTE: *The clutch pedal free play is the distance between the clutch pedal when fully released and the position when slight resistance is felt on downward motion.*

- Ignition OFF.
- Attach a tape measure to the cable tie.
- While observing the tape measure, slowly push downward on the clutch pedal until a slight resistance is felt.

Is the clutch pedal free play less than 13 mm (0.511 in)?

Yes	The clutch hydraulic system is OK.
No	GO to D6

D6 CHECK THE CLUTCH PRESSURE PLATE

- Remove the clutch pressure plate.
  REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
- Inspect the clutch pressure plate for wear or runout. REFER to Clutch Pressure Plate Check.

Are there any signs of excessive wear or runout to the clutch pressure plate?

Yes	INSTALL a new clutch pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
No	GO to D7

D7 INSPECT THE CLUTCH DISC

- Carry out the clutch disc inspection procedure.

Is the clutch disc OK.

Yes	GO to D8
No	INSTALL a new clutch disc. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).

D8 INSPECT THE TRANSMISSION

- Remove the transmission.
  REFER to: Transmission - 4x2 (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Installation).
  REFER to: Transmission - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, 2.2L Duratorq-TDCi (Puma) Diesel, 4x2 (308-03B Manual Transmission - 6-Speed Manual Transmission - MT82, Installation).
- Disassemble the transmission.
  REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
- Carry out the following:
  - Inspect all the shift rails for excessive scuffing or wear.
  - Check the interlock pins on the shift rail.
  - Make sure the interlock bolts are tightened to specifications.
  - Inspect the shift pads for wear or cracking.
  - Inspect the shift forks for wear or damage.
  - Check the synchronizer rings of the affected gear for wear or damage.
  - Check the synchronizer hubs of the affected gear for wear or damage.
  - Inspect the clutching teeth of the affected gear.

Are there any internal components worn or damaged?

Yes	INSTALL new components or REPAIR as necessary. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly).
No	ASSEMBLE and INSTALL the transmission. REFER to: Transmission (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Disassembly). REFER to: Transmission - 4x2 (308-03A Manual Transmission - 5-Speed Manual Transmission - MT75, Installation). REFER to: Transmission - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, 2.2L Duratorq-TDCi (Puma) Diesel, 4x2 (308-03B Manual Transmission - 6-Speed Manual Transmission - MT82, Installation).

PINPOINT TEST E: CLUTCH PEDAL PULSATION

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
for information about these practices.

Normal Operation and Fault Conditions

The clutch is designed to transfer the power from the engine to the transmission, which may be stationary (starting) or rotating at a different speed (upshifting or downshifting). The clutch is functioning correctly when the engine and transmission are rotating at the same speed with the clutch engaged. Clutch pedal movement is transmitted by fluid pressure, which actuates the clutch release hub bearing. The clutch release hub and bearing pushes on the spring center towards the flywheel. The diaphragm spring pivots at the fulcrum, relieving the load on the clutch pressure plate. Steel spring straps riveted in the clutch pressure plate cover pull the clutch pressure plate from the clutch disc, disengaging the engine torque from the transmission.

This pinpoint test is intended to diagnose the following:

- Clutch disc
- Clutch pressure plate

- Flywheel

PINPOINT TEST E : CLUTCH PEDAL PULSATION

E1 CHECK THE CLUTCH PEDAL PULSATION

- Start the engine.
- With the transmission in NEUTRAL, slowly apply the clutch pedal.

Does the clutch pedal pulsate while being applied?

Yes	GO to E2
No	VERIFY the customer concern. GO to Symptom Chart.

E2 INSPECT THE PRESSURE PLATE BOLTS

- Inspect the pressure plate-to-flywheel bolts.

Are any of the pressure plate-to-flywheel bolts loose?

Yes	TIGHTEN or INSTALL new bolts. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
No	GO to E3

E3 INSPECT THE CLUTCH PRESSURE PLATE

- Remove the clutch pressure plate.
  REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
- Inspect the clutch pressure plate for damage.

Are there any signs of damage present on the clutch pressure plate?

Yes	INSTALL a new clutch pressure plate. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
No	GO to E4

E4 INSPECT THE CLUTCH DISC

- Carry out clutch disc inspection procedure. REFER to Clutch Disc Check.

Is the clutch disc OK?

Yes	GO to E5
No	INSTALL a new clutch disc. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).

E5 INSPECT THE FLYWHEEL

- Inspect the flywheel for damage and runout. REFER to Flywheel Runout Check.

Is flywheel OK?

Yes	VERIFY the customer concern. GO to Symptom Chart.

No	TIGHTEN or INSTALL a new flywheel.

PINPOINT TEST F - CLUTCH-RELATED VIBRATIONS

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices. REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation). for information about these practices.

Normal Operation and Fault Conditions

The clutch is designed to transfer the power from the engine to the transmission, which may be stationary (starting) or rotating at a different speed (upshifting or downshifting). The clutch is functioning correctly when the engine and transmission are rotating at the same speed with the clutch engaged. Clutch pedal movement is transmitted by fluid pressure, which actuates the clutch release hub bearing. The clutch release hub and bearing pushes on the spring center towards the flywheel. The diaphragm spring pivots at the fulcrum, relieving the load on the clutch pressure plate. Steel spring straps riveted in the clutch pressure plate cover pull the clutch pressure plate from the clutch disc, disengaging the engine torque from the transmission.

This pinpoint test is intended to diagnose the following:

- Engine components
- Accessory drive belts
- Release bearing
- Flywheel

PINPOINT TEST F : CLUTCH-RELATED VIBRATIONS

F1 CHECK FOR ENGINE COMPONENT GROUNDING

- With the vehicle in NEUTRAL, position it on a hoist.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- Check the engine and transmission mounts for grounding.
- Check for exhaust manifolds or other engine component grounding on the body or frame.

Is there evidence of grounding on the body or frame?

Yes	REPAIR the components as necessary.
No	GO to F2

F2 CHECK FOR ACCESSORY DRIVE VIBRATIONS

- Remove the accessory drive belt.
  REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
- Start the engine.

Does the vibration stop when the accessory drive belt is removed from the engine?

Yes	INSTALL a new accessory drive belt. REFER to: Accessory Drive Belt - Vehicles With: Hydraulic Power Assist Steering (HPAS) (303-05B Accessory Drive - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
No	STOP the engine and INSTALL the drive belt. GO to F3

F3 CHECK FOR CLUTCH RELEASE BEARING NOISE

NOTE: *With the transmission in NEUTRAL, transmission rollover noise can be heard. Make sure to distinguish between rollover noise and clutch release bearing noise.*

- Start the engine.
- Apply and hold the clutch pedal.

Is a whirring, grating or grinding noise present only when pedal is pushed?

Yes	INSTALL a new clutch release bearing. REFER to: Clutch Slave Cylinder (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, Removal and Installation).
No	GO to F4

F4 INSPECT THE FLYWHEEL

- Ignition OFF.
- Remove the transmission.
  REFER to: Engine (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Assembly).
  REFER to: Engine (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Assembly).
- Carry out a flywheel check. REFER to Flywheel Runout Check.

Is the flywheel OK?

Yes	VERIFY the customer concern. GO to Symptom Chart.
No	TIGHTEN or INSTALL a new flywheel.

PINPOINT TEST G: EXCESSIVE NOISE

Diagnostic Overview

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Health and Safety Precautions (100-00 General Information, Description and Operation).
for information about these practices.

Normal Operation and Fault Conditions

The clutch is designed to transfer the power from the engine to the transmission, which may be stationary (starting) or rotating at a different speed (upshifting or downshifting). The clutch is functioning correctly when the engine and transmission are rotating at the same speed with the clutch engaged. Clutch pedal movement is transmitted by fluid pressure, which actuates the clutch release hub bearing. The clutch release hub and bearing pushes on the spring center towards the flywheel. The diaphragm spring pivots at the fulcrum, relieving the load on the clutch pressure plate. Steel spring straps riveted in the clutch pressure plate cover pull the clutch pressure plate from the clutch disc, disengaging the engine torque from the transmission.

This pinpoint test is intended to diagnose the following:

This pinpoint test is intended to diagnose the following:

- Transmission
- Clutch slave cylinder
- Pilot bearing

PINPOINT TEST G : EXCESSIVE NOISE

G1 TRANSMISSION NEUTRAL GEAR ROLLOVER TEST

- Start the engine.
- With the engine at idle, the transmission in NEUTRAL and the clutch engaged (pedal up). If noise is excessive, apply the clutch pedal to stop the transmission input shaft from rotating.

Does the noise stop when the clutch pedal is applied?

Yes	INSPECT the clutch components for damage. REFER to Clutch Disc Check.
No	GO to G2

G2 CHECK THE CLUTCH SYSTEM

- Ignition OFF.
- Using slow, medium, then fast stroke, and release the clutch pedal.

Is there a squeak?

Yes	GO to G3
No	The clutch system is OK. VERIFY the customer concern.

G3 CHECK THE CPP SWITCH

- Remove the CPP switch. Using slow, medium, then fast stroke, apply and release the clutch pedal.

Is there a squeak?

Yes	REINSTALL the CPP switch. GO to G4
No	INSTALL a new CPP switch.

G4 CHECK THE CLUTCH SLAVE CYLINDER

- Remove the transmission.
  REFER to: Engine (303-01B Engine - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Assembly).
  REFER to: Engine (303-01C Engine - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Assembly).
- Inspect the clutch slave cylinder for wear or loss of lubrication.

Are there any signs of wear or loss of lubrication?

Yes	INSTALL a new clutch slave cylinder. REFER to: Clutch Slave Cylinder (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, Removal and Installation).
No	GO to G5

G5 CHECK THE PILOT BEARING

- Inspect the pilot bearing for wear or damage.

Is the pilot bearing OK?

Yes	GO to G6
No	INSTALL a new pilot bearing. REFER to: Pilot Bearing - Diesel (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).

G6 CHECK THE DAMPER SPRINGS

- Inspect the damper springs for fatigue or breakage.
  REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).

Are there any signs of fatigue or breakage?

Yes	INSTALL a new clutch disc. REFER to: Clutch Disc and Pressure Plate (308-01B Clutch - 6-Speed Manual Transmission - MT82, Removal and Installation).
No	INSPECT the crankshaft end play.

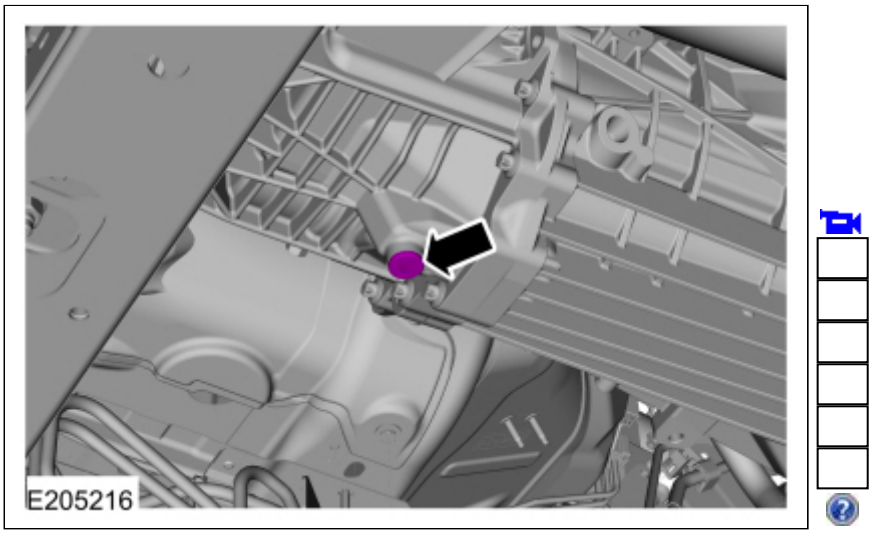
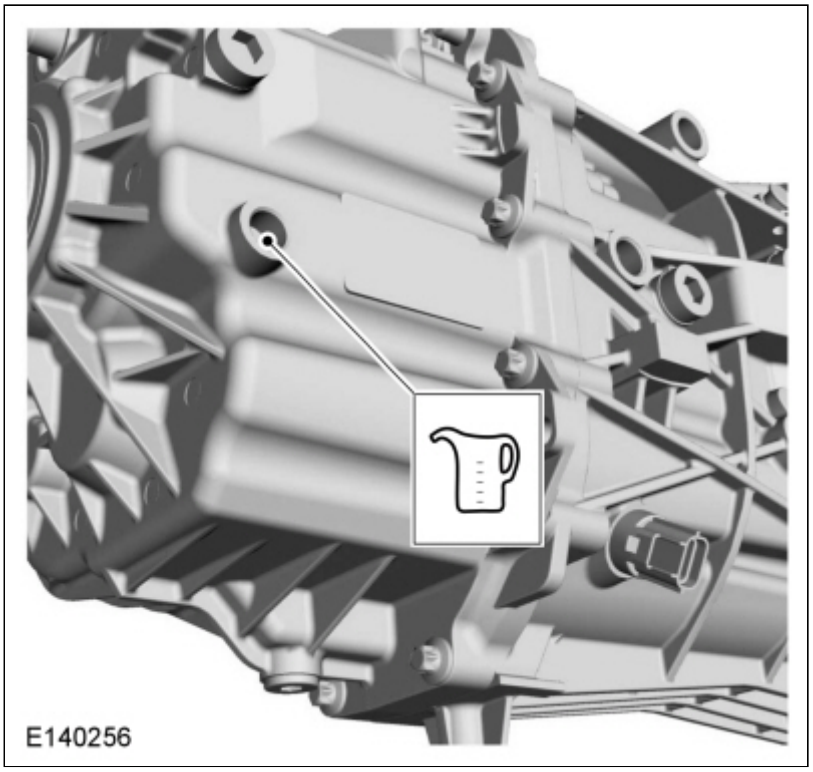
Transmission Draining and Filling



Materials

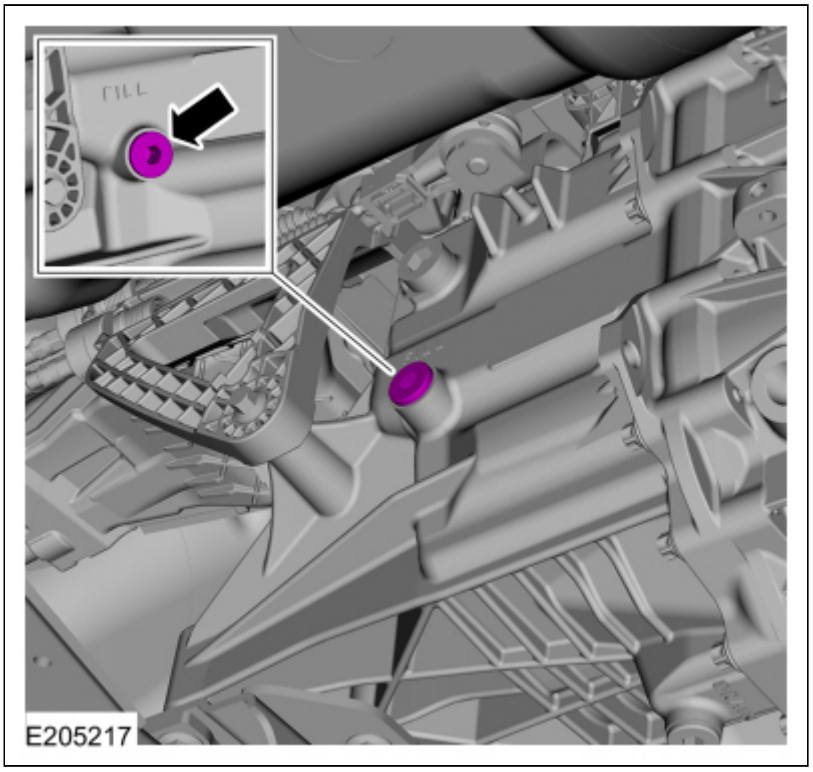
Name	Specification
Gear/Transmission Fluid - SAE 75W	WSS-M2C200-D2

1. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).



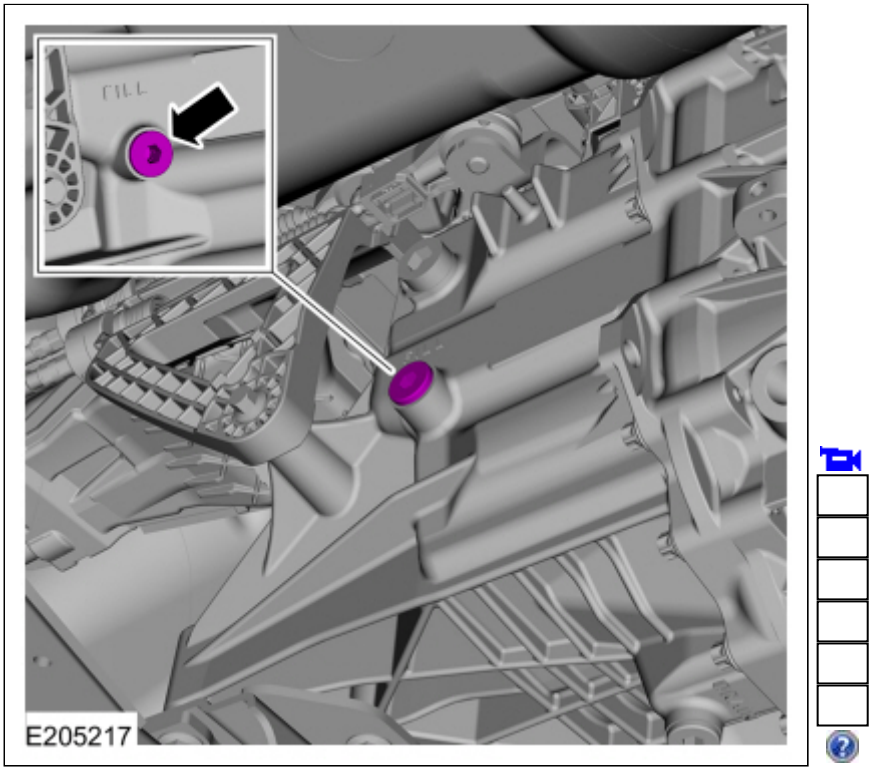
2. **WARNING: Be prepared to collect escaping fluid.**

   Torque: 50 Nm

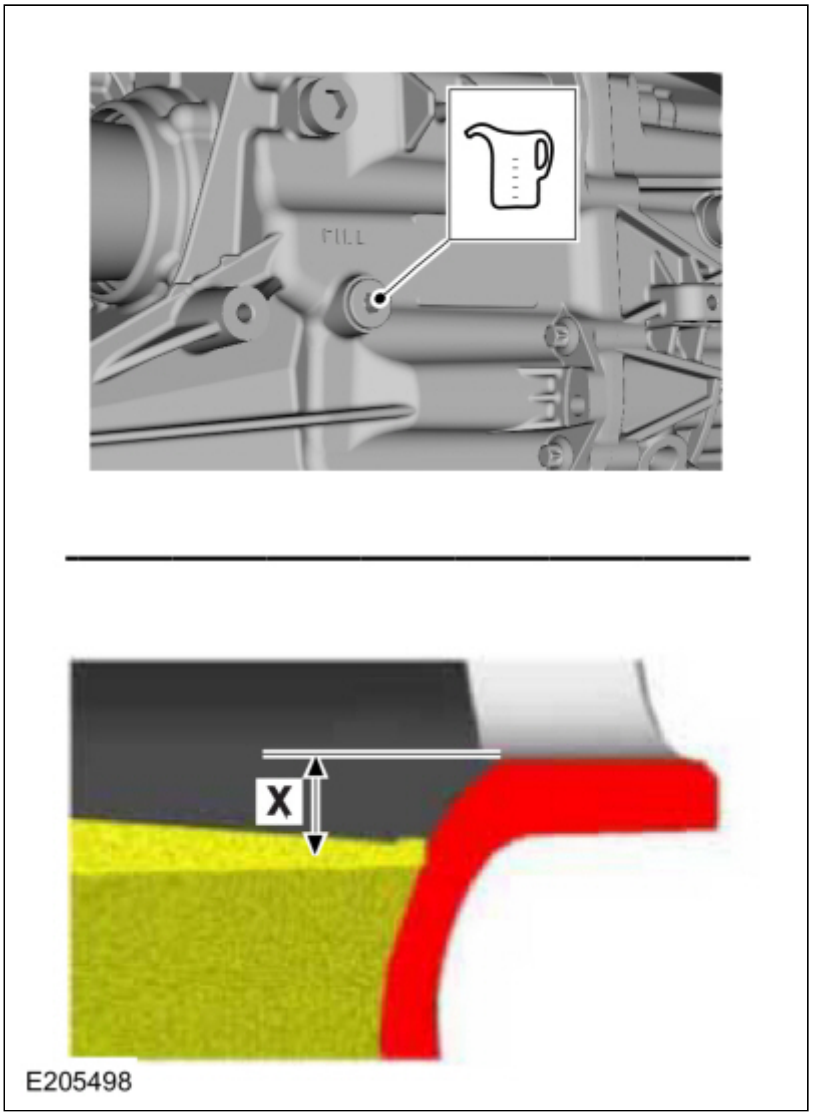


3. **NOTE:** *Add additional 0.1L Transmission Fluid to the initial fill amount, if transmission has been disassembled and assembled in your workshop.*

   Fill with 2.6L Transmission fluid.
   Material: Gear/Transmission Fluid - SAE 75W (WSS-M2C200-D2)

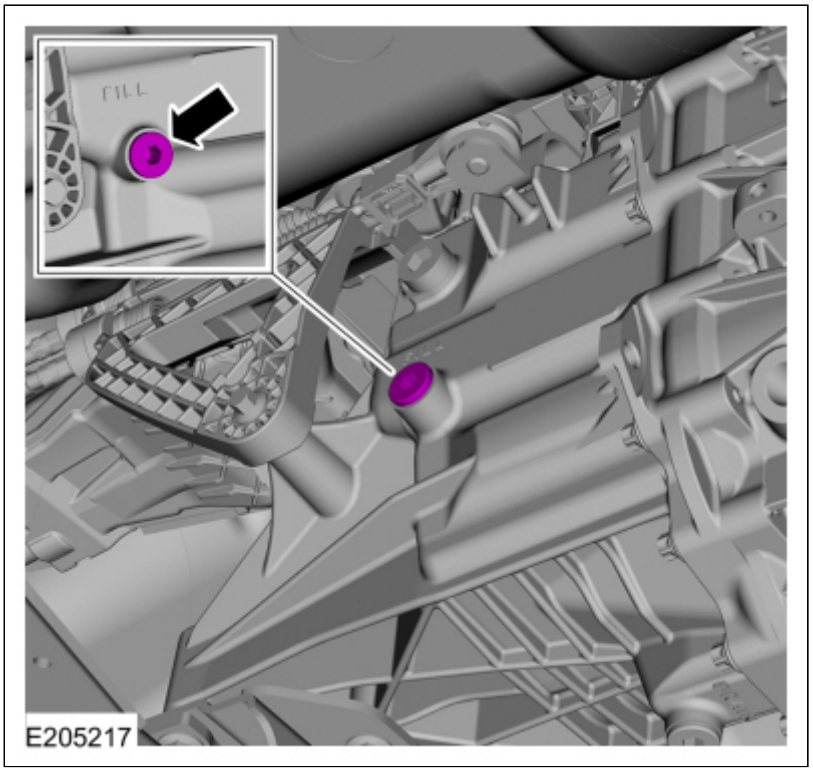


4. *Torque*: 35 Nm



Copyright © 2016 Ford Motor Company

Transmission Fluid Level Check



1. Check the component for leaks.
2. Transmission Fluid Level Check should only be carried out if an oil leak was identified.
   Refer to: Health and Safety Precautions (100-00 General Information, Description and Operation).
3. **NOTE:** *Make sure that the vehicle is standing on a level surface.*

   Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
4. 

- 2WD **X:** 11-13mm
- 4WD **X:** 7.5-8.5mm

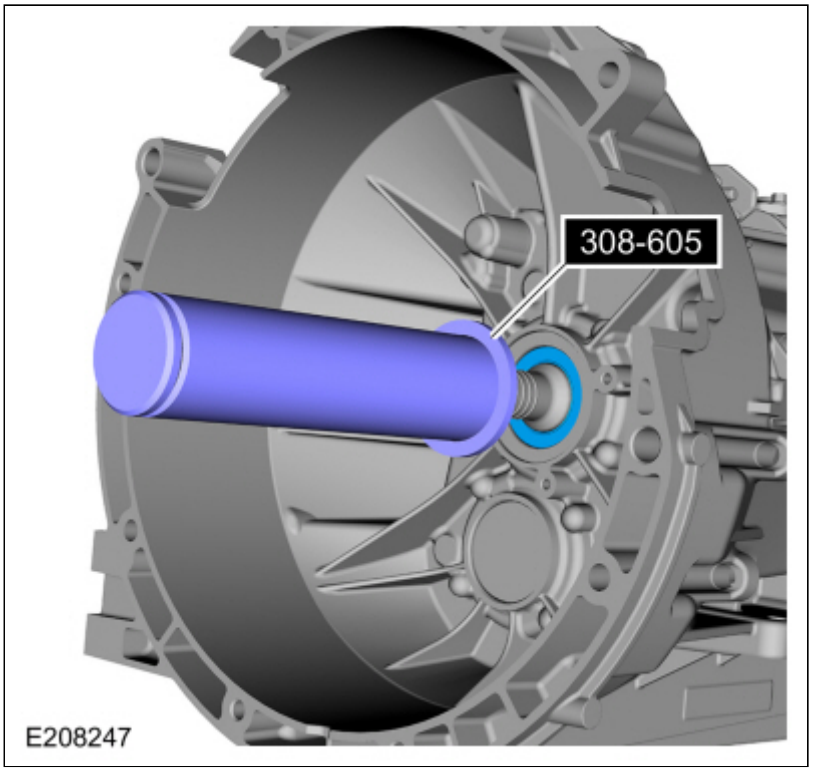
Input Shaft Seal

Special Tool(s) / General Equipment

 21151	303-336 Remover, Crankshaft Rear Seal
 E49153	308-605 Installer, Input Shaft Seal

Removal

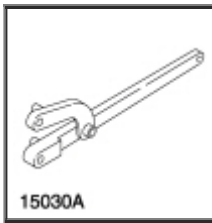


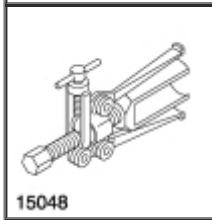
1. Refer to: Clutch Slave Cylinder (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, Removal and Installation).
2. Use Special Service Tool: 303-336 Remover, Crankshaft Rear Seal.

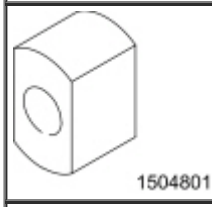
- Screw a self-tapping screw into the input shaft seal.
- Pull out the screw and the input shaft seal with pliers.
- Discard the input shaft seal.

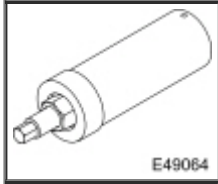
Installation

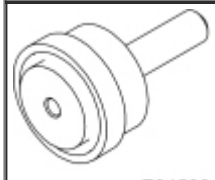
1. Use Special Service Tool: 308-605 Installer, Input Shaft Seal.











2. Refer to: Clutch Slave Cylinder (308-02B Clutch Controls - 6-Speed Manual Transmission - MT82, Removal and Installation).
3. Refer to: Transmission Draining and Filling (308-03B Manual Transmission - 6-Speed Manual Transmission - MT82, General Procedures).

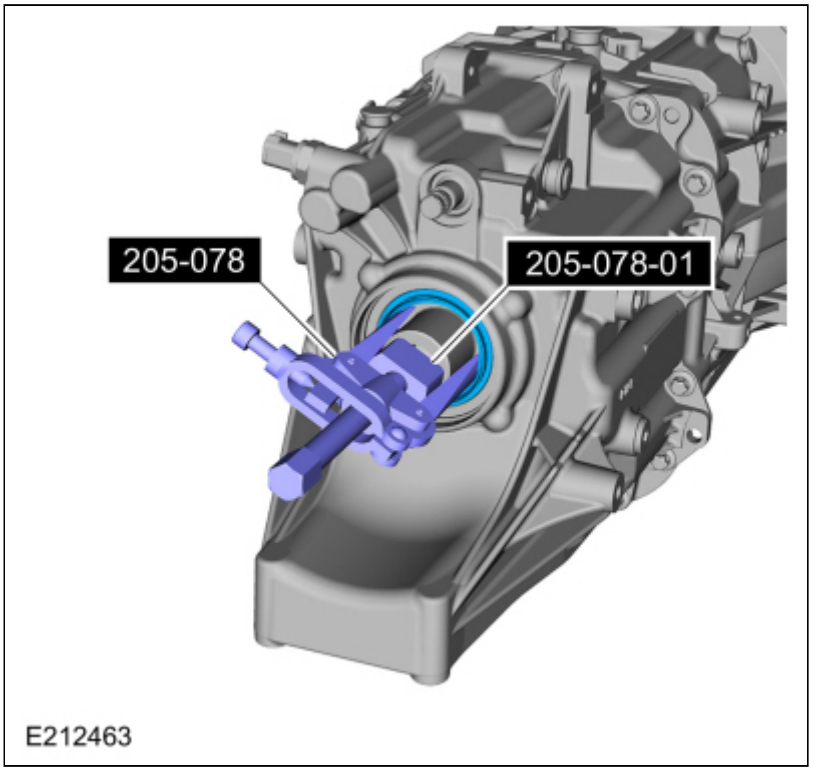
Output Shaft Seal - LHD RWD/RHD RWD

Base Part Number: 7B215

Special Tool(s) / General Equipment

 15030A	205-072 Universal Flange Holding Wrench
 15048	205-078 Remover, Drive Pinion Seal
 1504801	205-078-01 Adapter for 205-078 (Thrust Pad)
 E49064	308-604 Installer, Output Drive Flange Seal
 E84508	308-690 Installer, Output Drive Flange Seal

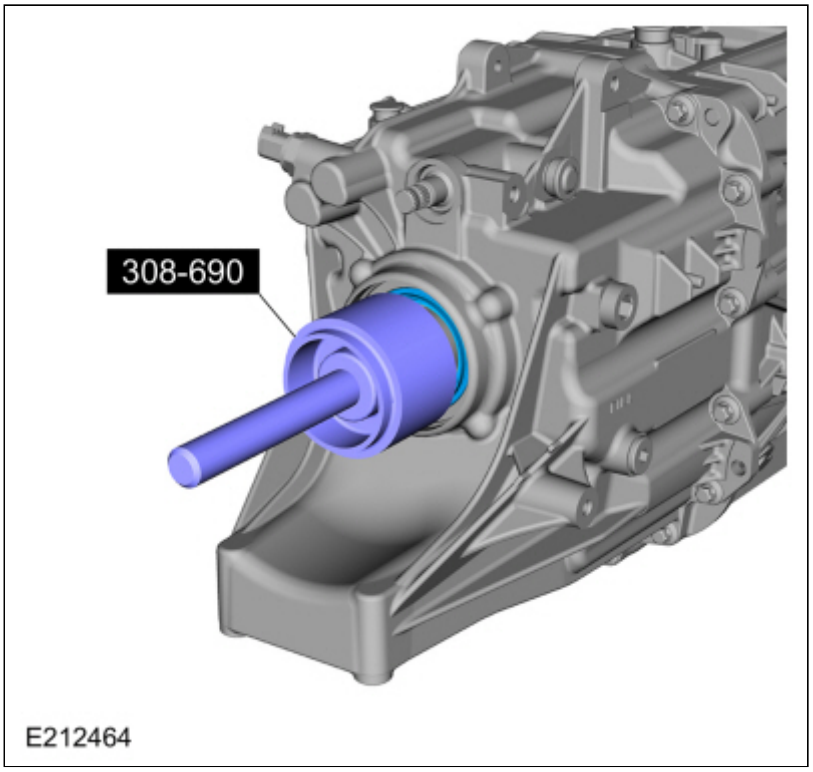
Materials



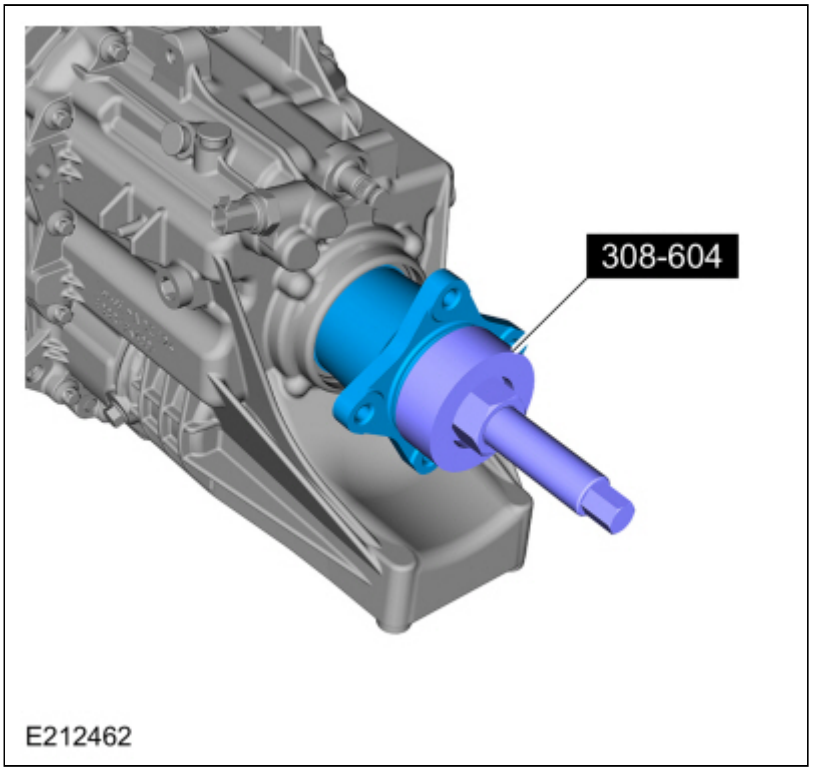
Name	Specification
Thread Locking Adhesive	WSK-M2G351-A6

Removal

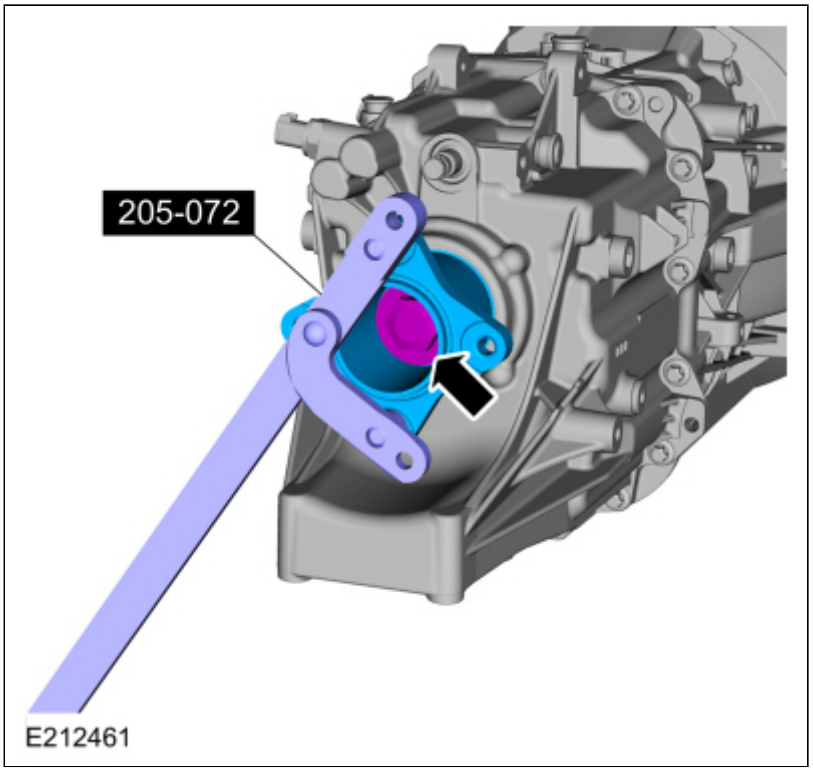
1. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
2. Refer to: Front Driveshaft - 4WD (205-01 Driveshaft, Removal and Installation).
3. Use Special Service Tool: 205-072 Universal Flange Holding Wrench.



4. Use Special Service Tool: 205-078 Remover, Drive Pinion Seal. , 205-078-01 Adapter for 205-078 (Thrust Pad).



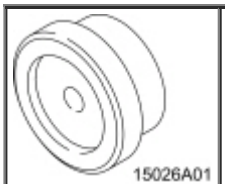
Installation

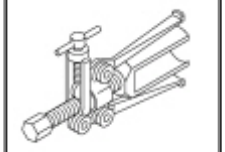


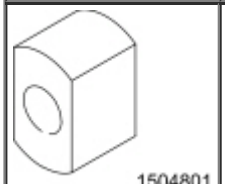
1. Use Special Service Tool: 308-690 Installer, Output Drive Flange Seal.

2. Use Special Service Tool: 308-604 Installer, Output Drive Flange Seal.

3. Use Special Service Tool: 205-072 Universal Flange Holding Wrench.
   Material: Thread Locking Adhesive (WSK-M2G351-A6)
   Torque:
   Stage 1: 200 Nm
   Stage 2: Loosen: 1 turn(s)
   Stage 3: 180 Nm







4. Refer to: Front Driveshaft - 4WD (205-01 Driveshaft, Removal and Installation).

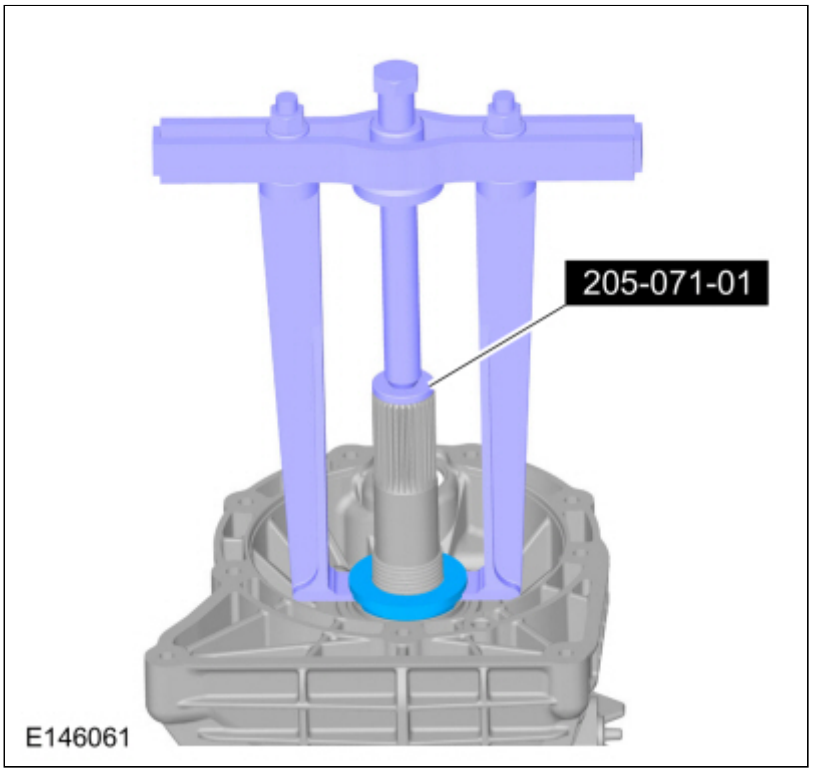
Output Shaft Seal - LHD 4WD/RHD 4WD

Base Part Number: 7B215

Special Tool(s) / General Equipment

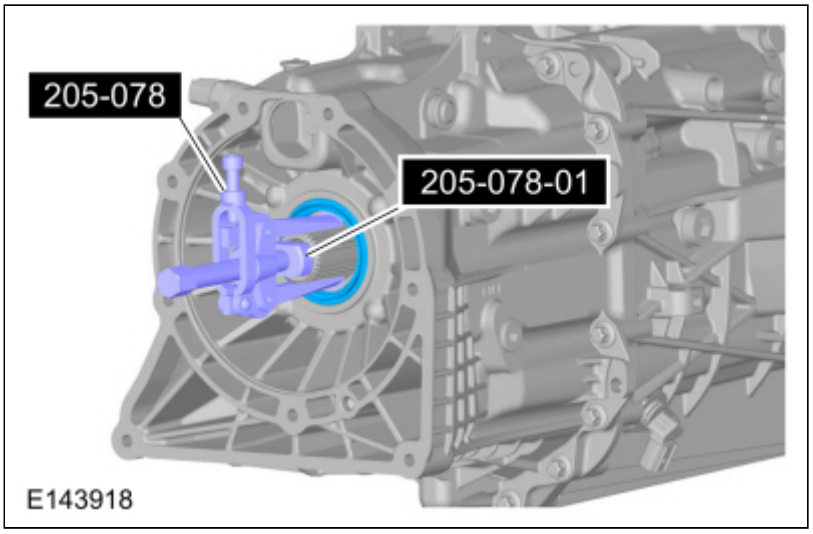
 15026A01	205-071-01 Adapter for 205-071 (Thrust Pad)
 15048	205-078 Remover, Drive Pinion Seal
 1504801	205-078-01 Adapter for 205-078 (Thrust Pad)
 E163726	308-883 Wrench, Output Shaft Nut
 E163727	308-884 Installer, Output Shaft Seal
Hot Air Gun	
Puller	

Materials



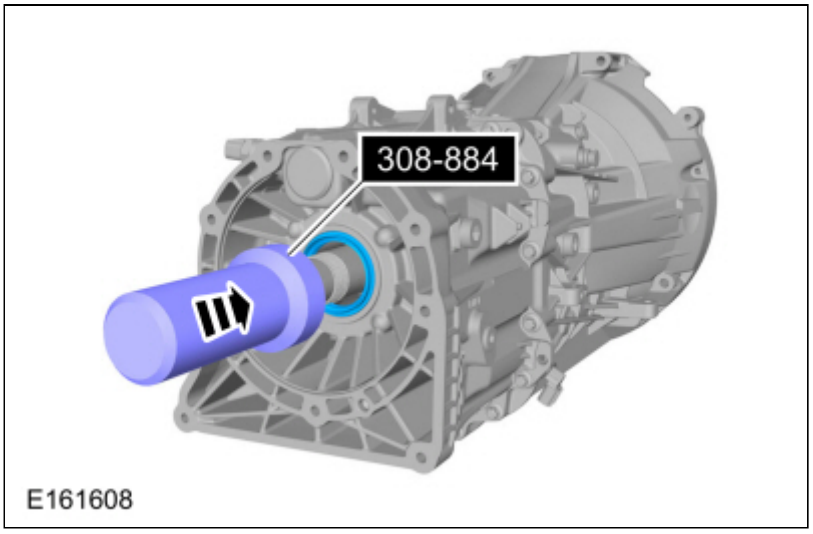
Name	Specification
Thread Locking Adhesive	WSK-M2G349-A7

Removal

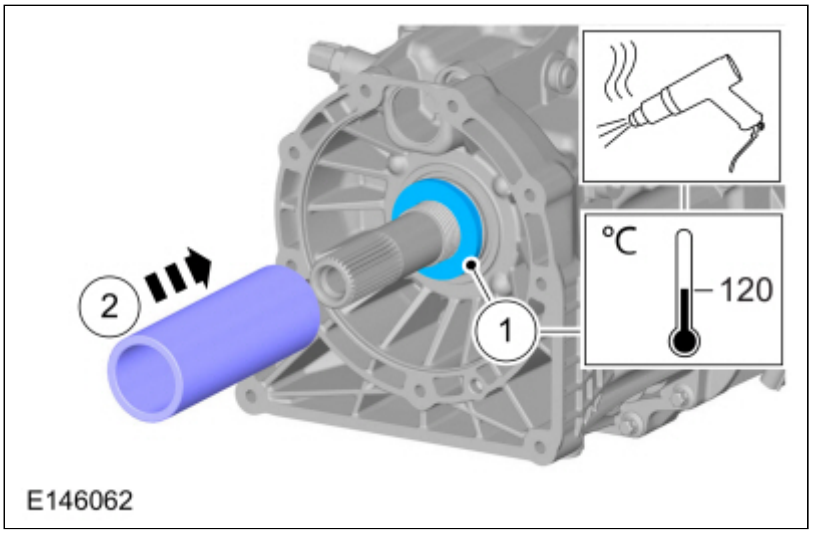


1. Refer to: Transfer Case (308-07B Transfer Case - 5-Speed Manual Transmission - MT75/6-Speed Manual Transmission - MT82, Removal).
2. Use Special Service Tool: 308-883 Wrench, Output Shaft Nut.

3. Use Special Service Tool: 205-071-01 Adapter for 205-071 (Thrust Pad).
   Use the General Equipment: Puller



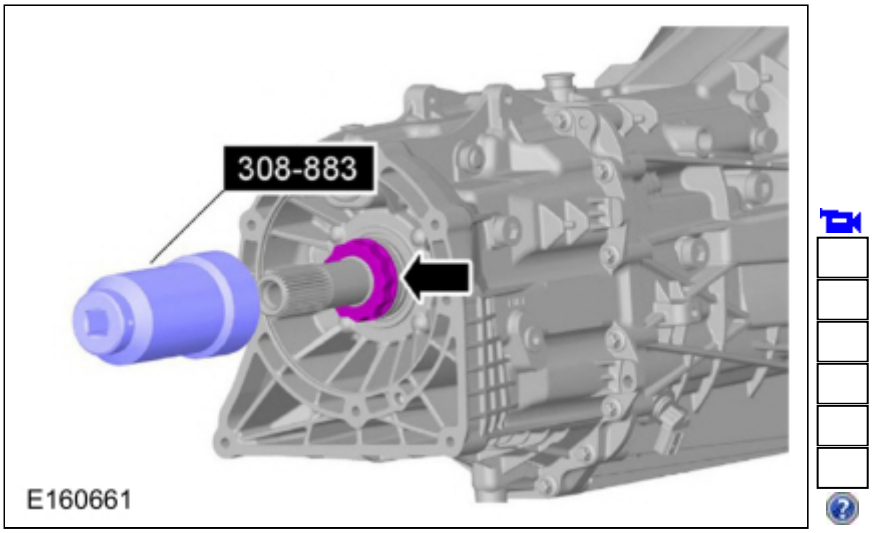
4. Discard the output shaft oil seal.
   Use Special Service Tool: 205-078 Remover, Drive Pinion Seal. , 205-078-01 Adapter for 205-078 (Thrust Pad).



Installation

1. **NOTICE: Install a new output shaft oil seal.**

   Use Special Service Tool: 308-884 Installer, Output Shaft Seal.



1. Use the General Equipment: Hot Air Gun
2. Use a suitable pipe to install the seal.

1. Use Special Service Tool: 308-883 Wrench, Output Shaft Nut.
2. Tighten the bolt.
   Material: Thread Locking Adhesive (WSK-M2G349-A7)

Torque: 210 Nm
3. Loosen the bolt.
4. *Torque*: 180 Nm

4. Refer to: Transfer Case (308-07B Transfer Case - 5-Speed Manual Transmission - MT75/6-Speed Manual Transmission - MT82, Installation).

Base Part Number: 7000

Special Tool(s) / General Equipment

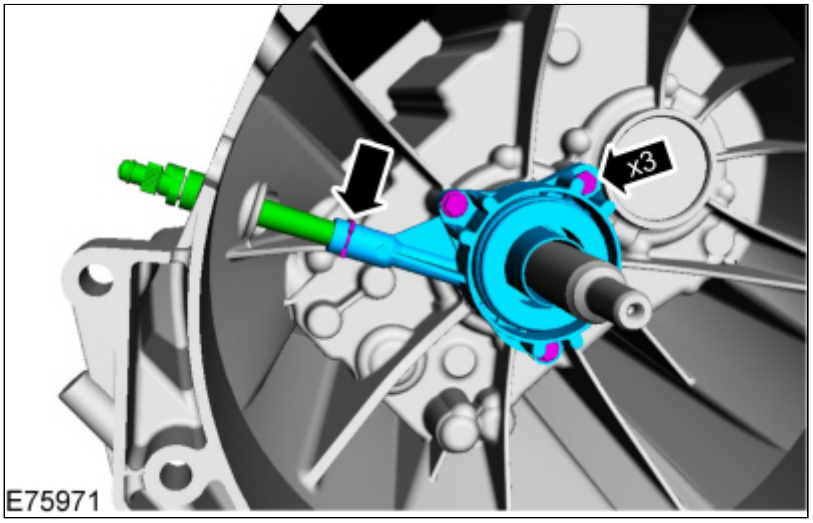
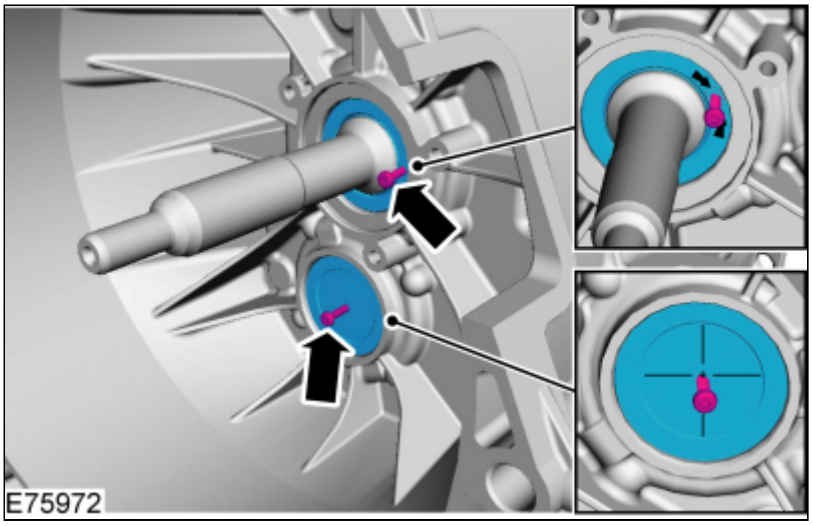
 E129694	100-001 (T50T-100-A) Slide Hammer
 15026A01	205-071-01 Adapter for 205-071 (Thrust Pad)
 15030A	205-072 Universal Flange Holding Wrench
 15048	205-078 Remover, Drive Pinion Seal
 1504801	205-078-01 Adapter for 205-078 (Thrust Pad)
 E133913	205-153 (T80T-4000-W) Handle
 15073	205-175 Socket, Drive Pinion Nut
 15105A	205-329 Mounting Bracket, Engine/Differential
	205-D072 (D97L-4221-A) 2 Jaw Puller

 E155534	
 21187	303-435 Mounting Stand
 21031B	303-435-06 Mounting Bracket for 303-435
 E182026	308-130 (T87T-7025-DH) Installer, Shift Rail Needle Bearing
 E216591	308-812 Remover, Detent
Hydraulic Press	
Two Leg Puller	

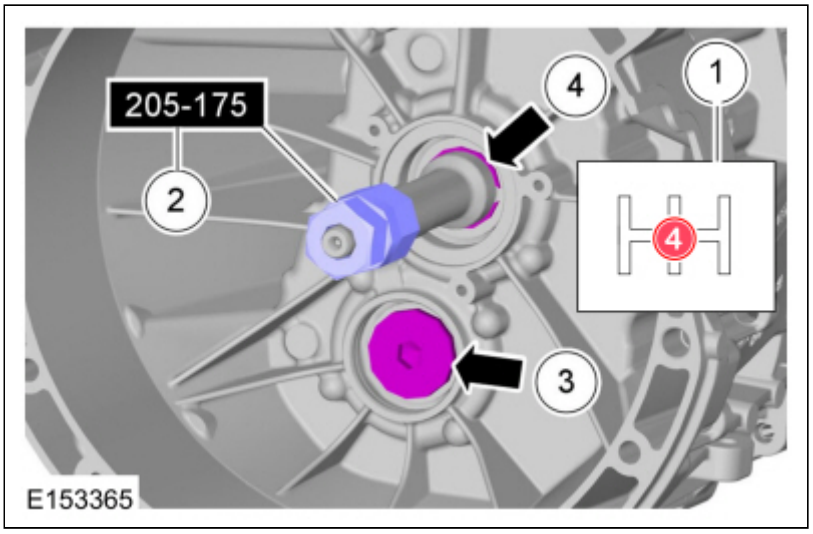


1. Use Special Service Tool: 205-329 Mounting Bracket, Engine/Differential. , 303-435 Mounting Stand. , 303-435-06 Mounting Bracket for 303-435.

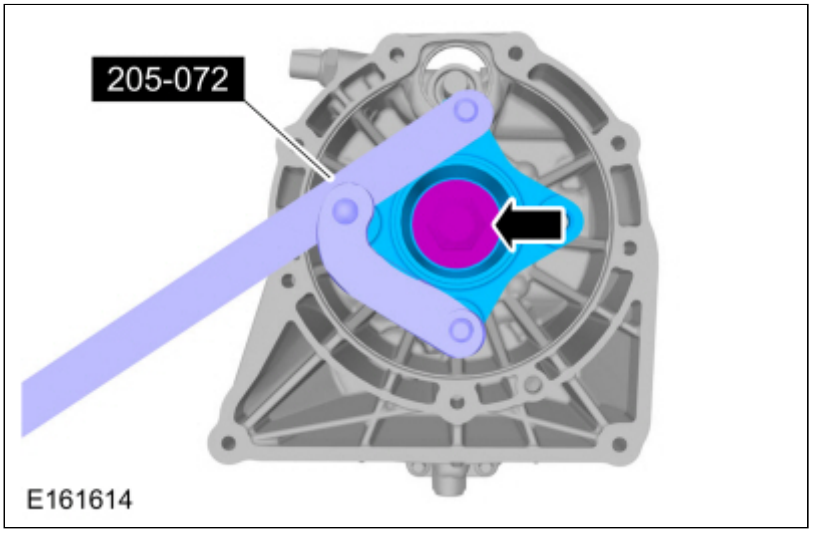


2. **WARNING: Be prepared to collect escaping fluid.**

3.

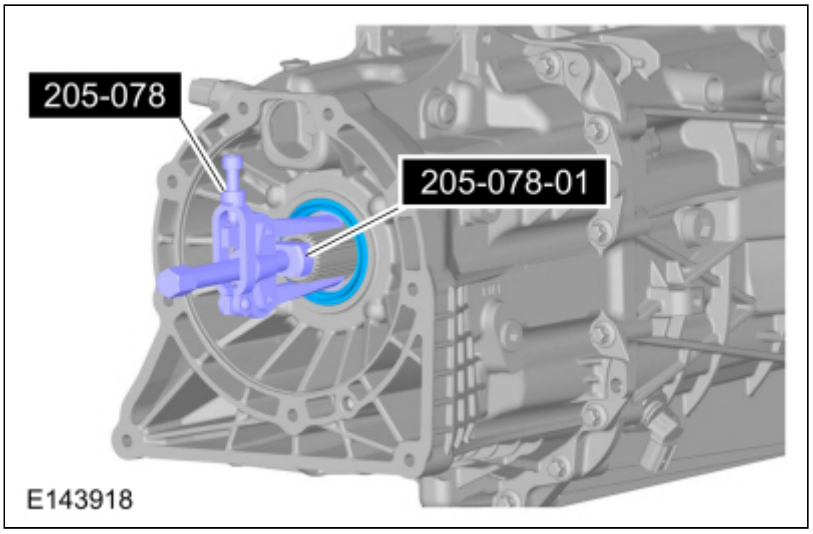


4.

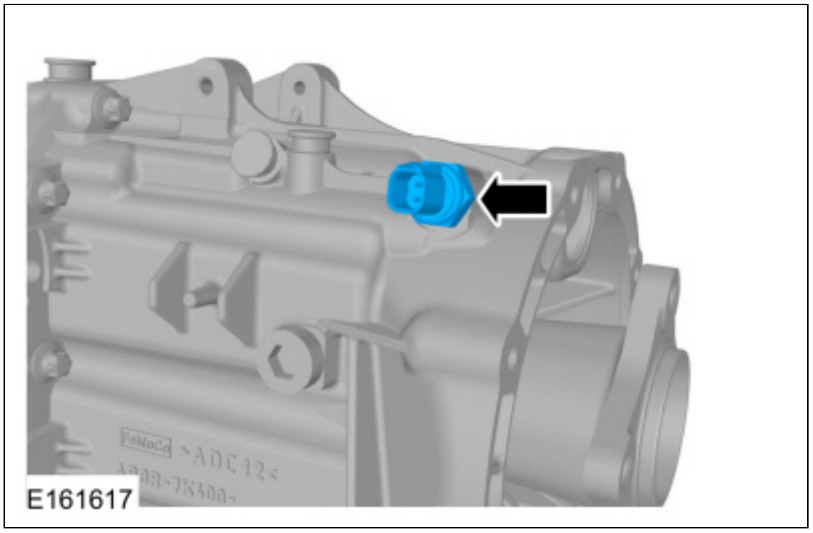


5. **NOTE:** *Make sure that 4th gear is selected.*

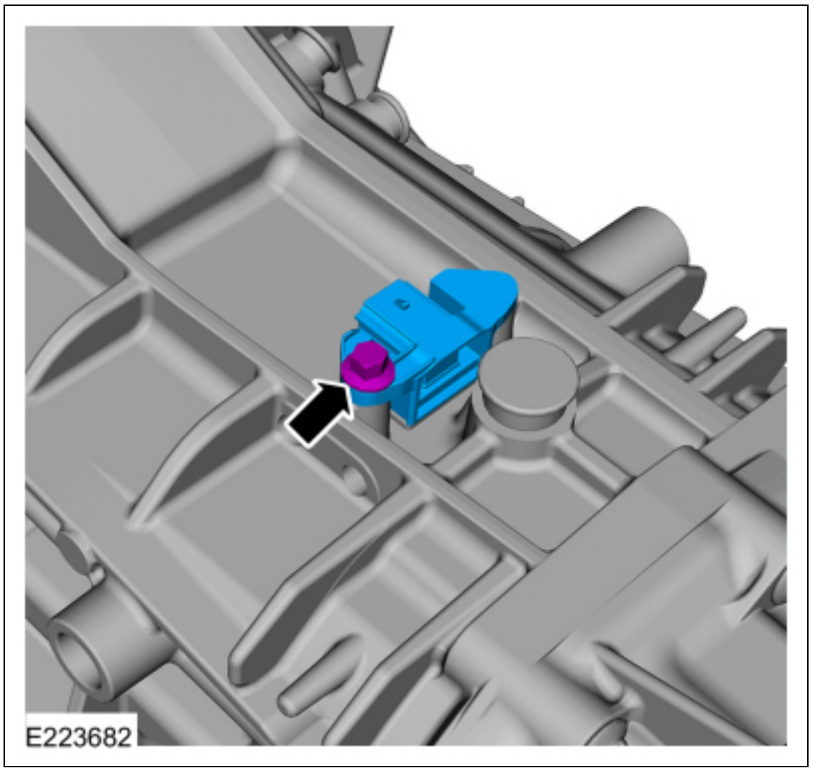
   Use Special Service Tool: 205-175 Socket, Drive Pinion Nut.



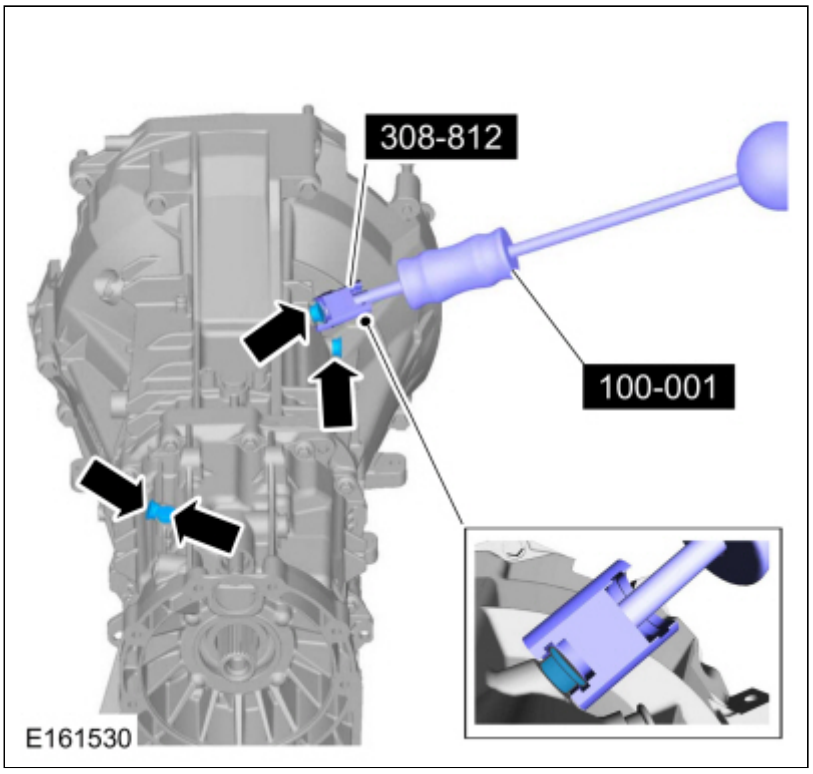
6. Use Special Service Tool: 205-072 Universal Flange Holding Wrench.



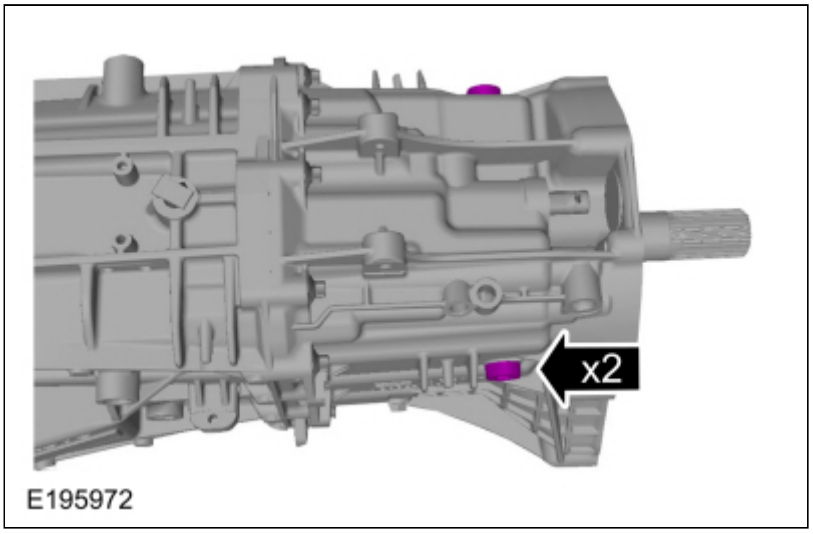
7. Use Special Service Tool: 205-071-01 Adapter for 205-071 (Thrust Pad). , 205-D072 (D97L-4221-A) 2 Jaw Puller.



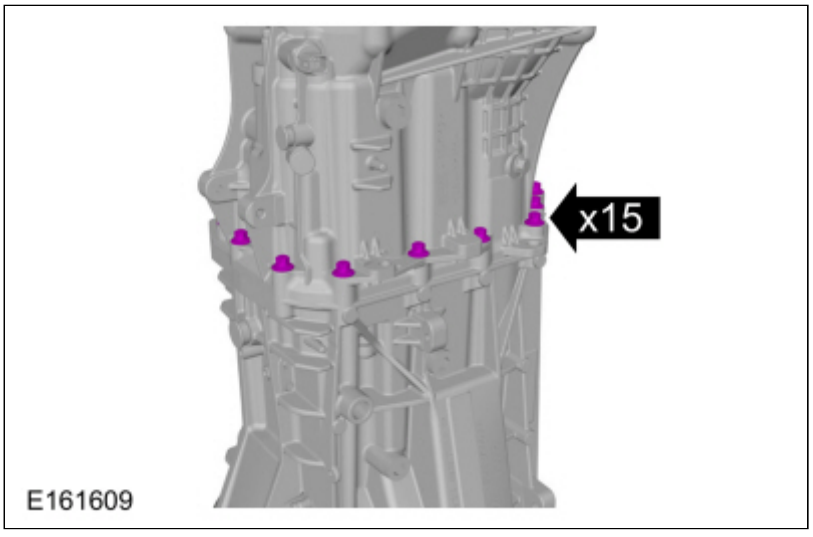
8. Use Special Service Tool: 205-078 Remover, Drive Pinion Seal. , 205-078-01 Adapter for 205-078 (Thrust Pad).



9.

