

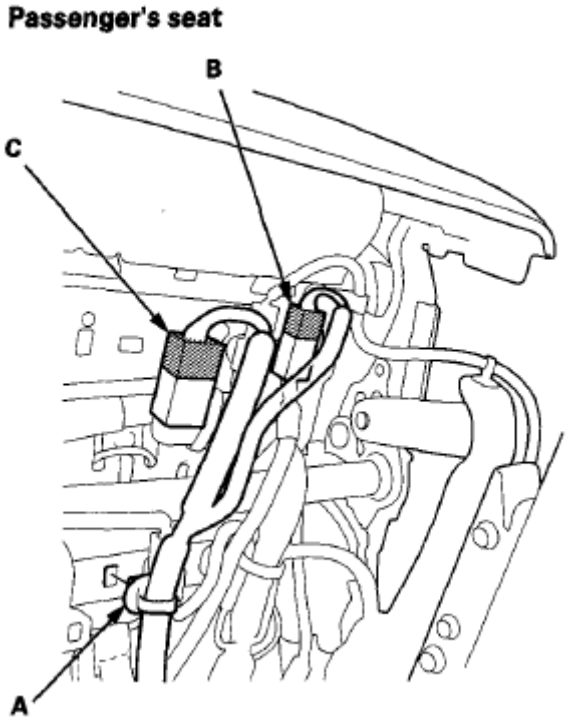

Fig. 11: Identifying Passenger's Seat Wire Harness And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the head restraint.
10. With the help of an assistant, carefully remove the front seat through the front door opening.
11. Install the seat in the reverse order of removal, and note these items:
    - Tighten the seat mounting bolts to the specified torque in the sequence shown. Slide the seat all the way back and tighten (1) and (2), then slide it forward and tighten (3) and (4).
    - Tighten the bolts by hand first, then tighten them to the specified torque.
    - Do the battery terminal reconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
    - Check for any DTCs that may have been set during repairs, and clear them.

Driver's seat

Fig. 12: Identifying Driver's Seat Fasteners Location With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's seat

Fig. 13: Identifying Passenger's Seat Fasteners Location With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT SEAT RECLINE MOTOR REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT**

LOCATION INDEX) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- **Put on gloves to protect your hands.**
- **The driver's seat is shown; the passenger's seat is similar.**

1. Remove these items:
   - Front seat (see **FRONT SEAT REMOVAL/INSTALLATION**)
   - Seat-back cover/pad (see **FRONT SEAT-BACK COVER REPLACEMENT**)
   - Recline cover (see **FRONT SEAT RECLINE COVER REMOVAL/INSTALLATION**)
2. Disconnect and detach the recline motor connector (A), and detach the harness clip (B).

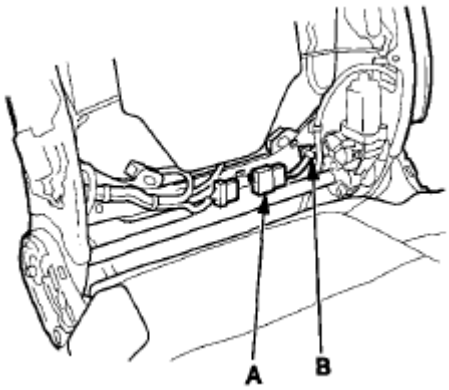

Fig. 14: Identifying Recline Motor Connector And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release the push nut (A) from the motor side end of the connecting rod (B), gently tap on the motor side of the connecting rod to remove it from the recline motor (C) and both recline adjusters (D).

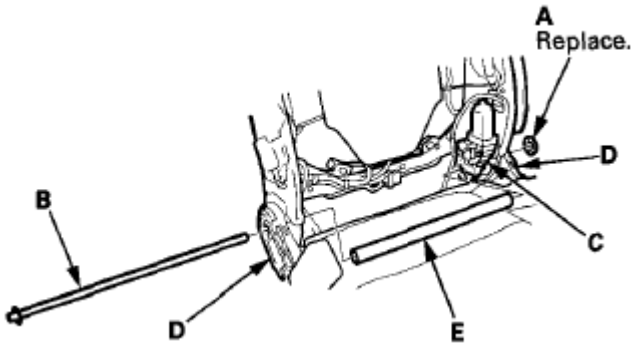

Fig. 15: Identifying Push Nut, Connecting Rod, Recline Motor, Rod Cover And Adjusters
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the rod cover (E).
5. Remove the mounting bolt, then remove the recline motor (A).

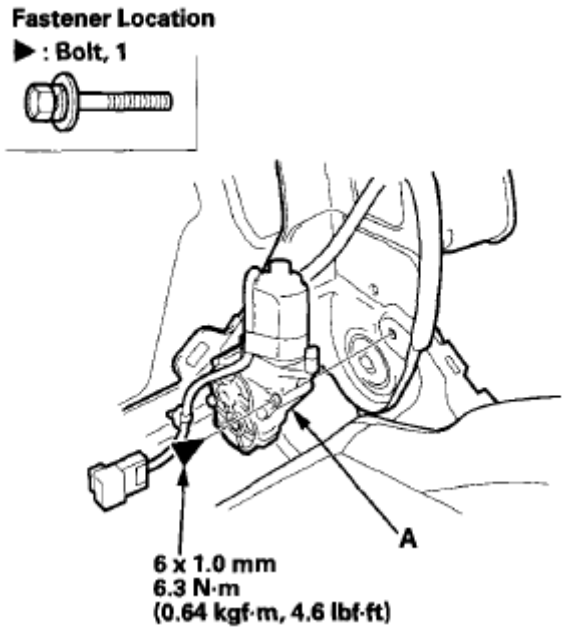

Fig. 16: Removing Recline Motor With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the motor in the reverse order of removal, and note these items:
   - Replace the push nut with a new one. Make sure the push nut is installed correctly.
   - Make sure the recline motor harness is routed properly.
   - Apply medium strength liquid thread lock to the mounting bolt before reinstallation.
   - Make sure the connector is plugged in properly.
   - Check the front seat recline operation.

FRONT SEAT LUMBAR SUPPORT REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

WITHOUT SEAT VENTILATION

NOTE:
- **Put on gloves to protect your hands.**
- **Take care not to kink the cable.**
- **Take care not to tear or damage the seat covers.**

1. Remove the driver's front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove the seat-back panel (see **FRONT SEAT-BACK COVER REPLACEMENT**).
3. Release the hook strips as needed, then turn over the seat-back cover (see step 4 on).
4. Remove the cable band (A) fastening the lumbar support cable (B).

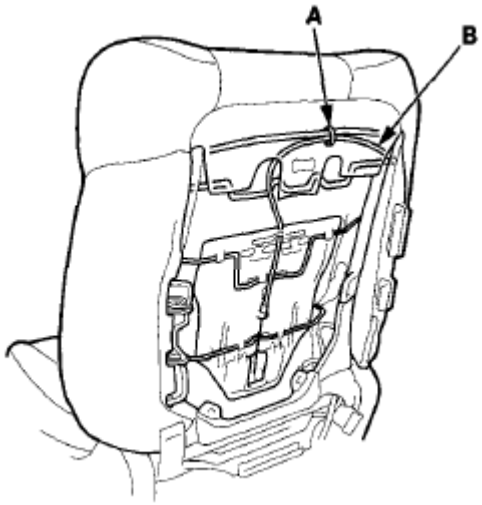

Fig. 17: Identifying Cable Band And Lumbar Support Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the upper wire (A) from both seat-back side frames inside the seat-back.

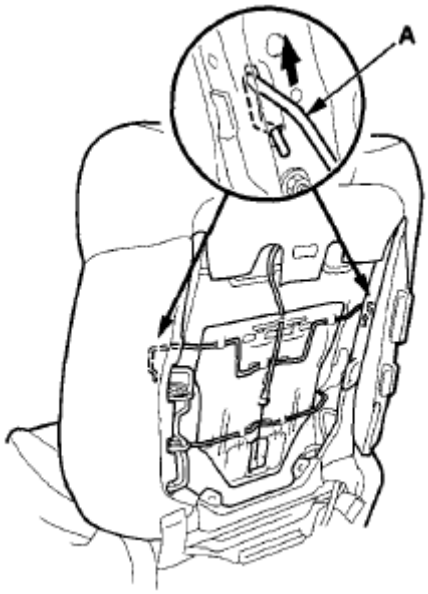

Fig. 18: Removing Upper Wire From Both Seat-Back Side Frames Inside Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Release the lower wires (A) from both active head restraint links (B) inside the seat-back.

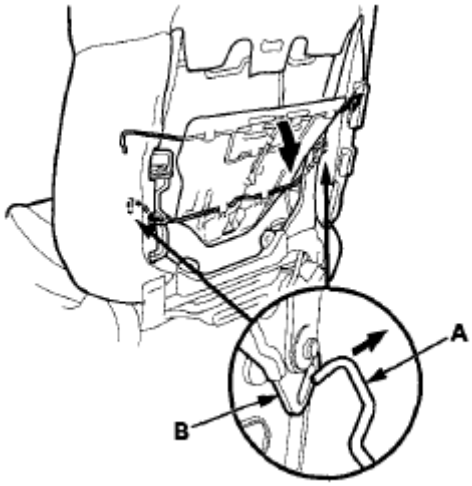

Fig. 19: Releasing Lower Wires From Both Active Head Restraint Links Inside Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the lumbar support motor cover (A).
    1. Release the cover from the lower hooks (B).
    2. Pull the cover upward to release it from the upper hook (C).

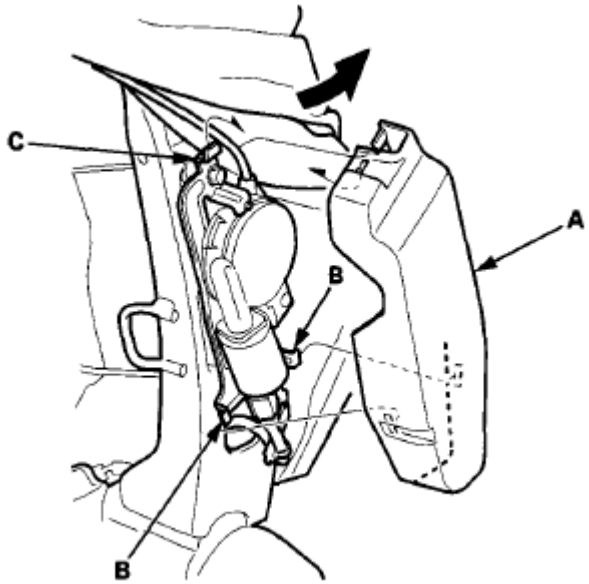

Fig. 20: Pulling Cover Upward To Release It From Upper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Disconnect the lumbar support motor connector (A), and detach the harness clip (B). Remove the bolts, and separate the lumbar support motor (C) from the seat frame, then remove the lumbar support.

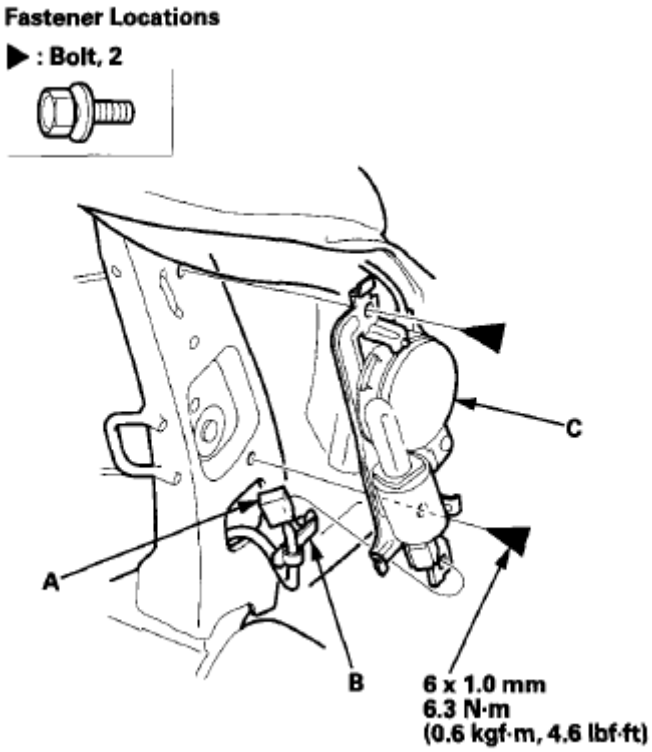

Fig. 21: Identifying Motor Connector, Harness Clip And Lumbar Support Motor With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the lumbar support in the reverse order of removal, and note these items:
   - Make sure the connector is plugged in properly.
   - To prevent wrinkles when installing a seat-back cover, make sure the material is stretched evenly over the pad before securing the hook strips.

WITH SEAT VENTILATION

NOTE: Put on gloves to protect your hands.

1. Remove the driver's front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove the seat-back cover/pad (see **FRONT SEAT-BACK COVER REPLACEMENT**).
3. Remove the upper wires (A) from both seat-back side frames inside the seat-back.

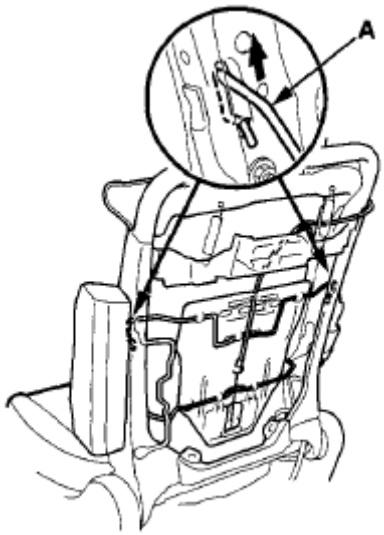

Fig. 22: Identifying Upper Wire Of Seat-Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Release the lower wires (A) from both active head restraint links (B) inside the seat-back.

Fig. 23: Identifying Lower Wires And Restraint Links
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the lumbar support motor cover (A).
    1. Release the cover from the lower hooks (B).
    2. Pull the cover upward to release it from the upper hook (C).

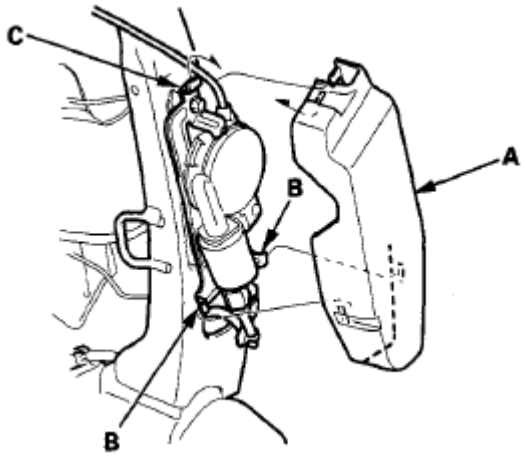

Fig. 24: Identifying Lumbar Support Motor Cover, Lower Hooks And Upper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Release the tie (A). Disconnect the lumbar support motor connector (B), and detach the harness clip (C). Remove the bolts, then separate the lumbar support motor (D) from the seat frame.

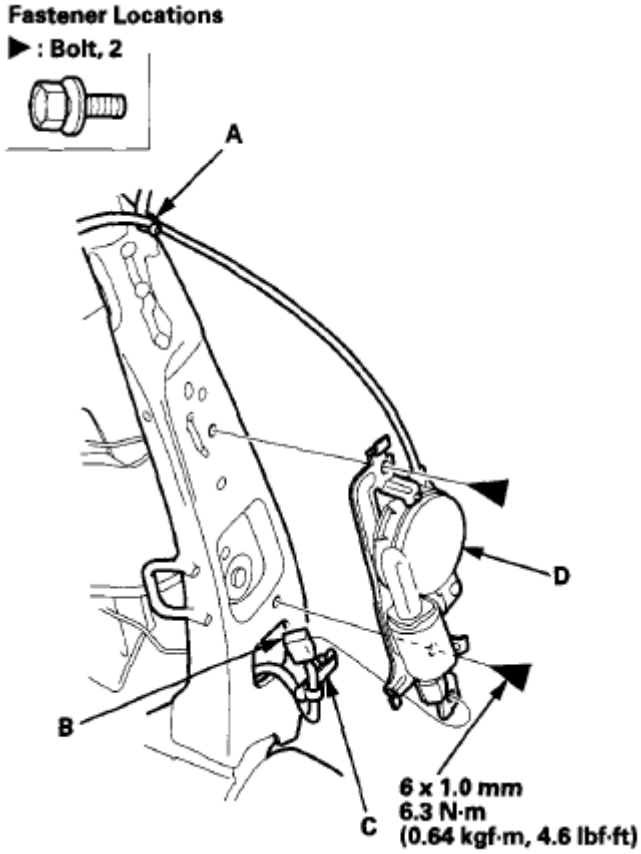

Fig. 25: Identifying Tie, Motor Connector, Harness Clip And Support Motor With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the seat frame spring (A), and pass the lumbar support motor (B) out through the seat frame, then remove it.

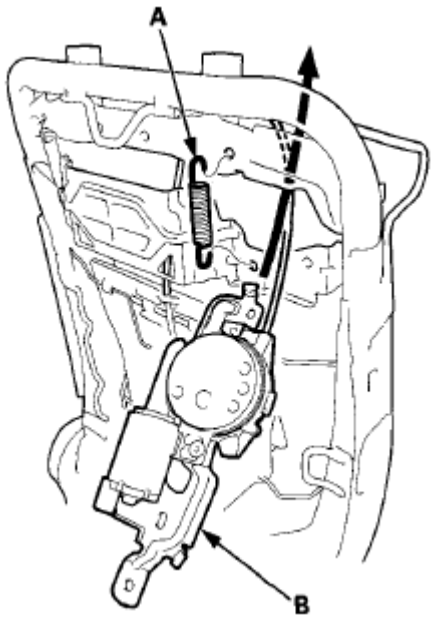

Fig. 26: Passing Lumbar Support Motor Out Through Seat Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the lumbar support in the reverse order of removal, and note these items:
   - Make sure the connector is plugged in properly.
   - To prevent wrinkles when installing the seat-back cover/pad, make sure the material is stretched evenly over the pad before securing the hook strips.

FRONT SEAT SLIDE MOTOR REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:
- **Put on gloves to protect your hands.**
- **Take care not to tear or damage the seat covers.**
- **The driver's seat is shown; the passenger's seat is similar.**

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove the flex cable (A) and the cable housing (B).
   1. Release the housing from the hooks (C).
   2. Disconnect the cable from the worm gear (D) in the inner seat track by pulling out the housing.
   3. Disconnect the cable from the slide motor (E).

NOTE: Take care not to kink the cable.

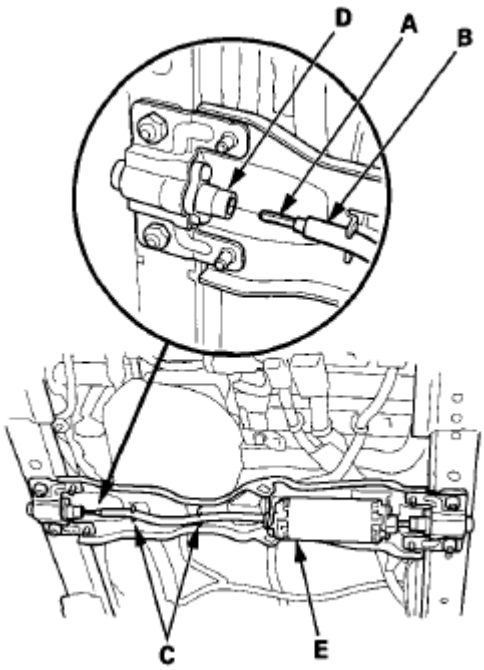

Fig. 27: Identifying Flex Cable, Cable Housing, Hooks, Worm Gears And Slide Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the slide motor connector (A), and remove the screws, then remove the slide motor (B) from the slide motor bracket (C) while disconnecting the motor from the short flex cable (D).

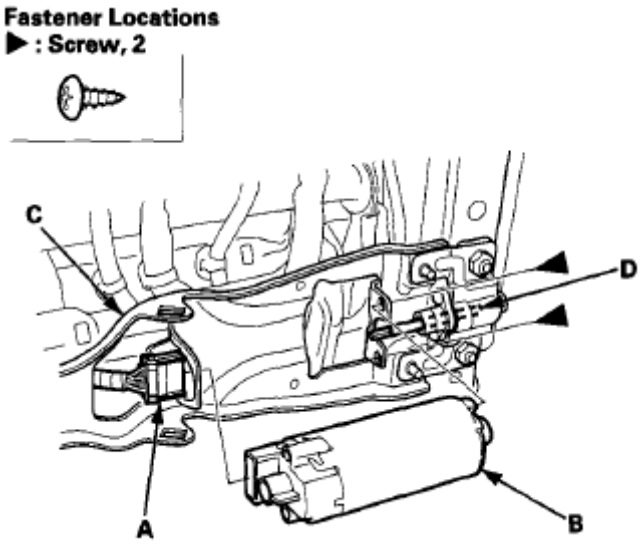

Fig. 28: Identifying Slide Motor Connector, Motor Bracket, Slide Motor And Flex Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pull out the short flex cable (A) from the worm gear (B) in the outer seat track.

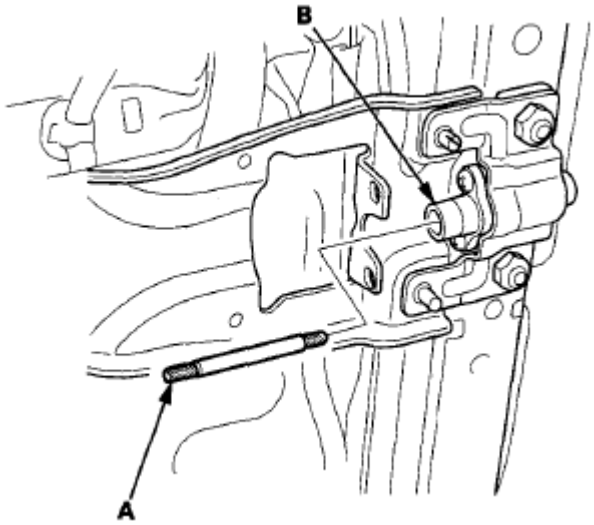

Fig. 29: Identifying Short Flex Cable And Worm Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the motor in the reverse order of removal, and note these items:
   - Apply multipurpose grease to the worm gear areas in both seat tracks.
   - Install the short flex cable to the slide motor before installing the slide motor to the slide motor bracket.
   - Make sure both seat tracks are all the way forward before installing the slide motor bracket on the tracks. Install the short flex cable to the slide motor.
   - Make sure the short flex cable and the flex cable are connected properly.
   - Make sure the connector is plugged in properly.
   - Check the front seat slide operation.

FRONT SEAT RAIL REPLACEMENT - DRIVER'S SEAT

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

Check the operation of the driver's seat position sensor (see **DRIVER'S SEAT POSITION SENSOR OPERATION CHECK**) after driver's seat position sensor replacement.

NOTE:
- **Put on gloves to protect your hands.**

- **Take care not to tear or damage the seat covers.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Raise the seat all the way up.
2. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
3. Remove these items:
   - Front seat recline cover (see **FRONT SEAT RECLINE COVER REMOVAL/INSTALLATION**)
   - Seat belt buckle (see **FRONT SEAT BELT BUCKLE**)
4. Detach the clips (A, B), then remove the upper rail outer cover (C).

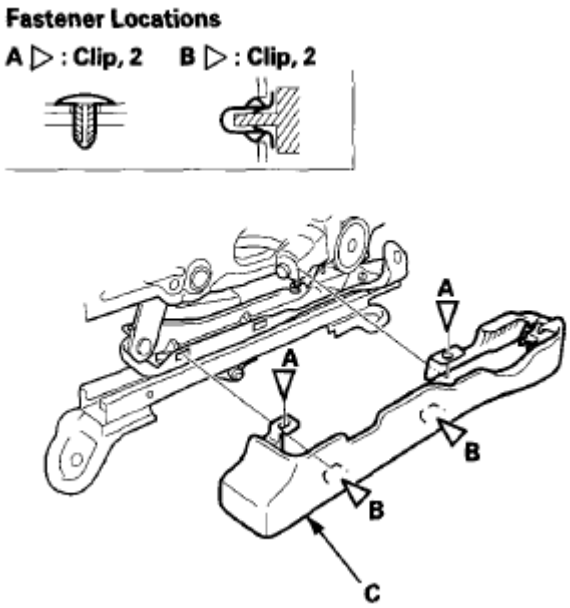

Fig. 30: Identifying Clips And Upper Rail Outer Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Detach the clip, then remove the upper rail inner cover (A).

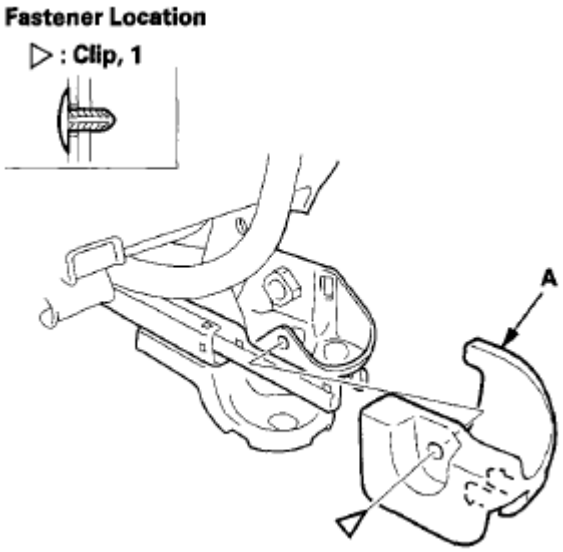

Fig. 31: Identifying Upper Rail Inner Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the slide motor cover (A).

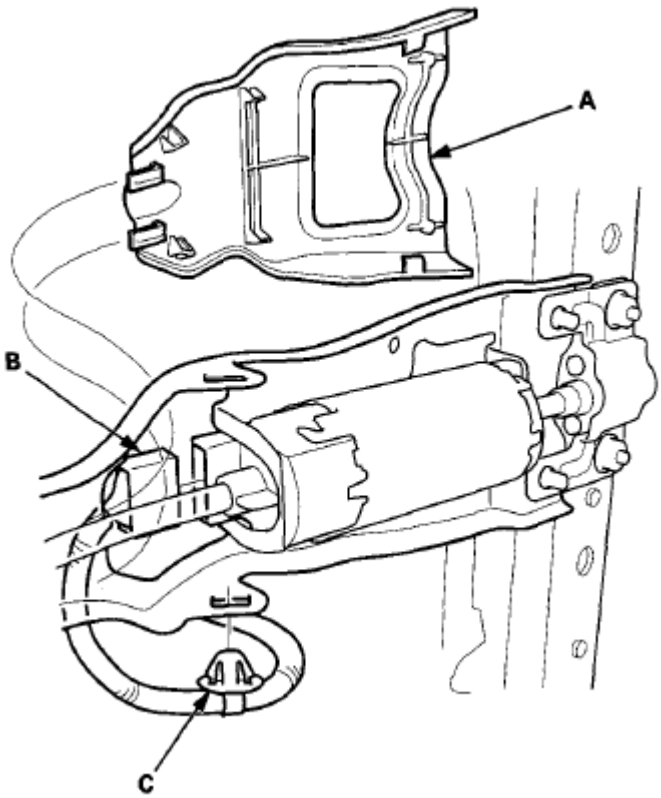

Fig. 32: Identifying Slide Motor Cover, Motor Connector And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the slide motor connector (B), then detach the harness clip (C).
8. Disconnect the driver's seat position sensor connector (A), then detach the harness clip (B).

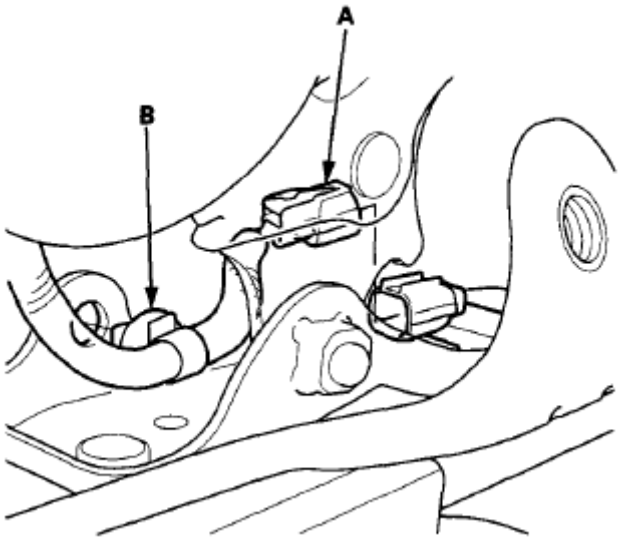

Fig. 33: Identifying Driver's Seat Position Sensor Connector And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the bolts with a TORX T30 bit, then remove the front seat rail (A).

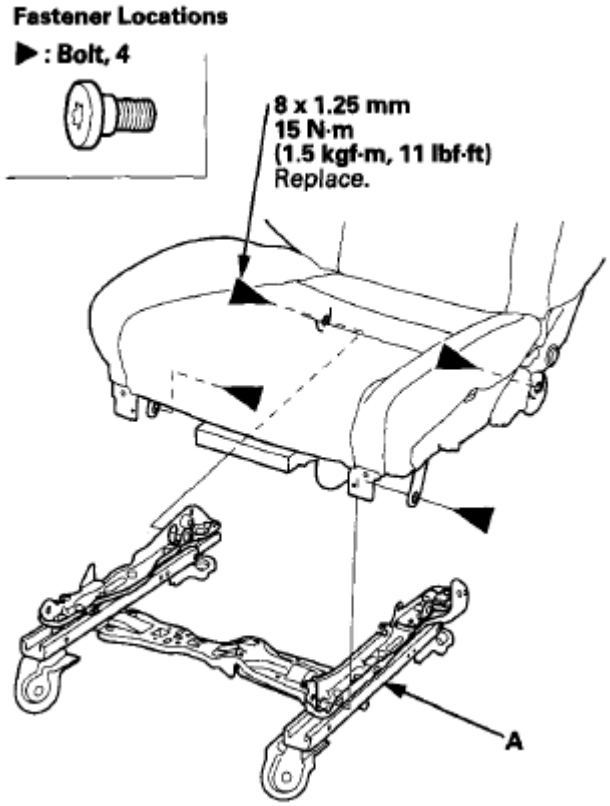

Fig. 34: Identifying Front Seat Rail With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the bolt and nut with a TORX T30 bit, then remove the driver's seat position sensor (A) from the front seat rail (B).

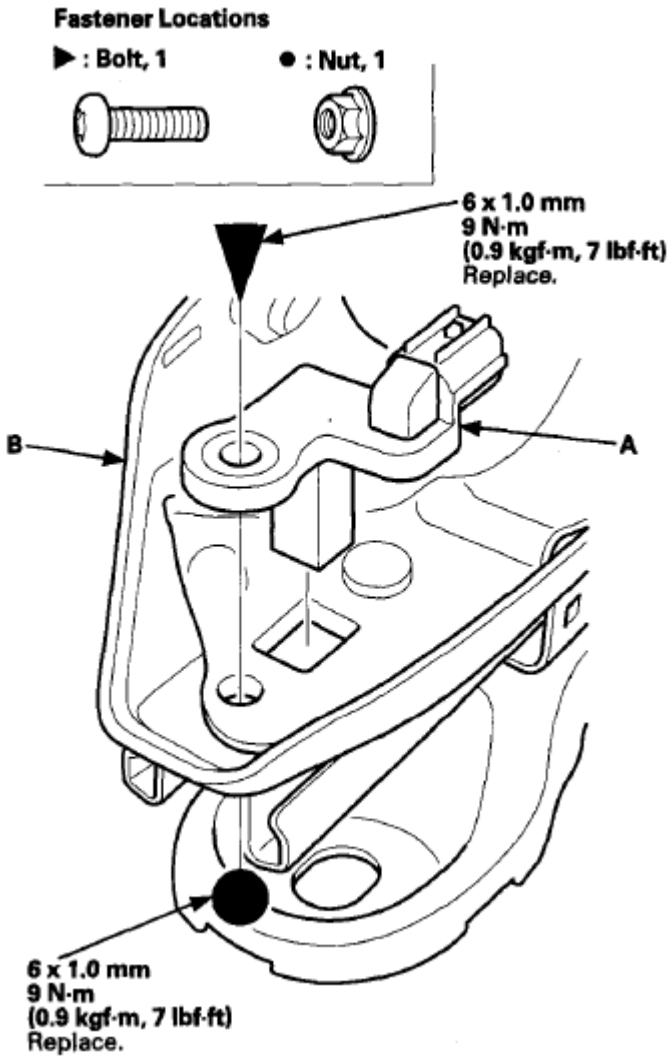

Fig. 35: Identifying Driver's Seat Position Sensor And Front Seat Rail With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the seat rail in the reverse order of removal, and note these items:
    - Clear any DTCs with the HDS (see **HOW TO READ DTCS**).
    - Check the operation of the driver's seat position sensor with the HDS (see **DRIVER'S SEAT POSITION SENSOR OPERATION CHECK**).
    - Confirm proper SRS operation: Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode, and check that the SRS indicator comes on for about 6 seconds and then goes off.

- If the clips are damaged or stress-whitened, replace them with new ones.
- Push the clips into place securely.
- Be sure to install the harness so it is not pinched or interferes with other parts.
- Check the seat slide operation.

FRONT SEAT RAIL REPLACEMENT - PASSENGER'S SEAT

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

Do the front passenger's weight sensor initialization (see **FRONT PASSENGER'S WEIGHT SENSOR INITIALIZATION**) after front passenger's seat frame replacement.

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to tear or damage the seat covers.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Raise the seat all the way up.
2. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
3. Remove these items:
   - Front seat recline cover (see **FRONT SEAT RECLINE COVER REMOVAL/INSTALLATION**)
   - Seat belt buckle (see **FRONT SEAT BELT BUCKLE**)
4. Detach the clips (A, B), then remove the upper rail outer cover (C).

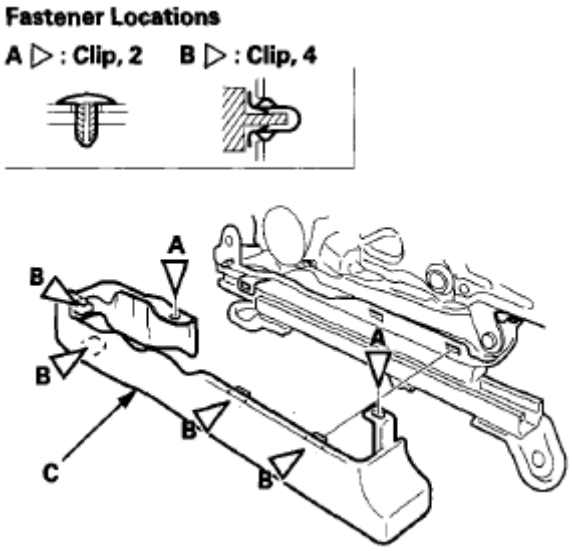

Fig. 36: Identifying Clips And Upper Rail Outer Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Detach the clip (A, B), then remove the upper rail inner cover (C).

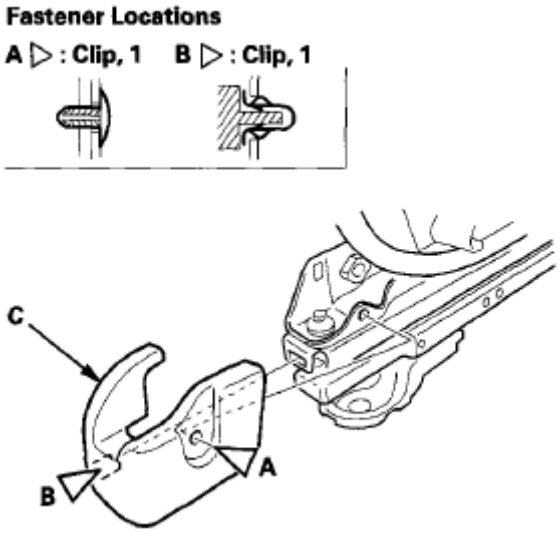

Fig. 37: Identifying Clip And Upper Rail Inner Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the slide motor cover (A).

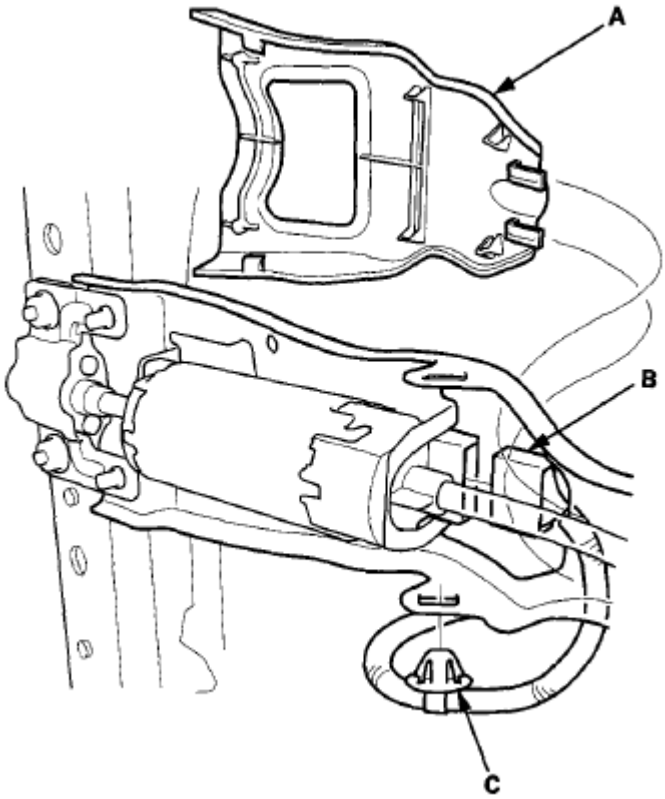

Fig. 38: Identifying Slide Motor Cover And Slide Motor Connector And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the slide motor connector (B), then detach the harness clip (C).
8. Disconnect the front passenger's weight sensor connector (A), then detach the harness clip (B). Repeat on the opposite side.

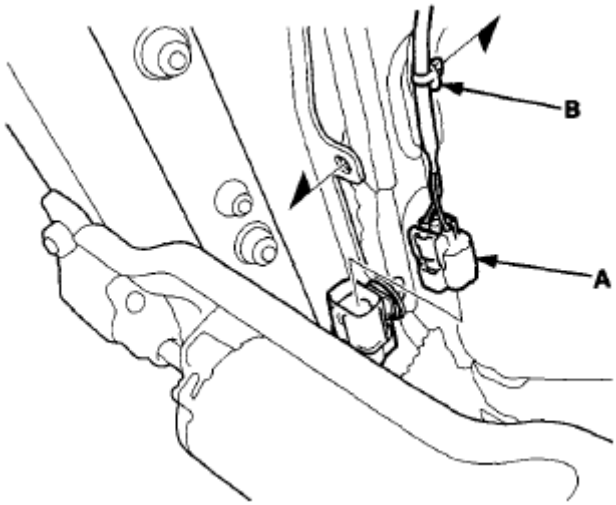

Fig. 39: Identifying Front Passenger's Weight Sensor Connector And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the bolts with a TORX T30 bit, then remove the front seat rail (A).

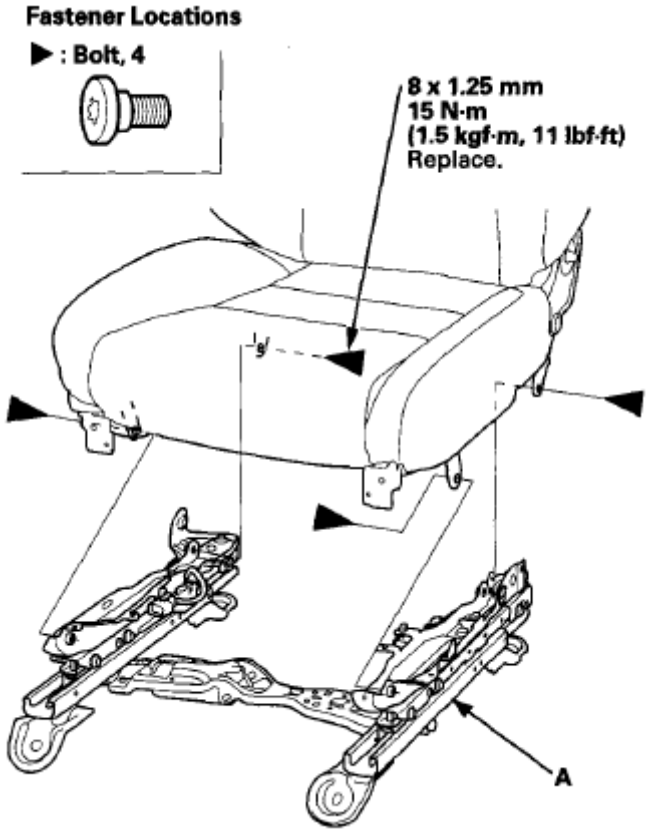

Fig. 40: Identifying Front Seat Rail With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the bolts with a TORX T40 bit, then remove the front passenger's weight sensors (A).

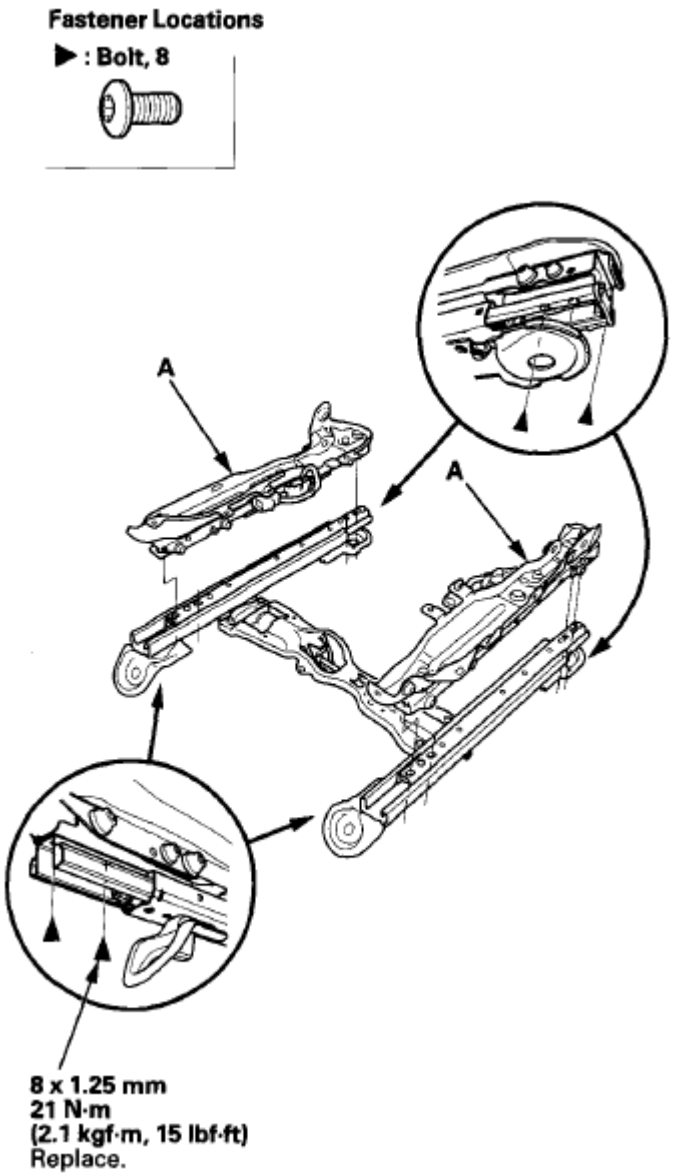

Fig. 41: Identifying Front Passenger's Weight Sensors With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the seat frame in the reverse order of removal, and note these items:
    - The front passenger's weight sensors are part of the seat frame and must be replaced as assembly.
    - Clear any DTCs with the HDS (see **HOW TO READ DTCS**).
    - Do the front passenger's weight sensor initialization (see **FRONT PASSENGER'S WEIGHT SENSOR INITIALIZATION**).
    - Confirm proper SRS operation: Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode, and check that the SRS indicator comes on for about 6 seconds and then goes off.
    - If the clips are damaged or stress-whitened, replace them with new ones.

- Push the clips into place securely.
- Be sure to install the harness wires so they are not pinched or interfere with other parts.
- Check the seat slide operation.

FRONT SEAT FRAME REPLACEMENT

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

Do the front passenger's weight sensor initialization (see **FRONT PASSENGER'S WEIGHT SENSOR INITIALIZATION**) after front passenger's seat frame replacement.

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to tear or damage the seat covers.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**
- **If the side airbag has deployed, replace the seat frame, along with the other parts listed for side airbag deployment (see COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT).**

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove these items:
   - Front seat-back cover/pad (see **FRONT SEAT-BACK COVER REPLACEMENT**)
   - Front seat cushion cover/pad (see **FRONT SEAT CUSHION COVER REPLACEMENT**)
   - Seat belt buckle (see **FRONT SEAT BELT BUCKLE**)
   - Side airbag (see **SIDE AIRBAG REPLACEMENT**)
3. Detach the clips (A, B), then remove the upper rail outer cover (C).

Driver's seat

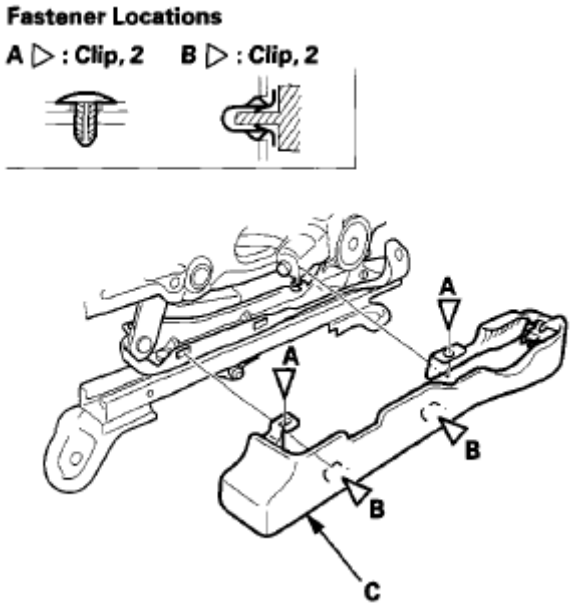

Fig. 42: Identifying Clips And Upper Rail Outer Cover (Driver's Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's seat

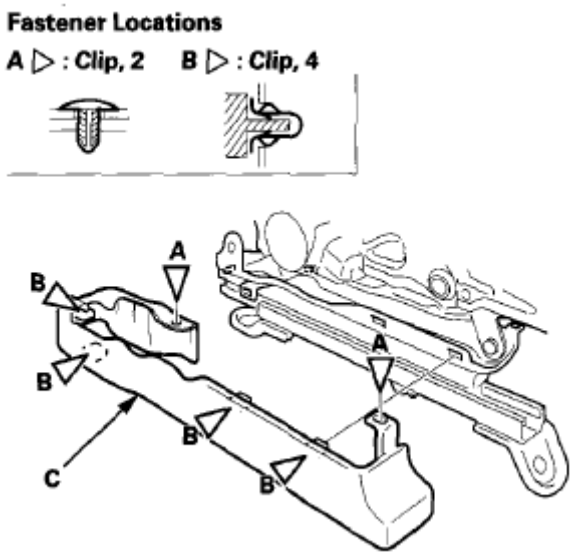

Fig. 43: Identifying Clips And Upper Rail Outer Cover (Passenger's Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Detach the clip (A, B), then remove the upper rail inner cover (C).

Driver's seat

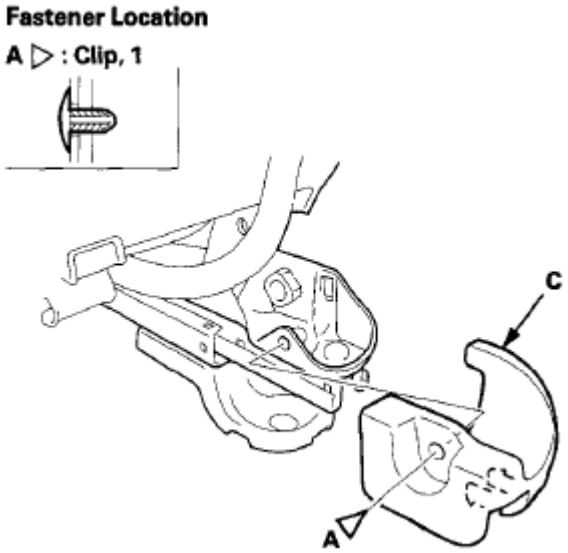

Fig. 44: Identifying Clip And Upper Rail Inner Cover (Driver's Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's seat

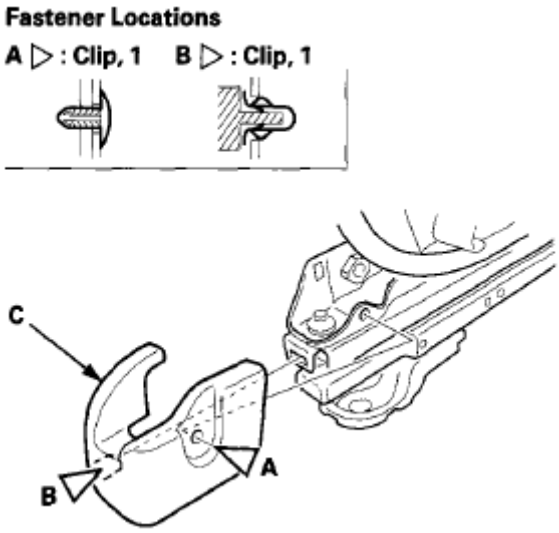

Fig. 45: Identifying Clip And Upper Rail Inner Cover (Passenger's Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the recline inner cover (A) and the center inner cover (B).

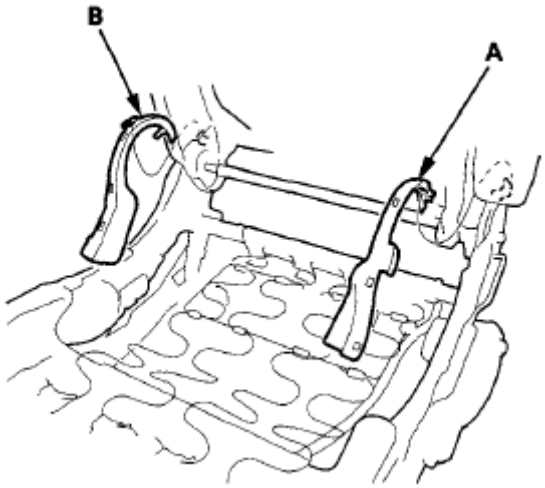

Fig. 46: Identifying Recline Inner Cover And Center Inner Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the seat frame in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Push the clips into place securely.

FRONT SEAT-BACK COVER REPLACEMENT

Special Tools Required

- DTC Trim Tool Set SOJATP2014*
- Trim Pad Remover, Snap-on A 177A or equivalent, commercially available

* Available through the Acura Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

Do the OPDS sensor initialization (see **ODS UNIT INITIALIZATION**) after front passenger's seat-back cover replacement.

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to tear or damage the seat covers.**
- **On the passenger's seat, do not touch the OPDS sensor in the seat-back cover/pad, and keep it away from oil. Oil can corrode the sensor causing it to fail.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. From under the seat cushion, release the hooks (A) on the elastic strap from the seat cushion frame springs (B), then pull out the back panel undercover (C).

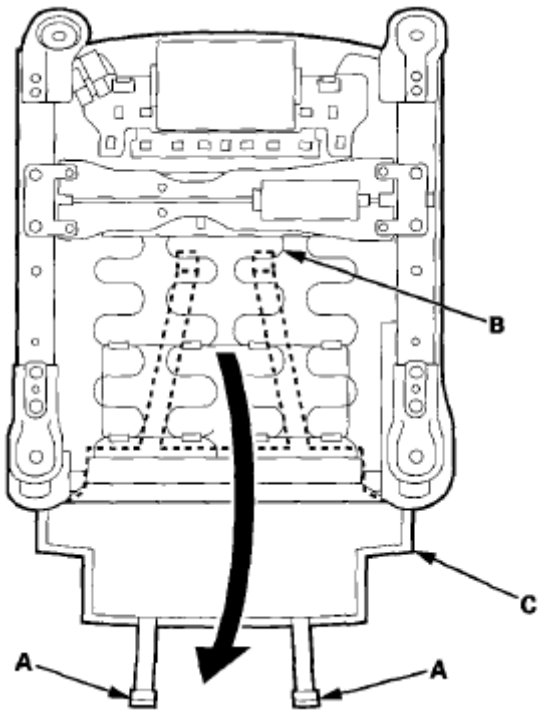

Fig. 47: Identifying Hooks, Seat Cushion Frame Springs And Back Panel Undercover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert a trim pad remover between the bottom of the back panel (A) and the seat frame until it squarely engages one of the clips. Gently pry on the clip until it detaches from the seat frame. Repeat for the other clip. Gently pull back the panel to release the hooks (B), then pull down the panel to release the hooks (C).

NOTE:

- **The clips usually break during removal. Always replace the clips with new ones.**
- **Detach the clips and release the hooks in numbered sequence as shown.**
- **Take care not damage the seat-back panel or the clip mounting pads.**

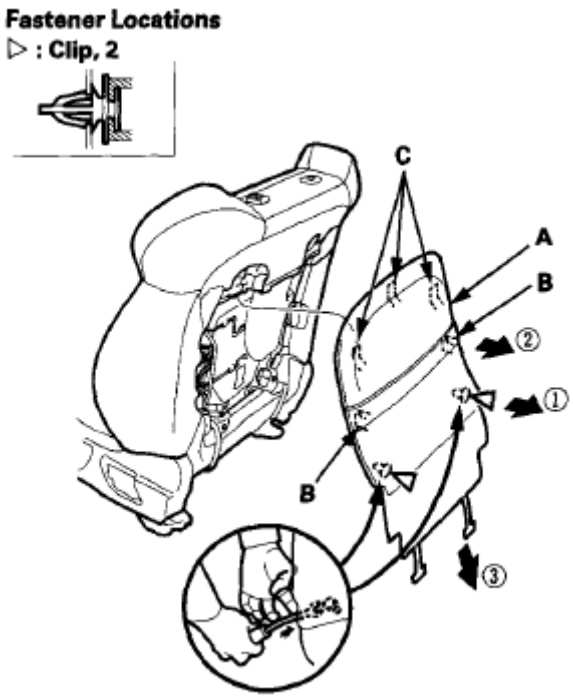

Fig. 48: Identifying Back Panel And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Release the Velcro fasteners (A) and the hook strips (B), then loosen the seat-back cover (C).

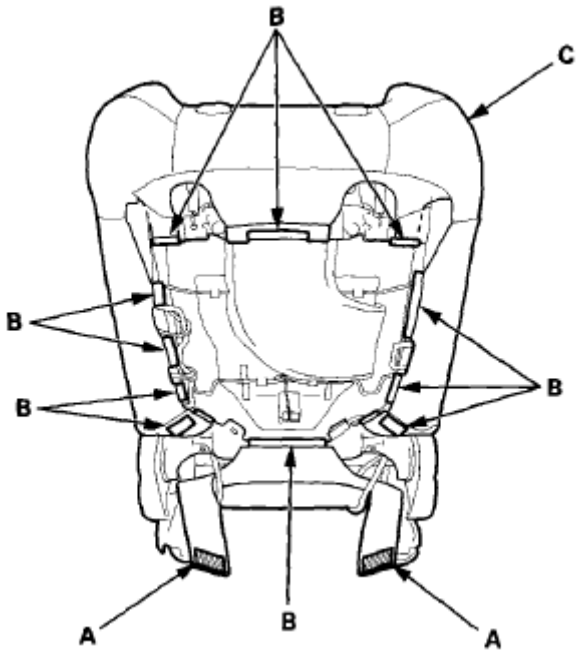

Fig. 49: Identifying Velcro Fasteners, Hook Strips And Seatback Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. With seat ventilation: Remove the nuts, and release the front seat-back blower (A) from the seat frame (B).

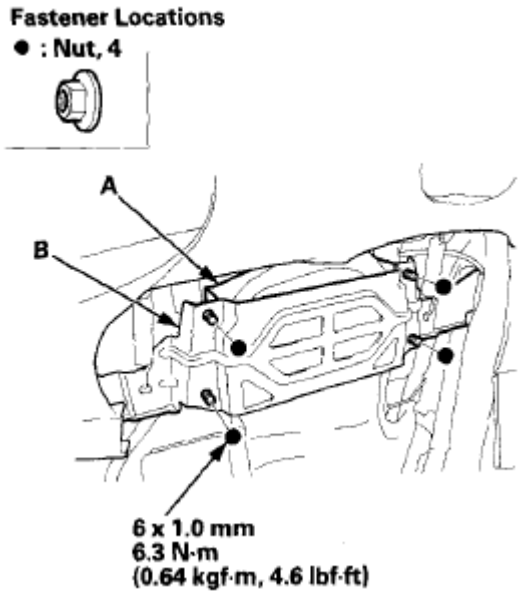

Fig. 50: Identifying Front Seat-Back Blower And Seat Frame With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. With seat ventilation: Release the hooks (A), then remove the front seat-back blower (B).

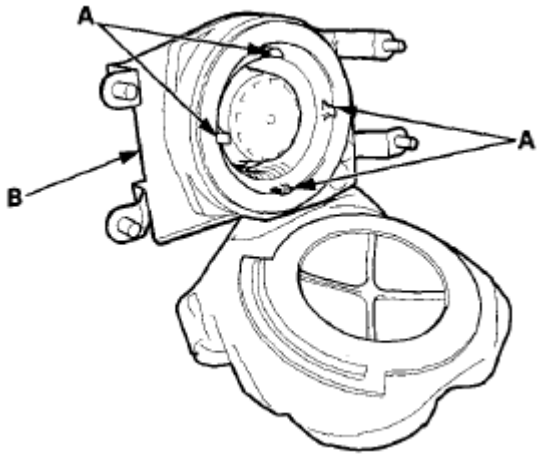

Fig. 51: Identifying Hooks And Front Seat-Back Blower
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the seat-back heater connector (A), and detach the harness clip (B).

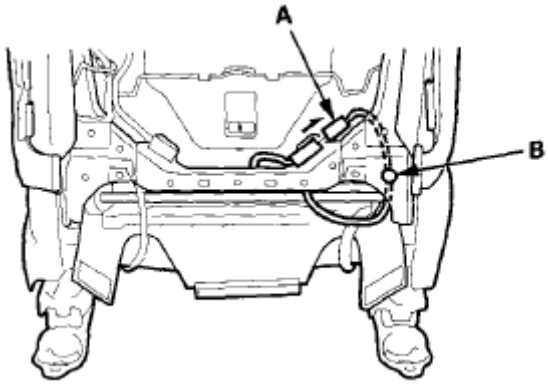

Fig. 52: Identifying Seat-Back Heater Connector And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Release airbag attachment wire A and airbag attachment wire B from the seat-back frame (C).

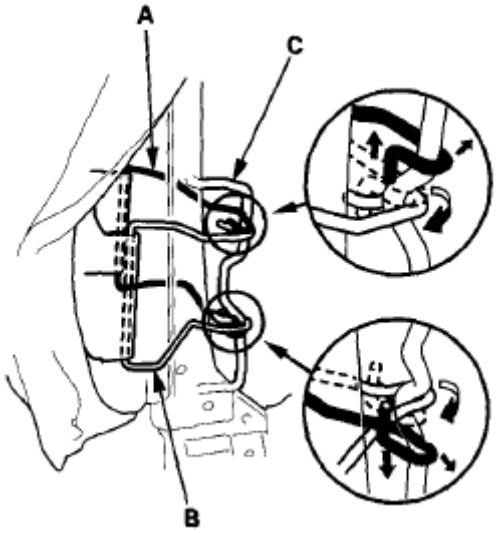

Fig. 53: Identifying Airbag Attachment Wire A And Airbag Attachment Wire B From Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Passenger's seat: Remove the ODS unit cover (A).
    1. Turn over the seat-back cover (B) and the pad (C) as needed.
    2. Release the cover from the lower hooks (D).
    3. Pull the cover upward to release it from the upper hook (E).

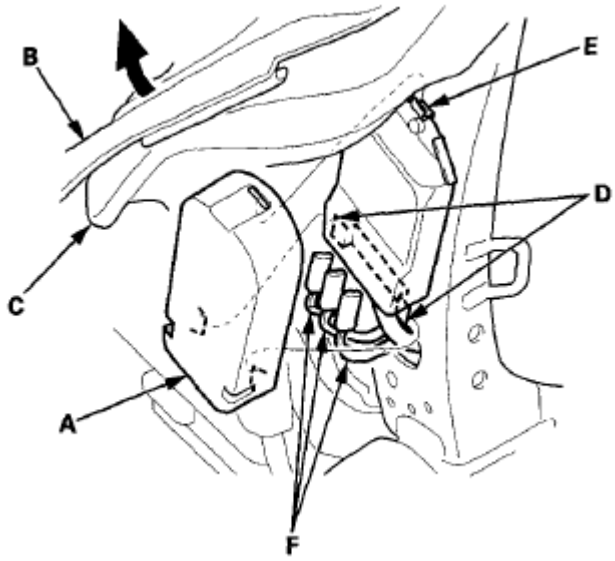

Fig. 54: Pulling Cover Upward To Release It From Upper Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Passenger's seat: Disconnect the OPDS sensor connectors (F).
11. Passenger's seat: Detach the harness clips (A) fastening the OPDS sensor harnesses (B), and release the wire tie (C).

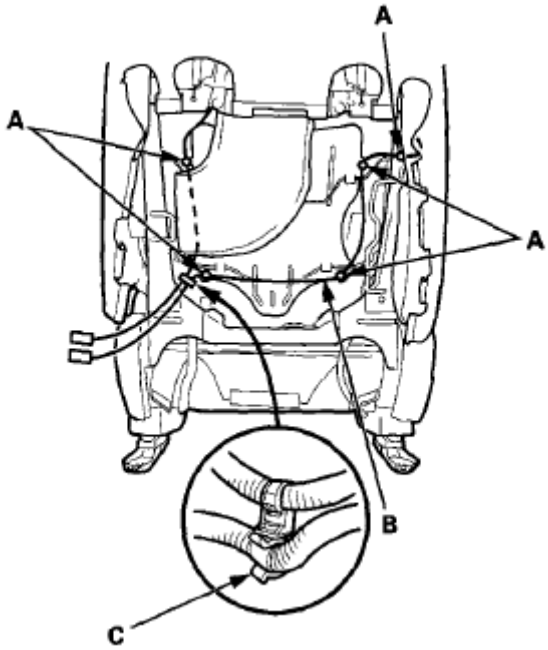

Fig. 55: Identifying Harness Clip, OPDS Sensor Harnesses And Wire Tie
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Pinch the tabs on the ends of the head restraint guides (A), and remove them from the seat-back.

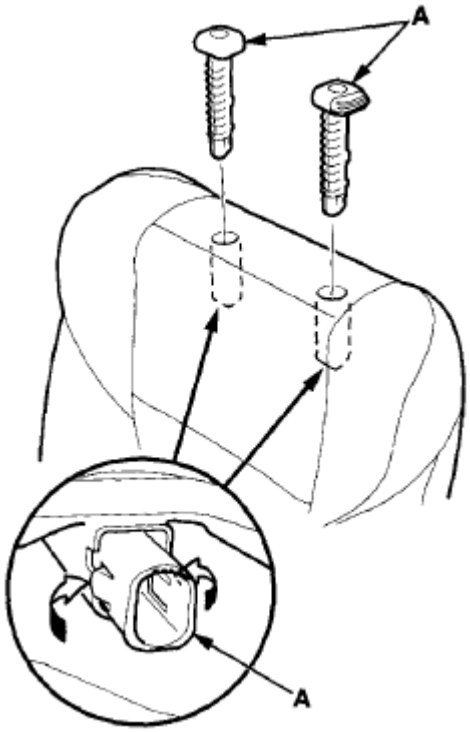

Fig. 56: Identifying Head Restraint Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the seat-back cover/pad (A) from the seat-back frame (B).

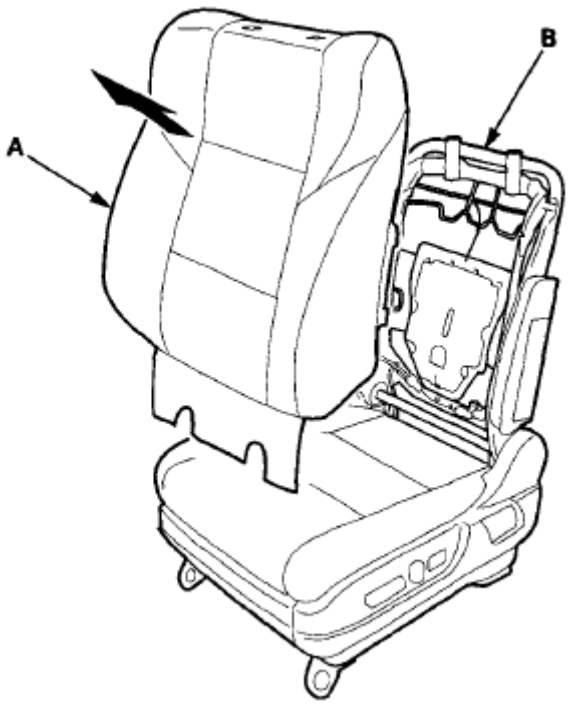

Fig. 57: Removing Seat-Back Cover/Pad From Seat-Back Frame

Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Pull back the edge of the seat-back cover (A) all the way around, and release the clips (B), and the Velcro fasteners (C), then remove the seat-back cover.

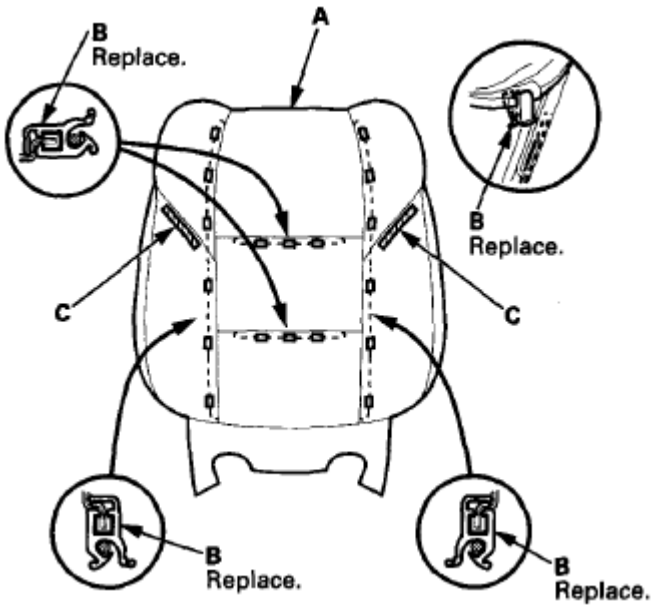

Fig. 58: Identifying Seat-Back Cover, Cloth, Loop, Clips And Velcro Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Remove airbag attachment wire B from the outside reinforcing cloth (C). Pull airbag attachment wire A out through the loop (D) of the inside reinforcing cloth (E). Remove airbag attachment wires A and B.

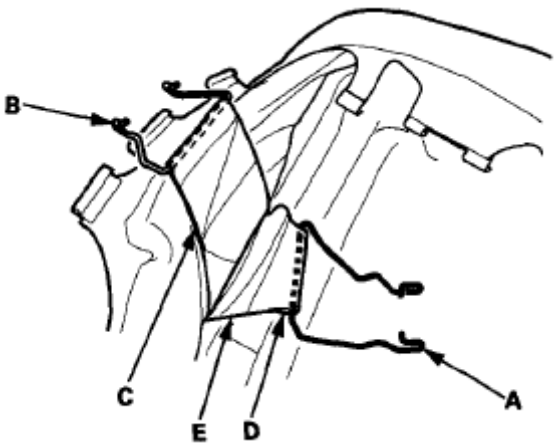

Fig. 59: Identifying Reinforcing Cloth, Loop And Wires
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Install the cover in the reverse order of removal, and note these items:
    - To prevent wrinkles when installing the seat-back cover, make sure the material is stretched evenly

over the pad before securing the clips, the hooks, and the hook strips.

- Before installing the seat-back cover, make sure airbag attachment wires A, B are installed in the reinforcing cloths (C) correctly.
- Replace any clips (D) you removed with new ones.
- Reinstall airbag attachment wires A, B securely to the seat-back frame as shown.
- Use only original Acura replacement seat-back covers.
- Make sure the side airbag harness and the seat wire harnesses are routed properly.

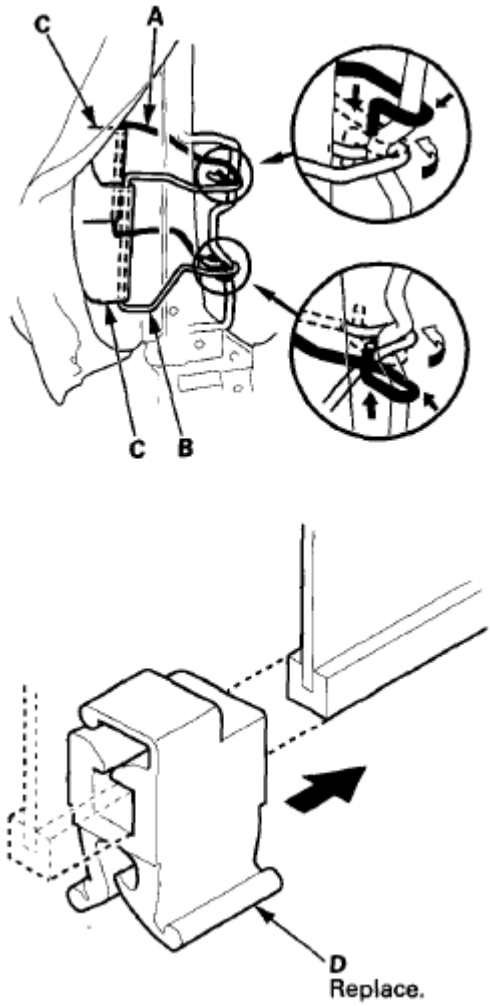

Fig. 60: Replacing Clips Of Front Seat Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT SEAT-BACK BLOWER REPLACEMENT

Special Tools Required

- KTC Trim Tool Set SOJATP2014*
- Trim Pad Remover, Snap-on A 177A or equivalent, commercially available

*Available through the Acura Tool and Equipment Program; call 888-424-6857

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to tear or damage the seat covers.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. From under the seat cushion, release the hooks (A) on the elastic strap from the seat cushion frame springs (B), then pull out the back panel undercover (C).

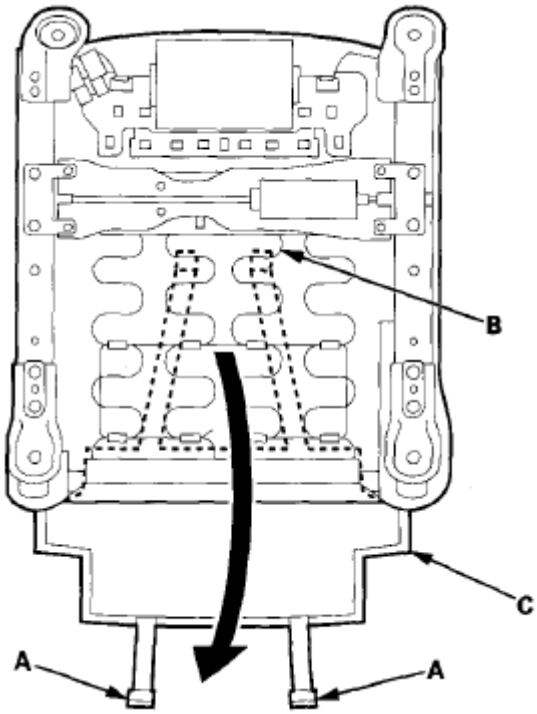

Fig. 61: Pulling Out Back Panel Undercover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert a trim pad remover between the bottom of the back panel (A) and the seat frame until it squarely engages one of the clips. Gently pry on the clip until it detaches from the seat frame. Repeat for the other clip. Gently pull back the panel to release the hooks (B), then pull down the panel to release the hooks (C).

NOTE:

- **The clips usually break during removal. Always replace the clips with new ones.**
- **Detach the clips and release the hooks in numbered sequence as shown.**
- **Take care not damage the seat-back panel or the clip mounting pads.**

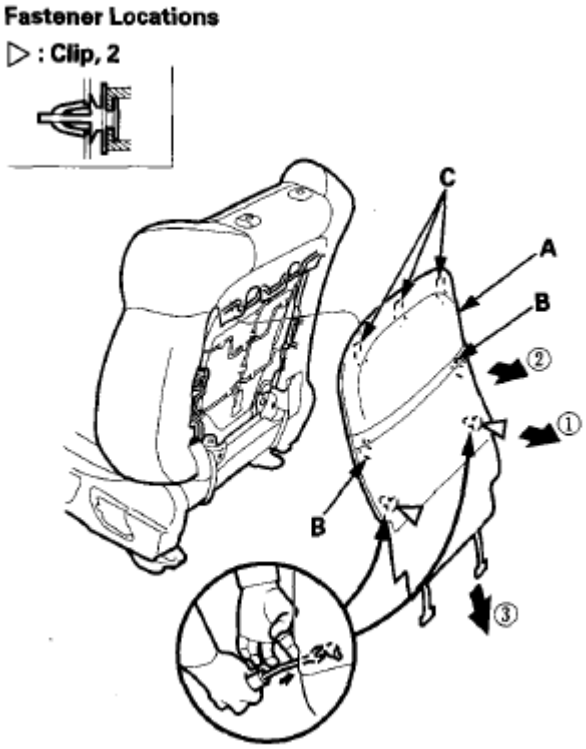

Fig. 62: Identifying Back Panel And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With seat ventilation: Disconnect the front seat-back blower connector (A). Release the ties (B) and detach the harness clip (C).

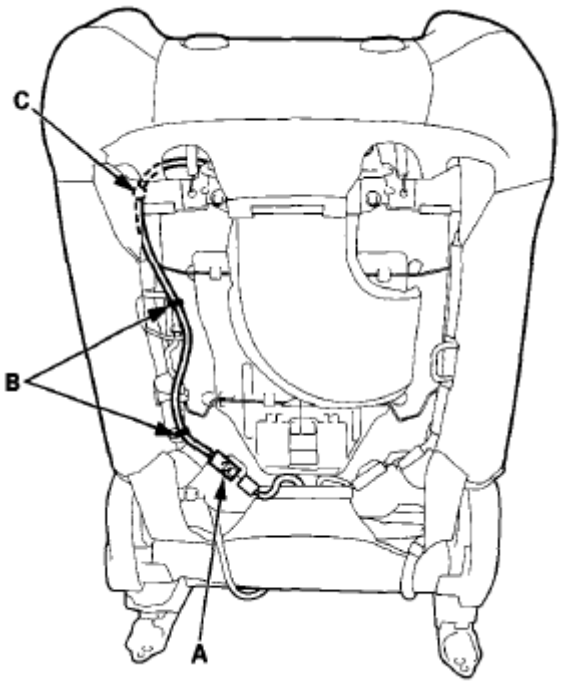

Fig. 63: Identifying Front Seat-Back Blower Connector, Ties And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the hook strips (A), then loosen the seat-back cover (B).

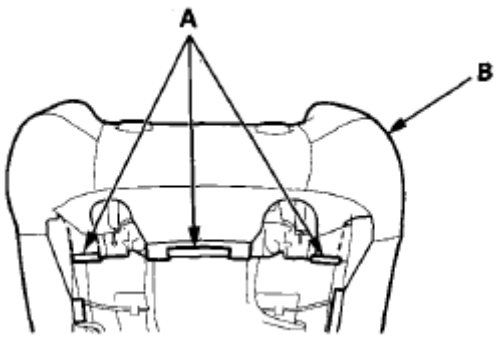

Fig. 64: Identifying Hook Strips And Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. With seat ventilation: Remove the nuts, and release the front seat-back blower (A) from the seat frame (B).

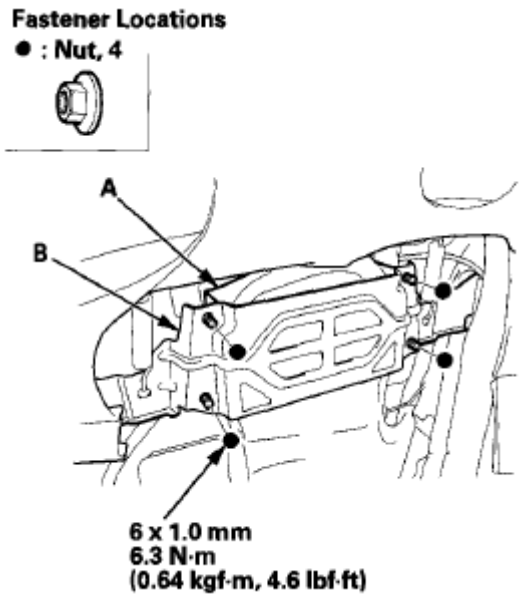

Fig. 65: Identifying Front Seat-Back Blower And Seat Frame With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. With seat ventilation: Release the hooks (A), then remove the front seat-back blower (B).

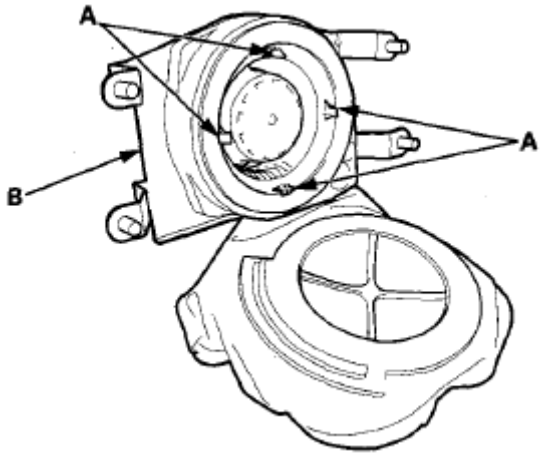

Fig. 66: Identifying Hooks And Front Seat-Back Blower
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the blower in the reverse order of removal.

FRONT SEAT RECLINE COVER REMOVAL/INSTALLATION

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to tear or damage the seat covers.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove the screw, and release the hook (A), the tabs (B), and the pin (C), then remove the front cover (D). The driver's seat is shown; the passenger's seat is similar.

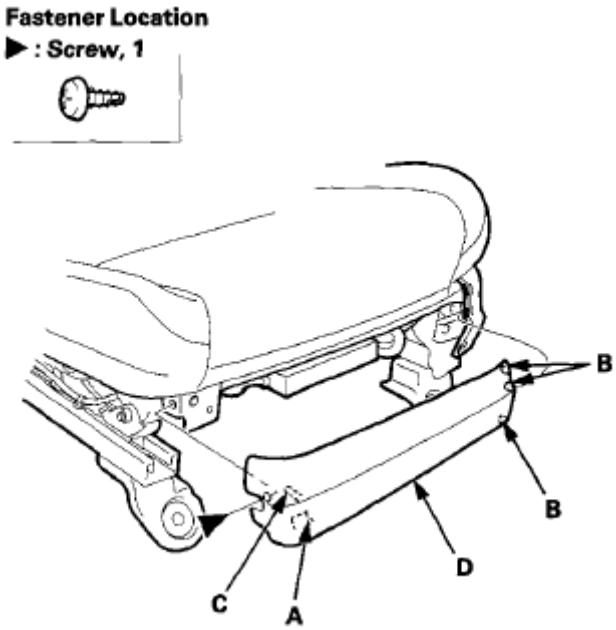

Fig. 67: Identifying Hook, Tabs, Pin And Front Cover
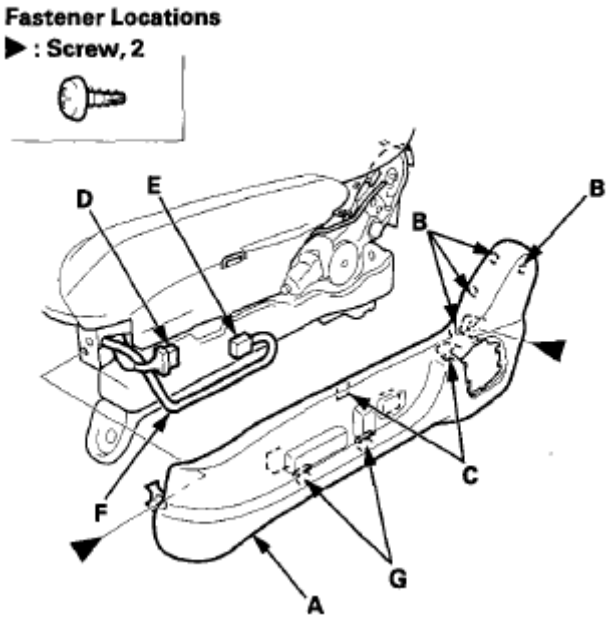
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. From under the seat cushion, release the seat-back hooks from the seat cushion frame springs (see step 2 on).
4. Remove the recline cover (A).
    1. Remove the screws, and detach the clip.
    2. Release the tabs (B).
    3. Pull up the cover, then release the hooks (C).
    4. Disconnect the power seat adjustment switch connector (D) and the lumbar support switch connector (E).
    5. Remove the wire harness (F) from the hooks (G).

Driver's seat



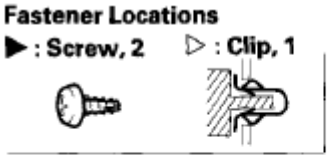


Fig. 68: Identifying Recline Cover, Tabs, Hooks, Switch Connector, Wire Harness And Hooks (Driver'S Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's seat

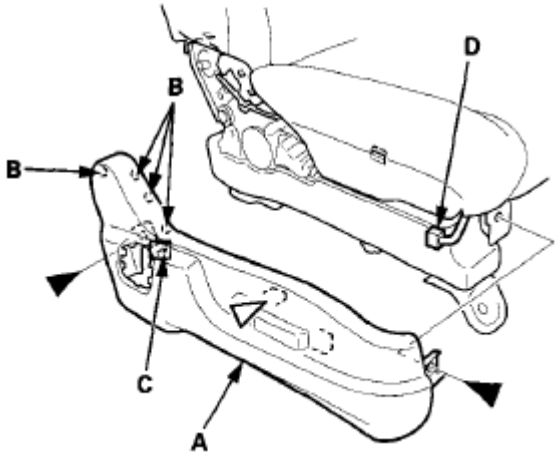

Fig. 69: Identifying Recline Cover, Tabs, Hooks, Switch Connector, Wire Harness And Hooks (Passenger'S Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the center cover (A). The driver's seat is shown; the passenger's seat is similar.
    1. Remove the screw.
    2. Pull up the cover to release the tab (B).

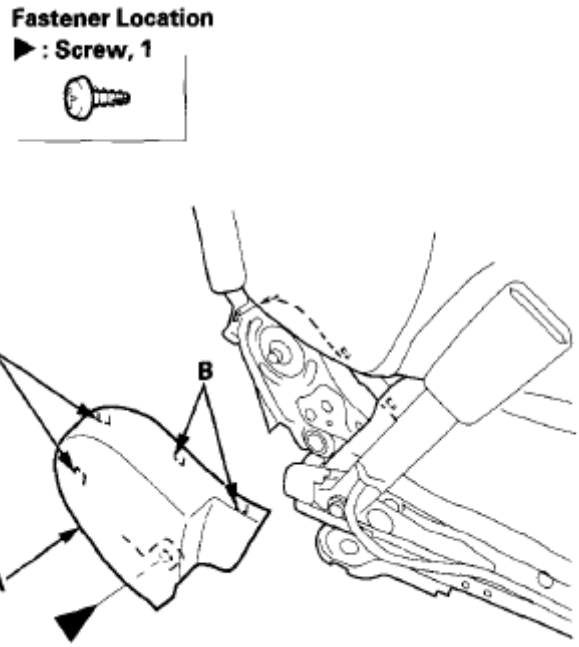

Fig. 70: Identifying Center Cover And Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the cover in the reverse order of removal, and push the clips, the hooks, and the tabs into place securely.

FRONT SEAT CUSHION COVER REPLACEMENT

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to tear or damage the seat covers.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

- **The driver's seat is shown; the passenger's seat is similar.**

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove the front seat recline cover (see **FRONT SEAT RECLINE COVER REMOVAL/INSTALLATION**).
3. From under the seat cushion, release the hooks (A) on the elastic straps from the seat cushion frame springs (B), then pull out the back panel undercover (C).

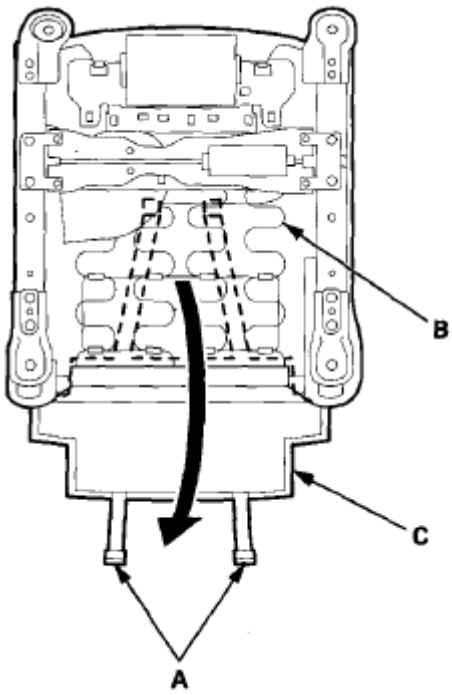

Fig. 71: Identifying Hooks, Seat Cushion Frame Springs And Back Panel Under Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. From under the seat cushion, disconnect the seat cushion heater connector (A). Detach the connector clip (B) and the harness clip (C), and release the harness holder (D) from the seat cushion frame springs (E).

Driver's seat (Without seat ventilation)

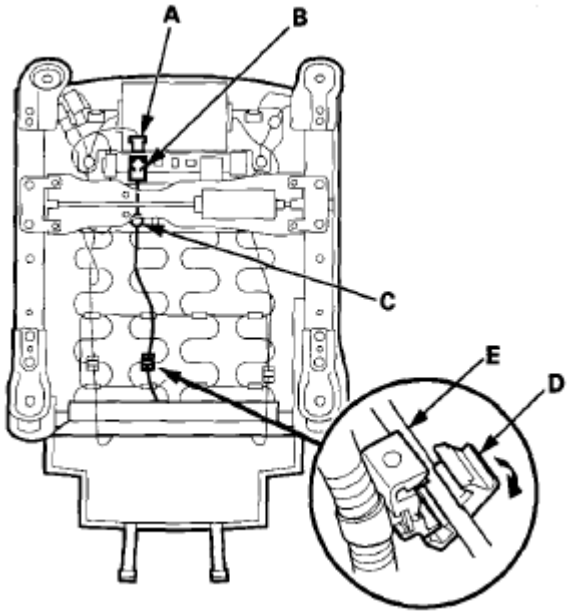

Fig. 72: Identifying Seat Cushion Heater Connector, Connector Clip And Harness Clip (Without Seat Ventilation)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Driver's seat (With seat ventilation)

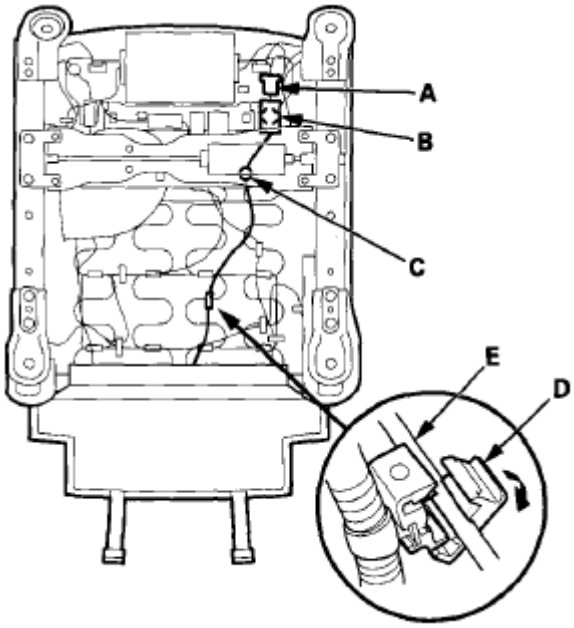

Fig. 73: Identifying Seat Cushion Heater Connector, Connector Clip And Harness Clip (With Seat Ventilation)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's seat

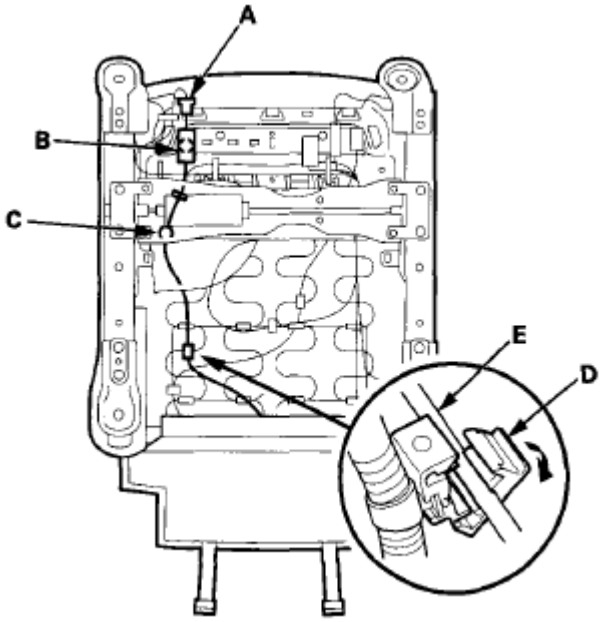

Fig. 74: Identifying Seat Cushion Heater Connector, Connector Clip And Harness Clip (Passenger's Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Driver's seat: Disconnect the connectors (A), and remove the bolts, then remove the power seat control unit (B).

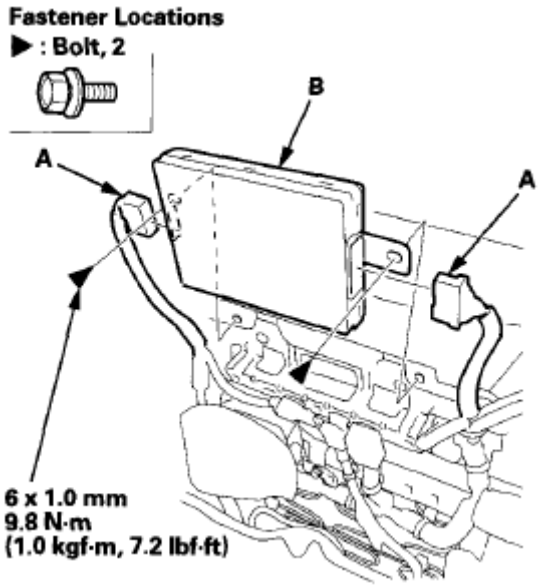

Fig. 75: Identifying Connectors And Power Seat Control Unit With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Release the hook strips (A) from under the seat cushion.

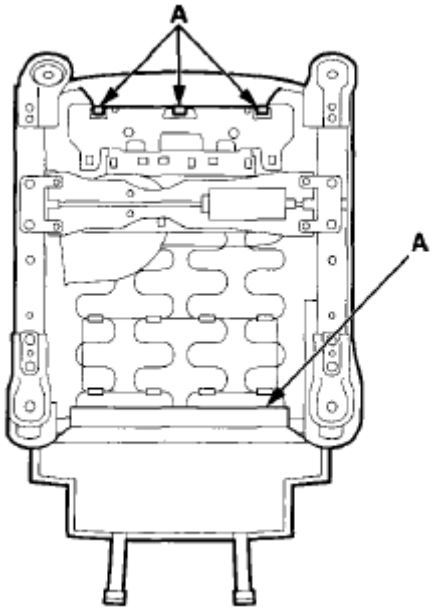

Fig. 76: Identifying Hook Strips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. With seat ventilation: Release the tie (A). Release the hooks (B), then separate the front seat cushion blower bag (C) from the front seat cushion blower (D).

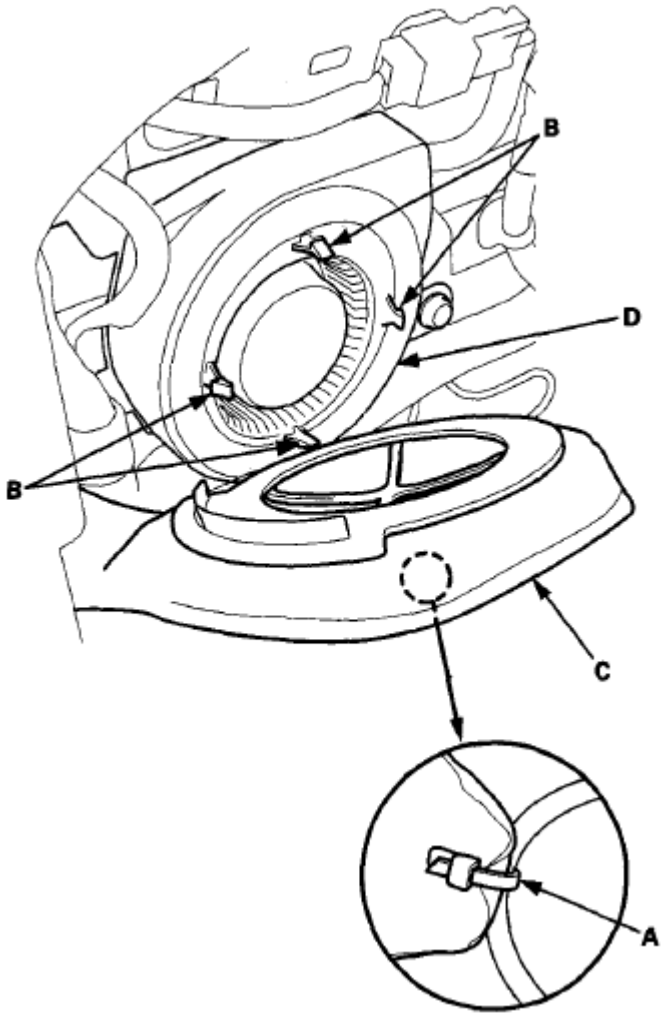

Fig. 77: Identifying Tie, Hooks, Front Seat Cushion Blower Bag And Front Seat Cushion Blower
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Release the hook strips (A) from both sides of the seat cushion frame.

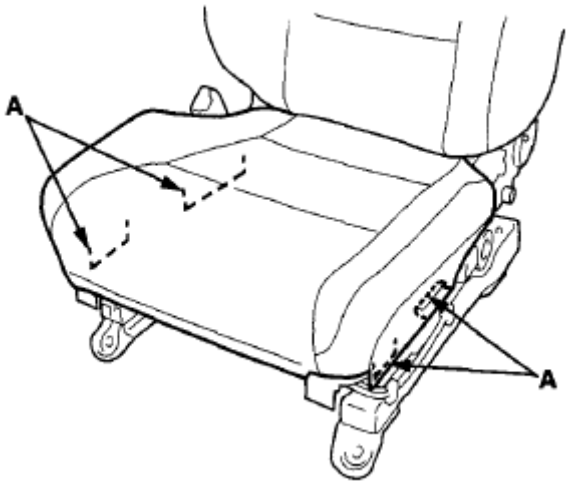

Fig. 78: Identifying Hook Strips Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the seat cushion cover/pad (A) from the seat frame (B).

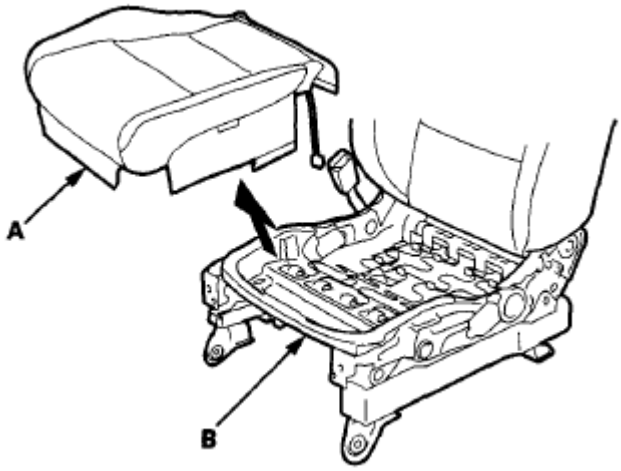

Fig. 79: Identifying Seat Cushion Cover/Pad And Seat Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Release the hook strips (A) fastening the seat cushion cover (B) on the seat cushion pad.

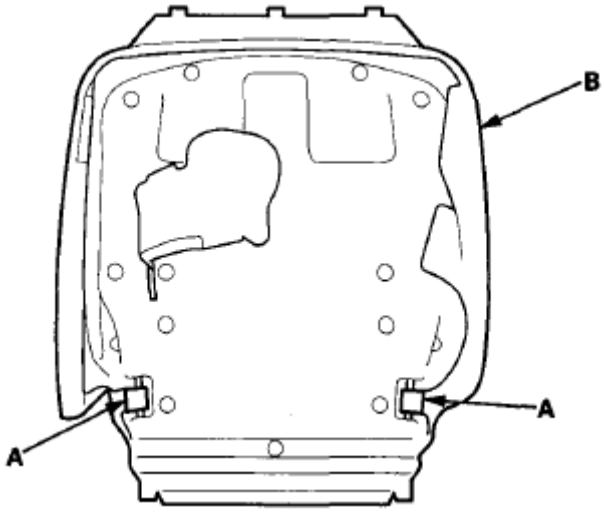

Fig. 80: Identifying Hook Strips And Seat Cushion Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Pull back the edge of the seat cushion cover (A) all the way around, and release the clips (B), then remove the seat cushion cover.

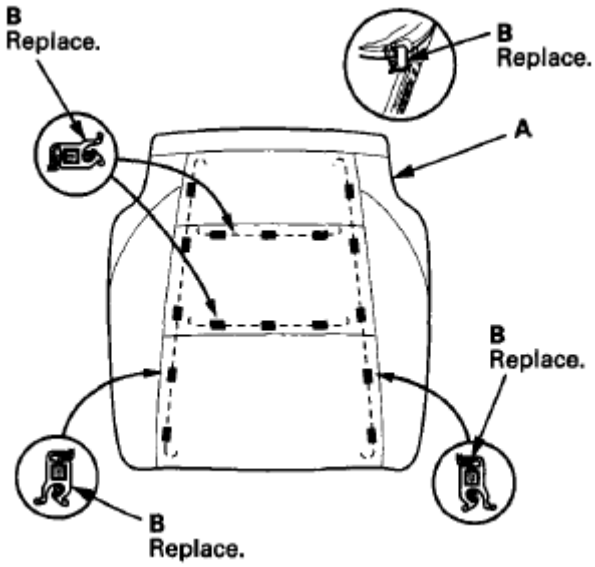

Fig. 81: Identifying Seat Cushion Cover And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the cushion cover in the reverse order of removal, and note these items:
    - To prevent wrinkles when installing a seat cushion cover, make sure the material is stretched evenly over the pad before securing the clips, the hooks, and the hook strips.
    - Replace any clips (A) you removed with new ones.
    - Push the clips, the hooks, and the hook strips into place securely.

FRONT SEAT CUSHION BLOWER REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to tear or damage the seat covers.**

1. Remove the front seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Release the hooks (A), then separate the front seat cushion blower bag (B) from the front seat cushion blower (C).

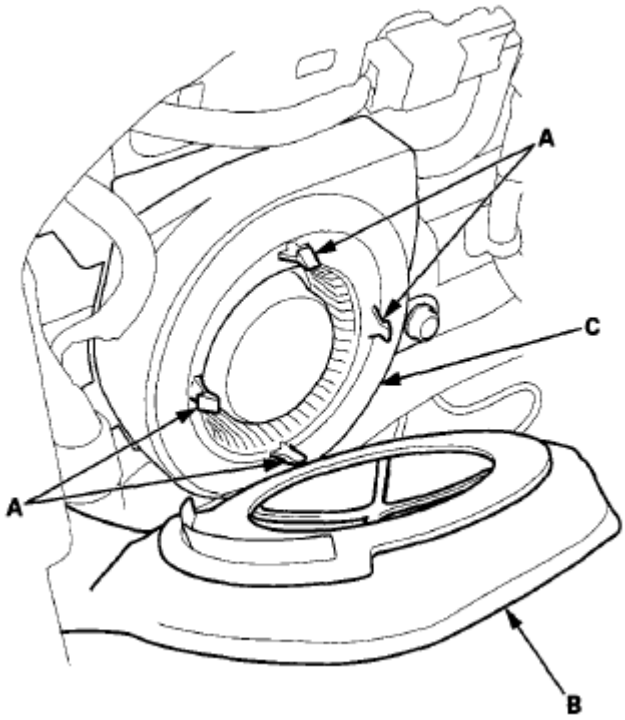

Fig. 83: Identifying Hooks, Seat Cushion Blower Bag And Front Seat Cushion Blower
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach and disconnect the front seat cushion blower connector (A).

Driver's seat

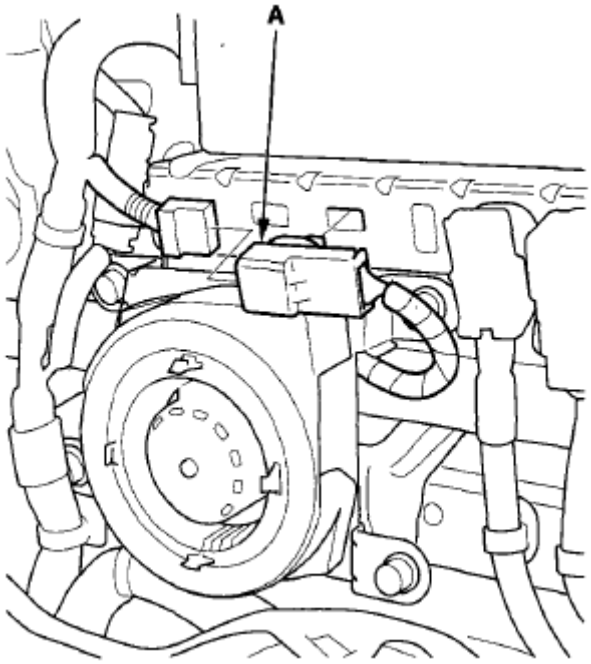

Fig. 84: Identifying Front Seat Cushion Blower Connector (Driver'S Seat)
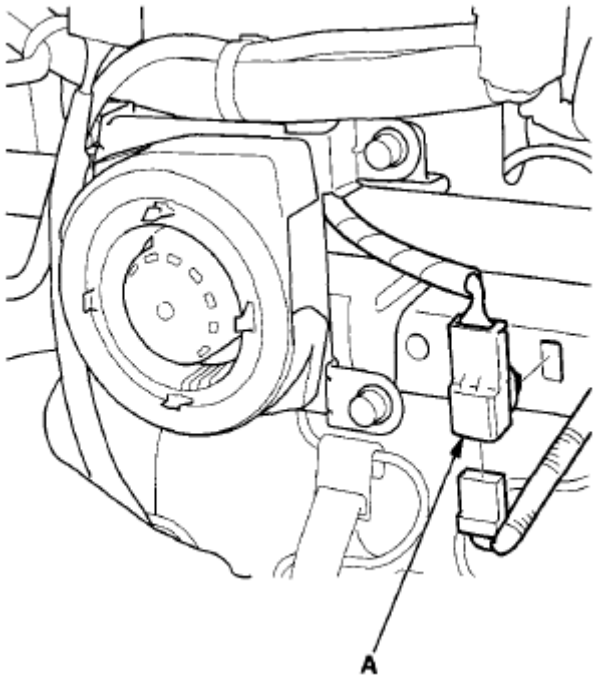
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's seat



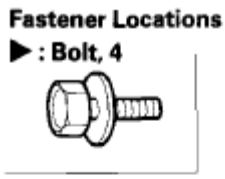


Fig. 85: Identifying Front Seat Cushion Blower Connector (Passenger's Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolts, then remove the front seat cushion blower (A).

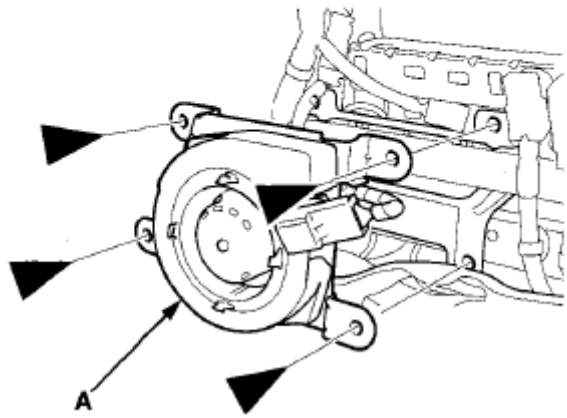

Fig. 86: Removing Front Seat Cushion Blower
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the blower in the reverse order of removal.

REAR SEAT REMOVAL/INSTALLATION

NOTE:

- **Have an assistant help you when removing and installing the rear seat-back.**
- **Take care not to scratch the body or tear the seat covers.**

1. While pushing down on the rear seat cushion (A), pull the seat hook handles (B) to release the hooks (C).

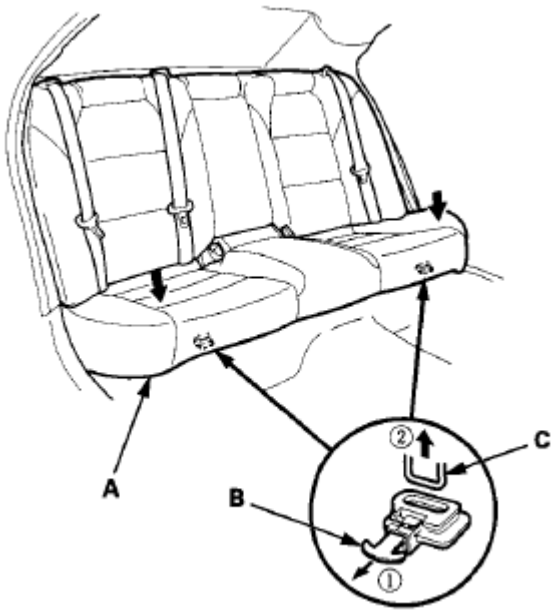

Fig. 87: Identifying Rear Seat Cushion, Seat Hook Handles And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the seat cushion (A), and release the center seat belt buckles (B) from the slits (C).

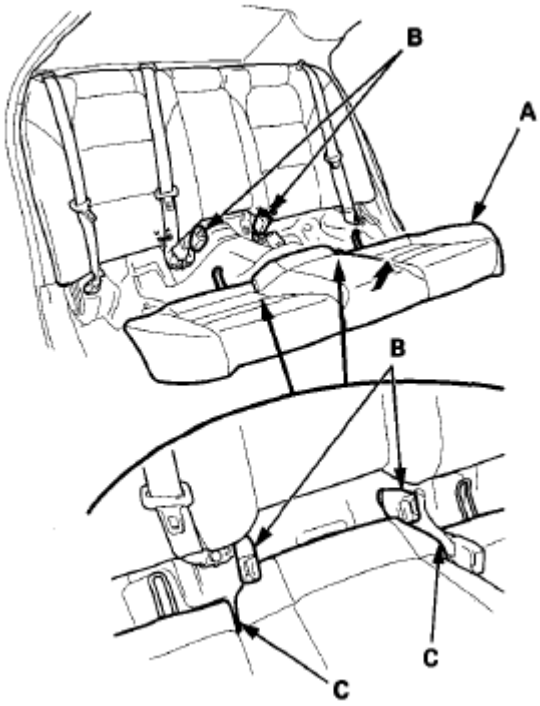

Fig. 88: Identifying Seat Cushion, Center Seat Belt Buckles And Slits
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release the seat belts (A) from their guides (B).

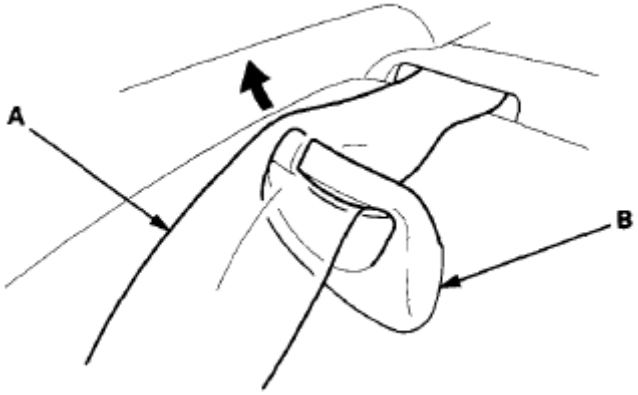

Fig. 89: Releasing Seat Belts From Their Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolts from the base of the seat-back (A).

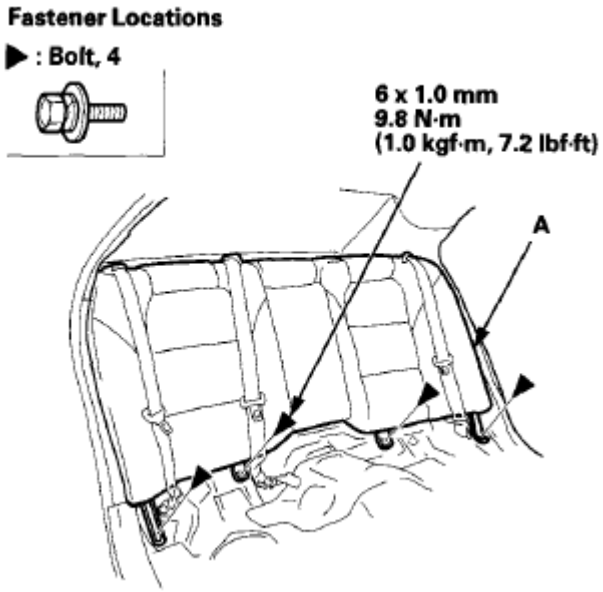

Fig. 90: Removing Bolts From Base Of Seat-Back With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the rear seat-back (A).
    1. Lift up the bottom of the seat-back.
    2. Push on the seat-back while lifting it up to release the wire loops (B) from the hooks (C) on the body.

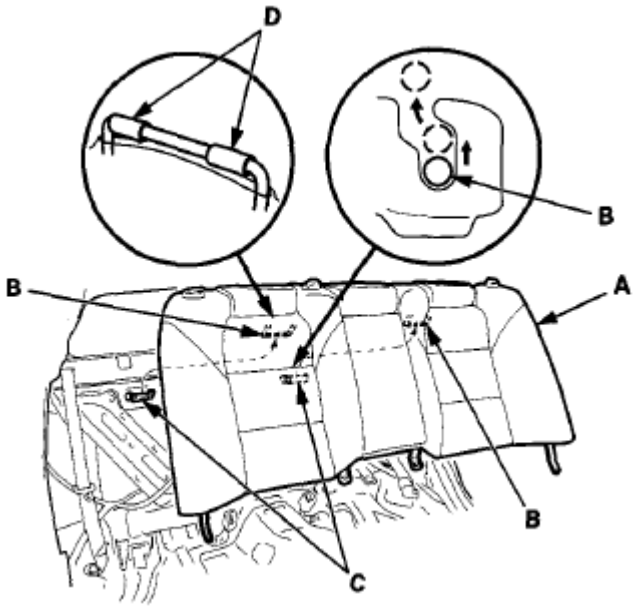

Fig. 91: Identifying Rear Seat Back, Wire Loops And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the seat in the reverse order of removal, and note these items:

- Replace any damaged felt tape (D) on the wire loops.
- Guide the belts over the front of the seat-back as you install it.
- Make sure there are no twists or kinks in the seat belts before attaching the rear seat-back and the rear seat cushion.
- Slip the seat belt buckles through the slits in the seat cushion as you install it.

REAR SEAT ARMREST REPLACEMENT

NOTE: Take care not to tear or damage the seat covers.

1. Remove the rear seat-back (see **REAR SEAT REMOVAL/INSTALLATION**).
2. Remove the screws, and release the hooks (A), then remove the upper cover (B) and the spring (C).

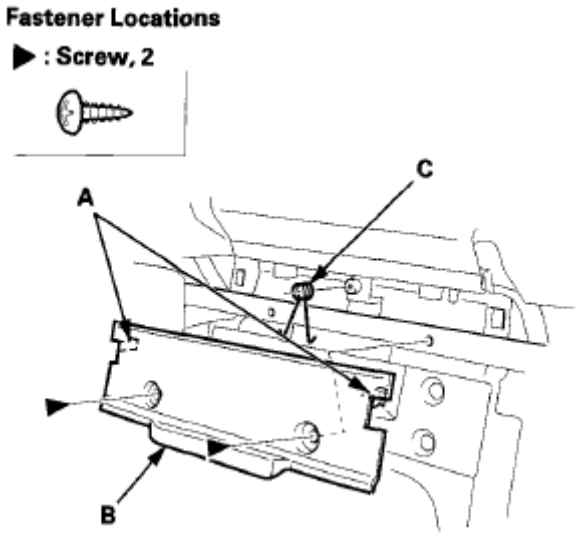

Fig. 92: Identifying Hooks, Upper Cover And Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pinch the tabs on the ends of the head restraint guides (A), and remove them from the seat-back.

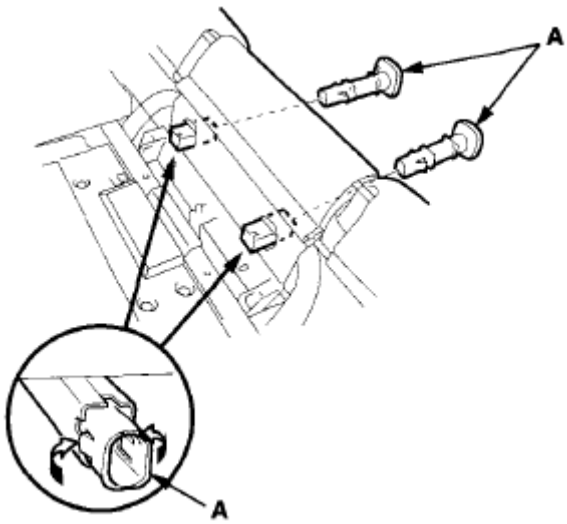

Fig. 93: Identifying Head Restraint Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Release the Velcro fastener (A), then pull back the upper flap (B). Remove the screws and detach the clips, then remove the trunk pass-through lid (C).

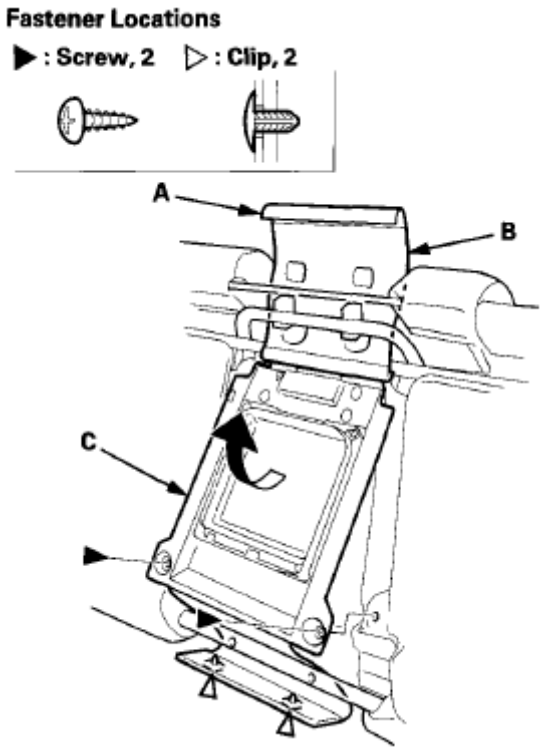

Fig. 94: Removing Trunk Pass-Through Lid
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If necessary, detach the clips and remove the screws, then remove the rear seat-back upper flap (A) and

the armrest cover (B) from the trunk pass-through lid (C).

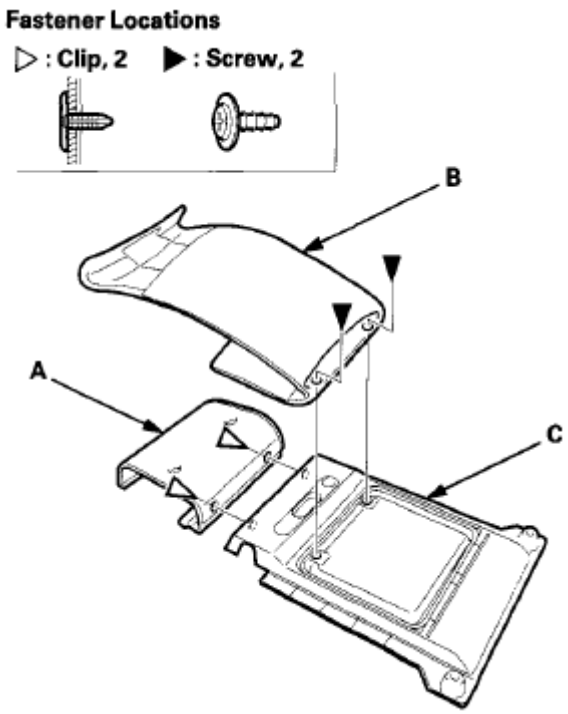

Fig. 95: Identifying Rear Seat-Back Upper Flap, Armrest Cover And Lid
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the bolts, then remove the rear seat armrest (A) from the seat-back frame.

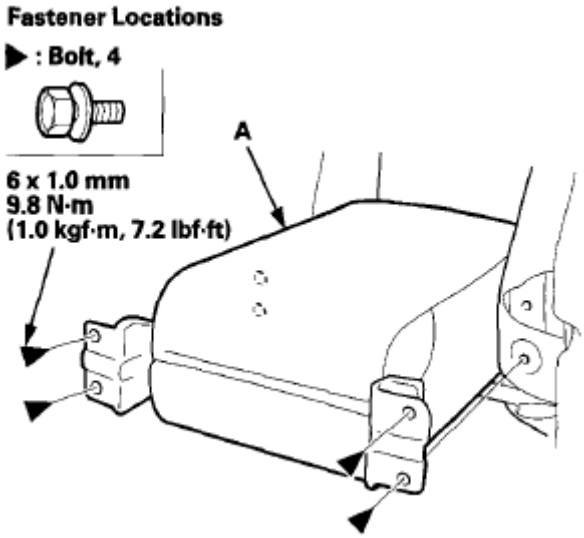

Fig. 96: Identifying Rear Seat Armrest With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the armrest in the reverse order of removal.

TRUNK PASS-THROUGH LID LOCK CYLINDER REPLACEMENT

NOTE: Take care not to tear or damage the seat covers.

1. Remove the rear seat-back (see **REAR SEAT REMOVAL/INSTALLATION**).
2. Remove the screws, and release the hooks (A), then remove the upper cover (B).

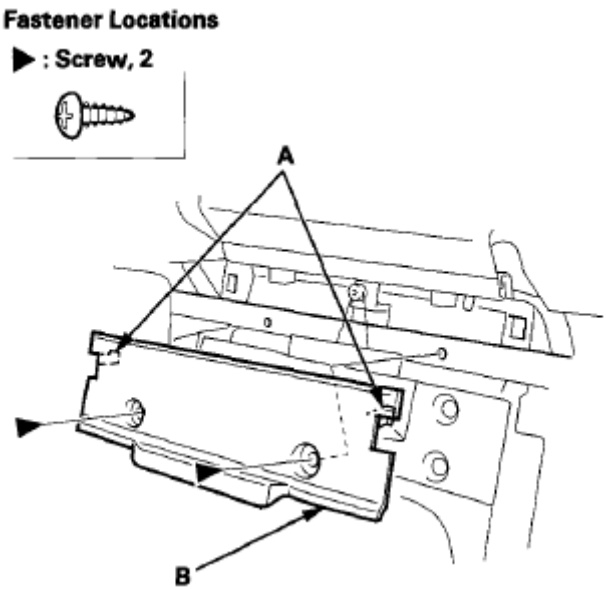

Fig. 97: Identifying Hooks And Upper Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the screws, and release the upper hook (A), then pull out the lock cover (6) to release the lower hook (C).

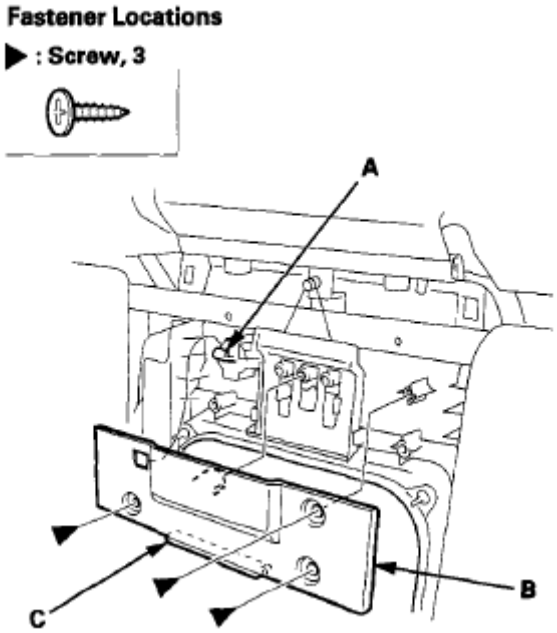

Fig. 98: Identifying Upper Hook, Lock Cover And Lower Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the retainer (A) with a hook-shaped tool, then remove the trunk pass-through lid lock cylinder (B) from the lid (C).

NOTE: Wear eye protection when doing this step.

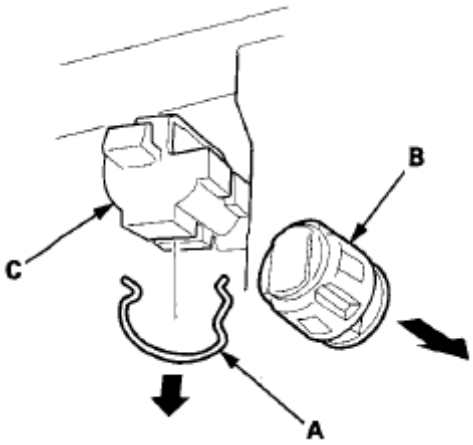

Fig. 99: Identifying Retainer, Lock Cylinder And Lid
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the lock cylinder in the reverse order of removal, and make sure the trunk pass-through lid opens properly and locks securely.

REAR SEAT ARMREST BEVERAGE HOLDER REPLACEMENT

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

NOTE:

- **Take care not to tear or damage the seat covers.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Detach the clips, and release the hooks (A) from the armrest trim (B), then remove the beverage holder (C).

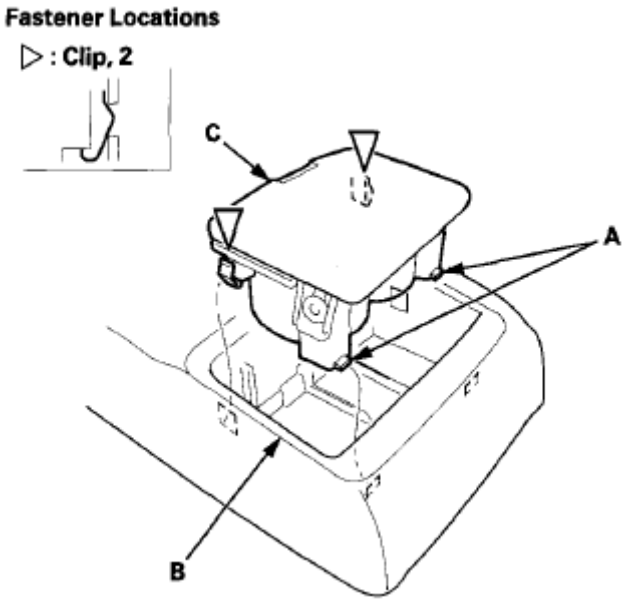

Fig. 100: Identifying Hook, Armrest Trim And Beverage Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If necessary, remove the screw, then remove the armrest trim (A) from the rear seat armrest (B).

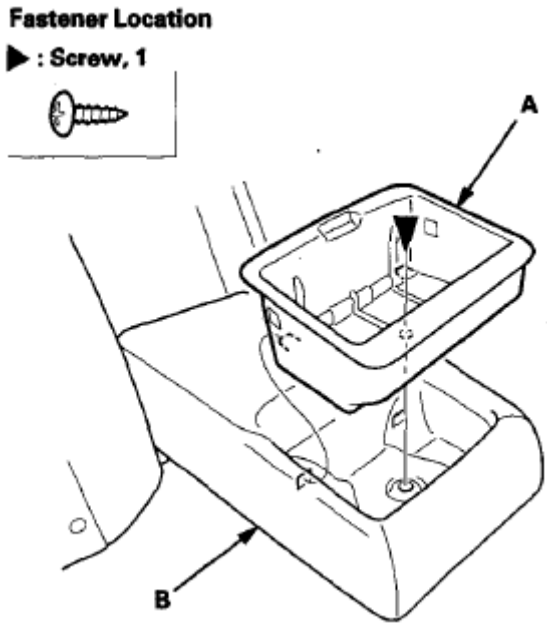

Fig. 101: Identifying Armrest Trim And Rear Seat Armrest
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the beverage holder in the reverse order of removal, and push the clips and the hooks into place securely.

REAR SEAT HEAD RESTRAINT TILT BUTTON REMOVAL/INSTALLATION

Special Tools Required

KTC Trim Tool Set SOJATP2014*

* Available through the Acura Tool and Equipment Program; call 888-424-6857

NOTE:

- **Take care not to tear or damage the seat covers.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove the rear seat head restraint to its upright position.
2. Remove the rear seat head restraint tilt button (A) from the rear seat head restraint (B).
    1. Position the appropriate trim tool (C) behind the tilt button as shown.
    2. Pull out on the tilt button to release it from the head restraint.

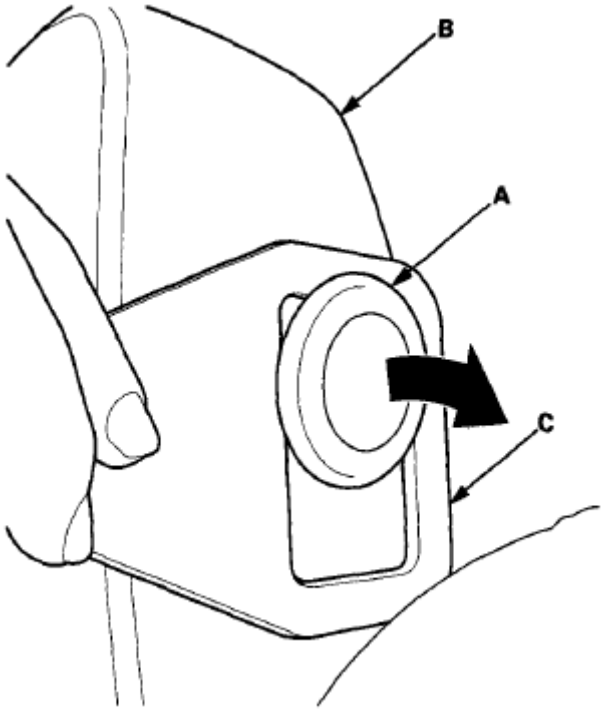

Fig. 102: Position Appropriate Trim Tool Behind Tilt Button
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Located the slots (A) in the rear seat head restraint tilt button hole (B), then align the slots with the tabs (C) on the new rear seat head restraint tilt button (D).

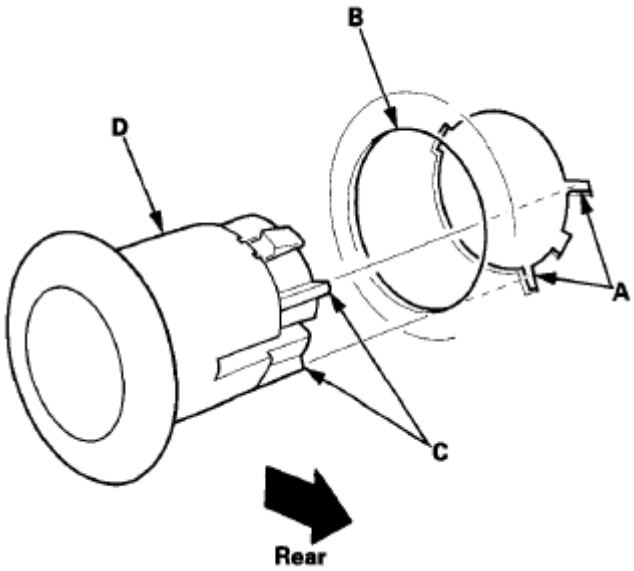

Fig. 103: Aligning Slots With Tabs On New Rear Seat Head Restraint Tilt Button
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With the slots and tabs aligned, push the new rear seat head restraint tilt button (A) in until you hear a

click.

NOTE: Make sure the tilt button is installed securely.

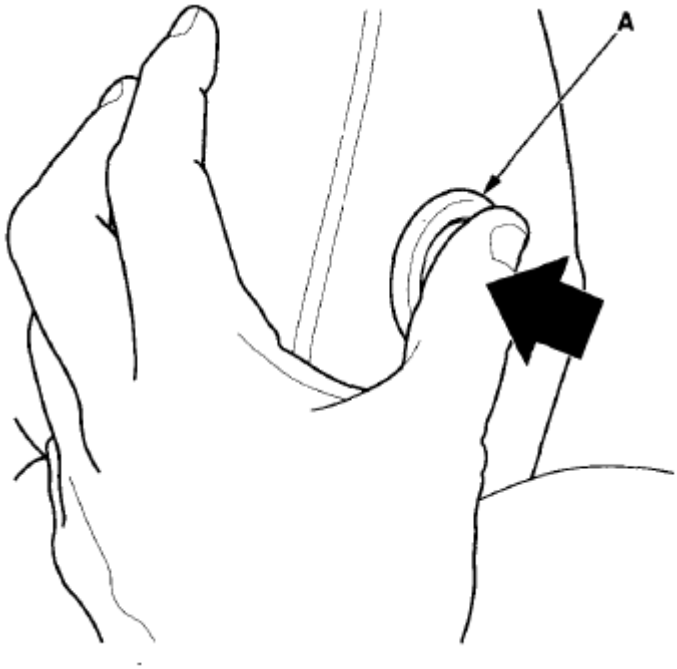

Fig. 104: Pushing New Rear Seat Head Restraint Tilt Button
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR SEAT-BACK COVER REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to tear or damage the seat covers.**

1. Remove the seat-back (see **REAR SEAT REMOVAL/INSTALLATION**).
2. Release all the upholstery rings (A), then remove the insulators (B).

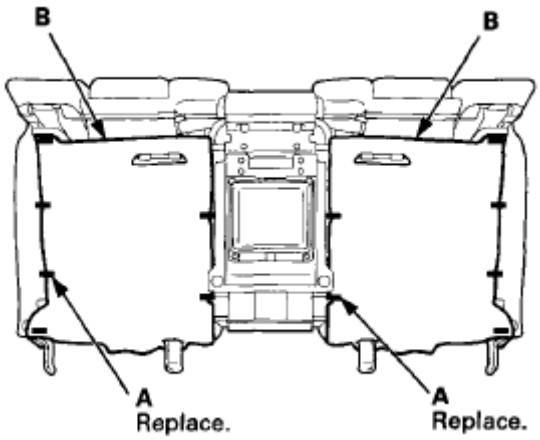

Fig. 105: Identifying Upholstery Rings And Insulators
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the armrest (see **REAR SEAT ARMREST REPLACEMENT**).
4. Release the hook strips (A) and the Velcro fasteners (B).

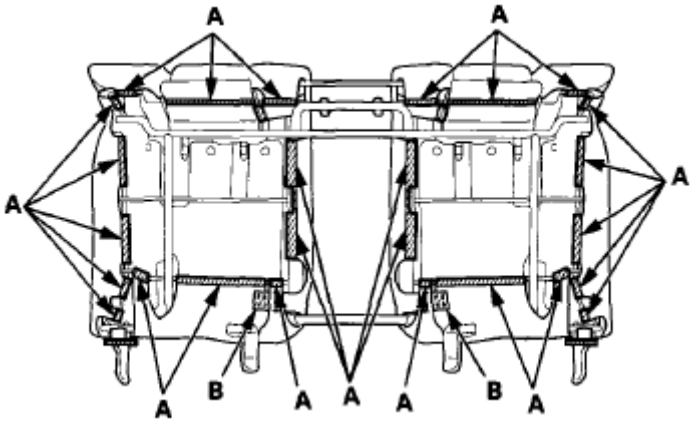

Fig. 106: Identifying Hook Strips And Velcro Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the screw, then remove the center belt guide (A).

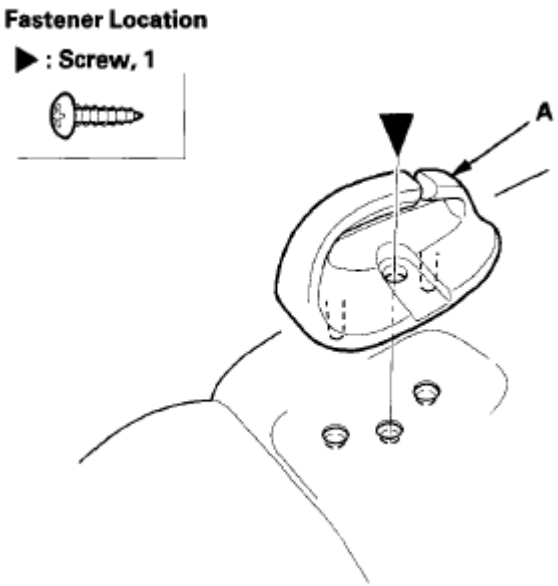

Fig. 107: Identifying Center Belt Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Pinch the tabs on the ends of the head restraint guides (A), and remove them from the seat-back.

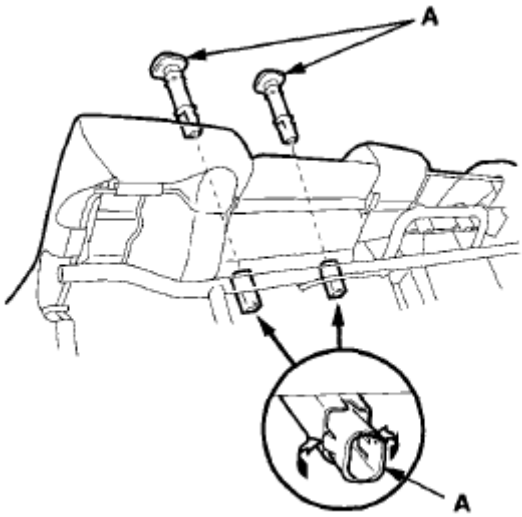

Fig. 108: Identifying Head Restraint Guides
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Separate the seat-back cover/pads (A) and the seat-back frame (B).

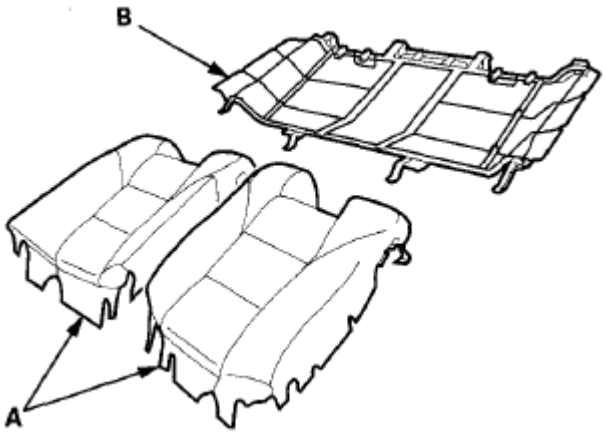

Fig. 109: Identifying Seat-Back Cover/Pads And Seat-Back Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Pull back the edge of the seat-back cover all the way around, and release the upholstery rings (A) and Velcro fastener (B), then remove the seat-back cover (C). The left seat-back cover is shown; the right seat-back cover is similar.

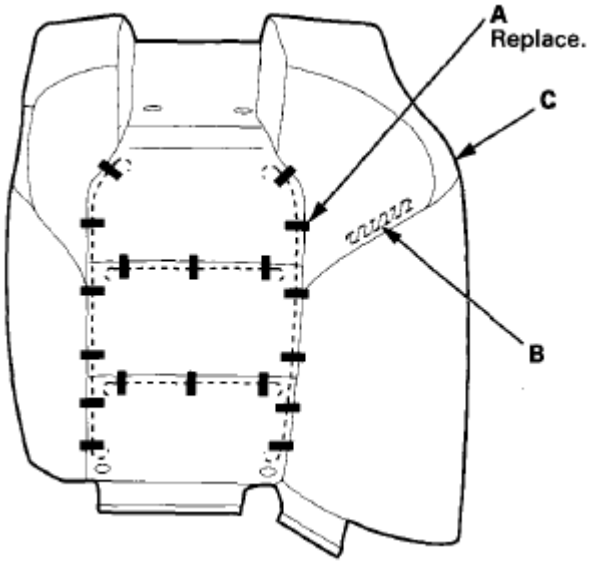

Fig. 110: Identifying Upholstery Rings, Velcro Fastener And Seat-Back Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the cover in the reverse order of removal, and note these items:
   - To prevent wrinkles when installing a seat-back cover, make sure the material is stretched evenly over the pad before securing the upholstery rings and the hook strips.
   - Replace all of the upholstery rings (A) fastening the seat-back cover (B) to the pad wires (C) with new ones using commercially available upholstery ring pliers (D).

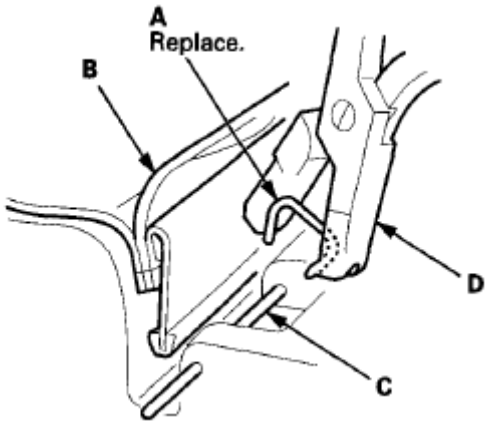

Fig. 111: Identifying Upholstery Rings, Seat-Back Cover, Pad Wires And Upholstery Ring Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR SEAT CUSHION COVER REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to tear or damage the seat covers.**

1. Remove the seat cushion (see **REAR SEAT REMOVAL/INSTALLATION**).
2. From the back of the seat cushion (A), release all the upholstery rings (B), then remove the insulators (C).

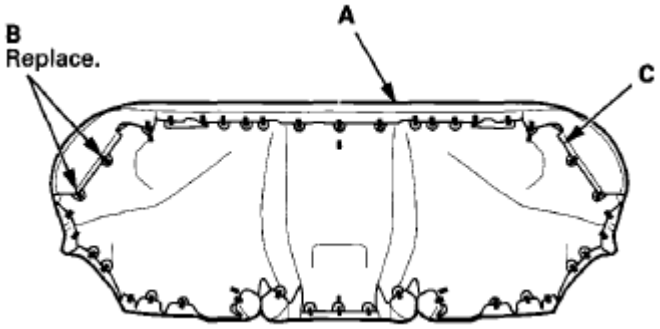

Fig. 112: Identifying Seat Cushion, Upholstery Rings And Insulators
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull back the edge of the seat cushion cover (A) all the way around, and release the upholstery rings (B). Release the hooks (C) of the lateral wires (D) from the longitudinal wires (E) on the pad, then remove the seat cushion cover.

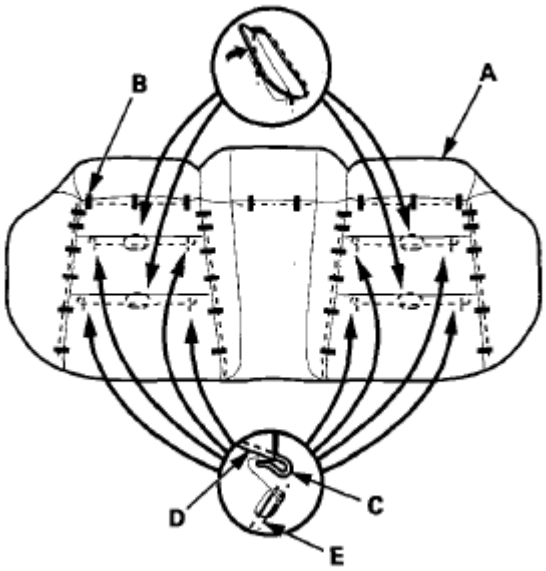

Fig. 113: Identifying Seat Cushion Cover, Upholstery Rings, Hooks, Lateral Wires And Longitudinal Wires
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the cover in the reverse order of removal, and note these items:
   - To prevent wrinkles when installing a seat cushion cover, make sure the material is stretched evenly over the pad before securing the upholstery rings and hook strips.
   - Replace all of the upholstery rings (A) fastening the seat cushion cover (B) to the pad wires (C) with new ones using commercially available upholstery ring pliers (D).

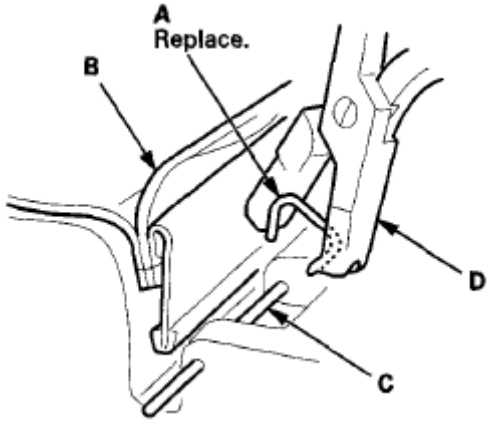

Fig. 114: Identifying Upholstery Rings, Seat Cushion Cover, Pad Wires And Upholstery Ring Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2012 ACCESSORIES & EQUIPMENT

Ventilated Seats - TL

COMPONENT LOCATION INDEX

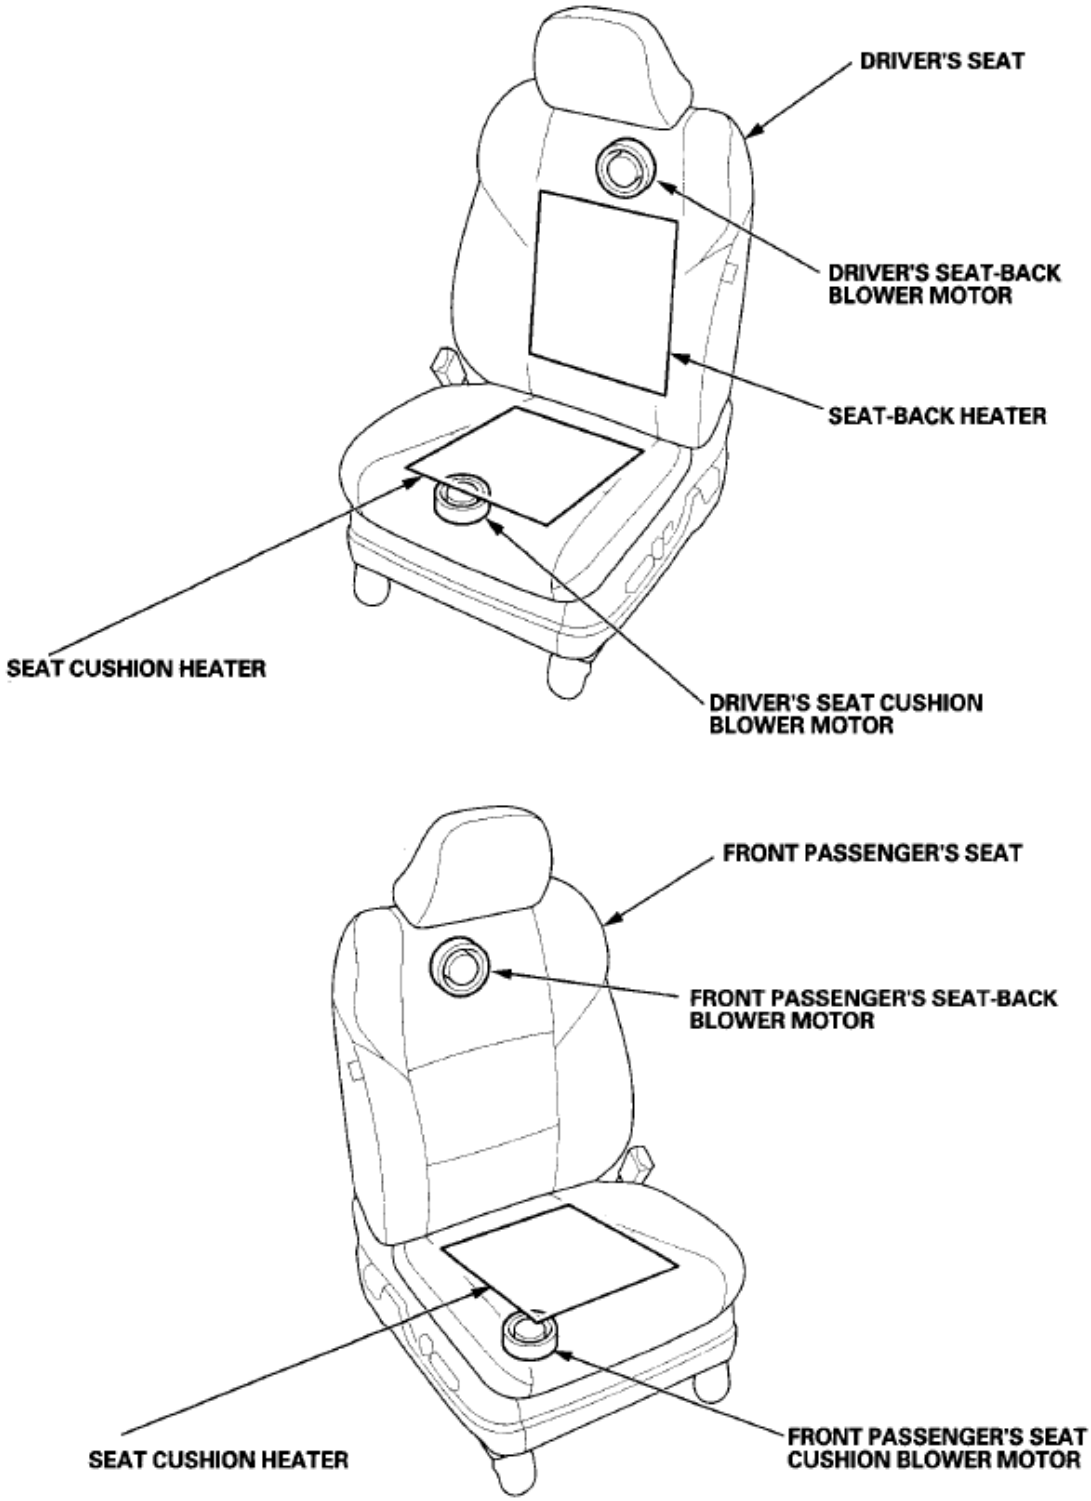

Fig. 1: Ventilated Seats Components Location (1 Of 2)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

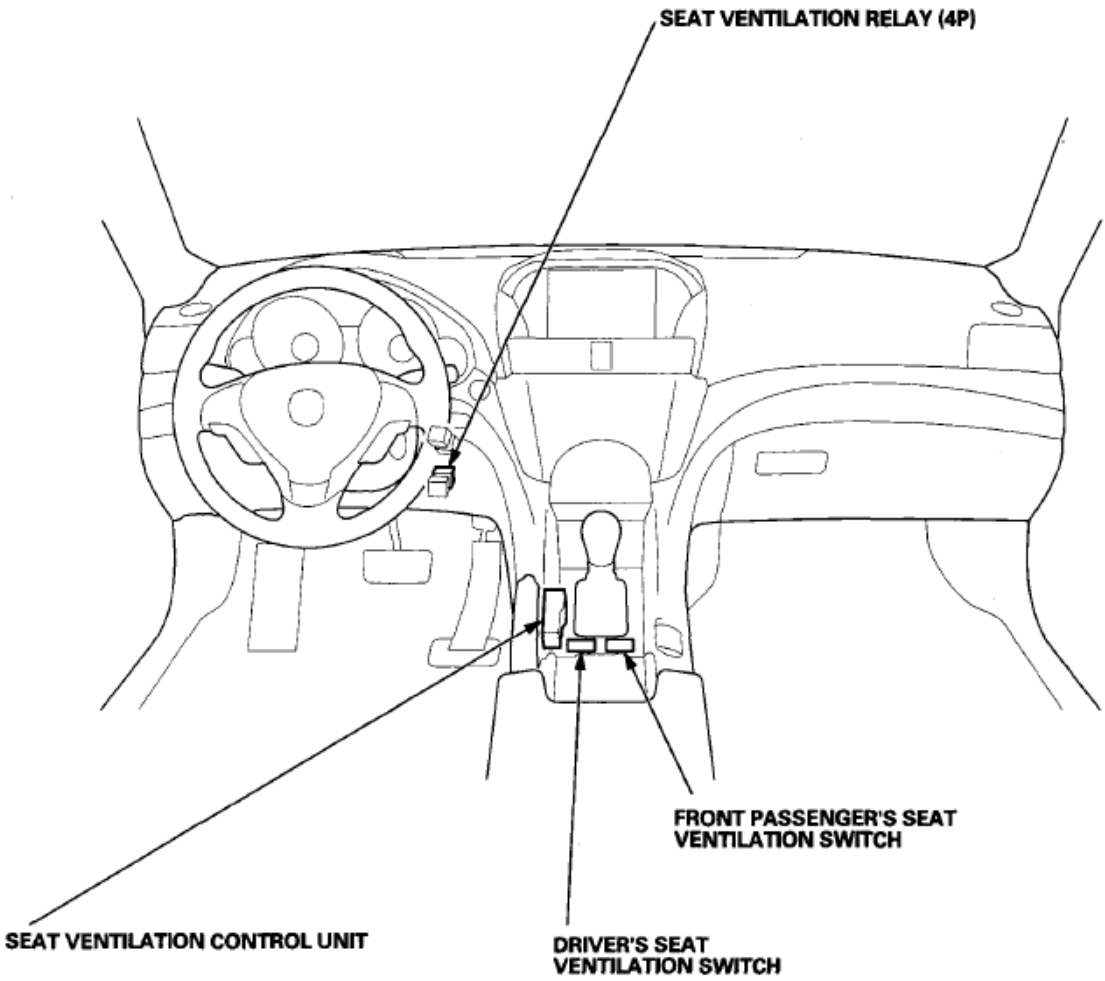

Fig. 2: Ventilated Seats Components Location (2 Of 2)
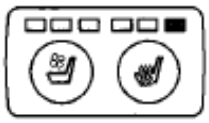
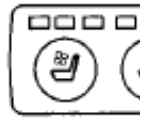
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SELF-DIAGNOSTIC FUNCTION





The seat ventilation control unit has a thermistor self-diagnostic function. It indicates the result by lighting the LEDs of the seat ventilation switch.

ENTERING THE SELF-DIAGNOSTIC FUNCTION

1. Push and hold the HEAT side of the driver's seat ventilation switch.
2. Turn the combination light switch ON.
3. Press the engine start/stop button to select the ON mode.
4. Within 2 to 5 seconds, turn the combination light switch OFF, then ON and OFF again.
5. Release the HEAT side of the driver's seat ventilation switch, and press the HEAT side of the driver's seat ventilation switch 3 times within 5 seconds.
6. If the system enters the self-diagnostic mode, all of the indicators turn on for 3 seconds.

- During self-diagnostic mode, the control unit blinks the driver's or front passenger's seat ventilation switch heat indicators in a specific pattern corresponding to the failure.
- An LED pattern will start to blink 2 seconds after all indicators turn off.
- The LED pattern will continue to blink every 2 seconds until self-diagnostic mode is off.
- If more than 1 failure exists, each pattern will be displayed according to their priority every 2 seconds.
- After all patterns are displayed, the cycle will be repeated until self-diagnostic mode is off.
- The DTC will be displayed on either the driver's seat ventilation switch or the front passenger's seat ventilation switch dependent upon where the failure has occurred.
- All LEDs turn off after entering the self diagnostic mode if there are no DTCs stored.

INDICATOR BLINK PATTERNS

Order of priority	1	2	3	4
Blinking pattern (1)	Seat heater HIGH indicator blinking 	Seat heater LOW indicator blinking 	Seat heater MIDDLE indicator and LOW indicator blinking 	Seat heater HIGH indicator and MIDD indicator blinking 
Failure status	Thermistor open	Thermistor short	Heater current abnormal	Heater voltage abno

(1) The indicator(s) will blink 4 times a second.

HOW TO CLEAR THE DTCS

Whenever the control unit detects failures (abnormal seat heater voltage, abnormal seat heater current abnormal, and/or a driver side or front passenger side seat not heating), each failure is stored in the control unit.

To clear the DTCs, press and hold the applicable HEAT side of the ventilation switch for 6 seconds while in the self-diagnostic mode.

NOTE:

- **Completely clear all DTCs for the driver's side (or passenger's side) before clearing the other side.**
- **After clearing the DTCs, all seat heater indicators will turn on for 2 seconds, and then go off.**
- **A thermistor open or a thermistor short failure is stored only when the vehicle ignition is in the ON mode. After the engine start/stop button is pressed to select the OFF mode, it is cleared.**
- **For self-diagnostic mode display of a thermistor open or a thermistor short failure, if the failure has already occurred, it will be detected within 6 seconds after the engine start/stop button is pressed to select the ON**

mode.

- **To exit the self-diagnostic mode, press the engine start/stop button to select the OFF mode.**

FACTORY MODE

When the vehicle is initially delivered, the seat ventilation control unit is in factory mode. While in this mode, the seats are fully functional for basic operation, fail-safe operation, etc., but will not store failures in memory while in self-diagnostic mode.

After manual or automatic activation, the control unit will permanently exit factory mode, and will never again simultaneously display all the indicator lights if all four switches are pressed with the ignition switch ON (II).

AUTOMATIC ACTIVATION METHOD

Press the engine start/stop button to select the ON mode and then the OFF mode: Do this procedure 9 more times for a total of 10 times.

NOTE: Keep the vehicle ignition in the ON mode for at least 20 seconds following activation using this method.

MANUAL ACTIVATION METHOD

Press the engine start/stop button to select the ON mode, then push and hold all four seat ventilation buttons for 2 seconds. After this sequence is accepted by the control unit, all indicators will turn on for 2 seconds.

CIRCUIT DIAGRAM

SYMPTOM TROUBLESHOOTING

1. Troubleshoot the seat ventilation system in this order:

Order of priority	Symptom	Possible cause
		Measure the resistance between seat cushion heater connector A (5P) [seat

		cushion heater 5P connector] terminals No. 3 and No. 2 [No. 4]. If the resistance value is at least 350 kohms. The thermistor is faulty; replace the seat cushion cover/pad (see **FRONT SEAT CUSHION COVER REPLACEMENT**).
1	Thermistor open	Check for continuity between seat ventilation control unit 37P connector terminals No. 9 [No. 36] and No. 21 [No. 20] and seat cushion heater connector A (5P) [seat cushion heater 5P connector] terminals No. 3 and No. 2 [No. 4] respectively. If there no continuity, repair an open in the wire.
2	Thermistor short	Measure the resistance between seat cushion heater connector A (5P) [seat cushion heater 5P connector] terminals No. 2 [No. 4] and No. 3. If the resistance value is 600 ohms or less. The thermistor is faulty; replace the seat cushion cover/pad (see **FRONT SEAT CUSHION COVER REPLACEMENT**).
		Disconnect the seat ventilation control unit 37P connector, and check for continuity between body ground and seat cushion heater connector A (5P) [seat cushion heater 5P connector] terminals No. 2 [No. 4] and No. 3 individually. If there continuity, repair a short to ground in the wire.
3	Heater current abnormal	Go to the ventilated seat system input test, and do all power and ground input tests (see). If the tests prove OK, measure the resistance between seat cushion heater connector A (5P) [seat cushion heater 5P connector] terminals No. 1 [No. 5] and No. 4 [No. 2], and seat-back heater connector B (2P) terminals No. 1 and No. 2: • If the resistance value of the seat cushion heater is out of the range between 4.7 and 5.7 ohms. The seat cushion heater is faulty; replace the seat cushion cover/pad (see **FRONT SEAT CUSHION COVER REPLACEMENT**). • If the resistance value of the seat-back heater is out of the range between 4.5 and 5.6 ohms. The seat-back heater is faulty; replace the seat cushion cover/pad (see **FRONT SEAT CUSHION COVER REPLACEMENT**).
	Heater voltage abnormal	Go to the ventilated seat system input test, and do all power and ground input tests (see **Control Unit Input Test/Replacement**).
4	Seat ventilation switch failure	Go to the ventilated seat system input test, and do all power and ground input tests (see **Control Unit Input Test/Replacement**). If the tests prove OK, measure the resistance between seat cushion heater connector A (5P) [seat cushion heater 5P connector] terminals No. 1 [No. 5] and No. 4 [No. 2], and seat-back heater connector B (2P) terminals No. 1 and No. 2: • If the resistance value of the seat cushion heater is out of the range between 4.7 and 5.7 ohms. The seat cushion heater is faulty; replace the seat cushion cover/pad (see **FRONT SEAT CUSHION COVER REPLACEMENT**). • If the resistance value of the seat-back heater is out of the range between

5	Seat not heating	4.5 and 5.6 ohms. The seat-back heater is faulty; replace the seat cushion cover/pad (see **FRONT SEAT CUSHION COVER REPLACEMENT**). • If the resistance value is within the specified value, replace the seat ventilation control unit.
[]: Front passenger's seat		

CONTROL UNIT INPUT TEST/REPLACEMENT

NOTE: Before testing, make sure the No. 2-4 (AS F/B OPTION) (40 A) fuse in the under-hood fuse/relay box, the No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box, and the No. 19 (20 A) fuse in the passenger's under-dash fuse/relay box are OK.

1. Remove the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
2. Disconnect the 37P connector (A) from the seat ventilation control unit (B).

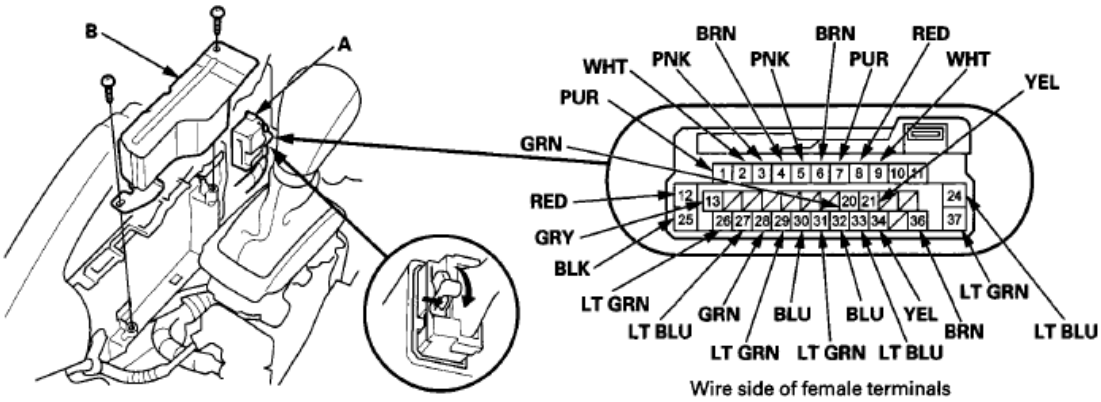

Fig. 6: Identifying 37P Connector And Seat Ventilation Control Unit With Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector and socket terminals to be sure they are all making good contact.
   - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
   - If the terminals look OK, go to step 4.
4. Reconnect the 37P connector to the control unit, and do the following input tests.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step 5.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
25	BLK	In all power modes	Measure the voltage to ground:	• Poor ground (G405) • An open or high resistance in the

			There should be less than 0.2 V.	ground wire
12	RED	Power mode ON	Measure the voltage to ground: There should be battery voltage.	• Blown No. 19 (20 A) fuse in the passenger's under-dash fuse/relay box • Faulty seat ventilation relay • An open or high resistance in the wire
13	GRY	Combination light switch (PARKING position) ON	Measure the voltage to ground: There should be battery voltage.	• Blown No. 6 (7.5 A) fuse in the passenger's under-dash fuse/relay box • An open or high resistance in the wire
26	LT GRN	Power mode ON	Measure the voltage to ground: There should be battery voltage.	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • An open or high resistance in the wire
24	LT BLU	Power mode ON, front passenger's seat heat switch pressed	Measure the voltage to ground: There should be battery voltage.	• Faulty front passenger's seat heater • Poor ground (G701) or an open in the ground wire • An open or high resistance in the wire
37	LT GRN	Power mode ON, driver's seat heat switch pressed	Measure the voltage to ground: There should be battery voltage.	• Faulty driver's seat heater • Poor ground (G701) or an open in the ground wire • An open or high resistance in the wire

5. Disconnect the 37P connector from the control unit, and do the following input tests.

- If any test indicates a problem, find and correct the cause, then recheck the system.
- If all the input tests prove OK, the control unit must be faulty; replace it.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
9	WHT	Under all conditions	Check for continuity between terminals No. 9 and No. 21: There should be continuity.	• Faulty driver's seat cushion heater • An open or high resistance in the wire
21	YEL			
20	GRN		Check for continuity	• Faulty front passenger's

36	BRN	Under all conditions	between terminals No. 20 and No. 36: There should be continuity.	seat cushion heater • An open or high resistance in the wire
33	LT BLU	Power mode ON, front passenger's seat heat switch pressed	Measure the voltage to ground: There should be battery voltage.	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty front passenger's seat ventilation switch • An open or high resistance in the wire
7	PUR	Power mode ON, front passenger's seat ventilation switch pressed	Measure the voltage to ground: There should be battery voltage.	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty front passenger's seat ventilation switch • An open or high resistance in the wire
34	YEL	Power mode ON, driver's seat heat switch pressed	Measure the voltage to ground: There should be battery voltage.	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty driver's seat ventilation switch • An open or high resistance in the wire
8	RED	Power mode ON, driver's seat ventilation switch pressed	Measure the voltage to ground: There should be battery voltage.	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty driver's seat ventilation switch • An open or high resistance in the wire
3	PNK	Power mode ON	Connect to ground with a jumper wire: The driver's seat heater HIGH indicator should come on.	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty driver's seat ventilation switch • An open or high resistance in the wire
29	LT	Power mode ON	Connect to ground with a jumper wire: The driver's seat heater	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty driver's seat

	GRN		MIDDLE indicator should come on.	ventilation switch • An open or high resistance in the wire
4	BRN	Power mode ON	Connect to ground with a jumper wire: The driver's seat heater LOW indicator should come on.	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty driver's seat ventilation switch • An open or high resistance in the wire
27	LT BLU	Power mode ON	Connect to ground with a jumper wire: The driver's seat ventilation HIGH indicator should come on.	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty driver's seat ventilation switch • An open or high resistance in the wire
1	PUR	Power mode ON	Connect to ground with a jumper wire: The driver's seat ventilation MIDDLE indicator should come on.	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty driver's seat ventilation switch • An open or high resistance in the wire
30	BLU	Power mode ON	Connect to ground with a jumper wire: The driver's seat ventilation LOW indicator should come on.	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty driver's seat ventilation switch • An open or high resistance in the wire
5	PNK	Power mode ON	Connect to ground with a jumper wire: The front passenger's seat heater HIGH indicator should come on.	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty front passenger's seat ventilation switch • An open or high resistance in the wire
31	LT	Power mode ON	Connect to ground with a jumper wire: The front passenger's seat	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty front passenger's

	GRN		heater MIDDLE indicator should come on.	seat ventilation switch • An open or high resistance in the wire
6	BRN	Power mode ON	Connect to ground with a jumper wire: The front passenger's seat heater LOW indicator should come on.	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty front passenger's seat ventilation switch • An open or high resistance in the wire
28	GRN	Power mode ON	Connect to ground with a jumper wire: The front passenger's seat ventilation HIGH indicator should come on.	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty front passenger's seat ventilation switch • An open or high resistance in the wire
2	WHT	Power mode ON	Connect to ground with a jumper wire: The front passenger's seat ventilation MIDDLE indicator should come on.	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty front passenger's seat ventilation switch • An open or high resistance in the wire
32	BLU	Power mode ON	Connect to ground with a jumper wire: The front passenger's seat ventilation LOW indicator should come on.	• Blown No. 16 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty front passenger's seat ventilation switch • An open or high resistance in the wire

SEAT HEATER TEST

DRIVER'S SEAT

NOTE: SRS components are located in this area. Review the SRS component locations (see COMPONENT LOCATION INDEX), and precautions and procedures (see PRECAUTIONS AND PROCEDURES) before doing repairs or servicing.

1. Remove the driver's seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Remove the seat-back panel (see **FRONT SEAT-BACK COVER REPLACEMENT**).

3. Disconnect connector A (5P) and connector B (2P) from the seat heaters.

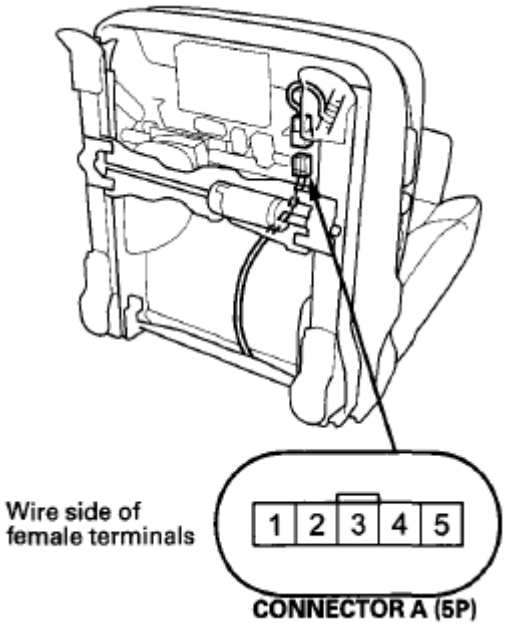

Fig. 7: Identifying Connector A (5P) From Seat Heaters With Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

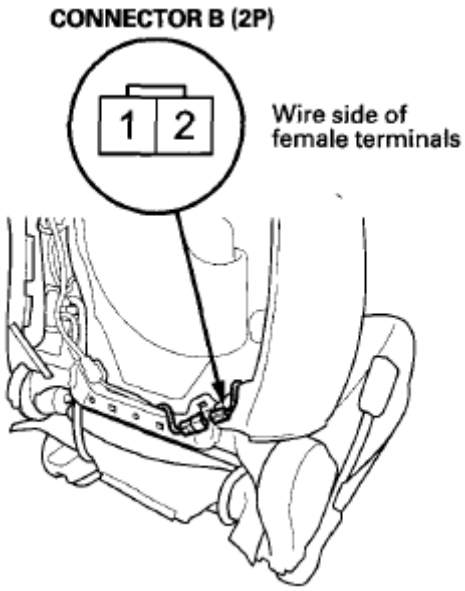

Fig. 8: Identifying Connector B (2P) From Seat Heaters With Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check for continuity between seat heater connector A (5P) terminal No. 3, and terminal No. 2. There should be continuity.
5. If the continuity is not as specified, the seat cushion heater is faulty; replace the seat cushion cover/pad

(see **FRONT SEAT CUSHION COVER REPLACEMENT**).

6. Check for continuity between seat heater connector B (2P) terminals No. 1 and No. 2. There should be continuity.
7. If the continuity is not as specified, the seat-back heater is faulty; replace the seat-back cover/pad (see **FRONT SEAT-BACK COVER REPLACEMENT**).
8. Check for continuity between seat heater connector A (5P) terminals No. 1 and No. 5, and terminals No. 1 and No. 4. There should be continuity.
9. If the continuity is not as specified, the seat cushion heater is faulty; replace the seat cushion cover/pad (see **FRONT SEAT CUSHION COVER REPLACEMENT**).

FRONT PASSENGER'S SEAT

NOTE: SRS components are located in this area. Review the SRS component locations (see COMPONENT LOCATION INDEX), and precautions and procedures (see PRECAUTIONS AND PROCEDURES) before doing repairs or servicing.

1. Remove the front passenger's seat (see **FRONT SEAT REMOVAL/INSTALLATION**).
2. Disconnect the 5P connector from the seat heater.

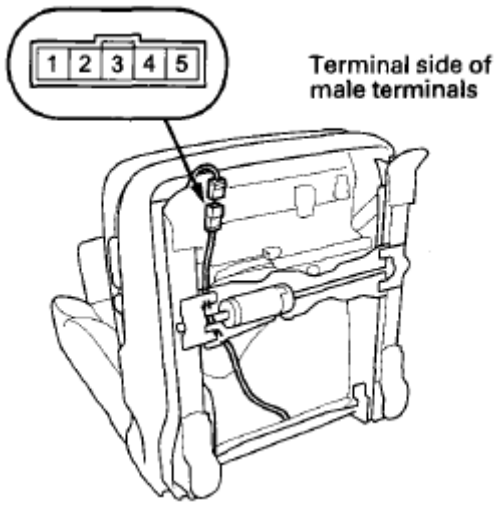

Fig. 9: Identifying 5P Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between seat heater 5P connector terminals No. 3 and No. 4 and terminals No. 2 and No. 5. There should be continuity.
4. If the continuity is not as specified, the seat cushion heater is faulty; replace the seat cushion cover/pad (see **FRONT SEAT CUSHION COVER REPLACEMENT**).

SWITCH TEST/REPLACEMENT

1. Remove the center console panel (see **CENTER CONSOLE PANEL**

REMOVAL/INSTALLATION).

2. Disconnect the 16P [12P] connector from the seat ventilation switch (A).

   []: Front passenger's seat ventilation switch

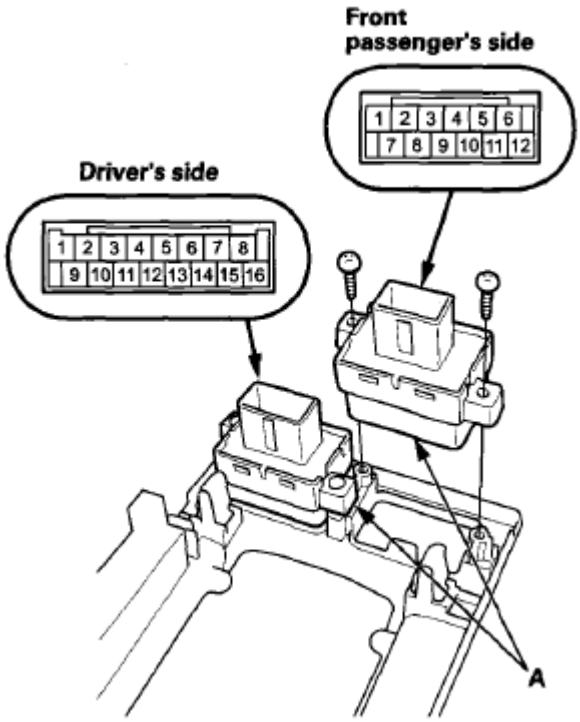

Fig. 10: Identifying Seat Ventilation Switch With Connector End Views
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the two screws and the switch.
4. Check for continuity between the terminals in each switch position according to the table.

NOTE:

- **Make sure the correct test lead (+ or -) is placed on the terminal.**
- **When checking for continuity across the diode, use the diode setting on the digital volt/ohm meter to check the diode bias.**
- **Be careful of this characteristic; a diode is one that conducts fully in one direction (forward) and not at all in the opposite direction (reverse).**

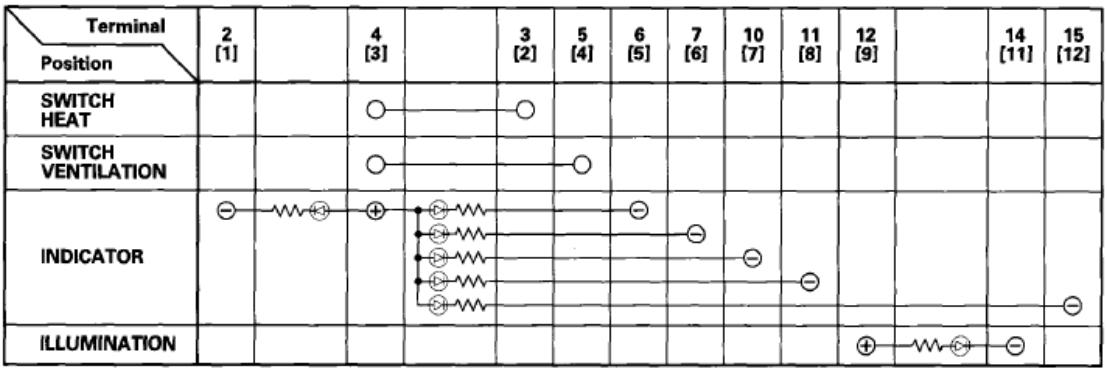

Fig. 11: Identifying Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

[]: Front passenger's seat ventilation

5. If the continuity check is not as specified, replace the seat ventilation switch.
6. Install the parts in the reverse order of removal.

DTC TROUBLESHOOTING

DTC B1077: WIPER AUTO-STOP (AS) SIGNAL CIRCUIT MALFUNCTION

NOTE: **If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).**

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0) and then back to ON (II), or press the engine start/stop button to select the OFF mode and then the ON mode.
3. Turn the wiper switch to LOW or HIGH for at least 15 seconds, then turn the wiper switch OFF.

   NOTE: If the wiper motor does not run, go to step 13.

   Do the wiper arms stop at AUTO STOP (park) position?

   YES - Go to step 4.

   NO - Go to step 5.

4. Check for DTCs with the HDS.

   Is DTC B1077 indicated?

   YES - Check for loose or poor connections at the driver's MICU and the wiper motor. If the connections are OK, replace the driver's under-dash fuse/relay box (see **DRIVER'S UNDER-DASH FUSE/RELAY BOX (MICU) REMOVAL AND INSTALLATION**).

   NO - Intermittent failure, the system is OK at this time. Check for loose or poor connections.

5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
6. Do the windshield wiper motor test (see **WIPER MOTOR TEST**).

   Is the windshield wiper motor OK?

   YES - Go to step 7.

   NO - Replace the windshield wiper motor (see **WIPER MOTOR REPLACEMENT**), and recheck.

7. Disconnect the windshield wiper motor 4P connector.
8. Disconnect driver's under-dash fuse/relay box connector F (33P).
9. Check for continuity between windshield wiper motor 4P connector terminal No. 3 and driver's under-dash fuse/relay box connector F (33P) terminal No. 9.

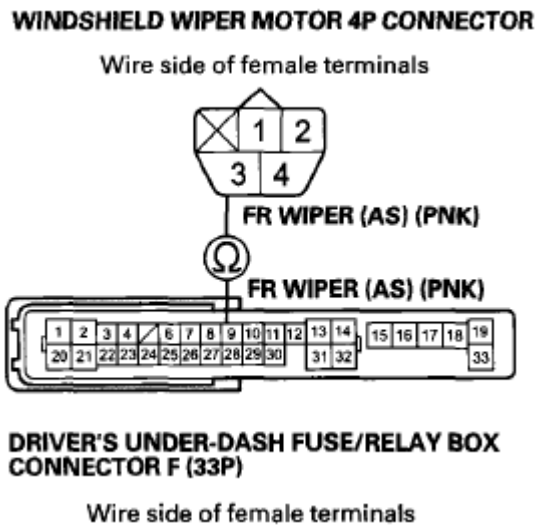

Fig. 7: Checking Continuity Between Windshield Wiper Motor 4P Connector And Driver's Under-Dash Fuse/Relay Box Connector F (33P) With Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 10.

NO - Repair an open or high resistance in the wire.

10. Check for continuity between windshield wiper motor 4P connector terminal No. 3 and body ground.

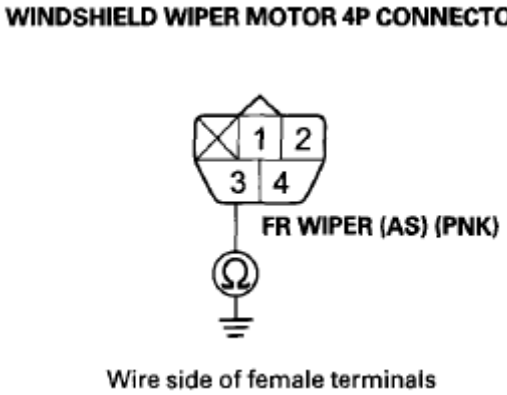

Fig. 8: Checking Continuity Between Windshield Wiper Motor 4P Connector Terminal No. 3 And Body Ground With Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to ground in the wire.

NO - Go to step 11.

11. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
12. Measure the voltage between windshield wiper motor 4P connector terminal No. 3 and body ground.

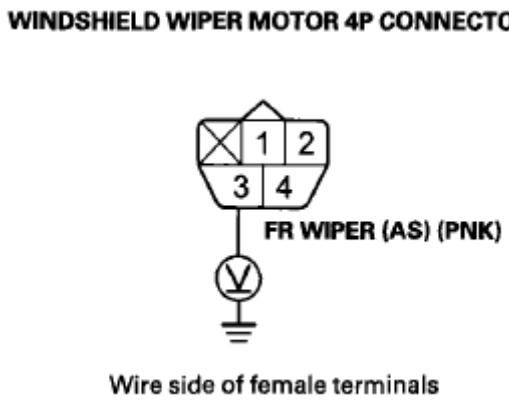

Fig. 9: Measuring Voltage Between Windshield Wiper Motor 4P Connector Terminal No. 3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there voltage?

YES - Repair a short to power in the wire.

NO - Faulty driver's MICU; replace the driver's under-dash fuse/relay box (see **DRIVER'S UNDER-DASH FUSE/RELAY BOX (MICU) REMOVAL AND INSTALLATION**).

13. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
14. Measure the voltage between under-hood fuse/relay box connector C (5P) terminal No. 4 and body ground.

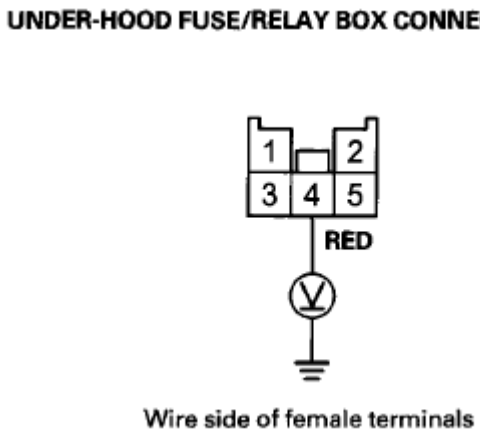

Fig. 10: Measuring Voltage Between Under-Hood Fuse/Relay Box Connector C (5P) Terminal No. 4 And Body Ground With Connector End View

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 16.

NO - Go to step 15.

15. Check the No. 3-7 (WIP MTR) (30 A) fuse in the under-hood fuse/relay box.

    Is the fuse OK?

    YES - Repair an open or high resistance in the No. 3-7 (WIP MTR) (30 A) fuse circuit.

    NO - Replace the fuse. If the fuse blows again, repair a short to ground in the No. 3-7 (WIP MTR) (30 A) fuse circuit.

16. Do the relay circuit board test.

    Is the relay circuit board OK?

    YES - Go to step 17.

    NO - Replace the relay circuit board, and recheck.

17. Disconnect under-hood fuse/relay box connector B (14P).
18. Check for continuity between under-hood fuse/relay box connector B (14P) terminal No. 4 and body ground.

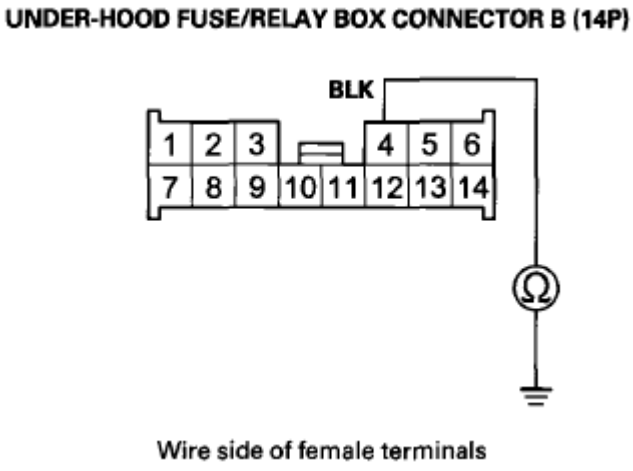

Fig. 11: Checking Continuity Between Under-Hood Fuse/Relay Box Connector B (14P) Terminal No. 4 And Body Ground With Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 19.

NO - Repair an open or high resistance in the wire or poor ground (G301).

19. Do the windshield wiper motor test

    Is the windshield wiper motor OK?

    YES - Go to step 20.

    NO - Replace the windshield wiper motor (see **WIPER MOTOR REPLACEMENT**), and recheck.

20. Reconnect under-hood fuse/relay box connector B (14P).
21. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
22. Measure the voltage between body ground and windshield wiper motor 4P connector terminal No. 2 with the wiper switch ON (Low), and measure the voltage between body ground and windshield wiper motor 4P connector terminal No. 4 with the wiper switch ON (High) individually.

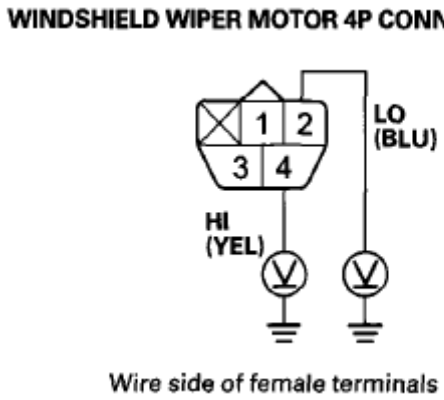

Fig. 12: Measuring Voltage Between Body Ground And Windshield Wiper Motor 4P Connector Terminal No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair an open or high resistance in the wire between the windshield wiper motor and body ground. If the wire is OK, check for poor ground (G301).

NO - Go to step 23.

23. Measure the voltage between body ground and under-hood fuse/relay box connector B (14P) terminal No. 5 with the wiper switch ON (Low), and measure the voltage between body ground and under-hood fuse/relay box connector B (14P) terminal No. 6 with the wiper switch ON (High) individually.

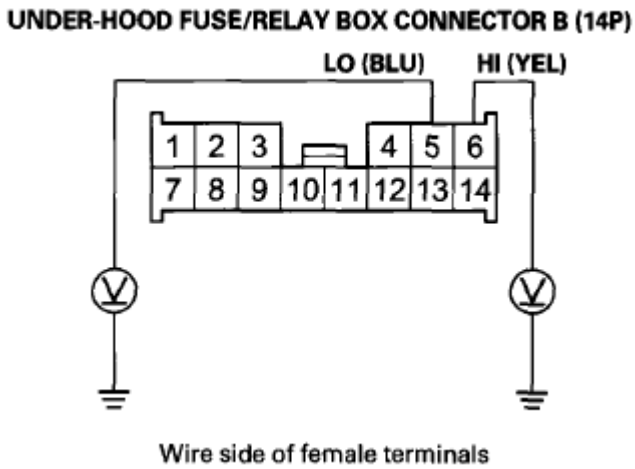

Fig. 13: Measuring Voltage Between Body Ground And Under-Hood Fuse/Relay Box Connector B (14P) Terminal No. 5
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair an open or high resistance in the BLU (LO) or YEL (HI) wire.

NO - Check terminals F7 and F8 of the driver's under-dash fuse/relay box connector F (33P) using the input test (see **MICU INPUT TEST**). If the input tests prove OK, replace the driver's under-dash fuse/relay box (see **DRIVER'S UNDER-DASH FUSE/RELAY BOX (MICU) REMOVAL AND INSTALLATION**).

DTC B1281: FRONT WIPER MIST POSITION CIRCUIT MALFUNCTION; DTC B1282: FRONT WIPER INT (AUTO) POSITION CIRCUIT MALFUNCTION; DTC B1283: FRONT WIPER LOW POSITION CIRCUIT MALFUNCTION; DTC B1284: FRONT WIPER HIGH POSITION CIRCUIT MALFUNCTION

NOTE: If you are troubleshooting multiple DTCs, be sure to follow the instructions in B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

1. Clear the DTCs with the HDS.
2. Turn the ignition switch to LOCK (0) and then back to ON (II), or press the engine start/stop button to select the OFF mode and then the ON mode.
3. Turn the wiper switch to the MIST, INT, LOW, HIGH, and OFF positions, and wait for at least 6 seconds.
4. Check for DTCs with the HDS.

Are DTCs B1281, B1282, B1283, and/or B1284 indicated?

YES - Go to step 5.

NO - Intermittent failure, the wiper system is OK at this time. Check for loose or poor connections.

5. Select WIPER from the BODY ELECTRICAL SYSTEM SELECT menu, and enter DATA LIST.
6. Check each wiper switch position value with the DATA LIST menu.

WHEN WIPER SWITCH IS TURNED OFF

Data List	Value
Wiper switch (LOW)	OFF
Wiper switch (HIGH)	OFF
Wiper switch (MIST)	OFF
Wiper switch (INT)	OFF

Are all data list values correct?

YES - Go to step 7.

NO - Go to step 10.

7. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
8. Disconnect driver's under-dash fuse/relay box connector R (24P).
9. Check for continuity between driver's under-dash fuse/relay box connector R (24P) terminals as shown:

From terminal	To terminal
15 (ORN)	1(BLU) 16 (WHT) 17 (GRN)
17 (GRN)	1 (BLU) 16 (WHT)

Is there continuity?

YES - Repair short between the wires.

NO - Faulty driver's MICU; replace the driver's under-dash fuse/relay box (see **DRIVER'S UNDER-DASH FUSE/RELAY BOX (MICU) REMOVAL AND INSTALLATION**).

10. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
11. Disconnect the 8P connector from the wiper switch.
12. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
13. Check each wiper switch position value with the DATA LIST menu.

Data List	Value
Wiper switch (LOW)	OFF
Wiper switch (HIGH)	OFF

Wiper switch (MIST)	OFF
Wiper switch (INT)	OFF

Are all data list values correct?

YES - Replace the wiper/washer switch (see **WIPER/WASHER SWITCH TEST/REPLACEMENT**).

NO - Go to step 14.

14. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
15. Disconnect driver's under-dash fuse/relay box connector R (24P).
16. Check for continuity between body ground and driver's under-dash fuse/relay box connector R (24P) terminals No. 15, No. 16, and No. 17 individually.

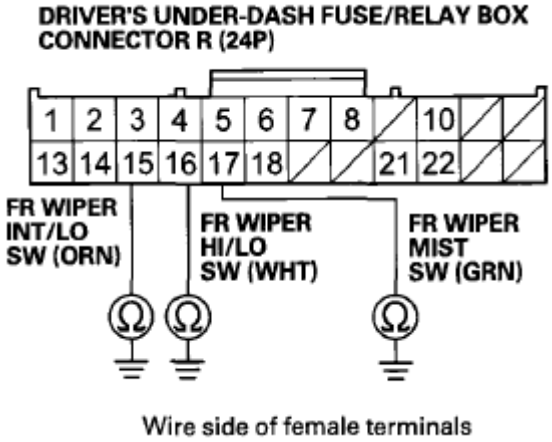

Fig. 14: Checking Continuity Between Body Ground And Driver's Under-Dash Fuse/Relay Box Connector R (24P) Terminals No. 15, No. 16, And No. 17
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to ground in the wire.

NO - Go to step 17.

17. Check for continuity between driver's under-dash fuse/relay box connector R (24P) terminal No. 4 and terminals No. 15, No. 16, and No. 17 respectively.

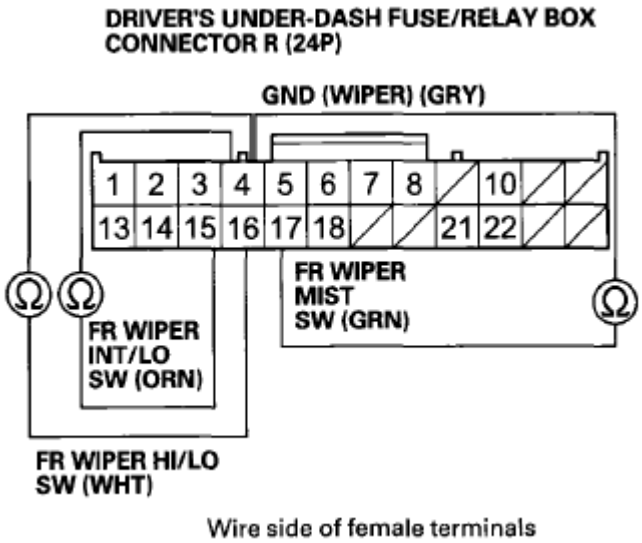

Fig. 15: Checking Continuity Between Driver's Under-Dash Fuse/Relay Box Connector R (24P) Terminal No. 4 And Terminals No. 15, No. 16, And No. 17
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short between the wires.

NO - Faulty driver's MICU; replace the driver's under-dash fuse/relay box (see **DRIVER'S UNDER-DASH FUSE/RELAY BOX (MICU) REMOVAL AND INSTALLATION**).

MICU INPUT TEST

NOTE: Before testing, troubleshoot the multiplex integrated control system first, using B-CAN System Diagnosis Test Mode A (see TROUBLESHOOTING - B-CAN SYSTEM DIAGNOSIS TEST MODE A).

Drivers MICU

1. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. Remove the driver's dashboard undercover (see **DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**).
3. Disconnect driver's under-dash fuse/relay box connectors F, Q, and R.

NOTE: All connector views are wire side of female terminals.

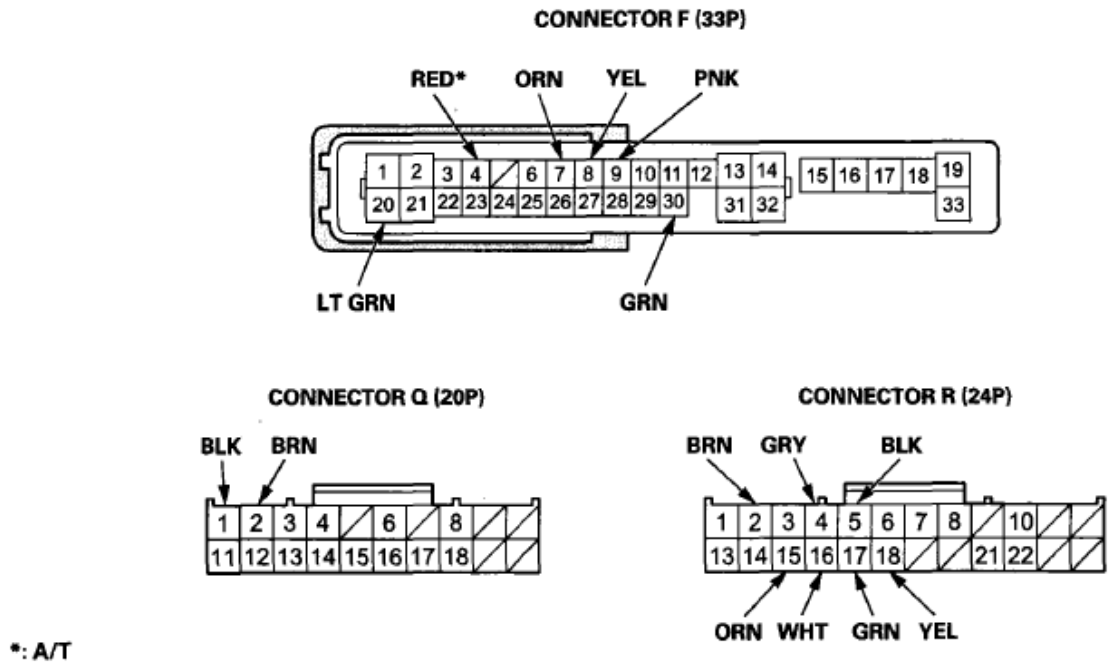

Fig. 16: View Of Driver's Under-Dash Fuse/Relay Box F (33P), Q (20P), & R (24P) Connector End Views
Courtesy of AMERICAN HONDA MOTOR CO., INC.

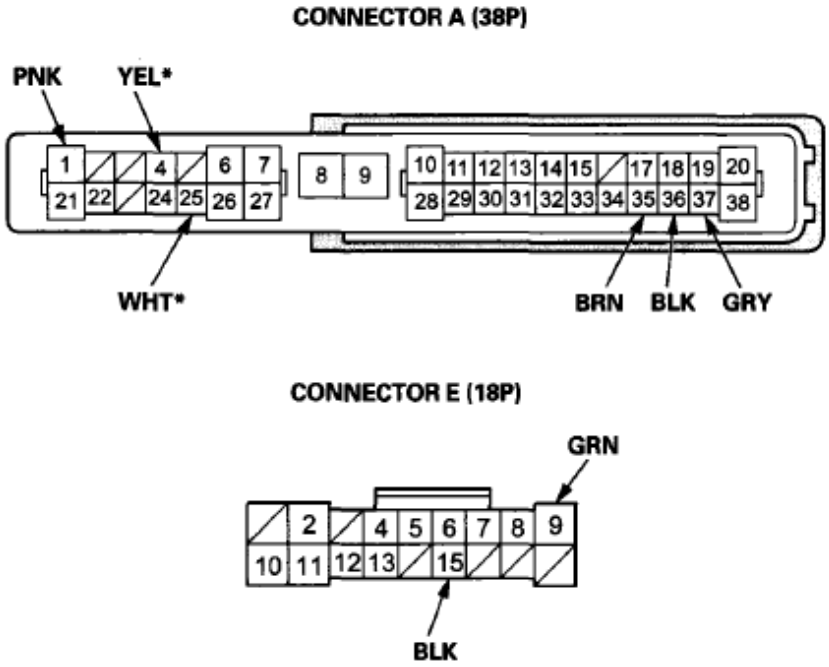
4. Inspect the connector and socket terminals to be sure they are all making good contact.
   - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
   - If the terminals look OK, go to step 5.
5. With the connectors still disconnected, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step 6.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
F7 . F30	ORN . GRN	Under all conditions	Connect terminals F16 and F30 and terminal F7 to body ground: The windshield wiper motor should run at high speed.	• Blown No. 3-7 (WIP MTR) (30 A) fuse in the under-hood fuse/relay box • Blown No. 4 (7.5A) fuse in the driver's under-dash fuse/relay box • Faulty relay circuit board • Faulty windshield wiper motor

				• Poor ground(G301)or an open in the ground wire • An open or high resistance in the wire
F8	YEL	Run the windshield wiper motor by connecting terminals F16 and F30 to terminal F7 to body ground.	Connect terminal F8 to body ground: The windshield wiper motor speed should change from high speed to low speed.	• Faulty under-hood fuse/relay box • Faulty relay circuit board • Faulty windshield wiper motor • An open or high resistance in the wire
F9	PNK	Run the windshield wiper motor by connecting terminals F16 and F30 to terminal F7 to body ground.	Check for continuity to ground: The needle of the ohmmeter should pulse 1 time per wiper motor cycle. **NOTE:** **Use a DVOM.**	• Faulty windshield wiper motor • Poor ground(G301)or an open in the ground wire • An open or high resistance in the wire

6. Reconnect the connectors to the driver's under-dash fuse/relay box, turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode, and do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step 7.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
Q1	BLK	In all ignition switch positions or all power modes	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground(G402) • An open or high resistance in the ground wire
Q2	BRN	In all ignition switch positions or all power modes	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground(G401) • An open or high resistance in the ground wire
R2	BRN	In all ignition switch positions or all power modes	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground(G401) • An open or high resistance in the ground wire
		In all ignition switch	Measure the voltage to	• Poor ground(G402)



R5	BLK	positions or all power modes	ground: There should be less than 0.2 V.	• An open or high resistance in the ground wire
F4 (A/T)	RED	Transmission range switch in P	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty transmission range switch • Poor ground (G101) or an open in the ground wire • An open or high resistance in the wire
		Transmission range switch in any other position than P	Measure the voltage to ground: There should be about 5 V.	• Faulty transmission range switch • A short to ground in the wire
F20	LT GRN	Brake pedal pressed	Measure the voltage to ground: There should be battery voltage.	• Blown No. 10 (20 A) fuse in the under-hood fuse/relay box • Faulty brake pedal position switch • An open or high resistance in the wire
		Brake pedal released	Measure the voltage to ground: There should be no voltage.	• Faulty brake pedal position switch • A short to power in the wire
R15 . R4	ORN . GRY	Wiper switch (INT or LO) ON	Measure the voltage between terminals R15 and R4: There should be less than 0.2 V.	• Faulty windshield wiper/washer switch • An open or high resistance in the wire
		Wiper switch OFF	Measure the voltage between terminals R15 and R4: There should be about 5 V.	• Faulty windshield wiper/washer switch • A short to ground in the wire
R16 . R4	WHT . GRY	Wiper switch (LO or HI) ON	Measure the voltage between terminals R16 and R4: There should be less than 0.2 V.	• Faulty windshield wiper/washer switch • An open or high resistance in the wire
		Wiper switch OFF	Measure the voltage between terminals R16 and R4: There should be about battery voltage.	• Faulty windshield wiper/washer switch • A short to ground in the wire

R17 . R4	GRN . GRY	Wiper switch (MIST) ON	Measure the voltage between terminals R17 and R4: There should be less than 0.2 V.	• Faulty windshield wiper/washer switch • An open or high resistance in the wire
		Wiper switch OFF	Measure the voltage between terminals R17 and R4: There should be about 5 V.	• Faulty windshield wiper/washer switch • A short to ground in the wire
R18 . R4	YEL . GRY	Washer switch ON	Measure the voltage between terminals R18 and R4: There should be less than 0.2 V.	• Faulty windshield wiper/washer switch • An open or high resistance in the wire
		Washer switch OFF	Measure the voltage between terminals R18 and R4: There should be about 5 V.	• Faulty windshield wiper/washer switch • A short to ground in the wire

Passenger's MICU

7. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
8. Remove the front passenger's kick panel (see **TRIM REMOVAL/INSTALLATION - DOOR AREAS**).
9. Disconnect passenger's under-dash fuse/relay box connectors A and E.

NOTE: All connector views are wire side of female terminals.

*: With headlight washer

Fig. 17: View Of Passenger's Under-Dash Fuse/Relay Box A (38P) & E (18P) Connector End Views
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. With the connectors still disconnected, do the following input tests:
    - If any test indicates a problem, find and correct the cause, then recheck the system.
    - If all the input tests prove OK, go to step 11.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
E9	GRN	Ignition switch ON (II), or power mode ON	Connect terminals A1 and E9: The windshield washer motor should run.	• Faulty windshield washer motor • An open or high resistance in the wire
A25(1)	WHT	Under all conditions	Connect to ground with a jumper wire: The headlight washer motor should run.	• Blown No. 2-5 (H/L WASHER) (30 A) fuse in the under-hood fuse/relay box • Faulty headlight washer motor • Faulty headlight washer motor relay • Poor ground (G203) or an open in the ground wire • An open or high resistance

				in the wire
A4(1)	YEL	Headlight washer switch pushed	Check for continuity to ground: There should be continuity.	• Faulty headlight washer switch • Poor ground (G401) or an open in the ground wire • An open or high resistance in the wire
		Headlight washer switch released	Check for continuity to ground: There should be no continuity.	• Faulty headlight washer switch • A short to ground in the wire
(1) With headlight washer				

11. Reconnect the connectors to the passenger's under-dash fuse/relay box, and do the following input tests:
    - If any test indicates a problem, find and correct the cause, then recheck the system.
    - If all the input tests prove OK, go to step 12.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
A1	PNK	Ignition switch ON (II), or power mode ON	Measure the voltage to ground: There should be battery voltage.	• Blown No. 3 (20 A) fuse in the driver's under-dash fuse/relay box • Faulty driver's under-dash fuse/relay box • An open or high resistance in the wire
A35	BRN	Ignition switch ON (II), or power mode ON	Measure the voltage to ground: There should be battery voltage.	• Blown No. 12 (7.5 A) fuse in the driver's under-dash fuse/relay box • Faulty driver's under-dash fuse/relay box • An open or high resistance in the wire
E15	BLK	In all ignition switch positions or all power modes	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G203) • An open or high resistance in the ground wire
A36	BLK	In all ignition switch positions or all power modes	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground (G405) • An open or high resistance in the ground wire
A37	GRY	In all ignition switch positions or all power modes	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground(G401) • An open or high resistance

				in the ground wire

12. If multiple failures are found on more than one control unit, replace the driver's under-dash fuse/relay box (includes the driver's MICU) (see **DRIVER'S UNDER-DASH FUSE/RELAY BOX (MICU) REMOVAL AND INSTALLATION**). If input failures are related to a particular control unit, replace the control unit.

WIPER/WASHER SWITCH TEST/REPLACEMENT

1. Remove the steering column covers (see **SIDE DEFOGGER VENT TRIM REMOVAL/INSTALLATION**).
2. Disconnect the dashboard wire harness 8P connector (A) from the windshield wiper/washer switch (B).

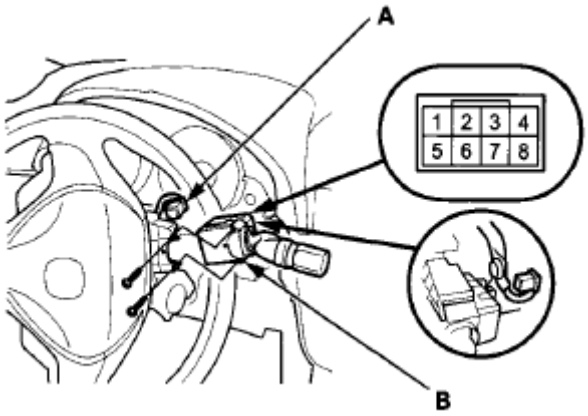


Fig. 18: Identifying Dashboard Wire Harness 8P Connector And Windshield Wiper/Washer Switch With Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the two screws, then slide out the switch.
4. Inspect the connector terminals to be sure they are all making good contact.
   - If the terminals are bent, loose or corroded, repair them as necessary, and recheck the system.
   - If the terminals look OK, go to step 5.
5. Check for continuity between the terminals in each switch position according to the table.

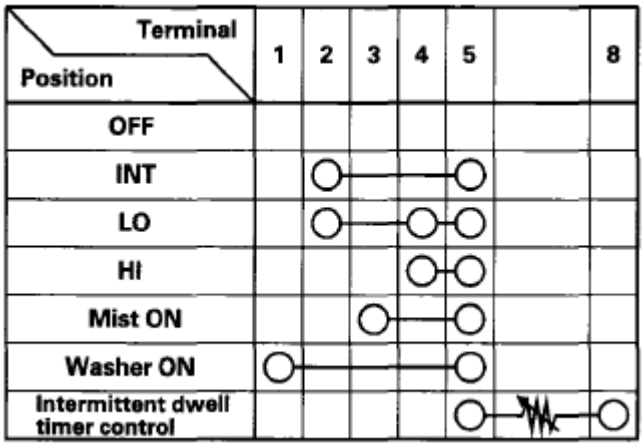

Fig. 19: Identifying Continuity Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If the continuity is not as specified, replace the switch.
7. Install the switch in the reverse order of removal.

WIPER MOTOR TEST

1. Remove the wiper arms (see **WIPER MOTOR REPLACEMENT**).
2. Remove the cowl cover (see **FRONT BULKHEAD BRACE COVER REPLACEMENT**).
3. Disconnect the 4P connector (A) from the windshield wiper motor (B).

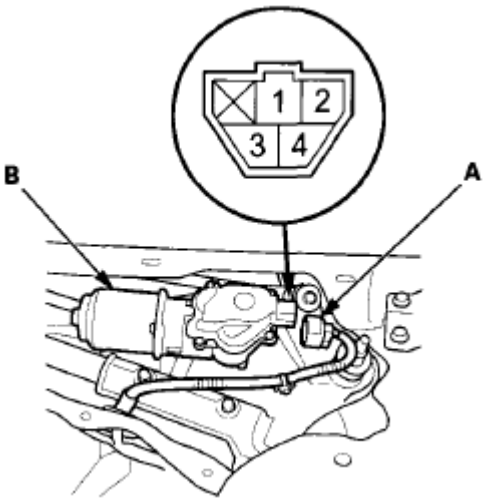

Fig. 20: Identifying 4P Connector And Windshield Wiper Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Test the motor by connecting battery power to terminal No. 2 and ground to terminal No. 1 of wiper motor 4P connector. The motor should run at low speed.
5. Test the motor by connecting battery power to terminal No. 4 and ground to terminal No. 1 of the wiper

motor 4P connector. The motor should run at high speed.

6. Connect an analog ohmmeter to the terminals No. 3 and No. 1, and run the motor at low or high speed. The needle of the ohmmeter should pulse.
7. If the motor does not run or fails to run smoothly, or there is no pulse, replace the motor (see **WIPER MOTOR REPLACEMENT**).

WASHER MOTOR TEST

WINDSHIELD

1. Remove the right inner fender (see **FRONT INNER FENDER REPLACEMENT**).
2. Disconnect the 2P connector (A) from the windshield washer motor (B).

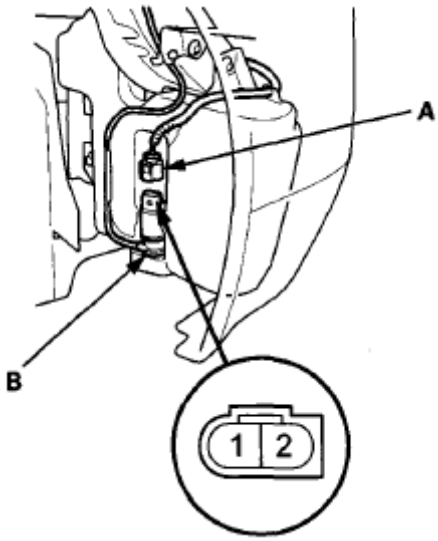

Fig. 21: Identifying 4P Connector And Windshield Wiper Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Test the motor by connecting battery power to terminal No. 2 and ground to terminal No. 1 of the washer motor. The motor should run.
   - If the motor does not run or fails to run smoothly, replace the motor (see **WIPER MOTOR REPLACEMENT**).
   - If the motor runs smoothly, but little or no washer fluid is pumped, check for a disconnected or blocked washer hose, or a clogged washer motor outlet.

HEADLIGHT WASHER

1. Remove the right inner fender (see **FRONT INNER FENDER REPLACEMENT**).
2. Disconnect the 2P connector (A) from the headlight washer motor (B).

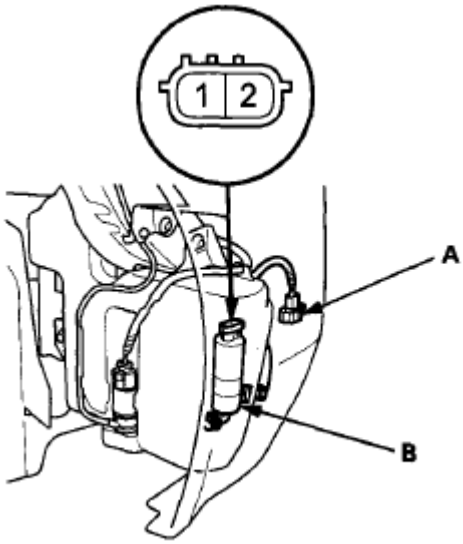

Fig. 22: Identifying 4P Connector & Motor Headlight Washer Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Test the motor by connecting battery power to terminal No. 1 and ground to terminal No. 2 of the washer motor. The motor should run.
   - If the motor does not run or fails to run smoothly, replace the motor (see **WIPER MOTOR REPLACEMENT**).
   - If the motor runs smoothly, but little or no washer fluid is pumped, check for a disconnected or blocked washer hose, or a clogged washer motor outlet.

WASHER FLUID LEVEL SWITCH TEST

CANADA MODELS

1. Remove the right inner fender (see **FRONT INNER FENDER REPLACEMENT**).
2. Disconnect the 2P connector (A) from the washer fluid level switch (B).

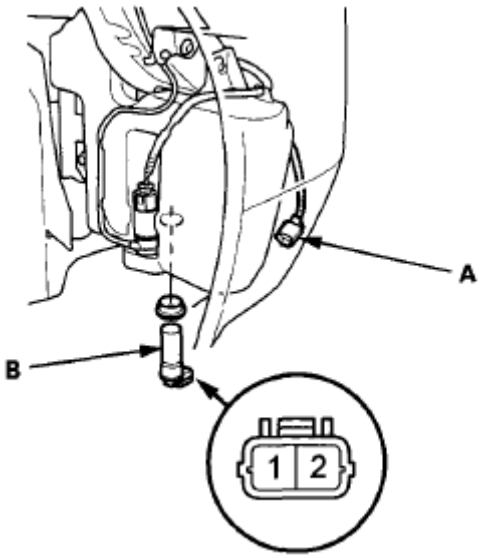

Fig. 23: Identifying 2P Connector And Washer Fluid Level Switch (Canada Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the washer fluid level switch from the washer reservoir.

NOTE: Fluid may flow out of the opening.

4. Check for continuity between terminals No. 1 and No. 2 in each float position.
   - There should be continuity when the float is down.
   - There should be no continuity when the float is up.
5. If the continuity is not as specified, replace the switch (see **WIPER/WASHER SWITCH TEST/REPLACEMENT**).

WIPER MOTOR REPLACEMENT

1. Open the hood. Remove the cap, nuts (A), and the windshield wiper arms (B).

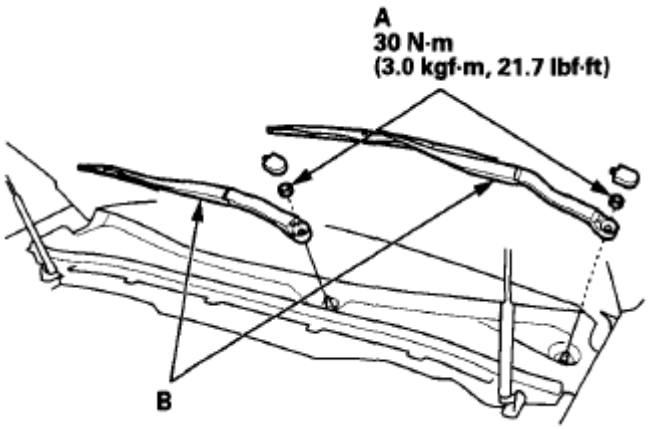

Fig. 24: Identifying Windshield Wiper Arms & Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the cowl cover (see **FRONT BULKHEAD BRACE COVER REPLACEMENT**).
3. Disconnect the 5P connector (A) from the windshield wiper motor.

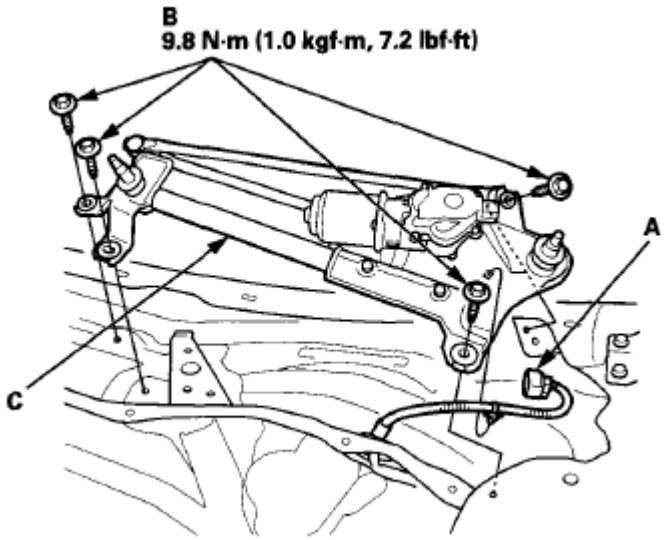

Fig. 25: Identifying 5P Connector, Wiper Linkage Assembly & Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the four bolts (B) and the wiper linkage assembly (C).
5. Separate the linkage (A) from the link (B).

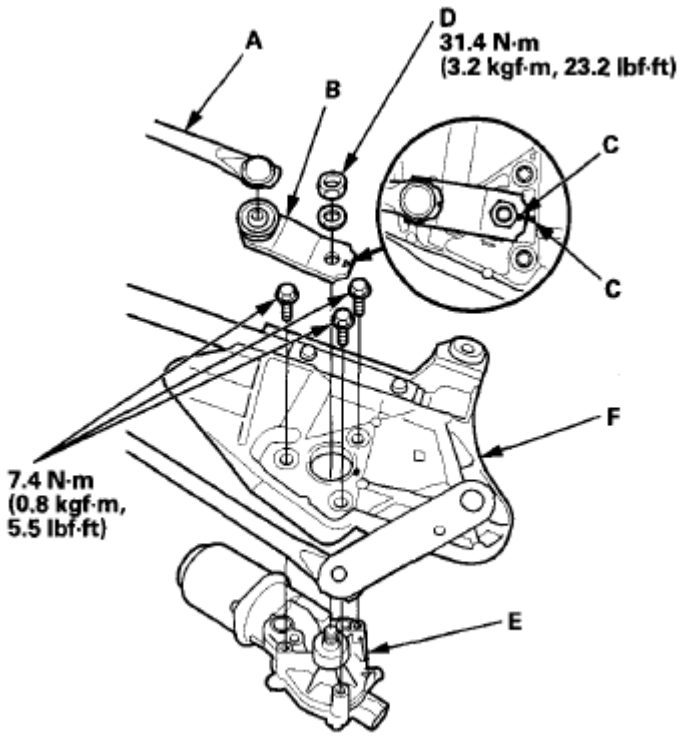

Fig. 26: Identifying Link, Linkage, Alignment Marks, Wiper Motor & Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Note the alignment marks (C), then remove the nut (D) and the link from the wiper motor (E).
7. Remove the three bolts, and separate the wiper motor from the linkage (F).
8. Before installing the motor, connect the 4P connector to the wiper motor, and turn the wiper/washer switch ON to (LO) or (HI) position, then OFF to return the motor shaft to the park position.

NOTE:

- **Do not use the wiper/washer switch (INT) position in this step.**
- **If necessary, replace any damaged clips.**
- **Apply multipurpose grease to the moving parts.**

9. Install the wiper motor to the wiper linkage assembly in the reverse order of removal.
10. Install the link to the wiper motor shaft, then align the mark (A) of the link and the mark (B) of the wiper linkage assembly.

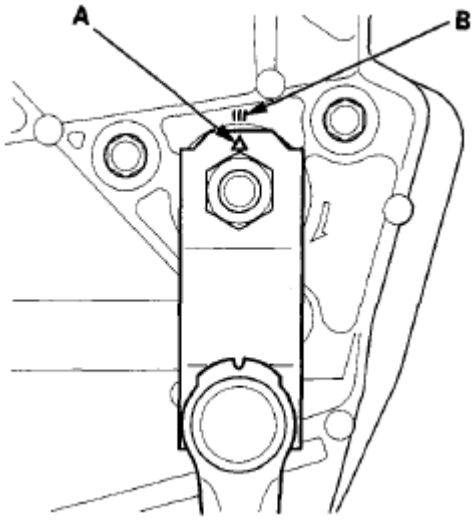

Fig. 27: Identifying Alignment Marks Of Wiper Linkage Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. After installation, adjust the wiper arms (see **WIPER ARM/NOZZLE ADJUSTMENT**).

WASHER MOTOR/RESERVOIR REPLACEMENT

1. Remove the right front inner fender (see **FRONT INNER FENDER REPLACEMENT**).
2. Disconnect the 2P connector(s) (A) from the windshield washer motor (B), washer fluid level switch (Canada models), and the headlight washer motor (with headlight washer).

Washer Reservoir Capacity:

2.5 L (2.64 US qt): USA models

5.8 L (6.13 US qt): Canada models

USA models

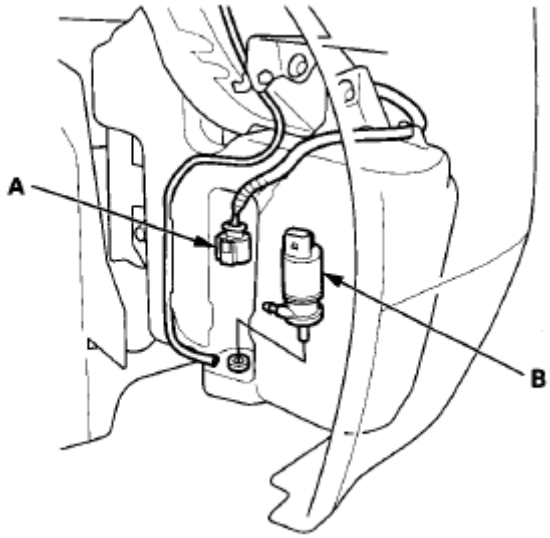

Fig. 28: Identifying Windshield Washer Motor & 2P Connector (USA Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Canada models

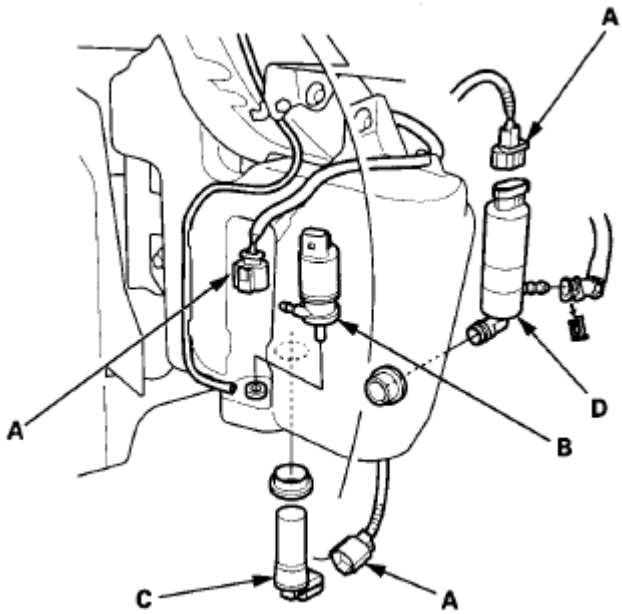

Fig. 29: Identifying Windshield Washer Motor, Washer Fluid Level Switch, Headlight Washer Motor & 2P Connector (Canada Models)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the washer tube(s), then if necessary, remove the washer motor, the washer fluid level switch (C) (Canada models), and the headlight washer motor (D) (with headlight washer).

NOTE: Fluid may flow out of the opening.

4. Remove the clip (A) and three bolts from the washer reservoir (B).

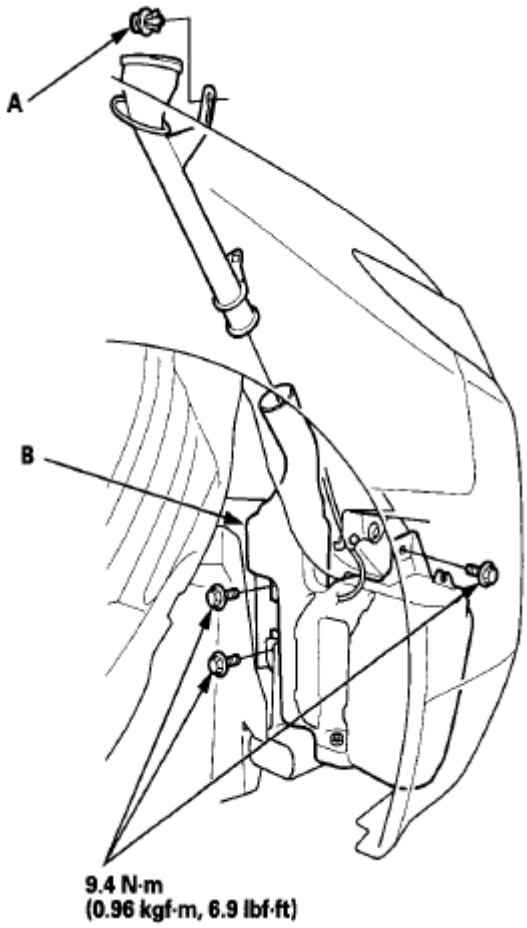

Fig. 30: Identifying Clip, Bolts & Washer Reservoir With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the washer reservoir in the reverse order of removal. Check the washer motor operation.

HEADLIGHT WASHER SWITCH TEST/REPLACEMENT

HEADLIGHT WASHER SWITCH

1. Remove the driver's dashboard undercover (see **DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**).
2. Disconnect the 6P connector (A) from the headlight washer switch (B).

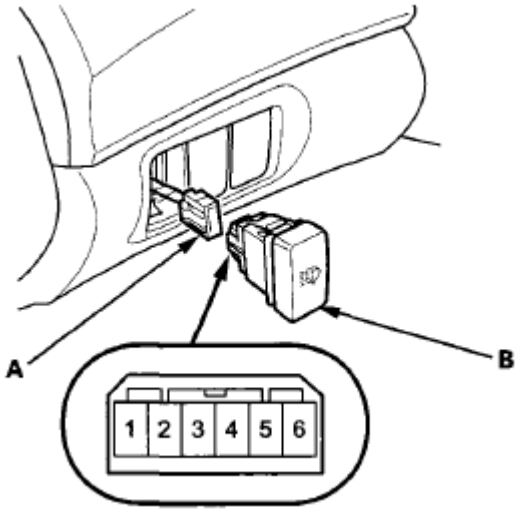

Fig. 31: Identifying 6P Connector And Headlight Washer Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals in each switch position according to the table.

NOTE:

- **Make sure the correct test lead (+ or -) is placed on the terminal.**
- **When checking for continuity across the diode, use the diode setting on the digital volt/ohm meter to check the diode bias.**
- **Be careful of this characteristic; a diode is one that conducts fully in one direction (forward) and not at all in the opposite direction (reverse).**

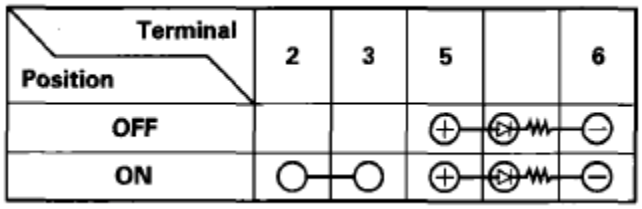

Fig. 32: Continuity Chart Of Diode
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the continuity is not as specified, replace the switch.
5. Install the switch in the reverse order of removal.

HEADLIGHT WASHER NOZZLE REPLACEMENT

HEADLIGHT WASHER NOZZLE

1. Remove the front bumper (see **FRONT BUMPER REMOVAL/INSTALLATION**).
2. Remove the cover (A), tube, mounting screws and headlight washer nozzles (B).

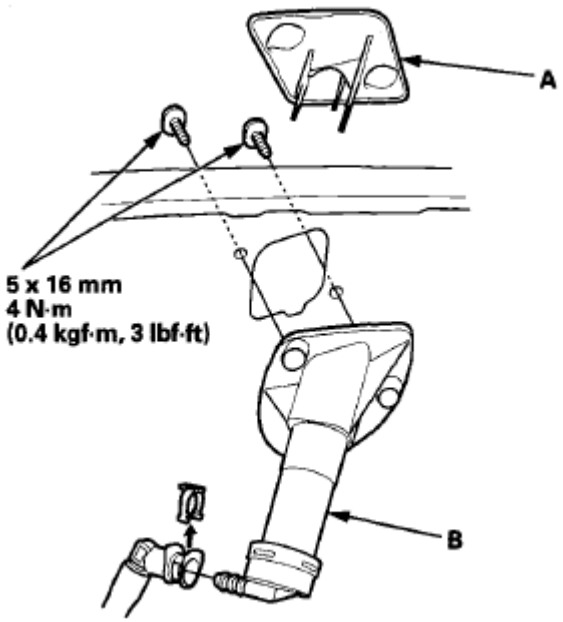

Fig. 33: Identifying Cover & Headlight Washer Nozzles With Mounting Screws With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the nozzle in the reverse order of removal. Take care not to pinch the washer tube. Check the headlight washer operation.

WIPER BLADE REPLACEMENT

1. Lift the wiper arms from the windshield.

NOTE: Lift the driver's side first.

2. Press and hold the tab (A) and slide the wiper blade assembly (B) toward the tab to release it from the wiper arm (C).

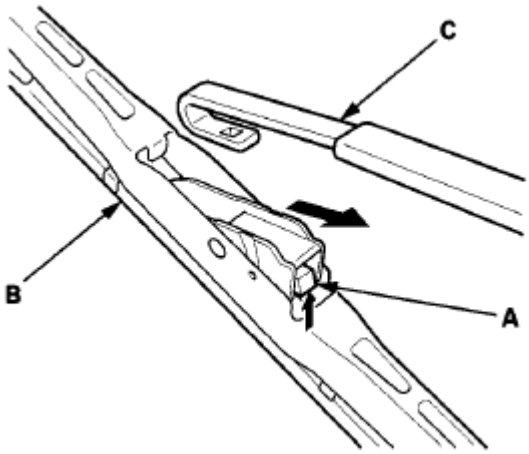

Fig. 34: Sliding Wiper Blade Assembly Toward Tab To Release It From Wiper Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Slide the blade (A) out from the wiper blade holder (B).

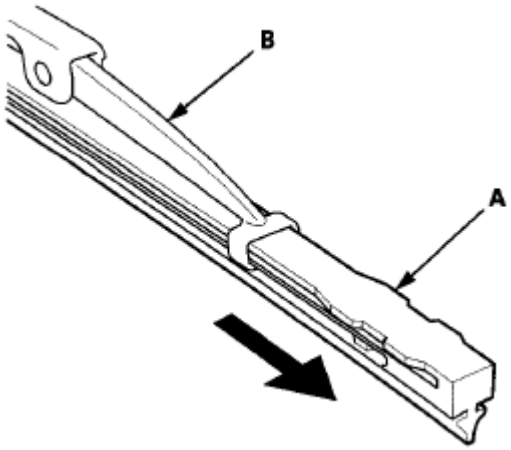

Fig. 35: Sliding Blade Out From Wiper Blade Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install a new blade to the wiper blade holder in the reverse order of removal.
5. Install the wiper blade assembly onto the wiper arms in the reverse order of removal.
6. Check the wiper operation, if the blades slip, turn the wiper switch OFF, and reinstall the wiper blades securely.

WIPER ARM/NOZZLE ADJUSTMENT

NOTE:

- **When you adjust the washer nozzles, carefully move the outside of the washer nozzles (A).**
- **Do not insert tools into the nozzle hole (B) as it may cause the washer fluid to spray incorrectly.**

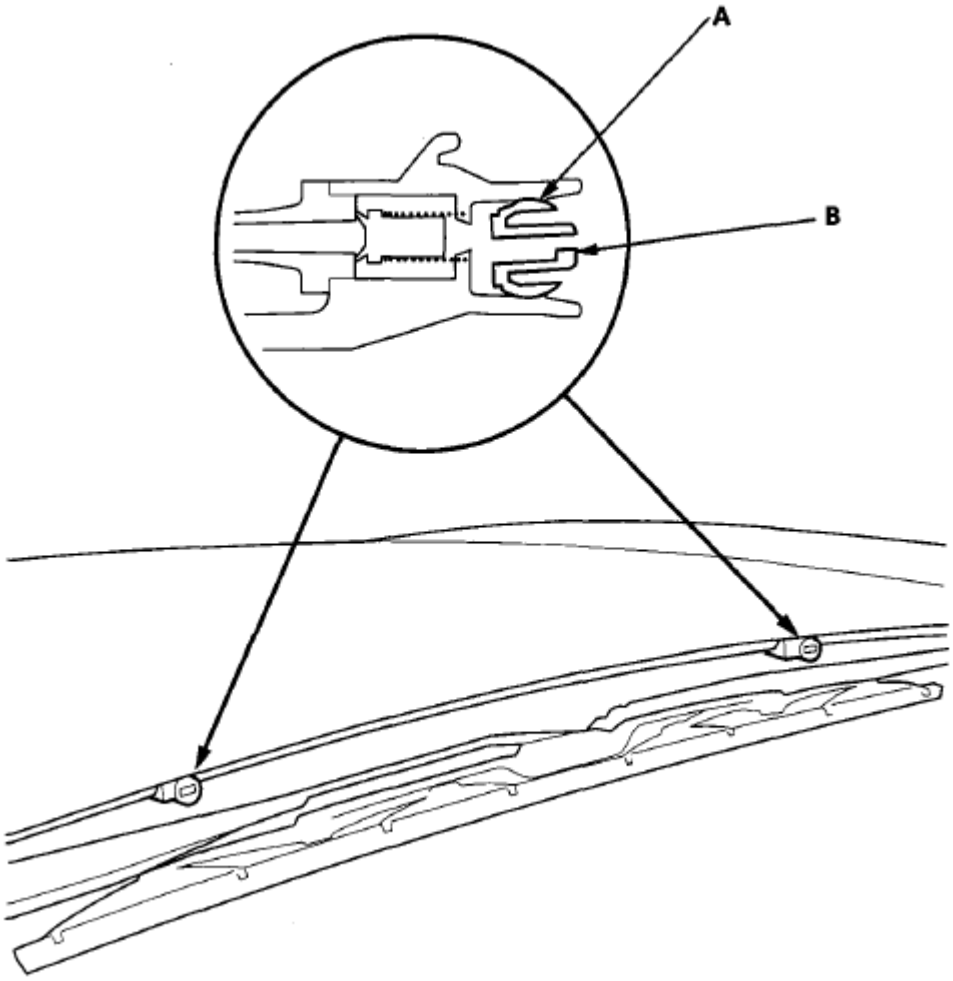

Fig. 36: Identifying Washer Nozzles And Nozzle Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Windshield Wiper Arms Park Position

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode, then turn the wiper switch ON, and then back OFF.
2. When the wiper arms stop at the park position, make sure that they are at the correct position.
    a. Position at about 66.9 mm (2.6 in) from the top of cowl cover (A).
    b. Position at about 36.2 mm (1.4 in) from the top of cowl cover (A).

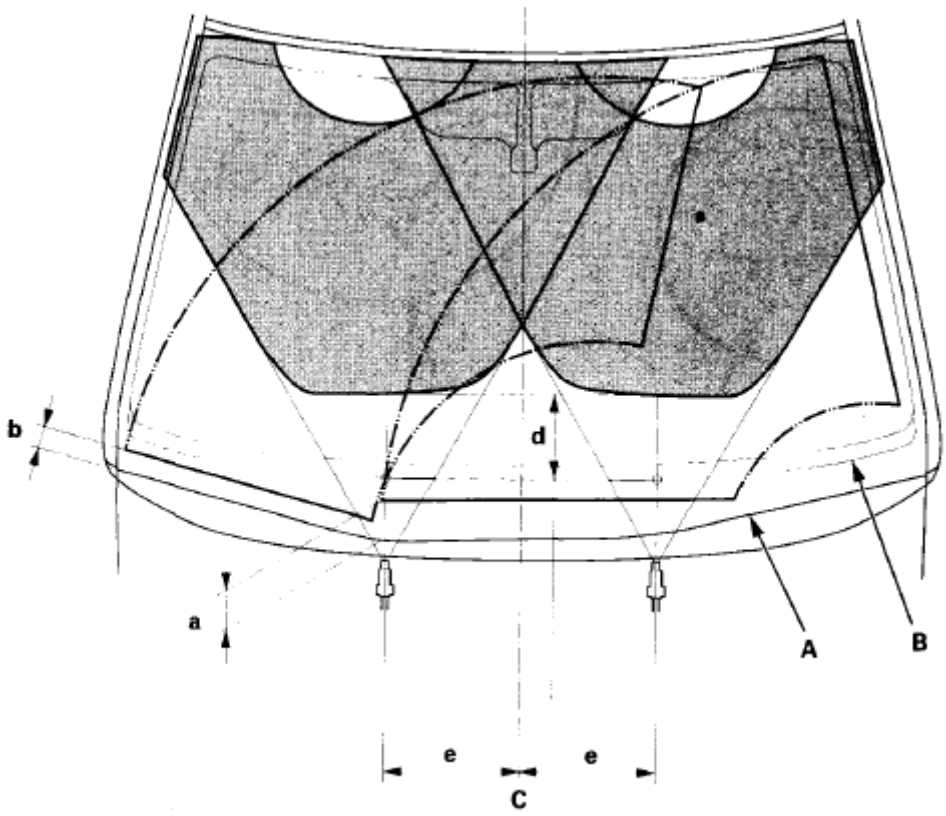

Fig. 37: Identifying Windshield Wiper Arms Park Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Washer Nozzle Position

3. When you turn on the washer(s), make sure 50 % or more of the washer fluid lands within the spray area. If the spray area is not within the standard positions, adjust the nozzle(s).

   d: Position at about 153 mm (6.0 in) from the top of the black ceramic area (B) at the lower windshield.

   e: Position at about 250 mm (9.8 in) from the windshield center line (C).

WASHER TUBE REPLACEMENT

WINDSHIELD

1. Remove the right front inner fender (see **FRONT INNER FENDER REPLACEMENT**).
2. Remove the washer nozzles and clips, then remove the tubes.

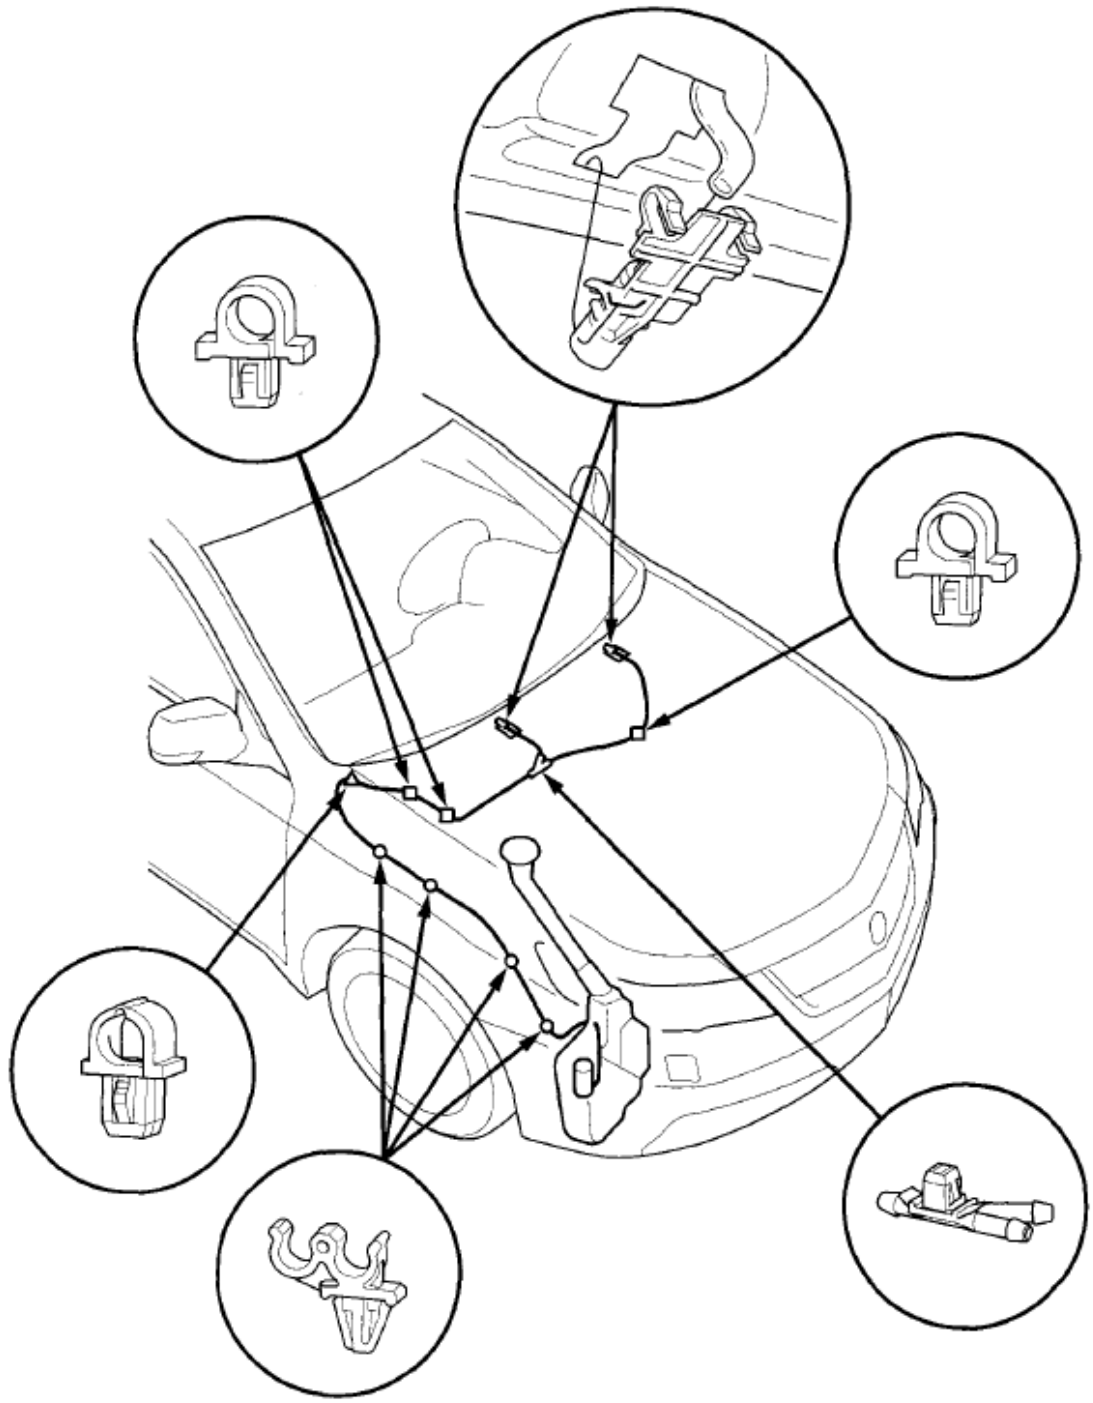

Fig. 38: Identifying Windshield Washer Tube, Washer Nozzles & Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install in the reverse order of removal. Take care not to pinch the washer tubes. Check the washer operation.

HEADLIGHT WASHER

1. Remove the front bumper (see **FRONT BUMPER REMOVAL/INSTALLATION**).
2. Remove the tube, mounting bolts and washer nozzles.

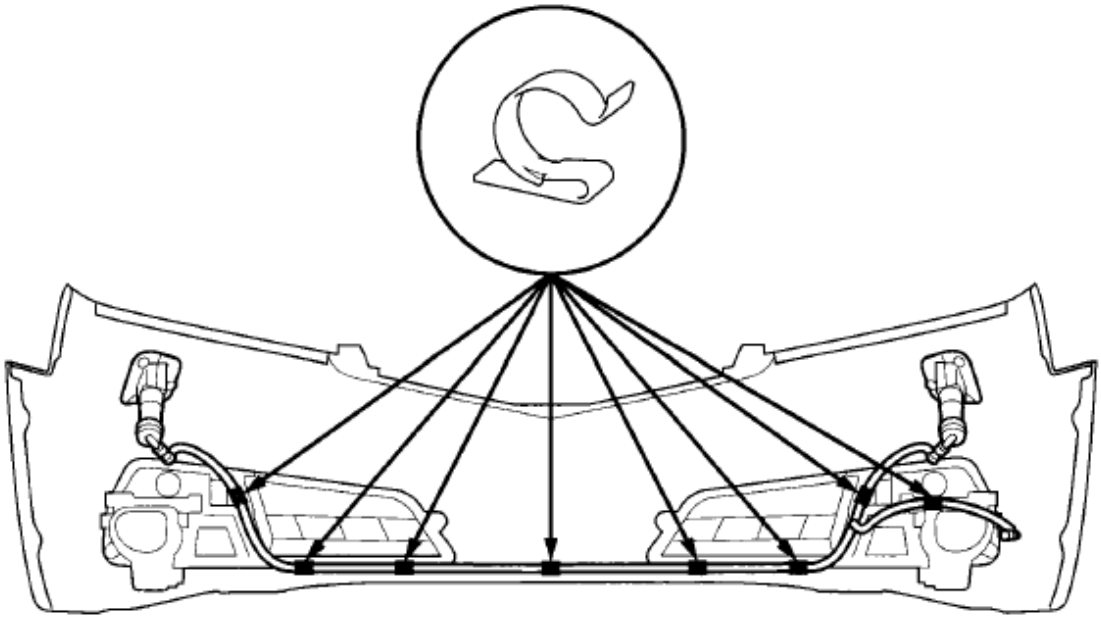

Fig. 39: Identifying Headlight Washer Tubes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the parts in the reverse order of removal. Take care not to pinch the washer tubes. Check the washer operation.

2012 ACCESSORIES & EQUIPMENT

Body (Special Tools) - TL

SPECIAL TOOLS

Ref.No.	Tool Number	Description	Qty
①	070AG-SJAA10S	Subframe Alignment Pin	1

2012 ACCESSORIES & EQUIPMENT

Bumpers - TL

FRONT BUMPER REMOVAL/INSTALLATION

NOTE:

- **Have an assistant help you when removing and installing the front bumper.**
- **Put on gloves to protect your hands.**
- **Take care not to scratch the front bumper or the body.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Disconnect the outside temperature sensor connector (A) from under the front bumper (B).

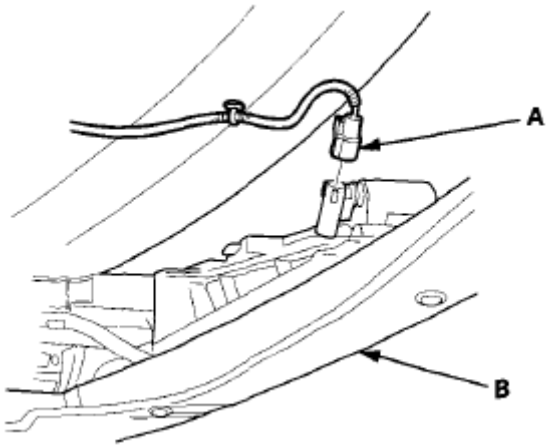

Fig. 1: Identifying Outside Temperature Sensor Connector And Front Bumper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove these items:
   - Front bulkhead cover (see **ENGINE COMPARTMENT COVER REPLACEMENT**)
   - Front strakes, both sides (see **FRONT STRAKE REPLACEMENT**)
3. Remove the bolts (A, B), the screws (C), and the clips (D, E) securing the front bumper (F).

NOTE: **To release the clips D, pry up on the center pin at the notch (G).**

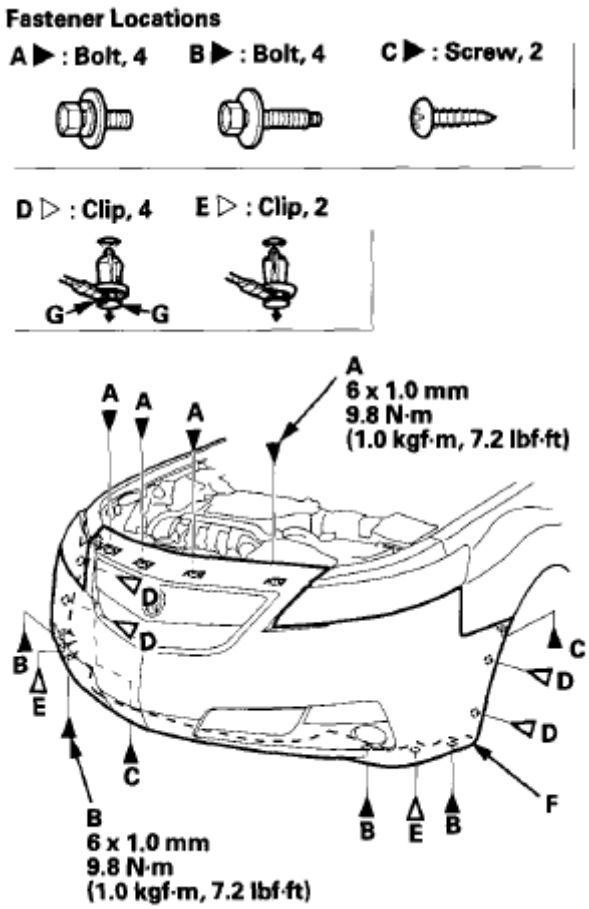

Fig. 2: Identifying Front Bumper, Notch, Clips, Screws And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pull out the front bumper (A) at the wheel arch areas to release it from the hooks (B) on the side spacers (C).

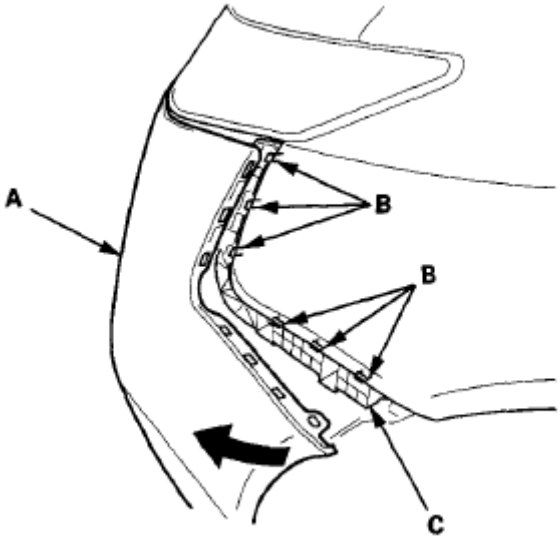

Fig. 3: Pulling Out Front Bumper At Wheel Arch Areas To Release It From Hooks On Side Spacers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. With the help of an assistant, pull both sides of the front bumper (A) away from the side spacers (B). Then pull out the bumper to release the hooks (C) from the upper beams (D).

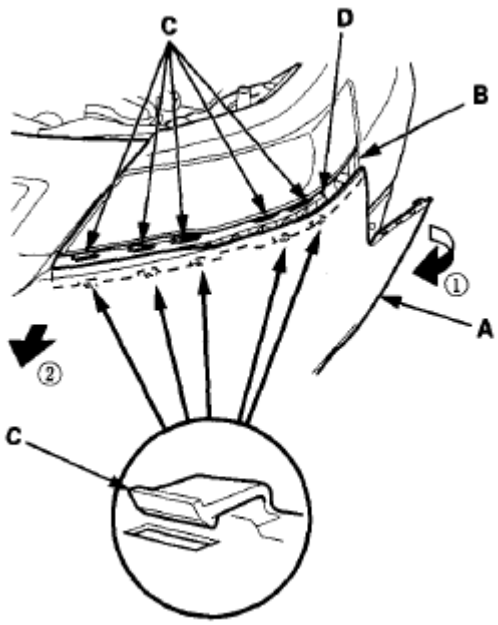

Fig. 4: Pulling Both Sides Of Front Bumper Away From Side Spacers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Hold up the bumper (A). Disconnect the front turn signal connectors (B), the fog light connectors (C), and, the headlight washer tube (D) (for some models). Release the projection (E) from the bulkhead (F), then remove the bumper.

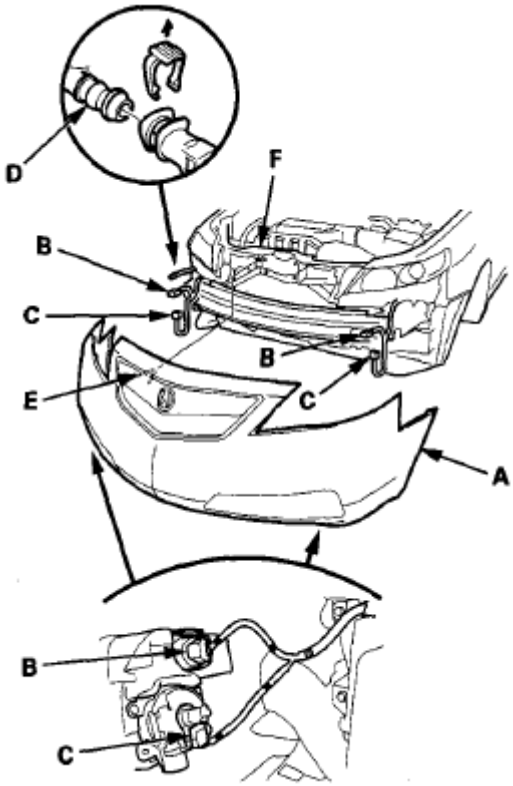

Fig. 5: Identifying Bumper, Front Turn Signal Connectors, Fog Light Connectors, Headlight Washer, Projection And Bulkhead
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the bumper in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Make sure the each connector is plugged in properly.
   - For some models: Make sure the headlight washer tube is connected properly.
   - Make sure the front bumper engages the hooks (on the upper beam and the side spacers) on each side securely.
   - Push the clips and the hooks into place securely.

LOWER FRONT BUMPER GRILLE REPLACEMENT

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

NOTE:
- **Put on gloves to protect your hands.**
- **Take care not to scratch the front bumper.**

- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove the **FRONT BUMPER**.
2. For some models: Remove the headlight washer tube as needed (see **HEADLIGHT WASHER (WITH HEADLIGHT WASHER)**).
3. Remove the screws from back of the front bumper (A), and release the hooks (B, C), then remove the lower front bumper grille (D) and the fog light housing (E).

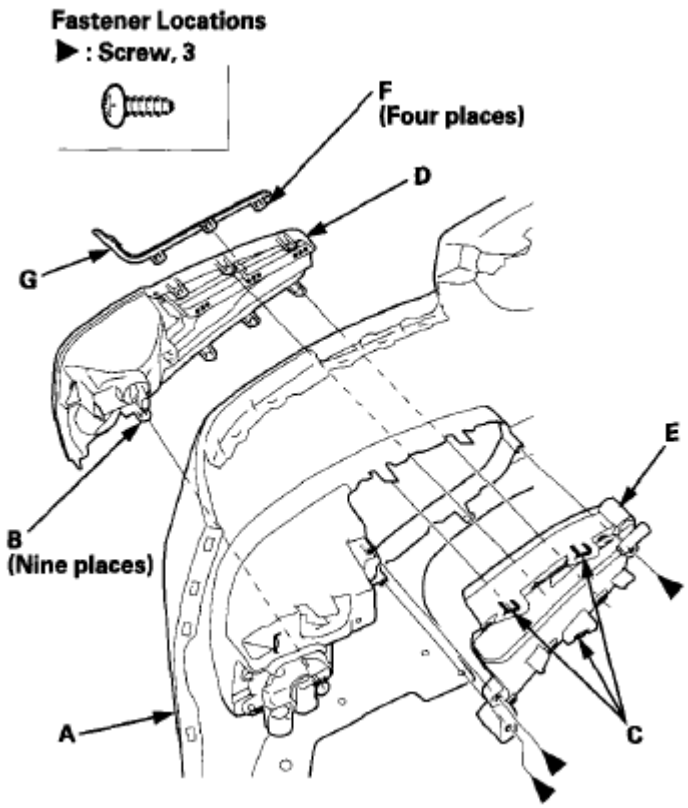

Fig. 6: Identifying Front Bumper, Hooks Lower Front Bumper Grille And Fog Light Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If necessary, release the hooks (F) (four places), then remove the front bumper lower mesh cross bar (G).
5. Install the grille in the reverse order of removal, and push the hooks into place securely.

REAR BUMPER REMOVAL/INSTALLATION

NOTE:

- **Have an assistant help you when removing and installing the rear bumper.**
- **Put on gloves to protect your hands.**
- **Take care not to scratch the rear bumper or the body.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to**

prevent damage.

1. Remove the screws (A, B) and the clips (C) securing the rear bumper (D).

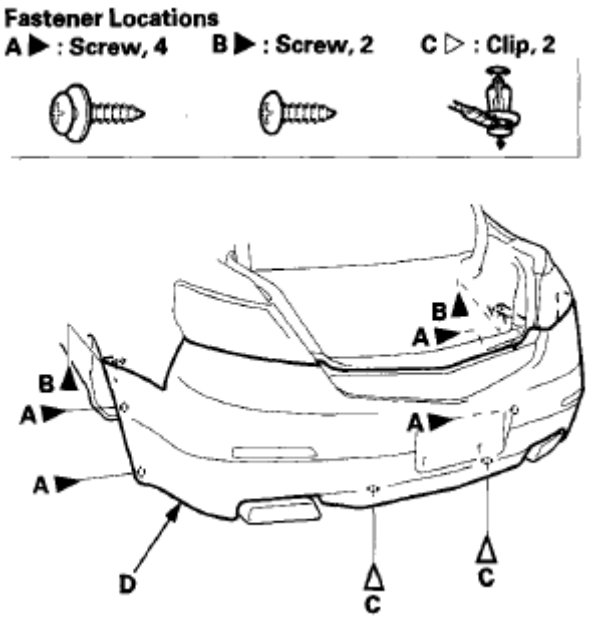

Fig. 7: Identifying Screws, Clips And Rear Bumper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull out the rear bumper (A) at the wheel arch areas to release it from the hooks (B) on the side spacer (C).

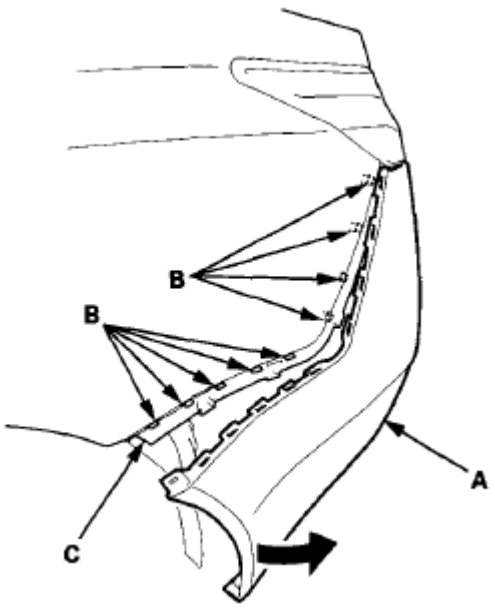

Fig. 8: Identifying Rear Bumper, Hooks And Side Spacer

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. With the help of an assistant, pull out one side of the rear bumper (A) to release the hooks (B) on the rear spacer (C) as shown. Repeat this step on the opposite side.

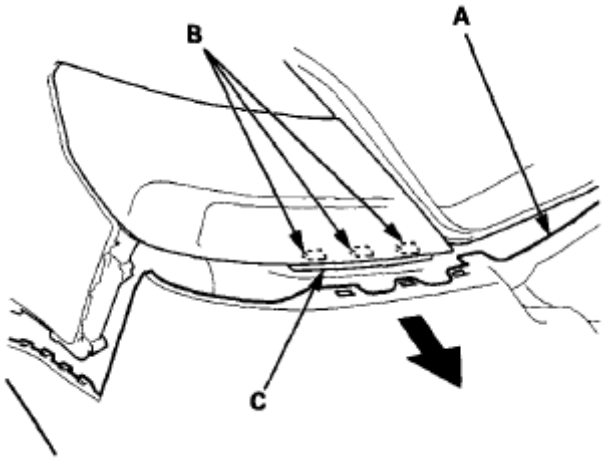

Fig. 9: Pulling Out One Side Of Rear Bumper To Release Hooks On Rear Spacer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With the help of an assistant, pull out the rear bumper to release the bumper (A) from the hooks (B) on the upper brackets (C). Disconnect the rear license plate light connectors (D).

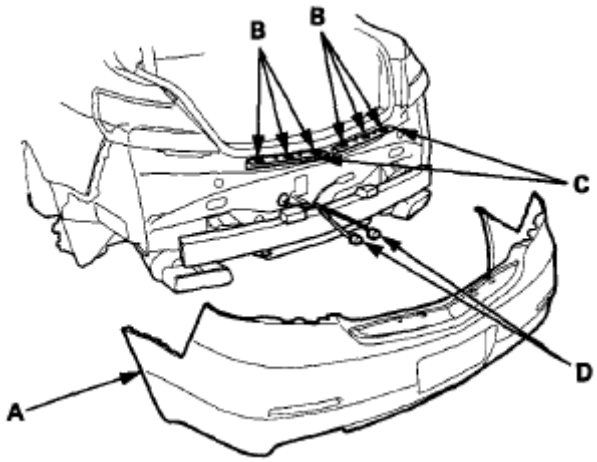

Fig. 10: Pulling Out Rear Bumper To Release Bumper From Hooks On Upper Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the bumper in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Make sure each connector is plugged in properly.
   - Make sure the rear bumper engages the hooks (of both side spacers and rear spacers) on each side securely.

- Push the clips and the hooks into place securely.

REAR BUMPER UPPER CENTER TRIM REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the rear bumper.**

1. Remove the **REAR BUMPER**.
2. Release the screws, then remove the rear bumper upper center trim (A).

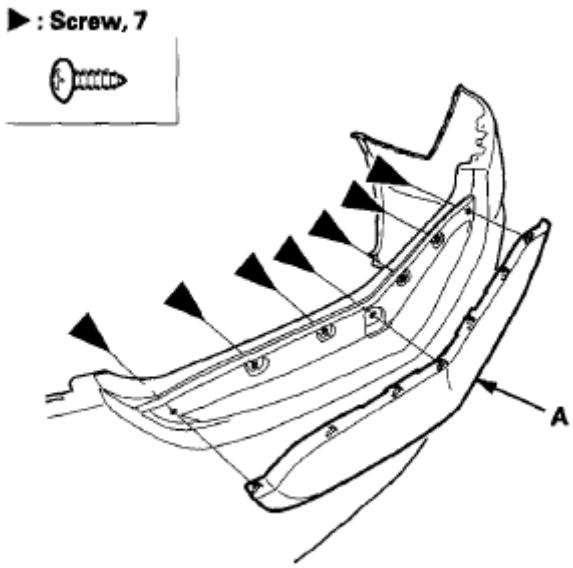

Fig. 11: Removing Rear Bumper Upper Center Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the trim in the reverse order of removal, and push the hooks into place securely.

REAR BUMPER LOWER TRIM REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the rear bumper.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Remove the **rear bumper**.
2. Detach the clips, and release the hooks (A) (six places), then remove the rear bumper lower trim (B).

NOTE: To release the clips, pry up on the center pin at the notch (C).

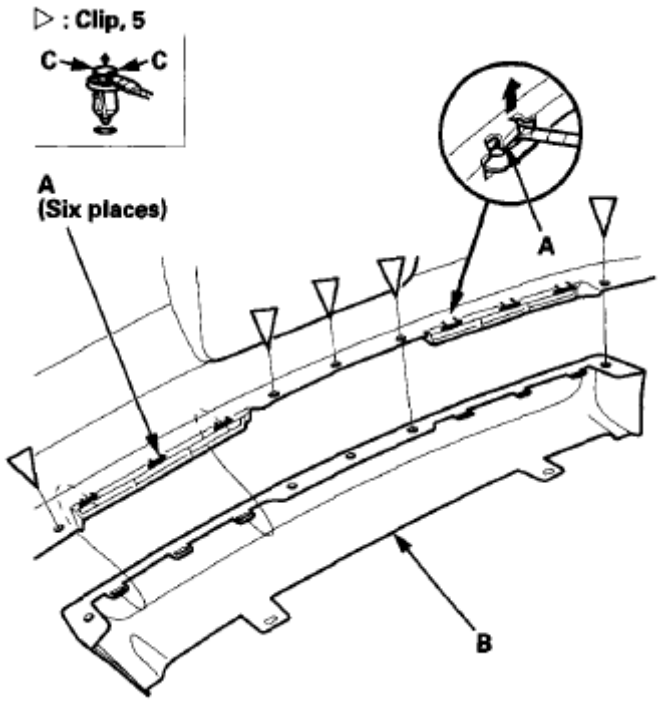

Fig. 12: Identifying Hooks, Rear Bumper Lower Trim And Notch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the trim in the reverse order of removal, and push the clips and the hooks into place securely.

REAR BUMPER REFLECTOR REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the rear bumper.**

1. Remove the **REAR BUMPER**.
2. Release the hooks (A), then remove the rear bumper reflector (B) from the rear bumper (C).

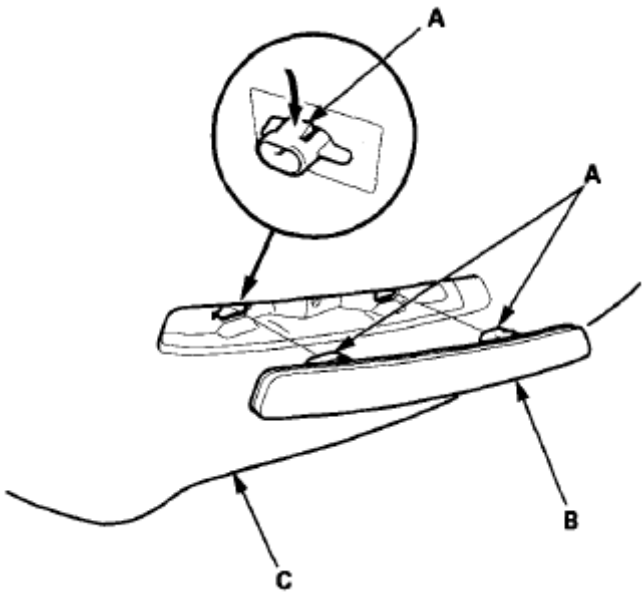

Fig. 13: Identifying Hooks, Rear Bumper Reflector And Rear Bumper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the reflector in the reverse order of removal, and push the hooks into place securely.

2012 ACCESSORIES & EQUIPMENT

Doors - TL

COMPONENT LOCATION INDEX - FRONT DOOR

FRONT DOOR PANEL REMOVAL/INSTALLATION

Special Tools Required

- KTC Trim Tool Set SOJATP2014*
- Trim Pad Remover, Snap-on A 177A or equivalent, commercially available

*Available through the Acura Tool and Equipment Program; call 888-424-6857

NOTE:

- **Take care not to scratch the door or the related parts.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Push on the upper hook (A) with the appropriate trim tool, then pull back the inner handle cap (B) to remove it.

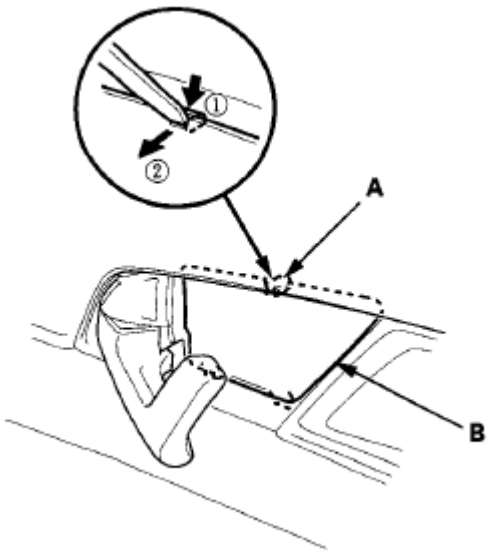

Fig. 7: Pushing On Upper Hook With Appropriate Trim Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screws securing the inner handle (A).

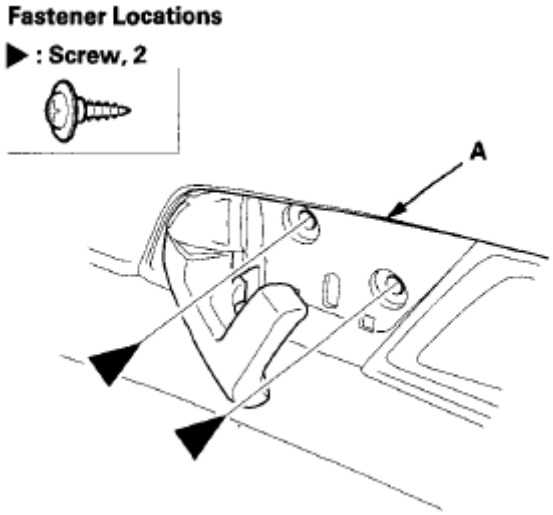

Fig. 8: Identifying Inner Handle

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the door grip trim (A).
    1. Insert the appropriate trim tool into the notch (B), and pry out along the edge of the trim to release the hooks (C).
    2. Pull up the trim to release the hook (D).

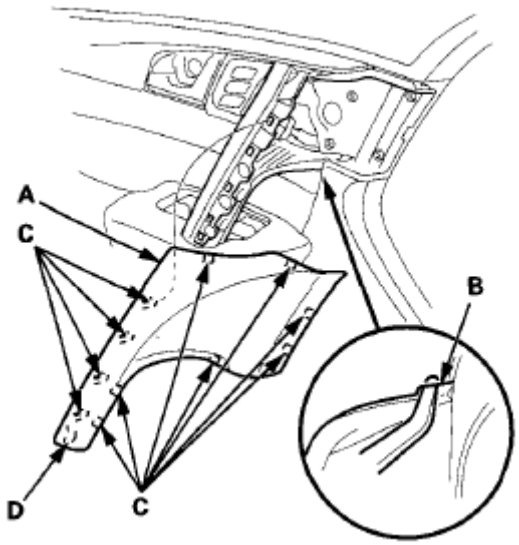

Fig. 9: Identifying Door Grip Trim, Notch And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the screw.

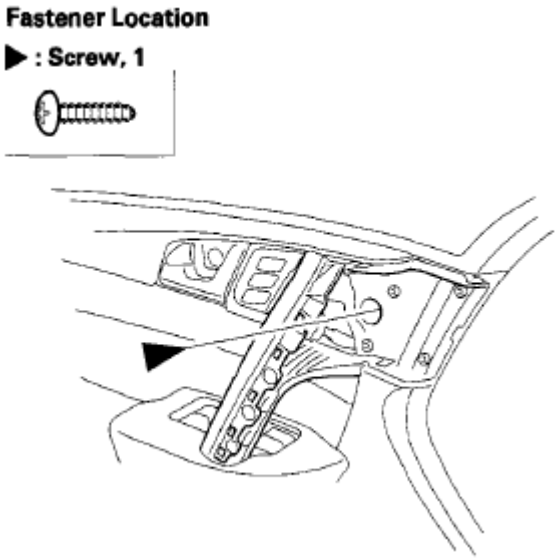

Fig. 10: Identifying Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the hooks (A), and remove the front pull pocket cap (B), then remove the screw.

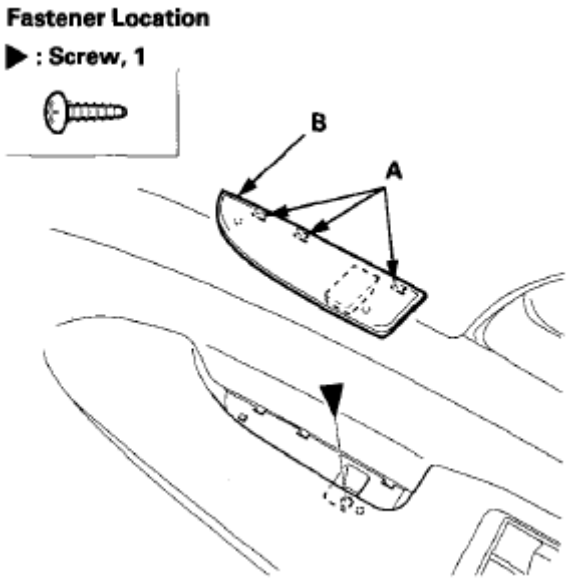

Fig. 11: Identifying Hooks And Pull Pocket Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. From under the armrest, pry out at the notch (A) with the appropriate trim tool, and open the pocket cap (B), then remove the screw.

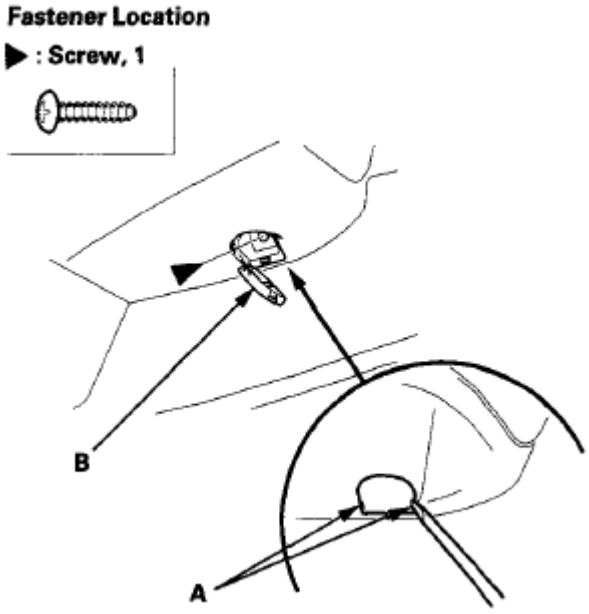

Fig. 12: Identifying Notch And Pocket Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the door panel (A) with as little bending as possible to avoid creasing or breaking it.

1. Start at the bottom edge of the door panel, detach the clips (B) with a commercially available trim pad remover.
2. Detach the remaining clips (C).
3. Release the door panel from the metal clips (D) attached to the door glass inner weatherstrip.
4. Starting at the rear, pull out the door panel.

NOTE: The inner handle cable (E) and the latch cable (F) are connected to the inner handle (G). Do not pull up the door panel too far, or these cables will be damaged.

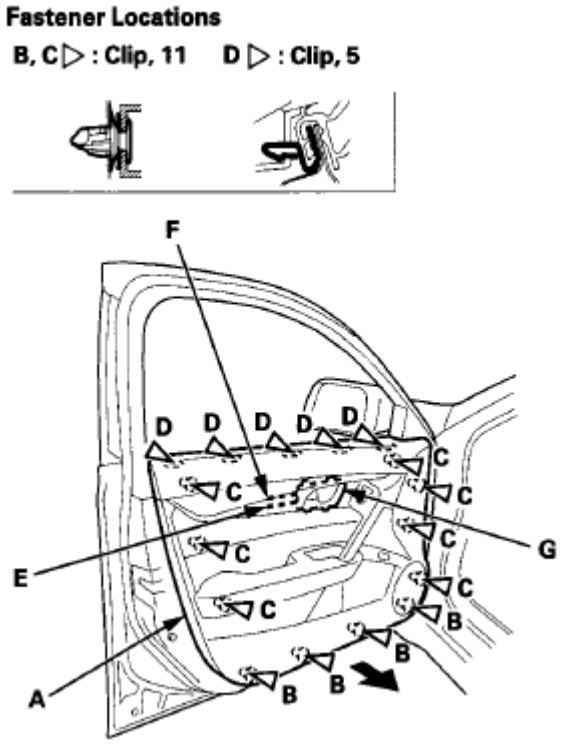

Fig. 13: Identifying Clips And Inner Handle Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. While holding the door panel away from the door, detach the clips by pulling out the inner handle (A), then remove the inner handle from the door panel.

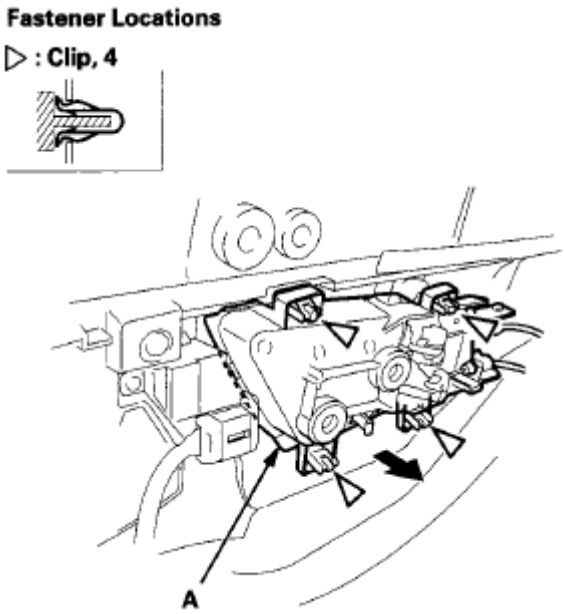

Fig. 14: Pulling Out Inner Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. While holding the door panel (A) away from the door, remove these items:
   - Driver's door: Disconnect the driver's door wire harness connectors (B, C).
   - Passenger's door: Detach the harness clip (D), then disconnect the power window switch connector (E) and the courtesy light connector (F).

NOTE: If you are only removing the door panel, go to step 14. If you are doing further disassembly of the door panel, continue to step 10.

Driver's Door

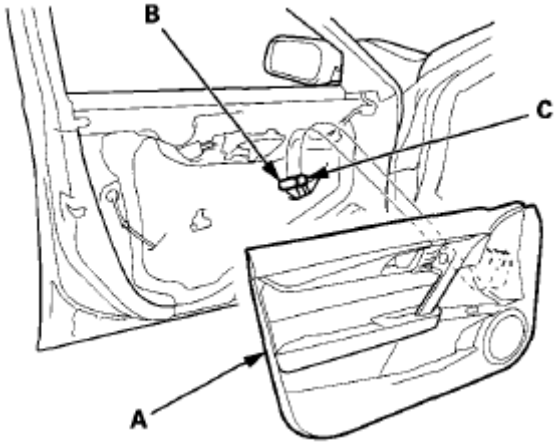

Fig. 15: Identifying Door Panel, Wire Harness Connections And Connectors (Driver's Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's Door

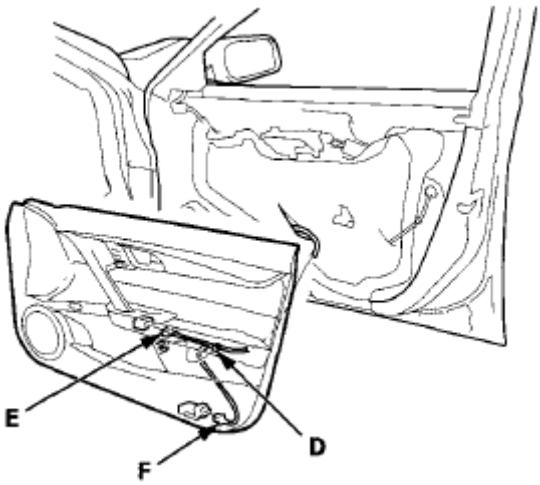

Fig. 16: Identifying Door Panel, Wire Harness Connections And Connectors (Passenger's Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Inner Handle Removal

10. Disconnect the inner handle cable (A) and the latch cable (B) from the inner handle (C), then remove the handle.
    1. Release the inner handle cable fasteners (D, E), then disconnect the inner handle cable from the cable fasteners.
    2. Release the latch cable fastener (F), and remove the latch cable fastener (G) from the inner handle by pinching its tabs together.

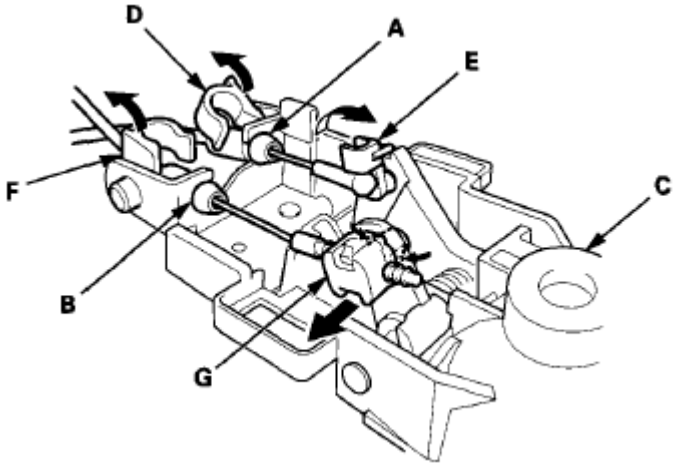

Fig. 17: Releasing Latch Cable Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Door End Trim Removal

11. Remove the screw (A), and detach the clips (B), then remove the door end trim (C) by pulling back the trim. The clips (D) will stay in the door.

NOTE: Install the clips D on the door end trim before installing the trim on the door.

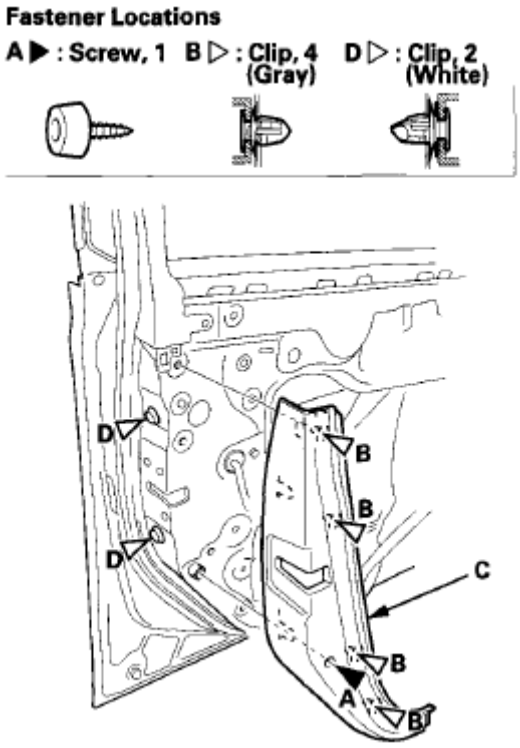

Fig. 18: Identifying Screw, Clips And Door End Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Armrest Assembly/Grip Assembly Removal

12. Remove the armrest/grip assembly (A) from the door panel (B).
    1. Disconnect the door subharness connector (C).
    2. Driver's door: Disconnect the seat position memory switch connector (D) and the power mirror switch connector (E).
    3. Remove the screws from back of the door panel and the front of the grip assembly.
    4. Pull out along the edge of the armrest/grip assembly to release the hooks (F).

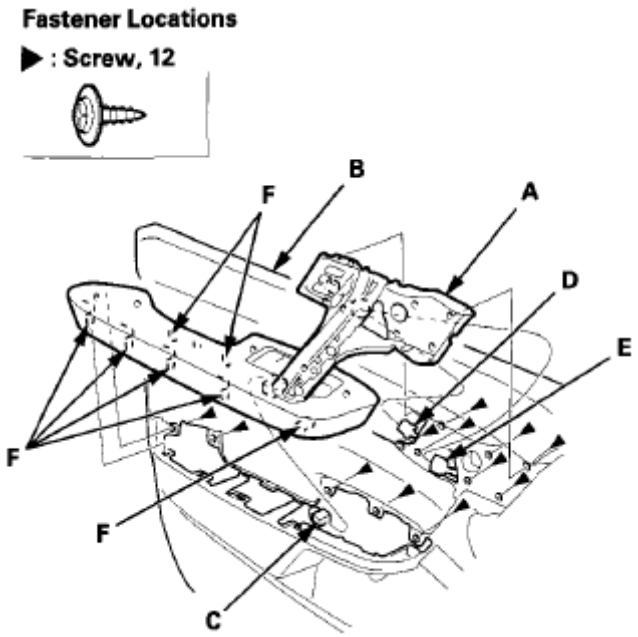

Fig. 19: Identifying Armrest/Grip Assembly Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the screws, then separate the armrest assembly (A) and the grip assembly (B).

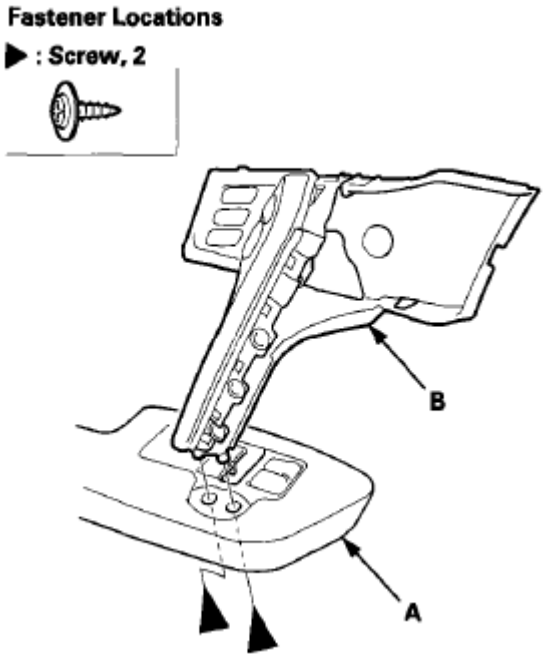

Fig. 20: Identifying Armrest Assembly And Grip Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the door panel in the reverse order of removal, and note these items:

- If the clips are damaged or stress-whitened, replace them with new ones.
- Replace any damaged cable fasteners with new ones.
- If the inner door handle cable end is damaged or stress-whitened, replace it with a new one.
- The latch cable (A) should be fixed to the cable fastener (B) with the latch in the unlocked position as shown.
- Make sure each connector is plugged in properly, and each cable is connected securely.
- Make sure the power window, the power door lock, and the power mirror operate properly.
- When reinstalling the door panel, make sure the plastic cover on the door is installed properly.
- Push the clips and the hooks into place securely.

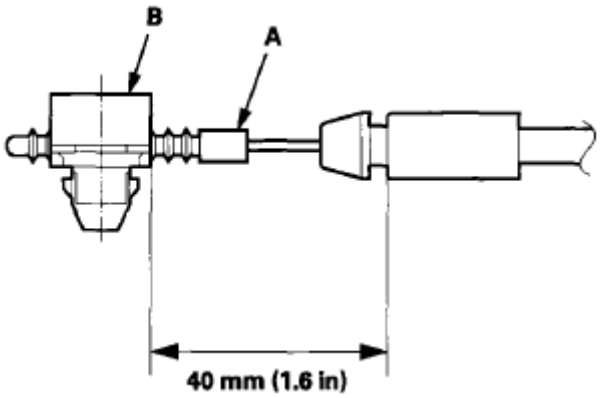

Fig. 21: Identifying Latch Cable And Cable Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT DOOR OUTER HANDLE REPLACEMENT

NOTE:
- **Put on gloves to protect your hands.**
- **Take care not to scratch the door.**

1. Remove these items:
   - Door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**)
   - Door end trim (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**)
2. Raise the glass fully.
3. Remove the plastic cover (A) as needed.
   1. Disconnect the power door lock actuator connector (B), and detach the harness clip (C).
   2. Remove the rear plug cap (D).

NOTE: If the plastic cover is damaged or torn, replace it with a new one.

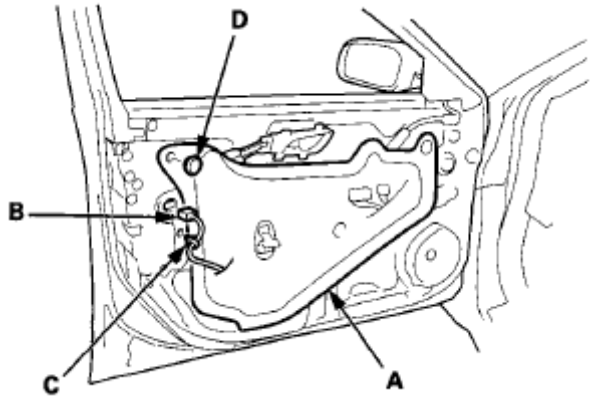

Fig. 22: Identifying Plastic Cover, Power Door Lock Actuator Connector, Rear Plug Cap And Detach Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Driver's door: Pull both side flanges (A) of the retainer (B) outward, and pull out the middle flange area (C) of the outer casing cover (D), then disconnect the lock cylinder cable (E) from the latch.

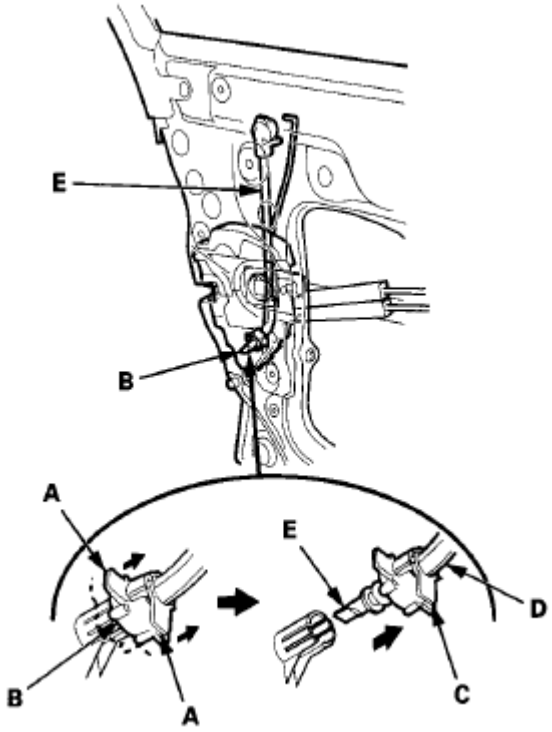

Fig. 23: Identifying Flanges, Retainer, Middle Flange Area, Outer Casing Cover And Lock Cylinder Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. While holding the outer handle cover (A), loosen the bolt until it can be pulled out half-way by hand (driver's door), or remove the bolt (passenger's door). Release the hooks (B) of the cover, then remove the cover.

Driver's door

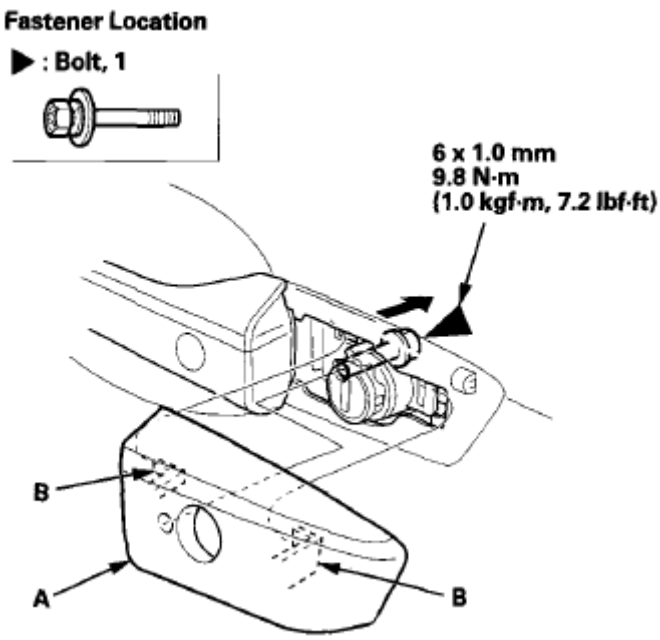

Fig. 24: Removing Front Door Outer Handle Cover (Driver's Door) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's door

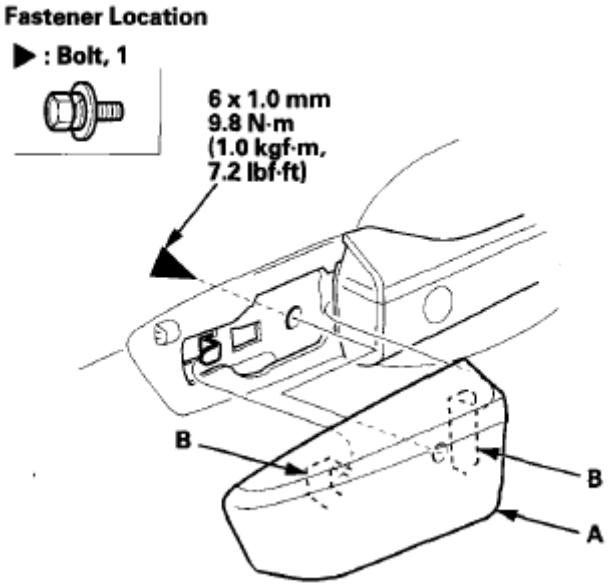

Fig. 25: Removing Front Door Outer Handle Cover (Passenger's Door) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Release the hooks (A), then remove the lock cylinder (B) (driver's door) or the outer handle holder (C) (passenger's door) from the outer handle base (D).

Driver's door

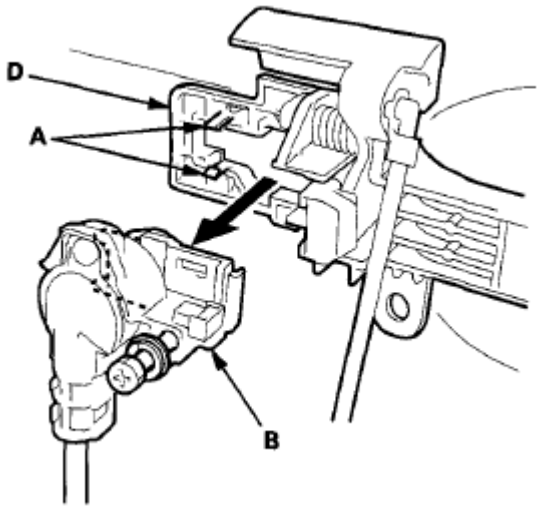

Fig. 26: Removing Lock Cylinder Or Outer Handle Holder From Outer Handle Base (Driver's Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's door

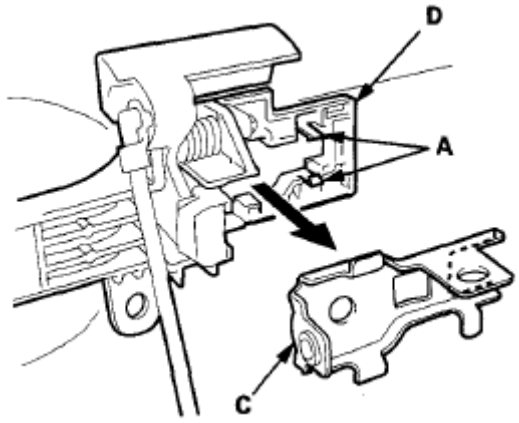

Fig. 27: Removing Lock Cylinder Or Outer Handle Holder From Outer Handle Base (Passenger's Door)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Driver's door: If the retainer (A) of the lock cylinder cable (B) is damaged, release the hooks (C), then replace it with a new one.

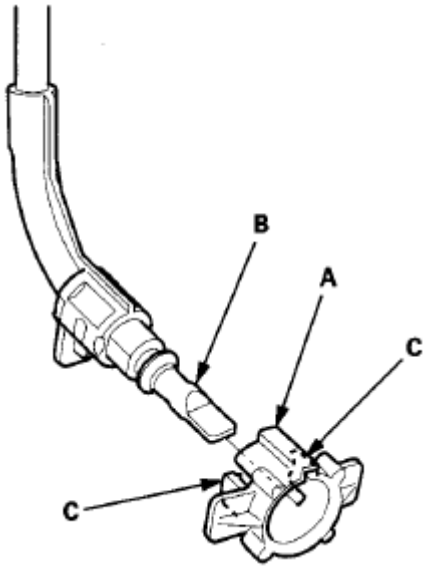

Fig. 28: Identifying Retainer, Hooks And Lock Cylinder Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Disconnect the door outer handle connector (A) (for some models) from the inside of the door. Pull back the outer handle (B), and out as shown to remove it from the door.

NOTE: If you are only removing the door panel, go to step 14. If you are doing further disassembly of the door panel, continue to step 9.

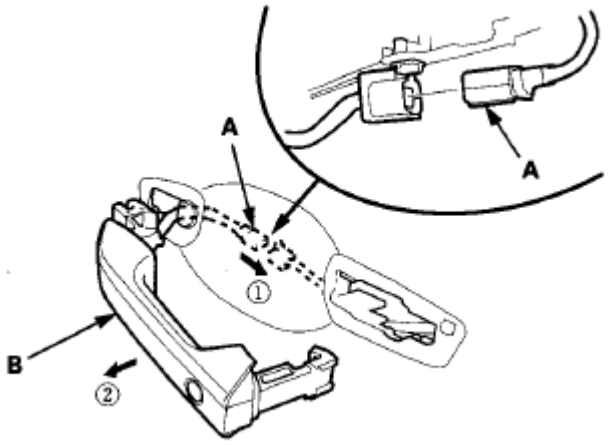

Fig. 29: Disconnecting Door Outer Handle Connector From Inside Of Door
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Outer Handle Base Removal

9. Release the hooks (A, B), then remove the outer handle front seal (C) and the outer handle rear seal (D).

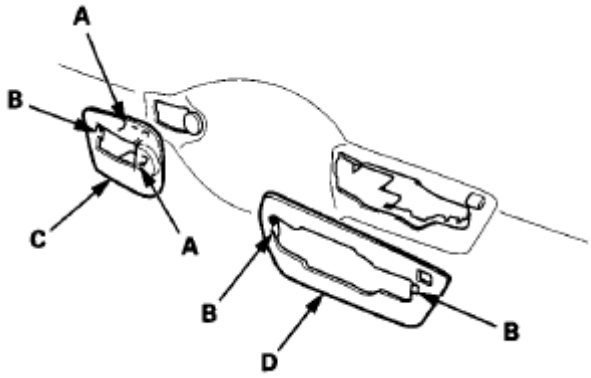

Fig. 30: Identifying Hooks, Outer Handle Front And Rear Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. For some models: Detach the harness clips (A).

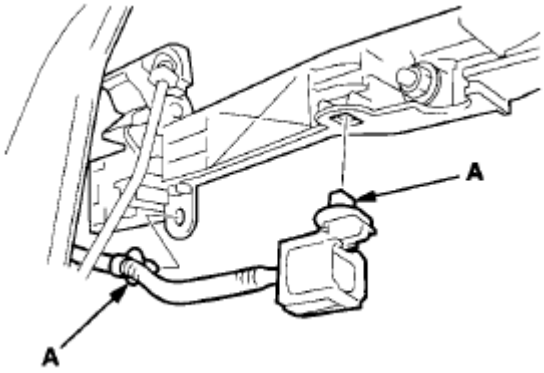

Fig. 31: Identifying Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the hole seal (A).

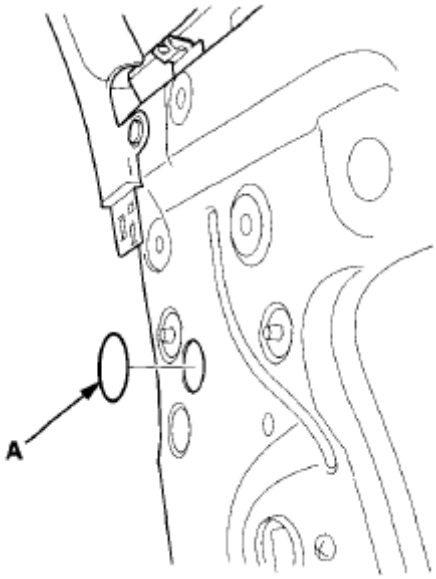

Fig. 32: Identifying Hole Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the outer handle base (A).
    1. Release the rod fastener (B).
    2. Disconnect the outer handle rod (C) with a clip remover.
    3. Loosen the nut.
    4. Release the hook (D), and slide the base forward to release the special bolt (E) from the door.

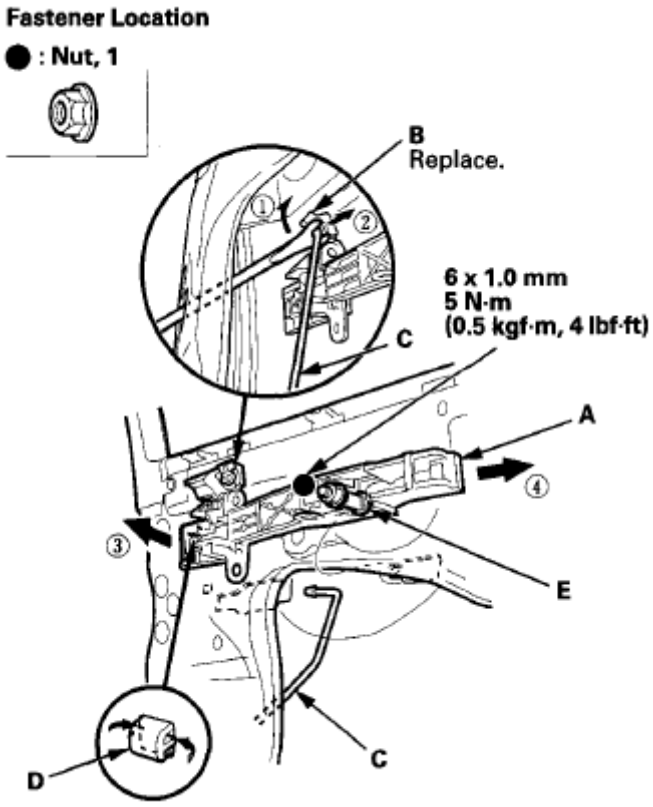

Fig. 33: Sliding Base Forward To Release Special Bolt From Door With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the rod fastener (A) from the outer handle base (6), then replace it with a new one.

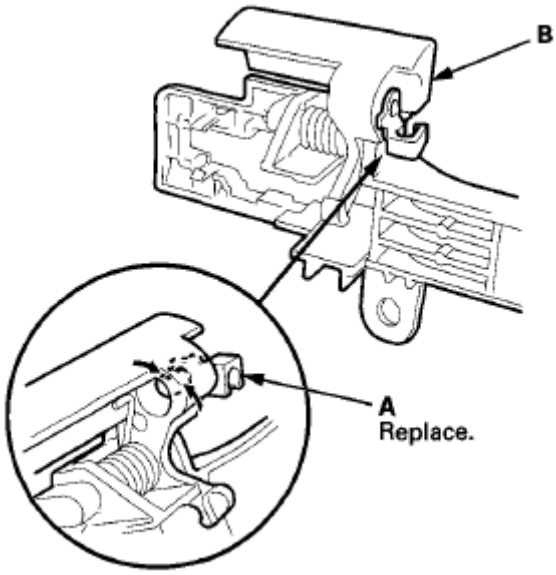

Fig. 34: Identifying Rod Fastener And Outer Handle Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the outer handle in the reverse order of removal, and note these items:
    - Reinstall the lock cylinder (driver's door) or the outer handle holder (passenger's door) before installing the outer handle cover.
    - Make sure each connector is plugged in properly, and the cable and the rod are connected securely.
    - Make sure the door key cylinder/door locks operate properly.
    - Make sure the door handle works properly.
    - When reinstalling the door panel, make sure the plastic cover on the door is installed properly.
    - Push the clips and the hooks into place securely.

FRONT DOOR LATCH REPLACEMENT

NOTE: Put on gloves to protect your hands.

1. Remove these items:
    - Door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**)
    - Inner handle (see step 10)
    - Door end trim (see step 11)
2. Raise the glass fully.
3. Remove the plastic cover as needed (see step 3).
4. Detach the rod fastener, and disconnect the outer handle rod from the outer handle base (see step 12).
5. Driver's door: Disconnect the lock cylinder cable from the latch (see step 4).
6. Pull away the glass run channel (A) as needed, and remove the bolt, then remove the center lower channel (B) by pulling it downward.

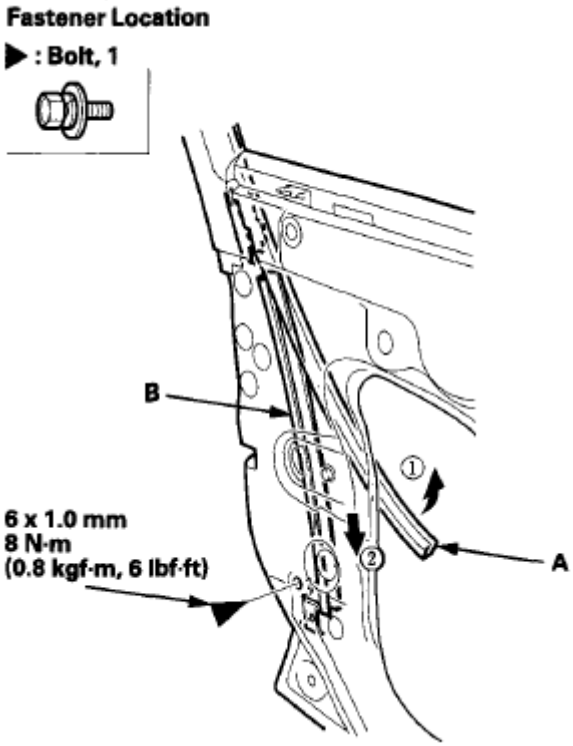

Fig. 35: Pulling Center Lower Channel Downward With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the screws (A, B) securing the latch (C), then remove the latch through the hole in the door.

NOTE: Take care not to bend the outer handle rod (D), the latch cable (E), or the inner handle cable (F).

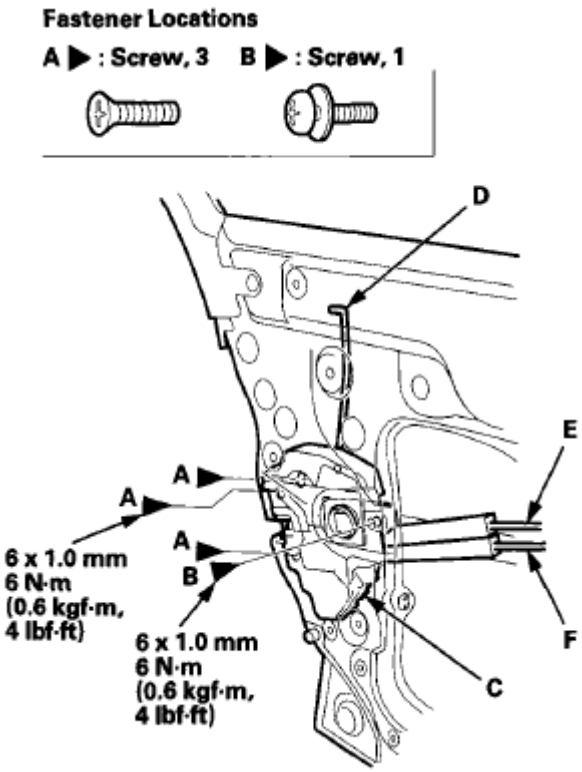

Fig. 36: Identifying Screws, Latch, Outer Handle Rod, Latch Cable And Inner Handle Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the foam seals (A, B) from the latch protector (C) and the latch (D).

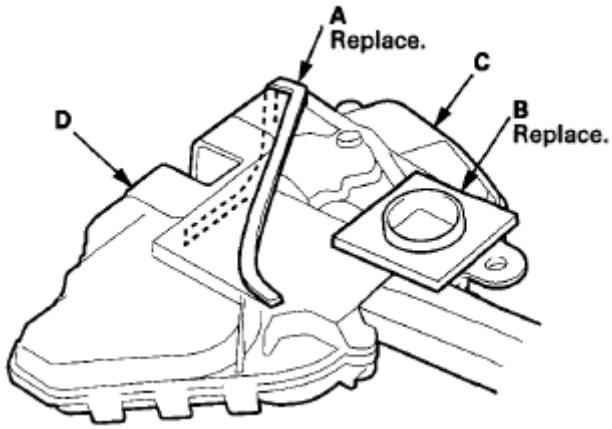

Fig. 37: Identifying Seals, Latch Protector And Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the screw, then remove the latch protector (A) by releasing the hook (B).

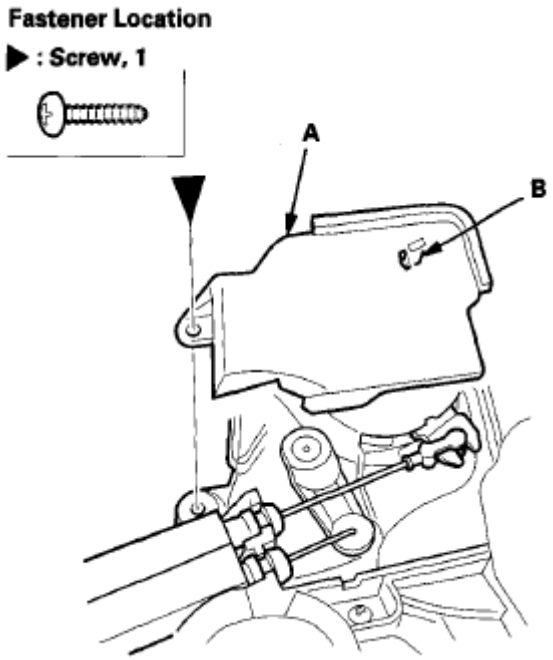

Fig. 38: Releasing Hook To Remove Latch Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Disconnect the latch cable (A) and the inner handle cable (B) from the latch (C).

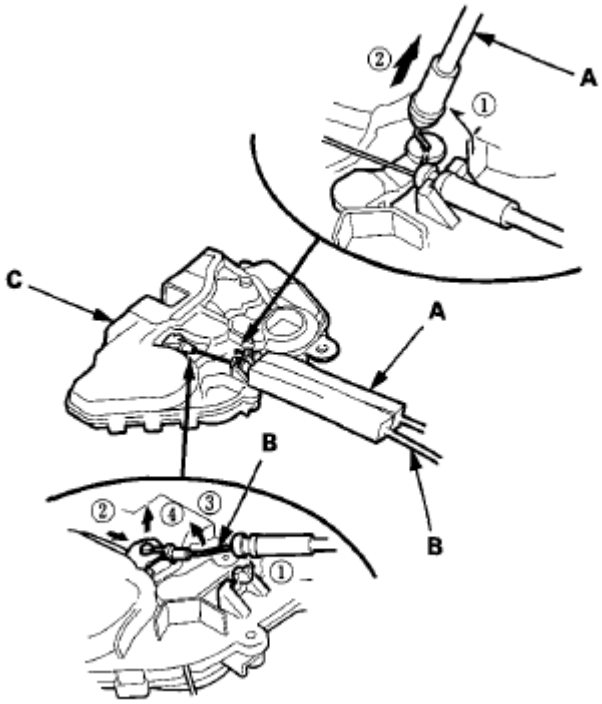

Fig. 39: Identifying Latch Cable, Inner Handle Cable And Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the latch in the reverse order of removal, and note these items:
    - Before reinstalling the latch protector, clean the latch and the latch protector surfaces with isopropyl alcohol where the new foam seals will be attached.
    - After reinstalling the latch protector to the latch, attach the new foam seals to the protector and the latch.
    - Make sure each connector is plugged in properly, and the rod and the cables are connected securely.
    - Make sure the power door locks and opens properly.
    - When reinstalling the door panel, make sure the plastic cover on the door is installed properly.
    - Push the hook into place securely.

FRONT DOOR GLASS AND REGULATOR REPLACEMENT

NOTE: Put on gloves to protect your hands.

1. Remove the door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Raise the glass fully.
3. Remove the screws, then remove the door panel bracket (A).

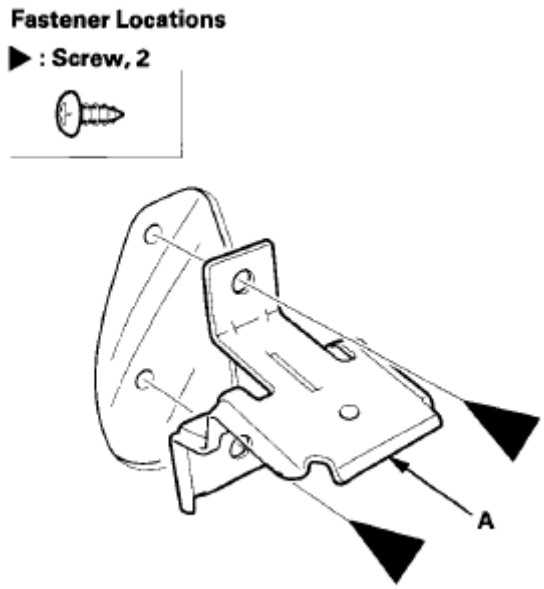

Fig. 40: Removing Door Panel Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the plastic cover (A).
    1. Disconnect the power door lock actuator connector (B), and detach the harness clip (C).
    2. Remove the plug caps (D).
    3. Pass the wire harnesses (E) through the slits (F) in the cover, then remove the cover.

NOTE: If the plastic cover is damaged or torn, replace it with a new one.

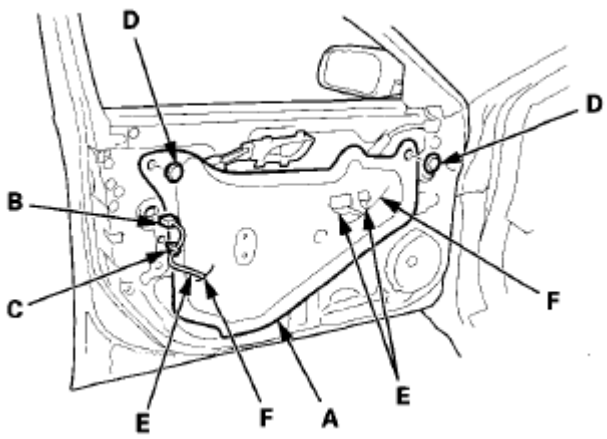

Fig. 41: Identifying Plastic Cover, Power Door Lock Actuator Connector, Harness Clip And Slits
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Detach the harness clip (A). Loosen the bolt (B), and remove the bolt (C), then remove the door panel bracket (D).

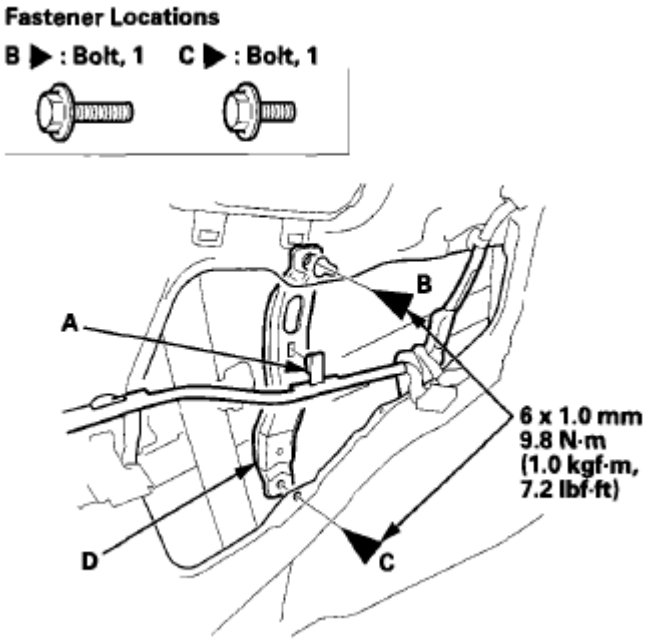

Fig. 42: Removing Door Panel Bracket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Lower the glass (A) until you can see the bolts, then remove them. Carefully pull out the glass through the window slot.

NOTE: Take care not to drop the glass inside the door.

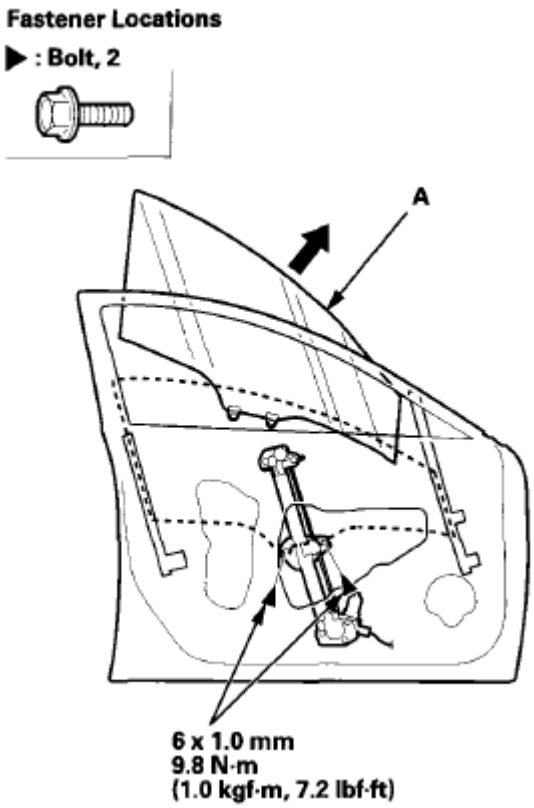

Fig. 43: Identifying Glass With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the connector (A) from the regulator (B).

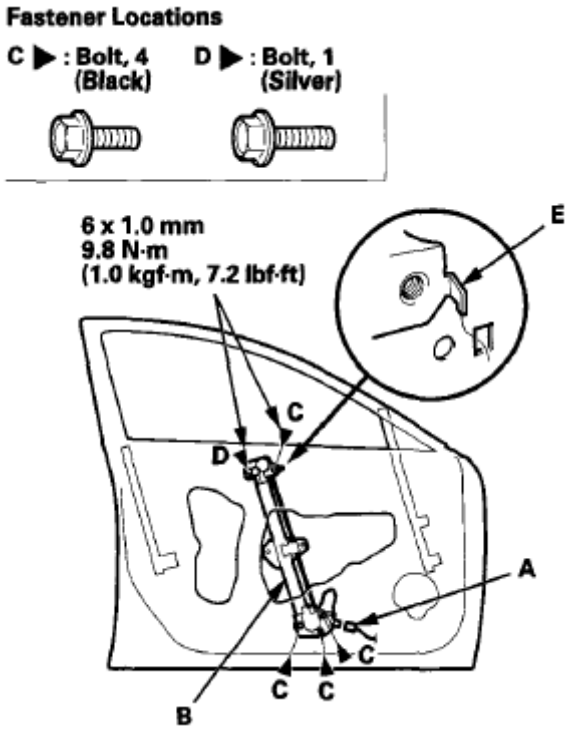

Fig. 44: Identifying Connector, Regulator, Bolts And Hook With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the bolts (C), and loosen the bolt (D). Release the hook (E), then remove the regulator through the hole in the door.
9. Apply multipurpose grease to all the sliding surfaces of the regulator (A) where shown.

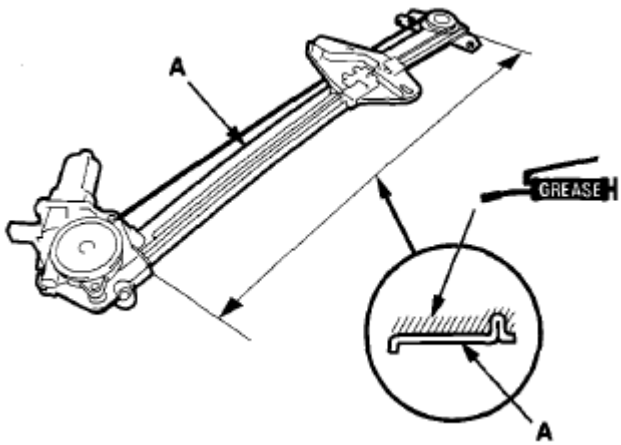

Fig. 45: Identifying Regulator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the glass and the regulator in the reverse order of removal, and note these items:
    - If the clips are damaged or stress-whitened, replace them with new ones.

- Roll the glass up and down to make sure it moves freely without binding.
- Make sure that there is no clearance between the glass and the glass run channel when the glass is closed.
- Make sure each connector is plugged in properly.
- Adjust the position of the glass as necessary (see **DOOR GLASS ADJUSTMENT**).
- Do the power window control unit reset procedure (see **RESETTING THE POWER WINDOW CONTROL UNIT**).
- Make sure the power door locks, the power windows, and the power mirror operate properly.
- Make sure the plastic cover on the door is installed properly and sealed around its outside perimeter to seal out water.
- Push the clips and the hook into place securely.
- Check for water leaks (see step 10).
- Test-drive the vehicle, and check for wind noise and rattles.

FRONT DOOR SASH INNER TRIM REPLACEMENT

NOTE: Take care not to scratch the door.

1. Remove there items:
   - Door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**)
   - Door end trim (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**)
2. Lower the glass fully.
3. Remove the front door sash inner trim (A).
   1. Detach the clips (B, C) fastening the trim.
   2. Pull back along the outside edge of the trim to release the hook strip (D) from the door glass opening flange at the A-pillar area and the roof area of the door sash.
   3. Pull back along the outside edge of the trim to release the hook strip (E) from the door glass opening flange at the B-pillar area of the door sash.
   4. With BSI: Disconnect the BSI warning indicator connector (F).
   5. If necessary, release the clip (G) from the door panel.

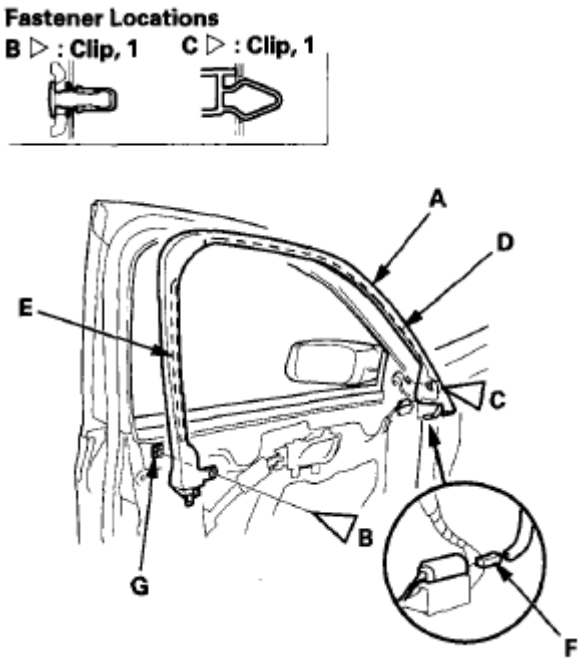

Fig. 46: Identifying Front Door Sash Inner Trim Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the trim in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Make sure the connector is plugged in properly.
   - Push the clips and the hook strips into place securely.

FRONT DOOR SASH OUTER TRIM REPLACEMENT

NOTE: Take care not to scratch the door.

1. Remove the door outer molding (see **FRONT DOOR OUTER MOLDING REPLACEMENT**).
2. Pull up the door sash outer trim (A) to release the hooks (B) from the door, and release the trim from between the door glass outer weatherstrip (C) and the door, then remove the trim.

NOTE: Take care not to damage the door glass outer weatherstrip.

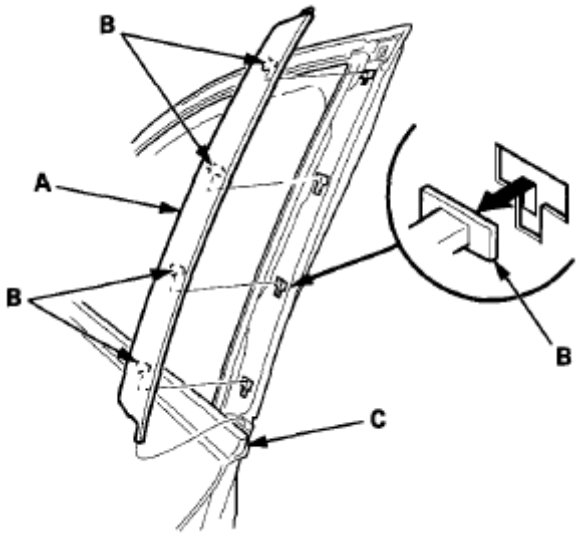

Fig. 47: Identifying Front Door Sash Outer Trim Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the trim in the reverse order of removal.

FRONT DOOR GLASS OUTER WEATHERSTRIP REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the door.**

1. Remove these items:
   - Door panel bracket (see step 3)
   - Plastic cover, as needed (see step 3)
   - Power mirror (see **POWER MIRROR REPLACEMENT**)
2. Remove the screw from the rear edge of the door.

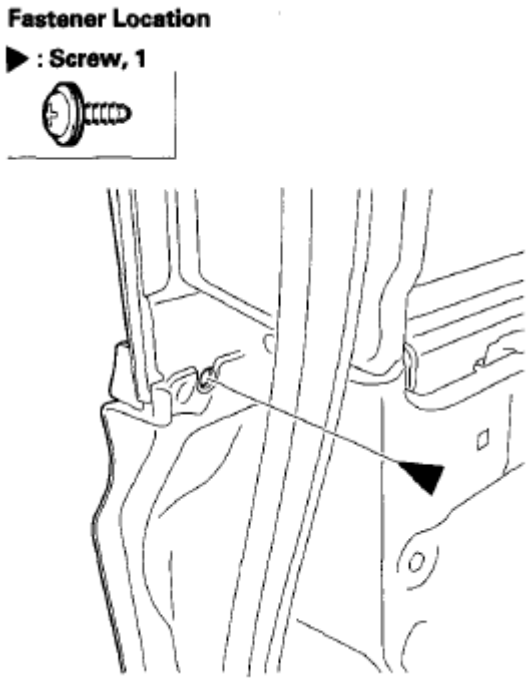

Fig. 48: Removing Screw From Rear Edge Of Door
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. From the inside of the door, slide the clips (A) on the door glass outer weatherstrip (B) to release the hooks (C) from the flanges (D) on the door.

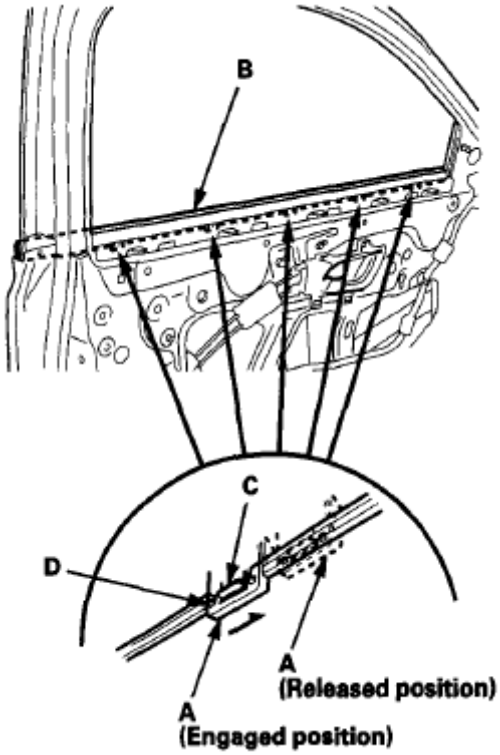

Fig. 49: Identifying Clips, Door Glass Outer Weatherstrip, Hooks And Flanges
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pull up the door glass outer weatherstrip (A), then remove the weatherstrip.

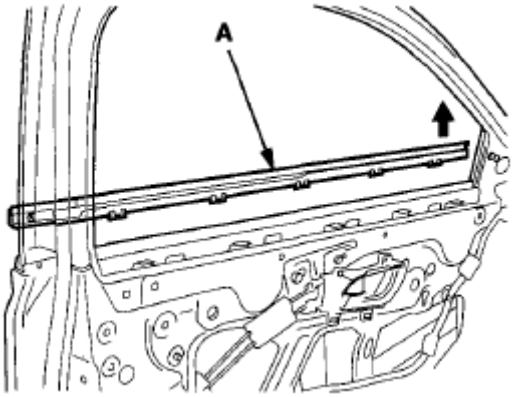

Fig. 50: Pulling Up Door Glass Outer Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Before installing the door glass outer weatherstrip, slide the clips to the released position as in step 3.
6. Install the front door glass outer weatherstrip, and slide the clips securely on to the flanges.
7. Reinstall all remaining removed parts, and note these items:
    - When reinstalling the door panel, make sure the plastic cover on the door is installed properly and sealed around its outside perimeter to seal out water.

- Check for water leaks (see step 10).

FRONT DOOR OUTER MOLDING REPLACEMENT

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

NOTE:

- **If you remove the door outer molding, replace it with a new one because it will bend during removal.**
- **Put on gloves to protect your hands.**
- **Take care not to scratch the door.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove these items:
   - Door panel (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**)
   - Power mirror (see **POWER MIRROR REPLACEMENT**)
2. Detach the clip with a clip remover, and release the hook (A), then pull back the door weatherstrip (B). Remove the screw securing the door outer molding (C).

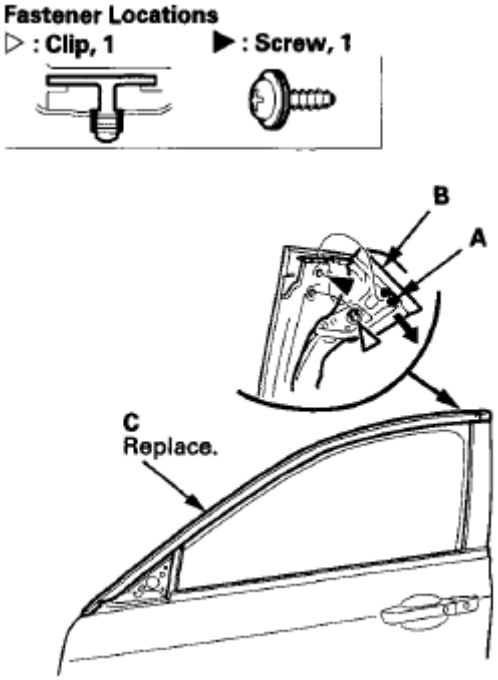

Fig. 51: Identifying Hook, Weatherstrip And Door Outer Molding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out the upper edge of the door outer molding (A) from the edge of the sash, and cut the double-sided adhesive tape (B) with a utility knife, then remove the molding from the sash.

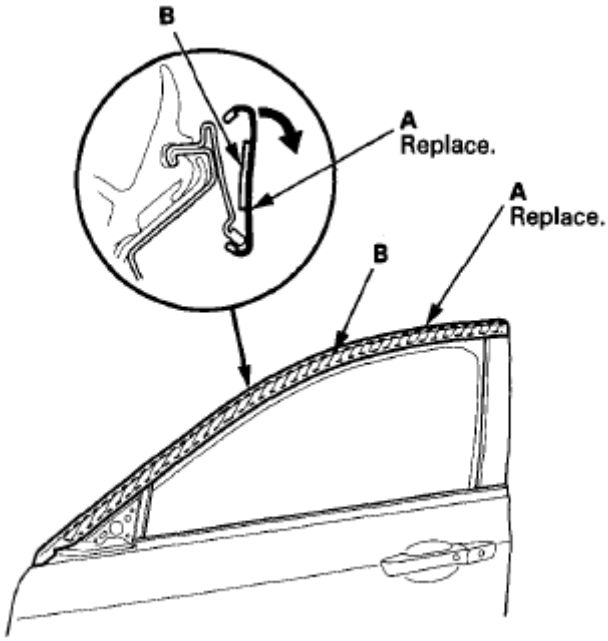

Fig. 52: Identifying Door Outer Molding And Double-Sided Adhesive Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully remove the remaining double-sided adhesive tape from the sash, then clean the sash surface with a shop towel dampened with isopropyl alcohol.
5. Install the door outer molding in the reverse order of removal, and note these items:
   - Push the adhesive areas into place securely.
   - Make sure the upper and lower sides of the molding are catching the edges of the sash properly.
   - Push the clip and the hook into place securely.

FRONT DOOR WEATHERSTRIP REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the door.**
- **Take care not to damage the front upper corner hook and the rear upper corner clip (black) because they are not available separately.**
- **Use a clip remover to detach the clips.**

1. Remove the door checker mounting bolt (A) at the A-pillar.

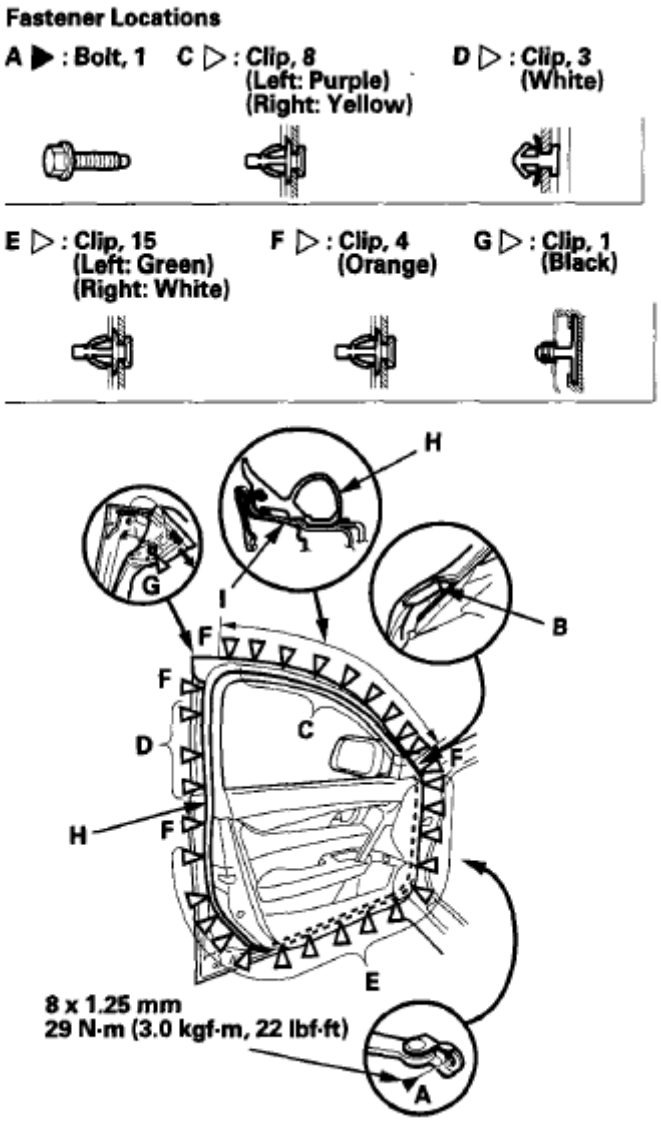

Fig. 53: Identifying Door Checker Mounting Bolt, Hooks And Clips With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Release the hook (B) and detach the clips (C, D, E, F, G). Then release the door weatherstrip (H) from the holder (I) on the door sash, and remove the weatherstrip.
3. Install the weatherstrip in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Push the clips and the hook into place securely.
   - Make sure the door weatherstrip is installed in the holder securely.
   - Apply medium strength liquid thread lock to the door checker mounting bolt before installation.
   - Check for water leaks (see step 10).

REAR DOOR PANEL REMOVAL/INSTALLATION

Special Tools Required

- KTC Trim Tool Set SOJATP2014*
- Trim Pad Remover, Snap-on A 177A or equivalent, commercially available

*Available through the Acura Tool and Equipment Program; call 888-424-6857

NOTE:

- **Take care not to scratch the door or the related parts.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Push on the upper hook (A) with the appropriate trim tool, then pull back the inner handle cap (B) to remove it.

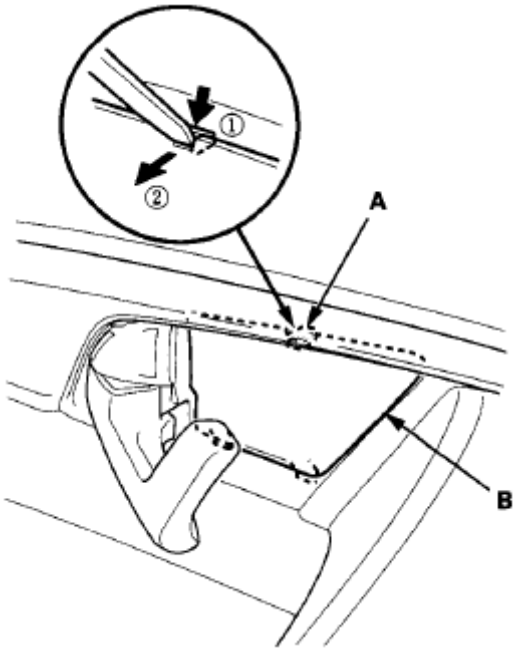

Fig. 54: Pushing On Upper Hook With Appropriate Trim Tool And Pull Back Inner Handle Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the screws securing the inner handle (A).

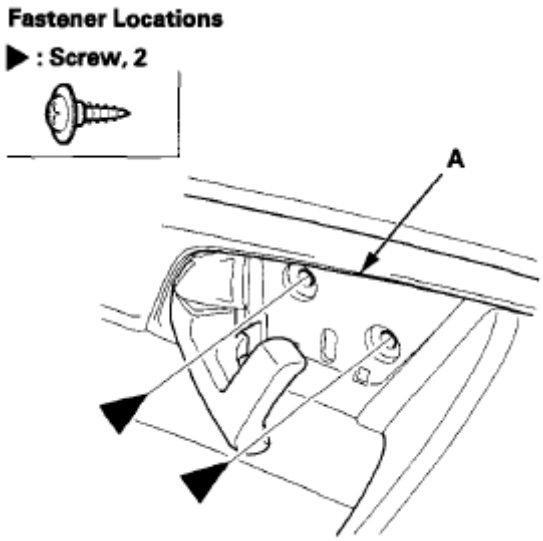

Fig. 55: Removing Screws Securing Inner Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the door grip trim (A).
    1. Insert the appropriate trim tool into the notch (B), and pry out along the edge of the trim to release the hooks (C).
    2. Pull up the trim to release the hook (D).

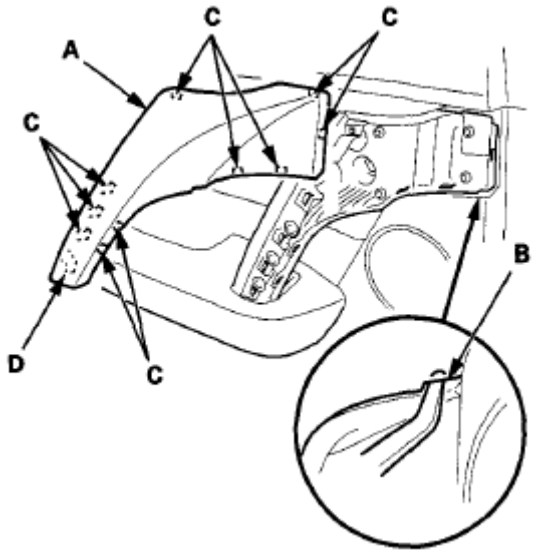

Fig. 56: Identifying Notch, Hooks And Door Grip Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the screw.

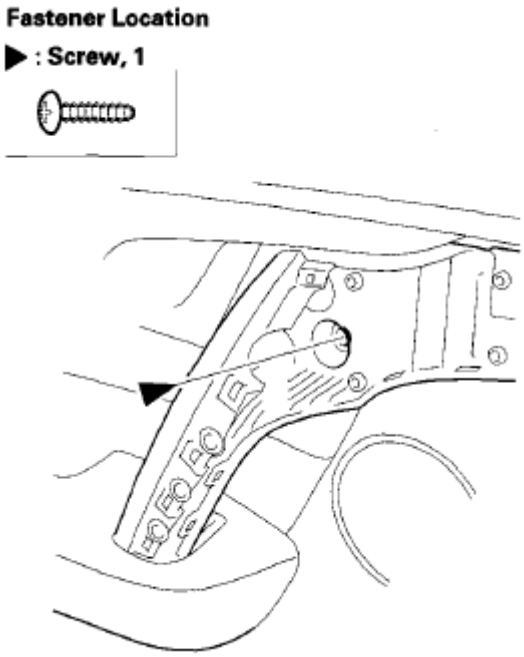

Fig. 57: Identifying Screw
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the hooks (A), then remove the rear pull pocket cap (B), and remove the screw.

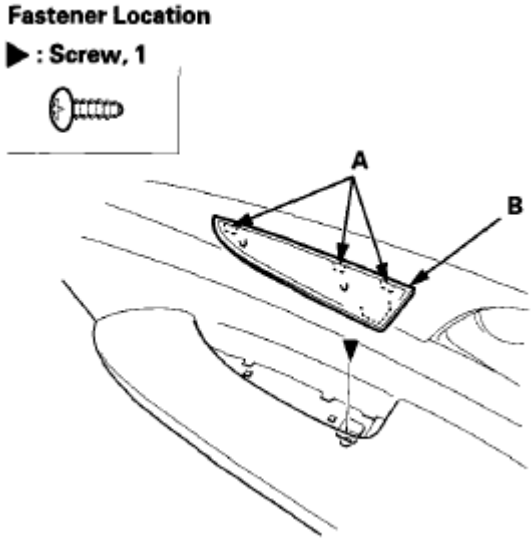

Fig. 58: Releasing Hooks Rear Pull Pocket Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. From under the armrest, pry out at the notch (A) with the appropriate trim tool, and open the pocket cap (B), then remove the screw.

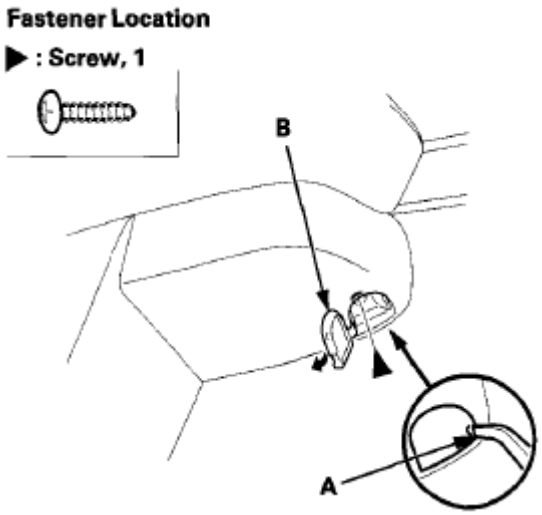

Fig. 59: Prying Out At Notch With Trim Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the door panel (A) with as little bending as possible to avoid creasing or breaking it.
    1. Start at the bottom edge of the door panel, detach the clips (B) with a commercially available trim pad remover.
    2. Detach the remaining clips (C).
    3. Release the door panel from the metal clips (D) attached to the door glass inner weatherstrip.
    4. Starting at the rear, pull out the door panel.

NOTE: The inner handle cable (E) and the latch cable (F) are connected to the inner handle (G). Do not pull the door panel up too far, or these cables will be damaged.

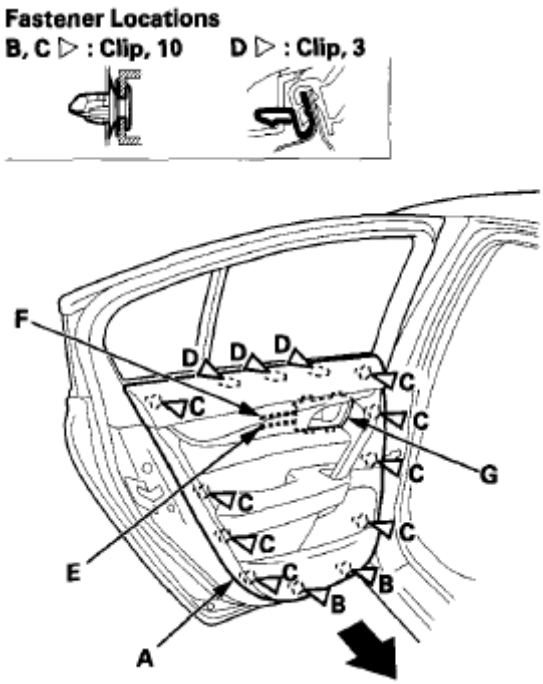

Fig. 60: Identifying Door Panel, Clips, Inner Handle And Latch Cables And Inner Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. While holding the door panel away from the door, detach the clips by pulling out the inner handle (A), then remove the inner handle from the door panel.

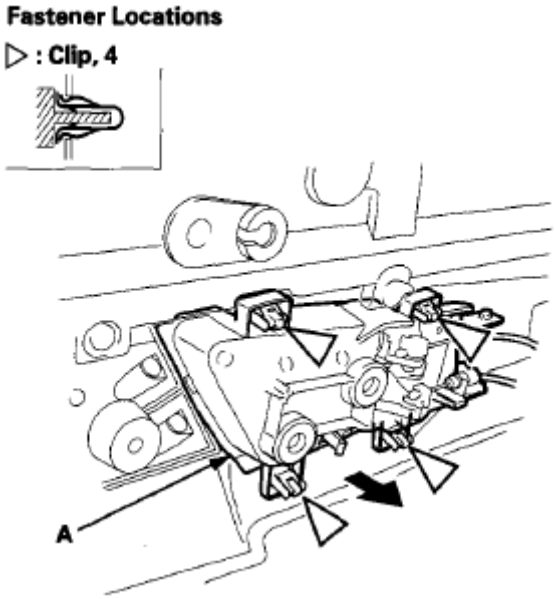

Fig. 61: Removing Inner Handle From Door Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. While holding the door panel (A) away from the door, disconnect the power window switch connector

(B).

NOTE: If you are only removing the door panel, go to step 14. If you are doing further disassembly of the door panel, continue to step 10.

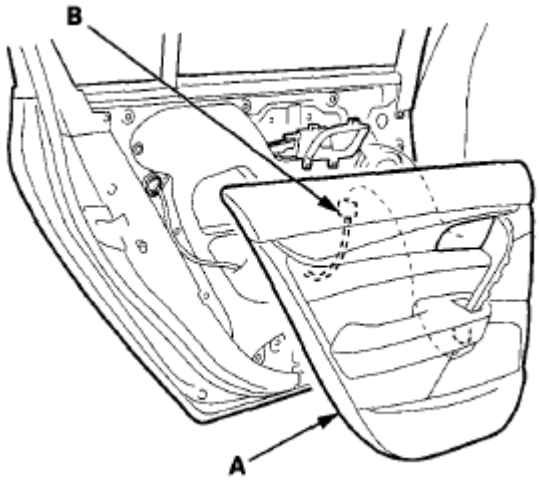

Fig. 62: Identifying Door Panel And Power Window Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Inner Handle Removal

10. Disconnect the inner handle cable (A) and the latch cable (B) from the inner handle (C), then remove the handle.
    1. Release the inner handle cable fasteners (D, E), then disconnect the inner handle cable.
    2. Release the latch cable fastener (F), and remove the latch cable fastener (G) from the inner handle by pinching its tabs together.

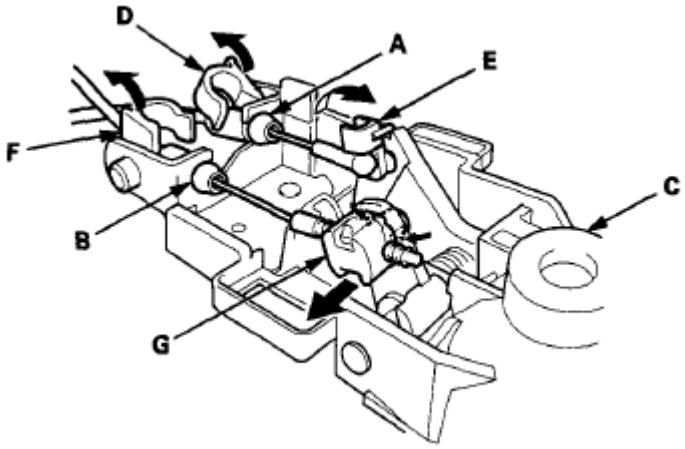

Fig. 63: Disconnecting Inner Handle Cable And Latch Cable From Inner Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Door End Trim Removal

11. Remove the screw (A), and detach the clips (B), then remove the door end trim (C) by pulling back the trim. The clips (D) will stay in the door.

NOTE: Install the clips D on the door end trim before installing the trim on the door.

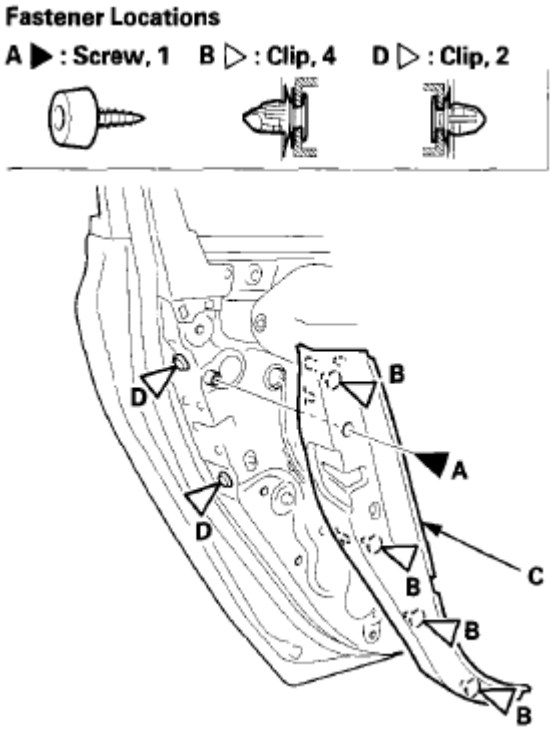

Fig. 64: Identifying Screw, Detach Clips, Door End Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Armrest Assembly/Grip Assembly Removal

12. Remove the armrest/grip assembly (A) from the door panel (B).
    1. Remove the screws from back of the door panel and the front of the grip assembly.
    2. Pull out along the edge of the armrest/grip assembly to release the hooks (C).

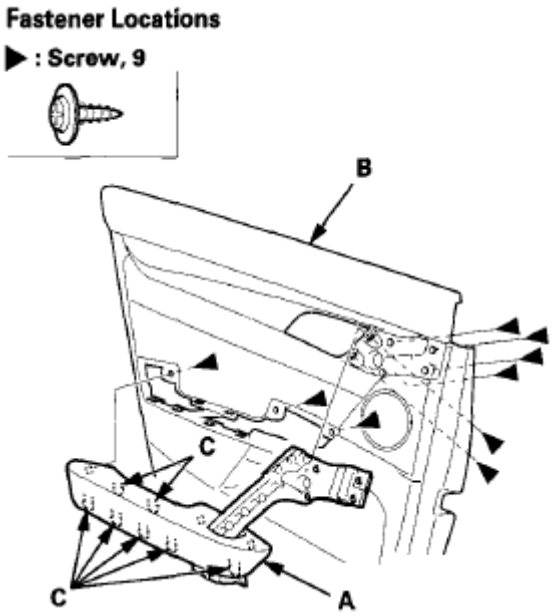

Fig. 65: Identifying Armrest/Grip Assembly, Door Panel And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the screws, then separate the armrest assembly (A) and the grip assembly (B).

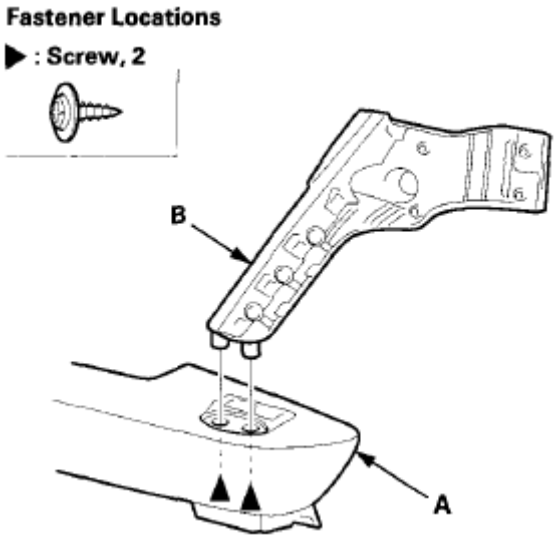

Fig. 66: Identifying Armrest Assembly And Grip Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the door panel in the reverse order of removal, and note these items:
    - If the clips are damaged or stress-whitened, replace them with new ones.
    - Replace any damaged cable fasteners with new ones.
    - If the inner door handle cable end is damaged or stress-whitened, replace it with a new one.
    - The latch cable (A) should be fixed to the cable fastener (B) with the latch in the unlocked position

as shown.

- Make sure the connector is plugged in properly, and the cables are connected securely.
- Make sure the power window and the power door lock operate properly.
- When reinstalling the door panel, make sure the plastic cover on the door is installed properly.
- Push the clips and the hooks into place securely.

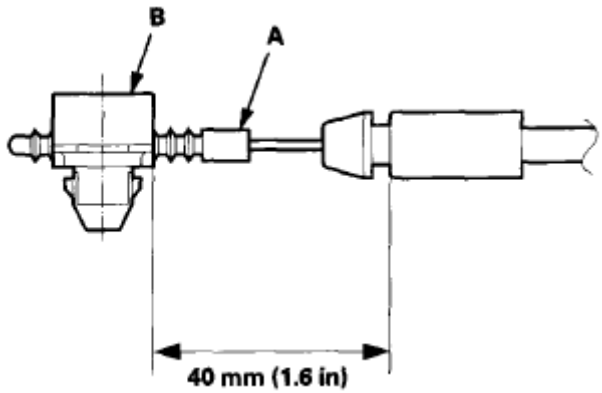

Fig. 67: Identifying Latch Cable And Cable Fastener
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DOOR OUTER HANDLE REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the door.**

1. Remove these items:
   - Door panel (see **REAR DOOR PANEL REMOVAL/INSTALLATION**)
   - Door end trim (see **REAR DOOR PANEL REMOVAL/INSTALLATION**)
2. Raise the glass fully.
3. Remove the plastic cover (A) as needed.
   1. Disconnect the power door lock actuator connector (B), and detach the harness clip (C).
   2. Remove the rear plug cap (D).

NOTE: If the plastic cover is damaged or torn, replace it with a new one.

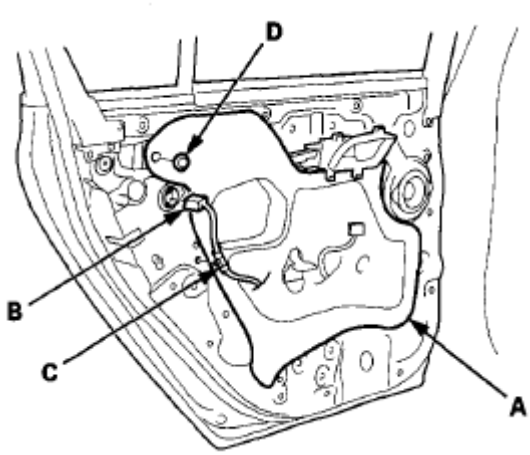

Fig. 68: Identifying Plastic Cover, Door Lock Actuator Connector, Harness Clip And Rear Plug Cap
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the screws (A, B) securing the latch (C), then lower it.

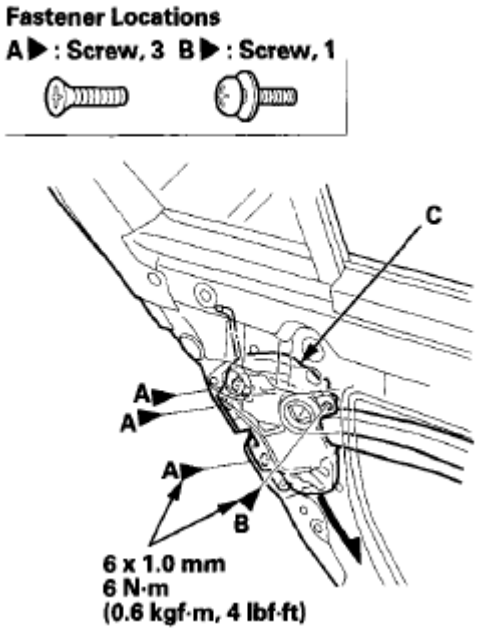

Fig. 69: Identifying Screws And Latch With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. While holding the outer handle cover (A), remove the bolt and release the hooks (B) of the cover, then remove the cover.

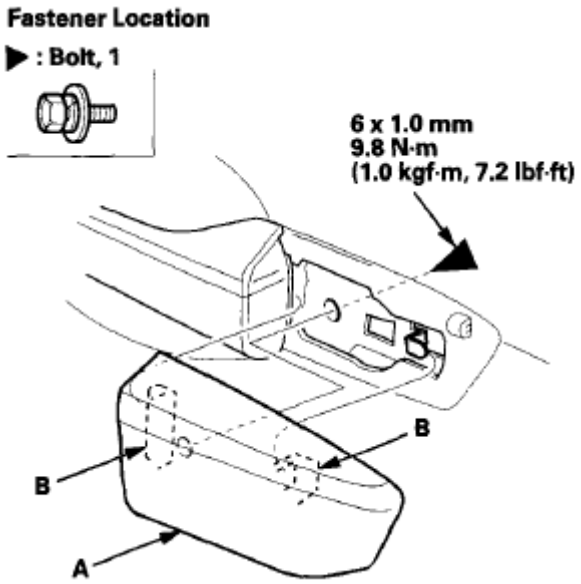

Fig. 70: Identifying Outer Handle Cover And Hooks With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Release the hooks (A), then remove the outer handle holder (B) from the outer handle base (C).

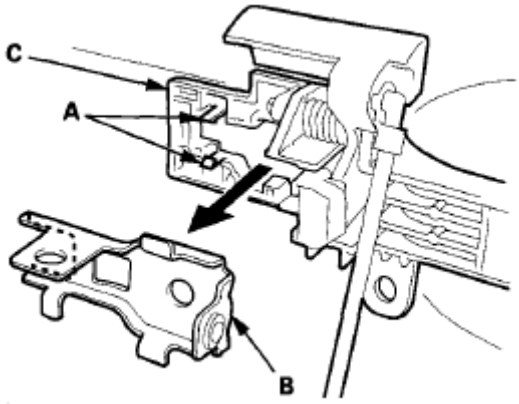

Fig. 71: Removing Outer Handle Holder From Outer Handle Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Pull back the outer handle (A), and out as shown to remove it from the door.

NOTE: If you are only removing the door panel, go to step 12. If you are doing further disassembly of the door panel, continue to step 8.

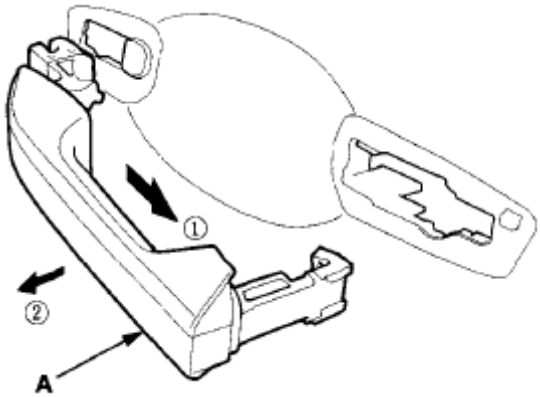

Fig. 72: Pulling Back Outer Handle And Out As Shown To Remove It From Door
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Outer Handle Base Removal

8. Release the hooks (A, B), then remove the outer handle front seal (C) and the outer handle rear seal (D).

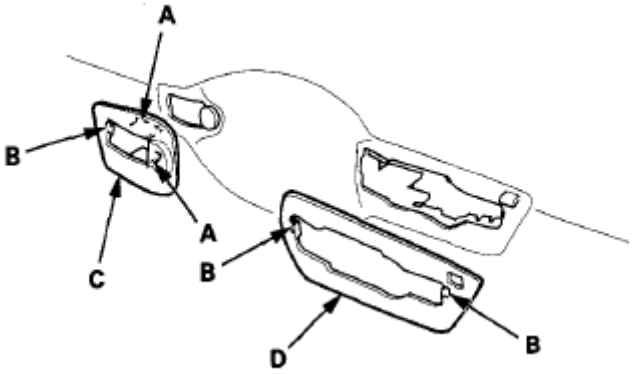

Fig. 73: Identifying Hooks, Outer Handle Front And Rear Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the hole seal (A).

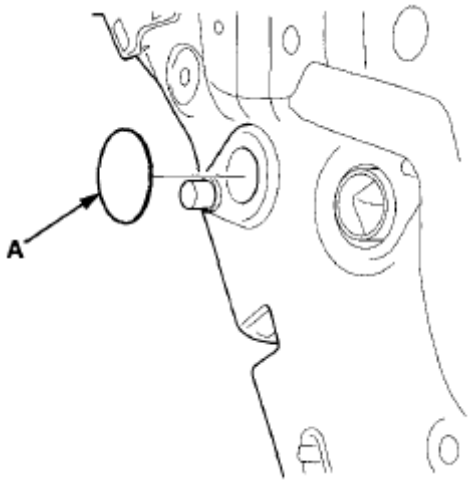

Fig. 74: Identifying Hole Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the outer handle base (A).
    1. Release the rod fastener (B).
    2. Disconnect the outer handle rod (C) with a clip remover.
    3. Loosen the nut.
    4. Release the hook (D), and slide the base forward to release the special bolt (E) from the door.

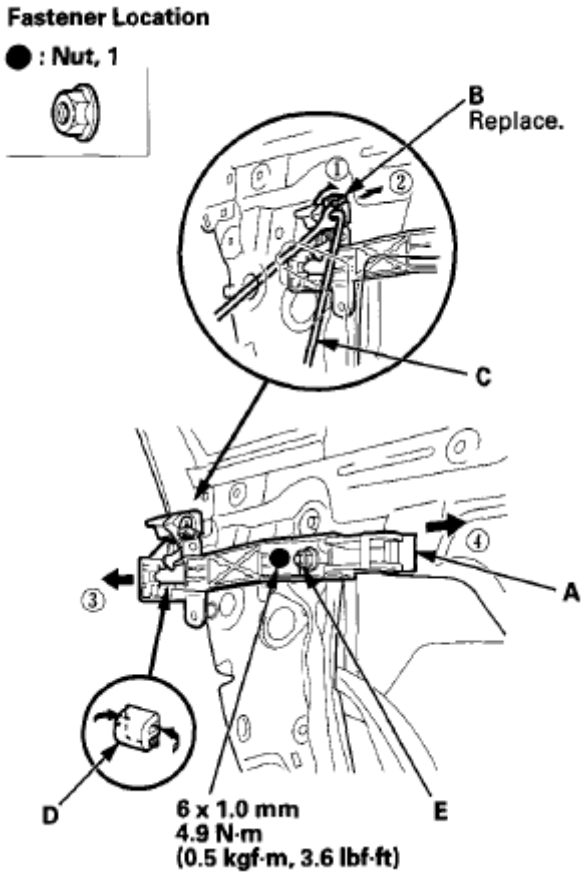

Fig. 75: Sliding Base Forward To Release Special Bolt From Door With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the rod fastener (A) from the outer handle base (B), then replace it with a new one.

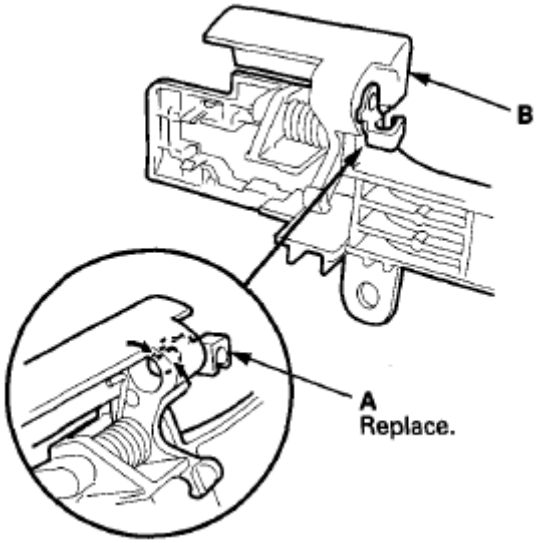

Fig. 76: Identifying Rod Fastener And Outer Handle Base

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the handle in the reverse order of removal, and note these items:
    - Reinstall the outer handle holder before installing the outer handle cover.
    - Make sure each connector is plugged in properly, and the rod is connected securely.
    - Make sure the door locks operate properly.
    - Make sure the door handle works properly.
    - When reinstalling the door panel, make sure the plastic cover on the door is installed properly.
    - Push the clip and the hooks into place securely.

REAR DOOR LATCH REPLACEMENT

NOTE: Put on gloves to protect your hands.

1. Remove these items:
    - Door panel (see **REAR DOOR PANEL REMOVAL/INSTALLATION**)
    - Inner handle (see **REAR DOOR PANEL REMOVAL/INSTALLATION**)
    - Door end trim (see **REAR DOOR PANEL REMOVAL/INSTALLATION**)
2. Raise the glass fully.
3. Remove the plastic cover as needed (see step 3).
4. Remove the door pad (see **REAR DOOR PAD REPLACEMENT**).
5. Release the rod fastener, and disconnect the outer handle rod from the outer handle base (see step 10).
6. Remove the bolts (A, B), then remove the collar (C) from the rear lower channel (D).

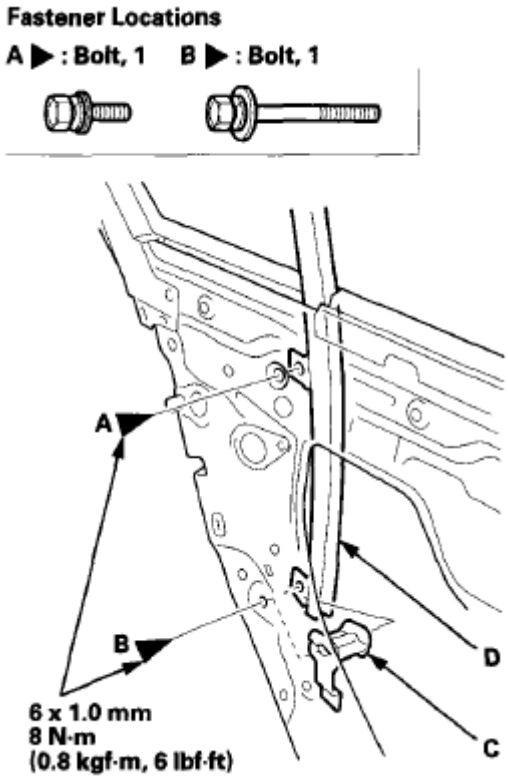

Fig. 77: Identifying Collar, Rear Lower Channel And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the screws (A, B) securing the latch (C), then remove the latch through the hole in the door.

NOTE: Take care not to bend the outer handle rod (D), the latch cable (E), or the inner handle cable (F).

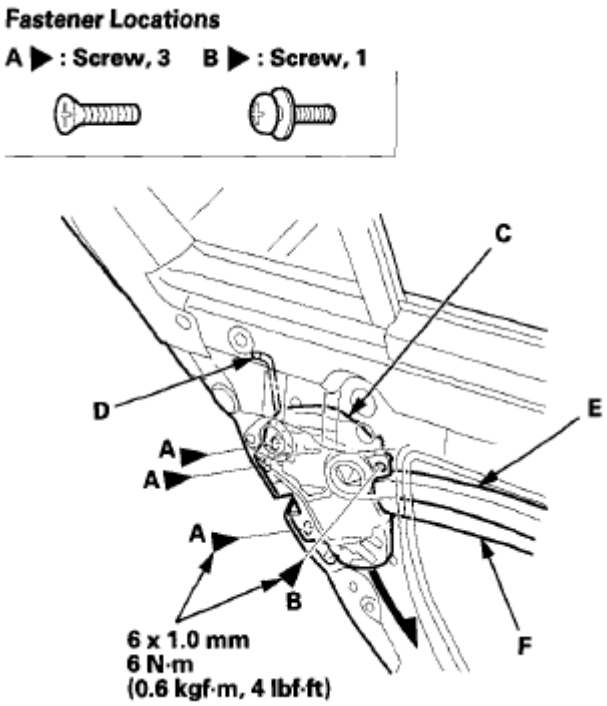

Fig. 78: Identifying Screws, Latch, Outer Handle Rod, Latch Cable And Inner Handle Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the foam seals (A, B) from the latch protector (C) and the latch (D).

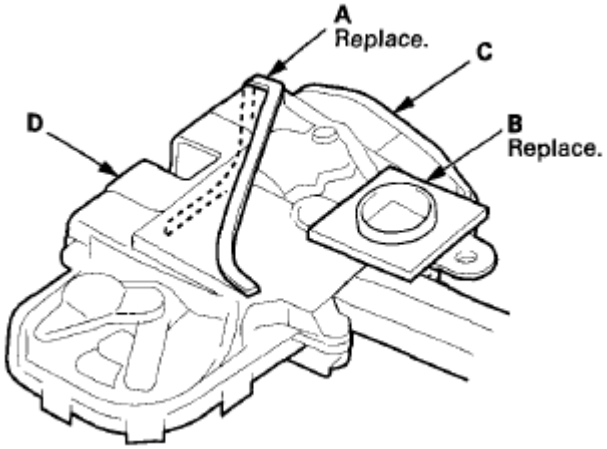

Fig. 79: Identifying Foam Seals, Latch Protector And Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the screw, then remove the latch protector (A) by releasing the hook (B).

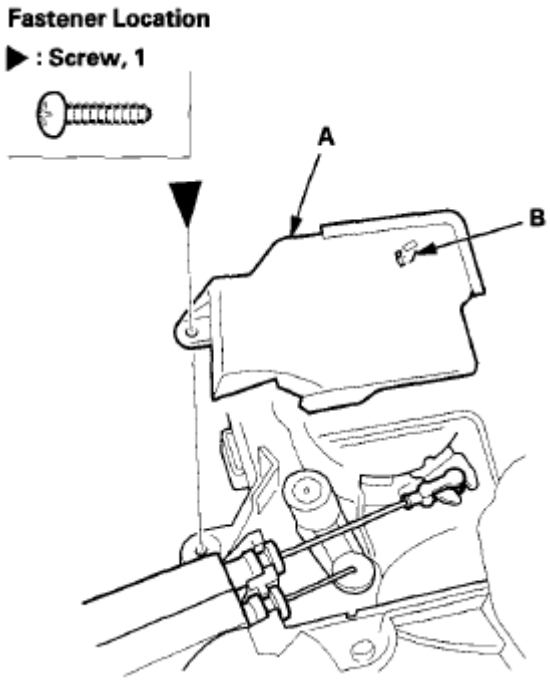

Fig. 80: Removing Latch Protector By Releasing Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Disconnect the latch cable (A) and the inner handle cable (B) from the latch (C).

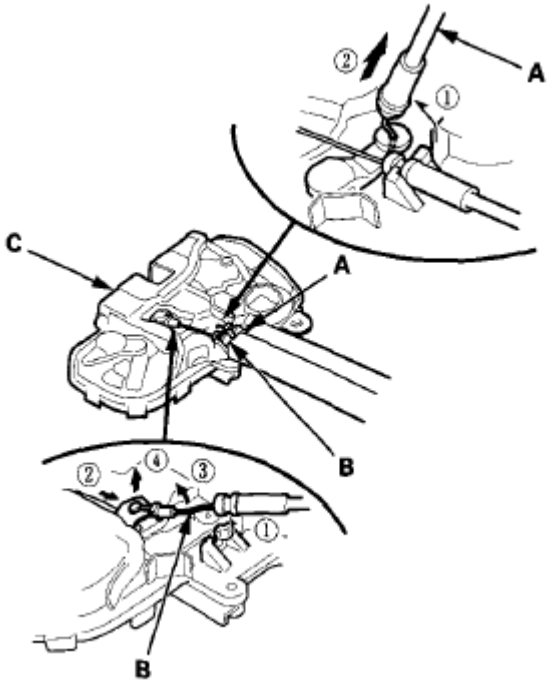

Fig. 81: Identifying Latch Cable, Inner Handle Cable And Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the latch in the reverse order of removal, and note these items:
    - Before reinstalling the latch protector, clean the latch and the latch protector surfaces with isopropyl alcohol where the new foam seals will be attached.
    - After reinstalling the latch protector to the latch, attach the new foam seals to the protector and the latch.
    - Make sure each connector is plugged in properly, and the rod is connected securely.
    - Make sure the door locks and opens properly.
    - When reinstalling the door panel, make sure the plastic cover on the door is installed properly.
    - Push the hook into place securely.

REAR DOOR GLASS AND REGULATOR REPLACEMENT

NOTE: Put on gloves to protect your hands.

1. Remove the door panel (see **REAR DOOR PANEL REMOVAL/INSTALLATION**).
2. Raise the glass fully.
3. Remove the screws, then remove the door panel bracket (A).

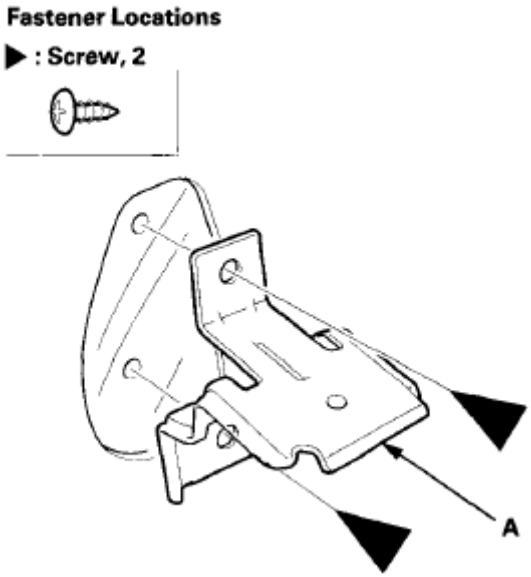

Fig. 82: Identifying Door Panel Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the plastic cover (A).
    1. Disconnect the power door lock actuator connector (B), and detach the harness clip (C).
    2. Remove the plug caps (D).
    3. Pass the wire harness (E) through the slits (F) in the plastic cover (G), then remove the cover.

NOTE: If the plastic cover is damaged or torn, replace it with a new one.

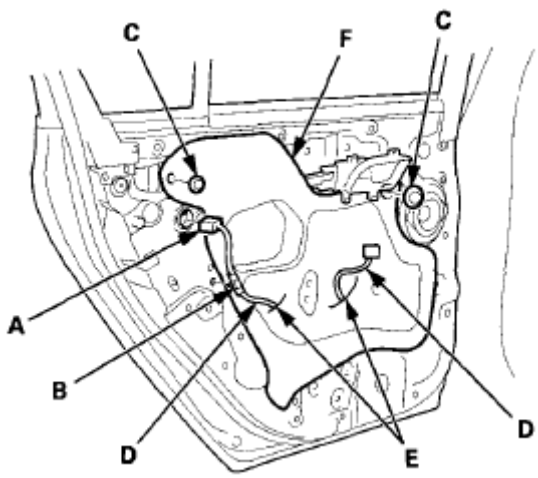

Fig. 83: Identifying Plastic Cover, Power Door Lock Actuator Connector, Harness Clip, Plug Caps And Slits
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Detach the harness clip (A). Remove the bolts, and release the hook (B), then remove the door panel bracket (C).

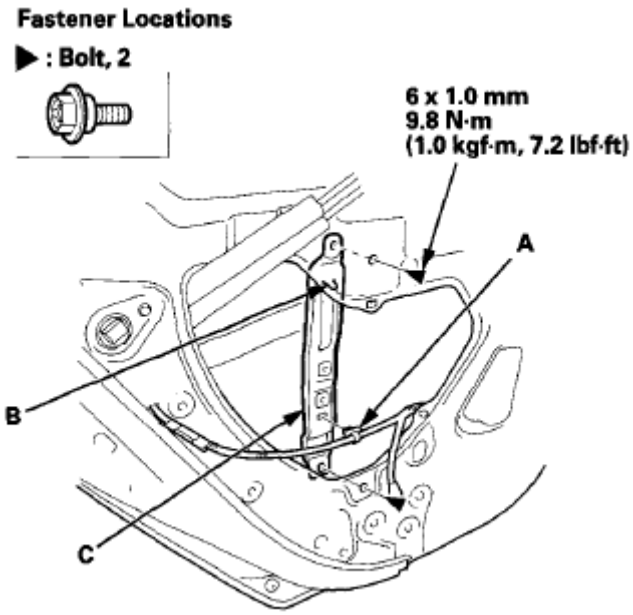

Fig. 84: Identifying Harness Clip, Hook And Door Panel Bracket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the door pad (see **REAR DOOR PAD REPLACEMENT**).
7. Lower the glass (A) until you can see the bolts, then remove them. Release the glass from the holder (B), then remove it from the regulator (C), and carefully lower the glass.

NOTE: Take care not to drop the glass inside the door.

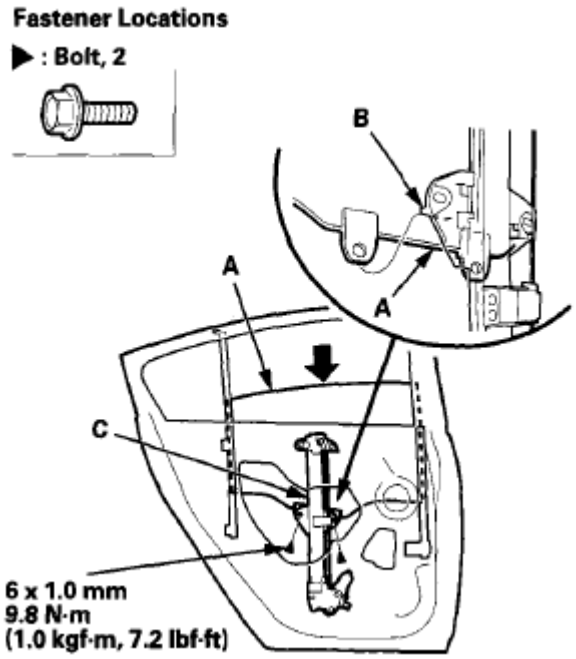

Fig. 85: Releasing Glass From Holder With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the bolts (A, B) and the collar (C) from the rear lower channel (D). Pull away the door weatherstrip (E) as needed, and remove the screw (F).

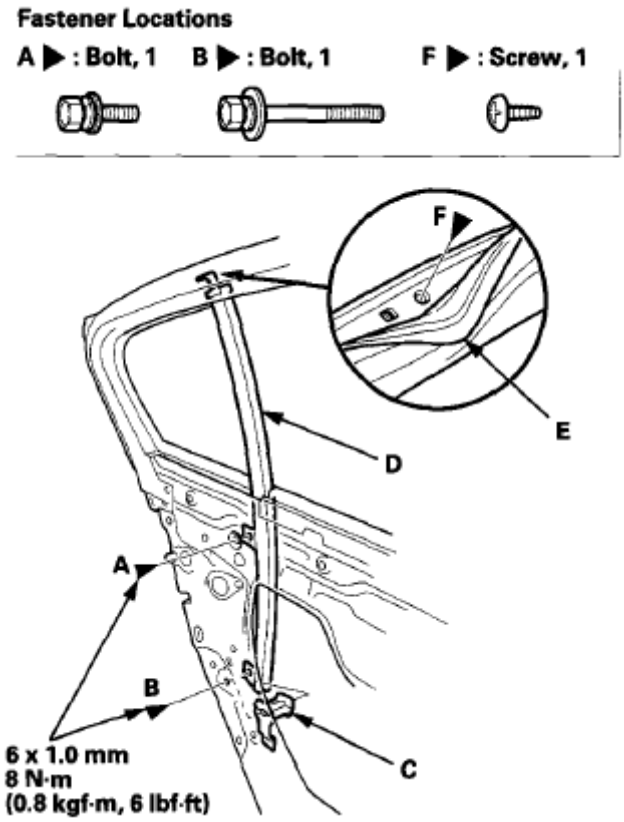

Fig. 86: Identifying Bolts, Collar, Rear Lower Channel, Door Weatherstrip And Screw With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Pull away the glass run channel (A) as needed. Pull the rear lower channel (B) forward from the quarter glass seal (C), then release the upper hook (D) from the door. Remove the rear lower channel from the door glass (E), then pull up the channel to remove it.

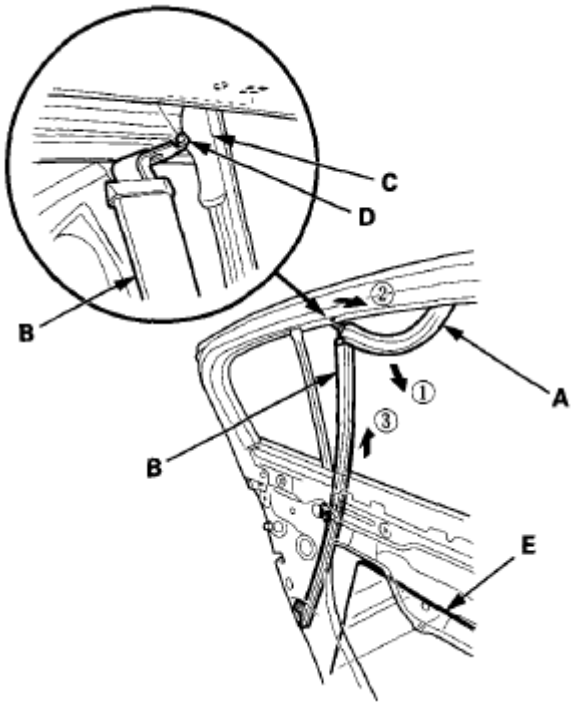

Fig. 87: Pulling Away Glass Run Channel And Rear Lower Channel Forward From Quarter Glass Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the rear lower channel (A) from the glass run channel (B).

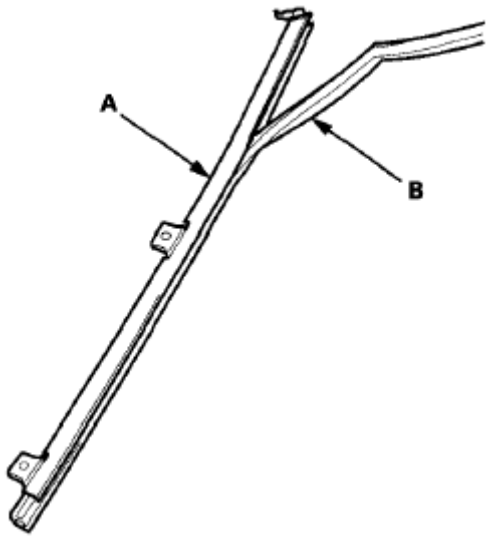

Fig. 88: Identifying Rear Lower Channel And Glass Run Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Carefully remove the glass (A) out through the window slot.

NOTE: Take care not to drop the glass inside the door.

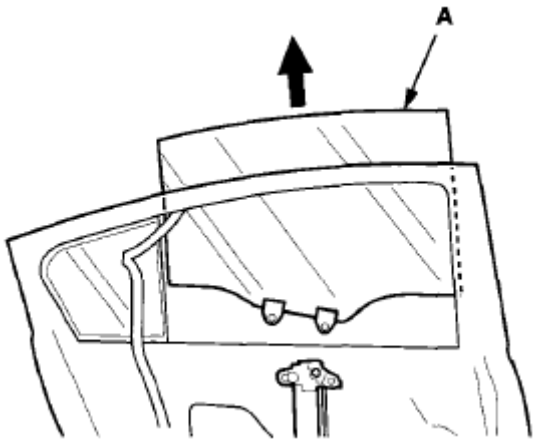

Fig. 89: Removing Glass Out Through Window Slot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Pull back the rear pillar inner trim (A) to release the hooks (B), then remove the trim. Remove the screws securing the quarter glass (C).

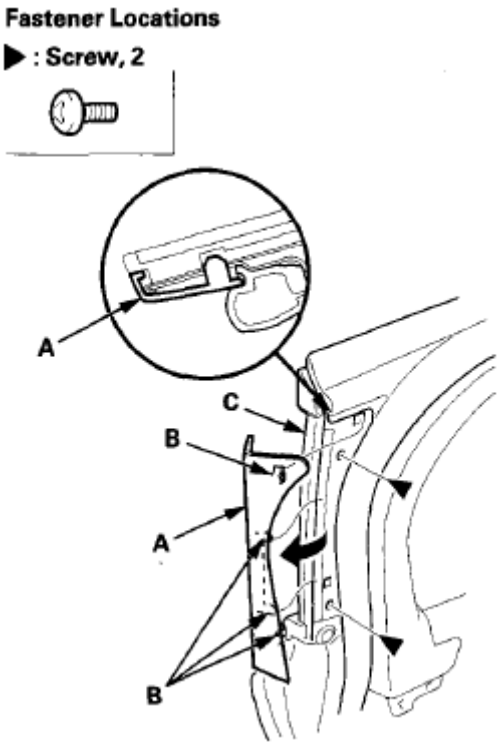

Fig. 90: Removing Screws Securing Quarter Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Starting at the rear, pull up the door inner weatherstrip (A), then remove it.

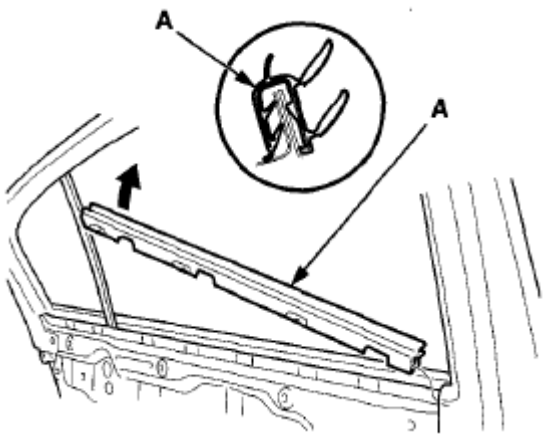

Fig. 91: Pulling Up Door Inner Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the quarter glass (A).

NOTE: Take care not to damage the door glass outer weatherstrip (B).

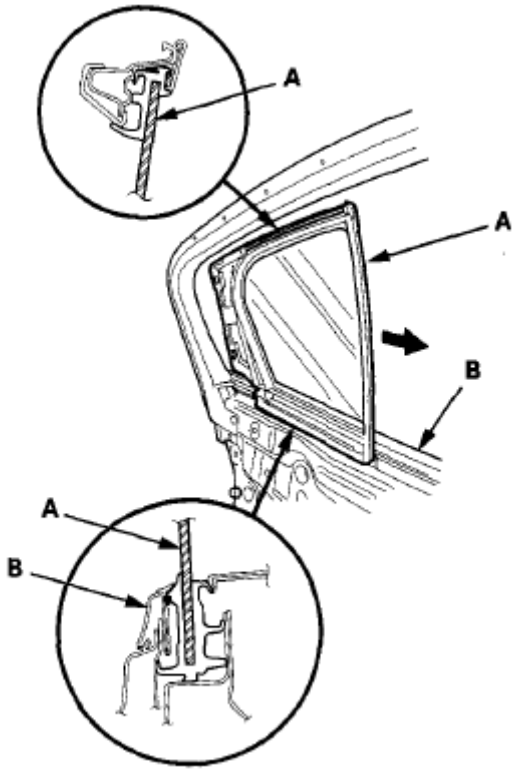

Fig. 92: Removing Quarter Glass
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Disconnect the connector (A) from the regulator (B).

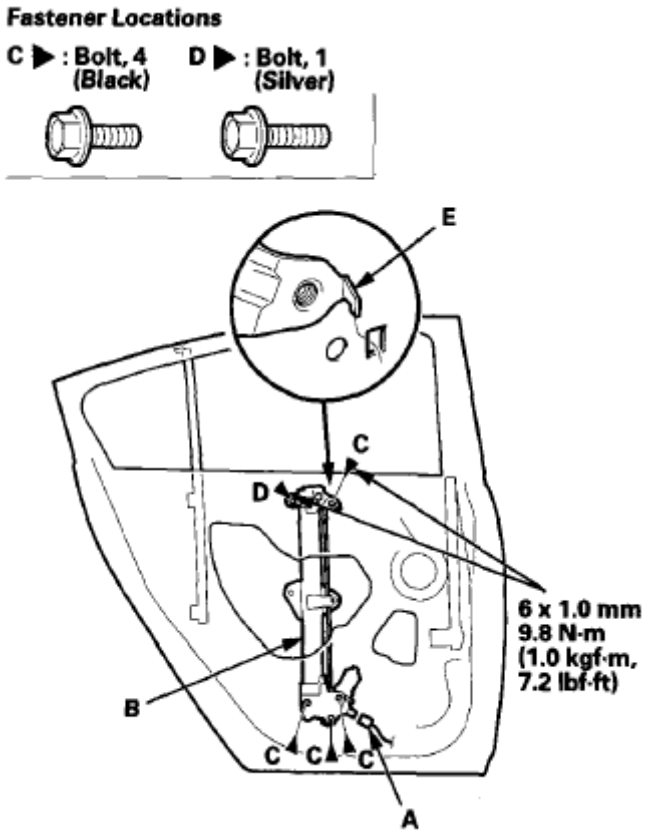

Fig. 93: Identifying Connector, Regulator, Bolts And Hook With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Remove the bolts (C), and loosen the bolt (D). Release the hook (E), then remove the regulator through the hole in the door.
17. Apply multipurpose grease to all the sliding surfaces of the regulator (A) where shown.

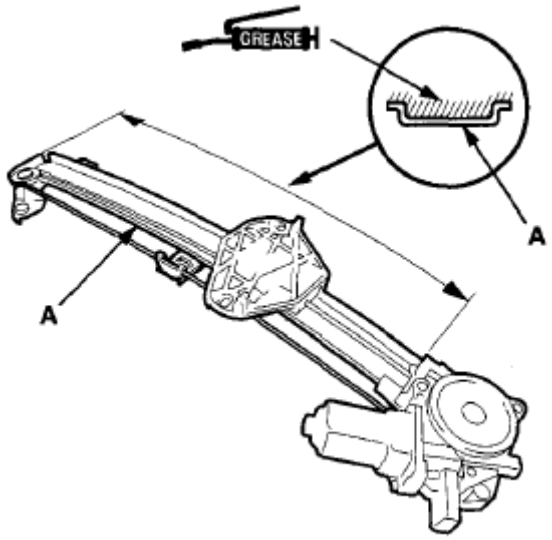

Fig. 94: Identifying Regulator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Install the glass and the regulator in the reverse order of removal, and note these items:
    - If the clip is damaged or stress-whitened, replace it with a new one.
    - Roll the glass up and down to make sure it moves freely without binding.
    - Make sure that there is no clearance between the glass and the glass run channel when the glass is closed.
    - Make sure each connector is plugged in properly.
    - Adjust the position of the glass as necessary (see **DOOR GLASS ADJUSTMENT**).
    - Make sure the power door locks and the power windows operate properly.
    - Make sure the plastic cover on the door is installed properly and sealed around its outside perimeter to seal out water.
    - Push the hooks into place securely.
    - Check for water leaks (see step 10).
    - Test-drive the vehicle, and check for wind noise and rattles.

REAR DOOR PAD REPLACEMENT

NOTE:
- **Put on gloves to protect your hands.**
- **Take care not to scratch the door.**

1. Remove these items:
    - Door panel (see **REAR DOOR PANEL REMOVAL/INSTALLATION**)
    - Plastic cover, as needed (see step 3)
2. Detach the clips with a clip remover, then remove the door pad (A) from the door.

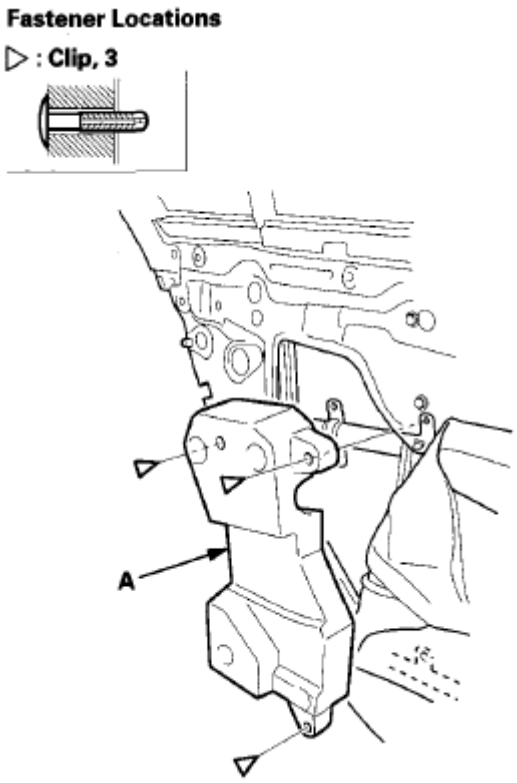

Fig. 95: Identifying Door Pad From Door
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the pad in the reverse order of removal, and note these items:
   - Make sure the plastic cover on the door is installed properly.
   - Push the clips into place securely.

REAR DOOR SASH INNER TRIM REPLACEMENT

NOTE: Take care not to scratch the door.

1. Remove these items:
   - Door panel (see **REAR DOOR PANEL REMOVAL/INSTALLATION**)
   - Door end trim (see **REAR DOOR PANEL REMOVAL/INSTALLATION**)
2. Remove the rear door sash inner trim (A).
   1. Detach the clips fastening the trim.
   2. Pull back along the outside edge of the trim to release the hook strip (6) from the door glass opening flange at the B-pillar area of the door sash.
   3. Pull back along the outside edge of the trim to release the hook strips (C) from the door glass opening flange at the roof area and the quarter glass area of the door sash.
   4. If necessary, release the clip (D) from the door panel.

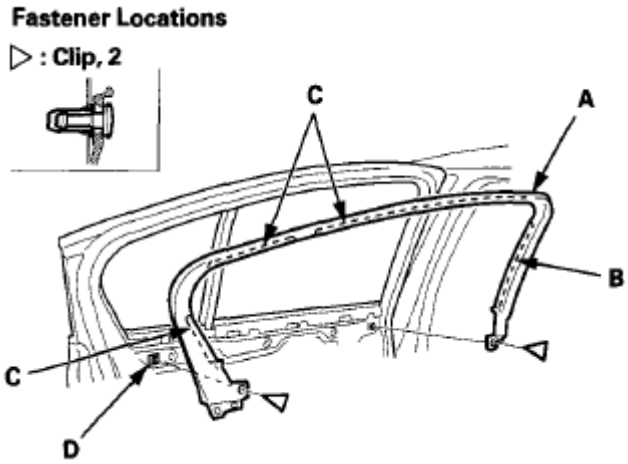

Fig. 96: Identifying Rear Door Sash Inner Trim, Hook Strip And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the trim in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Push the clips and the hook strips into place securely.