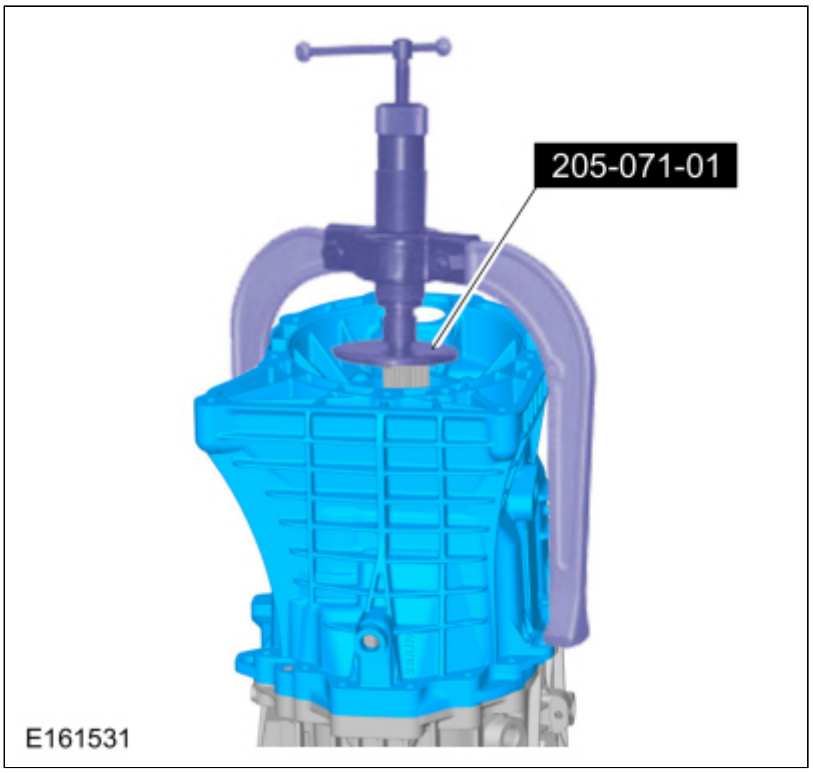


10.

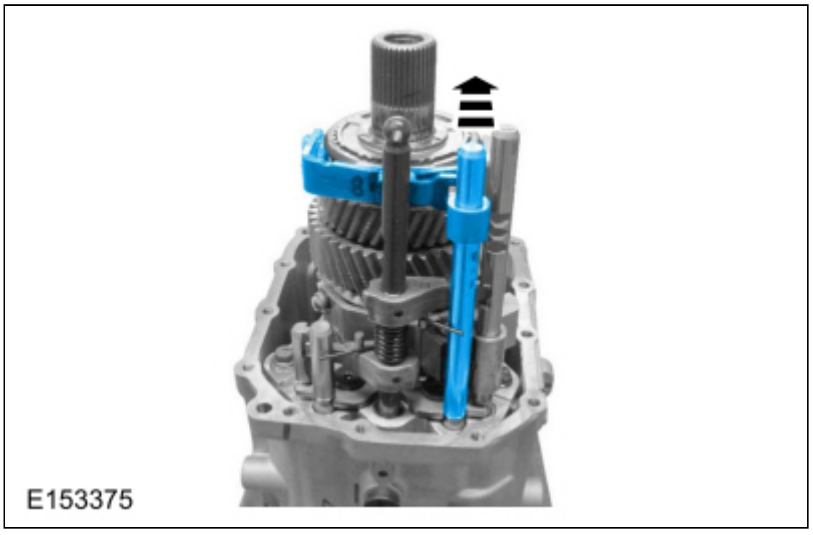


11. Use Special Service Tool: 100-001 (T50T-100-A) Slide Hammer. , 308-812 Remover, Detent.

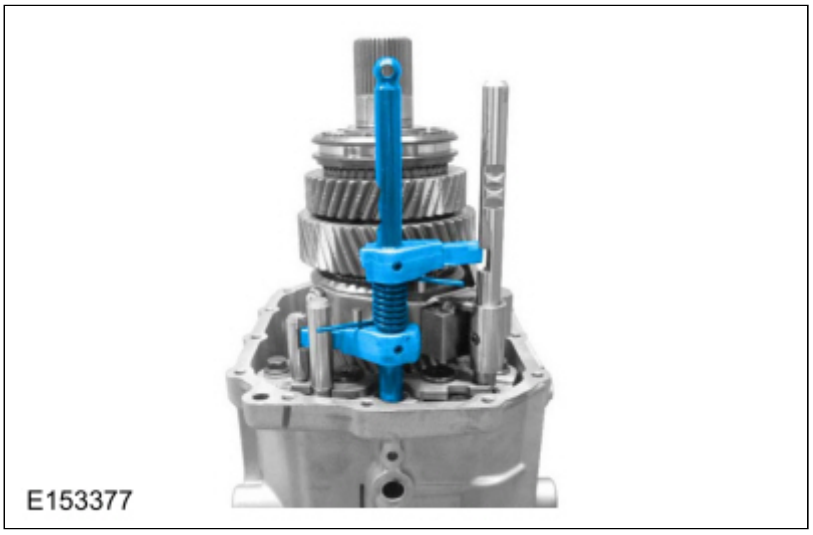
12.



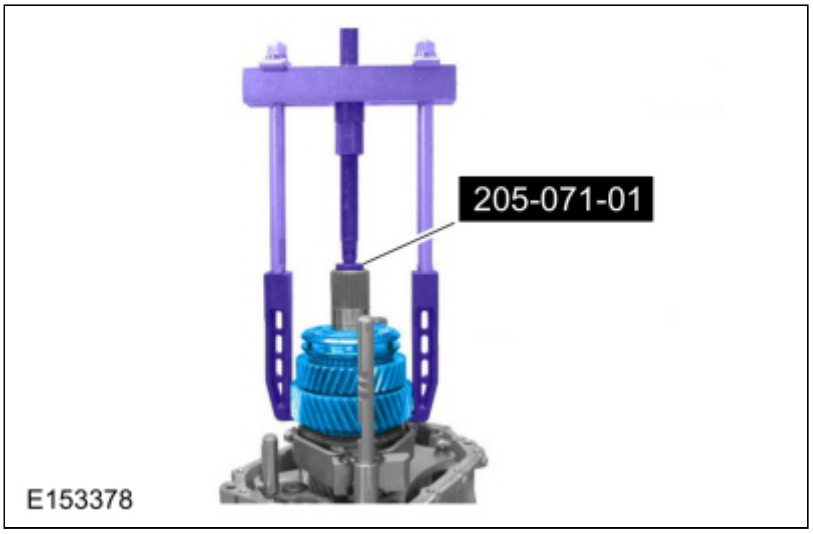
13.



14. Use Special Service Tool: 205-071-01 Adapter for 205-071 (Thrust Pad).



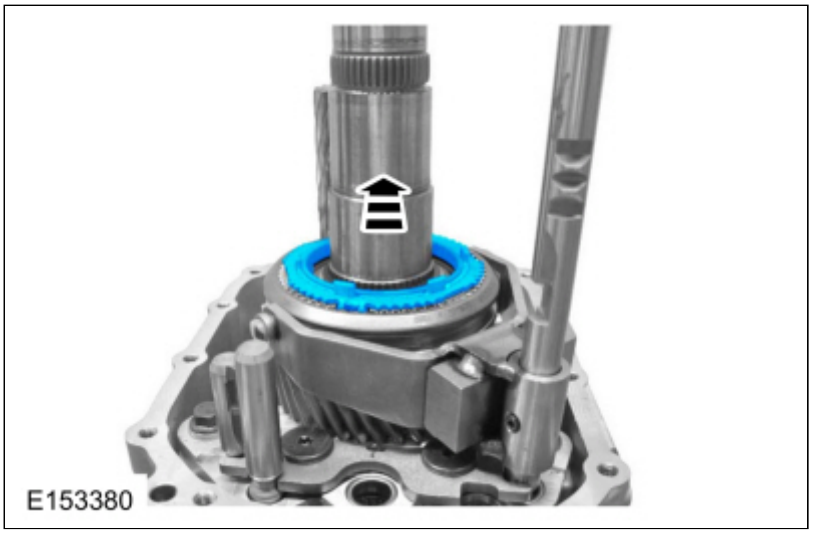
Use the General Equipment: Two Leg Puller



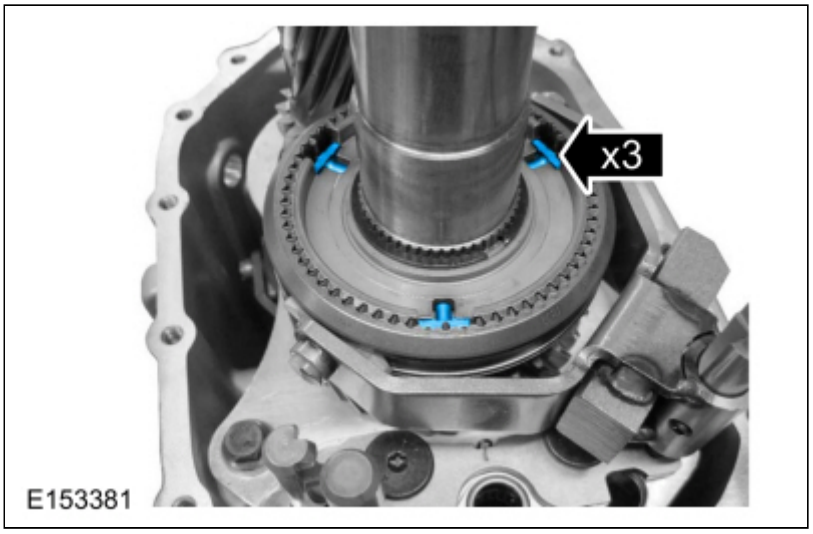
15.

16.

17. Use Special Service Tool: 205-071-01 Adapter for 205-071 (Thrust Pad).
Use the General Equipment: Two Leg Puller

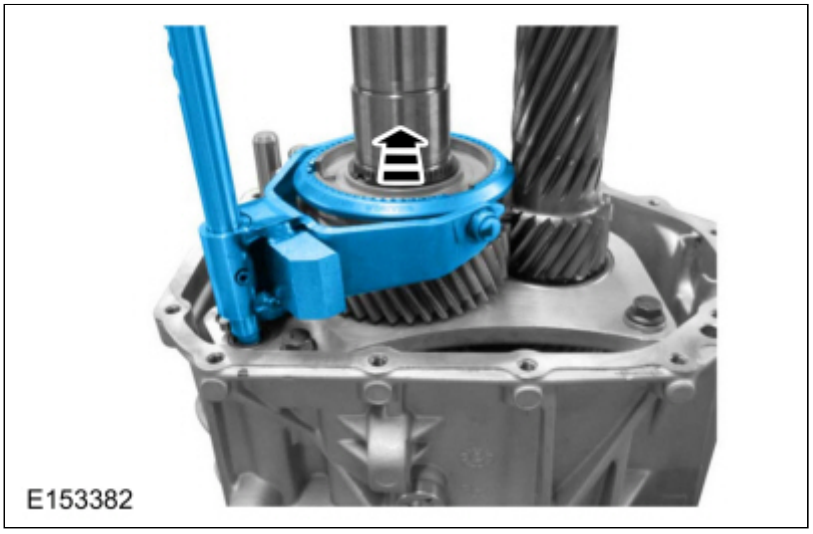


18.



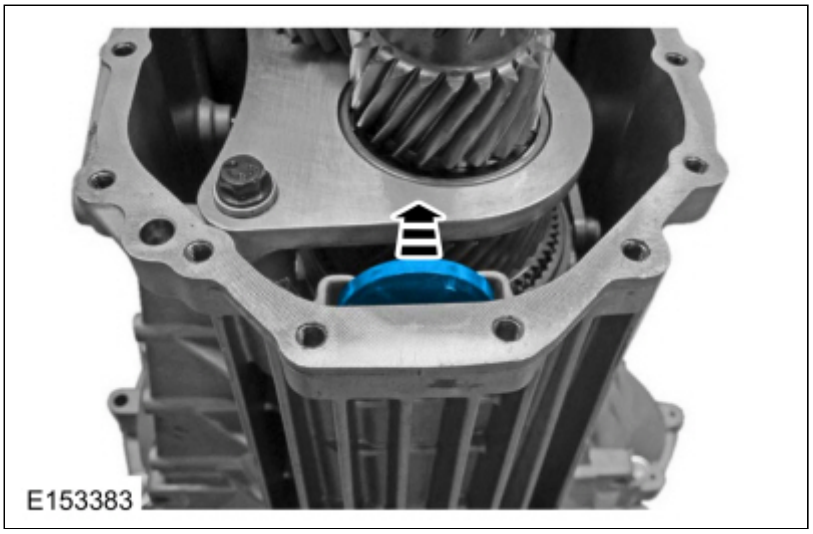
NOTE: *Note the position of each synchronizer ring component before removal.*

19.

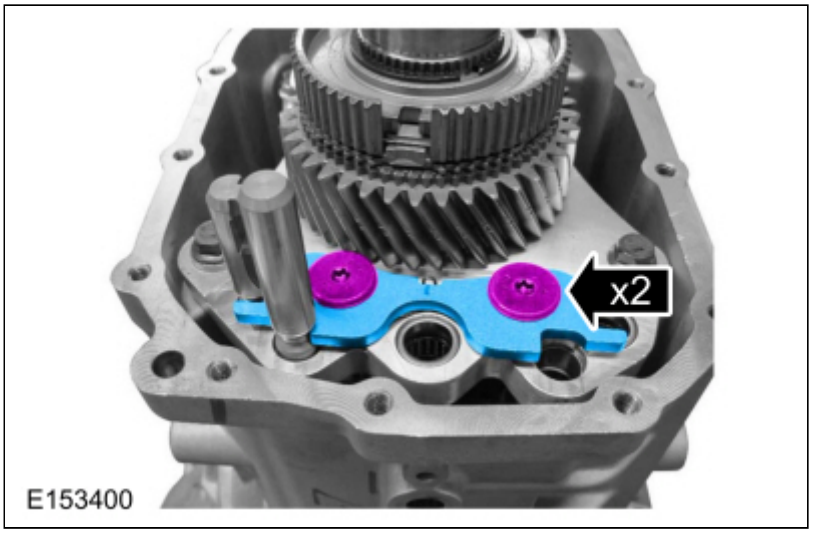


NOTE: *Slide the synchronizer sleeve up while removing the pressure pieces.*

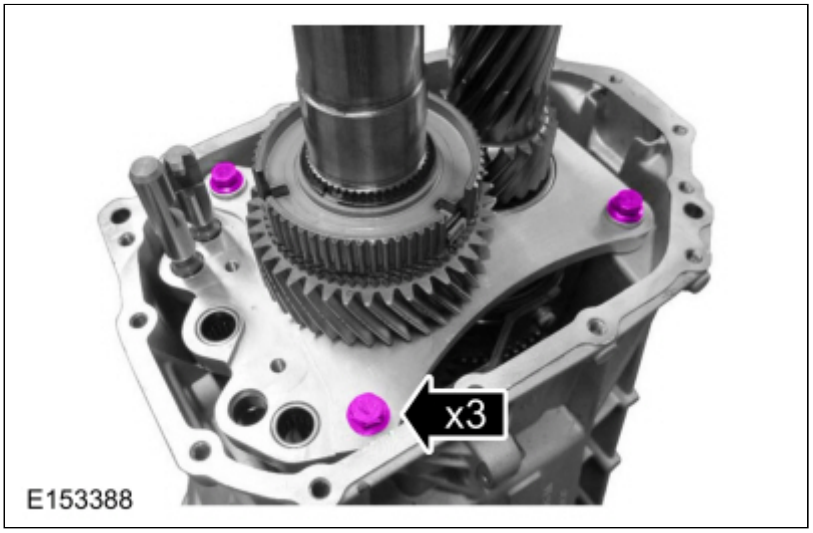
20.



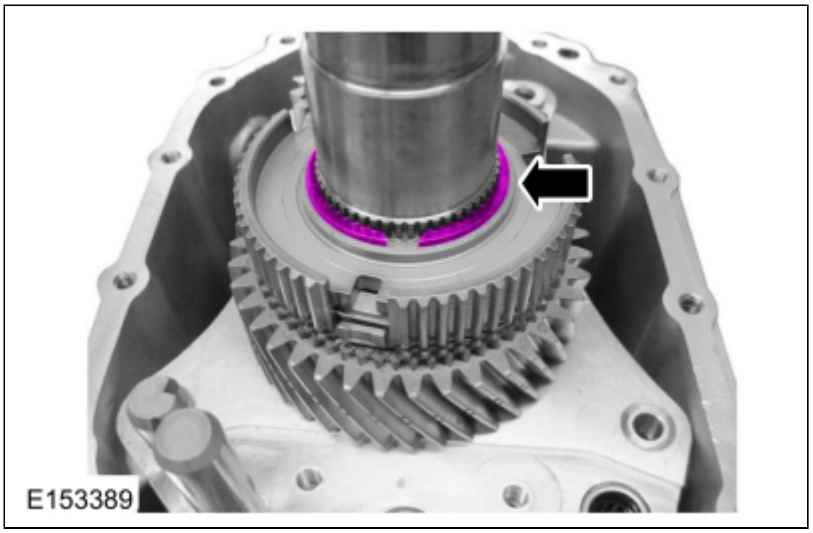
NOTE: *Index-mark the synchronizer sleeve to the synchronizer hub before removal.*



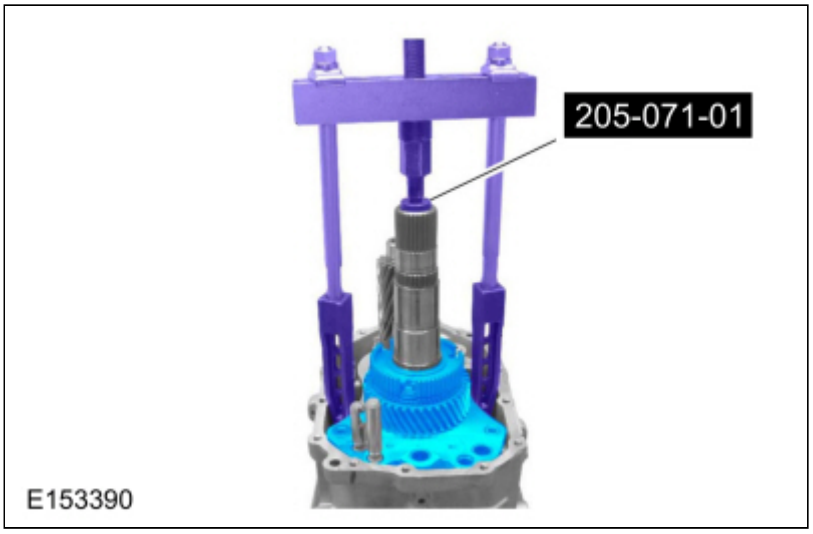
21.



22.

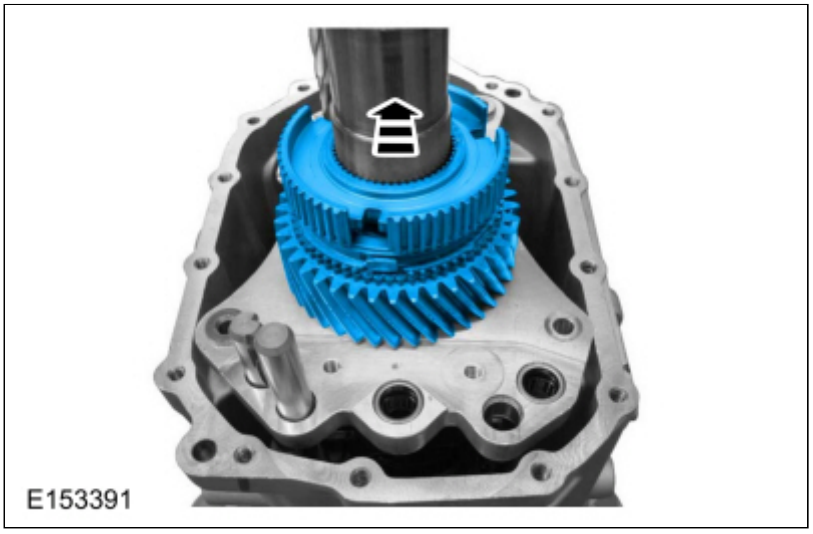


23.

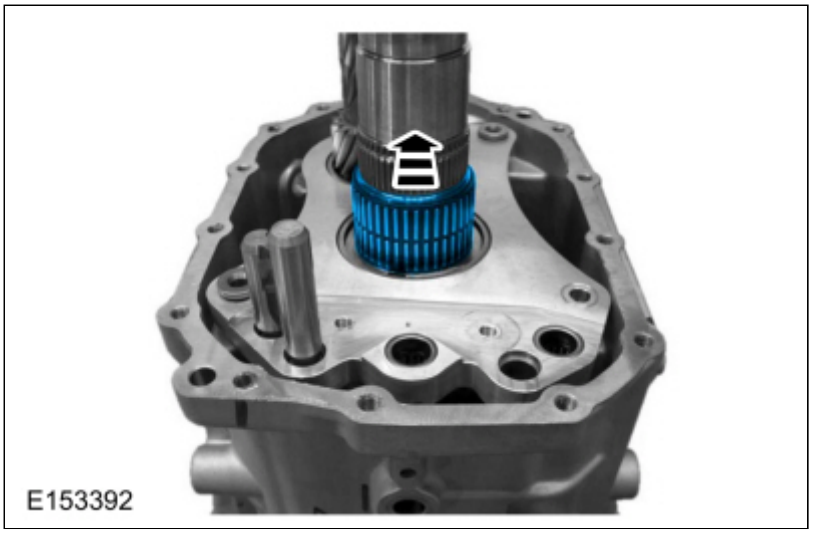


24.

25. **NOTICE: The center support must be pulled up evenly or damage to the center support or transmission case can occur.**



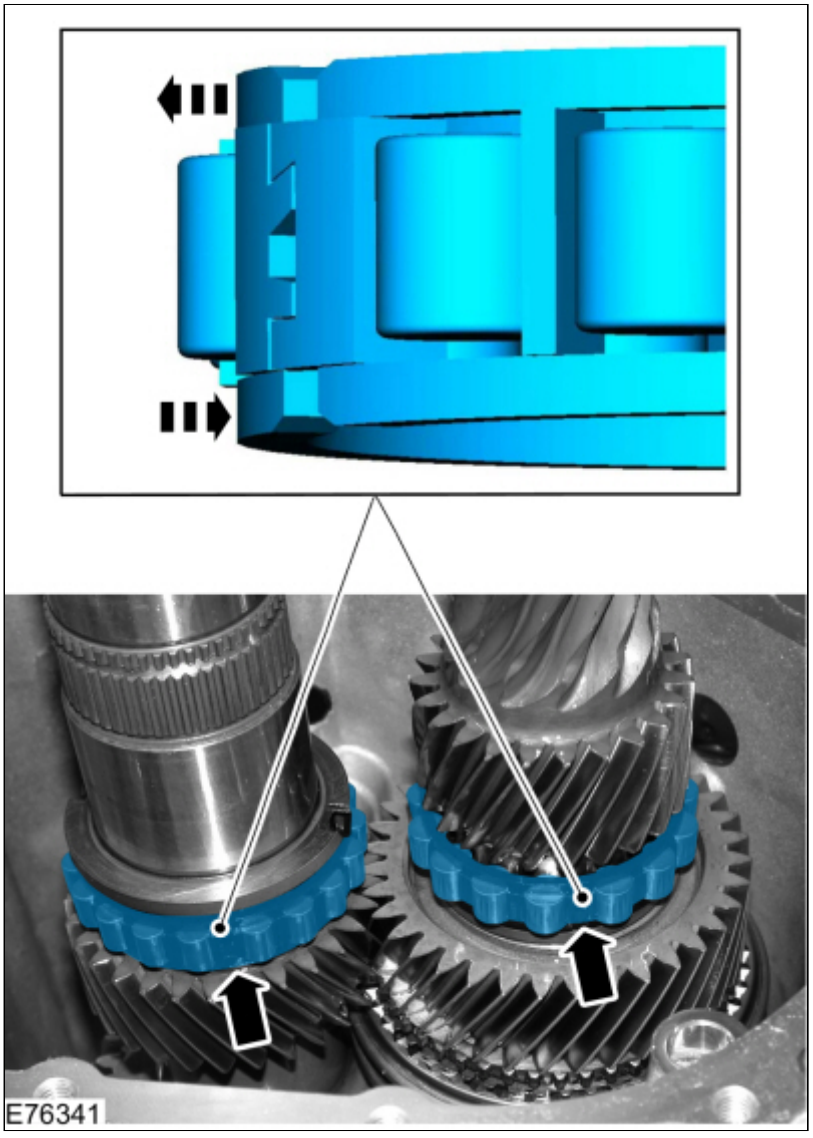
26. Use Special Service Tool: 205-071-01 Adapter for 205-071 (Thrust Pad).
Use the General Equipment: Two Leg Puller



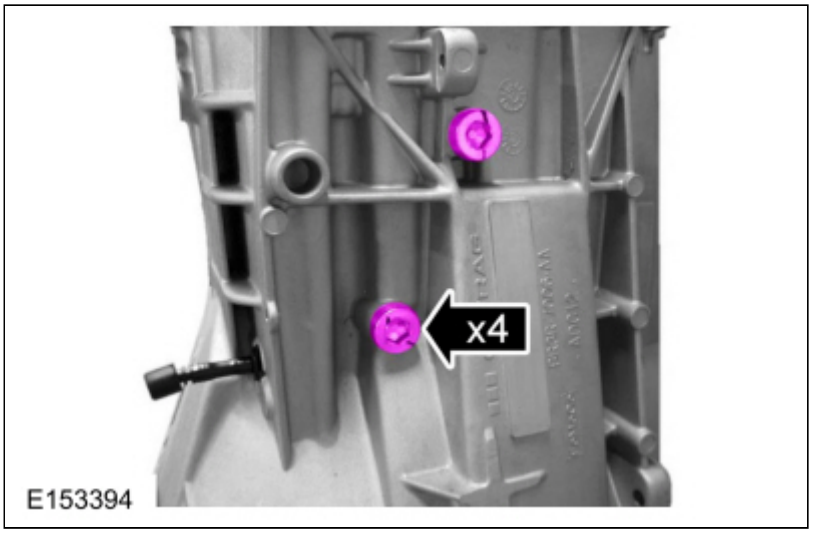
NOTE: *Note the position of each synchronizer ring component before removal.*

27.

28.

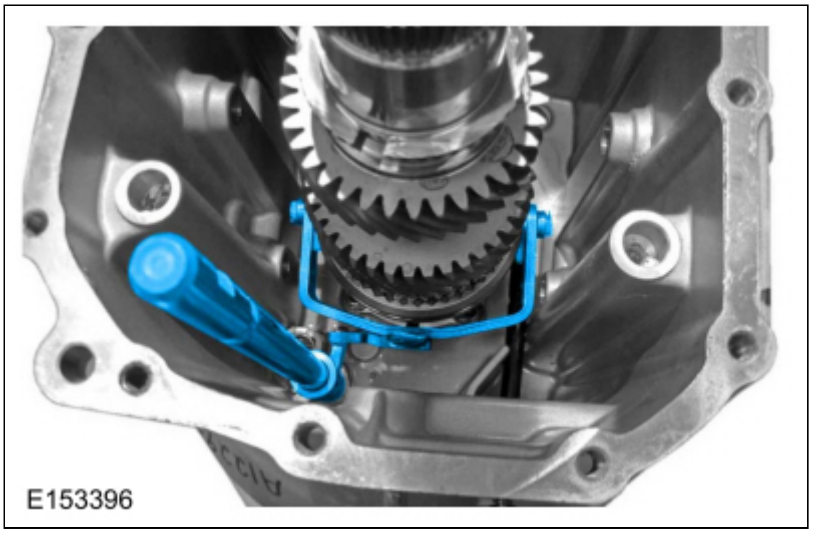


29.



30. **NOTICE: When removing the bearings, do not over expand the bearing cages or damage to the bearing cages can occur.**

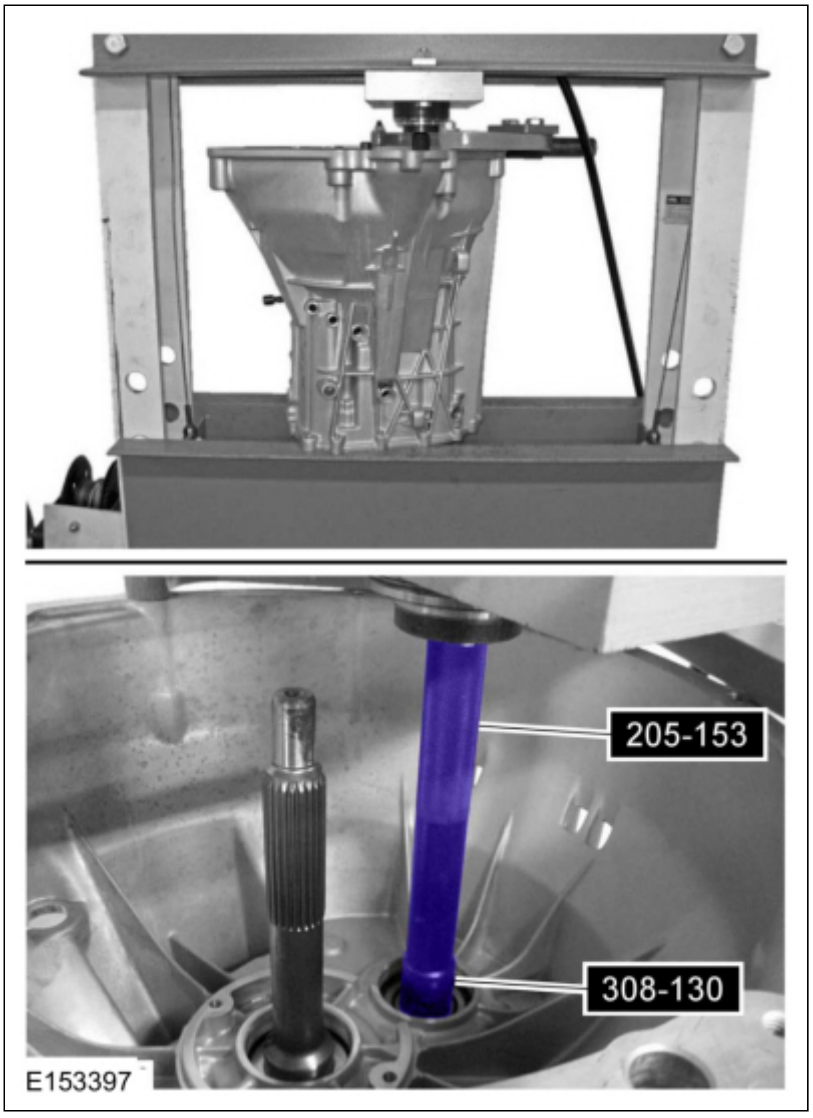
    Unlock the bearing cage Tabs and lightly expand the bearing cages.



31.

32.

33.



34. **WARNING: Wear protective gloves when handling components or parts that have pointed or sharp edges. Failure to follow instructions may result in personal injury.**

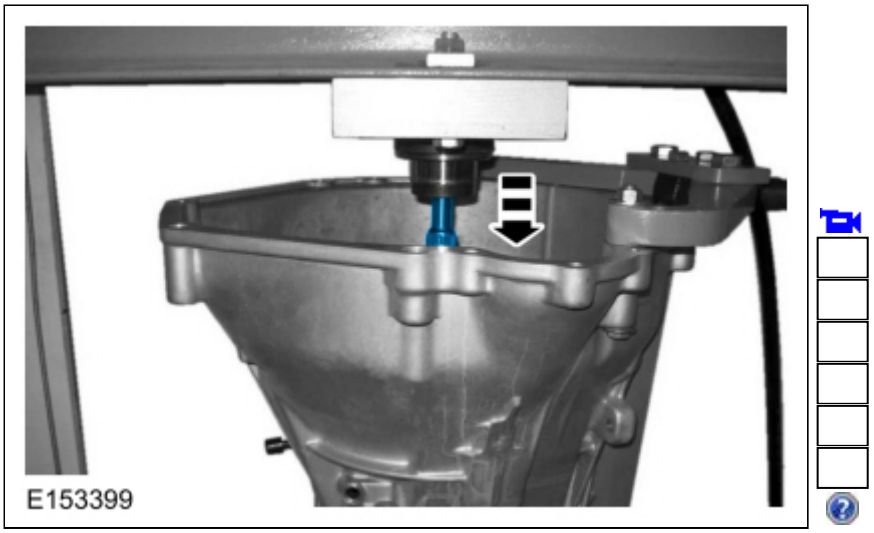
NOTE: *Use an assistant when pressing out the countershaft and output shaft, do not allow the shafts to bind during removal.*

NOTE: *The countershaft bolt must be removed prior to pressing out the countershaft or damage to the transmission case will occur.*

NOTE: *With an assistant, support the transmission case on flat surfaces of a hydraulic press. Press the countershaft out of the bearing and remove the countershaft and output shaft.*

Use Special Service Tool: 205-153 (T80T-4000-W) Handle. , 308-130 (T87T-7025-DH) Installer, Shift Rail Needle Bearing.

35.



36. **WARNING: Wear protective gloves when handling components or parts that have pointed or sharp edges. Failure to follow instructions may result in personal injury.**

NOTE: *Use an assistant when pressing out the input shaft, do not allow the input shaft to drop during removal.*

NOTE: *With an assistant, support the transmission case on flat surfaces of a hydraulic press.Using the hydraulic press, remove the input shaft.*

Use the General Equipment: Hydraulic Press

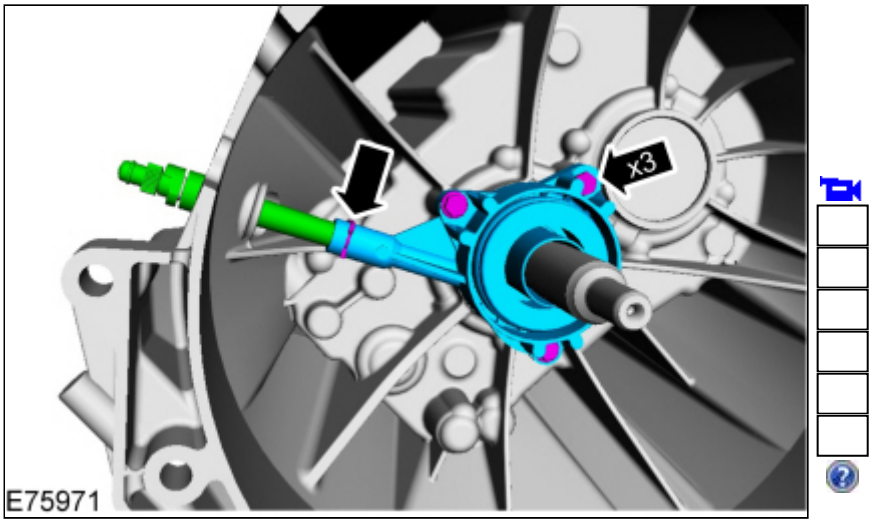
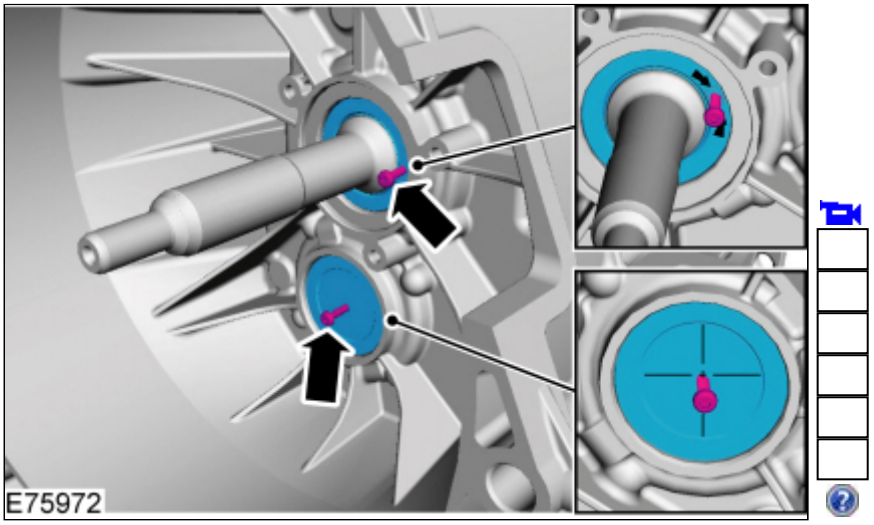
 E216591	308-812 Remover, Detent

 E163726	308-883 Wrench, Output Shaft Nut
Hydraulic Press	
Two Leg Puller	

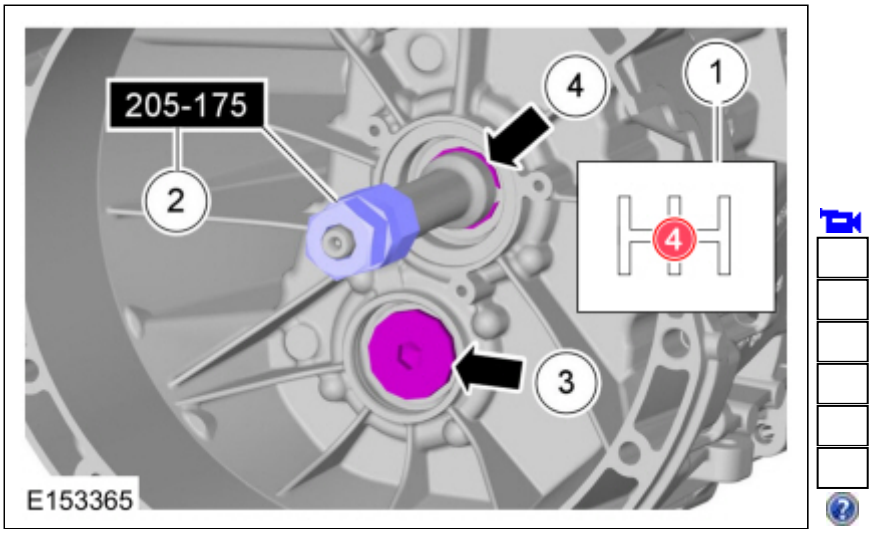


1. Use Special Service Tool: 205-329 Mounting Bracket, Engine/Differential. , 303-435 Mounting Stand. , 303-435-06 Mounting Bracket for 303-435.

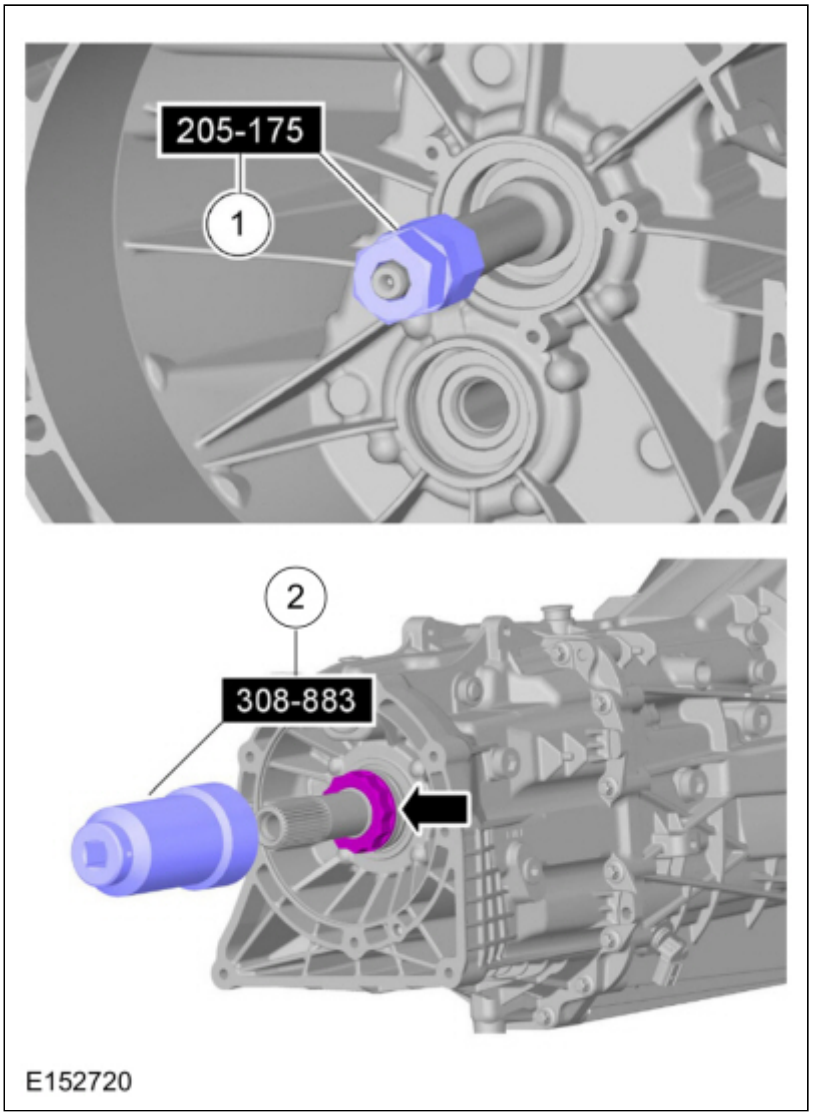


2. **WARNING: Be prepared to collect escaping fluid.**

3.

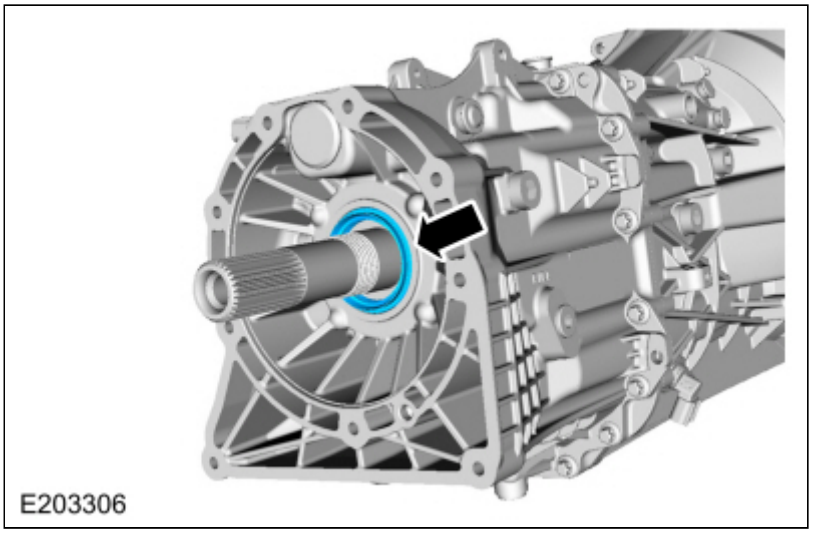


4.

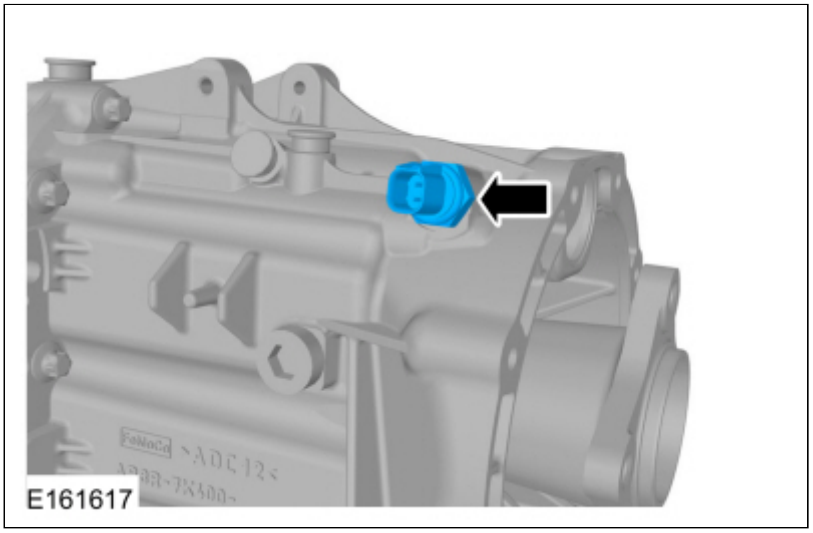


5. **NOTE:** *Make sure that 4th gear is selected.*

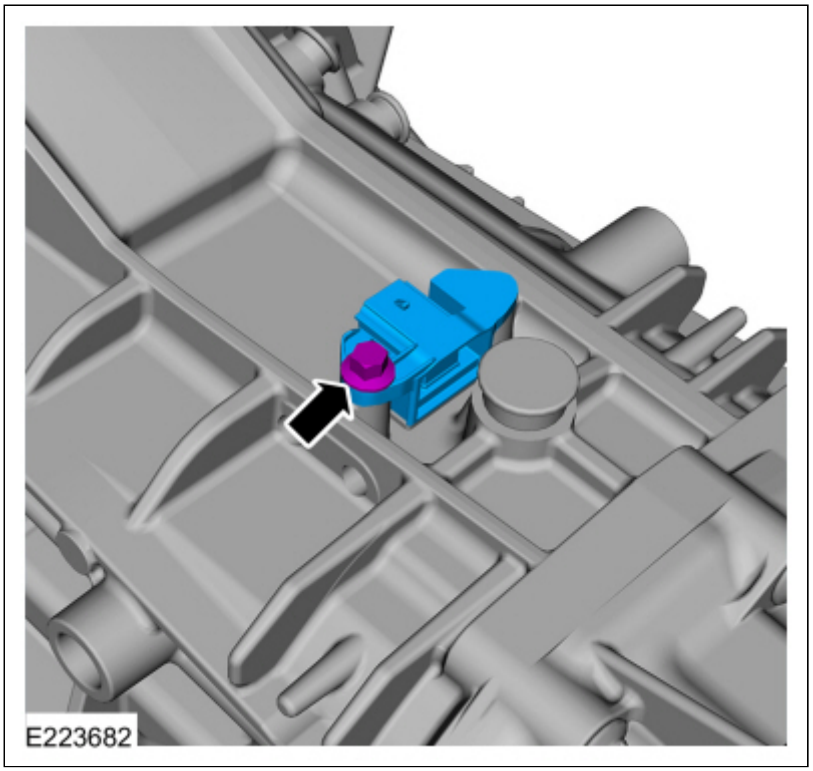
   Use Special Service Tool: 205-175 Socket, Drive Pinion Nut.



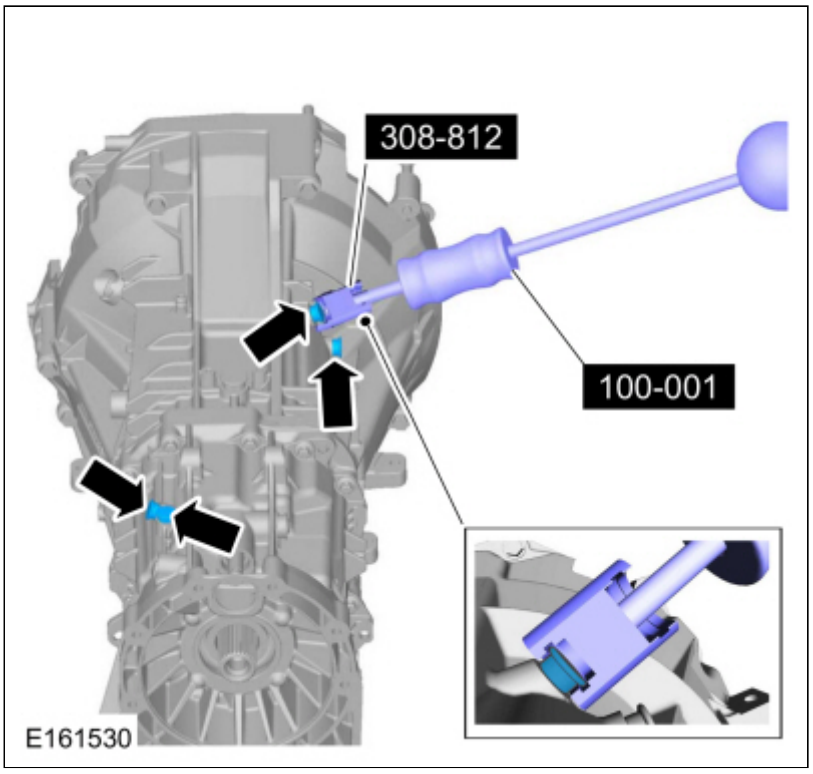
6. Use Special Service Tool: 205-175 Socket, Drive Pinion Nut. , 308-883 Wrench, Output Shaft Nut.



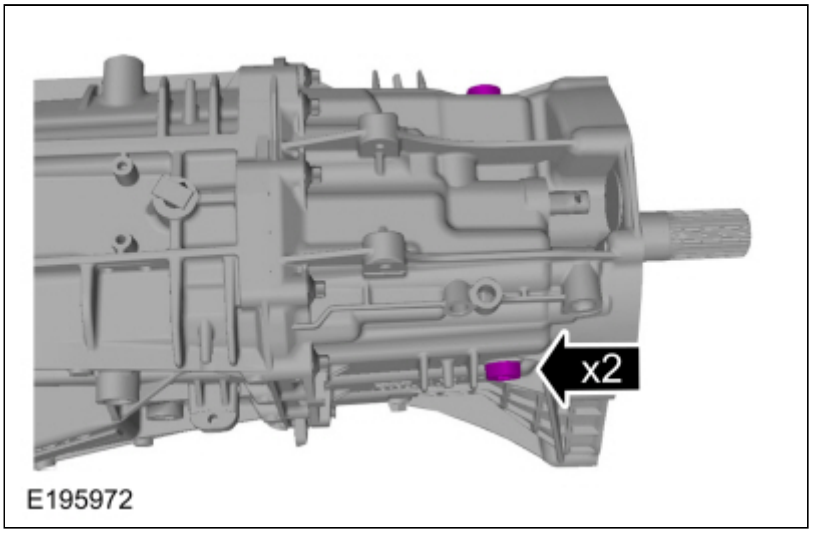
7. Use Special Service Tool: 205-071-01 Adapter for 205-071 (Thrust Pad).
   Use the General Equipment: Two Leg Puller



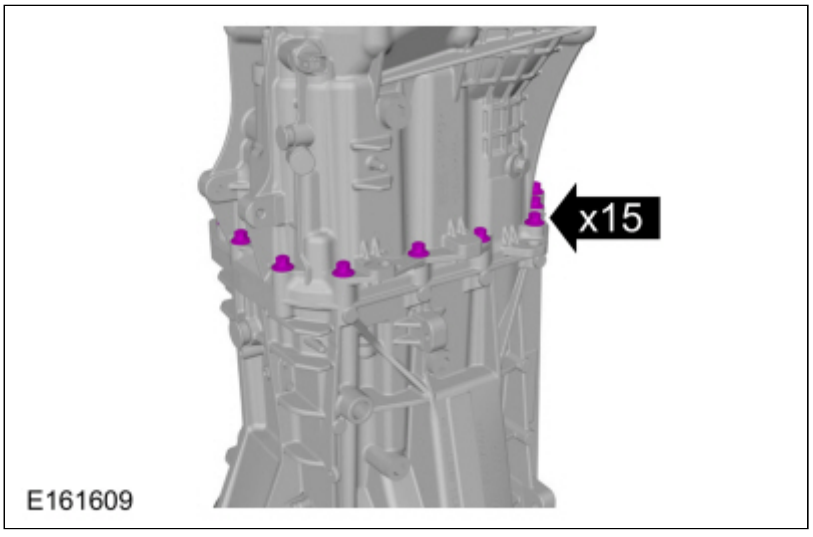
8. Use the General Equipment: Seal Remover



9.

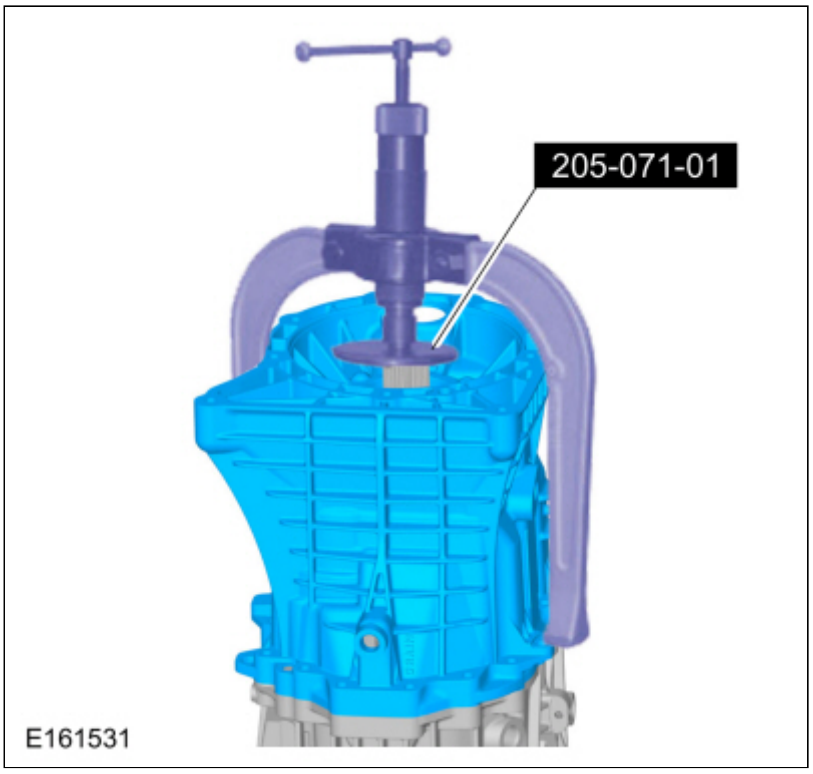


10.

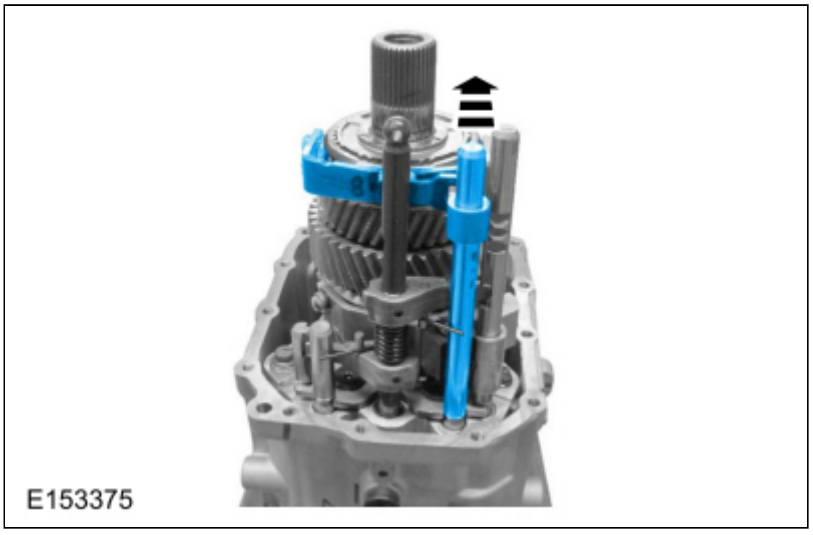


11. Use Special Service Tool: 100-001 (T50T-100-A) Slide Hammer. , 308-812 Remover, Detent.

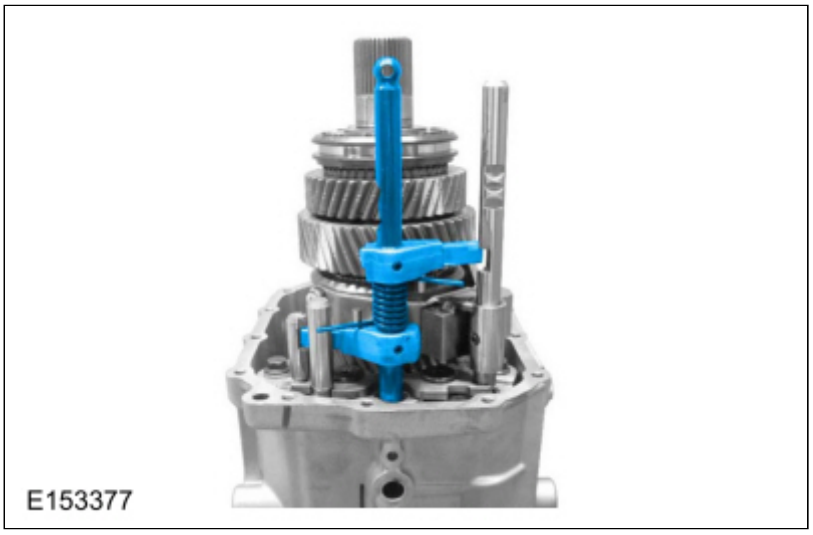
12.



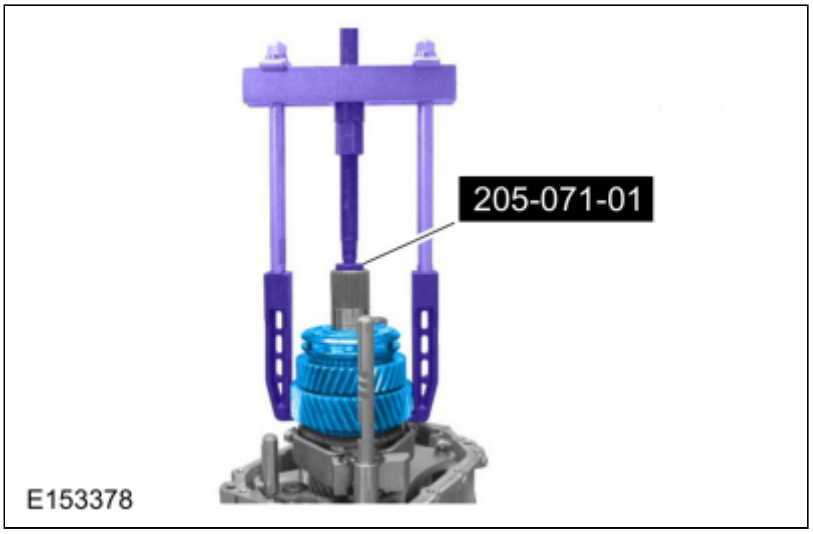
13.



14. Use Special Service Tool: 205-071-01 Adapter for 205-071 (Thrust Pad).



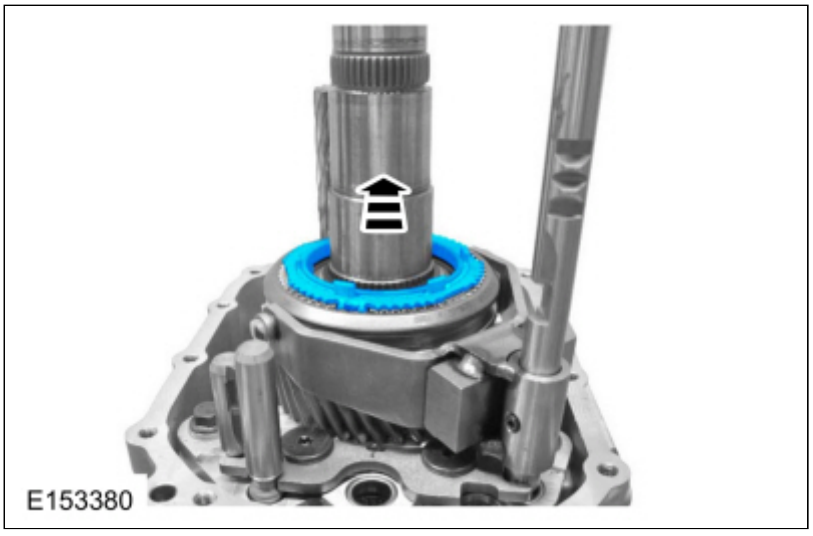
Use the General Equipment: Two Leg Puller



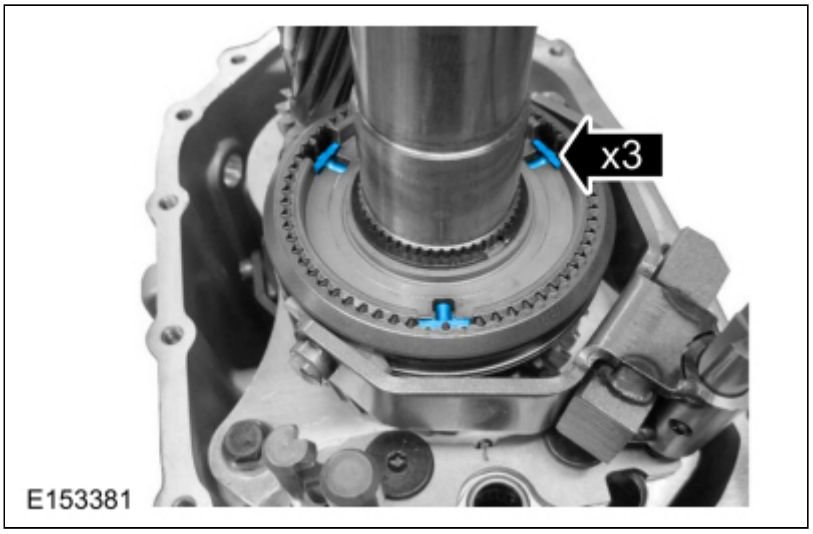
15.

16.

17. Use Special Service Tool: 205-071-01 Adapter for 205-071 (Thrust Pad).
Use the General Equipment: Two Leg Puller

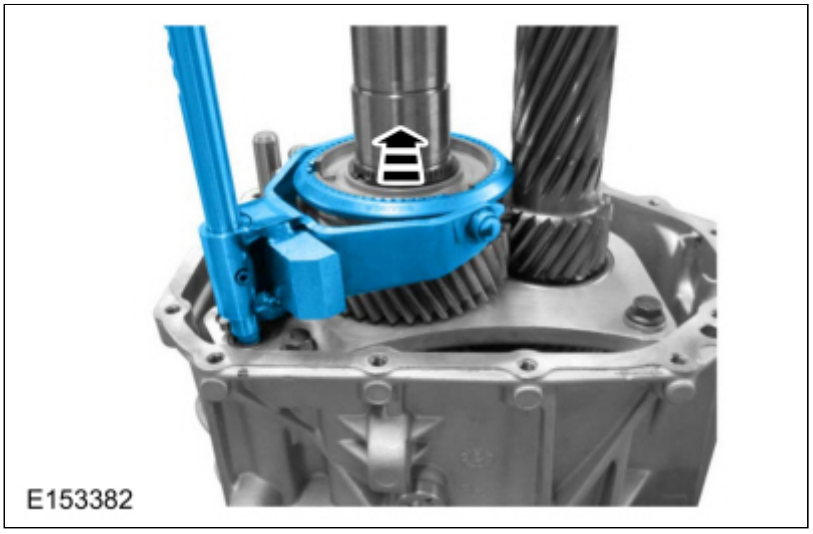


18.



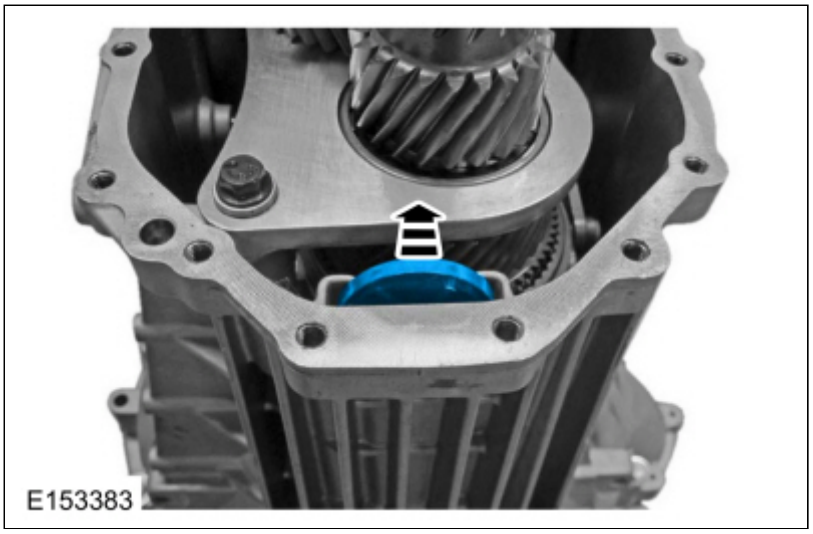
NOTE: *Note the position of each synchronizer ring component before removal.*

19.

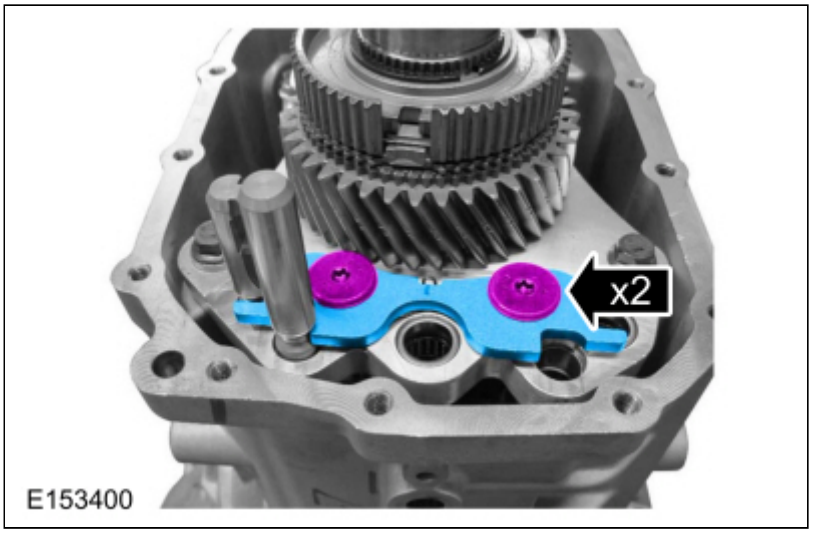


NOTE: *Slide the synchronizer sleeve up while removing the pressure pieces.*

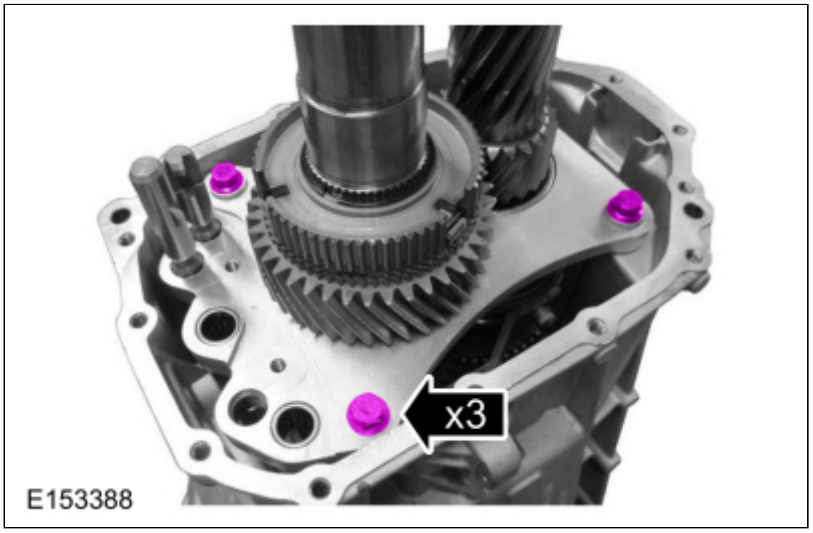
20.