REAR DOOR SASH OUTER TRIM REPLACEMENT

NOTE: Take care not to scratch the door.

1. Remove the door outer molding (see **REAR DOOR OUTER MOLDING REPLACEMENT**).
2. Pull up the door sash outer trim (A) to release the hooks (B) from the door, and release the trim from between the door glass outer weatherstrip (C) and the door, then remove the trim.

NOTE: Take care not to damage the door glass outer weatherstrip.

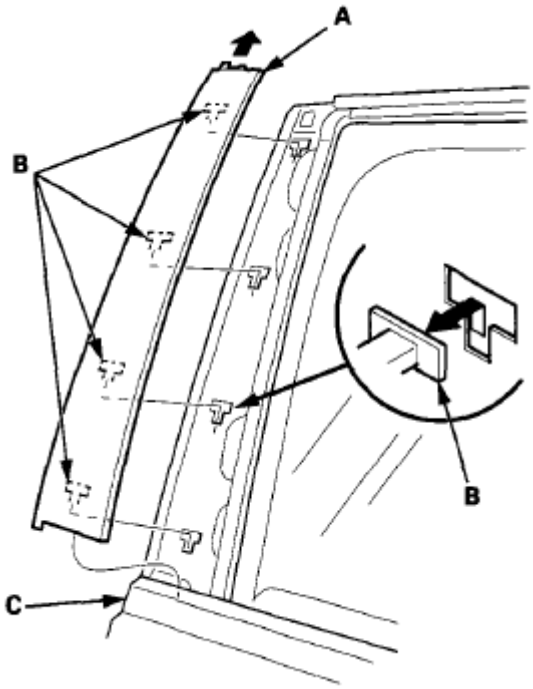

Fig. 97: Identifying Outer Trim, Hooks And Outer Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the trim in the reverse order of removal.

REAR DOOR GLASS OUTER WEATHERSTRIP REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the door.**

1. Remove these items:
   - Door panel bracket (see step 3)
   - Door pad (see **REAR DOOR PAD REPLACEMENT**)
   - Rear pillar inner trim (see step 12)
2. Raise the glass fully.
3. Remove the screws (A, B).

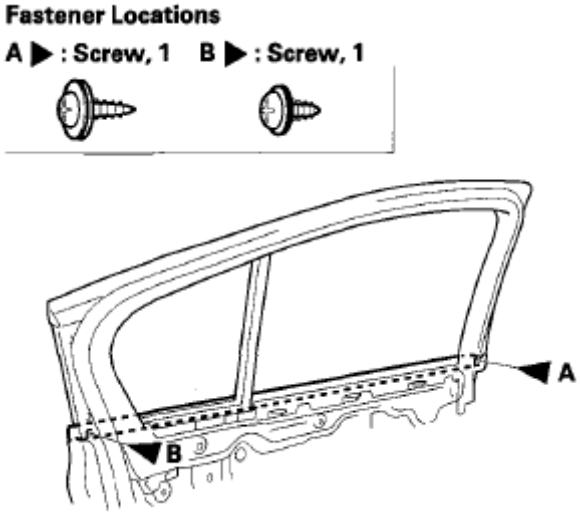

Fig. 98: Identifying Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. From the inside of the door, slide the clips (A) on the door glass outer weatherstrip (B) to release the hooks (C) from the flanges (D) on the door.

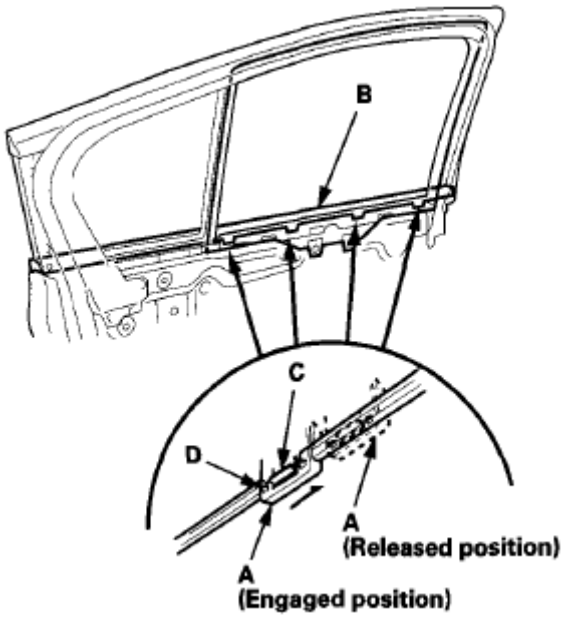

Fig. 99: Identifying Clips, Outer Weatherstrip, Hooks And Flanges
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Pull up the door glass outer weatherstrip (A), then remove the weatherstrip.

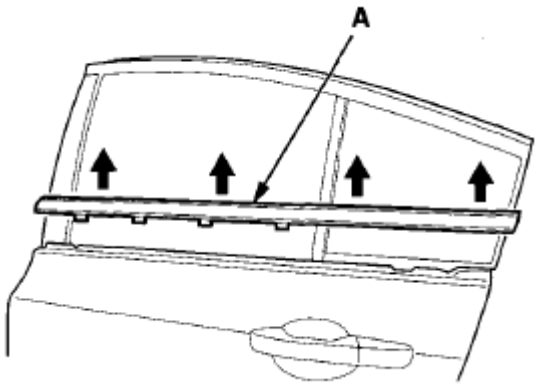

Fig. 100: Identifying Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If the clips are damaged or stress-whitened, replace them with new ones.
7. Before installing the door glass outer weatherstrip, slide the clips to the released position as in step 4.
8. Install the door glass outer weatherstrip, and slide the clips securely on to the flanges.
9. Reinstall all remaining removed parts, and note these items:
   - Make sure the plastic cover on the door is installed properly and sealed around its outside perimeter to seal out water.
   - Check for water leaks (see step 10).

REAR DOOR OUTER MOLDING REPLACEMENT

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

NOTE:

- **If you remove the door outer molding, replace it with a new one because it will bend during removal.**
- **Put on gloves to protect your hands.**
- **Take care not to scratch the door.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove the rear pillar inner trim (see step 12).
2. Detach the clips (A, B) with a clip remover, and release the hook (C), then pull back the door weatherstrip (D). Remove the screws (E, F) securing the door outer molding (G).

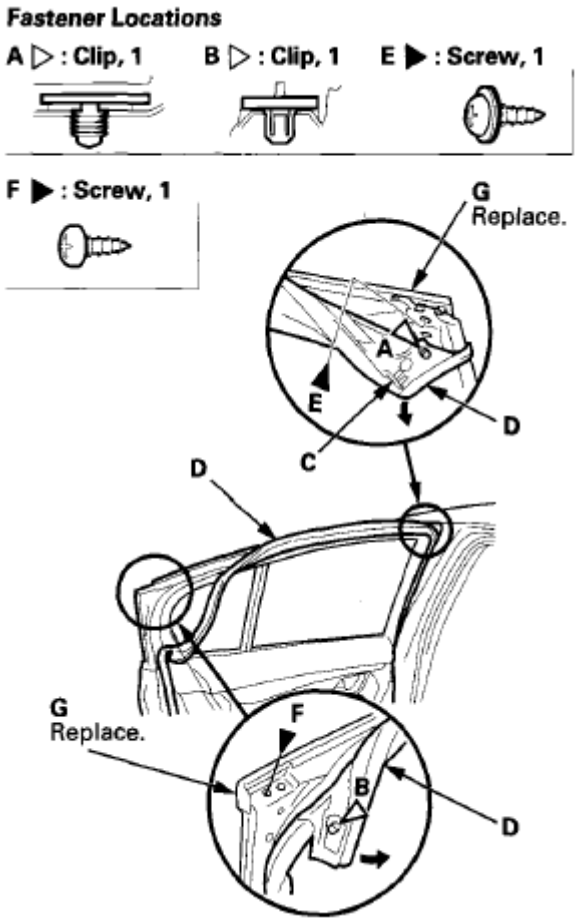

Fig. 101: Identifying Clips, Hook, Weatherstrip, Screws And Door Outer Molding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull out the upper edge of the door outer molding (A) from the edge of the sash, and cut the double-sided adhesive tape (B) with a utility knife, then remove the molding from the sash.

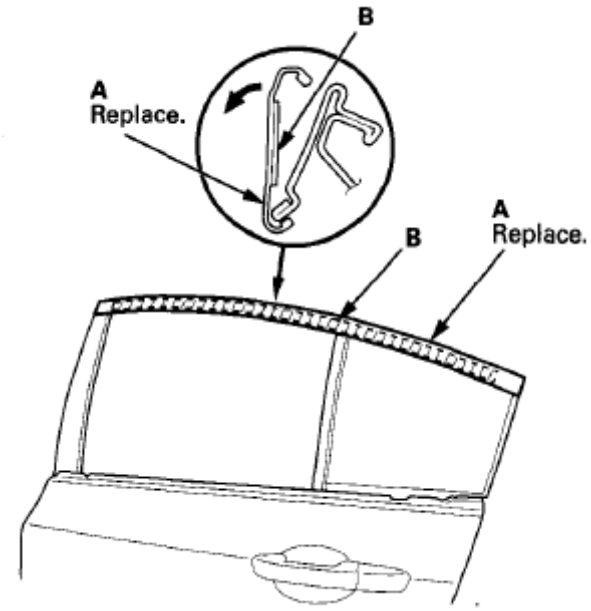

Fig. 102: Identifying Door Outer Molding And Adhesive Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Carefully remove the remaining double-sided adhesive tape from the sash, then clean the sash surface with a shop towel dampened with isopropyl alcohol.
5. Install the door outer molding in the reverse order of removal, and note these items:
   - Push the adhesive areas into place securely.
   - Make sure the upper and lower sides of the molding are catching the edges of the sash properly.
   - Push the clips into place securely.

REAR DOOR WEATHERSTRIP REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the door.**
- **Take care not to damage the front upper corner clip (black) and the rear upper corner clips (black) because they are not available separately.**
- **Use a clip remover to detach the clips.**

1. Remove the rear pillar inner trim (see step 12).
2. Remove the door checker mounting bolt (A) at the B-pillar.

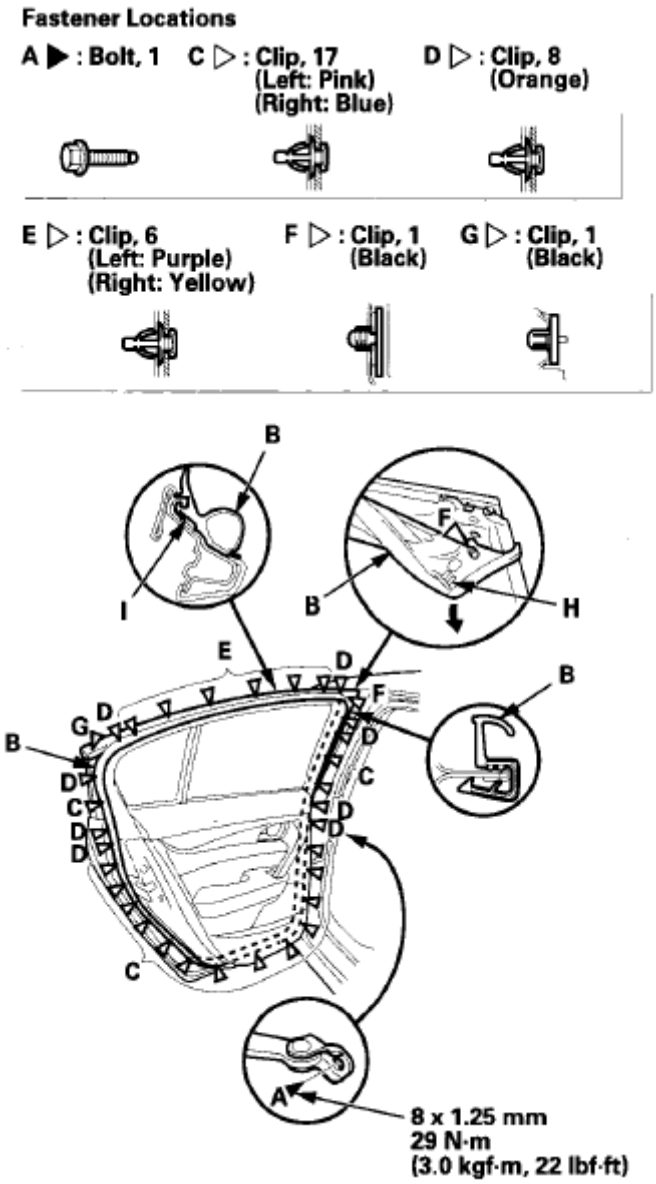

Fig. 103: Identifying Rear Door Weatherstrip & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the door weatherstrip (B).
    1. Detach the clips (C, D, E, F, G).
    2. Release the hook (H).
    3. Release the weatherstrip from the holder (I) on the door sash.
4. Install the weatherstrip in the reverse order of removal, and note these items:
    - If the clips are damaged or stress-whitened, replace them with new ones.
    - Push the clips and the hook into place securely.
    - Make sure the door weatherstrip is installed in the holder securely.
    - Apply medium strength liquid thread lock to the door checker mounting bolt before installation.

- Check for water leaks (see step 10).

DOOR GLASS ADJUSTMENT

NOTE: Check the door weatherstrip and the glass run channel for damage or deterioration, and replace them if necessary.

1. Place the vehicle on a firm, level surface when adjusting the door glass.
2. Remove these items:
   - Door panel:
     - Front door (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**)
     - Rear door (see **REAR DOOR PANEL REMOVAL/INSTALLATION**)
   - Door panel bracket:
     - Front door (see step 3)
     - Rear door (see step 3)
   - Plastic cover:
     - Front door (see step 4)
     - Rear door (see step 4)
3. Carefully lower the glass (A) until you can see the glass mounting bolts (B), then loosen them.

Front door

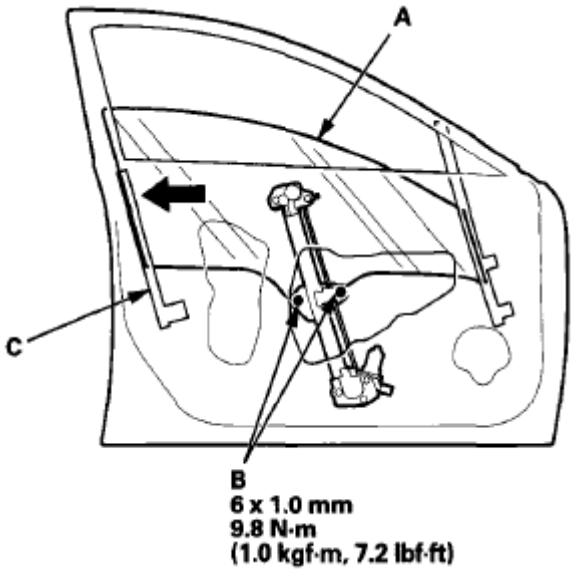

Fig. 104: Lowering Glass Until You Can See Glass Mounting Bolts (Front Door) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear door

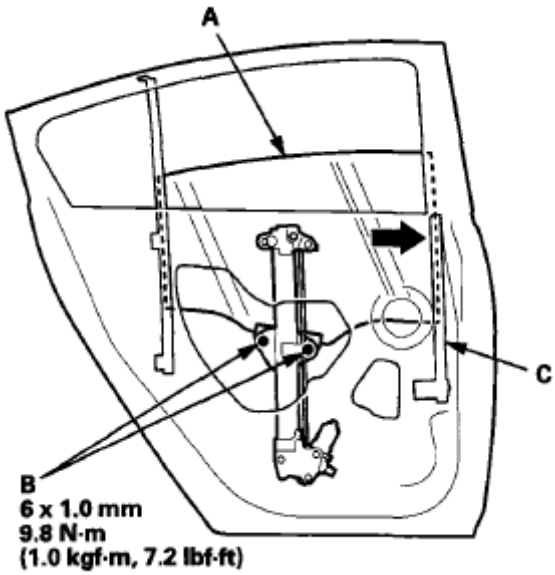

Fig. 105: Lowering Glass Until You Can See Glass Mounting Bolts (Rear Door) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Push the glass against the glass run channel (C), then tighten the glass mounting bolts.
5. Check that the glass moves smoothly.
6. Raise the glass fully, and check for gaps. Also make sure that the glass (A) contacts the glass run channel (B) evenly.

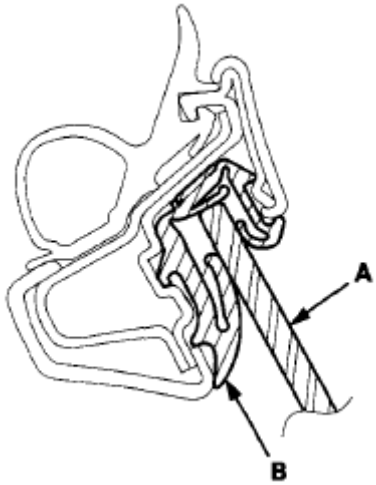

Fig. 106: Identifying Glass And Glass Run Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Attach the plastic cover making sure it is sealed around its outside perimeter to seal out water.
8. Reinstall the door panel bracket:
    - Front door (see step 3)

- Rear door (see step 3)

9. Reinstall the door panel:
   - Front door (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**)
   - Rear door (see **REAR DOOR PANEL REMOVAL/INSTALLATION**)
10. Check for water leaks. Run water over the roof and on the sealing area as shown, and note these items:
    - Use a 12 mm (1/2 in) diameter hose (A).
    - Adjust the rate of water flow as shown (B).
    - Do not use a nozzle.
    - Hold the hose about 300 mm (12 in) away from the door (C).

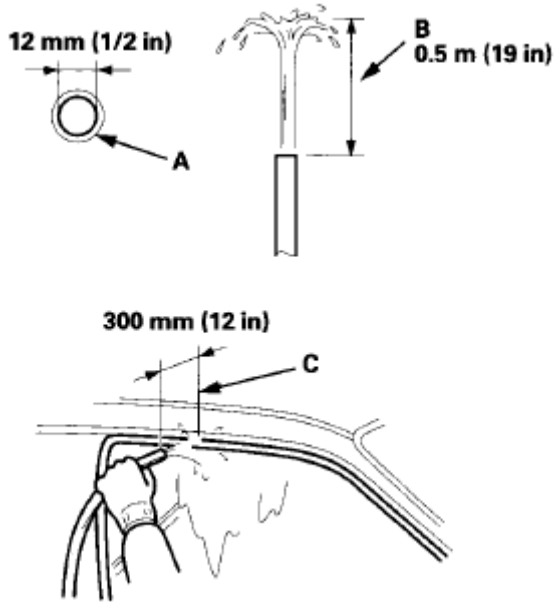

Fig. 107: Measuring Dimensions Of Water Hose And Door
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DOOR POSITION ADJUSTMENT

NOTE: Check for a flush fit with the body, then check for equal gaps between the front, rear, and bottom door edges and the body. Check that the door and body edges are parallel.

1. Place the vehicle on a firm, level surface when adjusting the doors.
2. Adjust at the hinges (A):
   - Pad a floor jack (B) with shop towels (C), then use the jack to support the door while adjusting it.
   - On the front door: Remove the front inner fender (see **FRONT INNER FENDER REPLACEMENT**) and the front fender fairing (see **FRONT BRAKE DUCT REPLACEMENT**). Loosen the hinge mounting bolts (D) slightly, and move the door backward or forward, up or down as necessary to equalize the gaps.

- On the rear door: Loosen the hinge mounting bolts (E) slightly, and move the door backward or forward, up or down as necessary to equalize the gaps.

Front door

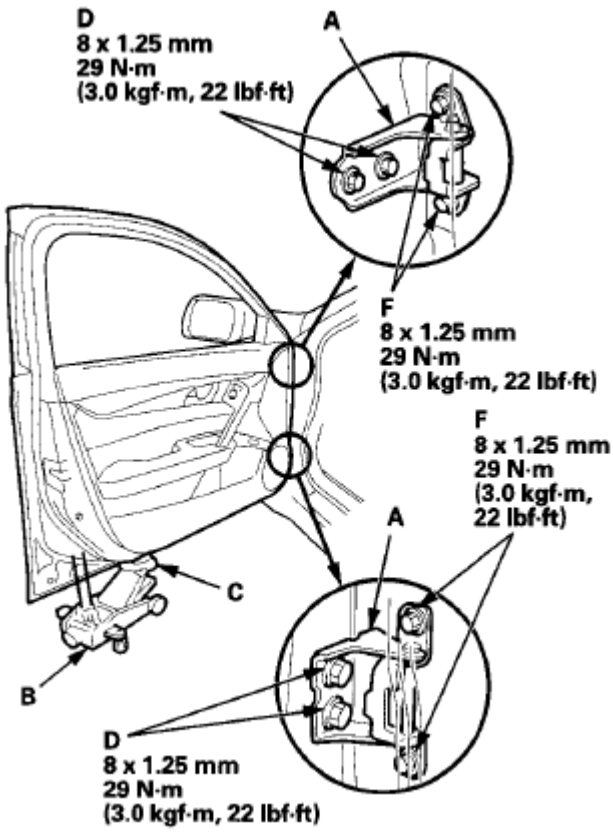

Fig. 108: Identifying Hinges, Floor Jack, Shop Towels, Mounting Bolts And Hinge Mounting Bolts (Front Door) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear door

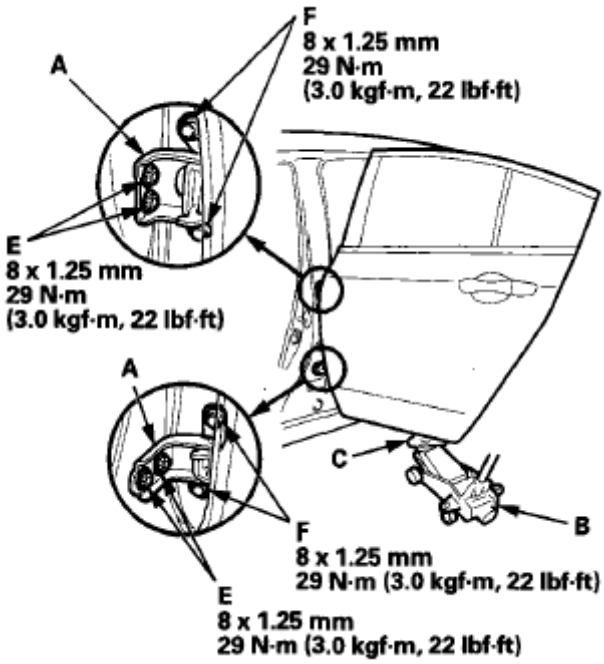

Fig. 109: Identifying Hinges, Floor Jack, Shop Towels, Mounting Bolts And Hinge Mounting Bolts (Rear Door) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If necessary, replace the door mounting bolts with the adjusting bolts made specifically for door adjustment, then adjust at the door: Loosen the door mounting bolts (F) slightly, and move the door up or down as necessary to equalize the gaps, and move it in or out until it's flush with the body.

NOTE: Refer to the Parts Catalog if you need use an adjusting bolt.

4. Check that the door and body edges are parallel. If necessary, adjust the door cushions (A) to make the rear of the doors flush with the body.

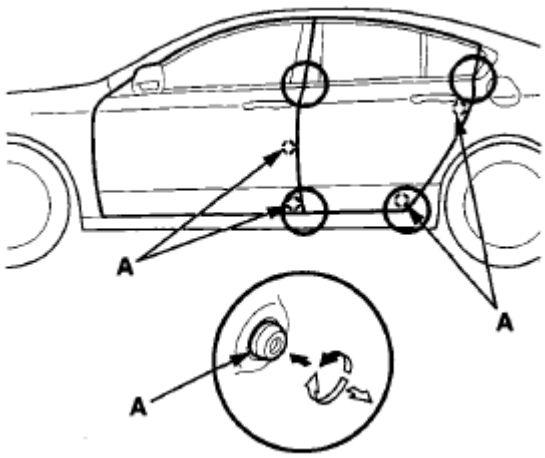

Fig. 110: Adjusting Door Cushions To Make Rear Of Doors Flush With Body

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Apply touch-up paint to the hinge mounting bolts and around the hinges.
6. Check for water leaks (see step 10).

DOOR STRIKER ADJUSTMENT

Make sure the door latches securely without slamming it. If necessary, adjust the striker (A): The striker can be adjusted slightly up or down, and in or out.

1. Release the hooks (B), then remove the striker trim (C).

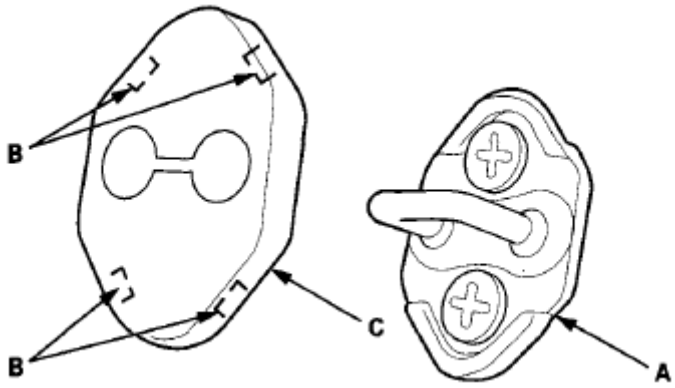

Fig. 111: Identifying Hooks, Striker Trim And Striker
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosen but do not remove the screws (A).

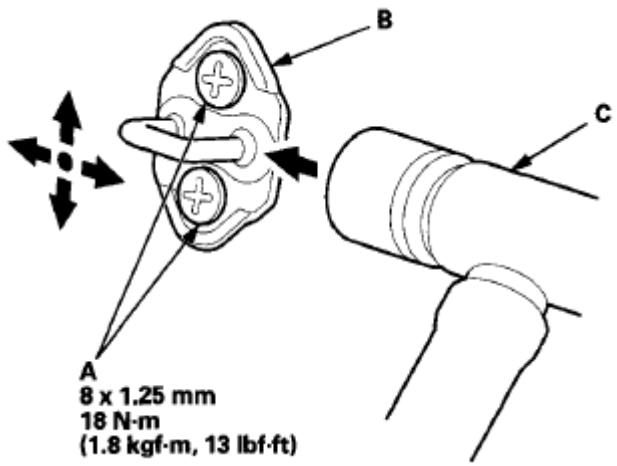

Fig. 112: Identifying Screws, Striker And Plastic Hammer With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Wrap the striker with a shop towel, then adjust the striker (B) by tapping it with a plastic hammer (C). Do

not hit the striker too hard.

4. Lightly tighten the screws.
5. Hold out the outer handle, and push the door against the body to be sure the striker allows a flush fit. If the door latches properly, tighten the screws to the specified torque, and recheck.
6. Install the striker trim.

2012 ACCESSORIES & EQUIPMENT

Exterior Trim - TL

ENGINE COMPARTMENT COVER REPLACEMENT

NOTE: Take care not to scratch the front grille or the body.

1. Remove the left engine compartment cover (A).
    1. Detach the clips and release the hook (B).
    2. Slide the cover to release the sleeve (C) from the front bulkhead cover (D).

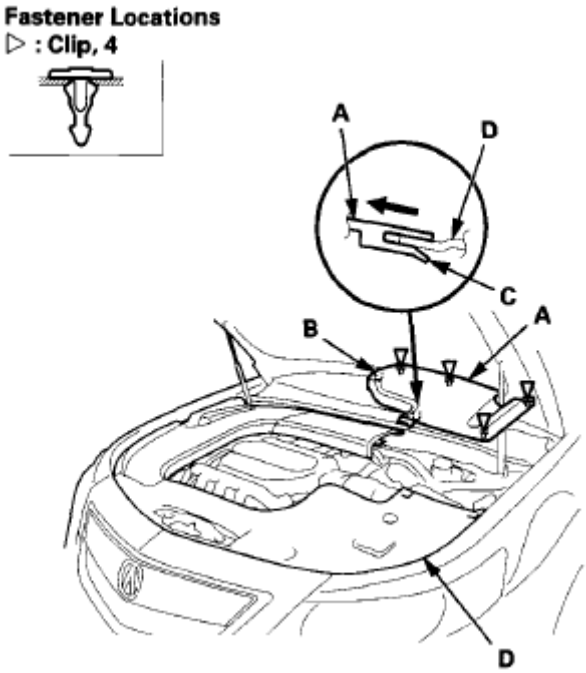

Fig. 1: Identifying Hook, Left Engine Compartment Cover, Sleeve And Bulkhead Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the right engine compartment cover (A).
    1. Detach the clips and release the hook (B).
    2. Slide the cover to release the sleeve (C) from the front bulkhead cover (D).

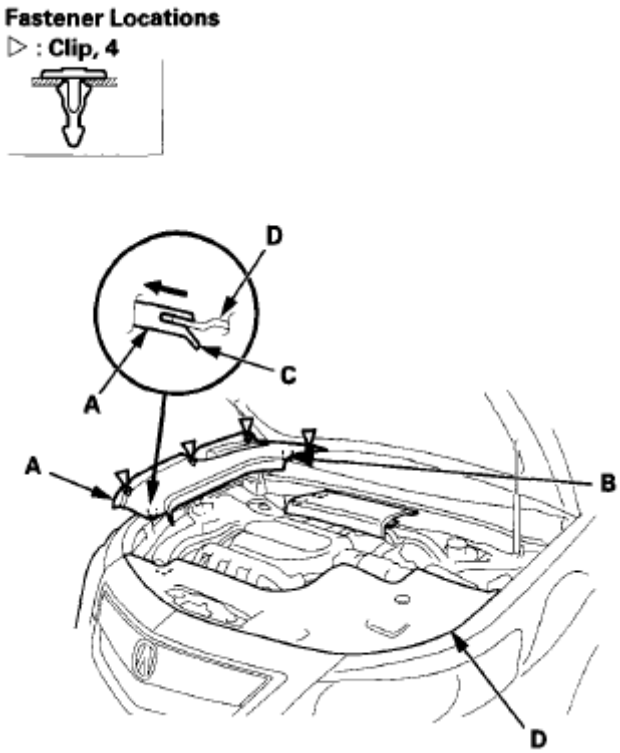

Fig. 2: Identifying Right Engine Compartment Cover, Hook, Sleeve And Bulkhead Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the clips, and release the projection (A), then remove the front bulkhead cover (B).

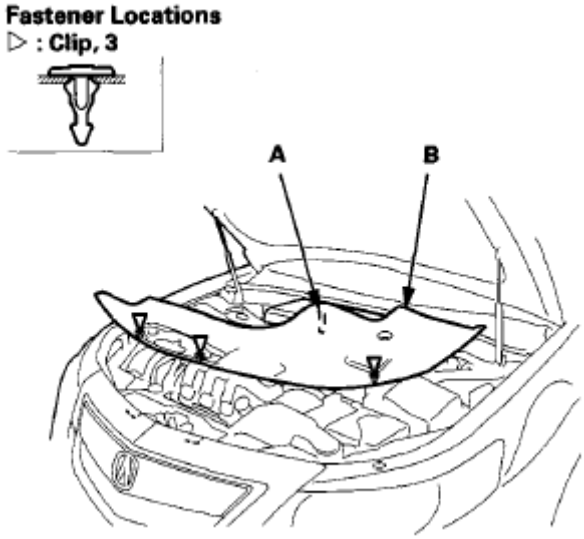

Fig. 3: Identifying Clips, Projection And Front Bulkhead Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Detach the clip, and release the hook (A), then remove the strut brace cover (B).

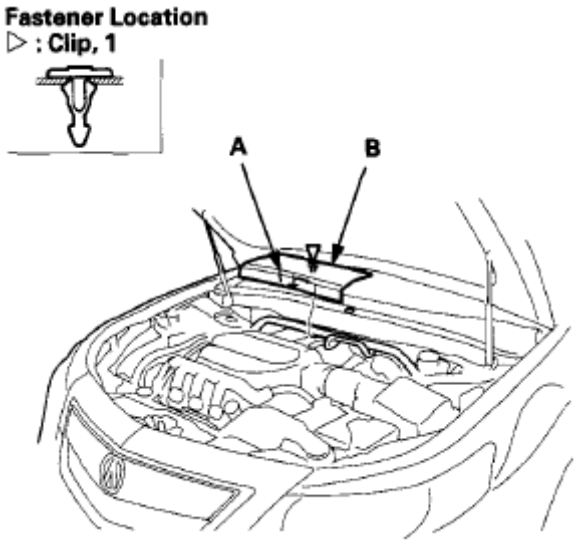

Fig. 4: Identifying Hook And Strut Brace Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the covers in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Push the clips and the hooks into place securely.

FRONT GRILLE REPLACEMENT

GRILLE REPLACEMENT

NOTE:
- **Take care not to scratch the front bumper.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Remove the front bumper (see **FRONT BUMPER REMOVAL/INSTALLATION**).
2. Detach the clips, then remove the front grille (A) from the front bumper (B).

NOTE: To release the clips, pry up on the center pin at the notch (C).

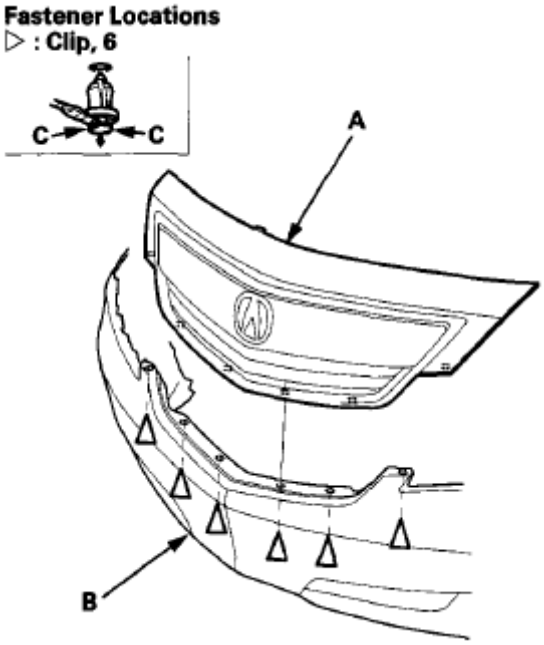

Fig. 5: Identifying Front Grille, Front Bumper And Notch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the grille in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Push the clips into place securely.

MOLDING REPLACEMENT

NOTE: Take care not to scratch the front grille.

1. Remove the grille.
2. From behind the grille, remove the TORX screws, then remove the front grille emblem base (A) from the front grille base (B).

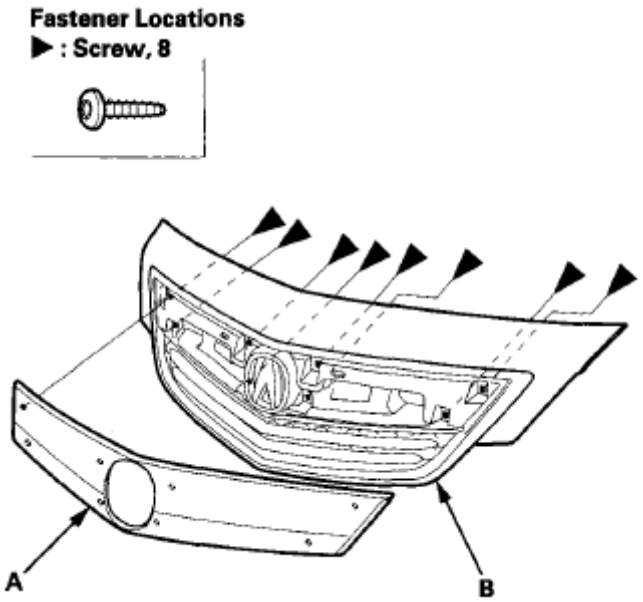

Fig. 6: Identifying Front Grille Emblem Base And Front Grille Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the TORX screws, then remove the front grille molding (A) and the front grill trim (B) from the front grille base (C).

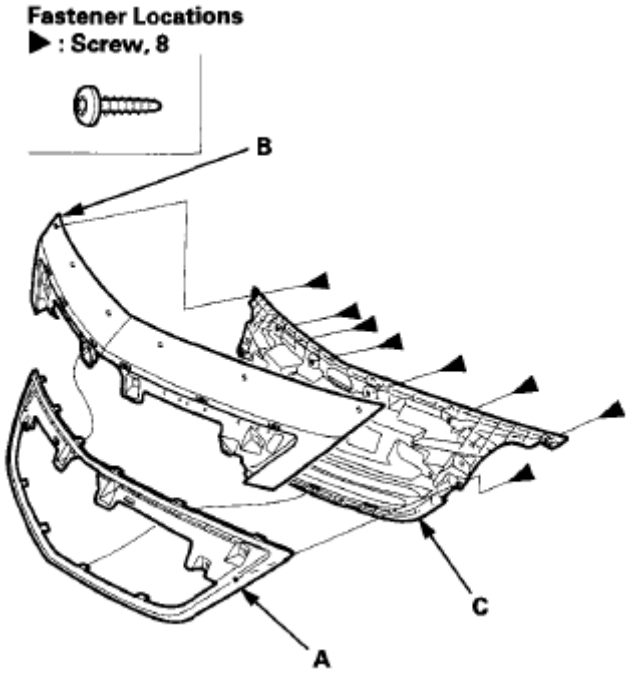

Fig. 7: Identifying Front Grille Molding, Front Grill Trim And Front Grille Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If necessary, release the hooks (A, B) (nine places), then remove the front grill mesh upper bar (C) and

front grill mesh lower bar (D) from the front grille base (E).

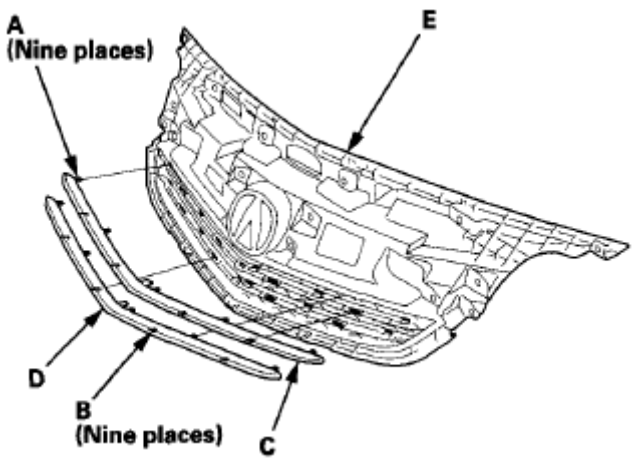

Fig. 8: Identifying Hooks, Front Grill Mesh Upper Bar, Front Grill Mesh Lower Bar And Front Grille Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the molding in the reverse order of removal.

FRONT BULKHEAD BRACE COVER REPLACEMENT

NOTE: When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.

1. Remove the front bumper (see **FRONT BUMPER REMOVAL/INSTALLATION**).
2. Detach the clips, and release the hook (A), then remove the front bulkhead brace cover (B).

NOTE: To release the clips, pry up on the center pin at the notch (C).

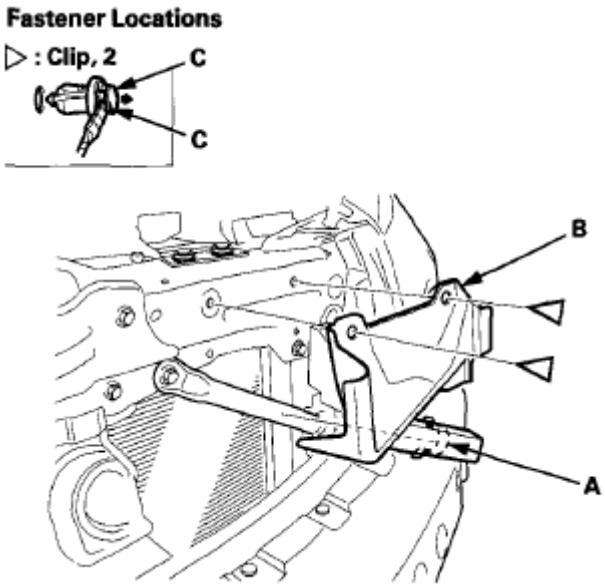

Fig. 9: Identifying Hook, Front Bulkhead Brace Cover And Notch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the cover in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Push the clips into place securely.

COWL COVER REPLACEMENT

Special Tools Required

KTC Trim Tool Set SOJATP2014*

* Available through the Acura Tool and Equipment Program; call 888-424-6857

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the body.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Remove these items:
   - Windshield wiper arms (see **WASHER FLUID LEVEL SWITCH TEST**)
   - **Engine compartment covers**.
2. Remove the cowl cover (A).
   1. Detach the clips (B).

2. Detach the clips (C, D, E) by carefully pulling up the cover.
3. Release the hood hinge covers (F) from both hood hinges.

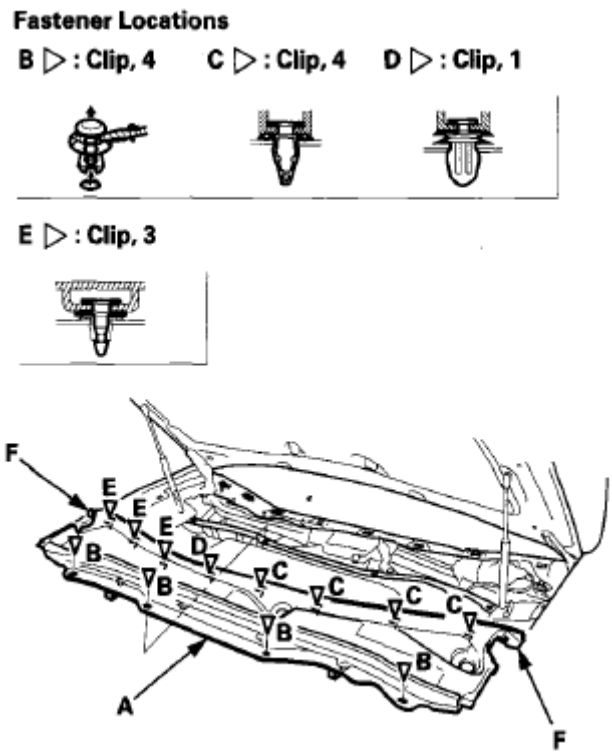

Fig. 10: Identifying Cowl Cover, Clips And Hood Hinge Covers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If necessary, release the hooks (A), then remove the A/C intake umbrella (B).

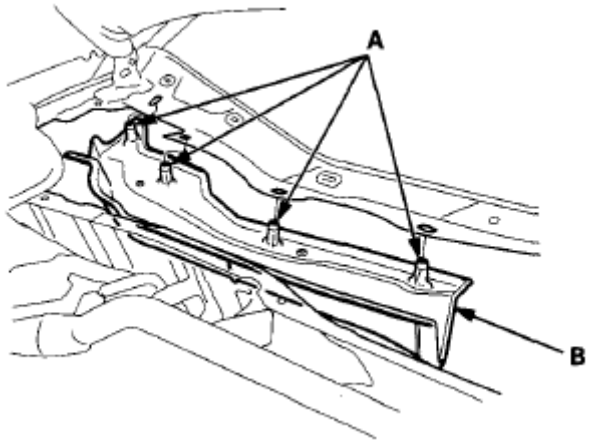

Fig. 11: Identifying Hooks And A/C Intake Umbrella
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the cover in the reverse order of removal, and note these items:

- If the clips are damaged or stress-whitened, replace them with new ones.
- Push the clips and the hooks into place securely.
- Make sure the washer tube is connected properly.

ROOF MOLDING REPLACEMENT

Special Tools Required

KTC Trim Tool Set SOJATP2014*

* Available through the Acura Tool and Equipment Program; call 888-424-6857

MOLDING REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the windshield.**
- **Take care not to bend the roof molding.**
- **Do not use any metallic tools to remove the windshield area of the roof molding, or you may chip or crack the windshield.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove the windshield area of the roof molding (A).
    1. Carefully insert the large trim tool (B) and the plastic spatula (C) (from the KTC tool set) under the molding next to the lower clip (D).
    2. While pulling up the clip area of the molding by hand, push each of the six small hooks (E) in the numbered sequence shown to release the clip from the retainer (F) on the A-pillar.

        NOTE: Do not try to pry up the clip if it is hard to release from the clip on the A-pillar.

    3. Gradually work your way up to release each of the upper clips (G, H, I).

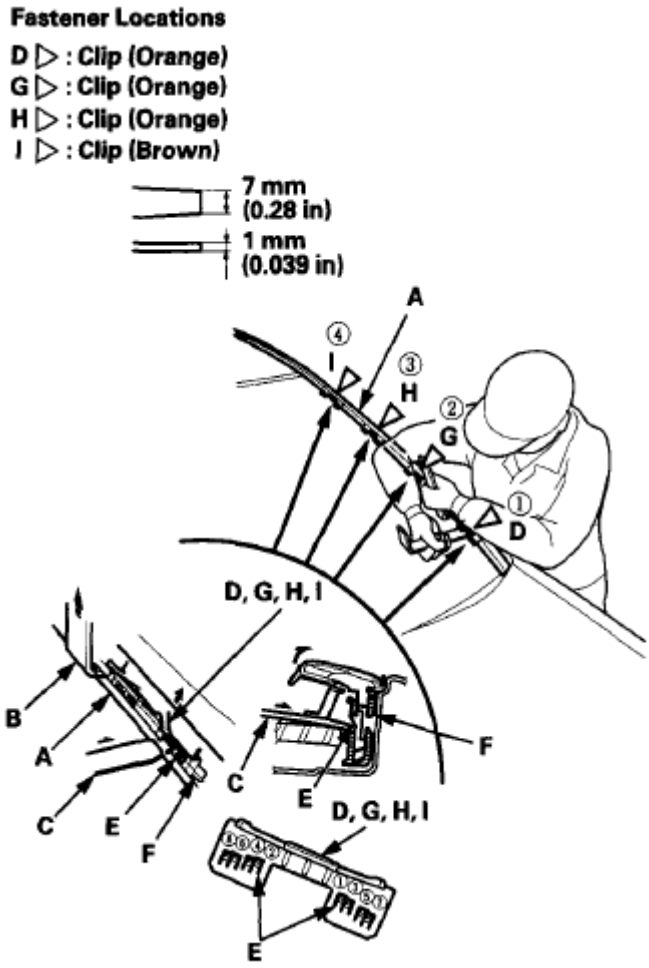

Fig. 12: Identifying Roof Molding, Large Trim Tool, Plastic Spatula, Lower Clip And Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull up the roof area of the roof molding (A) to release it from the retainers (B).

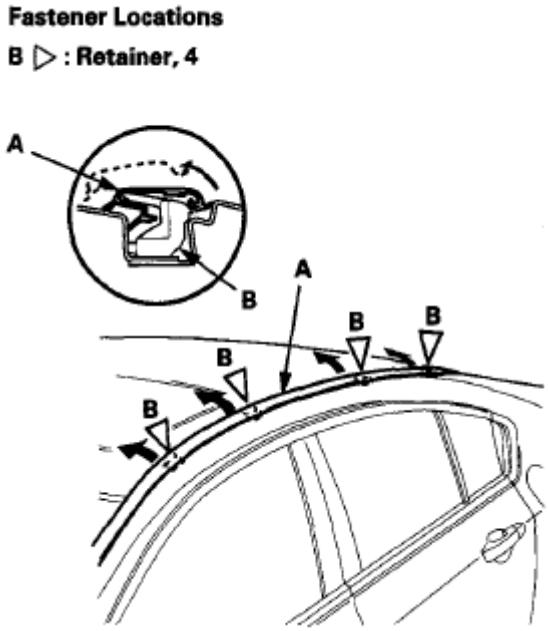

Fig. 13: Identifying Roof Molding And Retainers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull the rear end of the roof molding (A) forward to release it from the rear window molding (B).

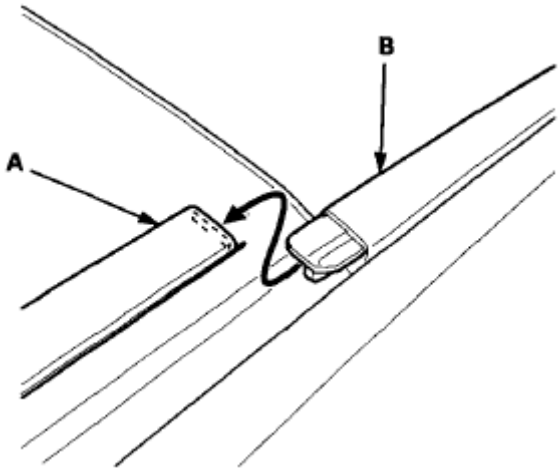

Fig. 14: Identifying Roof Molding And Rear Window Molding
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the molding in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Make sure the roof molding is installed securely.

RETAINER REPLACEMENT (WINDSHIELD AREA)

NOTE:

- **Take care not to scratch the body or damage the windshield.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Pry out the middle hooks (A) with a flat-tip screwdriver, and slide the retainers (B, C) downward to release them from the pins (D) on the A-pillar.

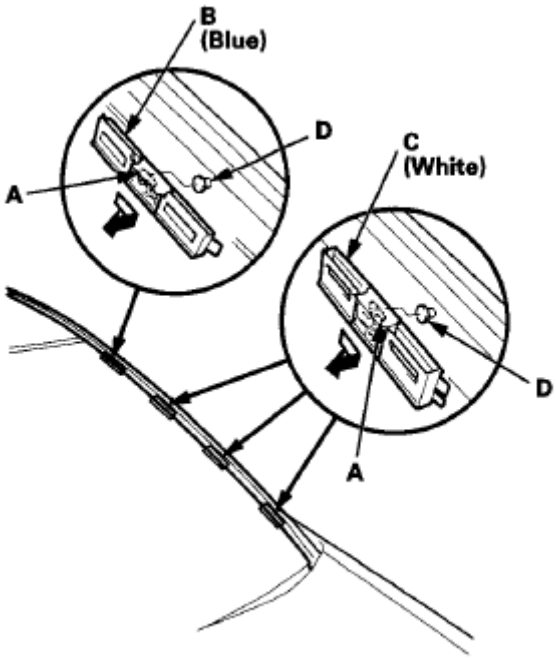

Fig. 15: Identifying Middle Hooks, Retainers And Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the retainers in the reverse order of removal, and make sure the retainers are securely fastened on the pins.

RETAINER REPLACEMENT (ROOF AREA)

NOTE:

- **Take care not to scratch the body.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Pry up the middle hooks (A) with a flat-tip screwdriver, and slide the retainers (B) rearward to release them from the pins (C) on the body.

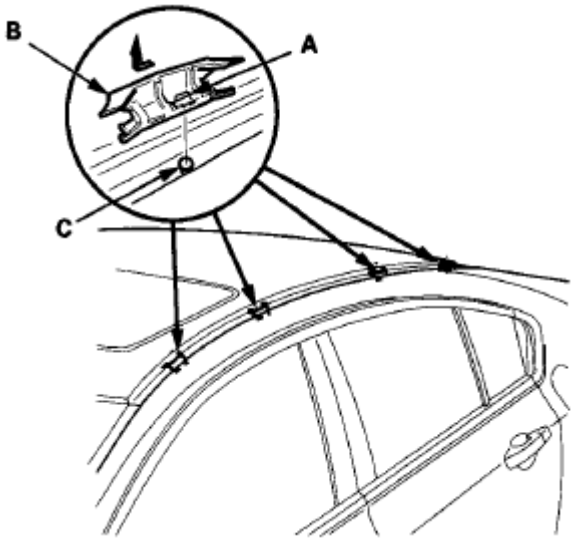

Fig. 16: Identifying Middle Hooks, Retainers And Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the retainers in the reverse order of removal, and make sure the retainers securely fastened on the pins.

REAR WINDOW MOLDING REPLACEMENT

Special Tools Required

KTC Trim Tool Set SOJATP2014*

* Available through the Acura Tool and Equipment Program; call 888-424-6857

MOLDING REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the rear window.**
- **Take care not to bend the rear window molding.**
- **Do not use any metallic tools to remove the rear window molding, or you may chip or crack the rear window.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove the **roof molding**.
2. Remove the rear window molding (A).
    1. Gently pry up the front edge of the molding, then pull up the molding from the top to the bottom to release the hooks (B) from the retainers (C) on the C-pillar.

2. Slide the molding forward to release the rear end (D) from the pin (E) on the body.

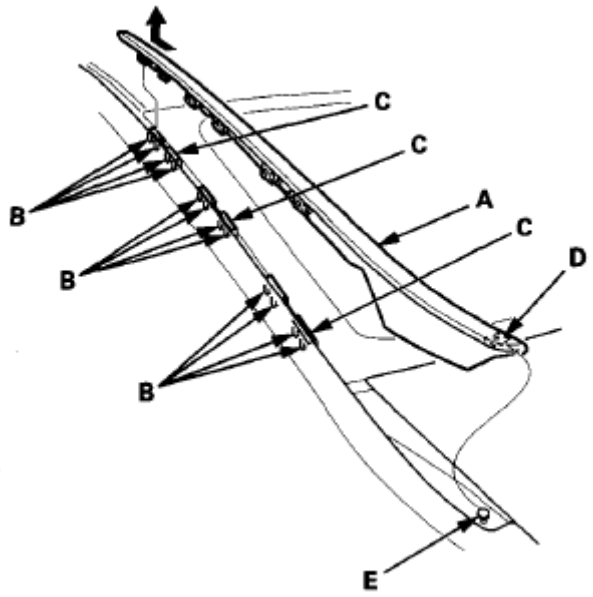

Fig. 17: Identifying Rear Window Molding, Hooks, Retainers, Rear End And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the molding in the reverse order of removal, and push the hooks into place securely.

RETAINER REPLACEMENT

NOTE:

- **Take care not to scratch the body or damage the rear window.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Pry up the middle hooks (A) with a flat-tip screwdriver, and slide the retainers (B) upward to release them from the pins (C) on the C-pillar.

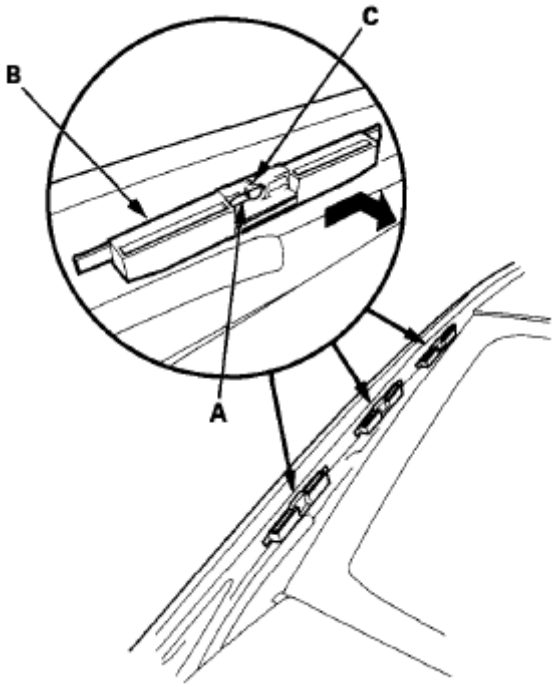

Fig. 18: Identifying Middle Hooks, Retainers And Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the retainers in the reverse order of removal, and make sure the retainers are securely fastened on the pins.

C-PILLAR OUTER TRIM REPLACEMENT

Special Tools Required

KTC Trim Tool Set SOJATP2014*

* Available through the Acura Tool and Equipment Program; call 888-424-6857

NOTE:

- **Take care not to scratch the trim or the body.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Open the rear door.
2. Pry up on the edge of the C-pillar outer trim (A) with a trim tool to detach the clips, then remove the trim.

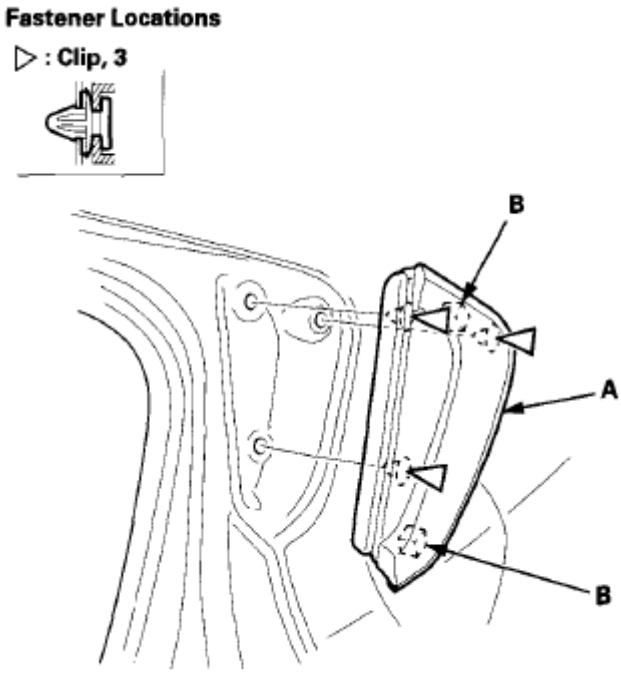

Fig. 19: Identifying C-Pillar Trim And EPT Foams
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the trim in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Make sure you cannot see the EPT foams (B) from outside.
   - Push the clips into place securely.

SIDE SILL PANEL REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the body.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Canada models: Remove the front splash guard (see **FRONT INNER FENDER REPLACEMENT**).
2. Remove the side sill panel (A).
   1. Except Canada models: Detach the clip (B) from the rear of the front wheel arch.
   2. Except Canada models: Remove the screws (C) securing the front inner fender and the side sill panel.
   3. Detach the clips (D, E).
   4. Remove the screws (F) securing the rear inner fender and the side sill panel.
   5. Pry out the rear clip (G) with a trim tool, then release the rear of the side sill panel from the body. Remove the grommet (H) from the body, then install the grommet on the rear clip on the side sill

panel.

6. Pull the rear area of the side sill panel away from the body, and slide the panel rearward to remove it. The side clips (I) will stay in the body.
7. Slide the side sill inner trim (J) forward and remove it. The side clip (K) will stay in the body.
8. Remove the side clips I, K from the body by turning them 45 °.

NOTE: To release the clips B, D, pry up on the center pin at the notch (L).

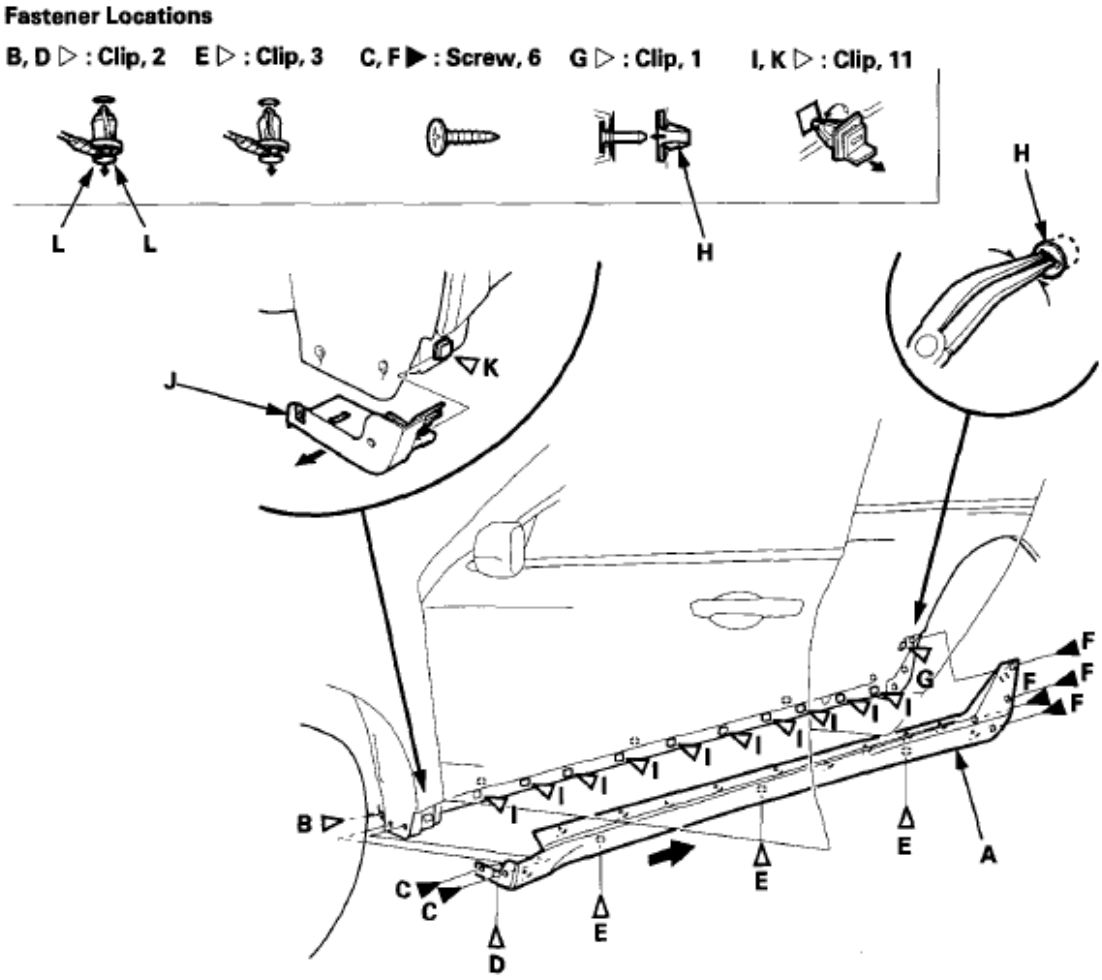

Fig. 20: Identifying Side Skill Panel & Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the clips are damaged or stress-whitened, replace them with new ones.
4. Install the side clips (A) and the rear clip (B) on the side sill panel (C).

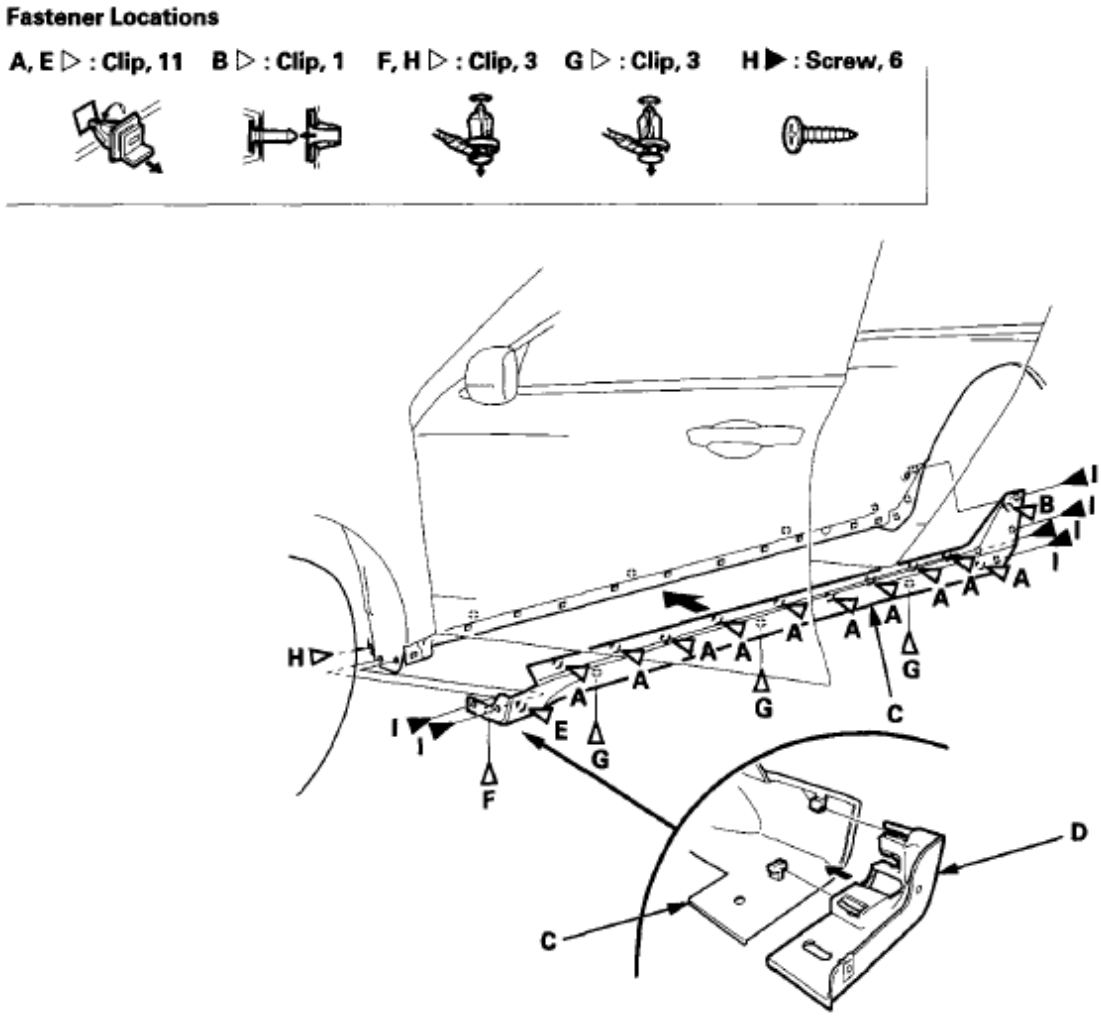

Fig. 21: Installing Side Clips And Rear Clip On Side Sill Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the side sill inner trim (D) on the side sill panel, and install the front side clip (E) on the side sill inner trim.
6. Hold up the panel, and slide it forward to engage the front side clip. Fit all the side clips and the rear clip into the holes in the body, then push on the panel until the clips snap into place.
7. Install the clips (F, G).
8. Install the clip (H) and the screws (I).

SIDE SILL PROTECTION TAPE REPLACEMENT

CANADA MODELS

1. Slowly peel off the original side sill protection tape.
2. Clean the side sill panel bonding surface with a shop towel dampened with isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the surface.

3. Peel the adhesive backing from the side sill protection tape.
4. Align the side sill protection tapes (A, B) with the edge of the side sill panel (C), then press them into place.

Unit: mm (in).

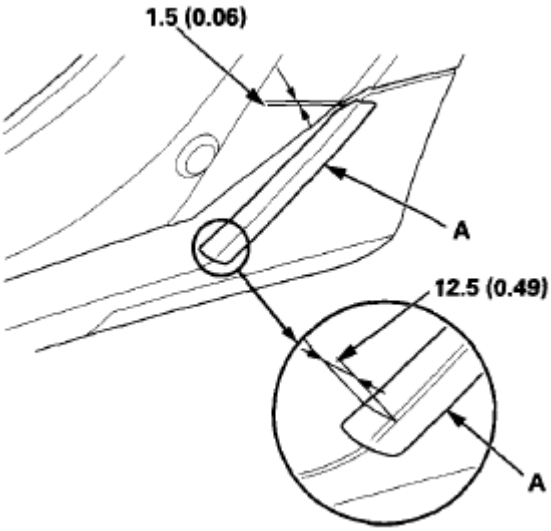

Fig. 22: Identifying Protection Tapes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

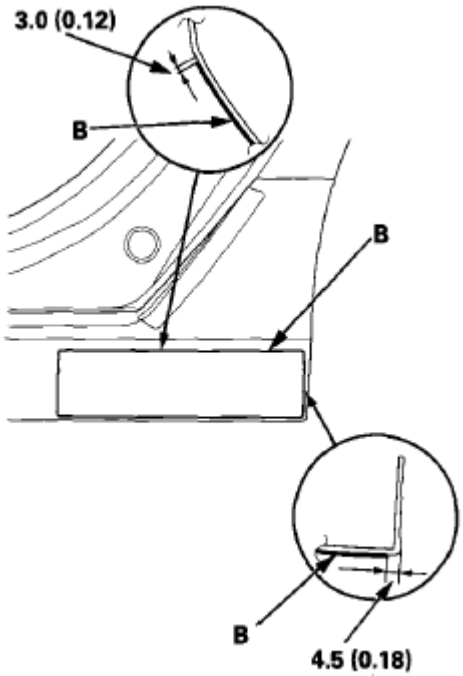

Fig. 23: Identifying Side Sill Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRUNK LID SPOILER REPLACEMENT

FOR SOME MODELS

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the trunk lid.**

1. Remove the trunk lid trim panel (see **TRIM REMOVAL/INSTALLATION - TRUNK LID**).
2. Open the trunk lid. Remove the nuts, and disconnect the trunk release switch connector (A) from inside the trunk lid.

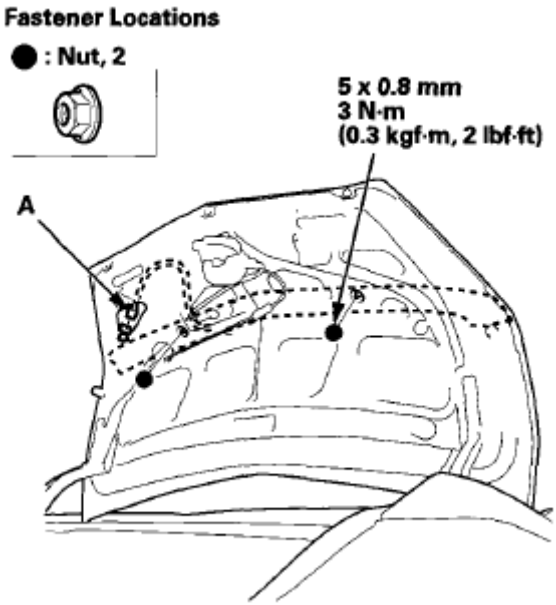

Fig. 24: Identifying Trunk Release Switch Connector & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Close the trunk lid, and while gently pulling out the edge of the trunk lid spoiler (A), carefully cut the double-sided adhesive tapes (B) along the edge of the spoiler.

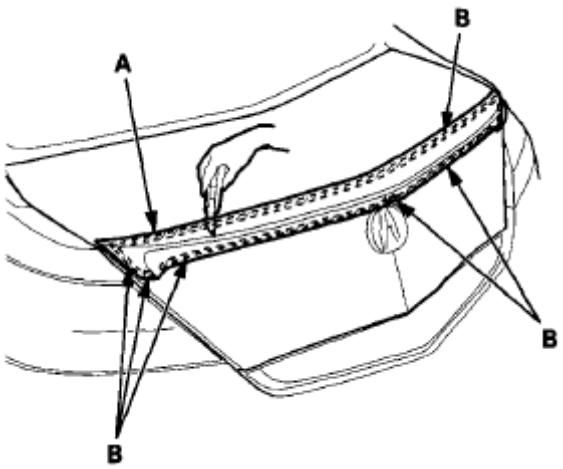

Fig. 25: Identifying Trunk Lid Spoiler And Double Sided Adhesive Tapes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pull out the trunk lid spoiler (A) to detach the clips, then remove the spoiler from the trunk lid.

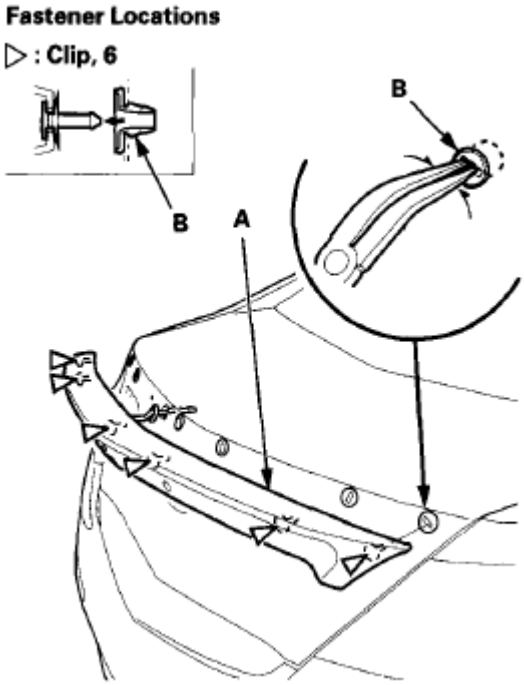

Fig. 26: Identifying Trunk Lid Spoiler And Grommets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the grommets (B) from the trunk lid, then insert the grommets into the clips on the trunk lid spoiler.
6. If the clips and the grommets are damaged or stress-whitened, replace them as an assembly with new ones.
7. If you are reusing the original trunk lid spoiler, carefully remove the remaining double-sided adhesive

tapes from the trunk lid spoiler. Also carefully remove the remaining double-sided adhesive tapes from the trunk lid. Clean the spoiler and trunk lid surfaces with a shop towel dampened with isopropyl alcohol.

8. Attach new double-sided adhesive tape to the edge of the trunk lid spoiler (F) as shown.

Adhesive tape (A): Thickness 1 mm (0.04 in) Width 5 mm (0.2 in) Length 602 mm (23.7 in)

Adhesive tape (B): Thickness 1.5 mm (0.06 in) Width 5 mm (0.2 in) Length 49 mm (1.93 in)

Adhesive tape (C): Thickness 1.5 mm (0.06 in) Width 5 mm (0.2 in) Length 473 mm (18.6 in)

Adhesive tape (D): Thickness 1.5 mm (0.06 in) Width 5 mm (0.2 in) Length 23 mm (0.91 in)

Adhesive tape (E): Thickness 1.5 mm (0.06 in) Width 5 mm (0.2 in) Length 90 mm (3.54 in)

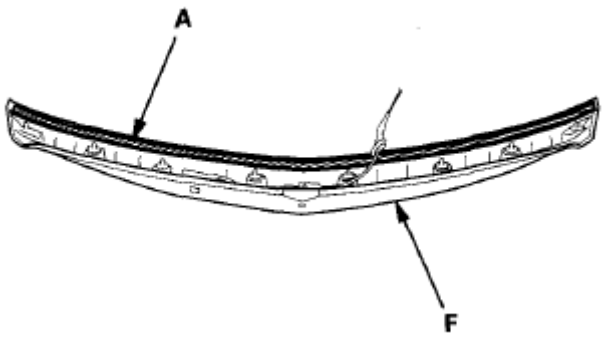

Fig. 27: Identifying Trunk Lid Spoiler And Adhesive Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

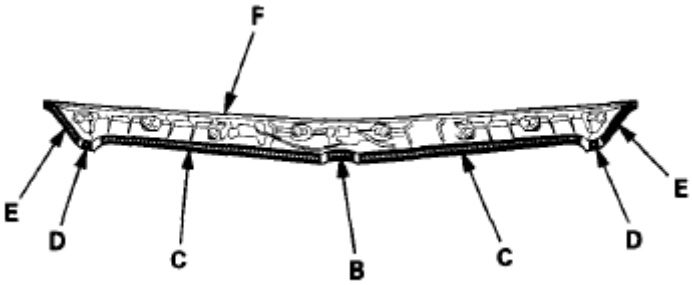

Fig. 28: Identifying Adhesive Tapes Of Different Sizes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Fold the edge of each adhesive backing from the double-sided adhesive tape.
10. Hold up the spoiler, and fit the clips into the holes in the trunk lid, then push on the spoiler until the clips snap into place securely.
11. Carefully pull the adhesive backing away, and push on the double-sided adhesive tape areas to make adhesive stick securely.
12. Reconnect the trunk release switch connector, and reinstall the nuts.

EMBLEM/STICKER REPLACEMENT

NOTE: When removing the emblems, take care not to scratch the body.

1. To remove the front "A" emblem, raise the vehicle on a lift. From underneath the vehicle, remove the two screws, then remove the emblem.
2. Clean the body surfaces where emblems are applied with a shop towel dampened with isopropyl alcohol. After cleaning, keep oil, grease, and water from getting on the surface.
3. Apply the emblems where shown.

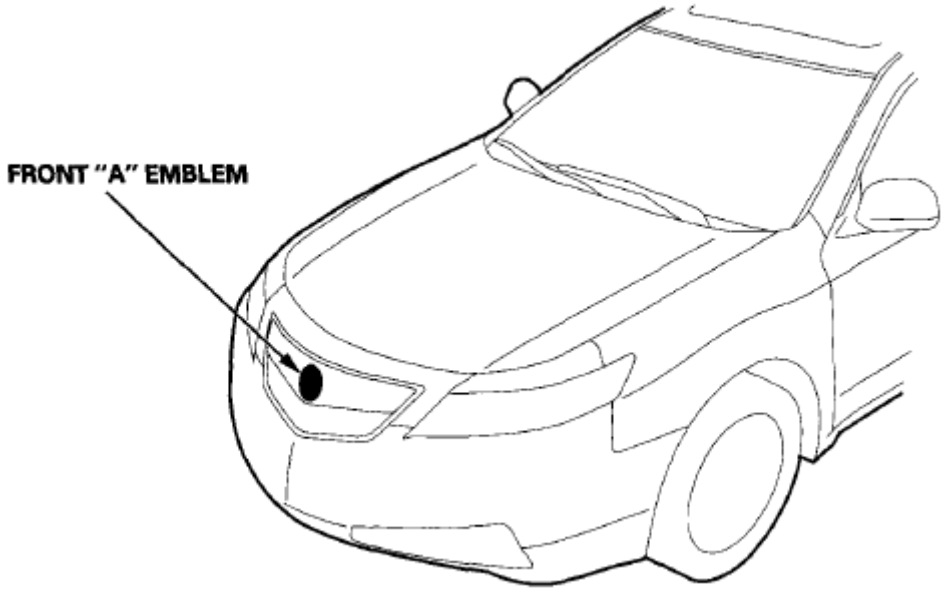

Fig. 29: Identifying Front "A" Emblem
Courtesy of AMERICAN HONDA MOTOR CO., INC.

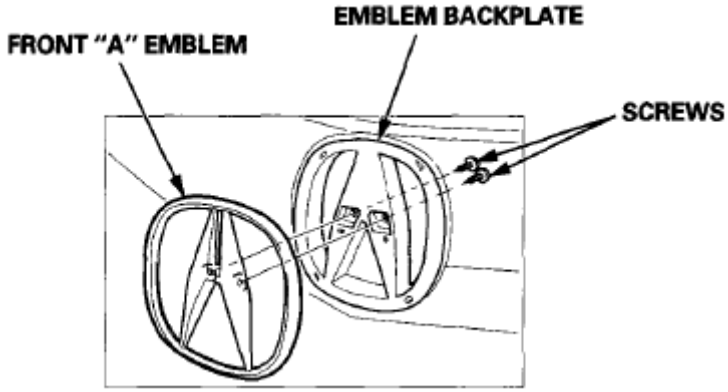

Fig. 30: Identifying Front "A" Emblem, Emblem Backplate And Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

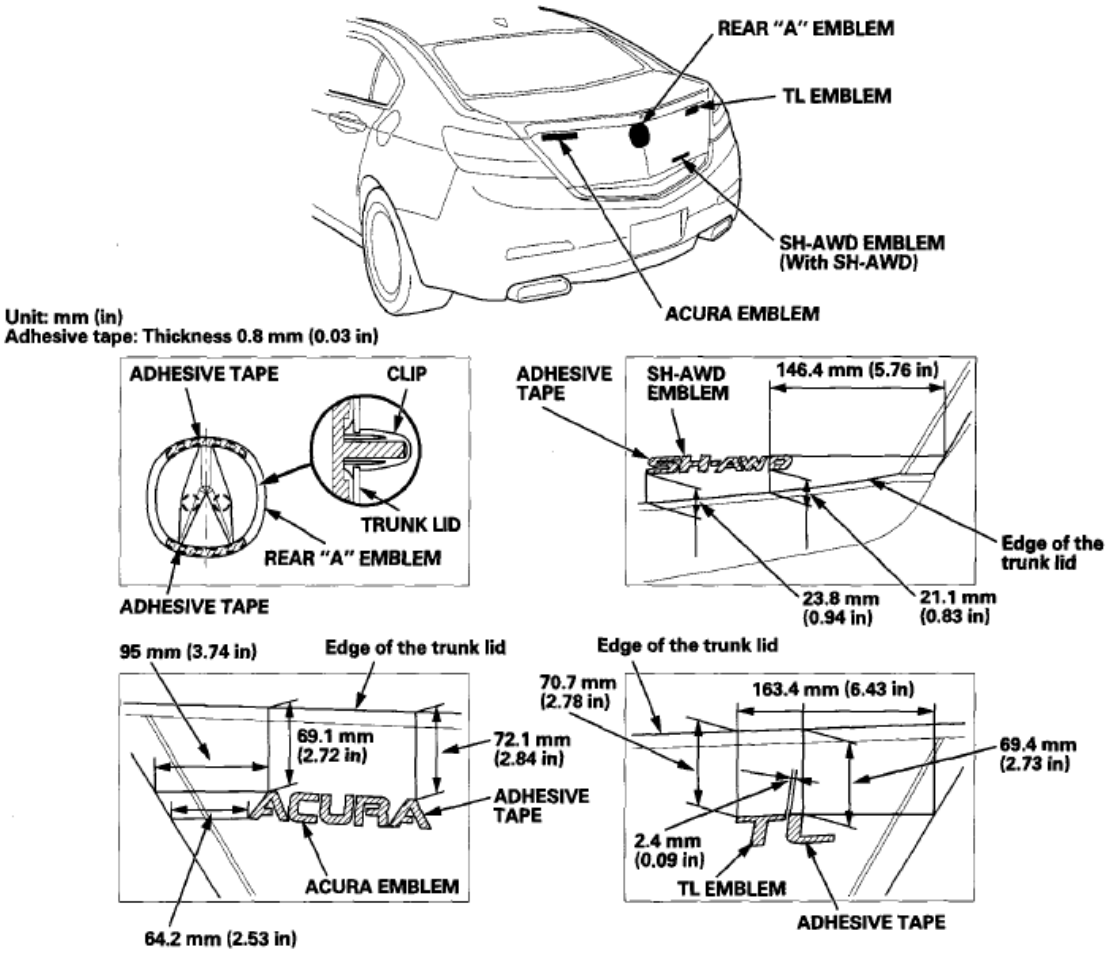

Fig. 31: Identifying Rear Emblems
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2012 ACCESSORIES & EQUIPMENT

Fenderwell - TL

FRONT AIR GUIDE PLATE REPLACEMENT

NOTE: Take care not to scratch the body.

1. Remove the bolts, and release the hooks (A), then remove the front air guide plate (B).

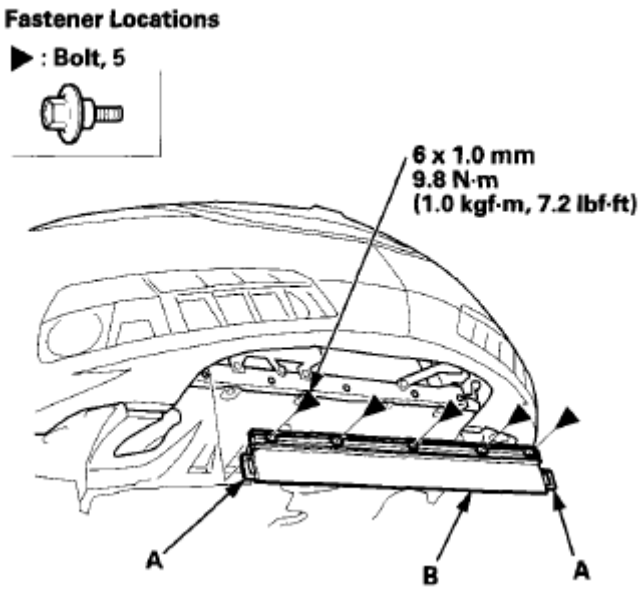

Fig. 1: Identifying Hooks, Front Air Guide Plate & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the plate in the reverse order of removal.

FRONT BUMPER STRAKE REPLACEMENT

NOTE: Take care not to scratch the bumper.

1. Remove the bolts. Release the front bumper strake (A) from the front air guide plate (B), then remove it.

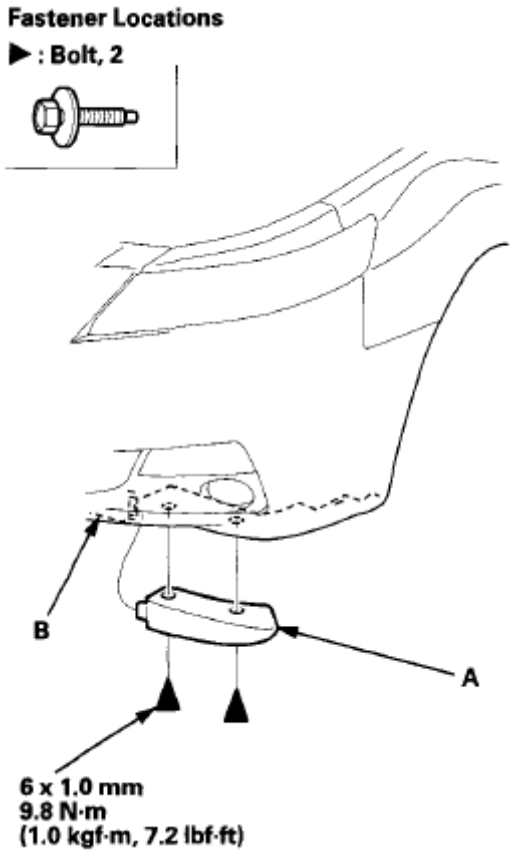

Fig. 2: Identifying Front Bumper Strake, Air Guide Plate & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the strake in the reverse order of removal.

FRONT STRAKE REPLACEMENT

NOTE: Take care not to scratch the body.

1. Remove the bolts (A, B). Release the front strake (C) from the front inner fender (D), then remove it.

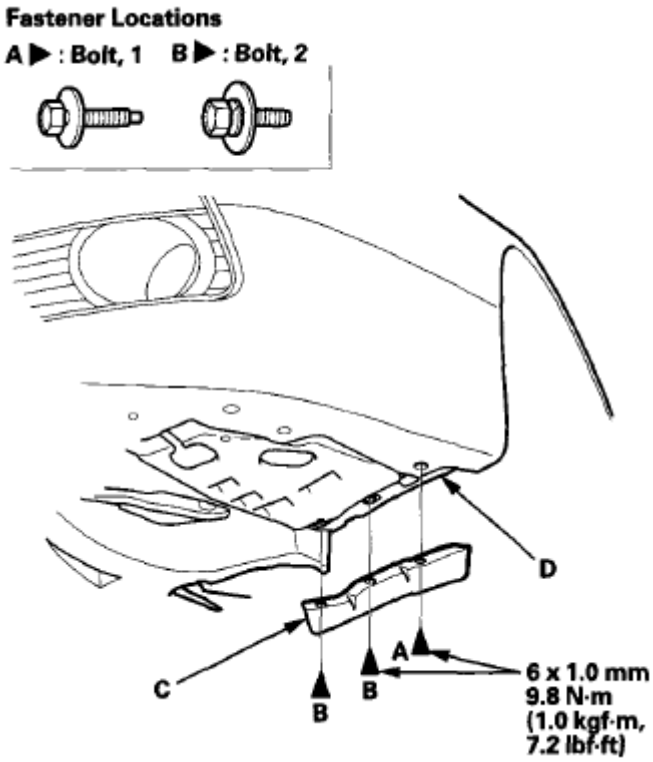

Fig. 3: Identifying Front Strake, Front Inner Fender & Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the strake in the reverse order of removal.

FRONT INNER FENDER REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the body.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Remove these items:
   - Front wheel (see **KNUCKLE/HUB REPLACEMENT**)
   - Front strake (see **FRONT STRAKE REPLACEMENT**)
2. Remove the front inner fender (A).
   1. Canada models: On the back of the wheel arch, remove the screws (B) and the clip (C), and remove the front splash guard (D).
   2. Except Canada models: On the back of the wheel arch, remove the screws (E).
   3. From under the front bumper (F), remove the bolt (G) and detach the clip (H) securing the front strake (I), the front bumper, and the front inner fender.
   4. From the wheel arch, detach the clips (J) securing the front bumper and the front inner fender.

5. From the wheel arch, detach the clips (K, L, M) that secure the front inner fender (and splash shield) to the body.
6. With SH-AWD (left side): Release the front inner fender from the front brake duct (N).
7. Release the hook (0) on the splash shield, then remove the front inner fender.

NOTE: To release the clips C, H, J, K, M, pry up on the center pin at the notch (P).

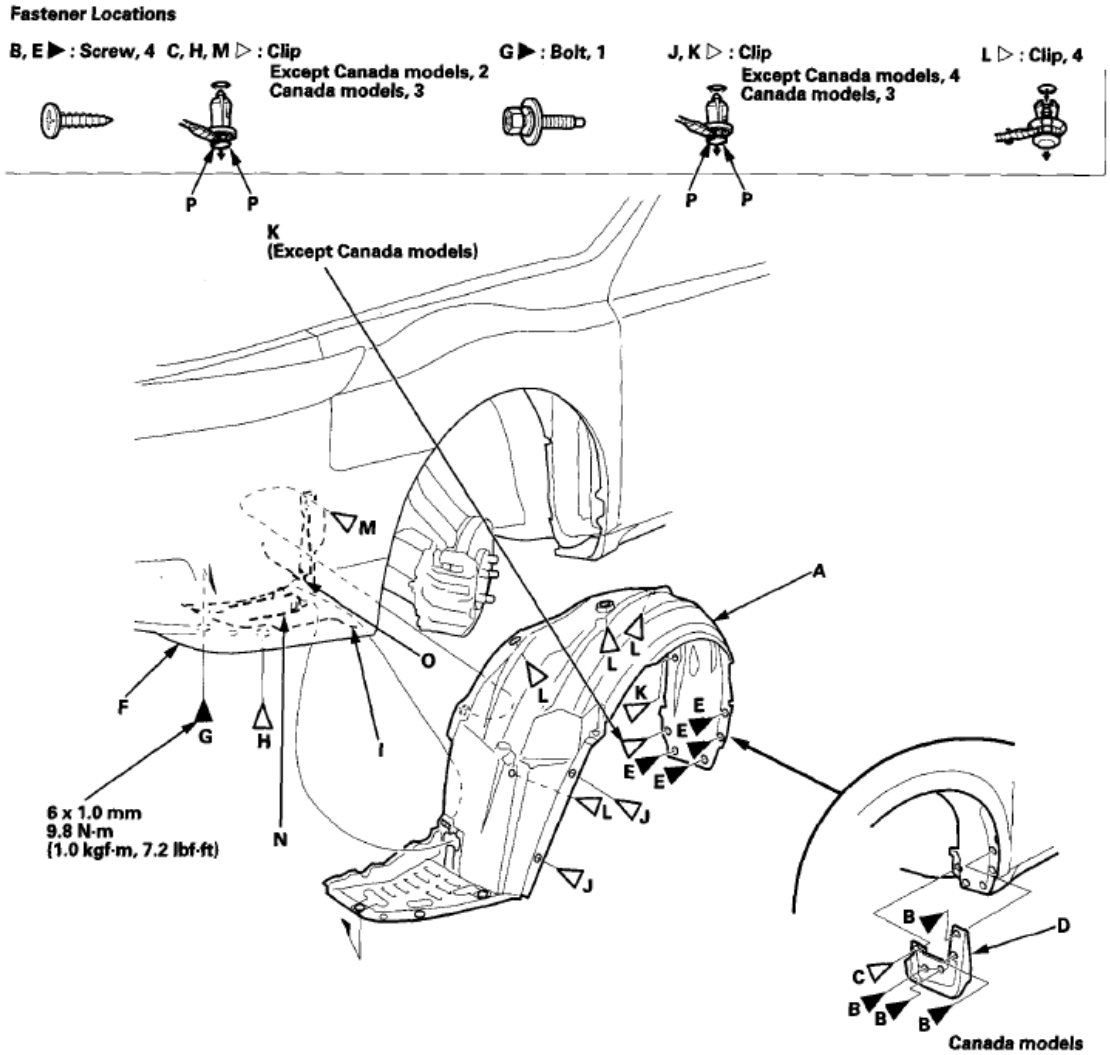

Fig. 4: Identifying Front Inner Fender & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the inner fender in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Push the clips and the hook into place securely.

FRONT SPLASH SHIELD REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the body.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Remove the front wheel (see **KNUCKLE/HUB REPLACEMENT**).
2. Remove the front splash shield (A).
   1. Detach the clips (B, C) that secure the front splash shield to the body.
   2. Detach the clips (D) that secure the front inner fender (E) and the front splash shield to the body.
   3. From under the front bumper (F), remove the bolts (G) that secure the front bumper, and the front splash shield to the body.

NOTE: To release the clips, pry up on the center pin up at the notch (H).

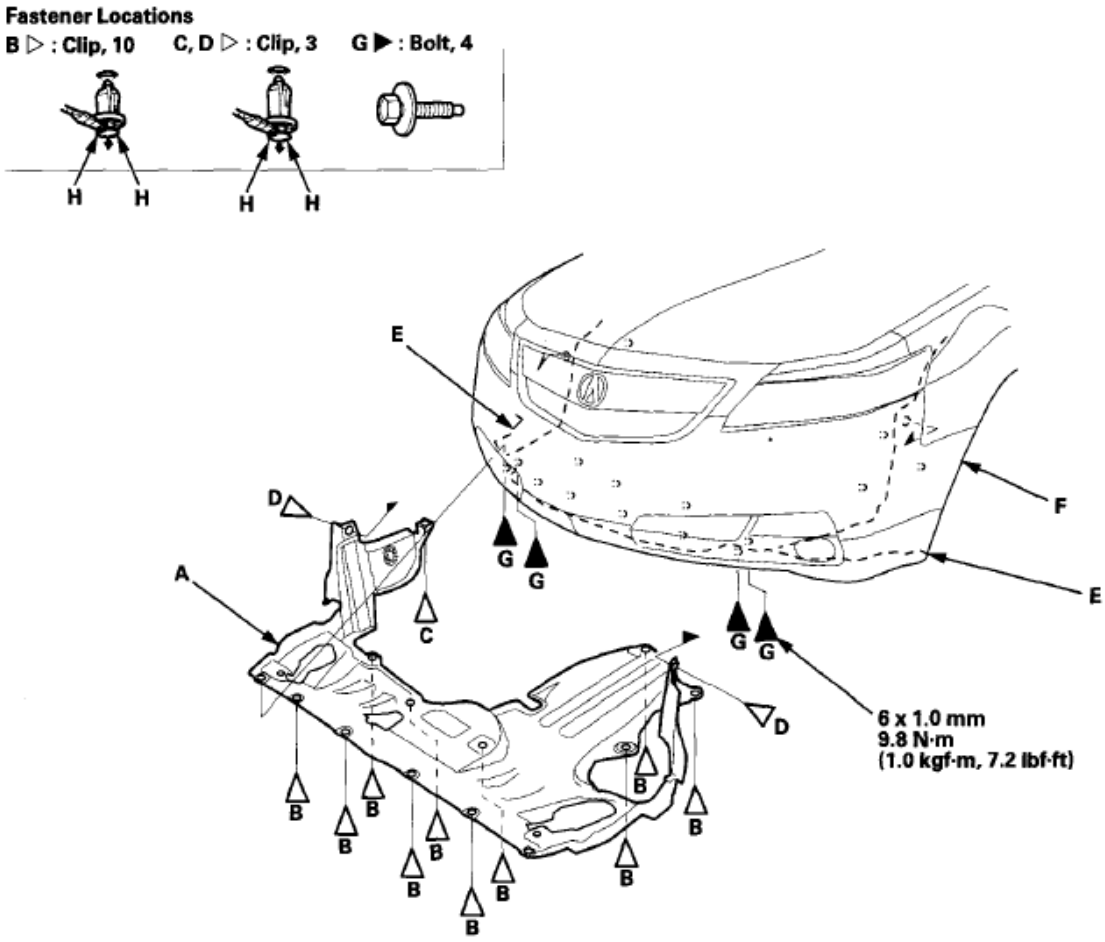

Fig. 5: Identifying Front Splash Shield & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the splash shield in the reverse order of removal, and note these items:

- If the clips are damaged or stress-whitened, replace them with new ones.
- Push the clips into place securely.

FRONT BRAKE DUCT REPLACEMENT

WITH SH-AWD

NOTE: Take care not to scratch the bumper or the body.

1. Remove the front bumper (see **FRONT BUMPER REMOVAL/INSTALLATION**).
2. Remove the bolts, and release the hooks (A) from the front inner fender (B), then remove the front brake duct (C).

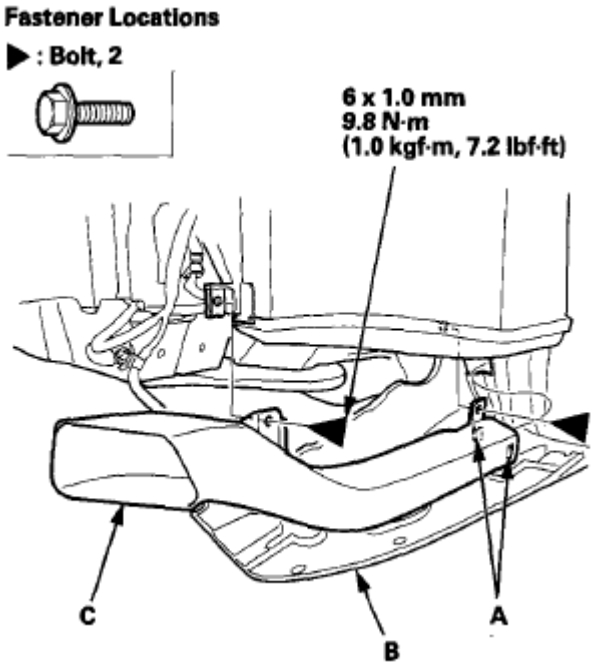

Fig. 6: Identifying Hooks, Front Inner Fender, Front Brake Duct & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the duct in the reverse order of removal, and push the hooks into place securely.

FRONT FENDER FAIRING REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the body.**

1. Remove the front inner fender (see **FRONT INNER FENDER REPLACEMENT**).

2. Pull out the front fender fairing (A).

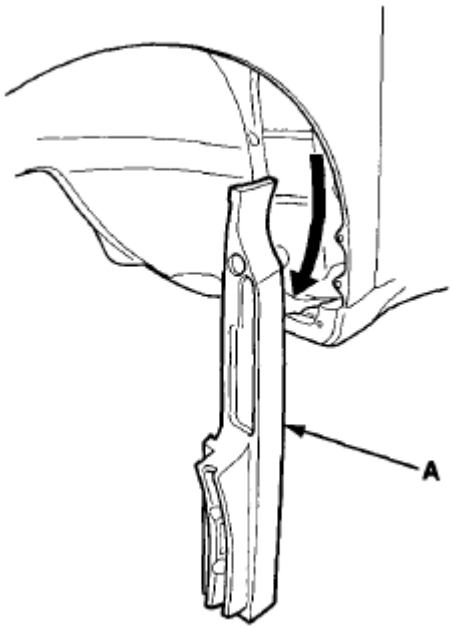

Fig. 7: Identifying Front Fender Fairing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the fender fairing in the reverse order of removal.

MIDDLE FLOOR UNDERCOVER REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the body.**
- **With SH-AWD: The left side is shown; the right side is similar.**

1. Remove the left middle floor undercover (A) and the right middle floor undercover (B).
    1. Remove the bolts.
    2. Right side (without SH-AWD): Remove the nut.
    3. Release the hook(s) (C).

LEFT SIDE

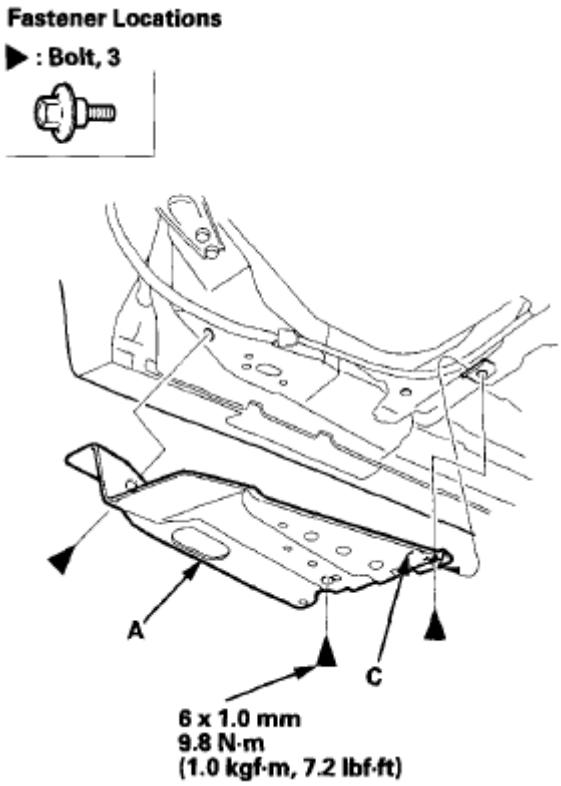

Fig. 8: Identifying Left Middle Floor Undercover, Right Middle Floor Undercover, Hooks & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RIGHT SIDE (without SH-AWD)

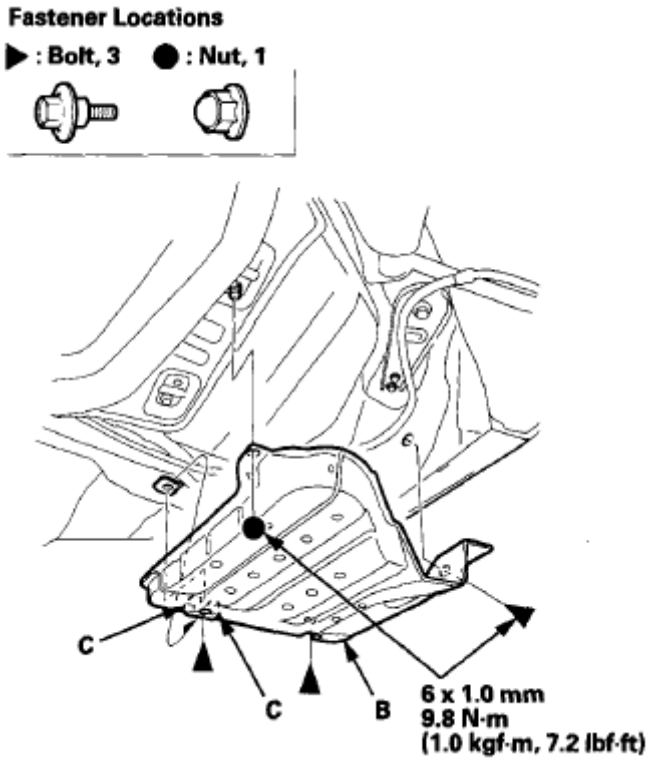

Fig. 9: Identifying Left Middle Floor Undercover, Right Middle Floor Undercover, Hooks & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the undercover in the reverse order of removal, and first attach the hook(s), then set the bolts starting at the rear.

REAR UNDERCOVER REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the rear bumper or the body.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Remove the rear undercover (A).
    1. Remove the bolts (B) and detach the clips (C) that secure the undercover to the body.
    2. From under the rear bumper (D), detach the clips (E) securing the undercover and the bumper.
    3. Lower the front area of the undercover, and pull the undercover away from the bumper.

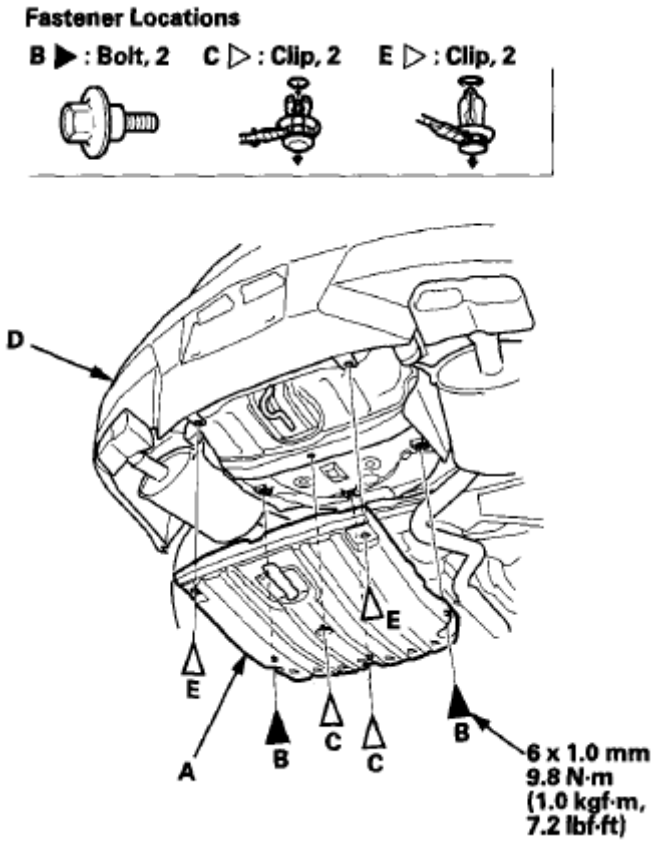

Fig. 10: Identifying Rear Undercover, Rear Bumper & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the undercover in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Push the clips into place securely.

FUEL PIPE PROTECTOR REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the body.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Remove the left rear wheel (see **HUB BEARING UNIT REPLACEMENT**).
2. Detach the clips, then remove the fuel pipe protector (A).

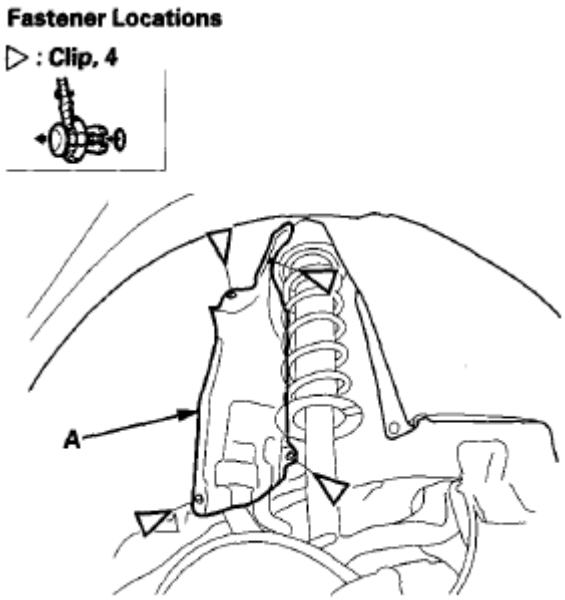

Fig. 11: Identifying Fuel Pipe Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the protector in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Push the clips into place securely.

REAR INNER FENDER REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the body or the related parts.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Remove the rear inner fender (A).
   1. Remove the screw (B) that secures the inner fender and the side sill panel (C) from the front of the rear wheel arch.
   2. Remove the screws (D) that secure the inner fender and the rear bumper (E) from the rear of the rear wheel arch.
   3. Remove the bolts (F) and the screw (G), and detach the clips (H, I, J, K) from the rear wheel arch.
   4. Pull out the rear inner fender.

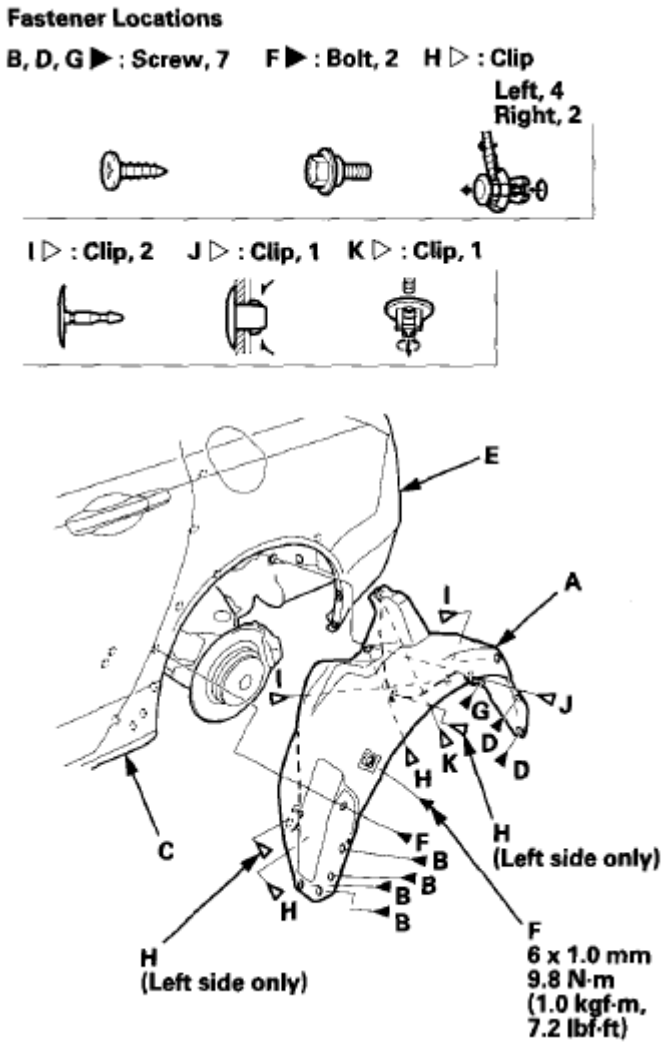

Fig. 12: Identifying Rear Inner Fender, Side Sill Panel, Rear Bumper & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the inner fender in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Push the clips into place securely.

REAR AIR OUTLET REPLACEMENT

NOTE: Take care not to scratch the body.

1. Remove the rear bumper (see **LOWER FRONT BUMPER GRILLE REPLACEMENT**).
2. Release the hooks (A), then remove the rear air outlet (B).

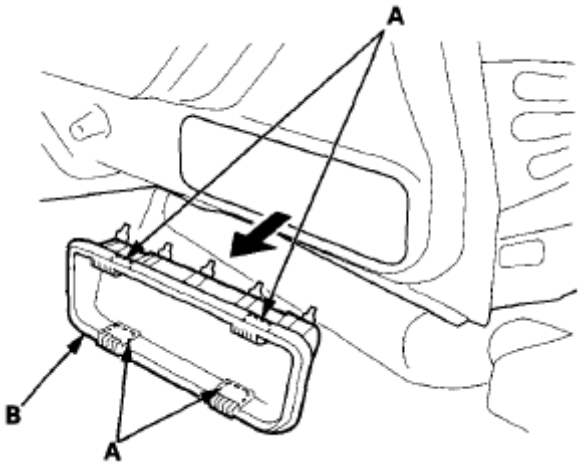

Fig. 13: Identifying Rear Air Outlet & Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the air outlet by pushing on the hook areas until the hooks snap into place.

2012 ACCESSORIES & EQUIPMENT

Frame - TL

FRAME BRACE REPLACEMENT

STRUT BRACE REPLACEMENT

1. Remove the cowl cover (see **FRONT BULKHEAD BRACE COVER REPLACEMENT**).
2. Disconnect the brake booster vacuum hose (A) from the strut brace (B).

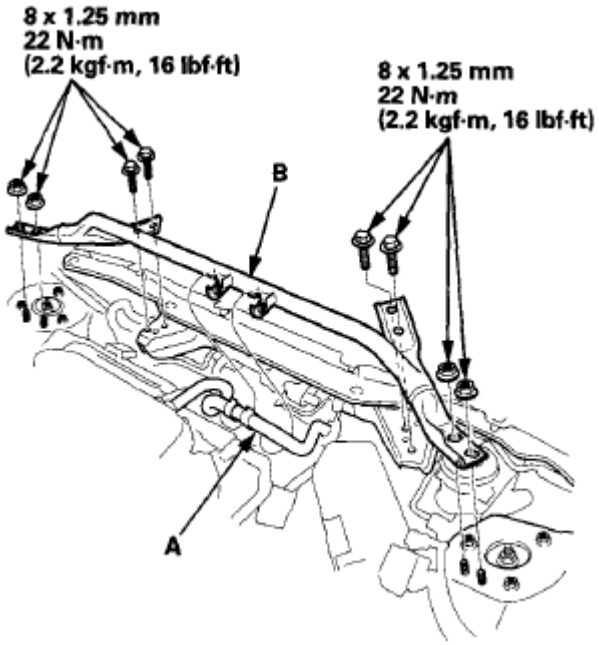

Fig. 1: Identifying Brake Booster Vacuum Hose And Strut Brace With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts and the nuts from the top of the damper, and remove the strut brace.
4. Install the strut brace in the reverse order of removal.

SUBFRAME REPLACEMENT

Special Tools Required

Subframe Alignment Pin 070AG-SJAA10S

FRONT SUBFRAME TORQUE

If you remove the mounting bolts for any of the following items, always replace the bolts with new ones:

- Front subframe
- Front subframe middle rubber mount
- Front subframe front stiffener
- Front subframe rear stiffener
- Rear engine mounting base bracket

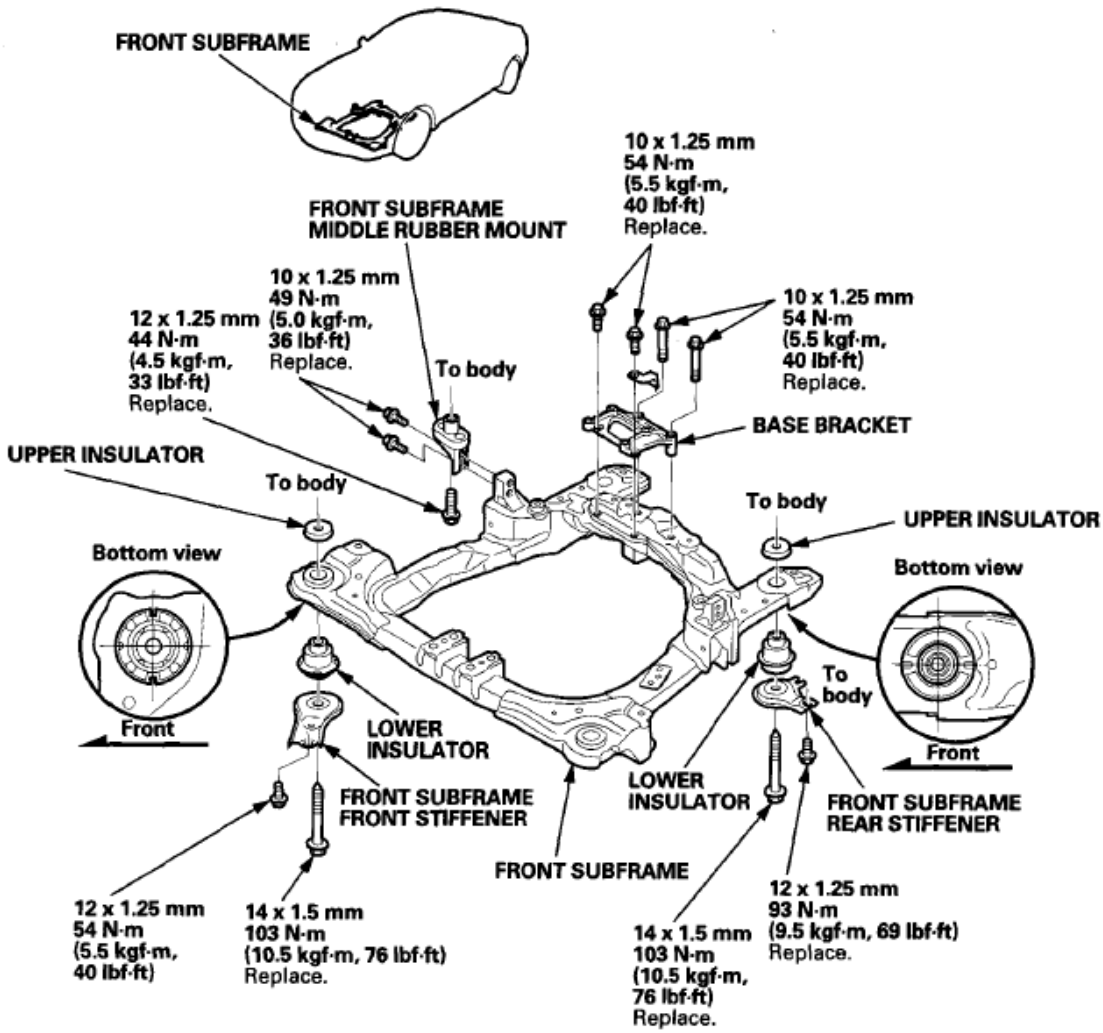

Fig. 2: Front Subframe And Related Components Location With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT SUBFRAME ALIGNMENT

NOTE: Align the front subframe with the subframe alignment pin.

1. Align the front subframe (A) in the following sequence.
    1. Lift the front subframe up to the body, and loosely install the new subframe mounting bolts (B), the front stiffener mounting bolts (C), the new rear stiffener mounting bolts (D) and the stiffeners (E).

2. Loosely install the new subframe middle rubber mounting bolts (F, G) securing the subframe middle rubber mounts (H).
3. Insert the subframe alignment pin (I) through the positioning slot (J) on the right rear stiffener, through the positioning hole (K) on the subframe, and into the positioning hole (L) on the body, then loosely tighten the subframe right rear mounting bolt.
4. Insert the subframe alignment pin through the positioning slot on the left rear stiffener, through the positioning hole on the subframe, and into the positioning hole on the body, then loosely tighten the subframe left rear mounting bolt.
5. Tighten the subframe mounting bolts to the specified torque values starting with the right rear subframe mounting bolt. Use the subframe alignment pin when tightening the rear side subframe mounting bolts.
6. Check all of the subframe mounting bolts, and retighten if necessary.

NOTE: Tighten the bolts in the sequence shown.

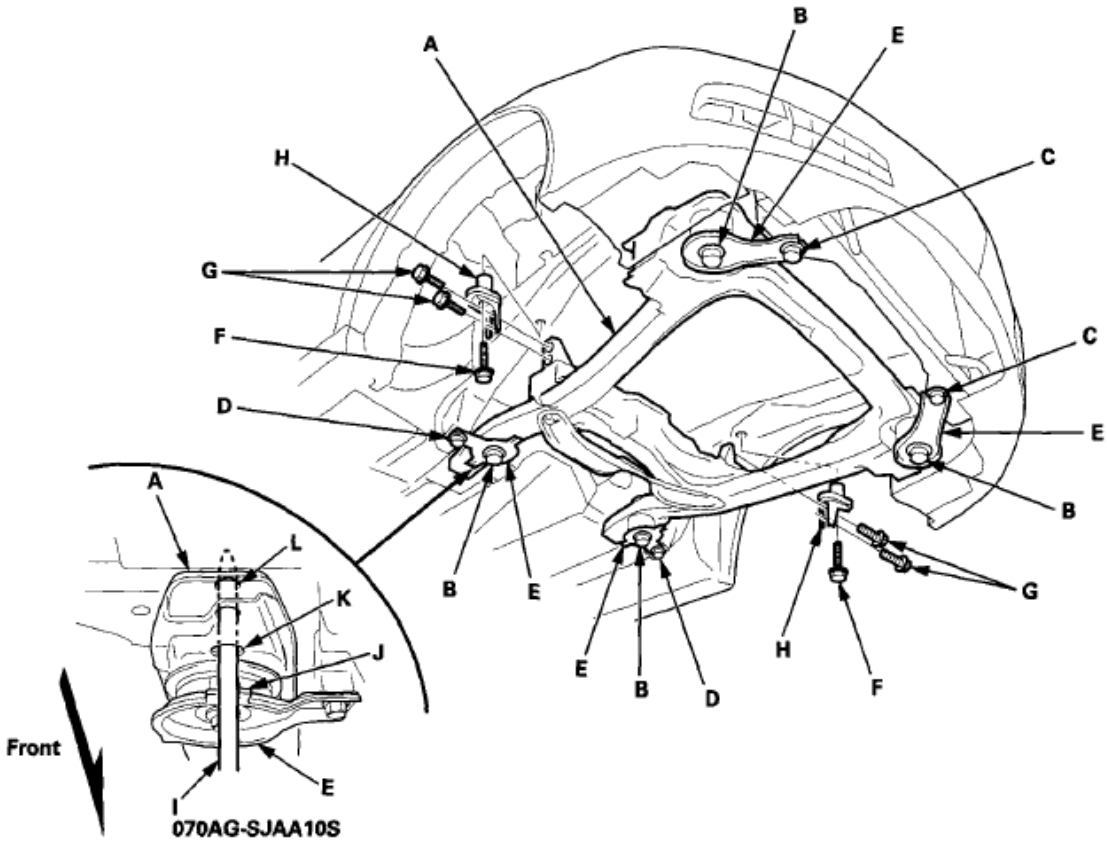

Fig. 3: Identifying Front Subframe Alignment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tighten the bolts securing the subframe middle mounts to the specified torque.
3. After reinstalling all removed parts, check and adjust the front wheel alignment (see **WHEEL ALIGNMENT**).

REAR SUBFRAME TORQUE

NOTE:

- **Install the rear subframe by aligning the installation positioning holes and positioning holes with the subframe alignment pin.**
- **Always replace any removed subframe mounting bolts with new ones.**

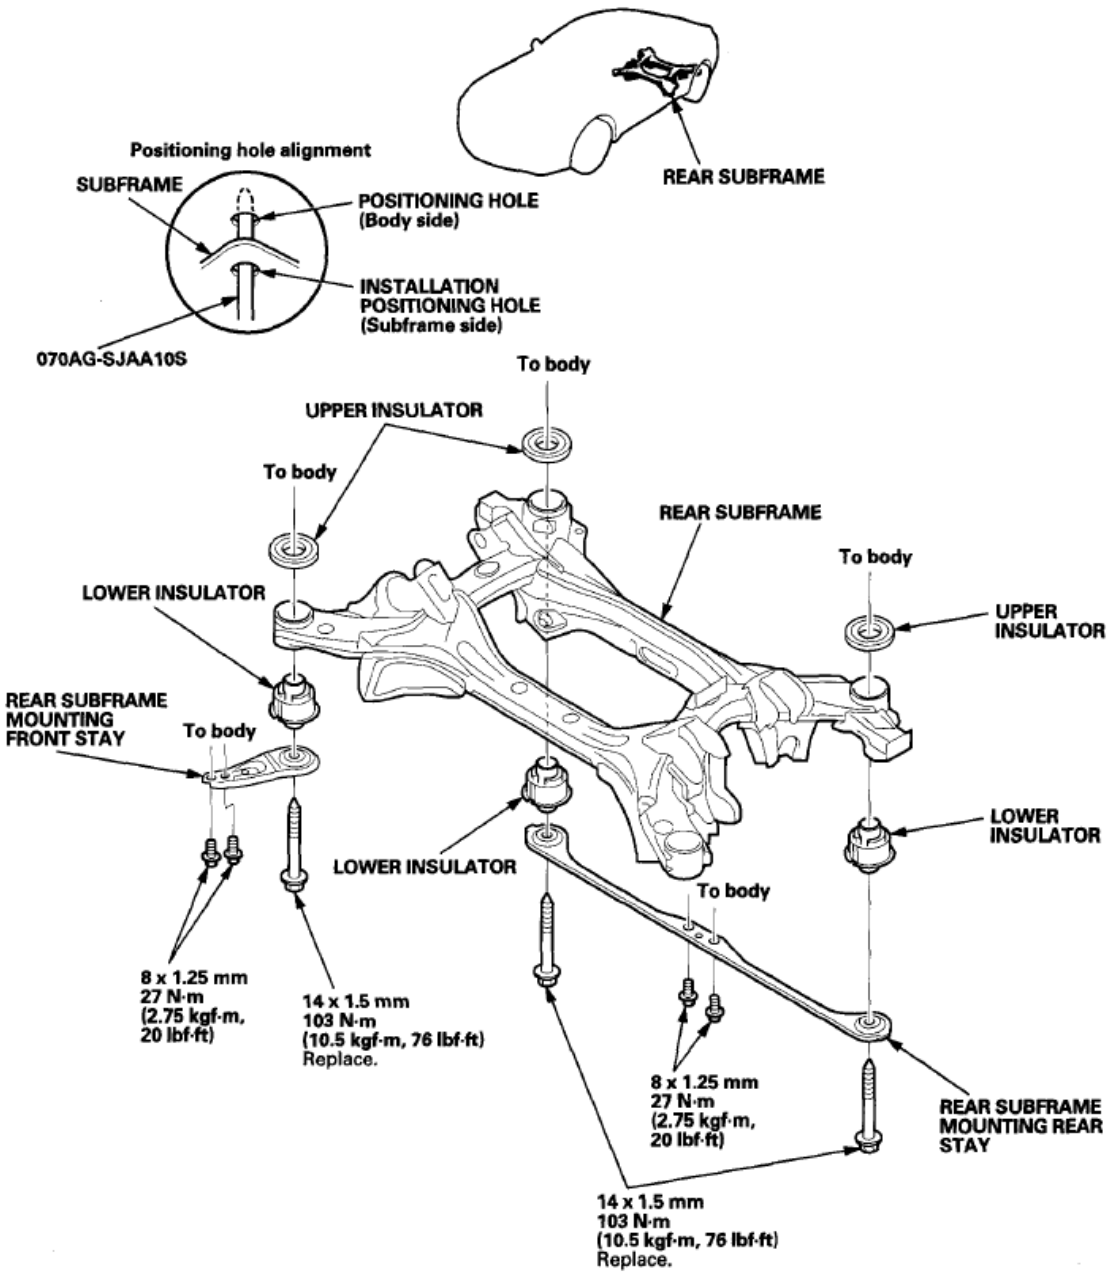

Fig. 4: Rear Subframe Torque And Related Components Location With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2012 ACCESSORIES & EQUIPMENT

Fuel Fill Door - TL

FUEL FILL DOOR ADAPTER REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the body.**

1. Remove the fuel pipe protector (see **REAR UNDERCOVER REPLACEMENT**).
2. Remove the fuel cap (A) by turning it counterclockwise, and remove the fuel cap wire (B) from the hinge arm (C). Remove the screw.

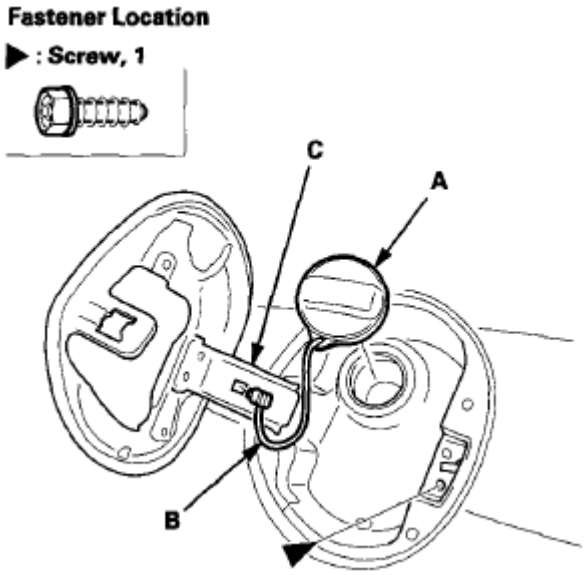

Fig. 1: Identifying Fuel Cap, Fuel Cap Wire And Hinge Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear inner fender as needed (see **REAR INNER FENDER REPLACEMENT**).
4. Release the drain tube (A). Remove the bolts, and lower the fuel filler pipe (B), then remove it from the fuel fill door adapter (C).

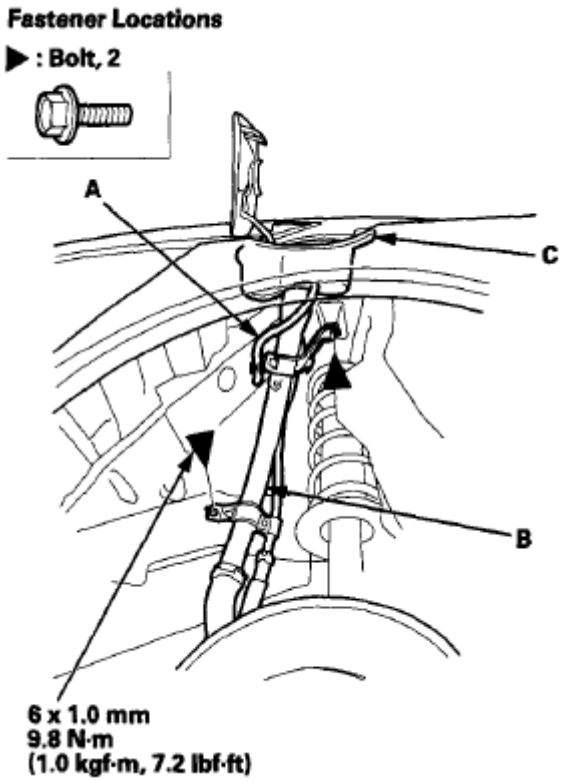

Fig. 2: Identifying Drain Tube, Fuel Filler Pipe And Fuel Fill Door Adapter With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Release the hooks (A), and remove the fuel adapter cover (B).

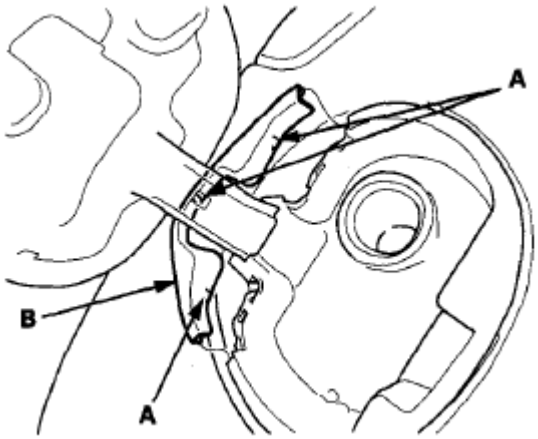

Fig. 3: Identifying Hooks And Fuel Adapter Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Turn the fuel cap adapter (A), then remove it.

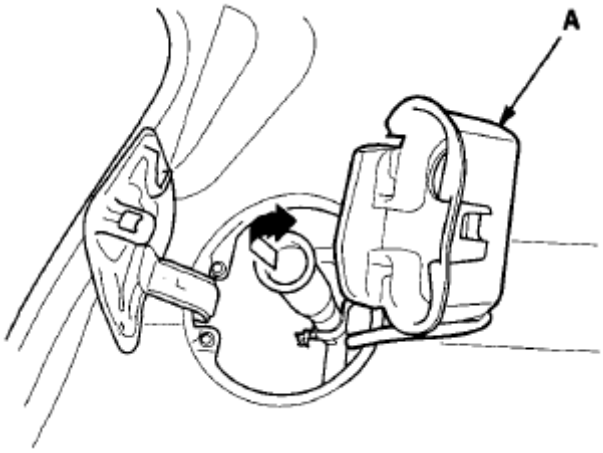

Fig. 4: Turning Fuel Cap Adapter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Pinch the hooks (A) from inside the vehicle, and remove the grommet (B) from the body.

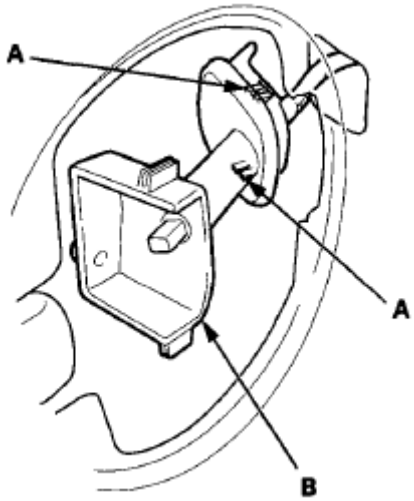

Fig. 5: Identifying Hooks And Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Release the hook (A), then remove the grommet (B) from the fuel fill door latch (C).

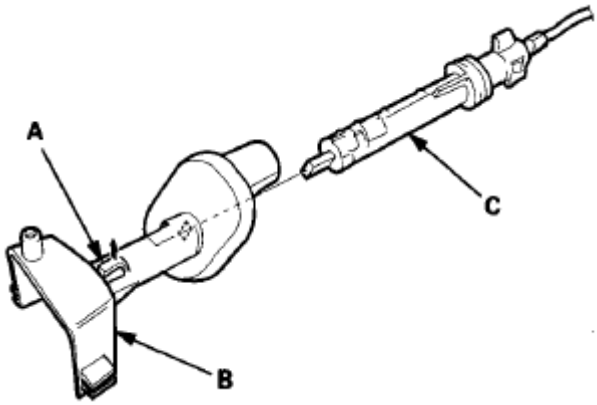

Fig. 6: Identifying Hook, Grommet And Fuel Fill Door Latch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the adapter in the reverse order of removal, and note these items:
   - Make sure the fuel cap adapter is properly installed on the fuel filler pipe.
   - Apply medium strength liquid thread lock to the fuel filler pipe mounting bolts before reinstallation.
   - Install the grommet by pushing on the hook areas until the hooks snap into place.

FUEL FILL DOOR ADJUSTMENT

1. Remove the fuel adapter cover (see step 5).
2. Slightly loosen the hinge mounting bolts (A).

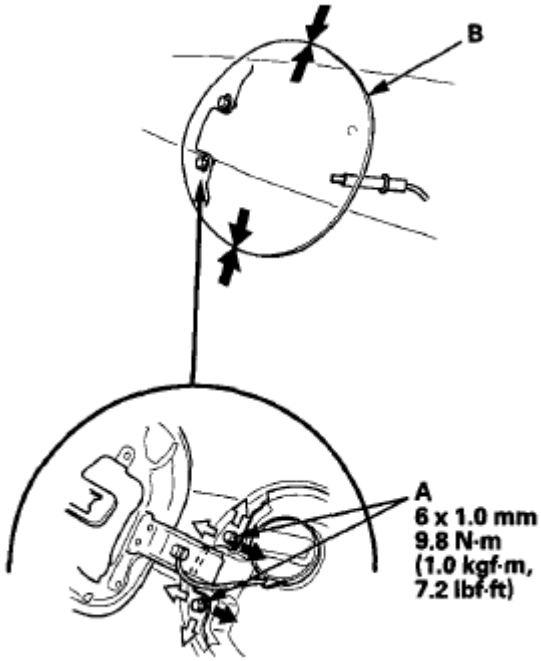

Fig. 7: Adjusting Fuel Fill Door In Or Out Until It Is Flush With Body With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Adjust the fuel fill door (B) in or out until it is flush with the body, and up or down as necessary to equalize the gaps.
4. Tighten the hinge mounting bolts.
5. Check that the fuel fill door opens properly and locks securely, and check that the door is flush with the body.
6. Apply multipurpose grease to each location indicated by the arrows.

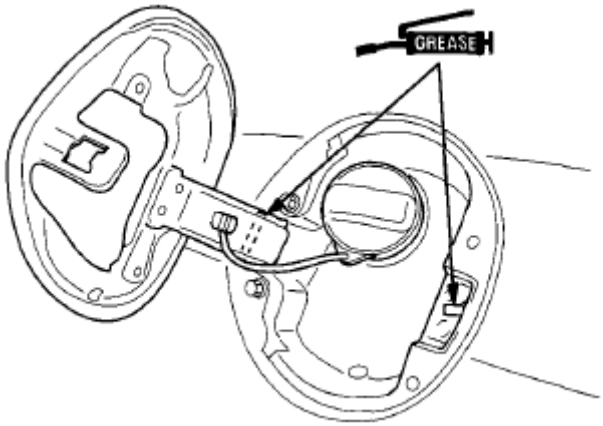

Fig. 8: Applying Multipurpose Grease To Location Indicated
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Apply touch-up paint to the hinge mounting bolts and around the hinges.
8. Reinstall the fuel adapter cover (see step 5).

2012 ACCESSORIES & EQUIPMENT

Hood - TL

COMPONENT LOCATION INDEX

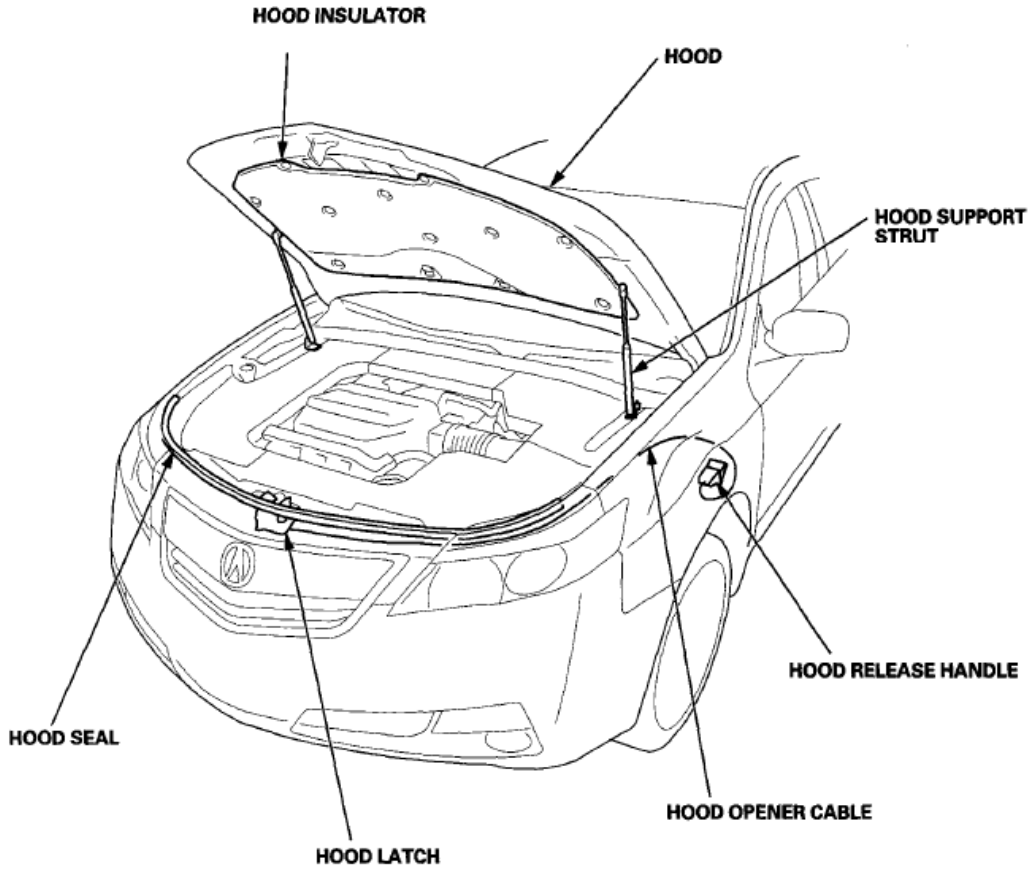

Fig. 1: Hood Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

HOOD ADJUSTMENT

1. Remove these items:
   - Engine compartment cover (see **ENGINE COMPARTMENT COVER REPLACEMENT**)
   - Cowl cover (see **FRONT BULKHEAD BRACE COVER REPLACEMENT**)
   - Front bulkhead center cover (see **HOOD LATCH REPLACEMENT**)
2. Slightly loosen the hood hinge mounting bolts (A) and the hood latch mounting bolts (B).

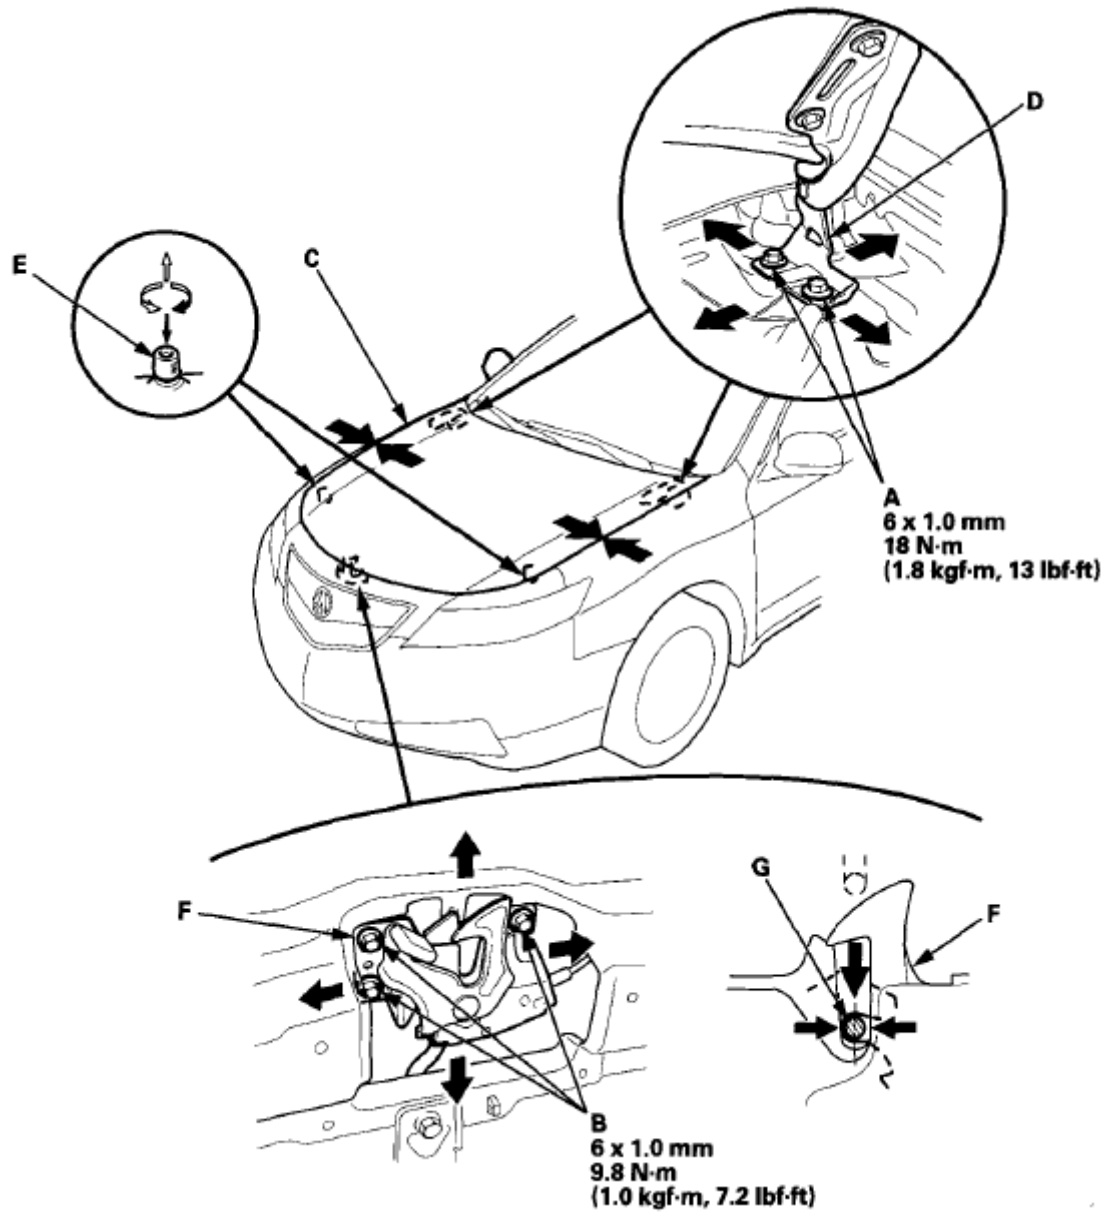

Fig. 2: Identifying Hood Hinges & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Adjust the hood (C) alignment in the following sequence:
   - Adjust the hood right and left, as well as forward and rearward, by using the elongated holes in the hood hinges (D).
   - Turn the hood edge cushions (E), in or out as necessary, to make the hood fit flush with the body at the front and side edges.
4. Adjust the hood latch (F) to obtain the proper height at the forward edge, and move the latch right or left until the striker (G) is centered in the latch.
5. Tighten each bolt to the specified torque.
6. Check that the hood opens properly and closes securely.

7. Apply touch-up paint to the hinge mounting bolts and around the hinges, and let the paint dry.
8. Apply multipurpose grease to the hood latch and the hood hinges as indicated by the arrows.

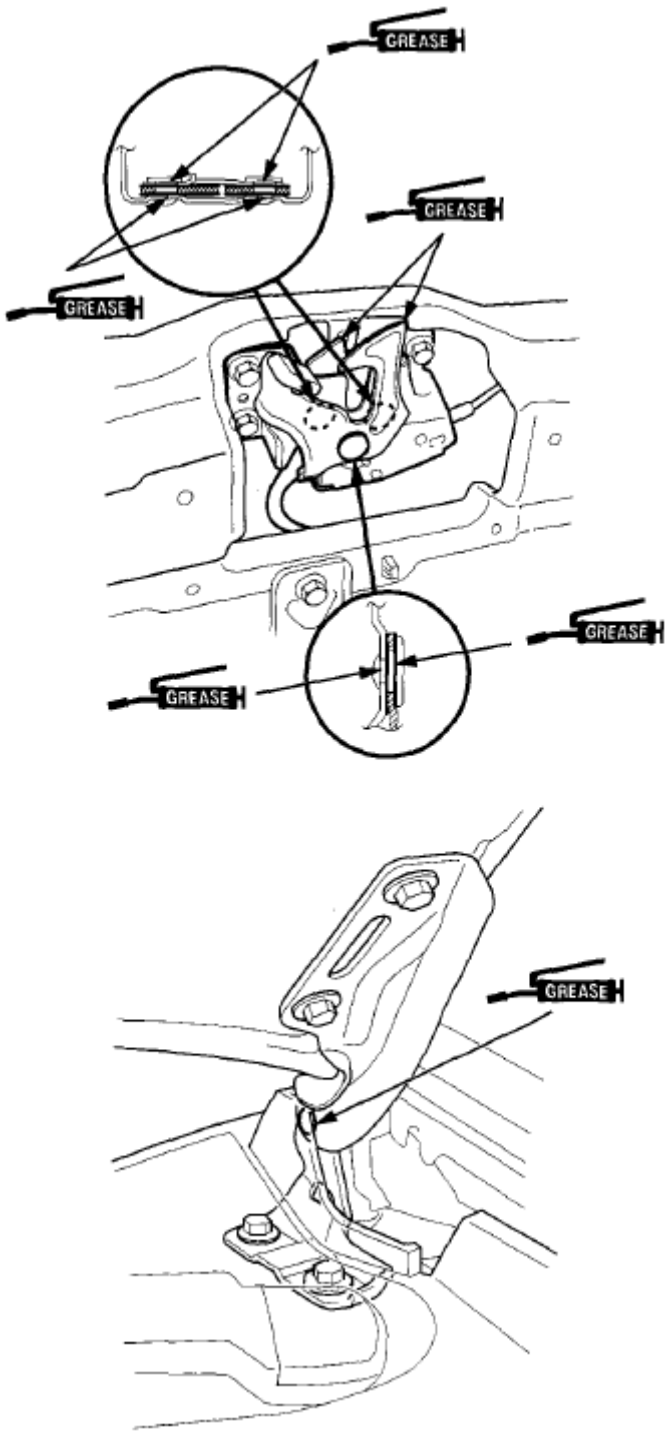

Fig. 3: Applying Multipurpose Grease To Hood Latch And Hood Hinges As Indicated
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Reinstall all remaining removed parts.

HOOD SEAL REPLACEMENT

1. Remove the hood seals (A, B) from all of the hooks.

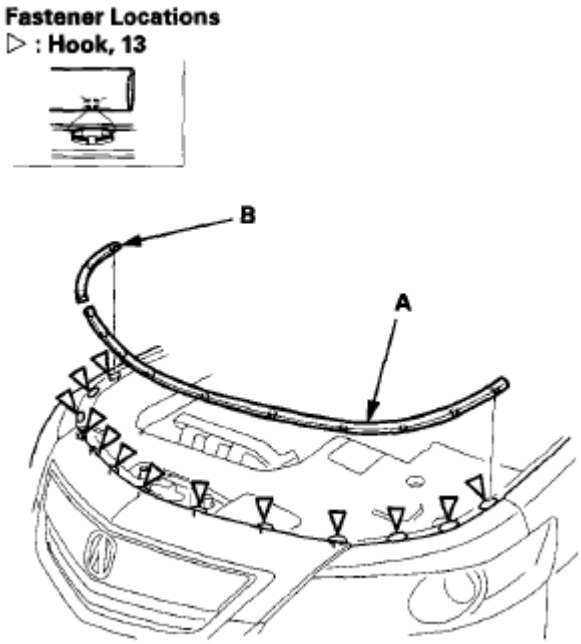

Fig. 4: Identifying Hood Seals & Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the seal in the reverse order of removal.

HOOD INSULATOR REPLACEMENT

NOTE: Take care not to scratch the hood.

1. Detach the clips with a clip remover. Remove the hood insulator (A) by pulling it away from the hooks (B).

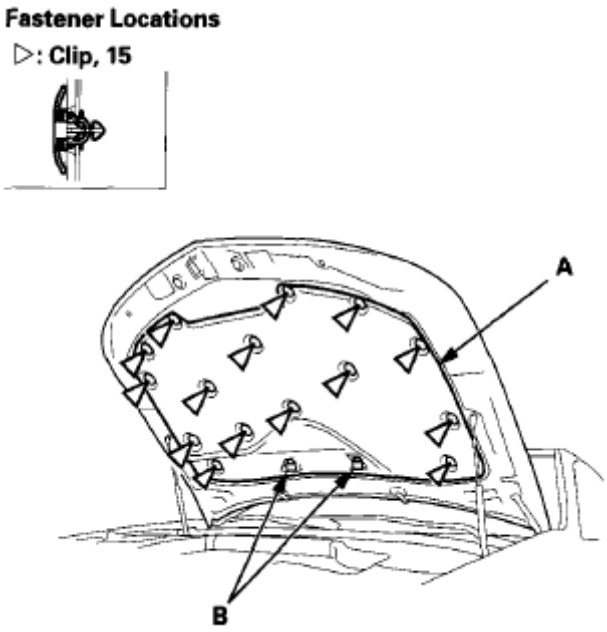

Fig. 5: Identifying Hood Insulator And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the insulator in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Push the clips and the hooks into place securely.

HOOD SUPPORT STRUT REPLACEMENT

NOTE:
- **Use eye protection when doing this procedure.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. With the help of an assistant, use a flat-tip screwdriver (A) to pry out the clips (B) on both ends of the hood support struts (C), and then remove the support struts from the pivot bolts (D). Do not remove the clips from the struts.

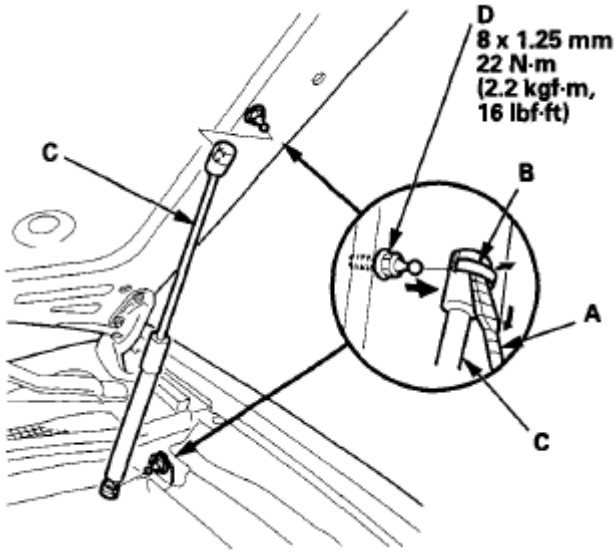

Fig. 6: Identifying Flat-Tip Screwdriver, Clips, Hood Support Struts, And Pivot Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Push the clips back into their original position, and then push the ends of the struts onto the pivot bolts.

HOOD OPENER CABLE REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the body or the related parts.**
- **Take care not to kink the hood opener cable.**

1. Remove these items:
   - Front bulkhead cover (see **ENGINE COMPARTMENT COVER REPLACEMENT**)
   - Front inner fender, driver's side as needed (see **FRONT INNER FENDER REPLACEMENT**)
   - Kick panel, driver's side (see **TRIM REMOVAL/INSTALLATION - DOOR AREAS**)
   - Front bulkhead center cover (see **HOOD LATCH REPLACEMENT**)
2. Disconnect the hood opener cable (A) from the hood latch (B) (see step 3).

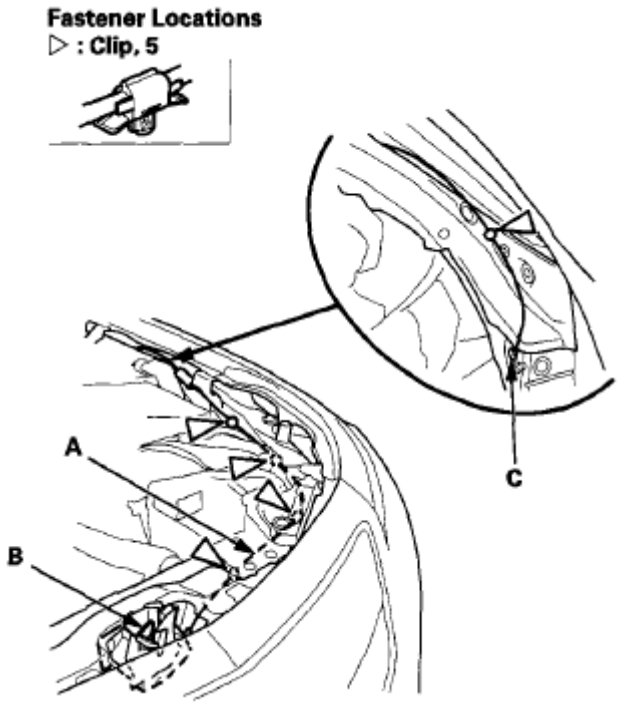

Fig. 7: Identifying Hood Opener Cable, Hood Latch And Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the clips with a clip remover, and remove the grommet (C) from the body, then remove the hood opener cable from the vehicle.
4. Install the cable in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Make sure the tape (A) is set to the front side of the clip (B).
   - Make sure the foam pad (C) is set properly.

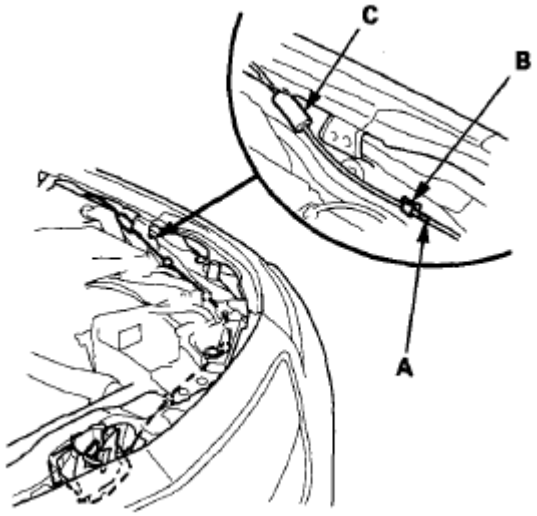

Fig. 8: Identifying Tape, Clip And Foam Pad

Courtesy of AMERICAN HONDA MOTOR CO., INC.

HOOD LATCH REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the body or the related parts.**

1. Remove these items:
   - Front bulkhead cover (see **ENGINE COMPARTMENT COVER REPLACEMENT**)
   - Front bulkhead brace cover (see **FRONT BULKHEAD BRACE COVER REPLACEMENT**)
2. Remove the bolts (A, B), then remove the front bulkhead center cover (C).

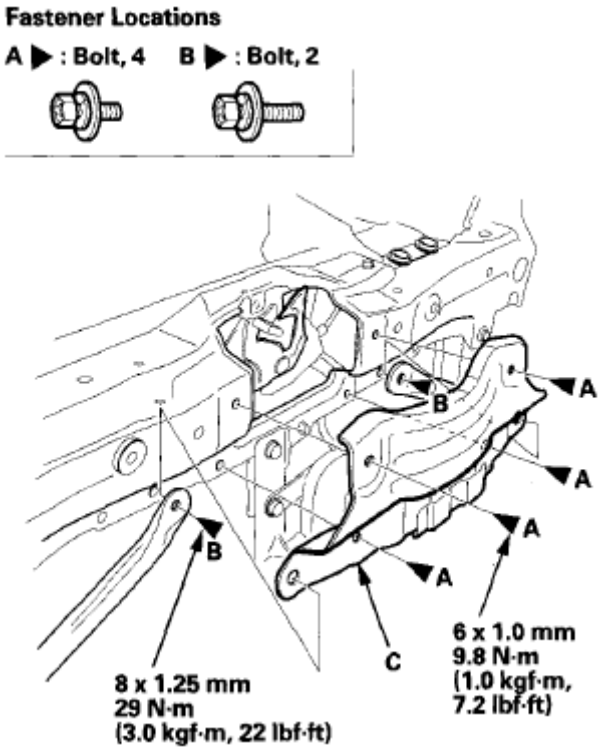

Fig. 9: Identifying Bulkhead Center Cover And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the bolts, then remove the hood latch (A) from the body, and disconnect the hood opener cable (B) from the hood latch.

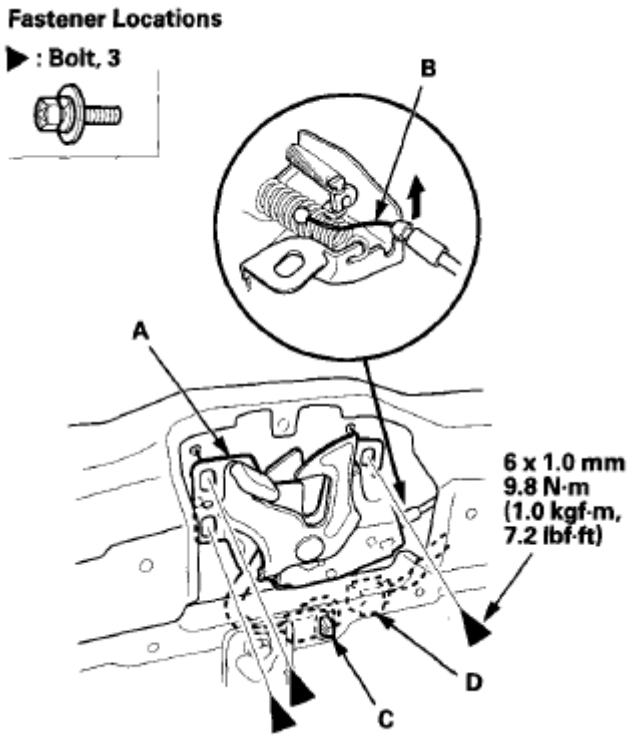

Fig. 10: Identifying Hood Latch, Harness Clips, Hood Latch Switch Connector And Hood Opener Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Detach the harness clip (C), and disconnect the hood latch switch connector (D).
5. Install the latch in the reverse order of removal, and note these items:
    - Apply multipurpose grease to each location on the hood latch indicated by the arrows.
    - Make sure the cable is connected properly, and the connector is plugged in properly.
    - Adjust the hood latch alignment (see step 4).
    - Make sure the hood opens properly and locks securely.

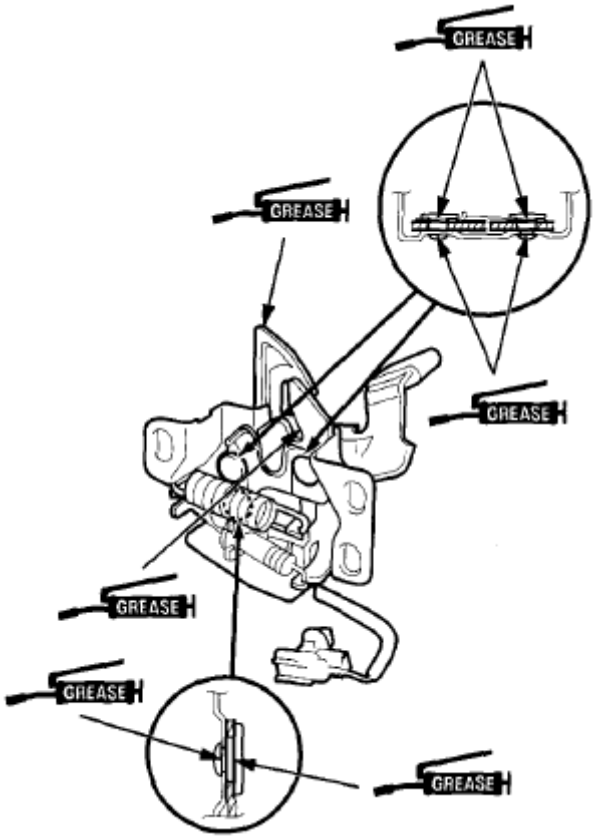

Fig. 11: Adjusting Hood Latch Alignment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

HOOD RELEASE HANDLE REPLACEMENT

NOTE: Take care not to kink the hood opener cable.

1. Remove the bolt, and release the hook (A), then remove the hood release handle (B) from the dashboard.

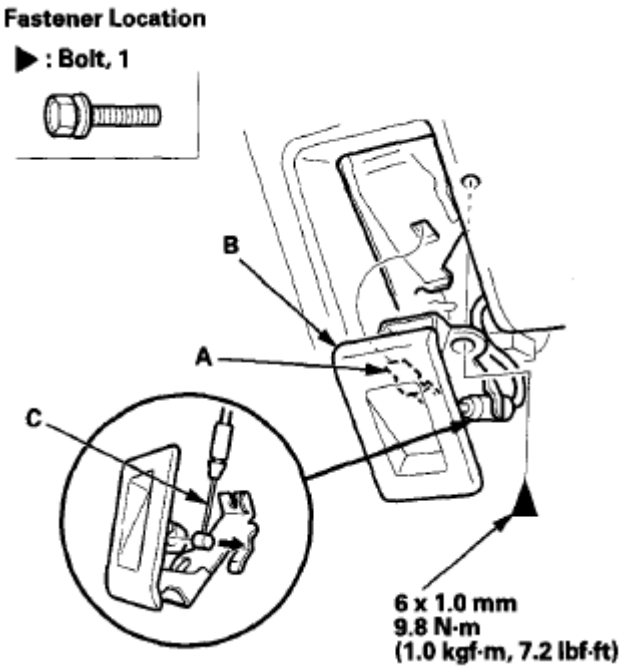

Fig. 12: Identifying Hook, Handle And Hood Opener Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Disconnect the hood opener cable (C) from the hood release handle.
3. Install the hood release handle in the reverse order of removal, and note these items:
    - Make sure the cable is connected properly.
    - Make sure the hood opens properly.

2012 ACCESSORIES & EQUIPMENT

Interior Trim - TL

COMPONENT LOCATION INDEX

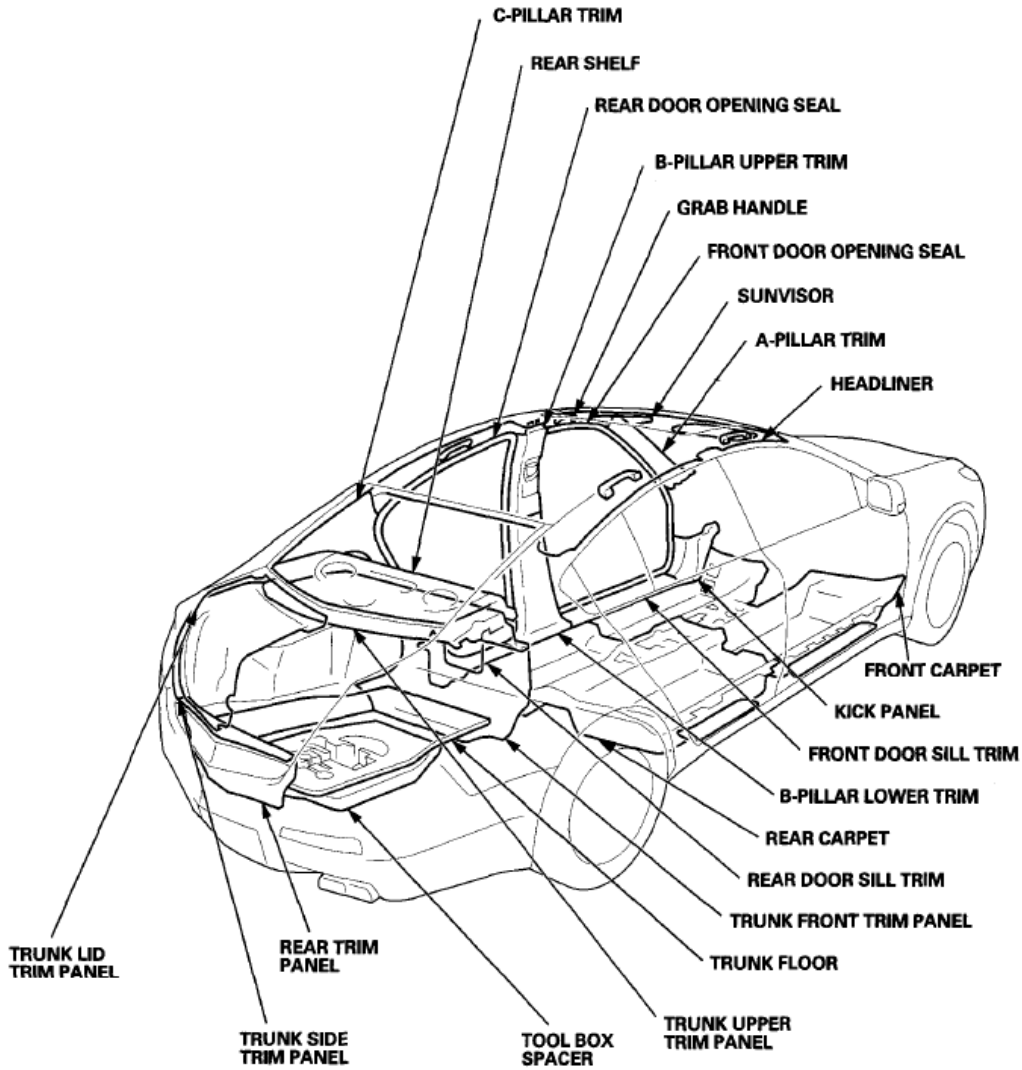

Fig. 1: Interior Trim Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRIM REMOVAL/INSTALLATION - DOOR AREAS

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

FRONT DOOR SILL AREA

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to bend or scratch the trim or the panels.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Release the hooks (A) from the kick panel (B) and the B-pillar lower trim (C), and pull up the front door sill trim (D) by hand to detach the clips (E), then remove the trim.

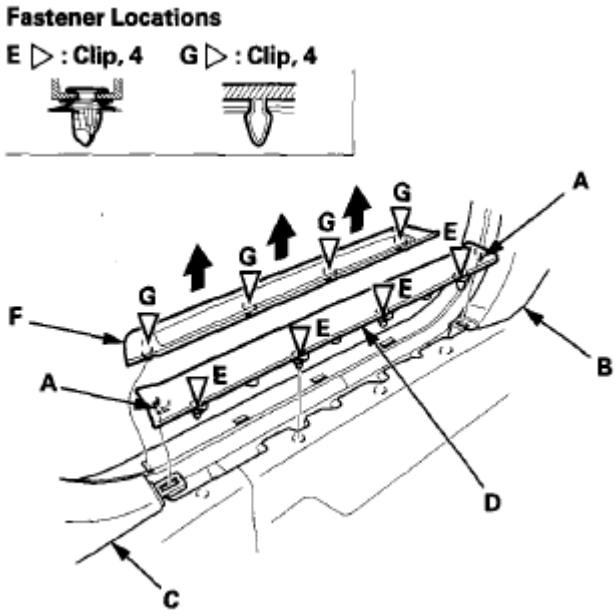

Fig. 2: Identifying Hooks, Kick Panel, B-Pillar Lower Trim, Front Door Sill Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If necessary, pull up the front side outer trim (F) to detach the clips (G), then remove the trim.
3. Remove the kick panels (A).
    1. Pull out the front door opening seal (B) as needed from the kick panel hooks (C).
    2. Pull back the kick panel by hand to detach the clips.

Driver's side

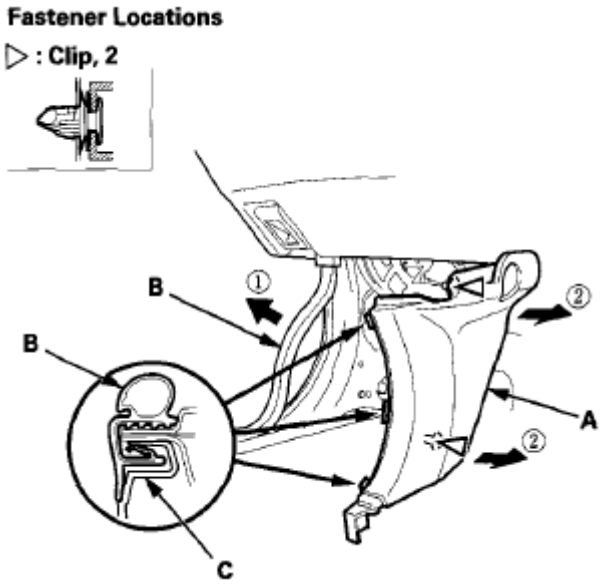

Fig. 3: Identifying Kick Panels, Front Door Opening Seal And Kick Panel Hooks (Driver'S Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Passenger's side

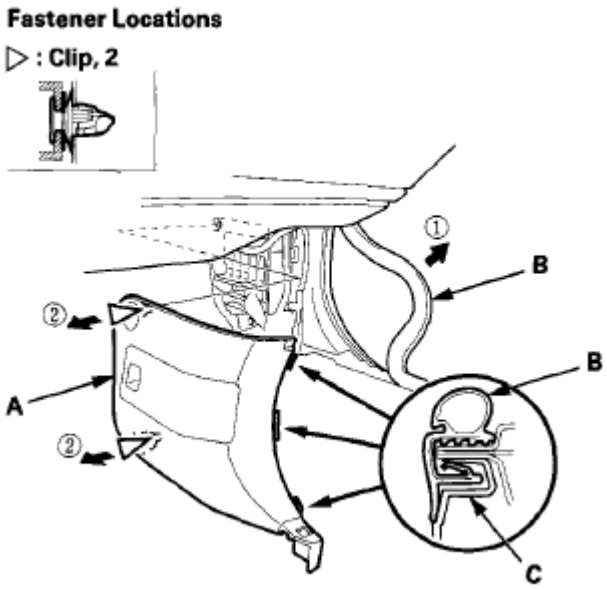

Fig. 4: Identifying Kick Panels, Front Door Opening Seal And Kick Panel Hooks (Passenger'S Seat)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the B-pillar lower trim (see **B-PILLAR UPPER/LOWER TRIM**).
5. Pull out the front door opening seal (A) from the trim hooks (B) around the front door opening flange, then remove the seal.

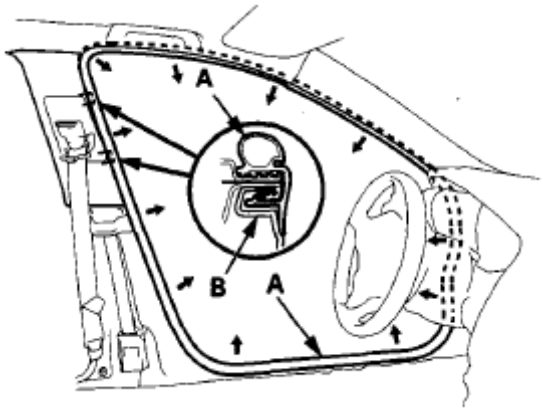

Fig. 5: Identifying Front Door Opening Seal, Trim Hooks And Front Door Opening Flange
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the trim in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Push the clips and the hooks into place securely.

REAR DOOR SILL AREA

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to bend or scratch the trim or the panels.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove the rear seat cushion (see **REAR SEAT REMOVAL/INSTALLATION**).
2. Release the hooks (A) and the tab (B) from the B-pillar lower trim (C). Pull up the rear door sill trim (D) by hand to detach the clips (E, F), then remove the trim.

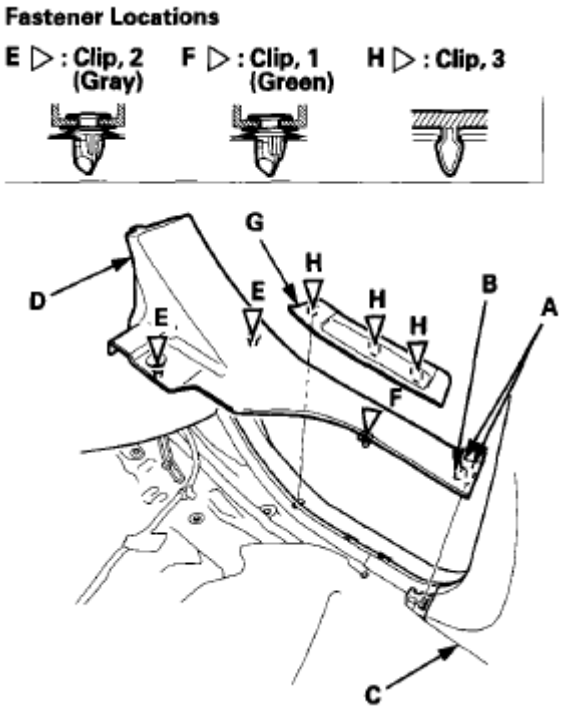

Fig. 6: Identifying Hooks, Tab, B-Pillar Lower Trim, Rear Door Sill Trim And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If necessary, pull up the rear side outer trim (G) to detach the clips (H), then remove the trim.
4. Remove the B-pillar lower trim (see **B-PILLAR UPPER/LOWER TRIM**).
5. Pull out the rear door opening seal (A) from the trim hooks (B) around the rear door opening flange, then remove the seal.

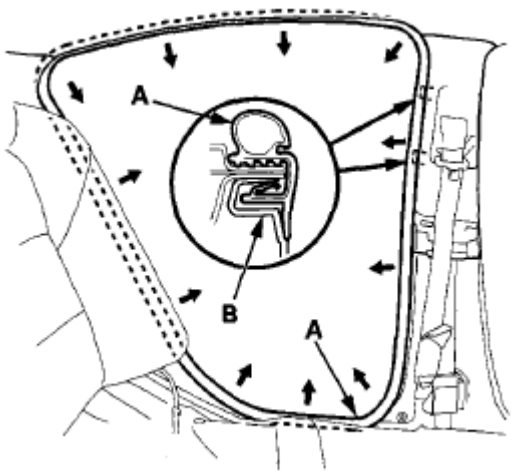

Fig. 7: Identifying Rear Door Opening Seal And Trim Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the trim in the reverse order of removal, and note these items:

- If the clips are damaged or stress-whitened, replace them with new ones.
- Push the clips, the hooks, and the tabs into place securely.

TRIM REMOVAL/INSTALLATION - PILLAR AREAS

Special Tools Required

KTC Trim Tool Set SOJATP2014*

* Available through the Acura Tool and Equipment Program; call 888-424-6857

A-PILLAR TRIM

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- **If side airbags and/or side curtain airbags have deployed, the affected pillar area trim and attachment clips must be replaced. Refer to Component Replacement/Inspection After Deployment (see COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT).**
- **Put on gloves to protect your hands.**
- **Take care not to scratch the trims or the panels.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**
- **The upper clip (A) in the A-pillar trim (B) consists of a plastic grommet (C) and a metal pin (D). The grommet expanded by the pin secures it to the body panel (E). The projections (F) on the pin will break during removal, so the upper clip must be replaced with a new one when the trim is reinstalled.**

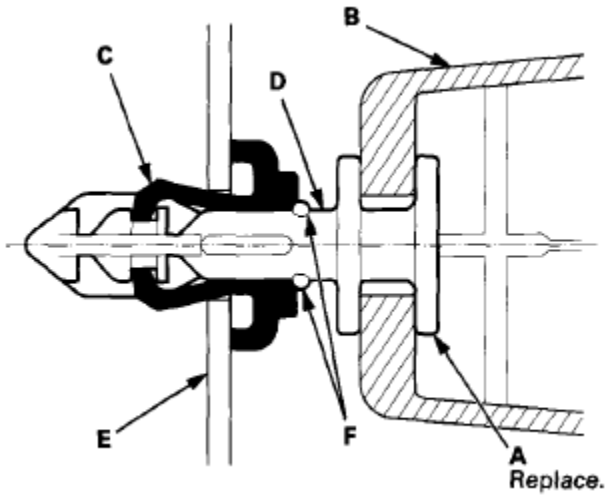

Fig. 8: Identifying Upper Clips, A-Pillar Trim, Plastic Grommet, Metal Pin, Body Panel And Projections
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Pull the front door opening seal away from the A-pillar as needed (see step 5).
2. Hit the upper clip (A) in the A-pillar trim (B) with a rubber mallet. The clip is located under the point where the index tab (C) on the edge of the trim indicates. Hitting the clip breaks the projections (D) on the pin (E) and pushes it into the grommet (F) on the body (G).

NOTE: The upper clip must be replaced with a new one when the A-pillar trim is reinstalled.

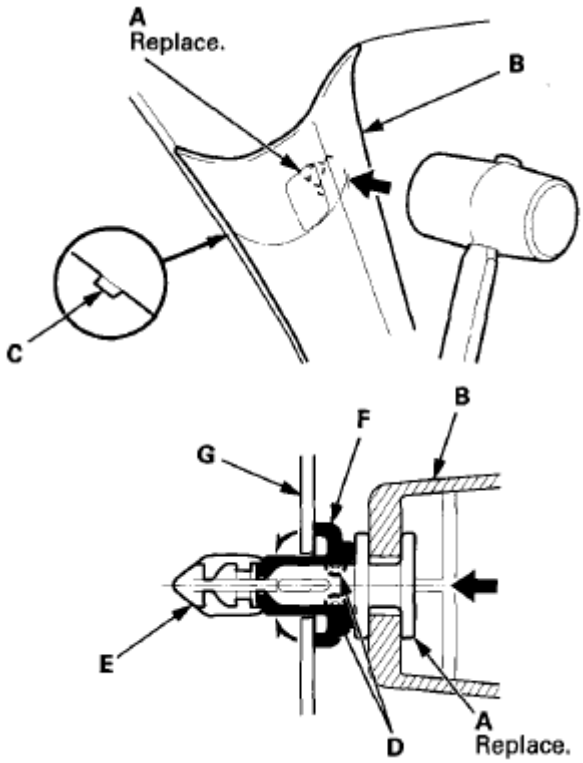

Fig. 9: Hitting Upper Clip In A-Pillar Trim With Rubber Mallet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull back the top of the A-pillar trim (A) by hand to remove the upper clip (B) from the body (C).

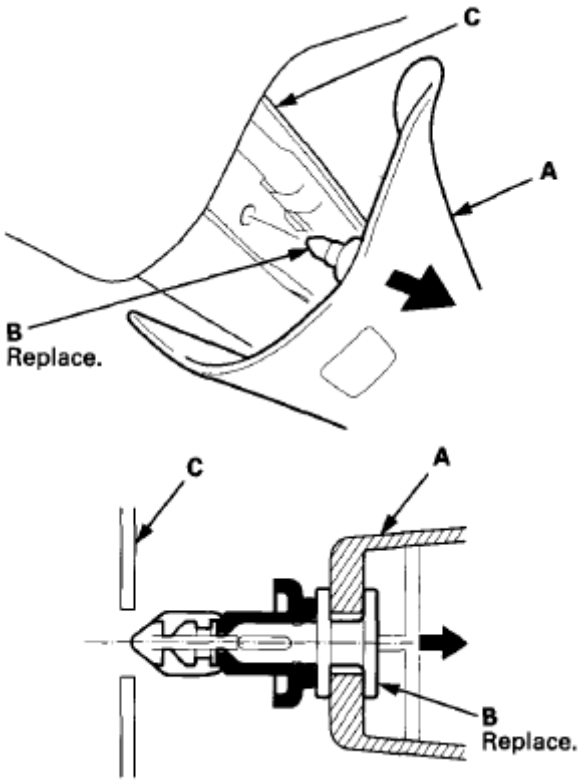

Fig. 10: Identifying A-Pillar Trim, Upper Clip And Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pull the A-pillar trim (A) by hand to detach the clip. Pull up the trim from the dashboard (B), and disconnect the tweeter connector (C), then remove the trim.

NOTE: Be careful not to damage the tweeter connector when removing the A-pillar trim.

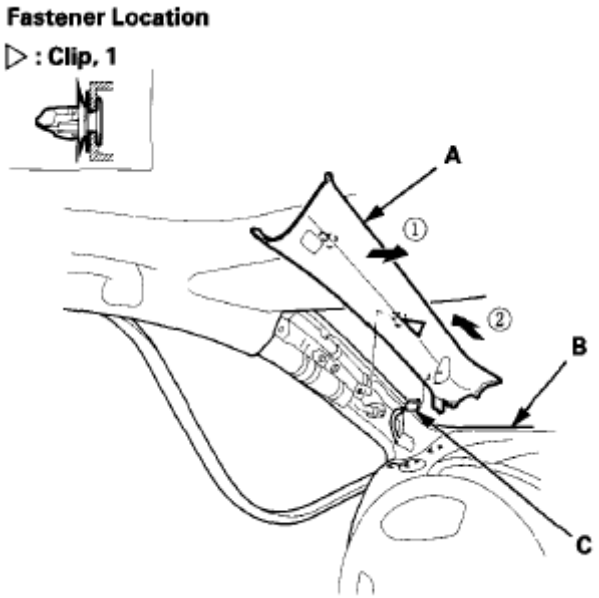

Fig. 11: Identifying A-Pillar Trim, Dashboard And Tweeter Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the side curtain airbag has deployed, replace the A-pillar trim, along with the other parts listed for side curtain airbag deployment (see **COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT**).
6. If the side curtain airbag has not deployed, check the A-pillar trim (A) and note the following items:
   - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the A-pillar trim and replace it with a new one if it has any of the following damage:
     - Any cracks, deformations, or stress-whitened areas in the A-pillar trim
     - Any cracks or stress-whitening in the clip seating surfaces (B)
   - After checking and adjusting the overlap between the headliner and the A-pillar trim, replace the upper clip (C) with a new one.
   - If the clip (D) is damaged or stress-whitened, replace it with a new one.

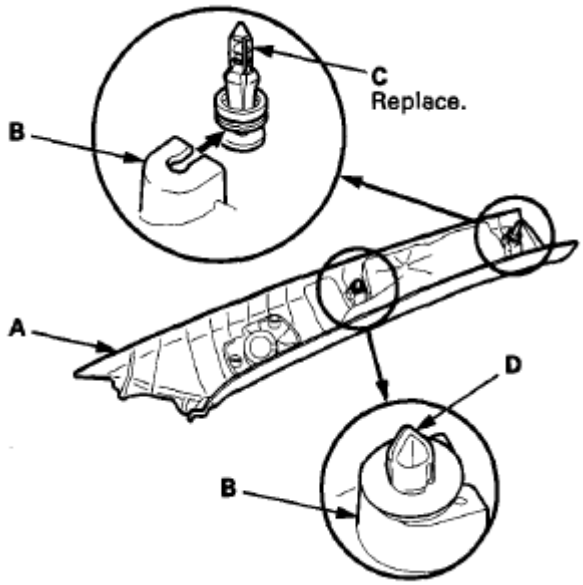

Fig. 12: Identifying A-Pillar Trim, Clip Seating Surfaces, Upper Clip And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Temporarily install the A-pillar trim (without the upper clip) to check the overlap between the trim and the headliner (see **B-PILLAR TRIM**). Remove the trim, and if necessary, adjust the overlap.
8. Carefully install the new upper clip (A) to the A-pillar trim (B). Be sure that the grommet (C) is nearest to the top of the pin (D) as shown.

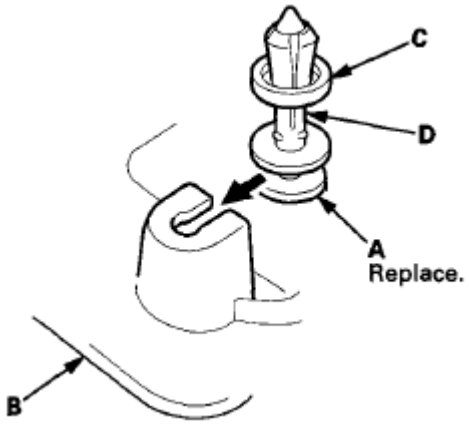

Fig. 13: Installing Upper Clip To A-Pillar Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Reinstall the A-pillar trim (A).
    1. Insert the bottom of the trim into the dashboard (B), then reconnect the tweeter connector (C).
    2. Place the trim over the A-pillar (D), and fit the upper clip (E) and the lower clip into the holes (F) in the A-pillar, then lightly push the trim into place.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the trim ribs.**
- **Do not push too hard on the A-pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the A-pillar trim to verify that all clips are securely fastened.**

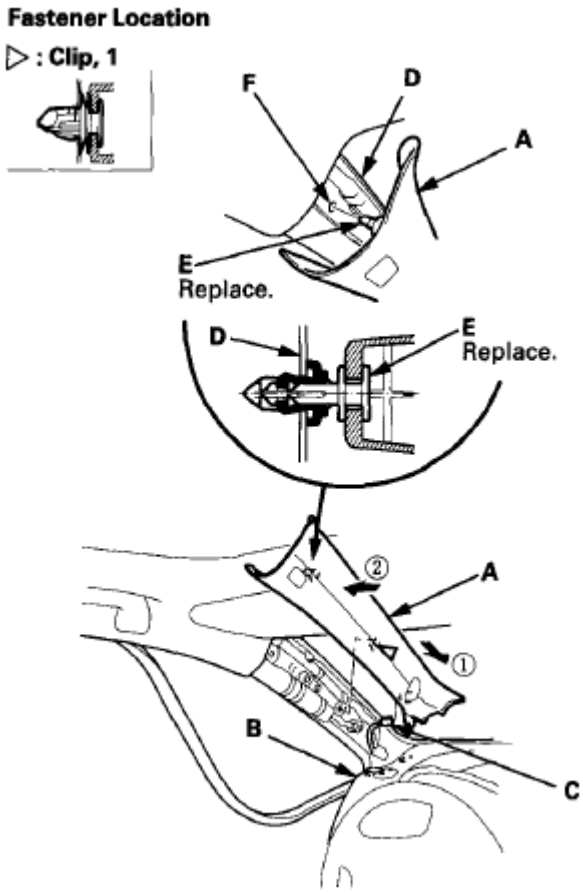

Fig. 14: Identifying A-Pillar Trim, Upper Clip, Dashboard And Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Reinstall the front door opening seal.

B-PILLAR UPPER/LOWER TRIM

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- **If side airbags and/or side curtain airbags have deployed, the affected**

pillar area trim and attachment clips must be replaced. Refer to Component Replacement/Inspection After Deployment (see COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT).

- **Put on gloves to protect your hands.**
- **Take care not to bend or scratch the trims or the panels.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove these items:
   - Front door sill trim (see **FRONT DOOR SILL AREA**)
   - Rear door sill trim (see **REAR DOOR SILL AREA**)
2. Slide the front seat forward fully.
3. Remove the B-pillar lower trim (A).
   1. Pull back the upper area of the trim to release the hooks (B).
   2. Detach the clip by pulling back the bottom of the trim by hand.

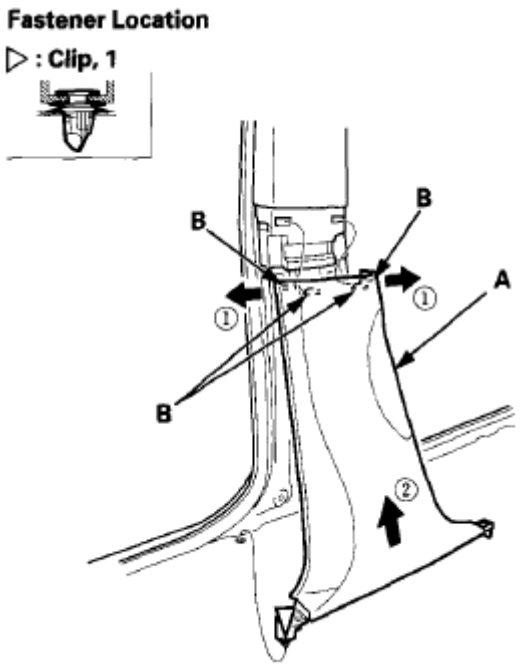

Fig. 15: Identifying B-Pillar Trim And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove these items:
   - Front seat belt lower anchor (see **FRONT SEAT BELT REPLACEMENT**)
   - Front door opening seal, as needed (see step 5)
   - Rear door opening seal, as needed (see step 5)
5. Remove the B-pillar upper trim (A).

1. Pull back the bottom of the trim by hand to release the lower hooks (B).
2. Pull back the bottom of the trim to detach the clip.
3. Pull down the trim to release the upper hooks (C) from the holes in the body.

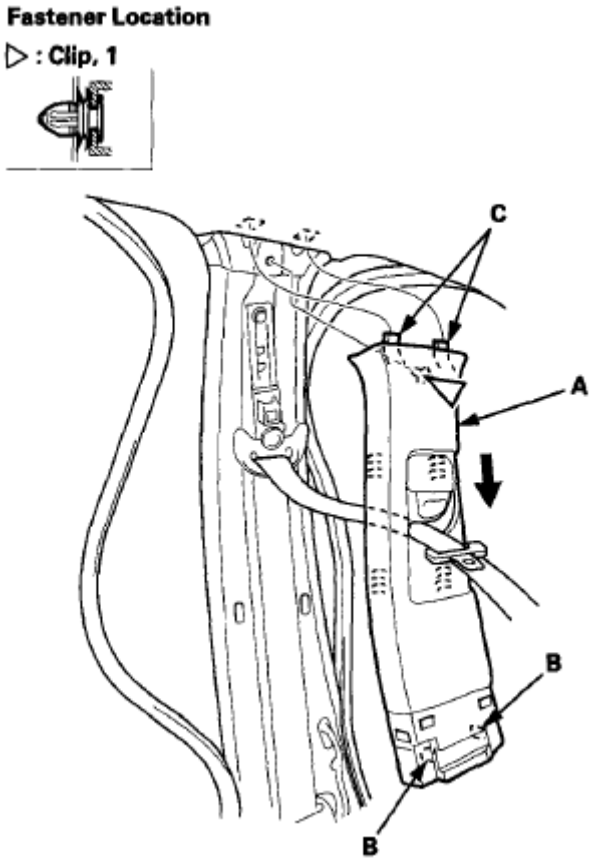

Fig. 16: Identifying B-Pillar Trim, Lower Hooks And Upper Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Pass the front seat belt lower anchor (A) out through a hole in the slider (B), then remove the B-pillar upper trim (C).

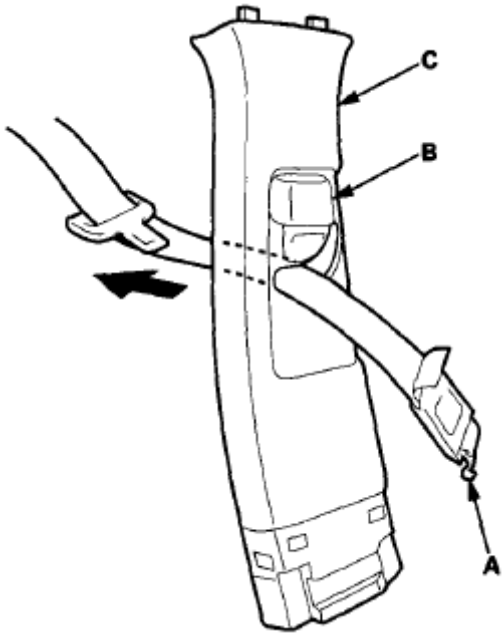

Fig. 17: Removing B-Pillar Upper Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the trim in the reverse order of removal, and note these items:
   - If the side curtain airbag has deployed, replace the B-pillar upper trim (A), the B-pillar lower trim (B), and the clip (C), along with the other parts listed for side curtain airbag deployment (see **COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT**).
   - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the trim and replace it with a new one if it has any of the following damage:
     - Any cracks or deformations in the B-pillar upper trim or the hooks (D), or any stress-whitened areas in the upper part of the trim
     - Any cracks or deformations in the B-pillar lower trim, or any breakages in the area (E) that overlaps the B-pillar upper trim
     - Any cracks or stress-whitening in the clip seating surface (F)
   - If the clip is damaged or stress-whitened, replace it with a new one.
   - Replace any damaged parts with new ones.
   - Make sure the top of the trim overlaps with the headliner correctly (see **B-PILLAR TRIM**).
   - Make sure the pin (G) on the front seat belt shoulder anchor adjuster (H) and the hole (I) on the back of the slider are engaged when installing the B-pillar upper trim.
   - Make sure the upper hooks are installed into the holes in the body securely.
   - Push the clip and the hooks into place securely.
   - Before installing the anchor bolt, make sure there are no twists or kinks in the seat belt.

Trim inspection

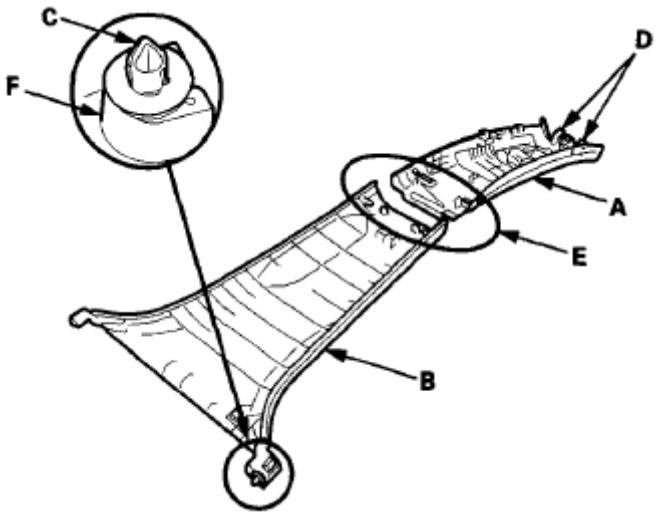

Fig. 18: Inspecting Trim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Slider engagement with shoulder anchor adjuster

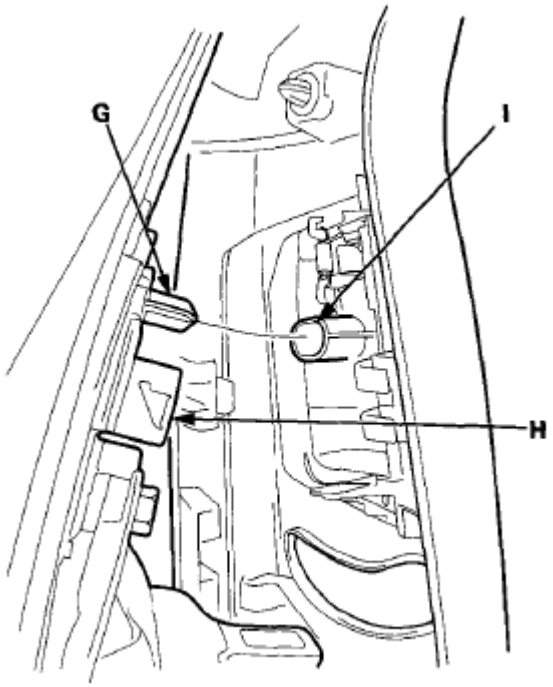

Fig. 19: Identifying Pin, Shoulder Anchor Adjuster And Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

C-PILLAR TRIM

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**)

before doing repairs or service.

NOTE:

- **If side airbags and/or side curtain airbags have deployed, the affected pillar area trim and attachment clips must be replaced. Refer to Component Replacement/Inspection After Deployment (see COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT).**
- **Put on gloves to protect your hands.**
- **Take care not to scratch the trims or the panels.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**
- **The upper clip (A) in the C-pillar trim (B) consists of a plastic grommet (C) and a metal pin (D). The grommet expanded by the pin secures it to the body panel (E). The projections (F) on the pin will break during removal, so the upper clip must be replaced with a new one when the trim is reinstalled.**

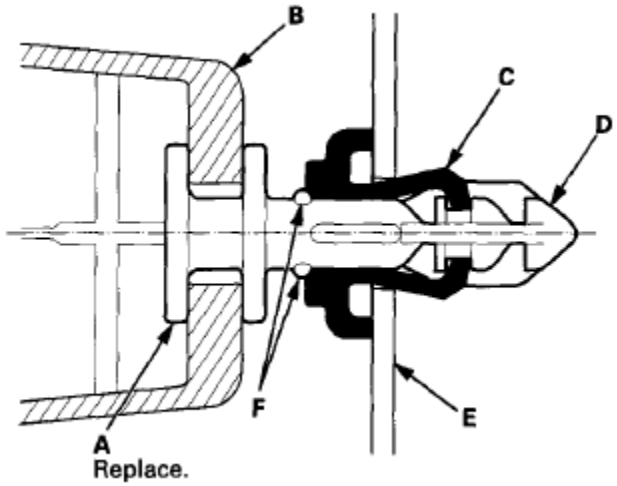

Fig. 20: Identifying Upper Clip, C-Pillar Trim, Grommet, Pin, Panel Projections
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Remove these items:
   - Rear seat-back (see **REAR SEAT REMOVAL/INSTALLATION**)
   - Rear door opening seal, as needed (see step 5)
2. Hit the upper clip (A) in the C-pillar trim (B) with a rubber mallet. Hitting the clip breaks the projections (C) on the pin (D) and pushes it into the grommet (E) on the body (F).

NOTE: **The upper clip must be replaced with a new one when the C-pillar trim is reinstalled.**

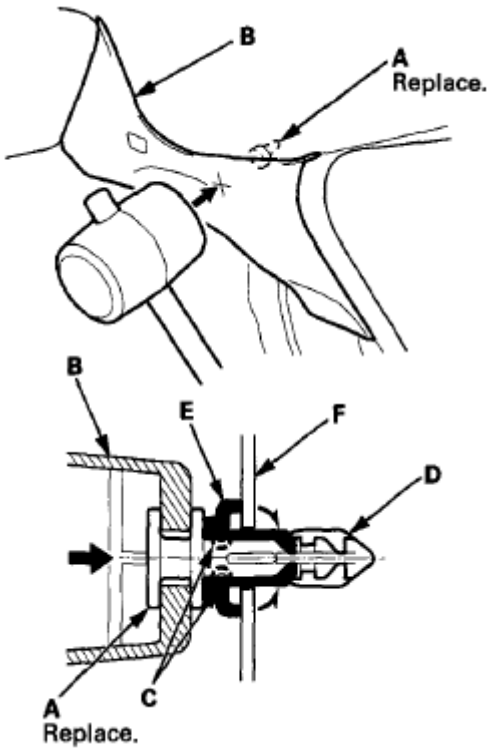

Fig. 21: Hitting Upper Clip In C-Pillar Trim Using Rubber Mallet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull back the top of the C-pillar trim (A) by hand to remove the upper clip (B) from the body (C).

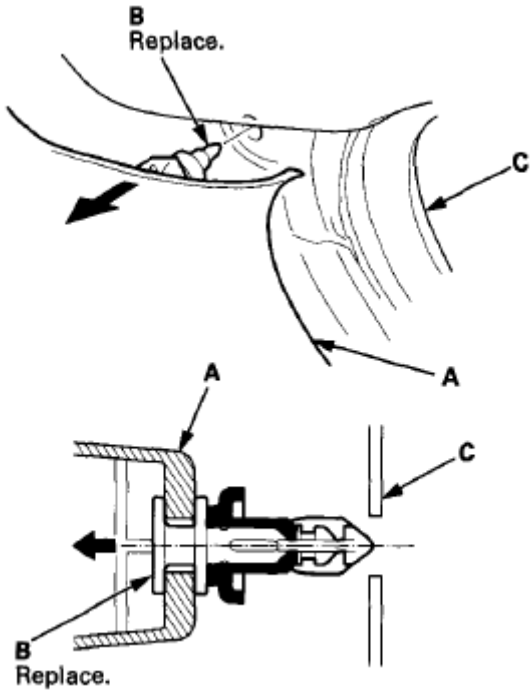

Fig. 22: Removing Upper Clip From Body

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pull the C-pillar trim (A) by hand to detach the clips and to release the hooks (B), then pull out the trim from the rear shelf (C).

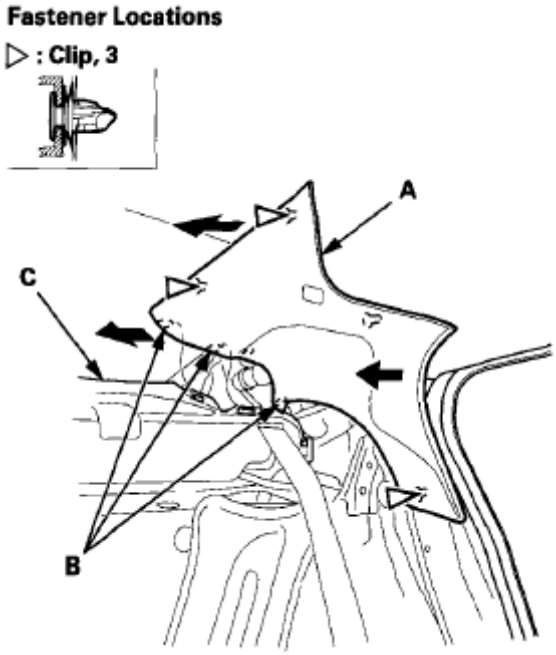

Fig. 23: Pulling C-Pillar Trim By Hand To Detach Clips And To Release Hooks To Pull Out Trim From Rear Shelf
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the side curtain airbag has deployed, replace the C-pillar trim, along with the other parts listed for side curtain airbag deployment (see **COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT**).
6. If the side curtain airbag has not deployed, check the C-pillar trim (A) and note the following items:
   - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the trim and replace it with a new one if it has any of the following damage:
     - Any cracks, deformations, or stress-whitened areas in the C-pillar trim
     - Any cracks or stress-whitening in the clip seating surfaces (B)
   - After checking and adjusting the overlap between the headliner and the C-pillar trim, replace the upper clip (C) with a new one.
   - If the clips (D) are damaged or stress-whitened, replace them with new ones.

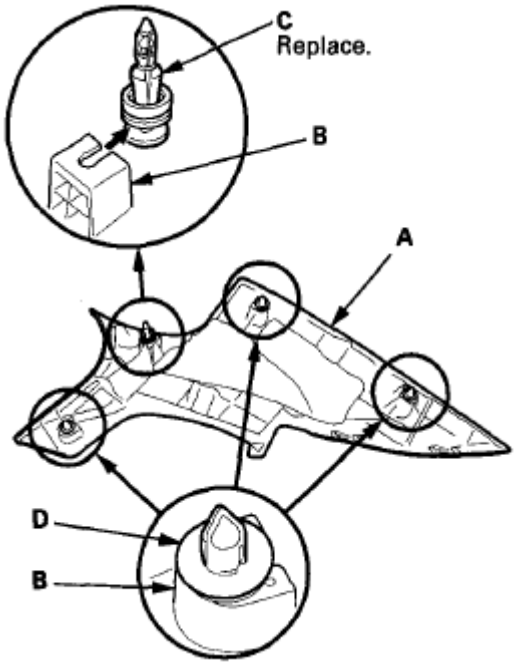

Fig. 24: Identifying C-Pillar Trim, Clip Seating Surfaces, Upper Clip And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Temporarily install the C-pillar trim (without the upper clip) to check the overlap between the trim and the headliner (see **B-PILLAR TRIM**). Remove the trim, and if necessary, adjust the overlap.
8. Carefully install the new upper clip (A) to the C-pillar trim (B). Be sure that the grommet (C) is nearest to the top of the pin (D) as shown.

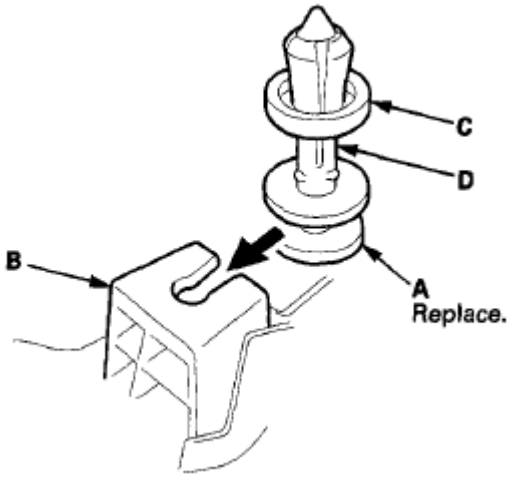

Fig. 25: Identifying Upper Clip, C-Pillar Trim, Grommet And Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Reinstall the C-pillar trim (A).
    1. Insert the bottom hooks (B) of the trim in the rear shelf (C).

2. Place the trim over the C-pillar (D), and fit the upper clip (E) and the lower clips into the holes (F) in the C-pillar, then lightly push the trim into place.

NOTE:

- **Make sure the side curtain airbag is not tucked under the clips or the trim ribs.**
- **Do not push too hard on the C-pillar trim. If you push too hard, the clip will be damaged, and it will not hold the trim properly.**
- **Gently tug on the C-pillar trim to verify that all clips are securely fastened.**

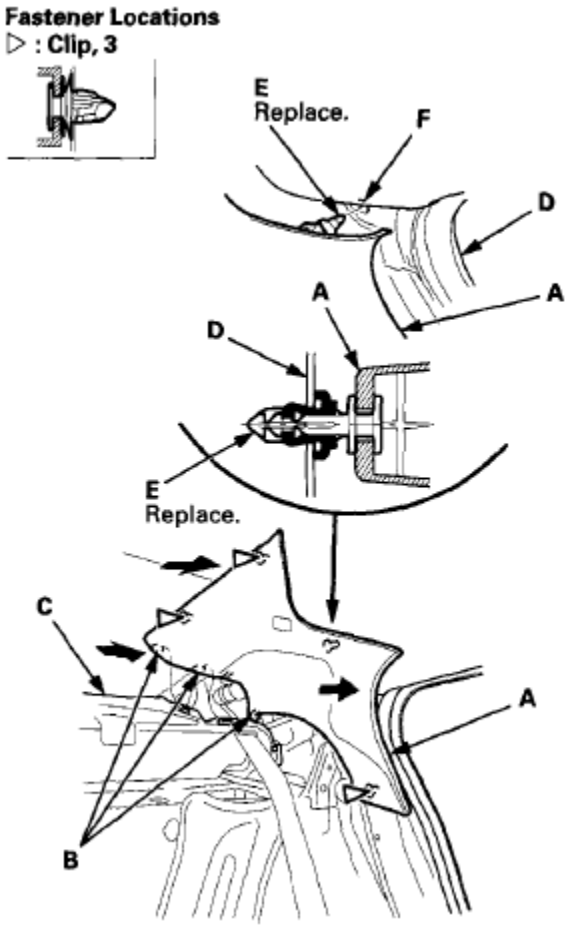

Fig. 26: Inserting Bottom Hooks Of Trim In Rear Shelf
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Reinstall the rear door opening seal.

TRIM REMOVAL/INSTALLATION - REAR SHELF AREA

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

REAR SHELF

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to bend or scratch the rear shelf or the trim.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove the C-pillar trims, both sides (see **C-PILLAR TRIM**).
2. Remove the rear shelf (A).
    1. Pull up the entire rear shelf to detach the clips.
    2. Pull both rear seat belts (B) and the rear center seat belt (C) out through the slits (D) in the rear shelf.

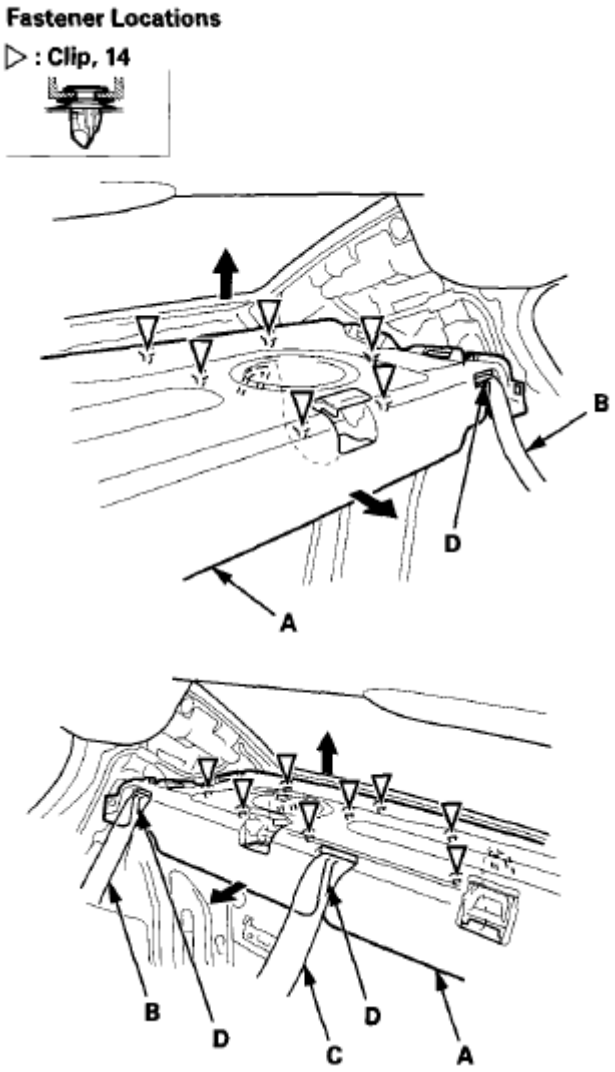

Fig. 27: Pulling Rear Seat Belts And Rear Center Seat Belt Out Through Slits In Rear Shelf
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the shelf in the reverse order of removal, and note these items:
   - Remove any clips with a clip remover left in the body, and install them on the rear shelf.
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - When installing the rear shelf, slip the rear seat belts and the rear center seat belt through the slits in the rear shelf properly.
   - Push the clips and the hooks into place securely.

TRIM REMOVAL/INSTALLATION - TRUNK AREA

Special Tools Required

KTC Trim Tool Set SOJATP2014*

* Available through the Acura Tool and Equipment Program; call 888-424-6857

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to bend or scratch the trim or the panels.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove the trunk floor (A).

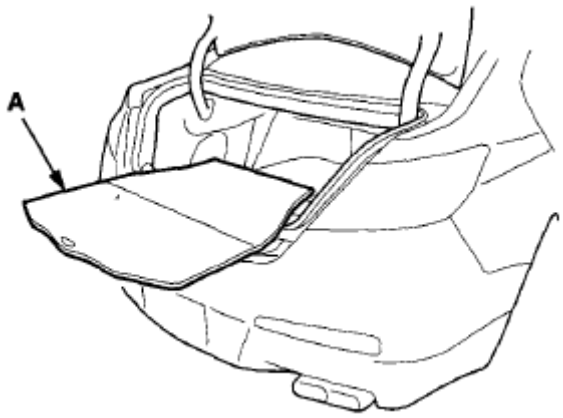

Fig. 28: Identifying Trunk Floor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the tool box spacer (A).

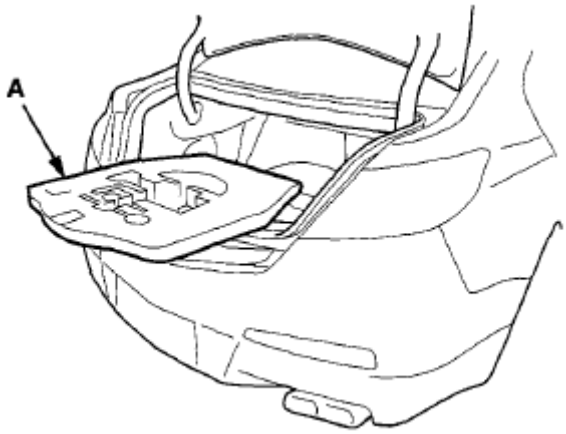

Fig. 29: Identifying Tool Box Spacer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the trunk lid weatherstrip near the trunk rear trim panel (see **TRUNK LID WEATHERSTRIP REPLACEMENT**).
4. Detach the clips, and release the hooks (A) and the tabs (6) by pulling up the trunk rear trim panel (C), then remove the panel.

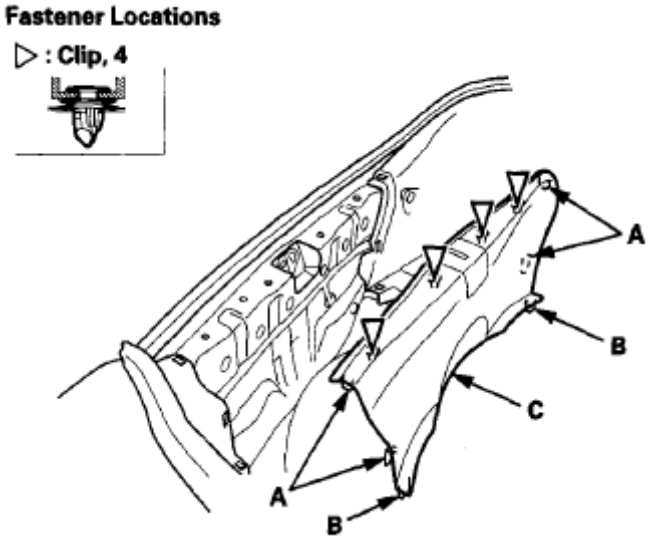

Fig. 30: Identifying Hooks, Tabs And Trunk Rear Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Detach the clips, and release the Velcro fasteners (A), then remove the trunk front trim panel (B).

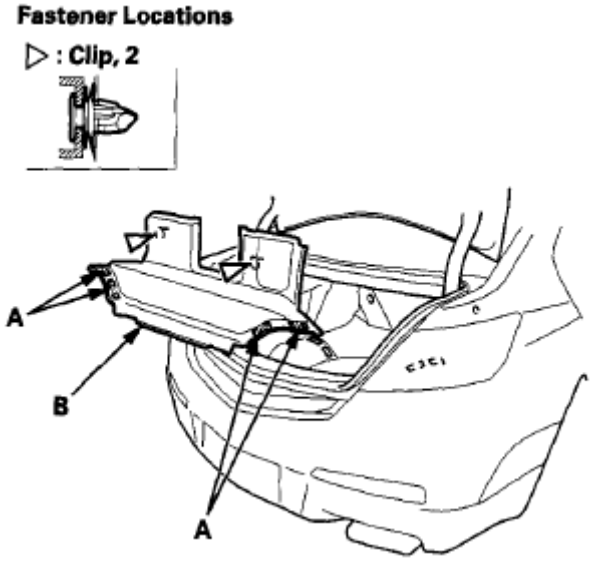

Fig. 31: Identifying Velcro Fasteners And Trunk Front Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Detach the clips (A, B), and remove the cargo hook buttons (C, D), then remove the trunk side trim panel (E).

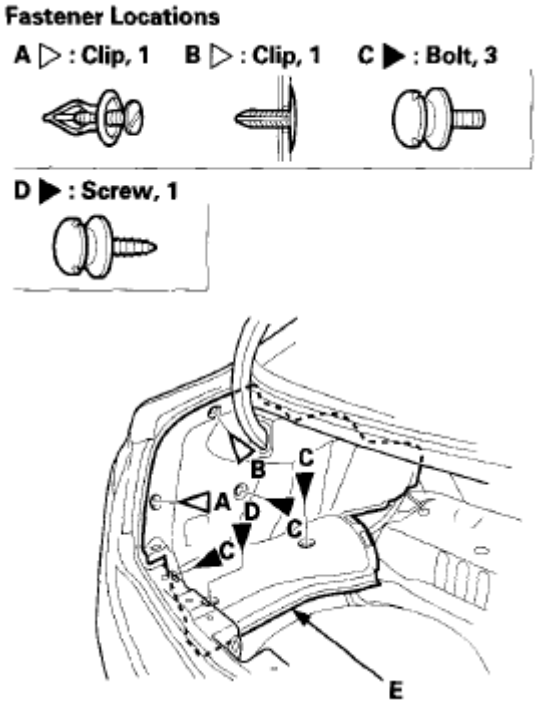

Fig. 32: Identifying Clips, Cargo Hook Buttons And Trunk Side Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the rear seat-back (see **REAR SEAT REMOVAL/INSTALLATION**).
8. Detach the clips.

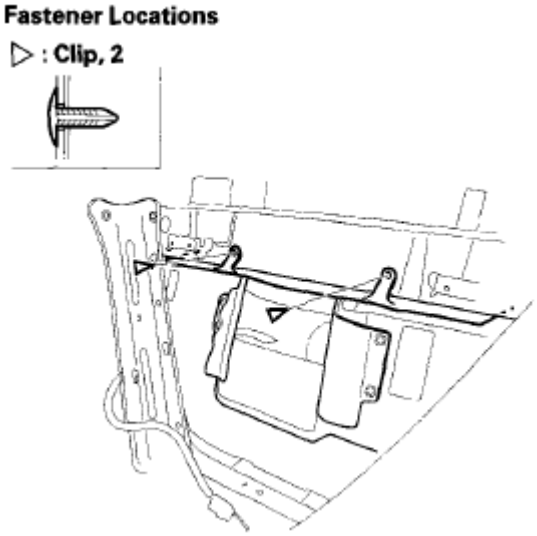

Fig. 33: Detaching Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Lower the trunk upper trim panel (A) to detach the clips, then remove the panel from the trunk compartment.

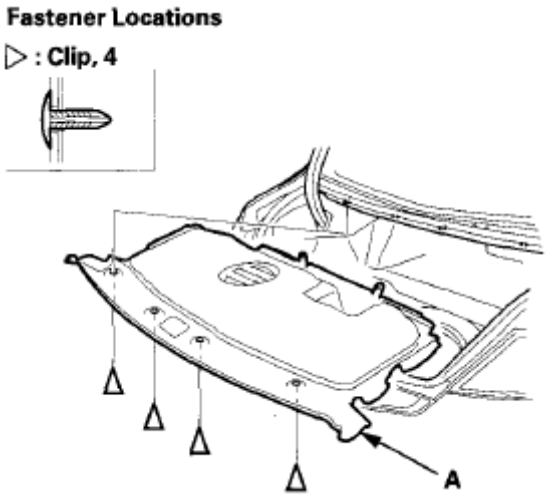

Fig. 34: Identifying Upper Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the trim in the reverse order of removal, and note these items:
    - If the clips are damaged or stress-whitened, replace them with new ones.
    - Push the clips and the hooks into place securely.

TRIM REMOVAL/INSTALLATION - TRUNK LID

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

TRUNK LID TRIM PANEL

NOTE:
- **Put on gloves to protect your hands.**
- **Take care not to bend or scratch the panel.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove the trunk lid cushion (see **TRUNK LID WEATHERSTRIP REPLACEMENT**).
2. Detach the clip, and remove the trunk lid hinge trim A by releasing the hooks (C) from the trunk lid hinge B (on both sides).

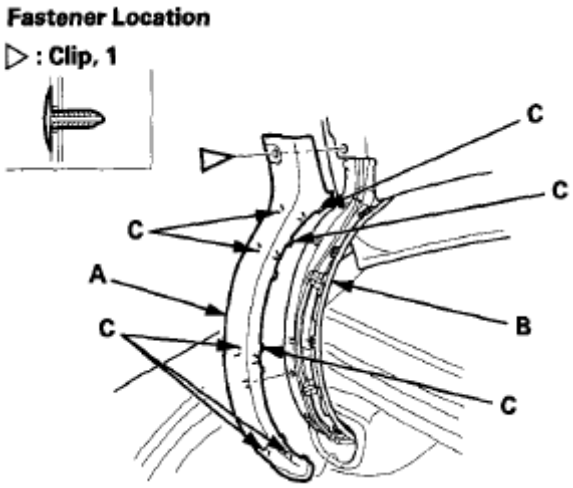

Fig. 35: Identifying Trunk Lid Hinge Trim, Hooks And Trunk Lid Hinge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the clips with a clip remover, then remove the trunk lid trim panel (A).

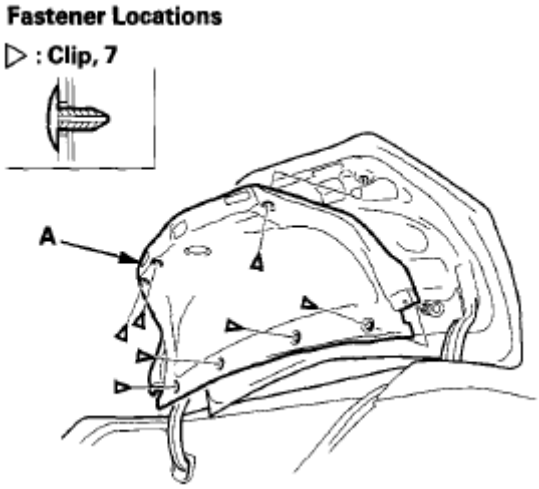

Fig. 36: Identifying Trunk Lid Trim Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If necessary, release the hook (A), then remove the trunk lid handle (B).

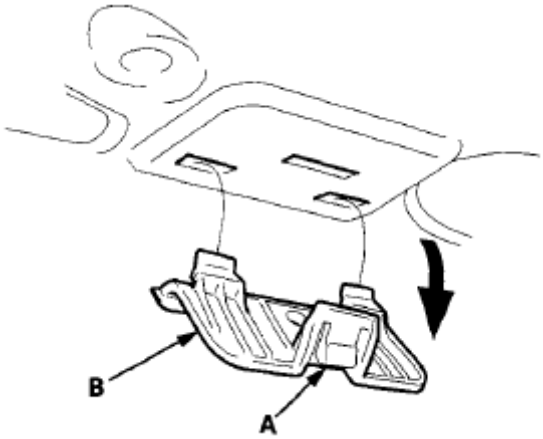

Fig. 37: Removing Trunk Lid Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the trim in the reverse order of removal, and note these items:
   - If the clips are damaged or stress-whitened, replace them with new ones.
   - Push the clips and the hooks into place securely.

TRUNK LID HINGE TRIM

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to bend or scratch the panel.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove the trunk side trim panel as needed (see **TRIM REMOVAL/INSTALLATION - TRUNK AREA**).
2. Detach the clip, and remove the trunk lid hinge trim A by releasing the hooks (C) from the trunk lid hinge trim B.

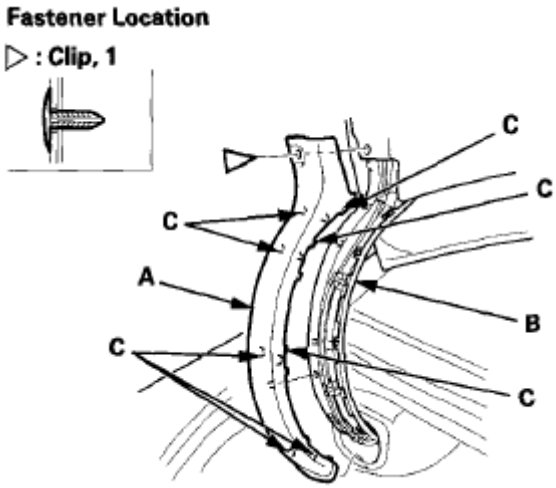

Fig. 38: Identifying Trunk Lid Hinge Trim And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the trunk lid hinge trim B from the trunk lid hinge (A).

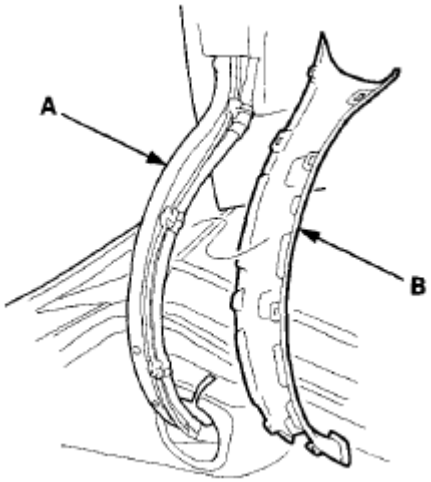

Fig. 39: Identifying Trunk Lid Hinge Trim And Trunk Lid Hinge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the trim in the reverse order of removal, and note these items:
   - If the clip is damaged or stress-whitened, replace it with a new one.
   - Push the clip and the hooks into place securely.

SUNVISOR REMOVAL/INSTALLATION

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to damage the sunvisor or the headliner.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to**

prevent damage.

1. Insert a flat-tip screwdriver through the hole in the front side of the bracket cover (A), and push the hook (B). Make sure the hook is unlocked.

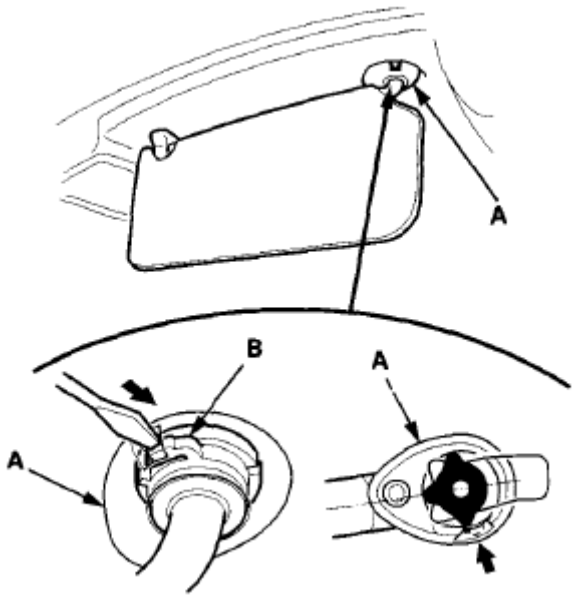

Fig. 40: Identifying Bracket Cover And Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. While pushing in the hook (A) with a flat-tip screwdriver, release the sunvisor (B) from the holder (C), and rotate the sunvisor backward about 45°. Make sure the hook slides into the bracket cover as you rotate the sunvisor.

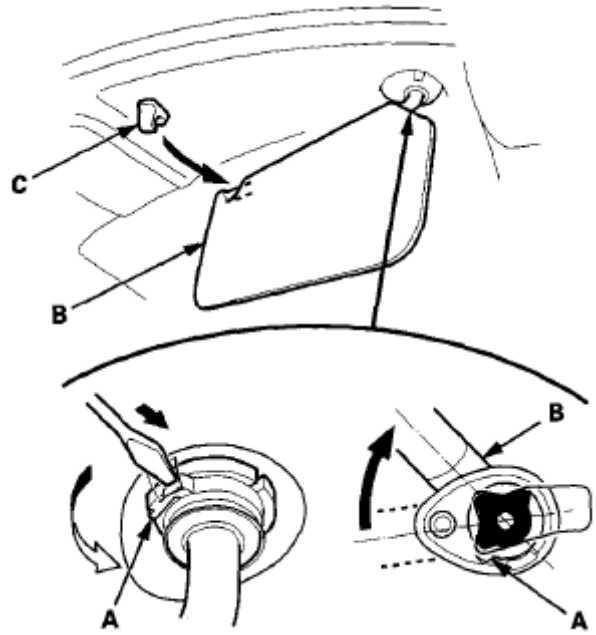

Fig. 41: Identifying Hook, Sunvisor And Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pull down the sunvisor (A) to release the pin (B) and the bracket (C) from the holes in the body. Then pull out the vanity mirror light connector (D), and disconnect it.

NOTE: If the sunvisor cannot be pulled down, the hook has not rotated into the bracket cover. Repeat step 2 to rotate the hook.

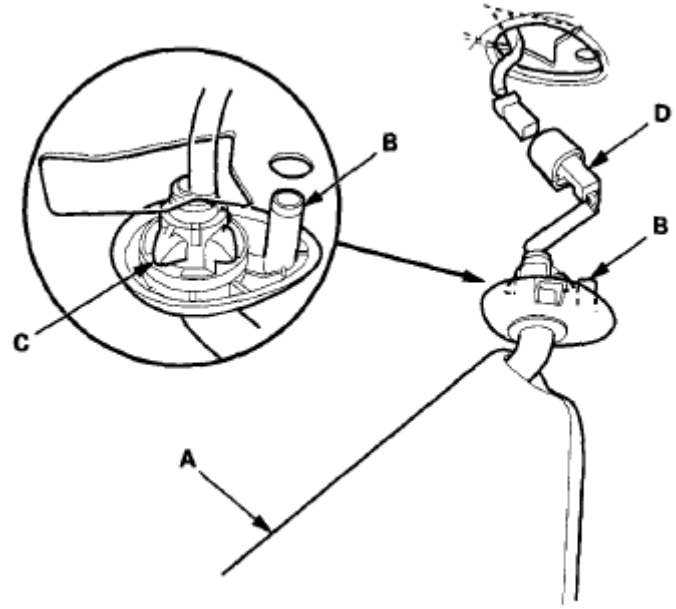

Fig. 42: Identifying Sunvisor, Pin, Bracket And Mirror Light Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn the holder (A) 45° counterclockwise, and pull it down to remove it from the holder grommet (B).

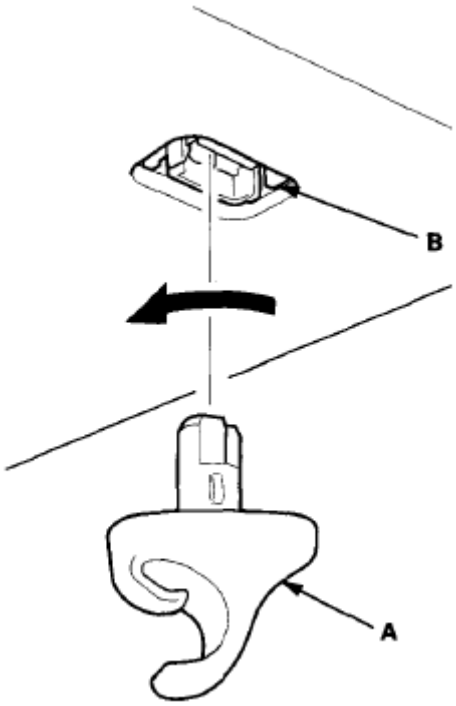

Fig. 43: Identifying Holder And Grommet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Pry out the holder grommet (A) from the body by pinching its hooks (B).

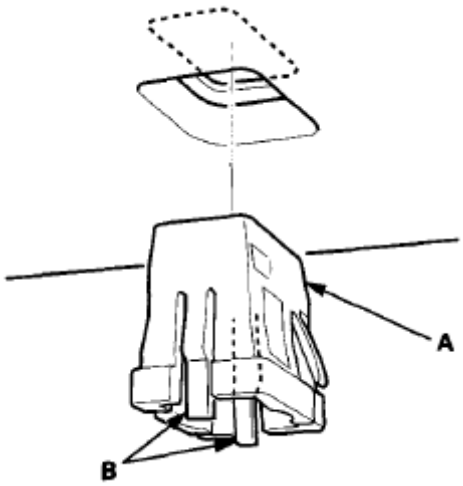

Fig. 44: Identifying Holder Grommet And Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If the side curtain airbag has deployed, replace the sunvisor, along with the other parts listed for side curtain airbag deployment (see **COMPONENT REPLACEMENT/INSPECTION AFTER**

DEPLOYMENT).

7. If the side curtain airbag has not deployed, inspect the sunvisor for damage. A damaged sunvisor may cause the side curtain airbags to deploy improperly, possibly causing injury. Replace the sunvisor if it has any of the following damage:
   - Any cracks in the sunvisor bracket (A)
   - Any cracks in the sunvisor bracket cover (B)
   - Any bends or cracks in the sunvisor stay shaft (C)
   - Any cracks in the sunvisor base (D)
   - Any cracks in the vanity mirror base (E)

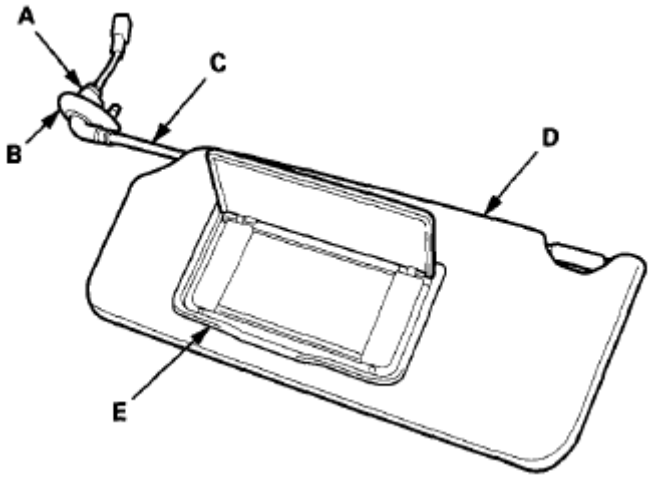

Fig. 45: Identifying Sunvisor Bracket, Cover, Shaft, Sunvisor Base And Mirror Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. If the holder grommet is damaged or stress-whitened, replace it with a new one.
9. Install the holder (A) into the holder grommet (B) by turning it 45° clockwise, and install them into the body as an assembly by pushing it until the hooks (C) snap into place securely.

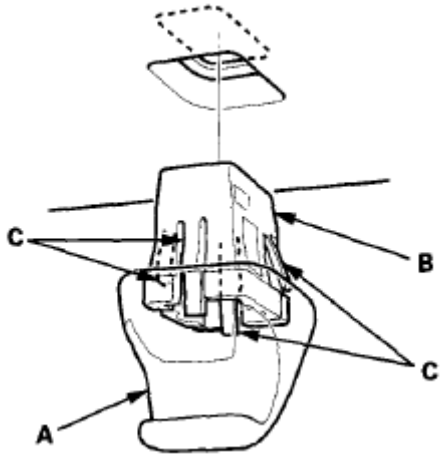

Fig. 46: Identifying Holder, Grommet And Hooks

Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Connect the vanity mirror light connector (A), and install the sunvisor (B) by inserting the bracket (C) and the pin (D) of the bracket cover (E) into the holes in the body.

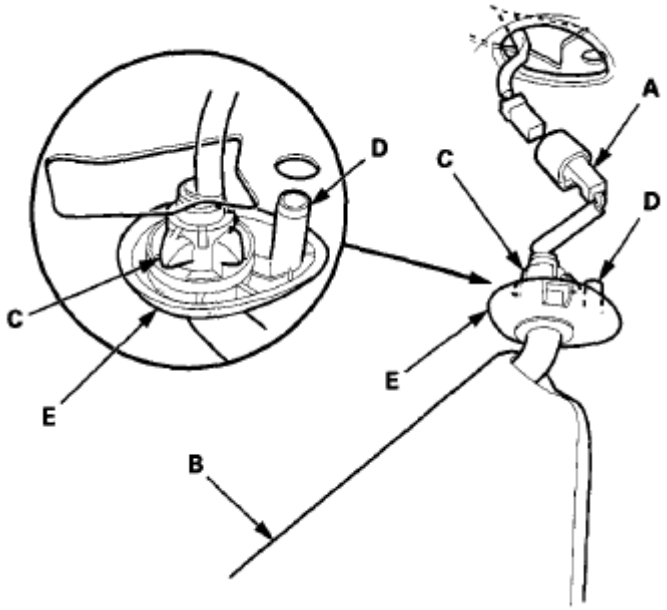

Fig. 47: Identifying Mirror Light Connector, Sunvisor, Bracket, Pin And Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. While holding the bracket cover (A), rotate the sunvisor (B) forward until the hook (C) snaps into place. Gently pull down on the sunvisor to make sure it is properly secured in the body. Rotate the sunvisor into the holder (D).

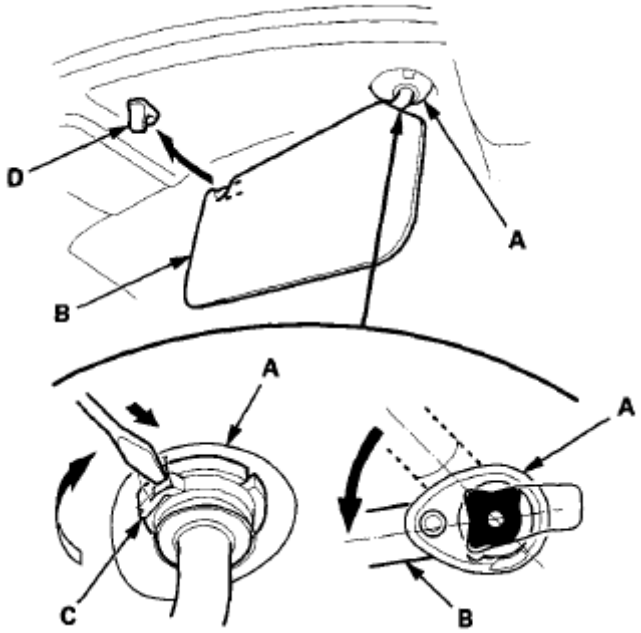

Fig. 48: Identifying Bracket Cover, Sunvisor, Hook And Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GRAB HANDLE REMOVAL/INSTALLATION

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

NOTE:

- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Lower the grab handle (A), then insert a small flat-tip screwdriver into the notch.

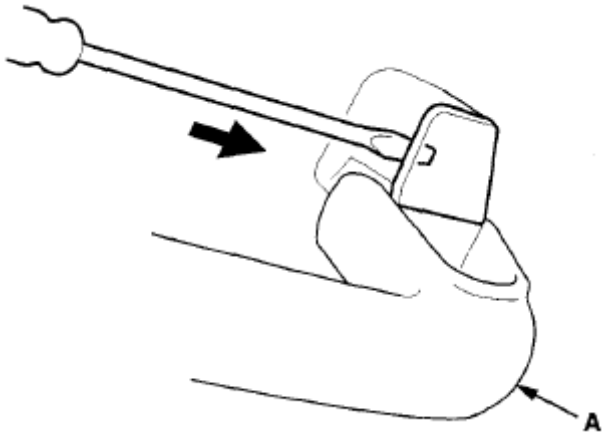

Fig. 49: Lowering Grab Handle Using Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Pull on the small flat-tip screwdriver with the appropriate trim tool (A), and remove the cap (B).

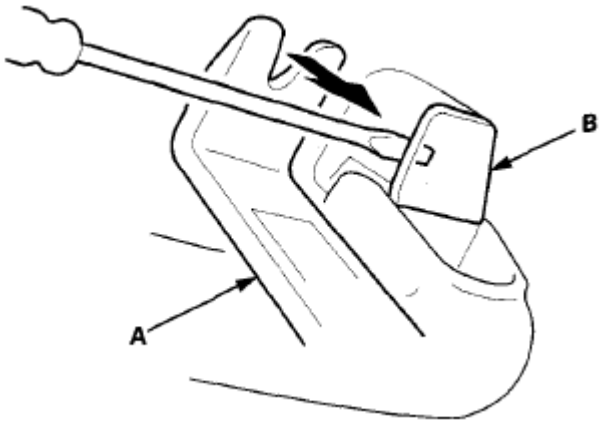

Fig. 50: Pulling On Small Flat-Tip Screwdriver With Appropriate Trim Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Pinch the clips (A) to release the hooks (B), then remove the grab handle (C).

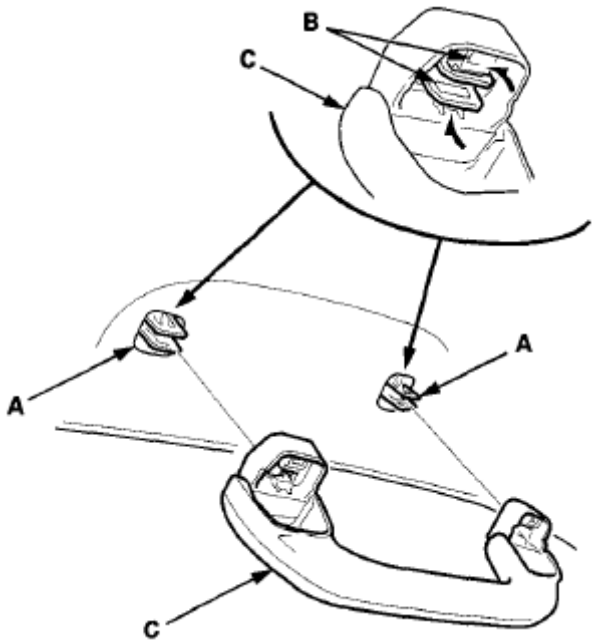

Fig. 51: Identifying Clips, Hooks And Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pinch the hooks on the clips (A) with a pair of pliers, and pull the clips out of the bracket.

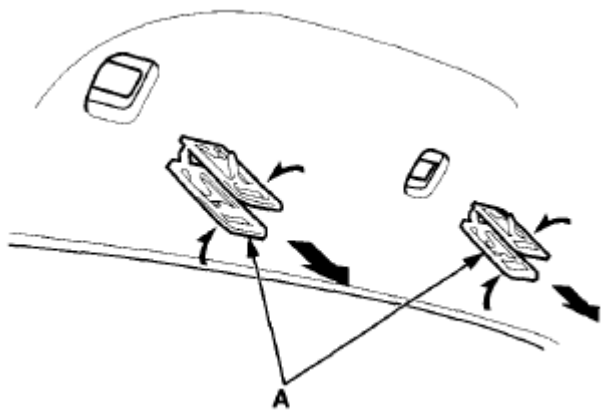

Fig. 52: Pinching Hooks On Clips With Pair Of Pliers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the side curtain airbag has deployed, replace the grab handle, along with the other parts listed for side curtain airbag deployment (see **COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT**).
6. If the side curtain airbag has not deployed, inspect the grab handle for damage. A damaged grab handle may cause the side curtain airbag to deploy improperly, possibly causing injury. Replace the grab handle if it has any of the following damage:
   - Any cracks or damage in the grab handle (A)
   - Any cracks or stress-whitening in the caps (B)

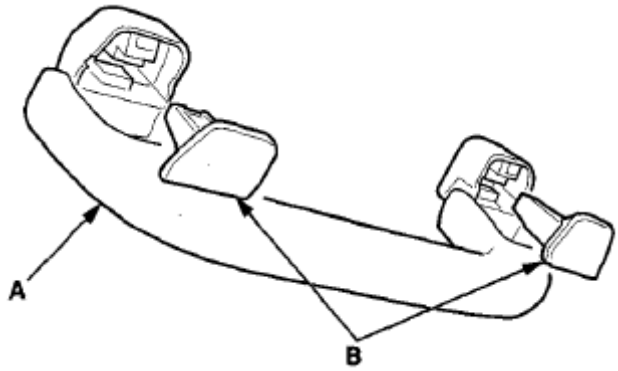

Fig. 53: Identifying Grab Handle And Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the clips (A) on the grab handle (B), then insert the caps (C) fully into the clips.

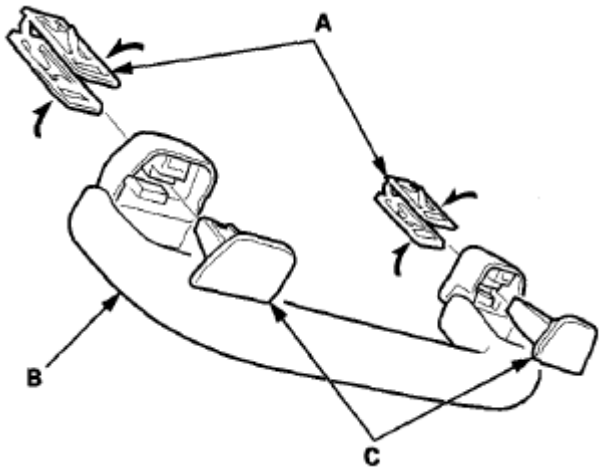

Fig. 54: Identifying Clips, Grab Handle And Caps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Position the grab handle (A) on the mounting bracket (B), and push on the grab handle until the clips (C) snap into place securely.

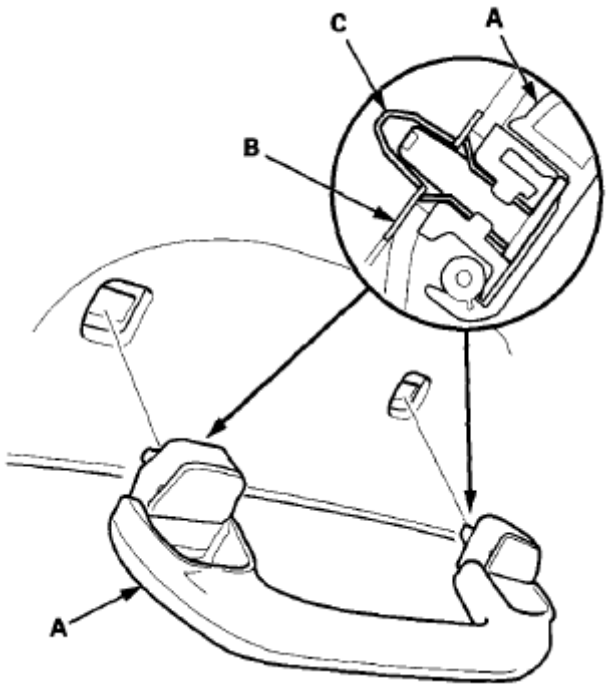

Fig. 55: Identifying Grab Handle, Mounting Bracket And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

HEADLINER REMOVAL/INSTALLATION

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- **Have an assistant help you when removing and installing the headliner.**
- **Put on gloves to protect your hands.**
- **Take care not to bend or scratch the headliner.**
- **Be careful not to damage the dashboard or the interior trim.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove the front seat head restraints, and hold down the rear seat head restraints. Slide both the front seats all the way back, and fully recline the seat-back.
2. Do the battery terminal disconnection procedure (see **BATTERY TERMINAL DISCONNECTION**

AND RECONNECTION), then wait at least 3 minutes before beginning work.

3. Remove these items:
   - A-pillar trims, both sides (see **A-PILLAR TRIM**)
   - B-pillar upper/lower trims, both sides (see **B-PILLAR UPPER/LOWER TRIM**)
   - C-pillar trims, both sides (see **C-PILLAR TRIM**)
   - Sunvisors and holders, both sides (see **SUNVISOR REMOVAL/INSTALLATION**)
   - Grab handles, four places (see **GRAB HANDLE REMOVAL/INSTALLATION**)
   - Center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**)
   - Rear individual map light (see **REAR INDIVIDUAL MAP LIGHT INPUT TEST/REPLACEMENT**)
   - High mount brake light cover (see **LICENSE PLATE LIGHT REPLACEMENT**)
   - Shift cable (see **SHIFT CABLE REPLACEMENT**)
   - Shift lever bracket base (see **SHIFT LEVER REMOVAL**)
4. Remove the roof console (A).
   1. Remove the screws, then pull down the roof console by detaching the clips.
   2. Disconnect the roof console connector (B), the moonroof switch connector (C), and the HFL microphone connector (D) (for some models).

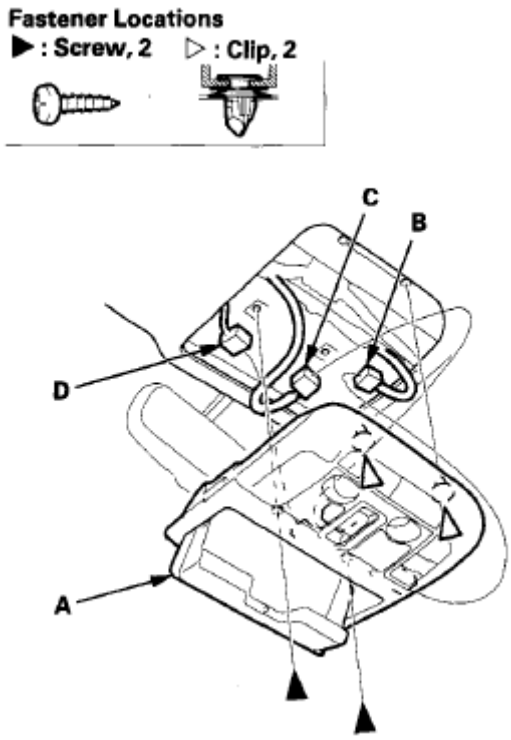

Fig. 56: Identifying Roof Console, Connector, Switch Connector And Phone Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the rearview mirror harness cover. Disconnect the connector from the rearview mirror, and

release the wire harness from the rearview mirror harness cover base (see **REARVIEW MIRROR HARNESS COVER BASE REPLACEMENT**).

6. Driver's side: Disconnect the roof wire harness connector (A), and remove the roof wire harness (B) from the A-pillar by detaching the harness clips (C).

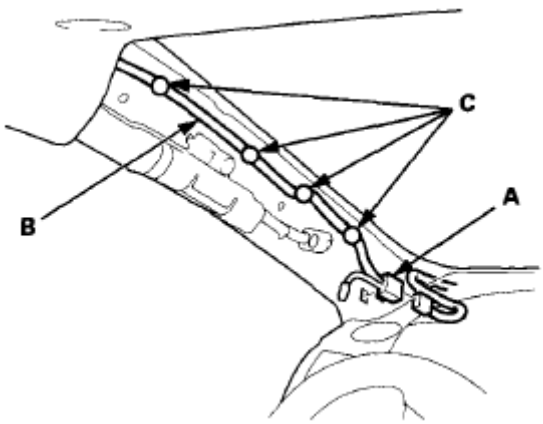

Fig. 57: Identifying Wire Harness Connector, Wire Harness And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the moonroof subharness connector (A), and detach the harness clip (B) as shown.

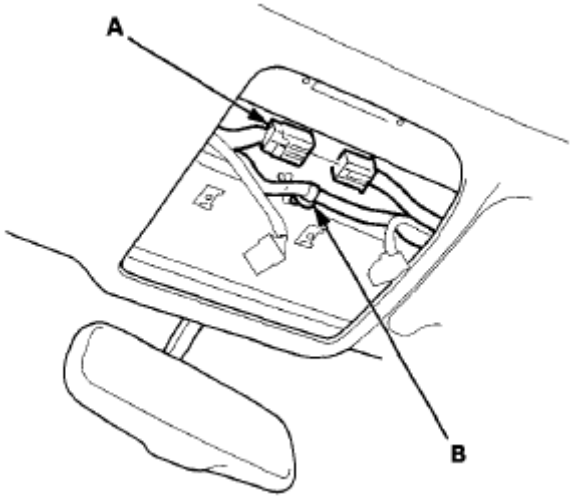

Fig. 58: Identifying Moonroof Subharness Connector And Harness Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Lower the headliner (A).
    1. Remove the front door opening seals (B) and the rear door opening seals (C) from each roof area.
    2. With the help of an assistant, detach the rear clips (D) by pulling down the rear area of the headliner.
    3. Detach the front clips (E), the magnet (F), and the Velcro fasteners (G) by pulling down the headliner at the moonroof opening.

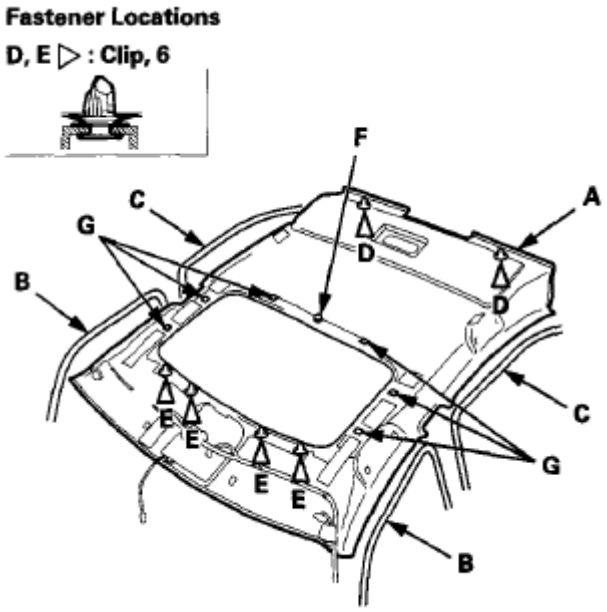

Fig. 59: Identifying Headliner, Door Opening Seals, Rear And Front Clips, Magnet And Velcro Fasteners
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the headliner (A) from the vehicle.
    1. Lower the headliner.
    2. Move the headliner rearward.
    3. Lower the front of the headliner below the dashboard.
    4. Rotate the headliner to point the front corner outside of the passenger's front door opening and the rear corner outside of the driver's front door opening.
    5. Pull the headliner and the roof wire harness (B) out through the passenger's front door.

NOTE: Do not bend the headliner. Bending the headliner will crease and damage it.

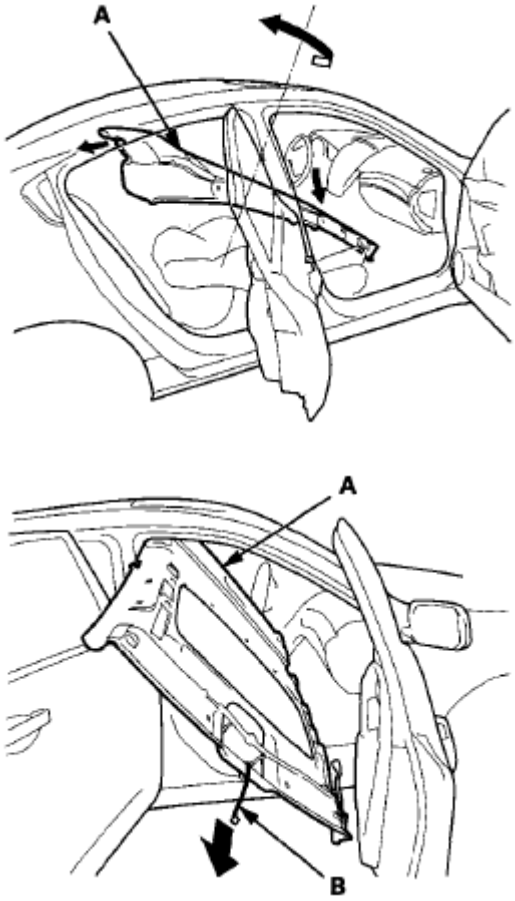

Fig. 60: Identifying Headliner And Roof Wire Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. If necessary, remove the cushion tapes fastening the roof wire harness (A) to the headliner (B), then remove the harness from the headliner.

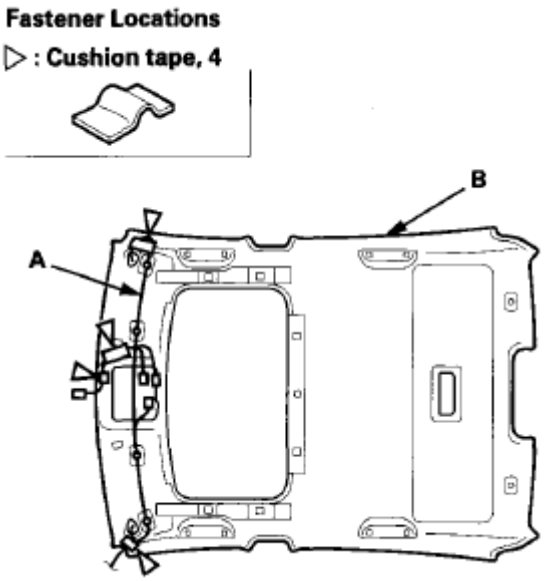

Fig. 61: Identifying Roof Wire Harness And Headliner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. If necessary, remove the front grab handle bracket (A) and the rear grab handle bracket (B). Take care not to damage the side curtain airbag.
    1. Remove the side curtain airbag mounting bolts (C, D).
    2. Release the tabs (E) holding the grab handle bracket to the side curtain airbag, and remove the bracket.

    Front

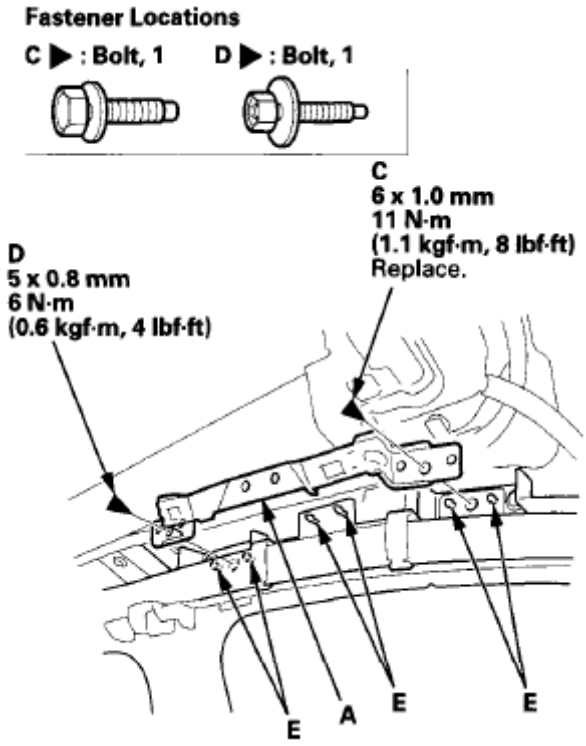

Fig. 62: Identifying Front Grab Handle Bracket, Mounting Bolts And Tabs (Front) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

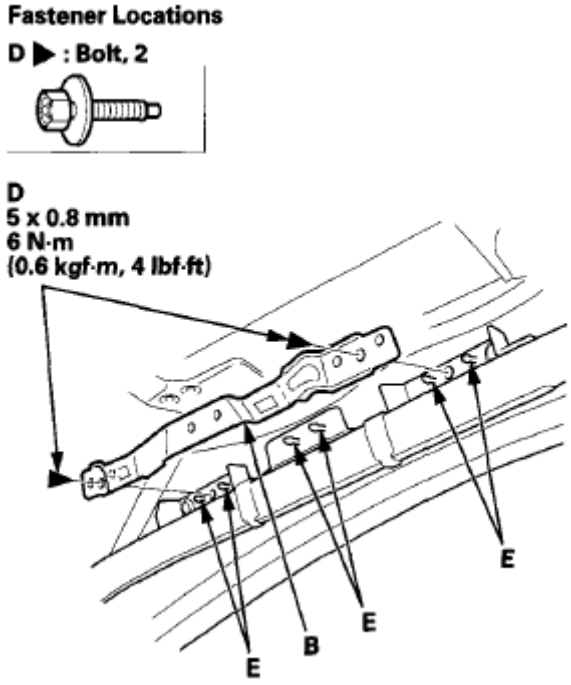

Fig. 63: Identifying Rear Grab Handle Bracket, Mounting Bolts And Tabs (Rear) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the headliner in the reverse order of removal, and note these items:
    - If the side curtain airbag has deployed, replace the headliner, along with the other parts listed for side curtain airbag deployment (see **COMPONENT REPLACEMENT/INSPECTION AFTER DEPLOYMENT**).
    - To prevent the side curtain airbags from deploying improperly and possibly causing injury, inspect the headliner and all removed trim. Replace any pieces with the following damage:
        - Any creases or tears in the headliner (A)
        - Any cracks or breakage in the grab handle (B)
        - Any damages around the grab handle holes (C) or sunvisor holes (D) in the headliner
        - Any cracks in the sunvisor stay base (E)
        - Any cracks in the sunvisor bracket cover (F)
        - Any bends or cracks in the sunvisor stay shaft (G)
        - Any cracks in the sunvisor base (H)
        - Any cracks or breakage in the vanity mirror base (I)
        - Any fastener bases (J), stiffeners (K), magnet (L), or clip bases (M) which have come off the headliner
    - When installing the grab handle, push on the handle against the bracket (N) until the clips (0) snap into place securely.
    - If the clips are damaged or stress-whitened, replace them with new ones.
    - Replace the removed cushion tapes with new pieces.
    - Check that both sides of the headliner are securely attached to the body.
    - Make sure the headliner overlaps the trim pieces correctly (see **B-PILLAR TRIM**).
    - Be careful not to crease or damage the headliner when reinstalling it through the front passenger's door opening. Also be careful not to scratch the body.
    - Push the clips and the hooks into place securely.

Headliner

FRONT CARPET REPLACEMENT

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to damage, wrinkle, or twist the carpet.**
- **Be careful not to damage the dashboard or the other interior trim pieces.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**
- **When prying with a flat-tip screwdriver, wrap it with protective tape to prevent damage.**

1. Remove these items:
   - Front seats, both sides (see **FRONT SEAT REMOVAL/INSTALLATION**)
   - Kick panels, both sides (see **FRONT DOOR SILL AREA**)
   - Driver's dashboard undercover (see **DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**)
   - Passenger's dashboard undercover (see **GLOVE BOX DAMPER REPLACEMENT**)
   - Center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**)
   - Steering joint cover (see **STEERING COLUMN REMOVAL AND INSTALLATION**)

- Shift cable (see **SHIFT CABLE REPLACEMENT**)
- Shift lever bracket base (see **SHIFT LEVER REMOVAL**)

2. Release the hooks (A), then remove the accelerator pedal clip (B).

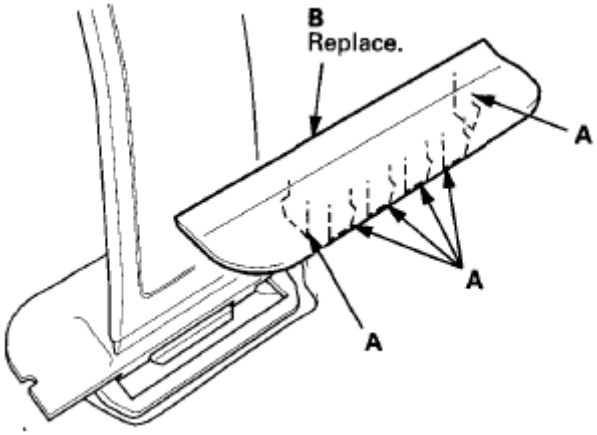

Fig. 67: Identifying Hooks And Accelerator Pedal Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. While pushing down the return spring (A) with a flat-tip screwdriver, pull back the accelerator pedal (B) to release the hook (C).

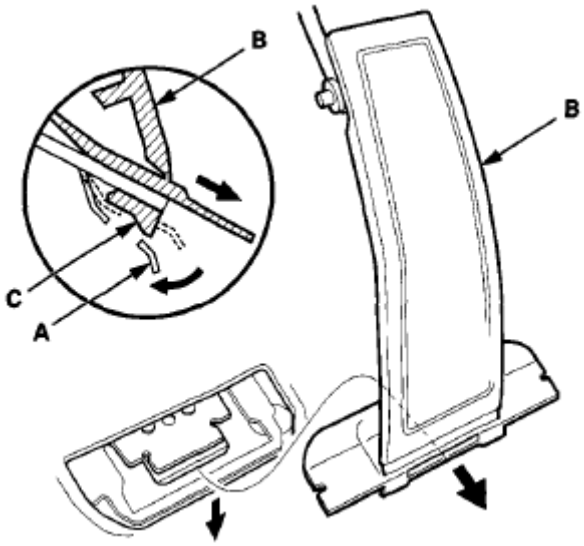

Fig. 68: Pulling Back Accelerator Pedal To Release Hook
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the footrest (A) by pulling it to detach the clips.

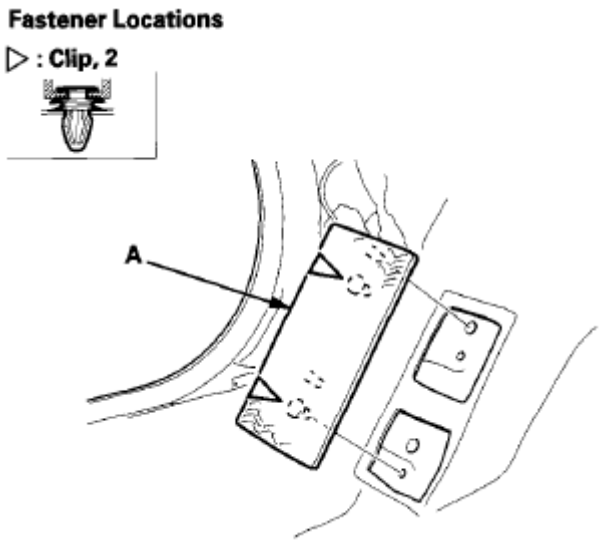

Fig. 69: Identifying Footrest
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the bolts, then remove the yaw rate-lateral/(longitudinal) acceleration sensor mounting bracket (A). Detach the harness clips (C), and remove the TORX ground bolt (D) with a TORX T30 bit. Disconnect the SRS unit connector B.

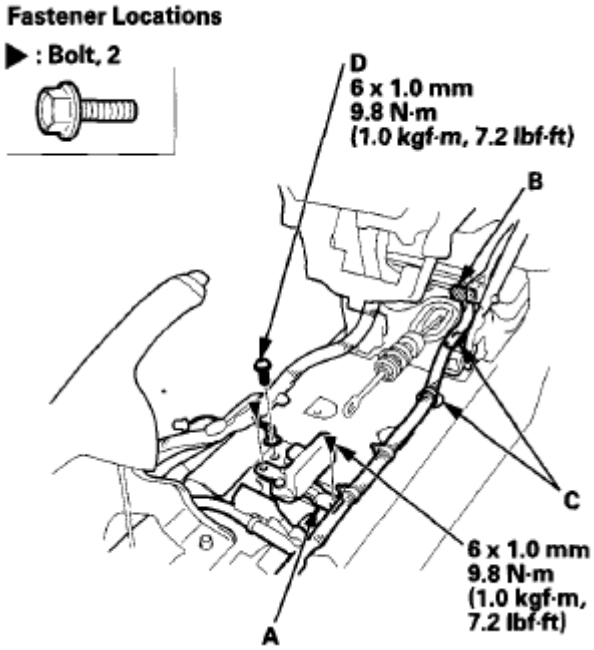

Fig. 70: Identifying Acceleration Sensor Mounting Bracket, Detach Harness Clips And Torx Ground Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Detach the clips (A, B) fastening the carpet to both door sill areas.

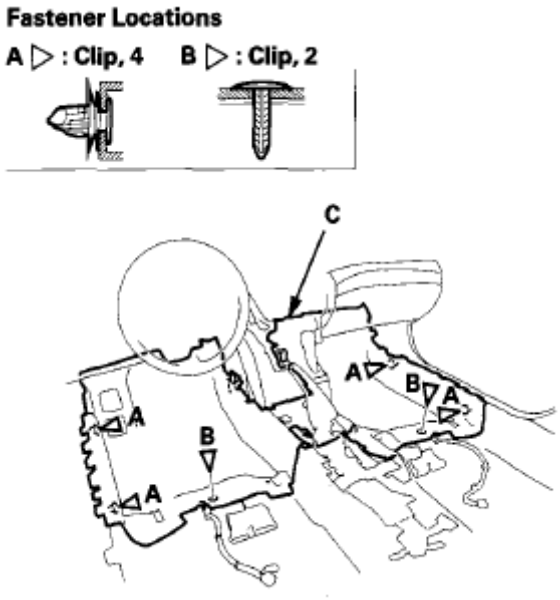

Fig. 71: Identifying Clips And Front Carpet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Pull out the front carpet (C) from under the dashboard, then remove the carpet.
8. If necessary, release the hook (A) that is just under the arrow mark (B) on the floor mat holder (C) by prying up on the holder with a flat-tip screwdriver, and remove the holder through the slit (D) in the carpet (E).

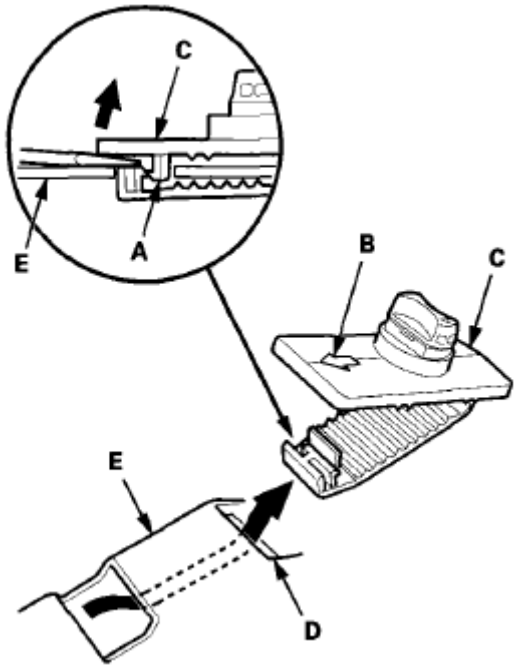

Fig. 72: Removing Holder Through Slit In Carpet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the front carpet in the reverse order of removal, and note these items:
    - If the clips are damaged or stress-whitened, replace them with new ones.
    - If you remove the accelerator pedal clip, replace it with a new one.
    - If necessary, adjust the parking brake cable (see **PEDAL FREE PLAY**).
    - Push the clips into place securely.

REAR CARPET REPLACEMENT

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to damage, wrinkle, or twist the carpet.**
- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove these items:
    - Front seats, both sides (see **FRONT SEAT REMOVAL/INSTALLATION**)
    - Front door sill trims, both sides (see **FRONT DOOR SILL AREA**)
    - Rear door sill trims, both sides (see **REAR DOOR SILL AREA**)
    - Center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**)
    - Rear seat cushion (see **REAR SEAT REMOVAL/INSTALLATION**)
    - Shift cable (see **SHIFT CABLE REPLACEMENT**)
    - Shift lever bracket base (see **SHIFT LEVER REMOVAL**)
2. Remove the bolts, then remove the yaw rate-lateral/(longitudinal) acceleration sensor mounting bracket (A). Detach the harness clips (C), and remove the TORX ground bolt (D) with a TORX T30 bit. Disconnect the SRS unit connector B.

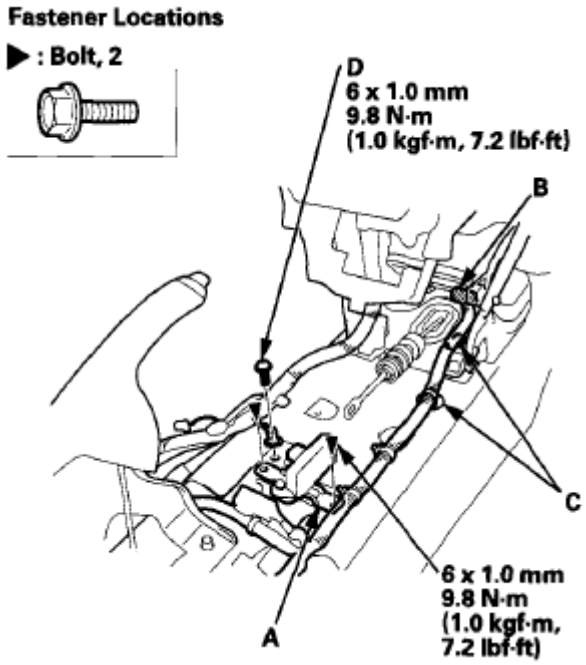

Fig. 73: Identifying Acceleration Sensor Mounting Bracket, Harness Clips And Remove Torx Ground Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the clips (A) securing the front carpet (B) and the rear carpet (C).

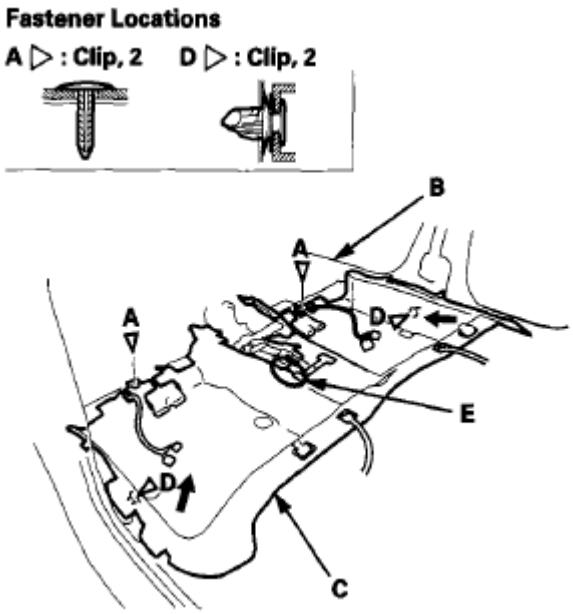

Fig. 74: Identifying Clips And Front Carpet And Rear Carpet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pull out the rear carpet by detaching the clips (D), cut the carpet in the area (E) shown, then remove the

carpet.

5. Install the rear carpet in the reverse order of removal, and note these items:
    - If the clips are damaged or stress-whitened, replace them with new ones.
    - Push the clips into place securely.

2012 ACCESSORIES & EQUIPMENT

Moonroof - TL

COMPONENT LOCATION INDEX

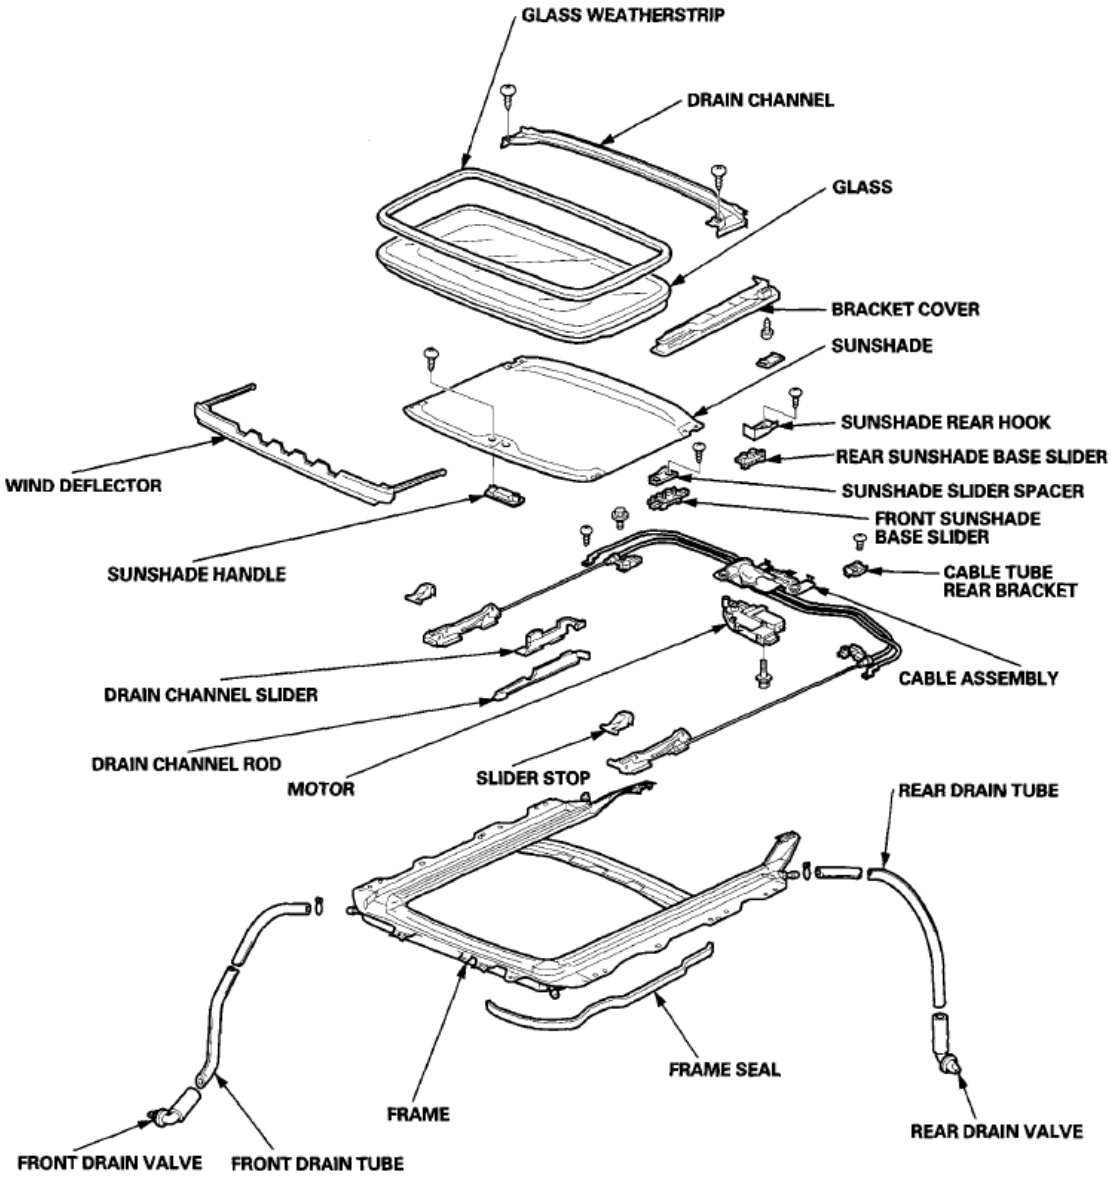

Fig. 1: Moonroof Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure

Water leaks from moonroof	1. Check for a clogged or detached drain tube. 2. Check the glass position adjustment (see **GLASS POSITION ADJUSTMENT**). 3. Check for a defective or an improperly installed glass weatherstrip or drain channel. 4. Check for a gap between the drain channel seal and the roof panel.
Wind noise from moonroof	1. Check for excessive clearance between the glass weatherstrip and the roof panel. 2. Check the glass position adjustment (see **GLASS POSITION ADJUSTMENT**).
Motor noise from moonroof	1. Check for a loose motor. 2. Check for a worn gear or bearing. 3. Check for a deformed cable assembly. 4. Check for dirt or debris.
Moonroof glass does not move smoothly.	1. Check for a defective motor control unit (see **MOONROOF CONTROL UNIT INPUT TEST**). 2. Check the moonroof motor (see **MOONROOF CONTROL UNIT INPUT TEST**). 3. Check the glass position adjustment (see **GLASS POSITION ADJUSTMENT**). 4. Check the sliding parts.
Moonroof glass does not move, but motor turns	1. Check for foreign matter stuck between the guide rail and the slider. 2. Make sure the cable assembly is attached properly. 3. Check for a loose inner cable. 4. Check for a defective gear or inner cable.
Moonroof glass does not move and motor does not turn.	1. Check for a run down battery (see **BATTERY TEST**). 2. Check for a blown fuse. 3. Check for a faulty moonroof switch (see **MOONROOF SWITCH TEST/REPLACEMENT**). 4. Check for a defective motor control unit (see **MOONROOF CONTROL UNIT INPUT TEST**).
Moonroof glass does not stop at proper flush closed position	1. Reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**). 2. Check the glass position adjustment (see **GLASS POSITION ADJUSTMENT**).
Moonroof glass moves in a jerking motion	

(moves 40 mm (1.57 in), stops for 0.4 seconds, and repeats)	Reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**).
During auto close operation, moonroof glass reverses when no object is trapped	1. Check for dirt and debris in the track. 2. Reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**).
Moonroof glass moves, but there is no AUTO function	Reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**).

GLASS POSITION ADJUSTMENT

The roof panel (A) should be even with the glass weatherstrip (B), to within 0+1/- 1 mm (0+0.04/- 0.04 in) all the way around. If not, make the following adjustment:

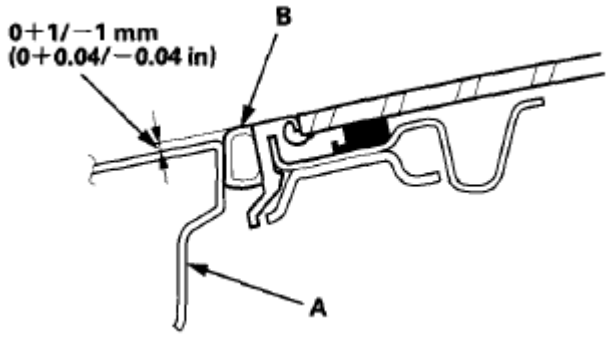

Fig. 2: Identifying Roof Panel And Glass Weatherstrip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

1. Remove the bracket cover (see step 3).
2. Adjust the glass (A).
    1. Slightly loosen the TORX screws with a TORX T25 bit.
    2. Move the glass up or down.
    3. Tighten all bolts securely.

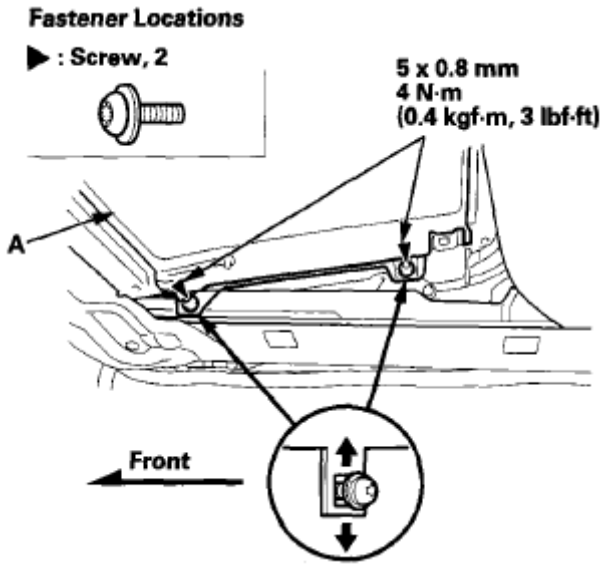

Fig. 3: Adjusting Glass With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If necessary, repeat on the opposite side.
4. Reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**).

GLASS REPLACEMENT

1. Close the glass fully.
2. Slide the sunshade all the way back.
3. Pry out the cap (A). Remove the screw (B), and release the guide pin (C), then remove the bracket cover (D). Repeat on the opposite side. Remove the TORX screws (E) with a TORX T25 bit from the glass brackets (F) on both sides.

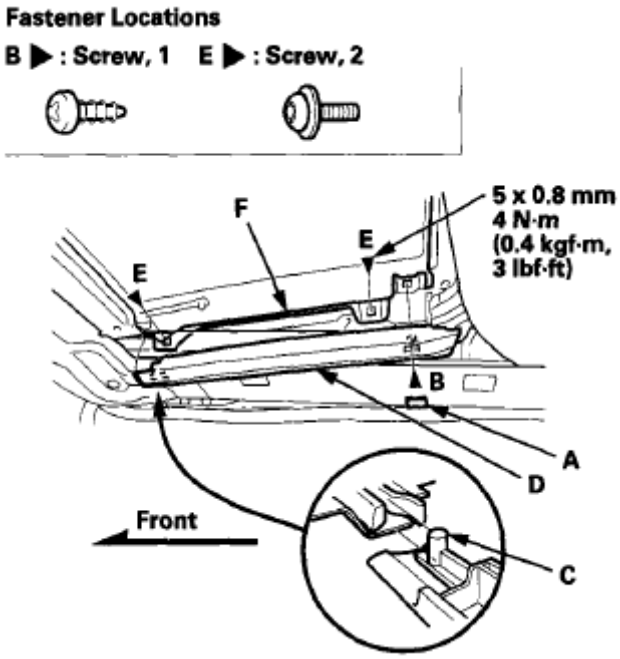

Fig. 4: Replacing Glass Using TORX T25 Bit With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the glass (A) by lifting it up. Do not damage the roof panel.

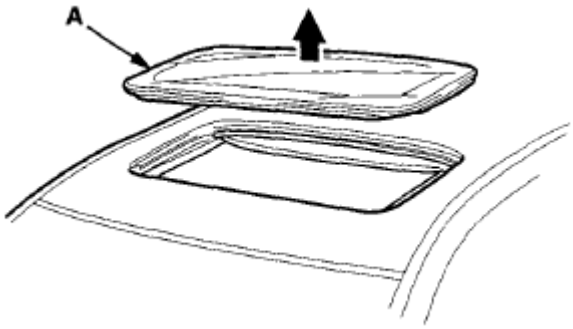

Fig. 5: Removing Glass By Lifting It Up
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the glass in the reverse order of removal, and check the glass position adjustment (see **GLASS POSITION ADJUSTMENT**).
6. Check for water leaks (see step 10 in **DOOR POSITION ADJUSTMENT** . Let the water run freely from a hose without a nozzle. Do not use a high-pressure spray.

NOTE: It is normal for some water to seep past the moonroof into the moonroof frame, and exit through the drains.

GLASS WEATHERSTRIP REPLACEMENT

1. Remove the moonroof glass (see **GLASS REPLACEMENT**).
2. Place a piece of masking tape (A) on the middle of the front edge of the moonroof glass (B). Make sure that the tape is on the glass only, and is not touching the weatherstrip.

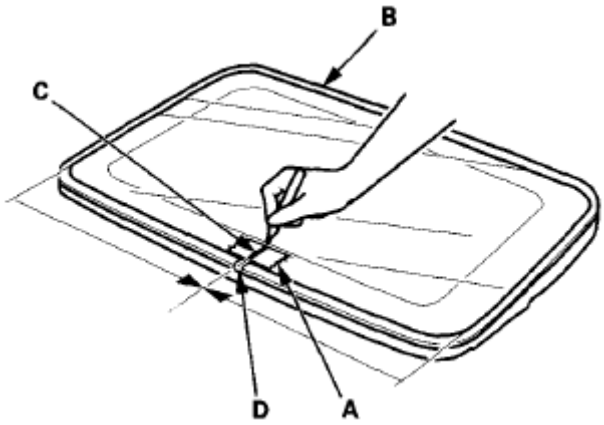

Fig. 6: Placing Piece Of Masking Tape On Middle Of Front Edge Of Moonroof Glass For Markings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Place a mark (C) on the masking tape that aligns with the seam (D) of the weatherstrip.
4. Push down on the top of the original weatherstrip with your thumb until a small section separates from the moonroof glass. Once a section has started to separate, grip it and pull outward, working around the moonroof glass until the weatherstrip is completely removed (note the locations of the holes in the weatherstrip).
5. Align the seam (A) of the new weatherstrip (B) to the mark (C) on the masking tape (D). Make sure the holes are pointed in the same direction as noted in step 4.

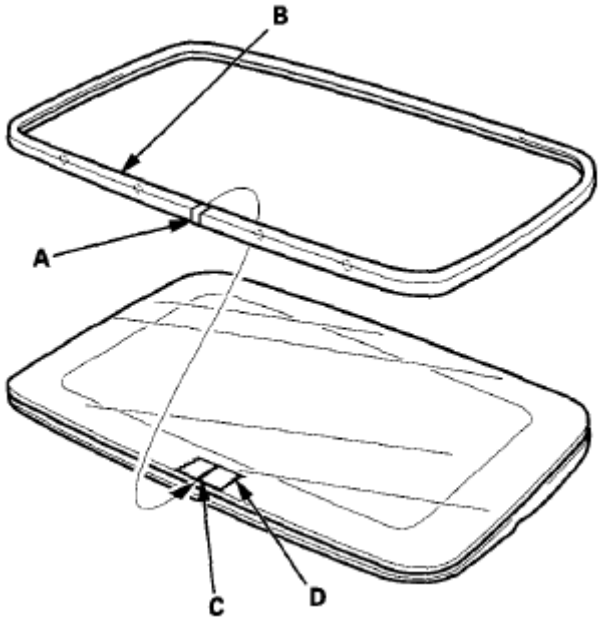

Fig. 7: Identifying Seam, Weatherstrip, Mark And Masking Tape

Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Press the ridge of the new weatherstrip into the groove on the moonroof glass starting at the seam. Work toward one corner; then go back to the middle and work toward the opposite corner.

NOTE: Be careful not to stretch the weatherstrip.

7. Continue pressing along one side, from corner to corner; then press along the opposite side, from corner to corner.
8. At the rear of the moonroof glass, continue pressing from one corner to the middle; then press from the opposite corner to the middle until the strip is completely installed.
9. Reinstall the moonroof glass (see **GLASS REPLACEMENT**).
10. Check for proper fit of the new weatherstrip by opening and closing the moonroof.

WIND DEFLECTOR REPLACEMENT

1. Open the glass fully.
2. Disconnect the deflector springs (A) from the bushings (B) on both sides.

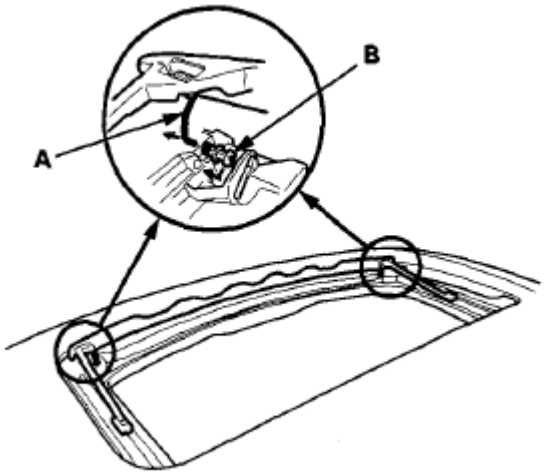

Fig. 8: Identifying Deflector Springs And Bushings
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the wind deflector (A).

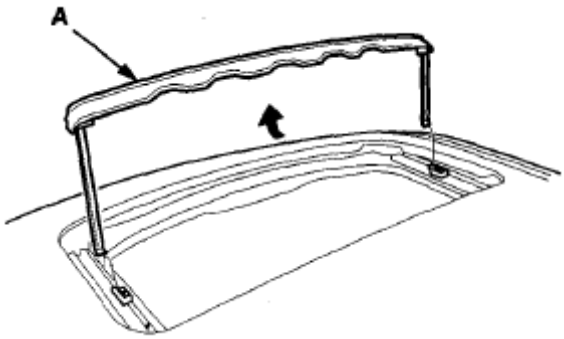

Fig. 9: Removing Wind Deflector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the deflector in the reverse order of removal.
5. Reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**).

DRAIN CHANNEL REPLACEMENT

1. Remove the moonroof glass (see **GLASS REPLACEMENT**).
2. Remove the screws securing the drain channel (A).

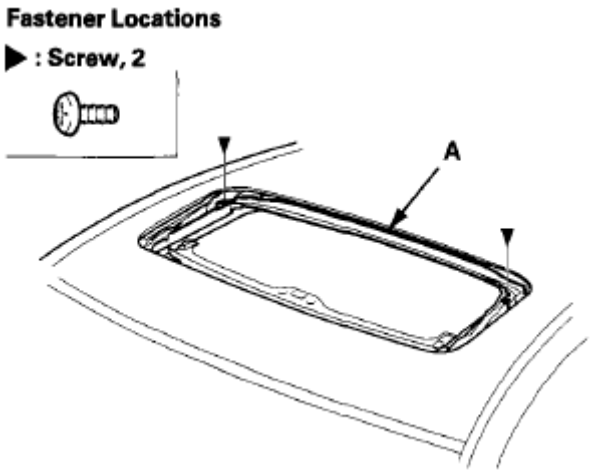

Fig. 10: Removing Screws Securing Drain Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Release the drain channel from both hooks (A) of the drain channel slider by pulling it rearward.

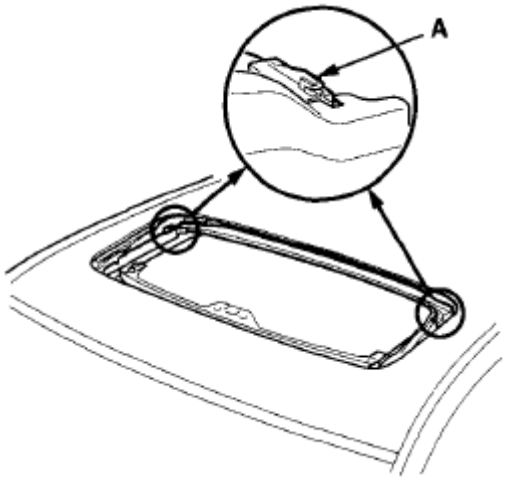

Fig. 11: Identifying Hooks Of Drain Channel Slider
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the drain channel (A).

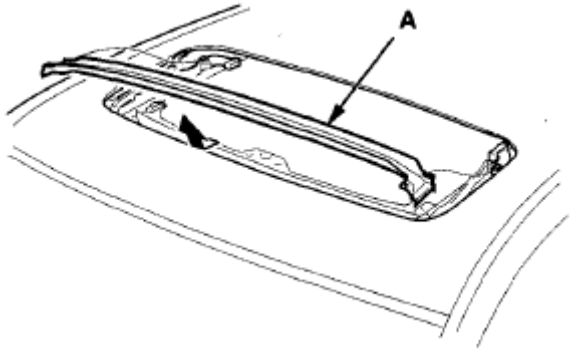

Fig. 12: Removing Drain Channel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the channel in the reverse order of removal, and check the glass position adjustment (see **GLASS POSITION ADJUSTMENT**).
6. Check for water leaks (see step 10 in **DOOR POSITION ADJUSTMENT** . Let the water run freely from a hose without a nozzle. Do not use a high-pressure spray.

SUNSHADE REPLACEMENT

1. Remove the drain channel (see **DRAIN CHANNEL REPLACEMENT**).
2. Slide the sunshade all the way forward.
3. Disconnect both drain channel rods (A) from both glass brackets (B) by pulling the front of them inward, then remove the rods from both drain channel sliders (C) by lifting them up.

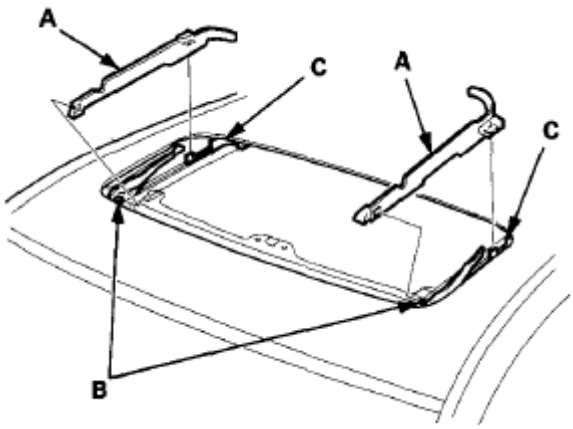

Fig. 13: Identifying Drain Channel Rods, Glass Brackets And Drain Channel Sliders
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Slide both drain channel sliders (A) forward until they contact both glass brackets (B).

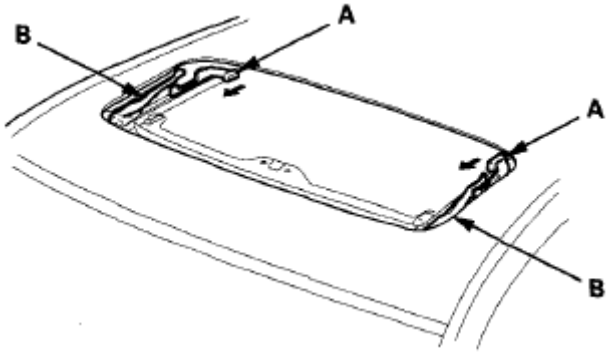

Fig. 14: Identifying Drain Slider Channel And Glass Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the screws, then remove both sunshade slider spacers (A).

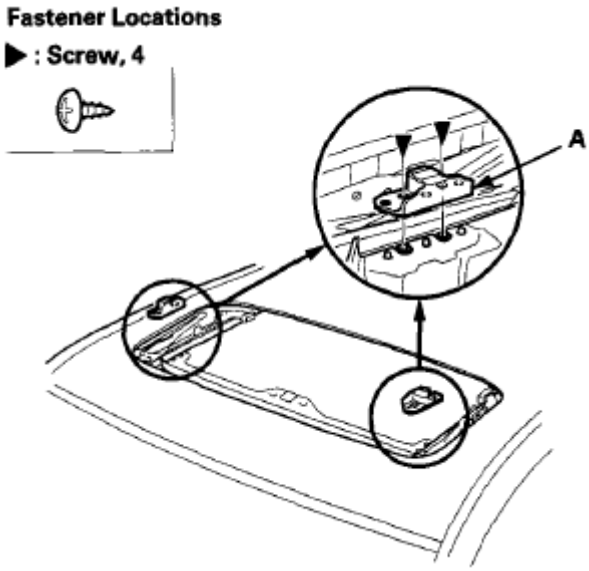

Fig. 15: Removing Screws From Sunshade Slider Spacers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. While lifting the front area of the sunshade (A), move the sunshade forward until you can see both sunshade rear hooks (B). Do not damage the sunshade or the hooks.

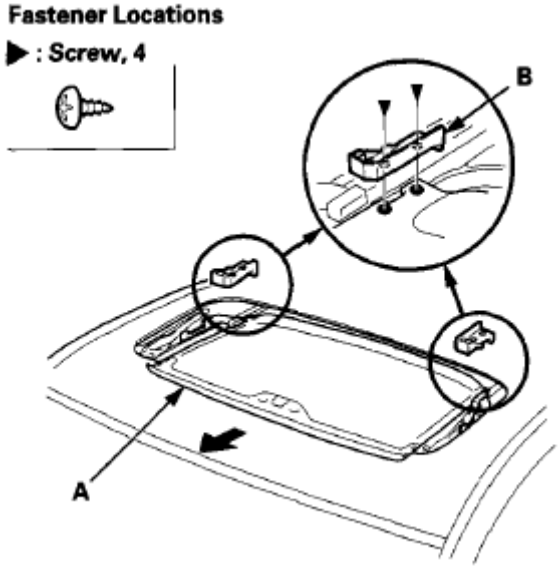

Fig. 16: Identifying Sunshade & Sunshade Rear Hooks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the screws, then remove both hooks.
8. Remove the sunshade (A).

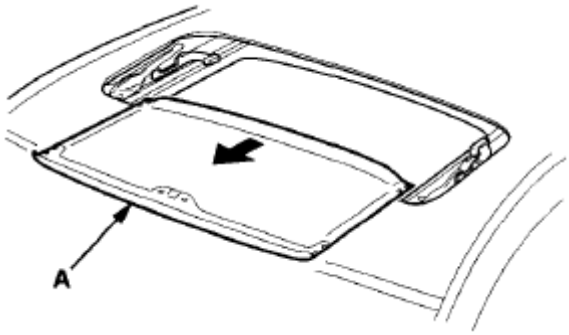

Fig. 17: Removing Sunshade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove both front sunshade base sliders (A) and both rear sunshade base sliders (B).

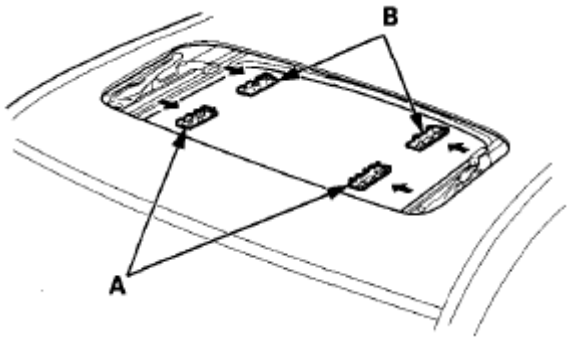

Fig. 18: Removing Front Sunshade Base Sliders And Rear Sunshade Base Sliders
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the sunshade in the reverse order of removal, and check the glass position adjustment (see **GLASS POSITION ADJUSTMENT**).
11. Check for water leaks (see step 10 in **DOOR POSITION ADJUSTMENT** . Let the water run freely from a hose without a nozzle. Do not use a high-pressure spray.

MOTOR REPLACEMENT

NOTE: Put on gloves to protect your hands.

1. Remove the headliner (see **HEADLINER REMOVAL/INSTALLATION**).
2. Disconnect the connector (A), and remove the screws, then remove the motor (B).

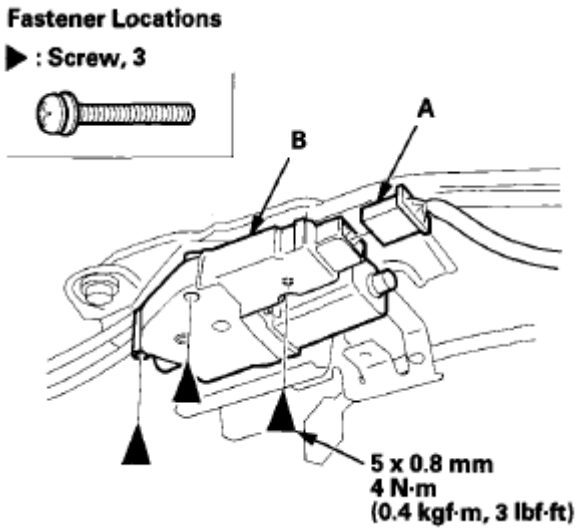

Fig. 19: Identifying Connector And Motor With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the motor in the reverse order of removal, and note these items:
   - Make sure the connector is plugged in properly.
   - Reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**).
   - Check the motor operation.

FRAME AND DRAIN TUBE REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE:
- **Put on gloves to protect your hands.**
- **Take care not to scratch the interior trim or the body, or tear the seat covers.**

1. Remove the headliner (see **HEADLINER REMOVAL/INSTALLATION**).
2. Disconnect the front drain tubes (A) and the rear drain tubes (B).

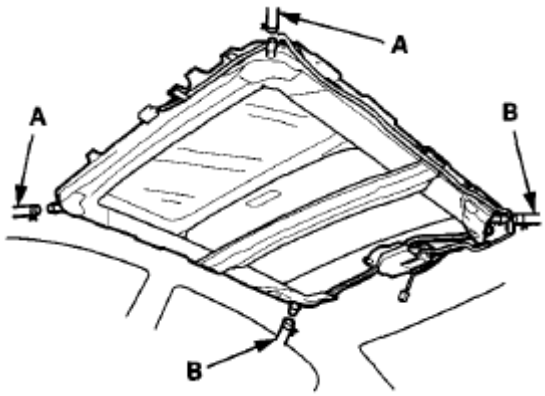

Fig. 20: Identifying Front Drain Tubes And Rear Drain Tubes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the clips (A) securing the roof wire harness (B) and the moonroof motor subharness (C) from the moonroof frame (D).

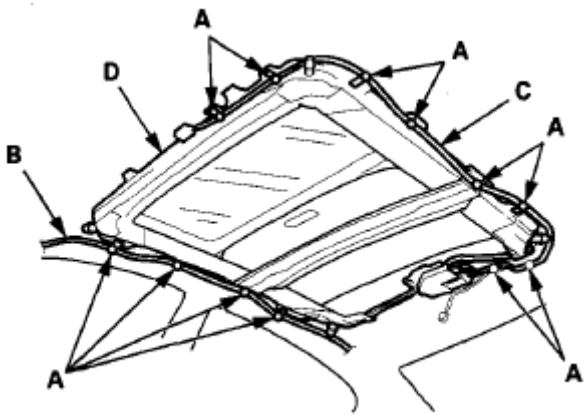

Fig. 21: Identifying Clips, Roof Wire Harness, Moonroof Motor Subharness And Moon Roof Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. With an assistant holding the frame (A), remove the bolts starting at the rear, and release the rear hook (B) by moving the frame forward.

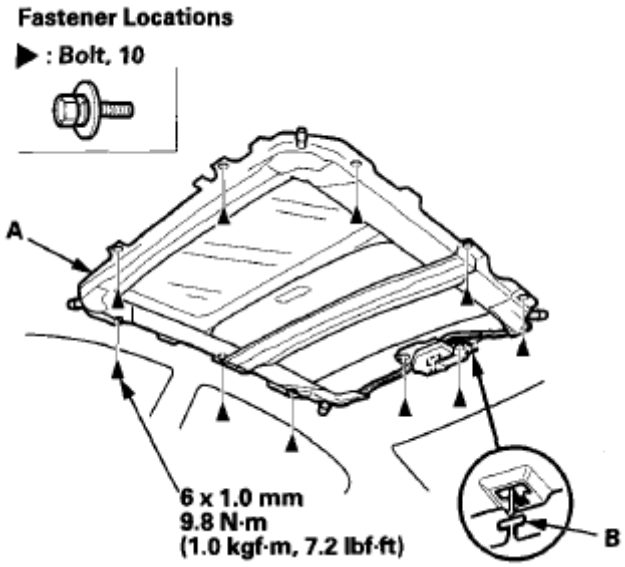

Fig. 22: Identifying Frame And Rear Hook With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. With the help of an assistant, carefully remove the frame through the front door opening.

Front Drain Tube

6. Remove these items:
   - Passenger's dashboard undercover (see **GLOVE BOX DAMPER REPLACEMENT**)
   - Passenger's side: EPS control unit (see **RACK GUIDE REMOVAL/INSTALLATION**)
7. Pull the front drain valve (A) out of the body hole. Tie a string to the top end of the drain tube (B), then pull the drain tube down out of the A-pillar. Leave the string in the pillar to use when reinstalling the drain tube.

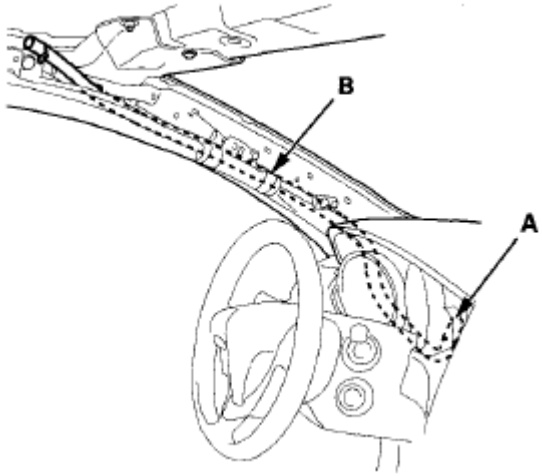

Fig. 23: Identifying Front Drain Drive And Drain Tube
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear Drain Tube

8. Remove these items from the trunk compartment (see **TRIM REMOVAL/INSTALLATION - TRUNK AREA**):
   - Trunk floor
   - Tool box spacer
   - Trunk rear trim panel
   - Trunk side trim panel
9. Pull the rear drain valve (A) out of the body hole. Tie a string to the top end of the rear drain tube (B), then pull the drain tube down out of the C-pillar. Leave the string in the pillar to use when reinstalling the drain tube.

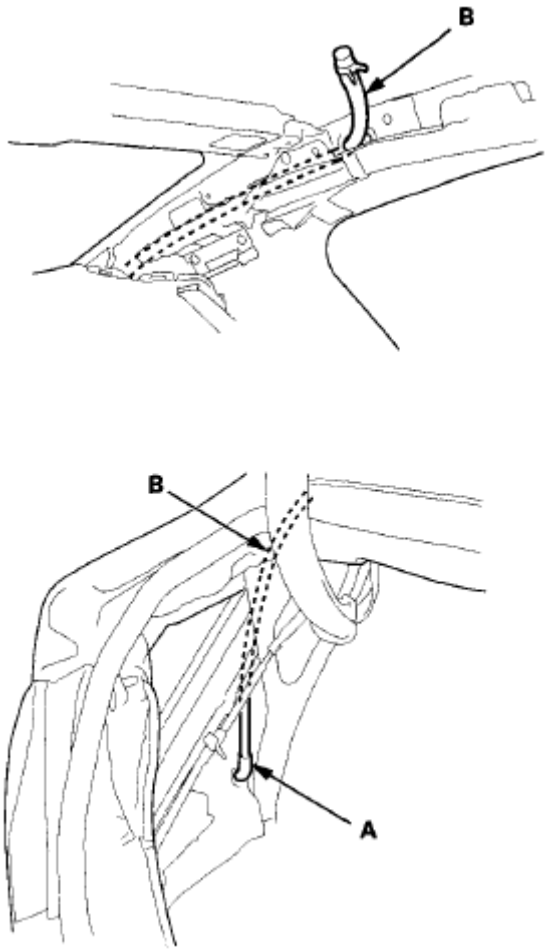

Fig. 24: Identifying Rear Drain Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the frame and the drain tube in the reverse order of removal, and note these items:
    - Before installing the frame, clear the drain tubes and the drain valves using compressed air.
    - To install a new drain tube, tie the string left in the body during drain tube removal to the top end of

the new drain tube, and pull it up into the roof.

- Check the frame seal.
- Clean the surface of the frame.
- When installing the frame, first attach the rear hook into the body holes.
- Make sure each connector is plugged in properly.
- When connecting the drain tubes, slide them over the frame nozzles at least 10 mm (0.39 in).
- Install the tube clips (A) on the drain tubes (B) as shown.

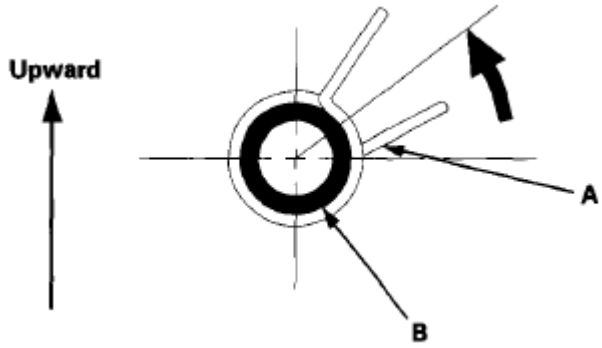

Fig. 25: Installing Tube Clips On Drain Tubes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check for water leaks (see step 10 in **DOOR POSITION ADJUSTMENT** . Let the water run freely from a hose without a nozzle. Do not use a high-pressure spray.

DRAIN CHANNEL SLIDER AND CABLE ASSEMBLY REPLACEMENT

NOTE: Put on gloves to protect your hands.

1. Remove the frame (see **FRAME AND DRAIN TUBE REPLACEMENT**).
2. Remove these parts from the frame:
   - Sunshade (see **SUNSHADE REPLACEMENT**)
   - Moonroof motor (see **MOTOR REPLACEMENT**)
3. Remove the screws (A) securing the cable tube rear brackets (B). Remove the cable tube side bracket mounting bolts (C) and the cable tube mounting screws (D) from both sides of the frame (E).

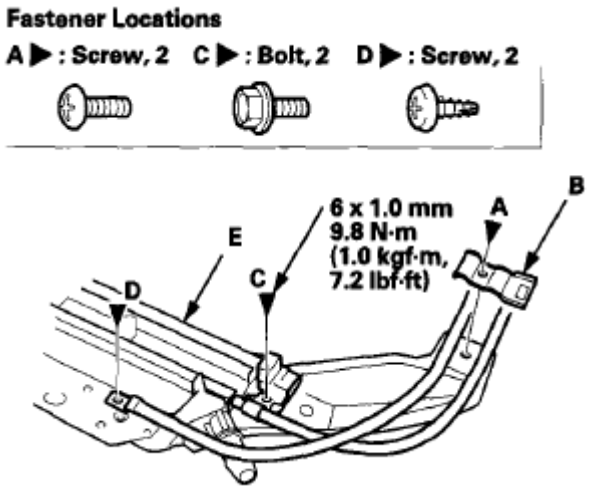

Fig. 26: Identifying Screws, Cable Tube Rear Brackets, Mounting Bolts, Cable Tube Mounting Screws And Frame With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Turn both cable tube side brackets (A) up to release the hooks (B) from the holes in both sides of the frame.

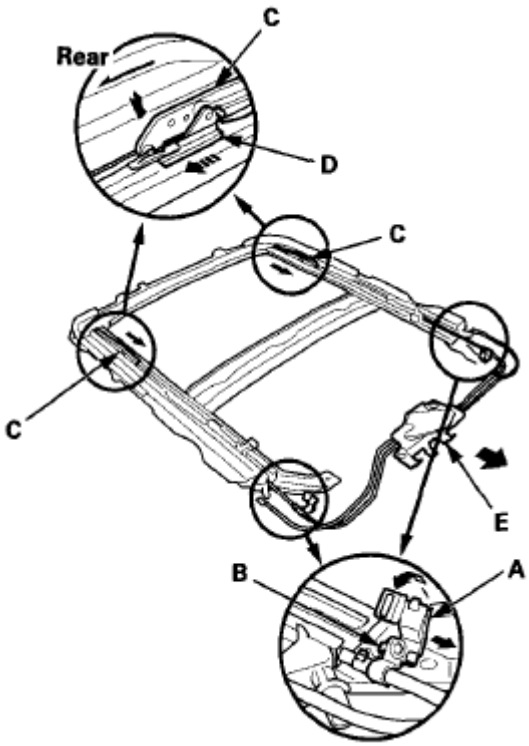

Fig. 27: Turning Cable Tube Side Brackets Up To Release Hooks From Holes In Both Sides Of Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Pivot the glass brackets (C) down by sliding the link lifters (D) back, then slide both glass brackets back with the link lifters.
6. Slide the cable assembly (E) half-way back.
7. Release the rear hooks of the slide stops (A) by pushing them forward, then pivot the stops up.

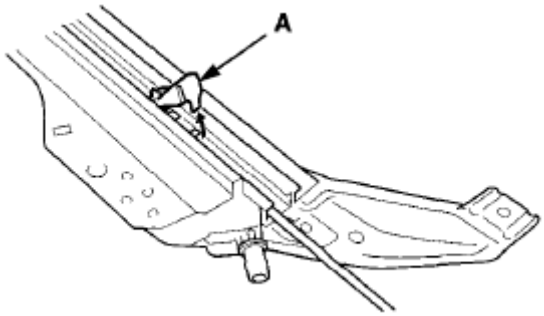

Fig. 28: Identifying Slide Stops
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the slide stops (A) and the drain channel sliders (B) from both sides.

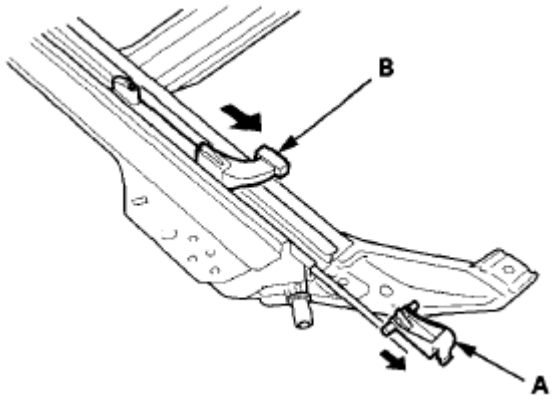

Fig. 29: Removing Slide Stops And Drain Channel Sliders
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Slide the cable assembly (A) and both glass brackets (B) back, from both brackets, then remove them from the frame (C).

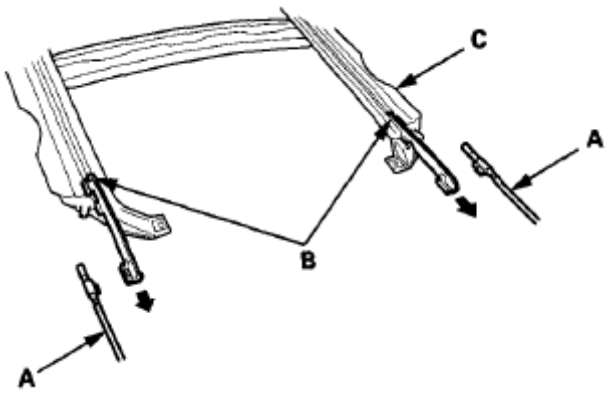

Fig. 30: Sliding Cable Assembly And Glass Brackets Back
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the drain channel slider and cable assembly in the reverse order of removal, and note these items:
    - Damaged parts should be replaced.
    - Apply multipurpose grease to the glass brackets (A) and the guide rail area of the frame (B) indicated by the arrows.
    - Before reinstalling the motor, make sure both link lifters are parallel, and in the tilt up position.
    - Before reinstalling the motor, install the frame and the glass.
    - After reinstalling the motor, reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**).

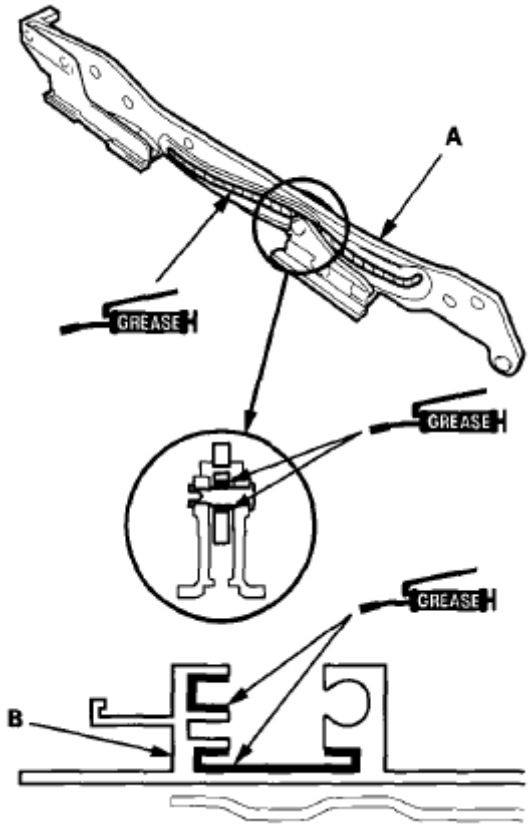

Fig. 31: Identifying Glass Brackets And Frame
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2012 ACCESSORIES & EQUIPMENT

Power Moonroof - TL

COMPONENT LOCATION INDEX

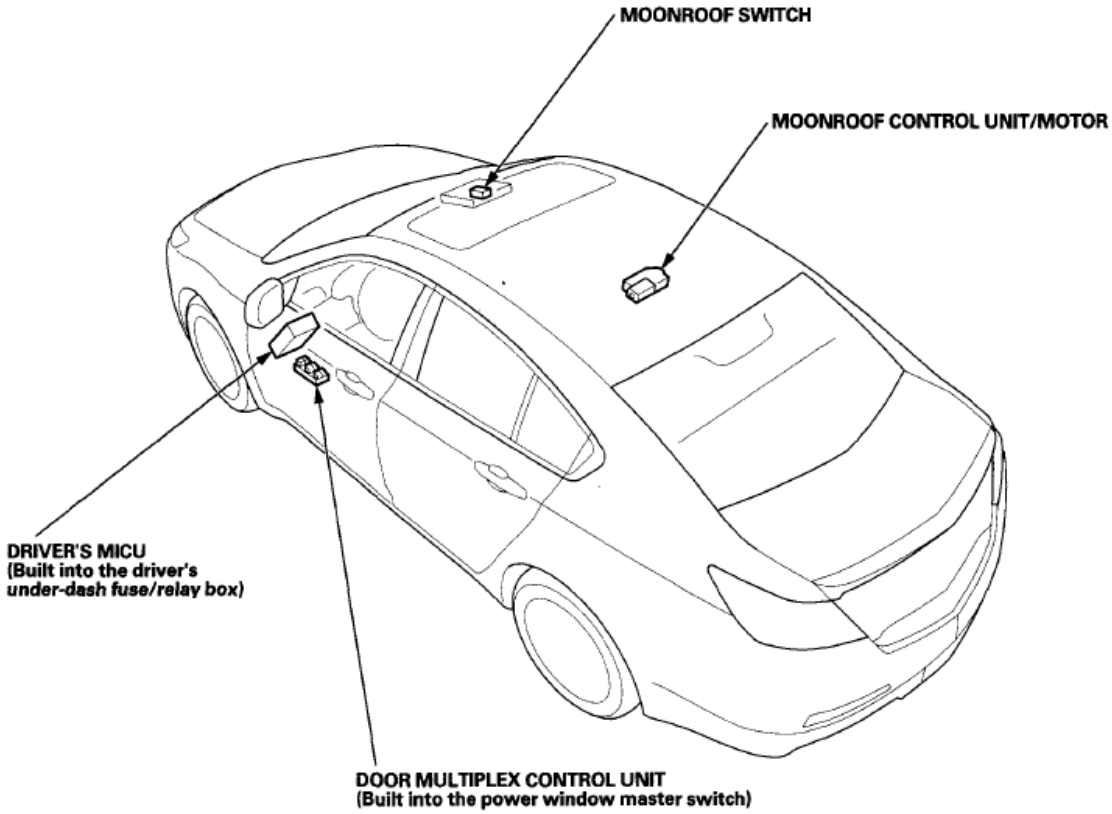

Fig. 1: Power Moonroof Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure
Water leaks from moonroof	1. Check for a clogged or detached drain tube. 2. Check the glass position adjustment (see **GLASS POSITION ADJUSTMENT**). 3. Check for a defective or an improperly installed glass weatherstrip or drain channel. 4. Check for a gap between the drain channel seal and the roof panel.
	1. Check for excessive clearance between the glass weatherstrip and the roof panel.

Wind noise from moonroof	2. Check the glass position adjustment (see **GLASS POSITION ADJUSTMENT**).
Motor noise from moonroof	1. Check for a loose motor. 2. Check for a worn gear or bearing. 3. Check for a deformed cable assembly. 4. Check for dirt or debris.
Moonroof glass does not move smoothly.	1. Check for a defective motor control unit (see **MOONROOF CONTROL UNIT INPUT TEST**). 2. Check the moonroof motor (see **MOONROOF CONTROL UNIT INPUT TEST**). 3. Check the glass position adjustment (see **GLASS POSITION ADJUSTMENT**). 4. Check the sliding parts.
Moonroof glass does not move, but motor turns	1. Check for foreign matter stuck between the guide rail and the slider. 2. Make sure the cable assembly is attached properly. 3. Check for a loose inner cable. 4. Check for a defective gear or inner cable.
Moonroof glass does not move and motor does not turn.	1. Check for a run down battery (see **BATTERY TEST**). 2. Check for a blown fuse. 3. Check for a faulty moonroof switch (see **MOONROOF SWITCH TEST/REPLACEMENT**). 4. Check for a defective motor control unit (see **MOONROOF CONTROL UNIT INPUT TEST**).
Moonroof glass does not stop at proper flush closed position	1. Reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**). 2. Check the glass position adjustment (see **GLASS POSITION ADJUSTMENT**).
Moonroof glass moves in a jerking motion (moves 40 mm (1.57 in), stops for 0.4 seconds, and repeats)	Reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**).
During auto close operation, moonroof glass reverses when no object is trapped	1. Check for dirt and debris in the track. 2. Reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**).
Moonroof glass moves, but there is no AUTO function	Reset the moonroof control unit (see **RESETTING THE MOONROOF CONTROL UNIT**).

RESETTING THE MOONROOF CONTROL UNIT

Reset the moonroof after doing any of the following actions:

- The moonroof was moved manually while the battery was dead or disconnected.
- The moonroof motor was removed or replaced with a new one.
- Any components related to the moonroof were replaced or removed and reinstalled.
    - Wind deflector
    - Moonroof glass
    - Moonroof seal
    - Moonroof glass bracket
    - Moonroof cables, etc.

To reset the moonroof control unit, do these steps:

1. Close the driver's door, and leave it closed until the procedure is complete.
2. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
3. Press and hold the tilt switch, and turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
4. Release the tilt switch, and turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
5. Repeat steps 3 and 4 four times.
6. Check if the AUTO OPEN and AUTO CLOSE functions still work. If they still work, the AUTO functions have not been cleared, go back to step 1. If the AUTO functions have been cleared, go to step 7.
7. Press and hold the moonroof open switch for at least 3 additional seconds after the moonroof is fully opened.
8. Press and hold the moonroof close switch for at least 3 additional seconds after the moonroof is fully closed (tilted).
9. Confirm that the moonroof control unit is reset by using the moonroof AUTO OPEN and AUTO CLOSE function.

CIRCUIT DIAGRAM

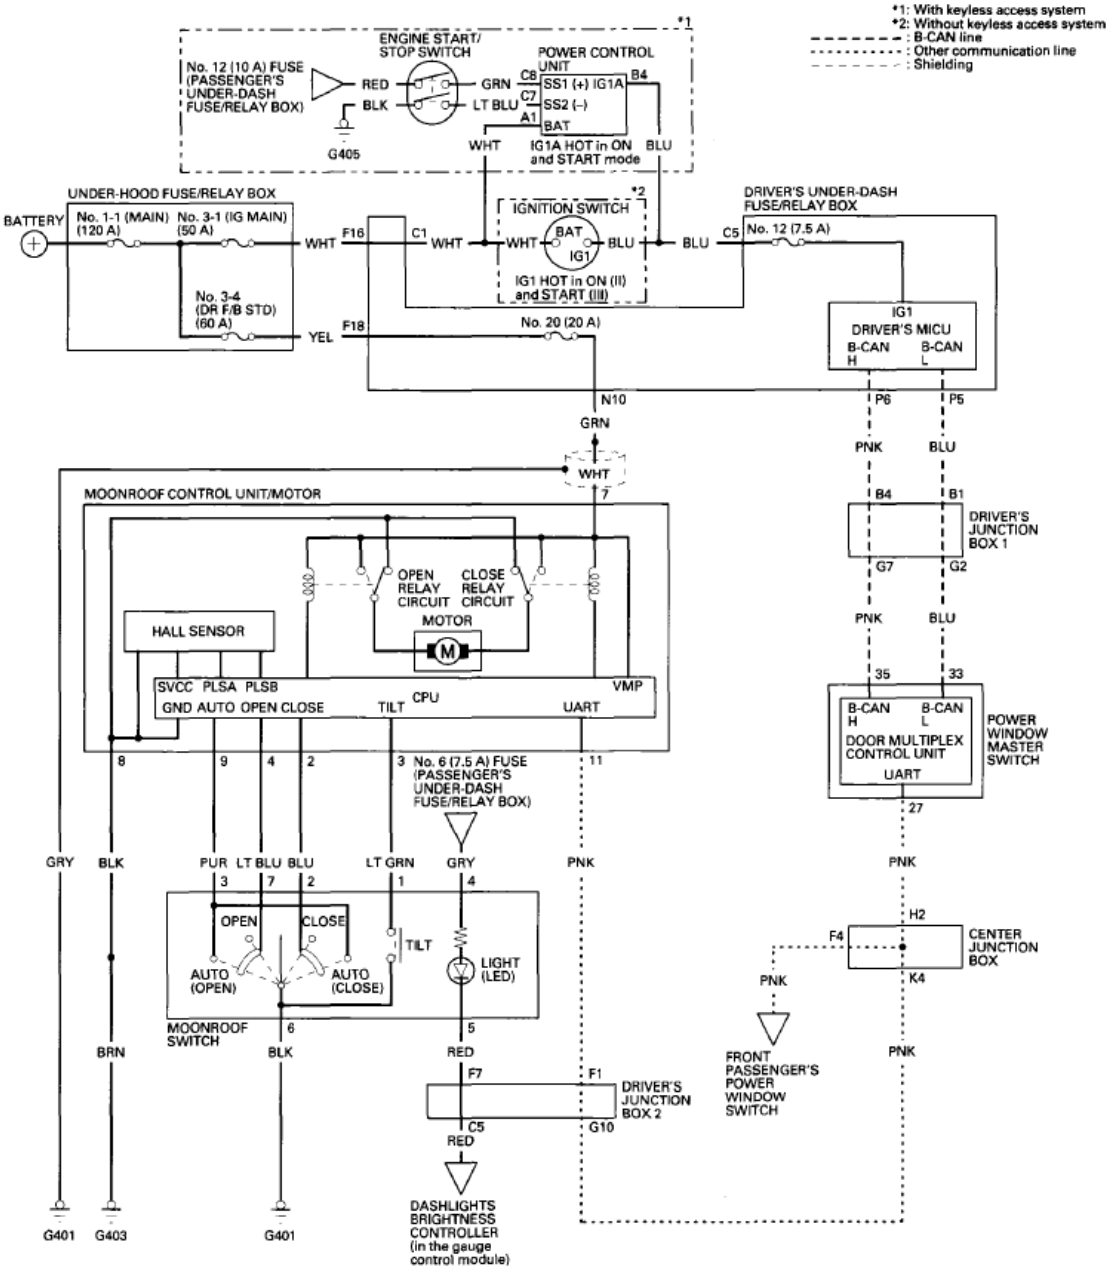

Fig. 2: Power Moonroof - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

MOONROOF CONTROL UNIT INPUT TEST

NOTE:

- **If the moonroof works OK manually, but will not work in AUTO, or reverses frequently (obstacle detection), reset the moonroof (see RESETTING THE MOONROOF CONTROL UNIT) before proceeding with the input test.**
- **SRS components are located in this area. Review the SRS component locations (see COMPONENT LOCATION INDEX), and precautions and**

procedures (see PRECAUTIONS AND PROCEDURES) before doing repairs or servicing.

1. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. Remove the headliner (see **HEADLINER REMOVAL/INSTALLATION**).
3. Disconnect the 14P connector (A) from the moonroof control unit/motor (B).

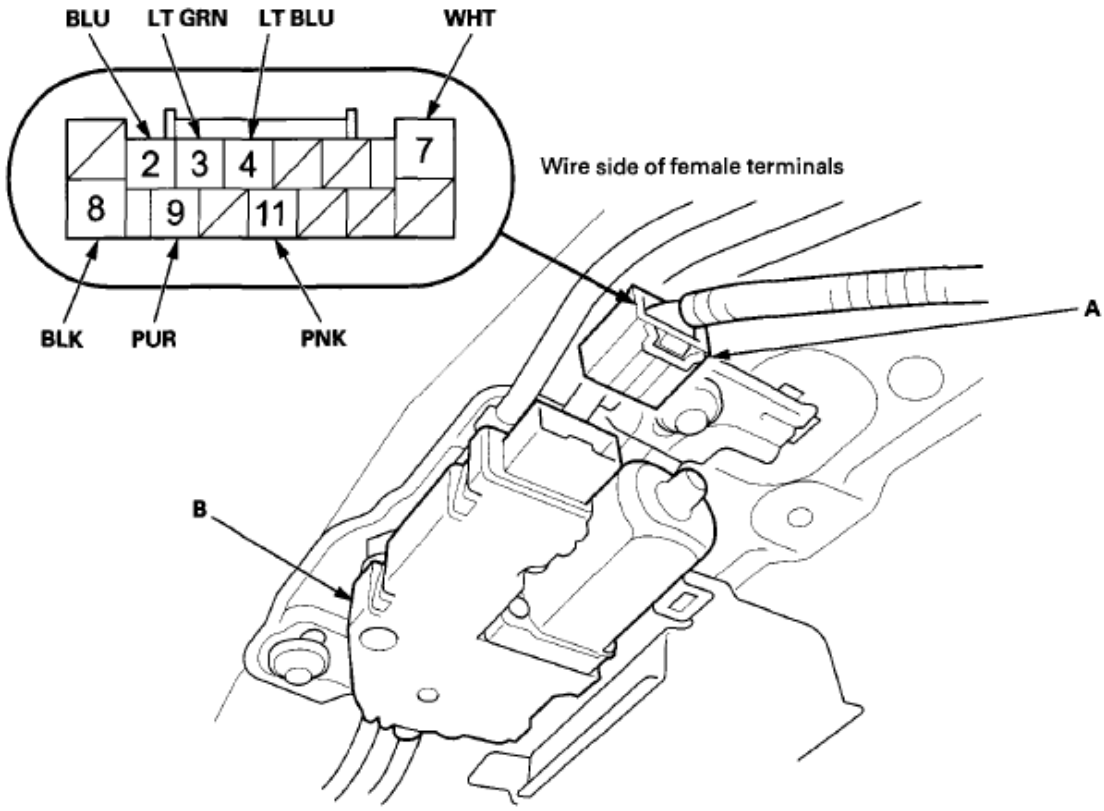

Fig. 3: Identifying 14P Connector End View And Moonroof Control Unit/Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect the connector and socket terminals to be sure they are all making good contact.
   - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
   - If the terminals look OK, go to step 5.
5. With the moonroof control unit/motor 14P connector still disconnected, do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If the input test proves OK, go to step 6.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
			Check for continuity between moonroof switch 14P connector terminal No. 11	

11	PNK	Disconnect the power window master switch 37P connector and the front passenger's power window switch 37P connector	and power window master switch 37P connector terminal No. 27: There should be continuity.	An open in the UART wire
			Check for continuity to ground: There should be no continuity.	A short to ground in the UART wire

6. Reconnect the connector to the control unit, and do the following input tests:
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, go to step 7.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
7	WHT	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 20 (20 A) fuse in the driver's under-dash fuse/relay box • An open or high resistance in the wire
8	BLK	In all ignition switch positions or all power modes	Measure the voltage to ground: There should be less than 0.2 V.	• Poor ground(G403) • An open or high resistance in the ground wire
2	BLU	Ignition switch to ON (II), or power mode ON, moonroof switch in CLOSE position	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty moonroof switch • Poor ground (G401) or an open in the ground wire • An open or high resistance in the wire
		Ignition switch to ON (II), or power mode ON, moonroof switch released	Measure the voltage to ground: There should be battery voltage.	• Blown No. 20 (20 A) fuse in the driver's under-dash fuse/relay box • Faulty driver's under-dash fuse/relay box • Faulty moonroof switch • A short to ground in the wire
		Ignition switch to ON (II), or power mode ON, moonroof switch in TILT position	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty moonroof switch • Poor ground (G401) or an open in the ground wire

3	LT GRN	Ignition switch to ON (II), or power mode ON, moonroof switch released	Measure the voltage to ground: There should be battery voltage.	• An open or high resistance in the wire • Blown No. 20 (20 A) fuse in the driver's under-dash fuse/relay box • Faulty driver's under-dash fuse/relay box • Faulty moonroof switch • A short to ground in the wire
4	LT BLU	Ignition switch to ON (II), or power mode ON, moonroof switch in OPEN position	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty moonroof switch • Poor ground (G401) or an open in the ground wire • An open or high resistance in the wire • Blown No. 20 (20 A) fuse in the driver's under-dash fuse/relay box • Faulty driver's under-dash fuse/relay box • Faulty moonroof switch • A short to ground in the wire
		Ignition switch to ON (II), or power mode ON, moonroof switch released	Measure the voltage to ground: There should be battery voltage.	
9	PUR	Ignition switch to ON (II), or power mode ON, moonroof switch in AUTO OPEN or AUTO CLOSE position	Measure the voltage to ground: There should be less than 0.2 V.	• Faulty moonroof switch • Poor ground (G401) or an open in the ground wire • An open or high resistance in the wire • Blown No. 20 (20 A) fuse in the driver's under-dash fuse/relay box • Faulty driver's under-dash fuse/relay box • Faulty moonroof switch • A short to ground in the wire
		Ignition switch to ON (II), or power mode ON, moonroof switch released	Measure the voltage to ground: There should be battery voltage.	

7. If all the input tests are OK and multiple failures are found, replace the moonroof control unit/motor assembly (see **MOTOR REPLACEMENT**). If the problem is related to the key-off operation, go to the driver's MICU input test (see **CONTROL UNIT INPUT TEST**), and power window master switch input test (see **POWER WINDOW MASTER SWITCH INPUT TEST**).

MOONROOF SWITCH TEST/REPLACEMENT

1. Remove the roof console (see **ROOF CONSOLE INPUT TEST/REPLACEMENT**).
2. Remove the two screws (A) then pull out the moonroof switch (B) from the roof console (C).

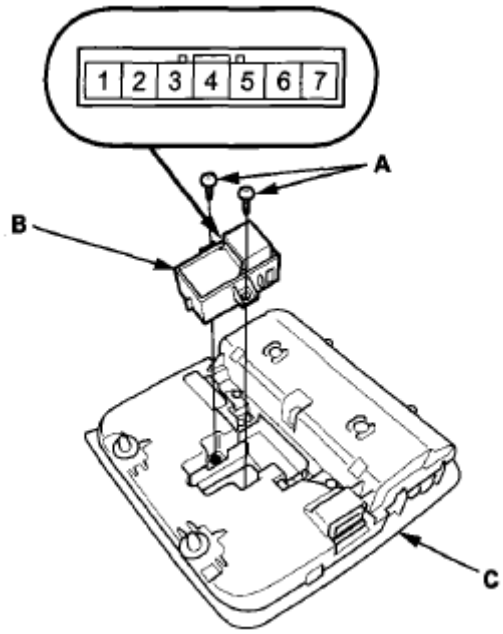

Fig. 4: Identifying Roof Console, Moonroof Switch And Screws With Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals in each switch position according to the table.
   - Make sure the correct test lead (+ or -) is placed on the terminal.
   - When checking for continuity across the diode, use the diode setting on the digital volt/ohm meter to check the diode bias.
   - Be careful of this characteristic; a diode is one that conducts fully in one direction (forward) and not at all in the opposite direction (reverse).

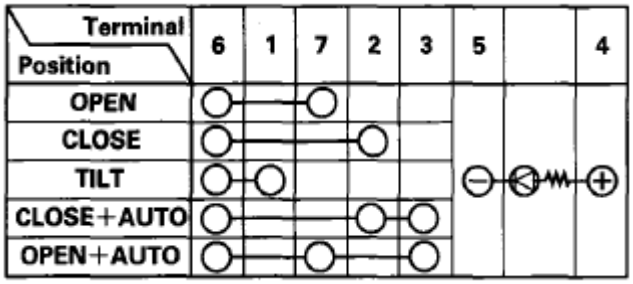

Fig. 5: Diode Setting - Reference Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the continuity is not as specified, replace the switch.
5. Install the switch in the reverse order of removal.

2012 ACCESSORIES & EQUIPMENT

Trunk Lid Opener - TL

COMPONENT LOCATION INDEX

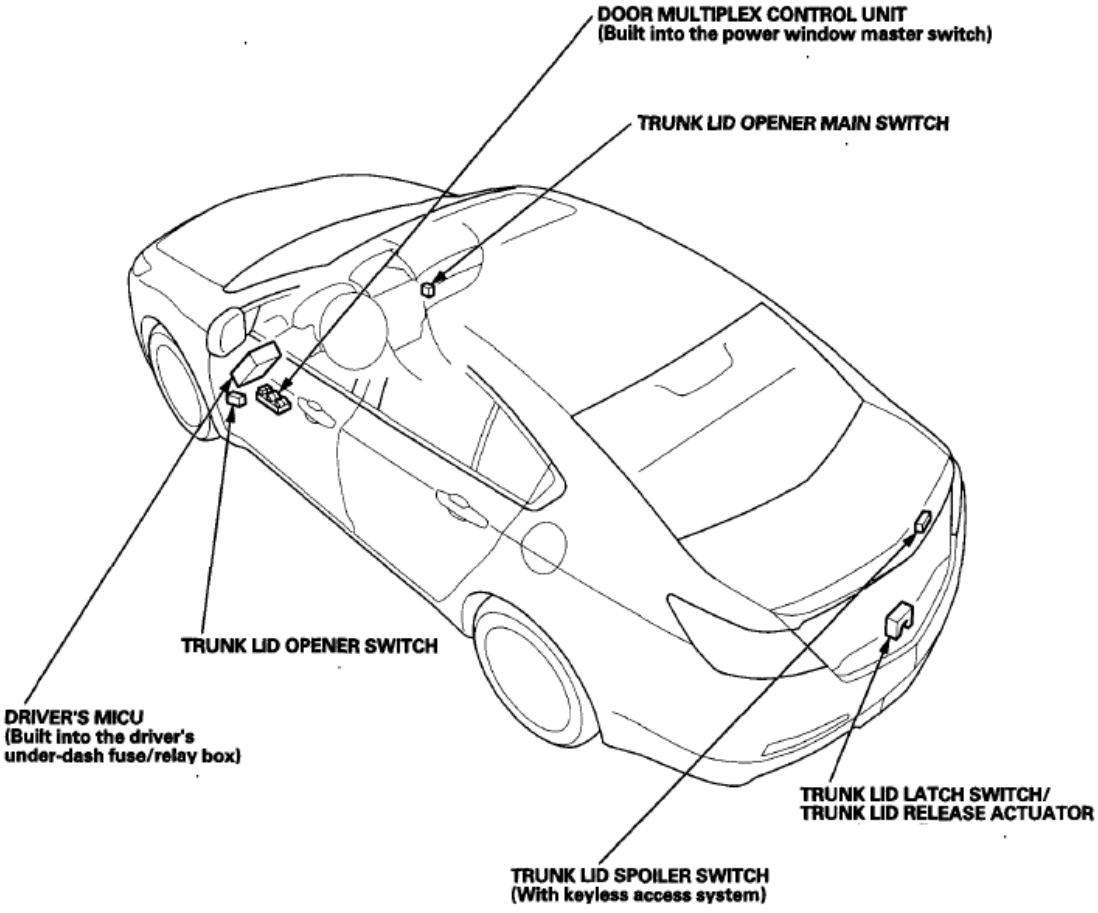

Fig. 1: Trunk Lid Opener Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CIRCUIT DIAGRAM

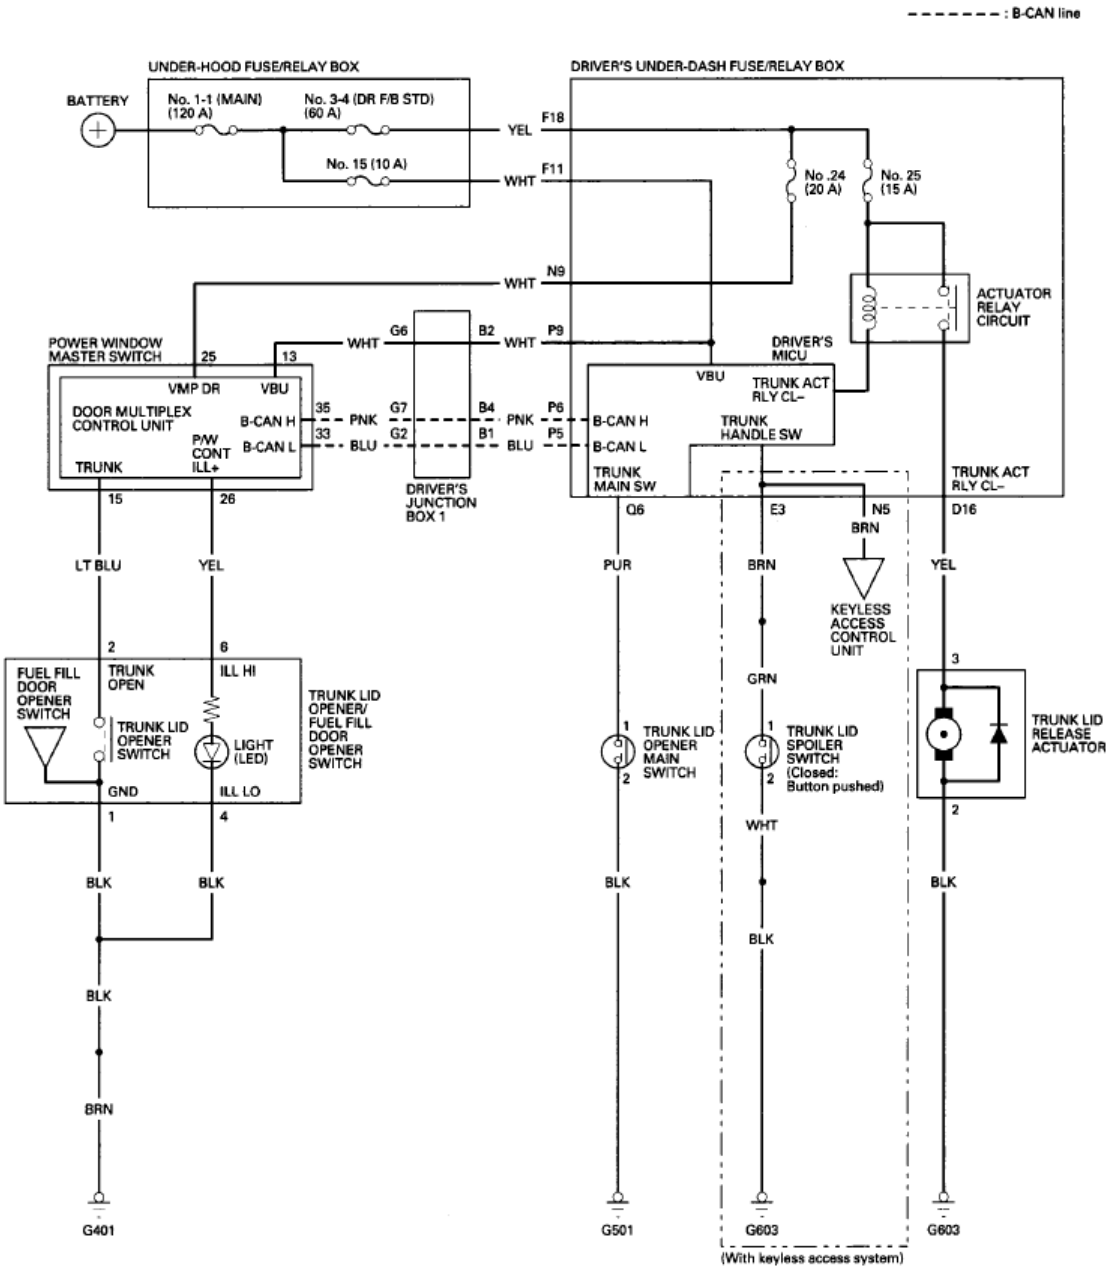

Fig. 2: Trunk Lid Opener Circuit Wiring Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRUNK LID OPENER MAIN SWITCH TEST/REPLACEMENT

1. Remove the glove box housing, (see **GLOVE BOX REMOVAL/INSTALLATION**).
2. Carefully push the main switch (A) out from behind the glove box housing.

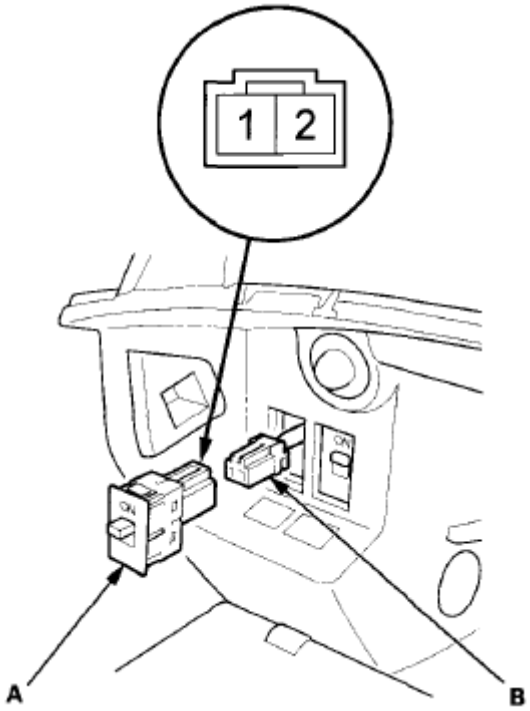

Fig. 3: Identifying Main Switch And 2P Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the 2P connector (B) from the trunk lid opener main switch.
4. Check for continuity between the terminals in each switch position according to the table.

Position \ Terminal	1	2
ON	○——	——○
OFF		

Fig. 4: Identifying Continuity Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the continuity is not as specified, replace the main switch.
6. Install the switch in the reverse order of removal.

TRUNK LID OPENER SWITCH TEST/REPLACEMENT

1. Remove the driver's door panel, (see **FRONT DOOR PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 6P connector (A) from the trunk lid opener switch (B).

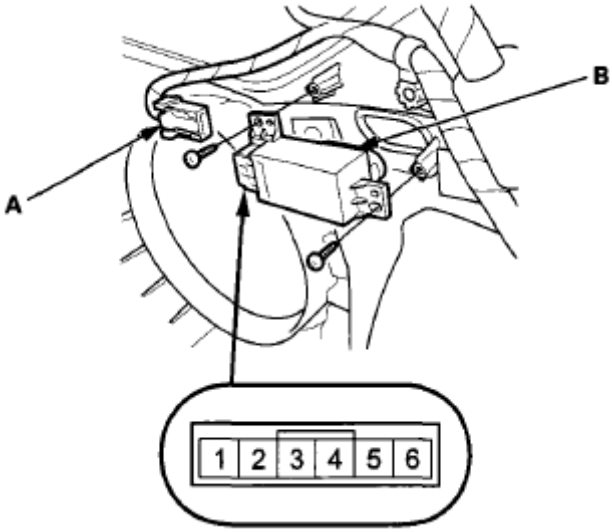

Fig. 5: Identifying Trunk Lid Opener Switch & 6P Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the terminals in each switch position according to the table.

Terminal / Position	1	2
ON	○——	——○
OFF		

Fig. 6: Identifying Continuity Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the continuity is not as specified, remove the two screws and replace the switch.
5. Install the switch in the reverse order of removal.

TRUNK LID SPOILER SWITCH TEST/REPLACEMENT

WITH KEYLESS ACCESS SYSTEM

1. Open the trunk lid, and remove the trunk lid spoiler, (see **SIDE SILL PROTECTION TAPE REPLACEMENT**).
2. Disconnect the rearview harness 2P connector (A) from the trunk lid spoiler switch 2P connector (B).

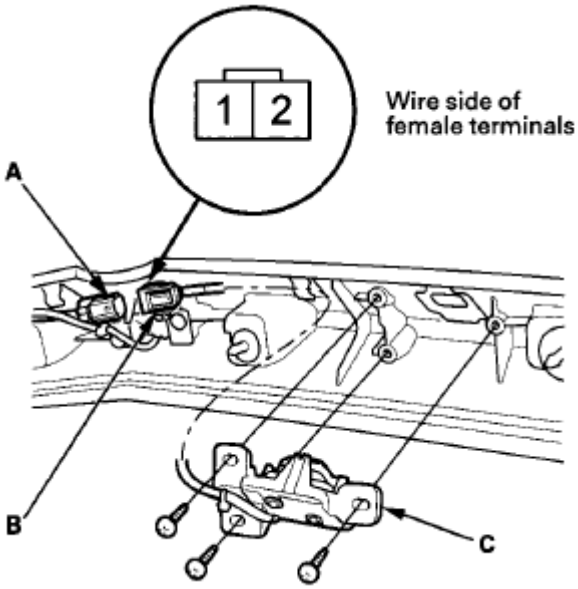

Fig. 7: Identifying Trunk Lid Spoiler Switch, Trunk Lid Spoiler Switch & 2P Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the three screws, and the trunk lid spoiler switch (C).
4. Check for continuity between the terminals in each switch position according to the table.

Terminal / Position	1	2
Pushed	○	○
Released		

Fig. 8: Identifying Continuity Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the continuity is not as specified, replace the switch.
6. Install the switch in the reverse order of removal.

2012 ACCESSORIES & EQUIPMENT

Trunk Lid - TL

COMPONENT LOCATION INDEX

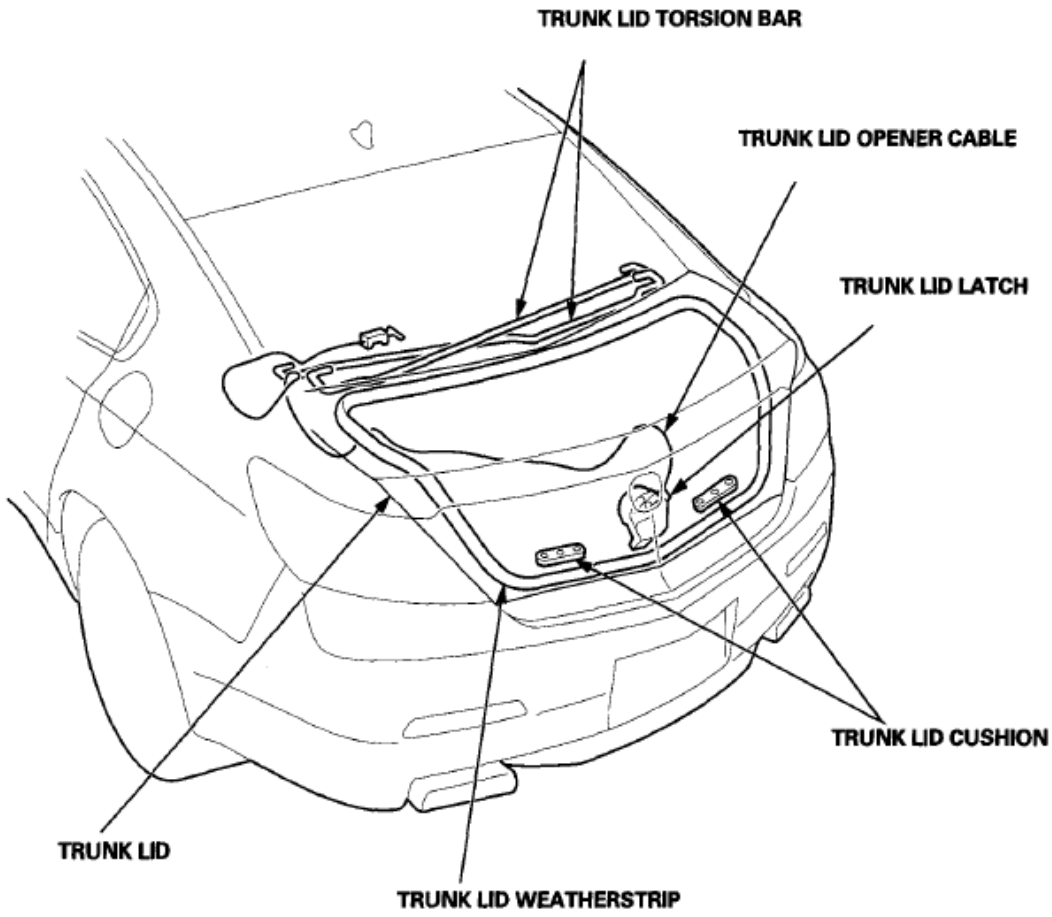

Fig. 1: Trunk Lid Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRUNK LID ADJUSTMENT

1. Remove these items:
   - Rear seat cushion (see **REAR SEAT REMOVAL/INSTALLATION**)
   - Rear door opening seal, as needed (see **TRIM REMOVAL/INSTALLATION - DOOR AREAS**)
   - C-pillar trims, both sides (see **C-PILLAR TRIM**)
   - Rear center seat belt lower anchor (see **REAR CENTER SEAT BELT AND REAR SEAT BELT BUCKLES**)
   - Rear shelf (see **TRIM REMOVAL/INSTALLATION - REAR SHELF AREA**)
2. Pull back the rear panel cap (A) to release the hooks (B), then remove the cap.

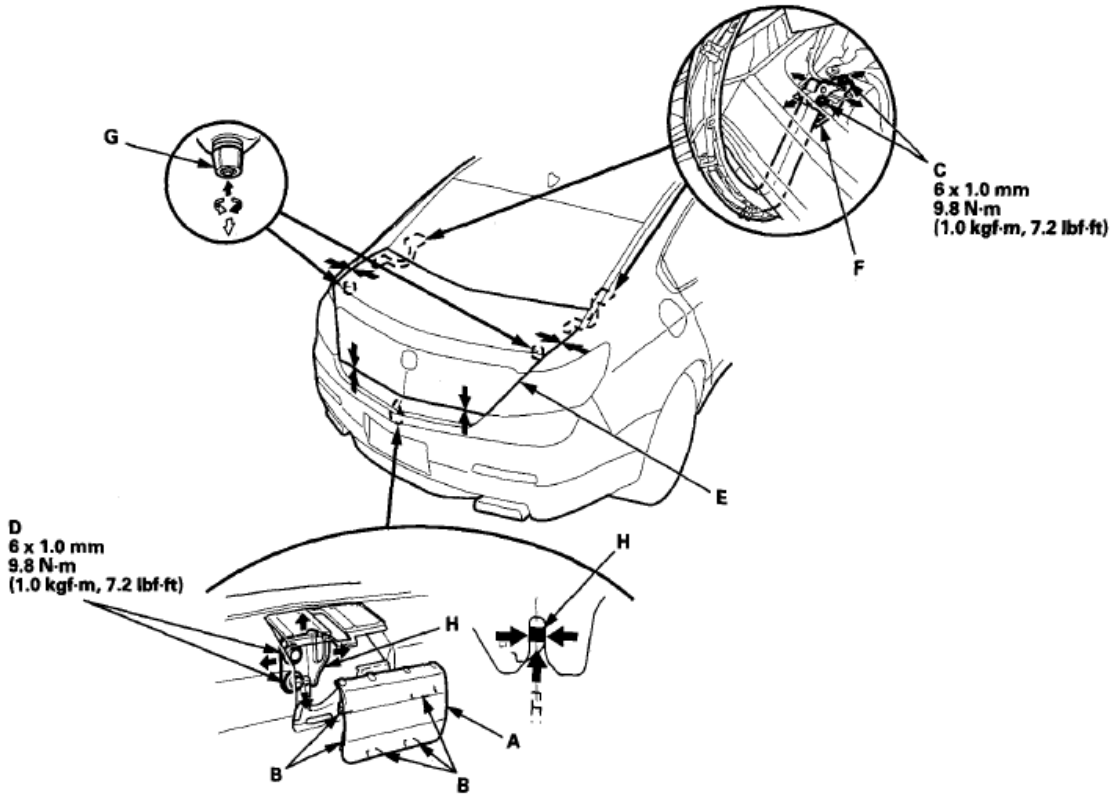

Fig. 2: Identifying Rear Panel Cap, Hooks, Trunk Lid Hinge Bolts, Striker Bolts, Trunk Lid Hinge Bolts And Trunk Lid With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Slightly loosen the trunk lid hinge bolts (C) and the striker bolts (D).
4. Adjust the trunk lid (E) alignment in the following sequence:
   - Adjust the trunk lid hinges (F) right and left, as well as forward and rearward, by using the elongated holes. Take care not to hit the rear window when loosening the bolts.
   - Turn the trunk lid edge cushions (G), in or out as necessary, to make the trunk lid fit flush with the body at the rear and side edges.
   - Adjust the fit between the trunk lid and the trunk lid latch by moving the striker (H).
5. Tighten each bolt to the specified torque.
6. Make sure the trunk lid opens properly and locks securely.
7. Reinstall all remaining removed parts.

TRUNK LID TORSION BAR REPLACEMENT

Special Tools Required

Torsion Bar Assembly Tool 07AAF-SNAA100

NOTE: put on gloves to protect your hands.

1. Remove the trunk side trim panels from both sides (see **TRIM REMOVAL/INSTALLATION - TRUNK AREA**).
2. Remove the trunk lid torsion bars with the torsion bar assembly tool from both trunk lid hinges. First remove the left torsion bar (A), then remove the right torsion bar (B).

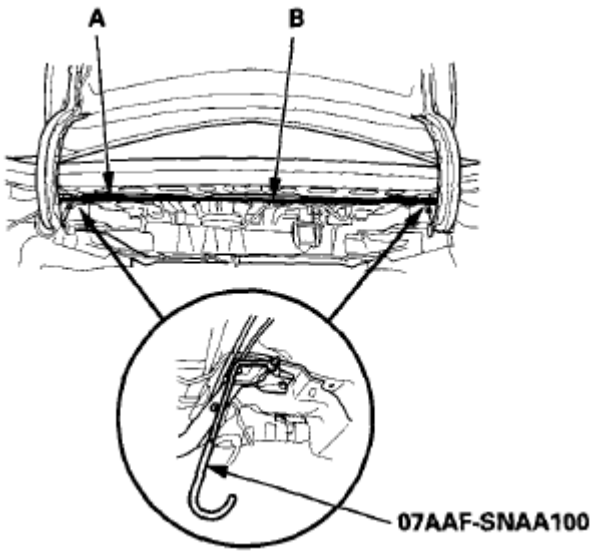

Fig. 3: Identifying Left Torsion Bar And Right Torsion Bar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the torsion bars in the reverse order of removal, and note these items:
   - The shapes of the right torsion bar (A) and the left torsion bar (B) are shown. Install the torsion bars properly.
   - Adjust the torsion bars forward or rearward with the torsion bar assembly tool.
   - The torsion bars ware installed at the factory at the normal position as shown.
   - Make sure the trunk lid opens properly and locks securely.

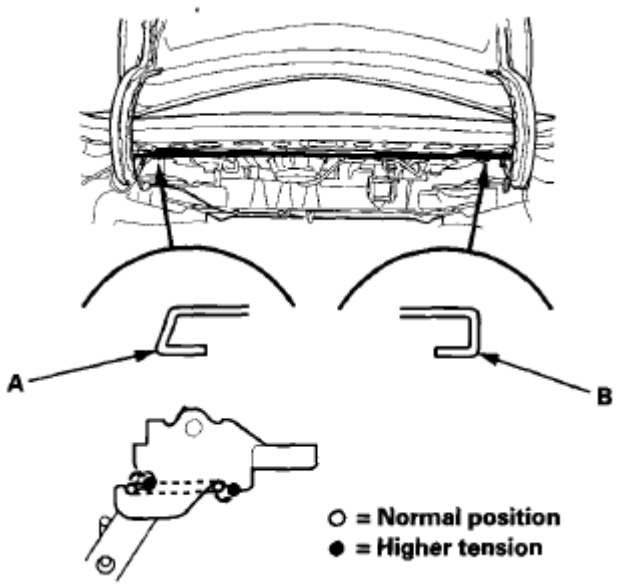

Fig. 4: Adjusting Torsion Bars Forward Or Rearward With Torsion Bar Assembly Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRUNK LID WEATHERSTRIP REPLACEMENT

1. Remove the trunk lid weatherstrip (A) by pulling it off.

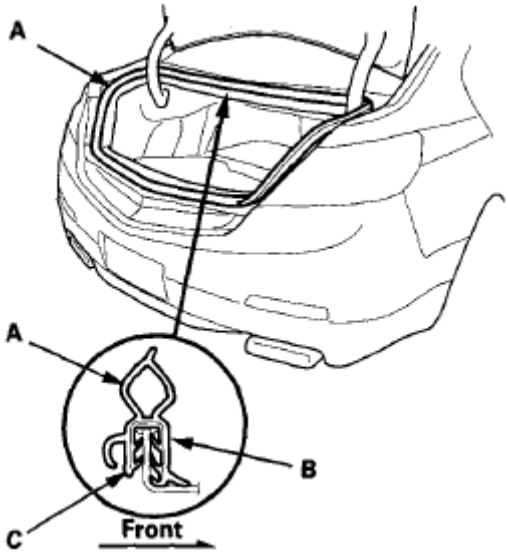

Fig. 5: Identifying Trunk Lid Weatherstrip And Painted Alignment Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Locate the painted alignment mark (B or C) on the trunk lid weatherstrip. Align the painted mark in the center of the trunk lid opening, and install the trunk lid weatherstrip all the way around in the direction shown. Make sure there are no wrinkles in the weatherstrip.

3. Check for water leaks (see **DOOR POSITION ADJUSTMENT**).

TRUNK LID CUSHION REPLACEMENT

1. Remove the trunk lid cushion (A) by pulling it out to detach the clips.

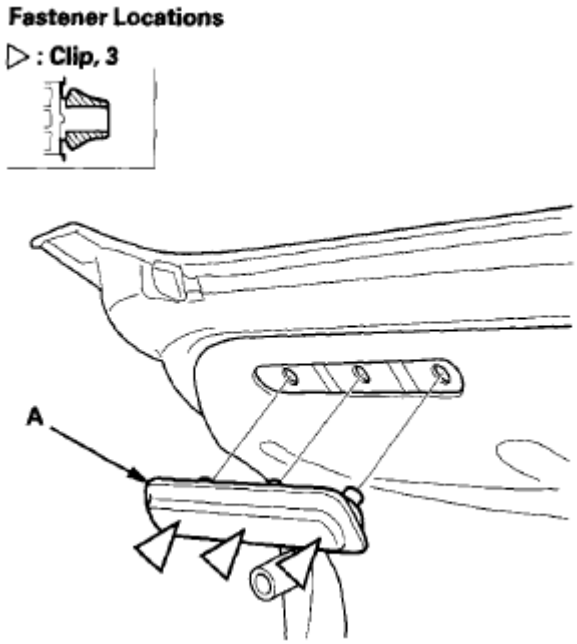

Fig. 6: Removing Trunk Lid Cushion
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the trunk lid cushion by pushing on the clip areas until the clips snap into place securely.

TRUNK LID OPENER CABLE REPLACEMENT

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the body.**
- **Take care not to kink the trunk lid opener cable.**

1. Remove these items:
   - Rear seat cushion (see **REAR SEAT REMOVAL/INSTALLATION**)
   - Rear seat-back (see **REAR SEAT REMOVAL/INSTALLATION**)
   - Trunk lid hinge trim (see **TRIM REMOVAL/INSTALLATION - TRUNK LID**)
   - Trunk lid trim panel (see **TRIM REMOVAL/INSTALLATION - TRUNK AREA**)
   - Trunk side trim panel, left side (see **TRIM REMOVAL/INSTALLATION - TRUNK AREA**)
   - Trunk upper trim panel (see **TRIM REMOVAL/INSTALLATION - TRUNK AREA**)
2. Disconnect the trunk lid opener cable (A) from the latch (B) (see step 4).

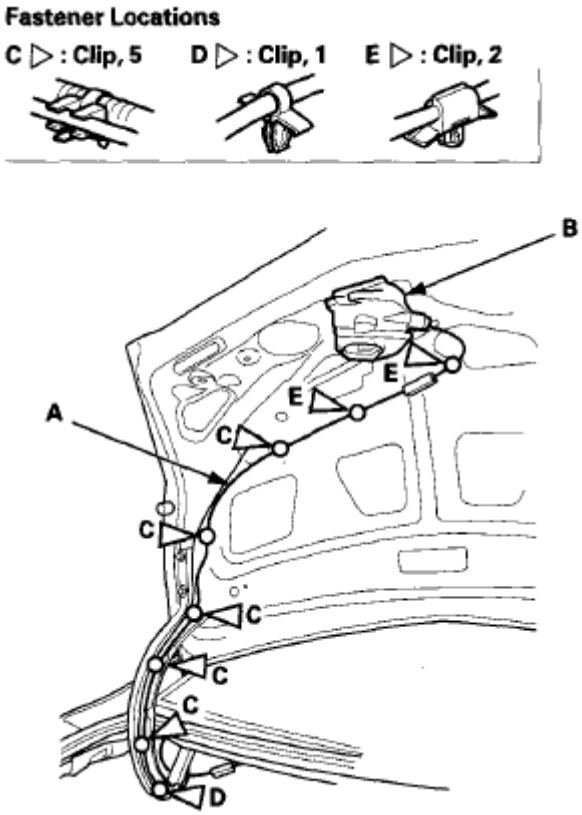

Fig. 7: Identifying Trunk Lid Opener Cable, Latch And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Detach the clips (C, D, E) with a clip remover.
4. Remove the trunk lid opener cable (A) from the opener cable bracket (B).

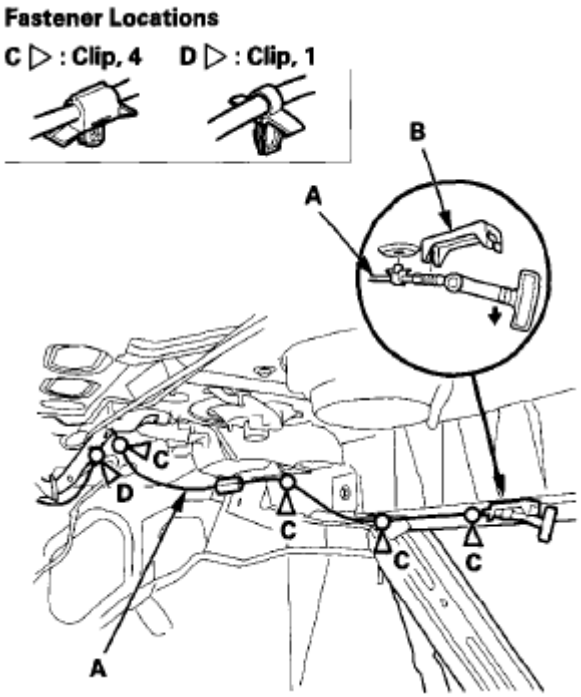

Fig. 8: Identifying Trunk Lid Opener Cable, Opener Cable Bracket And Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Detach the clips (C, D) with a clip remover.
6. Remove the trunk lid opener cable from the vehicle.
7. Install the cable in the reverse order of removal, and note these items:
    - Align the marks (A) on the opener cable (B) with the cable clips (C) as shown.
    - If the clips are damaged or stress-whitened, replace them with new ones.
    - Push the clips into place securely.
    - Make sure the trunk lid opens properly and locks securely.

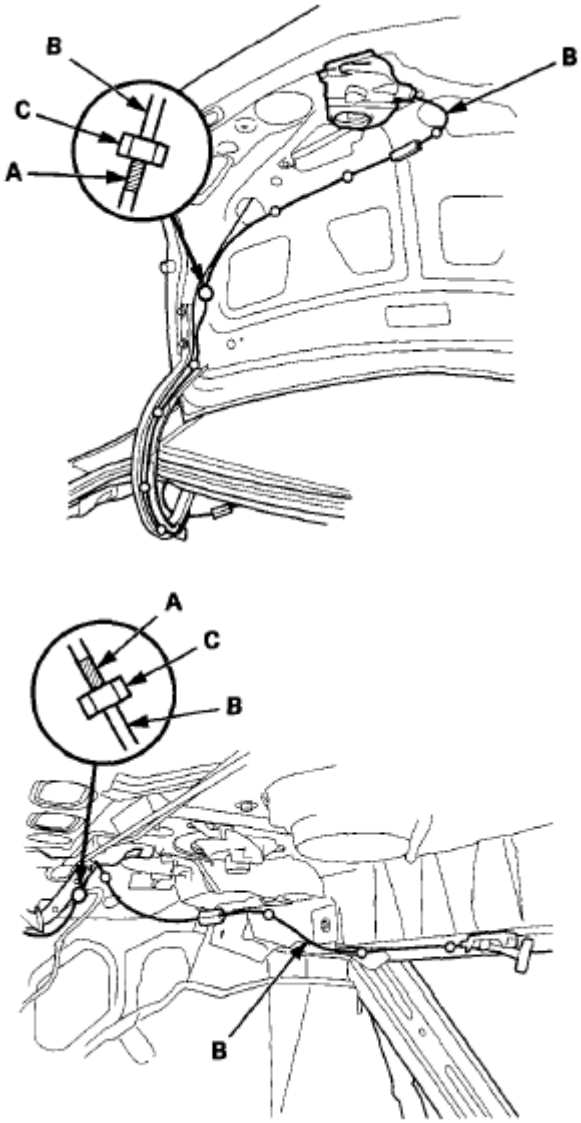

Fig. 9: Aligning Marks On Opener Cable With Cable Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TRUNK LID LATCH REPLACEMENT

Special Tools Required

KTC Trim Tool Set SOJATP2014*

*Available through the Acura Tool and Equipment Program; call 888-424-6857

NOTE:

- **Put on gloves to protect your hands.**
- **Take care not to scratch the trunk lid.**
- **Take care not to kink the trunk lid opener cable.**

- **Use the appropriate tool from the KTC trim tool set to avoid damage when removing components.**

1. Remove the trunk lid trim panel (see **TRIM REMOVAL/INSTALLATION - TRUNK LID**).
2. Insert a trim tool through the latch cover (A) opening, and pry on the cover to release the latch tabs (B). Pull on the cover, and release the projection (C), then remove the cover.

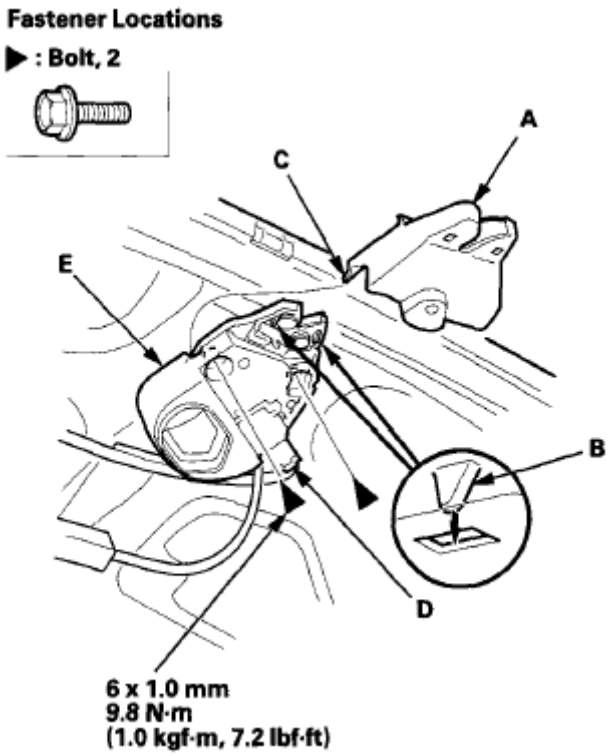

Fig. 10: Identifying Latch Cover, Latch Tabs, Trunk Lid Latch Connector And Trunk Lid Latch With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the trunk lid latch connector (D), and remove the bolts, then remove the trunk lid latch (E).
4. Note the position of the manual trunk lid opener cable end (A) in the trunk lid latch (B), then remove the cable from the latch.

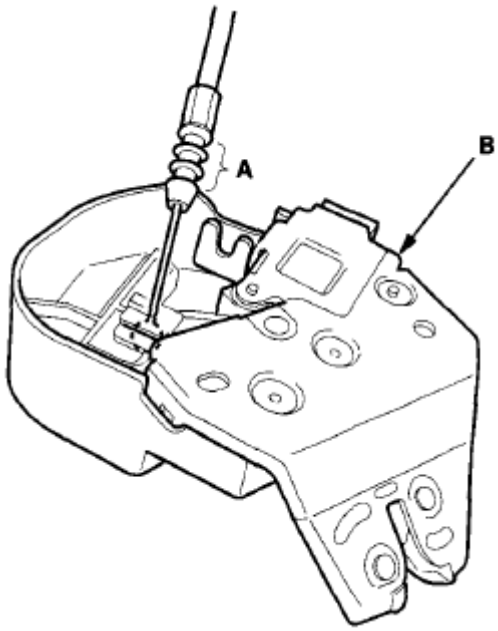

Fig. 11: Positioning Of Manual Trunk Lid Opener Cable End In Trunk Lid Latch
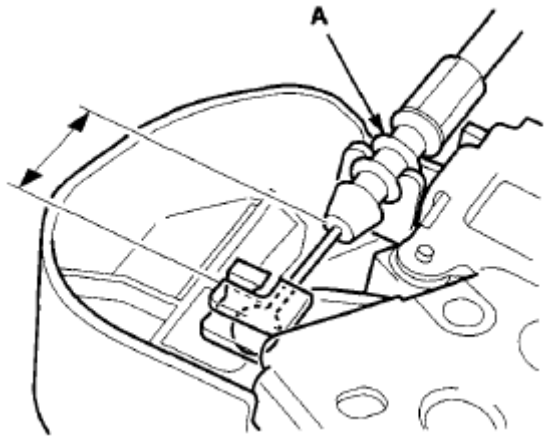
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the latch in the reverse order of removal, and note these items:
   - Make sure the connector is plugged in properly and the cable is connected properly.
   - Make sure the trunk lid opens properly and locks securely.
   - Reinstall the manual trunk lid opener cable end (A) back to the position noted in step 4. Check the operation of the manual trunk lid opener, by pulling on the rubber tab inside the pass through opening. If necessary, adjust the cable end position.



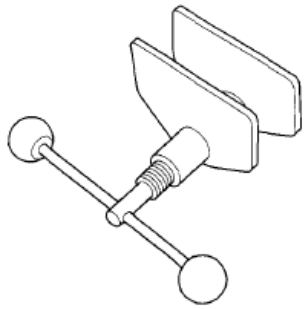


Fig. 12: Installing Manual Trunk Lid Opener Cable End Back To Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2012 BRAKES

Conventional Brake System - TL

SPECIAL TOOLS

Ref.No.	Tool Number	Description	Qty
①	07AAE-SEPA101	Brake Caliper Piston Compressor	1

①

Fig. 1: Identifying Conventional Brake System Special Tools
Courtesy of AMERICAN HONDA MOTOR CO., INC.

COMPONENT LOCATION INDEX

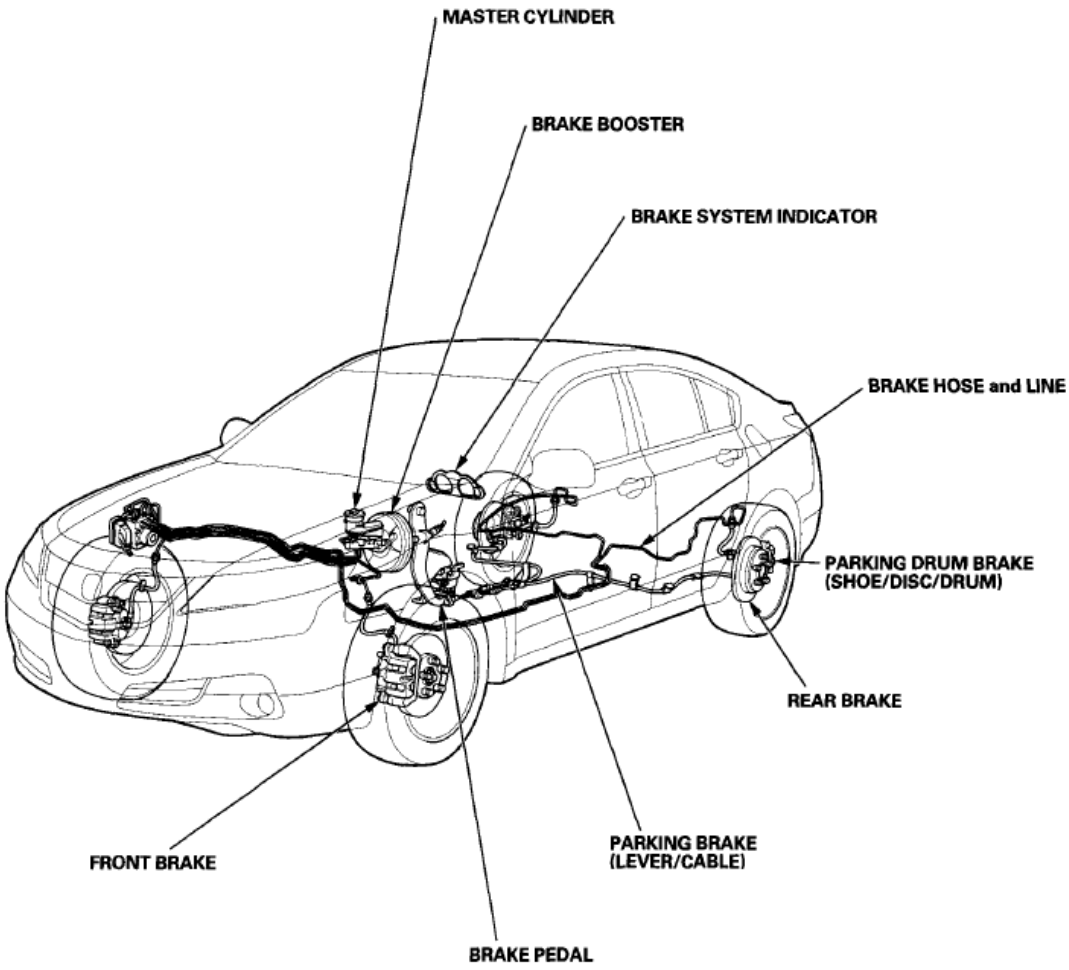

Fig. 2: Brake System Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

BRAKE SYSTEM INSPECTION AND TEST

Inspect the brake system components listed. Repair or replace any parts that are leaking or damaged.

COMPONENT INSPECTIONS

Component	Procedure	Also check for
Master Cylinder	Look for damage or signs of fluid leakage at: • Reservoir or reservoir grommets. • Line joints. • Between master cylinder and booster.	Bulging seal at reservoir cap. This is a sign of fluid contamination.
	Look for damage or signs of fluid	

Brake Hoses	leakage at: • Line joints and banjo bolt connections. • Hoses and lines, also inspect for twisting or damage.	Bulging, twisted, or bent lines.
Caliper	Look for damage or signs of fluid leakage at: • Piston seal. • Banjo bolt connections. • Bleed screw.	Seized or sticking caliper pins.
VSA Modulator-Control Unit	Look for damage or signs of fluid leakage at: • Line joints. • Modulator-control unit.	

BRAKE SYSTEM TEST

Brake pedal sinks/fades when braking

1. Set the parking brake, and start the engine, then turn off the A/C. Allow the engine to warm up to normal operating temperature (radiator fan comes on twice).
2. Attach a 50 mm (2 in) piece of masking tape along the bottom of the steering wheel, and draw a horizontal reference mark across it.
3. Make sure the steering column lock lever is in the locked position. With the transmission in neutral (M/T) or P or N (A/T), press and hold the brake pedal lightly (about the same pressure needed to keep an A/T-equipped vehicle from creeping), then release the parking brake.
4. While still holding the brake pedal, hook the end of the tape measure behind the brake pedal, then pull the tape up to the steering wheel. Note the measurement between the brake pedal and the reference mark on the steering wheel.
5. Apply steady pressure to the brake pedal for 3 minutes.
6. Watch the tape measure.
   - If the measurement increases 10 mm (0.39 in) or less, the master cylinder is OK.
   - If the measurement increases more than 10 mm (0.39 in), replace the master cylinder.

SYMPTOM TROUBLESHOOTING

RAPID BRAKE PAD WEAR, VEHICLE VIBRATION (AFTER A LONG DRIVE), OR HIGH, HARD BRAKE PEDAL

NOTE: Make sure that the caliper pins are installed correctly. The upper caliper pin and the lower caliper pin are different. If these caliper pins are installed in the wrong

location, it will cause vibration, uneven or rapid brake pad wear, and possibly uneven tire wear. For proper caliper pin location: Front caliper (see FRONT BRAKE CALIPER OVERHAUL), rear caliper (see REAR BRAKE CALIPER OVERHAUL).

1. Drive the vehicle until the brakes drag or until the pedal is high and hard. This can take 20 or more brake pedal applications during an extended test-drive.
2. With the engine running, raise and support the vehicle (see **LIFT AND SUPPORT POINTS**), and spin all four wheels by hand.

   Is there brake drag at any of the wheels?

   YES - Go to step 3.

   NO - Look for other causes of pad wear, high pedal, or vehicle vibration.

3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode (see **POWER MODE CONTROL FUNCTION**), press the brake pedal several times to deplete the vacuum in the brake booster, and then spin the wheels again to check for brake drag.

   Is there brake drag at any of the wheels?

   YES - Go to step 4.

   NO - Replace the brake booster (see **BRAKE BOOSTER REPLACEMENT**).

4. Without removing the brake lines, unbolt and separate the master cylinder from the brake booster, then spin the wheels to check for brake drag.

   Is there brake drag at any of the wheels?

   YES - Go to step 5.

   NO - Check the brake pedal position switch adjustment, and pedal free play (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).

5. Loosen the hydraulic lines at the master cylinder, then spin the wheels to check for brake drag.

   Is there brake drag at any of the wheels?

   YES - Go to step 6.

   NO - Check the master cylinder reservoir for contamination in the brake fluid. If you find contamination, flush the entire brake system of all contaminated fluid, then replace all rubber parts in the brake system that were exposed to contaminated fluid. If the brake fluid is OK, replace the master cylinder (see **MASTER CYLINDER REPLACEMENT**).

6. Loosen the bleed screws at each caliper, then spin the wheels to check for brake drag.

   Is there brake drag at any of the wheels?

   YES - Check the master cylinder reservoir for contamination in the brake fluid. If you find contamination, flush the entire brake system of all contaminated fluid, then replace all rubber parts in the brake system that were exposed to contaminated fluid. If the brake fluid is OK, disassemble and repair the caliper on the wheel(s) with brake drag.

   NO - Look for and replace any damaged brake lines. If all brake lines are OK, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT

PEDAL HEIGHT

1. Remove the driver's dashboard undercover (see **DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**).
2. Turn the brake pedal position switch 45 ° counterclockwise, and pull it back until it is no longer touching the brake pedal.
3. Remove the driver's side kick panel (see step 3 under **TRIM REMOVAL/INSTALLATION - DOOR AREAS**).
4. Remove the footrest (see step 4 under **FRONT CARPET REPLACEMENT**).
5. Remove the steering joint cover (see step 6 under **REMOVAL**).
6. Pull back the carpet, and find the cutout (A) in the insulation. Measure the pedal height (B) from the left side middle of the pedal pad (C) to the floor (D) without the insulation.

   Standard pedal height:

   M/T: 156 mm (6.14 in)

   A/T: 155 mm (6.10 in)

   M/T

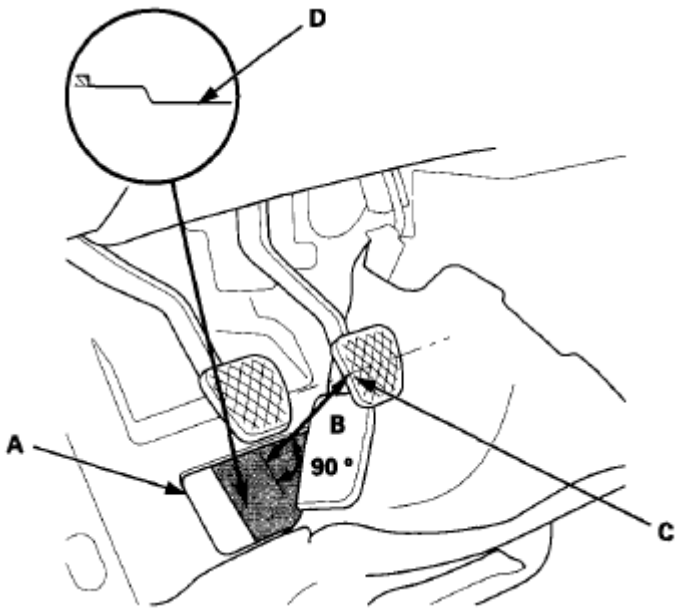

Fig. 3: Identifying Cutout, Pedal Height & Pedal Pad (M/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T

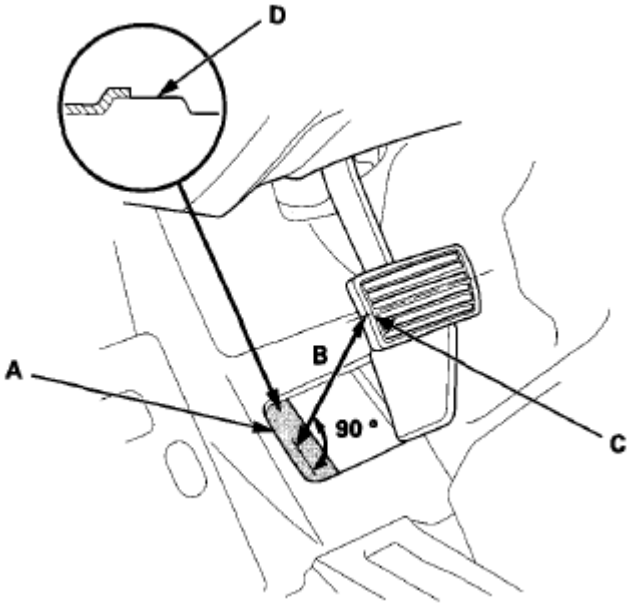

Fig. 4: Identifying Cutout, Pedal Height & Pedal Pad (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Pedal Adjustment

7. Loosen the pushrod locknut (A), and screw the pushrod (B) in or out with pliers until the standard pedal height from the floor is reached. After adjustment, tighten the locknut firmly. Do not adjust the pedal

height with the pushrod pressed.

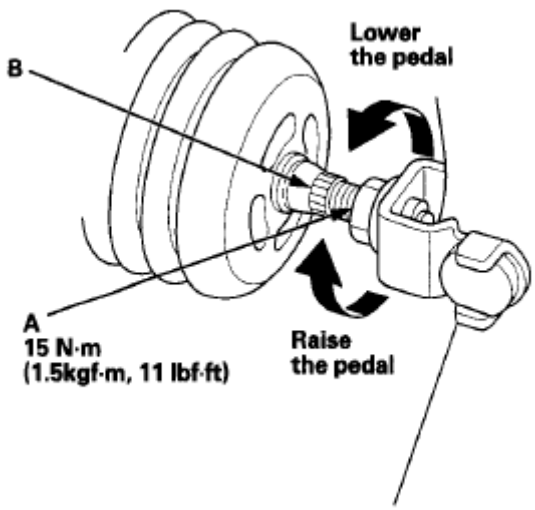

Fig. 5: Remove/Install Pushrod With Pliers With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Brake Pedal Position Switch Adjustment

8. Lift up on the brake pedal by hand. Push in the brake pedal position switch until its plunger is fully pressed (threaded end (A) touching the pad (B) on the pedal arm). Turn the switch 45 ° clockwise to lock it. The gap between the brake pedal position switch and the pad is automatically adjusted to 0.7 mm (0.028 in) by locking the switch. Make sure the brake lights go off when the pedal is released.

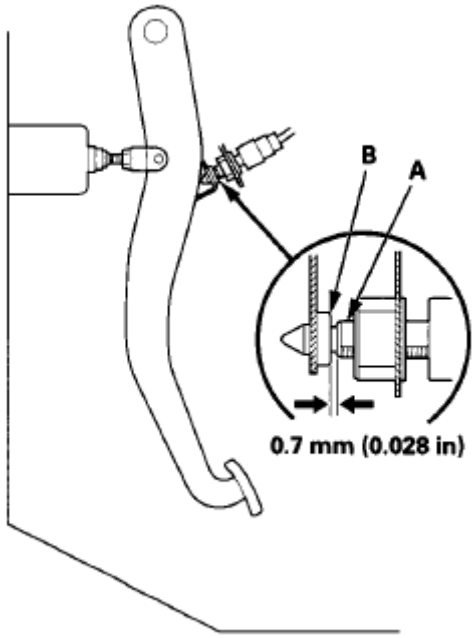

Fig. 6: Measuring Gap Between Brake Pedal Position Switch And Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install all removed parts in the reverse order of removal.
10. Check the brake pedal free play.

PEDAL FREE PLAY

1. With the ignition switch in LOCK (0), or press the engine start/stop button to select the OFF mode, inspect the free play (A) at the brake pedal pad (B) by pushing the brake pedal by hand. If the brake pedal free play is out of specification, adjust the brake pedal position switch (C). If the brake pedal free play is insufficient, it may result in brake drag.

   Free play: 1- 5 mm (0.04- 0.20 in)

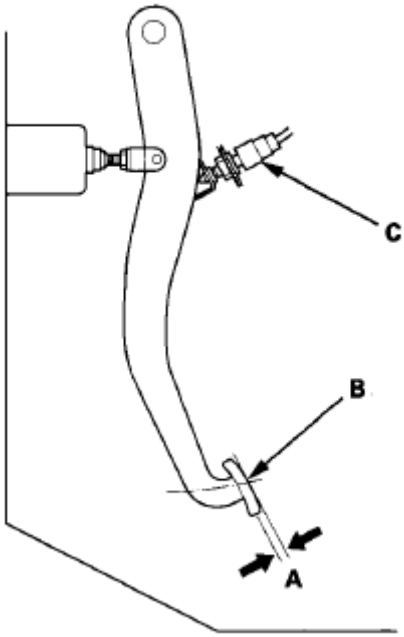

Fig. 7: Measuring Pedal Free Play
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PARKING BRAKE INSPECTION AND ADJUSTMENT

INSPECTION

1. Pull the parking brake lever (A) with 196 N (20 kgf, 44 lbf) of force to fully apply the parking brake. The parking brake lever should be locked within the specified number of clicks.

   Lever locked clicks: 6 to 8 clicks

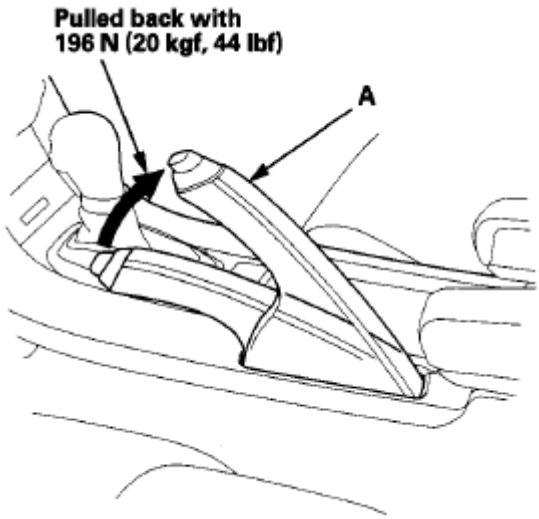

Fig. 8: Pulling Parking Brake Lever With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. If the number of lever clicks is not as specified, adjust the parking brake.

NOTE: Minor parking brake lever adjustments (1 to 2 clicks) can be made with the adjusting nut (see parking brake minor adjustment below). If a larger adjustment is required, follow the major adjustment procedure using the adjuster nut at the parking brake drum (see parking brake major adjustment below). After installing new parking brake shoes and/or new brake disc/drum, make sure you drive the vehicle for "break-in" (see PARKING BRAKE SHOE LINING BREAK-IN).

MINOR ADJUSTMENT

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Release the parking brake lever fully.
3. Remove the console box mat (A), then remove the lid (B).

NOTE: It is easier to use packing tape to remove the console box mat.

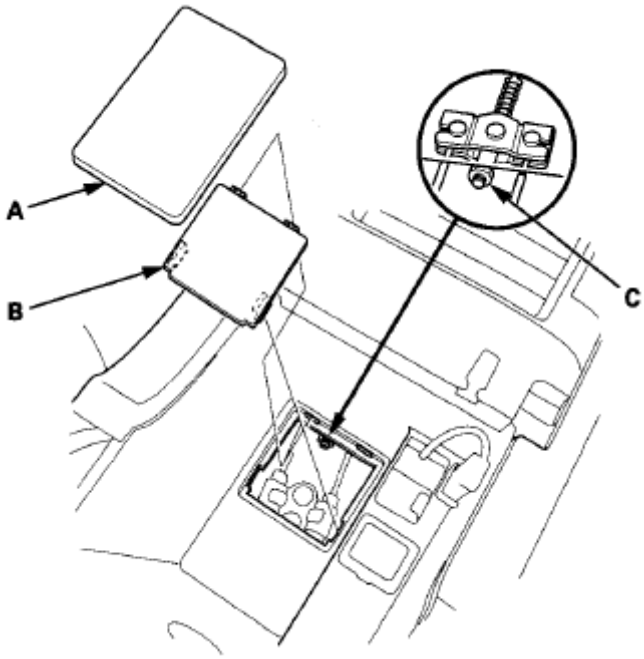

Fig. 9: Identifying Console Box Mat, Lid And Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pull the parking brake lever 1 click.
5. Tighten the adjusting nut (C) until the parking brakes drag slightly when the rear wheels are turned.
6. Release the parking brake lever fully, and check that the parking brakes do not drag when the rear wheels are turned. Readjust if necessary.
7. Make sure the parking brake lever is within the specified number of clicks (6 to 8 clicks).
8. Install the lid, then install the console box mat.

MAJOR ADJUSTMENT (TO BE DONE WHEN REPLACING PARKING BRAKE SHOES)

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Release the parking brake lever fully.
3. Remove the console box mat (A), then remove the lid (B).

NOTE: It is easier to use packing tape to remove the console box mat.

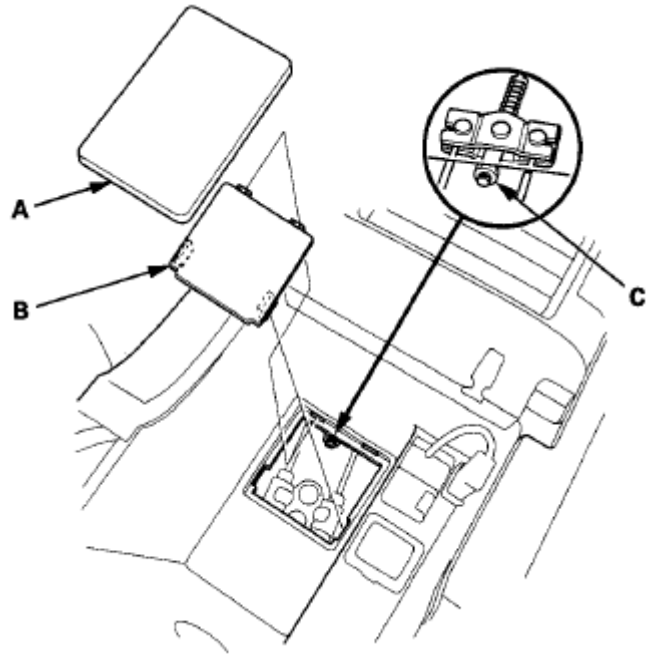

Fig. 10: Identifying Console Box Mat, Lid And Adjusting Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Loosen the adjusting nut (C).
5. Remove the rear wheels.
6. Remove the access plug (A).

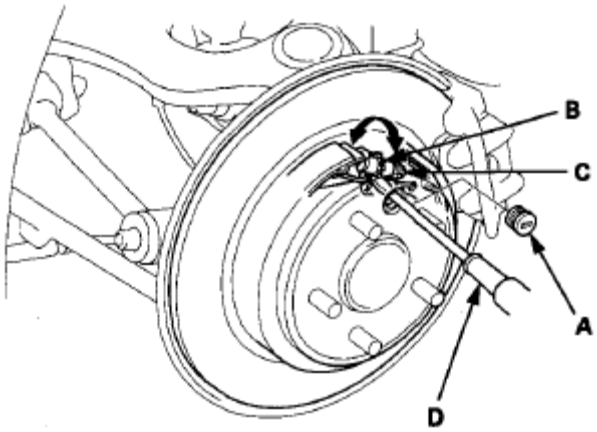

Fig. 11: Removing Access Plug By Using Flat-Tip Screwdriver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Turn the ratchet teeth (B) on the adjuster assembly (C) with a flat-tip screwdriver (D) until the shoes lock against the parking brake drum. Then back off the adjuster 8 clicks, and install the access plug.
8. Do the minor adjustment procedure.
9. Clean the mating surfaces between the brake disc/drum and the inside of the wheel, then install the rear

wheels.

BRAKE SYSTEM BLEEDING

NOTE: Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid gets on the paint, wash it off immediately with water.

NOTE:

- **Do not reuse the drained fluid. Use only new Acura DOT 3 Brake Fluid from an unopened container. Using a non-Acura brake fluid can cause corrosion and shorten the life of the system.**
- **Make sure no dirt or other foreign matter gets in the brake fluid.**
- **The reservoir connected to the master cylinder must be at the MAX (upper) level mark at the start of the bleeding procedure, and checked after bleeding each wheel location. Add fluid as required.**

1. Make sure the brake fluid level in the reservoir (A) is at the MAX (upper) level line (B).

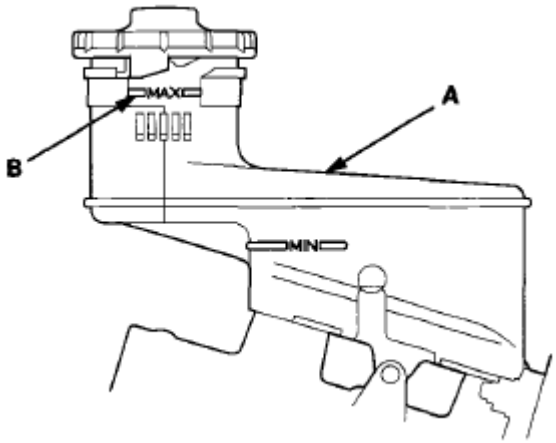

Fig. 12: Identifying Reservoir And MAX Level Line Of Brake Fluid
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Have someone slowly pump the brake pedal several times, then apply steady pressure.
3. Start the bleeding at the driver's side of the front brake system.

NOTE: Bleed the calipers in the sequence shown.

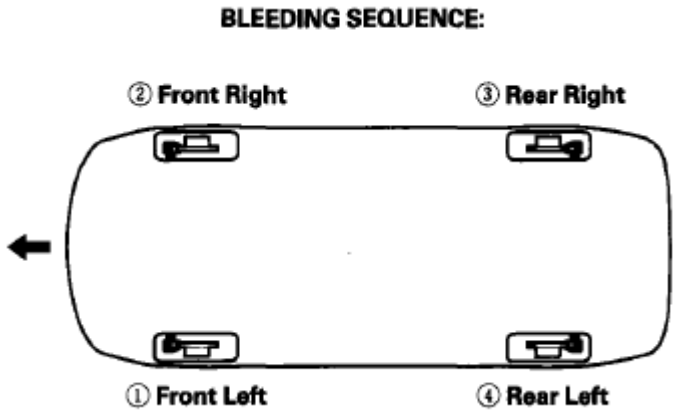

Fig. 13: Bleeding Caliper In Sequences
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Attach a length of clear drain tube (A) to the bleed screw (B), then loosen the bleed screw to allow air to escape from the system. Then tighten the bleed screw securely.

Front

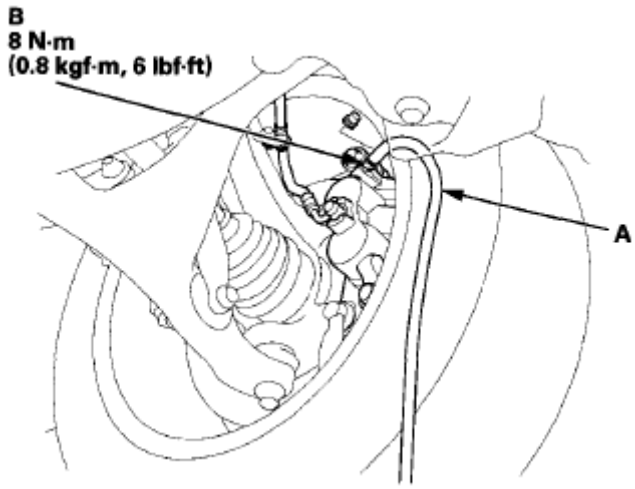

Fig. 14: Identifying Drain Tube And Bleed Screw (Front) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

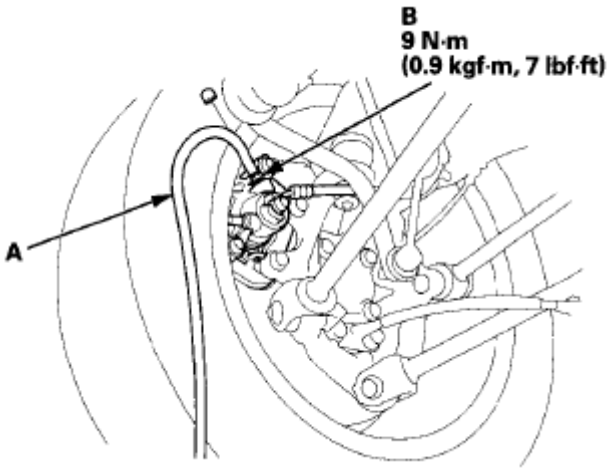

Fig. 15: Identifying Drain Tube And Bleed Screw (Rear) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Refill the master cylinder reservoir to the MAX (upper) level line.
6. Repeat the procedure for each brake circuit until there are no air bubbles in the fluid.

BRAKE SYSTEM INDICATOR CIRCUIT DIAGRAM

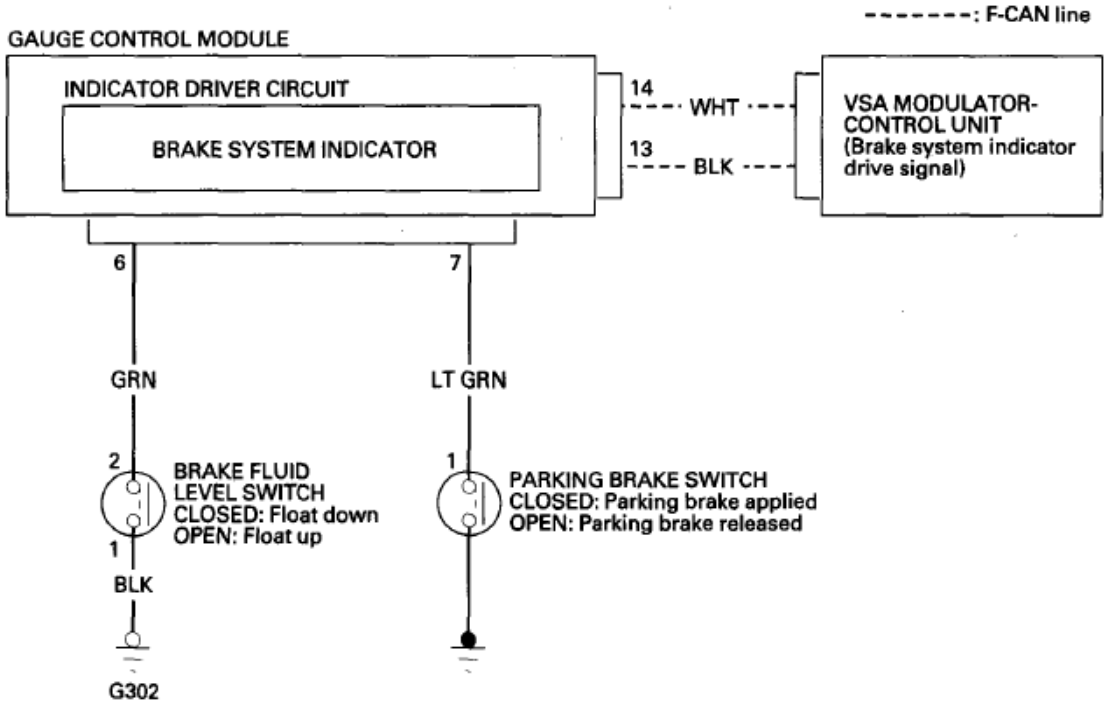

Fig. 16: Brake System Indicator - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PARKING BRAKE SWITCH TEST

NOTE: **If both the ABS/VSA indicator and the brake system indicator come on at the same time, check the VSA system for DTC's first (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Remove the center console panel (see **CENTER CONSOLE PANEL REMOVAL/INSTALLATION**).
2. Disconnect the parking brake switch connector (A) from the parking brake switch (B).

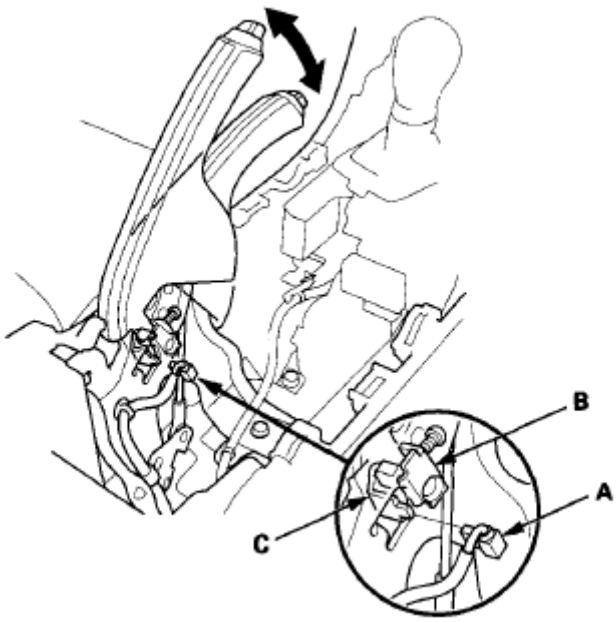

Fig. 17: Pulling Parking Brake Lever
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check for continuity between the switch terminal (C) and body ground.
   - With the parking brake lever pulled, there should be continuity.
   - With the parking brake lever released, there should be no continuity.

NOTE: **If the parking brake switch and the brake fluid level switch are OK, but the brake system indicator does not function, do the gauge control module self-diagnostic function (see SELF-DIAGNOSTIC FUNCTION).**

4. Reconnect the parking brake switch connector.
5. Install the center console panel (see **CENTER CONSOLE PANEL REMOVAL/INSTALLATION**).

BRAKE FLUID LEVEL SWITCH TEST

NOTE: **If both the ABS/VSA indicator and the brake system indicator come on at the same time, check the VSA system for DTC's first (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Disconnect the brake fluid level switch connector.
2. Check for continuity between the terminals (1) and (2) with the float in the down position and in the up position.
   - Remove the brake fluid completely from the reservoir. With the float down, there should be continuity.
   - Fill the reservoir with brake fluid to the MAX (upper) level (A). With the float up, there should be no continuity.

NOTE: If the parking brake switch and the brake fluid level switch are OK, but the brake system indicator does not function, do the gauge control module self-diagnostic function (see SELF-DIAGNOSTIC FUNCTION).

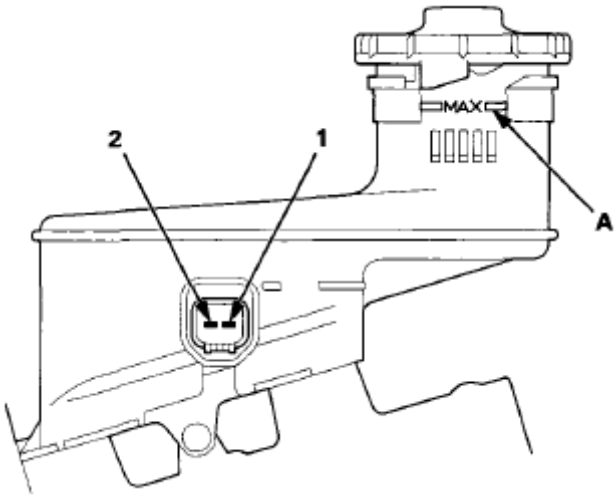

Fig. 18: Identifying MAX Level Of Brake Fluid
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Reconnect the brake fluid level switch connector.

FRONT BRAKE PAD INSPECTION AND REPLACEMENT

Special Tools Required

Brake Caliper Piston Compressor 07AAE-SEPA101

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

INSPECTION

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Remove the front wheels.
3. Check the thickness (A) of the inner pad (B) and the outer pad (C). Do not include the thickness of the backing plate.

   Brake pad thickness:

   Standard: 11.5- 12.2 mm (0.453- 0.480 in)

   Service limit: 1.6 mm (0.063 in)

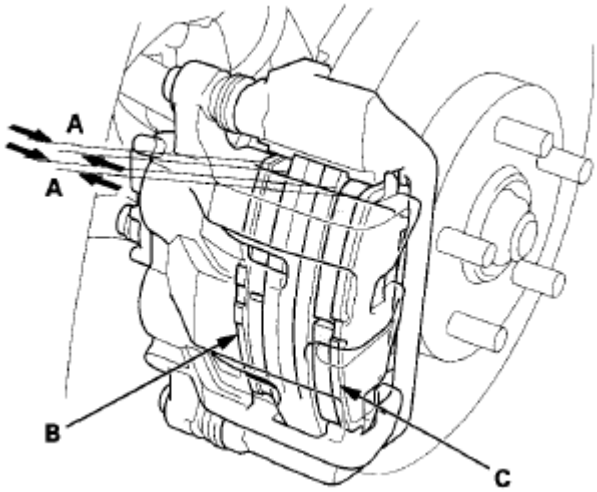

Fig. 19: Checking Thickness Of Inner Pad And Outer Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If any part of the brake pad thickness is less than the service limit, replace all of the brake pads as a set.
5. Clean the mating surface between the brake disc and the inside of the wheel, then install the front wheels.

REPLACEMENT

1. Remove some brake fluid from the master cylinder.
2. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
3. Remove the front wheels.
4. Remove the brake hose mounting bolt (A).

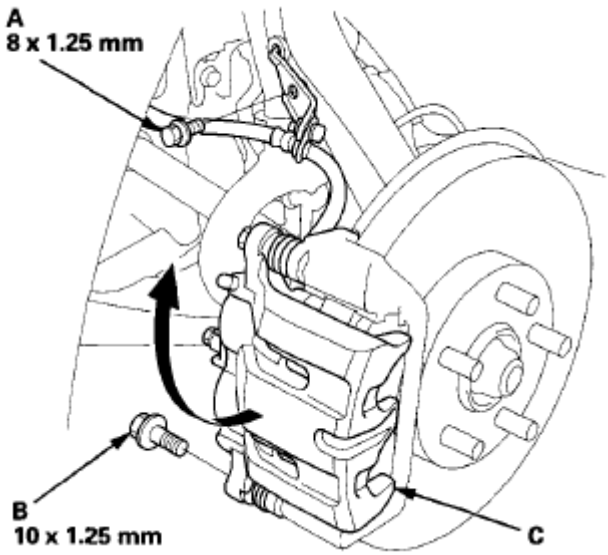

Fig. 20: Pivoting Caliper Body To Removing Flange Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the flange bolt (B), and pivot the caliper body (C) up out of the way. Check the hose and the pin boots for damage and deterioration.
6. Remove the pad shims (A) and the brake pads (B).

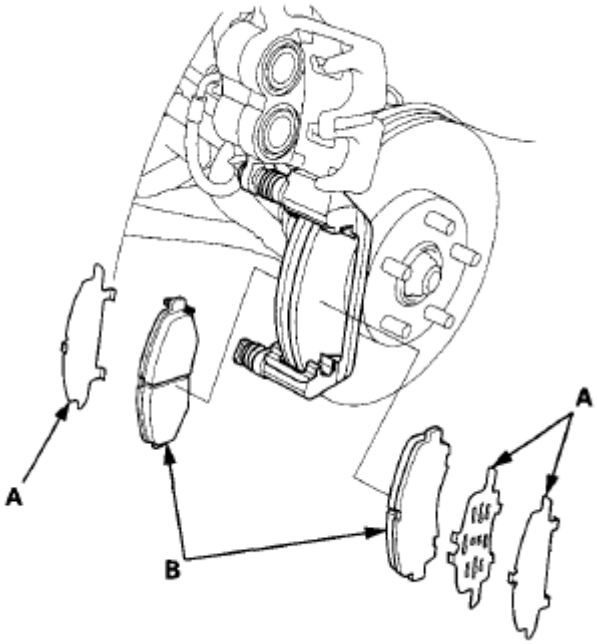

Fig. 21: Identifying Pad Shims And Brake Pads
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the pad retainers (A).

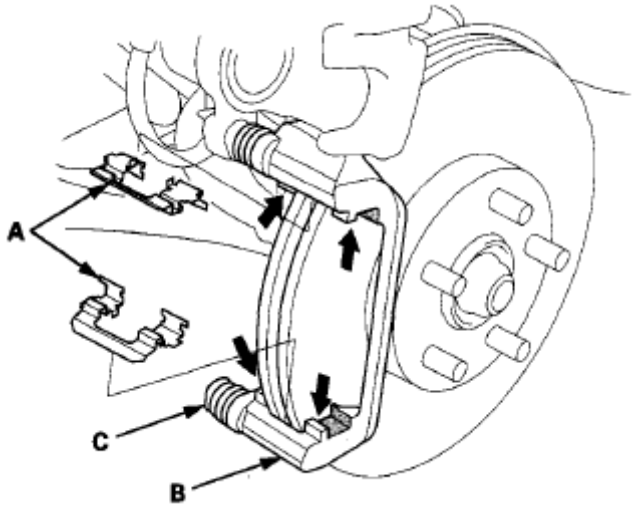

Fig. 22: Removing Pad Retainers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Clean the caliper bracket (B) thoroughly; remove any rust, and check for grooves and cracks. Verify that the caliper pins (C) move in and out smoothly. Clean and lube if needed.
9. Inspect the brake disc for runout, thickness, parallelism (see **THICKNESS AND PARALLELISM**), and check for damage and cracks.
10. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the retainer mating surface of the caliper bracket (indicated by the arrows).
11. Install the pad retainers. Wipe off the excess assembly paste from the retainers. Keep any assembly paste away from the brake disc and the brake pads.
12. Install the brake caliper piston compressor tool (A) on the caliper body (B).

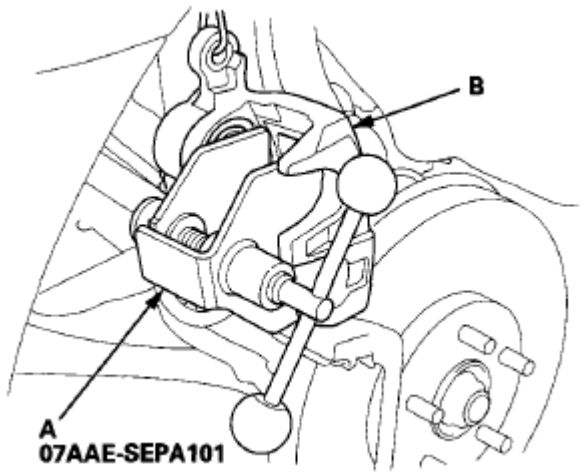

Fig. 23: Installing Brake Caliper Piston Compressor Tool On Caliper Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Press in the piston with the brake caliper piston compressor tool so the caliper body will fit over the brake

pads. Make sure the piston boot is in position to prevent damaging it when pivoting the caliper body down.

NOTE: Be careful when pressing in the piston; brake fluid might overflow from the master cylinder's reservoir. If brake fluid gets on any painted surface, wash it off immediately with water.

14. Remove the brake caliper piston compressor tool.
15. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the pad side of the shims (A), the back of the brake pads (B) and the other areas indicated by the arrows. Wipe off the excess assembly paste from the pad shims and the brake pads friction material. Keep grease and assembly paste away from the brake disc and the brake pads. Contaminated brake disc or brake pads reduce stopping ability.

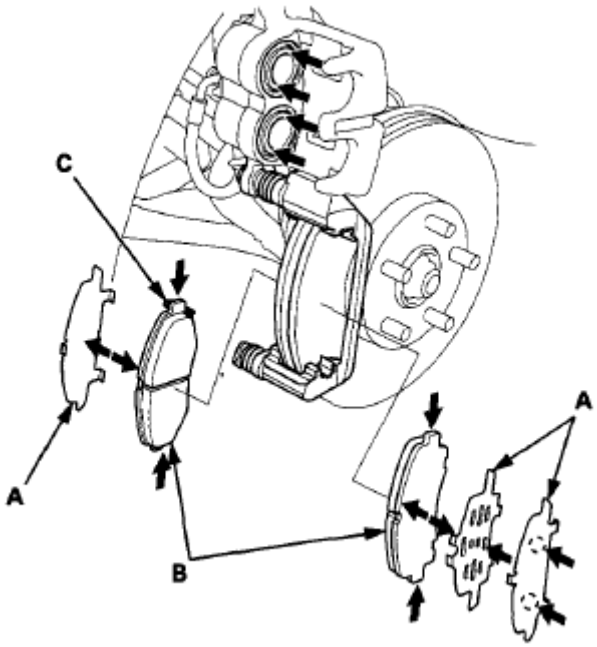

Fig. 24: Applying Thin Coat Of M-77 Assembly Paste To Pad Side Of Shims
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Install the brake pads and pad shims correctly. Install the brake pad with the wear indicator (C) on the upper inside position. If you are reusing the brake pads, always reinstall the brake pads in their original positions to prevent a temporary loss of braking efficiency.
17. Pivot the caliper body down into position. Install the flange bolt (A), and tighten it to the specified torque.

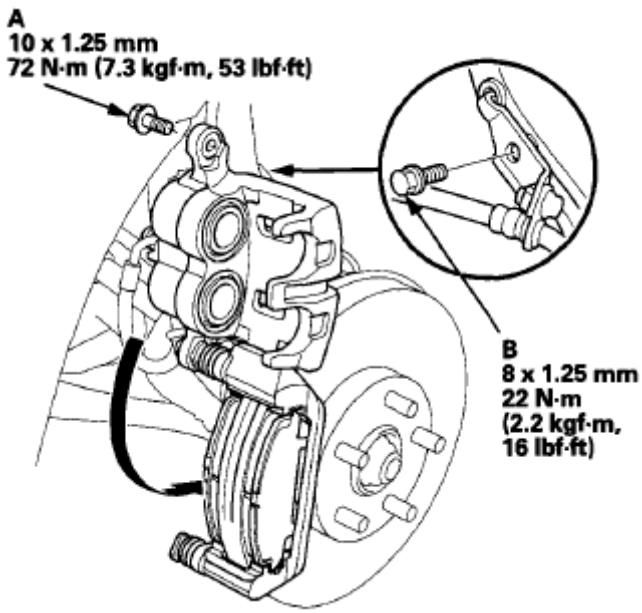

Fig. 25: Pivoting Caliper Body Down Into Position With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Install the brake hose mounting bolt (B).
19. Clean the mating surface between the brake disc and the inside of the wheel, then install the front wheels.
20. Press the brake pedal several times to make sure the brakes work.

NOTE: Engagement may require a greater pedal stroke immediately after the brake pads have been replaced as a set. Several applications of the brake pedal will restore the normal pedal stroke.

21. Add brake fluid as needed.
22. After installation, check for leaks at hose and line joints or connections, and retighten if necessary. Test-drive the vehicle, then check for leaks (see **BRAKE HOSE AND LINE INSPECTION**).

FRONT BRAKE DISC INSPECTION

THICKNESS AND PARALLELISM

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Remove the front wheels.
3. Remove the brake pads (see **FRONT BRAKE PAD INSPECTION AND REPLACEMENT**).
4. Using a micrometer (A), measure the brake disc thickness at eight points, about 45 ° apart and 10 mm (0.39 in) in from the outer edge of the brake disc. Replace the brake disc if the smallest measurement is less than the maximum refinishing limit.

Brake disc thickness:

Standard: 27.9- 28.1 mm (1.098- 1.106 in)

Maximum refinishing limit: 26.0 mm (1.024 in)

Brake disc parallelism*: 0.015 mm (0.00059 in) max.

*: This is the maximum allowable difference between the thickness measurements.

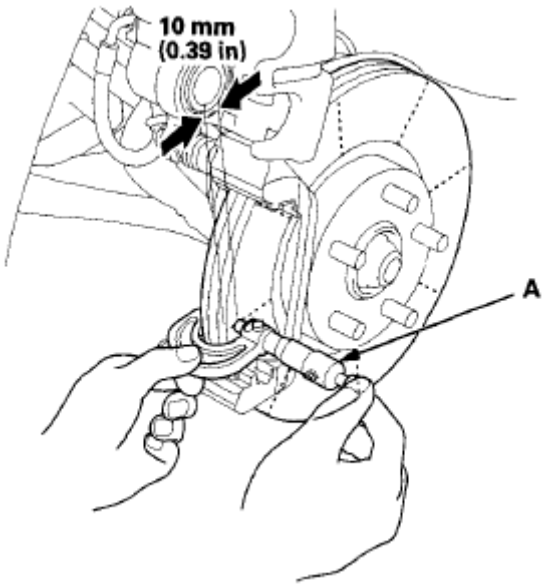

Fig. 26: Measuring Brake Disc Thickness By Using Micrometer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the brake disc is beyond the service limit for parallelism, refinish the brake disc with a Honda-approved commercially available on-car brake lathe.

NOTE: If the brake disc is beyond the service limit for refinishing, replace it (see FRONT BRAKE DISC REPLACEMENT).

6. Inspect the brake disc runout.

RUNOUT

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Remove the front wheels.
3. Remove the brake pads (see **FRONT BRAKE PAD INSPECTION AND REPLACEMENT**).
4. Inspect the brake disc to wheel surface for damage and cracks. Clean the brake disc thoroughly, and remove all rust.
5. Install suitable flat washers (A) and the wheel nuts (B), and tighten the wheel nuts to the specified torque to hold the brake disc securely against the hub.

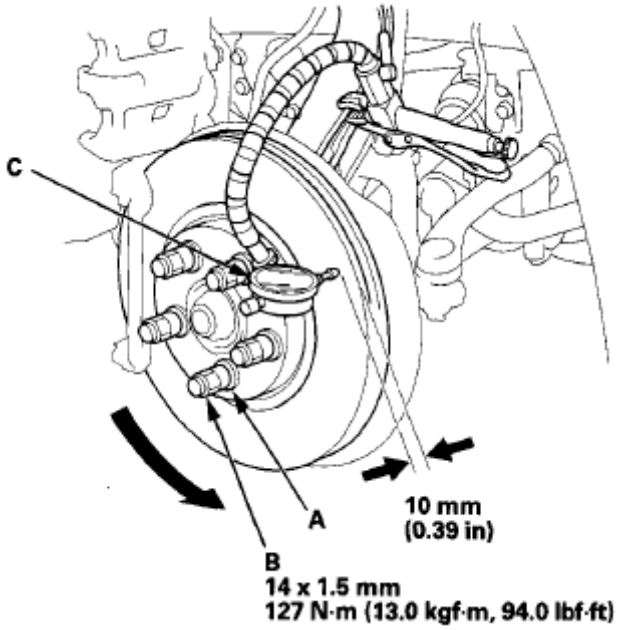

Fig. 27: Identifying Brake Disc, Flat Washers, Wheel Nuts & Dial Gauge With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Set up the dial gauge (C) against the brake disc as shown, and measure the runout at 10 mm (0.39 in) from the outer edge of the brake disc.

   Brake disc runout:

   Service limit: 0.04 mm (0.0016 in)

7. If the brake disc is beyond the service limit, refinish the brake disc with a Honda-approved commercially available on-car brake lathe.

   Maximum refinishing limit: 26.0 mm (1.024 in)

   NOTE:
   - **If the brake disc is beyond the service limit for refinishing, replace it (see FRONT BRAKE DISC REPLACEMENT).**
   - **If the brake disc is replaced with a new one, check the new disc for runout. If the new disc is out of specification, refinish the disc.**

8. Install the brake pads (see **FRONT BRAKE PAD INSPECTION AND REPLACEMENT**).
9. Clean the mating surfaces between the brake disc and the inside of the wheel, then install the front wheels.

FRONT BRAKE DISC REPLACEMENT

NOTE: Keep grease away from the brake disc and the brake pads.

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Remove the front wheel.
3. Remove the brake hose mounting bolt (A).

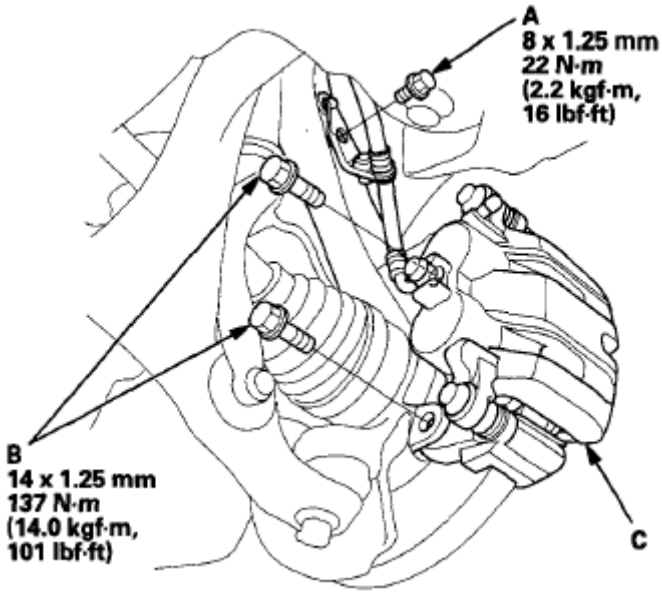

Fig. 28: Identifying Brake Hose Mounting Bolt, Brake Caliper Bracket Mounting Bolts And Caliper Assembly With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the brake caliper bracket mounting bolts (B), then remove the caliper assembly (C) from the knuckle. To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage. Do not twist the brake hose excessively.
5. Remove the brake disc flathead screws (A).

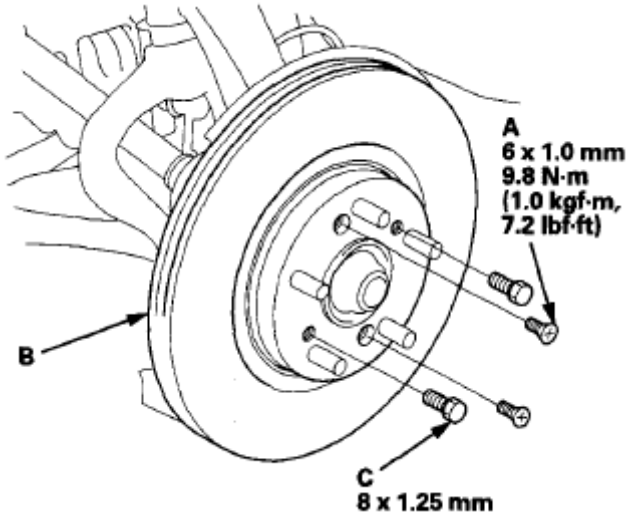

Fig. 29: Identifying Brake Disc And Flathead Screws With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the brake disc (B) from the front hub.

NOTE: If the brake disc is stuck to the front hub, thread two 8 x 1.25 mm bolts (C) into the brake disc to push it away from the front hub. Turn each bolt 90 degrees at a time to prevent the brake disc from binding.

7. Install the brake disc in the reverse order of removal.

NOTE: Before installing the brake disc, clean the mating surfaces between the front hub and the inside of the brake disc.

8. Inspect the brake disc runout (see **FRONT BRAKE DISC INSPECTION**).
9. Clean the mating surfaces between the brake disc and the inside of the wheel, then install the front wheel.

FRONT BRAKE CALIPER OVERHAUL

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

NOTE: Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid gets on the paint, wash it off immediately with water.

Remove, disassemble, inspect, reassemble, and install the caliper, and note these items:

- Make sure that the caliper pins are installed correctly. The upper caliper pin and the lower caliper pin are different. If these caliper pins are installed in the wrong location, it will cause vibration, uneven or rapid brake pad wear, and possibly uneven tire wear.
- To prevent dripping brake fluid, cover disconnected hose joints with clean rags or shop towels.
- Clean all parts in brake fluid and air dry; blow out all passages with compressed air.
- Before reassembling, check that all parts are free of dirt and other foreign particles.
- Replace parts with new ones as specified in the illustration.
- Make sure no dirt or other foreign matter gets in the brake fluid.
- Make sure no grease or oil gets on the brake discs or the pads.
- When reusing brake pads, always reinstall them in their original positions to prevent loss of braking efficiency.
- Do not reuse drained brake fluid. Use only new Acura DOT 3 Brake Fluid from an unopened container. Using a non-Acura brake fluid can cause corrosion and shorten the life of the system.
- Coat the pistons, the piston seal grooves, and the caliper bores with clean brake fluid.
- Use recommended greases in the front caliper set.
- After installing the caliper, check the brake hose and line for leaks, interference, and twisting.
- Refer to the **EXPLODED VIEW** as needed during this procedure.

EXPLODED VIEW

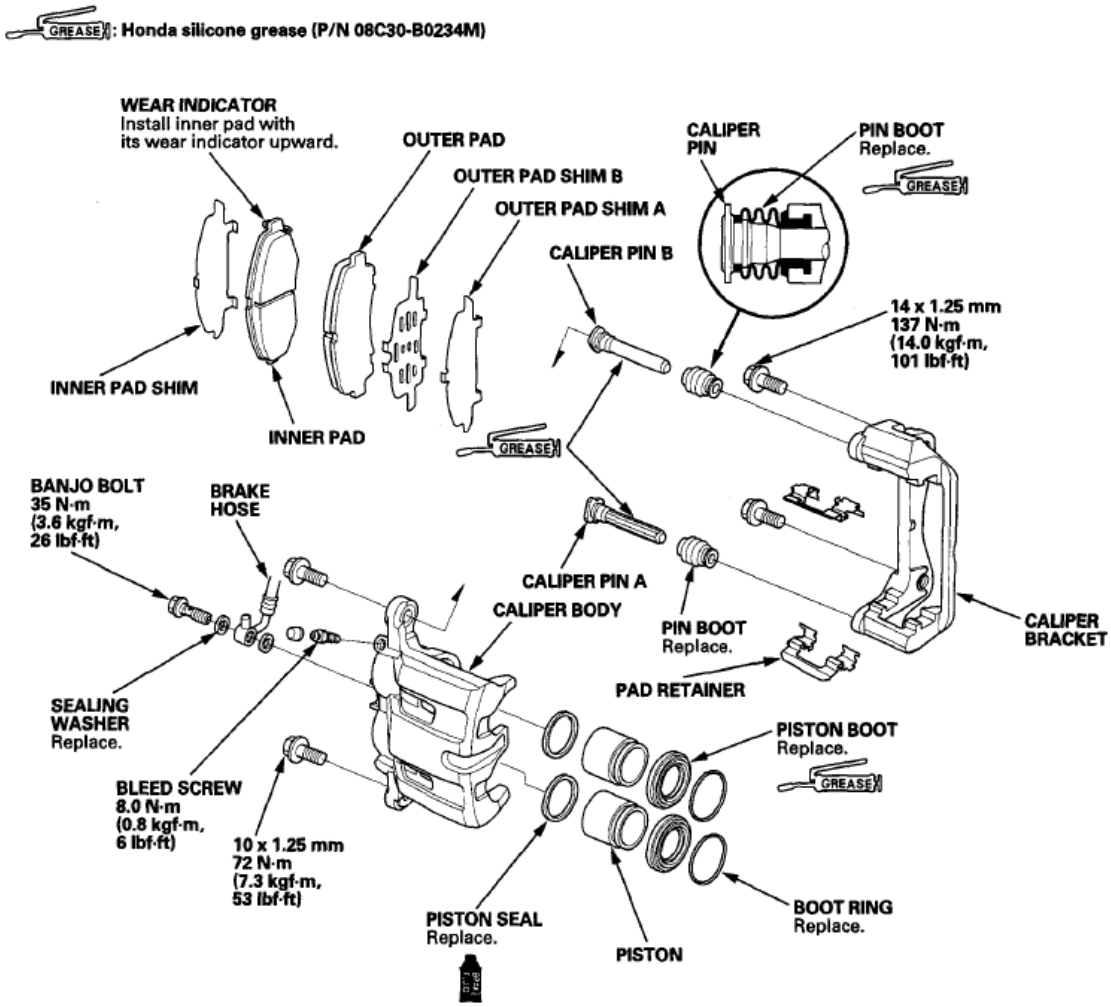

Fig. 30: Exploded View Of Front Brake Caliper With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

MASTER CYLINDER REPLACEMENT

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid gets on the paint, wash it off immediately with water.**

NOTE:

- **Be careful not to damage or bend the brake lines during removal and installation.**
- **After removal, plug the ends of the hoses and the joints to prevent spilling brake fluid.**

1. Remove the engine compartment covers (A) in the engine compartment (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

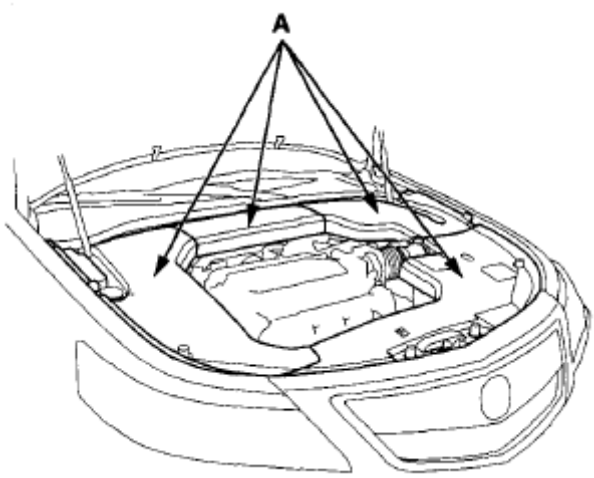

Fig. 31: Identifying Engine Compartment Covers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the strut brace (see **FRAME BRACE REPLACEMENT**).
3. Remove the under-hood fuse/relay box mount nut (A) and release the clip (B).

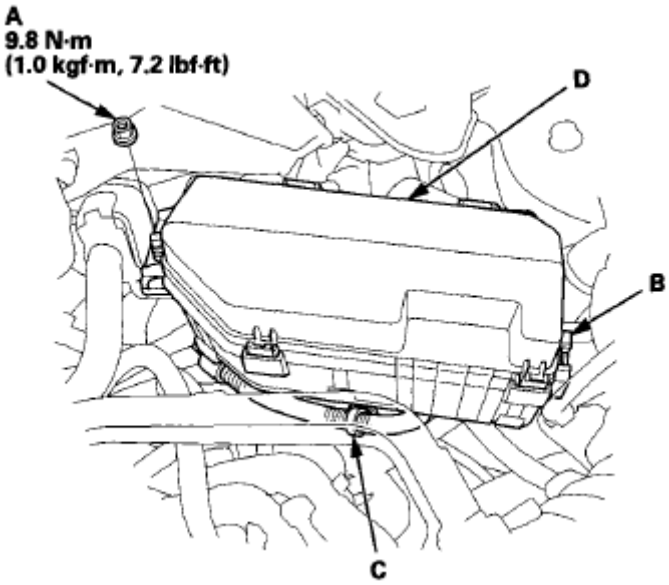

Fig. 32: Identifying Mount Nut, Clip, Harness Clamp And Under-Hood Fuse/Relay Box With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the harness clamp (C), then move the under-hood fuse/relay box (D) aside.
5. Remove the reservoir cap and the brake fluid from the master cylinder reservoir with a syringe.
6. Disconnect the brake fluid level switch connector (A).

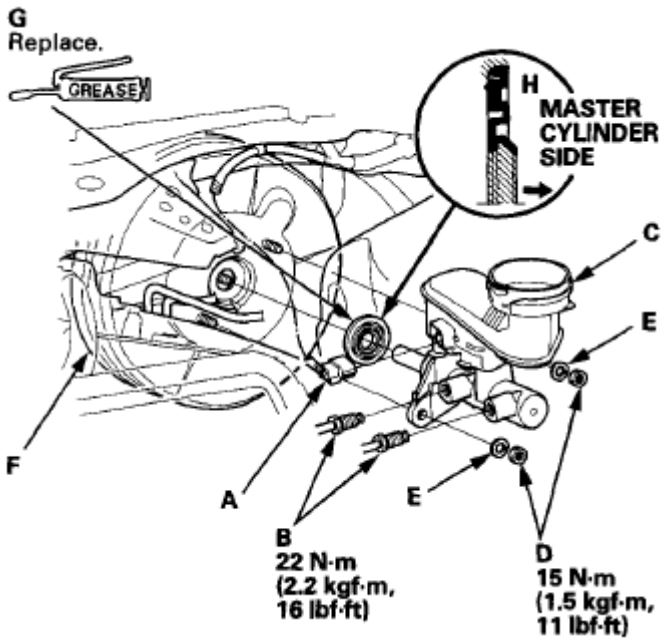

Fig. 33: Identifying Fluid Level Switch Connector, Brake Lines, Master Cylinder & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the brake lines (B) from the master cylinder (C). To prevent spills, cover the hose joints with clean rags or shop towels.
8. Remove the master cylinder mounting nuts (D) and the washers (E).
9. Remove the master cylinder from the brake booster (F). Be careful not to bend or damage the brake lines when removing the master cylinder.
10. Remove the rod seal (G) from the master cylinder.

NOTE: During installation, set a new rod seal onto the master cylinder with its grooved side (H) toward the master cylinder.

11. Install the master cylinder with a new rod seal in the reverse order of removal, and note these items:
    - Coat the inner bore lip and the outer circumference of the new rod seal with the Shin-Etsu silicone grease (P/N 08798-9013).
    - Make sure not to get any silicone grease on the terminal part of the connectors and switches, especially if you have silicone grease on your hands or gloves.
    - Check the brake pedal height and free play after installing the master cylinder, and adjust it if necessary (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).
12. Bleed the brake system (see **BRAKE SYSTEM BLEEDING**).
13. Spin the wheels to check for brake drag.

MASTER CYLINDER INSPECTION

1. Remove the master cylinder (see **MASTER CYLINDER REPLACEMENT**).
2. Inspect and note these items:
   - Before reassembling, check that all parts are free of dirt and other foreign particles.
   - Do not try to disassemble the master cylinder assembly. Replace the master cylinder assembly with a new part if necessary.
   - Do not allow dirt or foreign matter to contaminate the brake fluid.

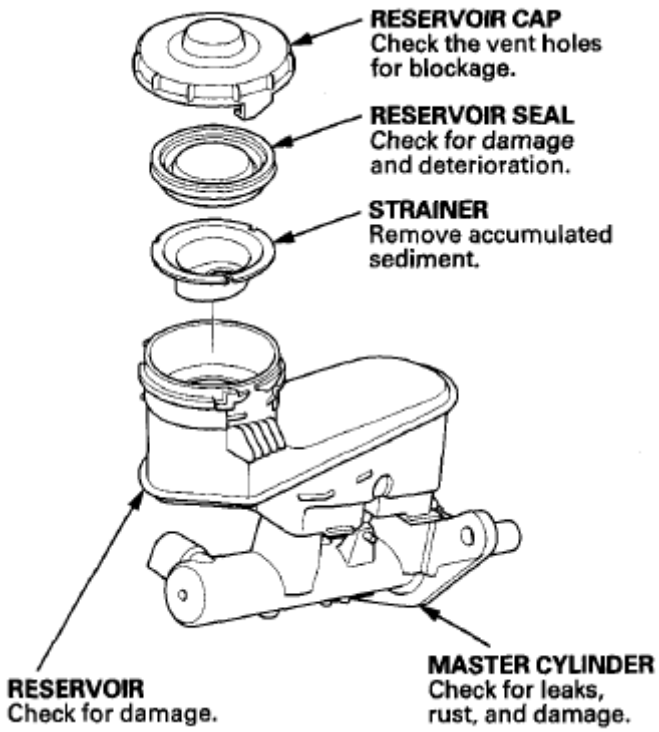

Fig. 34: Identifying Master Cylinder, Reservoir, Cap, Seal And Strainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the master cylinder (see **MASTER CYLINDER REPLACEMENT**).

BRAKE BOOSTER TEST

FUNCTIONAL TEST

1. With the ignition switch in LOCK (0), or press the engine start/stop button to select the OFF mode, press the brake pedal several times to deplete the vacuum reservoir, then press the brake pedal hard and hold it for 15 seconds. If the brake pedal sinks, either the master cylinder is bypassing internally or the brake system is leaking. Inspect the brake hoses and lines (see **BRAKE HOSE AND LINE INSPECTION**).
2. Start the engine with the brake pedal pressed. If the brake pedal sinks slightly, the vacuum booster is operating normally. If the brake pedal height does not vary, do the brake system test (see **BRAKE SYSTEM TEST**).

LEAK TEST

1. Press the brake pedal with the engine running, then turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode. The brake pedal height should not vary while pressed for 30 seconds.
   - If the pedal height rises, go to step 7.
   - If it does not rise, go to step 2.
2. Start the engine and let it idle for 30 seconds. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode, and wait 30 seconds. Press the brake pedal several times using normal pressure. When the pedal is first pressed, it should be low. On consecutive applications, the pedal height should gradually rise.
   - If it rises, the booster is OK.
   - If it does not rise, go to step 4.
3. Remove the engine compartment covers (A) in the engine compartment (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

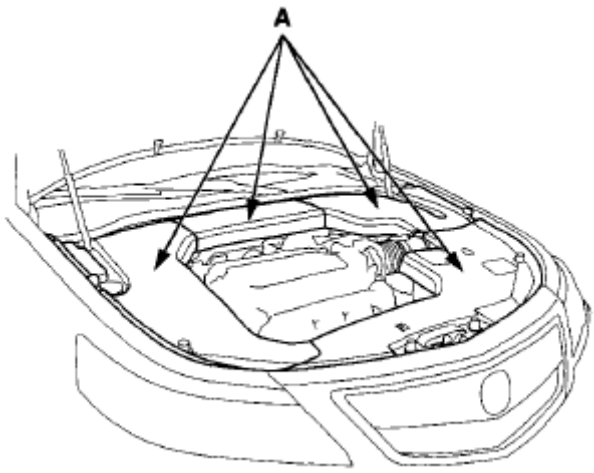

Fig. 35: Identifying Engine Compartment Covers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the brake booster vacuum hose (A) at the booster. The check valve (B) is built into the hose.

NOTE: If the check valve is faulty, replace the brake booster vacuum hose and the check valve as an assembly.

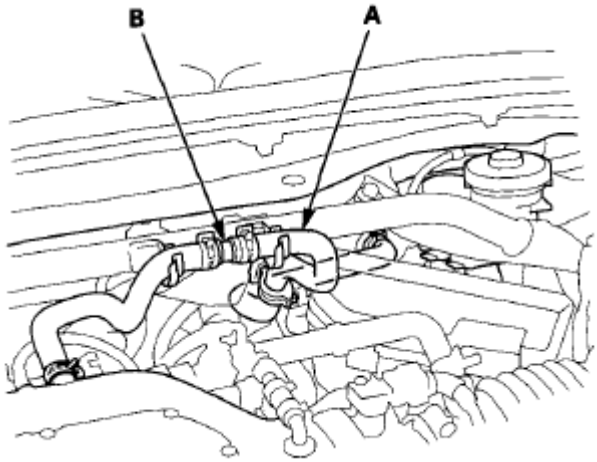

Fig. 36: Identifying Brake Booster Vacuum Hose And Check Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Start the engine, and let it idle. There should be vacuum available.
   - If no vacuum is available, the check valve is not working properly. Replace the brake booster vacuum hose and the check valve as an assembly, and retest.
   - If vacuum is found, go to step 6.
6. With the ignition switch in LOCK (0), or press the engine start/stop button to select the OFF mode, reconnect the vacuum hose to the brake booster.
7. Start the engine, and then pinch the brake booster vacuum hose between the check valve and the booster.
8. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode, and wait 30 seconds. Press the brake pedal several times using normal pressure. When the pedal is first pressed, it should be low. On consecutive applications, the pedal height should gradually rise.
   - If the pedal position does not vary, inspect the seal between the master cylinder and the booster. If the seal is OK, replace the brake booster.
   - If the pedal position varies, replace the brake booster vacuum hose and the check valve as an assembly.

BRAKE BOOSTER REPLACEMENT

1. Do the battery terminal disconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
2. Remove the master cylinder (see **MASTER CYLINDER REPLACEMENT**).
3. Remove the cowl cover (see **FRONT BULKHEAD BRACE COVER REPLACEMENT**).
4. Remove the under-hood fuse/relay box cover (A), then remove the two positive (+) terminals (B).

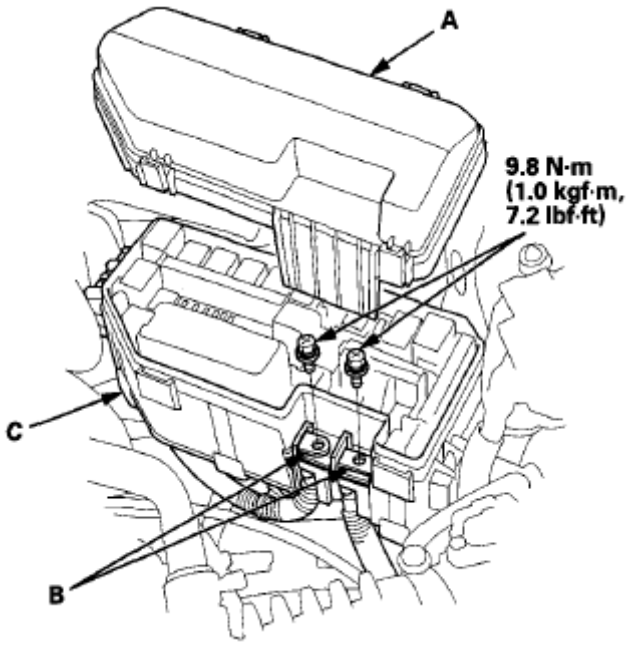

Fig. 37: Identifying Under-Hood Fuse/Relay Box, Cover & Terminals With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Move the under-hood fuse/relay box (C) aside.
6. Disconnect the brake booster vacuum hose (A) from the brake booster.

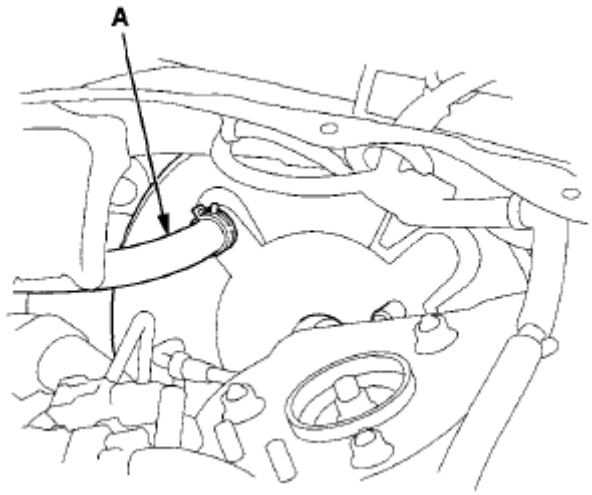

Fig. 38: Identifying Brake Booster Vacuum Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the under-hood fuse/relay box bracket (A), then remove the engine wire harness clamps (B).

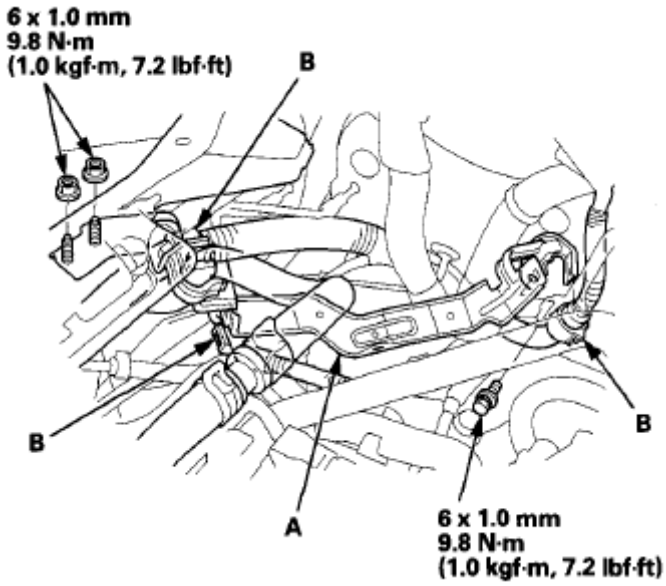

Fig. 39: Identifying Under-Hood Fuse/Relay Box Bracket, Engine Wire Harness Clamps & Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the brake lines (A) from the brake line clamp (B).

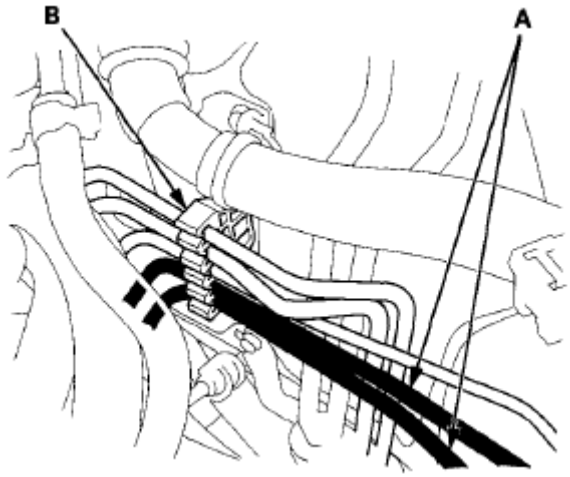

Fig. 40: Identifying Brake Lines And Brake Line Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the driver's dashboard undercover (see **DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**).
10. Remove the lock pin (A) and the clevis pin (B), then disconnect the yoke from the brake pedal.

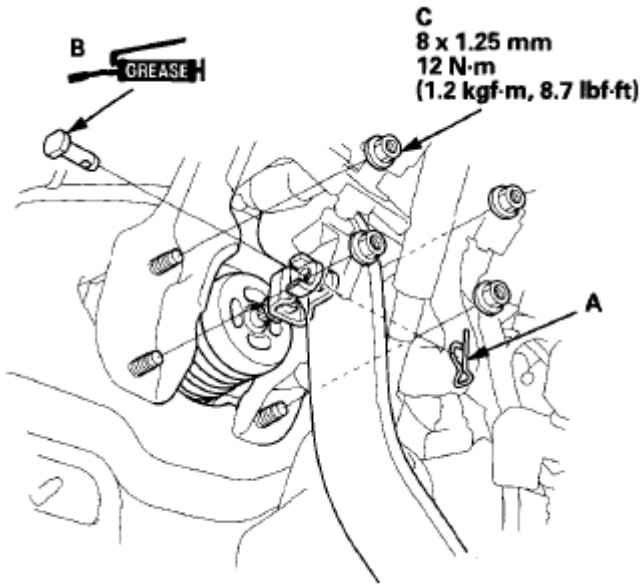

Fig. 41: Identifying Lock Pin, Clevis Pin With Brake Booster Mounting Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the brake booster mounting nuts (C).
12. Remove the brake booster (A) from the engine compartment.

NOTE:

- **Use a new brake booster gasket (B) during reassembly.**
- **Be careful not to damage the brake booster mounting surfaces and the threads on the booster stud.**
- **Be careful not to bend or damage the brake lines.**

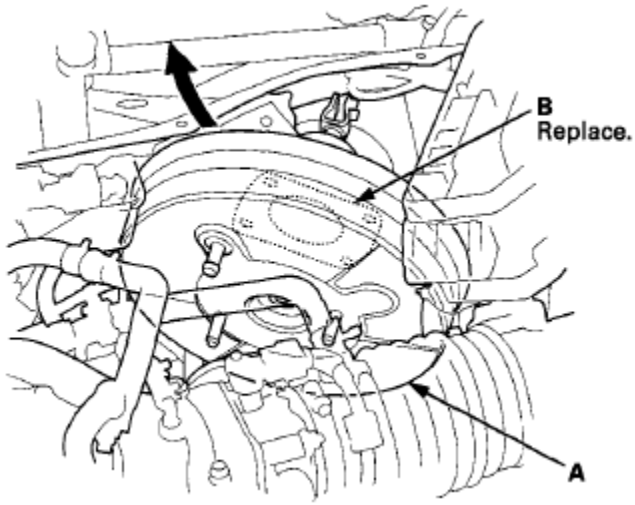

Fig. 42: Removing Brake Booster From Engine Compartment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the brake booster in the reverse order of removal, and note these items:
    - Install the master cylinder after installing the brake booster (see **MASTER CYLINDER REPLACEMENT**).
    - Check the brake pedal height and free play after installing the master cylinder, and adjust it if necessary (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).
    - Bleed the brake system (see **BRAKE SYSTEM BLEEDING**).
14. Do the battery terminal reconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).

REAR BRAKE PAD INSPECTION AND REPLACEMENT

Special Tools Required

Brake Caliper Piston Compressor 07AAE-SEPA101

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

INSPECTION

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheels.
3. Check the thickness (A) of the inner pad (B) and the outer pad (C). Do not include the thickness of the backing plate.

   Brake pad thickness:

   Standard: 9.6- 10.2 mm (0.378- 0.402 in)

   Service limit: 1.6 mm (0.063 in)

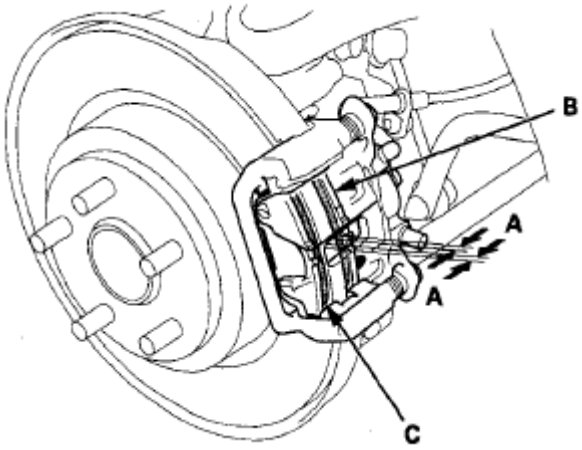

Fig. 43: Checking Thickness Of Inner Pad And Outer Pad
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If any part of the brake pad thickness is less than the service limit, replace the brake pads as a set.
5. Clean the mating surfaces between the brake disc/drum and the inside of the wheel, then install the rear wheels.

REPLACEMENT

1. Remove some brake fluid from the master cylinder.
2. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
3. Remove the rear wheels.
4. Remove the brake hose mounting bolt (A).

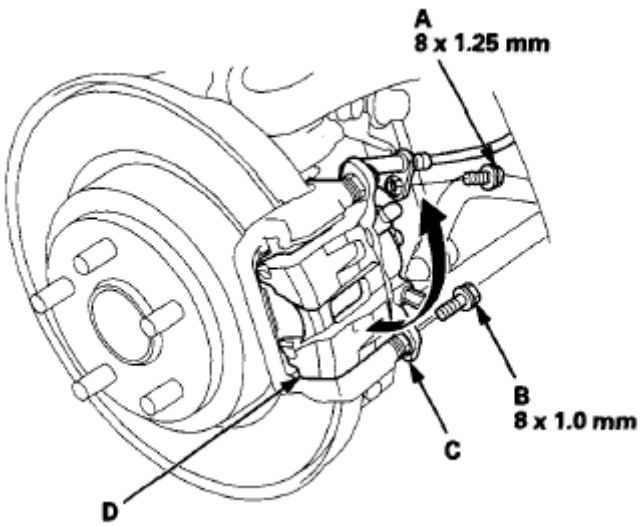

Fig. 44: Pivoting Caliper Body Up Out Of Way
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the flange bolt (B) while holding the caliper pin (C) with a wrench. Be careful not to damage the

pin boot, and pivot the caliper body (D) up out of the way. Check the hose and the pin boots for damage and deterioration.

6. Remove the pad shims (A) and the brake pads (B).

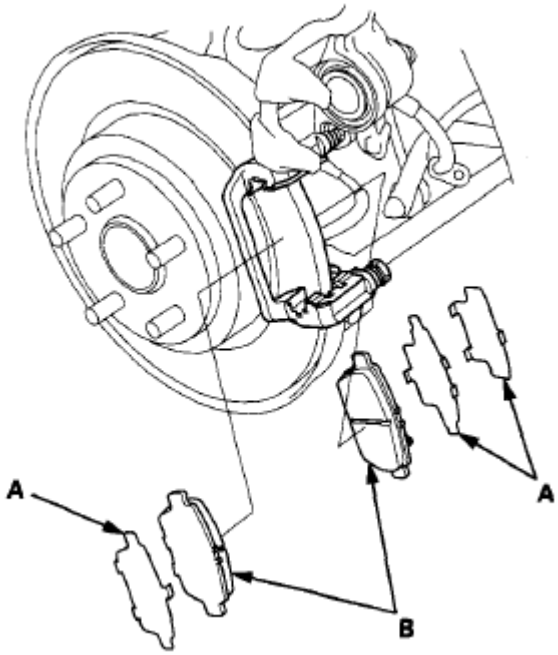

Fig. 45: Identifying Pad Shims And Brake Pads
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the upper and lower pad retainers (A).

NOTE: The upper and lower pad retainers are different. During installation, make sure the pad retainers are in the proper positions.

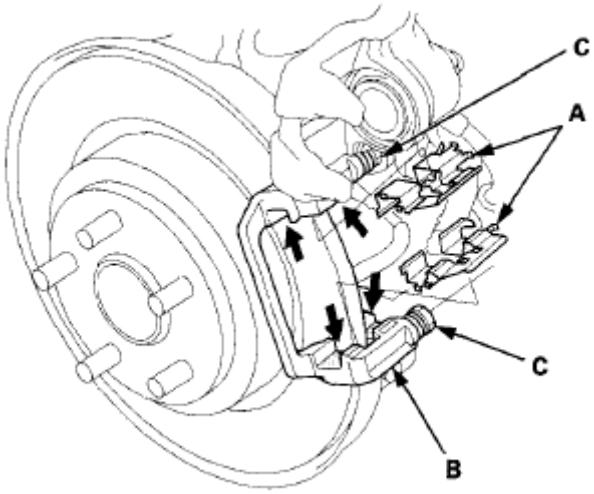

Fig. 46: Removing Upper And Lower Pad Retainers

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Clean the caliper bracket (B) thoroughly; remove any rust, and check for grooves and cracks. Verify that the caliper pins (C) move in and out smoothly. Clean and lube if needed.
9. Inspect the brake disc/drum for runout, thickness, parallelism (see **REAR BRAKE DISC INSPECTION**), and check for damage and cracks.
10. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the retainer mating surface of the caliper bracket (indicated by the arrows).
11. Install the upper and lower pad retainers. Wipe off the excess assembly paste from the retainers. Keep the assembly paste away from the brake disc/drum and the brake pads.
12. Install the brake caliper piston compressor tool (A) on the caliper body (B).

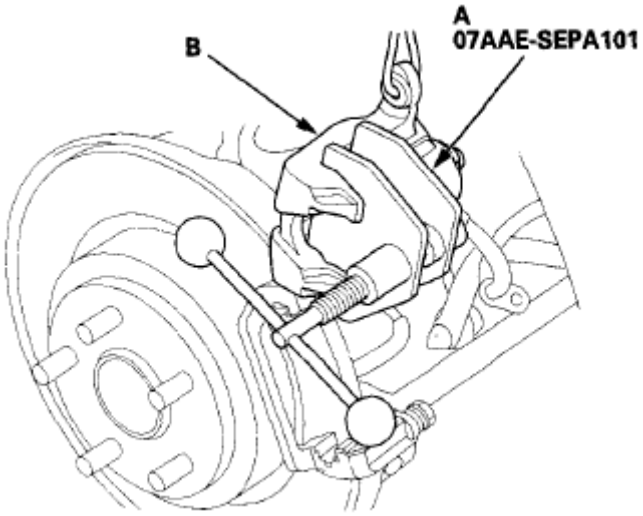

Fig. 47: Installing Brake Caliper Piston Compressor Tool On Caliper Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Press in the piston with the brake caliper piston compressor tool so the caliper body will fit over the brake pads. Make sure the piston boot is in position to prevent damaging it when pivoting the caliper body down.

NOTE: Be careful when pressing in the piston; brake fluid might overflow from the master cylinder's reservoir. If brake fluid gets on any painted surface, wash it off immediately with water.

14. Remove the brake caliper piston compressor tool.
15. Apply a thin coat of M-77 assembly paste (P/N 08798-9010) to the pad side of the shims (A), the back of the brake pads (B), and the other areas indicated by the arrows. Wipe off the excess assembly paste from the pad shims and the brake pads friction material. Keep grease and assembly paste away from the brake disc/drum and the brake pads. Contaminated brake disc/drum or brake pads reduce stopping ability.

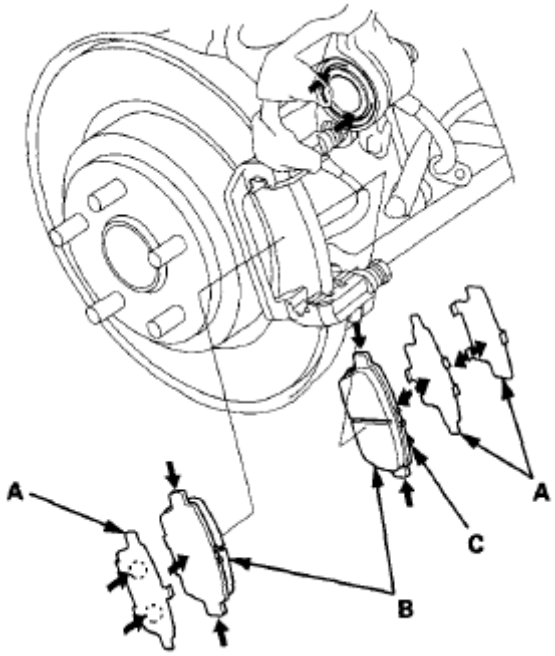

Fig. 48: Applying Thin Coat Of M-77 Assembly Paste To Pad Side Of Shims
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Install the brake pads and pad shims correctly. Install the brake pad with the wear indicator (C) on the bottom inside position. If you are reusing the brake pads, always reinstall the brake pads in their original positions to prevent a temporary loss of braking efficiency.
17. Pivot the caliper body down into position. Install the flange bolt (A), and tighten it to the specified torque while holding the caliper pin (B) with a wrench being careful not to damage the pin boot.

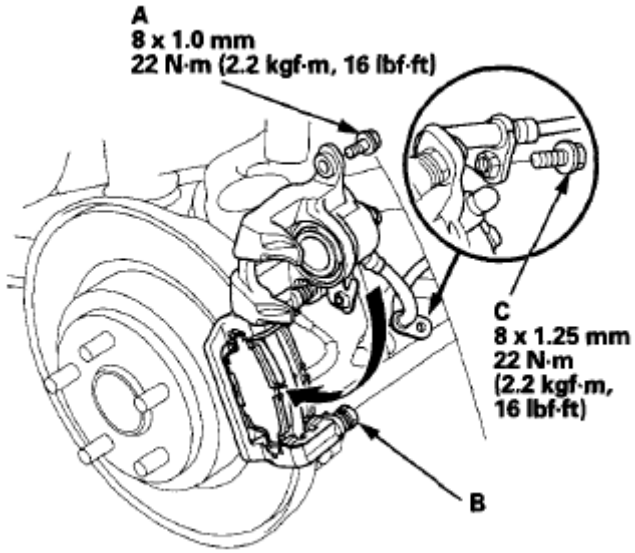

Fig. 49: Identifying Caliper Body, Flange Bolt, Caliper Pin & Brake Hose Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Install the brake hose mounting bolt (C).
19. Clean the mating surfaces between the brake disc/drum and the inside of the wheel, then install the rear wheels.
20. Press the brake pedal several times to make sure the brakes work.

NOTE: Engagement may require a greater pedal stroke immediately after the brake pads have been replaced as a set. Several applications of the brake pedal will restore the normal pedal stroke.

21. Add brake fluid as needed.
22. After installation, check for leaks at hose and line joints or connections, and retighten if necessary. Test-drive the vehicle, then recheck for leaks (see **BRAKE HOSE AND LINE INSPECTION**).

REAR BRAKE DISC INSPECTION

THICKNESS AND PARALLELISM

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheels.
3. Remove the brake pads (see **REAR BRAKE PAD INSPECTION AND REPLACEMENT**).
4. Using a micrometer (A), measure the brake disc/drum thickness at eight points, about 45 ° apart and 10 mm (0.39 in) in from the outer edge of the brake disc/drum. Replace the brake disc/drum if the smallest measurement is less than the maximum refinishing limit.

   Brake disc/drum thickness:

   Standard: 10.9- 11.1 mm (0.429- 0.437 in)

   Maximum refinishing limit: 9.0 mm (0.354 in)

   Brake disc/drum parallelism*: 0.015 mm (0.00059 in) max.

   *: This is the maximum allowable difference between the thickness measurements.

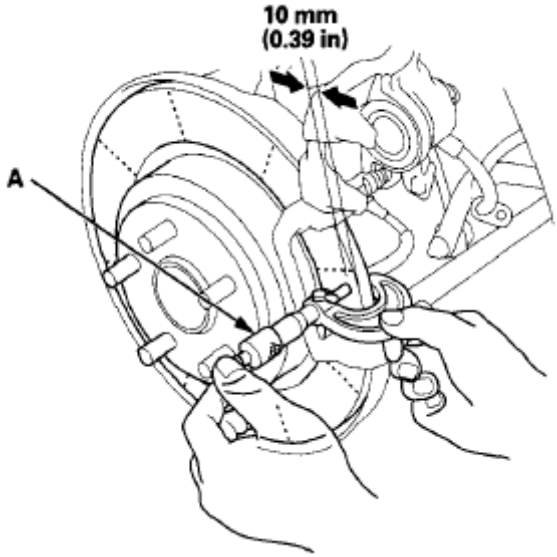

Fig. 50: Measuring Brake Disc/Drum Thickness By Using Micrometer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the brake disc/drum is beyond the service limit for parallelism, refinish the brake disc/drum with a Honda-approved commercially available on-car brake lathe.

NOTE: If the brake disc/drum is beyond the service limit for refinishing, replace it (see REAR BRAKE DISC REPLACEMENT).

6. Inspect the brake disc/drum runout.

RUNOUT

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheels.
3. Remove the brake pads (see **REAR BRAKE PAD INSPECTION AND REPLACEMENT**).
4. Inspect the brake disc/drum to wheel surface for damage and cracks. Clean the brake disc/drum thoroughly, and remove all rust.
5. Install suitable flat washers (A) and the wheel nuts (B), and tighten the wheel nuts to the specified torque to hold the brake disc/drum securely against the hub.

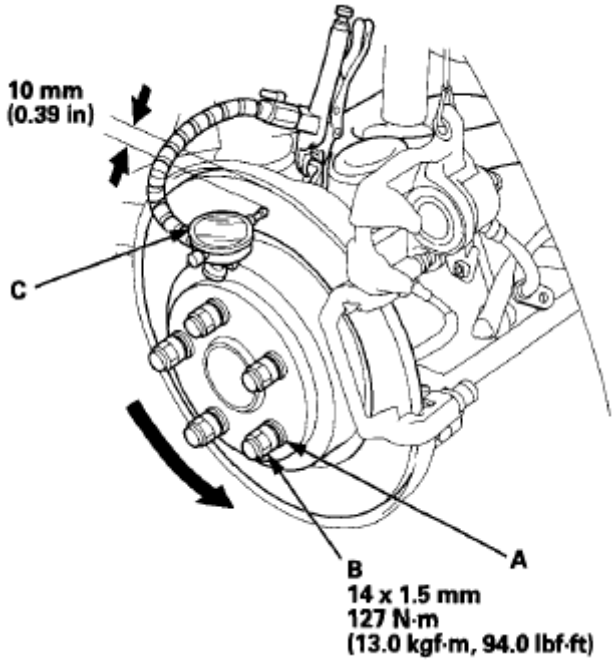

Fig. 51: Identifying Disc, Flat Washers, Wheel Nuts & Dial Gauge With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Set up the dial gauge (C) against the brake disc/drum as shown, and measure the runout at 10 mm (0.39 in) from the outer edge of the brake disc/drum.

   Brake disc/drum runout:

   Service limit: 0.04 mm (0.0016 in)

7. If the brake disc/drum is beyond the service limit, refinish the brake disc/drum with a Honda-approved commercially available on-car brake lathe.

   Maximum refinishing limit: 9.0 mm (0.354 in)

   NOTE:
   - **If the brake disc/drum is beyond the service limit for refinishing, replace it (see REAR BRAKE DISC REPLACEMENT).**
   - **If the brake disc/drum is replaced with a new one, check the new disc/drum for runout. If the new disc/drum is out of specification, refinish the disc/drum.**

8. Install the brake pads (see **REAR BRAKE PAD INSPECTION AND REPLACEMENT**).
9. Clean the mating surfaces between the brake disc/drum and the inside of the wheel, then install the rear wheels.

REAR BRAKE DISC REPLACEMENT

NOTE: Keep grease away from the brake disc/drum and the brake pads.

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheel.
3. Release the parking brake lever fully.
4. Remove the brake hose mounting bolt (A).

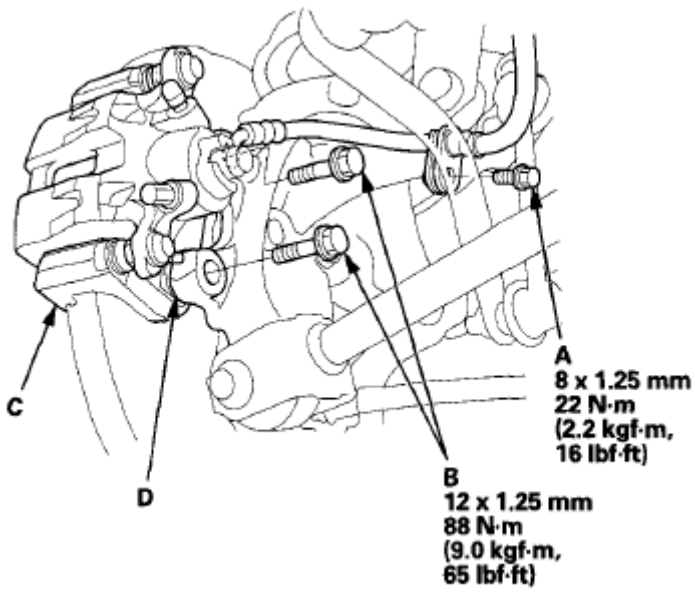

Fig. 52: Identifying Caliper Assembly, Washers, Brake Hose Mounting Bolt And Brake Caliper Bracket Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the brake caliper bracket mounting bolts (B), then remove the caliper assembly (C) from the knuckle. To prevent damage to the caliper assembly or brake hose, use a short piece of wire to hang the caliper assembly from the undercarriage. Do not twist the brake hose excessively.

NOTE: Make sure the washers (D) are in position on reassembly, if they are removed (see step 6 under KNUCKLE/HUB/WHEEL BEARING REPLACEMENT).

6. Remove the brake disc/drum flathead screws (A).

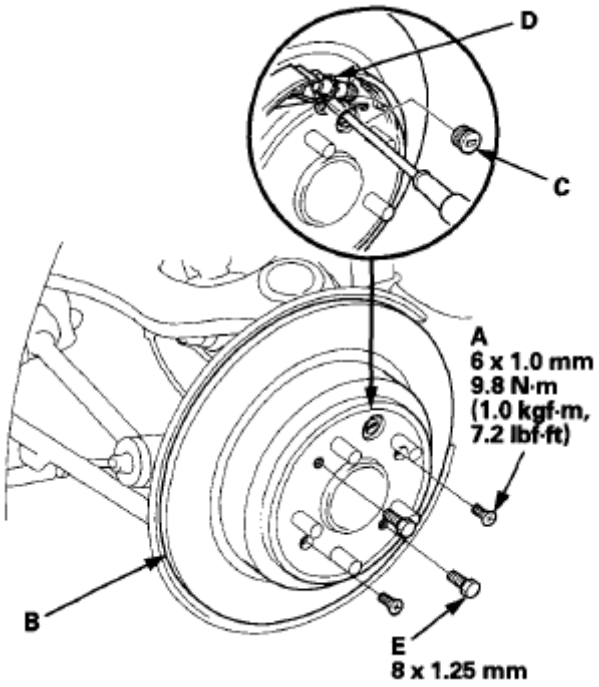

Fig. 53: Removing Brake Disc/Drum Flathead Screws With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the brake disc/drum (B) from the hub bearing unit.

NOTE:

- **Remove the access plug (C), then if necessary, turn the adjuster nut (D) with a flat-tip screwdriver until the shoes become loose.**
- **If the brake disc/drum is stuck to the hub bearing unit, thread two 8 x 1.25 mm bolts (E) into the brake disc/drum to push it away from the hub bearing unit. Turn each bolt 90 degrees at a time to prevent the brake disc/drum from binding.**

8. Install the brake disc/drum in the reverse order of removal, and note these items:
   - Before installing the brake disc/drum, clean the mating surfaces between the hub bearing unit and the inside of the brake disc/drum.
   - Adjust the parking brake (see **PARKING BRAKE INSPECTION AND ADJUSTMENT**).
9. Inspect the brake disc runout (see **REAR BRAKE DISC INSPECTION**).
10. Clean the mating surfaces between the brake disc/drum and the inside of the wheel, then install the rear wheel.

REAR BRAKE CALIPER OVERHAUL

CAUTION: Frequent inhalation of brake pad dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

NOTE: Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid gets on the paint, wash it off immediately with water.

Remove, disassemble, inspect, reassemble, and install the caliper, and note these items:

- Make sure that the caliper pins are installed correctly. The upper caliper pin and the lower caliper pin are different. If these caliper pins are installed in the wrong location, it will cause vibration, uneven or rapid brake pad wear, and possibly uneven tire wear.
- To prevent dripping brake fluid, cover disconnected hose joints with clean rags or shop towels.
- Clean all parts in brake fluid and air dry; blow out all passages with compressed air.
- Before reassembling, check that all parts are free of dirt and other foreign particles.
- Replace parts with new ones as specified in the illustration.
- Make sure no dirt or other foreign matter gets in the brake fluid.
- Make sure no grease or oil gets on the brake discs or the pads.
- When reusing brake pads, always reinstall them in their original positions to prevent loss of braking efficiency.
- Do not reuse drained brake fluid. Use only new Acura DOT 3 Brake Fluid from an unopened container. Using a non-Acura brake fluid can cause corrosion and shorten the life of the system.
- Coat the piston, the piston seal groove, and the caliper bore with clean brake fluid.
- Use recommended greases in the rear caliper set.
- After installing the caliper, check the brake hose and line for leaks, interference, and twisting.
- Refer to the **EXPLODED VIEW** as needed during this procedure.

EXPLODED VIEW

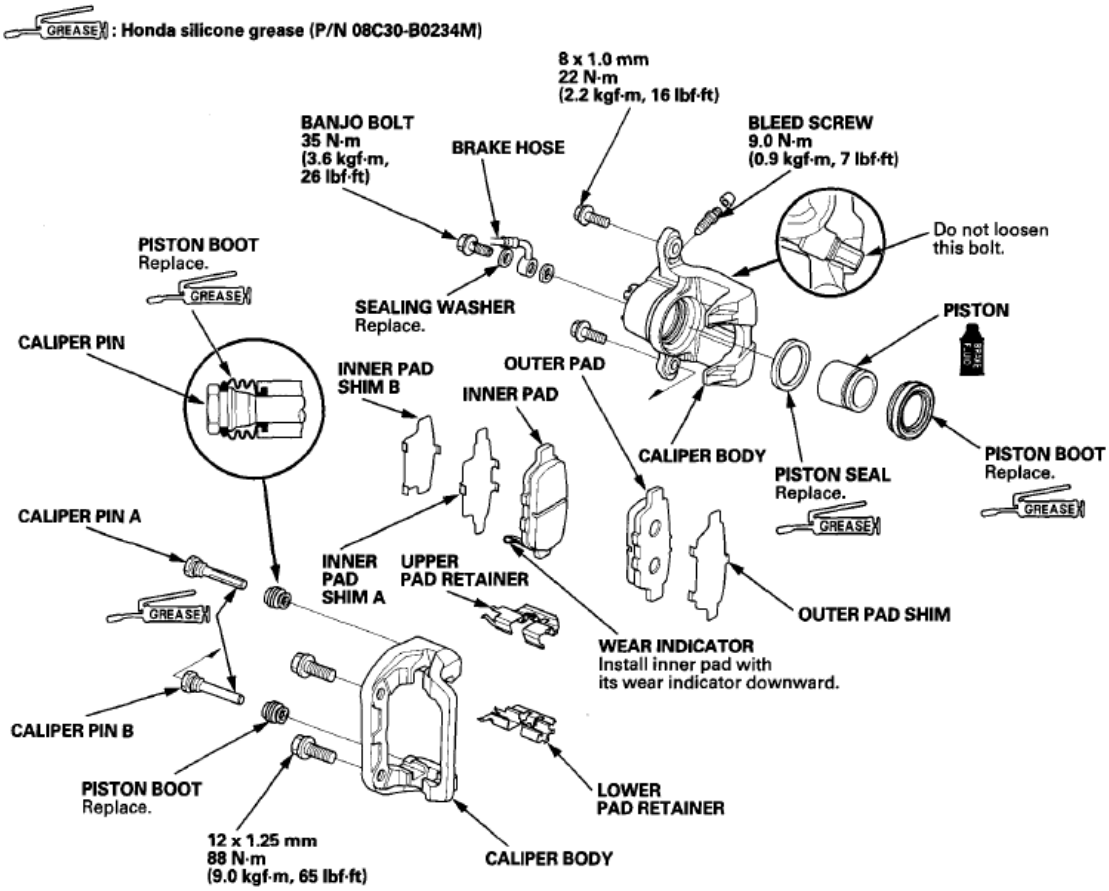

Fig. 54: Exploded View Of Rear Brake Caliper With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PARKING BRAKE INSPECTION

CAUTION: Frequent inhalation of brake shoe dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheels.
3. Release the parking brake, and remove the brake disc/drum (see **REAR BRAKE DISC REPLACEMENT**).

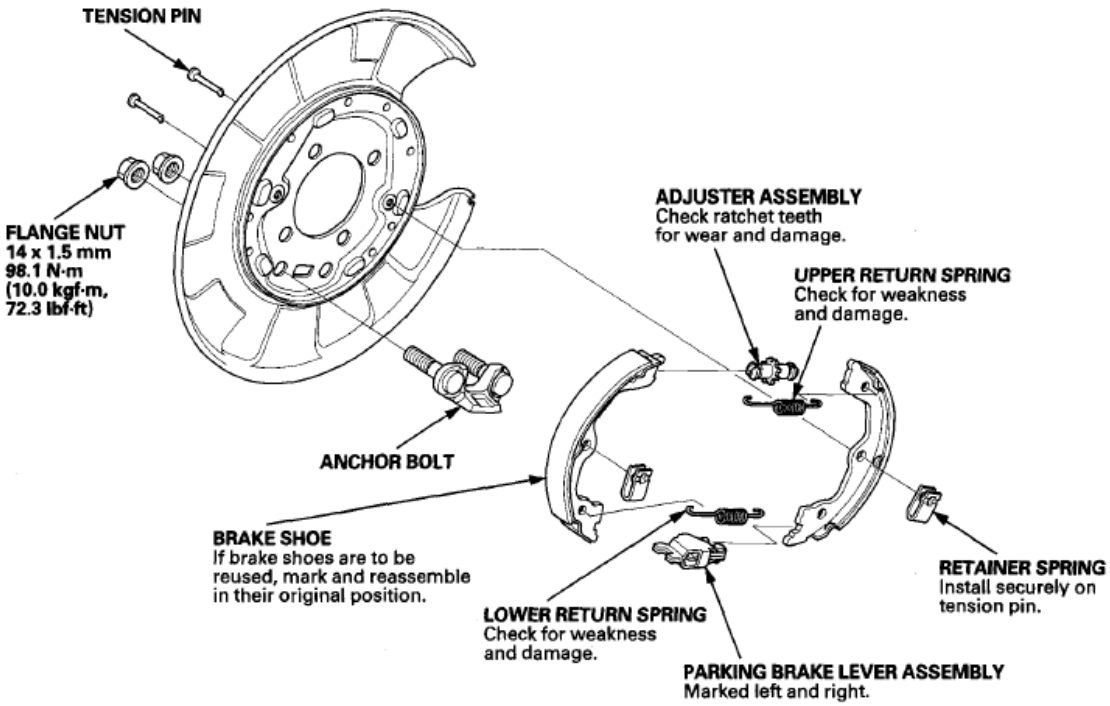

Fig. 55: Identifying Parking Brake Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check the parking brake linings (A) for cracking, glazing, wear, and contamination.

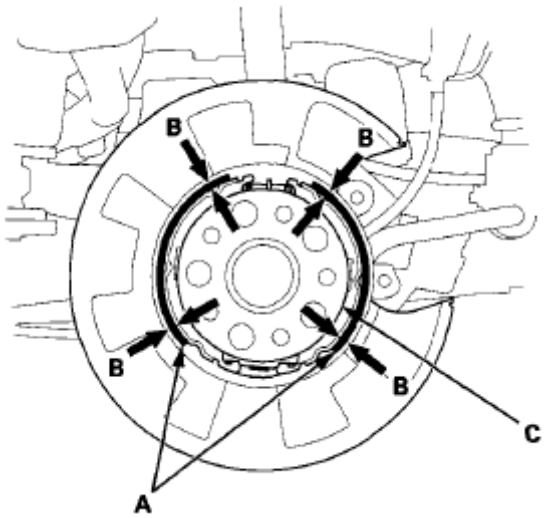

Fig. 56: Checking Parking Brake Lining Thickness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the parking brake lining thickness (B). Measurement does not include brake shoe thickness.

Parking brake lining thickness:

Standard: 3.4 mm (0.134 in)

Service limit: 1.0 mm (0.039 in)

6. If any part of the parking brake lining thickness is less than the service limit, replace all the parking brake shoes as a set (see **PARKING BRAKE SHOE REPLACEMENT**).
7. Check the hub (C) for smooth operation. If it requires servicing, replace the hub bearing unit (see **HUB BEARING UNIT REPLACEMENT**).
8. Measure the inside diameter of the parking brake drum with an inside vernier caliper.

   Parking brake drum inside diameter:

   Standard: 189.9- 190.0 mm (7.476- 7.480 in)

   Service limit: 191.0 mm (7.520 in)

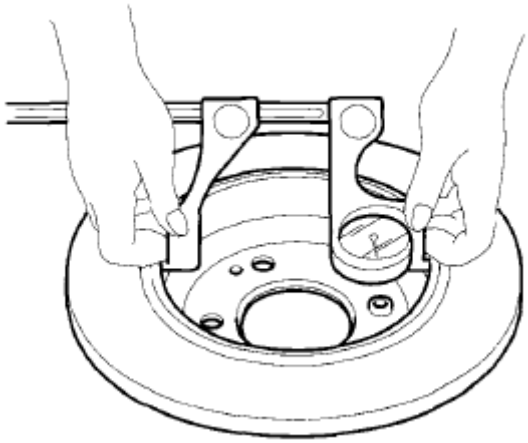

Fig. 57: Measuring Inside Diameter Of Parking Brake Drum With Inside Vernier Caliper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. If the inside diameter of the parking brake drum is more than service limit, replace the brake disc/drum.
10. Check the parking brake disc/drum for scoring, grooves, and cracks.
11. Install the brake disc/drum and the brake caliper (see **REAR BRAKE DISC REPLACEMENT**).
12. Do the major parking brake adjustment (see **MAJOR ADJUSTMENT (TO BE DONE WHEN REPLACING PARKING BRAKE SHOES)**).
13. Clean the mating surface between the brake disc/drum and the inside of the wheel, then install the rear wheels.

PARKING BRAKE SHOE REPLACEMENT

CAUTION: Frequent inhalation of brake shoe dust, regardless of material composition, could be hazardous to your health.

- **Avoid breathing dust particles.**
- **Never use an air hose or brush to clean brake assemblies. Use an OSHA-approved vacuum cleaner.**

DISASSEMBLY

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheels.
3. Release the parking brake, and remove the brake disc/drum (see **REAR BRAKE DISC REPLACEMENT**).
4. Disconnect and remove the upper return spring (A).

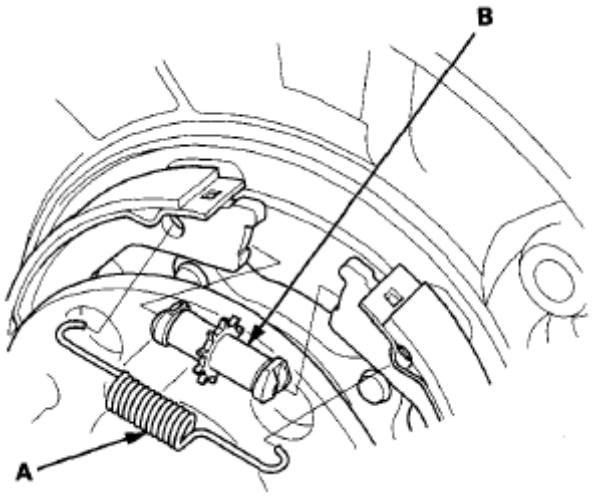

Fig. 58: Identifying Upper Return Spring And Adjuster Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the adjuster assembly (B).
6. Disconnect and remove the lower return spring (A).

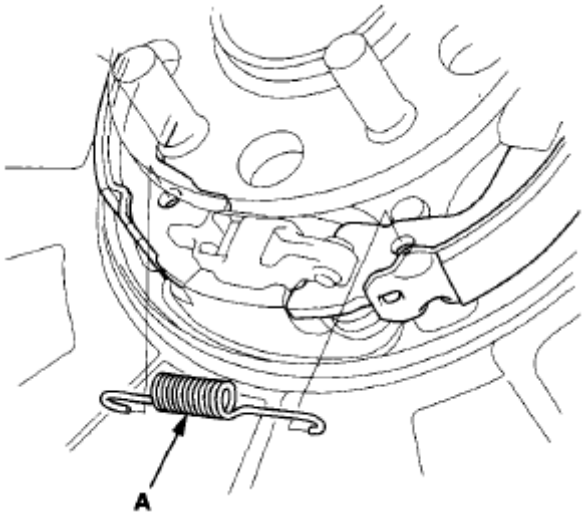

Fig. 59: Identifying Lower Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the parking brake lever assembly (A), and disconnect it from the parking brake cable end (B).

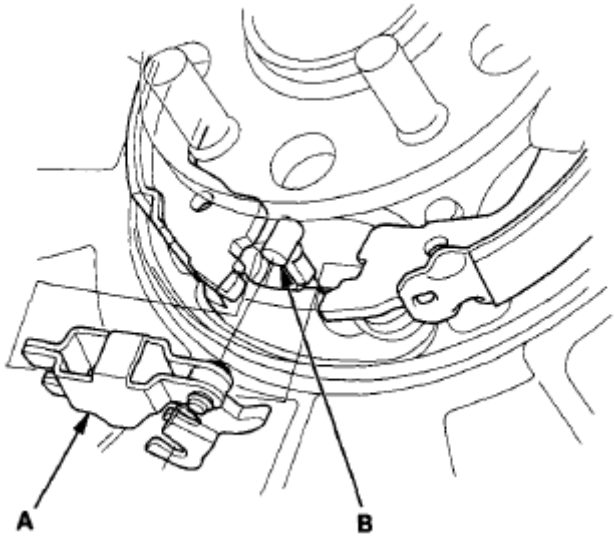

Fig. 60: Identifying Parking Brake Lever Assembly And Retainer Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the tension pins (A) by pushing respective retainer springs (B), and turning the pin.

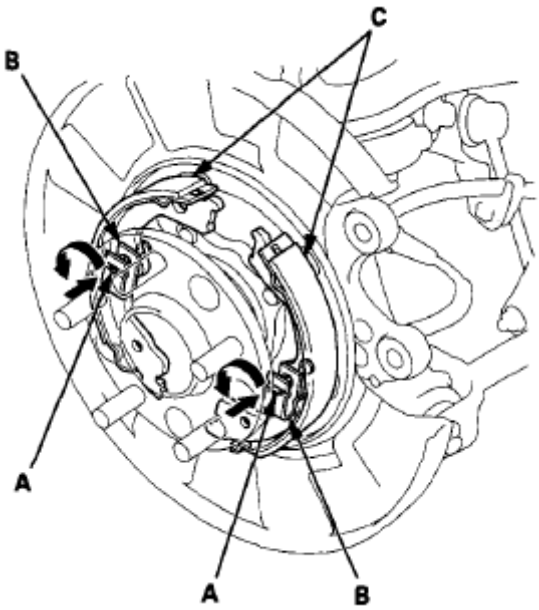

Fig. 61: Removing Tension Pins By Pushing Respective Retainer Springs And Turning Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the parking brake shoes (C).

REASSEMBLY

1. Apply Molykote 44MA grease to the shoe ends (A), sliding surfaces (B), and opposite edges of the parking brake shoe (C) as shown. Wipe off any excess. Keep grease away from the brake linings.

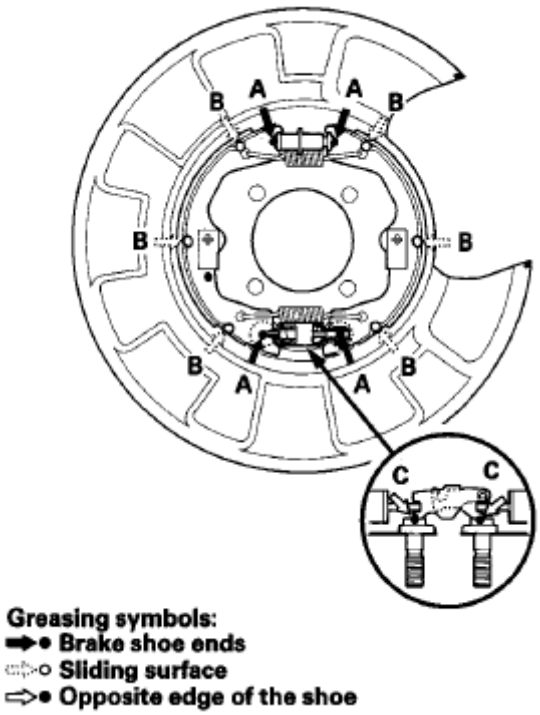

Fig. 62: Applying Molykote 44MA Grease To Shoe Ends, Sliding Surface And Opposite Edge Of Shoe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Reinstall the tension pins (A) and retainer springs (B).

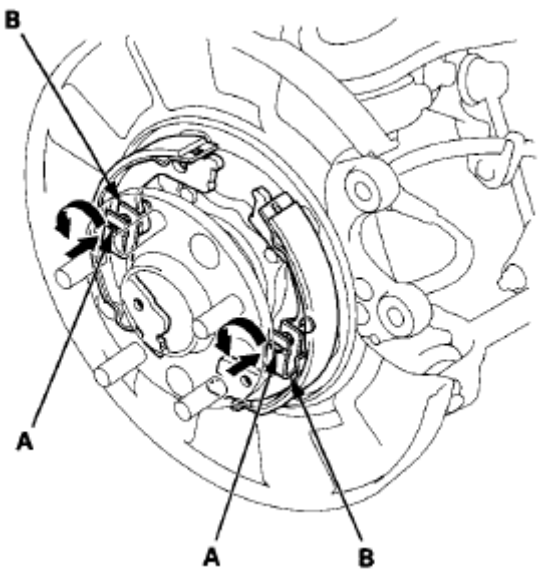

Fig. 63: Installing Tension Pins And Retainer Springs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the parking brake cable end (A) to the parking brake lever assembly (B), and install the parking

brake lever assembly.

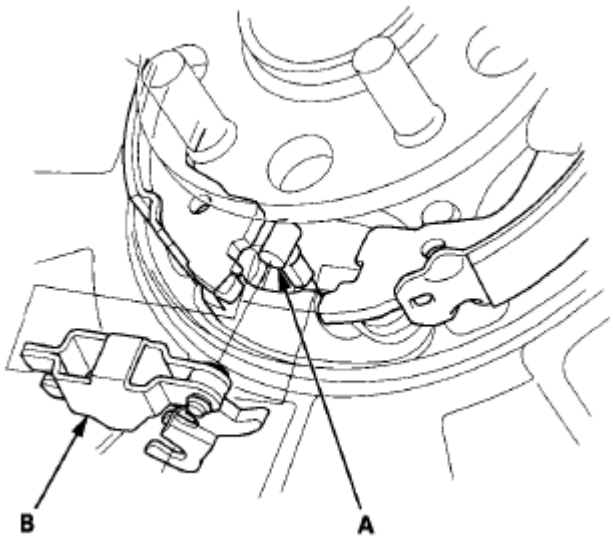

Fig. 64: Identifying Parking Brake Cable End And Lever Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Reinstall the lower return spring (A).

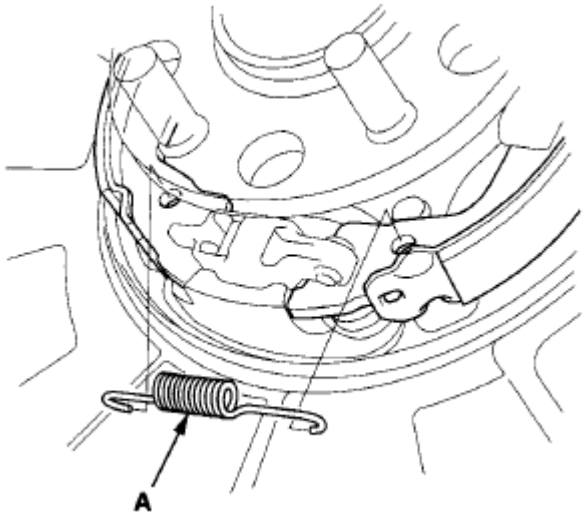

Fig. 65: Installing Lower Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Clean the threaded portions of the clevis pin A, and coat the threads of the clevis pin A with grease. Clean the sliding surface of the clevis pin B, and coat the sliding surface of the clevis pin B with grease. Install the clevis pin A and B on the adjuster (C) and shorten the clevis pin A by turning the adjuster.

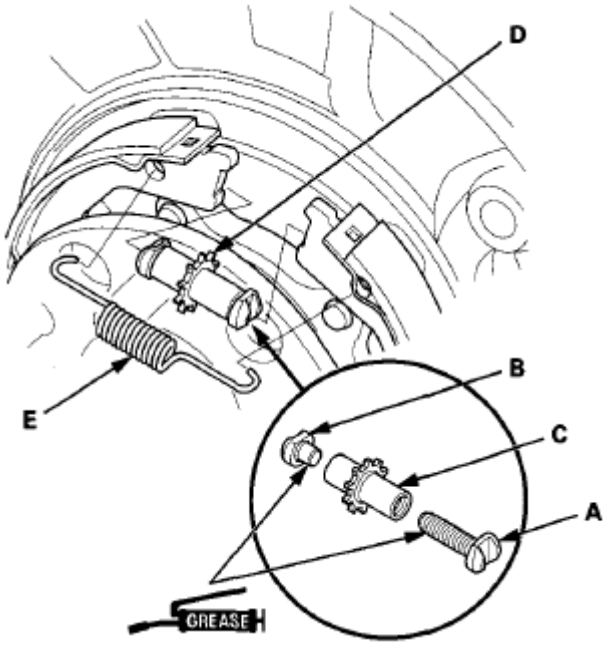

Fig. 66: Identifying Clevis Pins, Adjuster, Adjuster Assembly And Upper Return Spring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Position the brake shoe adjuster assembly (D) on the parking brake shoes.
7. Reinstall the upper return spring (E).
8. Install the brake disc/drum and the brake caliper (see **REAR BRAKE DISC REPLACEMENT**).
9. Do the major parking brake adjustment (see **MAJOR ADJUSTMENT (TO BE DONE WHEN REPLACING PARKING BRAKE SHOES)**).
10. Clean the mating surfaces between the brake disc/drum and the inside of the wheel, then install the rear wheels.

PARKING BRAKE SHOE LINING BREAK-IN

WARNING: Do this operation in a safe area.

NOTE:

- **Do the brake lining surface break-in when replacing shoes with new brake linings and/or new rear brake disc/drum.**
- **Check the number of parking brake lever clicks. Adjust the parking brake before lining surface break-in (see MAJOR ADJUSTMENT (TO BE DONE WHEN REPLACING PARKING BRAKE SHOES)).**

1. Park the vehicle on a firm, level surface.
2. Release the parking brake lever.
3. Drive the vehicle at 28 mph (45 km/h) and set cruise.

4. Pull the parking brake lever with 88 N (9 kgf, 20 lbf) (2 clicks) of force for 3 seconds.
5. Pull the parking brake lever with 167 N (17 kgf, 38 lbf) (5 clicks) of force for 12 seconds.
6. Check the parking brake lever adjustment (see **PARKING BRAKE INSPECTION AND ADJUSTMENT**).

BRAKE PEDAL REPLACEMENT

NOTE: The illustration shows A/T.

1. Remove the driver's dashboard undercover (see **DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**).
2. Disconnect the brake pedal position switch connector (A).

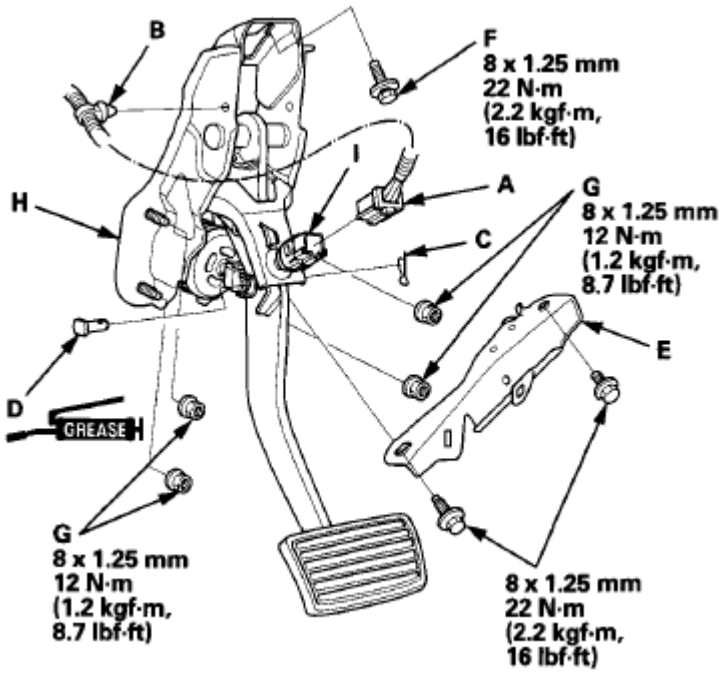

Fig. 67: Identifying Brake Pedal Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. A/T: Remove the wire harness clip (B).
4. Remove the lock pin (C) and the clevis pin (D).
5. Remove the brake pedal support member (E).
6. Remove the brake pedal bracket mounting bolt (F) and the nuts (G).
7. Remove the brake pedal with bracket (H).
8. Remove the brake pedal position switch (I) by turning it 45 ° counterclockwise.
9. Install the brake pedal in the reverse order of removal.
10. Adjust the brake pedal and the brake pedal position switch (see **BRAKE PEDAL AND BRAKE**

PEDAL POSITION SWITCH ADJUSTMENT).

BRAKE HOSE AND LINE INSPECTION

1. Inspect the brake hoses for damage, deterioration, leaks, interference, and twisting.
2. Check the brake lines for damage, rusting, and leaks. Also check for bent brake lines.
3. Check for leaks at hose and line joints and connections, and retighten if necessary.
4. Check the master cylinder and the VSA modulator-control unit for damage and leaks.

Connection Point	Component	Connected to	Specified Torque Value	Note
A	Front brake caliper	Brake hose	35 N.m (3.6 kgf.m, 26 lbf.ft)	Banjo bolt
		Bleed screw	8 N.m (0.8 kgf.m, 6 lbf.ft)	
B	Rear brake caliper	Brake hose	35 N.m (3.6 kgf.m, 26 lbf.ft)	Banjo bolt
		Bleed screw	9 N.m (0.9 kgf.m, 7 lbf.ft)	
C	Brake hose	Brake line	15 N.m (1.5 kgf.m, 11 lbf.ft)	Flare nut
D	Master cylinder	Brake line	22 N.m (2.2 kgf.m, 16 lbf.ft)	Flare nut
E	VSA modulator-control unit	Brake line (10 mm nut)	15 N.m (1.5 kgf.m, 11 lbf.ft)	Flare nut
		Brake line (12 mm nut)	22 N.m (2.2 kgf.m, 16 lbf.ft)	

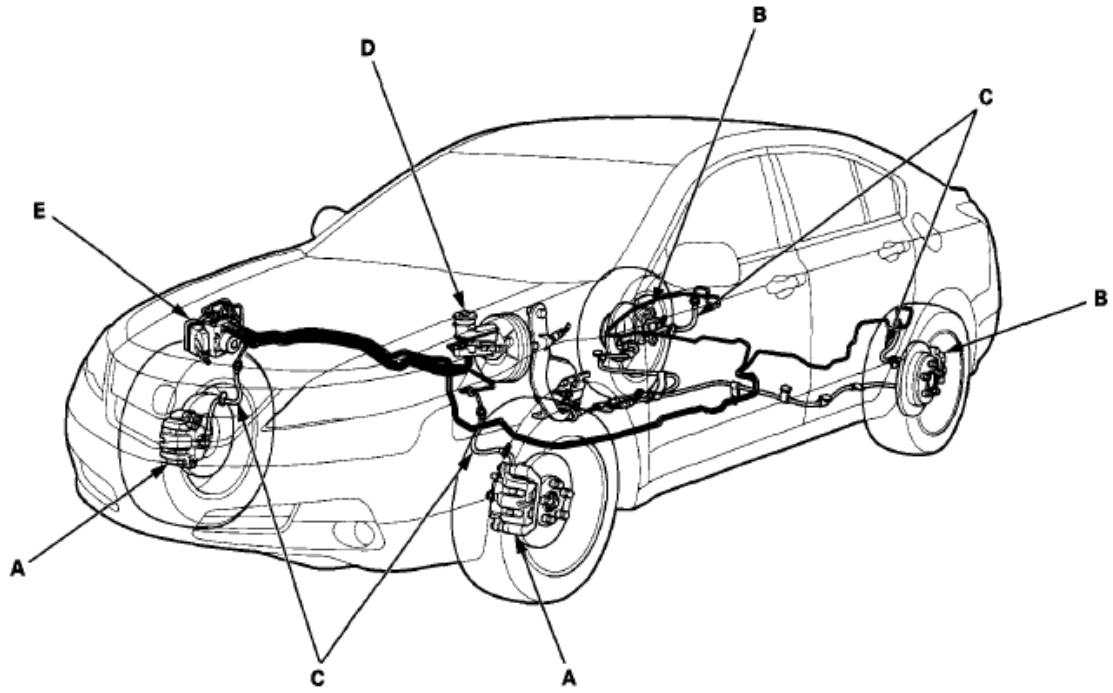

Fig. 68: Identifying Brake Hose And Line Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

BRAKE HOSE REPLACEMENT

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid gets on the paint, wash it off immediately with water.**

NOTE:

- **Before reassembling, check that all parts are free of dirt and other foreign particles.**
- **Replace parts with new ones whenever specified to do so.**
- **After removal, plug the ends of the hoses and the joints to prevent spilling brake fluid.**

Front

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Remove the front wheel.
3. Disconnect the brake line (A) from the brake hose (B), then remove the brake hose clip (C).

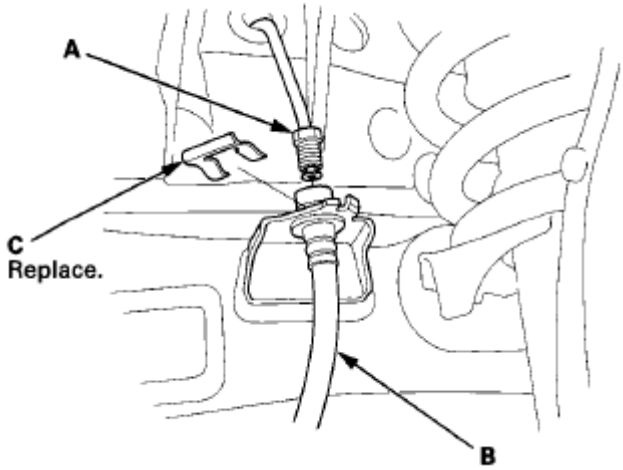

Fig. 69: Identifying Brake Line, Brake Hose And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the banjo bolt (A), and disconnect the brake hose (B) from the caliper body.

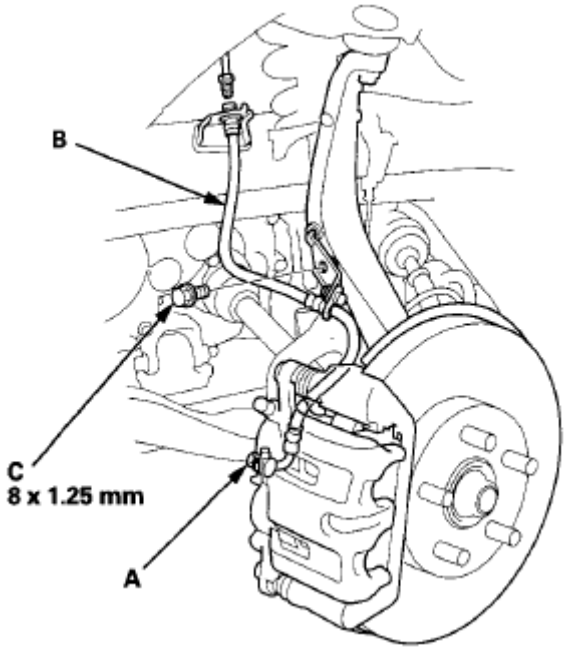

Fig. 70: Identifying Brake Hose, Banjo Bolt And Brake Hose Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the brake hose mounting bolt (C), then remove the brake hose.
6. Install the brake hose (A) with the mounting bolt (B).

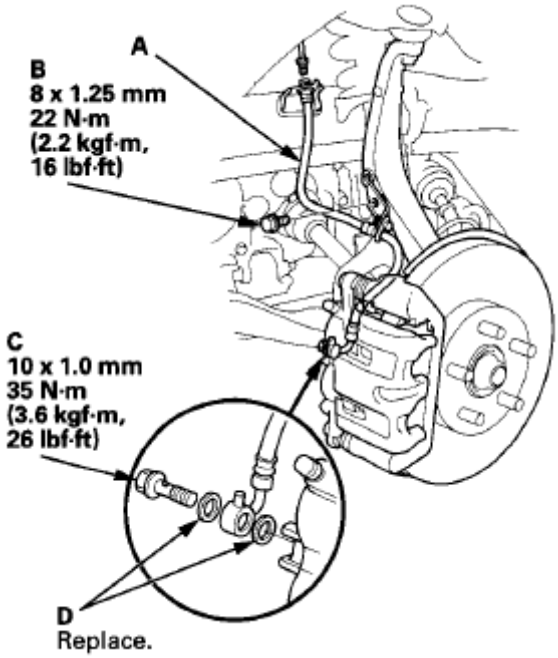

Fig. 71: Identifying Brake Hose, Washer, Banjo Bolt & Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Connect the brake hose to the caliper body with the banjo bolt (C) and new sealing washers (D).
8. Install a new brake hose clip (A) to the brake hose (B) on the bracket, then connect the brake line (C). Do not twist the brake hose.

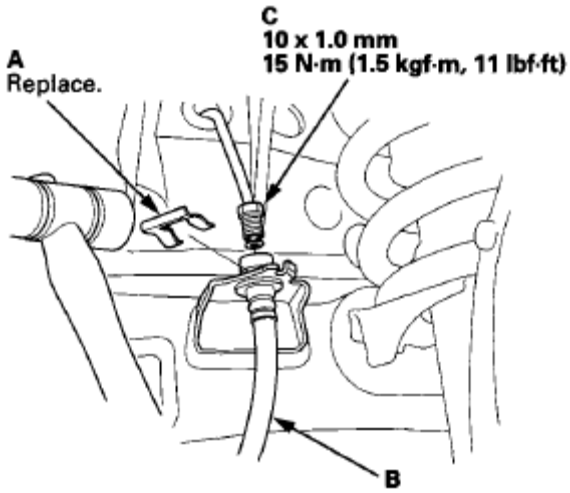

Fig. 72: Identifying Brake Line, Hose And Clip With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. After installing the brake hose, bleed the brake system (see **BRAKE SYSTEM BLEEDING**).
10. Do the following checks:
    - Check the brake hose and line joint for leaks, and tighten if necessary.

- Check the brake hoses for interference and twisting.

11. Clean the mating surfaces between the brake disc and the inside of the wheel, then install the front wheel.

REAR

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheel.
3. Disconnect the brake line (A) from the brake hose (B), then remove the brake hose clip (C).

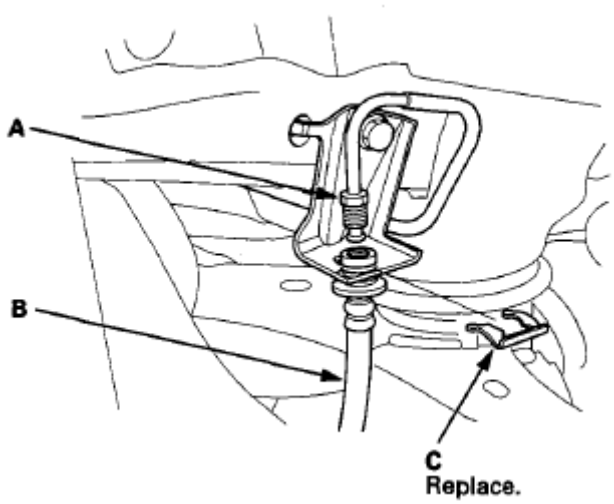

Fig. 73: Identifying Brake Line, Hose And Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the banjo bolt (A), and disconnect the brake hose (B) from the caliper body.

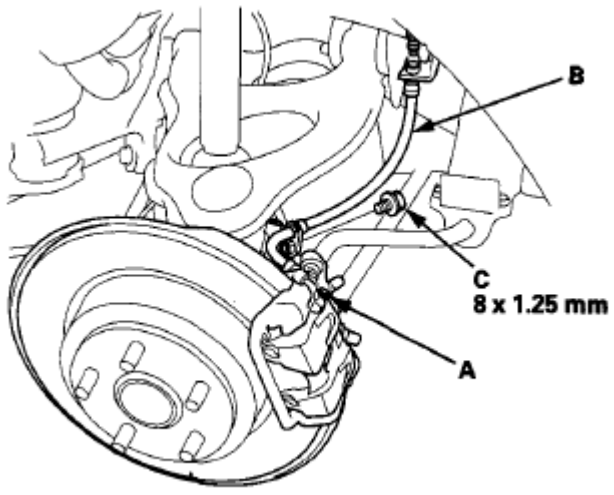

Fig. 74: Identifying Brake Hose, Banjo Bolt And Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the brake hose mounting bolt (C), then remove the brake hose.
6. Install the brake hose (A) with the mounting bolt (B).

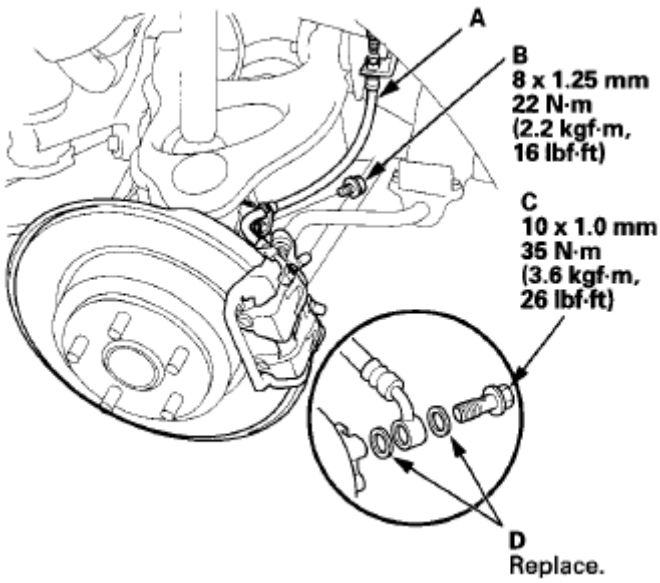

Fig. 75: Identifying Brake Hose, Washer, Banjo Bolt And Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Connect the brake hose to the caliper body with the banjo bolt (C) and new sealing washers (D).
8. Install a new brake hose clip (A) to the brake hose (B) on the bracket, then connect the brake line (C). Do not twist the brake hose.

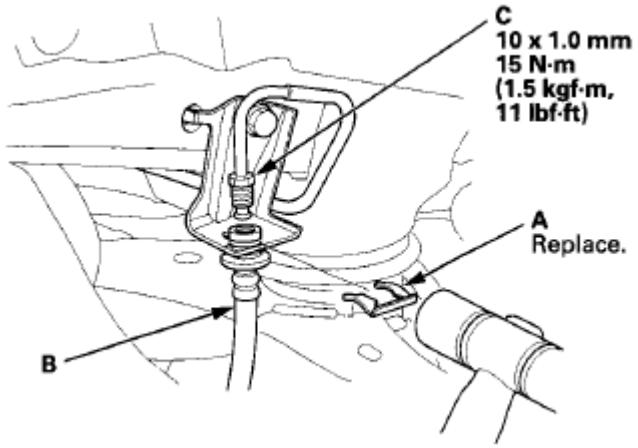

Fig. 76: Identifying Brake Hose, Line And Clip With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. After installing the brake hoses, bleed the brake system (see **BRAKE SYSTEM BLEEDING**).
10. Do the following checks:

- Check the brake hose and line joint for leaks, and tighten if necessary.
- Check the brake hose for interference and twisting.

11. Clean the mating surfaces between the brake disc/drum and the inside of the wheel, then install the rear wheel.

PARKING BRAKE LEVER REPLACEMENT

1. Release the parking brake lever fully.
2. Remove the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
3. Remove the RF unit (if equipped) (see **RF UNIT REPLACEMENT**).
4. Remove the parking brake lever mount bolts (A).

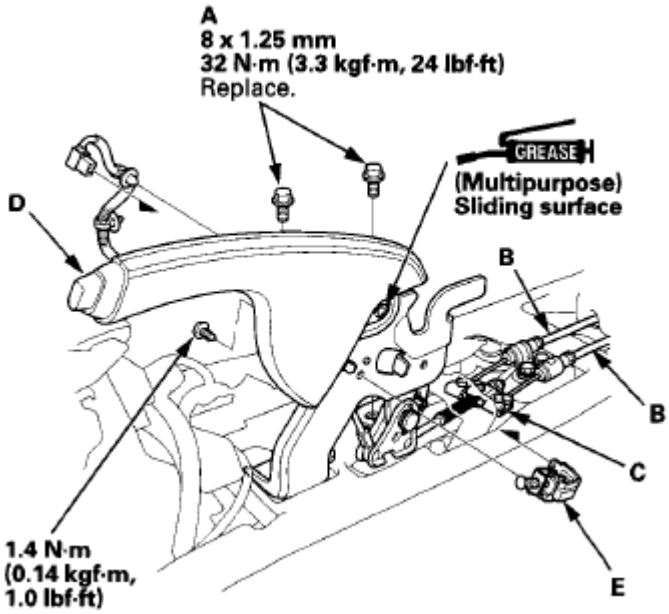

Fig. 77: Identifying Parking Brake Cables, Switch, Lever, Equalizer And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the parking brake cables (B) from the equalizer (C), then remove the parking brake lever (D).
6. Remove the parking brake switch (E).
7. Install the parking brake lever in the reverse order of removal.

NOTE: Do not scratch the coating on the link cable while handling and assembling the parking brake lever.

8. Adjust the parking brake (see **PARKING BRAKE INSPECTION AND ADJUSTMENT**).

PARKING BRAKE CABLE REPLACEMENT

EXPLODED VIEW

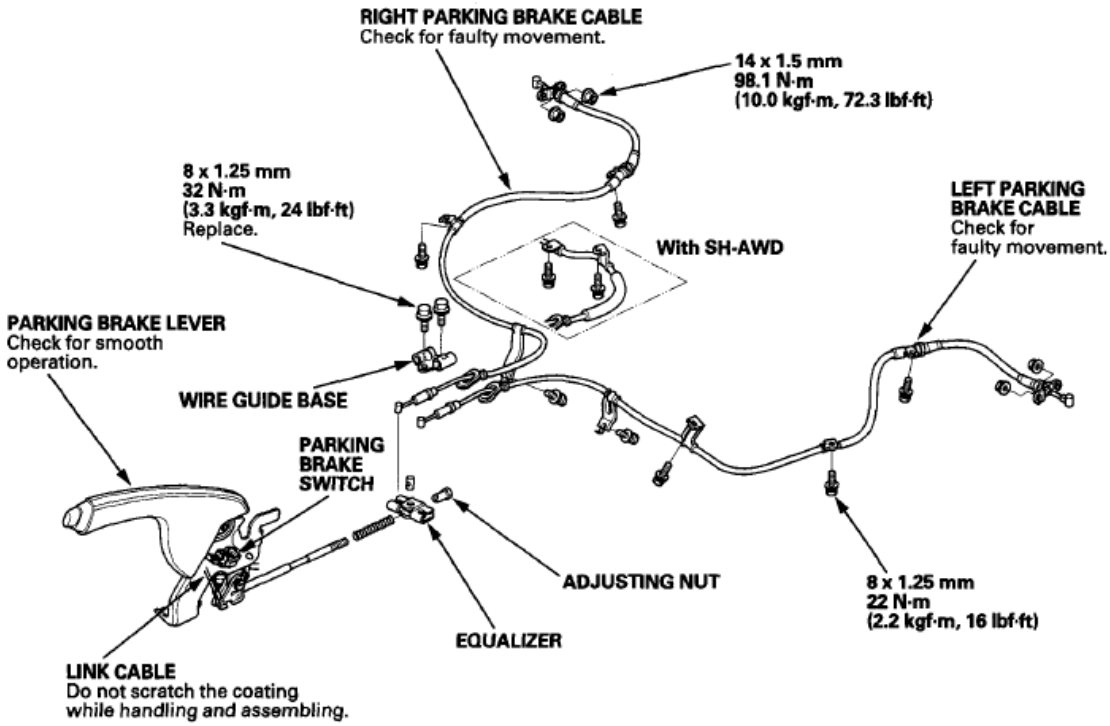

Fig. 78: Exploded View Of Parking Brake Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **The parking brake cables must not be bent or distorted. This will lead to stiff operation and premature cable failure.**
- **Refer to the EXPLODED VIEW as needed during this procedure.**

1. Release the parking brake lever fully.
2. Remove the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
3. Remove the wire guide base (A), then disconnect the parking brake cables (B) from the equalizer (C).

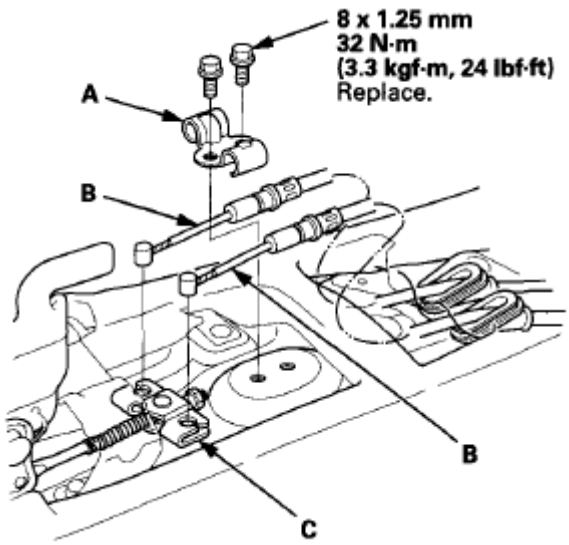

Fig. 79: Identifying Wire Guide Base, Parking Brake Cables And Equalizer With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Without SH-AWD: Remove the heat shield (A).

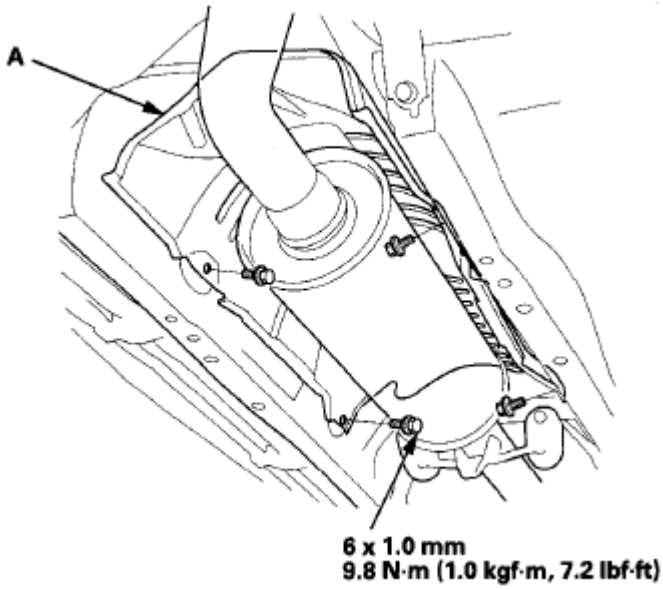

Fig. 80: Identifying Heat Shield And With Mounting Bolt (Without SH-AWD) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the parking brake cable grommets, and pull out the parking brake cable from the body floor.
6. Remove the parking brake shoes, and disconnect the parking brake cable from the parking brake lever assembly (see **PARKING BRAKE SHOE REPLACEMENT**).
7. Remove the parking brake cable mounting nuts from the backing plate (A), and remove the parking brake

cable (B).

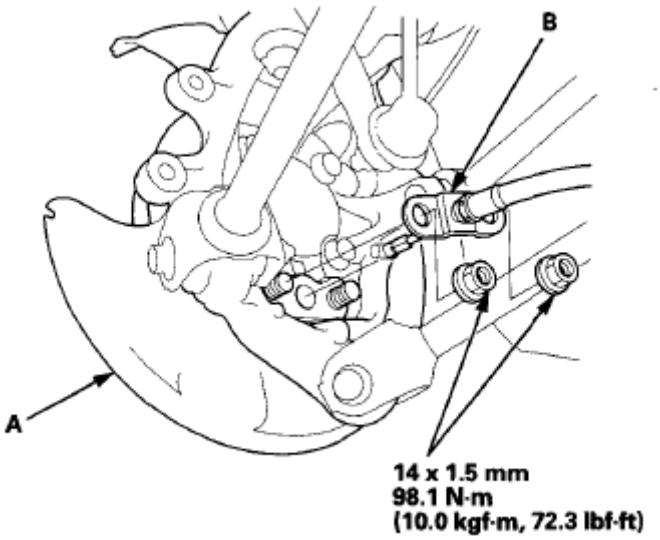

Fig. 81: Identifying Backing Plate, Parking Brake Cable With Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the parking brake cable mounting hardware, then remove the cable.
9. Install the parking brake cable in the reverse order of removal, and note these items:
    - Be careful not to bend or distort the cable.
    - Connect the parking brake cable to the parking brake lever assembly, and install the brake shoes and drum (see **PARKING BRAKE SHOE REPLACEMENT**).
    - Adjust the parking brake (see **PARKING BRAKE INSPECTION AND ADJUSTMENT**). Apply the parking brake firmly 10 times then adjust it again.

2012 GENERAL INFORMATION

Specifications - TL

STANDARDS AND SERVICE LIMITS

ENGINE ELECTRICAL (J35Z6)

Item	Measurement	Qualification	Standard or New	Service Limit
Ignition coil	Rated voltage		12V	
	Firing order		1- 4- 2- 5- 3- 6	
Sparkplug	Type	NGK	DILZKR7A11G	
	Gap		1.0- 1.1 mm (0.039- 0.043 in)	-
Ignition timing	At idle Check the red mark	In N or P	10+2°BTDC	
Drive belt	Tension		Auto-tensioner	
Alternator	Output	At 13.5 V and normal engine temperature	130A	
	Coil (rotor) resistance	At 68°F (20°C)	2.5ohms	
	Slip ring O.D.		14.4 mm (0.567 in)	14.0 mm (0.551 in)
	Brush length		10.5 mm (0.413 in)	1.5 mm (0.059 in)
Starter	Output		1.8 kW	
	Commutator mica depth		0.50- 0.90 mm (0.0197- 0.0354 in)	0.20 mm (0.0079 in)
	Commutator runout		0.02 mm (0.0008 in) max.	0.05 mm (0.0020 in)
	Commutator O.D.		28.9- 29.0 mm (1.138- 1.142 in)	28.0 mm (1.102 in)
	Brush length		15.0- 16.0 mm (0.591 - 0.630 in)	9.0 mm (0.354 in)
	Brush spring tension		22.3- 27.1 N (2.27- 2.76 kgf, 5.00- 6.08 lbf)	-

ENGINE LUBRICATION (J35Z6, J37A4)

Item	Measurement	Qualification	Standard or New	Service Limit
Engine oil	Capacity	Engine overhaul	5.0 L (5.3 US qt)	-
		Oil change including filter	4.3 L (4.5 US qt)	-
		Oil change without filter	4.0 L (4.2 US qt)	-
	Inner rotor-to-outer rotor radial clearance		0.04- 0.16 mm (0.002- 0.006 in)	0.20 mm (0.007 in)
	Pump housing-to-outer rotor radial clearance		0.07- 0.19 mm (0.003- 0.007 in)	0.20 mm (0.007 in)

Oil pump	Pump housing-to-rotor axial clearance		0.02- 0.07 mm (0.001 - 0.002 in)	0.12 mm (0.004 in)
	Oil pressure with oil temperature at 176°F (80°C)	At idle	70 kPa (0.71 kgf/cm^2 , 10.1 psi) min.	-
		At 3, 000 RPM	490 kPa (5.00 kgf/cm^2 , 71.1 psi) min.	-

COOLING SYSTEM (J35Z6, J37A4)

Item	Measurement	Qualification	Standard or New	Service Limit
Radiator	Coolant capacities (including engine, heater, hoses, and reservoir)	Engine overhaul	8.3 L (2.19 US gal)	-
		Coolant change	6.3 L (1.66 US gal)	-
	Coolant type		Acura Long Life Antifreeze/Coolant Type 2	
Coolant reservoir	Coolant capacity		0.69 L (0.182 US gal)	-
Radiator cap	Opening pressure		93- 123 kPa (0.95- 1.25 kgf/cm^2 , 13.5 - 17.8 psi)	-
Thermostat	Opening temperature	Begins to open	169- 176°F (76- 80°C)	-
		Fully open	194°F (90°C)	-
	Valve lift at fully open		10.0 mm (0.394 in) min.	-

FUEL AND EMISSIONS (J35Z6)

Item	Measurement	Qualification	Standard or New	Service Limit
Fuel pressure regulator	Pressure with fuel pressure gauge connected		390- 440 kPa (4.0- 4.5 kgf/cm^2 , 57- 64 psi)	-
Fuel tank	Capacity		70.0 L (18.49 US gal)	-
Engine idle	Idle speed without load	In N or P	680 ± 50 RPM	
	Idle speed with high electrical load (A/C switch on, temperature set to max cool, blower fan on high, rear window defogger on, and headlights on high beam)	In N or P	680 ± 50 RPM	

FUEL AND EMISSIONS (J37A4)

Item	Measurement	Qualification	Standard or New	Service Limit
Fuel pressure regulator	Pressure with fuel pressure gauge connected		390- 440 kPa (4.0- 4.5 kgf/cm^2 , 57- 64 psi)	-
Fuel tank	Capacity		70.0 L (18.49 US gal)	-
Engine idle	Idle speed without load	M/T in neutral	750 ± 50 RPM	
		A/T in N or P	700 ± 50 RPM	
	Idle speed with high electrical load (A/C switch on, temperature set to max cool, blower fan on high, rear window defogger on, and headlights on high beam)	M/T in neutral	750 ± 50 RPM	
		A/T in N or P	700 ± 50 RPM	

CLUTCH

Item	Measurement	Qualification	Standard or New	Service Limit
Clutch pedal	Height from floor		156 mm (6.14 in)	-
	Stroke		130- 140 mm (5.12- 5.51 in)	-
Flywheel	Runout on clutch mating surface		0.3 mm (0.012 in) max.	0.4 mm (0.016 in)
Clutch disc	Rivet head depth		1.35- 1.95 mm (0.0531 - 0.0768 in)	0.7 mm (0.028 in)
	Thickness		7.9- 8.5 mm (0.311- 0.335 in)	6.0 mm (0.236 in)
Pressure plate	Warpage		0.02 mm (0.001 in)	0.15 mm (0.005 in)
	Evenness of the height of the diaphragm spring fingers		0.6 mm (0.024 in) max.	0.8 mm (0.031 in)

MANUAL TRANSMISSION AND M/T DIFFERENTIAL

Item	Measurement	Qualification	Standard or New	Service Limit
Manual transmission fluid	Capacity: use Acura MTF	Fluid change	2.1 L (2.2US qt)	-
		Overhaul	2.5L (2.6US qt)	-
	End play		0.14- 0.21 mm (0.0055- 0.0083 in)	Adjust
	Diameter of ball bearing contact area (clutch housing side)		28.002- 28.015 mm (1.10244- 1.10295 in)	27.95 mm (1.1004 in)

Mainshaft	Diameter of needle bearing contact area		47.984- 48.000 mm (1.88913- 1.88976 in)	47.93 mm (1.8870 in)
	Diameter of ball bearing contact area (transmission housing side)		38.984- 39.000 mm (1.53480- 1.53543 in)	38.93 mm (1.5327 in)
	Diameter of 4th/5th gear distance collar contact area		41.984- 42.000 mm (1.65291 - 1.65354 in)	41.93 mm (1.6508 in)
	Diameter of 6th gear distance collar contact area		38.984- 39.000 mm (1.53480- 1.53543 in)	38.93 mm (1.5327 in)
	Runout		0.02 mm (0.0008 in) max.	0.05 mm (0.0020 in)
	Diameter of pilot bearing contact area		19.967- 19.980 mm (0.78610- 0.78661 in)	19.91 mm (0.7839 in)
Mainshaft 3rd gear	I.D.		53.010- 53.029 mm (2.08700- 2.08775 in)	-
	Clearance	2nd-3rd	0.06- 0.19 mm (0.002- 0.007 in)	0.3 mm (0.011 in)
	Thickness		23.89- 23.97 mm (0.9405- 0.9437 in)	23.8 mm (0.937 in)
Mainshaft 4th, 5th gear	I.D.		53.010- 53.029 mm (2.08700- 2.08775 in)	-
	End play (4th/5th gear distance collar side)		0.06- 0.19 mm (0.0024- 0.0075 in)	0.3 mm (0.012 in)
	Thickness		22.39- 22.47 mm (0.8815- 0.8846 in)	22.3 mm (0.878 in)
Mainshaft 6th gear	I.D.		53.010- 53.029 mm (2.08700- 2.08775 in)	53.08 mm (2.0898 in)
	End play		0.06- 0.19 mm (0.0024- 0.0075 in)	0.3 mm (0.012 in)
	Thickness		25.89- 25.97 mm (1.0193- 1.0224 in)	25.8 mm (1.016 in)
Mainshaft 4th/5th gear distance collar	I.D.		42.002- 42.012 mm (1.65362- 1.65401 in)	-
	O.D.		47.989- 48.000 mm (1.88933- 1.88976 in)	-
	Overall length		49.95- 50.05 mm	-

			(1.9665- 1.9705 in)	
	Length of needle bearing contact area	4th, 5th	22.53- 22.58 mm (0.8870- 0.8890 in)	-
Mainshaft 6th gear distance collar	I.D.		39.002- 39.012 mm (1.53551 - 1.53590 in)	39.06 mm (1.5378 in)
	O.D.		47.989- 48.000 mm (1.88933- 1.88976 in)	47.94 mm (1.8874 in)
	Length		26.03- 26.08 mm (1.0248- 1.0268 in)	-
Countershaft	Diameter of needle bearing contact area (clutch housing side)		43.974- 43.990 mm (1.73126- 1.73189 in)	43.92 mm (1.7291 in)
	Diameter of ball bearing contact area (transmission housing side)		30.002- 30.015 mm (1.18118- 1.18169 in)	29.95 mm (1.1791 in)
	Diameter of 2nd gear distance collar contact area		42.975- 42.991 mm (1.69193- 1.69256 in)	42.92 mm (1.6898 in)
	Runout		0.02 mm (0.0008 in) max.	0.05 mm (0.0020 in)
	35 mm shim-to-bearing inner race clearance		0.04- 0.10 mm (0.002- 0.003 in)	Adjust
	Diameter of countershaft reverse gear contact area		45.934- 45.950 mm (1.80842- 1.80905 in)	45.88 mm (1.8063 in)
Countershaft 1st gear	I.D.		59.010- 59.029 mm (2.32322- 2.32397 in)	59.08 mm (2.3260 in)
	End play (reverse gear side)		0.04- 0.17 mm (0.0016- 0.0067 in)	0.28 mm (0.0110 in)

Countershaft reverse gear	O.D.		53.987- 54.000 mm (2.12547- 2.12598 in)	53.93 mm (2.1232 in)
	Length		23.03- 23.08 mm (0.9067- 0.9087 in)	-
Countershaft 2nd gear distance collar	I.D.		42.990- 43.000 mm (1.69252- 1.69291 in)	43.05 mm (1.6949 in)
	O.D.		51.989- 52.000 mm (2.04681- 2.04724 in)	51.94 mm (2.0449 in)
	Length		23.03- 23.08 mm (0.9067- 0.9087 in)	-
Reverse idler gear	O.D.		19.989- 20.000 mm (0.78697- 0.78740 in)	19.93 mm (0.7846 in)
Reverse drive/driven gear	I.D.		30.007- 30.020 mm (1.18138- 1.18189 in)	25.07 mm (0.9870 in)
5th synchro ring	Ring-to-gear clearance (ring pushed against gear)		0.70- 1.49 mm (0.028- 0.058 in)	0.4 mm (0.016 in)
6th synchro ring	Ring-to-gear clearance (ring pushed against gear)		0.73- 1.44 mm (0.029- 0.056 in)	0.4 mm (0.016 in)
3rd double cone synchro	Outer synchro ring-to-synchro cone clearance (ring pushed against gear)		0.68- 1.19 mm (0.027- 0.046 in)	0.3 mm (0.012 in)
	Synchro cone-to-gear clearance (ring pushed against gear)		0.48- 1.04 mm (0.019- 0.040 in)	0.3 mm (0.012 in)
	Outer synchro ring-to-gear clearance (ring pushed against gear)		0.95- 1.68 mm (0.037- 0.066 in)	0.6 mm (0.024 in)
4th double cone synchro	Outer synchro ring-to-synchro cone clearance (ring pushed against gear)		0.70- 1.19 mm (0.028- 0.046 in)	0.3 mm (0.012 in)
	Synchro cone-to-gear clearance (ring pushed against gear)		0.50- 1.14 mm (0.020- 0.044 in)	0.3 mm (0.012 in)
	Outer synchro ring-to-gear clearance (ring pushed against gear)		0.95- 1.68 mm (0.037- 0.066 in)	0.6 mm (0.024 in)
1st triple cone synchro	Outer synchro ring-to-synchro cone clearance (ring pushed against gear)		0.70- 1.19 mm (0.028- 0.046 in)	0.3 mm (0.012 in)
	Synchro cone-to-gear clearance (ring pushed against gear)		0.70- 1.88 mm (0.028- 0.074 in)	0.3 mm (0.012 in)
	Outer synchro ring-to-gear		1.12- 1.68 mm	0.6 mm

	clearance (ring pushed against gear)		(0.044- 0.066 in)	(0.024 in)
2nd triple cone synchro	Outer synchro ring-to-synchro cone clearance (ring pushed against gear)		0.70- 1.19 mm (0.028- 0.046 in)	0.3 mm (0.012 in)
	Synchro cone-to-gear clearance (ring pushed against gear)		0.70- 1.88 mm (0.028- 0.074 in)	0.3 mm (0.012 in)
	Outer synchro ring-to-gear clearance (ring pushed against gear)		1.12- 1.68 mm (0.044- 0.066 in)	0.6 mm (0.024 in)
Shift fork	Finger thickness	1st/2nd, 3rd/4th, 5th/6th	7.4- 7.6 mm (0.291 - 0.299 in)	-
		Reverse	6.2- 6.4 mm (0.244- 0.252 in)	-
	Fork-to-synchro sleeve clearance		0.35- 0.65 mm (0.014- 0.025 in)	1.0 mm (0.039 in)
Reverse shift lever	Finger width		6.50- 6.75 mm (0.2559- 0.2657 in)	-
	Shift lever-to-reverse shift piece clearance		0- 0.4 mm (0- 0.015 in)	0.5 mm (0.019 in)
	Shift lever width at contact area (reverse shift piece side)		13.0- 13.2 mm (0.512- 0.520 in)	-
	Shift lever-to-reverse shift fork clearance		0.15- 0.60 mm (0.006- 0.023 in)	0.7 mm (0.027 in)
Detent ball spring	Free length	1st/2nd	26.1 mm (1.028 in)	When worn or damaged
		3rd/4th, 5th/6th	27.4 mm (1.079 in)	When worn or damaged
Steel ball	Ball size		7.94 mm (0.3126 in)	When worn or damaged
Shift arm	I.D.		15.973- 16.005 mm (0.62886- 0.63012 in)	-
	Shift arm-to-shift piece clearance		0.26- 0.57 mm (0.010- 0.022 in)	0.75 mm (0.029 in)
	Shift piece width at contact area		13.6- 13.8 mm (0.535- 0.543 in)	-
M/T differential carrier	Backlash (measured with final driven gear)		0.6- 1.2 mm (0.024- 0.047 in)	-
	Carrier bearing starting torque (preload)		3.4- 4.5 N.m (35- 46 kgf.cm, 30- 40 lbf.in)	Adjust
	Inner rotor-to-outer rotor clearance		0.14 mm (0.006 in) max.	0.2 mm (0.007 in)
			17.1- 17.2 mm	

Oil pump	Oil pump inner rotor I.D.		(0.673- 0.677 in)	-
	Oil pump shaft O.D.		16.8- 17.0 mm (0.661 - 0.669 in)	-
	Oil pump thrust clearance		0.03- 0.13 mm (0.001 - 0.005 in)	0.15 mm (0.005 in)
	Outer rotor-to-clutch housing clearance		0.1 - 0.2 mm (0.004- 0.007 in)	0.22 mm (0.008 in)
Shift piece	I.D.		14.000- 14.068 mm (0.55118- 0.55386 in)	-
	Shift fork width at contact area		12.8- 13.0 mm (0.504- 0.512 in)	-
	Shift piece-to-shift fork clearance		0.2- 0.6 mm (0.008- 0.023 in)	0.7 mm (0.027 in)
Select arm	I.D.		11.01- 11.05 mm (0.4335- 0.4350 in)	-
	Interlock width at contact area		12.9- 13.0 mm (0.508- 0.512 in)	-
	Select arm-to-interlock clearance		0.05- 0.25 mm (0.002- 0.009 in)	0.5 mm (0.019 in)
Transfer output shaft	Diameter of bearing contact area	Transmission housing side	21.977- 21.990 mm (0.86523- 0.86575 in)	21.92 mm (0.8630 in)
		Clucks housing side	40.002- 40.018 mm (1.57488- 1.57551 in)	39.95 mm (1.5728 in)
	Thrust clearance		0.08- 0.17 mm (0.003- 0.006 in)	-
Transfer assembly	Diameter of transfer hypoid drive gear/shaft assembly at tapered roller bearing contact area	At transfer cover side	50.002- 50.018 mm (1.96858- 1.96921 in)	49.95 mm (1.9665 in)
		At transfer gear side	24.987- 25.000 mm (0.98374- 0.98425 in)	24.93 mm (0.9815 in)
	Diameter of transfer output shaft (hypoid gear) at tapered roller bearing contact area	At transfer gear side	40.002- 40.018 mm (1.57488- 1.57551 in)	39.95 mm (1.5728 in)
		At companion flange side	31.975- 31.988 mm (1.25886- 1.25937 in)	31.92 mm (1.2567 in)
	Transfer gear backlash		0.06- 0.16 mm (0.0024- 0.0063 in)	Adjust
	Tapered roller bearing total starting torque (preload)		2.64- 4.23 N.m (26.9- 43.1 kgf.cm, 23.3- 37.4 lbf.in)	Adjust

Transfer assembly fluid	Capacity: Hypoid gear oil SAE 90 viscosity, API classified GL 4 or GL 5 only	Fluid change	0.43 L (0.45 US qt)	-
		Overhaul	0.45 L (0.48 US qt)	-

AUTOMATIC TRANSMISSION AND A/T DIFFERENTIAL

Item	Measurement	Qualification	Standard or New	Service Limit
Automatic transmission fluid	Capacity: use Acura ATF DW-1 (with SH-AWD)	Fluid change	3.1 L (3.3 US qt)	-
		Overhaul	7.8 L (8.2 US qt)	-
	Capacity: use Acura ATF DW-1 (without SH-AWD)	Fluid change	3.1 L (3.3US qt)	-
		Overhaul	7.1 L (7.5US qt)	-
ATF pressure	Line pressure (Low) (APP Sensor opening less than 25 % in D with Line Pressure Sol VLV. A ON)	ATF temperature between 122°F and 212°F (50°C and 100°C)	667- 716 kPa (6.80- 7.30 kgf/cm^2 , 96.7 - 103.8 psi)	Lower limit: 618 kPa (6.30 kgf/cm^2 , 89.6 psi) Upper limit: 765 kPa (7.80 kgf/cm^2 , 111.0 psi)
	Line pressure (Normal)	At 2, 000 RPM in N or P	1, 164- 1, 285 kPa (11.87- 13.10 kgf/cm^2 , 168.8- 186.3 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	1st clutch pressure	At 2, 000 RPM in 1st gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	2nd clutch pressure	At 2, 000 RPM in 2nd gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	3rd clutch pressure	At 2, 000 RPM in 3rd gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	4th clutch pressure	At 2, 000 RPM in 4th gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)

			psi)	
	5th clutch pressure	At 2, 000 RPM in 5th gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	6th clutch pressure	At 2, 000 RPM in 6th gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	Torque converter clutch pressure	At 4, 000 RPM in 2nd gear (Lock-up condition)	294 kPa (3.00 kgf/cm^2 , 42.7 psi) or more	245 kPa (2.50 kgf/cm^2 , 35.6 psi)
Torque converter	Stall speed Check with vehicle on level ground		2, 000 RPM	-
		Service limit	1, 800- 2, 100 RPM	-
Clutch	Clearance between clutch end-plate and top disc	1st	1.50- 1.70 mm (0.0591 - 0.0669 in)	-
		2nd	1.25- 1.45 mm (0.0492- 0.0571 in)	-
		3rd	1.25- 1.45 mm (0.0492- 0.0571 in)	-
		4th	1.50- 1.70 mm (0.0591 - 0.0669 in)	-
		5th	1.25- 1.45 mm (0.0492- 0.0571 in)	-
		6th	1.25- 1.45 mm (0.0492- 0.0571 in)	-
	Diameter of stator shaft needle bearing contact area		31.984- 32.000 mm (1.25921- 1.25984 in)	When worn or damaged
	3rd gear I.D.		49.000- 49.016 mm (1.92913- 1.92976 in)	When worn or damaged
	3rd gear axial clearance		0.10- 0.21 mm (0.0039- 0.0083 in)	-
			41.962- 41.978	

Mainshaft	3rd gear collar diameter of needle bearing contact area		mm (1.65204- 1.65267 in)	When worn or damaged
	3rd gear collar width		29.00- 29.05 mm (1.1417- 1.1437 in)	-
	Sealing ring thickness (41 mm)		1.91- 1.96 mm (0.0752- 0.0772 in)	-
	Sealing ring groove width		2.025- 2.060 mm (0.07972- 0.08110 in)	-
Countershaft	Diameter of needle bearing contact area at torque converter housing		40.505- 40.515 mm (1.59468- 1.59508 in)	When worn or damaged
	Diameter of 1st gear at needle bearing contact area		57.000- 57.019 mm (2.24409- 2.24484 in)	When worn or damaged
	Diameter of park gear at needle bearing contact area		52.971 - 52.990 mm (2.08547- 2.08622 in)	When worn or damaged
	Axial clearance of gears	1st gear	0.07- 0.30 mm (0.0028- 0.0118 in)	-
		2nd and 5th gear (total)	0.04- 0.10 mm (0.002- 0.003 in)	-
	Thrust shim thickness (42.5 mm)	A	1.82 mm (0.0717 in)	When worn or damaged
		B	1.86 mm (0.0732 in)	When worn or damaged
		C	1.90 mm (0.0748 in)	When worn or damaged
		D	1.94 mm (0.0764 in)	When worn or damaged
		E	1.98 mm (0.0780 in)	When worn or damaged
		F	2.02 mm (0.0795 in)	When worn or damaged
		G	2.06 mm (0.0811 in)	When worn or damaged
		H	2.10 mm (0.0827 in)	When worn or damaged
		I	2.14 mm (0.0843 in)	When worn or damaged
			2.18 mm	When worn or

		J	(0.0858 in)	damaged
		K	2.22 mm (0.0874 in)	When worn or damaged
		L	2.26 mm (0.0890 in)	When worn or damaged
	5th gear collar width		65.55- 66.50 mm (2.5807- 2.6181 in)	When worn or damaged
Secondary shaft	Diameter of bearing contact area	At 1st gear	31.986- 31.999 mm (1.25929- 1.25980 in)	When worn or damaged
		At torque converter housing bearing	32.002- 32.015 mm (1.25992- 1.26043 in)	When worn or damaged
		At torque converter housing (shaft end side)	28.5935- 28.6065 mm (1.125726- 1.126238 in)	When worn or damaged
	I.D. of gears	1st gear	38.000- 38.016 mm (1.49606- 1.49669 in)	When worn or damaged
		2nd gear	44.000- 44.016 mm (1.73228- 1.73291 in)	When worn or damaged
		5th gear	50.000- 50.016 mm (1.96850- 1.96913 in)	When worn or damaged
	Axial clearance of gears	1st gear	0.16- 0.40 mm (0.0063- 0.0157 in)	-
		2nd and 5th gear	0.05- 0.12 mm (0.002- 0.004 in)	-
	Diameter of gear collars at needle bearing contact area	2nd gear collar	37.975- 37.991 mm (1.49508- 1.49571 in)	When worn or damaged

Transfer assembly fluid	Capacity: Hypoid gear oil SAE 90 viscosity, API classified GL 4 or GL 5 only	Fluid change	0.43 L (0.45 US qt)	-
		Overhaul	0.45 L (0.48 US qt)	-
Transfer assembly	Diameter of transfer hypoid drive gear/shaft assembly at tapered roller bearing contact area	At transfer cover side	50.002- 50.018 mm (1.96858- 1.96921 in)	49.95 mm (1.9665 in)
		At transfer gear side	24.987- 25.000 mm (0.98374- 0.98425 in)	24.93 mm (0.9815 in)
	Diameter of transfer output shaft (hypoid gear) at tapered roller bearing contact area	At transfer gear side	40.002- 40.018 mm (1.57488- 1.57551 in)	39.95 mm (1.5728 in)
		At companion flange side	31.975- 31.988 mm (1.25886- 1.25937 in)	31.92 mm (1.2567 in)
	Transfer gear backlash		0.06- 0.16 mm (0.0024- 0.0063 in)	-
	Tapered roller bearing total starting torque (preload)		2.64- 4.23 N.m (26.9- 43.1 kgf.cm, 23.3- 37.4 lbf.in)	-

REAR DIFFERENTIAL

Item	Measurement	Qualification	Standard or New	Service Limit
Rear differential fluid	Capacity: use Acura All-Wheel Drive Fluid (DPSF)	Fluid change	2.53 L (2.67 US qt)	-
		Overhaul	2.77 L (2.93 US qt)	-

STEERING

Item	Measurement	Qualification	Standard or New	Service Limit
Steering wheel	Rotational play measured at outside edge		0- 10 mm (0- 0.39 in)	-
	Initial turning load measured at outside edge with engine running		29 N (3.0 kgf, 6.6 lbf)	-
Gearbox	Angle of rack guide screw loosened from locked position		10+5°	

SUSPENSION

Item	Measurement	Qualification	Standard or New	Service Limit
Wheel alignment	Camber	Front	- 0°30'$^{+30'}_{-45'}$ ·	
		Rear	- 1 °00'$^{+30'}_{-45'}$ ·	
	Caster	Front	3 ° 48 ' ±45 '	
	Total toe-in	Front	0±2mm (0+0.08 in)	
		Rear	2 ± 2 mm (0.08 ± 0.08 in)	
	Front wheel turning angle	Inward	38° 06' ±2°	
		Outward (reference)	30° 24' ± 1 °	
Wheel	Runout	Axial	0- 0.7 mm (0- 0.028 in)	2.0 mm (0.079 in)
		Radial	0- 0.7 mm (0- 0.028 in)	1.5 mm (0.059 in)
Wheel bearing	End play	Front	0- 0.05 mm (0- 0.0020 in)	-
		Rear	0- 0.05 mm (0- 0.0020 in)	-

BRAKES

Item	Measurement	Qualification	Standard or New	Service Limit
Parking brake	Number of clicks when lever pulled with 196 N (20.0 kgf, 44.1 lbf) of force		6 to 8 clicks	
	Drum I.D.		189.9- 190.0 mm (7.476- 7.480 in)	191.0 mm (7.520 in)
	Shoe lining thickness		3.4 mm (0.134 in)	1.0 mm (0.039 in)
Brake pedal	Height from floor	M/T	156 mm (6.14 in)	-
		A/T	155 mm (6.10 in)	-
	Free play		1 - 5 mm (0.04- 0.20 in)	-
Brake disc	Thickness	Front	27.9- 28.1 mm (1.098- 1.106 in)	26.0 mm (1.024 in)
		Rear	10.9- 11.1 mm (0.429- 0.437 in)	9.0 mm (0.354 in)
	Runout		-	0.04 mm (0.0016 in)
	Parallelism		-	0.015 mm (0.00059 in)
Brake pad	Thickness	Front	11.5- 12.2 mm (0.453- 0.480 in)	1.6 mm (0.063 in)
		Rear	9.6- 10.2 mm (0.378- 0.402 in)	1.6 mm (0.063 in)

AIR CONDITIONING

Item	Measurement	Qualification	Standard or New	Service Limit
Refrigerant	Type		HFC- 134a (R- 134a)	
	Capacity of system		505- 555 g (17.8- 19.6 oz)	-
Refrigerant oil	Type		DENSO ND- OIL 8 (P/N 38897- PR7- A01 AH)	
	Capacity of components	Condenser (including dryer desiccant)	35mL (1 1/5 fl.oz)	
		Evaporator	35mL (1 1/5 fl.oz)	
		Each line and hose	10mL (1/3 fl.oz)	
		Dryer desiccant	10mL (1/3 fl.oz)	
		Compressor	70- 82 mL (2 3/8- 2 7/9 fl.oz)	
Compressor	Field coil resistance	At 68°F (20°C)	3.9- 4.3 ohms	
	Pulley-to-pressure plate clearance		0.35- 0.60 mm (0.014- 0.023 in)	-

TORQUE SUMMARY

TORQUE SPECIFICATIONS

NOTE:

- **Refer to the appropriate Service information for the precautions and complete procedures.**
- **Refer to the appropriate Service information for the bolts/nuts not indicated here.**

Engine Electrical

Location	Item		Remark	Torque
Starting system	Starter bolts	M/T model		74 N.m (7.5 kgf.m, 54 lbf.ft)
		A/T model		44 N.m (4.5 kgf.m, 33 lbf.ft)
	Starter harness clamp nut			9 N.m (0.9 kgf.m, 7 lbf.ft)
Ignition system	Spark plugs			22 N.m (2.2 kgf.m, 16 lbf.ft)
Charging system	Alternator bolt (8 mm)			22 N.m (2.2 kgf.m, 16 lbf.ft)
	Alternator bolt (10 mm)			44 N.m (4.5 kgf.m, 33 lbf.ft)
	Alternator cable nut			12 N.m (1.2 kgf.m, 8.7 lbf.ft)
	Drive belt auto-tensioner bolt			22 N.m (2.2 kgf.m, 16 lbf.ft)
	Drive belt auto-tensioner pulley bolt			56 N.m (5.7 kgf.m, 41 lbf.ft)

NOTE:

- **Refer to the appropriate Service information for the precautions and complete procedures.**

- **Refer to the appropriate Service information for the bolts/nuts not indicated here.**

Engine Mechanical

Location	Item		Remark	Torque
Engine assembly	Power steering pump bracket bolts			22 N.m (2.2 kgf.m, 16 lbf.ft)
	Front engine mount bracket bolts		Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Front engine mount bolts		Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Front engine mount stop nuts		Use new nuts	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Rear engine mount bracket bolts		Use new bolts	78 N.m (8.0 kgf.m, 58 lbf.ft)
	Rear engine mount bolts (10 mm) Qty 4		Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Rear engine mount bolt (14 mm) Qty 1	M/T model	Use new bolt	88 N.m (9.0 kgf.m, 65 lbf.ft)
	Rear engine mount stop nuts	A/T model	Use new nuts	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Side engine mount bracket bolts (10 mm) Qty 3		Use new bolts	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Side engine mount bracket bolts (10 mm) Qty 2 (2)		Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Side engine mount bolt (12 mm) Qty 1 (2)			64 N.m (6.5 kgf.m, 47 lbf.ft)
	Side engine mount bolts (10 mm) Qty 2		Use new bolts	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Upper transmission mount bracket bolts		Use new bolts	59 N.m (6.0 kgf.m, 43 lbf.ft)
	Upper transmission mount bolts			54 N.m (5.5 kgf.m, 40 lbf.ft)
	Lower transmission mount bracket bolts	M/T model	Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
		A/T model	Use new bolts	39 N.m (4.0 kgf.m, 29 lbf.ft)
	Lower transmission mount nuts			44 N.m (4.5 kgf.m, 33 lbf.ft)
	Lower transmission mount bolt		Use new bolt	54 N.m (5.5 kgf.m, 40 lbf.ft)
			• Use new O-ring	22 N.m (2.2

Engine lubrication	Oil pressure switch	• Apply liquid gasket	kgf.m, 16 lbf.ft)
	Oil pan drain bolt	Use new washer	39 N.m (4.0 kgf.m, 29 lbf.ft)
	Oil filter		12 N.m (1.2 kgf.m, 9 lbf.ft)
	Oil filter feed pipe	Use oil on threads	35 N.m (3.6 kgf.m, 26 lbf.ft)
Intake manifold and exhaust system	Intake manifold bolts (1)		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Intake manifold nuts (1)		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Injector base bolts (1)		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Injector base nuts (1)		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Exhaust pipe A self-locking nuts (10 mm) Qty 3 (warm up TWC side) (2)	Use new nuts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Exhaust pipe A self-locking nuts (10 mm) Qty 3 (under-floor TWC side) (2)	Use new nuts	33 N.m (3.4 kgf.m, 25 lbf.ft)
	Exhaust pipe B self-locking nuts (10 mm) Qty 3 (2)	Use new nuts	33 N.m (3.4 kgf.m, 25 lbf.ft)
	Exhaust pipe B self-locking nuts (10 mm) Qty 2	Use new nuts	54 N.m (5.5 kgf.m, 40 lbf.ft)
(1) Parts to be tightened in a particular order.			
(2) Follow the S/M procedures closely for torque, sequence, and special steps.			

NOTE:

- **Refer to the appropriate Service information for the precautions and complete procedures.**
- **Refer to the appropriate Service information for the bolts/nuts not indicated here.**

Engine Cooling

Location	Item	Remark	Torque
Cooling system	Water passage bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Water passage nuts		22 N.m (2.2 kgf.m, 16 lbf.ft)

Fuel and Emissions

Location	Item	Remark	Torque

Fuel and emissions	A/F sensor			44 N.m (4.5 kgf.m, 33 lbf.ft)
	EGR pipe bolts		Use new gasket	22 N.m (2.2 kgf.m, 16 lbf.ft)
	EGR pipe nuts		Use new gasket	22 N.m (2.2 kgf.m, 16 lbf.ft)
	EGR valve nuts		Use new gasket	22 N.m (2.2 kgf.m, 16 lbf.ft)
	Fuel joint hose mounting bolt			22 N.m (2.2 kgf.m, 16 lbf.ft)
	Fuel tank locknut (1)		Use new locknut, locknut plate, and base gasket	70 N.m (7.1 kgf.m, 51 lbf.ft)
	Fuel tank support straps bolts			38 N.m (3.9 kgf.m, 28 lbf.ft)
	Knock sensor			31 N.m (3.2 kgf.m, 23 lbf.ft)
	Rocker arm oil pressure switch		Use new O-ring	22 N.m (2.2 kgf.m, 16 lbf.ft)
	Secondary HO2S			44 N.m (4.5 kgf.m, 33 lbf.ft)
	Secondary fuel gauge sending unit locknut (1)		Use new locknut, locknut plate, and base gasket	70 N.m (7.1 kgf.m, 51 lbf.ft)
	Throttle body bolts		Use new gasket	22 N.m (2.2 kgf.m, 16 lbf.ft)
	Under floor TWC self locking nuts	Without SH-AWD	Use new gaskets and nuts	33 N.m (3.4 kgf.m, 25 lbf.ft)
	Under floor TWC self locking nuts (front side)	With SH-AWD	Use new gaskets and nuts	33 N.m (3.4 kgf.m, 25 lbf.ft)
	Under floor TWC self locking nuts (rear side)	With SH-AWD	Use new gaskets and nuts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Warm up TWC (front bank) bracket bolts			45 N.m (4.5 kgf.m, 33 lbf.ft)
	Warm up TWC (rear bank) bracket bolts			22 N.m (2.2 kgf.m, 16 lbf.ft)
	Warm up TWC (front bank) upper self locking nuts		Use new nuts	31 N.m (3.2 kgf.m, 23 lbf.ft)
	Warm up TWC (rear bank) upper self locking nuts		Use new nuts	31 N.m (3.2 kgf.m, 23 lbf.ft)
(1) Follow the S/M procedures closely for torque, sequence, and special steps.				

Clutch

Location	Item	Remark	Torque

Clutch	Clutch push rod locknut		17 N.m (1.7 kgf.m, 12 lbf.ft)
	Clutch pedal position switch A locknut		9.8 N.m (1.0 kgf.m, 7 lbf.ft)
	Clutch pedal position switch B locknut		9.8 N.m (1.0 kgf.m, 7 lbf.ft)
	Clutch pedal bolt		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Master cylinder nuts		13 N.m (1.3 kgf.m, 9 lbf.ft)
	Slave cylinder bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Flywheel bolts		103 N.m (10.5 kgf.m, 76 lbf.ft)
	Pressure plate bolts (1)		25 N.m (2.6 kgf.m, 19 lbf.ft)
	Release fork bolt		29 N.m (3.0 kgf.m, 22 lbf.ft)
(1) Parts to be tightened in a particular order.			

Manual Transmission

Location	Item	Remark	Torque
Manual transmission	MTF drain plug	Use new sealing washer	44 N.m (4.5 kgf.m, 33 lbf.ft)
	MTF filler plug	Use new sealing washer	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Back-up light switch	Use liquid gasket on threads	29 N.m (3.0 kgf.m, 22 lbf.ft)
	Upper transmission bolts		74 N.m (7.5 kgf.m, 54 lbf.ft)
	Lower transmission bolts		74 N.m (7.5 kgf.m, 54 lbf.ft)
	Shift lever housing bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Shift cable bracket bolts		27 N.m (2.8 kgf.m, 20 lbf.ft)

Automatic Transmission

Location	Item	Remark	Torque
Automatic transmission	ATF drain plug	Use new sealing washer	49 N.m (5.0 kgf.m, 36 lbf.ft)
	ATF filler bolt	Use new sealing washer	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Clutch pressure inspection port sealing bolts (line/1st/5th/torque converter)		20 N.m (2.0 kgf.m, 14 lbf.ft)
	Clutch pressure inspection port sealing bolts (3rd/6th)		27 N.m (2.8 kgf.m, 20 lbf.ft)
	Transmission fluid pressure switches	Use new sealing washers	0 N.m (2.0 kgf.m, 14 lbf.ft)
	Line pressure switch	Use new sealing washer	20 N.m (2.0 kgf.m, 14 lbf.ft)
	Drive plate bolts (1)		74 N.m (7.5 kgf.m, 54 lbf.ft)
	Lower transmission housing mounting bolts		74 N.m (7.5 kgf.m, 54 lbf.ft)
	Upper transmission housing mounting bolts		64 N.m (6.5

			kgf.m, 47 lbf.ft)
	Transfer assembly mounting bolts		51 N.m (5.2 kgf.m, 38 lbf.ft)
	Transmission ground terminal bracket bolt		26 N.m (2.7 kgf.m, 20 lbf.ft)
	Shift lever assembly bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Shift cable end nut		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Shift lever bracket base bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
Transfer assembly	Transfer assembly fluid drain plug	Use new sealing washer	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Transfer assembly fluid filler plug	Use new sealing washer	44 N.m (4.5 kgf.m, 33 lbf.ft)
(1) Follow the S/M procedures closely for torque, sequence, and special steps.			

NOTE:

- **Refer to the appropriate Service information for the precautions and complete procedures.**
- **Refer to the appropriate Service information for the bolts/nuts not indicated here.**

Rear Differential

Location	Item	Remark	Torque
Rear differential	Rear differential fluid drain plug	Use new sealing washer	47 N.m (4.8 kgf.m, 35 lbf.ft)
	Rear differential fluid filler plug	Use new sealing washer	47 N.m (4.8 kgf.m, 35 lbf.ft)
	Rear differential front mounting bracket nuts (1)	Use new nuts	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Rear differential front mounting bracket bolts (1)	Use new bolts	74 N.m (7.5 kgf.m, 54 lbf.ft)
	Rear differential rear mount bolts (1)	Use new bolts	74 N.m (7.5 kgf.m, 54 lbf.ft)
(1) Follow the S/M procedures closely for torque, sequence, and special steps.			

Driveline/Axle

Location	Item	Remark	Torque
	Driveshaft spindle nut (24	• Use oil on the seating surface	245 N.m (25.0 kgf.m, 181

	mm)	• Use new nut	lbf.ft)
	Driveshaft spindle nut (26 mm)	• Use oil on the seating surface • Use new nut	329 N.m (33.5 kgf.m, 242 lbf.ft)
	Intermediate shaft dowel bolts		39 N.m (4.0 kgf.m, 29 lbf.ft)
Driveline/axle	Intermediate shaft flange bolt		39 N.m (4.0 kgf.m, 29 lbf.ft)
	Heat shield bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	No. 1 propeller shaft nuts	Use new nuts	72 N.m (7.3 kgf.m, 53 lbf.ft)
	No. 3 propeller shaft bolts	Use new bolts	72 N.m (7.3 kgf.m, 53 lbf.ft)
	No. 1 support bearing bolts (1)	Use new bolts	39 N.m (4.0 kgf.m, 29 lbf.ft)
	No. 2 support bearing bolts (1)	Use new bolts	39 N.m (4.0 kgf.m, 29 lbf.ft)
(1) Follow the S/M procedures closely for torque, sequence, and special steps.			

Steering

Location	Item	Remark	Torque
Steering	Steering wheel bolt		39 N.m (4.0 kgf.m, 29 lbf.ft)
	Steering joint bolts		28 N.m (2.9 kgf.m, 21 lbf.ft)
	Steering column nuts		16 N.m (1.6 kgf.m, 12 lbf.ft)
	Steering column bolts		16 N.m (1.6 kgf.m, 12 lbf.ft)
	Steering gearbox bolts	Use new bolts	74 N.m (7.5 kgf.m, 54 lbf.ft)
	Tie-rod end ball joint nuts	Use new nuts	60 N.m (6.1 kgf.m, 44 lbf.ft)
	Tie-rod end locking nuts		44 N.m (4.5 kgf.m, 33 lbf.ft)

Suspension

Location	Item	Remark	Torque
Front suspension	Wheel nuts		127 N.m (13.0 kgf.m, 94.0 lbf.ft)
	Upper arm castle nut		44- 52 N.m (4.5- 5.3 kgf.m, 33- 38 lbf.ft)
	Upper arm bolts	Use new bolts	31 N.m (3.2 kgf.m, 23 lbf.ft)
	Knuckle ball joint castle nut	Use new nut	93- 103 N.m (9.5- 10.5 kgf.m, 69- 75.9 lbf.ft)
	Lower arm bolt (12mm)	Use new bolt	74 N.m (7.5 kgf.m, 54 lbf.ft)
	Lower arm bolt (12mm)	Use new bolt	83 N.m (8.5 kgf.m, 61 lbf.ft)
	Stabilizer bar bolts		55 N.m (5.6 kgf.m, 41 lbf.ft)
	Stabilizer link nuts		78 N.m (8.0 kgf.m, 58 lbf.ft)

	Damper nuts	Use new nuts	55 N.m (5.6 kgf.m, 41 lbf.ft)
	Damper pinch bolt		49 N.m (5.0 kgf.m, 36 lbf.ft)
	Damper fork bolt/nut	Use new bolt/nut	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Damper self-locking	nut Use new nut	29 N.m (3.0 kgf.m, 22 lbf.ft)
Rear suspension	Wheel nuts		127 N.m (13.0 kgf.m, 94.0 lbf.ft)
	Upper arm castle nut	Use new nut	69- 78 N.m (7.0- 8.0 kgf.m, 51 - 58 lbf.ft)
	Upper arm bolts	Use new bolts	59 N.m (6.0 kgf.m, 43 lbf.ft)
	Lower arm A bolts	Use new bolts	59 N.m (6.0 kgf.m, 43 lbf.ft)
	Control arm self-locking nut	Use new nut	59 N.m (6.0 kgf.m, 43 lbf.ft)
	Control arm self-locking nut/adjusting bolt	Use new nut	57 N.m (5.8 kgf.m, 42 lbf.ft)
	Lower arm B bolts	Use new bolts	59 N.m (6.0 kgf.m, 43 lbf.ft)
	Stabilizer bar bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Stabilizer link nut	Use new nut	38 N.m (3.9 kgf.m, 28 lbf.ft)
	Stabilizer link self-locking nut	Use new nut	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Damper nuts	Use new nuts	55 N.m (5.6 kgf.m, 41 lbf.ft)
	Damper lower bolt	Use new bolt	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Damper self-locking nut	Use new nut	29 N.m (3.0 kgf.m, 22 lbf.ft)

Brakes

Location	Item	Remark	Torque
Conventional brake	Front brake caliper bolts		72 N.m (7.3 kgf.m, 53 lbf.ft)
	Front brake caliper bracket bolts		137 N.m (14.0 kgf.m, 101 lbf.ft)
	Front brake hose bracket bolt		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Front brake hose banjo bolt	Use new washers	35 N.m (3.6 kgf.m, 26 lbf.ft)
	Brake booster/brake pedal nuts		12 N.m (1.2 kgf.m, 8.7 lbf.ft)
	Master cylinder nuts		15 N.m (1.5 kgf.m, 11 lbf.ft)
	Master cylinder brake lines		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Rear brake caliper bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Rear brake caliper bracket bolts		88 N.m (9.0 kgf.m, 65 lbf.ft)

	Rear brake hose bracket bolt		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Rear brake hose banjo bolt	Use new washers	35 N.m (3.6 kgf.m, 26 lbf.ft)
	Parking brake lever bolts		32 N.m (3.3 kgf.m, 24 lbf.ft)
	Parking brake cable bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Equalizer cover bolts		32 N.m (3.3 kgf.m, 24 lbf.ft)
	Brake pedal bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
VSA	VSA modulator-control unit brake line (10 mm)		15 N.m (1.5 kgf.m, 11 lbf.ft)
	VSA modulator-control unit brake line (12 mm)		22 N.m (2.2 kgf.m, 16 lbf.ft)

NOTE:

	Windshield wiper linkage nut		31.4 N.m (3.2 kgf.m, 23.2 lbf.ft)

DESIGN SPECIFICATIONS

Item	Measurement	Qualification	Specification
DIMENSIONS	Overall length		4, 966 mm (195.5 in)
	Overall width		1, 880 mm (74.0 in)
	Overall height		1, 452 mm (57.2 in)
	Wheelbase		2, 775 mm (109.3 in)
	Track	Front	1, 606 mm (63.2 in)
		Rear	1, 620 mm (63.8 in)
	Seating capacity		Five (5)
WEIGHT	Gross Vehicle Weight Rating (GVWR)	Without SH-AWD	2, 130 kg (4, 696 lbs)
		With SH-AWD	2, 235 kg (4, 927 lbs)
ENGINE (J35Z6)	Type		Water-cooled, 4-stroke SOHC VTEC gasoline engine
	Cylinder arrangement		60 ° V6-cylinder, transverse
	Bore and stroke		89.0 x 93.0 mm (3.504 x 3.661 in)
	Displacement		3, 471 cm^3 (211.8 cu in)
	Compression ratio		11.2
	Valve train		Belt drive, SOHC VTEC 4 valves

			per cylinder
	Lubrication system		Forced, wet sump, with trochoid pump
	Fuel required		Premium UNLEADED gasoline with 91 Pump Octane Number or higher
ENGINE (J37A4)	Type		Water-cooled, 4- stroke SOHC VTEC gasoline engine
	Cylinder arrangement		60 ° V6- cylinder, transverse
	Bore and stroke		90.0 x 96.0 mm (3.543 x 3.780 in)
	Displacement		3, 664 cm^3 (223.6 cu in)
	Compression ratio		11.2
	Valve train		Belt drive, SOHC VTEC 4 valves per cylinder
	Lubrication system		Forced, wet sump, with trochoid pump
	Fuel required		Premium UNLEADED gasoline with 91 Pump Octane Number or higher
STARTER	Type		Gear reduction
	Nominal output	M/T	1.6 kW
		A/T	1.8 kW
	Nominal voltage		12V
	Hour rating		30 seconds
	Direction of rotation		Counterclockwise as viewed from drive end
CLUTCH	Type		Single plate dry, diaphragm spring
MANUAL TRANSMISSION	Type		Synchronized, six-speed forward, one reverse
	Primary reduction		Direct 1:1
	Gear ratio	1st	3.625
		2nd	2.115
		3rd	1.529
		4th	1.125
		5th	0.847
		6th	0.686
		Reverse	3.656
	Final reduction	Type	Single helical gear
		Gear ratio	3.842
	Type		Electronically-controlled automatic, six-speed forward, one reverse
	Primary reduction		Direct 1:1

AUTOMATIC TRANSMISSION	Gear ratio	1st	3.359
		2nd	2.094
		3rd	1.484
		4th	1.065
		5th	0.754
		6th	0.555
		Reverse	2.269
	Final reduction	Type	Single helical gear
		Gear ratio	3.722
STEERING	Type		Electrical power-assisted rack and pinion
	Overall ratio		13.96
	Turns, lock-to-lock		2.7
	Steering wheel diameter	Without SH-AWD	370 mm (14.57 in)
		With SH-AWD	374 mm (14.72 in)
SUSPENSION	Type	Front	Independent double wishbone with stabilizer, coil spring
		Rear	Independent multilink with stabilizer, coil spring
	Shock absorber	Front and rear	Telescopic, hydraulic, nitrogen gas-filled
TIRES	Size (without SH-AWD)	Front and rear	P245/50R17 98V
			P245/45R18 96V
		Spare	T135/80D17 103M
	Size (with SH-AWD)	Front and rear	P245/45R18 96V
			245/40ZR19 94V (Optional)
		Spare	T135/80D17 103M
WHEEL ALIGNMENT	Camber	Front	- 0°30'
		Rear	- 1°00'
	Caster	Front	3° 48'
	Total toe-in	Front	0 mm (0 in)
		Rear	2 mm (0.08 in)
	Front wheel turning angle	Inward	38 ° 06'
		Outward (reference)	30 ° 24'
BRAKES	Type of service brake	Front	Power-assisted self-adjusting ventilated disc
		Rear	Power-assisted self-adjusting solid disc
	Type of parking brake		Mechanical actuating, rear wheels
	Pad friction surface area (swept area)	Front	59.2 cm^2 (9.18 sq in) x 2
		Rear	34.4 cm^2 (5.33 sq in) x 2
	Parking brake shoe		

	friction surface area		45.6 cm^2 (7.07 sq in) x 2
AIR CONDITIONING	Compressor	Type	Swash plate/DENSO
		Capacity	154.4 mL (9.42 cu in)/rev
		Maximum speed	7, 600 RPM
		Lubricant capacity	70 mL (2 3/8 fl.oz)
		Lubricant type	DENSO ND-OIL 8
	Condenser	Type	Corrugated fin
	Evaporator	Type	Corrugated fin
	Blower	Type	Radial
		Motor input	300W/12V
		Speed control	Infinitely variable
		Maximum capacity	545 m^3 (19, 246 cu ft)/h
	Temperature control		Air-mix type
	Compressor clutch	Type	Dry, single plate, poly V- belt drive
		Electrical power consumption at 68°F (20°C)	35 W maximum at 12 V
	Refrigerant	Type	HFC-134a (R-134a)
		Capacity	505- 555 g (17.8- 19.6 oz)
ELECTRICAL RATINGS	Battery		12 V- 65 Ah/20 HR (12V- 55 Ah/5 HR)
	Fuses	Under-hood fuse/relay box	120 A, 70 A, 60 A, 50 A, 40 A, 30 A, 20 A, 15 A, 10 A, 7.5 A
		Driver's under-dash fuse/relay box	20 A, 15 A, 10 A, 7.5 A
		Passenger's under-dash fuse/relay box	20 A, 15 A, 10 A, 7.5 A
		Auxiliary under-dash fuse/relay box	7.5 A
		Headlight high beam	12V- 60W (HB3)
		Headlight low beam (HID)	12V- 35W (D2S)
		Fog lights	12V- 55W (H11)
		Front turn signal/parking lights	12 V- 24/2.2CP (Amber)
		Side turn signal lights	LED
		Front side marker lights	12V- 3CP
		Rear turn signal lights	12V- 21 W (Amber)
		Brake lights/taillights	LED
		Rear side marker lights	12V- 3CP
		High mount brake light	LED

	Light bulbs	Back-up lights	12V- 16W
		License plate lights	12V- 5W
		Ambient light	LED
		Trunk light	12V- 5W
		Front individual map lights	LED
		Rear individual map lights	LED
		Door courtesy lights	12V- 3.4W
		Glove box light	12V- 1.4W
		Vanity mirror lights	12V- 2W
		Gauge lights	LED
		Indicator lights	LED
		Console box light	12V- 1.4W
		Footwell lights	LED

GENERAL TROUBLESHOOTING INFORMATION

SYSTEM INDICATOR

This system has four indicators:

- ABS indicator (A)
- Brake system indicator (B)
- VSA indicator (C)
- VSA OFF indicator (D)

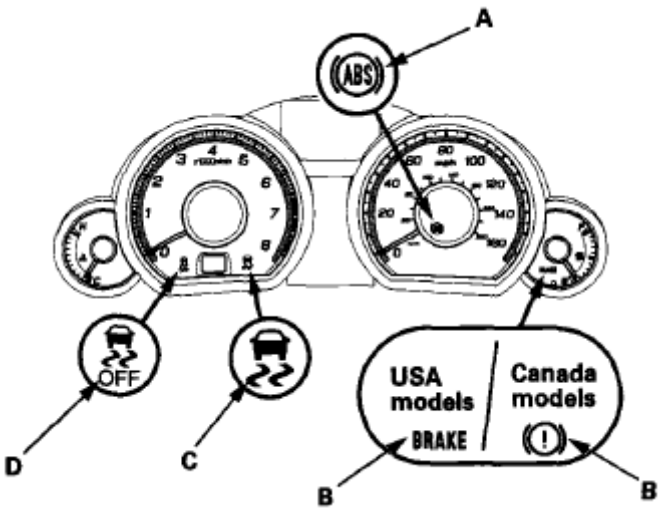

Fig. 3: Identifying System Indicators
Courtesy of AMERICAN HONDA MOTOR CO., INC.

When the system is OK, each indicator comes on for about 2 seconds after turning the ignition switch to ON (II), or press the engine start/stop button to select the ON mode, then goes off.

When the system detects a problem, a DTC will set and depending upon the failure, the VSA modulator-control unit determines which indicator(s) will turn on. If the problem goes away (system returns to normal), the indicator(s) will be controlled in the following way depending upon the DTC that was set:

- The indicator(s) will come on and stay on when the ignition switch is ON (II), or press the engine start/stop button to select the ON mode.
- The indicator(s) will automatically go off.
- The indicator(s) will go off after the vehicle is driven.

ABS Indicator

The ABS indicator comes on when the ABS function is lost. The brakes still work like a conventional system.

Brake System Indicator

The brake system indicator comes on when the EBD (Electronic Brake Distribution) function is lost, the parking brake is applied, and/or the brake fluid level is low.

NOTE: If two or more wheel speed sensors fail, the brake system indicator will come on.

VSA Indicator

The VSA indicator comes on when the VSA function is lost. The VSA indicator blinks when the VSA function is activating.

VSA OFF Indicator

The VSA OFF indicator comes on, when the VSA is turned OFF by using the VSA OFF switch.

DIAGNOSTIC TROUBLE CODE (DTC)

- The memory can hold all DTCs. However, when the same DTC is detected more than once, the more recent DTC is written over the earlier one. Therefore, when the same problem is detected repeatedly, it is memorized as a single DTC.
- The DTCs are indicated in ascending number order, not in the order they occur.
- The DTCs are memorized in the EEPROM in the VSA modulator-control unit. Therefore, the memorized DTCs cannot be erased by disconnecting the battery. Do the specified procedures to clear the DTCs.

SELF-DIAGNOSIS

- Self-diagnosis can be classified into two categories:
  - Initial diagnosis: Done right after the ignition switch is turned to ON (II), or press the engine start/stop button to select the ON mode, and until the ABS and VSA indicators go off.
  - Regular diagnosis: Done right after the initial diagnosis until the ignition switch is turned to LOCK (0), or press the engine start/stop button to select the OFF mode.
- When the system detects a problem, the VSA modulator-control unit shifts to fail-safe mode.

KICKBACK

The pump motor operates when the VSA modulator-control unit is functioning, and the fluid in the reservoir is forced out to the master cylinder, causing kickback at the brake pedal.

PUMP MOTOR

- The pump motor operates when the VSA modulator-control unit is functioning.
- The VSA modulator-control unit checks the pump motor operation during the first acceleration after the vehicle starts driving.

BRAKE FLUID REPLACEMENT/AIR BLEEDING

Brake fluid replacement and air bleeding procedures are identical to the procedures used on vehicles without the VSA system (see **BRAKE SYSTEM BLEEDING**).

HOW TO TROUBLESHOOT DTCS

The troubleshooting procedures assume that the cause of the problem is still present and the ABS and/or VSA indicator is still on. Following a troubleshooting procedure for a DTC that has been cleared but does not reset can result in incorrect diagnosis.

NOTE: Always troubleshoot fuel and emissions DTCs first.

1. Question the client about the conditions when the problem occurred, and try to reproduce the same conditions for troubleshooting. Find out when the ABS and/or VSA indicator came on, such as during activation, after activation, when the vehicle was traveling at a certain speed, etc. If necessary, have the client demonstrate the concern.
2. When the ABS and/or VSA indicators do not come on during the test-drive, but troubleshooting is done based on the DTC, check for loose connectors, poor contact of the terminals, etc. in the circuit indicated by the DTC.
3. After troubleshooting, or the repairs are done, clear the DTCs, and test-drive the vehicle under the same conditions that originally set the DTCs. Make sure the ABS and VSA indicators do not come on.

INTERMITTENT FAILURES

The term "intermittent failure" means a system may have had a failure, but it checks OK now. If you cannot reproduce the condition, check for loose connections and terminals. Also check ground and power connections related to the circuit that you are troubleshooting.

HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)

NOTE: Make sure the battery is in good condition and fully charged.

1. If the system indicators stay on, connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

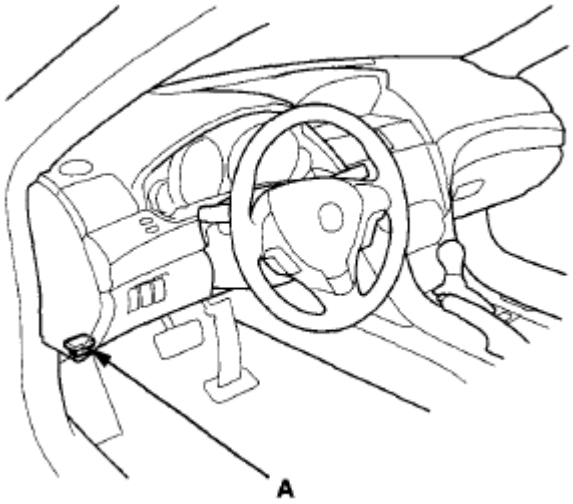

Fig. 4: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Make sure the HDS communicates with the vehicle and the VSA modulator-control unit. If it does not, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check the diagnostic trouble code (DTC) and the freeze data, and note them. Then refer to the indicated DTC's troubleshooting, and do the appropriate troubleshooting procedure.

NOTE:

- **Freeze data indicates the VSA conditions when the first system malfunction that activated the indicator was detected.**
- **The HDS can read the DTC, the freeze data, the current data, and other system data.**
- **For specific operations, refer to the Help menu that came with the HDS.**

HOW TO RETRIEVE DTCS

1. With the ignition switch in LOCK (0), or vehicle in OFF mode, connect the HDS to the data link connector (DLC) under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Make sure the HDS communicates with the vehicle and the VSA modulator-control unit. If it does not, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Follow the prompts on the HDS to display the DTC(s) on the screen. After determining the DTC, refer to the DTC troubleshooting.
5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

HOW TO CLEAR DTCS

1. With the ignition switch in LOCK (0), or vehicle in OFF mode, connect the HDS to the data link connector (DLC) under the driver's side of the dashboard.
2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Make sure the HDS communicates with the vehicle and the VSA modulator-control unit. If it does not, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Clear the DTC(s) by following the screen prompts on the HDS.
5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

DTC TROUBLESHOOTING INDEX

DTC	Detection Item	Note
11	Right-Front Wheel Speed Sensor Circuit Malfunction	DTC Troubleshooting (see **DTC 11: RIGHT-FRONT WHEEL SPEED SENSOR CIRCUIT MALFUNCTION; DTC 13: LEFT-FRONT WHEEL SPEED SENSOR CIRCUIT MALFUNCTION; DTC 15: RIGHT-REAR WHEEL SPEED SENSOR CIRCUIT MALFUNCTION; DTC 17: LEFT-REAR WHEEL SPEED SENSOR CIRCUIT MALFUNCTION**)

SYMPTOM TROUBLESHOOTING INDEX

When the vehicle has one of these symptoms, check for VSA diagnostic trouble code (DTCs) with the HDS. If there are no DTCs, do the diagnostic procedure for the symptom, in the sequence listed, until you find the cause.

Symptom	Diagnostic procedure	Also check for
HDS does not communicate with the VSA modulator-control	Troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).	

unit or the vehicle		
ABS indicator, brake system indicator, VSA indicator, or VSA OFF indicator do not come on at start-up (bulb check)	1. Do the gauge control module self-diagnostic function (see **SELF-DIAGNOSTIC FUNCTION**). 2. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**). If the VSA modulator-control unit was updated and the symptom is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).	
VSA cannot be turned OFF	1. Symptom troubleshooting (see **VSA CANNOT BE TURNED OFF**). 2. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**). If the VSA modulator-control unit was updated and the symptom is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).	
VSA OFF indicator does not go off	Do the VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION MEMORIZATION**).	
ABS indicator, brake system indicator, and VSA indicator do not go off	1. Check for F-CAN DTCs, and troubleshoot and repair those first (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Symptom troubleshooting (see **ABS INDICATOR, BRAKE SYSTEM INDICATOR, AND VSA INDICATOR DO NOT GO OFF**).

(2) Without SH-AWD

SYSTEM OUTLINE

This system is composed of the VSA modulator-control unit, the wheel speed sensors, the steering angle sensor, the yaw rate-acceleration sensor, and the system indicators in the gauge control module. The VSA modulator-control unit controls the Anti-Lock Brake System (ABS), the Electronic Brake Distribution (EBD), the Traction Control System (TCS), the Vehicle Stability Assist (VSA), the Hill Start Assist* (HSA), and brake assist with the brake pressure of each wheel and reduces engine torque.

*: With SH-AWD

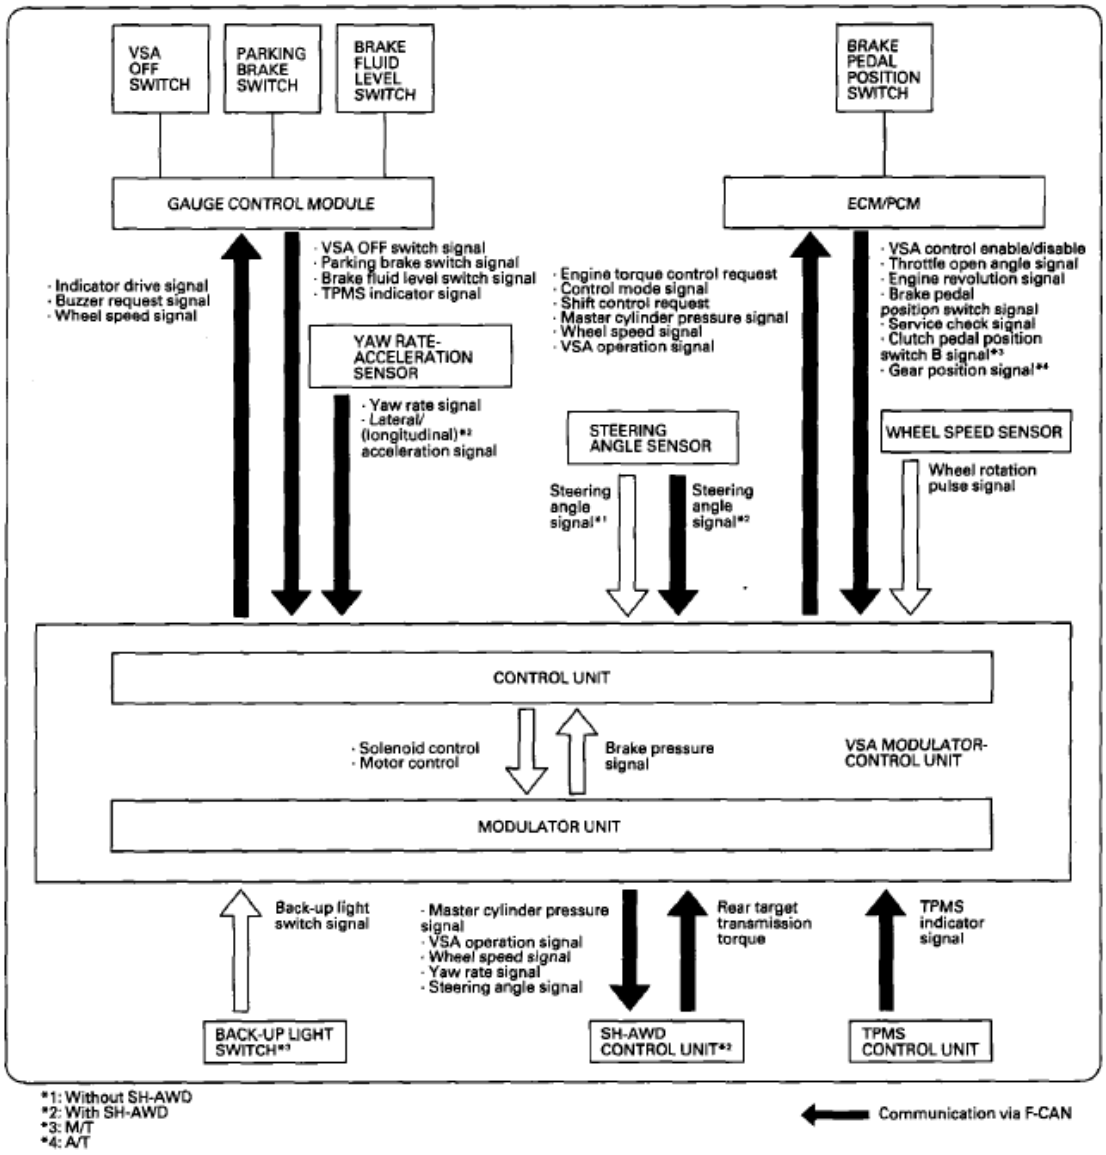

Fig. 6: VSA System Block Diagram (With SH-AWD)

ABS (ANTI-LOCK BRAKE SYSTEM) FEATURES

Anti-Lock Control

Without ABS, when the brake pedal is pressed while driving, the wheels sometimes lock before the vehicle comes to a stop. In such an event, the maneuverability of the vehicle is reduced if the front wheels are locked, and the stability of the vehicle is reduced if the rear wheels are locked, creating an extremely unstable condition. With ABS, the system precisely controls the slip rate of the wheels to ensure maximum grip force from the tires, and it thereby ensures maneuverability and stability of the vehicle. The ABS calculates the slip rate of the wheels based on the four wheel speeds, and then it controls the brake fluid pressure to reach the target slip rate.

Grip force of tire and road surface

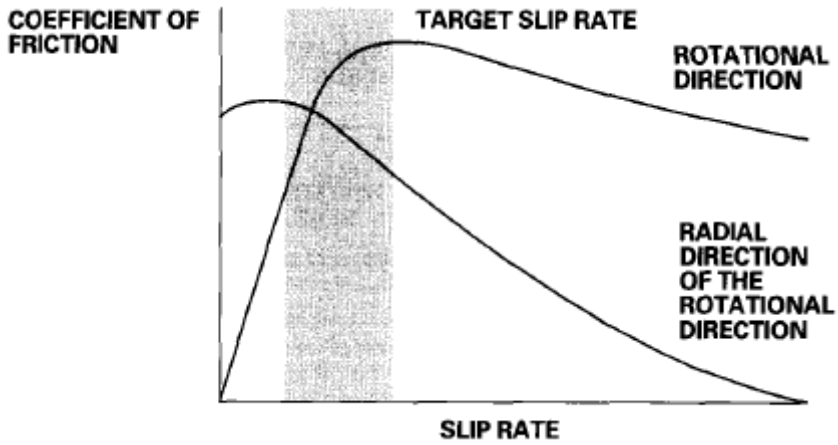

Fig. 7: Grip Force Of Tire And Road Surface - Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Main Control

The control unit detects the wheel speed based on the wheel speed sensor signals it receives, then it calculates the vehicle speed based on the detected wheel speed. The control unit detects the vehicle speed during deceleration based on the wheel speeds.

The control unit calculates the slip rate of each wheel, and transmits the control signal to the modulator unit solenoid valve when the slip rate is high.

The hydraulic control has three modes: Pressure intensifying.- pressure reducing, and pressure retaining.

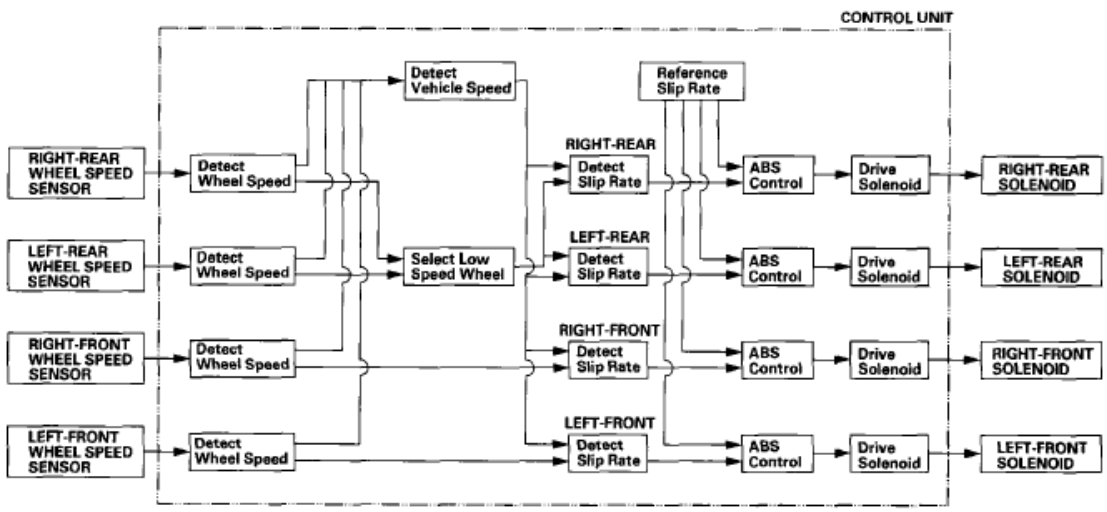

Fig. 8: Main Control Unit - Flow Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

EBD (ELECTRONIC BRAKE DISTRIBUTION) FEATURES

The EBD feature helps control vehicle braking by adjusting the rear brake force in accordance with the rear

wheel load before the ABS operates. Based on the wheel speed sensor signals, the control unit uses the modulator to control the rear brakes individually. When the rear wheel speed is less than the front wheel speed, the VSA modulator-control unit retains the current rear brake fluid pressure by closing the inlet valve in the modulator. As the rear wheel speed increases and approaches the front wheel speed, the VSA modulator-control unit increases the rear brake fluid pressure by momentarily opening the inlet valve. This whole process is repeated very rapidly. While this is happening, kickback may be felt at the brake pedal, you may also hear a muted buzzing sound from the VSA modulator-control unit. This is normal.

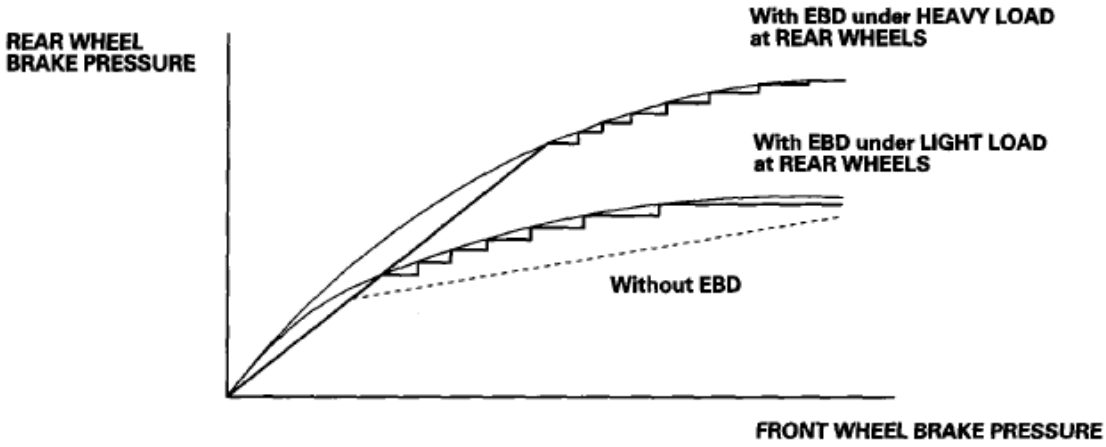

Fig. 9: Electronic Brake Distribution (EBD) Between Rear And Front Wheel Brake Pressure - Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TCS (TRACTION CONTROL SYSTEM) FEATURES

When a drive wheel loses traction on a slippery road surface and starts to spin, the VSA modulator-control unit applies brake pressure to the spinning wheel and sends an engine torque control request to the ECM/PCM to slow the spinning wheel and keep traction.

Without SH-AWD

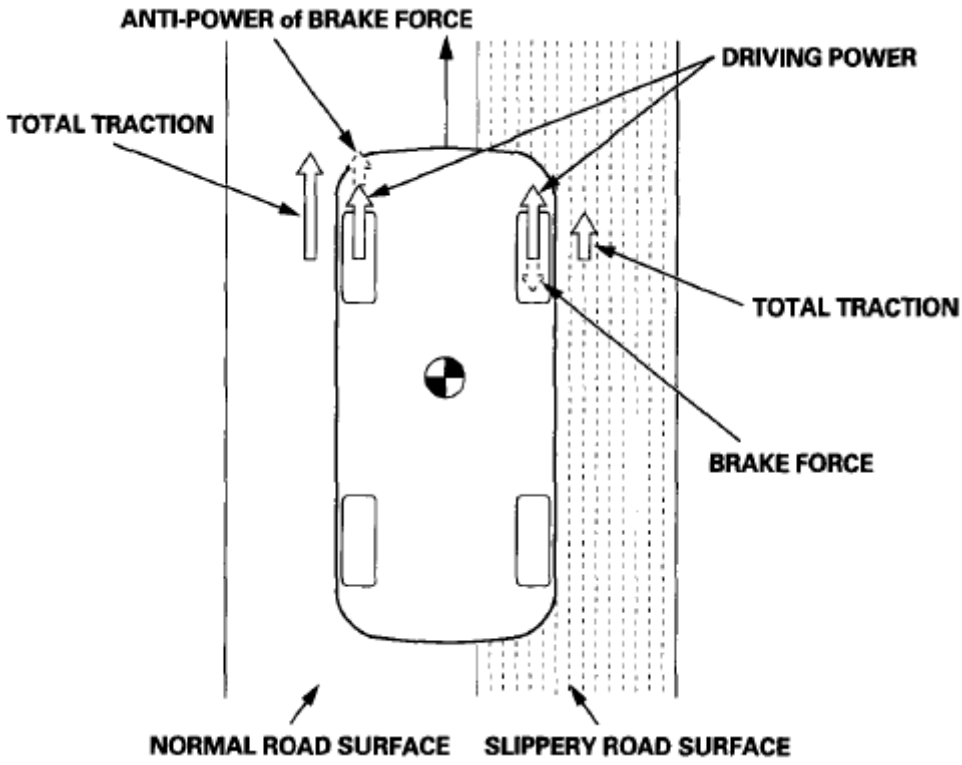

Fig. 10: Identifying Traction Control System Components (Without SH-AWD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With SH-AWD

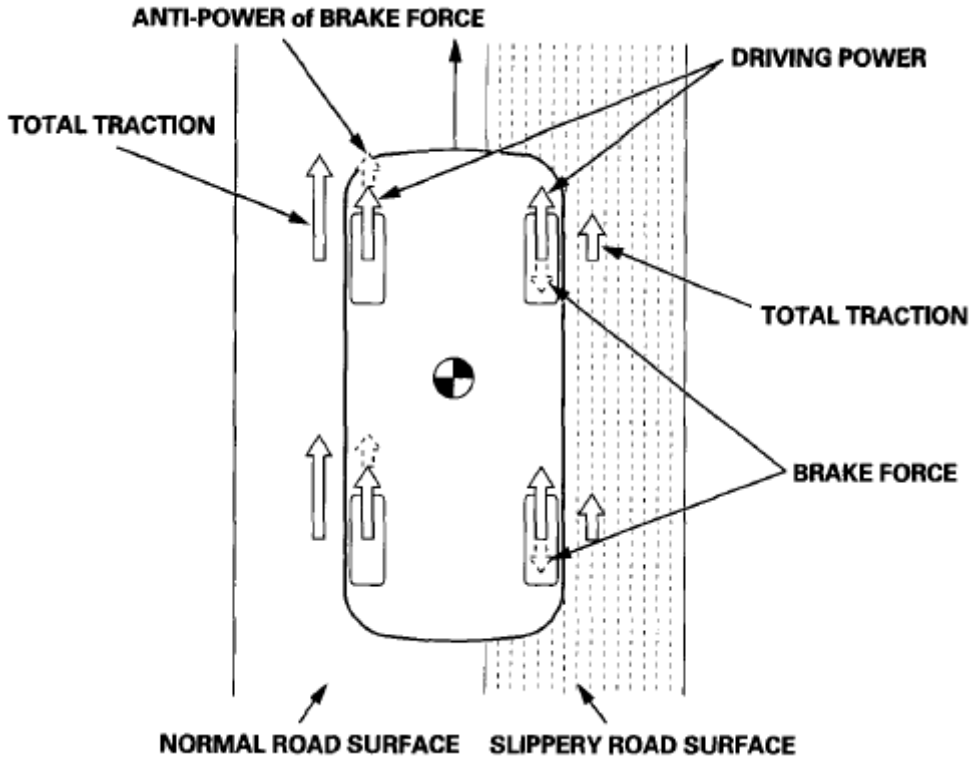

Fig. 11: Identifying Traction Control System Components (With SH-AWD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VSA (VEHICLE STABILITY ASSIST) SYSTEM FEATURES

Oversteer Control

Applies the brakes to the front and rear outside wheels

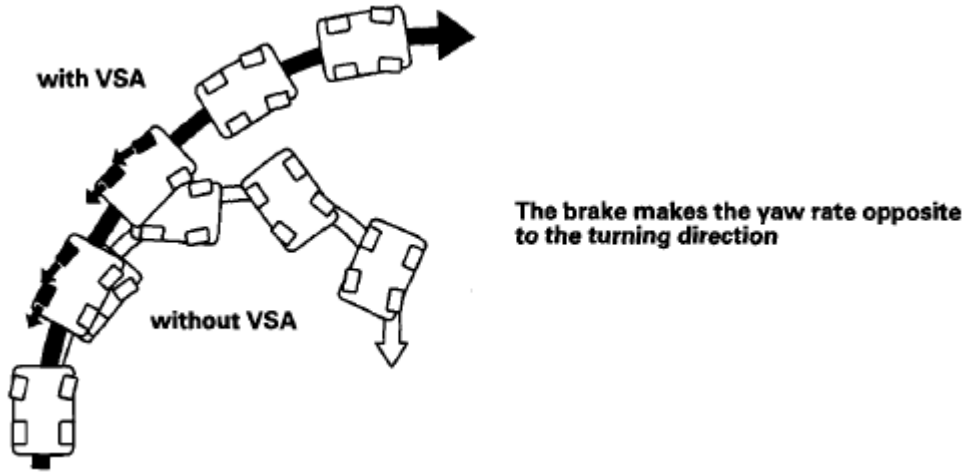

Fig. 12: View Of Oversteer Control (With And Without VSA)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Understeer Control

- Applies the brakes to the front and rear inside wheels
- Controls the engine torque when accelerating

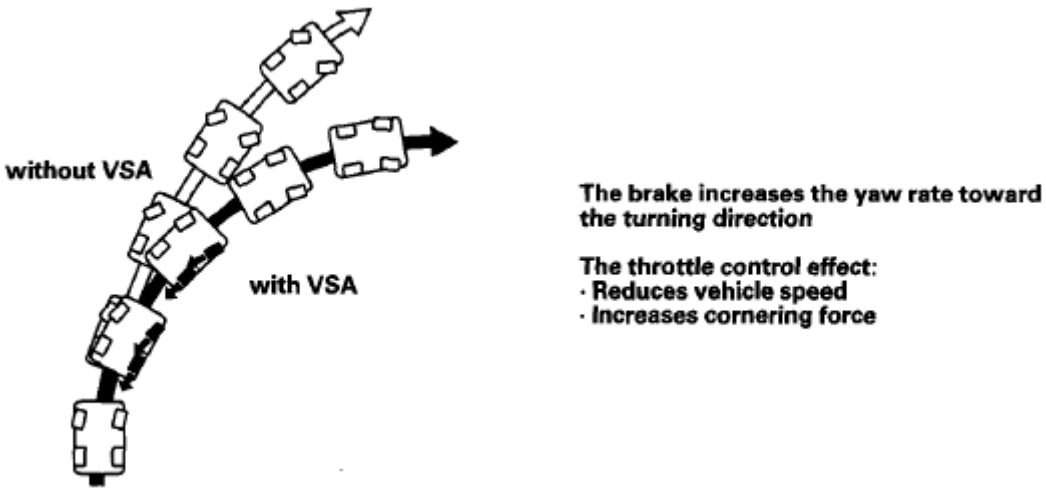

Fig. 13: View Of Understeer Control (With And Without VSA)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

BRAKE ASSIST FEATURES

Brake assist helps ensure that any driver can achieve the full braking potential of the vehicle by increasing brake system pressure in a panic situation, bringing the vehicle into a full ABS stop.

If during a panic stop the VSA modulator-control unit determines that the brake system pressure increases above a threshold in less than a certain amount of time, the VSA modulator-control unit engages brake assist.

Because the brake system pressure crossed the pressure threshold before the time threshold had expired, the VSA modulator-control unit goes into brake assist mode.

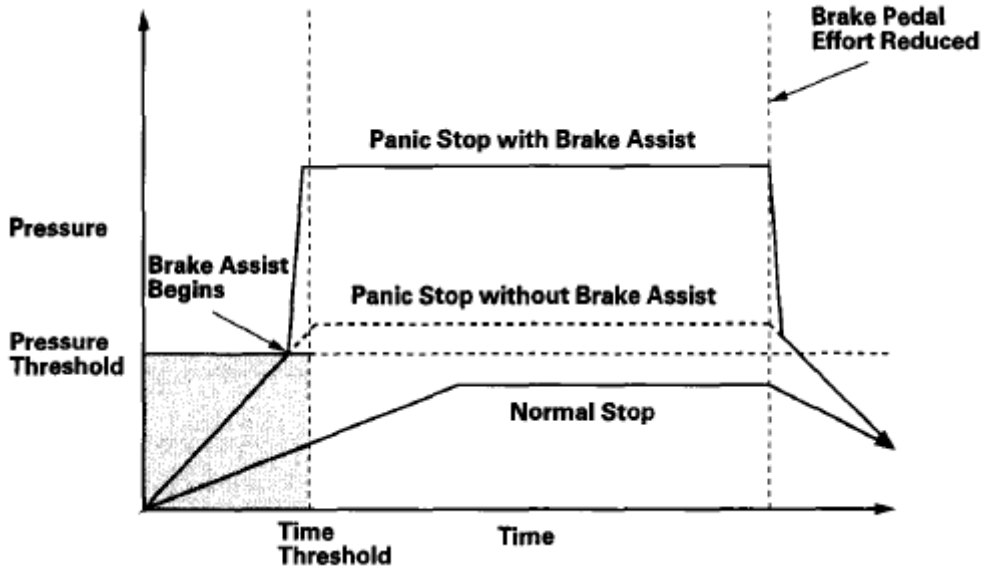

Fig. 14: Brake Assist Features Between Pressure And Time - Graph
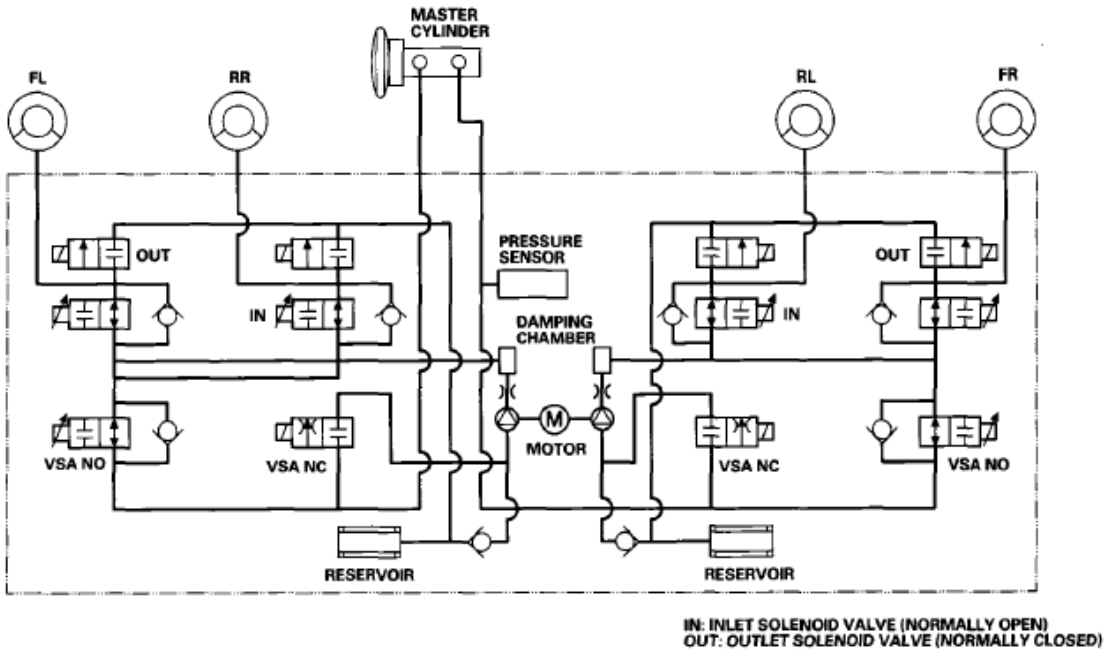
Courtesy of AMERICAN HONDA MOTOR CO., INC.

MODULATOR UNIT

The modulator unit consists of the inlet solenoid valve, the outlet solenoid valve, the VSA NO (normally open) solenoid valve, the VSA NC (normally closed) solenoid valve, the reservoir, the pump, and the pump motor.

The hydraulic control has three modes of ABS action; pressure intensifying, pressure retaining, and pressure reducing. Pressure intensifying mode (VSA) is combination of the TCS, VSA, and brake assist action.

The hydraulic circuit is an independent four channel type, one channel for each wheel.



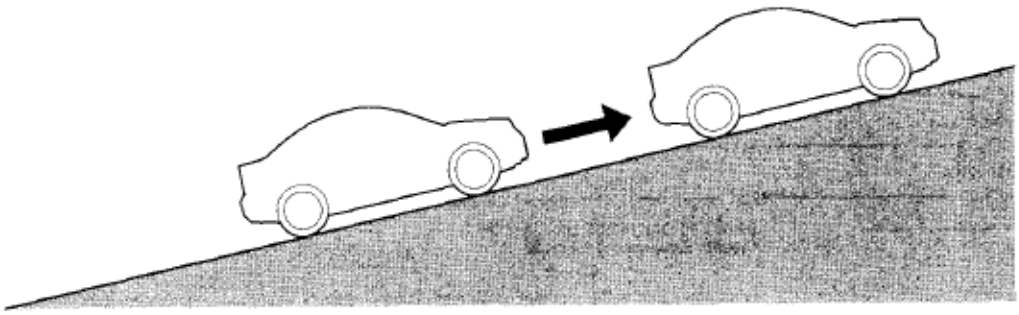


Fig. 15: VSA System Modulator Unit - Circuit Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Mode	VSA NO Valve	VSA NC Valve	Inlet Solenoid Valve	Outlet Solenoid Valve	Brake Fluid
Pressure intensifying mode	open	closed	open	closed	Master cylinder fluid is pumped out to the caliper.
Pressure retaining mode	open	closed	closed	closed	Caliper fluid is retained by the inlet and outlet valves.
Pressure reducing mode	open	closed	closed	open	• Caliper fluid flows through the outlet valve to the reservoir. • The motor pumps the reservoir fluid through the damping chamber to the master cylinder(1).
Pressure intensifying mode (VSA)	closed	open	open	closed	• Master cylinder fluid is pumped out by the pump through the VSA NC valve to the caliper. • Caliper fluid pressure exceeds master cylinder pressure.
(1) The motor will running until the operation of the anti-lock brake control is finished with the first pressure reducing mode.					

HSA (HILL START ASSIST) FEATURES (WITH SH-AWD)

Prevents the vehicle from rolling backwards when moving your feet from the brake pedal to the accelerator

pedal while stopped on a hill. The control unit reads the angle of inclination from the Yaw rate-acceleration sensor, and that all four wheels are stopped, then it calculates the amount of fluid pressure required to keep the vehicle from rolling backward when the control unit sees the brake pressure decrease as the driver lifts his foot off of the brake pedal, and moves his foot to the accelerator pedal. The hill start assist also works when the vehicle is stopped on a downhill slope.

DTC TROUBLESHOOTING

DTC 11: RIGHT-FRONT WHEEL SPEED SENSOR CIRCUIT MALFUNCTION; DTC 13: LEFT-FRONT WHEEL SPEED SENSOR CIRCUIT MALFUNCTION; DTC 15: RIGHT-REAR WHEEL SPEED SENSOR CIRCUIT MALFUNCTION; DTC 17: LEFT-REAR WHEEL SPEED SENSOR CIRCUIT MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Test-drive the vehicle at 19 mph (30 km/h) or more.

   NOTE: Drive the vehicle on the road, not on a lift.

5. Check for DTCs with the HDS.

   Is DTC 11, 13, 15, or 17 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
7. Disconnect the VSA modulator-control unit 47P connector (see step 5).
8. Check for continuity between body ground and the appropriate wheel speed sensor +B and GND terminals of the VSA modulator-control unit 47P connector individually (see table below).

DTC	Appropriate Terminal	
	+ B	GND
11 Right-front	FR +B: No. 34	FR-GND: No. 33
13 Left-front	FL +B: No. 45	FL-GND: No. 46
15 Right-rear	RR +B: No. 43	RR-GND: No. 42
17 Left-rear	RL +B: No. 36	RL-GND: No. 37

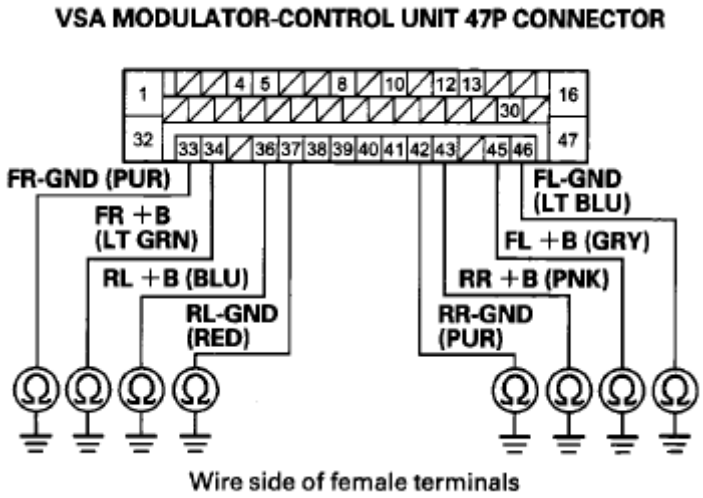

Fig. 22: Checking Continuity Between Body Ground And Wheel Speed Sensor And GND Terminals Of VSA Modulator-Control Unit 47P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Go to step 11.

9. Disconnect the appropriate wheel speed sensor 2P connector (see **WHEEL SPEED SENSOR REPLACEMENT**).
10. On the sensor side, check for continuity between body ground and wheel speed sensor 2P connector terminals No. 1 and No. 2 individually.

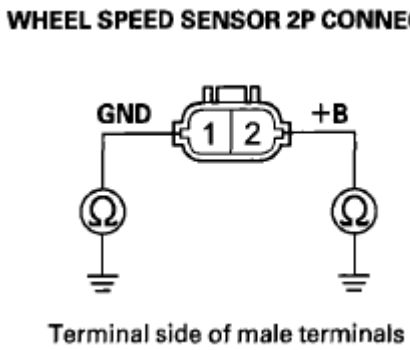

Fig. 23: Checking Continuity Between Body Ground And Wheel Speed Sensor 2P Connector Terminals No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the appropriate wheel speed sensor (see **WHEEL SPEED SENSOR**

REPLACEMENT).

NO - Repair a short to body ground in the wire between the VSA modulator-control unit and the appropriate wheel speed sensor.

11. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
12. Measure the voltage between body ground and the appropriate wheel speed sensor +B and GND terminals of the VSA modulator-control unit 47P connector individually (see table below).

DTC	Appropriate Terminal	
	+B	GND
11 Right-front	FR +B: No. 34	FR-GND: No. 33
13 Left-front	FL +B: No. 45	FL-GND: No. 46
15 Right-rear	RR +B: No. 43	RR-GND: No. 42
17 Left-rear	RL +B: No. 36	RL-GND: No. 37

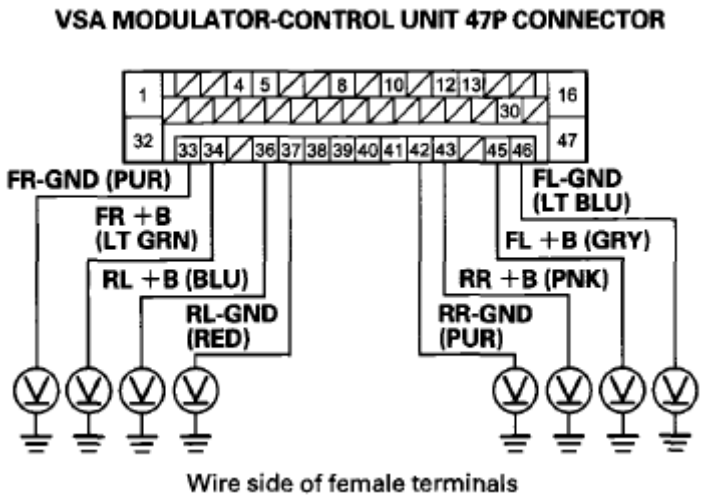

Fig. 24: Measuring Voltage Between Body Ground And Wheel Speed Sensor And GND Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.1 V or more?

YES - Go to step 13.

NO - Go to step 17.

13. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
14. Disconnect the appropriate wheel speed sensor 2P connector (see **WHEEL SPEED SENSOR REPLACEMENT**).
15. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
16. On the sensor side, measure the voltage between body ground and wheel speed sensor 2P connector terminals No. 1 and No. 2 individually.

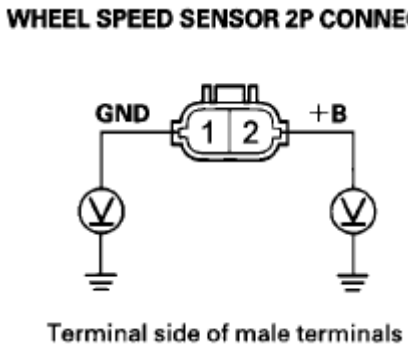

Fig. 25: Measuring Voltage Between Body Ground And Wheel Speed Sensor 2P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.1 V or more?

YES - Replace the appropriate wheel speed sensor (see **WHEEL SPEED SENSOR REPLACEMENT**).

NO - Repair a short to power in the wire between the VSA modulator-control unit and the appropriate wheel speed sensor.

17. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
18. Disconnect the appropriate wheel speed sensor 2P connector (see **WHEEL SPEED SENSOR REPLACEMENT**).
19. Check for continuity between the appropriate VSA modulator-control unit 47P connector wheel speed sensor +B and GND terminals (see table below).

DTC	Appropriate Terminal	
	+ B	GND
11 Right-front	FR +B: No. 34	FR-GND: No. 33
13 Left-front	FL +B: No. 45	FL-GND: No. 46
15 Right-rear	RR +B: No. 43	RR-GND: No. 42
17 Left-rear	RL +B: No. 36	RL-GND: No. 37

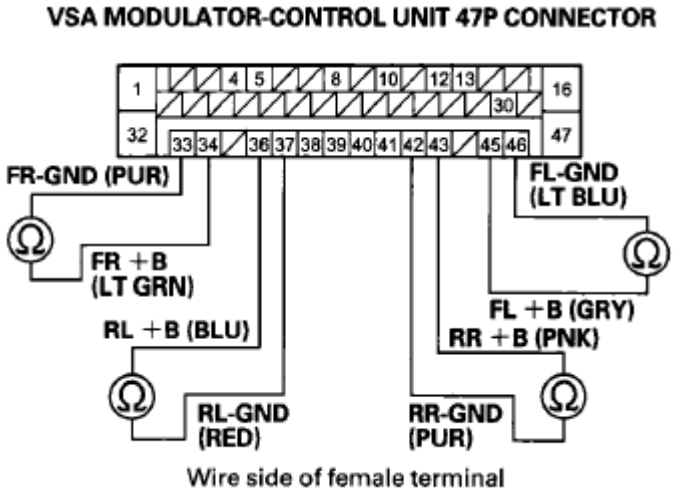

Fig. 26: Checking Continuity Between VSA Modulator-Control Unit 47P Connector Wheel Speed Sensor And GND Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short in the wires between the appropriate wheel speed sensor and the VSA modulator-control unit.

NO - Go to step 20.

20. Check for continuity between the appropriate VSA modulator-control unit 47P connector terminal and the wheel speed sensor 2P connector terminal (see table below).

DTC	VSA Modulator-Control Unit 47P Connector Terminal	Appropriate Wheel Speed Sensor 2P Connector Terminal No. 2
11	No. 34	Right-front
13	No. 45	Left-front
15	No. 43	Right-rear
17	No. 36	Left-rear

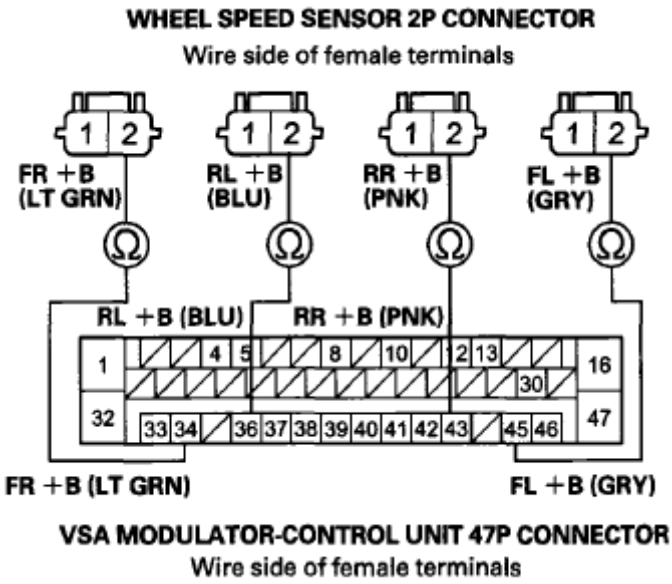

Fig. 27: Checking Continuity Between VSA Modulator-Control Unit 47P And Wheel Speed Sensor 2P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 21.

NO - Repair an open in the wire between the appropriate wheel speed sensor and the VSA modulator-control unit.

21. Check for continuity between the appropriate VSA modulator-control unit 47P connector terminal and the wheel speed sensor 2P connector terminal (see table below).

DTC	VSA Modulator-Control Unit 47P Connector Terminal	Appropriate Wheel Speed Sensor 2P Connector Terminal No. 1
11	No. 33	Right-front
13	No. 46	Left-front
15	No. 42	Right-rear
17	No. 37	Left-rear

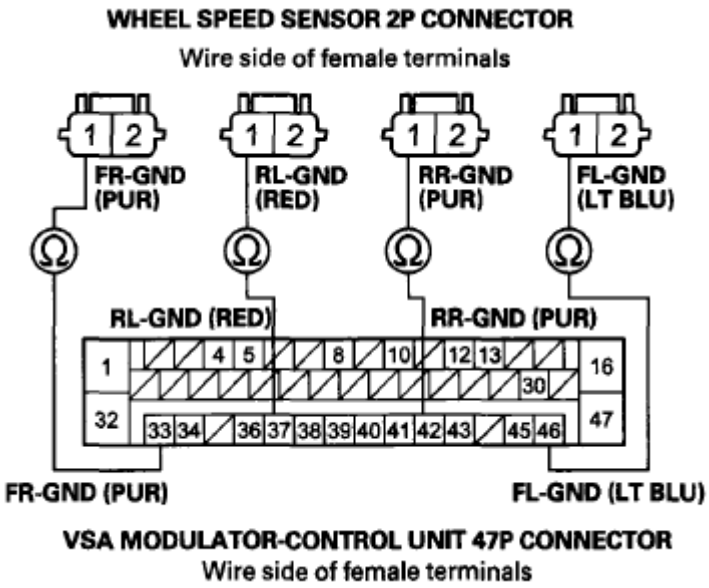

Fig. 28: Checking Continuity Between VSA Modulator-Control Unit 47P And Wheel Speed Sensor 2P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES -

- If the DTCs indicate one wheel speed sensor (either the right or left) on the same axle (front or rear), go to step 22.
- If the DTCs indicate both wheel speed sensors (right or left) on the same axle (front or rear), go to step 29.

NO - Repair an open in the wire between the appropriate wheel speed sensor and the VSA modulator-control unit.

22. Swap the applicable left and right wheel speed sensors.
23. Reconnect all connectors.
24. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
25. Clear the DTC with the HDS.
26. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
27. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

28. Check for DTCs with the HDS.

DTCs Before Swapping	DTCs After Swapping

11 (Right-front)	13 (Left-front)
13 (Left-front)	11 (Right-front)
15 (Right-rear)	17 (Left-rear)
17 (Left-rear)	15 (Right-rear)

Is the DTC indicated for the opposite wheel?

YES - Replace the original wheel speed sensor (see **WHEEL SPEED SENSOR REPLACEMENT**).

NO - Go to step 29.

29. Substitute a known-good wheel speed sensor (see **WHEEL SPEED SENSOR REPLACEMENT**).
30. Reconnect all connectors.
31. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
32. Clear the DTC with the HDS.
33. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
34. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

35. Check for DTCs with the HDS.

Is DTC 11, 13, 15, or 17 indicated?

YES - Go to step 36.

NO - Replace the original wheel speed sensor (see **WHEEL SPEED SENSOR REPLACEMENT**).

36. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
37. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
38. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

39. Check for DTCs with the HDS.

Is DTC 11, 13, 15, or 17 indicated?

YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 12: RIGHT-FRONT WHEEL SPEED SENSOR SIGNAL MALFUNCTION; DTC 14: LEFT-FRONT WHEEL SPEED SENSOR SIGNAL MALFUNCTION; DTC 16: RIGHT-REAR WHEEL SPEED SENSOR SIGNAL MALFUNCTION; DTC 18: LEFT-REAR WHEEL SPEED SENSOR SIGNAL MALFUNCTION

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **If the ABS and the VSA indicators come on because of electrical noise, the indicator goes off when you test-drive the vehicle at 9 mph (15 km/h) after the system returns to normal.**

1. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. Check that the appropriate wheel speed sensor is properly mounted (see **WHEEL SPEED SENSOR REPLACEMENT**).

DTC	Appropriate Wheel Speed Sensor
12	Right-front
14	Left-front
16	Right-rear
18	Left-rear

Is the wheel speed sensor installation OK?

YES - Go to step 3.

NO - Reinstall the wheel speed sensor, and check the mounting position (see **WHEEL SPEED SENSOR REPLACEMENT**).

3. Inspect the appropriate magnetic encoder for damage, debris, and correct installation.

DTC	Appropriate Magnetic Encoder	Note
12	Right-front	Remove the driveshaft outboard joint from the appropriate wheel hub (see **KNUCKLE/HUB REPLACEMENT**).
14	Left-front	
16	Right-rear	Remove the hub bearing unit (see **HUB BEARING UNIT REPLACEMENT**).
18	Left-rear	

Is the magnetic encoder OK?

YES - Go to step 4.

NO - Remove the debris from the magnetic encoder, or replace the wheel bearing (front) or the hub bearing unit (rear):

- Front: Replace the front wheel bearing (see **WHEEL BEARING REPLACEMENT**).
- Rear: Replace the rear hub bearing unit (see **HUB BEARING UNIT REPLACEMENT**).

4. Disconnect the VSA modulator-control unit 47P connector (see step 5).
5. Check for continuity between the appropriate wheel speed sensor GND terminal and the other wheel speed sensor GND terminals of the VSA modulator-control unit 47P connector (see table below).

DTC	Appropriate Terminal	Other Terminals		
12	FR-GND: No. 33	No. 46	No. 42	No. 37
14	FL-GND: No. 46	No. 33	No. 42	No. 37
16	RR-GND: No. 42	No. 33	No. 46	No. 37
18	RL-GND: No. 37	No. 33	No. 46	No. 42

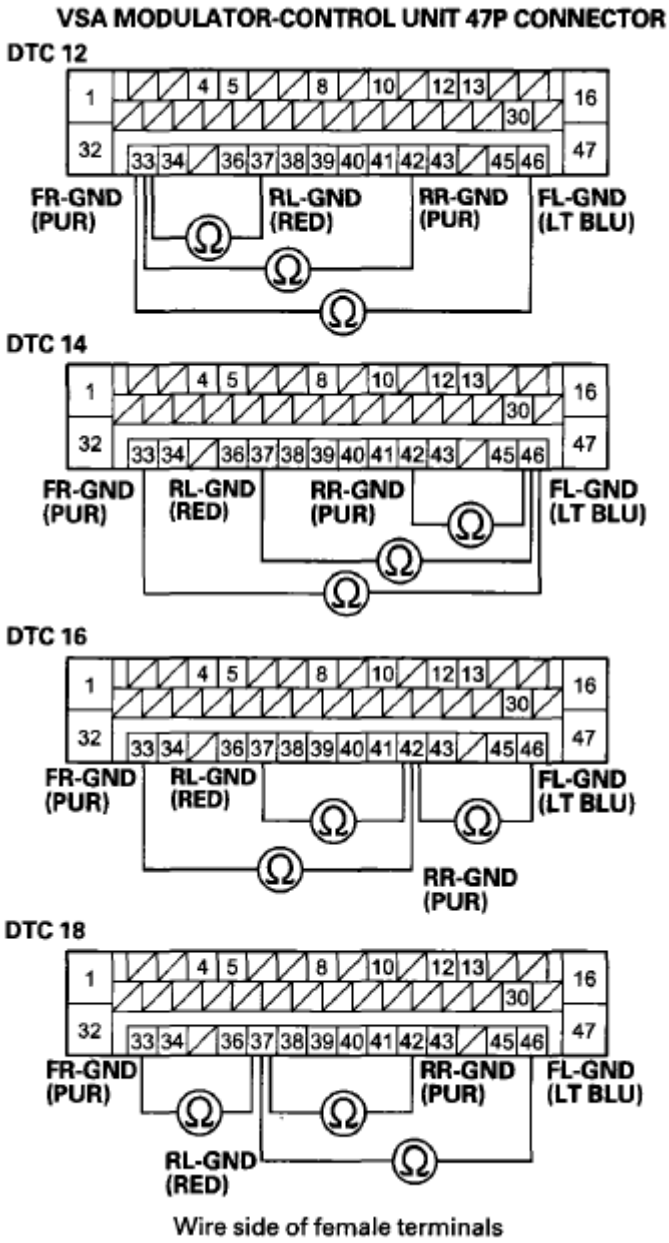

Fig. 29: Checking Continuity Between Both Wheel Speed Sensor GND Terminals Of VSA Modulator-Control Unit 47P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short in the wires between the appropriate wheel speed sensor and the other wheel speed sensor.

NO - Go to step 6.

6. Substitute a known-good wheel speed sensor (see **WHEEL SPEED SENSOR REPLACEMENT**).

7. Reconnect all connectors.
8. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
9. Clear the DTC with the HDS.
10. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
11. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

12. Check for DTCs with the HDS.

    Is DTC 12, 14, 16, or 18 indicated?

    YES - Go to step 13.

    NO - Replace the original wheel speed sensor (see **WHEEL SPEED SENSOR REPLACEMENT**).

13. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
14. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
15. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

16. Check for DTCs with the HDS.

    Is DTC 12, 14, 16, or 18 indicated?

    YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

    NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 21: RIGHT-FRONT MAGNETIC ENCODER MALFUNCTION; DTC 22: LEFT-FRONT MAGNETIC ENCODER MALFUNCTION; DTC 23: RIGHT-REAR MAGNETIC ENCODER MALFUNCTION; DTC 24: LEFT-REAR MAGNETIC ENCODER MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.

2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

5. Check for DTCs with the HDS.

   Is DTC 21, 22, 23, or 24 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

6. Inspect the appropriate magnetic encoder for damage, debris, and correct installation.

DTC	Appropriate Magnetic Encoder	Note
21	Right-front	Remove the driveshaft outboard joint from the appropriate wheel hub (see **KNUCKLE/HUB REPLACEMENT**).
22	Left-front	
23	Right-rear	Remove the hub bearing unit (see **HUB BEARING UNIT REPLACEMENT**).
24	Left-rear	

   Is the magnetic encoder OK?

   YES - Go to step 7.

   NO - Remove the debris from the magnetic encoder, or replace the wheel bearing (front) or the hub bearing unit (rear):

   - Front: Replace the front wheel bearing (see **WHEEL BEARING REPLACEMENT**).
   - Rear: Replace the rear hub bearing unit (see **HUB BEARING UNIT REPLACEMENT**).

7. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
8. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
9. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

10. Check for DTCs with the HDS.

    Is DTC 21, 22, 23, or 24 indicated?

YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 25: YAW RATE SENSOR MALFUNCTION; DTC 26: LATERAL ACCELERATION SENSOR MALFUNCTION; DTC 28: LONGITUDINAL ACCELERATION SENSOR MALFUNCTION (WITH SH-AWD); DTC 104: YAW RATE-ACCELERATION SENSOR MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Test-drive the vehicle around a number of corners.

   NOTE: Drive the vehicle on the road, not on a lift.

5. Check for DTCs with the HDS.

   Is DTC 25, 26, 28, or 104 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

6. Check the size, air pressure, and the amount of wear of all four tires (see **WHEEL ALIGNMENT**).

   Is the tire condition OK?

   YES - Go to step 7.

   NO - Replace the tires and/or adjust the air pressure, then recheck by test-driving.

7. Check the YAW/G COMBINE SENSOR DIAGNOSIS in the VSA FREEZE DATA with the HDS.

   Is YAW/G COMBINE SENSOR DIAGNOSIS NORMAL?

   YES - Go to step 13.

NO - Go to step 8.

8. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
9. Disconnect the yaw rate-acceleration sensor 4P connector (see **YAW RATE-ACCELERATION SENSOR REPLACEMENT**).
10. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
11. Measure the voltage between yaw rate-acceleration sensor 4P connector terminals No. 1 and No. 4.

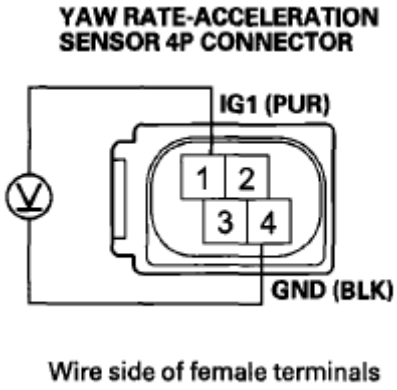

Fig. 30: Measuring Voltage Between Yaw Rate-Acceleration Sensor 4P Connector Terminals No. 1 And No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Replace the yaw rate-acceleration sensor (see **YAW RATE-ACCELERATION SENSOR REPLACEMENT**).

NO - Go to step 12.

12. Measure the voltage between yaw rate-acceleration sensor 4P connector terminal No. 1 and body ground.

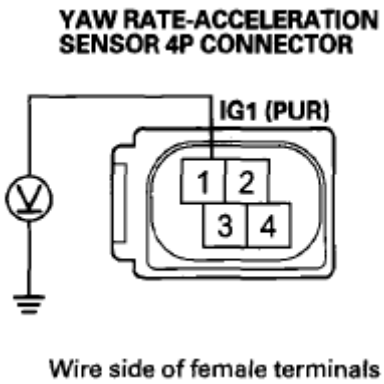

Fig. 31: Measuring Voltage Between Yaw Rate-Acceleration Sensor 4P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair an open in the wire between the yaw rate-acceleration sensor and body ground (G403).

NO - Repair an open in the wire between the yaw rate-acceleration sensor and the driver's under-dash fuse/relay box.

13. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
14. Disconnect the yaw rate-acceleration sensor 4P connector (see **YAW RATE-ACCELERATION SENSOR REPLACEMENT**).
15. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
16. Measure the voltage between yaw rate-acceleration sensor 4P connector terminals No. 1 and No. 4.

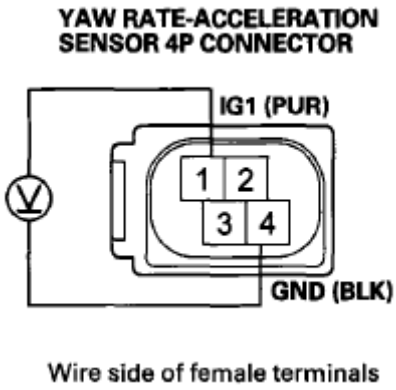

Fig. 32: Measuring Voltage Between Yaw Rate-Acceleration Sensor 4P Connector Terminals No. 1 And No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 18.

NO - Go to step 17.

17. Measure the voltage between yaw rate-acceleration sensor 4P connector terminal No. 1 and body ground.

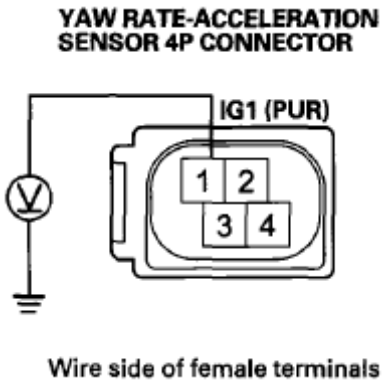

Fig. 33: Measuring Voltage Between Yaw Rate-Acceleration Sensor 4P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair an open in the wire between the yaw rate-acceleration sensor and body ground (G403).

NO - Repair an open in the wire between the yaw rate-acceleration sensor and the driver's under-dash fuse/relay box.

18. Check the wheel alignment (see **WHEEL ALIGNMENT**).

    Is the wheel alignment OK?

    YES - Go to step 19.

    NO - Make sure the suspension is not modified, and correct the wheel alignment, and recheck by test-driving.

19. Substitute a known-good yaw rate-acceleration sensor (see **YAW RATE-ACCELERATION SENSOR REPLACEMENT**).
20. Reconnect all connectors.
21. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
22. Clear the DTC with the HDS.
23. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
24. Test-drive the vehicle around a number of corners.

    NOTE: Drive the vehicle on the road, not on a lift.

25. Check for DTCs with the HDS.

    Is DTC 25, 26, 28, or 104 indicated?

YES - Go to step 26.

NO - Replace the original yaw rate-acceleration sensor (see **YAW RATE-ACCELERATION SENSOR REPLACEMENT**).

26. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
27. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
28. Test-drive the vehicle around a number of corners.

NOTE: Drive the vehicle on the road, not on a lift.

29. Check for DTCs with the HDS.

Is DTC 25, 26, 28, or 104 indicated?

YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 27: STEERING ANGLE SENSOR MALFUNCTION (WITHOUT SH-AWD)

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Test-drive the vehicle around a number of corners.

NOTE: Drive the vehicle on the road, not on a lift.

5. Check for DTCs with the HDS.

Is DTC 27 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

6. Check the size, air pressure, and the amount of wear of all four tires (see **WHEEL ALIGNMENT**).

   Is the tire condition OK?

   YES - Go to step 7.

   NO - Replace the tires and/or adjust the air pressure, then recheck by test-driving.

7. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
8. Disconnect the steering angle sensor 5P connector (see **STEERING ANGLE SENSOR REPLACEMENT**).
9. Disconnect the VSA modulator-control unit 47P connector (see step 5).
10. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
11. Measure the voltage between body ground and VSA modulator-control unit 47P connector terminals No. 5 and No. 40 individually.

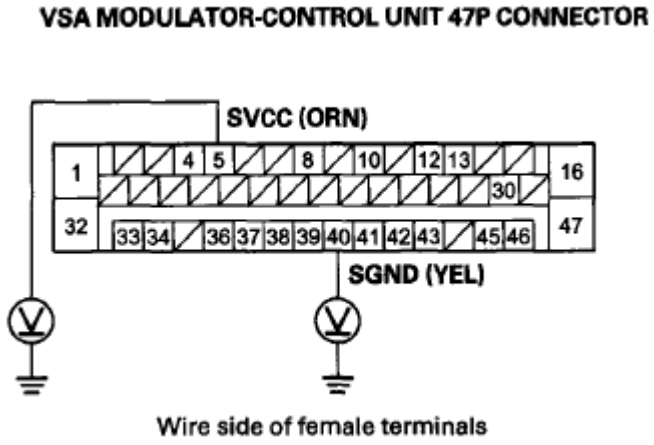

Fig. 34: Measuring Voltage Between Body Ground And VSA Modulator-Control Unit 47P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.1 V or more?

YES - Repair a short to power in the wire between the VSA modulator-control unit and the steering angle sensor.

NO - Go to step 12.

12. Measure the voltage between body ground and VSA modulator-control unit 47P connector terminals No. 30, No. 38, and No. 41 individually.

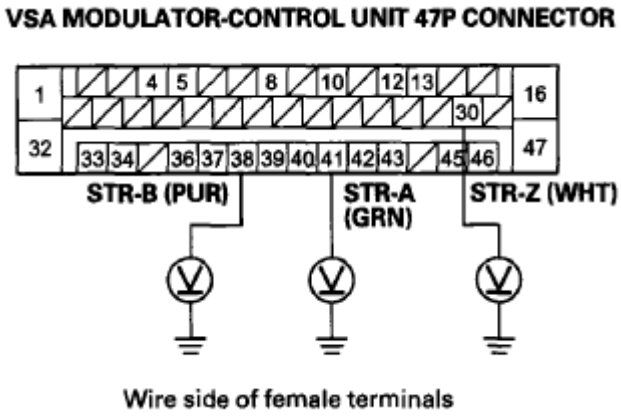

Fig. 35: Measuring Voltage Between Body Ground And VSA Modulator-Control Unit 47P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.1 V or more?

YES - Repair a short to power in the wire between the VSA modulator-control unit and the steering angle sensor.

NO - Go to step 13.

13. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
14. Check for continuity between body ground and VSA modulator-control unit 47P connector terminals No. 5 and No. 40 individually.

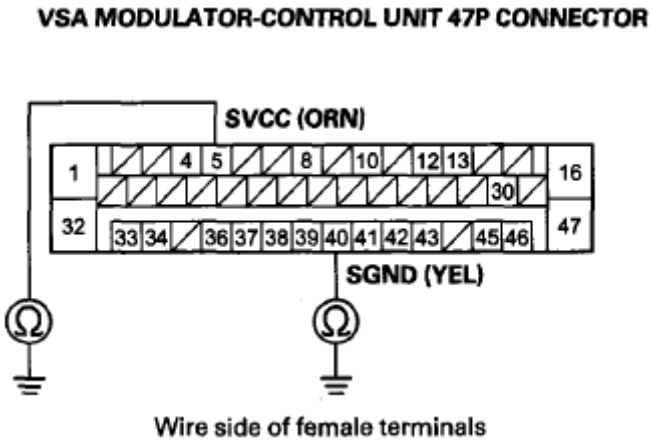

Fig. 36: Checking Continuity Between Body Ground And VSA Modulator-Control Unit 47P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between the VSA modulator-control unit and the steering

angle sensor.

NO - Go to step 15.

15. Check for continuity between body ground and VSA modulator-control unit 47P connector terminals No. 30, No. 38, and No. 41 individually.

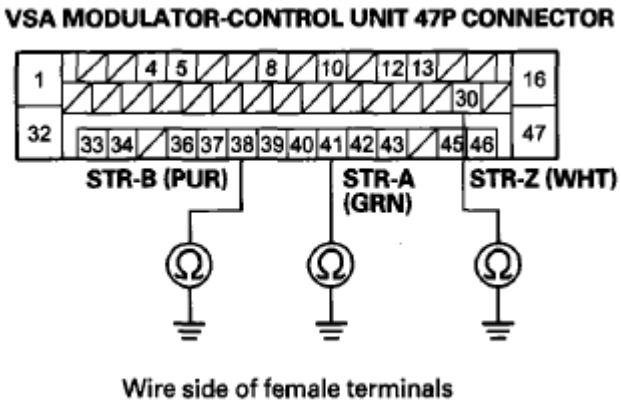

Fig. 37: Checking Continuity Between Body Ground And VSA Modulator-Control Unit 47P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between the VSA modulator-control unit and the steering angle sensor.

NO - Go to step 16.

16. Check for continuity between VSA modulator-control unit 47P connector terminal and steering angle sensor 5P connector terminal individually (see table below).

Sign	VSA Modulator-Control Unit 47P Connector Terminal	Steering Angle Sensor 5P Connector Terminal
SVCC	No. 5	No. 5
SGND	No. 40	No. 1

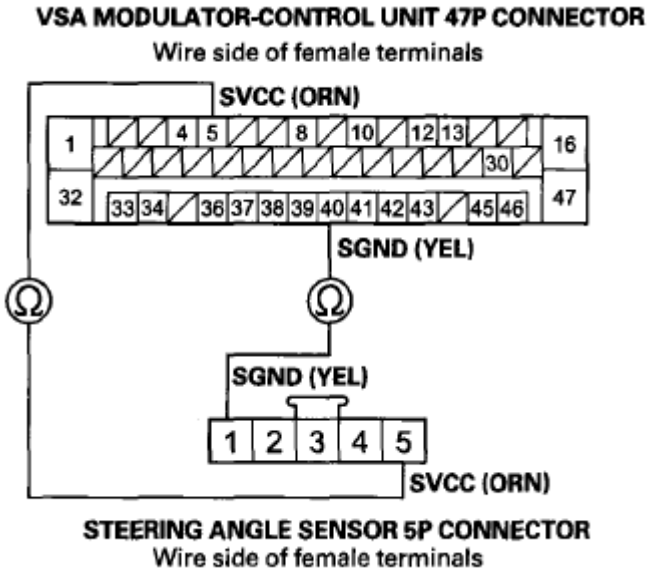

Fig. 38: Checking Continuity Between VSA Modulator-Control Unit 47P And Steering Angle Sensor 5P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 17.

NO - Repair an open in the wire between the VSA modulator-control unit and the steering angle sensor.

17. Check for continuity between VSA modulator-control unit 47P connector terminal and steering angle sensor 5P connector terminal individually (see table below).

Sign	VSA Modulator-Control Unit 47P Connector Terminal	Steering Angle Sensor 5P Connector Terminal
STR-A	No. 41	No. 2
STR-B	No. 38	No. 4
STR-Z	No. 30	No. 3

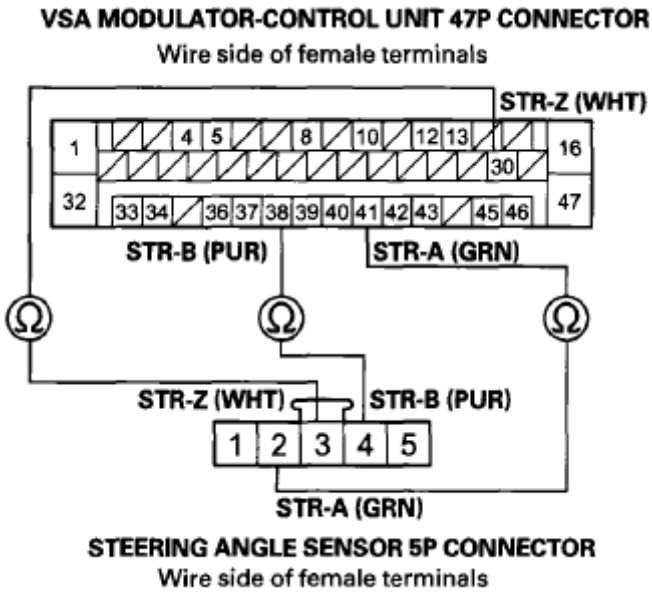

Fig. 39: Checking Continuity Between VSA Modulator-Control Unit 47P And Steering Angle Sensor 5P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 18.

NO - Repair an open in the wire between the VSA modulator-control unit and the steering angle sensor.

18. Check the wheel alignment (see **WHEEL ALIGNMENT**).

    Is the wheel alignment OK?

    YES - Go to step 19.

    NO - Make sure the suspension is not modified, and the steering rack is centered. Then correct the wheel alignment, and recheck by test-driving.

19. Substitute a known-good steering angle sensor (see **STEERING ANGLE SENSOR REPLACEMENT**).

    NOTE: Make sure the steering angle sensor and combination switch are mounted properly.

20. Reconnect all connectors.
21. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
22. Clear the DTC with the HDS.
23. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

24. Test-drive the vehicle around a number of corners.

    NOTE: Drive the vehicle on the road, not on a lift.

25. Check for DTCs with the HDS.

    Is DTC 27 indicated?

    YES - Go to step 26.

    NO - Replace the original steering angle sensor (see **STEERING ANGLE SENSOR REPLACEMENT**).

26. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
27. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
28. Test-drive the vehicle around a number of corners.

    NOTE: Drive the vehicle on the road, not on a lift.

29. Check for DTCs with the HDS.

    Is DTC 27 indicated?

    YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

    NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 27: STEERING ANGLE SENSOR MALFUNCTION (WITH SH-AWD)

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Check the size, air pressure, and the amount of wear of all four tires, and check the wheel alignment (see **WHEEL ALIGNMENT**).

   Is the tire condition and wheel alignment OK?

   YES - Go to step 2.

NO - Make sure the suspension is not modified, and adjust the wheel alignment, and recheck by test-driving.

2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Slowly drive the vehicle straight ahead without turning the steering wheel for 10 ft (3 m) or more, then park the vehicle while holding the steering wheel in the straight ahead position.
4. Check the STEERING ANGLE in the VSA DATA LIST with the HDS.

   Is it 0°±3°?

   YES - Go to step 6.

   NO - Go to step 5.

5. Do the VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION MEMORIZATION**).
6. Clear the DTC with the HDS.
7. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
8. Test-drive the vehicle around a number of corners.

   NOTE: Drive the vehicle on the road, not on a lift.

9. Check for DTCs with the HDS.

   Is DTC 27 indicated?

   YES - Go to step 10.

   NO - Troubleshooting is complete.

10. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
11. Disconnect the steering angle sensor 5P connector (see **STEERING ANGLE SENSOR REPLACEMENT**).
12. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
13. Measure the voltage between the steering angle sensor 5P connector terminal No. 5 and body ground.

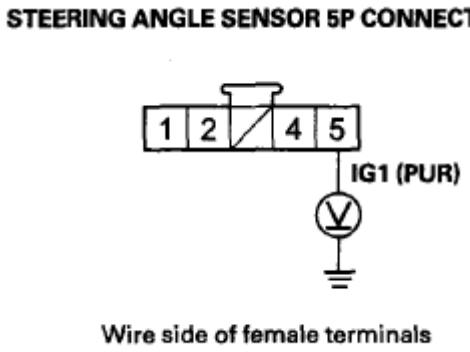

Fig. 40: Measuring Voltage Between Steering Angle Sensor 5P Connector Terminal No. 5 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 14.

NO - Repair an open in the wire between the No. 6 (7.5 A) fuse in the driver's under-dash fuse/relay box and the steering angle sensor.

14. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
15. Check for continuity between the steering angle sensor 5P connector terminal No. 1 and body ground.

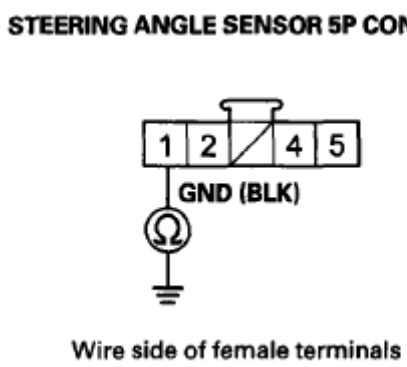

Fig. 41: Checking Continuity Between Steering Angle Sensor 5P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 16.

NO - Repair an open in the wire between the steering angle sensor and body ground (G401).

16. Disconnect the VSA modulator-control unit 47P connector (see step 5).

17. Check for continuity between VSA modulator-control unit 47P connector terminals No. 12, No 13 and steering angle sensor 5P connector terminals No. 4, No. 2 individually.

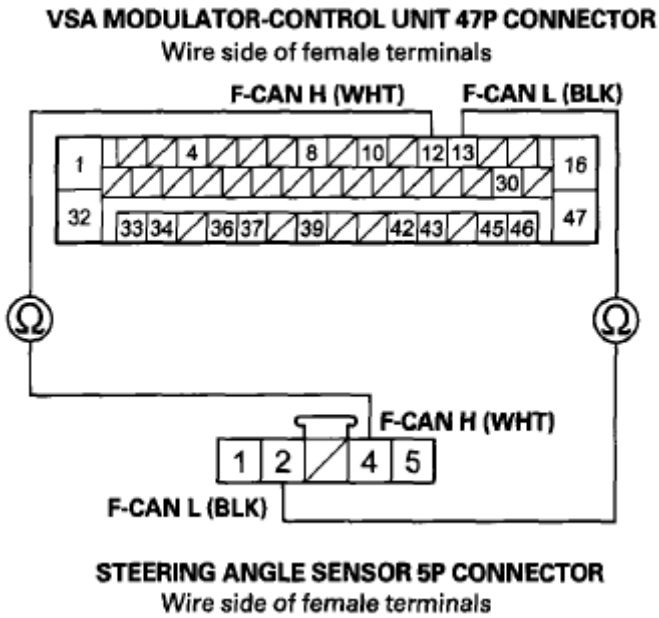

Fig. 42: Checking Continuity Between VSA Modulator-Control Unit 47P And Steering Angle Sensor 5P Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 18.

NO - Repair an open in the wire between the VSA modulator-control unit and the steering angle sensor.

18. Substitute a known-good steering angle sensor (see **STEERING ANGLE SENSOR REPLACEMENT**).
19. Reconnect all connectors.
20. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
21. Clear the DTC with the HDS.
22. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
23. Test-drive the vehicle around a number of corners.

NOTE: Drive the vehicle on the road, not on a lift.

24. Check for DTCs with the HDS.

Is DTC 27 indicated?

YES - Go to step 25.

NO - Replace the original steering angle sensor (see **STEERING ANGLE SENSOR REPLACEMENT**).

25. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
26. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
27. Test-drive the vehicle around a number of corners.

NOTE: Drive the vehicle on the road, not on a lift.

28. Check for DTCs with the HDS.

Is DTC 27 indicated?

YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 31, 32, 33, 34, 35, 36, 37, 38: ABS SOLENOID VALVE MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again, or select the OFF mode, then the ON mode.
4. Check for DTCs with the HDS.

Is DTC 31, 32, 33, 34, 35, 36, 37, or 38 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

5. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).

6. Turn the ignition switch to LOCK (0), then turn it to ON (II) again, or select the OFF mode, then the ON mode.
7. Check for DTCs with the HDS.

   Is DTC 31, 32, 33, 34, 35, 36, 37, or 38 indicated?

   YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

   NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 51: MOTOR LOCK; DTC 52: MOTOR STUCK

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Test-drive the vehicle at 19 mph (30 km/h) or more.

   NOTE: Drive the vehicle on the road, not on a lift.

5. Check for DTCs with the HDS.

   Is DTC 51 or 52 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
7. Check the No. 2-2 (40 A) fuse in the under-hood fuse/relay box.

   Is the fuse blown?

   YES - Go to step 8.

   NO - Reinstall the checked fuse, then go to step 16.

8. Disconnect the VSA modulator-control unit 47P connector (see step 5).
9. Check for continuity between VSA modulator-control unit 47P connector terminal No. 1 and body ground.

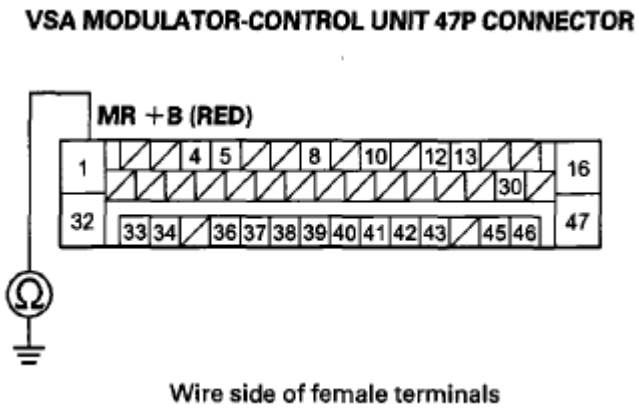

Fig. 43: Checking Continuity Between VSA Modulator-Control Unit 47P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between the No. 2-2 (40 A) fuse in the under-hood fuse/relay box and the VSA modulator-control unit.

NO - Install a new No. 2-2 (40 A) fuse in the under-hood fuse/relay box, then go to step 10.

10. Reconnect the VSA modulator-control unit 47P connector.
11. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
12. Clear the DTC with the HDS.
13. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
14. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

15. Check for DTCs with the HDS.

Is DTC 51 or 52 indicated?

YES - Go to step 20.

NO - Troubleshooting is complete.

16. Disconnect the VSA modulator-control unit 47P connector (see step 5).

17. Measure the voltage between VSA modulator-control unit 47P connector terminal No. 1 and body ground.

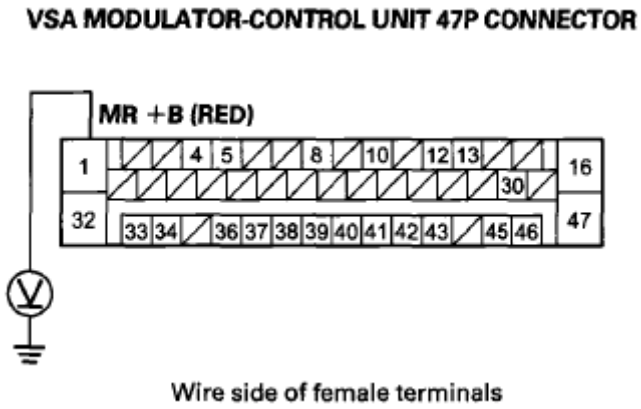

Fig. 44: Measuring Voltage Between VSA Modulator-Control Unit 47P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 18.

NO - Repair an open in the wire between the No. 2-2 (40 A) fuse in the under-hood fuse/relay box and the VSA modulator-control unit.

18. Check for continuity between VSA modulator-control unit 47P connector terminal No. 47 and body ground.

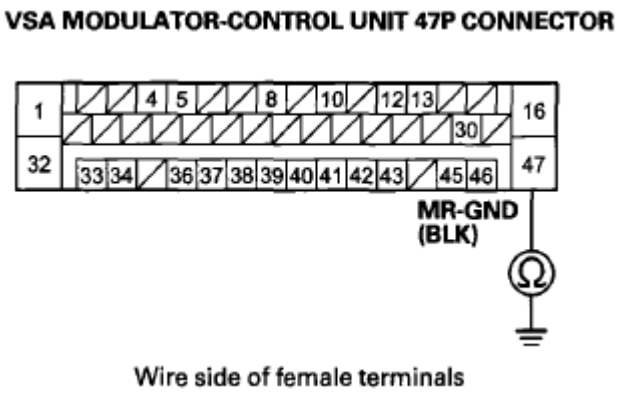

Fig. 45: Checking Continuity Between VSA Modulator-Control Unit 47P Connector Terminal No. 47 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 19.

NO - Repair an open in the wire between the VSA modulator-control unit and body ground (G202).

19. Reconnect the VSA modulator-control unit 47P connector.
20. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
21. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
22. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

23. Check for DTCs with the HDS.

Is DTC 51 or 52 indicated?

YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 54: FAIL-SAFE RELAY MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

5. Check for DTCs with the HDS.

Is DTC 54 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
7. Check the No. 2-3 (30 A) fuse in the under-hood fuse/relay box.

   Is the fuse blown?

   YES - Go to step 8.

   NO - Reinstall the checked fuse, then go to step 16.

8. Disconnect the VSA modulator-control unit 47P connector (see step 5).
9. Check for continuity between VSA modulator-control unit 47P connector terminal No. 32 and body ground.

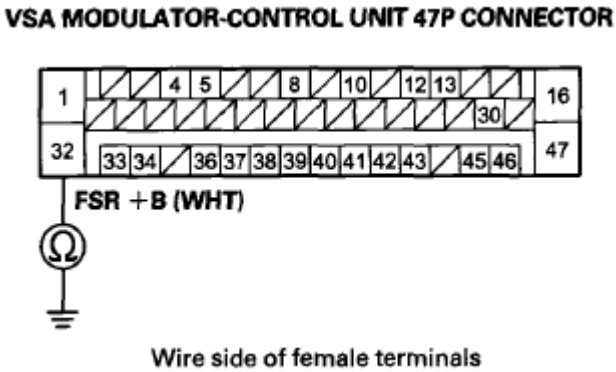

Fig. 46: Checking Continuity Between VSA Modulator-Control Unit 47P Connector Terminal No. 32 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   Is there continuity?

   YES - Repair a short to body ground in the wire between the No. 2-3 (30 A) fuse in the under-hood fuse/relay box and the VSA modulator-control unit.

   NO - Install a new No. 2-3 (30 A) fuse in the under-hood fuse/relay box, then go to step 10.

10. Reconnect the VSA modulator-control unit 47P connector.
11. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
12. Clear the DTC with the HDS.
13. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
14. Test-drive the vehicle at 19 mph (30 km/h) or more.

    NOTE: Drive the vehicle on the road, not on a lift.

15. Check for DTCs with the HDS.

Is DTC 54 indicated?

YES - Go to step 19.

NO - Troubleshooting is complete.

16. Disconnect the VSA modulator-control unit 47P connector (see step 5).
17. Measure the voltage between VSA modulator-control unit 47P connector terminal No. 32 and body ground.

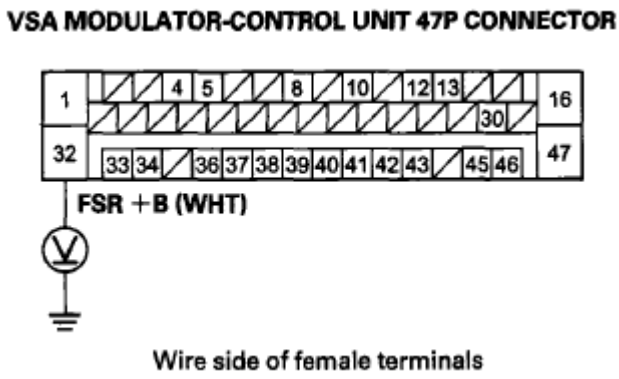

Fig. 47: Measuring Voltage Between VSA Modulator-Control Unit 47P Connector Terminal No. 32 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 18.

NO - Repair an open in the wire between the No. 2-3 (30 A) fuse in the under-hood fuse/relay box and the VSA modulator-control unit.

18. Reconnect the VSA modulator-control unit 47P connector.
19. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
20. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
21. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

22. Check for DTCs with the HDS.

Is DTC 54 indicated?

YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA

modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 61: BATTERY VOLTAGE LOW; DTC 62: BATTERY VOLTAGE HIGH

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **If the vehicle has high electric load or a weak battery, DTC 61 may be stored when starting the engine.**

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again, or select the OFF mode, then the ON mode.

   Does the ABS indicator come on?

   YES - Go to step 4.

   NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

4. Check for DTCs with the HDS.

   Is DTC 61 or 62 indicated?

   YES - Check the battery (see **BATTERY TEST**) and troubleshoot the alternator regulator circuit (see **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING**).

   NO - Do the appropriate troubleshooting for the DTC indicated.

DTC 64: SENSOR POWER SOURCE VOLTAGE MALFUNCTION (WITHOUT SH-AWD)

NOTE: **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

5. Check for DTCs with the HDS.

   Is DTC 64 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
7. Disconnect the steering angle sensor 5P connector (see **STEERING ANGLE SENSOR REPLACEMENT**).
8. Disconnect the VSA modulator-control unit 47P connector (see step 5).
9. Check for continuity between VSA modulator-control unit 47P connector terminal No. 5 and body ground.

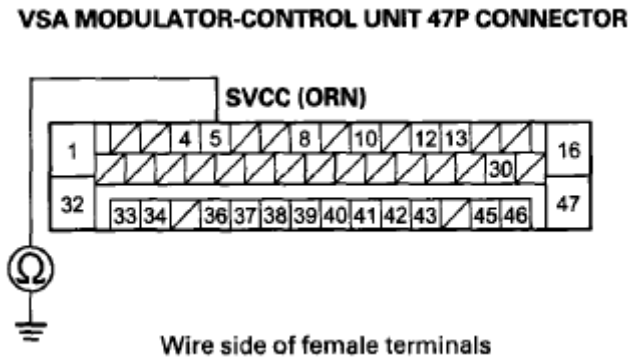

Fig. 48: Checking Continuity Between VSA Modulator-Control Unit 47P Connector Terminal No. 5 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between the VSA modulator-control unit and the steering angle sensor.

NO - Go to step 10.

10. Reconnect all connectors.
11. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
12. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
13. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

14. Check for DTCs with the HDS.

    Is DTC 64 indicated?

    YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

    NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 64: SENSOR POWER SOURCE VOLTAGE MALFUNCTION (WITH SH-AWD)

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

5. Check for DTCs with the HDS.

   Is DTC 64 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

6. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
7. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
8. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

9. Check for DTCs with the HDS.

Is DTC 64 indicated?

YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 65: BRAKE FLUID LEVEL LOW

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Check the brake fluid level in the master cylinder reservoir (see **BRAKE SYSTEM BLEEDING**).

   Is the brake fluid level OK?

   YES - Go to step 2.

   NO - Inspect the brake pads: Front (see **FRONT BRAKE PAD INSPECTION AND REPLACEMENT**), rear (see **REAR BRAKE PAD INSPECTION AND REPLACEMENT**), and replace worn out brake pads, then recheck.

2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Clear the DTC with the HDS.
4. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
5. Disconnect the brake fluid level switch 2P connector (see step 6 under **MASTER CYLINDER REPLACEMENT**).
6. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
7. Check for DTCs with the HDS.

   Is DTC 65 indicated?

   YES - Go to step 8.

   NO - Replace the master cylinder (see **MASTER CYLINDER REPLACEMENT**).

8. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
9. Disconnect the gauge control module 32P connector (see **GAUGE CONTROL MODULE REPLACEMENT**).
10. Check for continuity between brake fluid level switch 2P connector terminal No. 2 and body ground.

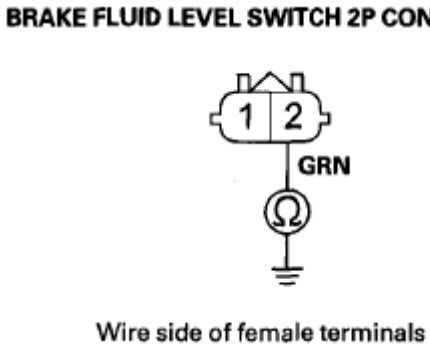

Fig. 49: Checking Continuity Between Brake Fluid Level Switch 2P Connector Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between the gauge control module and the brake fluid level switch.

NO - Go to step 11.

11. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
12. Turn the ignition switch to LOCK (0), then turn it to ON (II) again, or select the OFF mode, then the ON mode.
13. Check for DTCs with the HDS.

Is DTC 65 indicated?

YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 66: PRESSURE SENSOR MALFUNCTION

NOTE:

- **Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **Before you troubleshoot, check the brake pedal height, free play, and brake pedal position switch adjustment (see BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT).**

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

5. Check for DTCs with the HDS.

   Is DTC 66 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

6. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
7. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
8. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

9. Check for DTCs with the HDS.

   Is DTC 66 indicated?

   YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**)M

   NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 68: BRAKE PEDAL POSITION SWITCH MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Check for other system DTCs.

Is another DTC indicated?

YES - Do the appropriate troubleshooting for the DTC.

NO - Go to step 3.

3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Check the brake pedal position switch (see **BRAKE PEDAL POSITION SWITCH TEST**), and adjustment (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).

   Is the brake pedal position switch and adjustment OK?

   YES - Go to step 5.

   NO - Adjust the brake pedal position switch. If necessary, replace the brake pedal position switch (see **BRAKE PEDAL AND BRAKE PEDAL POSITION SWITCH ADJUSTMENT**).

5. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
6. Clear the DTC with the HDS.
7. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
8. Test-drive the vehicle at 19 mph (30 km/h) or more.

   NOTE: Drive the vehicle on the road, not on a lift.

9. Check for DTCs with the HDS.

   Is DTC 68 indicated?

   YES - Go to step 10.

   NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

10. Troubleshoot the brake pedal position switch signal circuit (see **BRAKE PEDAL POSITION SWITCH SIGNAL CIRCUIT TROUBLESHOOTING**).

    Is the brake pedal position switch circuit OK?

    YES - Go to step 11.

    NO - Repair the brake pedal position switch circuit (see **BRAKE PEDAL POSITION SWITCH SIGNAL CIRCUIT TROUBLESHOOTING**).

11. Reconnect all connectors.
12. Update the ECM/PCM if it does not have the latest software (see **ECM/PCM UPDATE**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**).

13. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
14. Clear the DTC with the HDS.
15. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
16. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

17. Check for DTCs with the HDS.

    Is DTC 68 indicated?

    YES - Check for loose terminals in the ECM/PCM connector A (49P). If the ECM/PCM was updated, substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then retest. If the ECM/PCM was substituted, go to step 18.

    NO - If the ECM/PCM was updated, troubleshooting is complete. If the ECM/PCM was substituted, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**).

18. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
19. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
20. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

21. Check for DTCs with the HDS.

    Is DTC 68 indicated?

    YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

    NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 81: MODULATOR-CONTROL UNIT INTERNAL CIRCUIT MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.

2. Check for other system DTCs.

   Is another DTC indicated?

   YES - Do the appropriate troubleshooting for the DTC.

   NO - Go to step 3.

3. Clear the DTC with the HDS.
4. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
5. Test-drive the vehicle at 19 mph (30 km/h) or more.

   NOTE: Drive the vehicle on the road, not on a lift.

6. Check for DTCs with the HDS.

   Is DTC 81 indicated?

   YES - Go to step 7.

   NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

7. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
8. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
9. Test-drive the vehicle at 19 mph (30 km/h) or more.

   NOTE: Drive the vehicle on the road, not on a lift.

10. Check for DTCs with the HDS.

    Is DTC 81 indicated?

    YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

    NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 83: PGM-FI MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and

review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Check for DTCs with the HDS.

   Is DTC 86 indicated?

   YES - Do the troubleshooting for DTC 86 (see **DTC 86: F-CAN COMMUNICATION MALFUNCTION**).

   NO - Go to step 3.

3. Clear the DTC with the HDS.
4. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
5. Test-drive the vehicle at 19 mph (30 km/h) or more.

   NOTE: Drive the vehicle on the road, not on a lift.

6. Check for DTCs with the HDS.

   Is DTC 83 indicated?

   YES - Go to step 7.

   NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

7. Check for fuel and emissions systems DTCs with the HDS (see **GENERAL TROUBLESHOOTING INFORMATION**).

   Are any ECM/PCM DTCs indicated?

   YES - Do the applicable troubleshooting for the ECM/PCM.

   NO - Go to step 8.

8. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
9. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
10. Test-drive the vehicle at 19 mph (30 km/h) or more.

    NOTE: Drive the vehicle on the road, not on a lift.

11. Check for DTCs with the HDS.

Is DTC 83 indicated?

YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 84-01: VSA SENSOR NEUTRAL POSITION NOT WRITTEN

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Do the VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION MEMORIZATION**).
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again, or select the OFF mode, then the ON mode.
4. Check for DTCs with the HDS.

   Is DTC 84-01 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

5. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
6. Turn the ignition switch to LOCK (0), then turn it to ON (II) again, or select the OFF mode, then the ON mode.
7. Check for DTCs with the HDS.

   Is DTC 84-01 indicated?

   YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

   NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 84-12: STEERING ANGLE SENSOR NEUTRAL POSITION MEMORIZATION INCOMPLETE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Check for DTCs with the HDS.

   Are any DTCs indicated with DTC 84-12 at the same time?

   YES - Troubleshoot any other DTCs first.

   NO - Go to step 3.

3. Clear the DTC with the HDS.
4. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
5. Test-drive the vehicle at 25 mph (40 km/h) or more in the straight ahead driving position, then turn the steering wheel left and right at 30 degrees or more once for each side. Continue test-drive afterwards more than 120 seconds.

   NOTE: Drive the vehicle on the road, not on a lift.

6. Check for DTCs with the HDS.

   Is DTC 84-12 indicated?

   YES - Go to step 7.

   NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

7. Check the size, air pressure, and the amount of wear of all four tires, and check the wheel alignment (see **WHEEL ALIGNMENT**).

   Is the tire condition and wheel alignment OK?

   YES - Go to step 8.

   NO - Make sure the suspension is not modified, and adjust the wheel alignment (see **WHEEL ALIGNMENT**), and recheck by test-driving.

8. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
9. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

10. Test-drive the vehicle at 25 mph (40 km/h) or more in the straight ahead driving position, then turn the steering wheel left and right at 30 degrees or more once for each side. Continue test-drive afterwards more than 120 seconds.

    NOTE: Drive the vehicle on the road, not on a lift.

11. Check for DTCs with the HDS.

    Is DTC 84-12 indicated?

    YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

    NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 86: F-CAN COMMUNICATION MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Start and run the engine for at least 5 seconds.
5. Check for DTCs with the HDS.

   Is DTC 86 indicated?

   YES - Go to step 6.

   NO - Check the COMMU FI ECU, COMMU A/T (A/T), COMMU GAUGE, COMMU YAW RATE/G, COMMU STEERING ANGLE S (With SH-AWD), and COMMU 4WD (With SH-AWD) in the VSA FREEZE DATA with the HDS. Then check for F-CAN communication lines continuity to the appropriate system or sensor and loose terminals in the appropriate system or sensor connectors.

6. Check the COMMU Fl ECU, COMMU A/T (A/T), COMMU GAUGE, COMMU YAW RATE/G, COMMU STEERING ANGLE S (With SH-AWD), and COMMU 4WD (With SH-AWD) in the VSA DATA LIST with the HDS.

   Is there a communication error in the system or sensor?

YES - Go to step 7.

NO - Go to step 24.

7. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
8. Short the SCS line with the HDS.
9. Disconnect ECM/PCM connector A (49P) (see **ECM/PCM REPLACEMENT**).
10. Disconnect the VSA modulator-control unit 47P connector (see step 5).
11. Disconnect the gauge control module 32P connector (see **GAUGE CONTROL MODULE REPLACEMENT**).
12. Disconnect the yaw rate-acceleration sensor 4P connector (see **YAW RATE-ACCELERATION SENSOR REPLACEMENT**).
13. With SH-AWD: Disconnect the steering angle sensor 5P connector (see **STEERING ANGLE SENSOR REPLACEMENT**).
14. With SH-AWD: Disconnect SH-AWD control unit connector A (20P) (see **REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR REPLACEMENT**).
15. Check the F-CAN communication lines for continuity between the VSA modulator-control unit and the appropriate system or sensor (see table below).

Component	F-CAN L Terminal	F-CAN H Terminal
VSA Modulator-Control Unit	No. 13	No. 12
ECM/PCM	No. A49	No. A48
Gauge Control Module	No. 13	No. 14
Yaw Rate-Acceleration Sensor	No. 2	No. 3
Steering Angle Sensor (With SH-AWD)	No. 2	No. 4
SH-AWD Control Unit (With SH-AWD)	No. A20	No. A10

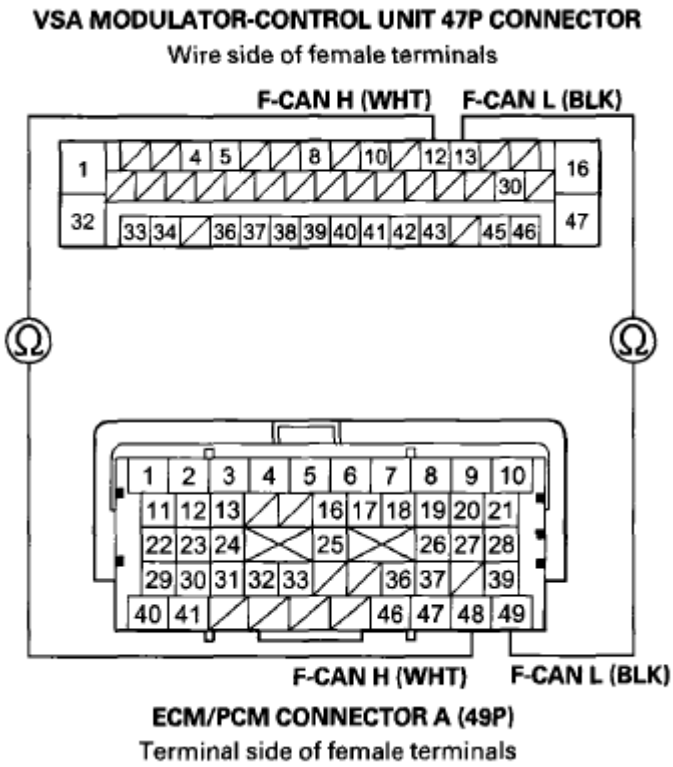

Fig. 50: Checking F-CAN Communication Lines For Continuity Between VSA Modulator-Control Unit And System Or Sensor

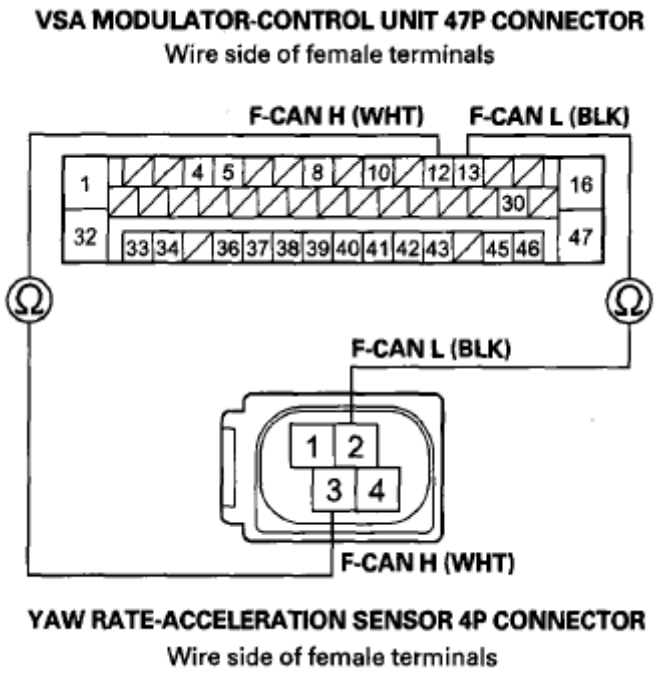

Fig. 52: Measuring Resistance Between VSA Modulator-Control Unit 47P And Yaw Rate-Acceleration Sensor 4P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With SH-AWD:

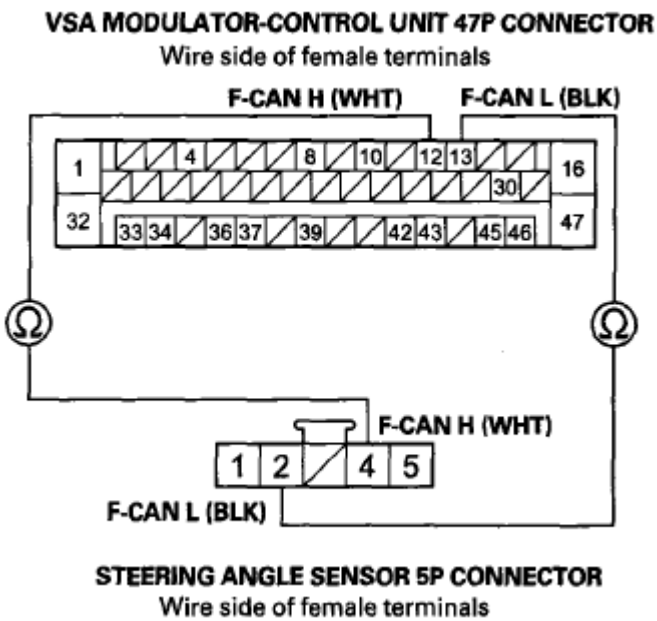

Fig. 53: Measuring Resistance Between VSA Modulator-Control Unit 47P And Steering Angle Sensor 5P Connector (With SH-AWD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

With SH-AWD:

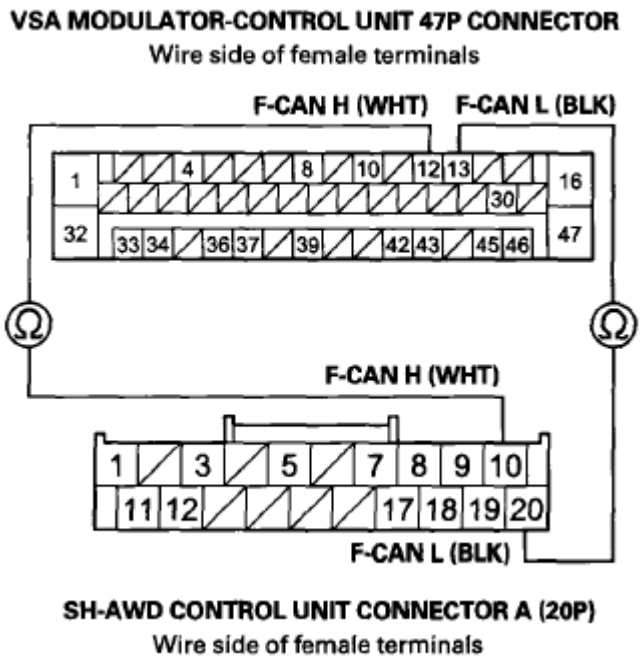

Fig. 54: Measuring Resistance Between VSA Modulator-Control Unit 47P And SH-AWD Control Unit A (20P) Connector (With SH-AWD)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity on the F-CAN communication lines?

YES -

- If the appropriate system or sensor is the yaw rate-acceleration sensor: Go to step 16.
- If the appropriate system or sensor is not the yaw rate-acceleration sensor: Go to step 20.

NO - Repair an open in the appropriate wire.

16. Check for loose terminals in the yaw rate-acceleration sensor 4P connector.

    Is the yaw rate-acceleration sensor 4P connector OK?

    YES - Go to step 17.

    NO - Repair or reconnect the connector securely.

17. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
18. Measure the voltage between yaw rate-acceleration sensor 4P connector terminals No. 1 and No. 4.

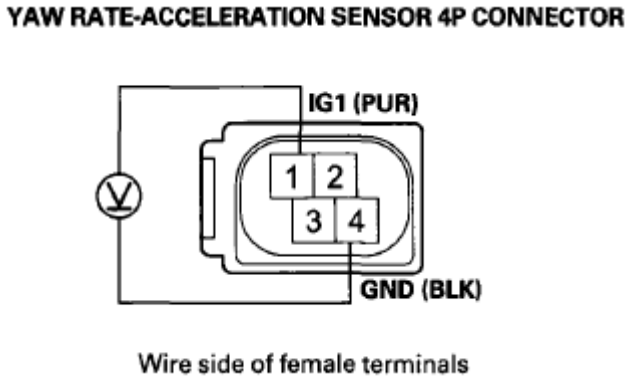

Fig. 55: Measuring Voltage Between Yaw Rate-Acceleration Sensor 4P Connector Terminals No. 1 And No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Replace the yaw rate-acceleration sensor (see **YAW RATE-ACCELERATION SENSOR REPLACEMENT**).

NO - Go to step 19.

19. Measure the voltage between yaw rate-acceleration sensor 4P connector terminal No. 1 and body ground.

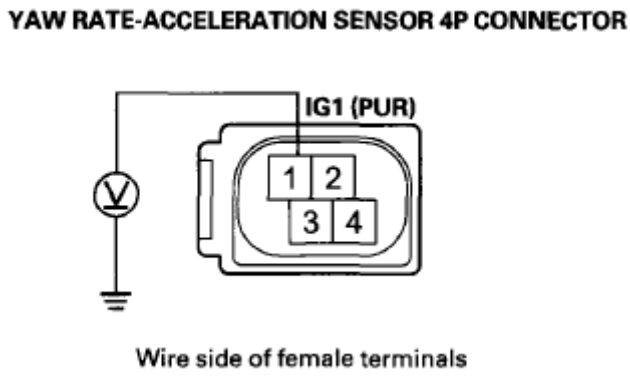

Fig. 56: Measuring Voltage Between Yaw Rate-Acceleration Sensor 4P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair an open in the wire between the yaw rate-acceleration sensor and body ground (G403).

NO - Repair an open in the wire between the yaw rate-acceleration sensor and the driver's under-dash fuse/relay box.

20. Check for loose terminals in the appropriate system connectors.

Are the appropriate system connectors OK?

YES - Go to step 21.

NO - Repair or reconnect the connector securely.

21. Reconnect all connectors.
22. Start and run the engine for at least 5 seconds.
23. Check for other system DTCs with the HDS.

Is another DTCs indicated?

YES - Do the appropriate DTC troubleshooting.

NO - Go to step 24.

24. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
25. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
26. Start and run the engine for at least 5 seconds.
27. Check for DTCs with the HDS.

Is DTC 86 indicated?

YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 91: VSA ACTIVATION TIME TOO LONG

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

5. Check for DTCs with the HDS.

   Is DTC 91 Indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

6. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
7. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
8. Test-drive the vehicle at 19 mph (30 km/h) or more.

   NOTE: Drive the vehicle on the road, not on a lift.

9. Check for DTCs with the HDS.

   Is DTC 91 indicated?

   YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

   NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 105: HYDRAULIC UNIT TEMPERATURE SENSOR MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Test-drive the vehicle at 19 mph (30 km/h) or more.

   NOTE: Drive the vehicle on the road, not on a lift.

5. Check for DTCs with the HDS.

   Is DTC 105 indicated?

YES - Go to step 6.

NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

6. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
7. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
8. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

9. Check for DTCs with the HDS.

Is DTC 105 indicated?

YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 111: BACK-UP LIGHT SWITCH MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn it to ON (II) again, or select the OFF mode, then the ON mode.
4. Check the REVERSE SWITCH STATUS in the VSA DATA LIST with the HDS.

Does It indicate ON when the shift lever is in reverse, and OFF when the shift lever is in neutral?

YES - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

NO - Go to step 5.

5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
6. Check the back-up light switch (see **BACK-UP LIGHT SWITCH TEST/REPLACEMENT**).

Is the back-up light switch OK?

YES - Go to step 7.

NO - Replace the back-up light switch (see **BACK-UP LIGHT SWITCH TEST/REPLACEMENT**).

7. Check the No. 12 (7.5 A) fuse in the driver's under-dash fuse/relay box.

   Is the fuse blown?

   YES - Go to step 8.

   NO - Reinstall the checked fuse, then go to step 19.

8. Disconnect the driver's under-dash fuse/relay box connector F (33P) (see **FUSE TO COMPONENTS INDEX**).
9. Disconnect the back-up light switch 2P connector (see **BACK-UP LIGHT SWITCH TEST/REPLACEMENT**).
10. Check for continuity between back-up light switch 2P connector terminal No. 2 and body ground.

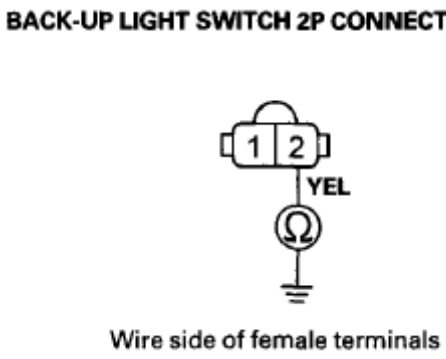

Fig. 57: Checking Continuity Between Back-Up Light Switch 2P Connector Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between the No. 12 (7.5 A) fuse in the driver's under-dash fuse/relay box and the back-up light switch.

NO - Go to step 11.

11. Disconnect the VSA modulator-control unit 47P connector (see step 5).
12. Check for continuity between VSA modulator-control unit 47P connector terminal No. 4 and body ground.

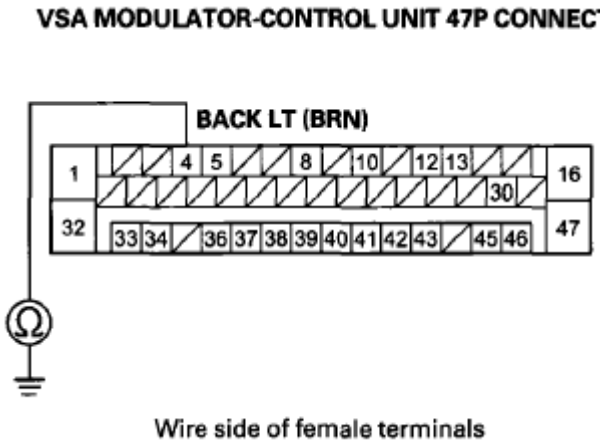

Fig. 58: Checking Continuity Between VSA Modulator-Control Unit 47P Connector Terminal No. 4 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between the VSA modulator-control unit and the back-up light switch.

NO - Install a new No. 12 (7.5 A) fuse in the driver's under-dash fuse/relay box, then go to step 13.

13. Reconnect all connectors.
14. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
15. Clear the DTC with the HDS.
16. Turn the ignition switch to LOCK(0), or press the engine start/stop button to select the OFF mode.
17. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

18. Check for DTCs with the HDS.

Is DTC 111 indicated?

YES - Go to step 30.

NO - Troubleshooting is complete.

19. Disconnect the VSA modulator-control unit 47P connector (see step 5).
20. Shift the shift lever into reverse.
21. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
22. Measure the voltage between VSA modulator-control unit 47P connector terminal No. 4 and body ground.

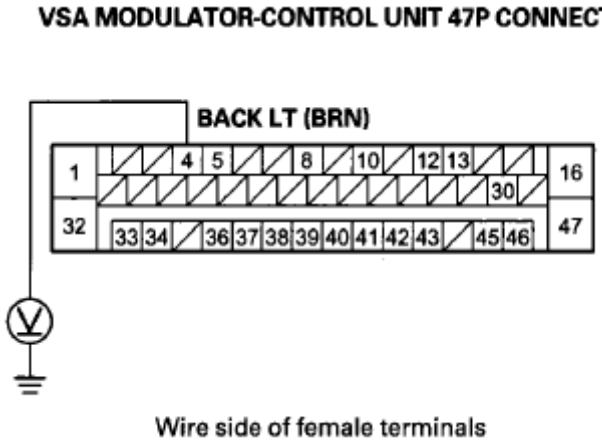

Fig. 59: Measuring Voltage Between VSA Modulator-Control Unit 47P Connector Terminal No. 4 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 23.

NO - Repair an open in the wire between the No. 12 (7.5 A) fuse in the driver's under-dash fuse/relay box and the VSA modulator-control unit.

23. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
24. Disconnect the back-up light switch 2P connector (see **BACK-UP LIGHT SWITCH TEST/REPLACEMENT**).
25. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
26. Measure the voltage between VSA modulator-control unit 47P connector terminal No. 4 and body ground.

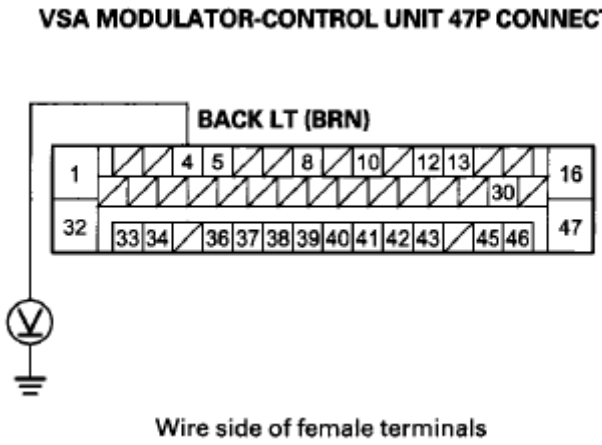

Fig. 60: Measuring Voltage Between VSA Modulator-Control Unit 47P Connector Terminal No. 4 And Body Ground

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.1 V or more?

YES - Repair a short to power in the wire between the VSA modulator-control unit and the back-up light switch.

NO - Go to step 27.

27. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
28. Reconnect all connectors.
29. Shift the shift lever into neutral.
30. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
31. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
32. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

33. Check for DTCs with the HDS.

Is DTC 111 indicated?

YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 118: CLUTCH PEDAL POSITION SWITCH B MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Start and run the engine for at least 5 seconds.
5. Check for DTCs with the HDS.

Is DTC 86 indicated?

YES - Do the troubleshooting for DTC 86 (see **DTC 86: F-CAN COMMUNICATION MALFUNCTION**).

NO - Go to step 6.

6. Check for fuel and emissions systems DTCs with the HDS (see **GENERAL TROUBLESHOOTING INFORMATION**).

   Is DTC P0835 indicated?

   YES - Do the troubleshooting for DTC P0835 (see **DTC P0835: CLUTCH PEDAL POSITION SWITCH B CIRCUIT LOW VOLTAGE**).

   NO - Go to step 7.

7. Check the CRUISE CANCEL CLUTCH SWITCH STATUS in the VSA DATA LIST with the HDS while moving the clutch pedal.

   Does it indicate OFF when the pedal is pressed, and ON when the pedal is released?

   YES - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

   NO - Go to step 8.

8. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
9. Check the clutch pedal position switch B (see **CLUTCH PEDAL POSITION SWITCH B TEST**).

   Is the clutch pedal position switch B OK?

   YES - Go to step 10.

   NO - Replace the clutch pedal position switch B (see **CLUTCH PEDAL POSITION SWITCH B TEST**).

10. Short the SCS line with the HDS.
11. Disconnect ECM connector A (49P) (see **ECM/PCM REPLACEMENT**).
12. Disconnect he clutch pedal position switch B 3P connector (see **CLUTCH PEDAL POSITION SWITCH B REPLACEMENT**).
13. Check for continuity between clutch pedal position switch B 3P connector terminal No. 2 and ECM connector A (49P) terminal No. 47.

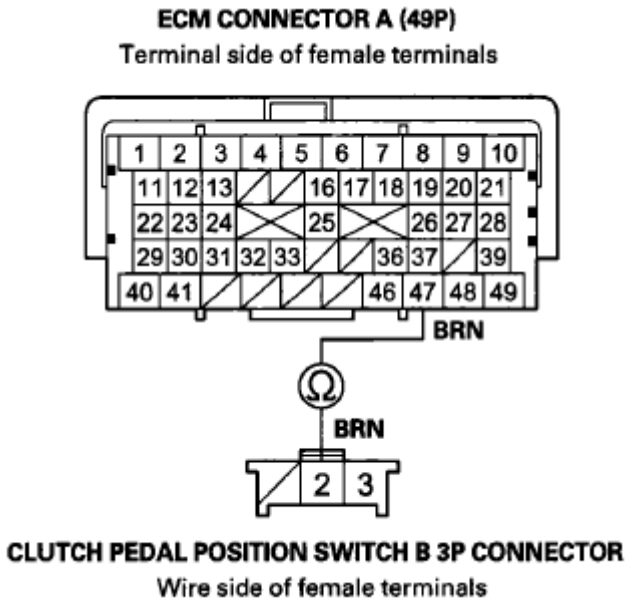

Fig. 61: Checking Continuity Between Clutch Pedal Position Switch B 3P Connector Terminal No. 2 And ECM Connector A (49P) Terminal No. 47
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 14.

NO - Repair an open in the wire between the ECM and the clutch pedal position switch B.

14. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
15. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
16. Test-drive the vehicle at 19 mph (30 km/h) or more.

NOTE: Drive the vehicle on the road, not on a lift.

17. Check for DTCs with the HDS.

Is DTC 118 indicated?

YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 121: VSA SOLENOID VALVE MALFUNCTION; DTC 122: VSA SOLENOID VALVE MALFUNCTION; DTC 123: VSA SOLENOID VALVE MALFUNCTION; DTC 124: VSA SOLENOID VALVE MALFUNCTION

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Test-drive the vehicle at 19 mph (30 km/h) or more.

   NOTE: Drive the vehicle on the road, not on a lift.

5. Check for DTCs with the HDS.

   Is DTC 121, 122, 123, or 124 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time. Refer to **INTERMITTENT FAILURES TROUBLESHOOTING**.

6. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
7. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
8. Test-drive the vehicle at 19 mph (30 km/h) or more.

   NOTE: Drive the vehicle on the road, not on a lift.

9. Check for DTCs with the HDS.

   Is DTC 121, 122, 123, or 124 indicated?

   YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the VSA modulator-control unit was updated and the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

   NO - If the VSA modulator-control unit was updated, troubleshooting is complete. If any other DTCs are indicated, go to the indicated **DTCS TROUBLESHOOTING**.

DTC 158: ECU SOFTWARE UPDATE FAILURE

NOTE: Before you troubleshoot, record all freeze data and any on-board snapshot, and review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Update the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
2. Turn the ignition switch to LOCK (0), then turn it to ON (II) again, or select the OFF mode, then the ON mode.
3. Check for DTCs with the HDS.

   Is DTC 158 indicated?

   YES - Check for loose terminals in the VSA modulator-control unit 47P connector. If the symptom/indication is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

   NO - Troubleshooting is complete.

SYMPTOM TROUBLESHOOTING

VSA CANNOT BE TURNED OFF

NOTE: If the low tire pressure indicator turns ON, the VSA cannot be turned OFF. Check the tire pressure first.

1. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. Check the VSA OFF switch (see **VSA OFF SWITCH TEST/REPLACEMENT**).

   Is the VSA OFF switch OK?

   YES - Go to step 3.

   NO - Replace the VSA OFF switch (see **VSA OFF SWITCH TEST/REPLACEMENT**).

3. Disconnect the VSA OFF switch 5P connector (see **VSA OFF SWITCH TEST/REPLACEMENT**).
4. Disconnect the gauge control module 32P connector (see **GAUGE CONTROL MODULE REPLACEMENT**).
5. Check for continuity between gauge control module 32P connector terminals No. 26 and VSA OFF switch 5P connector terminal No. 1.

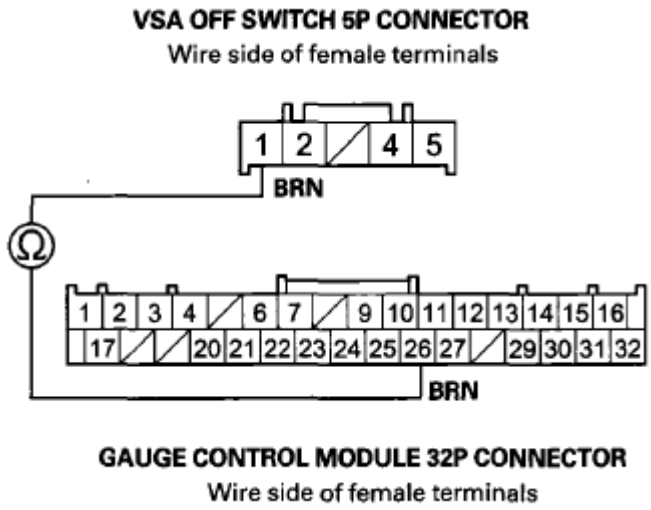

Fig. 62: Checking Continuity Between Gauge Control Module 32P Connector Terminals No. 26 And VSA OFF Switch 5P Connector Terminal No. 1
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 6.

NO - Repair an open in the wire between the gauge control module and the VSA OFF switch.

6. Check for continuity between VSA OFF switch 5P connector terminal No. 1 and body ground.

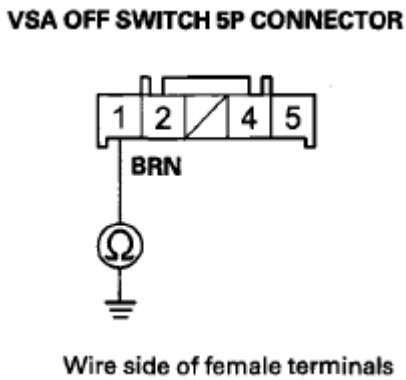

Fig. 63: Checking Continuity Between VSA OFF Switch 5P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between the gauge control module and the VSA OFF switch.

NO - Go to step 7.

7. Check for continuity between VSA OFF switch 5P connector terminal No. 2 and body ground.

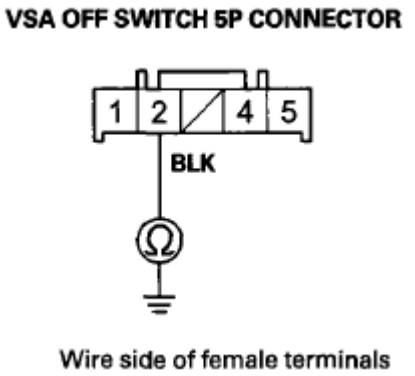

Fig. 64: Check For Continuity Between VSA OFF Switch 5P Connector Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).

NO - Repair an open in the wire between the VSA OFF switch and body ground (G401).

ABS INDICATOR, BRAKE SYSTEM INDICATOR, AND VSA INDICATOR DO NOT GO OFF

1. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. Check the No. 6 (7.5 A) fuse in the driver's under-dash fuse/relay box.

Is the fuse blown?

YES - Replace the fuse. Turn the ignition switch to ON (II), then turn it to LOCK (0), or select the ON mode, then the OFF mode again. If the fuse blows again, repair the short to body ground on the No. 6 (7.5 A) fuse circuit.

NO - Reinstall the checked fuse, then go to step 3.

3. Check the No. 2-3 (30 A) fuse in the under-hood fuse/relay box.

Is the fuse blown?

YES - Replace the fuse. If the fuse blows again, repair the short to body ground on the No. 2-3 (30 A) fuse circuit.

NO - Reinstall the checked fuse, then go to step 4.

4. Do the gauge control module self-diagnostic function (see **SELF-DIAGNOSTIC FUNCTION**).

   Is the gauge control module OK?

   YES - Go to step 5.

   NO - Replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).

5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
6. Disconnect the VSA modulator-control unit 47P connector (see step 5).
7. Disconnect the yaw rate-acceleration sensor 4P connector (see **YAW RATE-ACCELERATION SENSOR REPLACEMENT**).
8. With SH-AWD: Disconnect the steering angle sensor 5P connector (see **STEERING ANGLE SENSOR REPLACEMENT**).

   NOTE: Without SH-AWD, the steering angle sensor is not powered by IG1.

9. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
10. Measure the voltage between VSA modulator-control unit 47P connector terminal No. 8 and body ground.

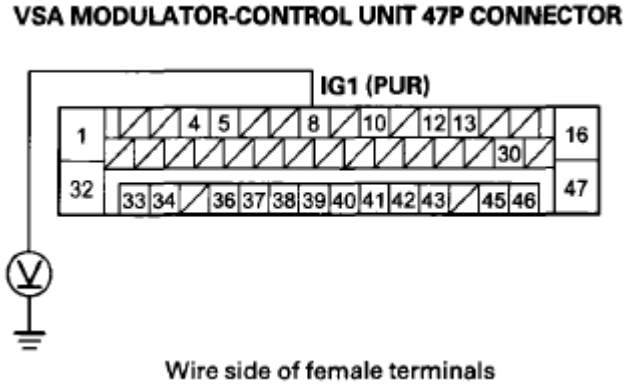

Fig. 65: Measuring Voltage Between VSA Modulator-Control Unit 47P Connector Terminal No. 8 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 11.

NO - Repair an open in the wire between the No. 6 (7.5 A) fuse in the driver's under-dash fuse/relay box and the VSA modulator-control unit.

11. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
12. Check for continuity between VSA modulator-control unit 47P connector terminal No. 16 and body

ground.

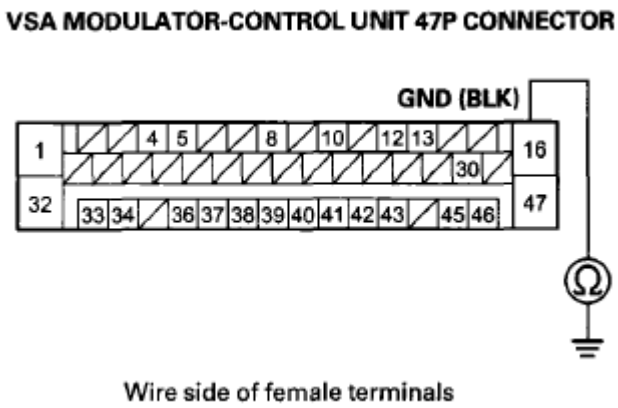

Fig. 66: Checking Continuity Between VSA Modulator-Control Unit 47P Connector Terminal No. 16 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Repair an open in the wire between the VSA modulator-control unit and body ground (G202).

13. Measure the voltage between VSA modulator-control unit 47P connector terminal No. 32 and body ground.

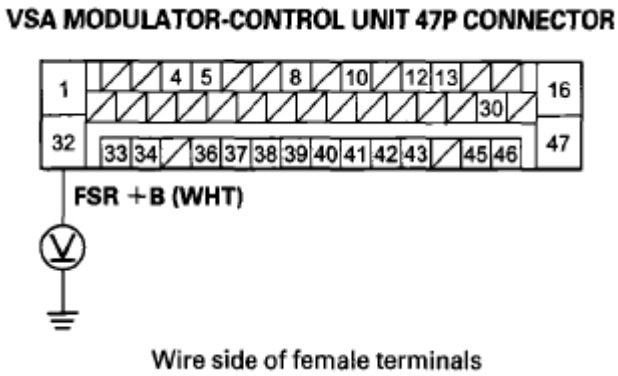

Fig. 67: Measuring Voltage Between VSA Modulator-Control Unit 47P Connector Terminal No. 32 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 14.

NO - Repair an open in the wire between the No. 2-3 (30 A) fuse in the under-hood fuse/relay box and

the VSA modulator-control unit.

14. Disconnect the gauge control module 32P connector (see **GAUGE CONTROL MODULE REPLACEMENT**).
15. Check for continuity between the VSA modulator-control unit 47P connector terminal and gauge control module 32P connector terminal (see table below).

Sign	VSA Modulator-Control Unit 47P Connector Terminal	Gauge Control Module 32P Connector Terminal
F-CAN L	No. 13	No. 13
F-CAN H	No. 12	No. 14

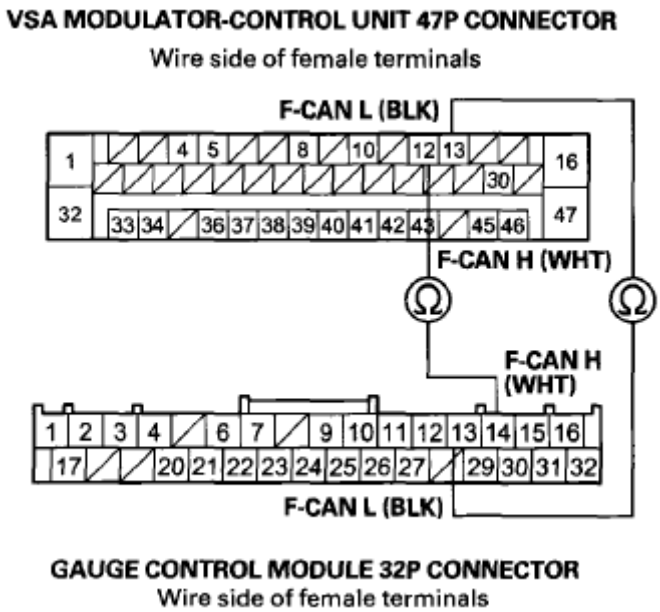

Fig. 68: Checking Continuity Between VSA Modulator-Control Unit 47P Connector Terminal And Gauge Control Module 32P Connector Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 16.

NO - Repair an open in the wire between the gauge control module and the VSA modulator-control unit.

16. Reconnect all connectors.
17. Update the VSA modulator-control unit if it does not have the latest software (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
18. Turn the ignition switch to LOCK (0), then turn it to ON (II) again, or select the OFF mode, then the ON

mode.

19. Check the ABS indicator, the brake system indicator, and the VSA indicator for several seconds when the ignition switch is turned to ON (II), or press the engine start/stop button to select the ON mode.

    Do the indicators come on then go off?

    YES - Troubleshooting is complete.

    NO - Check for loose terminals in the VSA modulator-control unit 47P connector. If the symptom is still present, replace the VSA modulator-control unit (see **VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION**).

STEERING ANGLE SENSOR REPLACEMENT

SRS components are located in this area. Review the SRS component locations (see **COMPONENT LOCATION INDEX**) and the precautions and procedures (see **PRECAUTIONS AND PROCEDURES**) before doing repairs or service.

NOTE: Do not damage or drop the combination switch as the steering angle sensor is sensitive to shock and vibration.

1. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. With the wheels in the straight ahead position and the steering wheel centered, then remove the steering wheel (see **STEERING WHEEL REMOVAL**).
3. Remove the steering column covers (see **SIDE DEFOGGER VENT TRIM REMOVAL/INSTALLATION**).
4. Disconnect the combination light switch 12P connector (A) and the steering angle sensor 5P connector (B) from the combination switch assembly/cable reel (C).

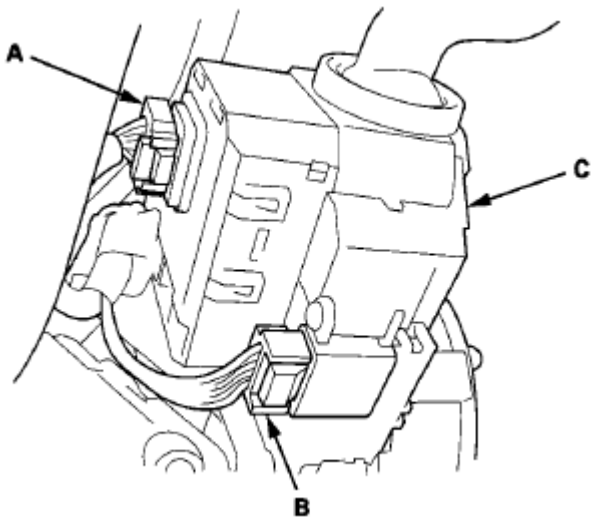

Fig. 69: Identifying Light Switch 12P Connector, Steering Angle Sensor 5P Connector And Switch Assembly/Cable Reel

Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the dashboard wire harness 4P connector (A) from the cable reel 4P connector (B), then disconnect the dashboard wire harness 20P connector (C) and the wiper/washer switch 8P connector (D).

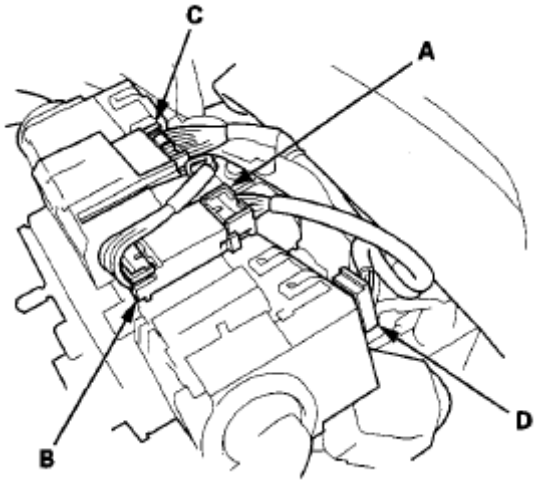

Fig. 70: Identifying Dashboard Wire Harness 4P Connector, 20P Connector, Cable Reel 4P Connector And Wiper/Washer Switch 8P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the combination switch assembly/cable reel mounting screws (A).

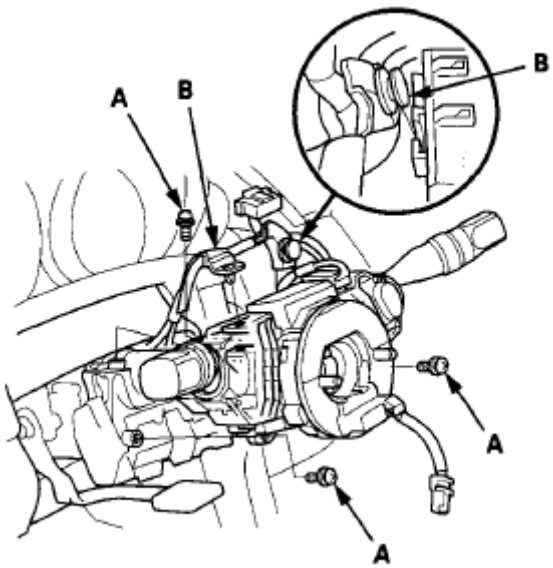

Fig. 71: Identifying Wire Harness Clips And Switch Assembly/Cable Reel Mounting Screws
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the wire harness clips (B), then remove the combination switch assembly/cable reel from the steering column.

8. Remove the cable reel (see **CABLE REEL REPLACEMENT**).
9. Remove the combination light switch (A) and the wiper/washer switch (B) from the combination switch body assembly (C).

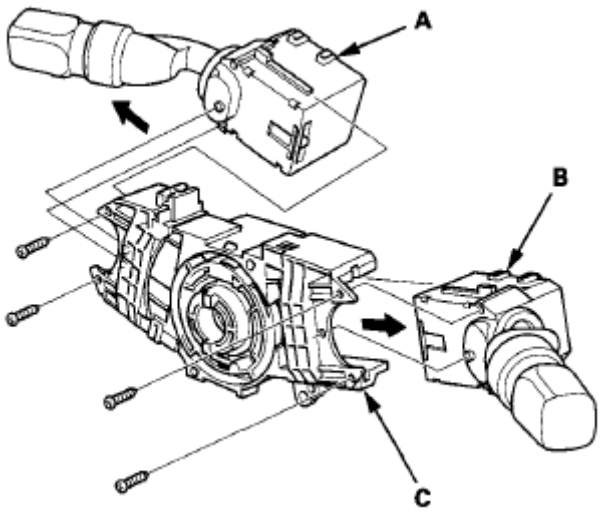

Fig. 72: Removing Combination Light Switch And Wiper/Washer Switch From Combination Switch Body Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the combination switch body assembly in the reverse order of removal, and note these items:
    - Do not remove the steering angle sensor from the combination switch body assembly.
    - When installing the cable reel, set the turn signal canceling sleeve position so that the arrow points straight up (see **INSTALLATION**).
    - Tighten the combination switch assembly/cable reel mounting screws in the proper sequence (see **INSTALLATION**).
    - With SH-AWD: Do the VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION MEMORIZATION**).

YAW RATE-ACCELERATION SENSOR REPLACEMENT

NOTE:
- **Do not damage or drop the sensor as it is sensitive.**
- **Do not use power tools when replacing the sensor.**

1. Turn the ignition-switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. Remove the center console (see **CENTER CONSOLE REMOVAL/INSTALLATION**).
3. MT: Remove the shift lever assembly (see **SHIFT LEVER HOUSING REPLACEMENT**).
4. Disconnect the yaw rate-acceleration sensor 4P connector (A), then remove the yaw rate-acceleration sensor (B).

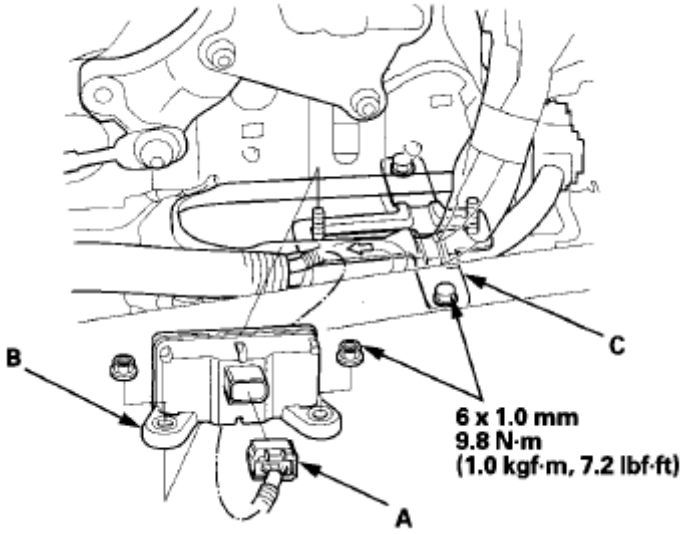

Fig. 73: Identifying Yaw Rate-Acceleration Sensor, Sensor 4P Connector, And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Check for deformation in the bracket (C). If necessary replace it.
6. Install the yaw rate-acceleration sensor in the reverse order of removal.
7. Do the VSA sensor neutral position memorization (see **VSA SENSOR NEUTRAL POSITION MEMORIZATION**).
8. SH-AWD: Do the yaw rate-acceleration neutral position memorization (see **SH-AWD® DIFFERENTIAL CLUTCH TORQUE MEMORIZATION**).

VSA SENSOR NEUTRAL POSITION MEMORIZATION

NOTE: Do not press the brake pedal during this procedure.

1. Park the vehicle on a flat and level surface, with the steering wheel in the straight ahead position.
2. With the ignition switch in LOCK (0), or press the engine start/stop button to select the OFF mode, connect the HDS to the data link connector (DLC) (A) under the driver's side of the dashboard.

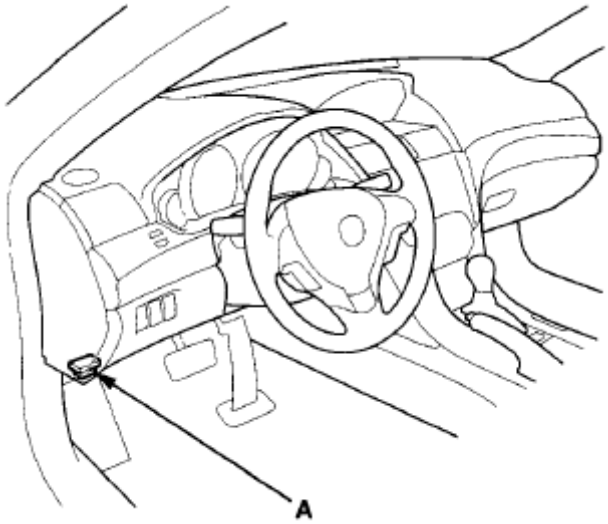

Fig. 74: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

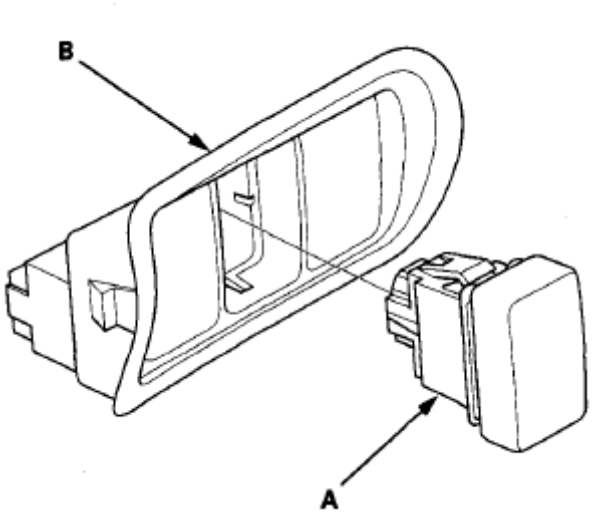
3. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
4. Make sure the HDS communicates with the vehicle and the VSA modulator-control unit. If it does not, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
5. Select VSA ADJUSTMENT, then select ALL SENSORS with the HDS, and follow the screen prompts.

NOTE: See the HDS Help menu for specific instructions.

6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

VSA OFF SWITCH TEST/REPLACEMENT

1. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. Remove the driver's switch panel (see **DRIVER'S SWITCH PANEL REMOVAL/INSTALLATION**).
3. Remove the VSA OFF switch (A) from the driver's switch panel (B).



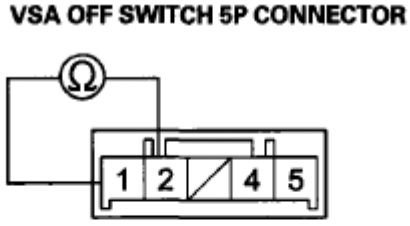


Fig. 75: Identifying VSA OFF Switch And Driver's Switch Panel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. On the switch side, check for continuity between the VSA OFF switch 5P connector terminal in each switch position according to the table.

Terminal side of male terminals

Position \ Terminal	1	2
PRESSED		
RELEASED	○	○

Fig. 76: Checking Continuity Between VSA OFF Switch 5P Connector Terminal In Each Switch Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- If the switch does not work as described in the table, replace the switch.
- If the switch tests OK, go to step 5.

5. On the switch side, check for continuity between VSA OFF switch 5P connector terminals No. 4 and No. 5. There should be continuity at all times.

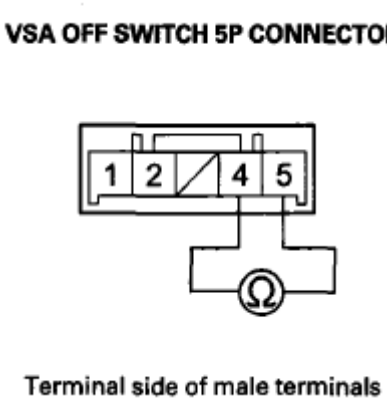

Fig. 77: Checking Continuity Between VSA OFF Switch 5P Connector Terminals No. 4 And No. 5
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If the continuity is not as specified, replace the VSA OFF switch.
7. Install the VSA OFF switch in the reverse order of removal.

VSA MODULATOR-CONTROL UNIT UPDATE

Special Tools Required

- Honda Diagnostic System (HDS) tablet tester
- Honda Interface Module (HIM) and an iN workstation with the latest HDS software version
- HDS Pocket Tester
- GNA600 and an iN workstation with the latest HDS software version
- MVCI unit with the latest control module (CM) update software installed

Any one of the above updating tools can be used.

NOTE:

- **Use this procedure when you need to update the VSA modulator-control unit at anytime.**
- **Make sure the HDS/iN workstation has the latest software version.**
- **Before you update the VSA modulator-control unit, make sure the battery in the vehicle is fully charged, and connect a jumper to the battery (not a battery charger) to maintain system voltage.**
- **Never turn the ignition switch to LOCK (0) or ACCESSORY (I), or press the engine start/stop button to select the OFF or ACCESSORY mode, during the update. If there is a problem with the update, leave the ignition switch ON (II), or the ON mode.**
- **To prevent VSA modulator-control unit damage, do not operate anything electrical (headlights, audio system, brakes, A/C, power windows, door locks, etc.) during the update.**
- **To ensure the latest program is installed, do a VSA modulator-control unit**

update whenever the VSA modulator-control unit is substituted or replaced.

- **You cannot update a VSA modulator-control unit with a program it already has. It will only accept a new program.**
- **High temperature in the engine compartment might cause the VSA modulator-control unit to become too hot to run the update. If the engine has been running before this procedure, open the hood and cool the engine compartment.**
- **If you need to diagnose the Honda interface module (HIM) because the HIM's red (#3) light came on or was flashing during the update, leave the ignition switch in ON (II), or in the ON mode when you disconnect the HIM from the data link connector (DLC). This will prevent VSA modulator-control unit damage.**
- **DTCs stored in memory are cleared when the VSA modulator-control unit is updated.**

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode, but do not start the engine.
2. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

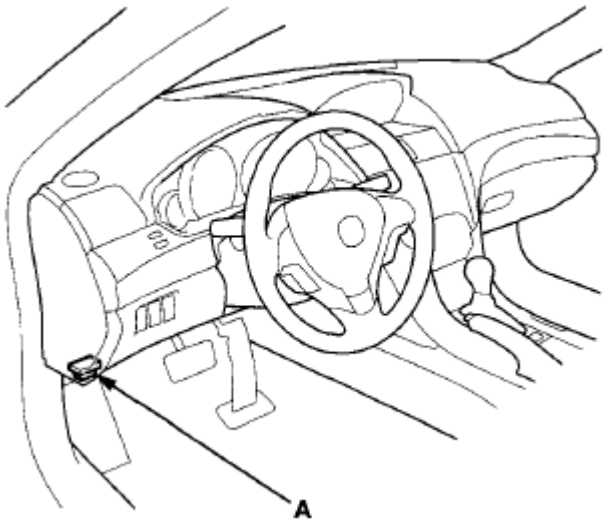

Fig. 78: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Make sure the HDS communicates with the vehicle and the VSA modulator-control unit. If it does not, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Select the update mode, and follow the screen prompts to update the VSA modulator-control unit.
5. If the software in the VSA modulator-control unit is the latest, disconnect the HDS/HIM/GNA600 from the DLC. If the software in the VSA modulator-control unit is not the latest, follow the instructions on the screen.
6. Do the VSA sensor neutral position memorization procedure (see **VSA SENSOR NEUTRAL**

POSITION MEMORIZATION).

VSA MODULATOR-CONTROL UNIT REMOVAL AND INSTALLATION

NOTE: **Do not spill brake fluid on the vehicle; it may damage the paint. If brake fluid gets on the paint, wash it off immediately with water.**

NOTE:

- **Be careful not to damage or deform the brake lines during removal and installation.**
- **To prevent the brake fluid from dripping, plug and cover the hose ends and joints with a shop towel.**

REMOVAL

1. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. Remove the left and right engine compartment covers (A) (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

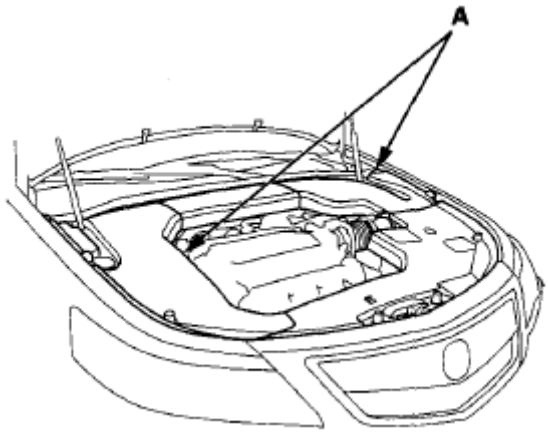

Fig. 79: Identifying Left And Right Engine Compartment Covers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the suction line mounting bolt (A) from the bracket.

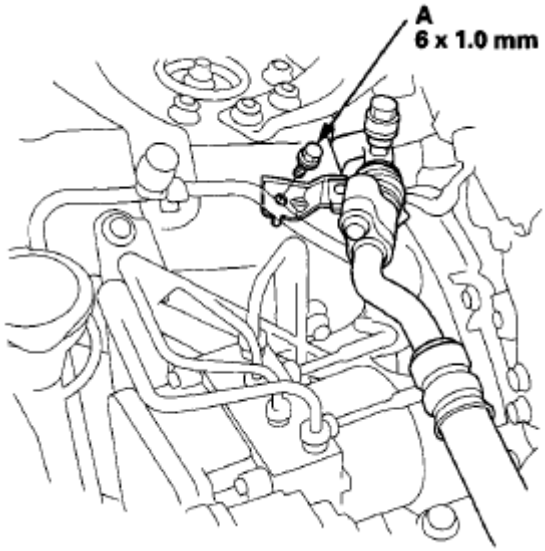

Fig. 80: Identifying Suction Line Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the 10 mm brake lines (A) and the 12 mm brake lines (B) from the VSA modulator-control unit (C).

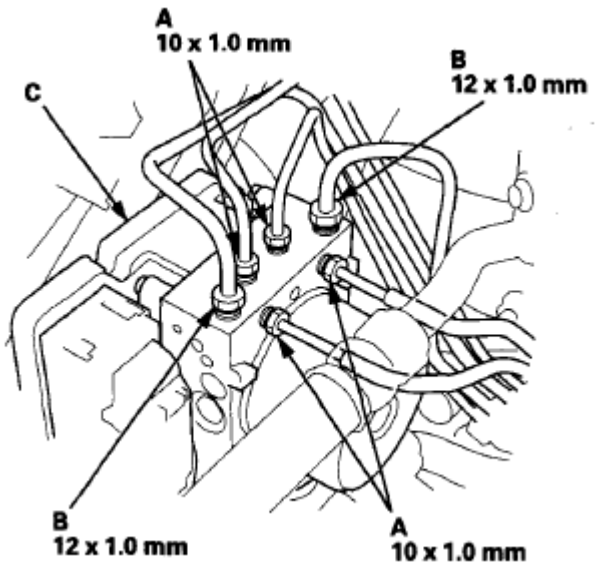

Fig. 81: Identifying Brake Lines, VSA Modulator-Control Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the VSA modulator-control unit 47P connector (A) by pushing the lock (B) and pulling up the lever (C); the connector disconnects itself.

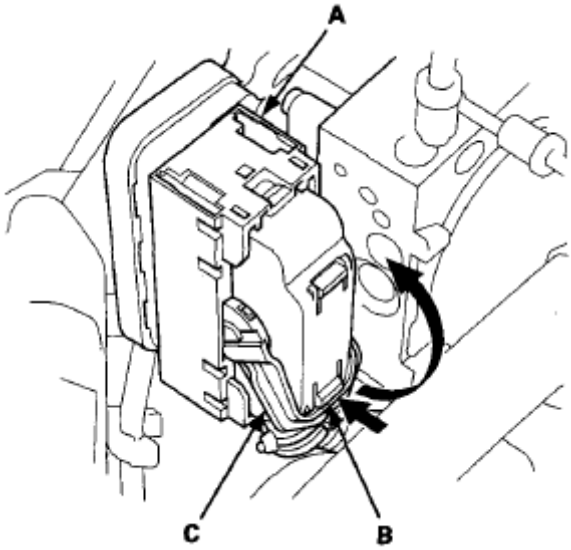

Fig. 82: Disconnecting VSA Modulator-Control Unit 47P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the VSA modulator-control unit bracket mounting bolts (A) and the wire harness clips (B), then remove the VSA modulator-control unit (C) with the bracket (D) from the body.

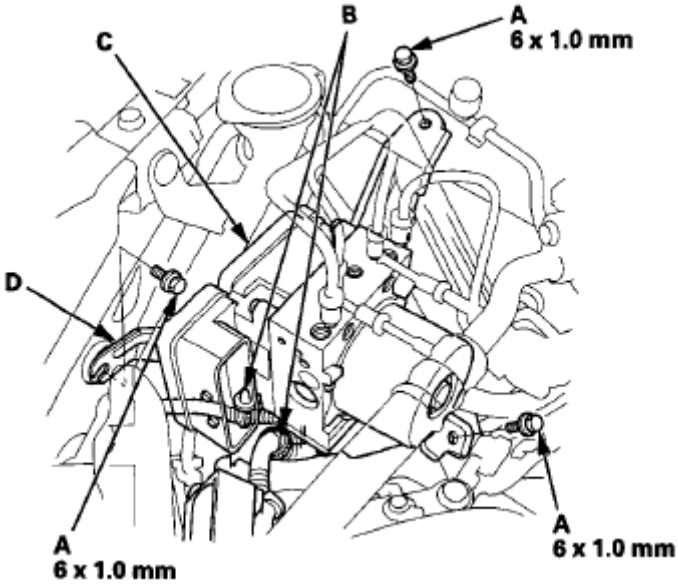

Fig. 83: Identifying Wire Harness Clips, VSA Modulator-Control Unit, Bracket And Bracket Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the TORX bolts (A), then remove the VSA modulator-control unit (B) from the bracket (C).

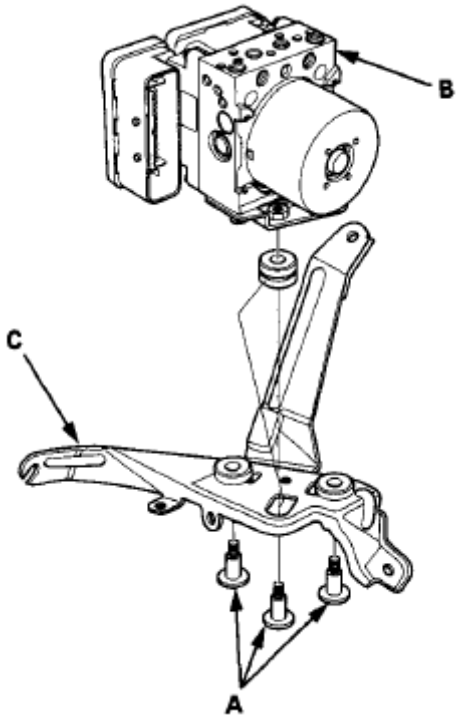

Fig. 84: Identifying Bracket, VSA Modulator-Control Unit And TORX Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Install the VSA modulator-control unit (A) onto the bracket (B), then tighten the TORX bolts (C).

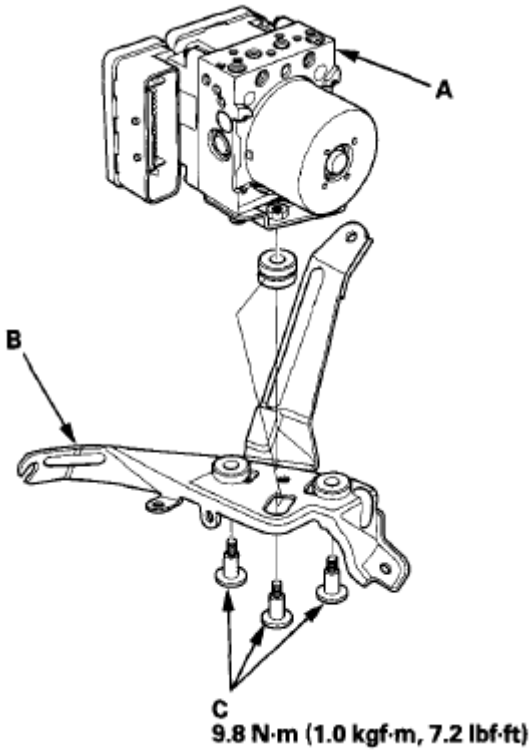

Fig. 85: Identifying Bracket, VSA Modulator-Control Unit And TORX Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the VSA modulator-control unit (A) with the bracket (B) to the body, then install the wire harness clips (C) and the VSA modulator-control unit bracket mounting bolts (D).

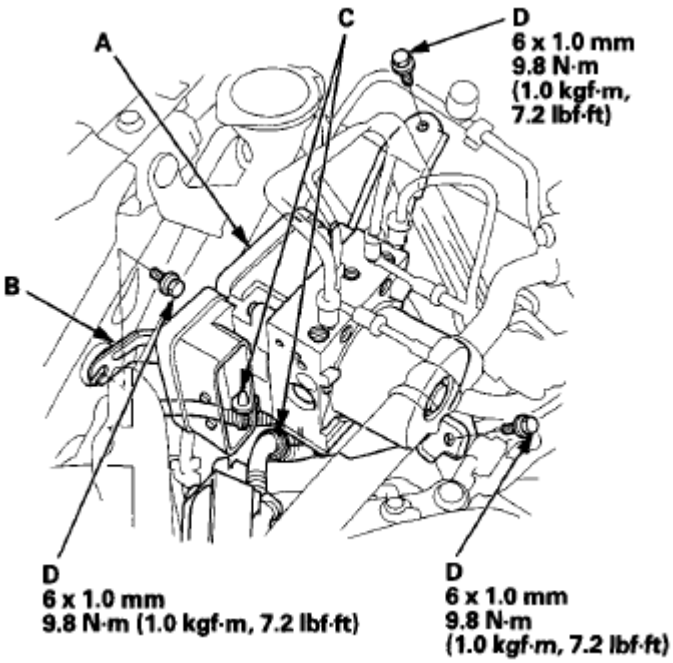

Fig. 86: Identifying Wire Harness Clips, VSA Modulator-Control Unit, Bracket And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Align the connecting surface of the VSA modulator-control unit 47P connector (A) to the VSA modulator-control unit.

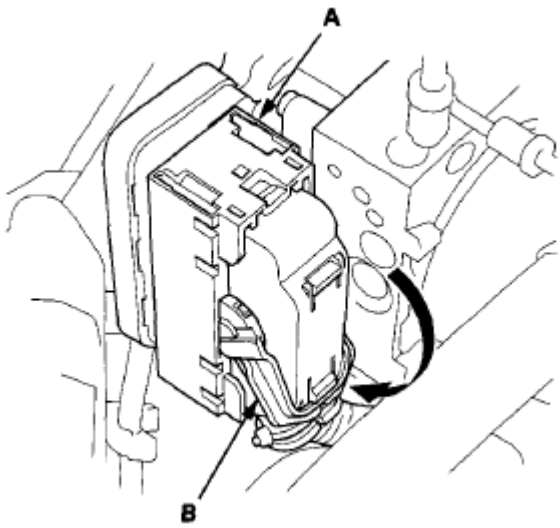

Fig. 87: Identifying VSA Modulator-Control Unit 47P Connector, Lever & VSA Modulator-Control Unit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Pull down the lever (B) of the VSA modulator-control unit 47P connector, then confirm the connector is fully seated.
5. Connect the 10 mm brake lines and the 12 mm brake lines to the VSA modulator-control unit (A).

NOTE: Brake lines are connected to the master cylinder (B), the left-front (C), the right-front (D), the left-rear (E), and the right-rear (F) brake systems.

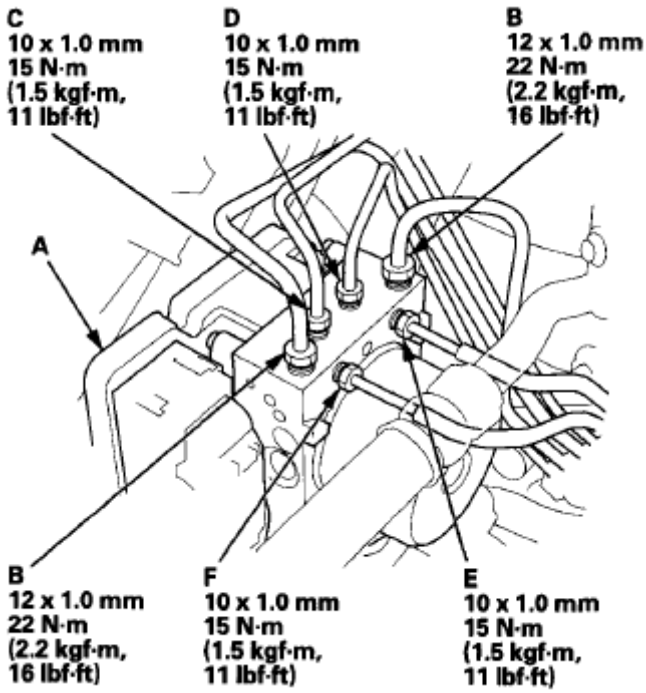

Fig. 88: Identifying Master Cylinder, Left-Front, Right-Front, Left-Rear And Right-Rear Of Brake Systems With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the suction line mounting bolt (A) to the bracket.

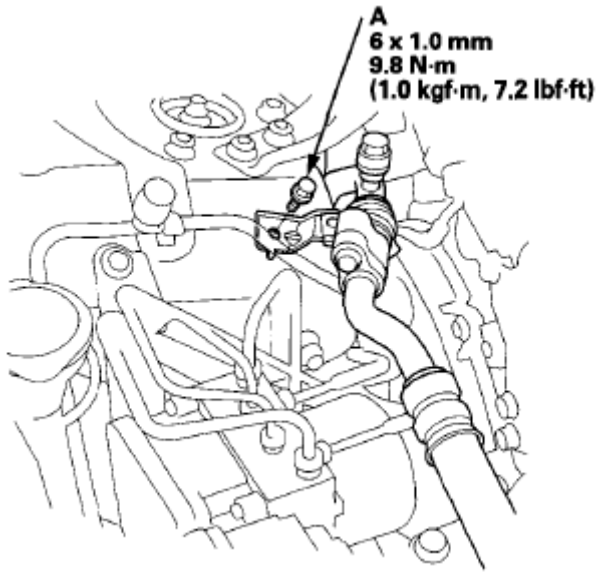

Fig. 89: Identifying Suction Line Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Bleed the brake system (see **BRAKE SYSTEM BLEEDING**).

8. Install the left and right engine compartment covers (A) (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

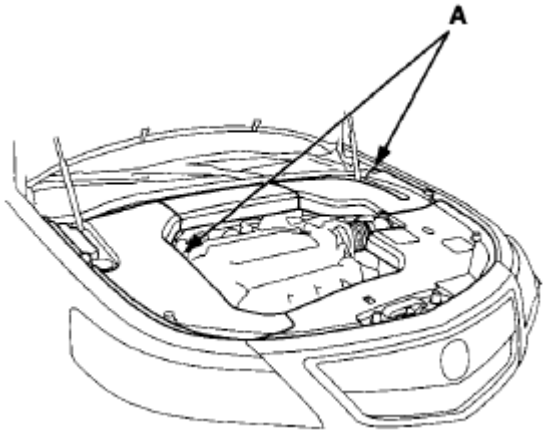

Fig. 90: Identifying Left And Right Engine Compartment Covers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Do the VSA modulator-control unit update (see **VSA MODULATOR-CONTROL UNIT UPDATE**).
10. Do the VSA sensor neutral position memorization procedure (see **VSA SENSOR NEUTRAL POSITION MEMORIZATION**).

WHEEL SPEED SENSOR REPLACEMENT

FRONT

1. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. Remove the front wheel.
3. Release the clamp (A), then disconnect the wheel speed sensor connector (B).

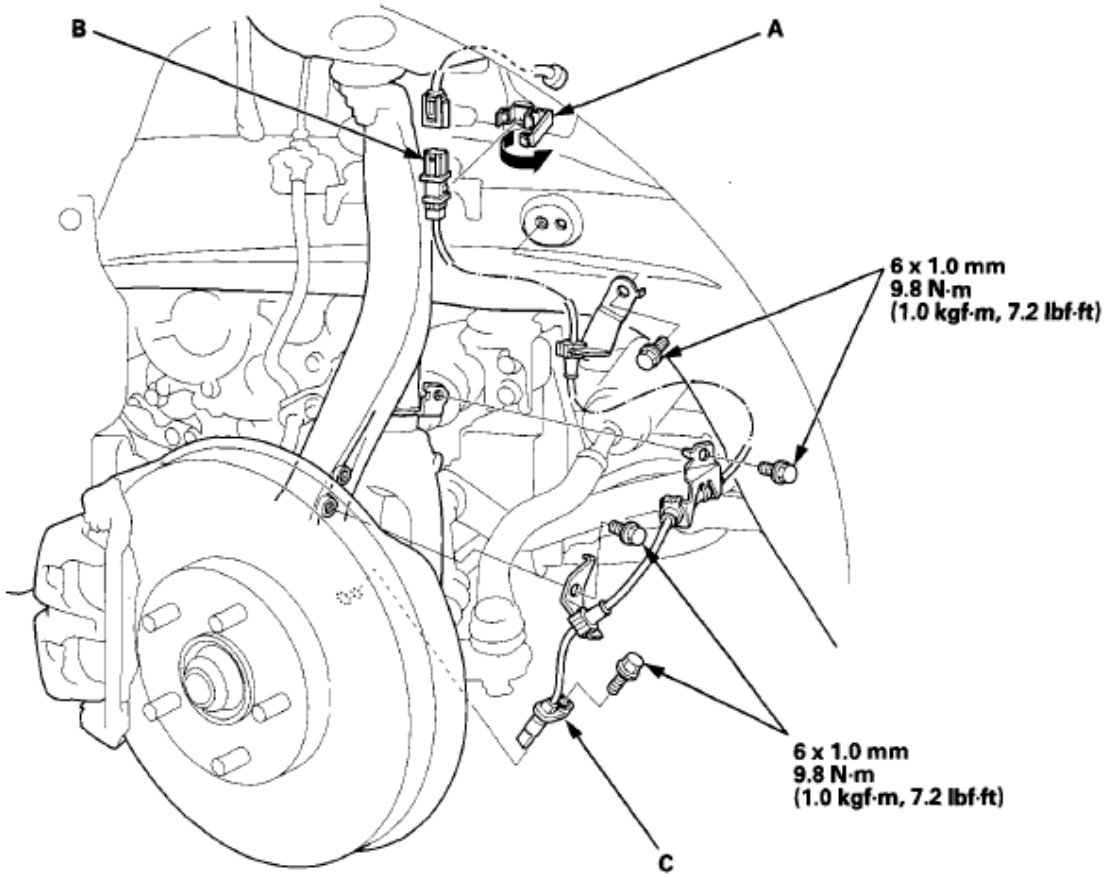

Fig. 91: Identifying Clamp, Wheel Speed Sensor Connector, Wheel Speed Sensor & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the bolts and the wheel speed sensor (C).
5. Install the wheel speed sensor in the reverse order of removal, and note these items:
    - Do not twist the sensor wires.
    - If the wheel speed sensor comes in contact with the wheel bearing, it is faulty.
    - Make sure there is no debris in the sensor mounting hole.

REAR

1. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. Remove the rear wheel.
3. Release the clamp (A), then disconnect the wheel speed sensor connector (B).

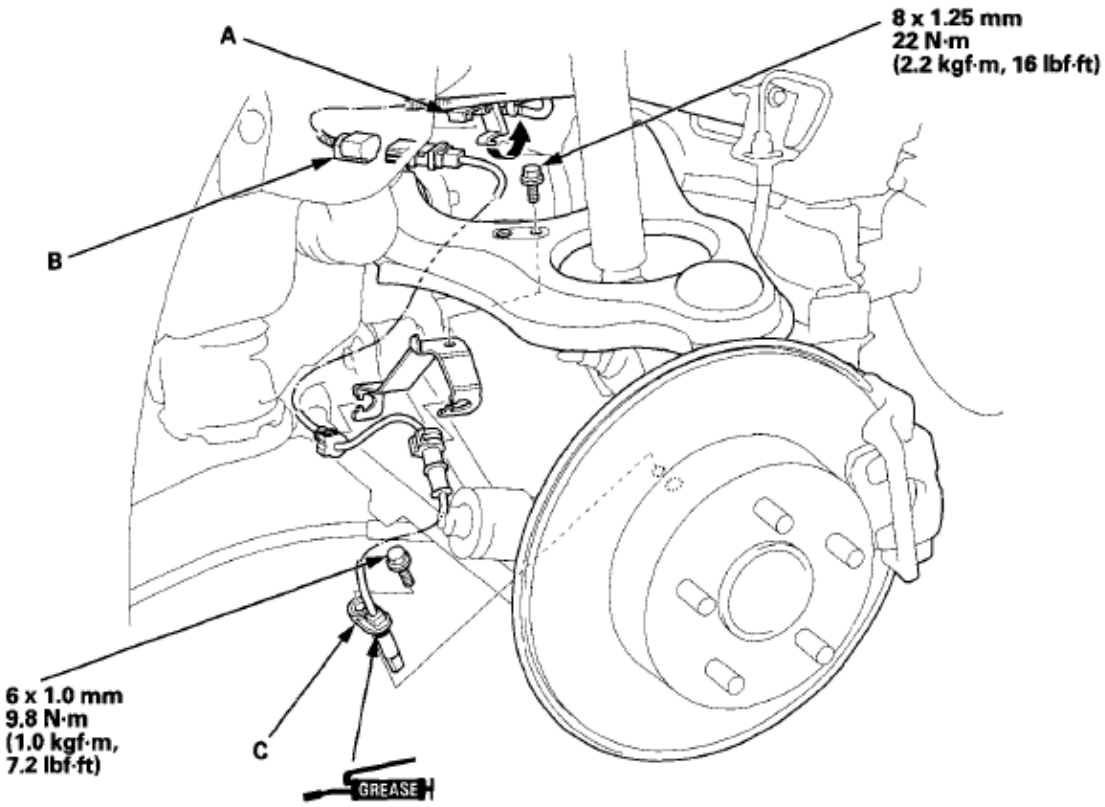

Fig. 92: Identifying Clamp, Wheel Speed Sensor Connector, Wheel Speed Sensor & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the clamps, the bolt, and the wheel speed sensor (C).
5. Install the wheel speed sensor in the reverse order of removal, and note these items:
    - Do not twist the sensor wires.
    - If the wheel speed sensor comes in contact with the hub bearing unit, it is faulty.
    - Make sure there is no debris in the sensor mounting hole.
    - Lubricate the O-ring on the wheel speed sensor.

SUPPLEMENTAL RESTRAINT SYSTEM (SRS) (If body maintenance is required)

The Acura TL SRS includes a driver's airbag in the steering wheel hub, a front passenger's airbag in the dashboard above the glove box, front seat belt tensioners in the front seat belt retractors, side curtain airbags in the sides of the roof, and side airbags in the front seat-backs. Information necessary to safely service the SRS is included in this Service Information. Servicing, disassembling, or replacing these items requires special precautions and tools, and should be done by an authorized Acura dealer.

- To avoid rendering the SRS inoperative, which could lead to personal injury or death in the event of a severe frontal or side collision, all SRS service work should be done by an authorized Acura dealer.
- Improper service procedures, including incorrect removal and installation of the SRS, could lead to personal injury caused by unintentional deployment of the front airbags, side airbags, side curtain airbags,

and/or front seat belt tensioners.

- Do not bump or impact the SRS unit, front impact sensors, side impact sensors, or rear safing sensor, especially when the ignition switch is in ON (II), or the engine start/stop button is in the ON mode, for at least 3 minutes after the ignition switch is turned to LOCK (0), or after the engine start/stop button is pressed to select the OFF mode; otherwise, the system may fail in a collision, or the airbags or the tensioners may deploy.
- SRS electrical connectors are identified by yellow color coding. Related components are located in the steering column, center console, dashboard, dashboard undercover, in the dashboard above the glove box, in the front seats, in the roof side, and around the floor. Do not use electrical test equipment on these circuits.

2012 DRIVELINE/AXLES

Driveline/Axle - TL

SPECIAL TOOLS

Ref.No.	Tool Number	Description	Qty
①	07746-0010300	Bearing Driver Attachment, 42 x 47 mm	1
②	07746-0010400	Bearing Driver Attachment, 52 x 55 mm	1
③	07749-0010000	Driver Handle, 15 x 135L	1
④	07947-4630100	Fork Seal Driver, 39.2 x 49.5 x 15 mm	1
⑤	07965-SD90100	Support Base	1
⑥	07AAD-S3VA000	Driveshaft Remover	1
⑦	07AAE-SJAA100	Ball Joint Thread Protector, 14 mm	1
⑧	07LAD-PW50601	Installer Attachment 40 mm	1
⑨	07LAF-SM40300	Support Base Attachment	1
⑩	07MAC-SL0A202	Ball Joint Remover, 28 mm	1
⑪	07TMD-MAC0100	Fork Seal Driver, 46.2 mm	1
⑫	07XAC-001020A	Threaded Adapter, 24 x 1.5 mm	1
⑬	07XAC-001030A	Threaded Adapter, 26 x 1.5 mm	1

COMPONENT LOCATION INDEX

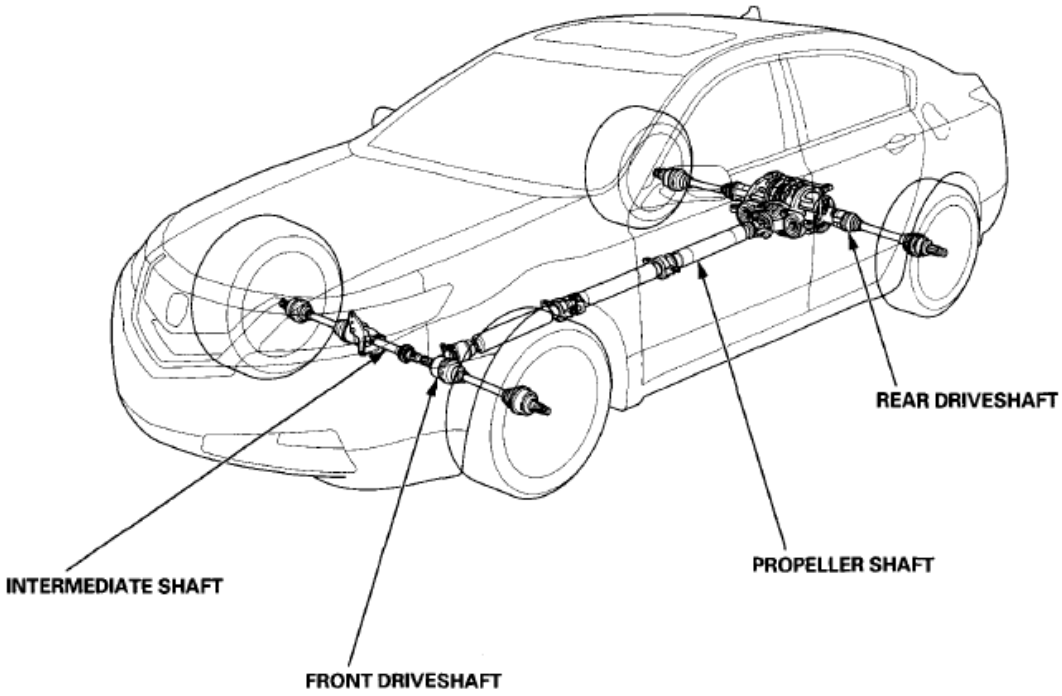

Fig. 2: Driveline/Axle Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

DRIVESHAFT INSPECTION

NOTE: Make sure to use silicone-type (gray) boot on the right front driveshaft inboard joint.

1. Check the inboard boot (A) and the outboard boot (B) on the driveshaft (C) for cracks, damage, leaking grease, and loose boot bands (D). If any damage is found, replace the boot and the boot bands.

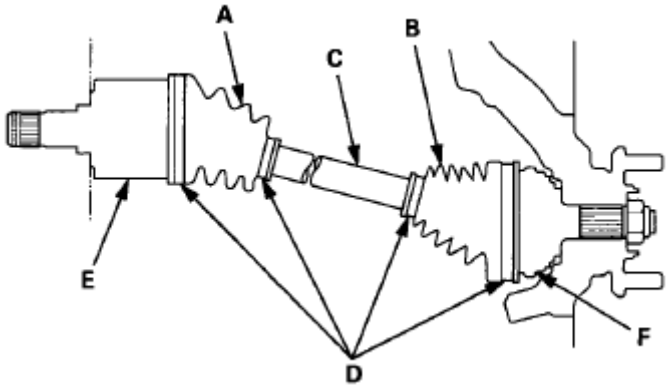

Fig. 3: Identifying Inboard And Outboard Boot, Driveshaft, Loose Boot Bands, Inboard And

Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check the driveshaft for cracks and damage. If any damage is found, replace the driveshaft.
3. Check the inboard joint (E) and the outboard joint (F) for cracks and damage. If any damage is found, replace the inboard joint or the outboard joint as an assembly.
4. Hold the inboard joint and turn the wheel by hand, then make sure the joint is not excessively loose. If necessary, replace the inboard joint or the outboard joint as an assembly.

FRONT DRIVESHAFT REMOVAL

Special Tools Required

- Ball Joint Thread Protector, 14 mm 07AAE-SJAA100
- Ball Joint Remover, 28 mm 07MAC-SL0A202

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Remove the front wheel.
3. Pry up the stake (A) on the spindle nut (B), then remove the nut.

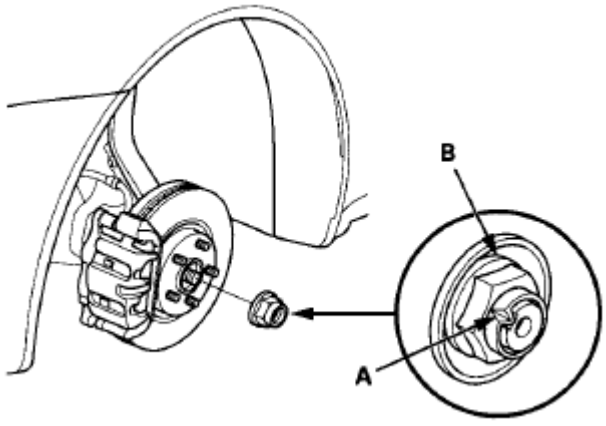

Fig. 4: Identifying Stake And Spindle Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Drain the transmission fluid, then reinstall the drain plug with a new sealing washer:
   - Manual transmission (see **TRANSMISSION FLUID INSPECTION AND REPLACEMENT**)
   - Automatic transmission (see **ATF REPLACEMENT**)
5. Hold the stabilizer joint pin (A) using a hex wrench (B), and remove the flange nut (C). Separate the front stabilizer link (D) from the lower arm.

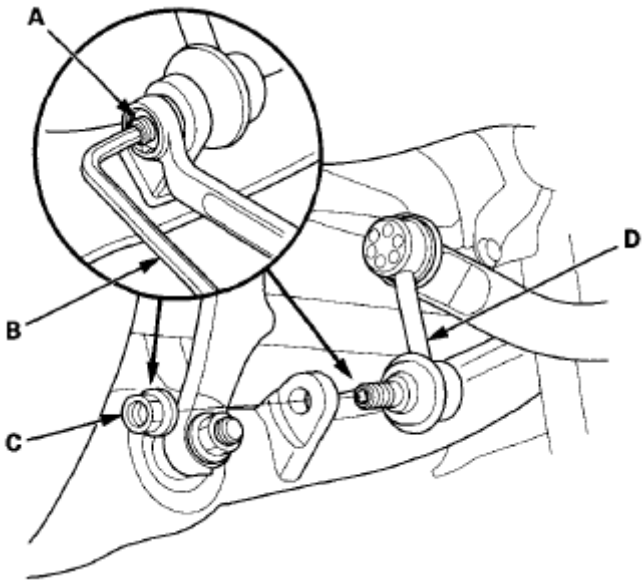

Fig. 5: Identifying Stabilizer Joint Pin, Hex Wrench, Flange Nut And Front Stabilizer Link
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the damper fork mounting nut (A), the damper fork mounting bolt (B), and the damper pinch bolt (C), then remove the damper fork (D).

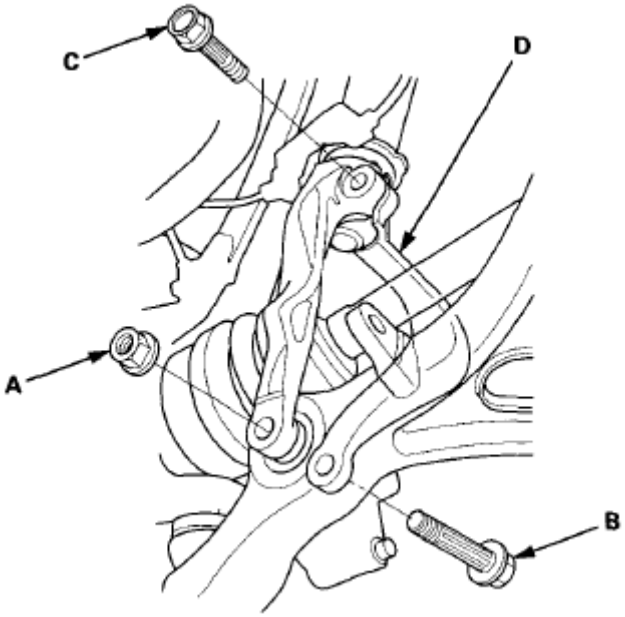

Fig. 6: Identifying Damper Fork Mounting Nut, Bolt, Damper Pinch Bolt And Damper Fork
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the cotter pin (A) from the knuckle ball joint, then remove the castle nut (B). Separate the ball joint from the lower arm (C) using the 28 mm ball joint remover (D) and the 14 mm ball joint thread protector (E) (see **BALL JOINT BOOT INSPECTION/REPLACEMENT**).

NOTE:

- **Be careful not to damage the ball joint boot when installing the remover.**
- **Do not force or hammer on the lower arm, or pry between the lower arm and the knuckle. You could damage the ball joint.**

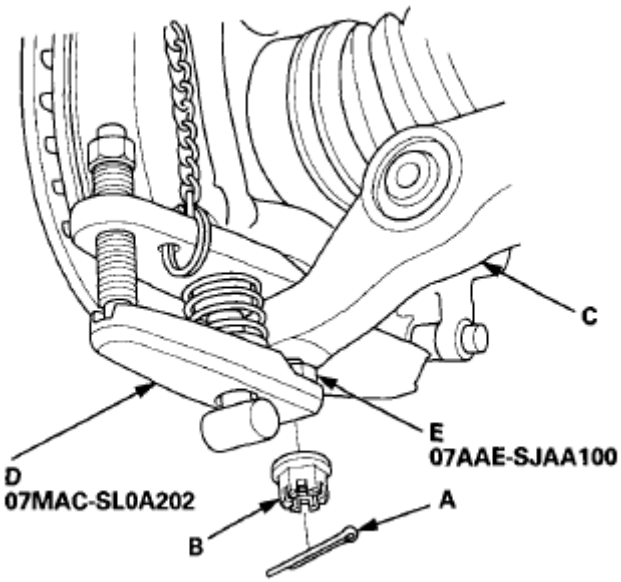

Fig. 7: Identifying Cotter Pin, Castle Nut, Lower Arm, Ball Joint Remover And Thread Protector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Pull the knuckle outward, and separate the outboard joint from the front hub using a soft face hammer.

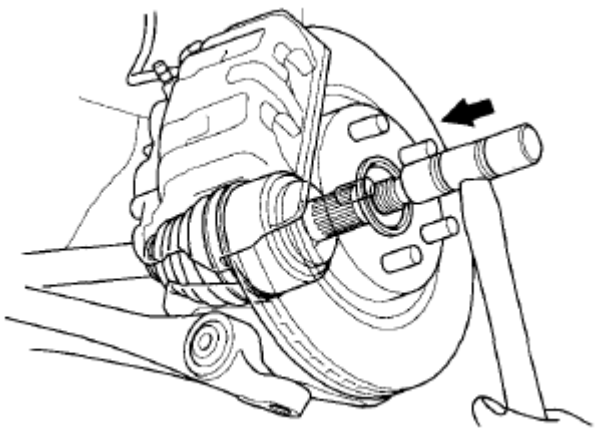

Fig. 8: Pulling Knuckle Outward And Separate Outboard Joint From Front Hub Using Soft Face Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove exhaust pipe A.
   - Without SH-AWD (see **EXHAUST PIPE AND MUFFLER REPLACEMENT**)

- With SH-AWD (see **J37A4 ENGINE (WITH SH-AWD)**)

10. Left driveshaft: Pry the inboard joint (A) from the differential using a pry bar. Remove the driveshaft as an assembly.

NOTE:

- **Do not pull on the driveshaft (B), or the inboard joint may come apart. Pull the inboard joint straight out to avoid damaging the oil seal.**
- **Be careful not to damage the oil seal or the end of the inboard joint with the pry bar.**

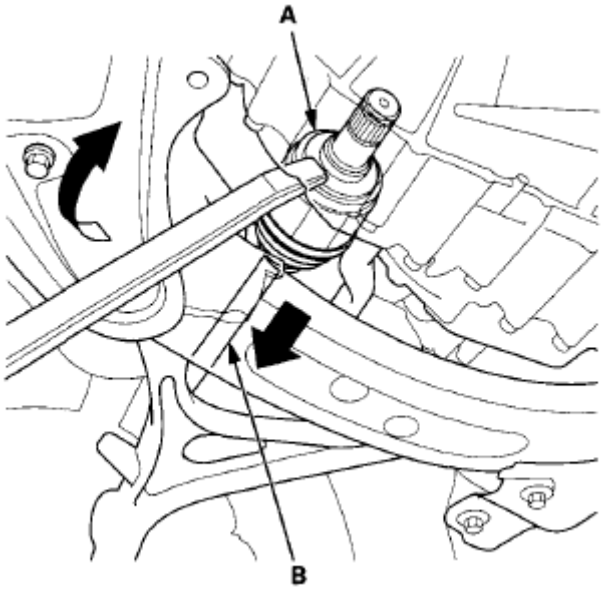

Fig. 9: Prying Inboard Joint From Differential Using Pry Bar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Right driveshaft: Drive the inboard joint (A) off of the intermediate shaft using a drift punch and a hammer. Remove the driveshaft as an assembly.

NOTE: Do not pull on the driveshaft (B), or the inboard joint may come apart.

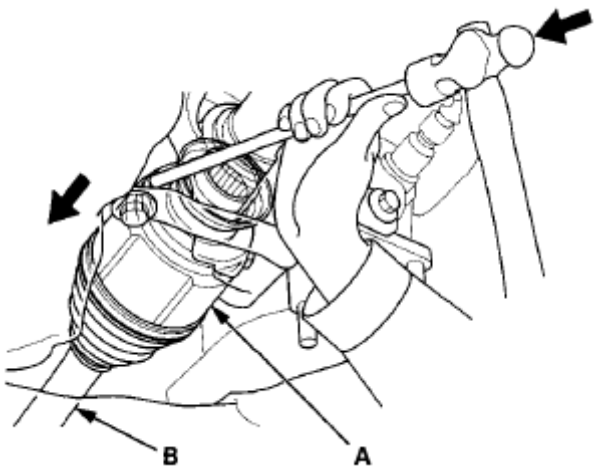

Fig. 10: Driving Inboard Joint Off Of Intermediate Shaft Using Drift Punch And Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the set ring (A) from the left driveshaft inboard joint.

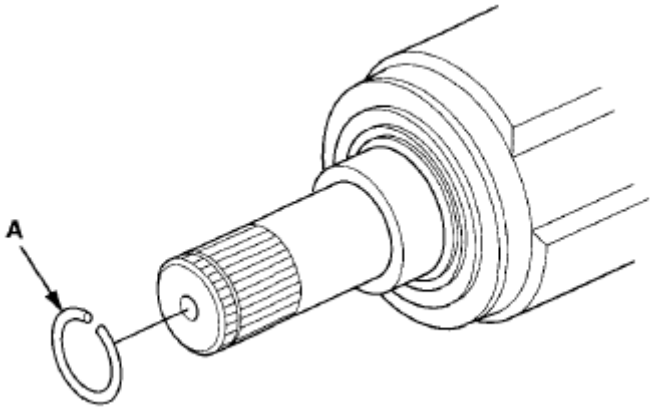

Fig. 11: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the set ring (A) from the intermediate shaft.

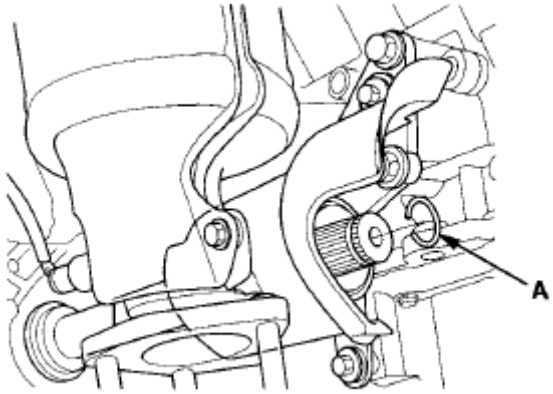

Fig. 12: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT DRIVESHAFT DISASSEMBLY

Special Tools Required

- Threaded Adapter, 26 x 1.5 mm 07XAC-001030A
- Slide Hammer 5/8"-18 UNF, commercially available
- Bearing Puller, commercially available
- Boot Band Pliers, commercially available

INBOARD JOINT SIDE

1. Remove the boot bands. Be careful not to damage the boot.
    - If the boot band is a welded type (A), cut the boot band.
    - If the boot band is a double loop type (B), lift up the band end (C), and push it into the clip (D).
    - If the boot band is a low profile type (E), pinch the boot band using commercially available boot band pliers (F).

Welded type

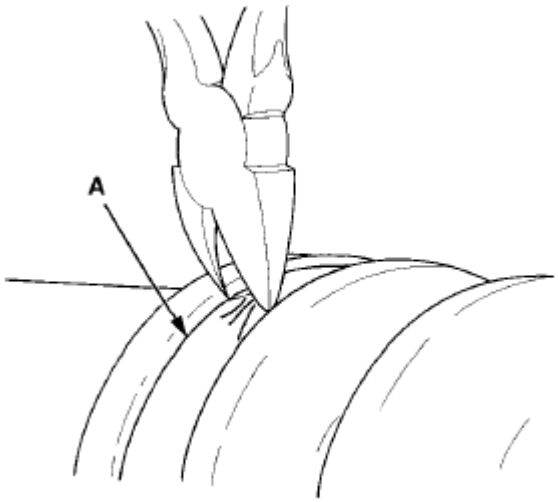

Fig. 13: Removing Boot Band - Welded Type
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Double loop type

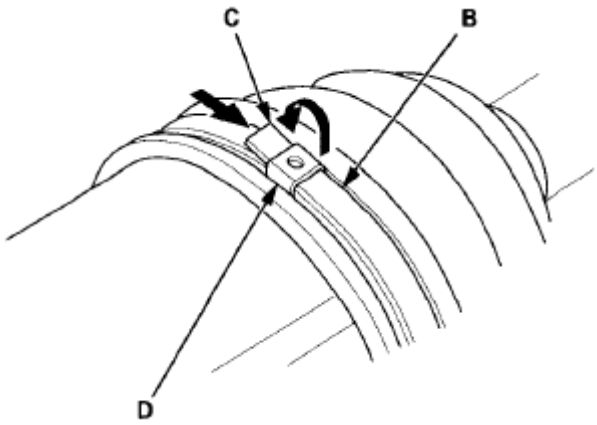

Fig. 14: Removing Boot Band - Double Loop Type
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Low profile type

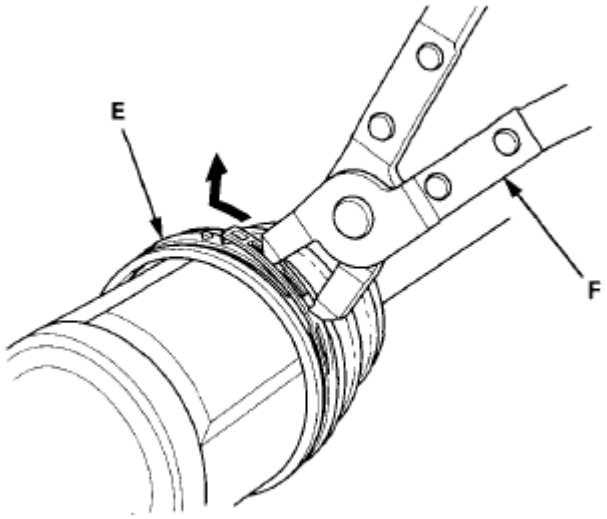

Fig. 15: Removing Boot Band - Low Profile Type
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Make marks (A) on each roller (B) and the inboard joint (C) to identify the locations of the rollers to the grooves in the inboard joint.

NOTE: Do not engrave or scribe any marks on the rolling surface.

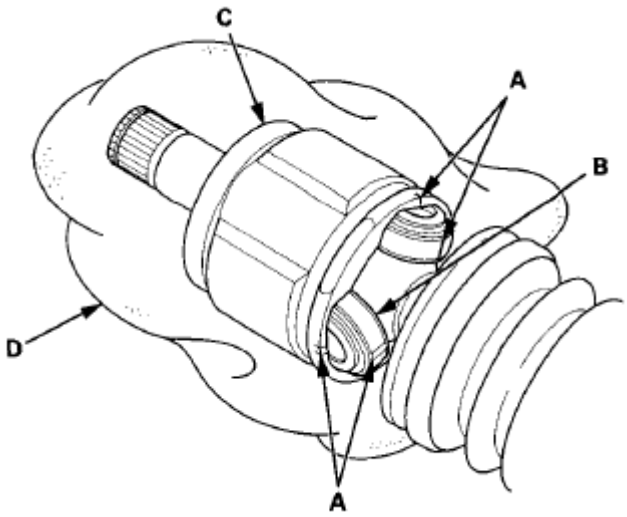

Fig. 16: Identifying Inboard Joint, Roller And Marks On Rollers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the inboard joint on a clean shop towel (D). Be careful not to drop the rollers when separating them from the inboard joint.
4. Remove the spider.
   - For the except right side with M/T, go to step 5.
   - For the right side with M/T, go to step 9.
5. Make marks (A) on the spider (B) that match the marks on the rollers, then remove the rollers.

NOTE: Do not engrave or scribe any marks on the rolling surface.

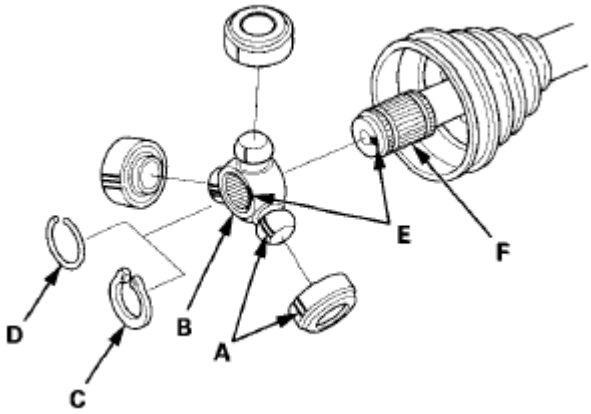

Fig. 17: Identifying Driveshaft, Snap Ring, Circlip, Spider And Marks On Spider
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. M/T model: Remove the snap ring (C). A/T model: Remove the circlip (D).
7. Make marks (E) on the spider and the driveshaft (F) to identify the position of the spider on the shaft.
8. Remove the spider, then go to step 12.

NOTE: If necessary, use a commercially available bearing puller while being careful not to damage the spider.

9. Remove the snap ring (A).

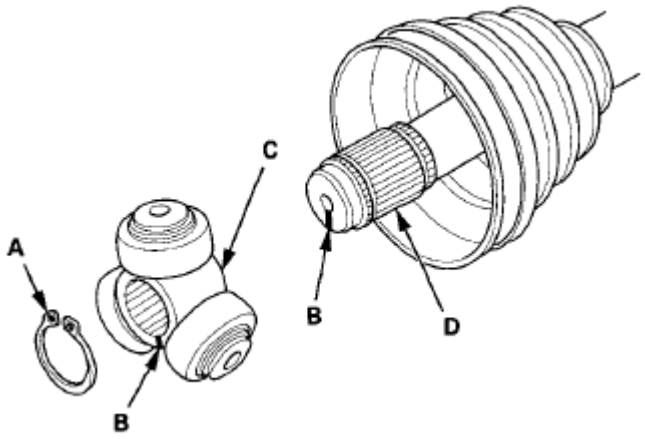

Fig. 18: Identifying Driveshaft, Snap Ring, Spider And Marks On Spider
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Make marks (B) on the spider (C) and the driveshaft (D) to identify the position of the spider on the shaft.
11. Remove the spider.

NOTE: If necessary, use a commercially available bearing puller while being careful not to damage the spider.

12. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging the inboard boot.

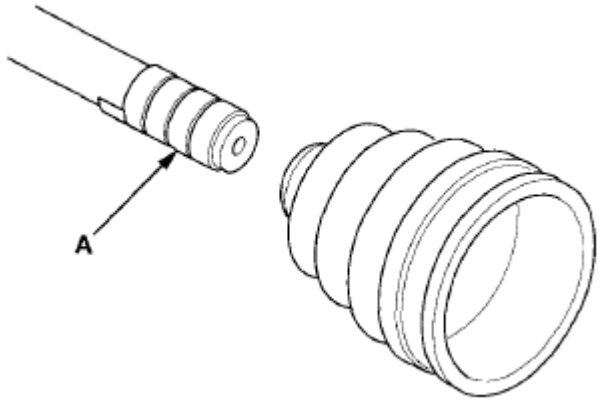

Fig. 19: Identifying Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the inboard boot. Be careful not to damage the boot.
14. Remove the vinyl tape.

OUTBOARD JOINT SIDE

1. Remove the ear clamp bands (A). Lift up the three tabs (B) using a flat-tipped screwdriver, then release the band. Be careful not to damage the boot.

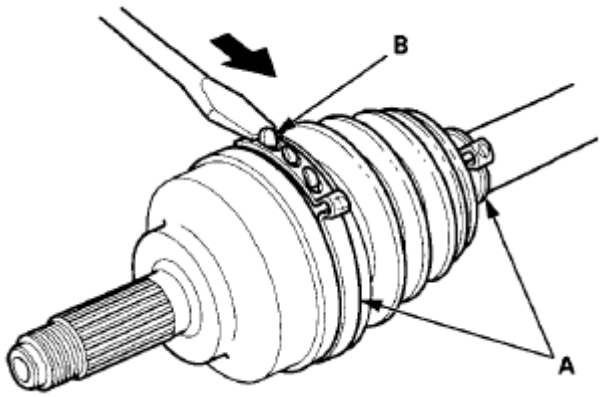

Fig. 20: Lifting Up Three Tabs Using Flat-Tipped Screwdriver And Releasing Ear Clamp Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Slide the outboard boot (A) partially toward the inboard joint side. Be careful not to damage the boot.