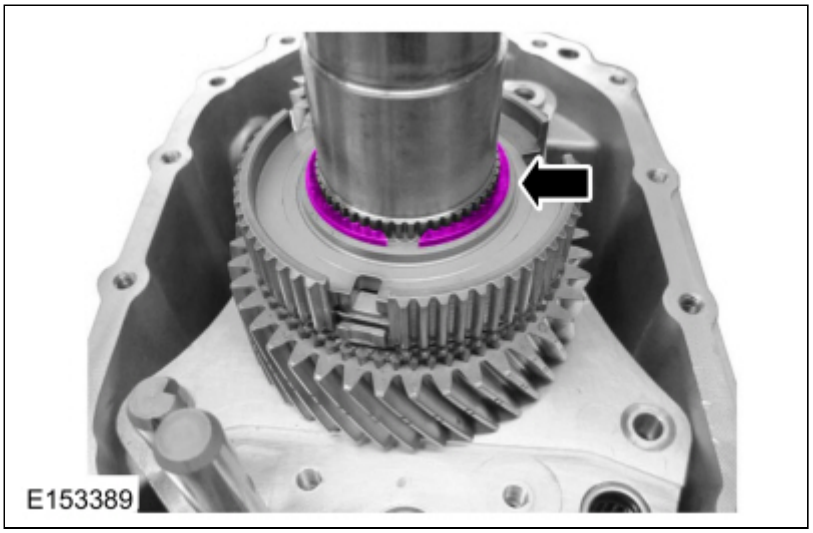
NOTE: *Index-mark the synchronizer sleeve to the synchronizer hub before removal.*



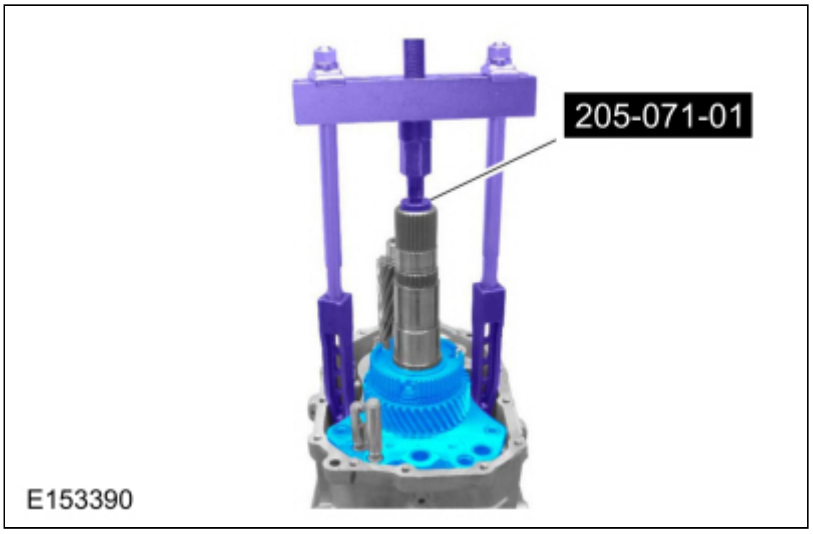
21.



22.

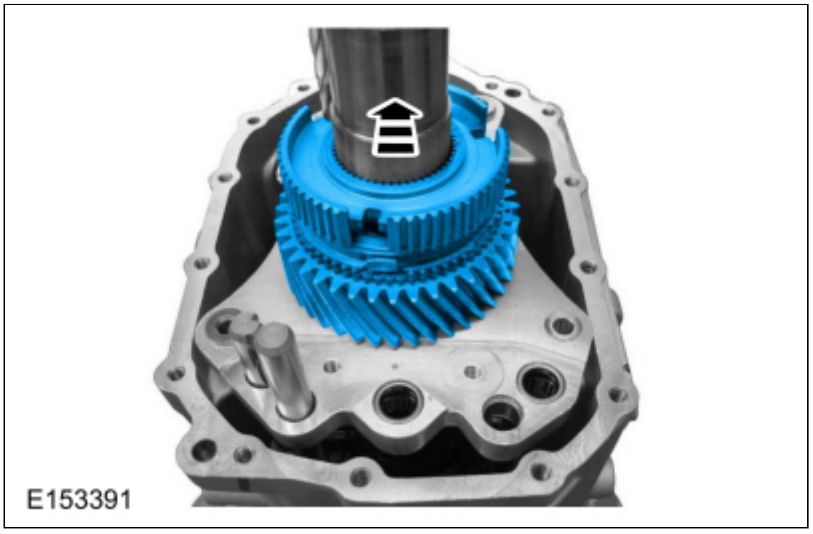


23.

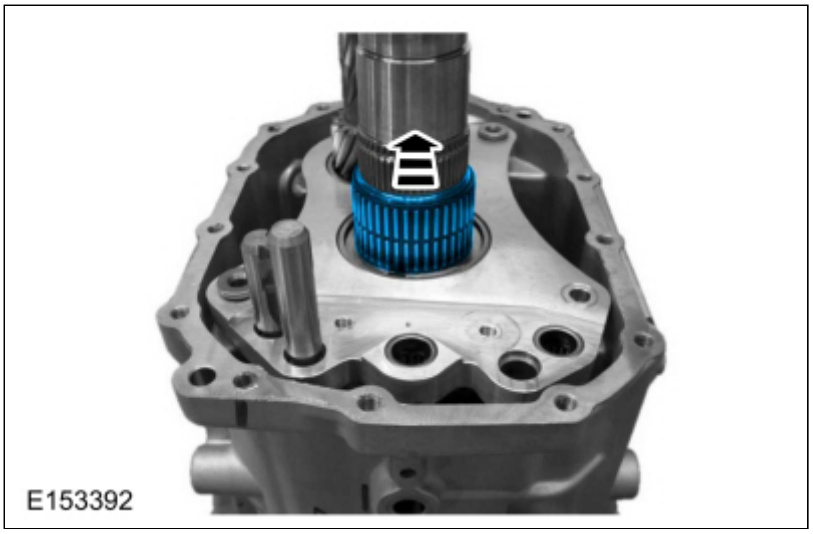


24.

25. **NOTICE: The center support must be pulled up evenly or damage to the center support or transmission case can occur.**



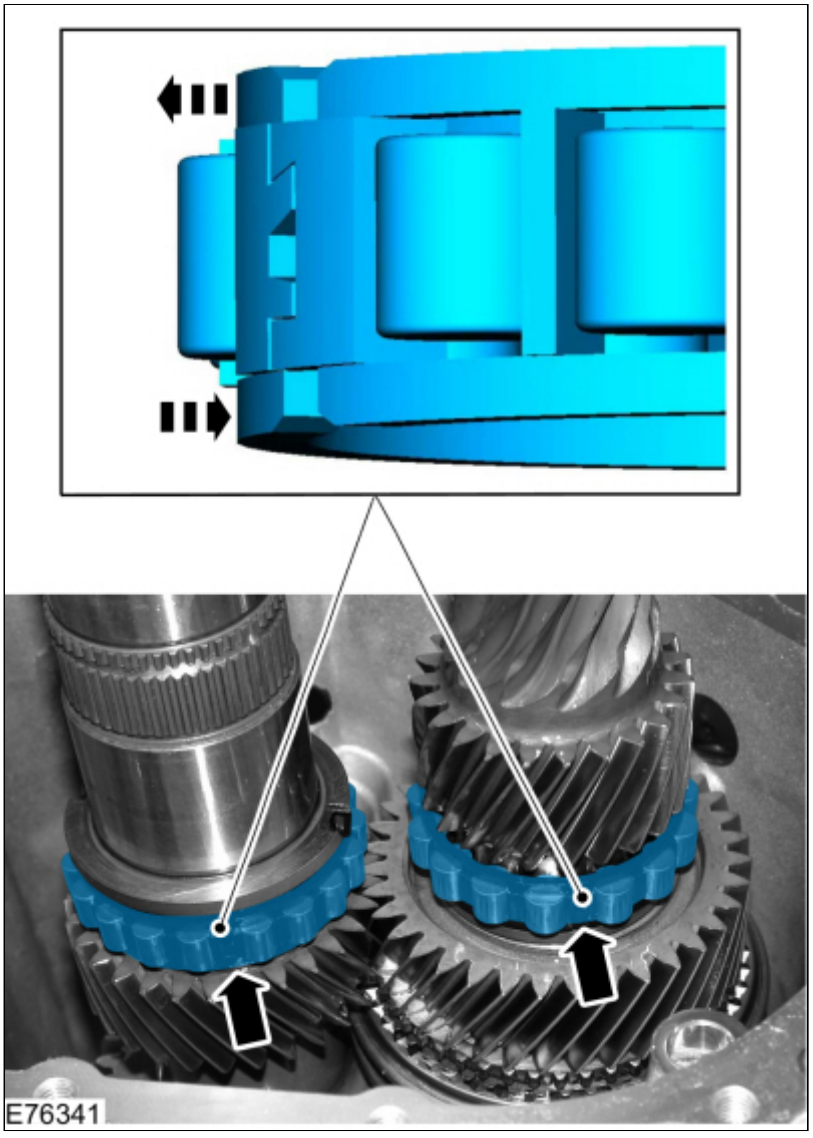
26. Use Special Service Tool: 205-071-01 Adapter for 205-071 (Thrust Pad).
Use the General Equipment: Two Leg Puller



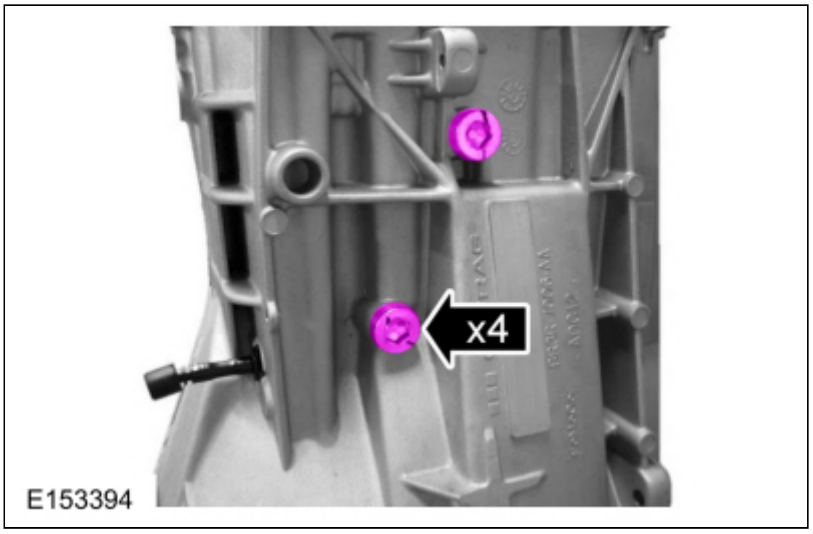
NOTE: *Note the position of each synchronizer ring component before removal.*

27.

28.

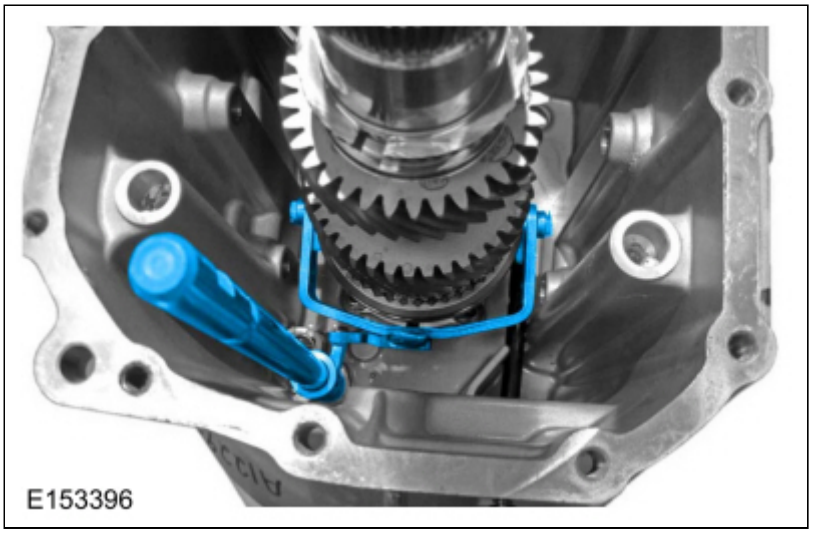


29.



30. **NOTICE: When removing the bearings, do not over expand the bearing cages or damage to the bearing cages can occur.**

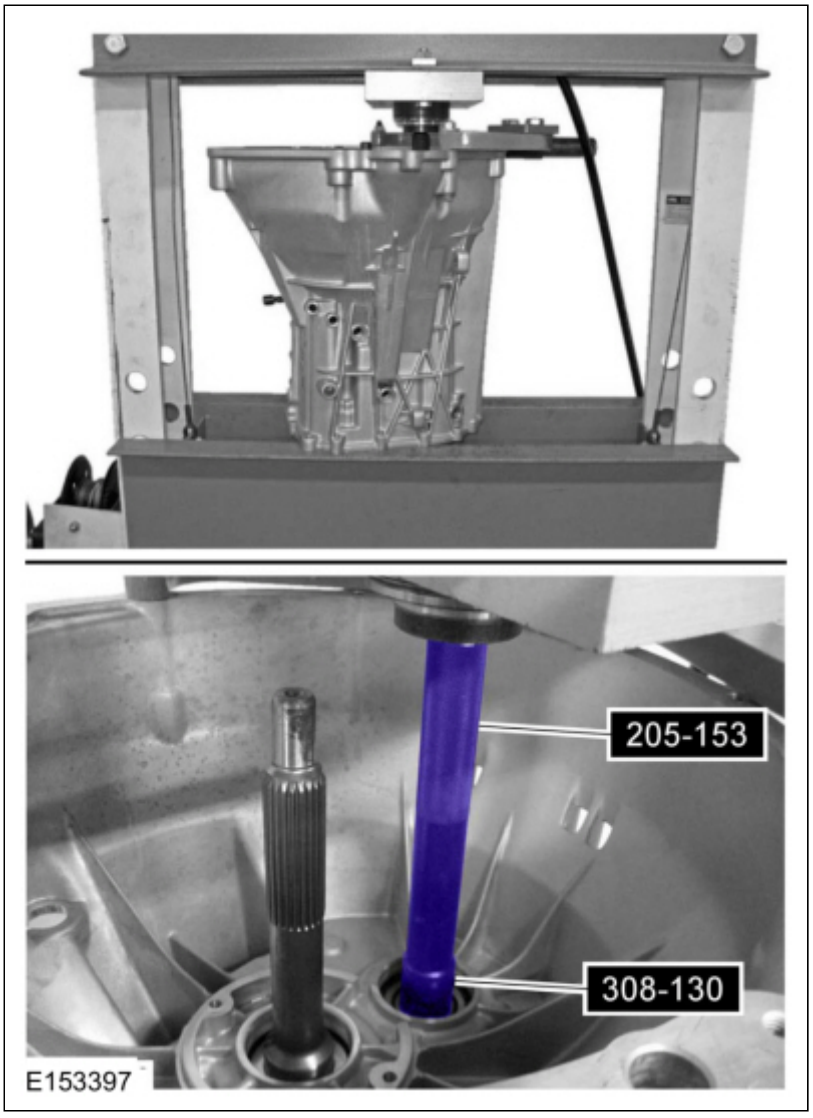
    Unlock the bearing cage Tabs and lightly expand the bearing cages.



31.

32.

33.



34. **WARNING: Wear protective gloves when handling components or parts that have pointed or sharp edges. Failure to follow instructions may result in personal injury.**

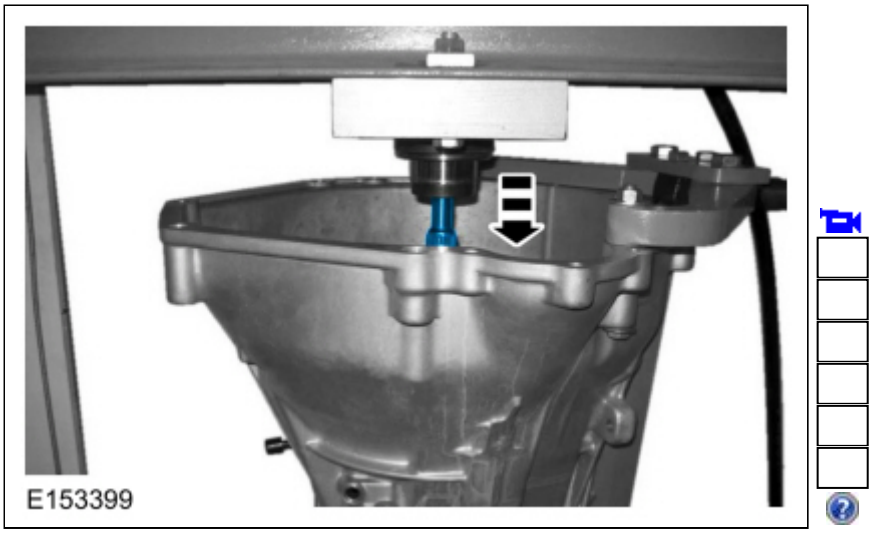
NOTE: *Use an assistant when pressing out the countershaft and output shaft, do not allow the shafts to bind during removal.*

NOTE: *The countershaft bolt must be removed prior to pressing out the countershaft or damage to the transmission case will occur.*

NOTE: *With an assistant, support the transmission case on flat surfaces of a hydraulic press. Press the countershaft out of the bearing and remove the countershaft and output shaft.*

Use Special Service Tool: 205-153 (T80T-4000-W) Handle. , 308-130 (T87T-7025-DH) Installer, Shift Rail Needle Bearing.

35.



36. **WARNING: Wear protective gloves when handling components or parts that have pointed or sharp edges. Failure to follow instructions may result in personal injury.**

NOTE: *Use an assistant when pressing out the input shaft, do not allow the input shaft to drop during removal.*

NOTE: *With an assistant, support the transmission case on flat surfaces of a hydraulic press.Using the hydraulic press, remove the input shaft.*

Transmission Case

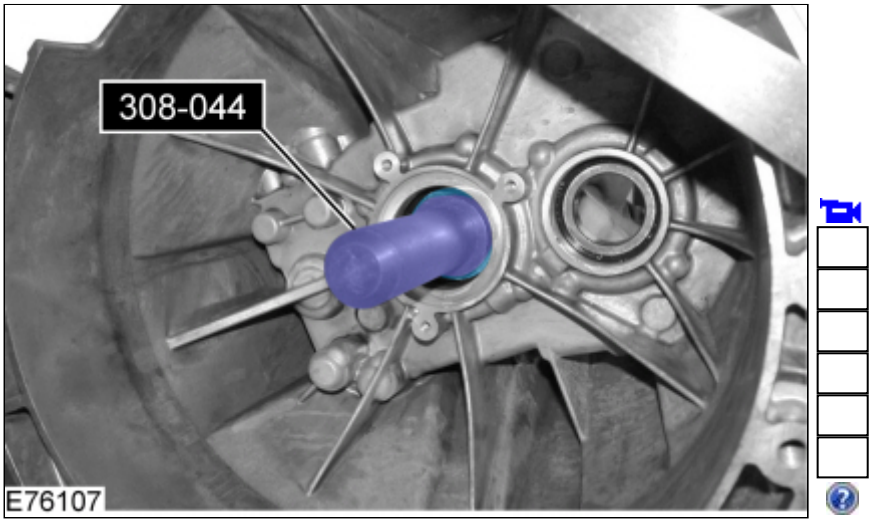
Base Part Number: 7005

Special Tool(s) / General Equipment

 15025A	205-062 Installer, Differential Bearing
 E92318	303-1365 Remover, Crankshaft Pilot Bearing
 E142012	307-318 Remover, Stator Bearing
 16014	308-044 Installer, Transmission Extension Housing Bushing/Seal
 16038	308-095 Installer, Input Shaft Bearing
Hot Air Gun	
Two Leg Puller	

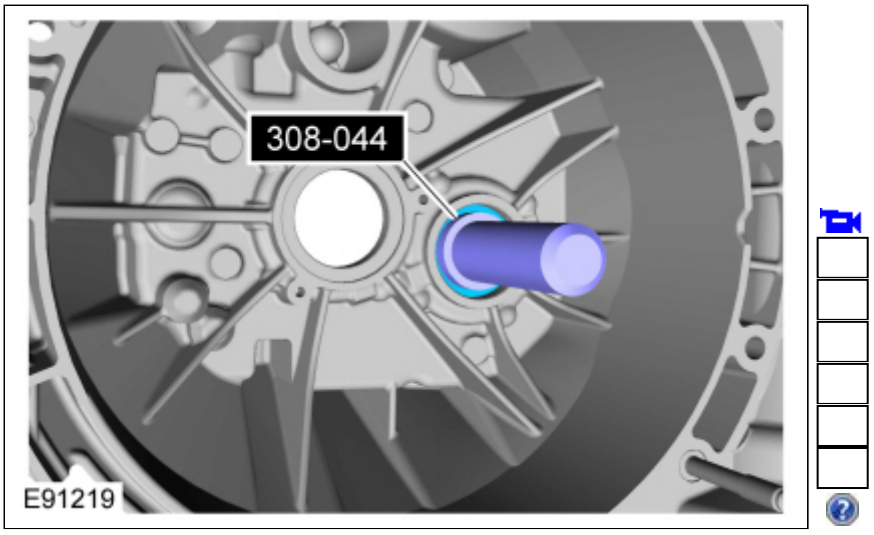
Materials

Name	Specification
Thread Locking Adhesive	WSK-M2G349-A7



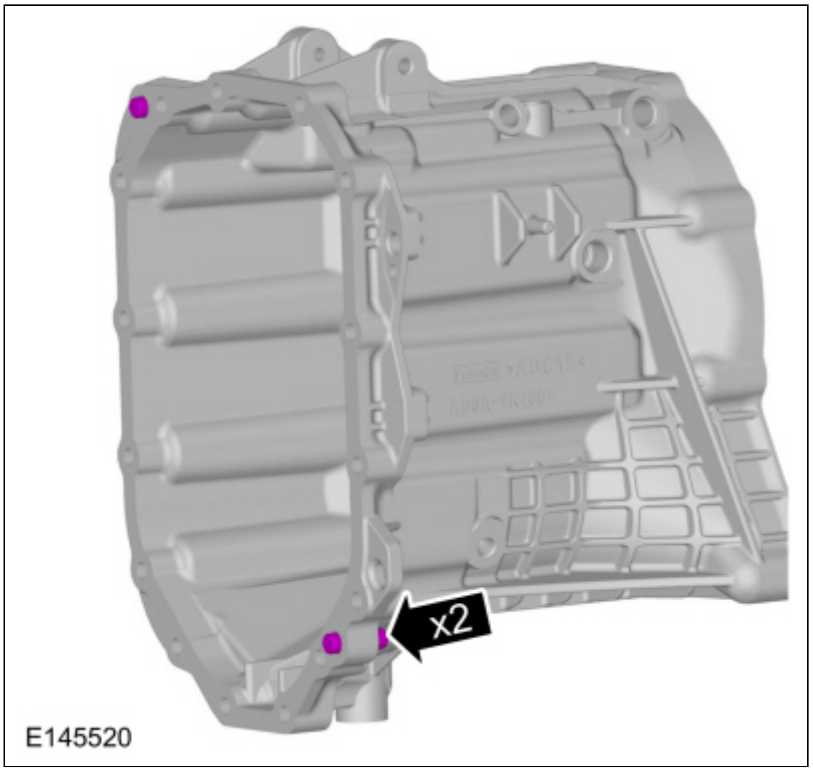
DISASSEMBLY

1.



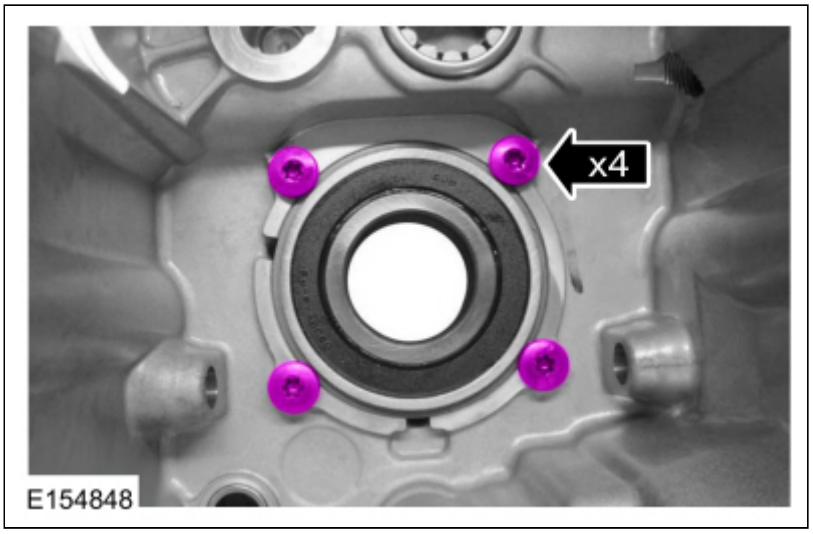
2. **NOTE:** *Inspect the input shaft bearing for wear or damage. Install a new bearing as necessary.*

   Use Special Service Tool: 308-044 Installer, Transmission Extension Housing Bushing/Seal.

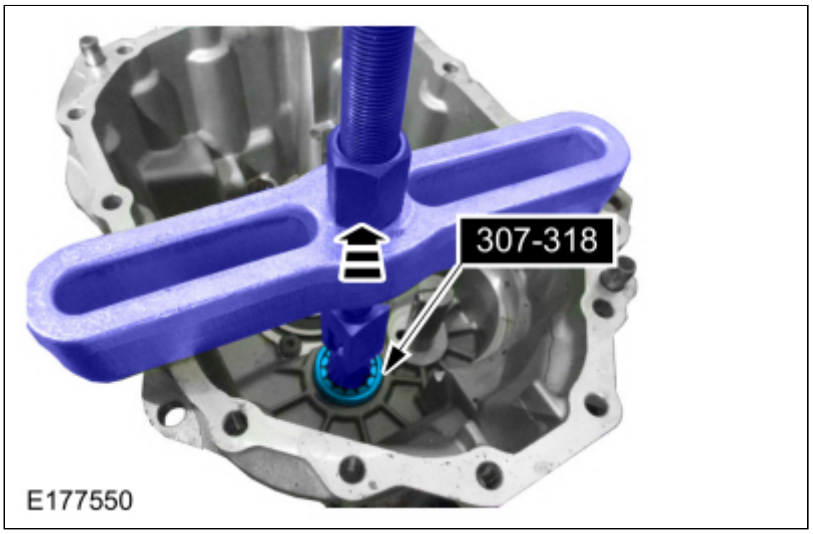


3. **NOTE:** *Inspect the countershaft bearing for wear or damage. Install a new bearing as necessary.*

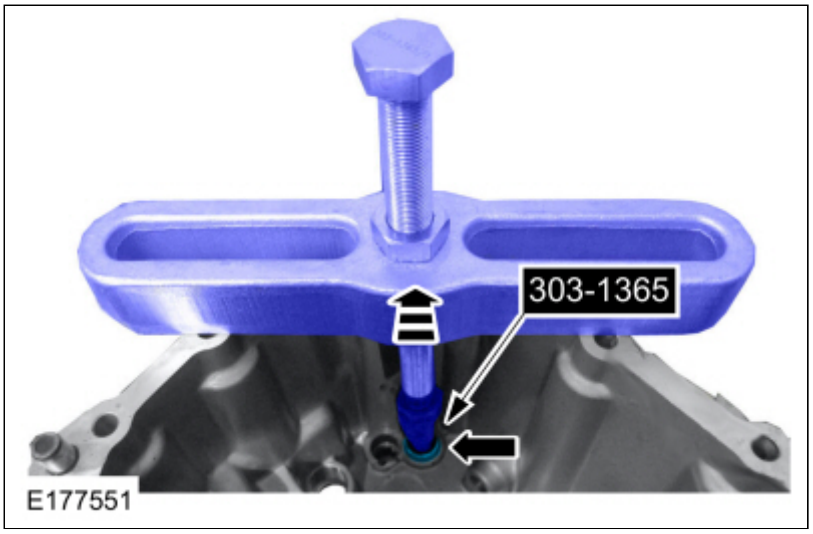
   Use Special Service Tool: 308-044 Installer, Transmission Extension Housing Bushing/Seal.



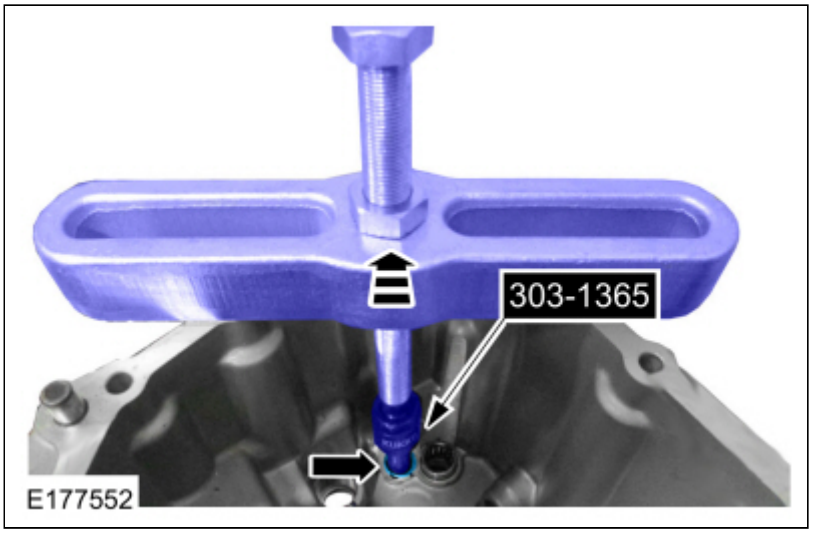
4. **NOTE:** *Using a brass drift, tap the dowel pins flush with the transmission case.*



5.

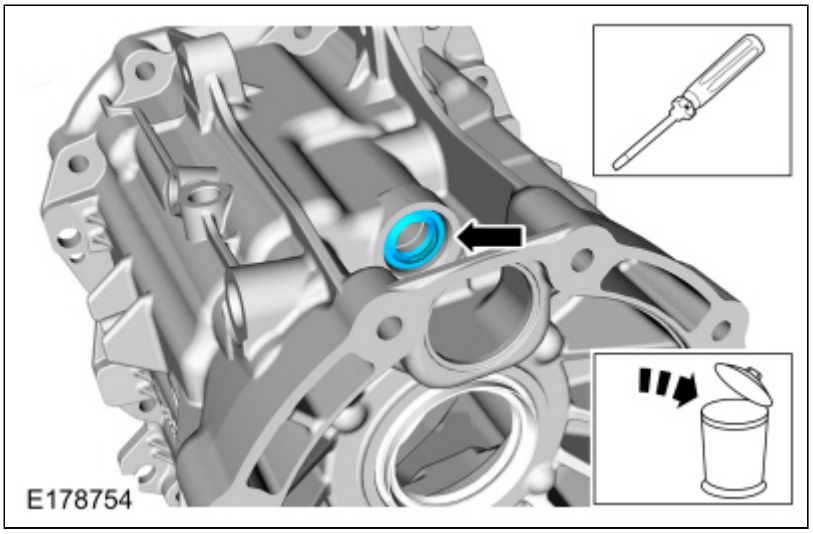


6.



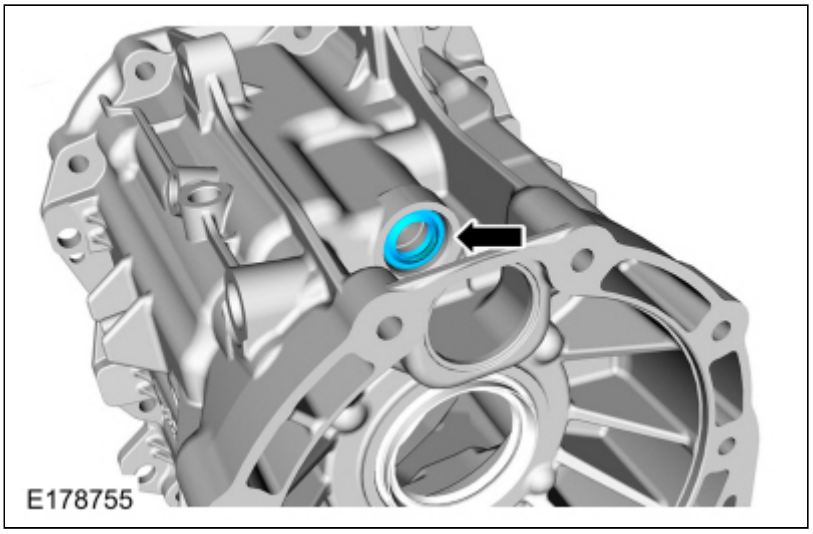
7. Use Special Service Tool: 307-318 Remover, Stator Bearing.
   Use the General Equipment: Two Leg Puller

8. Use Special Service Tool: 303-1365 Remover, Crankshaft Pilot Bearing.
   Use the General Equipment: Two Leg Puller

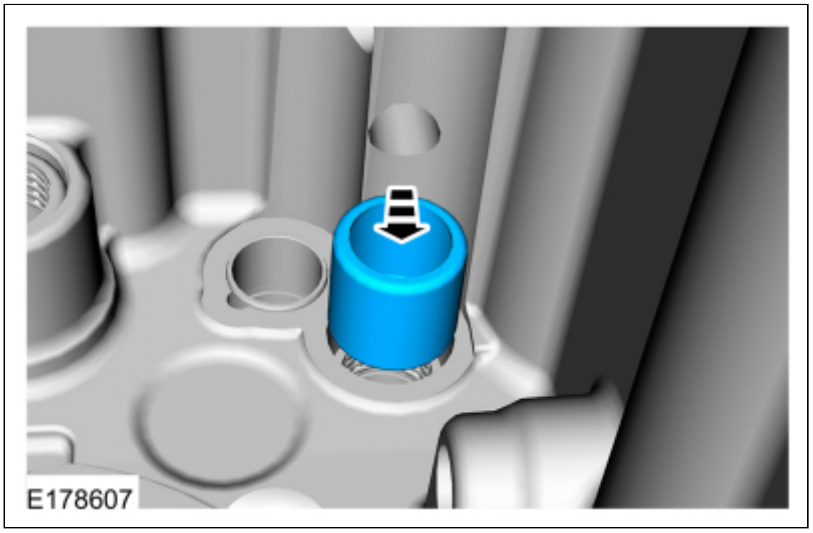


9. Use Special Service Tool: 303-1365 Remover, Crankshaft Pilot Bearing.
   Use the General Equipment: Two Leg Puller

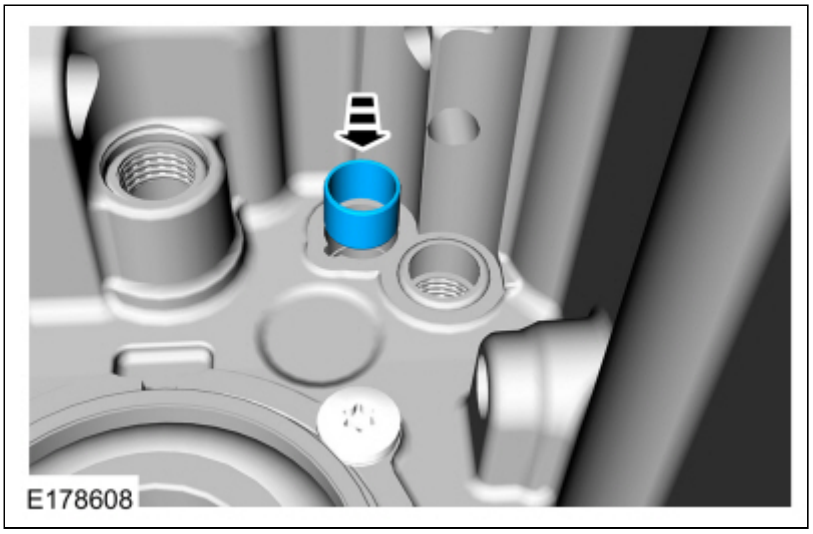
10.



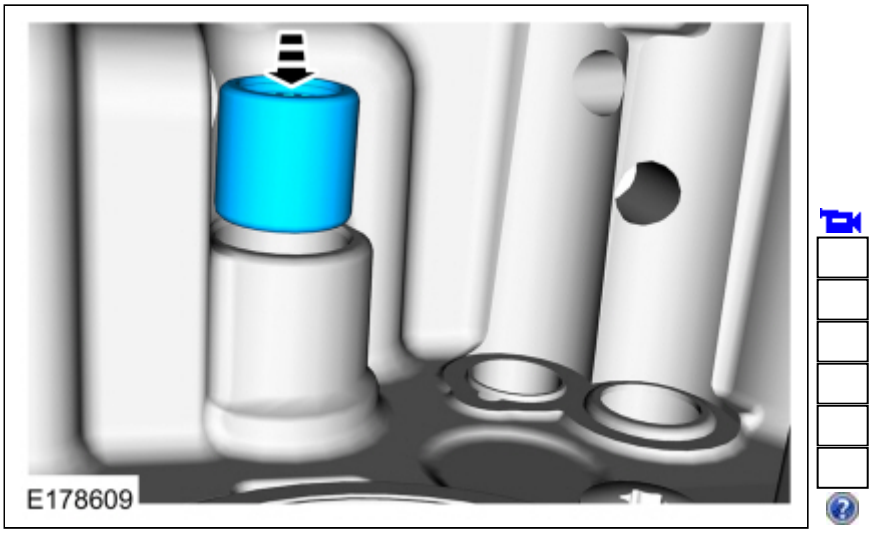
11.



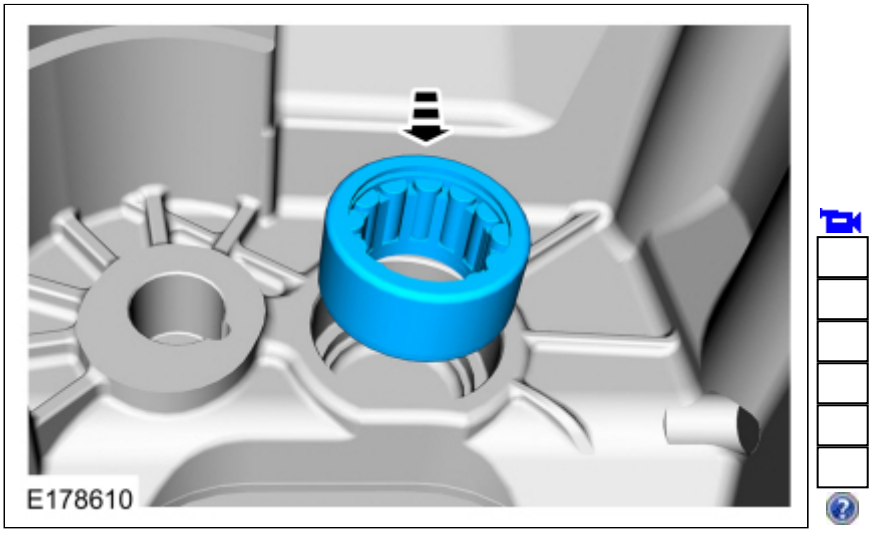
ASSEMBLY



1. Make sure that a new component is installed.

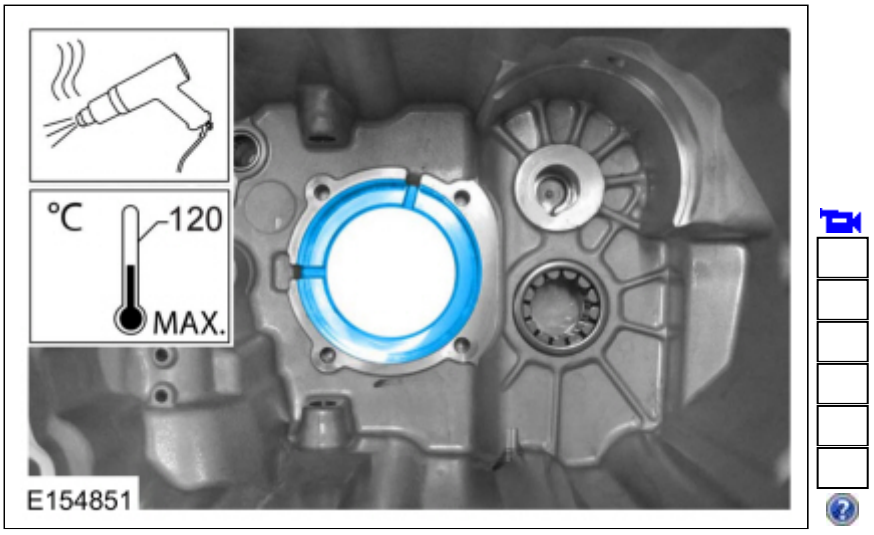


2. Make sure that a new component is installed.

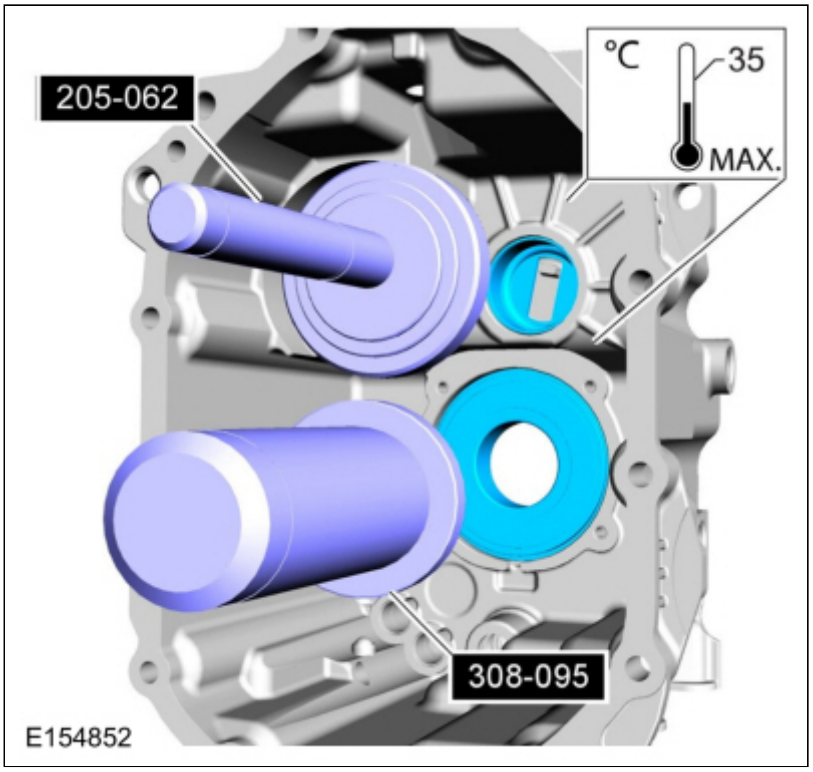


3. Make sure that a new component is installed.

4. Make sure that a new component is installed.

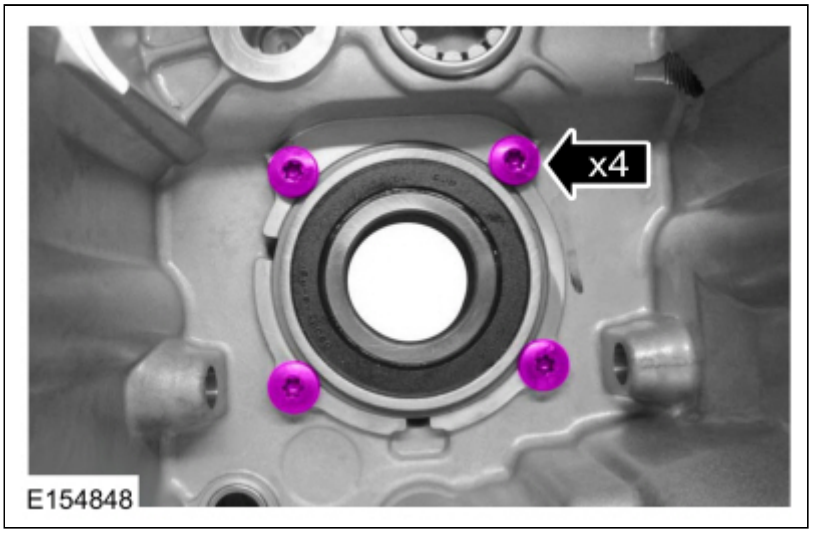


5. Make sure that a new component is installed.



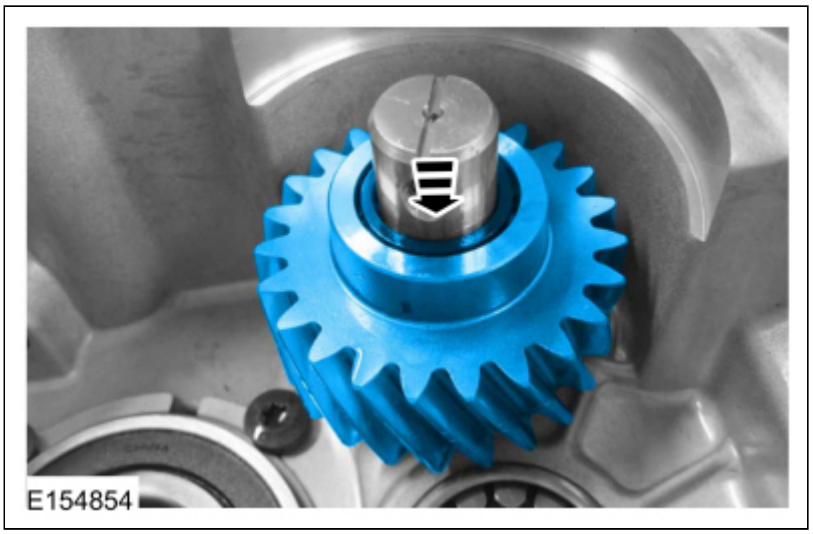
6. **NOTICE: Do not heat the transmission case higher than 120°C maximum or damage to the transmission case can occur.**

   Use the General Equipment: Hot Air Gun

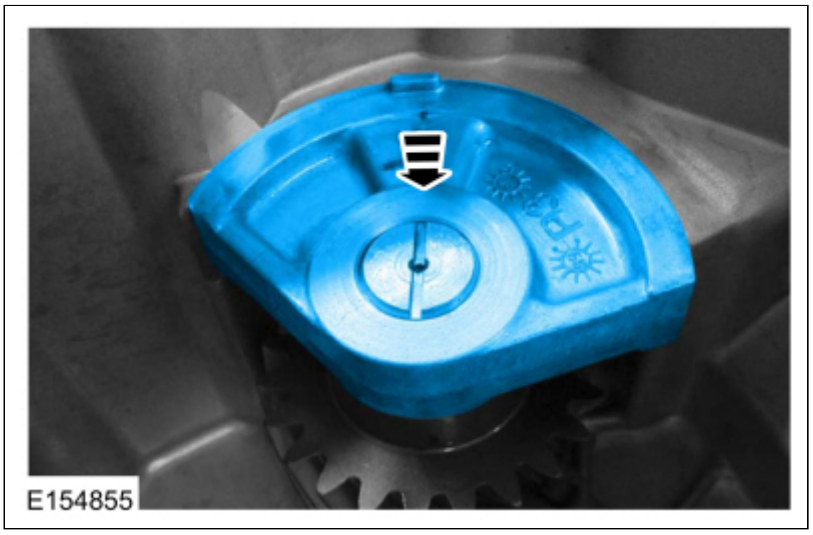


7. **NOTICE: Install the output shaft bearing with the grooved side of the outer output shaft bearing race facing the inside of the transmission case or damage to the transmission case can occur.**

   Use Special Service Tool: 205-062 Installer, Differential Bearing. , 308-095 Installer, Input Shaft Bearing.

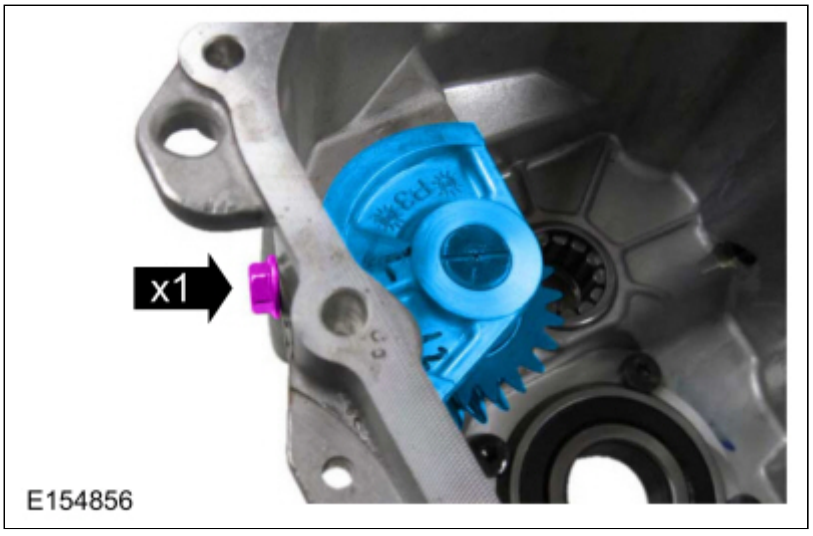


8. *Torque*: 36 Nm

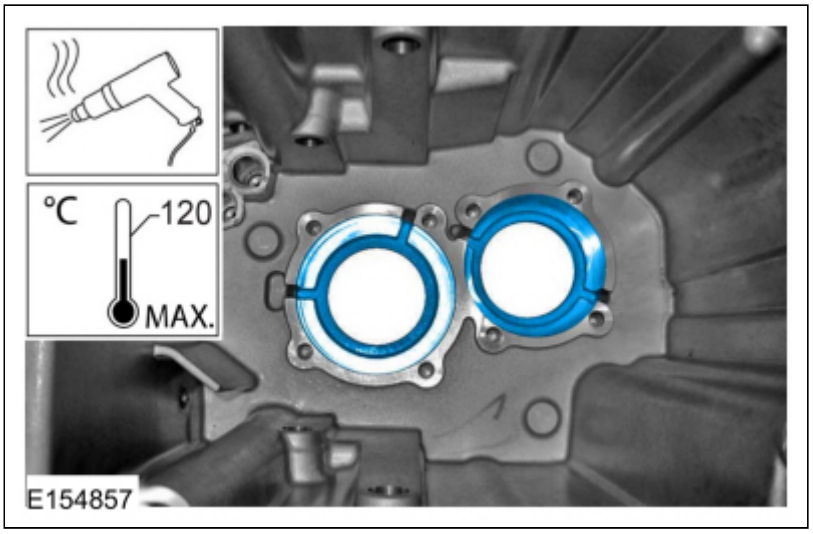


9.

10.

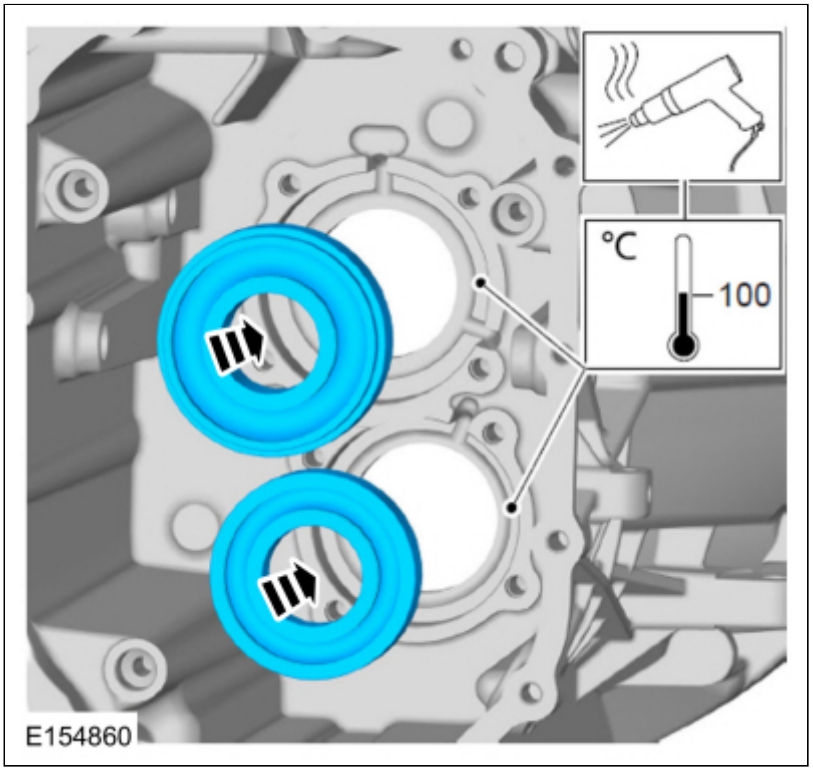


11.



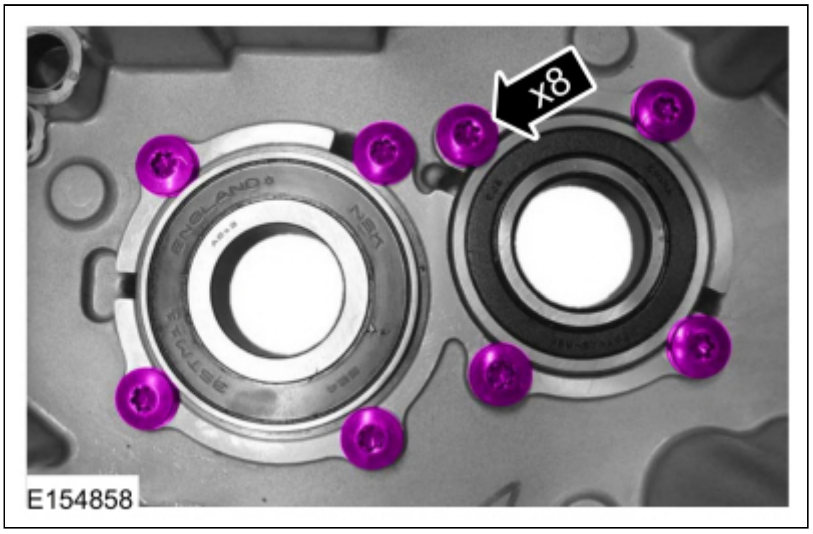
12. **NOTE:** *Apply threadlock to the reverse idler gear bolt.*

    Material: Thread Locking Adhesive (WSK-M2G349-A7)
    Torque: 27 Nm



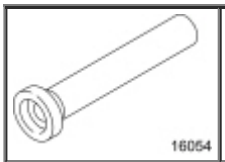
13. **NOTICE: Do not heat the transmission case higher than 120°C maximum or damage to the transmission case can occur.**

    Use the General Equipment: Hot Air Gun



14. Use the General Equipment: Hot Air Gun

15. Use Special Service Tool: 308-095 Installer, Input Shaft Bearing.



16. *Torque*: 36 Nm

Countershaft

Special Tool(s) / General Equipment

	308-150 Installer, Mainshaft Double Lip Seal
Hydraulic Press	
Bearing Separator	

DISASSEMBLY

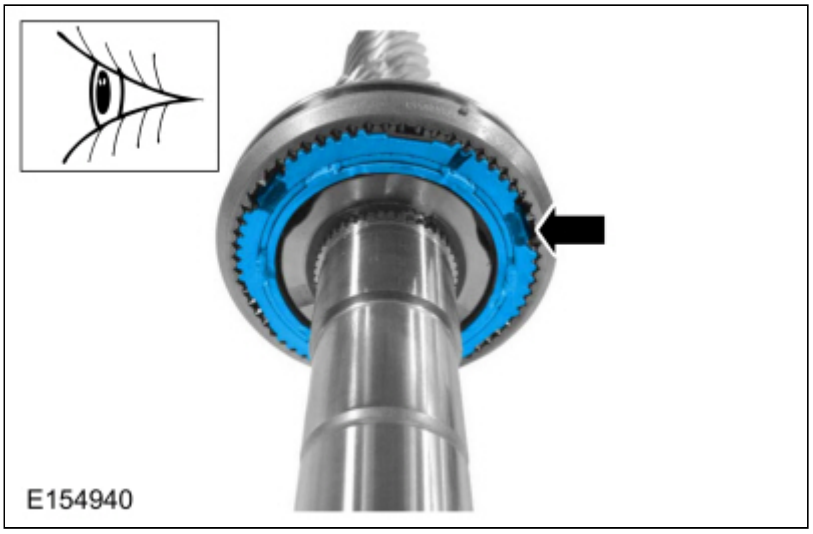
1. **NOTICE: Support the countershaft while using the hydraulic press to prevent damage to the shaft or gears.**

   NOTICE: Hand-tighten the Bearing Puller to prevent gear damage.

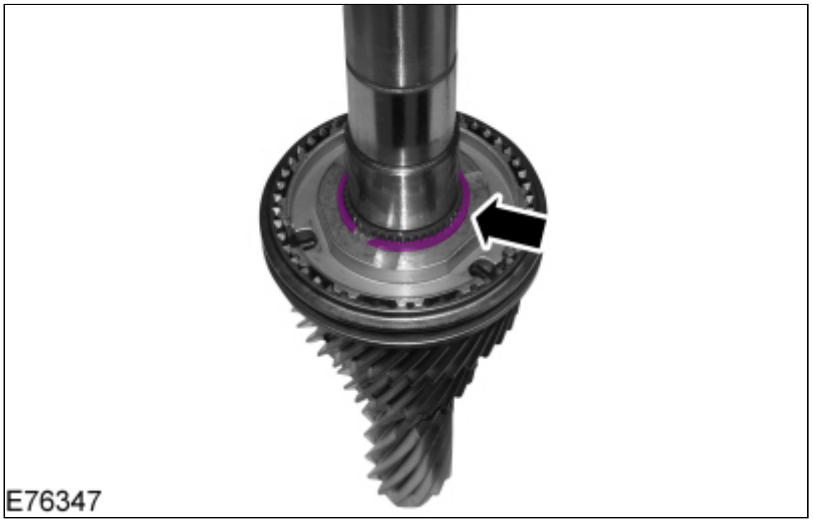
   Use Special Service Tool: 308-150 Installer, Mainshaft Double Lip Seal.
   Use the General Equipment: Hydraulic Press
   Use the General Equipment: Bearing Separator

2. **NOTE:** *Inspect component for wear or damage, Install a new component as necessary.*

   Use Special Service Tool: 308-150 Installer, Mainshaft Double Lip Seal.
   Use the General Equipment: Hydraulic Press
   Use the General Equipment: Bearing Separator

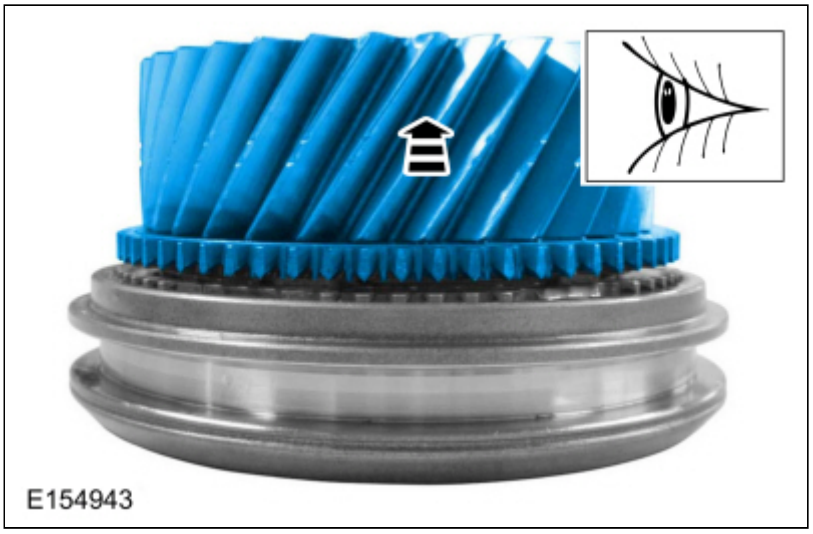


3. **NOTE:** *Inspect component for wear or damage, Install a new component as necessary.*

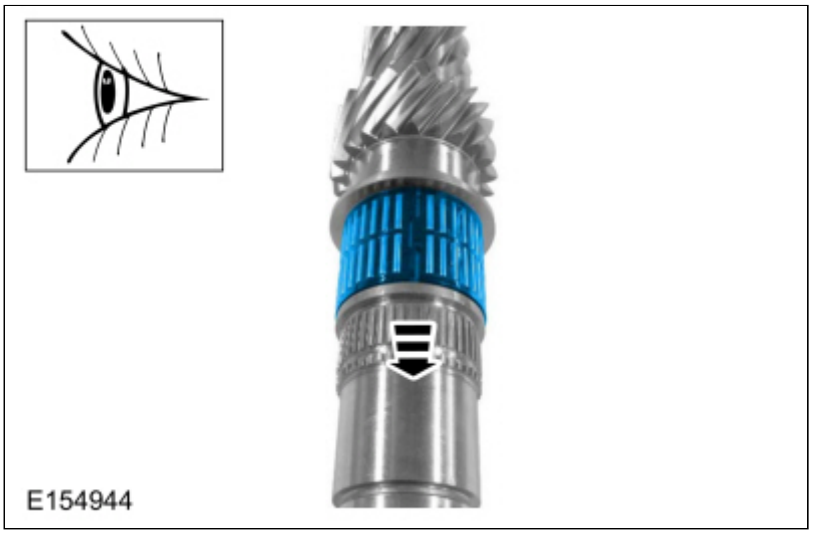


4. **NOTE:** *Inspect component for wear or damage, Install a new component as necessary.*

5. **NOTE:** *Inspect component for wear or damage, Install a new component as necessary.*



6.