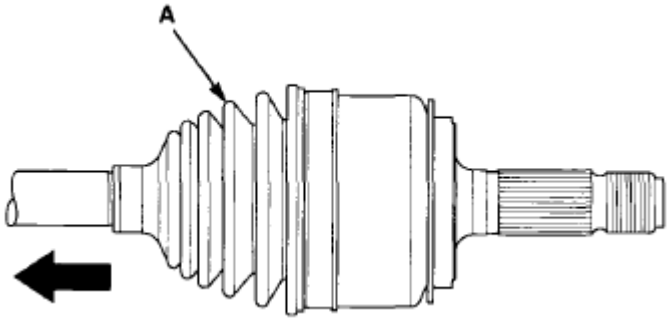

Fig. 21: Sliding Outboard Boot Partially Toward Inboard Joint Side
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Wipe off the grease to expose the driveshaft and the outboard joint inner race.
4. Make a mark (A) on the driveshaft (B) at the same level as the outboard joint end (C).

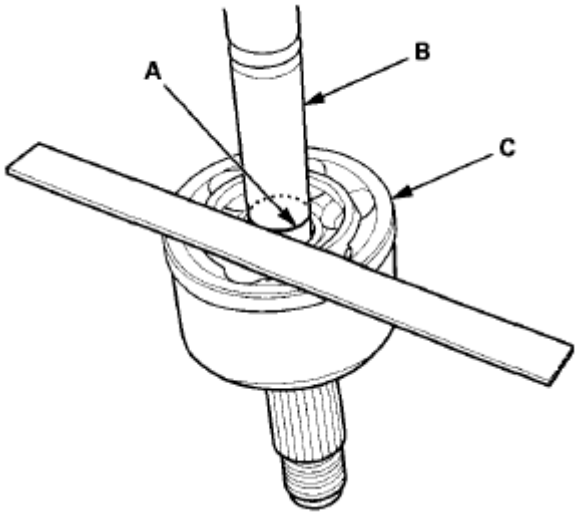

Fig. 22: Making Mark On Driveshaft At Same Level As Outboard Joint End
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Securely clamp the driveshaft in a bench vise with a shop towel wrapped around the driveshaft.
6. Remove the outboard joint (A) using the 26 x 1.5 mm threaded adapter (B) and a commercially available 5/8"-18 UNF slide hammer (C).

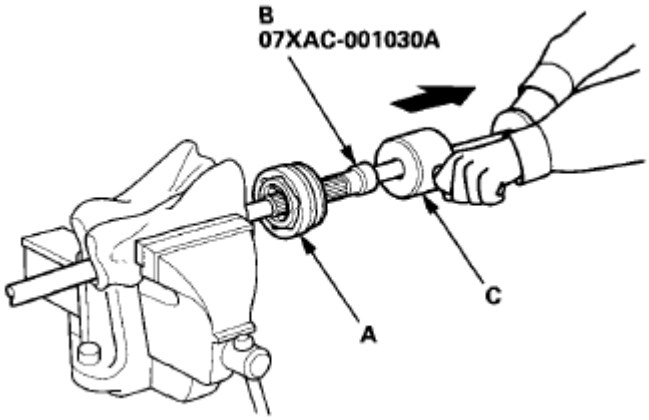

Fig. 23: Removing Outboard Joint Using Threaded Adapter And UNF Slide Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the driveshaft from the bench vise.
8. Remove the stop ring (A) from the driveshaft.

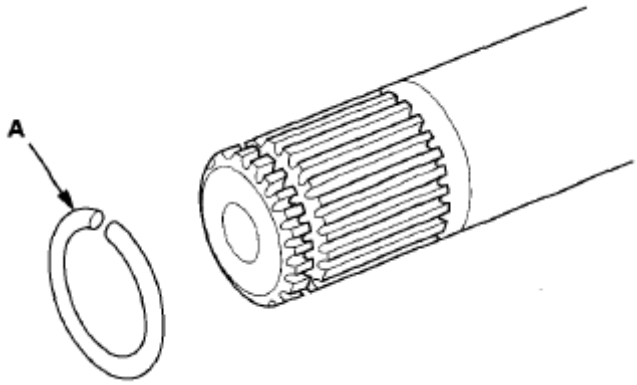

Fig. 24: Identifying Stop Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging the outboard boot.

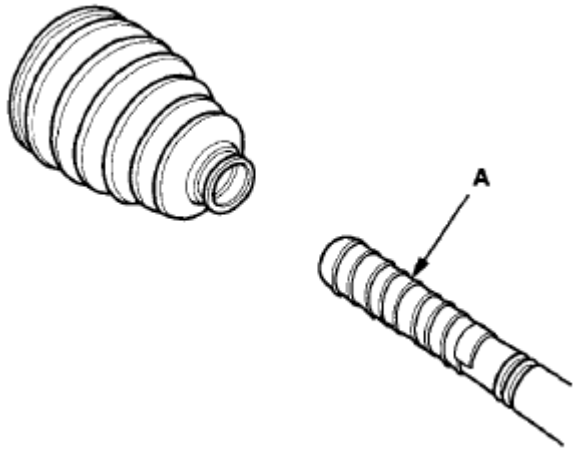

Fig. 25: Identifying Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the outboard boot. Be careful not to damage the boot.
11. Remove the vinyl tape.

FRONT DRIVESHAFT REASSEMBLY

EXPLODED VIEW (LEFT SIDE)

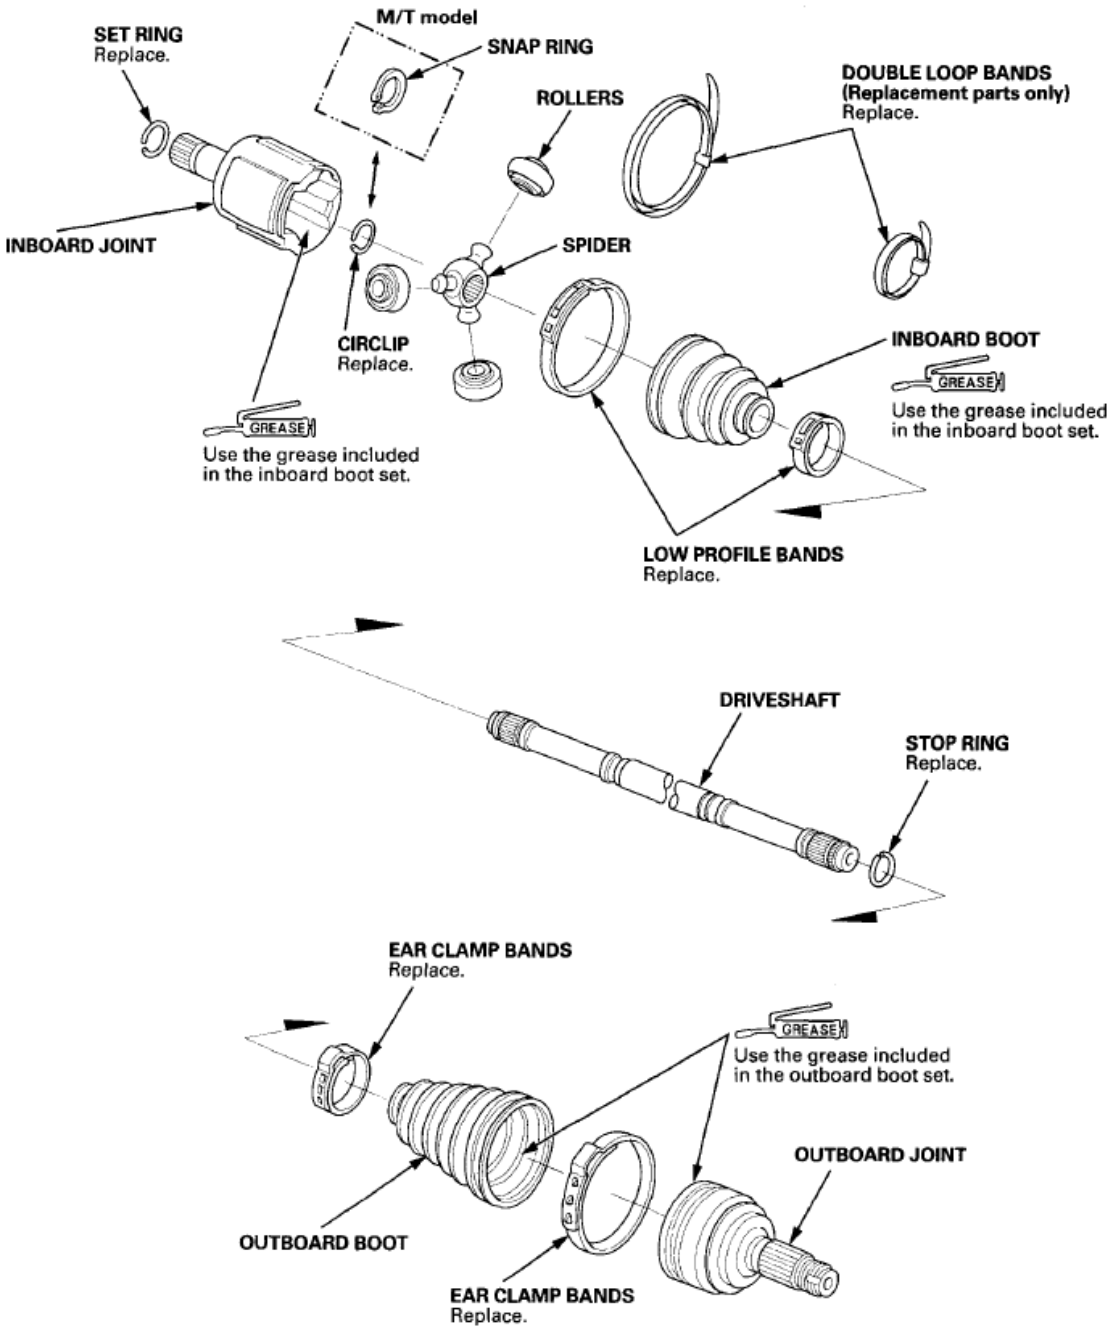

Fig. 26: Exploded View Of Front Driveshaft Assembly (Left Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

EXPLODED VIEW (RIGHT SIDE)

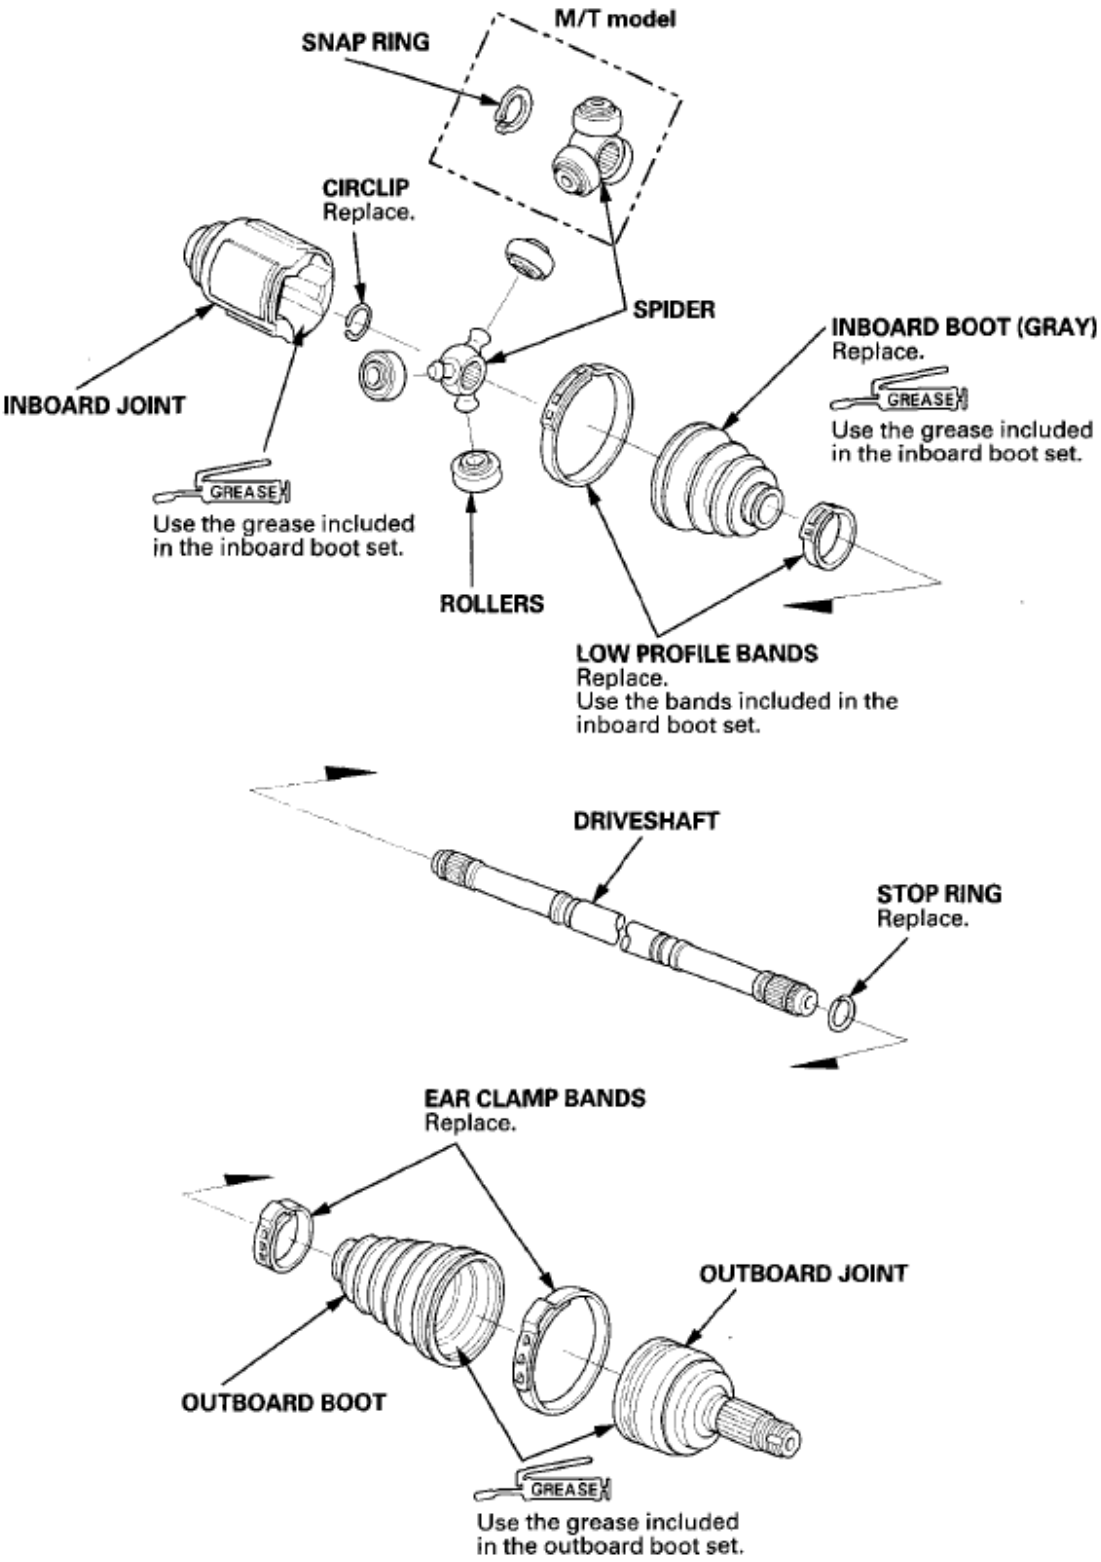

Fig. 27: Exploded View Of Front Driveshaft Assembly (Right Side)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Boot Band Tool KD-3191 or equivalent, commercially available
- Boot Band Clamp Tool Kent-Moore J-35910 or equivalent, commercially available
- Boot Band Pliers, commercially available

NOTE:

- **Refer to the EXPLODED VIEW, as needed, during this procedure.**
- **Make sure to use silicone-type (gray) boot on the right front driveshaft inboard joint.**
  - Do not reuse the removed right front driveshaft inboard boot.
  - Make sure to use the boot bands and the grease included in the inboard boot set or the inboard joint set.

INBOARD JOINT SIDE

1. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging the inboard boot.

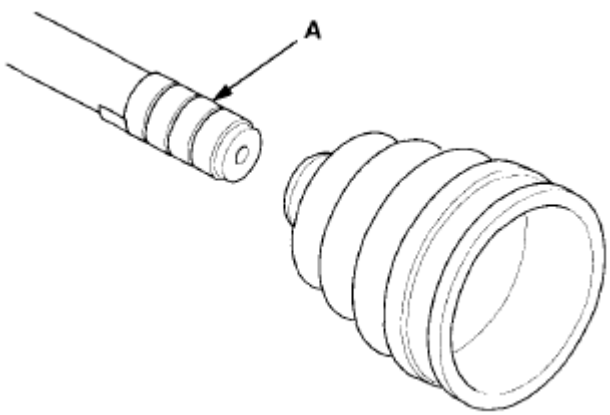

Fig. 28: Identifying Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the inboard boot onto the driveshaft, then remove the vinyl tape. Be careful not to damage the inboard boot.

NOTE: Do not reuse the removed right front driveshaft inboard boot.

3. Install the spider.
   - For the except right side with M/T, go to step 4.
   - For the right side with M/T, go to step 7.
4. Install the spider (A) onto the driveshaft by aligning the marks (B) you made on the spider and the end of the driveshaft.

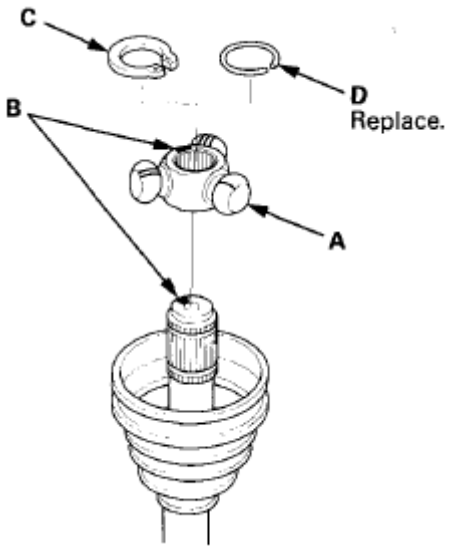

Fig. 29: Identifying Spider, Marks, Snap Ring And Circlip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. M/T model:

   Install the snap ring (C) into the driveshaft groove. A/T model:

   Install a new circlip (D) into the driveshaft groove.

   NOTE: Always rotate the circlip in its groove to make sure it is fully seated.

6. Fit the rollers (A) onto the spider (B) as shown, then go to step 9.

   NOTE:
   - **Reinstall the rollers in their original positions on the spider by aligning the marks (C) you made.**
   - **Hold the driveshaft pointed up to prevent the rollers from falling off.**

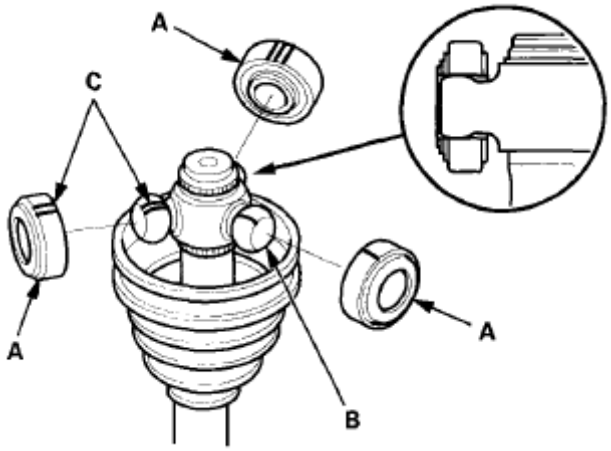

Fig. 30: Identifying Rollers, Spider And Marks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the spider (A) onto the driveshaft by aligning the marks (B) you made on the spider and the end of the driveshaft.

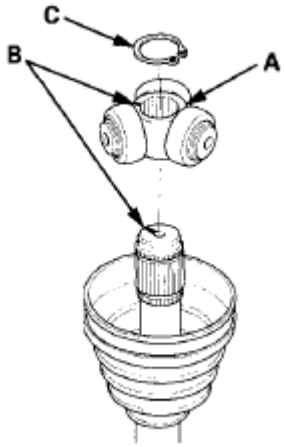

Fig. 31: Identifying Snap Ring, Spider And Marks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the snap ring (C).
9. Pack the inboard joint with the joint grease included in the new inboard boot set.

Grease quantity

Inboard joint:

Model	Driveshaft	Quantity
M/T	Left	215- 235 g (7.6- 8.3 oz)
	Right	190- 210g (6.7- 7.4 oz)
A/T	Left	110- 120g (3.9- 4.2 oz)
	Right	

Fig. 32: Greasing Inboard Boot Set
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Fit the inboard joint onto the driveshaft, and note these items:
    - Reinstall the inboard joint onto the driveshaft by aligning the marks (A) you made on the inboard joint and the rollers.
    - Hold the driveshaft so the inboard joint is pointing up to prevent it from falling off.

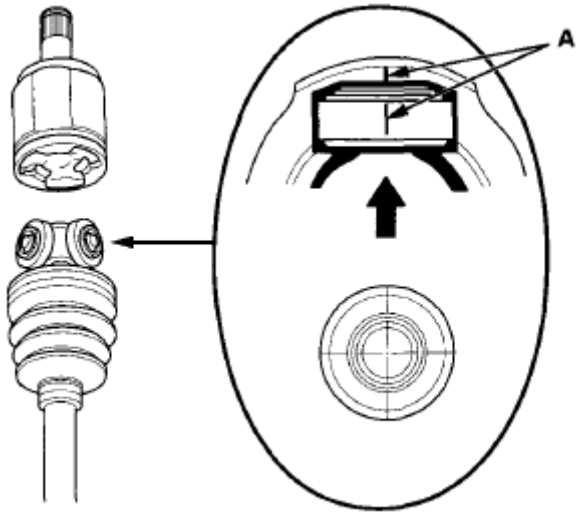

Fig. 33: Fitting Inboard Joint Onto Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Fit the boot ends (A) onto the driveshaft (B) and the inboard joint (C).

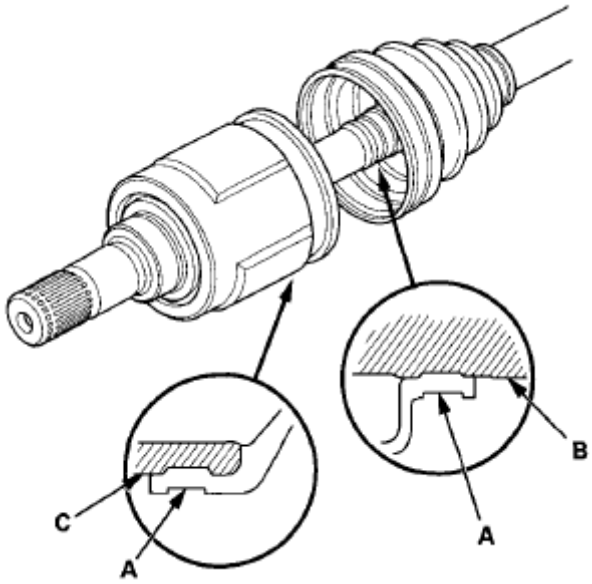

Fig. 34: Identifying Boot Ends, Driveshaft And Inboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Adjust the length (A) of the driveshafts in the figure as shown, then adjust the boots to halfway between full compression and full extension. Bleed excess air from the boots by inserting a flat-tipped screwdriver between the boot and the joint.

Left driveshaft

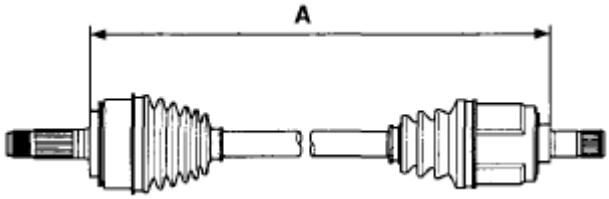

Fig. 35: Adjusting Length Of Driveshafts - Left Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right driveshaft

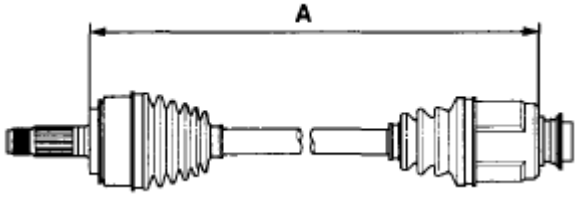

Fig. 36: Adjusting Length Of Driveshafts - Right Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Model	Driveshaft	Specified length (A)
M/T	Left	569.5- 574.5 mm (22.42- 22.62 in)
	Right	527.0- 532.0 mm (20.75- 20.94 in)
A/T	Left	560.0- 565.0 mm (22.05- 22.24 in)
	Right	533.0- 538.0 mm (20.98- 21.18 in)

13. Install new boot bands.

NOTE: Right side is only the low profile type.

- For the double loop type, go to step 14.
- For the low profile type, go to step 23.

14. Fit the boot ends onto the driveshaft and the inboard joint, then install a new double loop band (A) onto the boot (B).

NOTE: Pass the end of the double loop band through the clip (C) twice in the direction of the forward rotation of the driveshaft.

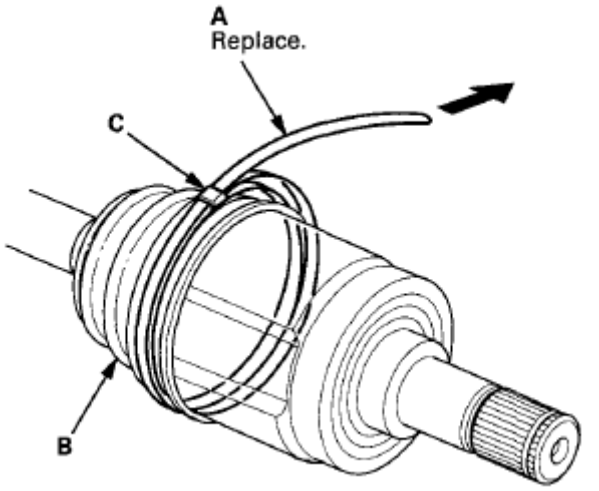

Fig. 37: Installing Double Loop Band Onto Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Pull up the slack in the band by hand.
16. Mark a line (A) on the band 10- 14 mm (0.4- 0.6 in) from the clip (B).

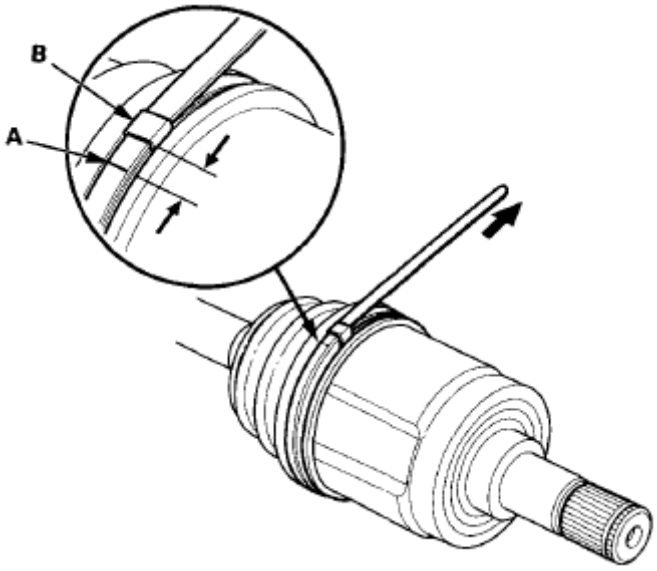

Fig. 38: Marking Line On Band From Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Thread the free end of the band through the nose section of the commercially available boot band tool (KD-3191 or equivalent) (A), and into the slot on the winding mandrel (B).

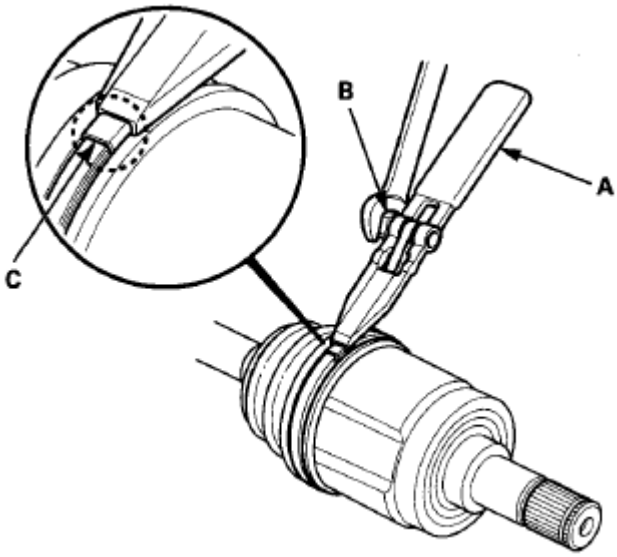

Fig. 39: Threading Free End Of Band Through Nose Section Of Boot Band Tool And Into Slot On Winding Mandrel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Using a wrench on the winding mandrel of the boot band tool, tighten the band until the marked line (C) on the band meets the edge of the clip.
19. Lift up the boot band tool to bend the free end of the band 90 degrees to the clip. Center-punch the clip, then fold over the remaining tail onto the clip.

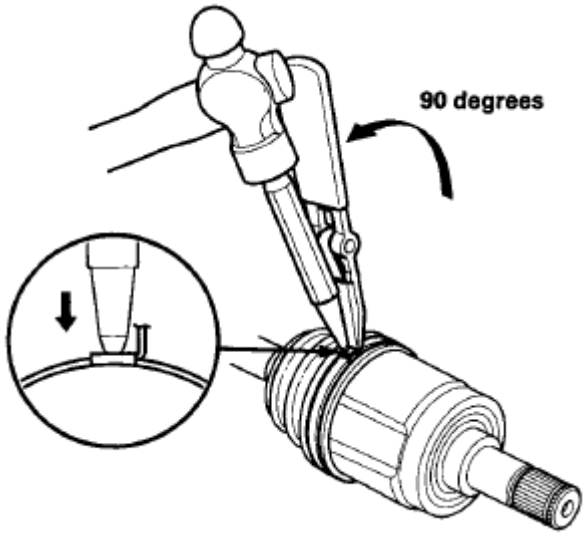

Fig. 40: Lifting Up Boot Band Tool To Bend Free End Of Band 90 Degrees To Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Unwind the boot band tool, and cut off the excess free end of the band to leave a 5- 10 mm (0.2- 0.4 in) tail protruding from the clip.

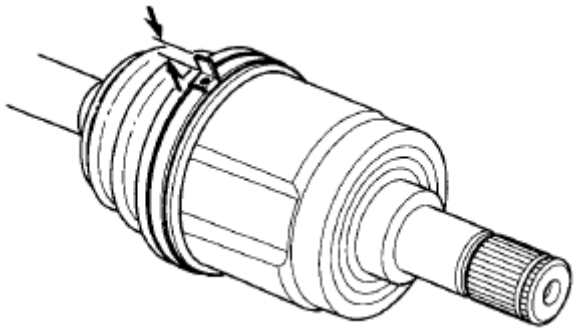

Fig. 41: Identifying Tail Protruding From Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Bend the band end (A) by tapping it down using a hammer.

NOTE:

- **Make sure the band and the clip do not interfere with anything on the vehicle, and the band does not move.**
- **Clean any grease remaining on the surrounding surfaces.**

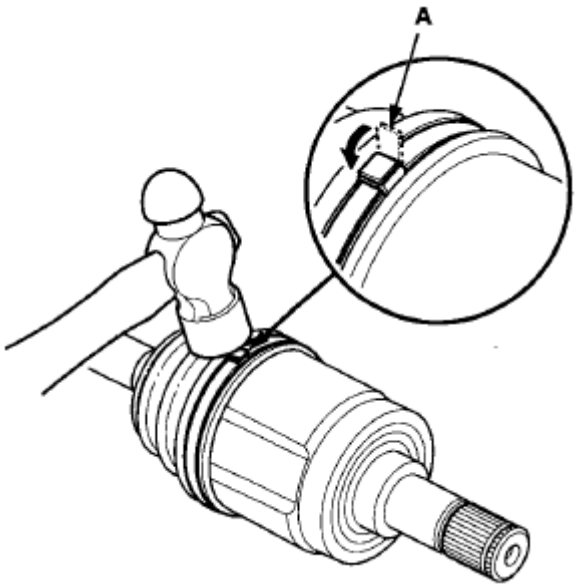

Fig. 42: Bending Band End By Tapping It Down Using Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Repeat steps 14 through 21 for the band on the other end of the boot.
23. Install a new low profile band (A) onto the boot (B), then hook the tab (C) of the band.

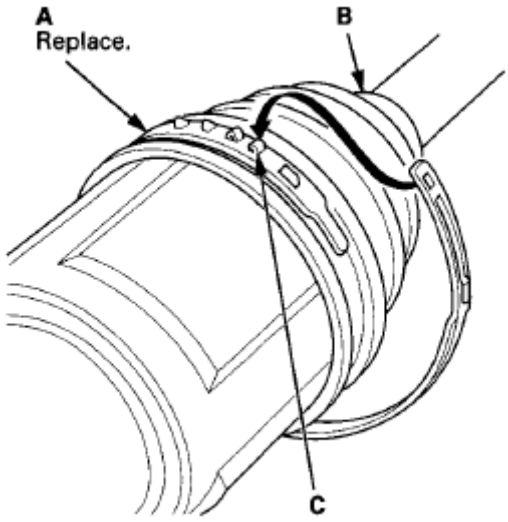

Fig. 43: Hooking Tab Of Boot Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Close the hook portion of the band using commercially available boot band pliers (A), then hook the tabs (B) of the band.

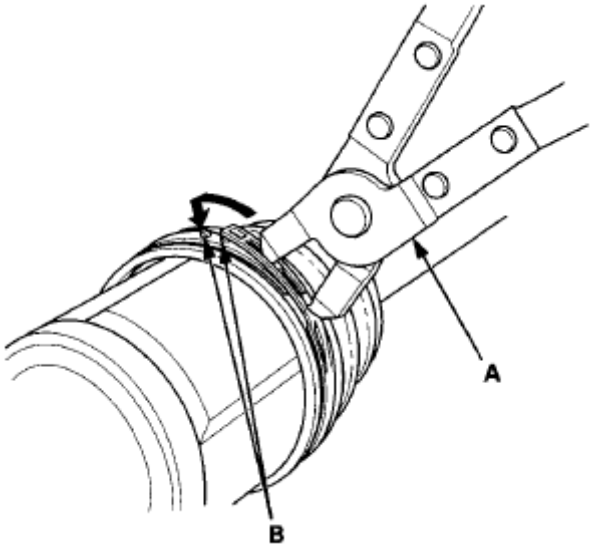

Fig. 44: Closing Hook Portion Of Band Using Boot Band Pliers And Hooking Tabs Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Install the boot band on the other end of the boot, and repeat steps 23 and 24.

OUTBOARD JOINT SIDE

1. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging the outboard boot.

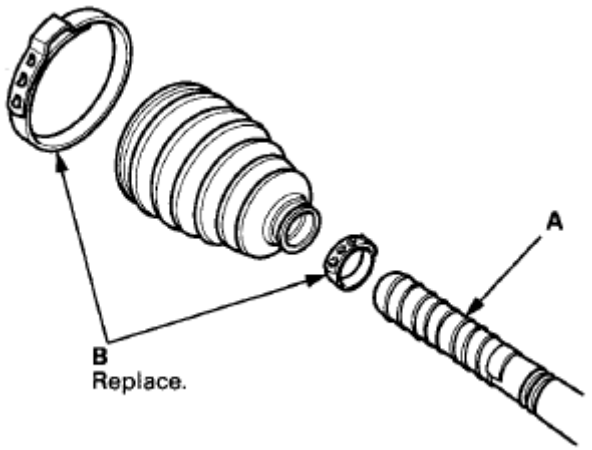

Fig. 45: Identifying Vinyl Tape And Ear Clamp Bands
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install new ear clamp bands (B) and the outboard boot onto the driveshaft, then remove the vinyl tape. Be careful not to damage the outboard boot.
3. Make sure to check the size of a new stop ring.

NOTE: To avoid driveshaft and vehicle damage, make sure you install a new stop

ring.

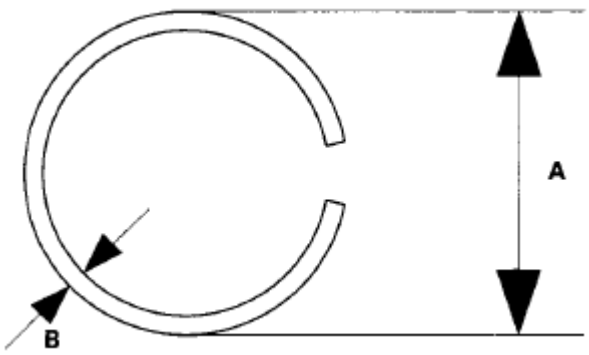

Fig. 46: Checking Size Of Stop Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

STOP RING SPECIFICATIONS

Model	Overall diameter (A)	Wire diameter (B)
M/T	31.2 mm (1.23 in)	2.0 mm (0.08 in)
A/T	29.2 mm (1.15 in)	

4. Install the stop ring (A) into the driveshaft groove (B).

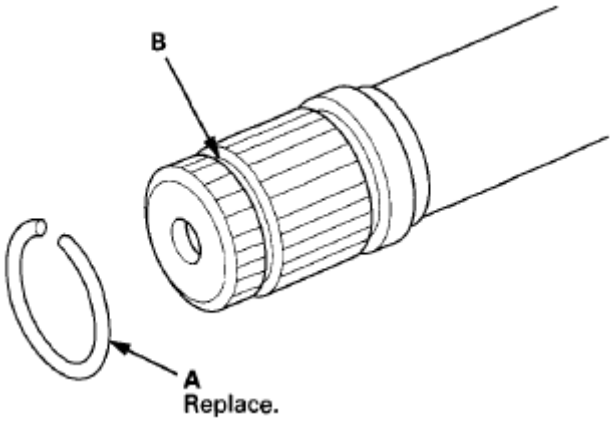

Fig. 47: Identifying Stop Ring And Driveshaft Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Pack about 35 g (1.2 oz) of grease included in the new outboard boot set into the driveshaft hole in the outboard joint.

NOTE: If you are installing a new outboard joint, the grease is already installed.

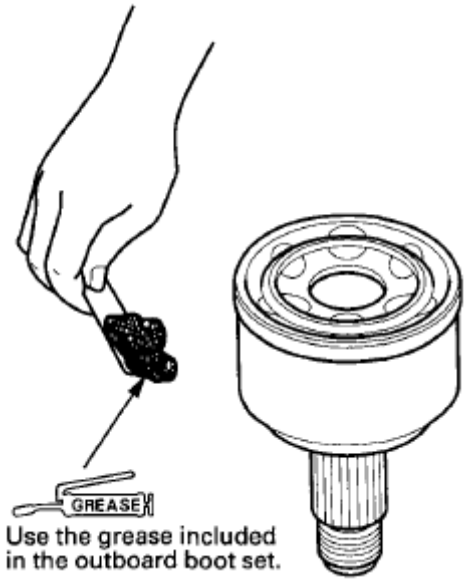

Fig. 48: Greasing Driveshaft Hole In Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Insert the driveshaft (A) into the outboard joint (B) until the stop ring (C) is close to the joint

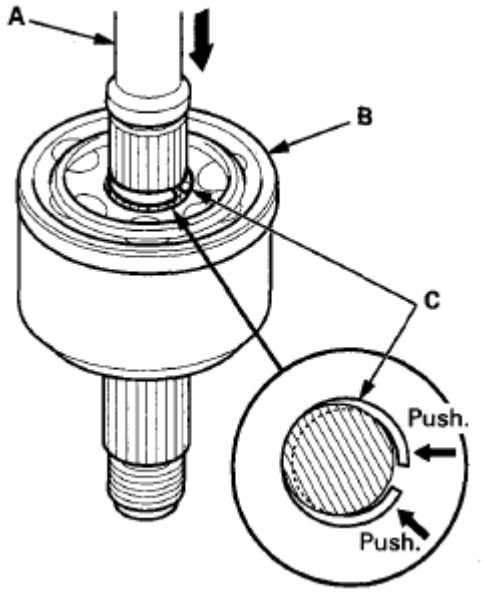

Fig. 49: Inserting Driveshaft Into Outboard Joint Until Stop Ring Is Close To Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. To completely seat the outboard joint, pick up the driveshaft and the joint, and tap or hit the assembly onto a hard surface from a height of about 10 cm (4 in).

NOTE: Do not use a hammer, as excessive force may damage the driveshaft. Be careful not to damage the threaded section (A) of the outboard joint.

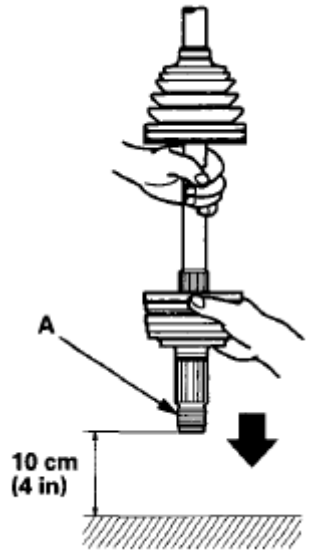

Fig. 50: To Completely Seat Outboard Joint Hitting Assembly Onto Hard Surface From Height
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Check the alignment of the paint mark (A) you made with the outboard joint end (B).

NOTE: To avoid driveshaft and vehicle damage, the shaft must be all the way into the outboard joint to ensure the stop ring is properly seated.

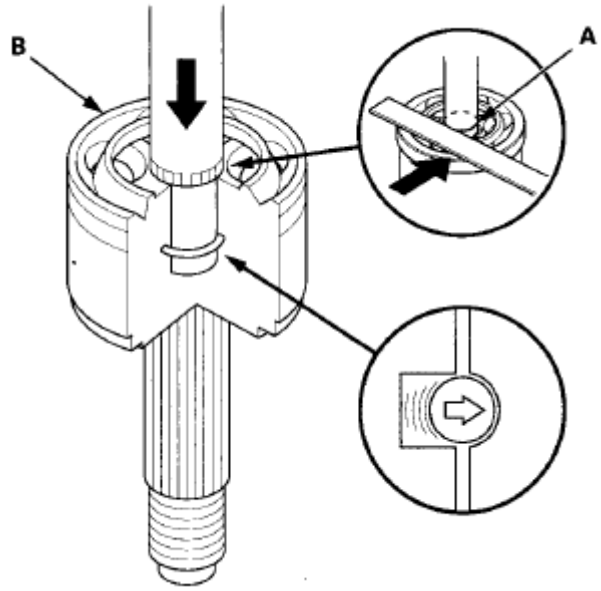

Fig. 51: Checking Alignment Of Paint Mark With Outboard Joint End
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Pack the outboard joint (A) with the remaining joint grease included in the outboard boot set.

Total grease quantity

OUTBOARD JOINT

Model	Quantity
M/T	110- 130 g (3.9- 4.6 oz)
A/T	160- 170 g (5.6- 6.0 oz)

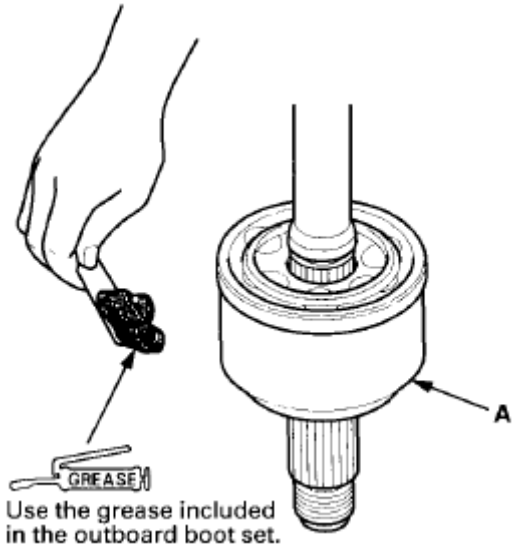

Fig. 52: Packing Outboard Joint With Grease Included In Outboard Boot Set
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Fit the boot ends (A) onto the driveshaft (B) and the outboard joint (C). Bleed any excess air from the boot by inserting a flat-tipped screwdriver between the boot and the joint.

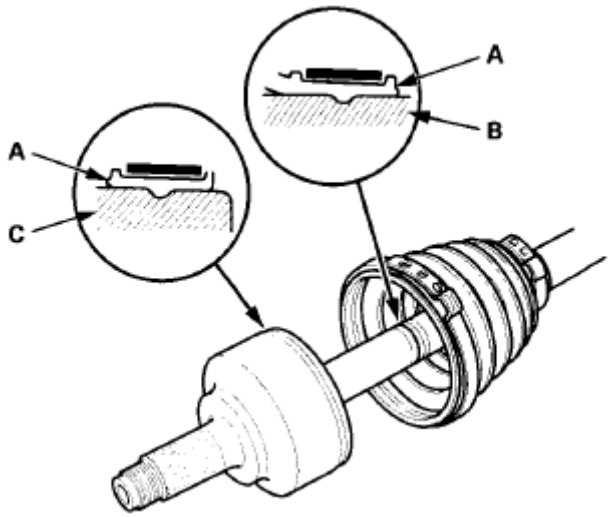

Fig. 53: Identifying Boot Ends, Driveshaft And Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Inspect the length (A) of the driveshafts in the figure as shown, then adjust the boots to halfway between full compression and full extension.

Left driveshaft

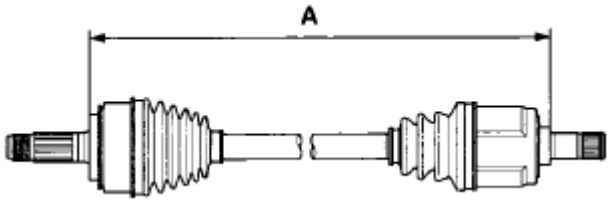

Fig. 54: Checking Length Of Driveshaft - Left Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Right driveshaft

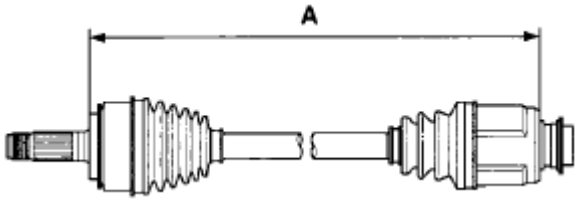

Fig. 55: Checking Length Of Driveshaft - Right Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Model	Driveshaft	Specified length (A)
M/T	Left	569.5- 574.5 mm (22.42- 22.62 in)
	Right	527.0- 532.0 mm (20.75- 20.94 in)
A/T	Left	560.0- 565.0 mm (22.05- 22.24 in)
	Right	533.0- 538.0 mm (20.98- 21.18 in)

12. Close the ear portion (A) of the band using a commercially available boot band clamp tool (Kent-Moore J-35910 or equivalent) (B).

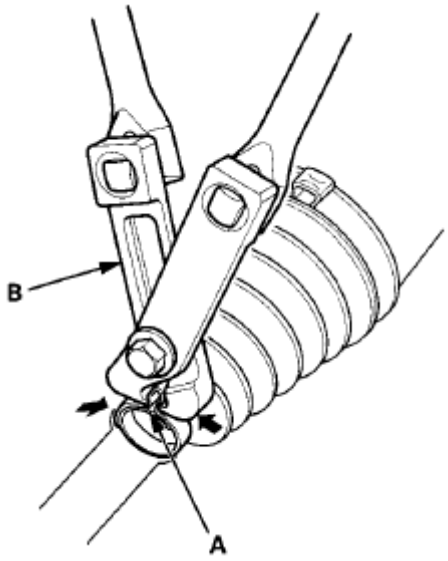

Fig. 56: Closing Ear Portion Of Band Using Boot Band Clamp Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Check the clearance between the closed ear portion of the band. If the clearance is not within the standard, close the ear portion of the band tighter.

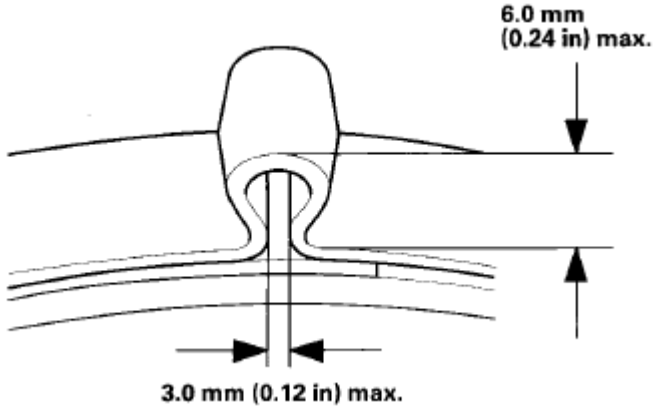

Fig. 57: Checking Clearance Between Closed Ear Portion Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Repeat steps 12 and 13 for the band on the other end of the boot.

FRONT DRIVESHAFT INSTALLATION

NOTE: Before starting installation, make sure the mating surfaces of the joint and the splined section are clean.

1. Apply about 5 g (0.18 oz) of moly 60 paste (P/N 08734-0001) to the contact area (A) of the outboard joint and the front wheel bearing.

NOTE: The paste helps prevent noise and vibration.

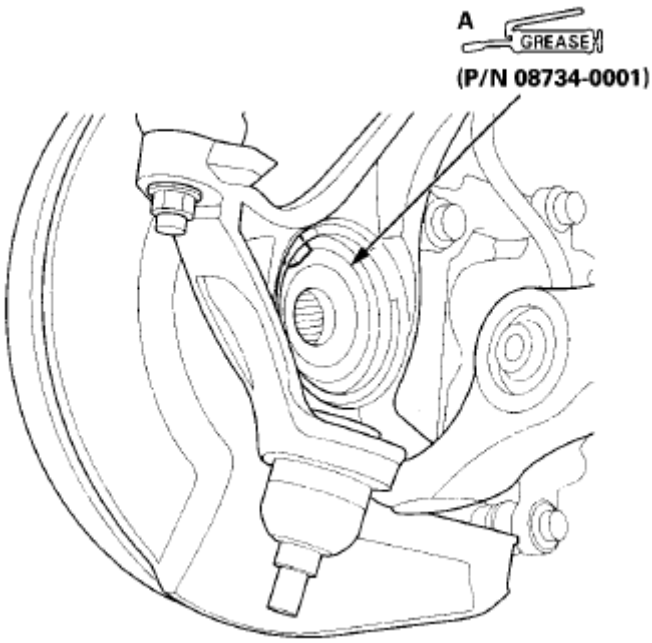

Fig. 58: Identifying Contact Area Of Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install a new set ring (A) into the set ring groove (B) of the left driveshaft inboard joint.

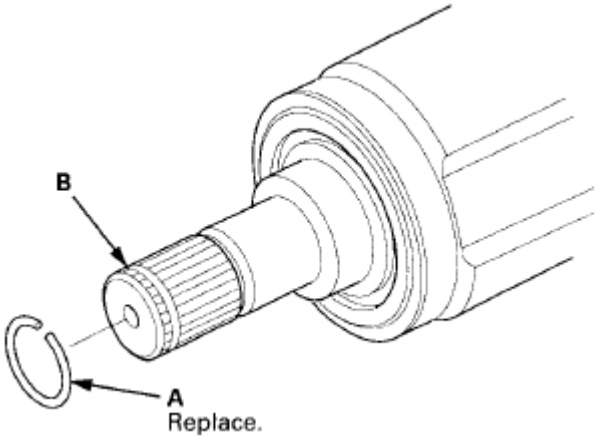

Fig. 59: Identifying Set Ring And Set Ring Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install a new set ring (A) into the set ring groove (B) of the intermediate shaft.

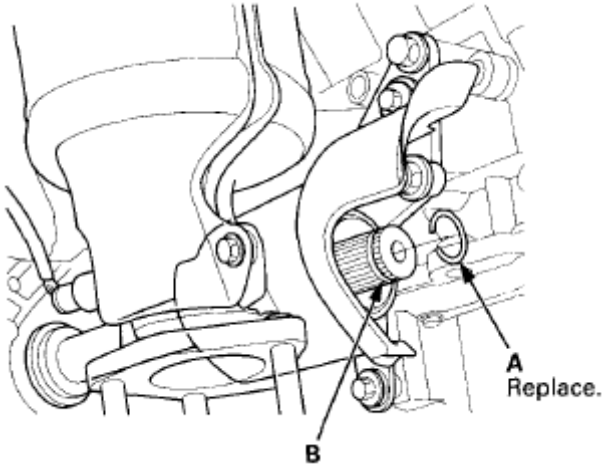

Fig. 60: Identifying Set Ring And Set Ring Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Apply specified quantity of super high temp urea grease (P/N 08798-9002) to the whole splined surface (A) of the right driveshaft. After applying grease, remove the grease from the splined grooves at intervals of 2- 3 splines and from the set ring groove (B) so that air can bleed from the intermediate shaft.

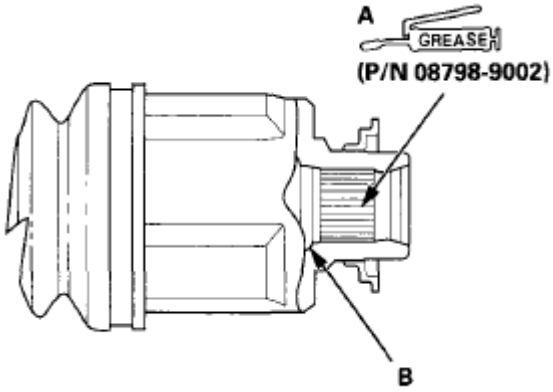

Fig. 61: Applying Super High Temp Urea Grease To Whole Splined Surface Of Right Driveshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Model	Grease quantity
M/T	2.0- 3.0 g (0.07- 0.11 oz)
A/T	0.5- 1.0 g (0.02- 0.04 oz)

5. Clean the areas where the driveshaft contacts the differential thoroughly with solvent, and dry them with compressed air.

NOTE: Do not wash the rubber parts with solvent.

6. Insert the inboard end (A) of the driveshaft into the differential (B) or the intermediate shaft (C) until the set ring (D) locks in the groove (E).

NOTE: Insert the driveshaft horizontally to prevent damaging the oil seal.

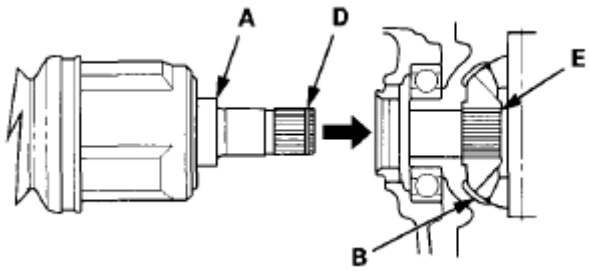

Fig. 62: Inserting Inboard End Of Driveshaft Into Differential Shaft Until Set Ring Locks In Groove - Left
Courtesy of AMERICAN HONDA MOTOR CO., INC.

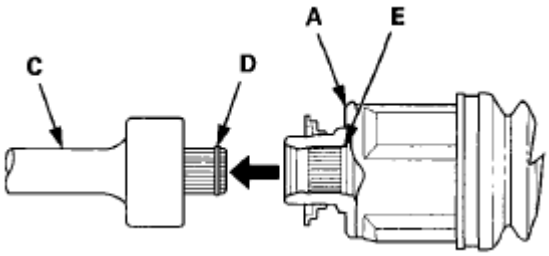

Fig. 63: Inserting Inboard End Of Driveshaft Into Differential Shaft Until Set Ring Locks In Groove - Right
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the outboard joint (A) into the front hub on the knuckle.

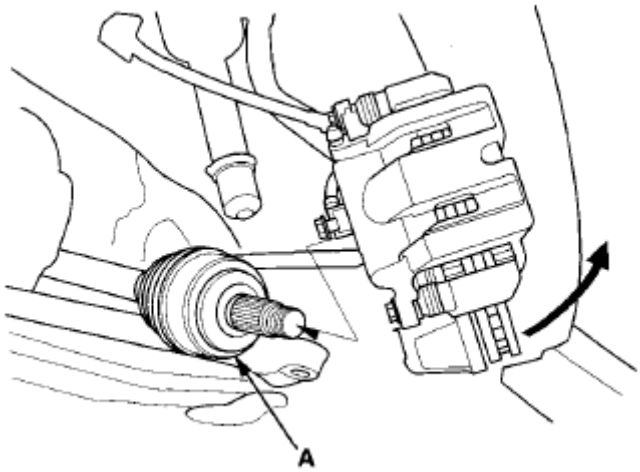

Fig. 64: Installing Outboard Joint Into Front Hub On Knuckle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install exhaust pipe A.

- Without SH-AWD (see **EXHAUST PIPE AND MUFFLER REPLACEMENT**)
- With SH-AWD (see **J37A4 ENGINE (WITH SH-AWD)**)

9. Wipe off any grease contamination from the ball joint tapered section and threads, then install the knuckle (A) onto the lower arm (B). Be careful not to damage the ball joint boot (C). Wipe off the grease before tightening the nut at the ball joint. Torque a new castle nut (D) to the lower torque specification, then tighten it only far enough to align the slot with the ball joint pin hole.

NOTE:

- **Make sure the ball joint boot is not damaged or cracked.**
- **Do not align the nut by loosening it.**

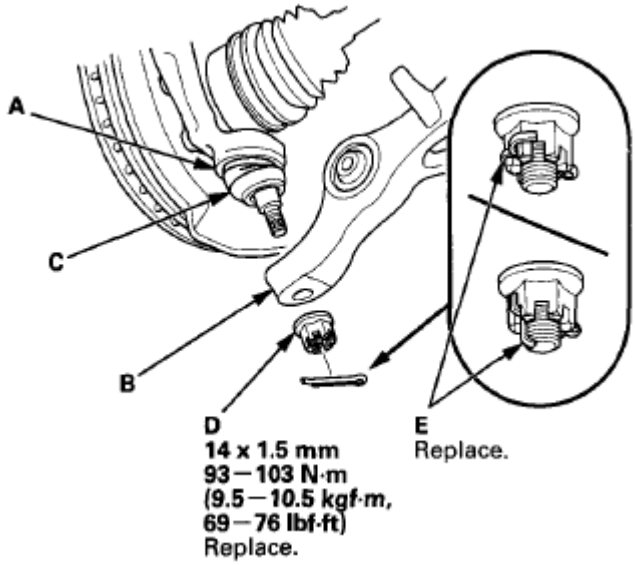

Fig. 65: Identifying Knuckle, Cotter Pin, Lower Arm, Ball Joint Boot And Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install a new cotter pin (E) into the ball joint pin hole, and bend the cotter pin as shown.
11. Install the damper fork (A) over the driveshaft and onto the lower arm. Install the damper in the damper fork so the aligning tab (B) is aligned with the slot in the damper fork. Loosely install the damper pinch bolt (C).

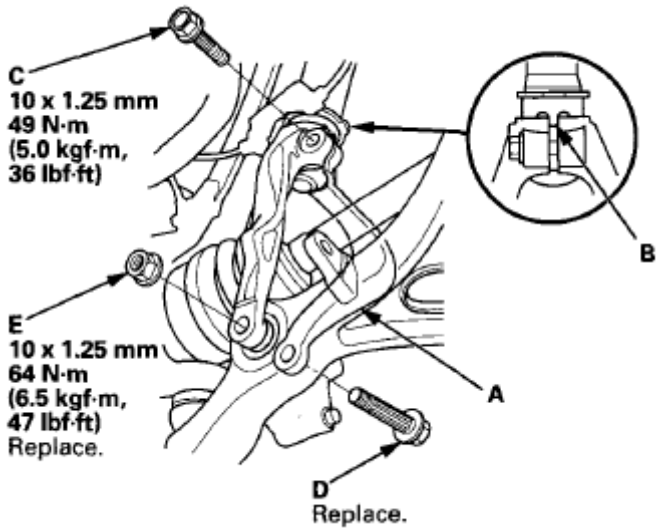

Fig. 66: Identifying Damper Fork, Aligning Tab, Flange Bolt, Pinch Bolt And Damper Fork Mounting Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Loosely install a new flange bolt (D) and a new damper fork mounting nut (E).
13. Connect the front stabilizer link (A) to the lower arm, and loosely install the flange nut (B). Hold the stabilizer joint pin (C) using a hex wrench (D), and tighten the flange nut.

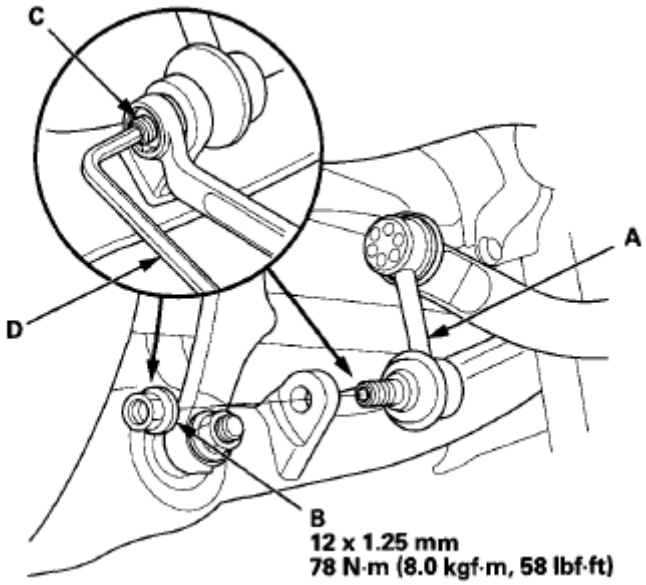

Fig. 67: Identifying Front Stabilizer Link, Hex Wrench, Stabilizer Joint Pin And Flange Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Place a floor jack under the lower arm, and raise the suspension to load it with the vehicle's weight.

NOTE: Do not put the floor jack under the ball joint.

15. Tighten the damper pinch bolt and the damper fork mounting nut while holding the flange bolt to the specified torque values, then remove the floor jack.
16. Apply a small amount of engine oil to the seating surface of a new spindle nut (A).

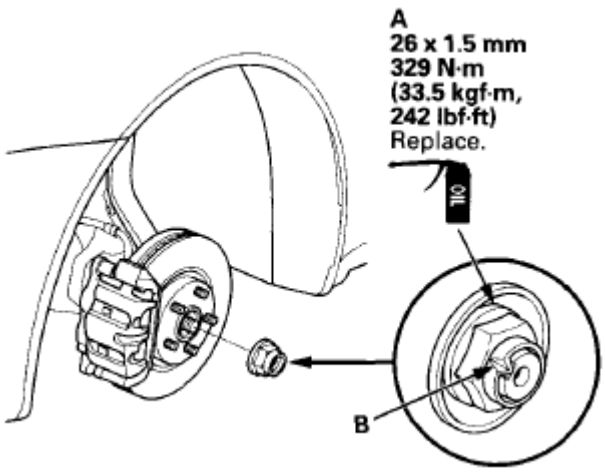

Fig. 68: Identifying Spindle Nut Shoulder And Spindle Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Install the spindle nut, then tighten it. After tightening, use a drift to stake the spindle nut shoulder (B) against the driveshaft.
18. Clean the mating surfaces between the brake disc and the inside of the wheel, then install the front wheel.
19. Turn the wheel by hand, and make sure there is no interference between the driveshaft and surrounding parts.
20. Lower the vehicle.
21. Refill the transmission with recommended transmission fluid:
    - Manual transmission (see **TRANSMISSION FLUID INSPECTION AND REPLACEMENT**)
    - Automatic transmission (see **ATF REPLACEMENT**)
22. Check the wheel alignment, and adjust it if necessary (see **WHEEL ALIGNMENT**).
23. Test-drive the vehicle.

INTERMEDIATE SHAFT REMOVAL

1. Drain the transmission fluid, then reinstall the drain plug with a new sealing washer:
    - Manual transmission (see **TRANSMISSION FLUID INSPECTION AND REPLACEMENT**)
    - Automatic transmission (see **ATF REPLACEMENT**)
2. Remove exhaust pipe A:
    - Without SH-AWD (see **EXHAUST PIPE AND MUFFLER REPLACEMENT**)
    - With SH-AWD (see **J37A4 ENGINE (WITH SH-AWD)**)

3. Remove the right front driveshaft (see **FRONT DRIVESHAFT REMOVAL**).
4. Remove the rear warm up three way catalytic converter (rear WU-TWC) bracket (A).

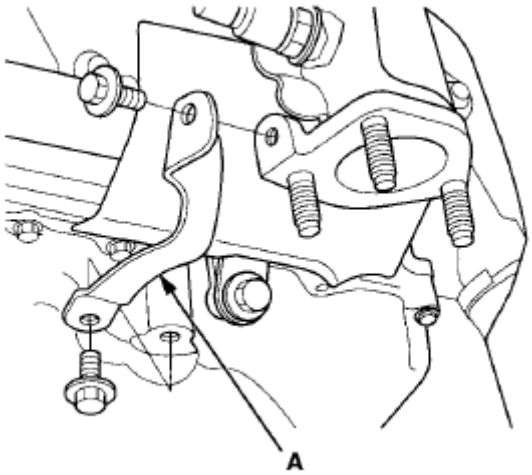

Fig. 69: Identifying Catalytic Converter (Rear WU-TWC) Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. M/T model: Remove the crankshaft position (CKP) sensor cover (A).

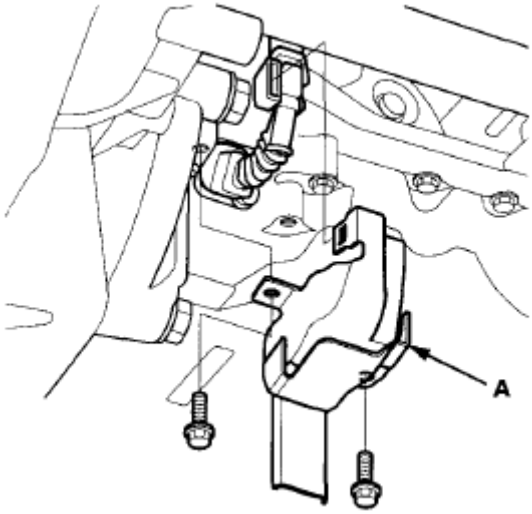

Fig. 70: Identifying Crankshaft Position (CKP) Sensor Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. M/T model: Disconnect the CKP sensor connector (A), and remove the sensor harness clamp bracket bolt (B).

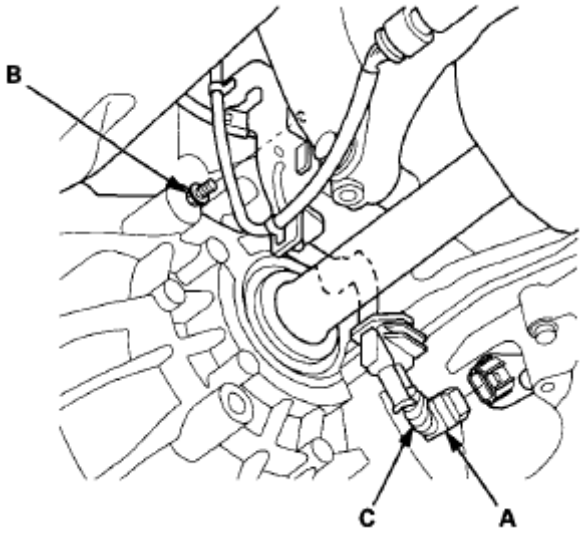

Fig. 71: Identifying CKP Sensor Connector, Sensor Harness And Clamp Bracket Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. M/T model: Swing the sensor harness (C) out of the way to prevent damaging it.
8. Remove the flange bolt (A) and the two dowel bolts (B).

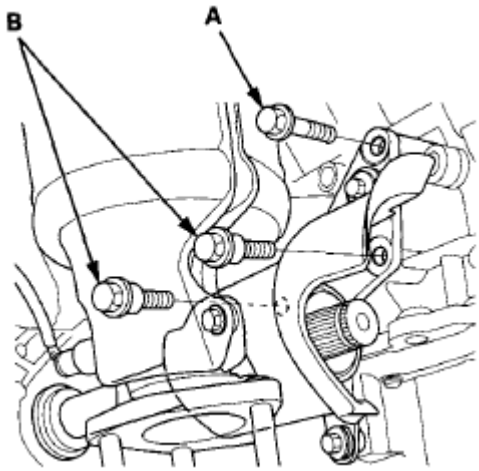

Fig. 72: Identifying Flange And Dowel Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the intermediate shaft (A) from the differential. Hold the intermediate shaft horizontal until it is clear of the differential to prevent damaging the oil seal (B).

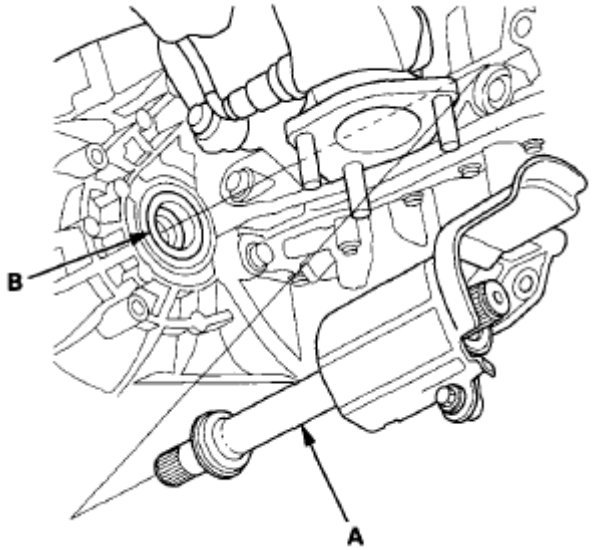

Fig. 73: Identifying Intermediate Shaft And Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INTERMEDIATE SHAFT DISASSEMBLY

Special Tools Required

- Bearing Driver Attachment, 42x47 mm 07746-0010300
- Driver Handle, 15 x 135L 07749-0010000
- Support Base 07965-SD90100
- Support Base Attachment 07LAF-SM40300

1. Remove the heat shield (A).

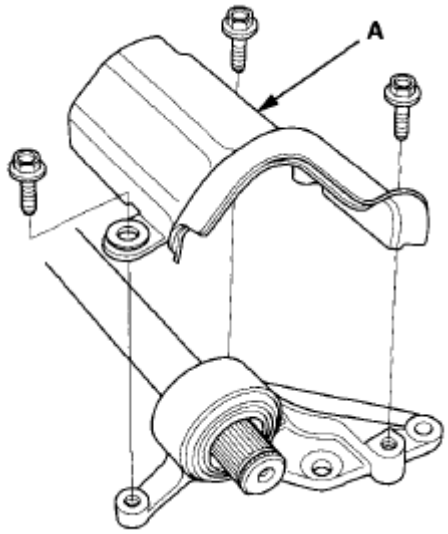

Fig. 74: Identifying Heat Shield
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the outer seal (A) and the external snap ring (B).

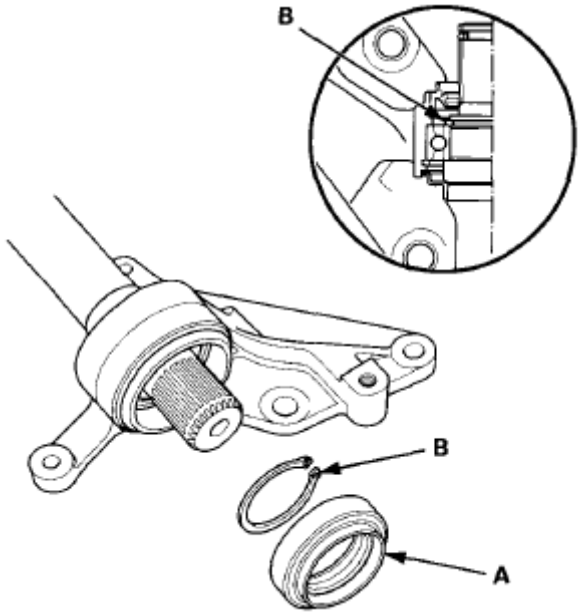

Fig. 75: Identifying Outer Seal And External Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Press the intermediate shaft (A) out of the intermediate shaft bearing (B) using the support base attachment (C), the support base (D), and a press. Be careful not to damage the bearing support ring (E) on the intermediate shaft during disassembly.

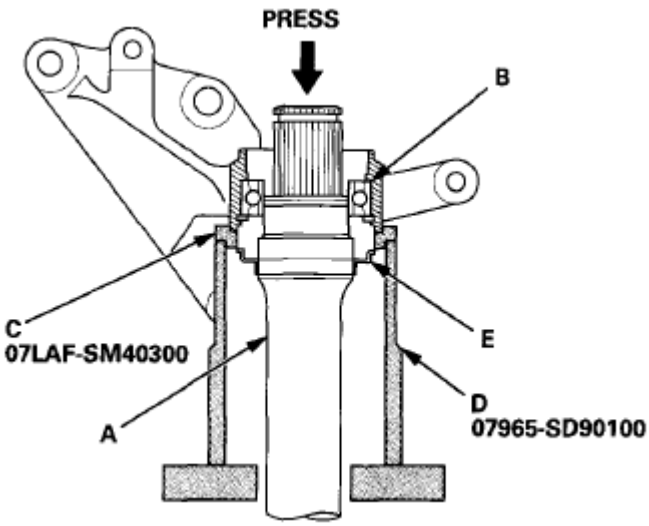

Fig. 76: Pressing Intermediate Shaft Out Of Intermediate Shaft Bearing Using Support Base Attachment, Support Base And Press

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the internal snap ring (A) from the bearing support (B).

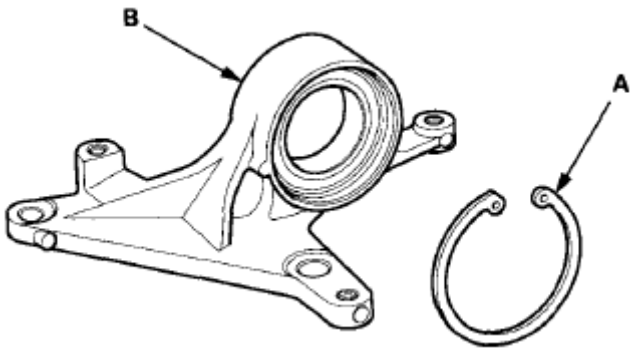

Fig. 77: Identifying Internal Snap Ring And Bearing Support
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Press the intermediate shaft bearing (A) out of the bearing support (B) using the 15 x 135L driver handle (C), the 42 x 47 mm bearing driver attachment (D), the support base attachment (E), the support base (F), and a press.

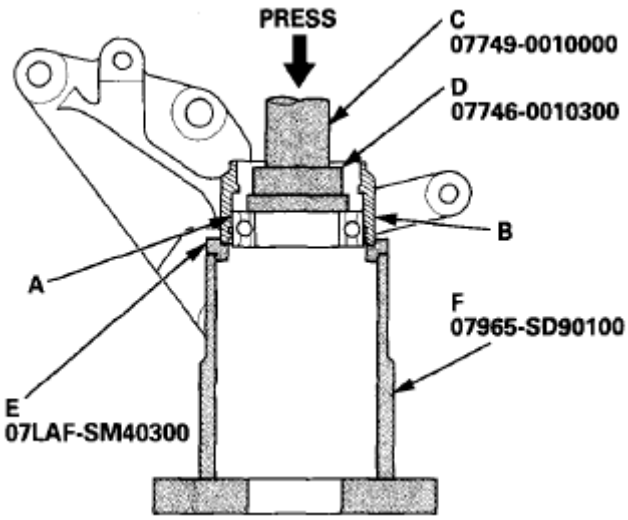

Fig. 78: Pressing Intermediate Shaft Bearing Out Of Bearing Support Using Driver Handle, Bearing Driver Attachment, Support Base Attachment, Support Base And Press
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INTERMEDIATE SHAFT REASSEMBLY

EXPLODED VIEW

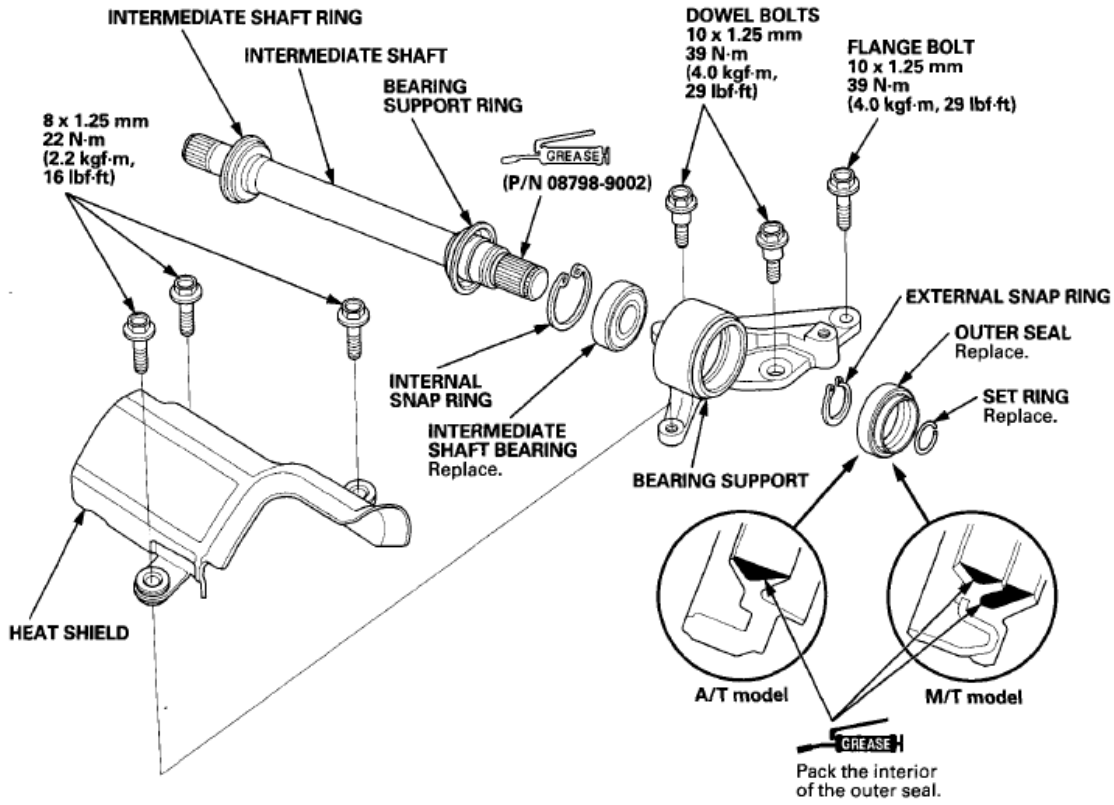

Fig. 79: Exploded View Of Intermediate Shaft Assembly With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Bearing Driver Attachment, 52 x 55 mm 07746-0010400
- Driver Handle, 15 x 135L 07749-0010000
- Fork Seal Driver, 39.2 x 49.5 x 15 mm 07947-4630100
- Support Base 07965-SD90100
- Installer Attachment 40 mm 07LAD-PW50601
- Support Base Attachment 07LAF-SM40300
- Fork Seal Driver, 46.2 mm 07TMD-MAC0100

NOTE: Refer to the EXPLODED VIEW, as needed, during this procedure.

1. Clean the disassembled parts with solvent, and dry them with compressed air.

   NOTE: Do not wash the rubber parts with solvent.

2. Press a new intermediate shaft bearing (A) into the bearing support (B) using the 15 x 135L driver handle (C), the 52 x 55 mm bearing driver attachment (D), the support base attachment (E), the support base (F), and a press.

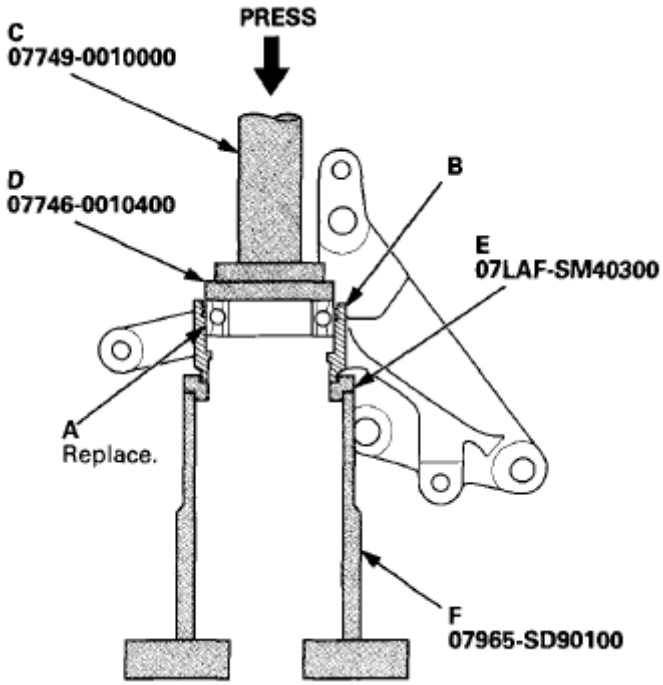

Fig. 80: Pressing Intermediate Shaft Bearing Into Bearing Support Using Driver Handle, Bearing Driver Attachment, Support Base Attachment, Support Base And Press
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the internal snap ring (A) into the groove (B) of the bearing support.

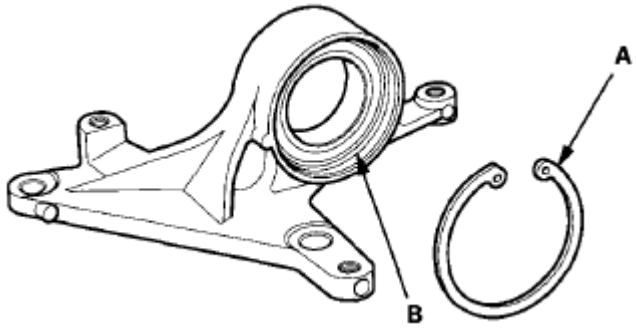

Fig. 81: Identifying Internal Snap Ring And Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Press the intermediate shaft (A) into the shaft bearing (B) using the 39.2 x 49.5 x 15 mm fork seal driver (C) and a press.

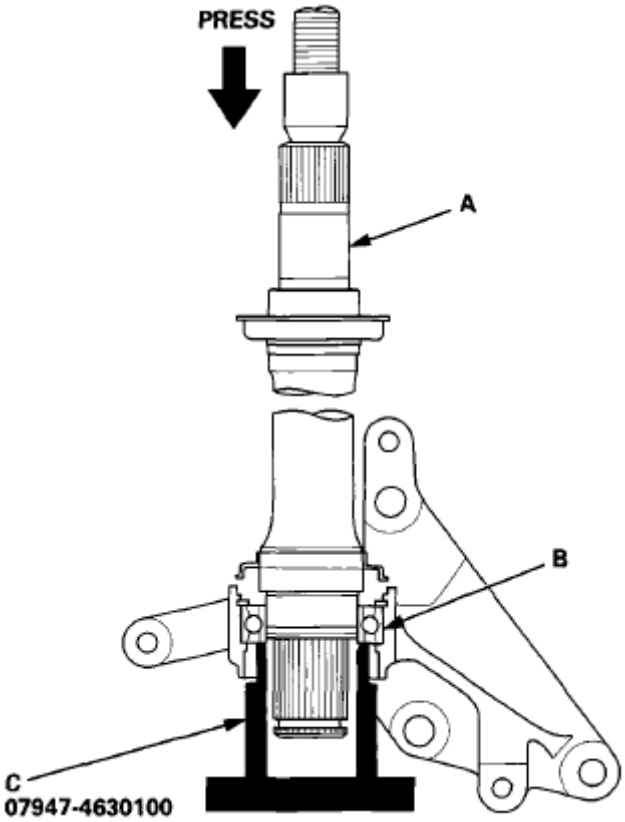

Fig. 82: Pressing Intermediate Shaft Into Shaft Bearing Using Fork Seal Driver And Press
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the external snap ring (A) into the groove of the intermediate shaft (B).

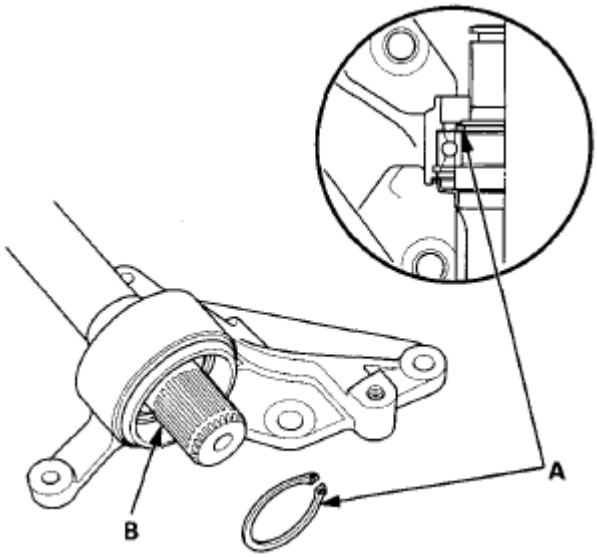

Fig. 83: Identifying External Snap Ring And Groove Of Intermediate Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the outer seal.
   - M/T model, go to step 7.
   - A/T model, go to step 8.
7. Install a new outer seal (A) into the bearing support (B) using the 46.2 mm fork seal driver (C), the support base attachment (D), the support base (E), and a press. Press in the seal until it is even with the surface of the bearing support. Then go to step 9.

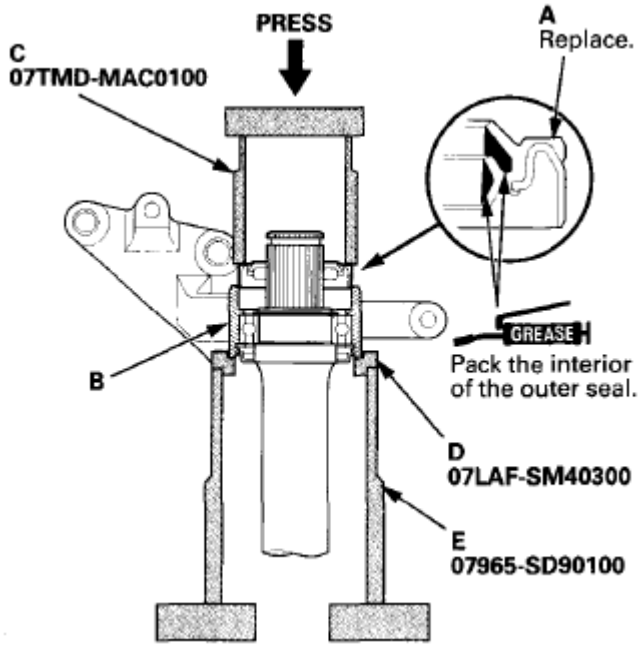

Fig. 84: Installing Outer Seal Into Bearing Support Using Fork Seal Driver, Support Base Attachment, Support Base And Press
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install a new outer seal (A) into the bearing support (B) using the 40 mm installer attachment (C), the support base attachment (D), the support base (E), and a press. Press in the seal until it is even with the surface of the bearing support.

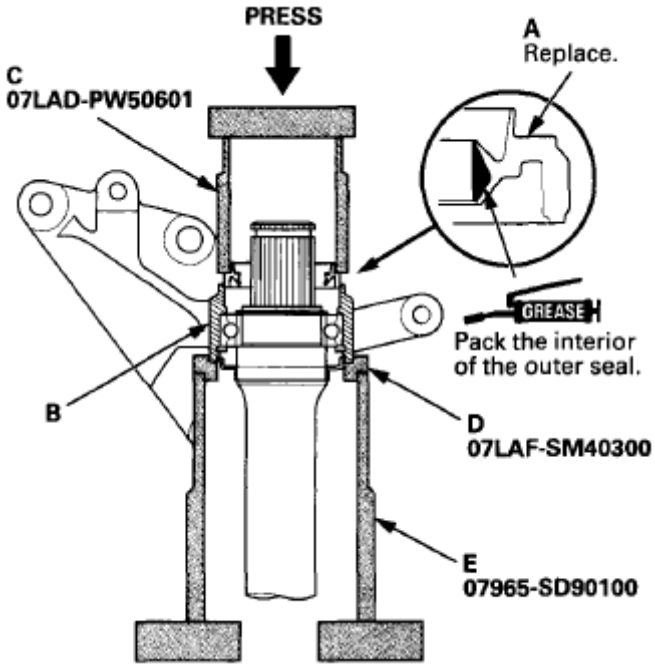

Fig. 85: Installing Outer Seal Into Bearing Support Using Installer Attachment, Support Base Attachment, Support Base And Press
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the heat shield (A).

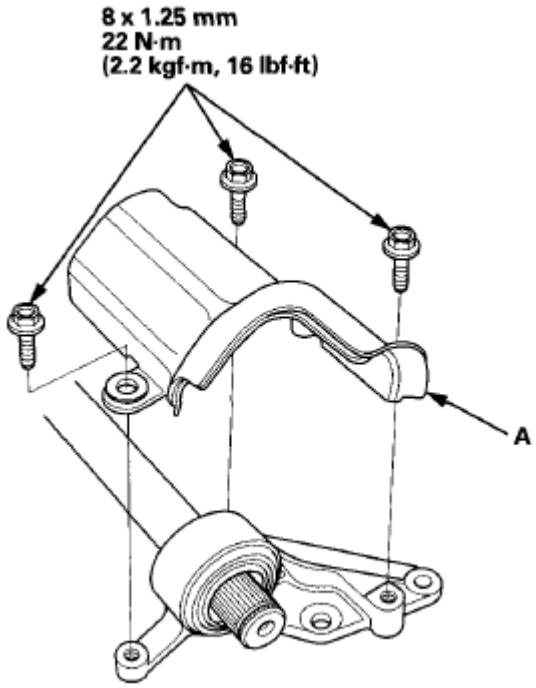

Fig. 86: Identifying Heat Shield & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INTERMEDIATE SHAFT INSTALLATION

1. Clean the areas where the intermediate shaft contacts the differential thoroughly with solvent, and dry them with compressed air.

   NOTE: Do not wash the rubber parts with solvent.

2. Install a new set ring (A) into the set ring groove (B) of the intermediate shaft (C).

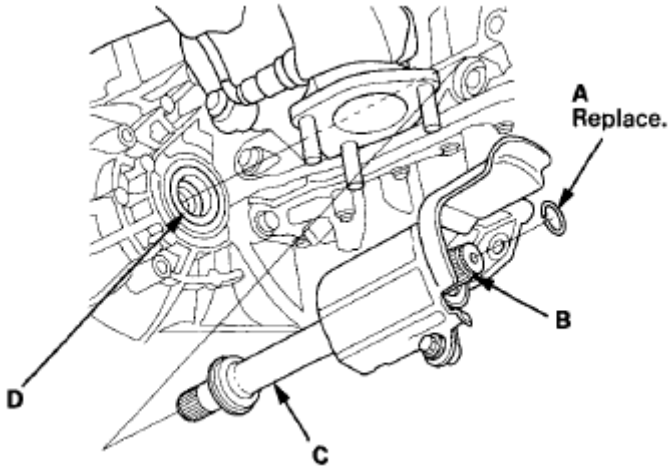

Fig. 87: Identifying New Set Ring, Set Ring Groove, Intermediate Shaft And Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Insert the intermediate shaft into the differential correctly.

   NOTE: Insert the intermediate shaft carefully to prevent damaging the oil seal (D).

4. Install the flange bolt (A) and the two dowel bolts (B).

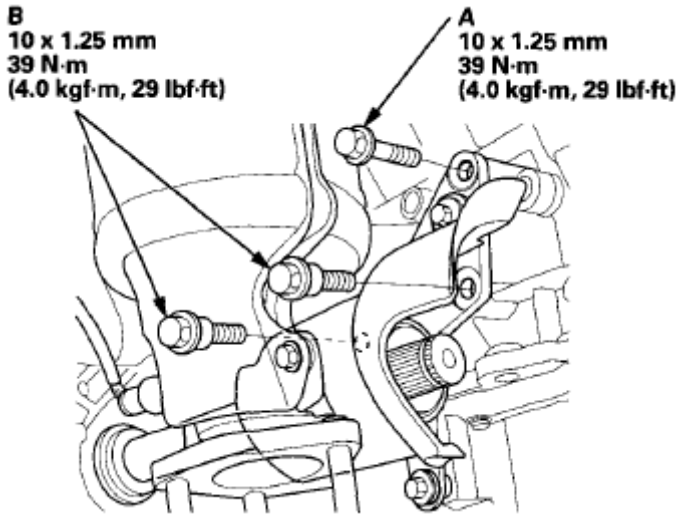

Fig. 88: Identifying Flange And Dowel Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the rear warm up three way catalytic converter (rear WU-TWC) bracket (A).

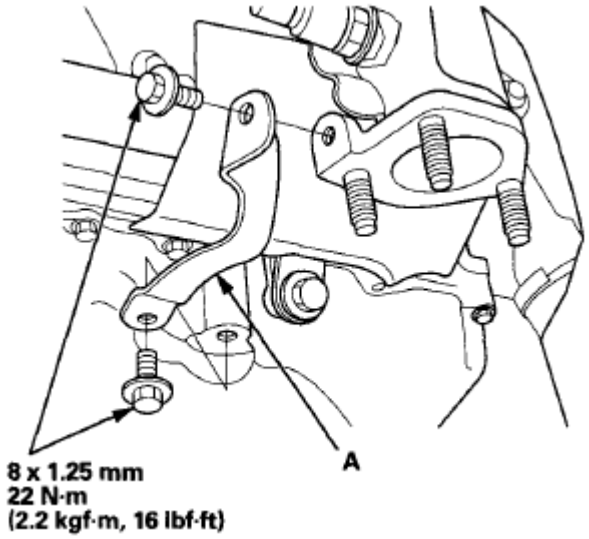

Fig. 89: Identifying Catalytic Converter (Rear WU-TWC) Bracket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the right front driveshaft (see **FRONT DRIVESHAFT INSTALLATION**).
7. M/T model: Connect the crankshaft position (CKP) sensor connector (A), and install the sensor harness clamp bracket (B).

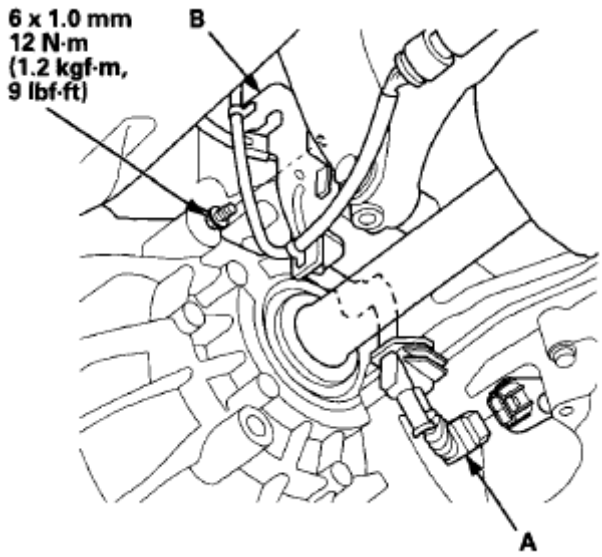

Fig. 90: Identifying Crankshaft Position (CKP) Sensor Connector And Sensor Harness Clamp Bracket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. M/T model: Install the CKP sensor cover (A).

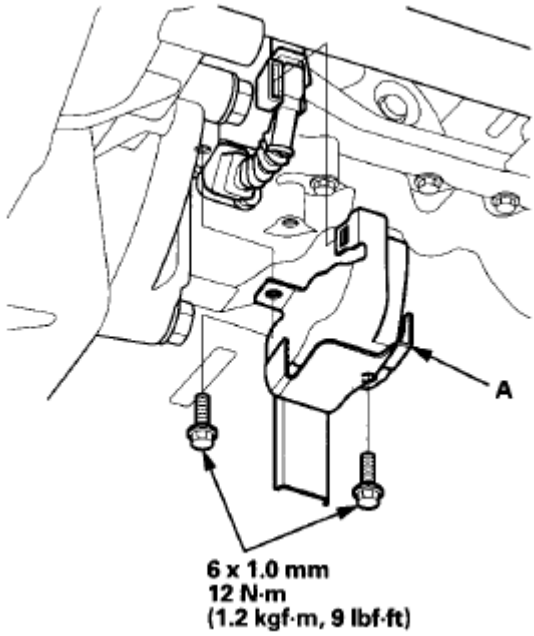

Fig. 91: Identifying CKP Sensor Cover & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install exhaust pipe A.
   - Without SH-AWD (see **EXHAUST PIPE AND MUFFLER REPLACEMENT**)
   - With SH-AWD (see **J37A4 ENGINE (WITH SH-AWD)**)

10. Refill the transmission with the recommended transmission fluid:
    - Manual transmission (see **TRANSMISSION FLUID INSPECTION AND REPLACEMENT**)
    - Automatic transmission (see **ATF REPLACEMENT**)
11. Check the wheel alignment, and adjust it if necessary (see **WHEEL ALIGNMENT**).
12. Test-d rive the vehicle.

REAR DRIVESHAFT REMOVAL

Special Tools Required

Driveshaft Remover 07AAD-S3VA000

NOTE: Be careful not to damage the brake hose, sensor, and harness.

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Remove the rear wheel.
3. Remove exhaust pipe B and the muffler (see **J37A4 ENGINE (WITH SH-AWD)**).
4. Remove the lower arm A mounting bolt (A) and the lower arm B mounting bolt (B).

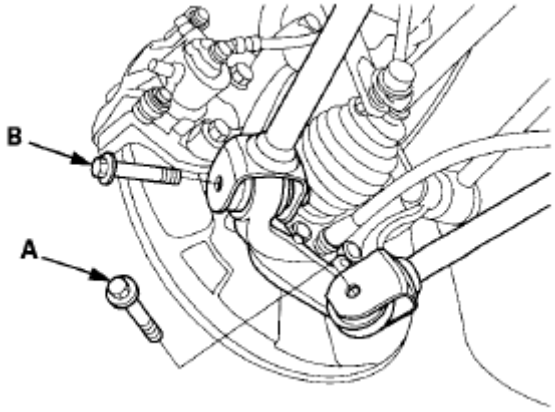

Fig. 92: Identifying Lower Arm Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Use a hammer to wedge the driveshaft remover (A) between the inboard joint (B) and the rear differential (C).

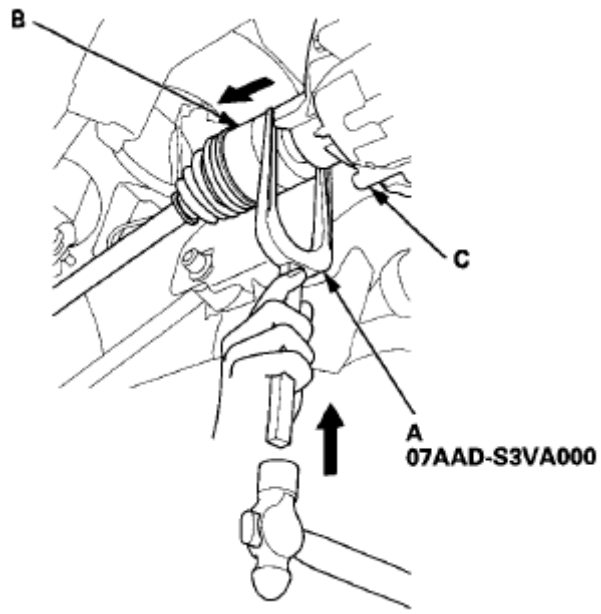

Fig. 93: Using Hammer To Wedge Driveshaft Remover Between Inboard Joint And Rear Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Pull the knuckle outward, and separate the inboard joint from the rear differential.

NOTE: Be careful not to damage the splash guard (A).

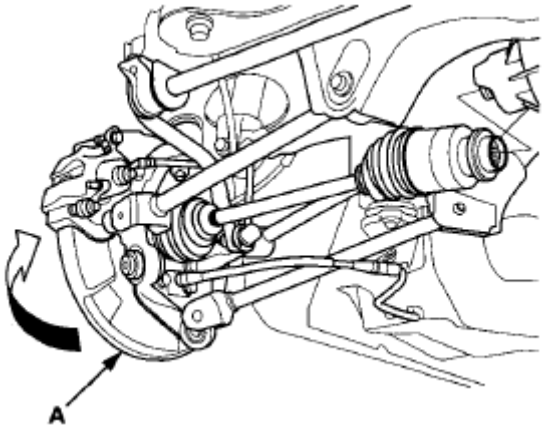

Fig. 94: Pulling Knuckle Outward And Separate Inboard Joint From Rear Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Pry up the stake (A) on the spindle nut (B), then remove the nut.

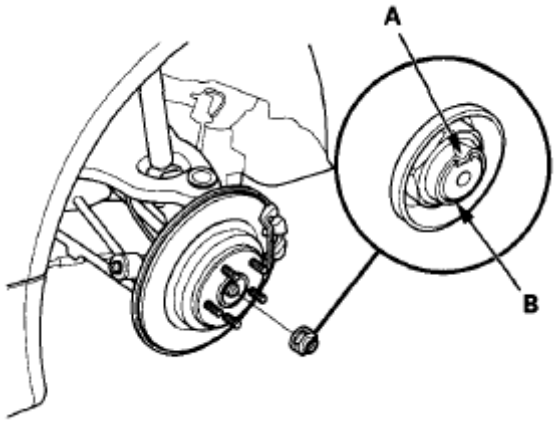

Fig. 95: Identifying Stake And Spindle Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. While holding the driveshaft by hand, separate the driveshaft outboard joint from the rear hub using a soft face hammer.

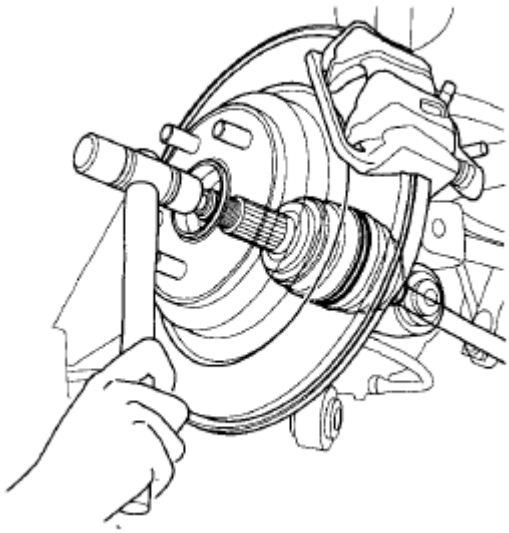

Fig. 96: Separating Driveshaft Outboard Joint From Rear Hub Using Soft Face Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the rear driveshaft (A).

NOTE: Be careful not to damage the wheel speed sensor (B).

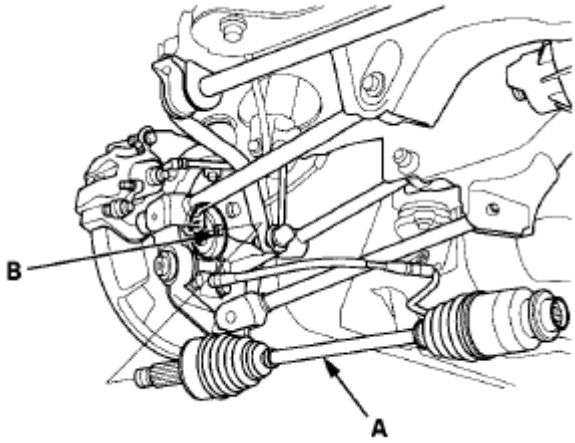

Fig. 97: Identifying Rear Driveshaft And Wheel Speed Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the set ring (A) from the rear differential.

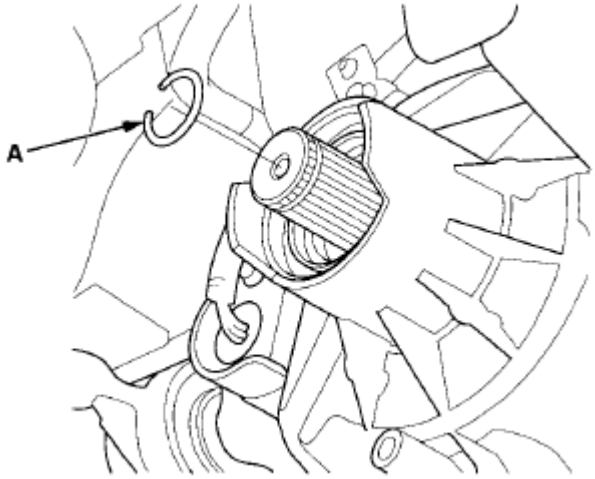

Fig. 98: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DRIVESHAFT DISASSEMBLY

Special Tools Required

- Threaded Adapter, 24 x 1.5 mm 07XAC-001020A
- Slide Hammer 5/8"-18 UNF, commercially available
- Bearing Puller, commercially available
- Boot Band Pliers, commercially available

INBOARD JOINT SIDE

1. Remove the boot bands. Be careful not to damage the boot.
   - If the boot band is a double loop type (A), lift up the band end (B), and push it into the clip (C).
   - If the boot band is a low profile type (D), pinch the boot band using commercially available boot band pliers (E).

   Double loop type

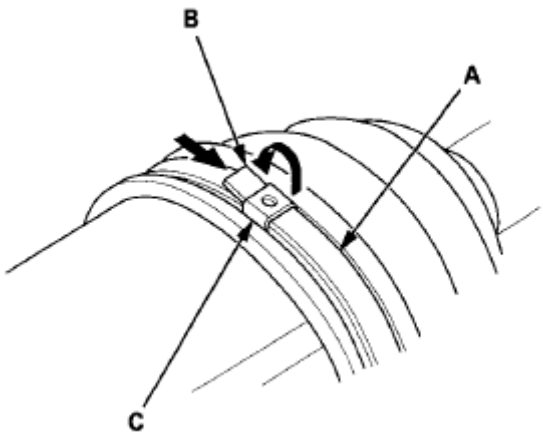

Fig. 99: Removing Boot Bands - Double Loop Type
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   Low profile type

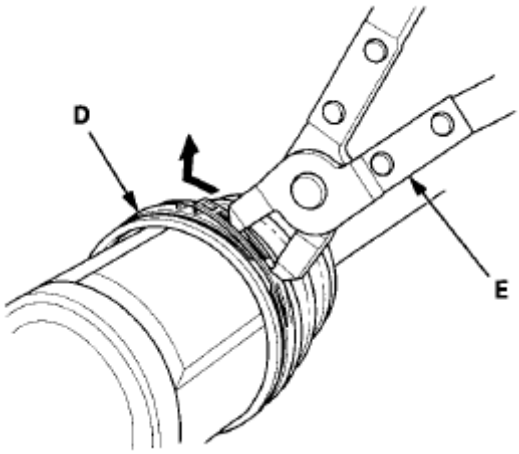

Fig. 100: Removing Boot Bands - Low Profile Type
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the circlip (A).

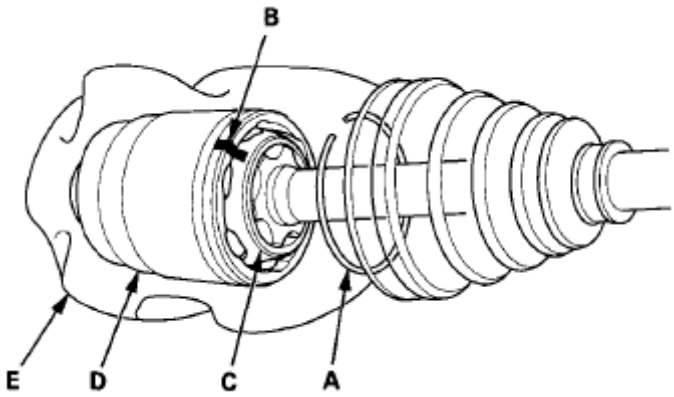

Fig. 101: Identifying Circlip, Bearing Retainer, Marks, Inboard Joint And Shop Towel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Make marks (B) on the bearing retainer (C) and the inboard joint (D) to identify the locations of the bearing retainer to the grooves in the inboard joint. Then remove the inboard joint on a clean shop towel (E). Be careful not to drop the steel balls when separating them from the inboard joint.
4. Make marks (A) on the bearing retainer (B), the bearing race (C), and the driveshaft (D) to identify the position of the bearing retainer and the bearing race on the shaft.

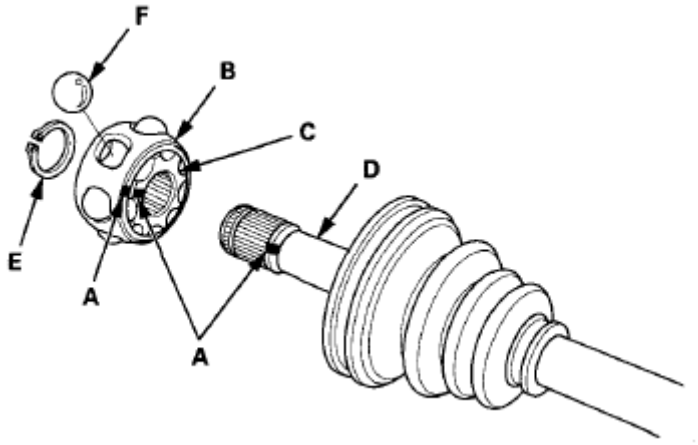

Fig. 102: Identifying Bearing Retainer, Bearing Race, Driveshaft, Snap Ring And Marks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the snap ring (E).
6. Remove the bearing race and the steel balls (F).

NOTE: If necessary, use a commercially available bearing puller.

7. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging the inboard boot.

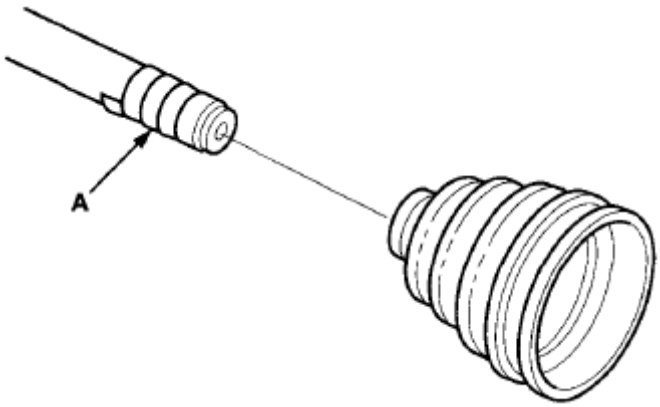

Fig. 103: Identifying Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the inboard boot. Be careful not to damage the boot.
9. Remove the vinyl tape.

OUTBOARD JOINT SIDE

1. Remove the boot bands. Be careful not to damage the boot.
   - If the boot band is a low profile type (A), pinch the boot band using commercially available boot band pliers (B).
   - If the boot band is an ear clamp type (C), lift up the three tabs (D) using a flat-tipped screwdriver.

Low profile type

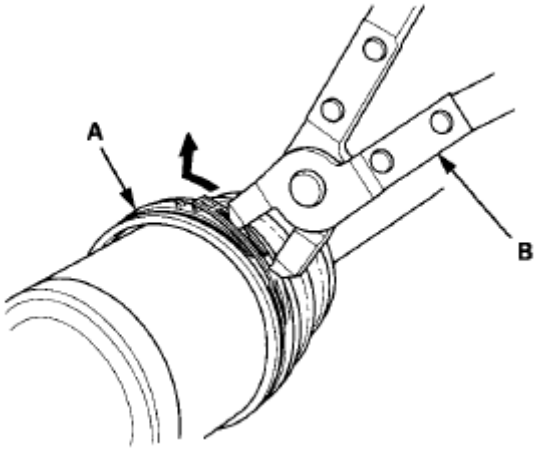

Fig. 104: Removing Boot Bands - Low Profile Type
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Ear clamp type

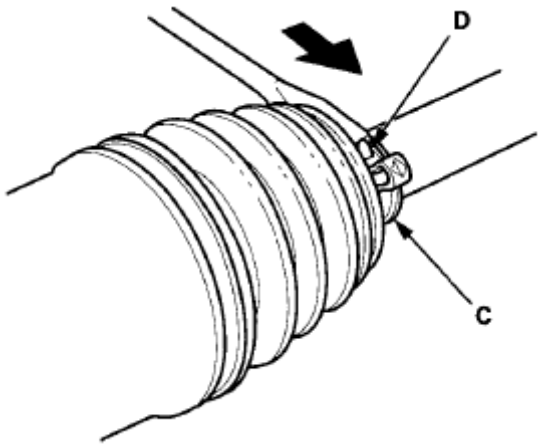

Fig. 105: Removing Boot Bands - Ear Clamp Type
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Slide the outboard boot (A) partially toward the inboard joint side. Be careful not to damage the boot.

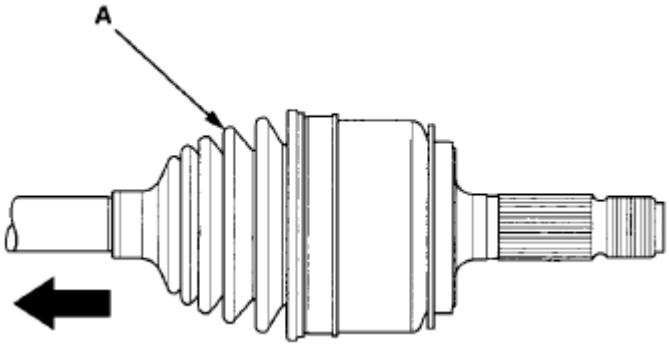

Fig. 106: Sliding Outboard Boot Partially Toward Inboard Joint Side
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Wipe off the grease to expose the driveshaft and the outboard joint inner race.
4. Make a mark (A) on the driveshaft (B) at the same level as the outboard joint end (C).

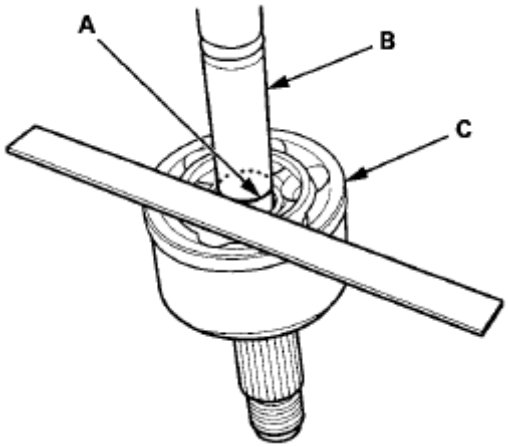

Fig. 107: Making Mark On Driveshaft At Same Level As Outboard Joint End
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Securely clamp the driveshaft in a bench vise with a shop towel wrapped around the driveshaft.
6. Remove the outboard joint (A) using the 24 x 1.5 mm threaded adapter (B) and a commercially available 5/8"-18 UNF slide hammer (C).

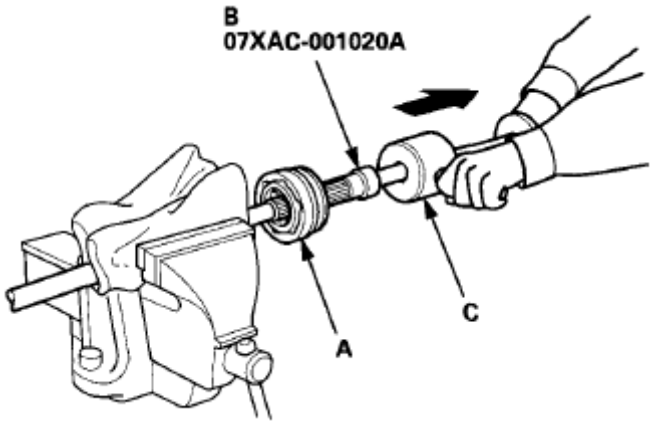

Fig. 108: Removing Outboard Joint Using Threaded Adapter And UNF Slide Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the driveshaft from the bench vise.
8. Remove the stop ring (A) from the driveshaft.

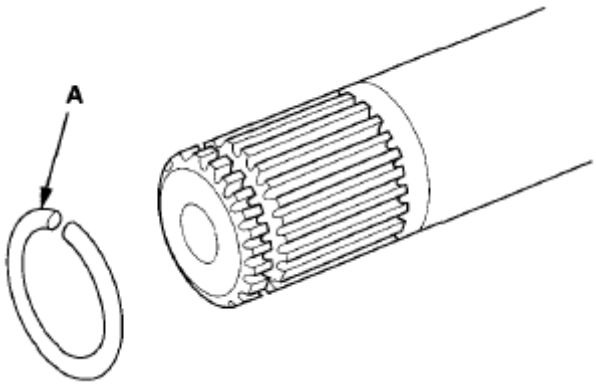

Fig. 109: Identifying Stop Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging the outboard boot.

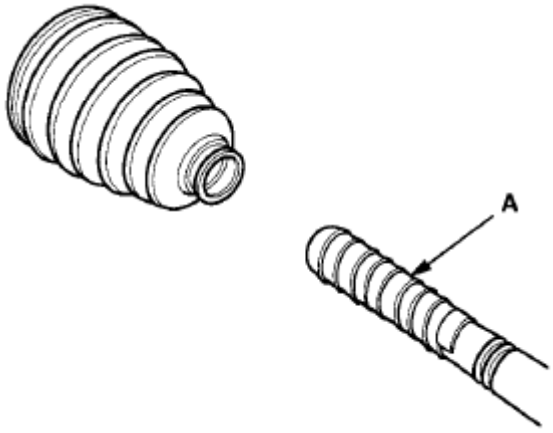

Fig. 110: Identifying Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the outboard boot. Be careful not to damage the boot.
11. Remove the vinyl tape.

REAR DRIVESHAFT REASSEMBLY

EXPLODED VIEW

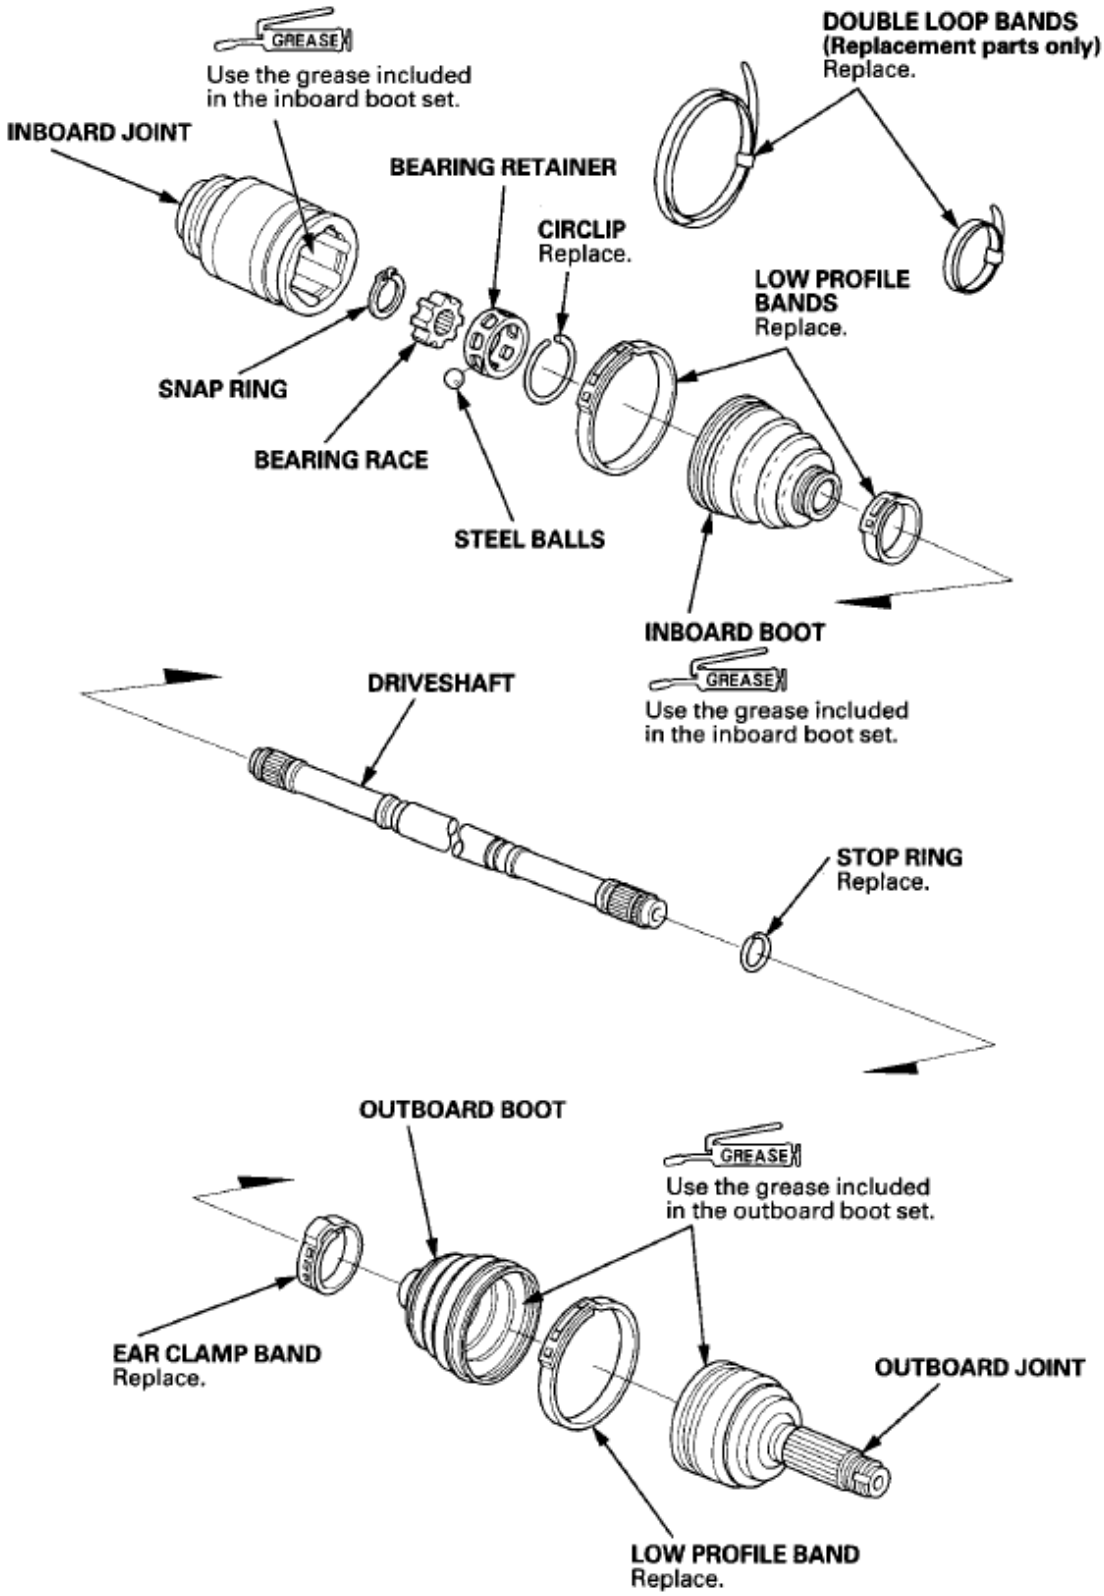

Fig. 111: Exploded View Of Rear Driveshaft Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Boot Band Tool KD-3191 or equivalent, commercially available
- Boot Band Clamp Tool Kent-Moore J-35910 or equivalent, commercially available
- Boot Band Pliers, commercially available

NOTE: Refer to the EXPLODED VIEW, as needed, during this procedure.

INBOARD JOINT SIDE

1. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging the inboard boot.

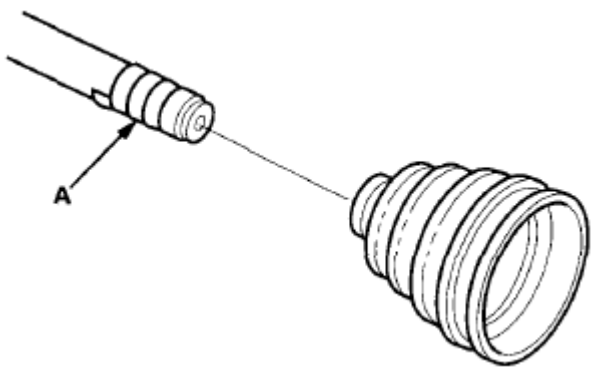

Fig. 112: Identifying Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the inboard boot onto the driveshaft, then remove the vinyl tape. Be careful not to damage the inboard boot.
3. Assemble the steel balls (A), the bearing retainer (B), and the bearing race (C) by aligning the marks (D) you made on the bearing retainer and the bearing race.

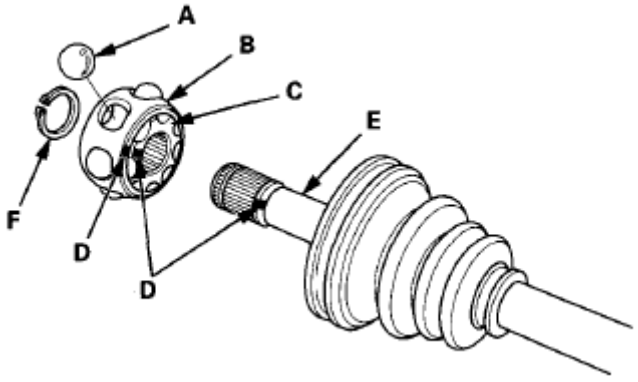

Fig. 113: Identifying Driveshaft, Steel Balls, Bearing Retainer, Bearing Race, Marks And Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the bearing onto the driveshaft (E) by aligning the marks you made on the bearing and the driveshaft. Be careful not to drop the steel balls when installing the bearing onto the driveshaft.
5. Install the snap ring (F).
6. Pack the inboard joint with the joint grease included in the new inboard boot set.

   Grease quantity

   Inboard joint: 85- 105 g (3.0- 3.7 oz)

Fig. 114: Packing Inboard Joint With Joint Grease
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the inboard joint onto the driveshaft by aligning the marks (A) you made on the inboard joint and the bearing retainer.

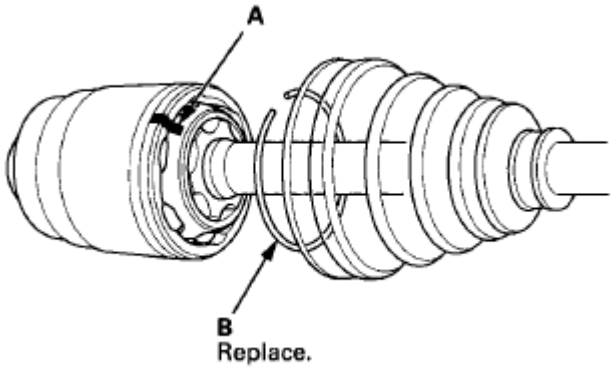

Fig. 115: Identifying Circlip And Marks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install a new circlip (B) into the inboard joint groove.
9. Fit the boot ends (A) onto the driveshaft (B) and the inboard joint (C).

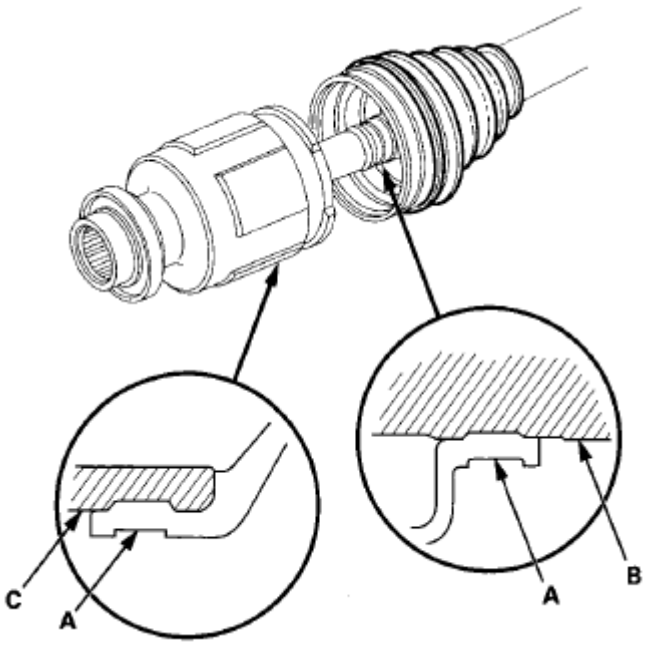

Fig. 116: Identifying Boot Ends, Driveshaft And Inboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Adjust the length (A) of the driveshafts in the figure as shown, then adjust the boots to halfway between full compression and full extension. Bleed excess air from the boots by inserting a flat-tipped screwdriver between the boot and the joint.

    Left and Right driveshaft: 567.1- 572.1 mm (22.33- 22.52 in)

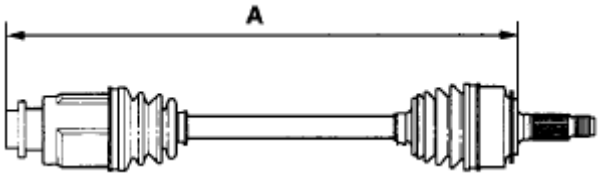

Fig. 117: Adjusting Length Of Driveshafts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install new boot bands.
    - For the double loop type, go to step 12.
    - For the low profile type, go to step 21.
12. Fit the boot ends onto the driveshaft and the inboard joint, then install a new double loop band (A) onto the boot (B).

    NOTE: Pass the end of the double loop band through the clip (C) twice in the direction of the forward rotation of the driveshaft.

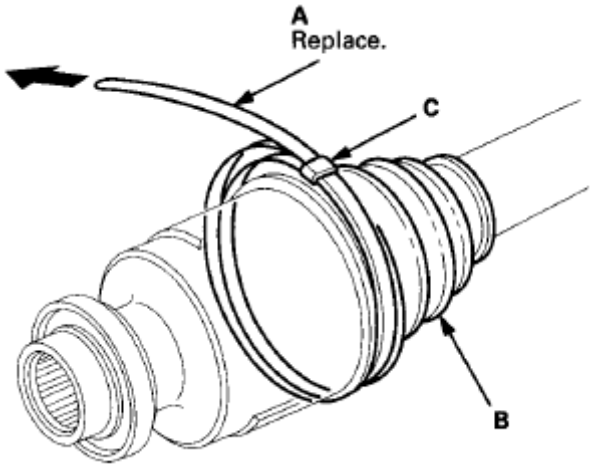

Fig. 118: Installing Double Loop Band Onto Boot
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Pull up the slack in the band by hand.
14. Mark a line (A) on the band 10- 14 mm (0.4- 0.6 in) from the clip (B).

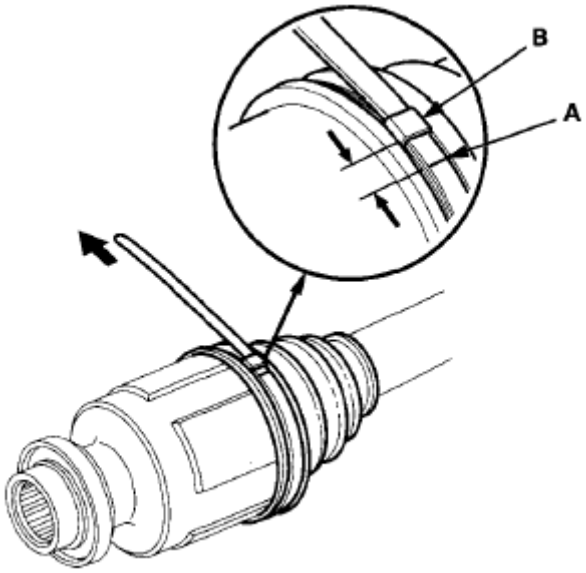

Fig. 119: Marking Line On Band From Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Thread the free end of the band through the nose section of the commercially available boot band tool (KD-3191 or equivalent) (A), and into the slot on the winding mandrel (B).

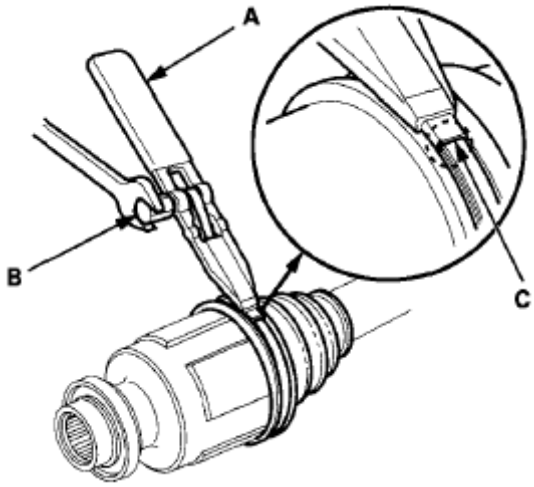

Fig. 120: Threading Free End Of Band Through Nose Section Of Boot Band Tool And Into Slot On Winding Mandrel
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Using a wrench on the winding mandrel of the boot band tool, tighten the band until the marked line (C) on the band meets the edge of the clip.
17. Lift up the boot band tool to bend the free end of the band 90 degrees to the clip. Center-punch the clip, then fold over the remaining tail onto the clip.

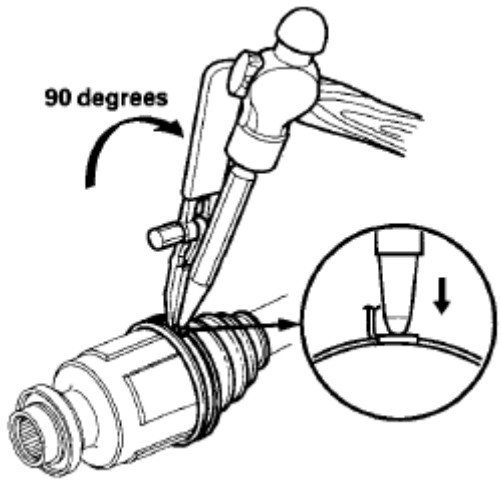

Fig. 121: Lifting Up Boot Band Tool To Bend Free End Of Band 90 Degrees To Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Unwind the boot band tool, and cut off the excess free end of the band to leave 5- 10 mm (0.2- 0.4 in) tail protruding from the clip.

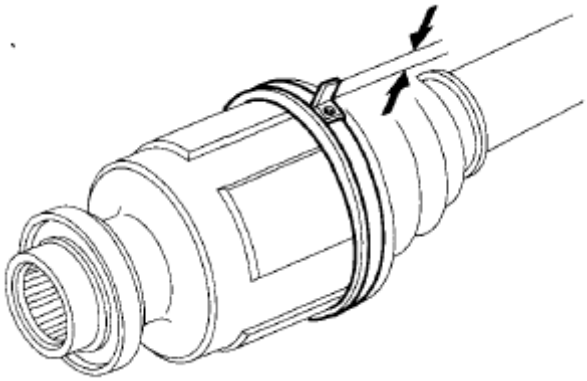

Fig. 122: Identifying Tail Protruding From Clip
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Bend the band end (A) by tapping it down using a hammer.

NOTE:

- **Make sure the band and the clip do not interfere with anything on the vehicle, and the band does not move.**
- **Clean any grease remaining on the surrounding surfaces.**

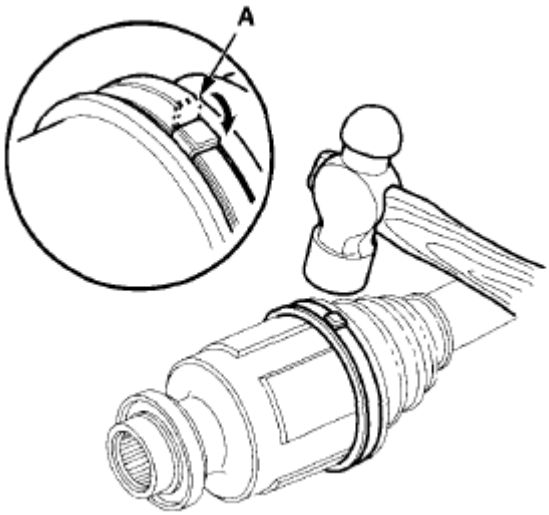

Fig. 123: Bending Band End By Tapping It Down Using Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Repeat steps 12 through 19 for the band on the other end of the boot.
21. Install a new low profile band (A) onto the boot (B), then hook the tab (C) of the band.

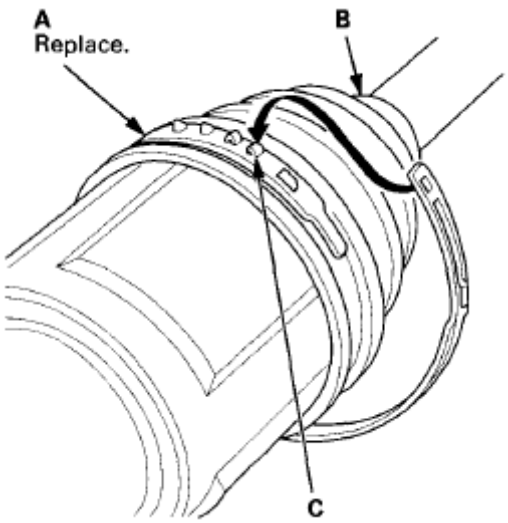

Fig. 124: Hooking Tab Of Boot Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Close the hook portion of the band using commercially available boot band pliers (A), then hook the tabs (B) of the band.

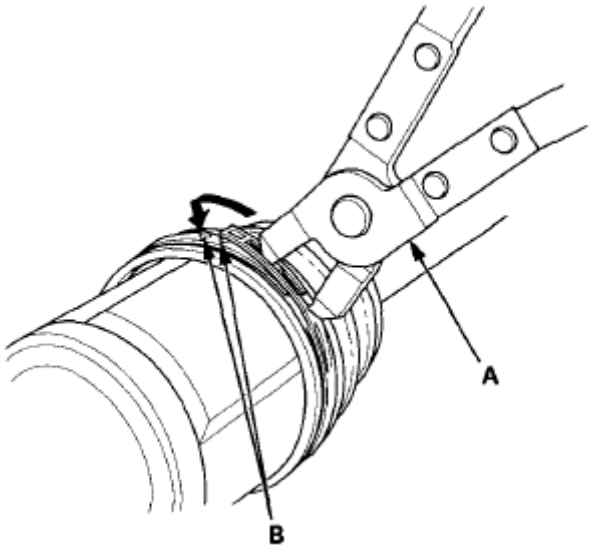

Fig. 125: Closing Hook Portion Of Band Using Boot Band Pliers And Hooking Tabs Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Install the boot band on the other end of the boot, and repeat steps 21 and 22.

OUTBOARD JOINT SIDE

1. Wrap the splines on the driveshaft with vinyl tape (A) to prevent damaging the outboard boot.

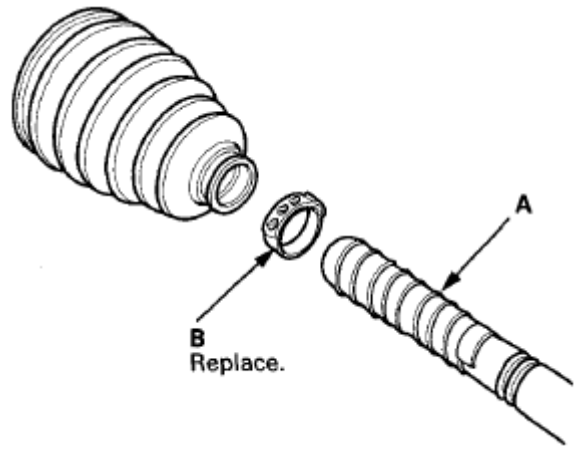

Fig. 126: Identifying Vinyl Tape
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install new ear clamp band (B) and the outboard boot onto the driveshaft, then remove the vinyl tape. Be careful not to damage the outboard boot.
3. Make sure to check the size of a new stop ring.

NOTE: To avoid driveshaft and vehicle damage, make sure you install a new stop ring.

Stop ring specifications

Overall diameter (A): 28.0 mm (1.10 in)

Wire diameter (B): 1.8 mm (0.07 in)

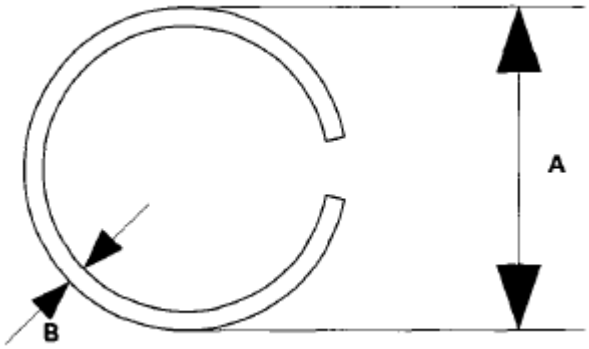

Fig. 127: Checking Size Of Stop Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the stop ring (A) into the driveshaft groove (B).

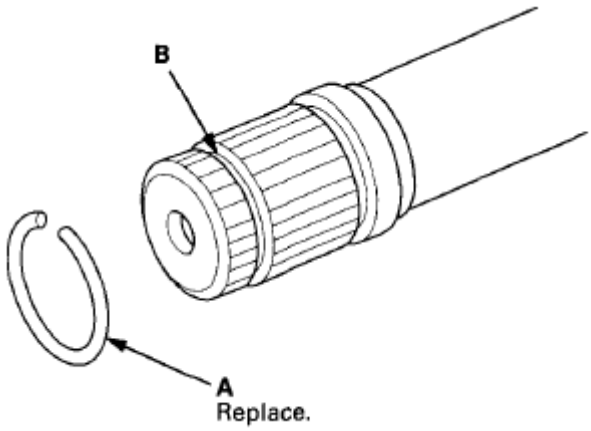

Fig. 128: Identifying Stop Ring And Driveshaft Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Pack about 35 g (1.2 oz) of grease included in the new outboard boot set into the driveshaft hole in the outboard joint.

NOTE: If you are installing a new outboard joint, the grease is already installed.

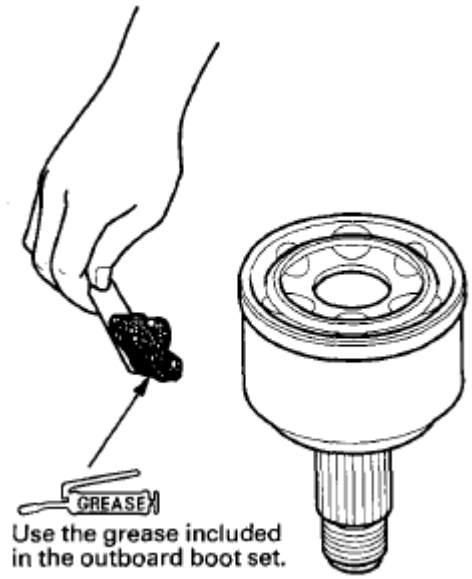

Fig. 129: Packing Grease Into Driveshaft Hole In Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Insert the driveshaft (A) into the outboard joint (B) until the stop ring (C) is close to the joint.

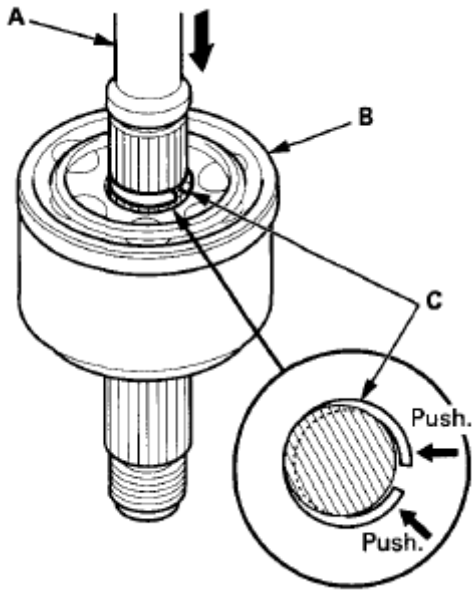

Fig. 130: Inserting Driveshaft Into Outboard Joint Until Stop Ring Is Close To Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. To completely seat the outboard joint, pick up the driveshaft and the joint, and tap or hit the assembly onto a hard surface from a height of about 10 cm (4 in).

NOTE: Do not use a hammer, as excessive force may damage the driveshaft. Be careful not to damage the threaded section (A) of the outboard joint.

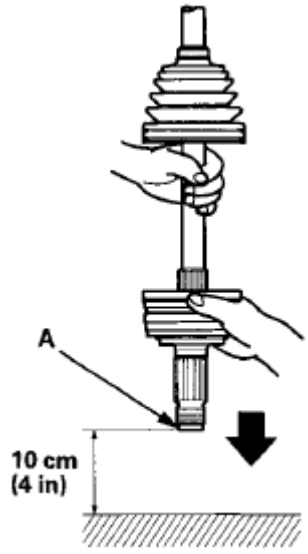

Fig. 131: To Completely Seat Outboard Joint Tapping Assembly Onto Hard Surface From Height
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Check the alignment of the paint mark (A) you made with the outboard joint end (B).

NOTE: To avoid driveshaft and vehicle damage, the shaft must be all the way into the outboard joint to ensure the stop ring is properly seated.

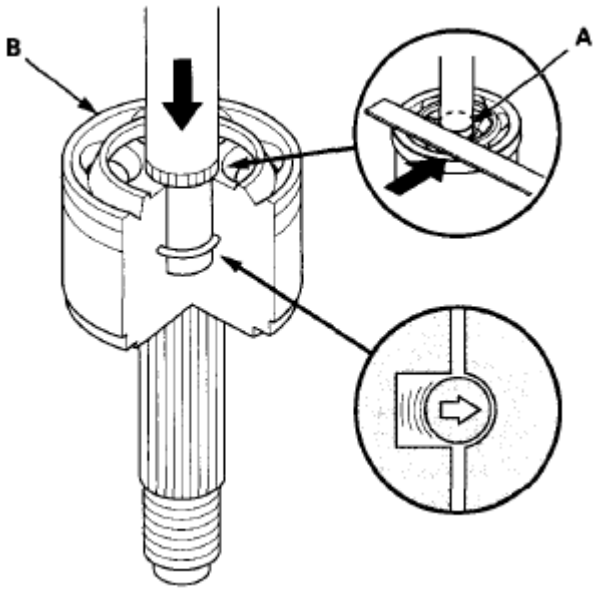

Fig. 132: Checking Alignment Of Paint Mark With Outboard Joint End
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Pack the outboard joint (A) with the remaining joint grease included in the outboard boot set.

Total grease quantity

Outboard joint: 80- 100 g (2.8- 3.5 oz)

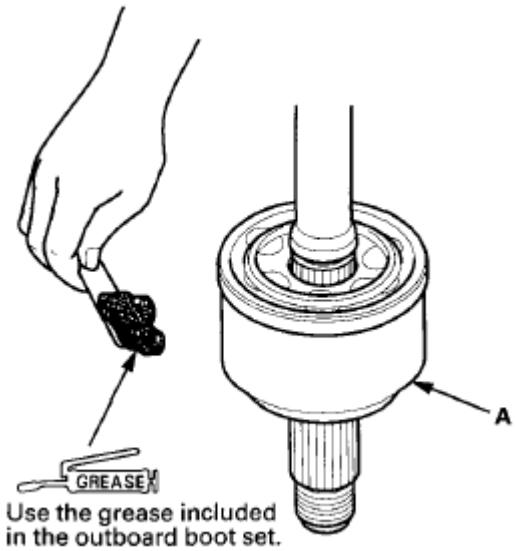

Fig. 133: Packing Outboard Joint With Remaining Joint Grease
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Fit the boot ends (A) onto the driveshaft (B) and the outboard joint (C). Bleed any excess air from the boot by inserting a flat-tipped screwdriver between the boot and the joint.

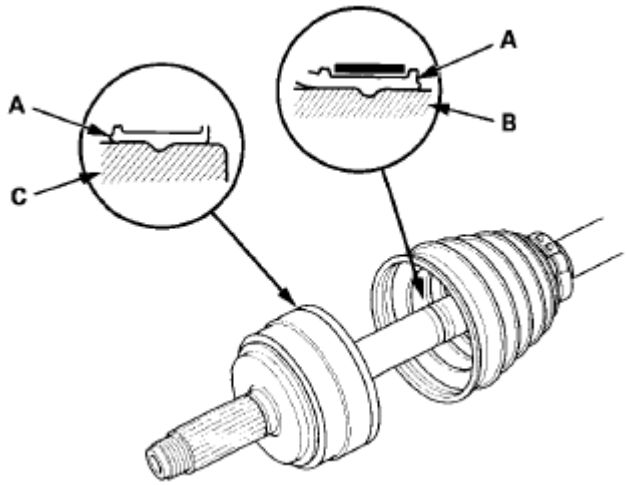

Fig. 134: Identifying Boot Ends, Driveshaft And Outboard Joint
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Inspect the length (A) of the driveshafts in the figure as shown, then adjust the boots to halfway between full compression and full extension.

    Left and Right driveshaft: 567.1- 572.1 mm (22.33- 22.52 in)

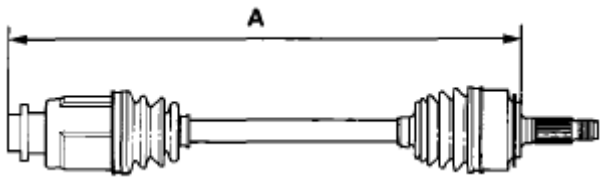

Fig. 135: Inspecting Length Of Driveshafts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Close the ear portion (A) of the band using a commercially available boot band clamp tool (Kent-Moore J-35910 or equivalent) (B).

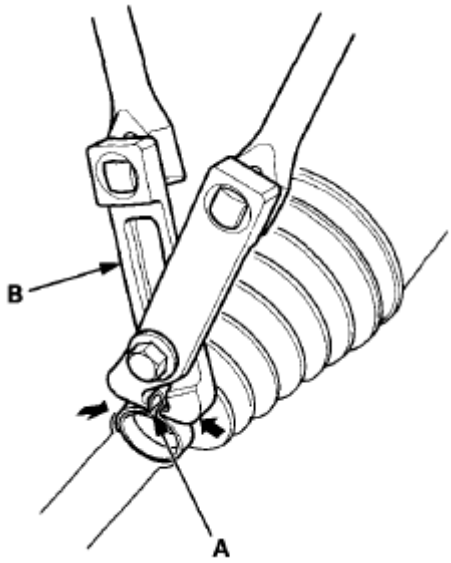

Fig. 136: Closing Ear Portion Of Band Using Boot Band Clamp Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Check the clearance between the closed ear portion of the band. If the clearance is not within the standard, close the ear portion of the band tighter.

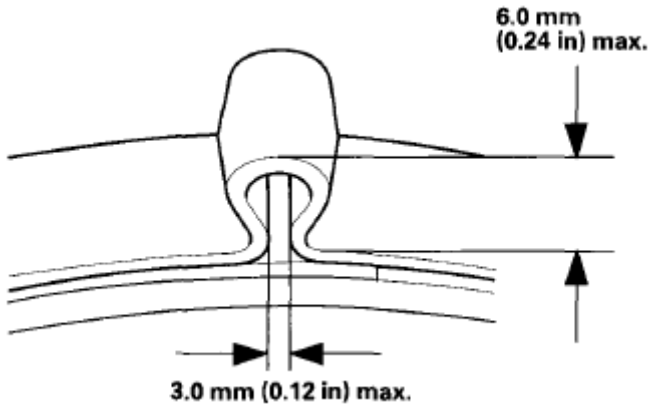

Fig. 137: Checking Clearance Between Closed Ear Portion Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install a new low profile band (A) onto the boot (B), then hook the tab (C) of the band.

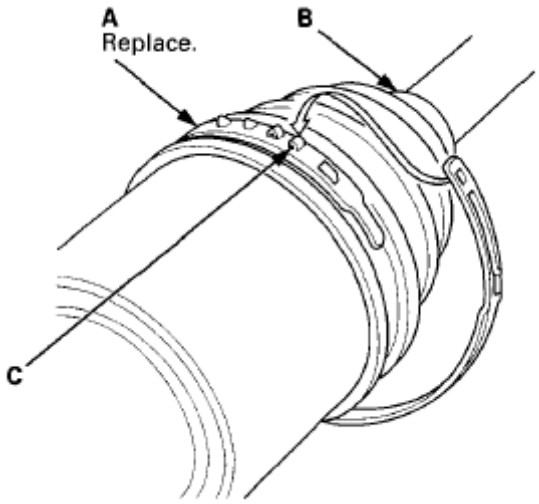

Fig. 138: Hooking Tab Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Close the hook portion of the band using commercially available boot band pliers (A), then hook the tabs (B) of the band.

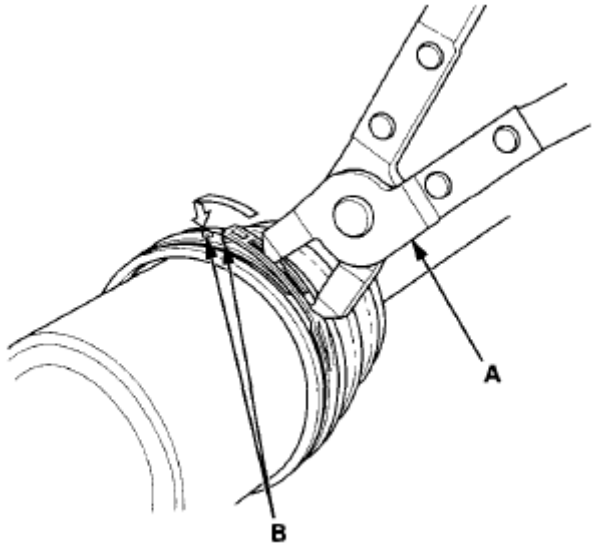

Fig. 139: Closing Hook Portion Of Band Using Boot Band Pliers And Hooking Tabs Of Band
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DRIVESHAFT INSTALLATION

NOTE: Before starting installation, make sure the mating surfaces of the joint and the splined section are clean.

1. Install a new set ring (A) into the set ring groove (B) of the rear differential.

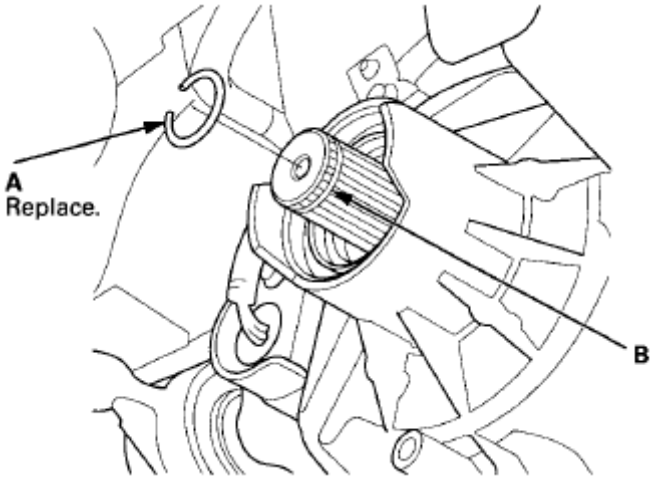

Fig. 140: Identifying Set Ring And Set Ring Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Apply 1.5- 2.0 g (0.05- 0.07 oz) of super high temp urea grease (P/N 08798-9002) to the whole splined surface (A). After applying grease, remove the grease from the splined grooves at intervals of 2- 3 splines and from the set ring groove (B) so that air can bleed from the rear differential.

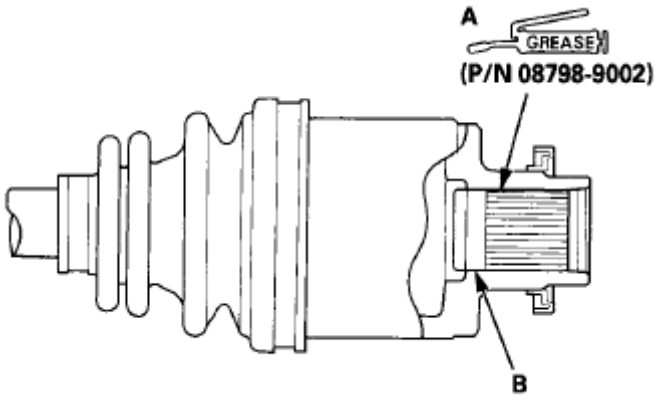

Fig. 141: Applying Super High Temp Urea Grease To Whole Splined Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the outboard joint (A) into the rear hub (B).

NOTE: Be careful not to damage the wheel speed sensor (C).

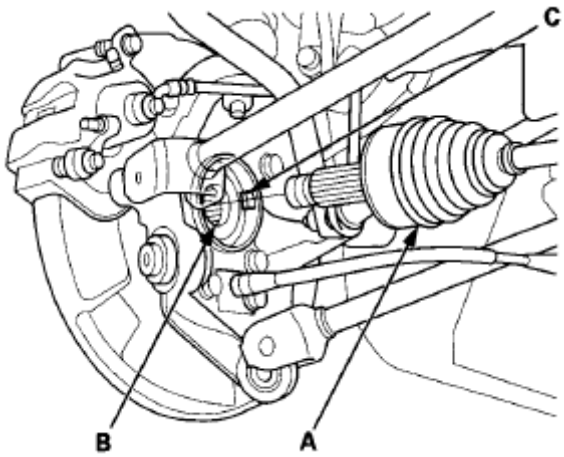

Fig. 142: Identifying Outboard Joint, Rear Hub And Wheel Speed Sensor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Clean the areas where the driveshaft contacts the differential thoroughly with solvent, and dry them with compressed air.

NOTE: Do not wash the rubber parts with solvent.

5. Pull the knuckle outward, and insert the inboard joint (A) into the rear differential (B).

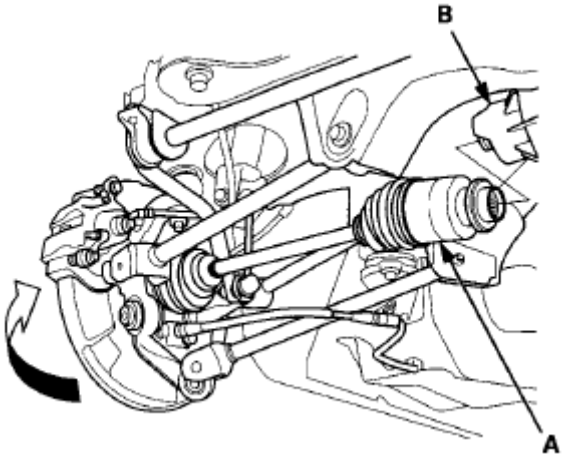

Fig. 143: Pulling Knuckle Outward And Insert Inboard Joint Into Rear Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Make sure the inboard joint (A) is installed all the way into the rear differential (B) and to ensure the set ring (C) is properly seated.

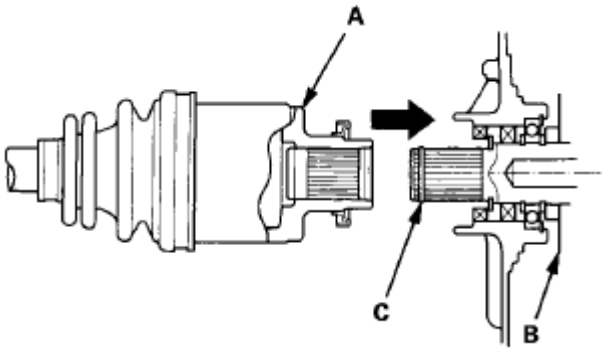

Fig. 144: Installing Inboard Joint Into Rear Differential Ensuring Set Ring Is Properly Seated
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Loosely install the new lower arm A mounting bolt (A) and the new lower arm B mounting bolt (B).

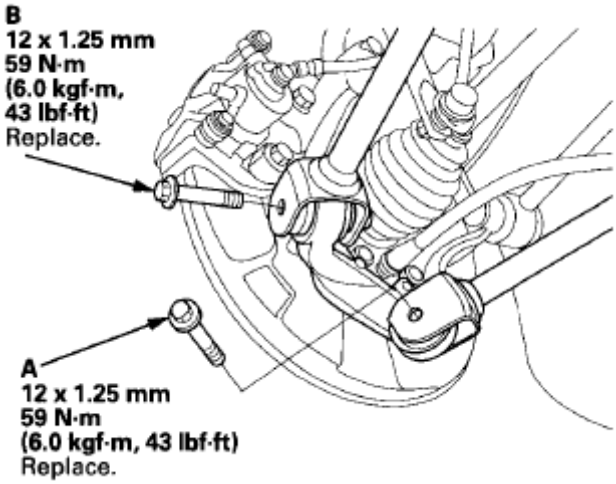

Fig. 145: Identifying Lower Arm Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Place a floor jack under the knuckle, and raise the suspension to load it with the vehicle's weight.
9. Tighten the lower arm A mounting bolt and the lower arm B mounting bolt to the specified torque, then remove the floor jack.
10. Apply a small amount of engine oil to the seating surface of a new spindle nut (A).

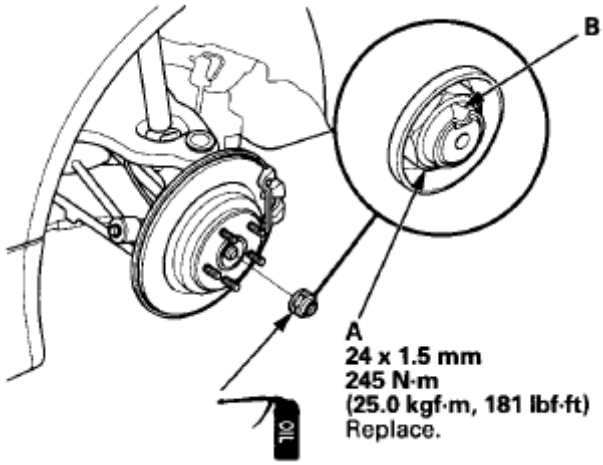

Fig. 146: Identifying Spindle Nut Shoulder And Spindle Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the spindle nut, then tighten it. After tightening, use a drift to stake the spindle nut shoulder (B) against the driveshaft.
12. Clean the mating surfaces between the brake disc and the inside of the wheel, then install the rear wheel.
13. Turn the wheel by hand, and make sure there is no interference between the driveshaft and surrounding parts.
14. Install exhaust pipe B and the muffler (see **J37A4 ENGINE (WITH SH-AWD)**).
15. Lower the vehicle.
16. Check the wheel alignment, and adjust it if necessary (see **WHEEL ALIGNMENT**).
17. Test-drive the vehicle.

PROPELLER SHAFT INSPECTION

UNIVERSAL JOINT AND BOOTS

1. Shift the transmission to neutral (M/T model) or N (A/T model).
2. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
3. Check the No. 1 center support bearing (A) and the No. 2 center support bearing (B) for excessive play or noise. If the center support has excessive play or noise, replace the propeller shaft assembly.

Front side

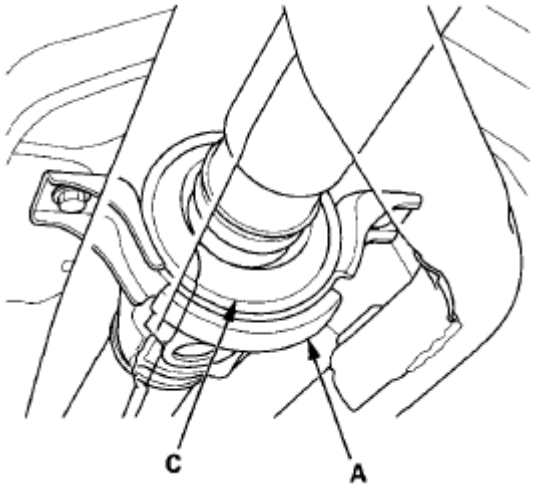

Fig. 147: Identifying Center Support Bearing And Rubber Portions - Front Side
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear side

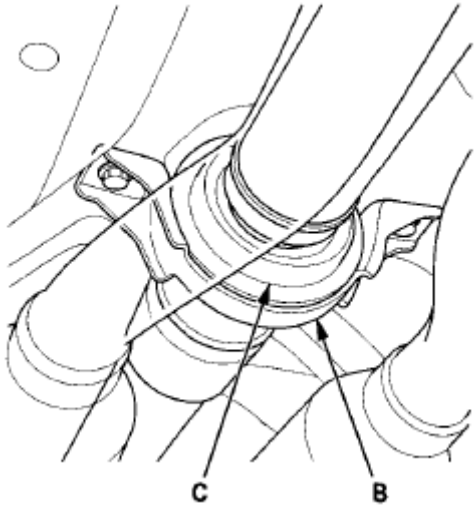

Fig. 148: Identifying Center Support Bearing And Rubber Portions - Rear Side
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check the rubber portions (C) of the center support bearings for damage and deterioration. If the rubber portions are damaged or deteriorated, replace the propeller shaft assembly.
5. Check the universal joints for excessive play or noise. If the universal joints have excessive play or noise, replace the propeller shaft assembly.

PROPELLER SHAFT RUNOUT

1. Shift the transmission to neutral (M/T model) or N (A/T model).
2. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).

3. Install a dial indicator with its needle on the middle of the No. 1, No. 2, or No. 3 propeller shaft.
4. Turn the other propeller shaft slowly and check the runout. Repeat this procedure for the other propeller shaft.

No. 1 Propeller Shaft Runout Service Limit: 1.5 mm (0.06 in)

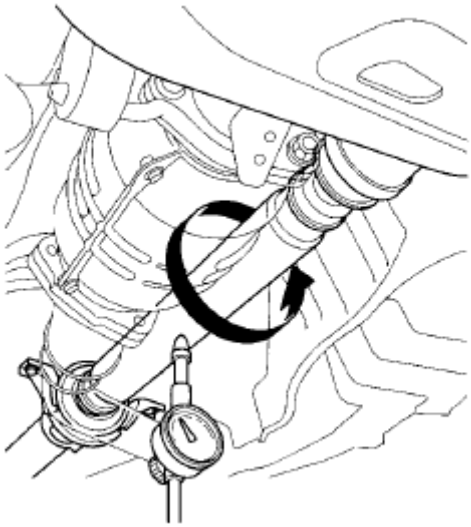

Fig. 149: Measuring No. 1 Propeller Shaft Runout
Courtesy of AMERICAN HONDA MOTOR CO., INC.

No. 2 Propeller Shaft Runout Service Limit: 1.5 mm (0.06 in)

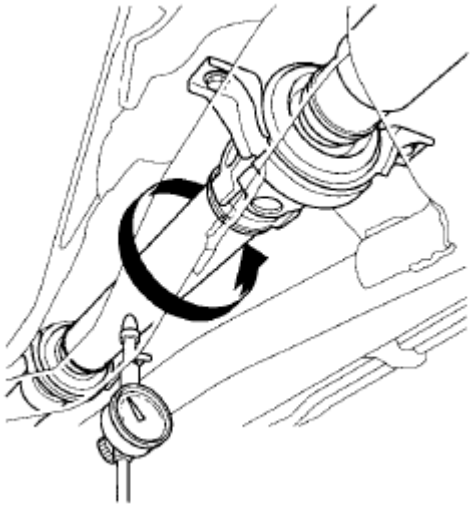

Fig. 150: Measuring No. 2 Propeller Shaft Runout
Courtesy of AMERICAN HONDA MOTOR CO., INC.

No. 3 Propeller Shaft Runout Service Limit: 1.5 mm (0.06 in)

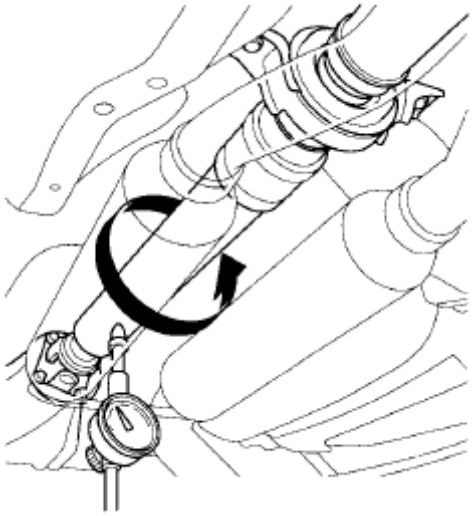

Fig. 151: Measuring No. 3 Propeller Shaft Runout
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If the runout on either propeller shaft exceeds the service limit, replace the propeller shaft assembly.

PROPELLER SHAFT REMOVAL

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Remove exhaust pipe B and the muffler (see **J37A4 ENGINE (WITH SH-AWD)**).
3. Place a transmission jack under the No. 2 propeller shaft.
4. Make reference mark (A) across the No. 1 propeller shaft (B) and the transfer companion flange (C).

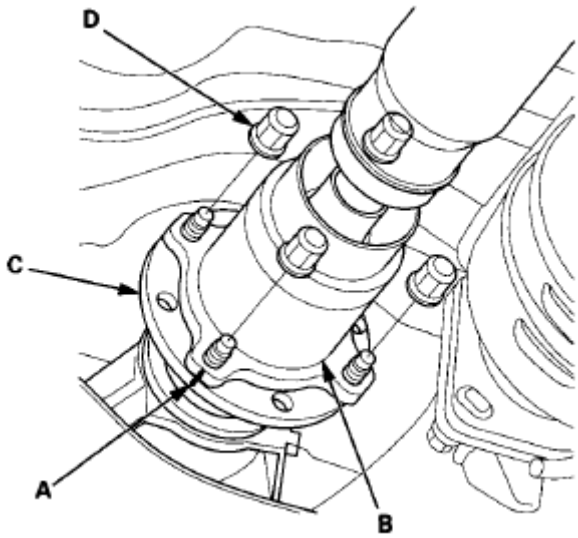

Fig. 152: Identifying Transfer Companion Flange, Reference Mark, Propeller Shaft And Flange Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the No. 1 propeller shaft flange nuts (D).
6. Make reference mark (A) across the No. 3 propeller shaft (B) and the rear differential companion flange (C).

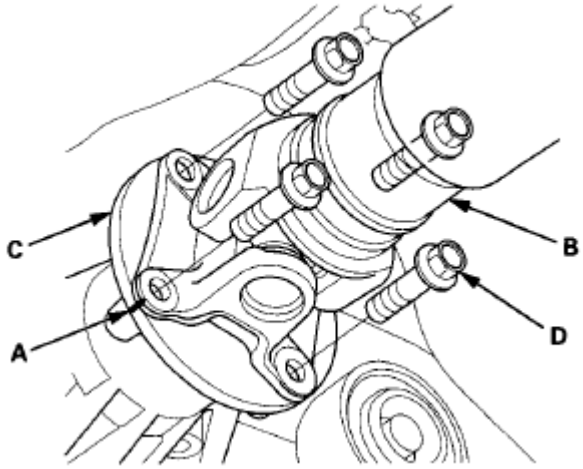

Fig. 153: Identifying Rear Differential Companion Flange, Reference Mark, Propeller Shaft And Flange Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the No. 3 propeller shaft flange bolts (D).
8. Remove the No. 1 and the No. 2 center support bearings mounting bolts.

No. 1 Support Bearing

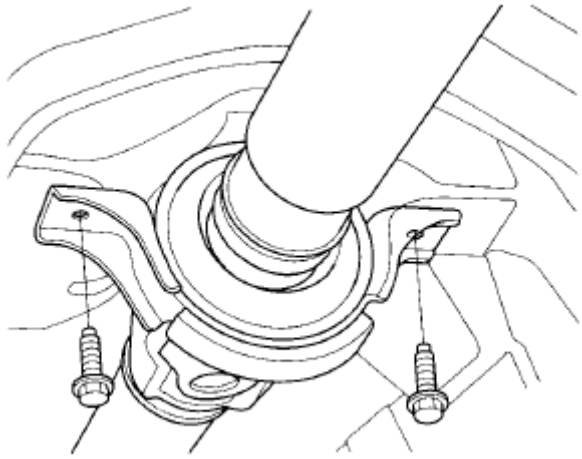

Fig. 154: Identifying No. 1 Support Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

No. 2 Support Bearing

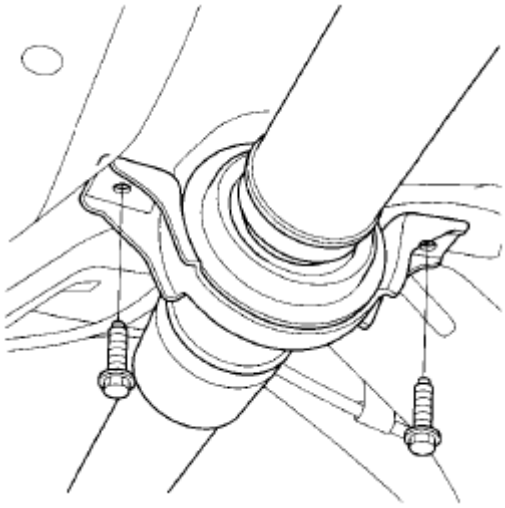

Fig. 155: Identifying No. 2 Support Bearing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Move the propeller shaft (A) toward the rear differential, then lower the propeller shaft assembly on the jack.

NOTE: Secure the shaft to the transmission jack with a tie down to prevent it from rolling off.

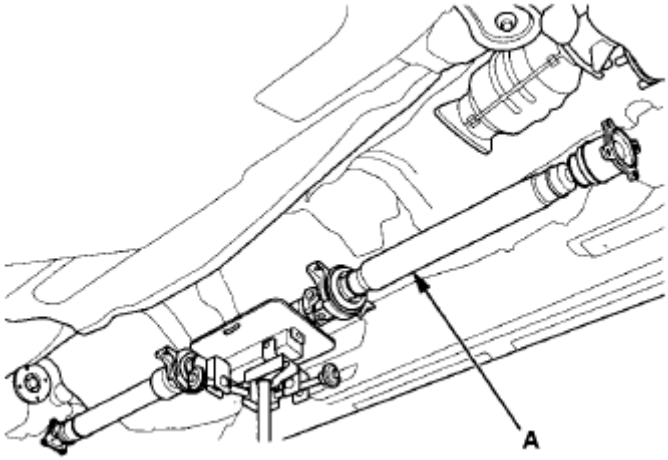

Fig. 156: Identifying Propeller Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

PROPELLER SHAFT INSTALLATION

1. Place the No. 2 propeller shaft on a transmission jack, then raise it to the mounting level.

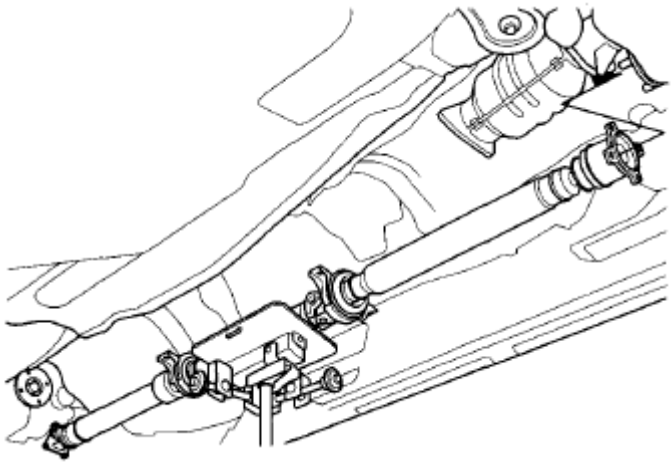

Fig. 157: Raising Propeller Shaft To Mounting Level Using Transmission Jack
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Set the No. 1 propeller shaft (A) to the transfer companion flange (B) by aligning the reference mark (C) you made during the removal procedure. Then install the No. 1 propeller shaft flange nuts (D) finger tight.

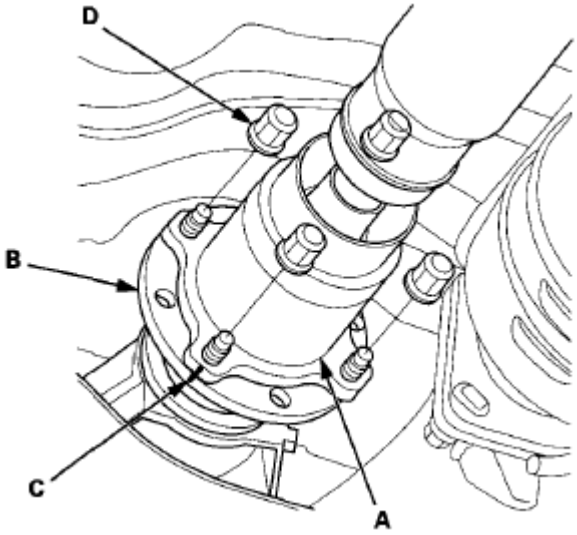

Fig. 158: Identifying Transfer Companion Flange, Reference Mark, Propeller Shaft And Flange Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the No. 1 support bearing (A) with new mounting bolts in the numbered sequence shown.

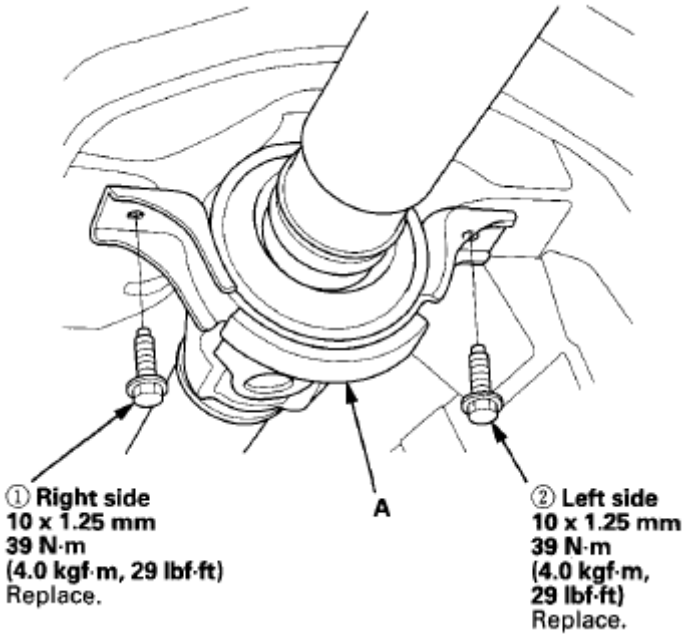

Fig. 159: Identifying Support Bearing With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the No. 2 support bearing (A) with new mounting bolts in the numbered sequence shown.

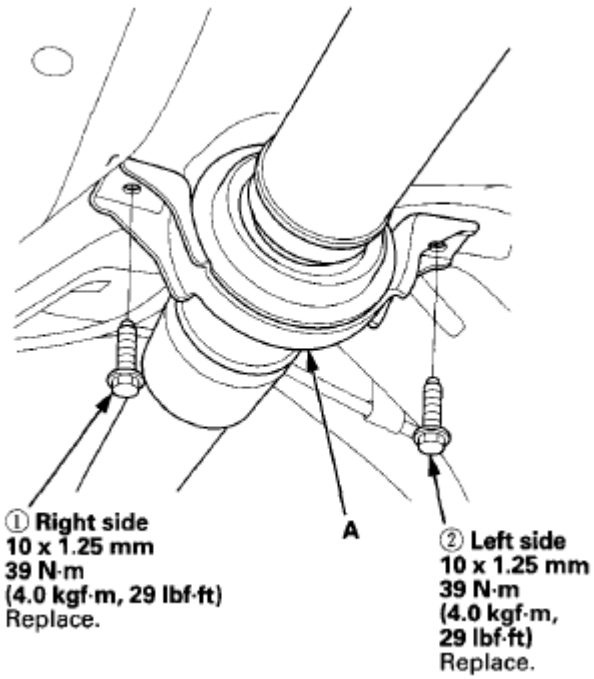

Fig. 160: Identifying Support Bearing With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Set the No. 3 propeller shaft (A) to the rear differential companion flange (B) by aligning the reference

mark (C) you made during the removal procedure. Then install the new No. 3 propeller shaft flange bolts (D) to the specified torque.

NOTE: When replacing the propeller shaft or the rear differential, align the factory reference marks (E).

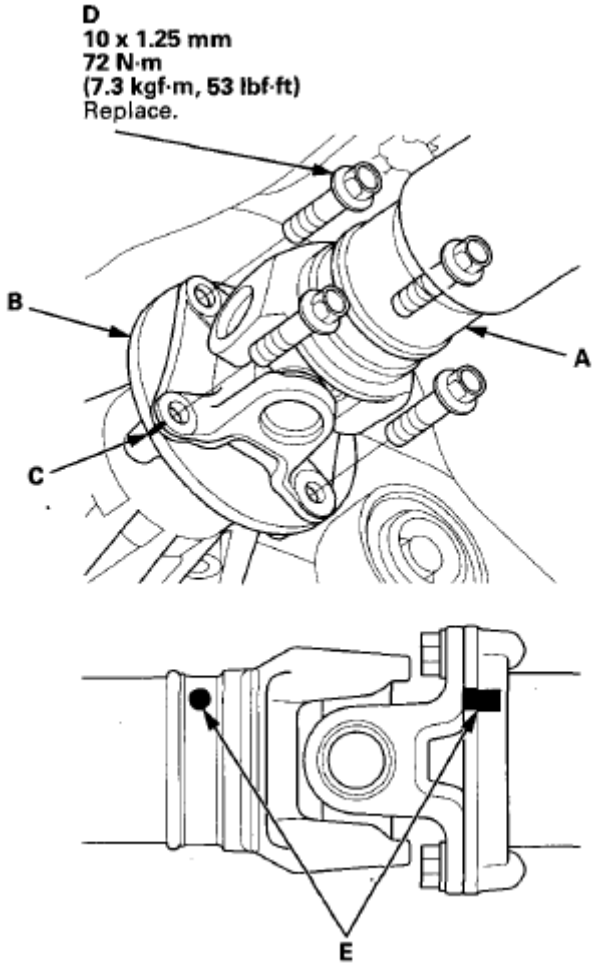

Fig. 161: Identifying Rear Differential Companion Flange, Factory Reference Marks, Propeller Shaft And Flange Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Tighten the No. 1 propeller shaft flange nuts to the specified torque.

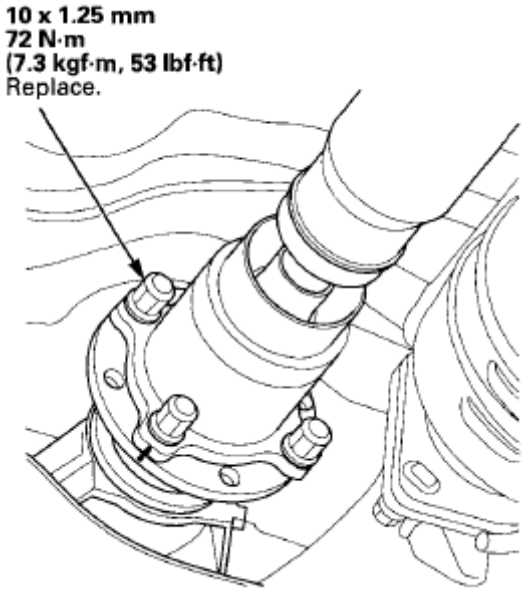

Fig. 162: Identifying Propeller Shaft Flange Nut With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install exhaust pipe B and the muffler (see **J37A4 ENGINE (WITH SH-AWD)**).
8. Lower the vehicle.
9. If you installed a new propeller shaft, test-drive the vehicle at 55 mph (88 km/h), and check for noise or vibration. If there is a noise or vibration, rotate the propeller shaft 180 degrees from its current alignment with the rear differential companion flange, then recheck.

2012 DRIVELINE/AXLES

Rear Differential - TL

SPECIAL TOOLS

Ref.No.	Tool Number	Description	Qty
①	070AJ-SJAA101	Torque Wrench Adapter	1

COMPONENT LOCATION INDEX

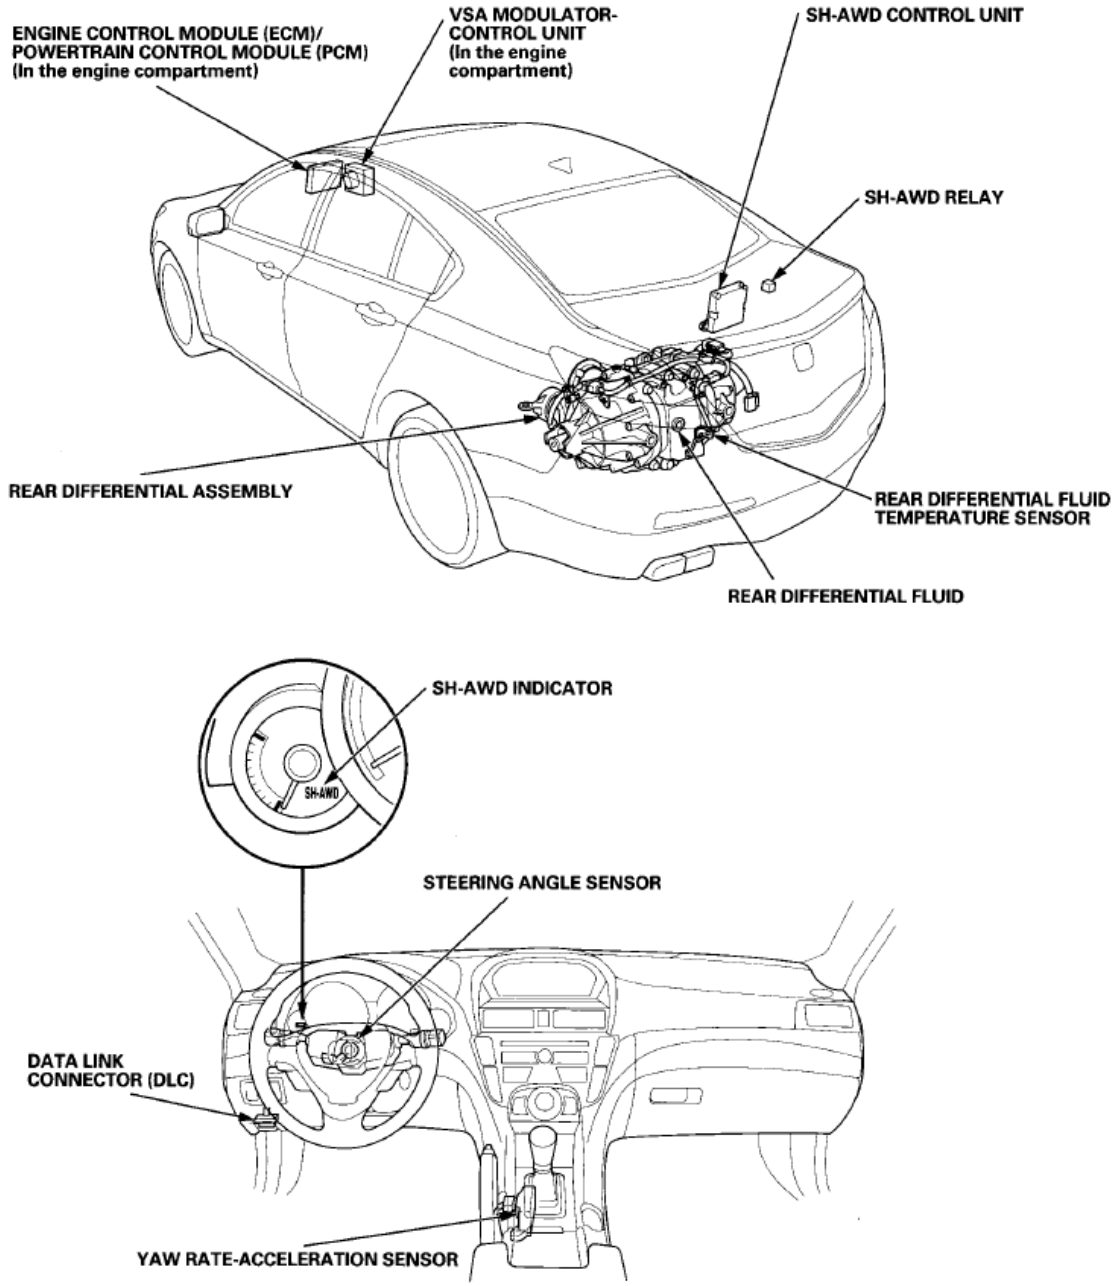

Fig. 2: Rear Differential Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GENERAL TROUBLESHOOTING INFORMATION

SH-AWD INDICATOR

The SH-AWD indicator will come on under certain conditions even if the AWD system is working normally. Here are some examples:

- When you use high-powered wireless equipment such as a CB or Ham radio in the vehicle.

- When you keep spinning the rear wheels while the vehicle is stuck in sand, mud, snow, etc.
- When the battery voltage suddenly drops below 10 volts.

After the SH-AWD indicator comes on, it stays on until you turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

DIAGNOSTIC TROUBLE CODE (DTC)

- The SH-AWD control unit can memorize up to eight different DTCs. The system displays the DTCs by blinking the SH-AWD indicator. Multiple DTCs are displayed in the order they occurred, beginning with the most recent.
- If the same DTC is detected more than once, the most recent DTC is written over the earlier one. Therefore, when the same problem is detected more than once, it is memorized as a single DTC.
- The DTCs are memorized in the SH-AWD units EEPROM (non-volatile memory). Therefore, the memorized DTCs are not cleared when the battery is disconnected or when the SH-AWD control unit is disconnected.
- If there is a problem in the central processing unit (CPU) of the SH-AWD control unit, the SH-AWD indicator comes on, but no DTC is memorized. Refer to the **SYMPTOM TROUBLESHOOTING**.

SELF-DIAGNOSIS

When a problem is detected during self-diagnosis, the system does the following:

- Turns the SH-AWD indicator on.
- Memorizes the DTC if possible.
- Stops AWD control and puts the vehicle back into two-wheel drive (front wheel only).
- Reduces engine torque to suit the driving conditions when an abnormality was detected (The client may notice a decrease in engine performance).

HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)

1. With the ignition switch in LOCK (0), or the vehicle in the OFF mode, connect the Honda Diagnostic System (HDS) to the data link connector (DLC) (A) located under the driver's side of the dashboard.

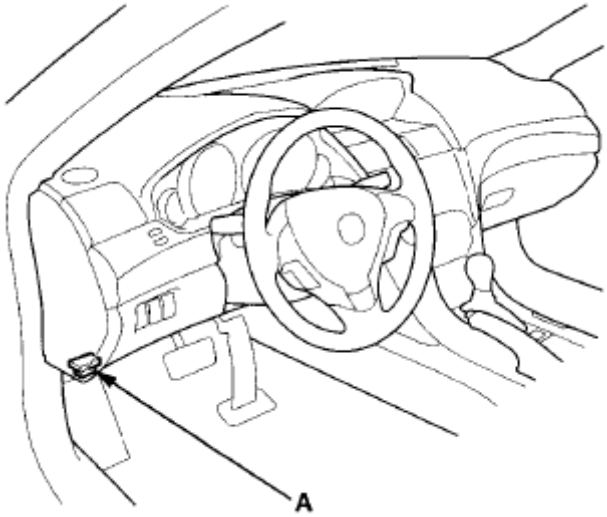

Fig. 3: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Make sure the HDS communicates with the vehicle and the SH-AWD control unit. If it does not, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check the diagnostic trouble code (DTC) and the freeze data, for all systems in the vehicle, troubleshoot the powertrain DTCs first and note them. Then refer to the indicated **DTC'S TROUBLESHOOTING**, and do the appropriate troubleshooting procedure.

NOTE:

- **The HDS can read the DTC, the freeze data, the current data, and other system data.**
- **For specific operations, refer to the Help menu that came with the HDS.**
- **It is best do an ALL DTC CHECK to look for other systems DTCs that are related to the problem.**

HOW TO CLEAR DTCS

1. With the ignition switch in LOCK (0), or the vehicle in the OFF mode, connect the HDS to the DLC (A) located under the driver's side of the dashboard.

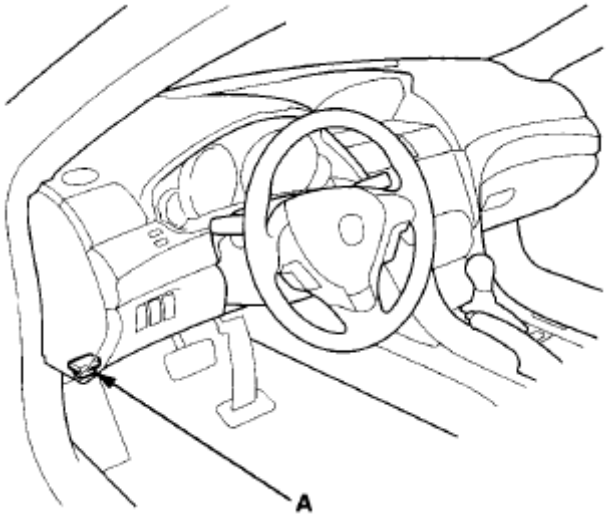

Fig. 4: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Make sure the HDS communicates with the vehicle and the SH-AWD control unit. If it does not, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Clear the DTC(s) by following the screen prompts on the HDS.
5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

NOTE: If the DTC that was cleared is related to another system, that system's DTC must be repaired, or the SH-AWD DTC will return.

HOW TO CHECK FOR DIAGNOSTIC TROUBLE CODES (DTCS)

When the SH-AWD control unit senses an abnormality in the input or output systems, the SH-AWD indicator in the gauge control module will usually come on, and the malfunction indicator lamp (MIL), the D indicator, the VSA indicator, and/or the ABS indicator may also come on.

NOTE: Check the vehicle battery condition and charging system before troubleshooting.

1. With the ignition switch in LOCK (0), or the vehicle in the OFF mode, connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

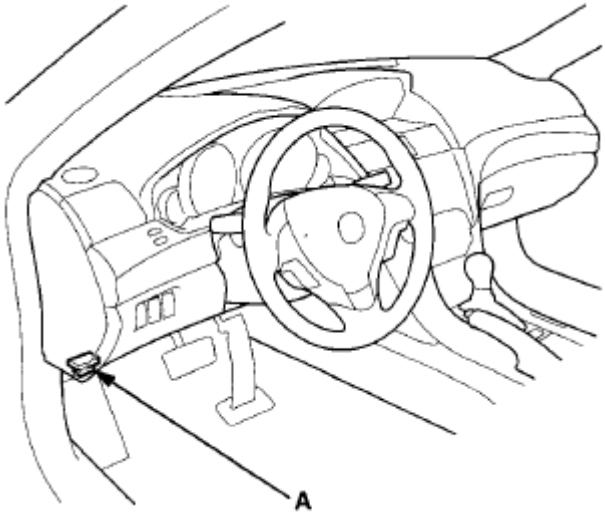

Fig. 5: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode. Make sure the HDS communicates with the vehicle and the SH-AWD control unit. If it does not, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**). Follow the prompts on the HDS to display the DTC(s) on the screen. Check the DTC and the freeze data for all systems. After determining the DTC(s), refer to the **DTC TROUBLESHOOTING**.

NOTE: See the HDS help menu for specific instructions.

3. If there are fuel and emissions DTCs and other system DTCs at the same time, troubleshoot the fuel and emissions DTCs first, otherwise the SH-AWD DTC may return.
4. After recording the DTCs, clear all DTCs.
5. Test-drive the vehicle for several minutes in AWD mode, and check for DTCs. If the DTC returns, refer to the **DTC TROUBLESHOOTING**. If the DTC does not return, there was an intermittent problem within the circuit. Make sure all connectors and terminals in the circuit are tight.

HOW TO TROUBLESHOOT CIRCUITS AT THE SH-AWD CONTROL UNIT

Special Tools Required

Backprobe Set 07SAZ-001000A (2)

1. Remove the trunk front trim panel (see **TRIM REMOVAL/INSTALLATION - TRUNK AREA**).
2. Remove the SH-AWD control unit (A).

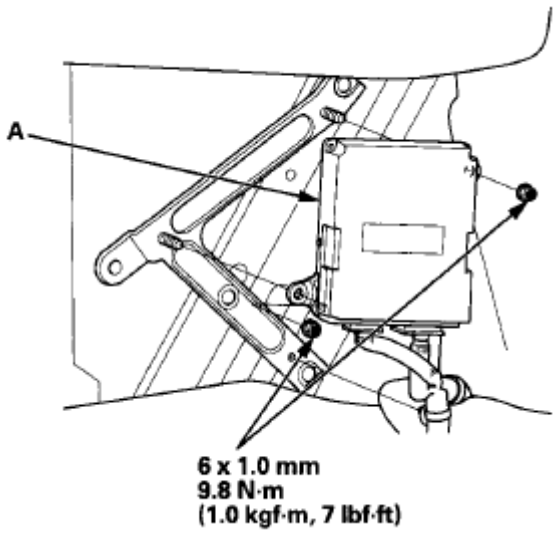

Fig. 6: Identifying SH-AWD Control Unit With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the circuit on the SH-AWD control unit according to the DTC Troubleshooting using the backprobe set and a digital multimeter or an analog circuit tester.
4. Connect the backprobe adapters (A) to the stacking patch cords (B), and connect the cords to a digital multimeter or an analog circuit tester (C). Using the wire insulator as a guide for the contoured-tip of the backprobe adapter, gently slide the tip into the connector from the wire side until it comes in contact with the terminal end of the wires.

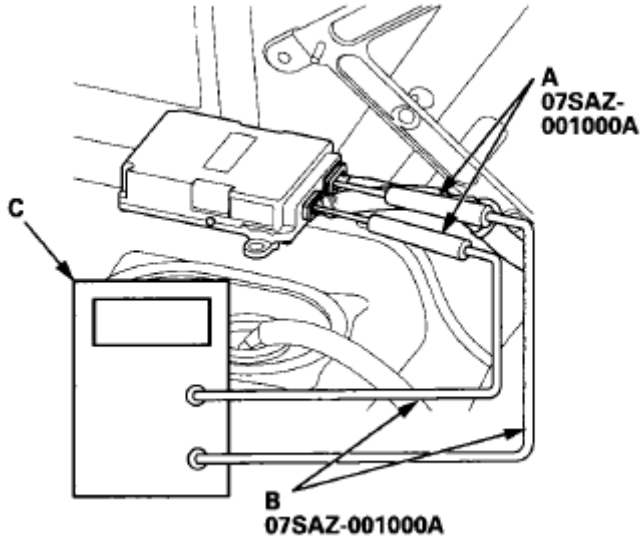

Fig. 7: Identifying Backprobe Adapters, Stacking Patch Cords And Analog Circuit Tester
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SH-AWD® CONTROL UNIT UPDATE

Special Tools Required

- Honda Diagnostic System (HDS)
- Honda Interface Module (HIM).
- HDS pocket tester
- MVCI unit with the latest control module (CM) update software installed

NOTE:

- **Before you update the SH-AWD control unit, make sure the battery in the vehicle is fully charged.**
- **Use this procedure when you need to update the SH-AWD control unit in a troubleshooting procedure.**
- **Make sure the HDS/HIM has the latest software version.**
- **Never turn the ignition switch to LOCK(0), or press the engine start/stop button to select the OFF mode during the update. If there is a problem with the update, leave the ignition switch in ON (II), or the vehicle in the ON mode, otherwise the control unit could be damaged, or it will set DTCs.**
- **To prevent SH-AWD control unit damage, do not operate anything electrical (headlights, audio system, brakes, A/C, power windows, moonroof, door locks, etc.) during the update.**
- **To ensure the latest program is installed, do an SH-AWD control unit update whenever the SH-AWD control unit is substituted or replaced.**
- **You cannot update an SH-AWD control unit with the same program it already has installed. It will only accept a new program.**
- **If you need to diagnose the Honda interface module (HIM) because the HIM's red (#3) light came on or was flashed during the update, leave the ignition switch in the ON (II) position, or the engine start/stop button in the ON mode, when you disconnect the HIM from the data link connector (DLC). This will prevent SH-AWD control unit damage.**

1. With the ignition switch in LOCK (0), or the vehicle in the OFF mode, connect the HDS/HIM to the DLC (A) located under the driver's side of the dashboard.

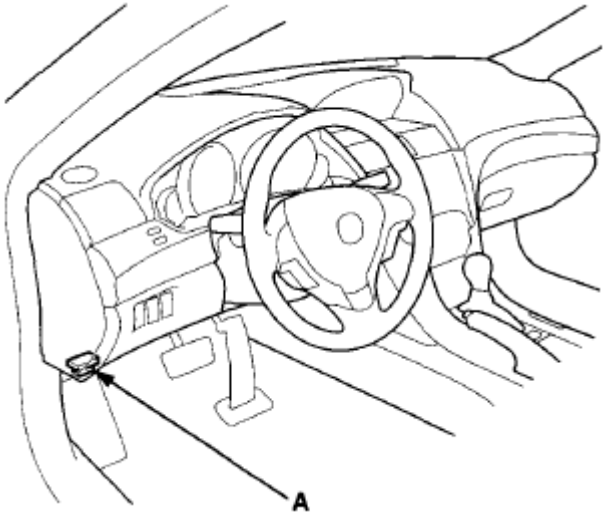

Fig. 8: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Make sure the HDS communicates with the vehicle and the SH-AWD control unit. If it does not, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Select the update program, and follow the screen prompts to update the SH-AWD control unit.
5. If the software in the SH-AWD control unit is the latest, disconnect the HDS/HIM from the DLC, and go back to the procedure that you were doing. If the software in the SH-AWD control unit is not the latest, follow the instructions on the screen.
6. Do the SH-AWD control unit initialization (see **SH-AWD® CONTROL UNIT INITIALIZATION**).
7. Do the SH-AWD differential clutch torque memorization (see **SH-AWD® DIFFERENTIAL CLUTCH TORQUE MEMORIZATION**).
8. Do the yaw rate-acceleration neutral position memorization (see **YAW RATE-ACCELERATION NEUTRAL POSITION MEMORIZATION**).

SH-AWD® DIFFERENTIAL CLUTCH TORQUE MEMORIZATION

Whenever the right or left clutch side case is replaced, the differential clutch torque memorization must be done.

1. With the ignition switch in LOCK (0), or the vehicle in the OFF mode, connect the HDS to the DLC (A) located under the driver's side of the dashboard.

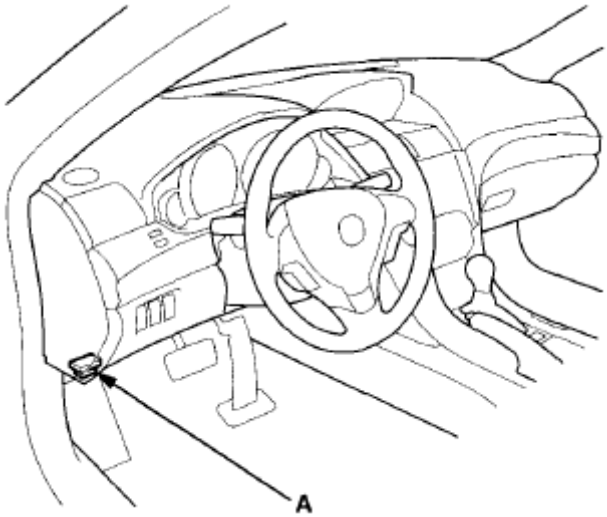

Fig. 9: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Make sure the HDS communicates with the vehicle and the SH-AWD control unit. If it does not, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. From the mode menu, select SH-AWD, select MISCELLANEOUS TEST, select NEUTRAL MENU, then select DIFFERENTIAL TORQUE with the HDS, and follow the screen prompts.

NOTE: See the HDS help menu for specific instructions.

YAW RATE-ACCELERATION NEUTRAL POSITION MEMORIZATION

Whenever the yaw rate-acceleration sensor is replaced, its neutral position memorization must be done.

1. With the ignition switch in LOCK (0), or the vehicle in the OFF mode, connect the HDS to the DLC (A) located under the driver's side of the dashboard.

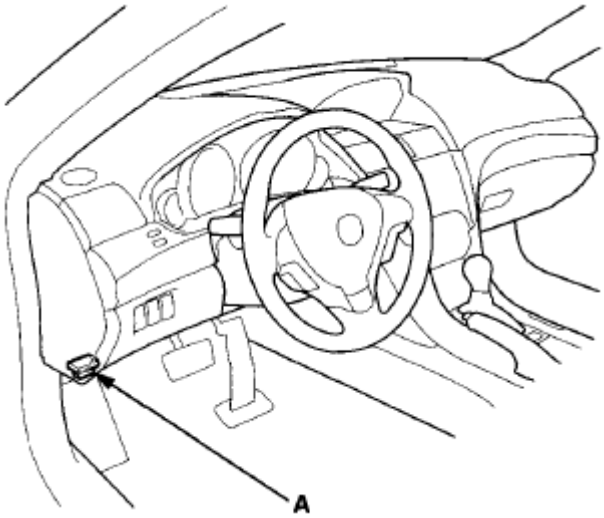

Fig. 10: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Make sure the HDS communicates with the vehicle and the SH-AWD control unit. If it does not, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. From the mode menu, select SH-AWD, select MISCELLANEOUS TEST, select NEUTRAL MENU, then select ALL SENSORS with the HDS, and follow the screen prompts.

NOTE: See the HDS help menu for specific instructions.

SH-AWD® CONTROL UNIT INITIALIZATION

Whenever the SH-AWD control unit is replaced, it must be initialized.

1. With the ignition switch in LOCK (0), or the vehicle in the OFF mode, connect the HDS to the DLC (A) located under the driver's side of the dashboard.

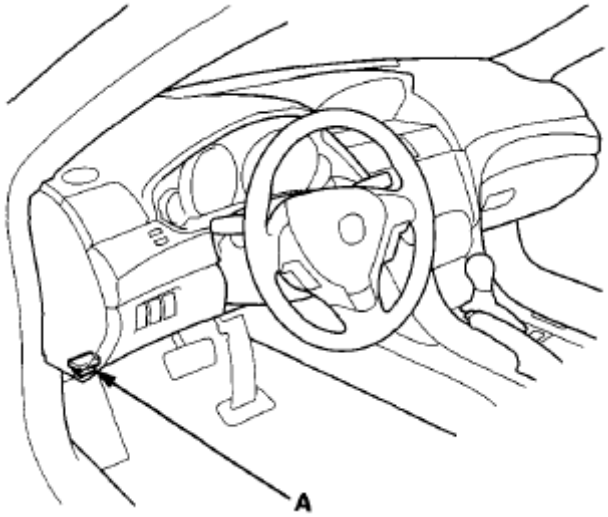

Fig. 11: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Make sure the HDS communicates with the vehicle and the SH-AWD control unit. If it does not, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. From the mode menu, select SH-AWD, select MISCELLANEOUS TEST, then select INITIALIZATION with the HDS, and follow the screen prompts.

NOTE: See the HDS help menu for specific instructions.

DTC TROUBLESHOOTING INDEX

DTC(1)	SH-AWD Indicator Light	Detection Item
12-1	ON	Lateral Acceleration Sensor Malfunction
12-2	ON	Lateral Acceleration Sensor Malfunction
12-3	ON	Lateral Acceleration Sensor Malfunction
15-1	ON	Longitudinal Acceleration Sensor Malfunction
16-3	ON	Steering Angle Sensor Neutral Position Incorrect
33-2	ON	Yaw Rate Sensor Malfunction
33-3	ON	Yaw Rate Sensor Malfunction
41-1	ON	F-CAN Malfunction (Lost Communication with Engine Control Module (ECM)/Powertrain Control

		Module (PCM))
41-2	ON	F-CAN Malfunction (Lost Communication with VSA Modulator-Control Unit)
41-4(2)	ON	F-CAN Malfunction (Lost Communication with A/T Control System)
41-5	ON	F-CAN Malfunction (Lost Communication with Yaw Rate-Acceleration Sensor)
41-6	ON	F-CAN Malfunction (Lost Communication with Steering Angle Sensor)
42-1	ON	Differential Fluid Temperature Sensor (Short to power)
42-2	ON	Differential Fluid Temperature Sensor (Open/GND Short)
43-1	ON	Differential Fluid Temperature Sensor Malfunction
44-11	ON	SH-AWD Control Unit
44-12	ON	SH-AWD Relay Stuck ON
44-32	ON	SH-AWD Control Unit Power Supply Stuck ON
44-41	ON	SH-AWD Control Unit Power Supply Stuck OFF
44-50	ON	SH-AWD Control Unit Power Supply Voltage Low
49-1	ON	SH-AWD Control Unit (PG Line Open)
52-3	ON	Left Clutch Electromagnetic Coil Current Malfunction
53-1	ON	Left Clutch Electromagnetic Coil (Open)
53-2	ON	Left Clutch Electromagnetic Coil (Short)
53-3	ON	Left Clutch Electromagnetic Coil (Open)

57-2	ON	Right Clutch Electromagnetic Coil (Short)
57-3	ON	Right Clutch Electromagnetic Coil

		(Open)
76-1	ON	Rear Differential Fluid Overheats
77-1	ON	The Functional Abnormalities of Fuel and Emissions
77-2	ON	The Functional Abnormalities of VSA Modulator-Control Unit
77-4(2)	ON	The Functional Abnormalities of Automatic Transmission
77-5	ON	Yaw Rate-Acceleration Sensor Malfunction
77-6	ON	Steering Angle Sensor Malfunction
78-XX	ON	SH-AWD Control Unit Self-Diagnostic Malfunction
81-1	ON	Left Search Coil Sensor Malfunction
82-1	ON	Right Search Coil Sensor Malfunction
91-1	ON	SH-AWD Control Unit Programming Error

NOTE:

The "x" at the end of each DTC denotes a numeric character (0 thru 9) or an alpha character (A thru F) that you will see on the HDS display. The character is unrelated to your troubleshooting; it designates the SH-AWD control unit manufacturer and other details used for product analysis.

(1) DTCs are indicated by the SH-AWD indicator when the data link connector (DLC) is connected to the HDS.

(2) A/T model

SYMPTOM TROUBLESHOOTING INDEX

NOTE: Most problems in the SH-AWD unit can be diagnosed by identifying noises from the gears or bearings. Care should be taken during diagnosis not to confuse differential noises with those from other drivetrain components.

Symptom	Diagnostic Procedure	Also check for
The SH-AWD indicator does not go off, and no DTCs are stored	Symptom troubleshooting (see **THE SH-AWD INDICATOR DOES NOT GO OFF, AND NO DTCS ARE STORED**).	Low battery voltage
The SH-AWD indicator does not come on	Symptom troubleshooting (see **THE SH-AWD INDICATOR DOES NOT COME ON**).	
Gear or bearing noises	• Inspect and/or replace the rear differential fluid (see **REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT**). • Inspect the side case clearance (see **SIDE**	• Worn or cupped tires • Tire inflation • Fluid condition • Incorrect side case clearance

	CASE REPLACEMENT). • Replace the rear differential carrier assembly.	• Damaged or chipped gears • Incorrect tire size (rolling circumference)
Rear differential overheats	• Inspect and/or replace the rear differential fluid (see **REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT**). • Inspect the tires.	• Fluid condition • Incorrect tire size (rolling circumference)
Rear differential leaks fluid	• Inspect fluid leaks. • Inspect and/or replace the rear differential fluid (see **REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT**). • Replace the side case oil seal (see **SIDE CASE OIL SEAL REPLACEMENT**). • Replace the center case assembly (see **CENTER CASE REPLACEMENT**).	• Fluid condition • Clogged breather hose • Worn or damaged oil seal • Damaged sealing washer • Loose mounting bolts or inadequate sealing
Rear differential screeches, whines, moans, or squeaks	• Inspect and/or replace the rear differential fluid (see **REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT**). • Inspect the tires. • Replace the rear differential carrier assembly.	• Worn or cupped tires • Tire inflation • Fluid condition • Incorrect tire size (rolling circumference) • Damaged oil pump
Noise during acceleration, or when accelerating from a full stop	• Inspect the side case clearance (see **SIDE CASE REPLACEMENT**). • Inspect the tires. • Replace the rear differential carrier assembly.	• Worn or cupped tires • Tire inflation • Incorrect side case clearance • Incorrect tire size (rolling circumference)
HDS does not communicate with the SH-AWD control unit or the vehicle	Troubleshooting the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).	

SYSTEM DESCRIPTION

SH-AWD SYSTEM

Outline

This vehicle is equipped with a Super Handling All-Wheel Drive® (SH-AWD®) rear differential system. This system uses the electromagnetic clutches and the SH-AWD control unit to control front to rear torque distribution and independent left to right rear torque distribution. This allows the system to function as a limited slip differential and as a torque distribution system to improve standing start performance, straight-line stability, climbing, and cornering ability.

SH-AWD features include:

- Independent torque distribution to the front and rear wheels, and to the left and right wheels for neutral handling when cornering.
- Controls differential (inside/outside) wheel speed in a turn to increase cornering stability.
- Limited slip differential function for better acceleration.

Operation

In a normal turn, the radius of the front wheels is shorter than the radius that the rear wheels travel. If the front and rear wheels are driven at the same speed, full power is not transmitted. The SH-AWD system monitors the speed of the front wheels and increases the speed of the outside rear wheel proportionally around the larger radius. This improves stability and steering response. On slippery surfaces, this provides the improved traction of a 4-wheel drive system.

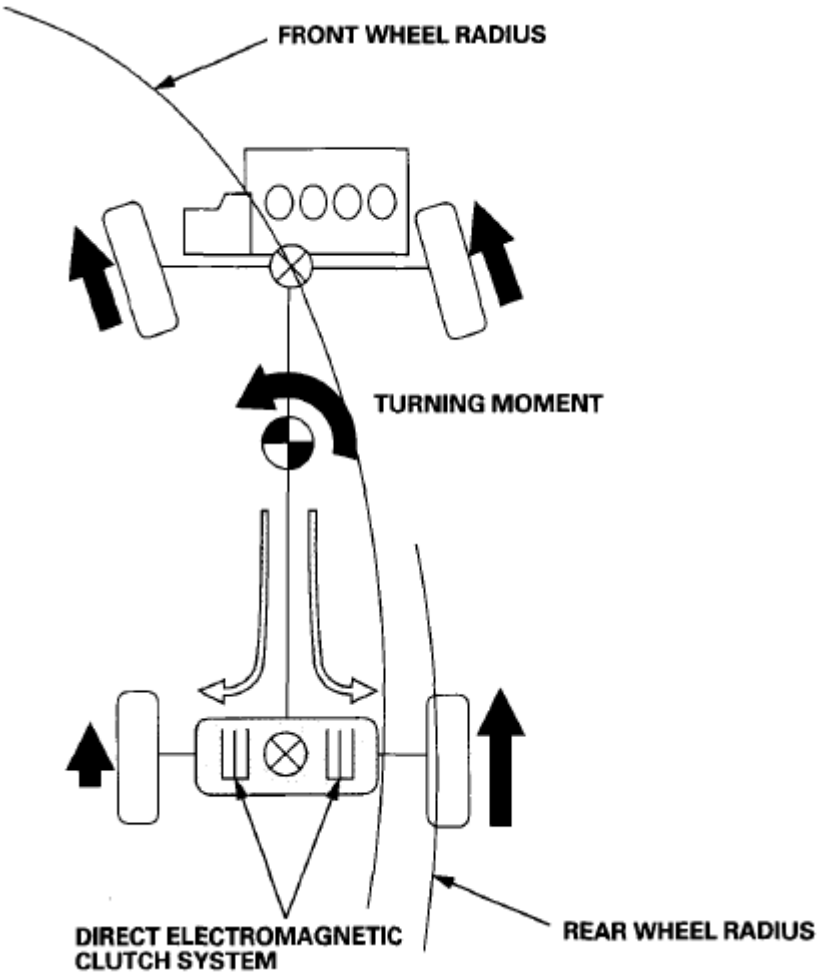

Fig. 12: Identifying Rear Differential Operation Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Construction

1. The differential assembly has a conventional hypoid ring and pinion gear set.
2. The direct electromagnetic clutch system consists of the coils, the planetary gear sets, and the multi-plate clutches that are installed in the side cases on either side of the differential carrier. When driving straight ahead, both rear wheels rotate at the same speed. When turning, current is applied to the appropriate outside wheel main coil to engage the clutch. The amount of current passed through the electromagnetic clutch controls the amount of driving force to the outside wheel.

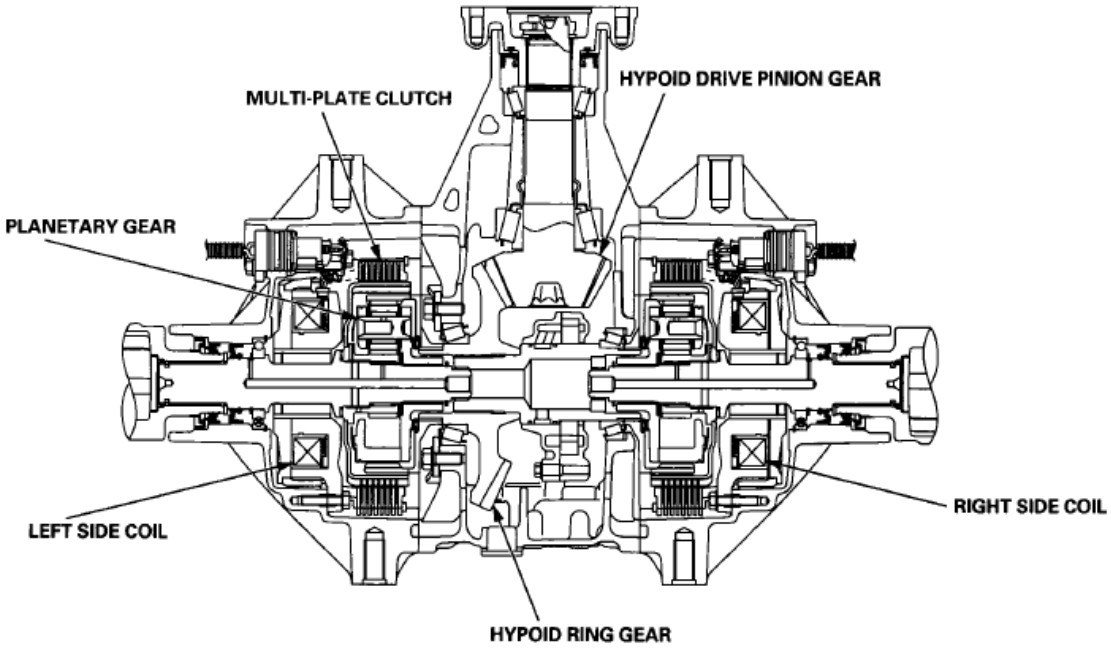

Fig. 13: Identifying Differential Assembly Components Location

SH-AWD 4WD CONTROL SYSTEM

Control System

The SH-AWD control system consists of a SH-AWD control unit, the ECM/PCM, the VSA modulator-control unit, along with various sensors and switches that detect the steering angle, the lateral G force, the yaw, and the vehicle speed. A fluid temperature sensor is located on the rear differential. The control units exchange information via the CAN communication lines. The SH-AWD control unit has a self-diagnostic function. If a malfunction is detected, the SH-AWD control unit turns on the SH-AWD indicator in the gauge control module, and the system goes into fail-safe mode. When in fail-safe mode, the vehicle disables the SH-AWD differential. The vehicle defaults to front wheel drive and reduces engine torque to suit the driving conditions.

Driving Force Control

The driving force control distributes the power based on the driver's inputs. It distributes torque to the front and rear wheels based on the throttle opening and the available engine torque output. When turning, torque is applied to the rear wheels independently based on the lateral G input and the direction of the turn. This generates an inward yaw movement to help steer the vehicle around the turn.

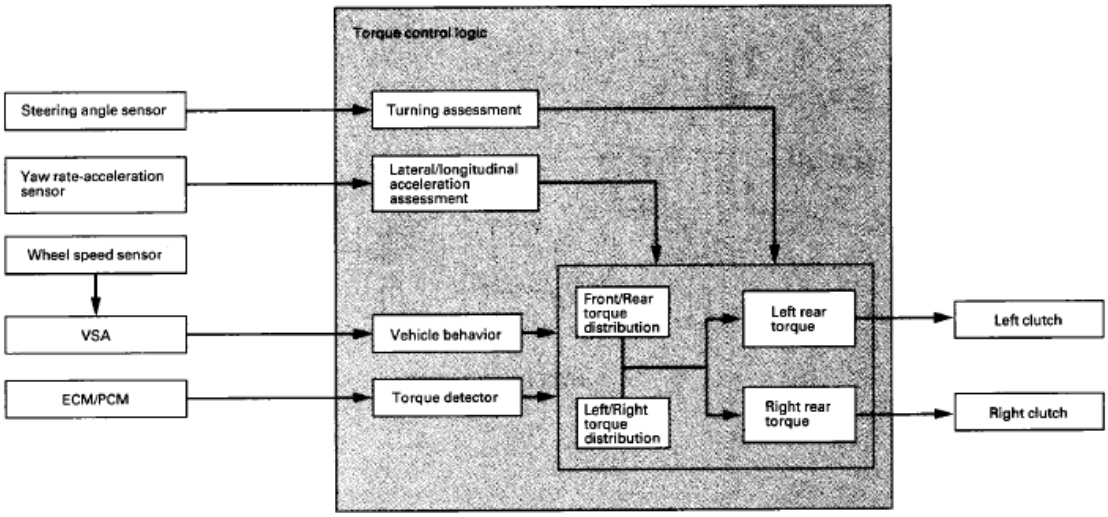

Fig. 14: Driving Force Control Flow Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ELECTROMAGNETIC CLUTCH SYSTEM

Construction

The electromagnetic clutch system is incorporated into the side case assemblies on both sides of the differential case. The system consists of the multi-plate clutches, the planetary gears, the pressure guides, the solenoid coil assembly (the search coil and the main coil), the armature assembly (the slider and the armature), and the yoke.

Components	Purpose
Multi-plate clutches	Convert thrust into torque, absorb wheel speed differences
Planetary gears	Magnify and convey clutch torque
Pressure guides	Reduce fluctuations in pressure
Search coils	Detect magnetic flux
Main coils	Generates magnetic fields
Slider	Centers the armature
Armature	Generates magnetic flux to generate thrust
Yoke	Generates magnetic flux to clamping force

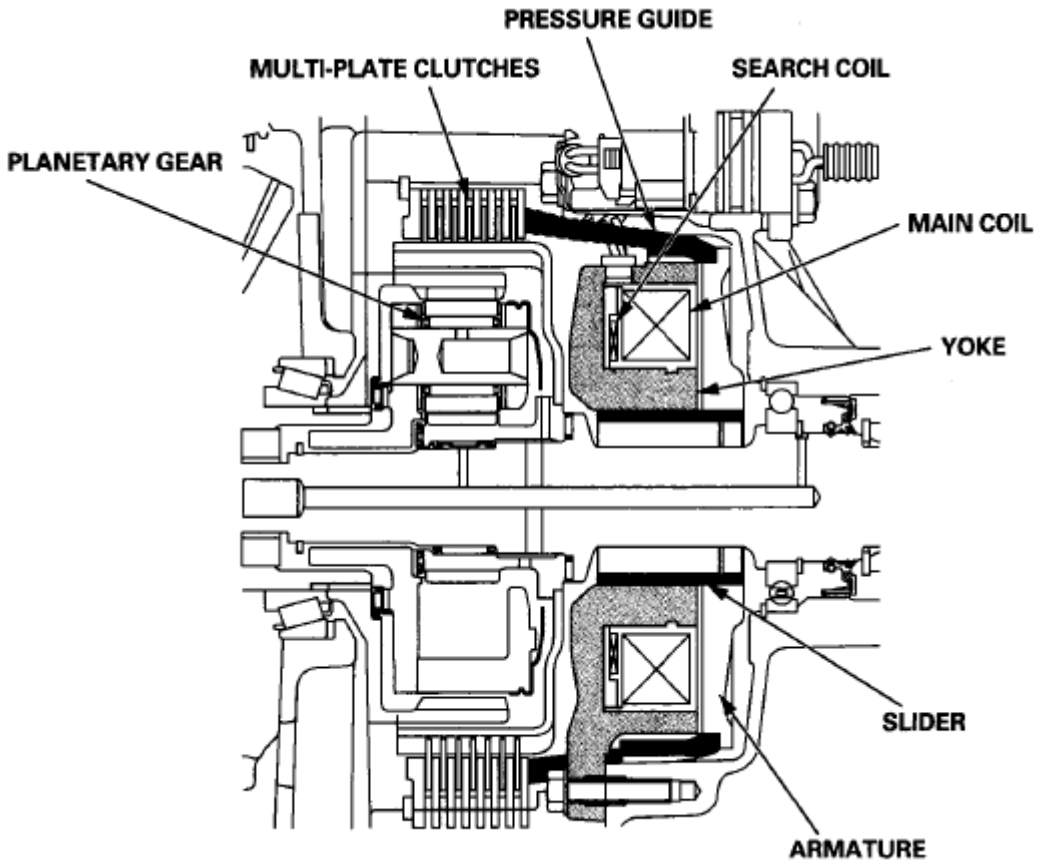

Fig. 15: Electromagnetic Clutch System Construction Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Operation

The SH-AWD control unit receives inputs from the ECM/PCM and the VSA modulator-control unit on the driving conditions via the CAN. The SH-AWD control unit sends signals to the main coils, which engage the electromagnetic clutches that connect the planetary gear set. This increases the torque applied to the rear wheels. The amount of current sent to the clutch is continuously varied as driving conditions change.

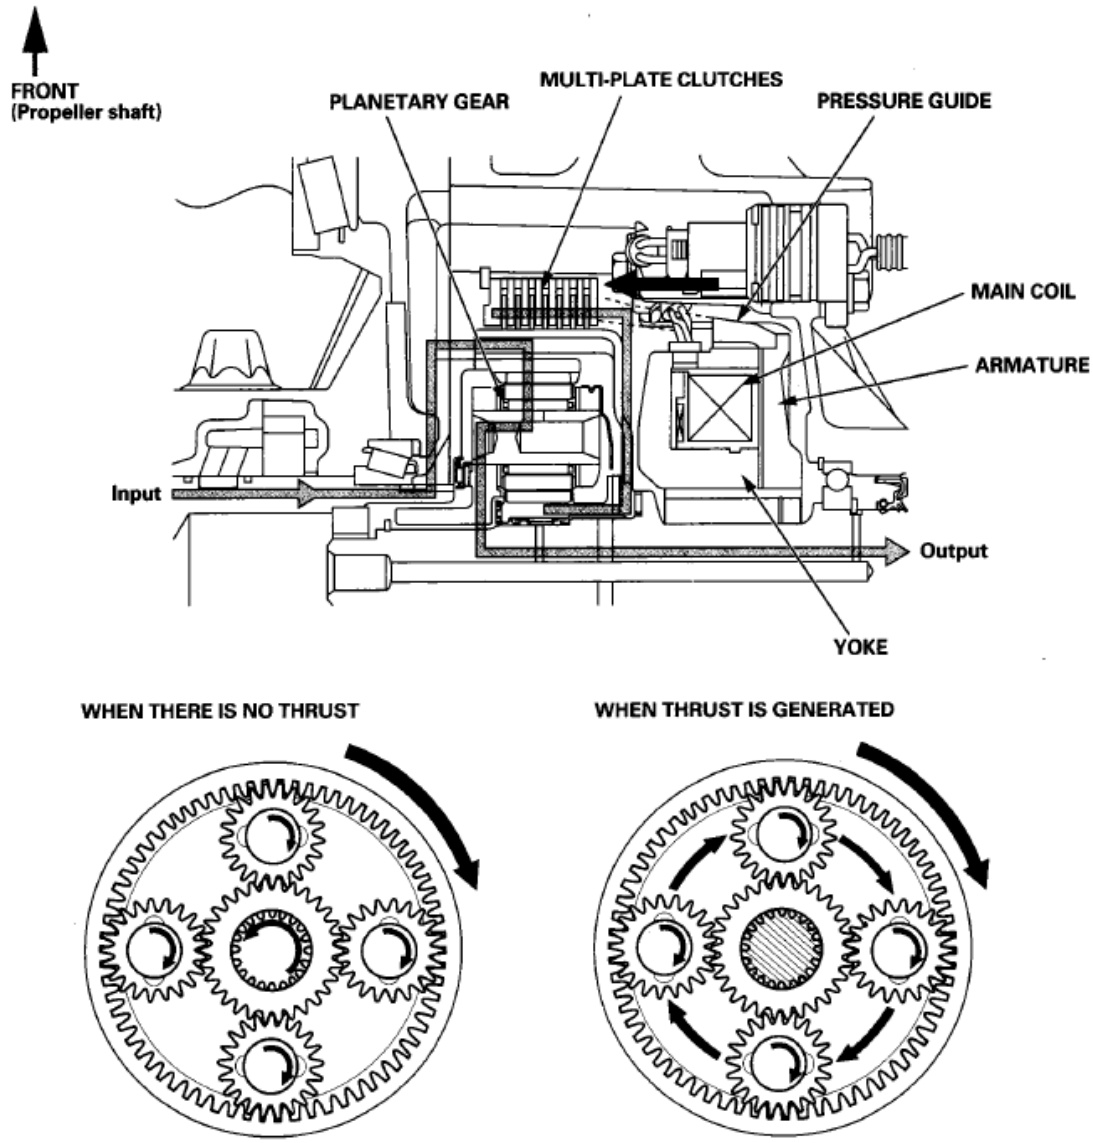

Fig. 16: Electromagnetic Clutch System Operation Diagram
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SEARCH COIL DETECTION SYSTEM

As the clutch discs wear, the air gap between the pressure guides and the multi-plate clutches decrease. The decrease in air gap changes the magnetic field generated by the main coil and the yoke. The search coil detects these changes in the magnetic field. The SH-AWD control unit uses predetermined maps to compensate for the changes to maintain precise control and smooth clutch engagement.

SH-AWD CONTROL UNIT INPUTS AND OUTPUTS

The SH-AWD control unit terminal voltages and the measuring conditions for the SH-AWD inputs and outputs test are done with the SH-AWD connectors connected.

SH-AWD Control Unit Connector A (20P) Terminal Locations

Terminal side of male terminals

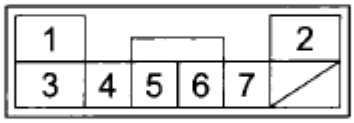

Fig. 19: Identifying SH-AWD Control Unit 20P Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Terminal number	Wire color	Signal	Description	Measuring Conditions/Terminal Voltage
A1	BLK	LFH	Detects left search coil signal (positive)	With ignition switch ON (II), or vehicle in ON mode: about 2.5 V
A3	BLU	RFH	Detects right search coil signal (positive)	With ignition switch ON (II), or vehicle in ON mode: about 2.5 V
A5	LT BLU	K-LINE	Communication line SH-AWD control unit-to-DLC	With ignition switch ON (II), or vehicle in ON mode: about 0 V or battery voltage
A7	GRY	IG1	Power supply for SH-AWD control unit	With ignition switch ON (II), or vehicle in ON mode: battery voltage
A8	GRN	TOL	Detects differential fluid temperature sensor (negative)	With ignition switch ON (II), or vehicle in ON mode: about 0.2 V to 4.7 V (Depending on rear differential fluid temperature)
A9	BLK	LG1	Unit ground	With ignition switch ON (II), or vehicle in ON mode: about 0 V
A10	WHT	CANH	F-CAN communication signal	With ignition switch ON (II), or vehicle in ON mode: about 2.5 V to 4.0 V
A11	RED	LFL	Detects left search coil signal (negative)	With ignition switch ON (II), or vehicle in ON mode: about 2.5 V
A12	RED	RFL	Detects right search coil signal (negative)	With ignition switch ON (II), or vehicle in ON mode: about 2.5 V
A17	ORN	FSR	Drives SH-AWD relay	With ignition switch ON (II), or vehicle in ON mode: about 0 V to battery voltage
A18	WHT	TOH	Power supply for differential fluid temperature sensor	With ignition switch ON (II), or vehicle in ON mode: about 4.7 V to 5.0 V
A19	RED	WEN	Detects write enable signal	With ignition switch ON (II), or vehicle in ON mode: about 0 V
A20	BLK	CANL	F-CAN communication signal	With ignition switch ON (II), or vehicle in ON mode: about 2.5 V to 1.0 V

SH-AWD CONTROL UNIT INPUTS AND OUTPUTS (CONT'D)

The SH-AWD control unit terminal voltages and the measuring conditions for the SH-AWD inputs and outputs test are done with the SH-AWD connectors connected.

SH-AWD Control Unit Connector B (8P) Terminal Locations

Terminal side of male terminals

Fig. 20: Identifying SH-AWD Control Unit 8P Connector End View

DTC TROUBLESHOOTING

DTC 12-1, 12-2, 12-3: LATERAL ACCELERATION SENSOR MALFUNCTION

NOTE: **Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn the ignition switch back to ON (II), or select the OFF mode, then the ON mode.
4. Check for DTCs in the VSA system with the HDS.

   Are any lateral acceleration sensor DTCs indicated?

   YES - Go to the indicated **DTC'S TROUBLESHOOTING**.

   NO - Go to step 5.

5. Check for DTCs with the HDS.

   Is DTC 12-1, 12-2, or 12-3 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time.

6. Test-drive the vehicle with an assistant. Drive in a left and right zig-zag pattern at about 13 mph (20 km/h) and check the LATERAL ACCELERATION SENSOR in the SH-AWD mode menu DATA LIST with the HDS.

   Does the sensor value change when turning?

   YES - Go to step 7.

   NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

7. Park the vehicle on a level surface.
8. Check the LATERAL ACCELERATION SENSOR in the SH-AWD mode menu DATA LIST with the HDS.

   Is there 0.1 G or less?

   YES - Go to step 9.

   NO - Do the yaw rate-acceleration neutral position memorization (see **YAW RATE-ACCELERATION NEUTRAL POSITION MEMORIZATION**), and recheck.

9. Check the LATERAL ACCELERATION SENSOR in the VSA DATA LIST with the HDS.

   Is there 0.1 G or less?

   YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

   NO - Replace the yaw rate-acceleration sensor (see **YAW RATE-ACCELERATION SENSOR REPLACEMENT**).

DTC 15-1: LONGITUDINAL ACCELERATION SENSOR MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Test-drive the vehicle for 2 minutes in a vehicle speed is kept constant at 19 mph (30 km/h).
4. Check for DTCs in the VSA system with the HDS.

   Are any longitudinal acceleration sensor DTCs indicated?

   YES - Go to the indicated **DTC'S TROUBLESHOOTING**.

   NO - Go to step 5.

5. Check for DTCs with the HDS.

   Is DTC 15-1 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time.

6. Test-drive the vehicle with an assistant. When accelerating, check the LONGITUDINAL ACCELERATION SENSOR in the SH-AWD mode menu DATA LIST with the HDS.

   Does the sensor value change when acceleration?

   YES - Go to step 7.

   NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD®**

CONTROL UNIT UPDATE), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

7. Park the vehicle on a level surface.
8. Check the LONGITUDINAL ACCELERATION SENSOR in the SH-AWD mode menu DATA LIST with the HDS.

   Is there 0.1 G or less?

   YES - Go to step 9.

   NO - Do the yaw rate-acceleration neutral position memorization (see **YAW RATE-ACCELERATION NEUTRAL POSITION MEMORIZATION**), and recheck.

9. Check the LONGITUDINAL ACCELERATION SENSOR in the VSA DATA LIST with the HDS.

   Is there 0.1 G or less?

   YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

   NO - Replace the yaw rate-acceleration sensor (see **YAW RATE-ACCELERATION SENSOR REPLACEMENT**).

DTC 16-3: STEERING ANGLE SENSOR NEUTRAL POSITION INCORRECT

NOTE:

- **Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **Check the wheel alignment (see WHEEL ALIGNMENT).**
- **Check for installation of the steering angle sensor.**

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Test-drive the vehicle for 2 minutes in a straight line at 19 mph (30 km/h) or more.
4. Check for DTCs in the VSA system with the HDS.

   Are any steering angle sensor DTCs indicated?

YES - Go to the indicated **DTC'S TROUBLESHOOTING**.

NO - Go to step 5.

5. Check for DTCs with the HDS.

   Is DTC 16-3 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time.

6. Start the engine.
7. Check the STEERING ANGLE SENSOR in the SH-AWD mode menu DATA LIST with the HDS.

   When the steering wheels is turned slowly, does the sensor value change?

   YES - Go to step 8.

   NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

8. Test-drive the vehicle in a straight line at 19 mph (30 km/h) or more.
9. Park the vehicle on a level surface, and center the steering wheel.
10. Check the STEERING ANGLE SENSOR in the SH-AWD mode menu DATA LIST with the HDS.

    Is it within ±25 deg of center?

    YES - Go to step 11.

    NO - Do the VSA sensor neutral position memorization (see **YAW RATE-ACCELERATION SENSOR REPLACEMENT**), and recheck.

11. Check the STEERING ANGLE SENSOR in the VSA DATA LIST with the HDS.

    Is it within ±25 deg of center?

    YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

NO - Replace the steering angle sensor (see **STEERING ANGLE SENSOR REPLACEMENT**).

DTC 33-2, 33-3: YAW RATE SENSOR MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn the ignition switch back to ON (II), or select the OFF mode, then the ON mode.
4. Check for DTCs in the VSA system with the HDS.

   Are any yaw rate sensor DTCs indicated?

   YES - Go to the indicated **DTC'S TROUBLESHOOTING**.

   NO - Go to step 5.

5. Check for DTCs with the HDS.

   Is DTC 33-2 or 33-3 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time.

6. Test-drive the vehicle with an assistant. Drive in a left and right zig-zag pattern at about 13 mph (20 km/h) and check the YAW RATE SENSOR in the SH-AWD mode menu DATA LIST with the HDS.

   Does the sensor value change when turning?

   YES - Go to step 7.

   NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

7. Park the vehicle on a level surface.
8. Check the YAW RATE SENSOR in the SH-AWD mode menu DATA LIST with the HDS.

   Is there 3.5 ° or less?

YES - Go to step 9.

NO - Do the yaw rate-acceleration neutral position memorization (see **YAW RATE-ACCELERATION NEUTRAL POSITION MEMORIZATION**), and recheck.

9. Check the YAW RATE SENSOR in the VSA DATA LIST with the HDS.

   Is there 3.5 deg/s or less?

   YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

   NO - Replace the yaw rate-acceleration sensor (see **YAW RATE-ACCELERATION SENSOR REPLACEMENT**).

DTC 41-1: F-CAN MALFUNCTION (LOST COMMUNICATION WITH ENGINE CONTROL MODULE (ECM)/POWERTRAIN CONTROL MODULE (PCM))

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for DTCs in the PGM-FI system with the HDS.

   Are there any PGM-FI system DTCs indicated?

   YES - Go to the indicated **DTC'S TROUBLESHOOTING**.

   NO - Go to step 5.

5. Check for DTCs with the HDS.

   Is DTC 41-1 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time. Check for an intermittent open between SH-AWD control unit connector terminals A10 and A20 and ECM/PCM connector terminals A48 and A49.

6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

7. Jump the SCS line with the HDS.

NOTE: This step must be done to prevent ECM/PCM damage.

8. Disconnect ECM/PCM connector A (49P).
9. Disconnect SH-AWD control unit connector A (20P).
10. Check for continuity between ECM/PCM connector terminals A48, A49 and SH-AWD control unit connector terminals A10, A20 respectively.

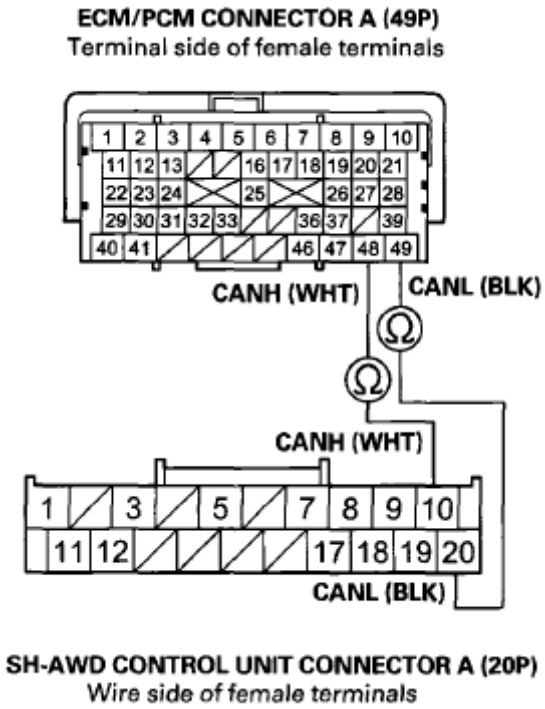

Fig. 23: Checking Continuity Between ECM/PCM Connector Terminals And SH-AWD Control Unit Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

NO - Repair an open in the wires between the SH-AWD control unit and the ECM/PCM.

DTC 41-2: F-CAN MALFUNCTION (LOST COMMUNICATION WITH VSA MODULATOR-CONTROL UNIT)

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for DTCs in the PGM-FI system with the HDS.

   Are there any PGM-FI system DTCs indicated?

   YES - Go to the indicated **DTC'S TROUBLESHOOTING**.

   NO - Go to step 5.

5. Check for DTCs with the HDS.

   Is DTC 41-2 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time. Check for an intermittent open between SH-AWD control unit connector terminals A10 and A20 and VSA modulator-control unit 47P connector terminals No. 12 and No. 13.

6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
7. Disconnect the VSA modulator-control unit 47P connector.
8. Disconnect SH-AWD control unit connector A (20P).
9. Check for continuity between VSA modulator-control unit 47P connector terminals No. 12, No. 13 and SH-AWD control unit connector terminals A10, A20 respectively.

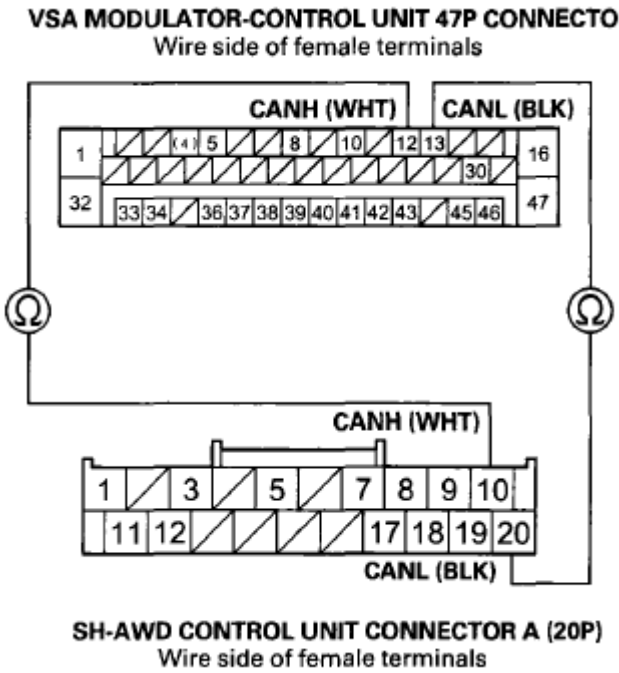

Fig. 24: Checking Continuity Between VSA Modulator-Control Unit 47P Connector Terminals And SH-AWD Control Unit Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

NO - Repair an open in the wires between the SH-AWD control unit and the VSA modulator-control unit.

DTC 41-4: F-CAN MALFUNCTION (LOST COMMUNICATION WITH A/T CONTROL SYSTEM)

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for DTCs in the A/T system with the HDS.

Are there any A/T system DTCs indicated?

YES - Go to the indicated **DTC'S TROUBLESHOOTING**.

NO - Go to step 5.

5. Check for DTCs with the HDS.

   Is DTC 41-4 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time. Check for an intermittent open between SH-AWD control unit connector terminals A10 and A20 and PCM connector terminals A48 and A49.

6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
7. Jump the SCS line with the HDS.

NOTE: This step must be done to prevent PCM damage.

8. Disconnect PCM connector A (49P).
9. Disconnect SH-AWD control unit connector A (20P).
10. Check for continuity between PCM connector terminals A48, A49 and SH-AWD control unit connector terminals A10, A20 respectively.

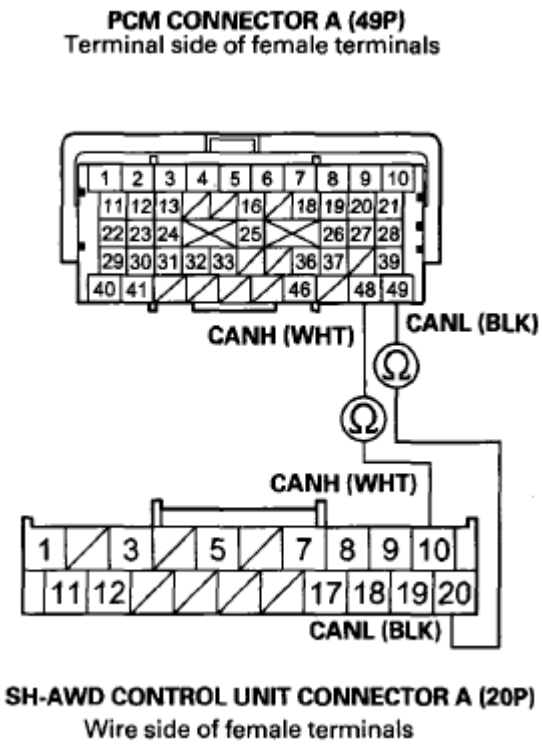

Fig. 25: Checking Continuity Between PCM Connector Terminals And SH-AWD Control Unit Connector Terminals

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

NO - Repair an open in the wires between the SH-AWD control unit and the PCM.

DTC 41-5: F-CAN MALFUNCTION (LOST COMMUNICATION WITH YAW RATE-ACCELERATION SENSOR)

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for DTCs in the VSA system with the HDS.

   Are any yaw rate-acceleration sensor DTCs of F-CAN indicated?

   YES - Go to the indicated **DTC'S TROUBLESHOOTING**.

   NO - Go to step 5.

5. Check for DTCs with the HDS.

   Is DTC 41-5 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time. Check for an intermittent open between SH-AWD control unit connector terminals A10 and A20 and yaw rate-acceleration sensor 4P connector terminals No. 2 and No. 3.

6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
7. Disconnect the yaw rate-acceleration sensor 4P connector.
8. Disconnect SH-AWD control unit connector A (20P).
9. Check for continuity between yaw rate-acceleration sensor 4P connector terminals No. 2, No. 3 and SH-AWD control unit connector terminals A10, A20 respectively.

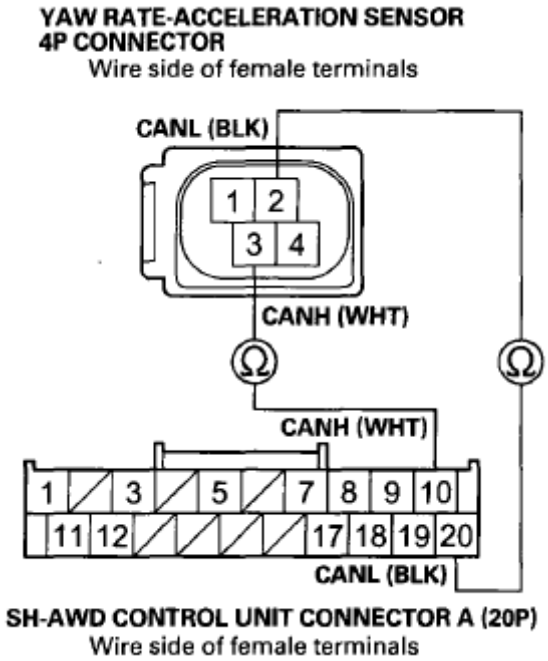

Fig. 26: Checking Continuity Between Yaw Rate-Acceleration Sensor 4P Connector Terminals And SH-AWD Control Unit Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

NO - Repair an open in the wire between the SH-AWD control unit and the yaw rate-acceleration sensor.

DTC 41-6: F-CAN MALFUNCTION (LOST COMMUNICATION WITH STEERING ANGLE SENSOR)

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for DTCs in the VSA system with the HDS.

Are any steering angle sensor DTCs of F-CAN indicated?

YES - Go to the indicated **DTC'S TROUBLESHOOTING**.

NO - Go to step 5.

5. Check for DTCs with the HDS.

   Is DTC 41-6 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time. Check for an intermittent open between SH-AWD control unit connector terminals A10 and A20 and steering angle sensor 5P connector terminals No. 2 and No. 4.1

6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
7. Disconnect the steering angle sensor 5P connector.
8. Disconnect SH-AWD control unit connector A (20P).
9. Check for continuity between steering angle sensor 5P connector terminals No. 2, No. 4 and SH-AWD control unit connector terminals A10, A20 respectively.

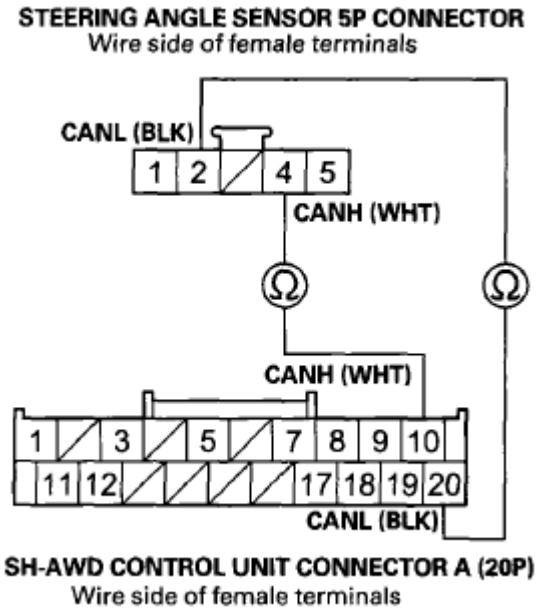

Fig. 27: Checking Continuity Between Steering Angle Sensor 5P Connector Terminals And SH-AWD Control Unit Connector Terminals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the

updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

NO - Repair an open in the wires between the SH-AWD control unit and the steering angle sensor.

DTC 42-1: DIFFERENTIAL FLUID TEMPERATURE SENSOR (SHORT TO POWER)

NOTE:

- **Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **If the vehicle was driven prior to this troubleshooting procedure, allow the rear differential to cool for more than an hour before continuing.**

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn the ignition switch back to ON (II), or select the OFF mode, then the ON mode.
4. Check for DTCs with the HDS.

   Is DTC 42-1 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time.

5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
6. Disconnect the rear differential fluid temperature sensor 2P connector.
7. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
8. Check the REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR in the DATA LIST with the HDS.

   Is the sensor reading 0 V?

   YES - Replace the rear differential fluid temperature sensor (see **REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR REPLACEMENT**).

   NO - Go to step 9.

9. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
10. Disconnect SH-AWD control unit connector A (20P).
11. Check for continuity between rear differential fluid temperature sensor 2P connector terminals No. 1 and No. 2.

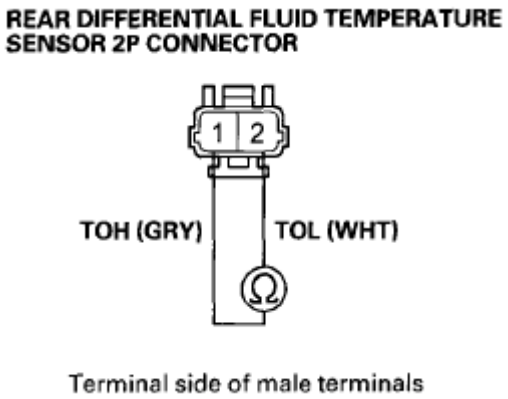

Fig. 28: Checking Continuity Between Rear Differential Fluid Temperature Sensor 2P Connector Terminals No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short in the wire between rear differential fluid temperature sensor 2P connector terminals No. 1 and No. 2.

NO - Go to step 12.

12. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
13. Measure the voltage between body ground and rear differential fluid temperature sensor 2P connector terminals No. 1 and No. 2 respectively.

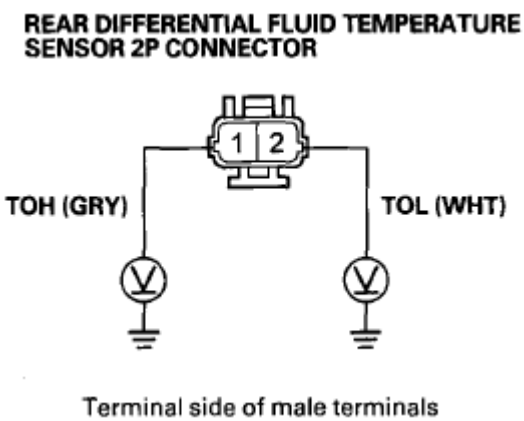

Fig. 29: Measuring Voltage Between Body Ground And Rear Differential Fluid Temperature Sensor 2P Connector Terminals No. 1 And No. 2 Respectively
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 5 V or more?

YES - Repair a short to power in the wire harness.

NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

DTC 42-2: DIFFERENTIAL FLUID TEMPERATURE SENSOR (OPEN/GND SHORT)

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Raise and support the vehicle, and allow all four wheels to rotate freely (see **LIFT AND SUPPORT POINTS**).
2. Start the engine and turn the VSA off (the VSA OFF lamp in the gauge control module turns on). Run the engine until the vehicle speed reaches 35 mph (56 km/h) and maintain the speed for 10 minutes, then slow down and stop the wheels.
3. Turn the ignition switch to LOCK (0), then turn the ignition switch back to ON (II), or select the OFF mode, then the ON mode.
4. Clear the DTC with the HDS.
5. Check for DTCs with the HDS.

   Is DTC 42-2 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time.

6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
7. Disconnect the rear differential fluid temperature sensor 2P connector.
8. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
9. Measure the voltage between rear differential fluid temperature sensor 2P connector terminals No. 1 and No. 2.

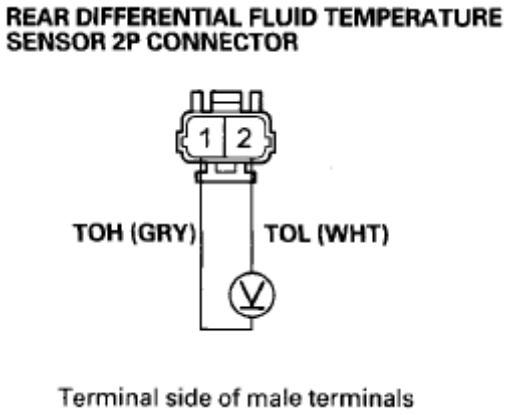

Fig. 30: Measuring Voltage Between Rear Differential Fluid Temperature Sensor 2P Connector Terminals No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 4 V?

YES - Replace the rear differential fluid temperature sensor (see **REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR REPLACEMENT**).

NO - Go to step 10.

10. Measure the voltage between rear differential fluid temperature sensor 2P connector terminal No. 1 and body ground.

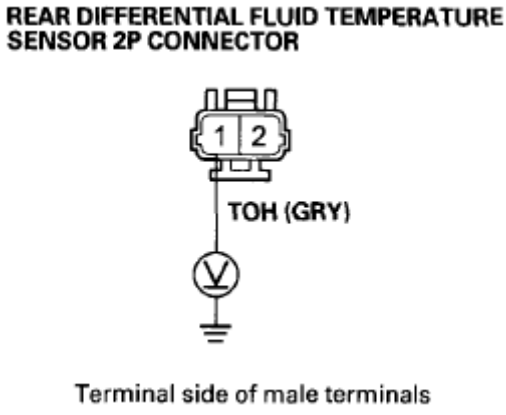

Fig. 31: Measuring Voltage Between Rear Differential Fluid Temperature Sensor 2P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 4 V?

YES - Go to step 15.

NO - Go to step 11.

11. Measure the voltage between SH-AWD control unit connector terminal A18 and body ground.

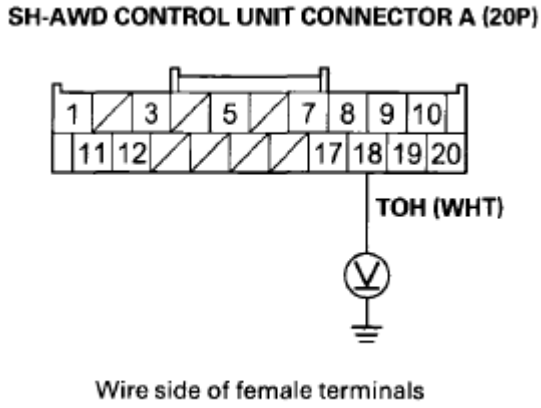

Fig. 32: Measuring Voltage Between SH-AWD Control Unit Connector Terminal A18 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 4 V?

YES - Repair an open in the wire between SH-AWD control unit connector terminal A18 and rear differential fluid temperature sensor 2P connector terminal No. 1.

NO - Go to step 12.

12. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
13. Disconnect SH-AWD control unit connector A (20P).
14. Check for continuity between rear differential fluid temperature sensor 2P connector terminal No. 1 and body ground.

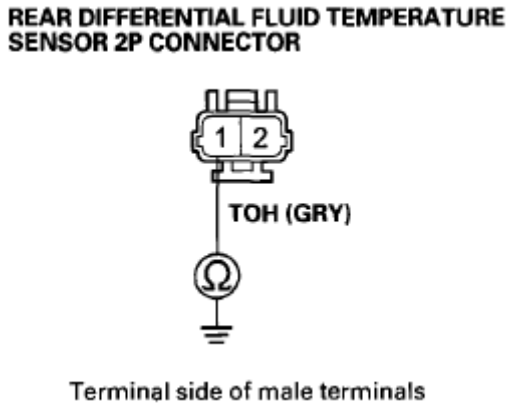

Fig. 33: Checking Continuity Between Rear Differential Fluid Temperature Sensor 2P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between SH-AWD control unit connector terminal A18 and the rear differential fluid temperature sensor 2P connector.

NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

15. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
16. Disconnect SH-AWD control unit connector A (20P).
17. Check for continuity between rear differential fluid temperature sensor 2P connector terminal No. 2 and body ground.

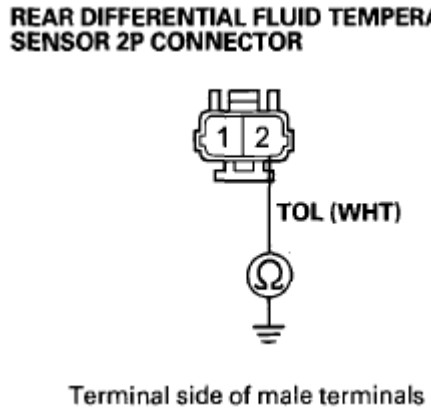

Fig. 34: Checking Continuity Between Rear Differential Fluid Temperature Sensor 2P Connector Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between SH-AWD control unit connector terminal A8 and the rear differential fluid temperature sensor 2P connector.

NO - Go to step 18.

18. Connect SH-AWD control unit connector terminal A8 to body ground with a jumper wire.

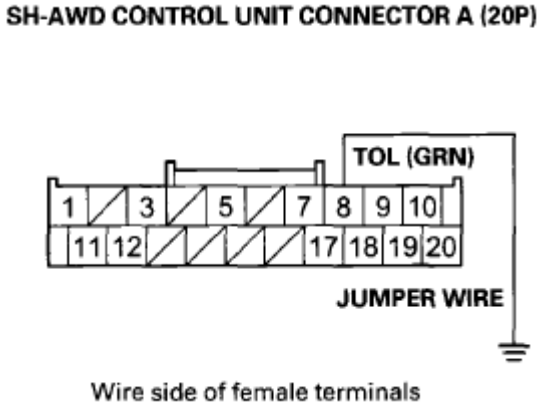

Fig. 35: Connecting SH-AWD Control Unit Connector Terminal A8 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Check for continuity between rear differential fluid temperature sensor 2P connector terminal No. 2 and body ground.

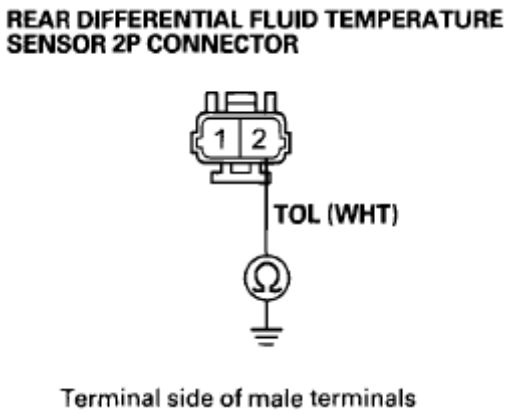

Fig. 36: Checking Continuity Between Rear Differential Fluid Temperature Sensor 2P Connector Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

NO - Repair an open in the wire between SH-AWD control unit connector terminal A8 and the rear differential fluid temperature sensor 2P connector.

DTC 43-1: DIFFERENTIAL FLUID TEMPERATURE SENSOR MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Check for DTCs with the HDS.

   Is DTC 42-1 or 42-2 indicated?

   YES - Go to the indicated **DTC'S TROUBLESHOOTING**.

   NO - Go to step 3.

3. Clear the DTC with the HDS.
4. Start the engine, and let it idle for 1 minute.
5. Test-drive the vehicle for 5 minutes.
6. Check for DTCs with the HDS.

   Is DTC 43-1 indicated?

   YES - Go to step 7.

   NO - Intermittent failure, the system is OK at this time.

7. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
8. Disconnect SH-AWD control unit connector A (20P) and the rear differential fluid temperature sensor 2P connector.
9. Check for continuity between rear differential fluid temperature sensor 2P connector terminals No. 1 and No. 2.

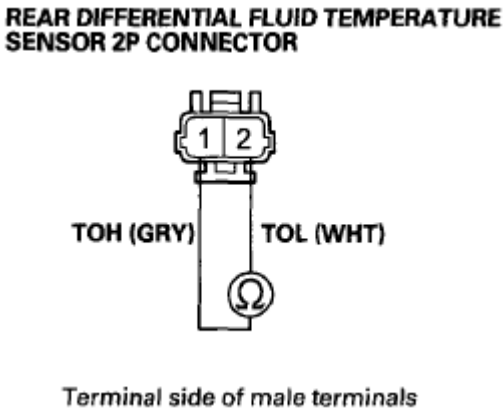

Fig. 37: Checking Continuity Between Rear Differential Fluid Temperature Sensor 2P Connector Terminals No. 1 And No. 2

Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short in the wires between rear differential fluid temperature sensor 2P connector terminals No. 1 and No. 2.

NO - Go to step 10.

10. Reconnect all connectors.
11. Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).
12. Start the engine, and let it idle for 1 minute.
13. Check for DTCs with the HDS.

Is DTC 43-1 indicated?

YES - Replace the rear differential fluid temperature sensor (see **REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR REPLACEMENT**).

NO - Replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

DTC 44-11: SH-AWD CONTROL UNIT

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Turn the ignition switch to LOCK (0), then turn the ignition switch back to ON (II), or select the OFF mode, then the ON mode.
4. Check for DTCs with the HDS.

Is DTC 44-11 indicated?

YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

NO - Intermittent failure, the system is OK at this time.

DTC 44-12: SH-AWD RELAY STUCK ON

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for DTCs with the HDS.

   Is DTC 44-12 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time.

5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
6. Remove the SH-AWD relay (see **SH-AWD® RELAY REPLACEMENT**), then test the SH-AWD relay (see **POWER RELAY TEST**).

   Is the SH-AWD relay OK?

   YES - Go to step 7.

   NO - Replace the SH-AWD relay (see **SH-AWD® RELAY REPLACEMENT**).

7. Disconnect SH-AWD control unit connector A (20P).
8. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
9. Measure the voltage between SH-AWD control unit connector terminal A17 and body ground.

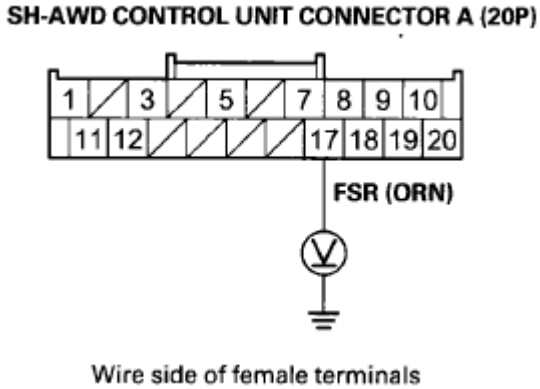

Fig. 38: Measuring Voltage Between SH-AWD Control Unit Connector Terminal A17 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair a short to power in the wire between the SH-AWD control unit connector terminal A17 and the SH-AWD relay (FSR line).

NO - Go to step 10.

10. Turn the ignition switch to LOCK(0), or press the engine start/stop button to select the OFF mode.
11. Disconnect SH-AWD control unit connector B (8P).
12. Measure the voltage between SH-AWD control unit connector terminals B1 and B2.

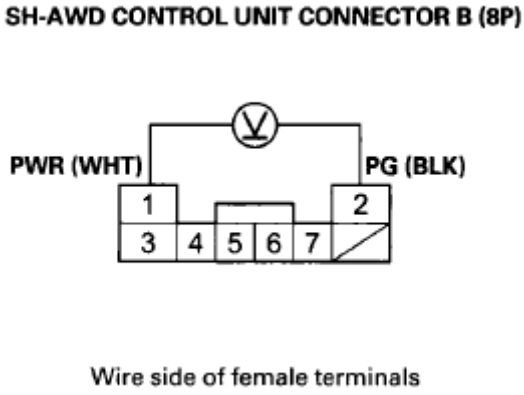

Fig. 39: Measuring Voltage Between SH-AWD Control Unit Connector Terminals B1 And B2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair a short to power in the wire between the SH-AWD control unit and the SH-AWD relay (PWR line).

NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

DTC 44-32: SH-AWD CONTROL UNIT POWER SUPPLY STUCK ON; DTC 44-41: SH-AWD CONTROL UNIT POWER SUPPLY STUCK OFF

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.

3. Start the engine.
4. Check for DTCs with the HDS.

   Is DTC 44-32 or 44-41 indicated?

   YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

   NO - Intermittent failure, the system is OK at this time.

DTC 44-50: SH-AWD CONTROL UNIT POWER SUPPLY VOLTAGE LOW

NOTE:
- **Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **Make sure the battery is fully charged and the charging system is working properly.**

1. Check the No. 2-6 (30 A) fuse in the under-hood fuse/relay box.

   Is the fuse OK?

   YES - Go to step 2.

   NO - Replace the blown fuse and recheck. If the No. 2-6 (30 A) fuse blows again, repair a short to ground in the wire between the No. 2-6 (30 A) fuse in the under-hood fuse/relay box and the SH-AWD relay 4P connector, then replace the fuse and recheck.

2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Clear the DTC with the HDS.
4. Start the engine.
5. Check for DTCs with the HDS.

   Is DTC 44-50 indicated?

   YES - Go to step 6.

   NO - Intermittent failure, the system is OK at this time.

6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
7. Remove the SH-AWD relay (see **SH-AWD® RELAY REPLACEMENT**), then test the SH-AWD relay (see **POWER RELAY TEST**).

Is the SH-AWD relay OK?

YES - Go to step 8.

NO - Replace the SH-AWD relay (see **SH-AWD® RELAY REPLACEMENT**).

8. Measure the voltage between SH-AWD relay 4P connector terminal No. 1 and body ground.

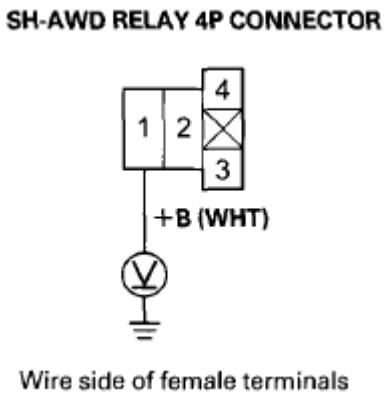

Fig. 40: Measuring Voltage Between SH-AWD Relay 4P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 9.

NO - Repair an open in the wire between the No. 2-6 (30 A) fuse in the under-hood fuse/relay box and the SH-AWD relay 4P connector.

9. Disconnect SH-AWD control unit connector A (20P) and connector B (8P).
10. Connect SH-AWD relay 4P connector terminals No. 1 and No. 2 with a jumper wire.

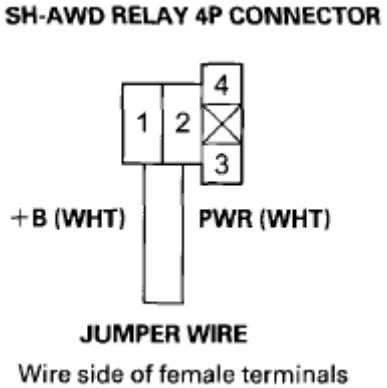

Fig. 41: Connecting SH-AWD Relay 4P Connector Terminals No. 1 And No. 2 With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Measure the voltage between SH-AWD control unit connector terminal B1 and body ground.

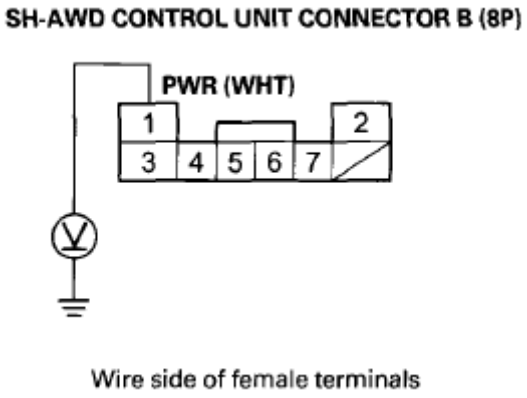

Fig. 42: Measuring Voltage Between SH-AWD Control Unit Connector Terminal B1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there voltage?

YES - Go to step 12.

NO - Repair an open in the wire between SH-AWD control unit connector terminal B1 and the SH-AWD relay 4P connector.

12. Check for continuity between SH-AWD relay 4P connector terminal No. 3 and body ground.

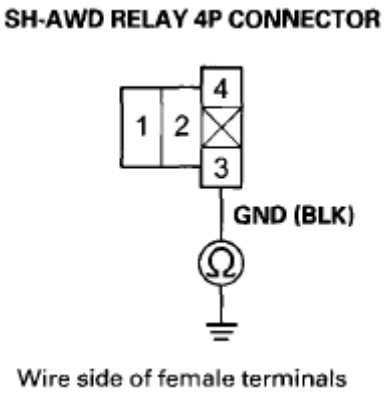

Fig. 43: Checking Continuity Between SH-AWD Relay 4P Connector Terminal No. 3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 13.

NO - Repair an open in the wire between the SH-AWD relay 4P connector and body ground (G652) (see

CONNECTOR TO FUSE/RELAY BOX INDEX), or repair poor body ground (G652).

13. Connect SH-AWD relay 4P connector terminals No. 3 and No. 4 with a jumper wire.

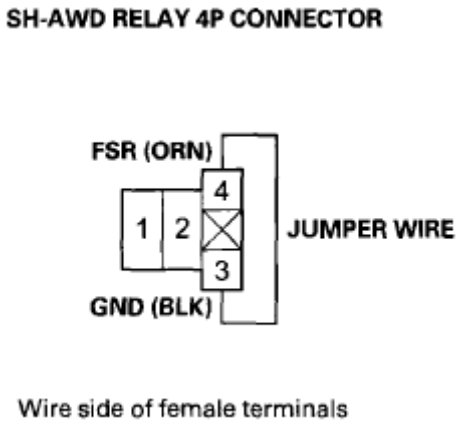

Fig. 44: Connecting SH-AWD Relay 4P Connector Terminals No. 3 And No. 4 With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Check for continuity between SH-AWD control unit connector terminal A17 and body ground.

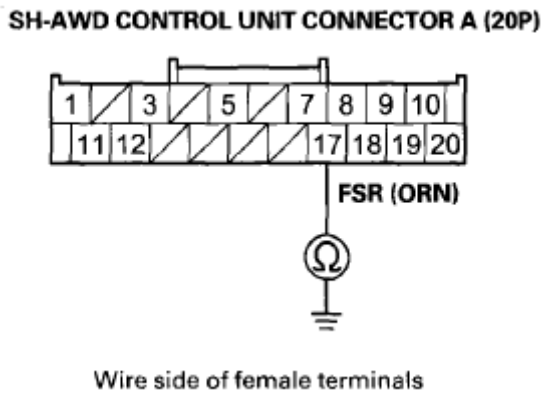

Fig. 45: Checking Continuity Between SH-AWD Control Unit Connector Terminal A17 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for loose connector terminals at the SH-AWD control unit. If the connections are OK, update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

NO - Repair an open in the wire between SH-AWD control unit connector terminal A17 and the SH-AWD relay 4P connector.

DTC 49-1: SH-AWD CONTROL UNIT (PG LINE OPEN)

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for DTCs with the HDS.

Is DTC 49-1 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time.

5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
6. Disconnect SH-AWD control unit connector B (8P).
7. Check for continuity between SH-AWD control unit connector terminal B2 and body ground.

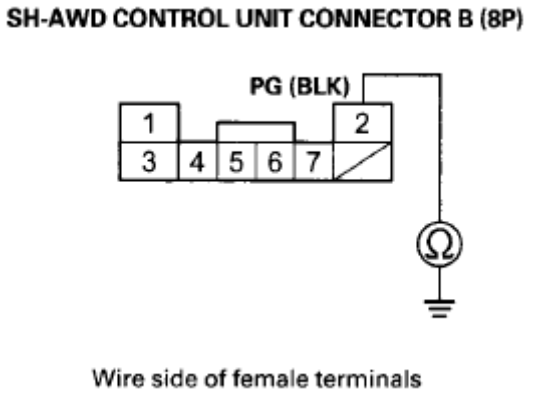

Fig. 46: Checking Continuity Between SH-AWD Control Unit Connector Terminal B2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD®**

CONTROL UNIT REPLACEMENT).

NO - Repair an open in the wire between SH-AWD control unit connector terminal B2 and body ground (G652) (see **CONNECTOR TO FUSE/RELAY BOX INDEX**), or repair poor body ground (G652).

DTC 52-3: LEFT CLUTCH ELECTROMAGNETIC COIL CURRENT MALFUNCTION

NOTE:

- **Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **If DTC 49-1 is stored at the same time as DTC 52-3, troubleshoot DTC 49-1 first, then recheck for DTC 52-3.**

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Do the clutch function test with the HDS (see **SH-AWD® FUNCTION TEST**).
4. Check for DTCs with the HDS.

   Is DTC 52-3 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time.

5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
6. Disconnect SH-AWD control unit connector B (8P) and the left solenoid 4P connector.
7. Connect left solenoid 4P connector terminal No. 1 to body ground with a jumper wire.

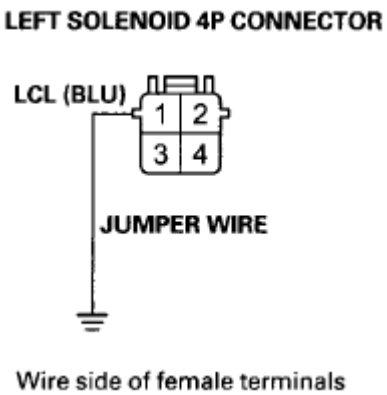

Fig. 47: Connecting Left Solenoid 4P Connector Terminal No. 1 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Check for continuity between SH-AWD control unit connector terminal B5 and body ground.

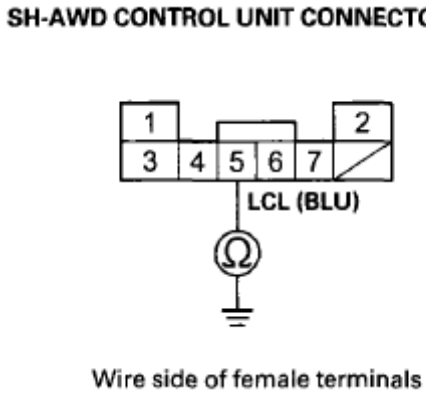

Fig. 48: Checking Continuity Between SH-AWD Control Unit Connector Terminal B5 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair an open in the wire between the SH-AWD control unit connector terminal B5 and the left solenoid 4P connector.

9. Remove the jumper wire from left solenoid 4P connector terminal No. 1.
10. Connect left solenoid 4P connector terminal No. 2 to body ground with a jumper wire.

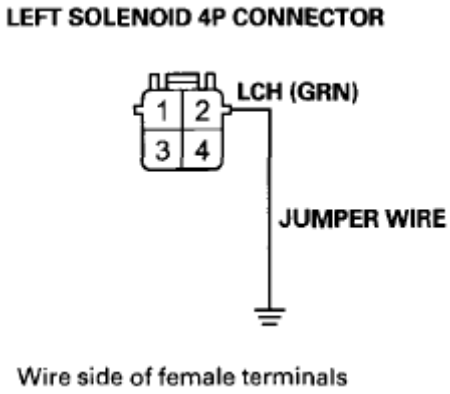

Fig. 49: Connecting Left Solenoid 4P Connector Terminal No. 2 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check for continuity between SH-AWD control unit connector terminal B4 and body ground.

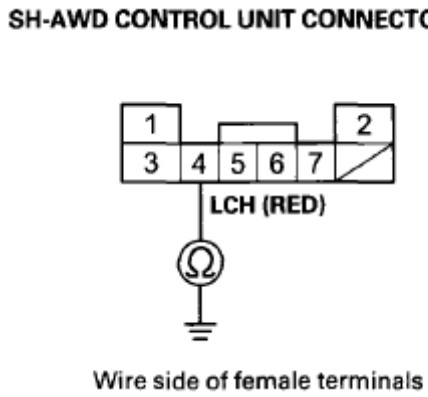

Fig. 50: Checking Continuity Between SH-AWD Control Unit Connector Terminal B4 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 12.

NO - Repair an open in the wire between SH-AWD control unit connector terminal B4 and the left solenoid 4P connector.

12. Remove the jumper wire from left solenoid 4P connector terminal No. 2.
13. Check for continuity between SH-AWD control unit connector terminal B2 and body ground.

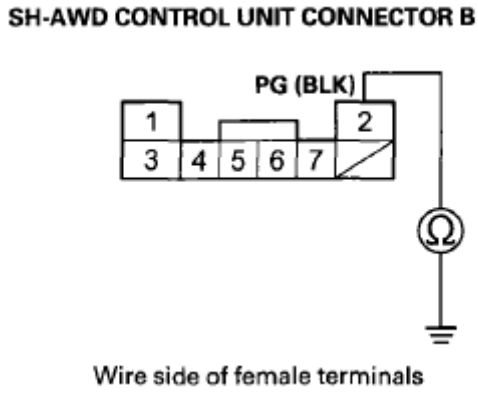

Fig. 51: Checking Continuity Between SH-AWD Control Unit Connector Terminal B2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 14.

NO - Repair an open in the wire between SH-AWD control unit connector terminal B2 and body ground (G652) (see **CONNECTOR TO FUSE/RELAY BOX INDEX**), or repair poor body ground (G652).

14. Check for continuity between SH-AWD control unit connector terminals B2 and B4.

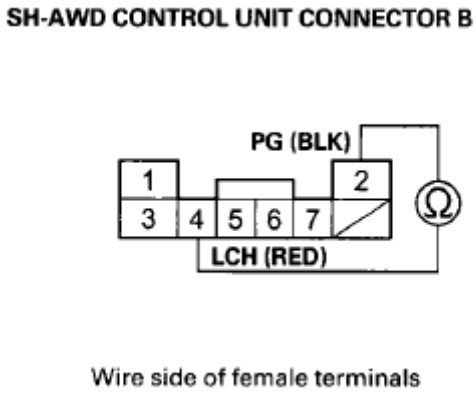

Fig. 52: Checking Continuity Between SH-AWD Control Unit Connector Terminals B2 And B4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between SH-AWD control unit connector terminal B4 and the left solenoid 4P connector.

NO - Go to step 15.

15. Check for continuity between SH-AWD control unit connector terminals B2 and B5.

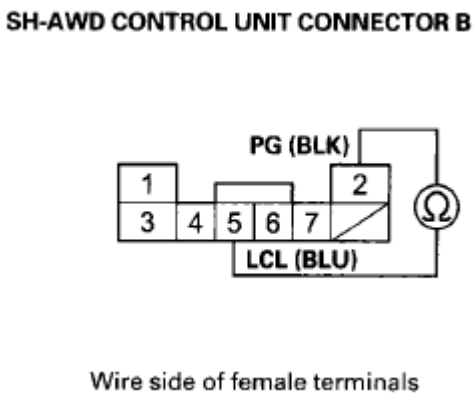

Fig. 53: Checking Continuity Between SH-AWD Control Unit Connector Terminals B2 And B5
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between SH-AWD control unit connector terminal B5 and the left solenoid 4P connector.

NO - Go to step 16.

16. Check for continuity between SH-AWD control unit connector terminals B4 and B5.

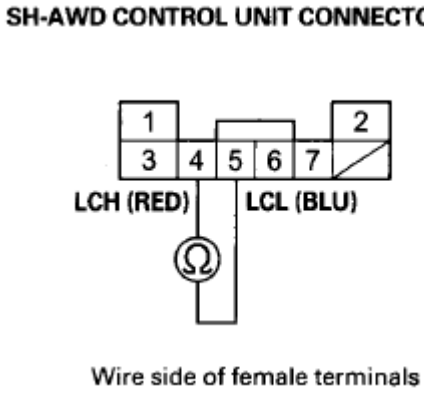

Fig. 54: Checking Continuity Between SH-AWD Control Unit Connector Terminals B4 And B5
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short in the wires between the SH-AWD control unit and the left solenoid 4P connector.

NO - Go to step 17.

17. Measure the voltage between SH-AWD control unit connector terminals B2 and B5.

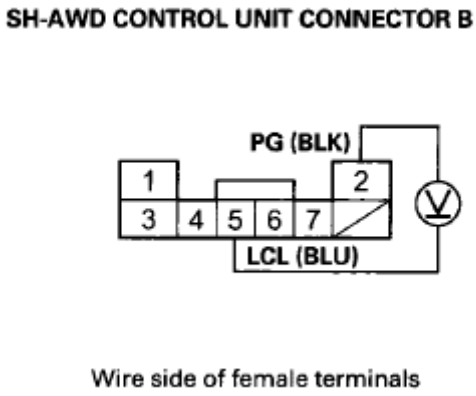

Fig. 55: Measuring Voltage Between SH-AWD Control Unit Connector Terminals B2 And B5
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there voltage?

YES - Repair a short to power in the wire between SH-AWD control unit connector terminal B5 and the left solenoid 4P connector.

NO - Go to step 18.

18. Measure the voltage between SH-AWD control unit connector terminals B2 and B4.

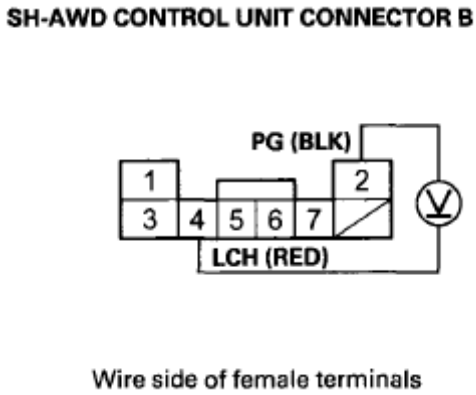

Fig. 56: Measuring Voltage Between SH-AWD Control Unit Connector Terminals B2 And B4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there voltage?

YES - Repair a short to power in the wire between SH-AWD control unit connector terminal B4 and the left solenoid 4P connector.

NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

DTC 53-1, 53-3: LEFT CLUTCH ELECTROMAGNETIC COIL (OPEN)

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Do the clutch function test with the HDS (see **SH-AWD® FUNCTION TEST**).
4. Check for DTCs with the HDS.

   Is DTC 53-1 or 53-3 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time.

5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
6. Disconnect SH-AWD control unit connector B (8P) and the left solenoid 4P connector.
7. Connect left solenoid 4P connector terminal No. 1 to body ground with a jumper wire.

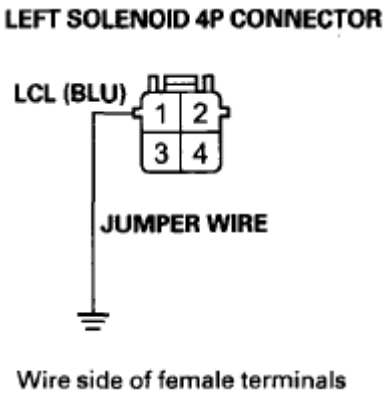

Fig. 57: Connecting Left Solenoid 4P Connector Terminal No. 1 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Check for continuity between SH-AWD control unit connector terminal B5 and body ground.

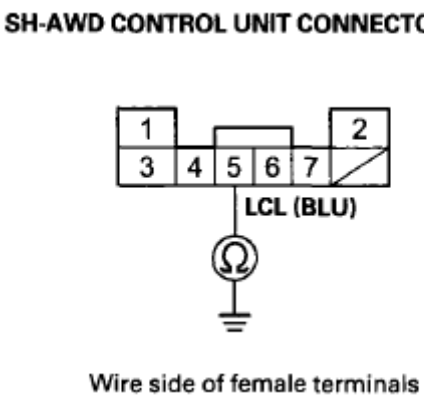

Fig. 58: Checking Continuity Between SH-AWD Control Unit Connector Terminal B5 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair an open in the wire between SH-AWD control unit connector terminal B5 and the left solenoid 4P connector.

9. Remove the jumper wire from left solenoid 4P connector terminal No. 1.
10. Connect left solenoid 4P connector terminal No. 2 to body ground with a jumper wire.

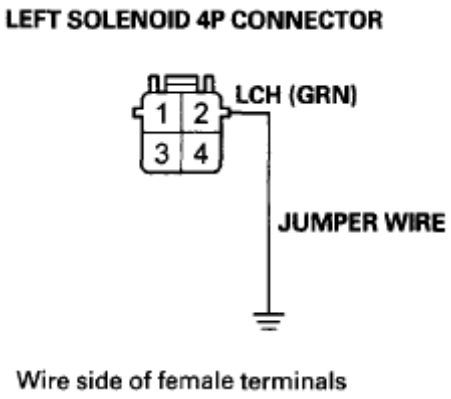

Fig. 59: Connecting Left Solenoid 4P Connector Terminal No. 2 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check for continuity between SH-AWD control unit connector terminal B4 and body ground.

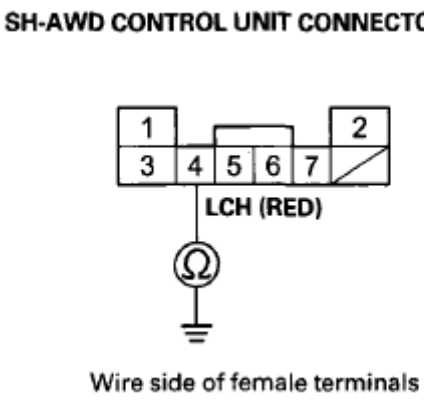

Fig. 60: Checking Continuity Between SH-AWD Control Unit Connector Terminal B4 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 12.

NO - Repair an open in the wire between SH-AWD control unit connector terminal B4 and the left solenoid 4P connector.

12. Remove the jumper wire from left solenoid 4P connector terminal No. 2.
13. Reconnect all connectors.
14. Turn the ignition switch to ON III), or press the engine start/stop button to select the ON mode.
15. Check the REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR in the SH-AWD mode menu DATA LIST. The temperature should be above 68°F (20°C) with the HDS before proceeding to the next step. If the temperature is below 68°F (20°C), drive the vehicle to warm up the rear differential until the

fluid temperature becomes above 68°F (20°C).

16. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
17. Disconnect the left solenoid 4P connector.
18. Measure the resistance between left solenoid 4P connector terminals No. 1 and No. 2.

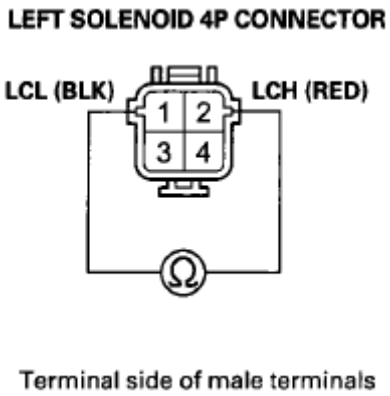

Fig. 61: Measuring Resistance Between Left Solenoid 4P Connector Terminals No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 1.8 ohms or more?

YES - Replace the rear differential left side case (see **SIDE CASE REPLACEMENT**).

NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

DTC 53-2: LEFT CLUTCH ELECTROMAGNETIC COIL (SHORT)

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Do the clutch function test with the HDS (see **SH-AWD® FUNCTION TEST**).
4. Check for DTCs with the HDS.

Is DTC 53-2 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time.

5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
6. Disconnect SH-AWD control unit connector B (8P) and the left solenoid 4P connector.
7. Check for continuity between SH-AWD control unit connector terminals B4 and B5.

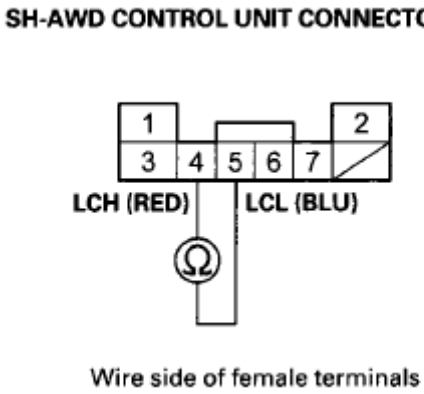

Fig. 62: Checking Continuity Between SH-AWD Control Unit Connector Terminals B4 And B5
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short in the wires between SH-AWD control unit connector terminals B4 and B5.

NO - Go to step 8.

8. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
9. Measure the voltage between SH-AWD control unit connector terminal B4 and body ground.

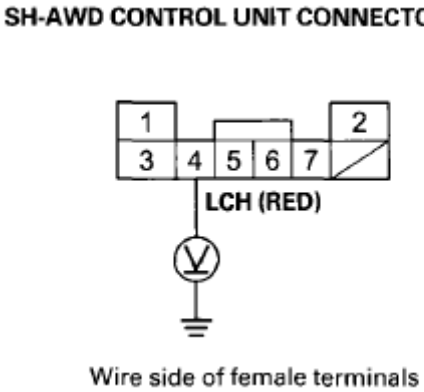

Fig. 63: Measuring Voltage Between SH-AWD Control Unit Connector Terminal B4 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there voltage?

YES - Repair a short to power in the wires between SH-AWD control unit connector terminal B4 and the

left solenoid 4P connector.

NO - Go to step 10.

10. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
11. Reconnect all connectors.
12. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
13. Check the REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR in the SH-AWD mode menu DATA LIST. The temperature should be above 68°F (20°C) with the HDS before proceeding to the next step. If the temperature is below 68°F (20°C), drive the vehicle to warm up the rear differential until the fluid temperature becomes above 68°F (20°C).
14. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
15. Disconnect the left solenoid 4P connector.
16. Measure the resistance between left solenoid 4P connector terminals No. 1 and No. 2.

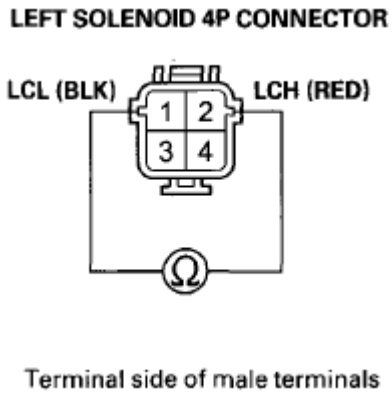

Fig. 64: Measuring Resistance Between Left Solenoid 4P Connector Terminals No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.45 ohms or less?

YES - Replace the rear differential left side case (see **SIDE CASE REPLACEMENT**).

NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

DTC 56-3: RIGHT CLUTCH ELECTROMAGNETIC COIL CURRENT MALFUNCTION

NOTE:

- **Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

- **If DTC 49-1 is stored at the same time as DTC 56-3, troubleshoot DTC 49-1 first, then recheck for DTC 56-3.**

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Do the clutch function test with the HDS (see **SH-AWD® FUNCTION TEST**).
4. Check for DTCs with the HDS.

   Is DTC 56-3 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time.

5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
6. Disconnect SH-AWD control unit connector B (8P) and the right solenoid 4P connector.
7. Connect right solenoid 4P connector terminal No. 1 to body ground with a jumper wire.

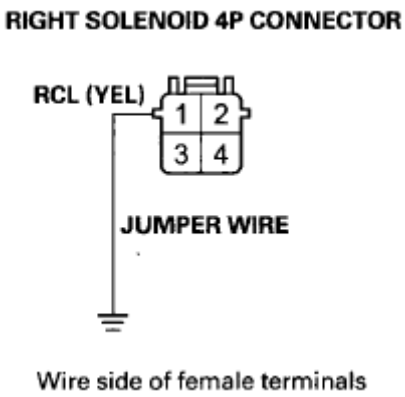

Fig. 65: Connecting Right Solenoid 4P Connector Terminal No. 1 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Check for continuity between SH-AWD control unit connector terminal B7 and body ground.

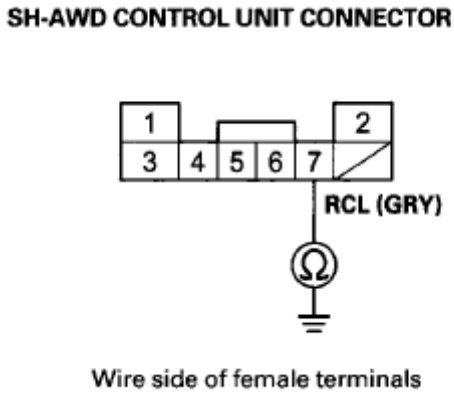

Fig. 66: Checking Continuity Between SH-AWD Control Unit Connector Terminal B7 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair an open in the wire between SH-AWD control unit connector terminal B7 and the right solenoid 4P connector.

9. Remove the jumper wire from right solenoid 4P connector terminal No. 1.
10. Connect right solenoid 4P connector terminal No. 2 to body ground with a jumper wire.

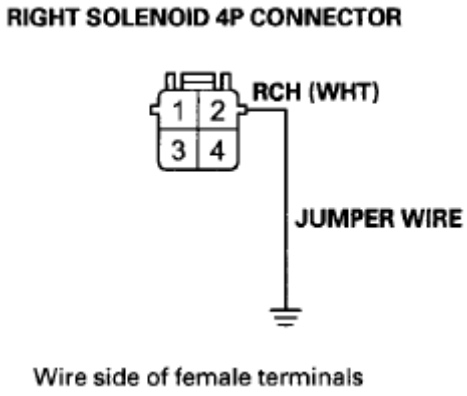

Fig. 67: Connecting Right Solenoid 4P Connector Terminal No. 2 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check for continuity between SH-AWD control unit connector terminal B6 and body ground.

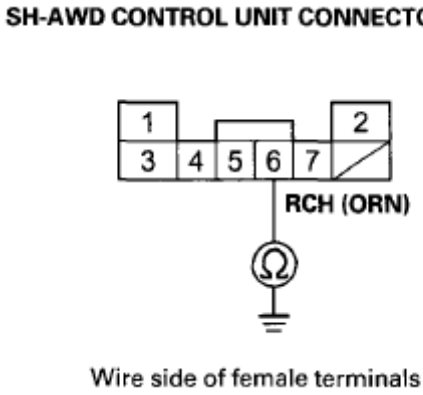

Fig. 68: Checking Continuity Between SH-AWD Control Unit Connector Terminal B6 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 12.

NO - Repair an open in the wire between SH-AWD control unit connector terminal B6 and the right solenoid 4P connector.

12. Remove the jumper wire from right solenoid 4P connector terminal No. 2.
13. Check for continuity between SH-AWD control unit connector terminal B2 and body ground.

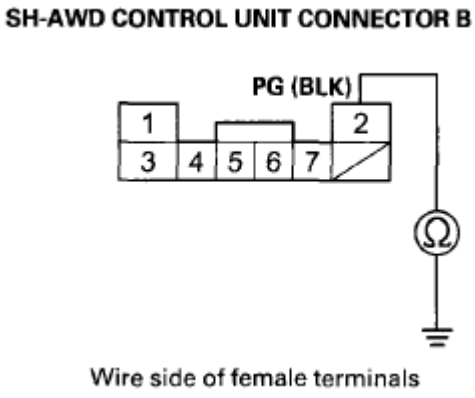

Fig. 69: Checking Continuity Between SH-AWD Control Unit Connector Terminal B2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 14.

NO - Repair an open in the wire between SH-AWD control unit connector terminal B2 and body ground (G652) (see **CONNECTOR TO FUSE/RELAY BOX INDEX**), or repair poor body ground (G652).

14. Check for continuity between SH-AWD control unit connector terminals B2 and B6.

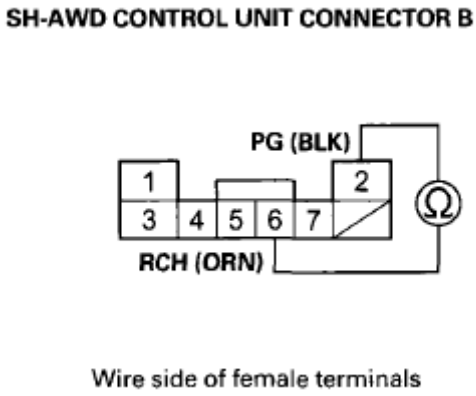

Fig. 70: Checking Continuity Between SH-AWD Control Unit Connector Terminals B2 And B6
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between SH-AWD control unit connector terminal B6 and the right solenoid 4P connector.

NO - Go to step 15.

15. Check for continuity between SH-AWD control unit connector terminals B2 and B7.

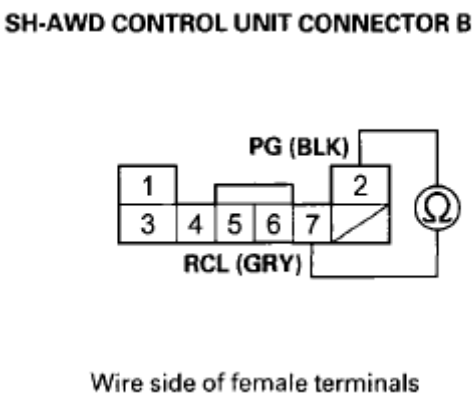

Fig. 71: Checking Continuity Between SH-AWD Control Unit Connector Terminals B2 And B7
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between SH-AWD control unit connector terminal B7 and the right solenoid 4P connector.

NO - Go to step 16.

16. Check for continuity between SH-AWD control unit connector terminals B6 and B7.

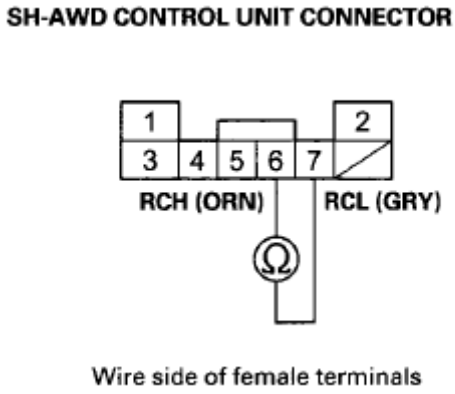

Fig. 72: Checking Continuity Between SH-AWD Control Unit Connector Terminals B6 And B7
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short in the wires between the SH-AWD control unit and the right solenoid 4P connector.

NO - Go to step 17.

17. Measure the voltage between SH-AWD control unit connector terminals B2 and B7.

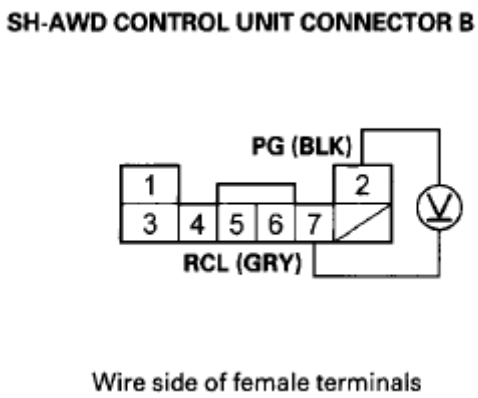

Fig. 73: Measuring Voltage Between SH-AWD Control Unit Connector Terminals B2 And B7
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there voltage?

YES - Repair a short to power in the wire between the SH-AWD control unit connector terminal B7 and the right solenoid 4P connector.

NO - Go to step 18.

18. Measure the voltage between SH-AWD control unit connector terminals B2 and B6.

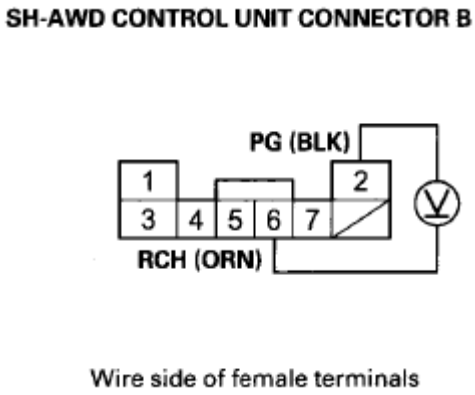

Fig. 74: Measuring Voltage Between SH-AWD Control Unit Connector Terminals B2 And B6
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there voltage?

YES - Repair a short to power in the wire between SH-AWD control unit connector terminal B6 and the right solenoid 4P connector.

NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

DTC 57-1, 57-3: RIGHT CLUTCH ELECTROMAGNETIC COIL (OPEN)

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Do the clutch function test with the HDS (see **SH-AWD® FUNCTION TEST**).
4. Check for DTCs with the HDS.

   Is DTC 57-1 or 57-3 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time.

5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
6. Disconnect SH-AWD control unit connector B (8P) and the right solenoid 4P connector.
7. Connect right solenoid 4P connector terminal No. 1 to body ground with a jumper wire.

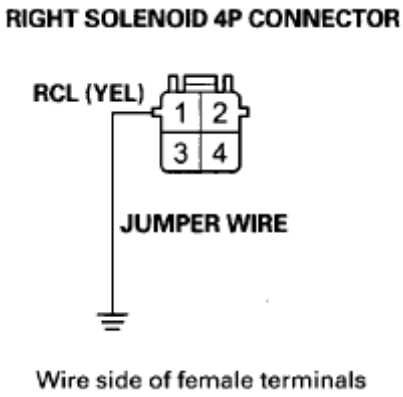

Fig. 75: Connecting Right Solenoid 4P Connector Terminal No. 1 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Check for continuity between SH-AWD control unit connector terminal B7 and body ground.

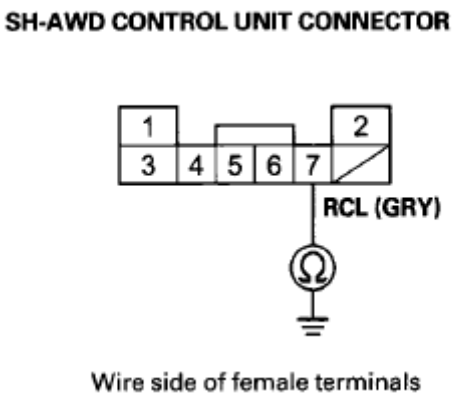

Fig. 76: Checking Continuity Between SH-AWD Control Unit Connector Terminal B7 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 9.

NO - Repair an open in the wire between SH-AWD control unit connector terminal B7 and the right solenoid 4P connector.

9. Remove the jumper wire from right solenoid 4P connector terminal No. 1.
10. Connect right solenoid 4P connector terminal No. 2 to body ground with a jumper wire.

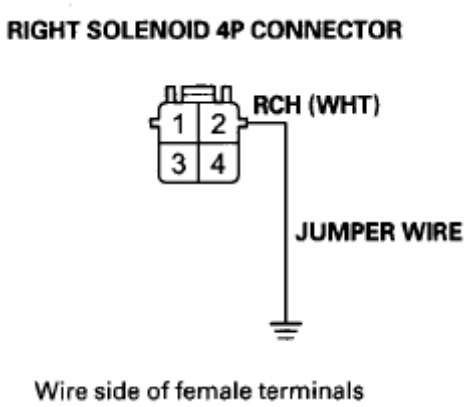

Fig. 77: Connecting Right Solenoid 4P Connector Terminal No. 2 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Check for continuity between SH-AWD control unit connector terminal B6 and body ground.

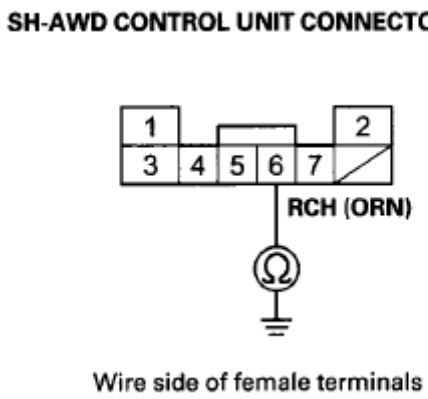

Fig. 78: Checking Continuity Between SH-AWD Control Unit Connector Terminal B6 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 12.

NO - Repair an open in the wire between SH-AWD control unit connector terminal B6 and the right solenoid 4P connector.

12. Remove the jumper wire from right solenoid 4P connector terminal No. 2.
13. Reconnect all connectors.
14. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
15. Check the REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR in the SH-AWD mode menu DATA LIST. The temperature should be above 68°F (20°C) with the HDS before proceeding to the next step. If the temperature is below 68°F (20°C), drive the vehicle to warm up the rear differential until the

fluid temperature becomes above 68°F (20°C).

16. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
17. Disconnect the right solenoid 4P connector.
18. Measure the resistance between right solenoid 4P connector terminals No. 1 and No. 2.

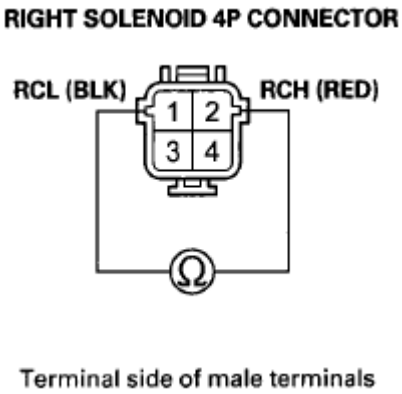

Fig. 79: Measuring Resistance Between Right Solenoid 4P Connector Terminals No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 1.8 ohms or more?

YES - Replace the rear differential right side case (see **SIDE CASE REPLACEMENT**).

NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

DTC 57-2: RIGHT CLUTCH ELECTROMAGNETIC COIL (SHORT)

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Do the clutch function test with the HDS (see **SH-AWD® FUNCTION TEST**).
4. Check for DTCs with the HDS.

Is DTC 57-2 indicated?

YES - Go to step 5.

NO - Intermittent failure, the system is OK at this time.

5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
6. Disconnect SH-AWD control unit connector B (8P) and the right solenoid 4P connector.
7. Check for continuity between SH-AWD control unit connector terminals B6 and B7.

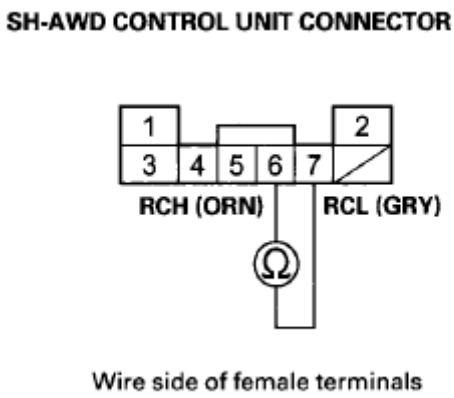

Fig. 80: Checking Continuity Between SH-AWD Control Unit Connector Terminals B6 And B7
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short in the wires between SH-AWD control unit connector terminals B6 and B7.

NO - Go to step 8.

8. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
9. Measure the voltage between SH-AWD control unit connector terminal B6 and body ground.

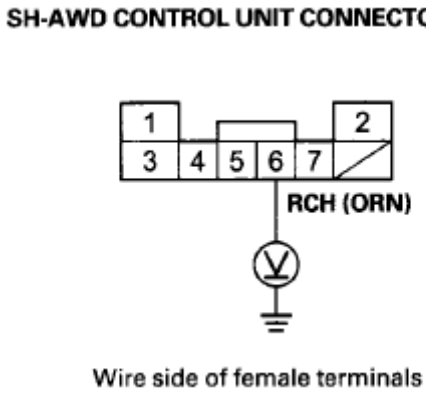

Fig. 81: Measuring Voltage Between SH-AWD Control Unit Connector Terminal B6 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there voltage?

YES - Repair a short to power in the wires between SH-AWD control unit connector terminal B6 and the

right clutch electromagnetic coil.

NO - Go to step 10.

10. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
11. Reconnect all connectors.
12. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
13. Check the REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR in the SH-AWD mode menu DATA LIST. The temperature should be above 68°F (20°C) with the HDS before proceeding to the next step. If the temperature is below 68°F (20°C), drive the vehicle to warm up the rear differential until the fluid temperature becomes above 68°F (20 CC).
14. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
15. Disconnect the right solenoid 4P connector.
16. Measure the resistance between right solenoid 4P connector terminals No. 1 and No. 2.

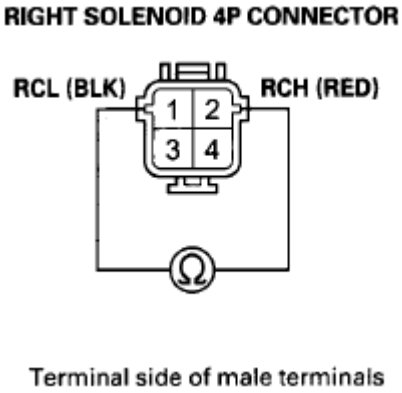

Fig. 82: Measuring Resistance Between Right Solenoid 4P Connector Terminals No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there 0.45 ohms or less?

YES - Replace the rear differential right side case (see **SIDE CASE REPLACEMENT**).

NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

DTC 76-1: REAR DIFFERENTIAL FLUID OVERHEATS

NOTE:

- **Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**

- **When the temperature of the rear differential fluid is abnormally high, the SH-AWD indicator comes on. This is not necessarily a problem, but DTC 76-1 will be stored.**
- **Check the rear differential fluid level (see REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT). If it is low, refill it, clear the DTC, and recheck.**

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Check for DTCs in the VSA system with the HDS.

   Are any VSA system DTCs indicated?

   YES - Go to the indicated **DTC'S TROUBLESHOOTING**.

   NO - Go to step 3.

3. Clear the DTC with the HDS.
4. Start the engine.
5. Test-drive the vehicle at 10 mph (15 km/h), and check for WHEEL SPEED in the DATA LIST with the HDS.

   Are all wheel speed the same?

   YES - Intermittent failure, the system is OK at this time.

   NO - Go to step 6.

6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
7. Check for rear brake drag.

   Are the rear brakes OK?

   YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

   NO - Inspect and repair the rear brakes (see **SYMPTOM TROUBLESHOOTING**).

DTC 77-1: THE FUNCTIONAL ABNORMALITIES OF FUEL AND EMISSIONS

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for DTCs with the HDS.

   Is DTC 77-1 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time.

5. Check for DTCs in the PGM-FI system with the HDS.

   Are there any PGM-FI system DTCs indicated?

   YES - Go to the indicated **DTC'S TROUBLESHOOTING**.

   NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

DTC 77-2: THE FUNCTIONAL ABNORMALITIES OF VSA MODULATOR-CONTROL UNIT; DTC 77-5: YAW RATE-ACCELERATION SENSOR MALFUNCTION; DTC 77-6: STEERING ANGLE SENSOR MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for DTCs with the HDS.

   Is DTC 77-2, 77-5, or 77-6 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time.

5. Check for DTCs in the VSA system with the HDS.

   Are there VSA system DTCs indicated?

YES - Go to the indicated **DTC'S TROUBLESHOOTING**.

NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

DTC 77-4: THE FUNCTIONAL ABNORMALITIES OF AUTOMATIC TRANSMISSION

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.
3. Start the engine.
4. Check for DTCs with the HDS.

   Is DTC 77-4 indicated?

   YES - Go to step 5.

   NO - Intermittent failure, the system is OK at this time.

5. Check for DTCs in the A/T system with the HDS.

   Are there any A/T system DTCs indicated?

   YES - Go to the indicated **DTC'S TROUBLESHOOTING**.

   NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

DTC 78-XX ("X" CAN BE 0 THRU 9 OR A THRU F): SH-AWD CONTROL UNIT SELF-DIAGNOSTIC MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Clear the DTC with the HDS.

3. Start the engine.
4. Check for DTCs with the HDS.

   Is DTC 78-xx indicated?

   YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

   NO - Intermittent failure, the system is OK at this time.

DTC 81-1: LEFT SEARCH COIL SENSOR MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. Disconnect SH-AWD control unit connector A (20P).
3. Check for continuity between SH-AWD control unit connector terminals A1 and A11.

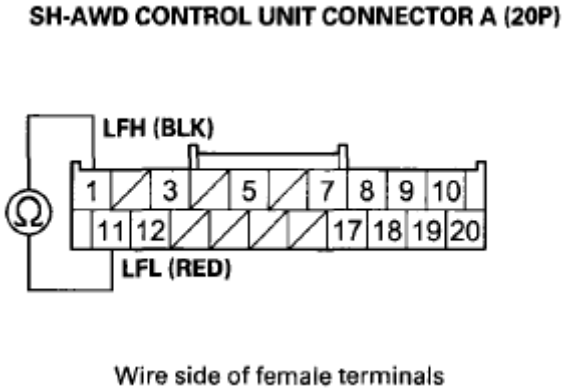

Fig. 83: Checking Continuity Between SH-AWD Control Unit Connector Terminals A1 And A11
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 4.

NO - Go to step 12.

4. Check the REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR in the SH-AWD mode menu DATA LIST. The temperature should be above 68°F (20°C) with the HDS before proceeding to the next

step. If the temperature is below 68°F (20°C), drive the vehicle to warm up the rear differential until the fluid temperature becomes above 68°F (20°C).

5. Measure the resistance between SH-AWD control unit connector terminals A1 and A11.

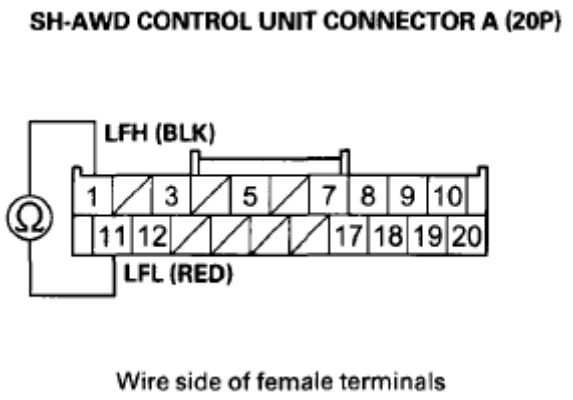

Fig. 84: Measuring Resistance Between SH-AWD Control Unit Connector Terminals A1 And A11
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 2.0 ohms or more?

YES - Go to step 8.

NO - Go to step 6.

6. Disconnect the left solenoid 4P connector.
7. Check for continuity between left solenoid 4P connector terminals No. 3 and No. 4.

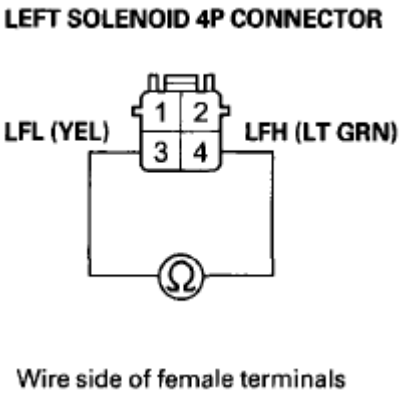

Fig. 85: Checking Continuity Between Left Solenoid 4P Connector Terminals No. 3 And No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short in the wires between SH-AWD control unit connector A and the left solenoid 4P connector.

NO - Replace the rear differential left side case (see **SIDE CASE REPLACEMENT**).

8. Check for continuity between SH-AWD control unit connector terminal A1 and body ground.

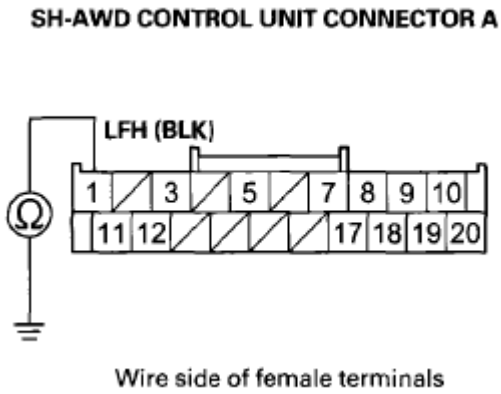

Fig. 86: Checking Continuity Between SH-AWD Control Unit Connector Terminal A1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between SH-AWD control unit connector terminal A1 and body ground.

NO - Go to step 9.

9. Check the connections at the SH-AWD control unit.

Are the connections loose or poor?

YES - Repair the connections as needed, and recheck.

NO - Go to step 10.

10. Update the SH-AWD control unit with the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), and recheck.

Does the symptom/indication go away?

YES - Troubleshooting is complete.

NO - Go to step 11.

11. Substitute the SH-AWD control unit with a known-good control unit, and recheck.

Does the symptom/indication go away?

YES - Replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

NO - Replace the rear differential left side case (see **SIDE CASE REPLACEMENT**).

NOTE: If a new SH-AWD control unit was used in place of the known-good control unit and the new control unit will not initialize, replace the rear differential left side case (see SIDE CASE REPLACEMENT).

12. Disconnect the left solenoid 4P connector.
13. Connect left solenoid 4P connector terminal No. 3 to body ground with a jumper wire.

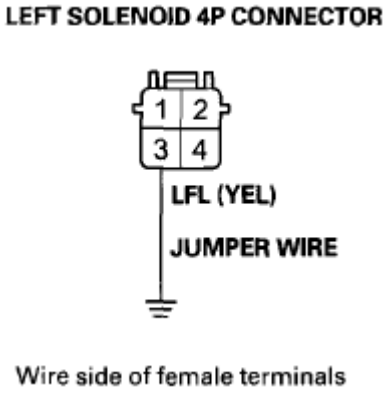

Fig. 87: Connecting Left Solenoid 4P Connector Terminal No. 3 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Check for continuity between SH-AWD control unit connector terminal A11 and body ground.

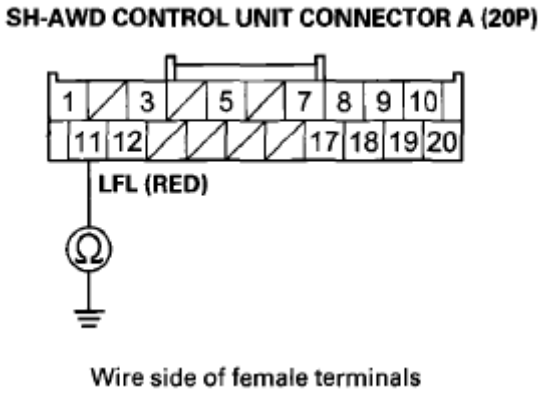

Fig. 88: Checking Continuity Between SH-AWD Control Unit Connector Terminal A11 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 15.

NO - Repair an open in the wire between SH-AWD control unit connector terminal A11 and the left solenoid 4P connector.

15. Remove the jumper wire from left solenoid 4P connector terminal No. 3.
16. Connect left solenoid 4P connector terminal No. 4 to body ground with a jumper wire.

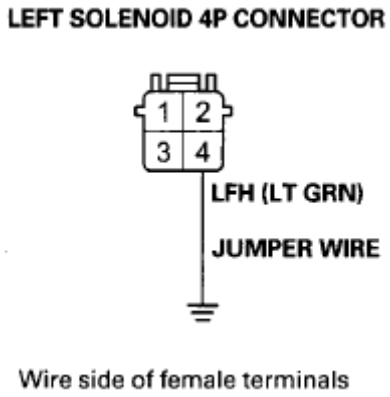

Fig. 89: Connecting Left Solenoid 4P Connector Terminal No. 4 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Check for continuity between SH-AWD control unit connector terminal A1 and body ground.

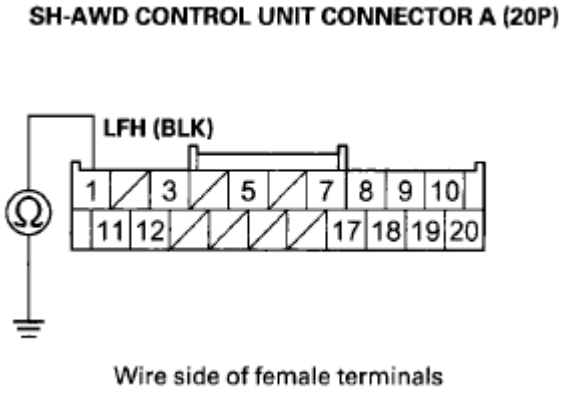

Fig. 90: Checking Continuity Between SH-AWD Control Unit Connector Terminal A1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the rear differential left side case (see **SIDE CASE REPLACEMENT**).

NO - Repair an open in the wire between SH-AWD control unit connector terminal A1 and the left solenoid 4P connector.

DTC 82-1: RIGHT SEARCH COIL SENSOR MALFUNCTION

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. Disconnect SH-AWD control unit connector A (20P).
3. Check for continuity between SH-AWD control unit connector terminals A3 and A12.

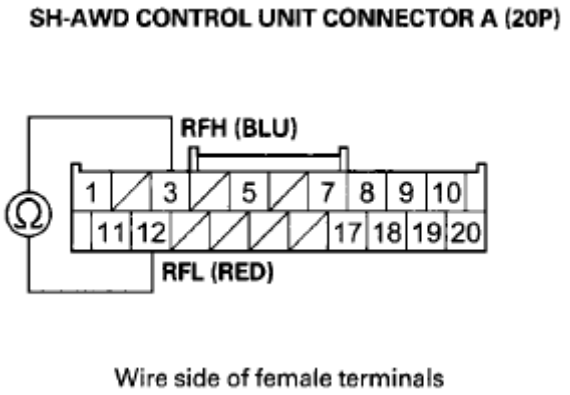

Fig. 91: Checking Continuity Between SH-AWD Control Unit Connector Terminals A3 And A12
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 4.

NO - Go to step 12.

4. Check the REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR in the SH-AWD mode menu DATA LIST. The temperature should be above 68°F (20°C) with the HDS before proceeding to the next step. If the temperature is below 68°F (20°C), drive the vehicle to warm up the rear differential until the fluid temperature becomes above 68°F (20°C).
5. Measure the resistance between SH-AWD control unit connector terminals A3 and A12.

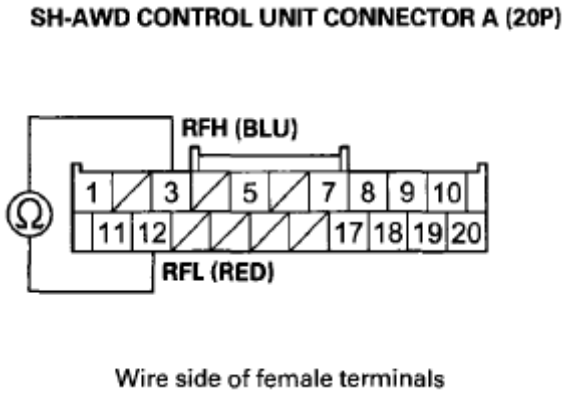

Fig. 92: Measuring Resistance Between SH-AWD Control Unit Connector Terminals A3 And A12
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there about 2.0 ohms or more?

YES - Go to step 6.

NO - Go to step 10.

6. Disconnect the right solenoid 4P connector.
7. Check for continuity between right solenoid 4P connector terminals No. 3 and No. 4.

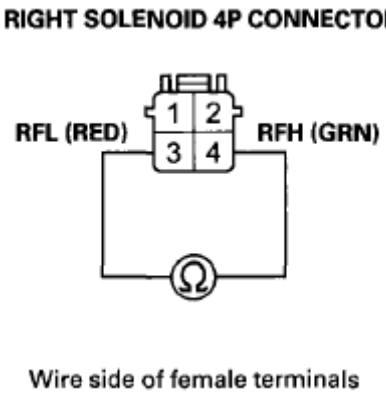

Fig. 93: Checking Continuity Between Right Solenoid 4P Connector Terminals No. 3 And No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short in the wires between SH-AWD control unit connector A and the right solenoid 4P connector.

NO - Replace the rear differential right side case (see **SIDE CASE REPLACEMENT**).

8. Check for continuity between SH-AWD control unit connector terminal A3 and body ground.

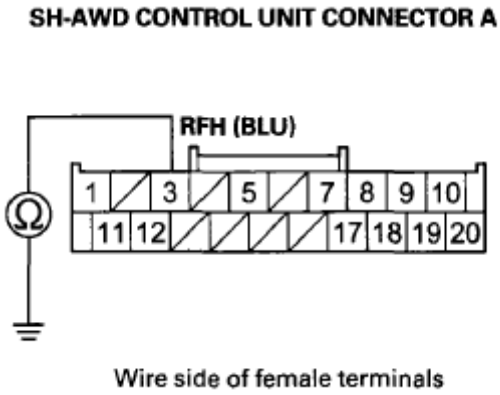

Fig. 94: Checking Continuity Between SH-AWD Control Unit Connector Terminal A3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to body ground in the wire between SH-AWD control unit connector terminal A3 and body ground.

NO - Go to step 9.

9. Check the connections at the SH-AWD control unit.

   Are the connections loose or poor?

   YES - Repair the connections as needed, and recheck.

   NO - Go to step 10.

10. Update the SH-AWD control unit with the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), and recheck.

    Does the symptom/indication go away?

    YES - Troubleshooting is complete.

    NO - Go to step 11.

11. Substitute the SH-AWD control unit with a known-good control unit, and recheck.

    Does the symptom/indication go away?

    YES - Replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

NO - Replace the rear differential right side case (see **SIDE CASE REPLACEMENT**).

NOTE: **If a new SH-AWD control unit was used in place of the known-good control unit and the new control unit will not initialize, replace the rear differential right side case.**

12. Disconnect the right solenoid 4P connector.
13. Connect right solenoid 4P connector terminal No. 3 to body ground with a jumper wire.

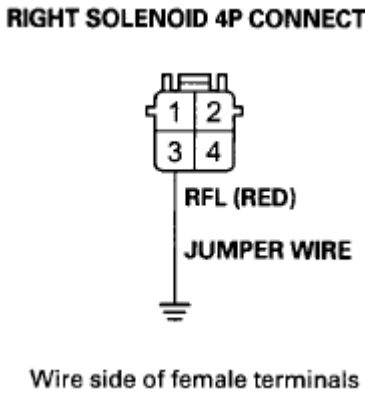

Fig. 95: Connecting Right Solenoid 4P Connector Terminal No. 3 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Check for continuity between SH-AWD control unit connector terminal A12 and body ground.

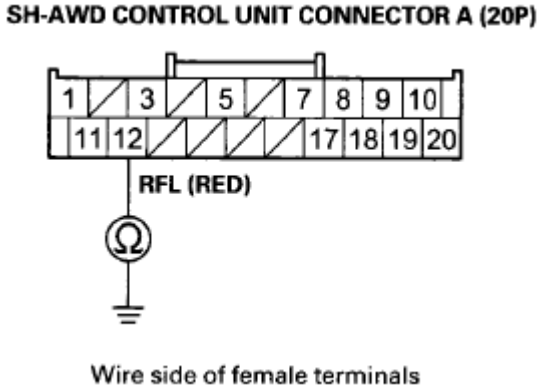

Fig. 96: Checking Continuity Between SH-AWD Control Unit Connector Terminal A12 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 15.

NO - Repair an open in the wire between SH-AWD control unit connector terminal A12 and the right solenoid 4P connector.

15. Remove the jumper wire from right solenoid 4P connector terminal No. 3.
16. Connect right solenoid 4P connector terminal No. 4 to body ground with a jumper wire.

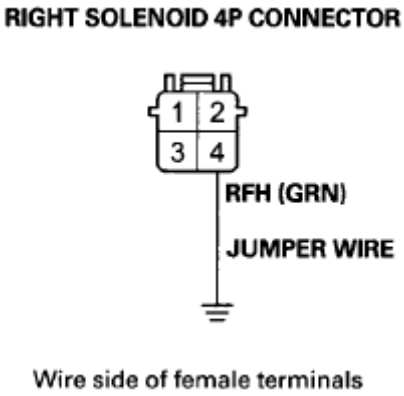

Fig. 97: Connecting Right Solenoid 4P Connector Terminal No. 4 To Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Check for continuity between SH-AWD control unit connector terminal A3 and body ground.

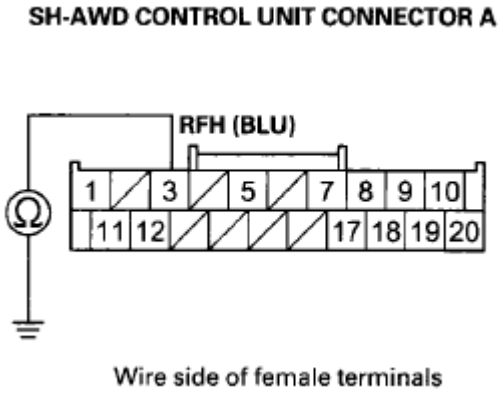

Fig. 98: Checking Continuity Between SH-AWD Control Unit Connector Terminal A3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Replace the rear differential right side case (see **SIDE CASE REPLACEMENT**).

NO - Repair an open in the wire between SH-AWD control unit connector terminal A3 and the right solenoid 4P connector.

DTC 91-1: SH-AWD CONTROL UNIT PROGRAMMING ERROR

NOTE:

- **Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **DTC 91-1 is stored when the SH-AWD system update is not completed.**
- **Do not turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode while updating the SH-AWD system. If you do, the SH-AWD system can be damaged.**

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Do the SH-AWD system update procedure (see **SH-AWD® CONTROL UNIT UPDATE**).
3. Check for DTCs with the HDS.

   Is DTC 91-1 indicated?

   YES - Substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

   NO - Update is complete.

SYMPTOM TROUBLESHOOTING

THE SH-AWD INDICATOR DOES NOT GO OFF, AND NO DTCS ARE STORED

NOTE:

- **Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).**
- **Make sure the No. 2-6 (30 A) fuse in the under-hood fuse/relay box is OK.**
- **Make sure there are no loose connector terminals at the SH-AWD control unit.**
- **Make sure the charging system and the battery are OK.**
- **Make sure the ECM/PCM is not in the middle of updating.**

1. Test the battery (see **BATTERY TEST**). Charge or replace the battery if necessary.
2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Check the COMPLETE MEMORIZATION in the DATA LIST with the HDS.

   Does the data list show "complete"?

   YES - Go to step 4.

   NO - Do the SH-AWD system memorization procedure for each of the following, then go to step 4.

   - SH-AWD differential clutch torque (see **SH-AWD® DIFFERENTIAL CLUTCH TORQUE**

MEMORIZATION)

- Yaw rate-acceleration neutral position (see **YAW RATE-ACCELERATION NEUTRAL POSITION MEMORIZATION**)
- SH-AWD control unit initialization (see **SH-AWD® CONTROL UNIT INITIALIZATION**)

4. Check for DTCs in the VSA system with the HDS.

   Are any steering angle sensor DTCs indicated?

   YES - Go to the indicated **DTC'S TROUBLESHOOTING**.

   NO - Go to step 5.

5. Start the engine.
6. Check the SH-AWD indicator value with the HDS.

   Is the SH-AWD indicator value OFF?

   YES - Go to the gauge control self-diagnostic function (see **SELF-DIAGNOSTIC FUNCTION**).

   NO - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

THE SH-AWD INDICATOR DOES NOT COME ON

NOTE: Before you troubleshoot, review the general troubleshooting information (see GENERAL TROUBLESHOOTING INFORMATION).

1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
2. Check the SH-AWD indicator.

   Does the SH-AWD indicator come on and go off?

   YES - Intermittent failure, the system is OK at this time.

   NO - Go to step 3.

3. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
4. Disconnect SH-AWD control unit connector A (20P) and connector B (8P).
5. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
6. Check the SH-AWD indicator.

Does the SH-AWD indicator come on?

YES - Update the SH-AWD control unit if it does not have the latest software (see **SH-AWD® CONTROL UNIT UPDATE**), or substitute a known-good SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**), and recheck. If the symptom/indication goes away with the updated SH-AWD control unit, troubleshooting is complete. If the symptom/indication goes away with a known-good SH-AWD control unit, replace the original SH-AWD control unit (see **SH-AWD® CONTROL UNIT REPLACEMENT**).

NO - Go to the gauge control self-diagnostic function (see **SELF-DIAGNOSTIC FUNCTION**).

SH-AWD® FUNCTION TEST

Special Tools Required

Torque Wrench Adapter 070AJ-SJAA101

DIRECT ELECTROMAGNETIC CLUTCH TEST

NOTE: Before doing the SH-AWD Function Test, check the following conditions.

- Check to make sure there are no DTC detected.
- The transmission is in neutral (A/T in P, M/T in neutral).
- The SH-AWD control unit has been initialized.

1. With the ignition switch in LOCK (0), or the vehicle in the OFF mode, connect the HDS to the DLC (A) located under the driver's side of the dashboard.

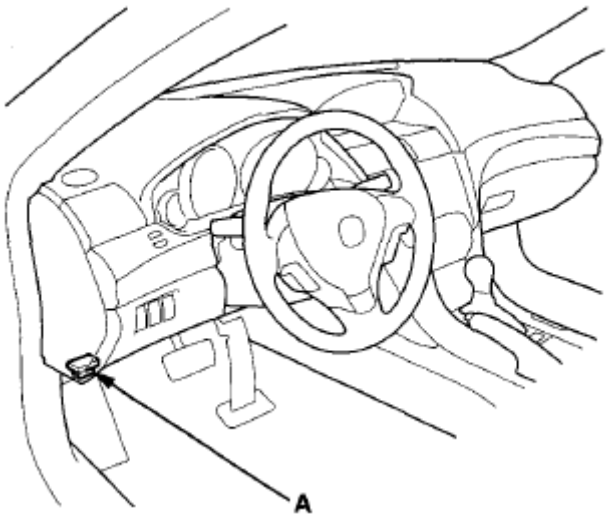

Fig. 99: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Make sure the HDS communicates with the vehicle and the SH-AWD control unit. If it does not, go to the DLC circuit troubleshooting (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check that the differential fluid temperature is over 68°F (20°C) with the HDS. If it is below 68°F (20° C), raise the temperature by driving the vehicle in circles or by constantly turning.
5. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
6. Remove the rear wheels.
7. Install the torque wrench adapter (A) on the rear wheel hub.

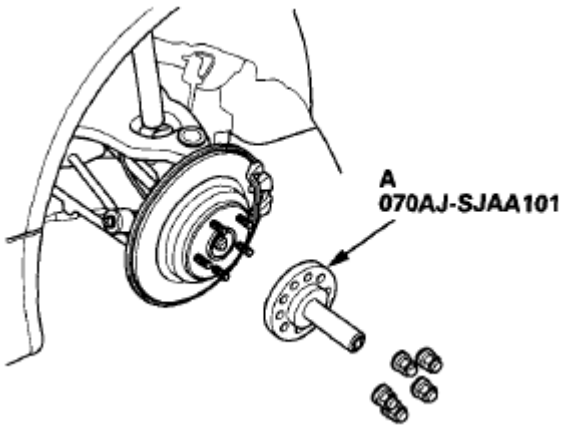

Fig. 100: Identifying Torque Wrench Adapter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Do the Direct Electromagnetic Clutch Test with the HDS.
9. Install a torque wrench on the torque wrench adapter as shown. Write down the torque value with the HDS while slowly rotating the rear hub with the torque wrench as shown. (Turn the hub no more than 90 degrees in 7 to 10 seconds).

NOTE: Use a torque wrench capable of measuring up to 785 N.m (80.0 Kgf.m, 579 lbf.ft) such as a commercially available Snap-on torque wrench TEC602A.

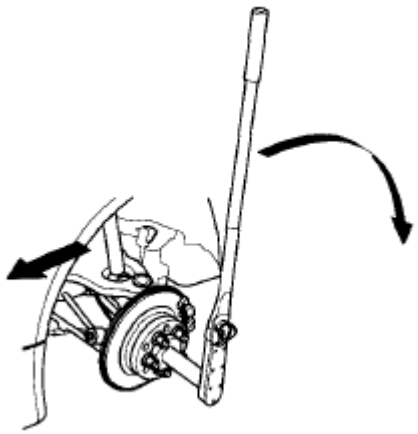

Fig. 101: Rotating Rear Hub With Torque Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Enter the torque value into the HDS, and wait for the test to finish.
    - If the result shows the clutch driving force is normal, the clutch assembly is OK.
    - If the result shows the clutch driving force is abnormal, replace the differential fluid, and retest. If the result still shows the clutch driving force is abnormal, replace the right and left differential side cases (see **SIDE CASE REPLACEMENT**).

REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT

INSPECTION

1. Park the vehicle on level ground, and turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. Use solvent and a brush to wash any oil and dirt off the differential fluid filler plug, and dry them with compressed air.
3. Remove the filler plug (A) and the sealing washer (B), then check the condition of the fluid, if the fluid is dirty or burnt, replace it.

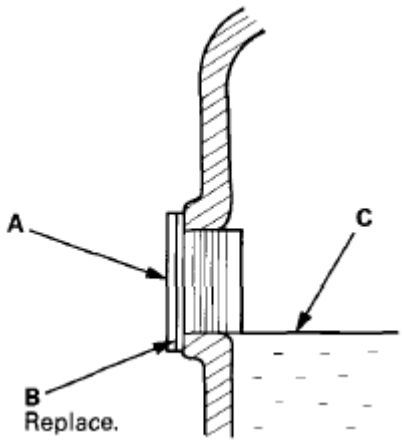

Fig. 102: Identifying Filler Plug, Sealing Washer And Proper Level Of Fluid
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Make sure the fluid is at the proper level (C). If the level is below the proper level, check for fluid leaks at the differential. If a problem is found, fix it before filling the differential with fluid.
5. The fluid level must reach up the bottom of the filler plug hole. If necessary, add the recommended fluid until it runs out, then reinstall the filler plug with a new sealing washer.

REPLACEMENT

1. Park the vehicle on level ground, and turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

2. Remove the filler plug (A) and the sealing washer (B).

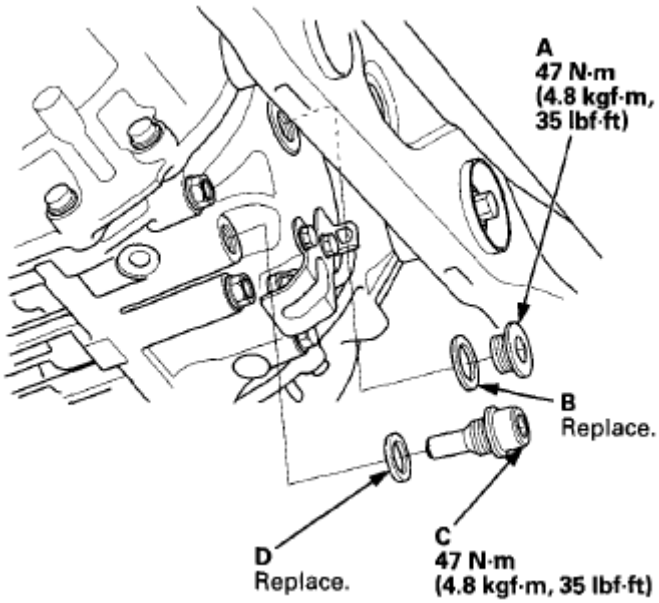

Fig. 103: Identifying Sealing Washer, Filler And Drain Plug With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the drain plug (C) and the sealing washer (D), and drain the fluid.
4. Reinstall the drain plug with a new sealing washer.
5. Refill the recommended fluid until it reaches the bottom of the filler plug hole.

Fluid Capacity:

2.53 L (2.67 US qt) at fluid change

2.77 L (2.93 US qt) at overhaul

Recommended fluid: Acura All-Wheel Drive Fluid (DPSF)

6. Reinstall the filler plug with a new sealing washer.
7. If the Maintenance Minder required to replace the rear differential fluid, reset the Maintenance Minder (see **MAINTENANCE MINDER™**), and this procedure is complete. If the Maintenance Minder did not require to replace the rear differential fluid, go to step 8.
8. With the ignition switch in LOCK (0), or the vehicle in the OFF mode, connect the HDS to the DLC (A) located under the driver's side of the dashboard.

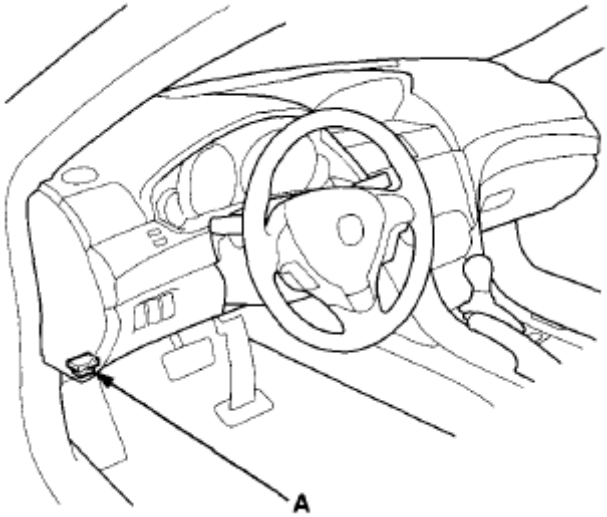

Fig. 104: Identifying Data Link Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
10. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it does not communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
11. Select GAUGES in the BODY ELECTRICAL with the HDS.
12. Select ADJUSTMENT in the GAUGES with the HDS.
13. Select MAINTENANCE MINDER in the ADJUSTMENT with the HDS.
14. Select RESET in the MAINTENANCE MINDER with the HDS.
15. Select MAINTENANCE SUB ITEM 6 RESET with the HDS, and reset the rear differential fluid life.

REAR DIFFERENTIAL FLUID TEMPERATURE SENSOR REPLACEMENT

1. Drain the rear differential fluid, and reinstall the drain plug with a new sealing washer (see **REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT**).
2. Remove the rear differential fluid temperature sensor cover (A) and rear differential harness bracket D, then disconnect the rear differential fluid temperature sensor 2P connector (B).

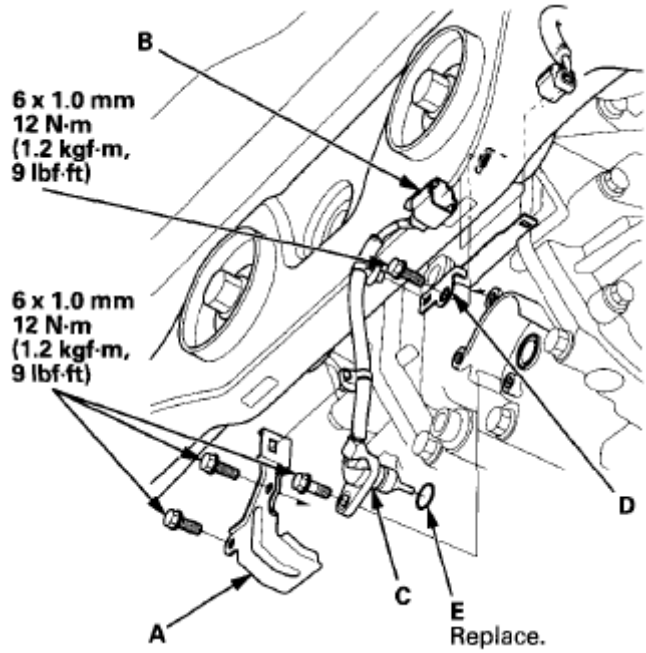

Fig. 105: Identifying Rear Differential Fluid Temperature Sensor, 2P Connector, Cover, Rear Differential Harness Bracket And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rear differential fluid temperature sensor (C).
4. Install the rear differential fluid temperature sensor with a new O-ring (E) in the reverse order of removal.
5. Refill the rear differential with the recommended fluid (see **REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT**).

SH-AWD® CONTROL UNIT REPLACEMENT

NOTE: The SH-AWD control unit must be initialized (see SH-AWD® CONTROL UNIT INITIALIZATION) after replacement, otherwise the SH-AWD system will not function.

1. Remove the trunk front trim panel (see **TRIM REMOVAL/INSTALLATION - TRUNK AREA**).
2. Remove the SH-AWD control unit (A).

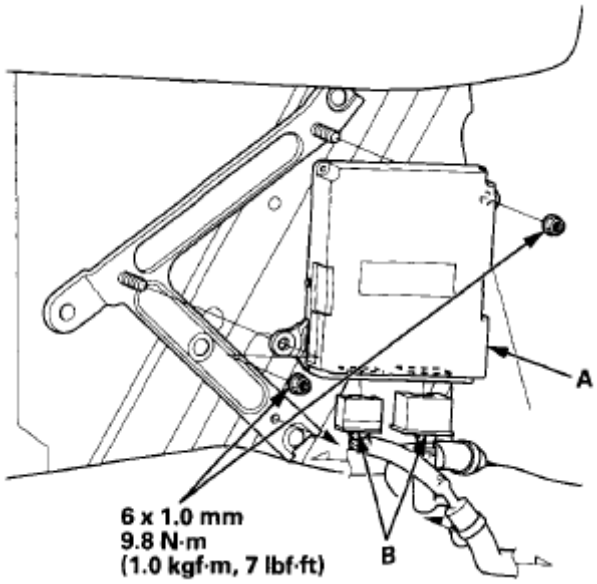

Fig. 106: Identifying SH-AWD Control Unit And Connectors With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the SH-AWD control unit connectors (B).
4. Install the SH-AWD control unit in the reverse order of removal.

SH-AWD® RELAY REPLACEMENT

1. Remove the trunk front trim panel (see **TRIM REMOVAL/INSTALLATION - TRUNK AREA**).
2. Remove the SH-AWD relay (A).

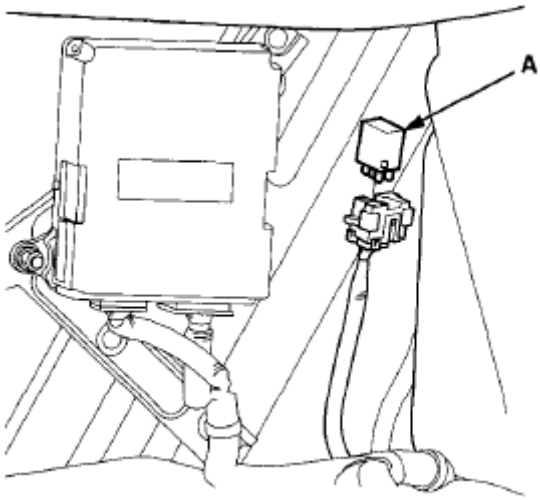

Fig. 107: Identifying SH-AWD Relay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the SH-AWD relay in the reverse order of removal.

REAR DIFFERENTIAL MOUNT REPLACEMENT

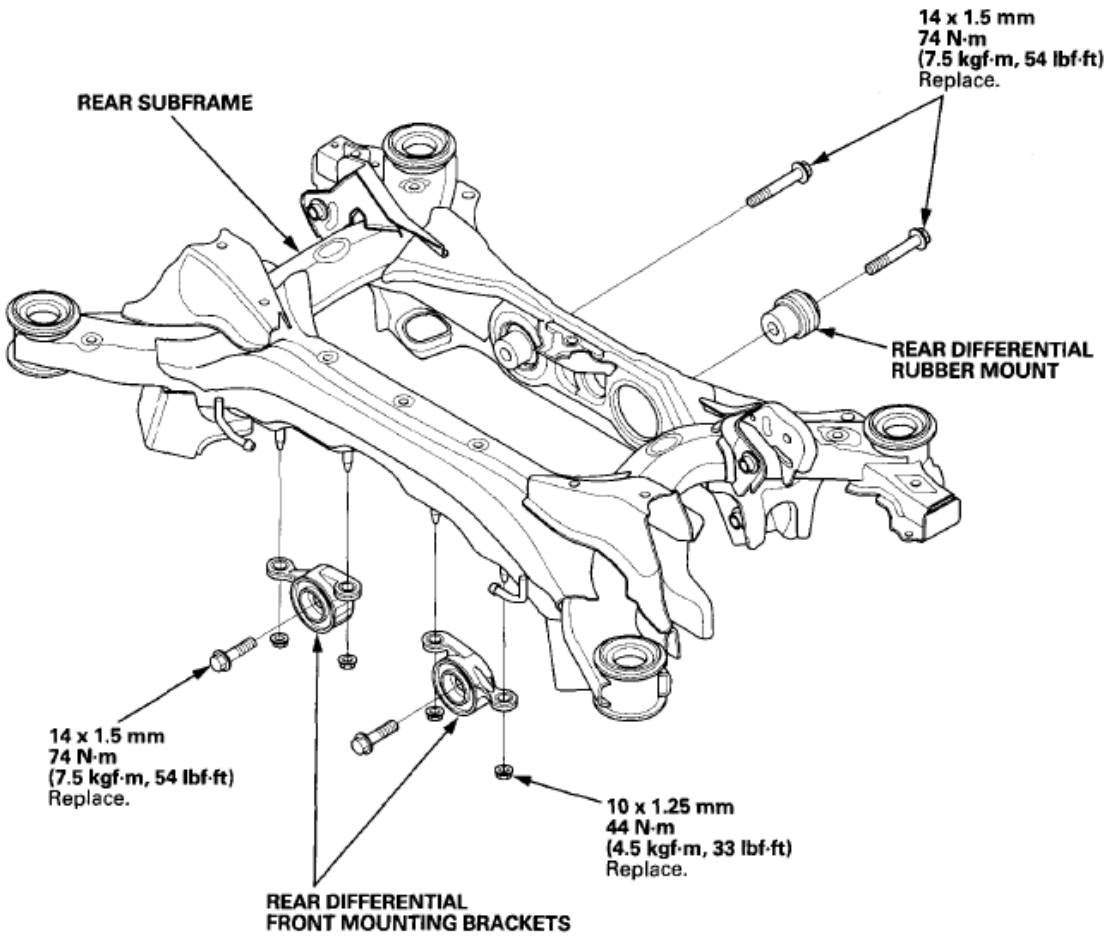

Fig. 108: Exploded View Of Rear Differential Mount With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DIFFERENTIAL REMOVAL

Special Tools Required

Driveshaft Remover 07AAD-S3VA000

1. Raise and support the vehicle (see **LIFT AND SUPPORT POINTS**).
2. Drain the rear differential fluid (see **REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT**).
3. Remove the rear wheels.
4. Remove exhaust pipe B and the muffler (see **J37A4 ENGINE (WITH SH-AWD)**).
5. Remove the lower arm A mounting bolts (A) and the lower arm B mounting bolts (B).

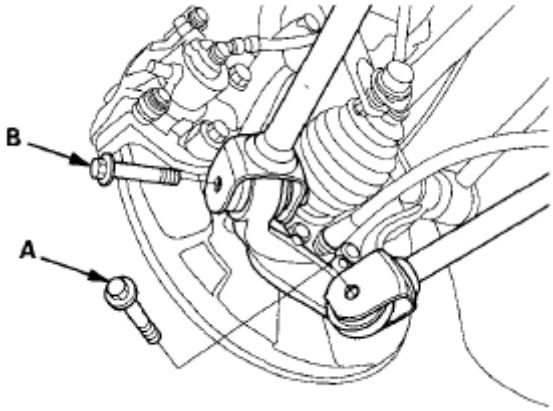

Fig. 109: Identifying Lower Arm Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Disconnect the inboard joints (A) from the rear differential (B) using the driveshaft remover (C) and a hammer.

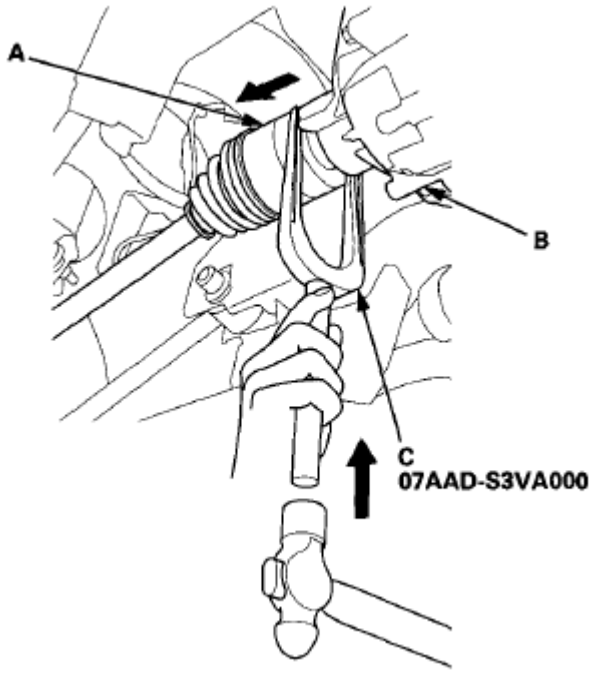

Fig. 110: Disconnecting Inboard Joints From Rear Differential Using Driveshaft Remover And Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Pull the knuckle (A) outward, and separate the rear driveshaft inboard joints (B) from the rear differential.

NOTE: Be careful not to damage the splash guard (C).

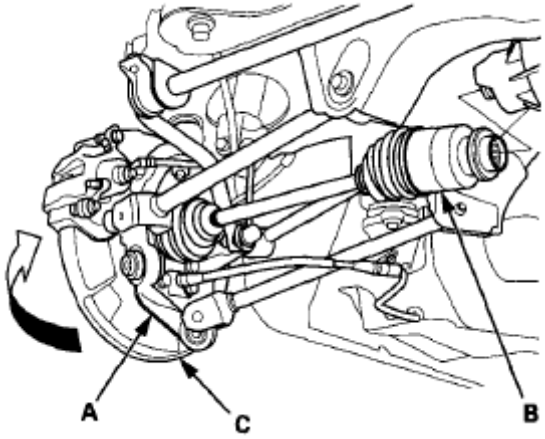

Fig. 111: Pulling Knuckle Outward And Separating Rear Driveshaft Inboard Joints From Rear Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Make reference mark (A) across the No. 3 propeller shaft (B) and the rear differential companion flange (C). Separate the No. 3 propeller shaft from the rear differential.

NOTE: Suspend the propeller shaft with an appropriate size nylon strap.

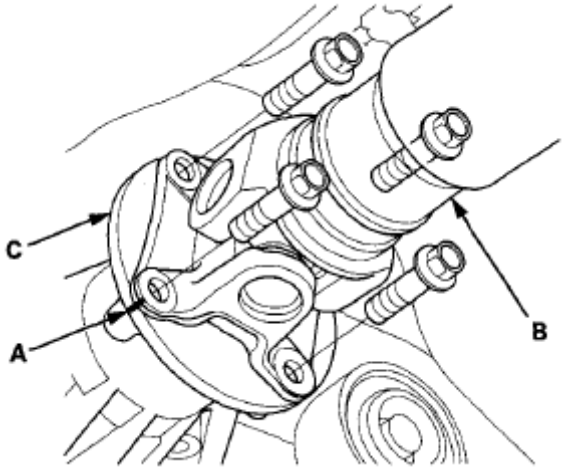

Fig. 112: Identifying Propeller Shaft, Rear Differential Companion Flange And Reference Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Disconnect the rear differential subharness connectors (A), and remove the harness clips (B).

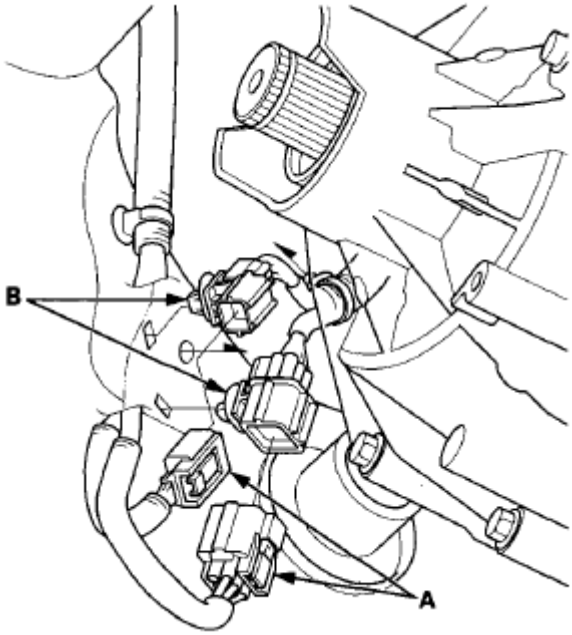

Fig. 113: Identifying Rear Differential Subharness Connectors And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the rear subframe rear bracket bolts (A).

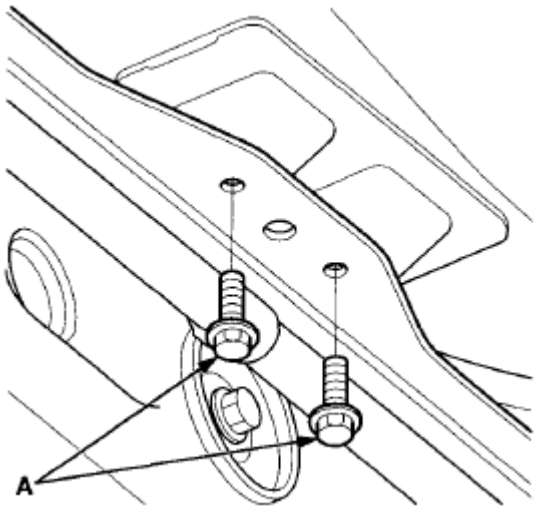

Fig. 114: Identifying Rear Subframe Rear Bracket Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Place a transmission jack (A) under the rear differential (B).

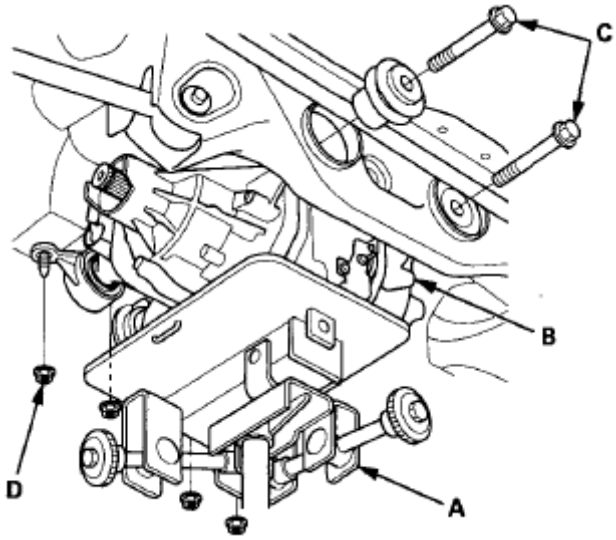

Fig. 115: Placing Transmission Jack Under Rear Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the rear differential rear mount bolts (C) and the rear differential front mounting bracket nuts (D).
13. Slightly lower the rear differential on the transmission jack, then disconnect the breather hose (A).

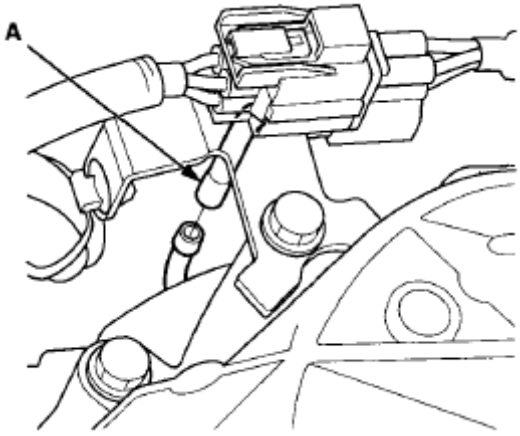

Fig. 116: Identifying Breather Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Lower the rear differential on the transmission jack.
15. Remove the set ring (A) from the rear differential.

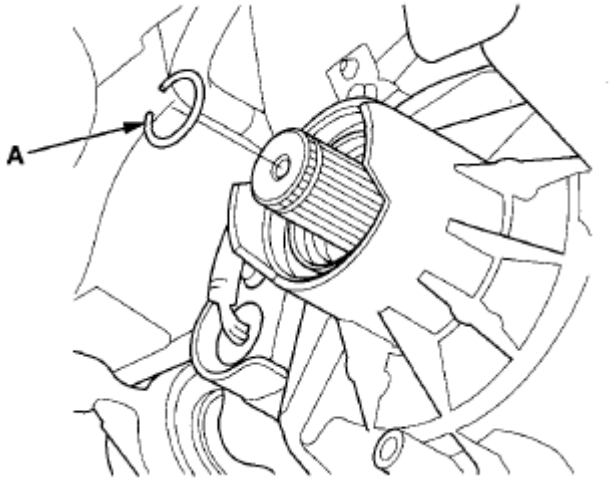

Fig. 117: Identifying Set Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR DIFFERENTIAL INSTALLATION

1. Place the rear differential on a transmission jack.
2. Install a new set ring (A) into the set ring groove (B) of the rear differential.

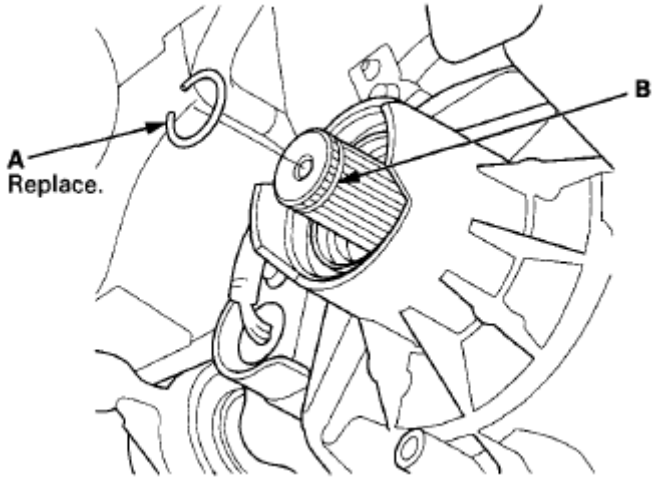

Fig. 118: Identifying Set Ring And Set Ring Groove
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Raise the rear differential to the appropriate position, then connect the breather hose (A).

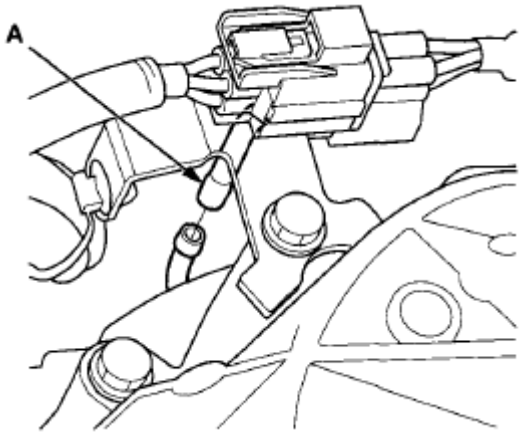

Fig. 119: Identifying Breather Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Raise the rear differential to the mounting level.
5. Loosely install new rear differential rear mount bolts (A) (B) and new rear differential front mounting bracket nuts (C).

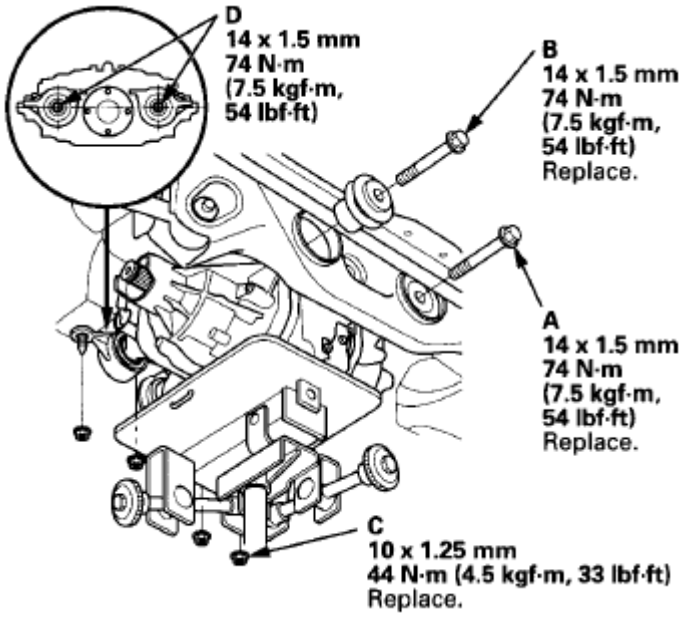

Fig. 120: Identifying Rear Differential Rear Mount Bolts And Bracket Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Loosen the rear differential front mounting bracket bolts (D).
7. Tighten the rear differential rear mount bolt (A) and the rear differential front mounting bracket nuts (C) to the specified torque.
8. Tighten the rear differential rear mount bolt (B) to the specified torque.

9. Tighten the rear differential front mounting bracket bolts (D) to the specified torque.
10. Install the rear subframe rear bracket bolts (A).

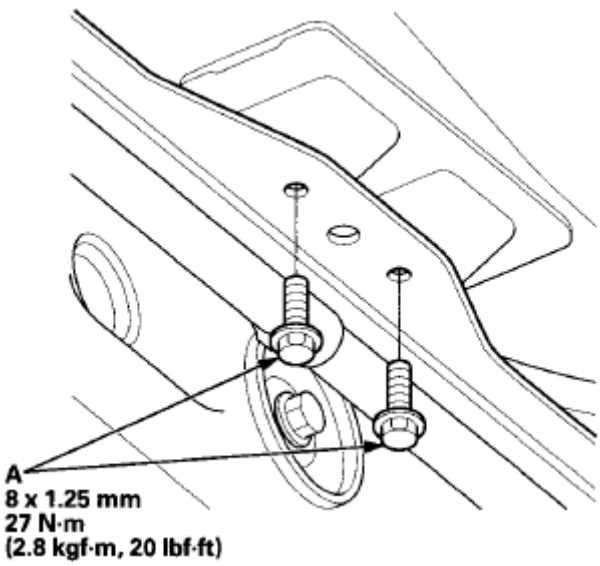

Fig. 121: Identifying Rear Subframe Rear Bracket Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Connect the rear differential subharness connectors (A), and install the harness clips (B).

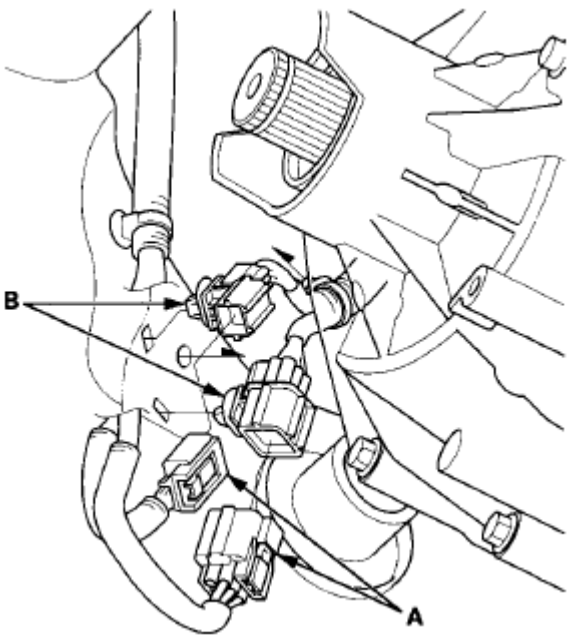

Fig. 122: Identifying Rear Differential Subharness Connectors And Harness Clips
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Attach the No. 3 propeller shaft (A) to the rear differential (B) by aligning the reference mark (C) you

made during the removal procedure.

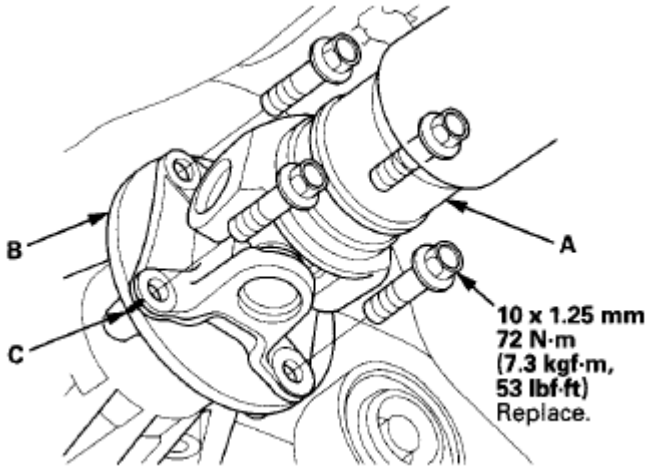

Fig. 123: Identifying Propeller Shaft, Rear Differential And Reference Mark With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Apply appropriate grease to the rear driveshaft inboard joints (see **REAR DRIVESHAFT INSTALLATION**).
14. Pull the knuckle outward, and insert the rear driveshaft inboard joints (A) into the rear differential (B).

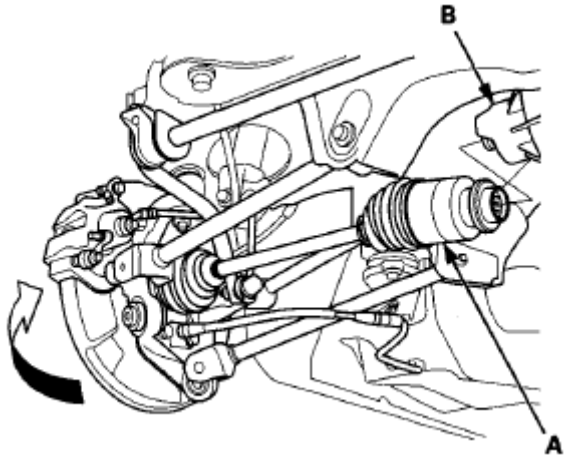

Fig. 124: Pulling Knuckle Outward And Inserting Rear Driveshaft Inboard Joints Into Rear Differential
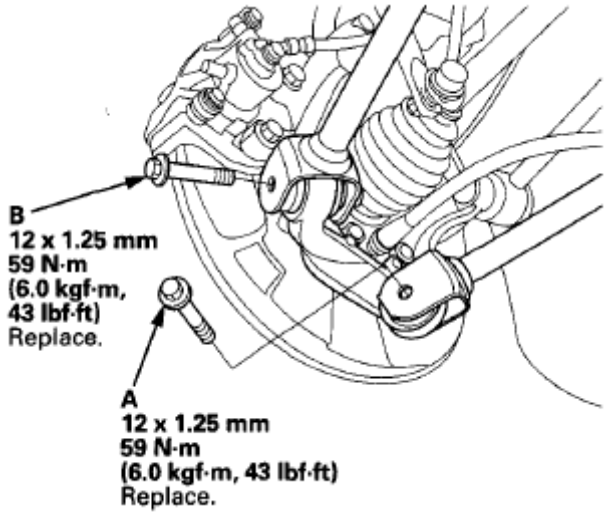
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Loosely install the new lower arm A mounting bolts (A) and the new lower arm B mounting bolts (B).



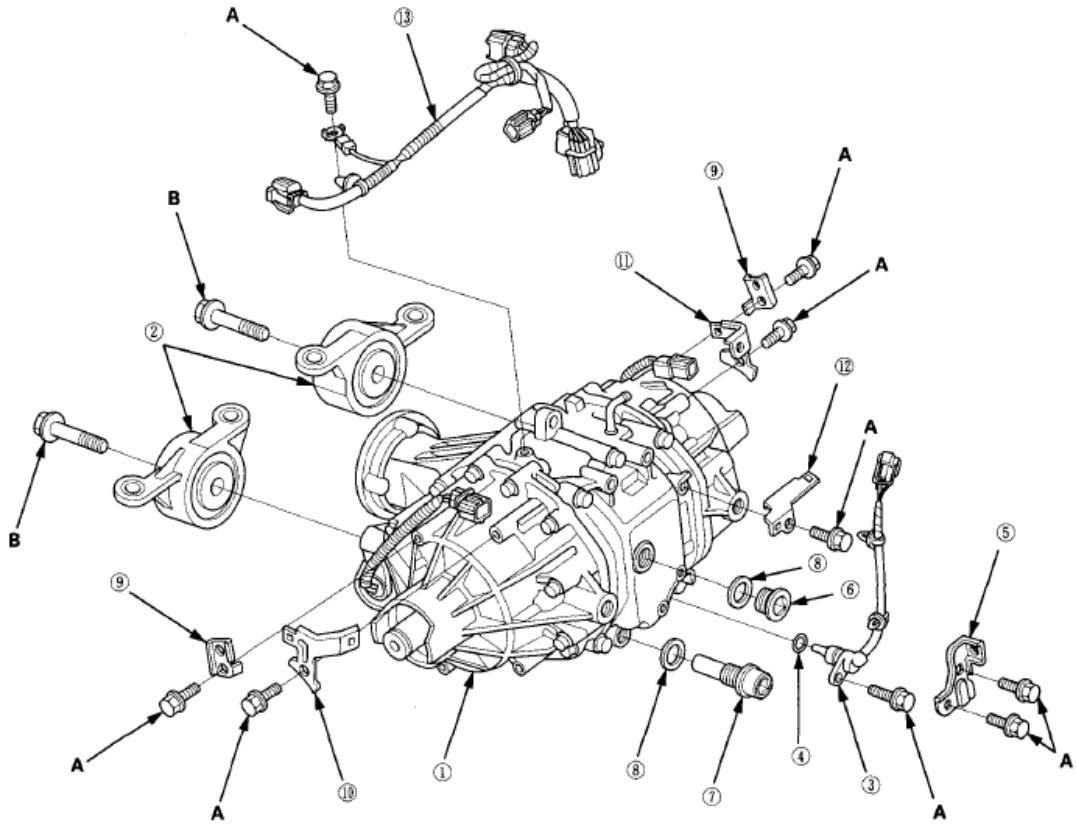


Fig. 125: Identifying Lower Arm Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Place a floor jack under the knuckle, and raise the suspension to load it with the vehicle's weight.
17. Tighten the lower arm A mounting bolt and the lower arm B mounting bolt to the specified torque, then remove the floor jack.
18. Install exhaust pipe B and the muffler (see **J37A4 ENGINE (WITH SH-AWD)**).
19. Install the rear wheels.
20. Refill the rear differential with the recommended fluid (see **REAR DIFFERENTIAL FLUID INSPECTION AND REPLACEMENT**).
21. Test-drive the vehicle.

REAR DIFFERENTIAL DISASSEMBLY/REASSEMBLY

SIDE CASE OIL SEAL REPLACEMENT

Special Tools Required

- Driver Handle 07AAD-STKA100
- Oil Seal Driver 07AAD-STKA111
- Dust Seal Driver 07AAD-STKA120

1. Remove the rear differential (see **REAR DIFFERENTIAL REMOVAL**).
2. Remove the 40 x 55 x 7.5 mm dust seal (A) using a commercially available tool.

NOTE: Remove the dust seal with care so you do not damage the inside surface of the side case seal surface.

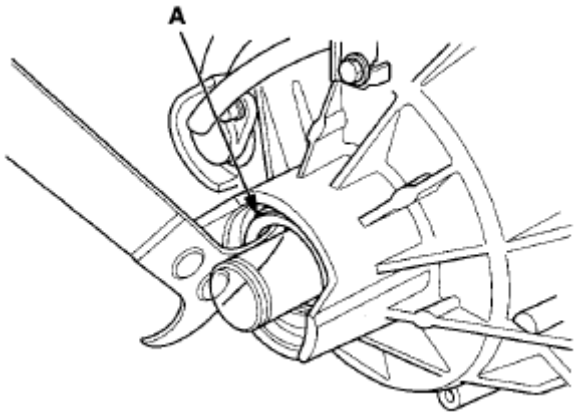

Fig. 127: Identifying Dust Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the thrust washer.
4. To remove the 34.7 x 54 x 9 mm oil seal (A), install the 6 mm screw (B) (P/N 93901-16580) into the maintenance hole (C) of the oil seal as shown; the oil seal has four invisible places on the surface for maintenance (4 places, 90 degrees apart). Remove the oil seal using pliers (D) and a screw driver (E) as shown.

NOTE: Do not thread the 6 mm screw into the oil seal more than 5 mm (0.20 in).

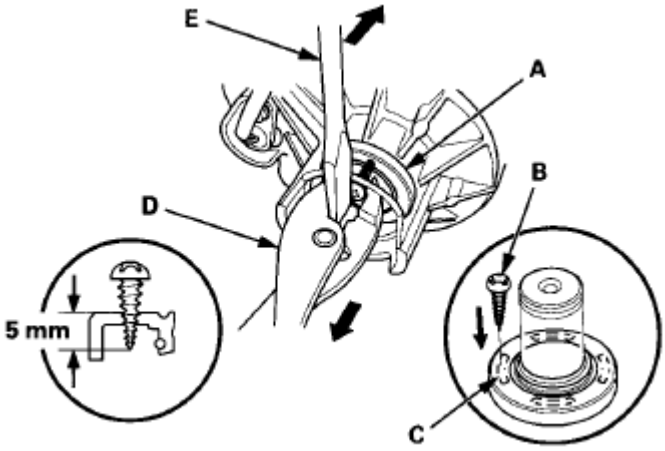

Fig. 128: Removing Oil Seal Using Pliers And Screw Driver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install a new 34.7 x 54 x 9 mm oil seal (A) into the rear differential side case (B) using the oil seal driver (C) and the driver handle (D).

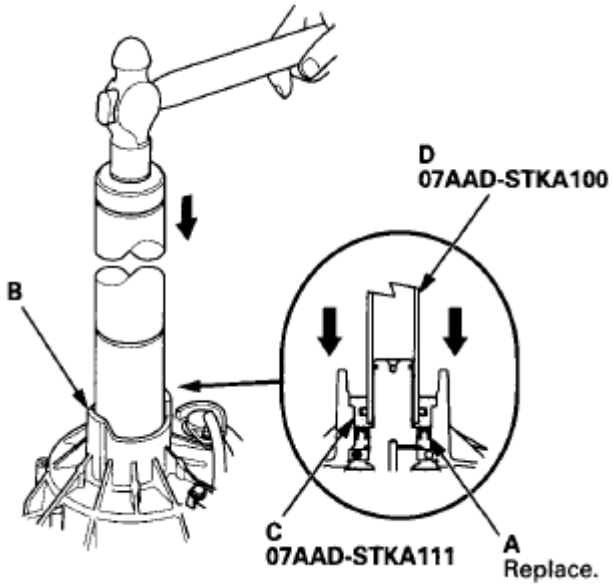

Fig. 129: Installing Oil Seal Into Rear Differential Side Case Using Oil Seal Driver And Driver Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the thrust washer (A), then install a new 40 x 55 x 7.5 mm dust seal (B) using the dust seal driver (C) and the driver handle (D).

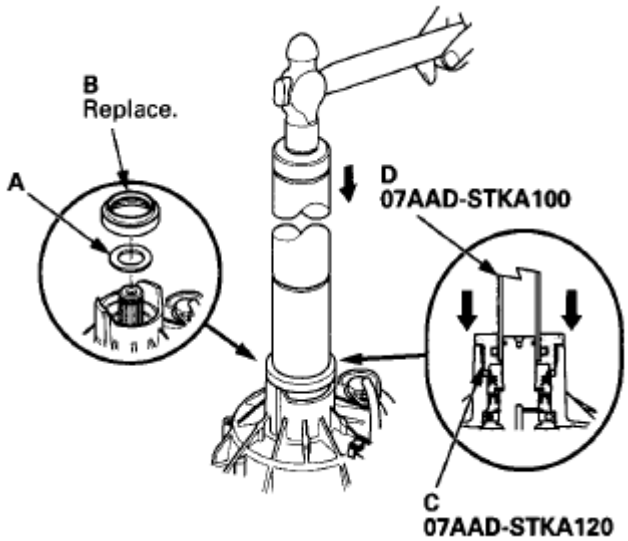

Fig. 130: Installing Thrust Washer And Dust Seal Using Dust Seal Driver And Driver Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the rear differential (see **REAR DIFFERENTIAL INSTALLATION**).

CENTER CASE REPLACEMENT

1. Remove the rear differential (see **REAR DIFFERENTIAL REMOVAL**).
2. Remove the rear differential front mounting brackets (A) from the rear differential (B).

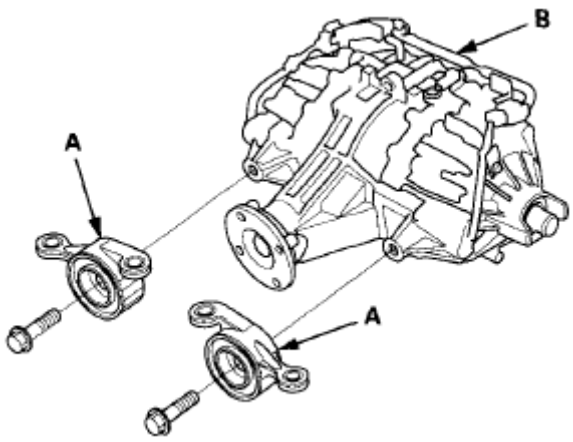

Fig. 131: Identifying Rear Differential Front Mounting Brackets And Rear Differential
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the rear differential fluid temperature sensor 2P connector (A), then remove the rear differential fluid temperature sensor cover (B), the rear differential fluid temperature sensor (C), and the O-ring (D).

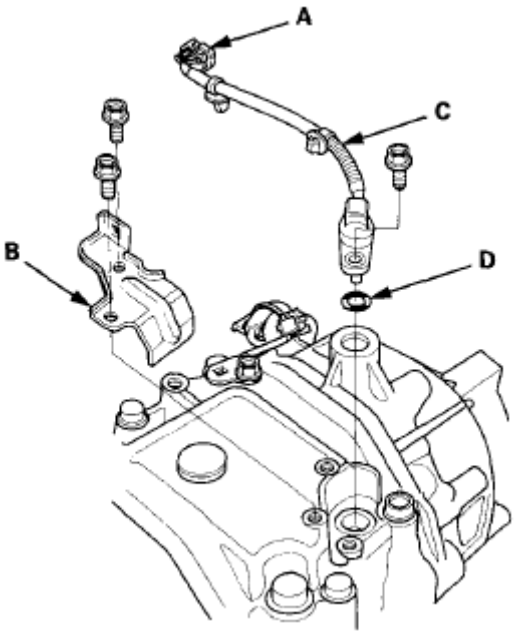

Fig. 132: Identifying Rear Differential Fluid Temperature Sensor, 2P Connector, Cover And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the left and right solenoid 4P connectors (A).

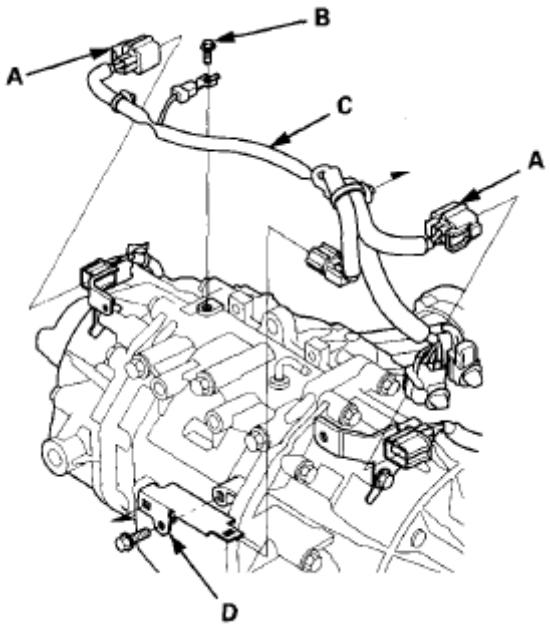

Fig. 133: Identifying Solenoid 4P Connectors, Rear Differential Harness Bracket, Subharness And Ground Cable Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the ground cable bolt (B) and rear differential harness bracket D, then remove the rear differential subharness (C).
6. Remove the rear differential left side case (A), the rear differential right side case (B), and the 10 x 12 mm dowel pins (C) from the rear differential center case (D).

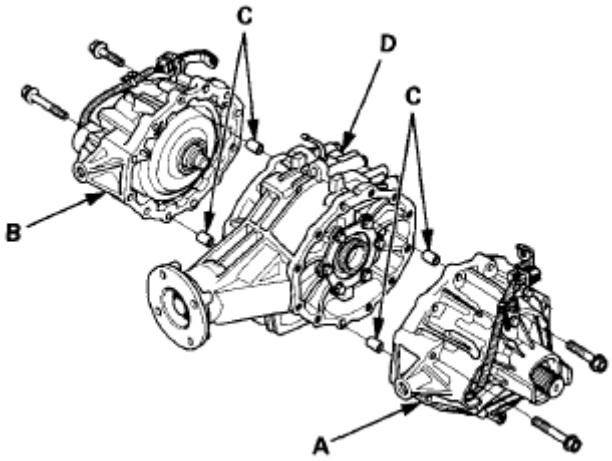

Fig. 134: Identifying Dowel Pins, Rear Differential Center, Left And Right Side Case
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Replace the rear differential center case.
8. Remove the dirt and oil from the sealing surfaces. Apply liquid gasket (P/N 08717-0004, 08718-0001, 08718-0003, 08718-0004 or 08718-0009) to the sealing surface. Make sure you seal up to the inside edge

of the bolt holes to prevent oil leakage.

NOTE:

- **You must assemble the housings within 5 minutes after applying the liquid gasket. If you applied liquid gasket P/N 08718-0012, the component must be installed within 4 minutes. If not, the sealing surface must be cleaned, and the liquid gasket reapplied.**
- **Allow the liquid gasket to cure at least 30 minutes after assembly before filling the differential with fluid.**

Left side case/Right side case

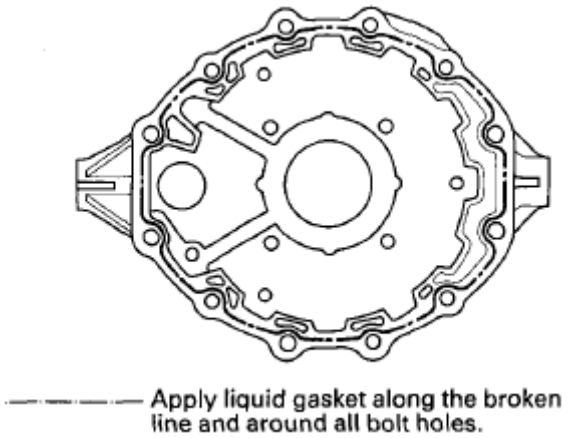

Fig. 135: Identifying Sealing Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the 10x12 mm dowel pins (A), the rear differential right side case (B), the rear differential left side case (C), and the mounting bolts (D) onto the rear differential center case (E).

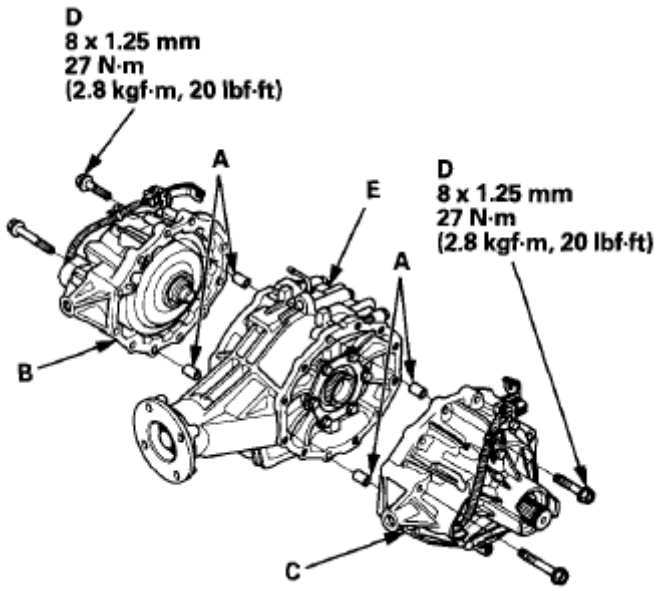

Fig. 136: Identifying Dowel Pins, Mounting Bolts, Rear Differential Center, Left And Right Side Case With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Tighten the mounting bolts in a crisscross pattern in several steps, then tighten the bolts to the specified torque.
11. Install the rear differential subharness (A) and rear differential harness bracket D, and install the ground cable (B).