7. Use Special Service Tool: 308-150 Installer, Mainshaft Double Lip Seal.
   Use the General Equipment: Hydraulic Press
   Use the General Equipment: Bearing Separator

8. **NOTE:** *Inspect components for wear or damage, Install a new component as necessary.*

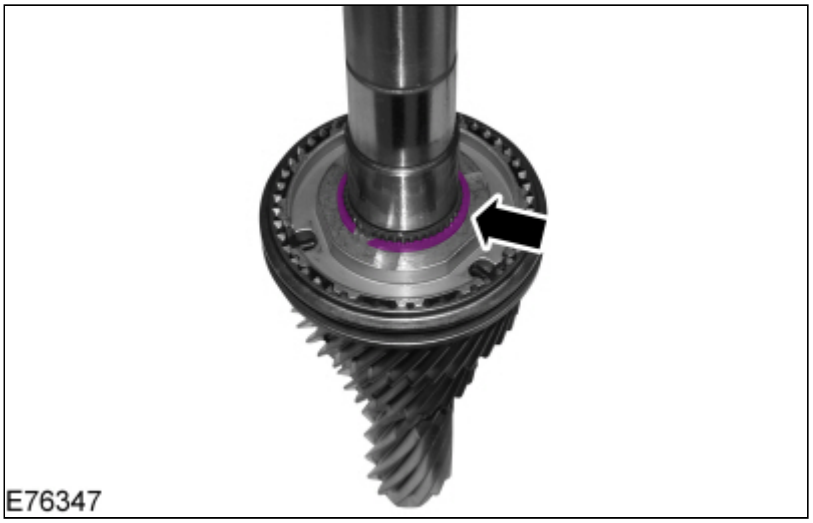
9. **NOTICE: When removing the bearing, do not over expand the bearing cage or damage to the bearing cage can occur.**

ASSEMBLY

1. **NOTICE: When installing the bearing, do not over expand the bearing cage or damage to the bearing cage can occur.**

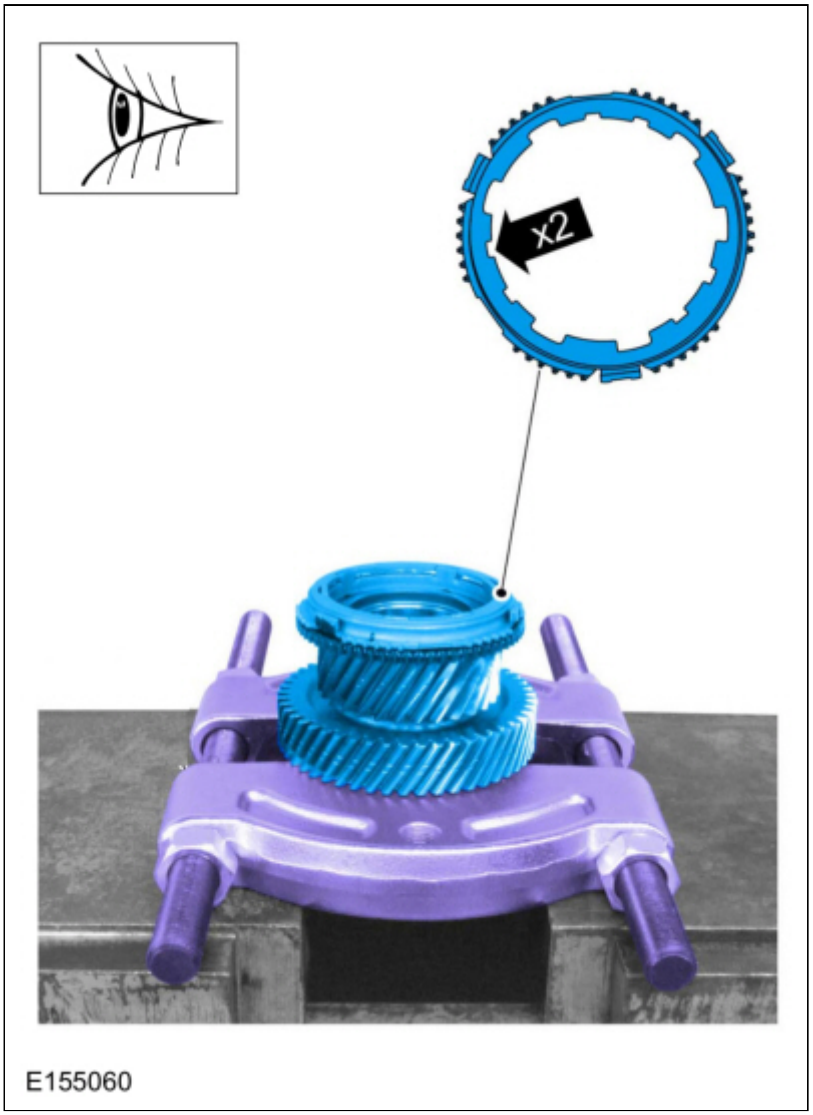
2. **NOTICE: The groove on the 3rd/4th gear synchronizer assembly must be facing away from 4th gear or damage to the synchronizer assembly can occur.**

   NOTICE: The 6 synchronizer ring tabs must engage into the 6 gear slots and the 3 synchronizer ring tabs must engage into the 3 synchronizer assembly slots or damage to the synchronizer assembly and synchronizer ring assembly can occur.

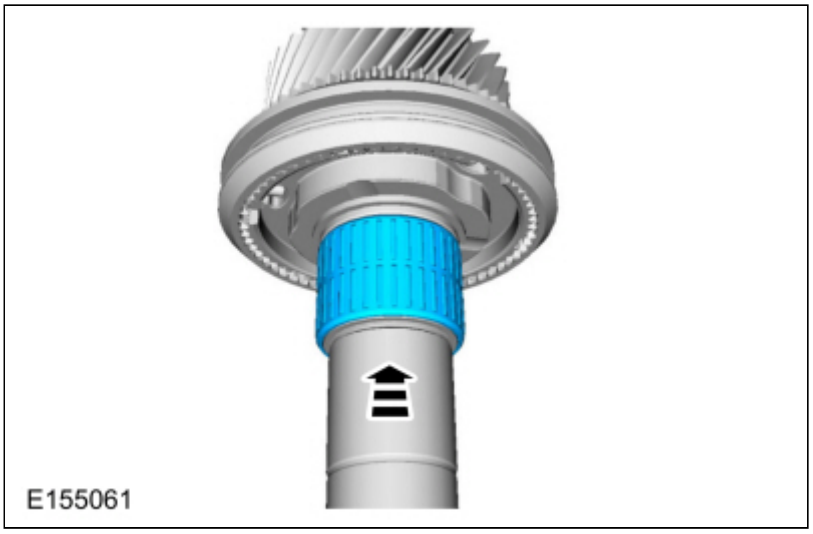


NOTE: *The 4th gear synchronizer ring assembly outer ring has one identification notch.*

3. Use the General Equipment: Hydraulic Press
   Use the General Equipment: Bearing Separator



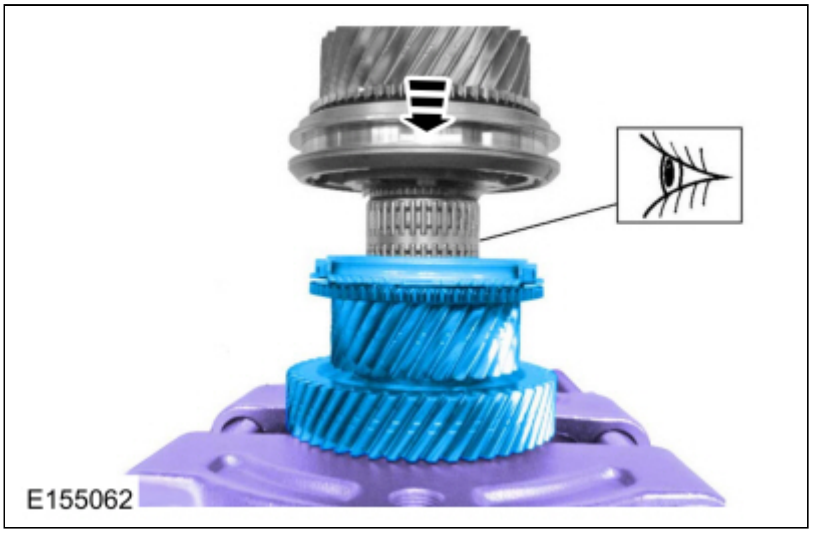
4.



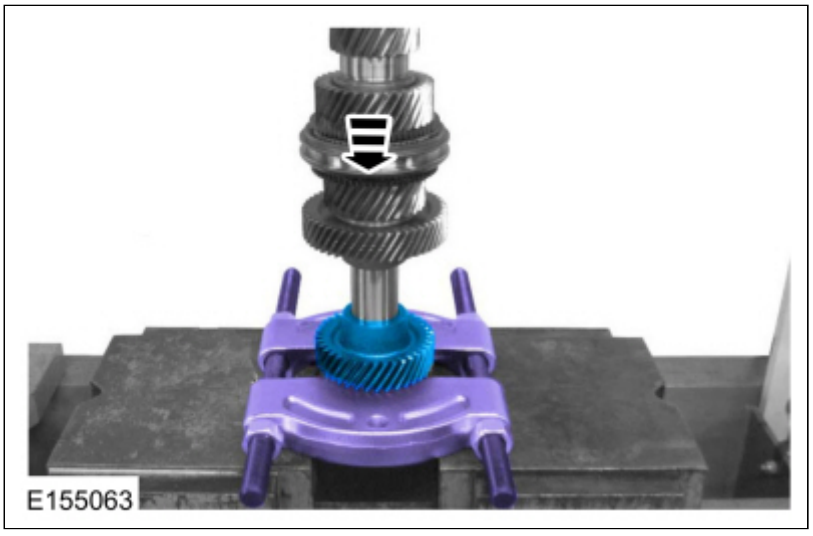
5. **NOTICE: The 6 synchronizer ring tabs must engage into the 6 gear slots or damage to the synchronizer assembly and synchronizer ring assembly can occur.**

   NOTICE: The 3rd gear synchronizer ring assembly outer ring has 2 identification notches.

   Use the General Equipment: Hydraulic Press
   Use the General Equipment: Bearing Separator



6. **NOTE:** *Lubricate the needle bearing with petroleum jelly to hold it in place during assembly.*



7. **NOTICE: The 3 synchronizer ring tabs must engage into the 3 synchronizer assembly slots or damage to the synchronizer assembly and synchronizer ring assembly can occur.**

   NOTICE: Do not allow the 3rd gear needle bearing to slide down the countershaft while pressing the components or damage to the needle bearing can occur.

   Use the General Equipment: Hydraulic Press
   Use the General Equipment: Bearing Separator

8. Use the General Equipment: Hydraulic Press
   Use the General Equipment: Bearing Separator

Output Shaft

Special Tool(s) / General Equipment

Hydraulic Press
Bearing Separator

Materials

Name	Specification
Gear/Transmission Fluid - SAE 75W	WSS-M2C200-D2

DISASSEMBLY

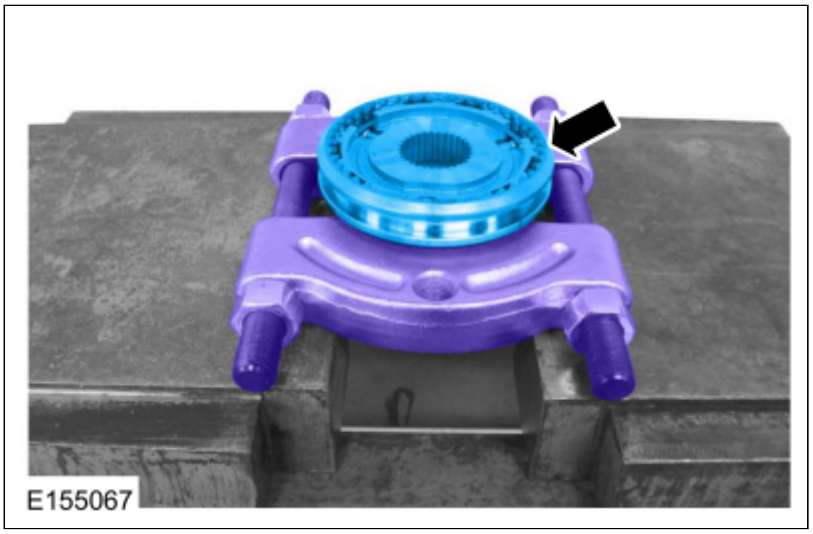
1. **NOTICE: Hand-tighten the Bearing Puller to prevent gear damage.**

   NOTICE: Support the output shaft while using the press to prevent damage to the shaft or gears.

2. **NOTE:** *Inspect components for wear or damage, Install new components as necessary.*

   Inspect components for wear or damage, Install new components as necessary.
   Use the General Equipment: Hydraulic Press
   Use the General Equipment: Bearing Separator

3. **NOTE:** *Inspect components for wear or damage, Install new components as necessary.*

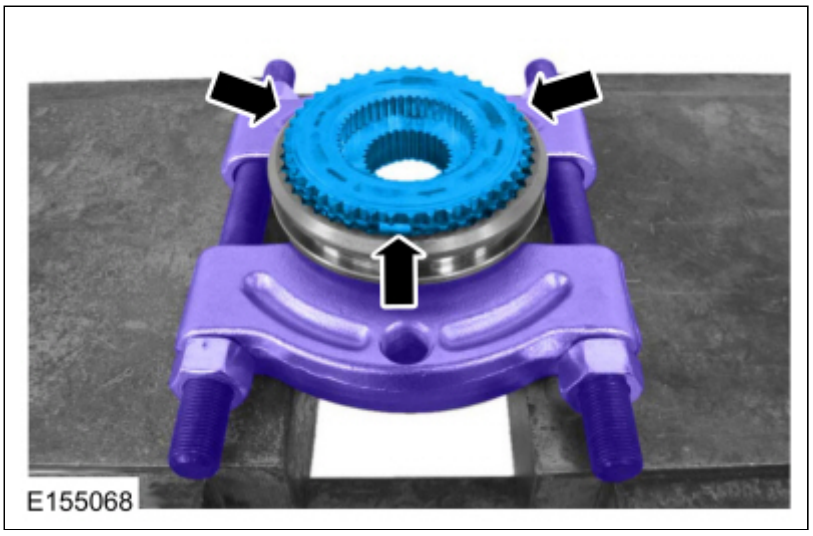


4. **NOTE:** *Inspect components for wear or damage, Install new components as necessary.*

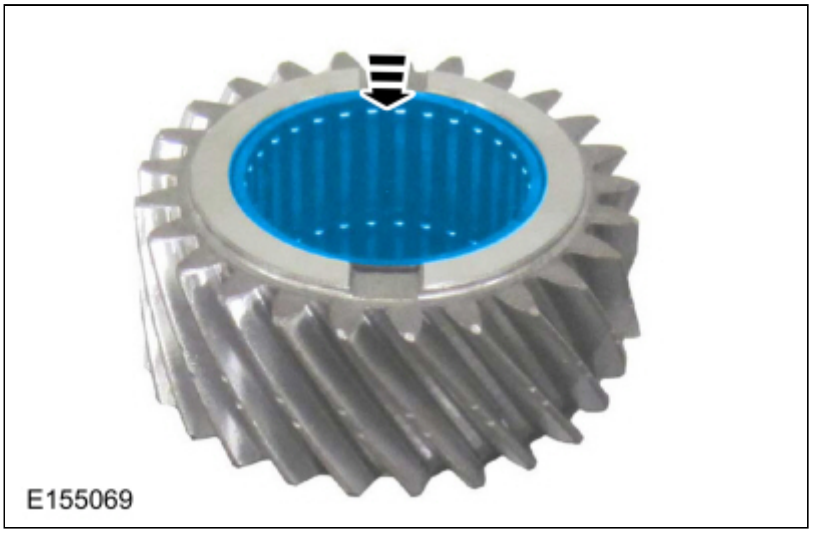
ASSEMBLY

1. **NOTE:** *Lubricate all components with the recommended transmission fluid before reassembling.*

   Use the General Equipment: Hydraulic Press
   Use the General Equipment: Bearing Separator
   Material: Gear/Transmission Fluid - SAE 75W (WSS-M2C200-D2)

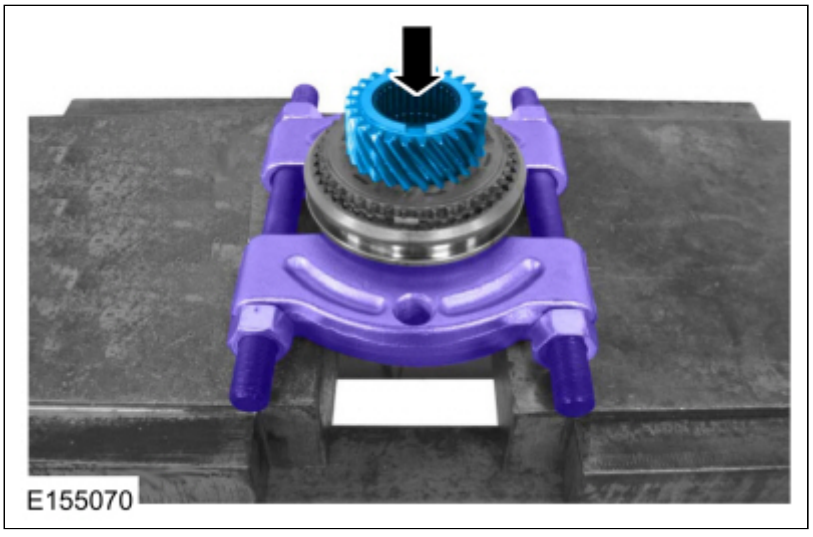


2. **NOTICE: The 3 synchronizer ring tabs must engage into the 3 synchronizer assembly slots or damage**



to the synchronizer assembly and synchronizer ring can occur.

NOTE: *Lubricate all components with the recommended transmission fluid before reassembling.*



Use the General Equipment: Hydraulic Press
Use the General Equipment: Bearing Separator

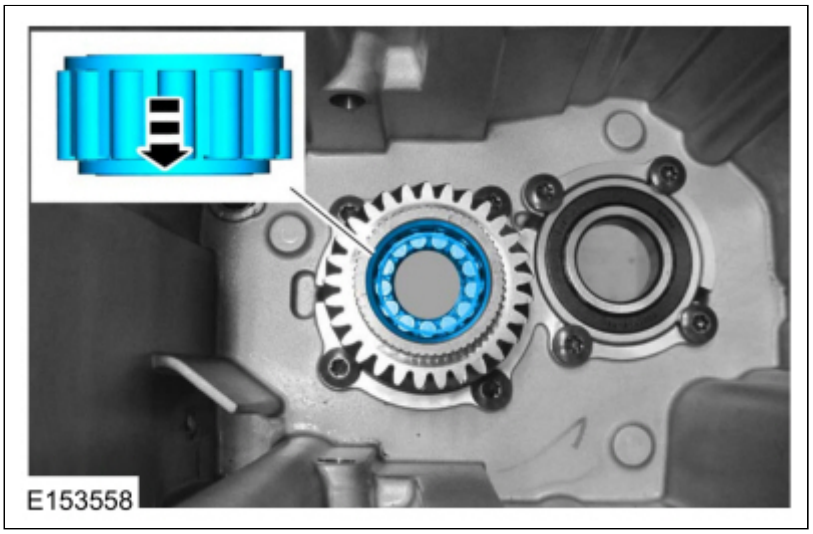
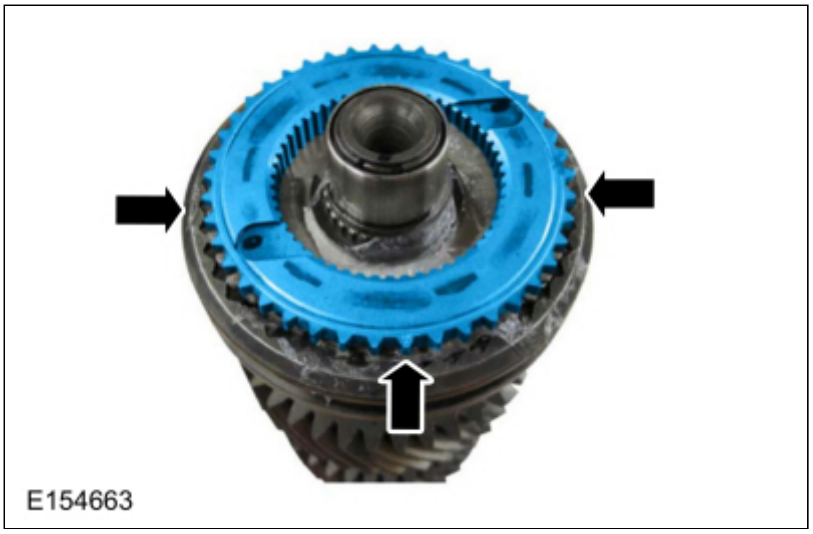
Thread Locking Sealant	-
Thread Locking Adhesive	WSK-M2G349-A7
Sealant	WSK-M2G348-A7

1. **NOTICE: Do not heat the input shaft bearing higher than 120°C (248°F) maximum or damage to the input shaft bearing can occur.**

   Use the General Equipment: Hot Air Gun

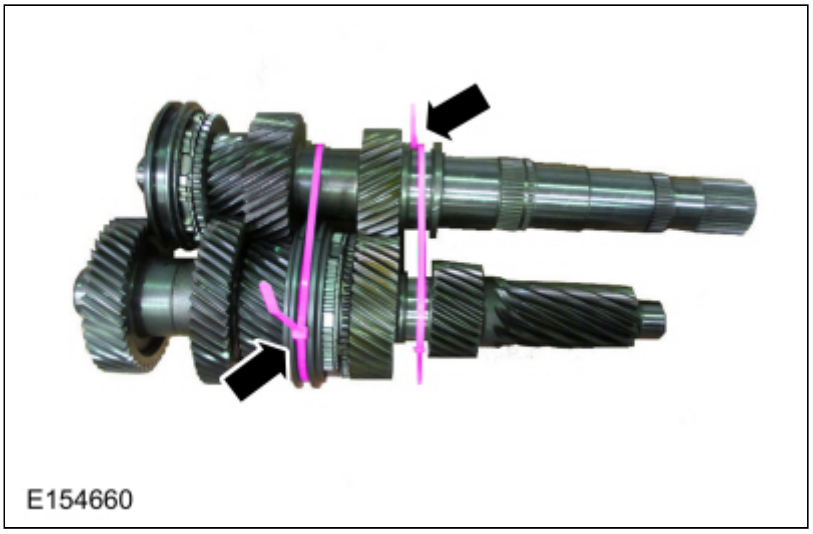


2. **NOTE:** *Install the oil feed hole facing the countershaft bearing.*



3.

4. **NOTE:** *Make sure the small diameter side of the output shaft bearing cage is facing the input shaft or damage to the output shaft bearing can occur.*

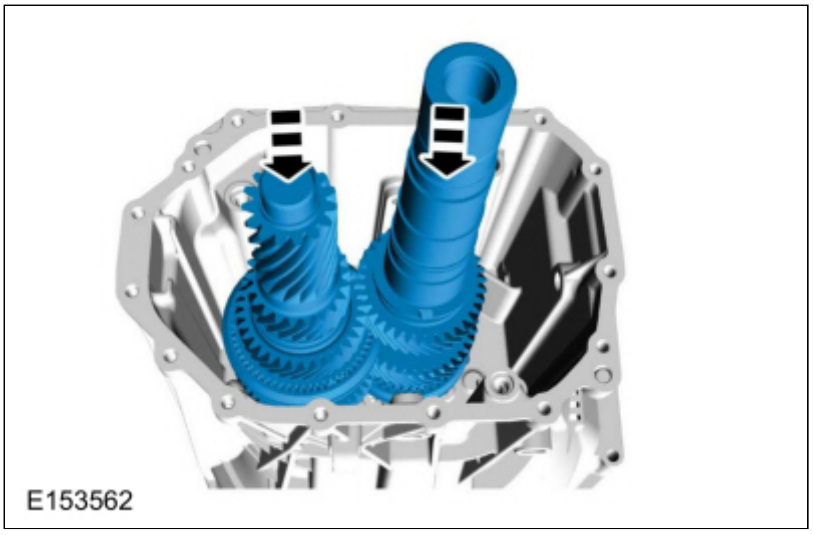


5. **NOTE:** *Apply petroleum jelly to hold 5th gear synchronizer ring and the 5th gear synchronizer cone in place during assembly.*

6. **NOTE:** *Assemble the shafts with the oil feed hole on the 5th gear cone facing the countershaft.*

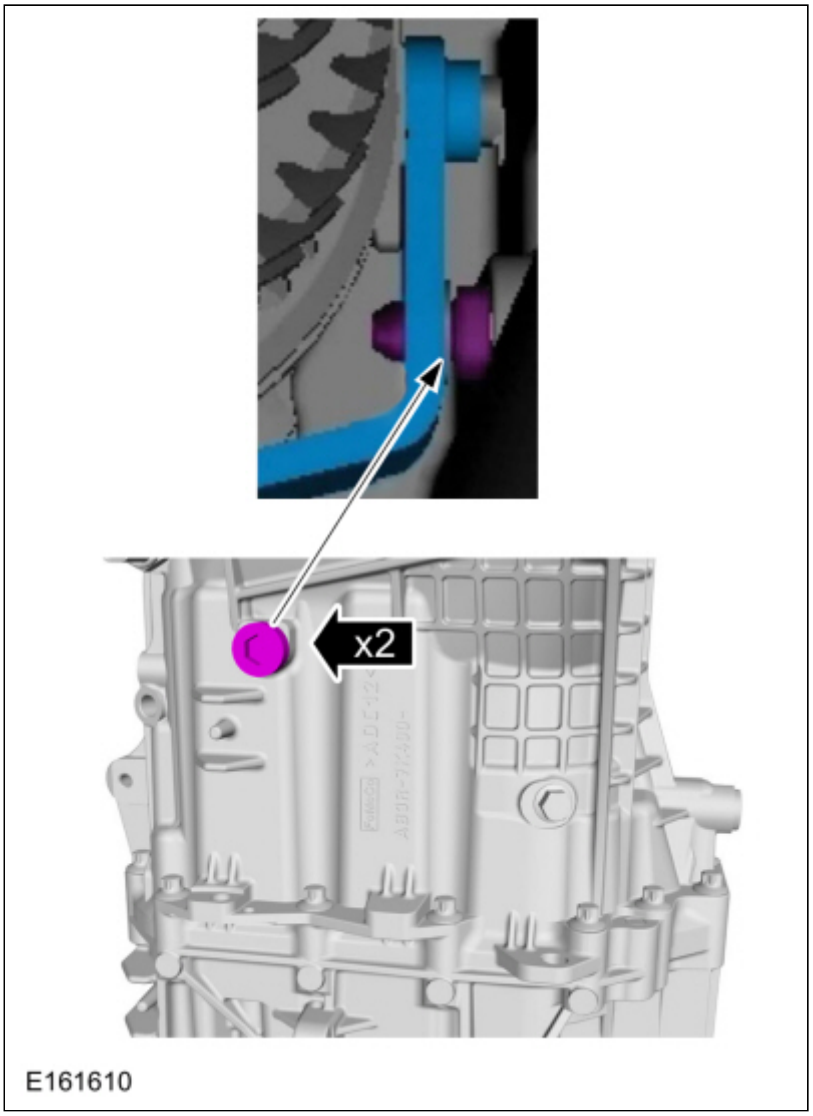
   NOTE: *Sercure the shaft pack with cable ties.*

   Install the General Equipment: Cable Ties



7. **NOTICE: Do not heat the countershaft bearing higher than 120°C (248°F) maximum or damage to the countershaft bearing can occur.**

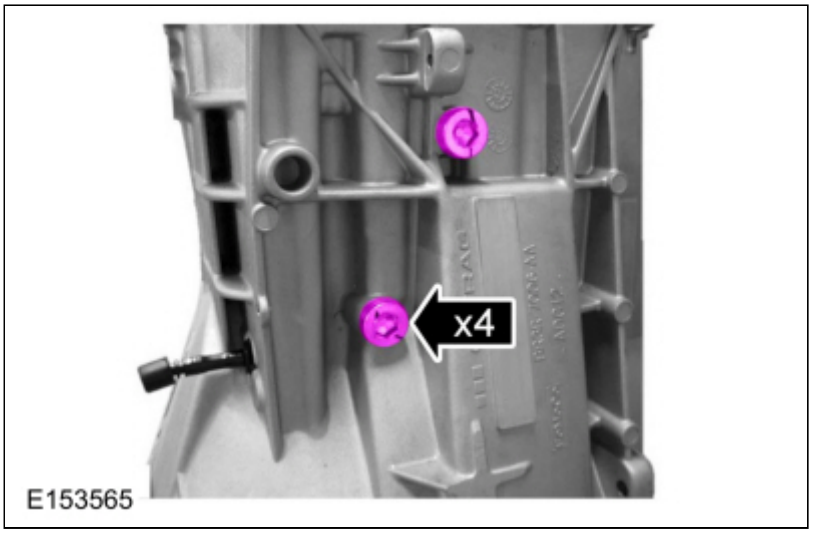
   Use the General Equipment: Hot Air Gun



8. **NOTE:** *With the oil feed holes aligned, install the output shaft and countershaft assemblies.*

9. **NOTICE: Make sure the shift fork pivot bolts engauge into the shift fork or damage to the shift fork can occur.**

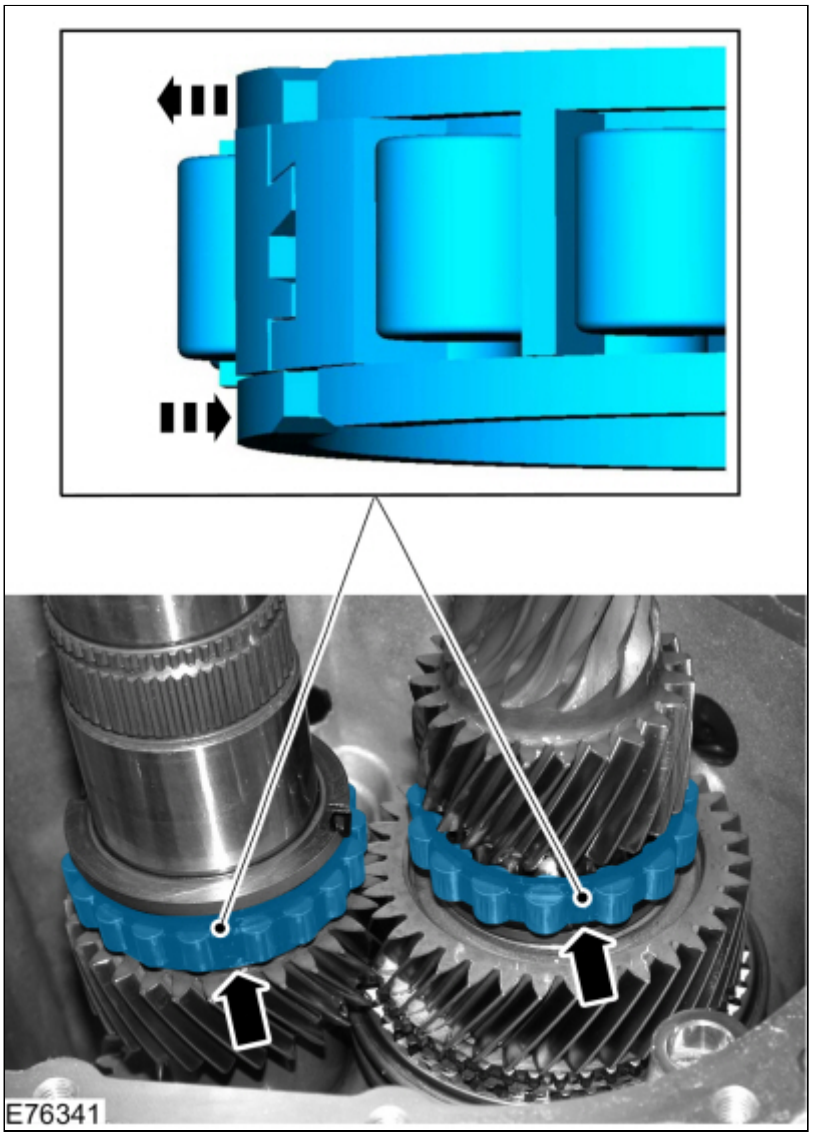
   Material: Thread Locking Sealant



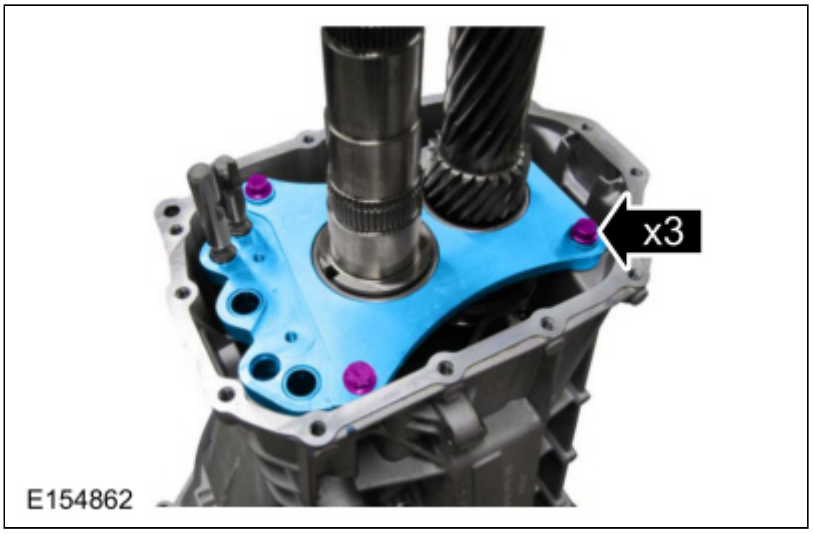
10. **NOTICE: Make sure the shift fork pivot bolts engauge into the shift fork or damage to the shift fork can occur.**

    NOTE: *Apply Threadlock and Sealer to the shift fork pivot bolts.*

    Material: Thread Locking Adhesive (WSK-M2G349-A7)

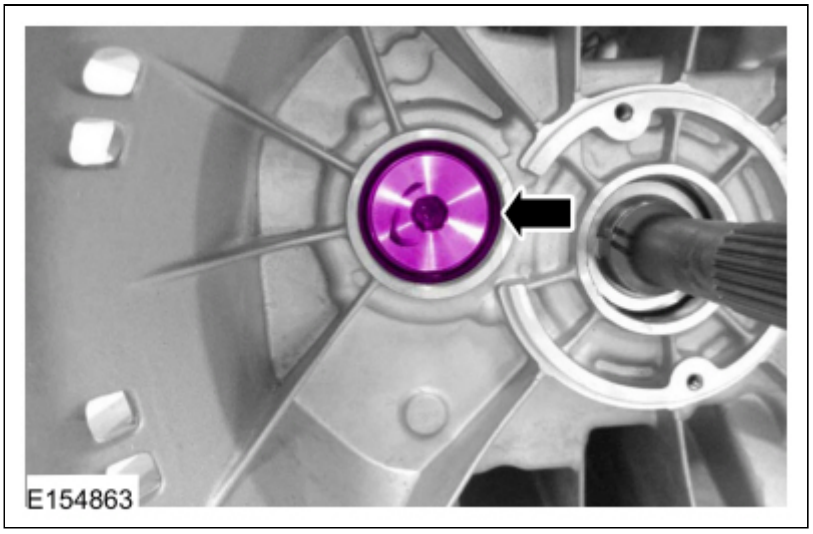


11. *Torque*: 37 Nm



12. Push down the 3rd/4th shift rail and the 5th/6th shift rail to lock the transmission into 2 gears.

13. **NOTICE: When installing the bearings, do not over expand the bearing cages or damage to the bearing cages can occur.**



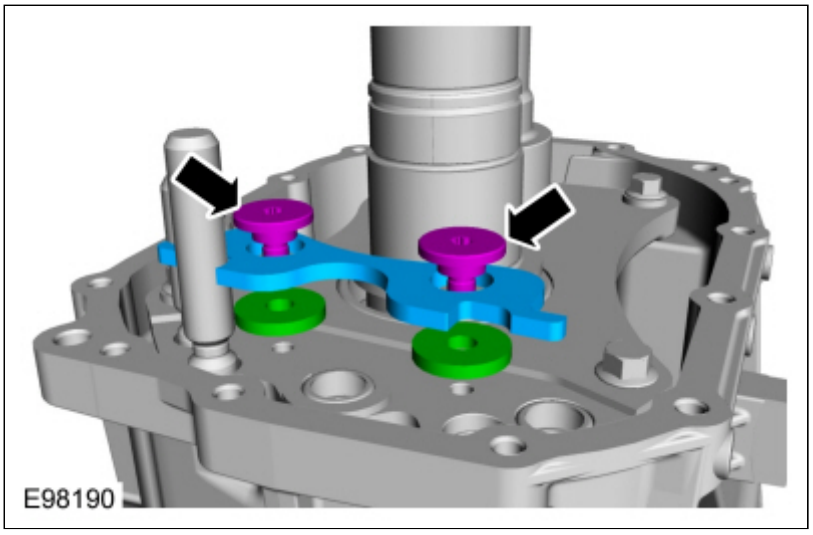
14. **NOTE:** *Only tighten the bolts finger tight at this stage.*

15. **NOTE:** *Install the counter shaft bolt with the transmission in the vertical position with the input shaft facing down.*

    Material: Thread Locking Adhesive (WSK-M2G349-A7)
    Torque: 95 Nm

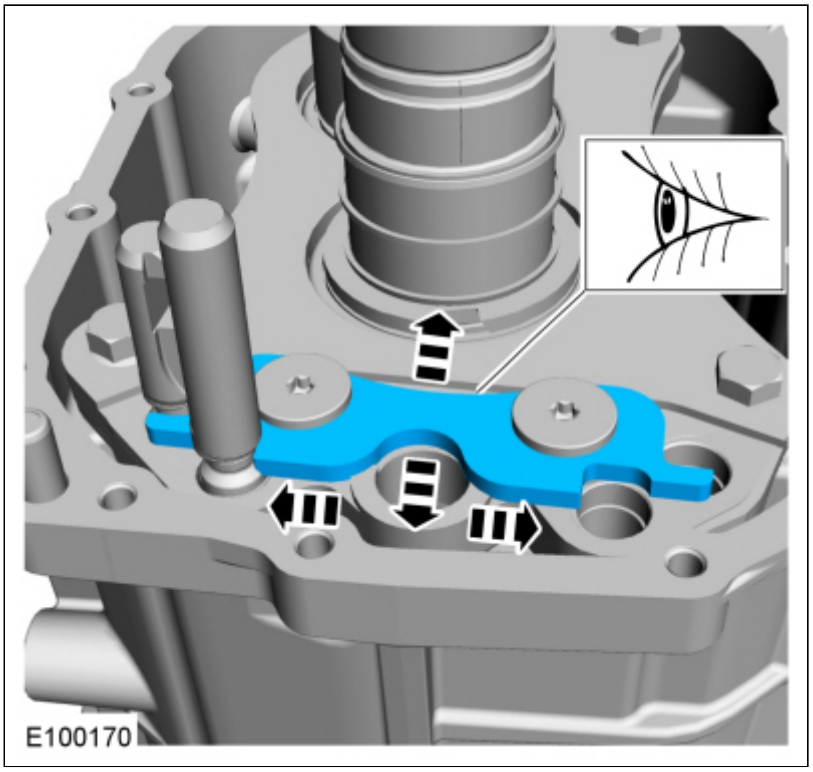
16. **NOTE:** *Remove the center support and 3 center support bolts.*

17. **NOTE:** *Pull up on the 3rd/4th shift rail and the 5th/6th shift rail to unlock the transmission from 2 gears.*

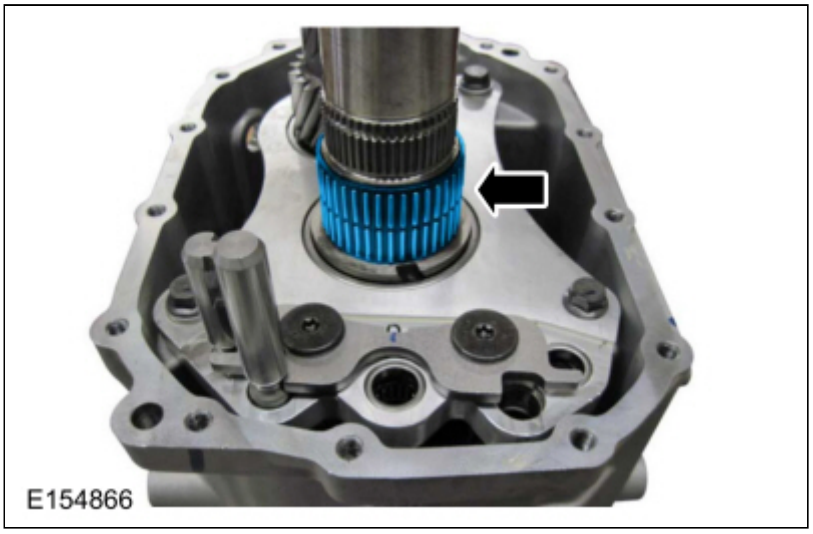


18. **NOTICE: The center support must be tightened evenly or damage to the center support or transmission case can occur.**

    Material: Thread Locking Adhesive (WSK-M2G349-A7)
    Torque: 35 Nm



19. *Torque*: 24 Nm



20. **NOTE:** *Make sure the interlock plate moves freely.*

    Material: Thread Locking Adhesive (WSK-M2G349-A7)
    Torque: 24 Nm

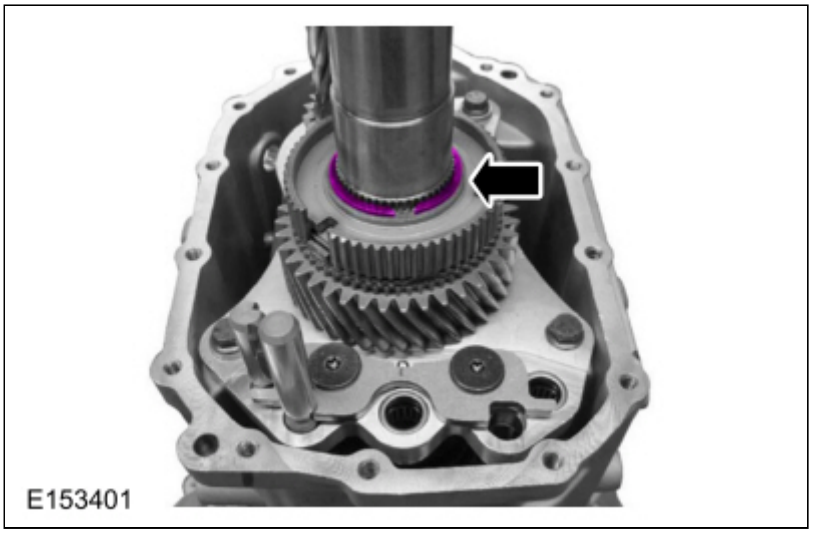
21.

22.

23. **NOTICE: The 6 synchronizer ring tabs must engauge into the 6 gear slots or damage to the synchronizer ring assembly can occur.**

    NOTE: *The 2nd gear synchronizer ring assembly outer ring has one identification notch.*

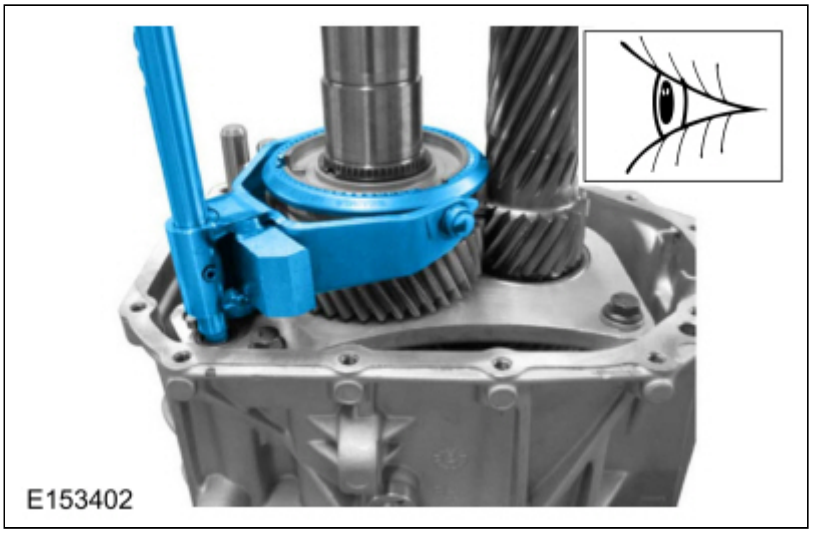
    Torque: 37 Nm



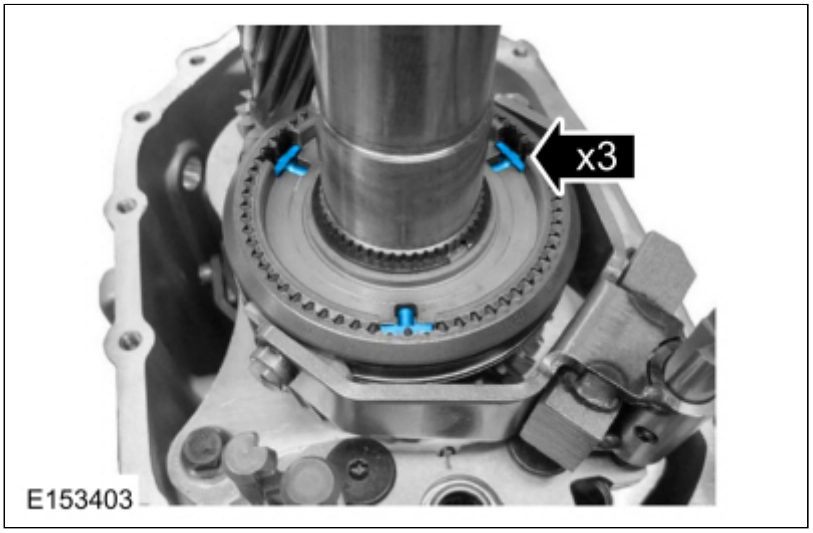
24. **NOTICE: The 3 synchronizer ring tabs must engauge into the 3 synchronizer hub slots or damage to the synchronizer hub and the synchronizer ring assembly can occur.**

    NOTICE: The long shoulder of the 1st/2nd synchronizer hub must be facing 2nd gear or damage to the synchronizer hub can occur.

    Use Special Service Tool: 308-604 Installer, Output Drive Flange Seal.

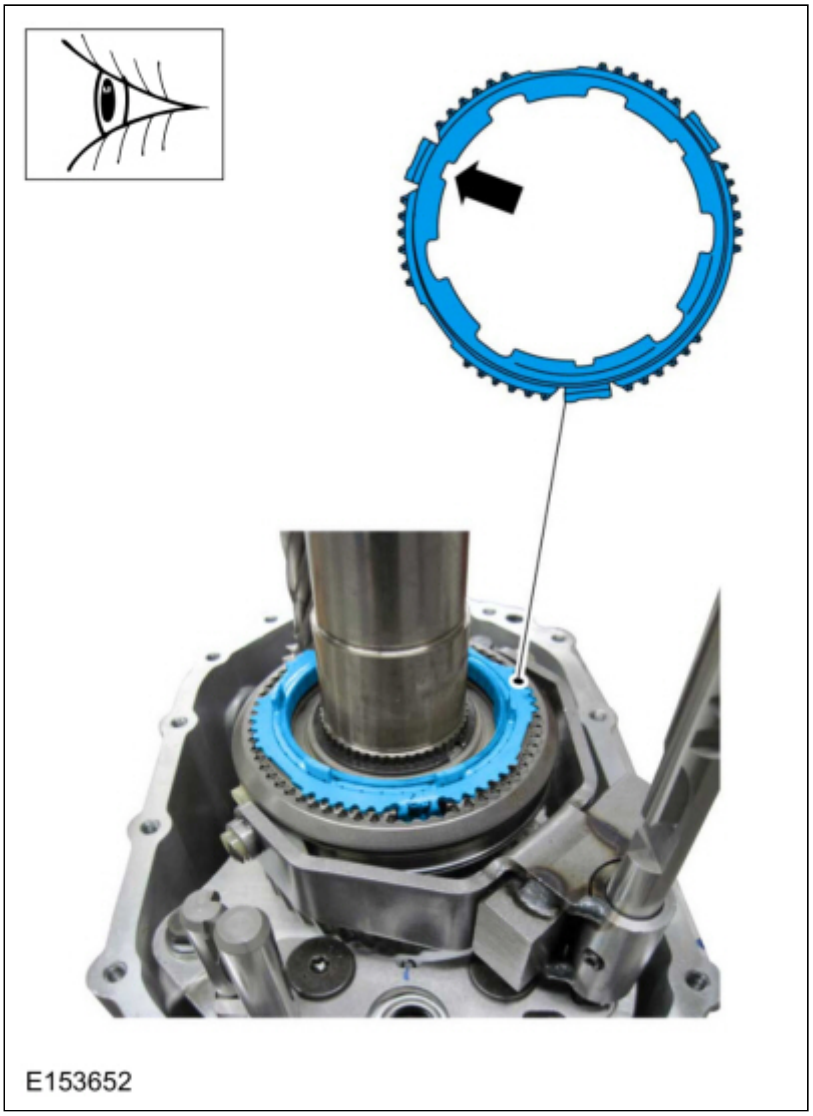


25.

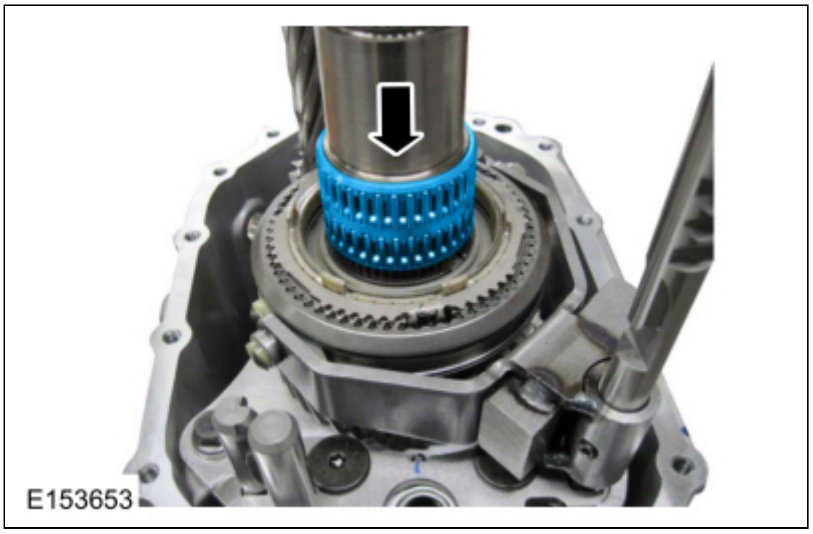


26. **NOTE:** *Align the index marks made during removal on the synchronizer sleeve and the synchronizer hub.*

NOTE: *With the groove on the 1st/2nd synchronizer sleeve facing 2nd gear, install the 1st/2nd shift fork, the 1st/2nd shift rail and the 1st/2nd synchronizer sleeve.*

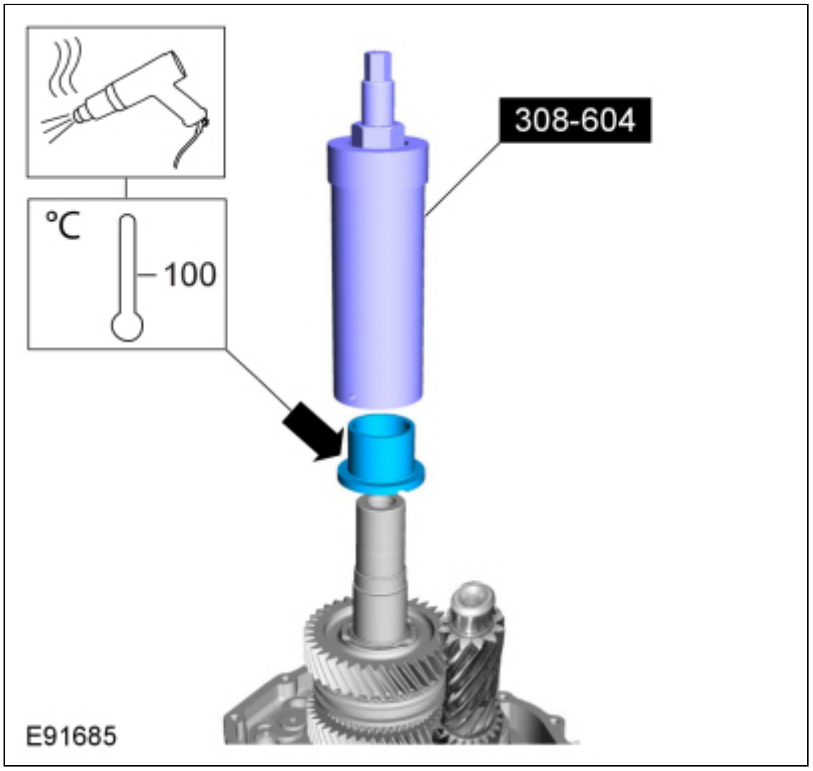


27. **NOTE:** *Slide the synchronizer sleeve up and install the 3 pressure pieces.*



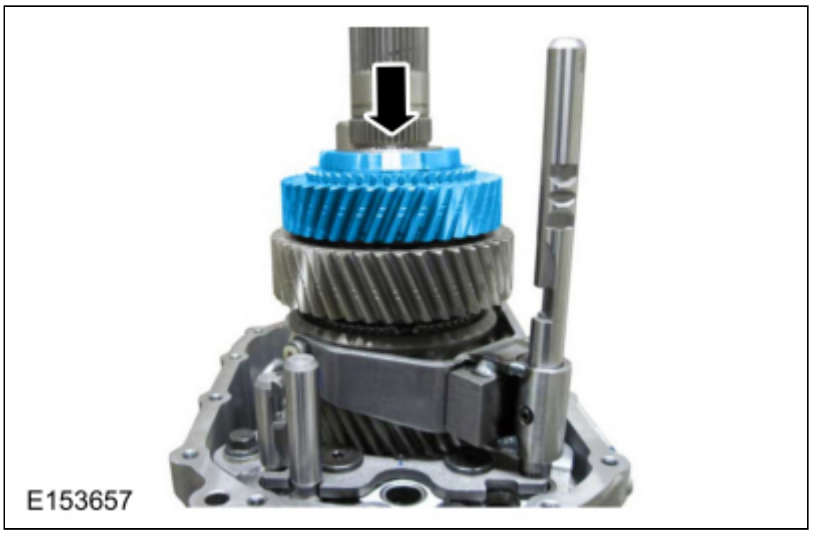
28. **NOTICE: The 3 synchronizer ring tabs must engage into the 3 synchronizer assembly slots or damage to the synchronizer assembly and the synchronizer ring assembly can occur.**

    NOTE: *The 1st gear synchronizer ring assembly outer ring has one identification notch.*



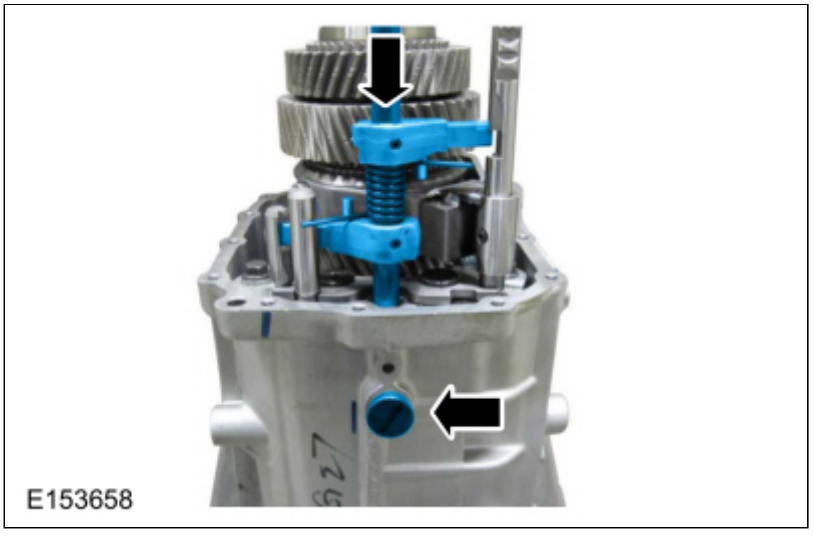
29.

30. **NOTICE: The 6 synchronizer ring tabs must engauge into the 6 gear slots or damage to the synchronizer assembly and synchronizer ring assembly can occur.**

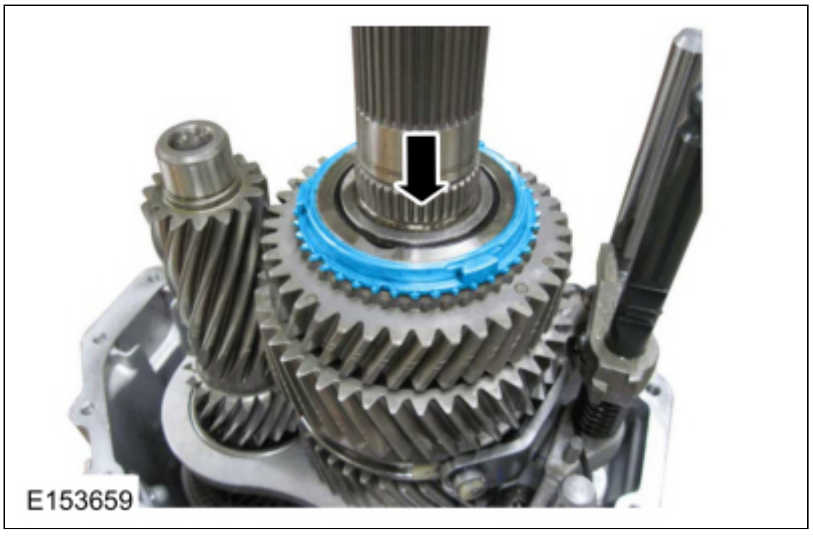


31. Use Special Service Tool: 308-604 Installer, Output Drive Flange Seal.

32.

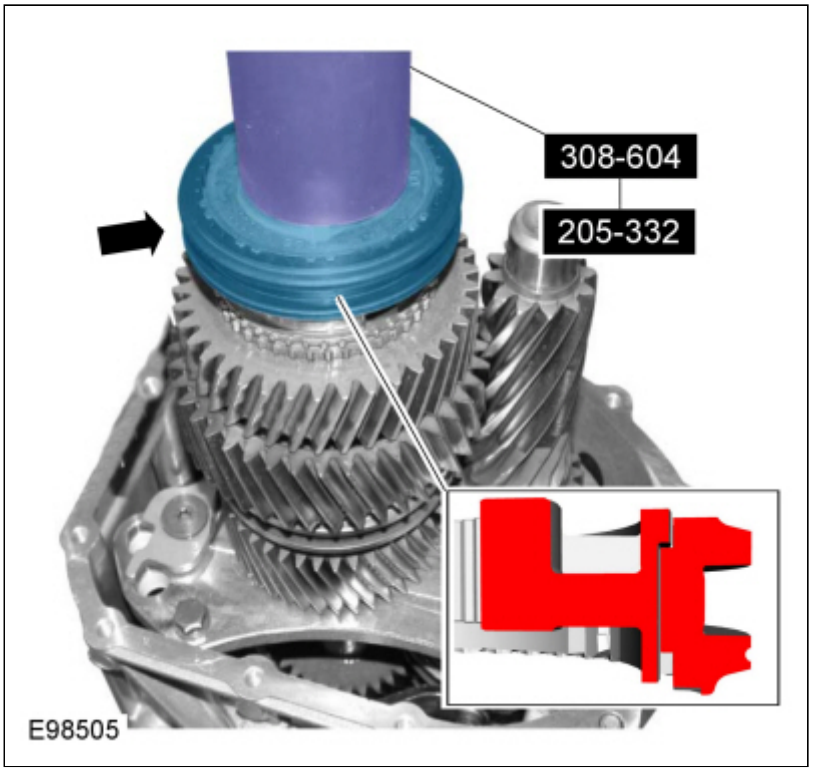


33.

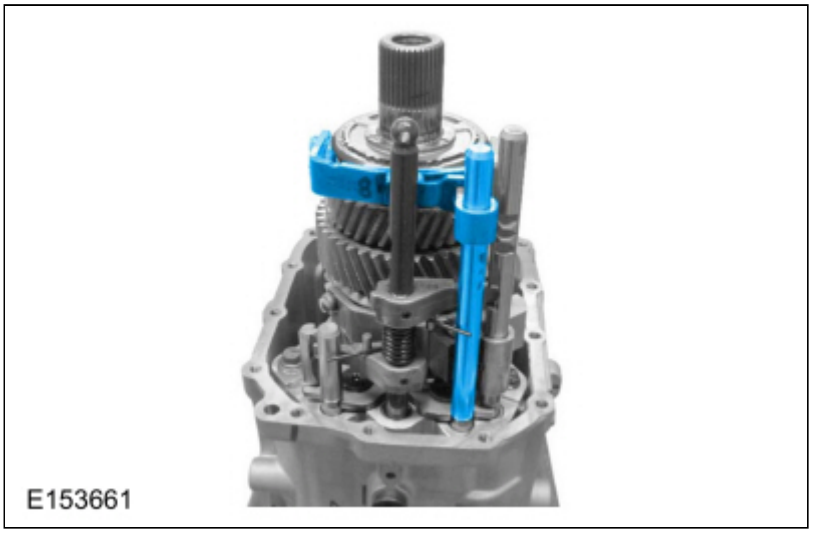


34. **NOTICE: The shift shaft must be installed in the neutral position prior to installing the shift shaft stop pin or damage to the shift shaft stop pin can occur.**

    Use the General Equipment: Copper Hammer

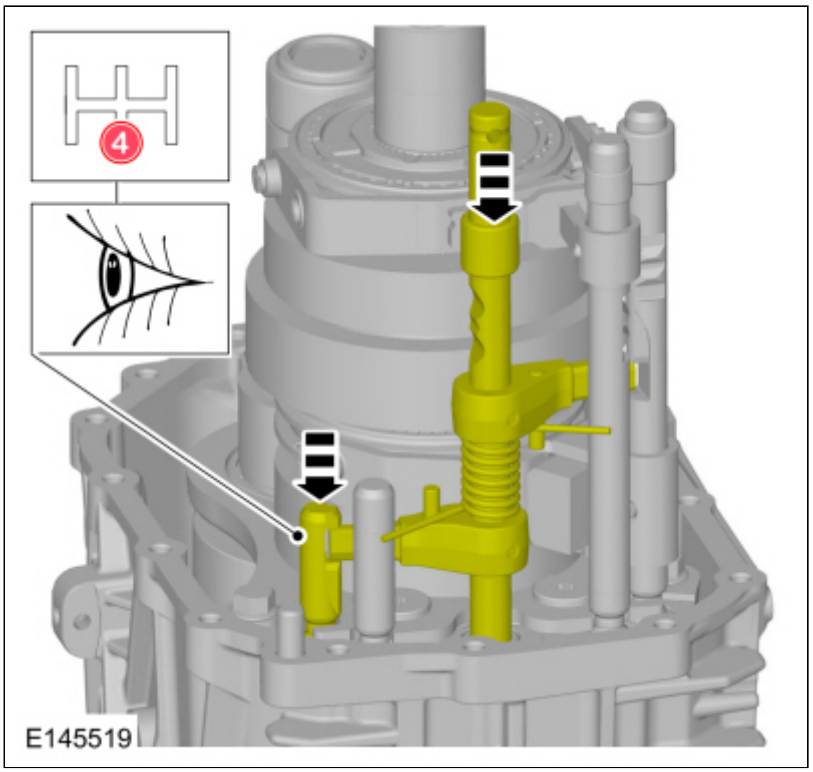


35.



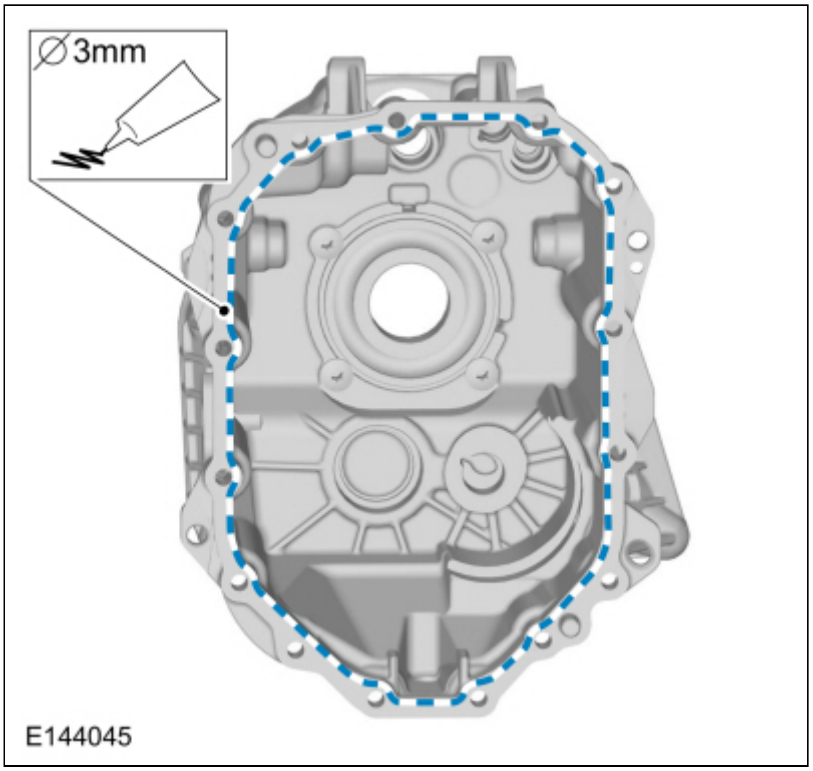
36. **NOTICE: The 3 synchronizer ring tabs must engage into the 3 synchronizer assembly slots or damage to the synchronizer assembly and the synchronizer ring can occur.**

    Use Special Service Tool: 205-332 Protector, Axle Shaft. , 308-604 Installer, Output Drive Flange Seal.



37. **NOTE:** *To install the reverse shift fork and the reverse shift rail assembly, the transmission must be in neutral and the groves on the shift rails must be aligned with the interlock plate.*

38.

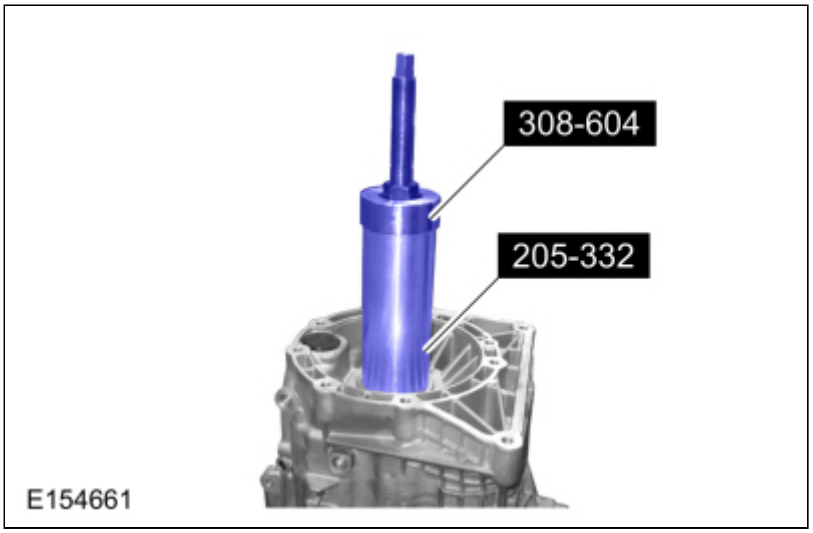


39. Engage fourth gear.

40. **NOTICE: Make sure the surface is cleaned with acetone and is free of foreign material.**

    NOTICE: Make sure that the sealant is applied continuously. Start and end should be on top of case.