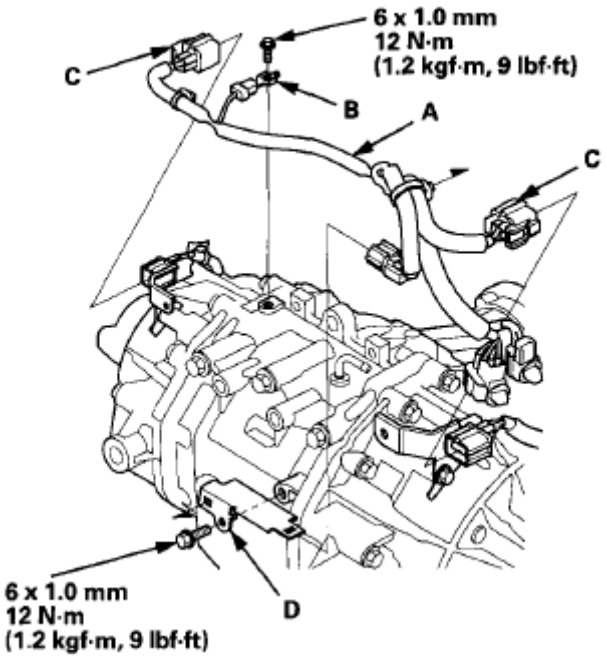

Fig. 137: Identifying Solenoid 4P Connectors, Rear Differential Harness Bracket, Subharness And Ground Cable With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Connect the left and right solenoid 4P connectors (C).
13. Install the rear differential fluid temperature sensor (A) with a new O-ring (B), and install the rear differential fluid temperature sensor cover (C).

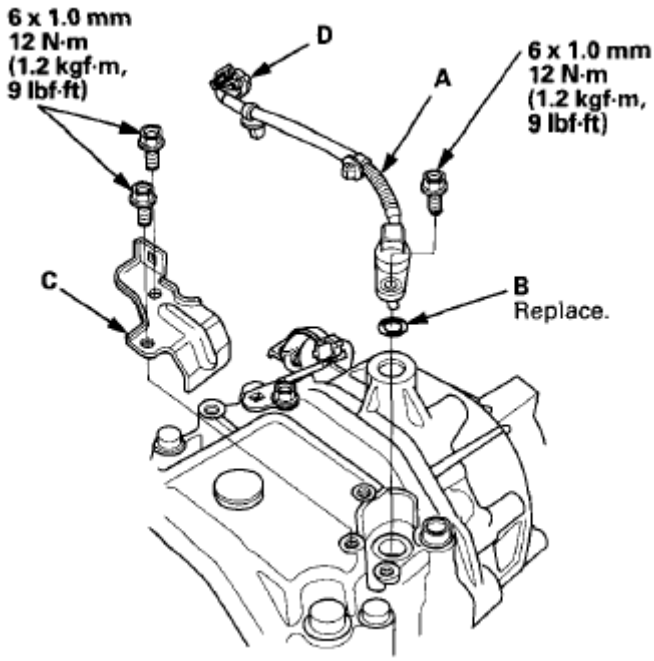

Fig. 138: Identifying Rear Differential Fluid Temperature Sensor, Sensor Cover, 2P Connector And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Connect the rear differential fluid temperature sensor 2P connector (D).
15. Install the rear differential front mounting brackets (A) with new bolts (B) on the rear differential (C).

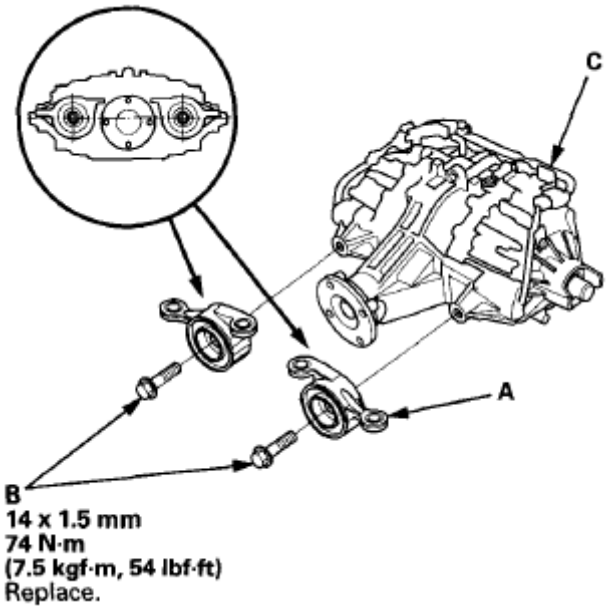

Fig. 139: Identifying Rear Differential, Front Mounting Brackets And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Install the rear differential (see **REAR DIFFERENTIAL INSTALLATION**).

SIDE CASE REPLACEMENT

1. Remove the rear differential (see **REAR DIFFERENTIAL REMOVAL**).
2. Remove the rear differential front mounting brackets (A) from the rear differential (B).

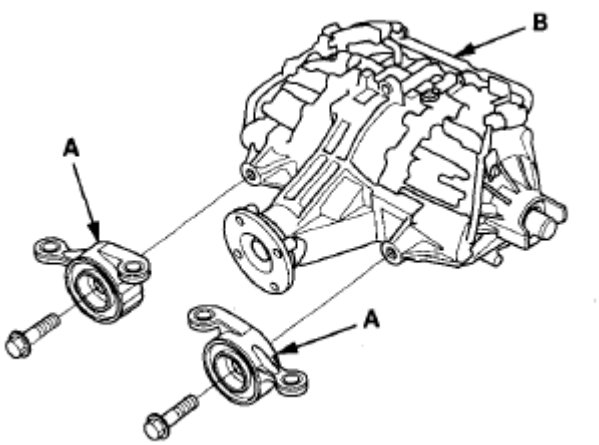

Fig. 140: Identifying Rear Differential And Front Mounting Brackets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the rear differential fluid temperature sensor 2P connector (A), then remove the rear differential fluid temperature sensor cover (B), the rear differential fluid temperature sensor (C), and the

O-ring (D).

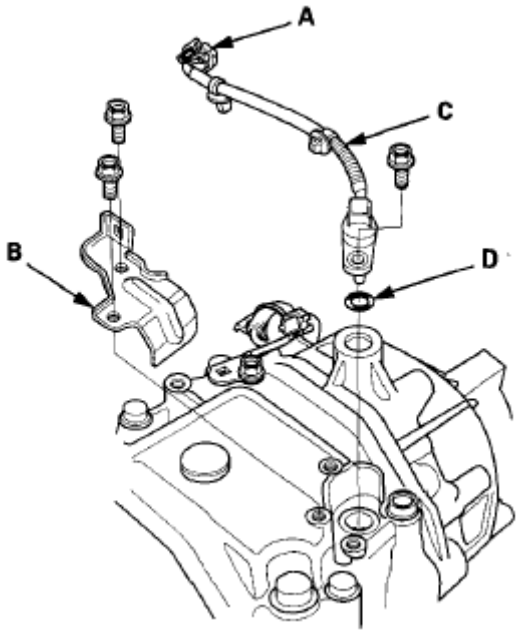

Fig. 141: Identifying Rear Differential Fluid Temperature Sensor, Sensor Cover, 2P Connector And O-Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Disconnect the left and right solenoid 4P connectors (A).

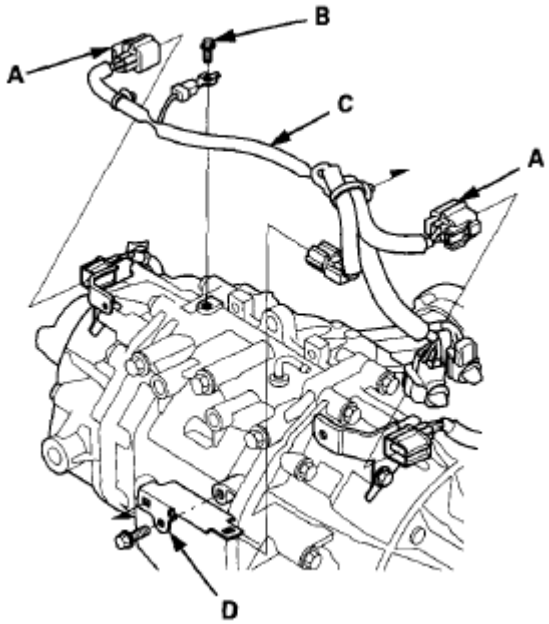

Fig. 142: Identifying Solenoid 4P Connectors, Rear Differential Harness Bracket, Subharness And Ground Cable Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the ground cable bolt (B) and rear differential harness bracket D, then remove the rear differential subharness (C).
6. Remove the rear differential left side case (A) or the rear differential right side case (D), and the 10x12 mm dowel pins (E) from the rear differential center case (F).

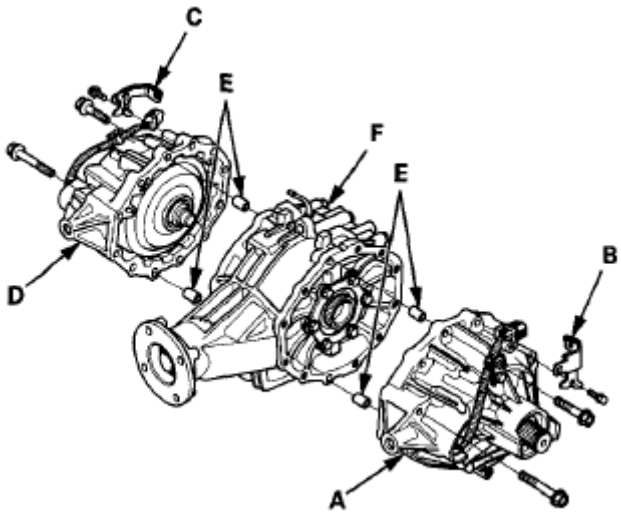

Fig. 143: Identifying Rear Differential Harness Bracket, Center, Left And Right Side Case
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove rear differential harness bracket B and rear differential harness bracket C.
8. Replace the rear differential left side case or the rear differential right side case.
9. Remove the ring gear (A), the needle bearing (B), and the 60.2 mm shim (C) from the differential side case (D).

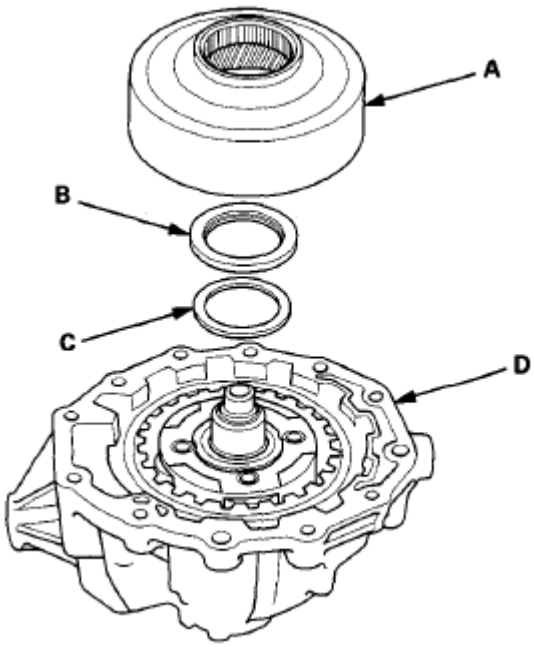

Fig. 144: Identifying Ring Gear, Needle Bearing, Shim And Differential Side Case
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Measure the distance (1) between the end of the rear differential side case (A) and the 60.2 mm shim contact area (B) of the planetary gear with a straight edge (C) and a depth gauge (D). Measure at three locations, and average the reading.

NOTE:

- **Carry out the measurement at normal room temperature.**
- **Clean the parts thoroughly before measure.**

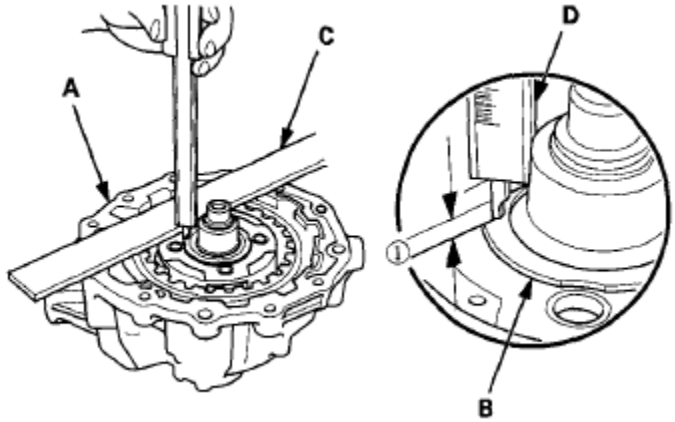

Fig. 145: Measuring Distance Between End Of Rear Differential Side Case And Shim Contact Area Of Planetary Gear With Straight Edge And Depth Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Measure the distance between the end of the rear differential center case (A) and the ring gear contact area (B) of the taper roller bearing with a straight edge (C) and a depth gauge (D). Measure at three locations, and average the reading.

NOTE:

- **Carry out the measurement at normal room temperature.**
- **Clean the parts thoroughly before measure.**

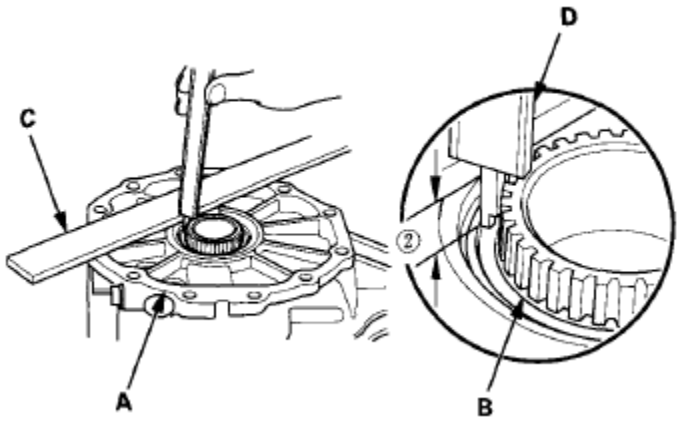

Fig. 146: Measuring Distance Between End Of Rear Differential Center Case And Ring Gear Contact Area Of Taper Roller Bearing With Straight Edge And Depth Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Measure the distance (3) between the needle bearing (A) and the taper roller bearing contact area (B) of ring gear with a depth gauge (C). Measure at three locations, and average the reading.

NOTE:

- **Carry out the measurement at normal room temperature.**
- **Clean the parts thoroughly before measure.**

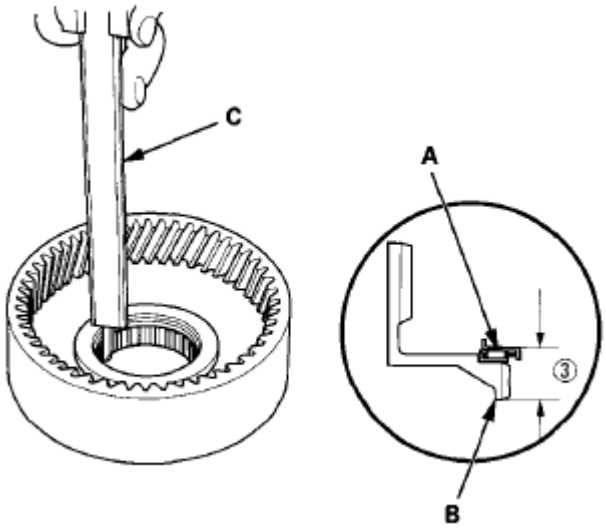

Fig. 147: Measuring Distance Between Needle Bearing And Taper Roller Bearing Contact Area Of Ring Gear With Depth Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Shim Selection Formula

13. Select the proper 60.2 mm shim from the table. Follow the example below, and use the measurements you

made in step 10 to 12.

(Basic Formula)

(1) + (2) - ((3) + 0.19) = shim thickness 0.19 mm (0.007 in): middle of the standard clearance.

Standard Clearance:

0.14- 0.24 mm (0.006- 0.009 in)

(For example)

(1) = 6.12 mm (0.241 in)

(2) = 15.3 mm (0.602 in)

(3) = 19.56 mm (0.770 in)

6.12 + 15.3 - (19.56 + 0.19) = 1.67 mm

Select the 1.60 mm shim from the table.

60.2 MM SHIM

No.	Thickness
A	1.10 mm (0.043 in)
B	1.20 mm (0.047 in)
C	1.30 mm (0.051 in)
D	1.40 mm (0.055 in)
E	1.50 mm (0.059 in)
F	1.60 mm (0.063 in)
G	1.70 mm (0.067 in)
H	1.80 mm (0.071 in)
I	1.90 mm (0.075 in)
J	2.00 mm (0.079 in)
K	2.10 mm (0.083 in)
L	2.20 mm (0.087 in)

14. Place one strip of plastigage (A) on the 60.2 mm shim contact area (B) of planetary gear. Install the 60.2 mm shim (C), the needle bearing (D), and the ring gear (E). Measure at three locations as shown.

NOTE:

- **Carry out the measurement at normal room temperature.**
- **Clean the parts thoroughly before measure.**

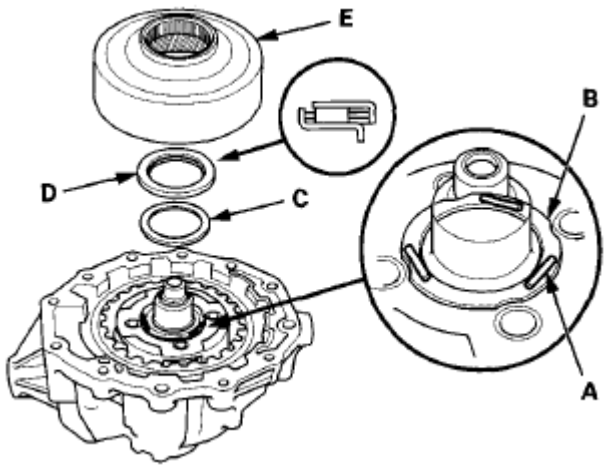

Fig. 148: Identifying Plastigage, Shim, Shim Contact Area, Needle Bearing And Ring Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Install the 10x12 mm dowel pins (A), the rear differential right side case (B) or the rear differential left side case (C), and the mounting bolts (D) onto the rear differential center case (E).

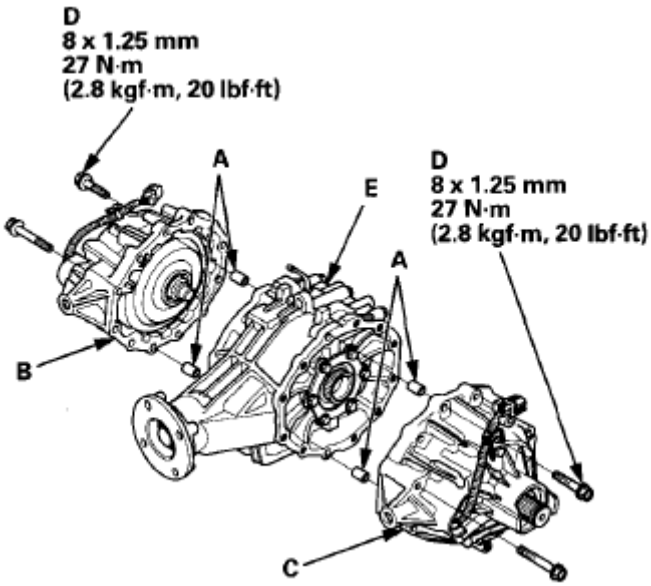

Fig. 149: Identifying Rear Differential Center, Left, Right Side Case, Dowel Pins And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Tighten the mounting bolts in a crisscross pattern in several steps, then tighten the bolts to the specified torque.
17. Remove the rear differential left side case (A) or the rear differential right side case (B), and the 10 x 12 mm dowel pins (C) from the rear differential center case

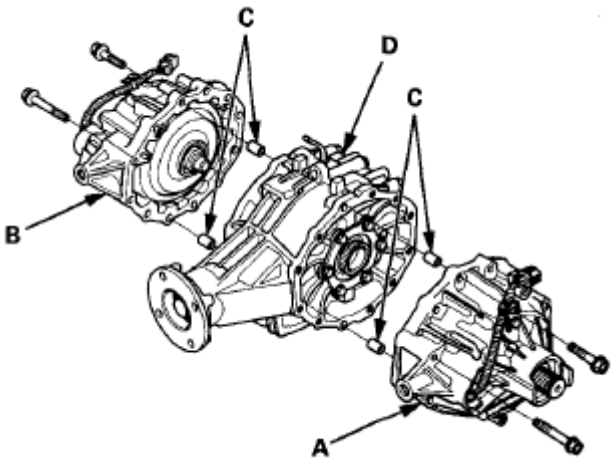

Fig. 150: Identifying Rear Differential Center, Left, Right Side Case And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Remove the ring gear (A), the needle bearing (B), and the 60.2 mm shim (C) from the differential side case (D).

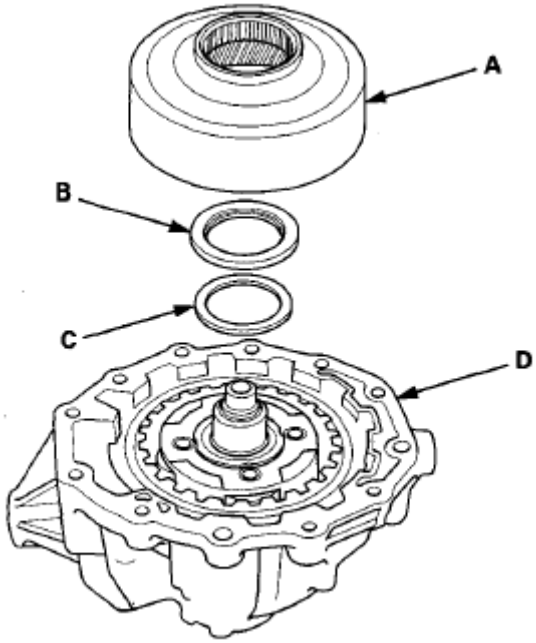

Fig. 151: Identifying Differential Side Case, Ring Gear, Needle Bearing And Shim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Measure the widest part of the plastigage.

    Measure at three locations, and average the reading.

    - If the clearance exceeds the standard, go to step 9.
    - If the clearance is within the standard, go to step 20.

Standard Clearance:

0.14- 0.24 mm (0.006- 0.009 in)

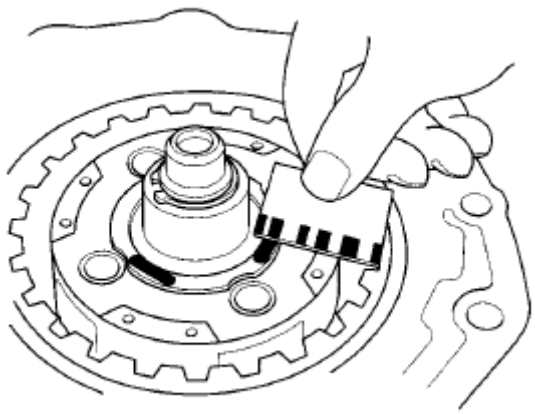

Fig. 152: Measure Clearance Using Plastigage
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Install the 60.2 mm shim (A), the needle bearing (B), and the ring gear (C) onto the rear differential side case (D).

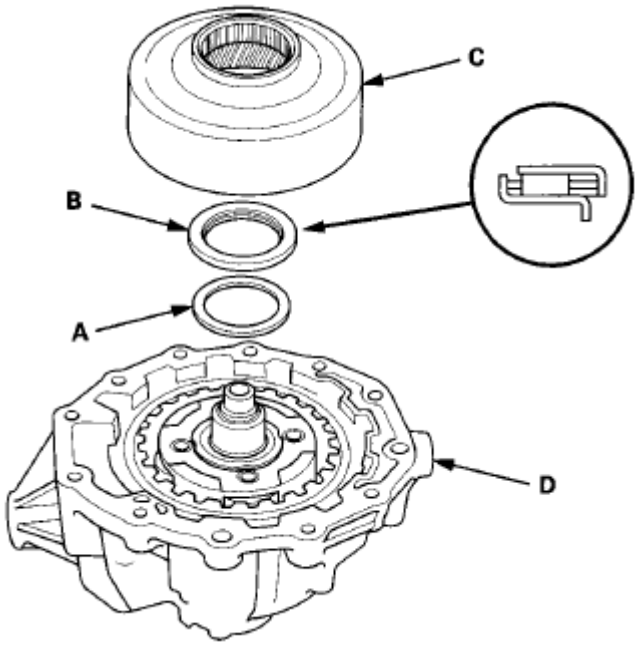

Fig. 153: Identifying Differential Side Case, Ring Gear, Needle Bearing And Shim
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Remove the dirt and oil from the sealing surfaces. Apply liquid gasket (P/N 08717-0004, 08718-0001, 08718-0003, 08718-0004, or 08718-0009) to the sealing surface. Make sure you seal up to the inside edge of the bolt holes to prevent oil leakage.

NOTE:

- **You must assemble the housings within 5 minutes after applying the liquid gasket. If you applied liquid gasket P/N 08718-0012, the component must be installed within 4 minutes. If not, the sealing surface must be cleaned, and the liquid gasket reapplied.**
- **Allow the liquid gasket to cure at least 30 minutes after assembly before filling the differential with fluid.**

Left side case/Right side case

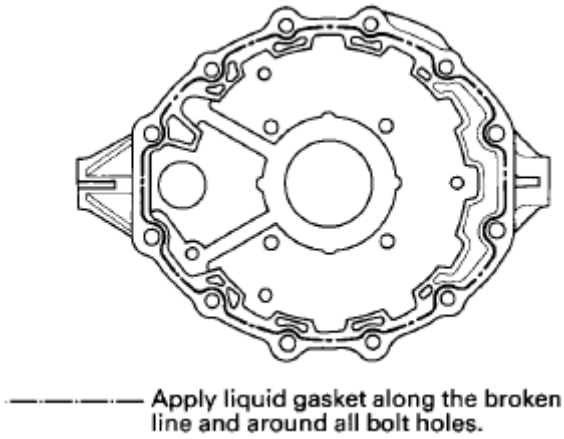

Fig. 154: Identifying Sealing Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Install the 10x12 mm dowel pins (A), the rear differential right side case (D) or the rear differential left side case (E), and the mounting bolts (F) onto the rear differential center case (G).

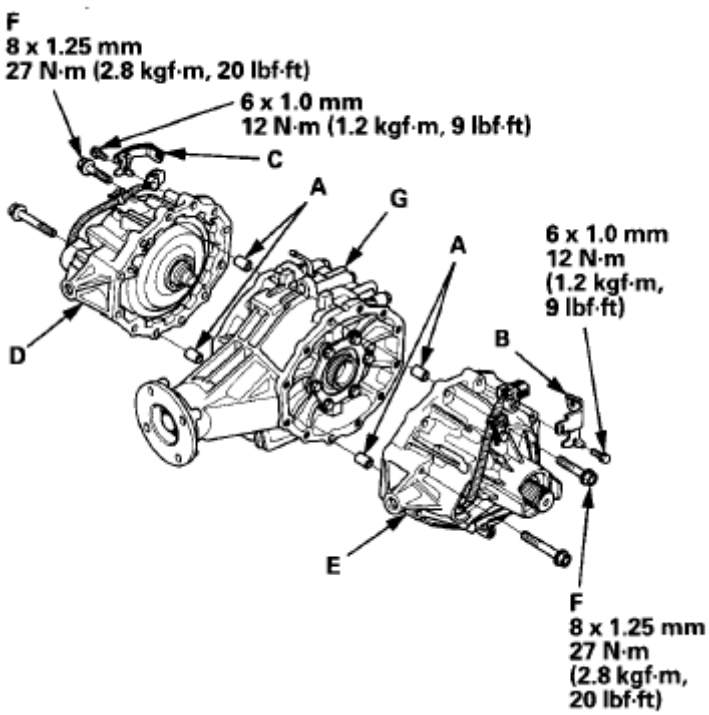

Fig. 155: Identifying Rear Differential Center, Left, Right Side Case, Dowel Pins And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Install rear differential harness bracket B and rear differential harness bracket C.
24. Tighten the mounting bolts in a crisscross pattern in several steps, then tighten the bolts to the specified torque.
25. Install the rear differential subharness (A) and rear differential harness bracket D, and install the ground cable (B).

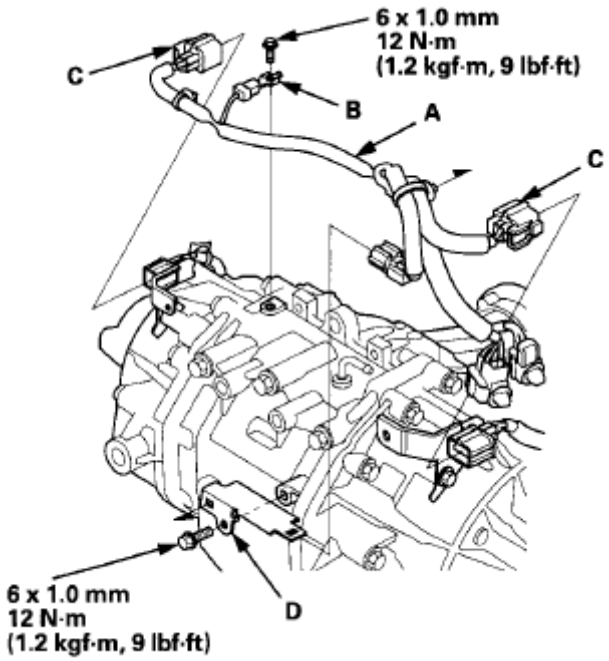

Fig. 156: Identifying Solenoid 4P Connectors, Rear Differential Harness Bracket, Subharness And Ground Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. Connect the left and right solenoid 4P connectors (C).
27. Install the rear differential fluid temperature sensor (A) with a new O-ring (B), and install the rear differential fluid temperature sensor cover (C).

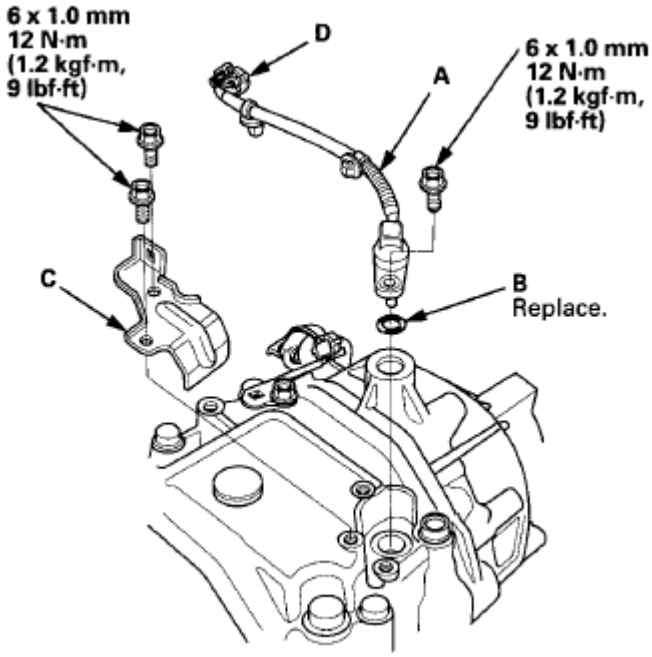

Fig. 157: Identifying Rear Differential Fluid Temperature Sensor, Sensor Cover, 2P Connector

And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Connect the rear differential fluid temperature sensor 2P connector (D).
29. Install the rear differential front mounting brackets (A) with new bolts (B) on the rear differential (C).

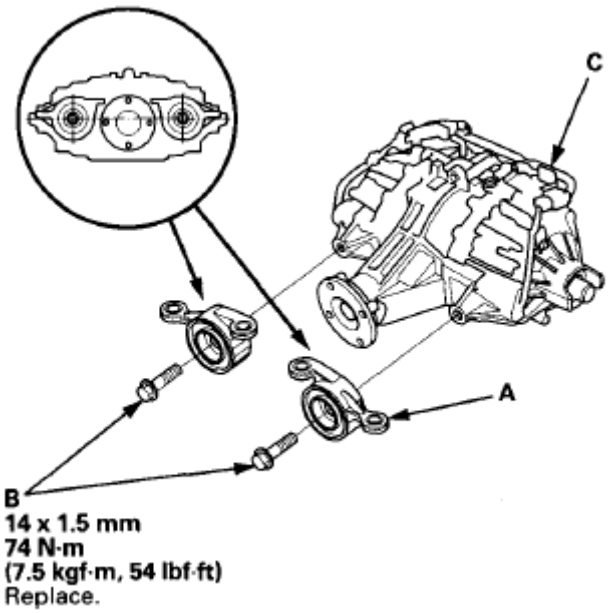

Fig. 158: Identifying Rear Differential, Rear Differential Front Mounting Brackets And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Install the rear differential (see **REAR DIFFERENTIAL INSTALLATION**).
31. Do the SH-AWD differential clutch torque memorization (see **SH-AWD® DIFFERENTIAL CLUTCH TORQUE MEMORIZATION**).

2012 ELECTRICAL

Accessory Power Sockets - TL

COMPONENT LOCATION INDEX

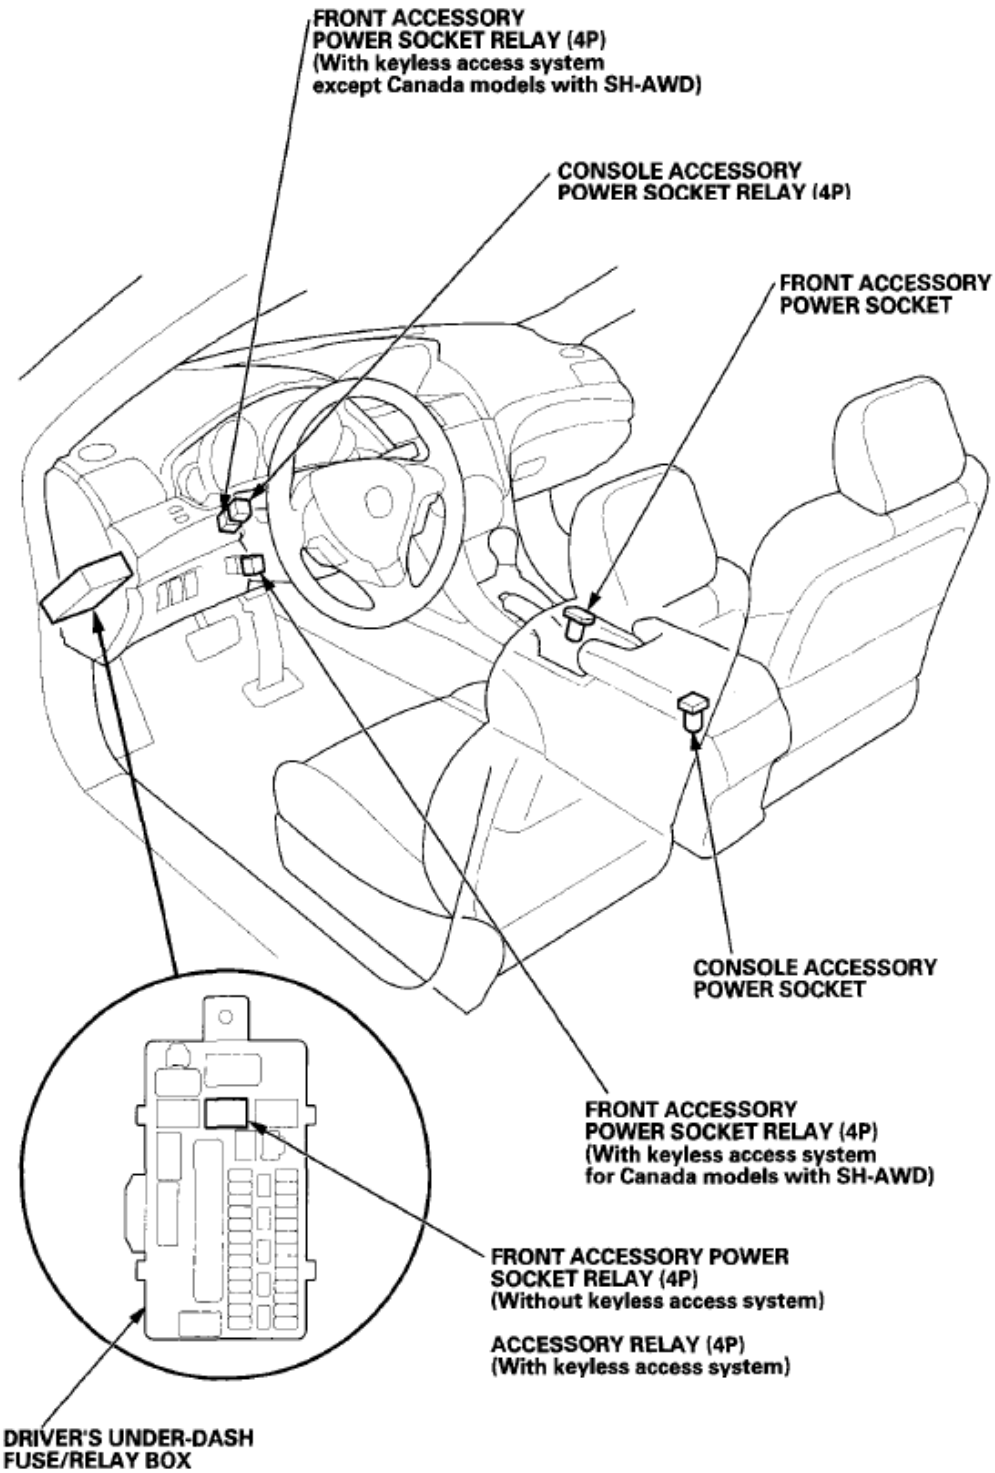

Fig. 1: Accessory Power Socket Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CIRCUIT DIAGRAM

WITHOUT KEYLESS ACCESS SYSTEM

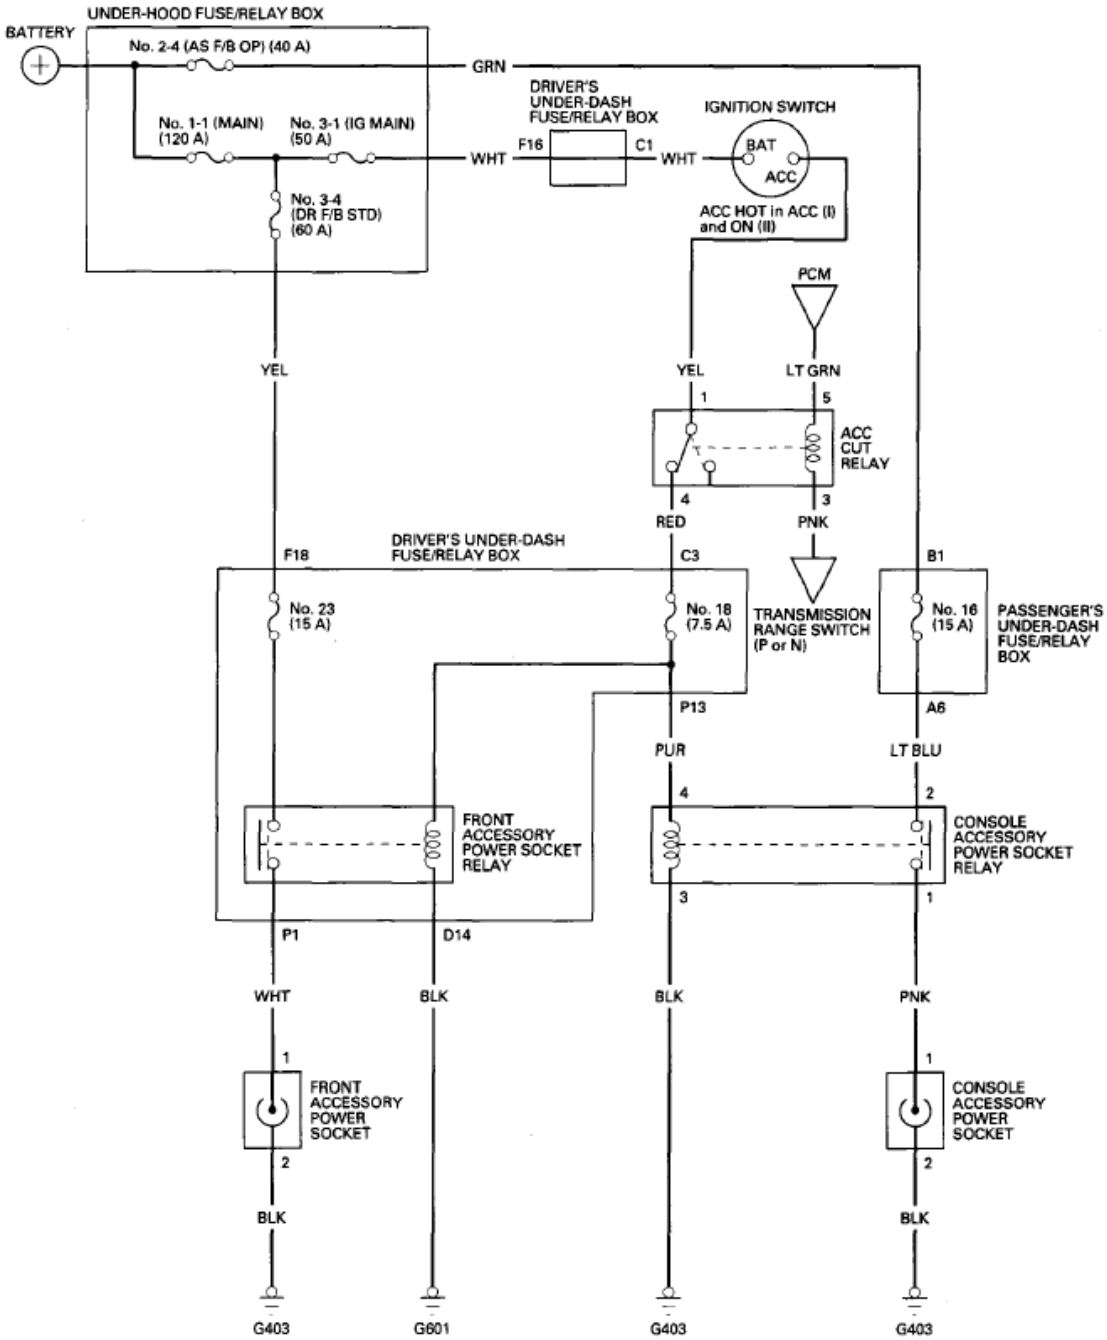

Fig. 2: Accessory Power Socket - Circuit Diagram (Without Keyless Access System)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

WITH KEYLESS ACCESS SYSTEM

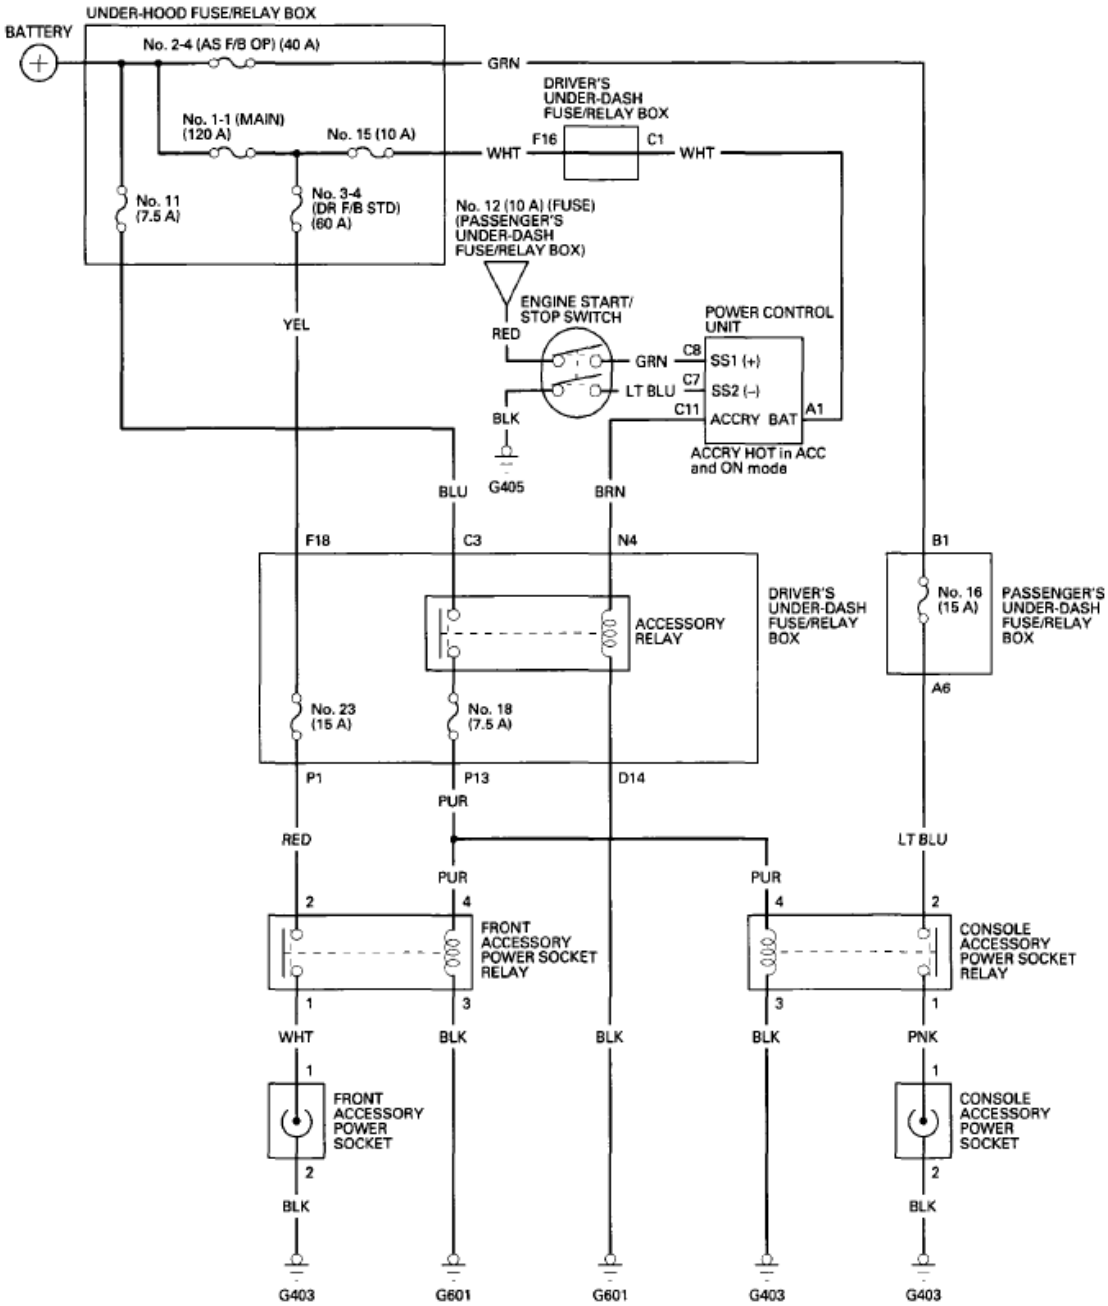

Fig. 3: Accessory Power Socket - Circuit Diagram (With Keyless Access System)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT ACCESSORY POWER SOCKET TEST/REPLACEMENT

NOTE: **If all of the front and console accessory power sockets do not work, check the No. 18 (7.5 A) fuse in the driver's under-dash fuse/relay box, ground (G403), and ground (G601) (with keyless access system) first.**

1. Remove the passenger's center trim (see **DASHBOARD CENTER TRIM REMOVAL/INSTALLATION**).
2. Disconnect the 2P connector (A) from the front accessory power socket (B).

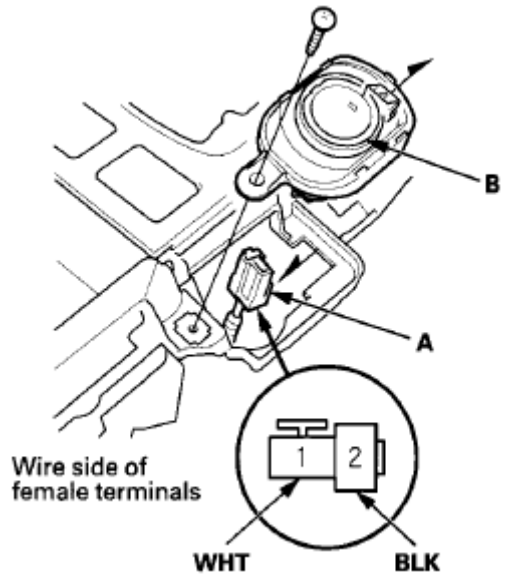

Fig. 4: Identifying 2P Connector And Front Accessory Power Socket Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector terminals to be sure they are all making good contact.
   - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
   - If the terminals look OK, go to step 4.
4. Turn the ignition switch to ACCESSORY (I), or press the engine start/stop button to select the ACC mode:
   - With keyless access system, go to step 5.
   - Without keyless access system, go to step 6.
5. Measure the voltage between front accessory power socket relay terminal No. 3 and body ground. There should be less than 0.2 V.
   - If there is less than 0.2 V, go to step 7.
   - If there is more than 0.2 V, check for:
     - - An open or high resistance in the wire between front accessory power socket relay terminal No. 3 and ground (G601).
     - - Poor ground (G601).
6. Measure the voltage between driver's under-dash fuse/relay box connector D (16P) terminal No. 14 and body ground. There should be less than 0.2 V.
   - If there is less than 0.2 V, go to step 7.
   - If there is more than 0.2 V, check for:
     - - An open or high resistance in the wire between driver's under-dash fuse/relay box connector

D (16P) terminal No. 14 and ground (G601).
- - Poor ground (G601).

7. Measure the voltage between front accessory power socket 2P connector terminal No. 1 and body ground. There should be battery voltage.
   - If there is battery voltage, go to step 8.
   - If there is no voltage, check for:
     - - Blown No. 23 (15 A) fuse in the driver's under-dash fuse/relay box.
     - - Faulty front accessory power socket relay.
     - - Faulty driver's under-dash fuse/relay box.
     - - An open in the wire between front accessory power socket terminal No. 1 and driver's under-dash fuse/relay box connector P (20P) terminal No. 1.
8. Check for continuity between front accessory power socket 2P connector terminal No. 2 and body ground. There should be continuity.
   - If there is continuity, replace the power socket, go to step 9.
   - If there is no continuity, check for:
     - - An open or high resistance in the wire between front accessory power socket 2P connector terminal No. 2 and ground (G403).
     - - Poor ground (G403).
9. Remove the screw and socket base (A), then gently press the tabs (B), and remove the socket (C).

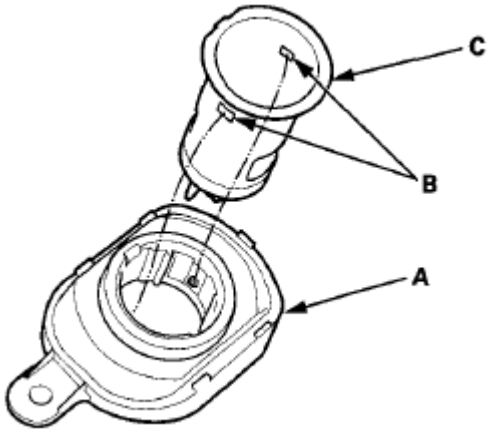

Fig. 5: Identifying Screw And Socket Base, Tabs And Socket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the housing (A) from the socket base (B). Note the location of the indexing tabs (C).

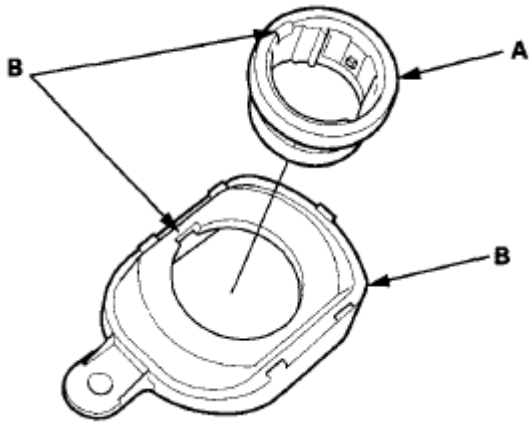

Fig. 6: Identifying Housing, Socket Base And Indexing Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the power socket in the reverse order of removal.

CONSOLE ACCESSORY POWER SOCKET TEST/REPLACEMENT

NOTE: If the front and console accessory power socket do not work, check the No. 18 (7.5 A) fuse in the driver's under-dash fuse/relay box, ground (G403), and ground (G601) (with keyless access system) first.

1. Remove the center console panel (see **CENTER CONSOLE PANEL REMOVAL/INSTALLATION**).
2. Disconnect the 2P connector (A) from the console accessory power socket (B).

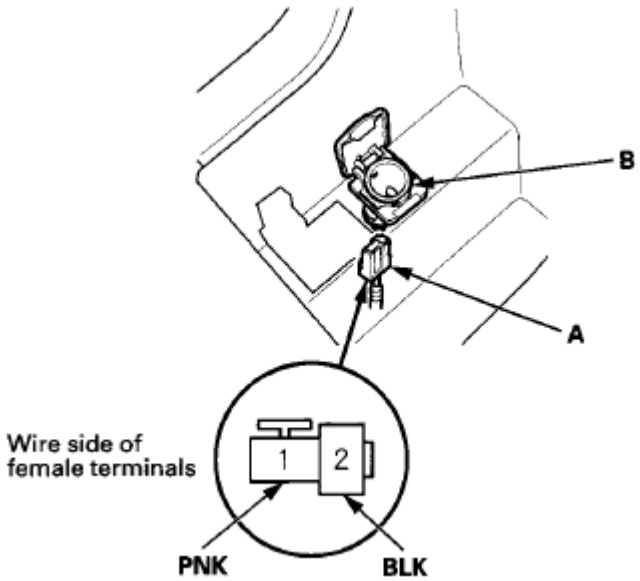

Fig. 7: Identifying 2P Connector And Console Accessory Power Socket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the connector terminals to be sure they are all making good contact.
    - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
    - If the terminals look OK, go to step 4.
4. Turn the ignition switch to ACCESSORY (I), or press the engine start/stop button to select the ACC mode.
5. Measure the voltage between console accessory power socket relay terminal No. 3 and body ground. There should be less than 0.2 V.
    - If there is less than 0.2 V, go to step 6.
    - If there is more than 0.2 V, check for:
        - - An open or high resistance in the wire between console accessory power socket relay terminal No. 3 and ground (G403).
        - - Poor ground (G403).
6. Measure the voltage between console accessory power socket 2P connector terminal No. 1 and body ground. There should be battery voltage.
    - If there is battery voltage, go to step 7.
    - If there is no voltage, check for:
        - - Blown No. 16 (15 A) fuse in the passenger's under-dash fuse/relay box.
        - - Faulty console accessory power socket relay.
        - - Faulty passenger's under-dash fuse/relay box.
        - - An open or high resistance in the wire between console accessory power socket relay terminal No. 2 and passenger's under-dash fuse/relay box connector A (38P) terminal No. 6.
        - - An open or high resistance in the wire between console accessory power socket relay terminal No. 1 and console accessory power socket 2P connector terminal No. 1.
7. Check for continuity between console accessory power socket 2P connector terminal No. 2 and body ground. There should be continuity.
    - If there is continuity, replace the power socket, go to step 8.
    - If there is no continuity, check for:
        - - An open or high resistance in the wire between console accessory power socket 2P connector terminal No. 2 and ground (G403).
        - - Poor ground (G403).
8. Gently press the tabs (A), then remove the socket (B).

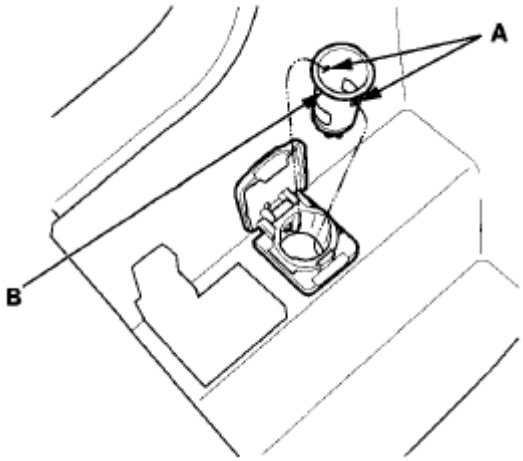

Fig. 8: Identifying Tabs And Socket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Gently press the tabs (A), then remove the housing (B) from the panel. Note the location of the indexing tabs (C).

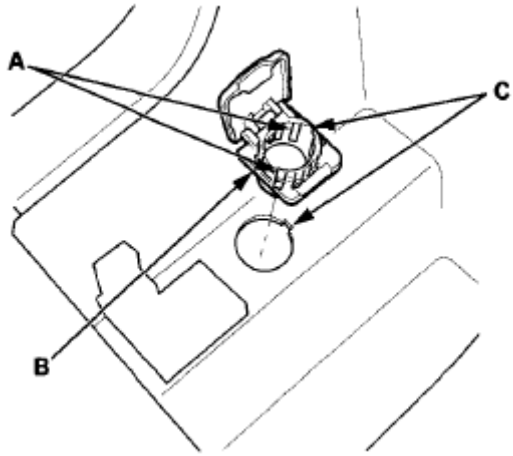

Fig. 9: Identifying Tabs, Housing And Indexing Tabs
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the power socket in the reverse order of removal.

2000-12 GENERAL INFO

Battery Cable Reset - Acura/Honda

PROCEDURE

NOTE: Before you begin the battery cable reset procedure, make sure the battery is fully charged. A low battery can cause problems with electronics. Then, retrieve the anti-theft code and write down your customer's audio presets.

1. Turn the ignition switch to LOCK (0), and remove the key.
2. Disconnect the negative battery cable first, then positive.
3. Using a jumper wire, short the battery cables together.
4. Turn the ignition switch to ON (II), and wait 10 minutes.
5. Turn the ignition switch to LOCK (0), and remove the key.
6. Remove the jumper wire, and reconnect the positive battery cable first, then negative.
7. Check the applicable service information, and perform the appropriate reset/learn procedures.
8. Enter the anti-theft code, and restore customer settings.

Battery Management System - TL

COMPONENT LOCATION INDEX

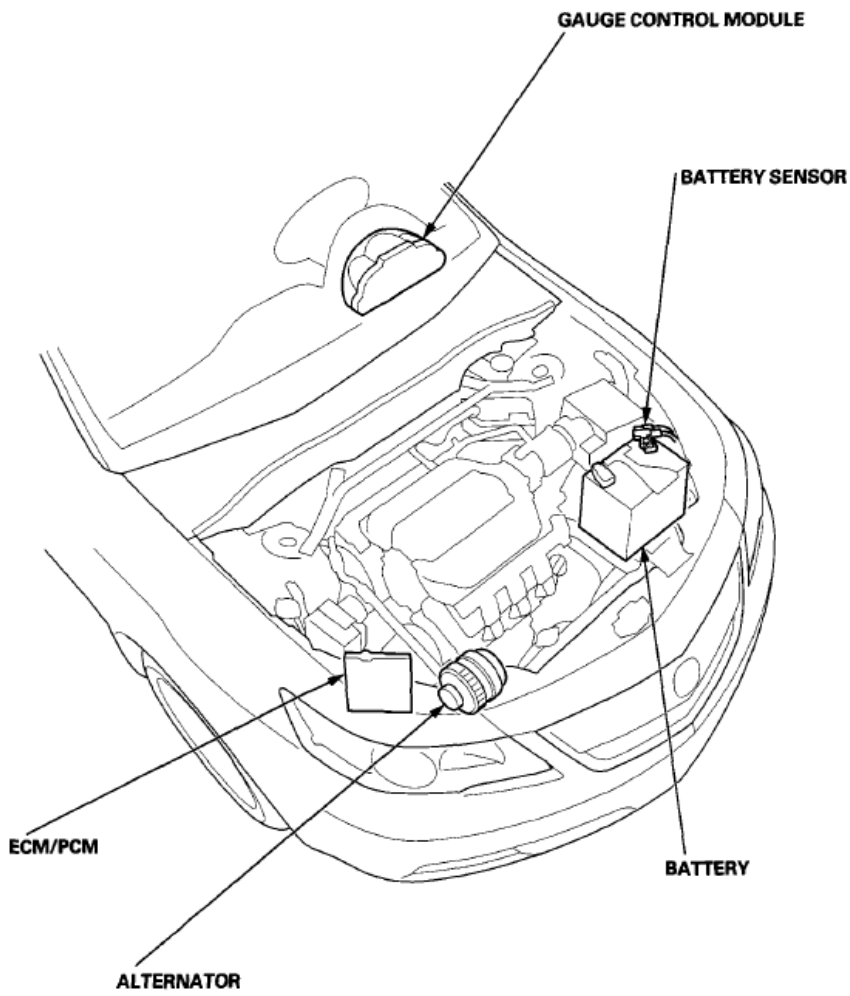

Fig. 1: Battery Management System Components Location (1 Of 3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

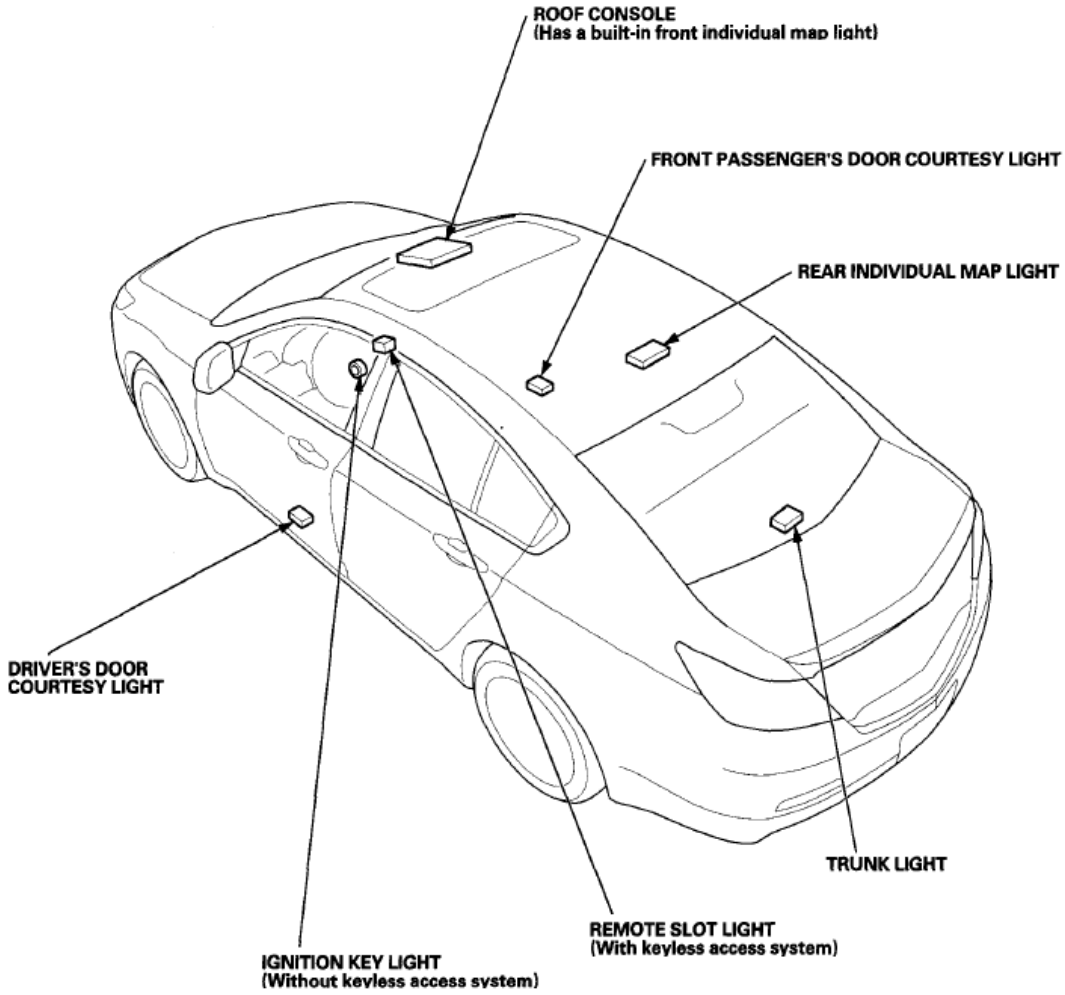

Fig. 2: Battery Management System Components Location (2 Of 3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

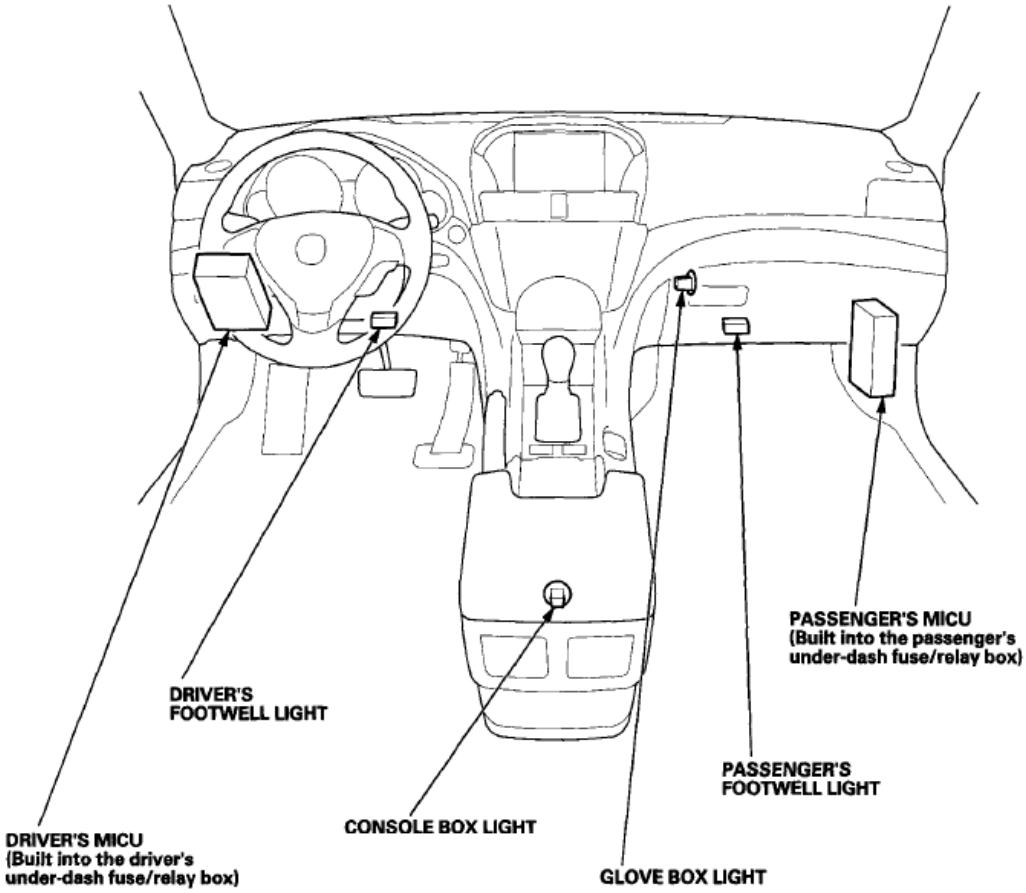

Fig. 3: Battery Management System Components Location (3 Of 3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYSTEM DESCRIPTION

This system consists of the battery sensor, the gauge control module, the driver's MICU, the passenger's MICU, the alternator, and the ECM/PCM.

The battery sensor measures the battery current, voltage, and temperature in all ignition switch positions. This data is used to control the alternator output, the idle speed, and the interior lights. These are the advantages of this system:

- Helps to prevent over-discharge of the battery.
- Helps to protect engine cranking amps.
- Helps to extend the battery life.
- Helps to improve fuel economy.
- Helps to alert the client of the battery condition.

BATTERY MANAGEMENT WHILE THE IGNITION SWITCH IS IN LOCK (0), OR THE VEHICLE IGNITION IS IN THE OFF MODE, AND WITH ELECTRICAL DEVICES ON

When the battery sensor detects the battery voltage decreasing, that information is sent to the gauge control module via the UART line. The gauge control module then operates a beeper, and displays the message Switch Off All Lights and Electrical Devices on the multi-information display (MID) to inform the client that electrical devices should be turned off. If electrical devices are not turned off and the battery voltage decreases more, the gauge control module sends an interior lights off signal to the driver's MICU and the passenger's MICU via the B-CAN line. Based on that signal, the units cut off the ground circuits of the interior lights and turns them off.

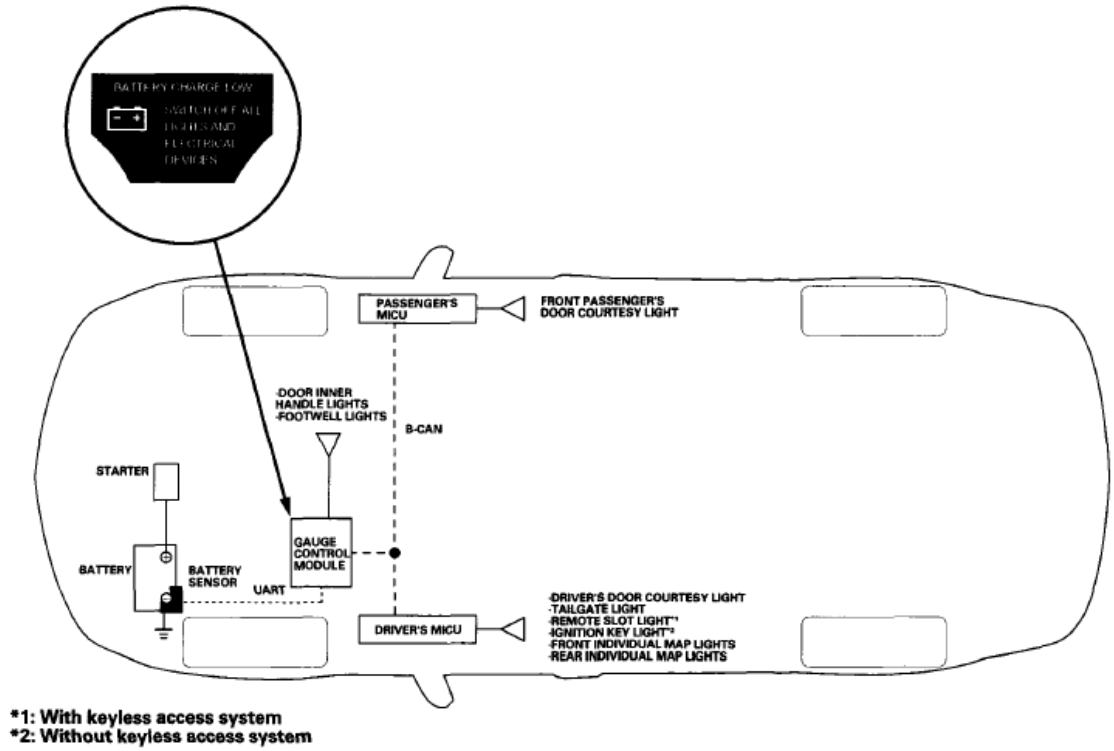

Fig. 4: Identifying Battery Management While Ignition Switch Is In Lock
Courtesy of AMERICAN HONDA MOTOR CO., INC.

BATTERY MANAGEMENT WHILE THE ENGINE IS RUNNING

While the engine is idling, the battery sensor measures the battery current, voltage, and temperature values, and sends this data to the gauge control module via the UART line. The gauge control module sends the idle speed control signal and alternator control signal to the ECM/PCM via the F-CAN line. Then, based on those signals, the ECM/PCM determines the idle speed that is appropriate for the current state of charge of the battery, and also controls the alternator output. These functions help maintain the battery condition and improve the fuel economy. If the battery sensor detects any problems, a warning message appears on the multi-information display (MID) to inform the client that the system needs attention.

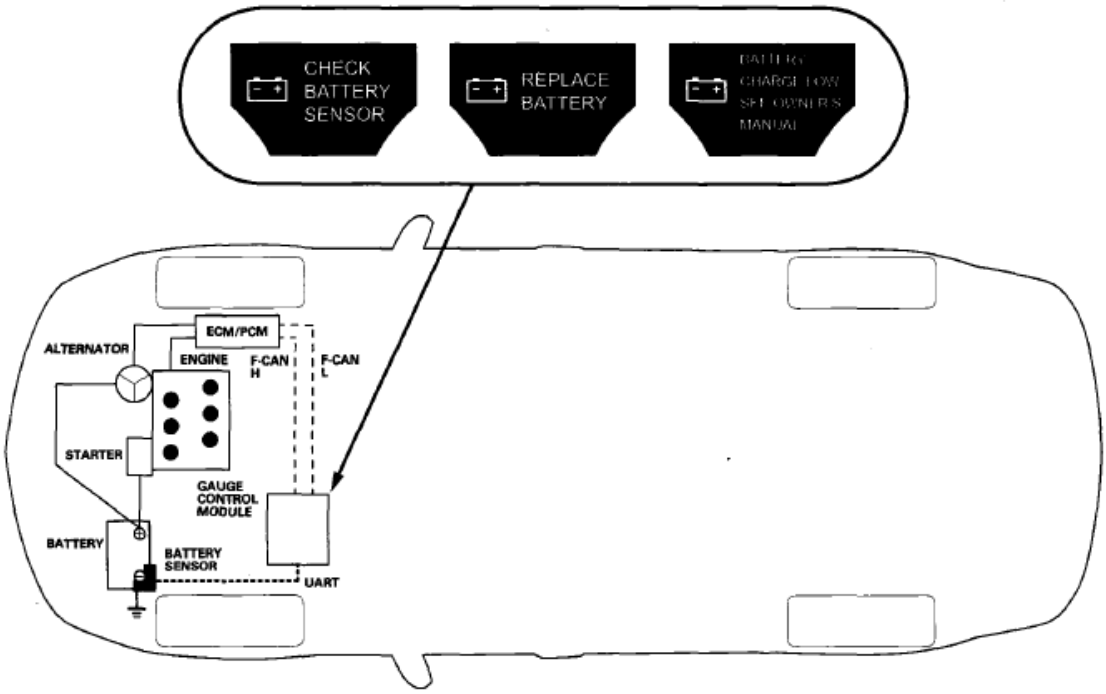

Fig. 5: Identifying Battery Management While Engine Is Running
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE:

- **If there are any problems with the charging system or the battery, the charging system indicator comes on at the same time.**
- **The most common causes for "Battery Charge Low" messages are:**

  1: Short-trip driving.

  2: Using the vehicles electrical devices, like the audio system, or aftermarket electrical devices for long periods of time with the engine OFF and the ignition switch is turned to ON (II), or the vehicle ignition is in the ON mode.

- **If the "Battery Charge Low" warning appears after fully charging the battery, disconnect the gray 2-pin connector next to the Battery Sensor for 10 seconds, then reconnect the connector; and the warning is removed from the display.**
- **If you need to replace the battery, replace it with a new battery of the same group size.**

CIRCUIT DIAGRAM

SYMPTOM TROUBLESHOOTING

MID Indication	Possible cause	Diagnostic procedure	Notes
	• Faulty connector • Faulty wire harness • Faulty battery	1. Inspect the connector to be sure it is making good contact. 2. Check for an open or high resistance in the wire. 3. Disconnect the battery sensor from the battery negative terminal and reconnect it.	The battery sensor is initialized and recalibrated automatically after reconnecting. To do this process quickly, turn off all electrical loads, lock all doors with the transmitter, and remove the No. 12 (7.5 A) fuse from the under-hood fuse/relay box. Then disconnect

	sensor	4. Check for DTCs. 5. Replace the battery sensor.	the battery sensor 2P connector, wait 5 seconds, reconnect it, and reinstall the fuse. The battery sensor is initialized and recalibrated within 10 minutes.
	Faulty battery	Test the battery (see **BATTERY TEST**).	
 	• Faulty alternator • Low battery voltage • Low battery charge	1. Troubleshoot the charging system (see **CHARGING SYSTEM INDICATOR CIRCUIT TROUBLESHOOTING**). 2. Check for excessive parasitic draw with the ignition switch in LOCK (0) and the key removed, or the vehicle ignition in the OFF mode.	This system may be caused by: • Long-term parking • Frequent short trips • Using the vehicles electrical devices, like the audio system, for long periods with the engine off

BATTERY SENSOR INPUT TEST

NOTE: Before testing, make sure the battery ground cable is installed correctly, and make sure there is continuity between the battery negative terminal and ground terminal G1.

1. Disconnect the 2P connector (A) from the battery sensor (B).

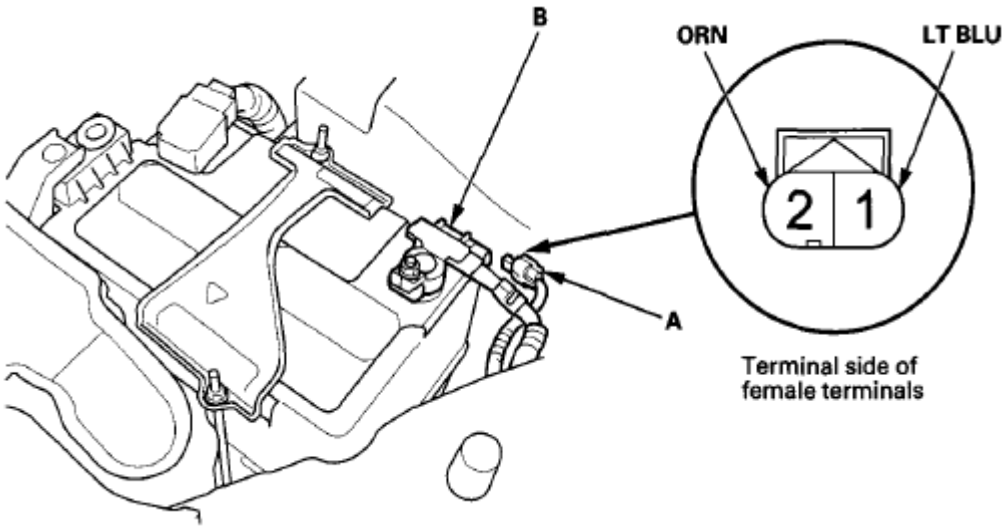

Fig. 8: Identifying 2P Connector And Battery Sensor Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Inspect the connector and socket terminals to be sure they are all making good contact.
   - If the terminals are bent, loose, or corroded, repair them as necessary, and recheck the system.
   - If the terminals look OK, go to step 3.
3. With the 2P connector still disconnected, do the following input tests.
   - If any test indicates a problem, find and correct the cause, then recheck the system.
   - If all the input tests prove OK, replace the battery sensor.

Cavity	Wire	Test condition	Test: Desired result	Possible cause if desired result is not obtained
2	ORN	Under all conditions	Measure the voltage to ground: There should be battery voltage.	• Blown No. 12 (7.5 A) fuse in the under-hood fuse/relay box • An open or high resistance in the wire
1	LT BLU	Disconnect the gauge control module 32P connector	Check for continuity between terminal No. 1 and gauge control module 32P connector terminal No. 12: There should be continuity.	An open in the UART wire

2012 ELECTRICAL

Battery - TL

BATTERY TEST

WARNING: A battery can explode if you do not follow the proper procedure, causing serious injury to anyone nearby. Follow all procedures carefully and keep sparks and open flames away from the battery.

SPECIAL TOOLS REQUIRED

Acura Electrical System Analyzer (ED-18 Battery tester): Model Number INB17191845*

Acura Battery Diagnostic Station (GR8): Model Number MTRGR81100PA*

*To order, go to the Acura Tool and Equipment catalog on the iN, or call 888-424-6857

SOFTWARE VERSION

Make sure you have the latest software for the ED-18 and GR8.

To check the software version on the ED-18, do this:

- Press the POWER button.
- Read the version number on the screen. It should appear for about 3 seconds.
- Or you can select: Language> Options> Info> Version. The version number will appear near the top of the screen.

Write down the version number, then call Midtronics at 800-776-1995 to verify you have the latest software version.

To check the software version on the GR8, do this:

- Press the POWER button.
- Read the version number on the screen. It should appear for about 5 seconds.
- Or from the Main Menu, select: Options> Info> I Version. The version number will appear on the screen.

Write down the version number, then call Midtronics at 800-776-1995 to verify you have the latest software version.

USING THE ED-18 BATTERY TESTER

NOTE: For setup, customization, and other available features, refer to the ED-18 user's manual.

1. Connect the leads to the positive and negative terminal of the battery.
2. Use the arrow keys to select the Battery test, then press ENTER, then follow the prompts.

NOTE:

- **Make sure to enter the correct cold cranking ampere (CCA) rating of the battery. You can find the CCA printed on the label on the top of the battery. If the CCA rating is not entered correctly, the test result will not be accurate.**
- **Make sure you select FLOODED for the battery type.**

3. Here are the four possible battery conditions:
   - GOOD BATTERY: The battery has at least 60 percent of its charge and good state of health. No action is required.
   - GR8 DIAGNOSTIC TEST NEEDED: The battery voltage is low. Connect the GR8 and use the diagnostic test to determine if the battery is GOOD or needs to be REPLACED.
   - REPLACE BATTERY: The battery condition is poor. Replace it.
   - BAD CELL: There is a problem with the battery. Replace it.

USING THE GR8 BATTERY DIAGNOSTIC STATION

NOTE:

- **For setup, customization, and other available features, refer to the GR8 user's manual.**
- **On the GR-8, you can select two modes: DEALER INVENTORY or CLIENT VEHICLE.**
  - **DEALER INVENTORY: Use this mode for vehicles in dealer inventory. The GR8 charges the battery to 80% of its state-of-charge. If the battery condition is OK, the GR8 states the battery is GOOD. If you leave the GR8 attached to the battery, it changes to Top Off mode, and continues to charge the battery until it is at 100% of its state-of-charge.**
  - **CLIENT VEHICLE: In order to give a waiting client quicker service, the GR8 charges the battery to 60% of its state-of-charge. If the battery condition is OK, the GR8 states the battery is GOOD. If you leave the GR8 attached to the battery, it changes to Top Off mode, and continues to charge the battery until it is at 100% of its state-of-charge.**

1. Connect the leads to the positive and negative terminal of the battery.
2. Use the arrow keys to select Diagnostic, and follow the prompts.

NOTE:

- **Make sure to enter the correct cold cranking ampere (CCA) rating of the battery. You can find the CCA printed on the label on the top of the battery. If the CCA rating is not entered correctly, the test result will not be accurate.**

- **Make sure you select FLOODED for the battery type.**

3. Here are the three possible battery conditions:
   - GOOD BATTERY: The battery state of health is good and state of charge is at least 60%.
   - REPLACE BATTERY: The battery condition is poor. Replace it.
   - BAD CELL: There is a problem with the battery. Replace it.

BATTERY TERMINAL DISCONNECTION AND RECONNECTION

DISCONNECTION

NOTE: Some systems store data in memory (including seat position, mirror position, etc) that is lost when the battery is disconnected. Do the following procedures before disconnecting the battery.

1. Make sure you have the anti-theft code for the audio system or the audio-navigation unit.
2. Make sure the ignition switch is in LOCK (0), or the vehicle ignition is in the OFF mode.
3. Remove the bulkhead cover (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
4. Disconnect and isolate the negative cable from the battery.

NOTE: Always disconnect the negative cable from the battery first.

5. Disconnect the positive cable from the battery.

RECONNECTION

NOTE: Some systems store data in memory (including seat position, mirror position, etc) that is lost when the battery is disconnected. Do the following procedures to restore the systems back to normal operation.

1. Clean the battery terminals.
2. Test the battery (see **BATTERY TEST**).
3. Reconnect the positive cable (A) to the battery (B) first, then reconnect the negative cable (C) to the battery.

NOTE: Always connect the positive cable to the battery first.

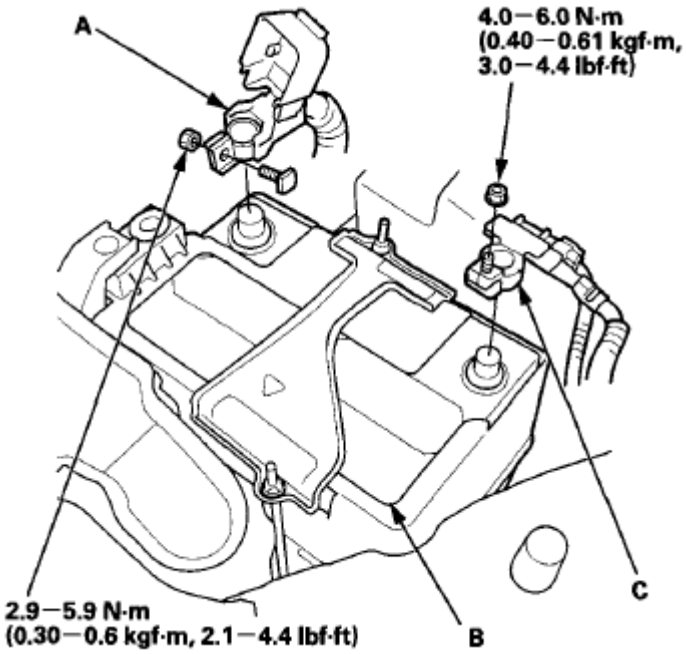

Fig. 1: Identifying Battery, Positive And Negative Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Apply multipurpose grease to the terminals to prevent corrosion.
5. Install the bulkhead cover (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
6. Enter the anti-theft code for the audio system or the audio-navigation unit.
7. Enter the audio presets (if applicable), and enter the XM audio presets (if equipped).
8. Set the clock (for vehicles without navigation).

BATTERY REMOVAL AND INSTALLATION

NOTE: The battery terminal disconnection and reconnection procedure (see BATTERY TERMINAL DISCONNECTION AND RECONNECTION) must be done before and after doing this procedure. Some systems store data in the memory that is lost when the battery is disconnected.

REMOVAL

1. Do the battery terminal disconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
2. Remove the three clips and air intake duct splash separator (A).

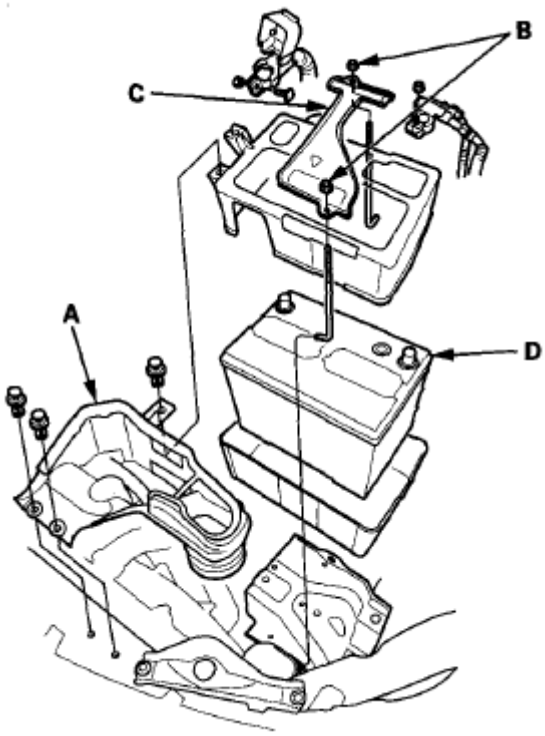

Fig. 2: Identifying Air Intake Duct Splash Separator, Battery, Battery Setting Plate And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the two nuts (B) securing the battery setting plate (C), then remove the battery setting plate and the battery (D).

INSTALLATION

1. Install the battery (A), then install the battery setting plate (B).

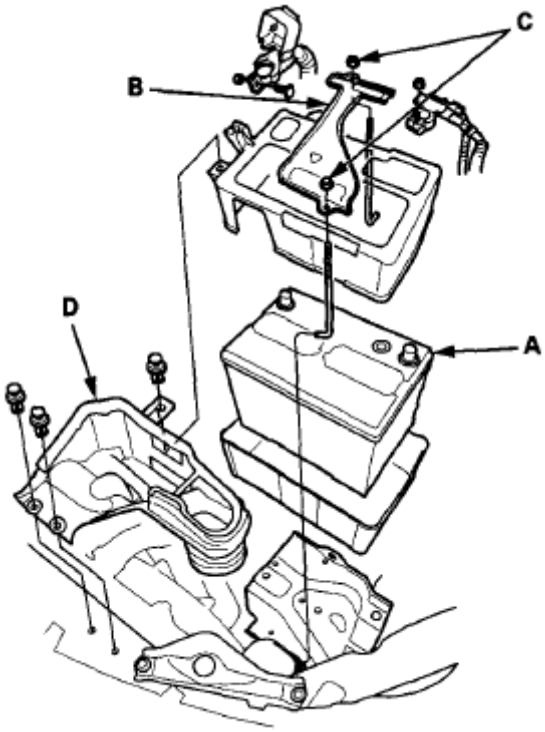

Fig. 3: Identifying Air Intake Duct Splash Separator, Battery, Battery Setting Plate And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Tighten the two nuts (C) equally until the battery is stable.

NOTE: Do not deform the battery setting plate by over-tightening the nuts.

3. Install the air intake duct splash separator (D) and three clips.
4. Do the battery terminal reconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).

NOTE: Make sure the battery is correctly installed, and that the positive terminal and the negative terminal are not connected in reverse.

PARASITIC DRAW CHECK

Special Tools Required

LH41 AC/DC low current clamp meter, FLULH41 A*

*: Available through the Honda Tool and Equipment Program, 888-424-6857

1. Make sure the battery is fully charged, and that all the vehicle's electrical accessories are turned off.
   - With security, go to step 2.

- Without security, go to step 4.

2. Open the hood.
3. Disconnect the security hood switch 2P connector to allow the security system to arm itself with the hood open.
4. Turn the ignition switch to ON (II).
5. Turn the ignition switch to LOCK (0), and remove the ignition key from the ignition switch.
6. Get out of the vehicle, and close all the doors.
7. Lock the doors with the keyless transmitter.
8. Make sure the map lights are turned off and the security alarm system is armed by confirming that the security indicator is flashing.
9. Wait at least 20 minutes.
10. Attach the LH41 AC/DC low current clamp meter (A) to the battery ground cable (B). Follow the equipment manufacturer's instructions, then measure the parasitic draw.

NOTE: If you are using a digital multimeter, go to step 12.

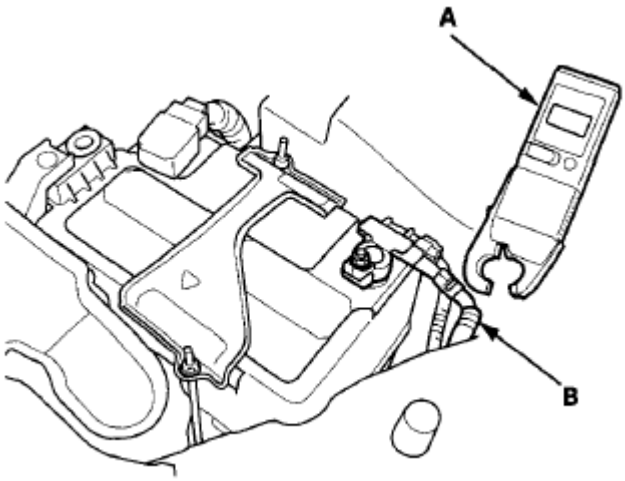

Fig. 4: Identifying Low Current Clamp Meter And Battery Ground Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is the parasitic draw 52 mA or less?

YES - Go to step 18.

NO - Go to step 11.

11. Check for poor connections and loose terminals at the battery and the alternator terminals.

Are the connections OK?

YES - Do the alternator and regulator circuit troubleshooting (see **ALTERNATOR AND**

REGULATOR CIRCUIT TROUBLESHOOTING), and alternator control circuit troubleshooting (see **ALTERNATOR CONTROL CIRCUIT TROUBLESHOOTING**), then recheck. If the system is OK, the battery is flat from self-discharge. Check the battery (see **BATTERY TEST**), then recharge or replace the battery (see **BATTERY REMOVAL AND INSTALLATION**).

NO - Reconnect the terminals, then recheck.

12. Check the following items before measuring:
    - The multimeter dial is set to the DCA (direct current amps) range.
    - The red test probe is plugged into the red A (Amps) jack, and the black test probe is plugged into the COM jack.
    - To avoid blowing an input fuse, start by setting the range above 10 A.
13. Loosen the nut (A) of the battery negative terminal.

NOTE: Follow the instructions exactly to avoid disconnecting the battery ground cable terminal from the battery negative terminal.

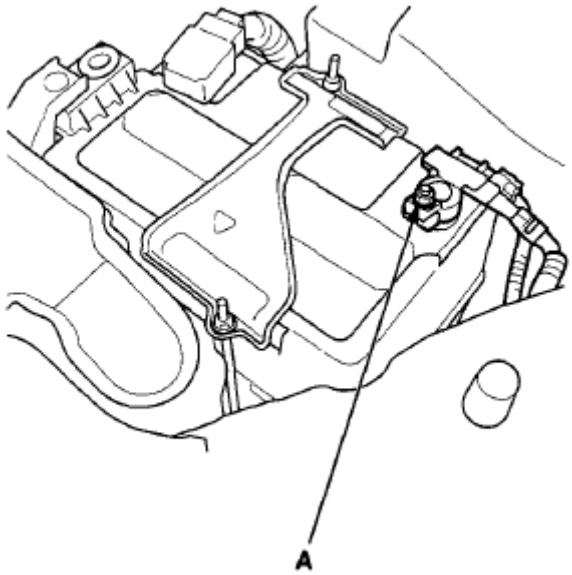

Fig. 5: Identifying Battery Negative Terminal Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Connect the red (+) test lead (A) to the negative terminal (B) of the battery ground cable.

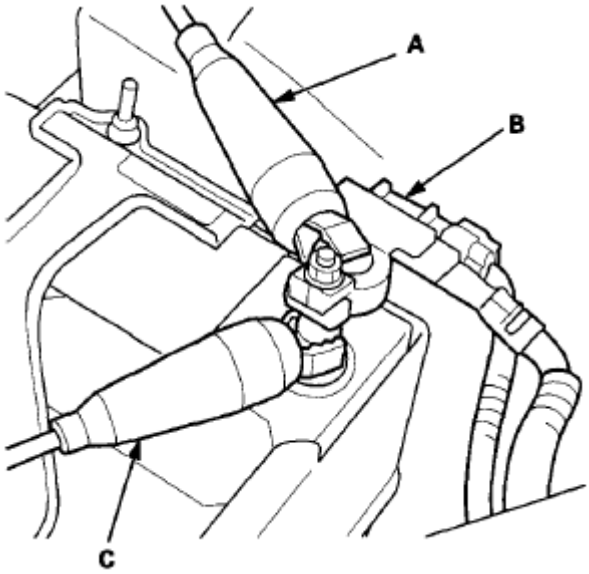

Fig. 6: Identifying Red Test Lead And Negative Terminal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Slide the negative terminal of the battery ground cable upwards from the battery negative terminal so that it still makes contact and avoids disconnection. Then connect the black (-) test lead (C) to the battery negative terminal post.
16. Disconnect the negative terminal (A) of the battery ground cable from the battery negative terminal.

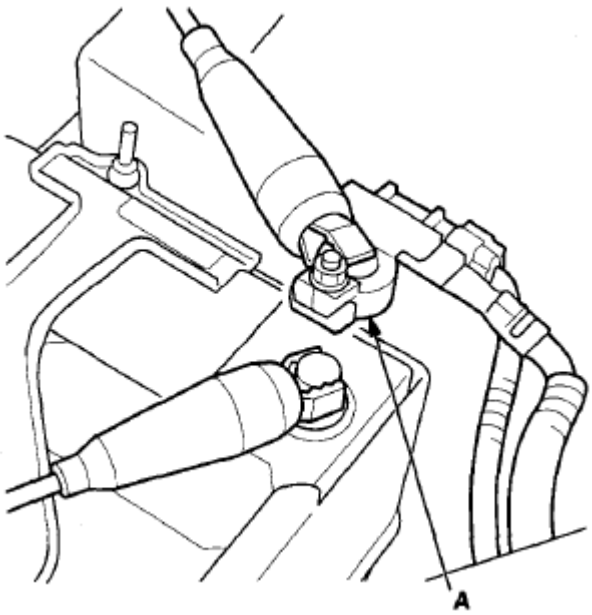

Fig. 7: Identifying Negative Terminal Of Battery Ground Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Measure the parasitic draw.

Is the parasitic draw 52 mA or less?

YES - The system is normal at this time.

NO - Go to step 18.

18. Check if there are any aftermarket electrical accessories installed on the vehicle.

    Are there any aftermarket electrical accessories installed?

    YES - Go to step 19.

    NO - Go to step 21.

19. Make sure that the aftermarket electrical accessories have been properly installed.

    Are the aftermarket electrical accessories installed correctly?

    YES - Go to step 20.

    NO - Repair, reinstall, or remove the aftermarket accessories, then recheck.

20. Disconnect the aftermarket electrical accessories one at a time, then measure the parasitic draw.
    1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode, and then back to LOCK (0), or press the engine start/stop button to select the OFF mode.
    2. Get out of the vehicle and close all doors.
    3. Wait at least 40 seconds.
    4. Measure the parasitic draw.

    Is the parasitic draw 52 mA or less?

    YES - Replace or repair the aftermarket electrical accessory that reduced the parasitic draw to 52 mA or less when disconnected.

    NO - Go to step 21.

21. Remove the No. 15(10 A) fuse in the under-hood fuse/relay box, then measure the parasitic draw.

    Is the parasitic draw 34.5 mA or less?

    YES - Go to step 22.

    NO - Go to step 24.

22. Connect immobilizer-keyless control unit 7P connector terminal No. 4 and body ground with a jumper wire.

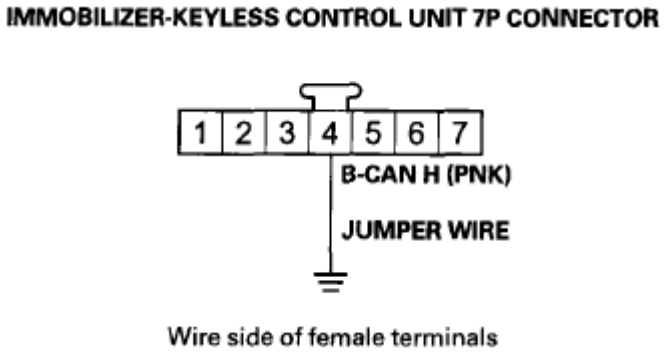

Fig. 8: Connecting Immobilizer-Keyless Control Unit 7P Connector Terminal No. 4 And Body Ground With Jumper Wire Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Install the No. 15(10 A) fuse to the under-hood fuse/relay box, then measure the parasitic draw.
    1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode, and then back to LOCK (0), or press the engine start/stop button to select the OFF mode.
    2. Get out of the vehicle and close all doors.
    3. Wait at least 40 seconds.
    4. Measure the parasitic draw.

    Is the parasitic draw 52 mA or less?

    YES - Disconnect the control units from the B-CAN circuit one at a time, perform steps 1 - 4 above, then measure the parasitic draw. Do the input test for the control unit that reduced the parasitic draw to 52 mA or less when disconnected.

    NO - Disconnect the control units from the No. 15(10 A) fuse circuit one at a time, perform steps 1 - 4 above, then measure the parasitic draw. Replace the control unit that reduced the parasitic draw to 52 mA or less when disconnected.

24. Remove the No. A3-1 (IG1 MAIN) (50 A) fuse in the under-hood fuse/relay box, then measure the parasitic draw.
    1. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode, and then back to LOCK(0), or press the engine start/stop button to select the OFF mode.
    2. Get out of the vehicle and close all doors.
    3. Wait at least 40 seconds.
    4. Measure the parasitic draw.

    Is the parasitic draw 52 mA or less?

    YES - Go to step 25.

    NO - Remove the fuses from the fuse box one at a time, perform steps 1- 4 above then, measure the parasitic draw in order to isolate the circuit which contains the fault. If all circuit are OK, check the starter

circuits and do the starter performance test (see **STARTER PERFORMANCE TEST**).

25. Install the No. A3-1 (IG1 MAIN) (50 A) fuse in the under-hood fuse/relay box.
26. With keyless access system: Disconnect power control unit connector B (4P), then measure the parasitic draw.

    Is the parasitic draw 52 mA or less?

    YES - Replace the power control unit (see **RF UNIT REPLACEMENT**).

    NO - Repair a short to ground in the wire between the No. A3-1 (IG1 MAIN) (50 A) fuse in the under-hood fuse/relay box and ignition switch.

27. Without keyless access system: Disconnect the ignition switch 5P connector, then measure the parasitic draw.

    Is the parasitic draw 52 mA or less?

    YES - Replace the ignition switch (see **IGNITION SWITCH TEST**).

    NO - Repair a short to ground in the wire between the No. A3-1 (IG1 MAIN) (50 A) fuse in the under-hood fuse/relay box and power control unit.

SYMPTOM TROUBLESHOOTING

LOW OR DEAD BATTERY

NOTE: A battery might be discharged under these conditions:

- Driving a vehicle 6 miles (10 km) or less per day.
- Leaving a vehicle parked without removing the ignition key from the ignition switch.
- Leaving the vehicle idling high electrical loads such as headlight, seat heaters, wipers, rear window defogger, etc.
- Parking the vehicle with the hood unlatched prevents the security system from arming, which causes excessive parasitic draw.

1. Check the battery (see **BATTERY TEST**). Recharge or replace the battery (see **BATTERY REMOVAL AND INSTALLATION**) if necessary.
2. Start the engine, and check the charging system indicator.

   Does the charging system indicator go off with the engine running?

   YES - Go to step 4.

   NO - Go to step 3.

3. Check for PGM-FI DTCs.

   Are DTCs P0562, P1549, P16BB, and/or P16BC indicated?

   YES - Go to the indicated DTCs troubleshooting.

   NO - Do the drive belt inspection (see **DRIVE BELT INSPECTION**), drive belt auto-tensioner inspection (see **DRIVE BELT REPLACEMENT**), and alternator and regulator circuit troubleshooting (see **ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING**).

4. Check the following items:
   - The hazard warning switch is off.
   - The front individual map light and interior light switches are off.
   - All of the doors, hood, and trunk are closed.
   - The brake pedal is not pressed.

   Are all of the check items OK?

   YES - Go to step 5.

   NO - Turn off the applicable switch, and check the parasitic draw (see **PARASITIC DRAW CHECK**).

5. Lock the doors with the remote transmitter LOCK button. Make sure the security alarm system arms by confirming that the security indicator is flashing slowly, about once every 3 seconds.

   Is the security alarm system armed?

   YES - Go to step 6.

   NO - Go to the **SYMPTOM TROUBLESHOOTING** for the security alarm system (see **SECURITY ALARM SYSTEM WILL NOT ARM**).

6. Check the following items with the ignition key removed from the ignition switch:
   - The brake lights are off when the brake pedal is not pressed.
   - The courtesy lights are off with all doors closed.
   - The trunk light is off with the trunk closed.
   - The radiator and condenser fans are not running.
   - The audio unit (including navigation) is off.
   - There is no operating sound from the VSA modulator-control unit.
   - The rear window defogger and the power mirror defoggers are off.

   Are all of the check items OK?

   YES - Check the parasitic draw (see **PARASITIC DRAW CHECK**).

NO - Troubleshoot and repair the affected circuits.

2012 ELECTRICAL

Body Electrical (Special Tools) - TL

SPECIAL TOOLS

Ref.No.	Tool Number	Description	Qty
①	07AAC-000A2A1 or 07AAC-000A1A0	Relay Puller	1
②	07AAJ-S3MA100	HID Bulb Test Light	1
③	07TAZ-001020A	Back Probe Adapter, 17 mm	2
④	07WAZ-001010A	MPCS (MCIC) Service Connector	1

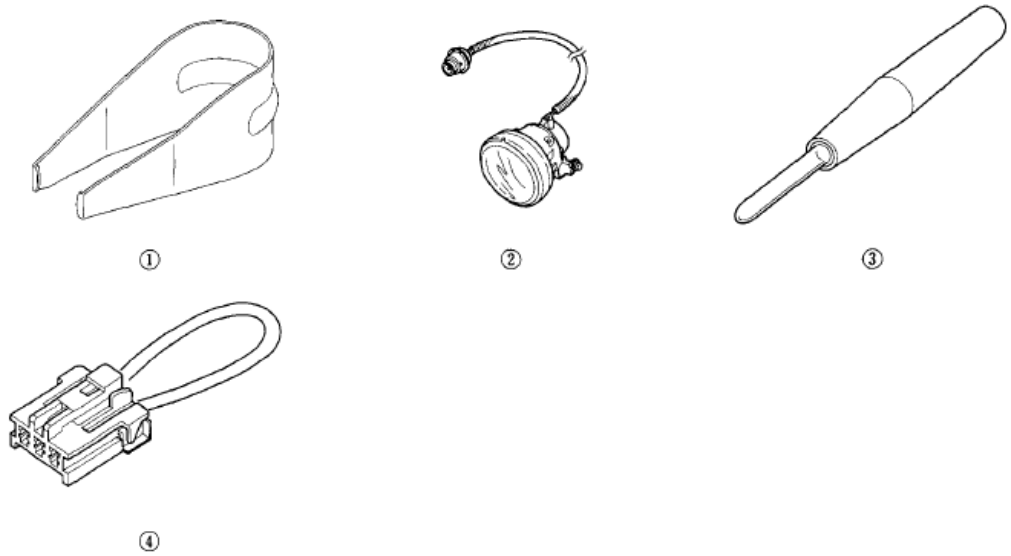

Fig. 1: Identifying Body Electrical Special Tools
Courtesy of AMERICAN HONDA MOTOR CO., INC.

GENERAL TROUBLESHOOTING INFORMATION

TIPS AND PRECAUTIONS

Special Tools Required

Back Probe Adapter, 17 mm 07TAZ-001020A

Before Troubleshooting

1. Check applicable fuses in the appropriate fuse/relay box.
2. Check the battery for damage, state of charge, and clean and tight connections.

NOTE:

- **Do not quick-charge a battery unless the battery ground cable has been disconnected, otherwise you will damage the alternator diodes.**
- **Do not attempt to crank the engine with the battery ground cable loosely**

connected, or you will severely damage the wiring.

Handling Connectors

- Make sure the connectors are clean and have no loose wire terminals.
- Make sure multiple cavity connectors are packed with dielectric grease (except waterproof connectors).
- All connectors have push-down release type locks (A).

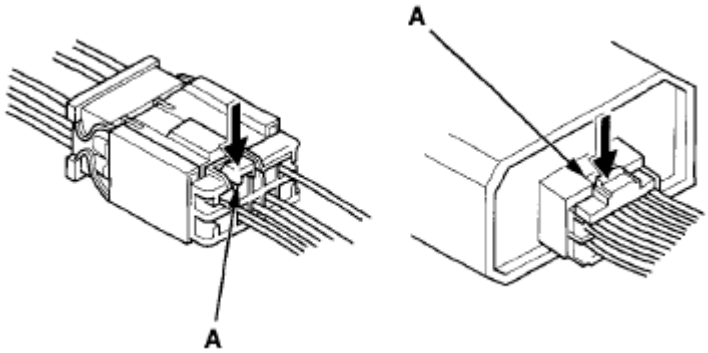

Fig. 2: Identifying Push-Down Release Type Locks Handling Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Some connectors have a clip on their side used to attach them to a mount bracket on the body or on another component. This clip has a pull type lock.
- Some mounted connectors cannot be disconnected unless you first release the lock and remove the connector from its mount bracket (A).

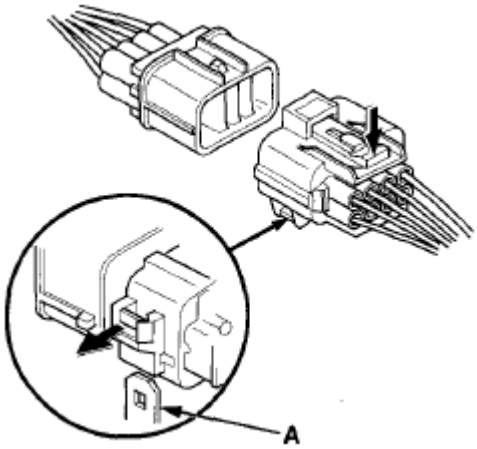

Fig. 3: Removing Connector From Its Mount Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Never try to disconnect connectors by pulling on their wires; pull on the connector halves instead.
- Always reinstall plastic covers.

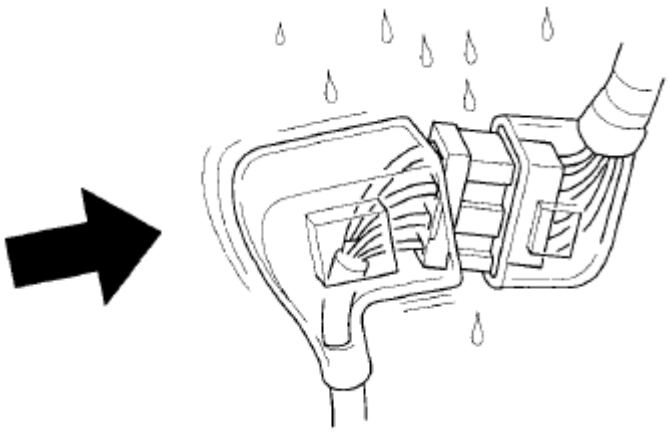

Fig. 4: Installing Plastic Covers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Before connecting connectors, make sure the terminals (A) are in place and not bent.

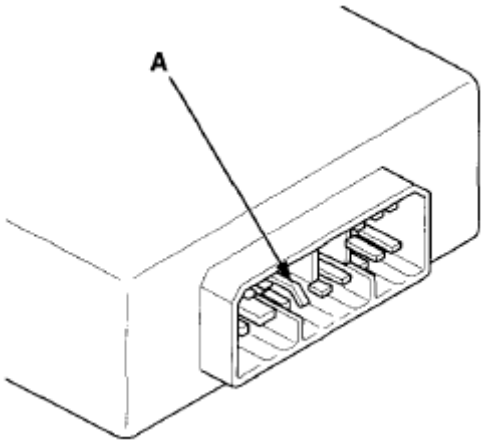

Fig. 5: Checking Terminals Are In Place And Not Bent
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Check for loose retainers (A) and rubber seals (B).

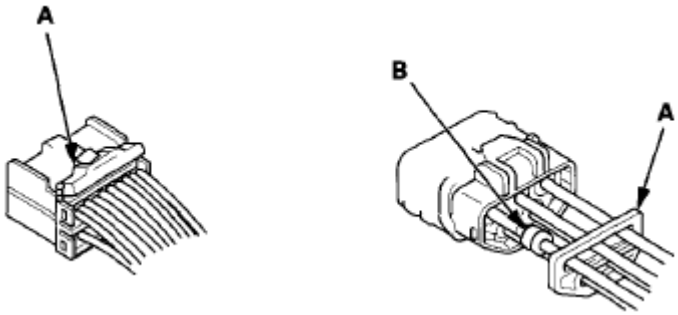

Fig. 6: Identifying Retainers And Rubber Seals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- The backs of some connectors are packed with dielectric grease. Add grease if necessary. If the grease is contaminated, replace it.

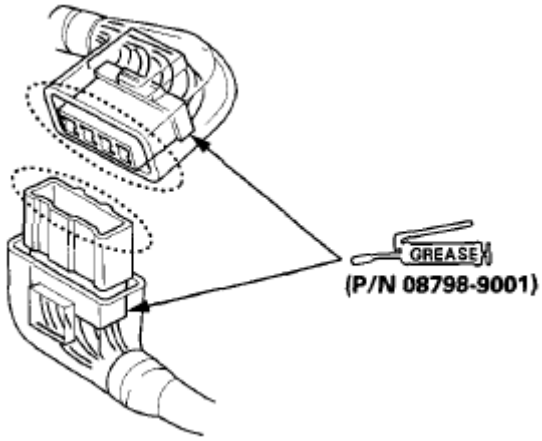

Fig. 7: Checking Grease Contamination At back Of Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Insert the connector all the way and make sure it is securely locked.
- Position wires so that the open end of the cover faces down.

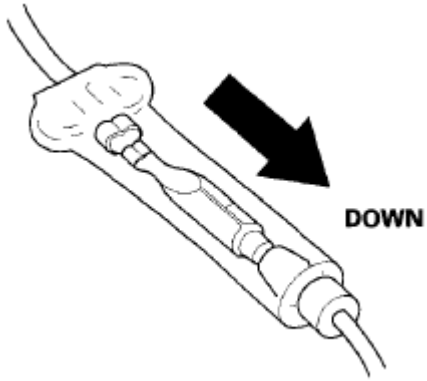

Fig. 8: Positioning Wires So That Open End Of Cover Faces Down
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Handling Wires and Harnesses

- Secure wires and wire harnesses to the frame with their respective wire ties at the designated locations.
- Remove clips carefully; do not damage their locks (A).

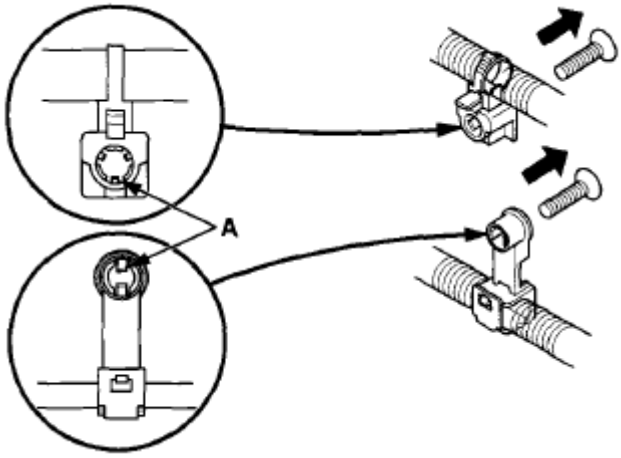

Fig. 9: Identifying Handling Wires And Harnesses Locks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- After installing harness clips, make sure the harness does not interfere with any moving parts.
- Keep wire harnesses away from exhaust components and other hot parts, from sharp edges of brackets and holes, and from exposed screws and bolts.
- Seat grommets in their grooves properly (A). Do not leave grommets distorted (B).

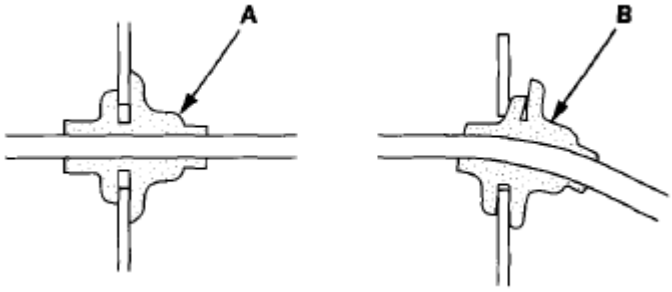

Fig. 10: Identifying Grooves And Grommets
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Testing and Repairs

- Do not use wires or harnesses with broken insulation. Replace them or repair them by wrapping the break with electrical tape or shrink tubing.
- Never attempt to modify, splice, or repair SRS wiring. If there is an open or damage to the SRS wiring or terminals, replace the harness.
- After installing parts, make sure that no wires are pinched under them.
- When using electrical test equipment, follow the manufacturer's instructions and those described in this information.
- If possible, insert the probe of the tester from the wire side (except waterproof connectors).

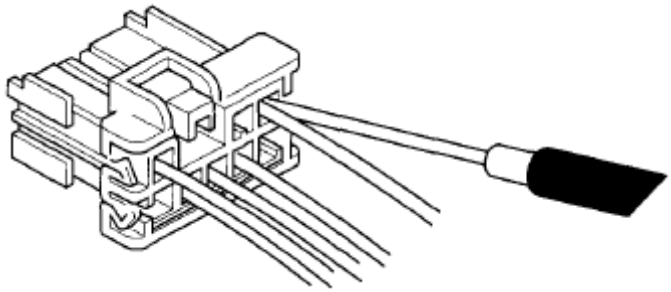

Fig. 11: Inserting Probe Of Tester From Wire Side
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Use back probe adapter, 17 mm 07TAZ-001020A.

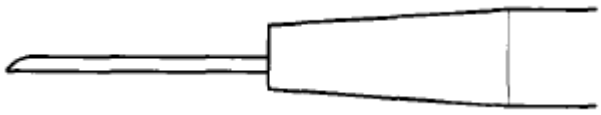

Fig. 12: Identifying Back Probe Adapter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

- Refer to the instructions in the Honda Terminal Kit for identification and replacement of connector terminals.

FIVE-STEP TROUBLESHOOTING

1. Verify The Complaint:

   Turn on all the components in the problem circuit to verify the client complaint. Note the symptoms. Do not begin disassembly or testing until you have narrowed down the problem area.

2. Analyze The Schematic:

   Look up the schematic for the problem circuit. Determine how the circuit is supposed to work by tracing the current paths from the power feed through the circuit components to ground. If several circuits fail at the same time, the fuse or a ground is a likely cause.

   Based on the symptoms and your understanding of the circuit operation, identify one or more possible causes of the problem.

3. Isolate The Problem By Testing The Circuit:

   Make circuit tests to check the diagnosis you made in step 2. Keep in mind that a logical, simple procedure is the key to efficient troubleshooting. Test for the most likely cause of failure first. Try to make tests at points that are easily accessible.

4. Fix The Problem:

Once the specific problem is identified, make the repair. Be sure to use proper tools and safe procedures.

5. Make Sure The Circuit Works:

   Turn on all components in the repaired circuit in all modes to make sure you've fixed the entire problem. If the problem was a blown fuse, be sure to test all of the circuits on the fuse. Make sure no new problems turn up and the original problem does not recur.

WIRE COLOR CODES

The following abbreviations are used to identify wire colors in the circuit schematics:

WHT	White
YEL	Yellow
BLK	Black
BLU	Blue
GRN	Green
RED	Red
ORN	Orange
PNK	Pink
BRN	Brown
GRY	Gray
PUR	Purple
TAN	Tan
LT BLU	Light Blue
LT GRN	Light Green

The wire insulation has one color or one color with another color stripe. The second color is the stripe.

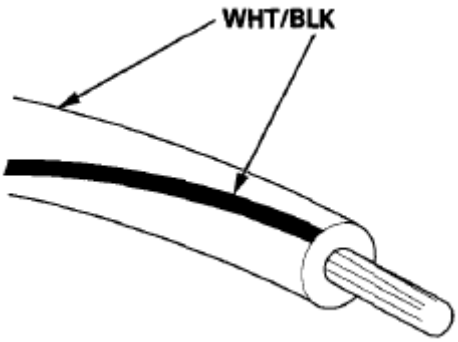

Fig. 13: Identifying Wire Color Codes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

HOW TO CHECK FOR DTCS WITH THE HONDA DIAGNOSTIC SYSTEM (HDS)

NOTE: For specific operations, refer to the user's manual that came with the Honda Diagnostic System (HDS).

Make sure the HDS is loaded with the latest software.

1. Connect the HDS to the data link connector (DLC) (A) located under the driver's side of the dashboard.

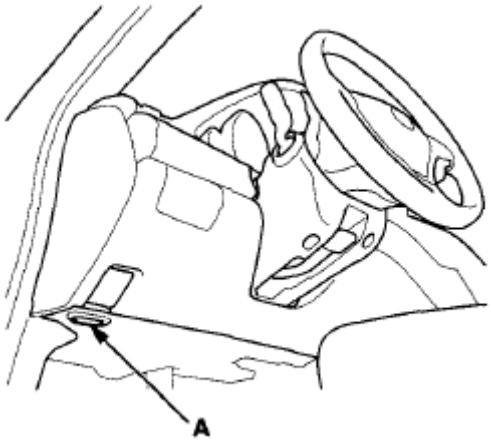

Fig. 14: Identifying Data Link Connector (DLC)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Make sure the HDS communicates with the vehicle, if it does not, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Enter the BODY ELECTRICAL then select the desired MODE MENU.
5. Check for DTCs with the HDS.

NOTE: If the DTCs do not pertain to the selected menu, select the All DTC Check icon to view all Body DTCs.

6. If any DTCs are indicated, note them, and go to the indicated DTCs troubleshooting.

2012 ELECTRICAL

Charging System - TL

COMPONENT LOCATION INDEX & DRIVE BELT ROUTING

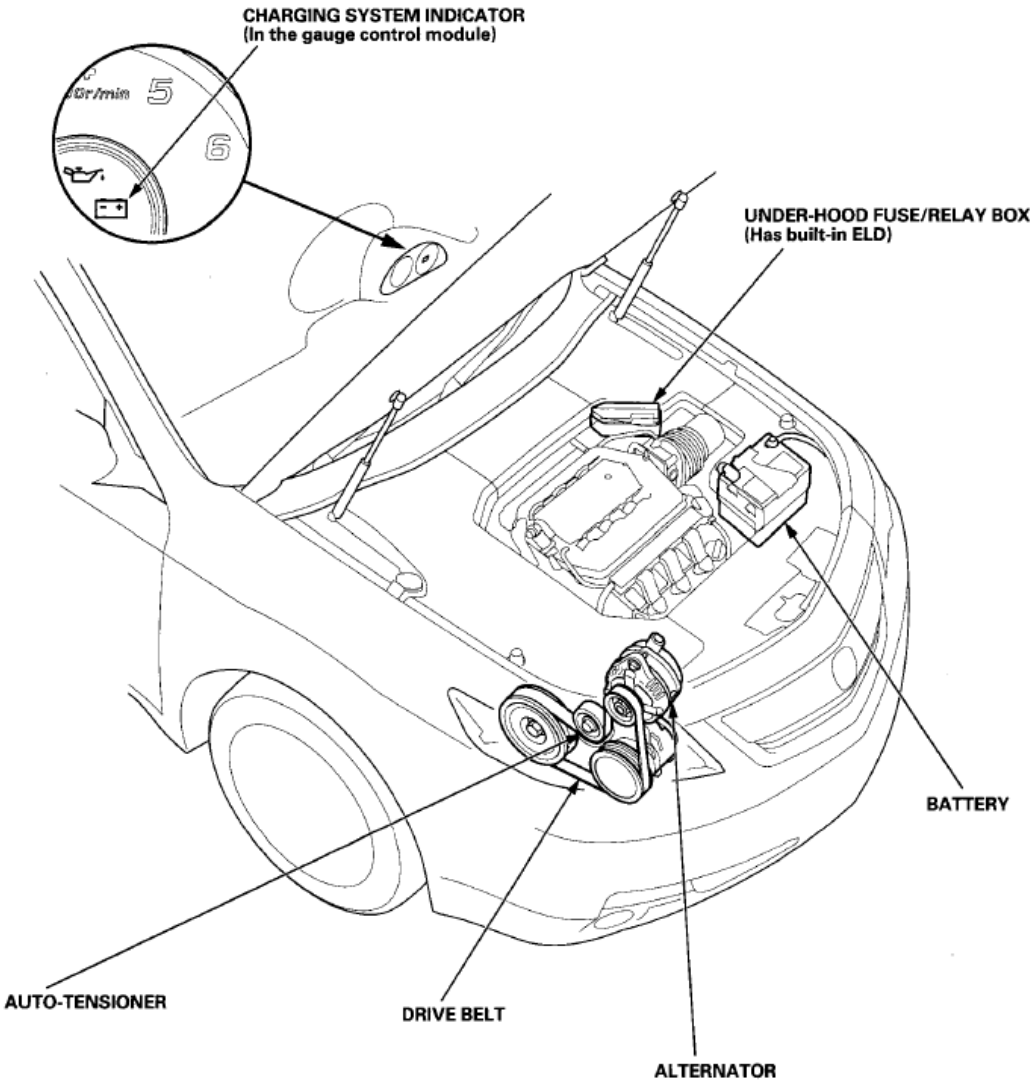

Fig. 1: Charging System Components Location & Drive Belt Routing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure	Also check for
Charging system indicator does not come on with the ignition switch in ON (II), or the vehicle ignition in the ON mode	Troubleshoot the **charging system indicator circuit**.	
Charging system indicator stays on	1. Check for a **broken drive belt**. 2. Troubleshoot the **charging system indicator circuit**. 3. Check the **drive belt** auto-tensioner. 4. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**).	
Battery discharged	1. Check for a poor connection at the battery terminal. 2. Test the battery (see **BATTERY TEST**). 3. **Troubleshoot the alternator and regulator circuit**. 4. Check for a **broken drive belt**. 5. Check the **drive belt** auto-tensioner. 6. Check for excessive parasitic electrical current draw with the ignition switch in LOCK (0), or the vehicle ignition in the OFF mode, and the key removed. The multiplex integrated control units may take up to 10 minutes to turn off (sleep mode).	
Battery overcharged	1. Test the battery (see **BATTERY TEST**). 2. **Troubleshoot the alternator and regulator circuit**.	
Low or dead battery	Battery system troubleshooting (see **SYMPTOM TROUBLESHOOTING**).	

CIRCUIT DIAGRAM

WITHOUT KEYLESS ACCESS SYSTEM

CHARGING SYSTEM INDICATOR CIRCUIT TROUBLESHOOTING

NOTE: Check for stored DTCs in the PGM-FI before troubleshooting the charging system indicator.

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.

   Does the charging system indicator come on?

   YES - Go to step 3.

   NO - Go to step 15.

3. Start the engine. Hold the engine speed at 2, 000 RPM for 1 minute.

   Does the charging system indicator go off?

   YES - Charging system indicator circuit is OK. Go to the **alternator and regulator circuit troubleshooting**. •

   NO - Go to step 4.

4. Do the gauge control module self-diagnostic function procedure (see **SELF-DIAGNOSTIC FUNCTION**).

   Does the charging system indicator flash?

   YES - Go to step 5.

   NO - Replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**). •

5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
6. Disconnect the alternator 4P connector.
7. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.

   Does the charging system indicator go off?

   YES - **Replace the alternator** or repair the **alternator**. •

   NO - Go to step 8.

8. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
9. Connect the HDS to the DLC (see **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
10. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
11. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it does not communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
12. Jump the SCS line with the HDS, then turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

NOTE: This step must be done to protect the ECM/PCM from damage.

13. Disconnect ECM/PCM connector C (49P).
14. Check for continuity between ECM/PCM connector terminal C42 and body ground.

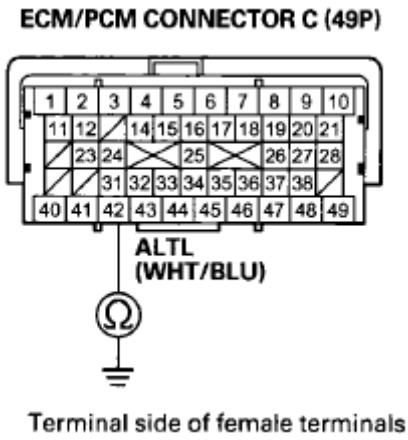

Fig. 4: Checking Continuity Between ECM/PCM Connector Terminal C42 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to ground in the wire between alternator 4P connector terminal No. 3 and ECM/PCM connector terminal C42. •

NO - Update the ECM/PCM if it does not have the latest software (see **ECM/PCM UPDATE**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**). •

15. Do the gauge control module self-diagnostic function procedure (see **SELF-DIAGNOSTIC FUNCTION**).

Does the charging system indicator flash?

YES - Go to step 16.

NO - Replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**). •

16. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
17. Disconnect the alternator 4P connector.
18. Connect alternator 4P connector terminal No. 3 and body ground with a jumper wire.

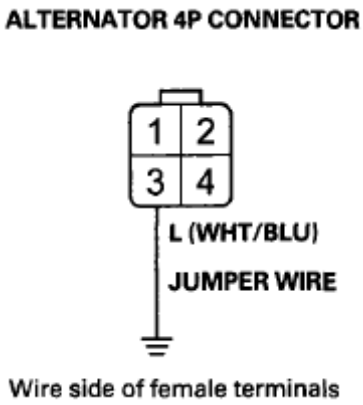

Fig. 5: Connecting Alternator 4P Connector Terminal No. 3 And Body Ground With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.

    Does the charging system indicator come on?

    YES - **Replace the alternator** or **repair the alternator**. •

    NO - Disconnect the jumper wire, then go to step 20.

20. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
21. Connect the HDS to the DLC (see **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
22. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
23. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it does not communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
24. Jump the SCS line with the HDS, then turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

    NOTE: This step must be done to protect the ECM/PCM from damage.

25. Disconnect ECM/PCM connector C (49P).
26. Check for continuity between ECM/PCM connector terminal C42 and alternator 4P connector terminal No. 3.

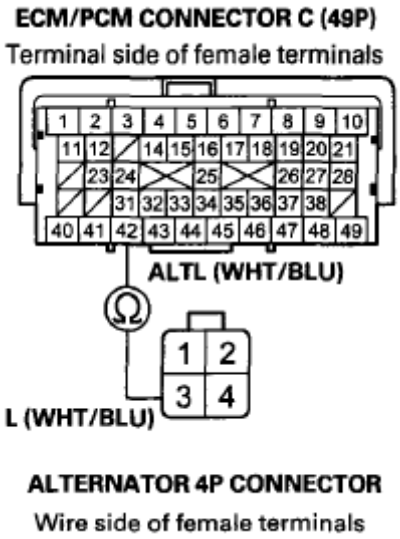

Fig. 6: Checking Continuity Between ECM/PCM Connector Terminal C42 And Alternator 4P Connector Terminal No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the ECM/PCM if it does not have the latest software (see **ECM/PCM UPDATE**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**). •

NO - Repair an open in the wire between alternator 4P connector terminal No. 3 and ECM/PCM connector terminal C42. •

27. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

ALTERNATOR AND REGULATOR CIRCUIT TROUBLESHOOTING

Special Tools Required

Alternator, Regulator, Battery, and Starter Tester OTC3131*

* : Available through the Acura Tool and Equipment Program, 888-424-6857.

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Make sure the battery connections are good and the battery is sufficiently charged.
3. Connect the alternator, regulator, battery, and starter tester (OTC3131) to the battery as shown.

NOTE: The probe is used for alternator testing.

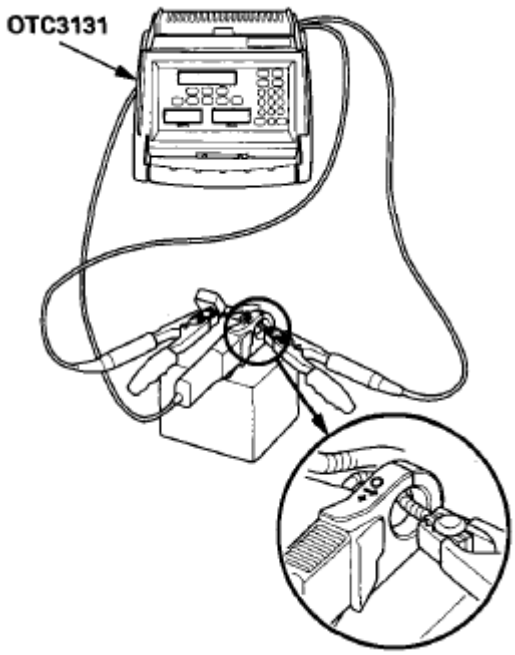

Fig. 7: View Of Alternator And Regulator Circuit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Start the engine. Hold the engine speed at 3, 000 RPM with no load (in neutral (M/T model) or P or N (A/T model)) until the radiator fan comes on, then let it idle.
5. Do the CHARGING SYSTEM TEST.

   Does the display indicate the voltage is within 13.3-15.3 V and the amperage is 87.5 A or more?

   YES - Go to step 6.

   NO - If the voltage is less than 13.3 V, go to alternator **control circuit troubleshooting**. If the voltage is over 15.3 V and amperage is less than 87.5 A, replace the **alternator** or repair the **alternator**. •

6. Check the diode condition on the display.

   Does the display indicate GOOD?

   YES - The diode is OK. Troubleshooting is complete. •

   NO - If the display indicates BAD, replace the **alternator** or repair the **alternator**, then retest. •

   NOTE: If the display indicates N/A, the diode pattern could not be diagnosed. Repeat the test again. If N/A appears repeatedly, replace the alternator.

7. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

ALTERNATOR CONTROL CIRCUIT TROUBLESHOOTING

NOTE: Do this troubleshooting if, in step 5 of the alternator and regulator circuit troubleshooting, the battery voltage is less than 13.3 V.

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Connect the HDS to the DLC (see **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
3. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
4. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it does not communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
5. Check for DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). If a DTC is present, diagnose and repair the cause before continuing with this test.
6. Disconnect the alternator 4P connector.
7. Start the engine, and turn on the headlights to high beam.
8. Measure the voltage between alternator 4P connector terminal No. 2 and the positive terminal of the battery.

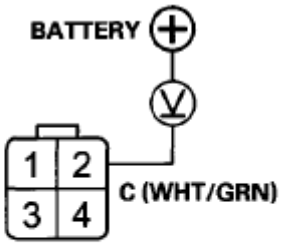

Fig. 8: Measuring Voltage Between Alternator 4P Connector Terminal No. 2 And Positive Terminal Of Battery
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there less than 1 V?

YES - Go to step 12.

NO - Go to step 9.

9. Jump the SCS line with the HDS, then turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

NOTE: This step must be done to protect the ECM/PCM from damage.

10. Disconnect ECM/PCM connector C (49P).
11. Check for continuity between ECM/PCM connector terminal C43 and body ground.

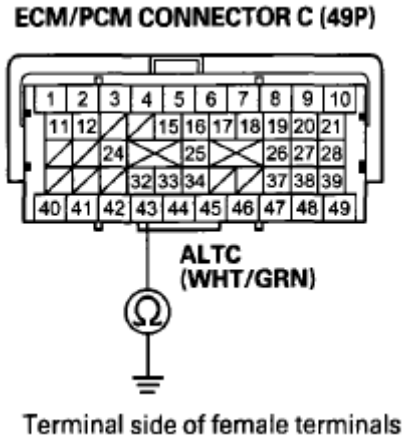

Fig. 9: Checking Continuity Between ECM/PCM Connector Terminal C43 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to ground in the wire between alternator 4P connector terminal No. 2 and ECM/PCM connector terminal C43. •

NO - Update the ECM/PCM if it does not have the latest software (see **ECM/PCM UPDATE**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**). •

12. Jump the SCS line with the HDS, then turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

NOTE: This step must be done to protect the ECM/PCM from damage.

13. Disconnect ECM/PCM connector C (49P).
14. Check for loose terminals and connectors, then check for continuity between ECM/PCM connector terminal C43 and alternator 4P connector terminal No. 2.

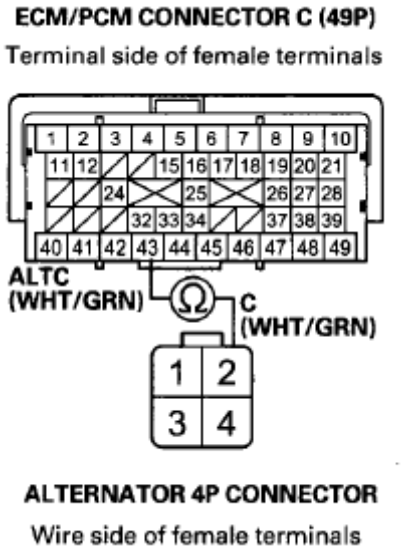

Fig. 10: Checking Continuity Between ECM/PCM Connector Terminal C43 And Alternator 4P Connector Terminal No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - **Replace the alternator**, or repair the **alternator**. •

NO - Repair an open in the wire between alternator 4P connector terminal No. 2 and ECM/PCM connector terminal C43. •

15. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

DRIVE BELT INSPECTION

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Inspect the belt for cracks or damage. If the **belt** is cracked or damaged, replace it.
3. Check that the position of the auto-tensioner indicator (A) is within the standard range (B) as shown. If it is out of the standard range, replace the **drive belt**.

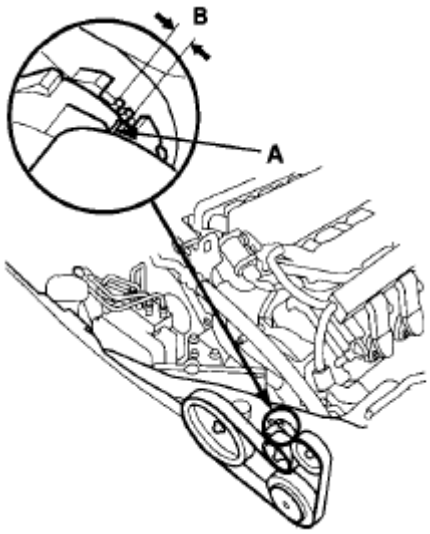

Fig. 11: Identifying Auto-Tensioner Indicator And Standard Range
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

DRIVE BELT REPLACEMENT

Special Tools Required

Belt Tension Release Tool Snap-on TK9317, commercially available

* : Available through the Acura Tool and Equipment Program, 888-424-6857.

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Move the auto-tensioner (A) using the belt tension release tool (TK9317) in the direction of the arrow to relieve tension from the drive belt, then remove the drive belt.

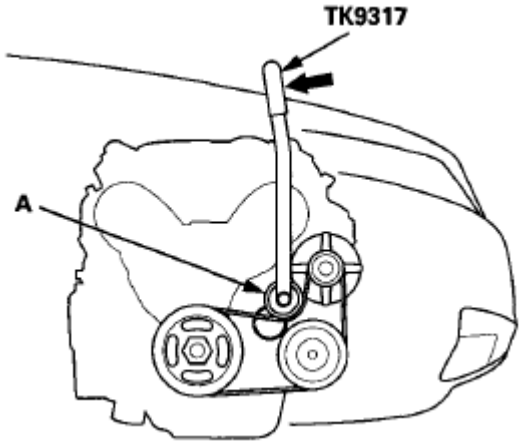

Fig. 12: Moving Auto-Tensioner Using Belt Tension Release Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the new drive belt in the reverse order of removal.
4. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

DRIVE BELT AUTO-TENSIONER INSPECTION

Special Tools Required

Belt Tension Release Tool Snap-on TK9317, commercially available

* : Available through the Acura Tool and Equipment Program, 888-424-6857.

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode, and make sure to turn the A/C switch OFF, then turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
3. Check the position of the auto-tensioner indicator (A). Start the engine, then check the position again with the engine idling. If the position of the indicator moves or fluctuates a lot, replace the **auto-tensioner**.

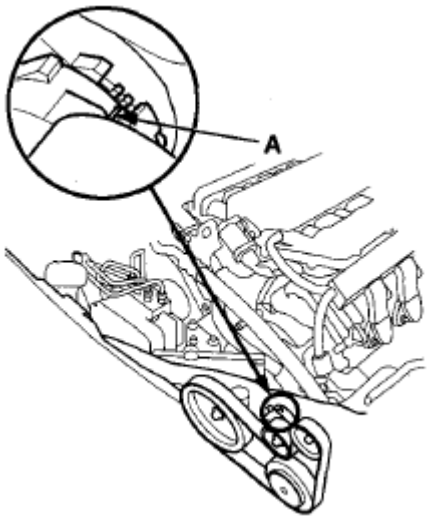

Fig. 13: Identifying Auto-Tensioner Indicator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check for abnormal noise from the tensioner pulley. If you hear any abnormal noise, replace the **tensioner pulley**.
5. Remove the **drive belt**.
6. Move the auto-tensioner within its limit using the belt tension release tool (TK9317) in the direction shown. Check that the auto-tensioner moves smoothly and without any abnormal noise. If the auto-

tensioner does not move smoothly, or you hear abnormal noises, replace the **auto-tensioner**.

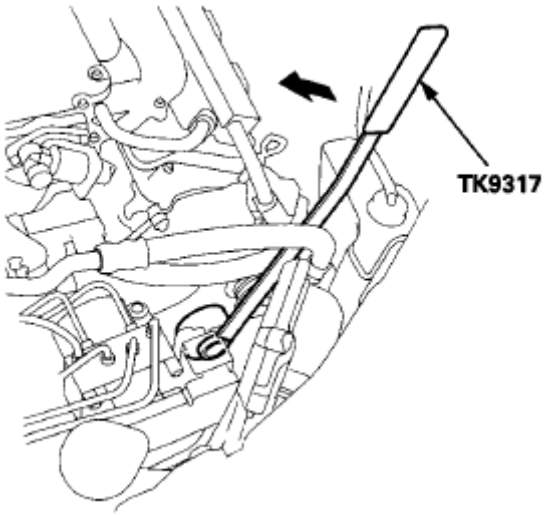

Fig. 14: Moving Auto-Tensioner With In Limits
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the **auto-tensioner**.
8. Clamp the auto-tensioner (A) by using a 10 mm bolt (B), an 8 mm bolt (C), and a vise (D) as shown. Do not clamp the auto-tensioner itself.

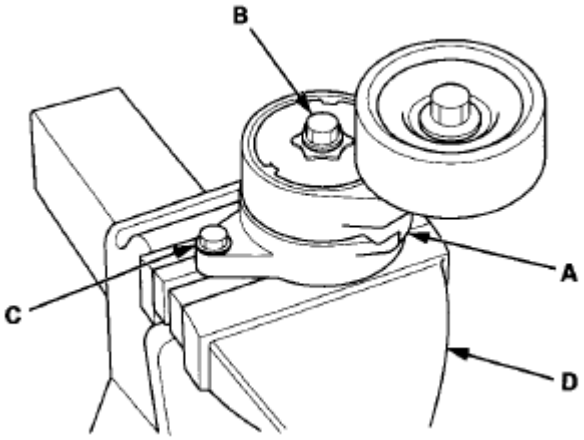

Fig. 15: Identifying Auto-Tensioner, Bolts And Vise
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Attach a torque wrench (A) to the pulley bolt. Measure the torque when the tensioner is turned counterclockwise. If the torque is less than the specified value, replace the **auto-tensioner**.

Auto-Tensioner Spring Torque 32.8 N.m (3.34 kgf.m, 24.2 lbf.ft)

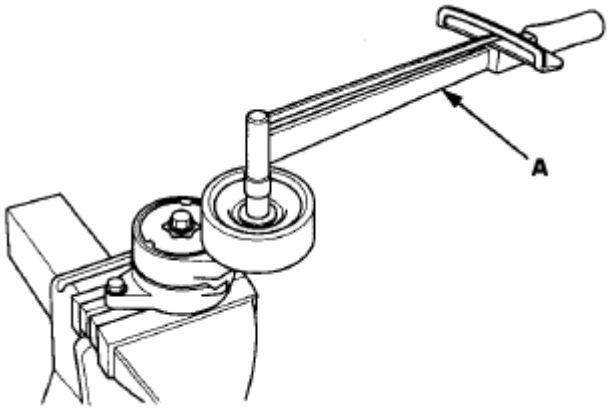

Fig. 16: Identifying Torque Wrench On Pulley Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the auto-tensioner in the reverse order of removal.
11. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

DRIVE BELT AUTO-TENSIONER REPLACEMENT

1. Remove the **drive belt**.
2. Remove the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
3. Remove the auto-tensioner.

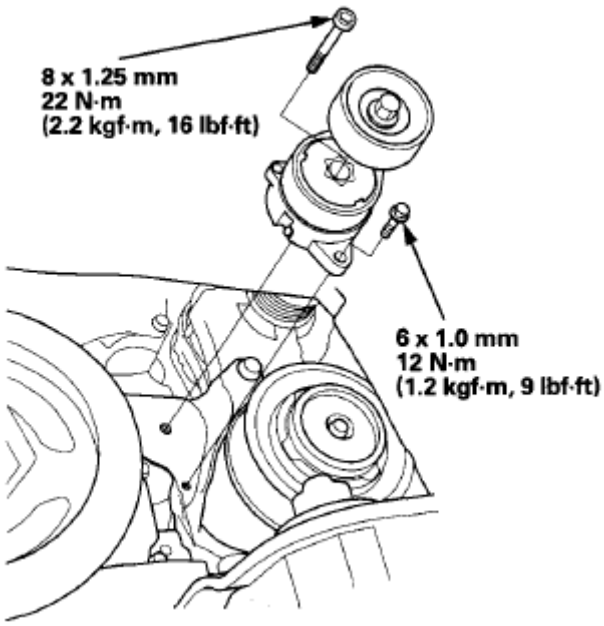

Fig. 17: Identifying Drive Belt Auto-Tensioner And Related Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the auto-tensioner in the reverse order of removal.

TENSIONER PULLEY REPLACEMENT

1. Remove the **auto-tensioner**.
2. Remove the pulley bolt (A) (left-hand threads), and remove the tensioner pulley (B).

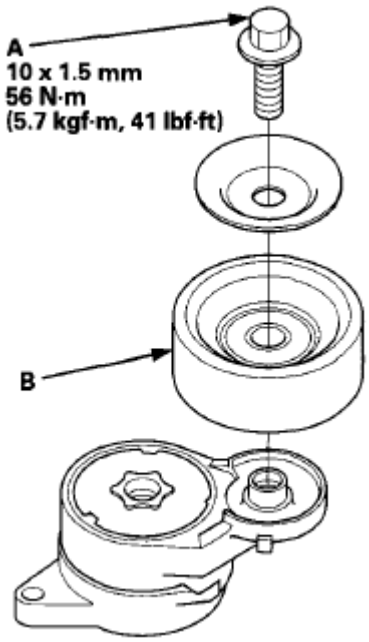

Fig. 18: Identifying Tensioner Pulley With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the tensioner pulley in the reverse order of removal.

ALTERNATOR REMOVAL AND INSTALLATION

REMOVAL

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Do the battery terminal disconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
3. Raise the vehicle on the lift.
4. Remove the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
5. Disconnect the A/C condenser fan motor connector (A), and remove the harness clamp (B).

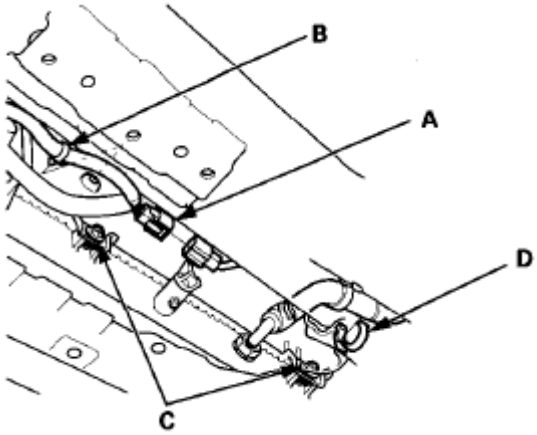

Fig. 19: Identifying Alternator And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Loosen the A/C condenser fan shroud mounting bolts (C).
7. A/T model: Remove the hose clamp (D).
8. Lower the vehicle on the lift.
9. Remove the coolant reservoir (A), then remove the A/C condenser fan shroud assembly (B).

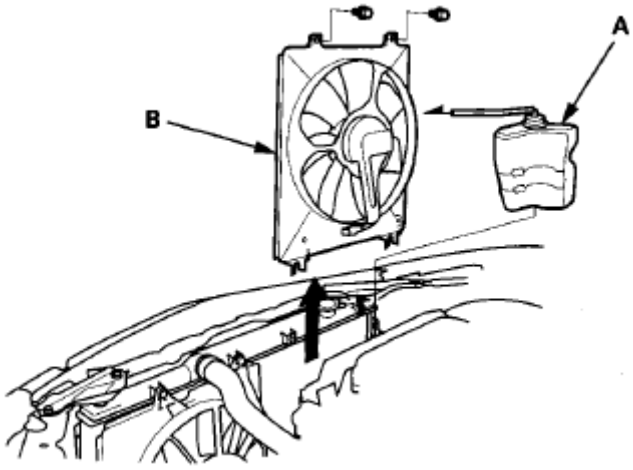

Fig. 20: Identifying Coolant Reservoir And Shroud Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the **auto-tensioner**.
11. Disconnect the alternator connector (A) and the positive alternator cable (B) from the alternator.

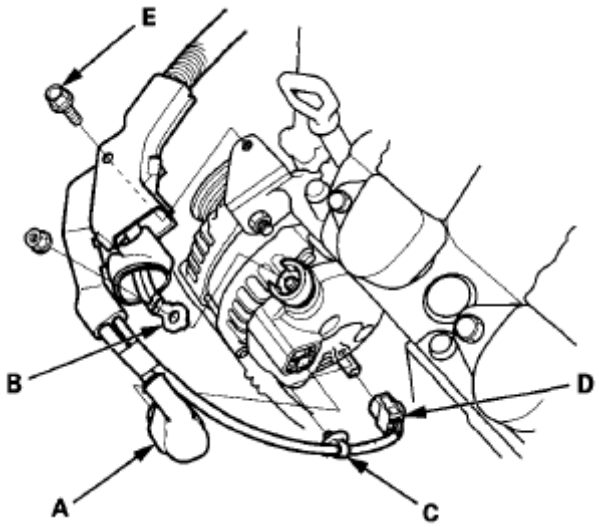

Fig. 21: Identifying Alternator Connector, Cable, Harness Clamp, Clutch Connector And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the harness clamp (C) from the alternator and disconnect the A/C compressor clutch connector (D) from the A/C compressor.
13. Remove the bolt (E) securing the harness holder.
14. Remove the mounting bolt (A) and the alternator bracket mounting bolt (B), then remove the alternator.

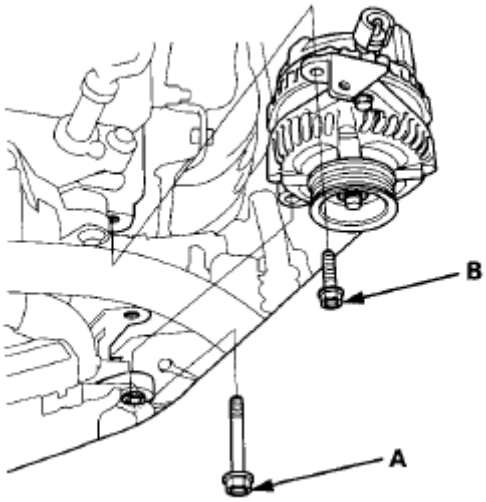

Fig. 22: Identifying Mounting Bolt And Alternator Bracket Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Install the alternator, then tighten the mounting bolt (A) and the alternator bracket mounting bolt (B).

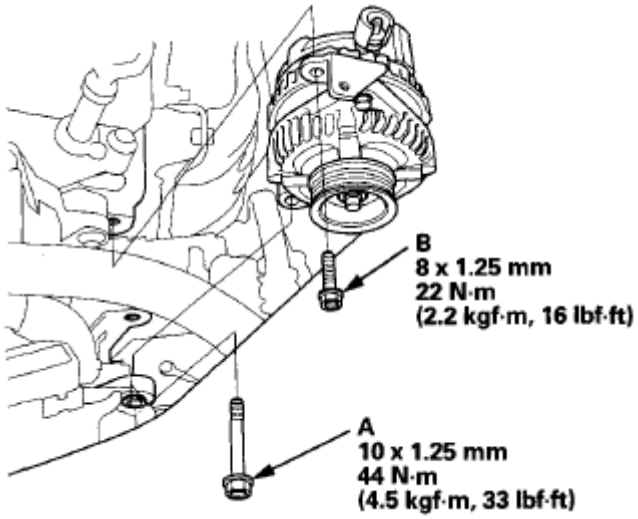

Fig. 23: Identifying Mounting Bolts On Alternator With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the bolt (A) securing the harness holder.

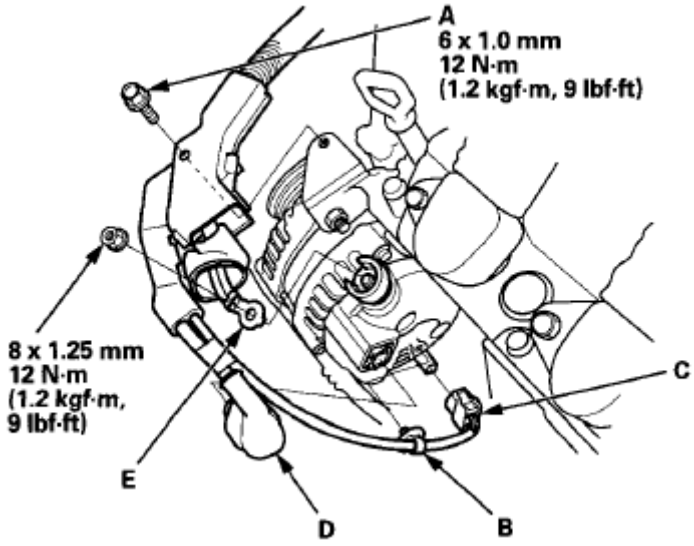

Fig. 24: Identifying Alternator And Related Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the harness clamp (B) to the alternator and connect the A/C compressor clutch connector (C) to the A/C compressor.
4. Connect the alternator connecter (D) and the positive alternator cable (E) to the alternator. Make sure the crimped side of the ring terminal faces away from the alternator when you connect it.
5. Install the **auto-tensioner**.
6. Install the A/C condenser fan shroud assembly (A), then install the coolant reservoir (B).

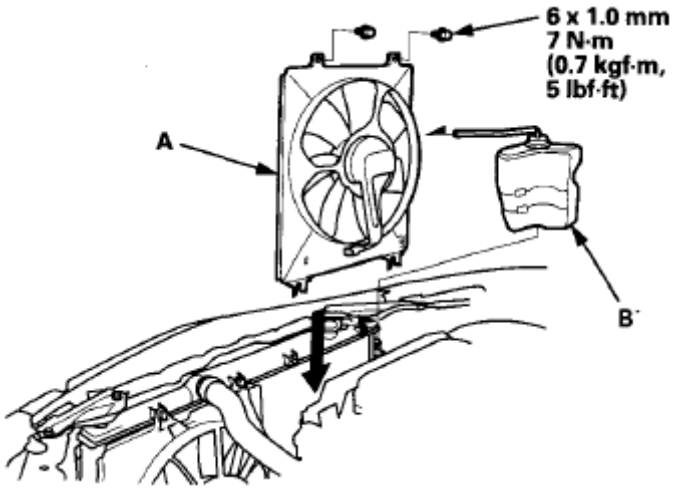

Fig. 25: Identifying Fan Shroud Assembly And Coolant Reservoir With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Raise the vehicle on the lift.
8. A/T model: Install the hose clamp (A).

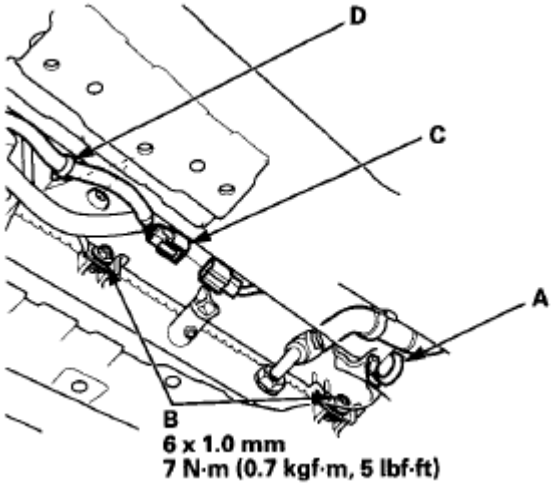

Fig. 26: Identifying Hose Clamp, Mounting Bolts And Motor Connector With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Tighten the A/C condenser fan shroud mounting bolts (B).
10. Connect the A/C condenser fan motor connector (C), and install the harness clamp (D).
11. Install the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
12. Lower the vehicle on the lift.
13. Do the battery terminal reconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
14. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

ALTERNATOR OVERHAUL

EXPLODED VIEW

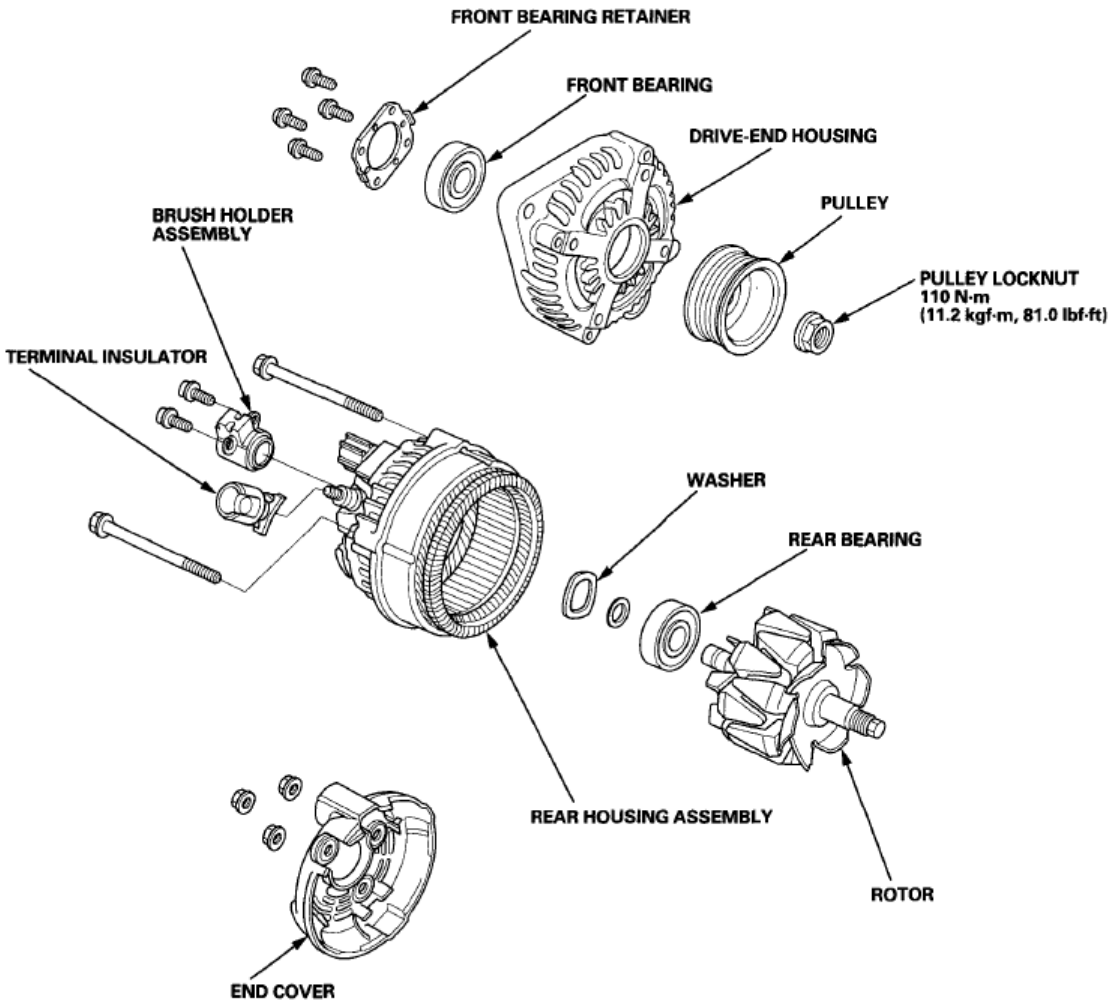

Fig. 27: Exploded View Of Alternator With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Driver Handle, 15 x 135L 07749-0010000
- Bearing Driver Attachment, 42 x 47 mm 07746-0010300

NOTE: Refer to the Exploded View if needed during this procedure.

1. Test the **alternator and regulator** before you remove them.
2. Remove the **alternator**.

Alternator Disassembly

3. If the front bearing needs replacing, remove the pulley locknut with a 10 mm wrench (A) and a 22 mm wrench (B). If necessary, use an impact wrench.

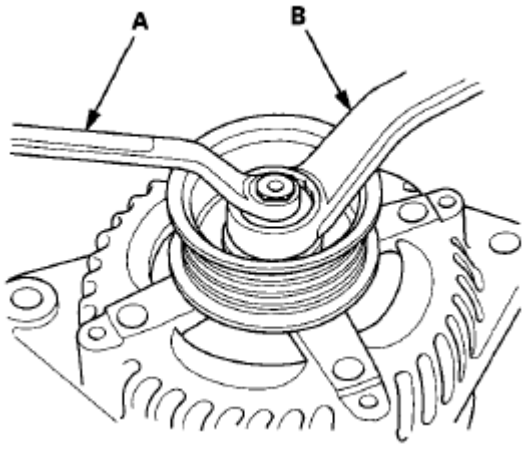

Fig. 28: Identifying Wrenches And Locknut Of Alternator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the three flange nuts.

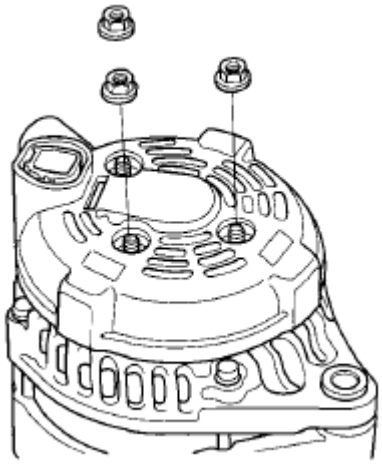

Fig. 29: Identifying Flange Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the end cover (A) and the terminal insulator (B).

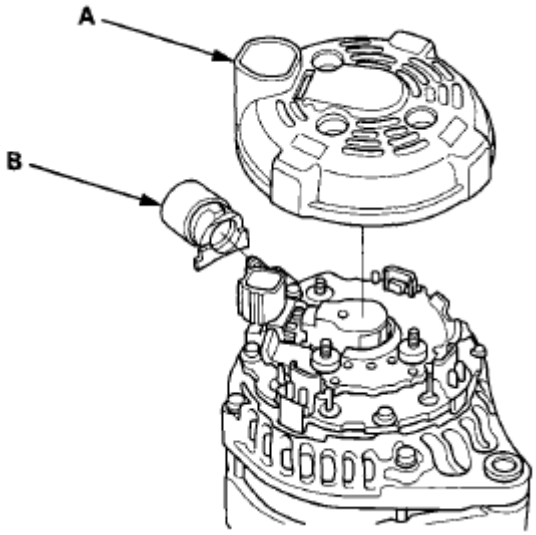

Fig. 30: Identifying End Cover And Terminal Insulator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the brush holder assembly (A).

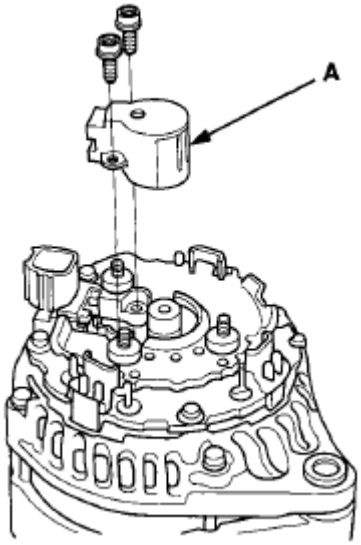

Fig. 31: Identifying Brush Holder Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the four through bolts, then remove the rear housing assembly (A) and the washer (B).

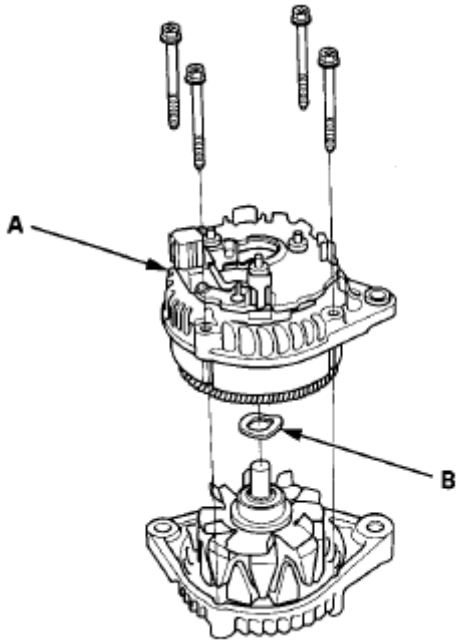

Fig. 32: Identifying Rear Housing Assembly And Washer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. If you are not replacing the front bearing, go to step 13. Remove the rotor from the drive-end housing.

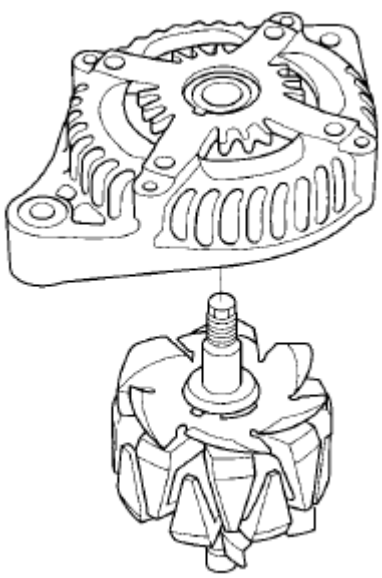

Fig. 33: Identifying Drive End Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Inspect the rotor shaft for scoring, and inspect the bearing journal surface in the drive-end housing for seizure marks:
    - If the rotor is damaged, replace the rotor assembly.

- If the rotor is OK, go to step 10.

10. Remove the front bearing retainer.

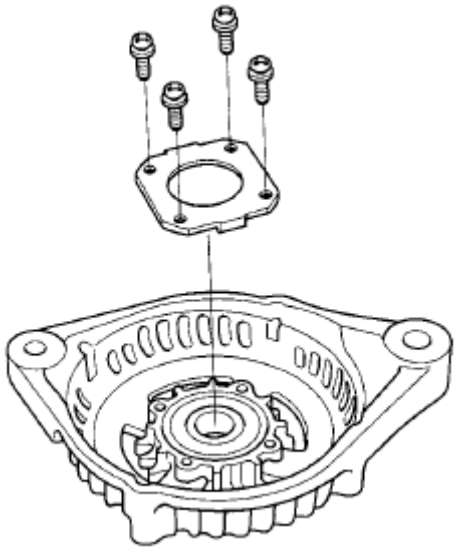

Fig. 34: Identifying Front Bearing Retainer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Drive out the front bearing with a brass drift and a hammer.

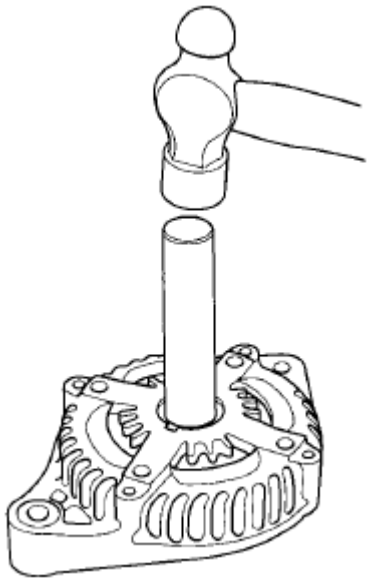

Fig. 35: Driving Out Front Bearing With Brass Drift And Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install a new front bearing in the drive-end housing with a hammer, the driver handle, 15 x 135L, and the bearing driver attachment, 42 x 47 mm.

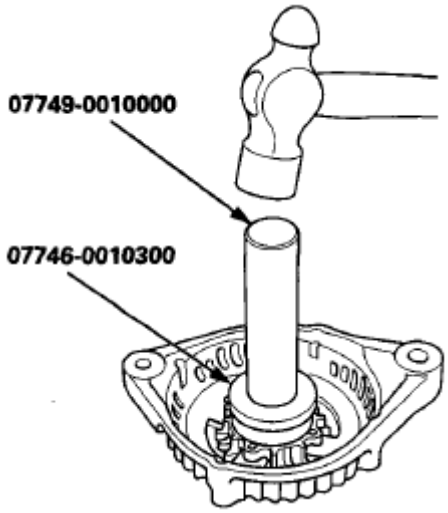

Fig. 36: Installing Front Bearing In Drive End Housing Using Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Alternator Brush Inspection

13. Measure the length of both brushes (A) with a vernier caliper (B):
    - If either brush is shorter than the service limit, replace the brush holder assembly.
    - If the brush length is OK, go to step 14.

Alternator Brush Length

Standard (New): 10.5 mm (0.413 in)

Service Limit: 1.5 mm (0.059 in)

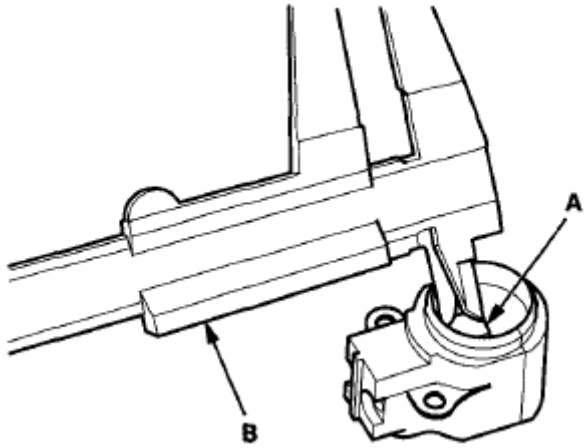

Fig. 37: Identifying Brushes In Alternator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rotor Slip Ring Test

14. Check for continuity between the slip rings (A):
    - If there is continuity, go to step 15.
    - If there is no continuity, replace the rotor assembly.

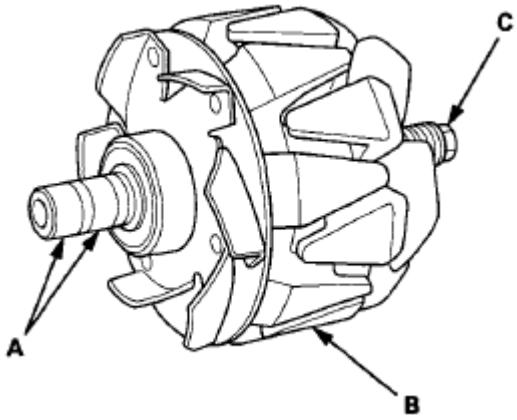

Fig. 38: Identifying Slip Rings, Rotor And Rotor Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Check for continuity between each slip ring and the rotor (B) and the rotor shaft (C):
    - If there is no continuity, go to step 16.
    - If there is continuity, replace the rotor assembly.

Alternator Reassembly

16. If you removed the pulley, put the rotor in the drive-end housing, then torque its locknut to 110 N.m (11.2 kgf.m, 81 lbf.ft).
17. Remove any grease or any oil from the slip rings.
18. Put the rear housing assembly and the drive-end housing/rotor assembly together, tighten the four through bolts.
19. Push the brushes (A) in, then insert a pin or drill bit(B) (about 1.6 mm (1/16 in) diameter) to hold them there.

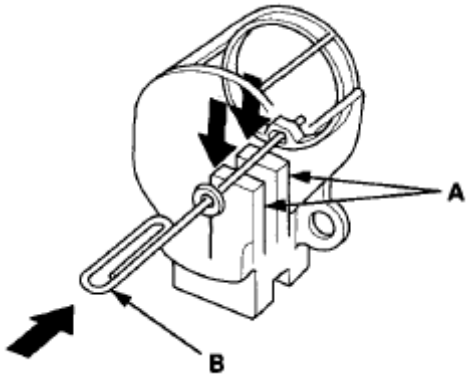

Fig. 39: Pushing Brushes Inwards
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Install the brush holder assembly, and pull out the pin or drill bit.

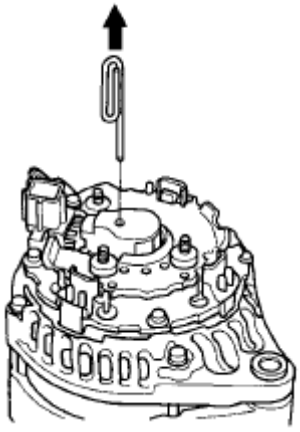

Fig. 40: Pulling Out Pin Or Drill Bit
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Install the end cover.
22. After assembling the alternator, turn the pulley by hand to make sure the rotor turns smoothly and without noise.
23. Install the **alternator**.

2012 ELECTRICAL

Connectors And Harnesses - TL

CONNECTOR INDEX

Identification numbers have been assigned to in-line connectors, junction connectors, and terminals. The number is preceded by the letter "C" for connectors, "G" for ground terminals, or "J" for non-ground terminals.

Harness	Location			
	Engine Compartment	Dashboard	Others (Floor, Door, Trunk, and Roof)	Notes
A/C wire harness		C205, C301, C302, C403, C501		Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Audio wire harness		C406, C407, C501 through C510 G501, G502		Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Battery ground cable	(-), G1			Connector to Harness: • **M/T**. • **A/T** (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Cable reel subharness			T9	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Console subharness			C405	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Dashboard wire harness (view of driver's side)		C304, C305, C306, C401, C402, C751, C752 G401, G402		Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Dashboard wire harness (view of middle to passenger's side)		C206, C207, C208, C403, C406 through C411, C761 G403, G405	C404, C405 G404	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Driver's door			C753,	Connector to Harness (see **CONNECTOR TO FUSE/RELAY**

subharness			C754, C756	**BOX INDEX**)
Driver's door wire harness		C751, C752	C753, C754, C755	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Driver's seat wire harness (with seat ventilation)			C701	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Driver's seat wire harness (without seat ventilation)			C701	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Engine ground cable	T1, G2			Connector to Harness: • **M/T**. • **A/T** (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Engine wire harness (transmission section)				Connector to Harness: • **M/T** (see **CONNECTOR TO FUSE/RELAY BOX INDEX**) • **A/T** (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Engine wire harness (engine section)	C101 through C107 T4, T102 G101			Connector to Harness: • **M/T** (see **CONNECTOR TO FUSE/RELAY BOX INDEX**) • **A/T** (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
EPS subharness	C202, C203 T6, T7, T8			Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Front passenger's door wire harness		C761	C762	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Front passenger's seat wire harness			C702	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Knock sensor	C104			Connector to Harness: • **M/T** (see **CONNECTOR TO FUSE/RELAY BOX**

subharness				**INDEX**) • **A/T** (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Left engine compartment wire harness (dashboard branch)		C301 through C307 G302		Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Left engine compartment wire harness (engine compartment branch)	C101, C102, C201 G301			Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Left rear door wire harness			C771	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Left side wire harness (without SH-AWD)		C303, C401	C601, C603, C771 G601, G602, G603	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Left side wire harness (with SH-AWD)		C303, C401	C601, C602, C603, C771 G601, G602, G603	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Moonroof subharness			C451	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Rear differential subharness (with SH-AWD)			C652, C653 T10	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Rear window defogger ground wire			G801	Connector to Harness: **Without SH-AWD** (see **CONNECTOR TO FUSE/RELAY BOX INDEX**) **With SH-AWD** (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Right engine compartment wire harness	C201, C202, C203 G202	C204 through C208 G203, G204		Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Right rear door wire harness			C781	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Right side wire harness (without		C410, C411,	C601, C781,	Connector to Harness (see **CONNECTOR TO FUSE/RELAY**

SH-AWD)		C509, C510	G651, G653	**BOX INDEX**)
Right side wire harness (with SH-AWD)		C410, C411, C509, C510	C601, C602, C651, C652, C653, C781 G651, G652, G653	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Roof wire harness			C402, C451	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
SRS floor wire harness			C404, C701, C702 G701, G702	Connector to Harness (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Starter cable	(+), T3, T101			Connector to Harness: • **M/T**. • **A/T** (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)
Transmission ground cable	T2, G3			Connector to Harness: • **Table 1. M/T**. • **A/T** (see **CONNECTOR TO FUSE/RELAY BOX INDEX**)

2012 ELECTRICAL

Ground Distribution - TL

GROUND TO COMPONENTS INDEX

Ground	Component or circuit grounded
G1	Battery
G2	Engine
G3	Transmission housing
G101	A/T clutch pressure control solenoid valve A, B, C, D, CKP sensor, CMP sensor, ECM/PCM (PGMETCS), ECM/PCM (LG1), ECM/PCM (LG2), ECM/PCM (PG1), ECM/PCM (PG2), EGR valve. Ignition coils. Line pressure solenoid valve A, Rocker arm oil pressure switch, Shift solenoid valve A, B, C, Transmission range switch, Shielding between the ECM/PCM and the front A/F sensor (Bank 2, Sensor 1), Shielding between the ECM/PCM and the front secondary HO2S (Bank 2, Sensor 2), Shielding between the ECM/PCM and the knock sensor. Shielding between the ECM/PCM and the rear A/F sensor (Bank 1, Sensor 1), Shielding between the ECM/PCM and the rear secondary HO2S (Bank 1, Sensor 2)
G202	VSA modulator-control unit
G203	Headlight washer motor(1). Passenger's MICU (SG), Right fog light, Right front side marker light. Right front turn signal light. Right front parking light, Right headlight (High), Right headlight (Low), Steering gear box (3 wires), Washer fluid level switch(2), Windshield washer motor
G204	EPS control unit (2 wires)
G301	Clutch pedal position switch A(9), Clutch pedal position switch B(9), Driver's under-dash fuse/relay box (starter cut relay 1 circuit)(9). Electrical load detector (ELD), Fan control relay circuit. Radiator fan motor, Under-hood fuse/relay box (wiper relay circuit). Windshield wiper motor
G302	Blower motor relay. Brake fluid level switch. Left fog light. Left front parking light. Left front turn signal light, Left front side marker light. Left headlight (High), Left headlight (Low), Power transistor. Security hood switch
G401	Automatic dimming inside mirror. Cable reel. Data link connector (DLC), Driver's MICU (SG) (2 wires), Driver's door lock knob switch/key cylinder switch, Driver's door outer handle touch sensor(3), Driver's power window motor. Driver's vanity mirror light. Driving position memory switch. Front passenger's power window motor, Front passenger's power window switch. Gauge control module. Headlight washer switch(1), Left power mirror (2 wires), Moonroof switch, HFL-Navigation microphone(4), Paddle shifter- (downshift switch), Passenger's MICU (SG), Passenger's vanity mirror light, Power mirror control unit. Power mirror switch (2 wires), Power window master switch, Rear individual map lights, Roof console. Steering angle sensor(5). Trunk lid opener/Fuel fill door opener switch, VSA OFF switch. Shielding between the driver's under-dash fuse/relay box and the moonroof control unit/motor
	BSI off switch(10), Dashlights brightness controller switch. Gauge control module. High mount brake light. Keyless access control unit (2 wires)'3. Left BSI alert indicator(10), Power window

G402	master switch, Driver's MICU (PG) (2 wires), Data link connector (DLC), MICU service check connector. Power control unit (2 wires)(3)
G403	Climate control unit, Console box light. Driver's climate control switch, Remote slot (2 wires)(3). Front accessory power socket, Front accessory power socket relay. Ignition key switch(8), Moonroof control unit/motor, Park pin switch. Rear accessory power socket, Rear accessory power socket relay, TPMS control unit, Yaw rate-lateral acceleration sensor(6). Yaw rate-lateral/longitudinal acceleration sensor(5), +B cut relay(9)
G404	SRS unit (2 wires)
G405	Cruise control combination switch/select/reset/information switch, Driver's seat heater switch(11). Electric steering lock(3). Engine start/stop switch(3). Remote slot control unit (2 wires)(3). Front passenger's door lock knob switch, Front passenger's door outer handle touch sensor(3), Front passenger's power window switch. Front passenger's seat heater switch(11), Horn switch. Paddle shifter-f- (upshift switch), Passenger's climate control switch. Passenger's MICU (PG), Right BSI alert indicator(10), Right power mirror (2 wires). Seat ventilation control unit(12)
G501	AcuraLink connector(13), AcuraLink control unit (XM receiver)(13), Audio-HVAC display unit(7), Audio-navigation switch panel(4), Glove box light, HandsFreeLink control unit. Interface dial(4). Keyless access system mode switch(3), Navigation display unit(4). Trunk lid opener main switch
G502	Audio-navigation unit(4), Audio unit(7)
G601	Accessory relay(3). Driver's under-dash fuse/relay box (door lock relay circuit). Front accessory power socket relay(8), Left rear door lock knob switch. Left rear power window switch
G602	Fuel pump
G603	BSI control unit(10), Fuel fill door opener solenoid. Keyless buzzer. Left back-up light. Left brake light/taillight. Left BSI radar unit(10). Left rear side marker light. Left rear turn signal light. License plate lights, Rear window defogger noise condenser. Right back-up light. Right brake light/taillight. Right BSI radar unit*10. 2009-11 ELECTRICAL

OEM Wiring Diagram General Information - All Models

HOW TO USE THIS SERVICE INFORMATION

Information below describes how this service information is organized. They also explain what kind of information the articles contain, what the information means, and how to use it to troubleshoot electrical problems.

Circuit schematics break the entire electrical system into individual systems, such as the Back-up Lights. See **Fig. 1**. Only electrical components that work together are shown together, so you will not be distracted by unrelated wires.

Explanations of the abbreviations and symbols used in the schematics begin at **Symbols**. You will need to know what they mean before you can use a schematic effectively.

CIRCUIT SCHEMATICS

Each schematic represents one circuit. A circuit's wires and components are arranged to show current flow, from power at the top of the illustration, to ground at the bottom.

Shared Circuits

Other circuits may share power or ground terminals or wiring with the circuit shown. A wire that connects one circuit to another, for example, is cut short and has an arrowhead at the end of it pointing in the direction of current flow. Next to the arrowhead is the name of the circuit or component which shares that wiring. To quickly check shared wiring, check the operation of a component it serves. If that component works, you know the shared wiring is OK.

Connectors

All in-line and junction connectors are numbered (C725, C416, etc.). Component connectors are not numbered but are identified either by the name of the component if the component only has one connector, or by a capital letter (A, B, C, etc.) if the component has more than one connector.

Below most connector numbers and component names are PHOTO and VIEW numbers. The PHOTO number refers to a photograph in the appropriate OEM COMPONENT LOCATION article of this service information that shows the connector's location on the vehicle. The VIEW number refers to an illustration in OEM CONNECTOR TERMINAL VIEWS article of this service information that shows the connector terminals, wire colors, connector cavity numbers, and other details.

The connector cavity numbering sequence begins at the top left corner of the connector as seen from either of the viewpoints shown in **CONNECTORS - "C"**. Except for the DLC (data link connector), disregard any numbers molded into the connector housing.

Wires

Wires are identified by the abbreviated names of their colors; the second color is the color of the stripe. Wires also are identified by their location in a connector. The number "2" next to the male and female wire terminals at C554, for example, means those terminals join in cavity 2 of connector C554.

Symbols

A complete description of schematic symbols begins in **Symbols**.

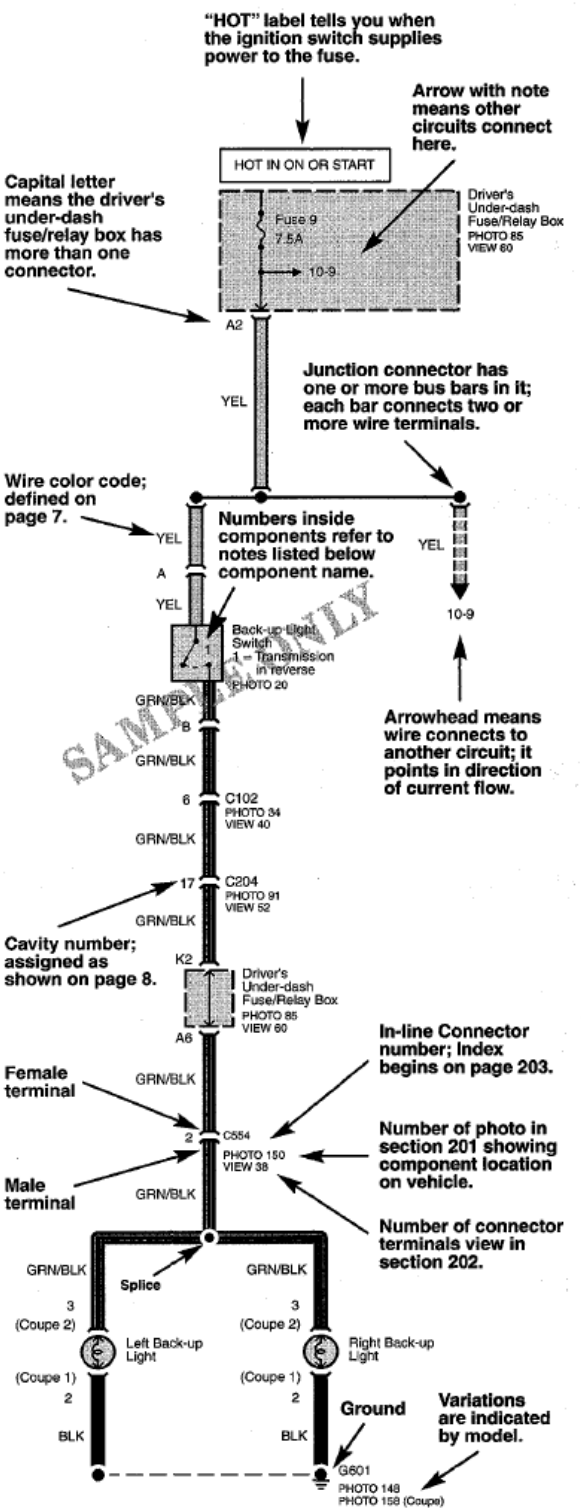

Fig. 1: Circuit Schematics Sample

POWER DISTRIBUTION SCHEMATICS

Power Distribution schematics show how power is supplied from the positive battery terminal to various

circuits in the vehicle. Refer to the appropriate POWER DISTRIBUTION diagram in OEM CIRCUIT DIAGRAMS article to get a more detailed understanding of how power is supplied to the circuit that you are working on.

Individual circuit schematics begin with a fuse. So, if Power Distribution shows that an inoperative circuit and another circuit share a fuse, check a component in the other circuit. If it works, you know the fuse is good and power is available to the inoperative circuit.

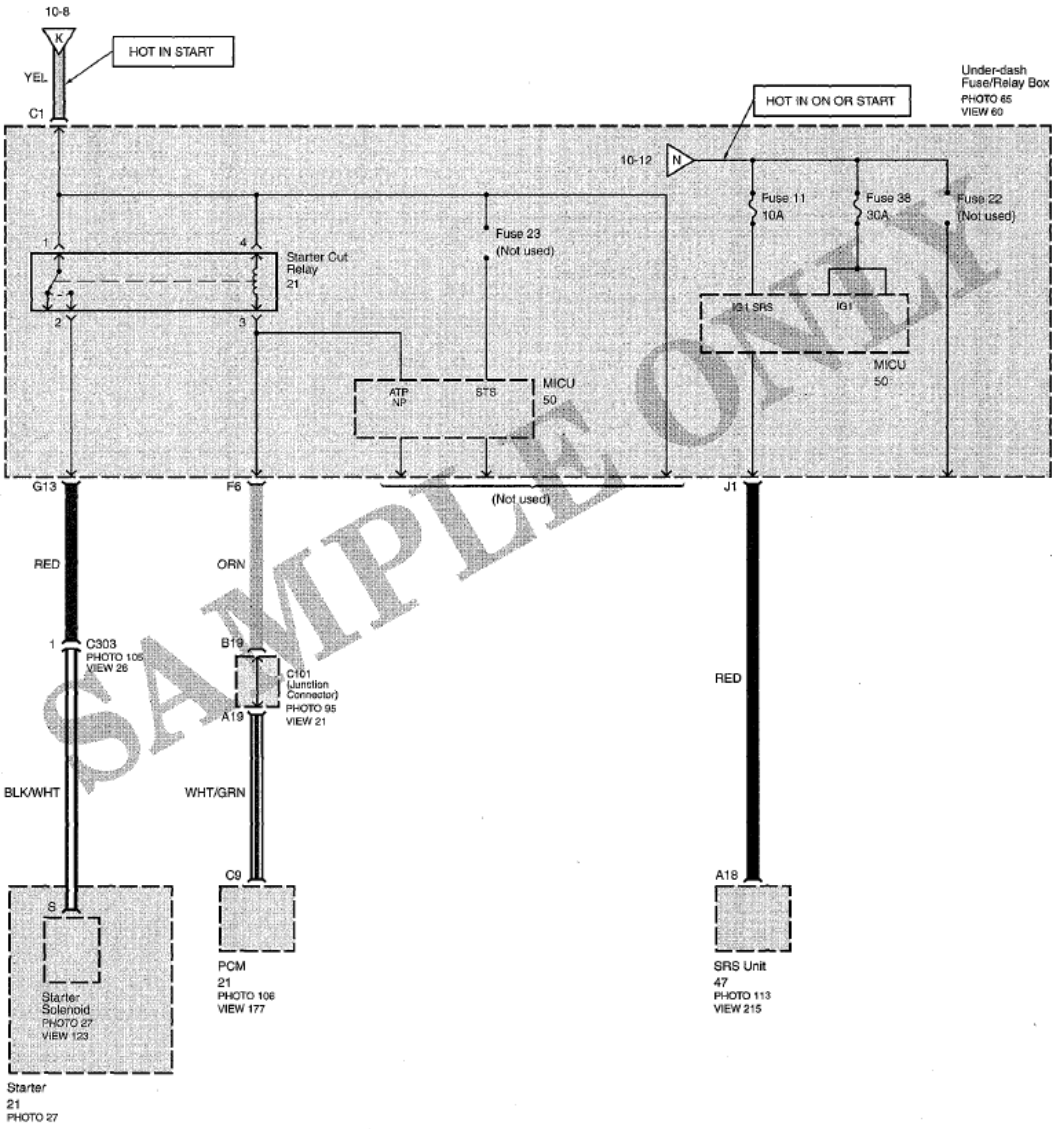

Fig. 2: Power Distribution Schematic Sample

GROUND DISTRIBUTION SCHEMATICS

This sample Ground Distribution schematic shows all of the components that share the same ground point.

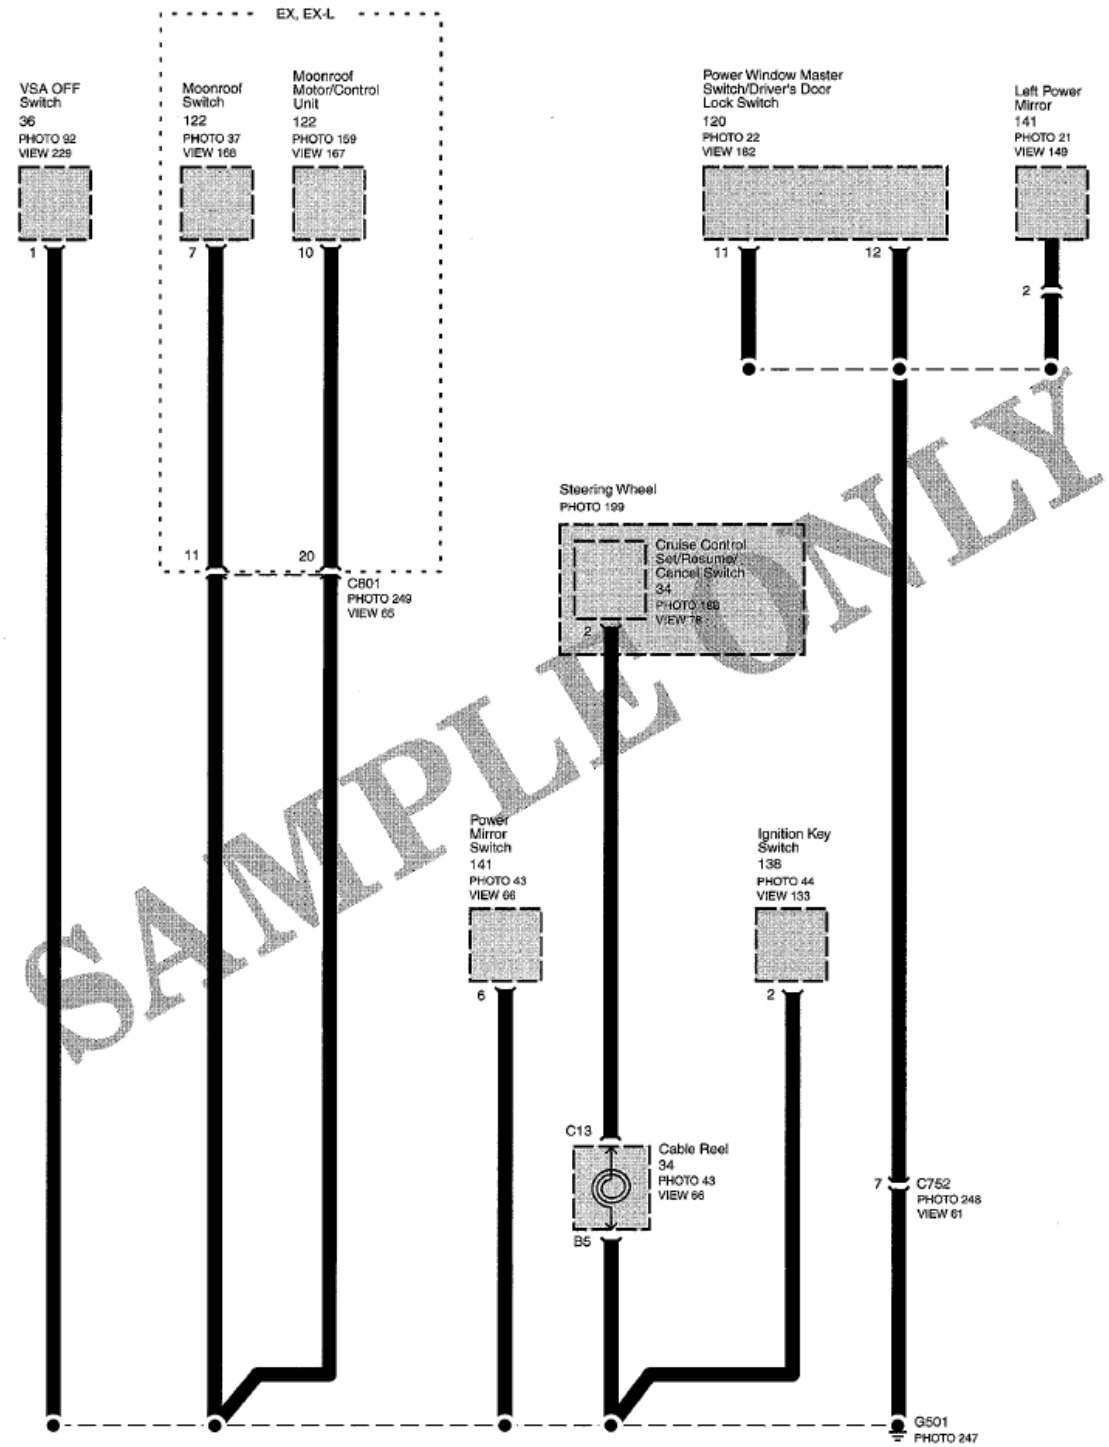

Fig. 3: Ground Distribution Schematic Sample

CONNECTOR LOCATIONS

To see where a component or connector is located on the vehicle, look up its photo number in the appropriate OEM COMPONENT LOCATION article. The photo also will tell you the color of the connector, and how many cavities it has.

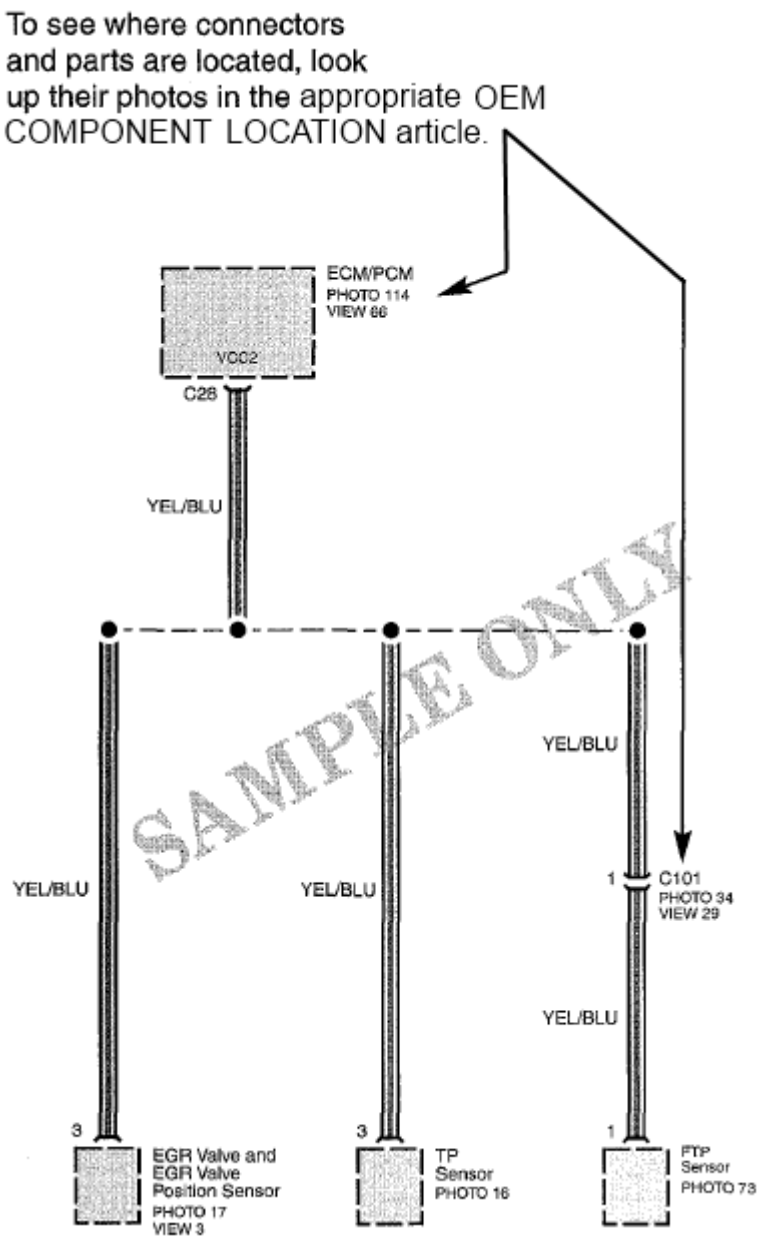

Fig. 4: Connector Location Sample

If there is no photo number below or beside a component name or a connector, ground, or terminal number, look up that name or number in the appropriate OEM CONNECTOR TO HARNESS LOCATIONS article. The chart lists how many cavities a connector has, where it is located, and what it connects to. The related illustration shows the connector's location on the harness and the harness routing.

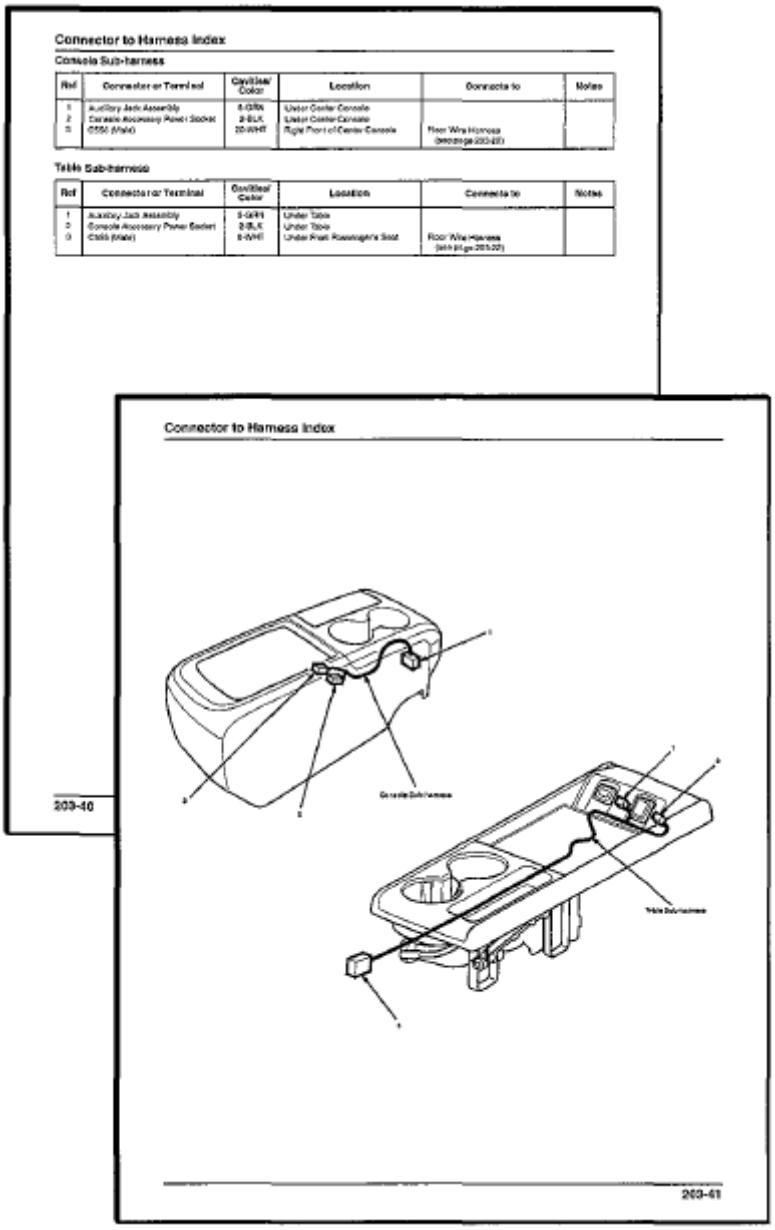

Fig. 5: Connector And Harness Location Sample

CONNECTOR TERMINAL VIEWS

To see the configuration of a connector's cavities, look up its view number in the appropriate OEM CONNECTOR TERMINAL VIEWS article. Each view includes the color of the connector, where it is located, and what it connects to.

Use the connector views to help locate the proper cavity when you need to test a connector. They can be especially helpful if the connector has more than one wire of the same color. A dash symbol (-) indicates that the cavity is empty. The connector views also can be used to help diagnose multiple symptoms in separate circuits that could be caused by a single problem in a connector shared by those circuits. Here is how:

1. Pick one of the multiple symptoms and look up the schematic for that circuit.
2. Make a list of all of the in-line and fuse box connectors in that schematic.
3. Then, in the appropriate OEM CONNECTOR TERMINAL VIEWS article, look up each connector on your list to see if circuits related to the other symptoms run through one of them. If they do, inspect that connector for the problem.

Example: The blower, rear window defogger, and the windshield wiper do not work. List all in-line and fuse box connectors in the blower controls circuit, and then check the appropriate OEM CONNECTOR VIEWS article (sample below). You find that C324 is common to the rear window defogger circuit and wiper/washer circuit, so you inspect C324 and find the problem, damaged terminals.

SYMBOLS

Wire Color Abbreviations

The following abbreviations are used to identify wire colors in the circuit schematics:

WIRE COLOR ABBREVIATIONS CHART

BLK	black
BLU	blue
BRN	brown
GRN	green
GRY	gray
LT BLU	light blue
LT GRN	light green
NAT	natural
ORN	orange

PNK	pink
PUR	purple
RED	red
TAN	tan
WHT	white
YEL	yellow

Wires

Wire insulation can be one color, or one color with another color stripe. (The second color is the color of the stripe.)

Fig. 7: Wire Insulation Symbol

This circuit continues on another illustration or at a different location in the same illustration. The arrow shows direction of current flow. To follow the RED/BLK wire in these examples, you would look for the "A" arrow on the following illustration or on the current illustration.

Fig. 8: Current Flow Direction Symbol (Following Illustration)

Fig. 9: Current Flow Direction Symbol (Current Illustration)

This means that the branch of the wire connects to another circuit. The arrow points to the name of the circuit branch where the wire continues.

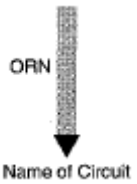

Fig. 10: Wire Circuit Connection Symbol

A broken line means that this part of the circuit is not shown; refer to the appropriate diagram in OEM CIRCUIT DIAGRAMS for the complete schematic.

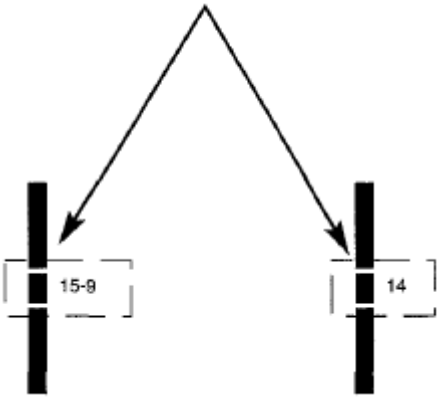

Fig. 11: Broken Line Symbol (Circuit Not Shown)

Where separate wires join, only the splice is shown; for details on the additional wiring, refer to the appropriate diagram in OEM CIRCUIT DIAGRAMS.

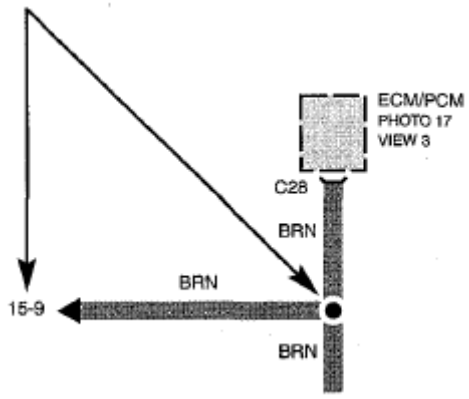

Fig. 12: Separate Wires Connection Symbol

Wire choices for options or different models are labeled and shown with a "choice" bracket like this.

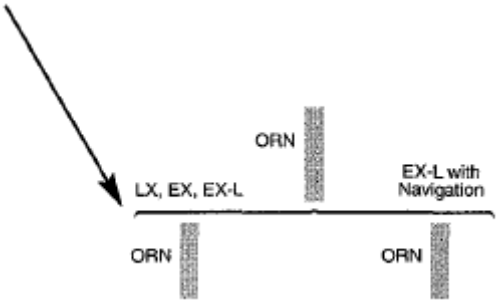

Fig. 13: Wire Choices Symbol

This broken line means that both terminals are in connector C134.

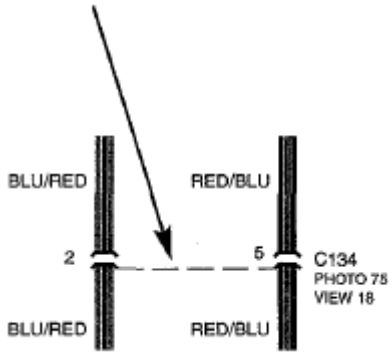

Fig. 14: Broken Line Symbol (Terminals Are In Connector C134)

Connectors - "C"

The cavities and wire terminals in each connector are numbered starting from the upper left (locking tab up), looking at the male terminals from the **terminal** side or looking at the female terminals from the **wire** side. Both views are in the same direction, so the numbers are the same. The gender of the connector is determined by the pins within the connector. All cavities are numbered, even if they have no wire terminals in them.

NOTE: DLC terminals are numbered according to SAE standard J1962, not the Honda standard. The numbers of the four end terminals are molded into the corners of the connector face.

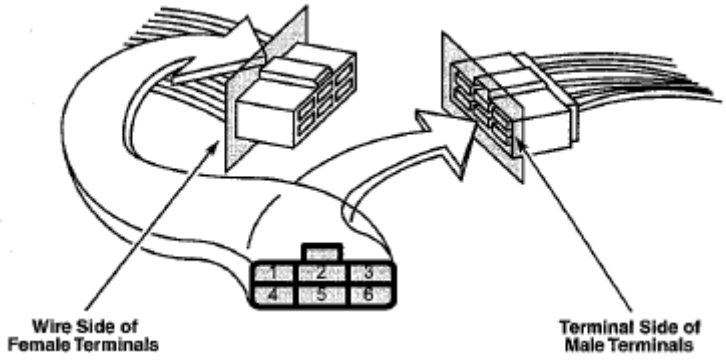

Fig. 15: Connector Male Terminals And Female Terminals Symbol

The connector cavity number is listed next to each terminal on the circuit schematic. The cavity/terminal shown to the right is #6.

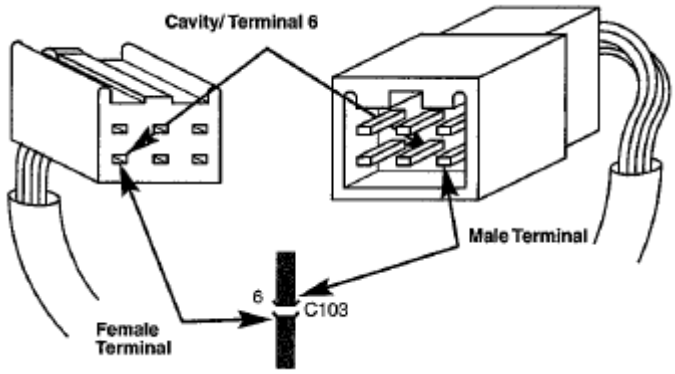

Fig. 16: Cavity/Terminal Symbol

This means that the connector connects directly to the component.

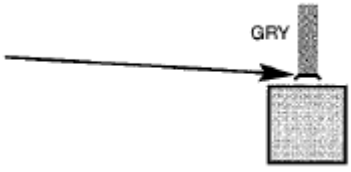

Fig. 17: Connector Symbol - Connects Directly To Component

This means that the connector connects to a lead (pigtail) that is wired directly to the component.

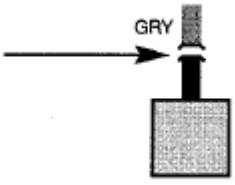

Fig. 18: Connector Symbol - Connects To Lead (Pigtail)

This symbol represents one bus bar inside the cap of a junction connector. A **junction** connector cap may contain several bus bars, but only the one affecting that circuit will be shown. The dots represent tabs on the bar that the wire terminals connect to.

Remaining wires to the same bus bar are represented by a dashed line.

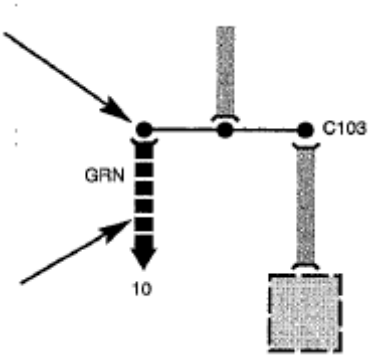

Fig. 19: Junction Connector Symbol

Splices

Splices are shown as a dot. Their location and the number of wires may vary depending on the harness manufacturer.

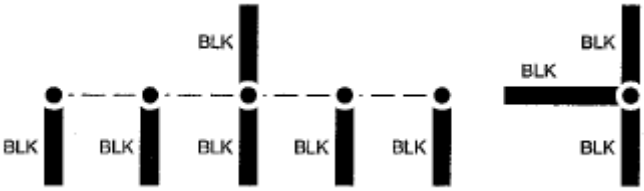

Fig. 20: Splices Symbol

Components

A solid border line means that the entire component is shown.

Fig. 21: Components Symbol (Entire Component Is Shown)

A broken border line indicates that only part of the component is shown.

Fig. 22: Components Symbol (Only Part Of Component Is Shown)

The name of the component appears next to it followed by notes about its function along with any photo and connector view references.

Fig. 23: Component Name And Function Symbol

Ground - "G"

This symbol means that the end of the wire is attached (grounded) to the vehicle's frame or to a metal part connected to the frame.

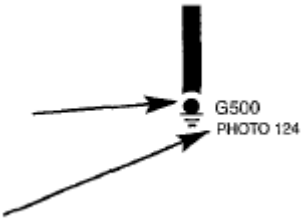

Fig. 24: Wire Ground Symbol

Each wire ground (G) is numbered for reference.

This ground symbol (dot and 3 lines) overlapping the component means that the housing of the component is grounded to the vehicle's frame or to a metal part connected to the frame.

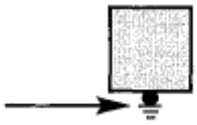

Fig. 25: Ground Symbol (End Of Wire Grounded)

This symbol represents the bus bar inside a **ground** connector. The dots represent tabs on the bus bar that the wire terminals connect to. The ground symbol (large dot) is the connection between the bus bar and metal (grounded) part of the vehicle.

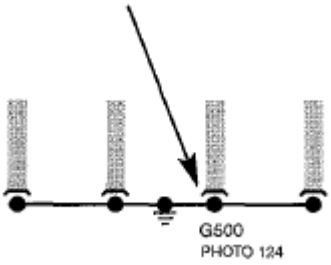

Fig. 26: Ground Symbol (Bus Bar Inside Ground Connector)

Terminals - "T"

Each "T" terminal (ring type) is numbered for reference and location. A "T" terminal is secured with a screw or bolt.

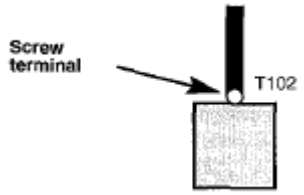

Fig. 27: Terminal Symbol

Shielding

This diagram represents RFI (Radio Frequency Interference) shielding around a wire.

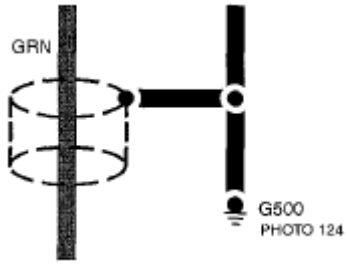

Fig. 28: Shielding Symbol

Switches

These switches move together; the broken straight line between them means that they are mechanically connected.

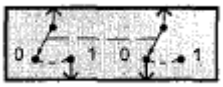

Fig. 29: Switches Symbol (Switches Move Together)

Other types of switches are controlled by a coil or a solid state circuit. Unless otherwise noted, all switches are shown in their normal (rest) position, with power off.

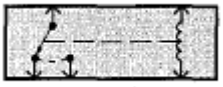

Fig. 30: Switches Symbol (Coil Circuit)

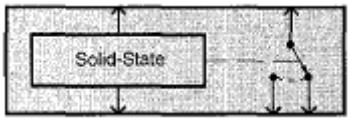

Fig. 31: Switches Symbol (Solid State Circuit)

Fuses

This means that power is supplied when the ignition switch is in ON (II).

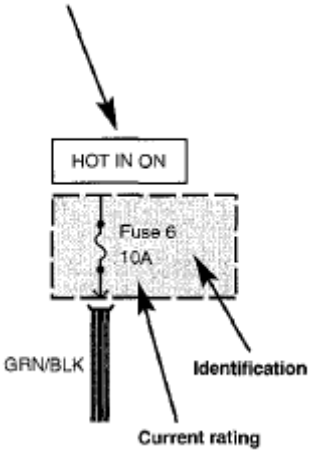

Fig. 32: Fuse Symbol

Diodes

A rectifier diode works like a one way valve. It allows current to flow only in the direction of the arrow.

Fig. 33: Rectifier Diode Symbol

A Zener diode blocks reverse current at normal voltages as does a rectifier diode. At high voltages, however, a Zener diode allows current to flow in reverse.

Fig. 34: Zener Diode Symbol

Light Emitting Diode (LED)

LEDs are special diodes that emit light when connected in a circuit. LEDs work the same as a rectifier diode by allowing current to flow only in one direction.

Fig. 35: Light Emitting Diode Symbol

Light

Light Sockets have two methods of wiring:

1. They can be wired to a connector, which then hooks up to the socket
2. They can be hardwired directly to the socket.

Fig. 36: Light Symbol (Wired To Connector)

Fig. 37: Light Symbol (Hardwired Directly)

Motor

This symbol represents a DC voltage electrical motor. Motors can reverse direction by changing the polarity of the voltage.

Fig. 38: Motor Symbol

Pressure Sensor

A variable resistor is used to monitor the difference in pressure between the intake manifold and outside atmosphere (MAP Sensor). This information is used by the engine computer to monitor engine load (vacuum drops when the engine is under load or at wide open throttle). When the engine is under load, the computer alters spark timing and the fuel mixture to control performance and emissions.

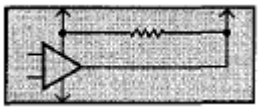

Fig. 39: Pressure Sensor Symbol

NOTE: There is also an FTP (Fuel Tank Pressure) Sensor that is used to monitor EVAP System testing.

Resistor

This symbol represents a component in electrical circuits that resists the flow of electrical current. Resistance is measured in Ohms. Higher resistance results in less current flow. This type of resistor has a fixed resistance value.

Fig. 40: Resistor Symbol

Variable Resistor

This symbol represents a component in electrical circuits that resists the flow of electrical current. Resistance is measured in Ohms. Higher resistance results in less current flow. This type of resistor (thermistor) has a variable resistance value that changes with temperature. The resistance of a thermistor decreases as temperature increases.

Fig. 41: Variable Resistor Symbol

Solenoid

An electromagnet is produced by current flowing through a coil of wire. A plunger inside the wire coil is moved by the electromagnet, turning ON or OFF.

Fig. 42: Solenoid Symbol

Transistors

Transistors are electrical devices that have two key properties:

1. They can amplify an electrical signal, and
2. They can switch ON and OFF, letting current through or blocking it as necessary.

Fig. 43: Transistor Symbol

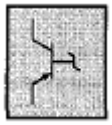

Fig. 44: Transistor Symbol

FIVE STEP TROUBLESHOOTING

Verify the Complaint

Turn on all the of components in the problem circuit to check the accuracy of the customer complaint. Note the symptoms. Do not begin disassembly or testing until you have narrowed down the problem area.

Analyze the Schematic

Look up the schematic for the problem circuit. Determine how the circuit should work by tracing the current paths from the power source through the circuit components to ground (certain circuits contain a "How the Circuit Works" article). Also, trace circuits that share wiring with the problem circuit. The names of circuits that share the same fuse, ground, or switch, and so on, are referred to in each circuit schematic. Try to operate any shared circuits that you did not check in step 1. If the shared circuits work, the shared wiring is OK, and the cause must be in the wiring used only by the problem circuit. If several circuits fail at the same time, the fuse or ground is a likely cause.

Based on the symptoms and your understanding of the circuit's operation, identify one or more possible causes.

Isolate the Problem by Testing the Circuit

Make circuit tests to check the diagnosis that you made in step 2. Keep in mind that a logical, simple procedure is the key to efficient troubleshooting. Test for the most likely cause of failure first. Try to make tests at points that are easily accessible.

Fix the Problem

Once the specific problem is identified, make the repair. Be sure to use proper tools and safe procedures.

Make Sure the Circuit Works

Turn on all components in the repaired circuit in all modes to make sure that you have fixed the entire problem.

If the problem was a blown fuse, be sure to test all of the circuits on that fuse. Make sure that no new problems turn up and that the original problem does not recur.

TEST EQUIPMENT

CAUTION: Most circuits include solid-state devices. Test the voltages in these circuits only with a 10-megaohm or higher impedance digital multimeter. Never use a test light or analog meter on circuits that contain solid-state devices. Damage to the devices may result.

Test Light and DVOM

On circuits without solid-state devices, use a test light to check for voltage. A test light is made up of a 12 volt bulb with a pair of leads attached. After grounding one lead, touch the other lead to various points along the circuit where voltage should be present. The bulb will glow if there is voltage at the point being tested. If you need to know how much voltage is present, use a digital volt/ohmmeter (DVOM). If, in addition, you need to know exactly how much resistance there is between two points, use a digital volt/ohmmeter (DVOM).

In the "OHMS" range, the DVOM will measure resistance between two points along a circuit. Low resistance means good continuity.

Diodes and solid-state devices in a circuit can make a DVOM give a false reading. To check a reading, reverse the leads, and take a second reading. If the readings differ, the component is affecting the measurement.

Jumper Wire

Use a jumper wire to bypass an open circuit. A jumper wire is made up of an in-line fuse holder connected to a set of test leads. It should have a five ampere fuse. Never connect a jumper wire across a short circuit. The direct battery short will blow the fuse.

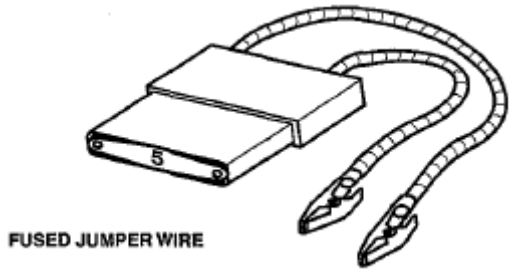

Fig. 45: Identifying Fused Jumper Wire

To order test equipment, contact your local tool supplier. For a list of suppliers and tool numbers, refer to Honda Required Special Tools and Equipment Service Bulletin.

TROUBLESHOOTING PRECAUTIONS

Before Troubleshooting

1. Check the main fuse and the fuse box.
2. Check the battery for damage, state of charge, and clean and tight connections.

CAUTION:

- **Do not quick-charge a battery unless the battery ground cable has been disconnected, or you will damage the alternator diodes.**
- **Do not attempt to crank the engine with the ground cable disconnected, or you will severely damage the wiring.**

While You Are Working

1. Make sure that connectors are clean and have no loose terminals or receptacles.
2. Make sure that connectors without wire seals are packed with dielectric (silicone) grease (Part Number: 08798-9001).

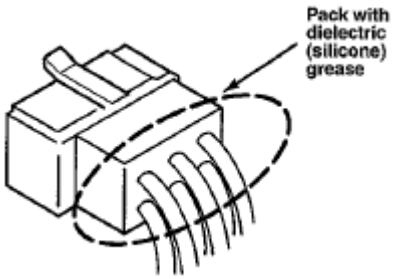

Fig. 46: Identifying Connectors Packed With Dielectric (Silicone Grease)

3. When connecting a connector, push it until it "clicks" into place.

CAUTION:

- **Do not pull on the wires when disconnecting a connector. Pull only on the connector housings.**
- **Most circuits include solid-state devices. Test the voltages in these circuits only with a 10-megaohm or higher impedance digital multimeter. Never use a test light or analog meter on circuits that contain solid-state devices. Damage to the devices may result.**

Testing for Voltage

When testing for voltage at a connector without wire seals, you do not have to separate the two halves of the connector. Instead, probe the connector from the back. Always check both sides of the connector because dirty, corroded, and bent terminals can cause problems (no electrical contact = an open).

1. Connect one lead of the test light to a known good ground, or, if you are using a digital volt ohmmeter (DVOM), place it in the appropriate DC volts range, and connect its negative lead to ground.

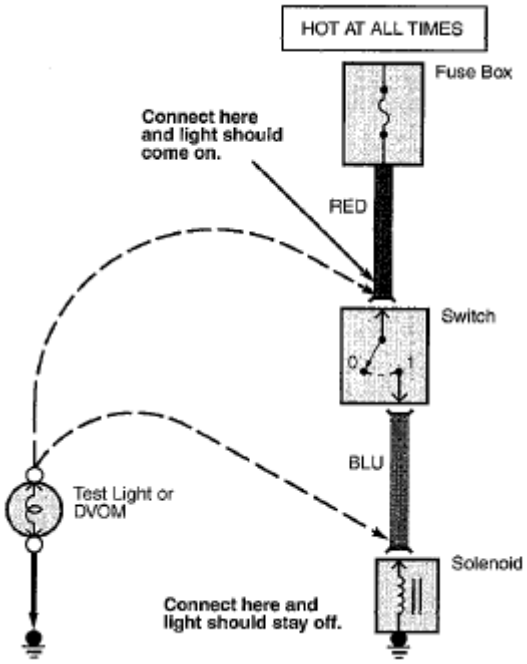

Fig. 47: Testing For Voltage At Connector Without Wire Seals

2. Connect the other lead of the test light or DVOM to the point you want to check.
3. If the test light glows, there is voltage present. If you are using a DVOM, note the voltage reading. It should be within one volt of measured battery voltage. A loss of more than one volt indicates a problem.

NOTE: Always use a DVOM on high impedance circuits. A test light may not glow (even with battery voltage present).

TROUBLESHOOTING TESTS

Testing for Continuity

When testing for continuity at a connector without wire seals, you do not have to separate the two halves of the connector. Instead, probe the connector from the back. Always check both sides of the connector because dirty, corroded, and bent terminals can cause problems (no electrical contact = an open).

1. Disconnect the negative cable from the battery. If you are using a DVOM, place it in the lowest "OHMS" range.
2. Connect one lead of a DVOM to one end of the part of the circuit you want to test.

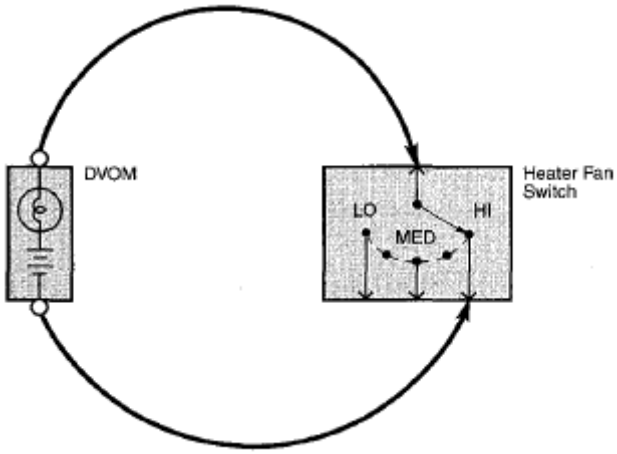

Fig. 48: Testing For Continuity At Connector Without Wire Seals

3. Connect the other lead to the other end.
4. If you are using a DVOM, a low reading or no reading (zero), means good continuity.

Testing for Voltage Drop

Wires, connectors, and switches are designed to conduct current with a minimum loss of voltage. A voltage drop of more than one volt indicates a problem. Circuits must be operating when checking voltage drop.

1. Place the digital volt/ohmmeter (DVOM) in the appropriate DC volts range. Connect the positive lead to the end of the wire (or to the connector or switch) closest to the battery.

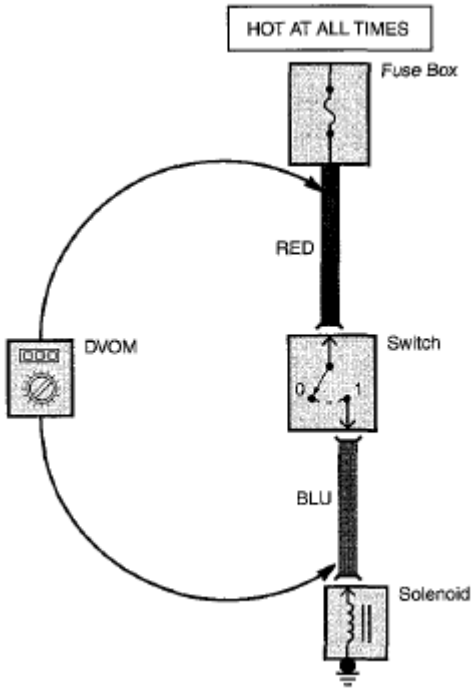

Fig. 49: Testing For Voltage Drop

2. Connect the negative lead to the other end of the wire (or the other side of the connector or switch).
3. Turn on the components in the circuit.
4. The DVOM will show the difference in voltage between the two points. A difference, or drop, of more than one volt indicates a problem. Check the circuit for loose, dirty, or bent terminals.

Testing for a Short with a Test Light or DVOM

1. Remove the blown fuse and disconnect the load.
2. Connect a test light or digital volt/ohmmeter (DVOM), switched to the appropriate DC volts range, across the fuse terminals to make sure voltage is present. You might have to turn the ignition switch to ON; check the schematic to see.

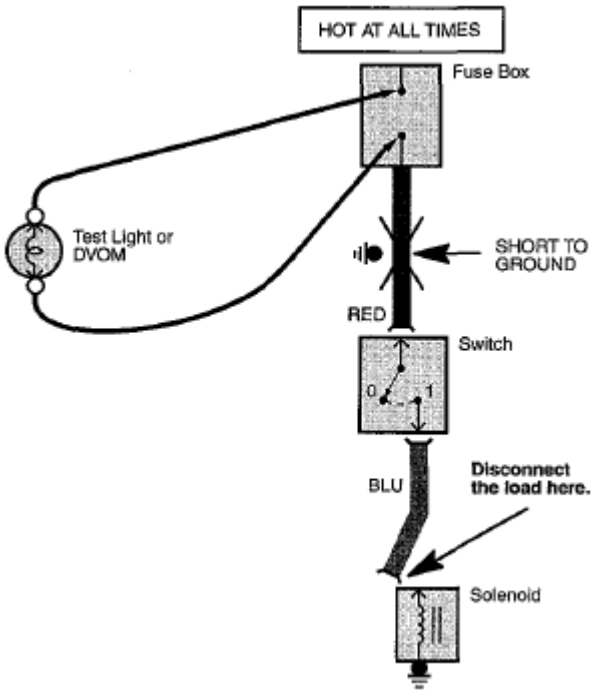

Fig. 50: Testing For Short With Test Light

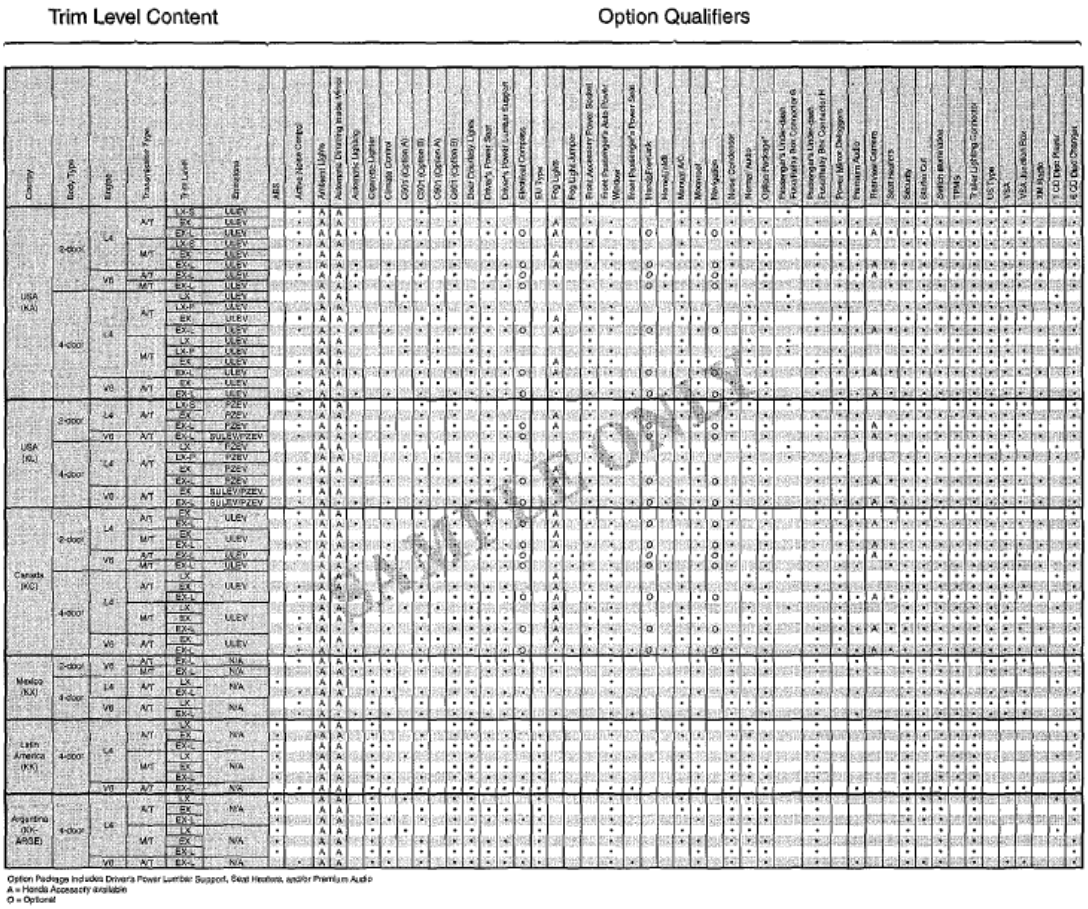

3. Beginning near the fuse box, wiggle the harness. Continue this at convenient points about six inches apart while watching the test light or DVOM.
4. Where the test light goes off, or the DVOM voltage drops to zero, there is a short to ground in the wiring near that point.

NOTE: Always use a DVOM on high impedance circuits. A test light may not glow (even with battery voltage present).

TRIM LEVEL MATRIX

The Trim Level Matrix is used to determine the option content of the various trim levels of a vehicle. Option qualifiers are used to define option content throughout this service information. When an option qualifier is

located, the Trim Level Matrix can be used to determine its application. A dot represents when an option qualifier applies to a certain trim level. An "O" represents an option qualifier is optional on a certain trim level, while an "A" represents an accessory is available for a certain trim level.

Option Package Includes Drivers Power Lumbar Support, Seat Heaters, and/or Premium Audio
A = Honda Accessory Available
O = Optional

Fig. 51: Trim Level Matrix

Relays - TL

POWER RELAY TEST

Special Tools Required

Relay Puller 07AAC-000A2A1 or 07AAC-000A1A0

Use this chart to identify the type of relay, then do the test listed for it.

Relay	Test
Accessory relay (with keyless access system)	Normally-open four-terminal type
A/C condenser fan relay(1)	
A/C compressor clutch relay(1)	
Blower motor relay(1)	
Console accessory power socket	
Driver's seat heater relay (high)(1)	
Electronic throttle control system (ETCS) control relay(1)	
Front accessory power socket relay* (with keyless access system)	
Front accessory power socket relay (without keyless access system)	
Headlight washer motor relay* (With headlight washer)	
Ignition coil relay(1)	
Front passenger's seat heater relay (high)(1)	
PGM-FI main relay 1(1)	
PGM-FI main relay 2(1)	
PGM-FI subrelay(1)	
Rear window defogger relay(1)	
Starter cut relay 1	
Starter cut relay 2(1)	
Seat ventilation relay* (with seat ventilation)	
SH-AWD relay* (with SH-AWD)	
+ B cut relay (M/T)	
ACC cut relay* (without keyless access system)	Five-terminal type
IG2 cut relay* (without keyless access system)	
Driver's seat heater relay (low)(1)	
Front passenger's seat heater relay (low)(1)	
(1) Carefully remove the relay from fuse/relay box using the relay puller. Do not use pliers. Pliers will damage the relay.	

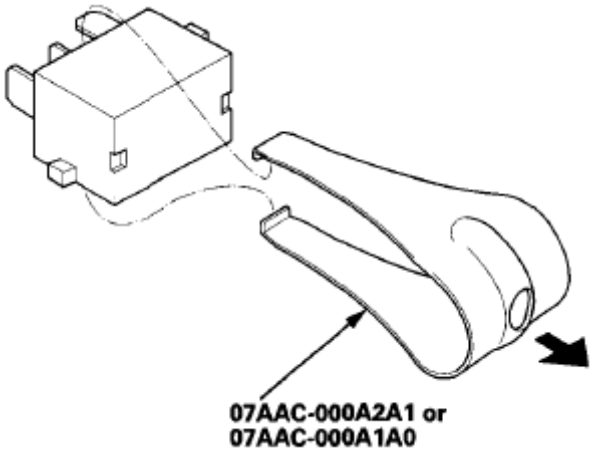

Fig. 1: Identifying Relay Puller, Relay Box & Relay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NORMALLY-OPEN FOUR-TERMINAL TYPE

Check for continuity between the terminals:

- There should be continuity between terminals No. 1 and No. 2 when battery power is connected to terminal No. 4, and body ground is connected to terminal No. 3.
- There should be no continuity between terminals No. 1 and No. 2 when power is disconnected.

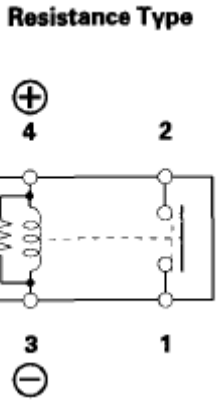

Fig. 2: Checking Continuity Between Open Four Terminals - Resistance Type
Courtesy of AMERICAN HONDA MOTOR CO., INC.

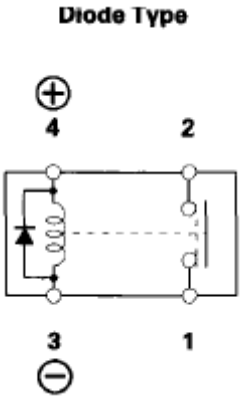

Fig. 3: Checking Continuity Between Open Four Terminals - Diode Type
Courtesy of AMERICAN HONDA MOTOR CO., INC.

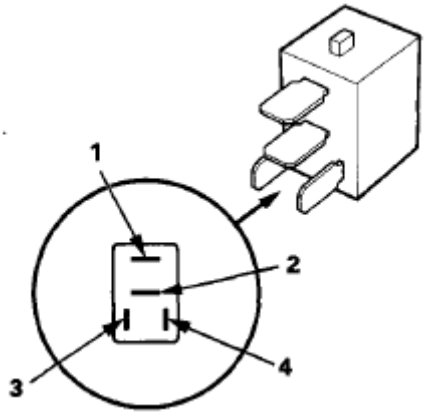

Fig. 4: Checking Continuity Between Open Four Terminals - Relay Type
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FIVE-TERMINAL TYPE

Check for continuity between the terminals:

- There should be continuity between terminals No. 1 and No. 2 when battery power is connected to terminal No. 5, and body ground is connected to terminal No. 3.
- There should be continuity between terminals No. 1 and No. 4 when power is disconnected.

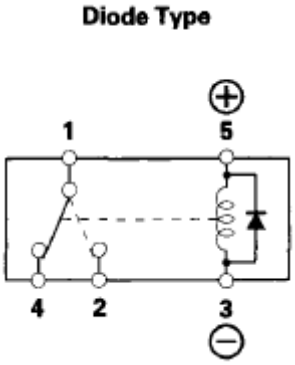

Fig. 5: Checking Continuity Between Five Terminals - Diode Type
Courtesy of AMERICAN HONDA MOTOR CO., INC.

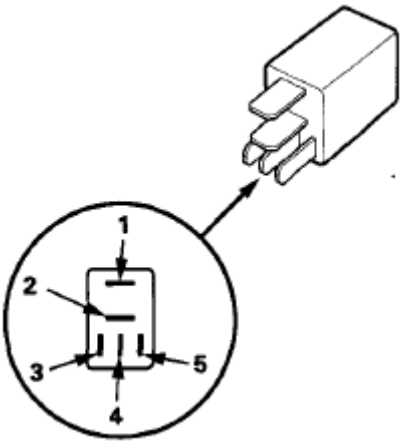

Fig. 6: Checking Continuity Between Five Terminals - Relay Type
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RELAY CIRCUIT BOARD TEST

The relay circuit board is part of the under-hood fuse/relay box, and it contains these relays:

- Radiator fan relay
- Fan control relay
- Horn relay
- Windshield wiper motor relay
- Windshield wiper intermittent relay
- Windshield wiper high/low relay

1. Do the battery terminal disconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
2. Disconnect under-hood fuse/relay box connectors B (14P) and C(5P).

CONNECTOR B (14P)

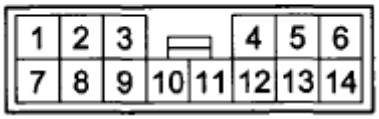

Fig. 7: Identifying Under-Hood Fuse/Relay Box Connector B (14P) Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CONNECTOR C (5P)

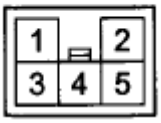

Fig. 8: Identifying Under-Hood Fuse/Relay Box Connector C(5P) Connector End View
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Test each relay circuit as shown:

   Radiator fan relay:

   There should be continuity between terminals C1 and C3 when battery power is connected to terminal B9, and battery ground is connected to terminal B10. There should be no continuity between terminals C1 and C3 when power is disconnected.

   Fan control relay:

   There should be continuity between terminals C2 and C5 when battery power is connected to terminal B1, (B2 or B8), and battery ground is connected to terminal B10. There should be continuity between terminals C1 and C5 when power is disconnected.

   Horn relay:

   There should be battery voltage at terminal B11 when battery power is connected to terminal B3, and battery ground is connected to terminal B7. There should be no continuity between terminals B3 and B11 when power is disconnected.

   Windshield wiper motor relay:

   There should be continuity between terminals C4 and B13, and terminals C4 and B14 when battery power is connected to terminal B12, and battery ground is connected to terminal B4. There should be no continuity between terminals C4 and B13, and terminals C4 and B14 when power is disconnected.

   Windshield wiper intermittent relay:

There should be battery voltage at terminal B6 when battery power is connected to terminals C4 and B12, and battery ground is connected to terminals B4 and B13. There should be no voltage at terminal B6 when terminal B13 is disconnected.

Windshield wiper high/low relay:

There should be battery voltage at terminal B5 when battery power is connected to terminals C4 and B12, and battery ground is connected to terminals B4, B13, and B14. There should be no voltage at terminal B5 when terminal B14 is disconnected.

Radiator fan relay. Fan control relay

Windshield wiper motor relay. Windshield wiper intermittent relay. Windshield wiper high/low relay

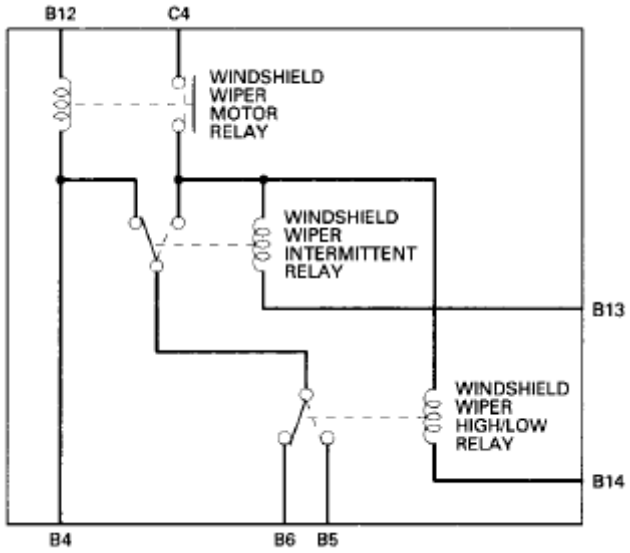

Fig. 11: Testing Relay Circuit - Windshield Wiper Motor Relay, Intermittent Relay, High/Low Relay
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If any of these relay circuit fails the test, replace the relay circuit board.
5. Reinstall all removed parts.
6. Do the battery terminal reconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).

ENGINE LUBRICATION (J35Z6, J37A4)

Item	Measurement	Qualification	Standard or New	Service Limit
Engine oil	Capacity	Engine overhaul	5.0 L (5.3 US qt)	-
		Oil change including filter	4.3 L (4.5 US qt)	-
		Oil change without filter	4.0 L (4.2 US qt)	-
	Inner rotor-to-outer rotor radial clearance		0.04- 0.16 mm (0.002- 0.006 in)	0.20 mm (0.007 in)
	Pump housing-to-outer rotor radial clearance		0.07- 0.19 mm (0.003- 0.007 in)	0.20 mm (0.007 in)

Oil pump	Pump housing-to-rotor axial clearance		0.02- 0.07 mm (0.001 - 0.002 in)	0.12 mm (0.004 in)
	Oil pressure with oil temperature at 176°F (80°C)	At idle	70 kPa (0.71 kgf/cm^2 , 10.1 psi) min.	-
		At 3, 000 RPM	490 kPa (5.00 kgf/cm^2 , 71.1 psi) min.	-

COOLING SYSTEM (J35Z6, J37A4)

Item	Measurement	Qualification	Standard or New	Service Limit
Radiator	Coolant capacities (including engine, heater, hoses, and reservoir)	Engine overhaul	8.3 L (2.19 US gal)	-
		Coolant change	6.3 L (1.66 US gal)	-
	Coolant type		Acura Long Life Antifreeze/Coolant Type 2	
Coolant reservoir	Coolant capacity		0.69 L (0.182 US gal)	-
Radiator cap	Opening pressure		93- 123 kPa (0.95- 1.25 kgf/cm^2 , 13.5 - 17.8 psi)	-
Thermostat	Opening temperature	Begins to open	169- 176°F (76- 80°C)	-
		Fully open	194°F (90°C)	-
	Valve lift at fully open		10.0 mm (0.394 in) min.	-

FUEL AND EMISSIONS (J35Z6)

Item	Measurement	Qualification	Standard or New	Service Limit
Fuel pressure regulator	Pressure with fuel pressure gauge connected		390- 440 kPa (4.0- 4.5 kgf/cm^2 , 57- 64 psi)	-
Fuel tank	Capacity		70.0 L (18.49 US gal)	-
Engine idle	Idle speed without load	In N or P	680 ± 50 RPM	
	Idle speed with high electrical load (A/C switch on, temperature set to max cool, blower fan on high, rear window defogger on, and headlights on high beam)	In N or P	680 ± 50 RPM	

FUEL AND EMISSIONS (J37A4)

Item	Measurement	Qualification	Standard or New	Service Limit
Fuel pressure regulator	Pressure with fuel pressure gauge connected		390- 440 kPa (4.0- 4.5 kgf/cm^2 , 57- 64 psi)	-
Fuel tank	Capacity		70.0 L (18.49 US gal)	-
Engine idle	Idle speed without load	M/T in neutral	750 ± 50 RPM	
		A/T in N or P	700 ± 50 RPM	
	Idle speed with high electrical load (A/C switch on, temperature set to max cool, blower fan on high, rear window defogger on, and headlights on high beam)	M/T in neutral	750 ± 50 RPM	
		A/T in N or P	700 ± 50 RPM	

CLUTCH

Item	Measurement	Qualification	Standard or New	Service Limit
Clutch pedal	Height from floor		156 mm (6.14 in)	-
	Stroke		130- 140 mm (5.12- 5.51 in)	-
Flywheel	Runout on clutch mating surface		0.3 mm (0.012 in) max.	0.4 mm (0.016 in)
Clutch disc	Rivet head depth		1.35- 1.95 mm (0.0531 - 0.0768 in)	0.7 mm (0.028 in)
	Thickness		7.9- 8.5 mm (0.311- 0.335 in)	6.0 mm (0.236 in)
Pressure plate	Warpage		0.02 mm (0.001 in)	0.15 mm (0.005 in)
	Evenness of the height of the diaphragm spring fingers		0.6 mm (0.024 in) max.	0.8 mm (0.031 in)

MANUAL TRANSMISSION AND M/T DIFFERENTIAL

Item	Measurement	Qualification	Standard or New	Service Limit
Manual transmission fluid	Capacity: use Acura MTF	Fluid change	2.1 L (2.2US qt)	-
		Overhaul	2.5L (2.6US qt)	-
	End play		0.14- 0.21 mm (0.0055- 0.0083 in)	Adjust
	Diameter of ball bearing contact area (clutch housing side)		28.002- 28.015 mm (1.10244- 1.10295 in)	27.95 mm (1.1004 in)

Mainshaft	Diameter of needle bearing contact area		47.984- 48.000 mm (1.88913- 1.88976 in)	47.93 mm (1.8870 in)
	Diameter of ball bearing contact area (transmission housing side)		38.984- 39.000 mm (1.53480- 1.53543 in)	38.93 mm (1.5327 in)
	Diameter of 4th/5th gear distance collar contact area		41.984- 42.000 mm (1.65291 - 1.65354 in)	41.93 mm (1.6508 in)
	Diameter of 6th gear distance collar contact area		38.984- 39.000 mm (1.53480- 1.53543 in)	38.93 mm (1.5327 in)
	Runout		0.02 mm (0.0008 in) max.	0.05 mm (0.0020 in)
	Diameter of pilot bearing contact area		19.967- 19.980 mm (0.78610- 0.78661 in)	19.91 mm (0.7839 in)
Mainshaft 3rd gear	I.D.		53.010- 53.029 mm (2.08700- 2.08775 in)	-
	Clearance	2nd-3rd	0.06- 0.19 mm (0.002- 0.007 in)	0.3 mm (0.011 in)
	Thickness		23.89- 23.97 mm (0.9405- 0.9437 in)	23.8 mm (0.937 in)
Mainshaft 4th, 5th gear	I.D.		53.010- 53.029 mm (2.08700- 2.08775 in)	-
	End play (4th/5th gear distance collar side)		0.06- 0.19 mm (0.0024- 0.0075 in)	0.3 mm (0.012 in)

	Length		23.03- 23.08 mm (0.9067- 0.9087 in)	-
Reverse idler gear	O.D.		19.989- 20.000 mm (0.78697- 0.78740 in)	19.93 mm (0.7846 in)
Reverse drive/driven gear	I.D.		30.007- 30.020 mm (1.18138- 1.18189 in)	25.07 mm (0.9870 in)
5th synchro ring	Ring-to-gear clearance (ring pushed against gear)		0.70- 1.49 mm (0.028- 0.058 in)	0.4 mm (0.016 in)
6th synchro ring	Ring-to-gear clearance (ring pushed against gear)		0.73- 1.44 mm (0.029- 0.056 in)	0.4 mm (0.016 in)
3rd double cone synchro	Outer synchro ring-to-synchro cone clearance (ring pushed against gear)		0.68- 1.19 mm (0.027- 0.046 in)	0.3 mm (0.012 in)
	Synchro cone-to-gear clearance (ring pushed against gear)		0.48- 1.04 mm (0.019- 0.040 in)	0.3 mm (0.012 in)
	Outer synchro ring-to-gear clearance (ring pushed against gear)		0.95- 1.68 mm (0.037- 0.066 in)	0.6 mm (0.024 in)
4th double cone synchro	Outer synchro ring-to-synchro cone clearance (ring pushed against gear)		0.70- 1.19 mm (0.028- 0.046 in)	0.3 mm (0.012 in)
	Synchro cone-to-gear clearance (ring pushed against gear)		0.50- 1.14 mm (0.020- 0.044 in)	0.3 mm (0.012 in)
	Outer synchro ring-to-gear clearance (ring pushed against gear)		0.95- 1.68 mm (0.037- 0.066 in)	0.6 mm (0.024 in)
1st triple cone synchro	Outer synchro ring-to-synchro cone clearance (ring pushed against gear)		0.70- 1.19 mm (0.028- 0.046 in)	0.3 mm (0.012 in)
	Synchro cone-to-gear clearance (ring pushed against gear)		0.70- 1.88 mm (0.028- 0.074 in)	0.3 mm (0.012 in)
	Outer synchro ring-to-gear		1.12- 1.68 mm	0.6 mm

	clearance (ring pushed against gear)		(0.044- 0.066 in)	(0.024 in)
2nd triple cone synchro	Outer synchro ring-to-synchro cone clearance (ring pushed against gear)		0.70- 1.19 mm (0.028- 0.046 in)	0.3 mm (0.012 in)
	Synchro cone-to-gear clearance (ring pushed against gear)		0.70- 1.88 mm (0.028- 0.074 in)	0.3 mm (0.012 in)
	Outer synchro ring-to-gear clearance (ring pushed against gear)		1.12- 1.68 mm (0.044- 0.066 in)	0.6 mm (0.024 in)
Shift fork	Finger thickness	1st/2nd, 3rd/4th, 5th/6th	7.4- 7.6 mm (0.291 - 0.299 in)	-
		Reverse	6.2- 6.4 mm (0.244- 0.252 in)	-
	Fork-to-synchro sleeve clearance		0.35- 0.65 mm (0.014- 0.025 in)	1.0 mm (0.039 in)
Reverse shift lever	Finger width		6.50- 6.75 mm (0.2559- 0.2657 in)	-
	Shift lever-to-reverse shift piece clearance		0- 0.4 mm (0- 0.015 in)	0.5 mm (0.019 in)
	Shift lever width at contact area (reverse shift piece side)		13.0- 13.2 mm (0.512- 0.520 in)	-
	Shift lever-to-reverse shift fork clearance		0.15- 0.60 mm (0.006- 0.023 in)	0.7 mm (0.027 in)
Detent ball spring	Free length	1st/2nd	26.1 mm (1.028 in)	When worn or damaged
		3rd/4th, 5th/6th	27.4 mm (1.079 in)	When worn or damaged
Steel ball	Ball size		7.94 mm (0.3126 in)	When worn or damaged
Shift arm	I.D.		15.973- 16.005 mm (0.62886- 0.63012 in)	-
	Shift arm-to-shift piece clearance		0.26- 0.57 mm (0.010- 0.022 in)	0.75 mm (0.029 in)
	Shift piece width at contact area		13.6- 13.8 mm (0.535- 0.543 in)	-
M/T differential carrier	Backlash (measured with final driven gear)		0.6- 1.2 mm (0.024- 0.047 in)	-
	Carrier bearing starting torque (preload)		3.4- 4.5 N.m (35- 46 kgf.cm, 30- 40 lbf.in)	Adjust
	Inner rotor-to-outer rotor clearance		0.14 mm (0.006 in) max.	0.2 mm (0.007 in)
			17.1- 17.2 mm	

Oil pump	Oil pump inner rotor I.D.		(0.673- 0.677 in)	-
	Oil pump shaft O.D.		16.8- 17.0 mm (0.661 - 0.669 in)	-
	Oil pump thrust clearance		0.03- 0.13 mm (0.001 - 0.005 in)	0.15 mm (0.005 in)
	Outer rotor-to-clutch housing clearance		0.1 - 0.2 mm (0.004- 0.007 in)	0.22 mm (0.008 in)
Shift piece	I.D.		14.000- 14.068 mm (0.55118- 0.55386 in)	-
	Shift fork width at contact area		12.8- 13.0 mm (0.504- 0.512 in)	-
	Shift piece-to-shift fork clearance		0.2- 0.6 mm (0.008- 0.023 in)	0.7 mm (0.027 in)
Select arm	I.D.		11.01- 11.05 mm (0.4335- 0.4350 in)	-
	Interlock width at contact area		12.9- 13.0 mm (0.508- 0.512 in)	-
	Select arm-to-interlock clearance		0.05- 0.25 mm (0.002- 0.009 in)	0.5 mm (0.019 in)
Transfer output shaft	Diameter of bearing contact area	Transmission housing side	21.977- 21.990 mm (0.86523- 0.86575 in)	21.92 mm (0.8630 in)
		Clucks housing side	40.002- 40.018 mm (1.57488- 1.57551 in)	39.95 mm (1.5728 in)
	Thrust clearance		0.08- 0.17 mm (0.003- 0.006 in)	-
Transfer assembly	Diameter of transfer hypoid drive gear/shaft assembly at tapered roller bearing contact area	At transfer cover side	50.002- 50.018 mm (1.96858- 1.96921 in)	49.95 mm (1.9665 in)
		At transfer gear side	24.987- 25.000 mm (0.98374- 0.98425 in)	24.93 mm (0.9815 in)
	Diameter of transfer output shaft (hypoid gear) at tapered roller bearing contact area	At transfer gear side	40.002- 40.018 mm (1.57488- 1.57551 in)	39.95 mm (1.5728 in)
		At companion flange side	31.975- 31.988 mm (1.25886- 1.25937 in)	31.92 mm (1.2567 in)
	Transfer gear backlash		0.06- 0.16 mm (0.0024- 0.0063 in)	Adjust
	Tapered roller bearing total starting torque (preload)		2.64- 4.23 N.m (26.9- 43.1 kgf.cm, 23.3- 37.4 lbf.in)	Adjust

Transfer assembly fluid	Capacity: Hypoid gear oil SAE 90 viscosity, API classified GL 4 or GL 5 only	Fluid change	0.43 L (0.45 US qt)	-
		Overhaul	0.45 L (0.48 US qt)	-

AUTOMATIC TRANSMISSION AND A/T DIFFERENTIAL

Item	Measurement	Qualification	Standard or New	Service Limit
Automatic transmission fluid	Capacity: use Acura ATF DW-1 (with SH-AWD)	Fluid change	3.1 L (3.3 US qt)	-
		Overhaul	7.8 L (8.2 US qt)	-
	Capacity: use Acura ATF DW-1 (without SH-AWD)	Fluid change	3.1 L (3.3US qt)	-
		Overhaul	7.1 L (7.5US qt)	-
ATF pressure	Line pressure (Low) (APP Sensor opening less than 25 % in D with Line Pressure Sol VLV. A ON)	ATF temperature between 122°F and 212°F (50°C and 100°C)	667- 716 kPa (6.80- 7.30 kgf/cm^2 , 96.7 - 103.8 psi)	Lower limit: 618 kPa (6.30 kgf/cm^2 , 89.6 psi) Upper limit: 765 kPa (7.80 kgf/cm^2 , 111.0 psi)
	Line pressure (Normal)	At 2, 000 RPM in N or P	1, 164- 1, 285 kPa (11.87- 13.10 kgf/cm^2 , 168.8- 186.3 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	1st clutch pressure	At 2, 000 RPM in 1st gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	2nd clutch pressure	At 2, 000 RPM in 2nd gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	3rd clutch pressure	At 2, 000 RPM in 3rd gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	4th clutch pressure	At 2, 000 RPM in 4th gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)

			psi)	
	5th clutch pressure	At 2, 000 RPM in 5th gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	6th clutch pressure	At 2, 000 RPM in 6th gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	Torque converter clutch pressure	At 4, 000 RPM in 2nd gear (Lock-up condition)	294 kPa (3.00 kgf/cm^2 , 42.7 psi) or more	245 kPa (2.50 kgf/cm^2 , 35.6 psi)
Torque converter	Stall speed Check with vehicle on level ground		2, 000 RPM	-
		Service limit	1, 800- 2, 100 RPM	-
Clutch	Clearance between clutch end-plate and top disc	1st	1.50- 1.70 mm (0.0591 - 0.0669 in)	-
		2nd	1.25- 1.45 mm (0.0492- 0.0571 in)	-
		3rd	1.25- 1.45 mm (0.0492- 0.0571 in)	-
		4th	1.50- 1.70 mm (0.0591 - 0.0669 in)	-

Transfer assembly fluid	Capacity: Hypoid gear oil SAE 90 viscosity, API classified GL 4 or GL 5 only	Fluid change	0.43 L (0.45 US qt)	-
		Overhaul	0.45 L (0.48 US qt)	-
Transfer assembly	Diameter of transfer hypoid drive gear/shaft assembly at tapered roller bearing contact area	At transfer cover side	50.002- 50.018 mm (1.96858- 1.96921 in)	49.95 mm (1.9665 in)
		At transfer gear side	24.987- 25.000 mm (0.98374- 0.98425 in)	24.93 mm (0.9815 in)
	Diameter of transfer output shaft (hypoid gear) at tapered roller bearing contact area	At transfer gear side	40.002- 40.018 mm (1.57488- 1.57551 in)	39.95 mm (1.5728 in)
		At companion flange side	31.975- 31.988 mm (1.25886- 1.25937 in)	31.92 mm (1.2567 in)
	Transfer gear backlash		0.06- 0.16 mm (0.0024- 0.0063 in)	-
	Tapered roller bearing total starting torque (preload)		2.64- 4.23 N.m (26.9- 43.1 kgf.cm, 23.3- 37.4 lbf.in)	-

REAR DIFFERENTIAL

Item	Measurement	Qualification	Standard or New	Service Limit
Rear differential fluid	Capacity: use Acura All-Wheel Drive Fluid (DPSF)	Fluid change	2.53 L (2.67 US qt)	-
		Overhaul	2.77 L (2.93 US qt)	-

STEERING

Item	Measurement	Qualification	Standard or New	Service Limit
Steering wheel	Rotational play measured at outside edge		0- 10 mm (0- 0.39 in)	-
	Initial turning load measured at outside edge with engine running		29 N (3.0 kgf, 6.6 lbf)	-
Gearbox	Angle of rack guide screw loosened from locked position		10+5°	

SUSPENSION

Item	Measurement	Qualification	Standard or New	Service Limit
Wheel alignment	Camber	Front	- 0°30'$^{+30'}_{-45'}$ ·	
		Rear	- 1 °00'$^{+30'}_{-45'}$ ·	
	Caster	Front	3 ° 48 ' ±45 '	
	Total toe-in	Front	0±2mm (0+0.08 in)	
		Rear	2 ± 2 mm (0.08 ± 0.08 in)	
	Front wheel turning angle	Inward	38° 06' ±2°	
		Outward (reference)	30° 24' ± 1 °	
Wheel	Runout	Axial	0- 0.7 mm (0- 0.028 in)	2.0 mm (0.079 in)
		Radial	0- 0.7 mm (0- 0.028 in)	1.5 mm (0.059 in)
Wheel bearing	End play	Front	0- 0.05 mm (0- 0.0020 in)	-
		Rear	0- 0.05 mm (0- 0.0020 in)	-

BRAKES

Item	Measurement	Qualification	Standard or New	Service Limit
Parking brake	Number of clicks when lever pulled with 196 N (20.0 kgf, 44.1 lbf) of force		6 to 8 clicks	
	Drum I.D.		189.9- 190.0 mm (7.476- 7.480 in)	191.0 mm (7.520 in)
	Shoe lining thickness		3.4 mm (0.134 in)	1.0 mm (0.039 in)
Brake pedal	Height from floor	M/T	156 mm (6.14 in)	-
		A/T	155 mm (6.10 in)	-
	Free play		1 - 5 mm (0.04- 0.20 in)	-
Brake disc	Thickness	Front	27.9- 28.1 mm (1.098- 1.106 in)	26.0 mm (1.024 in)
		Rear	10.9- 11.1 mm (0.429- 0.437 in)	9.0 mm (0.354 in)
	Runout		-	0.04 mm (0.0016 in)
	Parallelism		-	0.015 mm (0.00059 in)
Brake pad	Thickness	Front	11.5- 12.2 mm (0.453- 0.480 in)	1.6 mm (0.063 in)
		Rear	9.6- 10.2 mm (0.378- 0.402 in)	1.6 mm (0.063 in)

AIR CONDITIONING

Item	Measurement	Qualification	Standard or New	Service Limit
Refrigerant	Type		HFC- 134a (R- 134a)	
	Capacity of system		505- 555 g (17.8- 19.6 oz)	-
Refrigerant oil	Type		DENSO ND- OIL 8 (P/N 38897- PR7- A01 AH)	
	Capacity of components	Condenser (including dryer desiccant)	35mL (1 1/5 fl.oz)	
		Evaporator	35mL (1 1/5 fl.oz)	
		Each line and hose	10mL (1/3 fl.oz)	
		Dryer desiccant	10mL (1/3 fl.oz)	
		Compressor	70- 82 mL (2 3/8- 2 7/9 fl.oz)	
Compressor	Field coil resistance	At 68°F (20°C)	3.9- 4.3 ohms	
	Pulley-to-pressure plate clearance		0.35- 0.60 mm (0.014- 0.023 in)	-

TORQUE SUMMARY

TORQUE SPECIFICATIONS

NOTE:

- **Refer to the appropriate Service information for the precautions and complete procedures.**
- **Refer to the appropriate Service information for the bolts/nuts not indicated here.**

Engine Electrical

Location	Item		Remark	Torque
Starting system	Starter bolts	M/T model		74 N.m (7.5 kgf.m, 54 lbf.ft)
		A/T model		44 N.m (4.5 kgf.m, 33 lbf.ft)
	Starter harness clamp nut			9 N.m (0.9 kgf.m, 7 lbf.ft)
Ignition system	Spark plugs			22 N.m (2.2 kgf.m, 16 lbf.ft)
Charging system	Alternator bolt (8 mm)			22 N.m (2.2 kgf.m, 16 lbf.ft)
	Alternator bolt (10 mm)			44 N.m (4.5 kgf.m, 33 lbf.ft)
	Alternator cable nut			12 N.m (1.2 kgf.m, 8.7 lbf.ft)
	Drive belt auto-tensioner bolt			22 N.m (2.2 kgf.m, 16 lbf.ft)
	Drive belt auto-tensioner pulley bolt			56 N.m (5.7 kgf.m, 41 lbf.ft)

NOTE:

- **Refer to the appropriate Service information for the bolts/nuts not indicated here.**

Engine Mechanical

Location	Item		Remark	Torque
Engine assembly	Power steering pump bracket bolts			22 N.m (2.2 kgf.m, 16 lbf.ft)
	Front engine mount bracket bolts		Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Front engine mount bolts		Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Front engine mount stop nuts		Use new nuts	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Rear engine mount bracket bolts		Use new bolts	78 N.m (8.0 kgf.m, 58 lbf.ft)
	Rear engine mount bolts (10 mm) Qty 4		Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Rear engine mount bolt (14 mm) Qty 1	M/T model	Use new bolt	88 N.m (9.0 kgf.m, 65 lbf.ft)
	Rear engine mount stop nuts	A/T model	Use new nuts	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Side engine mount bracket bolts (10 mm) Qty 3		Use new bolts	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Side engine mount bracket bolts (10 mm) Qty 2 (2)		Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Side engine mount bolt (12 mm) Qty 1 (2)			64 N.m (6.5 kgf.m, 47 lbf.ft)
	Side engine mount bolts (10 mm) Qty 2		Use new bolts	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Upper transmission mount bracket bolts		Use new bolts	59 N.m (6.0 kgf.m, 43 lbf.ft)
	Upper transmission mount bolts			54 N.m (5.5 kgf.m, 40 lbf.ft)
	Lower transmission mount bracket bolts	M/T model	Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
		A/T model	Use new bolts	39 N.m (4.0 kgf.m, 29 lbf.ft)
	Lower transmission mount nuts			44 N.m (4.5 kgf.m, 33 lbf.ft)
	Lower transmission mount bolt		Use new bolt	54 N.m (5.5 kgf.m, 40 lbf.ft)
			• Use new O-ring	22 N.m (2.2

Engine lubrication	Oil pressure switch	• Apply liquid gasket	kgf.m, 16 lbf.ft)
	Oil pan drain bolt	Use new washer	39 N.m (4.0 kgf.m, 29 lbf.ft)
	Oil filter		12 N.m (1.2 kgf.m, 9 lbf.ft)
	Oil filter feed pipe	Use oil on threads	35 N.m (3.6 kgf.m, 26 lbf.ft)
Intake manifold and exhaust system	Intake manifold bolts (1)		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Intake manifold nuts (1)		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Injector base bolts (1)		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Injector base nuts (1)		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Exhaust pipe A self-locking nuts (10 mm) Qty 3 (warm up TWC side) (2)	Use new nuts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Exhaust pipe A self-locking nuts (10 mm) Qty 3 (under-floor TWC side) (2)	Use new nuts	33 N.m (3.4 kgf.m, 25 lbf.ft)
	Exhaust pipe B self-locking nuts (10 mm) Qty 3 (2)	Use new nuts	33 N.m (3.4 kgf.m, 25 lbf.ft)
	Exhaust pipe B self-locking nuts (10 mm) Qty 2	Use new nuts	54 N.m (5.5 kgf.m, 40 lbf.ft)
(1) Parts to be tightened in a particular order.			
(2) Follow the S/M procedures closely for torque, sequence, and special steps.			

NOTE:

- **Refer to the appropriate Service information for the precautions and complete procedures.**
- **Refer to the appropriate Service information for the bolts/nuts not indicated here.**

Engine Cooling

Location	Item	Remark	Torque
Cooling system	Water passage bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Water passage nuts		22 N.m (2.2 kgf.m, 16 lbf.ft)

Fuel and Emissions

Location	Item	Remark	Torque

Fuel and emissions	A/F sensor			44 N.m (4.5 kgf.m, 33 lbf.ft)
	EGR pipe bolts		Use new gasket	22 N.m (2.2 kgf.m, 16 lbf.ft)
	EGR pipe nuts		Use new gasket	22 N.m (2.2 kgf.m, 16 lbf.ft)
	EGR valve nuts		Use new gasket	22 N.m (2.2 kgf.m, 16 lbf.ft)
	Fuel joint hose mounting bolt			22 N.m (2.2 kgf.m, 16 lbf.ft)
	Fuel tank locknut (1)		Use new locknut, locknut plate, and base gasket	70 N.m (7.1 kgf.m, 51 lbf.ft)
	Fuel tank support straps bolts			38 N.m (3.9 kgf.m, 28 lbf.ft)
	Knock sensor			31 N.m (3.2 kgf.m, 23 lbf.ft)
	Rocker arm oil pressure switch		Use new O-ring	22 N.m (2.2 kgf.m, 16 lbf.ft)
	Secondary HO2S			44 N.m (4.5 kgf.m, 33 lbf.ft)
	Secondary fuel gauge sending unit locknut (1)		Use new locknut, locknut plate, and base gasket	70 N.m (7.1 kgf.m, 51 lbf.ft)
	Throttle body bolts		Use new gasket	22 N.m (2.2 kgf.m, 16 lbf.ft)
	Under floor TWC self locking nuts	Without SH-AWD	Use new gaskets and nuts	33 N.m (3.4 kgf.m, 25 lbf.ft)
	Under floor TWC self locking nuts (front side)	With SH-AWD	Use new gaskets and nuts	33 N.m (3.4 kgf.m, 25 lbf.ft)
	Under floor TWC self locking nuts (rear side)	With SH-AWD	Use new gaskets and nuts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Warm up TWC (front bank) bracket bolts			45 N.m (4.5 kgf.m, 33 lbf.ft)
	Warm up TWC (rear bank) bracket bolts			22 N.m (2.2 kgf.m, 16 lbf.ft)
	Warm up TWC (front bank) upper self locking nuts		Use new nuts	31 N.m (3.2 kgf.m, 23 lbf.ft)
	Warm up TWC (rear bank) upper self locking nuts		Use new nuts	31 N.m (3.2 kgf.m, 23 lbf.ft)
(1) Follow the S/M procedures closely for torque, sequence, and special steps.				

Clutch

Location	Item	Remark	Torque

Clutch	Clutch push rod locknut		17 N.m (1.7 kgf.m, 12 lbf.ft)
	Clutch pedal position switch A locknut		9.8 N.m (1.0 kgf.m, 7 lbf.ft)
	Clutch pedal position switch B locknut		9.8 N.m (1.0 kgf.m, 7 lbf.ft)
	Clutch pedal bolt		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Master cylinder nuts		13 N.m (1.3 kgf.m, 9 lbf.ft)
	Slave cylinder bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Flywheel bolts		103 N.m (10.5 kgf.m, 76 lbf.ft)
	Pressure plate bolts (1)		25 N.m (2.6 kgf.m, 19 lbf.ft)
	Release fork bolt		29 N.m (3.0 kgf.m, 22 lbf.ft)
(1) Parts to be tightened in a particular order.			

Manual Transmission

Location	Item	Remark	Torque
Manual transmission	MTF drain plug	Use new sealing washer	44 N.m (4.5 kgf.m, 33 lbf.ft)
	MTF filler plug	Use new sealing washer	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Back-up light switch	Use liquid gasket on threads	29 N.m (3.0 kgf.m, 22 lbf.ft)
	Upper transmission bolts		74 N.m (7.5 kgf.m, 54 lbf.ft)
	Lower transmission bolts		74 N.m (7.5 kgf.m, 54 lbf.ft)
	Shift lever housing bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Shift cable bracket bolts		27 N.m (2.8 kgf.m, 20 lbf.ft)

Automatic Transmission

Location	Item	Remark	Torque
Automatic transmission	ATF drain plug	Use new sealing washer	49 N.m (5.0 kgf.m, 36 lbf.ft)
	ATF filler bolt	Use new sealing washer	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Clutch pressure inspection port sealing bolts (line/1st/5th/torque converter)		20 N.m (2.0 kgf.m, 14 lbf.ft)
	Clutch pressure inspection port sealing bolts (3rd/6th)		27 N.m (2.8 kgf.m, 20 lbf.ft)
	Transmission fluid pressure switches	Use new sealing washers	0 N.m (2.0 kgf.m, 14 lbf.ft)
	Line pressure switch	Use new sealing washer	20 N.m (2.0 kgf.m, 14 lbf.ft)
	Drive plate bolts (1)		74 N.m (7.5 kgf.m, 54 lbf.ft)
	Lower transmission housing mounting bolts		74 N.m (7.5 kgf.m, 54 lbf.ft)
	Upper transmission housing mounting bolts		64 N.m (6.5

			kgf.m, 47 lbf.ft)
	Transfer assembly mounting bolts		51 N.m (5.2 kgf.m, 38 lbf.ft)
	Transmission ground terminal bracket bolt		26 N.m (2.7 kgf.m, 20 lbf.ft)
	Shift lever assembly bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Shift cable end nut		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Shift lever bracket base bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
Transfer assembly	Transfer assembly fluid drain plug	Use new sealing washer	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Transfer assembly fluid filler plug	Use new sealing washer	44 N.m (4.5 kgf.m, 33 lbf.ft)
(1) Follow the S/M procedures closely for torque, sequence, and special steps.			

NOTE:

- **Refer to the appropriate Service information for the precautions and complete procedures.**
- **Refer to the appropriate Service information for the bolts/nuts not indicated here.**

Rear Differential

Location	Item	Remark	Torque
Rear differential	Rear differential fluid drain plug	Use new sealing washer	47 N.m (4.8 kgf.m, 35 lbf.ft)
	Rear differential fluid filler plug	Use new sealing washer	47 N.m (4.8 kgf.m, 35 lbf.ft)
	Rear differential front mounting bracket nuts (1)	Use new nuts	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Rear differential front mounting bracket bolts (1)	Use new bolts	74 N.m (7.5 kgf.m, 54 lbf.ft)
	Rear differential rear mount bolts (1)	Use new bolts	74 N.m (7.5 kgf.m, 54 lbf.ft)
(1) Follow the S/M procedures closely for torque, sequence, and special steps.			

Driveline/Axle

Location	Item	Remark	Torque
	Driveshaft spindle nut (24	• Use oil on the seating surface	245 N.m (25.0 kgf.m, 181

	mm)	• Use new nut	lbf.ft)
	Driveshaft spindle nut (26 mm)	• Use oil on the seating surface • Use new nut	329 N.m (33.5 kgf.m, 242 lbf.ft)
	Intermediate shaft dowel bolts		39 N.m (4.0 kgf.m, 29 lbf.ft)
Driveline/axle	Intermediate shaft flange bolt		39 N.m (4.0 kgf.m, 29 lbf.ft)
	Heat shield bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	No. 1 propeller shaft nuts	Use new nuts	72 N.m (7.3 kgf.m, 53 lbf.ft)
	No. 3 propeller shaft bolts	Use new bolts	72 N.m (7.3 kgf.m, 53 lbf.ft)
	No. 1 support bearing bolts (1)	Use new bolts	39 N.m (4.0 kgf.m, 29 lbf.ft)
	No. 2 support bearing bolts (1)	Use new bolts	39 N.m (4.0 kgf.m, 29 lbf.ft)
(1) Follow the S/M procedures closely for torque, sequence, and special steps.			

Steering

Location	Item	Remark	Torque
Steering	Steering wheel bolt		39 N.m (4.0 kgf.m, 29 lbf.ft)
	Steering joint bolts		28 N.m (2.9 kgf.m, 21 lbf.ft)
	Steering column nuts		16 N.m (1.6 kgf.m, 12 lbf.ft)
	Steering column bolts		16 N.m (1.6 kgf.m, 12 lbf.ft)
	Steering gearbox bolts	Use new bolts	74 N.m (7.5 kgf.m, 54 lbf.ft)
	Tie-rod end ball joint nuts	Use new nuts	60 N.m (6.1 kgf.m, 44 lbf.ft)
	Tie-rod end locking nuts		44 N.m (4.5 kgf.m, 33 lbf.ft)

Suspension

Location	Item	Remark	Torque
Front suspension	Wheel nuts		127 N.m (13.0 kgf.m, 94.0 lbf.ft)
	Upper arm castle nut		44- 52 N.m (4.5- 5.3 kgf.m, 33- 38 lbf.ft)
	Upper arm bolts	Use new bolts	31 N.m (3.2 kgf.m, 23 lbf.ft)
	Knuckle ball joint castle nut	Use new nut	93- 103 N.m (9.5- 10.5 kgf.m, 69- 75.9 lbf.ft)
	Lower arm bolt (12mm)	Use new bolt	74 N.m (7.5 kgf.m, 54 lbf.ft)
	Lower arm bolt (12mm)	Use new bolt	83 N.m (8.5 kgf.m, 61 lbf.ft)
	Stabilizer bar bolts		55 N.m (5.6 kgf.m, 41 lbf.ft)
	Stabilizer link nuts		78 N.m (8.0 kgf.m, 58 lbf.ft)

	Damper nuts	Use new nuts	55 N.m (5.6 kgf.m, 41 lbf.ft)
	Damper pinch bolt		49 N.m (5.0 kgf.m, 36 lbf.ft)
	Damper fork bolt/nut	Use new bolt/nut	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Damper self-locking	nut Use new nut	29 N.m (3.0 kgf.m, 22 lbf.ft)
Rear suspension	Wheel nuts		127 N.m (13.0 kgf.m, 94.0 lbf.ft)
	Upper arm castle nut	Use new nut	69- 78 N.m (7.0- 8.0 kgf.m, 51 - 58 lbf.ft)
	Upper arm bolts	Use new bolts	59 N.m (6.0 kgf.m, 43 lbf.ft)
	Lower arm A bolts	Use new bolts	59 N.m (6.0 kgf.m, 43 lbf.ft)
	Control arm self-locking nut	Use new nut	59 N.m (6.0 kgf.m, 43 lbf.ft)
	Control arm self-locking nut/adjusting bolt	Use new nut	57 N.m (5.8 kgf.m, 42 lbf.ft)
	Lower arm B bolts	Use new bolts	59 N.m (6.0 kgf.m, 43 lbf.ft)
	Stabilizer bar bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Stabilizer link nut	Use new nut	38 N.m (3.9 kgf.m, 28 lbf.ft)
	Stabilizer link self-locking nut	Use new nut	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Damper nuts	Use new nuts	55 N.m (5.6 kgf.m, 41 lbf.ft)
	Damper lower bolt	Use new bolt	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Damper self-locking nut	Use new nut	29 N.m (3.0 kgf.m, 22 lbf.ft)

Brakes

Location	Item	Remark	Torque
Conventional brake	Front brake caliper bolts		72 N.m (7.3 kgf.m, 53 lbf.ft)
	Front brake caliper bracket bolts		137 N.m (14.0 kgf.m, 101 lbf.ft)
	Front brake hose bracket bolt		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Front brake hose banjo bolt	Use new washers	35 N.m (3.6 kgf.m, 26 lbf.ft)
	Brake booster/brake pedal nuts		12 N.m (1.2 kgf.m, 8.7 lbf.ft)
	Master cylinder nuts		15 N.m (1.5 kgf.m, 11 lbf.ft)
	Master cylinder brake lines		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Rear brake caliper bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Rear brake caliper bracket bolts		88 N.m (9.0 kgf.m, 65 lbf.ft)

	Rear brake hose bracket bolt		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Rear brake hose banjo bolt	Use new washers	35 N.m (3.6 kgf.m, 26 lbf.ft)
	Parking brake lever bolts		32 N.m (3.3 kgf.m, 24 lbf.ft)
	Parking brake cable bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Equalizer cover bolts		32 N.m (3.3 kgf.m, 24 lbf.ft)
	Brake pedal bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
VSA	VSA modulator-control unit brake line (10 mm)		15 N.m (1.5 kgf.m, 11 lbf.ft)
	VSA modulator-control unit brake line (12 mm)		22 N.m (2.2 kgf.m, 16 lbf.ft)

NOTE:

- **Refer to the appropriate Service information for the precautions and complete procedures.**
- **Refer to the appropriate Service information for the bolts/nuts not indicated here.**

BODY

Location	Item	Remark	Torque
Frame	Strut brace nuts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Strut brace bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Front subframe front stiffener bolts (12 mm) (1)		54 N.m (5.5 kgf.m, 40 lbf.ft)
	Front subframe front stiffener bolts (14 mm) (1)	Use new bolts	103 N.m (10.5 kgf.m, 76 lbf.ft)
	Front subframe middle rubber mount bolts (10 mm) (1)	Use new bolts	49 N.m (5.0 kgf.m, 36 lbf.ft)
	Front subframe middle rubber mount bolts (12 mm) (1)	Use new bolts	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Front subframe rear stiffener bolts (12 mm) (1)	Use new bolts	93 N.m (9.5 kgf.m, 69 lbf.ft)
	Front subframe rear stiffener bolts (14 mm) (1)	Use new bolts	103 N.m (10.5 kgf.m, 76 lbf.ft)
	Rear engine mounting base bracket bolts	Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Rear subframe mounting front stay bolts (8 mm)		27 N.m (2.75 kgf.m, 20 lbf.ft)
		Use new	103 N.m (10.5 kgf.m, 76

	Rear subframe mounting front stay bolts (14 mm)	bolts	lbf.ft)
	Rear subframe mounting rear stay bolts (8 mm)		27 N.m (2.75 kgf.m, 20 lbf.ft)
	Rear subframe mounting rear stay bolts (14 mm)	Use new bolts	103 N.m (10.5 kgf.m, 76 lbf.ft)
(1) Parts to be tightened in a particular order.			

HEATING, VENTILATION, AND AIR CONDITIONING

Location	Item	Remark	Torque
A/C compressor	A/C compressor bracket bolts		45 N.m (4.5 kgf.m, 33 lbf.ft)
	A/C compressor bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	A/C compressor center bolt		18 N.m (1.8 kgf.m, 13 lbf.ft)
	A/C compressor relief valve		13 N.m (1.35 kgf.m, 9.7 lbf.ft)
Receiver line	A/C pressure sensor		11 N.m (1.1 kgf.m, 8.0 lbf.ft)

BODY ELECTRICAL

Location	Item	Remark	Torque
Wipers/washers	Windshield wiper arm nut		30 N.m (3.0 kgf.m, 21.7 lbf.ft)
	Windshield wiper linkage nut		31.4 N.m (3.2 kgf.m, 23.2 lbf.ft)

DESIGN SPECIFICATIONS

Item	Measurement	Qualification	Specification
DIMENSIONS	Overall length		4, 966 mm (195.5 in)
	Overall width		1, 880 mm (74.0 in)
	Overall height		1, 452 mm (57.2 in)
	Wheelbase		2, 775 mm (109.3 in)
	Track	Front	1, 606 mm (63.2 in)
		Rear	1, 620 mm (63.8 in)
	Seating capacity		Five (5)
WEIGHT	Gross Vehicle Weight Rating (GVWR)	Without SH-AWD	2, 130 kg (4, 696 lbs)
		With SH-AWD	2, 235 kg (4, 927 lbs)
ENGINE (J35Z6)	Type		Water-cooled, 4-stroke SOHC VTEC gasoline engine
	Cylinder arrangement		60 ° V6-cylinder, transverse
	Bore and stroke		89.0 x 93.0 mm (3.504 x 3.661 in)
	Displacement		3, 471 cm^3 (211.8 cu in)
	Compression ratio		11.2
	Valve train		Belt drive, SOHC VTEC 4 valves

			per cylinder
	Lubrication system		Forced, wet sump, with trochoid pump
	Fuel required		Premium UNLEADED gasoline with 91 Pump Octane Number or higher
ENGINE (J37A4)	Type		Water-cooled, 4- stroke SOHC VTEC gasoline engine
	Cylinder arrangement		60 ° V6- cylinder, transverse
	Bore and stroke		90.0 x 96.0 mm (3.543 x 3.780 in)
	Displacement		3, 664 cm^3 (223.6 cu in)
	Compression ratio		11.2
	Valve train		Belt drive, SOHC VTEC 4 valves per cylinder
	Lubrication system		Forced, wet sump, with trochoid pump
	Fuel required		Premium UNLEADED gasoline with 91 Pump Octane Number or higher
STARTER	Type		Gear reduction
	Nominal output	M/T	1.6 kW
		A/T	1.8 kW
	Nominal voltage		12V
	Hour rating		30 seconds
	Direction of rotation		Counterclockwise as viewed from drive end
CLUTCH	Type		Single plate dry, diaphragm spring
MANUAL TRANSMISSION	Type		Synchronized, six-speed forward, one reverse
	Primary reduction		Direct 1:1
	Gear ratio	1st	3.625
		2nd	2.115
		3rd	1.529
		4th	1.125
		5th	0.847
		6th	0.686
		Reverse	3.656
	Final reduction	Type	Single helical gear
		Gear ratio	3.842
	Type		Electronically-controlled automatic, six-speed forward, one reverse
	Primary reduction		Direct 1:1

AUTOMATIC TRANSMISSION	Gear ratio	1st	3.359
		2nd	2.094
		3rd	1.484
		4th	1.065
		5th	0.754
		6th	0.555
		Reverse	2.269
	Final reduction	Type	Single helical gear
		Gear ratio	3.722
STEERING	Type		Electrical power-assisted rack and pinion
	Overall ratio		13.96
	Turns, lock-to-lock		2.7
	Steering wheel diameter	Without SH-AWD	370 mm (14.57 in)
		With SH-AWD	374 mm (14.72 in)
SUSPENSION	Type	Front	Independent double wishbone with stabilizer, coil spring
		Rear	Independent multilink with stabilizer, coil spring
	Shock absorber	Front and rear	Telescopic, hydraulic, nitrogen gas-filled
TIRES	Size (without SH-AWD)	Front and rear	P245/50R17 98V
			P245/45R18 96V
		Spare	T135/80D17 103M
	Size (with SH-AWD)	Front and rear	P245/45R18 96V
			245/40ZR19 94V (Optional)
		Spare	T135/80D17 103M
WHEEL ALIGNMENT	Camber	Front	- 0°30'
		Rear	- 1°00'
	Caster	Front	3° 48'
	Total toe-in	Front	0 mm (0 in)
		Rear	2 mm (0.08 in)
	Front wheel turning angle	Inward	38 ° 06'
		Outward (reference)	30 ° 24'
BRAKES	Type of service brake	Front	Power-assisted self-adjusting ventilated disc
		Rear	Power-assisted self-adjusting solid disc
	Type of parking brake		Mechanical actuating, rear wheels
	Pad friction surface area (swept area)	Front	59.2 cm^2 (9.18 sq in) x 2
		Rear	34.4 cm^2 (5.33 sq in) x 2
	Parking brake shoe		

	friction surface area		45.6 cm^2 (7.07 sq in) x 2
AIR CONDITIONING	Compressor	Type	Swash plate/DENSO
		Capacity	154.4 mL (9.42 cu in)/rev
		Maximum speed	7, 600 RPM
		Lubricant capacity	70 mL (2 3/8 fl.oz)
		Lubricant type	DENSO ND-OIL 8
	Condenser	Type	Corrugated fin
	Evaporator	Type	Corrugated fin
	Blower	Type	Radial
		Motor input	300W/12V
		Speed control	Infinitely variable
		Maximum capacity	545 m^3 (19, 246 cu ft)/h
	Temperature control		Air-mix type
	Compressor clutch	Type	Dry, single plate, poly V- belt drive
		Electrical power consumption at 68°F (20°C)	35 W maximum at 12 V
	Refrigerant	Type	HFC-134a (R-134a)
		Capacity	505- 555 g (17.8- 19.6 oz)
ELECTRICAL RATINGS	Battery		12 V- 65 Ah/20 HR (12V- 55 Ah/5 HR)
	Fuses	Under-hood fuse/relay box	120 A, 70 A, 60 A, 50 A, 40 A, 30 A, 20 A, 15 A, 10 A, 7.5 A
		Driver's under-dash fuse/relay box	20 A, 15 A, 10 A, 7.5 A
		Passenger's under-dash fuse/relay box	20 A, 15 A, 10 A, 7.5 A
		Auxiliary under-dash fuse/relay box	7.5 A
		Headlight high beam	12V- 60W (HB3)
		Headlight low beam (HID)	12V- 35W (D2S)
		Fog lights	12V- 55W (H11)
		Front turn signal/parking lights	12 V- 24/2.2CP (Amber)
		Side turn signal lights	LED
		Front side marker lights	12V- 3CP
		Rear turn signal lights	12V- 21 W (Amber)
		Brake lights/taillights	LED
		Rear side marker lights	12V- 3CP
		High mount brake light	LED

	Light bulbs	Back-up lights	12V- 16W
		License plate lights	12V- 5W
		Ambient light	LED
		Trunk light	12V- 5W
		Front individual map lights	LED
		Rear individual map lights	LED
		Door courtesy lights	12V- 3.4W
		Glove box light	12V- 1.4W
		Vanity mirror lights	12V- 2W
		Gauge lights	LED
		Indicator lights	LED
		Console box light	12V- 1.4W
		Footwell lights	LED

BODY SPECIFICATIONS

2012 ELECTRICAL

Under-Dash Fuse/Relay Box - TL

DRIVER'S UNDER-DASH FUSE/RELAY BOX (MICU) REMOVAL AND INSTALLATION

Special Tools Required

Relay Puller 07AAC-000A2A1 or 07AAC-000A1A0

NOTE: SRS components are located in this area. Review the SRS component locations (see COMPONENT LOCATION INDEX), and precautions and procedures (see PRECAUTIONS AND PROCEDURES) before doing repairs or servicing.

REMOVAL

1. Do the battery terminal disconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
2. Remove these items:
   - Driver's dashboard trim (see **DRIVER'S DASHBOARD TRIM REMOVAL/INSTALLATION**)
   - Driver's switch panel (see **DRIVER'S SWITCH PANEL REMOVAL/INSTALLATION**)
   - Driver's dashboard undercover (see **DRIVER'S DASHBOARD UNDERCOVER REMOVAL/INSTALLATION**)
   - Driver's kick panel (see **TRIM REMOVAL/INSTALLATION - DOOR AREAS**)
3. Loosen the bolt (A), then remove the bolt (B) and the bracket (C) from dashboard/steering hanger beam.

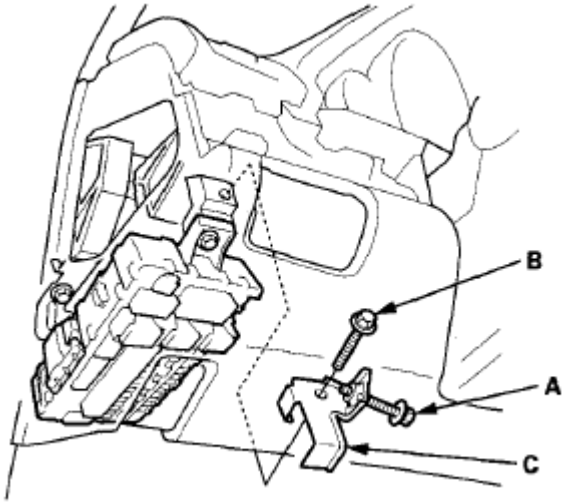

Fig. 1: Identifying Bolts And Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. USA models with keyless access system and Canada models without keyless access system: Remove the screws and cover (A) from the driver's under-dash fuse/relay box.

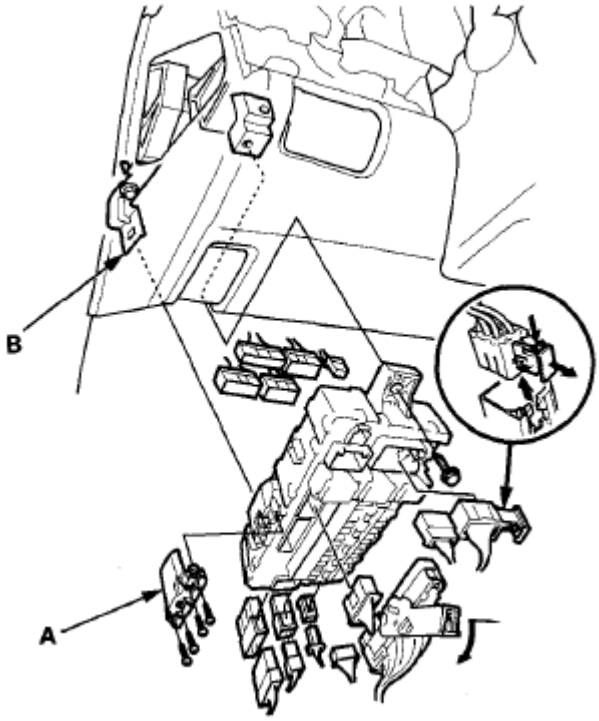

Fig. 2: Identifying Cover And Tab
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the mounting bolt, release the tab (B), and pull the driver's under-dash fuse/relay box away from the body.
6. Disconnect the connectors from the fuse side of the driver's under-dash fuse/relay box.
7. Disconnect the connectors from the back side of the driver's under-dash fuse/relay box, then remove the driver's under-dash fuse/relay box.
8. Carefully remove the relays by prying under the base of the relay (see **POWER RELAY TEST**).

NOTE: Do not use pliers. Pliers will damage the relays, which could cause the engine to stall or not start or cause other functions to fail.

INSTALLATION

NOTE: The imoes unit is built into the driver's MICU which is part of the driver's under-dash fuse/relay box. Further more, vehicles with the keyless access do the imoes certification by communicating with the remote slot control unit. Because of this construction, the imoes must be registered, or the vehicle will not start.

1. Install the relays and connect the connectors to the driver's under-dash fuse/relay box, then install the driver's under-dash fuse/relay box in the reverse order of removal.

2. Install the removed parts in the reverse order of removal.
3. Do the battery terminal reconnection procedure steps 1 to 4 (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
4. Register the immobilizer system with the HDS:
   - With keyless access system (see **KEYLESS ACCESS SYSTEM REGISTRATION**)
   - Without keyless access system (see **IMMOBILIZER KEY REGISTRATION**)
5. Do the remaining steps of battery terminal reconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
6. Confirm that all systems work properly.

PASSENGER'S UNDER-DASH FUSE/RELAY BOX (MICU) REMOVAL AND INSTALLATION

NOTE: SRS components are located in this area. Review the SRS component locations (see COMPONENT LOCATION INDEX), and precautions and procedures (see PRECAUTIONS AND PROCEDURES) before doing repairs or servicing.

REMOVAL

1. Do the battery terminal disconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
2. Remove the passenger's kick panel (see **TRIM REMOVAL/INSTALLATION - DOOR AREAS**).
3. Disconnect the connectors from the passenger's under-dash fuse/relay box (A).

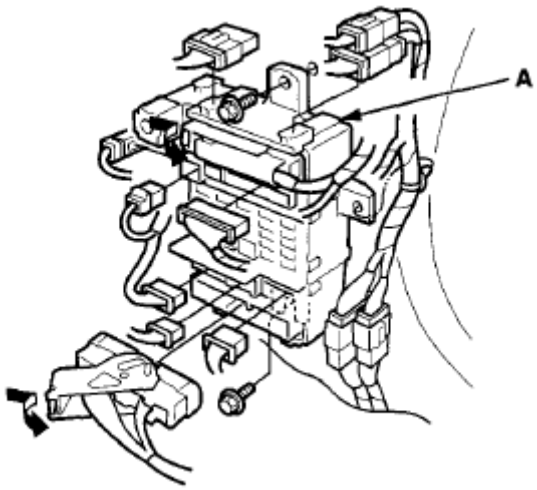

Fig. 3: Identifying Connectors & Passenger's Under-Dash Fuse/Relay Box
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Loosen the mounting bolt from the lower side of passenger's under-dash fuse/relay box.
5. Remove the mounting bolt from the upper side of passenger's under-dash fuse/relay box, and remove the

passenger's under-dash fuse/relay box.

INSTALLATION

1. Install the relays and connect the connectors to the passenger's under-dash fuse/relay box, then install the passenger's under-dash fuse/relay box in the reverse order of removal.
2. Install the removed parts in the reverse order of removal.
3. Do the battery terminal reconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
4. Confirm that all systems work properly.

2012 ELECTRICAL

Under-Hood Fuse/Relay Box - TL

REMOVAL AND INSTALLATION

Special Tools Required

Relay Puller 07AAC-000A2A1 or 07AAC-000A1A0

NOTE: The under-hood fuse/relay box is a part of the left engine compartment wire harness, and it cannot be replaced by itself.

REMOVAL

1. Do the battery terminal disconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
2. Open the cover (A), then remove the bolts (B) for the alternator and battery cable terminals.

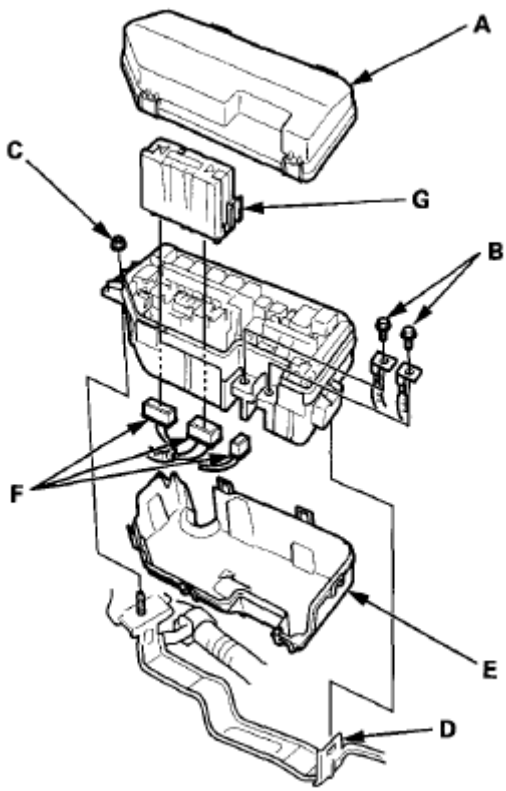

Fig. 1: Identifying Circuit Board, Connectors, Covers, Tab, Nut And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the nut (C) and release the tab (D), then remove the bottom cover (E) from the under-hood fuse/relay box.

4. Disconnect the connectors (F) from the under-hood fuse/relay box.
5. Remove the relay circuit board (G) from the under-hood fuse/relay box.
6. Carefully remove the relays by prying under the base of the relay (see **POWER RELAY TEST**).

NOTE: Do not use pliers. Pliers will damage the relays, which could cause the engine to stall or not start or cause other functions to fail.

INSTALLATION

1. Install the relays and connect the connectors to the under-hood fuse/relay box, then install the under-hood fuse/relay box in the reverse order of removal.
2. Install the removed parts in the reverse order of removal.
3. Do the battery terminal reconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
4. Confirm that all systems work properly.

2012 ENGINE

Cooling System - TL

COMPONENT LOCATION INDEX

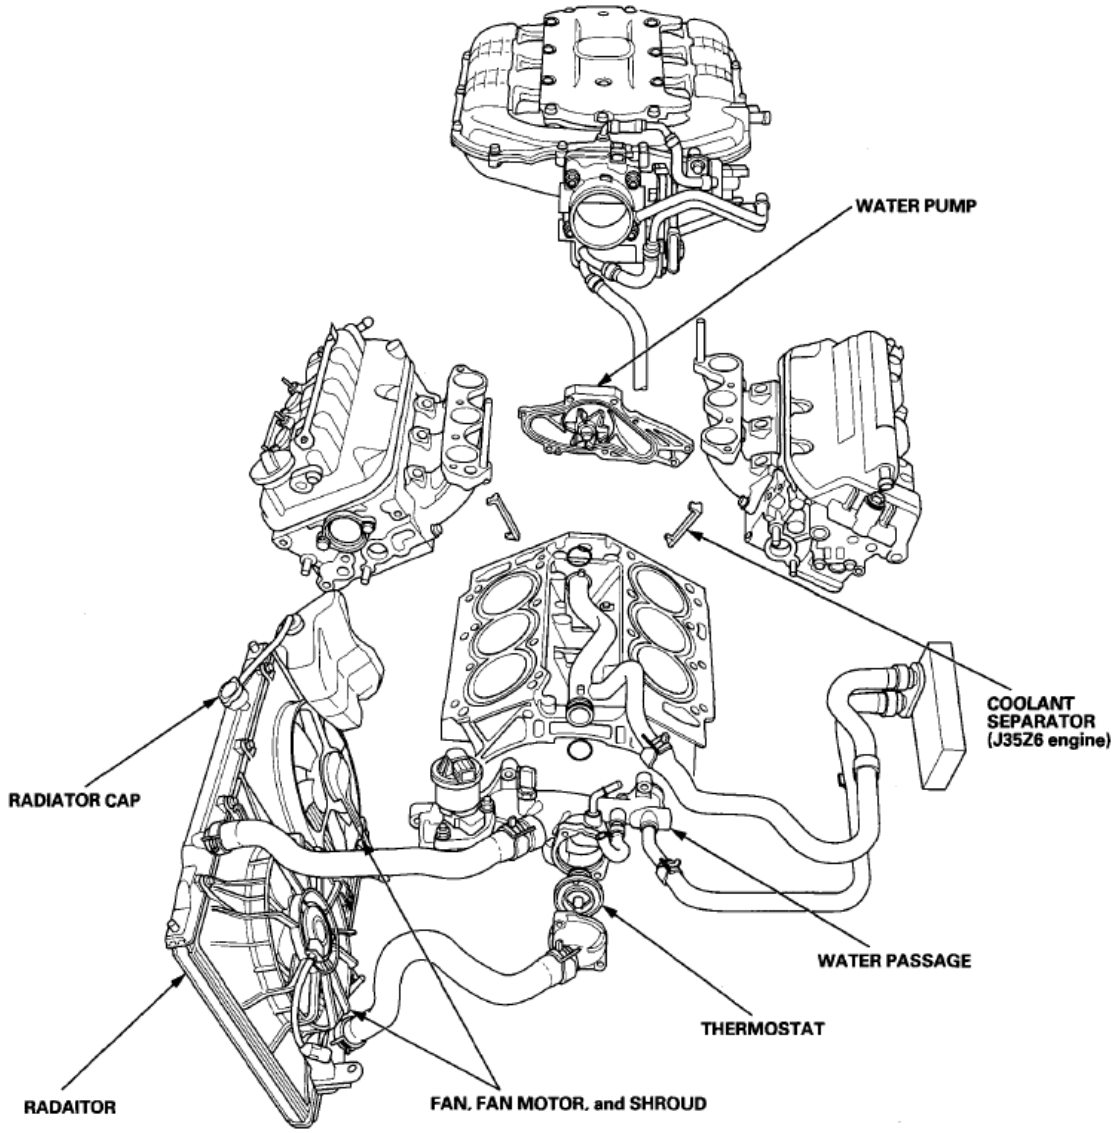

Fig. 1: Cooling System Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RADIATOR CAP TEST

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

2. Wait until the engine is cool, then carefully remove the radiator cap (A). Wet the radiator cap seal with engine coolant, then install it on a commercially available pressure tester (B).

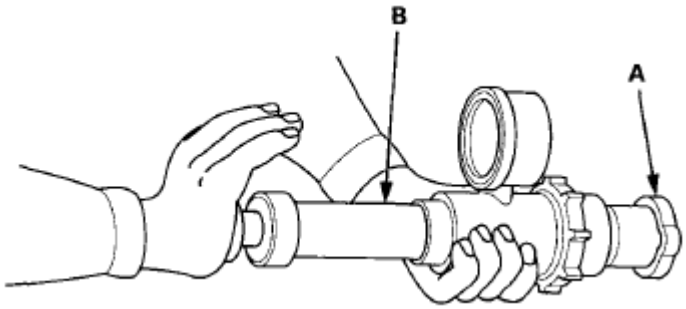

Fig. 2: Installing Wet Radiator Cap Seal On Pressure Tester
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Apply a pressure of 93- 123 kPa (0.95- 1.25 kgf/cm^2 , 13.5- 17.8 psi)
4. Check for a drop in pressure.
5. If the pressure drops, replace the radiator cap.
6. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

RADIATOR TEST

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Wait until the engine is cool, then carefully remove the radiator cap, and fill the radiator with engine coolant to the base of the filler neck.
3. Attach a commercially available pressure tester (A) to the radiator, and apply a pressure of 93- 123 kPa (0.95- 1.25 kgf/cm^2 , 13.5- 17.8 psi).

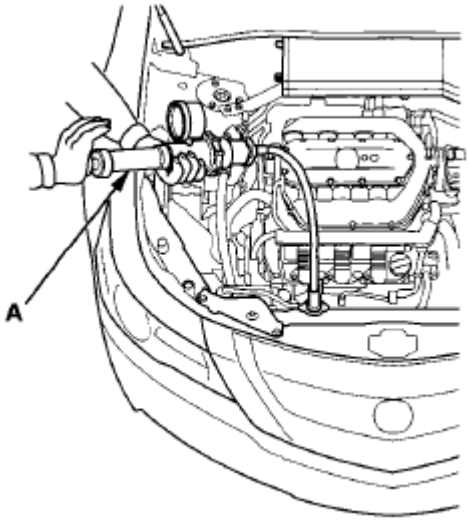

Fig. 3: Identifying Pressure Tester
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Inspect for engine coolant leaks and a drop in pressure.
5. Remove the tester, then reinstall the radiator cap.
6. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

FAN MOTOR TEST

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Disconnect the 2P connectors from the radiator fan motor (A) and the A/C condenser fan motor (B).

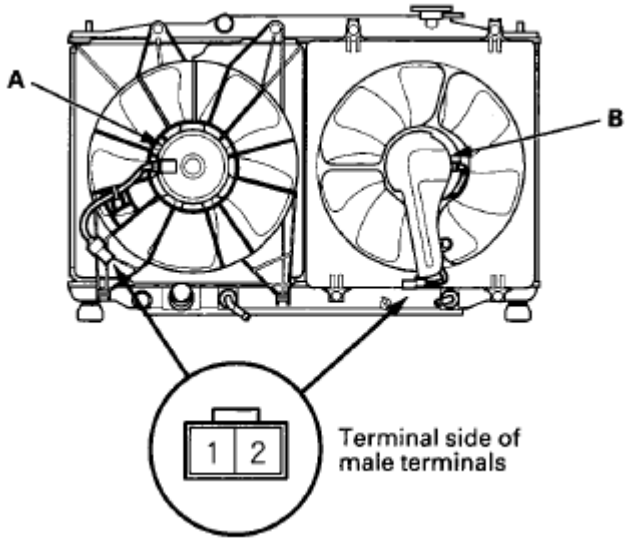

Fig. 4: Identifying Radiator Fan Motor And A/C Condenser Fan Motor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Test each motor by connecting battery power to terminal No. 2 and ground to terminal No. 1.
4. If either motor fails to run or does not run smoothly, replace it (see **FAN, FAN MOTOR, AND SHROUD REMOVAL AND INSTALLATION**).
5. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

THERMOSTAT TEST

Replace the thermostat if it is stuck in the open position at room temperature.

To test a closed thermostat:

1. Suspend the thermostat (A) in a container of water. Do not let the thermostat and the thermometer (B) touch the bottom of the hot container.

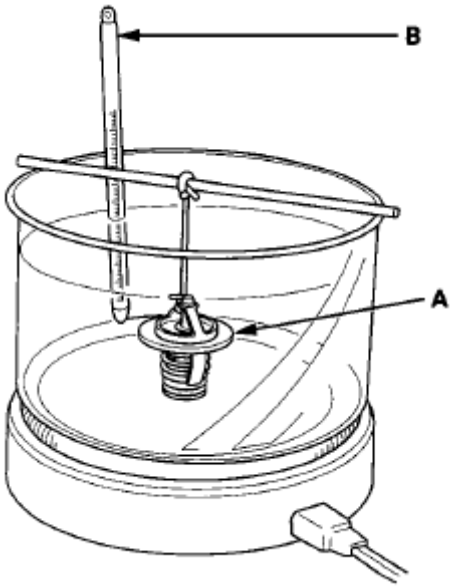

Fig. 5: Identifying Thermostat And Thermometer In Container Of Water
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Heat the water and check the temperature with a thermometer. Check the temperature at which the thermostat first opens, and at which it is fully open.
3. Measure the lift height of the thermostat when it is fully open.

Standard Thermostat

Lift Height: Above 10.0 mm (0.394 in)

Starts Opening: 169- 176°F (76- 80°C)

Fully Open: 194°F (90°C)

WATER PUMP INSPECTION

1. Remove the timing belt:
   - J35Z6 engine (see **TIMING BELT REMOVAL**)
   - J37A4 engine (see **TIMING BELT REMOVAL**)
2. Turn the water pump pulley counterclockwise, and check that it turns freely. If it does not turn freely, replace the water pump (see **WATER PUMP REPLACEMENT**).

NOTE: When you check the water pump, you may see a small amount of "weeping" from the bleed holes (A). This is normal.

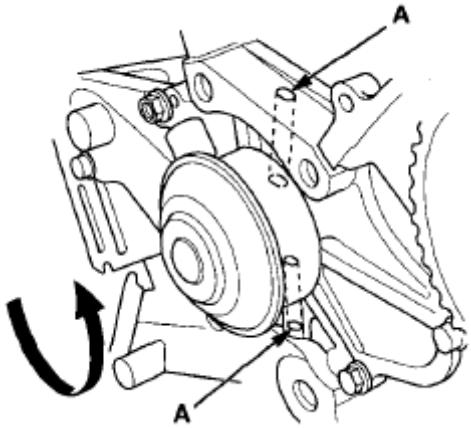

Fig. 6: Identifying Bleed Holes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the timing belt:
   - J35Z6 engine (see **TIMING BELT INSTALLATION**)
   - J37A4 engine (see **TIMING BELT INSTALLATION**)

WATER PUMP REPLACEMENT

1. Drain the engine coolant (see **COOLANT CHECK**).
2. Remove the timing belt:
   - J35Z6 engine (see **TIMING BELT REMOVAL**)
   - J37A4 engine (see **TIMING BELT REMOVAL**)
3. Remove the timing belt adjuster:
   - J35Z6 engine (see **TIMING BELT ADJUSTER REPLACEMENT**)
   - J37A4 engine (see **TIMING BELT ADJUSTER REPLACEMENT**)
4. Remove the five bolts securing the water pump (A), then remove the water pump.

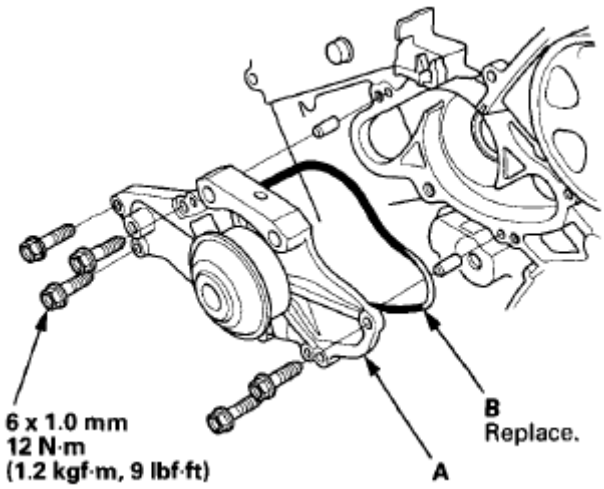

Fig. 7: Identifying Water Pump And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Inspect and clean the mating surface of the engine block.
6. Install the water pump with a new O-ring (B).
7. Clean up any spilled engine coolant.
8. Install the timing belt adjuster:
   - J35Z6 engine (see **TIMING BELT ADJUSTER REPLACEMENT**)
   - J37A4 engine (see **TIMING BELT ADJUSTER REPLACEMENT**)
9. Install the timing belt:
   - J35Z6 engine (see **TIMING BELT INSTALLATION**)
   - J37A4 engine (see **TIMING BELT INSTALLATION**)
10. Refill the radiator with engine coolant, then bleed the air from the cooling system (see **COOLANT CHECK**).

COOLANT CHECK

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Check the coolant level in the coolant reservoir. Make sure it is between the MAX mark (A) and the MIN mark (B).

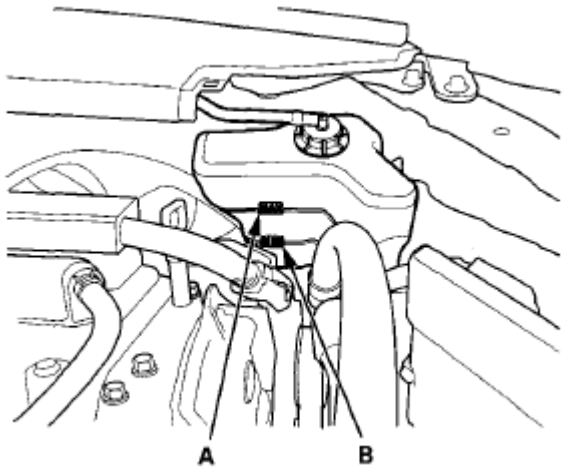

Fig. 8: Identifying MAX And MIN Marks On Coolant Reservoir
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. If the coolant level in the coolant reservoir is at or below the MIN mark, add coolant to bring it between the MIN and MAX marks, then inspect the cooling system for leaks.
4. Check the coolant level in the radiator, and add Acura Long Life Antifreeze/Coolant Type 2 into the radiator up to the base of the filler neck, if needed.

NOTE:

- **Always use Acura Long Life Antifreeze/Coolant Type 2. Using a non-Acura coolant can result in corrosion, causing the cooling system to malfunction or fail.**
- **Acura Long Life Antifreeze/Coolant Type 2 is a mixture of 50 % antifreeze and 50 % water. Do not add water.**

5. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

COOLANT REPLACEMENT

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Wait until the engine is cool, then carefully remove the radiator cap.
3. Loosen the drain plug (A), and drain the coolant.

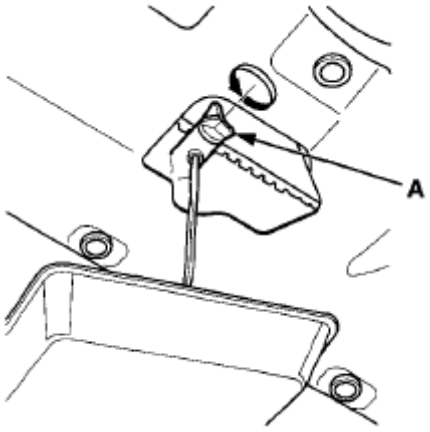

Fig. 9: Identifying Drain Plug
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install a rubber hose (A) on the drain bolt (B) located at the rear of the engine block, then loosen the drain bolt.

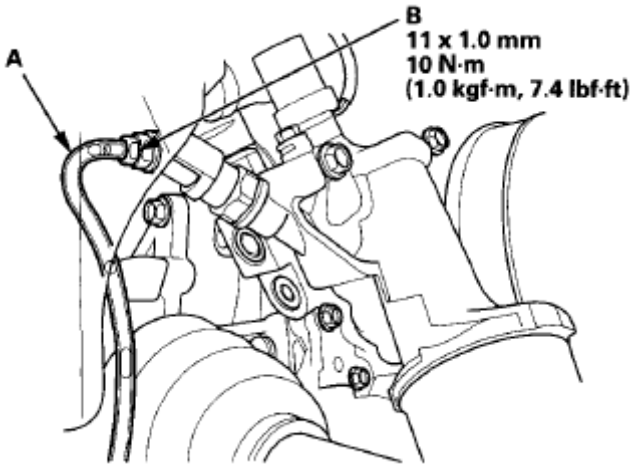

Fig. 10: Identifying Rubber Hose And Drain Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. When the coolant stops draining, tighten the drain bolt. Remove the rubber hose.
6. Tighten the radiator drain plug securely.
7. Remove, drain, and reinstall the coolant reservoir.
8. Fill the coolant reservoir to the MAX mark (A) with Acura Long Life Antifreeze/Coolant Type 2.

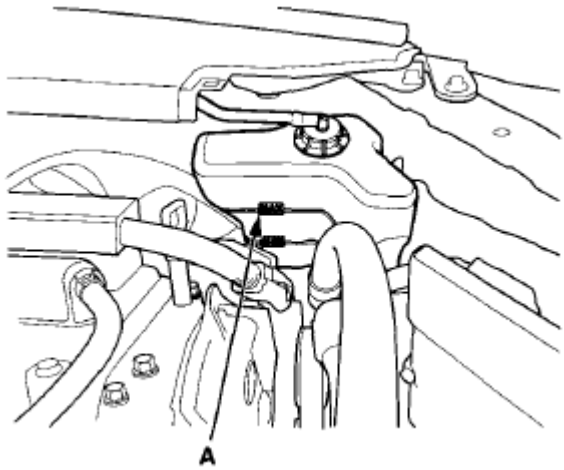

Fig. 11: Identifying MAX Mark With Acura Long Life Antifreeze/Coolant
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Pour Acura Long Life Antifreeze/Coolant Type 2 into the radiator up to the base of the filler neck.

NOTE:

- **Always use Acura Long Life Antifreeze/Coolant Type 2. Using a non-Acura coolant can result in corrosion, causing the cooling system to malfunction or fail.**
- **Acura Long Life Antifreeze/Coolant Type 2 is a mixture of 50 % antifreeze and 50 % water. Do not add water.**

Engine Coolant Refill Capacities (Including the coolant reservoir capacity of 0.69 L (0.182 US gal)) At Coolant Change:

6.3 L (1.66 US gal)

After Engine Overhaul:

8.3 L (2.19 US gal)

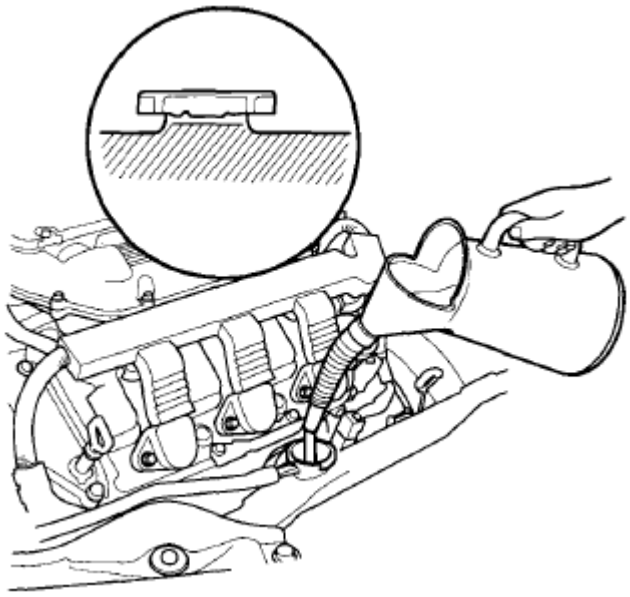

Fig. 12: Refilling Coolant Reservoir With Acura Long Life Antifeeze/Coolant
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Loosely install the radiator cap.
11. Set the heater temperature control to maximum heat.
12. Start the engine, and let it run until it warms up (the radiator fan comes on at least twice).
13. Turn off the engine. Check the level in the radiator, and add the recommended coolant, if needed.
14. Put the radiator cap on securely, then run the engine again, and check for leaks.
15. Clean up any spilled engine coolant.
16. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
17. If the Maintenance Minder required replacing the engine coolant, reset the Maintenance Minder (see **RESETTING THE MAINTENANCE MINDER**), and this procedure is complete. If the Maintenance Minder did not require engine coolant replacement, go to step 18.
18. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
19. Connect the HDS to the DLC (see **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
20. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
21. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it does not communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).

22. Select GAUGES in the BODY ELECTRICAL with the HDS.
23. Select ADJUSTMENT in the GAUGES with the HDS.
24. Select MAINTENANCE MINDER in the ADJUSTMENT with the HDS.
25. Select RESET in the MAINTENANCE MINDER with the HDS.
26. Select MAINTENANCE SUB ITEM 5 RESET with the HDS.

THERMOSTAT REPLACEMENT

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Drain the engine coolant (see **COOLANT CHECK**).
3. Do the battery removal procedure (see **BATTERY REMOVAL AND INSTALLATION**).
4. A/T model: Remove harness clamps (A) and disconnect the positive starter cable (B).

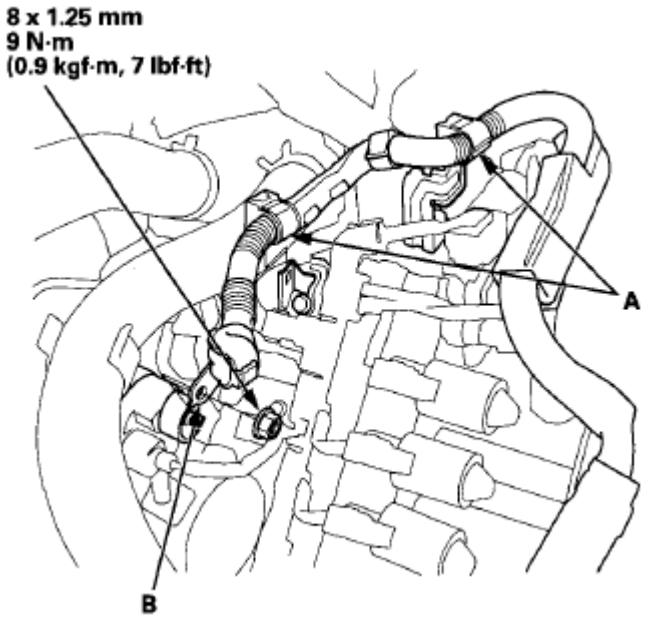

Fig. 13: Identifying Harness Clamp And Starter Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. A/T model: Remove the bolt (A) and the harness holder (B).

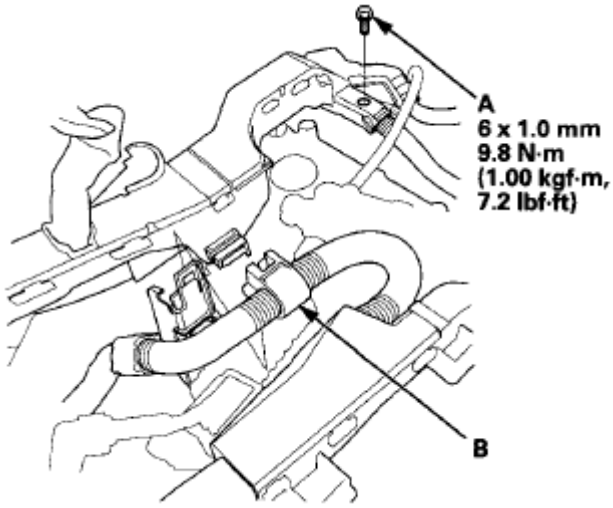

Fig. 14: Identifying Harness Holder And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the thermostat cover (A), then remove the thermostat (B).

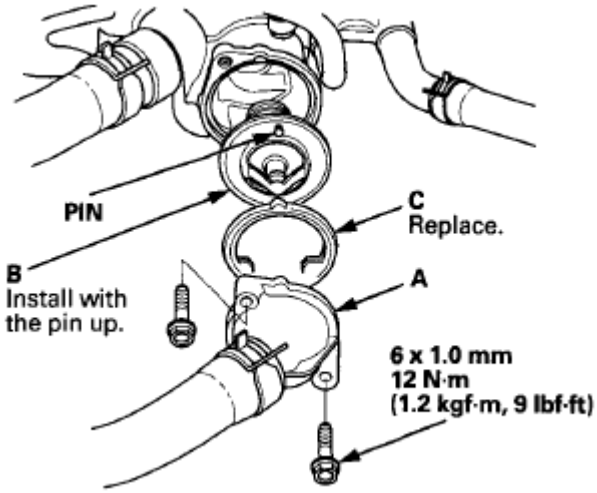

Fig. 15: Identifying Thermostat Cover, Thermostat And Rubber Seal With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the new thermostat with a new rubber seal (C) in the reverse order of the removal.
8. Do the battery installation procedure (see **BATTERY REMOVAL AND INSTALLATION**).
9. Refill the radiator with engine coolant, and bleed the air from the cooling system (see **COOLANT CHECK**).
10. Clean up any spilled engine coolant.
11. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

WATER PASSAGE REPLACEMENT

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Drain the engine coolant (see **COOLANT CHECK**).
3. Do the battery removal procedure (see **BATTERY REMOVAL AND INSTALLATION**).
4. Remove the intake manifold (see **REMOVAL**).
5. Disconnect the upper radiator hose (A), the lower radiator hose (B), the ECT sensor 1 connector (C), and the EGR valve connector (D).

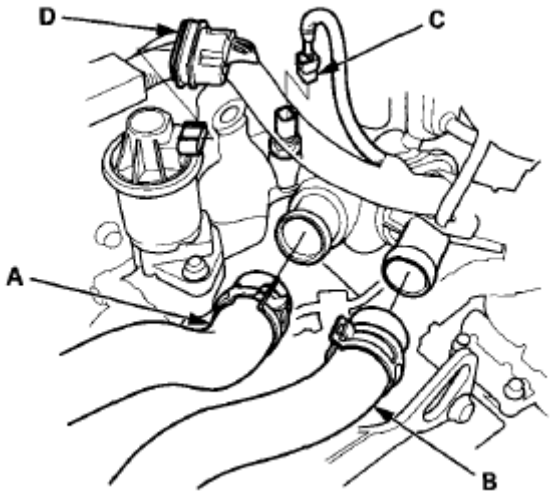

Fig. 16: Identifying Upper And Lower Radiator Hose, ECT Sensor Connector And EGR Valve Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Disconnect the water bypass hose (A) and the heater hose(B).

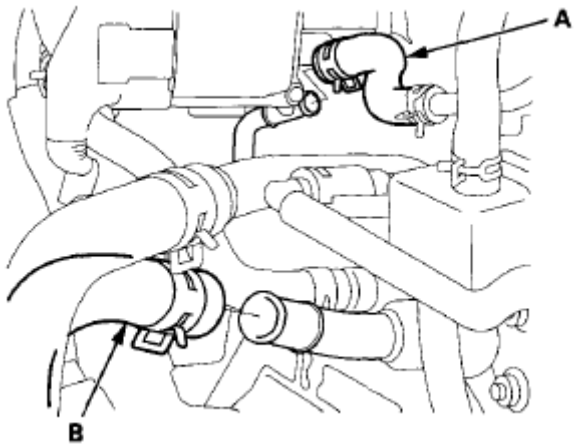

Fig. 17: Identifying Water By-Pass Hose And Heater Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the EGR pipe (see **EGR VALVE REPLACEMENT**).

8. Remove the water passage (A), then remove the EGR valve (B), the ECT sensor 1 (C), and the water bypass hose (D).

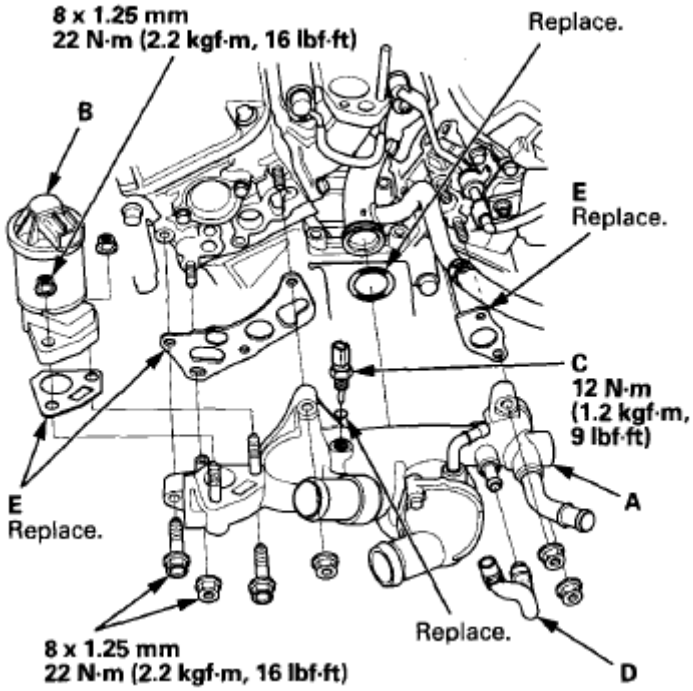

Fig. 18: Identifying Water Passage, EGR Valve, ECT Sensor And Water Bypass Hose With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the water passage with new gaskets (E) in the reverse order of the removal.
10. Do the battery installation procedure (see **BATTERY REMOVAL AND INSTALLATION**).
11. Refill the radiator with engine coolant, and bleed the air from the cooling system (see **COOLANT CHECK**).
12. Clean up any spilled engine coolant.
13. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

FAN, FAN MOTOR, AND SHROUD REMOVAL AND INSTALLATION

REMOVAL

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Do the battery removal procedure (see **BATTERY REMOVAL AND INSTALLATION**).
3. Remove the battery base (see **BATTERY REMOVAL AND INSTALLATION**).
4. Remove the air intake duct splash separator (see **ENGINE REMOVAL**).
5. Raise the vehicle on the lift.

6. Remove the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
7. Disconnect the A/C condenser fan motor connector (A), and remove the harness clamps (B).

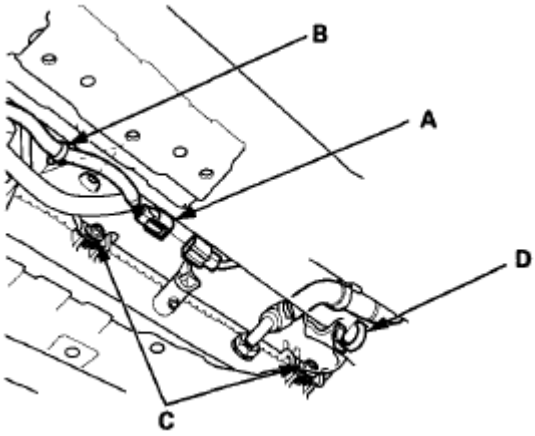

Fig. 19: Identifying Fan Motor Connector, Harness Clamps And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Loosen the A/C condenser fan shroud mounting bolts (C).
9. A/T model: Remove the harness clamps (D).
10. Disconnect the radiator fan motor connector (A), and remove the harness clamps (B).

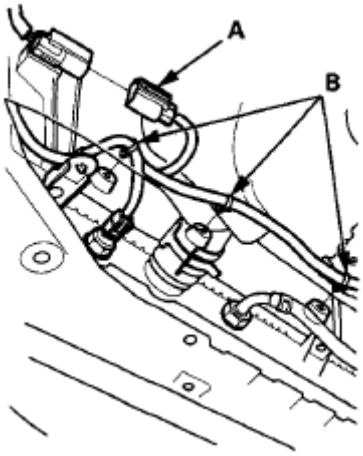

Fig. 20: Identifying Radiator Fan Motor Connector And Harness Clamps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Lower the vehicle on the lift.
12. Remove the coolant reservoir (A), then remove the A/C condenser fan shroud assembly (B).

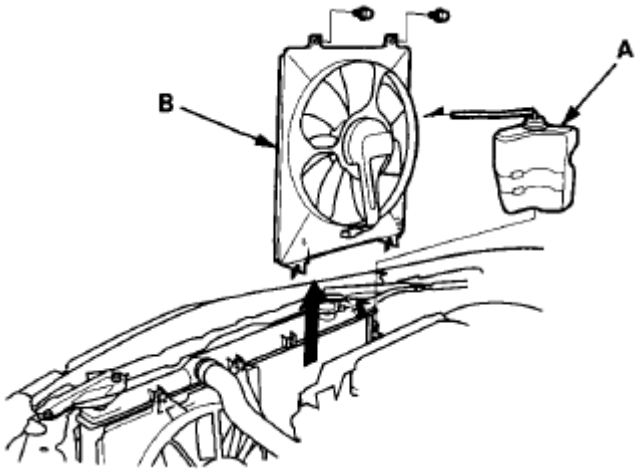

Fig. 21: Identifying Coolant Reservoir And Fan Shroud Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the upper brackets (A). A

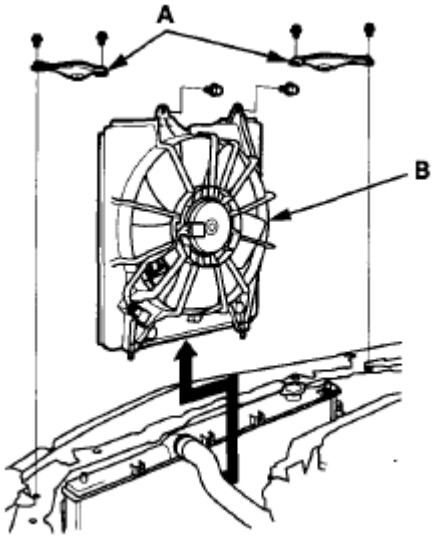

Fig. 22: Identifying Upper Brackets And Fan Shroud Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the radiator fan shroud assembly (B).

NOTE: Pull up the radiator, then move the radiator fan shroud assembly toward the right side of the vehicle to allow for enough space to lift it up and away from the A/C condenser fan shroud assembly.

15. Disassemble the fan shrouds.

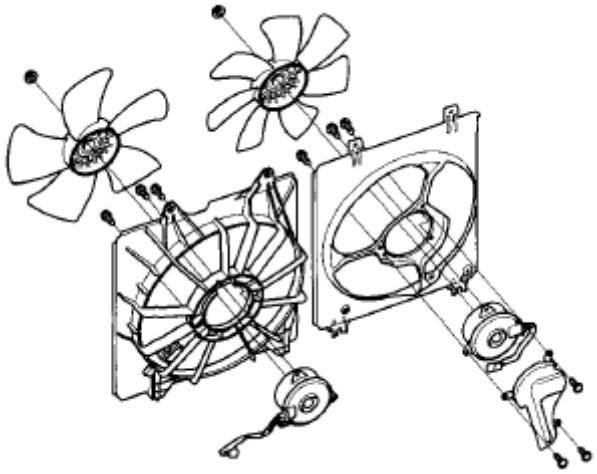

Fig. 23: Disassembling Fan Shrouds
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Assemble the fan shrouds.

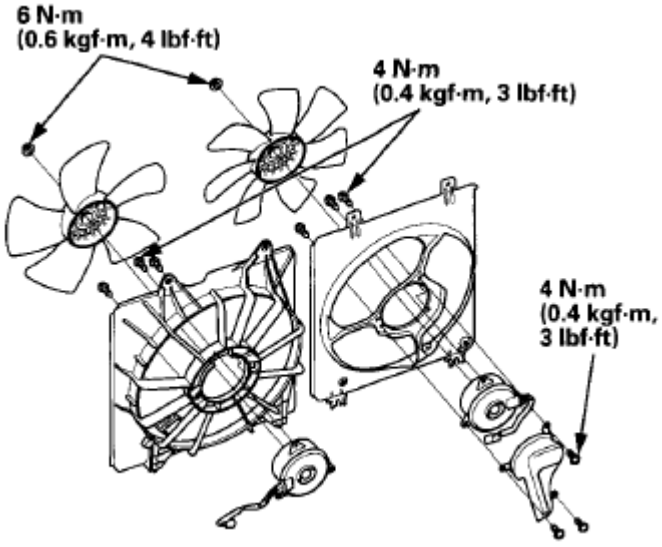

Fig. 24: Assembling Fan Shrouds With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the radiator fan shroud assembly (A).

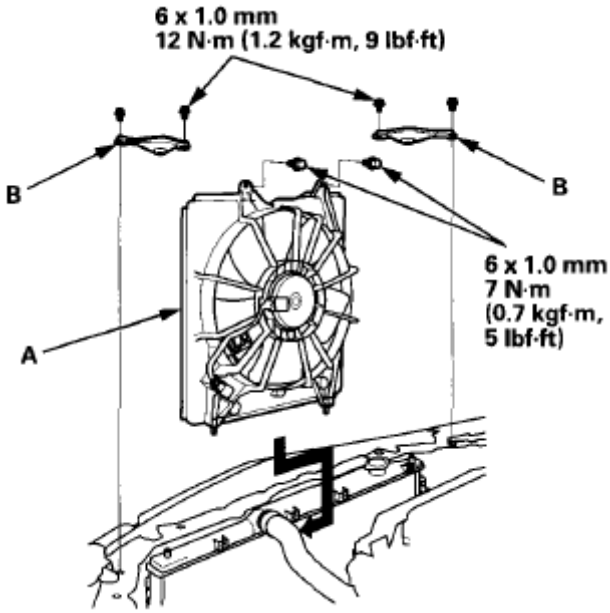

Fig. 25: Identifying Radiator Fan Shroud Assembly And Upper Brackets With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the upper brackets (B).
4. Install the A/C condenser fan shroud assembly (A), then install the coolant reservoir (B).

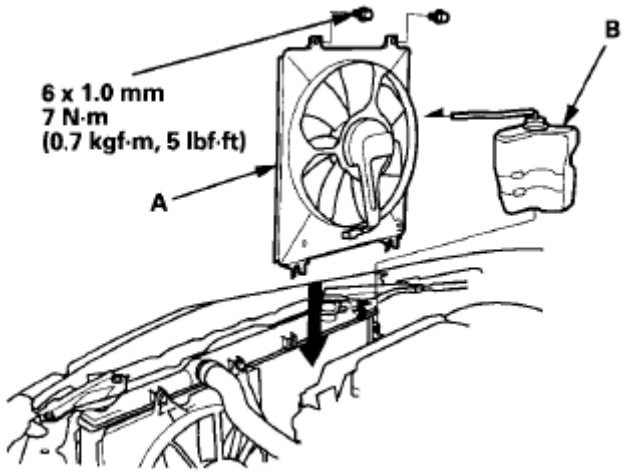

Fig. 26: Identifying A/C Condenser Fan Shroud Assembly And Coolant Reservoir With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Raise the vehicle on the lift.
6. Connect the radiator fan motor connector (A), and install the harness clamps (B).

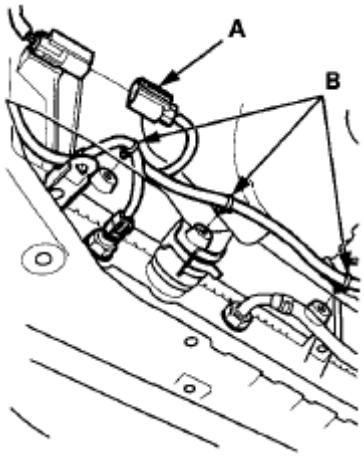

Fig. 27: Identifying Radiator Fan Motor Connector And Harness Clamps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. A/T model: Install the harness clamp (A).

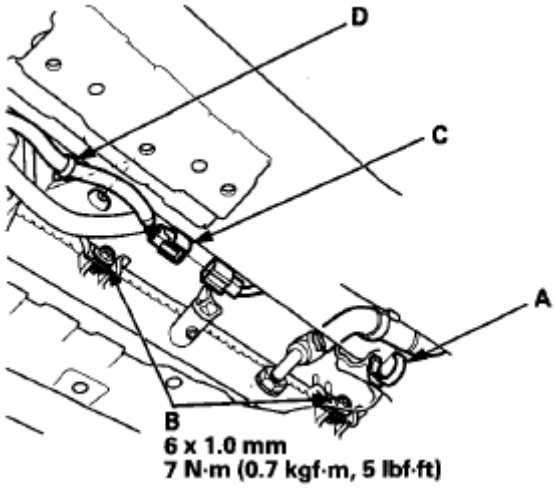

Fig. 28: Identifying Harness Clamps, Mounting Bolts And Motor Connector With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Tighten the A/C condenser fan shroud mounting bolts (B).
9. Connect the A/C condenser fan motor connector (C), and install the harness clamp (D).
10. Install the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
11. Lower the vehicle on the lift.
12. Install the air intake duct splash separator (see **ENGINE INSTALLATION**).
13. Install the battery base (see **BATTERY REMOVAL AND INSTALLATION**).
14. Do the battery installation procedure (see **BATTERY REMOVAL AND INSTALLATION**).
15. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

RADIATOR REPLACEMENT

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Drain the engine coolant (see **COOLANT CHECK**).
3. Remove the air intake duct splash separator (see **ENGINE REMOVAL**).
4. Raise the vehicle on the lift.
5. Remove the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
6. Disconnect the A/C condenser fan motor connector (A), and remove the harness clamp (B).

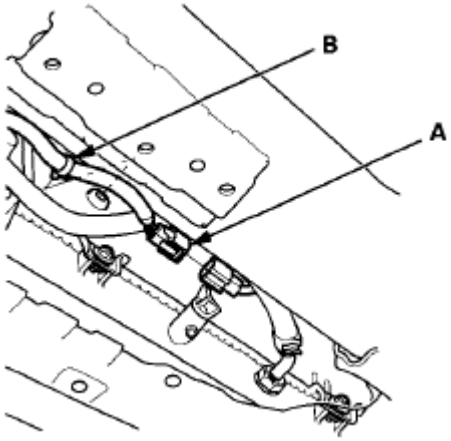

Fig. 29: Identifying A/C Condenser Fan Motor Connector And Harness Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the radiator fan motor connector (A) and the ECT sensor 2 connector (B), then remove the harness clamps (C).

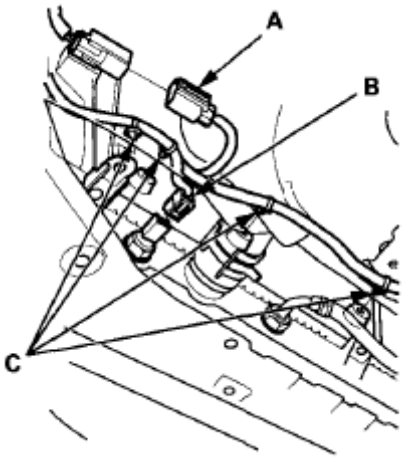

Fig. 30: Identifying Radiator Fan Motor Connector, ECT Sensor Connector And Harness Clamps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Disconnect the lower radiator hose (A).

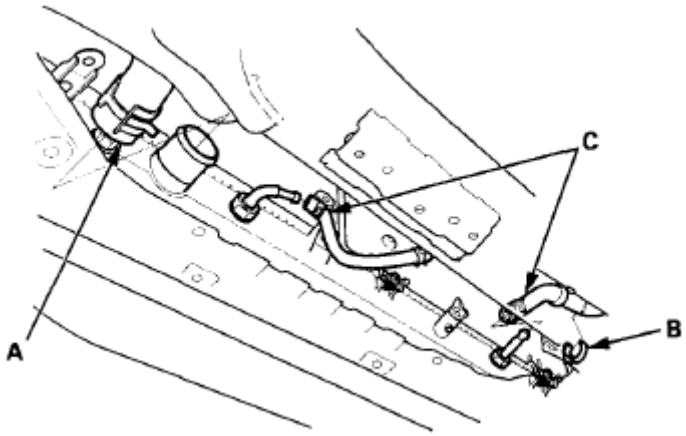

Fig. 31: Identifying Lower Radiator Hose, Clamp And ATF Cooler Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. A/T model: Remove the harness clamp (B). Disconnect the ATF cooler hoses (C) from the radiator, then plug the cooler hoses and the lines (see **ATF COOLER HOSE REPLACEMENT**).
10. Lower the vehicle on the lift.
11. Disconnect the upper radiator hose (A) and remove the coolant reservoir (B).

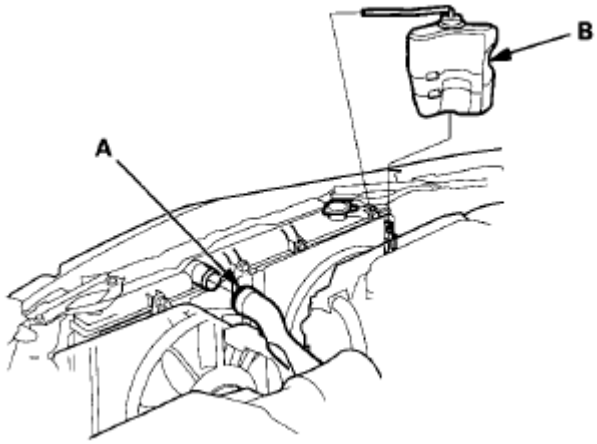

Fig. 32: Identifying Upper Radiator Hose And Coolant Reservoir
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the upper brackets (A), then pull up the radiator (B) with fan shrouds (C).

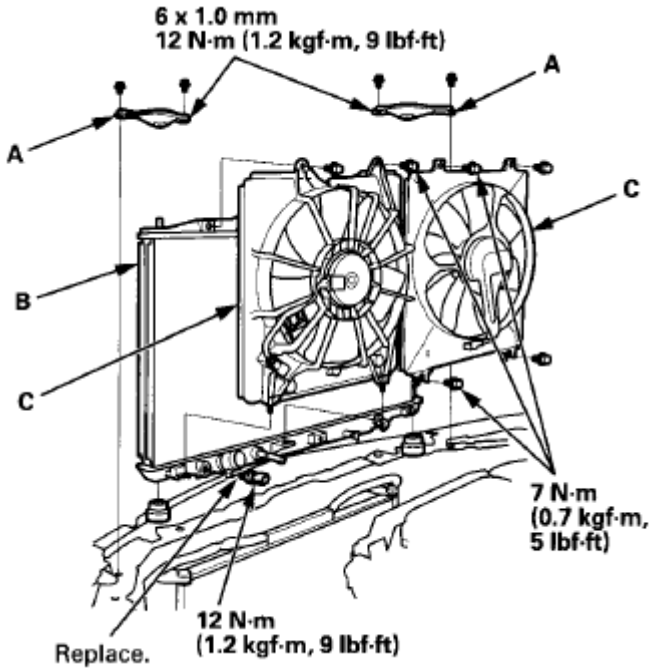

Fig. 33: Identifying Upper Brackets, Radiator And Fan Shrouds With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the fan shrouds and other parts from the radiator.
14. Install the radiator in the reverse order of removal. Make sure the upper and lower cushions are set securely.
15. A/T model: Refill the transmission with ATF (see **ATF REPLACEMENT**).
16. Fill the radiator with engine coolant, and bleed the air from the cooling system (see **COOLANT CHECK**).
17. Clean up any spilled engine coolant.
18. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

2012 ENGINE

Cylinder Head (J35Z6) - TL

SPECIAL TOOLS

Ref.No.	Tool Number	Description	Qty
①	070AJ-001A101	VCM Air Adapter	1
②	07742-0010100	Valve Guide Driver, 5.35 x 9.7 mm	1
③	07757-PJ1010A	Valve Spring Compressor Attachment	1
④	07AAJ-PNAA101	Air Pressure Regulator	1
⑤	07AAJ-R70A100	VTEC Air Stop Tool A	1
⑥	07AAJ-R70A200	VTEC Air Stop Tool B	1
⑦	07GAF-SD40330	Ball Joint Remover/Installer	1
⑧	07HAH-PJ7A100	Valve Guide Reamer, 5.5 mm	1
⑨	07JAA-001020A	Socket, 19 mm	1
⑩	07JAB-001020B	Holder Handle	1
⑪	07MAB-PY3010A	Holder Attachment, 50 mm, Offset	1
⑫	07PAD-0010000	Stem Seal Driver	1

ENGINE COMPRESSION INSPECTION

NOTE: After the inspection, you must reset the PCM. Otherwise, the PCM will continue to stop the fuel injectors from operating.

1. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. Connect the HDS to the DLC (see **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
3. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.

4. Make sure the HDS communicates with the vehicle and the PCM. If it does not communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
5. Select ALL INJECTORS STOP in the PGM-FI INSPECTION menu with the HDS.
6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
7. Remove the six ignition coils and the six spark plugs (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
8. Attach the compression gauge to a spark plug hole.

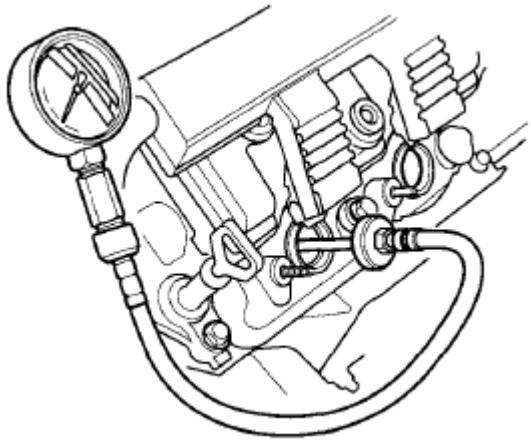

Fig. 6: Identifying Compression Gauge And Spark Plug Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Step on the accelerator pedal to open the throttle fully, then crank the engine with the starter motor, and measure the compression.

   Compression Pressure:

   Above 930 kPa (9.48 kgf/cm^2 , 134.8 psi)

10. Measure the compression on the remaining cylinders.

    Maximum Variation:

    Within 200 kPa (2.04 kgf/cm^2 , 29.0 psi)

11. If the compression is not within specifications, perform a cylinder leak down test to determine the problem area. Then check the following items, and remeasure the compression.
    - Incorrect valve clearance
    - Confirmation of cam timing
    - Damaged or worn cam lobes
    - Damaged or worn valves and seats
    - Damaged cylinder head gaskets

- Damaged or worn piston rings
- Damaged or worn piston and cylinder bore

12. Remove the compression gauge from the spark plug hole.
13. Install the six spark plugs.
14. Install the six spark plugs and the six ignition coils (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
15. Select PCM reset (see **HDS CLEAR COMMAND**) in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.

VTEC ROCKER ARM TEST

Special Tools Required

- VTEC Air Stop Tool B 07AAJ-R70A200
- VCM Air Adapter 070AJ-001A101
- Air Pressure Regulator 07AAJ-PNAA101
- VTEC Air Stop Tool A 07AAJ-R70A100

1. Remove the six ignition coils and the six spark plugs (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
2. Remove the cylinder head covers (see **TIMING BELT DRIVE PULLEY REPLACEMENT**).
3. Rotate the crankshaft pulley clockwise. Make sure that the intake primary rocker arm (A) and the intake secondary rocker arm (B) are separated and that the intake primary rocker arm should move independently:
   - If the intake primary rocker arm and the intake secondary rocker arm move together, remove the intake primary rocker arm and the intake secondary rocker arm as an assembly, and check that the pistons in the rocker arms move smoothly. If any intake rocker arm needs replacing, replace the primary and secondary rocker arms as an assembly, then retest.
   - If the intake primary rocker arm and the intake secondary rocker arm move independently, go to step 4.

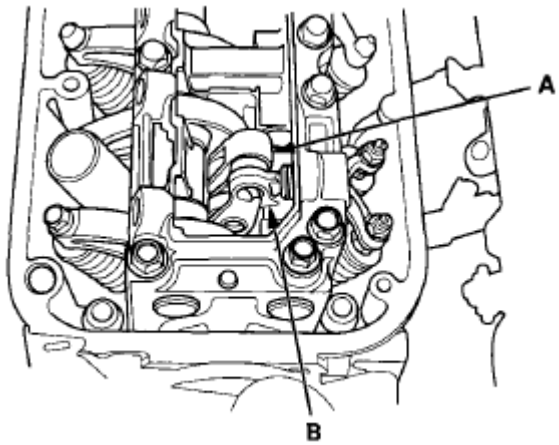

Fig. 7: Identifying Primary And Secondary Rocker Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check that the air pressure on the shop air compressor gauge indicates over 981 kPa (10.00 kgf/cm^2 , 142.3 psi).
5. Inspect the valve clearance (see **VALVE CLEARANCE ADJUSTMENT**).
6. Remove the sealing bolts, then install VTEC air stop tool B and the VCM air adapter (A) to the inspection hole, then connect the air pressure regulator (C) as shown.

FRONT

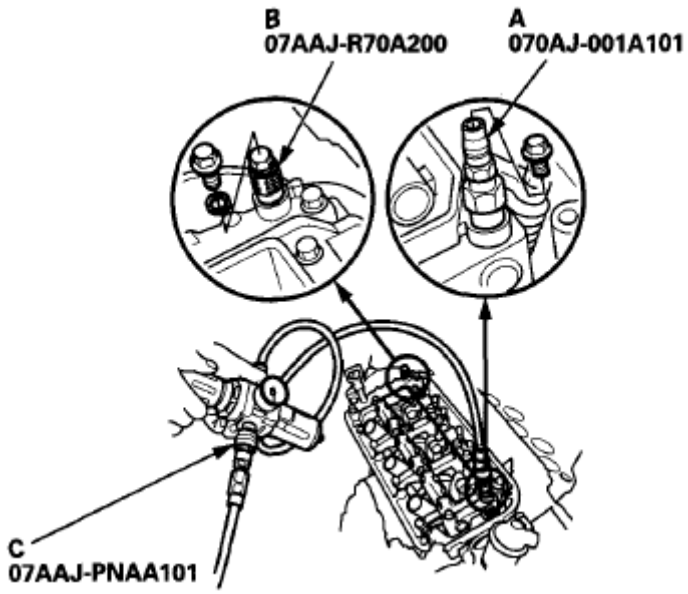

Fig. 8: Identifying VCM Air Adapter And Air Pressure Adapter - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the sealing bolts, then install VTEC air stop tool A and the VCM air adapter (B) to the inspection hole, then connect the air pressure regulator (C) as shown.

REAR

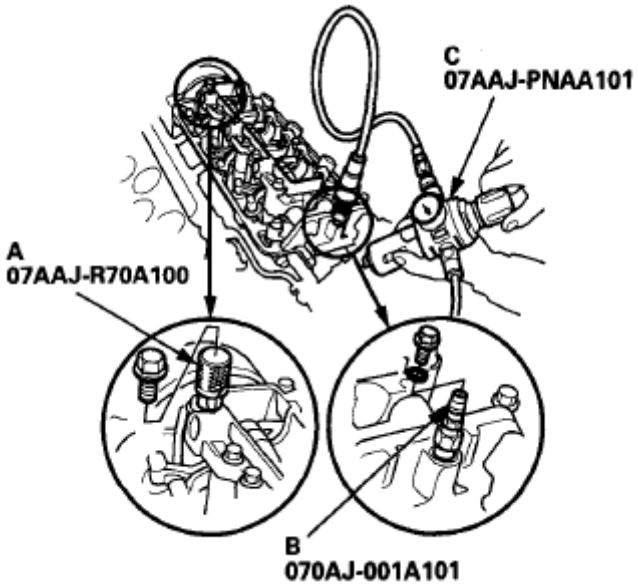

Fig. 9: Identifying VCM Air Adapter And Air Pressure Adapter - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Loosen the valve on the regulator, and apply the specified air pressure.

   Specified Air Pressure:

   550 - 690 kPa (5.61-7.04 kgf/cm^2 , 79.8-100.1 psi)

9. With the specified air pressure applied, rotate the crankshaft pulley clockwise. The intake primary rocker arm (A) should move together with the intake secondary rocker arm (B):
   - If the intake primary rocker arm and the intake secondary rocker arm move independently, remove the intake primary rocker arm and the intake secondary rocker arm as an assembly, and check that the pistons in the rocker arms move smoothly. If any intake rocker arm needs replacing, replace the primary and secondary rocker arms as an assembly, then retest.
   - If the intake primary rocker arm and the intake secondary rocker arm move together, go to step 10.

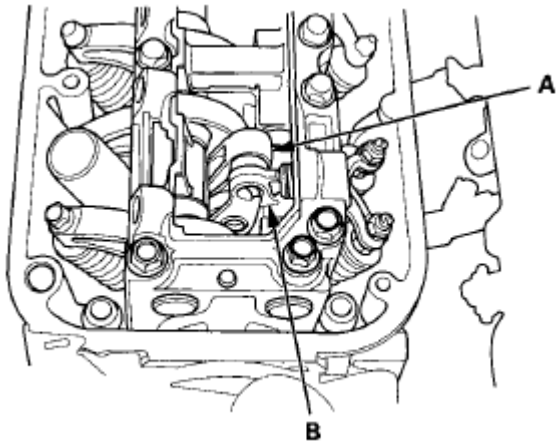

Fig. 10: Identifying Primary And Secondary Rocker Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the air pressure regulator, the VCM air adapter, VTEC air stop tool A, and VTEC air stop tool B.
11. Torque the sealing bolts to 22 N.m (2.2 kgf.m, 16 lbf.ft).
12. Install the cylinder head covers (see **CYLINDER HEAD COVER INSTALLATION**).
13. Install the six spark plugs.

VALVE CLEARANCE ADJUSTMENT

NOTE: Connect the HDS to the DLC (see HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)), and monitor ECT SENSOR 1. Adjust the valve clearance only when the engine coolant temperature is less than 100°F (38°C).

1. Remove the cylinder head covers (see **TIMING BELT DRIVE PULLEY REPLACEMENT**).
2. Set the No. 1 piston at top dead center (TDC). Align the pointer (A) on the front upper cover with the No. 1 piston TDC mark (B) on the front camshaft pulley.

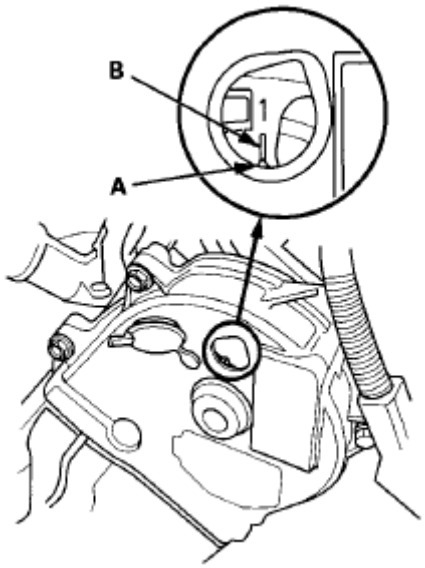

Fig. 11: Identifying Pointer And TDC Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Select the correct feeler gauge for the valve clearance you are going to check.

Valve Clearance

Intake: 0.20-0.24 mm (0.008-0.009 in)

Exhaust: 0.28-0.32 mm (0.011-0.012 in)

REAR

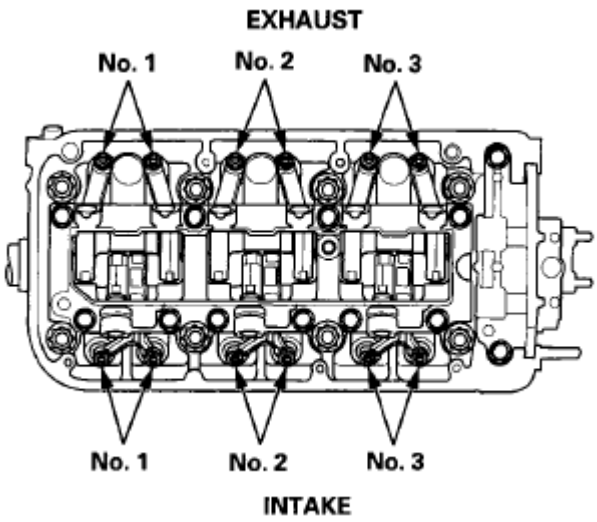

Fig. 12: Adjusting Rear Valve Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT

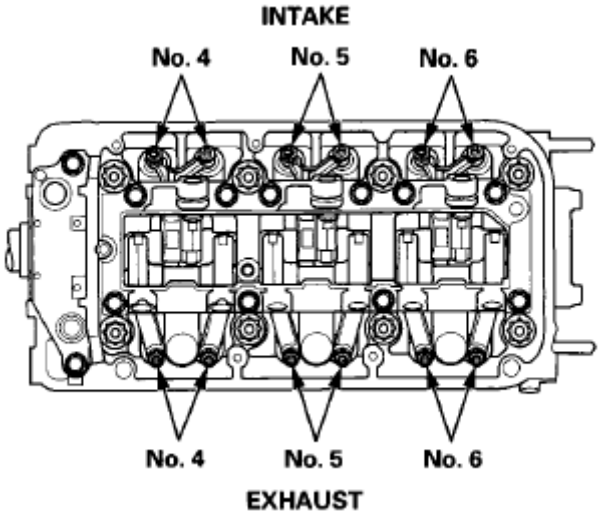

Fig. 13: Adjusting Front Valve Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert the feeler gauge (A) between the adjusting screw and the end of the valve stem on the No. 1 cylinder, and slide it back and forth; you should feel a slight amount of drag.

INTAKE

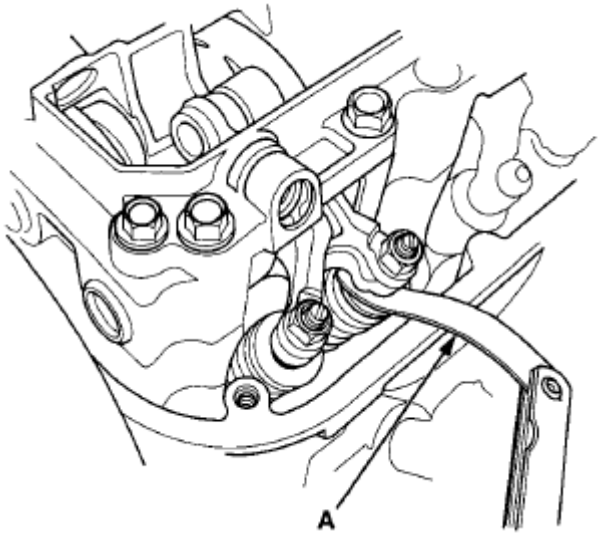

Fig. 14: Inserting Feeler Gauge In Intake Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

EXHAUST

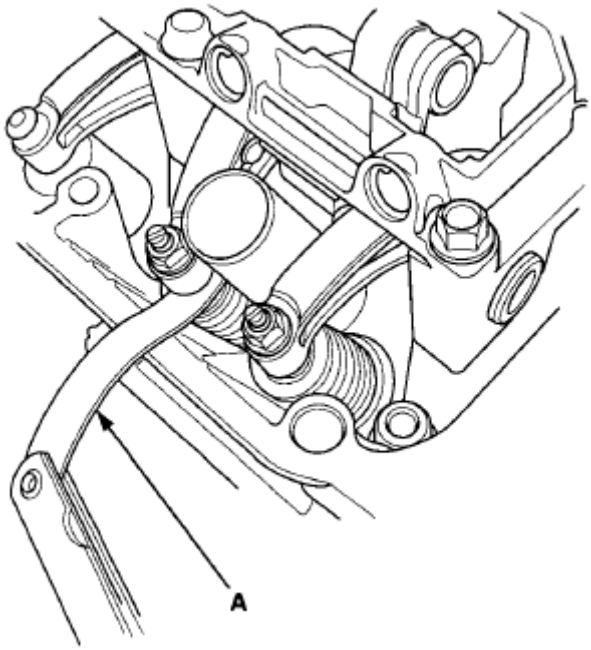

Fig. 15: Inserting Feeler Gauge In Exhaust Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If you feel too much or too little drag, loosen the locknut, and turn the adjusting screw until the drag on the feeler gauge is correct.

INTAKE

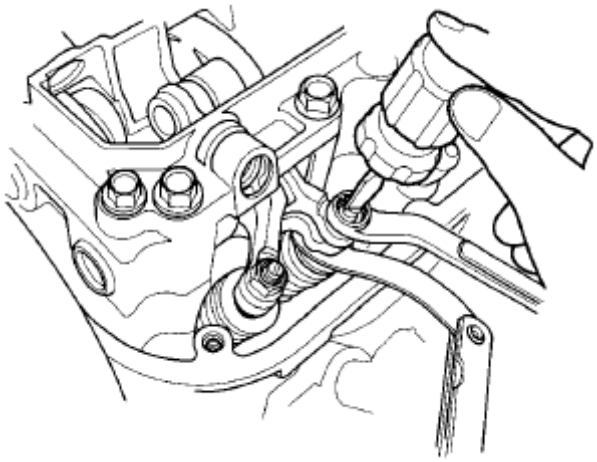

Fig. 16: Turning Adjusting Screw (Intake Valve)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

EXHAUST

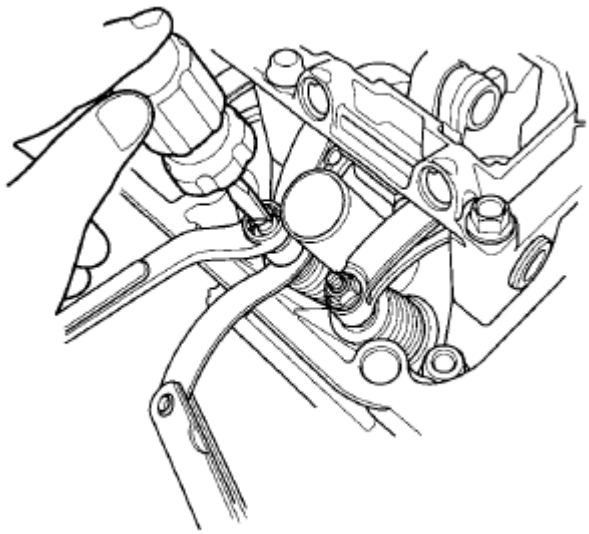

Fig. 17: Turning Adjusting Screw (Exhaust Valve)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. While holding the adjusting screw with the screw driver, tighten the locknut, then recheck the clearance. Repeat the adjustment, if necessary.

Specified Torque

Intake: 20 N.m (2.0 kgf.m, 14 lbf.ft)

Apply new engine oil to the nut threads.

Exhaust: 14 N.m (1.4 kgf.m, 10 lbf.ft)

Apply new engine oil to the nut threads.

7. Rotate the crankshaft clockwise. Align the pointer (A) on the front upper cover with the No. 4 piston TDC mark (B) on the front camshaft pulley.

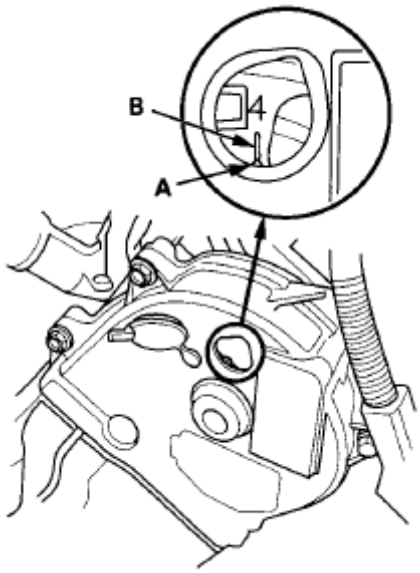

Fig. 18: Identifying Pointer And TDC Mark On Piston No. 4
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Check and, if necessary, adjust the valve clearance on the No. 4 cylinder.
9. Rotate the crankshaft clockwise. Align the pointer (A) on the front upper cover with the No. 2 piston TDC mark (B) on the front camshaft pulley.

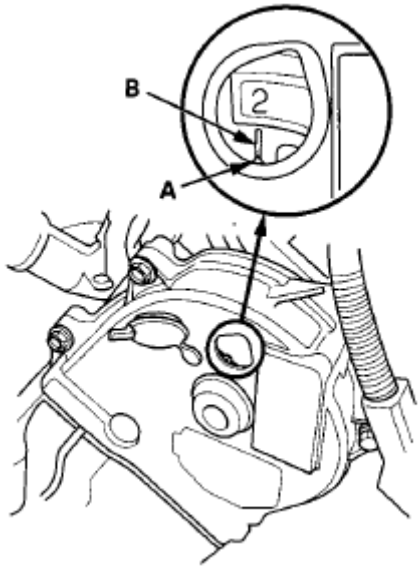

Fig. 19: Identifying Pointer And TDC Mark On Piston No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Check and, if necessary, adjust the valve clearance on the No. 2 cylinder.
11. Rotate the crankshaft clockwise. Align the pointer (A) on the front upper cover with the No. 5 piston TDC mark (B) on the front camshaft pulley.

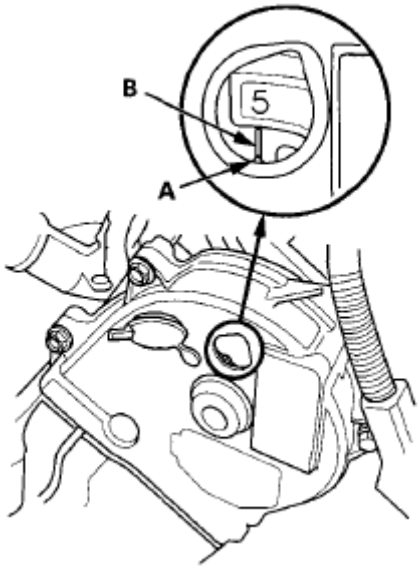

Fig. 20: Identifying Pointer And TDC Mark On Piston No. 5
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Check and, if necessary, adjust the valve clearance on the No. 5 cylinder.
13. Rotate the crankshaft clockwise. Align the pointer (A) on the front upper cover with the No. 3 piston TDC mark (B) on the front camshaft pulley.

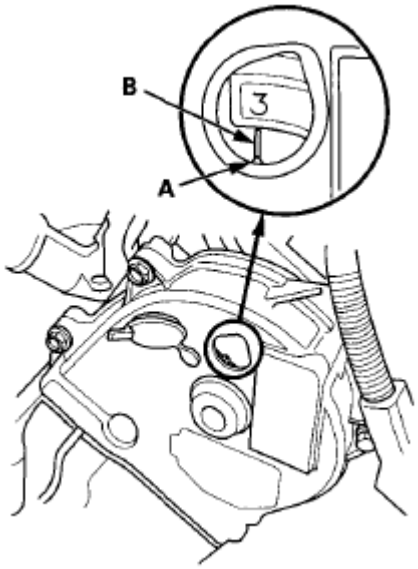

Fig. 21: Identifying Pointer And TDC Mark On Piston No. 3
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Check and, if necessary, adjust the valve clearance on the No. 3 cylinder.
15. Rotate the crankshaft clockwise. Align the pointer (A) on the front upper cover with the No. 6 piston TDC mark (B) on the front camshaft pulley.

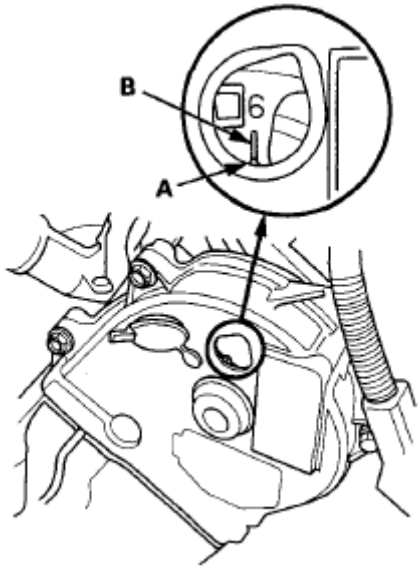

Fig. 22: Identifying Pointer And TDC Mark On Piston No. 6
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Check and, if necessary, adjust the valve clearance on the No. 6 cylinder.
17. Install the cylinder head covers (see **CYLINDER HEAD COVER INSTALLATION**).

CRANKSHAFT PULLEY REMOVAL AND INSTALLATION

Special Tools Required

- Holder Handle 07JAB-001020B
- Holder Attachment, 50 mm, Offset 07MAB-PY3010A
- Socket, 19 mm 07JAA-001020A or equivalent

REMOVAL

1. Raise the vehicle on the lift.
2. Remove the right front wheel.
3. Remove the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
4. Remove the drive belt (see **DRIVE BELT REPLACEMENT**).
5. Hold the pulley with the holder handle (A) and the holder attachment, 50 mm, offset (B).

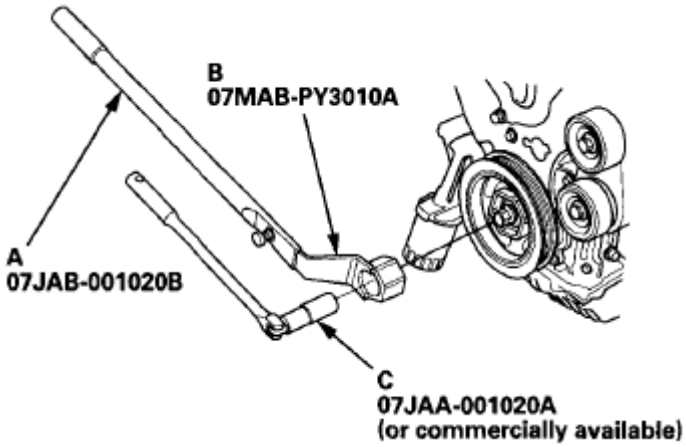

Fig. 23: Identifying Holder Handle, Holder Attachment And Offset Of Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the bolt with a heavy duty socket, 19 mm (C) and a breaker bar, then remove the crankshaft pulley.

INSTALLATION

1. Remove any oil and clean the pulleys (A), the crankshaft (B), the bolt (C), and the washer (D). Lubricate with new engine oil as shown.

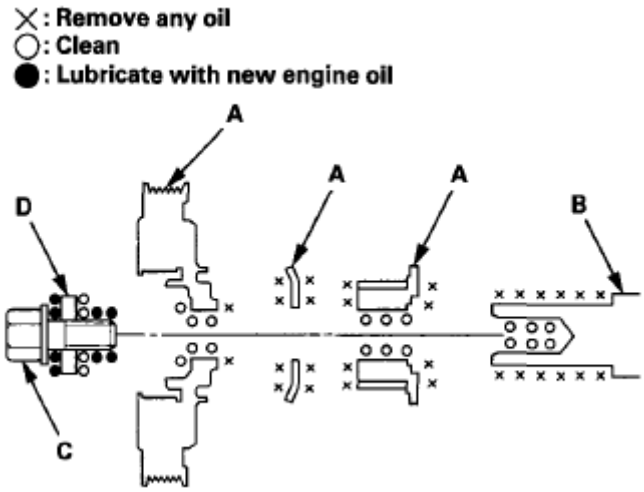

Fig. 24: Identifying Pulleys, Crankshaft, Washer And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the crankshaft pulley, and tighten the bolt. Do not use an impact wrench.
    1. Hold the pulley with the holder handle (A) and the holder attachment (B). Torque the bolt to 64 N.m (6.5 kgf.m, 47 lbf-ft) with a torque wrench and the heavy duty 19 mm (C).
    2. Tighten the bolt an additional 60 °.

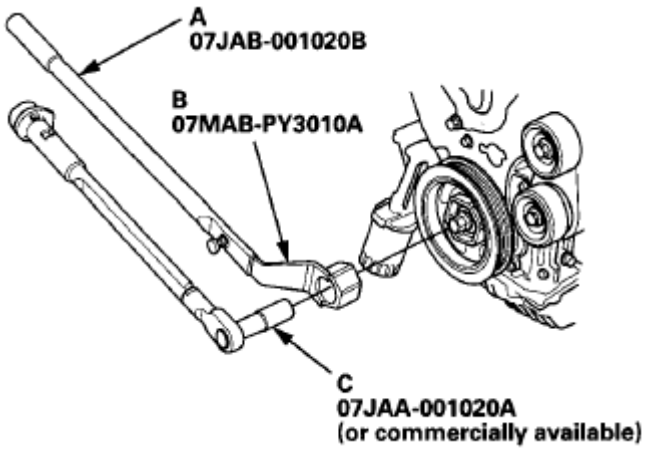

Fig. 25: Identifying Holder Handle, Holder Attachment And Offset Of Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

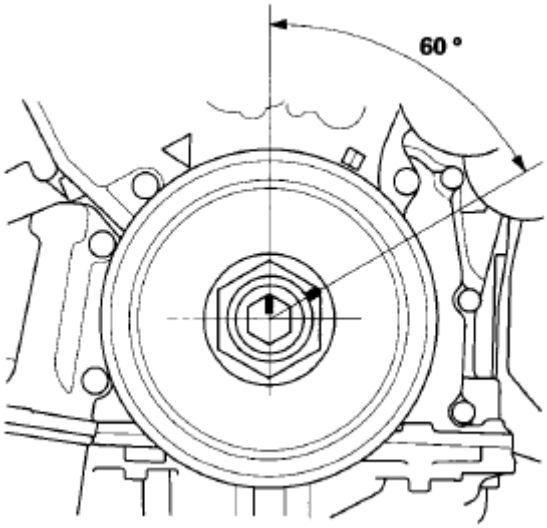

Fig. 26: Identifying Tightening Bolt An Additional 60°
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the drive belt (see **DRIVE BELT REPLACEMENT**).
4. Install the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
5. Install the right front wheel.

TIMING BELT INSPECTION

1. Remove the drive belt (see **DRIVE BELT REPLACEMENT**).
2. Remove the front upper cover.

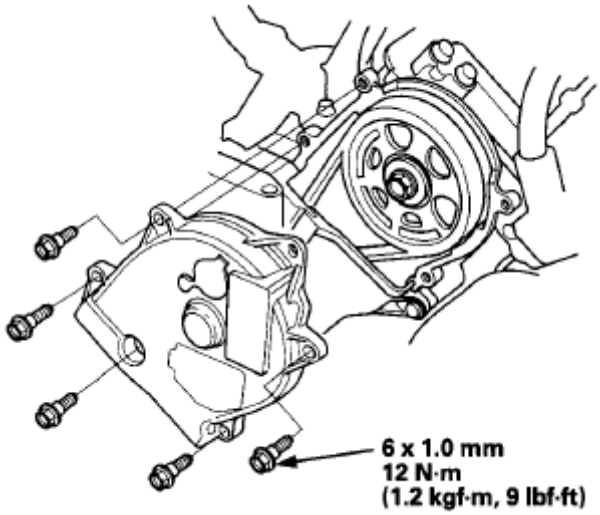

Fig. 27: Identifying Front Upper Cover And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the timing belt for cracks and oil or coolant contamination. Replace the belt if it is cracked, or contaminated with oil or coolant. Wipe off any oil or solvent that gets on the belt pulleys.

NOTE: If there is any leakage, repair them before replacing the timing belt.

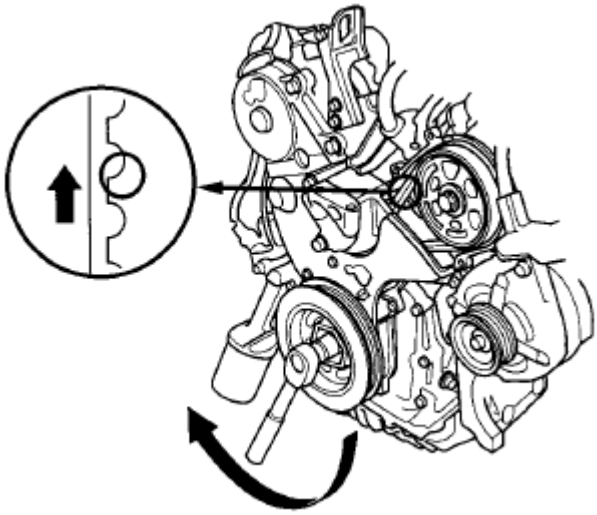

Fig. 28: Inspecting Timing Belt For Cracks And Oil Or Coolant Contamination
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TIMING BELT REMOVAL

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Turn the crankshaft so its white mark (A) on the crankshaft pulley lines up with the pointer (B).

NOTE: The other pointer (C) is not used.

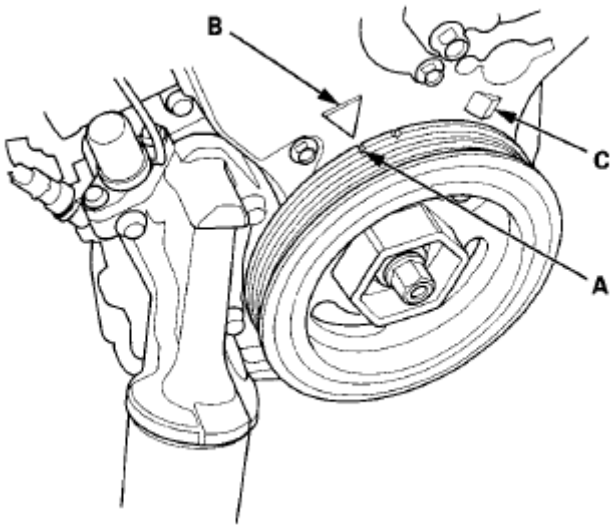

Fig. 29: Identifying White Mark And Pointers On Crankshaft Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check that the No. 1 piston top dead center (TDC) mark (A) on the front camshaft pulley and the pointer (B) on the front upper cover are aligned.

NOTE: If the marks are not aligned, rotate the crankshaft 360 degrees, and recheck the camshaft pulley mark.

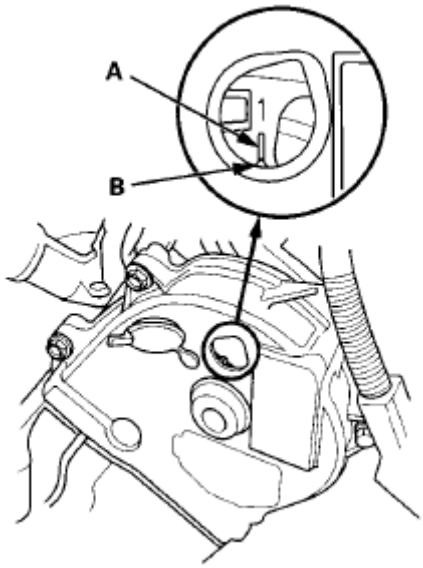

Fig. 30: Identifying TDC Mark And Pointer On Camshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Raise the vehicle on the lift, then remove the right front wheel.
5. Remove the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
6. Remove the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REPLACEMENT**).
7. Support the engine with a jack and a wood block under the oil pan.
8. Remove the ground cable (A), then remove the upper half of the side engine mount bracket (B).

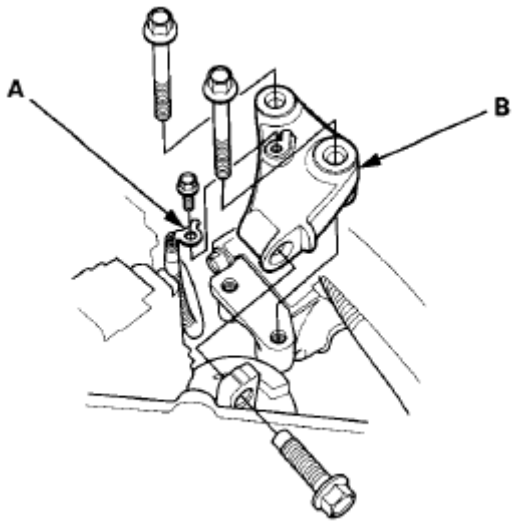

Fig. 31: Identifying Ground Cable And Engine Mount Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the crankshaft pulley (see **CRANKSHAFT PULLEY REMOVAL AND INSTALLATION**).
10. Remove the front upper cover (A) and the rear upper cover (B).

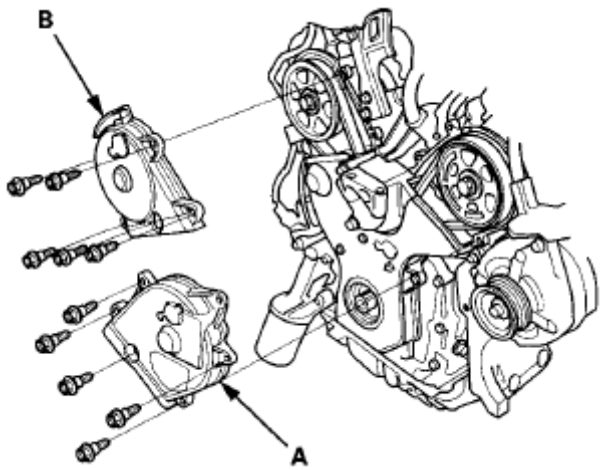

Fig. 32: Identifying Front And Rear Upper Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the lower cover.

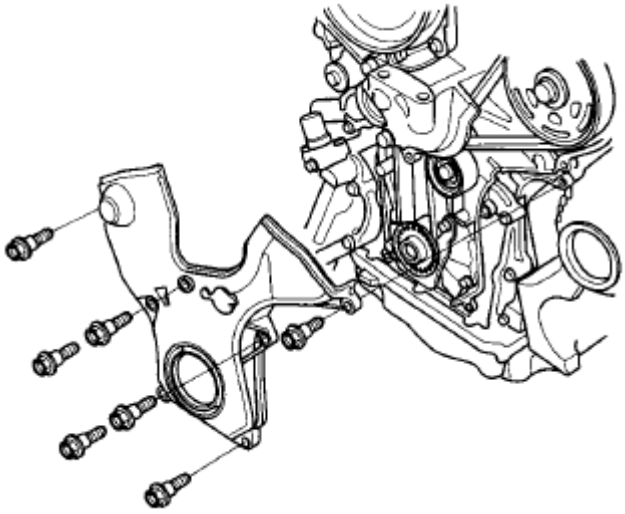

Fig. 33: Identifying Lower Cover And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove one of the battery clamp bolts from the battery tray, and grind the end of it as shown.

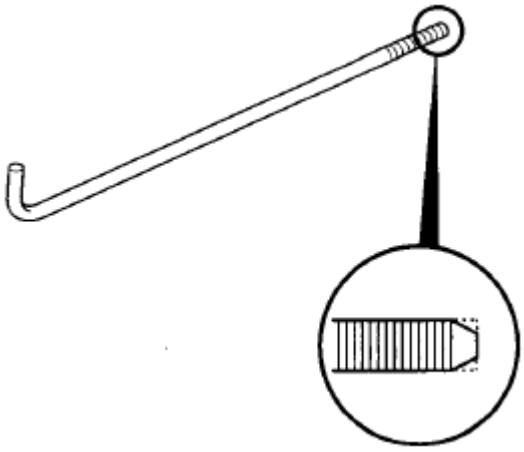

Fig. 34: Identifying Grind End Of Battery Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Thread the battery clamp bolt in as shown to hold the timing belt adjuster in its current position. Tighten it by hand, do not use a wrench.

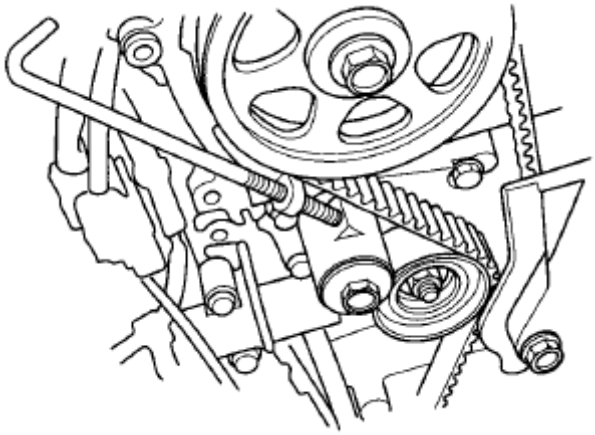

Fig. 35: Holding Timing Belt Adjuster In Current Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the timing belt guide plate (A).

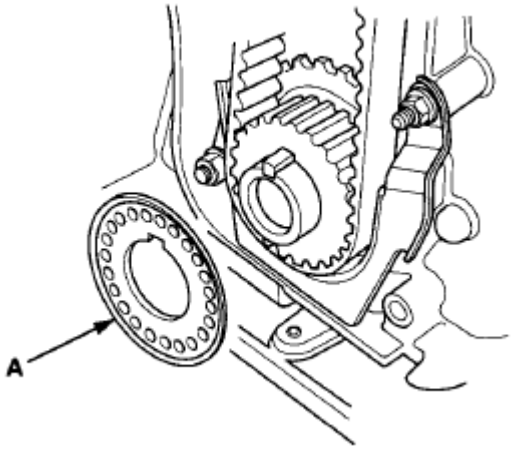

Fig. 36: Identifying Timing Belt Guide Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Remove the lower half of the side engine mount bracket.

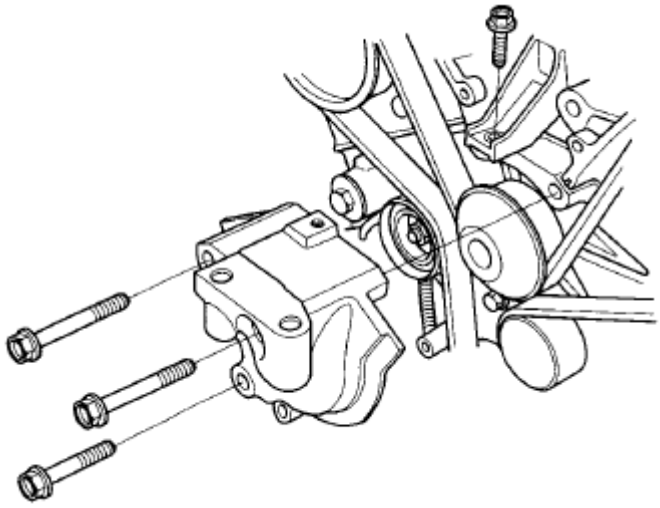

Fig. 37: Identifying Engine Mount Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Remove the idler pulley bolt (A) and the idler pulley (B), then remove the timing belt. Discard the idler pulley bolt.

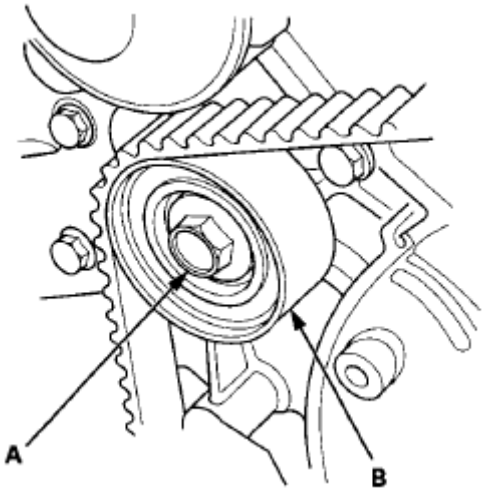

Fig. 38: Identifying Idler Pulley And Idler Pulley Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TIMING BELT INSTALLATION

NOTE: The following procedure is for installation of a used timing belt. If you are installing a new belt, refer to the TIMING BELT REPLACEMENT PROCEDURE.

1. Clean the timing belt pulleys, the timing belt guide plate, and the upper and lower covers.
2. Set the timing belt drive pulley to top dead center (TDC) by aligning the TDC mark (A) on the tooth of the timing belt drive pulley with the pointer (B) on the oil pump.

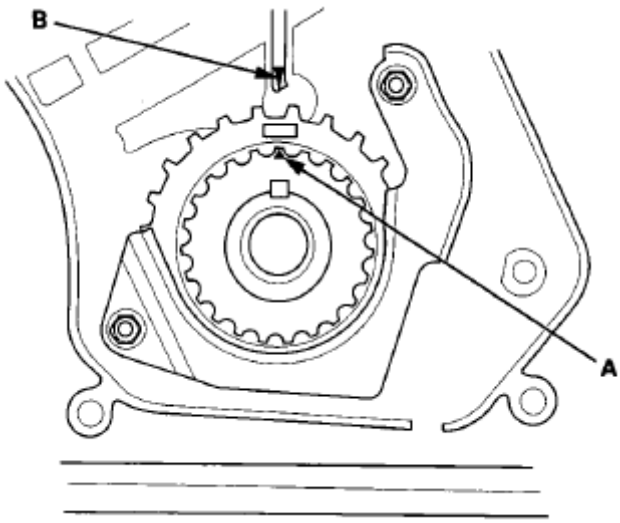

Fig. 39: Identifying TDC Mark And Pointer On Oil Pump
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Set the camshaft pulleys to TDC by aligning the TDC marks (A) on the camshaft pulleys with the pointers (B) on the back covers.

FRONT

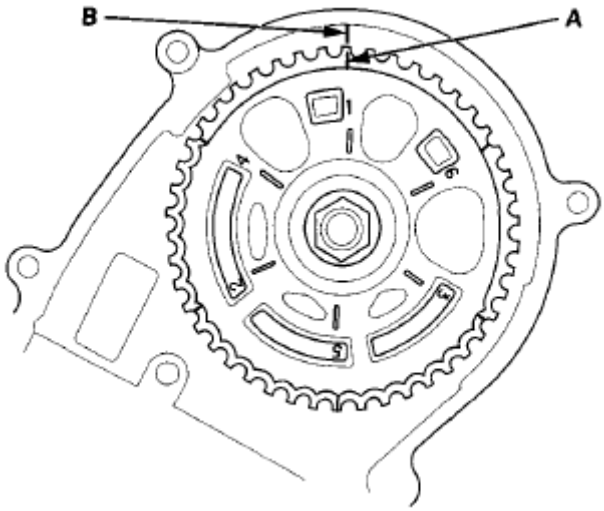

Fig. 40: Identifying TDC Marks And Pointers On Camshaft Pulley - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

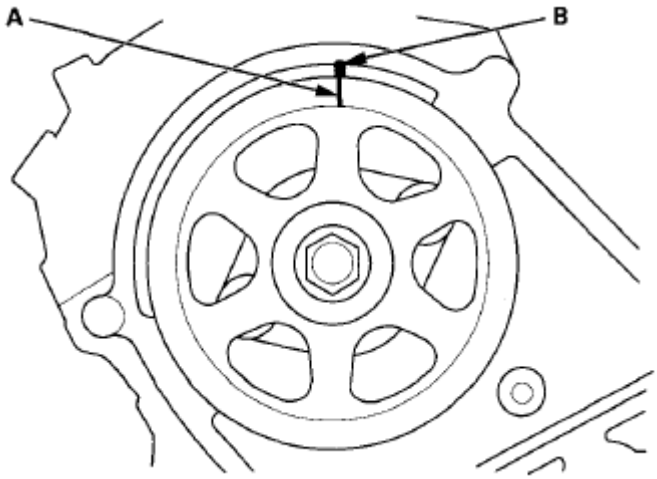

Fig. 41: Identifying TDC Marks And Pointers On Camshaft Pulley - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Loosely install the idler pulley with a new idler pulley bolt so the pulley can move but does not come off.
5. If the auto-tensioner has extended and the timing belt cannot be installed, do the timing belt replacement procedure (see **TIMING BELT REPLACEMENT**).
6. Install the timing belt in a counterclockwise sequence starting with the drive pulley. Take care not to damage the timing belt during installation:
    1. Drive pulley (A)
    2. Idler pulley (B)
    3. Front camshaft pulley (C)
    4. Water pump pulley (D)
    5. Rear camshaft pulley (E)
    6. Adjusting pulley (F)

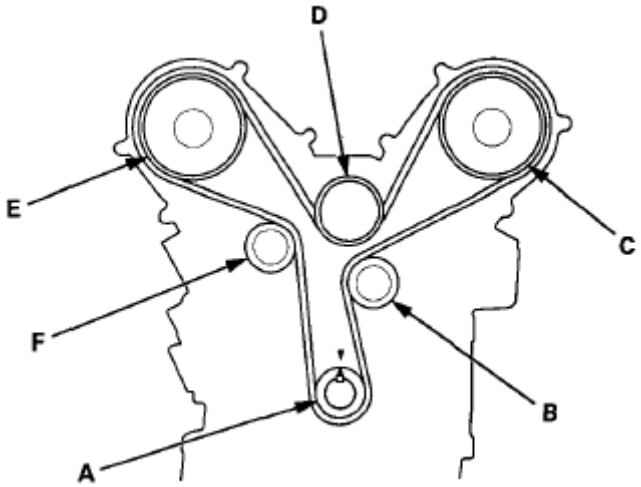

Fig. 42: Identifying Timing Belt And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Tighten the idler pulley bolt.

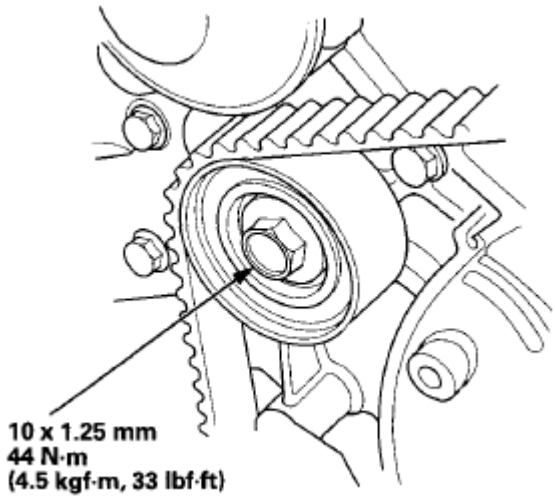

Fig. 43: Identifying Idler Pulley Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the battery clamp bolt from the back cover.

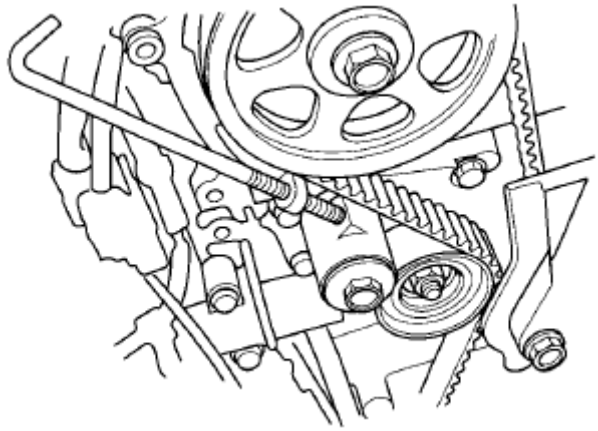

Fig. 44: Identifying Battery Clamp Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the lower half of the side engine mount bracket using new bolts (A) and the bolt (B).

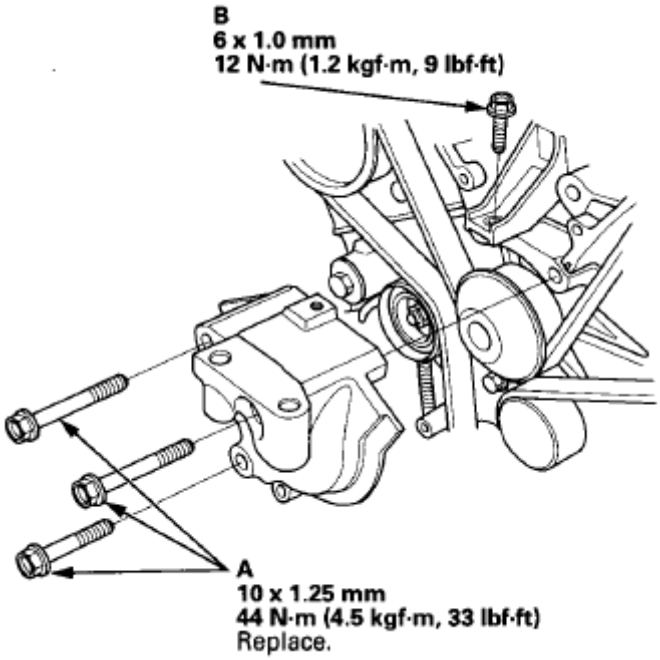

Fig. 45: Identifying Engine Mount Bracket Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the timing belt guide plate (A) as shown.

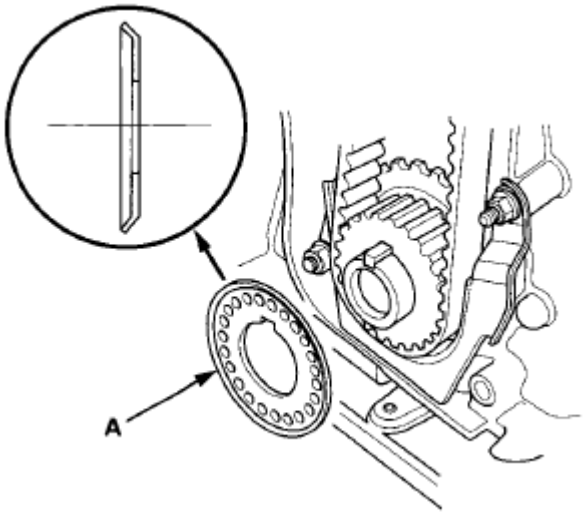

Fig. 46: Identifying Timing Belt Guide Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the lower cover.

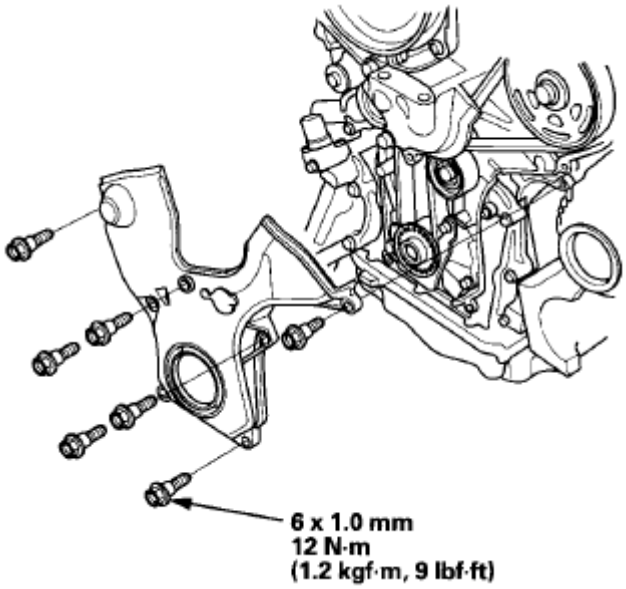

Fig. 47: Identifying Lower Cover And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the front upper cover (A) and the rear upper cover (B).

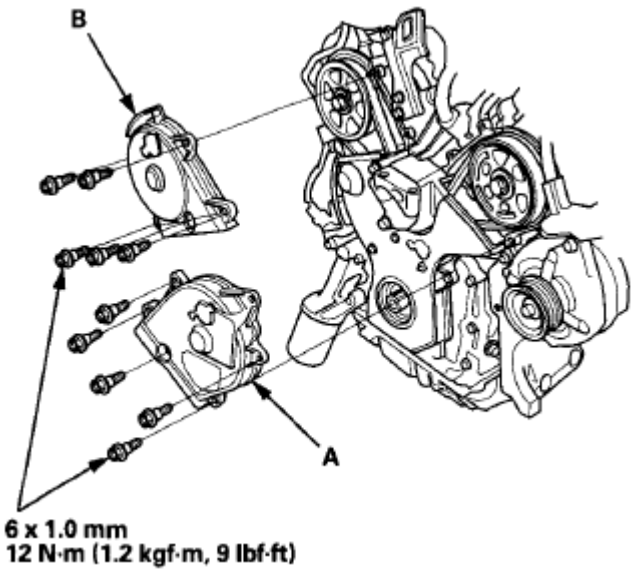

Fig. 48: Identifying Front And Rear Upper Cover With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the crankshaft pulley (see **CRANKSHAFT PULLEY REMOVAL AND INSTALLATION**).
14. Rotate the crankshaft pulley about six turns clockwise so the timing belt positions itself on the pulleys.
15. Turn the crankshaft pulley so its white mark (A) lines up with the pointer (B).

NOTE: The other pointer (C) is not used.

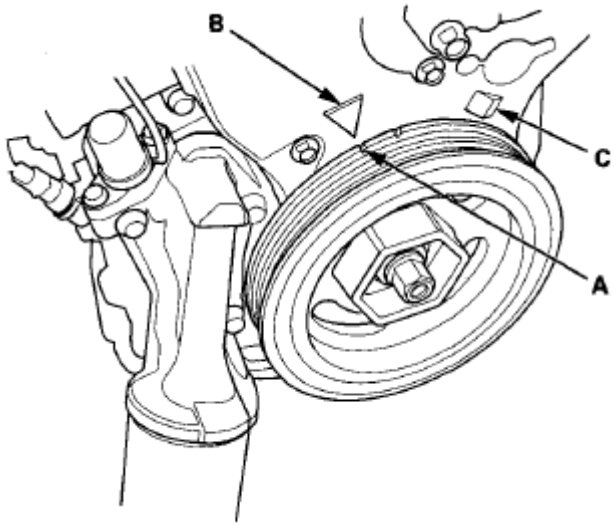

Fig. 49: Identifying White Marks And Pointers On Crankshaft Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Check the camshaft pulley marks.

NOTE: If the marks are not aligned, rotate the crankshaft 360 degrees, and recheck the camshaft pulley mark:

- **If the camshaft pulley marks are at TDC, go to step 17.**
- **If the camshaft pulley marks are not at TDC, remove the timing belt and repeat steps 2 through 16.**

FRONT

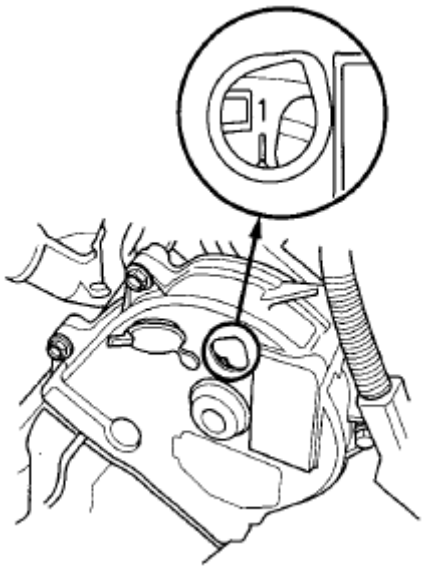

Fig. 50: Identifying Camshaft Pulley Marks - Front

Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

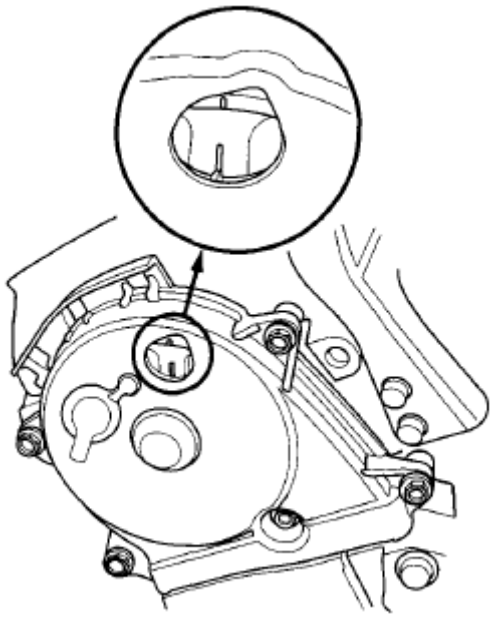

Fig. 51: Identifying Camshaft Pulley Marks - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Loosely install the upper half of the side engine mount bracket (A) using new bolts, then install the ground cable (B).

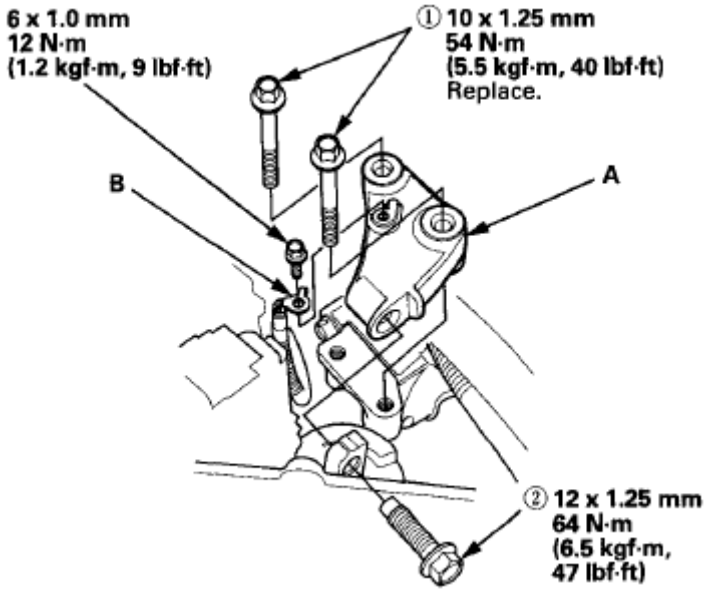

Fig. 52: Identifying Engine Mount Bracket, Bolts And Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Remove the jack and the wood block.
19. Tighten the mounting bolts in the numbered sequence shown.
20. Install the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REPLACEMENT**).
21. Install the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
22. Install the right front wheel.
23. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
24. Do the CKP pattern clear/CKP pattern learn procedure (see **CKP PATTERN CLEAR/CKP PATTERN LEARN**).

TIMING BELT REPLACEMENT

NOTE: The following procedure is for installation of a new timing belt. If you are installing a used belt, refer to the TIMING BELT INSTALLATION PROCEDURE.

1. Remove the timing belt (see **TIMING BELT REMOVAL**).
2. Clean the timing belt pulleys, the timing belt guide plate, and the upper and lower covers.
3. Set the timing belt drive pulley to top dead center (TDC) by aligning the TDC mark (A) on the tooth of the timing belt drive pulley with the pointer (B) on the oil pump.

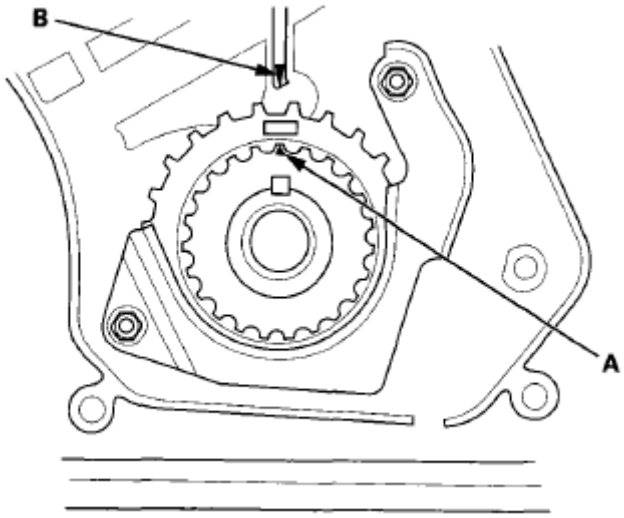

Fig. 53: Identifying TDC Mark And Pointer On Oil Pump
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Set the camshaft pulleys to TDC by aligning the TDC marks (A) on the camshaft pulleys with the pointers (B) on the back covers.

FRONT

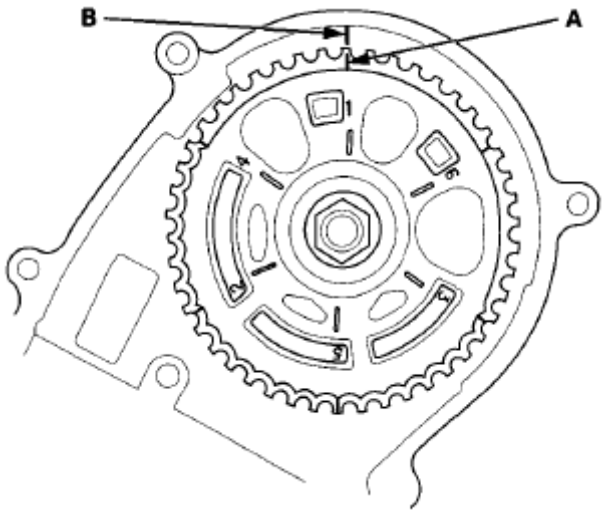

Fig. 54: Identifying TDC Marks On Crankshaft Pulley And Pointers On Back Cover - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

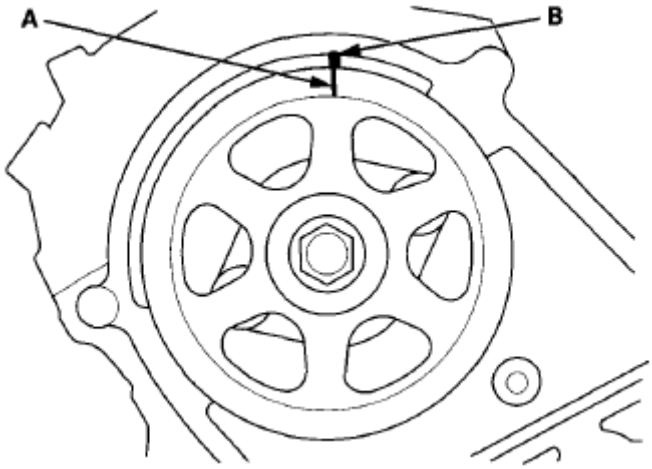

Fig. 55: Identifying TDC Marks On Crankshaft Pulley And Pointers On Back Cover - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the battery clamp bolt from the back cover.
6. Remove the auto-tensioner.

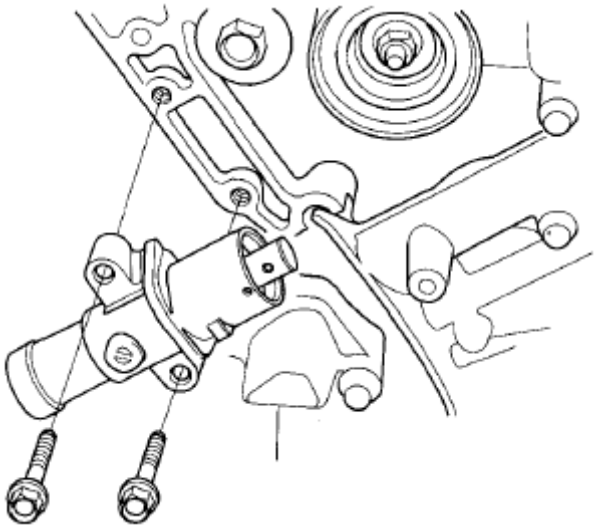

Fig. 56: Identifying Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Align the holes on the rod and the housing of the auto-tensioner.

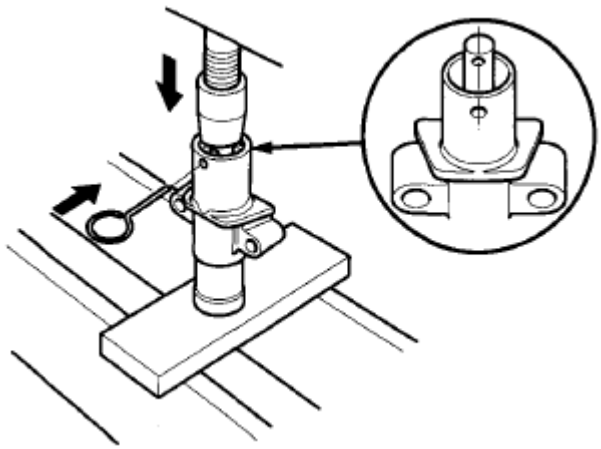

Fig. 57: Aligning Holes On Rod And Housing Of Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Use a hydraulic press to slowly compress the auto-tensioner. Insert a 2.0 mm (5/64 in) pin through the housing and the rod.

NOTE: The compression pressure should not exceed 9, 800 N (999.3 kgf, 2, 203.1 lbf).

9. Install the auto-tensioner.

NOTE: Make sure the pin stays in place.

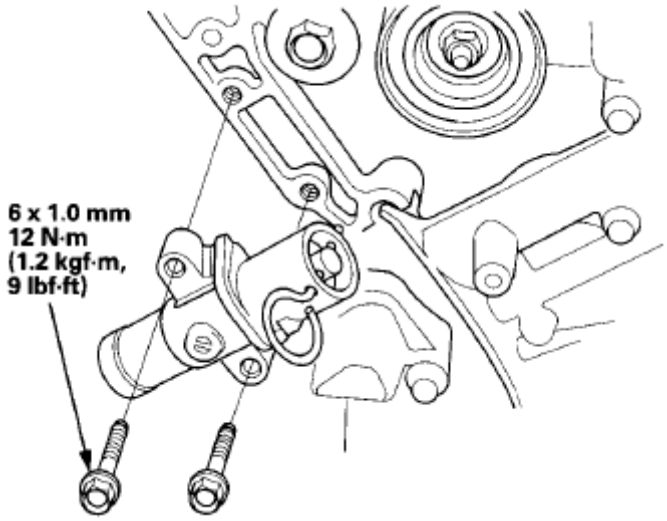

Fig. 58: Identifying Bolts Of Auto-Tensioner With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Thread the battery clamp bolt in as shown to hold the timing belt adjuster. Tighten it by hand, do not use a wrench.

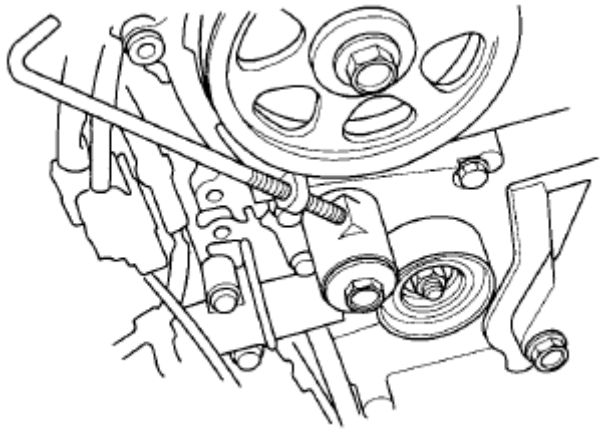

Fig. 59: Identifying Battery Clamp Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Loosely install the idler pulley with a new idler pulley bolt so the pulley can move but does not come off.
12. Install the timing belt in a counterclockwise sequence starting with the drive pulley:
    1. Drive pulley (A)
    2. Idler pulley (B)
    3. Front camshaft pulley (C)
    4. Water pump pulley (D)
    5. Rear camshaft pulley (E)
    6. Adjusting pulley (F)

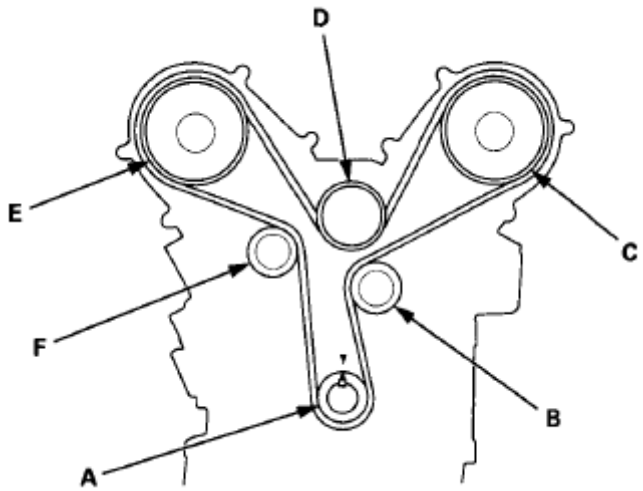

Fig. 60: Identifying Timing Belt And Related Parts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Tighten the idler pulley bolt.

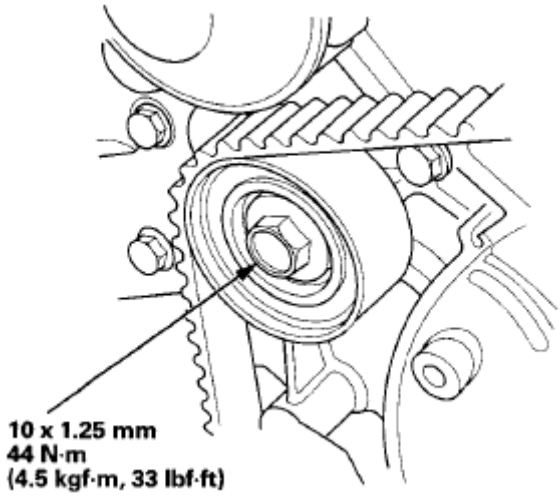

Fig. 61: Identifying Idler Pulley Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the pin from the auto-tensioner.

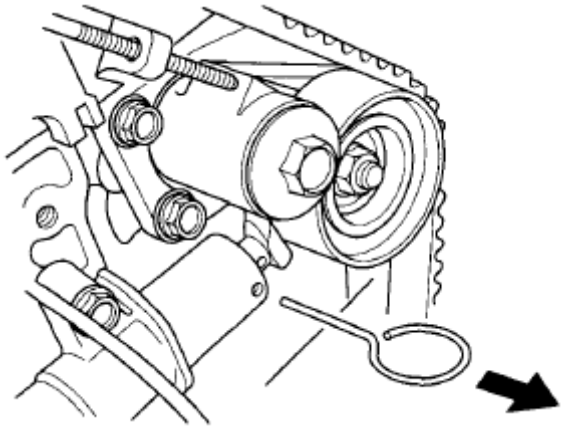

Fig. 62: Removing Pin From Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Remove the battery clamp bolt from the back cover.
16. Install the lower half of the side engine mount bracket using new bolts (A) and the bolt (B).

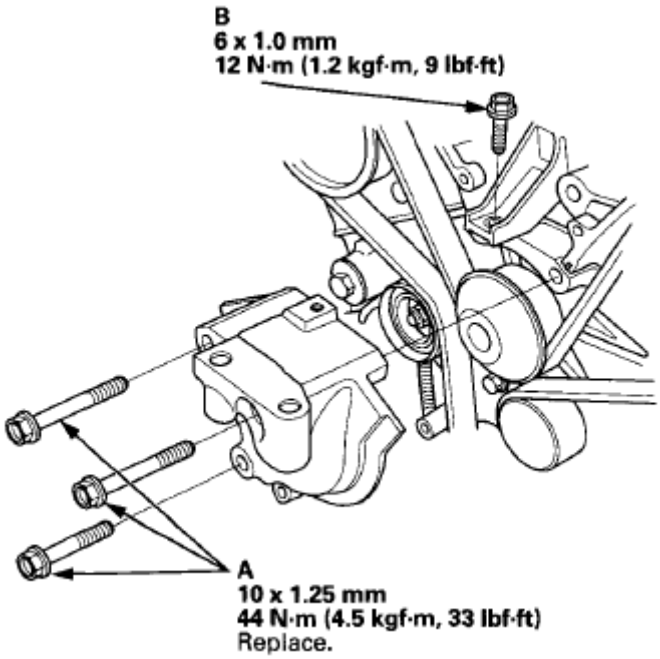

Fig. 63: Identifying Engine Mount Bracket Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Install the timing belt guide plate (A) as shown.

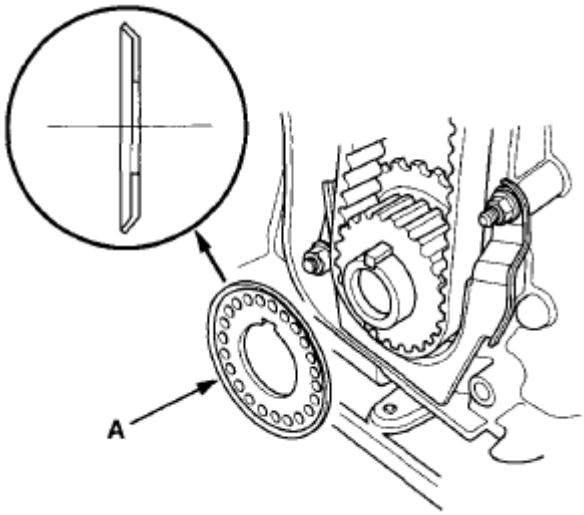

Fig. 64: Identifying Timing Belt Guide Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Install the lower cover.

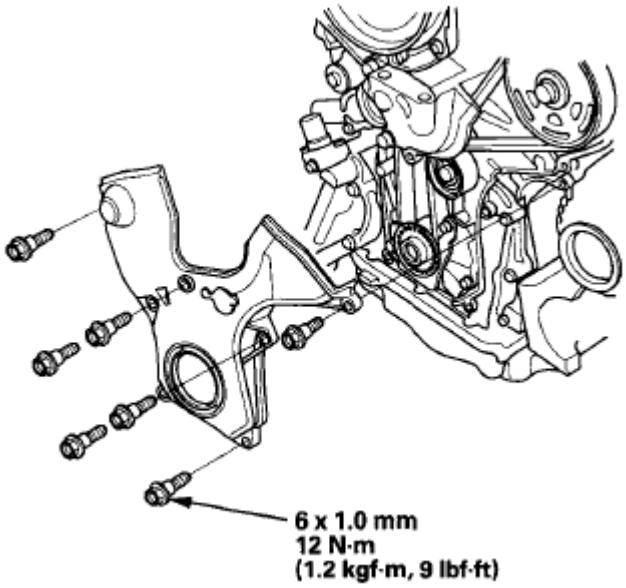

Fig. 65: Identifying Lower Cover And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Install the front upper cover (A) and the rear upper cover (B).

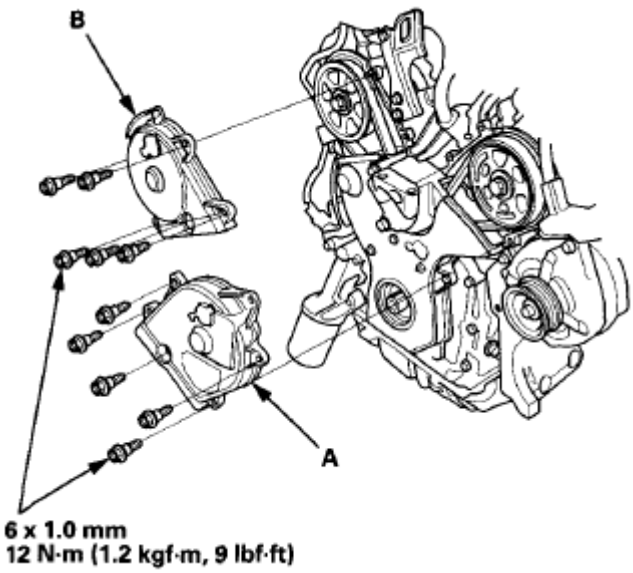

Fig. 66: Identifying Front And Rear Upper Cover With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Install the crankshaft pulley (see **CRANKSHAFT PULLEY REMOVAL AND INSTALLATION**).
21. Rotate the crankshaft pulley about six turns clockwise so the timing belt positions itself on the pulleys.
22. Turn the crankshaft pulley so its white mark (A) lines up with the pointer (B).

NOTE: The other pointer (C) is not used.

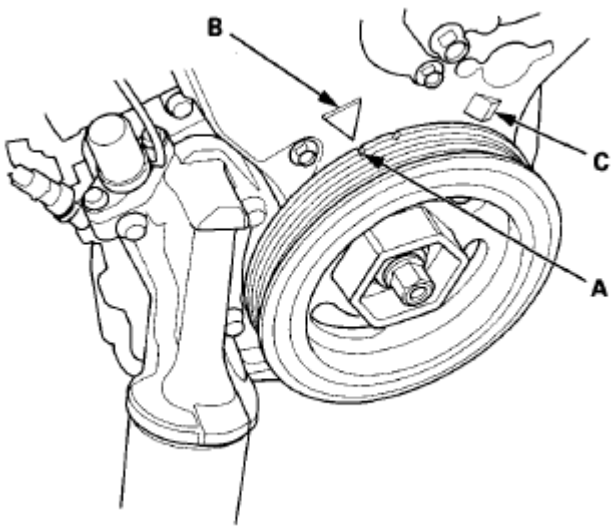

Fig. 67: Identifying White Mark And Pointer On Crankshaft Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Check the camshaft pulley marks.

NOTE: If the marks are not aligned, rotate the crankshaft 360 degrees, and recheck the camshaft pulley mark:

- If the camshaft pulley marks are at TDC, go to step 24.
- If the camshaft pulley marks are not at TDC, remove the timing belt and repeat steps 3 through 23.

FRONT

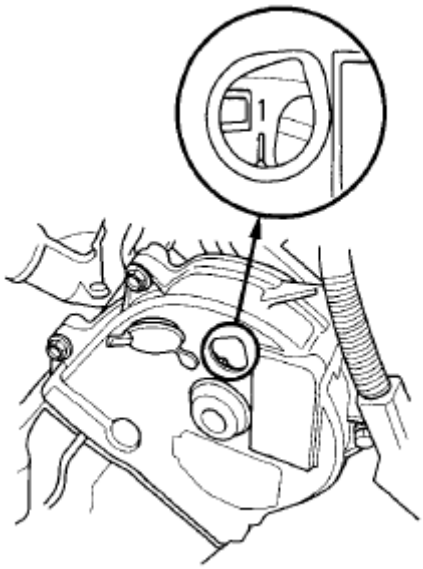

Fig. 68: Identifying Camshaft Pulley Marks - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

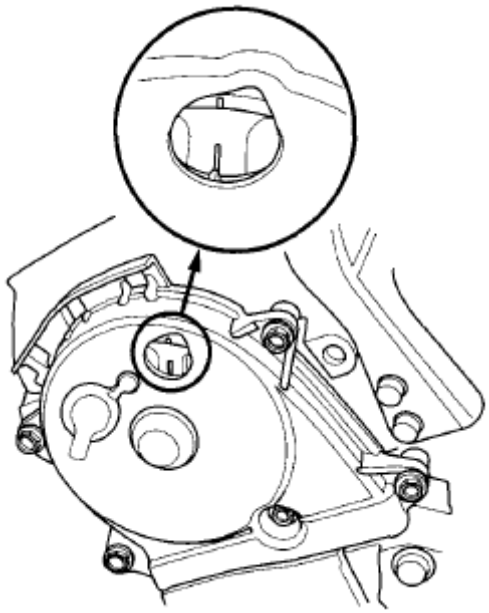

Fig. 69: Identifying Camshaft Pulley Marks - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Loosely install the upper half of the side engine mount bracket (A) using new bolts, then install the ground cable (B).

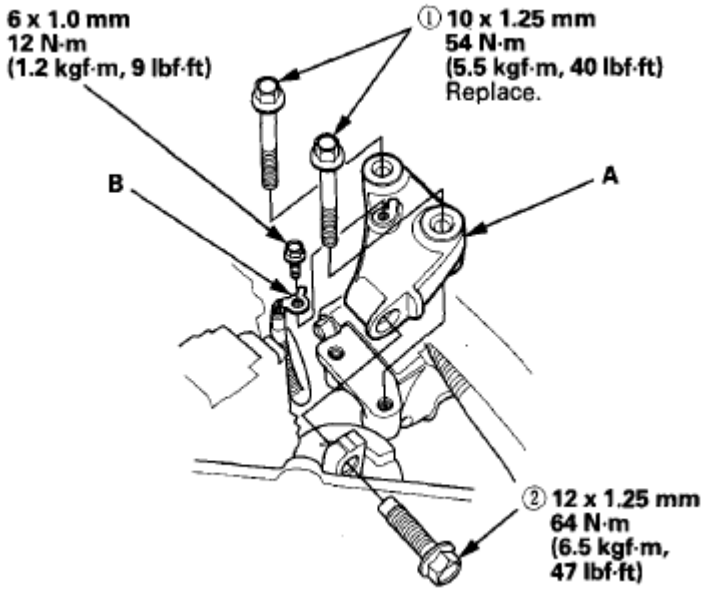

Fig. 70: Identifying Engine Mount Bracket And Ground Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Remove the jack and the wood block.
26. Tighten the mounting bolts in the numbered sequence shown.
27. Install the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REPLACEMENT**).

28. Install the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
29. Install the right front wheel.
30. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
31. Do the CKP pattern clear/CKP pattern learn procedure (see **CKP PATTERN CLEAR/CKP PATTERN LEARN**).

TIMING BELT ADJUSTER REPLACEMENT

1. Remove the timing belt (see **TIMING BELT REMOVAL**).
2. Remove the battery clamp bolt from the back cover.
3. Remove the auto-tensioner (see step 6).
4. Remove the bolt (A), then remove the timing belt adjuster (B) and the collar (C).

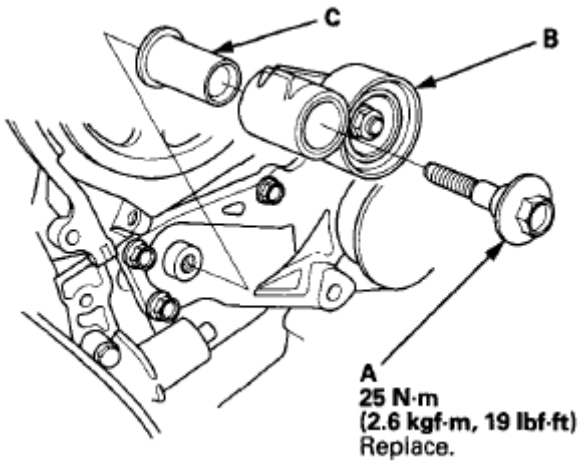

Fig. 71: Identifying Timing Belt Adjuster, Collar And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the timing belt adjuster using new bolt in the reverse order of removal.
6. Install the timing belt (see **TIMING BELT INSTALLATION**).

TIMING BELT DRIVE PULLEY REPLACEMENT

1. Remove the timing belt (see **TIMING BELT REMOVAL**).
2. Remove the timing belt stopper (A), then remove the timing belt drive pulley (B) and the key (C).

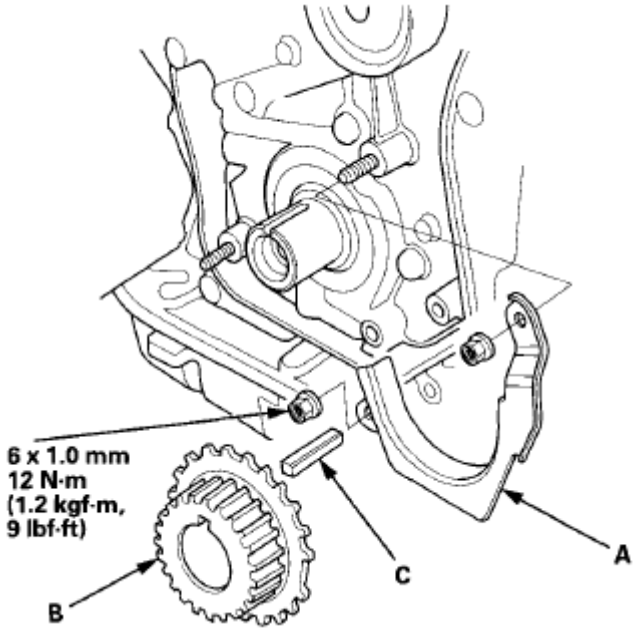

Fig. 72: Identifying Timing Belt Stopper, Driver Pulley And Key With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the timing belt drive pulley and the key for damage. If it is cracked or damaged, replace the timing belt drive pulley.
4. Install the new timing belt drive pulley and the key, then install the timing belt stopper.
5. Install the timing belt (see **TIMING BELT INSTALLATION**).
6. Do the CKP pattern clear/CKP pattern learn procedure (see **CKP PATTERN CLEAR/CKP PATTERN LEARN**).

CYLINDER HEAD COVER REMOVAL

FRONT

1. Remove the intake manifold (see **REMOVAL**).
2. Remove the three ignition coils from the front cylinder head (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
3. Disconnect the EGR valve connector (A) and remove the harness holder mounting bolt (B) and the harness clamp (C).

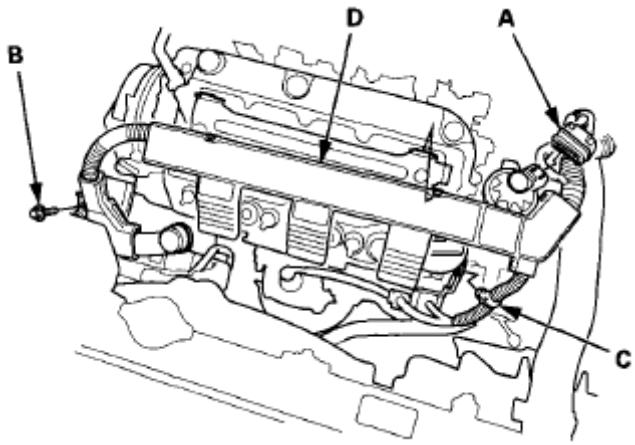

Fig. 73: Identifying EGR Valve Connector, Mounting Bolt And Harness Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the harness holder (D) from the bracket.
5. Remove the front cylinder head cover.

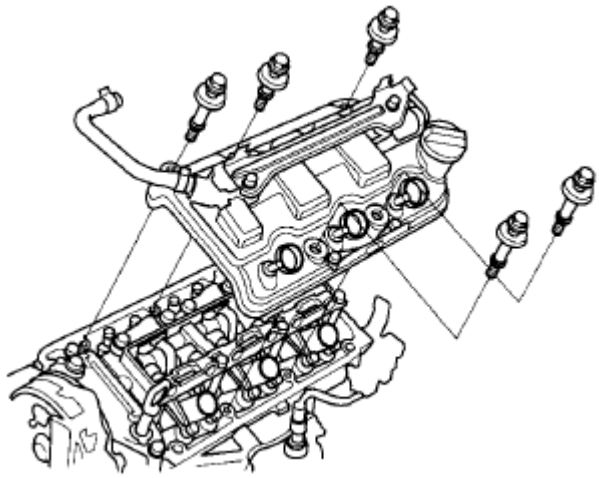

Fig. 74: Removing Front Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

1. Remove the strut brace (see **FRAME BRACE REPLACEMENT**).
2. Remove the intake manifold (see **REMOVAL**).
3. Remove the three ignition coils from the rear cylinder head (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
4. Remove the harness holder mounting bolts (A) and the engine ground cable (B).

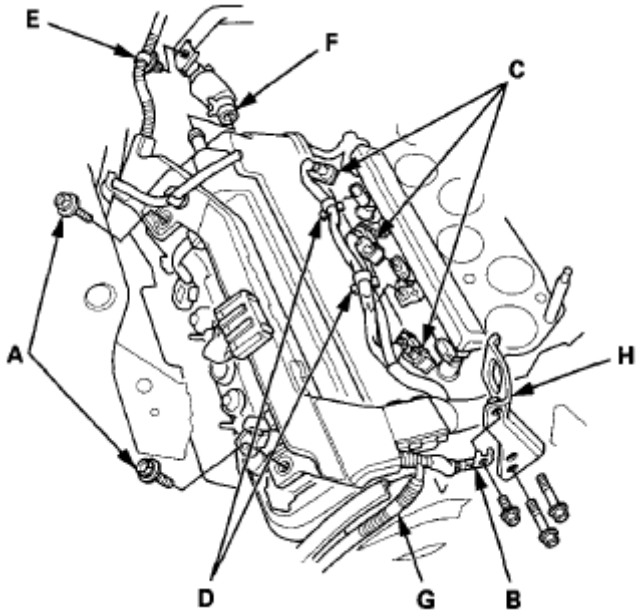

Fig. 75: Identifying Cylinder Head Cover And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the three injector connectors (C) and the two harness clamps (D).
6. Remove the harness clamp (E) and disconnect the breather hose (F).
7. Remove the harness (G) from the upper cover.
8. Remove the engine hanger bracket (H).
9. Remove the harness holder mounting bolts (A) and disconnect the knock sensor connector (B) and the CMP sensor connector (C).

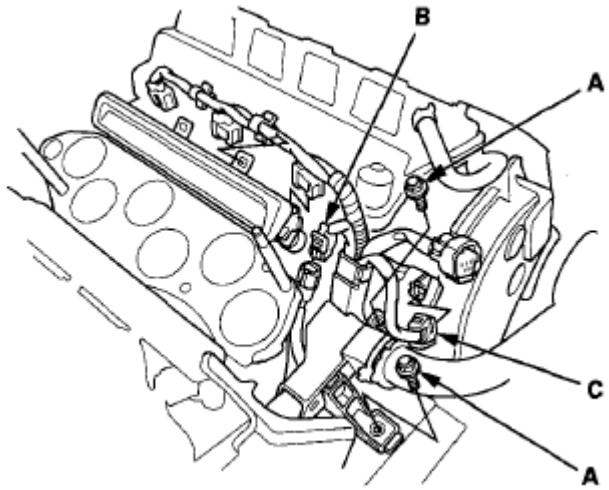

Fig. 76: Identifying Mounting Bolts, Knock Sensor Connector And CMP Sensor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the rear cylinder head cover.

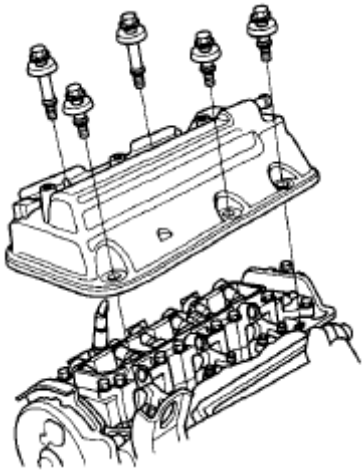

Fig. 77: Identifying Rear Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CYLINDER HEAD COVER INSTALLATION

FRONT

1. Check the spark plug seals for damage. If any seals are damaged, replace it.
2. Thoroughly clean the head cover gasket and the groove.
3. Install the head cover gasket (A) in the groove of the cylinder head cover (B). Make sure the head cover gasket is seated securely.

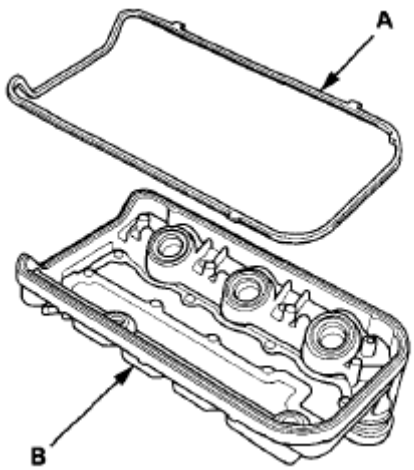

Fig. 78: Identifying Head Cover Gasket And Cylinder Head Cover (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove all of the old liquid gasket from the rocker shaft holder and the cylinder head.
5. Clean the head cover contacting surfaces with a shop towel.
6. Apply liquid gasket, P/N 08717-0004, 08718-0003, 08718-0004 or 08718-0009 to the rocker shaft holder

mating areas (A). Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**

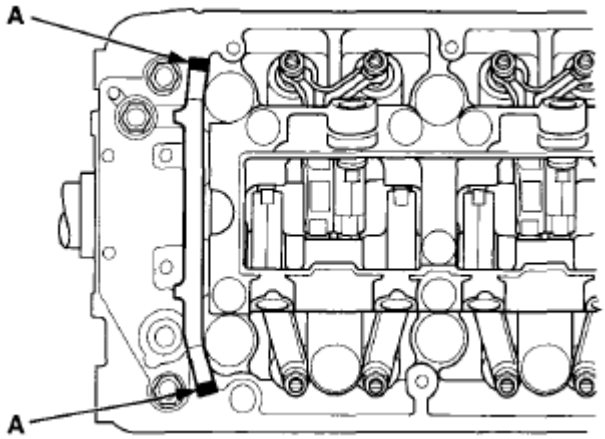

Fig. 79: Locating Shaft Holder Mating Areas
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Set the spark plug seals (A) on the spark plug tubes, and install the front cylinder head cover (B).

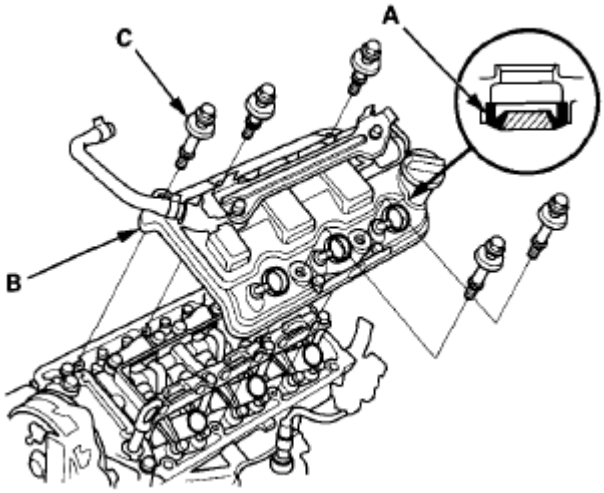

Fig. 80: Identifying Spark Plug Seal, Head Cover And Cover Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Inspect the spark plug seals for damage.
9. Inspect the cover washers (C). Replace any washer that is damaged or deteriorated.
10. Tighten the bolts in three steps. In the final step torque all bolts, in sequence, 12 N.m (1.2 kgf.m, 9 lbf.ft).

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the cylinder head cover.**

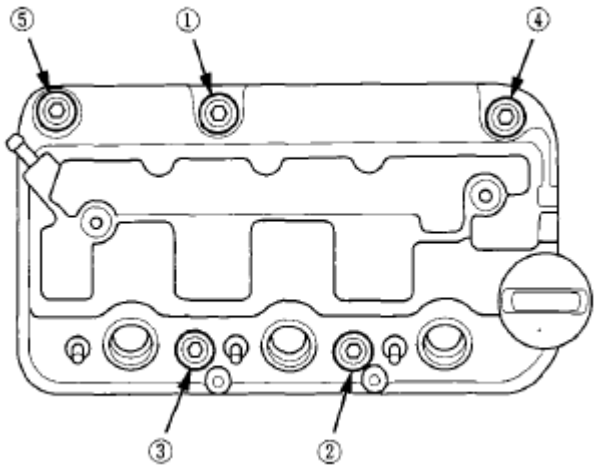

Fig. 81: Identifying Bolts On Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the harness holder (A) to the bracket.

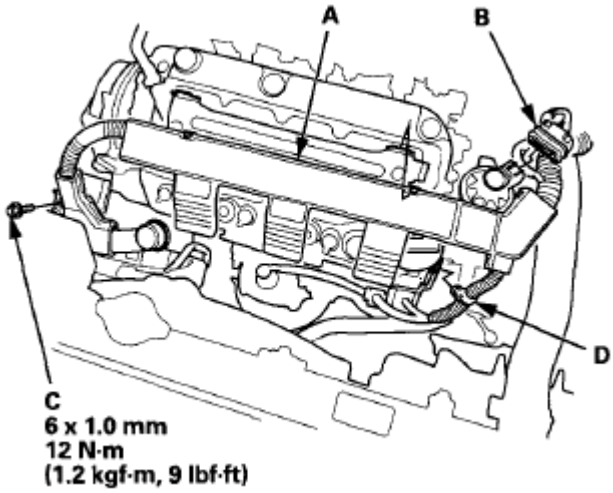

Fig. 82: Identifying Harness Holder, Mounting Bolt, EGR Valve Connector And Clamp With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Connect the EGR valve connector (B) and tighten the harness holder mounting bolt (C) and the harness clamp (D).
13. Install the three ignition coils to the front cylinder head (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
14. Install the intake manifold (see **INSTALLATION**).

REAR

1. Check the spark plug seals for damage. If any seals are damaged, replace it.
2. Thoroughly clean the head cover gasket and the groove.
3. Install the head cover gasket (A) in the groove of the cylinder head cover (B). Make sure the head cover gasket is seated securely.

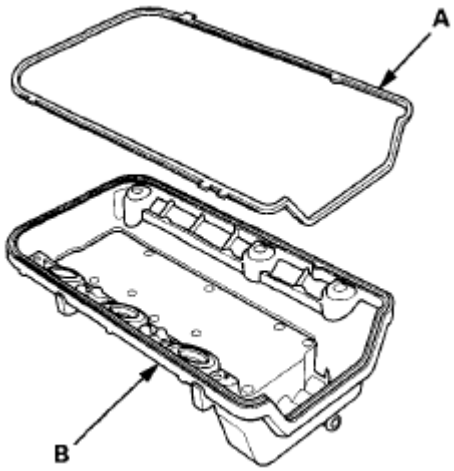

Fig. 83: Identifying Head Cover Gasket And Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove all of the old liquid gasket from the rocker shaft holder and the cylinder head.
5. Clean the head cover contacting surfaces with a shop towel.
6. Apply liquid gasket, P/N 08717-0004, 08718-0003 08718-0004, or 08718-0009 to the rocker shaft holder mating areas (A). Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**

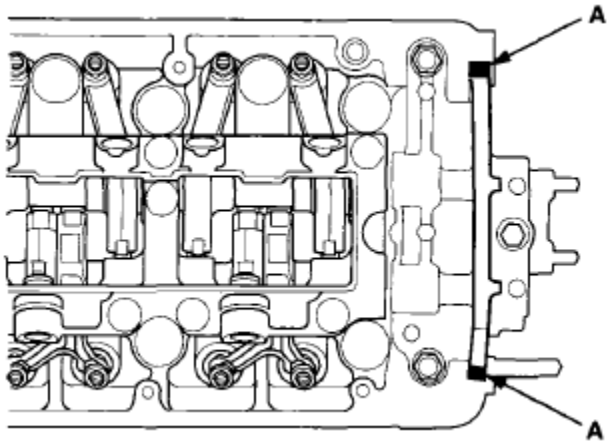

Fig. 84: Locating Shaft Holder Mating Areas
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Set the spark plug seals (A) on the spark plug tubes, and install the rear cylinder head cover (B).

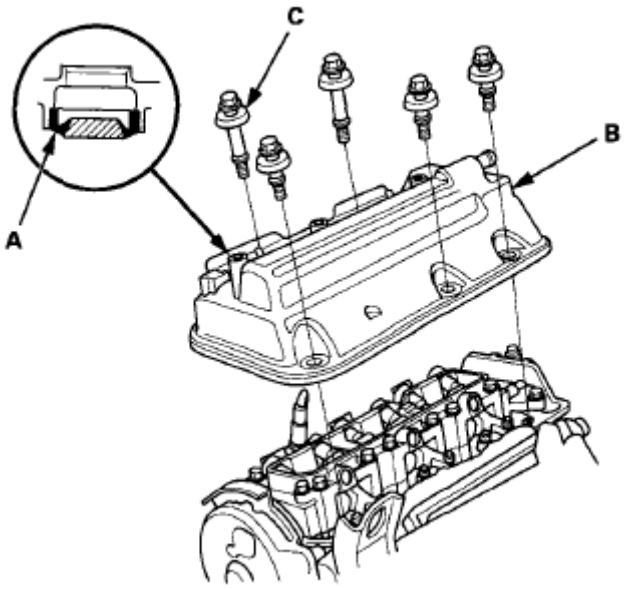

Fig. 85: Identifying Spark Plug Seals, Cylinder Head Cover And Cover Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Inspect the spark plug seals for damage.
9. Inspect the cover washers (C). Replace any washer that is damaged or deteriorated.
10. Tighten the bolts in three steps. In the final step torque all bolts, in sequence, 12 N.m (1.2 kgf.m, 9 lbf.ft).

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the cylinder head cover.**

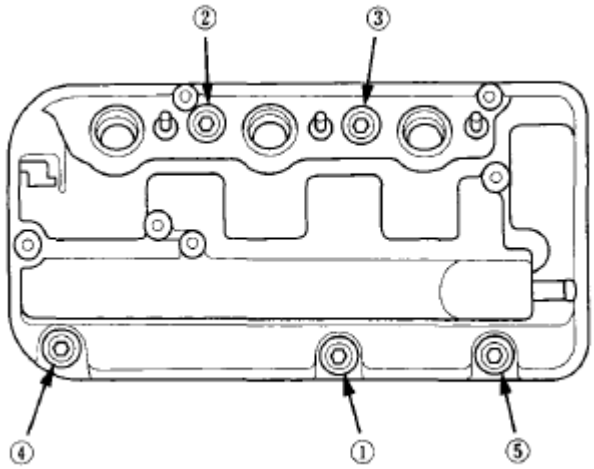

Fig. 86: Identifying Bolts On Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Connect the knock sensor connector (A) and the CMP sensor connector (B) and install the harness holder mounting bolts (C).

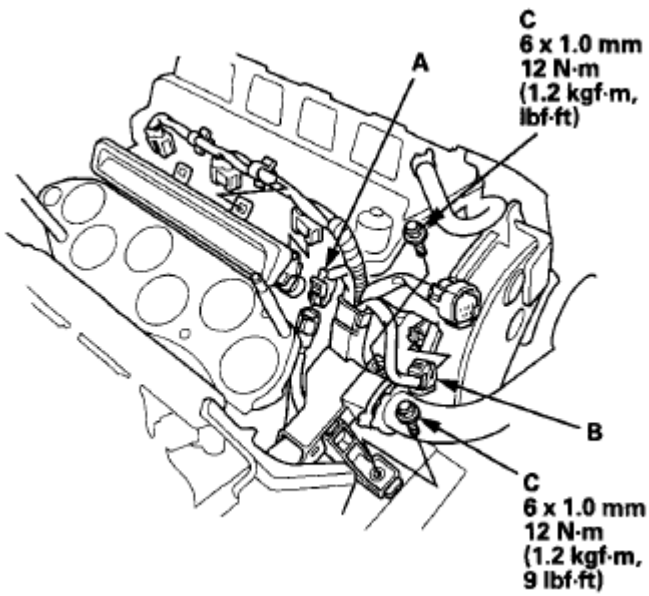

Fig. 87: Identifying Knock Sensor Connector, CMP Sensor Connector And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the engine hanger bracket (A). D-

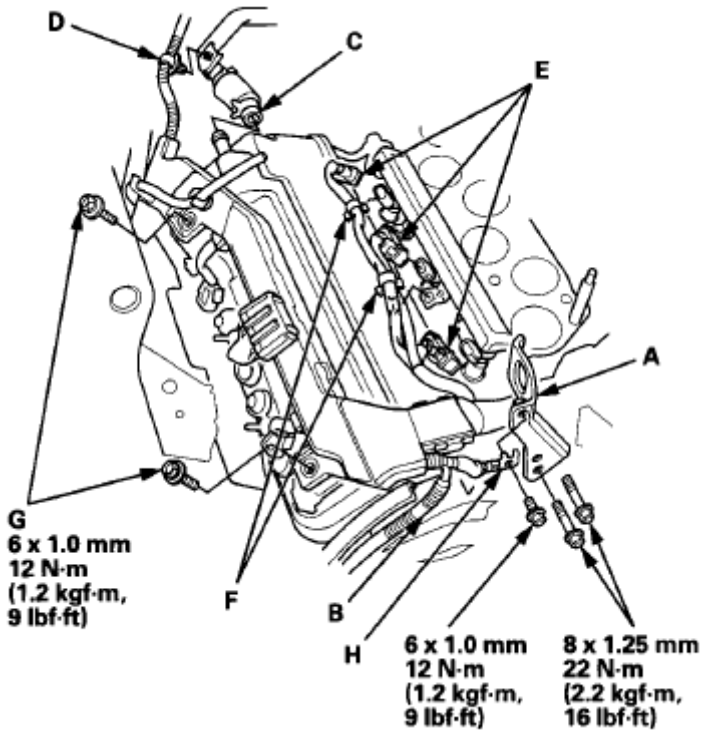

Fig. 88: Identifying Hanger Brackets, Upper Cover, Breather Hose, Connectors, Harness Clamps, Ground Cable & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the harness (B) to the upper cover.
14. Connect the breather hose (C) and install the harness clamp (D).
15. Connect the three injector connectors (E) and the two harness clamps (F).
16. Install the harness holder mounting bolts (G) and the engine ground cable (H).
17. Install the three ignition coils to the rear cylinder head (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
18. Install the intake manifold (see **INSTALLATION**).
19. Install the strut brace (see **FRAME BRACE REPLACEMENT**).

CYLINDER HEAD REMOVAL

NOTE:

- **Use fender covers to avoid damaging painted surfaces.**
- **To avoid damaging the wiring and terminals, unplug the wiring connectors carefully while holding the connector portion.**
- **Connect the HDS to the DLC (see HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)), and monitor ECT SENSOR 1. To avoid damaging the cylinder head, wait until the engine coolant temperature drops below 100°F (38°C) before loosening the cylinder head bolts.**
- **Mark all wiring and hoses to avoid misconnection. Also, be sure that they**

do not contact any other wiring or hoses, or interfere with any other parts.

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
3. Do the battery terminal disconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
4. Drain the engine coolant (see **COOLANT CHECK**).
5. Remove the six ignition coils (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
6. Remove the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**).
7. Remove the intake manifold (see **INTAKE MANIFOLD REMOVAL AND INSTALLATION**).
8. Disconnect the following engine wire harness connectors, and remove the wire harness clamps from the cylinder head:
   - Six injector connectors
   - Knock sensor connector
   - ECT sensor 1 connector
   - Engine mount control solenoid valve connector
   - EGR valve connector
   - CMP sensor connector
   - Rocker arm oil control solenoid connector
   - Rocker arm oil pressure switch connector
   - Two A/F sensor connectors
   - Two secondary HO2S connectors
9. Remove the front warm up TWC (see **WARM UP TWC REMOVAL/INSTALLATION**) and the rear warm up TWC (see **REAR (BANK 1)**).
10. Remove the quick-connect fitting cover (A), then disconnect the fuel feed hose (B) (see **FUEL LINE/QUICK-CONNECT FITTING REMOVAL**).

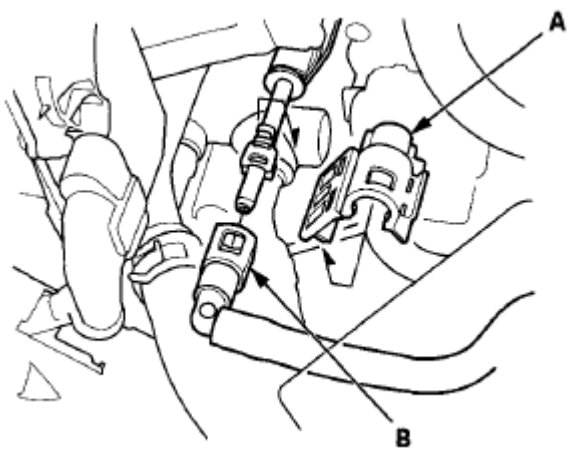

Fig. 89: Identifying Quick Connect Fitting Cover And Fuel Feed Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the connector bracket (A) from the front cylinder head.

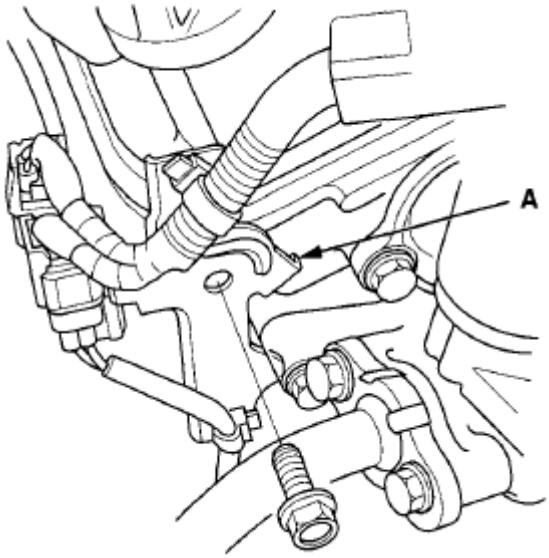

Fig. 90: Identifying Connector Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the engine mount control solenoid valve bracket (A) from the rear cylinder head.

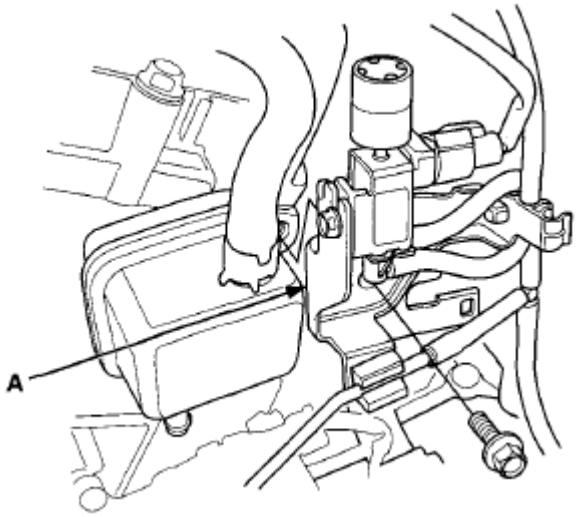

Fig. 91: Identifying Engine Mount Control Solenoid Valve Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the EVAP canister joint with the bracket (see step 9).
14. Remove the injector bases (see **INJECTOR BASE REMOVAL AND INSTALLATION**).

15. Remove the water passage (see **WATER PASSAGE REPLACEMENT**).
16. Remove the timing belt (see **TIMING BELT REMOVAL**).
17. Remove the camshaft pulleys (A) and the back covers (B).

FRONT

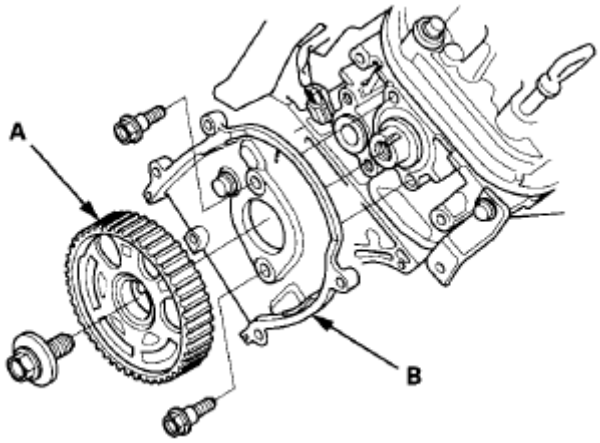

Fig. 92: Identifying Camshaft Pulleys And Back Covers (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

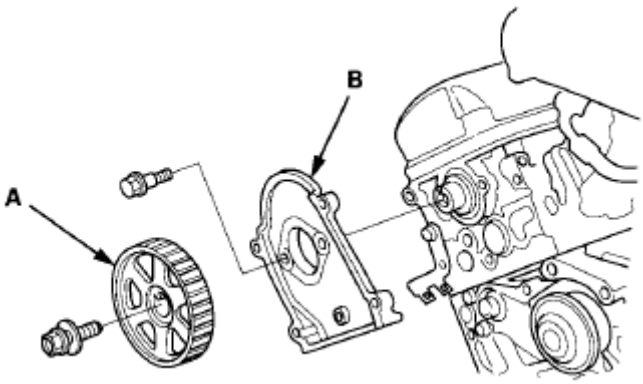

Fig. 93: Identifying Camshaft Pulleys And Back Covers (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Remove the cylinder head covers (see **TIMING BELT DRIVE PULLEY REPLACEMENT**).
19. Remove the cylinder head bolts. To prevent warpage, loosen the bolts in sequence 1/3 turn at a time; repeat the sequence until all bolts are loosened.

FRONT

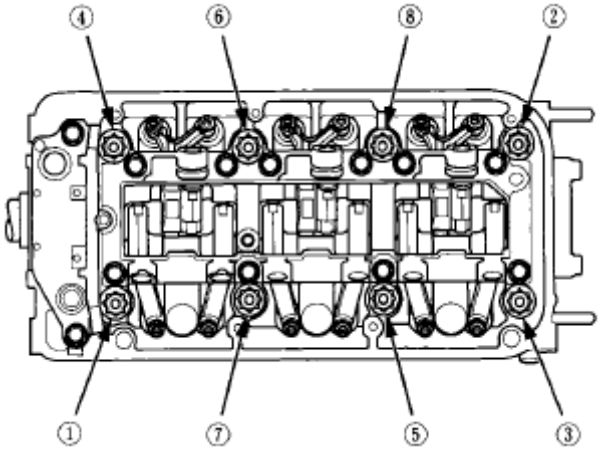

Fig. 94: Identifying Cylinder Head Bolts (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

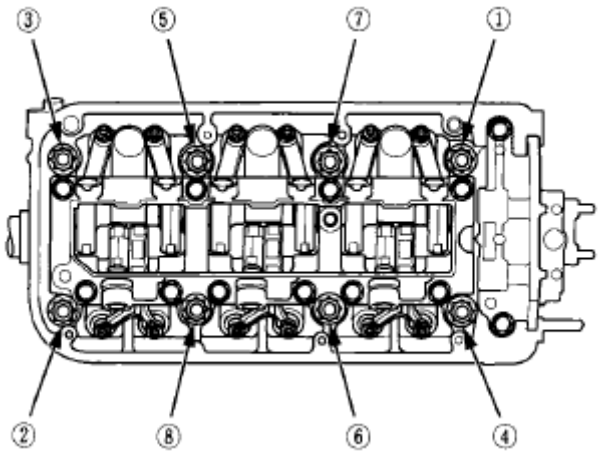

Fig. 95: Identifying Cylinder Head Bolts (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Remove the cylinder heads.

CAMSHAFT REPLACEMENT

FRONT

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Do the battery removal procedure (see **BATTERY REMOVAL AND INSTALLATION**).
3. Drain the engine coolant (see **COOLANT CHECK**).
4. Disconnect the radiator hoses (A).

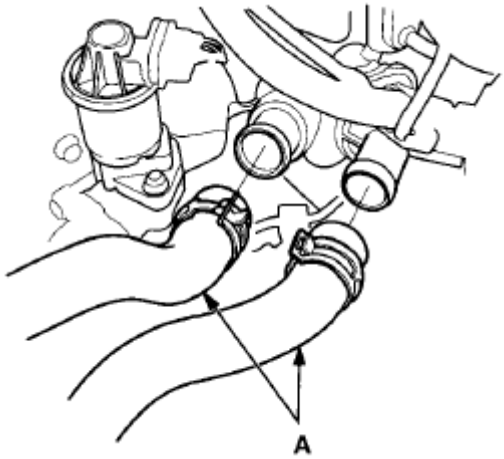

Fig. 96: Identifying Radiator Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the EGR valve (see **EGR VALVE REPLACEMENT**).
6. Remove the EGR valve stud bolts (A).

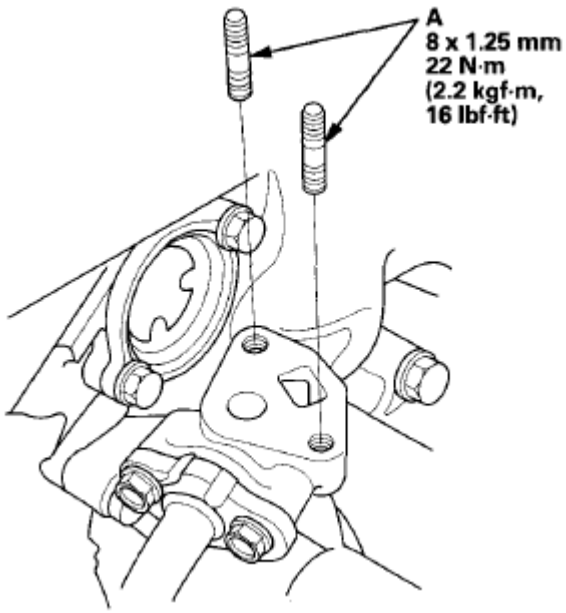

Fig. 97: Identifying EGR Valve Stud Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the timing belt (see **TIMING BELT REMOVAL**).
8. Remove the front rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
9. Remove the front camshaft pulley (see step 17).
10. Remove the thrust cover (A), then remove the front camshaft (B).

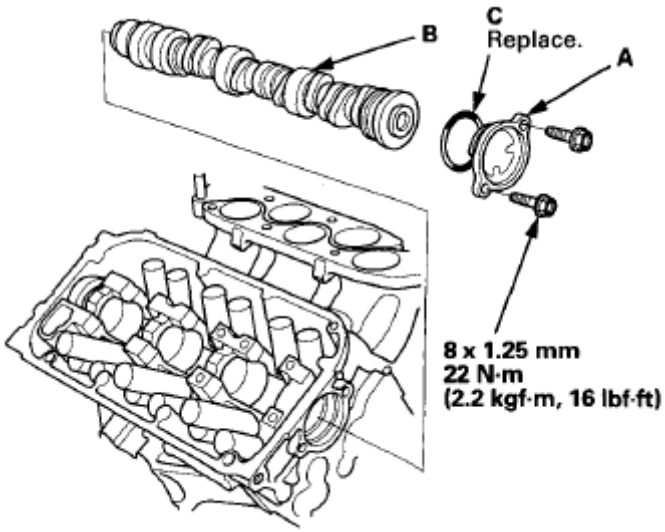

Fig. 98: Identifying Thrust Cover, Front Camshaft And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the front camshaft in the reverse order of removal. Always use a new O-ring (C). Apply new engine oil to the journals and the cam lobes.
12. Apply new engine oil to the threads of the camshaft pulley mounting bolt, then install the front camshaft pulley (see step 15).
13. Install the front rocker arm assembly, then tighten the mounting bolts (see step 13).
14. Install the timing belt (see **TIMING BELT INSTALLATION**).
15. Adjust the valve clearance (see **VALVE CLEARANCE ADJUSTMENT**).
16. Install the EGR valve stud bolts, then install the EGR valve (see **EGR VALVE REPLACEMENT**).
17. Connect the radiator hoses.
18. Do the battery installation procedure (see **BATTERY REMOVAL AND INSTALLATION**).
19. Fill the radiator with engine coolant, and bleed the air from the cooling system (see **COOLANT CHECK**).
20. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
21. Do the CKP pattern clear/CKP pattern learn procedure (see **CKP PATTERN CLEAR/CKP PATTERN LEARN**).

REAR

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
3. Do the battery removal procedure (see **BATTERY REMOVAL AND INSTALLATION**).
4. Drain the engine coolant (see **COOLANT CHECK**).
5. Remove the under-hood fuse/relay box from the bracket.
6. Remove the air cleaner (see **THROTTLE BODY CLEANING**).

7. Remove the quick-connect fitting cover, then disconnect the fuel feed hose (see step 10).
8. Disconnect the heater hoses (A).

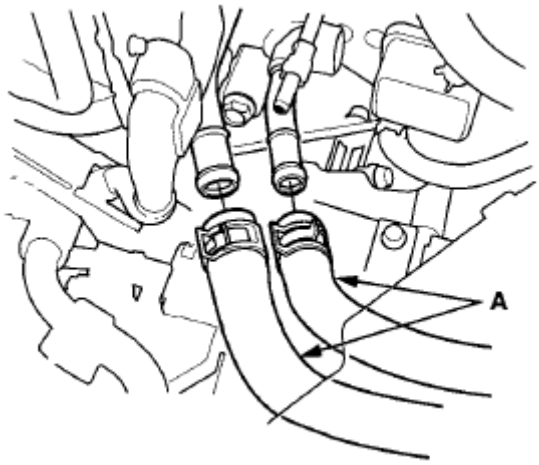

Fig. 99: Identifying Heater Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Disconnect the EVAP canister hose (A), then remove the EVAP canister joint (B) with the bracket.

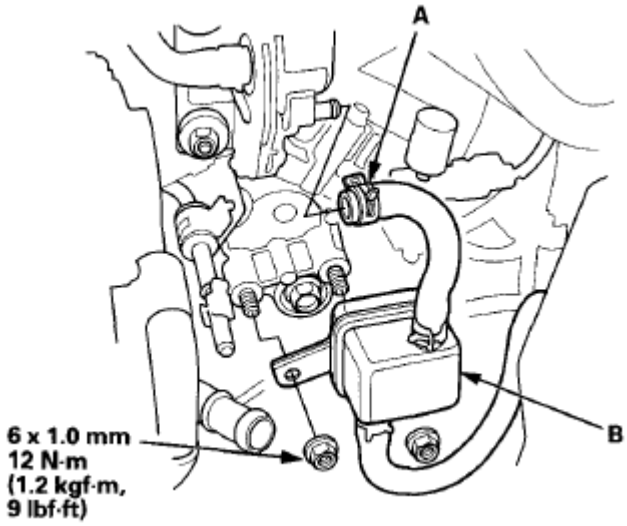

Fig. 100: Identifying EVAP Canister Hose And Joint With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the timing belt (see **TIMING BELT REMOVAL**).
11. Remove the rear rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
12. Remove the rear camshaft pulley.
13. Remove the thrust cover (A), then remove the rear camshaft (B).

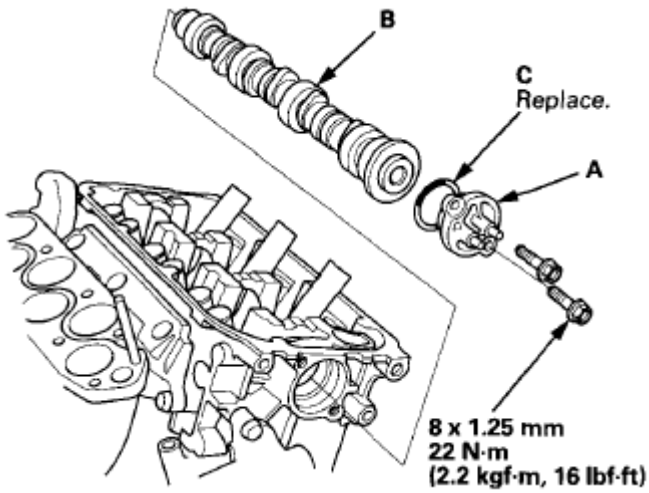

Fig. 101: Identifying Thrust Cover, Rear Camshaft And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the rear camshaft in the reverse order of removal. Always use a new O-ring (C). Apply new engine oil to the journals and cam lobes.
15. Apply new engine oil to the threads of the camshaft pulley mounting bolt, then install the rear camshaft pulley (see step 15).
16. Install the rear rocker arm assembly, then tighten the mounting bolts (see step 13).
17. Install the timing belt (see **TIMING BELT INSTALLATION**).
18. Adjust the valve clearance (see **VALVE CLEARANCE ADJUSTMENT**).
19. Install the EVAP canister joint with the bracket, then connect the EVAP canister hose.
20. Connect the heater hoses.
21. Connect the fuel feed hose, then install the quick-connect fitting cover (see step 21).
22. Install the air cleaner (see **THROTTLE BODY CLEANING**).
23. Install the under-hood fuse/relay box to the bracket.
24. Do the battery installation procedure (see **BATTERY REMOVAL AND INSTALLATION**).
25. Inspect for fuel leaks. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode (do not operate the starter) so the fuel pump runs for about 2 seconds and pressurizes the fuel line. Repeat this operation three times, then check for fuel leakage at any point in the fuel line.
26. Fill the radiator with engine coolant, and bleed the air from the cooling system (see **COOLANT CHECK**).
27. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
28. Do the CKP pattern clear/CKP pattern learn procedure (see **CKP PATTERN CLEAR/CKP PATTERN LEARN**).

CYLINDER HEAD INSPECTION FOR WARPAGE

1. Remove the cylinder head (see **CYLINDER HEAD REMOVAL**).
2. Inspect the camshaft (see **CAMSHAFT INSPECTION**).

3. Check the cylinder head for warpage. Measure along the edges, and three ways across the center:
   - If warpage is less than 0.05 mm (0.002 in), cylinder head resurfacing is not required.
   - If warpage is between 0.05 mm (0.002 in) and 0.2 mm (0.008 in), resurface the cylinder head.
   - Maximum resurface limit is 0.2 mm (0.008 in) based on a height of 121 mm (4.76 in).

   Cylinder Head Warpage

   Standard (New): 0.05 mm (0.002 in) max.

   Cylinder Head Height

   Standard (New): 120.95-121.05 mm (4.762-4.765 in)

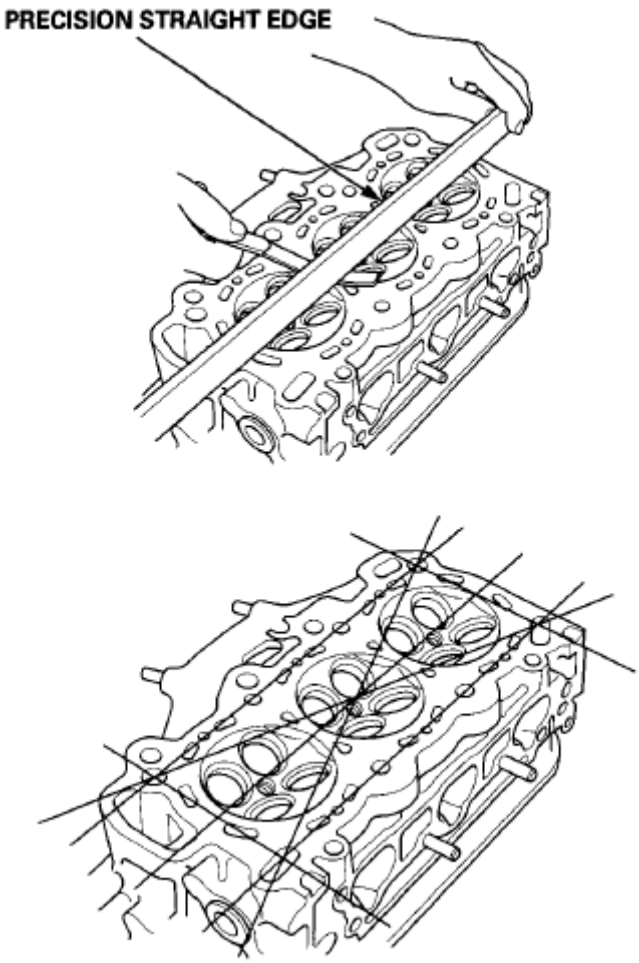

Fig. 102: Inspecting Cylinder Head Warpage
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM ASSEMBLY REMOVAL

Front

1. Remove the cylinder head cover (see **TIMING BELT DRIVE PULLEY REPLACEMENT**).
2. Loosen the locknuts and the adjusting screws (A).

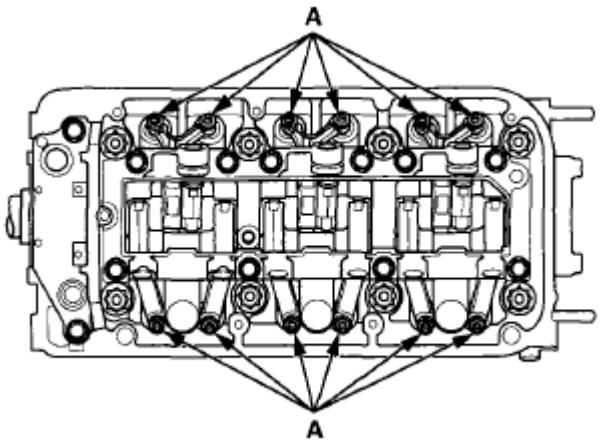

Fig. 103: Identifying Locknuts And Adjusting Screws (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rocker shaft bridge mounting bolts, the rocker shaft holder mounting bolts, and the rocker arm assembly.
    1. Loosen the rocker shaft bridge mounting bolts and the rocker shaft holder mounting bolts in sequence two turns at a time, to prevent damaging the valves or the rocker arm assembly.
    2. When removing the rocker arm assembly, do not remove the rocker shaft bridge mounting bolts and the rocker shaft holder mounting bolts. The bolts will keep the rocker arms on the shafts.

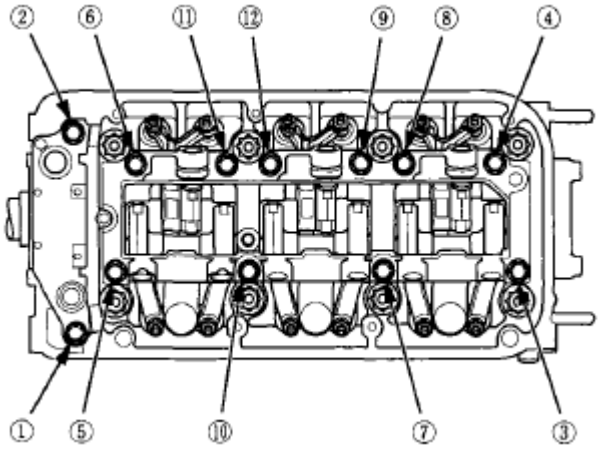

Fig. 104: Identifying Bolts On Rocker Arm Assembly (Front) With Loosening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

4. Remove the cylinder head cover (see **TIMING BELT DRIVE PULLEY REPLACEMENT**).
5. Loosen the locknuts and the adjusting screws (A).

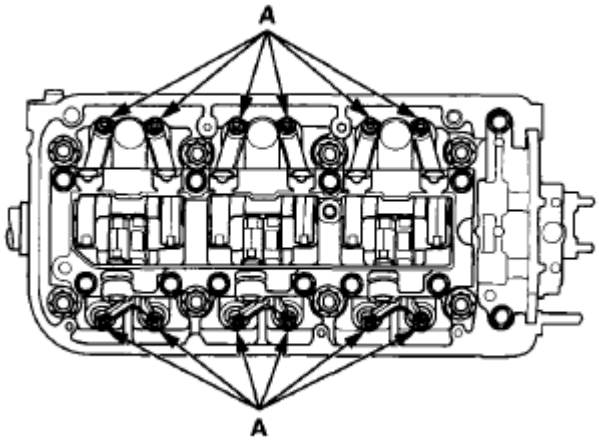

Fig. 105: Identifying Locknuts And Adjusting Screws (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the rocker shaft bridge mounting bolts, the rocker shaft holder mounting bolts, and the rocker arm assembly.
    1. Loosen the rocker shaft bridge mounting bolts and the rocker shaft holder mounting bolts in sequence two turns at a time, to prevent damaging the valves or the rocker arm assembly.
    2. When removing the rocker arm assembly, do not remove the rocker shaft bridge mounting bolts and the rocker shaft holder mounting bolts. The bolts will keep the rocker arms on the shafts.

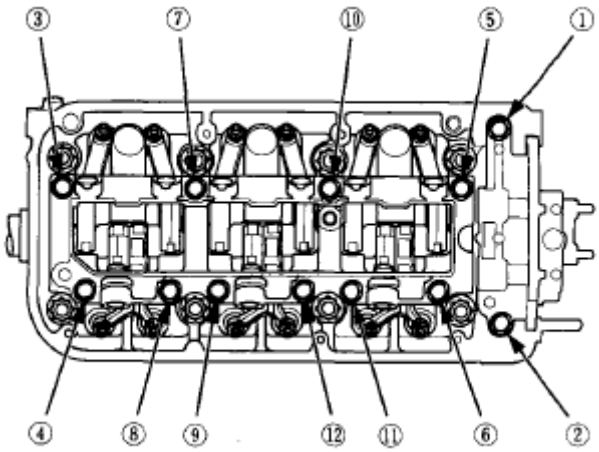

Fig. 106: Identifying Bolts On Rocker Arm Assembly (Rear) With Loosening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY

FRONT

NOTE:

- **Identify parts as they are removed so they can be reinstalled in their original locations.**
- **Inspect the rocker shafts and the rocker arms (see ROCKER ARM AND SHAFT INSPECTION).**
- **If reused, the rocker arms must be installed in their original locations.**
- **When removing or installing the rocker arm assembly, do not remove the mounting bolts. The bolts will keep the rocker arms, the rocker shaft bridge, and the rocker shaft holder on the shaft.**
- **If the rocker shaft cannot be removed or installed by hand, remove or install the rocker shaft by heating the rocker shaft bridge.**
- **Bundle the rocker arms with rubber bands to keep them together as a set, and remove the bands after the rocker arms have been installed.**
- **Prior to reassembling, clean all the parts in solvent, dry them, and apply new engine oil to all contact points and bearing surfaces, and the lost motion assembly.**
- **When replacing the rocker arm assembly, remove the fastening hardware from the new rocker arm assembly.**
- **Never remove any of the circlips that retain the lost motion assemblies in the rocker shaft bridge. The circlips are not available separately, and are factory installed in the rocker shaft bridge. To remove the lost motion assemblies, first remove the rocker shafts and the rocker arms.**

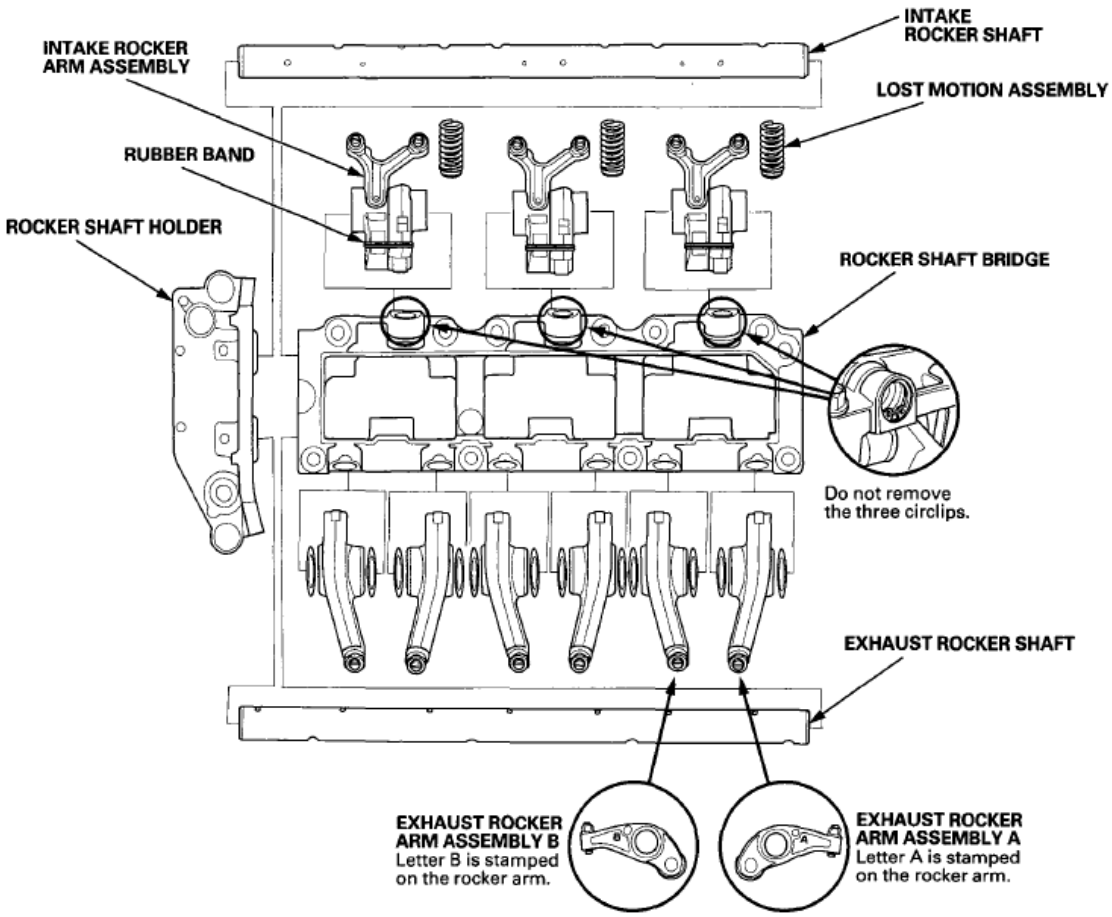

Fig. 107: Identifying Rocker Arm And Shaft And Related Components (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

NOTE:

- **Identify parts as they are removed so they can be reinstalled in their original locations.**
- **Inspect the rocker shafts and the rocker arms (see ROCKER ARM AND SHAFT INSPECTION).**
- **If reused, the rocker arms must be installed in their original locations.**
- **When removing or installing the rocker arm assembly, do not remove the mounting bolts. The bolts will keep the rocker arms, the rocker shaft bridge, and the rocker shaft holder on the shaft.**
- **If the rocker shaft cannot be removed or installed by hand, remove or install the rocker shaft by heating the rocker shaft bridge.**
- **Bundle the rocker arms with rubber bands to keep them together as a set, and remove the bands after the rocker arms have been installed.**
- **Prior to reassembling, clean all the parts in solvent, dry them, and apply**

new engine oil to all contact points and bearing surfaces, and the lost motion assembly.

- **When replacing the rocker arm assembly, remove the fastening hardware from the new rocker arm assembly.**
- **Never remove any of the circlips that retain the lost motion assemblies in the rocker shaft bridge. The circlips are not available separately, and are factory installed in the rocker shaft bridge. To remove the lost motion assemblies, first remove the rocker shafts and the rocker arms.**

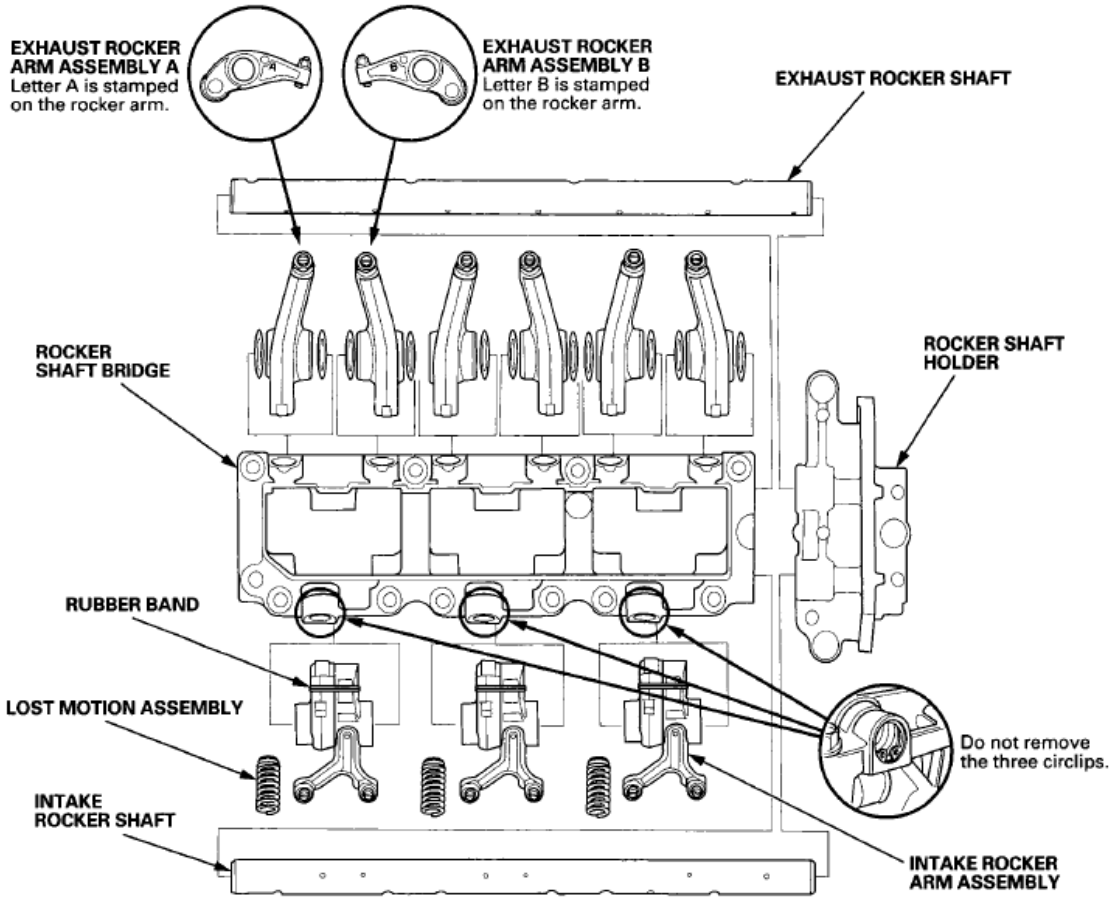

Fig. 108: Identifying Rocker Arm And Shaft And Related Components (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM AND SHAFT INSPECTION

1. Remove the rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
2. Disassemble the rocker arm assembly (see **ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY**).
3. Measure the diameter of the shaft at the first rocker location.

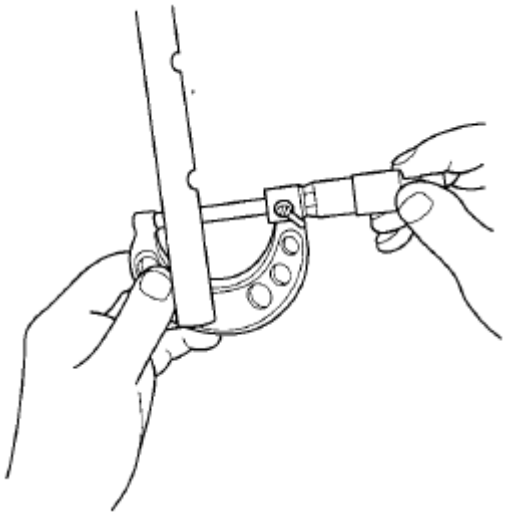

Fig. 109: Measuring Diameter Of Shaft At First Rocker Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Zero the dial gauge (A) to the shaft diameter.

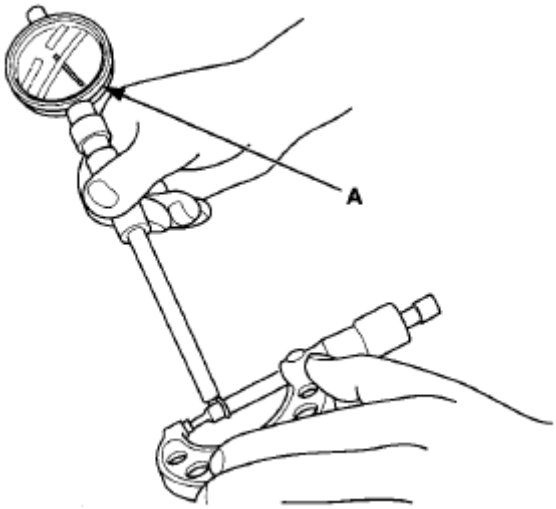

Fig. 110: Identifying Dial Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the inside diameter of the rocker arm, and check it for an out-of-round condition.

   Intake Rocker Arm-to-Shaft Clearance:

   Standard (New): 0.015-0.046 mm (0.00059-0.00181 in)

   Service Limit: 0.046 mm (0.00181 in)

   Exhaust Rocker Arm-to-Shaft Clearance:

Standard (New): 0.018-0.047 mm (0.00071-0.00185 in)

Service Limit: 0.047 mm (0.00185 in)

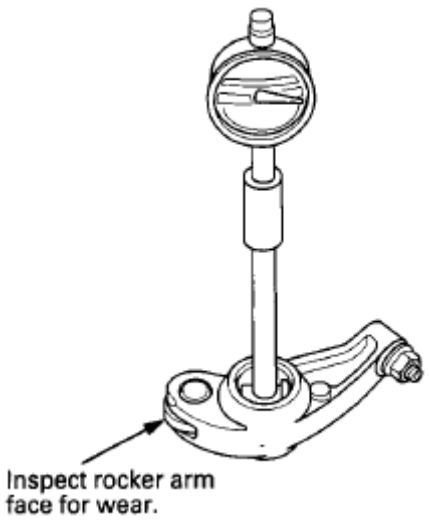

Fig. 111: Measuring Inside Diameter Of Rocker Arm And Check For Out-Of-Round Condition
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Repeat for all rockers and both shafts. If the clearance is over the limit, replace the rocker shaft and all over-tolerance rocker arms. If any intake rocker arm needs replacement, replace all rocker arms in that set (primary and secondary).

VTEC Rocker Arms

7. Inspect the rocker arm piston (A). Slide them into the rocker arms. If they do not move smoothly, replace the rocker arm set.

NOTE:

- **Apply new engine oil to the rocker arm piston when reassembling.**
- **When removing the rocker arm piston from the intake secondary rocker arm (B), carefully apply air pressure to the oil passage of the rocker arm.**

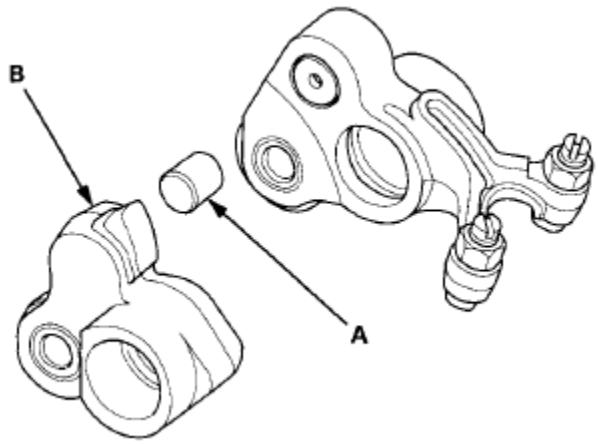

Fig. 112: Identifying Rocker Arm Piston And Intake Secondary Rocker Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Reassemble the rocker arm assembly (see **ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY**).
9. Install the rocker arm assembly (see **CAMSHAFT, ROCKER ARM ASSEMBLY, CAMSHAFT SEAL, AND PULLEY INSTALLATION**).

CAMSHAFT INSPECTION

1. Remove the cylinder head (see **CYLINDER HEAD REMOVAL**).
2. Remove the rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
3. Disassemble the rocker arm assembly (see **ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY**).
4. Front: Put the rocker shafts bridge and the rocker shaft holder on the front cylinder head, then tighten the bolts to the specified torque.

   Specified Torque

   8 x 1.25 mm: 22 N.m (2.2 kgf.m, 16 lbf.ft)

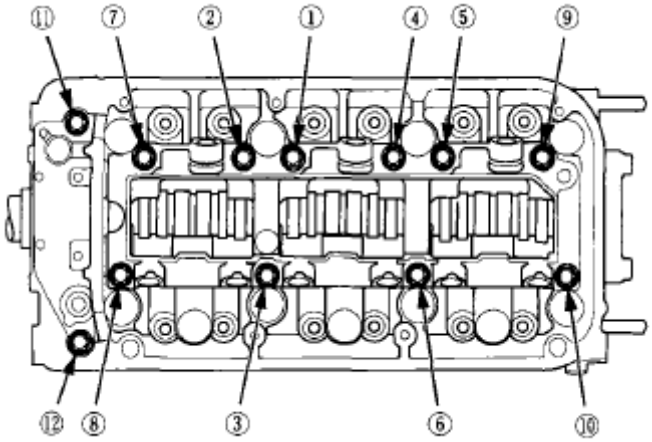

Fig. 113: Identifying Rocker Shaft Holder-To-Front Cylinder Head Bolts With Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear: Put the rocker shaft bridge and the rocker shaft holder on the rear cylinder head, then tighten the bolts to the specified torque.

   Specified Torque

   8 x 1.25 mm: 22 N.m (2.2 kgf.m, 16 lbf.ft)

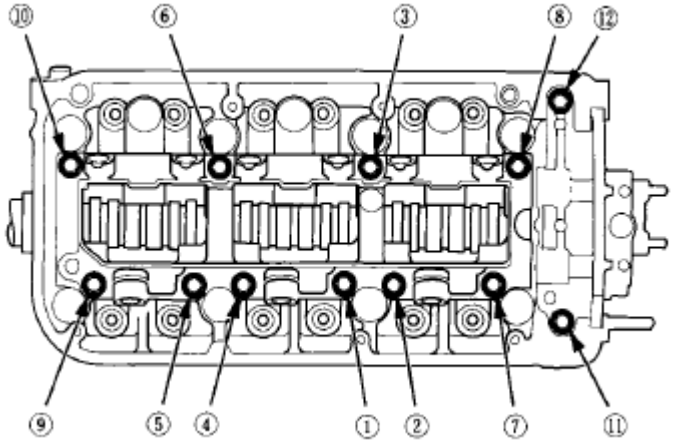

Fig. 114: Identifying Rocker Shaft Holder-To-Rear Cylinder Head Bolts With Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Seat the camshaft by pushing it toward the rear of the cylinder head.
7. Zero the dial gauge against the end of the camshaft. Push the camshaft back and forth and read the end play. If the end play is beyond the service limit, replace the thrust cover and recheck. If it is still beyond the service limit, replace the cylinder head. If it is still beyond the service limit, replace the camshaft.

   Camshaft End Play

Standard (New): 0.05-0.20 mm (0.0020-0.0079 in)

Service Limit: 0.20 mm (0.0079 in)

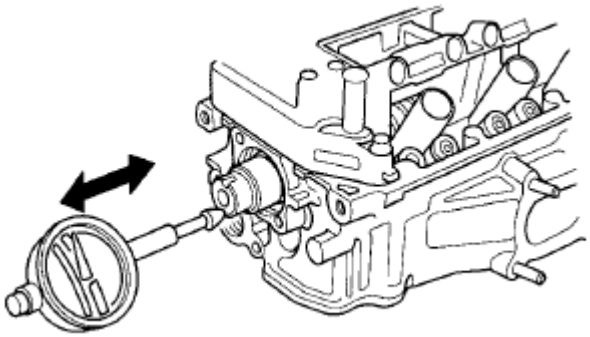

Fig. 115: Inspecting Camshaft Using Dial Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the camshaft thrust cover (A), then pull out the camshaft (B).

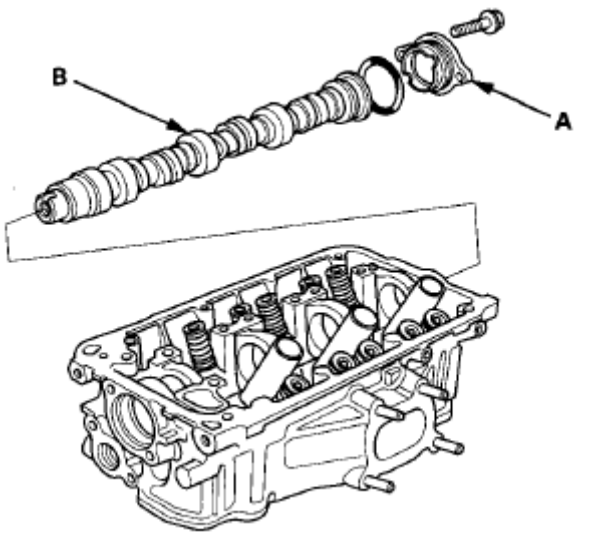

Fig. 116: Identifying Camshaft Thrust Cover And Camshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Wipe the camshaft clean, then inspect the lift ramps. Replace the camshaft if any lobes are pitted, scored, or excessively worn.
10. Measure the diameter of each camshaft journal.

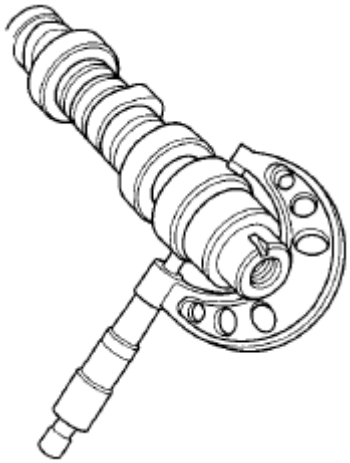

Fig. 117: Measuring Diameter Of Each Camshaft Journal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Zero the dial gauge (A) to the journal diameter.

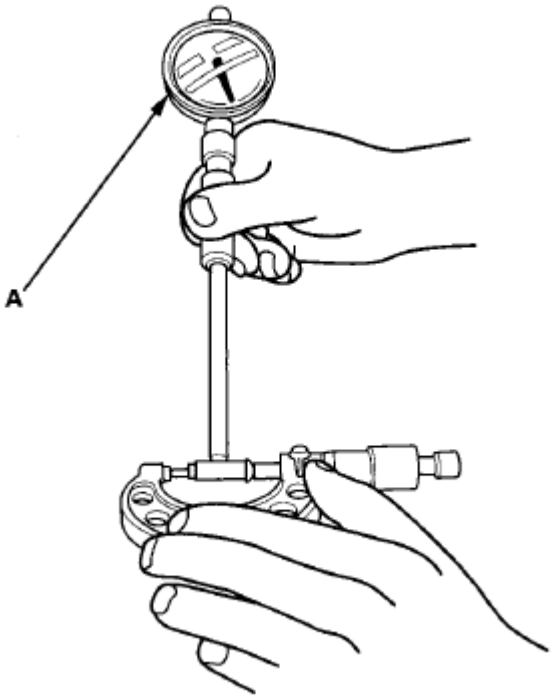

Fig. 118: Identifying Dial Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Clean the camshaft bearing surfaces in the cylinder head. Measure the inside diameter of each camshaft bearing surface, and check for an out-of-round condition:
    - If the camshaft-to-holder clearance is within limits, go to step 14.
    - If the camshaft-to-holder clearance is beyond the service limit and the camshaft has been replaced, replace the cylinder head.

- If the camshaft-to-holder clearance is beyond the service limit and the camshaft has not been replaced, go to step 13.

Camshaft-to-Holder Oil Clearance

Standard (New): 0.050- 0.089 mm (0.00197- 0.00350 in)

Service Limit: 0.15 mm (0.0059 in)

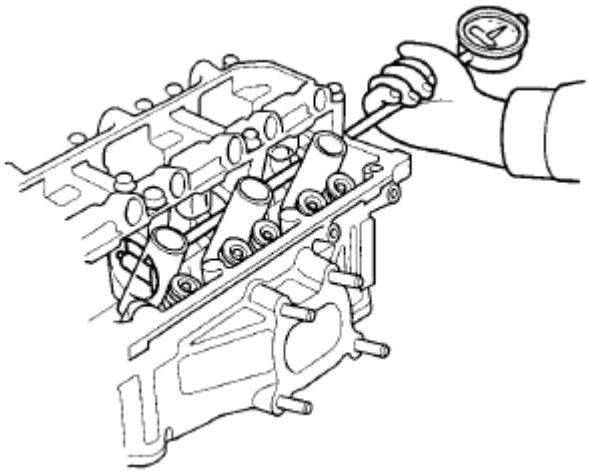

Fig. 119: Measuring Inside Diameter Of Each Camshaft Bearing Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Check total runout with the camshaft supported on V-blocks:
    - If the total runout of the camshaft is within the service limit, replace the cylinder head.
    - If the total runout is beyond the service limit, replace the camshaft and recheck the oil clearance. If the oil clearance is still out of tolerance, replace the cylinder head.

Camshaft Total Runout

Standard (New): 0.03 mm (0.0012 in) max.

Service Limit: 0.04 mm (0.0016 in)

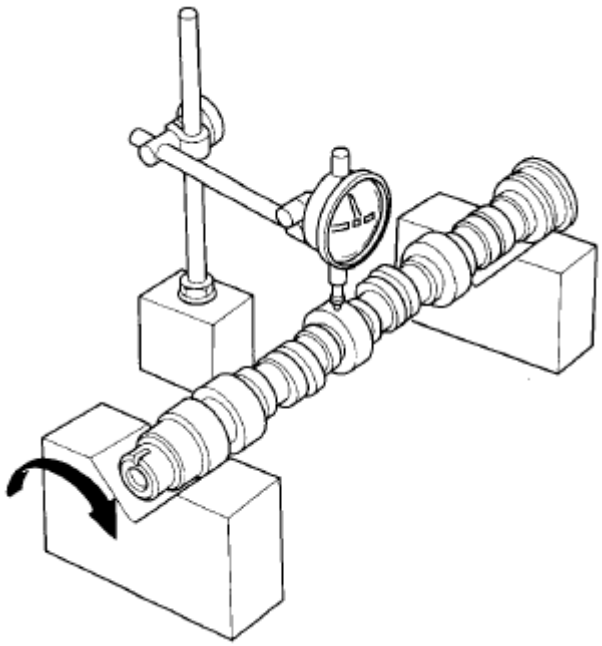

Fig. 120: Turning Camshaft For Inspection Using Dial Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Measure the cam lobe height.

CAM LOBE HEIGHT STANDARD (NEW)

	INTAKE	EXHAUST
PRI	34.299 mm (1.35035 in)	36.760 mm (1.44724 in)
SEC	35.621 mm (1.40240 in)	

FRONT

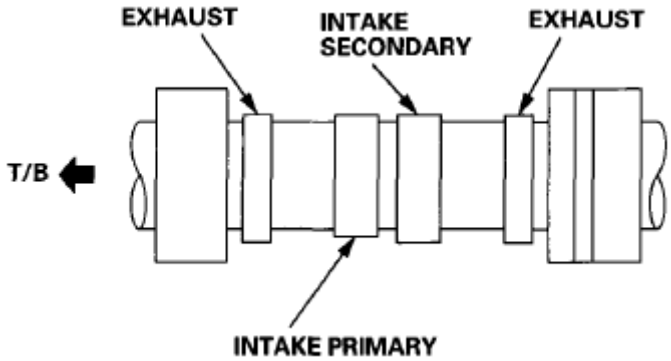

Fig. 121: Identifying Front Of Camshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

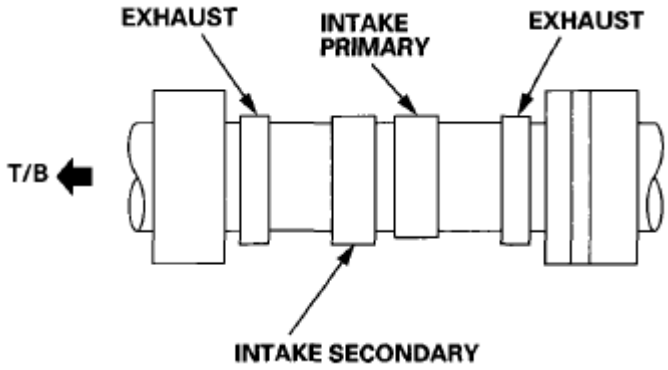

Fig. 122: Identifying Rear Of Camshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VALVE, SPRING, AND VALVE SEAL REMOVAL

Special Tools Required

Valve Spring Compressor Attachment 07757-PJ1010A

NOTE: Identify the valves and the valve springs as they are removed so that each item can be reinstalled in its original position.

1. Remove the cylinder head (see **CYLINDER HEAD REMOVAL**).
2. Remove the rocker arm assembly (see **ROCKER ARM ASSEMBLY REMOVAL**).
3. Using an appropriate-sized socket (A) and a plastic mallet (B), lightly tap the spring retainer to loosen the valve cotters.

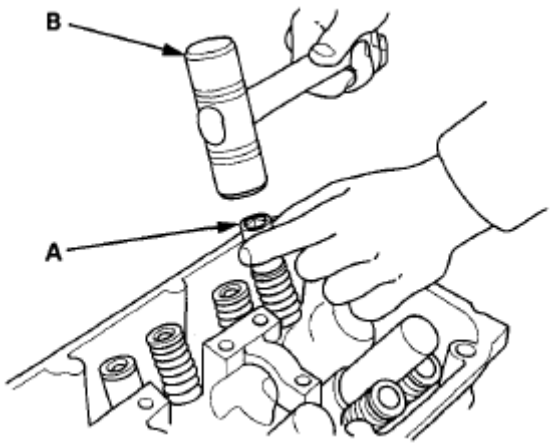

Fig. 123: Identifying Socket And Plastic Mallet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the valve spring compressor attachment and the valve spring compressor. Compress the spring and remove the valve cotters.

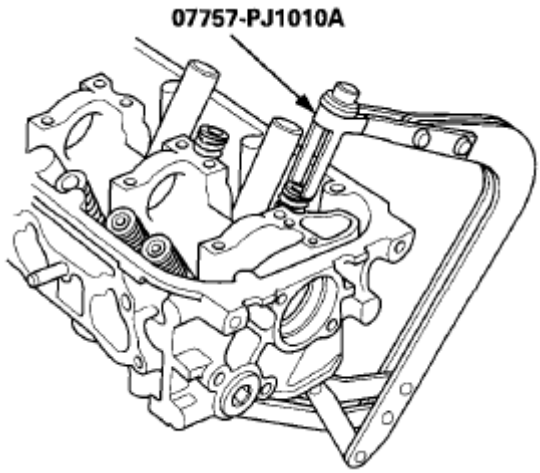

Fig. 124: Compressing Spring To Release Valve Cotters
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the valve spring compressor and the valve spring compressor attachment, then remove the spring retainer, the valve spring, and the valve.
6. Install the valve guide seal remover (A).

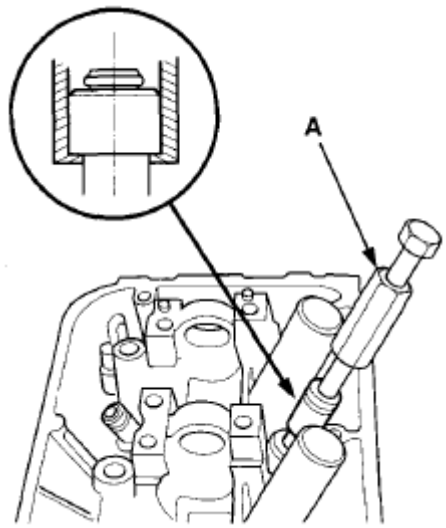

Fig. 125: Identifying Valve Guide Seal Remover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the valve seal.

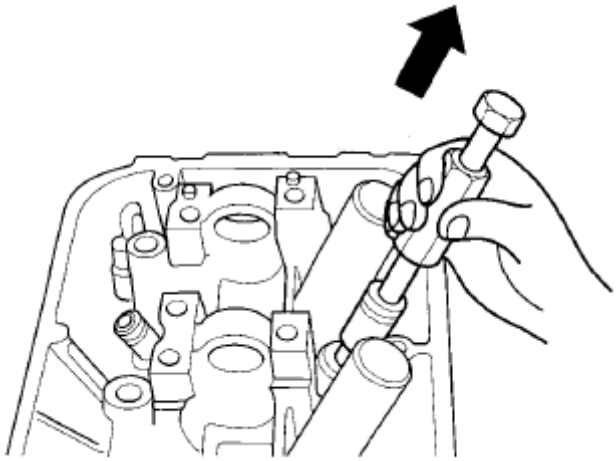

Fig. 126: Removing Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the valve spring seat.

VALVE INSPECTION

1. Remove the valves (see **VALVE, SPRING, AND VALVE SEAL REMOVAL**).
2. Measure the valve in these areas.

Intake Valve Dimensions

A Standard (New): 35.90-36.01 mm (1.4134-1.4177 in)

B Standard (New): 116.55-117.15 mm (4.5886-4.6122 in)

C Standard (New): 5.485-5.495 mm (0.21594-0.21634 in)

C Service Limit: 5.455 mm (0.21476 in)

Exhaust Valve Dimensions

A Standard (New): 29.90-30.10 mm (1.1772-1.1850 in)

B Standard (New): 113.90-114.50 mm (4.4842-4.5079 in)

C Standard (New): 5.450-5.460 mm (0.21457-0.21496 in)

C Service Limit: 5.420 mm (0.21339 in)

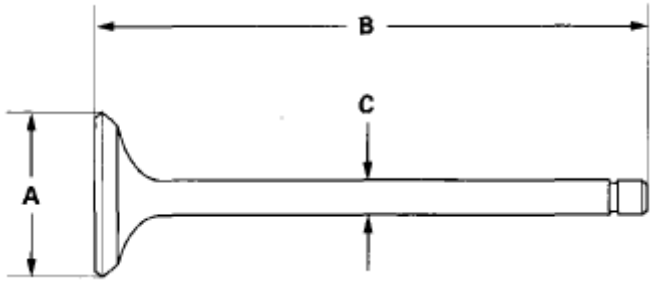

Fig. 127: Measuring Intake Valve Dimensions
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VALVE STEM-TO-GUIDE CLEARANCE INSPECTION

1. Remove the valves (see **VALVE, SPRING, AND VALVE SEAL REMOVAL**).
2. Subtract the O.D. of the valve stem, measured with a micrometer, from the I.D. of the valve guide, measured with an inside micrometer or a ball gauge. Take the measurements in three places along the valve stem and three places inside the valve guide. The difference between the largest guide measurement and the smallest stem measurement should not exceed the service limit.

   Intake Valve Stem-to-Guide Clearance

   Standard (New): 0.020-0.045 mm (0.00079-0.00177 in)

   Service Limit: 0.08 mm (0.0031 in)

   Exhaust Valve Stem-to-Guide Clearance

   Standard (New): 0.055-0.080 mm (0.00217-0.00315 in)

   Service Limit: 0.11 mm (0.0043 in)

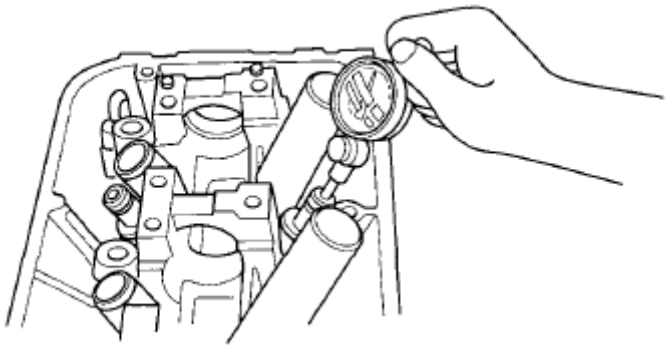

Fig. 128: Identifying Valve Stem To Guide Clearances
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VALVE GUIDE REPLACEMENT

Special Tools Required

- Valve Guide Driver, 5.35 x 9.7 mm 07742-0010100
- Valve Guide Reamer, 5.5 mm 07HAH-PJ7A100

1. Inspect the valve stem-to-guide clearance (see **VALVE STEM-TO-GUIDE CLEARANCE INSPECTION**).
2. As illustrated, use a commercially available air-impact valve guide driver (A) modified to fit the diameter of the valve guides. In most cases, the same procedure can be done using the valve guide driver, 5.35 x 9.7 mm and a conventional hammer.

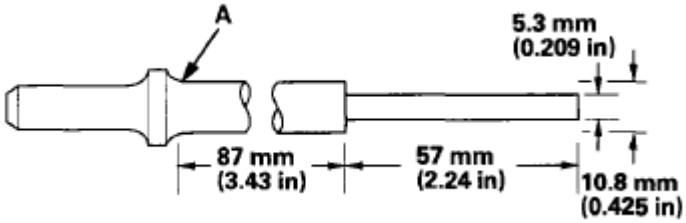

Fig. 129: Identifying Air-Impact Valve Guide Driver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Select the proper replacement guides, and chill them in the freezer section of a refrigerator for at least an hour.
4. Use a hot plate or oven to evenly heat the cylinder head to 300°F (150°C). Monitor the temperature with a cooking thermometer. Do not get the head hotter than 300°F (150°C); excessive heat may loosen the valve seats.

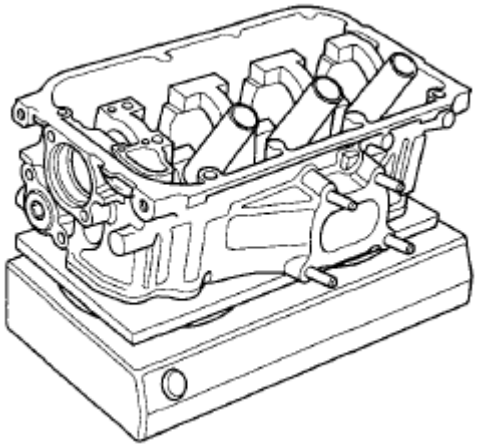

Fig. 130: Monitoring Temperature Of Cylinder Head With Cooking Thermometer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Working from the camshaft side, use the driver and an air hammer to drive the guide about 2 mm (0.08 in) towards the combustion chamber. This will knock off some of the carbon and make removal easier. Hold the air hammer directly in line with the valve guide to prevent damaging the driver. Wear safety

goggles or a face shield.

6. Turn the head over, and drive the guide out toward the camshaft side of the head.

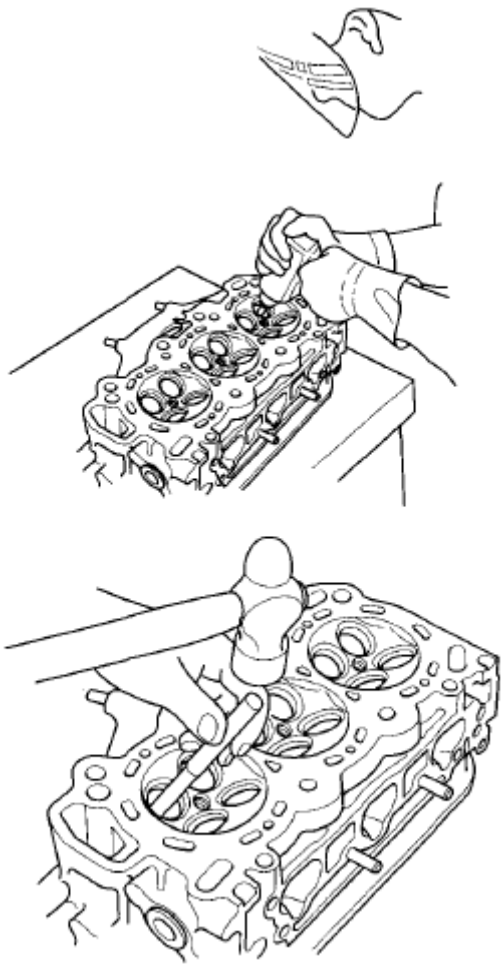

Fig. 131: Turning Head Over And Drive Guide Out Toward Camshaft Side Of Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. If a valve guide still will not move, drill it out with an 8 mm (5/16 in) drill bit, then try again.

NOTE: Drill guides only in extreme cases; you could damage the cylinder head if the guide breaks.

8. Remove the new guide(s) from the freezer, one at a time, as you need them.
9. Apply a thin coat of new engine oil to the outside of the new valve guide. Install the guide from the camshaft side of the head; use the valve guide driver to drive the guide to the specified installed height (A) of the guide (B). If you have all 12 guides to do, you may have to reheat the head.

Valve Guide Installed Height

Intake: 21.20-22.20 mm (0.8346-0.8740 in)

Exhaust: 20.60-21.60 mm (0.8110-0.8504 in)

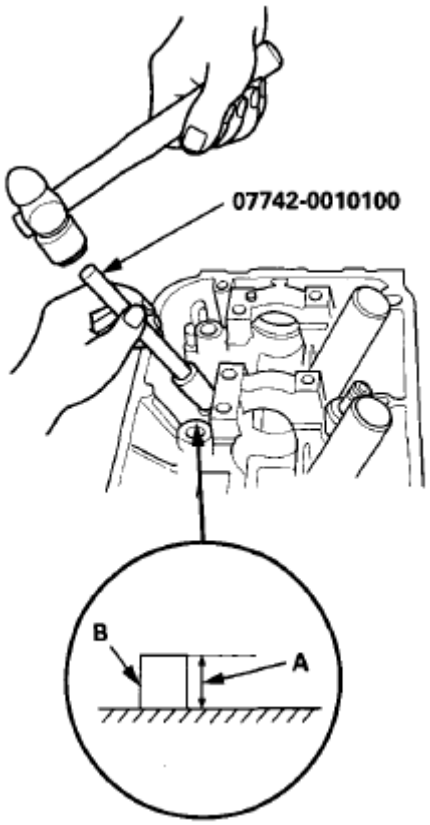

Fig. 132: Identifying Dimensions Of Valve Driver Guide
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Coat both the valve guide reamer, 5.5 mm and the valve guide with cutting oil.
11. Rotate the reamer clockwise the full length of the valve guide bore.

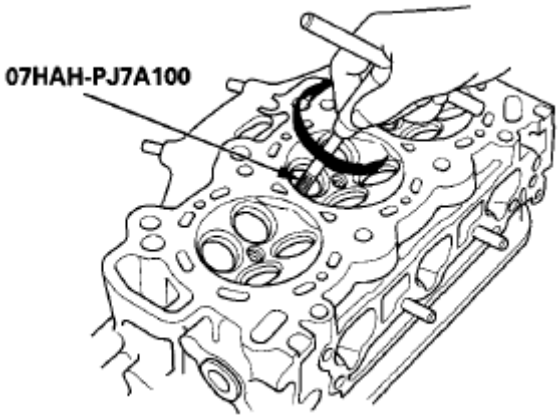

Fig. 133: Rotating Reamer Clockwise Full Length Of Valve Guide Bore
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Continue to rotate the reamer clockwise while removing it from the bore.
13. Thoroughly wash the guide in detergent and water to remove any cutting residue.
14. Check the clearance with a valve (see **VALVE STEM-TO-GUIDE CLEARANCE INSPECTION**). Verify that a valve slides into the intake and exhaust valve guides without sticking.
15. Inspect the valve seating (see **VALVE SEAT RECONDITIONING**). If necessary renew the valve seat using a valve seat cutter.

VALVE SEAT RECONDITIONING

1. Inspect valve stem-to-guide clearance (see **VALVE STEM-TO-GUIDE CLEARANCE INSPECTION**). If the valve guides are worn, replace them (see **VALVE GUIDE REPLACEMENT**) before cutting the valve seats.
2. Renew the valve seats in the cylinder head using a valve seat cutter.

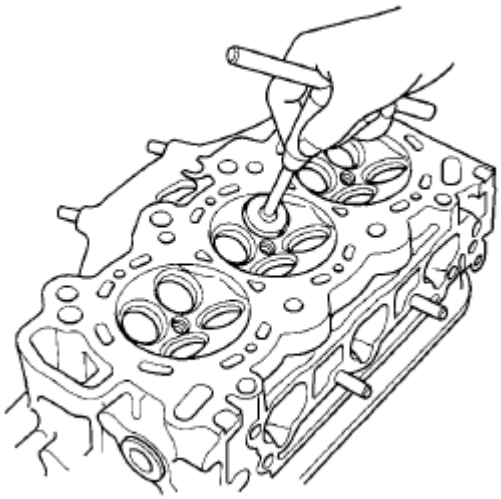

Fig. 134: Renewing Valve Seats In Cylinder Head Using Valve Seat Cutter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Carefully cut a 45 ° seat, removing only enough material to ensure a smooth and concentric seat.
4. Bevel the upper and lower edges at the angles shown in the illustration. Check the width of the seat and adjust accordingly.

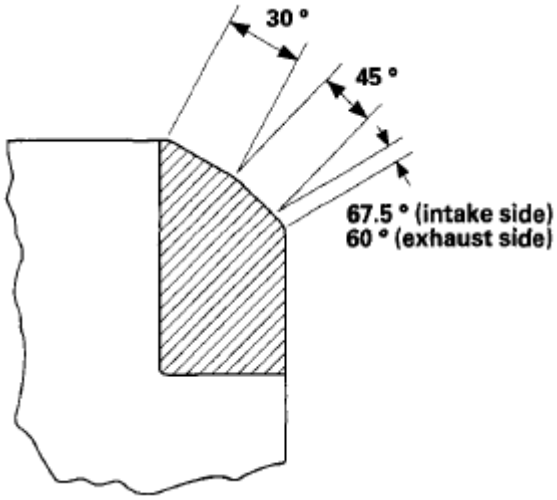

Fig. 135: Identifying Width Of Seat And Adjust Accordingly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Make one more very light passes with the 45 ° cutter to remove any possible burrs caused by the other cutters.

   Valve Seat Width

   Standard (New): 1.25-1.55 mm (0.0492-0.0610 in)

   Service Limit: 2.00 mm (0.0787 in)

6. After resurfacing the seat, inspect it for even valve seating. Apply Prussian Blue compound (A) to the valve face. Insert the valve in its original location in the head, then lift it and snap it closed against the seat several times.

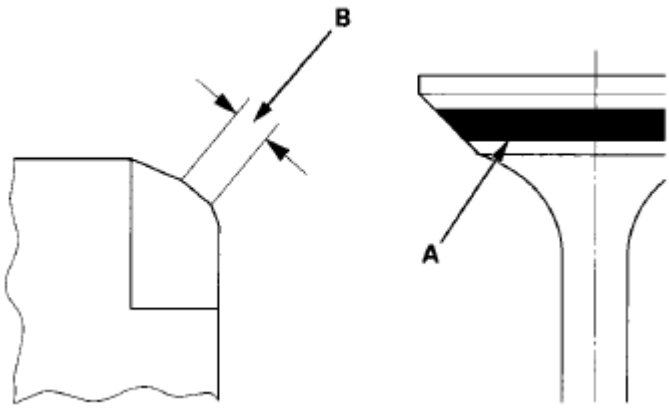

Fig. 136: Identifying Prussian Blue Compound And Actual Valve Seating Surface
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. The actual valve seating surface (B), as shown by the blue compound, should be centered on the seat:

- If it is too high (closer to the valve stem), you must make a second cut with the 67.5 ° cutter (intake seat) or the 60 ° cutter (exhaust seat) to move it down, then one more cut with the 45 ° cutter to restore seat width.
- If it is too low (closer to the valve edge), you must make a second cut with the 30 ° cutter to move it up, then one more cut with the 45 ° cutter to restore seat width.

NOTE: The final cut should always be made with the 45 ° cutter.

8. Insert the intake and exhaust valves in the head, and measure the valve stem installed height (A).

   Intake Valve Stem Installed Height

   Standard (New): 46.75-47.55 mm (1.8405-1.8720 in)

   Service Limit: 47.80 mm (1.8819 in)

   Exhaust Valve Stem Installed Height

   Standard (New): 46.68-47.48 mm (1.8378-1.8693 in)

   Service Limit: 47.73 mm (1.8791 in)

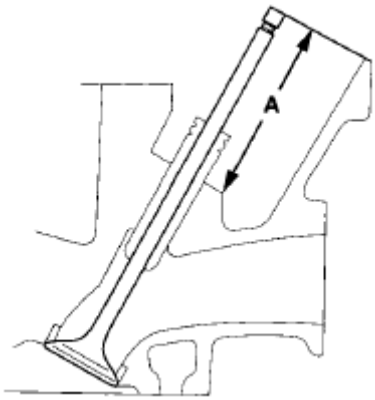

Fig. 137: Identifying Valve Stem Installed Height
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. If the valve stem installed height is over the service limit, replace the valve and recheck. If it is still over the service limit, replace the cylinder head; the valve seat in the head is too deep.

VALVE, SPRING, AND VALVE SEAL INSTALLATION

Special Tools Required

- Stem Seal Driver 07PAD-0010000
- Valve Spring Compressor Attachment 07757-PJ1010A

1. Coat the valve stems with new engine oil. Install the valves in the valve guides.
2. Check that the valves move up and down smoothly.
3. Install the spring seats on the cylinder head.
4. Install the new valve seals (A) using the 5.5 mm side of the stem seal driver (B).

NOTE: The exhaust valve seal (C) have a black spring (D) and intake valve seal (E) have a white or silver spring (F); They are not interchangeable.

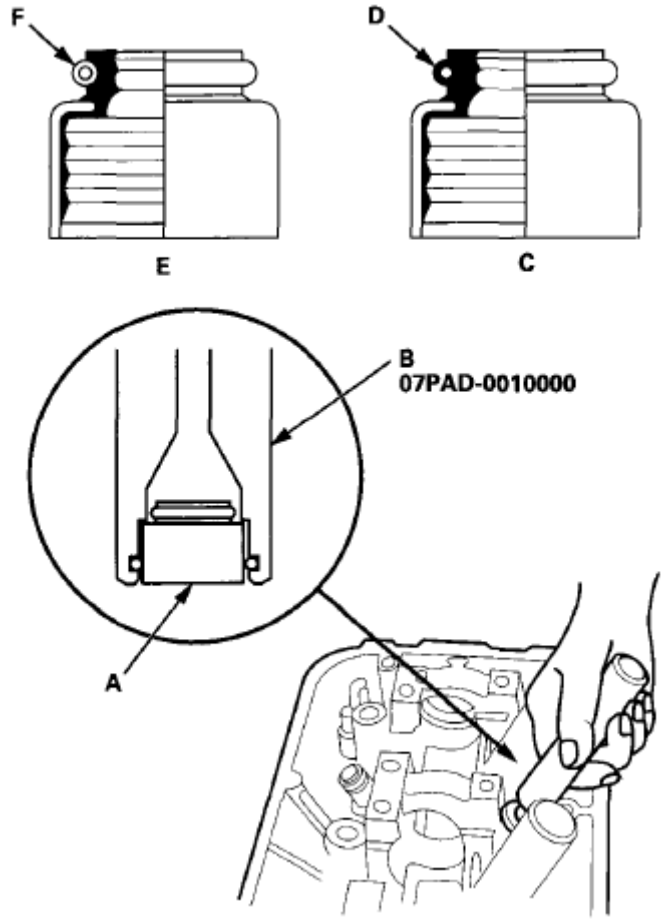

Fig. 138: Identifying Valve, Spring And Valve Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the valve spring and the spring retainer. Place the end of the valve spring with the closely wound coils toward the cylinder head.
6. Install the valve spring compressor attachment and the valve spring compressor. Compress the spring and install the valve cotters.

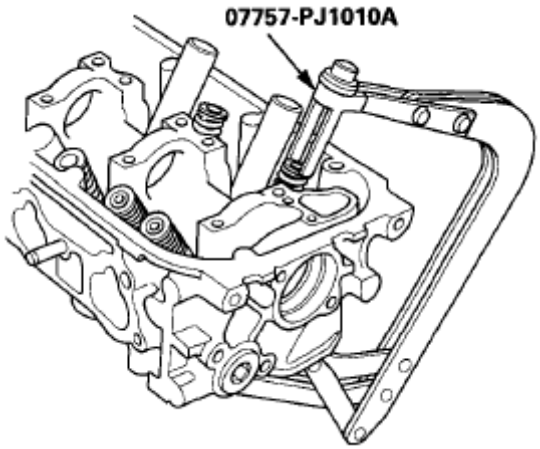

Fig. 139: Identifying Valve Spring Compressor Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the valve spring compressor and the valve spring compressor attachment.
8. Lightly tap the end of each valve stem two or three times with a plastic mallet (A) to ensure proper seating of the valve and valve cotters. Tap the valve stem only along its axis so you do not bend the stem.

NOTE: Be sure to raise the head off the work bench so the valve is not possibly damaged.

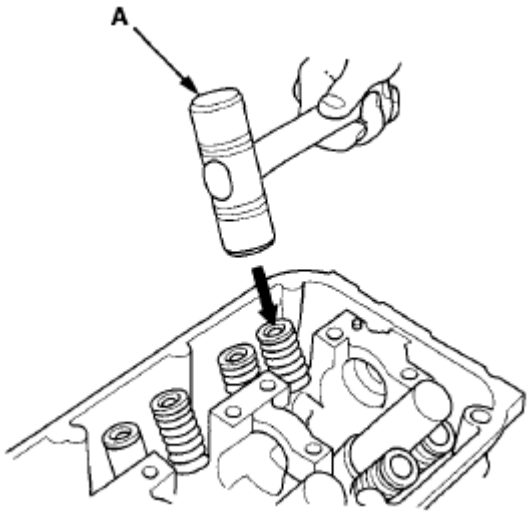

Fig. 140: Tapping Valve Stem With Plastic Mallet To Ensure Proper Seating Of Valve And Valve Cotters
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CAMSHAFT, ROCKER ARM ASSEMBLY, CAMSHAFT SEAL, AND PULLEY INSTALLATION

FRONT

1. Loosen the locknuts and the adjusting screws.
2. Dry the camshaft oil seal housing.
3. Apply a light coat of new engine oil to the lip of the camshaft oil seal.
4. Gently tap the new camshaft oil seal (A) squarely into the cylinder head to the specified installed height.

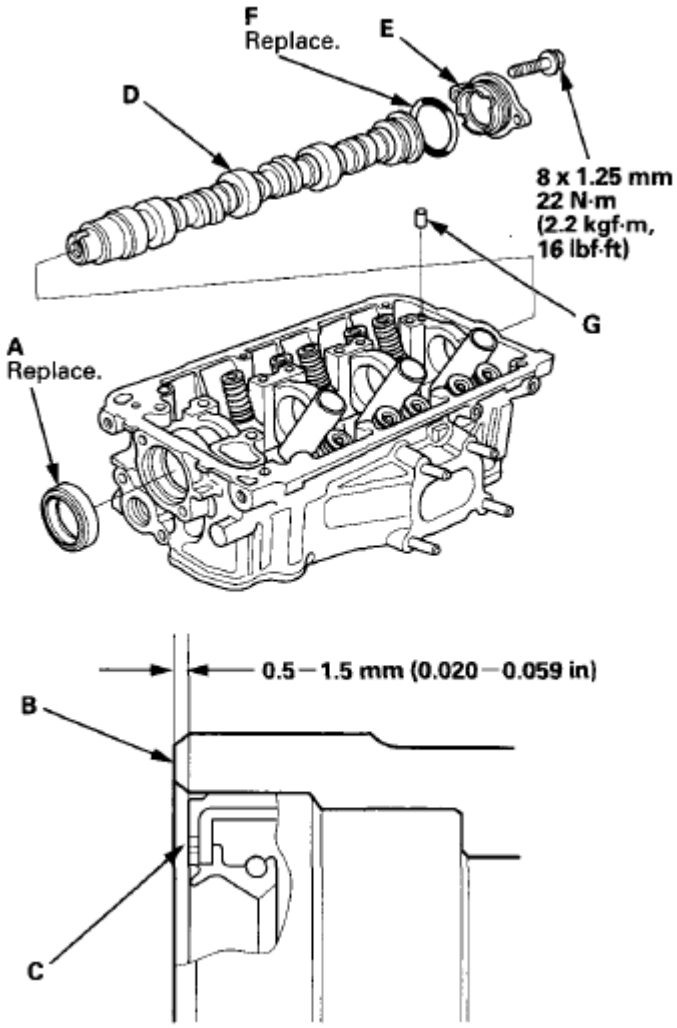

Fig. 141: Identifying Camshaft Oil Seal, Cylinder Head Surface, Oil Seal, Camshaft, Thrust Cover And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the distance between the cylinder head surface (B) and the oil seal (C).

   Oil Seal Installed Height

   0.5-1.5 mm (0.020-0.059 in)

6. Insert the camshaft (D) into the cylinder head, then install the camshaft thrust cover (E). Always use a new O-ring (F). Apply new engine oil to the journals and the cam lobes.

7. Clean the excess oil off the camshaft, check that the oil seal lip is distorted.
8. Install the solid dowel pin (G).
9. If the rocker arm assembly is disassembled, reassemble the rocker arm assembly (see **ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY**).
10. Remove all of the old liquid gasket from the rocker shaft holder and the cylinder head.
11. Apply liquid gasket, P/N 08717-0004, 08718-0003, 08718-0004, or 08718-0009 to the rocker shaft holder mating surface of the cylinder head. Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- **Apply a 2.5 mm (0.098 in) diameter bead of liquid gasket along the broken line (A).**
- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**

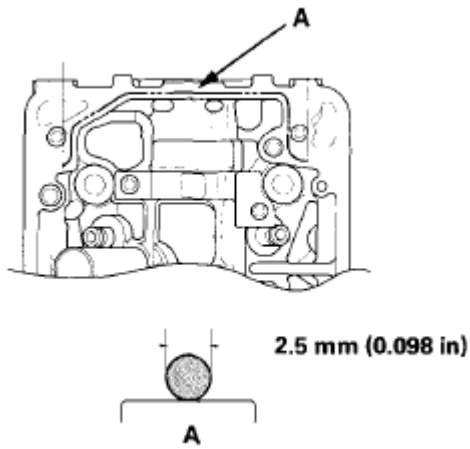

Fig. 142: Identifying Broken Line Of Liquid Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Set the rocker arm assembly in place, and loosely install the bolts. Make sure that the rocker arms are properly positioned on the valve stems.

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the rocker arm assembly.**

13. Tighten each bolt two turns at a time in the sequence shown to ensure that the rockers do not bind on the valves.

Specified Torque

8 x 1.25 mm: 22 N.m (2.2 kgf m, 16 lbf.ft)

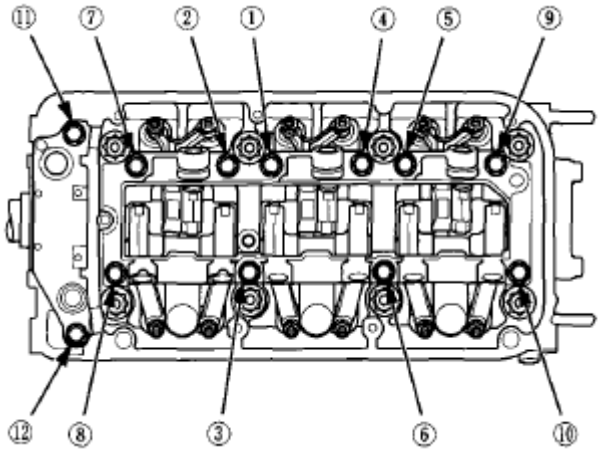

Fig. 143: Identifying Rocker Bolts With Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the injector base (A). Always use a new gasket (B).

NOTE: The front injector base gasket is different from the rear one. Do the mix injector base gasket types.

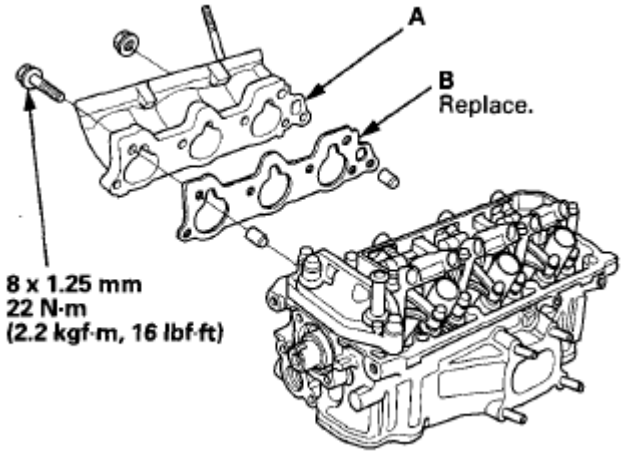

Fig. 144: Identifying Injector Base And Gasket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Apply new engine oil to the threads of the camshaft pulley mounting bolt (A). Install the back cover (B), then install the camshaft pulley (C).

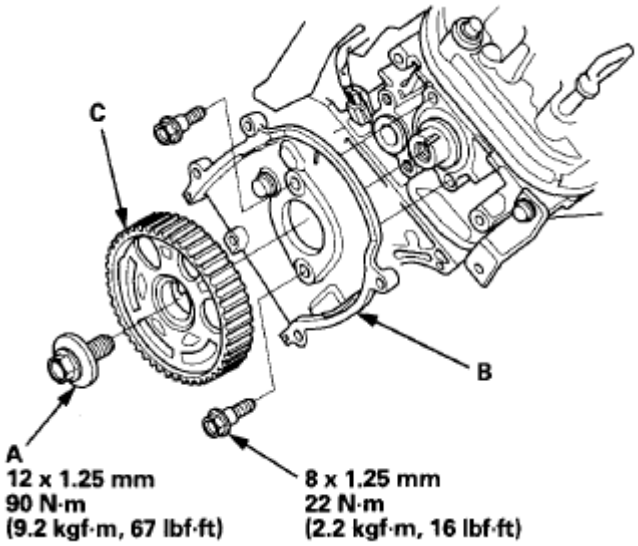

Fig. 145: Identifying Camshaft Pulley, Back Cover And Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Set the camshaft pulleys to top dead center (TDC) before bolting them onto the engine block (see step 6).

REAR

1. Loosen the locknuts and the adjusting screws.
2. Dry the camshaft oil seal housing.
3. Apply a light coat of new engine oil to the lip of the camshaft oil seal.
4. Gently tap the new camshaft oil seal (A) into the cylinder head.
    1. Tap the camshaft oil seal in squarely.
    2. Install the oil seal about 0.5-1.5 mm (0.020-0.059 in) below the surface of the cylinder head.

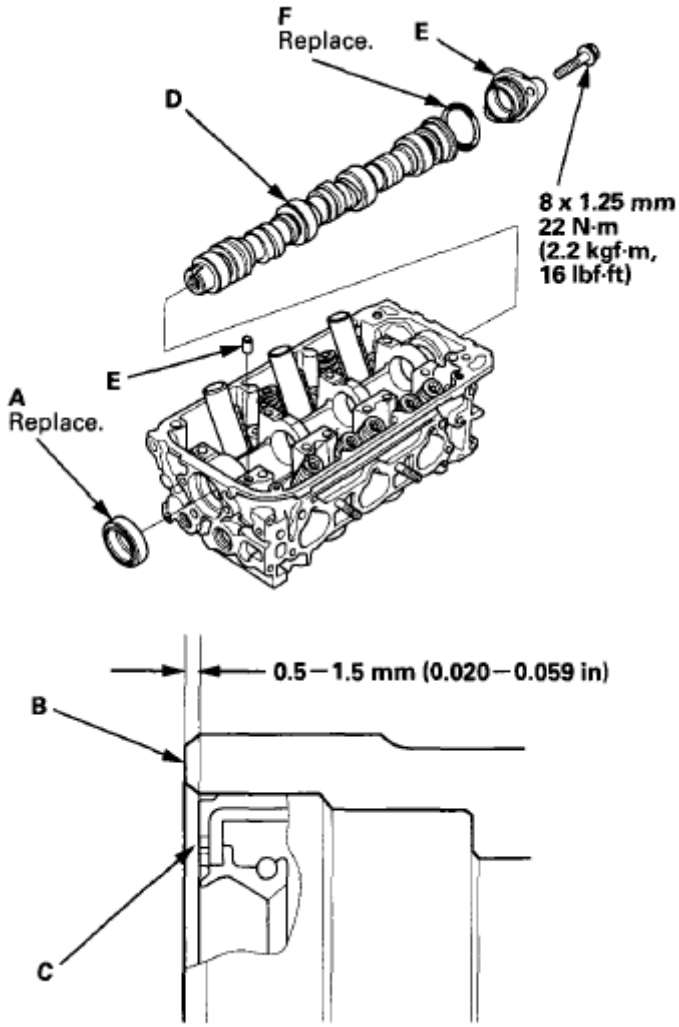

Fig. 146: Identifying Camshaft Oil Seal, Cylinder Head Surface, Camshaft Thrust Cover And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the distance between the cylinder head surface (B) and the oil seal (C).

   Oil Seal Installed Height 0.5-1.5 mm (0.020-0.059 in)

6. Insert the camshaft (D) into the cylinder head, then install the camshaft thrust cover (E). Always use a new O-ring (F). Apply new engine oil to the journals and the cam lobes.
7. Clean the excess oil off the camshaft, check that the oil seal lip is distorted.
8. Install the hollow dowel pin (G).
9. If the rocker arm assembly is disassembled, reassemble the rocker arm assembly (see **ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY**).
10. Remove all of the old liquid gasket from the rocker shaft holder and the cylinder head.
11. Apply liquid gasket, P/N 08717-0004, 08718-0003, 08718-0004, or 08718-0009 to the rocker shaft holder mating surface of the cylinder head. Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- **Apply a 2.5 mm (0.098 in) diameter bead of liquid gasket along the broken line (A).**
- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**

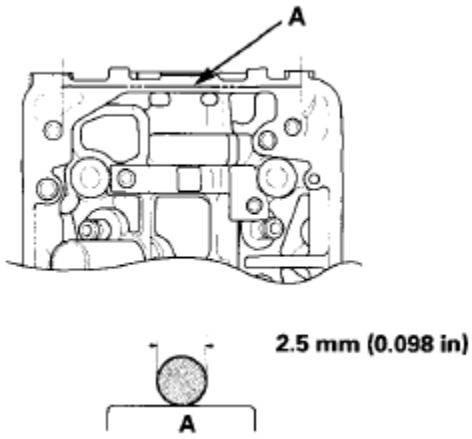

Fig. 147: Identifying Broken Line Of Liquid Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Set the rocker arm assembly in place, and loosely install the bolts. Make sure that the rocker arms are properly positioned on the valve stems.

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the rocker arm assembly.**

13. Tighten each bolt two turns at a time in the sequence shown to ensure that the rockers do not bind on the valves.

Specified Torque

8 x 1.25 mm: 22 N.m (2.2 kgf.m, 16 lbf.ft)

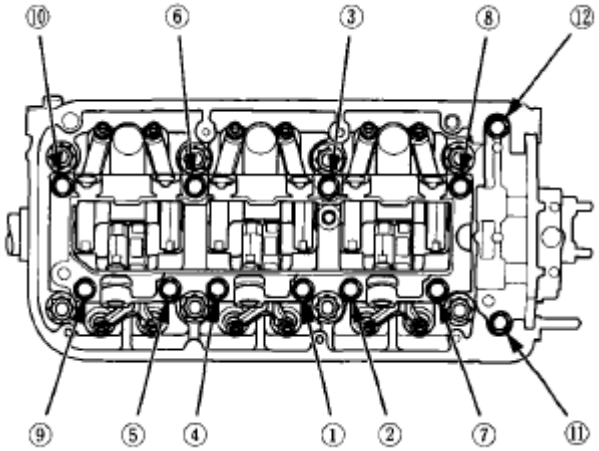

Fig. 148: Identifying Rocker Bolts With Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the injector base (A). Always use a new gasket (B).

NOTE: The rear injector base gasket is different from the front one. Do the mix injector base gasket types.

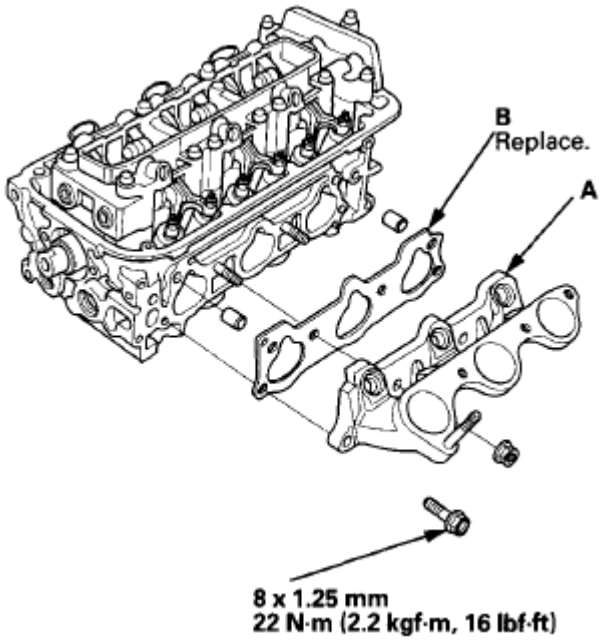

Fig. 149: Identifying Injector Base And Gasket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Apply new engine oil to the threads of the camshaft pulley mounting bolt (A). Install the back cover (B), then install the camshaft pulley (C).

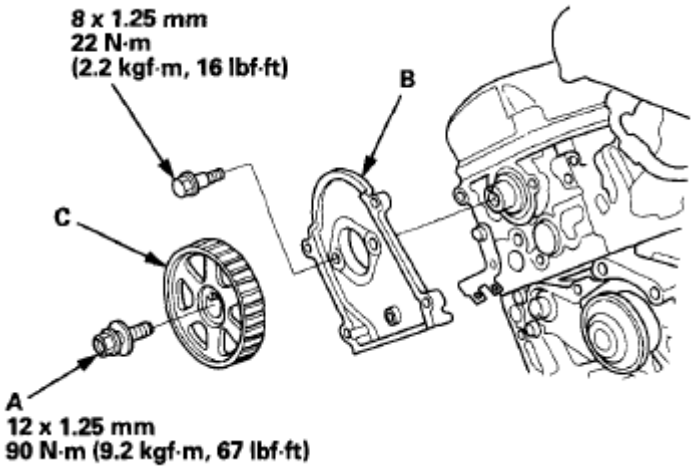

Fig. 150: Identifying Mounting Bolt, Back Cover And Camshaft Pulley With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Set the camshaft pulleys to TDC before bolting them onto the engine block (see step 6).

CYLINDER HEAD INSTALLATION

1. Clean the cylinder head and the engine block surface.
2. Clean and install the oil control orifices (A) with new O-rings (B).

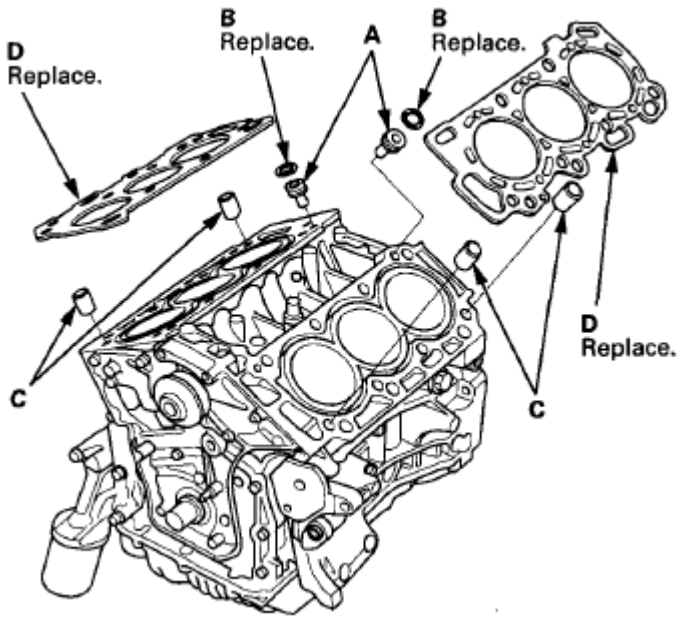

Fig. 151: Identifying Oil Control Orifices, O-Rings, Dowel Pins And Head Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the dowel pins (C) and the new cylinder head gaskets (D).
4. Clean the timing belt pulleys, the timing belt guide plate, and the upper and lower covers.

5. Set the timing belt drive pulley to top dead center (TDC) by aligning the TDC mark (A) on the tooth of the timing belt drive pulley with the pointer (B) on the oil pump.

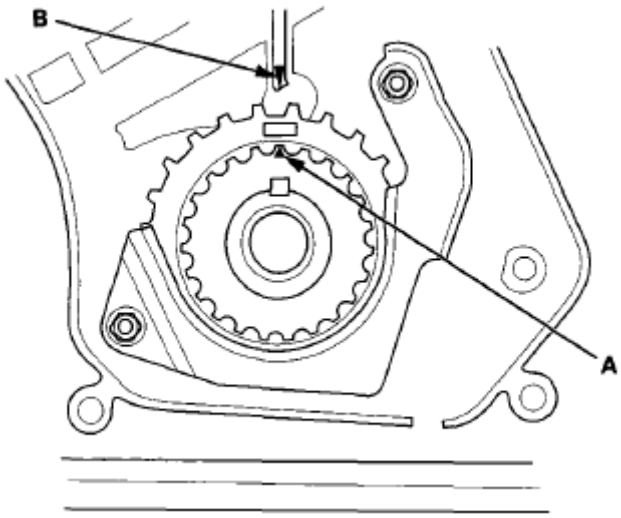

Fig. 152: Identifying TDC Mark And Pointer On Oil Pump
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Set the camshaft pulleys to TDC by aligning the TDC marks (A) on the camshaft pulleys with the pointers (B) on the back covers.

FRONT

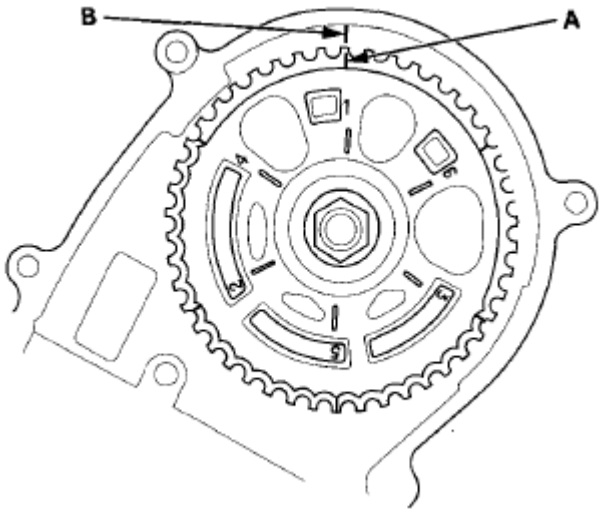

Fig. 153: Identifying TDC Marks And Pointers On Camshaft Pulley (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

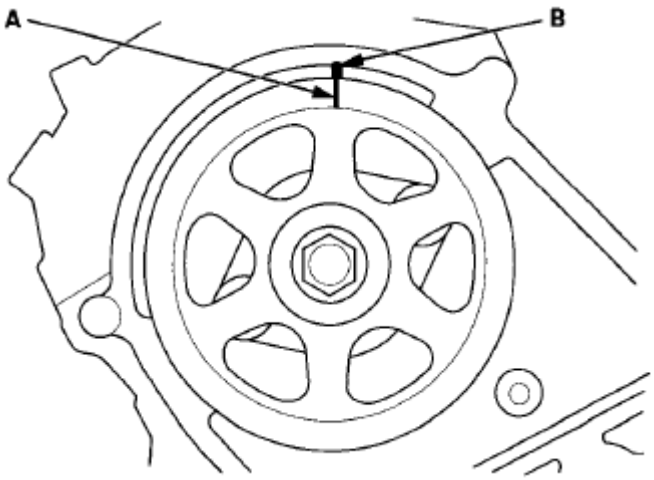

Fig. 154: Identifying TDC Marks And Pointers On Camshaft Pulley (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the cylinder heads on the engine block.
8. Measure the diameter of each cylinder head bolt at point A and point B.

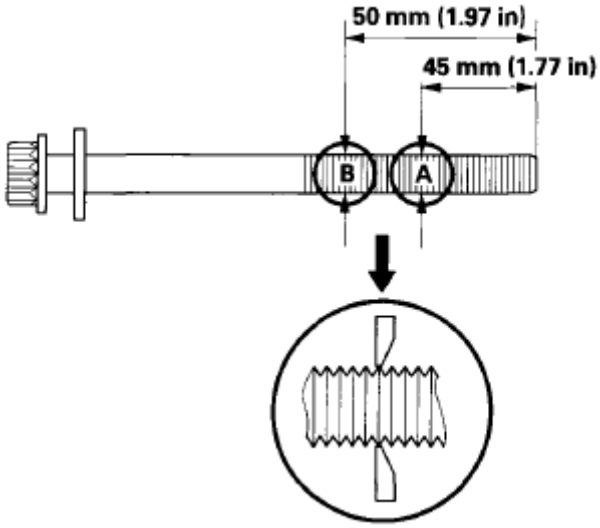

Fig. 155: Measuring Diameter Of Each Cylinder Head Bolt At Point A And Point B
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. If either diameter is less than 11.3 mm (0.445 in), replace the cylinder head bolt.
10. Apply new engine oil to the threads and under the bolt heads of all cylinder head bolts.
11. Torque the cylinder head bolts in sequence to 29 N.m (3.0 kgf.m, 22 lbf.ft) using a beam-type torque wrench. When using a preset click-type torque wrench, be sure to tighten slowly and do not overtighten. If a bolt makes any noise while you are torquing it, loosen the bolt and retighten it from the first step.

FRONT

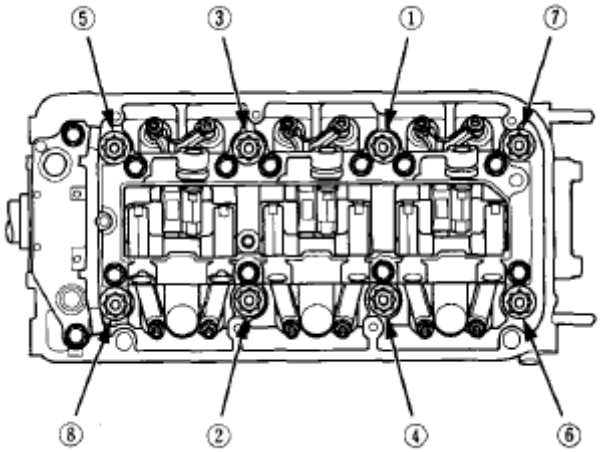

Fig. 156: Identifying Cylinder Head Bolts With Tightening Sequence (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

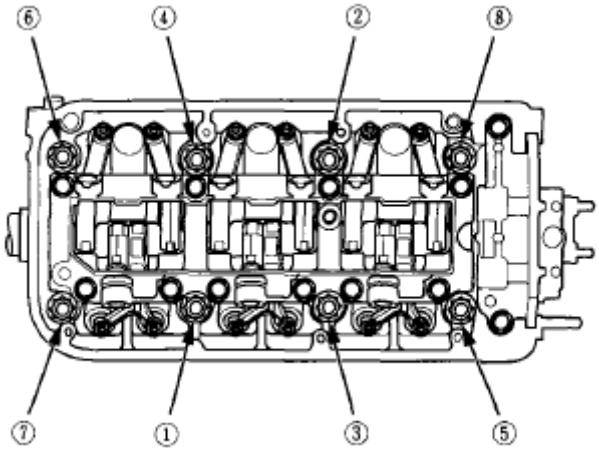

Fig. 157: Identifying Cylinder Head Bolts With Tightening Sequence (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. After torquing, tighten all cylinder head bolts in two steps (90 ° per step) using the sequence shown in step 11. If you are using a new cylinder head bolt, tighten the bolt an extra 90 °.

NOTE: Remove the cylinder head bolt if you tightened it beyond the specified angle, and go back to step 8 of the procedure. Do not loosen it back to the specified angle.

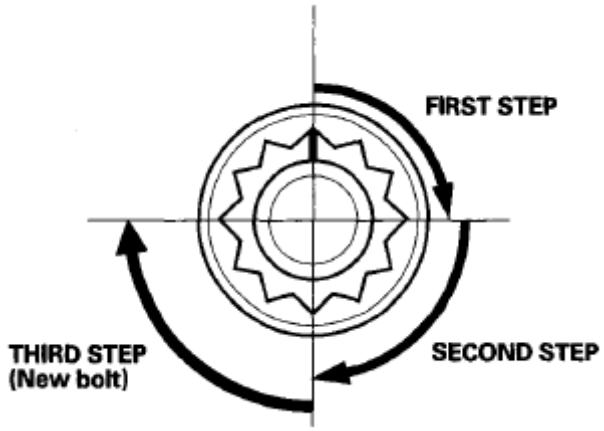

Fig. 158: Identifying Cylinder Head Bolt Tightening Graph
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the timing belt (see **TIMING BELT INSTALLATION**).
14. Adjust the valve clearance (see **VALVE CLEARANCE ADJUSTMENT**).
15. Install the cylinder head covers (see **CYLINDER HEAD COVER INSTALLATION**).
16. Install the water passage (see **WATER PASSAGE REPLACEMENT**).
17. Install the injector bases (see **INJECTOR BASE REMOVAL AND INSTALLATION**).
18. Install the connector bracket (A) to the front cylinder head.

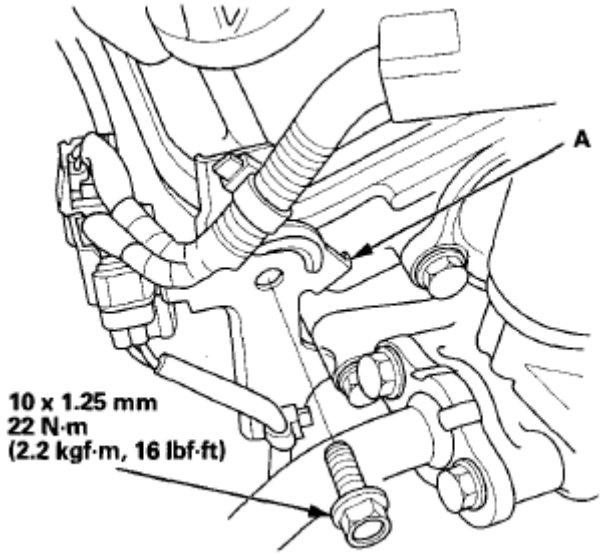

Fig. 159: Identifying Connector Bracket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Install the EVAP canister joint with the bracket (see step 9).
20. Install the engine mount control solenoid valve bracket (A) to the rear cylinder head.

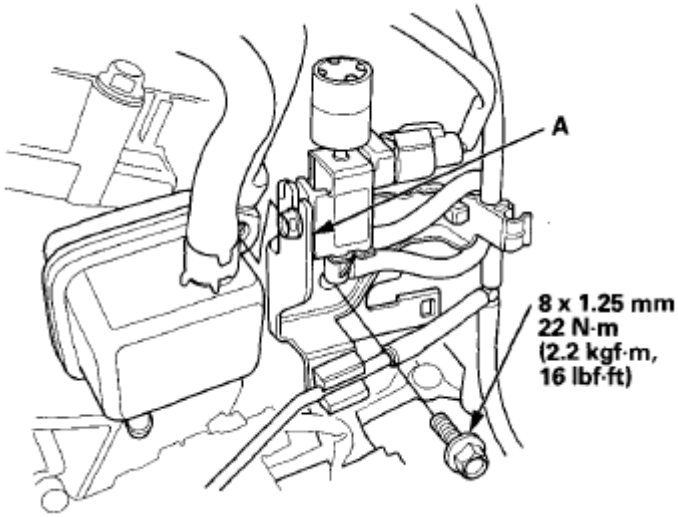

Fig. 160: Identifying Engine Mount Control Solenoid Valve Bracket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Connect the fuel feed hose (A), then install the quick-connect fitting cover (B) (see **FUEL LINE/QUICK-CONNECT FITTING INSTALLATION**).

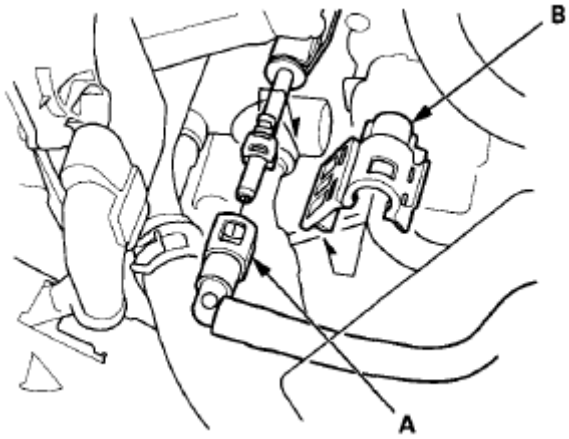

Fig. 161: Identifying Fuel Feed Hose And Fitting Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Install the front warm up TWC (see **WARM UP TWC REMOVAL/INSTALLATION**) and the rear warm up TWC (see **REAR (BANK 1)**).
23. Connect the following engine wire harness connectors, and install the wire harness clamps to the cylinder head:
    - Six injector connectors
    - Knock sensor connector
    - ECT sensor 1 connector
    - Engine mount control solenoid valve connector
    - EGR valve connector

- CMP sensor connector
- Rocker arm oil control solenoid connector
- Rocker arm oil pressure switch connector
- Two A/F sensor connectors
- Two secondary HO2S connectors

24. Install the intake manifold (see **INSTALLATION**).
25. Install the alternator (see **INSTALLATION**).
26. Install the six ignition coils (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
27. Do the battery terminal reconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
28. After installation, check that all tubes, hoses, and connectors are installed correctly.
29. Inspect for fuel leaks. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode (do not operate the starter) so the fuel pump runs for about 2 seconds and pressurizes the fuel line. Repeat this operation three times, then check for fuel leakage at any point in the fuel line.
30. Refill the radiator with engine coolant, and bleed the air from the cooling system (see **COOLANT CHECK**).
31. Check for fluid leaks.
32. Do the PCM idle learn procedure (see **ECM/PCM IDLE LEARN PROCEDURE**).
33. Do the CKP pattern clear/CKP pattern learn procedure (see **CKP PATTERN CLEAR/CKP PATTERN LEARN**).
34. Inspect the idle speed (see **IDLE SPEED INSPECTION**).
35. Inspect the ignition timing (see **IGNITION TIMING INSPECTION**).
36. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

CAMSHAFT OIL SEAL INSTALLATION - IN CAR

Special Tools Required

Ball Joint Remover/Installer 07GAF-SD40330

1. Remove the timing belt (see **TIMING BELT REMOVAL**).
2. Remove the camshaft pulley and the back cover (see step 17).
3. Remove the camshaft oil seal.
4. Clean and dry the camshaft oil seal housing.
5. Apply a light coat of new engine oil to the lip of the camshaft oil seal.
6. Using the ball joint remover/installer (A), a washer (B), and a 12x75 x 1.25 mm bolt (C), press in the new camshaft oil seal (D) squarely into the cylinder head to the specified installed height.

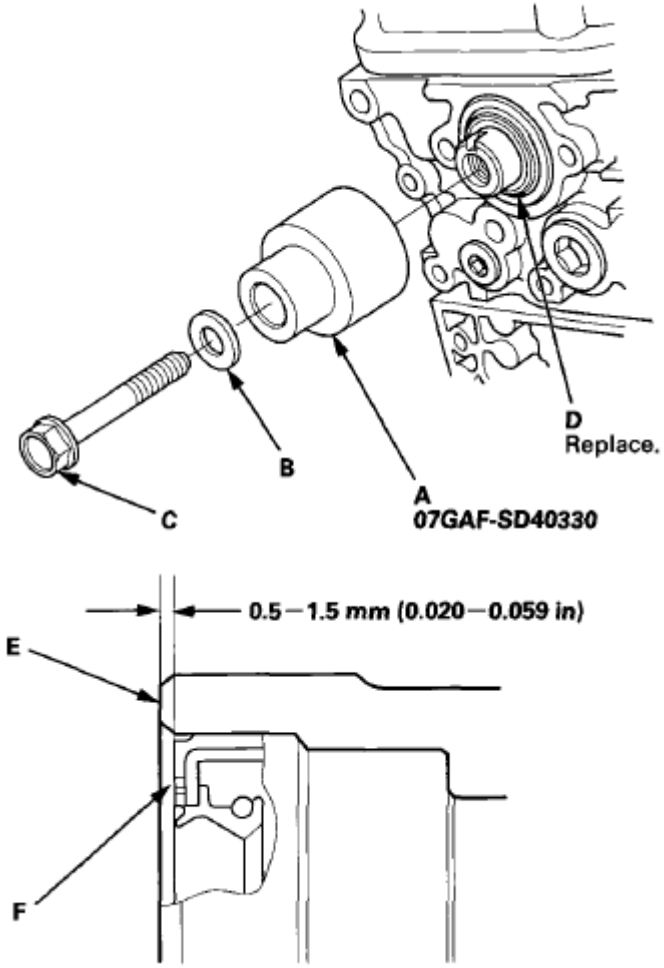

Fig. 162: Identifying Camshaft Oil Seal And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Measure the distance between the cylinder head surface (E) and the oil seal (F).

   Oil Seal Installed Height 0.5-1.5 mm (0.020-0.059 in)

8. Clean the excess oil off the camshaft, and check that the oil seal is not distorted.
9. Apply new engine oil to the threads of the camshaft pulley mounting bolt. Install the back cover, then install the camshaft pulley:
   - Front (see step 15)
   - Rear (see step 15)
10. Install the timing belt (see **TIMING BELT INSTALLATION**).

SEALING BOLT INSTALLATION

NOTE: When installing the sealing bolts (A), always use new washers (B).

FRONT

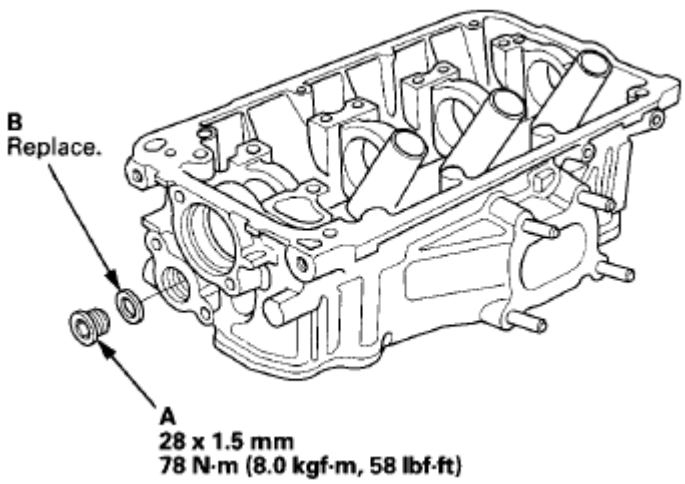

Fig. 163: Identifying Sealing Bolt And Washer (Front) With Torque Specifications

ENGINE COMPRESSION INSPECTION

NOTE: After the inspection, you must reset the ECM/PCM. Otherwise, the ECM/PCM will continue to stop the fuel injectors from operating.

1. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
2. Connect the HDS to the DLC (see **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
3. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.

4. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it does not communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
5. Select ALL INJECTORS STOP in the PGM-FI INSPECTION menu with the HDS.
6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
7. Remove the six ignition coils and the six spark plugs (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
8. Attach the compression gauge to a spark plug hole.

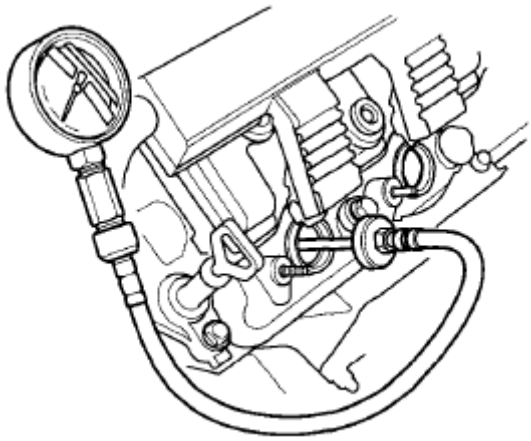

Fig. 6: Measuring Engine Compression Using Compression Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Step on the accelerator pedal to open the throttle fully, then crank the engine with the starter motor, and measure the compression.

   Compression Pressure:

   Above 930 kPa (9.48 kgf/cm^2 , 134.8 psi)

10. Measure the compression on the remaining cylinders.

    Maximum Variation:

    Within 200 kPa (2.04 kgf/cm^2 , 29.0 psi)

11. If the compression is not within the specifications, perform a cylinder leak down test to determine the problem area. Then check the following items, and remeasure the compression:
    - Incorrect valve clearance
    - Confirmation of cam timing
    - Damaged or worn cam lobes
    - Damaged or worn valves and seats
    - Damaged cylinder head gaskets

- Damaged or worn piston rings
- Damaged or worn piston and cylinder bore

12. Remove the compression gauge from the spark plug hole.
13. Install the six spark plugs and the six ignition coils (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
14. Select ECM/PCM reset (see **HDS CLEAR COMMAND**) in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.

VTEC ROCKER ARM TEST

Special Tools Required

- VTEC Air Stop Tool B 07AAJ-R70A200
- VCM Air Adapter 070AJ-001A101
- Air Pressure Regulator 07AAJ-PNAA101
- VTEC Air Stop Tool A 07AAJ-R70A100

1. Remove the six ignition coils and the six spark plugs, (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**)
2. Remove the **cylinder head covers**.
3. Rotate the crankshaft pulley clockwise. Make sure that the intake primary rocker arm (A) and the intake secondary rocker arm (B) are separated and that the intake primary rocker arm should move independently:
   - If the intake primary rocker arm and the intake secondary rocker arm move together, remove the intake primary rocker arm and the intake secondary rocker arm as an assembly, and check that the pistons in the rocker arms move smoothly. If any intake rocker arm needs replacing, replace the primary and secondary rocker arms as an assembly, then retest.
   - If the intake primary rocker arm and the intake secondary rocker arm move independently, go to step 4.

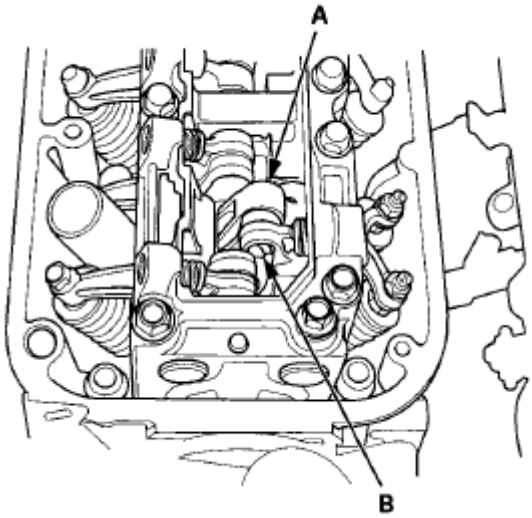

Fig. 7: Identifying Intake Primary And Secondary Rocker Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Rotate the crankshaft pulley clockwise, and visually check all the exhaust primary rocker arms (A) and the exhaust secondary rocker arms (B) move independently:
   - If the exhaust primary rocker arm and the exhaust primary rocker arm move together, remove the exhaust primary rocker arm and the exhaust secondary rocker arm as an assembly, and check that the pistons in the rocker arms move smoothly. If any exhaust rocker arm needs replacing, replace the primary and secondary rocker arms as an assembly, then retest.
   - If the exhaust primary rocker arm and the exhaust secondary rocker arm move independently, go to step 5.

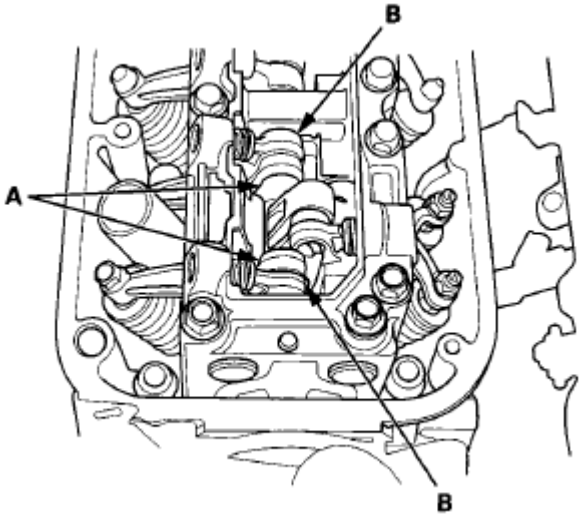

Fig. 8: Identifying Exhaust Primary And Secondary Rocker Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Check that the air pressure on the shop air compressor gauge indicates over 981 kPa (10.00 kgf/cm^2 ,

142.3 psi).

6. Inspect the **valve clearance**.
7. Remove the sealing bolts, then install VTEC air stop tool B (A) and the VCM air adapter (B) to the inspection hole, then connect the air pressure regulator (C) as shown.

FRONT

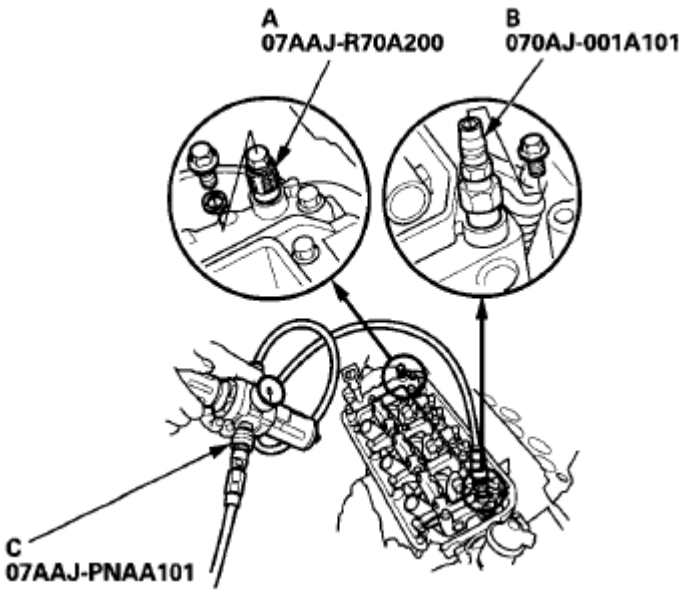

Fig. 9: Identifying Air Pressure Regulator Connection With VCM Air Adapter (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the sealing bolts, then install VTEC air stop tool A (A) and the VCM air adapter (B) to the inspection hole, then connect the air pressure regulator (C) as shown.

REAR

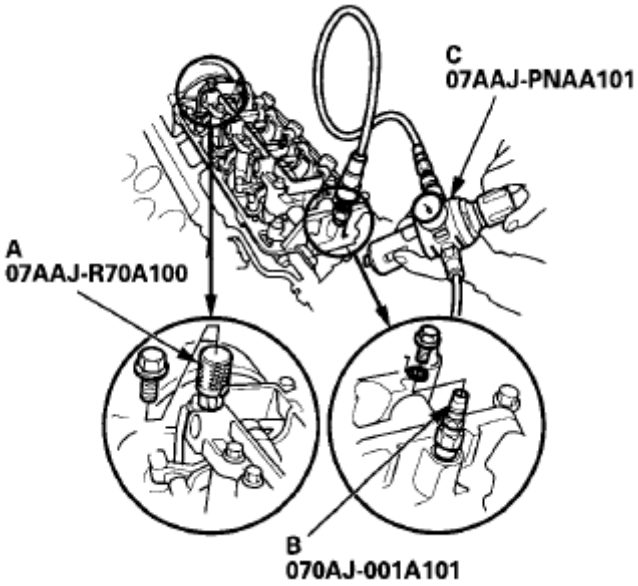

Fig. 10: Identifying Air Pressure Regulator Connection With VCM Air Adapter (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Loosen the valve on the regulator, and apply the specified air pressure.

   Specified Air Pressure:

   550-690 kPa (5.61-7.04 kgf/cm^2 , 79.8-100.1 psi)

10. With the specified air pressure applied, rotate the crankshaft pulley clockwise. The intake primary rocker arm (A) should move together with the intake secondary rocker arm (B):
    - If the intake primary rocker arm and the intake secondary rocker arm move independently, remove the intake primary rocker arm and the intake secondary rocker arm as an assembly, and check that the pistons in the rocker arms move smoothly. If any intake rocker arm needs replacing, replace the primary and secondary rocker arms as an assembly, then retest.
    - If the intake primary rocker arm and the intake secondary rocker arm move together, go to step 11.

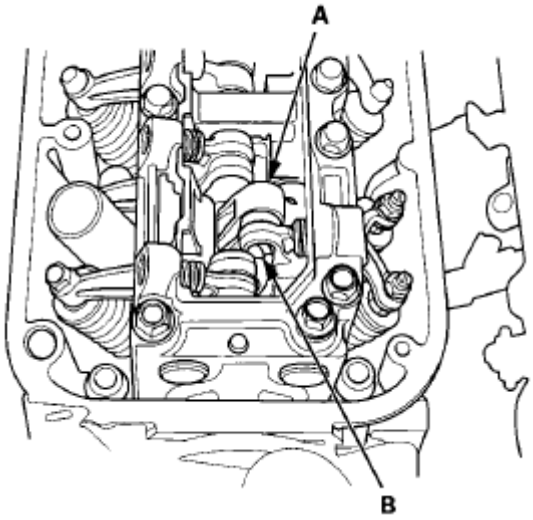

Fig. 11: Identifying Intake Primary And Secondary Rocker Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. With the specified air pressure applied, rotate the crankshaft pulley clockwise. The exhaust primary rocker arm (A) should move together with the exhaust secondary rocker arm (B):
    - If the exhaust primary rocker arm and the exhaust secondary rocker arm move independently, remove the exhaust primary rocker arm and the exhaust secondary rocker arm as an assembly, and check that the pistons in the rocker arms move smoothly. If any exhaust rocker arm needs replacing, replace the primary and secondary rocker arms as an assembly, then retest.
    - If the exhaust primary rocker arm and the exhaust secondary rocker arm move together, go to step 12.

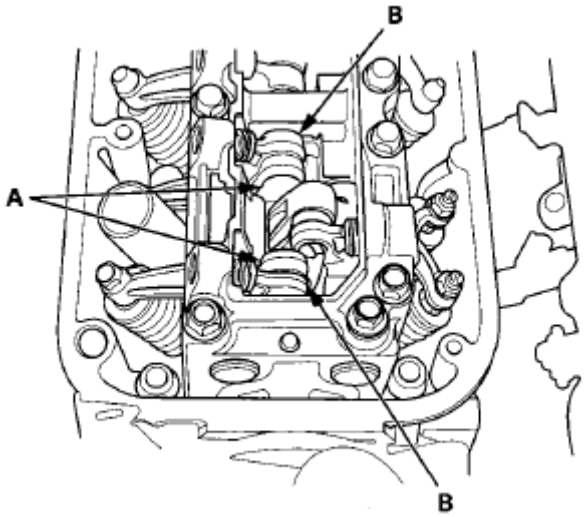

Fig. 12: Identifying Exhaust Primary And Secondary Rocker Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the air pressure regulator, the VCM air adapter, VTEC air stop tool A, and VTEC air stop tool B.

13. Torque the sealing bolts to 22 N.m (2.2 kgf.m, 16 lbf.ft).
14. Install the **cylinder head covers**.
15. Install the six spark plugs.

VALVE CLEARANCE ADJUSTMENT

NOTE: Connect the HDS to the DLC, and monitor ECT SENSOR 1. Adjust the valve clearance only when the engine coolant temperature is less than 100°F (38°C).

1. Remove the **cylinder head covers**.
2. Set the No. 1 piston at top dead center (TDC). Align the pointer (A) on the front upper cover with the No. 1 piston TDC mark (B) on the front camshaft pulley.

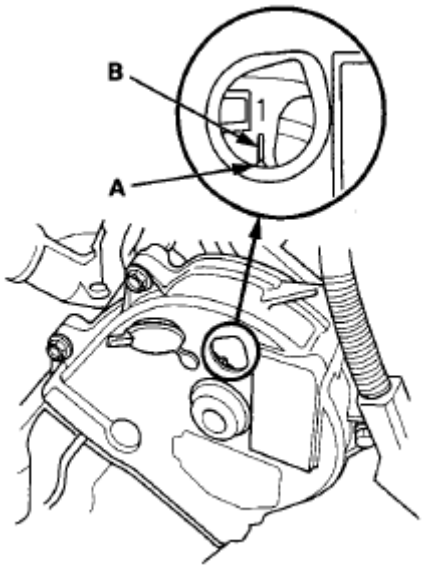

Fig. 13: Identifying Pointer And No. 1 Piston TDC Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Select the correct feeler gauge for the valve clearance you are going to check.

Valve Clearance

Intake: 0.20-0.24 mm (0.008-0.009 in)

Exhaust: 0.28-0.32 mm (0.011-0.012 in)

REAR

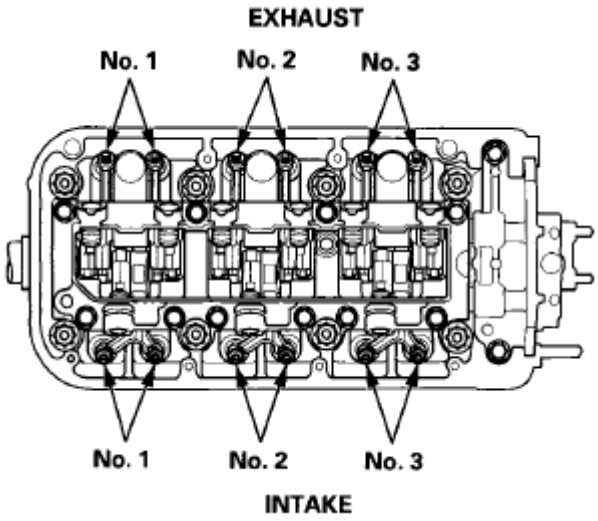

Fig. 14: Identifying Valves (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

FRONT

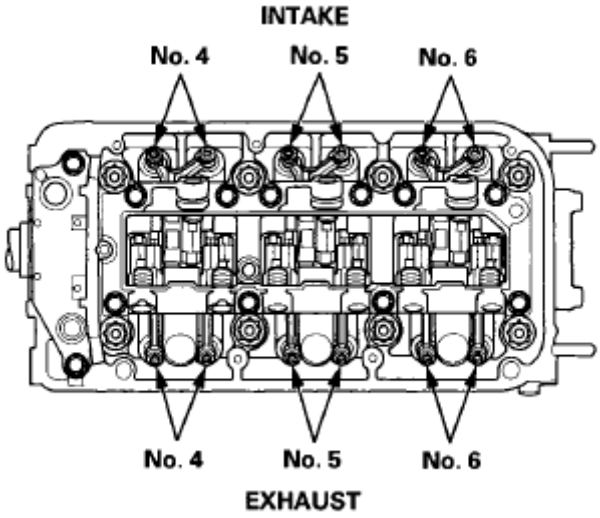

Fig. 15: Identifying Valves (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Insert the feeler gauge (A) between the adjusting screw and the end of the valve stem on the No. 1 cylinder, and slide it back and forth; you should feel a slight amount of drag.

INTAKE

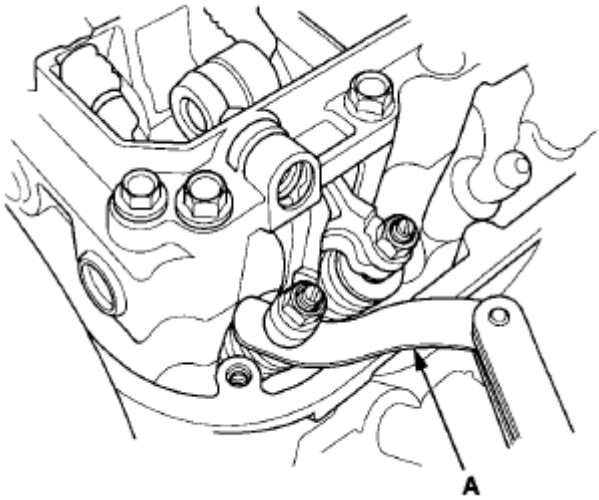

Fig. 16: Checking Valve Clearance Using Feeler Gauge (Intake)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

EXHAUST

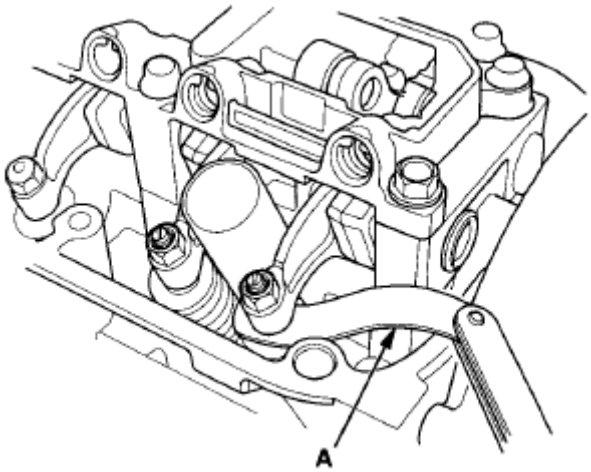

Fig. 17: Checking Valve Clearance Using Feeler Gauge (Exhaust)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. If you feel too much or too little drag, loosen the locknut, and turn the adjusting screw until the drag on the feeler gauge is correct.

INTAKE

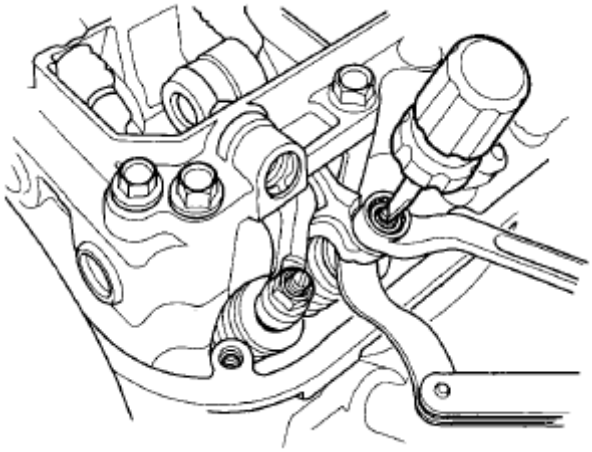

Fig. 18: Adjusting Valve Clearance Using Feeler Gauge (Intake)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

EXHAUST

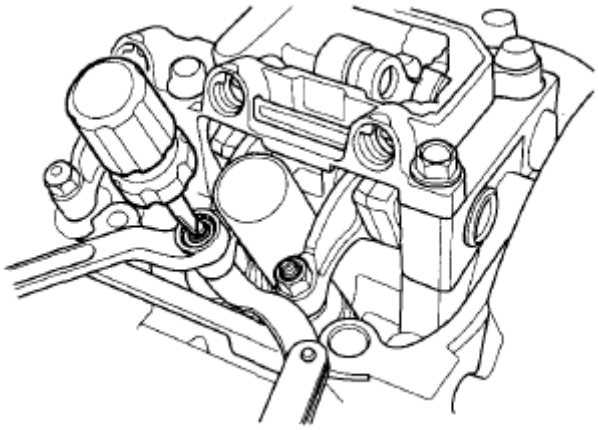

Fig. 19: Adjusting Valve Clearance Using Feeler Gauge (Exhaust)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. While holding the adjusting screw with the screw driver, tighten the locknut, then recheck the clearance. Repeat the adjustment, if necessary.

   Specified Torque

   20 N.m (2.0 kgf.m, 14 lbf.ft)

   Apply new engine oil to the nut threads.

7. Rotate the crankshaft clockwise. Align the pointer (A) on the front upper cover with the No. 4 piston TDC mark (B) on the front camshaft pulley.

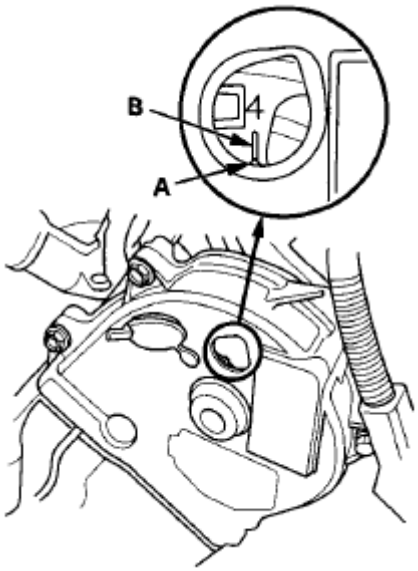

Fig. 20: Identifying Front Upper Cover Pointer And No. 4 Piston TDC Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Check and, if necessary, adjust the valve clearance on the No. 4 cylinder.
9. Rotate the crankshaft clockwise. Align the pointer (A) on the front upper cover with the No. 2 piston TDC mark (B) on the front camshaft pulley.

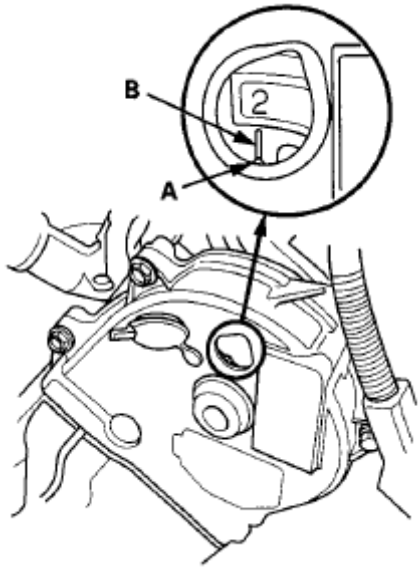

Fig. 21: Identifying Front Upper Cover Pointer And No. 2 Piston TDC Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Check and, if necessary, adjust the valve clearance on the No. 2 cylinder.
11. Rotate the crankshaft clockwise. Align the pointer (A) on the front upper cover with the No. 5 piston TDC mark (B) on the front camshaft pulley.

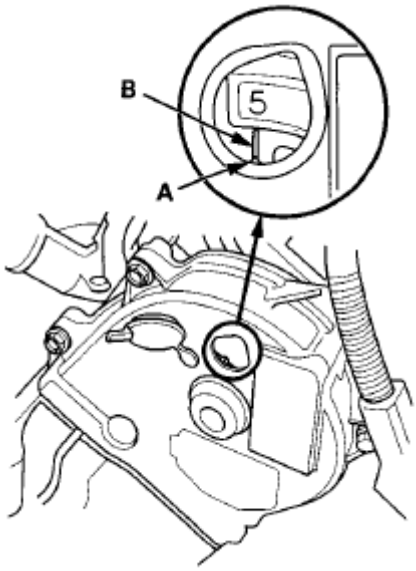

Fig. 22: Identifying Front Upper Cover Pointer And No. 5 Piston TDC Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Check and, if necessary, adjust the valve clearance on the No. 5 cylinder.
13. Rotate the crankshaft clockwise. Align the pointer (A) on the front upper cover with the No. 3 piston TDC mark (B) on the front camshaft pulley.

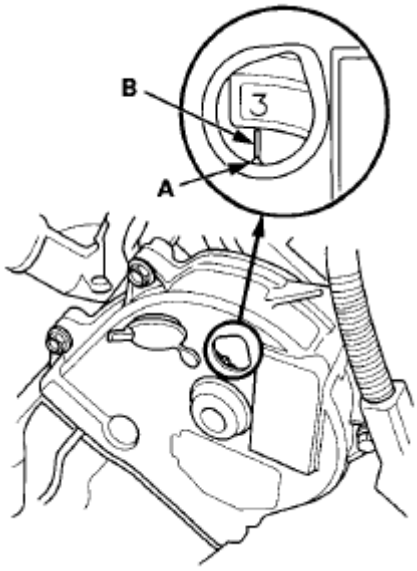

Fig. 23: Identifying Front Upper Cover Pointer And No. 3 Piston TDC Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Check and, if necessary, adjust the valve clearance on the No. 3 cylinder.
15. Rotate the crankshaft clockwise. Align the pointer (A) on the front upper cover with the No. 6 piston TDC mark (B) on the front camshaft pulley.

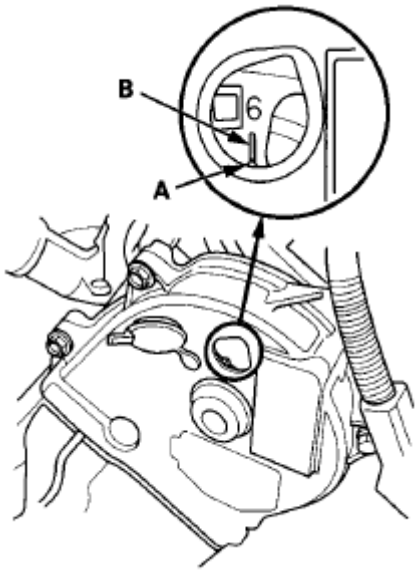

Fig. 24: Identifying Front Upper Cover Pointer And No. 6 Piston TDC Mark
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Check and, if necessary, adjust the valve clearance on the No. 6 cylinder.
17. Install the **cylinder head covers**.

CRANKSHAFT PULLEY REMOVAL AND INSTALLATION

Special Tools Required

- Holder Handle 07JAB-001020B
- Holder Attachment, 50 mm, Offset 07MAB-PY3010A
- Socket, 19 mm 07JAA-001020A or equivalent

REMOVAL

1. Raise the vehicle on the lift.
2. Remove the right front wheel.
3. Remove the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
4. Remove the drive belt (see **DRIVE BELT REPLACEMENT**).
5. Hold the pulley with the holder handle (A) and the holder attachment, 50 mm, offset (B).

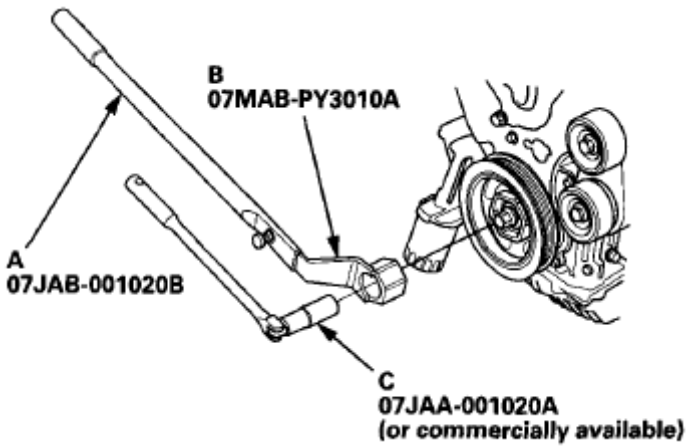

Fig. 25: Identifying Holder Handle And Holder Attachment Offset Of Crankshaft Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the bolt with a heavy duty socket, 19 mm (C) and a breaker bar, then remove the crankshaft pulley.

INSTALLATION

1. Remove any oil and clean the pulleys (A), the crankshaft (B), the bolt (C), and the washer (D). Lubricate with new engine oil as shown.

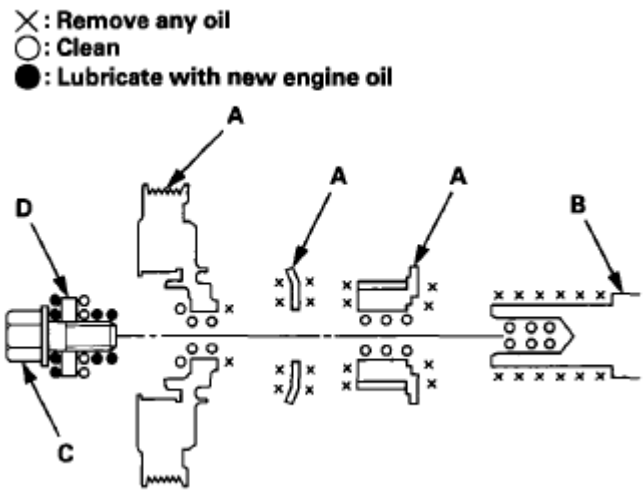

Fig. 26: Positions For Installing Crankshaft Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the crankshaft pulley, and tighten the bolt. Do not use an impact wrench.
    1. Hold the pulley with the holder handle (A) and the holder attachment (B). Torque the bolt to 64 N.m (6.5 kgf.m, 47 lbf.ft) with a torque wrench and the heavy duty socket, 19 mm (C).
    2. Tighten the bolt an additional 60 °.

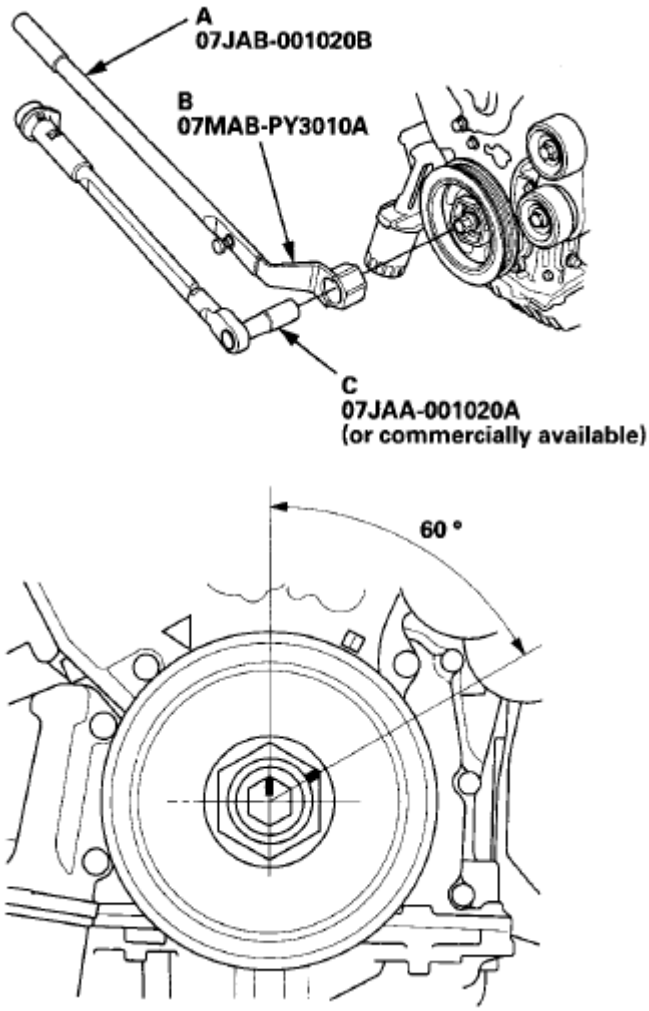

Fig. 27: Position For Installing Crankshaft Pulley Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the drive belt (see **DRIVE BELT REPLACEMENT**).
4. Install the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
5. Install the right front wheel.

TIMING BELT INSPECTION

1. Remove the drive belt (see **DRIVE BELT REPLACEMENT**).
2. Remove the front upper cover.

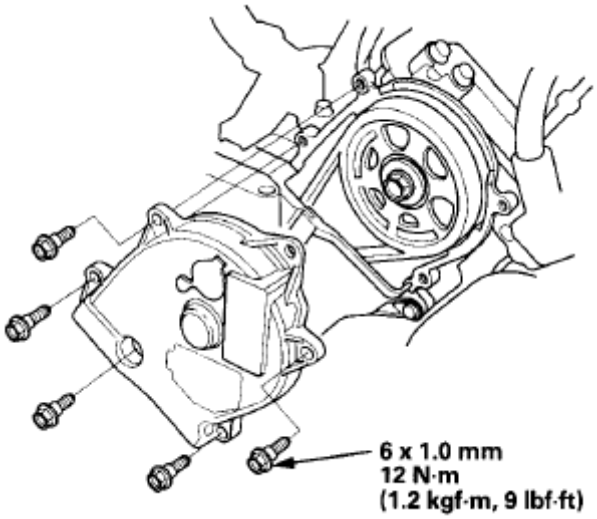

Fig. 28: Identifying Front Upper Cover Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the timing belt for cracks and oil or coolant contamination. Replace the belt if it is cracked, or contaminated with oil or coolant. Wipe off any oil or solvent that gets on the belt pulleys.

NOTE: If there is any leakage, repair them before replacing the timing belt.

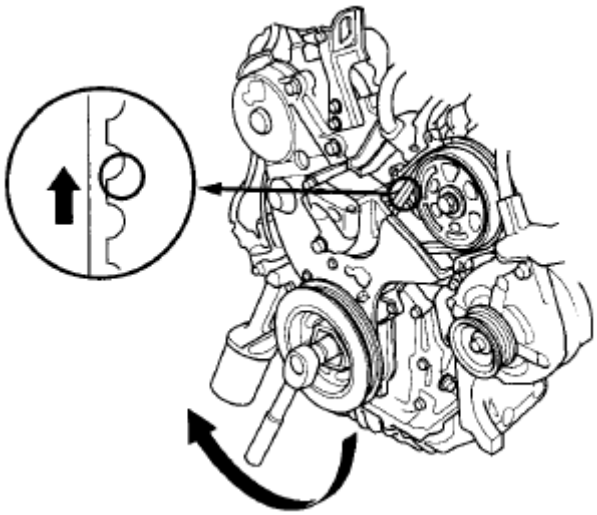

Fig. 29: Inspecting Timing Belt For Cracks And Oil Or Coolant Contamination
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TIMING BELT REMOVAL

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Turn the crankshaft so its white mark (A) on the crankshaft pulley lines up with the pointer (B).

NOTE: The other pointer (C) is not used.

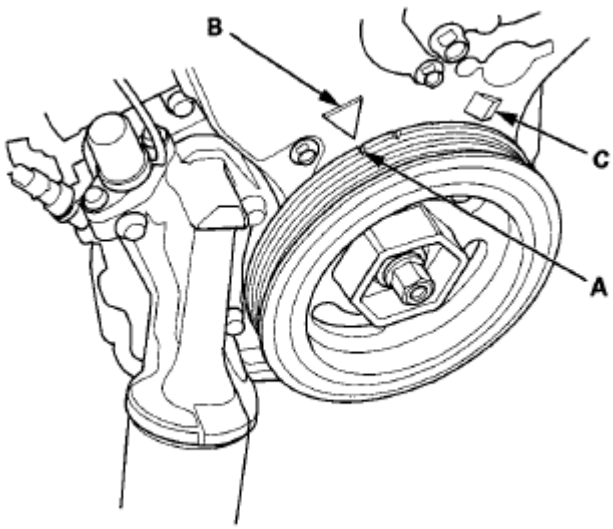

Fig. 30: Identifying White Mark On Crankshaft Pulley And Pointer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check that the No. 1 piston top dead center (TDC) mark (A) on the front camshaft pulley and the pointer (B) on the front upper cover are aligned.

NOTE: If the marks are not aligned, rotate the crankshaft 360 degrees, and recheck the camshaft pulley mark.

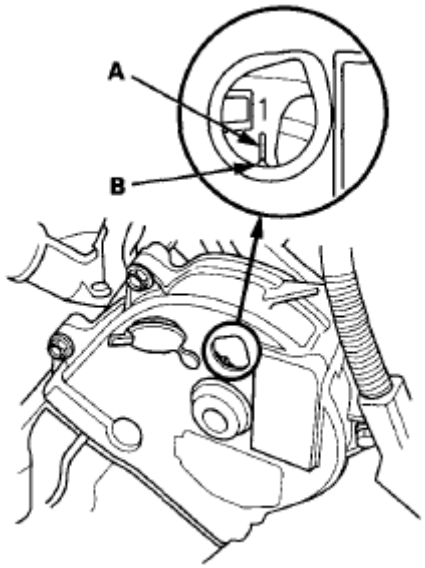

Fig. 31: Identifying No. 1 Piston Top Dead Center (TDC) Mark And Pointer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Raise the vehicle on the lift, then remove the right front wheel.
5. Remove the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
6. Remove the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REPLACEMENT**).
7. Support the engine with a jack and a wood block under the oil pan.
8. Remove the ground cable (A), then remove the upper half of the side engine mount bracket (B).

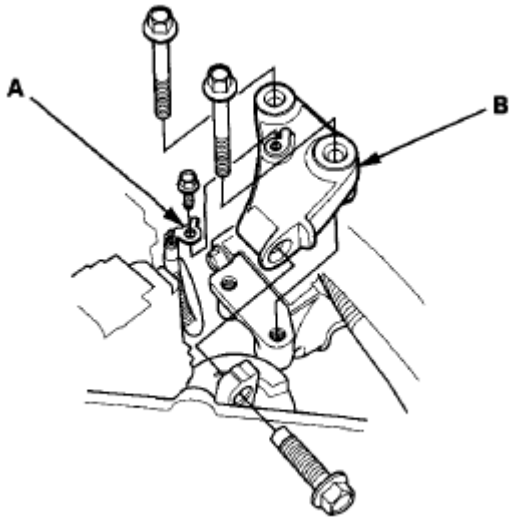

Fig. 32: Identifying Engine Mount Bracket And Ground Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the **crankshaft pulley**.
10. Remove the front upper cover (A) and the rear upper cover (B).

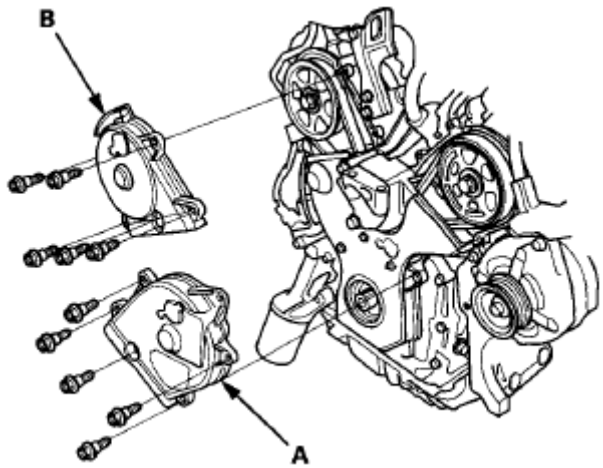

Fig. 33: Identifying Front And Rear Upper Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the lower cover.

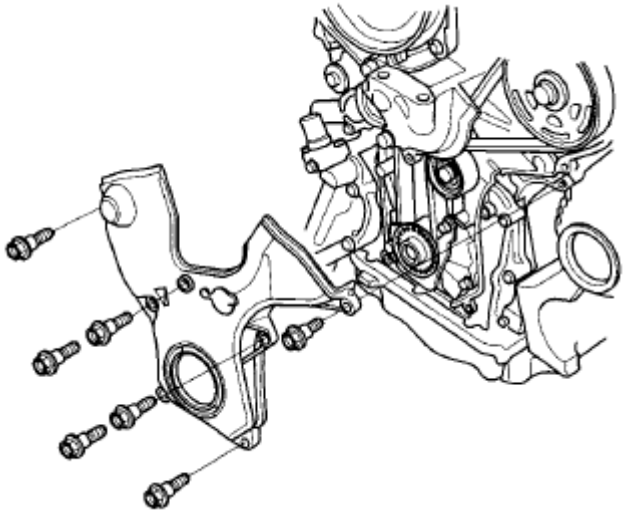

Fig. 34: Identifying Lower Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove one of the battery clamp bolts from the battery tray, and grind the end of it as shown.

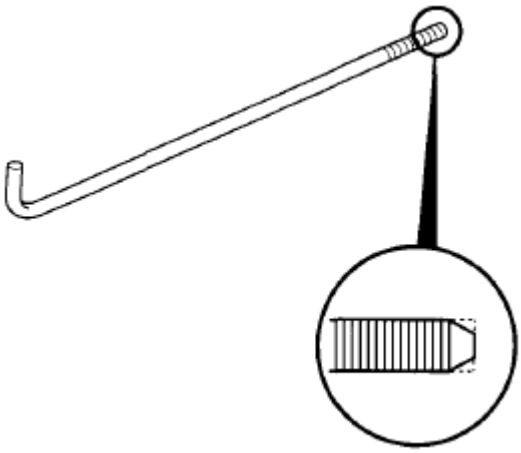

Fig. 35: Identifying Grind At End Of Battery Clamp Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Thread the battery clamp bolt in as shown to hold the timing belt adjuster in its current position. Tighten it by hand, do not use a wrench.

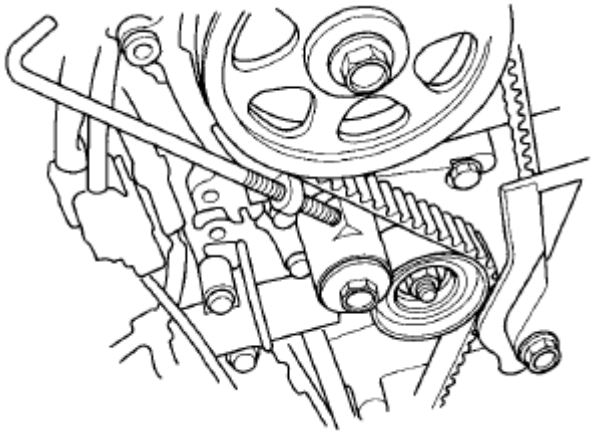

Fig. 36: Identifying Battery Clamp Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the timing belt guide plate (A).

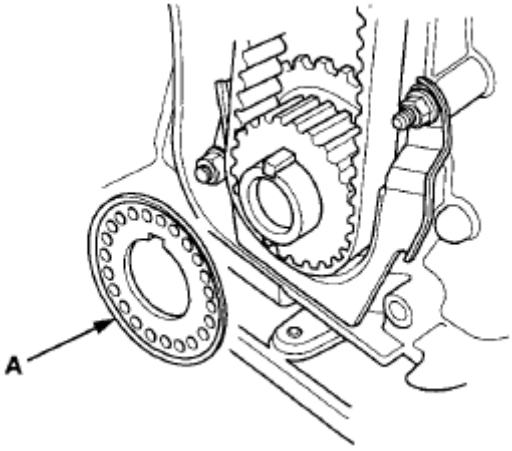

Fig. 37: Identifying Timing Belt Guide Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Remove the lower half of the side engine mount bracket.

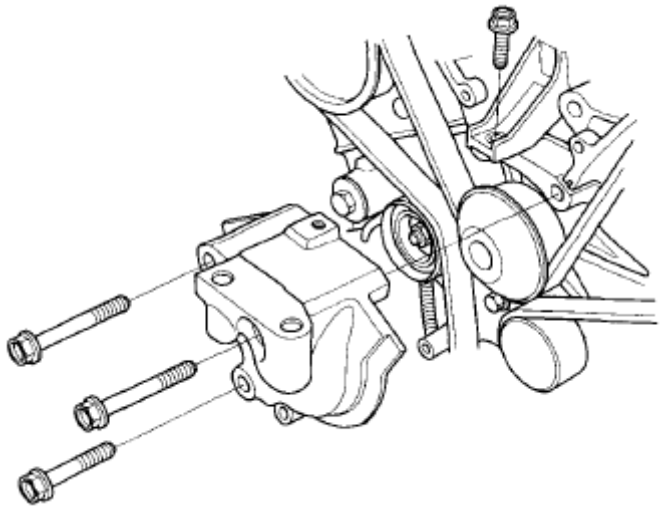

Fig. 38: Identifying Lower Half Of Side Engine Mount Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Remove the idler pulley bolt (A) and the idler pulley (B), then remove the timing belt. Discard the idler pulley bolt.

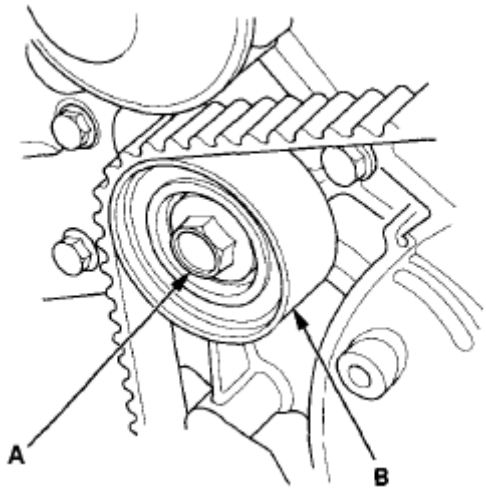

Fig. 39: Identifying Idler Pulley And Idler Pulley Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

TIMING BELT INSTALLATION

NOTE: The following procedure is for installation of a used timing belt. If you are installing a new belt, refer to the timing belt replacement procedure.

1. Clean the timing belt pulleys, the timing belt guide plate, and the upper and lower covers.
2. Set the timing belt drive pulley to top dead center (TDC) by aligning the TDC mark (A) on the tooth of the timing belt drive pulley with the pointer (B) on the oil pump.

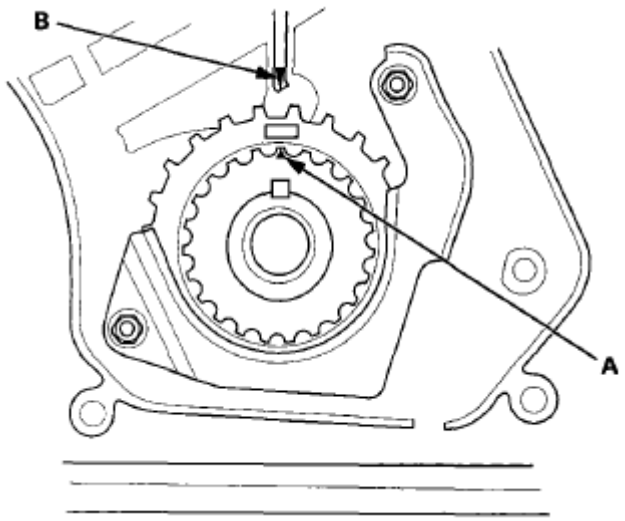

Fig. 40: Identifying TDC Mark On Tooth Of Timing Belt Drive Pulley And Pointer On Oil Pump
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Set the camshaft pulleys to TDC by aligning the TDC marks (A) on the camshaft pulleys with the pointers (B) on the back covers.

FRONT

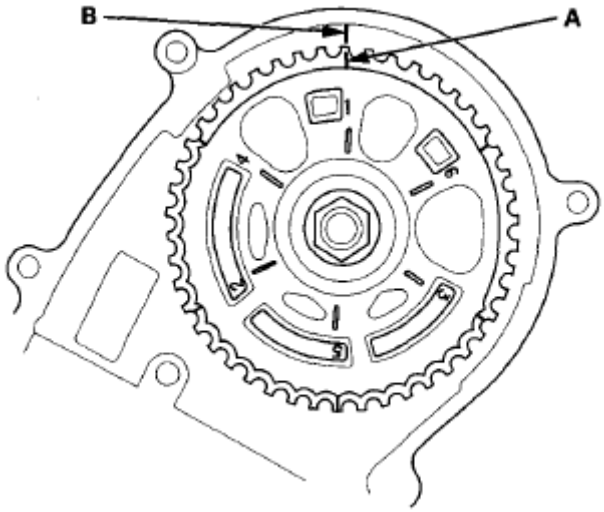

Fig. 41: Identifying TDC Mark On Camshaft Pulleys And Pointer On Back Covers - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

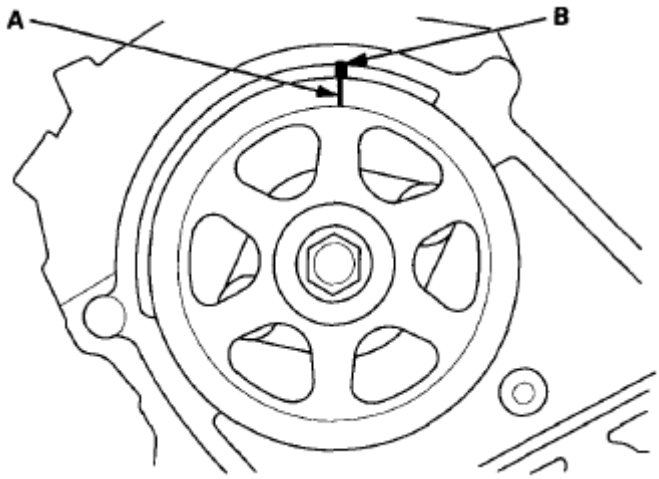

Fig. 42: Identifying TDC Mark On Camshaft Pulleys And Pointer On Back Covers - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Loosely install the idler pulley with a new idler pulley bolt so the pulley can move but does not come off.
5. If the auto-tensioner has extended and the timing belt cannot be installed, do the **timing belt replacement** procedure.
6. Install the timing belt in a counterclockwise sequence starting with the drive pulley. Take care not to damage the timing belt during installation:
    1. Drive pulley (A)
    2. Idler pulley (B)
    3. Front camshaft pulley (C)
    4. Water pump pulley (D)
    5. Rear camshaft pulley (E)
    6. Adjusting pulley (F)

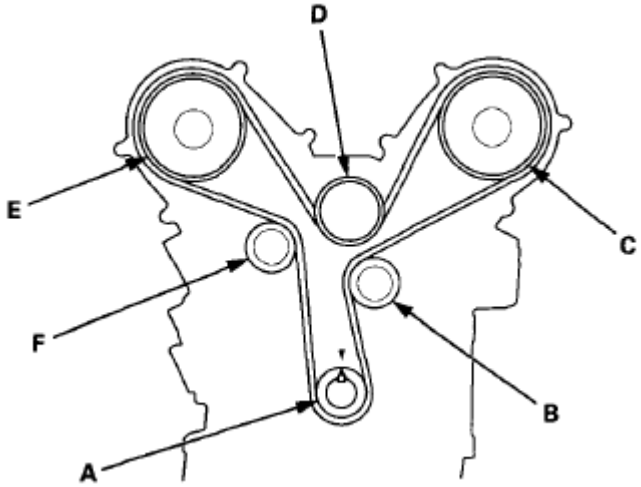

Fig. 43: Identifying Various Types Of Pulley
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Tighten the idler pulley bolt.

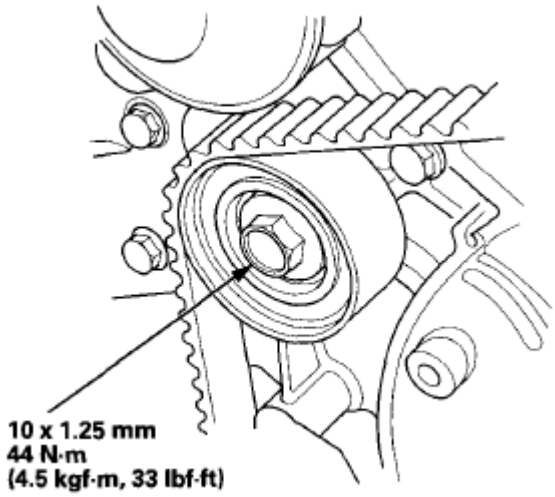

Fig. 44: Identifying Idler Pulley Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the battery clamp bolt from the back cover.

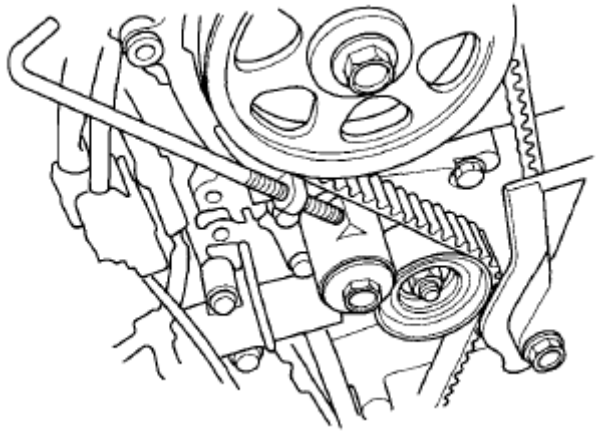

Fig. 45: Identifying Battery Clamp Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the lower half of the side engine mount bracket using new bolts (A) and the bolt (B).

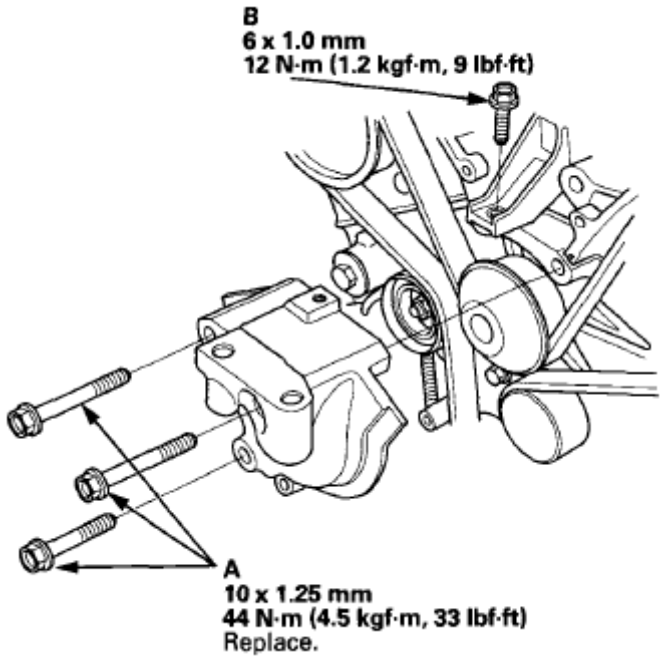

Fig. 46: Identifying Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Install the timing belt guide plate (A) as shown

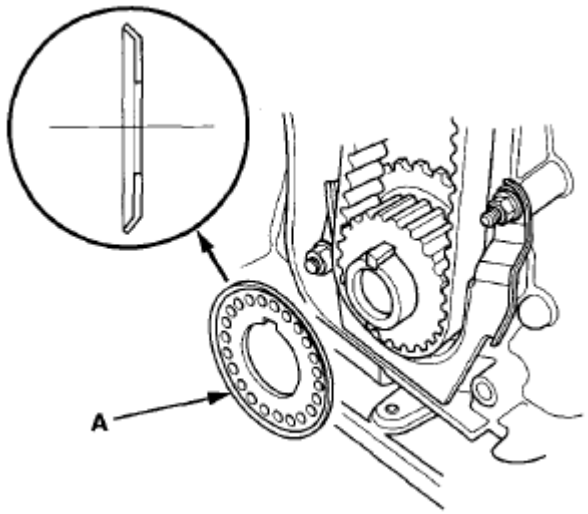

Fig. 47: Identifying Timing Belt Guide Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the lower cover.

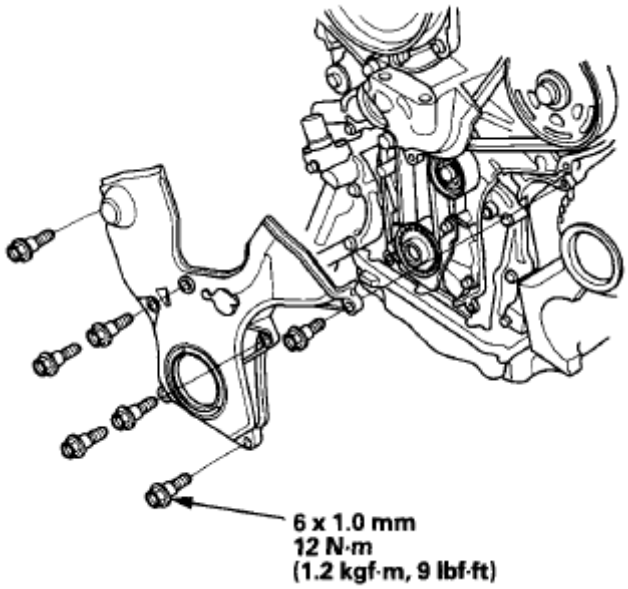

Fig. 48: Identifying Lower Cover Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the front upper cover (A) and the rear upper cover (B).

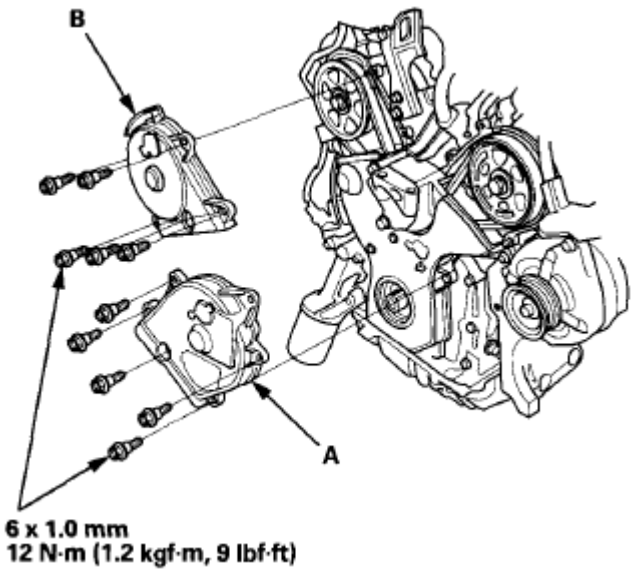

Fig. 49: Identifying Front Upper Cover And Rear Upper Cover With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the **crankshaft pulley**.
14. Rotate the crankshaft pulley about six turns clockwise so the timing belt positions itself on the pulleys.
15. Turn the crankshaft pulley so its white mark (A) lines up with the pointer (B).

NOTE: The other pointer (C) is not used.

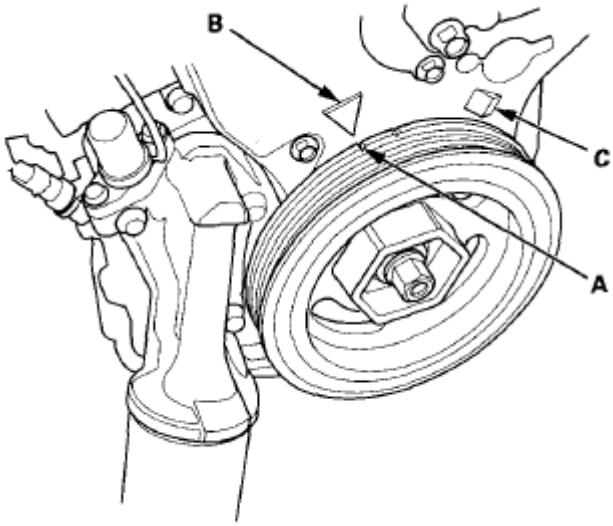

Fig. 50: Identifying Crankshaft Pulley White Mark And Pointer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Check the camshaft pulley marks.

NOTE: If the marks are not aligned, rotate the crankshaft 360 degrees, and recheck the camshaft pulley mark:

- If the camshaft pulley marks are at TDC, go to step 17.
- If the camshaft pulley marks are not at TDC, remove the timing belt and repeat steps 2 through 16.

FRONT

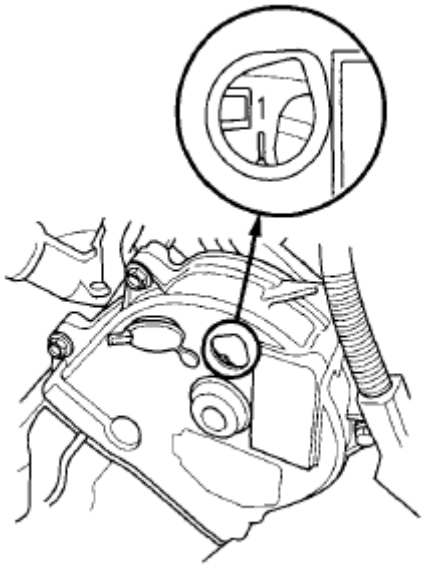

Fig. 51: Identifying Camshaft Pulley Mark - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

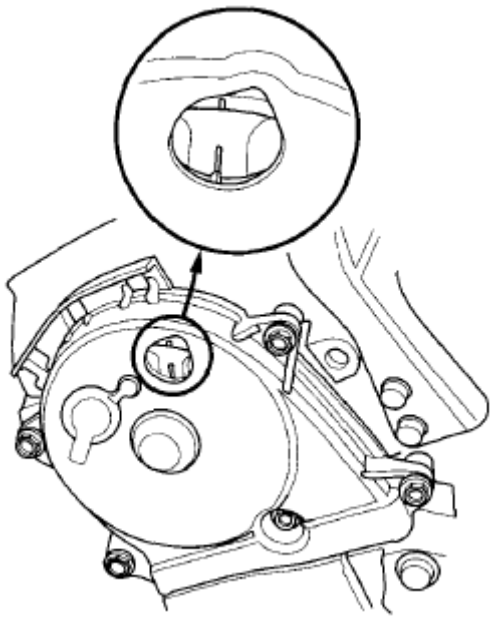

Fig. 52: Identifying Camshaft Pulley Mark - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Loosely install the upper half of the side engine mount bracket (A) using new bolts, then install the ground cable (B).

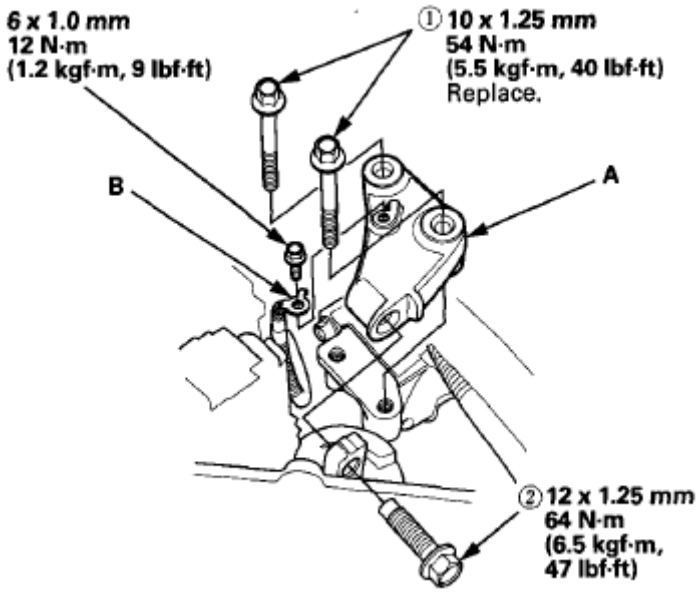

Fig. 53: Identifying Side Engine Mount Bracket And Ground Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Remove the jack and the wood block.

19. Tighten the mounting bolts in the numbered sequence shown.
20. Install the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REPLACEMENT**).
21. Install the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
22. Install the right front wheel.
23. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
24. Do the CKP pattern clear/CKP pattern learn procedure (see **CKP PATTERN CLEAR/CKP PATTERN LEARN**).

TIMING BELT REPLACEMENT

NOTE: The following procedure is for installation of a new timing belt. If you are installing a used belt, refer to the timing belt installation procedure.

1. Remove the **timing belt**.
2. Clean the timing belt pulleys, the timing belt guide plate, and the upper and lower covers.
3. Set the timing belt drive pulley to top dead center (TDC) by aligning the TDC mark (A) on the tooth of the timing belt drive pulley with the pointer (B) on the oil pump.

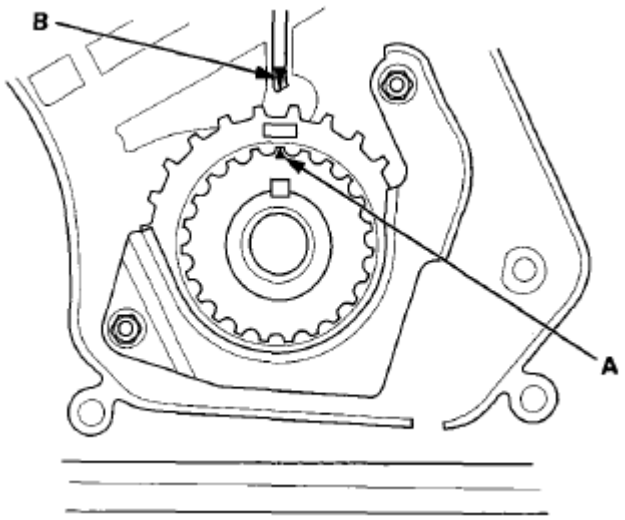

Fig. 54: Identifying TDC Mark On Tooth Of Timing Belt Drive Pulley And Pointer On Oil Pump
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Set the camshaft pulleys to TDC by aligning the TDC marks (A) on the camshaft pulleys with the pointers (B) on the back covers.

FRONT

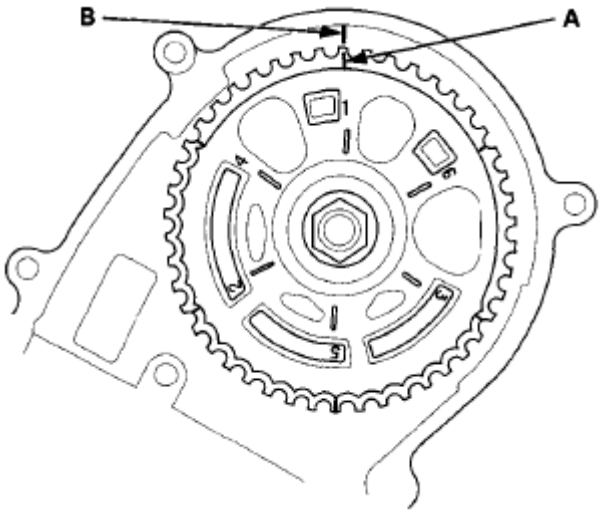

Fig. 55: Identifying TDC Marks On Camshaft Pulleys And Pointers On Back Covers - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

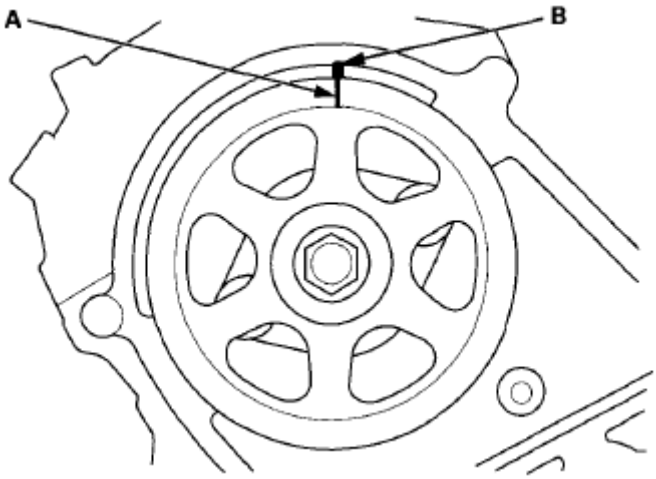

Fig. 56: Identifying TDC Marks On Camshaft Pulleys And Pointers On Back Covers - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the battery clamp bolt from the back cover.
6. Remove the auto-tensioner.

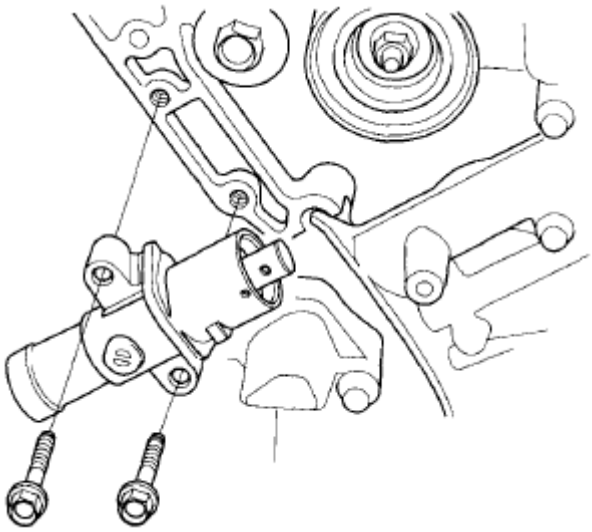

Fig. 57: Identifying Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Align the holes on the rod and the housing of the auto-tensioner.

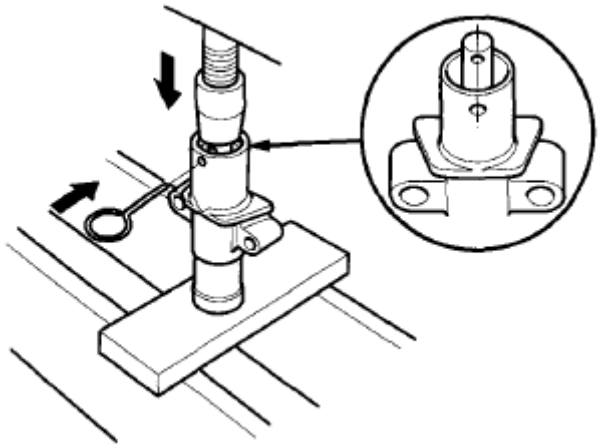

Fig. 58: Aligning Holes On Rod And Housing Of Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Use a hydraulic press to slowly compress the auto-tensioner. Insert a 2.0 mm (5/64 in) pin through the housing and the rod.

NOTE: The compression pressure should not exceed 9, 800 N (999.3 kgf, 2, 203.1 lbf).

9. Install the auto-tensioner.

NOTE: Make sure the pin stays in place.

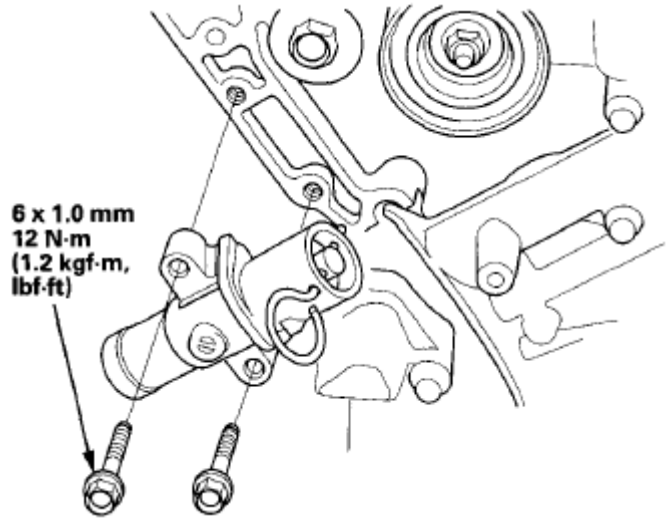

Fig. 59: Identifying Auto-Tensioner With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Thread the battery clamp bolt in as shown to hold the timing belt adjuster. Tighten it by hand, do not use a wrench.

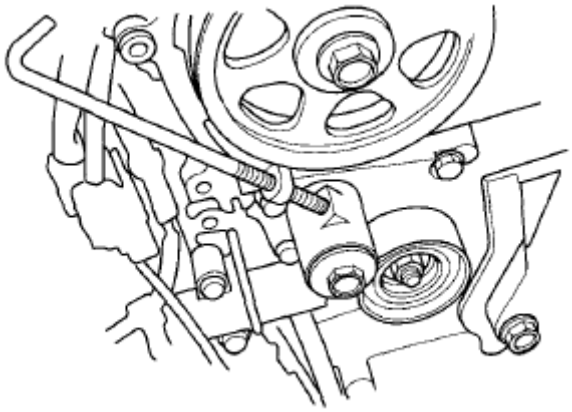

Fig. 60: Identifying Battery Clamp Bolt To Hold Timing Belt Adjuster
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Loosely install the idler pulley with a new idler pulley bolt so the pulley can move but does not come off.
12. Install the timing belt in a counterclockwise sequence starting with the drive pulley:
    1. Drive pulley (A)
    2. Idler pulley (B)
    3. Front camshaft pulley (C)
    4. Water pump pulley (D)
    5. Rear camshaft pulley (E)
    6. Adjusting pulley (F)

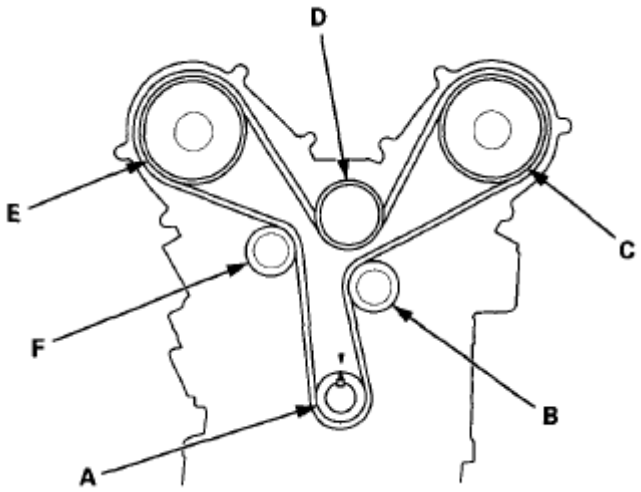

Fig. 61: Identifying Timing Belt & Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Tighten the idler pulley bolt.

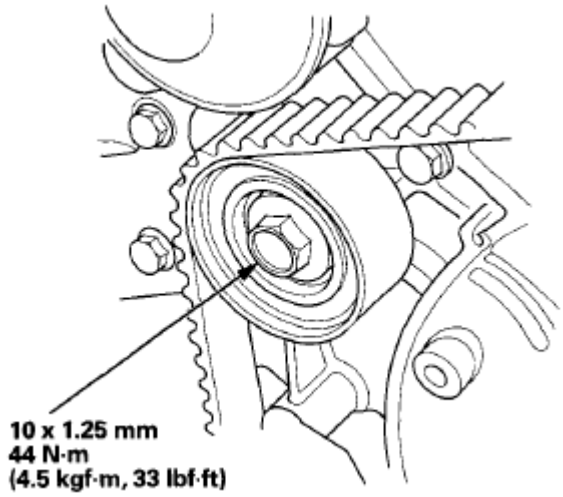

Fig. 62: Identifying Idler Pulley Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the pin from the auto-tensioner.

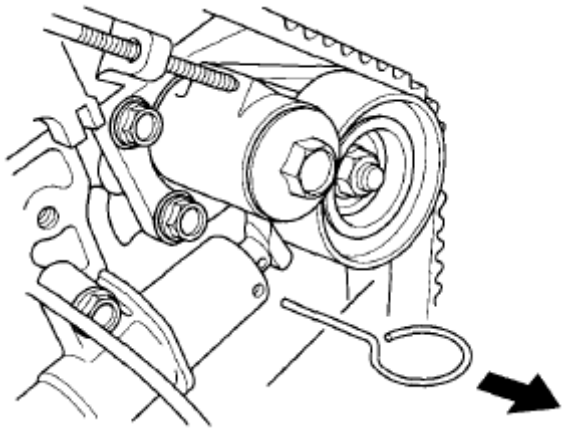

Fig. 63: Removing Pin From Auto-Tensioner
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Remove the battery clamp bolt from the back cover.
16. Install the lower half of the side engine mount bracket using new bolts (A) and the bolt (B).

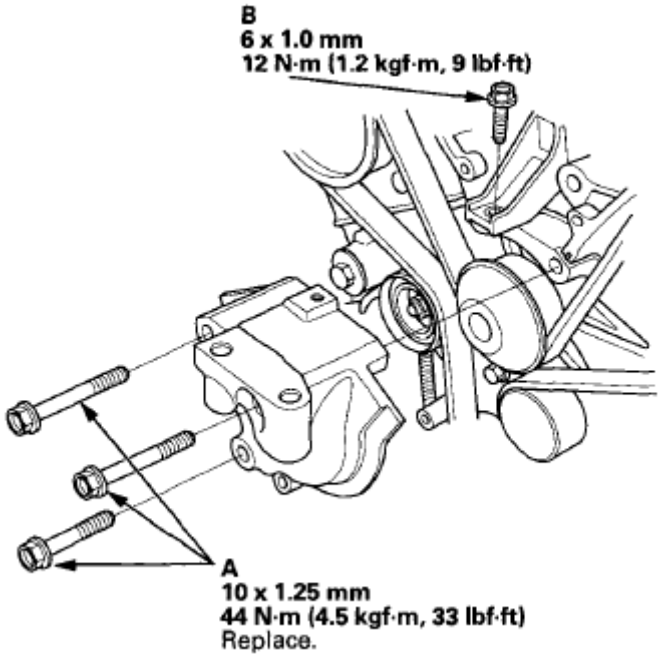

Fig. 64: Identifying Lower Half Of The Side Engine Mount Bracket & Fasteners With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Install the timing belt guide plate (A) as shown.

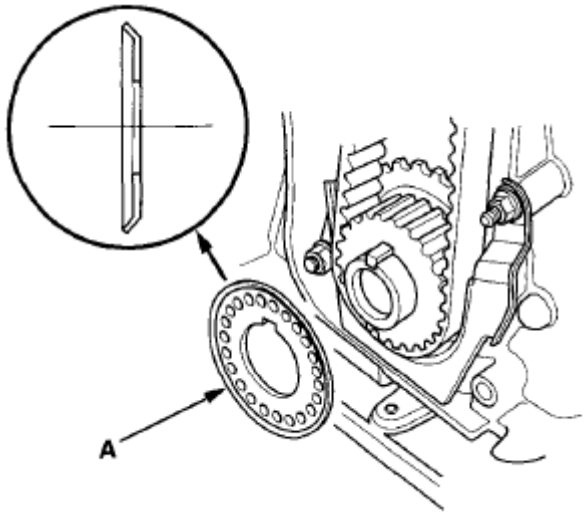

Fig. 65: Identifying Timing Belt Guide Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Install the lower cover.

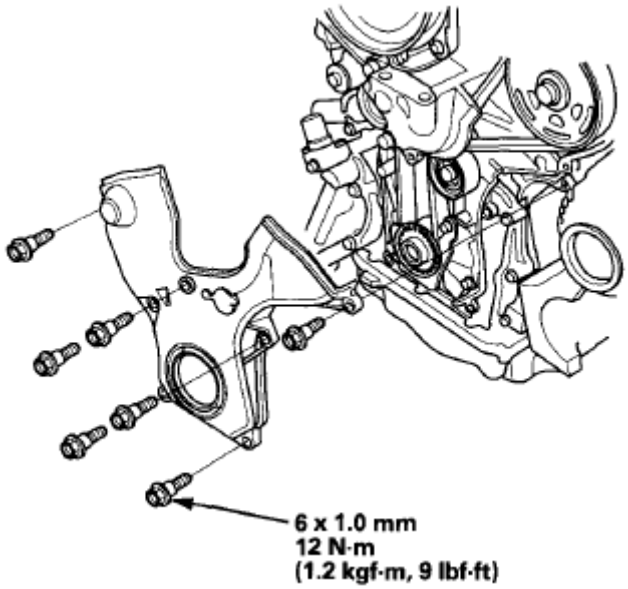

Fig. 66: Identifying Lower Cover Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Install the front upper cover (A) and the rear upper cover (B).

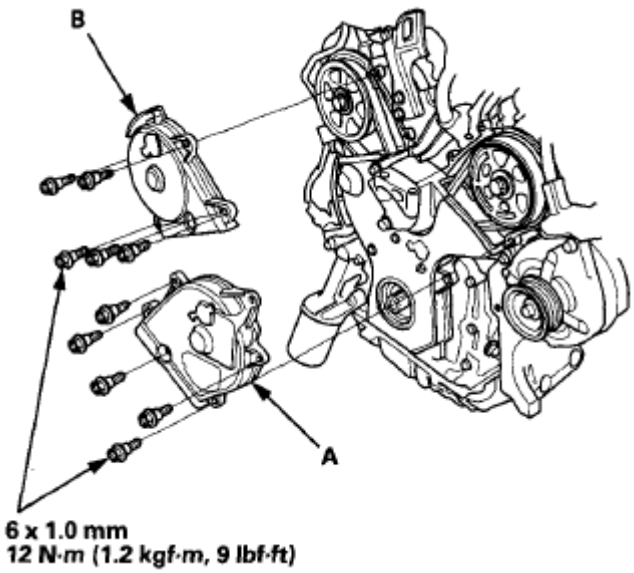

Fig. 67: Identifying Front And Rear Upper Cover With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Install the **crankshaft pulley**.
21. Rotate the crankshaft pulley about six turns clockwise so the timing belt positions itself on the pulleys.
22. Turn the crankshaft pulley so its white mark (A) lines up with the pointer (B).

NOTE: The other pointer (C) is not used.

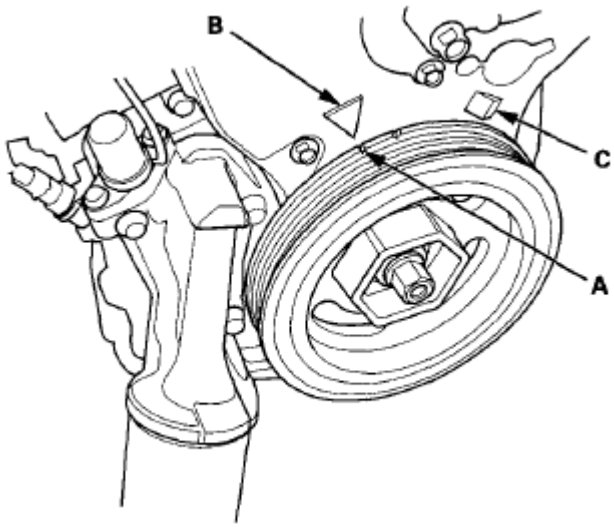

Fig. 68: Identifying Crankshaft Pulley White Mark And Pointer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Check the camshaft pulley marks.

NOTE: If the marks are not aligned, rotate the crankshaft 360 degrees, and recheck the camshaft pulley mark:

- If the camshaft pulley marks are at TDC, go to step 24.
- If the camshaft pulley marks are not at TDC, remove the timing belt and repeat steps 3 through 23.

FRONT

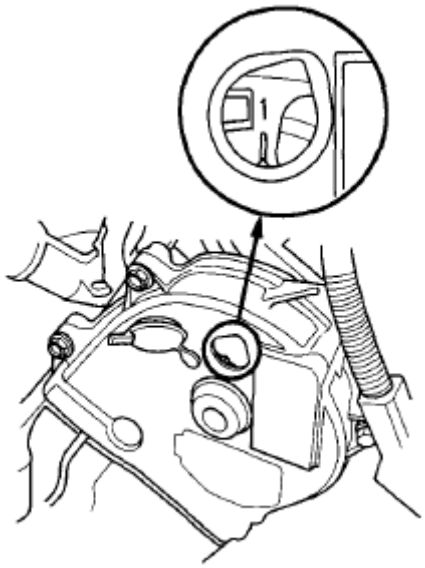

Fig. 69: Identifying Camshaft Pulley Mark - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

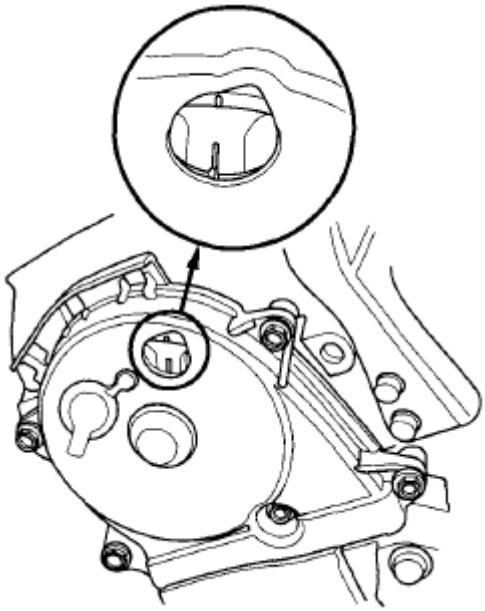

Fig. 70: Identifying Camshaft Pulley Mark - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Loosely install the upper half of the side engine mount bracket (A) using new bolts, then install the ground cable (B).

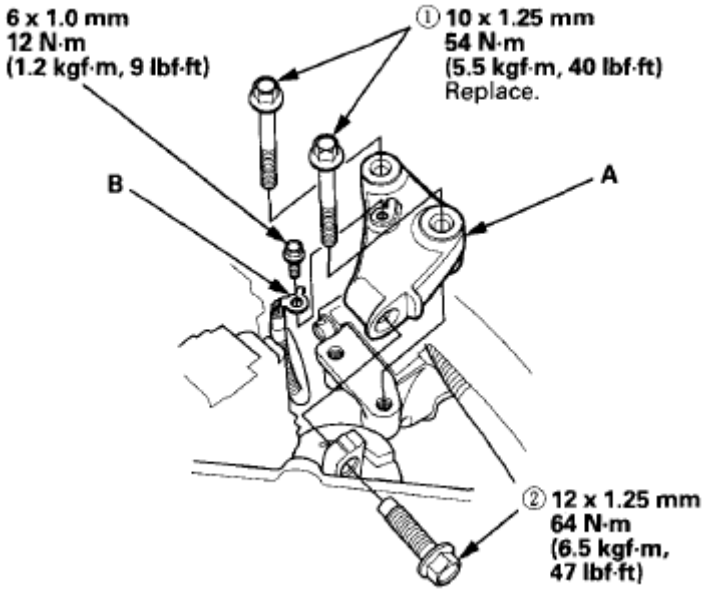

Fig. 71: Identifying Side Engine Mount Bracket And Ground Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Remove the jack and the wood block.
26. Tighten the mounting bolts in the numbered sequence shown.
27. Install the drive belt auto-tensioner (see **DRIVE BELT AUTO-TENSIONER REPLACEMENT**).

28. Install the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
29. Install the right front wheel.
30. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
31. Do the CKP pattern clear/CKP pattern learn procedure (see **CKP PATTERN CLEAR/CKP PATTERN LEARN**).

TIMING BELT ADJUSTER REPLACEMENT

1. Remove the **timing belt**.
2. Remove the battery clamp bolt from the back cover.
3. Remove the auto-tensioner (see step 6).
4. Remove the bolt (A), then remove the timing belt adjuster (B) and the collar (C).

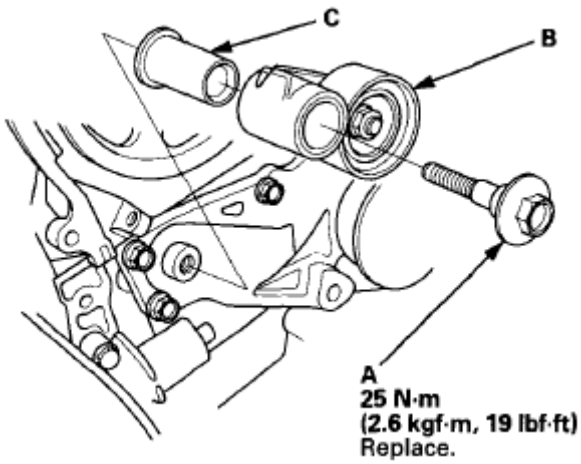

Fig. 72: Identifying Timing Belt Adjuster, Collar And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the timing belt adjuster using new bolt in the reverse order of removal.
6. Install the **timing belt**.

TIMING BELT DRIVE PULLEY REPLACEMENT

1. Remove the **timing belt**.
2. Remove the timing belt stopper (A), then remove the timing belt drive pulley (B) and the key (C).

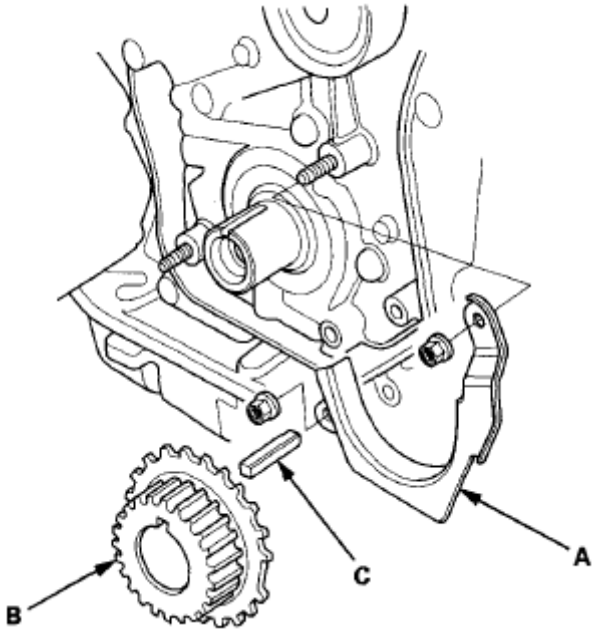

Fig. 73: Identifying Timing Belt Stopper, Timing Belt Drive Pulley And Key
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Inspect the timing belt drive pulley and the key for damage. If it is cracked or damaged, replace the timing belt drive pulley.
4. Install the new timing belt drive pulley and the key, then install the timing belt stopper.
5. Install the **timing belt**.
6. Do the CKP pattern clear/CKP pattern learn procedure (see **CKP PATTERN CLEAR/CKP PATTERN LEARN**).

CYLINDER HEAD COVER REMOVAL

FRONT

1. Remove the intake manifold (see **REMOVAL**).
2. Remove the three ignition coils from the front cylinder head (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
3. Disconnect the EGR valve connector (A) and remove the harness holder mounting bolt (B) and the harness clamp (C).

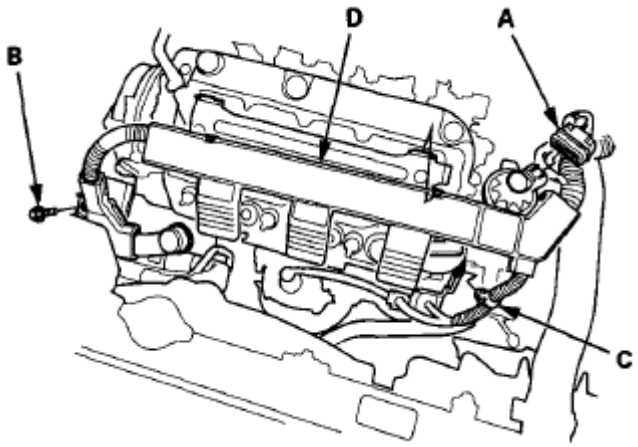

Fig. 74: Identifying EGR Valve Connector, Harness Clamp, Harness Holder And Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the harness holder (D) from the bracket.
5. Remove the front cylinder head cover.

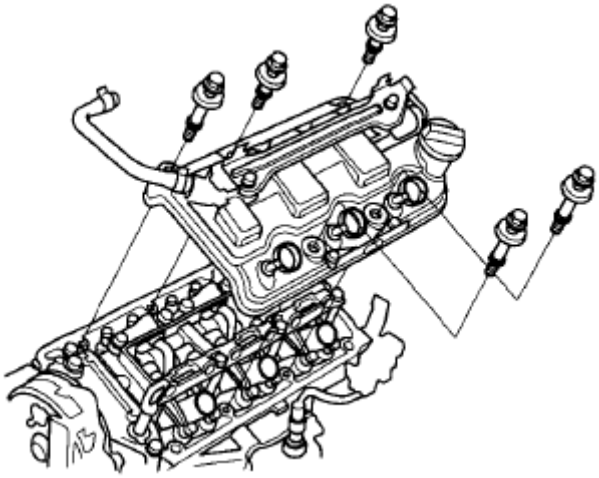

Fig. 75: Identifying Front Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

1. Remove the strut brace (see **FRAME BRACE REPLACEMENT**).
2. Remove the intake manifold (see **REMOVAL**).
3. Remove the three ignition coils from the rear cylinder head (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
4. Remove the harness holder mounting bolts (A) and the engine ground cable (B).

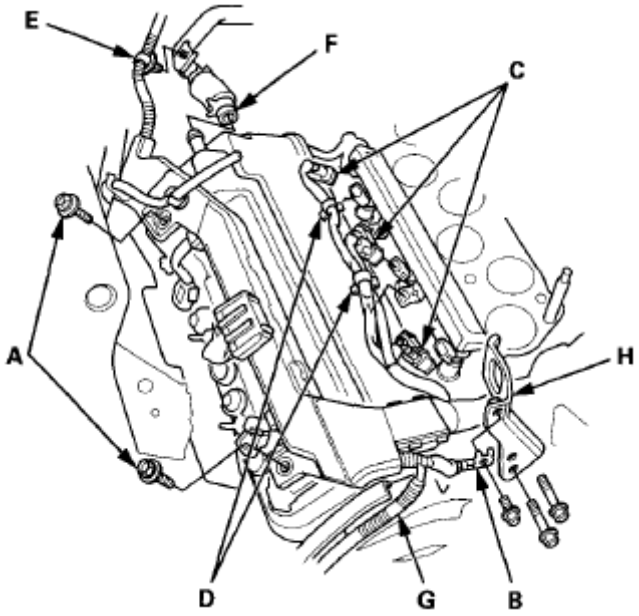

Fig. 76: Identifying Injector Connectors, Breather Hose, Hanger Bracket, Harness Clamps, Engine Ground Cable And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Disconnect the three injector connectors (C) and the two harness clamps (D).
6. Remove the harness clamp (E) and disconnect the breather hose (F).
7. Remove the harness (G) from the upper cover.
8. Remove the engine hanger bracket (H).
9. Remove the harness holder mounting bolts (A) and disconnect the knock sensor connector (B) and the CMP sensor connector (C).

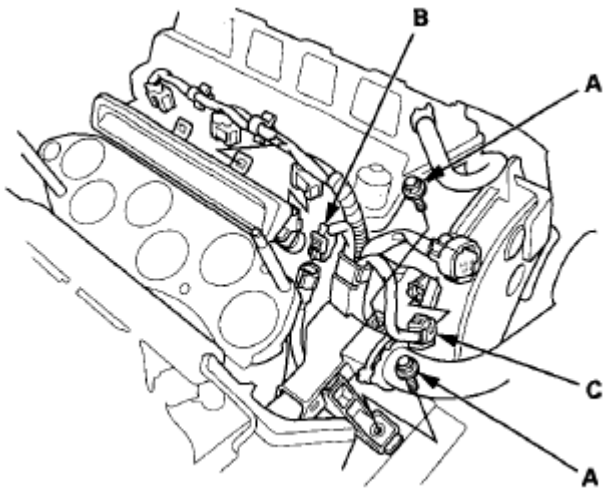

Fig. 77: Identifying Knock Sensor Connector, CMP Sensor Connector And Harness Holder Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the rear cylinder head cover.

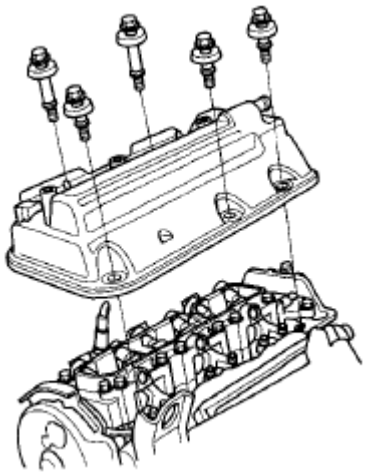

Fig. 78: Identifying Rear Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CYLINDER HEAD COVER INSTALLATION

FRONT

1. Check the spark plug seals for damage. If any seals are damaged, replace it.
2. Thoroughly clean the head cover gasket and the groove.
3. Install the head cover gasket (A) in the groove of the cylinder head cover (B). Make sure the head cover gasket is seated securely.

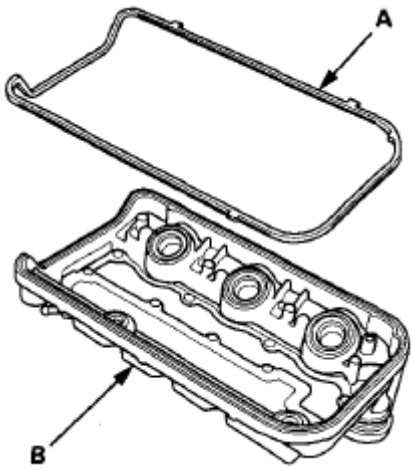

Fig. 79: Identifying Head Cover Gasket And Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove all of the old liquid gasket from the rocker shaft holder and the cylinder head.

5. Clean the head cover contacting surfaces with a shop towel.
6. Apply liquid gasket, P/N 08717-0004, 08718-0003, 08718-0004, or 08718-0009 to the rocker shaft holder mating areas (A). Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**

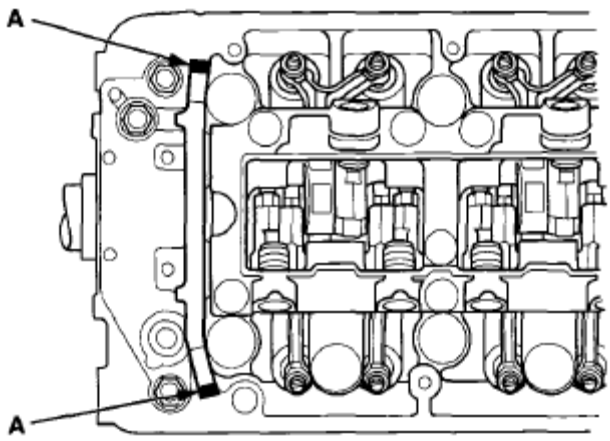

Fig. 80: Identifying Rocker Shaft Holder Mating Areas
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Set the spark plug seals (A) on the spark plug tubes, and install the front cylinder head cover (B).

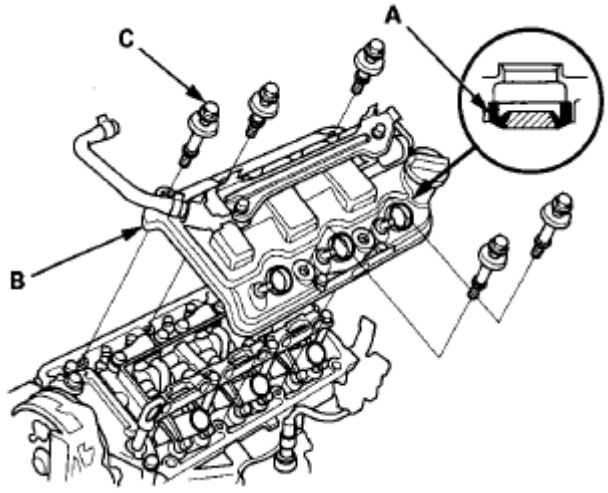

Fig. 81: Identifying Spark Plug Seals And Front Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Inspect the spark plug seals for damage.

9. Inspect the cover washers (C). Replace any washer that is damaged or deteriorated.
10. Tighten the bolts in three steps. In the final step torque all bolts, in sequence, 12 N.m (1.2 kgf.m, 9 lbf.ft).

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the cylinder head cover.**

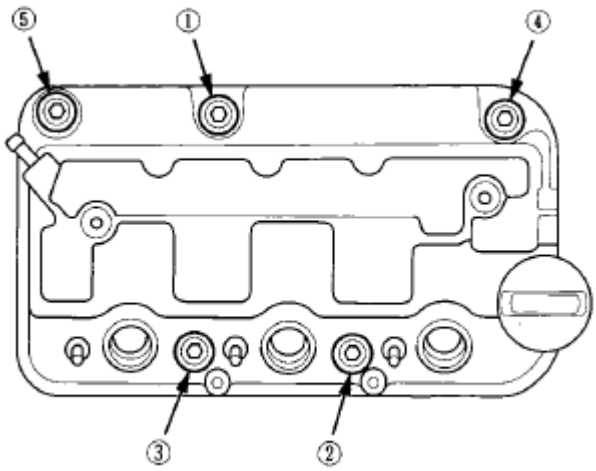

Fig. 82: Identifying Front Cylinder Head Cover Bolts With Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the harness holder (A) to the bracket.

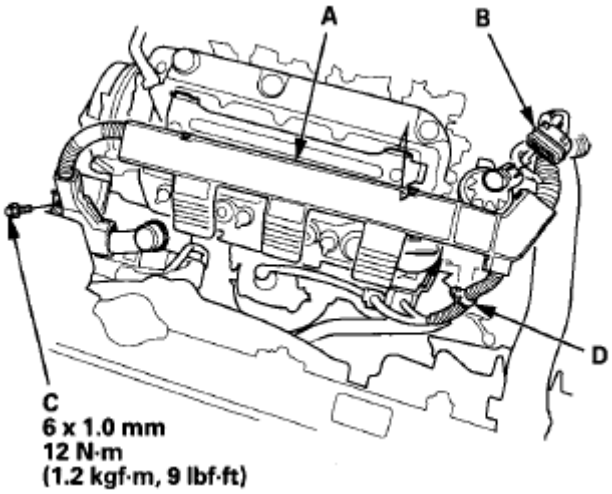

Fig. 83: Identifying EGR Valve Connector, Harness Holder, Clamp And Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Connect the EGR valve connector (B) and tighten the harness holder mounting bolt (C) and the harness

clamp (D).

13. Install the three ignition coils to the front cylinder head (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
14. Install the intake manifold (see **INSTALLATION**).

REAR

1. Check the spark plug seals for damage. If any seals are damaged, replace it.
2. Thoroughly clean the head cover gasket and the groove.
3. Install the head cover gasket (A) in the groove of the cylinder head cover (B). Make sure the head cover gasket is seated securely.

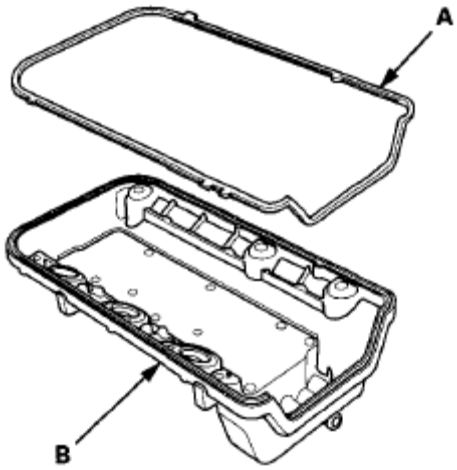

Fig. 84: Identifying Head Cover Gasket And Cylinder Head Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove all of the old liquid gasket from the rocker shaft holder and the cylinder head.
5. Clean the head cover contacting surfaces with a shop towel.
6. Apply liquid gasket, P/N 08717-0004, 08718-0003, 08718-0004, or 08718-0009 to the rocker shaft holder mating areas (A). Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**

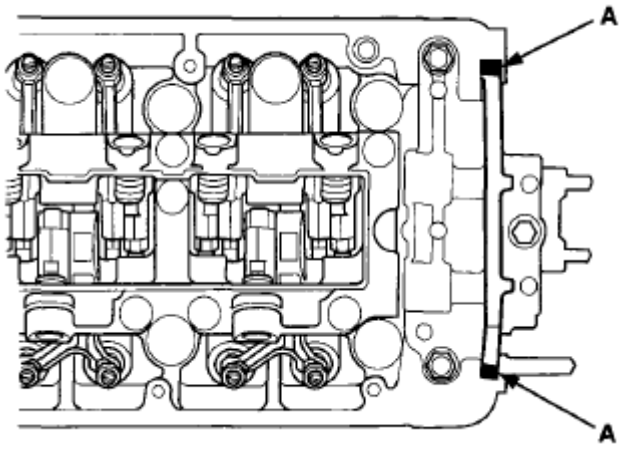

Fig. 85: Identifying Rocker Shaft Holder Mating Areas
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Set the spark plug seals (A) on the spark plug tubes, and install the rear cylinder head cover (B).

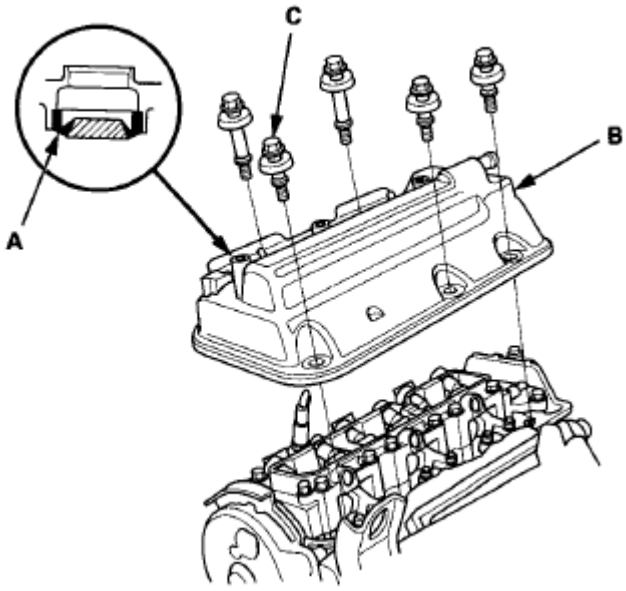

Fig. 86: Identifying Spark Plug Seals, Rear Cylinder Head Cover And Cover Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Inspect the spark plug seals for damage.
9. Inspect the cover washers (C). Replace any washer that is damaged or deteriorated.
10. Tighten the bolts in three steps. In the final step torque all bolts, in sequence, 12 N.m (1.2 kgf.m, 9 lbf.ft).

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the cylinder head cover.**

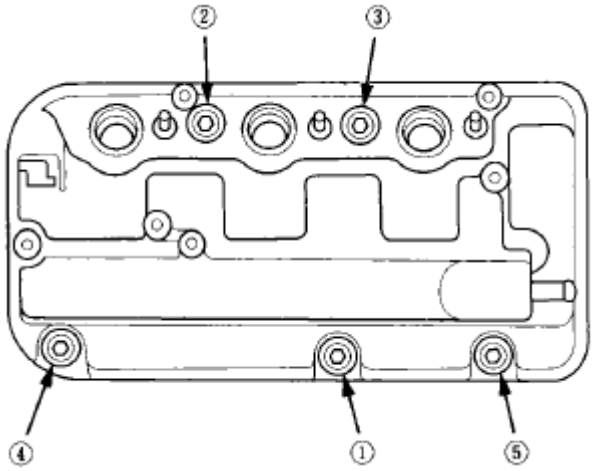

Fig. 87: Identifying Rear Cylinder Head Cover Bolts With Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Connect the knock sensor connector (A) and the CMP sensor connector (B) and install the harness holder mounting bolts (C).

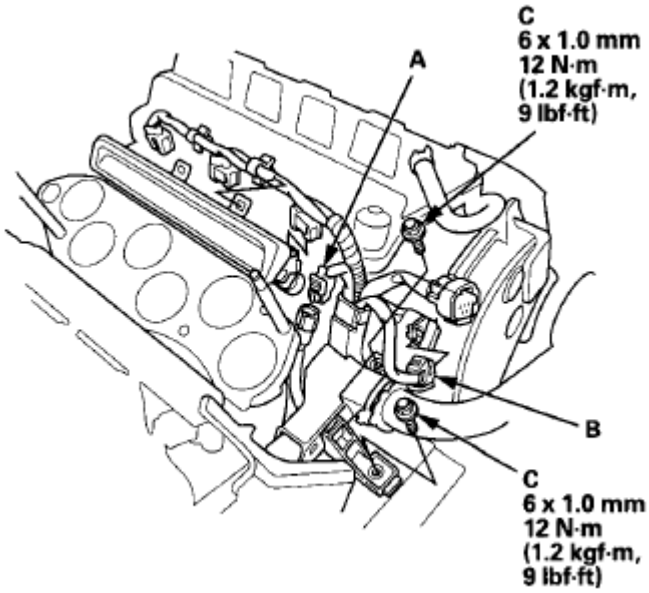

Fig. 88: Identifying Knock Sensor Connector, CMP Sensor Connector And Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Install the engine hanger bracket (A).

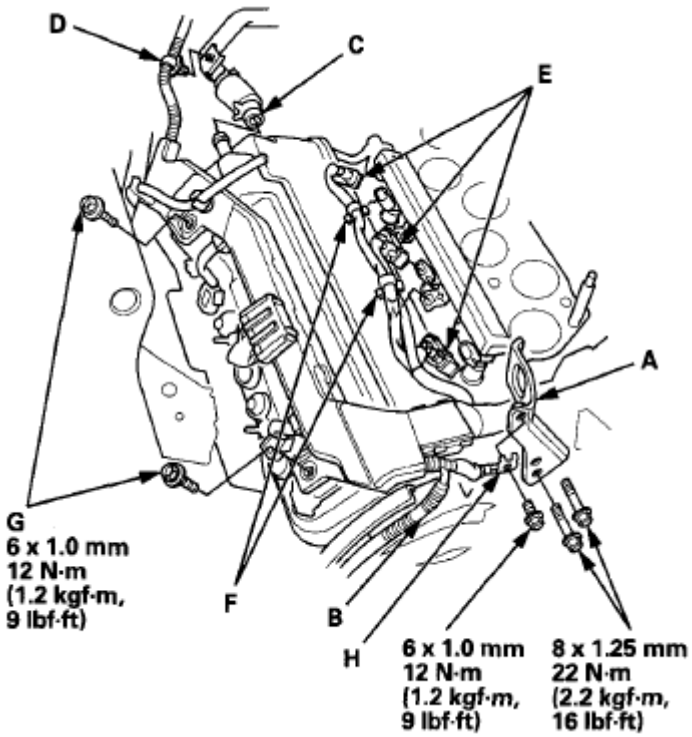

Fig. 89: Identifying Engine Hanger Bracket, Breather Hose, Injector Connectors, Harness Clamps, Engine Ground Cable And Harness Holder Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the harness (B) to the upper cover.
14. Connect the breather hose (C) and install the harness clamp (D).
15. Reconnect the three injector connectors (E) and the two harness clamps (F).
16. Install the harness holder mounting bolts (G) and engine ground cable (H).
17. Install the three ignition coils to the rear cylinder head (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
18. Install the intake manifold (see **INSTALLATION**).
19. Install the strut brace (see **FRAME BRACE REPLACEMENT**).

CYLINDER HEAD REMOVAL

NOTE:

- **Use fender covers to avoid damaging painted surfaces.**
- **To avoid damaging the wiring and terminals, unplug the wiring connectors carefully while holding the connector portion.**
- **Connect the HDS to the DLC (see HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)), and monitor ECT SENSOR 1. To avoid damaging the cylinder head, wait until the engine coolant temperature drops below 100°F (38°C) before loosening the cylinder head bolts.**
- **Mark all wiring and hoses to avoid misconnection. Also, be sure that they**

do not contact any other wiring or hoses, or interfere with any other parts.

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
3. Do the battery terminal disconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
4. Drain the engine coolant (see **COOLANT CHECK**).
5. Remove the six ignition coils (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
6. Remove the alternator (see **ALTERNATOR REMOVAL AND INSTALLATION**).
7. Remove the intake manifold (see **REMOVAL**).
8. Remove the **timing belt**.
9. Disconnect the following engine wire harness connectors, and remove the wire harness clamps from the cylinder head:
   - Six injector connectors
   - Knock sensor connector
   - ECT sensor 1 connector
   - Engine mount control solenoid valve connector
   - EGR valve connector
   - CMP sensor connector
   - Rocker arm oil control solenoid connector
   - Rocker arm oil pressure switch connector
   - Two A/F sensor connectors
   - Two secondary HO2S connectors
10. Remove the front warm up TWC (see **WARM UP TWC REMOVAL/INSTALLATION**) and the rear warm up TWC (see **REAR (BANK 1)**).
11. Remove the quick-connect fitting cover (A), then disconnect the fuel feed hose (B) (see **FUEL LINE/QUICK-CONNECT FITTING REMOVAL**).

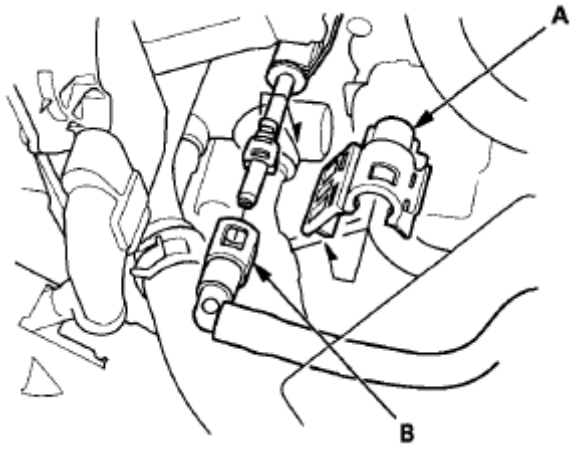

Fig. 90: Identifying Quick-Connect Fitting Cover And Fuel Feed Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the connector bracket (A) from the front cylinder head.

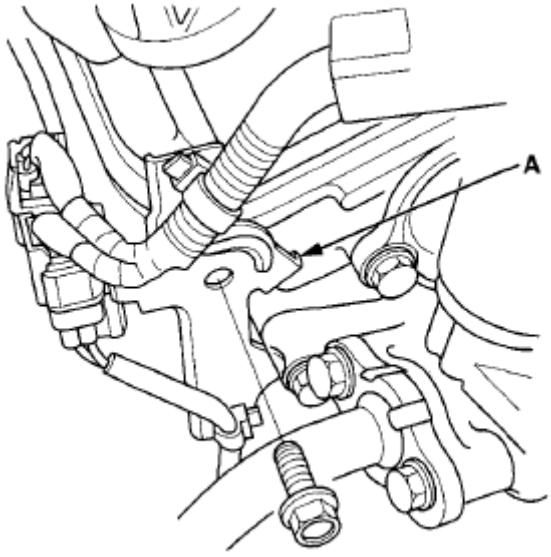

Fig. 91: Identifying Connector Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the engine mount control solenoid valve bracket (A) from the rear cylinder head.

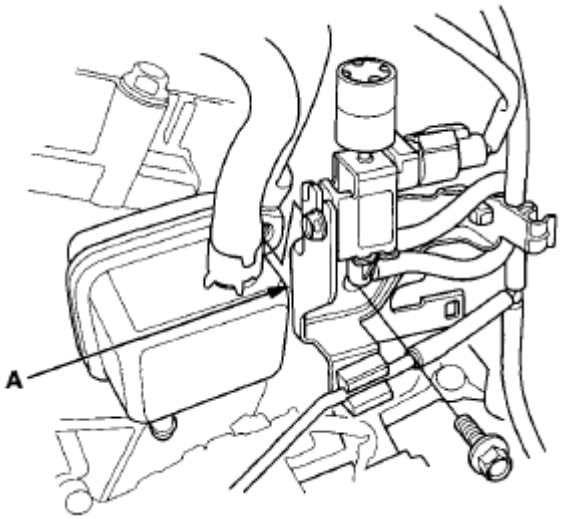

Fig. 92: Identifying Engine Mount Control Solenoid Valve Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the EVAP canister joint with the bracket (see step 9).
15. Remove the injector bases (see **INJECTOR BASE REMOVAL AND INSTALLATION**).
16. Remove the water passage (see **WATER PASSAGE REPLACEMENT**).
17. Remove the **timing belt**.
18. Remove the camshaft pulleys (A) and the back covers (B).

FRONT

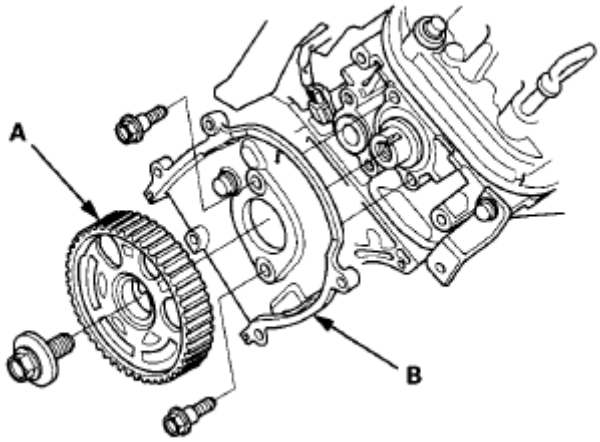

Fig. 93: Identifying Camshaft Pulleys And Back Covers - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

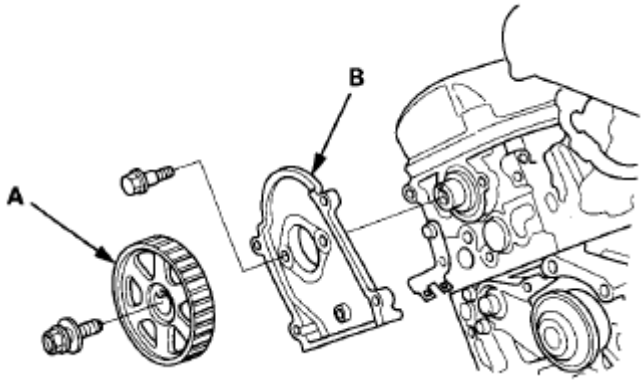

Fig. 94: Identifying Camshaft Pulleys And Back Covers - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Remove the **cylinder head covers**.
20. Remove the cylinder head bolts. To prevent warpage, loosen the bolts in sequence 1/3 turn at a time; repeat the sequence until all bolts are loosened.

FRONT

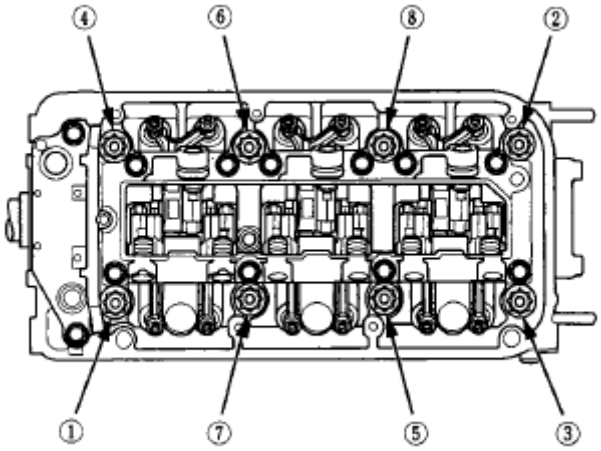

Fig. 95: Identifying Cylinder Head Bolts With Loosening Sequence (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

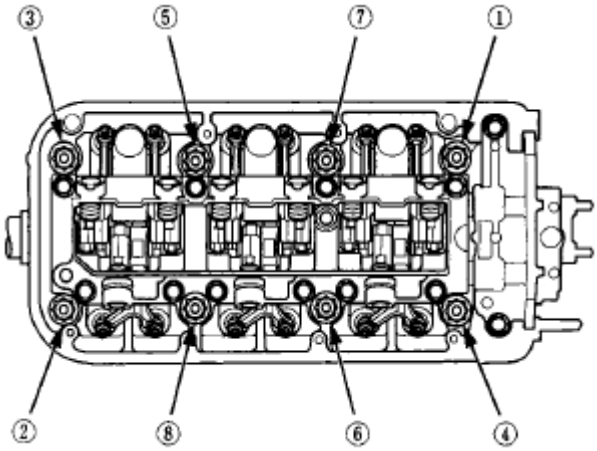

Fig. 96: Identifying Cylinder Head Bolts With Loosening Sequence (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Remove the cylinder heads.

CAMSHAFT REPLACEMENT

FRONT

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Do the battery removal procedure (see **BATTERY REMOVAL AND INSTALLATION**).
3. Drain the engine coolant (see **COOLANT CHECK**).
4. Disconnect the radiator hoses (A).

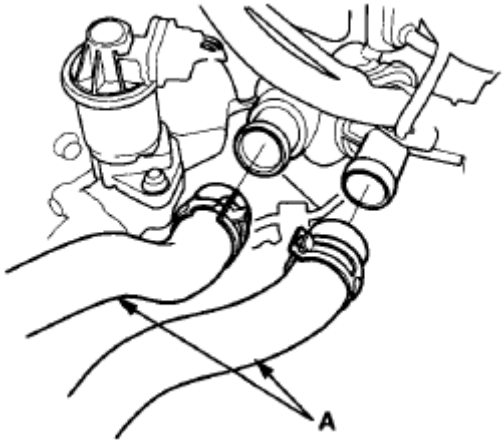

Fig. 97: Identifying Radiator Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the EGR valve (see **EGR VALVE REPLACEMENT**).

6. Remove the EGR valve stud bolts (A).

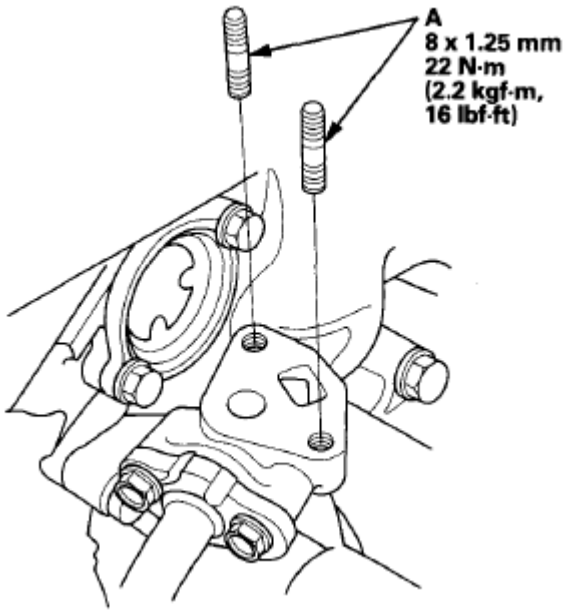

Fig. 98: Identifying EGR Valve Stud Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the **timing belt**.
8. Remove the front **rocker arm assembly**.
9. Remove the front camshaft pulley (see step 18).
10. Remove the thrust cover (A), then remove the front camshaft (B).

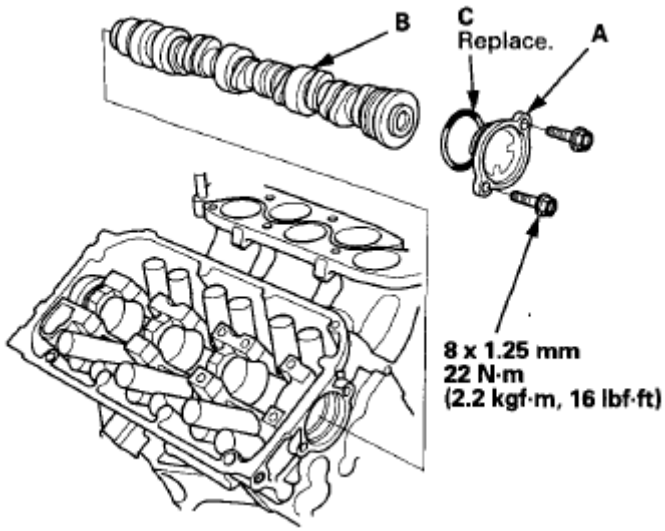

Fig. 99: Identifying Thrust Cover, Camshaft And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Install the front camshaft in the reverse order of removal. Always use a new O-ring (C). Apply new engine oil to the journals and the cam lobes.
12. Apply new engine oil to the threads of the camshaft pulley mounting bolt, then install the front camshaft pulley (see step 15).
13. Install the front rocker arm assembly, then tighten the mounting bolts (see step 13).
14. Install the **timing belt**.
15. Adjust the **valve clearance**.
16. Install the EGR valve stud bolts, then install the EGR valve (see **EGR VALVE REPLACEMENT**).
17. Connect the radiator hoses.
18. Do the battery installation procedure (see **BATTERY REMOVAL AND INSTALLATION**).
19. Fill the radiator with engine coolant, and bleed the air from the cooling system (see **COOLANT CHECK**).
20. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
21. Do the CKP pattern clear/CKP pattern learn procedure (see **CKP PATTERN CLEAR/CKP PATTERN LEARN**).

REAR

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
3. Do the battery removal procedure (see **BATTERY REMOVAL AND INSTALLATION**).
4. Drain the engine coolant (see **COOLANT CHECK**).
5. Remove the under-hood fuse/relay box from the bracket.
6. Remove the air cleaner (see **THROTTLE BODY CLEANING**).
7. Remove the quick-connect fitting cover, then disconnect the fuel feed hose (see step 11).
8. Disconnect the heater hoses (A).

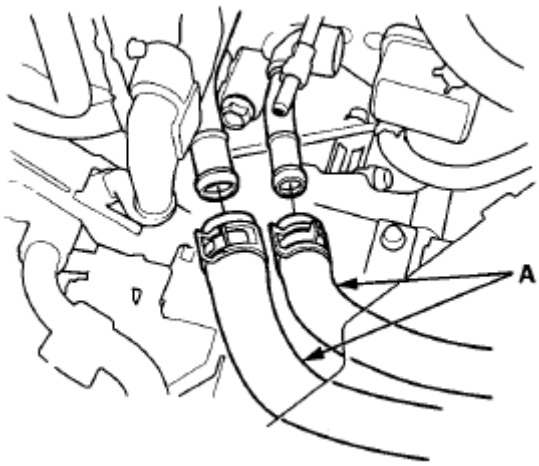

Fig. 100: Identifying Heater Hoses

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Disconnect the EVAP canister hose (A), then remove the EVAP canister joint (B) with the bracket.

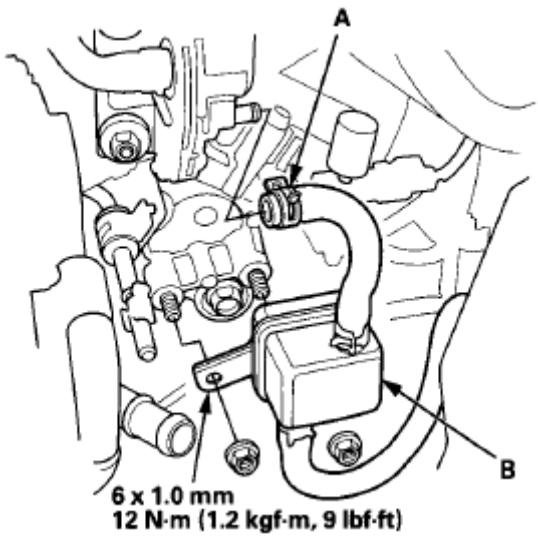

Fig. 101: Identifying EVAP Canister Hose And EVAP Canister Joint With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the **timing belt**.
11. Remove the rear **rocker arm assembly**.
12. Remove the rear camshaft pulley (see step 18).
13. Remove the thrust cover (A), then remove the rear camshaft (B).

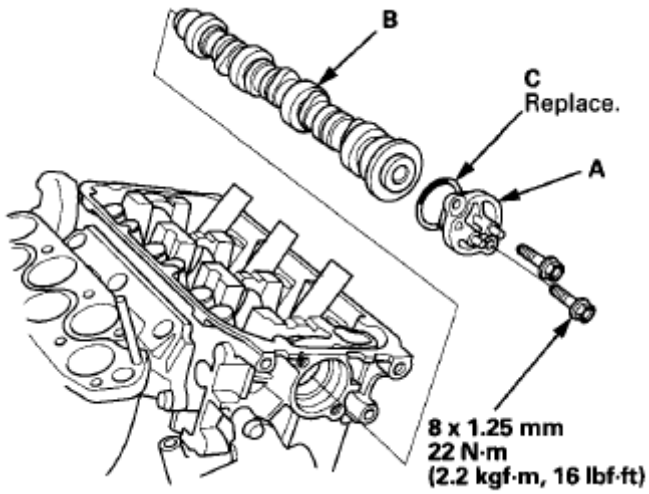

Fig. 102: Identifying Thrust Cover, Rear Camshaft And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the rear camshaft in the reverse order of removal. Always use a new O-ring (C). Apply new engine

oil to the journals and cam lobes.

15. Apply new engine oil to the threads of the camshaft pulley mounting bolt, then install the rear camshaft pulley (see step 15).
16. Install the rear rocker arm assembly, then tighten the mounting bolts (see step 13).
17. Install the **timing belt**.
18. Adjust the **valve clearance**.
19. Install the EVAP canister joint with the bracket, then connect the EVAP canister hose.
20. Connect the heater hoses.
21. Connect the fuel feed hose, then install the quick-connect fitting cover (see step 21).
22. Install the air cleaner (see **THROTTLE BODY CLEANING**).
23. Install the under-hood fuse/relay box to the bracket.
24. Do the battery installation procedure (see **BATTERY REMOVAL AND INSTALLATION**).
25. Inspect for fuel leaks. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode (do not operate the starter) so the fuel pump runs for about 2 seconds and pressurizes the fuel line. Repeat this operation three times, then check for fuel leakage at any point in the fuel line.
26. Fill the radiator with engine coolant, and bleed the air from the cooling system (see **COOLANT CHECK**).
27. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
28. Do the CKP pattern clear/CKP pattern learn procedure (see **CKP PATTERN CLEAR/CKP PATTERN LEARN**).

CYLINDER HEAD INSPECTION FOR WARPAGE

1. Remove the **cylinder head**.
2. Inspect the **camshaft**.
3. Check the cylinder head for warpage. Measure along the edges, and three ways across the center:
    - If warpage is less than 0.05 mm (0.002 in), cylinder head resurfacing is not required.
    - If warpage is between 0.05 mm (0.002 in) and 0.2 mm (0.008 in), resurface the cylinder head.
    - Maximum resurface limit is 0.2 mm (0.008 in) based on a height of 121 mm (4.76 in).

    Cylinder Head Warpage

    Standard (New): 0.05 mm (0.002 in) max.

    Cylinder Head Height

    Standard (New): 120.95-121.05 mm (4.762-4.765 in)

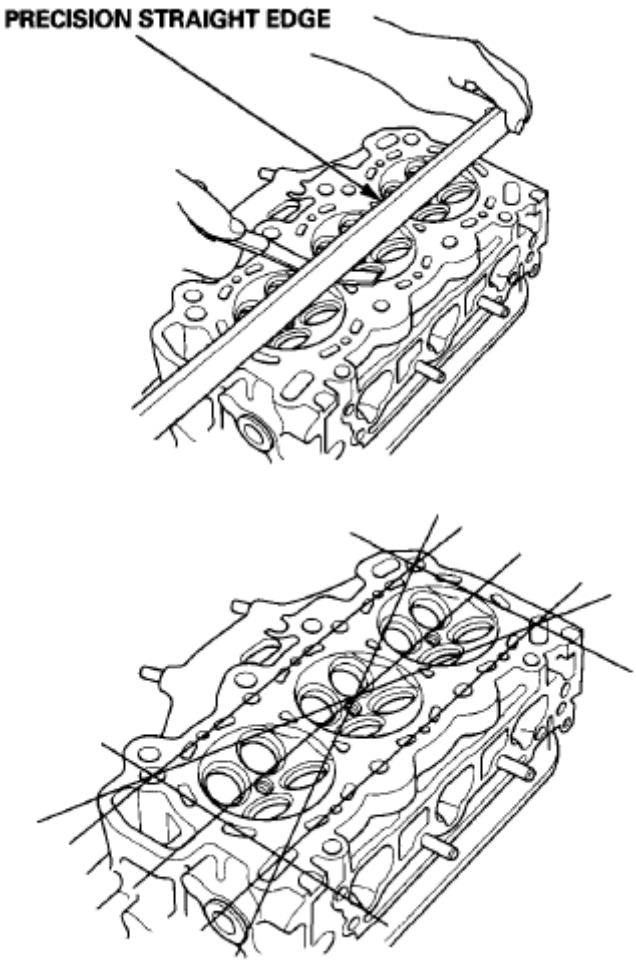

Fig. 103: Checking Cylinder Head For Warpage Along Edges And Three Ways Across Center
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM ASSEMBLY REMOVAL

Front

1. Remove the **cylinder head cover**.
2. Loosen the locknuts and the adjusting screws (A).

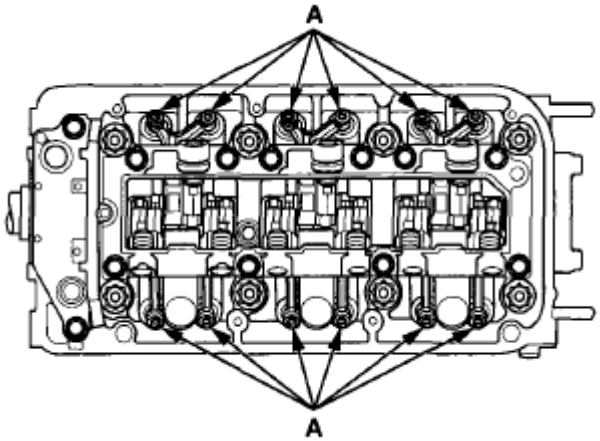

Fig. 104: Identifying Adjusting Screws (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the rocker shaft bridge mounting bolts, the rocker shaft holder mounting bolts, and the rocker arm assembly.
    1. Loosen the rocker shaft bridge mounting bolts and the rocker shaft holder mounting bolts in sequence two turns at a time, to prevent damaging the valves or the rocker arm assembly.
    2. When removing the rocker arm assembly, do not remove the rocker shaft bridge mounting bolts and the rocker shaft holder mounting bolts. The bolts will keep the rocker arms on the shafts.

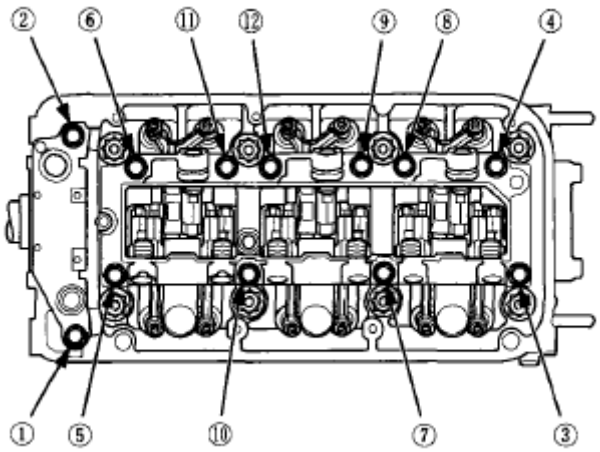

Fig. 105: Identifying Rocker Bolts With Loosening Sequence (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Rear

4. Remove the **cylinder head cover**.
5. Loosen the locknuts and the adjusting screws (A).

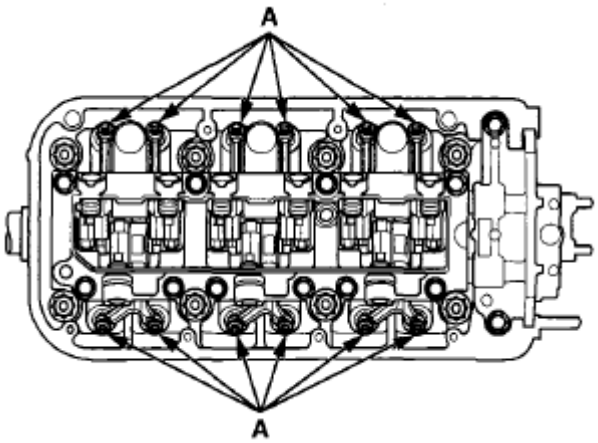

Fig. 106: Identifying Adjusting Screws - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the rocker shaft bridge mounting bolts, the rocker shaft holder mounting bolts, and the rocker arm assembly.
    1. Loosen the rocker shaft bridge mounting bolts and the rocker shaft holder mounting bolts in sequence two turns at a time, to prevent damaging the valves or the rocker arm assembly.
    2. When removing the rocker arm assembly, do not remove the rocker shaft bridge mounting bolts and the rocker shaft holder mounting bolts. The bolts will keep the rocker arms on the shafts.

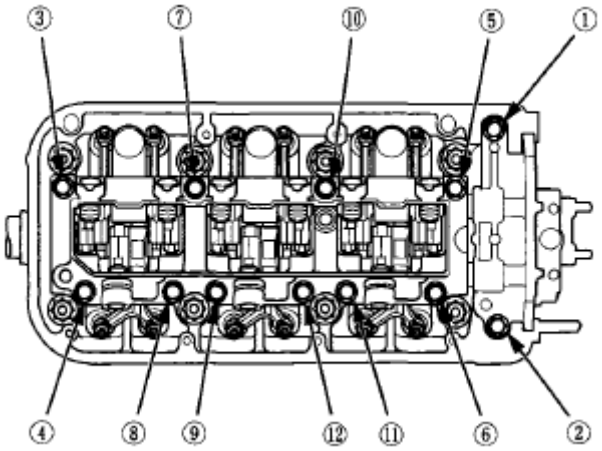

Fig. 107: Identifying Rocker Bolts With Loosening Sequence (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM AND SHAFT DISASSEMBLY/REASSEMBLY

FRONT

NOTE:

- **Identify parts as they are removed so they can be reinstalled in their original locations.**

- **Inspect the rocker shafts and the rocker arms.**
- **If reused, the rocker arms must be installed in their original locations.**
- **When removing or installing the rocker arm assembly, do not remove the mounting bolts. The bolts will keep the rocker arms, the rocker shaft bridge, and the rocker shaft holder on the shaft.**
- **If the rocker shaft cannot be removed or installed by hand, remove or install the rocker shaft by heating the rocker shaft bridge.**
- **Bundle the rocker arms with rubber bands to keep them together as a set, and remove the bands after the rocker arms have been installed.**
- **Prior to reassembling, clean all the parts in solvent, dry them, and apply new engine oil to all contact points and bearing surfaces, and the lost motion assembly.**
- **When replacing the rocker arm assembly, remove the fastening hardware from the new rocker arm assembly.**
- **Never remove any of the circlips that retain the lost motion assemblies in the rocker shaft bridge. The circlips are not available separately, and are factory installed in the rocker shaft bridge. To remove the lost motion assemblies, first remove the rocker shafts and the rocker arms.**

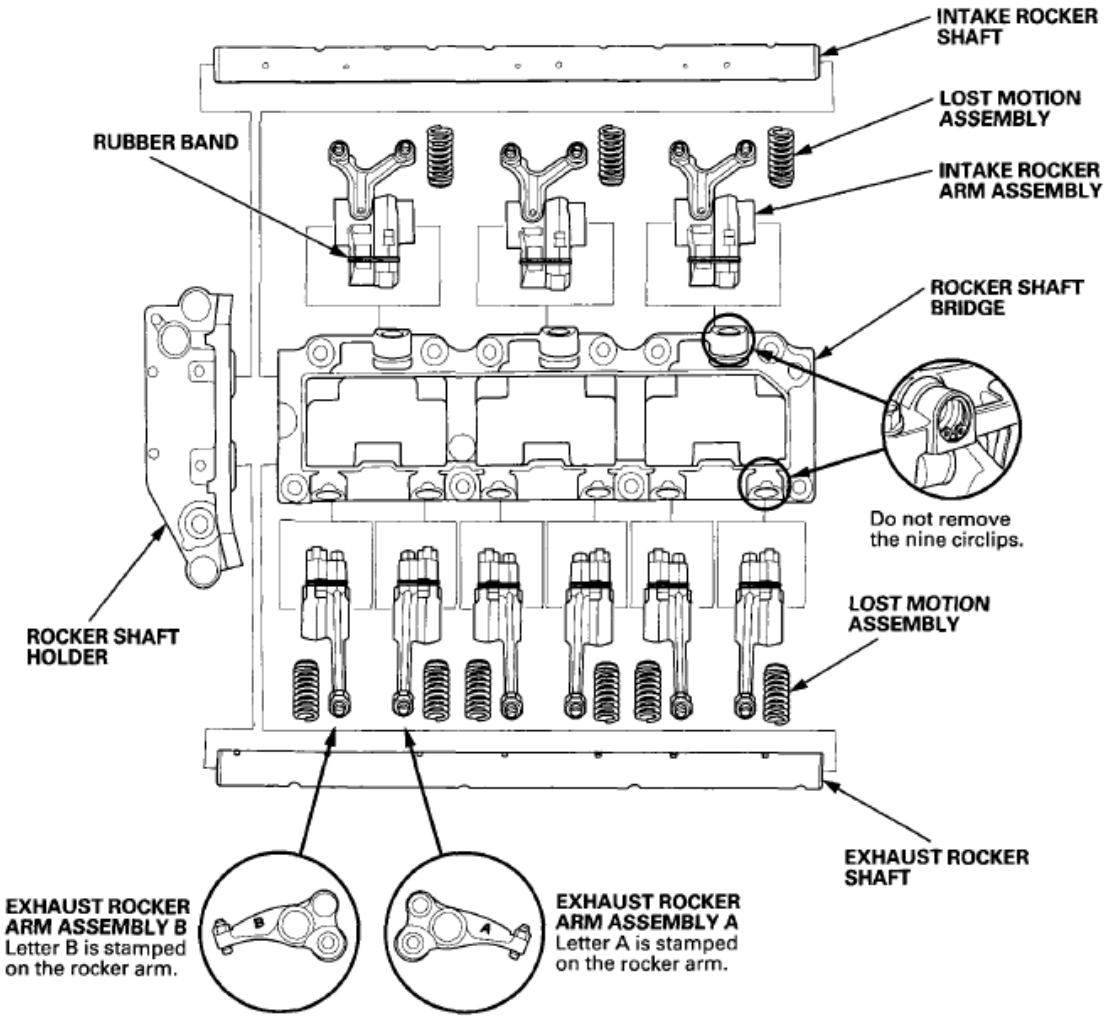

Fig. 108: Identifying Rocker Arm And Shaft Components Location (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

NOTE:

- **Identify parts as they are removed so they can be reinstalled in their original locations.**
- **Inspect the rocker shafts and the rocker arms.**
- **If reused, the rocker arms must be installed in their original locations.**
- **When removing or installing the rocker arm assembly, do not remove the mounting bolts. The bolts will keep the rocker arms, the rocker shaft bridge, and the rocker shaft holder on the shaft.**
- **If the rocker shaft cannot be removed or installed by hand, remove or install the rocker shaft by heating the rocker shaft bridge.**
- **Bundle the rocker arms with rubber bands to keep them together as a set, and remove the bands after the rocker arms have been installed.**

- **Prior to reassembling, clean all the parts in solvent, dry them, and apply new engine oil to all contact points and bearing surfaces, and the lost motion assembly.**
- **When replacing the rocker arm assembly, remove the fastening hardware from the new rocker arm assembly.**
- **Never remove any of the circlips that retain the lost motion assemblies in the rocker shaft bridge. The circlips are not available separately, and are factory installed in the rocker shaft bridge. To remove the lost motion assemblies, first remove the rocker shafts and the rocker arms.**

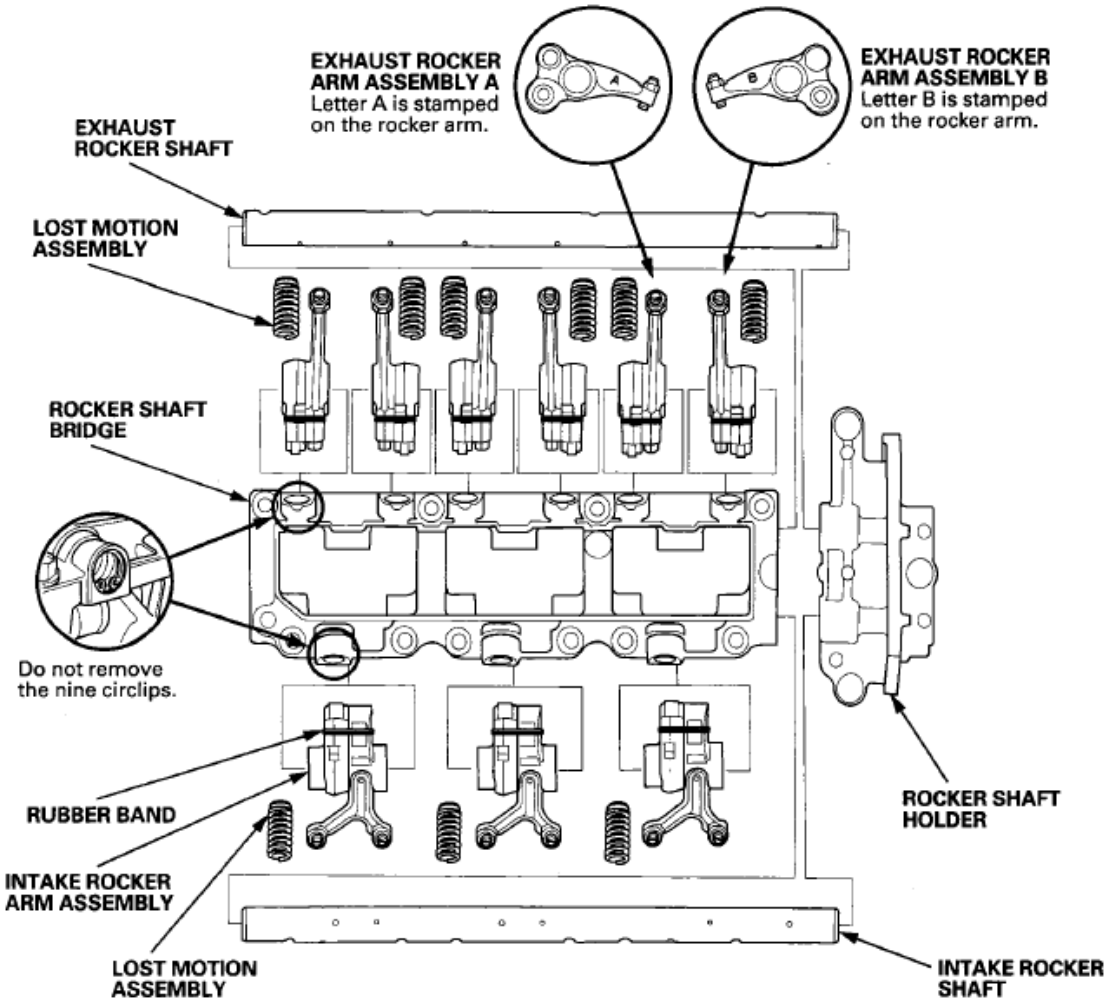

Fig. 109: Identifying Rocker Arm And Shaft Components Location (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

ROCKER ARM AND SHAFT INSPECTION

1. Remove the **rocker arm assembly**.
2. Disassemble the **rocker arm assembly**.

3. Measure the diameter of the shaft at the first rocker location.

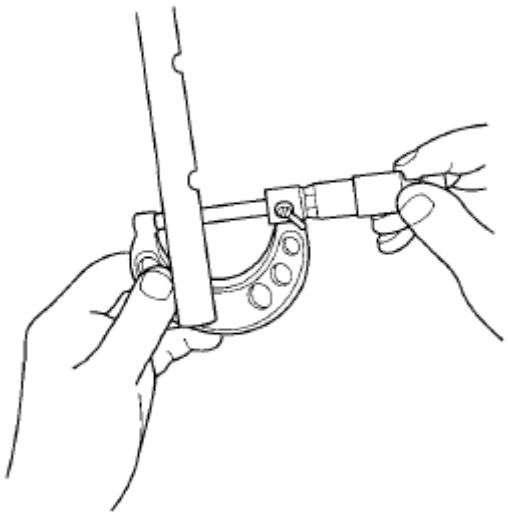

Fig. 110: Measuring Diameter Of Shaft At First Rocker Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Zero the dial gauge (A) to the shaft diameter.

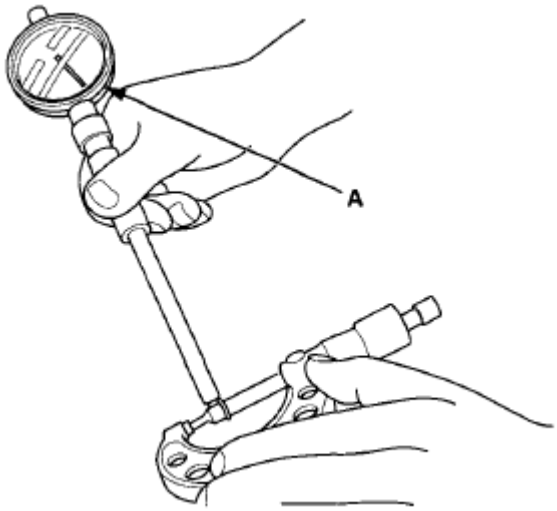

Fig. 111: Setting Dial Gauge To Zero Corresponding To Shaft Diameter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the inside diameter of the rocker arm, and check it for an out-of-round condition.

Intake Rocker Arm-to-Shaft Clearance:

Standard (New): 0.015-0.046 mm (0.00059-0.00181 in)

Service Limit: 0.046 mm (0.00181 in)

Exhaust Rocker Arm-to-Shaft Clearance:

Standard (New): 0.015-0.046 mm (0.00059-0.00181 in)

Service Limit: 0.046 mm (0.00181 in)

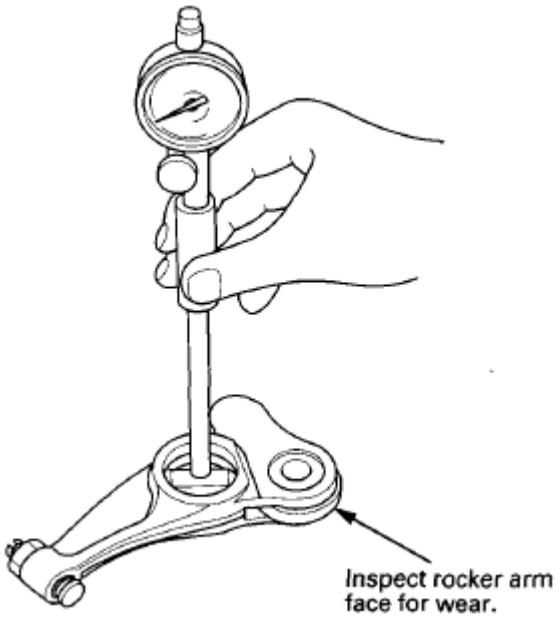

Fig. 112: Measuring Intake Rocker Arm-To-Shaft Clearance Using Dial Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Repeat for all rockers and both shafts. If the clearance is over the limit, replace the rocker shaft and all over-tolerance rocker arms. If any VTEC rocker arm needs replacement, replace all rocker arms in that set (primary and secondary).

VTEC Rocker Arms

7. Inspect the rocker arm piston (A). Slide them into the rocker arms. If they do not move smoothly, replace the rocker arm set.

NOTE:

- **Apply new engine oil to the rocker arm piston when reassembling.**
- **When removing the rocker arm piston from the intake secondary (B), and or the exhaust primary rocker arm (C), carefully apply air pressure to the oil passage of the rocker arm.**

INTAKE

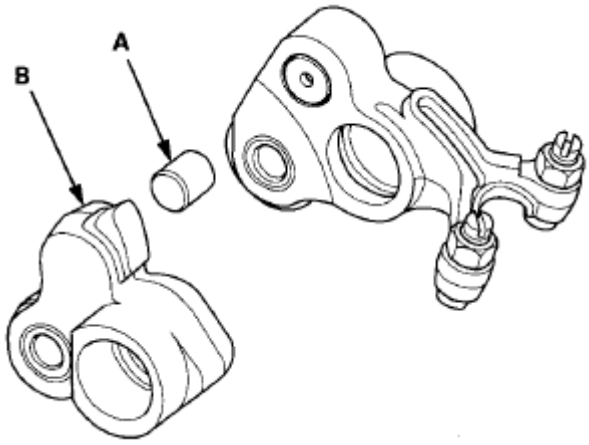

Fig. 113: Identifying Rocker Arm Piston And Intake Secondary
Courtesy of AMERICAN HONDA MOTOR CO., INC.

EXHAUST

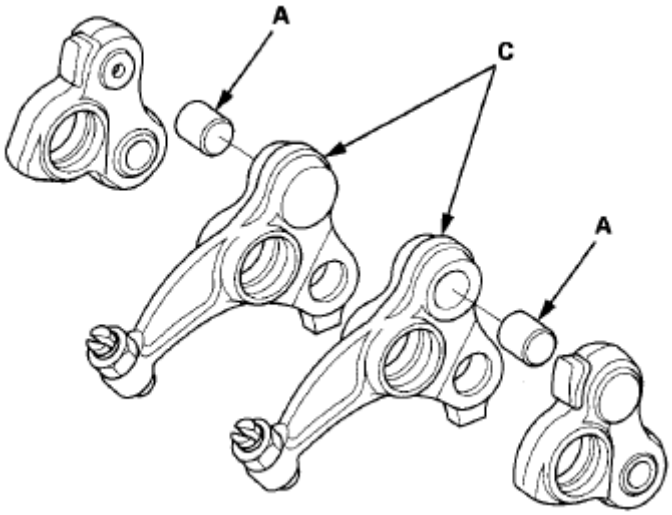

Fig. 114: Identifying Rocker Arm Piston And Exhaust Primary Rocker Arm
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Reassemble the **rocker arm assembly**.
9. Install the **rocker arm assembly**.

CAMSHAFT INSPECTION

1. Remove the **cylinder head**.
2. Remove the **rocker arm assembly**.
3. Disassemble the **rocker arm assembly**.
4. Front: Put the rocker shafts bridge and the rocker shaft holder on the front cylinder head, then tighten the bolts to the specified torque.

Specified Torque

8 x 1.25 mm: 22 N.m (2.2 kgf.m, 16 lbf.ft)

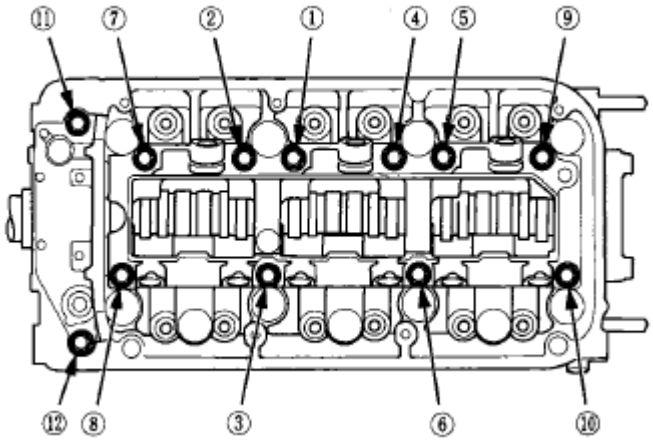

Fig. 115: Identifying Rocker Bolts With Tightening Sequence (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Rear: Put the rocker shaft bridge and the rocker shaft holder on the rear cylinder head, then tighten the bolts to the specified torque.

Specified Torque

8 x 1.25 mm: 22 N.m (2.2 kgf.m, 16 lbf.ft)

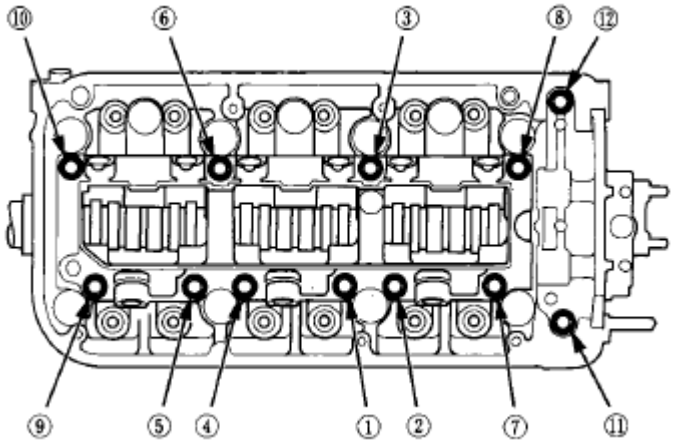

Fig. 116: Identifying Rocker Bolts With Tightening Sequence (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Seat the camshaft by pushing it toward the rear of the cylinder head.
7. Zero the dial gauge against the end of the camshaft. Push the camshaft back and forth and read the end play. If the end play is beyond the service limit, replace the thrust cover and recheck. If it is still beyond

the service limit, replace the cylinder head. If it is still beyond the service limit, replace the camshaft.

Camshaft End Play

Standard (New): 0.05-0.20 mm (0.0020-0.0079 in)

Service Limit: 0.20 mm (0.0079 in)

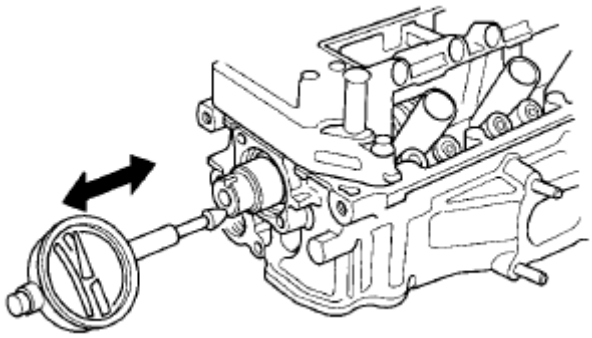

Fig. 117: Measuring Camshaft End Play Using Dial Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the camshaft thrust cover (A), then pull out the camshaft (B).

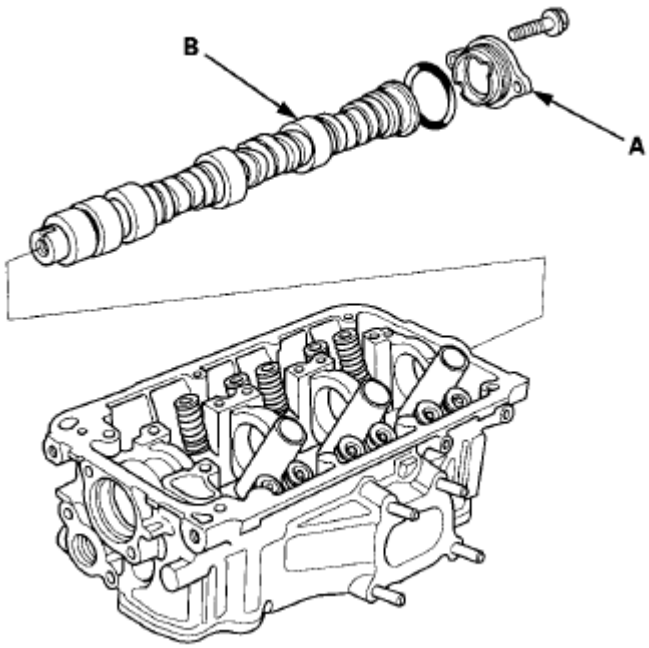

Fig. 118: Identifying Camshaft Thrust Cover And Camshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Wipe the camshaft clean, then inspect the lift ramps. Replace the camshaft if any lobes are pitted, scored, or excessively worn.

10. Measure the diameter of each camshaft journal.

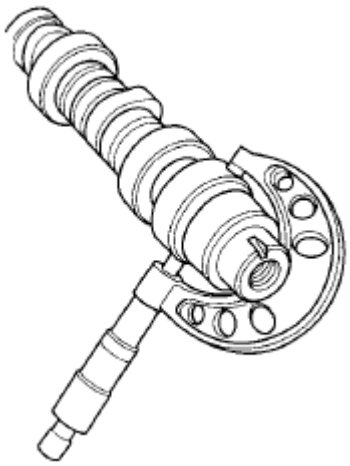

Fig. 119: Measuring Diameter Of Camshaft Journal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Zero the dial gauge (A) to the journal diameter.

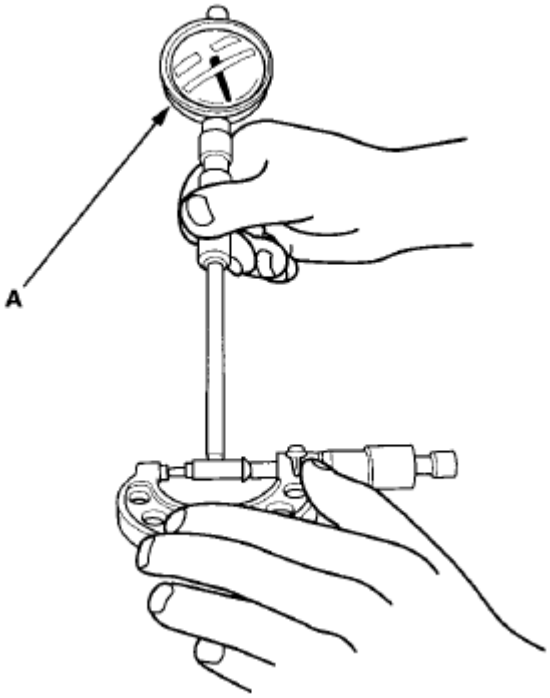

Fig. 120: Setting Dial Gauge To Zero Corresponding To Journal Diameter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Clean the camshaft bearing surfaces in the cylinder head. Measure the inside diameter of each camshaft bearing surface, and check for an out-of-round condition:
    - If the camshaft-to-holder clearance is within limits, go to step 14.

- If the camshaft-to-holder clearance is beyond the service limit and the camshaft has been replaced, replace the cylinder head.
- If the camshaft-to-holder clearance is beyond the service limit and the camshaft has not been replaced, go to step 13.

Camshaft-to-Holder Oil Clearance

Standard (New): 0.050-0.089 mm (0.00197-0.00350 in)

Service Limit: 0.15 mm (0.0059 in)

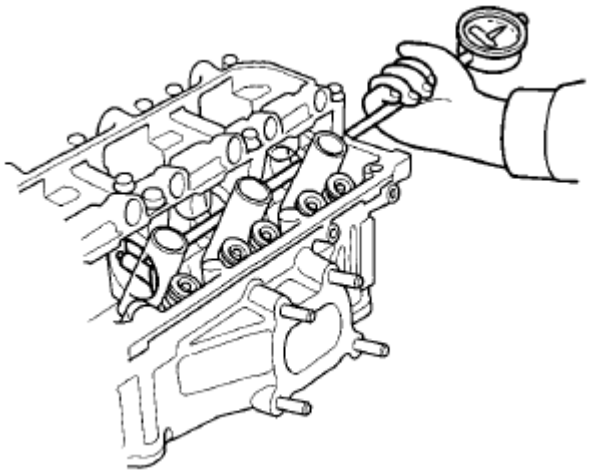

Fig. 121: Measuring Camshaft-To-Holder Oil Clearance Using Dial Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Check total runout with the camshaft supported on V-blocks:
    - If the total runout of the camshaft is within the service limit, replace the cylinder head.
    - If the total runout is beyond the service limit, replace the camshaft and recheck the oil clearance. If the oil clearance is still out of tolerance, replace the cylinder head.

Camshaft Total Runout

Standard (New): 0.03 mm (0.0012 in) max.

Service Limit: 0.04 mm (0.0016 in)

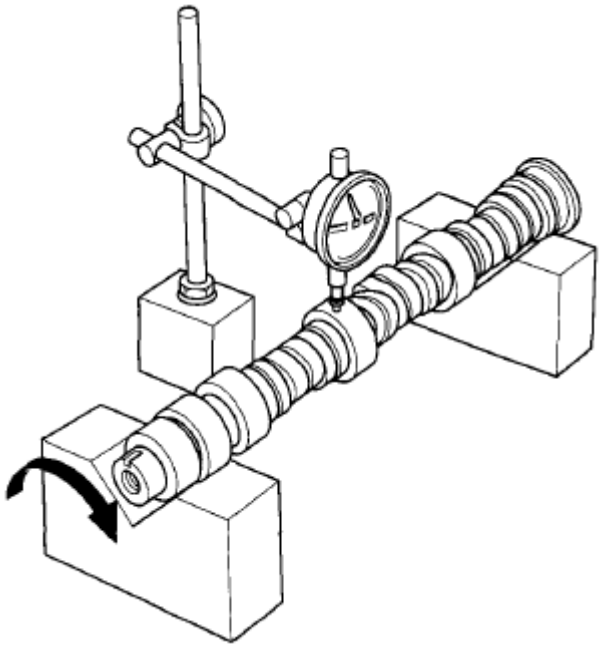

Fig. 122: Checking Camshaft Total Runout Using Dial Gauge
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Measure the cam lobe height.

CAM LOBE HEIGHT STANDARD (NEW)

	INTAKE	EXHAUST
PRI	34.299 mm (1.35035 in)	36.734 mm (1.44622 in)
SEC	35.932 mm (1.41464 in)	37.370 mm (1.47126 in)

FRONT

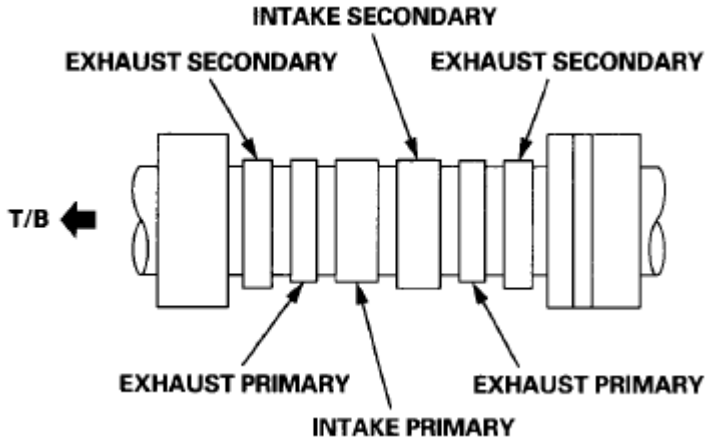

Fig. 123: Measuring Cam Lobe Height For Intake And Secondary Exhaust - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

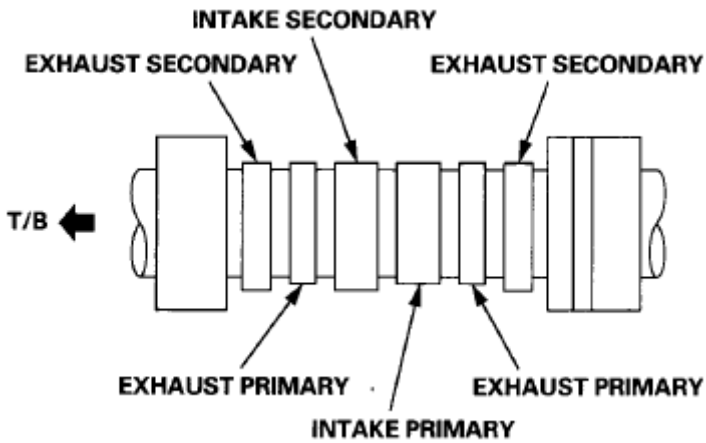

Fig. 124: Measuring Cam Lobe Height For Intake And Secondary Exhaust - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VALVE, SPRING, AND VALVE SEAL REMOVAL

Special Tools Required

Valve Spring Compressor Attachment 07757-PJ1010A

NOTE: Identify the valves and the valve springs as they are removed so that each item can be reinstalled in its original position.

1. Remove the **cylinder head**.
2. Remove the **rocker arm assembly**.
3. Using an appropriate-sized socket (A) and a plastic mallet (B), lightly tap the spring retainer to loosen the valve cotters.

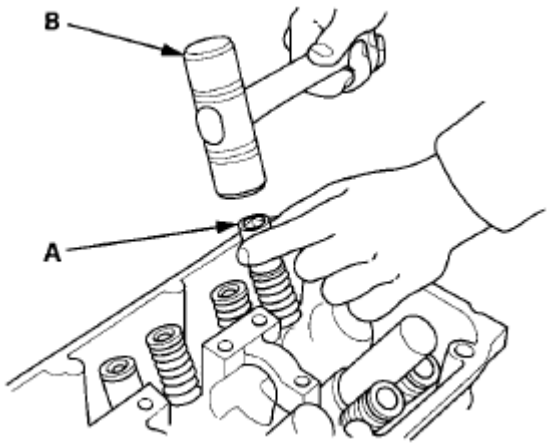

Fig. 125: Tapping Spring Retainer To Loosen Valve Cotters Using Socket And Plastic Mallet

Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the valve spring compressor attachment and the valve spring compressor. Compress the spring and remove the valve cotters.

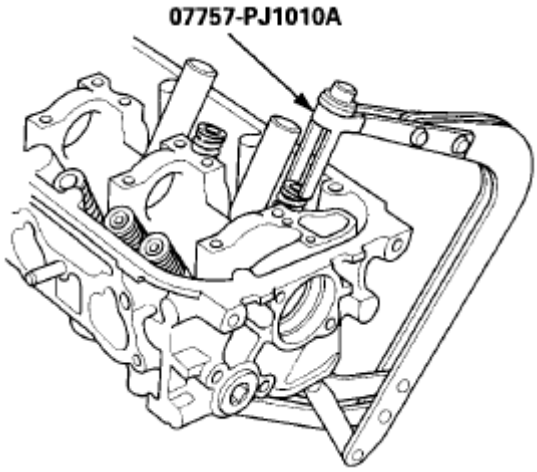

Fig. 126: Installing Valve Spring Compressor Attachment And Valve Spring Compressor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the valve spring compressor and the valve spring compressor attachment, then remove the spring retainer, the valve spring, and the valve.
6. Install the valve guide seal remover (A).

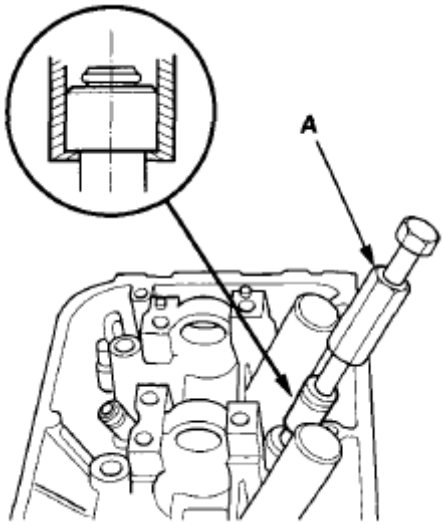

Fig. 127: Identifying Valve Guide Seal Remover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the valve seal.

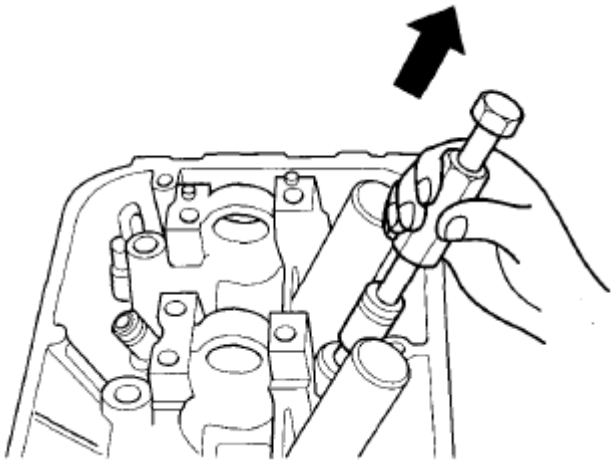

Fig. 128: Removing Valve Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the valve spring seat.

VALVE INSPECTION

1. Remove the **valves**.
2. Measure the valve in these areas.

Intake Valve Dimensions

A Standard (New): 35.90-36.01 mm (1.413-1.421 in)

B Standard (New): 116.55-117.15 mm (4.589-4.612 in)

C Standard (New): 5.485-5.495 mm (0.21594-0.21634 in)

C Service Limit: 5.455 mm (0.21476 in)

Exhaust Valve Dimensions

A Standard (New): 29.90-30.10 mm (1.177-1.185 in)

B Standard (New): 113.90-114.50 mm (4.484-4.508 in)

C Standard (New): 5.450-5.460 mm (0.21457-0.21496 in)

C Service Limit: 5.420 mm (0.21339 in)

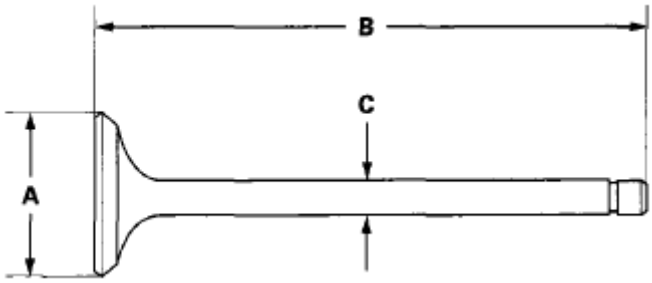

Fig. 129: Measuring Intake And Exhaust Valve Dimensions
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VALVE STEM-TO-GUIDE CLEARANCE INSPECTION

1. Remove the **valves**.
2. Subtract the O.D. of the valve stem, measured with a micrometer, from the I.D. of the valve guide, measured with an inside micrometer or a ball gauge. Take the measurements in three places along the valve stem and three places inside the valve guide. The difference between the largest guide measurement and the smallest stem measurement should not exceed the service limit.

   Intake Valve Stem-to-Guide Clearance

   Standard (New): 0.020-0.045 mm (0.00079-0.00177 in)

   Service Limit: 0.08 mm (0.0031 in)

   Exhaust Valve Stem-to-Guide Clearance Standard (New): 0.055-0.080 mm (0.00217-0.00315 in)

   Service Limit: 0.11 mm (0.0043 in)

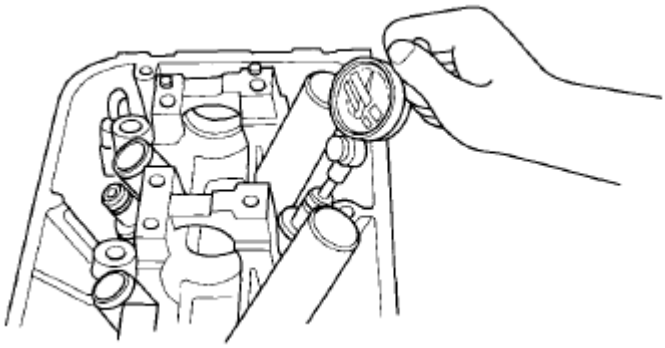

Fig. 130: Measuring Valve Stem-To-Guide Clearance Using Micrometer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

VALVE GUIDE REPLACEMENT

Special Tools Required

- Valve Guide Driver, 5.35 x 9.7 mm 07742-0010100
- Valve Guide Reamer, 5.5 mm 07HAH-PJ7A100

1. Inspect the **valve stem-to-guide clearance**.
2. As illustrated, use a commercially available air-impact valve guide driver (A) modified to fit the diameter of the valve guides. In most cases, the same procedure can be done using the valve guide driver, 5.35 x 9.7 mm and a conventional hammer.

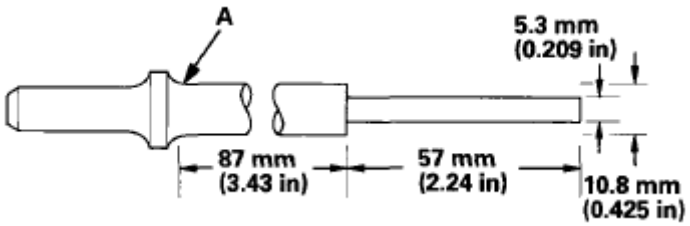

Fig. 131: Identifying Air-Impact Valve Guide Driver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Select the proper replacement guides, and chill them in the freezer section of a refrigerator for at least an hour.
4. Use a hot plate or oven to evenly heat the cylinder head to 300°F (150°C). Monitor the temperature with a cooking thermometer. Do not get the head hotter than 300°F (150°C); excessive heat may loosen the valve seats.

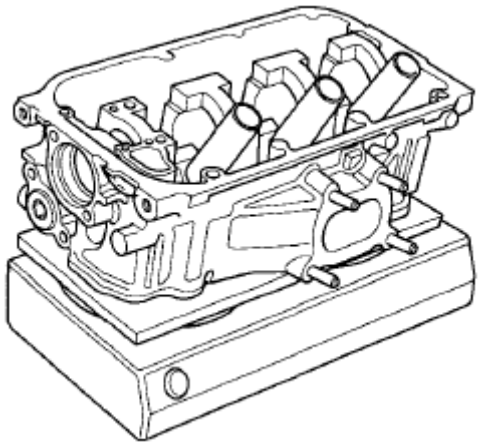

Fig. 132: Using Hot Plate Or Oven To Evenly Heat Cylinder Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Working from the camshaft side, use the driver and an air hammer to drive the guide about 2 mm (0.08 in) towards the combustion chamber. This will knock off some of the carbon and make removal easier. Hold the air hammer directly in line with the valve guide to prevent damaging the driver. Wear safety goggles or a face shield.
6. Turn the head over, and drive the guide out toward the camshaft side of the head.

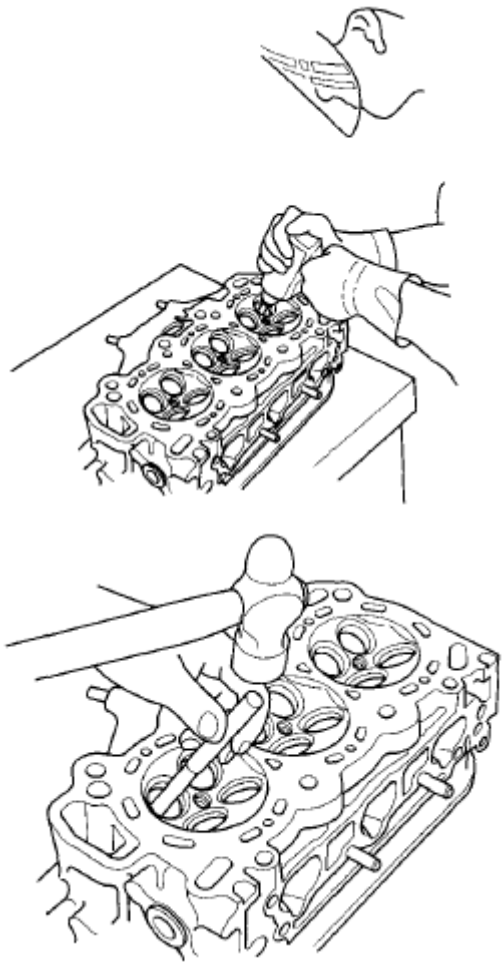

Fig. 133: Turning Head Over And Driving Guide Out Toward Camshaft Side Of Head
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. If a valve guide still will not move, drill it out with an 8 mm (5/16 in) drill bit, then try again.

NOTE: Drill guides only in extreme cases; you could damage the cylinder head if the guide breaks.

8. Remove the new guide(s) from the freezer, one at a time, as you need them.
9. Apply a thin coat of new engine oil to the outside of the new valve guide. Install the guide from the camshaft side of the head; use the valve guide driver to drive the guide to the specified installed height (A) of the guide (B). If you have all 12 guides to do, you may have to reheat the head.

Valve Guide Installed Height

Intake: 21.20-22.20 mm (0.8346-0.8740 in)

Exhaust: 20.60-21.60 mm (0.8110-0.8504 in)

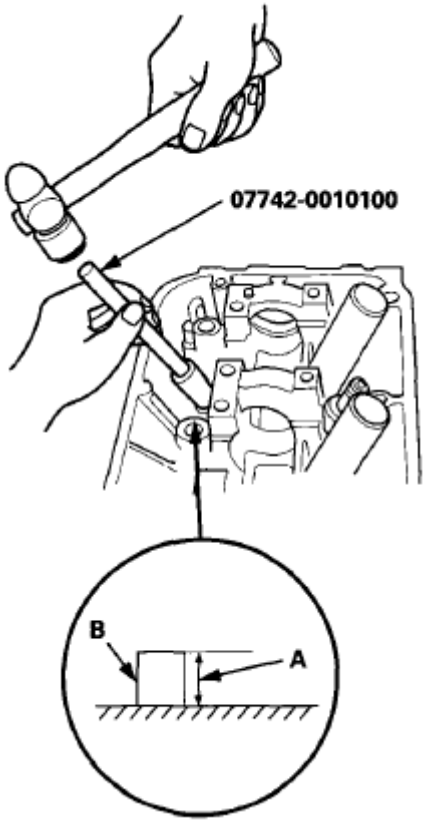

Fig. 134: Installing Guide To Specified Height From Camshaft Side Of Head Using Valve Guide Driver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Coat both the valve guide reamer, 5.5 mm and the valve guide with cutting oil.
11. Rotate the reamer clockwise the full length of the valve guide bore.

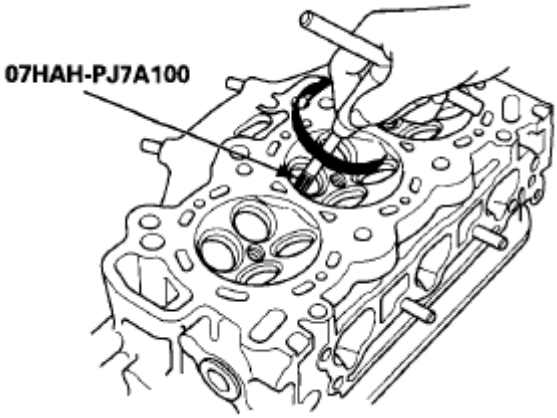

Fig. 135: Rotating Reamer Clockwise Full Length Of Valve Guide Bore
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Continue to rotate the reamer clockwise while removing it from the bore.

13. Thoroughly wash the guide in detergent and water to remove any cutting residue.
14. Check the **clearance with a valve**. Verify that a valve slides into the intake and exhaust valve guides without sticking.
15. Inspect the **valve seating**. If necessary renew the valve seat using a valve seat cutter.

VALVE SEAT RECONDITIONING

1. Inspect **valve stem-to-guide clearance**. If the valve guides are worn, replace them before cutting the valve seats.
2. Renew the valve seats in the cylinder head using a valve seat cutter.

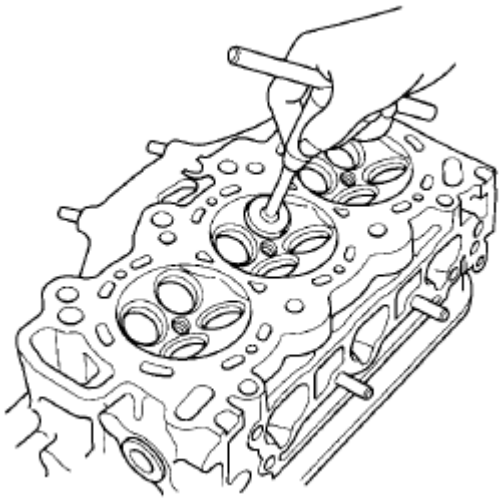

Fig. 136: Renewing Valve Seats In Cylinder Head Using Valve Seat Cutter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Carefully cut a 45 ° seat, removing only enough material to ensure a smooth and concentric seat.
4. Bevel the upper and lower edges at the angles shown in the illustration. Check the width of the seat and adjust accordingly.

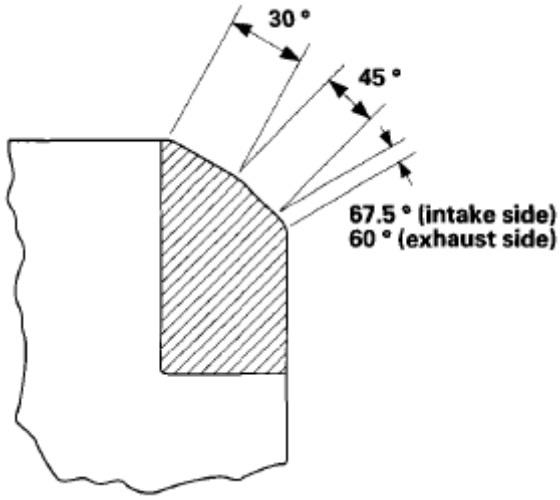

Fig. 137: Bevelling Upper And Lower Edges At Specified Angles
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Make one more very light pass with the 45 ° cutter to remove any possible burrs caused by the other cutters.

   Valve Seat Width

   Standard (New): 1.25-1.55 mm (0.0492-0.0610 in)

   Service Limit: 2.00 mm (0.0787 in)

6. After resurfacing the seat, inspect it for even valve seating. Apply Prussian Blue compound (A) to the valve face. Insert the valve in its original location in the head, then lift it and snap it closed against the seat several times.

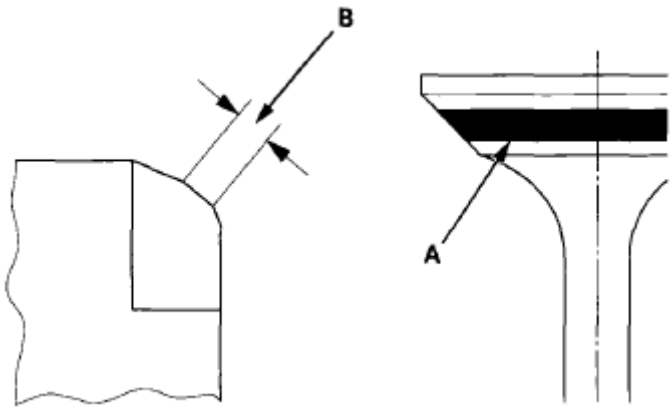

Fig. 138: Identifying Valve Seating Surface And Prussian Blue Compound
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. The actual valve seating surface (B), as shown by the blue compound, should be centered on the seat:

- If it is too high (closer to the valve stem), you must make a second cut with the 67.5 ° cutter (intake seat) or the 60 ° cutter (exhaust seat) to move it down, then one more cut with the 45 ° cutter to restore seat width.
- If it is too low (closer to the valve edge), you must make a second cut with the 30 ° cutter to move it up, then one more cut with the 45 ° cutter to restore seat width.

NOTE: The final cut should always be made with the 45 ° cutter.

8. Insert the intake and exhaust valves in the head, and measure the valve stem installed height (A).

   Intake Valve Stem Installed Height Standard (New): 46.75-47.55 mm (1.8405-1.8720 in)

   Service Limit: 47.80 mm (1.8819 in)

   Exhaust Valve Stem Installed Height Standard (New): 46.68-47.48 mm (1.8378-1.8693 in)

   Service Limit: 47.73 mm (1.8791 in)

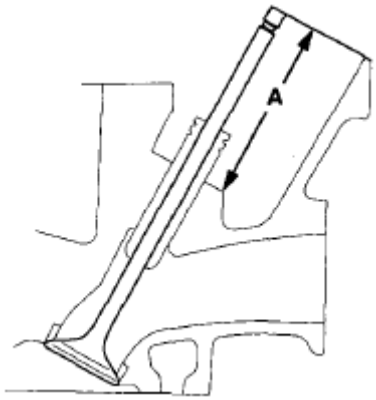

Fig. 139: Measuring Intake Valve Stem Installed Height
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. If the valve stem installed height is over the service limit, replace the valve and recheck. If it is still over the service limit, replace the cylinder head; the valve seat in the head is too deep.

VALVE, SPRING, AND VALVE SEAL INSTALLATION

Special Tools Required

- Stem Seal Driver 07PAD-0010000
- Valve Spring Compressor Attachment 07757-PJ1010A

1. Coat the valve stems with new engine oil. Install the valves in the valve guides.
2. Check that the valves move up and down smoothly.

3. Install the spring seats on the cylinder head.
4. Install the new valve seals (A) using the 5.5 mm side of the stem seal driver (B).

NOTE: The exhaust valve seal (C) have a black spring (D) and intake valve seal (E) have a white or silver spring (F); they are not interchangeable.

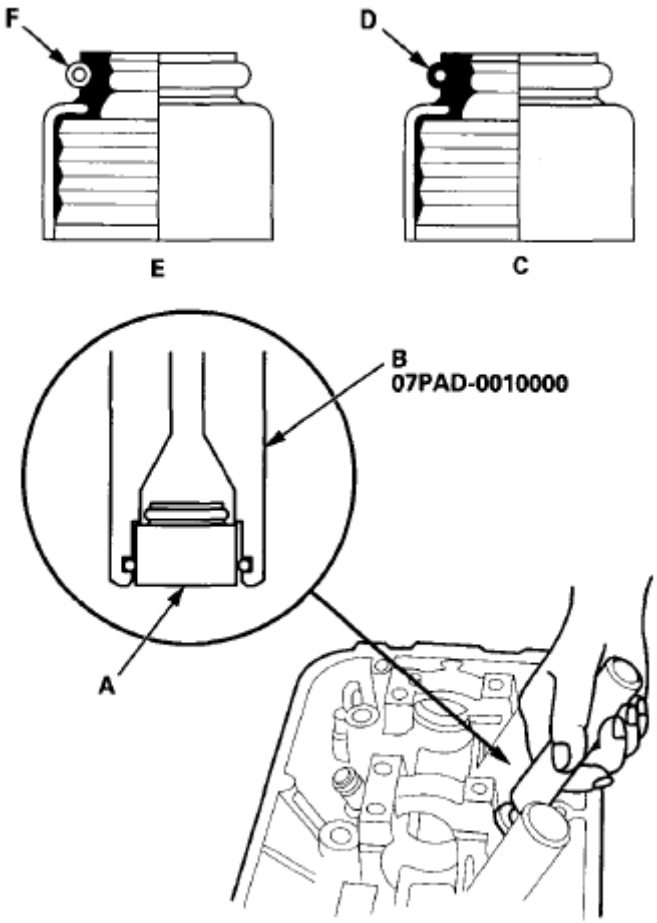

Fig. 140: Installing Valve Seals Using Side Of Stem Seal Driver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the valve spring and the spring retainer. Place the end of the valve spring with the closely wound coils toward the cylinder head.
6. Install the valve spring compressor attachment and the valve spring compressor. Compress the spring and install the valve cotters.

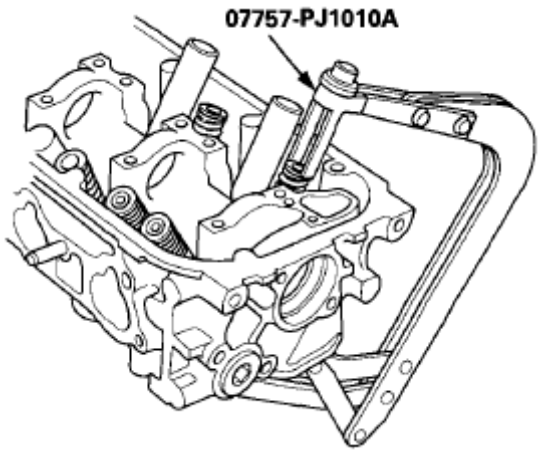

Fig. 141: Installing Valve Spring Compressor Attachment And Valve Spring Compressor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the valve spring compressor and the valve spring compressor attachment.
8. Lightly tap the end of each valve stem two or three times with a plastic mallet (A) to ensure proper seating of the valve and valve cotters. Tap the valve stem only along its axis so you do not bend the stem.

NOTE: Be sure to raise the head off the work bench so the valve is not possibly damaged.

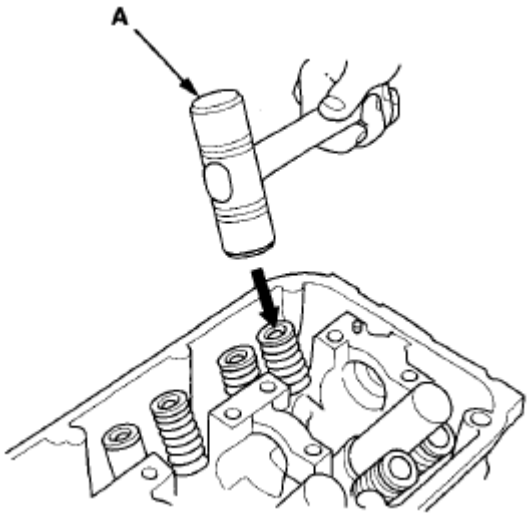

Fig. 142: Tapping End Of Valve Stem With Plastic Mallet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CAMSHAFT, ROCKER ARM ASSEMBLY, CAMSHAFT SEAL, AND PULLEY INSTALLATION

FRONT

1. Loosen the locknuts and the adjusting screws.
2. Dry the camshaft oil seal housing.
3. Apply a light coat of new engine oil to the lip of the camshaft oil seal.
4. Gently tap the new camshaft oil seal (A) squarely into the cylinder head to the specified installed height.

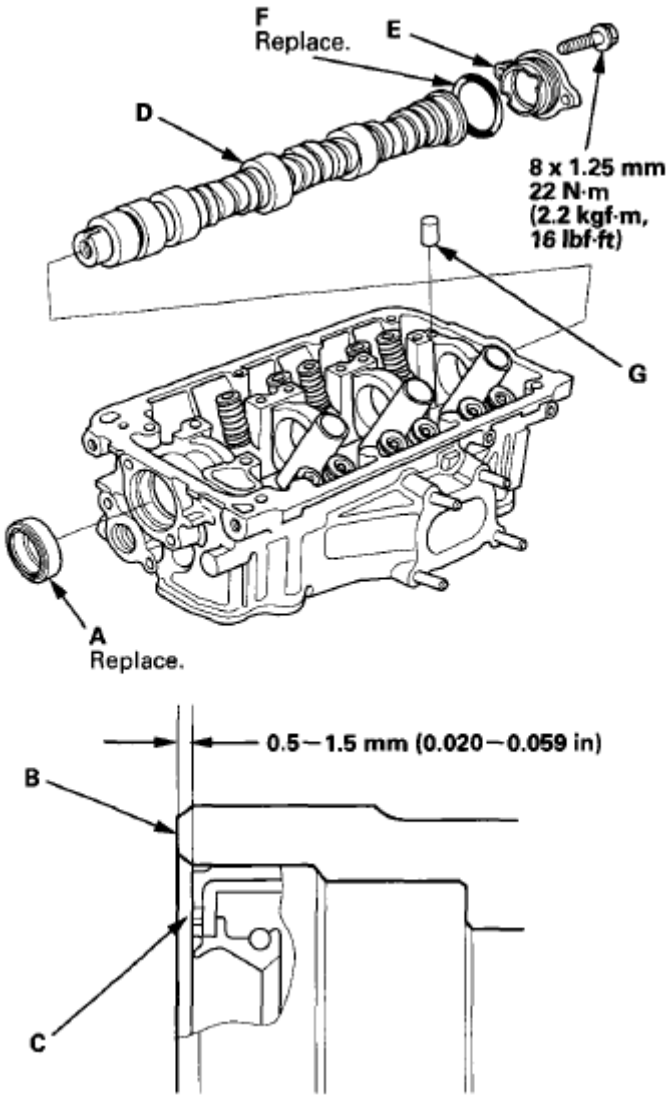

Fig. 143: Identifying Camshaft Oil Seal And Distance Between Cylinder Head Surface And Oil Seal With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the distance between the cylinder head surface (B) and the oil seal (C).

   Oil Seal Installed Height 0.5-1.5 mm (0.020-0.059 in)

6. Insert the camshaft (D) into the cylinder head, then install the camshaft thrust cover (E). Always use a new O-ring (F). Apply new engine oil to the journals and the cam lobes.

7. Clean the excess oil off the camshaft, and check that the oil seal lip is not distorted.
8. Install the solid dowel pin (G).
9. If the rocker arm assembly is disassembled, reassemble the **rocker arm assembly**.
10. Remove all of the old liquid gasket from the rocker shaft holder and the cylinder head.
11. Apply liquid gasket, P/N 08717-0004, 08718-0003, 08718-0004, or 08718-0009 to the rocker shaft holder mating surface of the cylinder head. Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- **Apply a 2.5 mm (0.098 in) diameter bead of liquid gasket along the broken line (A).**
- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**

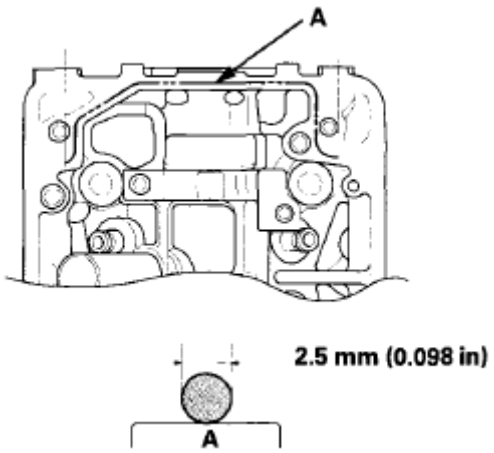

Fig. 144: Identifying Broken Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Set the rocker arm assembly in place, and loosely install the bolts. Make sure that the rocker arms are properly positioned on the valve stems.

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the rocker arm assembly.**

13. Tighten each bolt two turns at a time in the sequence shown to ensure that the rockers do not bind on the valves.

Specified Torque

8 x 1.25 mm: 22 N.m (2.2 kgf.m, 16 lbf.ft)

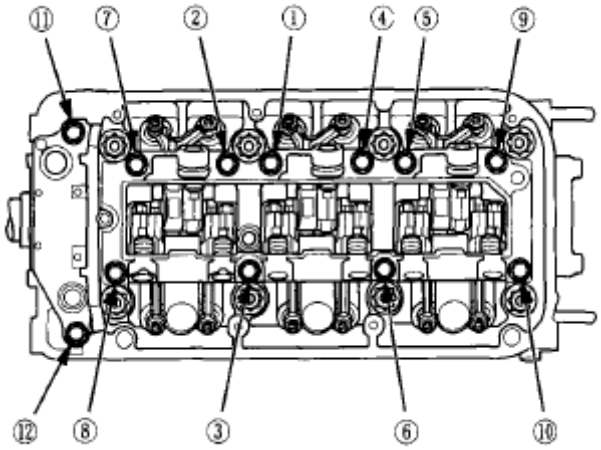

Fig. 145: Identifying Rocker Bolts With Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the injector base (A). Always use a new gasket (B).

NOTE: The front injector base gasket is different from the rear one. Do the mix injector base gasket types.

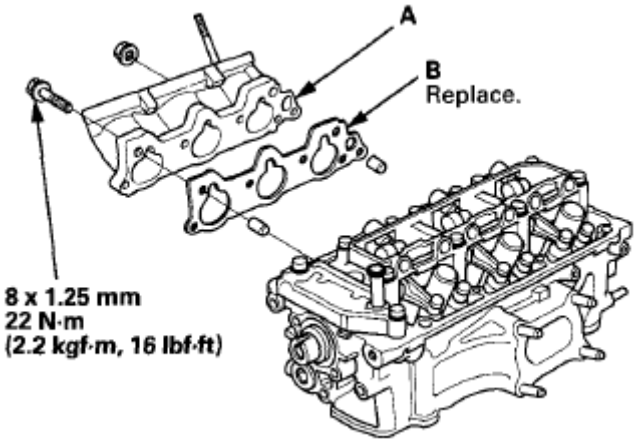

Fig. 146: Identifying Injector Base And Gasket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Apply new engine oil to the threads of the camshaft pulley mounting bolt (A). Install the back cover (B), then install the camshaft pulley (C).

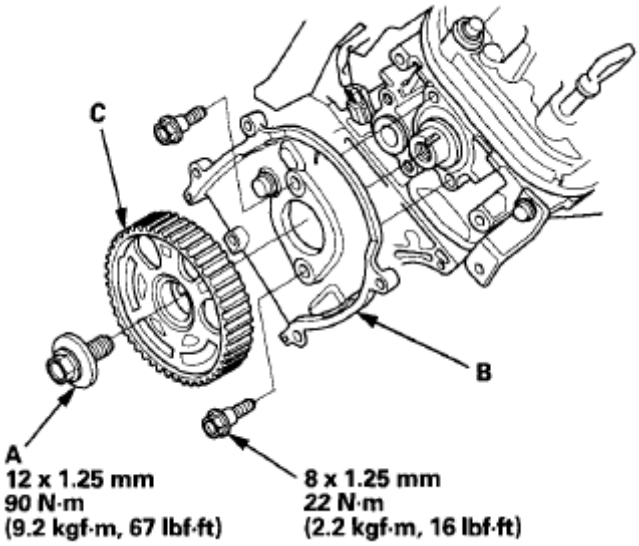

Fig. 147: Identifying Camshaft Pulley, Back Cover And Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Set the camshaft pulleys to top dead center (TDC) before bolting them onto the engine block (see step 6).

REAR

1. Loosen the locknuts and the adjusting screws.
2. Dry the camshaft oil seal housing.
3. Apply a light coat of new engine oil to the lip of the camshaft oil seal.
4. Gently tap the new camshaft oil seal (A) squarely into the cylinder head to the specified installed height.

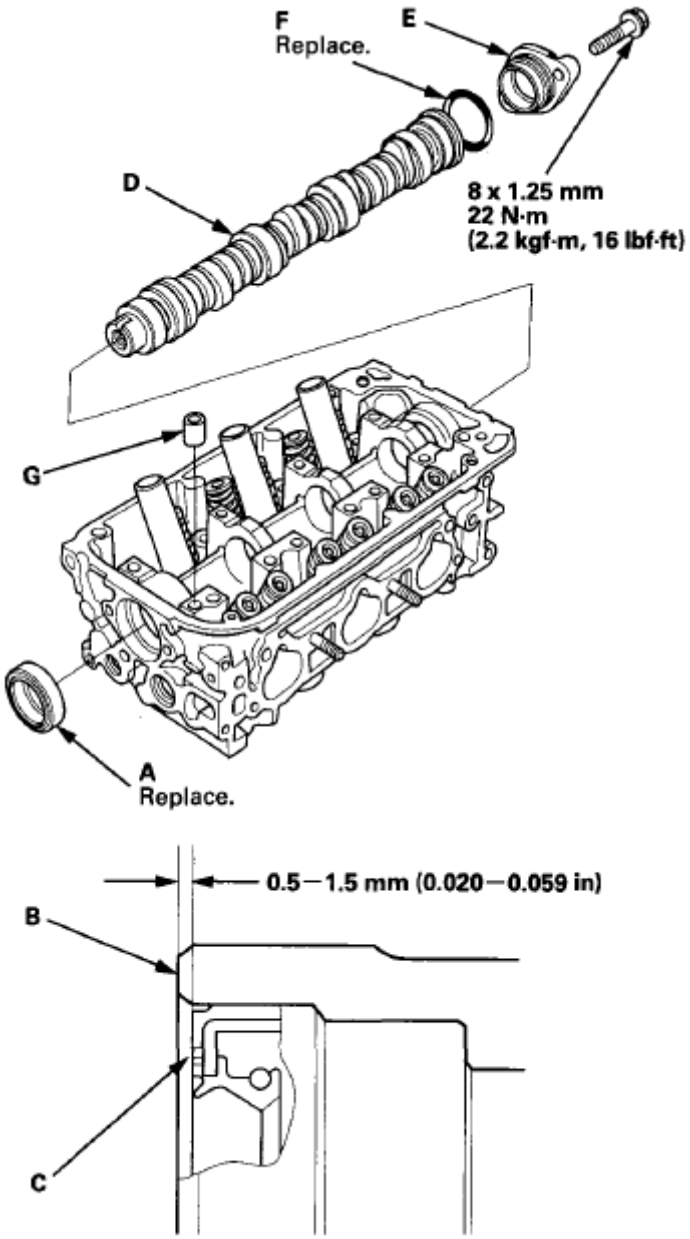

Fig. 148: Identifying Camshaft Oil Seal And Distance Between Cylinder Head Surface And Oil Seal With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the distance between the cylinder head surface (B) and the oil seal (C).

   Oil Seal Installed Height 0.5-1.5 mm (0.020-0.059 in)

6. Insert the camshaft (D) into the cylinder head, then install the camshaft thrust cover (E). Always use a new O-ring (F). Apply new engine oil to the journals and the cam lobes.
7. Clean the excess oil off the camshaft, and check that the oil seal lip is not distorted.
8. Install the hollow dowel pin (G).

9. If the rocker arm assembly is disassembled, reassemble the **rocker arm assembly**.
10. Remove all of the old liquid gasket from the rocker shaft holder and the cylinder head.
11. Apply liquid gasket, P/N 08717-0004, 08718-0003, 08718-0004, or 08718-0009 to the rocker shaft holder mating surface of the cylinder head. Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- **Apply a 2.5 mm (0.098 in) diameter bead of liquid gasket along the broken line (A).**
- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**

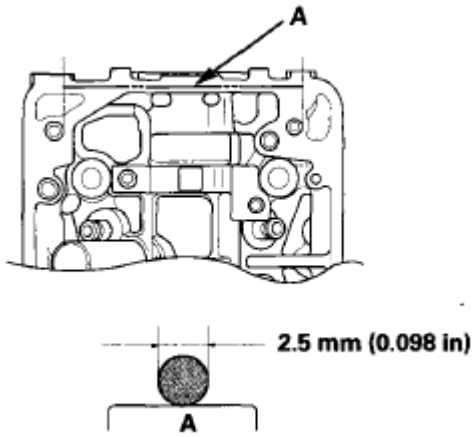

Fig. 149: Identifying Broken Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Set the rocker arm assembly in place, and loosely install the bolts. Make sure that the rocker arms are properly positioned on the valve stems.

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the rocker arm assembly.**

13. Tighten each bolt two turns at a time in the sequence shown to ensure that the rockers do not bind on the valves.

Specified Torque

8 x 1.25 mm: 22 N.m (2.2 kgf.m, 16 lbf.ft)

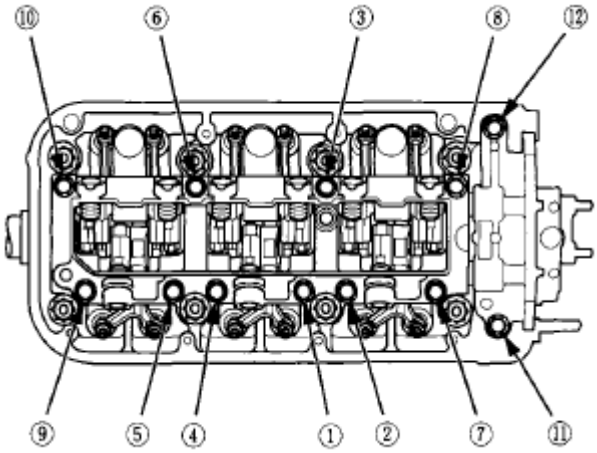

Fig. 150: Identifying Rocker Bolts With Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the injector base (A). Always use a new gasket (B).

NOTE: The rear injector base gasket is different from the front one. Do the mix injector base gasket types.

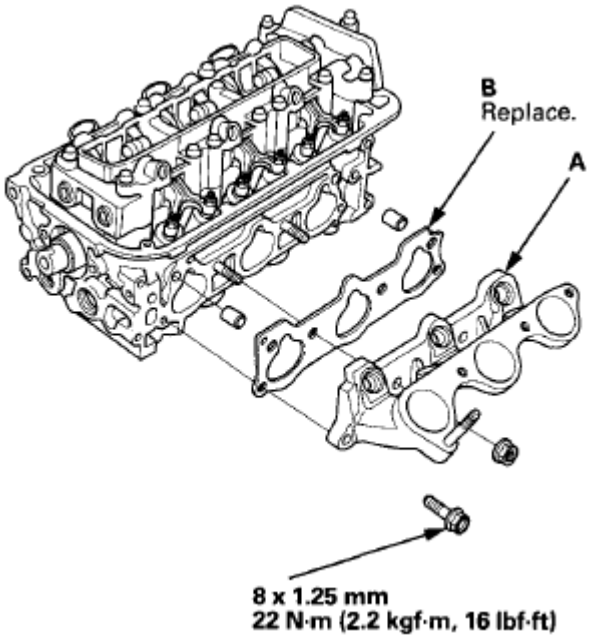

Fig. 151: Identifying Injector Base And Gasket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Apply new engine oil to the threads of the camshaft pulley mounting bolt (A). Install the back cover (B), then install the camshaft pulley (C).

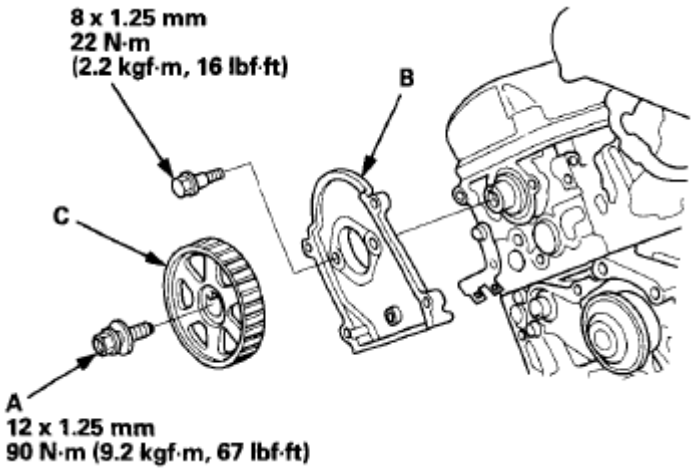

Fig. 152: Identifying Camshaft Pulley, Back Cover And Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Set the camshaft pulleys to TDC before bolting them onto the engine block (see step 6).

CYLINDER HEAD INSTALLATION

1. Clean the cylinder head and the engine block surface.
2. Clean and install the oil control orifices (A) with new O-rings (B).