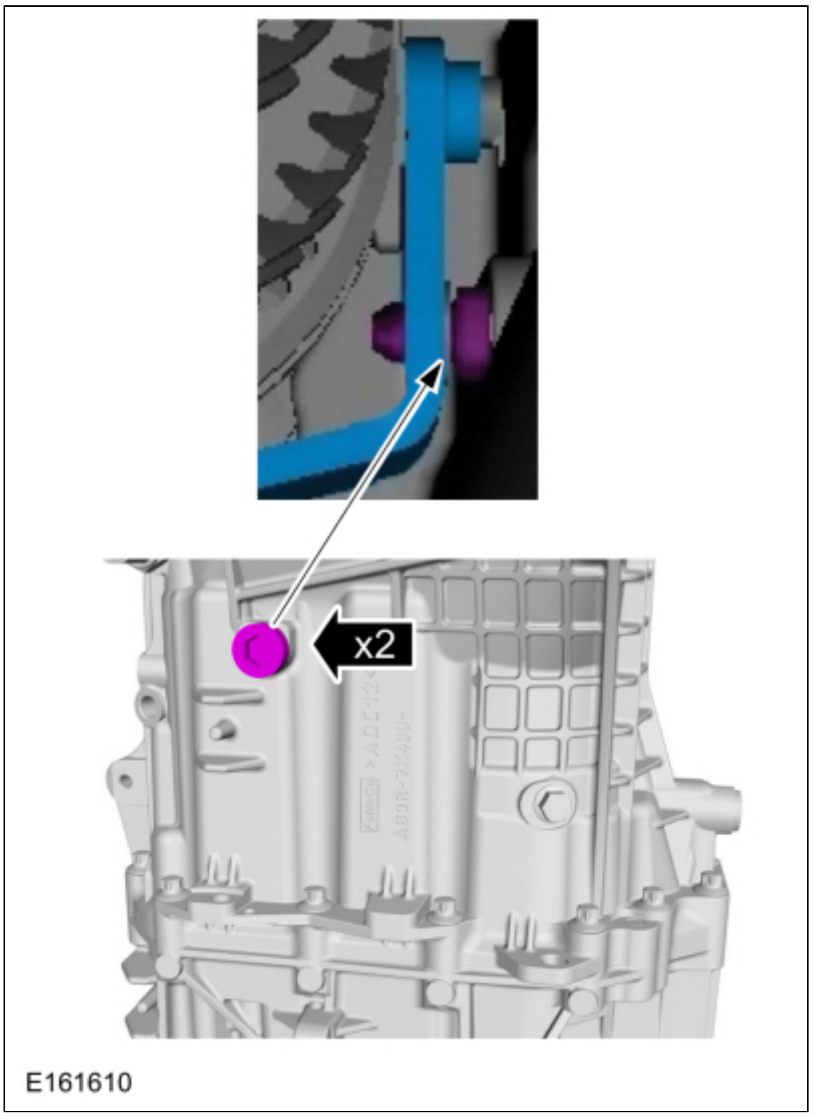
    Material: Sealant (WSK-M2G348-A7)



41. **NOTE:** *Do not wait longer than 10 minutes to install the rear transmission case assembly due to the rapid cure time of the sealant.*

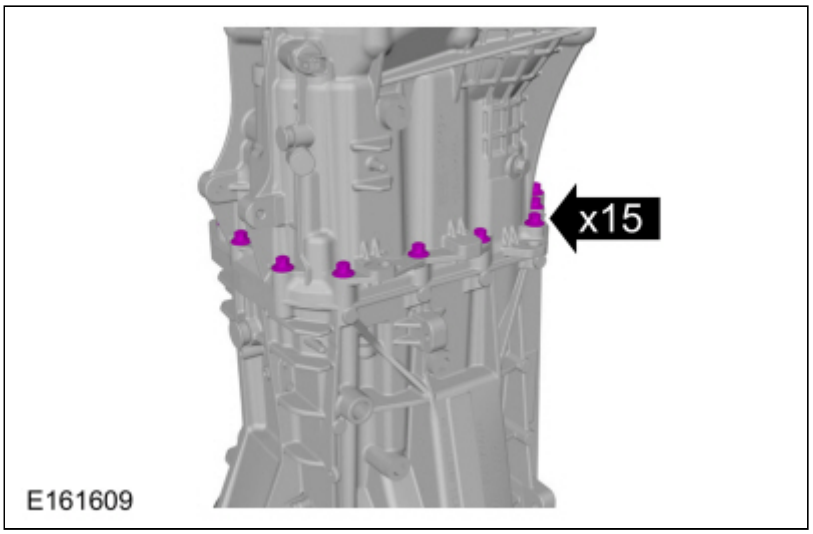
    NOTE: *Clean the sealing surfaces of the front transmission case and the sealing surfaces of the rear transmission case. Thinly coat the sealing surface of the front transmission case assembly and the sealing surface of the rear transmission case assembly with Gasket Maker.*

42. **NOTICE: The rear transmission case assembly must be installed evenly with the transmission shifted**



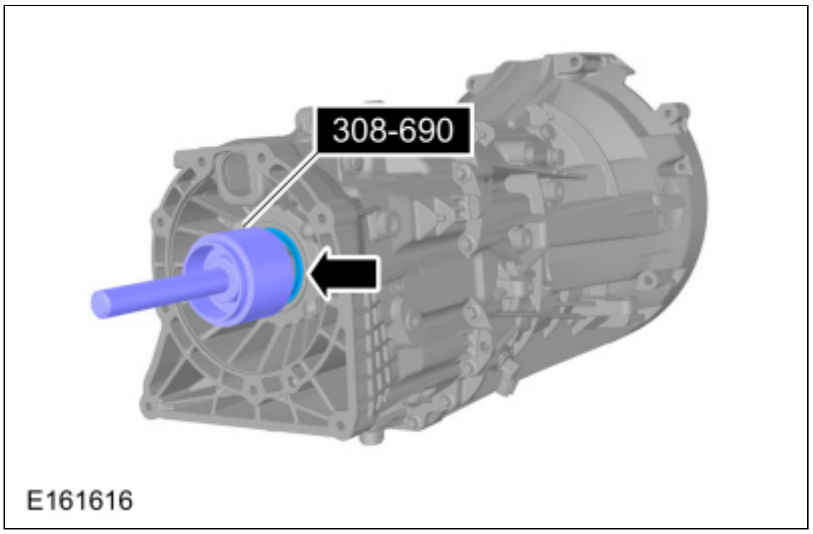
into 4th gear, do not allow the shift rails to bind during installation or damage to the transmission case assembly can occur.

Use Special Service Tool: 308-604 Installer, Output Drive Flange Seal. , 205-332 Protector, Axle Shaft.

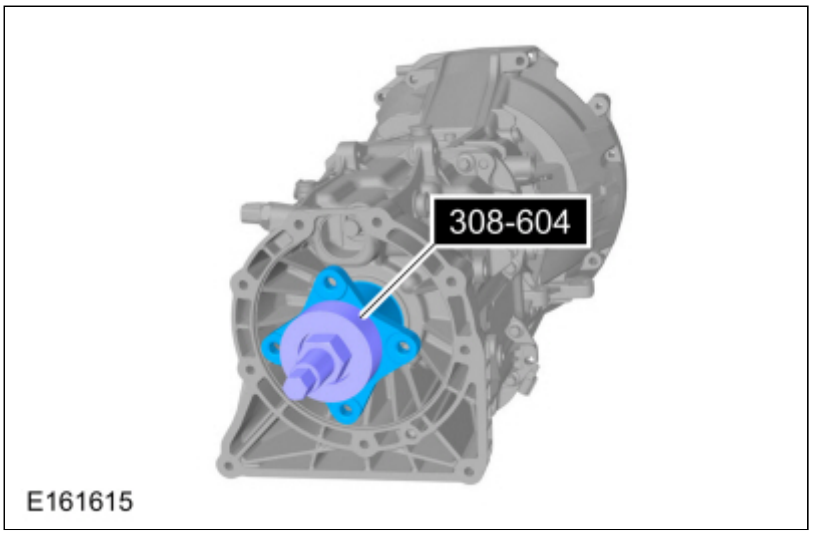


43. **NOTICE: Make sure the shift fork pivot bolts engage into the shift fork or damage to the shift fork can occur.**

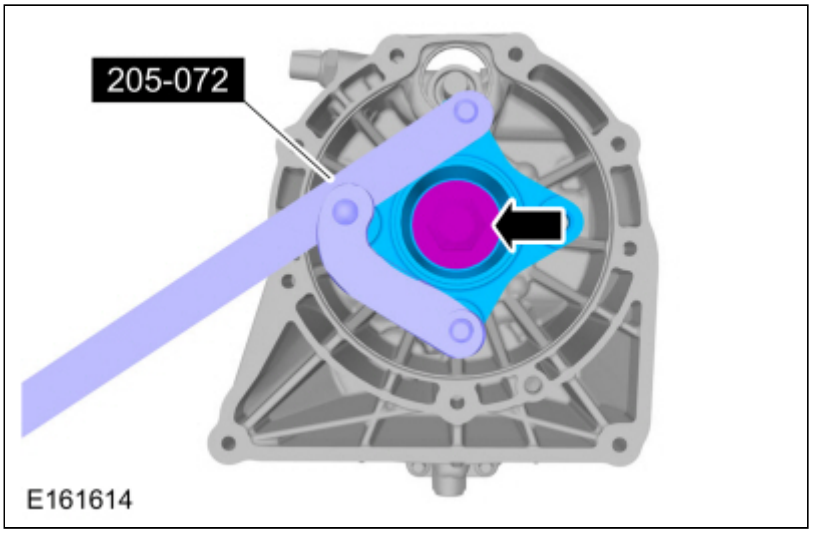
    Material: Thread Locking Sealant
    Torque: 37 Nm



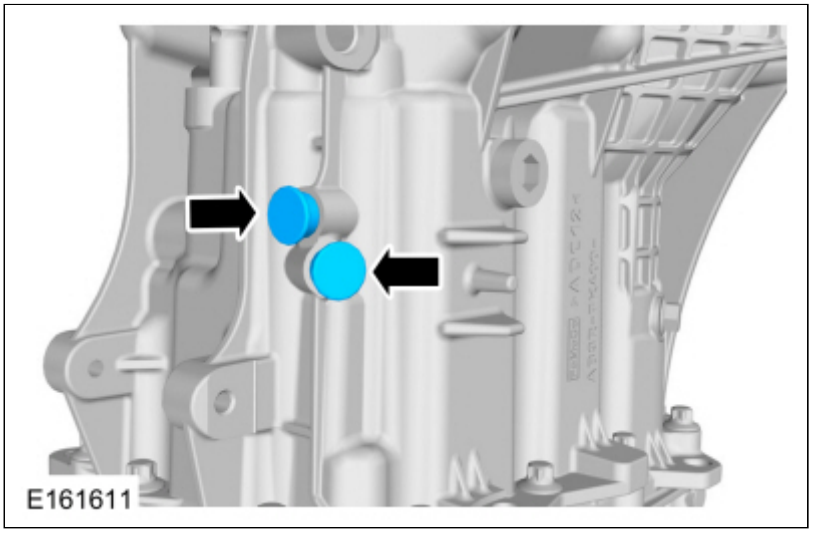
44. Loosely install the 15 transmission case bolts. Using a suitable brass drift, tap the 2 dowel pins flush with the transmission case.



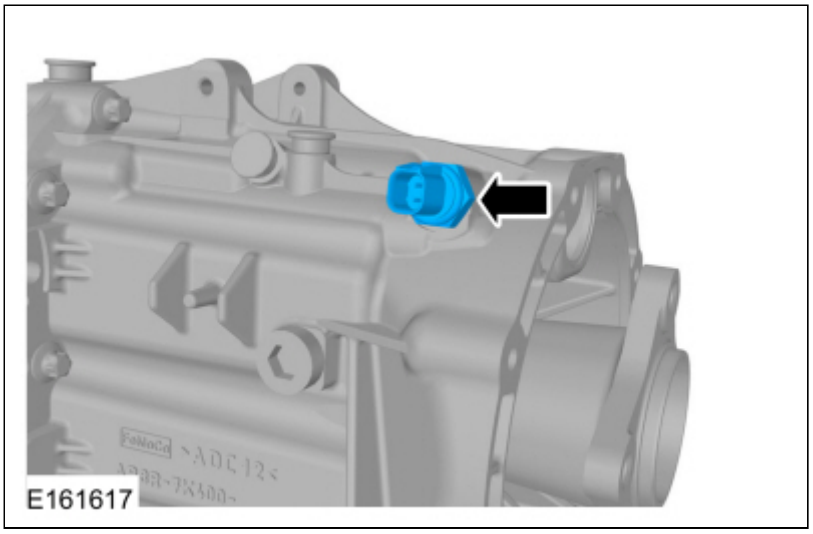
Torque: 24 Nm



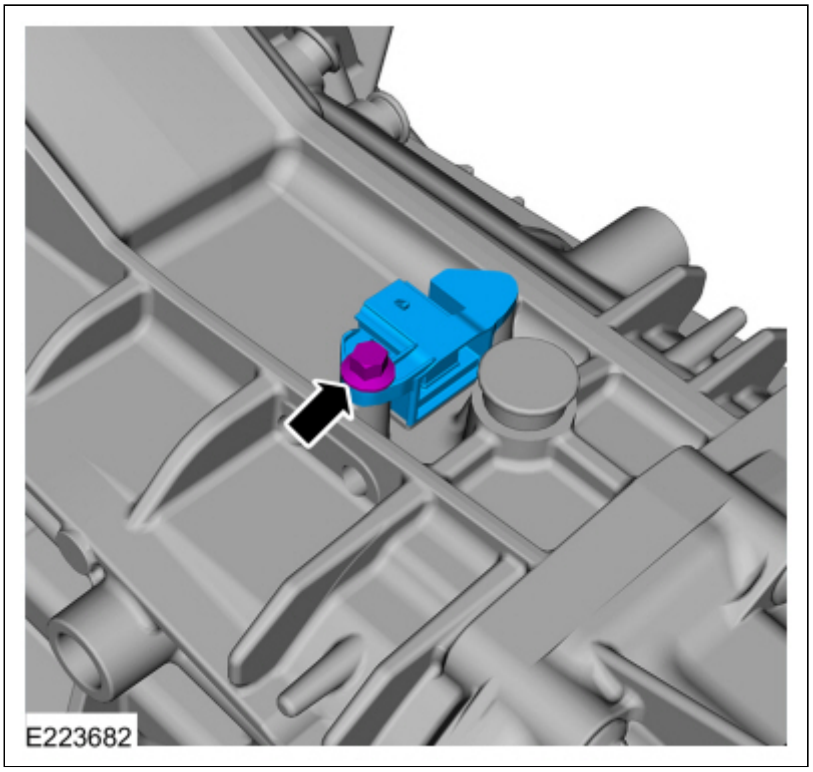
45. Use Special Service Tool: 308-690 Installer, Output Drive Flange Seal.



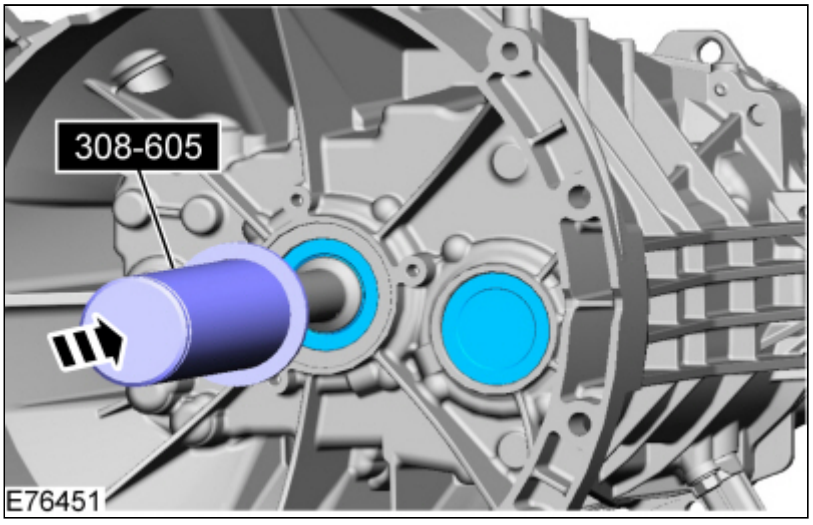
46. Use Special Service Tool: 308-604 Installer, Output Drive Flange Seal.



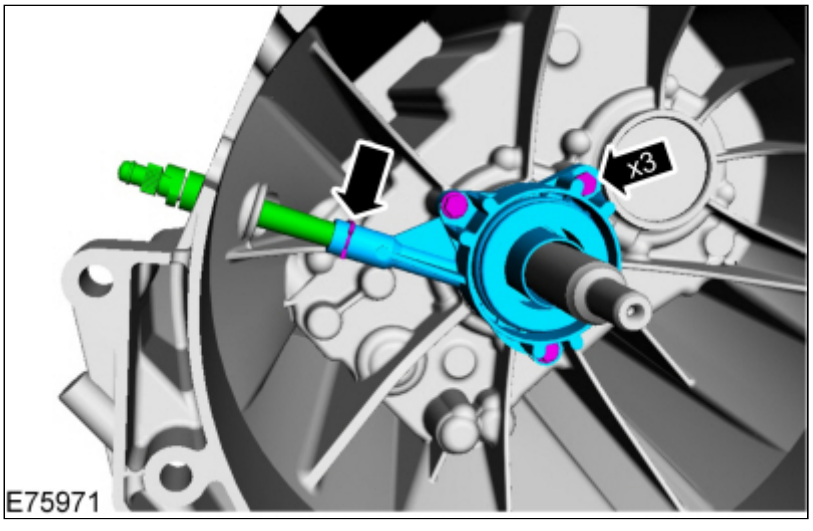
47. Use Special Service Tool: 205-072 Universal Flange Holding Wrench.
Material: Thread Locking Adhesive (WSK-M2G349-A7)
Torque:
Stage 1: 200 Nm
Stage 2: Loosen: °
Stage 3: 180 Nm



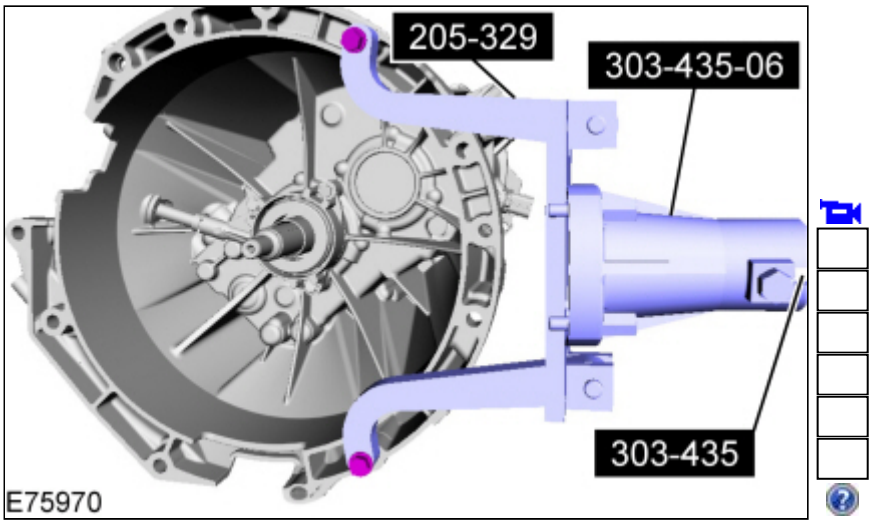
48.



49. *Torque*: 20 Nm



50. *Torque*: 10 Nm



51. Use Special Service Tool: 308-605 Installer, Input Shaft Seal.

52. *Torque*: 11 Nm

53. Remove Special Service Tool: 205-329 Mounting Bracket, Engine/Differential. , 303-435 Mounting Stand. , 303-435-06 Mounting Bracket for 303-435.

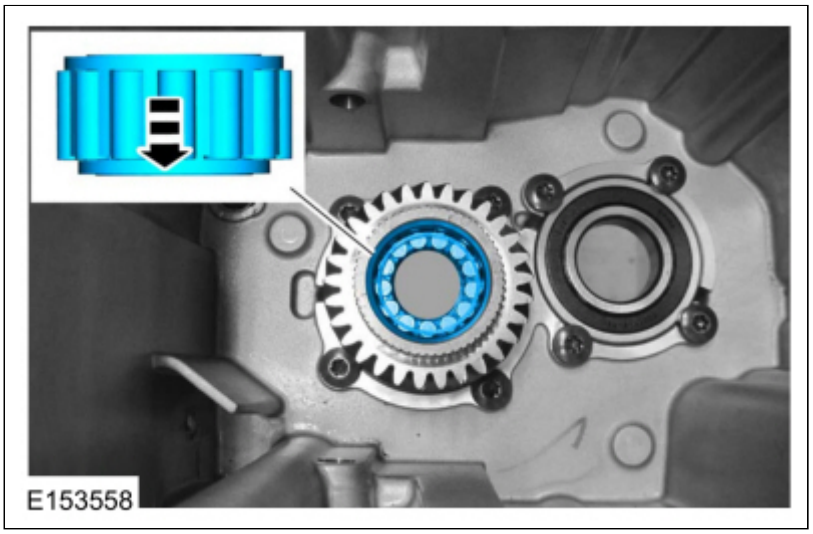
Materials

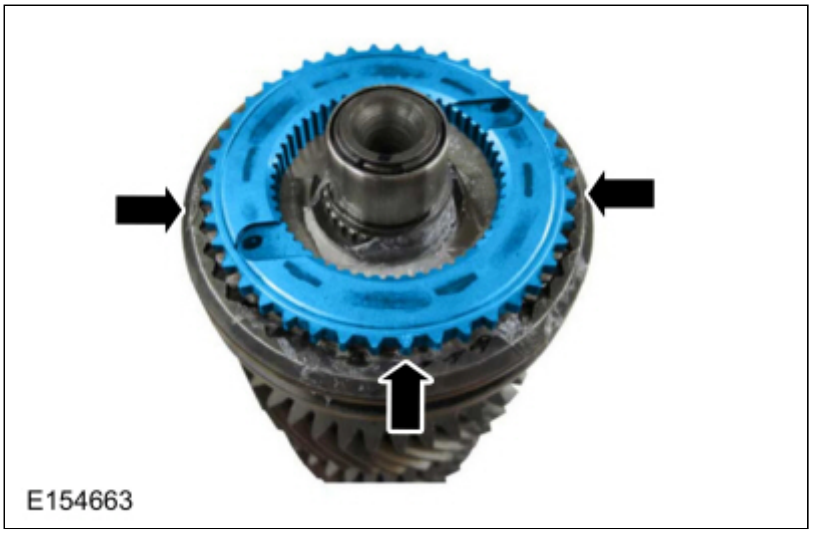
Name	Specification
Thread Locking Sealant	-
Thread Locking Adhesive	WSK-M2G349-A7
Sealant	WSK-M2G348-A7

1. **NOTICE: Do not heat the input shaft bearing higher than 120°C (248°F) maximum or damage to the input shaft bearing can occur.**

   Use the General Equipment: Hot Air Gun

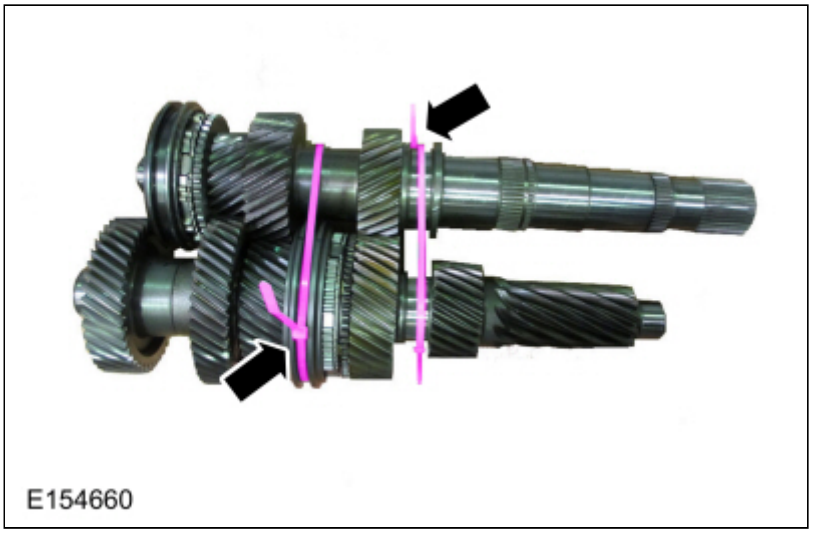


2. **NOTE:** *Install the oil feed hole facing the countershaft bearing.*



3.

4. **NOTE:** *Make sure the small diameter side of the output shaft bearing cage is facing the input shaft or damage to the output shaft bearing can occur.*

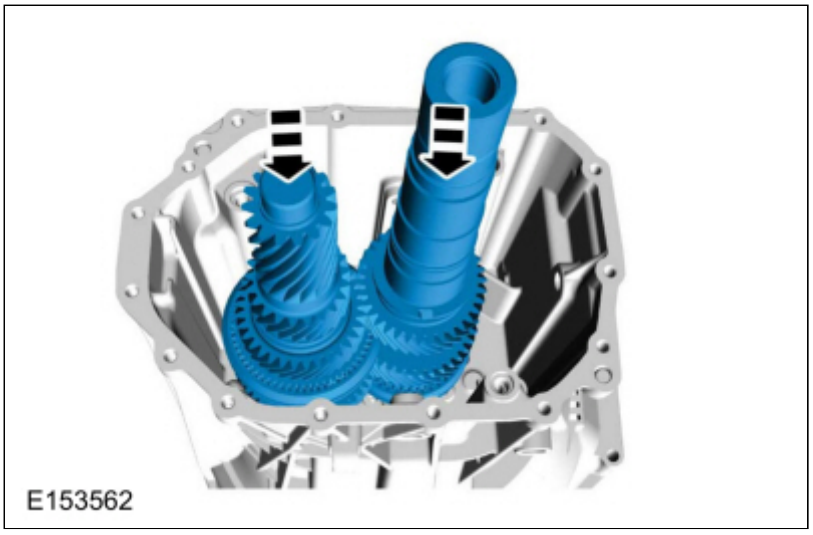


5. **NOTE:** *Apply petroleum jelly to hold 5th gear synchronizer ring and the 5th gear synchronizer cone in place during assembly.*

6. **NOTE:** *Assemble the shafts with the oil feed hole on the 5th gear cone facing the countershaft.*

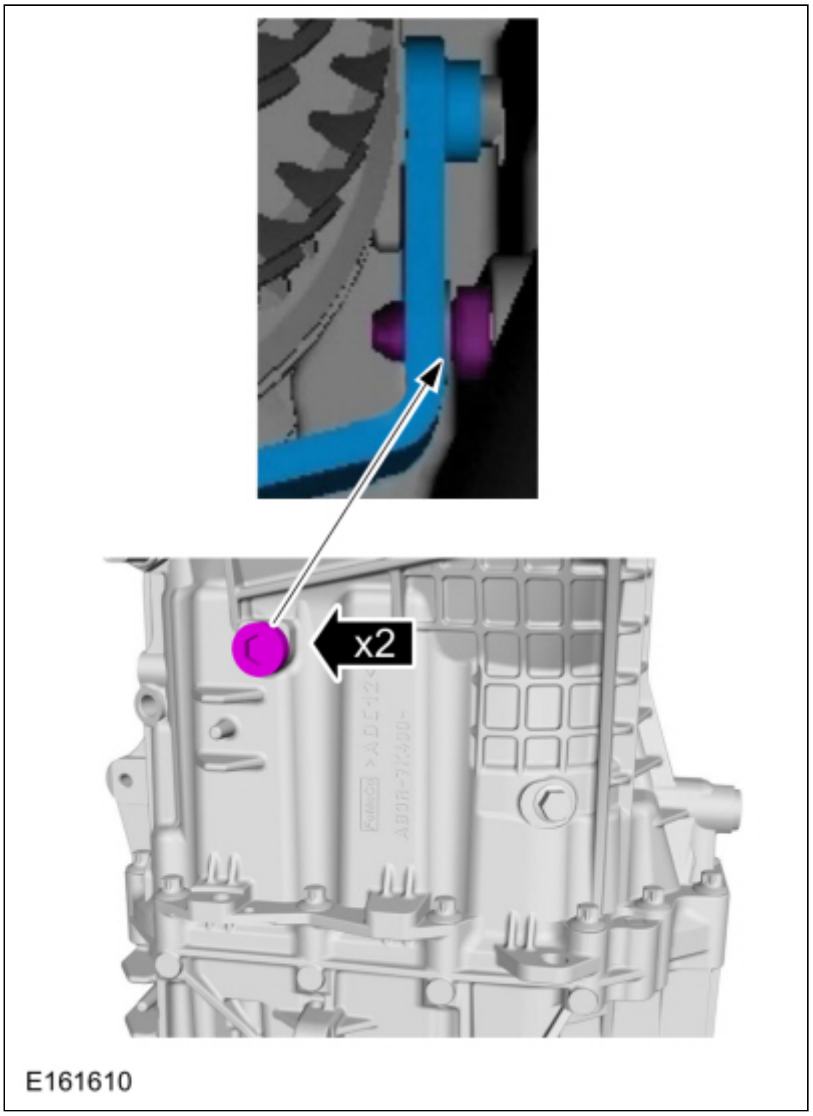
   NOTE: *Sercure the shaft pack with cable ties.*

   Install the General Equipment: Cable Ties



7. **NOTICE: Do not heat the countershaft bearing higher than 120°C (248°F) maximum or damage to the countershaft bearing can occur.**

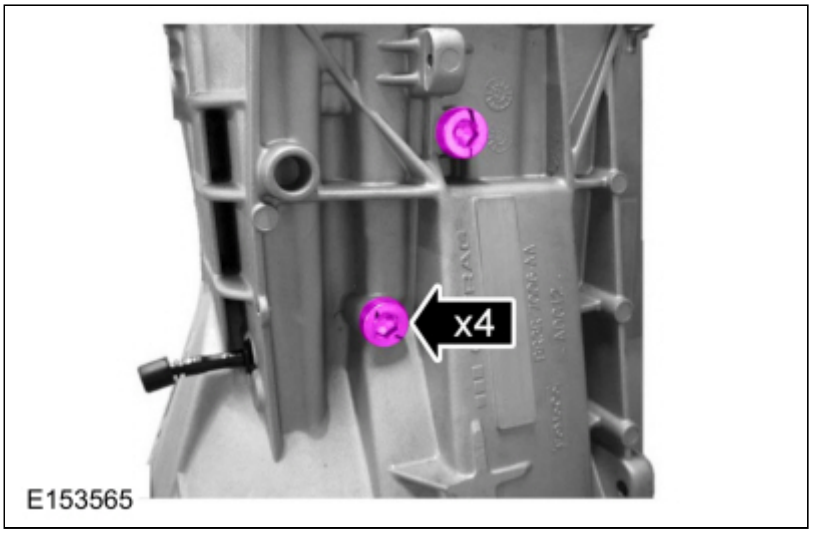
   Use the General Equipment: Hot Air Gun



8. **NOTE:** *With the oil feed holes aligned, install the output shaft and countershaft assemblies.*

9. **NOTICE: Make sure the shift fork pivot bolts engauge into the shift fork or damage to the shift fork can occur.**

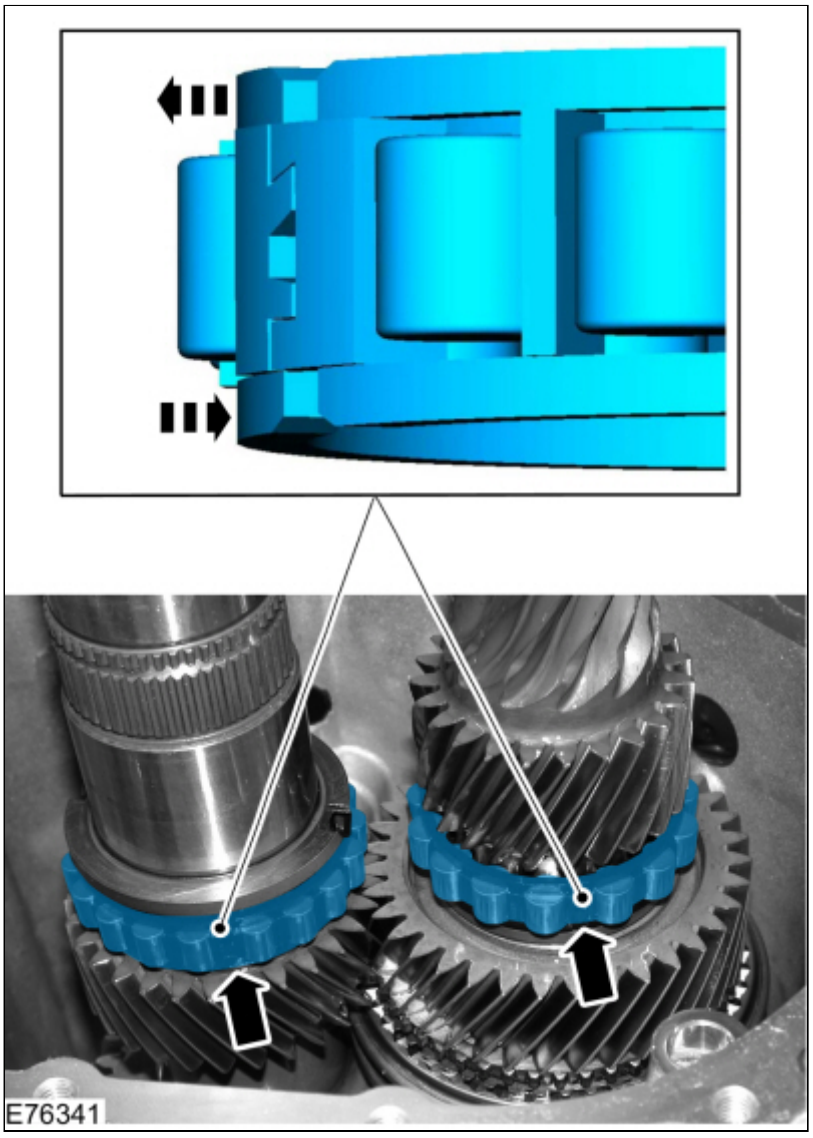
   Material: Thread Locking Sealant



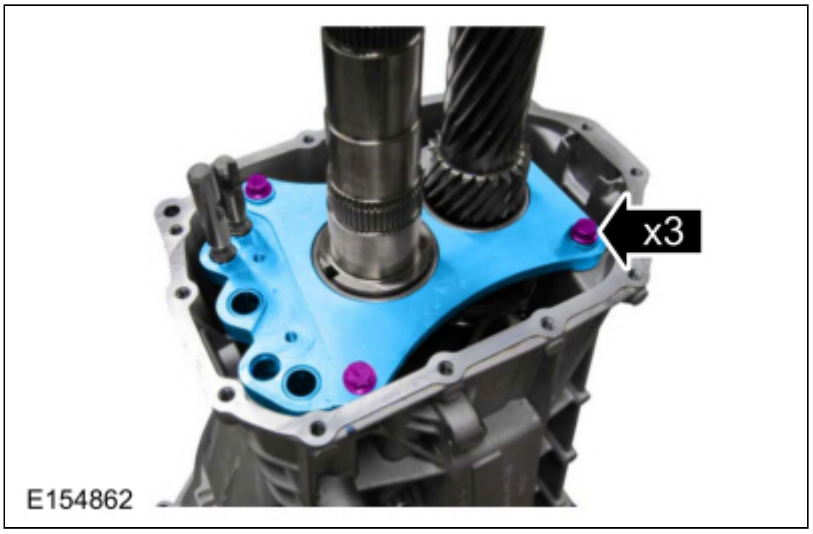
10. **NOTICE: Make sure the shift fork pivot bolts engauge into the shift fork or damage to the shift fork can occur.**

    NOTE: *Apply Threadlock and Sealer to the shift fork pivot bolts.*

    Material: Thread Locking Adhesive (WSK-M2G349-A7)

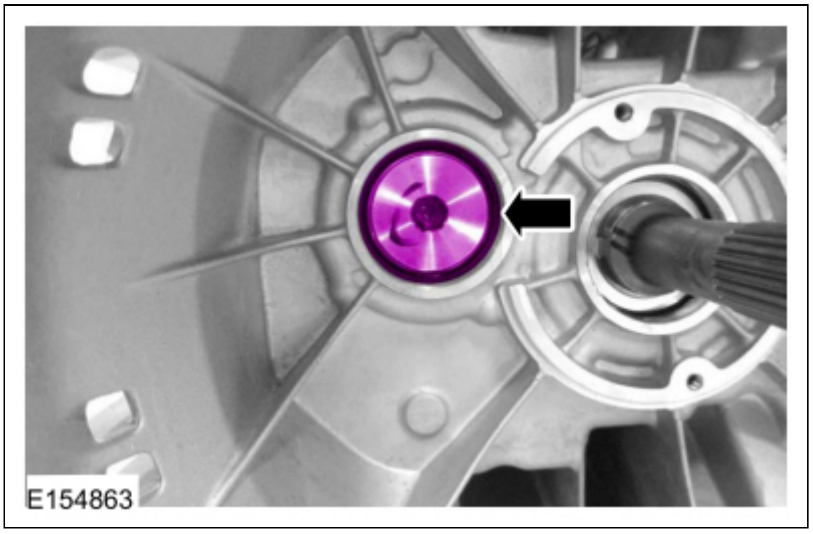


11. *Torque*: 37 Nm



12. Push down the 3rd/4th shift rail and the 5th/6th shift rail to lock the transmission into 2 gears.

13. **NOTICE: When installing the bearings, do not over expand the bearing cages or damage to the bearing cages can occur.**



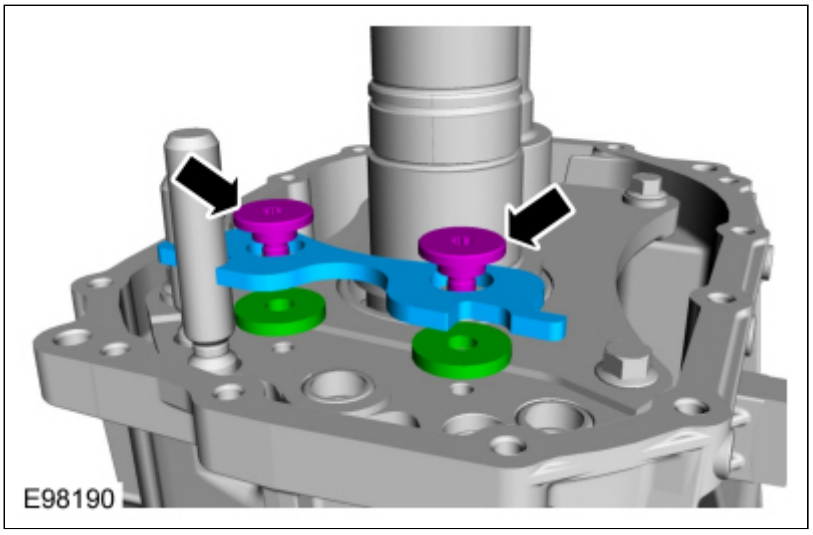
14. **NOTE:** *Only tighten the bolts finger tight at this stage.*

15. **NOTE:** *Install the counter shaft bolt with the transmission in the vertical position with the input shaft facing down.*

    Material: Thread Locking Adhesive (WSK-M2G349-A7)
    Torque: 95 Nm

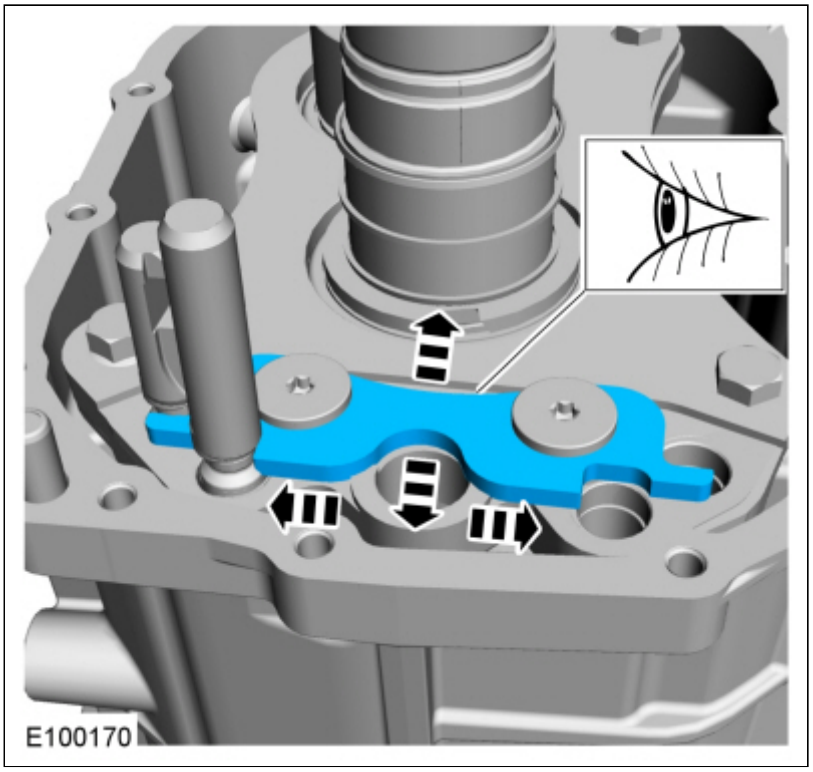
16. **NOTE:** *Remove the center support and 3 center support bolts.*

17. **NOTE:** *Pull up on the 3rd/4th shift rail and the 5th/6th shift rail to unlock the transmission from 2 gears.*

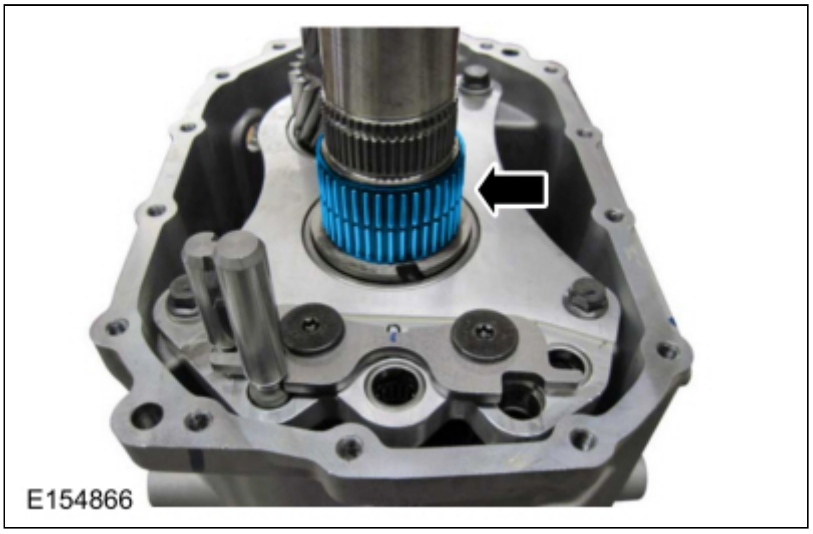


18. **NOTICE: The center support must be tightened evenly or damage to the center support or transmission case can occur.**

    Material: Thread Locking Adhesive (WSK-M2G349-A7)
    Torque: 35 Nm



19. *Torque*: 24 Nm



20. **NOTE:** *Make sure the interlock plate moves freely.*

    Material: Thread Locking Adhesive (WSK-M2G349-A7)
    Torque: 24 Nm

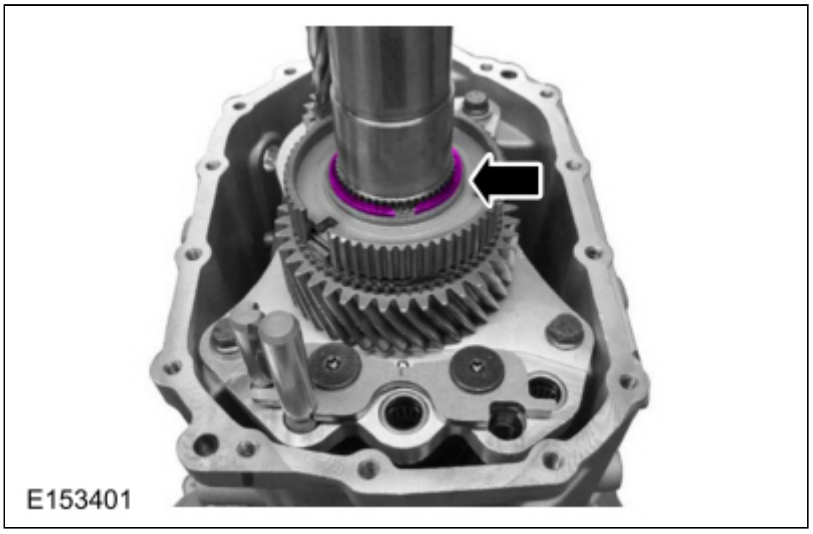
21.

22.

23. **NOTICE: The 6 synchronizer ring tabs must engauge into the 6 gear slots or damage to the synchronizer ring assembly can occur.**

    NOTE: *The 2nd gear synchronizer ring assembly outer ring has one identification notch.*

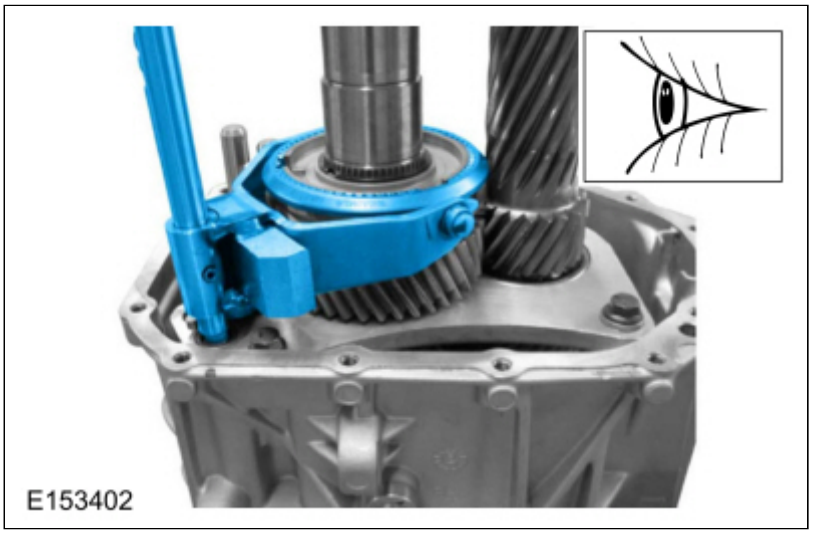
    Torque: 37 Nm



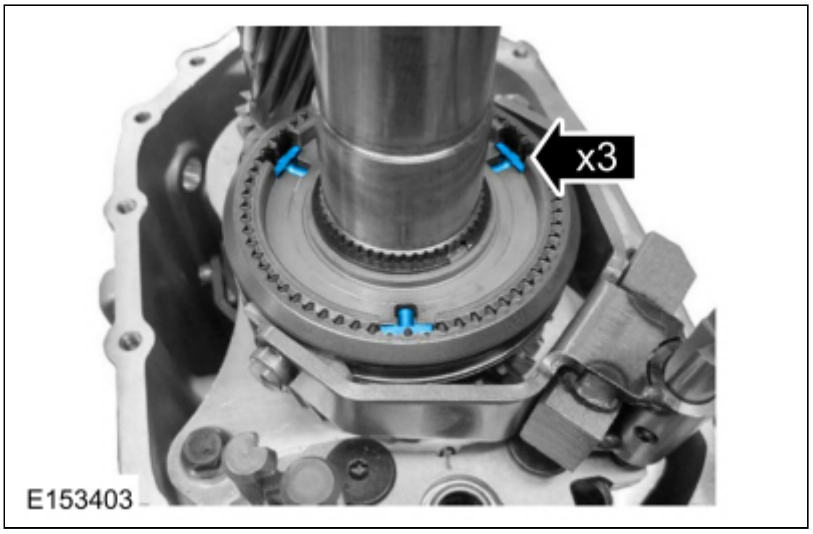
24. **NOTICE: The 3 synchronizer ring tabs must engauge into the 3 synchronizer hub slots or damage to the synchronizer hub and the synchronizer ring assembly can occur.**

    NOTICE: The long shoulder of the 1st/2nd synchronizer hub must be facing 2nd gear or damage to the synchronizer hub can occur.

    Use Special Service Tool: 307-728 Installer, Output Shaft Seal and Bearing.

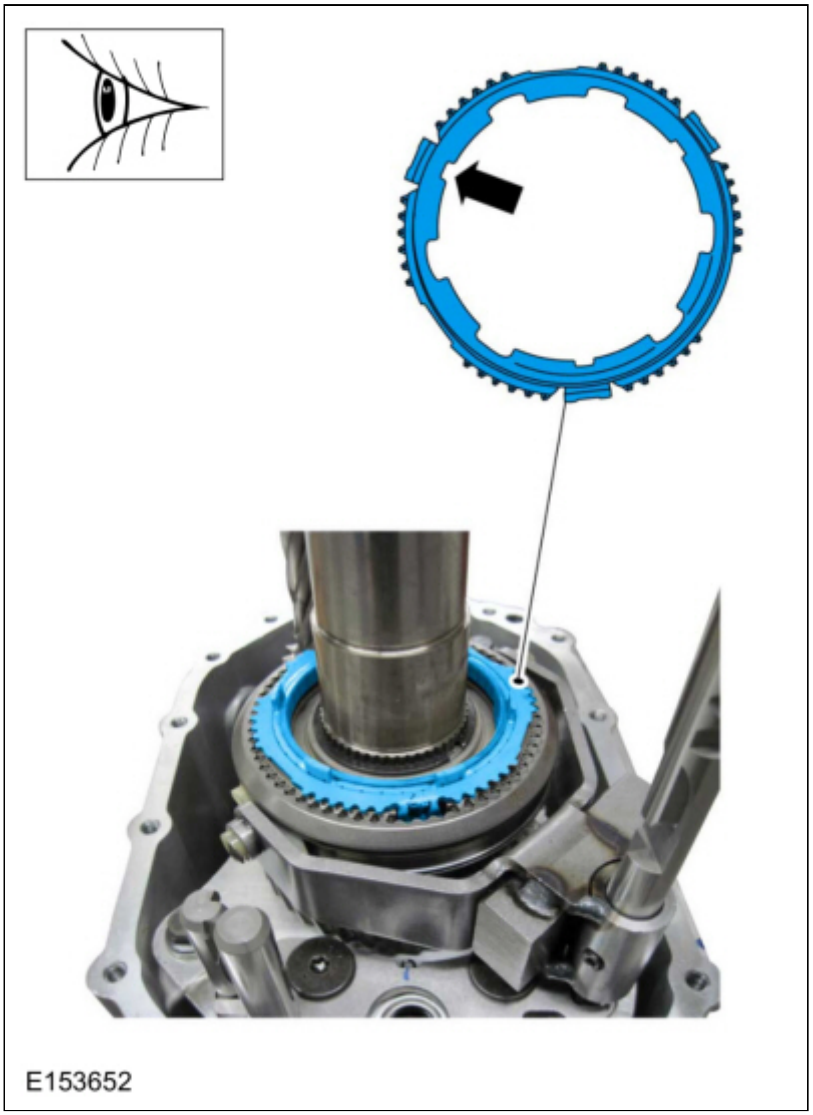


25.

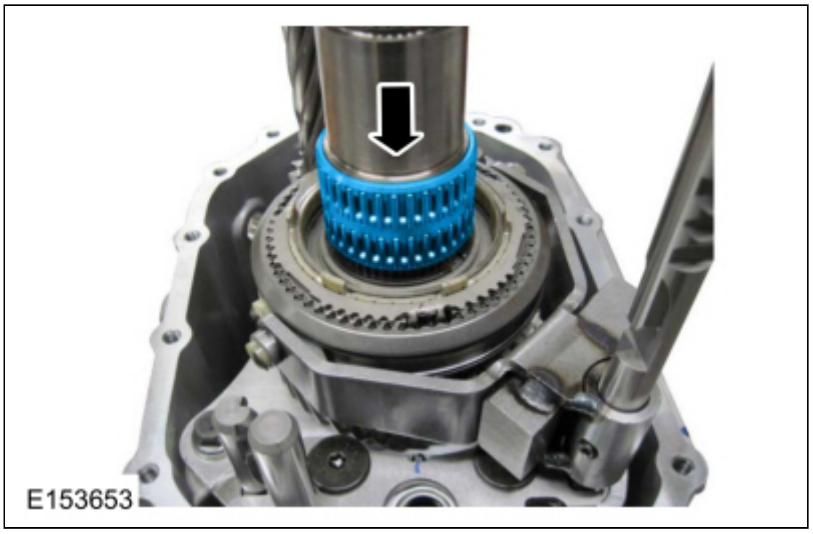


26. **NOTE:** *Align the index marks made during removal on the synchronizer sleeve and the synchronizer hub.*

NOTE: *With the groove on the 1st/2nd synchronizer sleeve facing 2nd gear, install the 1st/2nd shift fork, the 1st/2nd shift rail and the 1st/2nd synchronizer sleeve.*

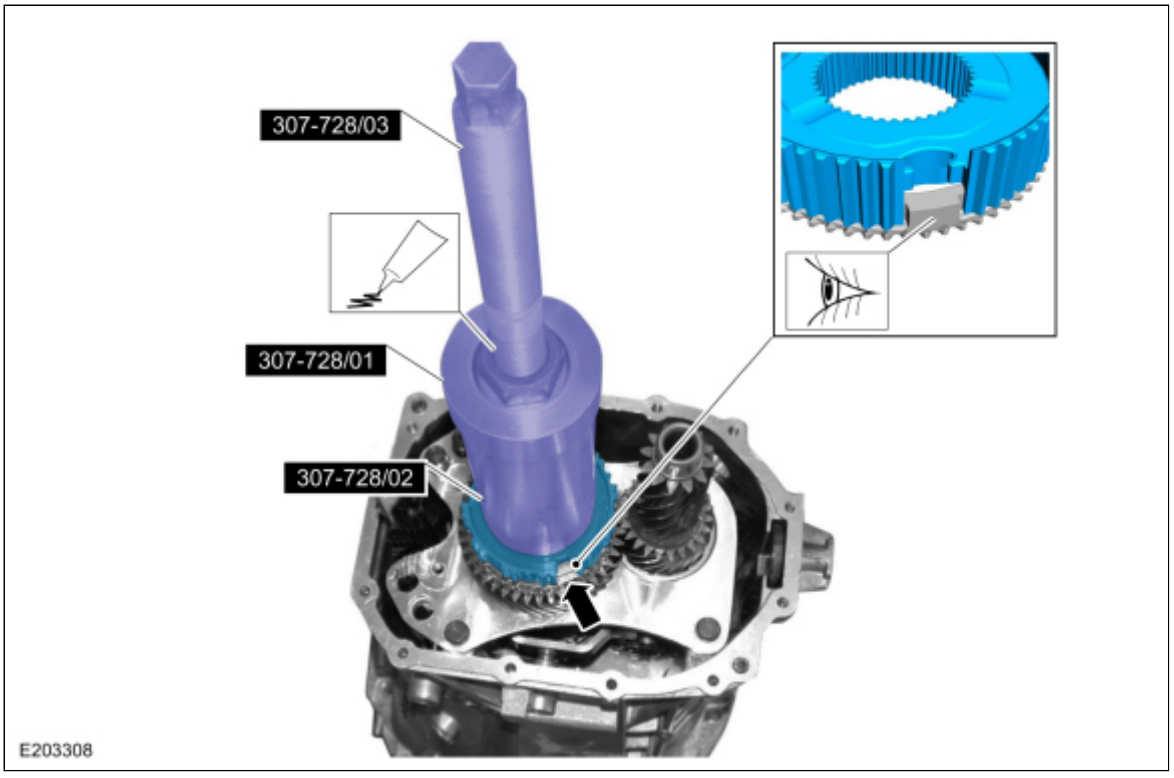


27. **NOTE:** *Slide the synchronizer sleeve up and install the 3 pressure pieces.*

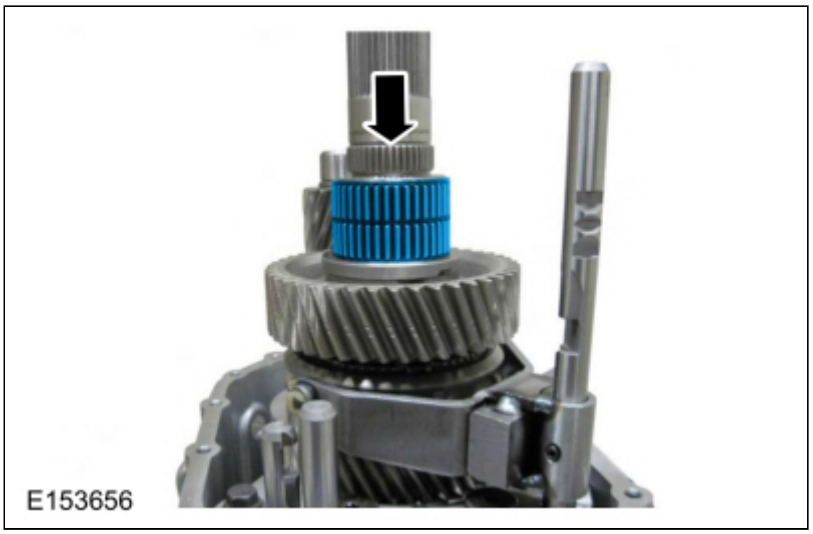


28. **NOTICE: The 3 synchronizer ring tabs must engage into the 3 synchronizer assembly slots or damage to the synchronizer assembly and the synchronizer ring assembly can occur.**

    NOTE: *The 1st gear synchronizer ring assembly outer ring has one identification notch.*



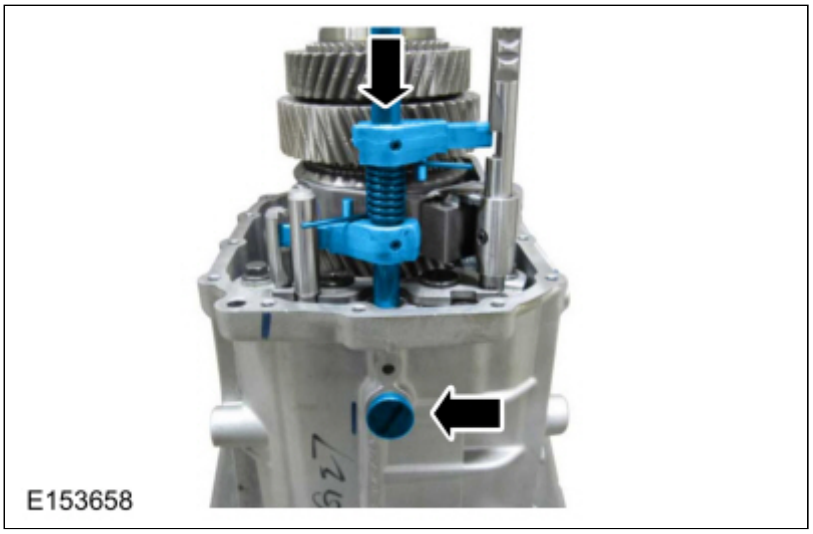
29.



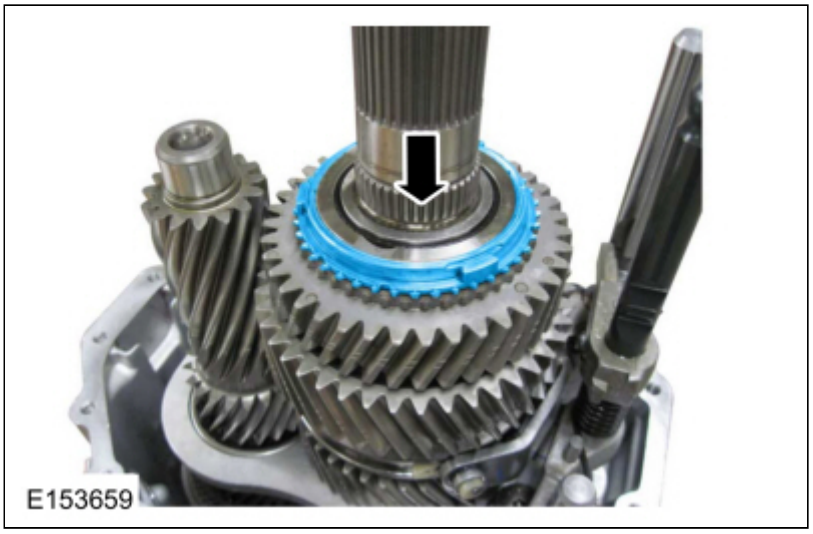
30. **NOTICE: The 6 synchronizer ring tabs must engauge into the 6 gear slots or damage to the synchronizer assembly and synchronizer ring assembly can occur.**

31. Use Special Service Tool: 307-728 Installer, Output Shaft Seal and Bearing.

32.

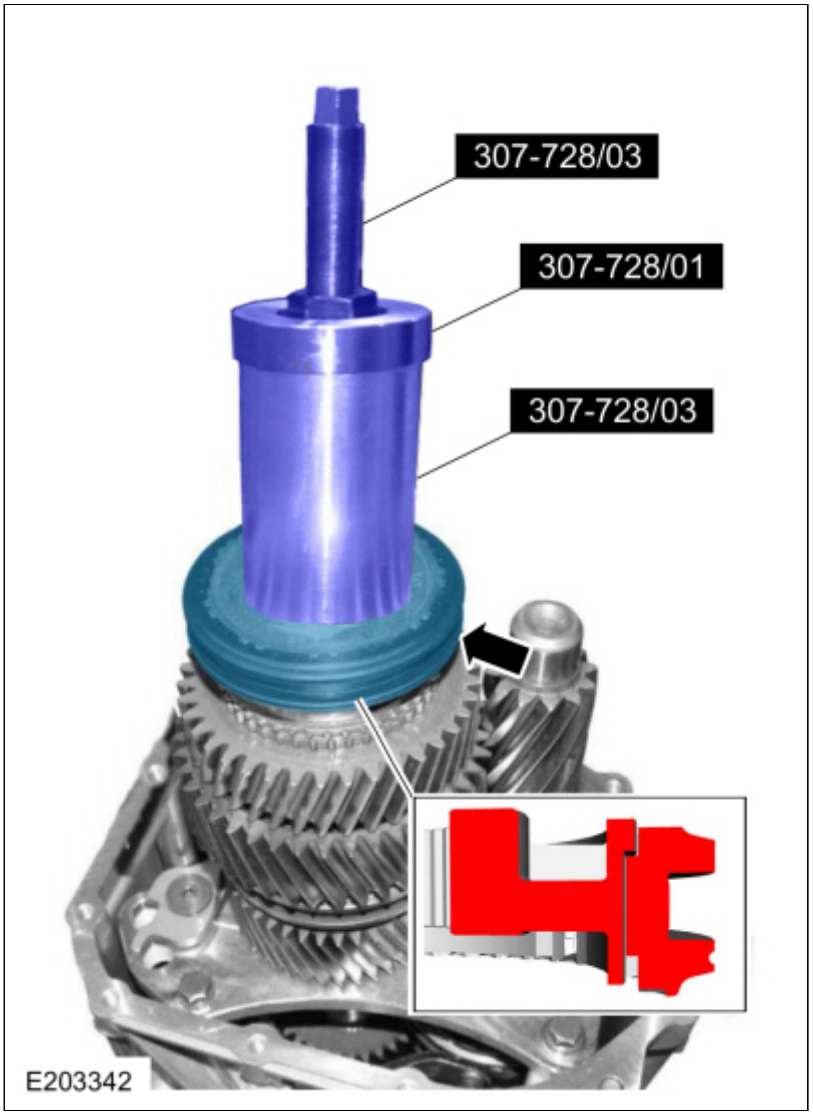


33.