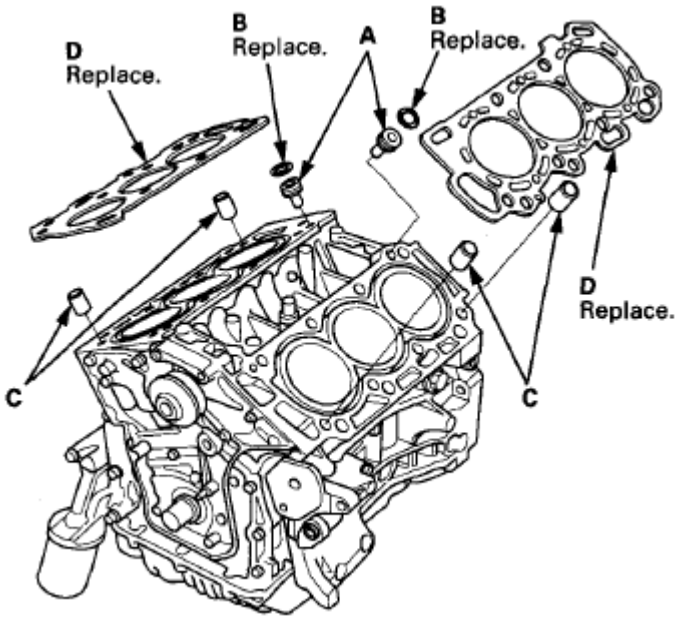

Fig. 153: Identifying Cylinder Head Gaskets, Oil Control Orifices, O-Rings And Dowel Pins
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the dowel pins (C) and the new cylinder head gaskets (D).
4. Clean the timing belt pulleys, the timing belt guide plate, and the upper and lower covers.

5. Set the timing belt drive pulley to top dead center (TDC) by aligning the TDC mark (A) on the tooth of the timing belt drive pulley with the pointer (B) on the oil pump.

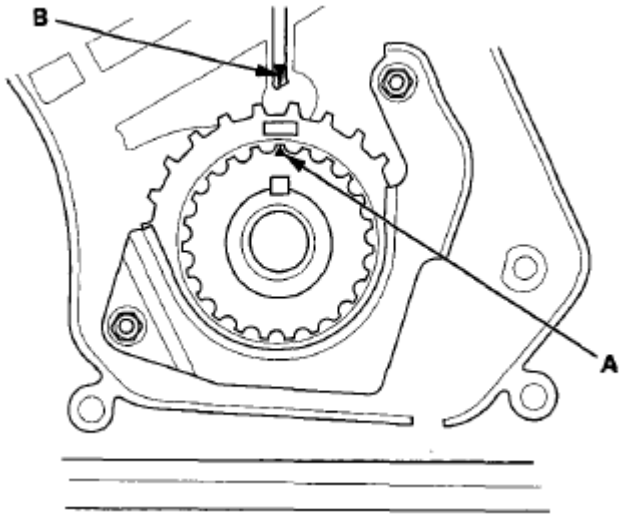

Fig. 154: Identifying TDC Mark And Pointer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Set the camshaft pulleys to TDC by aligning the TDC marks (A) on the camshaft pulleys with the pointers (B) on the back covers.

FRONT

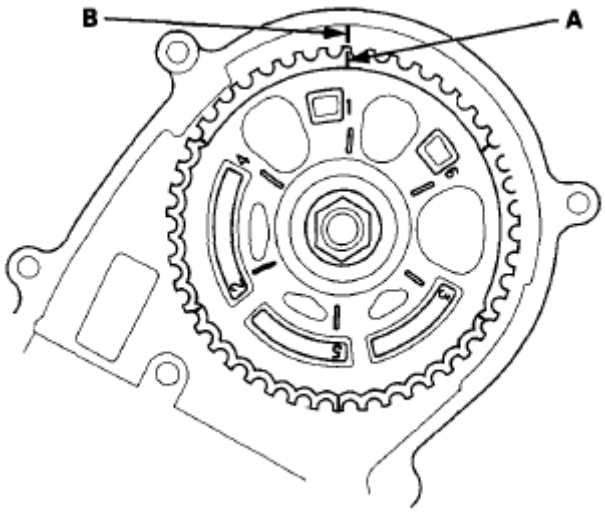

Fig. 155: Identifying TDC Marks On Camshaft Pulleys And Pointers On Back Covers - Front
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

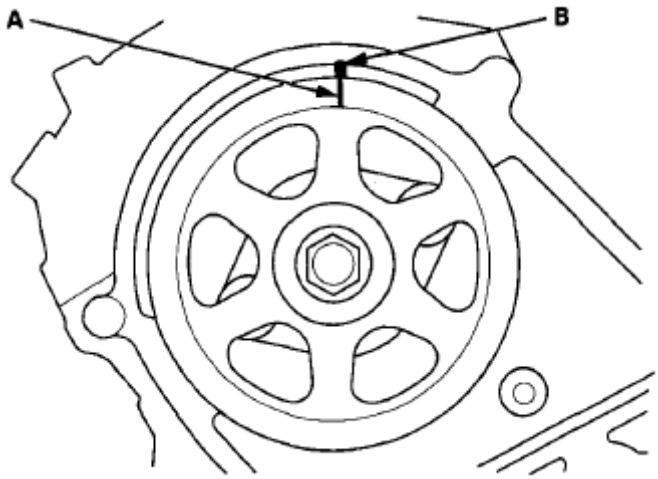

Fig. 156: Identifying TDC Marks On Camshaft Pulleys And Pointers On Back Covers - Rear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the cylinder heads on the engine block.
8. Measure the diameter of each cylinder head bolt at point A and point B.

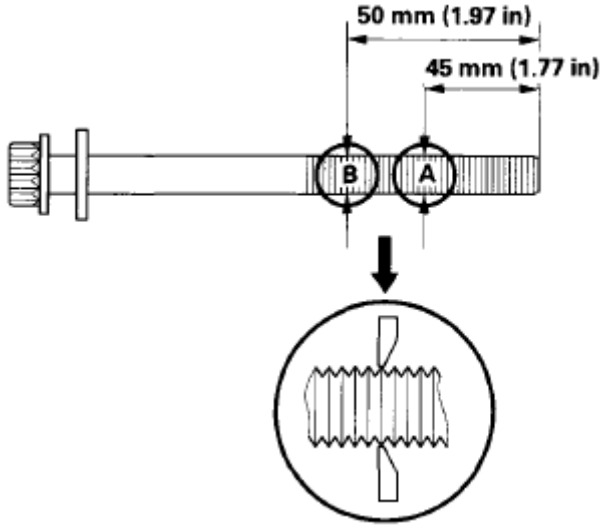

Fig. 157: Identifying Cylinder Head Bolt Diameter At Point A And B
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. If either diameter is less than 11.3 mm (0.445 in), replace the cylinder head bolt.
10. Apply new engine oil to the threads and under the bolt heads of all cylinder head bolts.
11. Torque the cylinder head bolts in sequence to 29 N.m (3.0 kgf.m, 22 lbf.ft) using a beam-type torque wrench. When using a preset click-type torque wrench, be sure to tighten slowly and do not overtighten. If a bolt makes any noise while you are torquing it, loosen the bolt and retighten it from the first step.

FRONT

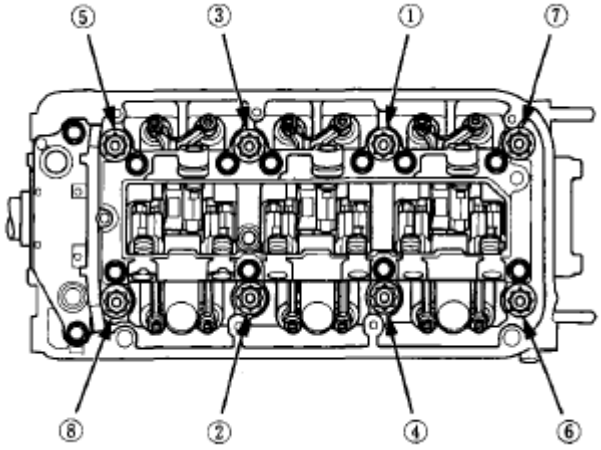

Fig. 158: Identifying Cylinder Head Bolts With Tightening Sequence (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

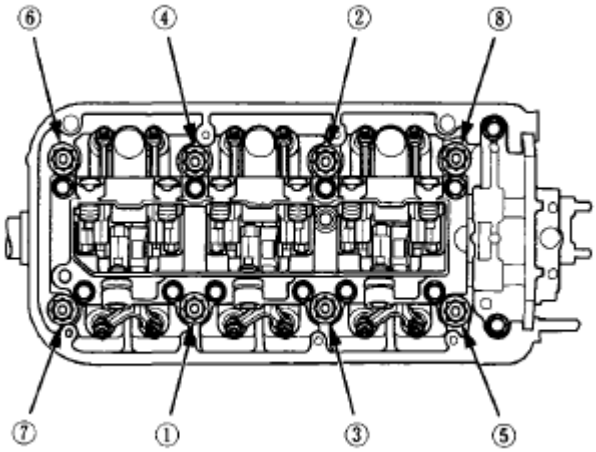

Fig. 159: Identifying Cylinder Head Bolts With Tightening Sequence (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. After torquing, tighten all cylinder head bolts in two steps (90 ° per step) using the sequence shown in step 11. If you are using a new cylinder head bolt, tighten the bolt an extra 90 °.

NOTE: Remove the cylinder head bolt if you tightened it beyond the specified angle, and go back to step 8 of the procedure. Do not loosen it back to the specified angle.

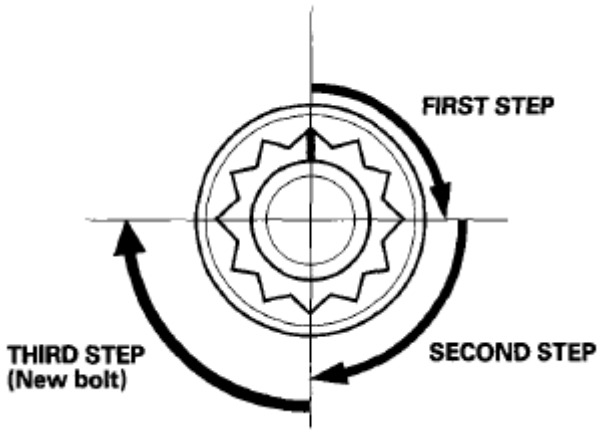

Fig. 160: Identifying Cylinder Head Bolts Tightening Steps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the **timing belt**.
14. Adjust the **valve clearance**.
15. Install the **cylinder head covers**.
16. Install the water passage (see **WATER PASSAGE REPLACEMENT**).
17. Install the injector bases (see **INJECTOR BASE REMOVAL AND INSTALLATION**).
18. Install the connector bracket (A) to the front cylinder head.

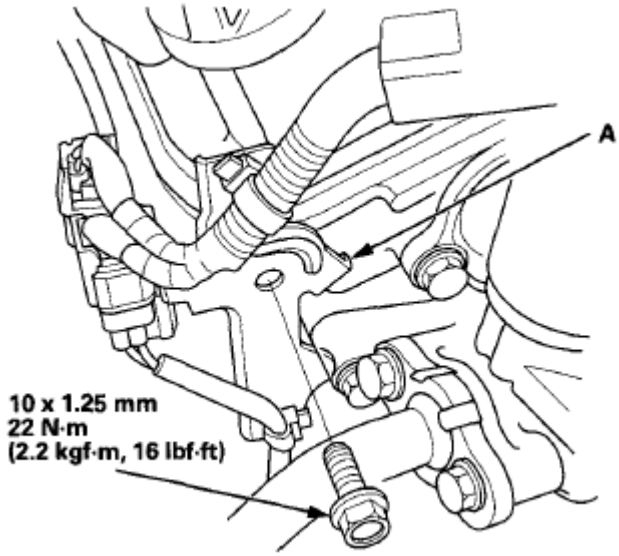

Fig. 161: Identifying Connector Bracket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Install the EVAP canister joint with the bracket (see step 9).
20. Install the engine mount control solenoid valve bracket (A) to the rear cylinder head.

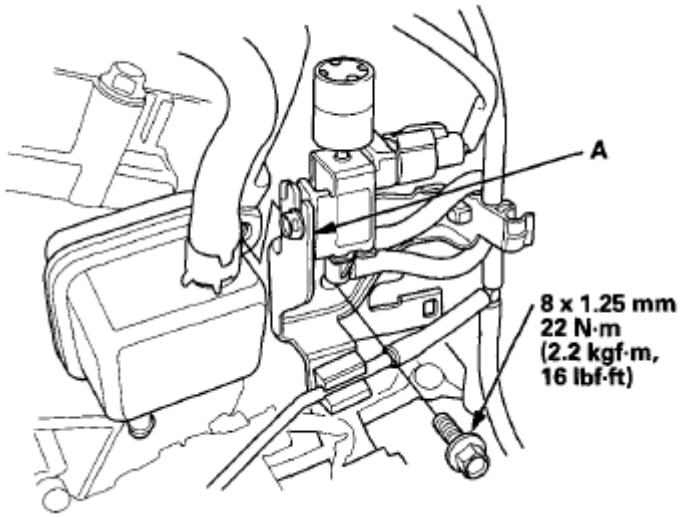

Fig. 162: Identifying Control Solenoid Valve Bracket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Connect the fuel feed hose (A), then install the quick-connect fitting cover (B) (see **FUEL LINE/QUICK-CONNECT FITTING INSTALLATION**).

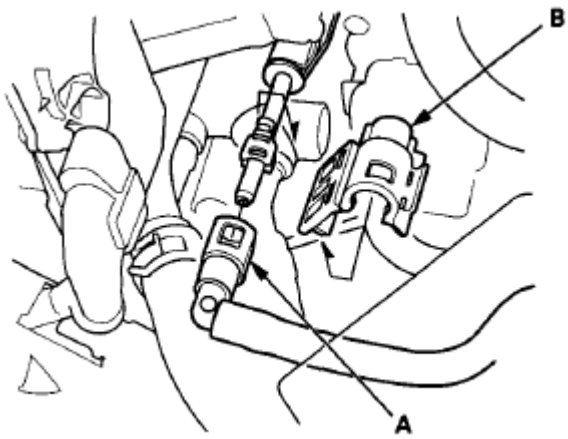

Fig. 163: Identifying Fuel Feed Hose And Quick-Connect Fitting Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Install the front warm up TWC (see **WARM UP TWC REMOVAL/INSTALLATION**) and the rear warm up TWC (see **REAR (BANK 1)**).
23. Connect the following engine wire harness connectors, and install the wire harness clamps to the cylinder head:
    - Six injector connectors
    - Knock sensor connector
    - ECT sensor 1 connector
    - Engine mount control solenoid valve connector
    - EGR valve connector

- CMP sensor connector
- Rocker arm oil control solenoid connector
- Rocker arm oil pressure switch connector
- Two A/F sensor connectors
- Two secondary HO2S connectors

24. Install the intake manifold (see **INSTALLATION**).
25. Install the alternator (see **INSTALLATION**).
26. Install the six ignition coils (see **IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION**).
27. Do the battery terminal reconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
28. After installation, check that all tubes, hoses, and connectors are installed correctly.
29. Inspect for fuel leaks. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode (do not operate the starter) so the fuel pump runs for about 2 seconds and pressurizes the fuel line. Repeat this operation three times, then check for fuel leakage at any point in the fuel line.
30. Refill the radiator with engine coolant, and bleed the air from the cooling system (see **COOLANT CHECK**).
31. Check for fluid leaks.
32. Do the ECM/PCM idle learn procedure (see **ECM/PCM IDLE LEARN PROCEDURE**).
33. Do the CKP pattern clear/CKP pattern learn procedure (see **CKP PATTERN CLEAR/CKP PATTERN LEARN**).
34. Inspect the idle speed (see **IDLE SPEED INSPECTION**).
35. Inspect the ignition timing (see **IGNITION TIMING INSPECTION**).
36. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

CAMSHAFT OIL SEAL INSTALLATION - IN CAR

Special Tools Required

Ball Joint Remover/Installer 07GAF-SD40330

1. Remove the **timing belt**.
2. Remove the camshaft pulley and the back cover (see step 18).
3. Remove the camshaft oil seal.
4. Clean and dry the camshaft oil seal housing.
5. Apply a light coat of new engine oil to the lip of the camshaft oil seal.
6. Using the ball joint remover/installer (A), a washer (B), and a 12 x 75 x 1.25 mm bolt (C), press in the new camshaft oil seal (D) squarely into the cylinder head to the specified installed height.

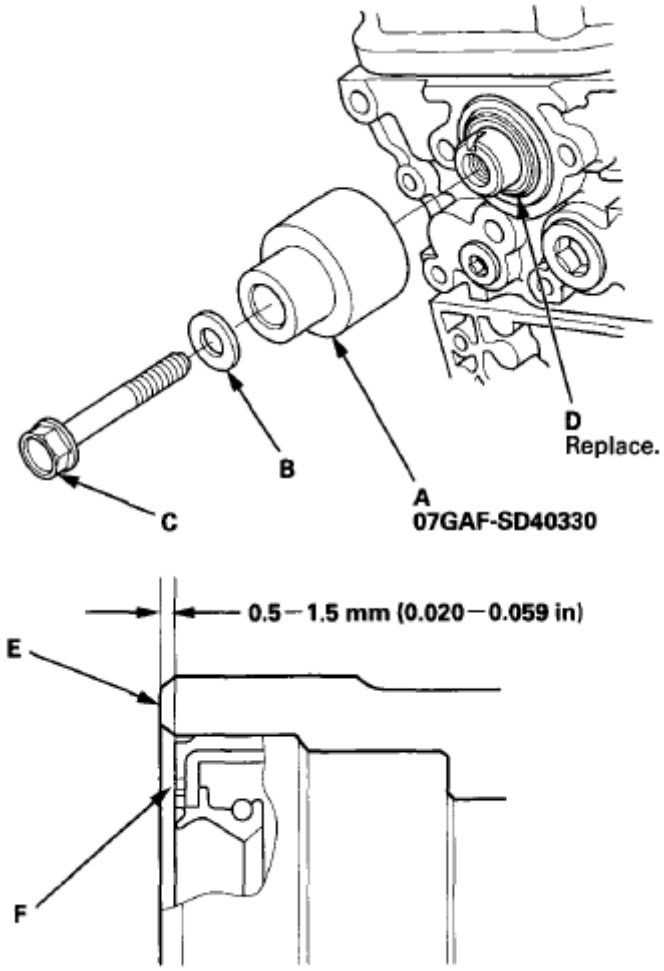

Fig. 164: Identifying Ball Joint Remover/Installer, Camshaft Oil Seal And Distance Between Cylinder Head Surface And Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Measure the distance between the cylinder head surface (E) and the oil seal (F).

   Oil Seal Installed Height 0.5-1.5 mm (0.020-0.059 in)

8. Clean the excess oil off the camshaft, and check that the oil seal is not distorted.
9. Apply new engine oil to the threads of the camshaft pulley mounting bolt. Install the back cover, then install the camshaft pulley:
   - Front (see step 15)
   - Rear (see step 15)
10. Install the **timing belt**.

SEALING BOLT INSTALLATION

NOTE: When installing the sealing bolts (A), always use a new washers (B).

FRONT

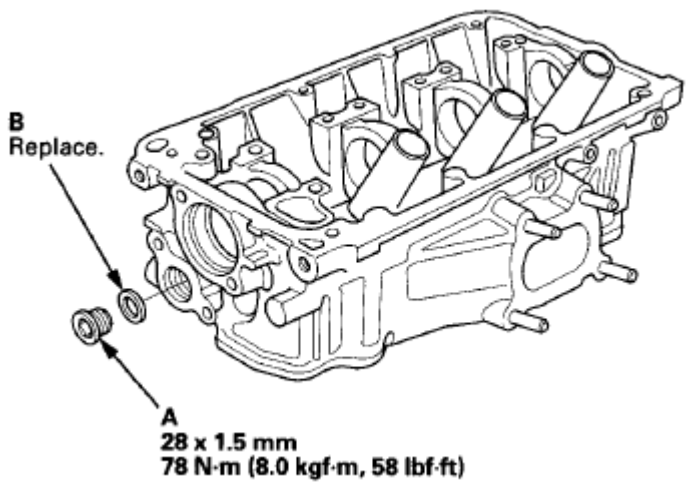

Fig. 165: Identifying Washers And Sealing Bolts With Torque Specification (Front)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REAR

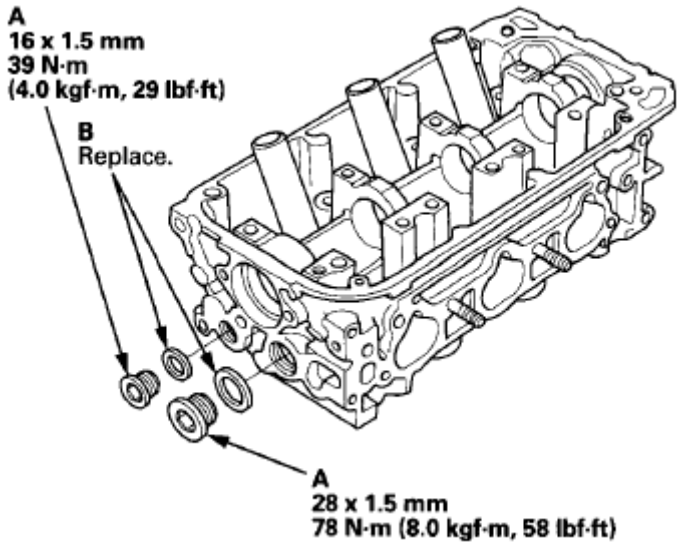

Fig. 166: Identifying Washers And Sealing Bolts With Torque Specification (Rear)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2012 ENGINE

Engine Assembly - TL

ENGINE REMOVAL

Special Tools Required

- 2008 V6 Attachment Arm SIL02C000033*
- Engine Support Hanger, A and Reds AAR-T1256*
- Engine Hanger Balance Bar VSB02C000019*
- Subframe Adapter VSB02C000016*

*: Available through the Acura Tool and Equipment Program, 888-424-6857.

NOTE:

- **Use fender covers to avoid damaging painted surfaces.**
- **To avoid damaging the wiring and terminals, unplug the wiring connectors carefully while holding the connector portion.**
- **Mark all wiring and hoses to avoid misconnection. Also, be sure that they do not contact other wiring or hoses, or interfere with other parts.**

1. Disconnect the support struts from both sides of the pivot ball (bolted to the hood). Secure the hood in a vertical position. Install the right side pivot ball into the lower threaded hole.

NOTE: Do not attempt to close the hood with the support strut in the vertical position, as it will damage the support strut and hood.

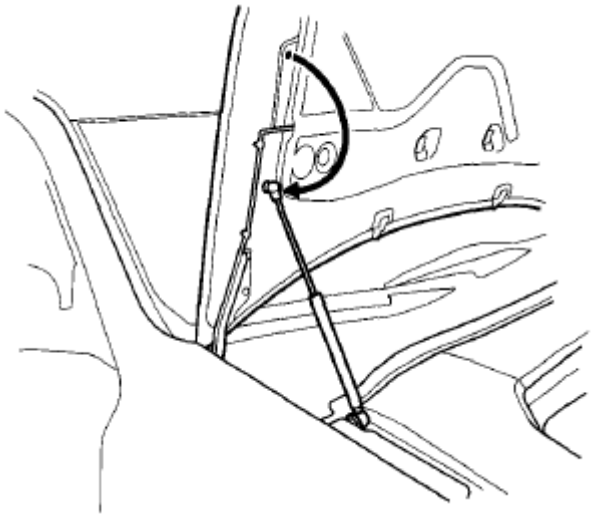

Fig. 1: Installing Right Side Pivot Ball Into Lower Threaded Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
3. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
4. Remove the air intake duct splash separator.

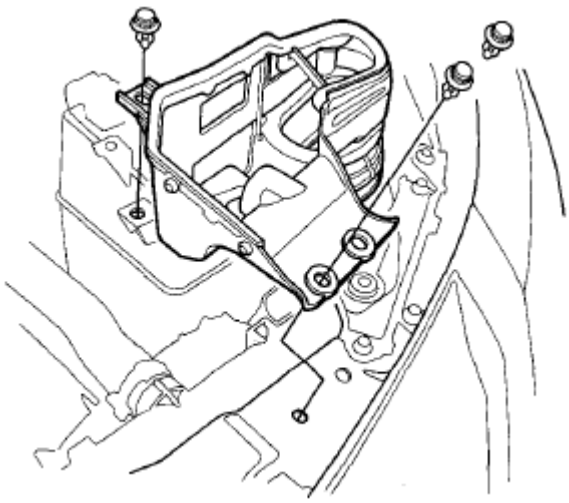

Fig. 2: Identifying Air Intake Duct Splash Separator And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Do the battery removal procedure (see **BATTERY REMOVAL AND INSTALLATION**).
6. Remove the air cleaner (see **THROTTLE BODY CLEANING**).
7. Remove the harness clamp (A) from the battery base (B).

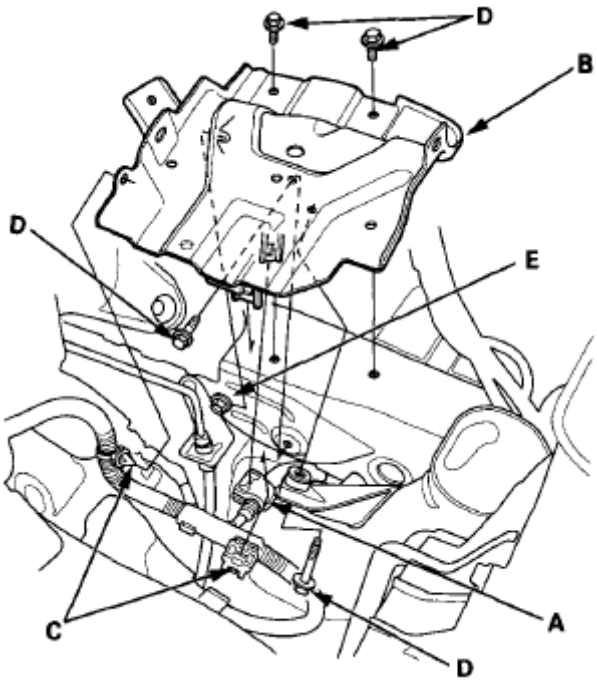

Fig. 3: Exploded View Of Engine Assembly And Related Parts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. M/T model: Remove the harness clamps (C) from the battery base.
9. Remove the bolts (D), and loosen the bolt (E), then remove the battery base.
10. M/T model: Remove the harness clamp (A) and the ground cable (B), then disconnect the positive starter cable (C).

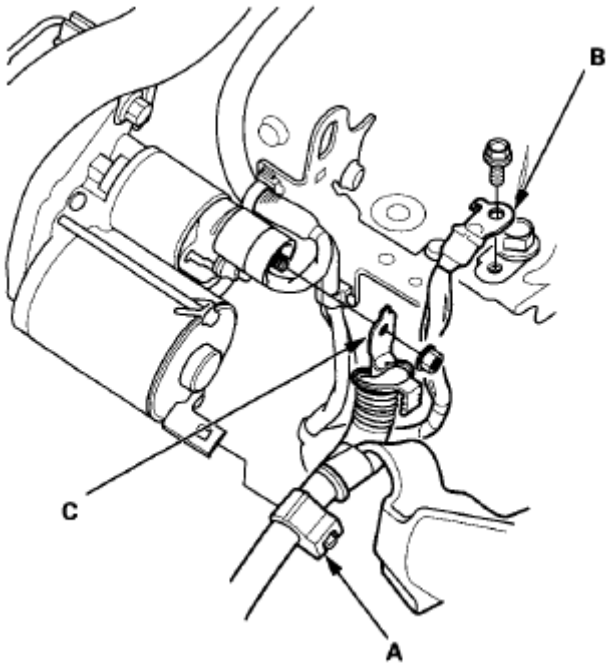

Fig. 4: Identifying Harness Clamp, Ground Cable And Positive Starter Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. A/T model: Remove the harness clamps (A), then disconnect the positive starter cable (B).

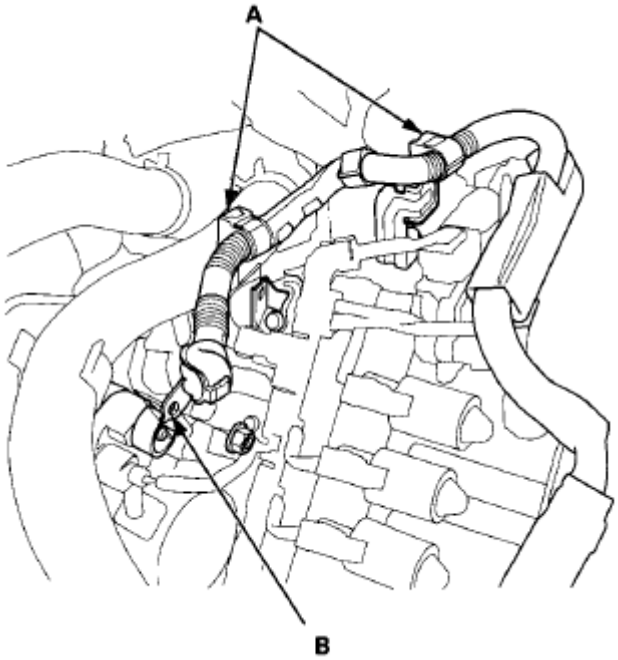

Fig. 5: Identifying Harness Clamp And Positive Starter Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the strut brace (see **FRAME BRACE REPLACEMENT**).
13. Disconnect the battery cable (A) from the under-hood fuse/relay box.

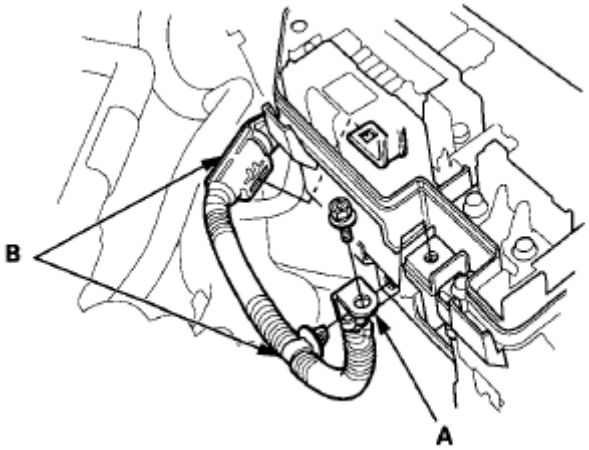

Fig. 6: Identifying Battery Cable From Under-Hood Fuse/Relay Box And Harness Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Remove the harness clamps (B).
15. Remove the harness clamp (A), then disconnect the harness connectors (B).

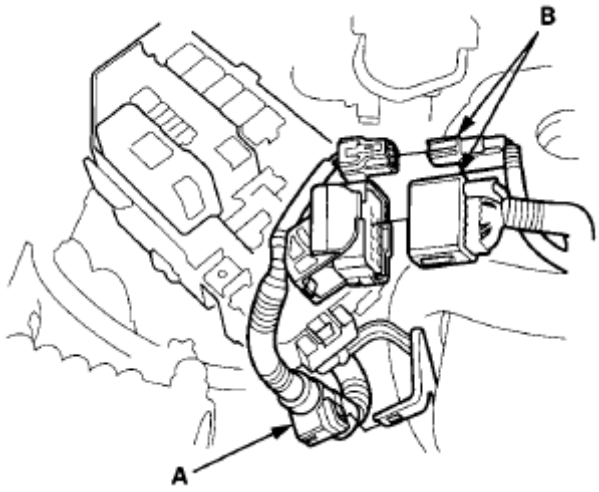

Fig. 7: Identifying Harness Clamp And Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Remove the harness clamp (A), then disconnect the ECM/PCM connectors (B).

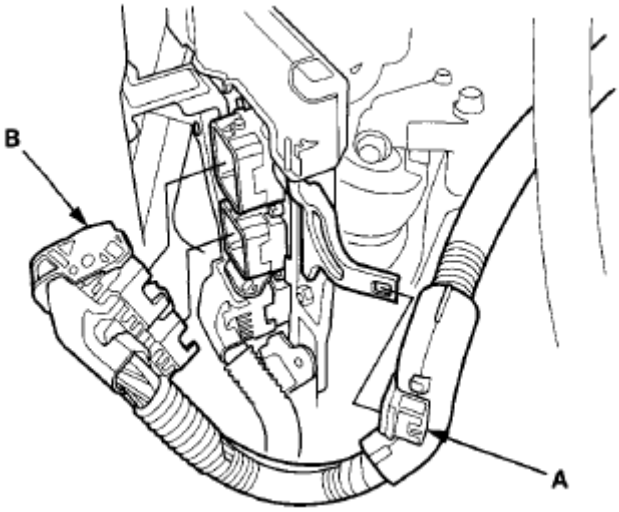

Fig. 8: Identifying Harness Clamp And ECM/PCM Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Remove the quick-connect fitting cover (A), then disconnect the fuel feed hose (B) (see **FUEL LINE/QUICK-CONNECT FITTING REMOVAL**).

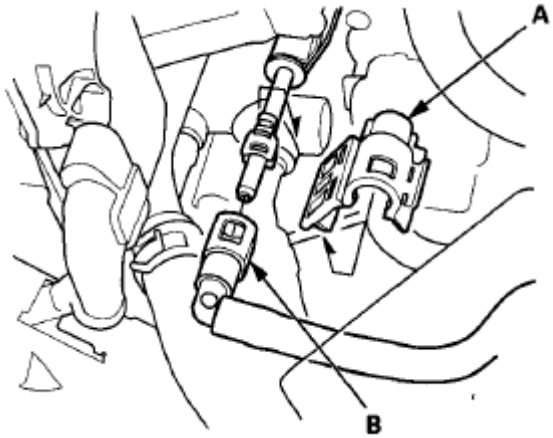

Fig. 9: Identifying Quick-Connect Fitting Cover And Fuel Feed Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Disconnect the brake booster vacuum hose (A) and the EVAP canister hose (B).

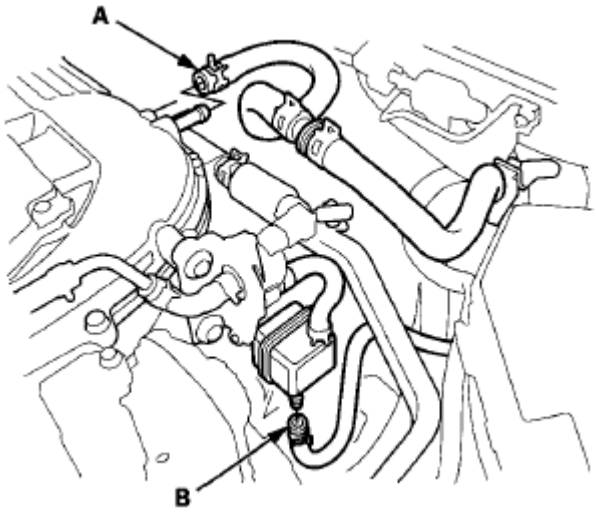

Fig. 10: Identifying Vacuum Hose And EVAP Canister Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. M/T model: Remove the three bolts securing the shift cable holder, then remove the shift cable and the select cable (see step 23 under **TRANSMISSION REMOVAL**). Do not bend the cables excessively.
20. M/T model: Remove the clutch slave cylinder and the clutch line bracket mounting nut (see step 24 under **TRANSMISSION REMOVAL**). Do not operate the clutch pedal once the slave cylinder has been removed.
21. A/T model: Remove the shift cable (see **SHIFT CABLE REPLACEMENT**). Do not bend the shift cable excessively.
22. Remove the drive belt (see **DRIVE BELT REPLACEMENT**).
23. Disconnect the EPS connectors (A).

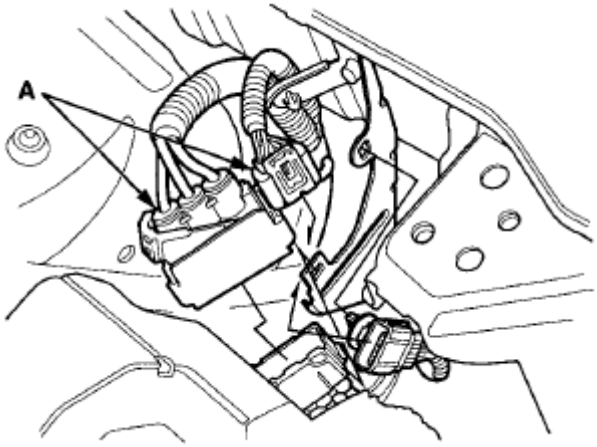

Fig. 11: Identifying EPS Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Remove the steering joint cover (A).

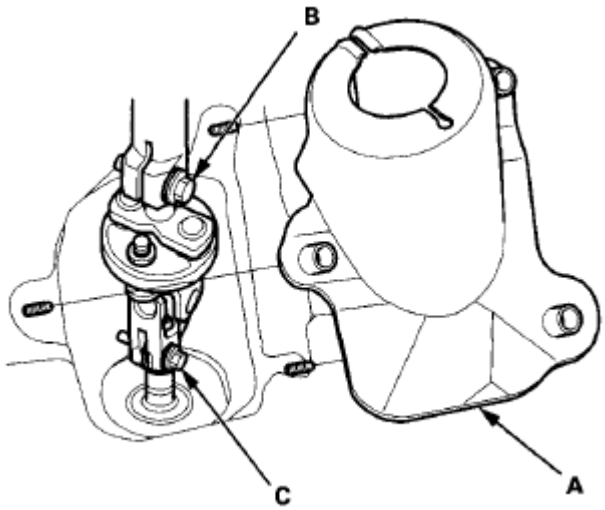

Fig. 12: Identifying Steering Joint Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Loosen the upper steering joint bolt (B) and the lower steering bolt (C).
26. Center the steering wheel spokes, and install a commercially available steering wheel holder tool (A).

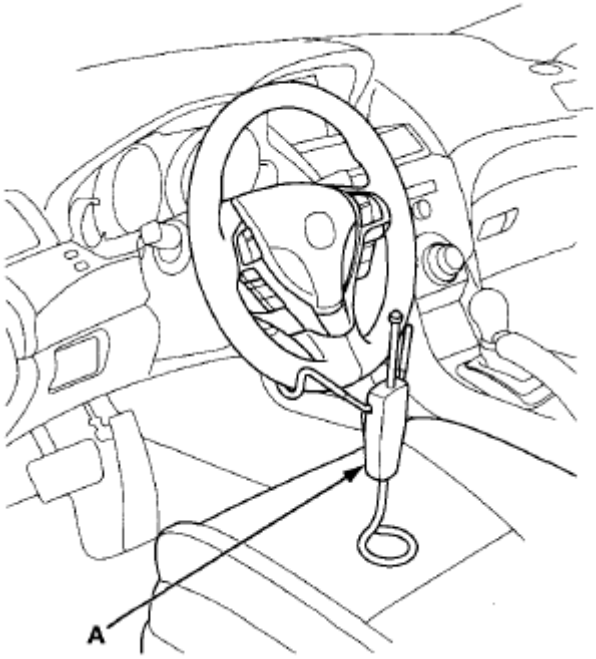

Fig. 13: Identifying Steering Wheel Holder Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Remove the lower steering joint bolt (A). Disconnect the steering joint (B) by sliding the steering joint into the column shaft (C). Tighten the upper steering joint bolt (D) to hold the steering joint in place.

NOTE: Do not disconnect the steering joint from the column shaft.

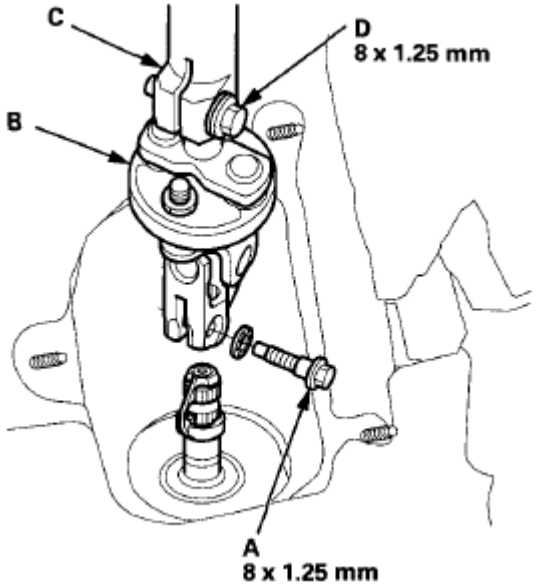

Fig. 14: Identifying Steering Joint, Column Shaft, Upper And Lower Steering Joint Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Remove the center guide (A) (if equipped) from the top of the pinion shaft (B), and discard it.

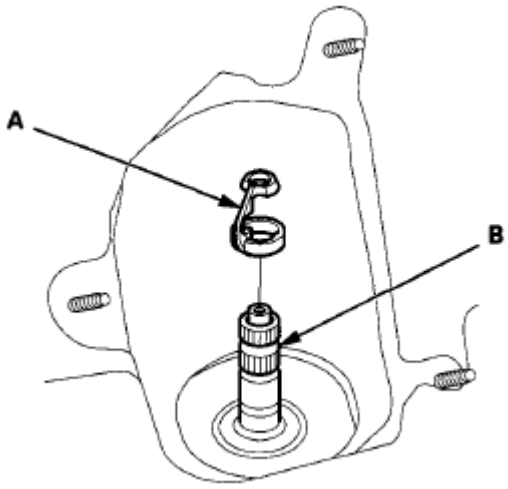

Fig. 15: Identifying Center Guide And Pinion Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Wrap vinyl tape over the splines on the pinion shaft.
30. Wait until the engine is cool, then carefully remove the radiator cap.
31. Raise the vehicle on the lift.
32. Remove the front wheels.
33. Remove the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
34. Loosen the drain plug in the radiator, and drain the engine coolant (see **COOLANT CHECK**).
35. Drain the transmission fluid:
    - Manual transmission (see **TRANSMISSION FLUID INSPECTION AND REPLACEMENT**)
    - Automatic transmission (see **ATF REPLACEMENT**)
36. Drain the engine oil (see **ENGINE OIL LEVEL CHECK**).
37. Remove the damper fork (see step 4 under **DAMPER/SPRING REMOVAL AND INSTALLATION**).
38. Separate the tie-rod end ball joints from the knuckles (see step 13 under **RACK END REMOVAL AND INSTALLATION**).
39. Separate the knuckles from the suspension lower arms (see step 7 under **LOWER ARM REMOVAL/INSTALLATION**).
40. Remove the driveshafts (see **DRIVESHAFT INSPECTION**). Coat all precision-finished surfaces with new engine oil. Tie plastic bags over the driveshaft ends.
41. Remove the front subframe stiffener.

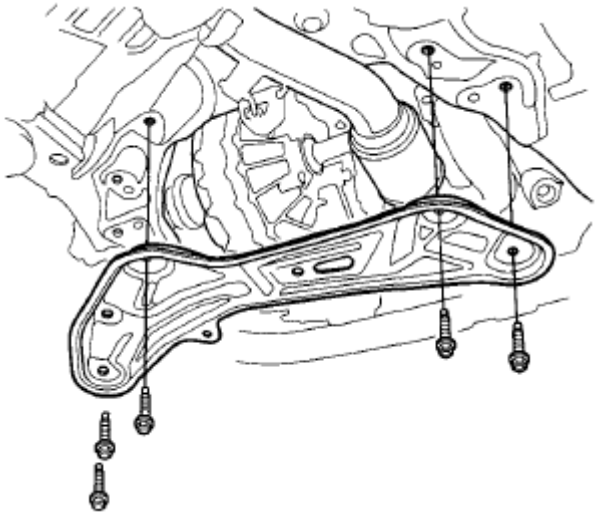

Fig. 16: Identifying Front Subframe Stiffener With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

42. Remove exhaust pipe A. With SH-AWD

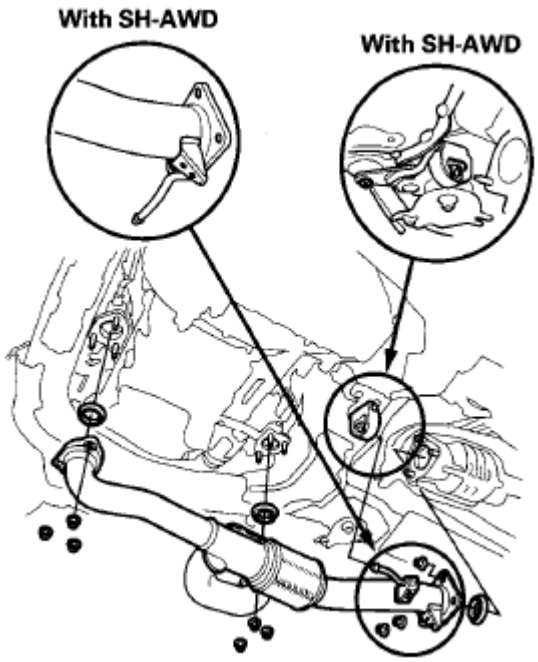

Fig. 17: Identifying Exhaust Pipe And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

43. With SH-AWD: Remove the propeller shaft (see **PROPELLER SHAFT REMOVAL**).
44. With SH-AWD: Remove the transfer assembly:
    - Manual transmission (see **TRANSFER ASSEMBLY FLUID INSPECTION AND REPLACEMENT**)

- Automatic transmission (see **TRANSFER ASSEMBLY REMOVAL**)

45. A/T model: Disconnect the ATF cooler hoses from the transmission, then plug the ATF cooler hoses and the lines (see step 44 under **TRANSMISSION REMOVAL**).
46. Lower the vehicle on the lift.
47. Disconnect the upper radiator hose (A) and the lower radiator hose (B).

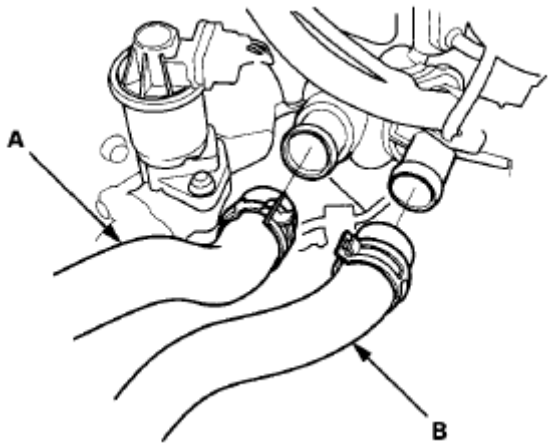

Fig. 18: Identifying Upper And Lower Radiator Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

48. Disconnect the heater hoses.

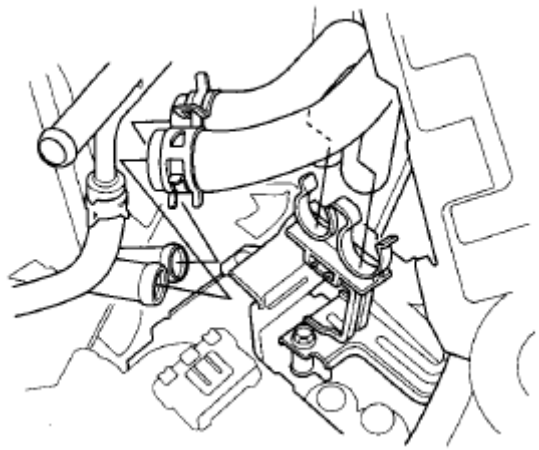

Fig. 19: Identifying Radiator Hoses And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

49. Remove the radiator (see **RADIATOR REPLACEMENT**).
50. Disconnect the A/C compressor clutch connector (A), and remove the harness clamp (B).

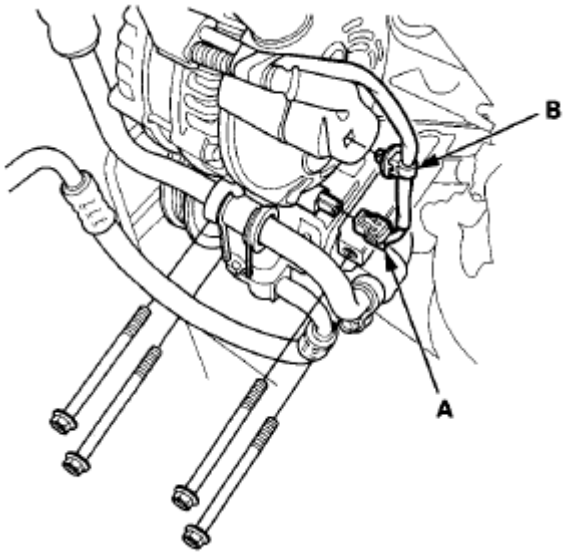

Fig. 20: Identifying A/C Compressor Clutch Connector And Harness Clamp With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

51. Remove the A/C compressor without disconnecting the A/C hoses. Do not bend the A/C hoses excessively.

NOTE: Hang the A/C compressor with a wire tie.

52. Remove the bolt (A) securing the connector bracket (B) from the front cylinder head; use the bracket bolt hole (C) to attach the engine hanger balance bar front arm.

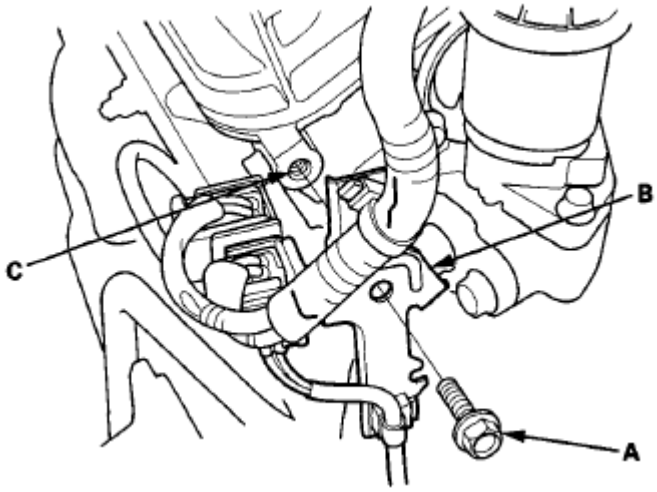

Fig. 21: Identifying Connector Bracket, Bracket Bolt Hole And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

53. Remove the harness clamp (A), then remove the bolt (B) securing the engine mount control solenoid valve bracket (C) from the rear cylinder head; use the bracket bolt hole (D) to attach the 2008 V6

attachment arm.

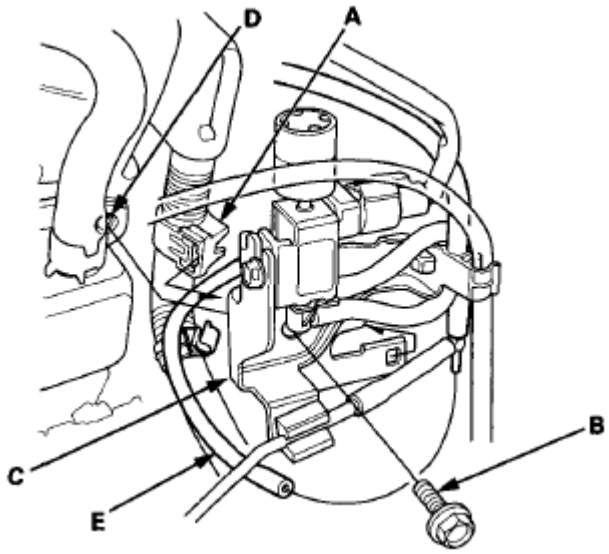

Fig. 22: Identifying Solenoid Valve Bracket, Harness Clamp, Bracket Bolt Hole, Vacuum Hose And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

54. A/T model: Disconnect the vacuum hose (E).
55. Install the engine hanger balance bar (VSB02C000019). Attach the front arm (A) to the front cylinder head with a 10 mm (0.39 in) spacer (B) and a 10 x 1.25 mm bolt (C). Remove the rear arm from the engine hanger balance bar, then install the 2008 V6 attachment arm (SIL02C000033). Attach the 2008 V6 attachment arm to the rear cylinder head with a 10 mm (0.39 in) spacer (D) and an 8 x 1.25 mm bolt (E).

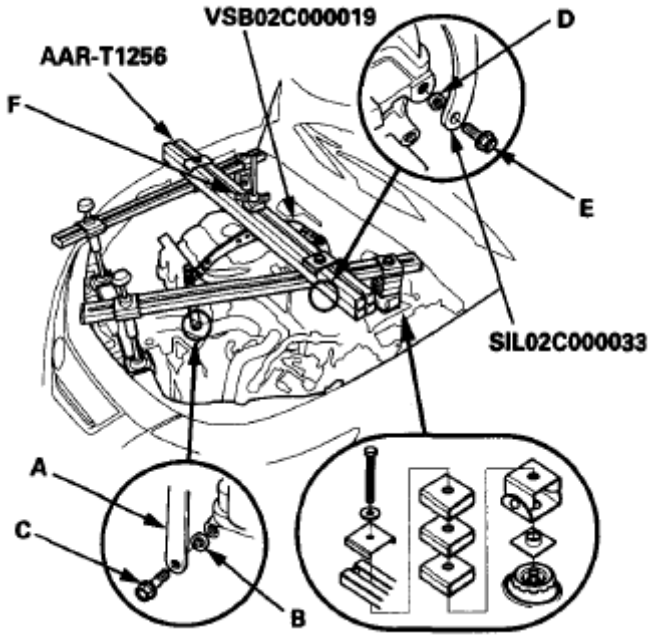

Fig. 23: Identifying Front Arm, Spacer, Bolts And Wing Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

56. Install the engine support hanger (AAR-T1256) onto the vehicle as shown, and attach the hook to the slotted hole in the engine hanger balance bar. Tighten the wing nut (F) by hand, and lift and support the engine/transmission.

NOTE:

- **Be careful when working around the windshield.**
- **AAR-T1256 two sets required for stacking two cross section bars.**

57. M/T model: Remove the front engine mount (see **FRONT ENGINE MOUNT REMOVAL AND INSTALLATION**).
58. A/T model: Disconnect the vacuum hose (A) and remove the front engine mount stop (B), then remove the front engine mount bolt (C).

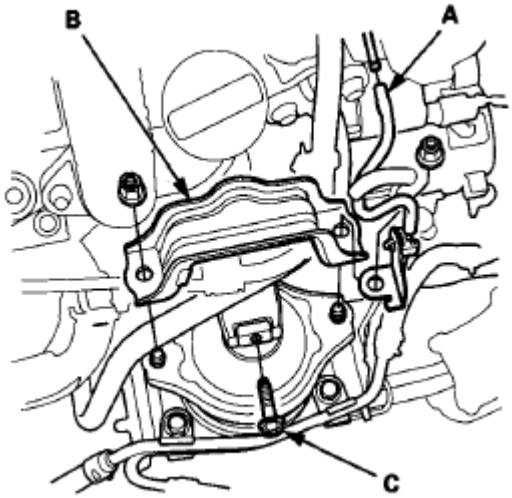

Fig. 24: Identifying Vacuum Hose, Front Engine Mount Stop And Engine Mounting Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

59. M/T model: Remove the rear engine mount bolt (A).

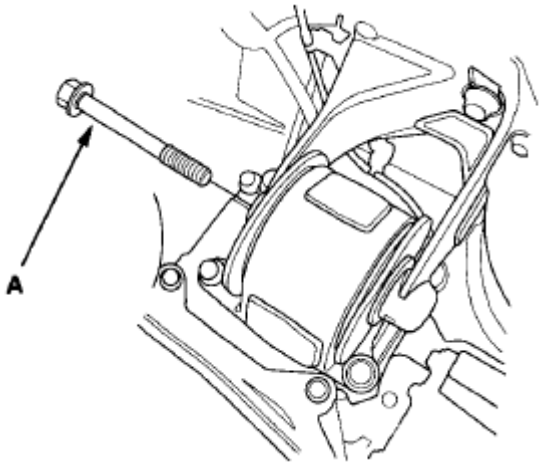

Fig. 25: Identifying Rear Engine Mount Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

60. A/T model: Remove the rear engine mount stop (A), then remove the rear engine mount bolt (B).

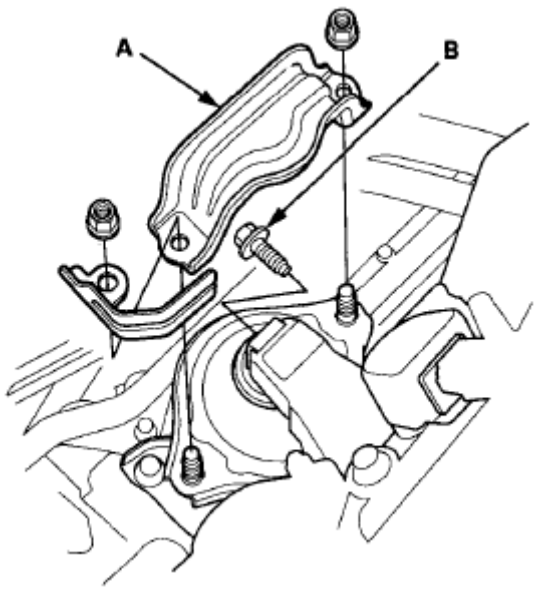

Fig. 26: Identifying Rear Engine Mount Stop And Engine Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

61. Raise the vehicle on the lift.
62. Loosen the subframe middle mount bolts.

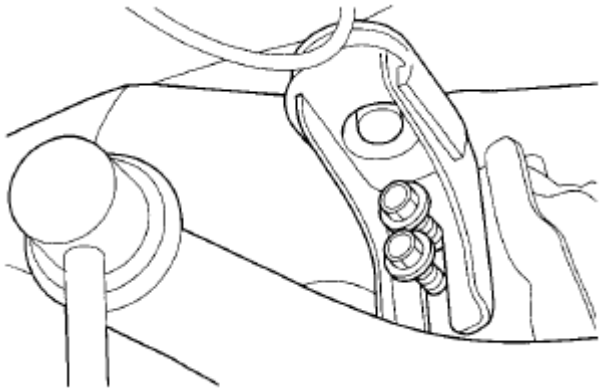

Fig. 27: Identifying Subframe Middle Mount Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

63. Remove the lower transmission mount nuts (A).

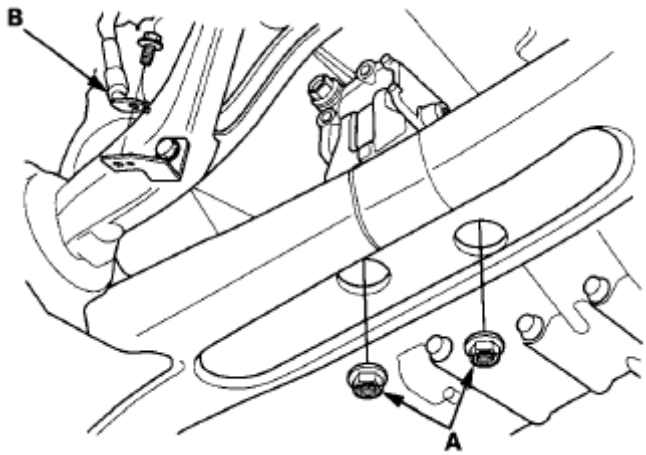

Fig. 28: Identifying Ground Cable And Lower Transmission Mount Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

64. A/T model: Remove the ground cable (B).
65. Attach the subframe adapter (VSB02C000016) to the front subframe by looping the belt (A) over the front of the subframe (B), then secure the belt with its stop (C).

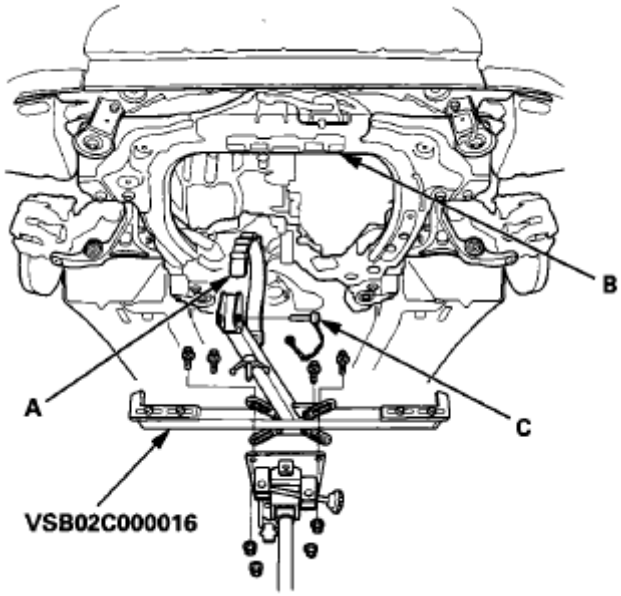

Fig. 29: Identifying Subframe, Subframe Adapter, Belt And Belt Stop
Courtesy of AMERICAN HONDA MOTOR CO., INC.

66. Raise the transmission jack and line up the slots in the subframe adapter arms with the bolt holes on the jack base, then securely attach them with four bolts.
67. Remove the four 12 x 1.25 mm bolts (A) securing the subframe stiffeners (B), the four subframe mounting bolts (C), and the stiffeners, then lower the front subframe (D).

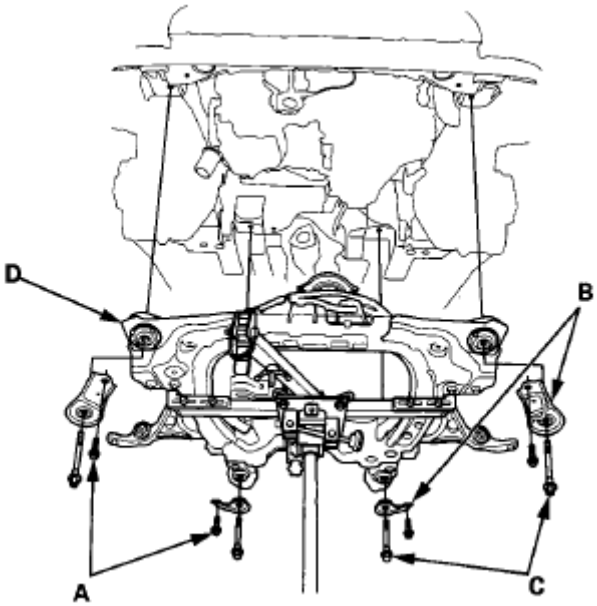

Fig. 30: Identifying Front Subframe, Subframe Stiffeners, Subframe Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

68. Lower the vehicle on the lift.

69. Attach a chain hoist (A) to the engine hanger (B) and the transmission hanger (C), then lift the engine/transmission until it's securely supported by the chain hoist and remove the engine support hanger, the engine hanger balance bar, and the 2008 V6 attachment arm.

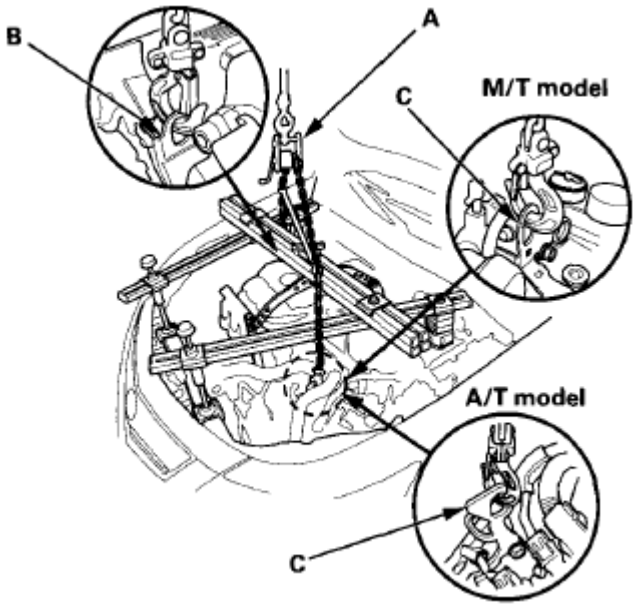

Fig. 31: Identifying Chain Hoist, Engine Hanger And Transmission Hanger
Courtesy of AMERICAN HONDA MOTOR CO., INC.

70. Remove the mounting bolts from the upper half of the side engine mount bracket.

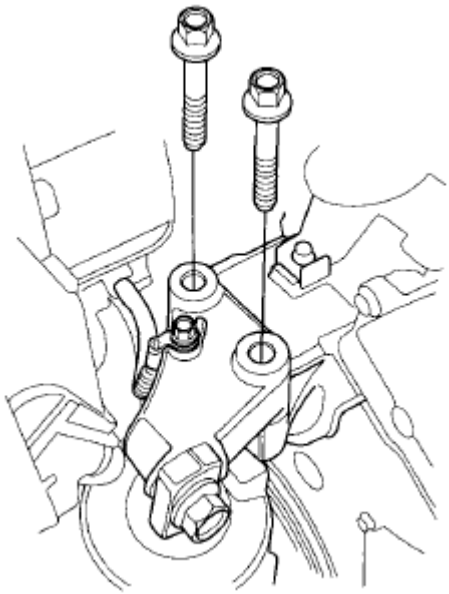

Fig. 32: Identifying Mounting Bolts Of Side Engine Mount Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

71. Remove the upper transmission mount bracket mounting bolts.

NOTE: Do not remove the bolt (A) from the. upper transmission mount. If the bolt is removed, the upper transmission mount must be replaced as an assembly.

M/T model

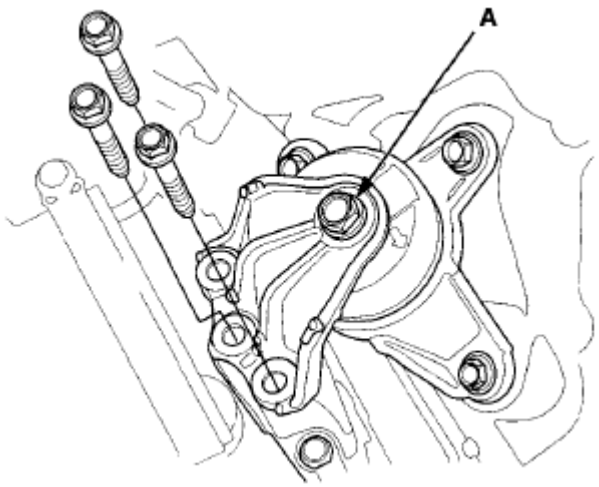

Fig. 33: Identifying Bracket Mounting Bolts (M/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T model

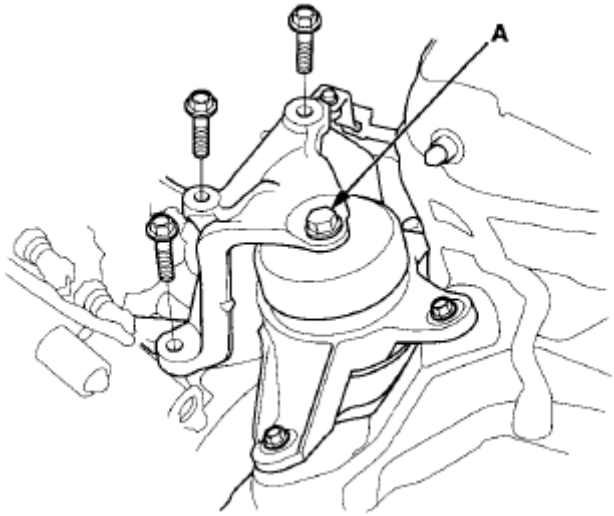

Fig. 34: Identifying Bracket Mounting Bolts (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

72. Check that the engine/transmission is completely free of the vacuum hoses, the fuel hoses, the coolant

hoses, and the electrical wiring.

73. Slowly lower the engine/transmission about 150 mm (6 in). Check once again that all the hoses and the electrical wiring are disconnected and free from the engine/transmission, then lower it all the way and support it.
74. Disconnect the chain hoist from the engine/transmission.
75. Raise the vehicle, and remove the engine/transmission from under the vehicle.

ENGINE INSTALLATION

Special Tools Required

- Engine Support Hanger, A and Reds AAR-T1256*
- Engine Hanger Balance Bar VSB02C000019*
- 2008 V6 Attachment Arm SIL02C000033*
- Subframe Adapter VSB02C000016*

*: Available through the Acura Tool and Equipment Program, 888-424-6857.

1. Install the engine mount brackets and the accessory brackets and tighten their bolts to the specified torque.

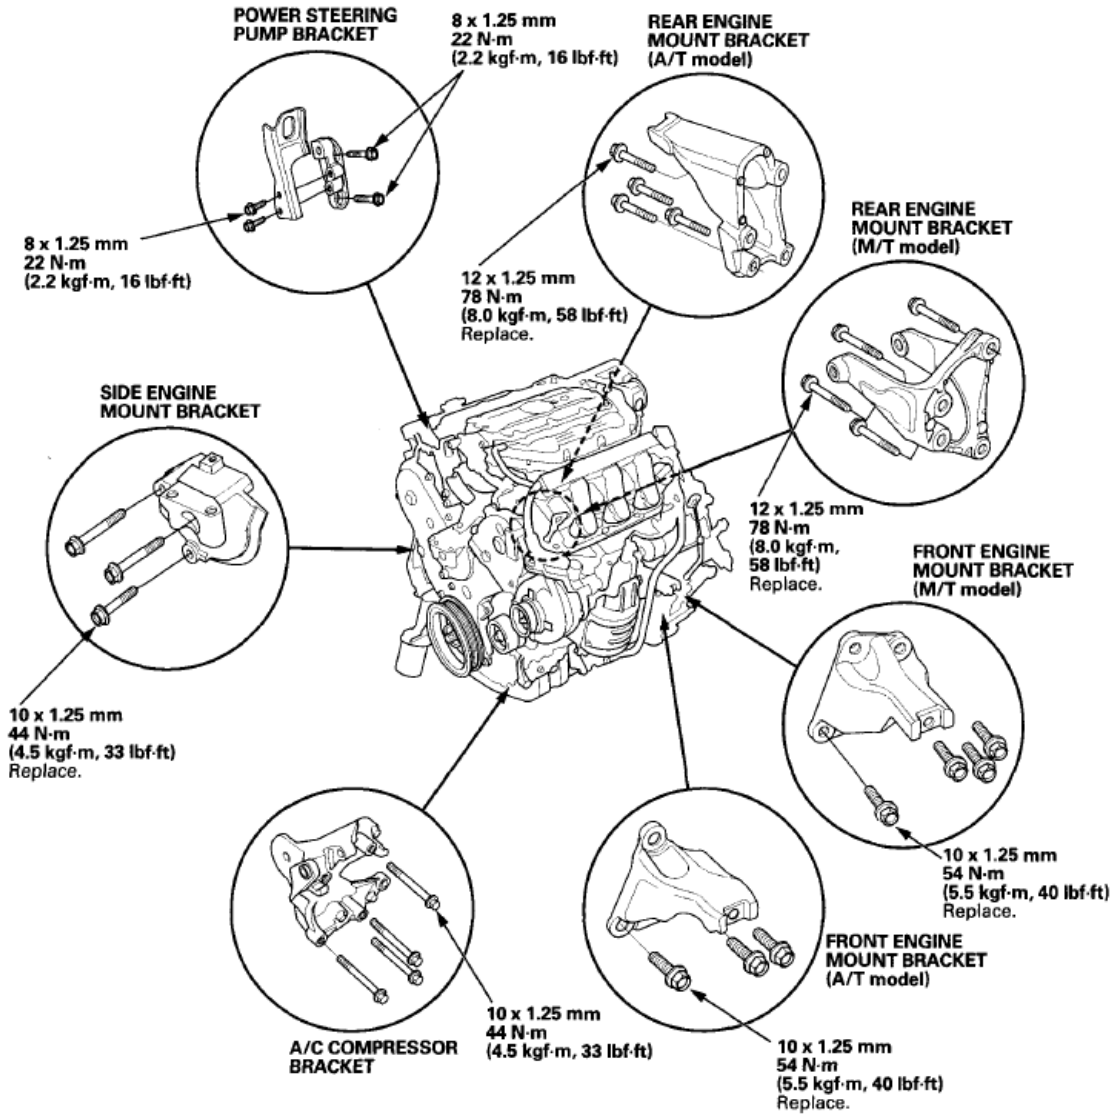

Fig. 35: Identifying Engine Mount Brackets And Accessory Brackets With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Position the engine/transmission under the vehicle. Be sure that they are properly aligned. Carefully lower the vehicle until the engine/transmission are properly positioned in the engine compartment. Make sure the vehicle is not resting on any part of the engine/transmission. Support the engine/transmission with a chain hoist (A) and carefully raise the engine/transmission into place.

NOTE: Reinstall the mounting bolts/support nuts in the sequence given in the following steps. Failure to follow this sequence may cause excessive noise and vibration, and reduce engine mount life.

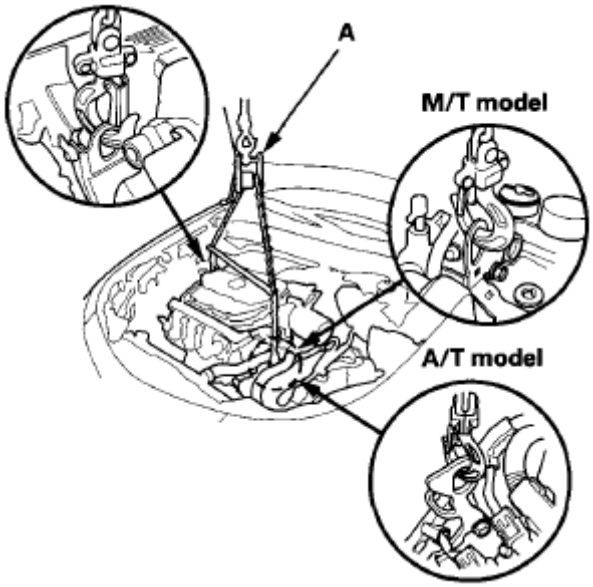

Fig. 36: Identifying Chain Hoist With Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the new mounting bolts into the upper half of the side engine mount bracket. Tighten the bolts to the specified torque.

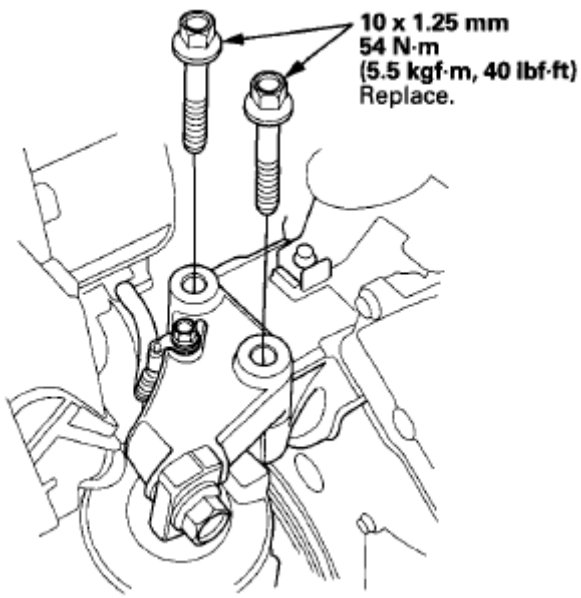

Fig. 37: Identifying Mounting Bolts Into Upper Half Of Side Engine Mount Bracket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Tighten the new upper transmission mount bracket mounting bolts to the specified torque.

NOTE: **If bolt (A) was removed by mistake during removal, the upper transmission mount bracket must be replaced as an assembly.**

M/T model

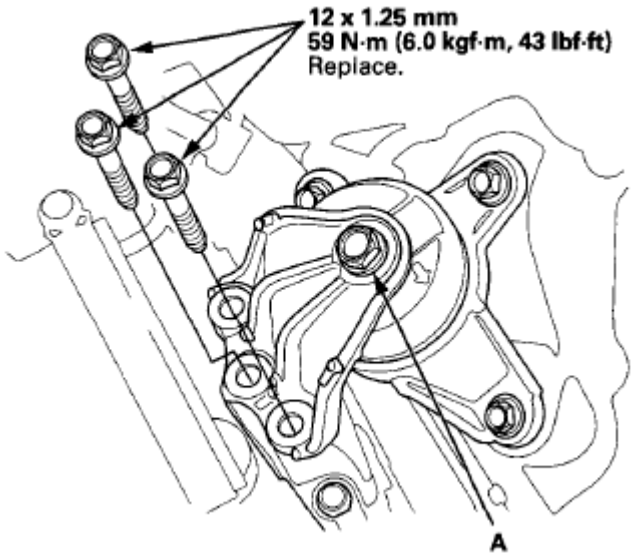

Fig. 38: Identifying Bracket Mounting Bolts (M/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T model

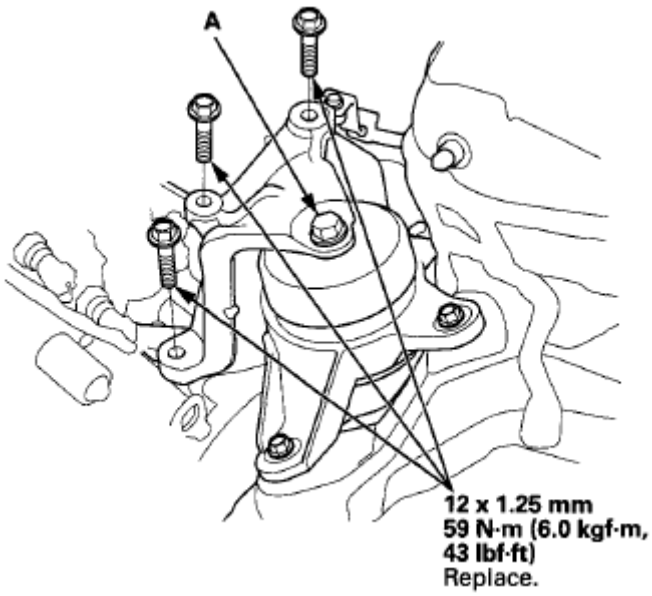

Fig. 39: Identifying Bracket Mounting Bolts (A/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the engine hanger balance bar (VSB02C000019). Attach the front arm (A) to the front cylinder head with a 10 mm (0.39 in) spacer (B) and a 10 x 1.25 mm bolt (C). Remove the rear arm from the engine hanger balance bar, then install the 2008 V6 attachment arm (SIL02C000033). Attach the 2008 V6 attachment arm to the rear cylinder head with a 10 mm (0.39 in) spacer (D) and an 8 x 1.25 mm bolt (E).

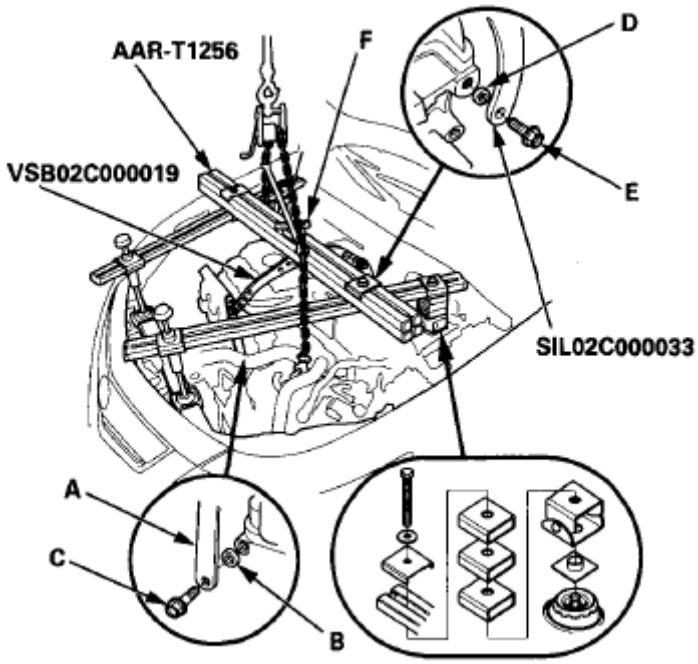

Fig. 40: Identifying Front Arm, Spacers And Bolts Of Engine Hanger Balance Bar
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the engine support hanger (AAR-T1256) onto the vehicle as shown, and attach the hook to the slotted hole in the engine hanger balance bar. Tighten the wing nut (F) by hand, and lift and support the engine/transmission.

NOTE:

- **Be careful when working around the windshield.**
- **AAR-T1256 two sets required for stacking additional cross section bar.**

7. Remove the chain hoist, then raise the vehicle on the lift.
8. Attach the subframe adapter (VSB02C000016) to the subframe by looping the belt (A) over the front of the front subframe (B), then secure the belt with its stop (C).

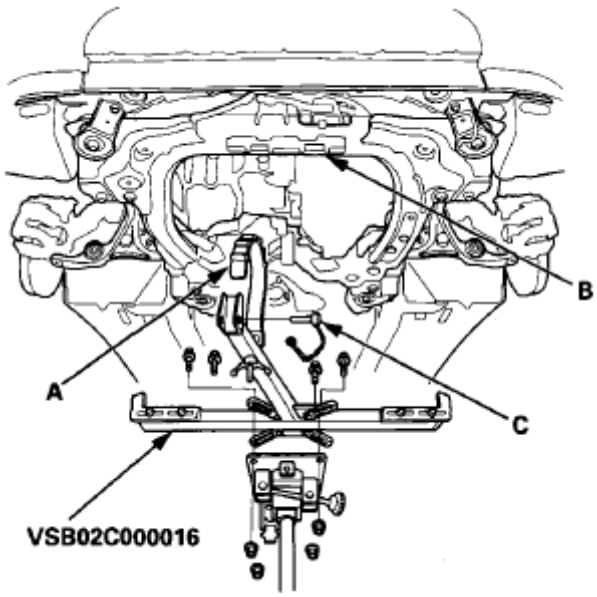

Fig. 41: Identifying Front Subframe, Belt And Belt Stop
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Line up the slots in the subframe adapter arms with the bolt holes on the jack base, then securely attach them with four bolts, then raise the front subframe up to the body.
10. Loosely install the new subframe mounting bolts (four) (A), the 12 x 1.25 mm bolts (two) (B), the new 12 x 1.25 mm (two) (C), and the stiffeners (D).

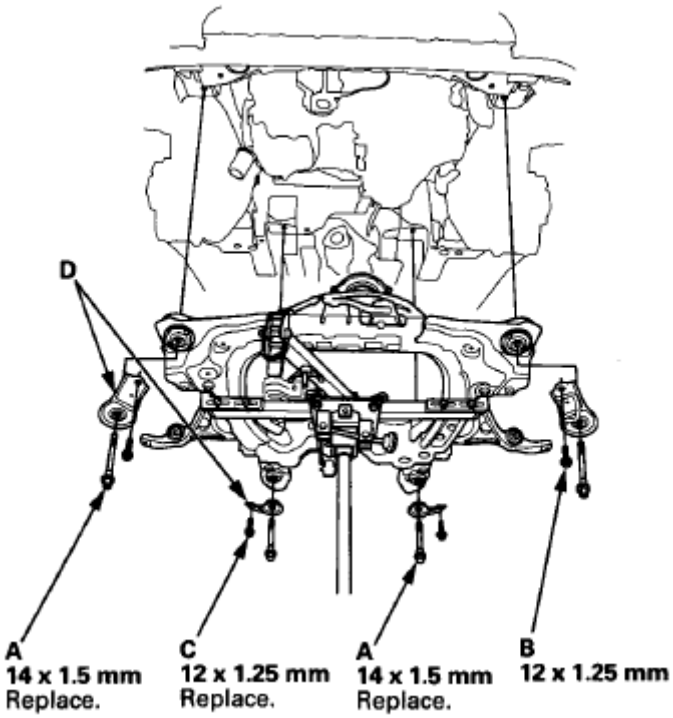

Fig. 42: Identifying Subframe Mounting Stiffeners And Bolts

Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Align the front subframe with the subframe alignment pin (see **FRONT SUBFRAME ALIGNMENT**).
12. Remove the transmission jack and the front subframe adapter.
13. Tighten the bolts securing the subframe middle mount.

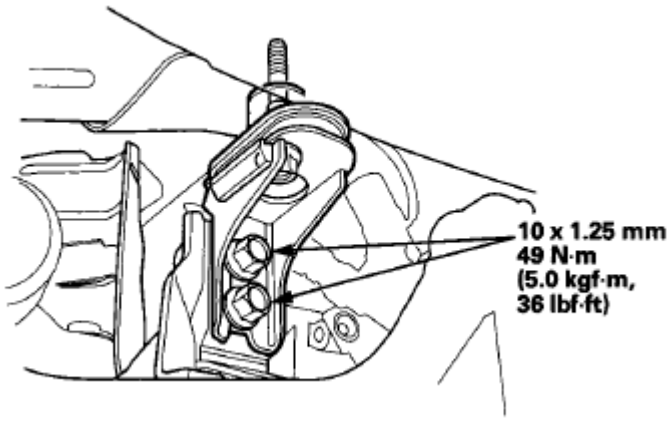

Fig. 43: Identifying Subframe Middle Mount & Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Tighten the lower transmission mount nuts (A).

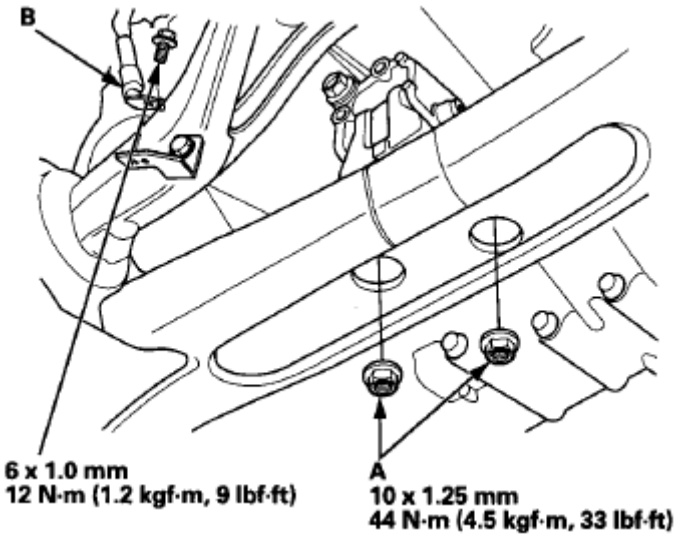

Fig. 44: Identifying Lower Transmission Mount With Nuts And Ground Cable With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. A/T model: Install the ground cable (B).
16. Lower the vehicle on the lift.
17. Remove the engine support hanger, the engine hanger balance bar, and the 2008 V6 attachment arm.

18. M/T model: Install the front engine mount (see **FRONT ENGINE MOUNT REMOVAL AND INSTALLATION**).
19. A/T model: Tighten the new front engine mount bolt (A), then install the front engine mount stop (B) and connect the vacuum hose (C).

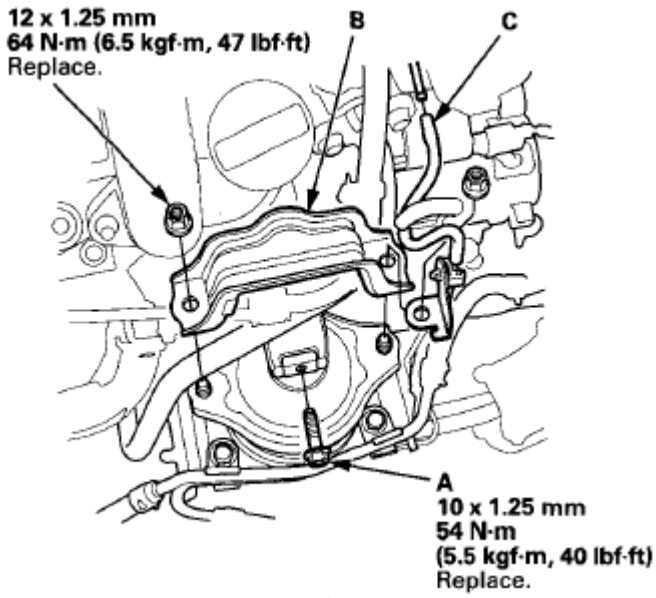

Fig. 45: Identifying Vacuum Hose, Front Engine Mounting Bolt And Engine Mount Stop (A/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. M/T model: Tighten the new rear engine mount bolt.

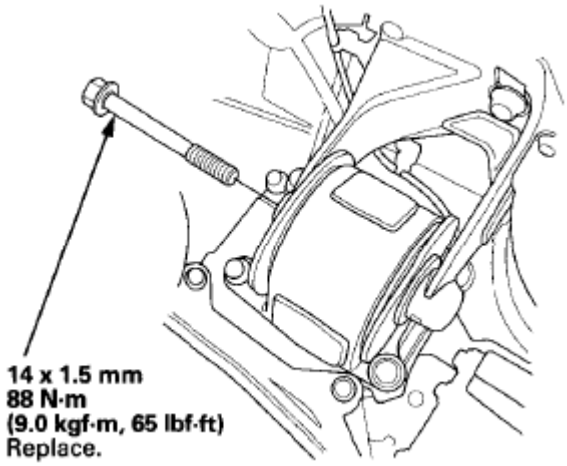

Fig. 46: Identifying Rear Engine Mount Bolt (M/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. A/T model: Tighten the new rear engine mount bolt (A), then install the rear engine mount stop (B) using

new nuts (C).

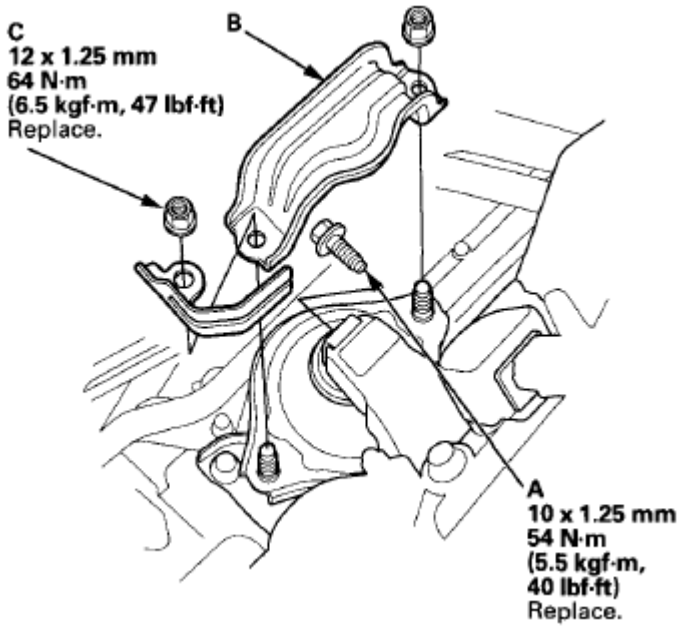

Fig. 47: Identifying Rear Engine Mount Bolt, Engine Mount Stop And Nuts (A/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Loosen the mounting bolts for the upper half of the side engine mount bracket, then retighten them in the numbered sequence shown.

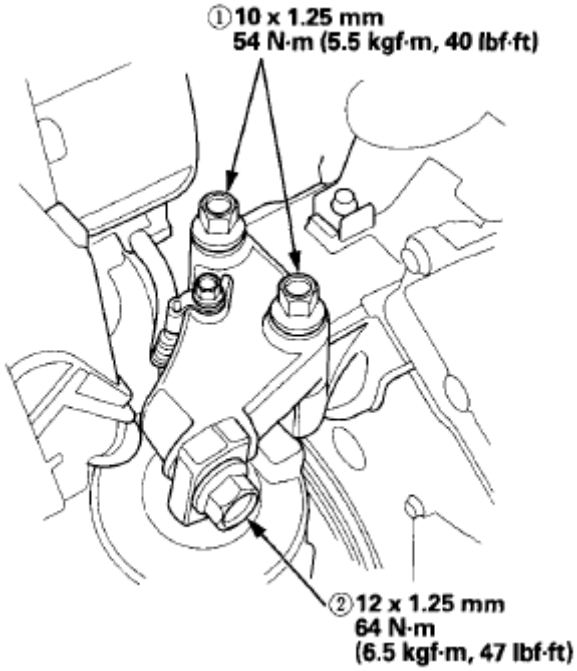

Fig. 48: Identifying Mounting Bolts Of Side Engine Mount Bracket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Loosen the mounting bolts for the upper transmission mount bracket, then retighten them to the specified torque.

M/T model

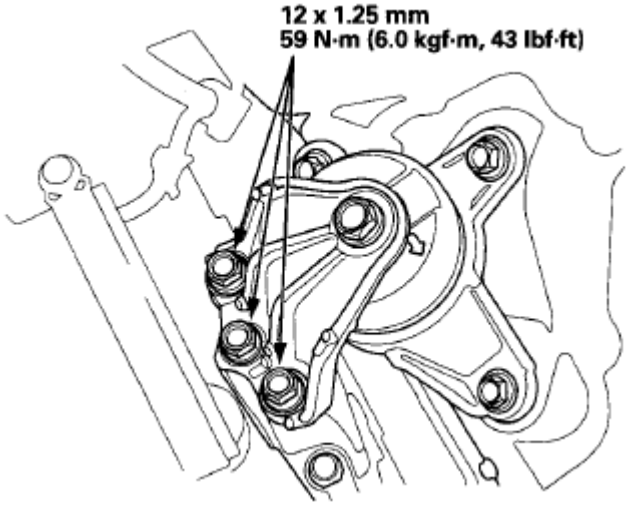

Fig. 49: Identifying Mounting Bolts For Upper Transmission Mount Bracket (M/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T model

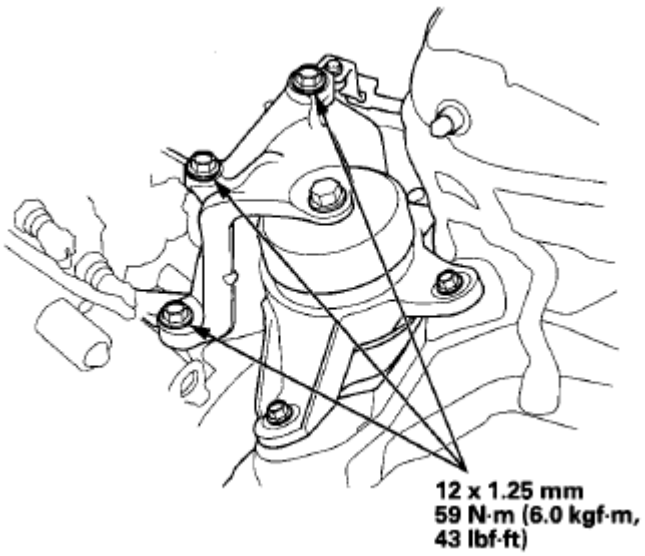

Fig. 50: Identifying Mounting Bolts For Upper Transmission Mount Bracket (A/T Model) With Torque Specifications

Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Install the connector bracket to the front cylinder head.

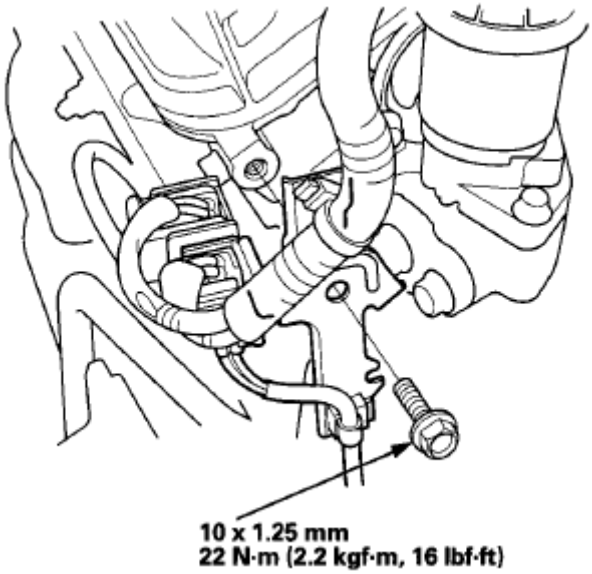

Fig. 51: Identifying Connector Bracket To Front Cylinder Head With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

25. Install the engine mount control solenoid valve bracket to the rear cylinder head, then install the harness clamp (A).

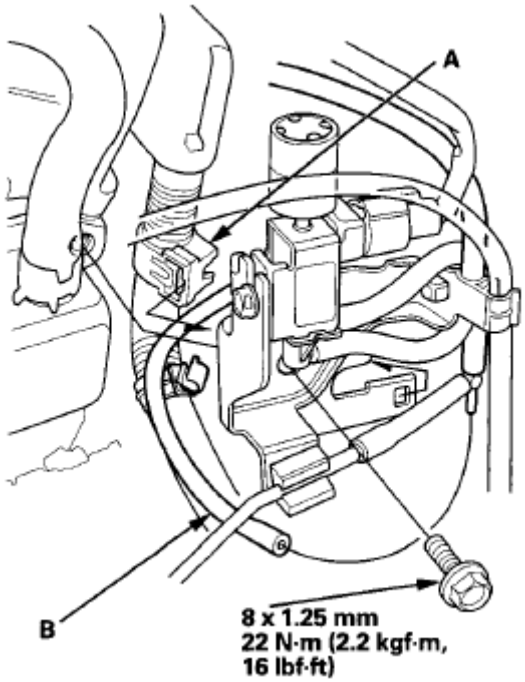

Fig. 52: Identifying Harness Clamp And Vacuum Hose Of Engine Mount Control Solenoid Valve

Bracket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

26. A/T model: Connect the vacuum hose (B).
27. Install the A/C compressor, then install the harness clamp (A) and connect the A/C compressor clutch connector (B).

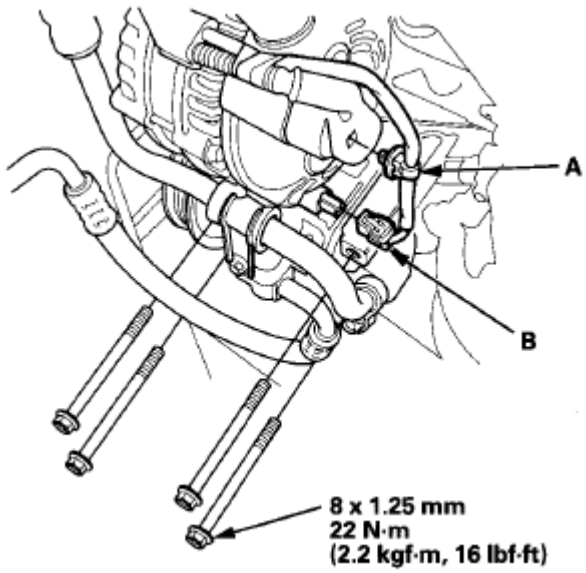

Fig. 53: Identifying Harness Clamp And Clutch Connector Of A/C Compressor With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Install the radiator (see **RADIATOR REPLACEMENT**).
29. Connect the heater hoses (A).

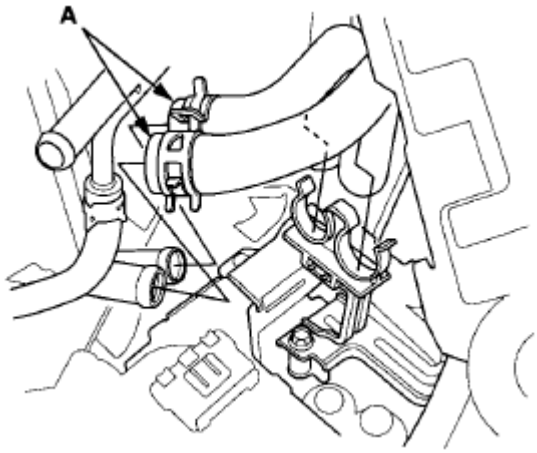

Fig. 54: Identifying Heater Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

30. Connect the upper radiator hose (A) and the lower radiator hose (B).

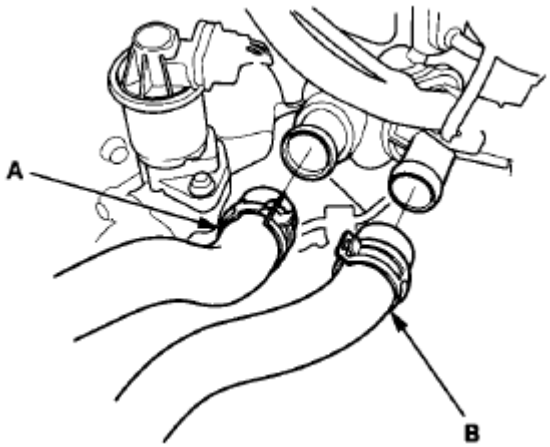

Fig. 55: Identifying Upper And Lower Radiator Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

31. Raise the vehicle on the lift.
32. A/T model: Connect the ATF cooler hoses to the transmission (see step 30 under **TRANSMISSION INSTALLATION**).
33. With SH-AWD: Install the transfer assembly:
    - Manual transmission (see **TRANSFER ASSEMBLY INSTALLATION**)
    - Automatic transmission (see **TRANSFER ASSEMBLY INSTALLATION**)
34. With SH-AWD: Install the propeller shaft (see **PROPELLER SHAFT INSTALLATION**).
35. Install exhaust pipe A using new gaskets (6) and new self-locking nuts (C).

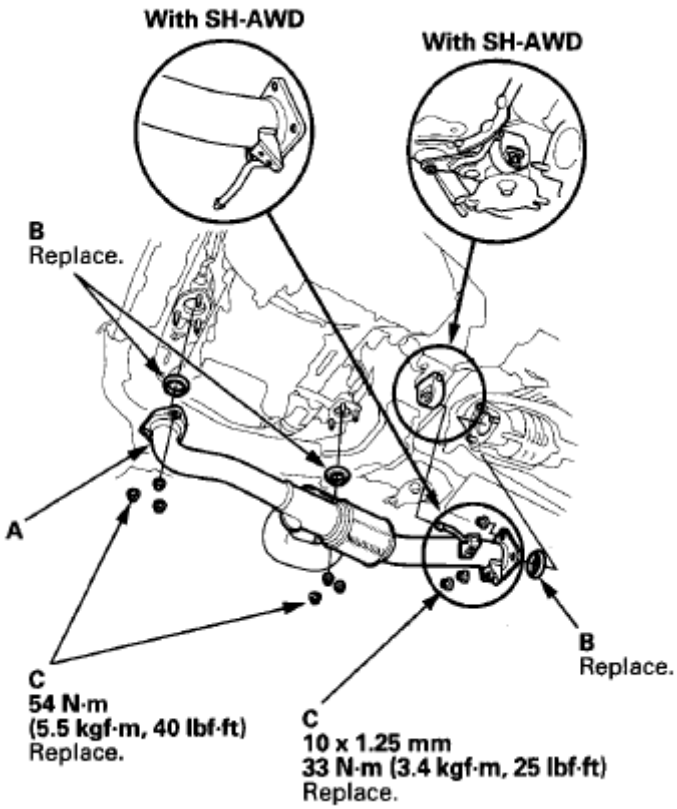

Fig. 56: Identifying Exhaust Pipe, Gaskets And Self-Locking Nuts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

36. Install the front subframe stiffener (A) using new bolts (B).

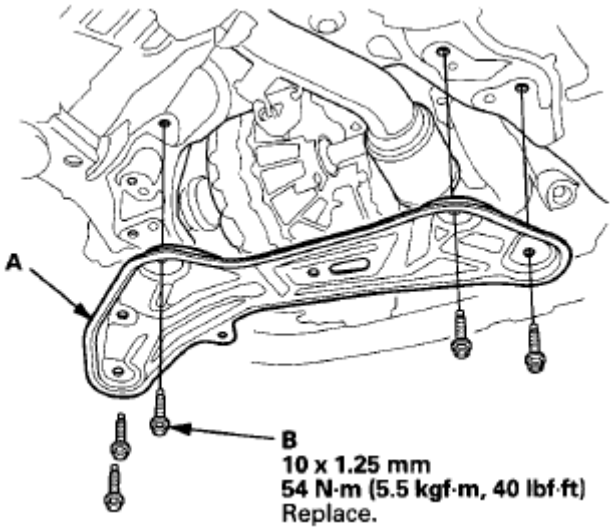

Fig. 57: Identifying Front Subframe Stiffener And Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

37. Install a new set ring on the end of each driveshaft, then install the driveshafts (see **FRONT**

DRIVESHAFT INSTALLATION). Make sure each ring "clicks" into place in the differential and the intermediate shaft.

38. Connect the suspension lower arm to the knuckles (see step 7 under **LOWER ARM REMOVAL/INSTALLATION**).
39. Connect the tie-rod end ball joints to the knuckles (see step 42 under **STEERING GEARBOX REMOVAL AND INSTALLATION**).
40. Install the damper fork (see step 4 under **DAMPER/SPRING REMOVAL AND INSTALLATION**).
41. Install the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
42. Install the front wheels.
43. Lower the vehicle on the lift.
44. Loosen the upper steering joint bolt (A), and slip the lower end of the steering joint (B) onto the pinion shaft (C).

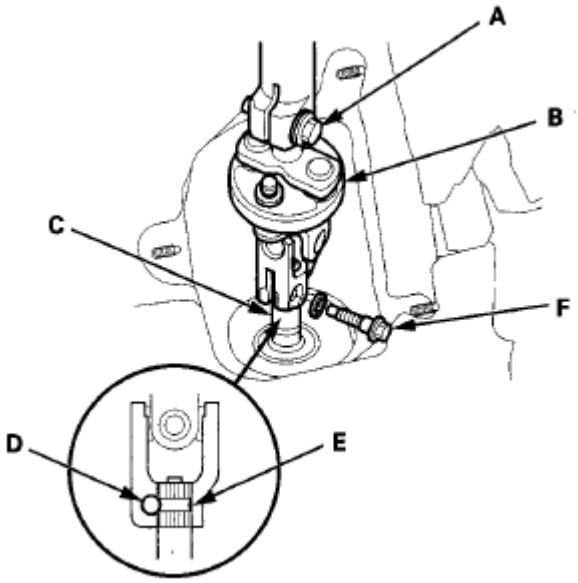

Fig. 58: Identifying Pinion Shaft, Steering Joint, Groove, Bolt Hole, Upper And Lower Steering Joint Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

45. Align the bolt hole (D) on the steering joint with the groove (E) around the pinion shaft, then loosely install the lower steering joint bolt (F). Be sure that the joint bolt is securely in the groove in the pinion shaft.
46. Remove the steering wheel holder tool (A).

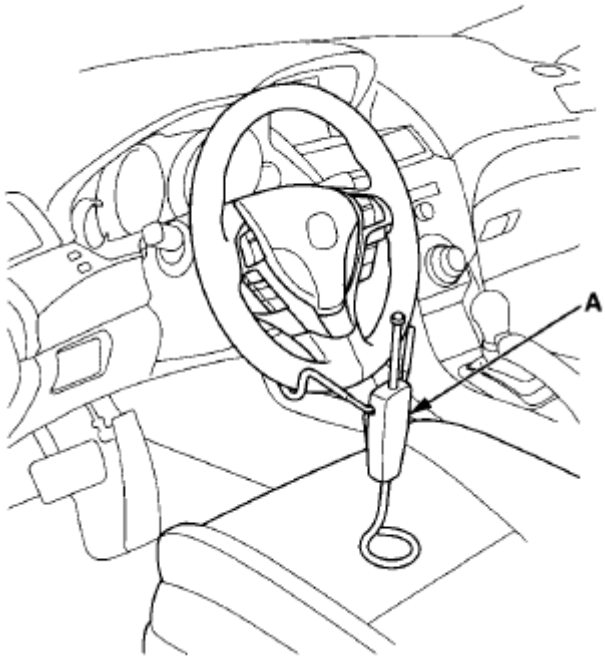

Fig. 59: Identifying Steering Wheel Holder Tool
Courtesy of AMERICAN HONDA MOTOR CO., INC.

47. Tighten the upper and lower steering joint bolts (A) to the specified torque.

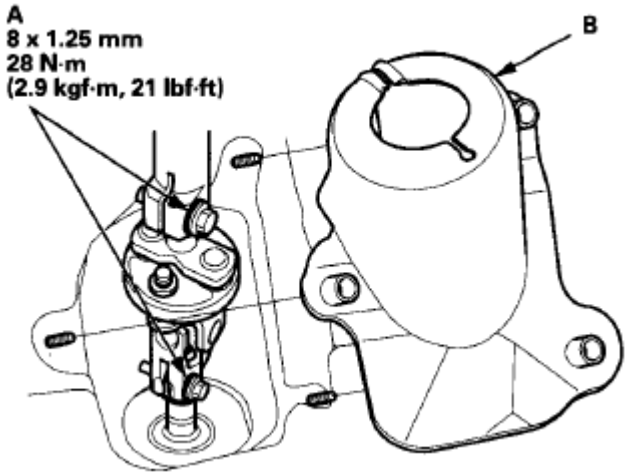

Fig. 60: Identifying Steering Joint Cover, Upper And Lower Steering Joint Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

48. Install the steering joint cover (B).
49. Install the drive belt (see **DRIVE BELT REPLACEMENT**).
50. Connect the EPS connectors (A).

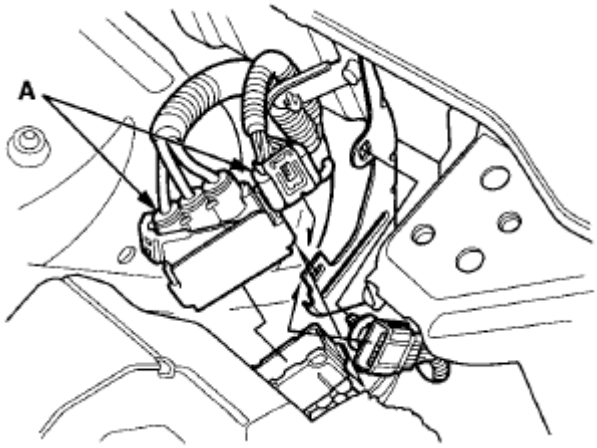

Fig. 61: Identifying EPS Connectors
Courtesy of AMERICAN HONDA MOTOR CO., INC.

51. A/T model: Install the shift cable (see **SHIFT CABLE REPLACEMENT**).
52. M/T model: Install the clutch slave cylinder and the clutch line bracket mounting bolt (see step 49 under **TRANSMISSION INSTALLATION**).
53. M/T model: Install the shift cable and the select cable, then tighten the three bolts securing the shift cable holder (see step 50 under **TRANSMISSION INSTALLATION**).
54. Connect the brake booster vacuum hose (A) and the EVAP canister hose (B).

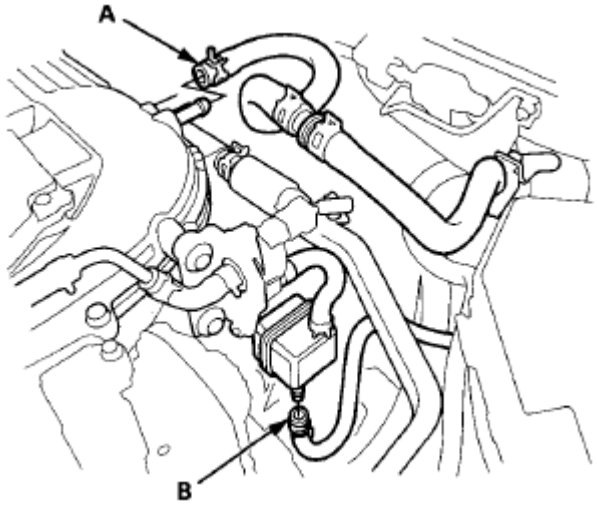

Fig. 62: Identifying Brake Booster Vacuum Hose And EVAP Canister Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

55. Connect the fuel feed hose (A), then install the quick-connect fitting cover (B) (see **FUEL LINE/QUICK-CONNECT FITTING INSTALLATION**).

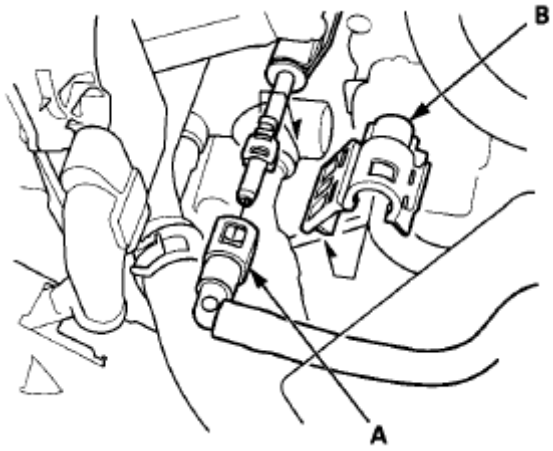

Fig. 63: Identifying Fuel Feed Hose And Quick-Connect Fitting Cover
Courtesy of AMERICAN HONDA MOTOR CO., INC.

56. Connect the ECM/PCM connectors (A), then install the harness clamp (B).

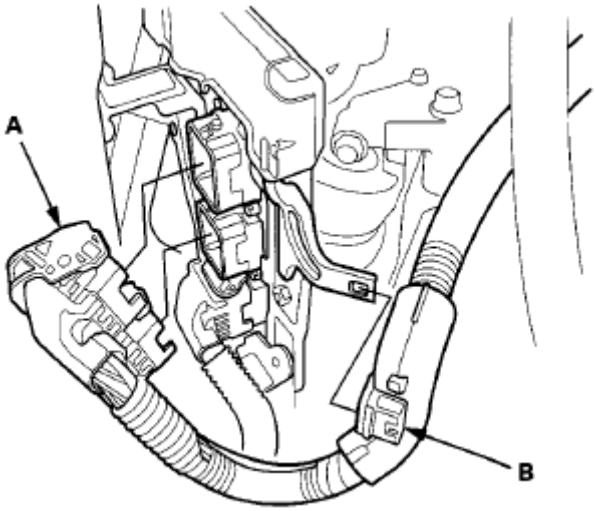

Fig. 64: Identifying ECM/PCM Connectors And Harness Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

57. Connect the harness connectors (A), then install the harness clamp (B).

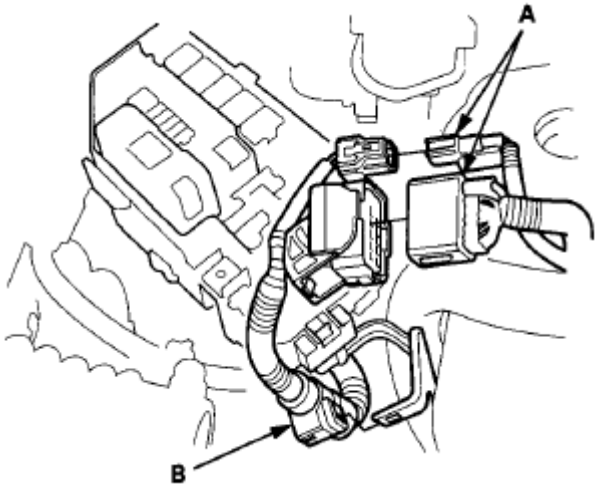

Fig. 65: Identifying Harness Connectors And Harness Clamp
Courtesy of AMERICAN HONDA MOTOR CO., INC.

58. Install the harness clamps (A).

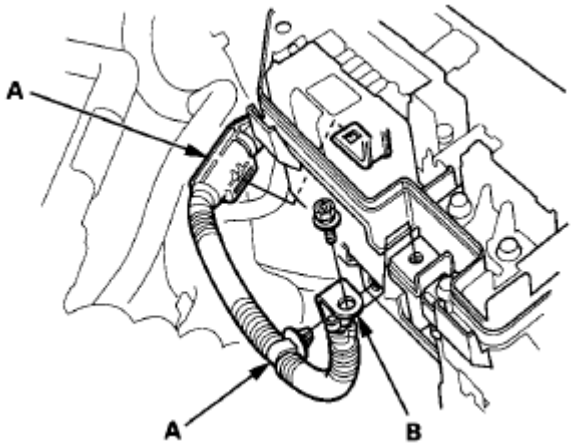

Fig. 66: Identifying Harness Clamps And Battery Cable
Courtesy of AMERICAN HONDA MOTOR CO., INC.

59. Connect the battery cable (B) to the under-hood fuse/relay box.
60. Install the strut brace (see **FRAME BRACE REPLACEMENT**).
61. M/T model: Connect the positive starter cable (A), then install the harness clamp (B). Make sure the crimped side of the ring terminal face away from the starter when you connect it.

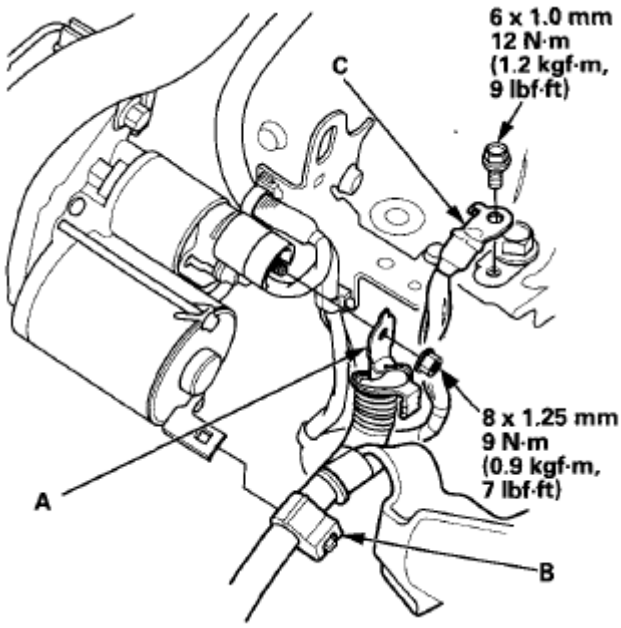

Fig. 67: Identifying Positive Starter Cable, Harness Clamp And Ground Cable (M/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

62. M/T model: Install the ground cable (C).
63. A/T model: Connect the positive starter cable (A), then install the harness clamps (B). Make sure the crimped side of the ring terminal face away from the starter when you connect it.

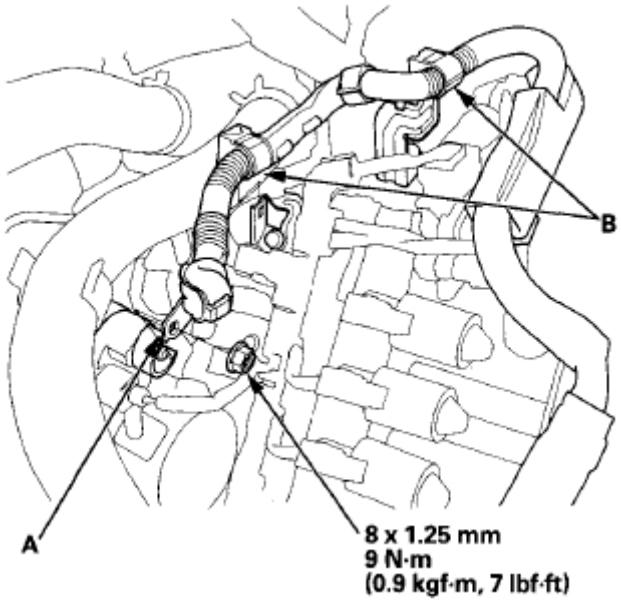

Fig. 68: Identifying Positive Starter Cable, Harness Clamps (A/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

64. Install the battery base (A), then install the harness clamp (B).

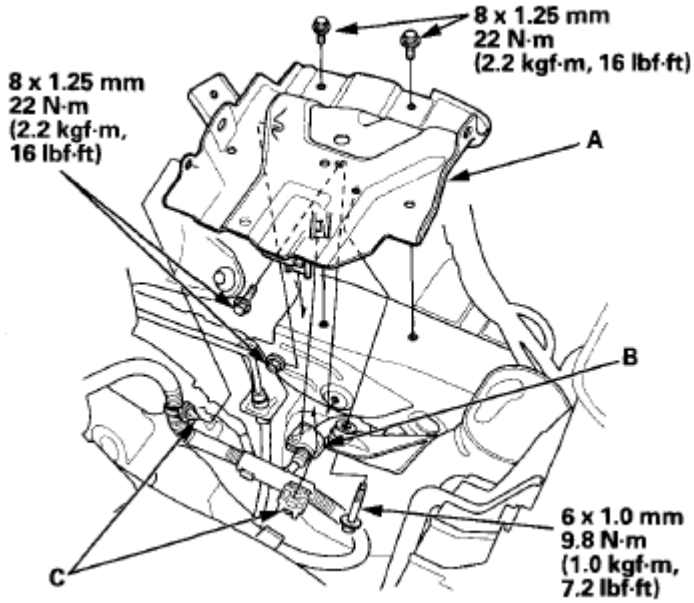

Fig. 69: Identifying Battery Base And Harness Clamps With Torque Specification (M/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

65. M/T model: Install the harness clamps (C).
66. Install the air cleaner (see **THROTTLE BODY CLEANING**).
67. Do the battery installation procedure (see **BATTERY REMOVAL AND INSTALLATION**).
68. Install the air intake duct splash separator.

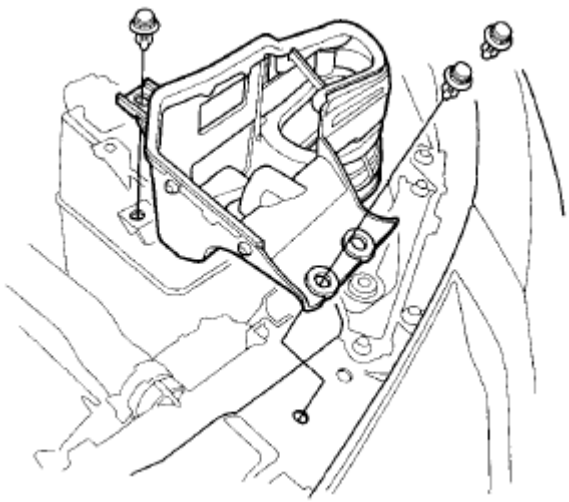

Fig. 70: Identifying Air Intake Duct Splash Separator With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

69. Inspect for fuel leaks. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode (do not operate the starter) so the fuel pump runs for about 2 seconds and pressurizes the fuel line. Repeat this operation three times, then check for fuel leaks at any point in the fuel line.
70. Refill the engine with engine oil (see **ENGINE OIL LEVEL CHECK**).
71. Refill the transmission with fluid:
    - Manual transmission (see **TRANSMISSION FLUID INSPECTION AND REPLACEMENT**)
    - Automatic transmission (see **ATF REPLACEMENT**)
72. M/T model: Check that the transmission shifts into all gears smoothly.
73. A/T model: Move the shift lever to each gear, and verify that the A/T gear position indicator follows the transmission range switch.
74. Refill the radiator with engine coolant, and bleed the air from the cooling system (see **COOLANT CHECK**).
75. Check for fluid leaks.
76. Do the ECM/PCM reset procedure (see **HDS CLEAR COMMAND**).
77. Do the CKP pattern clear/CKP pattern learn procedure (see **CKP PATTERN CLEAR/CKP PATTERN LEARN**).
78. Inspect the idle speed (see **IDLE SPEED INSPECTION**).
79. Inspect the ignition timing (see **IGNITION TIMING INSPECTION**).
80. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
81. Check the wheel alignment (see **WHEEL ALIGNMENT**).

SIDE ENGINE MOUNT REMOVAL AND INSTALLATION

REMOVAL

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Lift and support the engine with a jack and a wood block under the oil pan.
3. Remove the ground cable (A), then remove the upper half of the side engine mount bracket (B).

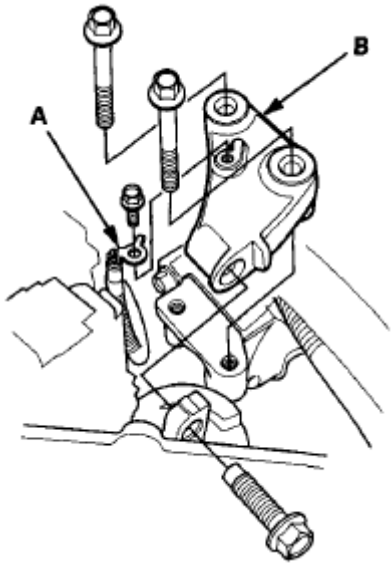

Fig. 71: Identifying Ground Cable And Engine Mount Bracket With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the side engine mount.

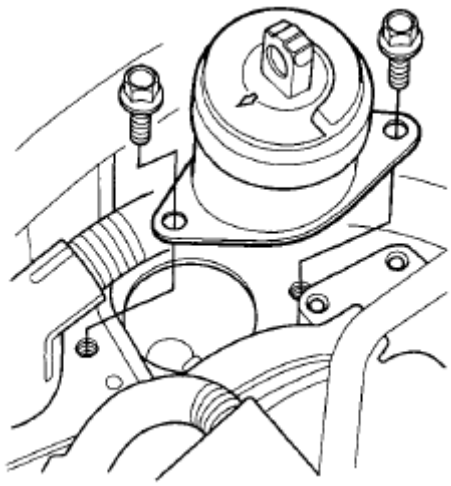

Fig. 72: Identifying Side Engine Mount With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Install the side engine mount using new bolts.

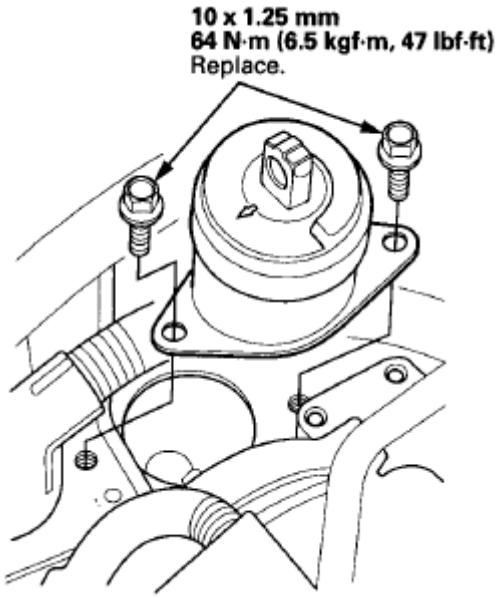

Fig. 73: Identifying Side Engine Mount & Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosely install the upper half of the side engine mount bracket (A) using new bolts.

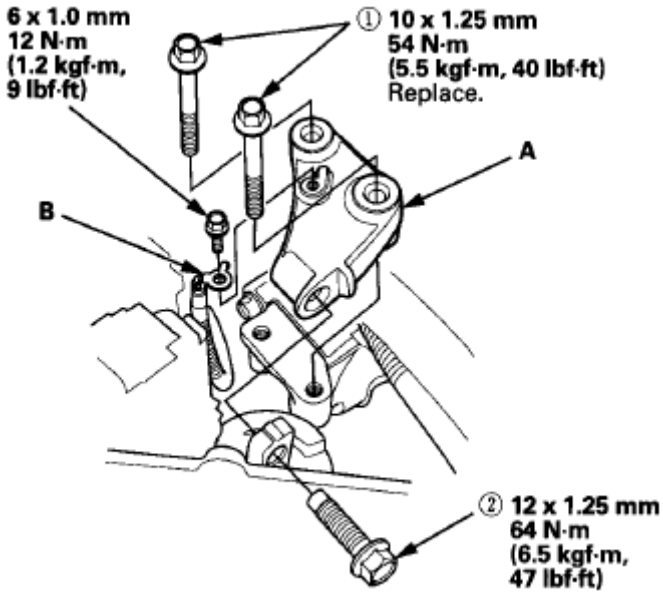

Fig. 74: Identifying Engine Mount Bracket, Ground Cable And Tightening Sequence Of Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the jack and the wood block.
4. Tighten the bolts in the numbered sequence shown.
5. Install the ground cable (B).

6. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

FRONT ENGINE MOUNT REMOVAL AND INSTALLATION

REMOVAL

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Remove the front warm up TWC (see **WARM UP TWC REMOVAL/INSTALLATION**).
3. Remove the front engine mount stop (A), then remove the front engine mount bolt (B).

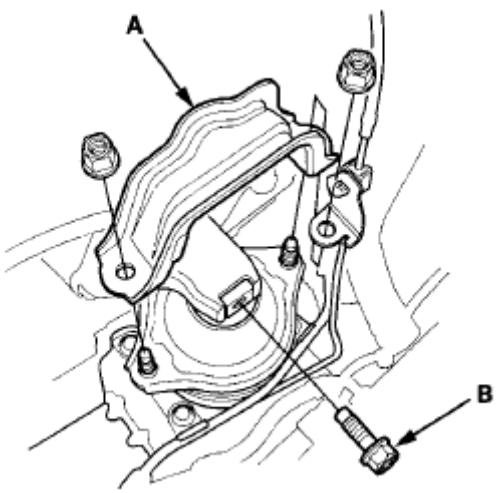

Fig. 75: Identifying Front Engine Mount Stop And Front Engine Mount Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the front engine mount mounting bolts (A). A-

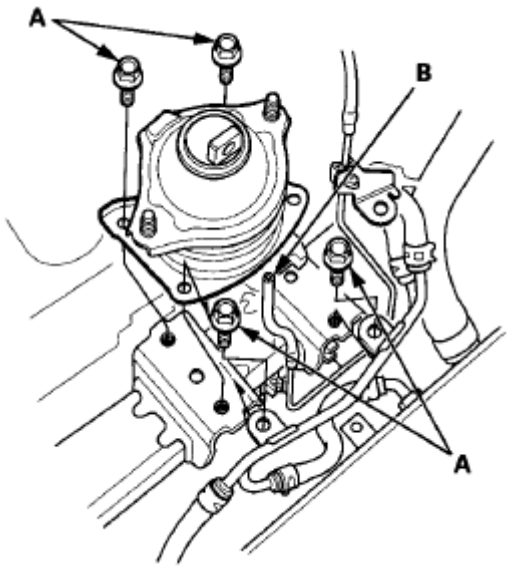

Fig. 76: Identifying Front Engine Mount Mounting Bolts And Vacuum Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Lift and support the engine with a jack and a wood block under the engine/transmission.
6. Remove the front engine mount and disconnect the vacuum hose (B).

NOTE: A/T model: Do not bend the ATF cooler pipe when removing the front engine mount.

INSTALLATION

1. Connect the vacuum hose (A), then align the front engine mount with its mounting holes and install the new front engine mount mounting bolts (B).

NOTE: A/T model: Do not bend the ATF cooler pipe when installing the front engine mount.

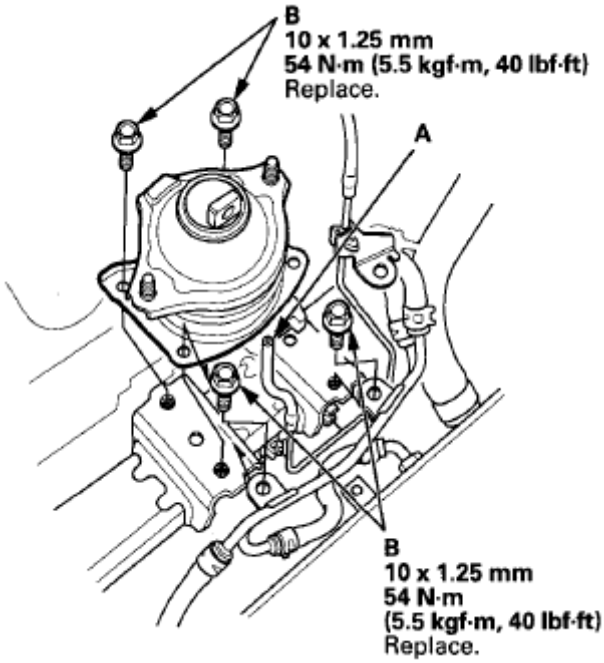

Fig. 77: Identifying Vacuum Hose, Front Engine Mount Mounting Bolts With Torque Specifications (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove the jack and the wood block.
3. Tighten the new front engine mount bolt (A), then install the front engine mount stop (B) using new nuts.

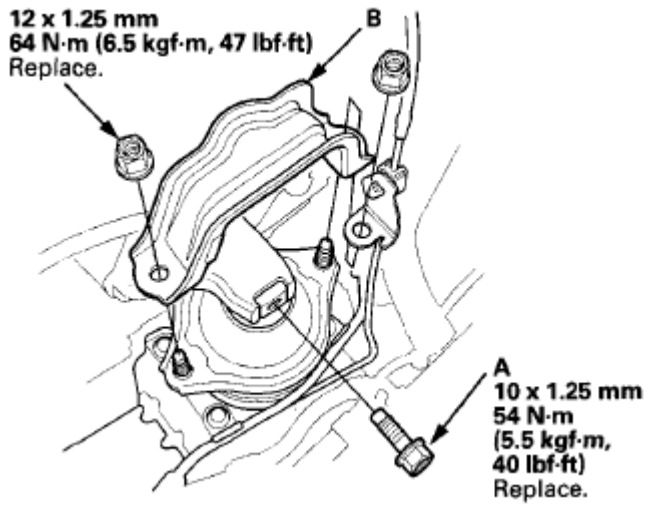

Fig. 78: Identifying Front Engine Mount Bolt And Front Engine Mount Stop With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the front warm up TWC (see **WARM UP TWC REMOVAL/INSTALLATION**).
5. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

REAR ENGINE MOUNT REMOVAL AND INSTALLATION

REMOVAL-M/T MODEL

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Do the battery removal procedure (see **BATTERY REMOVAL AND INSTALLATION**).
3. Remove the air cleaner (see **THROTTLE BODY CLEANING**).
4. Remove the cowl cover (see **FRONT BULKHEAD BRACE COVER REPLACEMENT**).
5. Remove the strut brace (see **FRAME BRACE REPLACEMENT**).
6. Remove the harness clamp (A), then disconnect the harness connectors (B) on the left strut tower.

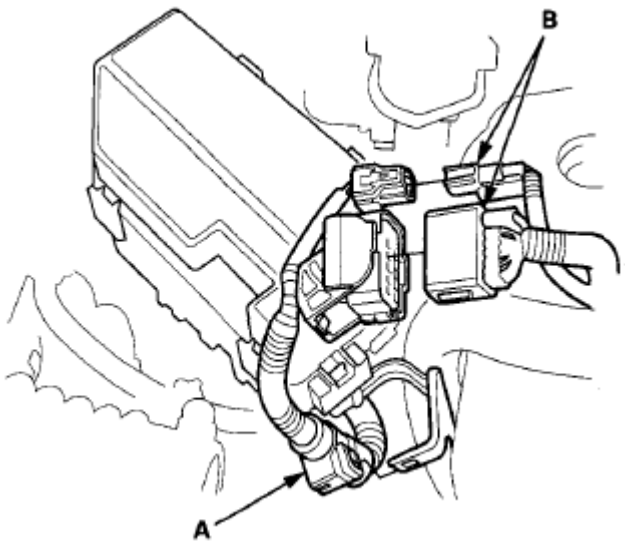

Fig. 79: Identifying Harness Clamp, Harness Connectors On Left Strut Tower
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the two harness clamps (A) and the brake booster vacuum hose clamp (B) from the under-hood fuse/relay box mounting bracket (C).

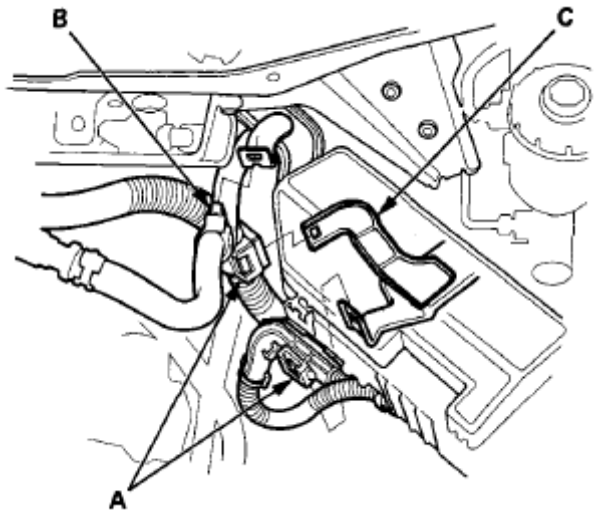

Fig. 80: Identifying Harness Clamp, Brake Booster Vacuum Hose Clamp And Mounting Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the mounting bolt (A) and the two mounting nuts (B) from the under-hood fuse/relay box mounting bracket, then tilt the under-hood fuse/relay box forward.

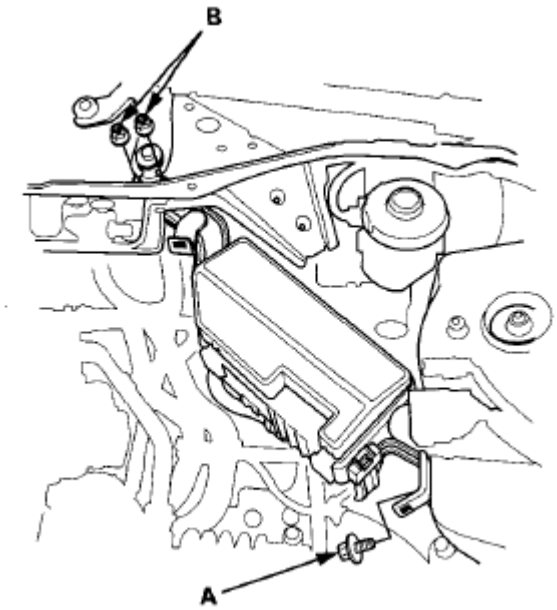

Fig. 81: Identifying Mounting Bolt And Nuts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Raise the vehicle on the lift.
10. Remove the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
11. Remove the front subframe stiffener (see step 41).
12. Remove exhaust pipe A (see step 42).
13. Remove the two rear engine mount bracket mounting bolts (A).

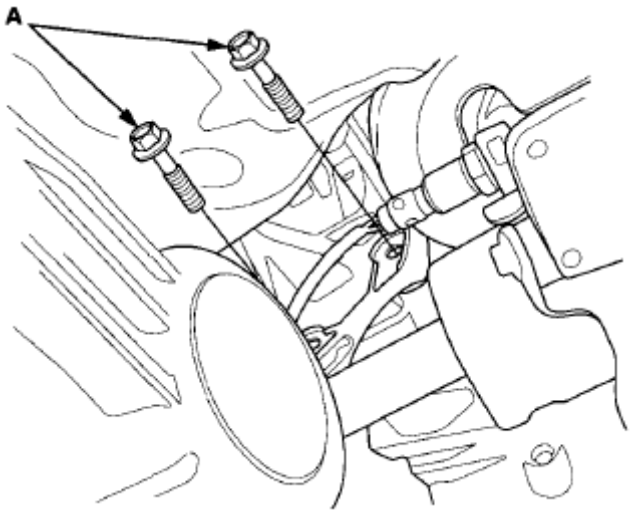

Fig. 82: Identifying Rear Engine Mount Bracket Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Lower the vehicle on the lift.
15. Lift and support the engine with a jack and a wood block under the engine/transmission.
16. Remove the harness bracket (A).

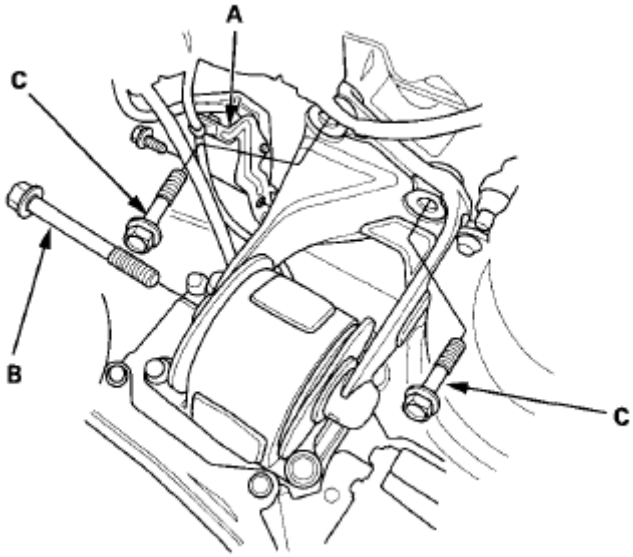

Fig. 83: Identifying Harness Bracket And Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Remove the rear engine mount mounting bolt (B), then remove the two rear engine mount bracket mounting bolts (C).
18. Remove the rear engine mount bracket (A) from the top by sliding it out, and lifting it out from the driver's side.

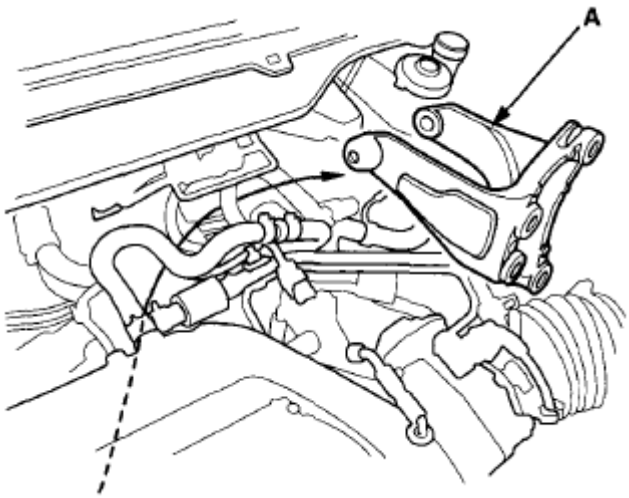

Fig. 84: Identifying Rear Engine Mount Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Remove the rear engine mount mounting bolts (A).

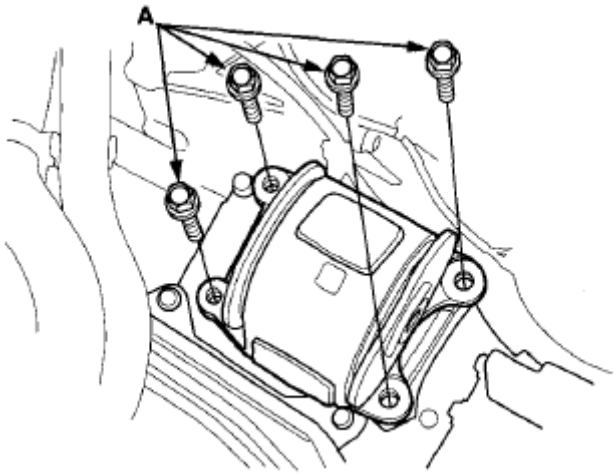

Fig. 85: Identifying Rear Engine Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Remove the rear engine mount (A).

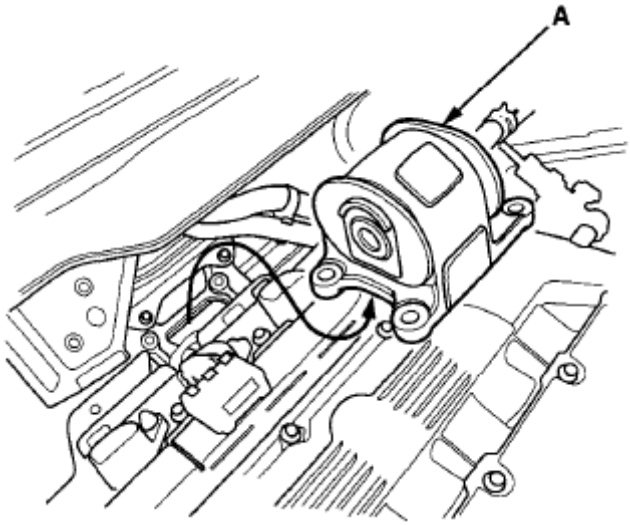

Fig. 86: Identifying Rear Engine Mount
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION-M/T MODEL

1. Install the rear engine mount (A).

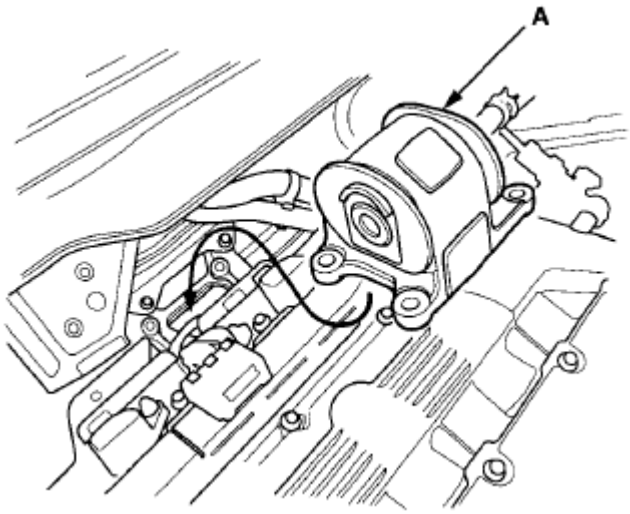

Fig. 87: Identifying Rear Engine Mount (M/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the rear engine mount with its mounting holes and install the new rear engine mount mounting bolts (A).

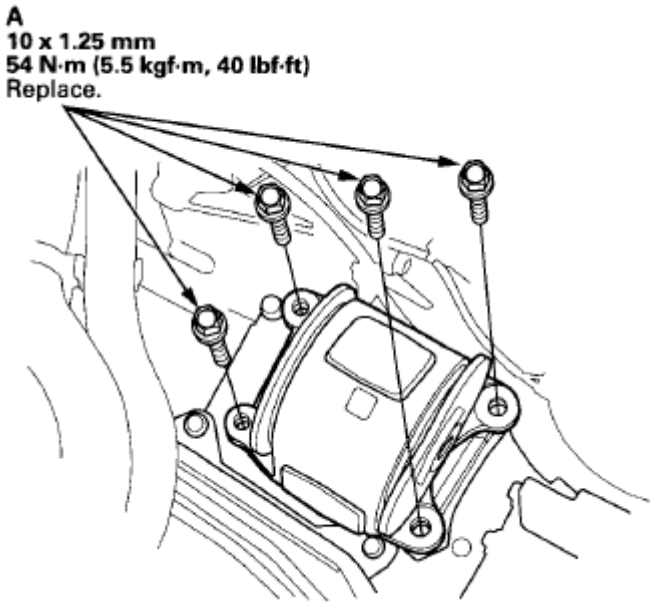

Fig. 88: Identifying Rear Engine Mounting Bolts (M/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the rear engine mount bracket (A) from the top by sliding it into place from the driver's side.

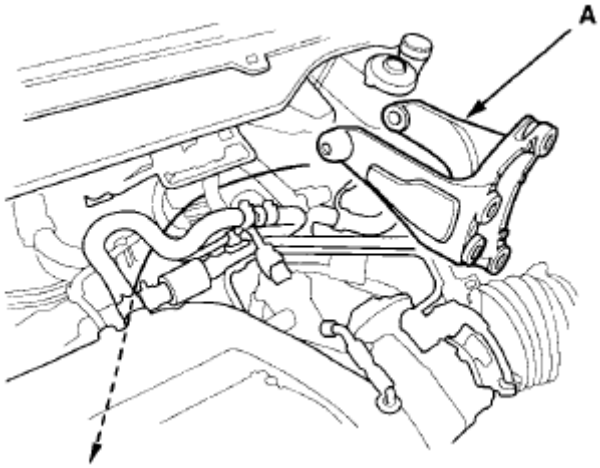

Fig. 89: Identifying Rear Engine Mount Bracket (M/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Loosely install the new two rear engine mount bracket mounting bolts (A) and the new rear engine mount mounting bolt (B).

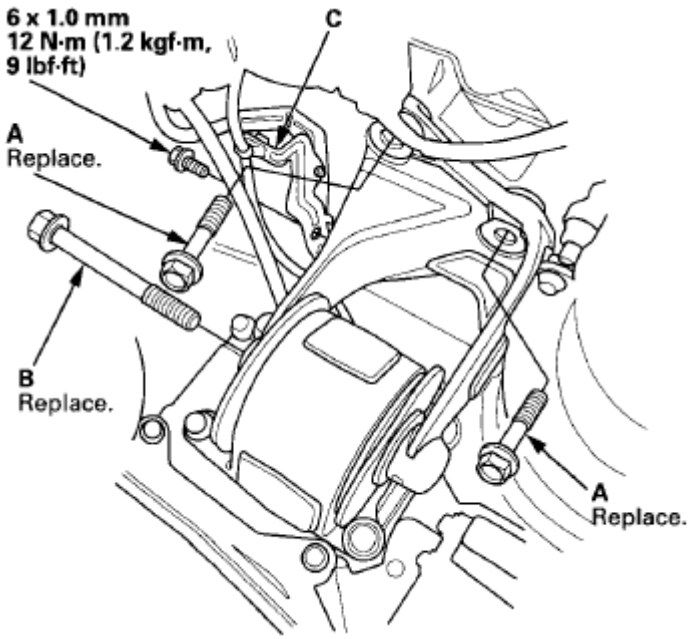

Fig. 90: Identifying Harness Bracket And Mounting Bolts (M/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the harness bracket (C).
6. Remove the jack and the wood block, then raise the vehicle on the lift.
7. Tighten the new two rear engine mount bracket mounting bolts (A).

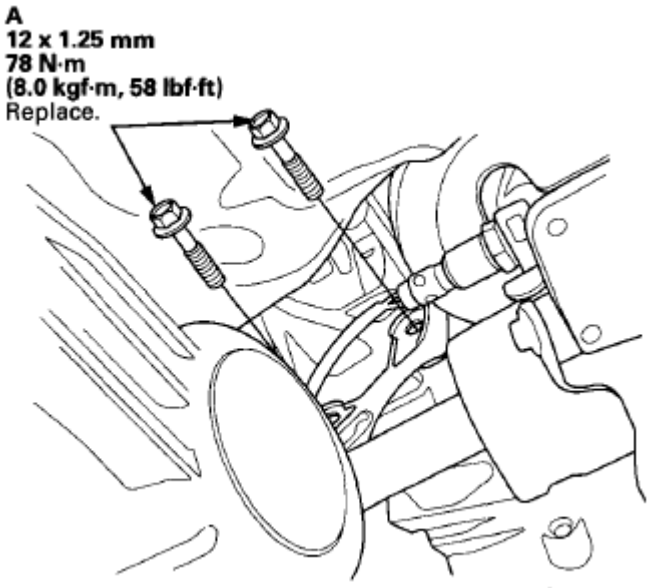

Fig. 91: Identifying Rear Engine Mount Bracket Mounting Bolts (M/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install exhaust pipe A (see step 35).
9. Install the front subframe stiffener (see step 36).
10. Install the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
11. Lower the vehicle on the lift.
12. Tighten the two rear engine mount bracket mounting bolts (A), then tighten the rear engine mount mounting bolt (B).

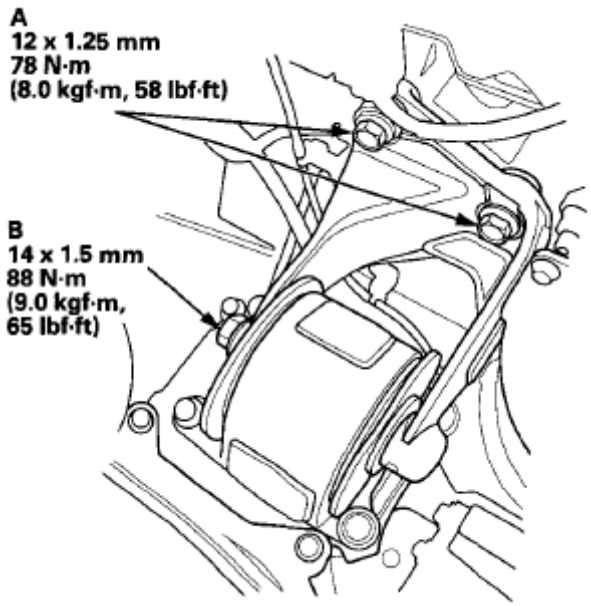

Fig. 92: Identifying Rear Engine Mount Bracket Mounting Bolts And Mount Mounting Bolt (M/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Install the under-hood fuse/relay box with the mounting bracket, and tighten the two mounting nuts (A) and the mounting bolt (B).

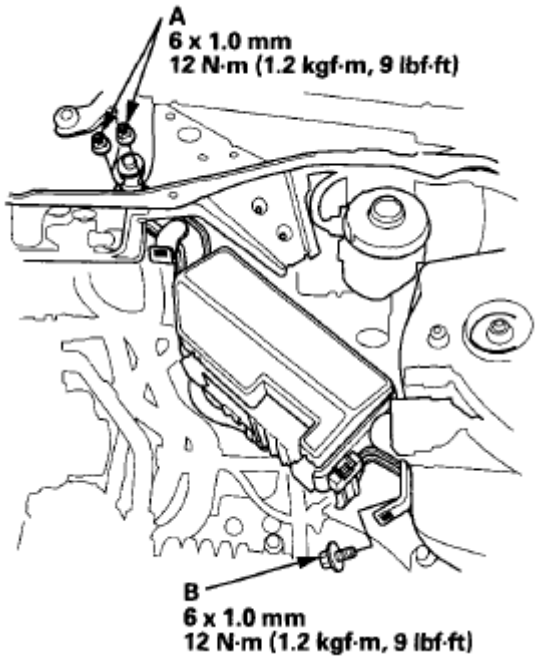

Fig. 93: Identifying Mounting Nuts And Mounting Bolt Of Mounting Bracket (M/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Install the two harness clamps (A) and the brake booster vacuum hose clamp (B) to the under-hood fuse/relay box mounting bracket (C).

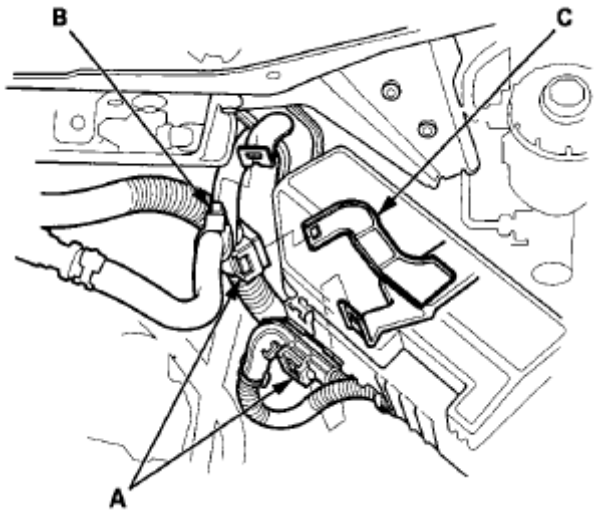

Fig. 94: Identifying Harness Clamps, Hose Clamp And Mounting Bracket (M/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Connect the harness connectors (A), then install the harness clamp (B) on the left strut tower.

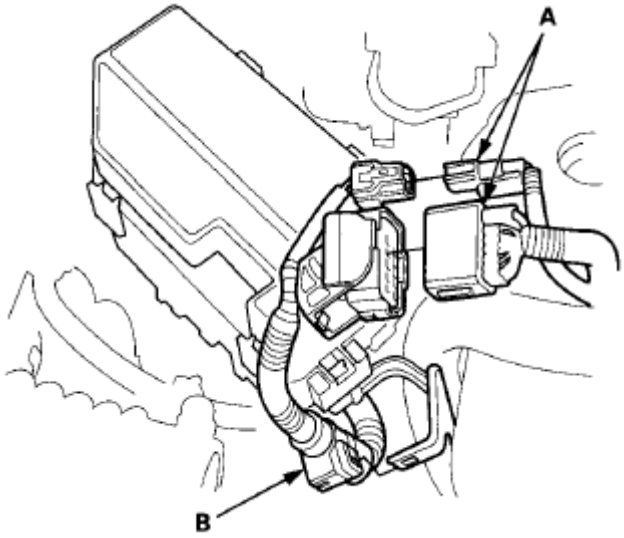

Fig. 95: Identifying Harness Connectors And Harness Clamps On Left Strut Tower (M/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

16. Install the strut brace (see **FRAME BRACE REPLACEMENT**).
17. Install the cowl cover (see **FRONT BULKHEAD BRACE COVER REPLACEMENT**).
18. Install the air cleaner (see **THROTTLE BODY CLEANING**).
19. Do the battery installation procedure (see **BATTERY REMOVAL AND INSTALLATION**).
20. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

REMOVAL-A/T MODEL

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Do the battery removal procedure (see **BATTERY REMOVAL AND INSTALLATION**).
3. Remove the air cleaner (see **THROTTLE BODY CLEANING**).
4. Remove the cowl cover (see **FRONT BULKHEAD BRACE COVER REPLACEMENT**).
5. Remove the strut brace (see **FRAME BRACE REPLACEMENT**).
6. Remove the harness clamp (A), then disconnect the harness connectors (B) on the left strut tower.

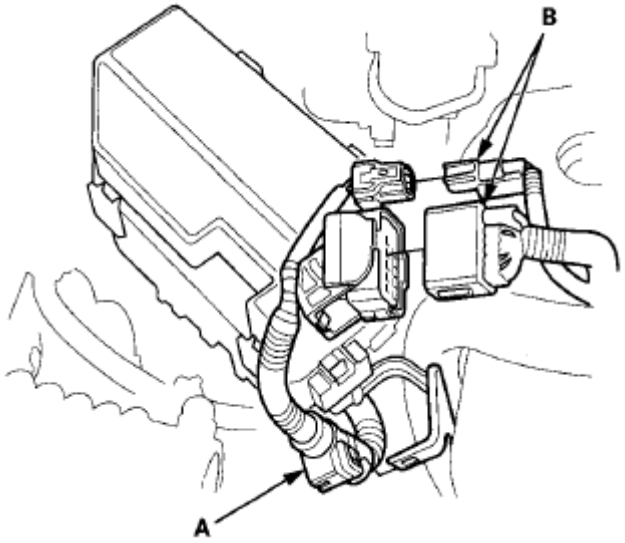

Fig. 96: Identifying Harness Connectors And Harness Clamps On Left Strut Tower (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the two harness clamps (A) and the brake booster vacuum hose clamp (B) from the under-hood fuse/relay box mounting bracket (C).

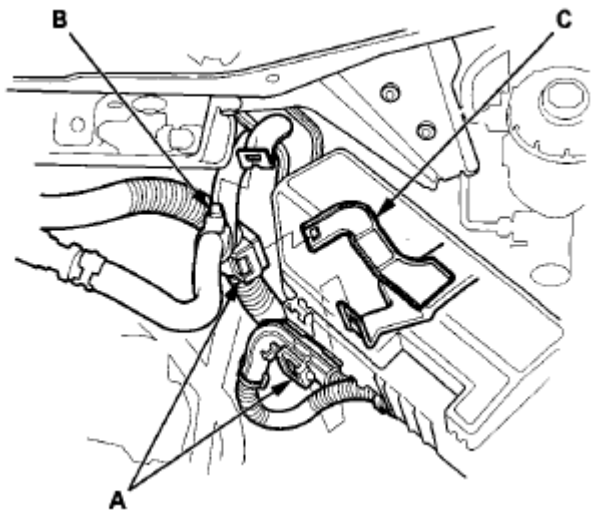

Fig. 97: Identifying Mounting Bracket, Harness Clamps And Hose Clamp (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the mounting bolt (A) and the two mounting nuts (B) from the under-hood fuse/relay box mounting bracket, then tilt the under-hood fuse/relay box forward.

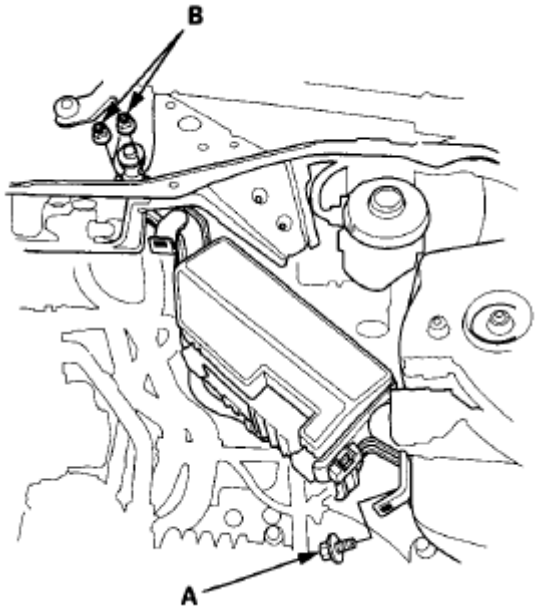

Fig. 98: Identifying Mounting Nuts And Bolts (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the vacuum hose (A) from the clamp (B) and disconnect the vacuum hose from the three way valve (C).

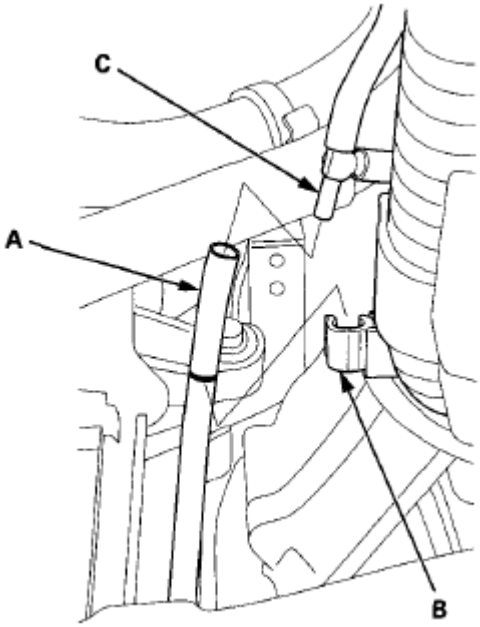

Fig. 99: Identifying Vacuum Hose And Clamp (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the rear engine mount stop (A), then remove the rear engine mount bolt (B).

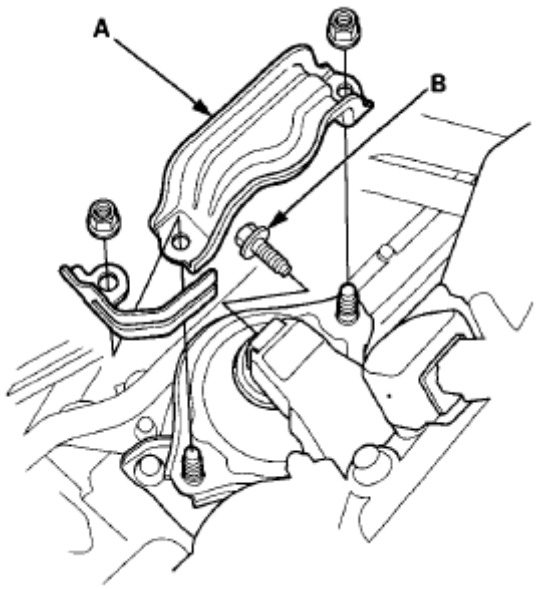

Fig. 100: Identifying Rear Engine Mount Stop And Mount Bolt (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the rear engine mount mounting bolts (A). A

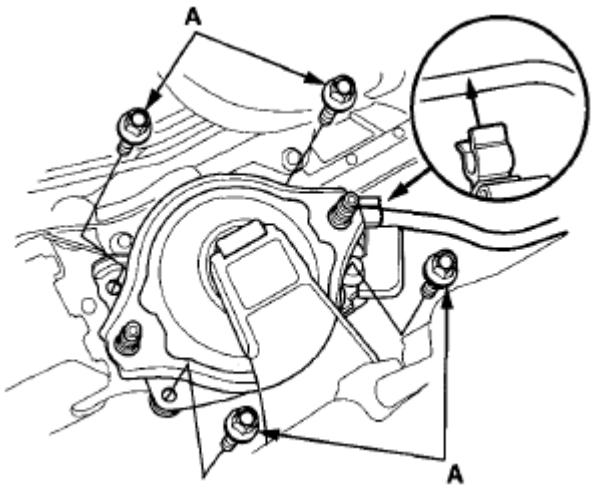

Fig. 101: Identifying Rear Engine Mount Mounting Bolts (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Lift and support the engine with a jack and a wood block under the engine/transmission.
13. Remove the rear engine mount (A) from the top by sliding it out, and lifting it out from the driver's side.

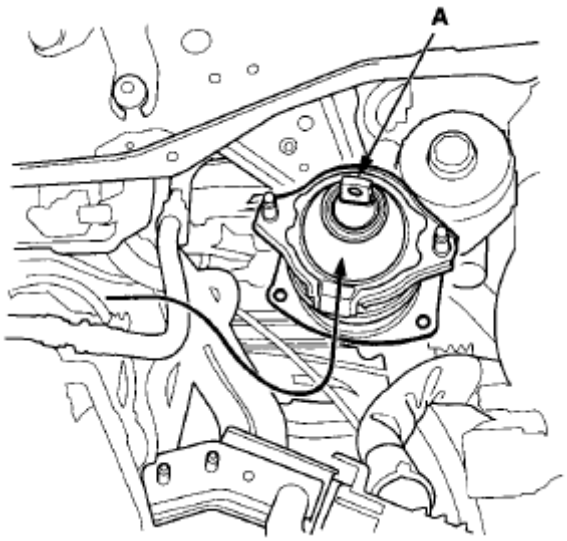

Fig. 102: Identifying Rear Engine Mount (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION-A/T MODEL

1. Install the rear engine mount (A) from the top by sliding it into place from the driver's side and route the vacuum hose (B) through the hole in the mount base bracket (C).

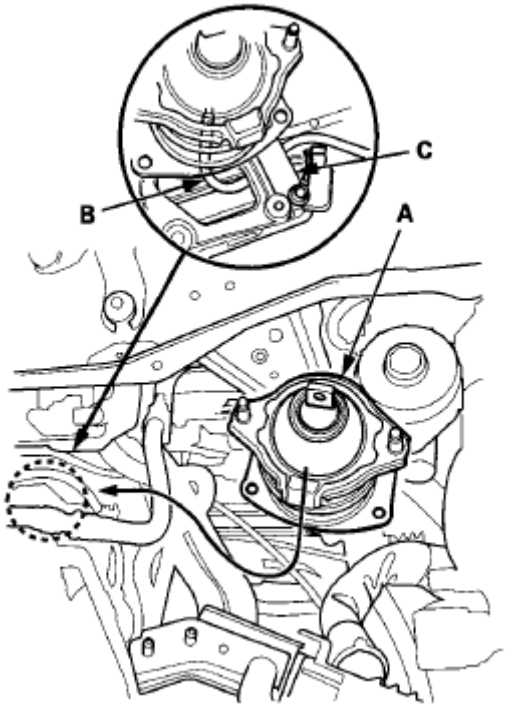

Fig. 103: Identifying Rear Engine Mount, Vacuum Hose And Base Bracket (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Align the rear engine mount with its mounting holes and install the new rear engine mount mounting bolts (A).

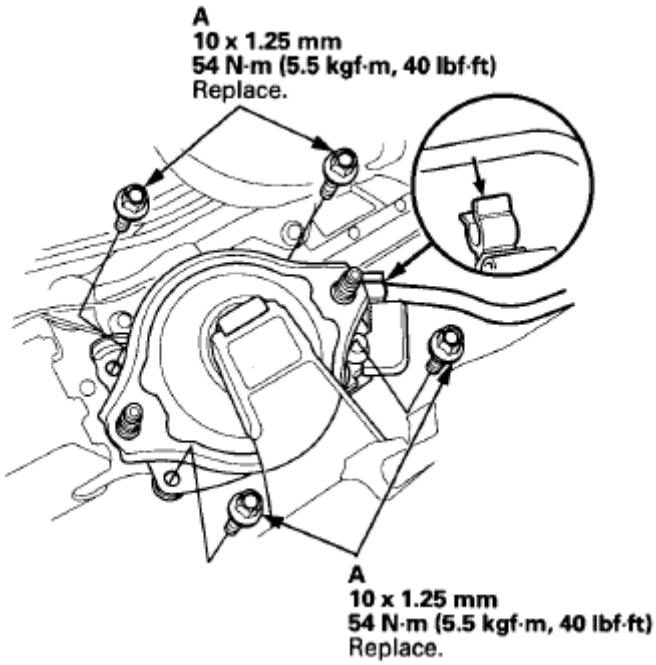

Fig. 104: Identifying Rear Engine Mount Mounting Bolts (A/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the jack and the wood block.
4. Tighten the new rear engine mount bolt (A), then install the rear engine mount stop (B) using new nuts.

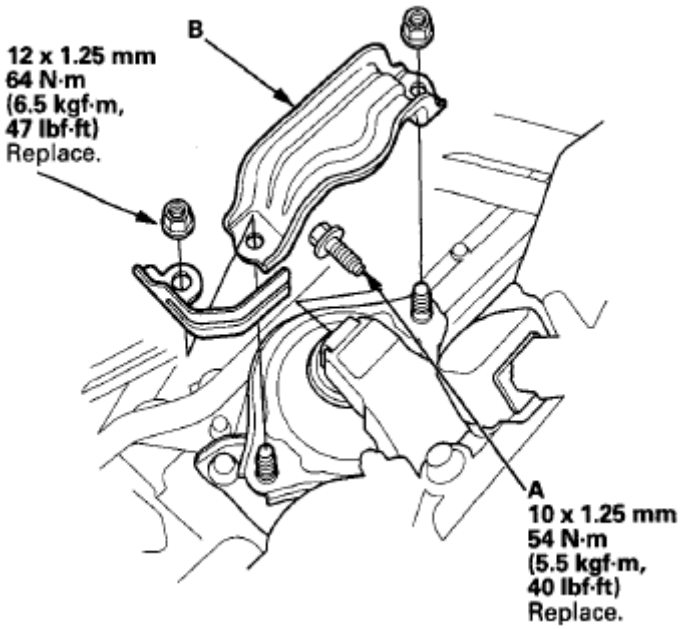

Fig. 105: Identifying Rear Engine Mount Bolt And Mount Stop (A/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Connect the vacuum hose (A) to the three way valve (B) and install the vacuum hose on its clamp (C) at the mark (D).

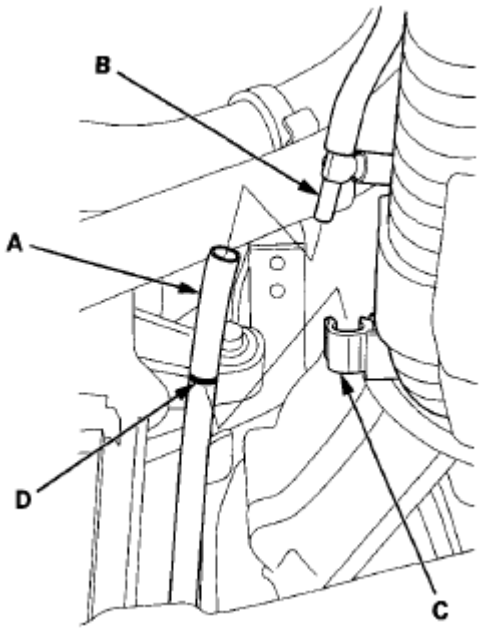

Fig. 106: Identifying Vacuum Hose, Three Way Valve, Clamp And Mark On Vacuum Hose (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Install the under-hood fuse/relay box with the mounting bracket, and tighten the two mounting nuts (A) and the mounting bolt (B).

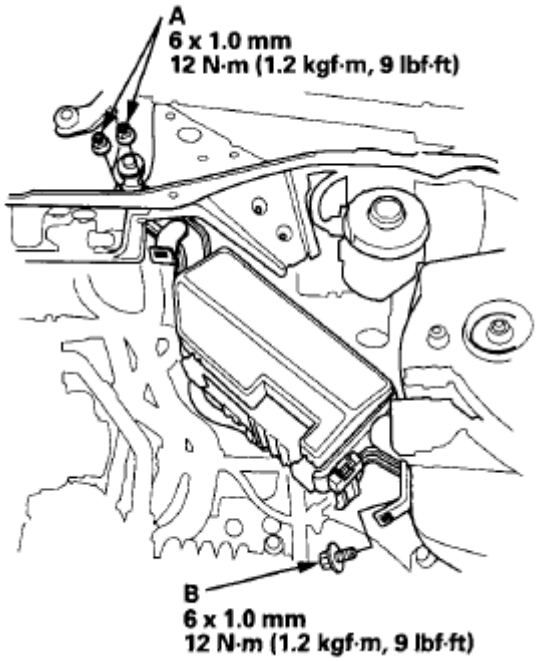

Fig. 107: Identifying Mounting Nuts And Mounting Bolt (A/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Install the two harness clamps (A) and the brake booster vacuum hose clamp (B) to the under-hood fuse/relay box mounting bracket (C).

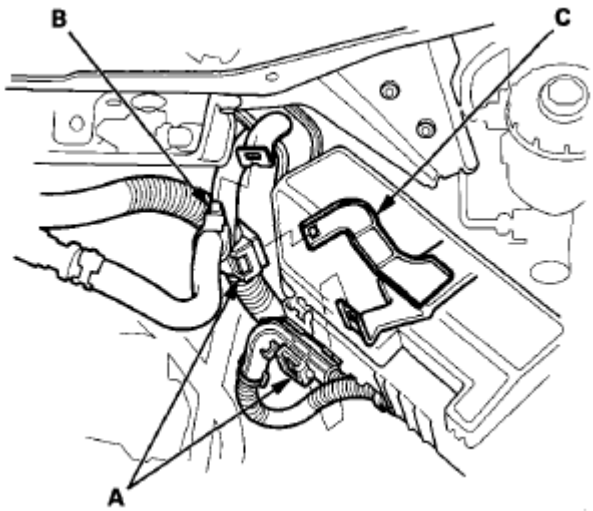

Fig. 108: Identifying Harness Clamps, Hose Clamp And Mounting Bracket (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Connect the harness connectors (A), then install the harness clamp (B) on the left strut tower.

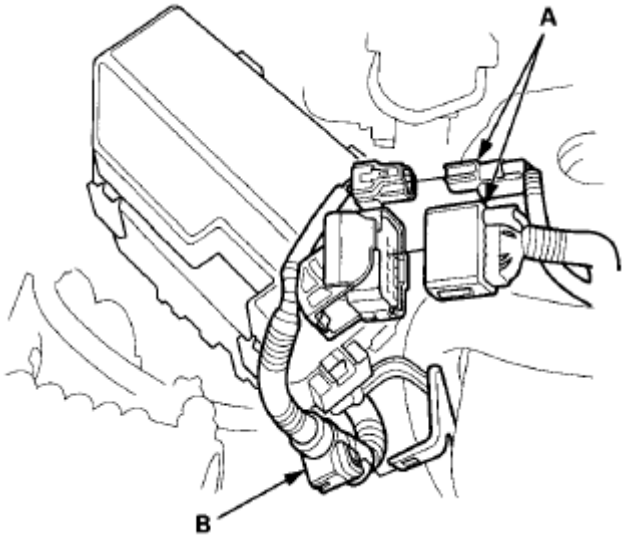

Fig. 109: Identifying Harness Connectors And Harness Clamp On Left Strut Tower (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Install the strut brace (see **FRAME BRACE REPLACEMENT**).
10. Install the cowl cover (see **FRONT BULKHEAD BRACE COVER REPLACEMENT**).
11. Install the air cleaner (see **THROTTLE BODY CLEANING**).
12. Do the battery installation procedure (see **BATTERY REMOVAL AND INSTALLATION**).
13. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

UPPER TRANSMISSION MOUNT REMOVAL AND INSTALLATION

REMOVAL-M/T MODEL

1. Remove the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
2. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
3. Remove the air cleaner (see **THROTTLE BODY CLEANING**).
4. Lift and support the engine with a jack and a wood block under the transmission.
5. Remove the upper transmission mount bracket mounting bolts.

NOTE: Do not remove the bolt (A) from the upper transmission mount. If the bolt is removed, the upper transmission mount must be replaced as an assembly.

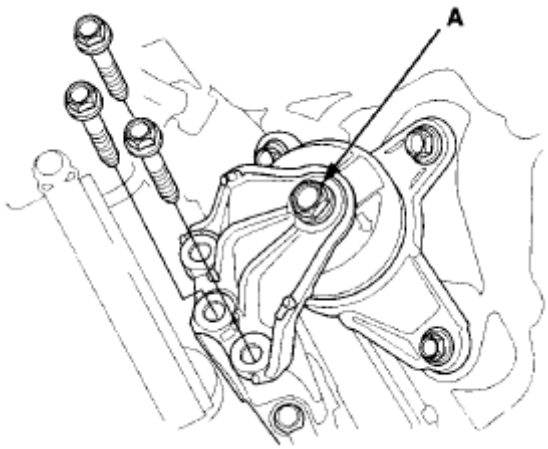

Fig. 110: Identifying Upper Transmission Mounting Bolts (M/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the upper transmission mount.

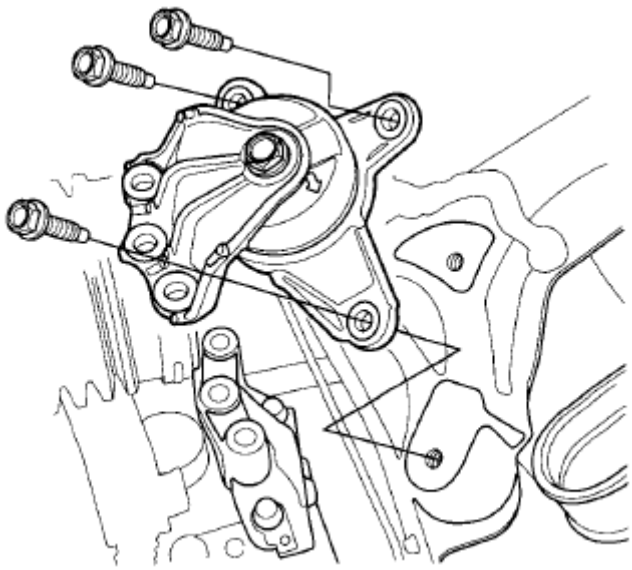

Fig. 111: Identifying Upper Transmission Mount (M/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION-M/T MODEL

1. Install the upper transmission mount.

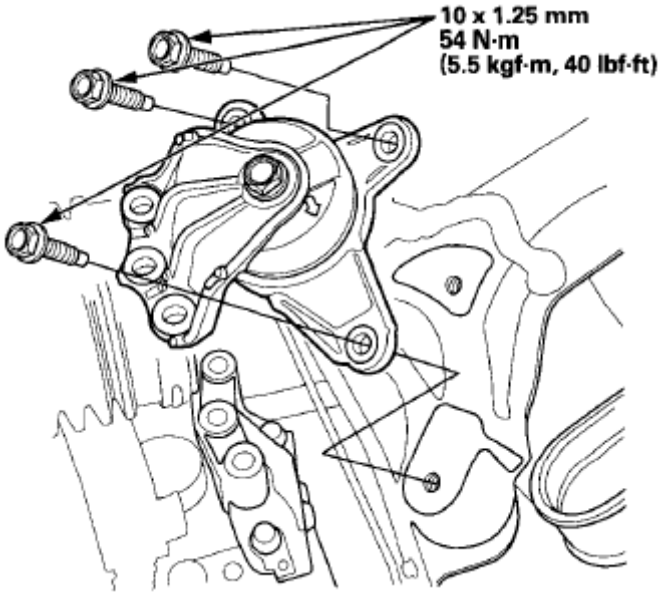

Fig. 112: Identifying Upper Transmission Mount (M/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosely install the new upper transmission mount bracket mounting bolts.

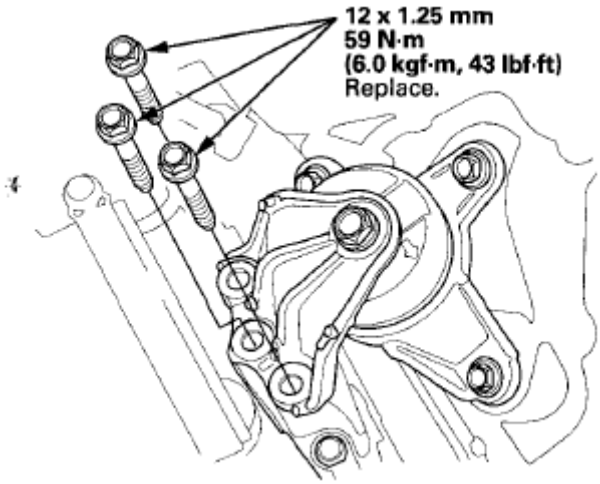

Fig. 113: Identifying Upper Transmission Mount Bracket Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the jack and the wood block.
4. Tighten the upper transmission mount bracket mounting bolts.
5. Install the air cleaner (see **THROTTLE BODY CLEANING**).
6. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
7. Install the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).

REMOVAL-A/T MODEL

1. Remove the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
2. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
3. Remove the air cleaner (see **THROTTLE BODY CLEANING**).
4. Lift and support the engine with a jack and a wood block under the transmission.
5. Disconnect the transmission fluid pressure switch E (6th clutch) connector (A). Remove the harness bracket (B), then remove the upper transmission mount bracket mounting bolts.

NOTE: Do not remove the bolt (C) from the upper transmission mount. If the bolt is removed, the upper transmission mount must be replaced as an assembly.

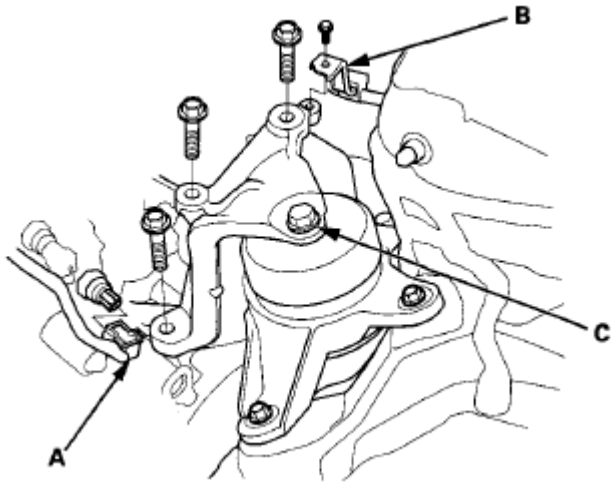

Fig. 114: Identifying Connector, Harness Bracket And Bolts (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the upper transmission mount.

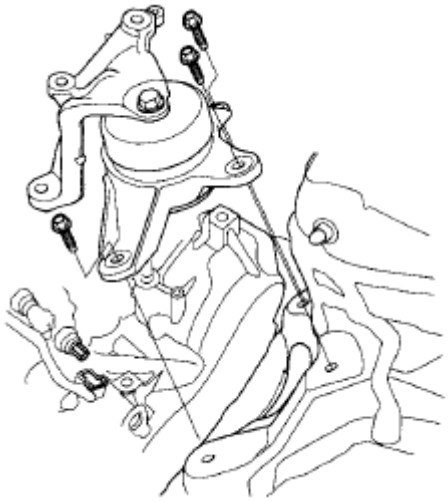

Fig. 115: Identifying Upper Transmission Mount With Mounting Bolts (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION-A/T MODEL

1. Install the upper transmission mount.

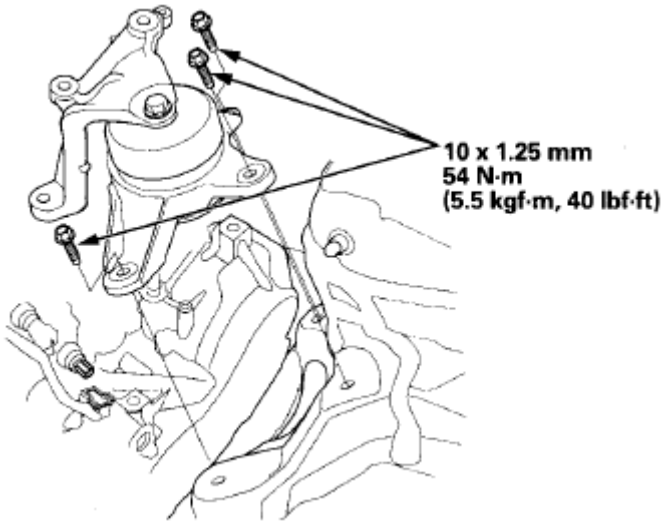

Fig. 116: Identifying Upper Transmission Mount With Mounting Bolts (A/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosely install the new upper transmission mount bracket mounting bolts, then install the harness bracket (A). Connect the transmission fluid pressure switch E (6th clutch) connector (B).

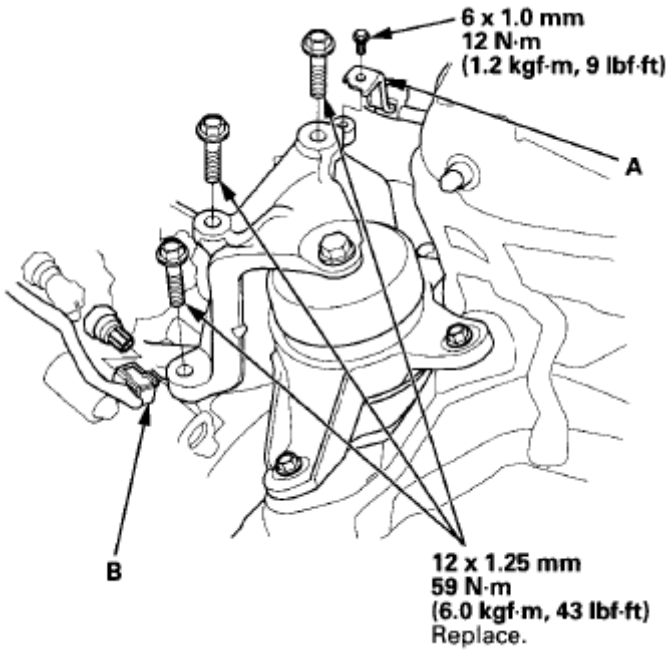

Fig. 117: Identifying Harness Bracket And Connector With Torque Specification Of Bolts (A/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the jack and the wood block.
4. Tighten the upper transmission mount bracket mounting bolts.
5. Install the air cleaner (see **THROTTLE BODY CLEANING**).
6. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
7. Install the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).

LOWER TRANSMISSION MOUNT REMOVAL AND INSTALLATION

REMOVAL-M/T MODEL

1. Remove the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
2. Support the engine/transmission with a transmission jack.
3. Remove the lower transmission mount bracket (A), then remove the lower transmission mount (B).

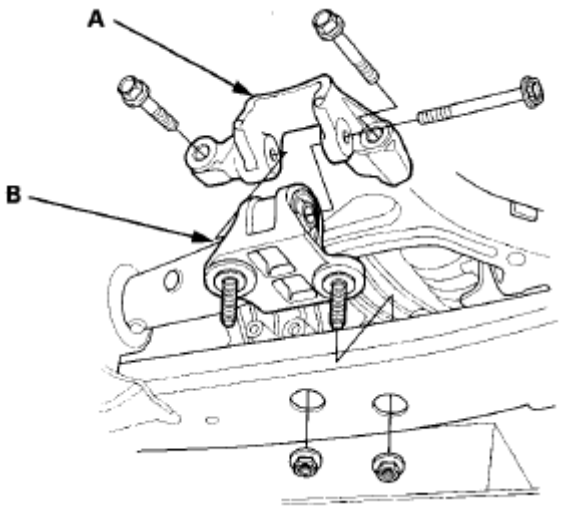

Fig. 118: Identifying Lower Transmission Mount Bracket And Transmission Mount (M/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION-M/T MODEL

1. Install the lower transmission mount (A).

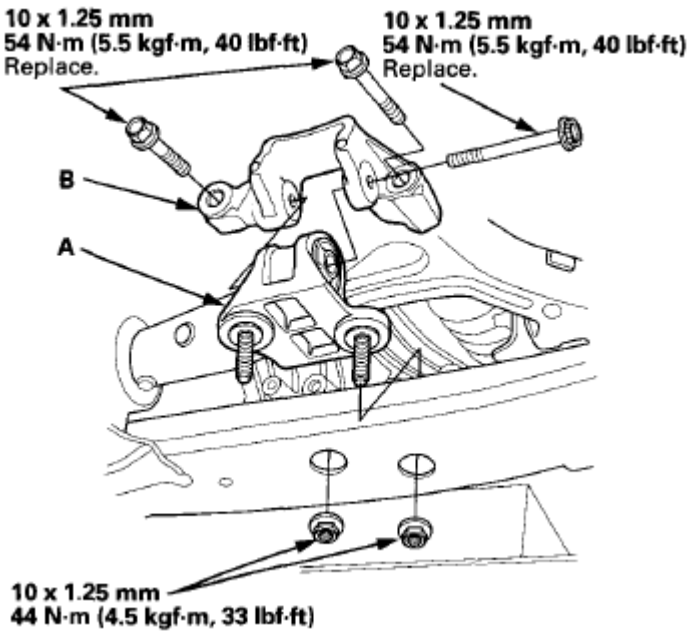

Fig. 119: Identifying Lower Transmission Mount Bracket And Transmission Mount (M/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosely install the lower transmission mount bracket (B) using new bolts.
3. Remove the transmission jack.
4. Tighten the lower transmission mount bracket mounting bolts and the lower transmission mount

mounting nuts.

5. Install the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).

REMOVAL-A/T MODEL

1. Remove the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
2. Lift and support the engine with a transmission jack and a wood block under the transmission.
3. Remove the lower transmission mount bracket (A), then remove the lower transmission mount (B).

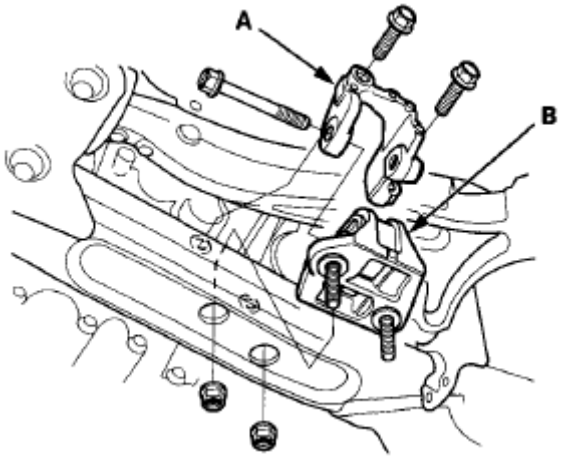

Fig. 120: Identifying Lower Transmission Mount Bracket And Transmission Mount (A/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION-A/T MODEL

1. Install the lower transmission mount (A).

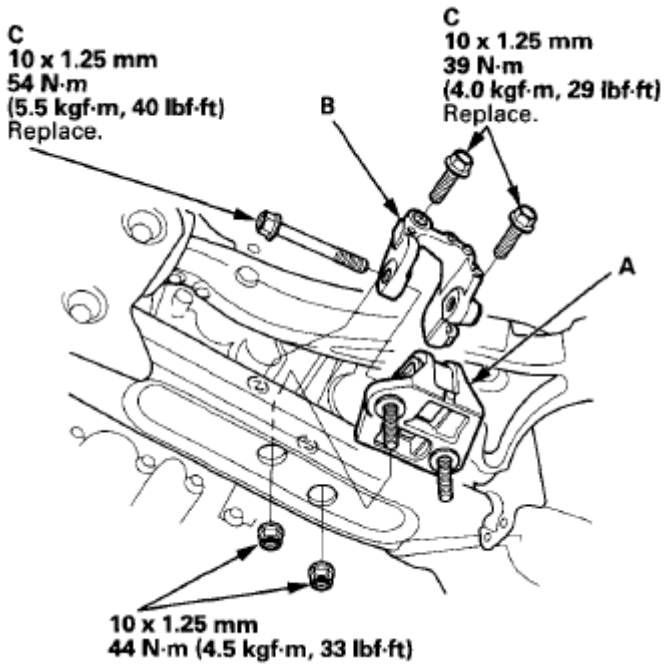

Fig. 121: Identifying Lower Transmission Mount Bracket And Transmission Mount (A/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosely install the lower transmission mount bracket (B) using new bolts (C).
3. Remove the transmission jack and the wood block.
4. Tighten the lower transmission mount bracket mounting bolts and the lower transmission mount mounting nuts.
5. Install the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).

2012 ENGINE

Engine Block - TL

SPECIAL TOOLS

Ref.No.	Tool Number	Description	Qty
①	070AD-RCA0200	Oil Seal Driver Attachment, 106 mm	1
②	07749-0010000	Driver Handle, 15 x 135L	1
③	07OAD-RCAA100	Oil Seal Driver, 64 mm	1

COMPONENT LOCATION INDEX

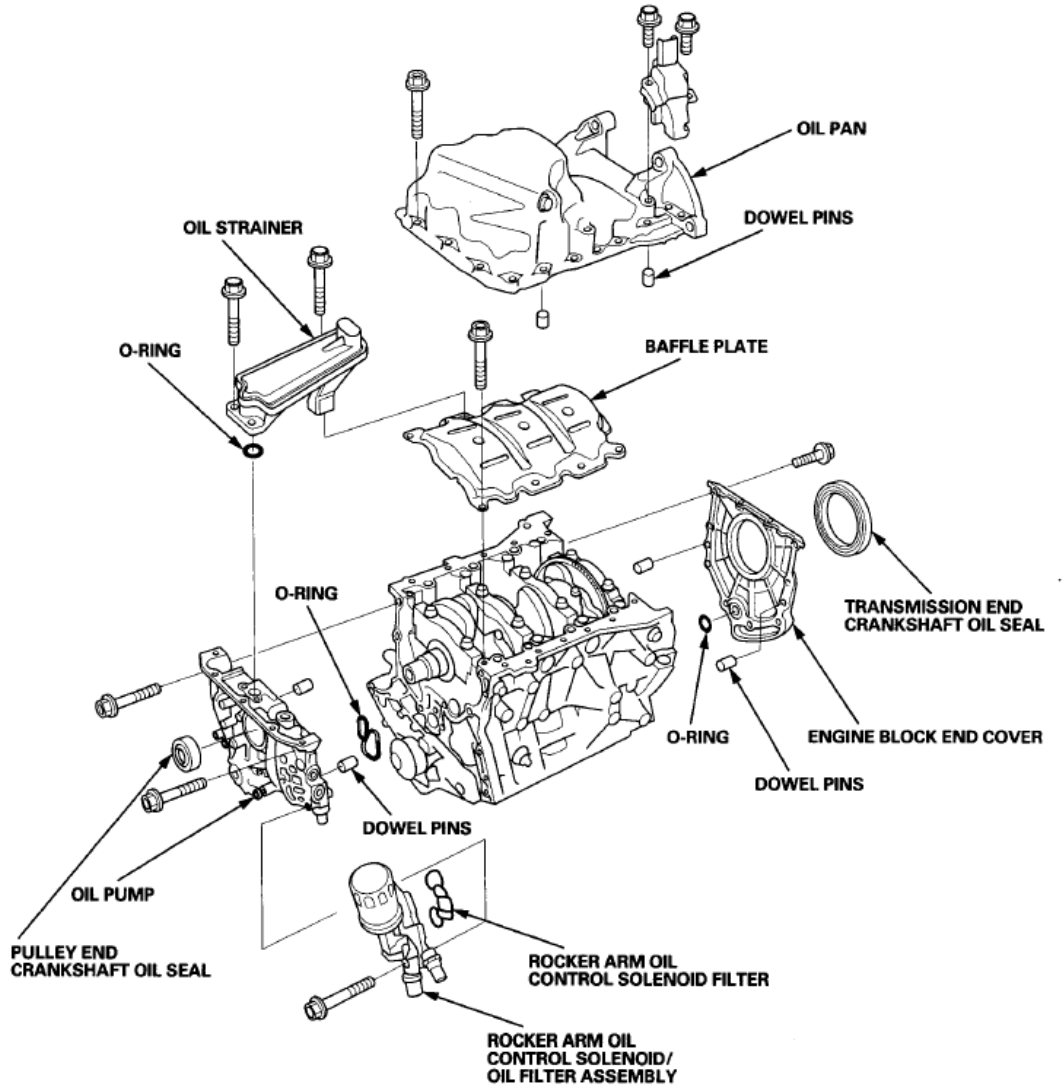

Fig. 2: Identifying Engine Block Components (1 Of 3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

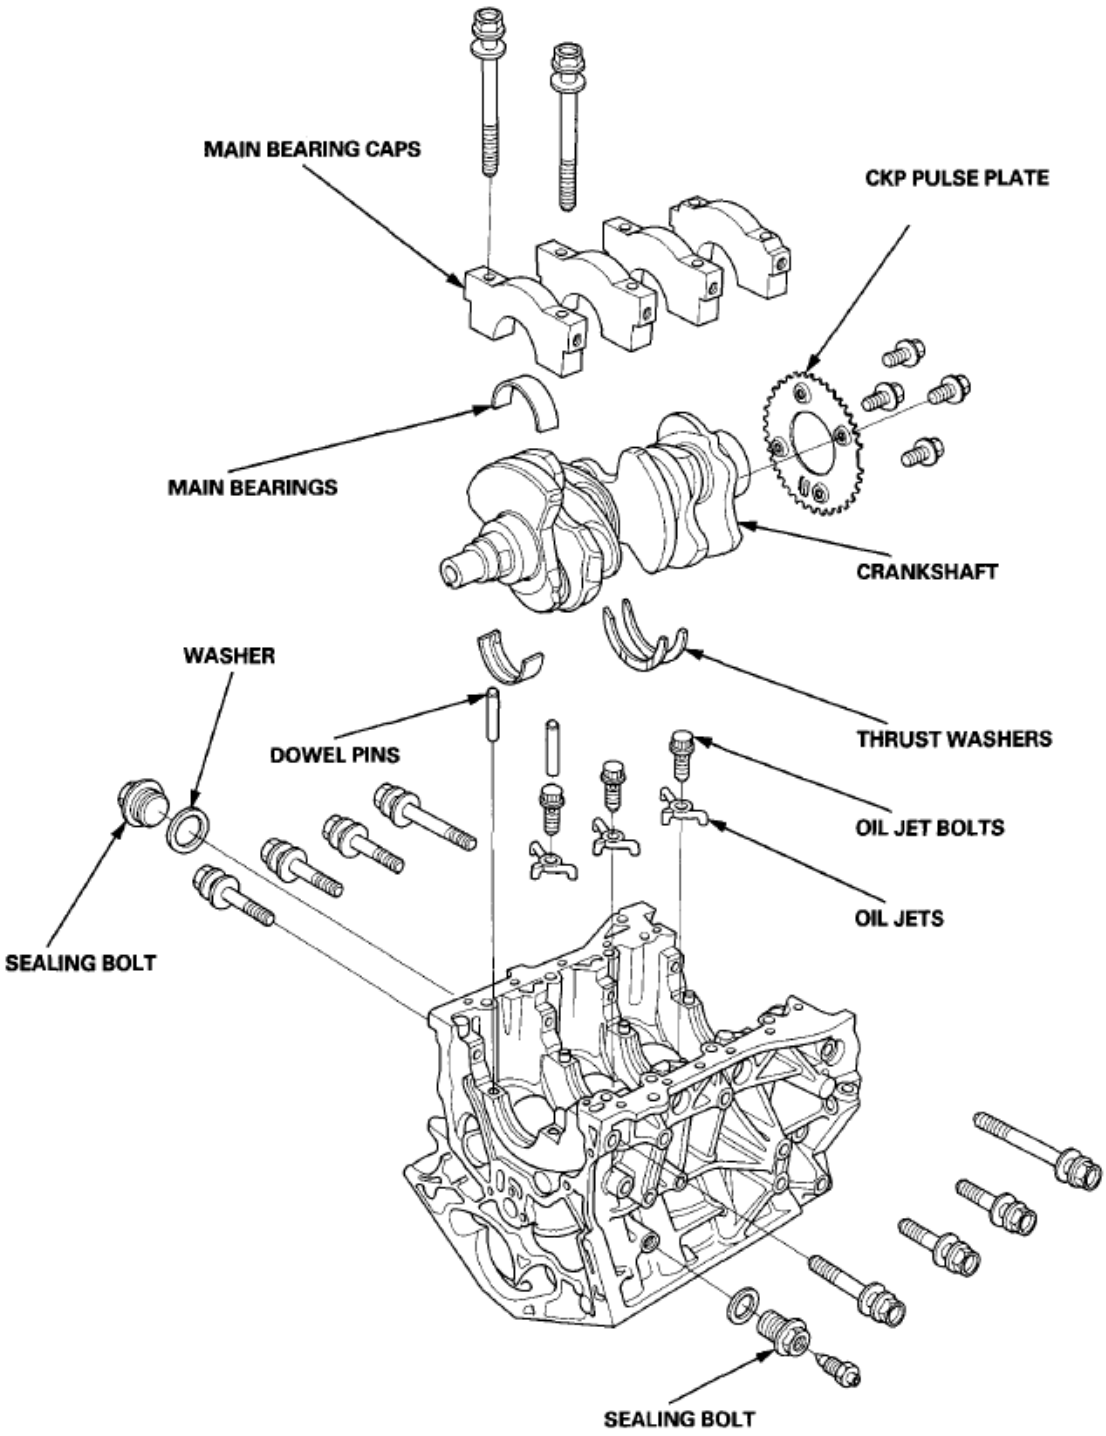

Fig. 3: Identifying Engine Block Components (2 Of 3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

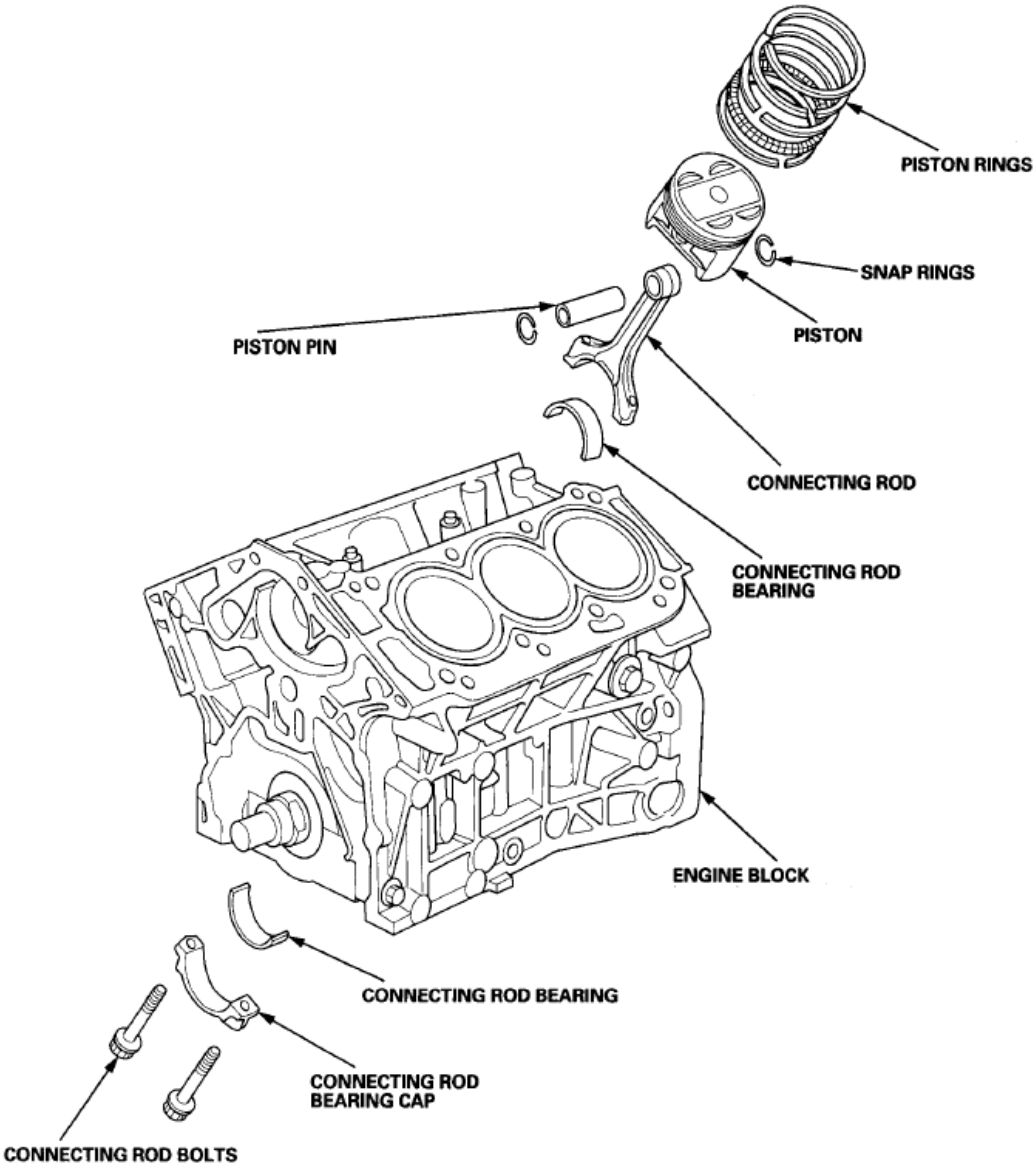

Fig. 4: Identifying Engine Block Components (3 Of 3)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CONNECTING ROD AND CRANKSHAFT END PLAY INSPECTION

1. Remove the oil pump (see **REMOVAL**).
2. Remove the baffle plate (see step 10).
3. Measure the connecting rod end play with a feeler gauge (A) between the connecting rod (B) and the crankshaft (C).

   Connecting Rod End Play

   Standard (New): 0.15- 0.35 mm (0.006- 0.013 in)

Service Limit: 0.45 mm (0.017 in)

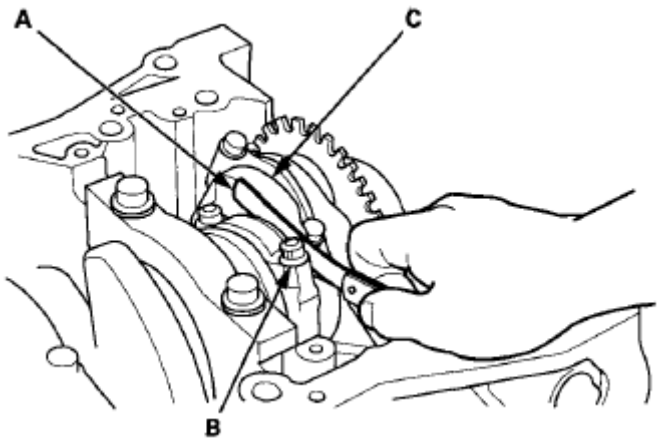

Fig. 5: Measuring Connecting Rod End Play Using Feeler Gauge Between Connecting Rod And Crankshaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the connecting rod end play is beyond the service limit, install a new connecting rod and recheck. If it is still beyond the service limit, replace the **crankshaft**.
5. Push the crankshaft firmly away from the dial indicator by prying, and zero the dial against the end of the crankshaft. Then pull the crankshaft firmly back toward the indicator by prying; the dial reading should not exceed the service limit.

Crankshaft End Play

Standard (New): 0.10- 0.35 mm (0.0039- 0.0138 in)

Service Limit: 0.45 mm (0.0177 in)

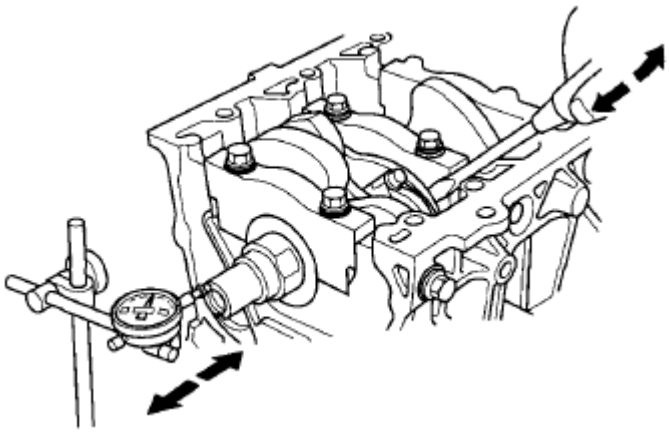

Fig. 6: Measuring Crankshaft End Play
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If the crankshaft end play is beyond the service limit, replace the thrust washers and recheck. If it is still beyond the service limit, replace the **crankshaft**.

CRANKSHAFT MAIN BEARING REPLACEMENT

MAIN BEARING CLEARANCE INSPECTION

1. Remove the main bearing caps and the **bearing halves**.
2. Clean each main journal and bearing half with a clean shop towel.
3. Place one strip of plastigage across each main journal.

NOTE: If the engine is still in the vehicle when you bolt the main cap down to check the clearance, the weight of the crankshaft and the drive plate will flatten the plastigage further than just the torque on the cap bolt and give you an incorrect reading. For an accurate reading, support the crank with a jack under the counterweights, and check only one bearing at a time.

4. Reinstall the bearings and the bearing caps, then torque the bearing cap bolts to 74 N.m (7.5 kgf.m, 54 lbf.ft), and the bearing cap side bolts to 49 N.m (5.0 kgf.m, 36 lbf.ft) in the proper sequence (see step 22).

NOTE:
- **Apply new engine oil to the bolt threads and flanges.**
- **Do not rotate the crankshaft during inspection.**

5. Remove the bearing cap and the bearing half, and measure the widest part of the plastigage.

Main Bearing-to-Journal Oil Clearance

Standard (New): 0.019- 0.045 mm (0.00075- 0.00177 in)

Service Limit: 0.050 mm (0.00197 in)

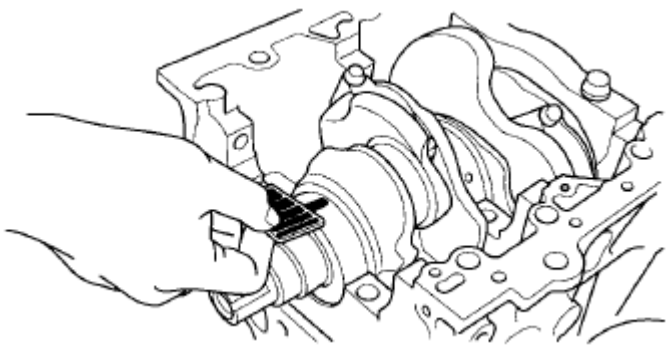

Fig. 7: Measuring Widest Part Of Plastigage
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If the plastigage measures too wide or too narrow, remove the crankshaft, and remove the upper half of

the bearing. Install a new, complete bearing with the same color code, and recheck the clearance. Do not file, shim, or scrape the bearings or the caps to adjust clearance.

7. If the plastigage shows the clearance is still incorrect, try the next larger or smaller bearing (the color listed above or below that one), and check the clearance again. If the proper clearance cannot be obtained by using the appropriate larger or smaller bearings, replace the **crankshaft and start over**.

MAIN BEARING SELECTION

Block Bore Code Location

Letters or bars have been stamped on the end of the engine block as a code for the size of each of the four main journal bores.

Use them, and the numbers or bars stamped on the crankshaft (codes for main journal size), to choose the correct bearings. If the codes are indecipherable because of an accumulation of dirt and dust, do not scrub them with a wire brush or scraper. Clean them only with solvent or detergent.

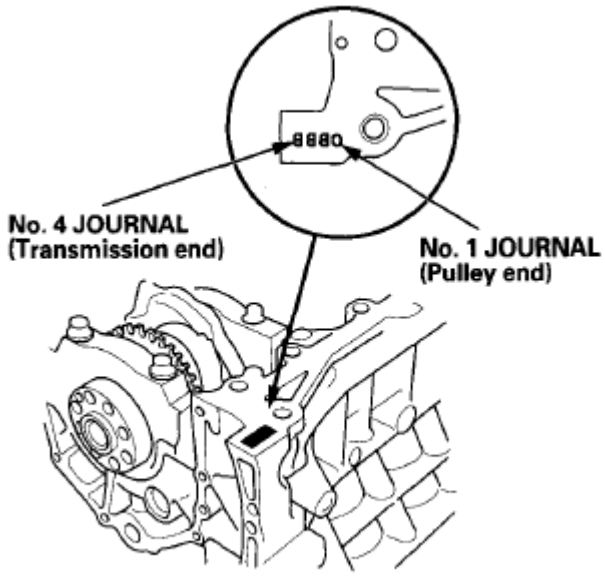

Fig. 8: Identifying Block Bore Code Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

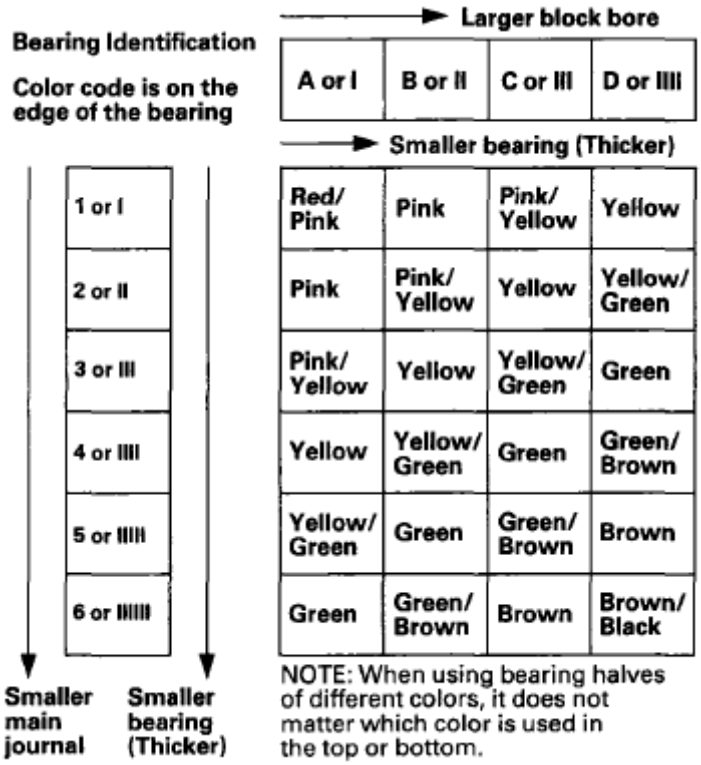

Fig. 9: Color Coded Bearing Identification Table
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Main Journal Code Locations (Numbers or Bars)

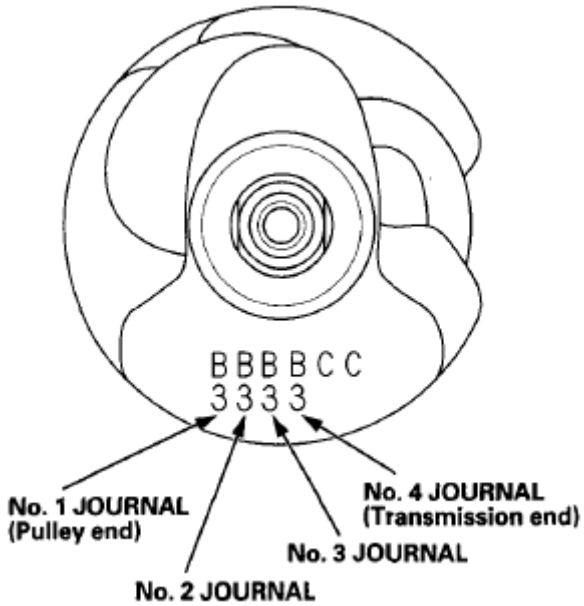

Fig. 10: Identifying Main Journal Code Locations (Numbers Or Bars)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CONNECTING ROD BEARING REPLACEMENT

CONNECTING ROD BEARING CLEARANCE INSPECTION

1. Remove the connecting rod cap and the **bearing half**.
2. Clean the connecting rod journal and the bearing half with a clean shop towel.
3. Place a strip of plastigage across the rod journal.
4. Reinstall the bearing half and the rod cap, and tighten the bolts.

NOTE:

- **Apply new engine oil to the bolt threads and flanges.**
- **Do not rotate the crankshaft during inspection.**

Tightening Torque:

20 N.m (2.0 kgf.m, 14 lbf.ft) + 90 °

5. Remove the rod cap and the bearing half and measure the widest part of the plastigage.

Connecting Rod Bearing-to-Journal Oil

Clearance

Standard (New): 0.020- 0.044 mm (0.00079- 0.00173 in)

Service Limit: 0.050 mm (0.00197 in)

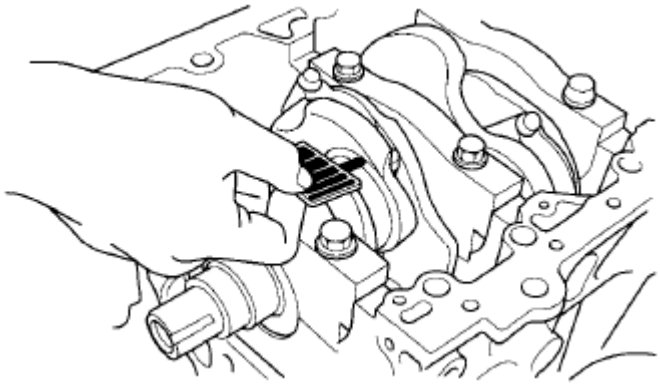

Fig. 11: Measuring Widest Part Of Plastigage
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If the plastigage measures too wide or too narrow, remove the upper half of the bearing, then install a new, complete bearing with the same color code, and recheck the clearance. Do not file, shim, or scrape the bearings or the caps to adjust clearance.
7. If the plastigage shows the clearance is still incorrect, try the next larger or smaller bearing (the color

listed above or below that one), and check the clearance again. If the proper clearance cannot be obtained by using the appropriate larger or smaller bearings, replace the **crankshaft and start over**.

CONNECTING ROD BEARING SELECTION

Each connecting rod falls into one of four tolerance ranges (from 0 to 0.024 mm (0.0009 in), in 0.006 mm (0.0002 in) increments) depending on the size of its big end bore.

It is then stamped with a number or bar (1, 2, 3, or 4/I, II, III, or IIII) indicating the range. You may find any combination of 1, 2, 3, or 4/I, II, III, or IIII in any engine.

Big End Bore Size

J35Z6 engine: 58.0 mm (2.283 in)

J37A4 engine: 60.0 mm (2.362 in)

Inspect the connecting rod for cracks and heat damage.

Big End Bore Code Locations

Numbers or bars have been stamped on the side of each connecting rod as a code for the size of the big end. Use them, and the letters or bars stamped on the crank (codes for rod journal size), to choose the correct bearings. If the codes are indecipherable because of an accumulation of dirt and dust, do not scrub them with a wire brush or scraper. Clean them only with solvent or detergent.

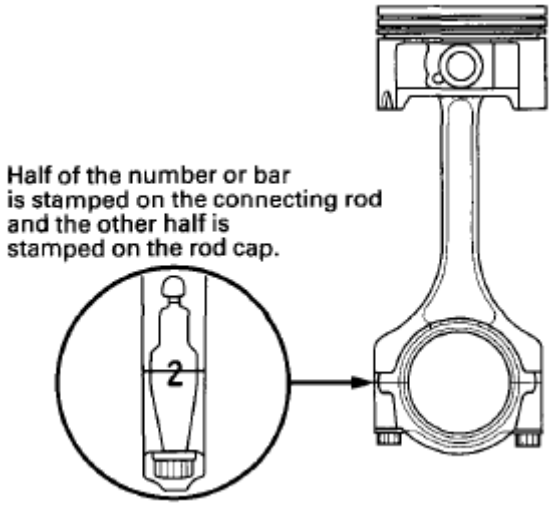

Fig. 12: Identifying Big End Bore Code Locations
Courtesy of AMERICAN HONDA MOTOR CO., INC.

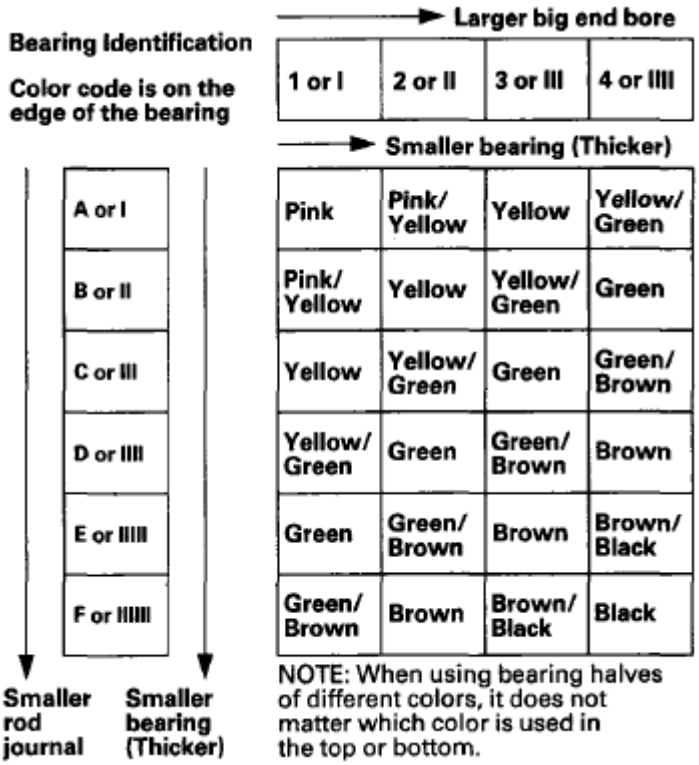

Fig. 13: Color Coded Bearing Identification Table
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Connecting Rod Journal Code Locations (Letters or Bars)

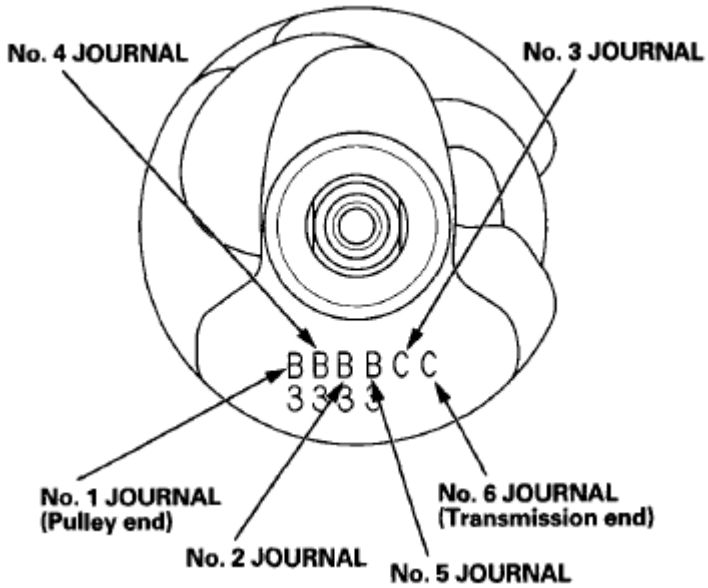

Fig. 14: Identifying Connecting Rod Journal Code Locations (Letters Or Bars)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

OIL PAN REMOVAL

1. If the engine is already out of the vehicle, go to step 6.
2. Raise the vehicle on the lift.
3. Drain the engine oil (see **ENGINE OIL LEVEL CHECK**).
4. Remove the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
5. Remove exhaust pipe A (see step 42 **ENGINE REMOVAL**).
6. Remove the rear warm up TWC bracket.

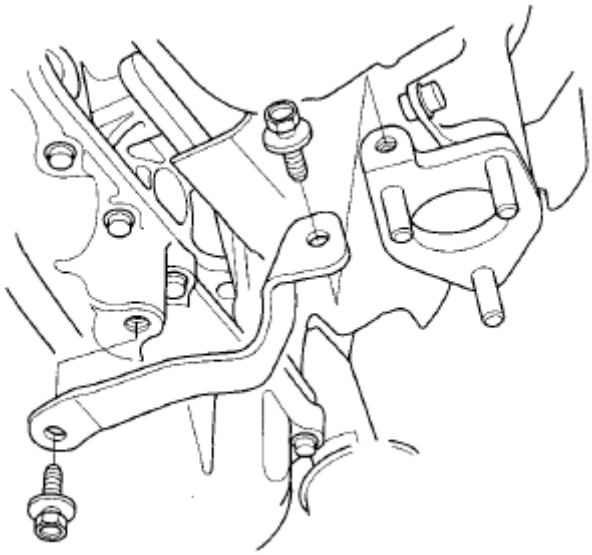

Fig. 15: Identifying Rear Warm Up TWC Bracket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Remove the CKP sensor cover (A) and the bolt (B), then disconnect the CKP sensor connector (C).

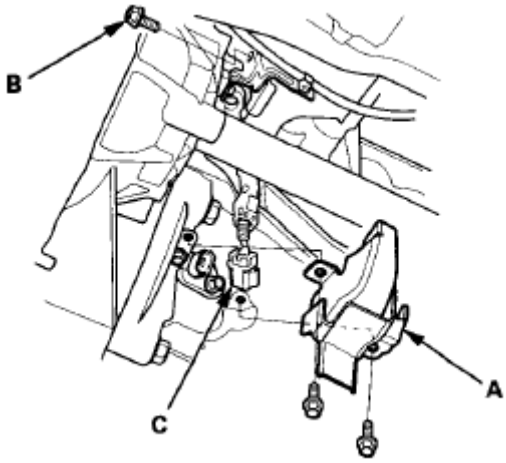

Fig. 16: Identifying CKP Sensor Cover, Connector And Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Remove the torque converter case cover (A) and the four bolts (B) securing the transmission.

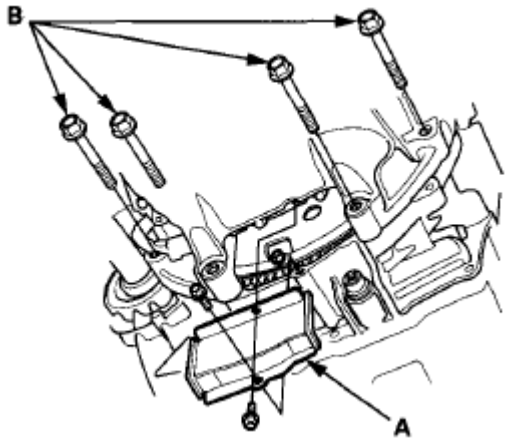

Fig. 17: Identifying Torque Converter Case Cover And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the bolts securing the oil pan.
10. Using a flat blade screwdriver, separate the oil pan from the engine block in the places shown in illustration below.

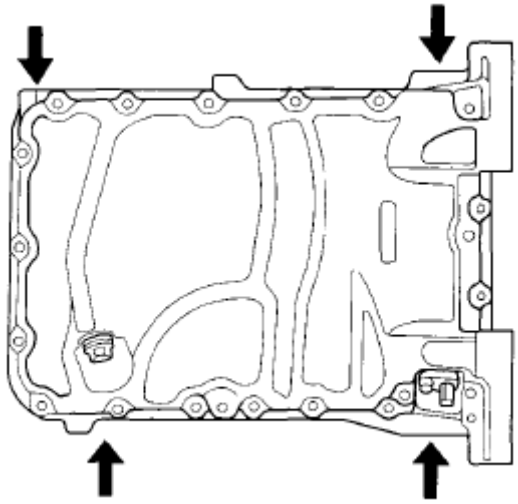

Fig. 18: Identifying Oil Pan & Screwdriver Pry Points
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Remove the oil pan.

CRANKSHAFT AND PISTON REMOVAL

1. Remove the engine/transmission (see **ENGINE REMOVAL**).
2. Remove the transmission:

- Manual transmission (see **TRANSMISSION REMOVAL**)
- Automatic transmission (see **TRANSMISSION REMOVAL**)

3. M/T model: Remove the flywheel (see **TRANSMISSION SIDE**).
4. A/T model: Remove the drive plate (see **DRIVE PLATE REMOVAL AND INSTALLATION**).
5. Remove the cylinder heads:
   - J35Z6 engine (see **CYLINDER HEAD REMOVAL**)
   - J37A4 engine (see **CYLINDER HEAD REMOVAL**)
6. Remove the timing belt drive pulley from the crankshaft:
   - J35Z6 engine (see **TIMING BELT DRIVE PULLEY REPLACEMENT**)
   - J37A4 engine (see **TIMING BELT DRIVE PULLEY REPLACEMENT**)
7. Remove the **oil pan**.
8. Remove the engine block end cover.

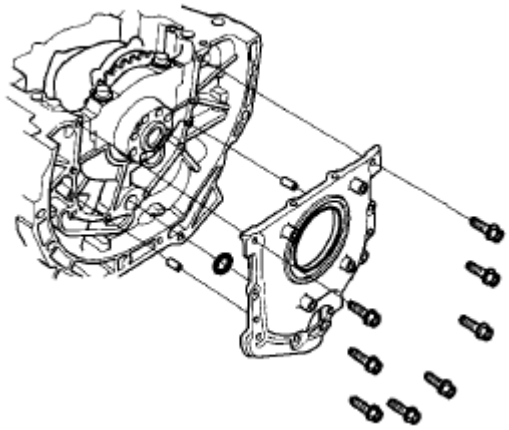

Fig. 19: Identifying Engine Block End Cover With Mounting Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the rocker arm oil control solenoid/oil filter assembly.

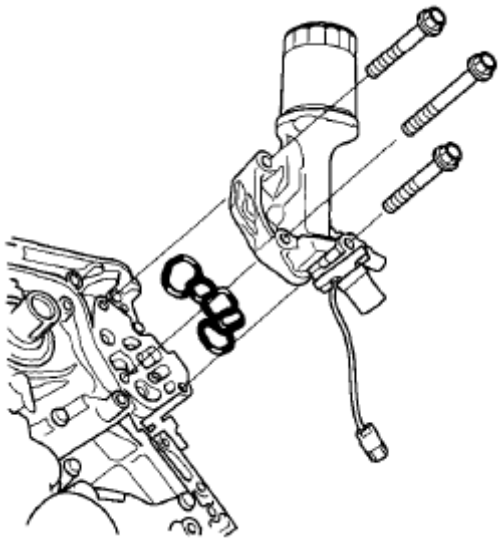

Fig. 20: Identifying Rocker Arm Oil Control Solenoid/Oil Filter Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Remove the oil strainer (A), the baffle plate (B), and the oil pump (C).

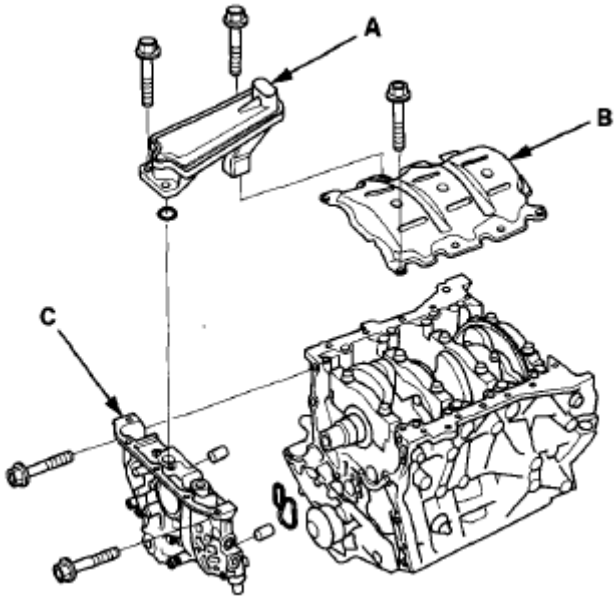

Fig. 21: Identifying Oil Strainer, Baffle Plate, And Oil Pump
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. J35Z6 engine: If you can feel a ridge of metal or hard carbon around the top of any cylinder, remove it with a ridge reamer (A). Follow the reamer manufacturer's instructions. If the ridge is not removed, it may damage the piston as it's pushed out.

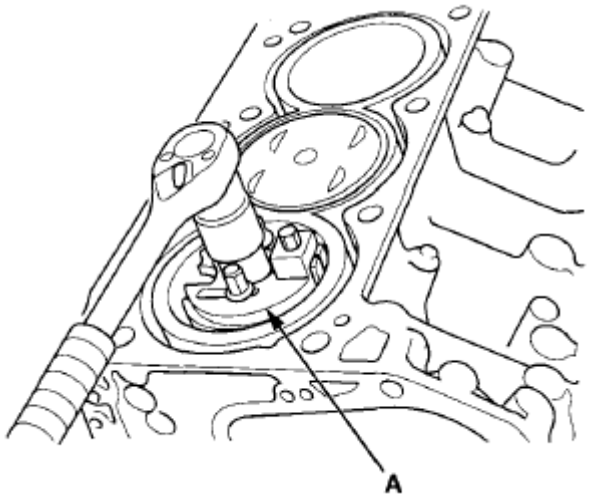

Fig. 22: Removing Ridge Of Metal Or Hard Carbon Around Top Of Cylinder By Using Ridge Reamer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Remove the connecting rod caps after setting the connecting rod journal at bottom dead center (BDC) for each cylinder. Remove the piston/connecting rod assembly by pushing on the connecting rod. Take care not to damage the oil jets, the connecting rod journal, or the cylinder with the connecting rod.

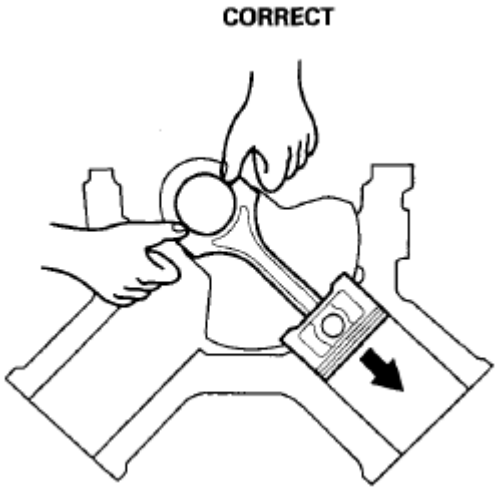

Fig. 23: Pushing Connecting Rod In Correct Direction
Courtesy of AMERICAN HONDA MOTOR CO., INC.

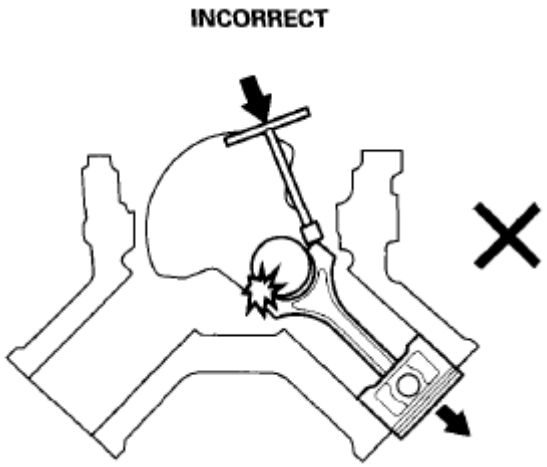

Fig. 24: Pushing Connecting Rod In Incorrect Direction
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Remove the bearing from the rod cap. Keep all caps/bearings in order.
14. Remove the upper bearing halves from the connecting rods, and set them aside with their respective caps.
15. After removing a piston/connecting rod assembly, reinstall the rod cap on the rod.
16. To avoid confusion during reassembly, mark each piston/connecting rod assembly with its cylinder number.
17. Loosen the bearing cap bolts and the bearing cap side bolts in sequence 1/3 turn at a time; repeat the sequence until all bolts are loosened.

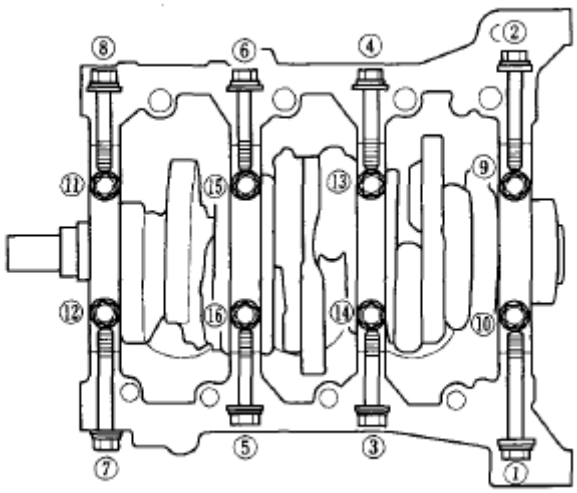

Fig. 25: Identifying Bearing Cap Bolts And Side Bolts With Loosening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Remove the bearing cap bolts (A) and the bearing cap side bolts (B), then remove the main bearing caps (C).

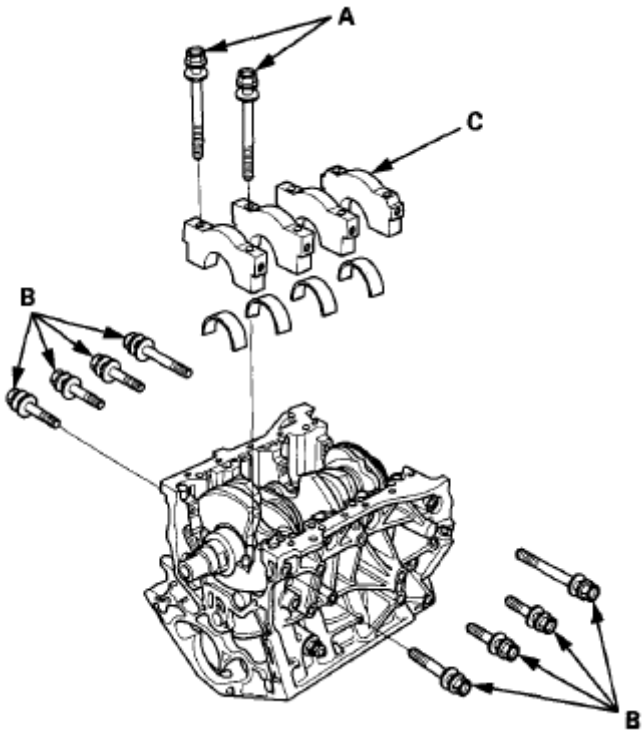

Fig. 26: Identifying Main Bearing Caps, Bearing Cap Bolts And Side Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

19. Lift the crankshaft (A) out of the engine block, being careful not to damage the journals and the CKP pulse plate (B).

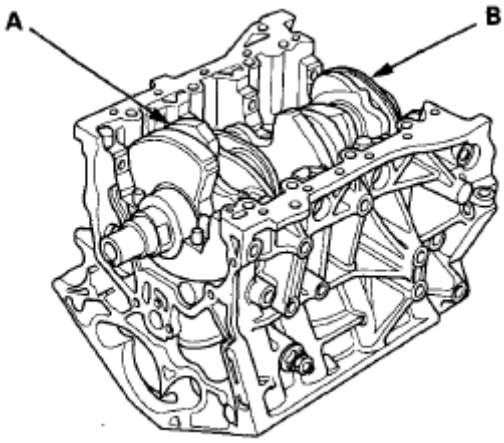

Fig. 27: Identifying Crankshaft And CKP Pulse Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Remove the CKP pulse plate from the **crankshaft**.
21. Reinstall the main caps and the bearings on the engine block in the proper order.

CRANKSHAFT INSPECTION

Out-of-Round and Taper

1. Remove the **crankshaft from the engine block**.
2. Remove the **CKP pulse plate from the crankshaft**.
3. Clean the crankshaft oil passages with pipe cleaners or a suitable brush.
4. Check the keyway slot and the threaded holes for damage.
5. Measure the out-of-round at the middle of each rod and the main journal in two places. The difference between measurements on each journal must not be more than the service limit.

   Journal Out-of-Round

   Standard (New): 0.005 mm (0.00020 in) max.

   Service Limit: 0.010 mm (0.00039 in)

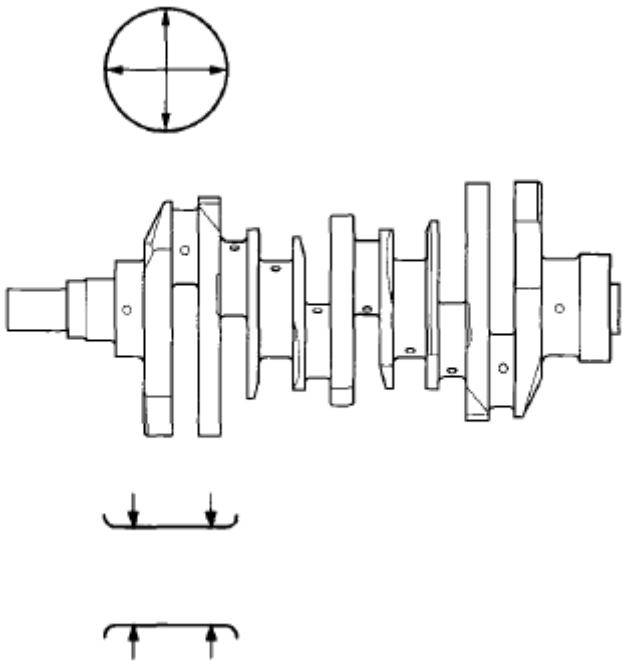

Fig. 28: Identifying Journal Out-Of-Round At Middle Of Each Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Measure the taper at the edges of each rod and main journal. The difference between measurements on each journal must not be more than the service limit.

   Journal Taper

   Standard (New): 0.005 mm (0.00020 in) max.

   Service Limit: 0.010 mm (0.00039 in)

Straightness

7. Place the V-blocks on a flat surface.
8. Check the total runout with the crankshaft supported on V-blocks.
9. Measure the runout on all of the main journals. Rotate the crankshaft two complete revolutions. The difference between measurements on each journal must not be more than the service limit.

Crankshaft Total Runout

Standard (New): 0.025 mm (0.00098 in) max.

Service Limit: 0.030 mm (0.00118 in)

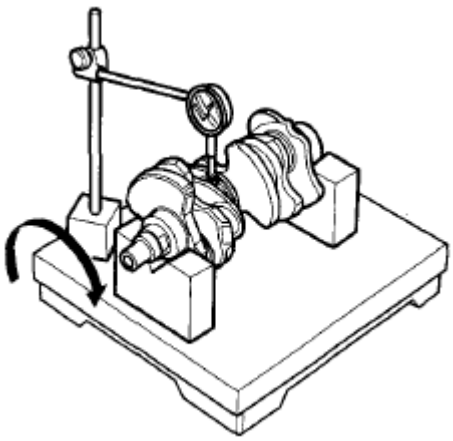

Fig. 29: Measuring Runout On All Of Main Journals
Courtesy of AMERICAN HONDA MOTOR CO., INC.

BLOCK AND PISTON INSPECTION

1. Remove the pistons from the **engine block**.
2. Check the pistons for distortion or cracks.
3. Measure the piston skirt diameter at a point 16 mm (0.63 in) from the bottom of the skirt.

J35Z6 engine

Piston Skirt Diameter

Standard (New): 88.975- 88.985 mm (3.50295- 3.50334 in)

Service Limit: 88.965 mm (3.50255 in)

Oversize Piston Skirt Diameter

0.25: 89.225- 89.235 mm (3.51279- 3.51318 in)

J37A4 engine

Piston Skirt Diameter

Standard (New): 89.983- 89.996 mm (3.54263- 3.54314 in)

Service Limit: 89.975 mm (3.54232 in)

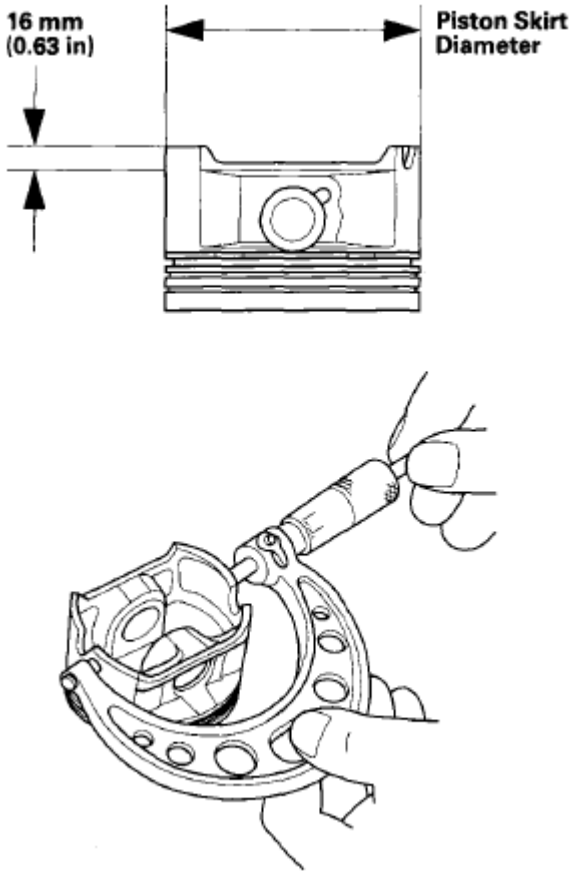

Fig. 30: Measuring Piston Skirt Diameter From Bottom Of Skirt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Measure the wear and taper in direction X and Y at three levels in each cylinder as shown in illustration above.
5. J35Z6 engine: If the measurements in any cylinder are beyond the oversize bore service limit, replace the engine block. If the engine block has to be rebored, refer to step 8 after reboring.

   J37A4 engine: If the measurements in any cylinder are beyond the service limit, replace the engine block. The J37A4 engine block can not be rebored.

J35Z6 engine

Cylinder Bore Size

Standard (New): 89.000- 89.015 mm (3.50393- 3.50452 in)

Service Limit: 89.065 mm (3.50649 in)

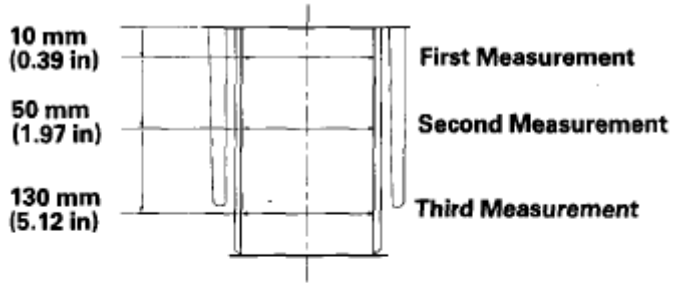
Oversize

0.25: 89.250- 89.265 mm (3.51377- 3.51436 in)

Reboring Limit: 0.25 mm (0.0098 in)

Bore Taper

Limit: (Difference between first and third measurement) 0.05 mm (0.0020 in)



J37A4 engine Cylinder Bore Size

Standard (New): 90.000- 90.015 mm (3.54330- 3.54389 in)

Service Limit: 90.065 mm (3.54586 in)

Bore Taper

Limit: (Difference between first and third measurement) 0.05 mm (0.0020 in)

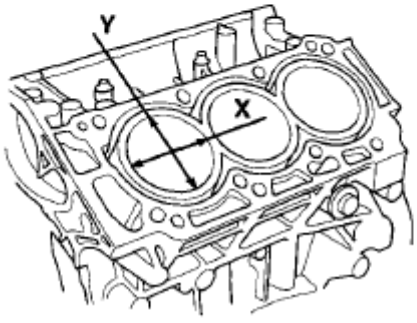


Fig. 31: Measuring Wear And Taper In Direction X And Y At Three Levels In Each Cylinder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. **J35Z6 engine**: Hone any scored or scratched cylinder bores.

NOTE: The J37A4 engine can not be honed. If the cylinders are damaged, the engine block must be replaced.

7. Check the top of the engine block for warpage. Measure along the edges and across the center as shown in illustration below.

Engine Block Warpage

Standard (New): 0.07 mm (0.002 in) max.

Service Limit: 0.10 mm (0.003 in)

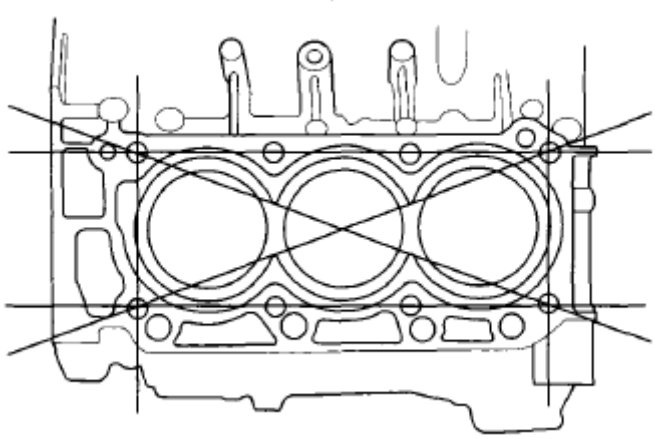

Fig. 32: Identifying Top Of Engine Block For Warpage
Courtesy of AMERICAN HONDA MOTOR CO., INC.

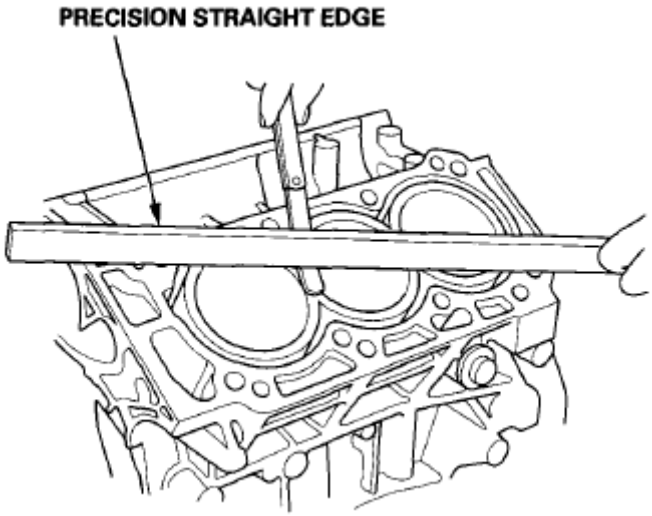

Fig. 33: Checking Top Of Engine Block For Warpage Using Precision Straight Edge

Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Calculate the difference between the cylinder bore diameter and the piston diameter. If the clearance is near or exceeds the service limit, inspect the piston and the cylinder bore for excessive wear.

J35Z6 engine

Piston-to-Cylinder Bore Clearance

Standard (New): 0.015- 0.040 mm (0.001- 0.001 in)

Service Limit: 0.08 mm (0.003 in)

J37A4 engine

Piston-to-Cylinder Bore Clearance

Standard (New): 0.004- 0.032 mm (0.001- 0.001 in)

Service Limit: 0.07 mm (0.002 in)

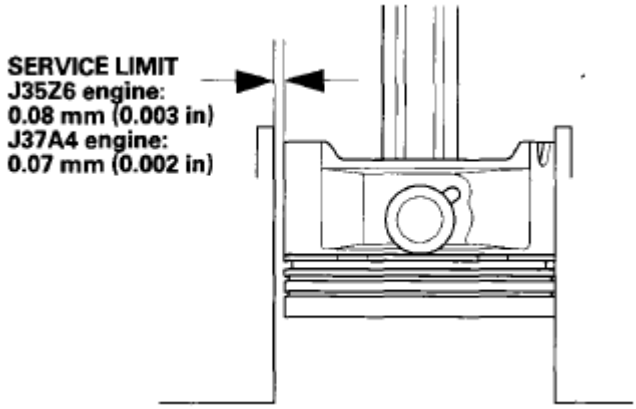

Fig. 34: Identifying Difference Between Cylinder Bore Diameter And Piston Diameter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CYLINDER BORE HONING

J35Z6 ENGINE

NOTE: The J37A4 engine can not be honed. If the cylinders are damaged, the engine block must be replaced.

1. Measure the cylinder bores (see step 4). If the engine block is to be reused, hone the cylinders and remeasure the bores. Only scored or scratched cylinder bores must be honed.
2. Remove the oil jets (see **OIL JET REPLACEMENT**).

3. Hone the cylinder bores with honing oil and a fine (400 grit) stone in a 60 degree Crosshatch pattern.

NOTE:

- **Use only a rigid hone with 400 grit or finer stone, such as Sunnen, Ammco, or equivalent.**
- **Do not use stones that are worn or broken.**

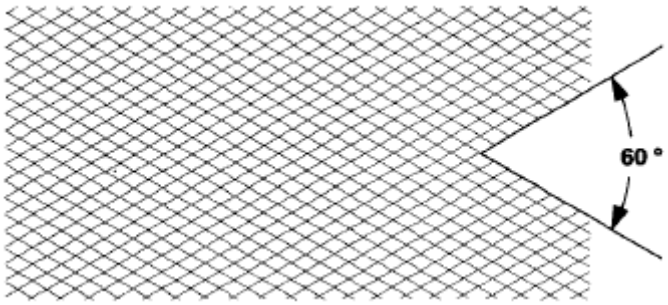

Fig. 35: Identifying 60° Crosshatch Pattern Of Cylinder Bores
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. When honing is complete, thoroughly clean the engine block of all metal particles. Wash the cylinder bores with hot soapy water, then dry and oil them immediately to prevent rusting.

NOTE: Never use solvent, it will only redistribute the grit on the cylinder walls.

5. If scoring or scratches are still present in the cylinder bores after honing to the service limit, rebore the engine block. Some light vertical scoring and scratching is acceptable if it is not deep enough to catch your fingernail and does not run the full length of the bore.
6. Install the oil jets (see **OIL JET REPLACEMENT**).

PISTON, PIN, AND CONNECTING ROD REPLACEMENT

DISASSEMBLY

1. Remove the pistons from the **engine block**.
2. Apply new engine oil to the piston pin snap rings (A) and turn them in the ring grooves until the end gaps are lined up with the cutouts in the piston pin bores (B).

NOTE: Take care not to damage the ring grooves.

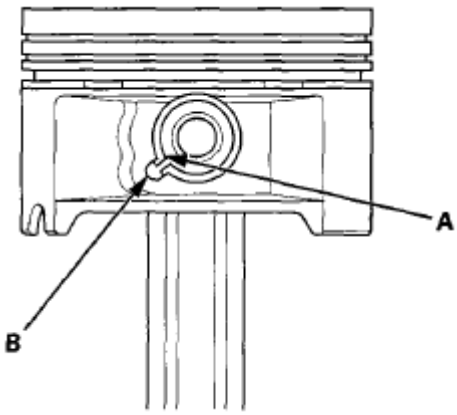

Fig. 36: Identifying Piston Pin Snap Rings And Piston Pin Bores
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Remove the snap rings (A) from both sides of each piston. Start at the cutout in the piston pin bore. Remove the snap rings carefully so they do not go flying or get lost. Wear eye protection.

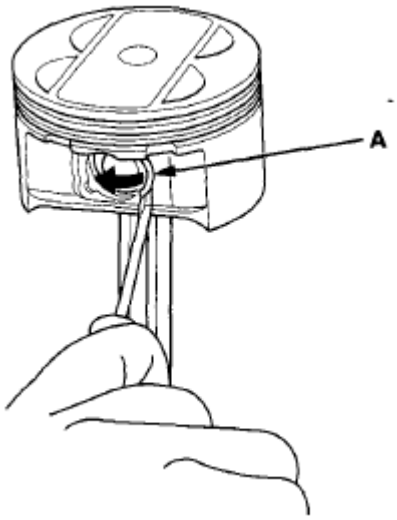

Fig. 37: Identifying Snap Rings From Both Sides Of Each Piston
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Separately heat each piston and connecting rod assembly to about 158 CF (70 °C), then remove the piston pin.

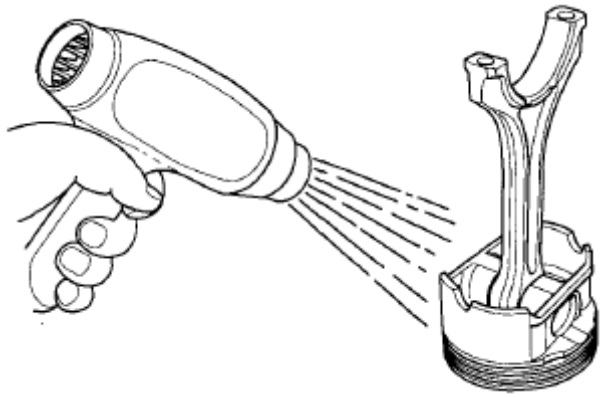

Fig. 38: Removing Piston Pin To Separate Heat On Each Piston And Connecting Rod Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSPECTION

NOTE: Inspect the piston, the piston pin, and the connecting rod when they are at room temperature.

1. Measure the diameter of the piston pin.

   Piston Pin Diameter

   Standard (New): 21.962- 21.965 mm (0.86464- 0.86476 in)

   Service Limit: 21.954 mm (0.86433 in)

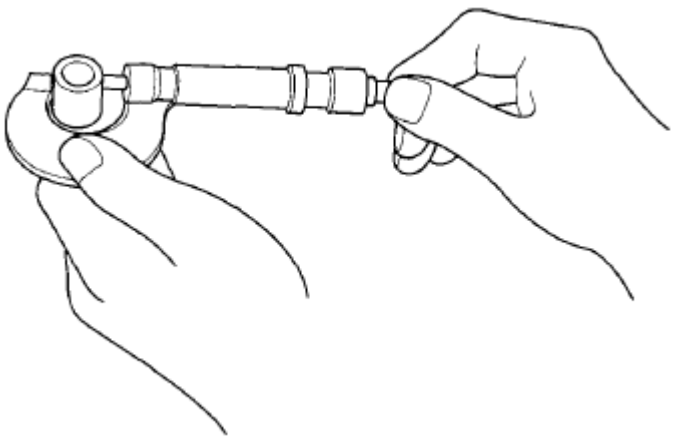

Fig. 39: Measuring Piston Pin Diameter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Zero the dial gauge (A) to the piston pin diameter.

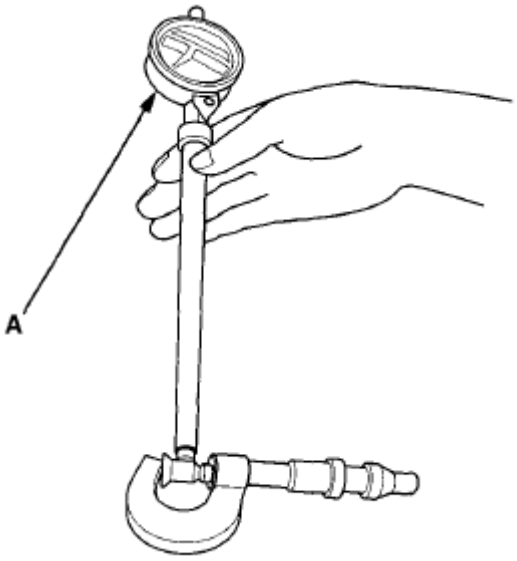

Fig. 40: Measuring Piston Pin Diameter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check the difference between the piston pin diameter and the piston pin hole diameter on the piston.

   J35Z6 engine

   Piston Pin-to-Piston Clearance

   Standard (New): -0.005- 0.001 mm (-0.00020- 0.00004 in)

   Service Limit: 0.004 mm (0.00016 in)

   J37A4 engine

   Piston Pin-to-Piston Clearance

   Standard (New): -0.005- 0.003 mm (-0.00020- 0.00012 in)

   Service Limit: 0.004 mm (0.00016 in)

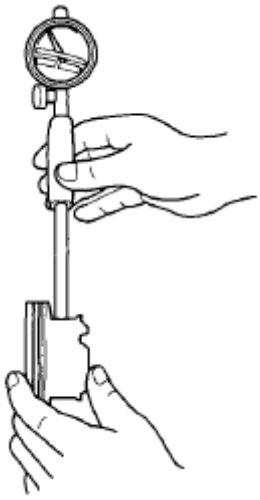

Fig. 41: Checking Piston Pin-To-Piston Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Measure the piston pin-to-connecting rod clearance.

   Piston Pin-to-Connecting Rod Clearance

   Standard (New): 0.005- 0.014 mm (0.00020- 0.00055 in)

   Service Limit: 0.019 mm (0.00075 in)

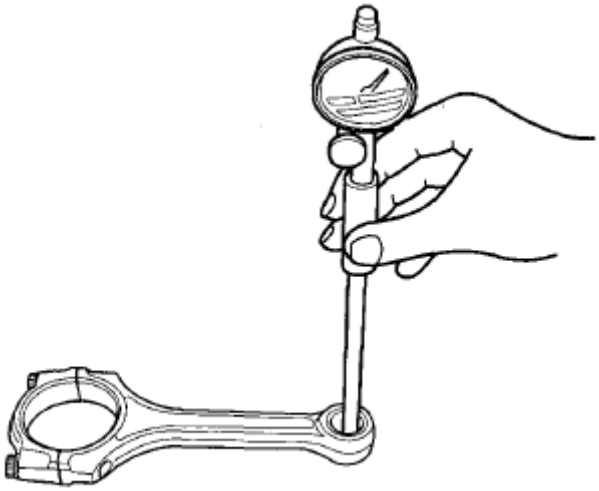

Fig. 42: Measuring Piston Pin-To-Connecting Rod Clearance
Courtesy of AMERICAN HONDA MOTOR CO., INC.

REASSEMBLY

1. Install a piston pin snap ring (A) only on one side.

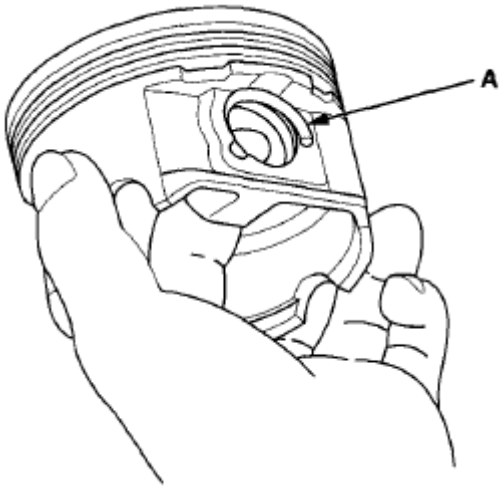

Fig. 43: Installing Piston Pin Snap Ring
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Coat the piston pin bore in the piston, the bore in the connecting rod, and the piston pin with new engine oil.
3. Heat the piston to about 158 °F (70 °C).

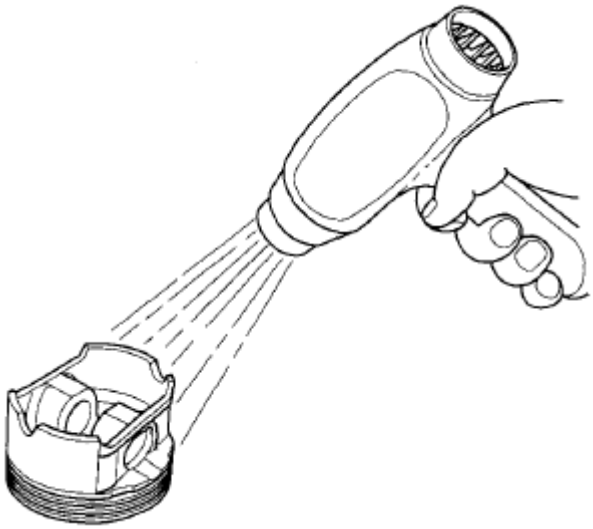

Fig. 44: Heating Piston
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Assemble the piston (A) and the connecting rod (B) with the embossed marks (C) on the same side. Install the piston pin (D).

NOTE: Apply new engine oil to the piston pin.

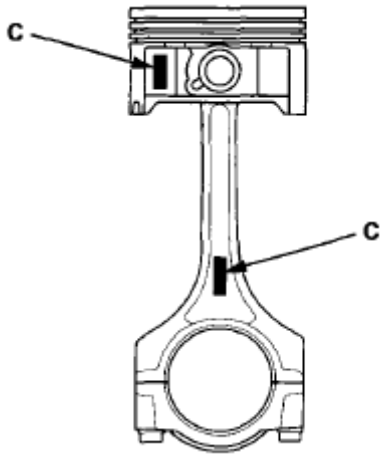

Fig. 45: Identifying Embossed Marks On Piston And Connecting Rod
Courtesy of AMERICAN HONDA MOTOR CO., INC.

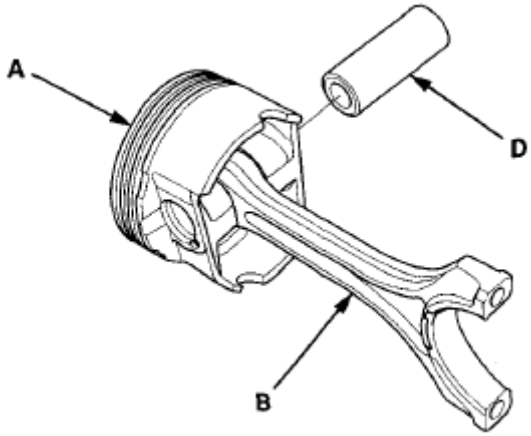

Fig. 46: Identifying Piston, Connecting Rod And Piston Pin
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Install the remaining snap ring.
6. Reassemble the other pistons the same way.

PISTON RING REPLACEMENT

1. Remove the pistons from the **engine block**.
2. Using a ring expander (A), remove the old piston rings (B).

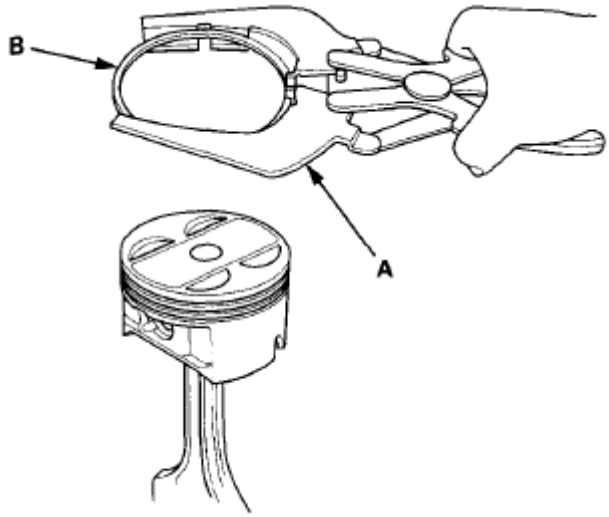

Fig. 47: Removing Piston Rings Using Ring Expander
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Clean all the ring grooves thoroughly with a squared-off broken ring, or a ring groove cleaner with a blade to fit the piston grooves. File down the blade, if necessary. The top ring and second ring grooves are 1.2 mm (0.047 in) wide, and the oil ring groove is 2.8 mm (0.110 in) (J35Z6 engine) or 2.0 mm (0.079 in) (J37A4 engine) wide. Do not use a wire brush to clean the ring grooves, or cut the ring grooves deeper with the cleaning tool.

NOTE: If the piston is to be separated from the connecting rod, do not install new rings yet.

4. Using a piston, push a new ring (A) into the cylinder bore 15- 20 mm (0.59- 0.79 in) from the bottom.

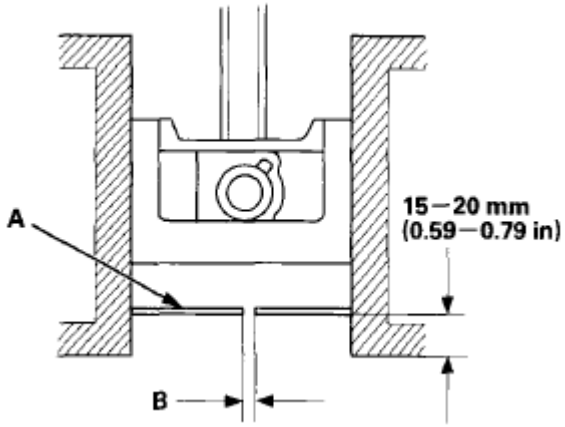

Fig. 48: Identifying Piston Ring Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Measure the piston ring end-gap (B) with a feeler gauge:
   - If the gap is too small, check to see if you have the proper rings for your engine.

- If the gap is too large, recheck the cylinder bore diameter against the wear limits (see step 4).

6. J35Z6 engine: If the bore is over the service limit, the engine block must be rebored.

J35Z6 engine

Piston Ring End-Gap

Top Ring:

Standard (New): 0.20- 0.35 mm (0.008- 0.013 in)

Service Limit: 0.60 mm (0.023 in)

Second Ring:

Standard (New): 0.40- 0.S5 mm (0.016- 0.021 in)

Service Limit: 0.70 mm (0.027 in)

Oil Ring:

Standard (New): 0.20- 0.70 mm (0.008- 0.027 in)

Service Limit: 0.80 mm (0.031 in)

J37A4 engine

Piston Ring End-Gap

Top Ring:

Standard (New): 0.30- 0.40 mm (0.012- 0.015 in)

Service Limit: 0.60 mm (0.023 in)

Second Ring:

Standard (New): 0.40- 0.55 mm (0.016- 0.021 in)

Service Limit: 0.70 mm (0.027 in)

Oil Ring:

Standard (New): 0.20- 0.35 mm (0.008- 0.013 in)

Service Limit: 0.45 mm (0.017 in)

7. Install the rings as shown in illustration below. The top ring (A) has a 1D or 1R mark (J35Z6 engine) or 1E mark (J37A4 engine) and the second ring (B) has a 2X or 2R mark (J35Z6 engine) or 2E mark (J37A4 engine). The manufacturing marks (C) must be facing upward.

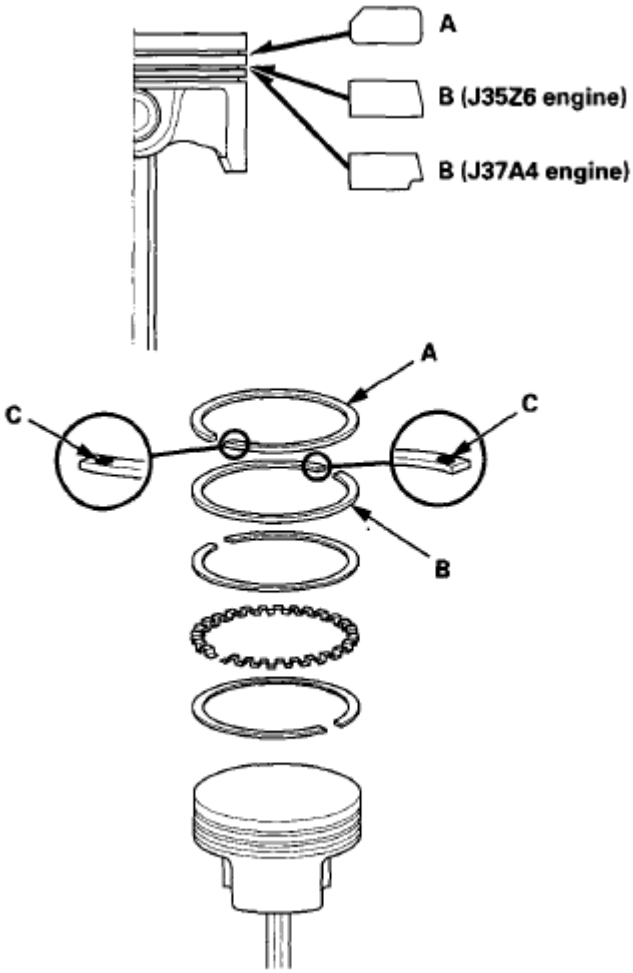

Fig. 49: Identifying Top Ring, Second Ring With Manufacturing Marks
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Piston Ring Dimensions:

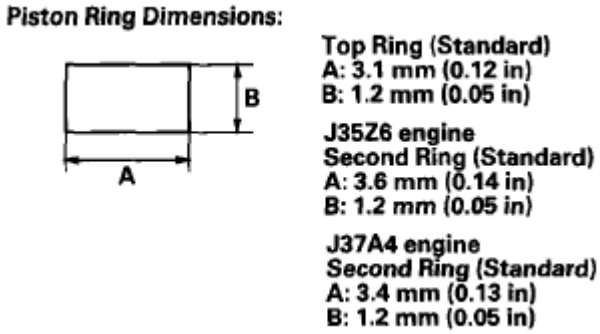

Fig. 50: Identifying Piston Ring Dimensions
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. After installing a new set of rings, measure the ring-to-groove clearance:

J35Z6 engine

Top Ring Clearance

Standard (New): 0.055- 0.080 mm (0.003- 0.003 in)

Service Limit: 0.15 mm (0.005 in)

Second Ring Clearance

Standard (New): 0.030- 0.055 mm (0.002- 0.002 in)

Service Limit: 0.13 mm (0.005 in)

J37A4 engine

Top Ring Clearance

Standard (New): 0.055- 0.085 mm (0.003- 0.003 in)

Service Limit: 0.15 mm (0.005 in)

Second Ring Clearance

Standard (New): 0.030- 0.060 mm (0.002- 0.002 in)

Service Limit: 0.13 mm (0.005 in)

Fig. 51: Measuring Ring-To-Groove Clearance

Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Rotate the rings in their grooves to make sure they do not bind.
10. Position the ring end gaps as shown in illustration below.

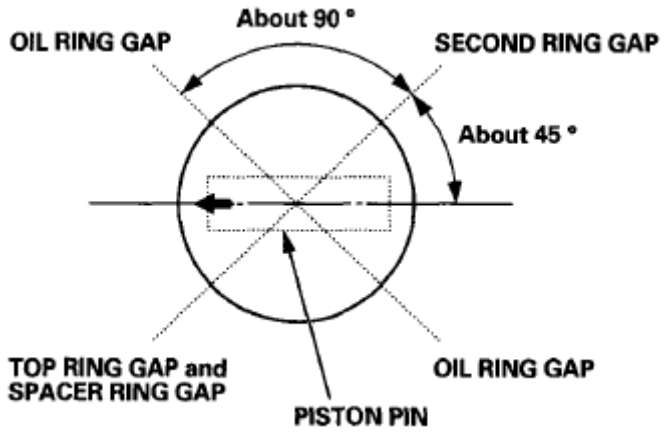

Fig. 52: Positioning Ring End Gaps
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CRANKSHAFT AND PISTON INSTALLATION

Special Tools Required

- Driver Handle, 15 x 135L 07749-0010000
- Oil Seal Driver Attachment, 106 mm 070AD-RCA0200

1. Check the **main bearing clearance** with plastigage.
2. Check the **connecting rod bearing clearance** with plastigage.
3. Install the bearing halves in the engine block and the connecting rods.
4. Apply new engine oil to the inside of the main bearings and the rod bearings.
5. Install the **CKP pulse plate to the crankshaft**.
6. Lower the crankshaft (A) into the engine block, being careful not to damage the journals and the CKP pulse plate (B).

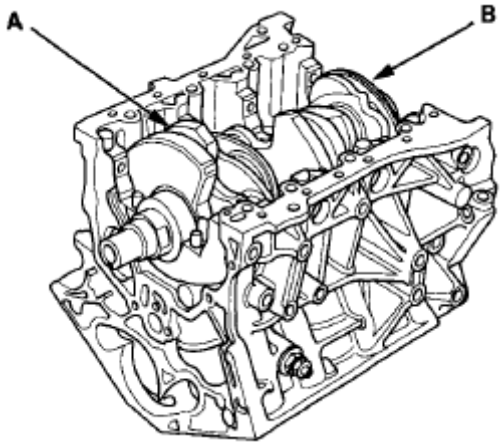

Fig. 53: Identifying Crankshaft And CKP Pulse Plate
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Apply new engine oil to the side with the thrust washer groove. Install the thrust washers (A) in the No. 3 journal.

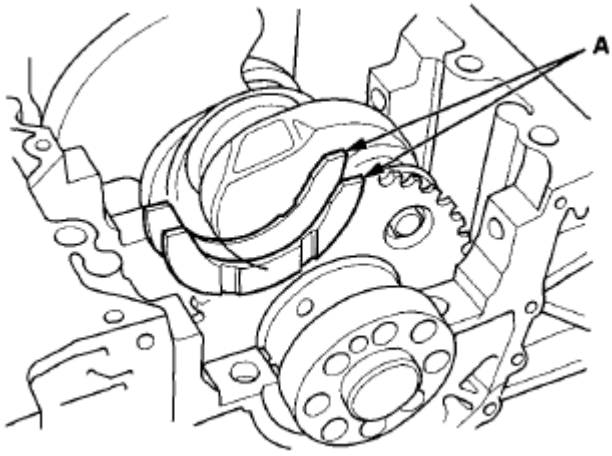

Fig. 54: Identifying Thrust Washers
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the bearings (A) and the main bearing caps (B) with the arrow (C) facing the timing belt side of the engine block.

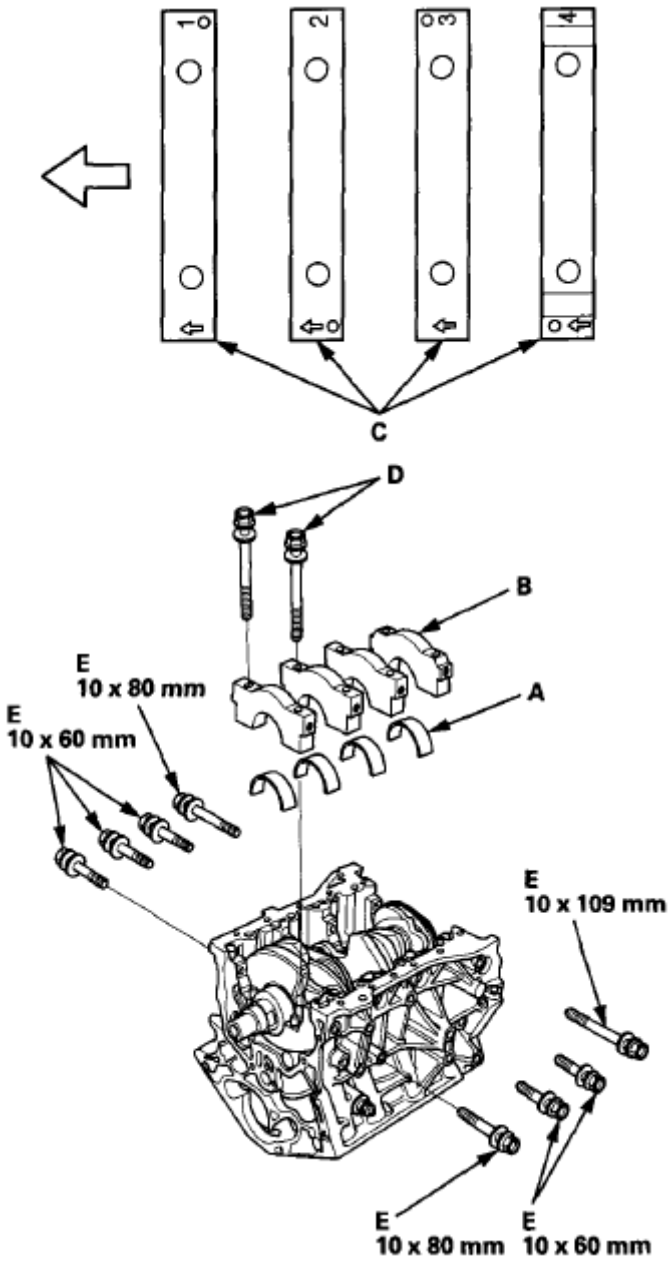

Fig. 55: Identifying Bearings And Main Bearing Caps Installation Position
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Apply new engine oil to the bolt threads and flanges, then loosely install the bearing cap bolts (D) and the bearing cap side bolts (E).
10. Set the crankshaft to bottom dead center (BDC) for the cylinder you are installing the piston in.
11. Apply new engine oil to the piston, the inside of the ring compressor, and the cylinder bore.
12. Attach the ring compressor to the piston/connecting rod assembly, and check that the bearing is securely in place.
13. Position the piston/connecting rod assembly with the arrow (A) facing the timing belt side of the engine block.

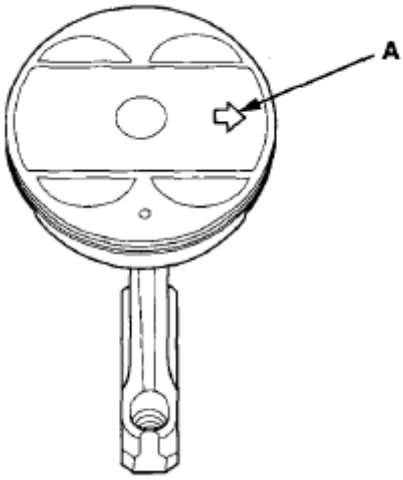

Fig. 56: Positioning Piston/Connecting Rod Assembly With Arrow
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Position the piston/connecting rod assembly in the cylinder, and tap it in using the wooden handle of a hammer (A). Maintain downward force on the ring compressor (B) to prevent the rings from expanding before entering the cylinder bore.

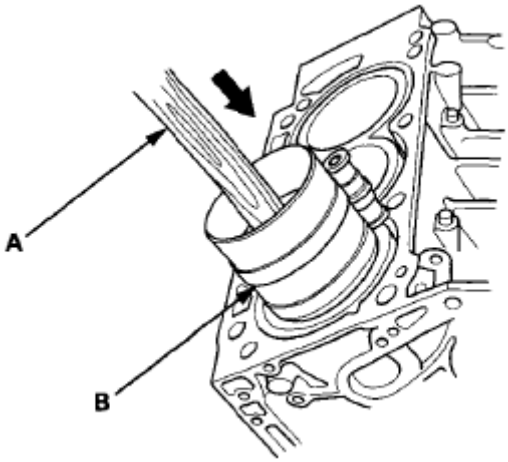

Fig. 57: Pushing Downward Force On Ring Compressor By Using Wooden Handle Of Hammer
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Stop after the ring compressor pops free, and check the connecting rod-to-rod journal alignment before pushing the piston into place.
16. Measure the diameter of each connecting rod bolt at point A and point B.

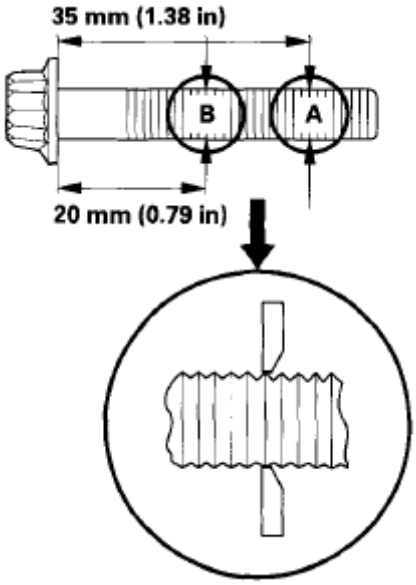

Fig. 58: Identifying Connecting Rod Bolt Diameter At Point A And B
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Calculate the difference in diameter between point A and point B.

    Point A- Point B = Difference in Diameter

    Difference in Diameter

    Specification: 0- 0.1 mm (0- 0.004 in)

18. If the difference in diameter is out of tolerance, replace the connecting rod bolt.
19. Install the bearing (A), then line up the mark (B) on the connecting rod (C) and the rod cap (D).

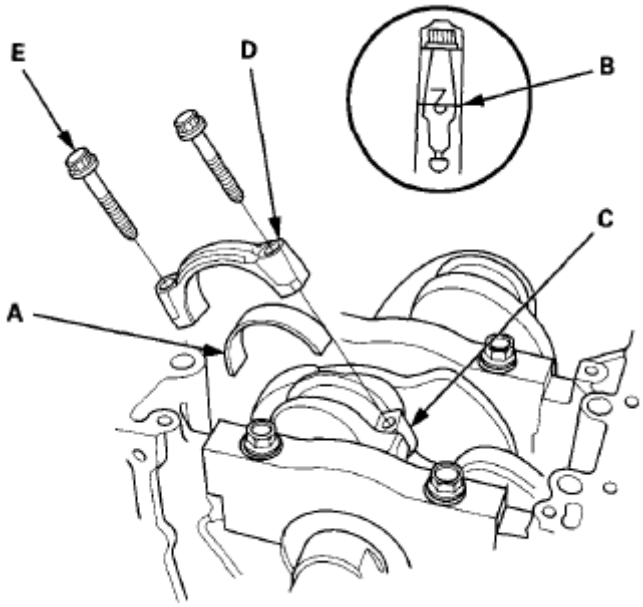

Fig. 59: Identifying Bearing, Connecting Rod, Rod Cap, Bearing Mark And Bolts
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Apply new engine oil to the bolt threads and flanges. Torque the bolts (E) to 20 N.m (2.0 kgf.m, 15 lbf.ft).
21. Tighten the connecting rod bolt an additional 90 °.

NOTE: Remove the connecting rod bolt if you tightened it beyond the specified angle, and go back to step 16 of the procedure. Do not loosen it back to the specified angle. Repeat steps 10 to 21 for the remaining cylinders.

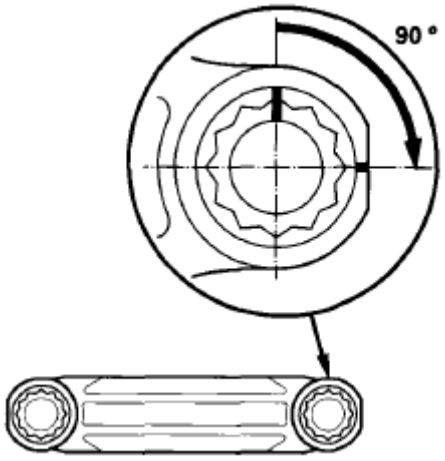

Fig. 60: Identifying Specified Angle For Tightening Connecting Rod Bolt
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Tighten the main bearing cap bolts, then tighten the main bearing cap side bolts to the specified torque in

the sequence as shown in illustration below. Repeat the torque sequence again to ensure the bolts are properly torqued.

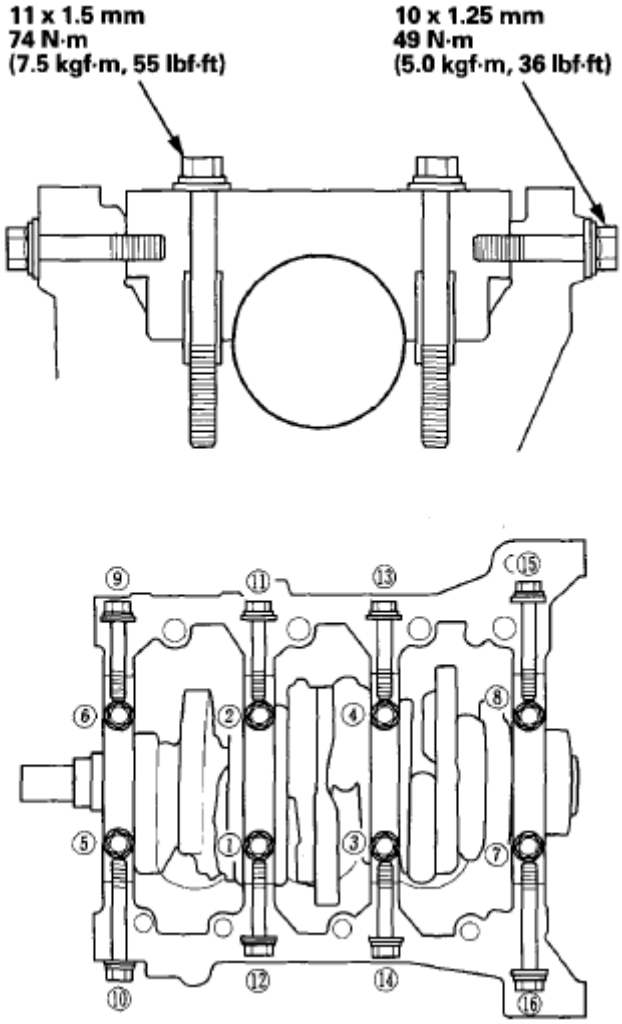

Fig. 61: Identifying Main Bearing Cap Side Bolts With Tightening Sequence With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Remove ail of the old liquid gasket from the engine block end cover mating surfaces, the bolts, and the bolt holes.
24. Clean and dry the engine block end cover mating surfaces.
25. Apply a light coat of new engine oil to the lip of the crankshaft oil seal.
26. Using the driver handle, 15 x135 L and the oil seal driver attachment, 106 mm, drive in the new crankshaft oil seal (A) until the oil seal driver attachment bottoms on the engine block end cover.

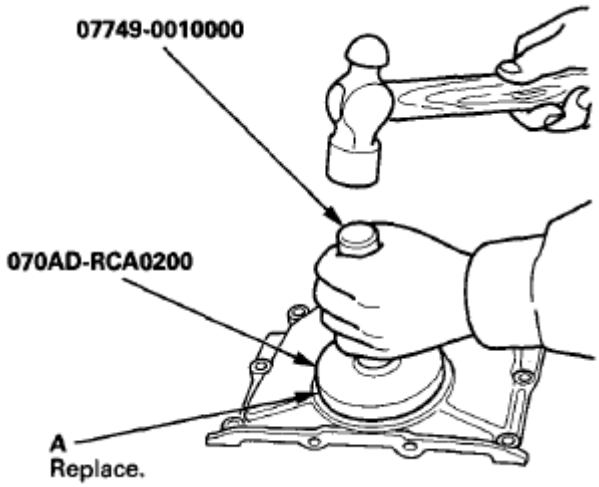

Fig. 62: Installing Crankshaft Oil Seal Using Driver Handle And Attachment
Courtesy of AMERICAN HONDA MOTOR CO., INC.

27. Apply liquid gasket, P/N 08717-0004, 08718-0003, 08718-0004, or 08718-0009 to the engine block mating surface of the engine block end cover and to the inside edge of the threaded bolt holes. Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- **Apply a 2.5 mm (0.098 in) diameter bead of liquid gasket along the broken line (A).**
- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**

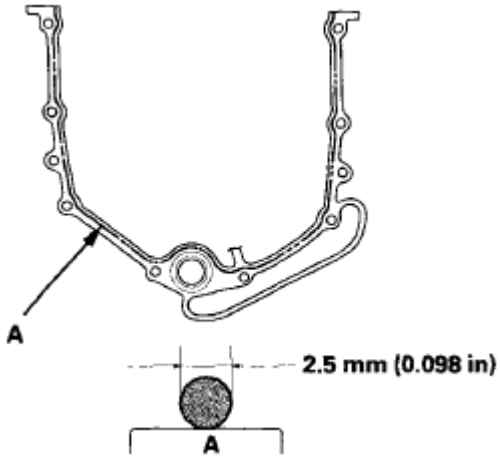

Fig. 63: Identifying Diameter Bead Of Liquid Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

28. Install the dowel pins (A), a new O-ring (B), and the engine block end cover (C) on the engine block.

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the engine block end cover.**

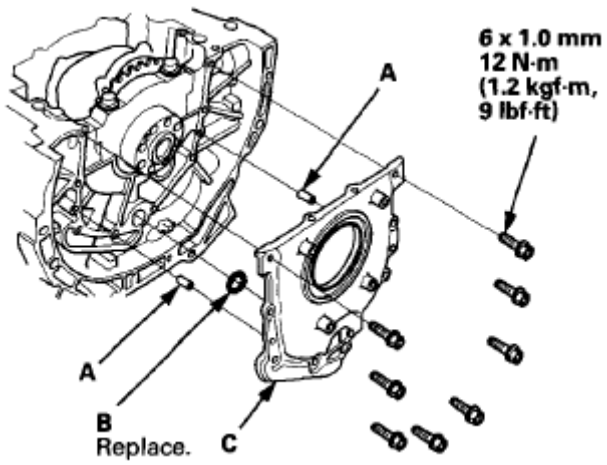

Fig. 64: Identifying Dowel Pins, O-Rings And Engine Block End Cover On Engine Block With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

29. Clean the excess oil off the crankshaft, and check that the oil seal lip is not distorted.
30. Install a new crankshaft oil seal in the oil pump (see **OIL PUMP OVERHAUL**).
31. Remove all of the old liquid gasket from the oil pump mating surfaces, the bolts, and the bolt holes.
32. Clean and dry the oil pump mating surfaces.
33. Apply liquid gasket, P/N 08717-0004, 08718-0003, 08718-0004, or 08718-0009 to the engine block mating surface of the oil pump and to the inside edge of the threaded bolt holes. Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- **Apply a 2.5 mm (0.098 in) diameter bead of liquid gasket along the broken line (A).**
- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**

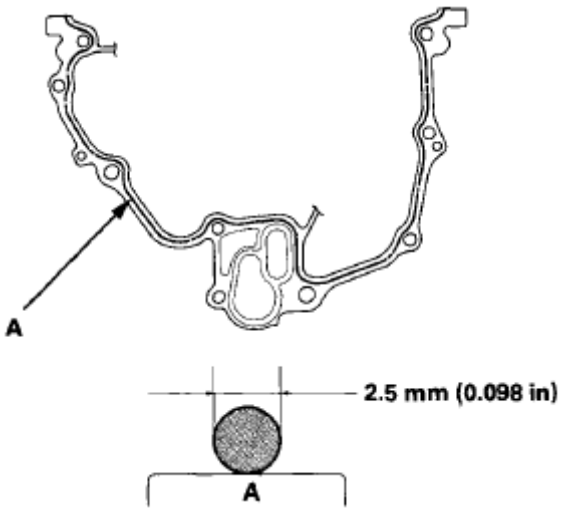

Fig. 65: Identifying Diameter Bead Of Liquid Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

34. Apply a light coat of new engine oil to the lip of the crankshaft oil seal, and apply new engine oil to the new O-ring (A).

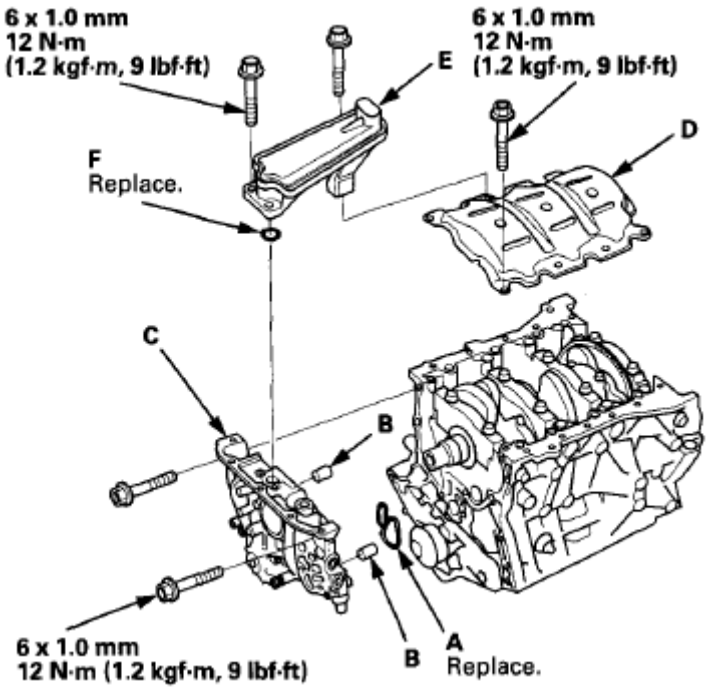

Fig. 66: Identifying O-Rings, Dowel Pins, Oil Pump, Baffle Plate, Oil Retainer With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

35. Install the dowel pins (B), then align the inner rotor with the crankshaft, and install the oil pump (C).
36. Clean the excess oil off the crankshaft, and check that the oil seal is not distorted.

37. Install the baffle plate (0), then install the oil strainer (E) with a new O-ring (F).

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the oil pump.**

38. Install the rocker arm oil control solenoid/oil filter assembly (A), with a new rocker arm oil control solenoid filter (B).

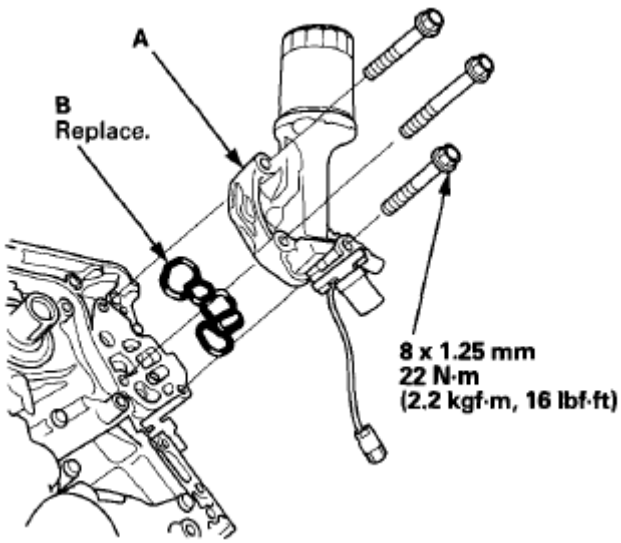

Fig. 67: Identifying Rocker Arm Oil Control Solenoid/Oil Filter Assembly And Solenoid Filter With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

39. Install the **oil pan**.
40. Install the timing belt drive pulley to the crankshaft:
    - J35Z6 engine (see **TIMING BELT DRIVE PULLEY REPLACEMENT**)
    - J37A4 engine (see **TIMING BELT DRIVE PULLEY REPLACEMENT**)
41. Install the cylinder heads:
    - J35Z6 engine (see **CYLINDER HEAD INSTALLATION**)
    - J37A4 engine (see **CYLINDER HEAD INSTALLATION**)
42. M/T model: Install the flywheel (see **TRANSMISSION SIDE**).
43. A/T model: Install drive plate (see **DRIVE PLATE REMOVAL AND INSTALLATION**).
44. Install the transmission:
    - Manual transmission (see **TRANSMISSION INSTALLATION**)
    - Automatic transmission (see **DRIVE PLATE REMOVAL AND INSTALLATION**)
45. Install the engine/transmission (see **ENGINE INSTALLATION**).

NOTE: When any crankshaft main or connecting rod bearing is replaced, run the engine at idle until it reaches normal operating temperature, then continue to run it for about 15 minutes.

CKP PULSE PLATE REPLACEMENT

1. Remove the **crankshaft** from the engine block.
2. Remove the CKP pulse plate (A) from the crankshaft.

NOTE: Be careful not to damage the journals and the CKP pulse plate.

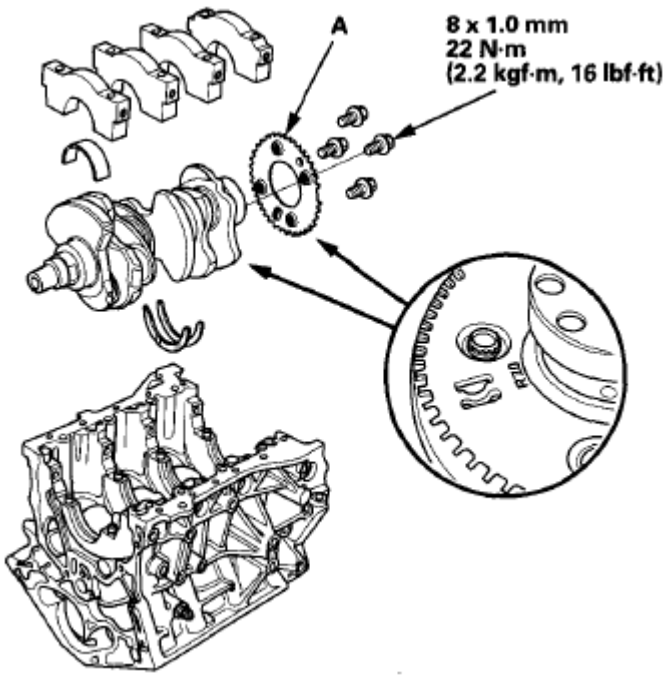

Fig. 68: Identifying CKP Pulse Plate With Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the CKP pulse plate in the reverse order of removal.

NOTE: When installing the crankshaft, refer to the crankshaft and piston installation procedure.

OIL PAN INSTALLATION

1. Remove all of the old liquid gasket from the oil pan mating surfaces, the bolts, and the bolt holes.
2. Clean and dry the oil pan mating surfaces.
3. Apply liquid gasket, P/N 08717-0004, 08718-0003, 08718-0004, or 08718-0009 to the oil pan mating surface of the engine block and to the inside edge of the threaded bolt holes. Install the component within

5 minutes of applying the liquid gasket.

NOTE:

- **Apply a 2.5 mm (0.098 in) diameter bead of liquid gasket along the broken line (A).**
- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**

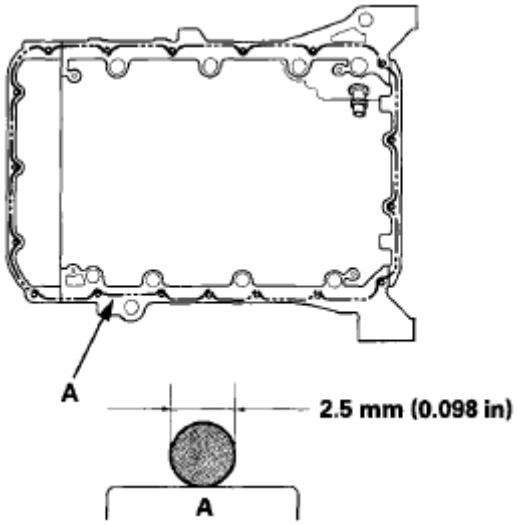

Fig. 69: Identifying Diameter Bead Of Liquid Gasket Along Broken Line
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the oil pan on the engine block.
5. Tighten the bolts in three steps. In the final step, torque all bolts, in sequence, to 12 N.m (1.2 kgf.m, 9 lbf.ft).

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the oil pan.**

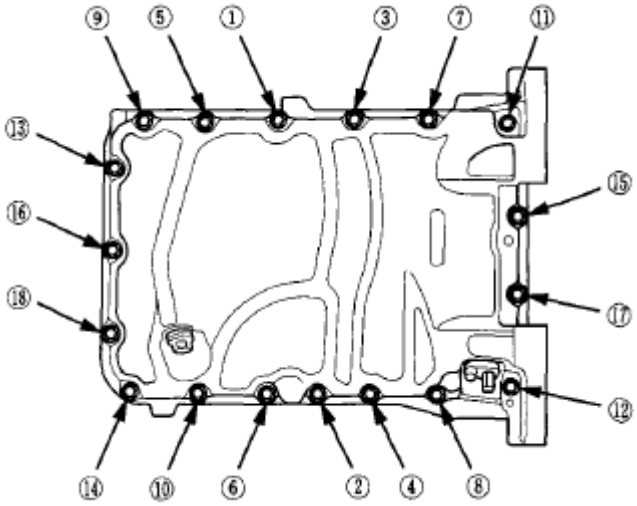

Fig. 70: Identifying Oil Pan Bolts With Tightening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Tighten the four bolts (A) securing the transmission, then install the torque converter case cover (B).

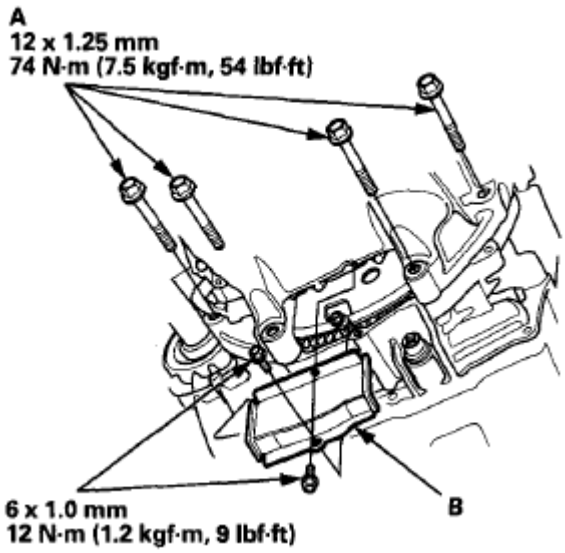

Fig. 71: Identifying Transmission Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Connect the CKP sensor connector (A), then install the CKP sensor cover (B) and the bolt (C).

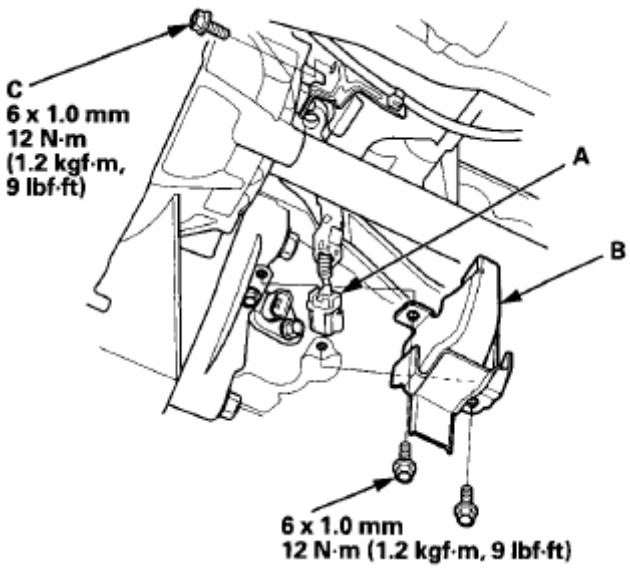

Fig. 72: Identifying CKP Sensor Connector, CKP Sensor Cover & Mounting Bolt With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the rear warm up TWC bracket.

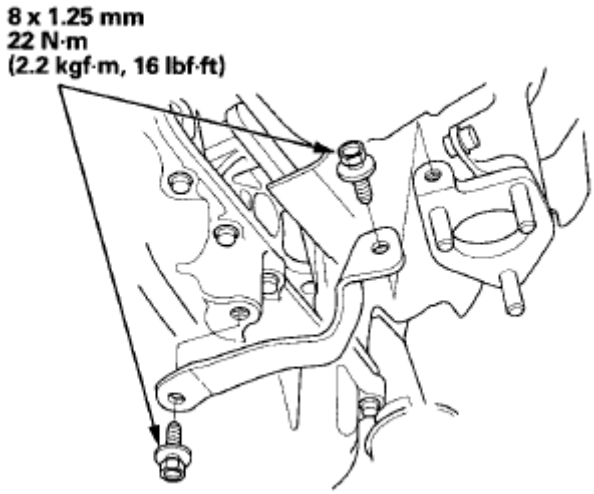

Fig. 73: Identifying Rear Warm Up TWC Bracket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. If the engine is still in the vehicle, do the following steps.
10. Install exhaust pipe A using new gaskets and new self-locking nuts (see step 35 **ENGINE INSTALLATION**).
11. Install the front splash shield (see **FRONT SPLASH SHIELD REPLACEMENT**).
12. Refill the engine with engine oil (see **ENGINE OIL LEVEL CHECK**).

PULLEY END CRANKSHAFT OIL SEAL INSTALLATION - IN CAR

Special Tools Required

Oil Seal Driver, 64 mm 07OAD-RCAA100

1. Remove the timing belt drive pulley:
   - J35Z6 engine (see **TIMING BELT DRIVE PULLEY REPLACEMENT**)
   - J37A4 engine (see **TIMING BELT DRIVE PULLEY REPLACEMENT**)
2. Remove the pulley end crankshaft oil seal.
3. Clean and dry the crankshaft oil seal housing.
4. Apply a light coat of new engine oil to the lip of the crankshaft oil seal.
5. Using the oil seal driver, 64 mm, drive in the new crankshaft oil seal (A) until the oil seal driver bottoms on the oil pump.

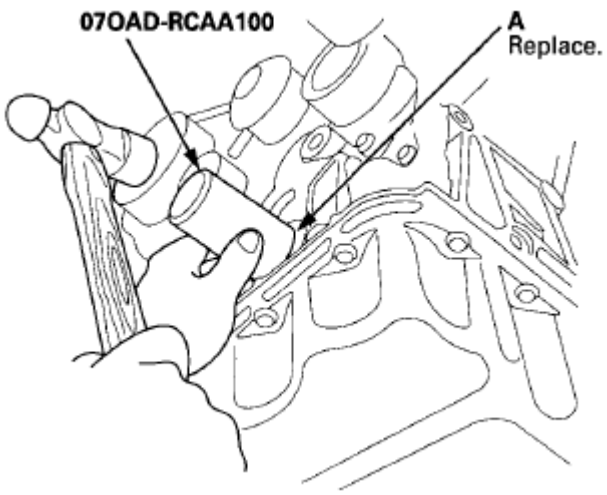

Fig. 74: Installing End Crankshaft Oil Seal Using Oil Seal Driver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Clean the excess oil off the crankshaft, and check that the oil seal lip is not distorted.
7. Install the timing belt drive pulley:
   - J35Z6 engine (see **TIMING BELT DRIVE PULLEY REPLACEMENT**)
   - J37A4 engine (see **TIMING BELT DRIVE PULLEY REPLACEMENT**)

TRANSMISSION END CRANKSHAFT OIL SEAL INSTALLATION - IN CAR

Special Tools Required

- Driver Handle, 15 x 135L 07749-0010000
- Oil Seal Driver Attachment, 106 mm 070AD-RCA0200

1. M/T model: Remove the transmission (see **TRANSMISSION REMOVAL**), and the flywheel (see **TRANSMISSION SIDE**).
2. A/T model: Remove the transmission (see **TRANSMISSION REMOVAL**), and the drive plate (see **DRIVE PLATE REMOVAL AND INSTALLATION**).
3. Remove the transmission end crankshaft oil seal.
4. Clean and dry the crankshaft oil seal housing.
5. Apply a light coat of new engine oil to the lip of the crankshaft oil seal.
6. Using the driver handle, 15x 135 Land the oil seal driver attachment, 106 mm, drive in the new crankshaft oil seal (A) until the oil seal driver attachment bottoms on the engine block end cover. Align the hole in the oil seal driver attachment with the pin on the crankshaft.

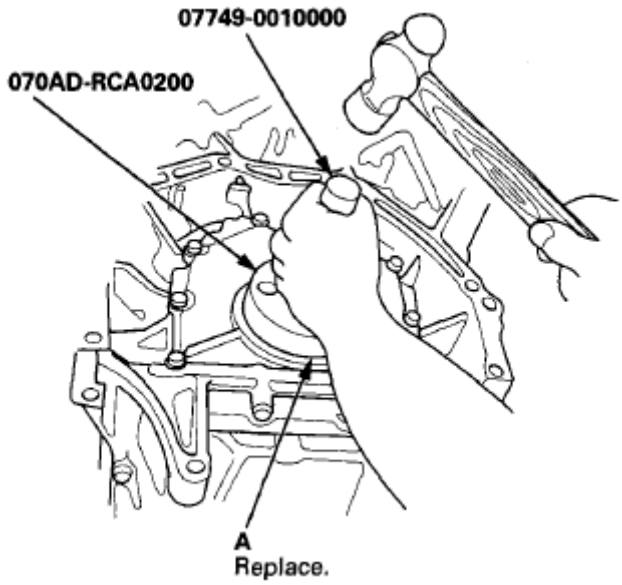

Fig. 75: Installing Transmission End Crankshaft Oil Seal Using Driver Handle
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Clean the excess oil off the crankshaft, and check that the oil seal lip is not distorted.
8. M/T model: Install the flywheel (see **TRANSMISSION SIDE**), and the transmission (see **TRANSMISSION INSTALLATION**).
9. A/T model: Install the drive plate (see **DRIVE PLATE REMOVAL AND INSTALLATION**), and the transmission (see **DRIVE PLATE REMOVAL AND INSTALLATION**).

SEALING BOLT INSTALLATION

NOTE: When installing the sealing bolts (A), always use new washers (B).

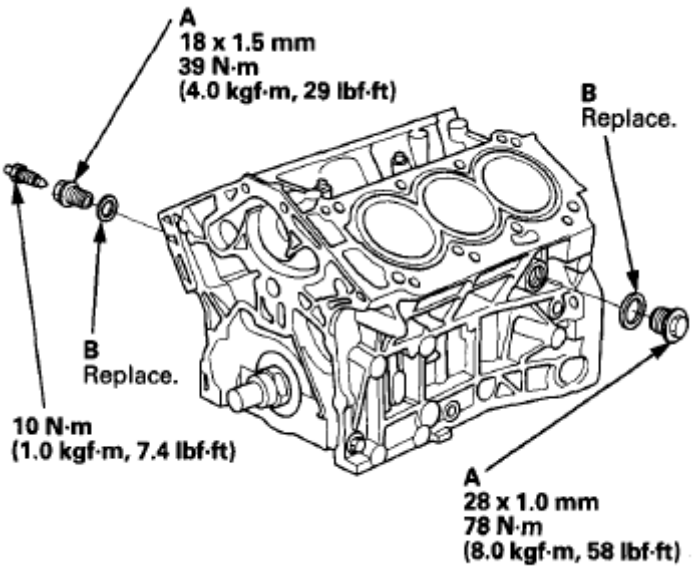

Fig. 76: Identifying Sealing Bolts And Washers With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic procedure	Also check for
	1. Verify the engine oil filler cap, the oil drain bolt, and the oil filter are tight. 2. Check for oil leaks. 3. Check for worn valve guide(s): • J35Z6 engine (see **VALVE**	

Excessive engine oil consumption	**STEM-TO-GUIDE CLEARANCE INSPECTION**) • J37A4 engine (see **VALVE STEM-TO-GUIDE CLEARANCE INSPECTION**) or worn seal(s): • J35Z6 engine (see **VALVE, SPRING, AND VALVE SEAL REMOVAL**) • J37A4 engine (see **VALVE INSPECTION**) 4. Check for damaged or worn piston ring (s) (see **PISTON RING REPLACEMENT**). 5. Check for damaged or worn engine internal parts (cylinder wall, pistons, etc.) (see **BLOCK AND PISTON INSPECTION**).	Check the maintenance records as engine oil that is worn out bums off at a higher rate
Low oil pressure indicator stays on	1. Check the **engine oil level**. 2. Do the **low oil pressure indicator circuit troubleshooting** (Open) procedure.	An open in the wire between the ECM/PCM and the oil pressure switch
Low oil pressure indicator does not come on with the ignition switch in ON (II), or the vehicle ignition in the ON mode	1. Do the **low oil pressure indicator circuit troubleshooting** (Short) procedure. 2. Test the **oil pressure switch**.	A wire shorted to ground between the ECM/PCM and the oil pressure switch

LOW OIL PRESSURE INDICATOR CIRCUIT DIAGRAM

WITHOUT KEYLESS ACCESS SYSTEM

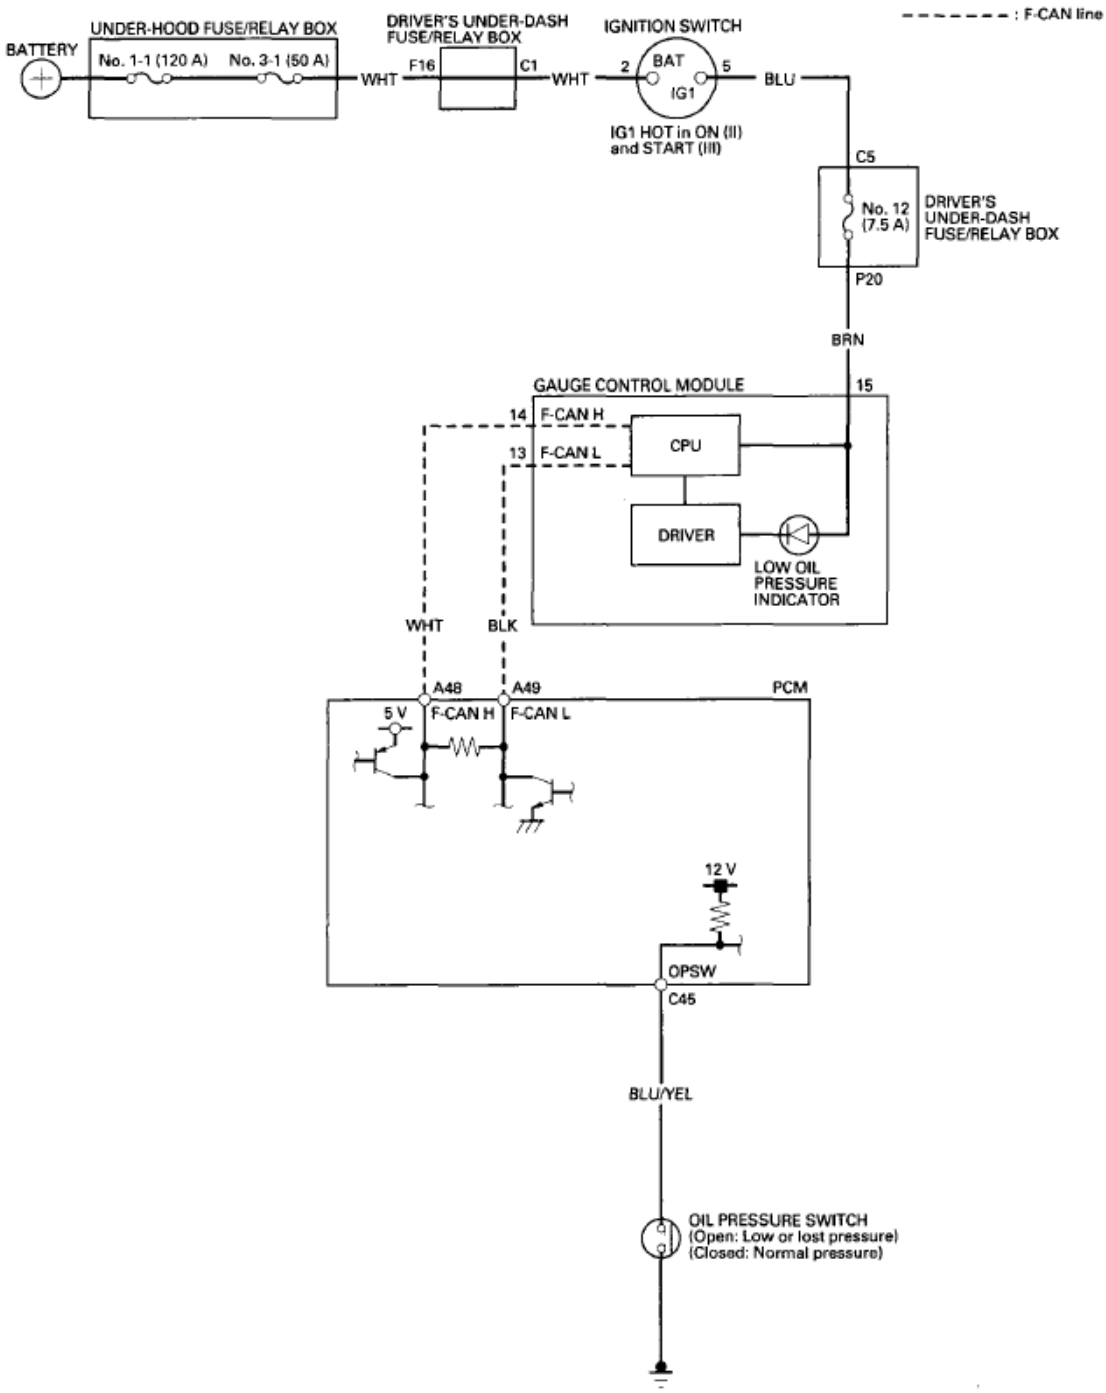

Fig. 4: Low Oil Pressure Indicator - Circuit Diagram (Without Keyless Access System)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

WITH KEYLESS ACCESS SYSTEM

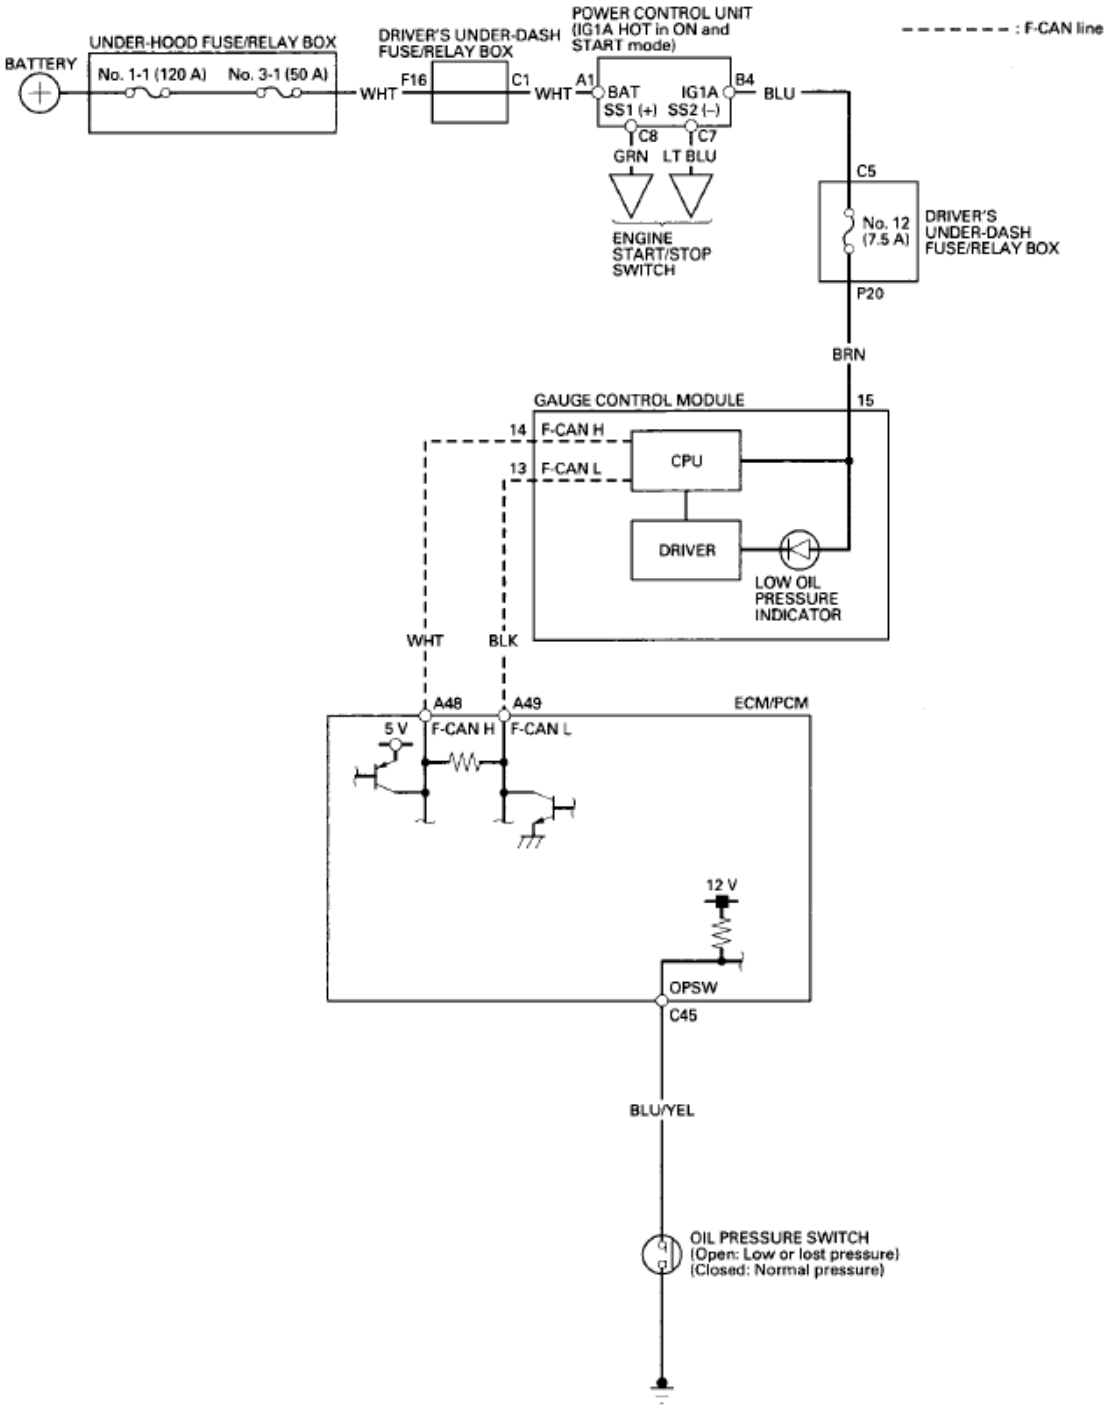

Fig. 5: Low Oil Pressure Indicator - Circuit Diagram (With Keyless Access System)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (OPEN)

1. Connect the HDS to the DLC (see **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.

3. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it does not communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check for DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). If a DTC is present, diagnose, and repair the cause before continuing with this test.
5. Start the engine, and check the OIL PRESSURE SWITCH in the PGM-FI DATA LIST with the HDS.

   Is ON indicated?

   YES - Replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).•

   NO - Go to step 6.

6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
7. Check the **oil pressure switch**.

   Is the oil pressure switch OK?

   YES - Go to step 8.

   NO - Do the **oil pressure test**. If the oil pressure is OK, replace the **oil pressure switch**.•

8. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode, and jump the SCS line with the HDS, then turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

   NOTE: This step must be done to protect the ECM/PCM from damage.

9. Disconnect ECM/PCM connector C (49P) and the oil pressure switch connector.
10. Check for continuity between ECM/PCM connector terminal C45 and the oil pressure switch connector.

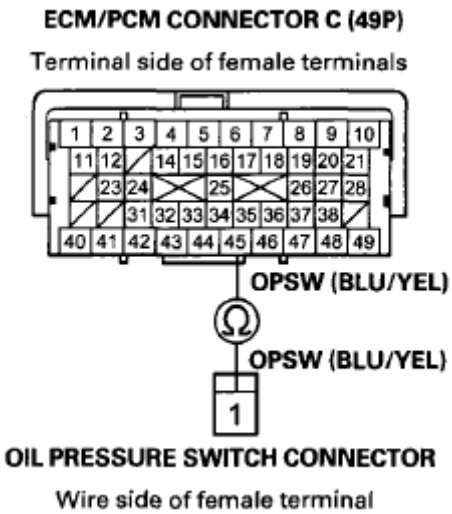

Fig. 6: Checking Continuity Between ECM/PCM Connector Terminal C45 And Oil Pressure

Switch Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the ECM/PCM if it does not have the latest software (see **ECM/PCM UPDATE**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**).•

NO - Repair an open in the wire between the oil pressure switch and ECM/PCM connector terminal C45.
•

LOW OIL PRESSURE INDICATOR CIRCUIT TROUBLESHOOTING (SHORT)

1. Connect the HDS to the DLC (see **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
2. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
3. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it does not communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
4. Check for DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). If a DTC is present, diagnose, and repair the cause before continuing with this test.
5. Turn the ignition switch ON (II), or press the engine start/stop button to select the ON mode, and check the OIL PRESSURE SWITCH in the PGM-FI DATA LIST with the HDS.

   Is OFF indicated?

   YES - Replace the gauge control module (see **GAUGE CONTROL MODULE REPLACEMENT**).•

   NO - Go to step 6.

6. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
7. Check the **oil pressure switch**.

   Is the oil pressure switch OK?

   YES - Go to step 8.

   NO - Replace the **oil pressure switch**.•

8. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode, and jump the SCS line with the HDS, then turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

   NOTE: This step must be done to protect the ECM/PCM from damage.

9. Disconnect ECM/PCM connector C (49P).
10. Check for continuity between the oil pressure switch connector and body ground.

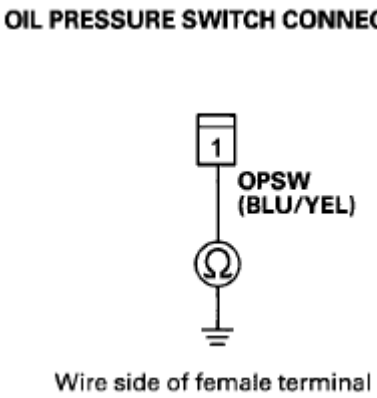

Fig. 7: Checking Continuity Between Oil Pressure Switch Connector And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Repair a short to ground in the wire between the oil pressure switch and ECM/PCM connector terminal C45. •

NO - Update the ECM/PCM if it does not have the latest software (see **ECM/PCM UPDATE**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**).•

OIL PRESSURE SWITCH TEST

1. Disconnect the oil pressure switch connector (A) from the oil pressure switch (B).

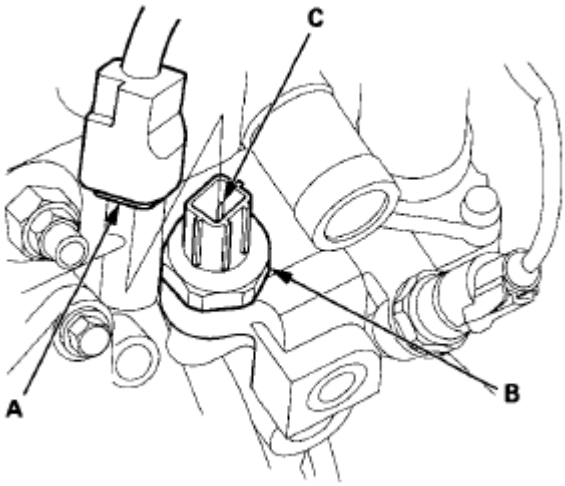

Fig. 8: Identifying Oil Pressure Switch Connector, Switch Terminal And Oil Pressure Switch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check for continuity between the oil pressure switch terminal (C) and the engine (ground). There should be no continuity with the engine stopped. There should be continuity with the engine running.

OIL PRESSURE SWITCH REPLACEMENT

1. Disconnect the oil pressure switch connector (A), then remove the oil pressure switch (B).

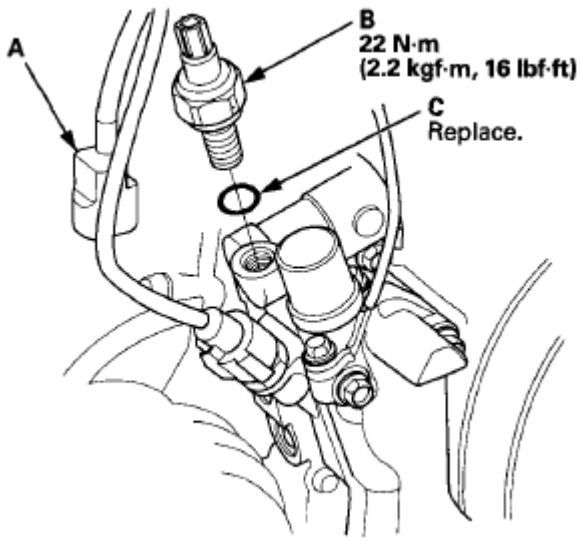

Fig. 9: Identifying Oil Pressure Switch Connector And Switch And O-Ring With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Remove all of the old liquid gasket from the oil pressure switch mounting hole.
3. Clean and dry the oil pressure switch mounting hole.
4. Apply liquid gasket (P/N 08717-0004, 08718-0003, 08718-0004, or 08718-0009) to the new oil pressure switch threads. Install the component within 5 minutes of applying the liquid gasket:

NOTE:

- **Using too much liquid gasket may cause liquid gasket to enter the oil passage or the end of the oil pressure switch.**
- **If too much time has passed after applying the liquid gasket, remove the old liquid gasket and residue, then reapply the new liquid gasket.**

5. Install the oil pressure switch with a new O-ring (C).
6. Connect the oil pressure switch connector.

OIL PRESSURE TEST

Special Tools Required

- Oil Pressure Hose 07ZAJ-S5AA200
- A/T Low Pressure Gauge w/Panel 07406-0070301
- AT Pressure Test Hose 07AAJ-PY4A100
- A/T Pressure Adapter 07MAJ-PY40120
- Pressure Gauge Adapter 07NAJ-P07010A

If the low oil pressure indicator stays on with the engine running, check the **engine oil level**. If the oil level is correct:

1. Remove the **oil pressure switch**.
2. Install the oil pressure hose, the A/T low pressure gauge w/panel, the A/T pressure test hose, and the A/T pressure adapter as shown, then install the oil pressure switch and/or rocker arm oil pressure switch to the pressure gauge adapter.

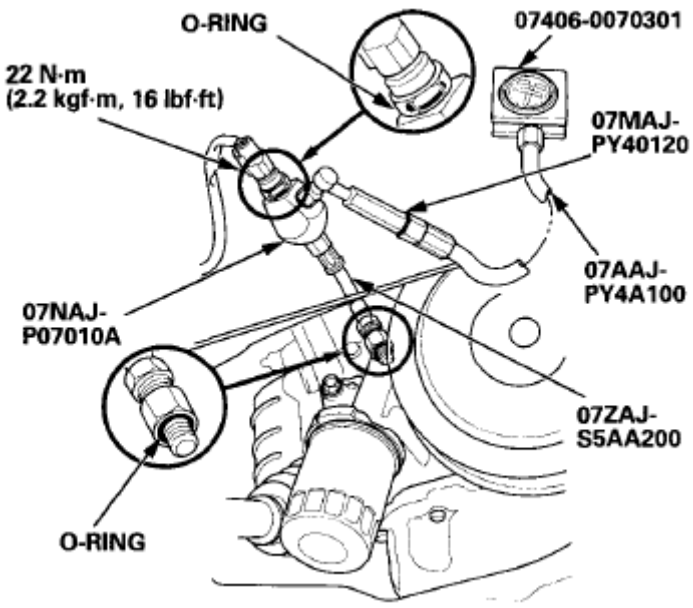

Fig. 10: Identifying O-Ring And Pressure Hoses With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Start the engine. Shut it off immediately if the gauge registers no oil pressure. Repair the problem before continuing.
4. Allow the engine to reach operating temperature (fan comes on at least twice). The pressure should be:

   Engine Oil Temperature: 176°F (80°C)

   Engine Oil Pressure:

   At Idle: 70 kPa (0.71 kgf/cm^2 , 10.1 psi) min.

At 3, 000 RPM: 490 kPa (5.00 kgf/cm^2 , 71.1 psi) min.

5. If oil pressure is not within specifications, inspect these items:
   - Blocking of oil filter.
   - Blocking of oil strainer.
   - Inspect the **oil pressure relief valve**.
   - Inspect the **oil pump**.
6. Install the **oil pressure switch**.

ENGINE OIL LEVEL CHECK

1. Park the vehicle on level ground, and start the engine. Hold the engine speed at 3, 000 RPM with no load (in neutral (M/T model) or P or N (A/T model)) until the radiator fan comes on, then turn off the engine, and wait a few minutes.
2. Remove the dipstick, and wipe off the dipstick, then reinstall the dipstick.
3. Remove the dipstick, and check the engine oil level. It should be between the upper mark (A) and the lower mark (B).

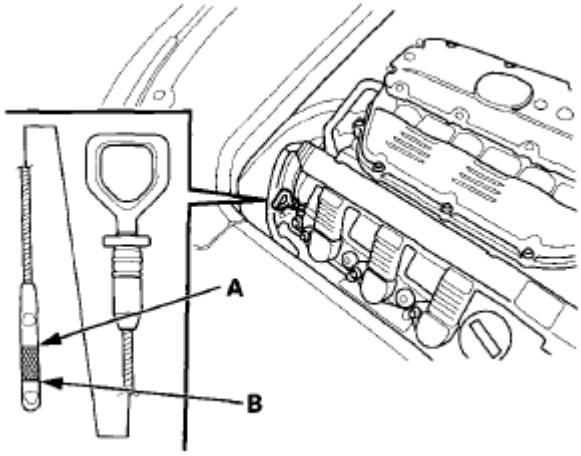

Fig. 11: Identifying Upper Mark And Lower Mark On Oil Level Check
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. If the engine oil level is near or below the lower mark, check for oil leakage, and add the engine oil (see step 4) to bring it to the upper mark.

ENGINE OIL REPLACEMENT

1. Allow the engine to reach operating temperature (fan comes on at least twice).
2. Remove the drain bolt (A), and drain the engine oil.

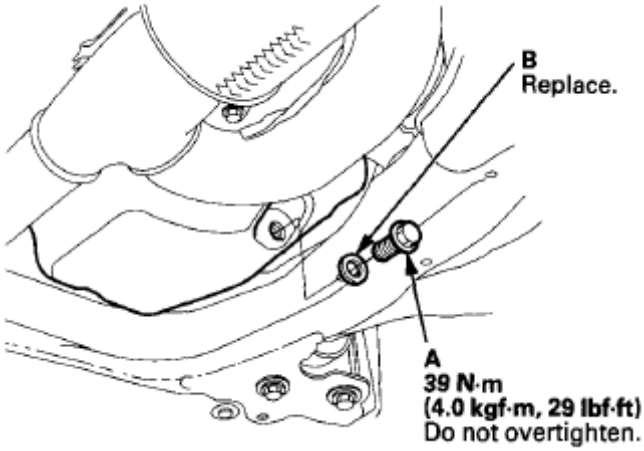

Fig. 12: Identifying Drain Bolt And Washer With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Reinstall the drain bolt with a new washer (B) and torque to specification.
4. Refill the engine with the recommended engine oil (see **MAINTENANCE**).

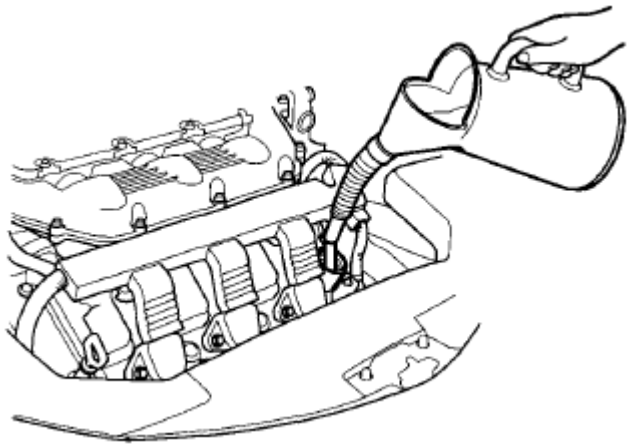

Fig. 13: Refilling Engine With Engine Oil
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Capacity

At Oil Change:

4.0 L (4.2 US qt)

At Oil Change including Filter:

4.3 L (4.5 US qt)

After Engine Overhaul:

5.0 L (5.3 US qt)

5. Run the engine for more than 3 minutes, then check the **oil level** and oil leakage.
6. If the Maintenance Minder required replacing the engine oil, reset the Maintenance Minder (see **RESETTING THE MAINTENANCE MINDER**), and this procedure is complete. If the Maintenance Minder did not require engine oil replacement, go to step 7.
7. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
8. Connect the HDS to the DLC (see **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
9. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
10. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it does not communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
11. Select GAUGES in the BODY ELECTRICAL with the HDS.
12. Select ADJUSTMENT in the GAUGES with the HDS.
13. Select MAINTENANCE MINDER in the ADJUSTMENT with the HDS.
14. Select RESET in the MAINTENANCE MINDER with the HDS.
15. Select RESETTING THE ENGINE OIL LIFE with the HDS.

ENGINE OIL FILTER REPLACEMENT

Special Tools Required

Oil Filter Wrench 07AAA-PLCA100

1. Remove the oil filter with the oil filter wrench.
2. Inspect the filter to make sure the rubber seal is not stuck to the oil filter seating surface of the engine.
3. Inspect the threads (A) and the rubber seal (B) on the new filter. Clean the seat on the oil filter base, then apply a light coat of new engine oil to the oil filter rubber seal. Use only filters with a built-in bypass system.

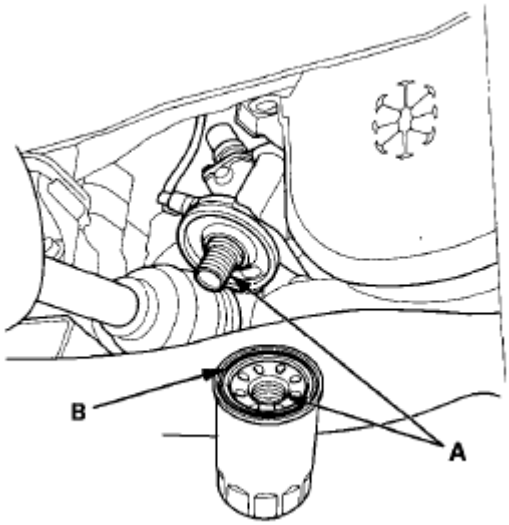

Fig. 14: Identifying Threads And Rubber Seal On Filter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Install the oil filter by hand.
5. After the rubber seal seats, tighten the oil filter clockwise with the oil filter wrench.

   Tighten: 3/4 Turn Clockwise

   Tightening Torque: 12 N.m (1.2 kgf.m, 9 lbf.ft)

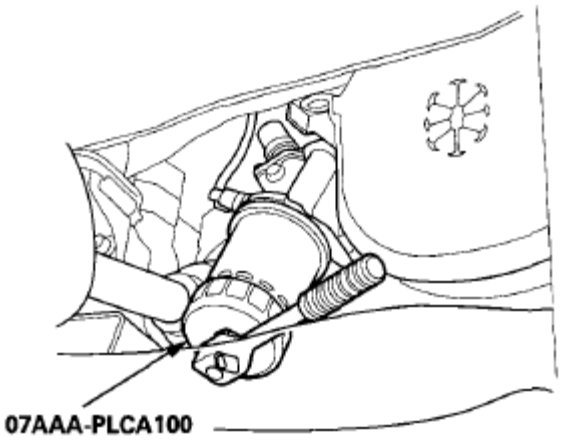

Fig. 15: Turning Oil Filter Clockwise With Oil Filter Wrench
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. If four numbers or marks (1 to 4 or ˇ to ˇˇˇˇ) are printed around the outside of the filter, you can use the following procedure to tighten the filter:
   - Spin the filter on until its seal lightly seats against the oil filter base, and note which number or mark is at the bottom.
   - Tighten the filter by turning it clockwise three numbers or marks from the one you noted. For example, if mark ˇ is at the bottom when the seal is lightly seated, tighten the filter until the mark ˇˇˇˇ comes around to the bottom.

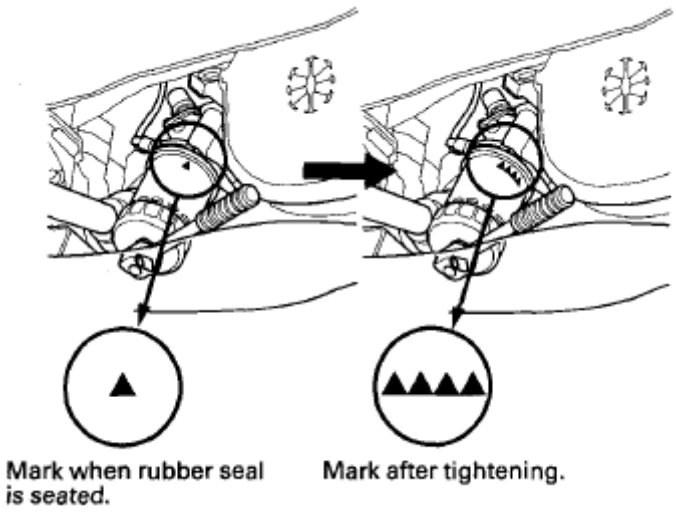

Fig. 16: Identifying Tightening Marks On Engine Oil Filter
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Mark when rubber seal is seated.

Mark after tightening.

Number or Mark when rubber seal is seated	1 or ˇ	2 or ˇˇ	3 or ˇˇˇ	4 or ˇˇˇˇ
Number or Mark after tightening	4 or ˇˇˇˇ	1 or ˇ	2 or ˇˇ	3 or ˇˇˇ

7. After installation, fill the engine with **engine oil** to the specified level, run the engine for more than 3 minutes, then check for oil leakage.

OIL FILTER FEED PIPE REPLACEMENT

1. Remove the **oil filter**.
2. Remove the oil filter feed pipe.

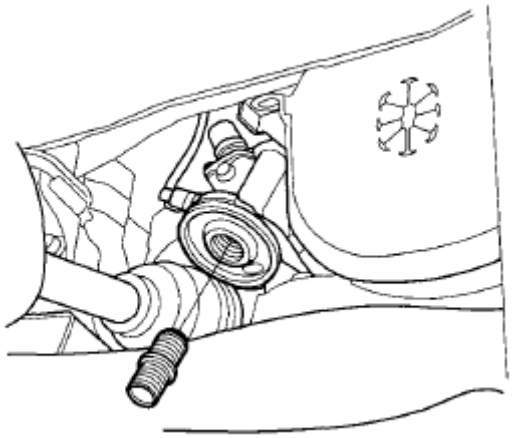

Fig. 17: Removing Oil Filter Feed Pipe
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install two 20 x 1.5 mm nuts (A) onto the new oil filter feed pipe, and hold one nut with a wrench, then tighten the other nut.

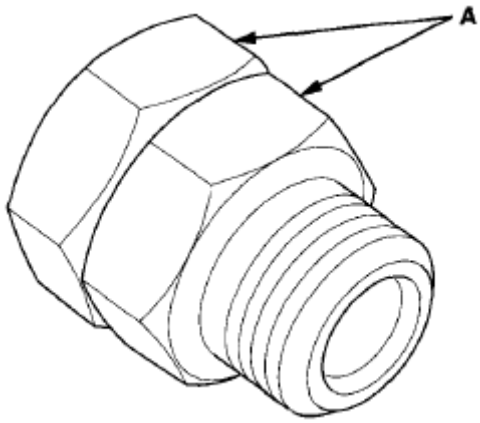

Fig. 18: Identifying Oil Filter Feed Pipe Nut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Apply new engine oil to the oil filter feed pipe threads, then torque the oil filter feed pipe to 35 N.m (3.6 kgf.m, 26 lbf.ft), then remove the nuts from the oil filter feed pipe.
5. Install the **oil filter**.

OIL JET REPLACEMENT

1. Remove the crankshaft from the engine block (see **CRANKSHAFT AND PISTON REMOVAL**).
2. Remove the oil jet bolt (A), then remove the oil jet (B).

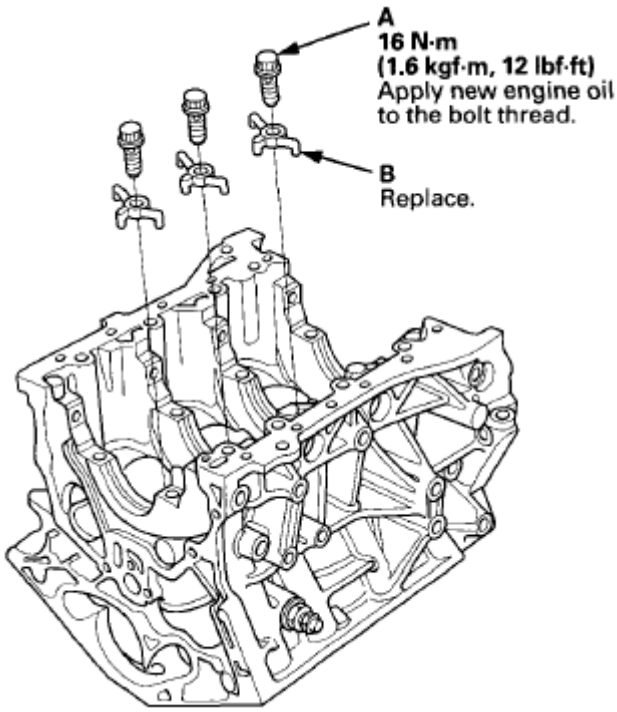

Fig. 19: Identifying Oil Jet Bolt And Oil Jet With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Carefully install the new oil jet and tighten the oil jet bolt.
4. Install the crankshaft (see **CRANKSHAFT AND PISTON INSTALLATION**).

OIL JET BOLT INSPECTION

1. Remove the **oil jet bolt**.
2. Inspect the oil jet bolt as follows:
   - Make sure that a 0.6 mm (1/64 in) diameter drill bit will go through the oil intake (0.7 mm (0.028 in) diameter). Make sure the check ball (A) moves smoothly and has a stroke of about 4.0 mm (0.157 in).
   - Check the oil jet bolt operation with an air nozzle. It should take at least 120 kPa (1.22 kgf/cm^2 , 17.4 psi) to unseat the check ball.

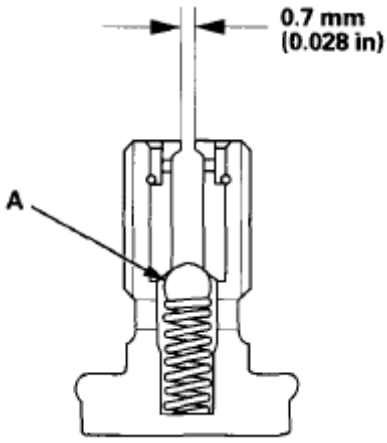

Fig. 20: Identifying Ball In Oil Jet
Courtesy of AMERICAN HONDA MOTOR CO., INC.

OIL PUMP OVERHAUL

EXPLODED VIEW

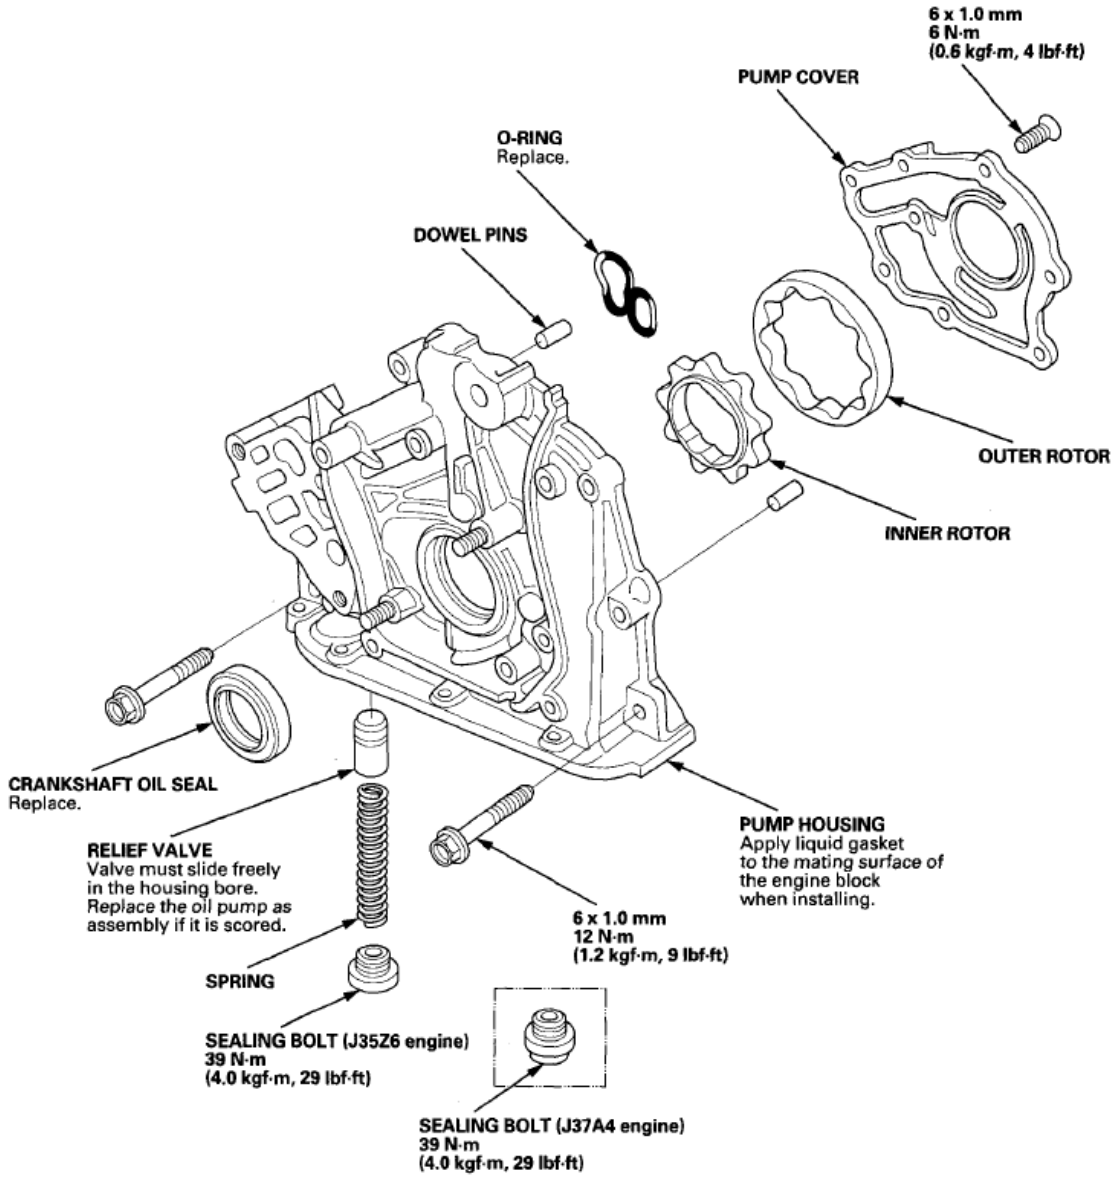

Fig. 21: Exploded View Of Oil Pump With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Special Tools Required

- Oil Seal Driver, 64 mm 07OAD-RCAA100
- Engine Support Hanger, A and Reds AAR-T1256*

*: Available through the Acura Tool and Equipment Program, 888-424-6857.

REMOVAL

1. Disconnect the support struts from both sides of the pivot ball (bolted to the hood). Secure the hood in a vertical position. Install the right side pivot ball into the lower threaded hole.

NOTE: **Do not attempt to close the hood with the support strut in the vertical position, as it will damage the support strut and hood.**

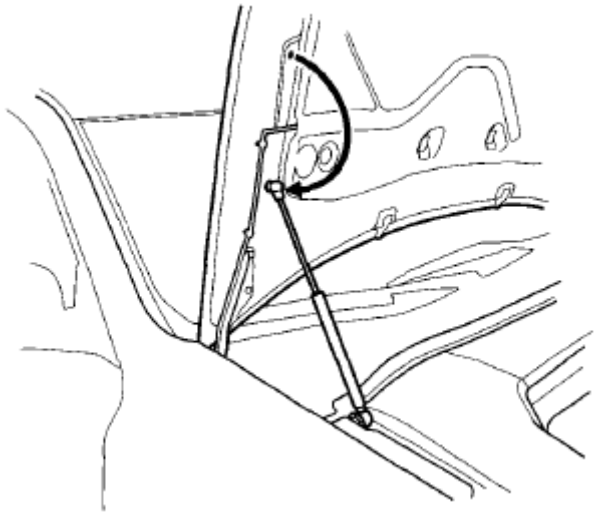

Fig. 22: Installing Right Side Pivot Ball Into Lower Threaded Hole
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Drain the **engine oil**.
3. Install the engine support hanger (AAR-T1256) onto the vehicle as shown, and attach the hook (A) to the engine hanger (B). Tighten the wing nut (C) by hand, and lift and support the engine/transmission.

NOTE:

- **Be careful when working around the windshield.**
- **AAR-T1256 two sets required for stacking two cross section bars.**

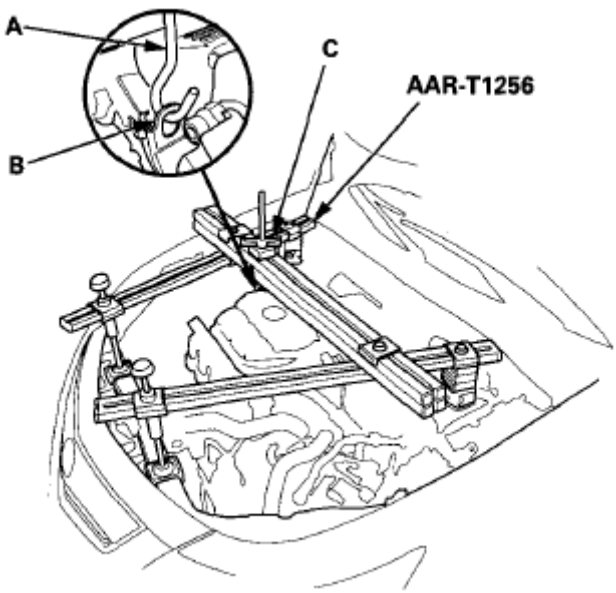

Fig. 23: Identifying Hook, Engine Hanger And Wing Nut Of Engine Support Hanger
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the timing belt:
   - J35Z6 engine (see **TIMING BELT REMOVAL**)
   - J37A4 engine (see **TIMING BELT REMOVAL**)
5. Remove the timing belt drive pulley from the crankshaft:
   - J35Z6 engine (see **TIMING BELT DRIVE PULLEY REPLACEMENT**)
   - J37A4 engine (see **TIMING BELT DRIVE PULLEY REPLACEMENT**)
6. Remove the rocker arm oil control solenoid/oil filter assembly (see **CRANKSHAFT AND PISTON REMOVAL**).
7. Remove the oil pan (see **OIL PAN REMOVAL**).
8. Remove the oil strainer (A).

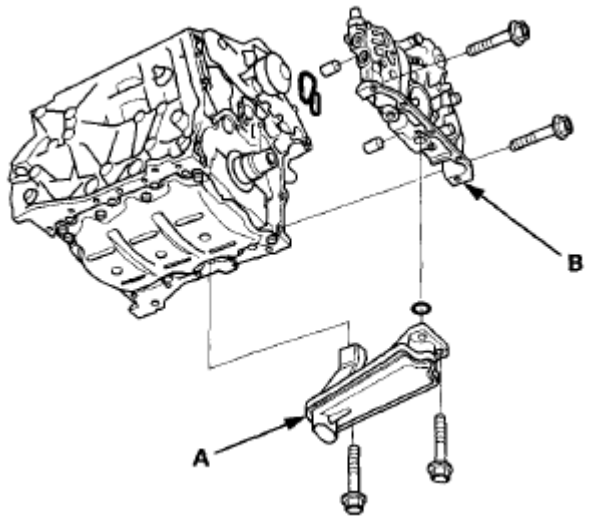

Fig. 24: Identifying Oil Strainer And Oil Pump Assembly
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Remove the mounting bolts, then remove the oil pump assembly (B).

INSPECTION

NOTE: Refer to the Exploded View if needed during this procedure.

1. Remove the screws from the pump housing, then separate the pump housing and the cover.
2. Check the inner rotor-to-outer rotor radial clearance between the inner rotor (A) and the outer rotor (B). If the inner-to-outer rotor radial clearance exceeds the service limit, replace the oil pump assembly.

   Inner Rotor-to-Outer Rotor Radial Clearance Standard (New): 0.04- 0.16 mm (0.002- 0.006 in)
   Service Limit: 0.20 mm (0.007 in)

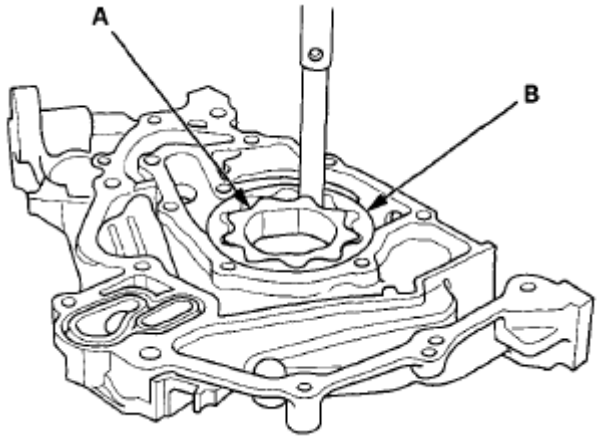

Fig. 25: Identifying Inner And Outer Rotor
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Check the pump housing-to-rotor axial clearance between the rotors (A) and the pump housing (B). If the pump housing-to-rotor axial clearance exceeds the service limit, replace the oil pump assembly.

   Pump Housing-to-Rotor Axial Clearance Standard (New): 0.02- 0.07 mm (0.001- 0.002 in) Service Limit: 0.12 mm (0.004 in)

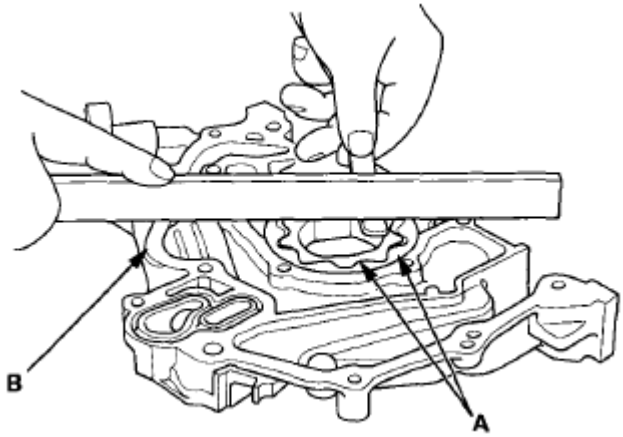

Fig. 26: Identifying Rotor And Pump Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Check the pump housing-to-outer rotor radial clearance between the outer rotor (A) and the pump housing (B). If the pump housing-to-outer rotor radial clearance exceeds the service limit, replace the oil pump assembly.

   Pump Housing-to-Outer Rotor Radial Clearance Standard (New): 0.07- 0.19 mm (0.003- 0.007 in) Service Limit: 0.20 mm (0.007 in)

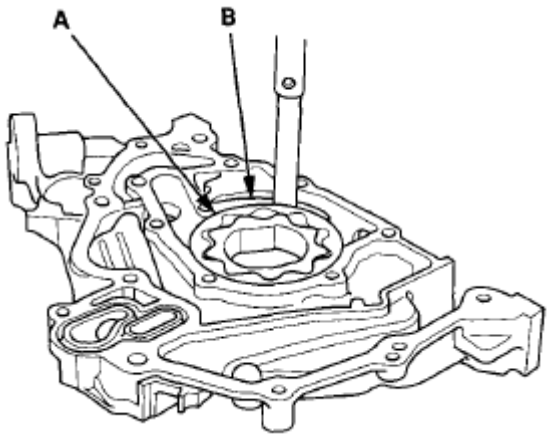

Fig. 27: Identifying Outer Rotor And Pump Housing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Inspect both rotors and the pump housing for scoring or other damage. Replace the oil pump assembly, if necessary.
6. Apply liquid thread lock to the pump housing screws, then install the oil pump cover.
7. Check that the oil pump turns freely.

INSTALLATION

1. Remove the old oil seal from the oil pump.
2. Clean and dry the crankshaft oil seal housing.
3. Using the oil seal driver, 64 mm, drive in the new crankshaft oil seal (A) until the oil seal driver bottoms on the pump.

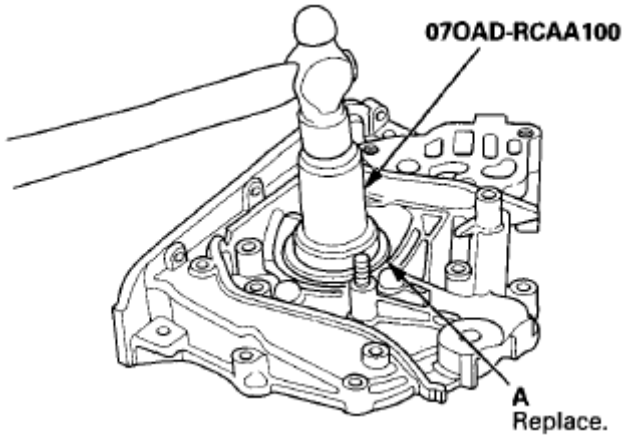

Fig. 28: Identifying Crankshaft Oil Seal
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove all of the old liquid gasket from the oil pump mating surfaces, the bolts, and the bolt holes.
5. Clean and dry the oil pump mating surfaces.

6. Apply liquid gasket, P/N 08717-0004, 08718-0003, 08718-0004, or 08718-0009, to the engine block mating surface of the oil pump and to the inside edge of the threaded bolt holes. Install the component within 5 minutes of applying the liquid gasket.

NOTE:

- **Apply a 2.3 mm (0.091 in) diameter bead of liquid gasket along the broken line (A).**
- **If you apply liquid gasket P/N 08718-0012, the component must be installed within 4 minutes.**
- **If too much time has passed after applying the liquid gasket, remove all of the old liquid gasket and residue, then reapply the new liquid gasket.**

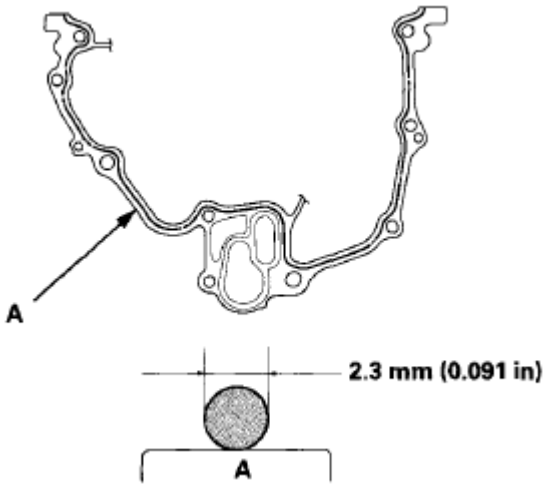

Fig. 29: Identifying Broken Line Of Bead Of Liquid Gasket
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Apply a light coat of new engine oil to the lip of the crankshaft oil seal, and apply new engine oil to the new O-ring (A).

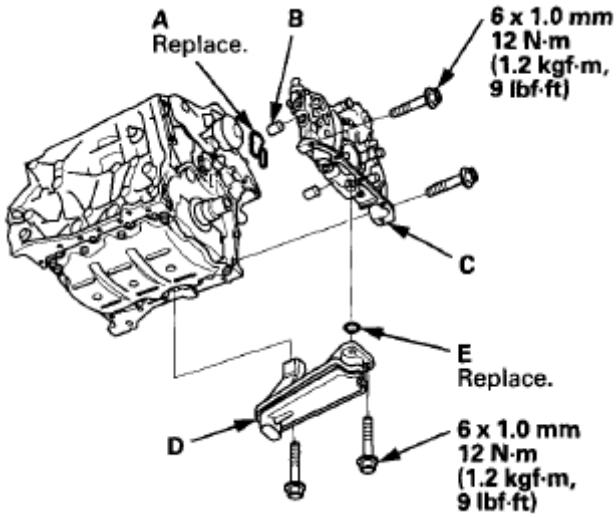

Fig. 30: Identifying O-Ring, Dowel Pins, Oil Pump And Oil Strainer With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Install the dowel pins (B), then align the inner rotor with the crankshaft, and install the oil pump (C).

NOTE:

- **Wait at least 30 minutes before filling the engine with oil.**
- **Do not run the engine for at least 3 hours after installing the oil pump.**

9. Clean the excess oil off the crankshaft, and check that the oil seal lip is not distorted.
10. Install the oil strainer (D) with a new O-ring (E).
11. Install the oil pan (see **OIL PAN INSTALLATION**).
12. Install the rocker arm oil control solenoid/oil filter assembly with a new rocker arm oil control solenoid filter (see **CRANKSHAFT AND PISTON INSTALLATION**).
13. Install the timing belt drive pulley to the crankshaft:
    - J35Z6 engine (see **TIMING BELT DRIVE PULLEY REPLACEMENT**)
    - J37A4 engine (see **TIMING BELT DRIVE PULLEY REPLACEMENT**)
14. Support the engine with a jack and a wood block under the oil pan.
15. Remove the engine support hanger.
16. Install the timing belt:
    - J35Z6 engine (see **TIMING BELT INSTALLATION**)
    - J37A4 engine (see **TIMING BELT INSTALLATION**)
17. Refill the engine with **engine oil**.

2012 ENGINE

Engine Mount Control System - TL

COMPONENT LOCATION INDEX

TROUBLESHOOTING

Special Tools Required

Vacuum Pump/Gauge, 0-30 inHg Snap-on YA4000A or equivalent, commercially available

M/T MODEL

NOTE:

- **Check the vacuum hoses and lines for damage and proper connections before troubleshooting.**
- **Check the liquid filled engine mount for damage. The rubber mount should have dimples in it. This is normal. If the internal bladder ruptures, the rubber mount will look like it is bulging. Replace it (see INSTALLATION).**

Follow this procedure if the engine vibrates excessively when idling.

1. Remove the engine compartment cover (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Start the engine, and let it idle.
3. Raise the engine speed from idling to 2, 000 RPM.
4. Check the MOUNT CTRL SOL in the PGM-FI DATA LIST with the HDS.

   Is ON indicated at idling and OFF indicated at 2, 000 RPM?

   YES - Go to step 5.

   NO - Update the ECM if it does not have the latest software (see **ECM/PCM UPDATE**), or substitute a known-good ECM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the engine mount control system works properly, and the ECM was updated, the troubleshooting is complete. If the ECM was substituted, replace the original ECM (see **ECM/PCM REPLACEMENT**).

5. Press the engine start/stop button to select the OFF mode.
6. Disconnect the engine mount control solenoid valve 2P connector from the engine mount control solenoid valve.
7. Press the engine start/stop button to select the ON mode.
8. Measure the voltage between engine mount control solenoid valve 2P connector terminal No. 2 and body ground.

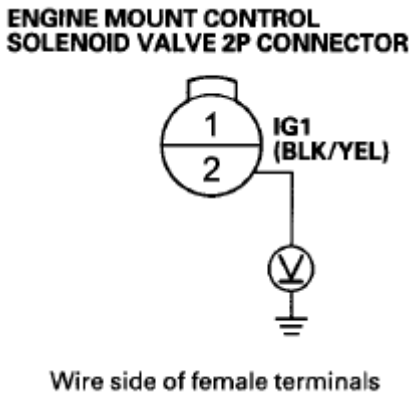

Fig. 4: Measuring Voltage Between Engine Mount Control Solenoid Valve 2P Connector Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 9.

NO - Repair an open in the wire between engine mount control solenoid valve 2P connector terminal No. 2 and No. 13 (15 A) fuse in the driver's under-dash fuse/relay box.

9. Start the engine, and let it idle.
10. Measure the voltage between engine mount control solenoid valve 2P connector terminals No. 1 and No. 2, with the engine at idle.

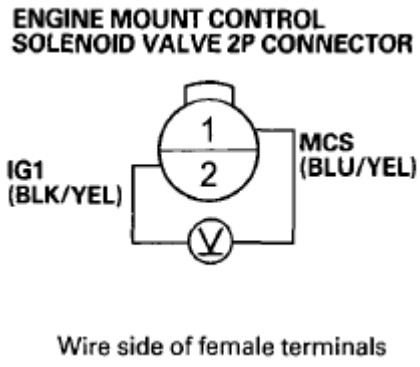

Fig. 5: Measuring Voltage Between Engine Mount Control Solenoid Valve 2P Connector Terminals No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 11.

NO - Repair an open in the wire between ECM connector terminal A12 and engine mount control

solenoid valve 2P connector terminal No. 1. If the wire is OK, update the ECM if it does not have the latest software (see **ECM/PCM UPDATE**), or substitute a known-good ECM (see **SUBSTITUTING THE ECM/PCM**), and recheck. If the engine mount control system works properly, and the ECM was updated, the troubleshooting is complete. If the ECM was substituted, replace the original ECM (see **ECM/PCM REPLACEMENT**).

11. Raise the engine speed above 2, 000 RPM.
12. Measure the voltage between engine mount control solenoid valve 2P connector terminals No. 1 and No. 2.

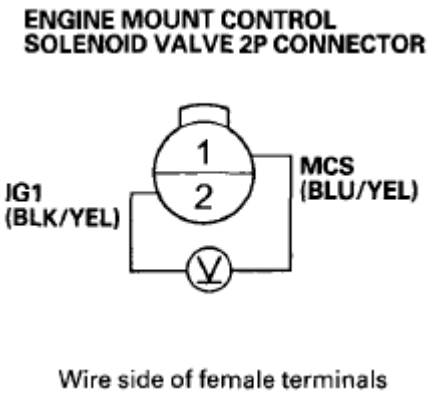

Fig. 6: Measuring Voltage Between Engine Mount Control Solenoid Valve 2P Connector Terminals No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair a short to body ground in the wire between ECM connector terminal A12 and the engine mount control solenoid valve. If the wire is OK, update the ECM if it does not have the latest software (see **ECM/PCM UPDATE**), or substitute a known-good ECM (see **SUBSTITUTING THE ECM/PCM**), and recheck. If the engine mount control system works properly, and the ECM was updated, the troubleshooting is complete. If the ECM was substituted, replace the original ECM (see **ECM/PCM REPLACEMENT**).

NO - Reconnect the engine mount control solenoid valve 2P connector, then go to step 14.

13. Press the engine start/stop button to select the OFF mode.
14. Disconnect the vacuum hose (A) from the engine mount control solenoid valve (B), and connect a vacuum pump/gauge, 0-30 inHg, to the vacuum hose. Apply about 20 inHg of vacuum, and wait for 20 seconds.

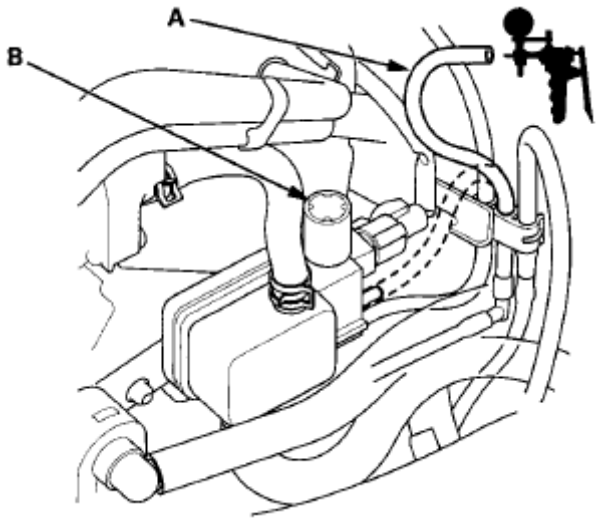

Fig. 7: Identifying Vacuum Hose And Engine Mount Control Solenoid Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the engine mount hold vacuum?

YES - Reconnect the vacuum hose, then go to step 16.

NO - Reconnect the vacuum hose, then go to step 15.

15. Disconnect the vacuum hose (A) from the two way valve, and connect a vacuum pump/gauge to the hose. Apply about 20 inHg vacuum, and wait 20 seconds.

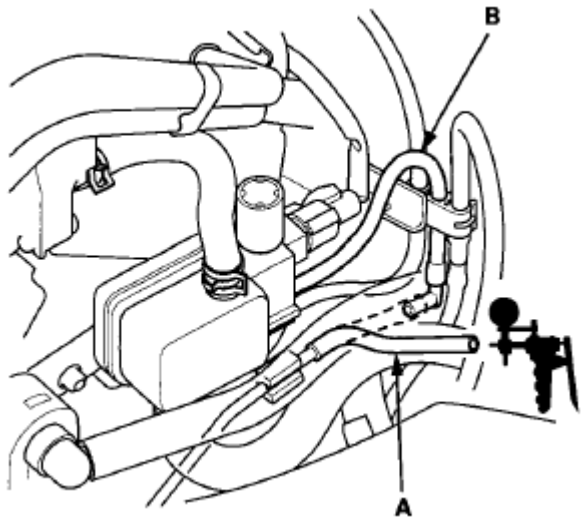

Fig. 8: Identifying Vacuum Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the engine mount hold vacuum?

YES - Repair the vacuum hose (B) between the engine mount control solenoid valve and the two way valve.

NO - The vacuum hose or the front engine mount has a vacuum leak. Repair as needed.

16. Disconnect the vacuum hose (A) from the two way valve, then connect the vacuum pump/gauge to the vacuum hose.

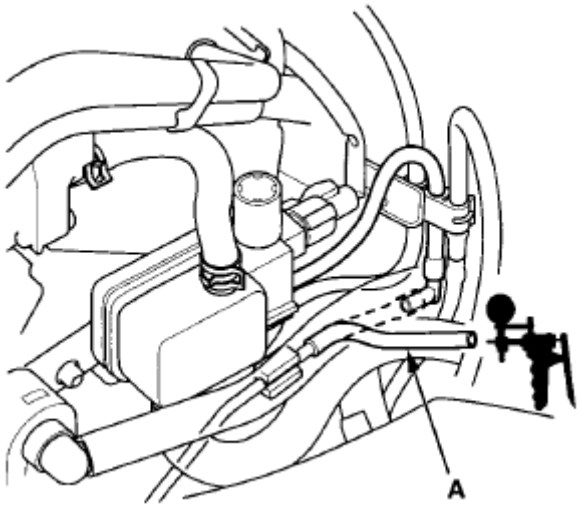

Fig. 9: Identifying Vacuum Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. Start the engine and let it idle, then apply vacuum to the mount.

    Is there a noticeable change in idle smoothness with and without vacuum applied?

    YES - Reconnect the vacuum hose to the two way valve, then go to step 18.

    NO - Replace the front engine mount (see **INSTALLATION**).

18. Disconnect the vacuum hose (A) from the engine mount control solenoid valve (B), then connect a vacuum pump/gauge to the engine mount control solenoid valve.

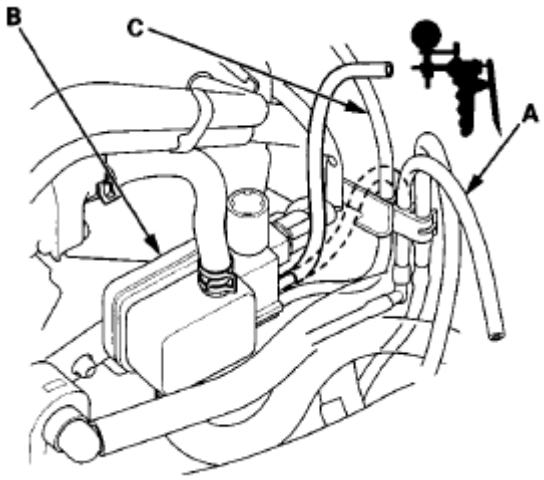

Fig. 10: Identifying Vacuum Hoses And Engine Mount Control Solenoid Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there manifold vacuum at idle, and a decrease in manifold vacuum when you raise the engine speed above 2, 000 RPM?

YES - The system is OK.

NO - Repair the vacuum hose (C) between the intake manifold and the engine mount control solenoid valve. If the vacuum hose is OK, replace the engine mount control solenoid valve.

Special Tools Required

Vacuum Pump/Gauge, 0-30 inHg Snap-on YA4000A or equivalent, commercially available

A/T MODEL

NOTE:

- **Check the vacuum hoses and lines for damage and proper connections before troubleshooting.**
- **The rubber mount should have dimples in it. This is normal. If the internal bladder ruptures, the rubber mount looks like it is bulging, replace it:**
  - **Front engine mount (see INSTALLATION)**
  - **Rear engine mount (see REMOVAL-A/T MODEL)**

Follow this procedure if the engine vibrates excessively when idling.

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Start the engine, and let it idle.
3. Raise the engine speed from idling to 2, 000 RPM.
4. Check the MOUNT CTRL SOL in the PGM-FI DATA LIST with the HDS.

Is ON indicated at idling and OFF indicated at 2, 000 RPM?

YES - Go to step 5.

NO - Update the PCM if it does not have the latest software (see **ECM/PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the engine mount control system works properly, and the PCM was updated, the troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **ECM/PCM REPLACEMENT**).

5. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
6. Disconnect the engine mount control solenoid valve 2P connector from the engine mount control solenoid valve.
7. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
8. Measure the voltage between engine mount control solenoid valve 2P connector terminal No. 2 and body ground.

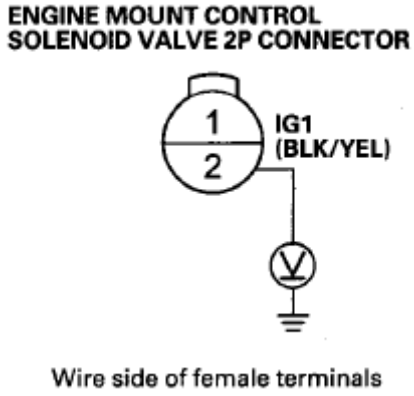

Fig. 11: Measuring Voltage Between Engine Mount Control Solenoid Valve 2P Connector Terminal No. 2 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 9.

NO - Repair an open in the wire between engine mount control solenoid valve 2P connector terminal No. 2 and No. 13(15 A) fuse in the driver's under-dash fuse/relay box.

9. Start the engine, and let it idle.
10. Measure the voltage between engine mount control solenoid valve 2P connector terminals No. 1 and No. 2, with the engine at idle.

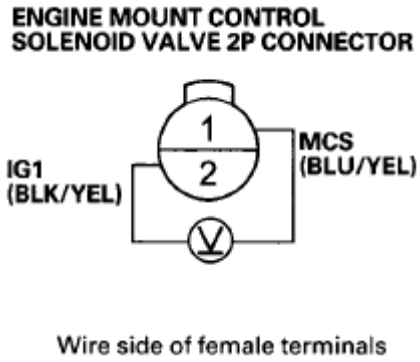

Fig. 12: Measuring Voltage Between Engine Mount Control Solenoid Valve 2P Connector Terminals No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 11.

NO - Repair an open in the wire between PCM terminal A12 and engine mount control solenoid valve 2P connector terminal No. 1. If the wire is OK, update the PCM if it does not have the latest software (see **ECM/PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE ECM/PCM**), and recheck. If the engine mount control system works properly, and the PCM was updated, the troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **ECM/PCM REPLACEMENT**).

11. Raise the engine speed above 2, 000 RPM.
12. Measure the voltage between engine mount control solenoid valve 2P connector terminals No. 1 and No. 2.

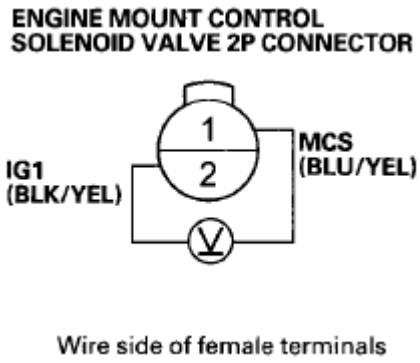

Fig. 13: Measuring Voltage Between Engine Mount Control Solenoid Valve 2P Connector Terminals No. 1 And No. 2
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Repair a short to body ground in the wire between PCM terminal A12 and the engine mount

control solenoid valve. If the wire is OK, update the PCM if it does not have the latest software (see **ECM/PCM UPDATE**), or substitute a known-good PCM (see **SUBSTITUTING THE ECM/PCM**), and recheck. If the engine mount control system works properly, and the PCM was updated, the troubleshooting is complete. If the PCM was substituted, replace the original PCM (see **ECM/PCM REPLACEMENT**).

NO - Reconnect the engine mount control solenoid valve 2P connector, then go to step 13.

13. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
14. Disconnect the vacuum hose (A) from the engine mount control solenoid valve (B), and connect a vacuum pump/gauge, 0-30 inHg, to the vacuum hose. Apply about 20 inHg of vacuum, and wait for 20 seconds.

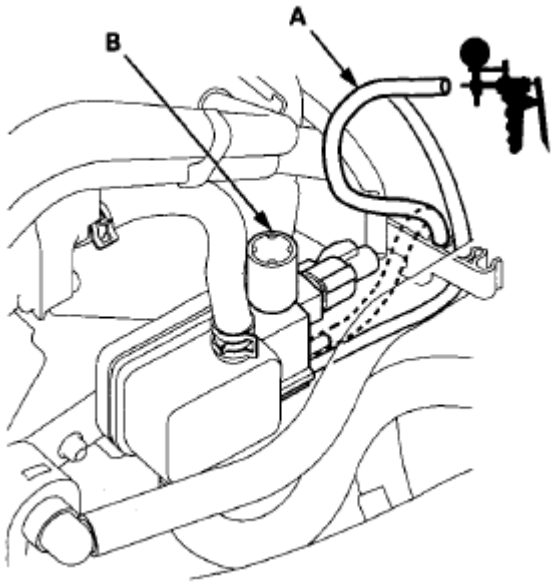

Fig. 14: Identifying Vacuum Hose And Engine Mount Control Solenoid Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Do both engine mounts hold vacuum?

YES - Reconnect the vacuum hose, then go to step 17.

NO - Reconnect the vacuum hose, then go to step 15.

15. Disconnect the vacuum hose (A) from the three way valve, and connect a vacuum pump/gauge to the vacuum hose. Apply about 20 inHg of vacuum, and wait for 20 seconds.

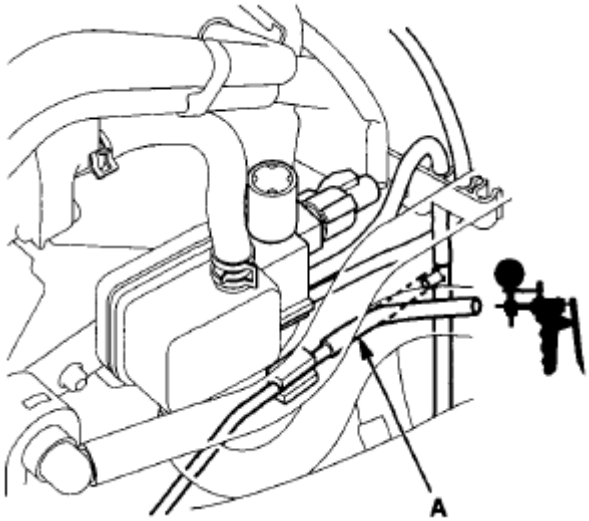

Fig. 15: Identifying Vacuum Hose From Three Way Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the front engine mount hold vacuum?

YES - Go to step 16.

NO - The vacuum hose or the front engine mount has a vacuum leak. Repair as needed.

16. Disconnect the vacuum hose (A) from the three way valve, and connect a vacuum pump/gauge to the hose. Apply about 20 inHg of vacuum, and wait for 20 seconds.

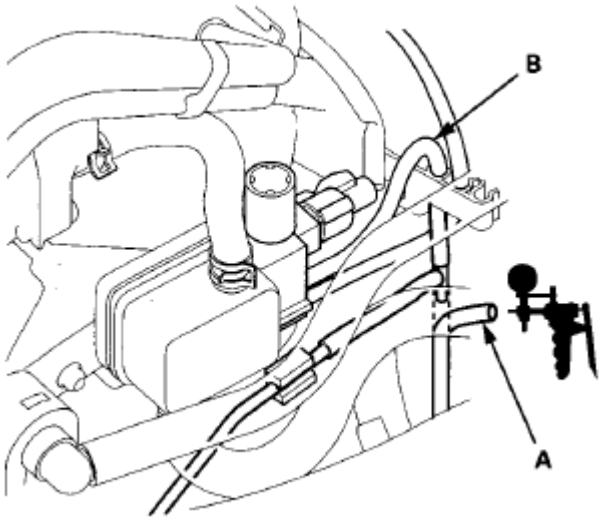

Fig. 16: Identifying Vacuum Hoses
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the rear engine mount hold vacuum?

YES - Repair the vacuum hose (B) between the engine mount control solenoid valve and the three way valve.

NO - The vacuum hose or the rear engine mount has a vacuum leak. Repair as needed.

17. Disconnect the vacuum hose (A) from the three way valve. Block the open port, then connect the vacuum pump/gauge to the vacuum hose.

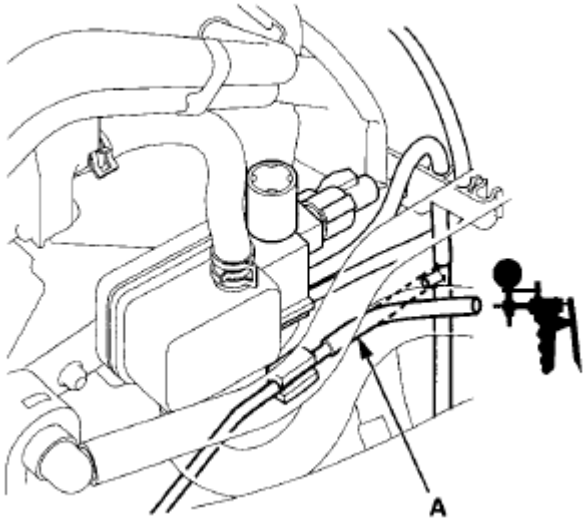

Fig. 17: Identifying Vacuum Hose From Three Way Valve
Courtesy of AMERICAN HONDA MOTOR CO., INC.

18. Start the engine and let it idle, then apply vacuum to the mount.

    Is there a noticeable change in idle smoothness with and without vacuum applied?

    YES - Reconnect the vacuum hose to the three way valve, then go to step 19.

    NO - Replace the front engine mount (see **INSTALLATION**).

19. Disconnect the vacuum hose (A) from the three way valve. Block the open port, then connect the vacuum pump/gauge to the vacuum hose.

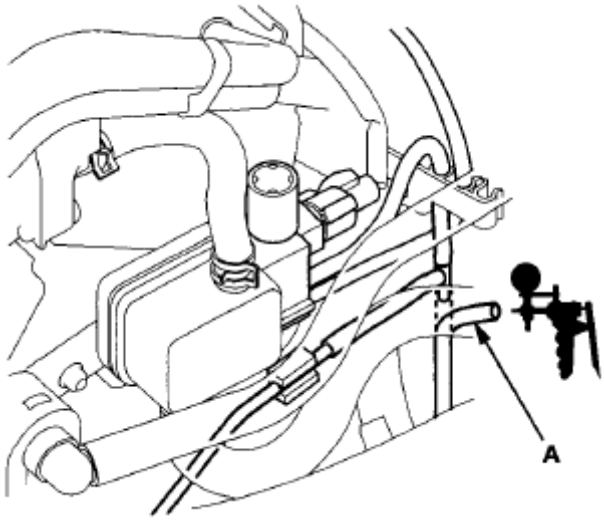

Fig. 18: Identifying Vacuum Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there a noticeable change in idle smoothness with and without vacuum applied?