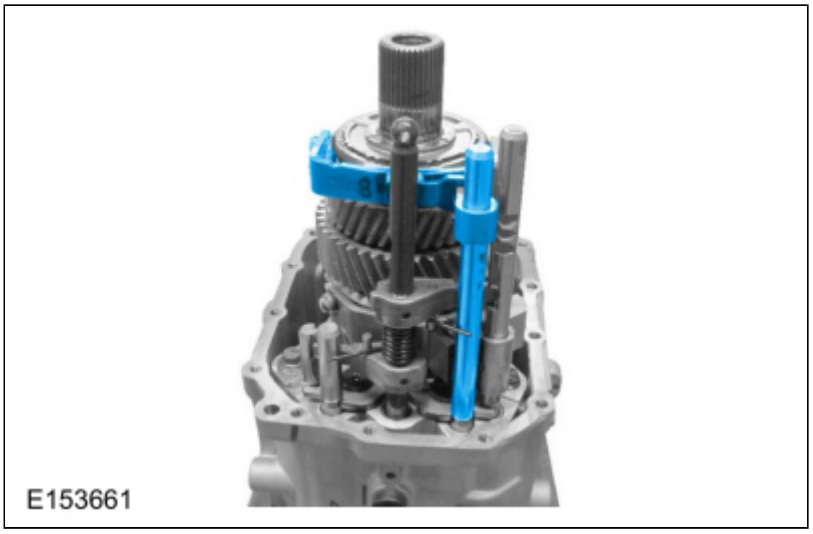


34. **NOTICE: The shift shaft must be installed in the neutral position prior to installing the shift shaft stop pin or damage to the shift shaft stop pin can occur.**

Use the General Equipment: Copper Hammer

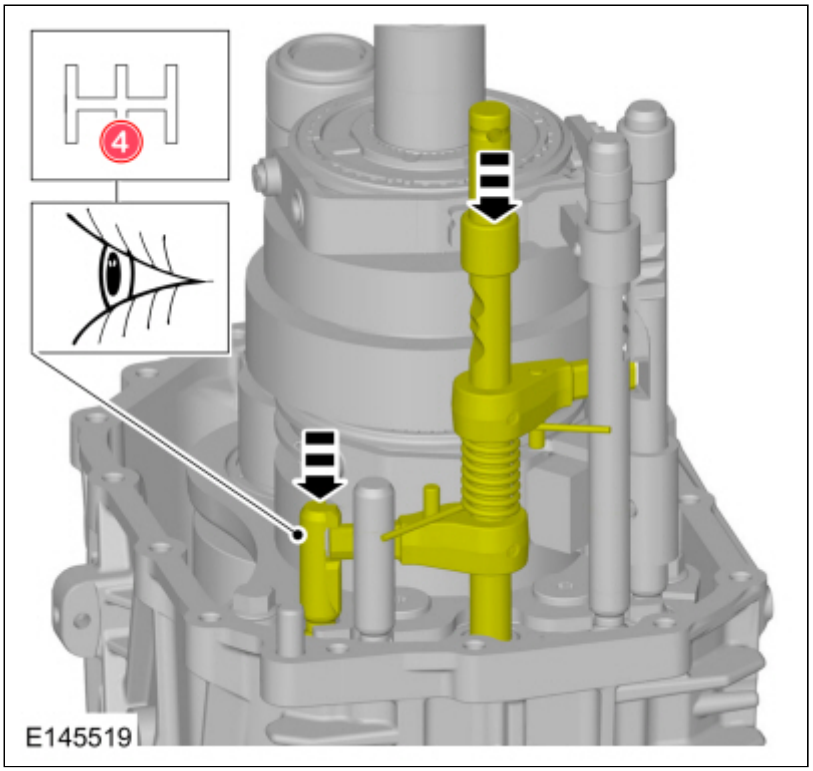


35.



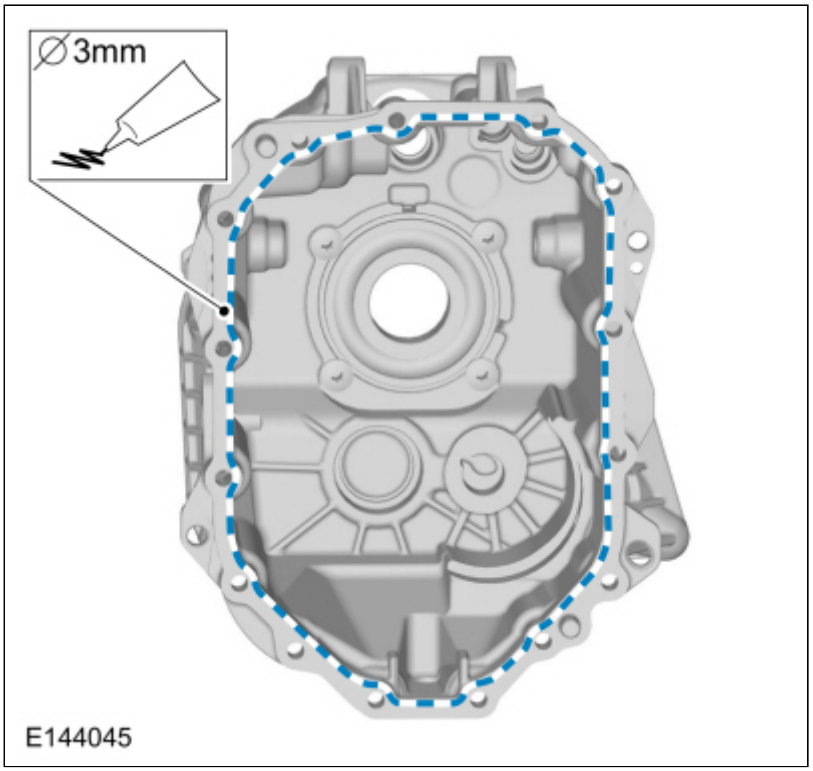
36. **NOTICE: The 3 synchronizer ring tabs must engage into the 3 synchronizer assembly slots or damage to the synchronizer assembly and the synchronizer ring can occur.**

    Use Special Service Tool: 307-728 Installer, Output Shaft Seal and Bearing.



37. **NOTE:** *To install the reverse shift fork and the reverse shift rail assembly, the transmission must be in neutral and the groves on the shift rails must be aligned with the interlock plate.*

38.

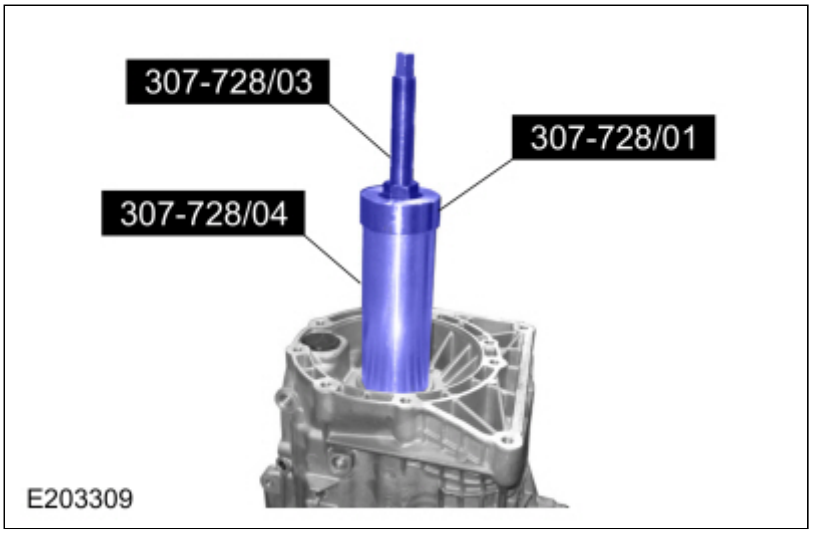


39. Engage fourth gear.

40. **NOTICE: Make sure the surface is cleaned with acetone and is free of foreign material.**

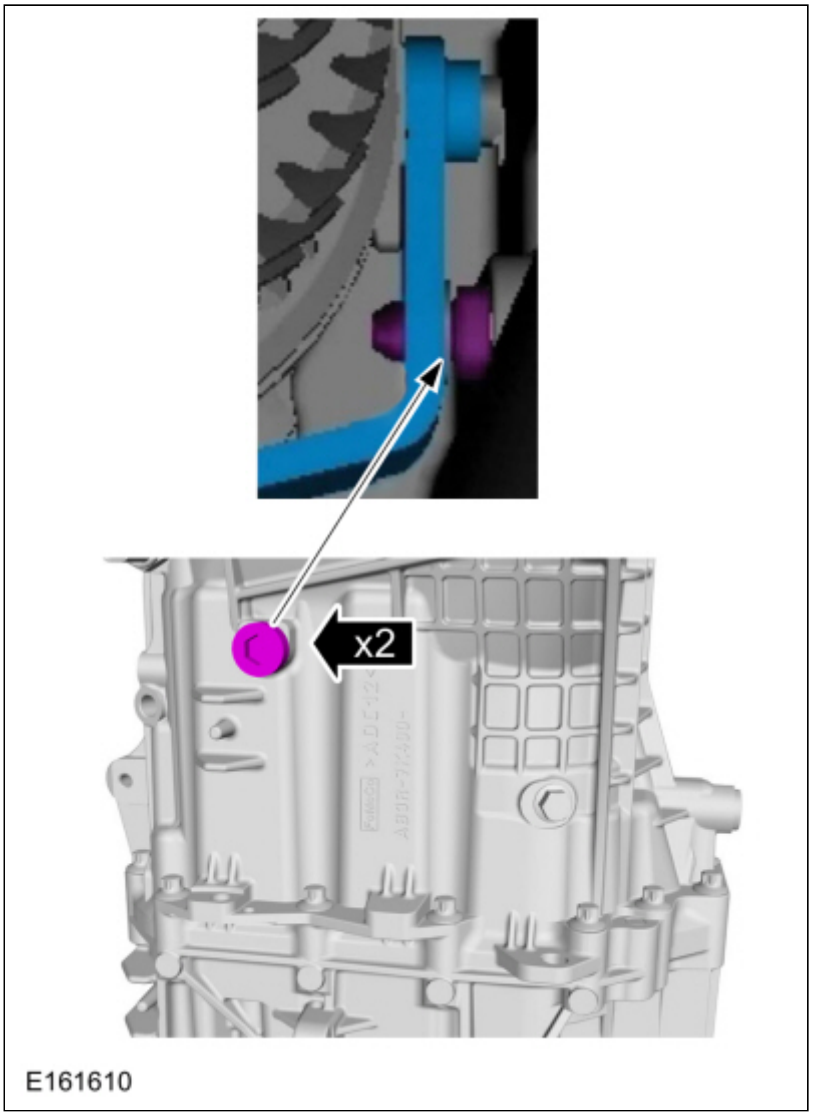
NOTICE: Make sure that the sealant is applied continuously. Start and end should be on top of case.

Material: Sealant (WSK-M2G348-A7)



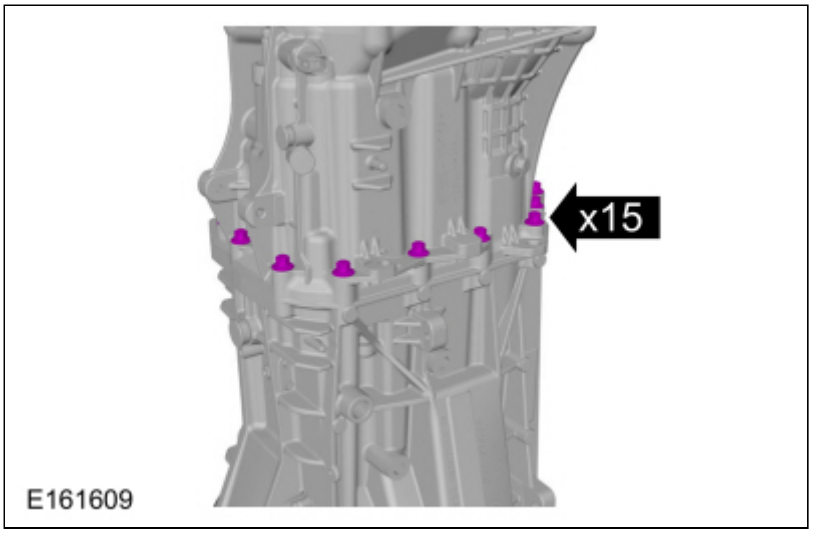
41. **NOTE:** *Do not wait longer than 10 minutes to install the rear transmission case assembly due to the rapid cure time of the sealant.*

    NOTE: *Clean the sealing surfaces of the front transmission case and the sealing surfaces of the rear transmission case. Thinly coat the sealing surface of the front transmission case assembly and the sealing surface of the rear transmission case assembly with Gasket Maker.*



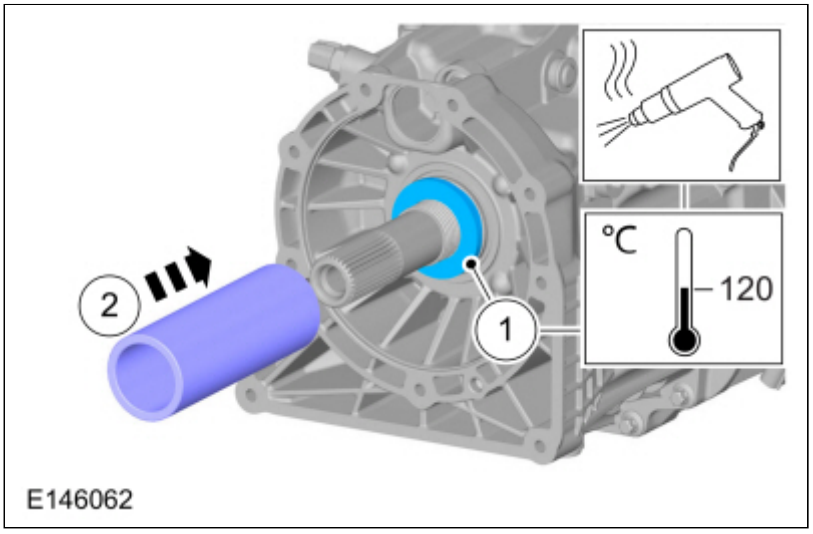
42. **NOTICE: The rear transmission case assembly must be installed evenly with the transmission shifted into 4th gear, do not allow the shift rails to bind during installation or damage to the transmission case assembly can occur.**

    Use Special Service Tool: 307-728 Installer, Output Shaft Seal and Bearing.

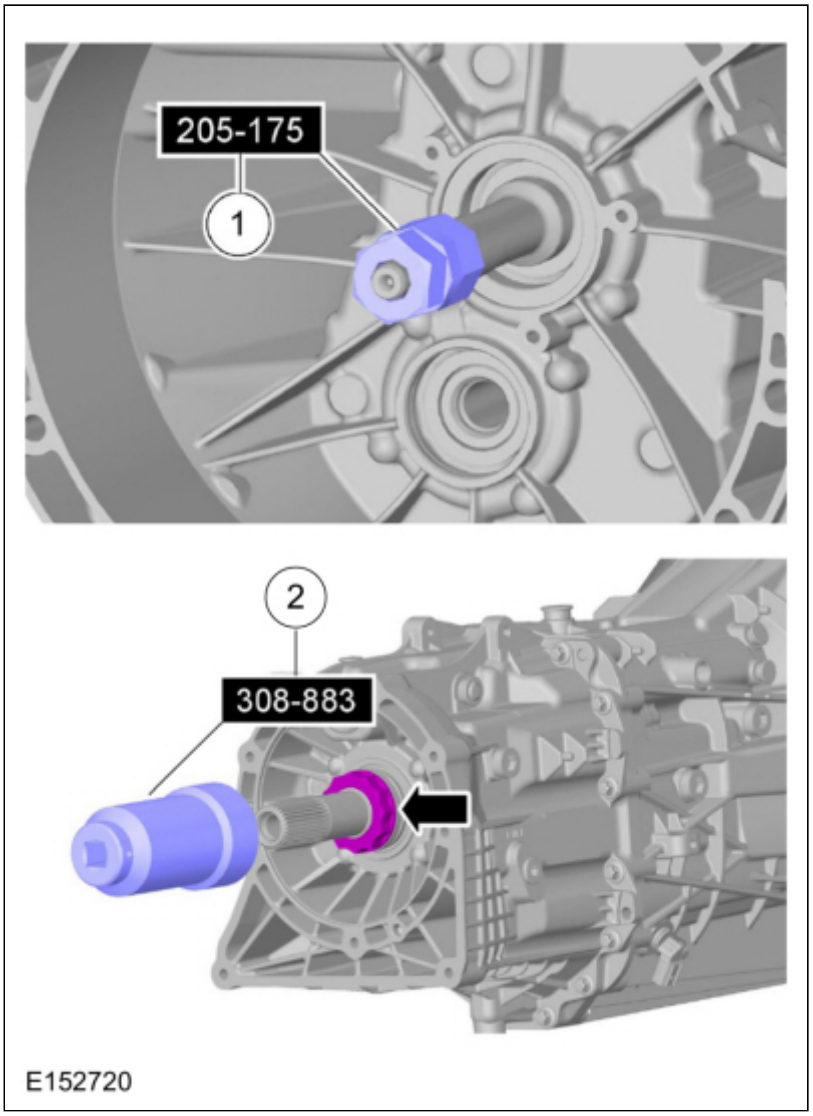


43. **NOTICE: Make sure the shift fork pivot bolts engage into the shift fork or damage to the shift fork can occur.**

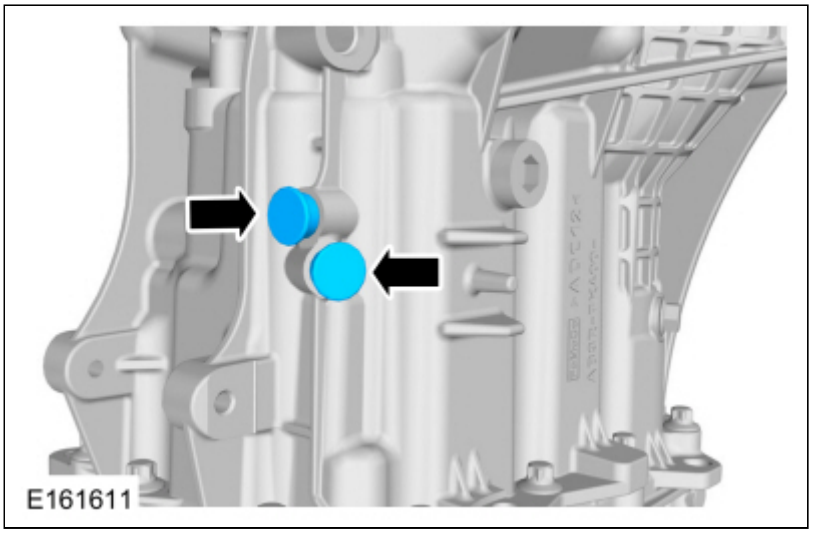
    Material: Thread Locking Sealant
    Torque: 37 Nm



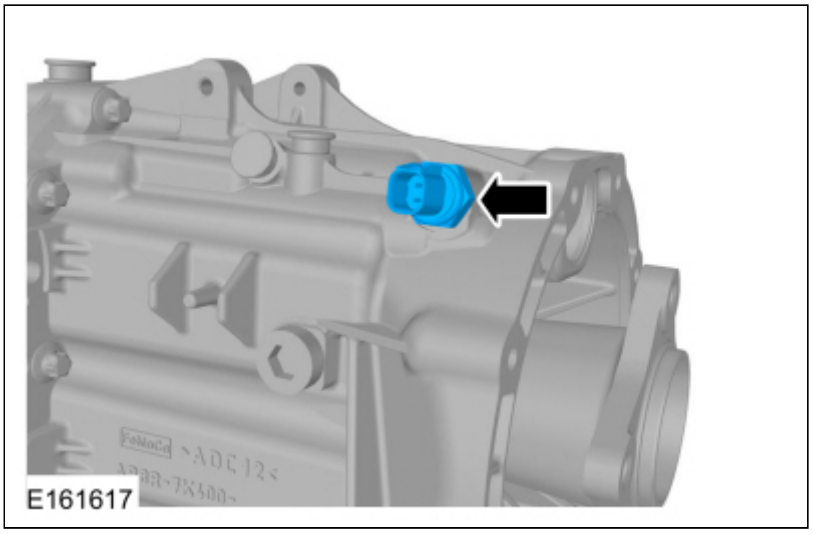
44. Loosely install the 15 transmission case bolts. Using a suitable brass drift, tap the 2 dowel pins flush with the transmission case.
Torque: 24 Nm



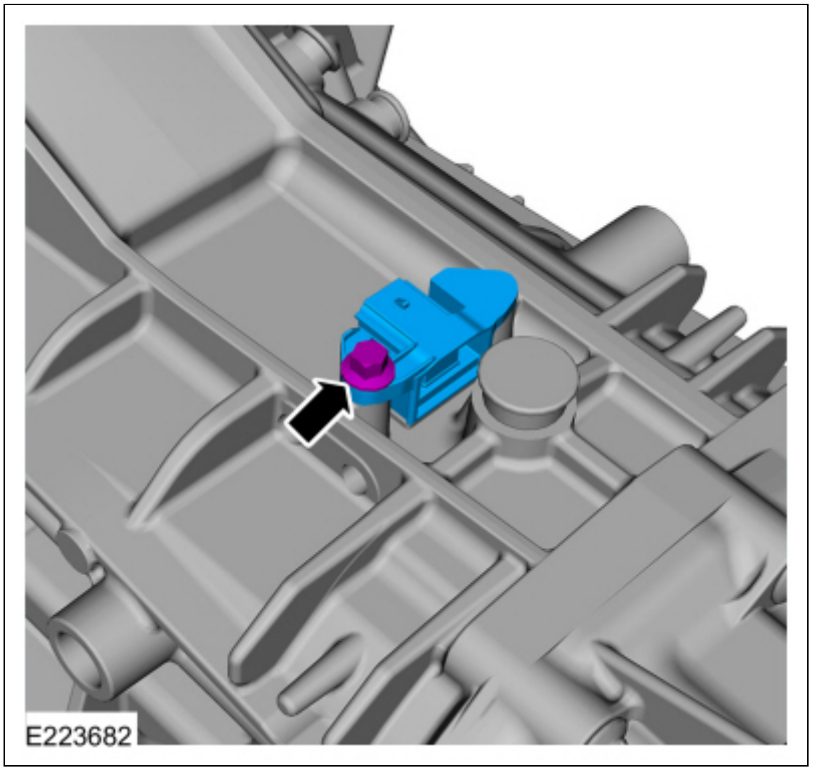
45. Use Special Service Tool: 308-884 Installer, Output Shaft Seal.



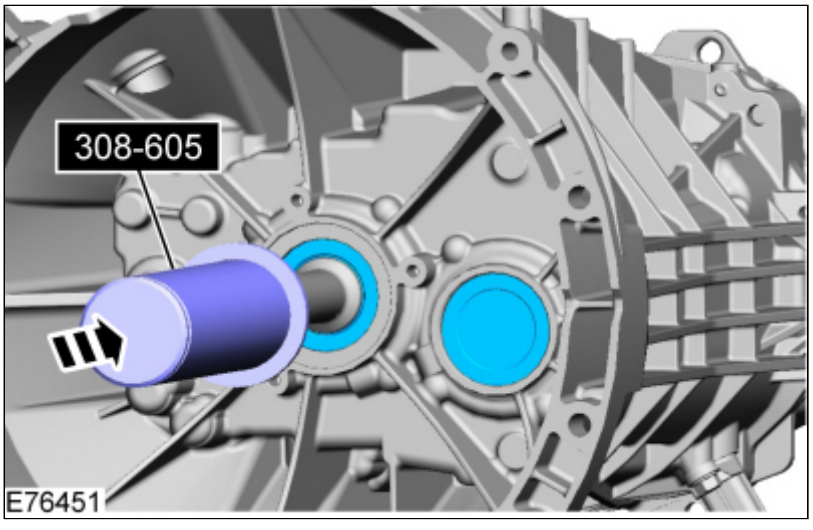
1. Use the General Equipment: Hot Air Gun
2. Use a suitable pipe to install the seal.



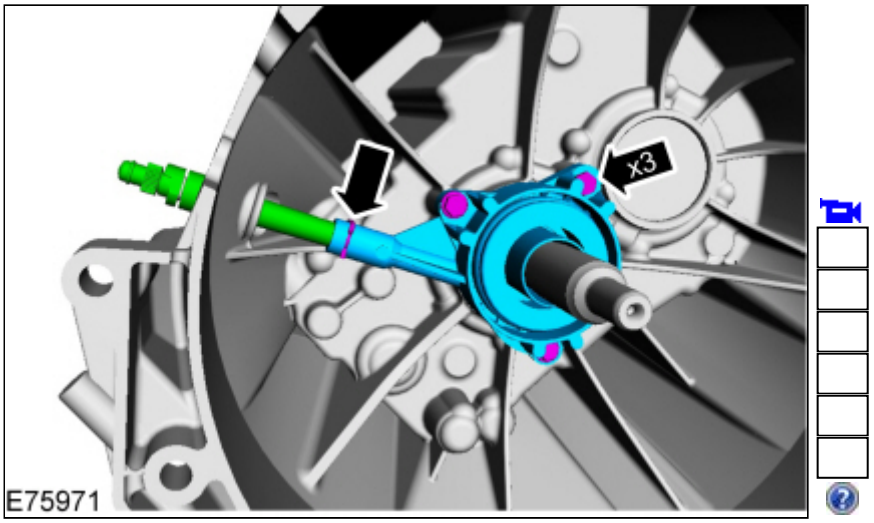
1. Use Special Service Tool: 205-175 Socket, Drive Pinion Nut.
2. Tighten the bolt.
   Use Special Service Tool: 308-883 Wrench, Output Shaft Nut.
   Material: Thread Locking Adhesive (WSK-M2G349-A7)
   Torque: 210 Nm
3. Undo the bolt.
4. Tighten the bolt.
   Torque: 180 Nm



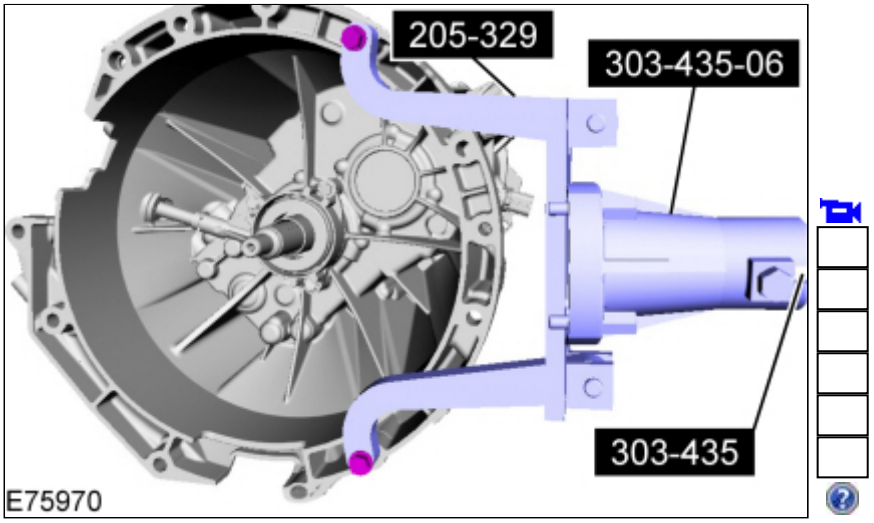
48.



49. *Torque*: 20 Nm



50. *Torque*: 10 Nm



51. Use Special Service Tool: 308-605 Installer, Input Shaft Seal.

52. *Torque*: 11 Nm

53. Remove Special Service Tool: 205-329 Mounting Bracket, Engine/Differential. , 303-435 Mounting Stand. , 303-435-06 Mounting Bracket for 303-435.

External Controls - Overview

MT75 Manual Transmission External Controls

The length of the selector cable can be adjusted.

A spring in the gearshift lever pulls the selector cable into the neutral position between 3rd and 4th gear.

In order to ensure precision shifting as well as to prevent increased wear, the gearshift cables must be precisely adjusted. The instructions in the current workshop literature must be observed for this.

Incorrect adjustment of the gearshift cables or incorrect operation by the driver during driving can cause shifting problems and excessive wear of the shift forks as well as of the synchronizers.

External Controls

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical damage.
3. Make sure that the gearshift cables are correctly routed and not under any tension from other components.
4. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
5. If the concern is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Sources	Action
• External controls do not operate freely.	• Gearshift cables incorrectly adjusted. • Gearshift lever damaged. • Selector mechanism damaged. • Gearshift cables damaged.	• ADJUST the gearshift cables. • GO to Pinpoint Test A

Pinpoint Tests

PINPOINT TEST A : STIFF GEARSHIFT

A1 CHECK THE GEARSHIFT LEVER

- Detach the gearshift cables from the gearshift lever.

Is the gearshift lever difficult to operate?

Yes	Install a new gearshift lever.
No	GO to A2

A2 CHECK THE GEARSHIFT CABLES

- Attach the gearshift cables to the gearshift lever.
- Detach the gearshift cables from the transaxle.

Is the gearshift lever difficult to operate?

Yes	Install new gearshift cables.
No	Check the selector mechanism.

Four-Wheel Drive Systems - System Operation and Component Description

System Operation

System Diagram

Network Message Chart

PCM Module Network Input Messages

Broadcast Message	Originating Module	Message Purpose
Wheel speed data	ABS	The PCM uses wheel speed information for the four-wheel drive system to determine percentage of torque to be transferred to the front wheels.

4WD Control And Fault Indicators

The 4WD system consists of a transfer case, driveshafts, front and rear axles, mode select switch (MSS), and PCM. Using inputs from various module/systems, the PCM controls the transfer case. 4WD system faults are be indicated by an icon indicator in the IPC as well as the Check 4WD message in the message center.

Electronic Locking Differential (ELD) System

The ELD system consists of the following components:

- ELD field coil, located at the rear differential
- Rear differential
- ELD switch

For more information on the ELD system,
Refer to: Electronic Locking Differential (ELD) (205-02) .

Component Description

Mode Select Switch

The MSS allows the driver to select the mode best suited to the terrain and driving conditions. The MSS is located on the center console. The driver can select the following modes with the MSS:

- 2WD High (2H)
- 4WD High (4H)
- 4WD Low (4L)

Transfer Case

The transfer case is a gearbox that attaches to the transmission. The transfer case directs power to the front driveshaft and the front drive axle. For more information on the transfer case,
Refer to: Transfer Case (308-07B Transfer Case - 5-Speed Manual Transmission - MT75/6-Speed Manual Transmission - MT82, Description and Operation).
Refer to: Transfer Case (308-07C Transfer Case - 6-Speed Automatic Transmission - 6R80, Description and Operation).

Four-Wheel Drive Systems

Principles of Operation

The Four-Wheel Drive (4WD) system is an electronic shift system that allows the operator to choose between 2 different 4WD modes as well as 2-Wheel Drive (2WD).

Using the Four Wheel Drive Switch on the shift console, the operator can switch between 2WD-High (2H) and 4WD-High (4H) mode at speeds up to 110 km/h (68 mph), but only with the accelerator pedal released. During the shift the indicator lamp will flash. To engage or disengage 4WD-Low (4L) mode , the vehicle speed must be less than 5 km/h (3 mph) and the transmission must be in neutral (or the clutch pedal pressed in manual transmission vehicles).

When shifting to 4L the Engine Traction Control and Trailer Stability Control are deactivated. Hill Descent Control, Hill Start Assist and Brake Traction Control remain active. When shifting to 2H, all the stability control (ESP) functions are reactivated.

2WD-High Range (2H)

Use for all normal road driving and also for off-road driving across dry, level terrain.

4WD-High Range (4H)

Use for off-road driving. The 4WD indicator lamp will come on when the four wheel drive switch is in the 4H position.

4WD-Low Range (4L)

Use for more extreme off-road conditions, such as steep ascents and descents. Also use when low speed manoeuvring is necessary, such as reversing a trailer or negotiating a boulder-strewn river bed. The 4L and 4WD indicator lamps will come on when the four wheel drive switch is in the 4L position. During the shift the indicator lamp will flash.

When the four wheel drive switch is turned, the Powertrain Control Module (PCM) activates the appropriate relay to supply power to the transfer case shift motor.

The electric shift motor is mounted externally to the transfer case. It drives a rotary cam which moves the 2 shift forks in the transfer case to change between the 2H and 4H modes and between the 4H and 4L modes. For information on transfer case mechanical operation, refer to Section 308-07B for automatic transmission or Section 308-07C for manual transmission. The PCM directly controls the electric shift motor and can reverse motor polarity to reverse rotary cam/shift fork direction. The transfer case hall effect sensor, an integral part of the shift motor assembly, informs the PCM of the transfer case position.

Shifts from 2H mode to 4H mode can be made at any speed. The following are the inputs and outputs needed by the PCM to execute a change between these modes.

Feature inputs:

- Ambient air temperature from the PCM
- Four wheel drive switch
- Wheel speed signal from ABS module
- APP from PCM

Feature outputs:

- Transfer case electric shift motor outputs
- PWM signal to transfer case clutch
- Instrument panel cluster (IPC) indicators

When shifting into or out of 4L mode, the PCM requires the vehicle speed to be less than 5 km/h (3 mph) and the transmission in NEUTRAL. The following are the inputs and outputs needed by the PCM to execute a change into or out of 4L mode.

Feature inputs:

- Four wheel drive switch
- Wheel speed signal from ABS module
- TR position from PCM

Feature outputs:

- Transfer case electric shift motor outputs
- PWM signal to transfer case clutch
- IPC

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Driveshaft and U-joints • Fluid leaks • Matching tire sizes • Transfer case	• Fuse(s) • Four wheel drive switch • Transfer case shift motor • Loose or corroded connections • Wiring harness

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step
4. If the cause is not visually evident, connect the scan tool to the Data Link Connector (DLC).
5. If the scan tool does not communicate with the VCM:

- check the VCM connection to the vehicle.
- check the scan tool connection to the VCM.
- to diagnose no power to the scan tool,
  REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

6. If the scan tool does not communicate with the vehicle:

- verify the ignition is in the ON position.
- verify the scan tool operation with a known good vehicle.
- to diagnose no response from the PCM,
  REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).

7. Carry out the network test.

- If the scan tool responds with no communication for one or more modules,
  REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
- If the network test passes, retrieve and record CMDTCs.

8. Carry out the self-test diagnostics for the PCM.
9. If the DTCs retrieved are related to the concern, go to the PCM DTC Chart in this section. For all other DTCs, refer to appropriate section diagnostics.
10. If no DTCs related to the concern are retrieved, refer to the Symptom Chart in this section.

DTC Chart: PCM

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.

PCM DTC Chart

DTC	Description	Action
P1820-00	Transfer Case Clockwise Shift Relay Coil	GO to Pinpoint Test G

	Circuit Failure	
P1821-00	Transfer Case Clockwise Shift Relay Coil Open Circuit	GO to Pinpoint Test G
P1822-00	Transfer Case Clockwise Shift Relay Coil Short Circuit To Battery	GO to Pinpoint Test G
P1823-00	Transfer Case Clockwise Shift Relay Coil Short Circuit To Ground	GO to Pinpoint Test G
P1828-00	Transfer Case Counter Clockwise Shift Relay Coil Circuit Failure	GO to Pinpoint Test G
P1829-00	Transfer Case Counter Clockwise Shift Relay Coil Open Circuit	GO to Pinpoint Test G
P1830-00	Transfer Case Counter Clockwise Shift Relay Coil Short Circuit To Battery	GO to Pinpoint Test G
P1831-00	Transfer Case Counter Clockwise Shift Relay Coil Short Circuit To Ground	GO to Pinpoint Test G
P184A-00	Transfer Case Unable To Transition Between 4x2 and 4x4 Mode	GO to Pinpoint Test B
P184B-00	Transfer Case Unable To Transition Between 4x4 High and 4x4 Low Range	GO to Pinpoint Test C
P1870-00	Mechanical Transfer Case 4x4 Switch Circuit Failure	GO to Pinpoint Test B
P1871-00	Mechanical Transfer Case 4x4 Switch Circuit Short To Battery	GO to Pinpoint Test B
P1874-00	Transfer Case Hall Effect Sensor Power Circuit Failure	GO to Pinpoint Test B
P1875-00	Transfer Case Hall Effect Sensor Power Circuit Short To Battery	GO to Pinpoint Test B
All other Diagnostic Trouble Codes (DTCs)	-	Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Symptom Chart

Symptom	Possible Sources	Action
• No communication with the PCM	• Scan tool • DLC • PCM • Wiring, terminals or connectors.	• REFER to: Communications Network (418-00 Module Communications Network, Diagnosis and Testing).
• The 4WD indicators do not operate correctly/do not operate	• 4WD system fault • IPC • PCM • Wiring, terminals or connectors.	• GO to Pinpoint Test A
• The vehicle does not shift between 2H and 4H modes correctly	• MSS • Transfer case • Transfer case synchronization clutch • PCM • Front axle assembly • Relay • Wiring, terminals or	• GO to Pinpoint Test B

	terminals or connectors	
• The vehicle does not shift between 4H and 4L modes correctly	• MSS • TR • Transmission drag torque • ABS wheel speed inputs • HS-CAN • Relay	• GO to Pinpoint Test C
• The 4WD does not engage at speed correctly	• Transfer case • Transfer case synchronization clutch • PCM • Front axle assembly • Relay • Wiring, terminals or connectors	• GO to Pinpoint Test G
• The front axle does not engage/disengage correctly	• MSS • Transfer case • Front axle assembly • Fuse • Wiring, terminals or connectors	• GO to Pinpoint Test D
• The transfer case jumps out of gear	• MSS • Transfer case	• GO to Pinpoint Test E
• Rear wheels binding when turning corners with the MSS in 2WD or OFF	• ELD field coil • Differential • Wiring, terminals or connectors	• REFER to: Electronic Locking Differential (ELD) (205-02 Rear Drive Axle/Differential) . and perform Pinpoint Test D.
• Unable to duplicate customer concern	• 4WD system and/or related components	• CARRY OUT the ESOF Functional Test. GO to Pinpoint Test I

Pinpoint Tests

PINPOINT TEST A : THE 4WD INDICATORS DO NOT OPERATE CORRECTLY/DO NOT OPERATE

A1 CHECK THE 4WD INDICATOR PROVE-OUT

- Ignition OFF.
- Ignition ON.

Do the 4WD indicators prove out correctly?

Yes	GO to A2
No	CHECK the IPC for faults. REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).

A2 CHECK FOR IPC DTCS

- Enter the following diagnostic mode on the scan tool: Self-Test — IPC.

Are any DTCs present?

Yes	For all IPC DTCs, REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).
No	GO to A3

A3 CHECK FOR PCM DTCS

- Enter the following diagnostic mode on the scan tool: Self-Test — PCM.

Are any DTCs present?

Yes	REFER to the PCM DTC Chart in this section for diagnosis.
No	GO to A4

A4 CHECK THE 4WD SYSTEM INDICATION IN 2H

- Switch the four wheel drive switch to 2H while monitoring the IC.

Does 4WD indicator or 4WD Low indicator display on the IC?

Yes	GO to A7
No	GO to A5

A5 CHECK THE 4WD SYSTEM INDICATION IN 4H

- Switch the four wheel drive switch to 4H while monitoring the IC.

Does the 4WD indicator display on the IC?

Yes	GO to A6
No	GO to A7

A6 CHECK THE 4WD SYSTEM INDICATION IN 4L

- **NOTE:** *When shifting in or out of 4L, the transmission must be in NEUTRAL and the vehicle stopped or moving less than 5 km/h (3 mph).*

  With the vehicle at a stop and transmission in NEUTRAL, switch the four wheel drive switch to 4L while monitoring the IC.

Does the 4WD Low indicator display on the IC?

Yes	The 4WD indicators are operating correctly. CARRY OUT the ESOF Functional Test. GO to Pinpoint Test I
No	GO to A7

A7 CHECK THE MSS USING THE PCM 4WD SWITCH STATUS (4X4_SW) PID

- Enter the following diagnostic mode on the scan tool: DataLogger — PCM.
- Monitor the 4X4_SW PID while switching to each four wheel drive switch position.

Does the 4X4_SW PID match the four wheel drive switch position?

Yes	CHECK the IPC for faults. REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing).

No	CARRY OUT the ESOF Functional Test. GO to Pinpoint Test I

PINPOINT TEST B : THE VEHICLE DOES NOT SHIFT BETWEEN 2H AND 4H CORRECTLY AND/OR GRINDING NOISE HEARD DURING 4WD ENGAGEMENT AT HIGH SPEEDS

B1 CHECK FOR PCM DTCS

- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self-Test — PCM.

Are any DTCs present?

Yes	For DTC P184A:00 and P184B:00, GO to B16 For P1870:00 and P1871:00, GO to B3 Fort DTC P1874:00 and P1875:00, GO to B28 For all other DTCs, REFER to the DTC Chart in this section.
No	GO to B2

B2 CHECK THE FOUR WHEEL DRIVE SWITCH POSITION MONITORING THE PCM 4WD SWITCH STATUS (4X4_SW) PID

- Enter the following diagnostic mode on the scan tool: DataLogger — PCM.
- Monitor the 4X4_SW PID while switching to each four wheel drive switch position.

Does the 4X4_SW PID match the four wheel drive switch position?

Yes	GO to B9
No	GO to B3

B3 CHECK THE FOUR WHEEL DRIVE SWITCH RESISTANCE VALUES

- Ignition OFF.
- Disconnect Four Wheel Drive Switch C284.
- Measure the resistance between C284 pins 2 and 3, component side, while rotating the four wheel drive switch through all positions. Refer to the following chart.

MSS Position	Resistance
2H	606 - 632 ohms
4H	265 - 275 ohms
4L	127 - 133 ohms

Are the resistance values within specification?

Yes	GO to B4
No	INSTALL a new four wheel drive switch. CLEAR the DTCs. TEST the system for normal operation.

B4 CHECK THE FOUR WHEEL DRIVE SWITCH CONTROL CIRCUIT FOR SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect PCM C175B (Petrol).
- Disconnect PCM C1232A (Diesel).
- Disconnect PCM C1232B (Diesel).

- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C284-2	V	Ground
C284-3	V	Ground

Is any voltage present?

Yes	REPAIR the affected circuit(s). CLEAR the DTCs. TEST the system for normal operation.
No	GO to B5

B5 CHECK THE FOUR WHEEL DRIVE SWITCH CONTROL AND RETURN CIRCUITS FOR SHORT TO GROUND

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C284-2	Ω	Ground
C284-3	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	GO to B6
No	REPAIR the affected circuit(s). CLEAR the DTCs. TEST the system for normal operation.

B6 CHECK THE FOUR WHEEL DRIVE SWITCH CONTROL AND RETURN CIRCUITS FOR AN OPEN

- On a petrol equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C284-2	Ω	C175B-46
C284-3	Ω	C175B-34

- On a diesel equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C284-2	Ω	C1232B-46
C284-3	Ω	C1232A-43

Are the resistances less than 3 ohms?

Yes	GO to B7
No	REPAIR the affected circuit(s). CLEAR the DTCs. TEST the system for normal operation.

No	REPAIR the affected circuit(s). CLEAR the DTCs. TEST the system for normal operation.

B7 CHECK THE FOUR WHEEL DRIVE SWITCH CONTROL AND RETURN CIRCUITS FOR A SHORT TOGETHER

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
C284-2	Ω	C284-3

Is the resistance greater than 10,000 ohms?

Yes	GO to B8
No	REPAIR the affected circuit(s). CLEAR the DTCs. TEST the system for normal operation.

B8 CHECK THE ABS FRONT AND REAR WHEEL SPEED PIDS

- Connect PCM C175B (Petrol).
- Connect PCM C1232A (Diesel).
- Connect PCM C1232B (Diesel).
- Connect Four Wheel Drive Switch C284.
- Ignition ON.
- Set the four wheel drive switch to 2H.
- Enter the following diagnostic mode on the scan tool: DataLogger — ABS.
- With the vehicle stopped and while driving, monitor the wheel speed PIDs:
  - Left Front Wheel Speed Sensor (WSPD_LF)
  - Left Rear Wheel Speed Sensor (WSPD_LR)
  - Right Front Wheel Speed Sensor (WSPD_RF)
  - Right Rear Wheel Speed Sensor (WSPD_RR)

Do the Wheel Speed PIDs match with the vehicle stopped and at all speeds?

Yes	GO to B9
No	For further diagnosis of the ABS system, REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing). After the repair is complete, CLEAR the DTCs. TEST the system for normal operation.

B9 CHECK THE PCM 4WD MODE (4WD_MODES) PID WITH THE MSS IN 4H

- Start the engine.
- Enter the following diagnostic mode on the scan tool: DataLogger — PCM.
- Switch the four wheel drive switch to 4H while monitoring the IC and the 4WD_SWITCH PID.

Does the 4WD indicator display on the IC and the 4WD_SWITCH PID indicate 4WD High?

Yes	GO to B12
No	GO to B10

B10 CHECK FOR 4H WIND-UP

- Drive the vehicle on a dry, hard surface in turns.

Is wind-up present in turns?

Yes	For petrol equipped vehicles, GO to B13 For diesel equipped vehicles, GO to B14
No	GO to B11

B11 CHECK FOR TRANSFER CASE ENGAGEMENT

- With the vehicle in NEUTRAL, position it on a hoist.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- Rotate the rear driveshaft.
- Observe the front driveshaft.

Does the front driveshaft rotate?

Yes	CHECK that all driveline fasteners are present and tightened to specification. For further diagnosis of the front axle, REFER to: Driveline System (205-00 Driveline System - General Information, Diagnosis and Testing).
No	GO to B16

B12 CHECK FOR FRONT HALFSHAFT ENGAGEMENT

- Rotate the LH front tire one revolution forward and one revolution backward while observing the LH front halfshaft and U-joint.
- Rotate the RH front tire one revolution forward and one revolution backward while observing the RH front halfshaft and U-joint.

Did both front halfshafts rotate?

Yes	CHECK that all driveline fasteners are present and tightened to specification. For further diagnosis of the front axle, REFER to: Driveline System (205-00 Driveline System - General Information, Diagnosis and Testing).
No	GO to Pinpoint Test D

B13 CHECK THE TRANSFER CASE SHIFT TO 2H

- Ignition ON.
- Enter the following diagnostic mode on the scan tool: DataLogger — PCM.
- Set the four wheel drive switch to 2H.
- Monitor the 4WD_MODE PID.

Does the 4WD_MODE PID indicate 2WD?

Yes	GO to B15
No	GO to B16

B14 CHECK THE TRANSFER CASE SHIFT TO 2H

- Ignition ON.
- Enter the following diagnostic mode on the scan tool: DataLogger — PCM.
- Switch the four wheel drive switch to 2H while monitoring the IC and the 4WD_SWITCH PID.

Does 4WD indicator or 4WD Low indicator display on the IC and does the 4WD_SWITCH PID indicate 2WD?

Yes	GO to B15

No	GO to B16

B15 CHECK FOR TRANSFER CASE DISENGAGEMENT

- Rotate the rear driveshaft while observing the front driveshaft.

Does the front driveshaft rotate?

Yes	GO to B16
No	The system is functioning correctly. CARRY OUT the ESOF Functional Test. GO to Pinpoint Test I

B16 CHECK THE TRANSFER CASE SHIFT MOTOR OPERATION

- Remove the transfer case shift motor from the transfer case, leaving the wiring connector connected.
- Observe the transfer case shift motor while switching the four wheel drive switch from 2H to 4H.
- Observe the transfer case shift motor while switching the four wheel drive switch from 4H to 2H.

Does the transfer case shift motor rotate when the switch is commanded to both positions?

Yes	GO to B35
No	GO to B17

B17 CHECK THE SHIFT MOTOR FOR AN INTERNAL SHORT TO GROUND

- Disconnect Transfer Case C350 (Automatic Transmission).
- Disconnect Transfer Case C3820 (Manual Transmission).
- On an automatic transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C350, Pin 4, Component Side	Ω	Ground
C350, Pin 5, Component Side	Ω	Ground

- On a manual transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C3820, Pin 4, Component Side	Ω	Ground
C3820, Pin 5, Component Side	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to B18
No	INSTALL a new transfer case shift motor. CLEAR the DTCs. REPEAT the self-test, if the concern is still present, GO to B35

B18 CHECK THE SHIFT MOTOR CIRCUITS FOR POWER

- Connect PCM C175B (Petrol).
- Connect PCM C1232A (Diesel).
- Connect PCM C1232B (Diesel).
- Ignition ON.

- On an automatic transmission equipped vehicle, switch the four wheel drive switch between 2H and 4H while measuring:

Positive Lead	Measurement / Action	Negative Lead
C350-4		C350-5

- On a manual transmission equipped vehicle, switch the four wheel drive switch between 2H and 4H while measuring:

Positive Lead	Measurement / Action	Negative Lead
C3820-4		C350-5

Are the voltages 9 volts or greater on the circuits only when switching the four wheel drive switch between 2H and 4H?

Yes	GO to B34
No	GO to B19

B19 CHECK THE TRANSFER CASE SHIFT MOTOR CIRCUITS FOR SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect 4WD Relay R17.
- Ignition ON.
- On an automatic transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C350-4		Ground
C350-5		Ground

- On a manual transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C3820-4		Ground
C3820-5		Ground

Is any voltage present?

Yes	VERIFY that circuit fuse (10A) is OK. REPAIR the affected circuit(s). CLEAR the DTCs. TEST the system for normal operation.
No	GO to B20

B20 CHECK THE TRANSFER CASE SHIFT MOTOR CIRCUITS FOR SHORT TO GROUND

- Ignition OFF.
- On an automatic transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C350-4	Ω	Ground
C350-5	Ω	Ground

- On a manual transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C3820-4	Ω	Ground
C3820-5	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to B21
No	VERIFY that circuit fuse (25A) is OK. REPAIR the affected circuit(s). CLEAR the DTCs. TEST the system for normal operation.

B21 CHECK THE TRANSFER CASE SHIFT MOTOR CIRCUITS FOR AN OPEN

- Disconnect 4WD Motor 1 Relay R16.
- Disconnect 4WD Motor 2 Relay R15.
- On an automatic transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C350-4	Ω	4WD Motor 2 Relay R15, Pin 3, Component Side
C350-5	Ω	4WD Motor 1 Relay R16, Pin 3, Component Side

- On a manual transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C3820-4	Ω	4WD Motor 2 Relay R15, Pin 3, Component Side
C3820-5	Ω	4WD Motor 1 Relay R16, Pin 3, Component Side

Are the resistances less than 3 ohms?

Yes	GO to B22
No	REPAIR the affected circuit. CLEAR the DTCs. TEST the system for normal operation.

B22 CHECK THE 4WD RELAY VOLTAGE CIRCUIT

- Connect 4WD Relay R17.
- Ignition ON.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
4WD Motor 2 Relay R15, Pin 5, Component Side		Ground

4WD Motor 2 Relay R15, Pin 5, Component Side	V	Ground
4WD Motor 1 Relay R16, Pin 5, Component Side	V	Ground

Is the voltage greater than 11 volts at both relays?

Yes	GO to B23
No	GO to B25

B23 CHECK 4WD RELAY GROUND CIRCUIT AN OPEN AND A SHORT TO VOLTAGE

- Ignition OFF.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
4WD Motor 2 Relay R15, Pin 4, Component Side	Ω	Ground
4WD Motor 1 Relay R16, Pin 4, Component Side	Ω	Ground

Is the resistance less than 3 ohms?

Yes	GO to B24
No	VERIFY that circuit fuse (10A) is OK. REPAIR the affected circuit(s). CLEAR the DTCs. TEST the system for normal operation.

B24 CHECK THE 4WD MOTOR 1 RELAY

- Carry out the Relay component test. Refer to Wiring Diagrams Cell 149 for component testing.

Did the 4WD Motor 1 Relay pass the component test?

Yes	INSTALL a new 4WD Motor 2 Relay. TEST the system for normal operation.
No	INSTALL a new 4WD Motor 1 Relay. TEST the system for normal operation.

B25 CHECK THE 4WD RELAY VOLTAGE CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect 4WD Relay R17.
- Measure:

Positive Lead	Measurement / Action	Negative Lead
4WD Motor 2 Relay R15, Pin 5, Component Side	Ω	Ground
4WD Motor 1 Relay R16, Pin 5, Component Side	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to B26
No	VERIFY that circuit fuse F12 (10A) is OK. REPAIR the affected circuit(s). CLEAR the DTCs. TEST the system for normal operation.

B26 CHECK THE 4WD RELAY VOLTAGE CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
4WD Motor 2 Relay R15, Pin 5, Component Side	Ω	4WD Relay R17, Pin 5, Component Side
4WD Motor 1 Relay R16, Pin 5, Component Side	Ω	4WD Relay R17, Pin 5, Component Side

Is the resistance less than 3 ohms?

Yes	GO to B27
No	REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation.

B27 CHECK THE 4WD RELAY GROUND CIRCUIT FOR AN OPEN

- Measure:

Positive Lead	Measurement / Action	Negative Lead
4WD Relay R17, Pin 2, Component Side	Ω	Ground

Is the resistance less than 3 ohms?

Yes	INSTALL a new 4WD Motor 2 Relay. TEST the system for normal operation.
No	REPAIR the circuit. CLEAR the DTCs. TEST the system for normal operation.

B28 CHECK TRANSFER CASE HALL EFFECT SENSOR CIRCUITS FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect Transfer Case C350 (Automatic Transmission).
- Disconnect Transfer Case C3820 (Manual Transmission).
- Disconnect PCM C175B (Petrol).
- Disconnect PCM C1232A (Diesel).
- Disconnect PCM C1232B (Diesel).
- Ignition ON.
- On an automatic transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C350-1		Ground
C350-2		Ground
C350-3		Ground

- On a manual transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead

C3820-1	V	Ground
C3820-2	V	Ground
C3820-3	V	Ground

Is any voltage present?

Yes	REPAIR the affected circuit(s). CLEAR the DTCs. TEST the system for normal operation.
No	GO to B29

B29 CHECK TRANSFER CASE HALL EFFECT SENSOR CIRCUITS FOR A SHORT TO GROUND

- Ignition OFF.
- On an automatic transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C350-1	Ω	Ground
C350-2	Ω	Ground
C350-3	Ω	Ground

- On a manual transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C3820-1	Ω	Ground
C3820-2	Ω	Ground
C3820-3	Ω	Ground

Are the resistances greater than 10,000 ohms?

Yes	GO to B30
No	REPAIR the affected circuit(s). CLEAR the DTCs. TEST the system for normal operation.

B30 CHECK THE TRANSFER CASE HALL EFFECT SENSOR CIRCUITS FOR AN OPEN

- On a petrol / automatic transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C350-1	Ω	C175B-15
C350-2	Ω	C175B-27
C350-3	Ω	C175B-39

- On a diesel / automatic transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C350-1	Ω	C1232A-51

C350-1	Ω	C1232A-51
C350-2	Ω	C1232B-7
C350-3	Ω	C1232A-35

- On a petrol / manual transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C3820-1	Ω	C175B-15
C3820-2	Ω	C175B-27
C3820-3	Ω	C175B-39

- On a diesel / manual transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C3820-1	Ω	C1232A-51
C3820-2	Ω	C1232B-7
C3820-3	Ω	C1232A-35

Are the resistances less than 3 ohms?

Yes	GO to B17
No	REPAIR the affected circuit(s). CLEAR the DTCs. TEST the system for normal operation.

B31 CHECK THE VREF VOLTAGE TO TRANSFER CASE HALL EFFECT SENSOR

- Ignition OFF.
- Connect PCM C175B (Petrol).
- Connect PCM C1232A (Diesel).
- Connect PCM C1232B (Diesel).
- Ignition ON.
- On an automatic transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C350-1	V	C350-3

- On a manual transmission equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C3820-1	V	C3820-3

Is the voltage between 4.5 V - 5.5 V?

Yes	For petrol equipped vehicles, GO to B32 For diesel equipped vehicles, GO to B33
No	GO to B34

B32 CHECK THE TRANSFER CASE HALL EFFECT SENSOR SIGNAL CIRCUIT

- Enter the following diagnostic mode on the scan tool:
- Monitor the 4X4_MODE PID.
- Ignition OFF.
- On an automatic transmission equipped vehicle, connect:

Positive Lead	Measurement / Action	Negative Lead
C350-1		C350-2

- On a manual transmission equipped vehicle, connect:

Positive Lead	Measurement / Action	Negative Lead
C3820-1		C3820-2

- Ignition ON.
- Monitor the 4X4_MODE PID.

Does the 4X4_MODE PID change with the jumper installed?

Yes	INSTALL a new transfer case shift motor. CLEAR the DTCs. TEST the system for normal operation.
No	GO to B34

B33 CHECK THE TRANSFER CASE HALL EFFECT SENSOR SIGNAL CIRCUIT

- Ignition OFF.
- Connect Transfer Case C350 (Automatic Transmission).
- Connect Transfer Case C3820 (Manual Transmission).
- On an automatic transmission equipped vehicle, measure the signal circuit voltage by carefully backprobing the connector pin:

Positive Lead	Measurement / Action	Negative Lead
C350-2		Ground

- On a manual transmission equipped vehicle, measure the signal circuit voltage by carefully backprobing the connector pin:

Positive Lead	Measurement / Action	Negative Lead
C3820-2		Ground

- Ignition ON.
- Switch the four wheel drive switch between 2H and 4H while observing the DVOM.

Does the signal circuit voltage change when the four wheel drive switch is switched between 2H and 4H?

Yes	GO to B34
No	INSTALL a new transfer case shift motor. CLEAR the DTCs. TEST the system for normal operation.

B34 CHECK FOR CORRECT PCM OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Connect all PCM connectors. Make sure they are seated correctly.
- Operate the system and verify the concern is still present.

Is the concern still present?

Yes	INSTALL a new PCM. REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). TEST the system for normal operation.
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of the connector or pin issues.

B35 SHIFT THE TRANSFER CASE TO 4H MANUALLY

- Remove the transfer case shift motor from the transfer case.
- Using a wrench, rotate the shift cam to the 4H position.
- Rotate the rear driveshaft and watch the front driveshaft.

Does the transfer case shift to 4H and the front driveshaft rotates?

Yes	GO to B36
No	REPAIR the transfer case. REFER to: Transfer Case (308-07B Transfer Case - 5-Speed Manual Transmission - MT75/6-Speed Manual Transmission - MT82, Disassembly and Assembly). REFER to: Transfer Case (308-07C Transfer Case - 6-Speed Automatic Transmission - 6R80, Disassembly and Assembly).

B36 CHECK THE TORQUE REQUIRED TO SHIFT THE TRANSFER CASE

- Rotate the shift cam by hand through 4L, 4H and 2H positions.
- Measure the torque required to perform the shift.

Is the torque required to shift 45 Nm (33 lb-ft) or less?

Yes	GO to B37
No	REPAIR the transfer case. REFER to: Transfer Case (308-07B Transfer Case - 5-Speed Manual Transmission - MT75/6-Speed Manual Transmission - MT82, Disassembly and Assembly). REFER to: Transfer Case (308-07C Transfer Case - 6-Speed Automatic Transmission - 6R80, Disassembly and Assembly).

B37 SHIFT THE TRANSFER CASE TO 2H MANUALLY

- Rotate the shift cam to the 2H position.
- Rotate the rear driveshaft and watch the front driveshaft.

Does the transfer case shift to 2H and the front driveshaft does not rotate?

Yes	GO to B38

No	REPAIR the transfer case. REFER to: Transfer Case (308-07B Transfer Case - 5-Speed Manual Transmission - MT75/6-Speed Manual Transmission - MT82, Disassembly and Assembly). REFER to: Transfer Case (308-07C Transfer Case - 6-Speed Automatic Transmission - 6R80, Disassembly and Assembly).

B38 SHIFT THE TRANSFER CASE TO 4L MANUALLY

- Rotate the shift cam by hand to the 4L position.
- Rotate the rear driveshaft and watch the front driveshaft.

Does the transfer case shift to 4L and the front driveshaft rotates?

Yes	INSTALL a new transfer case shift motor. CLEAR the DTCs. TEST the system for normal operation.
No	REPAIR the transfer case. REFER to: Transfer Case (308-07B Transfer Case - 5-Speed Manual Transmission - MT75/6-Speed Manual Transmission - MT82, Disassembly and Assembly). REFER to: Transfer Case (308-07C Transfer Case - 6-Speed Automatic Transmission - 6R80, Disassembly and Assembly).

PINPOINT TEST C : THE VEHICLE DOES NOT SHIFT BETWEEN 4H AND 4L MODES CORRECTLY

C1 CHECK THE 2H TO 4H SHIFT

- Ignition ON.
- Drive the vehicle and shift four wheel drive switch from 2H to 4H.

Does the vehicle shift between 2H and 4H correctly?

Yes	GO to C2
No	GO to Pinpoint Test B

C2 CHECK THE 4H TO 4L SHIFT

- **NOTE:** *When shifting in or out of 4L, the transmission must be in NEUTRAL and the vehicle stopped or moving less than 5 km/h (3 mph).*

  Drive the vehicle and shift four wheel drive switch from 4H to 4L.

Does the transfer case shift from 4H to 4L correctly and the complaint is related to a clunk noise during the shift?

Yes	Transmission neutral drag is excessive. REFER to: Diagnostic Strategy (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing).
No	GO to C3

C3 CHECK THE PCM GEAR (GEAR_OSC) PID

- Monitor the GEAR_OSC PID while shifting the transmission through gear ranges.

Does the GEAR_OSC PID show the correct gear position when shifted?

Yes	GO to C4
No	REFER to: Diagnostic Strategy (307-01 Automatic Transmission - 6-Speed Automatic Transmission - 6R80, Diagnosis and Testing). for further diagnosis of the TR sensor.

C4 CHECK THE PCM ABS MODULE WHEEL SPEED PIDS

- Enter the following diagnostic mode on the scan tool: DataLogger — ABS Module.
- Monitor the wheel speed PIDs:
  - Left Front Wheel Speed Sensor (WSPD_LF)
  - Left Rear Wheel Speed Sensor (WSPD_LR)
  - Right Front Wheel Speed Sensor (WSPD_RF)
  - Right Rear Wheel Speed Sensor (WSPD_RR)

Do the wheel speed PIDs indicate 0 km/h (0 mph)?

Yes	All PIDs are accurate. GO to Pinpoint Test B
No	REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing). for further diagnosis of the ABS system.

PINPOINT TEST D : THE FRONT AXLE DOES NOT ENGAGE/DISENGAGE CORRECTLY

D1 CHECK FOR GRINDING NOISES AT HIGH SPEEDS

- Ignition ON.
- With the vehicle warm and the four wheel drive switch in 2H mode, drive the vehicle at sustained WOT for 5 seconds.

Is there a grinding noise from the axle system during WOT?

Yes	REFER to: Driveline System (205-00 Driveline System - General Information, Diagnosis and Testing).
No	GO to D2

D2 CHECK PCM OPERATION

- Ignition ON.
- Monitor the 4X4 indicator on the IPC while moving the four wheel drive switch between 2H and 4H modes.

Does the 4X4 indicator illuminate when the MSS is in the 4H position and turn off when the four wheel drive switch is in the 2H position?

Yes	GO to Pinpoint Test C
No	GO to Pinpoint Test B

PINPOINT TEST E : THE TRANSFER CASE JUMPS OUT OF GEAR

E1 VERIFY THE CONCERN

- Drive the vehicle and attempt to duplicate the concern.

Is the concern an uncommanded range shift (in or out of low range)?

Yes	GO to E5
No	For petrol equipped vehicles, GO to E2 For diesel equipped vehicles, GO to E3

E2 CHECK THE MSS POSITION MONITORING THE PCM 4WD SWITCH STATUS (4X4_SW) PID AND 4WD MODE STATUS (4X4_MODE) PID

- Ignition ON.
- Enter the following diagnostic mode on the scan tool: DataLogger — PCM.
- Drive the vehicle.
- Dynamically monitor the 4X4_SW and 4X4_MODE PIDs while driving the vehicle in each shift position.

Do the 4X4_SW and 4X4_MODE PIDs always agree with the switch position?

Yes	GO to E4
No	GO to Pinpoint Test B

E3 CHECK THE MSS POSITION MONITORING THE PCM 4WD SWITCH STATUS (4X4_SW) PID

- Ignition ON.
- Enter the following diagnostic mode on the scan tool: DataLogger — PCM.
- Drive the vehicle.
- Dynamically monitor the 4X4_SW PID while driving the vehicle in each shift position.

Do the 4X4_SW PID always agree with the switch position?

Yes	GO to E4
No	GO to Pinpoint Test B

E4 CHECK FOR PCM DTCS

- Enter the following diagnostic mode on the scan tool: Self-Test — PCM.

Are any DTCs present?

Yes	REFER to the PCM DTC Chart in this section.
No	CARRY OUT the ESOF Functional Test. GO to Pinpoint Test I

E5 CHECK THE 4WD INDICATORS

- Stop the vehicle.
- Transmission in NEUTRAL.
- Depress the brake pedal.
- Observe the 4WD indication on the IC while cycling through each four wheel drive switch position.

Do the 4WD indicator and 4WD Low indicator match the four wheel drive switch?

Yes	GO to E6
No	GO to Pinpoint Test A

E6 CHECK FOR PCM DTCS

- Transmission in PARK.
- Enter the following diagnostic mode on the scan tool: Self-Test — PCM.

Are any DTCs present?

Yes	REFER to the PCM DTC Chart in this section.
No	CHECK the transfer case fluid level.

	REFER to: Transfer Case Fluid Level Check (308-07B Transfer Case - 5-Speed Manual Transmission - MT75/6-Speed Manual Transmission - MT82, General Procedures). . If the fluid level is OK, CHECK for internal transfer case faults.

PINPOINT TEST F : THE FRONT AXLE MAKES NOISE IN 2H MODE ONLY AND GENERALLY UNDER HEAVY THROTTLE

F1 CHECK FOR GRINDING NOISES AT HIGH SPEEDS

- With the vehicle warm and the four wheel drive switch in 2H mode, drive the vehicle at sustained WOT for 5 seconds.

Is there a grinding noise from the axle system during WOT?

Yes	REFER to: Driveline System (205-00 Driveline System - General Information, Diagnosis and Testing).
No	IDENTIFY the customer concern and GO to the Symptom Chart in this section.

PINPOINT TEST G : THE 4WD DOES NOT ENGAGE AT SPEED CORRECTLY

G1 CHECK FOR PCM DTCS

- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self-Test — PCM.

Are any DTCs present?

Yes	For DTC P1820:00, P1821:00, P1822:00, or P1823:00, GO to G7 For DTC P1828:00, P1829:00, P1830:00, or P1831:00, GO to G11 For all other DTCs, REFER to the PCM DTC Chart for diagnosis.
No	GO to G2

G2 CHECK 4H ENGAGEMENT AT REST

- Switch the four wheel drive switch from 2H to 4H.
- Confirm 4H engagement by driving the vehicle and check for wind-up in turns.

Does 4H engage at rest correctly?

Yes	GO to G3
No	GO to Pinpoint Test B

G3 CHECK 2H TO 4H SHIFT AT SPEED

- Switch the four wheel drive switch to 2H.
- Drive the vehicle and carry out a 2H to 4H shift while driving approximately at 16 km/h (10 mph).
- Stop the vehicle, shift to 2H, drive the vehicle and carry out a 2H to 4H shift while driving at approximately 64 km/h (40 mph).

Does 4H engage correctly (or much better) at 16 km/h (10 mph) than at 64 km/h (40 mph)?

Yes	GO to Pinpoint Test D
No	GO to G4

G4 CHECK THE ABS FRONT AND REAR WHEEL SPEED SENSOR PIDS

- Enter the following diagnostic mode on the scan tool: DataLogger — ABS.
- While driving in a straight line, monitor the wheel speed PIDs:
  - Left Front Wheel Speed Sensor (WSPD_LF)
  - Left Rear Wheel Speed Sensor (WSPD_LR)
  - Right Front Wheel Speed Sensor (WSPD_RF)
  - Right Rear Wheel Speed Sensor (WSPD_RR)

Do the Wheel Speed PIDs match?

Yes	GO to G5
No	For further diagnosis of the ABS system, REFER to: Anti-Lock Brake System (ABS) and Stability Control (206-09 Anti-Lock Brake System (ABS) and Stability Control, Diagnosis and Testing).

G5 CHECK THE TRANSFER CASE SYNCHRONIZATION CLUTCH IN 2H

- Ignition OFF.
- With the vehicle in NEUTRAL, position it on a hoist.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- Remove the transfer case shift motor from the transfer case, leaving the electrical connector connected.
- Using a wrench, shift the transfer case shift cam to 2H.
- Rotate the rear driveshaft while observing the front driveshaft.

Does the front driveshaft rotate when the rear driveshaft is rotated?

Yes	REPAIR the transfer case. REFER to: Transfer Case (308-07B Transfer Case - 5-Speed Manual Transmission - MT75/6-Speed Manual Transmission - MT82, Disassembly and Assembly). .
No	GO to G6

G6 CHECK THE TRANSFER CASE SYNCHRONIZATION CLUTCH IN 4H

- Using a wrench, shift the transfer case shift cam to 4H.
- Rotate the rear driveshaft while observing the front driveshaft.

Does the front driveshaft rotate when the rear driveshaft is rotated?

Yes	The system is functioning correctly. CARRY OUT the ESOF Functional Test. GO to Pinpoint Test I
No	REPAIR the transfer case. REFER to: Transfer Case (308-07B Transfer Case - 5-Speed Manual Transmission - MT75/6-Speed Manual Transmission - MT82, Disassembly and Assembly). .

G7 CHECK THE 4WD MOTOR 1 RELAY CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect PCM C175B (Petrol).
- Disconnect PCM C1232A (Diesel).
- Disconnect 4WD Motor 1 Relay.
- Ignition ON.
- On a petrol equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C175B-37		Ground

- On a diesel equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-52		Ground

Is any voltage present?

Yes	REPAIR circuit. CLEAR the DTCs. TEST the system for normal operation.
No	GO to G8

G8 CHECK THE 4WD MOTOR 1 RELAY CONTROL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect 4WD Motor 1 Relay.
- On a petrol equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C175B-37	Ω	Ground

- On a diesel equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-52	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	VERIFY that circuit fuse is OK. REPAIR circuit. CLEAR the DTCs. TEST the system for normal operation.
No	GO to G9

G9 CHECK THE 4WD MOTOR 1 RELAY CONTROL CIRCUIT FOR AN OPEN

- On a petrol equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C175B-37	Ω	4WD Motor 1 Relay R16, Pin 2, Component Side

- On a diesel equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-52	Ω	4WD Motor 1 Relay R16, Pin 2, Component Side

Is the resistance less than 3 ohms?

Yes	GO to G10
No	REPAIR circuit. CLEAR the DTCs. TEST the system for normal operation.

G10 CHECK THE 4WD MOTOR 1 RELAY

- Ignition OFF.
- Carry out the Relay component test. Refer to Wiring Diagrams Cell 149 for component testing.

Did the 4WD Motor 1 Relay pass the component test?

Yes	GO to G15
No	INSTALL a new 4WD Motor 1 Relay. TEST the system for normal operation.

G11 CHECK THE 4WD MOTOR 2 RELAY CONTROL CIRCUIT FOR A SHORT TO VOLTAGE

- Ignition OFF.
- Disconnect PCM C175C (Petrol).
- Disconnect PCM C1232A (Diesel).
- Disconnect 4WD Motor 2 Relay.
- Ignition ON.
- On a petrol equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C175C-20		Ground

- On a diesel equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-41		Ground

Is any voltage present?

Yes	REPAIR circuit. CLEAR the DTCs. TEST the system for normal operation.
No	GO to G12

G12 CHECK THE 4WD MOTOR 2 RELAY CONTROL CIRCUIT FOR A SHORT TO GROUND

- Ignition OFF.
- Disconnect 4WD Motor 2 Relay.
- On a petrol equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C175C-20	Ω	Ground

- On a diesel equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-41	Ω	Ground

Is the resistance greater than 10,000 ohms?

Yes	VERIFY that circuit fuse (10A) is OK. REPAIR circuit. CLEAR the DTCs. TEST the system for normal operation.
No	GO to G13

G13 CHECK THE 4WD MOTOR 2 RELAY CONTROL CIRCUIT FOR AN OPEN

- On a petrol equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C175C-20	Ω	4WD Motor 2 Relay R15, Pin 2, Component Side

- On a diesel equipped vehicle, measure:

Positive Lead	Measurement / Action	Negative Lead
C1232A-41	Ω	4WD Motor 2 Relay R15, Pin 2, Component Side

Is the resistance less than 3 ohms?

Yes	GO to G14
No	REPAIR circuit. CLEAR the DTCs. TEST the system for normal operation.

G14 CHECK THE 4WD MOTOR 2 RELAY

- Ignition OFF.
- Carry out the Relay component test. Refer to Wiring Diagrams Cell 149 for component testing.

Did the 4WD Motor 2 Relay pass the component test?

Yes	GO to G15
No	INSTALL a new 4WD Motor 2 Relay. TEST the system for normal operation.

G15 CHECK FOR CORRECT PCM OPERATION

- Ignition OFF.
- Disconnect and inspect all PCM connectors.
- Repair:
  - corrosion (install new connector or terminals - clean module pins)
  - damaged or bent pins - install new terminals/pins
  - pushed-out pins - install new pins as necessary
- Connect all PCM connectors. Make sure they are seated correctly.
- Operate the system and verify the concern is still present.

Is the concern still present?

Yes	INSTALL a new PCM.

	REFER to: Powertrain Control Module (PCM) (303-14A Electronic Engine Controls - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation). TEST the system for normal operation.
No	The system is operating correctly at this time. Concern may have been caused by a loose or corroded connector. ADDRESS the root cause of the connector or pin issues.

PINPOINT TEST H : VEHICLE PULSATES OR SHUDDERS IN A STRAIGHT LINE (STRAIGHTLINE DRIVELINE WIND-UP)

NOTE: *4X4 high/low (4H/4L) is not intended for driving on hard/dry surfaces.*

H1 VERIFY THE CONCERN

- Drive the vehicle and shift from 2H to 4H. There should be minimal wind-up in 4H mode during straight line maneuvers (wind-up in turns is normal; 4X4 high/low is not intended for driving on hard/dry surfaces).

Is excessive wind-up present?

Yes	GO to H2
No	RETURN the vehicle to the customer. ADVISE about correct system operation and normal vehicle behavior.

H2 CHECK FOR MATCHING WHEEL AND TIRE SIZES

- Check the wheel and tire sizes.

Do the 4 wheel and tire sizes match?

Yes	GO to H3
No	ADVISE the customer that 4WD systems require 4 matched, correctly inflated, correctly maintained tires to operate correctly.

H3 CHECK TIRE WEAR

- Check each of the 4 tires for wear.

Are the 4 tires worn evenly?

Yes	GO to H4
No	ADVISE the customer that 4WD systems require 4 matched, correctly inflated, correctly maintained tires to operate correctly.

H4 CHECK TIRE INFLATION PRESSURE

- Check the inflation pressure in each tire. Refer to VC label.

Are the tire inflation pressures correct?

Yes	GO to H5
No	ADJUST the tire pressure as necessary. TEST the vehicle for normal operation. ADVISE the customer that 4WD systems require 4 matched, correctly inflated, correctly maintained tires to operate correctly.

H5 CHECK THE FRONT AND REAR AXLE RATIOS

- Check that front and rear axle ratios match.

Do the front and rear axle ratios match?

Yes	RETURN the vehicle to the customer and ADVISE about correct 4WD usage and normal vehicle behavior.
No	CHECK the vehicle VC label. INSTALL the correct axle(s).

PINPOINT TEST I : ESOF FUNCTIONAL TEST

NOTE: *4X4 high/low (4H/4L) is not intended for driving on hard/dry surfaces.*

I1 CHECK FOR IPC DTCS

- Ignition ON.
- Enter the following diagnostic mode on the scan tool: Self-Test — IPC.

Are any DTCs present?

Yes	REFER to: Instrumentation, Message Center and Warning Chimes (413-01 Instrumentation, Message Center and Warning Chimes, Diagnosis and Testing). .
No	GO to I2

I2 CHECK 2H OPERATION

- Enter the following diagnostic mode on the scan tool: DataLogger — PCM.
- Switch the four wheel drive switch to 2H.
- Monitor the 4X4_SW PID.

Does the PID display the vehicle in 2H?

Yes	GO to I4
No	GO to I3

I3 CHECK FOR PCM DTCS

- Enter the following diagnostic mode on the scan tool: Self-Test — PCM.

Are any DTCs present?

Yes	REFER to the PCM DTC Chart in this section.
No	GO to I4

I4 CHECK FOR WIND-UP IN 2H

- Drive the vehicle on a dry, hard surface while executing turns.

Is wind-up present in turns?

Yes	GO to Pinpoint Test B
No	GO to I5

I5 CHECK 4H OPERATION

- Switch the four wheel drive switch to 4H while monitoring the IPC.

Does the 4WD indicator display on the IPC?

Yes	GO to I8
No	GO to I6

I6 CHECK FOR PCM DTCS

- Select PARK.
- Enter the following diagnostic mode on the scan tool: Self-Test — PCM.

Are any DTCs present?

Yes	REFER to the PCM DTC Chart in this section.
No	GO to I7

I7 CHECK FOR WIND-UP IN 4H

- Drive the vehicle on a dry, hard surface while executing turns.

Is wind-up present in turns?

Yes	REFER to: Electronic Locking Differential (ELD) (205-02 Rear Drive Axle/Differential) . and perform Pinpoint Test D.
No	REFER to: Electronic Locking Differential (ELD) (205-02 Rear Drive Axle/Differential) . and perform Pinpoint Test C.

I8 CHECK FOR STRAIGHT LINE 4H WIND-UP

- Drive the vehicle on a dry, hard surface.

Is straightline wind-up present?

Yes	GO to Pinpoint Test B
No	GO to I9

I9 CHECK 4H WIND-UP IN TURNS

- Drive the vehicle in 4H while turning.

Is wind-up present in turns?

Yes	GO to I10
No	GO to Pinpoint Test B

I10 CHECK 4L OPERATION

- **NOTE:** *When shifting in or out of 4L, the transmission must be in NEUTRAL and the vehicle stopped or moving less than 5 km/h (3 mph).*

  With the vehicle at a stop and transmission in NEUTRAL, switch the four wheel drive switch to 4L while monitoring the IPC.

Does the 4WD Low indicator display on the IPC?

Yes	GO to I13
No	GO to I11

I11 CHECK FOR PCM DTCS

- Select PARK.
- Enter the following diagnostic mode on the scan tool: Self-Test — PCM.

Are any DTCs present?

Yes	REFER to the PCM DTC Chart in this section.
No	GO to I12

I12 CHECK FOR WIND-UP IN 4L

- Drive the vehicle on a dry, hard surface while executing turns.

Is wind-up present in turns?

Yes	GO to Pinpoint Test A
No	GO to Pinpoint Test C

I13 CHECK FOR 4L WIND-UP IN TURNS

- Drive the vehicle on a dry, hard surface while executing turns.

Is wind-up present and 4L functioning?

Yes	GO to I14
No	CHECK for PCM DTCs. REFER to the PCM DTC Chart in this section. If no DTCs are present, GO to Pinpoint Test C

I14 CHECK 4L TO 2H SHIFT

- Enter the following diagnostic mode on the scan tool: DataLogger — PCM.
- With the vehicle at a stop and transmission in NEUTRAL, switch the four wheel drive switch from 4L to 2H.
- Monitor the 4X4_SW PID.

Does the PID display the vehicle in 2H?

Yes	GO to I15
No	GO to I16

I15 CHECK FOR WIND-UP IN 2H

- Switch the four wheel drive switch to 2H.
- Drive the vehicle on a dry, hard surface while executing turns.

Is wind-up present in turns?

Yes	GO to Pinpoint Test A
No	GO to I18

I16 CHECK FOR PCM DTCS

- Select PARK.
- Enter the following diagnostic mode on the scan tool: Self-Test — PCM.

Are any DTCs present?

Yes	REFER to the PCM DTC Chart in this section.
No	GO to I17

I17 CHECK FOR WIND-UP IN 2H

- Switch the four wheel drive switch to 2H.
- Drive the vehicle on a dry, hard surface while executing turns.

Is wind-up present in turns?

Yes	GO to Pinpoint Test C
No	GO to Pinpoint Test A

I18 CHECK FOR TRANSFER CASE DISENGAGEMENT

- With the vehicle in NEUTRAL, position it on a hoist.
  REFER to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
- Rotate the rear driveshaft while observing the front driveshaft.

Does the front driveshaft rotate?

Yes	REFER to: Driveline System (205-00 Driveline System - General Information, Diagnosis and Testing).
No	GO to I19

I19 CHECK 2H TO 4H SHIFT AT SPEED ABOVE 32 KM/H (20 MPH)

- Switch the four wheel drive switch to 2H.
- Drive the vehicle on the road and shift from 2H to 4H while driving above 32 km/h (20 mph).

Does the transfer case shift to 4H satisfactorily?

Yes	The 4WD system is functioning correctly.
No	GO to Pinpoint Test G

OPERATING PRINCIPLE

The transfer case delivers engine torque to the rear wheels and when requested to the front wheels. The transfer case is mounted on the rear of the transmission assembly and also has the ability to drive an additional gear reduction.

The transfer case has three different operating modes;

- Two Wheel Drive
- Four Wheel Drive - High Range
- Four Wheel Drive - Low Range

A toggle switch mounted in the vehicle cabin is used to select between the three different operating modes. The transfer case is electronically shifted via a shift motor mounted on the rear of the transfer case housing. The transfer case is filled with lubricating oil which is circulated using a mechanical oil pump. The oil pump is fitted with a strainer to filter any debris.

In four wheel drive mode there is no speed differential between the front and rear axles. This can cause driveline

windup when cornering on sealed surfaces.

Two Wheel Drive Operation

When the transfer case is in two wheel drive mode the engine torque is transferred from the input shaft through the planetary gearset. The planetary gearset is driven as one unit providing the torque to the rear output shaft, through the rear differential to the rear wheels.

Four Wheel Drive Operation

To engage four wheel drive the shift motor rotates the shift hub attached to the motor assembly which moves the shift fork to engage to drive either the high or low operating mode depending on the electronic request sent from the cabin switch.

Four Wheel Drive High Range

When the transfer case is in Four Wheel Drive High Range mode, the engine torque is transferred from the input shaft through the planetary gearset. The planetary gearset is driven as one unit providing the torque to the rear output shaft, through the rear differential to the rear wheels. To drive the front wheels one of the selector forks engages a selector ring to lock the silent chain gear wheel to the rear output shaft which drives engine torque to the front output shaft via the silent chain. Engine torque is the delivered to both the front and rear wheel without any gear reduction.

Four Wheel Drive Low Range

When the transfer case is in Four Wheel Drive Low Range mode, the operation is the same as described in high range mode except the planetary gearset is independently driven to provide a gear reduction to both the front and rear drive axles.

Tachograph

For markets where a tachograph is required, a 'tachograph ready' transfer case is fitted to the vehicle. This allows the fitment of a tachograph sensor to the transfer case housing. The machined hole in the housing is filled with the blanking plug, which can be removed for the fitment of the sensor.

The tachograph ready transfer case has the following additional features:

- Internal pulse gear.
- Machined shoulder on front output shaft for pulse gear.
- Machined hole and thread on rear case.

Transfer Case Draining and Filling

1. For additional information, refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).

2. **NOTICE: Do not use an impact wrench when removing the filler plug or drain plug. It may damage the transfer case.**

   Remove the drain plug and the seal.
   - Drain the oil into a suitable container.
   - Tighten the drain plug with a new seal.
   - Tightening torque 19-30 Nm.

3. **NOTICE: Only use the specified lubricant.**

   NOTE: *The transfer case should be in in-vehicle position.*

   NOTE: *Make sure that fluid level is to the MAX mark.*

   Remove the filler plug and seal and add the specified amount and type of oil through the filler plug hole until the level reaches the bottom of the filler plug hole **X:** 0 mm.
   For additional information, refer to: Specifications (308-07B Transfer Case - 5-Speed Manual Transmission - MT75/6-Speed Manual Transmission - MT82, Specifications).

   - Wait for three minutes and check if **X:** 0 mm.
   - Top up the oil if necessary.
   - Tighten the filler plug with a new seal.
   - Tightening torque 19-30 Nm.

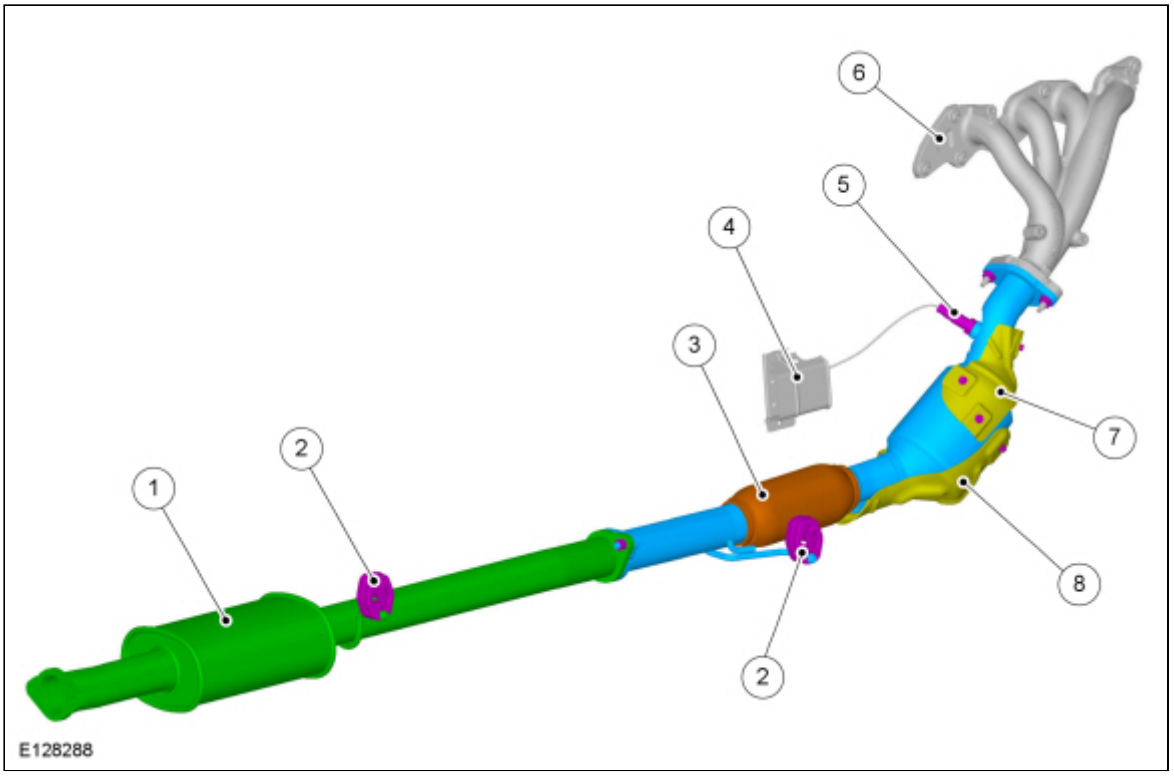
Exhaust System - Component Location



Exhaust flexible pipes are very fragile and must not be subjected to any load. They must be secured against twisting and bending during any work on the exhaust system.

2.5L E100

Exhaust System - Overview

Overview

NOTICE: Do not use leaded fuel in a vehicle equipped with a catalytic converter. In a vehicle that is continually misfueled, the lead in the fuel will be deposited in the catalytic converter and completely blanket the catalyst. Lead reacts with platinum to "poison" the catalyst. Continuous use of leaded fuel can destroy the catalyst and render the catalytic converter useless. The addition of lead to the catalytic converter can also solidify the catalyst, causing excessive back pressure in the exhaust system and possibly causing engine damage.

NOTICE: Extremely high temperatures of 1,100°C (2,012°F) or above due to misfiring or an over-rich fuel/air mixture will cause the ceramic substrate to sinter or burn, destroying the catalytic converter. Do not continue to operate the vehicle if the engine is misfiring, there is a power loss or other unusual operating conditions, such as engine overheating and backfiring.

NOTICE: Do not use oil or grease-based lubricants on the isolators. These lubricants may cause deterioration of the rubber. This can lead to separation of the isolator from the exhaust hanger bracket during vehicle operation.

The exhaust system provides an exit for exhaust gases and reduces engine noise by passing exhaust gases through the catalytic converters and a muffler assembly. The catalytic converters also play a major role in reducing air pollutants.

The exhaust system consists of:

- a one-piece catalytic converter with exhaust flexible pipe.
- a resonator.
- a muffler and tailpipe assembly with isolators.

The catalytic converter plays a major role in the emission control system. The catalytic converter operates as a gas reactor. Its catalytic function is to speed the heat-producing chemical reaction of components in the exhaust gases in order to reduce air pollutants.

The catalyst material inside the catalytic converter consists of a ceramic substrate.

The catalytic converter is designed to provide a long life. No maintenance is necessary for the catalytic converter.

Sound insulators and shields, attached to the underbody, protect the vehicle from exhaust system heat and should be inspected at regular intervals to make sure they are not dented or out of position. If a sound insulator and shield is damaged or shows evidence of deterioration, install a new insulator and shield. The sound insulators and shields for the muffler, muffler pipe, resonator and catalytic converter pipe are installed separately.

Some exhaust fasteners must be discarded and new ones installed as indicated in the procedures. Also, any damaged or heavily corroded fasteners should be discarded and new ones installed. Some exhaust fasteners are of a prevailing torque design. Use only new fasteners with the same part number as the original. Torque values must be used as specified during reassembly to make sure of correct retention of exhaust components.

Exhaust System

Symptom Chart(s)

Symptom Chart: Exhaust System

Verify the customer concern. Inspect the components of the exhaust system for obvious signs of damage or other mechanical concerns using the following chart.

Visual Inspection Chart - Mechanical

Mechanical
• Exhaust pipe pinched or crushed • Damaged muffler • Broken or damaged exhaust hanger brackets • Damaged catalytic converter • Loose or damaged heat shields

Verify the exhaust system is installed correctly, with clamps correctly located and tightened to specifications. If the fault is not visually evident, determine the symptom. GO to Symptom Chart below.

Symptom Chart

Condition	Possible Sources	Actions
Vehicle has low or no power — vehicle performance complaint	• Exhaust pipe pinched or crushed • Damaged catalytic converter • Loose obstruction in exhaust	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
	Restricted exhaust (possible frozen condensate in muffler)	CHECK drain holes for foreign material. PARK the vehicle inside to thaw. TEST the vehicle for normal operation. If the concern is still present, REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
Burning smell — usually occurs at idle, with possible traces of smoke	• Foreign material caught in exhaust system • Missing heat shields	INSPECT the exhaust system for foreign material or missing heat shields. REPAIR or INSTALL new components as necessary.
Odor — described as a sulfur or rotten egg smell	• Catalytic converter • Excessive sulfur	At times, a slight sulfur smell is normal for catalytic converters. The cause is the sulfur content in the gasoline being used. ADVISE the customer no repair is required.

	content in fuel	
	• Rich fuel conditions • Misfire conditions	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
Visible rust on surface of exhaust pipes	Catalytic converter/exhaust system	Surface rust is a characteristic of materials used on exhaust systems. Exposure to heat or road salt may result in surface rust. INSPECT for perforations. If there are no perforations, the condition is normal.

Symptom Chart: NVH

Symptom Chart

Condition	Possible Sources	Actions
Rattle, squeaks or buzz type noise — from the bottom of the vehicle	Loose or damaged heat shield	INSPECT the exhaust system for loose or missing heat shields or foreign material trapped between the heat shields and the exhaust system components. If any heat shields are loose, INSTALL worm gear clamp and tighten to specification. If the heat shields are missing or a rattle, noise or buzz condition persists, INSTALL a new heat shield or component as necessary.
	Loose or damaged exhaust isolators	VERIFY the exhaust isolators are correctly installed. INSPECT the exhaust isolators for wear or damage. INSTALL new isolators as necessary.
	Damaged exhaust isolator hanger bracket	INSPECT the exhaust system components for damage or broken hangers. INSTALL new components as necessary. CHECK for loose or damaged exhaust hanger brackets or fasteners. TIGHTEN the bolts to specification or INSTALL new components as necessary.
	Loose or damaged catalytic converter or muffler	MOVE the exhaust system to simulate the bouncing action of the vehicle, checking for exhaust-to-body contact while moving the exhaust system. Using a rubber mallet, TAP on the exhaust components to duplicate the noise concern. Lightly TAP on the muffler, then the catalytic converter. DETERMINE if there are loose or broken baffles in the muffler or a loose or broken element in the catalytic converter. REPAIR or INSTALL new components as necessary.
	Exhaust grounded to chassis	INSPECT for signs of exhaust components-to-body contact. REPAIR or INSTALL new components as necessary.
Drone or clunk type noise — from the bottom of the vehicle	Loose or damaged exhaust isolators	INSPECT the exhaust isolators for wear or damage. INSTALL new isolators as necessary.
	Exhaust grounded to chassis	INSPECT for signs of exhaust components-to-body contact. REPAIR or INSTALL new components as necessary.
Whistles, boom, hum or ticking type noise — noise tends to change as the engine warms. The noises are often accompanied by exhaust fumes	Exhaust system leak	INSPECT the entire exhaust system for leaks. CHECK for punctures, loose or damaged clamps/fasteners, gaskets, sensors or broken welds. EXAMINE the chassis for grayish-white or black exhaust soot, which indicates exhaust leakage at that point. To magnify a small leak, have an assistant hold a shop towel over the tail pipe outlet while listening for a leak. REPAIR or INSTALL new components as necessary.
	Catalytic converter	MOVE the exhaust system to simulate the bouncing action of the vehicle, checking for exhaust-to-body contact while moving the exhaust system. Using a rubber mallet, TAP on the exhaust components to duplicate the noise concern. Lightly TAP on the muffler and the catalytic converter. DETERMINE if there are loose or broken baffles in the muffler, or a loose or broken element in the catalytic converter. REPAIR or INSTALL new components as necessary.

	Exhaust muffler/resonator drain hole enlarged due to corrosion	CONFIRM the drain holes are the noise source. INSTALL new components as necessary.
Hissing or rushing noise — high frequency sound and the vehicle performance is unaffected	Exhaust system Exhaust flow through pipes	CHECK the exhaust system for leaks. Using a rubber mallet, TAP on the exhaust components to duplicate the noise concern. Lightly TAP on the muffler and the catalytic converter. DETERMINE if there are loose or broken baffles in the muffler, or a loose or broken element in the catalytic converter. REPAIR or INSTALL new components as necessary.
Pinging noise — occurs when exhaust system is hot, engine turned off	Catalytic converter/exhaust system	Cool down pinging is a result of the exhaust system expanding and contracting during heating and cooling. This is a normal condition.
Vibration — occurs at idle and at low speeds. Also accompanied by a clunk or buzz type noise	Loose or damaged exhaust isolator	INSPECT the exhaust isolators for wear or damage. INSTALL new isolators as necessary.
	Loose or damaged exhaust isolator hanger brackets	INSPECT the exhaust isolator hanger brackets for wear or damage. INSTALL or REPAIR as necessary.
	Exhaust system grounded to chassis	REPAIR or INSTALL new components as necessary.
Engine drumming noise — normally accompanied by vibration	Damaged or misaligned exhaust system	INSPECT the exhaust system for loose or damaged fasteners or isolators. REPAIR or INSTALL new components as necessary.
Sputter type noise — noise worse when cold, lessens or disappears when the vehicle is at operating temperature	Damaged or worn exhaust system	INSPECT the exhaust system for leaks or damage. REPAIR as necessary.
Thumping noise — from the bottom of the vehicle, worse during acceleration	Misaligned exhaust system	CHECK the exhaust system to chassis clearance. CHECK the exhaust system isolators for damage. REPAIR as necessary.
Engine vibration — is felt with increases and decreases in engine rpm	Strain on exhaust system isolators	REPAIR or INSTALL new components as necessary.
Drumming noise — occurs inside the vehicle during idle or high idle, hot or cold. Very low-frequency drumming is very rpm dependent	Exhaust system vibration excites the body resonances inducing interior noise	REPAIR or INSTALL new components as necessary.

Exhaust System - Overview

Diesel Particulate Filter (DPF)

The Diesel Particulate Filter (DPF) system consists of the following components:

- DPF
- Pressure differential sensor
- Temperature sensor

The DPF reduces the pollution generated by diesel vehicles by filtering soot and ash particles out of the exhaust gases.

The PCM monitors the pressure differential sensor, DPF temperature sensors and other inputs to control the operation of the DPF system.

Soot particles can accumulate in the post DPF exhaust tailpipe. The accumulation of the soot particles should not be considered a concern, as the DPF is not 100% efficient at filtering the soot particles.

The amount of matter trapped in the DPF is monitored using the pressure sensor which monitors the exhaust pressure before the DPF. As the DPF fills with soot, exhaust flow through it is restricted.

When this occurs the pressure differential in the exhaust before and after the DPF will increase which will indicate to the PCM that a DPF regeneration is required to clean it.

Diesel Particulate Filter (DPF) Regeneration

During the regeneration process, it is possible that white smoke may be emitted from the exhaust tailpipe. This is an inherent by-product of the regeneration process and should not be considered a concern.

The pressure differential sensor is connected to the DPF by the pressure differential sensor line to monitor the exhaust pressure. The pressure differential sensor converts these measurements to a signal voltage, which is then sent to the PCM. The PCM uses the pressure differential sensor information to determine whether to carry out a regeneration.

The PCM will choose the optimum time for the regeneration of the DPF. Under normal operating conditions the regeneration process occurs when the PCM has calculated that the DPF requires regeneration and that predetermined vehicle conditions are met (for example coolant temperature, vehicle speed and engine load).

During the DPF regeneration the temperature of the exhaust gas increases to greater than 550C at the DPF. At this temperature soot burns. Soot particulates that may have accumulated in the diesel particulate filter are burned and the ash is trapped in the diesel particulate filter.

The ash particulates that remain in the diesel particulate filter are mainly comprised of metallic compounds generated during combustion and from corrosion in the exhaust system.

DPF Manual Regeneration

When the DPF becomes blocked a high pressure DTC sets in the PCM, the MIL is illuminated and limp home mode activated.

A blocked DPF can be a result of:

- Excessive soot particles production
- Multiple failed regeneration events
- Mechanical or electrical failure of a related system or sub-system (for example EGR valve stuck open, charge air system leak, fuel injectors)

The DPF manual regeneration function can be used to clear the soot particles from the DPF manually. To do this the

Integrated Diagnostic System (IDS) must be connected to the vehicle select Powertrain> Service Functions>PCM>Diesel Particulate Filter Static Regeneration. For additional information, refer to IDS.

Exhaust System - Overview

Diesel Particulate Filter (DPF)

The Diesel Particulate Filter (DPF) system consists of the following components:

- DPF
- Pressure differential sensor
- Temperature sensor

The DPF reduces the pollution generated by diesel vehicles by filtering soot and ash particles out of the exhaust gases.

The PCM monitors the pressure differential sensor, DPF temperature sensors and other inputs to control the operation of the DPF system.

Soot particles can accumulate in the post DPF exhaust tailpipe. The accumulation of the soot particles should not be considered a concern, as the DPF is not 100% efficient at filtering the soot particles.

The amount of matter trapped in the DPF is monitored using the pressure sensor which monitors the exhaust pressure before the DPF. As the DPF fills with soot, exhaust flow through it is restricted.

When this occurs the pressure differential in the exhaust before and after the DPF will increase which will indicate to the PCM that a DPF regeneration is required to clean it.

Diesel Particulate Filter (DPF) Regeneration

During the regeneration process, it is possible that white smoke may be emitted from the exhaust tailpipe. This is an inherent by-product of the regeneration process and should not be considered a concern.

The pressure differential sensor is connected to the DPF by the pressure differential sensor line to monitor the exhaust pressure. The pressure differential sensor converts these measurements to a signal voltage, which is then sent to the PCM. The PCM uses the pressure differential sensor information to determine whether to carry out a regeneration.

The PCM will choose the optimum time for the regeneration of the DPF. Under normal operating conditions the regeneration process occurs when the PCM has calculated that the DPF requires regeneration and that predetermined vehicle conditions are met (for example coolant temperature, vehicle speed and engine load).

During the DPF regeneration the temperature of the exhaust gas increases to greater than 550C at the DPF. At this temperature soot burns. Soot particulates that may have accumulated in the diesel particulate filter are burned and the ash is trapped in the diesel particulate filter.

The ash particulates that remain in the diesel particulate filter are mainly comprised of metallic compounds generated during combustion and from corrosion in the exhaust system.

DPF Manual Regeneration

When the DPF becomes blocked a high pressure DTC sets in the PCM, the MIL is illuminated and limp home mode activated.

A blocked DPF can be a result of:

- Excessive soot particles production
- Multiple failed regeneration events
- Mechanical or electrical failure of a related system or sub-system (for example EGR valve stuck open, charge air system leak, fuel injectors)

The DPF manual regeneration function can be used to clear the soot particles from the DPF manually. To do this the Integrated Diagnostic System (IDS) must be connected to the vehicle select Powertrain> Service Functions>PCM>Diesel Particulate Filter Static Regeneration. For additional information, refer to IDS.

Exhaust System

Symptom Chart(s)

Symptom Chart: Exhaust System

Verify the customer concern. Inspect the components of the exhaust system for obvious signs of damage or other mechanical concerns using the following chart.

Visual Inspection Chart - Mechanical

Mechanical
• Exhaust pipe pinched or crushed • Damaged muffler • Broken or damaged exhaust hanger brackets • Damaged catalytic converter • Loose or damaged heat shields

Verify the exhaust system is installed correctly, with clamps correctly located and tightened to specifications. If the fault is not visually evident, determine the symptom. GO to Symptom Chart below.

Symptom Chart

Condition	Possible Sources	Actions
Vehicle has low or no power — vehicle performance complaint	• Exhaust pipe pinched or crushed • Damaged catalytic converter • Loose obstruction in exhaust	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
	Restricted exhaust (possible frozen condensate in muffler)	CHECK drain holes for foreign material. PARK the vehicle inside to thaw. TEST the vehicle for normal operation. If the concern is still present, REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
Burning smell — usually occurs at idle, with possible traces of smoke	• Foreign material caught in exhaust system • Missing heat shields	INSPECT the exhaust system for foreign material or missing heat shields. REPAIR or INSTALL new components as necessary.
Odor — described as a sulfur or rotten egg smell	• Catalytic converter • Excessive sulfur	At times, a slight sulfur smell is normal for catalytic converters. The cause is the sulfur content in the gasoline being used. ADVISE the customer no repair is required.

	content in fuel	
	• Rich fuel conditions • Misfire conditions	REFER to the Powertrain Control/Emissions Diagnosis (PC/ED) manual.
Visible rust on surface of exhaust pipes	Catalytic converter/exhaust system	Surface rust is a characteristic of materials used on exhaust systems. Exposure to heat or road salt may result in surface rust. INSPECT for perforations. If there are no perforations, the condition is normal.

Symptom Chart: NVH

Symptom Chart

Condition	Possible Sources	Actions
Rattle, squeaks or buzz type noise — from the bottom of the vehicle	Loose or damaged heat shield	INSPECT the exhaust system for loose or missing heat shields or foreign material trapped between the heat shields and the exhaust system components. If any heat shields are loose, INSTALL worm gear clamp and tighten to specification. If the heat shields are missing or a rattle, noise or buzz condition persists, INSTALL a new heat shield or component as necessary.
	Loose or damaged exhaust isolators	VERIFY the exhaust isolators are correctly installed. INSPECT the exhaust isolators for wear or damage. INSTALL new isolators as necessary.
	Damaged exhaust isolator hanger bracket	INSPECT the exhaust system components for damage or broken hangers. INSTALL new components as necessary. CHECK for loose or damaged exhaust hanger brackets or fasteners. TIGHTEN the bolts to specification or INSTALL new components as necessary.
	Loose or damaged catalytic converter or muffler	MOVE the exhaust system to simulate the bouncing action of the vehicle, checking for exhaust-to-body contact while moving the exhaust system. Using a rubber mallet, TAP on the exhaust components to duplicate the noise concern. Lightly TAP on the muffler, then the catalytic converter. DETERMINE if there are loose or broken baffles in the muffler or a loose or broken element in the catalytic converter. REPAIR or INSTALL new components as necessary.
	Exhaust grounded to chassis	INSPECT for signs of exhaust components-to-body contact. REPAIR or INSTALL new components as necessary.
Drone or clunk type noise — from the bottom of the vehicle	Loose or damaged exhaust isolators	INSPECT the exhaust isolators for wear or damage. INSTALL new isolators as necessary.
	Exhaust grounded to chassis	INSPECT for signs of exhaust components-to-body contact. REPAIR or INSTALL new components as necessary.
Whistles, boom, hum or ticking type noise — noise tends to change as the engine warms. The noises are often accompanied by exhaust fumes	Exhaust system leak	INSPECT the entire exhaust system for leaks. CHECK for punctures, loose or damaged clamps/fasteners, gaskets, sensors or broken welds. EXAMINE the chassis for grayish-white or black exhaust soot, which indicates exhaust leakage at that point. To magnify a small leak, have an assistant hold a shop towel over the tail pipe outlet while listening for a leak. REPAIR or INSTALL new components as necessary.
	Catalytic converter	MOVE the exhaust system to simulate the bouncing action of the vehicle, checking for exhaust-to-body contact while moving the exhaust system. Using a rubber mallet, TAP on the exhaust components to duplicate the noise concern. Lightly TAP on the muffler and the catalytic converter. DETERMINE if there are loose or broken baffles in the muffler, or a loose or broken element in the catalytic converter. REPAIR or INSTALL new components as necessary.

	Exhaust muffler/resonator drain hole enlarged due to corrosion	CONFIRM the drain holes are the noise source. INSTALL new components as necessary.
Hissing or rushing noise — high frequency sound and the vehicle performance is unaffected	Exhaust system Exhaust flow through pipes	CHECK the exhaust system for leaks. Using a rubber mallet, TAP on the exhaust components to duplicate the noise concern. Lightly TAP on the muffler and the catalytic converter. DETERMINE if there are loose or broken baffles in the muffler, or a loose or broken element in the catalytic converter. REPAIR or INSTALL new components as necessary.
Pinging noise — occurs when exhaust system is hot, engine turned off	Catalytic converter/exhaust system	Cool down pinging is a result of the exhaust system expanding and contracting during heating and cooling. This is a normal condition.
Vibration — occurs at idle and at low speeds. Also accompanied by a clunk or buzz type noise	Loose or damaged exhaust isolator	INSPECT the exhaust isolators for wear or damage. INSTALL new isolators as necessary.
	Loose or damaged exhaust isolator hanger brackets	INSPECT the exhaust isolator hanger brackets for wear or damage. INSTALL or REPAIR as necessary.
	Exhaust system grounded to chassis	REPAIR or INSTALL new components as necessary.
Engine drumming noise — normally accompanied by vibration	Damaged or misaligned exhaust system	INSPECT the exhaust system for loose or damaged fasteners or isolators. REPAIR or INSTALL new components as necessary.
Sputter type noise — noise worse when cold, lessens or disappears when the vehicle is at operating temperature	Damaged or worn exhaust system	INSPECT the exhaust system for leaks or damage. REPAIR as necessary.
Thumping noise — from the bottom of the vehicle, worse during acceleration	Misaligned exhaust system	CHECK the exhaust system to chassis clearance. CHECK the exhaust system isolators for damage. REPAIR as necessary.
Engine vibration — is felt with increases and decreases in engine rpm	Strain on exhaust system isolators	REPAIR or INSTALL new components as necessary.
Drumming noise — occurs inside the vehicle during idle or high idle, hot or cold. Very low-frequency drumming is very rpm dependent	Exhaust system vibration excites the body resonances inducing interior noise	REPAIR or INSTALL new components as necessary.

Fuel System - Overview

Overview

The fuel system consists of:

- A mechanical returnless fuel system.
- An 80L cigar shaped fuel tank.
- A fuel filler pipe with a vented cap.
- A fuel filter with return line back to fuel tank.
- Fuel vapour tubes and evaporative system.
- Fuel feed lines.
- A fuel delivery module containing:
  - A fuel pump with integrated jet pump.
  - A pressure regulator.
  - A serviceable fuel level sender.

Fuel Pump Shut-off Feature

In the event of a moderate to severe collision, the vehicle is equipped with a Fuel Pump and Sender Shut-off Feature that is initiated by the event notification signal.

The event notification signal is a signal provided by the RCM to the FPDM. Signal communication between the RCM and the FPDM allows the PCM to shut-off the Fuel Pump.

Should the vehicle shut off after a collision due to this feature, the vehicle may be restarted by first turning the ignition to the OFF position and then turn the ignition to the ON position. In some instances the vehicle may not start the first time and may take one additional ignition cycle.

Fuel System

Symptom Chart(s)

Symptom Chart: Fuel System

Diagnostics in this manual assume a certain skill level and knowledge of Ford-specific diagnostic practices.
REFER to: Diagnostic Methods (100-00 General Information, Description and Operation).
for information regarding Ford-specific diagnostic practices.

NOTE: *The following procedure diagnoses a slow to fill concern only. For all other concerns, refer to Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.*

Symptom Chart

Condition	Possible Sources	Actions
Slow to fill	• Fuel tank filler pipe • Fuel tank filler pipe vent tube, if equipped • EVAPsystem • Fuel tank inlet check valve (part of the fuel tank) • Fuel level vent valve (part of the fuel tank)	GO to Pinpoint Test A
All other fuel system concerns	Fuel system components	Refer to Powertrain Control/Emissions Diagnosis (PC/ED) manual.

Diagnostic Routine(s)

Slow to Fill

Normal Operation and Fault Conditions

Under normal operation, fuel should flow at a steady rate through the fuel tank filler pipe into the fuel tank. As fuel enters the fuel tank air is vented through the evaporative system.

PINPOINT TEST A : SLOW TO FILL

A1 CHECK COMPONENTS FOR SIGNS OF DAMAGE

- Visually inspect the following components for signs of damage:
  - Fuel tank filler pipe
  - Fuel tank filler pipe vent tube, if equipped
  - EVAP system
  - Fuel tank inlet check valve (part of the fuel tank)
  - Fuel level vent valve (part of the fuel tank)

Was the cause of the concern found?

Yes	REPAIR or INSTALL new components to correct the concern.
No	GO to A2

A2 CHECK THE FUEL TANK FILLER PIPE ASSEMBLY FOR BLOCKAGE OR RESTRICTION

- Remove the fuel tank filler pipe assembly.

REFER to: Fuel Tank Filler Pipe - Chassis Cab (310-01A Fuel Tank and Lines - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).

- Inspect the fuel tank filler pipe and fuel tank filler pipe vent tube (if equipped) for a blockage or restriction.

Is the fuel tank filler pipe or fuel tank filler pipe vent tube (if equipped) blocked or restricted?

Yes	If possible, REPAIR the blockage or restriction. If the blockage or restriction cannot be repaired, INSTALL a new fuel tank filler pipe or fuel tank filler pipe vent tube.
No	GO to A3

A3 CHECK THE FUEL TANK INLET CHECK VALVE

- Inspect the fuel tank inlet check valve for restriction or sticking.

Is the fuel tank inlet check valve restricted or sticking?

Yes	If possible, REPAIR the restriction. If the restriction cannot be repaired, INSTALL a new fuel tank. REFER to: Fuel Tank - Chassis Cab (310-01A Fuel Tank and Lines - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).
No	INSTALL a new fuel tank. REFER to: Fuel Tank - Chassis Cab (310-01A Fuel Tank and Lines - 2.5L Duratec-HE (122kW/165PS) - MI4, Removal and Installation).

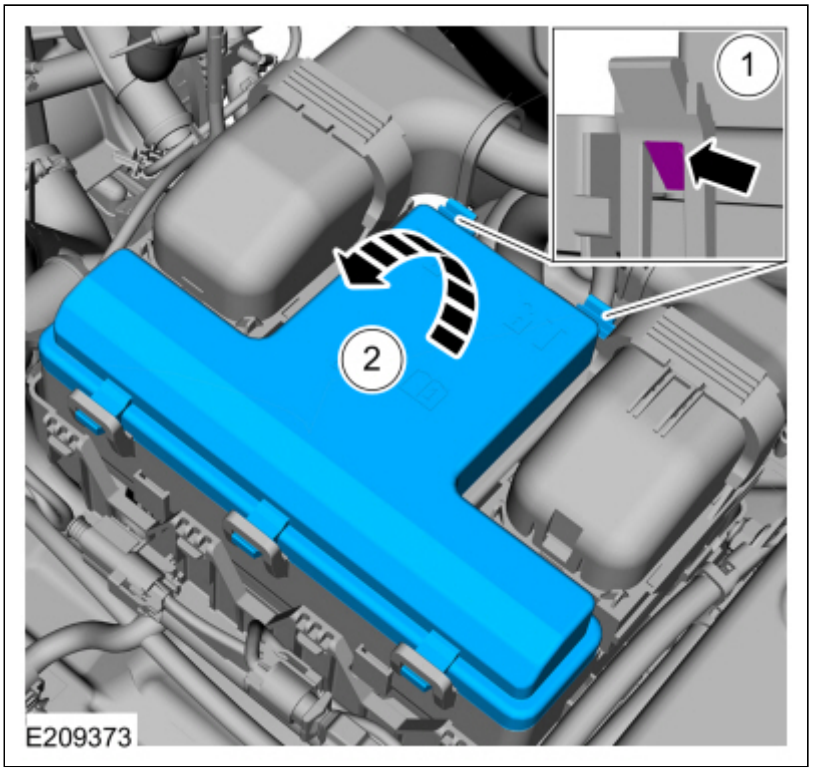
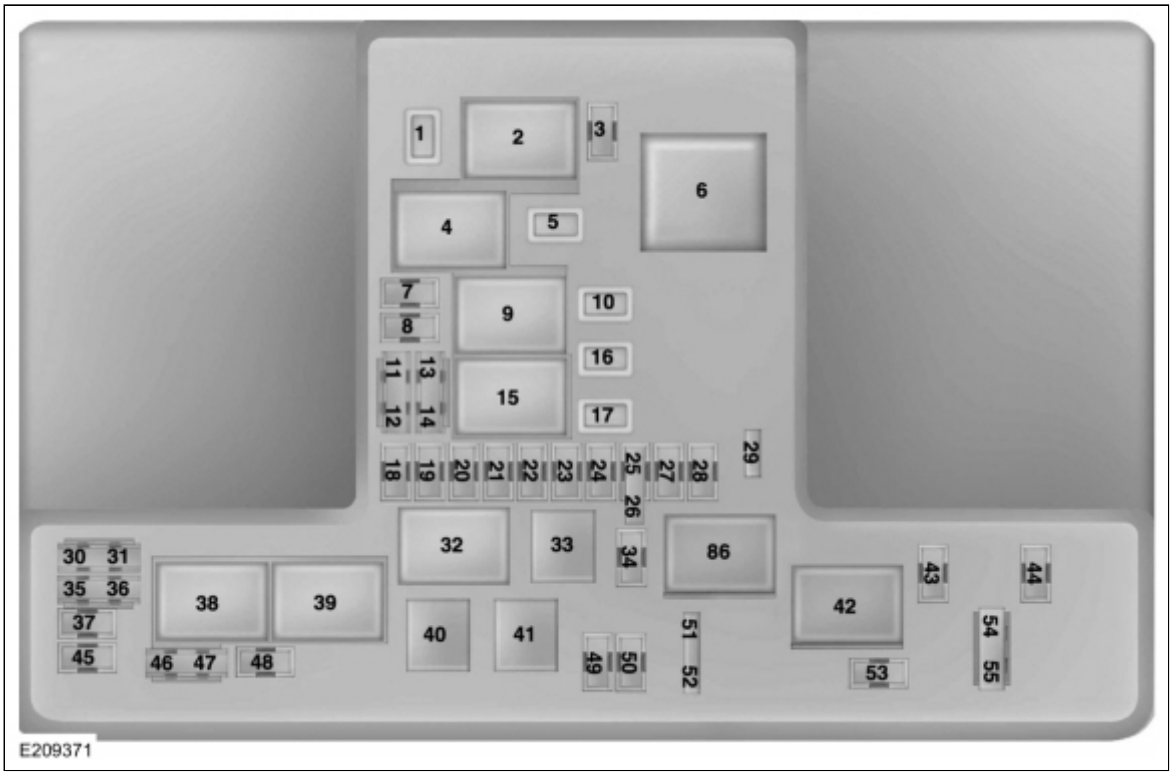
Fuel System Pressure Release



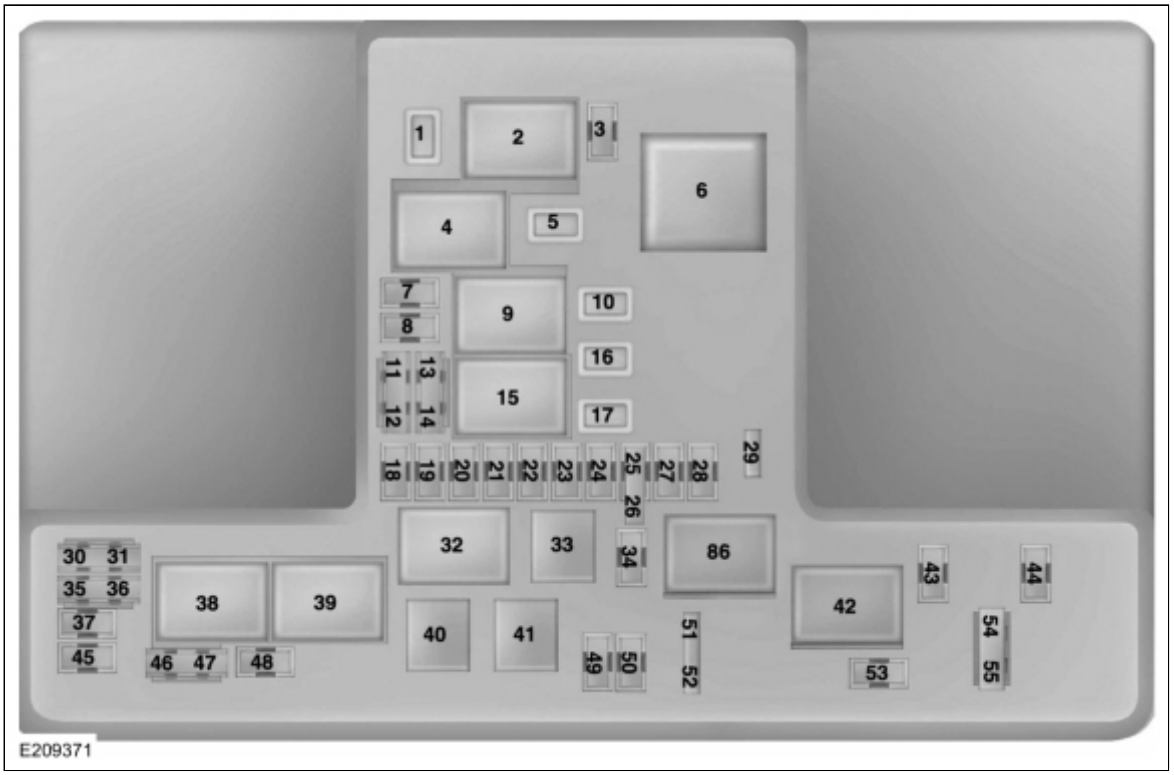
Pressure release

WARNING: Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.



WARNING: Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.



WARNING: When handling fuel, always observe fuel handling precautions and be prepared in the event of fuel spillage. Spilled fuel may be ignited by hot vehicle components or other ignition sources. Failure to follow these instructions may result in serious personal injury.

1. Refer to: Gasoline and Gasoline-Ethanol Fuel Systems Health and Safety Precautions (100-00 General Information, Description and Operation).
   Refer to: Diesel Fuel System Health and Safety Precautions (100-00 General Information, Description and Operation).
2. 

3. Remove the fuse F32 (fuel pump relay) from the junction box panel.

4. Start and run the engine at idle speed until the engine stops.
5. After the engine stalls, crank the engine for approximately 5 seconds to make sure the fuel rail pressure has been released.
6. Turn the ignition switch to the OFF position.
7. When the fuel system service is complete, install the fuse F32 (fuel pump relay) to the junction box panel.

8. Cycle the ignition key and wait 3 seconds to pressurize the fuel system. Check for leaks before starting the engine.
9. Start the vehicle and check the fuel system for leaks.

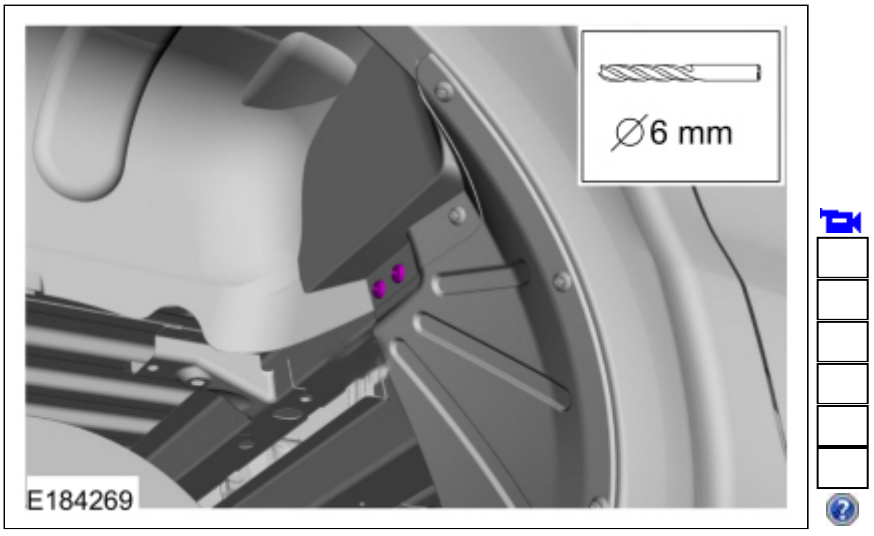
Fuel Tank Draining

Special Tool(s) / General Equipment

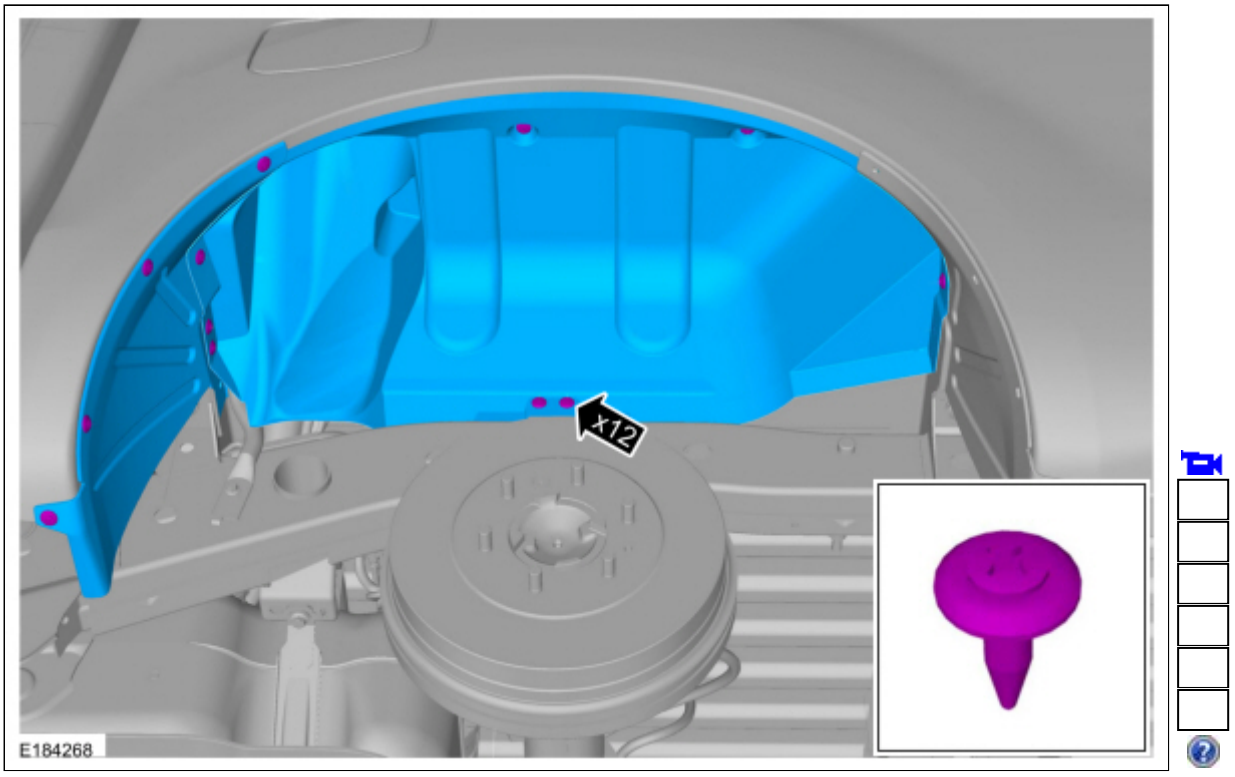
Fuel Tank Draining Equipment
6 mm Drill Bit

Draining



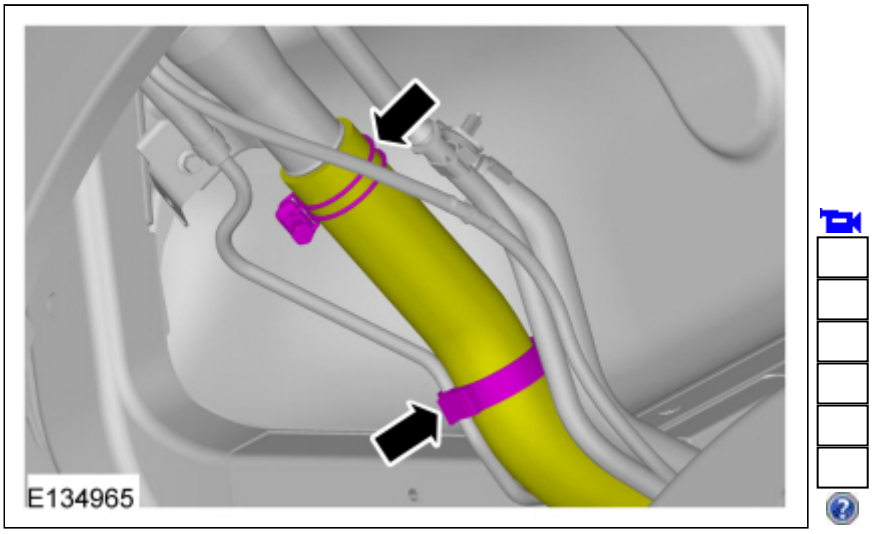
WARNING: Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.



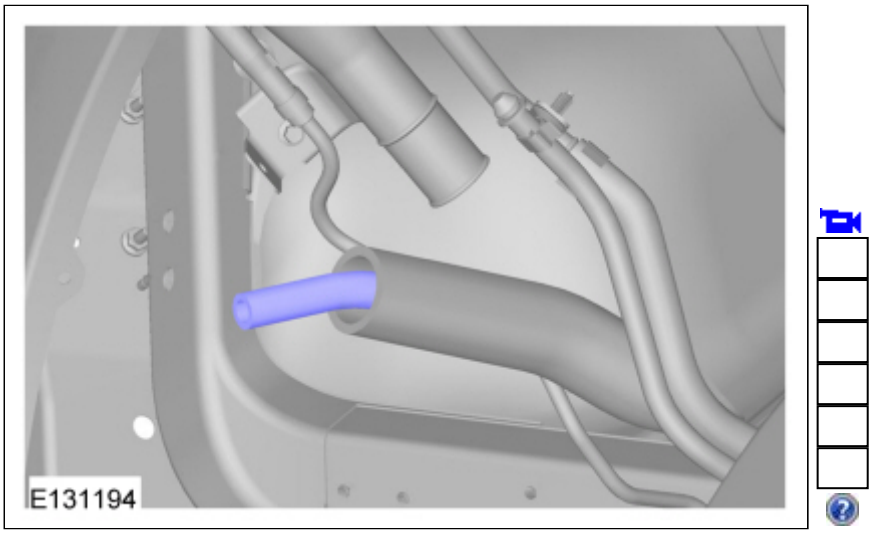
WARNING: When handling fuel, always observe fuel handling precautions and be prepared in the event of fuel spillage. Spilled fuel may be ignited by hot vehicle components or other ignition sources. Failure to follow these instructions may result in serious personal injury.

WARNING: Remove the fuel filler cap slowly. The fuel system may be under pressure. If the fuel filler cap is venting vapor or if you hear a hissing sound, wait until it stops before completely removing the fuel filler cap. Otherwise, fuel may spray out. Failure to follow these instructions may result in serious personal injury.

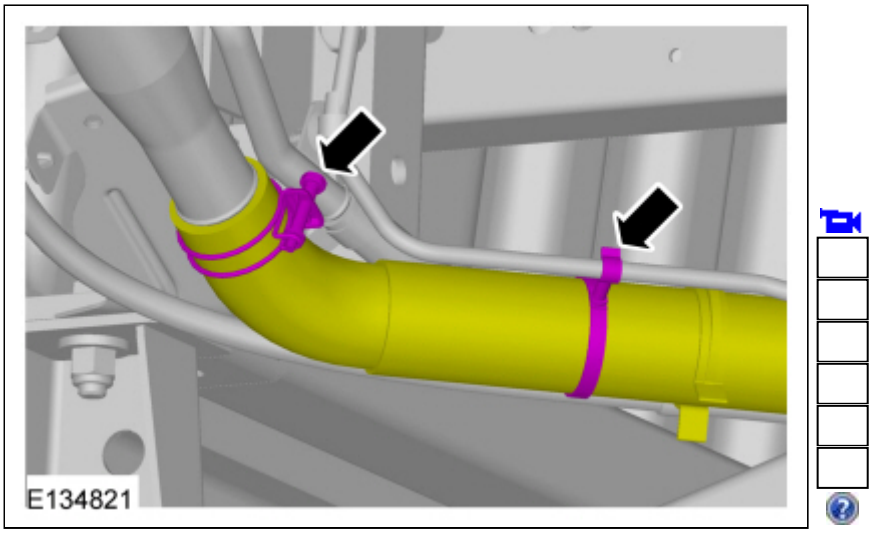


1. Refer to: Gasoline and Gasoline-Ethanol Fuel Systems Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
3. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
4. Remove the left-hand rear wheel and tire.
   Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).
5. Use the General Equipment: 6 mm Drill Bit

6.

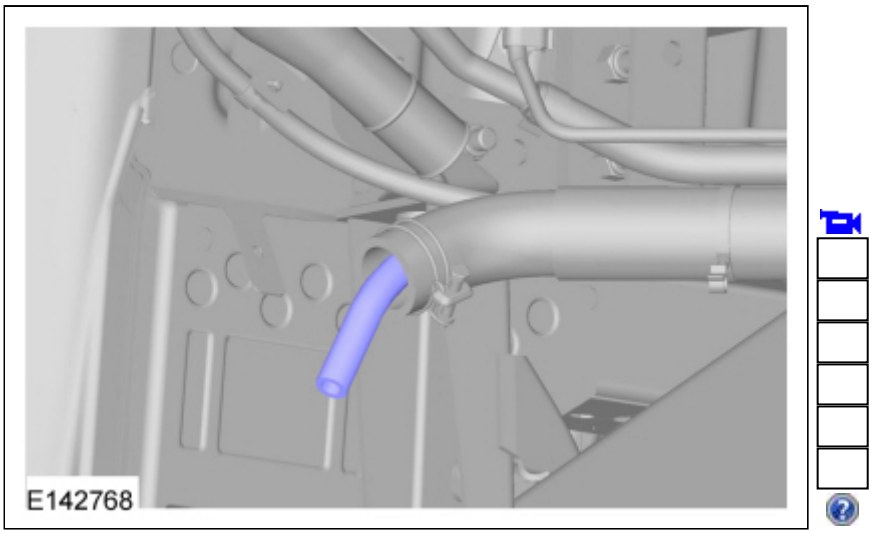


7. **NOTE:** *Make sure that the clamp is installed to the same orientation as when removed.*



8. **NOTE:** *Follow the operating instructions supplied by the equipment manufacturer.*

   Use the General Equipment: Fuel Tank Draining Equipment



NOTE: *Vehicles with aluminium tray.*

9. **NOTE:** *Make sure that the clamp is installed to the same orientation as when removed.*

10. **NOTE:** *Follow the operating instructions supplied by the equipment manufacturer.*

    Use the General Equipment: Fuel Tank Draining Equipment

Quick Release Coupling

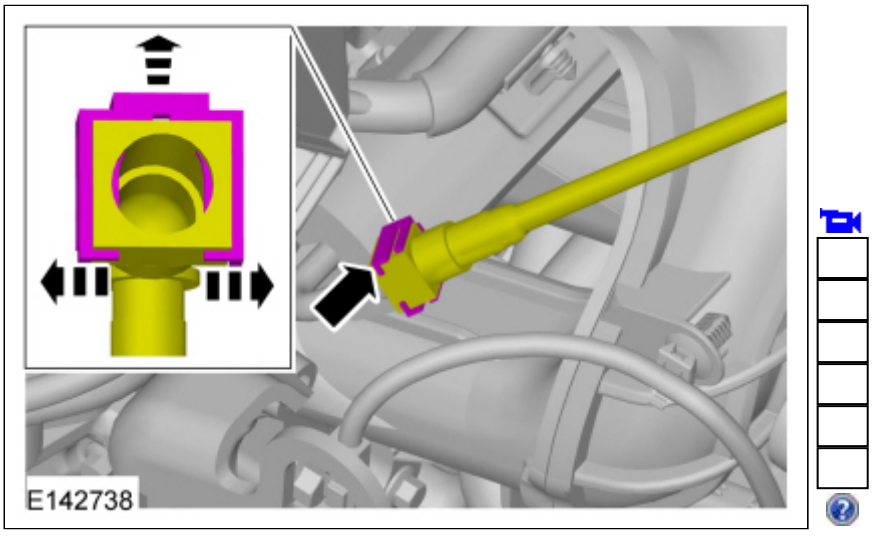
Disconnect

WARNING: Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

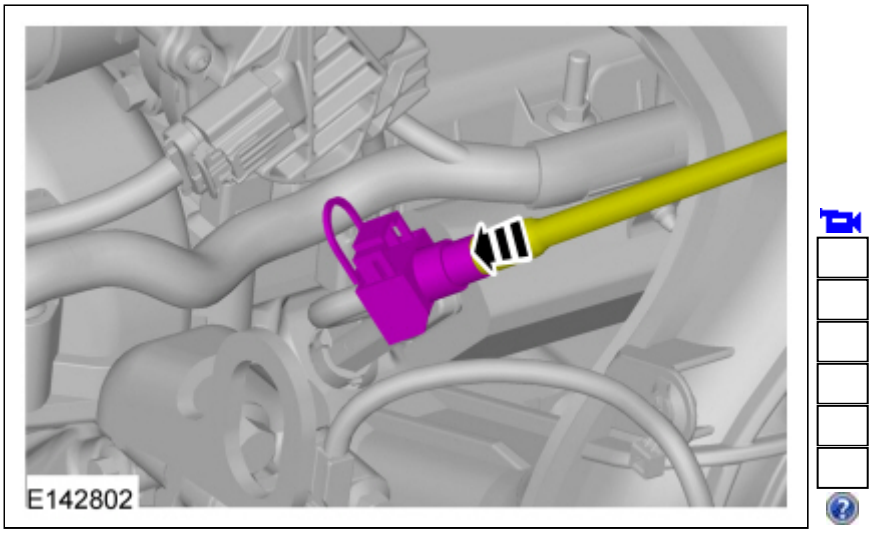
WARNING: When handling fuel, always observe fuel handling precautions and be prepared in the event of fuel spillage. Spilled fuel may be ignited by hot vehicle components or other ignition sources. Failure to follow these instructions may result in serious personal injury.



WARNING: Remove the fuel filler cap slowly. The fuel system may be under pressure. If the fuel filler cap is venting vapor or if you hear a hissing sound, wait until it stops before completely removing the fuel filler cap. Otherwise, fuel may spray out. Failure to follow these instructions may result in serious personal injury.

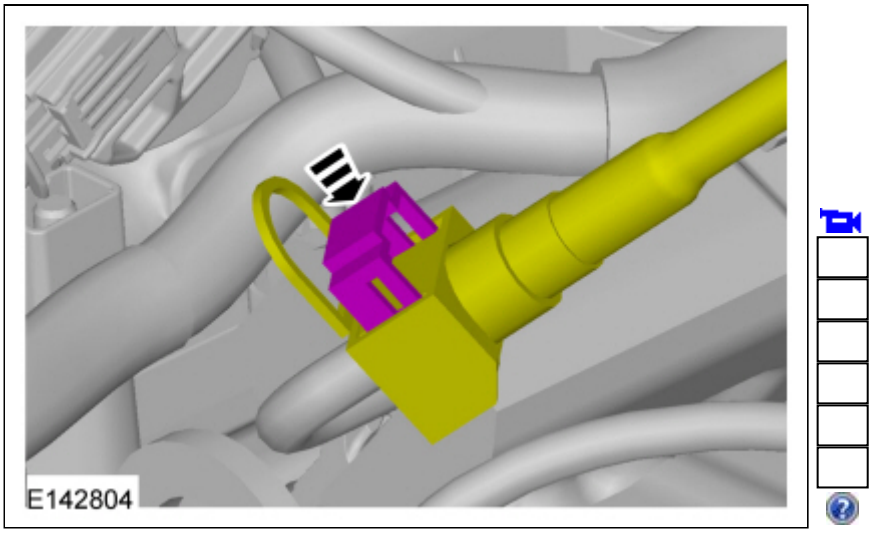
WARNING: Do not repair the fuel lines. If the fuel lines are found to damaged, a new component must be installed.

NOTE: *Fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is essential that absolute cleanliness is observed when working with these components or component damage may occur. Always install blanking plugs to any open orifices or tubes.*



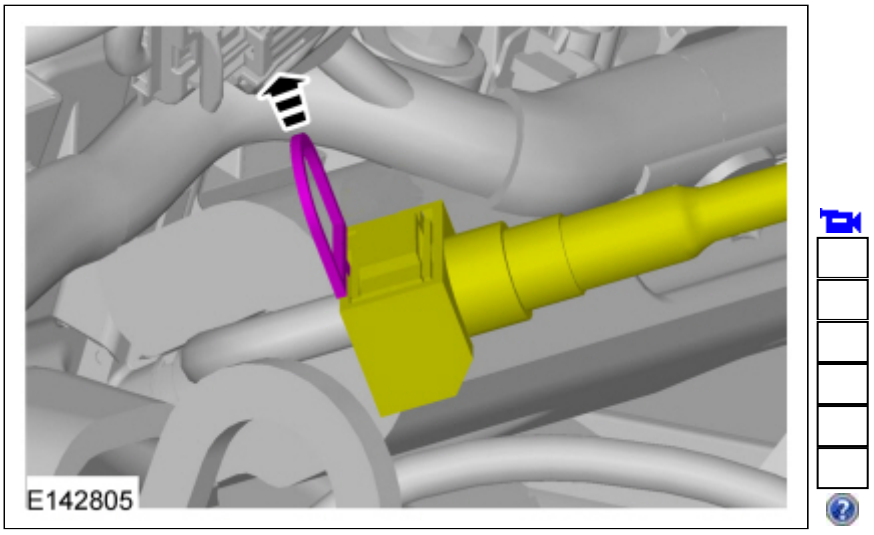
NOTE: *When reusing liquid or vapor tube connectors, make sure to use compressed air to remove any foreign material from the connector retaining clip area before separating from the tube or damage to the tube or connector retaining clip may occur. Apply clean engine oil to the end of the tube before inserting the tube into the connector.*

1. Refer to: Fuel System Pressure Release (310-00A Fuel System - General Information - 2.5L Duratec-HE (122kW/165PS) - MI4, General Procedures).
2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
3.



Connect

1.



2.

3. **WARNING: Make sure that all fuel connections are checked for leaks.**

   NOTE: *This step is only neccessary if a new component is installed.*

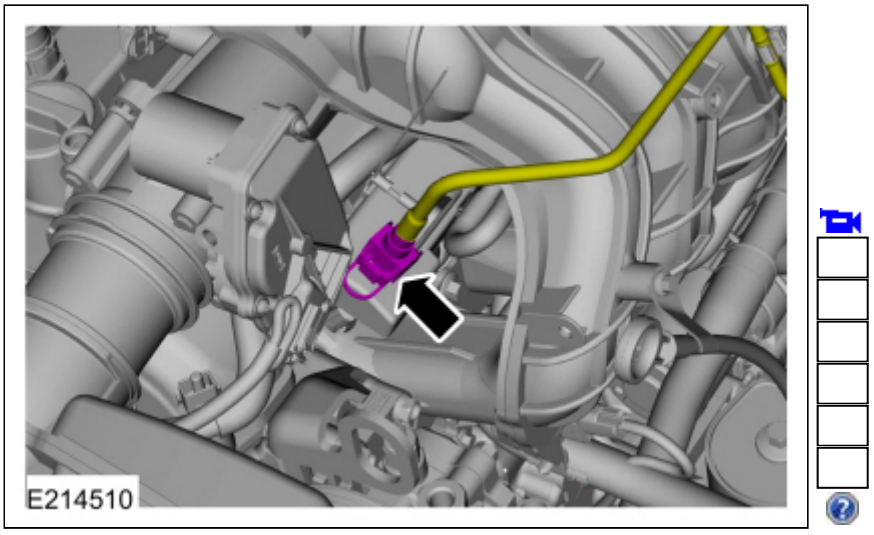
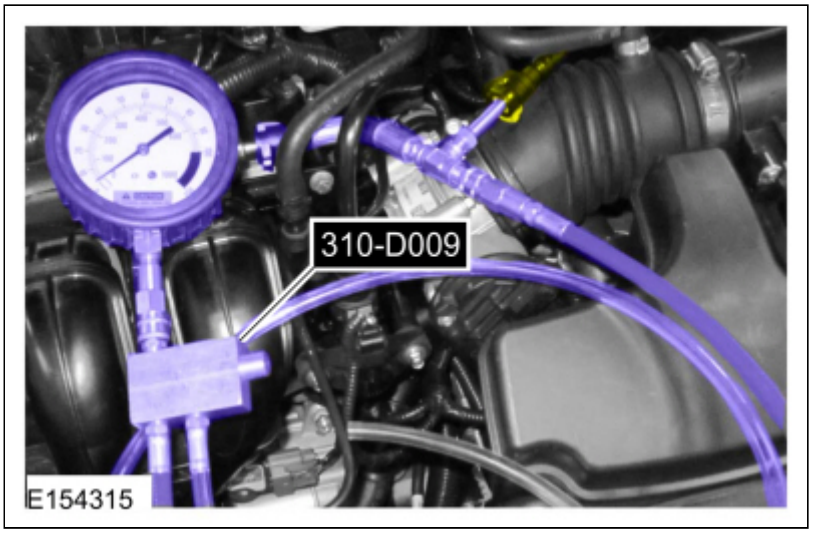
Fuel System Pressure Check



Special Tool(s) / General Equipment

	310-D009 (D95L-7211-A) Fuel Pressure Test Kit



Check

WARNING: Before beginning any service procedure in this section, refer to Safety Warnings in section 100-00 General Information. Failure to follow this instruction may result in serious personal injury.

1. Refer to: Gasoline and Gasoline-Ethanol Fuel Systems Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Fuel System Pressure Release (310-00A Fuel System - General Information - 2.5L Duratec-HE (122kW/165PS) - MI4, General Procedures).
3. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
4. **NOTICE: Fuels containing ethanol have a corrosive effect on other materials such as plastic, paint and metal.**

   Refer to: Quick Release Coupling (310-00A Fuel System - General Information - 2.5L Duratec-HE (122kW/165PS) - MI4, General Procedures).
5. 

6. Use Special Service Tool: 310-D009 (D95L-7211-A) Fuel Pressure Test Kit.

7. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
8. **NOTE:** *Carry out a Key ON Engine OFF (KOEO) visual inspection for fuel leaks prior to completing the fuel system pressure test.*

   NOTE: *After completion of the fuel system pressure test, open the drain valve on the Fuel Pressure Test Kit and release any residual fuel into a suitable container prior to removing the tool.*

   Refer to: Specifications (310-00A Fuel System - General Information - 2.5L Duratec-HE (122kW/165PS) - MI4, Specifications).

Fuel System

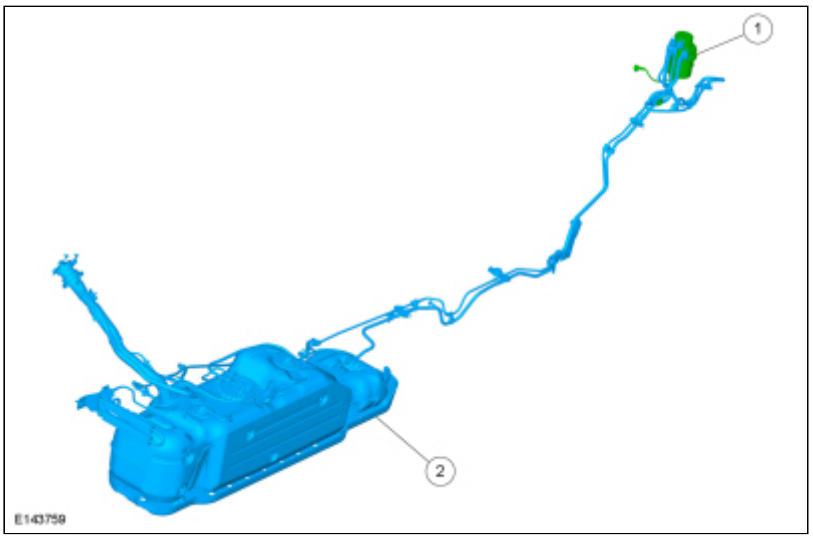
Overview

The fuel system consists of:

- A mechanical return fuel system.
- An 80L cigar shaped fuel tank.
- A fuel filler pipe with a vented cap.
- Fuel feed & return lines
- A fuel filter with bi-metallic valve (for recirculation) and water in fuel sensor.
- Fuel vapour tubes.
- A diesel delivery module containing:
  - A fuel pump.
  - With Jet pump and 50kPa pressure relief valve.
  - A serviceable fuel level sender.
  - A low level fuel switch.

Fuel Pump Shut-off Feature

In the event of a moderate to severe collision, the vehicle is equipped with a Fuel Pump and Sender Unit Shut-off Feature that is initiated by the event notification signal.



The event notification signal is a signal provided by the RCM to the Fuel Pump Control Module. Signal communication between the RCM and the Fuel Pump Control Module allows the PCM to shut-off the Fuel Pump.

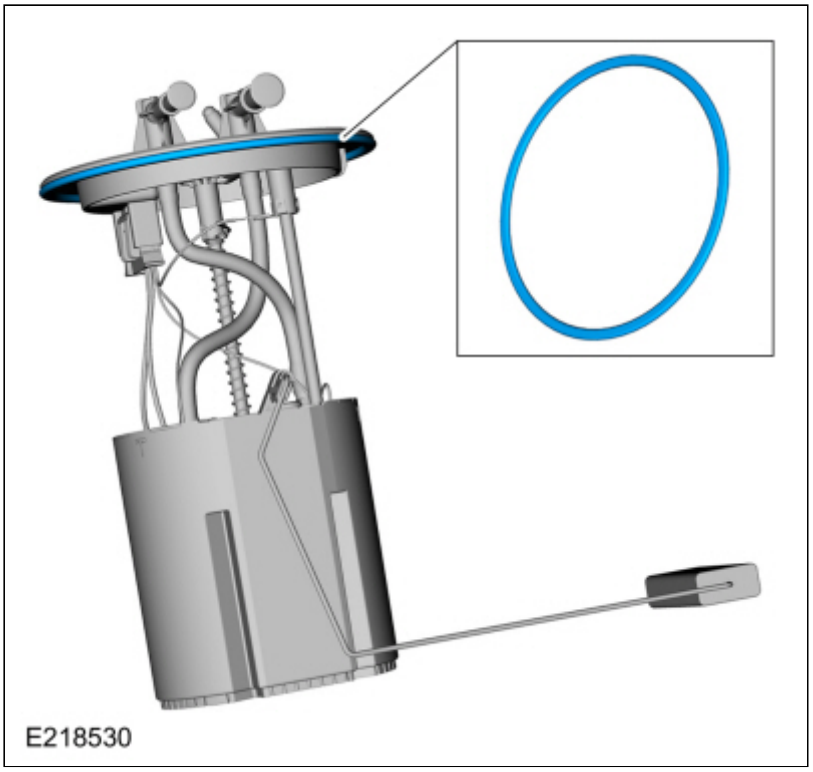
Should the vehicle shut off after a collision due to this feature, the vehicle may be restarted by first turning the ignition to the OFF position and then turn the ignition to the ON position. In some instances the vehicle may not start the first time and may take one additional ignition cycle.

Copyright © 2016 Ford Motor Company

Fuel System - Overview

Diesel Fuel System

The Fuel System comprises of :



- Fuel tank
- Supply and return lines
- Fuel tank vent valves
- Fuel pump and sender unit
- Fuel filter
- Fuel filler

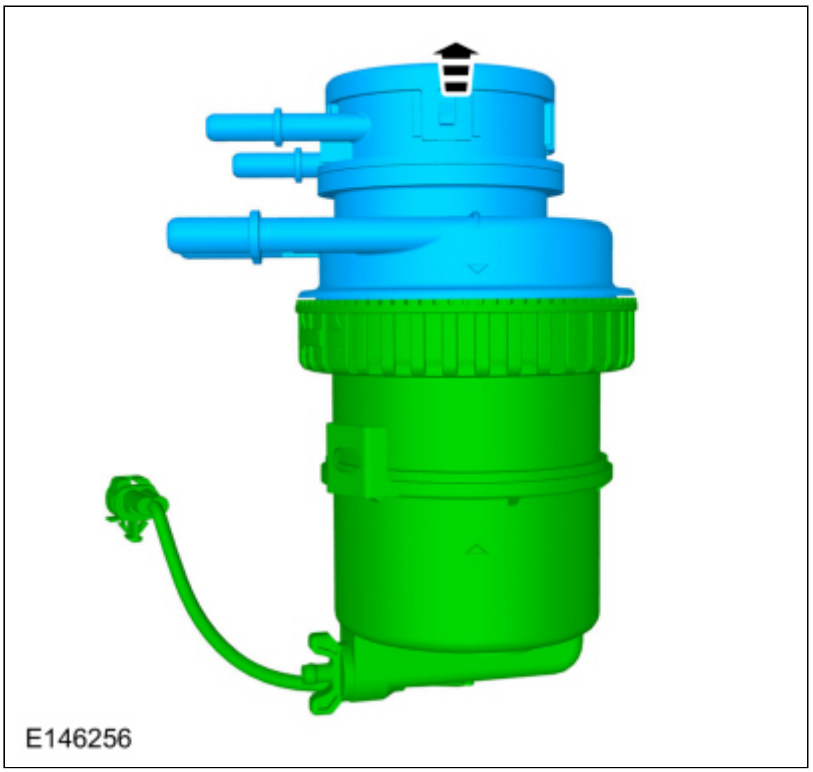
Fuel Tank

The fuel tank is of plastic construction and is secured to the vehicle by two metal support straps, which are bolted to the chassis side rail.

NOTE: *The diesel fuel tank must contain at least 4 litres of fuel before the fuel pump is operated. Running the fuel pump with less than 4 litres of fuel will cause damage to the fuel pump.*

Fuel Pump and Sender Unit

The pump and sender unit is located in the top of the fuel tank and is retained by a locking ring and seal. The fuel pump is attached to the fuel pump and sender unit flange by spring loaded guide bars, which ensure that the fuel pump is seated against the base of the fuel tank when installed.

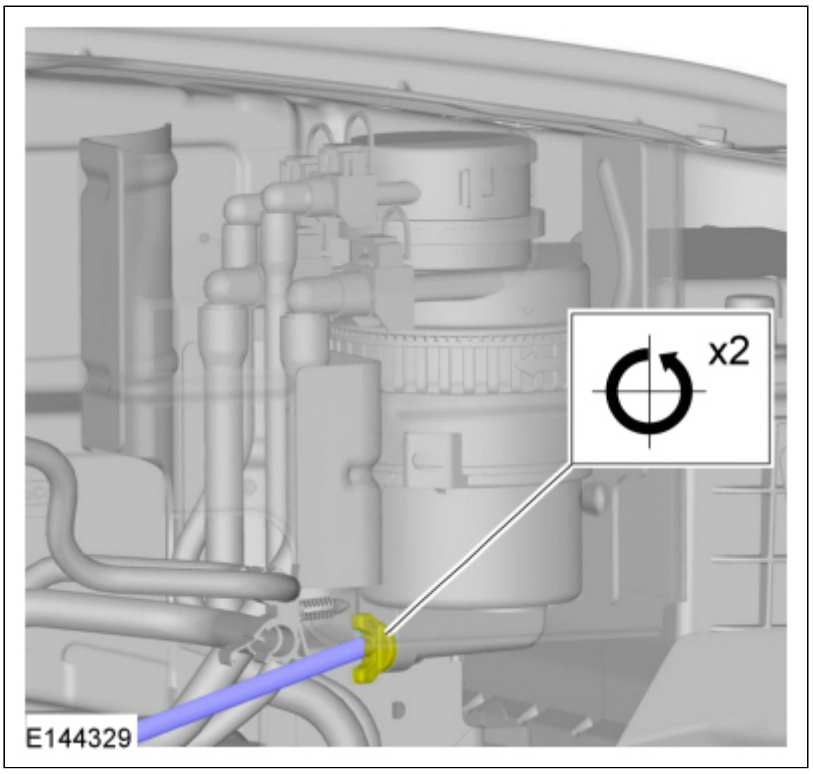


The electric fuel pump delivers fuel to the high pressure mechanical fuel pump.

The fuel level sender consists of a mechanical float attached to a variable resistor card by means of a rigid wire lever.

The base of the fuel pump and sender unit is a chamber that sits in the swirl bowl at the bottom of the fuel tank.

The fuel pump and sender unit also incorporates a fuel jet pump. Fuel from the fuel charging system is passed through a venturi in the jet pump which causes a pressure drop across an open orifice. This draws in fuel through the base of the unit which then passes through the fuel supply tube.



Fuel Filter

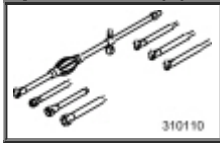
The diesel fuel filter separates air, water and other contaminants from fuel, in addition to retaining system back

pressure.

The upper section of the filter incorporates the recirculation valve and the return valve. The recirculation valve controls the flow of warm return fuel from the engine. When fuel temperature drops below 20 C, the valve opens to direct return fuel to the filter, warming the fuel to prevent waxing. When fuel temperature reaches 33 C, the valve closes and return fuel is directed back to the fuel tank.

Water trapped in the fuel filter can be removed by attaching a suitable length of hose to the drain plug and draining it into a suitable container. Refer to the workshop manual for further instructions.

Fuel Filler



The fuel tank filler neck incorporates a fuel tank breather hose. The fuel tank breather hose is connected to the top of the fuel tank and exits just below the top of the fuel tank filler neck. The fuel tank breather hose allows the displaced vapor above the fuel in the fuel tank to escape, avoiding fuel "spit back" and premature shut off during refueling.

The fuel filler cap seals to the fuel filler neck. This is to prevent the escape of fuel vapor during normal operation and to prevent fuel loss in the event of a vehicle accident.

Pinpoint Tests

PINPOINT TEST A : AIR INGRESS INTO THE FUEL LINES

A1 CHECK FOR AIR INGRESS INTO THE FUEL SYSTEM
WARNING: Do not smoke or carry lighted tobacco of any type when working on or near any fuel

WARNING: Do not smoke or carry lighted tobacco of any type when working on or near any fuel related components. Highly flammable mixtures are always present and may ignite. Failure to follow these instructions may result in personal injury.

WARNING: This procedure involves fuel handling. Be prepared for fuel spillage at all times and always observe fuel handling precautions. Failure to follow this instruction may result in personal injury.

NOTICE: Diesel fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is therefore essential that absolute cleanliness is observed when working with these components. Always install blanking plugs to any open orifices or lines.

NOTICE: Always carry out the cleaning process before carrying out any repairs to the fuel system components to prevent foreign material ingress to the components.

- Disconnect the fuel filter fuel supply line quick release coupling.
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
- Using a suitable piece of clear plastic pipe, manufacture and install a pipe between the fuel filter fuel supply line and the fuel filter.
- Start the engine, wait a few minutes and observe the clear plastic pipe for signs of air ingress.

Are any signs of air present in the clear plastic pipe?

Yes	GO to A2
No	For additional diagnostics, REFER to: Fuel Charging and Controls (303-04B Fuel Charging and Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Diagnosis and Testing). REFER to: Fuel Charging and Controls (303-04C Fuel Charging and Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Diagnosis and Testing).

A2 CHECK WHERE AIR IS ENTERING THE SYSTEM

- Using suitable clean engine oil, apply the oil to each of the fuel supply line and fuel return line connections, unions and joints in turn and observe the clear plastic pipe for visible signs of air after each oil application.

Did the amount of air in the clear plastic fuel pipe decrease when any of the connectors, unions or joints were oiled?

Yes	INSTALL a new fuel pipe(s) as necessary. Test the system for normal operation.
No	GO to A3

A3 CHECK THE FUEL LEVEL SENSOR FOR AIR INGRESS

- Drain the fuel tank.
  REFER to: Fuel Tank Draining (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
- Fill the fuel tank with 10 liters of diesel.
- Disconnect the fuel filter to fuel pump fuel supply line quick release coupling.
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
- Using a suitable piece of clear plastic pipe, manufacture and install a pipe between the fuel filter to fuel pump fuel supply line and the fuel filter.
- **NOTE:** *Make sure that the engine is at normal operating temperature.*

  Start the engine, wait a few minutes and observe the clear plastic pipe for signs of air ingress.

Are any signs of air present in the clear plastic pipe?

Yes	INSTALL a new fuel level sensor or fuel tank to fuel filter supply pipe as necessary.
No	INSTALL a new fuel filter. REFER to: Fuel Filter (310-01B Fuel Tank and Lines - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Fuel Filter (310-01B Fuel Tank and Lines - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

PINPOINT TEST B : FUEL FILTER FUEL SUPPLY LINE BLOCKAGE

B1 CHECK THE FUEL FILTER FUEL SUPPLY LINE FOR BLOCKAGE

WARNING: Do not smoke or carry lighted tobacco of any type when working on or near any fuel related components. Highly flammable mixtures are always present and may ignite. Failure to follow these instructions may result in personal injury.

WARNING: This procedure involves fuel handling. Be prepared for fuel spillage at all times and always observe fuel handling precautions. Failure to follow this instruction may result in personal injury.

NOTICE: Diesel fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is therefore essential that absolute cleanliness is observed when working with these components. Always install blanking plugs to any open orifices or lines.

NOTICE: Always carry out the cleaning process before carrying out any repairs to the fuel injection system components to prevent foreign material ingress to the components.

- Disconnect the fuel filter fuel supply line quick release coupling.
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
- **NOTE:** *Make sure that the hand pressure pump arrow indicating the direction of fuel flow is pointing towards the fuel filter.*

  Install the special tool between the fuel filter fuel supply line quick release coupling and the fuel filter union.
- Operate the hand pressure pump at least 30 times.
- Disconnect the fuel pump fuel return line quick release coupling.
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
  REFER to: Quick Release Coupling (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).
- Using a suitable piece of clear plastic pipe, manufacture and install a pipe between the fuel pump fuel return line and the fuel return line union.
- Observe the flow of fuel in the clear plastic pipe.

Does the fuel from the fuel tank flow freely with no restrictions?

Yes	GO to Pinpoint Test A
No	REPAIR or INSTALL a new fuel filter fuel supply line as necessary.

Diesel Filter Water Drain-Off

WARNING: Fuel vapor is hazardous. It can easily ignite, causing serious injury and damage. Always keep sparks and flames away from fuel.

WARNING: A person charged with static electricity could cause a fire or explosion, resulting in death or serious injury. Before performing work on the fuel system, discharge static electricity by touching the vehicle body.

WARNING: Avoid fuel line spills and leaks by completing the following procedure.

1. For additional information, refer to: Diesel Fuel System Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Attach a suitable length of hose to the drain plug and place it into a suitable container.
3. 

4. **WARNING: If fuel does not pass through the fuel filter, foreign material may have penetrated in the supply pump, and this may cause a malfunction resulting in damage to the fuel injection pump.**

   WARNING: Be prepared to collect escaping fluids under pressure.

   Turn ignition ON. Wait for a minimum of 5 seconds, this purges the water and fuel from the filter.
5. Tighten the drain plug and remove the hose and container.

Copyright © 2016 Ford Motor Company

Fuel System Bleeding

Bleeding

1. Turn the ignition key to ON position. Wait for 45 seconds.
2. Start the engine and hold at 1500 rpm.
3. Wait for 20 seconds.
4. If the engine is running smoothly, reduce the rpm to idle speed.
5. Check fuel leaks.
6. Switch the engine off.

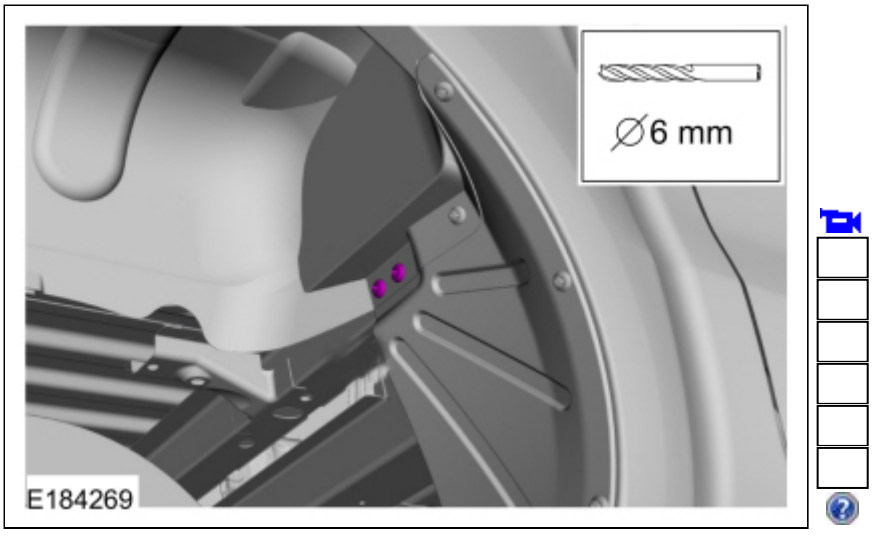
Fuel Tank Draining

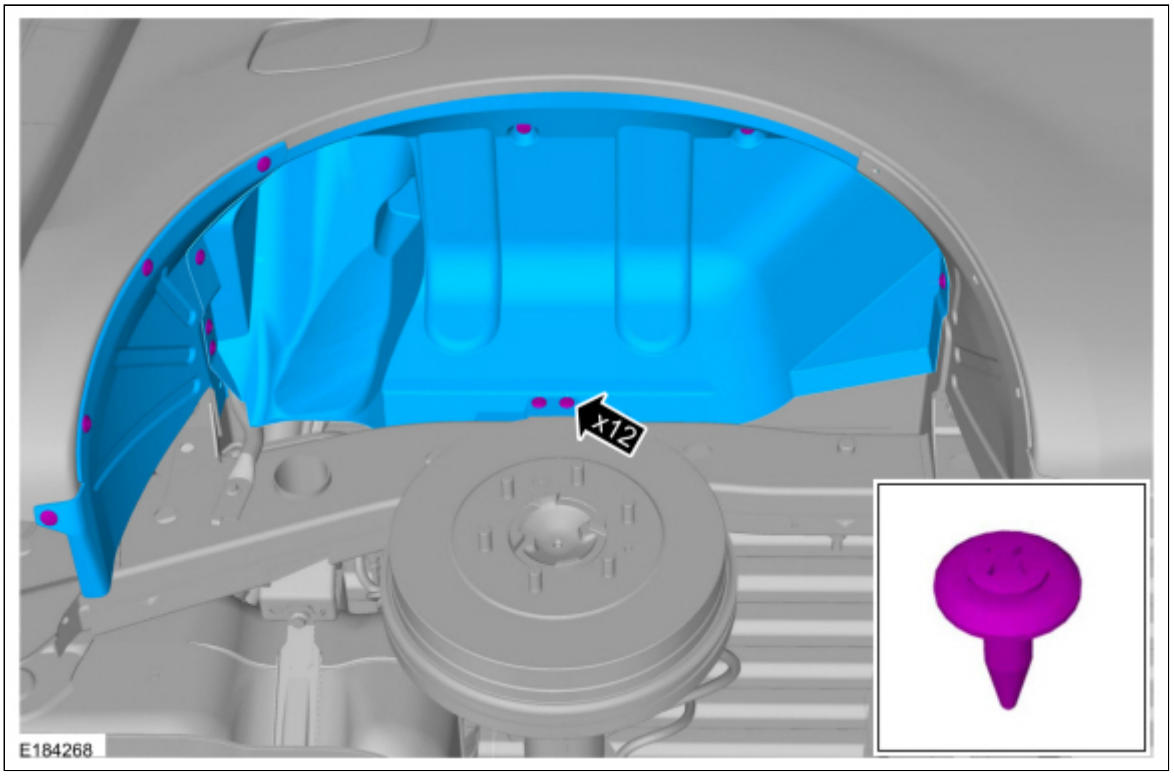
Special Tool(s) / General Equipment

10 mm Drill Bit
Fuel Tank Draining Equipment



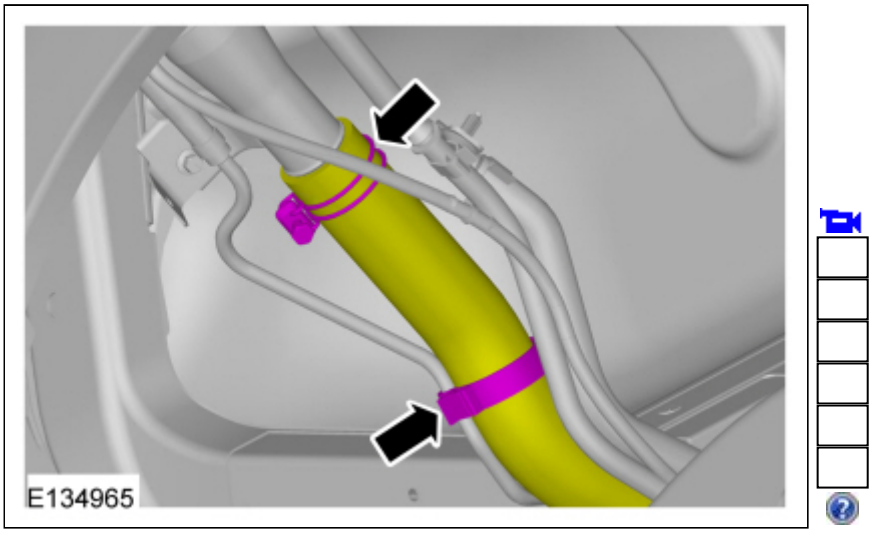
Draining

WARNING: Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.



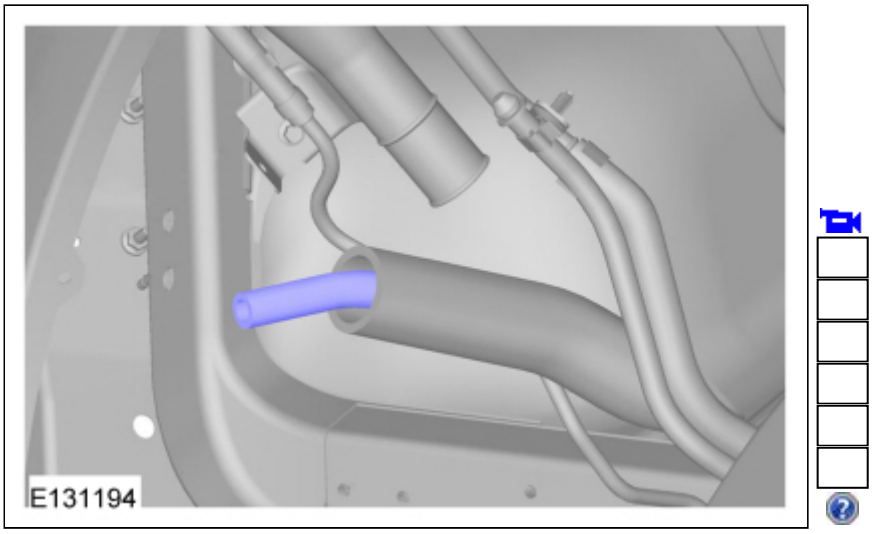
WARNING: Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: Remove the fuel filler cap slowly. The fuel system may be under pressure. If the fuel filler cap is venting vapor or if you hear a hissing sound, wait until it stops before completely removing the fuel filler cap. Otherwise, fuel may spray out. Failure to follow these instructions may result in serious personal injury.

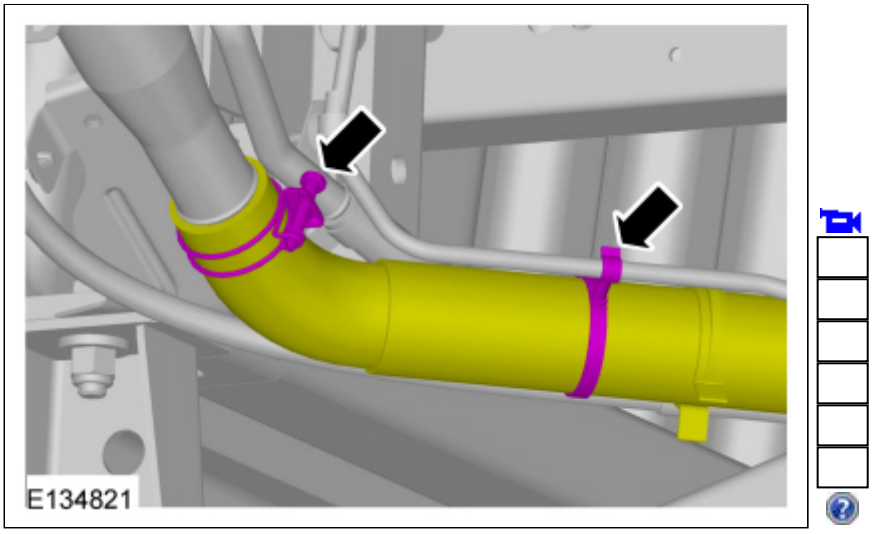


1. Refer to: Diesel Fuel System Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
3. Refer to: Jacking and Lifting - Overview (100-02 Jacking and Lifting, Description and Operation).
4. Remove the left-hand rear wheel and tire.
   Refer to: Wheel and Tire (204-04A Wheels and Tires, Removal and Installation).
5. Use the General Equipment: 10 mm Drill Bit

6.

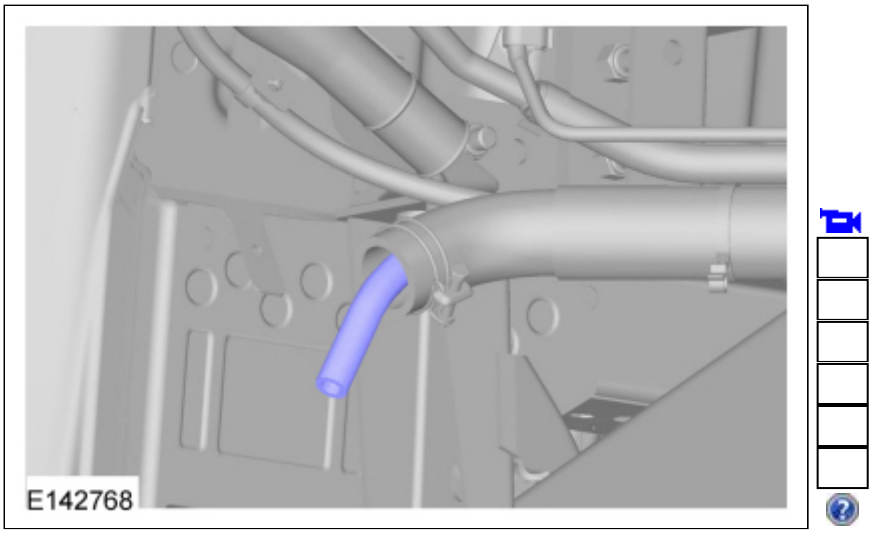


7. **NOTE:** *Make sure that the clamp is installed to the same orientation as when removed.*



8. **NOTE:** *Follow the operating instructions supplied by the equipment manufacturer.*

Insert the fuel tank drain hose into the fuel tank hose.
Use the General Equipment: Fuel Tank Draining Equipment



NOTE: *Vehicles with aluminium tray.*

9. **NOTE:** *Make sure that the clamp is installed to the same orientation as when removed.*

10. **NOTE:** *Follow the operating instructions supplied by the equipment manufacturer.*

    Insert the fuel tank drain hose into the fuel tank hose.
    Use the General Equipment: Fuel Tank Draining Equipment

Copyright © 2016 Ford Motor Company

Quick Release Coupling

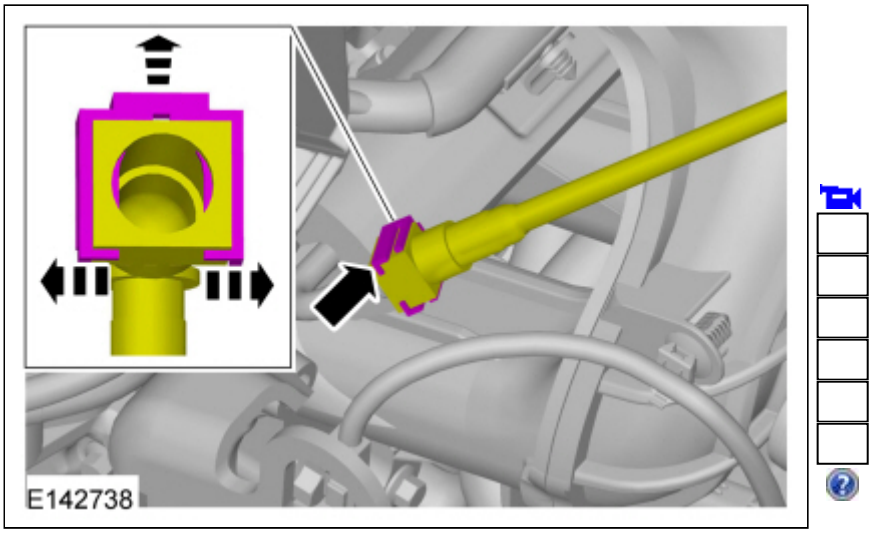
Disconnect

WARNING: Do not smoke, carry lighted tobacco or have an open flame of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

WARNING: Before working on or disconnecting any of the fuel tubes or fuel system components, relieve the fuel system pressure to prevent accidental spraying of fuel. Fuel in the fuel system remains under high pressure, even when the engine is not running. Failure to follow this instruction may result in serious personal injury.

WARNING: Do not carry personal electronic devices such as cell phones, pagers or audio equipment of any type when working on or near any fuel-related component. Highly flammable mixtures are always present and may be ignited. Failure to follow these instructions may result in serious personal injury.

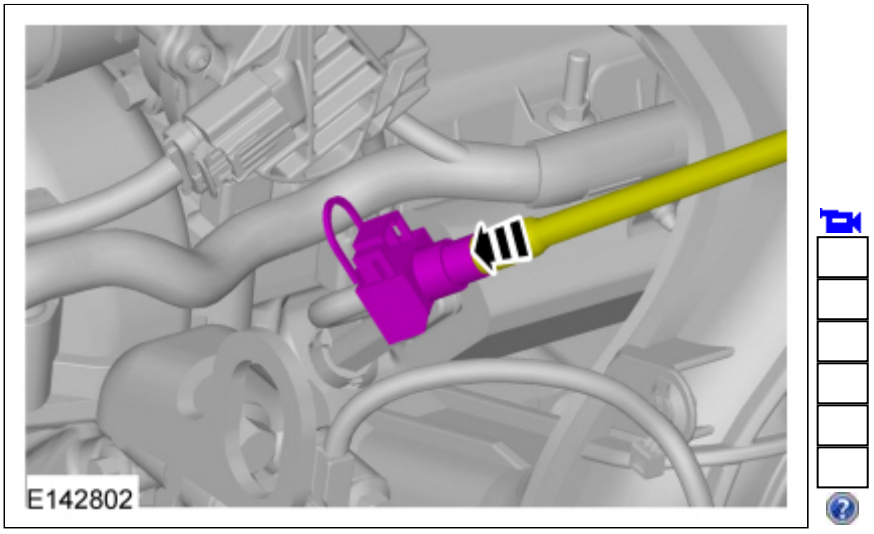
WARNING: When handling fuel, always observe fuel handling precautions and be prepared in the event of fuel spillage. Spilled fuel may be ignited by hot vehicle components or other ignition sources. Failure to follow these instructions may result in serious personal injury.



WARNING: Remove the fuel filler cap slowly. The fuel system may be under pressure. If the fuel filler cap is venting vapor or if you hear a hissing sound, wait until it stops before completely removing the fuel filler cap. Otherwise, fuel may spray out. Failure to follow these instructions may result in serious personal injury.

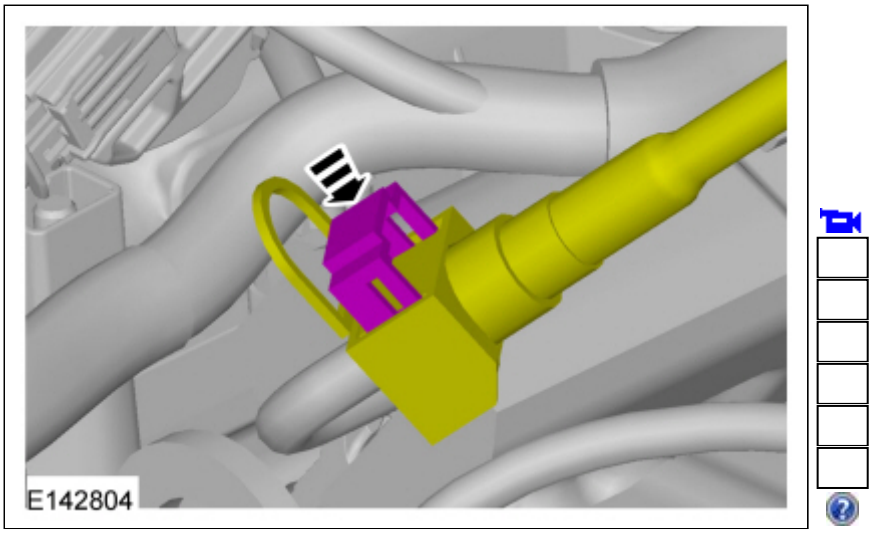
WARNING: Do not repair the fuel lines. If the fuel lines are found to damaged, a new component must be installed.

NOTE: *Fuel injection equipment is manufactured to very precise tolerances and fine clearances. It is essential that absolute cleanliness is observed when working with these components or component damage may occur. Always install blanking plugs to any open orifices or tubes.*



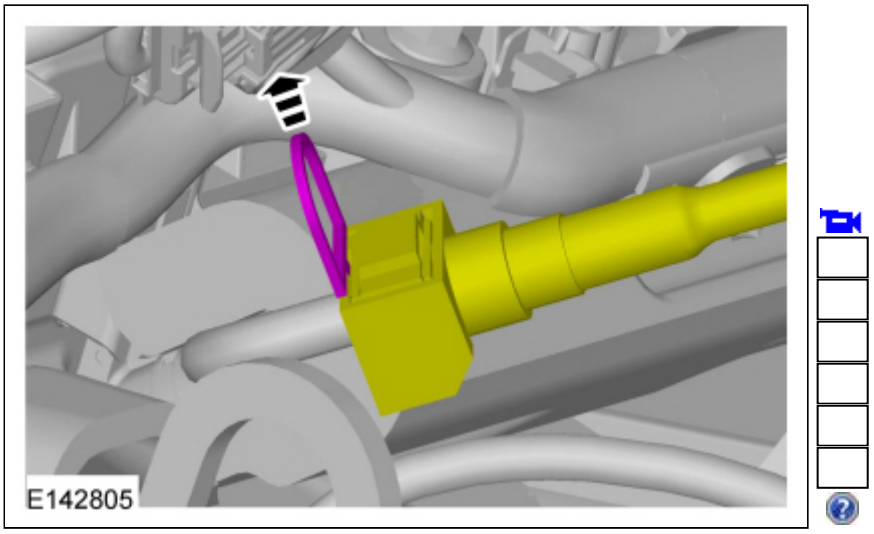
NOTE: *When reusing liquid or vapor tube connectors, make sure to use compressed air to remove any foreign material from the connector retaining clip area before separating from the tube or damage to the tube or connector retaining clip may occur. Apply clean engine oil to the end of the tube before inserting the tube into the connector.*

1. Refer to: Diesel Fuel System Health and Safety Precautions (100-00 General Information, Description and Operation).
2. Refer to: Battery Disconnect and Connect (414-01 Battery, Mounting and Cables, General Procedures).
3.



Connect

1.



2.

3. **WARNING: Make sure that all fuel connections are checked for leaks.**

NOTE: *This step is only neccessary if a new component is installed.*

4. Refer to: Fuel System Bleeding (310-00B Fuel System - General Information - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, General Procedures).

Fuel System

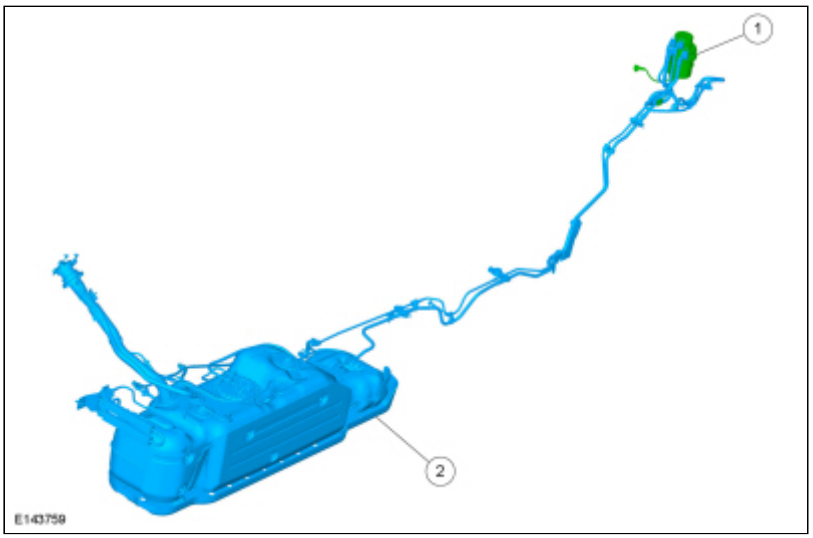
Overview

The fuel system consists of:

- A mechanical return fuel system.
- An 80L cigar shaped fuel tank.
- A fuel filler pipe with a vented cap.
- Fuel feed & return lines
- A fuel filter with bi-metallic valve (for recirculation) and water in fuel sensor.
- Fuel vapour tubes.
- A diesel delivery module containing:
  - A fuel pump.
  - With Jet pump and 50kPa pressure relief valve.
  - A serviceable fuel level sender.
  - A low level fuel switch.

Fuel Pump Shut-off Feature

In the event of a moderate to severe collision, the vehicle is equipped with a Fuel Pump and Sender Unit Shut-off Feature that is initiated by the event notification signal.



The event notification signal is a signal provided by the RCM to the Fuel Pump Control Module. Signal communication between the RCM and the Fuel Pump Control Module allows the PCM to shut-off the Fuel Pump.

Should the vehicle shut off after a collision due to this feature, the vehicle may be restarted by first turning the ignition to the OFF position and then turn the ignition to the ON position. In some instances the vehicle may not start the first time and may take one additional ignition cycle.

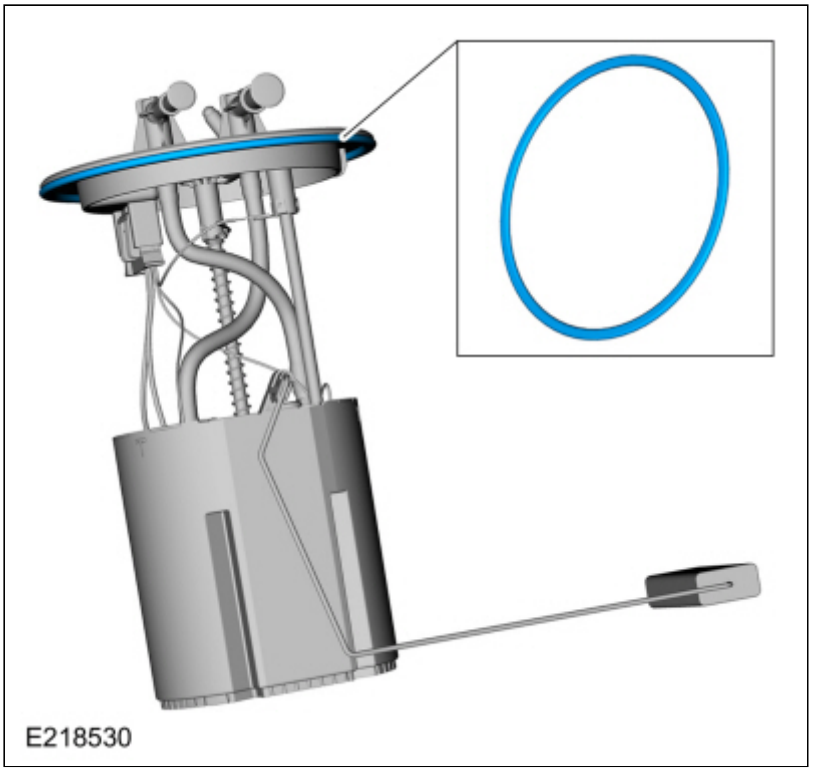
Fuel System - Overview

Diesel Fuel System

The Fuel System comprises of :



- Fuel tank
- Supply and return lines
- Fuel tank vent valves
- Fuel pump and sender unit
- Fuel filter
- Fuel filler

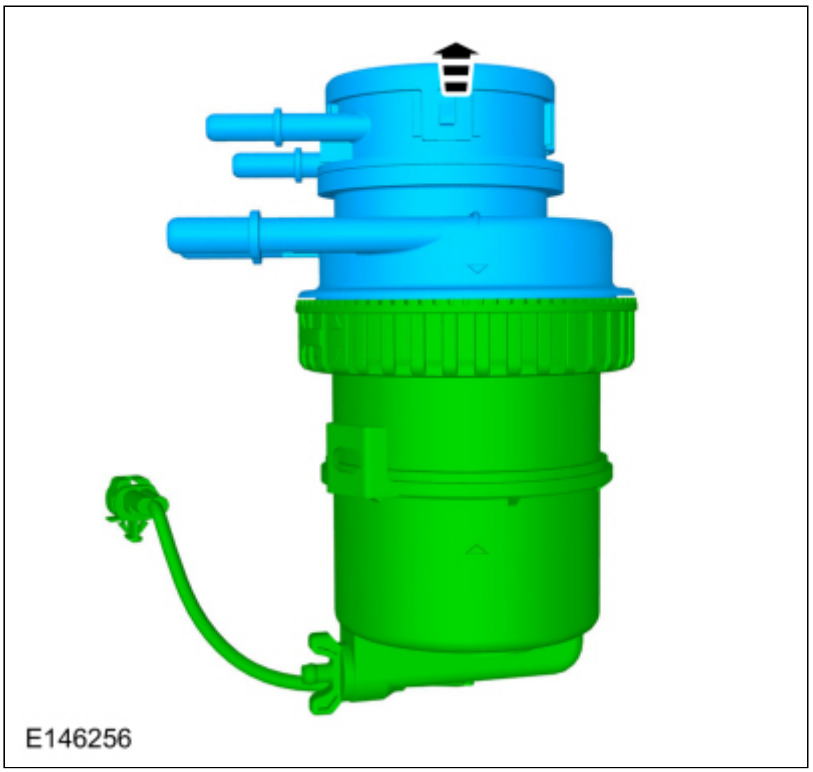
Fuel Tank

The fuel tank is of plastic construction and is secured to the vehicle by two metal support straps, which are bolted to the chassis side rail.

NOTE: *The diesel fuel tank must contain at least 4 litres of fuel before the fuel pump is operated. Running the fuel pump with less than 4 litres of fuel will cause damage to the fuel pump.*

Fuel Pump and Sender Unit

The pump and sender unit is located in the top of the fuel tank and is retained by a locking ring and seal. The fuel pump is attached to the fuel pump and sender unit flange by spring loaded guide bars, which ensure that the fuel pump is seated against the base of the fuel tank when installed.

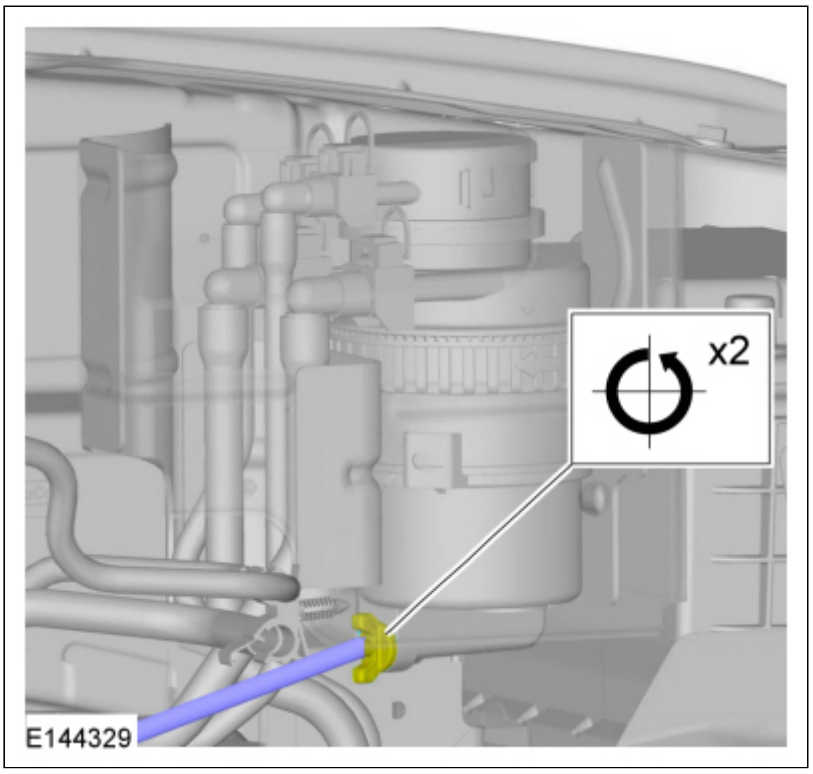


The electric fuel pump delivers fuel to the high pressure mechanical fuel pump.

The fuel level sender consists of a mechanical float attached to a variable resistor card by means of a rigid wire lever.

The base of the fuel pump and sender unit is a chamber that sits in the swirl bowl at the bottom of the fuel tank.

The fuel pump and sender unit also incorporates a fuel jet pump. Fuel from the fuel charging system is passed through a venturi in the jet pump which causes a pressure drop across an open orifice. This draws in fuel through the base of the unit which then passes through the fuel supply tube.



Fuel Filter

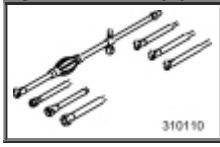
The diesel fuel filter separates air, water and other contaminants from fuel, in addition to retaining system back

pressure.

The upper section of the filter incorporates the recirculation valve and the return valve. The recirculation valve controls the flow of warm return fuel from the engine. When fuel temperature drops below 20 C, the valve opens to direct return fuel to the filter, warming the fuel to prevent waxing. When fuel temperature reaches 33 C, the valve closes and return fuel is directed back to the fuel tank.

Water trapped in the fuel filter can be removed by attaching a suitable length of hose to the drain plug and draining it into a suitable container. Refer to the workshop manual for further instructions.

Fuel Filler



The fuel tank filler neck incorporates a fuel tank breather hose. The fuel tank breather hose is connected to the top of the fuel tank and exits just below the top of the fuel tank filler neck. The fuel tank breather hose allows the displaced vapor above the fuel in the fuel tank to escape, avoiding fuel "spit back" and premature shut off during refueling.

The fuel filler cap seals to the fuel filler neck. This is to prevent the escape of fuel vapor during normal operation and to prevent fuel loss in the event of a vehicle accident.

Ford diagnostic equipment

Inspection and Verification

1. Verify the customer concern.
2. Visually inspect for obvious signs of mechanical or electrical damage.

Visual Inspection Chart

Mechanical	Electrical
• Fuel level • Fuel leak(s) • Fuel line(s) • Fuel filter • Fuel filter element • Fuel tank • Fuel tank ventilation hose • Fuel tank filler pipe/hose	• Fuse(s) • Wiring harness • Electrical connector(s) • Fuel level sensor

3. If an obvious cause for an observed or reported concern is found, correct the cause (if possible) before proceeding to the next step.
4. If the cause is not visually evident, verify the symptom and refer to the Symptom Chart.

Symptom Chart

Symptom	Possible Sources	Action
• Engine cranks but does not start	• Low fuel level.	• Fill the fuel tank with sufficient fuel to enable the engine to start.
	• Fuel charging and controls.	• REFER to: Fuel Charging and Controls (303-04B Fuel Charging and Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Diagnosis and Testing). REFER to: Fuel Charging and Controls (303-04C Fuel Charging and Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Diagnosis and Testing).
	• Air ingress into the fuel	• GO to Pinpoint Test A

	lines.	
	• Contaminated fuel.	• DRAIN and REFILL the fuel system with fresh fuel. INSTALL a new fuel filter element. REFER to: Fuel Filter Element (310-01B Fuel Tank and Lines - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Fuel Filter Element (310-01B Fuel Tank and Lines - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
• Poor starting	• Fuel charging and controls.	• REFER to: Fuel Charging and Controls (303-04B Fuel Charging and Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Diagnosis and Testing). REFER to: Fuel Charging and Controls (303-04C Fuel Charging and Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Diagnosis and Testing).
	• Air ingress into the fuel lines.	• GO to Pinpoint Test A
	• Contaminated fuel.	• DRAIN and REFILL the fuel system with fresh fuel. INSTALL a new fuel filter element. REFER to: Fuel Filter Element (310-01B Fuel Tank and Lines - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Fuel Filter Element (310-01B Fuel Tank and Lines - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
• Engine starts but immediately stops	• Fuel charging and controls.	• REFER to: Fuel Charging and Controls (303-04B Fuel Charging and Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Diagnosis and Testing). REFER to: Fuel Charging and Controls (303-04C Fuel Charging and Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Diagnosis and Testing).
	• Air ingress into the fuel lines.	• GO to Pinpoint Test A
• Poor idling	• Fuel charging and controls.	• REFER to: Fuel Charging and Controls (303-04B Fuel Charging and Controls - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma, Diagnosis and Testing). REFER to: Fuel Charging and Controls (303-04C Fuel Charging and Controls - 3.2L Duratorq-TDCi (148kW/200PS) - Puma, Diagnosis and Testing).
	• Air ingress into the fuel lines.	• GO to Pinpoint Test A
	• Contaminated fuel.	• DRAIN and REFILL the fuel system with fresh fuel. INSTALL a new fuel filter element. REFER to: Fuel Filter Element (310-01B Fuel Tank and Lines - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).

		REFER to: Fuel Filter Element (310-01B Fuel Tank and Lines - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
• Engine lacks power	• Fuel tank to fuel filter fuel supply line blocked.	• CHECK the fuel supply lines for damage. INSTALL a new fuel filter fuel supply line as necessary.
	• Fuel filter element blocked.	• INSTALL a new fuel filter element. REFER to: Fuel Filter Element (310-01B Fuel Tank and Lines - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation). REFER to: Fuel Filter Element (310-01B Fuel Tank and Lines - 2.2L Duratorq-TDCi (88kW/120PS) - Puma/2.2L Duratorq-TDCi (96kW/130PS) - Puma/2.2L Duratorq-TDCi (110kW/150PS) - Puma/2.2L Duratorq-TDCi (118kW/160PS) - Puma, Removal and Installation).