YES - Reconnect the vacuum hose to the three way valve, then go to step 20.

NO - Replace the rear engine mount (see **REMOVAL-A/T MODEL**).

20. Disconnect the vacuum hose (A) from the engine mount control solenoid valve (B), then connect a vacuum pump/gauge to the engine mount control solenoid valve.

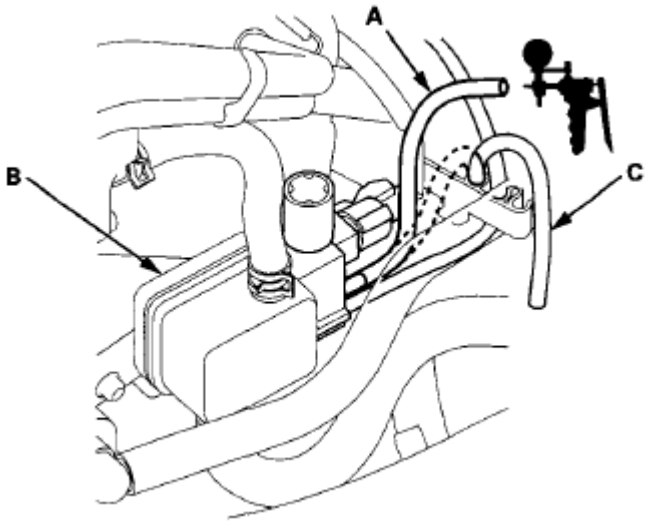

Fig. 19: Identifying Vacuum Hose, Engine Mount Control Solenoid Valve And Vacuum Pump
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there manifold vacuum at idle, and a decrease in manifold vacuum when you raise the engine speed above 2, 000 RPM?

YES - The system is OK.

NO - Repair the vacuum hose (C) between the intake manifold and the engine mount control solenoid. If the vacuum hose is OK, replace the engine mount control solenoid valve.

2012 ENGINE

Fan Controls - TL

COMPONENT LOCATION INDEX

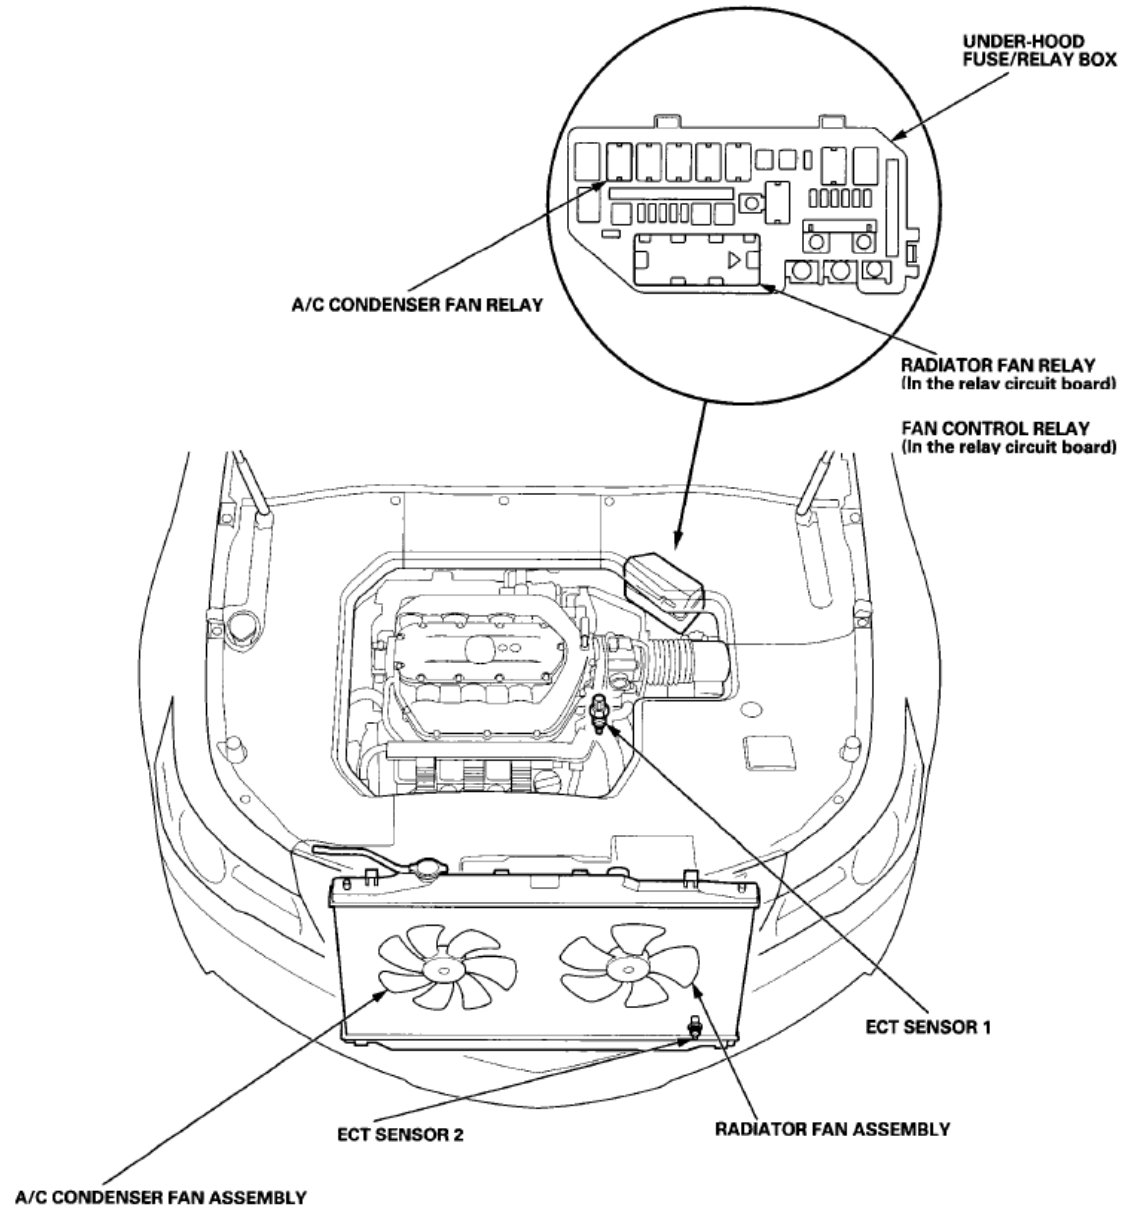

Fig. 1: Fan Controls Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

SYMPTOM TROUBLESHOOTING INDEX

Symptom	Diagnostic Procedure	Also check for
Engine overheats	1. Check the coolant level. 2. Check for any engine coolant leakage (from gaskets, hoses, O-rings, etc.). 3. Check for dirt, leaves, or insects on the radiator and A/C condenser. 4. Check for deteriorated coolant. 5. Check for damaged or deformed fan shrouds. 6. Check the fan motors are operating properly (air should be blowing toward the engine). 7. Inspect the fan motors (see **FAN MOTOR TEST**) or fan relays: • A/C condenser fan relay (see **POWER RELAY TEST**) • Relay circuit board (see **FIVE-TERMINAL TYPE**) 8. Check the radiator cap (see **RADIATOR CAP TEST**). 9. Check the thermostat (see **FAN MOTOR TEST**). 10. Inspect the water pump (see **WATER PUMP INSPECTION**). 11. Check for plugged or deteriorated radiator hoses. 12. Check for a plugged heater core or hoses. 13. Check for a damaged cylinder head gasket.	Check the radiator and A/C condenser fan are operating properly
The radiator fan does not run at high speed	Radiator fan high speed circuit troubleshooting (see **RADIATOR FAN HIGH SPEED CIRCUIT TROUBLESHOOTING**).	Check the connectors are properly connected and the terminals are making good contact
Both the radiator fan and the A/C condenser fan do not run at low speed	Radiator and A/C condenser fans low speed circuit troubleshooting (see **RADIATOR AND A/C CONDENSER FAN LOW SPEED CIRCUIT TROUBLESHOOTING**).	Check the connectors are properly connected and the terminals are making good contact
The A/C condenser fan does not run at high speed	A/C condenser fan high speed circuit troubleshooting (see **A/C CONDENSER FAN HIGH SPEED CIRCUIT TROUBLESHOOTING**).	Check the connectors are properly connected and the terminals are making good contact

CIRCUIT DIAGRAM

WITHOUT KEYLESS ACCESS SYSTEM

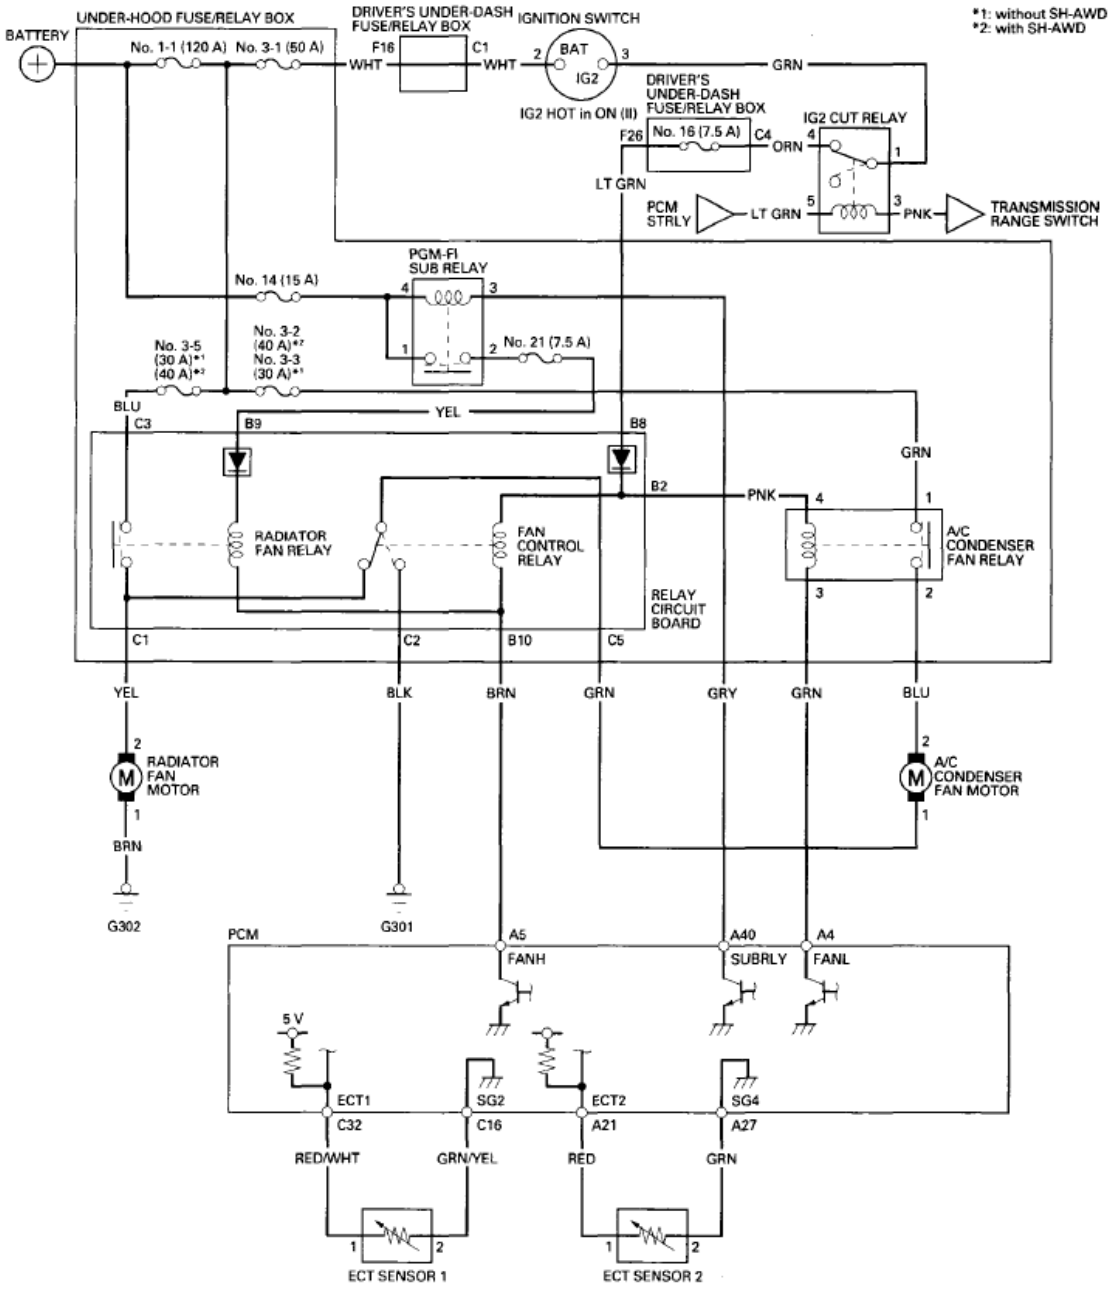

Fig. 2: Fan Controls - Circuit Diagram (Without Keyless Access System)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

WITH KEYLESS ACCESS SYSTEM

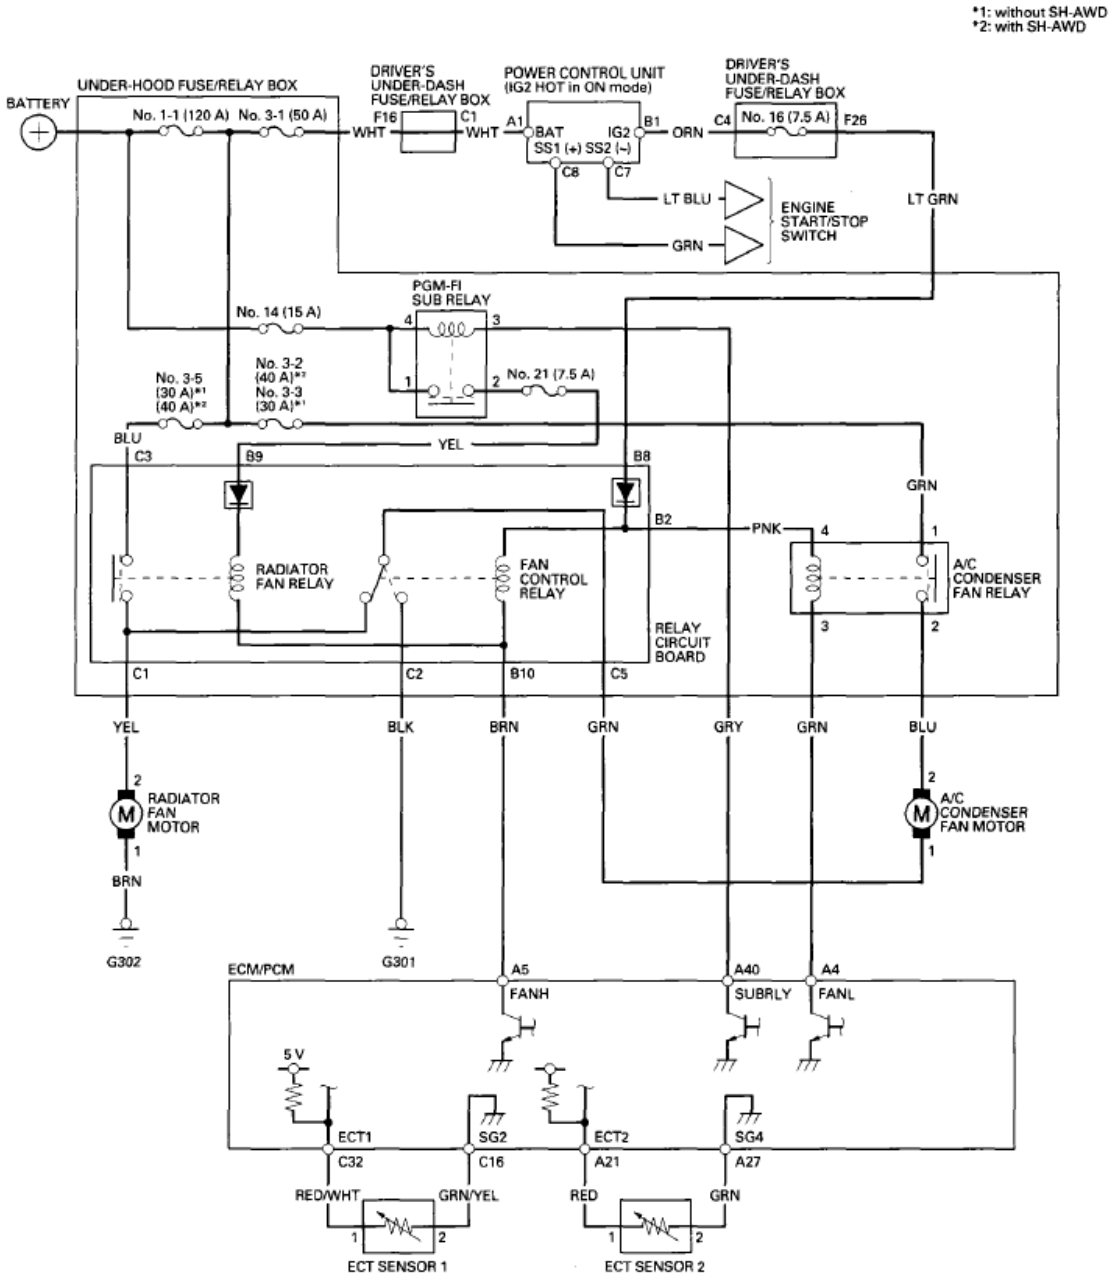

Fig. 3: Fan Controls - Circuit Diagram (With Keyless Access System)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

RADIATOR FAN HIGH SPEED CIRCUIT TROUBLESHOOTING

NOTE: Information marked with an asterisk (*1) applies to without SH-AWD and (*2) applies to with SH-AWD.

1. Check the No. 3-5 (30 A) (*1), (40 A) (*2) fuse, the No. 14 (15 A) fuse, and the No. 21 (7.5 A) fuse in the under-hood fuse/relay box, and the No. 16(7.5 A) fuse in the driver's under-dash fuse/relay box.

Are the fuse(s) OK?

YES - Reinstall the fuses, then go to step 2.

NO - Replace the fuse(s) and recheck. If the fuse(s) blow again, repair the short to ground on the No. 3-5 (30A) (*1), (40 A) (*2) fuse, the No. 14 (15A) fuse, the No. 21 (7.5A) fuse, and the No. 16 (7.5A) fuse circuit.

2. Disconnect and remove the relay circuit board from the under-hood fuse/relay box, and test it (see **FIVE-TERMINAL TYPE**).

   Is the relay circuit board OK?

   YES - Go to step 3.

   NO - Replace the relay circuit board (see **REMOVAL AND INSTALLATION**).

3. Measure the voltage between under-hood fuse/relay box connector terminal C3 and body ground.

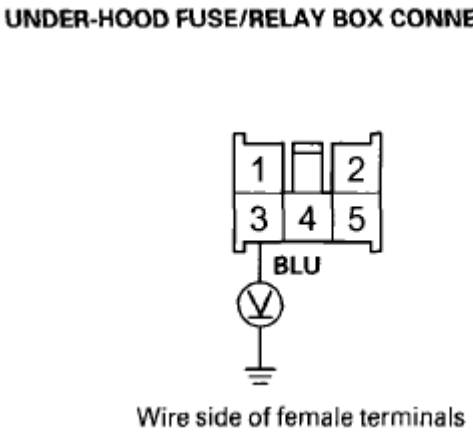

Fig. 4: Measuring Voltage Between Under-Hood Fuse/Relay Box Connector Terminal C3 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

   Is there battery voltage?

   YES - Go to step 4.

   NO - Replace the under-hood fuse/relay box (see **REMOVAL AND INSTALLATION**).

4. Connect under-hood fuse/relay box connector terminals C1 and C3 with a jumper wire.

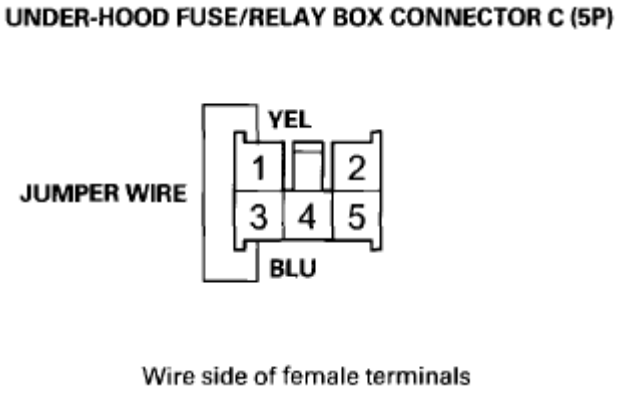

Fig. 5: Connecting Under-Hood Fuse/Relay Box Connector Terminals C1 And C3 With Jumper Wire
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the radiator fan run at high speed?

YES - Go to step 8.

NO - Go to step 5.

5. Disconnect the radiator fan motor 2P connector, then test the fan motor (see **FAN MOTOR TEST**).

   Is the fan motor OK?

   YES - Go to step 6.

   NO - Replace the radiator fan motor (see **FAN, FAN MOTOR, AND SHROUD REMOVAL AND INSTALLATION**).

6. Check for continuity between under-hood fuse/relay box connector terminal C1 and radiator fan motor 2P connector terminal No. 2.

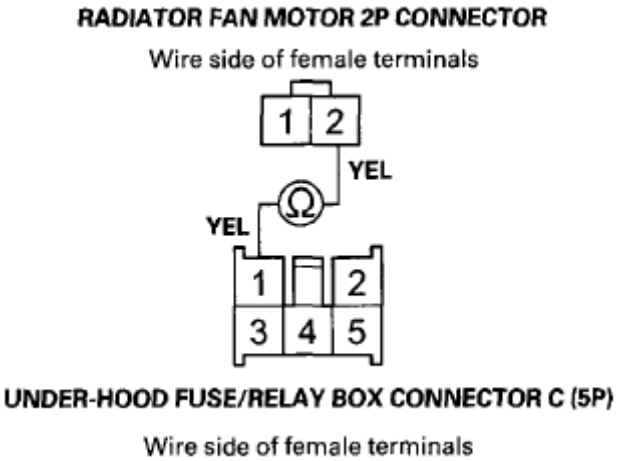

Fig. 6: Checking Continuity Between Under-Hood Fuse/Relay Box Connector And Radiator Fan Motor 2P Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Go to step 7.

NO - Repair an open in the wire between under-hood fuse/relay box connector terminal C1 and radiator fan motor 2P connector terminal No. 2.

7. Check for continuity between radiator fan motor 2P connector terminal No. 1 and body ground.

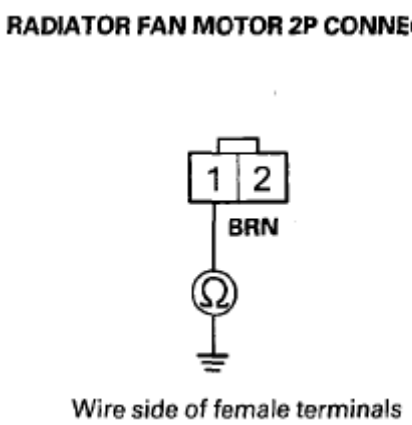

Fig. 7: Checking Continuity Between Radiator Fan Motor 2P Connector Terminal No. 1 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Check for poor connections or loose terminals at the radiator fan motor and body ground G302.

NO - Repair an open in the wire between radiator fan motor 2P connector terminal No. 1 and body ground.

8. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
9. Measure the voltage between under-hood fuse/relay box connector terminal B8 and body ground.

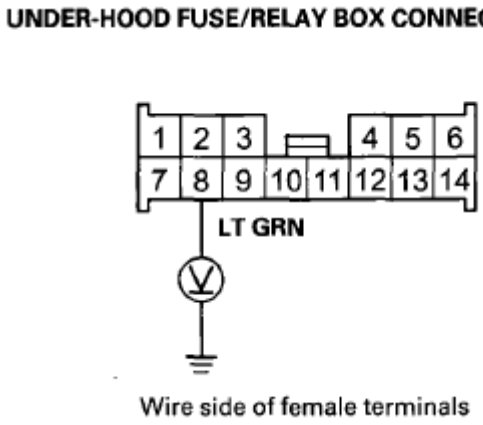

Fig. 8: Measuring Voltage Between Under-Hood Fuse/Relay Box Connector Terminal B8 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 10.

NO - Repair an open in the wire between driver's under-dash fuse/relay box connector terminal F26 and under-hood fuse/relay box connector terminal B8.

10. Measure the voltage between under-hood fuse/relay box connector terminal B9 and body ground.

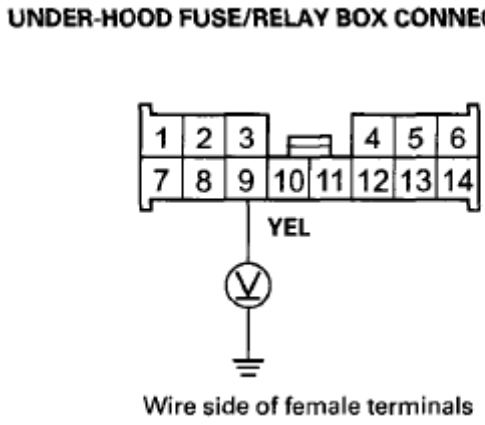

Fig. 9: Measuring Voltage Between Under-Hood Fuse/Relay Box Connector Terminal B9 And Body Ground
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there battery voltage?

YES - Go to step 11.

NO - Check the PGM-FI subrelay. If the relay is OK, replace the under-hood fuse/relay box (see

REMOVAL AND INSTALLATION).

11. Turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.
12. Connect the HDS to the DLC (see **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
13. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
14. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it does not communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
15. Jump the SCS line with the HDS, then turn the ignition switch to LOCK (0), or press the engine start/stop button to select the OFF mode.

NOTE: This step must be done to protect the ECM/PCM from damage.

16. Disconnect ECM/PCM connector A (49P).
17. Check for continuity between ECM/PCM connector terminal A5 and under-hood fuse/relay box connector terminal B10.

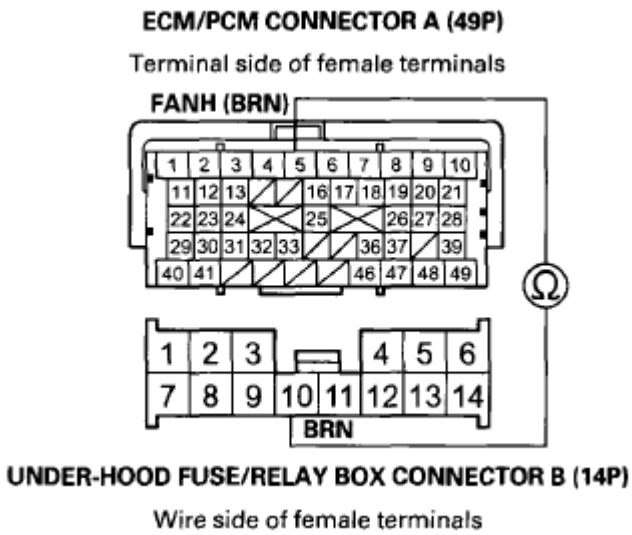

Fig. 10: Checking Continuity Between ECM/PCM Connector Terminal A5 And Under-Hood Fuse/Relay Box Connector Terminal B10
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Is there continuity?

YES - Update the ECM/PCM if it does not have the latest software (see **ECM/PCM UPDATE**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the symptom/indication goes away with a known-good ECM/PCM, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**).

NO - Repair an open in the wire between under-hood fuse/relay box connector terminal B10 and ECM/PCM connector terminal A5.

2012 ENGINE

Ignition System - TL

COMPONENT LOCATION INDEX

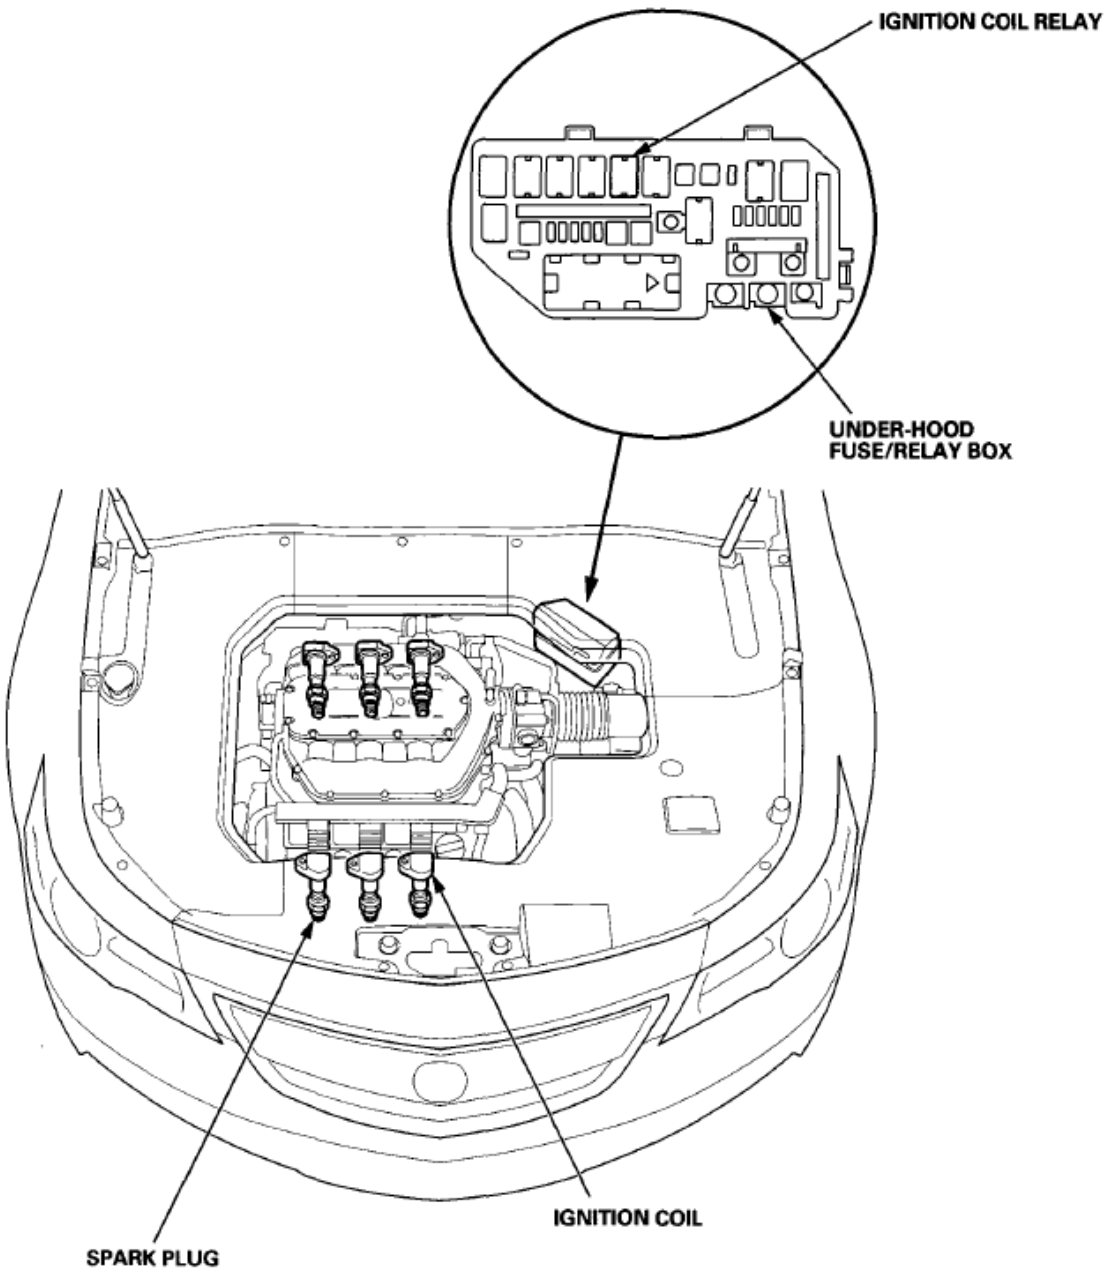

Fig. 1: Ignition System Components Location
Courtesy of AMERICAN HONDA MOTOR CO., INC.

IGNITION TIMING INSPECTION

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Connect the HDS to the DLC (see **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
3. Turn the ignition switch to ON (II), or press the engine start/stop button to select the ON mode.
4. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it does not communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
5. Check for DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). If a DTC is present, diagnose and repair the cause before continuing with this test.
6. Start the engine. Hold the engine speed at 3, 000 RPM with no load in neutral (M/T model) or P or N (A/T model) until the radiator fan comes on, then let it idle.
7. Check the idle speed (see **IDLE SPEED INSPECTION**).
8. Jump the SCS line with the HDS.
9. Connect the timing light to the No. 1 ignition coil harness.

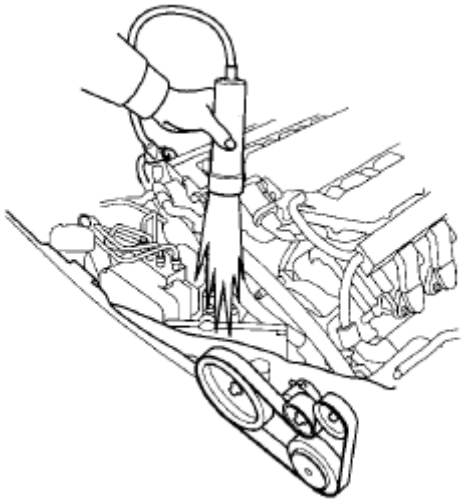

Fig. 2: Identifying Timing Light At No. 1 Ignition Coil Harness
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Aim the light toward the pointer (A) on the timing belt lower cover. Check the ignition timing under a no load condition (headlights, blower fan, rear window defogger, and air conditioner are turned off).

NOTE: The other pointer (B) is not used.

Ignition Timing

M/T model: 10 ± 2 ° BTDC (RED mark (C)) at idle in neutral

A/T model: 10 ±2 ° BTDC (RED mark (C)) at idle in P or N

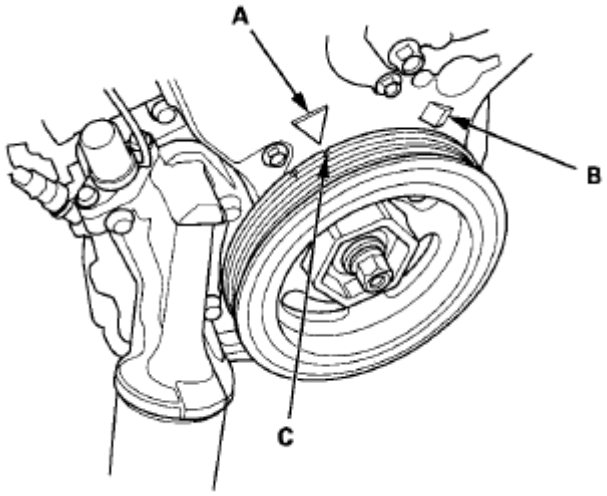

Fig. 3: Identifying Pointers And Red Marks For Ignition Timing
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. If the ignition timing differs from the specification, check the cam timing. If the cam timing is OK, update the ECM/PCM if it does not have the latest software (see **ECM/PCM UPDATE**), or substitute a known-good ECM/PCM (see **SUBSTITUTING THE ECM/PCM**), then recheck. If the system works properly, and the ECM/PCM was substituted, replace the original ECM/PCM (see **ECM/PCM REPLACEMENT**).
12. Disconnect the HDS and the timing light.
13. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

IGNITION COIL AND SPARK PLUG REMOVAL/INSTALLATION

FRONT

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Remove the harness clamp (A) and the bolt (B), then remove the harness holder (C) from the bracket.

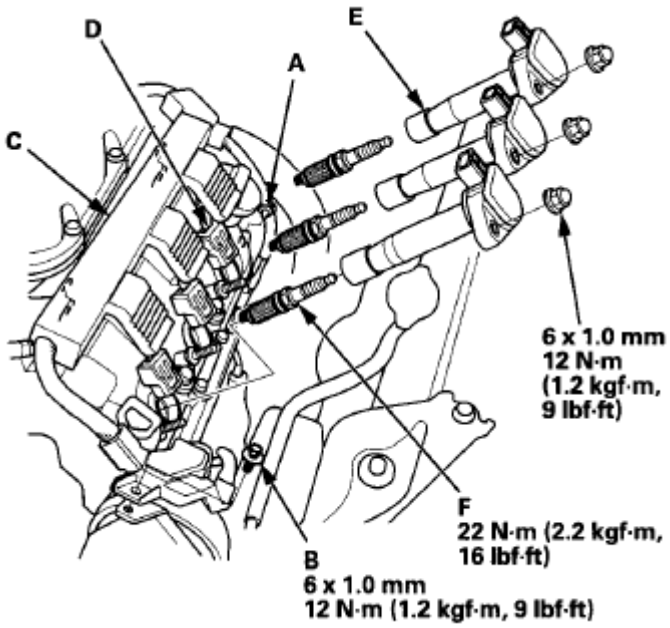

Fig. 4: Identifying Harness Clamp, Bolt, Holder, Ignition Coils And Coil Connectors With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Disconnect the ignition coil connectors (D), then remove the front ignition coils (E).
4. Remove the **spark plugs (F) and inspect** them.
5. Apply a small amount of anti-seize compound to the plug threads, and screw the plugs into the cylinder head, finger tight, then tighten the plugs to the specified torque.

   Specified Torque: 22 N.m (2.2 kgf.m, 16 lbf.ft)

6. Install the ignition coils in the reverse order of removal.

REAR

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Remove the strut brace (see **FRAME BRACE REPLACEMENT**).
3. Disconnect the ignition coil connectors (A), then remove the rear ignition coils (B).

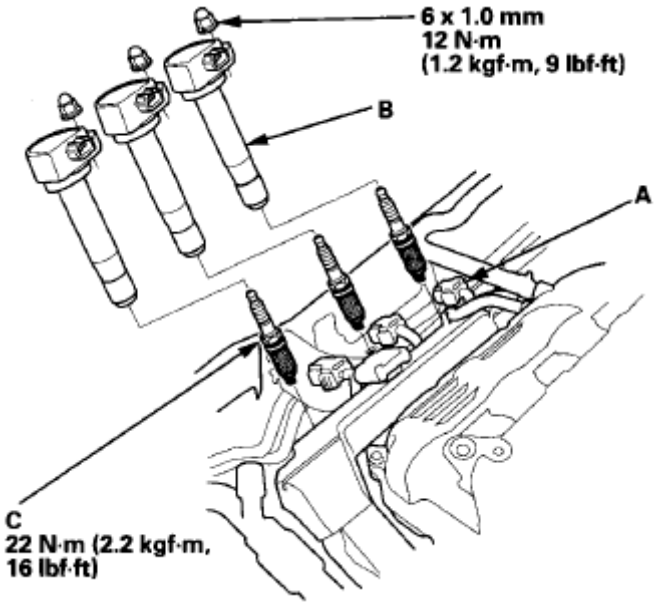

Fig. 5: Identifying Ignition Coil Connectors, Ignition Coils And Spark Plugs With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the **spark plugs (C) and inspect** them.
5. Apply a small amount of anti-seize compound to the plug threads, and screw the plugs into the cylinder head, finger-tight, then tighten the plugs to the specified torque.

   Specified Torque: 22 N.m (2.2 kgf.m, 16 lbf.ft)

6. Install the ignition coils in the reverse order of removal.

SPARK PLUG INSPECTION

1. Remove the ignition coils and the **spark plugs**.
2. Inspect the electrodes and the ceramic insulator.
   - Burned or worn electrodes may be caused by these conditions:
     - Advanced ignition timing
     - Loose spark plug
     - Plug heat range too hot
     - Insufficient cooling
   - Fouled plugs may be caused by these conditions:
     - Retarded ignition timing
     - Oil in combustion chamber
     - Incorrect spark plug gap
     - Plug heat range too cold

- Excessive idling/low speed running
- Clogged air cleaner element
- Deteriorated ignition coils

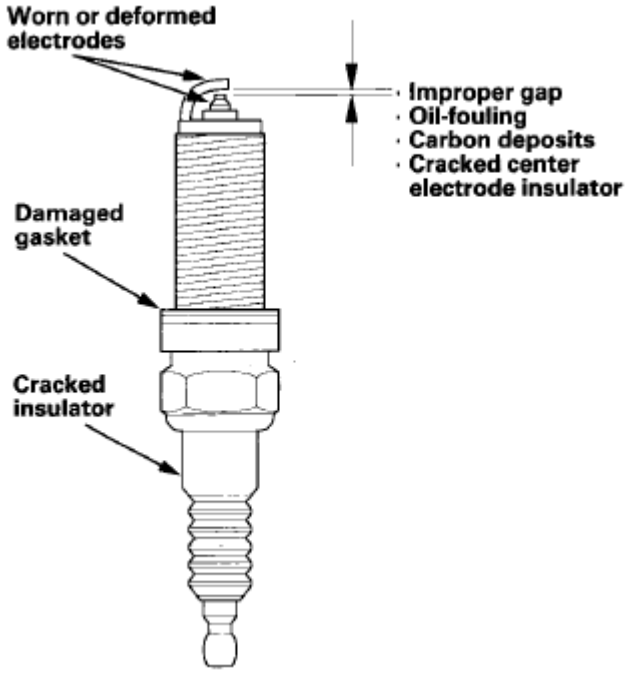

Fig. 6: Identifying Spark Plug
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Replace the plug at the specified interval, or if the center electrode (A) is rounded, or if the spark plug gap (B) is out of specification, or if the spark plug electrode is dirty or contaminated. Use only the spark plugs listed.

NOTE:

- **Do not adjust the gap of iridium tip plugs.**
- **Do not use a plug cleaner.**

INTAKE MANIFOLD REMOVAL AND INSTALLATION

EXPLODED VIEW

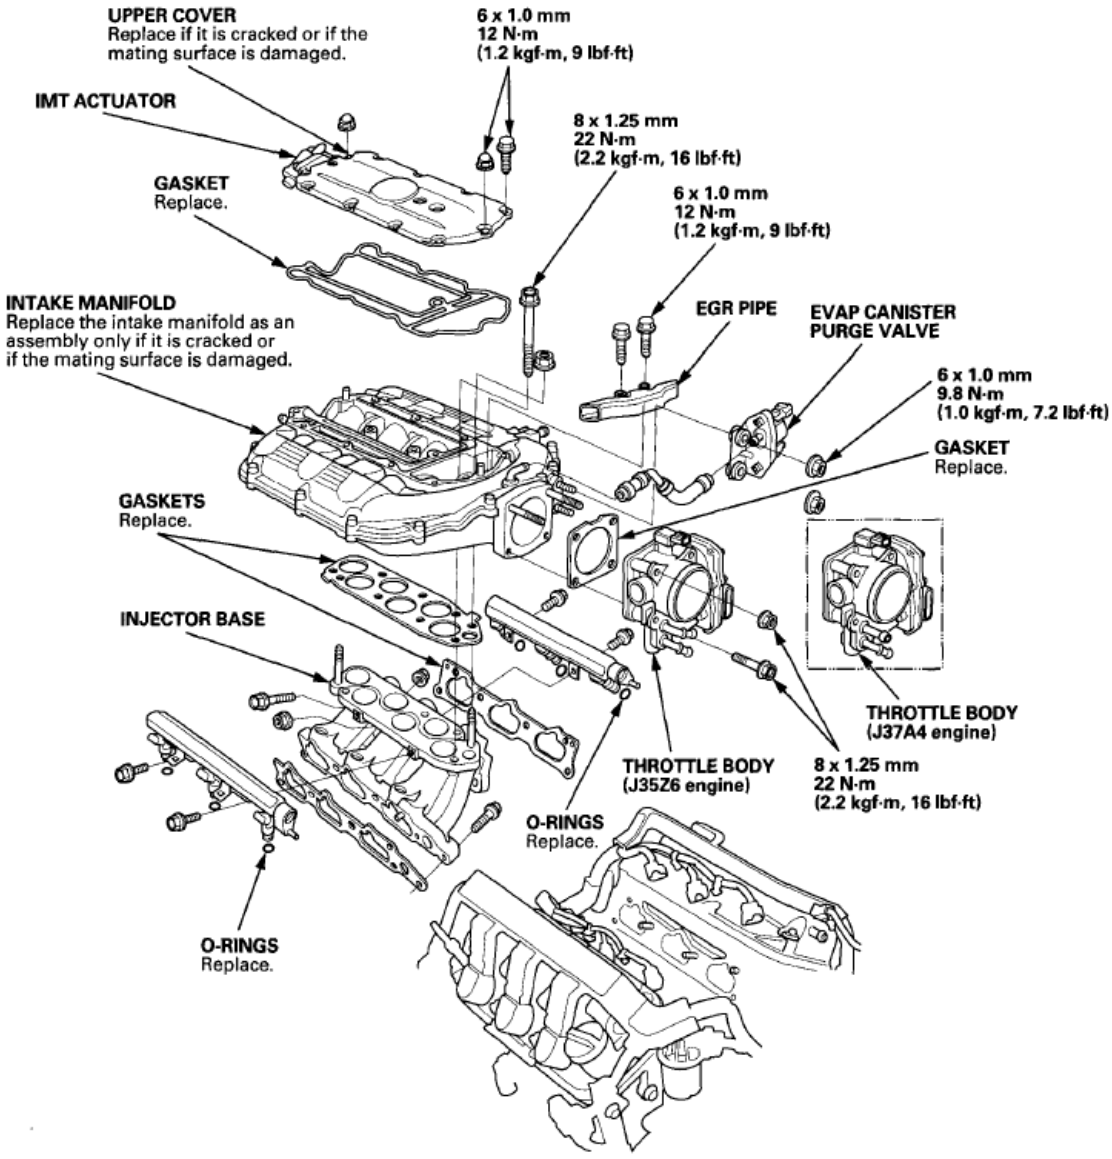

Fig. 3: Exploded View Of Intake Manifold With Torque Specifications
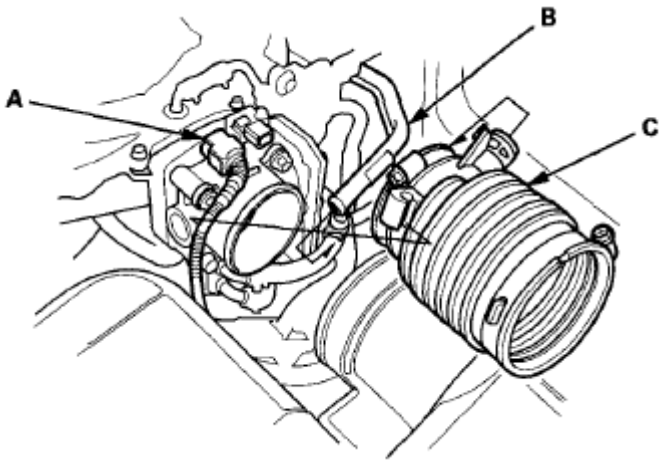
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Refer to the Exploded View if needed during this procedure.

REMOVAL

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Disconnect the MAP sensor connector (A) and the breather pipe (B), then remove the intake air duct (C).



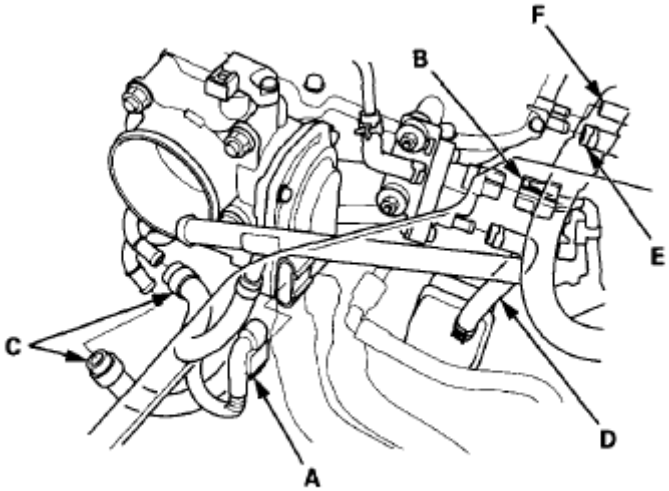


Fig. 4: Identifying MAP Sensor Connector, Breather Pipe And Intake Air Duct
Courtesy of AMERICAN HONDA MOTOR CO., INC.

* : This illustration shows J35Z6 engine.

3. Disconnect the throttle actuator connector (A), the EVAP canister purge valve connector (B), the water bypass hoses (C), the EVAP canister hose (D), the brake booster vacuum hose (E), and the vacuum hose (F).

*: This illustration shows J35Z6 engine.

Fig. 5: Identifying Throttle Actuator Connector, EVAP Canister Hose And Purge Valve Connector, Bypass Hose, Vacuum Hose
Courtesy of AMERICAN HONDA MOTOR CO., INC.

* : This illustration shows J35Z6 engine.

4. Disconnect the PCV hose (A) and the IMT actuator connector (B).

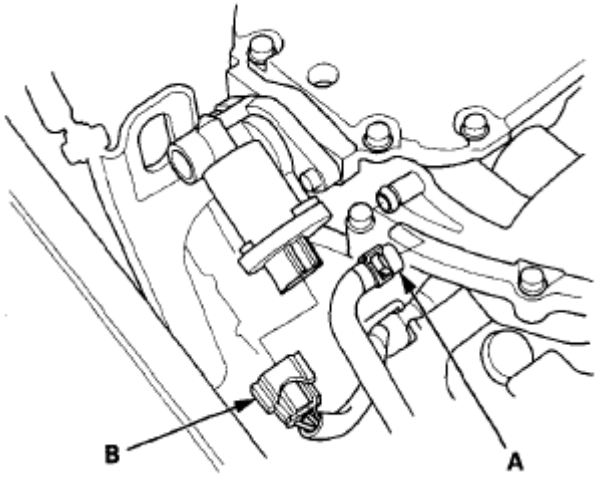

Fig. 6: Identifying PCV Hose And IMT Actuator Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the upper cover mounting bolts and nuts sequentially in three steps, then remove the upper cover.

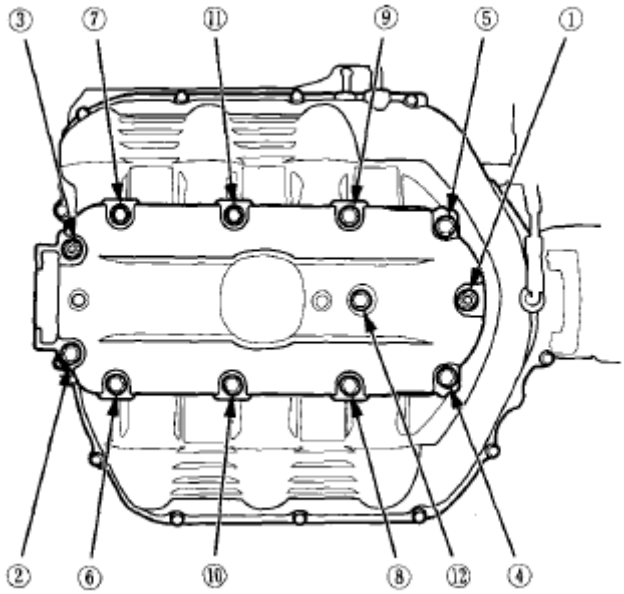

Fig. 7: Identifying Bolts And Nuts Of Upper Cover With Loosening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Remove the intake manifold mounting bolts and nuts sequentially in three steps, then remove the intake manifold.

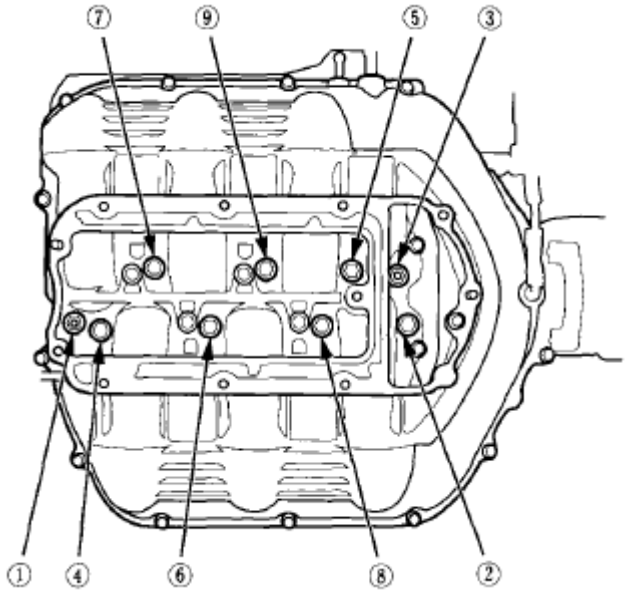

Fig. 8: Identifying Bolts And Nuts Of Intake Manifold With Loosening Sequence
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Install the intake manifold. Tighten the mounting bolts and nuts sequentially in three steps. Always use a new intake manifold gasket.

   Specified Torque

   8 x 1.25 mm: 22 N.m (2.2 kgf.m, 16 lbf.ft)

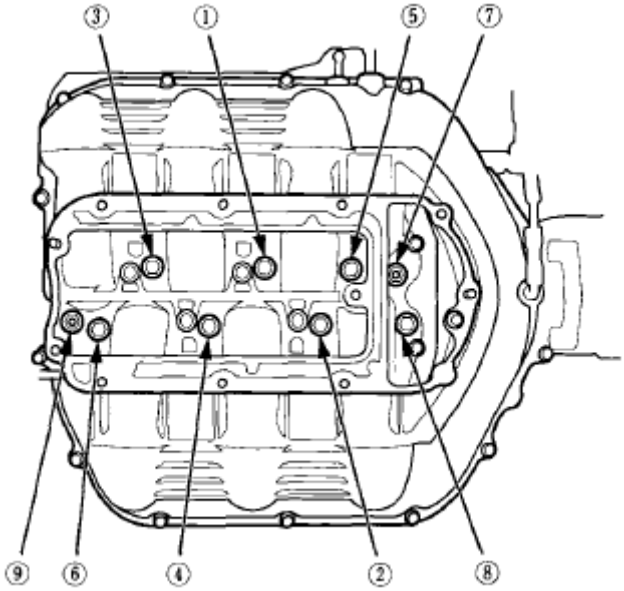

Fig. 9: Identifying Bolts And Nuts Of Intake Manifold With Tightening Sequence

Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Install the upper cover. Tighten the mounting bolts and nuts sequentially in three steps. Always use a new gasket.

Specified Torque

6 x 1.0 mm: 12 N.m (1.2 kgf.m, 9 lbf.ft)

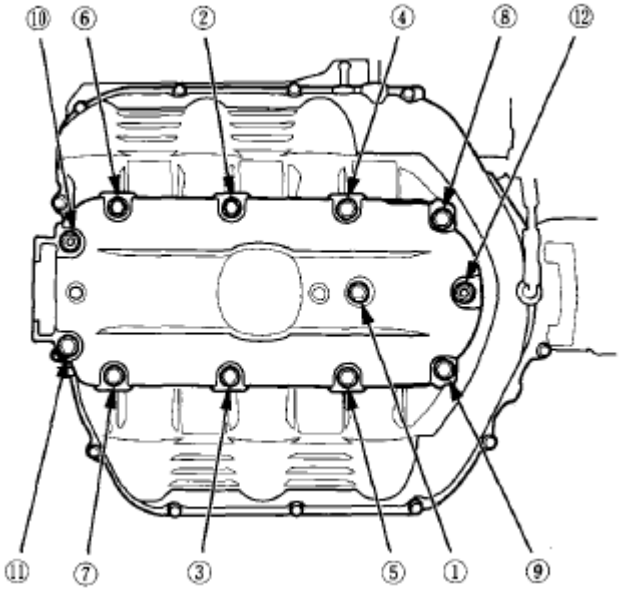

Fig. 10: Identifying Bolts And Nuts Of Upper Cover With Tightening Sequence
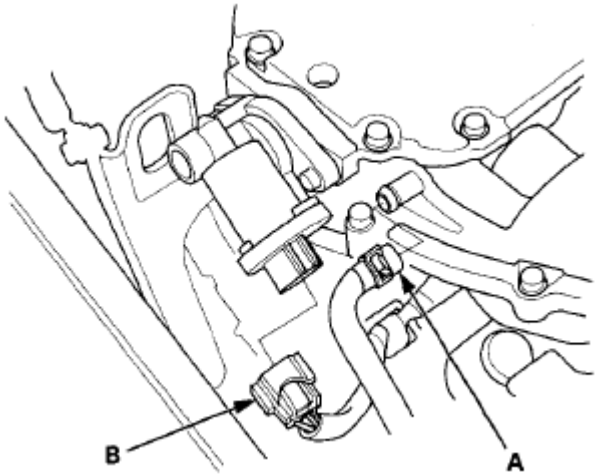
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Connect the PCV hose (A) and the IMT actuator connector (B).



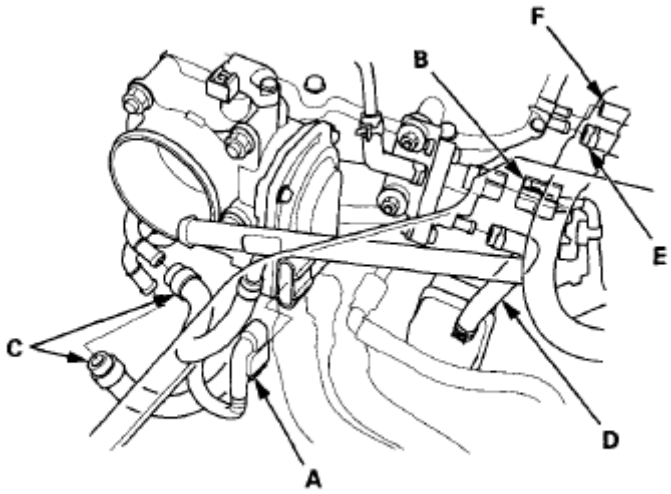


Fig. 11: Identifying IMT Actuator And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Connect the throttle actuator connector (A), the EVAP canister purge valve connector (B), the water bypass hoses (C), the EVAP canister hose (D), the brake booster vacuum hose (E), and the vacuum hose (F).

*: This illustration shows J35Z6 engine.

Fig. 12: Identifying Intake Manifold And Related Components
Courtesy of AMERICAN HONDA MOTOR CO., INC.

* : This illustration shows J35Z6 engine.

5. Install the intake air duct (A), then connect the breather pipe (B) and the MAP sensor connector (C).

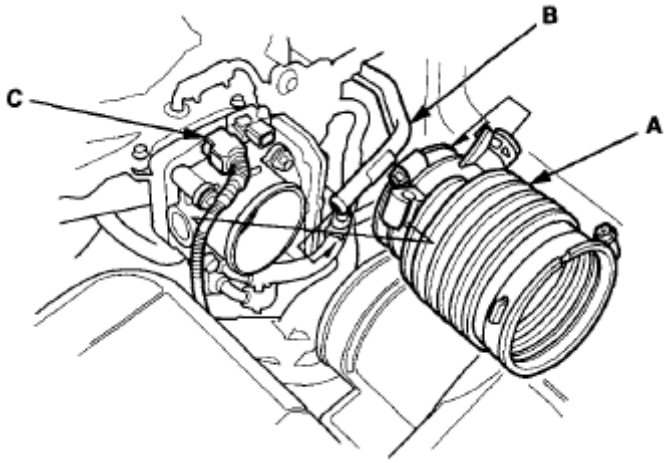

Fig. 13: Identifying Intake Air Duct, Breather Pipe And MAP Sensor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

* : This illustration shows J35Z6 engine.

6. Clean up any spilled engine coolant.

7. After installation, check that all tubes, hoses, and connectors are installed correctly.
8. Refill the radiator with engine coolant, and bleed the air from the cooling system (see **COOLANT CHECK**).
9. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

INJECTOR BASE REMOVAL AND INSTALLATION

REMOVAL

1. Relieve the fuel pressure (see **FUEL PRESSURE RELIEVING**).
2. Remove the **intake manifold**.
3. Remove the injectors (see **INJECTOR REPLACEMENT**).
4. Remove the harness holder mounting bolts (A) and disconnect the knock sensor connector (B).

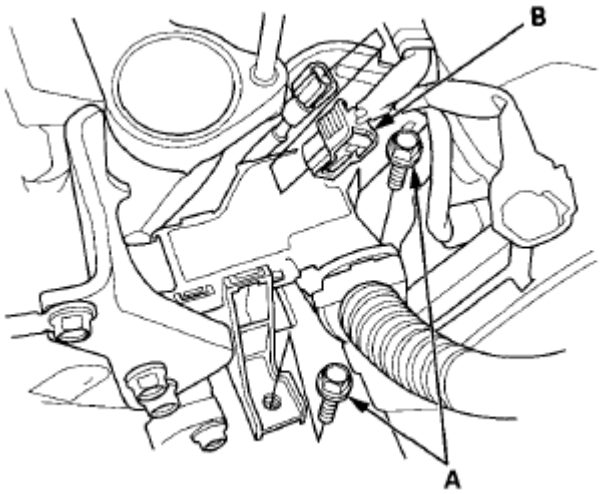

Fig. 14: Identifying Mounting Bolt And Knock Sensor Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Remove the injector base mounting bolts/nuts (A), then remove the front injector base (B) and the rear injector base (C).

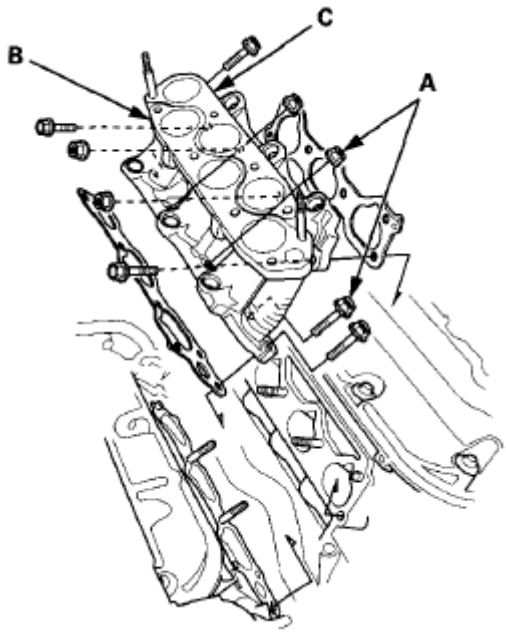

Fig. 15: Identifying Mounting Bolts, Front And Rear Injector Base
Courtesy of AMERICAN HONDA MOTOR CO., INC.

INSTALLATION

1. Install the front injector base (A) and the rear injector base (B) with new gaskets (C), and tighten the injector base mounting bolts/nuts (D) in a crisscross pattern in three steps, beginning with the inner nuts.

NOTE: The front injector base gasket is different from the rear one. Do not mix injector base gasket types.

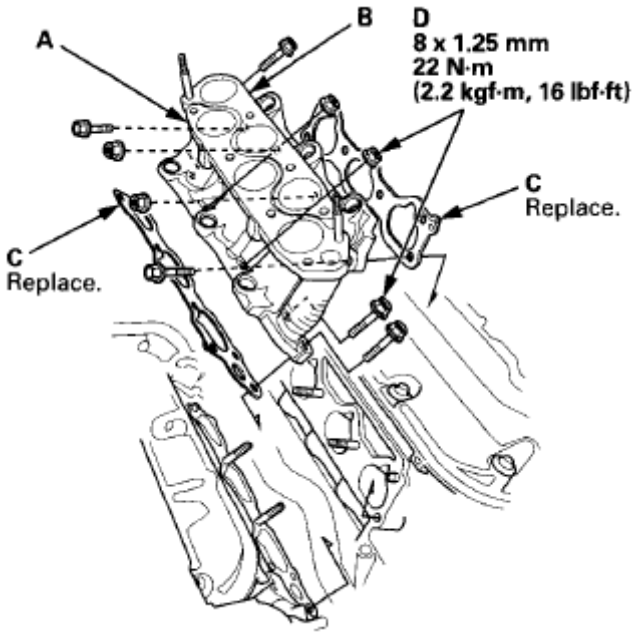

Fig. 16: Identifying Front And Rear Injector Base And Gasket With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Connect the knock sensor connector (A), then install the harness holder mounting bolts (B).

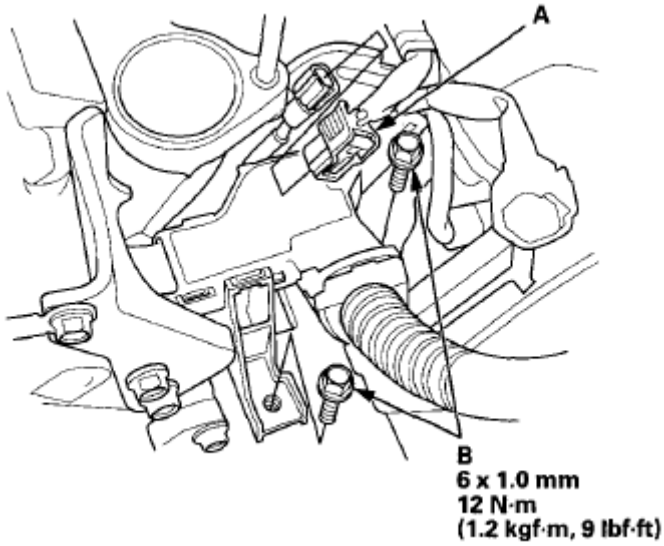

Fig. 17: Identifying Knock Sensor Connector And Holder Mounting Bolts With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Install the injectors (see **INJECTOR REPLACEMENT**).
4. Install the **intake manifold**.
5. Inspect for fuel leaks. Turn the ignition switch to ON (II), or press the engine start/stop button to select

the ON mode (do not operate the starter) so the fuel pump runs for about 2 seconds and pressurizes the fuel line. Repeat this operation three times, then check for fuel leakage at any point in the fuel line.

EXHAUST PIPE AND MUFFLER REPLACEMENT

J35Z6 ENGINE (WITHOUT SH-AWD)

NOTE: Use new gaskets and new self-locking nuts when reassembling.

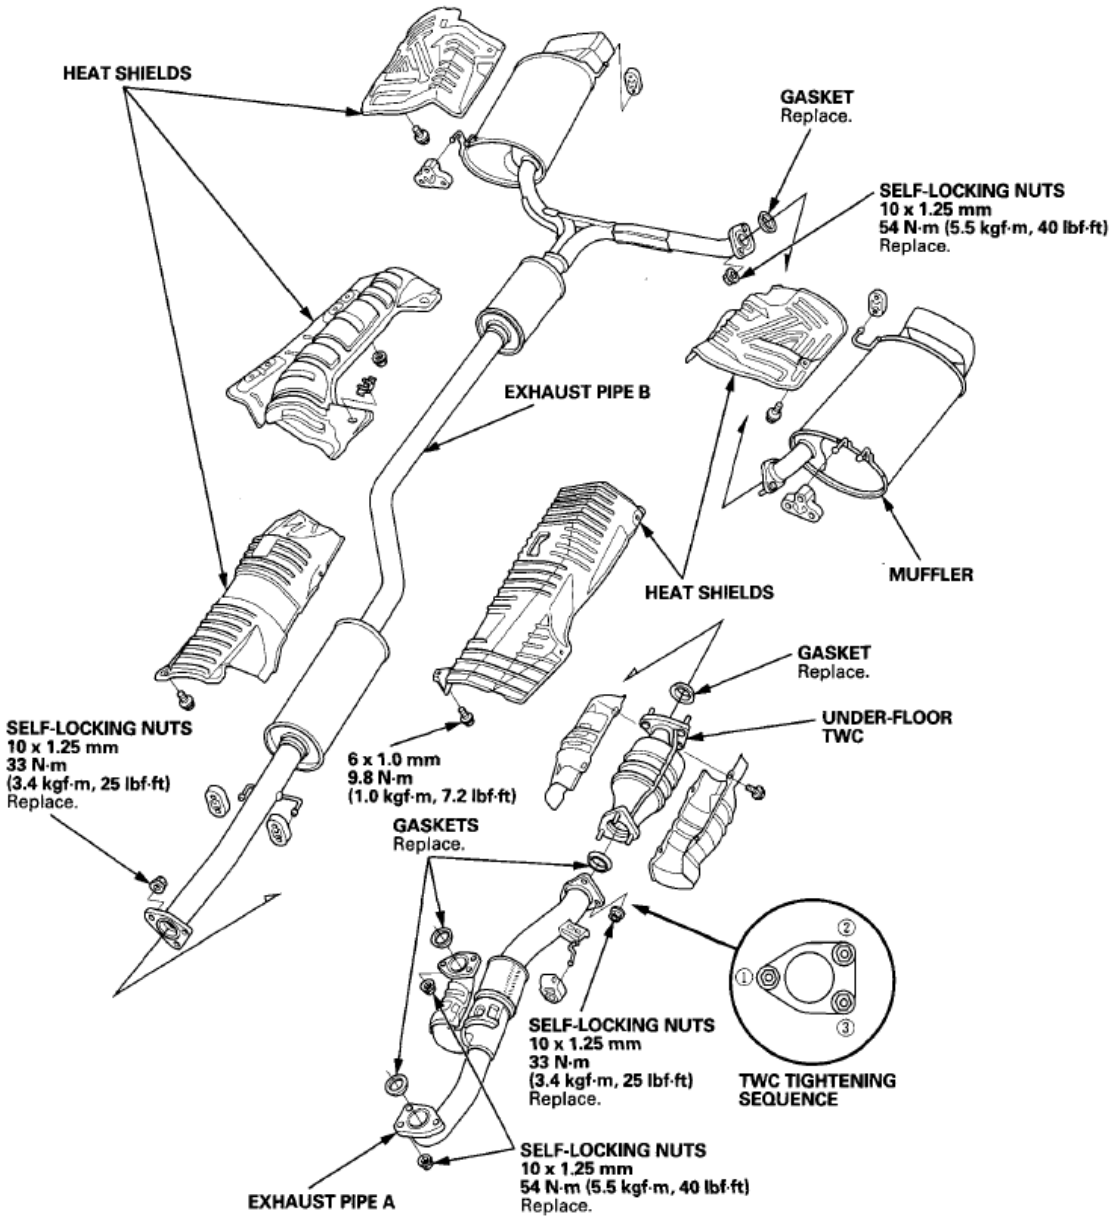

Fig. 18: Identifying Exhaust Pipe And Muffler And Related Components With Torque Specifications (1 Of 2)

ENGINE LUBRICATION (J35Z6, J37A4)

Item	Measurement	Qualification	Standard or New	Service Limit
Engine oil	Capacity	Engine overhaul	5.0 L (5.3 US qt)	-
		Oil change including filter	4.3 L (4.5 US qt)	-
		Oil change without filter	4.0 L (4.2 US qt)	-
	Inner rotor-to-outer rotor radial clearance		0.04- 0.16 mm (0.002- 0.006 in)	0.20 mm (0.007 in)
	Pump housing-to-outer rotor radial clearance		0.07- 0.19 mm (0.003- 0.007 in)	0.20 mm (0.007 in)

Oil pump	Pump housing-to-rotor axial clearance		0.02- 0.07 mm (0.001 - 0.002 in)	0.12 mm (0.004 in)
	Oil pressure with oil temperature at 176°F (80°C)	At idle	70 kPa (0.71 kgf/cm^2 , 10.1 psi) min.	-
		At 3, 000 RPM	490 kPa (5.00 kgf/cm^2 , 71.1 psi) min.	-

COOLING SYSTEM (J35Z6, J37A4)

Item	Measurement	Qualification	Standard or New	Service Limit
Radiator	Coolant capacities (including engine, heater, hoses, and reservoir)	Engine overhaul	8.3 L (2.19 US gal)	-
		Coolant change	6.3 L (1.66 US gal)	-
	Coolant type		Acura Long Life Antifreeze/Coolant Type 2	
Coolant reservoir	Coolant capacity		0.69 L (0.182 US gal)	-
Radiator cap	Opening pressure		93- 123 kPa (0.95- 1.25 kgf/cm^2 , 13.5 - 17.8 psi)	-
Thermostat	Opening temperature	Begins to open	169- 176°F (76- 80°C)	-
		Fully open	194°F (90°C)	-
	Valve lift at fully open		10.0 mm (0.394 in) min.	-

FUEL AND EMISSIONS (J35Z6)

Item	Measurement	Qualification	Standard or New	Service Limit
Fuel pressure regulator	Pressure with fuel pressure gauge connected		390- 440 kPa (4.0- 4.5 kgf/cm^2 , 57- 64 psi)	-
Fuel tank	Capacity		70.0 L (18.49 US gal)	-
Engine idle	Idle speed without load	In N or P	680 ± 50 RPM	
	Idle speed with high electrical load (A/C switch on, temperature set to max cool, blower fan on high, rear window defogger on, and headlights on high beam)	In N or P	680 ± 50 RPM	

FUEL AND EMISSIONS (J37A4)

Item	Measurement	Qualification	Standard or New	Service Limit
Fuel pressure regulator	Pressure with fuel pressure gauge connected		390- 440 kPa (4.0- 4.5 kgf/cm^2 , 57- 64 psi)	-
Fuel tank	Capacity		70.0 L (18.49 US gal)	-
Engine idle	Idle speed without load	M/T in neutral	750 ± 50 RPM	
		A/T in N or P	700 ± 50 RPM	
	Idle speed with high electrical load (A/C switch on, temperature set to max cool, blower fan on high, rear window defogger on, and headlights on high beam)	M/T in neutral	750 ± 50 RPM	
		A/T in N or P	700 ± 50 RPM	

CLUTCH

Item	Measurement	Qualification	Standard or New	Service Limit
Clutch pedal	Height from floor		156 mm (6.14 in)	-
	Stroke		130- 140 mm (5.12- 5.51 in)	-
Flywheel	Runout on clutch mating surface		0.3 mm (0.012 in) max.	0.4 mm (0.016 in)
Clutch disc	Rivet head depth		1.35- 1.95 mm (0.0531 - 0.0768 in)	0.7 mm (0.028 in)
	Thickness		7.9- 8.5 mm (0.311- 0.335 in)	6.0 mm (0.236 in)
Pressure plate	Warpage		0.02 mm (0.001 in)	0.15 mm (0.005 in)
	Evenness of the height of the diaphragm spring fingers		0.6 mm (0.024 in) max.	0.8 mm (0.031 in)

MANUAL TRANSMISSION AND M/T DIFFERENTIAL

Item	Measurement	Qualification	Standard or New	Service Limit
Manual transmission fluid	Capacity: use Acura MTF	Fluid change	2.1 L (2.2US qt)	-
		Overhaul	2.5L (2.6US qt)	-
	End play		0.14- 0.21 mm (0.0055- 0.0083 in)	Adjust
	Diameter of ball bearing contact area (clutch housing side)		28.002- 28.015 mm (1.10244- 1.10295 in)	27.95 mm (1.1004 in)

Mainshaft	Diameter of needle bearing contact area		47.984- 48.000 mm (1.88913- 1.88976 in)	47.93 mm (1.8870 in)
	Diameter of ball bearing contact area (transmission housing side)		38.984- 39.000 mm (1.53480- 1.53543 in)	38.93 mm (1.5327 in)
	Diameter of 4th/5th gear distance collar contact area		41.984- 42.000 mm (1.65291 - 1.65354 in)	41.93 mm (1.6508 in)
	Diameter of 6th gear distance collar contact area		38.984- 39.000 mm (1.53480- 1.53543 in)	38.93 mm (1.5327 in)
	Runout		0.02 mm (0.0008 in) max.	0.05 mm (0.0020 in)

Countershaft reverse gear	O.D.		53.987- 54.000 mm (2.12547- 2.12598 in)	53.93 mm (2.1232 in)
	Length		23.03- 23.08 mm (0.9067- 0.9087 in)	-
Countershaft 2nd gear distance collar	I.D.		42.990- 43.000 mm (1.69252- 1.69291 in)	43.05 mm (1.6949 in)
	O.D.		51.989- 52.000 mm (2.04681- 2.04724 in)	51.94 mm (2.0449 in)
	Length		23.03- 23.08 mm (0.9067- 0.9087 in)	-
Reverse idler gear	O.D.		19.989- 20.000 mm (0.78697- 0.78740 in)	19.93 mm (0.7846 in)
Reverse drive/driven gear	I.D.		30.007- 30.020 mm (1.18138- 1.18189 in)	25.07 mm (0.9870 in)
5th synchro ring	Ring-to-gear clearance (ring pushed against gear)		0.70- 1.49 mm (0.028- 0.058 in)	0.4 mm (0.016 in)
6th synchro ring	Ring-to-gear clearance (ring pushed against gear)		0.73- 1.44 mm (0.029- 0.056 in)	0.4 mm (0.016 in)
3rd double cone synchro	Outer synchro ring-to-synchro cone clearance (ring pushed against gear)		0.68- 1.19 mm (0.027- 0.046 in)	0.3 mm (0.012 in)
	Synchro cone-to-gear clearance (ring pushed against gear)		0.48- 1.04 mm (0.019- 0.040 in)	0.3 mm (0.012 in)
	Outer synchro ring-to-gear clearance (ring pushed against gear)		0.95- 1.68 mm (0.037- 0.066 in)	0.6 mm (0.024 in)
4th double cone synchro	Outer synchro ring-to-synchro cone clearance (ring pushed against gear)		0.70- 1.19 mm (0.028- 0.046 in)	0.3 mm (0.012 in)
	Synchro cone-to-gear clearance (ring pushed against gear)		0.50- 1.14 mm (0.020- 0.044 in)	0.3 mm (0.012 in)
	Outer synchro ring-to-gear clearance (ring pushed against gear)		0.95- 1.68 mm (0.037- 0.066 in)	0.6 mm (0.024 in)
1st triple cone synchro	Outer synchro ring-to-synchro cone clearance (ring pushed against gear)		0.70- 1.19 mm (0.028- 0.046 in)	0.3 mm (0.012 in)
	Synchro cone-to-gear clearance (ring pushed against gear)		0.70- 1.88 mm (0.028- 0.074 in)	0.3 mm (0.012 in)
	Outer synchro ring-to-gear		1.12- 1.68 mm	0.6 mm

	clearance (ring pushed against gear)		(0.044- 0.066 in)	(0.024 in)
2nd triple cone synchro	Outer synchro ring-to-synchro cone clearance (ring pushed against gear)		0.70- 1.19 mm (0.028- 0.046 in)	0.3 mm (0.012 in)
	Synchro cone-to-gear clearance (ring pushed against gear)		0.70- 1.88 mm (0.028- 0.074 in)	0.3 mm (0.012 in)
	Outer synchro ring-to-gear clearance (ring pushed against gear)		1.12- 1.68 mm (0.044- 0.066 in)	0.6 mm (0.024 in)
Shift fork	Finger thickness	1st/2nd, 3rd/4th, 5th/6th	7.4- 7.6 mm (0.291 - 0.299 in)	-
		Reverse	6.2- 6.4 mm (0.244- 0.252 in)	-
	Fork-to-synchro sleeve clearance		0.35- 0.65 mm (0.014- 0.025 in)	1.0 mm (0.039 in)
Reverse shift lever	Finger width		6.50- 6.75 mm (0.2559- 0.2657 in)	-
	Shift lever-to-reverse shift piece clearance		0- 0.4 mm (0- 0.015 in)	0.5 mm (0.019 in)
	Shift lever width at contact area (reverse shift piece side)		13.0- 13.2 mm (0.512- 0.520 in)	-
	Shift lever-to-reverse shift fork clearance		0.15- 0.60 mm (0.006- 0.023 in)	0.7 mm (0.027 in)
Detent ball spring	Free length	1st/2nd	26.1 mm (1.028 in)	When worn or damaged
		3rd/4th, 5th/6th	27.4 mm (1.079 in)	When worn or damaged
Steel ball	Ball size		7.94 mm (0.3126 in)	When worn or damaged
Shift arm	I.D.		15.973- 16.005 mm (0.62886- 0.63012 in)	-
	Shift arm-to-shift piece clearance		0.26- 0.57 mm (0.010- 0.022 in)	0.75 mm (0.029 in)
	Shift piece width at contact area		13.6- 13.8 mm (0.535- 0.543 in)	-
M/T differential carrier	Backlash (measured with final driven gear)		0.6- 1.2 mm (0.024- 0.047 in)	-
	Carrier bearing starting torque (preload)		3.4- 4.5 N.m (35- 46 kgf.cm, 30- 40 lbf.in)	Adjust
	Inner rotor-to-outer rotor clearance		0.14 mm (0.006 in) max.	0.2 mm (0.007 in)
			17.1- 17.2 mm	

Oil pump	Oil pump inner rotor I.D.		(0.673- 0.677 in)	-
	Oil pump shaft O.D.		16.8- 17.0 mm (0.661 - 0.669 in)	-
	Oil pump thrust clearance		0.03- 0.13 mm (0.001 - 0.005 in)	0.15 mm (0.005 in)
	Outer rotor-to-clutch housing clearance		0.1 - 0.2 mm (0.004- 0.007 in)	0.22 mm (0.008 in)
Shift piece	I.D.		14.000- 14.068 mm (0.55118- 0.55386 in)	-
	Shift fork width at contact area		12.8- 13.0 mm (0.504- 0.512 in)	-
	Shift piece-to-shift fork clearance		0.2- 0.6 mm (0.008- 0.023 in)	0.7 mm (0.027 in)
Select arm	I.D.		11.01- 11.05 mm (0.4335- 0.4350 in)	-
	Interlock width at contact area		12.9- 13.0 mm (0.508- 0.512 in)	-
	Select arm-to-interlock clearance		0.05- 0.25 mm (0.002- 0.009 in)	0.5 mm (0.019 in)
Transfer output shaft	Diameter of bearing contact area	Transmission housing side	21.977- 21.990 mm (0.86523- 0.86575 in)	21.92 mm (0.8630 in)
		Clucks housing side	40.002- 40.018 mm (1.57488- 1.57551 in)	39.95 mm (1.5728 in)
	Thrust clearance		0.08- 0.17 mm (0.003- 0.006 in)	-
Transfer assembly	Diameter of transfer hypoid drive gear/shaft assembly at tapered roller bearing contact area	At transfer cover side	50.002- 50.018 mm (1.96858- 1.96921 in)	49.95 mm (1.9665 in)
		At transfer gear side	24.987- 25.000 mm (0.98374- 0.98425 in)	24.93 mm (0.9815 in)
	Diameter of transfer output shaft (hypoid gear) at tapered roller bearing contact area	At transfer gear side	40.002- 40.018 mm (1.57488- 1.57551 in)	39.95 mm (1.5728 in)
		At companion flange side	31.975- 31.988 mm (1.25886- 1.25937 in)	31.92 mm (1.2567 in)
	Transfer gear backlash		0.06- 0.16 mm (0.0024- 0.0063 in)	Adjust
	Tapered roller bearing total starting torque (preload)		2.64- 4.23 N.m (26.9- 43.1 kgf.cm, 23.3- 37.4 lbf.in)	Adjust

Transfer assembly fluid	Capacity: Hypoid gear oil SAE 90 viscosity, API classified GL 4 or GL 5 only	Fluid change	0.43 L (0.45 US qt)	-
		Overhaul	0.45 L (0.48 US qt)	-

AUTOMATIC TRANSMISSION AND A/T DIFFERENTIAL

Item	Measurement	Qualification	Standard or New	Service Limit
Automatic transmission fluid	Capacity: use Acura ATF DW-1 (with SH-AWD)	Fluid change	3.1 L (3.3 US qt)	-
		Overhaul	7.8 L (8.2 US qt)	-
	Capacity: use Acura ATF DW-1 (without SH-AWD)	Fluid change	3.1 L (3.3US qt)	-
		Overhaul	7.1 L (7.5US qt)	-
ATF pressure	Line pressure (Low) (APP Sensor opening less than 25 % in D with Line Pressure Sol VLV. A ON)	ATF temperature between 122°F and 212°F (50°C and 100°C)	667- 716 kPa (6.80- 7.30 kgf/cm^2 , 96.7 - 103.8 psi)	Lower limit: 618 kPa (6.30 kgf/cm^2 , 89.6 psi) Upper limit: 765 kPa (7.80 kgf/cm^2 , 111.0 psi)
	Line pressure (Normal)	At 2, 000 RPM in N or P	1, 164- 1, 285 kPa (11.87- 13.10 kgf/cm^2 , 168.8- 186.3 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	1st clutch pressure	At 2, 000 RPM in 1st gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	2nd clutch pressure	At 2, 000 RPM in 2nd gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	3rd clutch pressure	At 2, 000 RPM in 3rd gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	4th clutch pressure	At 2, 000 RPM in 4th gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)

			psi)	
	5th clutch pressure	At 2, 000 RPM in 5th gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	6th clutch pressure	At 2, 000 RPM in 6th gear	1, 123- 1, 172 kPa (11.45- 11.95 kgf/cm^2 , 162.9- 170.0 psi)	1, 079 kPa (11.00 kgf/cm^2 , 156.5 psi)
	Torque converter clutch pressure	At 4, 000 RPM in 2nd gear (Lock-up condition)	294 kPa (3.00 kgf/cm^2 , 42.7 psi) or more	245 kPa (2.50 kgf/cm^2 , 35.6 psi)
Torque converter	Stall speed Check with vehicle on level ground		2, 000 RPM	-
		Service limit	1, 800- 2, 100 RPM	-
Clutch	Clearance between clutch end-plate and top disc	1st	1.50- 1.70 mm (0.0591 - 0.0669 in)	-
		2nd	1.25- 1.45 mm (0.0492- 0.0571 in)	-
		3rd	1.25- 1.45 mm (0.0492- 0.0571 in)	-
		4th	1.50- 1.70 mm (0.0591 - 0.0669 in)	-
		5th	1.25- 1.45 mm (0.0492- 0.0571 in)	-
		6th	1.25- 1.45 mm (0.0492- 0.0571 in)	-
	Diameter of stator shaft needle bearing contact area		31.984- 32.000 mm (1.25921- 1.25984 in)	When worn or damaged
	3rd gear I.D.		49.000- 49.016 mm (1.92913- 1.92976 in)	When worn or damaged
	3rd gear axial clearance		0.10- 0.21 mm (0.0039- 0.0083 in)	-
			41.962- 41.978	

Mainshaft	3rd gear collar diameter of needle bearing contact area		mm (1.65204- 1.65267 in)	When worn or damaged
	3rd gear collar width		29.00- 29.05 mm (1.1417- 1.1437 in)	-
	Sealing ring thickness (41 mm)		1.91- 1.96 mm (0.0752- 0.0772 in)	-
	Sealing ring groove width		2.025- 2.060 mm (0.07972- 0.08110 in)	-
Countershaft	Diameter of needle bearing contact area at torque converter housing		40.505- 40.515 mm (1.59468- 1.59508 in)	When worn or damaged
	Diameter of 1st gear at needle bearing contact area		57.000- 57.019 mm (2.24409- 2.24484 in)	When worn or damaged
	Diameter of park gear at needle bearing contact area		52.971 - 52.990 mm (2.08547- 2.08622 in)	When worn or damaged
	Axial clearance of gears	1st gear	0.07- 0.30 mm (0.0028- 0.0118 in)	-
		2nd and 5th gear (total)	0.04- 0.10 mm (0.002- 0.003 in)	-
	Thrust shim thickness (42.5 mm)	A	1.82 mm (0.0717 in)	When worn or damaged
		B	1.86 mm (0.0732 in)	When worn or damaged
		C	1.90 mm (0.0748 in)	When worn or damaged
		D	1.94 mm (0.0764 in)	When worn or damaged
		E	1.98 mm (0.0780 in)	When worn or damaged
		F	2.02 mm (0.0795 in)	When worn or damaged
		G	2.06 mm (0.0811 in)	When worn or damaged
		H	2.10 mm (0.0827 in)	When worn or damaged
		I	2.14 mm (0.0843 in)	When worn or damaged
			2.18 mm	When worn or

		J	(0.0858 in)	damaged
		K	2.22 mm (0.0874 in)	When worn or damaged
		L	2.26 mm (0.0890 in)	When worn or damaged
	5th gear collar width		65.55- 66.50 mm (2.5807- 2.6181 in)	When worn or damaged
Secondary shaft	Diameter of bearing contact area	At 1st gear	31.986- 31.999 mm (1.25929- 1.25980 in)	When worn or damaged
		At torque converter housing bearing	32.002- 32.015 mm (1.25992- 1.26043 in)	When worn or damaged
		At torque converter housing (shaft end side)	28.5935- 28.6065 mm (1.125726- 1.126238 in)	When worn or damaged
	I.D. of gears	1st gear	38.000- 38.016 mm (1.49606- 1.49669 in)	When worn or damaged
		2nd gear	44.000- 44.016 mm (1.73228- 1.73291 in)	When worn or damaged
		5th gear	50.000- 50.016 mm (1.96850- 1.96913 in)	When worn or damaged
	Axial clearance of gears	1st gear	0.16- 0.40 mm (0.0063- 0.0157 in)	-
		2nd and 5th gear	0.05- 0.12 mm (0.002- 0.004 in)	-
	Diameter of gear collars at needle bearing contact area	2nd gear collar	37.975- 37.991 mm (1.49508- 1.49571 in)	When worn or damaged

Transfer assembly fluid	Capacity: Hypoid gear oil SAE 90 viscosity, API classified GL 4 or GL 5 only	Fluid change	0.43 L (0.45 US qt)	-
		Overhaul	0.45 L (0.48 US qt)	-
Transfer assembly	Diameter of transfer hypoid drive gear/shaft assembly at tapered roller bearing contact area	At transfer cover side	50.002- 50.018 mm (1.96858- 1.96921 in)	49.95 mm (1.9665 in)
		At transfer gear side	24.987- 25.000 mm (0.98374- 0.98425 in)	24.93 mm (0.9815 in)
	Diameter of transfer output shaft (hypoid gear) at tapered roller bearing contact area	At transfer gear side	40.002- 40.018 mm (1.57488- 1.57551 in)	39.95 mm (1.5728 in)
		At companion flange side	31.975- 31.988 mm (1.25886- 1.25937 in)	31.92 mm (1.2567 in)
	Transfer gear backlash		0.06- 0.16 mm (0.0024- 0.0063 in)	-
	Tapered roller bearing total starting torque (preload)		2.64- 4.23 N.m (26.9- 43.1 kgf.cm, 23.3- 37.4 lbf.in)	-

REAR DIFFERENTIAL

Item	Measurement	Qualification	Standard or New	Service Limit
Rear differential fluid	Capacity: use Acura All-Wheel Drive Fluid (DPSF)	Fluid change	2.53 L (2.67 US qt)	-
		Overhaul	2.77 L (2.93 US qt)	-

STEERING

Item	Measurement	Qualification	Standard or New	Service Limit
Steering wheel	Rotational play measured at outside edge		0- 10 mm (0- 0.39 in)	-
	Initial turning load measured at outside edge with engine running		29 N (3.0 kgf, 6.6 lbf)	-
Gearbox	Angle of rack guide screw loosened from locked position		10+5°	

SUSPENSION

Item	Measurement	Qualification	Standard or New	Service Limit
Wheel alignment	Camber	Front	- 0°30'$^{+30'}_{-45'}$ ·	
		Rear	- 1 °00'$^{+30'}_{-45'}$ ·	
	Caster	Front	3 ° 48 ' ±45 '	
	Total toe-in	Front	0±2mm (0+0.08 in)	
		Rear	2 ± 2 mm (0.08 ± 0.08 in)	
	Front wheel turning angle	Inward	38° 06' ±2°	
		Outward (reference)	30° 24' ± 1 °	
Wheel	Runout	Axial	0- 0.7 mm (0- 0.028 in)	2.0 mm (0.079 in)
		Radial	0- 0.7 mm (0- 0.028 in)	1.5 mm (0.059 in)
Wheel bearing	End play	Front	0- 0.05 mm (0- 0.0020 in)	-
		Rear	0- 0.05 mm (0- 0.0020 in)	-

BRAKES

Item	Measurement	Qualification	Standard or New	Service Limit
Parking brake	Number of clicks when lever pulled with 196 N (20.0 kgf, 44.1 lbf) of force		6 to 8 clicks	
	Drum I.D.		189.9- 190.0 mm (7.476- 7.480 in)	191.0 mm (7.520 in)
	Shoe lining thickness		3.4 mm (0.134 in)	1.0 mm (0.039 in)
Brake pedal	Height from floor	M/T	156 mm (6.14 in)	-
		A/T	155 mm (6.10 in)	-
	Free play		1 - 5 mm (0.04- 0.20 in)	-
Brake disc	Thickness	Front	27.9- 28.1 mm (1.098- 1.106 in)	26.0 mm (1.024 in)
		Rear	10.9- 11.1 mm (0.429- 0.437 in)	9.0 mm (0.354 in)
	Runout		-	0.04 mm (0.0016 in)
	Parallelism		-	0.015 mm (0.00059 in)
Brake pad	Thickness	Front	11.5- 12.2 mm (0.453- 0.480 in)	1.6 mm (0.063 in)
		Rear	9.6- 10.2 mm (0.378- 0.402 in)	1.6 mm (0.063 in)

AIR CONDITIONING

Item	Measurement	Qualification	Standard or New	Service Limit
Refrigerant	Type		HFC- 134a (R- 134a)	
	Capacity of system		505- 555 g (17.8- 19.6 oz)	-
Refrigerant oil	Type		DENSO ND- OIL 8 (P/N 38897- PR7- A01 AH)	
	Capacity of components	Condenser (including dryer desiccant)	35mL (1 1/5 fl.oz)	
		Evaporator	35mL (1 1/5 fl.oz)	
		Each line and hose	10mL (1/3 fl.oz)	
		Dryer desiccant	10mL (1/3 fl.oz)	
		Compressor	70- 82 mL (2 3/8- 2 7/9 fl.oz)	
Compressor	Field coil resistance	At 68°F (20°C)	3.9- 4.3 ohms	
	Pulley-to-pressure plate clearance		0.35- 0.60 mm (0.014- 0.023 in)	-

TORQUE SUMMARY

TORQUE SPECIFICATIONS

NOTE:

- **Refer to the appropriate Service information for the precautions and complete procedures.**
- **Refer to the appropriate Service information for the bolts/nuts not indicated here.**

Engine Electrical

Location	Item		Remark	Torque
Starting system	Starter bolts	M/T model		74 N.m (7.5 kgf.m, 54 lbf.ft)
		A/T model		44 N.m (4.5 kgf.m, 33 lbf.ft)
	Starter harness clamp nut			9 N.m (0.9 kgf.m, 7 lbf.ft)
Ignition system	Spark plugs			22 N.m (2.2 kgf.m, 16 lbf.ft)
Charging system	Alternator bolt (8 mm)			22 N.m (2.2 kgf.m, 16 lbf.ft)
	Alternator bolt (10 mm)			44 N.m (4.5 kgf.m, 33 lbf.ft)
	Alternator cable nut			12 N.m (1.2 kgf.m, 8.7 lbf.ft)
	Drive belt auto-tensioner bolt			22 N.m (2.2 kgf.m, 16 lbf.ft)
	Drive belt auto-tensioner pulley bolt			56 N.m (5.7 kgf.m, 41 lbf.ft)

NOTE:

- **Refer to the appropriate Service information for the precautions and complete procedures.**

- **Refer to the appropriate Service information for the bolts/nuts not indicated here.**

Engine Mechanical

Location	Item		Remark	Torque
Engine assembly	Power steering pump bracket bolts			22 N.m (2.2 kgf.m, 16 lbf.ft)
	Front engine mount bracket bolts		Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Front engine mount bolts		Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Front engine mount stop nuts		Use new nuts	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Rear engine mount bracket bolts		Use new bolts	78 N.m (8.0 kgf.m, 58 lbf.ft)
	Rear engine mount bolts (10 mm) Qty 4		Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Rear engine mount bolt (14 mm) Qty 1	M/T model	Use new bolt	88 N.m (9.0 kgf.m, 65 lbf.ft)
	Rear engine mount stop nuts	A/T model	Use new nuts	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Side engine mount bracket bolts (10 mm) Qty 3		Use new bolts	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Side engine mount bracket bolts (10 mm) Qty 2 (2)		Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Side engine mount bolt (12 mm) Qty 1 (2)			64 N.m (6.5 kgf.m, 47 lbf.ft)
	Side engine mount bolts (10 mm) Qty 2		Use new bolts	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Upper transmission mount bracket bolts		Use new bolts	59 N.m (6.0 kgf.m, 43 lbf.ft)
	Upper transmission mount bolts			54 N.m (5.5 kgf.m, 40 lbf.ft)
	Lower transmission mount bracket bolts	M/T model	Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
		A/T model	Use new bolts	39 N.m (4.0 kgf.m, 29 lbf.ft)
	Lower transmission mount nuts			44 N.m (4.5 kgf.m, 33 lbf.ft)
	Lower transmission mount bolt		Use new bolt	54 N.m (5.5 kgf.m, 40 lbf.ft)
			• Use new O-ring	22 N.m (2.2

Engine lubrication	Oil pressure switch	• Apply liquid gasket	kgf.m, 16 lbf.ft)
	Oil pan drain bolt	Use new washer	39 N.m (4.0 kgf.m, 29 lbf.ft)
	Oil filter		12 N.m (1.2 kgf.m, 9 lbf.ft)
	Oil filter feed pipe	Use oil on threads	35 N.m (3.6 kgf.m, 26 lbf.ft)
Intake manifold and exhaust system	Intake manifold bolts (1)		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Intake manifold nuts (1)		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Injector base bolts (1)		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Injector base nuts (1)		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Exhaust pipe A self-locking nuts (10 mm) Qty 3 (warm up TWC side) (2)	Use new nuts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Exhaust pipe A self-locking nuts (10 mm) Qty 3 (under-floor TWC side) (2)	Use new nuts	33 N.m (3.4 kgf.m, 25 lbf.ft)
	Exhaust pipe B self-locking nuts (10 mm) Qty 3 (2)	Use new nuts	33 N.m (3.4 kgf.m, 25 lbf.ft)
	Exhaust pipe B self-locking nuts (10 mm) Qty 2	Use new nuts	54 N.m (5.5 kgf.m, 40 lbf.ft)
(1) Parts to be tightened in a particular order.			
(2) Follow the S/M procedures closely for torque, sequence, and special steps.			

NOTE:

- **Refer to the appropriate Service information for the precautions and complete procedures.**
- **Refer to the appropriate Service information for the bolts/nuts not indicated here.**

Engine Cooling

Location	Item	Remark	Torque
Cooling system	Water passage bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Water passage nuts		22 N.m (2.2 kgf.m, 16 lbf.ft)

Fuel and Emissions

Location	Item	Remark	Torque

Fuel and emissions	A/F sensor			44 N.m (4.5 kgf.m, 33 lbf.ft)
	EGR pipe bolts		Use new gasket	22 N.m (2.2 kgf.m, 16 lbf.ft)
	EGR pipe nuts		Use new gasket	22 N.m (2.2 kgf.m, 16 lbf.ft)
	EGR valve nuts		Use new gasket	22 N.m (2.2 kgf.m, 16 lbf.ft)
	Fuel joint hose mounting bolt			22 N.m (2.2 kgf.m, 16 lbf.ft)
	Fuel tank locknut (1)		Use new locknut, locknut plate, and base gasket	70 N.m (7.1 kgf.m, 51 lbf.ft)
	Fuel tank support straps bolts			38 N.m (3.9 kgf.m, 28 lbf.ft)
	Knock sensor			31 N.m (3.2 kgf.m, 23 lbf.ft)
	Rocker arm oil pressure switch		Use new O-ring	22 N.m (2.2 kgf.m, 16 lbf.ft)
	Secondary HO2S			44 N.m (4.5 kgf.m, 33 lbf.ft)
	Secondary fuel gauge sending unit locknut (1)		Use new locknut, locknut plate, and base gasket	70 N.m (7.1 kgf.m, 51 lbf.ft)
	Throttle body bolts		Use new gasket	22 N.m (2.2 kgf.m, 16 lbf.ft)
	Under floor TWC self locking nuts	Without SH-AWD	Use new gaskets and nuts	33 N.m (3.4 kgf.m, 25 lbf.ft)
	Under floor TWC self locking nuts (front side)	With SH-AWD	Use new gaskets and nuts	33 N.m (3.4 kgf.m, 25 lbf.ft)
	Under floor TWC self locking nuts (rear side)	With SH-AWD	Use new gaskets and nuts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Warm up TWC (front bank) bracket bolts			45 N.m (4.5 kgf.m, 33 lbf.ft)
	Warm up TWC (rear bank) bracket bolts			22 N.m (2.2 kgf.m, 16 lbf.ft)
	Warm up TWC (front bank) upper self locking nuts		Use new nuts	31 N.m (3.2 kgf.m, 23 lbf.ft)
	Warm up TWC (rear bank) upper self locking nuts		Use new nuts	31 N.m (3.2 kgf.m, 23 lbf.ft)
(1) Follow the S/M procedures closely for torque, sequence, and special steps.				

Clutch

Location	Item	Remark	Torque

Clutch	Clutch push rod locknut		17 N.m (1.7 kgf.m, 12 lbf.ft)
	Clutch pedal position switch A locknut		9.8 N.m (1.0 kgf.m, 7 lbf.ft)
	Clutch pedal position switch B locknut		9.8 N.m (1.0 kgf.m, 7 lbf.ft)
	Clutch pedal bolt		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Master cylinder nuts		13 N.m (1.3 kgf.m, 9 lbf.ft)
	Slave cylinder bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Flywheel bolts		103 N.m (10.5 kgf.m, 76 lbf.ft)
	Pressure plate bolts (1)		25 N.m (2.6 kgf.m, 19 lbf.ft)
	Release fork bolt		29 N.m (3.0 kgf.m, 22 lbf.ft)
(1) Parts to be tightened in a particular order.			

Manual Transmission

Location	Item	Remark	Torque
Manual transmission	MTF drain plug	Use new sealing washer	44 N.m (4.5 kgf.m, 33 lbf.ft)
	MTF filler plug	Use new sealing washer	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Back-up light switch	Use liquid gasket on threads	29 N.m (3.0 kgf.m, 22 lbf.ft)
	Upper transmission bolts		74 N.m (7.5 kgf.m, 54 lbf.ft)
	Lower transmission bolts		74 N.m (7.5 kgf.m, 54 lbf.ft)
	Shift lever housing bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Shift cable bracket bolts		27 N.m (2.8 kgf.m, 20 lbf.ft)

Automatic Transmission

Location	Item	Remark	Torque
Automatic transmission	ATF drain plug	Use new sealing washer	49 N.m (5.0 kgf.m, 36 lbf.ft)
	ATF filler bolt	Use new sealing washer	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Clutch pressure inspection port sealing bolts (line/1st/5th/torque converter)		20 N.m (2.0 kgf.m, 14 lbf.ft)
	Clutch pressure inspection port sealing bolts (3rd/6th)		27 N.m (2.8 kgf.m, 20 lbf.ft)
	Transmission fluid pressure switches	Use new sealing washers	0 N.m (2.0 kgf.m, 14 lbf.ft)
	Line pressure switch	Use new sealing washer	20 N.m (2.0 kgf.m, 14 lbf.ft)
	Drive plate bolts (1)		74 N.m (7.5 kgf.m, 54 lbf.ft)
	Lower transmission housing mounting bolts		74 N.m (7.5 kgf.m, 54 lbf.ft)
	Upper transmission housing mounting bolts		64 N.m (6.5

			kgf.m, 47 lbf.ft)
	Transfer assembly mounting bolts		51 N.m (5.2 kgf.m, 38 lbf.ft)
	Transmission ground terminal bracket bolt		26 N.m (2.7 kgf.m, 20 lbf.ft)
	Shift lever assembly bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Shift cable end nut		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Shift lever bracket base bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
Transfer assembly	Transfer assembly fluid drain plug	Use new sealing washer	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Transfer assembly fluid filler plug	Use new sealing washer	44 N.m (4.5 kgf.m, 33 lbf.ft)
(1) Follow the S/M procedures closely for torque, sequence, and special steps.			

NOTE:

- **Refer to the appropriate Service information for the precautions and complete procedures.**
- **Refer to the appropriate Service information for the bolts/nuts not indicated here.**

Rear Differential

Location	Item	Remark	Torque
Rear differential	Rear differential fluid drain plug	Use new sealing washer	47 N.m (4.8 kgf.m, 35 lbf.ft)
	Rear differential fluid filler plug	Use new sealing washer	47 N.m (4.8 kgf.m, 35 lbf.ft)
	Rear differential front mounting bracket nuts (1)	Use new nuts	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Rear differential front mounting bracket bolts (1)	Use new bolts	74 N.m (7.5 kgf.m, 54 lbf.ft)
	Rear differential rear mount bolts (1)	Use new bolts	74 N.m (7.5 kgf.m, 54 lbf.ft)
(1) Follow the S/M procedures closely for torque, sequence, and special steps.			

Driveline/Axle

Location	Item	Remark	Torque
	Driveshaft spindle nut (24	• Use oil on the seating surface	245 N.m (25.0 kgf.m, 181

	mm)	• Use new nut	lbf.ft)
	Driveshaft spindle nut (26 mm)	• Use oil on the seating surface • Use new nut	329 N.m (33.5 kgf.m, 242 lbf.ft)
	Intermediate shaft dowel bolts		39 N.m (4.0 kgf.m, 29 lbf.ft)
Driveline/axle	Intermediate shaft flange bolt		39 N.m (4.0 kgf.m, 29 lbf.ft)
	Heat shield bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	No. 1 propeller shaft nuts	Use new nuts	72 N.m (7.3 kgf.m, 53 lbf.ft)
	No. 3 propeller shaft bolts	Use new bolts	72 N.m (7.3 kgf.m, 53 lbf.ft)
	No. 1 support bearing bolts (1)	Use new bolts	39 N.m (4.0 kgf.m, 29 lbf.ft)
	No. 2 support bearing bolts (1)	Use new bolts	39 N.m (4.0 kgf.m, 29 lbf.ft)
(1) Follow the S/M procedures closely for torque, sequence, and special steps.			

Steering

Location	Item	Remark	Torque
Steering	Steering wheel bolt		39 N.m (4.0 kgf.m, 29 lbf.ft)
	Steering joint bolts		28 N.m (2.9 kgf.m, 21 lbf.ft)
	Steering column nuts		16 N.m (1.6 kgf.m, 12 lbf.ft)
	Steering column bolts		16 N.m (1.6 kgf.m, 12 lbf.ft)
	Steering gearbox bolts	Use new bolts	74 N.m (7.5 kgf.m, 54 lbf.ft)
	Tie-rod end ball joint nuts	Use new nuts	60 N.m (6.1 kgf.m, 44 lbf.ft)
	Tie-rod end locking nuts		44 N.m (4.5 kgf.m, 33 lbf.ft)

Suspension

Location	Item	Remark	Torque
Front suspension	Wheel nuts		127 N.m (13.0 kgf.m, 94.0 lbf.ft)
	Upper arm castle nut		44- 52 N.m (4.5- 5.3 kgf.m, 33- 38 lbf.ft)
	Upper arm bolts	Use new bolts	31 N.m (3.2 kgf.m, 23 lbf.ft)
	Knuckle ball joint castle nut	Use new nut	93- 103 N.m (9.5- 10.5 kgf.m, 69- 75.9 lbf.ft)
	Lower arm bolt (12mm)	Use new bolt	74 N.m (7.5 kgf.m, 54 lbf.ft)
	Lower arm bolt (12mm)	Use new bolt	83 N.m (8.5 kgf.m, 61 lbf.ft)
	Stabilizer bar bolts		55 N.m (5.6 kgf.m, 41 lbf.ft)
	Stabilizer link nuts		78 N.m (8.0 kgf.m, 58 lbf.ft)

	Damper nuts	Use new nuts	55 N.m (5.6 kgf.m, 41 lbf.ft)
	Damper pinch bolt		49 N.m (5.0 kgf.m, 36 lbf.ft)
	Damper fork bolt/nut	Use new bolt/nut	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Damper self-locking	nut Use new nut	29 N.m (3.0 kgf.m, 22 lbf.ft)
Rear suspension	Wheel nuts		127 N.m (13.0 kgf.m, 94.0 lbf.ft)
	Upper arm castle nut	Use new nut	69- 78 N.m (7.0- 8.0 kgf.m, 51 - 58 lbf.ft)
	Upper arm bolts	Use new bolts	59 N.m (6.0 kgf.m, 43 lbf.ft)
	Lower arm A bolts	Use new bolts	59 N.m (6.0 kgf.m, 43 lbf.ft)
	Control arm self-locking nut	Use new nut	59 N.m (6.0 kgf.m, 43 lbf.ft)
	Control arm self-locking nut/adjusting bolt	Use new nut	57 N.m (5.8 kgf.m, 42 lbf.ft)
	Lower arm B bolts	Use new bolts	59 N.m (6.0 kgf.m, 43 lbf.ft)
	Stabilizer bar bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Stabilizer link nut	Use new nut	38 N.m (3.9 kgf.m, 28 lbf.ft)
	Stabilizer link self-locking nut	Use new nut	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Damper nuts	Use new nuts	55 N.m (5.6 kgf.m, 41 lbf.ft)
	Damper lower bolt	Use new bolt	64 N.m (6.5 kgf.m, 47 lbf.ft)
	Damper self-locking nut	Use new nut	29 N.m (3.0 kgf.m, 22 lbf.ft)

Brakes

Location	Item	Remark	Torque
Conventional brake	Front brake caliper bolts		72 N.m (7.3 kgf.m, 53 lbf.ft)
	Front brake caliper bracket bolts		137 N.m (14.0 kgf.m, 101 lbf.ft)
	Front brake hose bracket bolt		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Front brake hose banjo bolt	Use new washers	35 N.m (3.6 kgf.m, 26 lbf.ft)
	Brake booster/brake pedal nuts		12 N.m (1.2 kgf.m, 8.7 lbf.ft)
	Master cylinder nuts		15 N.m (1.5 kgf.m, 11 lbf.ft)
	Master cylinder brake lines		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Rear brake caliper bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Rear brake caliper bracket bolts		88 N.m (9.0 kgf.m, 65 lbf.ft)

	Rear brake hose bracket bolt		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Rear brake hose banjo bolt	Use new washers	35 N.m (3.6 kgf.m, 26 lbf.ft)
	Parking brake lever bolts		32 N.m (3.3 kgf.m, 24 lbf.ft)
	Parking brake cable bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Equalizer cover bolts		32 N.m (3.3 kgf.m, 24 lbf.ft)
	Brake pedal bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
VSA	VSA modulator-control unit brake line (10 mm)		15 N.m (1.5 kgf.m, 11 lbf.ft)
	VSA modulator-control unit brake line (12 mm)		22 N.m (2.2 kgf.m, 16 lbf.ft)

NOTE:

- **Refer to the appropriate Service information for the precautions and complete procedures.**
- **Refer to the appropriate Service information for the bolts/nuts not indicated here.**

BODY

Location	Item	Remark	Torque
Frame	Strut brace nuts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Strut brace bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	Front subframe front stiffener bolts (12 mm) (1)		54 N.m (5.5 kgf.m, 40 lbf.ft)
	Front subframe front stiffener bolts (14 mm) (1)	Use new bolts	103 N.m (10.5 kgf.m, 76 lbf.ft)
	Front subframe middle rubber mount bolts (10 mm) (1)	Use new bolts	49 N.m (5.0 kgf.m, 36 lbf.ft)
	Front subframe middle rubber mount bolts (12 mm) (1)	Use new bolts	44 N.m (4.5 kgf.m, 33 lbf.ft)
	Front subframe rear stiffener bolts (12 mm) (1)	Use new bolts	93 N.m (9.5 kgf.m, 69 lbf.ft)
	Front subframe rear stiffener bolts (14 mm) (1)	Use new bolts	103 N.m (10.5 kgf.m, 76 lbf.ft)
	Rear engine mounting base bracket bolts	Use new bolts	54 N.m (5.5 kgf.m, 40 lbf.ft)
	Rear subframe mounting front stay bolts (8 mm)		27 N.m (2.75 kgf.m, 20 lbf.ft)
		Use new	103 N.m (10.5 kgf.m, 76

	Rear subframe mounting front stay bolts (14 mm)	bolts	lbf.ft)
	Rear subframe mounting rear stay bolts (8 mm)		27 N.m (2.75 kgf.m, 20 lbf.ft)
	Rear subframe mounting rear stay bolts (14 mm)	Use new bolts	103 N.m (10.5 kgf.m, 76 lbf.ft)
(1) Parts to be tightened in a particular order.			

HEATING, VENTILATION, AND AIR CONDITIONING

Location	Item	Remark	Torque
A/C compressor	A/C compressor bracket bolts		45 N.m (4.5 kgf.m, 33 lbf.ft)
	A/C compressor bolts		22 N.m (2.2 kgf.m, 16 lbf.ft)
	A/C compressor center bolt		18 N.m (1.8 kgf.m, 13 lbf.ft)
	A/C compressor relief valve		13 N.m (1.35 kgf.m, 9.7 lbf.ft)
Receiver line	A/C pressure sensor		11 N.m (1.1 kgf.m, 8.0 lbf.ft)

BODY ELECTRICAL

Location	Item	Remark	Torque
Wipers/washers	Windshield wiper arm nut		30 N.m (3.0 kgf.m, 21.7 lbf.ft)
	Windshield wiper linkage nut		31.4 N.m (3.2 kgf.m, 23.2 lbf.ft)

DESIGN SPECIFICATIONS

Item	Measurement	Qualification	Specification
DIMENSIONS	Overall length		4, 966 mm (195.5 in)
	Overall width		1, 880 mm (74.0 in)
	Overall height		1, 452 mm (57.2 in)
	Wheelbase		2, 775 mm (109.3 in)
	Track	Front	1, 606 mm (63.2 in)
		Rear	1, 620 mm (63.8 in)
	Seating capacity		Five (5)
WEIGHT	Gross Vehicle Weight Rating (GVWR)	Without SH-AWD	2, 130 kg (4, 696 lbs)
		With SH-AWD	2, 235 kg (4, 927 lbs)
ENGINE (J35Z6)	Type		Water-cooled, 4-stroke SOHC VTEC gasoline engine
	Cylinder arrangement		60 ° V6-cylinder, transverse
	Bore and stroke		89.0 x 93.0 mm (3.504 x 3.661 in)
	Displacement		3, 471 cm^3 (211.8 cu in)
	Compression ratio		11.2
	Valve train		Belt drive, SOHC VTEC 4 valves

			per cylinder
	Lubrication system		Forced, wet sump, with trochoid pump
	Fuel required		Premium UNLEADED gasoline with 91 Pump Octane Number or higher
ENGINE (J37A4)	Type		Water-cooled, 4- stroke SOHC VTEC gasoline engine
	Cylinder arrangement		60 ° V6- cylinder, transverse
	Bore and stroke		90.0 x 96.0 mm (3.543 x 3.780 in)
	Displacement		3, 664 cm^3 (223.6 cu in)
	Compression ratio		11.2
	Valve train		Belt drive, SOHC VTEC 4 valves per cylinder
	Lubrication system		Forced, wet sump, with trochoid pump
	Fuel required		Premium UNLEADED gasoline with 91 Pump Octane Number or higher
STARTER	Type		Gear reduction
	Nominal output	M/T	1.6 kW
		A/T	1.8 kW
	Nominal voltage		12V
	Hour rating		30 seconds
	Direction of rotation		Counterclockwise as viewed from drive end
CLUTCH	Type		Single plate dry, diaphragm spring
MANUAL TRANSMISSION	Type		Synchronized, six-speed forward, one reverse
	Primary reduction		Direct 1:1
	Gear ratio	1st	3.625
		2nd	2.115
		3rd	1.529
		4th	1.125
		5th	0.847
		6th	0.686
		Reverse	3.656
	Final reduction	Type	Single helical gear
		Gear ratio	3.842
	Type		Electronically-controlled automatic, six-speed forward, one reverse
	Primary reduction		Direct 1:1

AUTOMATIC TRANSMISSION	Gear ratio	1st	3.359
		2nd	2.094
		3rd	1.484
		4th	1.065
		5th	0.754
		6th	0.555
		Reverse	2.269
	Final reduction	Type	Single helical gear
		Gear ratio	3.722
STEERING	Type		Electrical power-assisted rack and pinion
	Overall ratio		13.96
	Turns, lock-to-lock		2.7
	Steering wheel diameter	Without SH-AWD	370 mm (14.57 in)
		With SH-AWD	374 mm (14.72 in)
SUSPENSION	Type	Front	Independent double wishbone with stabilizer, coil spring
		Rear	Independent multilink with stabilizer, coil spring
	Shock absorber	Front and rear	Telescopic, hydraulic, nitrogen gas-filled
TIRES	Size (without SH-AWD)	Front and rear	P245/50R17 98V
			P245/45R18 96V
		Spare	T135/80D17 103M
	Size (with SH-AWD)	Front and rear	P245/45R18 96V
			245/40ZR19 94V (Optional)
		Spare	T135/80D17 103M
WHEEL ALIGNMENT	Camber	Front	- 0°30'
		Rear	- 1°00'
	Caster	Front	3° 48'
	Total toe-in	Front	0 mm (0 in)
		Rear	2 mm (0.08 in)
	Front wheel turning angle	Inward	38 ° 06'
		Outward (reference)	30 ° 24'
BRAKES	Type of service brake	Front	Power-assisted self-adjusting ventilated disc
		Rear	Power-assisted self-adjusting solid disc
	Type of parking brake		Mechanical actuating, rear wheels
	Pad friction surface area (swept area)	Front	59.2 cm^2 (9.18 sq in) x 2
		Rear	34.4 cm^2 (5.33 sq in) x 2
	Parking brake shoe		

	friction surface area		45.6 cm^2 (7.07 sq in) x 2
AIR CONDITIONING	Compressor	Type	Swash plate/DENSO
		Capacity	154.4 mL (9.42 cu in)/rev
		Maximum speed	7, 600 RPM
		Lubricant capacity	70 mL (2 3/8 fl.oz)
		Lubricant type	DENSO ND-OIL 8
	Condenser	Type	Corrugated fin
	Evaporator	Type	Corrugated fin
	Blower	Type	Radial
		Motor input	300W/12V
		Speed control	Infinitely variable
		Maximum capacity	545 m^3 (19, 246 cu ft)/h
	Temperature control		Air-mix type
	Compressor clutch	Type	Dry, single plate, poly V- belt drive
		Electrical power consumption at 68°F (20°C)	35 W maximum at 12 V
	Refrigerant	Type	HFC-134a (R-134a)
		Capacity	505- 555 g (17.8- 19.6 oz)
ELECTRICAL RATINGS	Battery		12 V- 65 Ah/20 HR (12V- 55 Ah/5 HR)
	Fuses	Under-hood fuse/relay box	120 A, 70 A, 60 A, 50 A, 40 A, 30 A, 20 A, 15 A, 10 A, 7.5 A
		Driver's under-dash fuse/relay box	20 A, 15 A, 10 A, 7.5 A
		Passenger's under-dash fuse/relay box	20 A, 15 A, 10 A, 7.5 A
		Auxiliary under-dash fuse/relay box	7.5 A
		Headlight high beam	12V- 60W (HB3)
		Headlight low beam (HID)	12V- 35W (D2S)
		Fog lights	12V- 55W (H11)
		Front turn signal/parking lights	12 V- 24/2.2CP (Amber)
		Side turn signal lights	LED
		Front side marker lights	12V- 3CP
		Rear turn signal lights	12V- 21 W (Amber)
		Brake lights/taillights	LED
		Rear side marker lights	12V- 3CP
		High mount brake light	LED

	Light bulbs	Back-up lights	12V- 16W
		License plate lights	12V- 5W
		Ambient light	LED
		Trunk light	12V- 5W
		Front individual map lights	LED
		Rear individual map lights	LED
		Door courtesy lights	12V- 3.4W
		Glove box light	12V- 1.4W
		Vanity mirror lights	12V- 2W
		Gauge lights	LED
		Indicator lights	LED
		Console box light	12V- 1.4W
		Footwell lights	LED

SYMPTOM TROUBLESHOOTING INDEX

WITHOUT KEYLESS ACCESS SYSTEM

Symptom	Diagnostic procedure	Also check for
Engine does not crank	1. Check for loose battery terminals or connections. 2. Test the battery for a low state of charge (see **BATTERY TEST**). 3. Check the **starter**. 4. Check starter cut relay 1 and starter cut relay 2 (see **POWER RELAY TEST**). 5. Check the transmission range switch (see **TRANSMISSION RANGE SWITCH TEST**). 6. Check the ignition switch and its related circuits (see **IGNITION SWITCH TEST**).	Poor ground at G101
Engine cranks, but does not start	1. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Check the PGM-FI main relays (see **POWER RELAY TEST**). 3. Check for IMMOBI status and function (see **ENGINE DOES NOT START WITH THE IMMOBILIZER KEY**). 4. Check the fuel pressure (see **FUEL PRESSURE TEST**). 5. Check for a plugged or damaged fuel line: • Without SH-AWD (see **FUEL LINE INSPECTION**) • With SH-AWD (see **WITH SH-AWD**) 6. Check for a plugged fuel filter: • Without SH-AWD (see **FUEL FILTER REPLACEMENT**) • With SH-AWD (see **FUEL FILTER REPLACEMENT**) 7. Check the throttle body (see **THROTTLE BODY TEST**). 8. Check for low engine compression: • J35Z6 engine (see **ENGINE COMPRESSION INSPECTION**) • J37A4 engine (see **ENGINE COMPRESSION INSPECTION**) 9. Check for a damaged or broken timing belt. 10. Do the PCM reset in the PGM-FI INSPECTION	• Fuel level in tank • Weak or fouled spark plugs

	menu to cancel ALL INJECTORS STOP with the HDS.	
Engine is hard to start	1. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Check the fuel pressure (see **FUEL PRESSURE TEST**). 3. Check for a plugged or damaged fuel line: • Without SH-AWD (see **FUEL LINE INSPECTION**) • With SH-AWD (see **WITH SH-AWD**) 4. Check for a plugged fuel filter: • Without SH-AWD (see **FUEL FILTER REPLACEMENT**) • With SH-AWD (see **FUEL FILTER REPLACEMENT**)	Weak or fouled spark plugs
Engine cranks slowly	1. Check for loose battery terminals or connections. 2. Test the battery for a low state of charge (see **BATTERY TEST**). 3. Check the starter for **binding**. 4. Check for excessive drag in the engine.	
Multi-information display warning CHECK STARTING SYSTEM	Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**).	

WITH KEYLESS ACCESS SYSTEM

Symptom	Diagnostic procedure	Also check for
Engine does not crank	1. Check for loose battery terminals or connections. 2. Test the battery for a low state of charge (see **BATTERY TEST**). 3. Check for BODY DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 4. Check for symptom troubleshooting: • Engine does not start with the remote or with the remote in the remote slot (see **SYMPTOM TROUBLESHOOTING**) • Engine does not start with the remote (see **THE ENGINE CRANKS BUT WILL NOT START WITH KEYLESS ACCESS**) • Engine does not start with the remote in the remote slot (see **THE ENGINE CRANKS BUT WILL NOT START WITH THE REMOTE**	Poor ground at G301 (M/T model)

	IN THE REMOTE SLOT) 5. Check the starter (see). 6. Check starter cut relay 1 and starter cut relay 2 (see **POWER RELAY TEST**). 7. Check the +B cut relay (M/T model) (see **POWER RELAY TEST**). 8. Check the brake pedal position switch (see **BRAKE PEDAL POSITION SWITCH TEST**). 9. Check the **clutch pedal position switch A (M/T model)**. 10. Check the transmission range switch (A/T model) (see **TRANSMISSION RANGE SWITCH TEST**). 11. Check the engine start/stop switch and its related circuits (see **REAR BUMPER LF ANTENNA REPLACEMENT**).	or G101 (A/T model)
Engine cranks, but does not start	1. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Check the PGM-FI main relays (see **POWER RELAY TEST**). 3. Check for keyless access system symptom troubleshooting information (see **SYMPTOM TROUBLESHOOTING INFORMATION**). 4. Check the fuel pressure (see **FUEL PRESSURE TEST**). 5. Check for a plugged or damaged fuel line: • Without SH-AWD (see **FUEL LINE INSPECTION**) • With SH-AWD (see **WITH SH-AWD**) 6. Check for a plugged fuel filter. • Without SH-AWD (see **FUEL FILTER REPLACEMENT**) • With SH-AWD (see **FUEL FILTER REPLACEMENT**) 7. Check the throttle body (see **THROTTLE BODY TEST**). 8. Check for low engine compression: • J35Z6 engine (see **ENGINE COMPRESSION INSPECTION**) • J37A4 engine (see **ENGINE COMPRESSION INSPECTION**) 9. Check for a damaged or broken timing belt.	• Fuel level in tank • Weak or fouled spark plugs

	10. Do the ECM/PCM reset in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.	
Engine is hard to start	1. Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Check the fuel pressure (see **FUEL PRESSURE TEST**). 3. Check for a plugged or damaged fuel line: • Without SH-AWD (see **FUEL LINE INSPECTION**) • With SH-AWD (see **WITH SH-AWD**) 4. Check for a plugged fuel filter: • Without SH-AWD (see **FUEL FILTER REPLACEMENT**) • With SH-AWD (see **FUEL FILTER REPLACEMENT**)	Weak or fouled spark plugs
Engine cranks slowly	1. Check for loose battery terminals or connections. 2. Test the battery for a low state of charge (see **BATTERY TEST**). 3. Check the starter for binding (see **binding**). 4. Check for excessive drag in the engine.	
Multi-information display warning CHECK KEYLESS STARTING SYSTEM	Check for PGM-FI DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**).	
Engine does not stop	1. Check for BODY DTCs (see **GENERAL TROUBLESHOOTING INFORMATION**). 2. Check the engine start/stop switch (see **REAR BUMPER LF ANTENNA REPLACEMENT**).

STARTER SYSTEM CIRCUIT TROUBLESHOOTING

Special Tools Required

Alternator, Regulator, Battery, and Starter Tester OTC3131*

*: Available through the Acura Tool and Equipment Program, 888-424-6857.

WITHOUT KEYLESS ACCESS SYSTEM

NOTE:

- **Air temperature must be within 59- 100°F (15- 38°C) during this procedure.**
- **After the inspection, you must reset the PCM. Otherwise, the PCM will continue to stop the fuel injectors from operating.**
- **The battery must be in good condition and fully charged.**

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Connect the alternator, regulator, battery, and starter tester (OTC3131) to the battery as shown.

   NOTE: The probe is not used for battery testing.

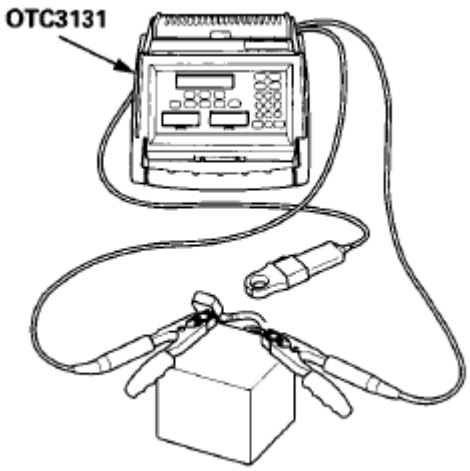

Fig. 5: Identifying Alternator, Regulator, Battery And Starter Tester
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Do the BATTERY TEST.

   Does the display indicate GOOD or GOOD, LOW CHARGE?

   YES - The battery is OK. Charge the battery if necessary, then go to step 4.

   NO - If the display indicates BAD BATTERY, replace the battery, then retest. If the display indicates CHARGE&RETEST, charge the battery, then retest.

4. Connect the HDS to the DLC (see **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).
5. Turn the ignition switch to ON (II).
6. Make sure the HDS communicates with the vehicle and the PCM. If it does not communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
7. Select ALL INJECTORS STOP in the PGM-FI INSPECTION menu with the HDS.
8. Set the parking brake, then with the shift lever in P or N, turn the ignition switch to START (III) to crank

the engine.

Does the starter crank the engine normally?

YES - The starting system is OK. Go to step 16.

NO - Go to step 9.

9. Turn the ignition switch to LOCK (0).
10. Check the electrical connections at the battery, the negative battery cable to the body, the engine ground cables, and the starter for looseness and corrosion. Then try cranking the engine again.

    Does the starter crank the engine normally?

    YES - Repairing the loose connection corrected the problem. The starting system is OK. Go to step 16.

    NO - Based on the following symptoms, take the appropriate action:

    - If the starter does not crank the engine at all, go to step 11.
    - If the starter cranks the engine erratically or too slowly, go to step 13.
    - If the starter does not disengage from the torque converter ring gear when you release the key after 15 seconds, replace the **starter**, or remove and **disassemble** it, and check for the following:
        - Starter solenoid and switch malfunction.
        - Dirty drive gear or damaged overrunning clutch.
        - Damaged torque converter ring gear.
11. Make sure the shift lever is in P or N, then disconnect the connector (A) from the starter S terminal. Connect a jumper wire from the battery positive terminal to the S terminal.

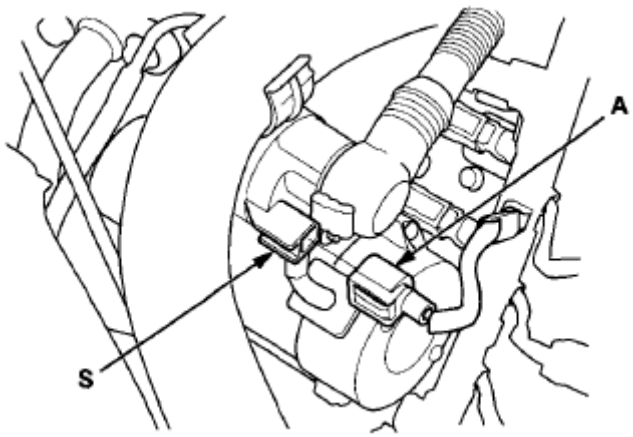

Fig. 6: Identifying Starter And Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the starter crank the engine?

YES - Go to step 12.

NO - Replace the **starter** or remove and **disassemble** it as necessary. •

12. Check the following items in the order listed until you find the problem in the circuit:

NOTE: After the problem in the circuit is found and repaired, go to step 16.

- A blown STS (7.5 A) fuse in the auxiliary under-dash fuse holder located below the driver's under-dash fuse/relay box.
- A blown No. 8 (7.5 A) fuse in the driver's under-dash fuse/relay box.
- Check for an open or short in the WHT wire and connectors between starter cut relay 1, the ignition switch, and the under-hood fuse/relay box.
- Check for an open or short in the PNK wire and connectors between starter cut relay 1 socket terminal No. 1 and the PCM.
- Check for an open or short in the BRN wire and connectors between starter cut relay 1 socket terminal No. 1 and starter cut relay 2 socket terminal No. 1.
- Check for an open or short in the WHT wire, BLK/WHT wire, and connectors between starter cut relay 2 socket terminal No. 2 and the starter.
- Check for an open or short in the YEL wire, LT GRN wire, and connectors between the ignition switch and the PCM.
- Check for an open or short in the LT GRN wire and connectors between the PCM, starter cut relay 1 socket terminal No. 4, and starter cut relay 2 socket terminal No. 4.
- Check for an open or short in the PNK wire, BLU/WHT wire, and connectors between starter cut relay 1 socket terminal No. 3, starter cut relay 2 socket terminal No. 3, and the transmission range switch.
- Check for poor connections or loose terminals at the transmission range switch and body ground G101.
- Check for a faulty ignition switch (see **IGNITION SWITCH TEST**).
- Check for a faulty transmission range switch (see **TRANSMISSION RANGE SWITCH TEST**).
- Check for faulty starter cut relay 1 and starter cut relay 2 (see **POWER RELAY TEST**).

13. Connect the alternator, regulator, battery, and starter tester to the battery.

NOTE: The probe is used for starter testing.

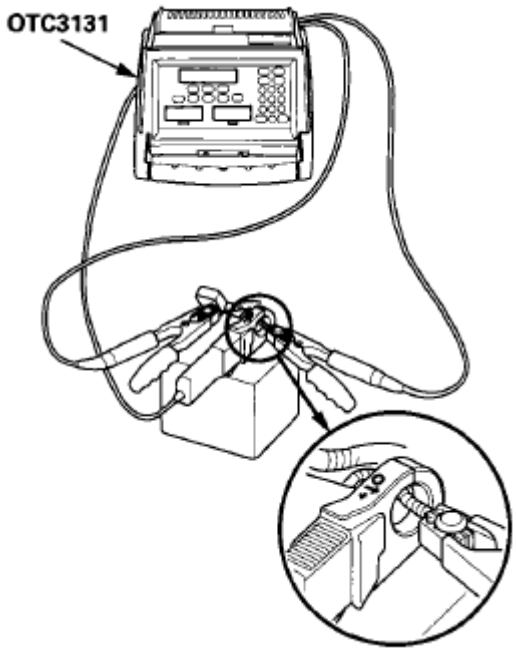

Fig. 7: Identifying Starter Tester, Battery, Regulator And Alternator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Do the STARTING TEST.

    Does the display indicate cranking voltage greater than or equal to 8.0 V and is the current draw less than or equal to 375 A?

    YES - Go to step 15.

    NO - Replace the **starter** or remove and **disassemble** it, and check for these problems: •

    - Drag in the starter armature
    - Short in the armature winding
    - Excessive drag in the engine
    - Open circuit in starter armature commutator segments
    - Excessively worn starter brushes
    - Open circuit in the starter brushes
    - Dirty or damaged helical splines or drive gear
    - Faulty overrunning clutch

15. Remove the **starter**, and inspect its drive gear and the torque converter ring gear for damage. Replace any damaged parts.
16. Select PCM reset (see **HDS CLEAR COMMAND**) in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.
17. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

Special Tools Required

Alternator, Regulator, Battery, and Starter Tester OTC3131*

*: Available through the Acura Tool and Equipment Program, 888-424-6857.

WITH KEYLESS ACCESS SYSTEM

NOTE:

- **Air temperature must be within 59- 100°F (15- 38°C) during this procedure.**
- **After the inspection, you must reset the ECM/PCM. Otherwise, the ECM/PCM will continue to stop the fuel injectors from operating.**
- **The battery must be in good condition and fully charged.**

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Connect the alternator, regulator, battery, and starter tester to the battery as shown.

NOTE: The probe is not used for battery testing.

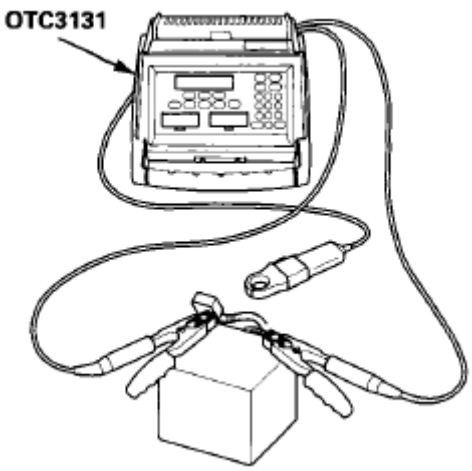

Fig. 8: Identifying Alternator, Regulator, Battery, And Starter Tester
Courtesy of AMERICAN HONDA MOTOR CO., INC.

3. Do the BATTERY TEST.

   Does the display indicate GOOD or GOOD, LOW CHARGE?

   YES - The battery is OK. Charge the battery if necessary, then go to step 4.

   NO - If the display indicates BAD BATTERY, replace the battery, then retest. If the display indicates CHARGE&RETEST, charge the battery, then retest.

4. Connect the HDS to the DLC (see **HOW TO USE THE HDS (HONDA DIAGNOSTIC SYSTEM)**).

5. Press the engine start/stop button to select the ON mode.
6. Make sure the HDS communicates with the vehicle and the ECM/PCM. If it does not communicate, troubleshoot the DLC circuit (see **DLC CIRCUIT TROUBLESHOOTING**).
7. Select ALL INJECTORS STOP in the PGM-FI INSPECTION menu with the HDS.
8. Set the parking brake, then with the clutch pedal pressed (M/T model) or the shift lever in P or N (A/T model), press the brake pedal, then press the engine start/stop button to select START mode to crank the engine.

NOTE: The auto-start function cranks the engine until it starts, or for 15 seconds if the engine does not start.

Does the starter crank the engine normally?

YES - The starting system is OK. Go to step 17.

NO - Go to step 9.

9. Press the engine start/stop button to select the OFF mode.
10. Check the electrical connections at the battery, the negative battery cable to the body, the engine ground cables, and the starter for looseness and corrosion. Then try cranking the engine again.

Does the starter crank the engine normally?

YES - Repairing the loose connection corrected the problem. The starting system is OK. Go to step 17.

NO - Based on the following symptoms, take the appropriate action: •

- If the starter does not crank the engine at all, go to step 11.
- If the starter cranks the engine erratically or too slowly, go to step 14.
- If the starter does not disengage from the flywheel ring gear (M/T model) or the torque converter ring gear (A/T model) when you release the key, replace the **starter**, or remove and disassemble it; (**M/T model**), (**A/T model**), and check for the following:
  - Starter solenoid and switch malfunction.
  - Dirty drive gear or damaged overrunning clutch.
  - Damaged flywheel ring gear (M/T model), torque converter ring gear (A/T model)

11. Make sure the shift lever is in neutral (M/T model) or P or N (A/T model), then disconnect the connector (A) from the starter S terminal. Connect a jumper wire from the battery positive terminal to the S terminal.

M/T model

Fig. 9: Identifying Connector And Starter Of M/T Model
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T model

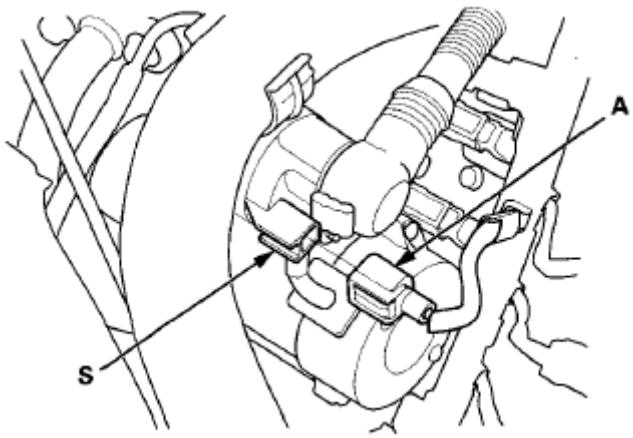

Fig. 10: Identifying Connector And Starter Of A/T Model
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Does the starter crank the engine?

YES - Go to step 12 (M/T model) / go to step 13 (A/T model).

NO - Replace the **starter**, or remove and disassemble it; (**M/T model**), (**A/T model**), as necessary. •

12. M/T model: Check the following items in the order listed until you find the problem in the circuit:

NOTE: After the problem in the circuit is found and repaired, go to step 17.

- A blown No. 8 (7.5 A) fuse in the driver's under-dash fuse/relay box.
- Check for an open or short in the WHT wire and connectors between starter cut relay 1 socket

terminal No. 2, the power control unit, and the under-hood fuse/relay box.

- Check for an open or short in the PNK wire and connectors between starter cut relay 1 socket terminal No. 1 and the ECM.
- Check for an open or short in the BRN wire and connectors between starter cut relay 1 socket terminal No. 1 and starter cut relay 2 socket terminal No. 1.
- Check for an open or short in the WHT wire, BLK/WHT wire, and connectors between starter cut relay 2 socket terminal No. 2 and the starter.
- Check for an open or short in the LT GRN wire and connectors between the ECM, starter cut relay 1 socket terminal No. 4.
- Check for an open or short in the PNK wire and connectors between the clutch pedal position switch A, starter cut relay 2 socket terminal No. 3, the power control unit, and the ECM.
- Check for poor connections or loose terminals at starter cut relay 1 socket terminal No. 3 and body ground G301.
- Check for poor connections or loose terminals at the clutch pedal position switch A and body ground G301.
- Check for an open or short in the LT GRN wire and connectors between starter cut relay 1 socket terminal No. 4 and the +B cut relay.
- Check for an open or short in the GRY wire and connectors between starter cut relay 2 socket terminal No. 4 and the + B cut relay.
- Check for faulty **clutch pedal position switch A**.
- Check for faulty starter cut relay 1 and starter cut relay 2. (see **POWER RELAY TEST**)
- Check for faulty + B cut relay (see **POWER RELAY TEST**).

13. A/T model: Check the following items in the order listed until you find the problem in the circuit:

NOTE: After the problem in the circuit is found and repaired, go to step 17.

- A blown No. 8 (7.5 A) fuse and No. 13 (15 A) fuse in the driver's under-dash fuse/relay box.
- Check for an open or short in the WHT wire and connectors between starter cut relay 1, the power control unit, and the under-hood fuse/relay box.
- Check for an open or short in the PNK wire and connectors between starter cut relay 1 socket terminal No. 1 and the PCM.
- Check for an open or short in the BRN wire and connectors between starter cut relay 1 socket terminal No. 1 and starter cut relay 2 socket terminal No. 1.
- Check for an open or short in the WHT wire, BLK/WHT wire, and connectors between starter cut relay 2 socket terminal No. 2 and the starter.
- Check for an open or short in the LT GRN wire and connectors between the PCM, starter cut relay 1 socket terminal No. 4, and starter cut relay 2 socket terminal No. 4.
- Check for an open or short in the PNK wire, BLU/WHT wire, and connectors between the transmission range switch, starter cut relay 1 socket terminal No. 3, and starter cut relay 2 socket terminal No. 3.
- Check for poor connections or loose terminals at the transmission range switch and body ground G101.

- Check for an open or short in the LT GRN wire and connectors between the power control unit, the brake pedal position switch, and the PCM.
- Check for an open or short in the RED wire and connectors between the brake pedal position switch and the under-hood fuse/relay box.
- Check for an open or short in the ORN wire and connectors between the brake pedal position switch and the PCM.
- Check for an open or short in the RED wire, BLU wire, and connectors between the brake pedal position switch and the under-hood fuse/relay box.
- Check for a faulty transmission range switch (see **TRANSMISSION RANGE SWITCH TEST**).
- Check for faulty starter cut relay 1 and starter cut relay 2. (see **POWER RELAY TEST**)
- Check for a faulty brake pedal position switch (see **BRAKE PEDAL POSITION SWITCH TEST**).

14. Connect the alternator, regulator, battery, and starter tester to the battery.

NOTE: The probe is used for starter testing.

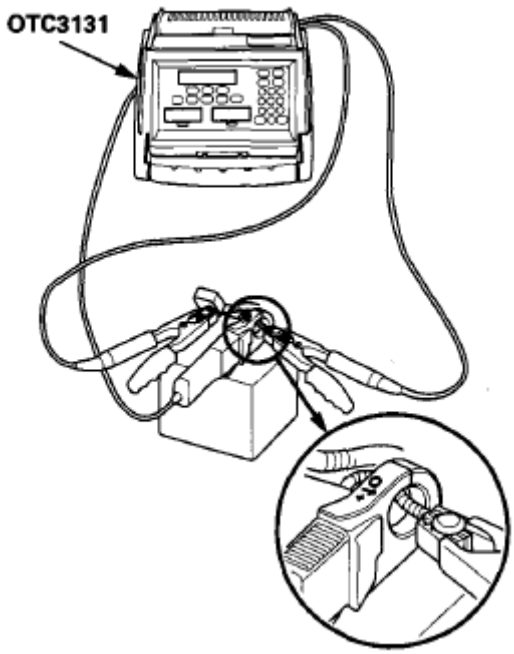

Fig. 11: Identifying Alternator, Regulator, Battery, And Starter Tester
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. Do the STARTING TEST.

Does the display indicate cranking voltage greater than or equal to 8.0 V and is the current draw less than or equal to 375 A?

YES - Go to step 16.

NO - Replace the **starter**, or remove and disassemble it; (**M/T model**), (**A/T model**), and check for these problems: •

- Drag in the starter armature
- Short in the armature winding
- Excessive drag in the engine
- Open circuit in starter armature commutator segments
- Excessively worn starter brushes
- Open circuit in the starter brushes
- Dirty or damaged helical splines or drive gear
- Faulty overrunning clutch

16. Remove the **starter**, and inspect its drive gear and the flywheel ring gear (M/T model), the torque converter ring gear (A/T model) for damage. Replace any damaged parts.
17. Select ECM/PCM reset (see **HDS CLEAR COMMAND**) in the PGM-FI INSPECTION menu to cancel ALL INJECTORS STOP with the HDS.
18. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

CLUTCH PEDAL POSITION SWITCH A TEST

M/T MODEL

1. Disconnect the clutch pedal position switch A connector (A).

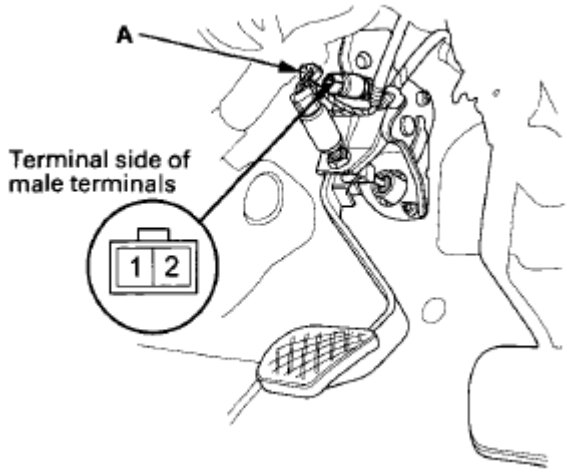

Fig. 12: Identifying Clutch Pedal Position Switch A Connector
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Check for continuity between the terminals according to the table:
   - If the continuity is not as specified, replace **clutch pedal position switch A** and adjust the pedal height (see **CLUTCH PEDAL, CLUTCH PEDAL POSITION SWITCH A, AND CLUTCH PEDAL POSITION SWITCH B ADJUSTMENT**).

- If OK, connect the clutch pedal position switch A connector.

Terminal / Clutch Pedal	1	2
PRESSED	○——○	
RELEASED		

Fig. 13: Terminal Continuity Chart
Courtesy of AMERICAN HONDA MOTOR CO., INC.

CLUTCH PEDAL POSITION SWITCH A REPLACEMENT

M/T MODEL

1. Disconnect the clutch pedal position switch A connector (B).

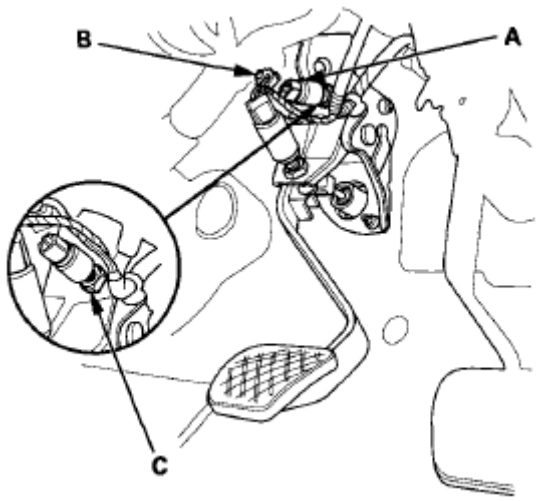

Fig. 14: Identifying Clutch Pedal Position Switch, Connector And Locknut
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. Loosen the locknut (C), then remove clutch pedal position switch A.
3. Install clutch pedal position switch A and adjust the pedal height (see **CLUTCH PEDAL, CLUTCH PEDAL POSITION SWITCH A, AND CLUTCH PEDAL POSITION SWITCH B ADJUSTMENT**).

STARTER SOLENOID TEST

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

2. Do the battery terminal disconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
3. Remove the air intake duct splash separator (see step 4 **ENGINE REMOVAL**).
4. Remove the harness clamp (A), then disconnect the positive starter cable (B), the motor wire (C), and the S terminal connector (D).

M/T model

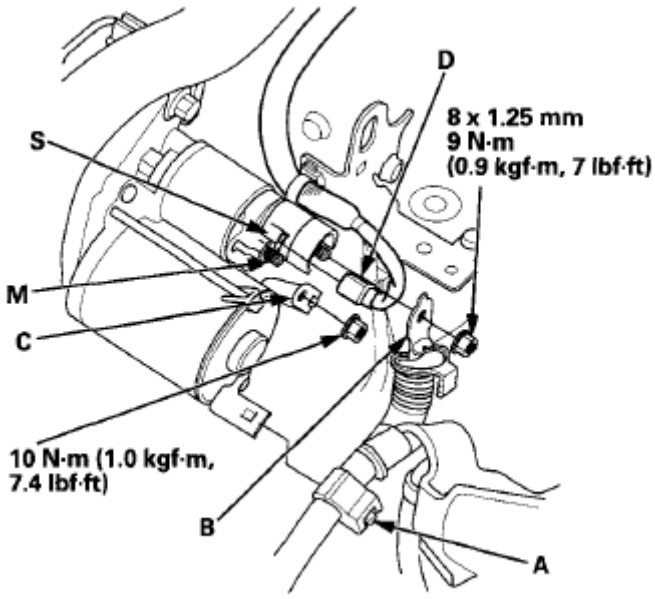

Fig. 15: Identifying Starter Solenoid And Related Components Of M/T Model With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T model

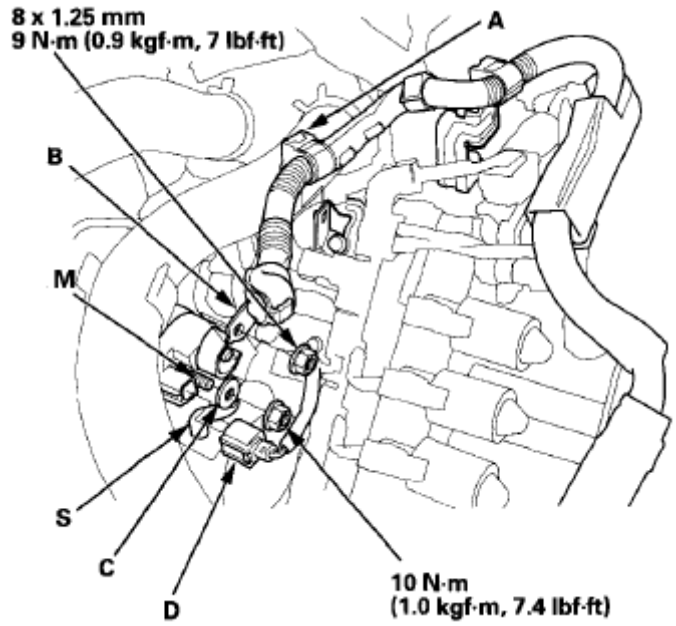

Fig. 16: Identifying Starter Solenoid And Related Components Of A/T Model With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Check the hold-in coil for continuity between the S terminal and the armature housing (ground). There should be continuity:
   - If there is continuity, go to step 6.
   - If there is no continuity, replace the solenoid.
6. Check the pull-in coil for continuity between the S terminal and the M terminal. There should be continuity:
   - If there is continuity, the solenoid is OK.
   - If there is no continuity, replace the solenoid.
7. Connect the wire and the connector in the reverse order of removal.
8. Do the battery terminal reconnection procedure (see **BATTERY TERMINAL DISCONNECTION AND RECONNECTION**).
9. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

STARTER PERFORMANCE TEST

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Remove the **starter**.
3. Disconnect the motor wire from the M terminal (see step 4).
4. Clamp the starter firmly in a vise.
5. Make the connections for this test using the thickest (gauge) wire possible (preferably the same gauge as used on the vehicle).

NOTE: To avoid damaging the starter, never leave the battery connected for more than 5 seconds.

6. Connect the battery as shown. Make sure you disconnect the starter motor wire from the M terminal. If the starter pinion moves out, it is working properly.

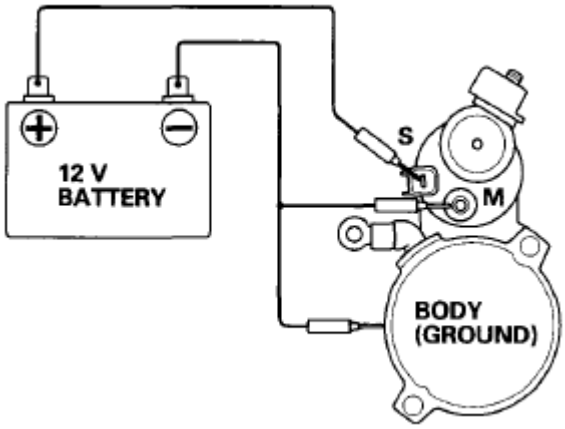

Fig. 17: Connecting Battery
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Disconnect the battery from the M terminal. If the pinion does not retract, the hold-in coil of the solenoid is working properly.

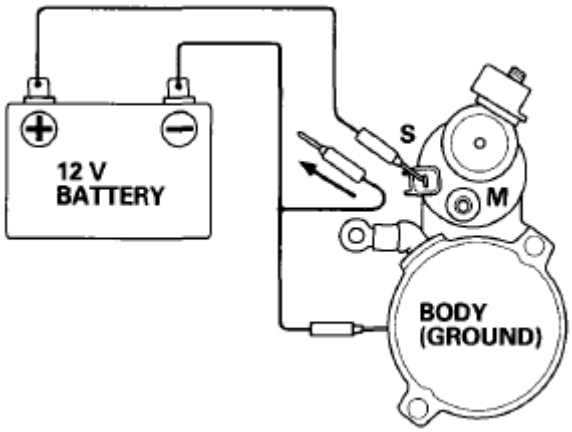

Fig. 18: Identifying Hold-In Coil Of Solenoid
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Disconnect the battery from the starter body as shown. If the pinion retracts immediately, it is working properly.

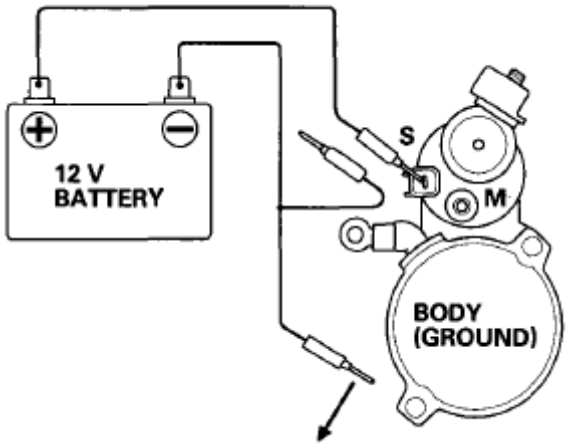

Fig. 19: Disconnecting Battery From Starter Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Reconnect the motor wire to the M terminal.
10. Connect the starter to the battery as shown, and confirm that the motor runs.

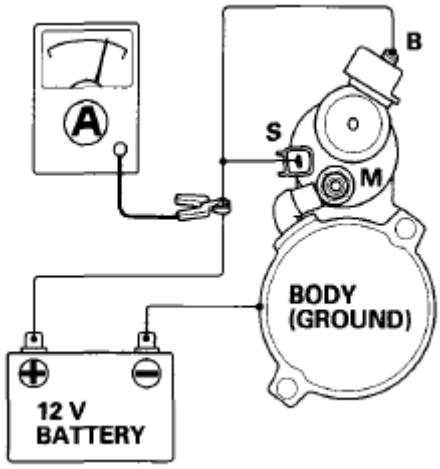

Fig. 20: Connecting Battery To Starter Body
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. If the electric current meets the specification when the battery voltage is at 11.5 V, the starter is working properly.

    Specification

    Electric Current: 80 A (M/T model)

    90 A (A/T model) or less

12. Install the **starter**.
13. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

STARTER REMOVAL AND INSTALLATION

REMOVAL

1. Remove the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).
2. Do the battery removal procedure (see **BATTERY REMOVAL AND INSTALLATION**).
3. Remove the battery base (see step 7 **ENGINE REMOVAL**).
4. Remove the air intake duct splash separator (see step 4 **ENGINE REMOVAL**).
5. Remove the harness clamp (A).

M/T model

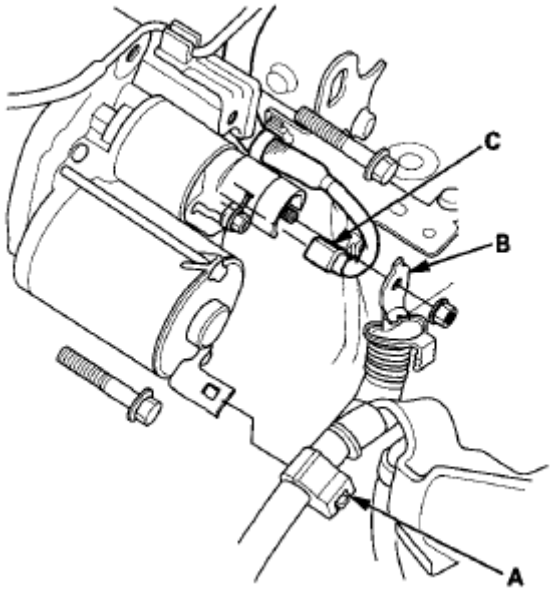

Fig. 21: Identifying Harness Clamp, Starter Cable And Connector Of M/T Model
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T model

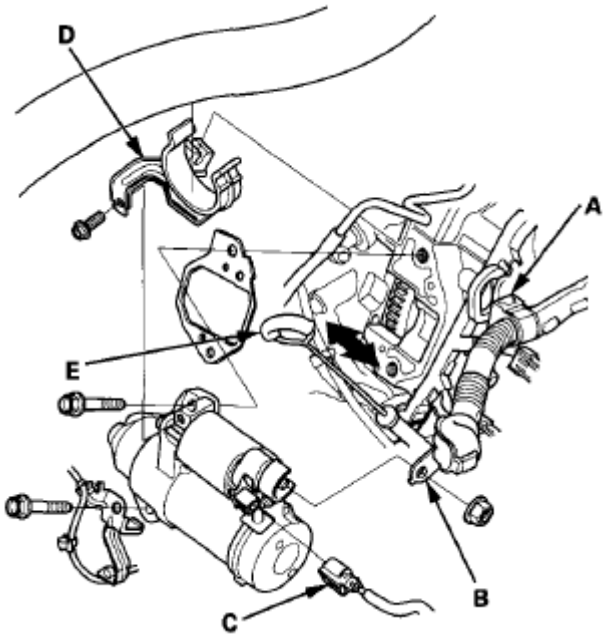

Fig. 22: Identifying Harness Clamp, Starter Cable, Hose Bracket, Dipstick And Connector Of A/T Model
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Disconnect the positive starter cable (B) and the S terminal connector (C).
7. A/T model: Remove the lower radiator hose bracket (D) and the dipstick (E).
8. Remove the two bolts holding the starter, then remove the starter.

INSTALLATION

1. Install the starter, then tighten the bolts (A).

NOTE: Always use a new gasket (A/T model).

M/T model

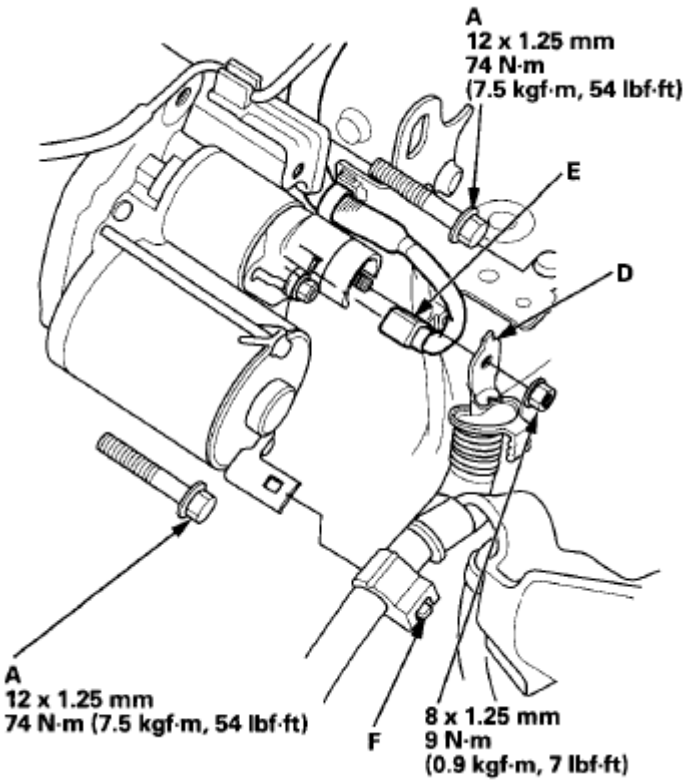

Fig. 23: Identifying Starter And Related Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

A/T model

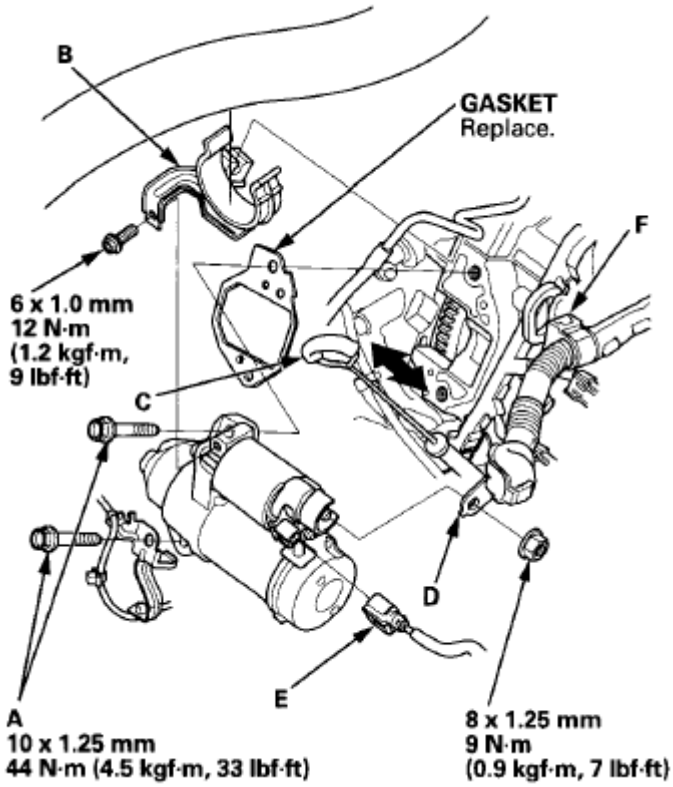

Fig. 24: Identifying Gasket Of Starter (A/T Model) With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

2. A/T model: Install the lower radiator hose bracket (B) and the dipstick (C).
3. Connect the positive starter cable (D) and the S terminal connector (E). Make sure the crimped side of the ring terminal faces away from the starter when you connect it.
4. Install the harness clamp (F).
5. Install the air intake duct splash separator (see step 68 **ENGINE INSTALLATION**).
6. Install the battery base (see step 64 **ENGINE INSTALLATION**).
7. Do the battery installation procedure (see **BATTERY REMOVAL AND INSTALLATION**).
8. Start the engine to make sure the starter works properly.
9. Install the engine compartment covers (see **ENGINE COMPARTMENT COVER REPLACEMENT**).

STARTER OVERHAUL

M/T MODEL

Exploded View

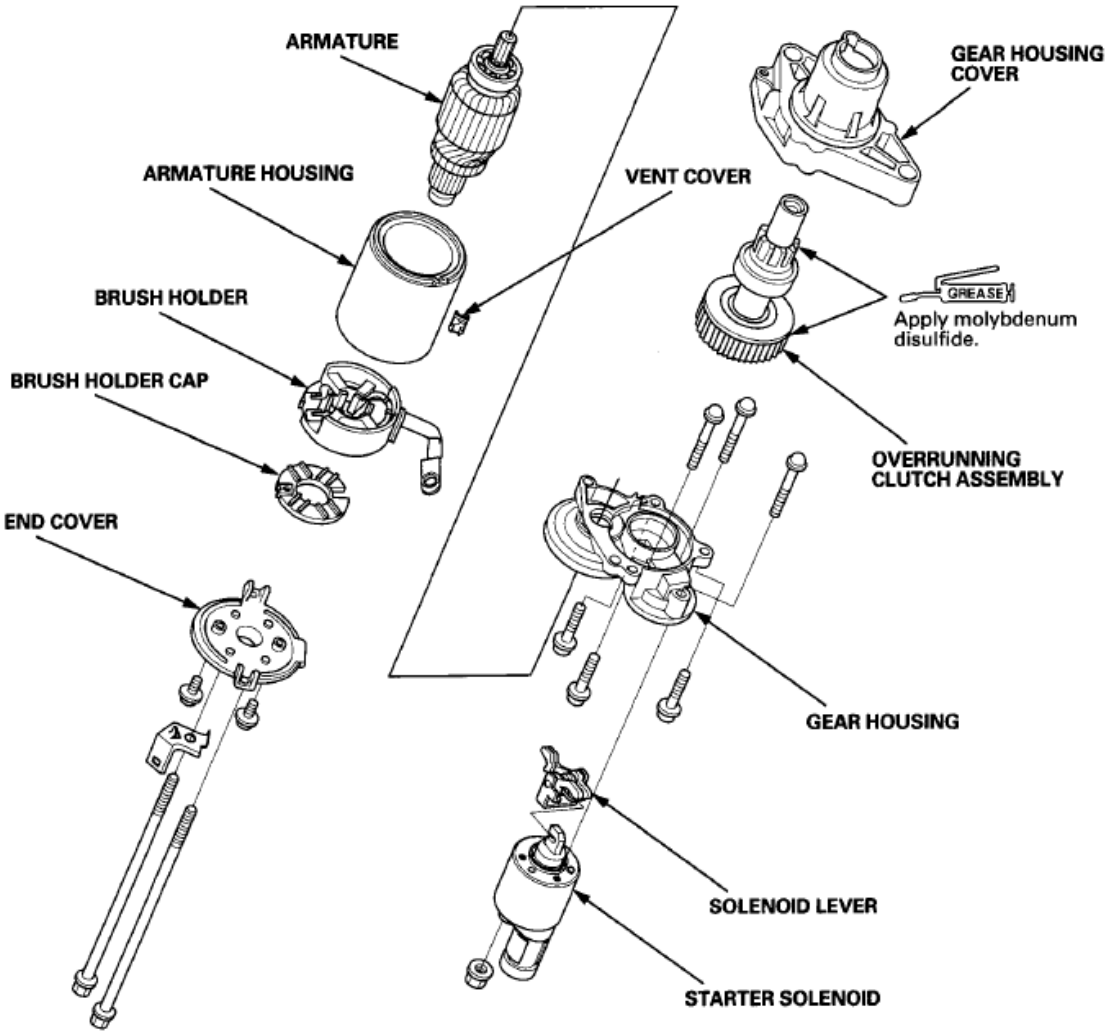

Fig. 25: Exploded View Of Starter (M/T Model)
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Refer to the Exploded View if needed during this procedure.

Brush Holder Removal

1. Remove the **starter**.
2. Disconnect the motor wire from the **M terminal**, and remove the end cover.
3. Remove the brush holder (A).

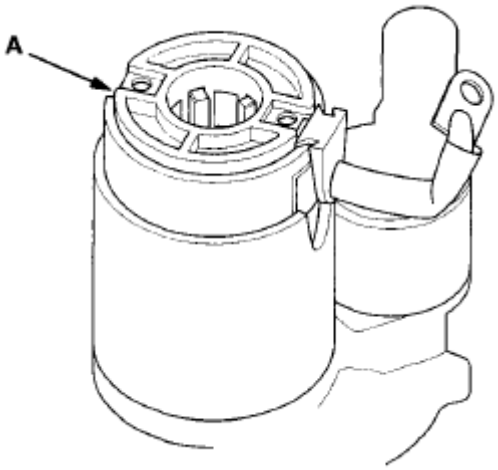

Fig. 26: Identifying Brush Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Armature Inspection and Test

4. Inspect the armature for wear or damage from contact with the permanent magnet. If there is wear or damage, replace the armature.

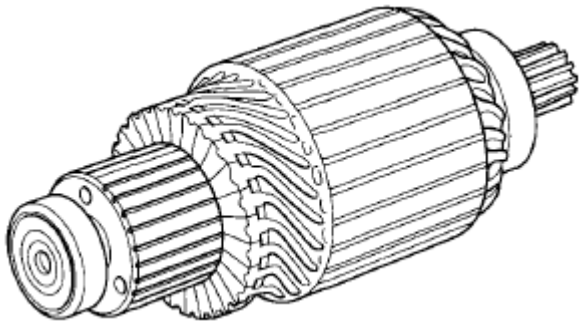

Fig. 27: Identifying Armature
Courtesy of AMERICAN HONDA MOTOR CO., INC.

5. Check the commutator (A) surface. If the surface is dirty or burnt, resurface it with an emery cloth or a lathe to the specifications in step 6, or recondition with #500 or #600 sandpaper (B).

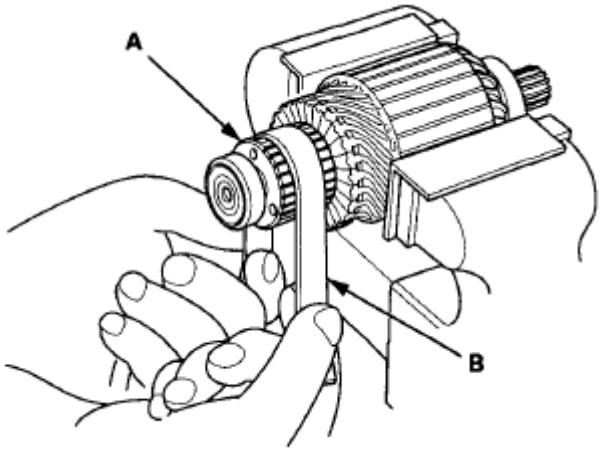

Fig. 28: Identifying Commutator And Sand Paper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Check the commutator diameter with a digital caliper or dial type caliper. If the diameter is below the service limit, replace the armature.

   Commutator Diameter

   Standard (New): 28.0- 28.1 mm (1.102- 1.106 in)

   Service Limit: 27.5 mm (1.083 in)

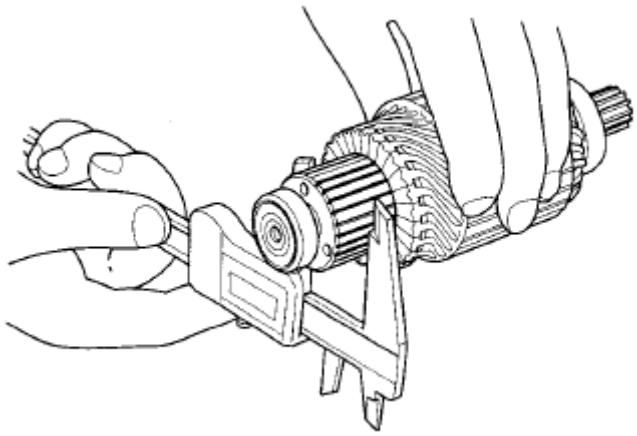

Fig. 29: Checking Commutator Diameter With Digital Caliper Or Dial Type Caliper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Measure the commutator (A) runout:
   - If the commutator runout is within the service limit, check the commutator for carbon dust or brass chips between the segments.
   - If the commutator runout is not within the service limit, replace the armature.

Commutator Runout

Standard (New): 0.02 mm (0.0008 in) max.

Service Limit: 0.05 mm (0.0020 in)

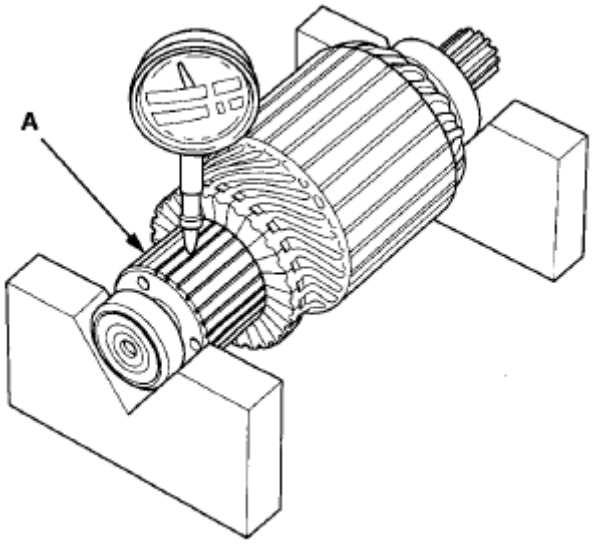

Fig. 30: Identifying Commutator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Use a digital caliper or dial type caliper to check the mica depth (A). If the mica depth is below the service limit, replace the armature.

Commutator Mica Depth

Standard (New): 0.4- 0.5 mm (0.016- 0.020 in)

Service Limit: 0.15 mm (0.0059 in)

Fig. 31: Checking Mica Depth Of Armature Slots
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Use an ohmmeter to check for continuity between the segments of the commutator. If there is an open circuit between any segments, replace the armature.

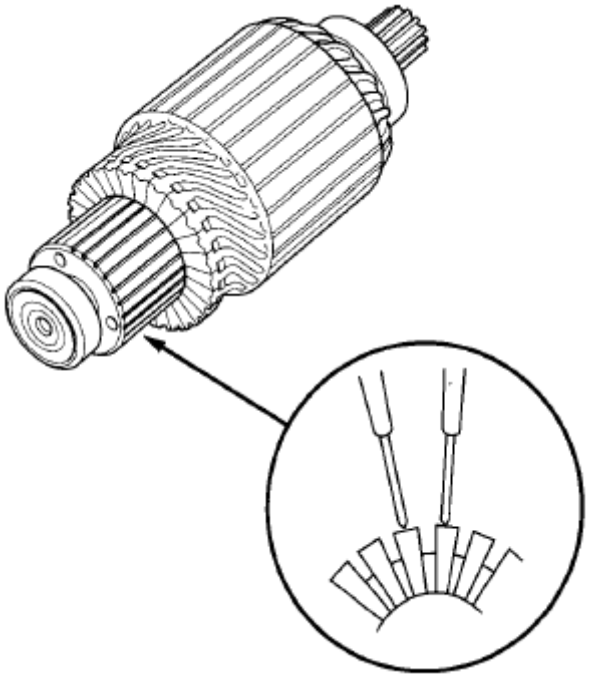

Fig. 32: Checking Continuity Between Segments Of Commutator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Place the armature (A) on an armature tester (B). Hold a hacksaw blade (C) on the armature core. If the blade is attracted to the core while the core is turned, the armature is shorted. Replace the armature.

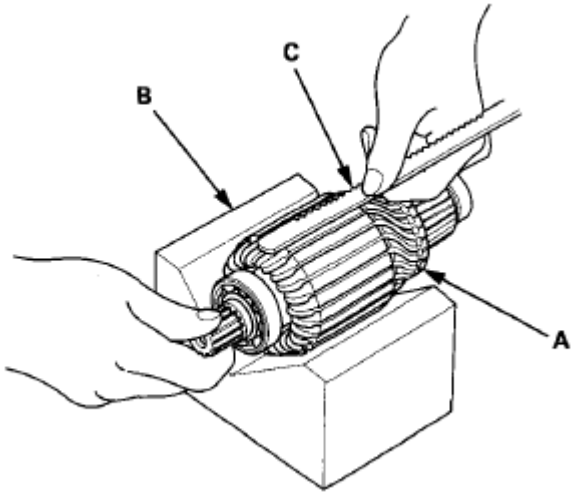

Fig. 33: Identifying Armature, Armature Tester And Hacksaw Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Use an ohmmeter to check for continuity between the commutator (A) and the armature coil core (B), and between the commutator and the armature shaft (C). If there is continuity, replace the armature.

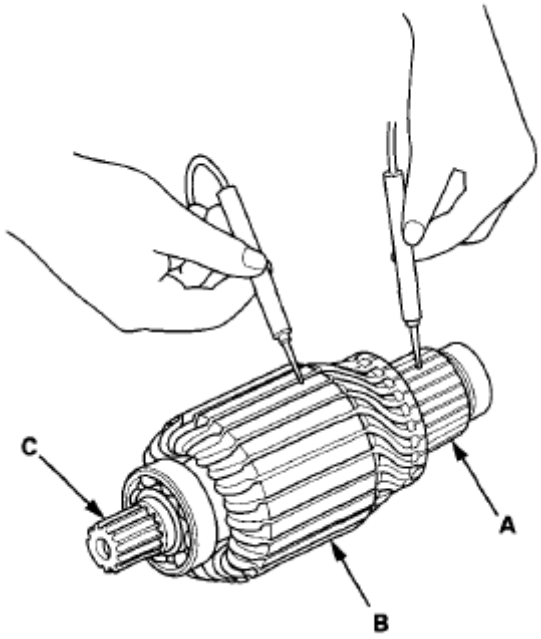

Fig. 34: Identifying Commutator, Armature Coil Core And Armature Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Starter Brush Inspection

12. Remove the brush holder cap (A), then remove the brushes (B).

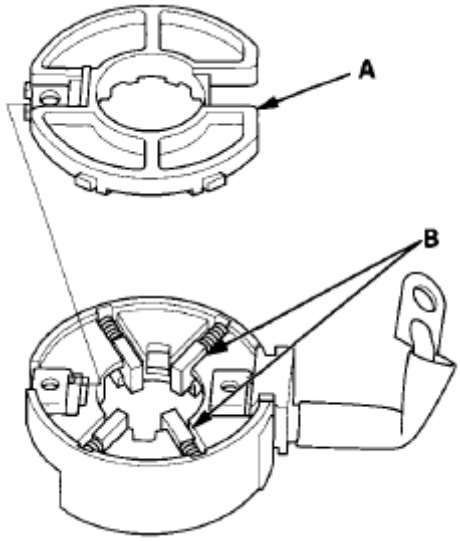

Fig. 35: Identifying Brush Holder Cap And Brushes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

13. Measure the brush length. Shorter than the service limit, replace the brush holder assembly.

Brush Length

Standard (New): 15.8- 16.2 mm (0.622- 0.638 in)

Service Limit: 11.0 mm (0.433 in)

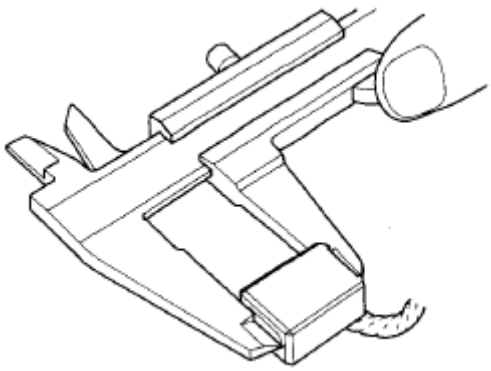

Fig. 36: Measuring Brush Length With Vernier Caliper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Starter Brush Holder Test

14. Check for continuity between the (+) brushes (A) and the (-) brushes (B). If there is continuity, replace the brush holder assembly.

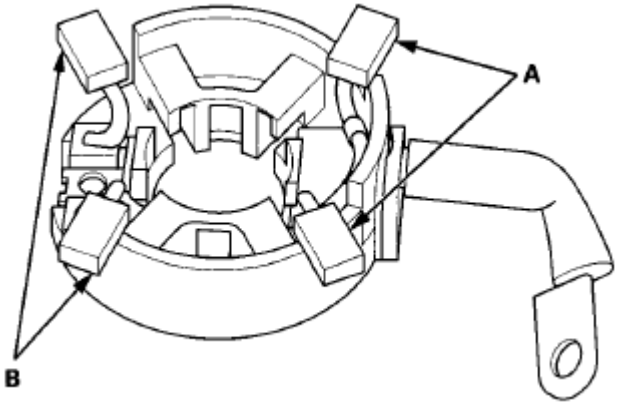

Fig. 37: Identifying (+) And (-) Brushes
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Overrunning Clutch Inspection

15. Slide the overrunning clutch along the shaft. Replace it if it does not slide smoothly.
16. Rotate the overrunning clutch (A) both ways. If it does not lock in either direction, or it locks in both directions, replace it.

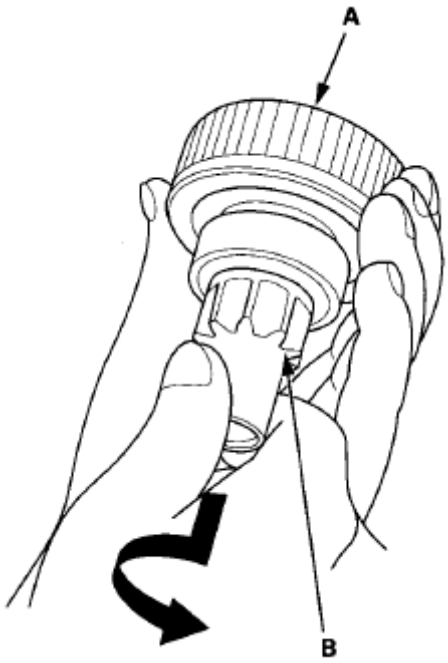

Fig. 38: Rotating Overrunning Clutch
Courtesy of AMERICAN HONDA MOTOR CO., INC.

17. If the starter drive gear (B) is worn or damaged, replace the overrunning clutch assembly; the gear is not available separately. Check the condition of the flywheel ring gear to see if the teeth are damaged.

Starter Reassembly

18. Install the armature in the housing.
19. Set the brushes with the brush spring in the brush holder (A).

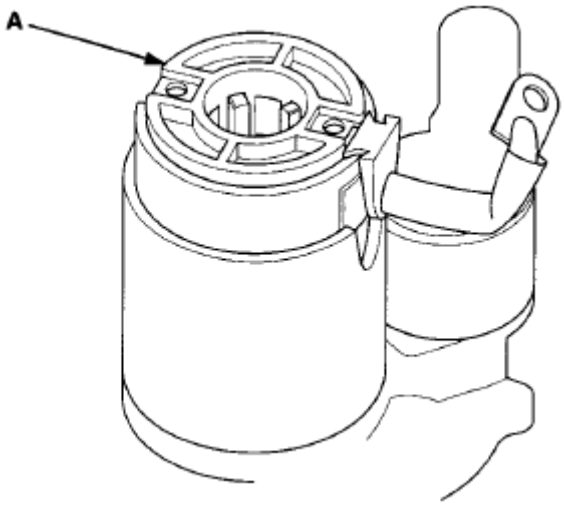

Fig. 39: Identifying Brush Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

20. Place the brush holder assembly on the armature, then move the brush holder down to the armature.

NOTE: Keep the brush holder on the armature so the brushes do not come out of the brush holder.

21. Install the end cover (A) to retain the brush holder (B).

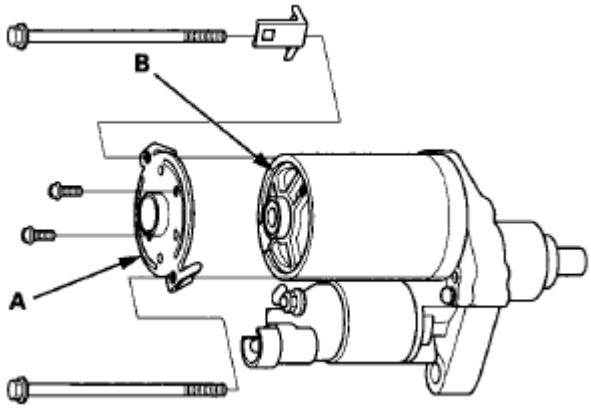

Fig. 40: Identifying End Cover And Brush Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Install the **starter**.

A/T MODEL

Exploded View

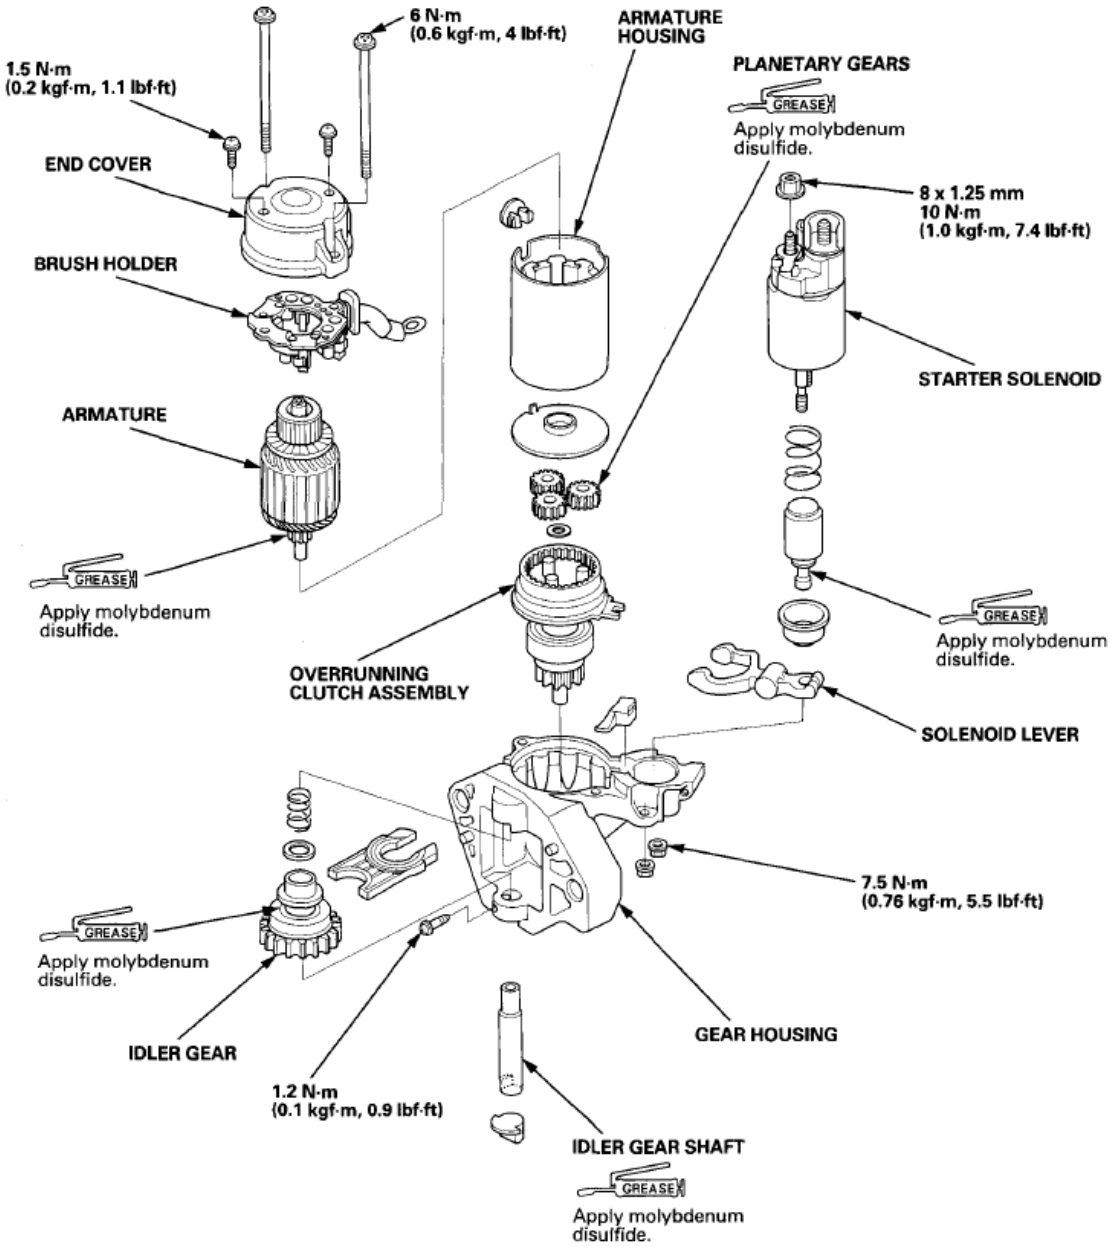

Fig. 41: Exploded View Of A/T Model With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

NOTE: Refer to the Exploded View if needed during this procedure.

Brush Holder Removal

1. Remove the **starter**.
2. Disconnect the motor wire from M terminal (see step 4), and remove the end cover.
3. Pry back each brush spring with a screwdriver, then position the brush on the brush holder (A) about halfway out of its holder. Release the spring to hold it in place.

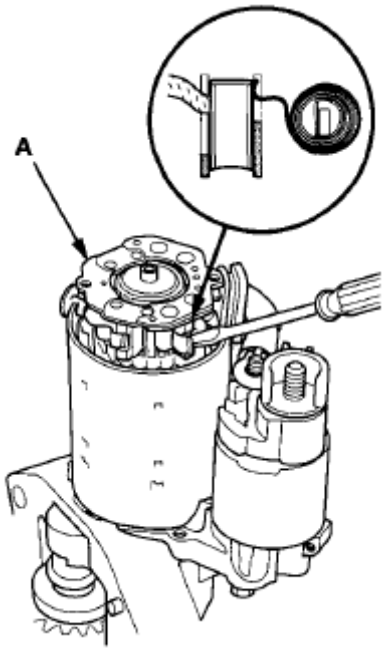

Fig. 42: Identifying Brush Holder
Courtesy of AMERICAN HONDA MOTOR CO., INC.

4. Remove the brush holder assembly.

Armature Inspection and Test

5. Inspect the armature for wear or damage from contact with the permanent magnet. If there is wear or damage, replace the armature.

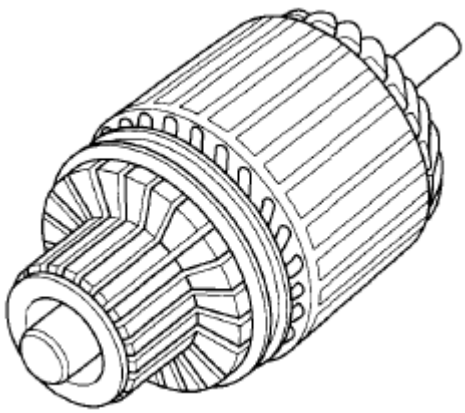

Fig. 43: Identifying Armature
Courtesy of AMERICAN HONDA MOTOR CO., INC.

6. Check the commutator (A) surface. If the surface is dirty or burnt, resurface it with an emery cloth or a lathe to the specifications in step 7, or recondition with #500 or #600 sandpaper (B).

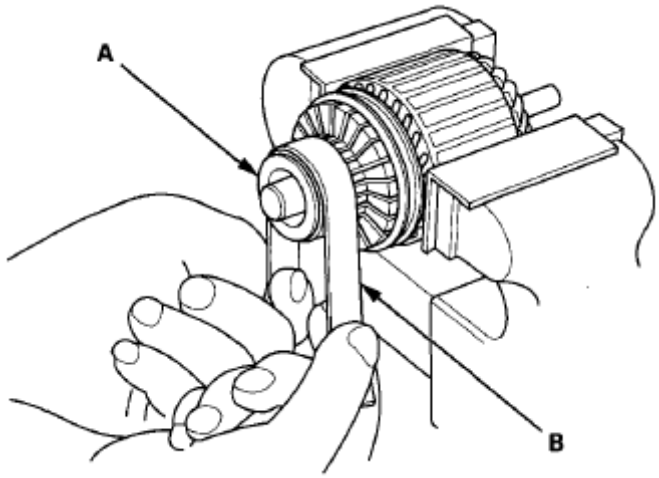

Fig. 44: Identifying Commutator And Sandpaper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

7. Check the commutator diameter with a digital caliper or dial type caliper. If the diameter is below the service limit, replace the armature.

   Commutator Diameter

   Standard (New): 28.9- 29.0 mm (1.138- 1.142 in)

   Service Limit: 28.0 mm (1.102 in)

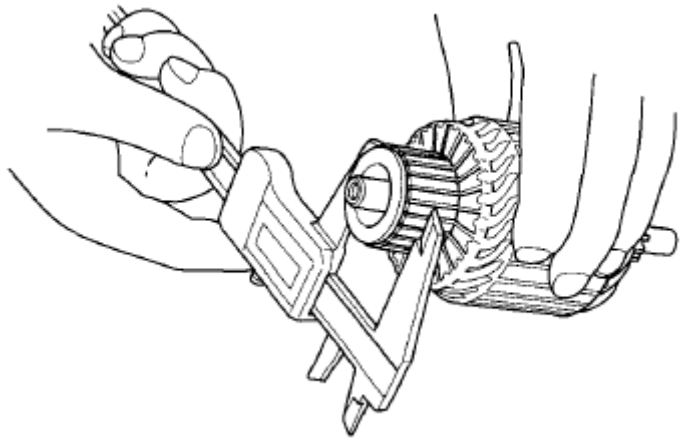

Fig. 45: Measuring Diameter Of Commutator Using Vernier Caliper
Courtesy of AMERICAN HONDA MOTOR CO., INC.

8. Measure the commutator (A) runout:
   - If the commutator runout is within the service limit, check the commutator for carbon dust or brass chips between the segments.
   - If the commutator runout is not within the service limit, replace the armature.

Commutator Runout

Standard (New): 0.02 mm (0.0008 in) max.

Service Limit: 0.05 mm (0.0020 in)

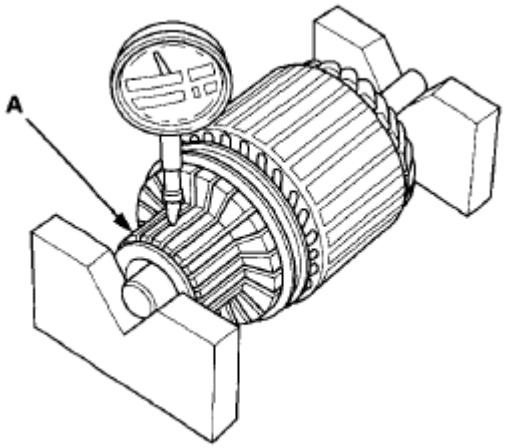

Fig. 46: Identifying Commutator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

9. Use a digital caliper or dial type caliper to check the mica depth (A). If the mica depth is below the service limit, replace the armature.

Commutator Mica Depth

Standard (New): 0.50- 0.90 mm (0.0197- 0.0354 in)

Service Limit: 0.20 mm (0.0079 in)

Fig. 47: Checking Mica Depth Of Commutator Slots
Courtesy of AMERICAN HONDA MOTOR CO., INC.

10. Use an ohmmeter to check for continuity between the segments of the commutator. If there is an open circuit between any segments, replace the armature.

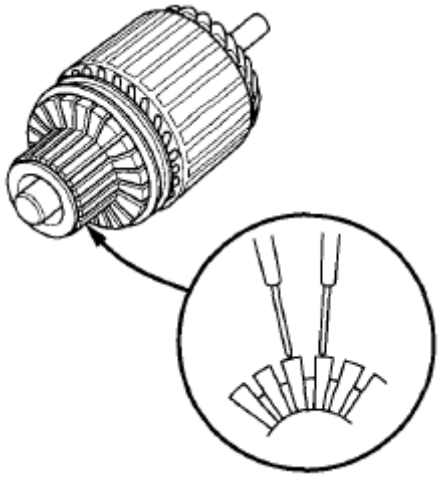

Fig. 48: Checking Continuity Between Segments Of Commutator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

11. Place the armature (A) on an armature tester (B). Hold a hacksaw blade (C) on the armature core. If the blade is attracted to the core while the core is turned, the armature is shorted. Replace the armature.

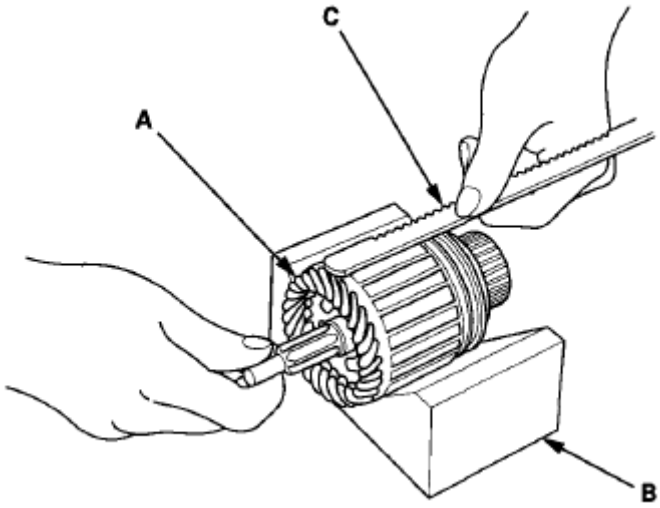

Fig. 49: Identifying Armature, Armature Tester And Hacksaw Blade
Courtesy of AMERICAN HONDA MOTOR CO., INC.

12. Use an ohmmeter to check for continuity between the commutator (A) and the armature coil core (B), and between the commutator and the armature shaft (C). If there is continuity, replace the armature.

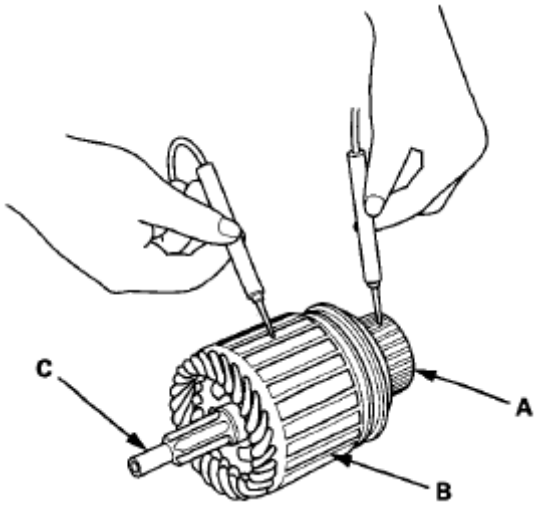

Fig. 50: Identifying Commutator, Armature Coil Core And Armature Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Overrunning Clutch Inspection

13. Slide the overrunning clutch (A) along the shaft. Replace it if it does not slide smoothly.

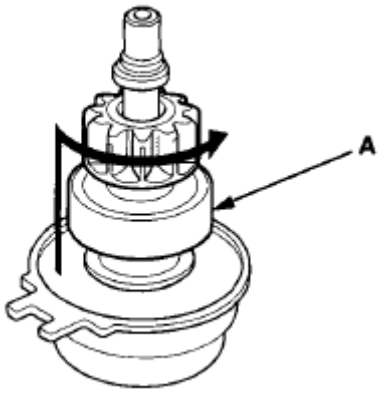

Fig. 51: Sliding Overrunning Clutch Along Shaft
Courtesy of AMERICAN HONDA MOTOR CO., INC.

14. Hold the overrunning clutch (A), and turn the drive gear (B) in the direction shown to make sure it turns freely. Also make sure the drive gear locks in the opposite direction. If it does not lock, replace the overrunning clutch assembly.

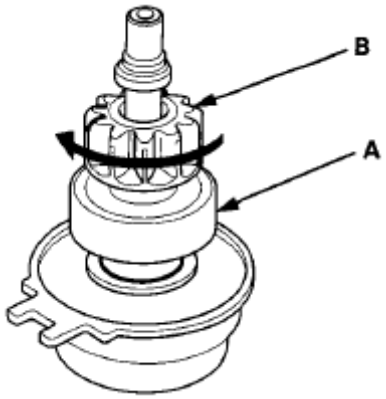

Fig. 52: Turning Drive Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

15. If the starter drive gear is worn or damaged, replace the overrunning clutch assembly; the gear is not available separately. Check the condition of the idler gear and the torque converter ring gear. Replace it if the starter drive gear teeth are damaged.

Starter Brush Inspection

16. Measure the brush length. If it is shorter than the service limit, replace the brush holder assembly.

Brush Length

Standard (New): 15.0- 16.0 mm (0.591- 0.630 in)

Service Limit: 9.0 mm (0.354 in)

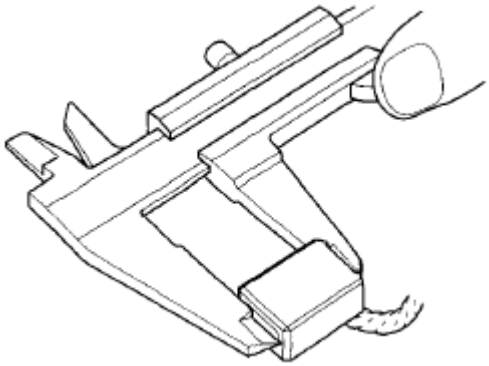

Fig. 53: Measuring Brush Length
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Starter Brush Holder Test

17. Check for continuity between the (+) brush holders (A) and the (-) brush holders (B). If there is continuity, replace the brush holder assembly.

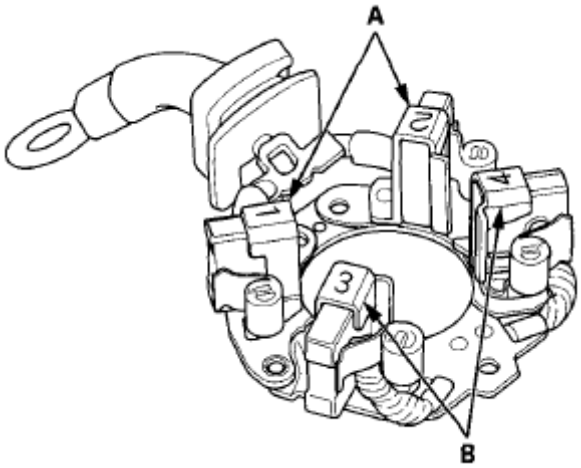

Fig. 54: Identifying (+) And (-) Brush Holders
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Brush Spring Inspection

18. Insert the brush (A) into the brush holder, and bring the brush into contact with the commutator, then attach a spring scale (B) to the spring (C). Measure the spring tension at the moment the spring lifts off the brush. If it is not within the standard, replace the brush holder assembly.

Spring Tension

Standard (New): 22.3- 27.1 N (2.27- 2.76 kgf, 5.00- 6.08 lbf)

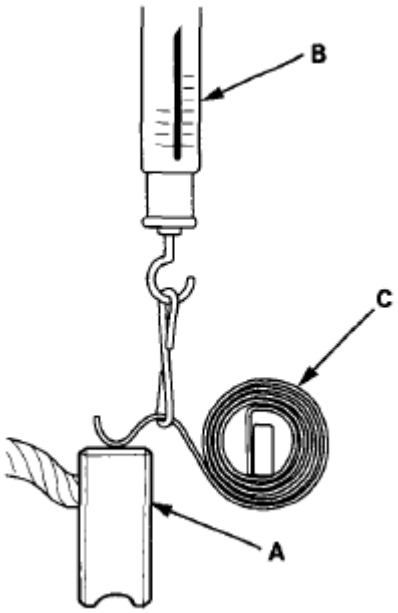

Fig. 55: Identifying Brush, Spring And Spring Scale
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Planetary Gear Inspection

19. Check the planetary gears (A), the armature shaft gear (B), and the internal ring gear (C). Replace them if they are worn or damaged.

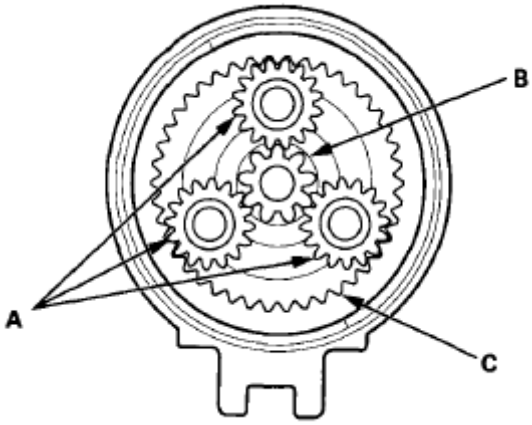

Fig. 56: Identifying Planetary Gear, Armature Shaft Gear And Internal Ring Gear
Courtesy of AMERICAN HONDA MOTOR CO., INC.

Starter Reassembly

20. Install the armature housing (A) and the armature (B) by aligning the slotted point (C) to the projection (D).

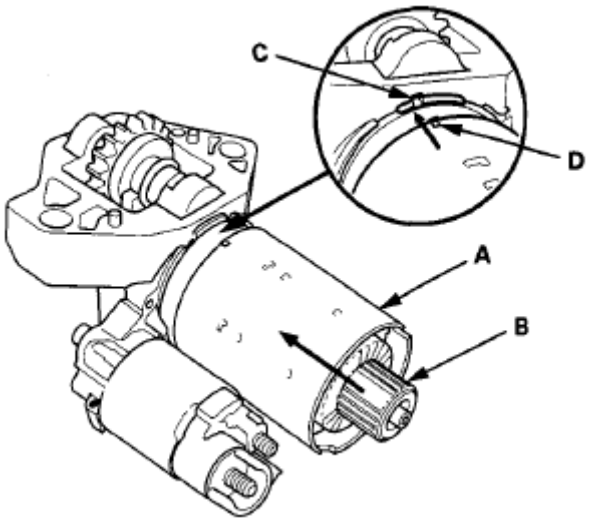

Fig. 57: Identifying Armature Housing, Armature, Slotted Point And Projection
Courtesy of AMERICAN HONDA MOTOR CO., INC.

21. Pry back each brush spring with a screwdriver, then position the brush on the brush holder about halfway out of its holder. Release the spring to hold it in place.

NOTE: To seat the new brushes, slip a strip of # 500 or #600 sandpaper, with the grit side up, between the commutator and the each brush, and smoothly turn the armature. The contact surface of the brushes will be sanded to the same contour as the commutator.

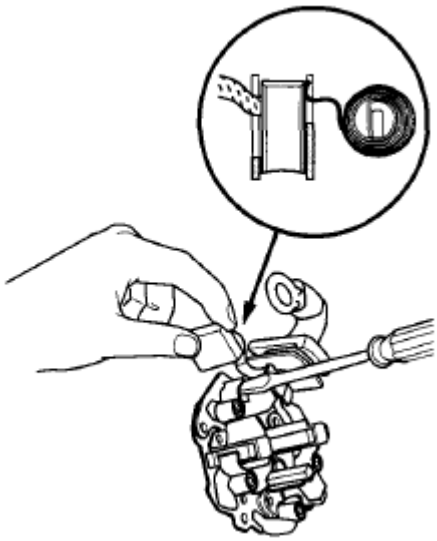

Fig. 58: Prying Back Each Brush Spring Using Screw Driver
Courtesy of AMERICAN HONDA MOTOR CO., INC.

22. Install the brush holder assembly. Next, pry back each brush spring again, and push each brush down until it seats against the commutator, then release the spring against the end of the brush.

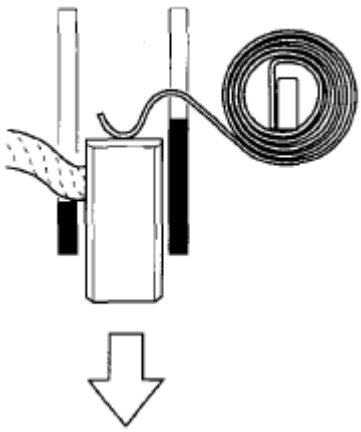

Fig. 59: Pushing Down Each Brush Till Commutator
Courtesy of AMERICAN HONDA MOTOR CO., INC.

23. Install the end cover to retain the brush holder.

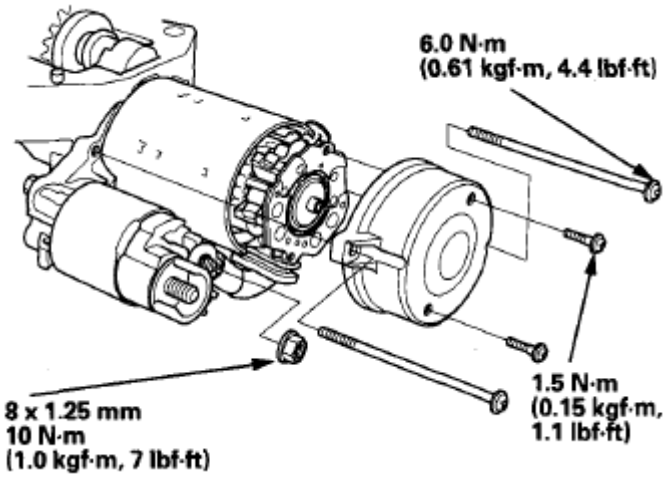

Fig. 60: Identifying Brush Holder And Related Components With Torque Specifications
Courtesy of AMERICAN HONDA MOTOR CO., INC.

24. Install the **starter**.

2012 ENGINE PERFORMANCE

Advanced Diagnostics - TL

DTC P0101: MASS AIRFLOW (MAF) SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM

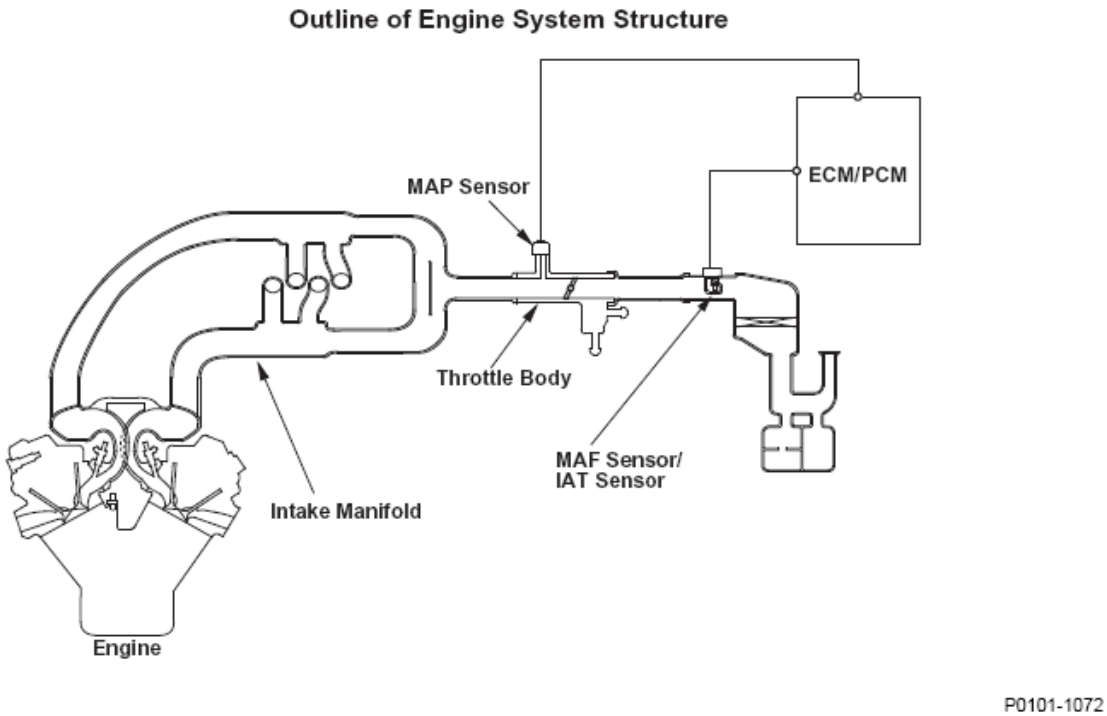

Fig. 1: Overview Of Engine System Structure

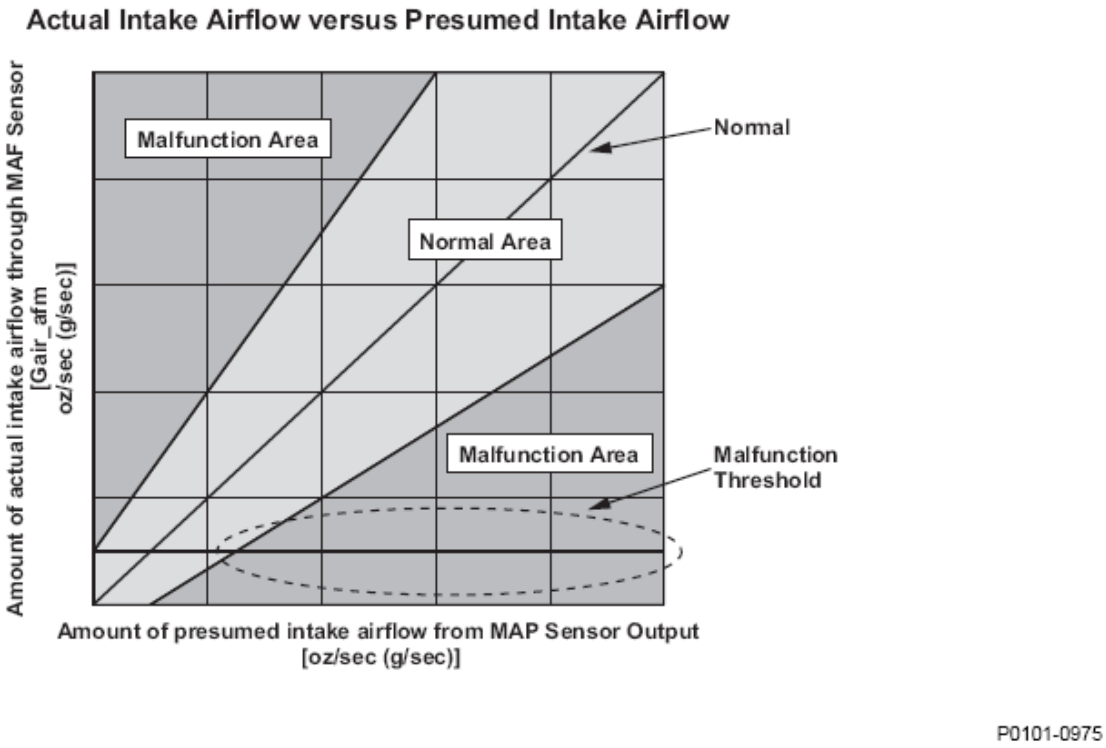

Fig. 2: Actual Intake Airflow Versus Presumed Intake Airflow Graph

GENERAL DESCRIPTION

The mass airflow (MAF) sensor directly measures the amount of intake airflow into the engine, and the engine control module (ECM)/powertrain control module (PCM) controls the fuel injection based on the measured value. The manifold absolute pressure (MAP) sensor measures the intake manifold pressure, and the ECM/PCM calculates the amount of intake airflow from the MAP sensor output and the engine revolutions. The ECM/PCM compares the MAF sensor output (amount of intake airflow) and the amount of intake airflow calculated from MAP sensor output. If their difference is too large (in the malfunction area), the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Once per driving cycle
Sequence	None
Duration	5.0 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	Minimum	Maximum
Elapsed time after starting the engine	3.0 seconds	-

Engine coolant temperature	156 °F (69 °C)	-
Engine speed	550 rpm	6,900 rpm(1) 6,800 rpm(2)
No active DTCs set (prevents monitor from running)	P0102, P0103, P0107, P0108, P0112, P0113, P0117, P0118, P0171, P0172, P0174, P0175, P0300, P0301, P0302, P0303, P0304, P0305, P0306, P0335, P0339, P0351, P0352, P0353, P0354, P0355, P0356, P0401, P0404, P0443, P0496, P0497, P0506, P0507, P1077, P1078, P1128, P1129, P145C, P2279, P2413, P2646, P2647, P2648, P2649	
(1) J35Z6 engine (2) J37A4 engine		

MALFUNCTION THRESHOLD

The difference between the amount of intake air measured by the MAF sensor and the amount of intake air calculated from the MAP sensor output is out of the normal area for at least 5.0 seconds.

DRIVING PATTERN

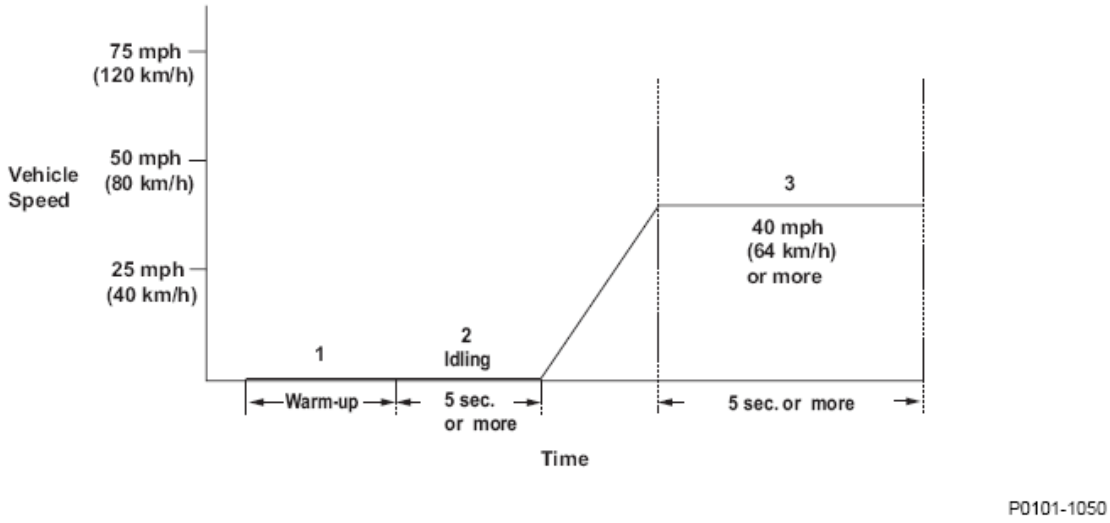

Fig. 3: Vehicle Speed Driving Pattern

1. Start the engine. Hold the engine speed at 3,000 rpm without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
2. Let the engine idle for at least 5 seconds.
3. Drive the vehicle at a steady speed of 40 mph (64 km/h) or more for at least 5 seconds.
    - When freeze data is stored, drive the vehicle under those conditions instead of Driving Pattern step 3.
    - When you have difficulty duplicating the DTC because of road conditions and traffic situations, repeat the driving pattern several times.

- Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0102: MASS AIRFLOW (MAF) SENSOR CIRCUIT LOW VOLTAGE

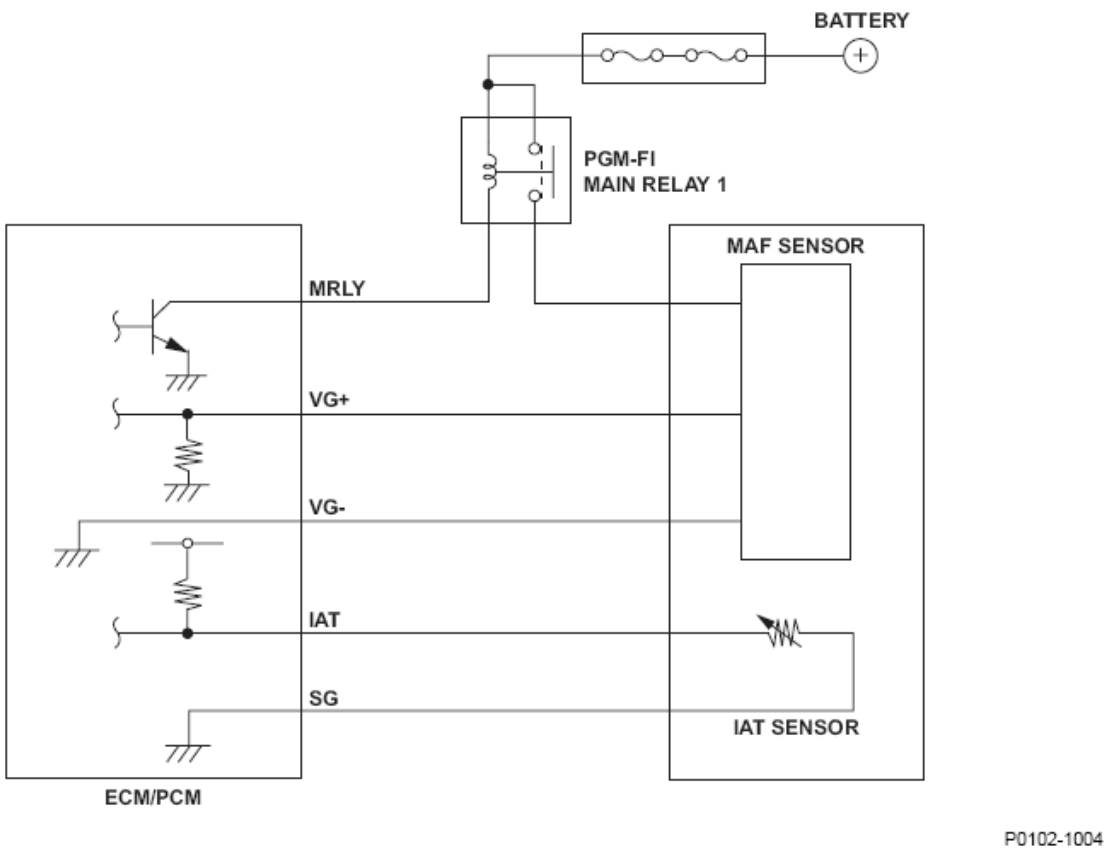

Fig. 4: Mass Airflow Sensor - Circuit Diagram

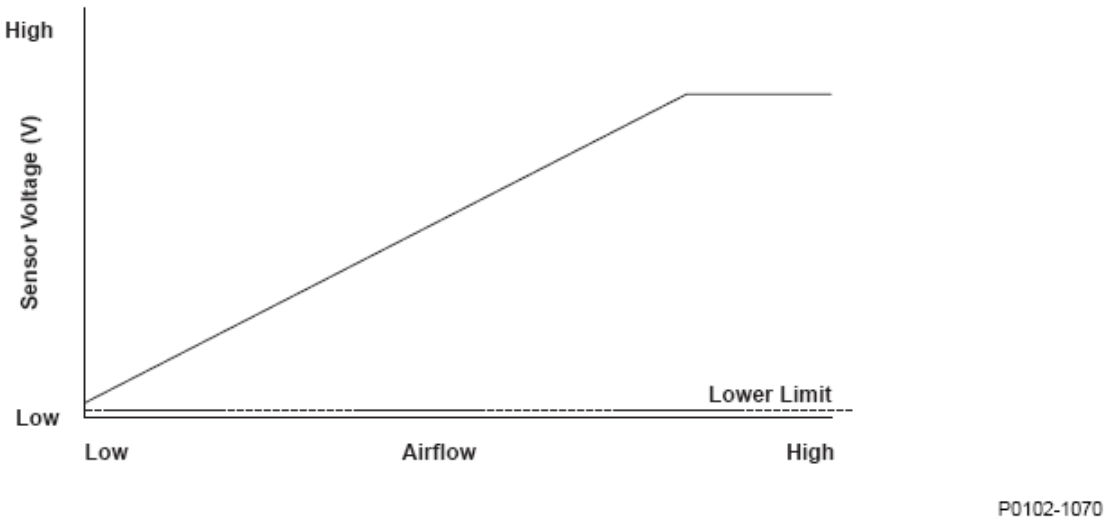

Fig. 5: Mass Airflow Sensor Voltage Versus Airflow Graph (Lower Limit)

GENERAL DESCRIPTION

The mass airflow (MAF) sensor is attached to the intake air passage, and it measures the amount of intake airflow. The MAF sensor is a hot wire airflow meter. The airflow cools the electrically heated wire that is mounted in the air passage. The engine control module (ECM)/powertrain control module (PCM) determines the amount of intake airflow by detecting the current that is required to keep the hot wire at a constant temperature. The lower limit of the MAF sensor output is specified. If the output is below that limit, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	2.0 seconds or more
DTC Type	One drive cycle, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	
Ignition switch(1)	ON (II)
Engine start/stop button(2)	ON mode
No active DTCs set (prevents monitor from running)	P0103
(1) Without keyless access system (2) With keyless access system	

MALFUNCTION THRESHOLD

The MAF sensor output voltage is 0.10 V or less for at least 2.0 seconds.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected, the MIL comes on and a Pending DTC, a Confirmed DTC, and the freeze data are stored in the ECM/PCM memory.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0103: MASS AIRFLOW (MAF) SENSOR CIRCUIT HIGH VOLTAGE

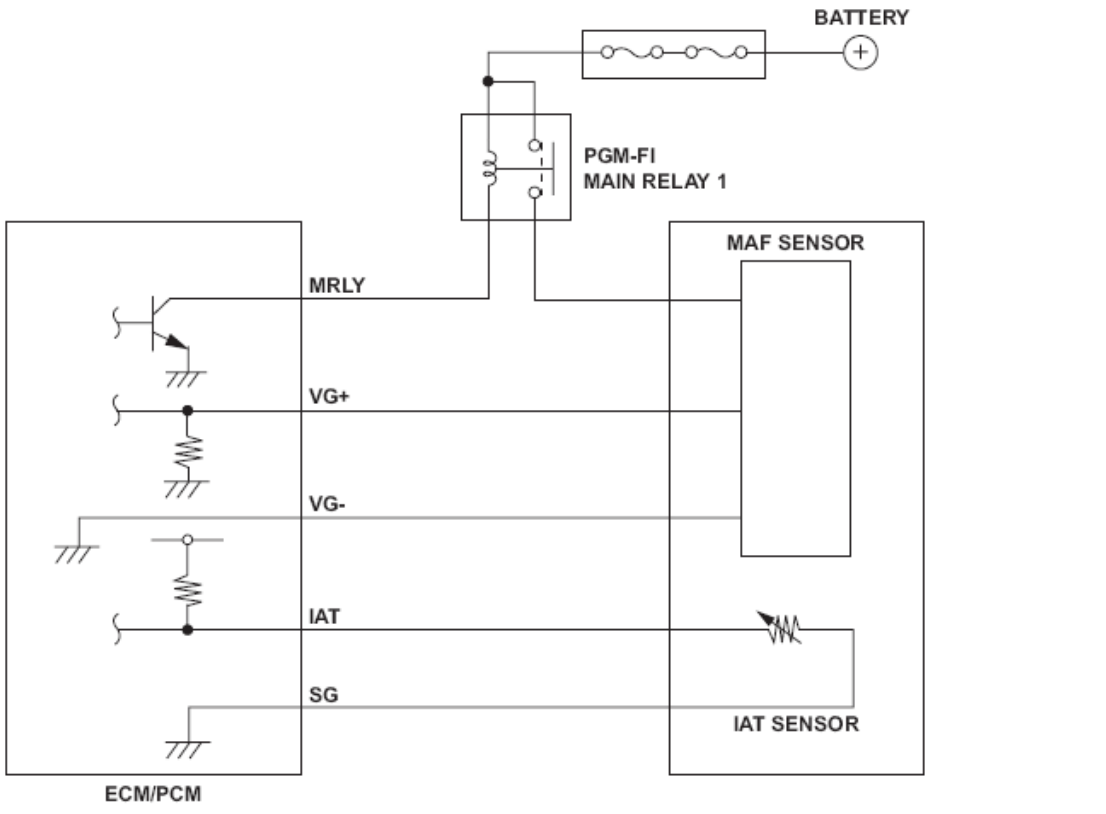

Fig. 6: Mass Airflow Sensor - Circuit Diagram

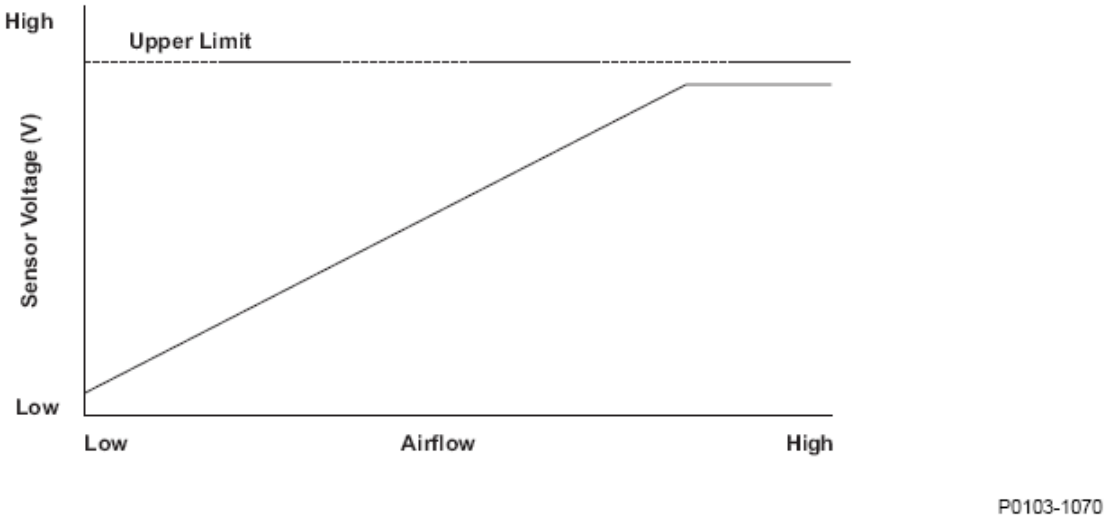

Fig. 7: Mass Airflow Sensor Voltage Versus Airflow Graph (Upper Limit)

GENERAL DESCRIPTION

The mass airflow (MAF) sensor is attached to the intake air passage, and it measures the amount of intake airflow. The MAF sensor is a hot wire airflow meter. The airflow cools the electrically heated wire that is mounted in the air passage. The engine control module (ECM)/powertrain control module (PCM) determines the amount of intake airflow by detecting the current that is required to keep the hot wire at a constant temperature. The upper limit of the MAF sensor output is specified. If the output is above that limit, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	2.0 seconds or more
DTC Type	One drive cycle, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	
Ignition switch(1)	ON (II)
Engine start/stop button(2)	ON mode
No active DTCs set (prevents monitor from running)	P0102
(1) Without keyless access system (2) With keyless access system	

MALFUNCTION THRESHOLD

The MAF sensor output voltage is 4.89 V or more for at least 2.0 seconds.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected, the MIL comes on and a Pending DTC, a Confirmed DTC, and the freeze data are stored in the ECM/PCM memory.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0107: MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR CIRCUIT LOW VOLTAGE

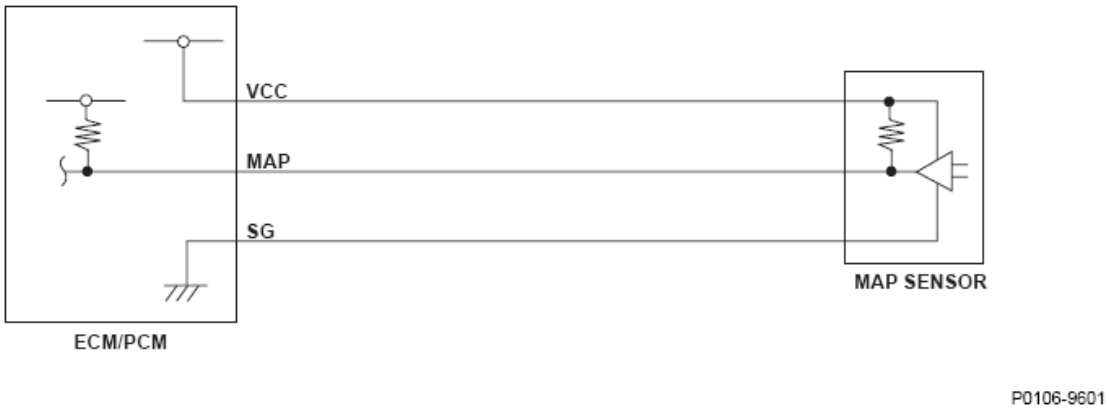

Fig. 8: Manifold Absolute Pressure Sensor - Circuit Diagram

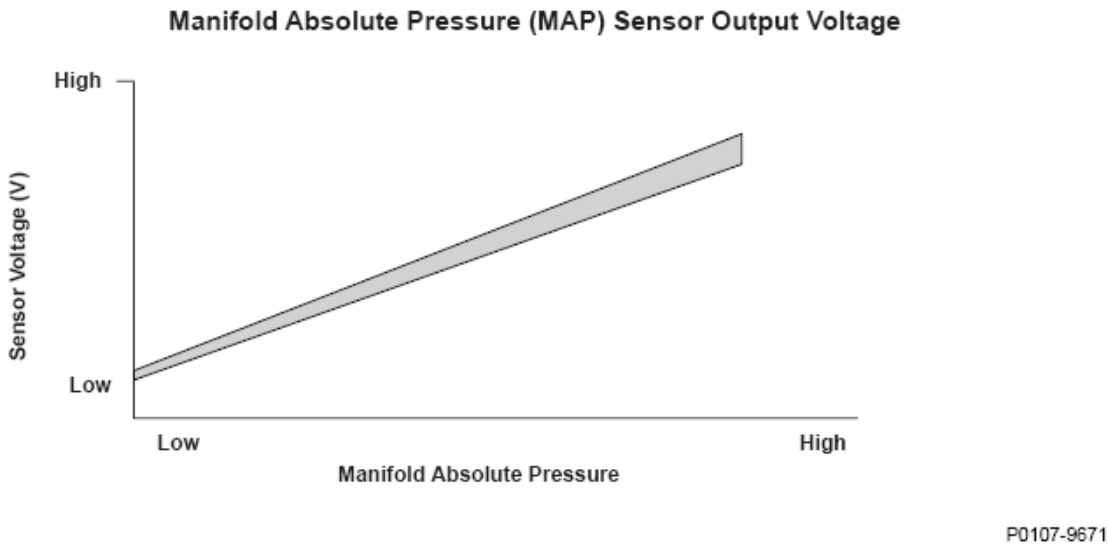

Fig. 9: Manifold Absolute Pressure Sensor Output Voltage Graph

GENERAL DESCRIPTION

The manifold absolute pressure (MAP) sensor measures the pressure or vacuum in the manifold. This measurement is converted into an electrical signal which the engine control module (ECM)/powertrain control module (PCM) uses to run the engine. The MAP sensor outputs low signal voltage at high vacuum (throttle valve closed) and high signal voltage at low vacuum (throttle valve wide open). If the signal voltage from the MAP sensor is a set value, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	2 seconds or more
DTC Type	One drive cycle, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	
Ignition switch(1)	ON (II)
Engine start/stop button(2)	ON mode
No active DTCs set (prevents monitor from running)	P0108
(1) Without keyless access system (2) With keyless access system	

MALFUNCTION THRESHOLD

The MAP sensor output voltage is 0.23 V or less for at least 2 seconds.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected, the MIL comes on and a Pending DTC, a Confirmed DTC, and the freeze data are stored in the ECM/PCM memory.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0108: MANIFOLD ABSOLUTE PRESSURE (MAP) SENSOR CIRCUIT HIGH VOLTAGE

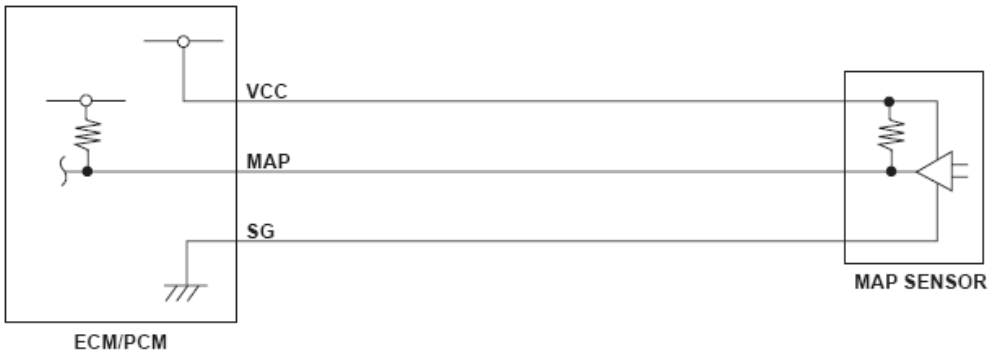

Fig. 10: Manifold Absolute Pressure Sensor - Circuit Diagram

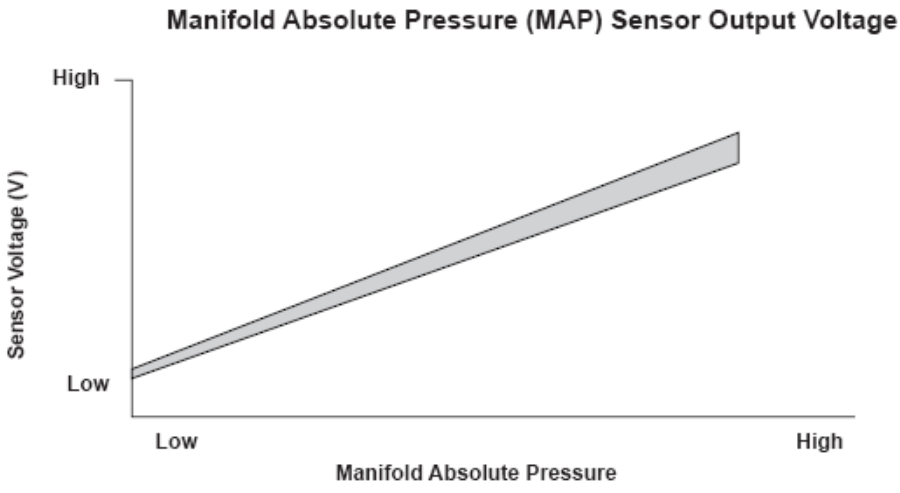

Fig. 11: Manifold Absolute Pressure Sensor Output Voltage Graph

GENERAL DESCRIPTION

The manifold absolute pressure (MAP) sensor measures the pressure or vacuum in the manifold. This measurement is converted into an electrical signal which the engine control module (ECM)/powertrain control module (PCM) uses to run the engine. The MAP sensor outputs low signal voltage at high vacuum (throttle valve closed) and high signal voltage at low vacuum (throttle valve wide open). If the signal voltage from the MAP sensor is a set value, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	2 seconds or more
DTC Type	One drive cycle, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	
Ignition switch(1)	ON (II)
Engine start/stop button(2)	ON mode
No active DTCs set (prevents monitor from running)	P0107
(1) Without keyless access system (2) With keyless access system	

MALFUNCTION THRESHOLD

The MAP sensor output voltage is 4.49 V or more for at least 2 seconds.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected, the MIL comes on and a Pending DTC, a Confirmed DTC, and the freeze data are stored in the ECM/PCM memory.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0111: INTAKE AIR TEMPERATURE (IAT) SENSOR CIRCUIT RANGE/PERFORMANCE PROBLEM

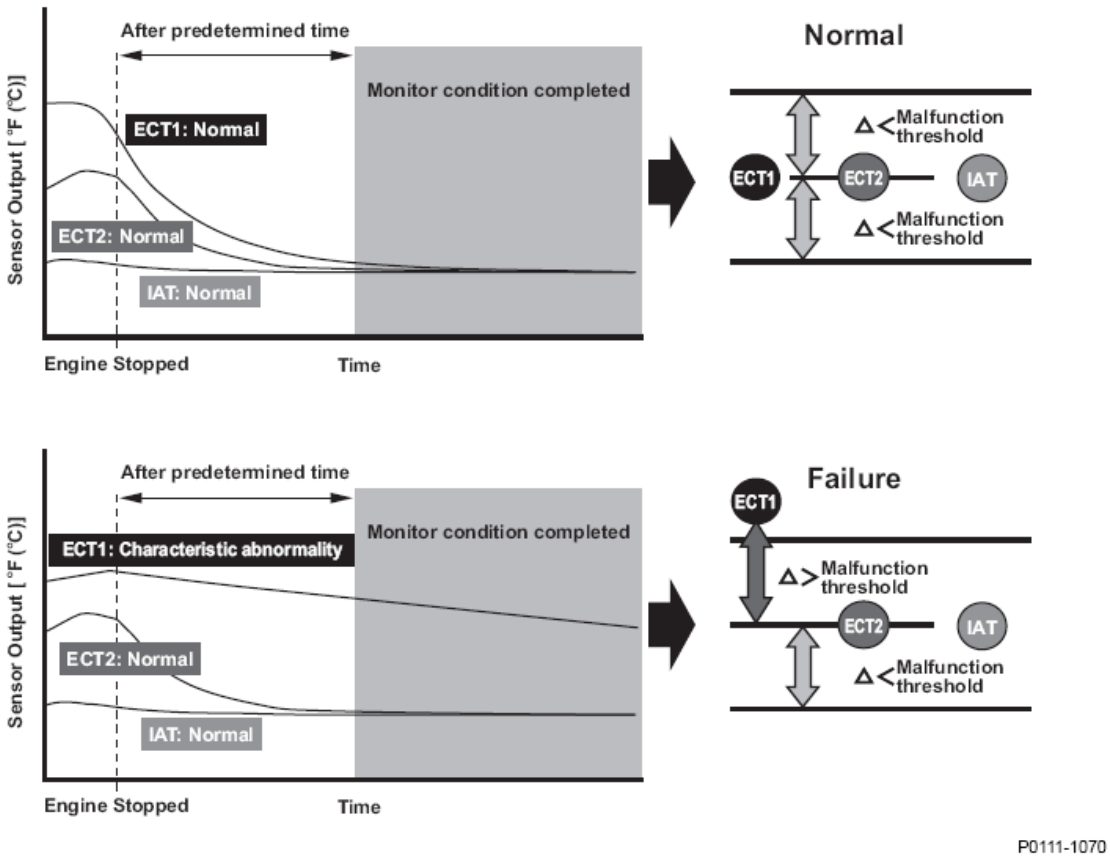

Fig. 12: Engine Coolant Temperature Sensor Characteristics Curve

GENERAL DESCRIPTION

Two engine coolant temperature (ECT) sensors and one intake air temperature (IAT) sensor are used by the engine control module (ECM)/powertrain control module (PCM). When the engine is stopped and enough time has passed, the temperature of the engine will equalize to the ambient temperature. ECT sensor 1 and IAT sensor are compared to ECT sensor 2, and if an inappropriate temperature is read, the ECM/PCM detects a malfunction in the corresponding sensor and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Once per driving cycle
Sequence	None
Duration	10 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	Minimum	Maximum
Engine off time	6 hours	-
No active DTCs set (prevents monitor from running)	P0112, P0113, P0116, P0117, P0118, P0125, P2184, P2185, P2610	

MALFUNCTION THRESHOLD

A malfunction is detected if the following conditions are present after the engine has stopped and the ignition switch has been turned to LOCK (0) or engine start/stop button has been pressed to select the OFF mode, for at least 6 hours before restarting the engine:

Temperature difference between each sensor values		Malfunction judgment		
ECT1 - ECT2	IAT - ECT2	ECT sensor 1	IAT sensor	ECT sensor 2
Higher than 57 °F (32 °C)	Higher than 57 °F (32 °C)	Normal	Normal	Failure
	From -43 °F (-24 °C) to 57 °F (32 °C)	Failure	Normal	Normal
	Lower than -43 °F (-24 °C)	Failure	Failure	Normal
From -43 °F (-24 °C) to 57 °F (32 °C)	Higher than 57 °F (32 °C)	Normal	Failure	Normal
	From -43 °F (-24 °C) to 57 °F (32 °C)	Normal	Normal	Normal
	From -44 °F (-25 °C) to -108 °F (-60 °C)	Normal	Failure Suspended(1)	Normal
	Lower than -108 °F (-60 °C)	Normal	Failure	Normal
Lower than -43 °F (-24 °C)	Higher than 57 °F (32 °C)	Failure	Failure	Normal
	From -43 °F (-24 °C) to 57 °F (32 °C)	Failure	Normal	Normal
	Lower than -43 °F (-24 °C)	Normal	Normal	Failure

(1) Malfunction judgment is suspended because the cooled air introduced after engine start lowers the intake air temperature; the ambient temperature condition does not stay equal.

DRIVING PATTERN

1. Turn the ignition switch to LOCK (0) or press the engine start/stop button to select the OFF mode, and wait at least 6 hours.
2. Start the engine, and let it idle for at least 10 seconds.
   - Do not use an engine block heater because the engine coolant temperature will not stay equal during engine stop.
   - When freeze data is stored, test the vehicle under an ambient temperature close to the intake air temperature in the freeze data.
   - When an ambient temperature extremely changes, malfunction judgment may not execute. Avoid extreme temperature changing condition after or before engine start. (When the vehicle is parked in the garage, open the shutter to introduce outside air; then start the engine.)

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0112: INTAKE AIR TEMPERATURE (IAT) SENSOR CIRCUIT LOW VOLTAGE

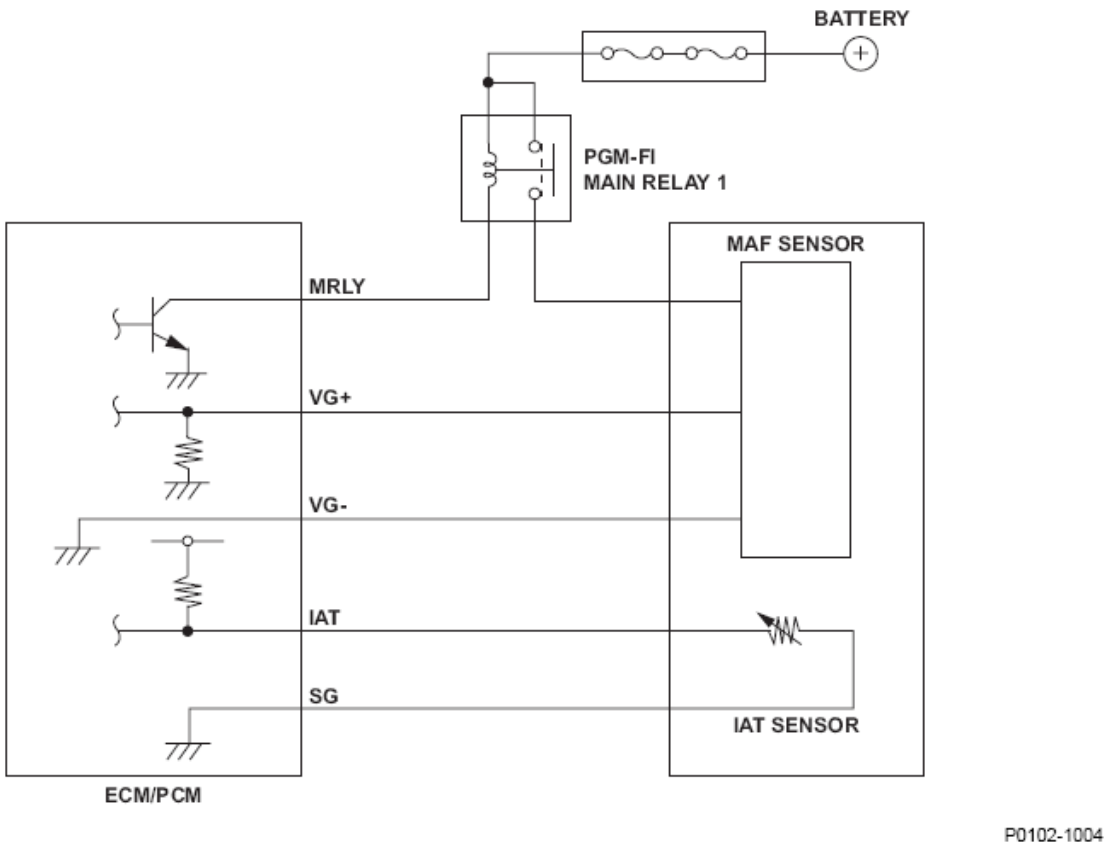

Fig. 13: Intake Air Temperature Sensor - Circuit Diagram

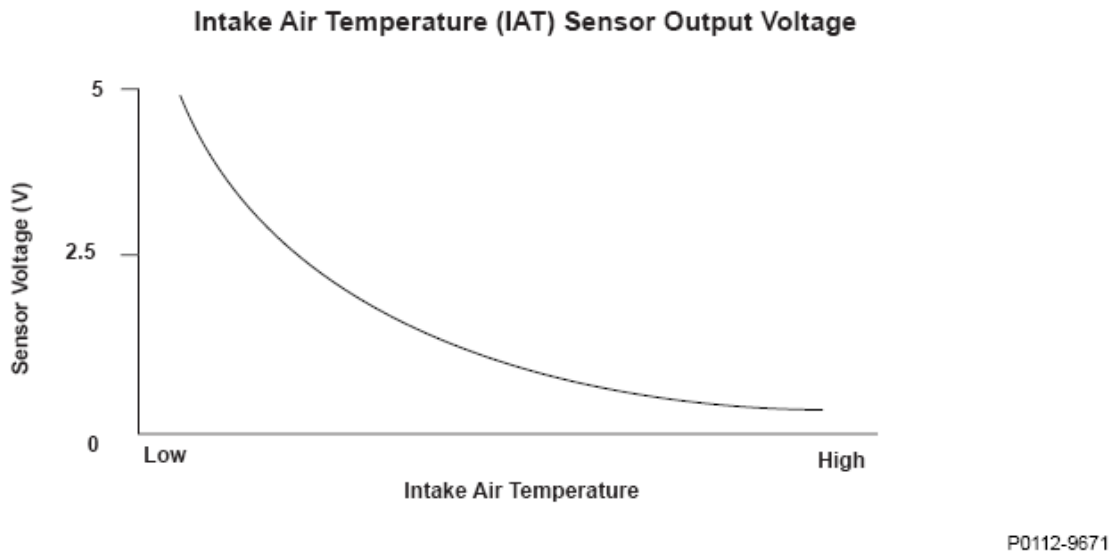

Fig. 14: Intake Air Temperature Sensor Output Voltage Graph

GENERAL DESCRIPTION

The intake air temperature (IAT) sensor is a thermistor that detects intake air temperature, and it is used for air/fuel ratio feedback control to compensate for the atmospheric density fluctuations that accompany changes in intake air temperature. The IAT sensor resistance varies depending on temperature. The output voltage and the sensor resistance increase as the intake air temperature decreases. Conversely, the output voltage and the sensor resistance decrease as the intake air temperature increases. If the IAT sensor output voltage is excessively low, the engine control module (ECM)/powertrain control module (PCM) detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	2.0 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	
Ignition switch(1)	ON (II)
Engine start/stop button(2)	ON mode
No active DTCs set (prevents monitor from running)	P0113
(1) Without keyless access system (2) With keyless access system	

MALFUNCTION THRESHOLD

The IAT sensor output voltage is 0.08 V or less for at least 2.0 seconds.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0113: INTAKE AIR TEMPERATURE (IAT) SENSOR CIRCUIT HIGH VOLTAGE

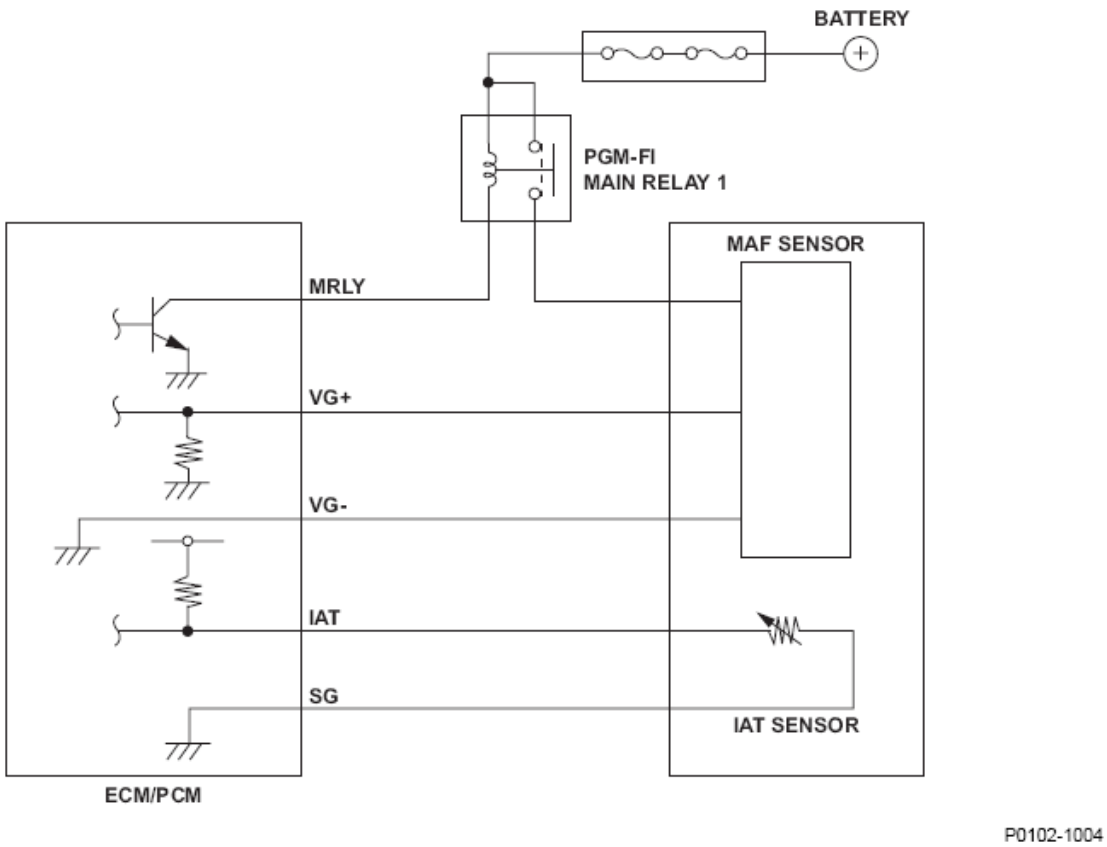

Fig. 15: Intake Air Temperature Sensor - Circuit Diagram

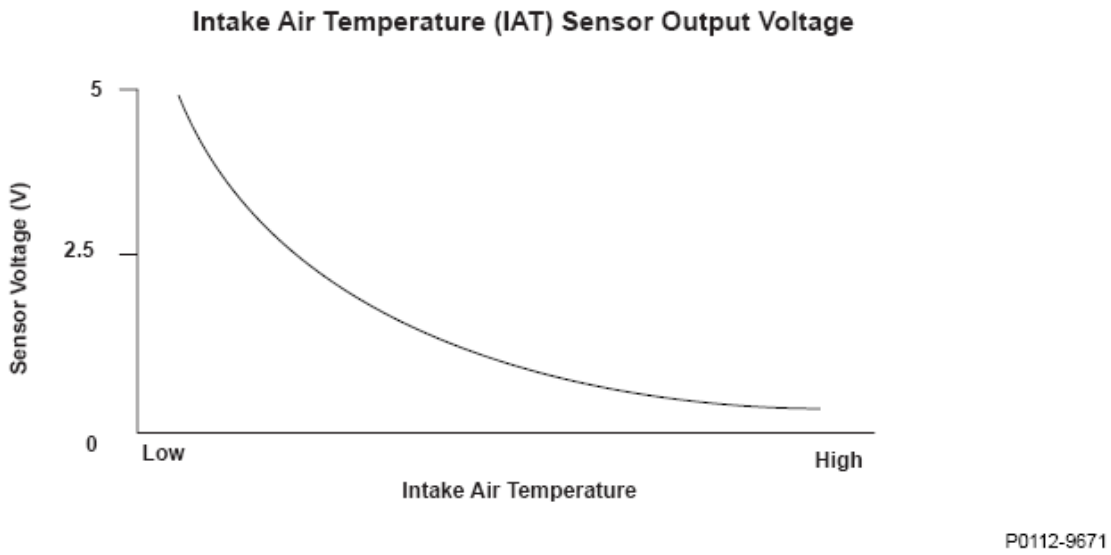

Fig. 16: Intake Air Temperature Sensor Output Voltage Graph

GENERAL DESCRIPTION

The intake air temperature (IAT) sensor is a thermistor that detects intake air temperature, and it is used for air/fuel ratio feedback control to compensate for the atmospheric density fluctuations that accompany changes in intake air temperature. The IAT sensor resistance varies depending on temperature. The output voltage and the sensor resistance increase as the intake air temperature decreases. Conversely, the output voltage and the sensor resistance decrease as the intake air temperature increases. If the IAT sensor output voltage is excessively high, the engine control module (ECM)/powertrain control module (PCM) detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	2.0 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	
Ignition switch(1)	ON (II)
Engine start/stop button(2)	ON mode
No active DTCs set (prevents monitor from running)	P0112
(1) Without keyless access system (2) With keyless access system	

MALFUNCTION THRESHOLD

The IAT sensor output voltage is 4.92 V or more for at least 2.0 seconds.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0116: ENGINE COOLANT TEMPERATURE (ECT) SENSOR 1 CIRCUIT RANGE/PERFORMANCE PROBLEM

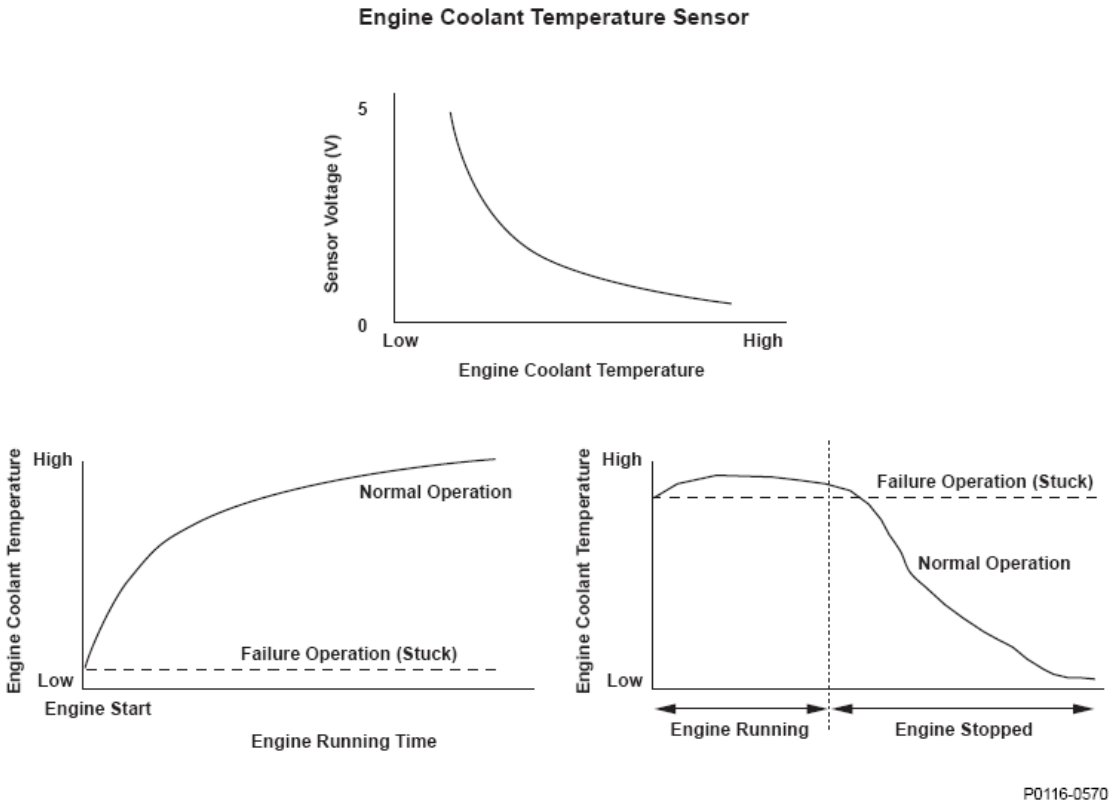

Fig. 17: Engine Coolant Temperature Sensor Characteristics Curve

GENERAL DESCRIPTION

The engine control module (ECM)/powertrain control module (PCM) supplies voltage to the engine coolant temperature signal circuit (about 5 V) through a pull-up resistor. As the engine coolant cools, the engine coolant temperature (ECT) sensor 1 resistance increases, and the ECM/PCM detects a high signal voltage. As the engine coolant warms, the ECT sensor 1 resistance decreases, and the ECM/PCM detects a low signal voltage. If the ECT sensor 1 output voltage does not reach a set temperature after starting the engine and driving a set time, or when the difference between the ECT sensor 1 output voltage while driving and the output voltage of ECT sensor 1 after the engine has been stopped a certain length of time does not change a certain amount, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Once per driving cycle
Sequence	None
Duration	30 minutes or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	Minimum	Maximum
Elapsed time after starting the engine	10 seconds	-
Fuel feedback	Other than during fuel cut-off operation	
No active DTCs set (prevents monitor from running)	P0101, P0102, P0103, P0107, P0108, P0117, P0118, P0134, P0135, P0154, P0155, P0171, P0172, P0174, P0175, P0300, P0301, P0302, P0303, P0304, P0305, P0306, P0335, P0339, P0351, P0352, P0353, P0354, P0355, P0356, P0401, P0404, P0443, P0496, P0497, P0506, P0507, P1077, P1078, P1128, P1129, P1172, P1174, P145C, P2195, P2197, P2227, P2228, P2229, P2237, P2238, P2240, P2241, P2243, P2245, P2247, P2249, P2251, P2252, P2254, P2255, P2279, P2413, P2610, P2646, P2647, P2648, P2649	
Other	With a completely cooled engine (one that has been off for at least 6 hours): Judgment is made after the engine has run for at least 30 minutes or been driven at least 3 miles (5 km), turn the ignition switch to LOCK (0) or press the engine start/stop button to select the OFF mode for at least 10 seconds, then started and run again for at least 10 seconds.	
	With a partially cooled engine (one that has been off for less than 6 hours): Judgment is made after the engine has run for at least 30 minutes or been driven at least 3 miles (5 km), turn the ignition switch to LOCK (0) or press the engine start/stop button to select the OFF mode for at least 3 hours, then started and run again for at least 10 seconds.	

MALFUNCTION THRESHOLD

Malfunction determination 1:

With a completely cooled engine (one that has been off for at least 6 hours):

When the change in coolant temperature after 30 minutes or more of running time or 3 miles (5 km) or more of driving distance is 18 °F (10 °C) or less, a malfunction is detected.

Malfunction determination 2:

With a partially cooled engine (one that has been off for less than 6 hours):

When the difference between the coolant temperature after 30 minutes or more of running time or 3 miles (5 km) or more of driving distance the coolant temperature after the engine has been off for 3 hours and then ran for 10 seconds is 18 °F (10 °C) or less, a malfunction is detected.

DRIVING PATTERN

- With a completely cooled engine (one that has been off for at least 6 hours).

1. Start the engine, and let it idle for at least 30 minutes or drive for at least 3 miles (5 km).
2. Turn the ignition switch to LOCK (0) or press the engine start/stop button to select the OFF mode for 10 seconds, then restart the engine and let it idle for at least 10 seconds.

- With a partially cooled engine (one that has been off for less than 6 hours).

1. Start the engine, and let it idle for at least 30 minutes or drive for at least 3 miles (5 km).
2. Turn the ignition switch to LOCK (0) or press the engine start/stop button to select the OFF mode for 3 hours, then restart the engine and let it idle for at least 10 seconds.

- Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0117: ENGINE COOLANT TEMPERATURE (ECT) SENSOR 1 CIRCUIT LOW VOLTAGE

Fig. 18: Engine Coolant Temperature Sensor 1 - Circuit Diagram

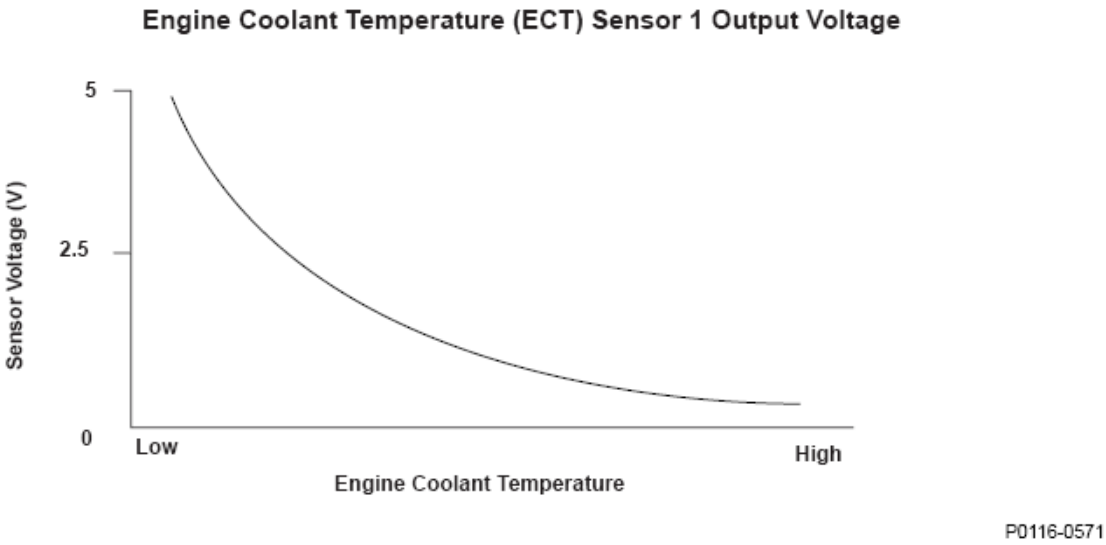

Fig. 19: Engine Coolant Temperature Sensor 1 Output Voltage Graph

GENERAL DESCRIPTION

Engine coolant temperature (ECT) sensor 1 is used for air/fuel ratio feedback control, ignition timing control, idle speed control, and other functions. The ECT sensor 1 resistance varies depending on the engine coolant temperature. As the engine coolant cools, the ECT sensor 1 resistance increases, and the engine control module (ECM)/powertrain control module (PCM) detects a high signal voltage. As the engine coolant warms, the ECT sensor 1 resistance decreases, and the ECM/PCM detects a low signal voltage. If the ECT sensor 1 output voltage is a set value when the engine coolant temperature is high, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	2 seconds or more
DTC Type	One drive cycle, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	
Ignition switch(1)	ON (II)
Engine start/stop button(2)	ON mode
No active DTCs set (prevents monitor from running)	P0118
(1) Without keyless access system (2) With keyless access system	

MALFUNCTION THRESHOLD

The ECT sensor 1 output voltage is 0.08 V or less for at least 2 seconds.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected, the MIL comes on and a Pending DTC, a Confirmed DTC, and the freeze data are stored in the ECM/PCM memory.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0118: ENGINE COOLANT TEMPERATURE (ECT) SENSOR 1 CIRCUIT HIGH VOLTAGE

Fig. 20: Engine Coolant Temperature Sensor 1 - Circuit Diagram

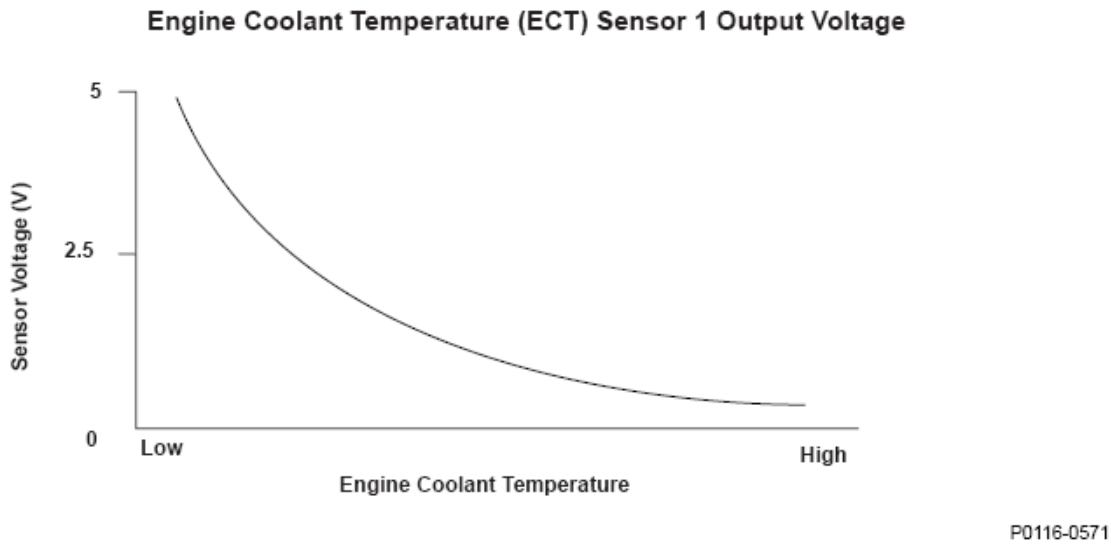

Fig. 21: Engine Coolant Temperature Sensor 1 Output Voltage Graph

GENERAL DESCRIPTION

Engine coolant temperature (ECT) sensor 1 is used for air/fuel ratio feedback control, ignition timing control, idle speed control, and other functions. The ECT sensor 1 resistance varies depending on the engine coolant temperature. As the engine coolant cools, the ECT sensor 1 resistance increases, and the engine control module (ECM)/powertrain control module (PCM) detects a high signal voltage. As the engine coolant warms, the ECT sensor 1 resistance decreases, and the ECM/PCM detects a low signal voltage. If the ECT sensor 1 output voltage is a set value when the engine coolant temperature is low, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	2 seconds or more
DTC Type	One drive cycle, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	
Ignition switch(1)	ON (II)
Engine start/stop button(2)	ON mode
No active DTCs set (prevents monitor from running)	P0117
(1) Without keyless access system (2) With keyless access system	

MALFUNCTION THRESHOLD

The ECT sensor 1 output voltage is 4.92 V or more for at least 2 seconds.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected, the MIL comes on and a Pending DTC, a Confirmed DTC, and the freeze data are stored in the ECM/PCM memory.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0122: THROTTLE POSITION (TP) SENSOR A CIRCUIT LOW VOLTAGE

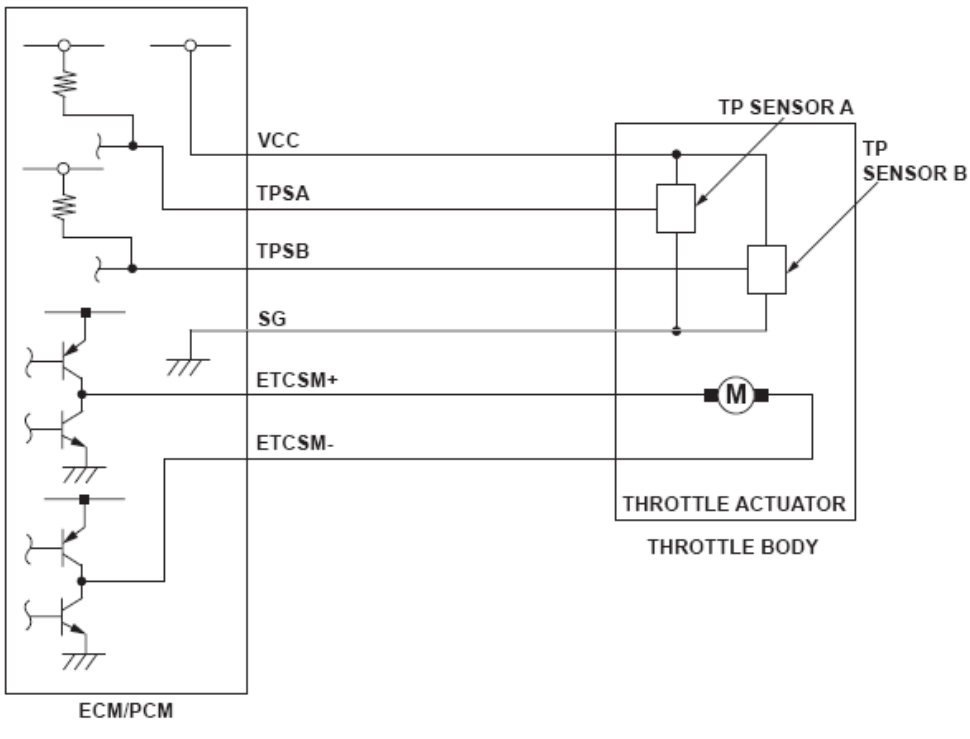

Fig. 22: Throttle Position Sensor - Circuit Diagram

GENERAL DESCRIPTION

The electronic throttle control system controls the throttle valve opening. The system includes the throttle actuator, the throttle valve, throttle position (TP) sensors A and B, the electronic throttle control system (ETCS) control relay, the accelerator pedal position (APP) sensor, and the engine control module (ECM)/powertrain

control module (PCM). TP sensor A is a semiconductor type, and it is attached to the throttle body and shaft to determine throttle valve position. The throttle valve position signal from TP sensor A is transmitted to the ECM/PCM for target position feedback control. If the signal from TP sensor A is a fixed value for a set time, the ECM/PCM detects a TP sensor A malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	200 milliseconds or more
DTC Type	One drive cycle, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	
Ignition switch(1)	ON (II)
Engine start/stop button(2)	ON mode
No active DTCs set (prevents monitor from running)	P0123, P0222, P0223, P2101, P2118, P2122, P2123, P2127, P2128, P2135, P2138, P2176
(1) Without keyless access system (2) With keyless access system	

MALFUNCTION THRESHOLD

The TP sensor A output voltage is 0.3 V or less for at least 200 milliseconds.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected, the MIL comes on and a Pending DTC, a Confirmed DTC, and the freeze data are stored in the ECM/PCM memory.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0123: THROTTLE POSITION (TP) SENSOR A CIRCUIT HIGH VOLTAGE

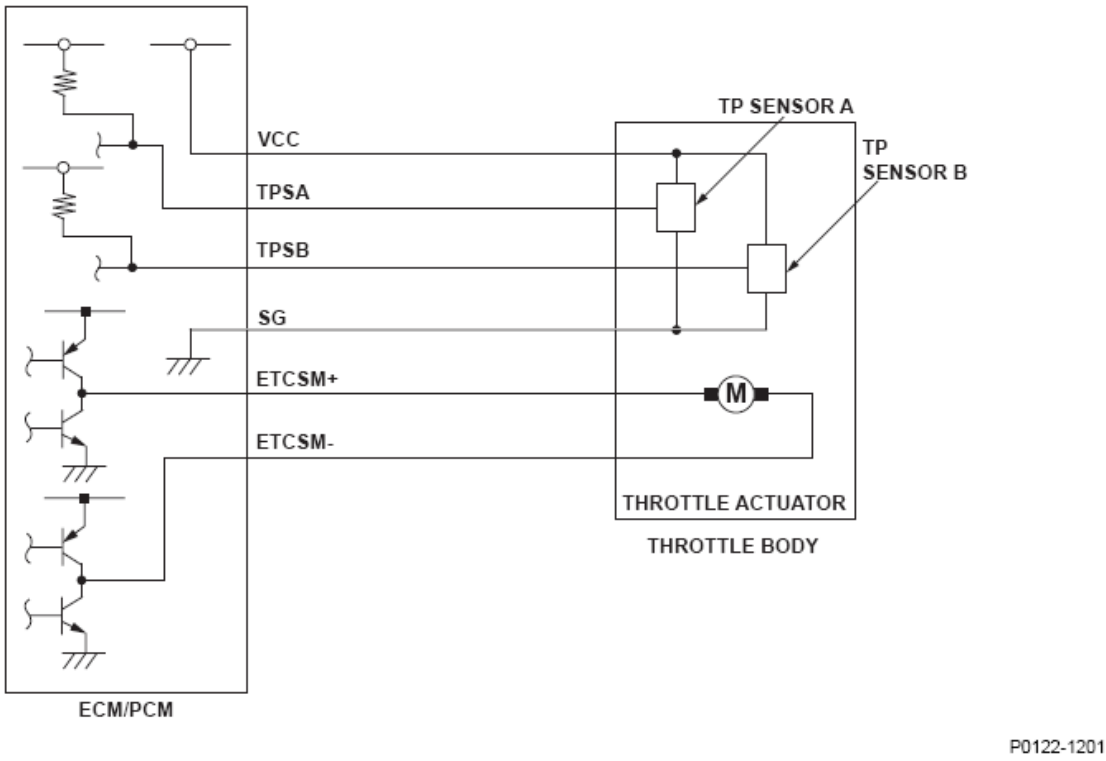

Fig. 23: Throttle Position Sensor - Circuit Diagram

GENERAL DESCRIPTION

The electronic throttle control system controls the throttle valve opening. The system includes the throttle actuator, the throttle valve, throttle position (TP) sensors A and B, the electronic throttle control system (ETCS) control relay, the accelerator pedal position (APP) sensor, and the engine control module (ECM)/powertrain control module (PCM). TP sensor A is a semiconductor type, and it is attached to the throttle body and shaft to determine throttle valve position. The throttle valve position signal from TP sensor A is transmitted to the ECM/PCM for target position feedback control. If the signal from TP sensor A is a fixed value for a set time, the ECM/PCM detects a TP sensor A malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	200 milliseconds or more
DTC Type	One drive cycle, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	
Ignition switch(1)	ON (II)

Engine start/stop button(2)	ON mode
No active DTCs set (prevents monitor from running)	P0122, P0222, P0223, P2101, P2118, P2122, P2123, P2127, P2128, P2135, P2138, P2176

(1) Without keyless access system

(2) With keyless access system

MALFUNCTION THRESHOLD

The TP sensor A output voltage is 4.8 V or more for at least 200 milliseconds.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected, the MIL comes on and a Pending DTC, a Confirmed DTC, and the freeze data are stored in the ECM/PCM memory.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0125: ENGINE COOLANT TEMPERATURE (ECT) SENSOR 1 MALFUNCTION/SLOW RESPONSE

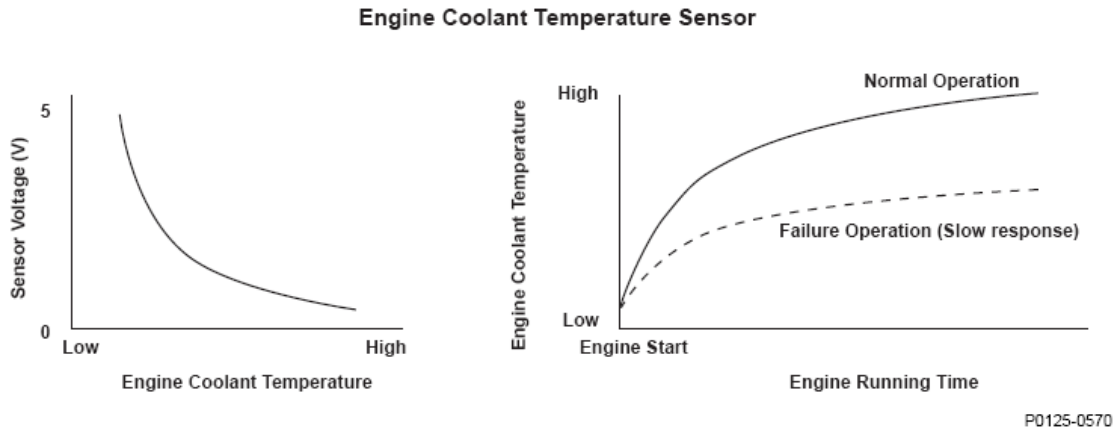

Fig. 24: Engine Coolant Temperature Sensor Characteristics Curve

GENERAL DESCRIPTION

The engine control module (ECM)/powertrain control module (PCM) supplies voltage to the engine coolant temperature signal circuit (about 5 V) through a pull-up resistor. As the engine coolant cools, the engine coolant temperature (ECT) sensor 1 resistance increases, and the ECM/PCM detects a high signal voltage. As the

engine coolant warms, the ECT sensor 1 resistance decreases, and the ECM/PCM detects a low signal voltage. If the ECT sensor 1 output voltage does not reach a specified temperature at which closed loop control for stoichiometric air/fuel ratio starts within a set time, depending on the initial engine coolant temperature after starting the engine, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Once per driving cycle
Sequence	None
Duration	20 minutes or less
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	Minimum	Maximum
Initial engine coolant temperature	-	10 °F (-12 °C)
Fuel feedback	Other than during fuel cut-off operation	
No active DTCs set (prevents monitor from running)	P0101, P0102, P0103, P0107, P0108, P0111, P0112, P0113, P0117, P0118, P0134, P0135, P0154, P0155, P0171, P0172, P0174, P0175, P0300, P0301, P0302, P0303, P0304, P0305, P0306, P0335, P0339, P0351, P0352, P0353, P0354, P0355, P0356, P0401, P0404, P0443, P0496, P0497, P0506, P0507, P1077, P1078, P1128, P1129, P1172, P1174, P145C, P2195, P2197, P2227, P2228, P2229, P2237, P2238, P2240, P2241, P2243, P2245, P2247, P2249, P2251, P2252, P2254, P2255, P2279, P2413, P2646, P2647, P2648, P2649	

MALFUNCTION THRESHOLD

The engine running time before the engine coolant temperature reaches 10 °F (-12 °C), based on the initial engine coolant temperatures, is as follows:

Initial engine coolant temperature	Engine running time
-24 °F (-31 °C)	5 minutes or more
10 °F (-12 °C)	1 minute or more

DRIVING PATTERN

1. Start the engine under Enable Conditions (see "Initial engine coolant temperature").
2. Let the engine idle for at least 20 minutes.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle with the engine coolant temperature and intake air temperature at engine start-up within the specified temperature range, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle with the engine coolant temperature and intake air temperature at engine start-up within the specified temperature range, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0128: COOLING SYSTEM MALFUNCTION

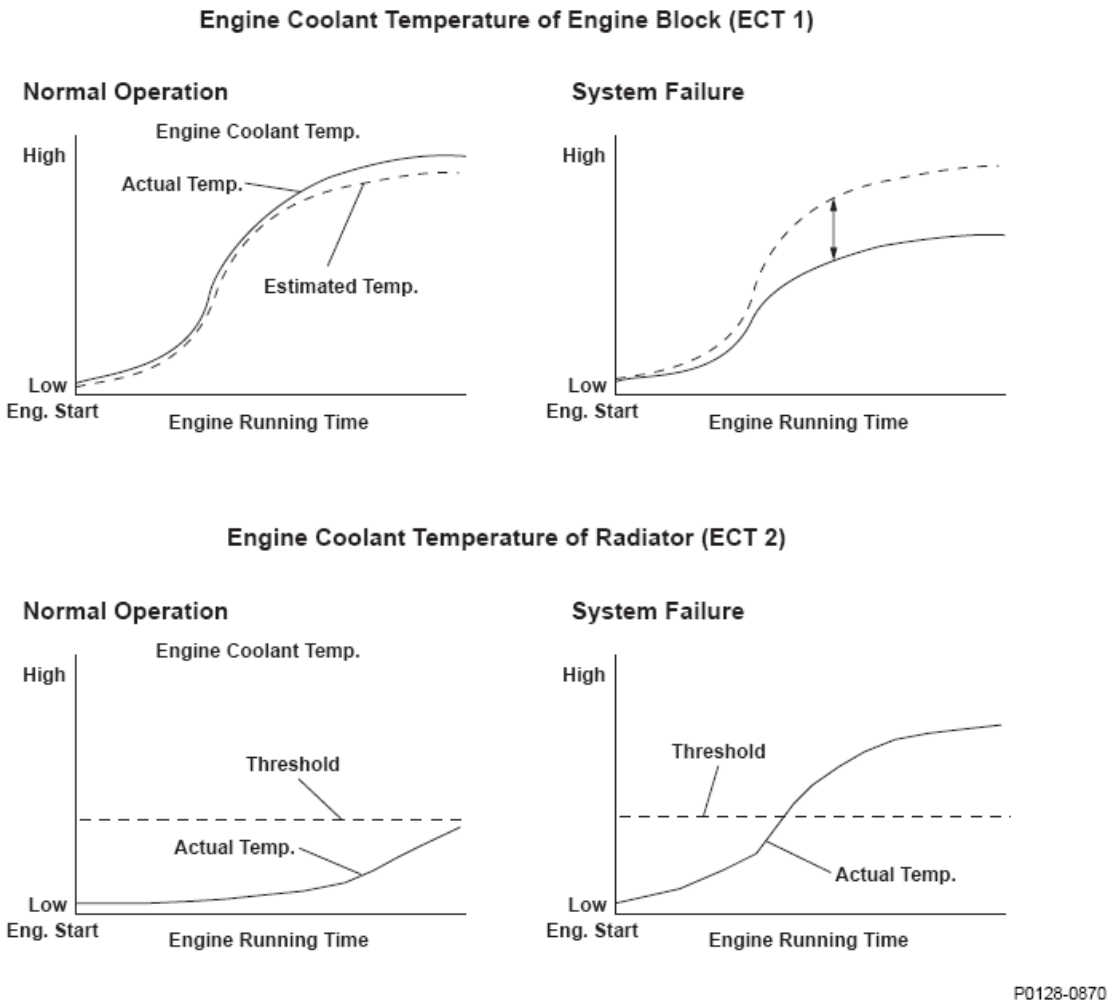

Fig. 25: Cooling System Malfunction Graph

GENERAL DESCRIPTION

The thermostat is closed when the engine coolant temperature is low, and it stops the circulation of engine

coolant to speed engine warm up. When the engine coolant temperature increases, the thermostat opens and circulates engine coolant to control its temperature. When the engine coolant temperature decreases, the opening area of the thermostat is reduced to regulate the engine coolant temperature. If the thermostat sticks open, engine warm up is delayed, and exhaust emissions are adversely affected. The engine control module (ECM)/powertrain control module (PCM) measures the rise in the coolant temperature after the engine starts at the engine block and at the radiator, and it estimates the characteristics of the engine coolant temperature by calculations based on those two temperatures and the driving conditions. When ECT 2 immediately increases from the starting value, it is defined as the thermostat stuck open. When ECT 1 does not reach a specified value at a certain condition, it is defined as a thermostat malfunction.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Once per driving cycle
Sequence	None
Duration	Depending on the driving conditions
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

Initial engine coolant temperature (ECT 2)	19 °F (-7 °C)	123 °F (50 °C)
The difference between initial intake air temperature and current intake air temperature	-	3 °F (2 °C)(1)
		7 °F (4 °C)(2)
No active DTCs set (prevents monitor from running)	P0101, P0102, P0103, P0107, P0108, P0111, P0112, P0113, P0116, P0117, P0118, P0122, P0123, P0125, P0134, P0135, P0154, P0155, P0171, P0172, P0174, P0175, P0222, P0223, P0300, P0301, P0302, P0303, P0304, P0305, P0306, P0335, P0339, P0351, P0352, P0353, P0354, P0355, P0356, P0400, P0401, P0404, P0443, P0496, P0497, P0506, P0507, P060A, P0720, P0722, P1077, P1078, P1116, P1128, P1129, P1172, P1174, P145C, P1659, P2101, P2118, P2122, P2123, P2127, P2128, P2135, P2138, P2176, P2183, P2184, P2185, P2195, P2197, P2227, P2228, P2229, P2237, P2238, P2240, P2241, P2243, P2245, P2247, P2249, P2251, P2252, P2254, P2255, P2279, P2413, P2610, P2646, P2647, P2648, P2649	

(1) Intake air temperature decrease judgment when there is no driving record of 25 mph (40 km/h) in this drive cycle.

(2) Intake air temperature decrease judgment when there is a driving record of 25 mph (40 km/h) in this drive cycle.

MALFUNCTION THRESHOLD

Malfunction determination 1:

The difference between the current engine coolant temperature at the radiator (ECT 2) and the initial engine coolant temperature at the radiator (ECT 2) is at least 15 °F (8 °C) when either of there condition is met.

- When the estimated engine coolant temperature reached to 160 °F (72 °C).
- When the estimated engine coolant temperature changed 36 °F (20 °C).

Malfunction determination 2:

The estimated engine coolant temperature reaches to 158 °F (70 °C) before the actual engine coolant temperature at the engine (ECT 1) reaches to 158 °F (70 °C).

DRIVING PATTERN

1. Start the engine under Enable Conditions (see "Engine off time", "Initial intake air temperature", "Initial engine coolant temperature (ECT 2)" and "The difference between initial intake air temperature and current intake air temperature").
2. Drive the vehicle at a speed between 15 - 75 mph (24 - 120 km/h) for at least 30 minutes.
    - Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle with the engine coolant temperature and intake air temperature at engine start-up within the specified temperature range, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle with the engine coolant temperature and intake air temperature at engine start-up within the specified temperature range, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0133: REAR AIR/FUEL RATIO (A/F) SENSOR (BANK 1, SENSOR 1) MALFUNCTION/SLOW RESPONSE (ENGINE TYPE: J35Z6)

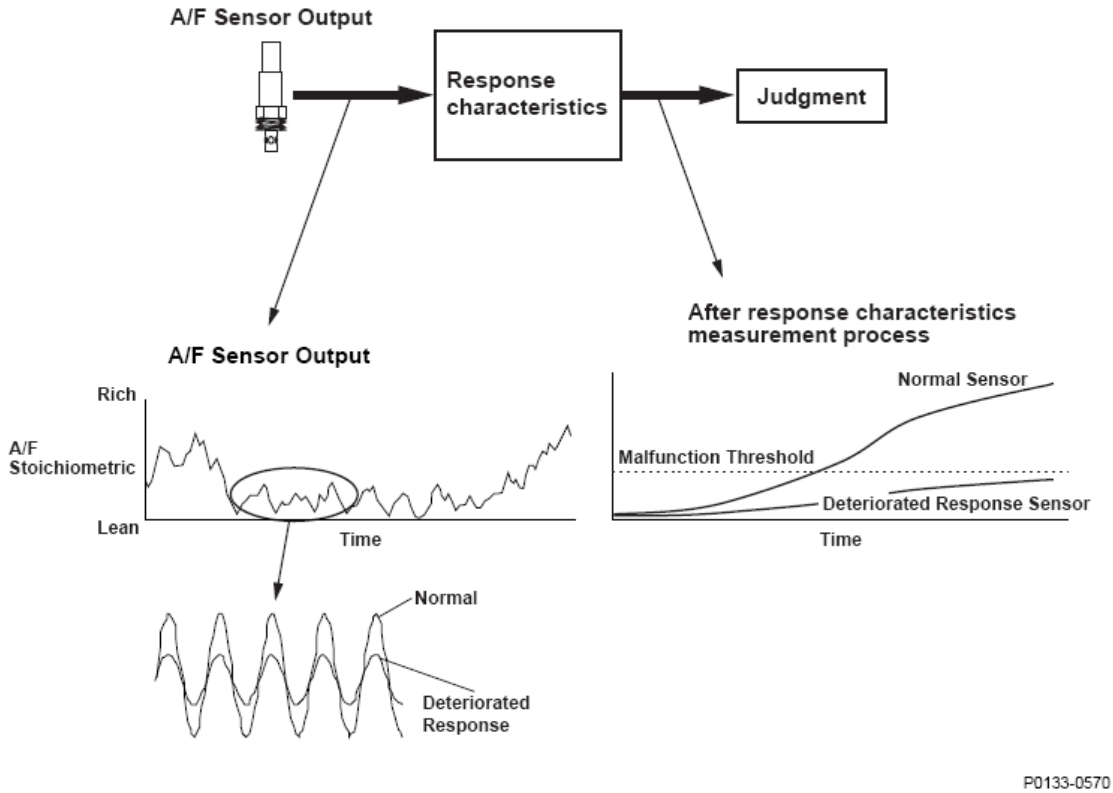

Fig. 26: Air/Fuel Ratio Sensor Characteristics Curve

GENERAL DESCRIPTION

The rear air/fuel ratio (A/F) sensor (bank 1, sensor 1) has a linear signal output in relation to the oxygen concentration. The powertrain control module (PCM) computes the air/fuel ratio from the rear A/F sensor output voltage and uses fuel feedback control to improve exhaust emissions. The PCM compares the response characteristics against the rear A/F sensor output. If the total rear A/F sensor output is a specified value for a specified time, the PCM detects a deteriorated response and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Once per driving cycle
Sequence	None
Duration	6.8 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/EXECUTING/OUT OF (TEST) CONDITION

ENABLE CONDITIONS

Condition	Minimum	Maximum
Elapsed time after application of	60 seconds	-

Other		Without excessive load change	

MALFUNCTION THRESHOLD

The total rear A/F sensor (bank 1, sensor 1) output value is 34 or less in 6.8 seconds.

DRIVING PATTERN

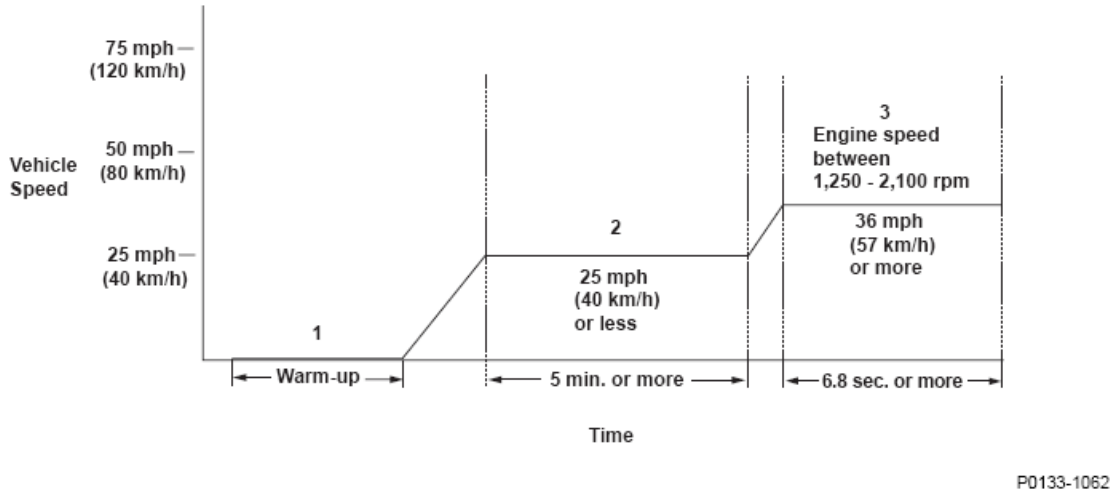

Fig. 27: Vehicle Speed Driving Pattern

1. Start the engine. Hold the engine speed at 3,000 rpm without load (in P or N) until the radiator fan comes on.
2. Drive the vehicle at a steady speed of 25 mph (40 km/h) or less, for at least 5 minutes.
3. Drive immediately at a steady speed of 36 mph (57 km/h) or more and engine speed between 1,250 - 2,100 rpm for at least 6.8 seconds.
    - Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0133: REAR AIR/FUEL RATIO (A/F) SENSOR (BANK 1, SENSOR 1) MALFUNCTION/SLOW RESPONSE (ENGINE TYPE: J37A4)

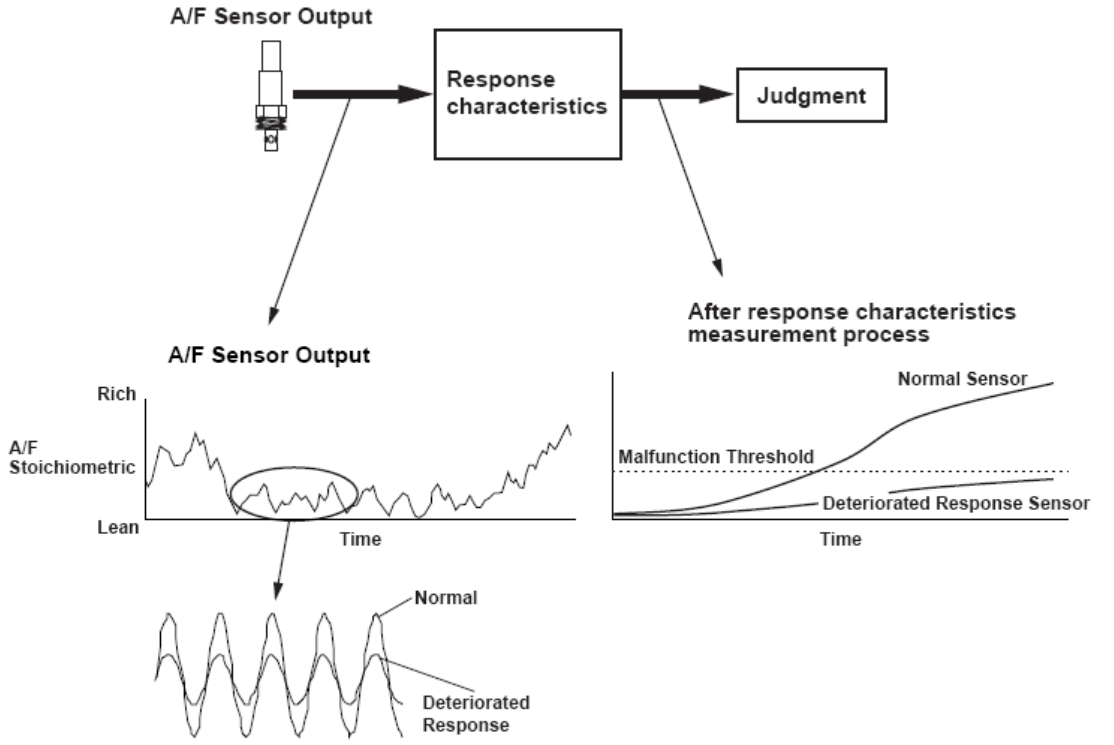

Fig. 28: Air/Fuel Ratio Sensor Characteristics Curve

GENERAL DESCRIPTION

The rear air/fuel ratio (A/F) sensor (bank 1, sensor 1) has a linear signal output in relation to the oxygen concentration. The engine control module (ECM)/powertrain control module (PCM) computes the air/fuel ratio from the rear A/F sensor output voltage and uses fuel feedback control to improve exhaust emissions. The ECM/PCM compares the response characteristics against the rear A/F sensor output. If the total rear A/F sensor output is a specified value for a specified time, the ECM/PCM detects a deteriorated response and stores a DTC.

Other	Without excessive load change
(1) A/T model	
(2) M/T model	

MALFUNCTION THRESHOLD

The total rear A/F sensor (bank 1, sensor 1) output value is 34 or less in 6.8 seconds.

DRIVING PATTERN

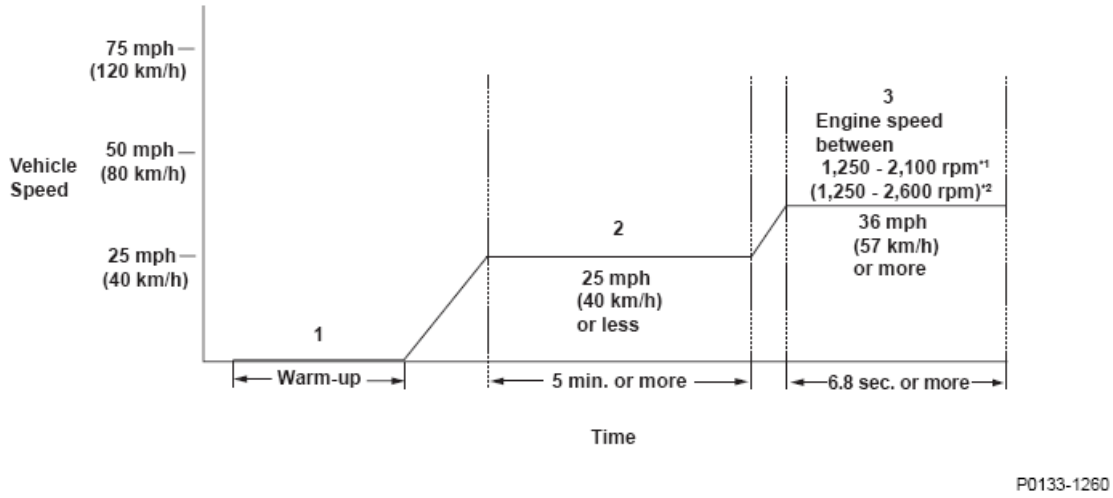

Fig. 29: Vehicle Speed Driving Pattern

1. Start the engine. Hold the engine speed at 3,000 rpm without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
2. Drive the vehicle at a steady speed of 25 mph (40 km/h) or less, for at least 5 minutes.
3. Drive immediately at a steady speed of 36 mph (57 km/h) or more and engine speed between 1,250 - 2,100 rpm*1 (1,250 - 2,600 rpm)*2 for at least 6.8 seconds.
    - Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear

command or by disconnecting the battery.

DTC P0134: REAR AIR/FUEL RATIO (A/F) SENSOR (BANK 1, SENSOR 1) HEATER SYSTEM MALFUNCTION

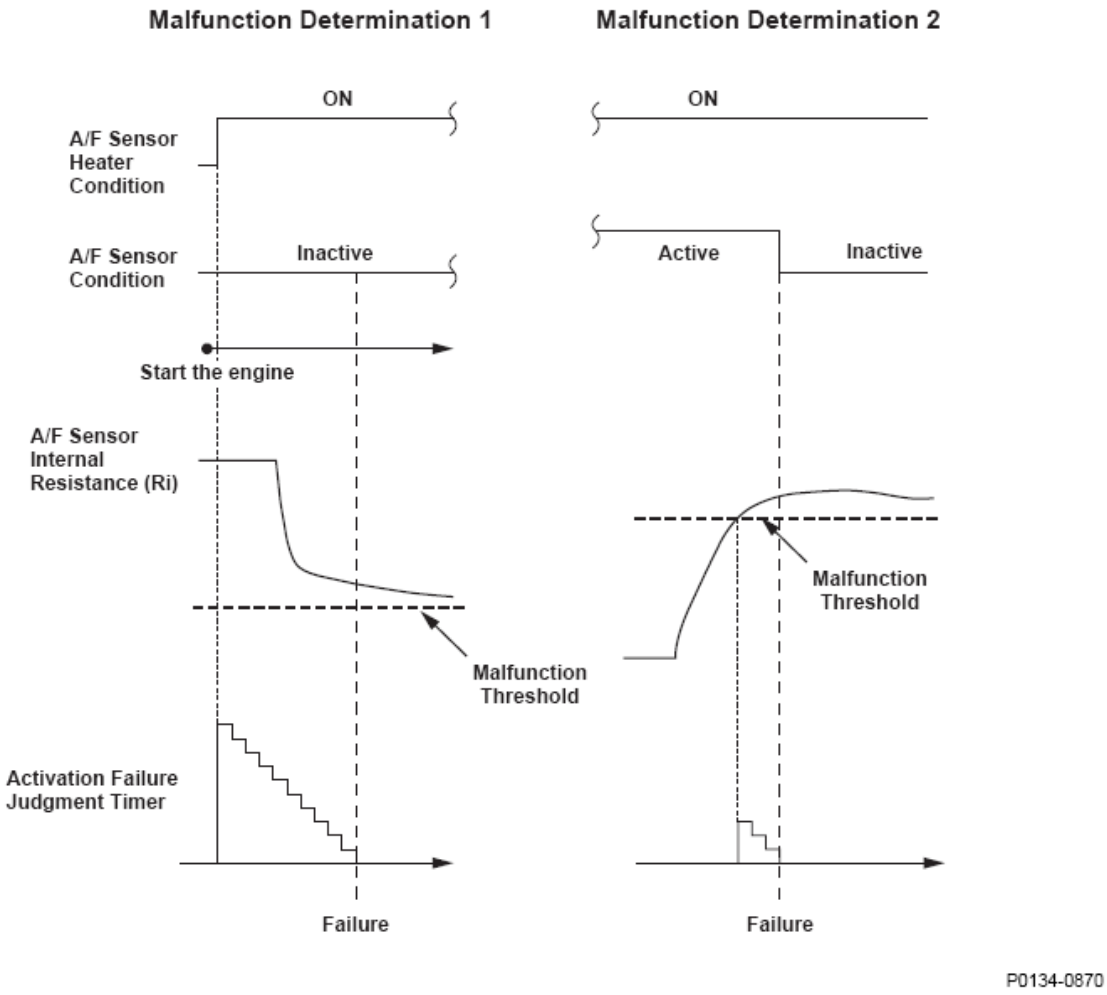

Fig. 30: Air/Fuel Ratio Sensor Heater System Characteristics Curve

GENERAL DESCRIPTION

The rear air/fuel ratio (A/F) sensor (bank 1, sensor 1) is activated by warming the element with a heater and by maintaining a steady high temperature to accurately calculate the air/fuel ratio. If the heater does not properly heat the element, the rear A/F sensor does not activate, and the exhaust emissions deteriorate. The engine control module (ECM)/powertrain control module (PCM) monitors the rear A/F sensor internal resistance.

1. When the rear A/F sensor does not activate for a set time after the rear A/F sensor heater is turned on (with high rear A/F sensor internal resistance), a malfunction of the rear A/F sensor heater is detected, and a DTC is stored.
2. When the rear A/F sensor heater cycles ON and OFF for a set time, and the resistance remains high when the heater is ON, a malfunction of the rear A/F sensor heater is detected, and a DTC is stored.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	40 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	Minimum	Maximum
Battery voltage	10.5 V	-
Fuel feedback	Other than during fuel cut-off operation	
No active DTCs set (prevents monitor from running)	P0135, P0300, P0301, P0302, P0303, P0304, P0305, P0306, P0351, P0352, P0353, P0354, P0355, P0356, P1172, P2195, P2237, P2238, P2243, P2245, P2251, P2252	

MALFUNCTION THRESHOLD

Malfunction determination 1 - From start up

The rear A/F sensor (bank 1, sensor 1) internal resistance value is 200 W or more for at least 40 seconds right after the engine starts.

Malfunction determination 2 - Hot

The rear A/F sensor (bank 1, sensor 1) internal resistance value is 270 W or more for at least 1.0 second.

DRIVING PATTERN

Start the engine, and let it idle for at least 1 minute. When engine coolant temperature is 14 °F (-10 °C) or less, leave the vehicle for 4 minutes or more.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0135: REAR AIR/FUEL RATIO (A/F) SENSOR (BANK 1, SENSOR 1) HEATER CIRCUIT MALFUNCTION

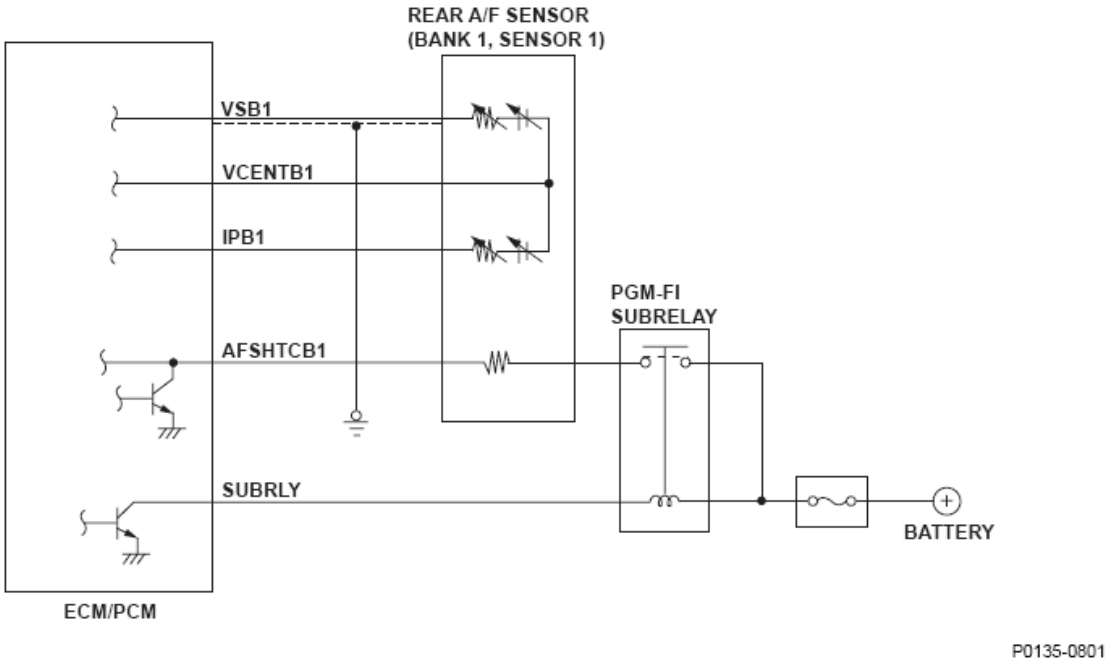

Fig. 31: Rear Air/Fuel Ratio Sensor - Circuit Diagram (Bank 1, Sensor 1)

GENERAL DESCRIPTION

A heater for the sensor element is embedded in the rear air/fuel ratio (A/F) sensor (bank 1, sensor 1), and it is controlled by the engine control module (ECM)/powertrain control module (PCM). It is activated and heats the sensor to stabilize and speed up the detection of oxygen content when the exhaust gas temperature is cold. The ECM/PCM monitors the rear A/F sensor heater output (return check). If the return signals do not meet the command value (for heater activation) for a set time, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	5 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	Minimum	Maximum
Battery voltage	9.0 V	-
State of the engine	Running	

Other	During rear A/F sensor heater operation

MALFUNCTION THRESHOLD

One of these conditions is met for at least 5 seconds.

- No return signal "HIGH" is detected when the ECM/PCM output duty is less than 5 %.
- Return signal does not change when the ECM/PCM output duty is more than 5 %*.

*: ECM/PCM output duty is limited to 95 % when it exceeds 95%.

DRIVING PATTERN

Start the engine. Hold the engine speed at 3,000 rpm without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0137: REAR SECONDARY HEATED OXYGEN SENSOR (SECONDARY HO2S (BANK 1, SENSOR 2)) CIRCUIT LOW VOLTAGE

GENERAL DESCRIPTION

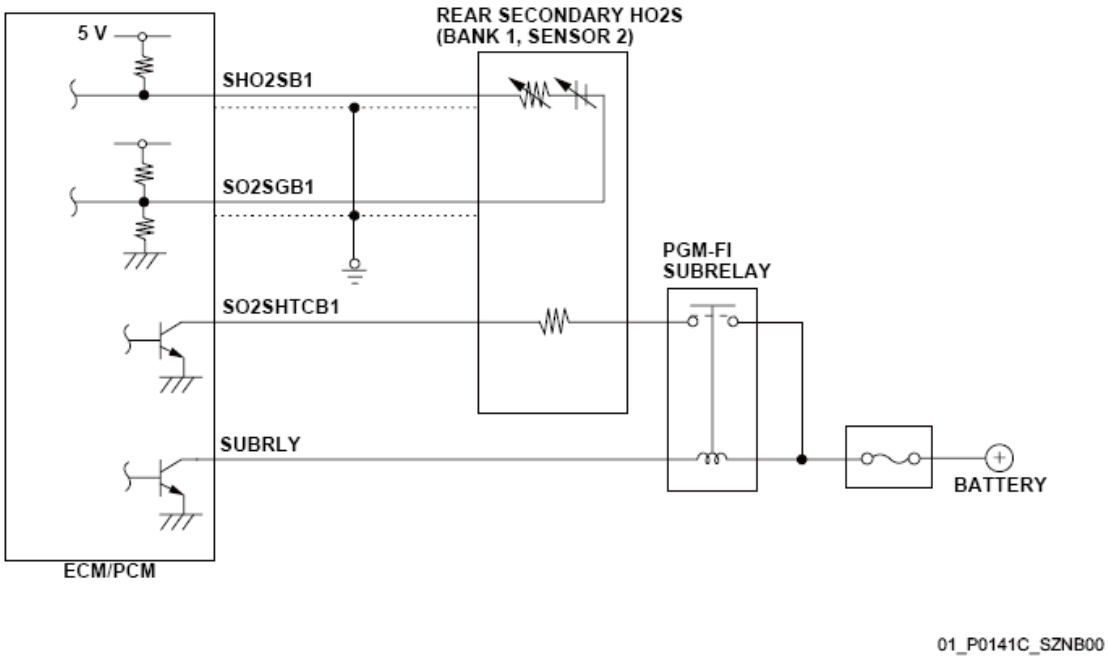

Fig. 32: Secondary Heated Oxygen Sensor - Circuit Diagram

The rear secondary heated oxygen sensor (secondary HO2S (bank 1, sensor 2)) detects the oxygen density in the exhaust gas and converts it into electrical signals. If the rear secondary HO2S output voltage is a specified value for a set time, the engine control module (ECM)/powertrain control module (PCM) detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	5 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/EXECUTING/OUT OF (TEST) CONDITION

ENABLE CONDITIONS

Condition	
State of the engine	Running
Other	At least 55 seconds must be passed after the rear secondary HO2S (bank 1, sensor 2) output voltage reaches 1.0 V or less

MALFUNCTION THRESHOLD

The rear secondary HO2S (bank 1, sensor 2) output voltage is 0.12 V or less for at least 5 seconds.

CONFIRMATION PROCEDURE

With the Driving Pattern

Start the engine. Hold the engine speed at 3,000 rpm without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0138: REAR SECONDARY HEATED OXYGEN SENSOR (SECONDARY HO2S (BANK 1, SENSOR 2)) CIRCUIT HIGH VOLTAGE

GENERAL DESCRIPTION

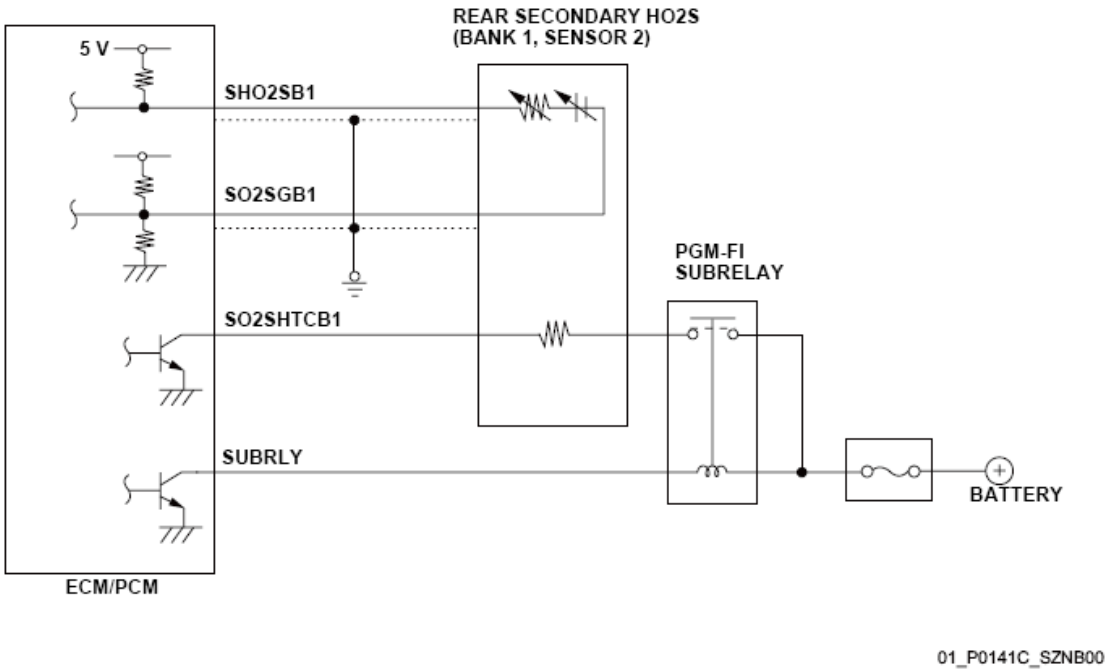

Fig. 33: Secondary Heated Oxygen Sensor - Circuit Diagram

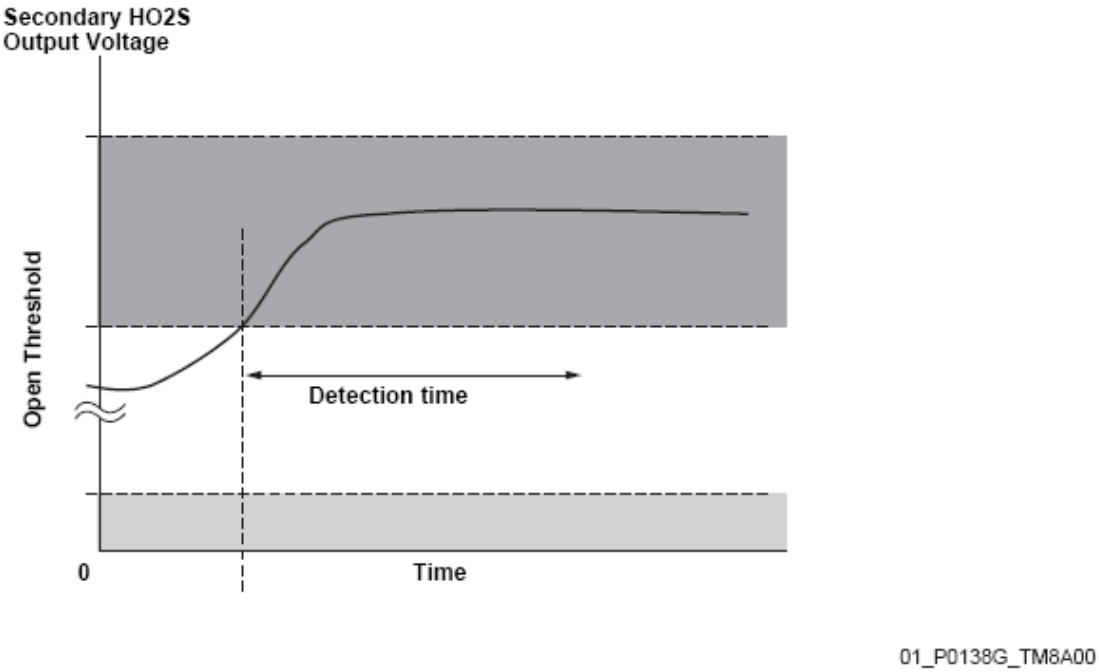

Fig. 34: Secondary Heated Oxygen Sensor Output Voltage Graph

The rear secondary heated oxygen sensor (secondary HO2S (bank 1, sensor 2)) detects the oxygen content in the exhaust gas downstream of the rear warm up three way catalytic converter (WU-TWC) (bank 1) during stoichiometric air/fuel ratio feedback control. The engine control module (ECM)/powertrain control module (PCM) controls the air/fuel ratio from the rear air/fuel ratio (A/F) sensor (bank 1, sensor 1) output voltage so that the rear WU-TWC efficiency is optimized. After current is applied to the rear secondary HO2S heater, if the rear secondary HO2S output continues to exceed the upper limit used during feedback control, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	5.0 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/EXECUTING/OUT OF (TEST) CONDITION

ENABLE CONDITIONS

Condition	Minimum	Maximum
Elapsed time that secondary HO2S activity is not monitored after starting the engine	20 seconds	-
Fuel feedback	Closed loop	
No active DTCs set (prevents monitor from running)	P0117, P0118, P0137, P0139, P0141, P2270	

MALFUNCTION THRESHOLD

The rear secondary HO2S output voltage is 1.27 V or more for at least 5.0 seconds.

CONFIRMATION PROCEDURE

With the Driving Pattern

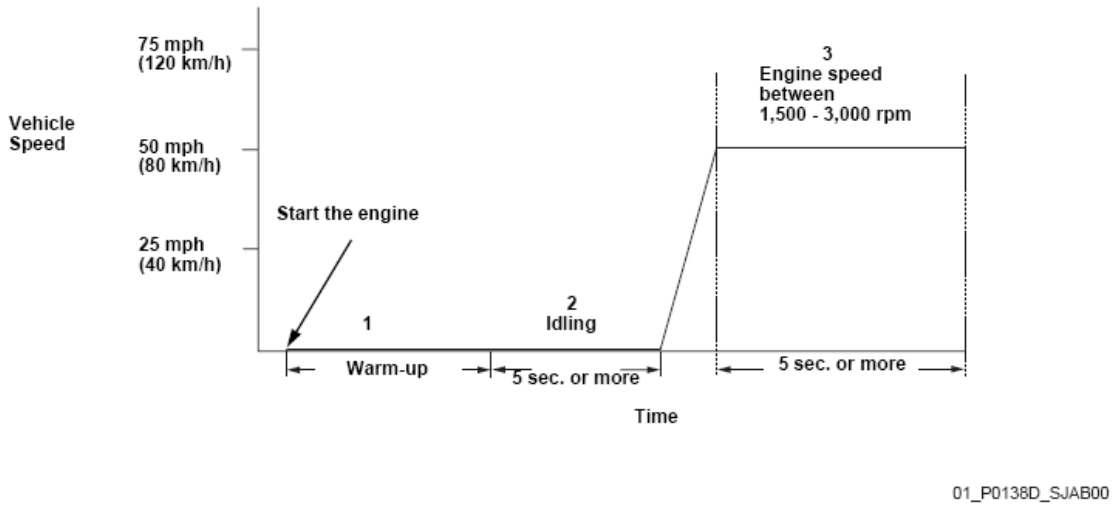

Fig. 35: Vehicle Speed Driving Pattern

1. Start the engine, and let it idle until the radiator fan comes on.
2. Let the engine idle for at least 5 seconds.
3. Drive immediately at a steady engine speed between 1,500 - 3,000 rpm for at least 5 seconds.
   - When freeze data is stored, drive the vehicle under those conditions instead of Driving Pattern step 3.
   - Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0139: REAR SECONDARY HEATED OXYGEN SENSOR (SECONDARY

HO2S (BANK 1, SENSOR 2)) SLOW RESPONSE

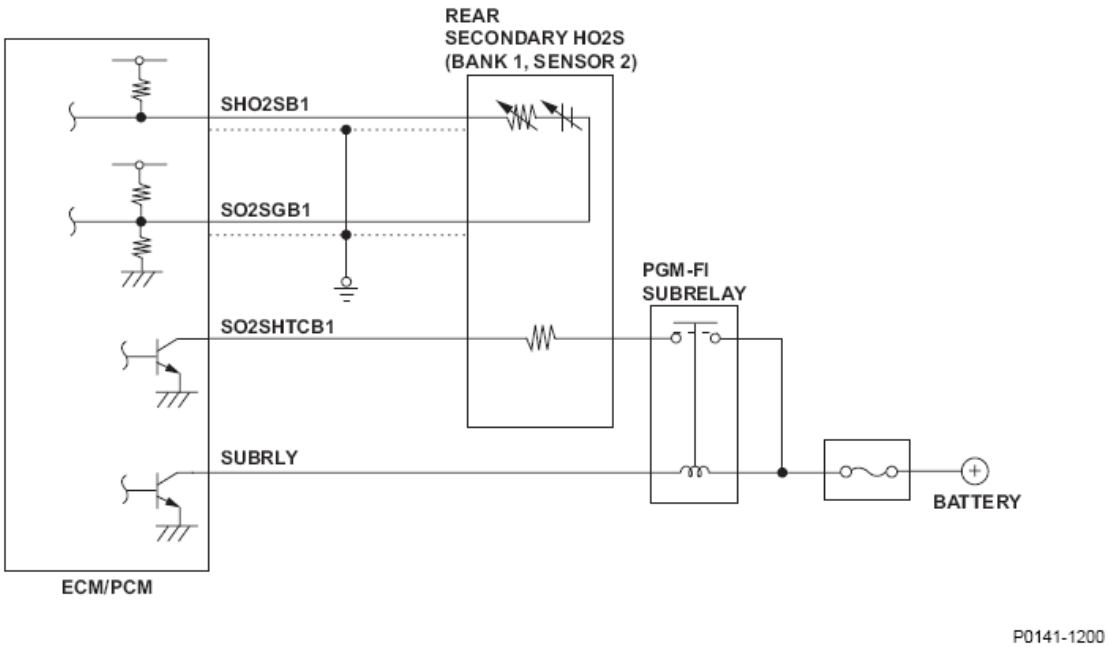

Fig. 36: Rear Secondary Heated Oxygen Sensor - Circuit Diagram (Bank 1, Sensor 2)

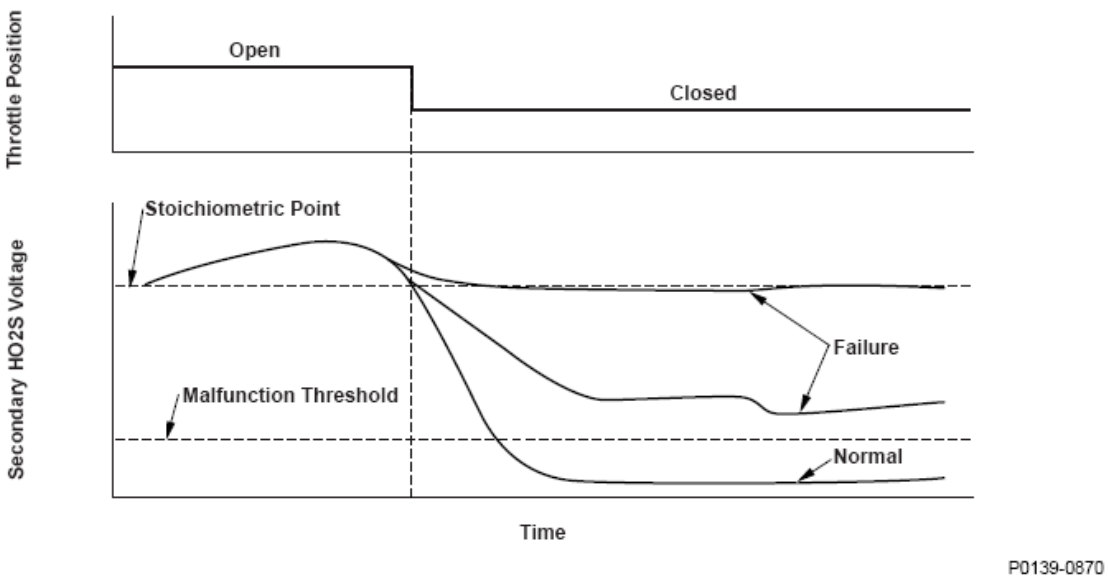

Fig. 37: Secondary HO2S Voltage And Throttle Position Characteristics Curve

GENERAL DESCRIPTION

The rear secondary heated oxygen sensor (secondary HO2S (bank 1, sensor 2)) detects the oxygen content in the exhaust gas downstream of the rear warm up three way catalytic converter (WU-TWC) (bank 1) during stoichiometric air/fuel ratio feedback control. The engine control module (ECM)/powertrain control module (PCM) controls the air/fuel ratio with the rear air/fuel ratio (A/F) sensor (bank 1, sensor 1) output voltage to

optimize the rear WU-TWC's efficiency. When the rear secondary HO2S does not change during lean air/fuel ratio when the throttle is closed, after full current is applied to the rear secondary HO2S heater, and output remains within the specified range continuously, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Once per driving cycle
Sequence	P0138 is judged as OK
Duration	10 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/EXECUTING/OUT OF (TEST) CONDITION

ENABLE CONDITIONS

Condition	Minimum	Maximum
Elapsed time after starting the engine	2 minutes	-
Engine coolant temperature	156 °F (69 °C)	-
Intake air temperature	-13 °F (-25 °C)	-
Engine speed	-	4,000 rpm
Secondary HO2S output voltage	0.05 V	-
Fuel feedback	During deceleration	
No active DTCs set (prevents monitor from running)	P0101, P0102, P0103, P0107, P0108, P0111, P0112, P0113, P0116, P0117, P0118, P0122, P0123, P0125, P0135, P0137, P0138, P0141, P0171, P0172, P0222, P0223, P0300, P0301, P0302, P0303, P0304, P0305, P0306, P0335, P0339, P0351, P0352, P0353, P0354, P0355, P0356, P0443, P0496, P0497, P060A, P0720, P0722, P1116, P1128, P1129, P1172, P145C, P1659, P2101, P2118, P2122, P2123, P2127, P2128, P2135, P2138, P2176, P2195, P2237, P2238, P2243, P2245, P2251, P2252, P2270, P2279	

MALFUNCTION THRESHOLD

The rear secondary HO2S output voltage is 0.05 V or more for at least 10 seconds.

DRIVING PATTERN

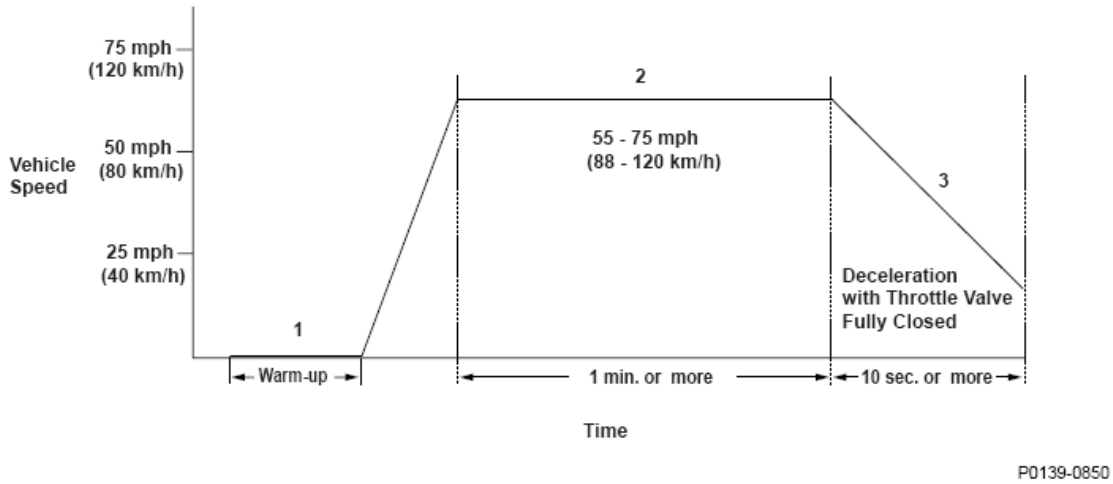

Fig. 38: Vehicle Speed Driving Pattern

1. Start the engine. Hold the engine speed at 3,000 rpm without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
2. Drive the vehicle at a steady speed between 55 - 75 mph (88 - 120 km/h) for at least 1 minute.
3. Decelerate with the throttle valve fully closed for at least 10 seconds.
    - Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0141: REAR SECONDARY HEATED OXYGEN SENSOR (SECONDARY HO2S (BANK 1, SENSOR 2)) HEATER CIRCUIT MALFUNCTION

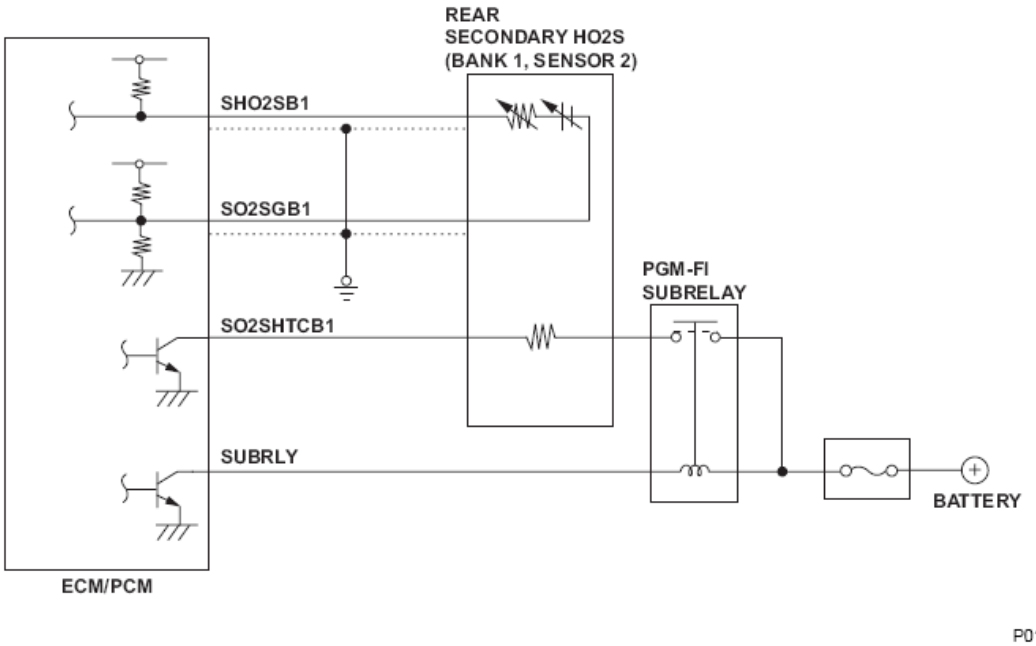

Fig. 39: Rear Secondary Heated Oxygen Sensor - Circuit Diagram (Bank 1, Sensor 2)

GENERAL DESCRIPTION

A heater for the zirconia element is embedded in the rear secondary heated oxygen sensor (secondary HO2S (bank 1, sensor 2)), and it is controlled by the engine control module (ECM)/powertrain control module (PCM). When activated, it heats the sensor to stabilize and speed up the detection of oxygen content when the exhaust gas temperature is cold. If the rear secondary HO2S heater draws other than a specified amperage, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	5.0 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	Minimum	Maximum
Battery voltage (IGP terminal of ECM/PCM)	10.5 V	-
State of the engine	Running	
No active DTCs set (prevents monitor from running)	P0117, P0118	

MALFUNCTION THRESHOLD

The rear secondary HO2S heater output is 0.38 A or less, or 3.33 A or more, for at least 5.0 seconds when the heater is on.

DRIVING PATTERN

Start the engine in a cold condition, and let it idle until the radiator fan comes on.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0153: FRONT AIR/FUEL RATIO (A/F) SENSOR (BANK 2, SENSOR 1) MALFUNCTION/SLOW RESPONSE (ENGINE TYPE: J35Z6)

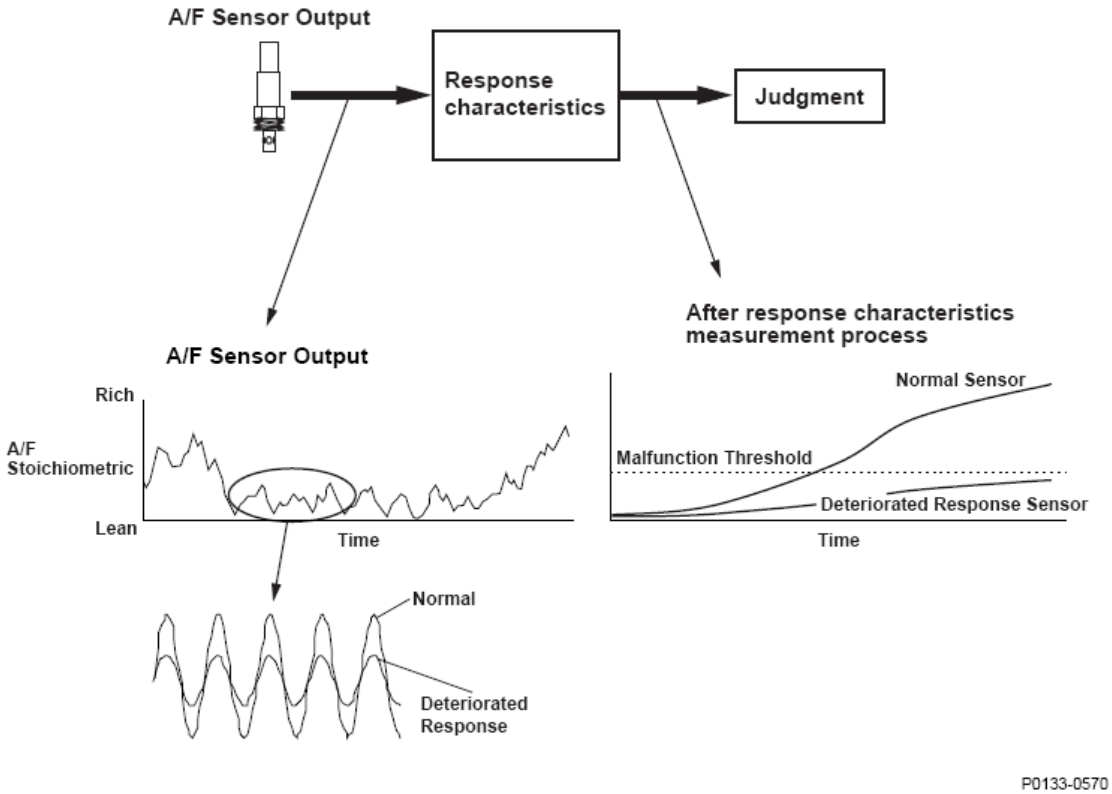

Fig. 40: Air/Fuel Ratio Sensor Characteristics Curve

GENERAL DESCRIPTION

The front air/fuel ratio (A/F) sensor (bank 2, sensor 1) has a linear signal output in relation to the oxygen concentration. The powertrain control module (PCM) computes the air/fuel ratio from the front A/F sensor output voltage and uses fuel feedback control to improve exhaust emissions. The PCM compares the response characteristics against the front A/F sensor output. If the total front A/F sensor output is a specified value for a specified time, the PCM detects a deteriorated response and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Once per driving cycle
Sequence	None
Duration	6.8 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/EXECUTING/OUT OF (TEST) CONDITION

ENABLE CONDITIONS

Condition		Minimum	Maximum
Elapsed time after application of power to A/F sensor heater starts		60 seconds	-

	2,000 rpm	34 kPa (9.9 inHg, 250 mmHg)	
Vehicle speed		36 mph (57 km/h)	-
Fuel trim		0.73	1.47
Fuel feedback		Closed loop at stoichiometric	
Monitoring priority		P0400	
No active DTCs set (prevents monitor from running)		P0101, P0102, P0103, P0107, P0108, P0112, P0113, P0117, P0118, P0154, P0155, P0174, P0175, P0300, P0301, P0302, P0303, P0304, P0305, P0306, P0335, P0339, P0351, P0352, P0353, P0354, P0355, P0356, P0400, P0401, P0404, P0443, P0496, P0497, P0722, P1077, P1078, P1128, P1129, P1174, P145C, P2197, P2227, P2228, P2229, P2240, P2241, P2247, P2249, P2254, P2255, P2279, P2413, P2646, P2647, P2648, P2649, P2A03	
Other		Without excessive load change	

MALFUNCTION THRESHOLD

The total front A/F sensor (bank 2, sensor 1) output value is 34 or less in 6.8 seconds.

DRIVING PATTERN

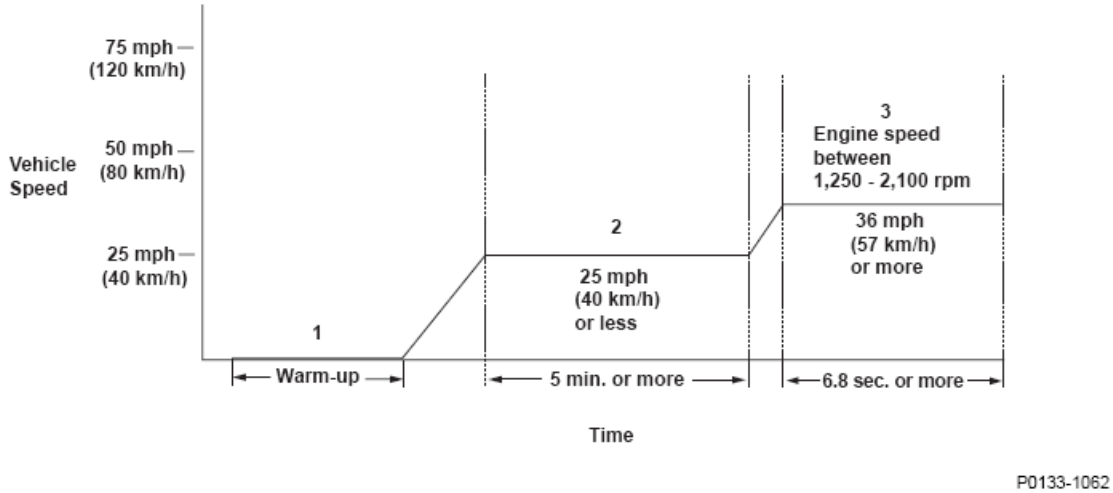

Fig. 41: Vehicle Speed Driving Pattern

1. Start the engine. Hold the engine speed at 3,000 rpm without load (in P or N) until the radiator fan comes on.
2. Drive the vehicle at a steady speed of 25 mph (40 km/h) or less, for at least 5 minutes.
3. Drive immediately at a steady speed of 36 mph (57 km/h) or more and engine speed between 1,250 - 2,100 rpm for at least 6.8 seconds.
    - Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0153: FRONT AIR/FUEL RATIO (A/F) SENSOR (BANK 2, SENSOR 1) MALFUNCTION/SLOW RESPONSE (ENGINE TYPE: J37A4)

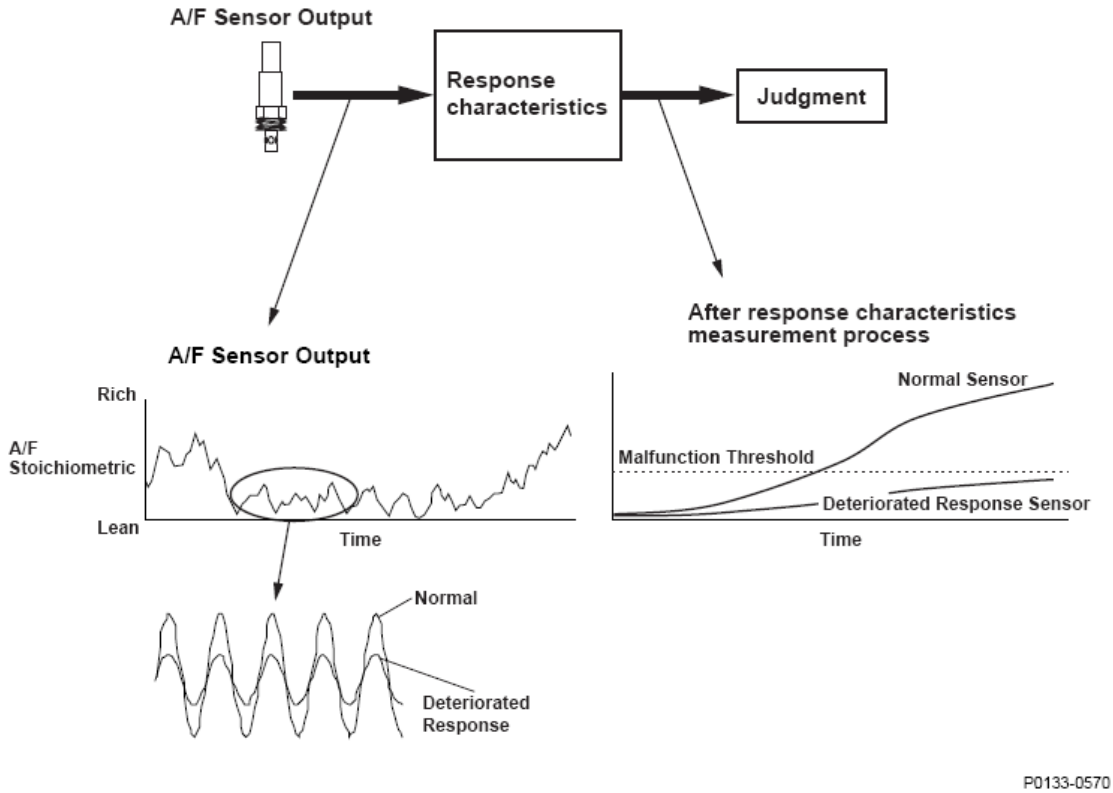

Fig. 42: Air/Fuel Ratio Sensor Characteristics Curve

GENERAL DESCRIPTION

The front air/fuel ratio (A/F) sensor (bank 2, sensor 1) has a linear signal output in relation to the oxygen concentration. The engine control module (ECM)/powertrain control module (PCM) computes the air/fuel ratio from the front A/F sensor output voltage and uses fuel feedback control to improve exhaust emissions. The ECM/PCM compares the response characteristics against the front A/F sensor output. If the total front A/F sensor output is a specified value for a specified time, the ECM/PCM detects a deteriorated response and stores a DTC.

(1) A/T model

(2) M/T model

MALFUNCTION THRESHOLD

The total front A/F sensor (bank 2, sensor 1) output value is 34 or less in 6.8 seconds.

DRIVING PATTERN

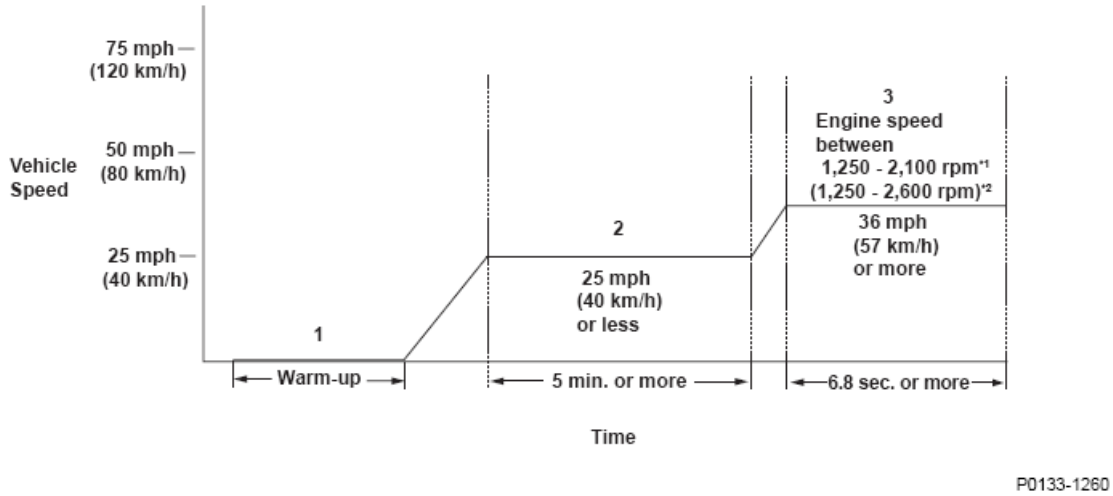

Fig. 43: Vehicle Speed Driving Pattern

1. Start the engine. Hold the engine speed at 3,000 rpm without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
2. Drive the vehicle at a steady speed of 25 mph (40 km/h) or less, for at least 5 minutes.
3. Drive immediately at a steady speed of 36 mph (57 km/h) or more and engine speed between 1,250 - 2,100 rpm*1 (1,250 - 2,600 rpm)*2 for at least 6.8 seconds.
    - Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0154: FRONT AIR/FUEL RATIO (A/F) SENSOR (BANK 2, SENSOR 1) HEATER SYSTEM MALFUNCTION

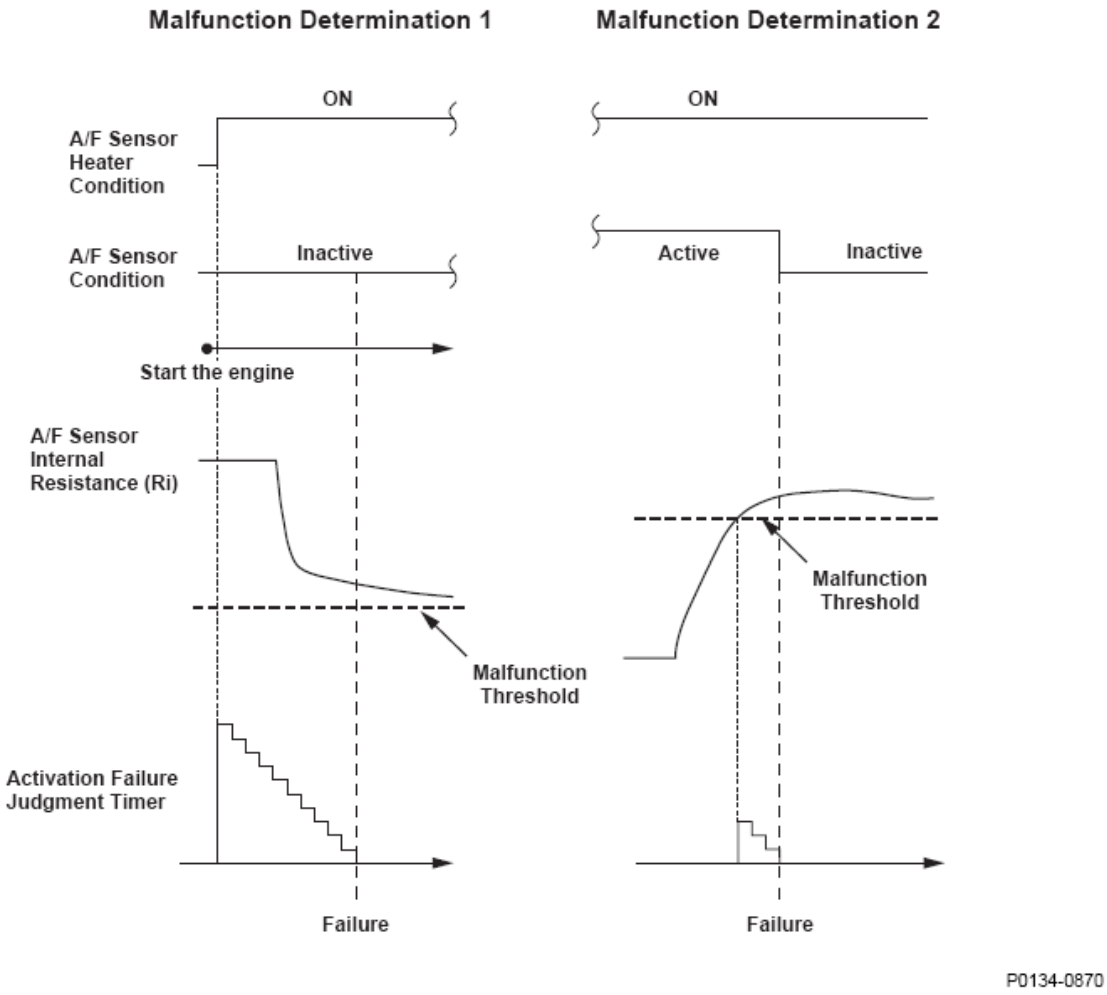

Fig. 44: Air/Fuel Ratio Sensor Heater System Characteristics Curve

GENERAL DESCRIPTION

The front air/fuel ratio (A/F) sensor (bank 2, sensor 1) is activated by warming the element with a heater and by maintaining a steady high temperature to accurately calculate the air/fuel ratio. If the heater does not properly heat the element, the front A/F sensor does not activate, and the exhaust emissions deteriorate. The engine control module (ECM)/powertrain control module (PCM) monitors the front A/F sensor internal resistance.

1. When the front A/F sensor does not activate for a set time after the front A/F sensor heater is turned on (with high front A/F sensor internal resistance), a malfunction of the front A/F sensor heater is detected, and a DTC is stored.
2. When the front A/F sensor heater cycles ON and OFF for a set time, and the resistance remains high when the heater is ON, a malfunction of the front A/F sensor heater is detected, and a DTC is stored.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None

Duration	40 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	Minimum	Maximum
Battery voltage	10.5 V	-
Fuel feedback	Other than during fuel cut-off operation	
No active DTCs set (prevents monitor from running)	P0155, P0300, P0301, P0302, P0303, P0304, P0305, P0306, P0351, P0352, P0353, P0354, P0355, P0356, P1174, P2197, P2240, P2241, P2247, P2249, P2254, P2255	

MALFUNCTION THRESHOLD

Malfunction determination 1 - From start up

The front A/F sensor (bank 2, sensor 1) internal resistance value is 200 W or more for at least 40 seconds right after the engine starts.

Malfunction determination 2 - Hot

The front A/F sensor (bank 2, sensor 1) internal resistance value is 270 W or more for at least 1.0 second.

DRIVING PATTERN

Start the engine, and let it idle for at least 1 minute. When engine coolant temperature is 14 °F (-10 °C) or less, leave the vehicle for 4 minutes or more.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0155: FRONT AIR/FUEL RATIO (A/F) SENSOR (BANK 2, SENSOR 1) HEATER CIRCUIT MALFUNCTION

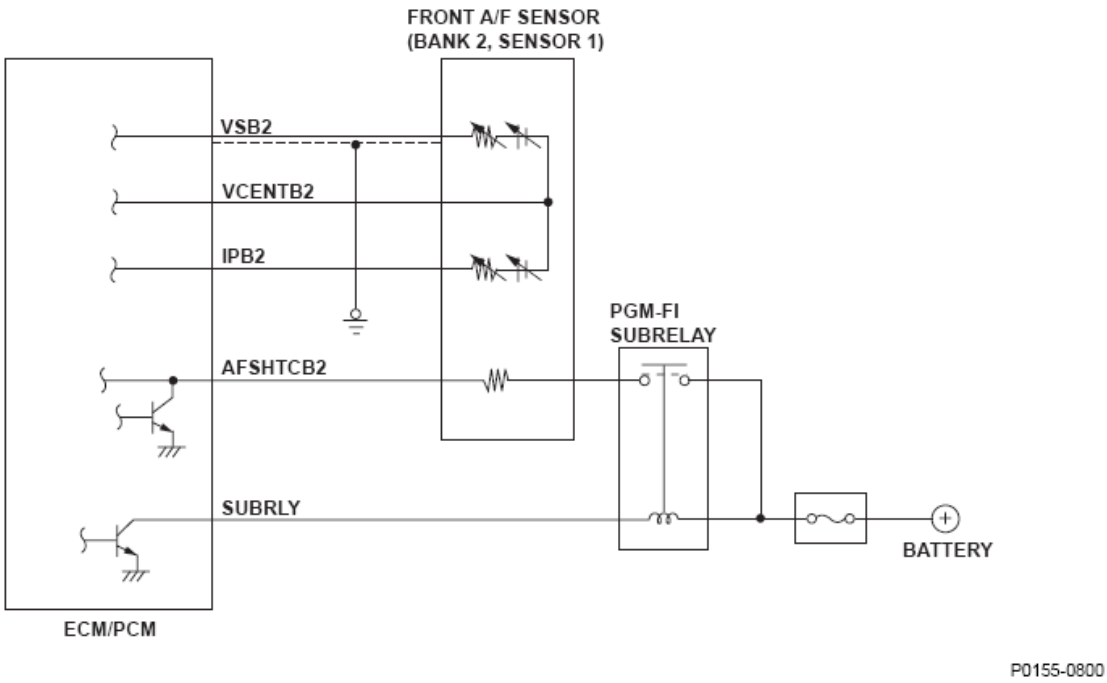

Fig. 45: Front Air/Fuel Ratio Sensor - Circuit Diagram (Bank 2, Sensor 1)

GENERAL DESCRIPTION

A heater for the sensor element is embedded in the front air/fuel ratio (A/F) sensor (bank 2, sensor 1), and it is controlled by the engine control module (ECM)/powertrain control module (PCM). It is activated and heats the sensor to stabilize and speed up the detection of oxygen content when the exhaust gas temperature is cold. The ECM/PCM monitors the front A/F sensor heater output (return check). If the return signals do not meet the command value (for heater activation) for a set time, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	5 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	Minimum	Maximum
Battery voltage	9.0 V	-
State of the engine	Running	
Other	During front A/F sensor heater operation	

MALFUNCTION THRESHOLD

One of these conditions is met for at least 5 seconds.

- No return signal "HIGH" is detected when the ECM/PCM output duty is less than 5 %.
- Return signal does not change when the ECM/PCM output duty is more than 5 %*.

*: ECM/PCM output duty is limited to 95 % when it exceeds 95 %.

DRIVING PATTERN

Start the engine. Hold the engine speed at 3,000 rpm without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0157: FRONT SECONDARY HEATED OXYGEN SENSOR (SECONDARY HO2S (BANK 2, SENSOR 2)) CIRCUIT LOW VOLTAGE

GENERAL DESCRIPTION

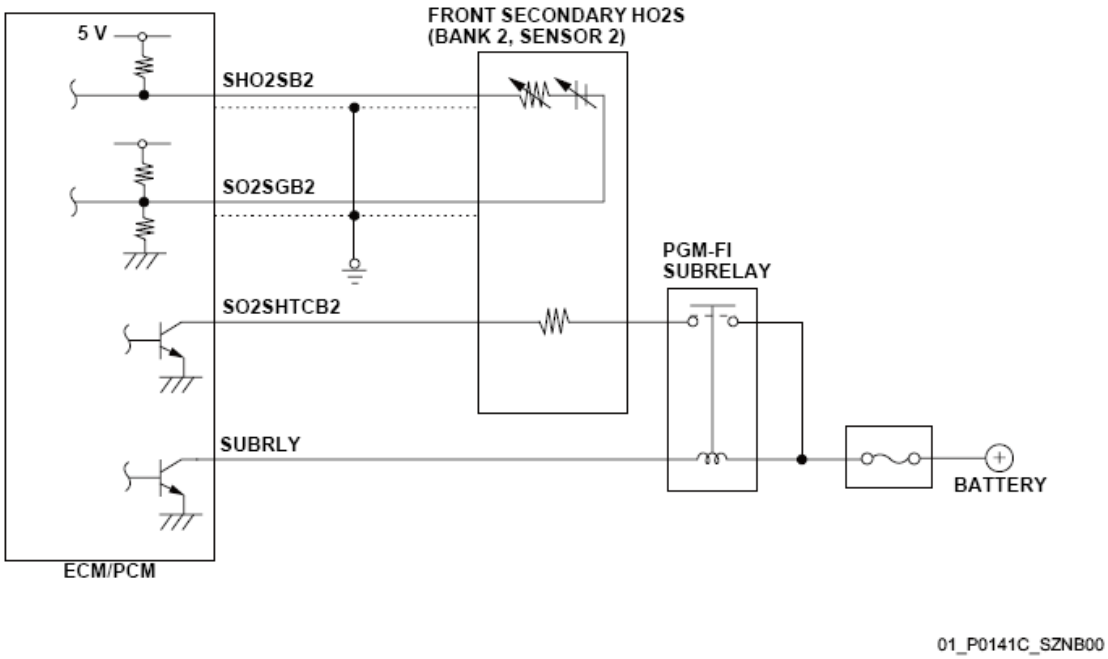

Fig. 46: Secondary Heated Oxygen Sensor - Circuit Diagram

The front secondary heated oxygen sensor (secondary HO2S (bank 2, sensor 2)) detects the oxygen density in the exhaust gas and converts it into electrical signals. If the front secondary HO2S output voltage is a specified value for a set time, the engine control module (ECM)/powertrain control module (PCM) detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	5 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/EXECUTING/OUT OF (TEST) CONDITION

ENABLE CONDITIONS

Condition	
State of the engine	Running
Other	At least 55 seconds must be passed after the front secondary HO2S (bank 2, sensor 2) output voltage reaches 1.0 V or less

MALFUNCTION THRESHOLD

The front secondary HO2S (bank 2, sensor 2) output voltage is 0.12 V or less for at least 5 seconds.

CONFIRMATION PROCEDURE

With the Driving Pattern

Start the engine. Hold the engine speed at 3,000 rpm without load (A/T in P or N, M/T in neutral) until the radiator fan comes on, then let it idle.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0158: FRONT SECONDARY HEATED OXYGEN SENSOR (SECONDARY HO2S (BANK 2, SENSOR 2)) CIRCUIT HIGH VOLTAGE

GENERAL DESCRIPTION

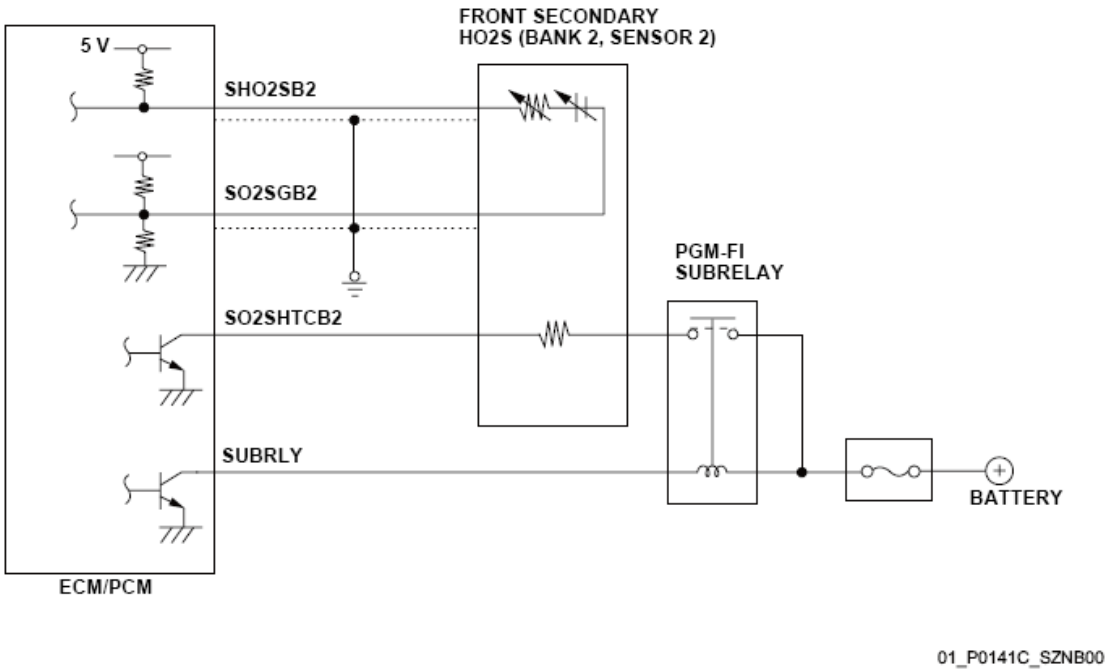

Fig. 47: Secondary Heated Oxygen Sensor - Circuit Diagram

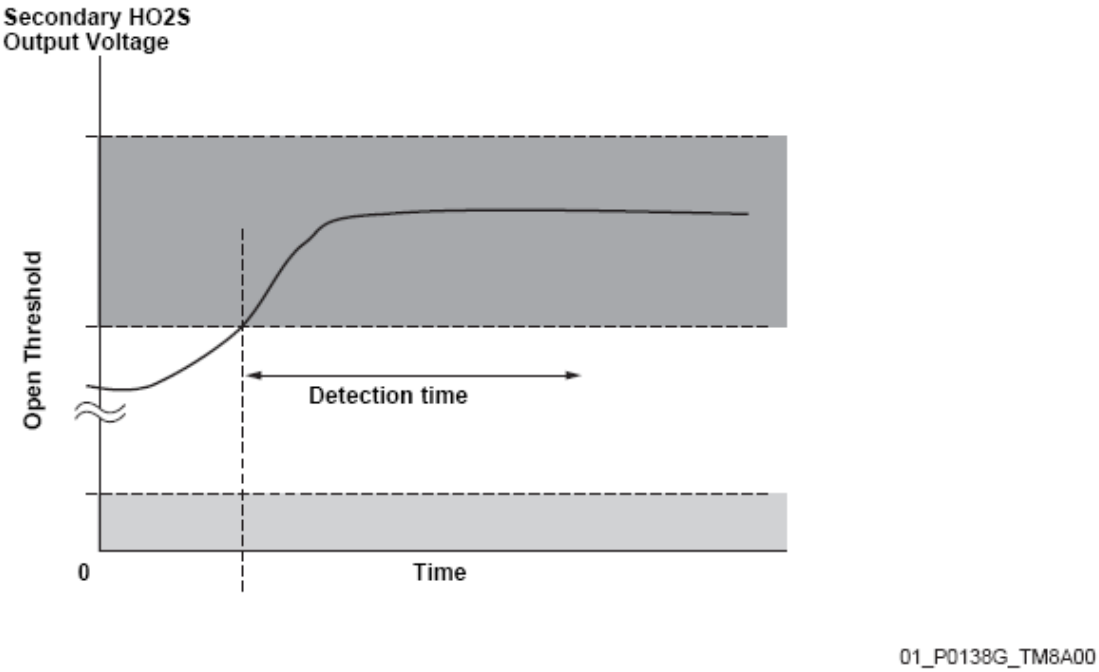

Fig. 48: Secondary Heated Oxygen Sensor Output Voltage Graph

The front secondary heated oxygen sensor (secondary HO2S (bank 2, sensor 2)) detects the oxygen content in the exhaust gas downstream of the front warm up three way catalytic converter (WU-TWC) (bank 2) during stoichiometric air/fuel ratio feedback control. The engine control module (ECM)/powertrain control module (PCM) controls the air/fuel ratio from the front air/fuel ratio (A/F) sensor (bank 2, sensor 1) output voltage so that the front WU-TWC efficiency is optimized. After current is applied to the front secondary HO2S heater, if the front secondary HO2S output continues to exceed the upper limit used during feedback control, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	5.0 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/EXECUTING/OUT OF (TEST) CONDITION

ENABLE CONDITIONS

Condition	Minimum	Maximum
Elapsed time that secondary HO2S activity is not monitored after starting the engine	20 seconds	-
Fuel feedback	Closed loop	
No active DTCs set (prevents monitor from running)	P0117, P0118, P0157, P0159, P0161, P2272	

MALFUNCTION THRESHOLD

The front secondary HO2S output voltage is 1.27 V or more for at least 5.0 seconds.

CONFIRMATION PROCEDURE

With the Driving Pattern

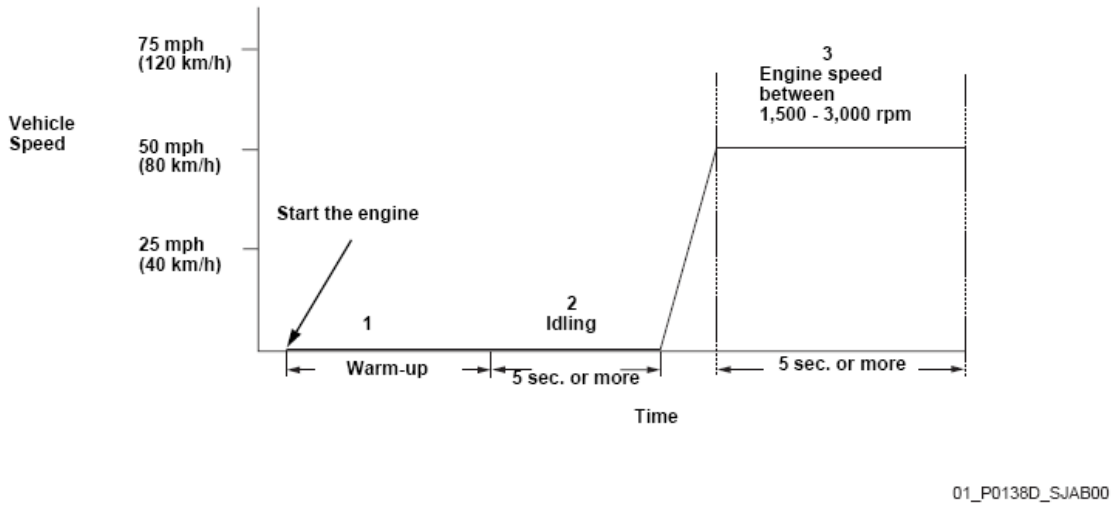

Fig. 49: Vehicle Speed Driving Pattern

1. Start the engine, and let it idle until the radiator fan comes on.
2. Let the engine idle for at least 5 seconds.
3. Drive immediately at a steady engine speed between 1,500 - 3,000 rpm for at least 5 seconds.
    - When freeze data is stored, drive the vehicle under those conditions instead of Driving Pattern step 3.
    - Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0159: FRONT SECONDARY HEATED OXYGEN SENSOR

(SECONDARY HO2S (BANK 2, SENSOR 2)) SLOW RESPONSE

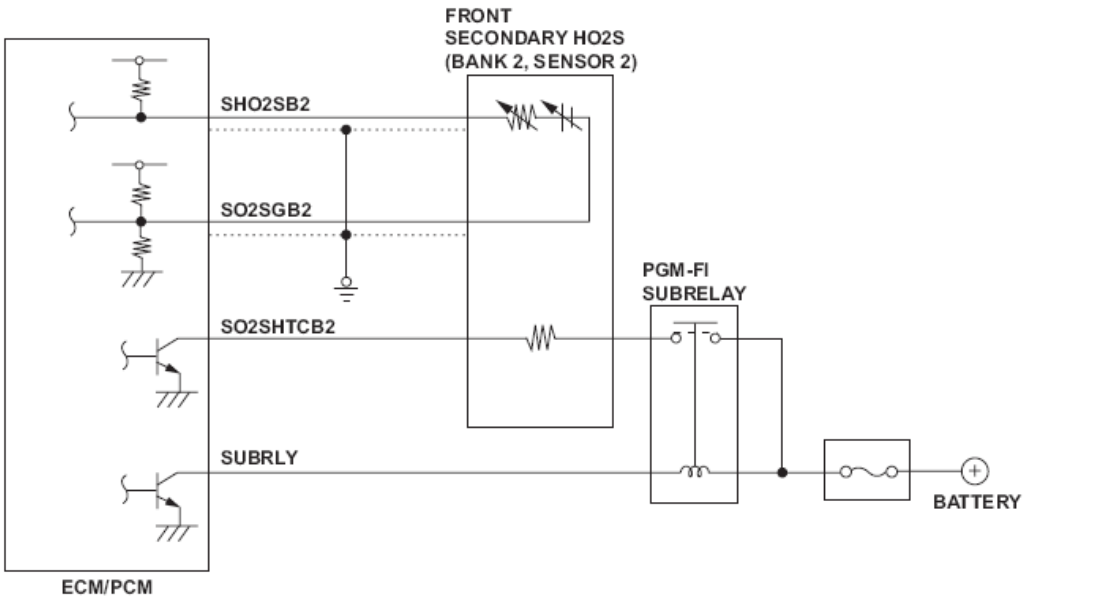

Fig. 50: Front Secondary Heated Oxygen Sensor - Circuit Diagram (Bank 2, Sensor 2)

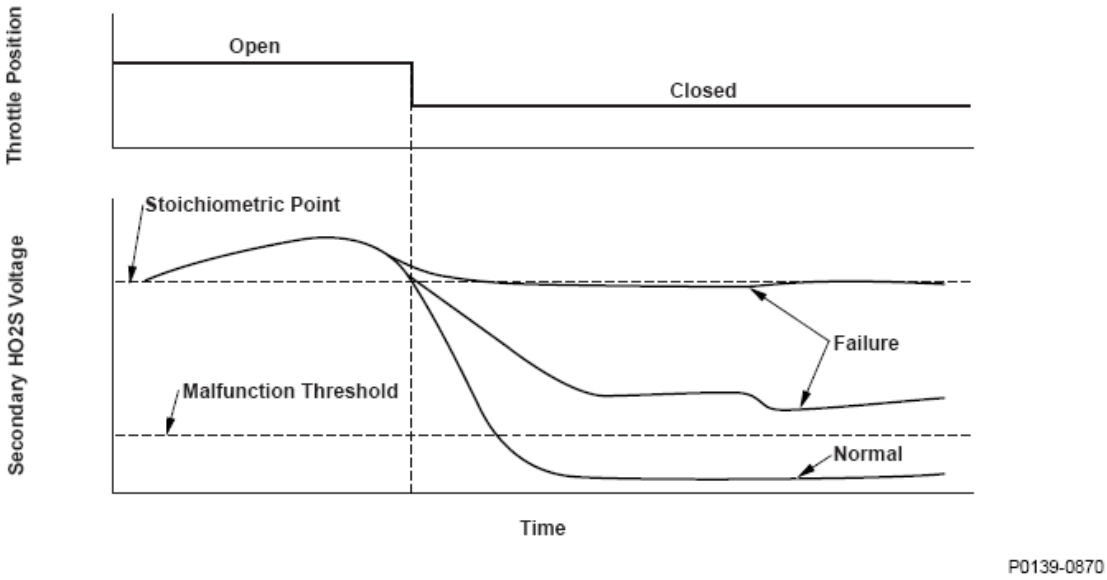

Fig. 51: Secondary HO2S Voltage And Throttle Position Characteristics Curve

GENERAL DESCRIPTION

The front secondary heated oxygen sensor (secondary HO2S (bank 2, sensor 2)) detects the oxygen content in the exhaust gas downstream of the front warm up three way catalytic converter (WU-TWC) (bank 2) during stoichiometric air/fuel ratio feedback control. The engine control module (ECM)/powertrain control module (PCM) controls the air/fuel ratio with the front air/fuel ratio (A/F) sensor (bank 2, sensor 1) output voltage to

optimize the front WU-TWC's efficiency. When the front secondary HO2S does not change during lean air/fuel ratio when the throttle is closed, after full current is applied to the front secondary HO2S heater, and output remains within the specified range continuously, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Once per driving cycle
Sequence	P0158 is judged as OK
Duration	10 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/EXECUTING/OUT OF (TEST) CONDITION

ENABLE CONDITIONS

Condition	Minimum	Maximum
Elapsed time after starting the engine	2 minutes	-
Engine coolant temperature	156 °F (69 °C)	-
Intake air temperature	-13 °F (-25 °C)	-
Engine speed	-	4,000 rpm
Secondary HO2S output voltage	0.05 V	-
Fuel feedback	During deceleration	
No active DTCs set (prevents monitor from running)	P0101, P0102, P0103, P0107, P0108, P0111, P0112, P0113, P0116, P0117, P0118, P0122, P0123, P0125, P0155, P0157, P0158, P0161, P0174, P0175, P0222, P0223, P0300, P0301, P0302, P0303, P0304, P0305, P0306, P0335, P0339, P0351, P0352, P0353, P0354, P0355, P0356, P0443, P0496, P0497, P060A, P0720, P0722, P1116, P1128, P1129, P1174, P145C, P1659, P2101, P2118, P2122, P2123, P2127, P2128, P2135, P2138, P2176, P2240, P2241, P2247, P2249, P2254, P2255, P2272, P2279	

MALFUNCTION THRESHOLD

The front secondary HO2S output voltage is 0.05 V or more for at least 10 seconds.

DRIVING PATTERN

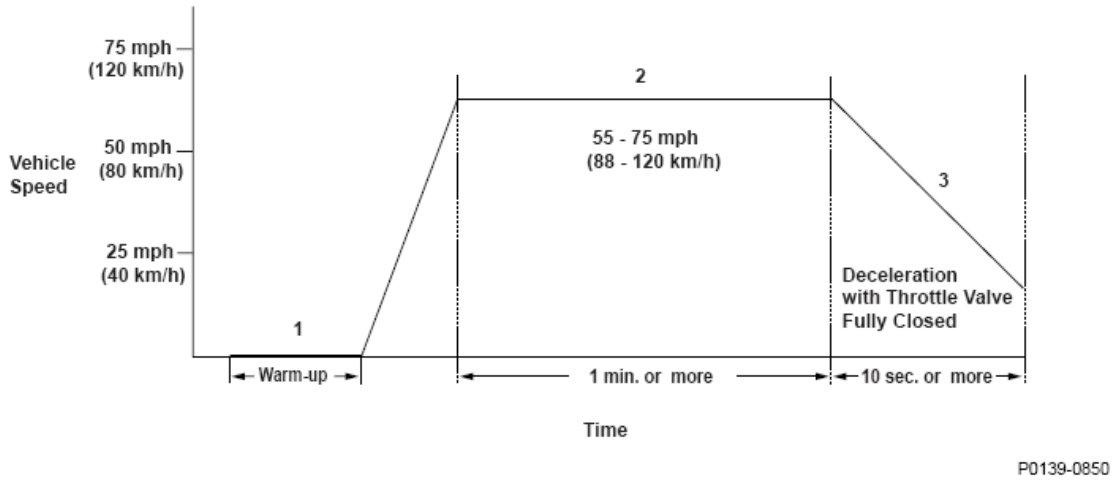

Fig. 52: Vehicle Speed Driving Pattern

1. Start the engine. Hold the engine speed at 3,000 rpm without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
2. Drive the vehicle at a steady speed between 55 - 75 mph (88 - 120 km/h) for at least 1 minute.
3. Decelerate with the throttle valve fully closed for at least 10 seconds.
    - Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0161: FRONT SECONDARY HEATED OXYGEN SENSOR (SECONDARY HO2S (BANK 2, SENSOR 2)) HEATER CIRCUIT MALFUNCTION

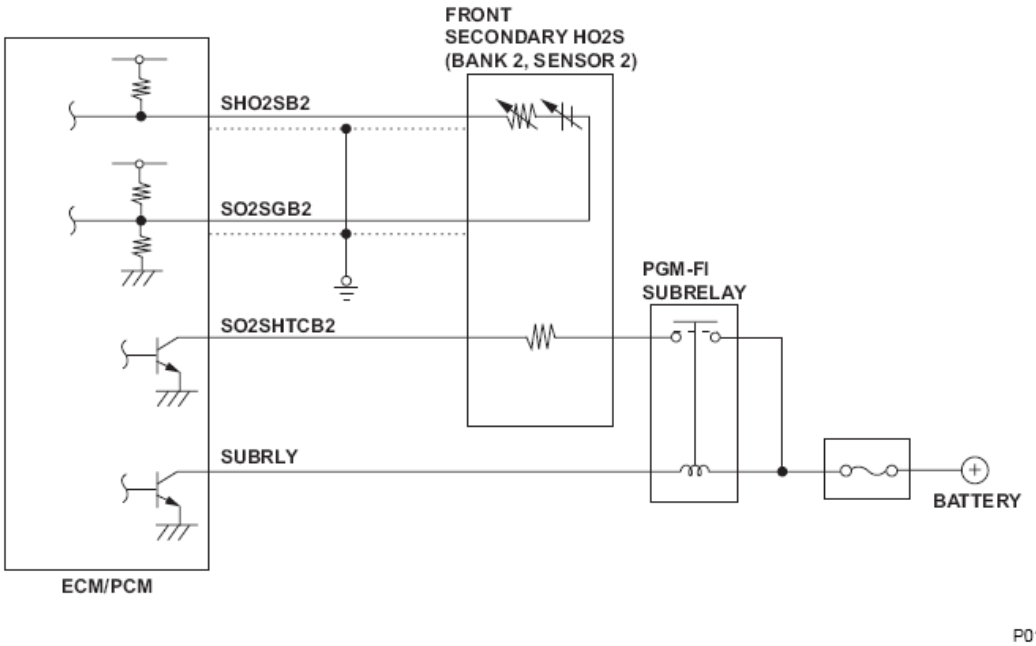

Fig. 53: Front Secondary Heated Oxygen Sensor - Circuit Diagram (Bank 2, Sensor 2)

GENERAL DESCRIPTION

A heater for the zirconia element is embedded in the front secondary heated oxygen sensor (secondary HO2S (bank 2, sensor 2)), and it is controlled by the engine control module (ECM)/powertrain control module (PCM). When activated, it heats the sensor to stabilize and speed up the detection of oxygen content when the exhaust gas temperature is cold. If the front secondary HO2S heater draws other than a specified amperage, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	5.0 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	Minimum	Maximum
Battery voltage (IGP terminal of ECM/PCM)	10.5 V	-
State of the engine	Running	
No active DTCs set (prevents monitor from running)	P0117, P0118	

MALFUNCTION THRESHOLD

The front secondary HO2S heater output is 0.38 A or less, or 3.33 A or more, for at least 5.0 seconds when the heater is on.

DRIVING PATTERN

Start the engine in a cold condition, and let it idle until the radiator fan comes on.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0171: REAR BANK (BANK 1) FUEL SYSTEM TOO LEAN

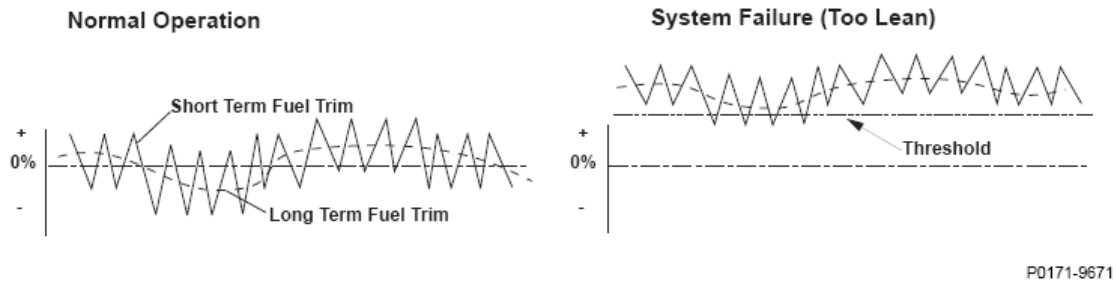

Fig. 54: Fuel System Characteristics Curve (Too Lean)

GENERAL DESCRIPTION

The engine control module (ECM)/powertrain control module (PCM) detects the oxygen content in the exhaust gas from the rear air/fuel ratio (A/F) sensor (bank 1, sensor 1) signal voltage, and it uses fuel feedback control to maintain the optimal air/fuel ratio. The air/fuel ratio coefficient for correcting the amount of injected fuel is the short term fuel trim. The ECM/PCM varies short term fuel trim continuously to keep the air/fuel ratio close to the stoichiometric ratio for all driving conditions. Long term fuel trim is computed from short term fuel trim and is used to regulate long term deviation from the stoichiometric air/fuel ratio, which occurs when fuel metering components deteriorate with age or system failures occur. In addition, long term fuel trim is stored in the ECM/PCM memory and is used to determine when fuel metering components malfunction. When long term fuel trim is higher than normal, which is about 1.0 (0 %), the amount of injected fuel must be increased, and when lower than normal, it must be decreased. If long term fuel trim is higher than normal (too lean), the ECM/PCM detects a malfunction in the fuel metering components and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Once per driving cycle(1)
Sequence	None
Duration	Every 7.0 seconds
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

(1) The malfunction parameters are cleared when it is judged as normal under the same driving conditions in which the malfunction was detected.

ENABLE CONDITIONS

Condition	Minimum	Maximum
Engine coolant temperature	156 °F (69 °C)	-
Intake air temperature	19 °F (-7 °C)	-
Engine speed	550 rpm(1) 650 rpm(2)	4,000 rpm
MAP value	20 kPa (6.0 inHg, 150 mmHg)(1) 16 kPa (4.8 inHg, 120 mmHg)(2)	-
Fuel feedback	Closed loop	
Monitoring priority	P0133, P0153, P0400, P0420, P0430	
No active DTCs set (prevents monitor from running)	P0107, P0108, P0112, P0113, P0117, P0118, P0134, P0135, P0137, P0138, P0139, P0300, P0301, P0302, P0303, P0304, P0305, P0306, P0335, P0339, P0351, P0352, P0353, P0354, P0355, P0356, P0443, P0496, P0497, P1077, P1078, P1128, P1129, P1172, P145C, P2195, P2227, P2228, P2229, P2237, P2238, P2243, P2245, P2251, P2252, P2270	

(1) A/T model

(2) M/T model

MALFUNCTION THRESHOLD

Long term fuel trim is higher than 1.25 (+25 %).

DRIVING PATTERN

1. Start the engine. Hold the engine speed at 3,000 rpm without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
2. Drive at a steady speed between 15 - 75 mph (24 - 120 km/h) for at least 15 minutes, and watch the long term fuel trim. If the long term fuel trim stays at about 1.0, the vehicle is OK or it is a very minor problem. If a significant fault is still present, the long term fuel trim will move up or down while driving.

- When freeze data is stored, drive the vehicle under those conditions instead of Driving Pattern step 2.
- If the EVAP monitor runs instead of the HO2S monitor, turn the engine off, then restart it, and the HO2S monitor will restart.
- After clearing the DTC by disconnecting the battery or using the scan tool, extend Driving Pattern step 2 to 40 minutes or longer to allow time for long term fuel trim to recover.
- Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive drive cycles in which the engine conditions are similar to the first time the malfunction was detected. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0172: REAR BANK (BANK 1) FUEL SYSTEM TOO RICH

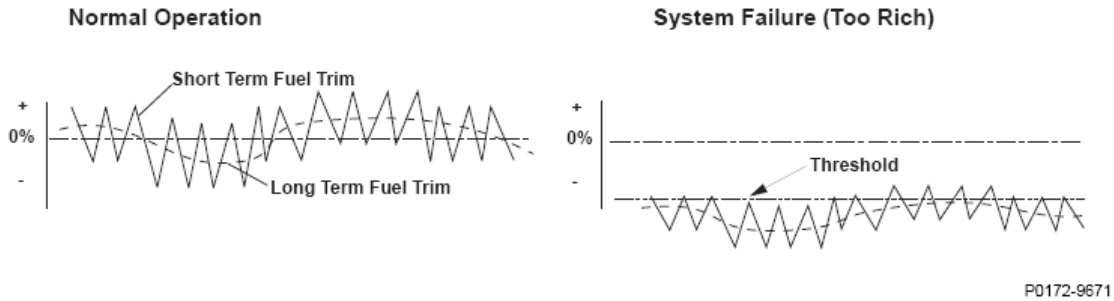

Fig. 55: Fuel System Characteristics Curve (Too Rich)

GENERAL DESCRIPTION

The engine control module (ECM)/powertrain control module (PCM) detects the oxygen content in the exhaust gas from the rear air/fuel ratio (A/F) sensor (bank 1, sensor 1) signal voltage, and it uses fuel feedback control to maintain the optimal air/fuel ratio. The air/fuel ratio coefficient for correcting the amount of injected fuel is the short term fuel trim. The ECM/PCM varies short term fuel trim continuously to keep the air/fuel ratio close to the stoichiometric ratio for all driving conditions. Long term fuel trim is computed from short term fuel trim and is used to regulate long term deviation from the stoichiometric air/fuel ratio, which occurs when fuel metering components deteriorate with age or system failures occur. In addition, long term fuel trim is stored in the ECM/PCM memory and is used to determine when fuel metering components malfunction. When long term fuel trim is higher than normal, which is about 1.0 (0 %), the amount of injected fuel must be increased, and when lower than normal, it must be decreased. If long term fuel trim is lower than normal (too rich), the

ECM/PCM detects a malfunction in the fuel metering components and stores a DTC.

(1) A/T model (2) M/T model		

MALFUNCTION THRESHOLD

Long term fuel trim is lower than 0.79 (-21 %).

DRIVING PATTERN

1. Start the engine. Hold the engine speed at 3,000 rpm without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
2. Drive at a steady speed between 15 - 75 mph (24 - 120 km/h) for at least 15 minutes, and watch the long

term fuel trim. If the long term fuel trim stays at about 1.0, the vehicle is OK or it is a very minor problem. If a significant fault is still present, the long term fuel trim will move up or down while driving.

- When freeze data is stored, drive the vehicle under those conditions instead of Driving Pattern step 2.
- If the EVAP monitor runs instead of the HO2S monitor, turn the engine off, then restart it, and the HO2S monitor will restart.
- After clearing the DTC by disconnecting the battery or using the scan tool, extend Driving Pattern step 2 to 40 minutes or longer to allow time for long term fuel trim to recover.
- Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive drive cycles in which the engine conditions are similar to the first time the malfunction was detected. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0174: FRONT BANK (BANK 2) FUEL SYSTEM TOO LEAN

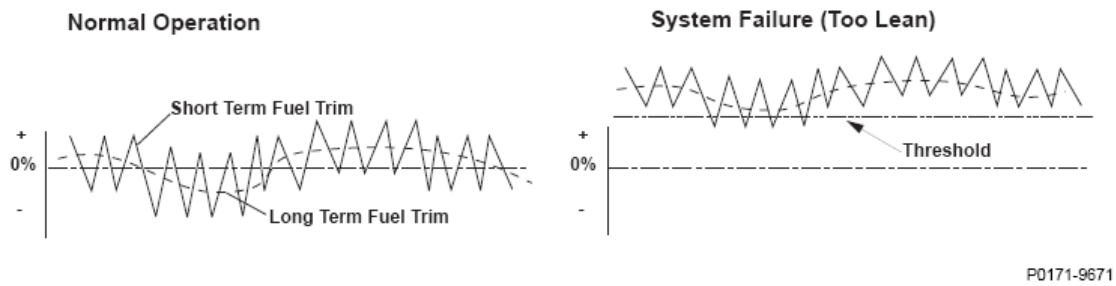

Fig. 56: Fuel System Characteristics Curve (Too Lean)

GENERAL DESCRIPTION

The engine control module (ECM)/powertrain control module (PCM) detects the oxygen content in the exhaust gas from the front air/fuel ratio (A/F) sensor (bank 2, sensor 1) signal voltage, and it uses fuel feedback control to maintain the optimal air/fuel ratio. The air/fuel ratio coefficient for correcting the amount of injected fuel is the short term fuel trim. The ECM/PCM varies short term fuel trim continuously to keep the air/fuel ratio close to the stoichiometric ratio for all driving conditions. Long term fuel trim is computed from short term fuel trim and is used to regulate long term deviation from the stoichiometric air/fuel ratio, which occurs when fuel metering components deteriorate with age or system failures occur. In addition, long term fuel trim is stored in the ECM/PCM memory and is used to determine when fuel metering components malfunction. When long term

fuel trim is higher than normal, which is about 1.0 (0 %), the amount of injected fuel must be increased, and when lower than normal, it must be decreased. If long term fuel trim is higher than normal (too lean), the ECM/PCM detects a malfunction in the fuel metering components and stores a DTC.

DTC P0222: THROTTLE POSITION (TP) SENSOR B CIRCUIT LOW VOLTAGE

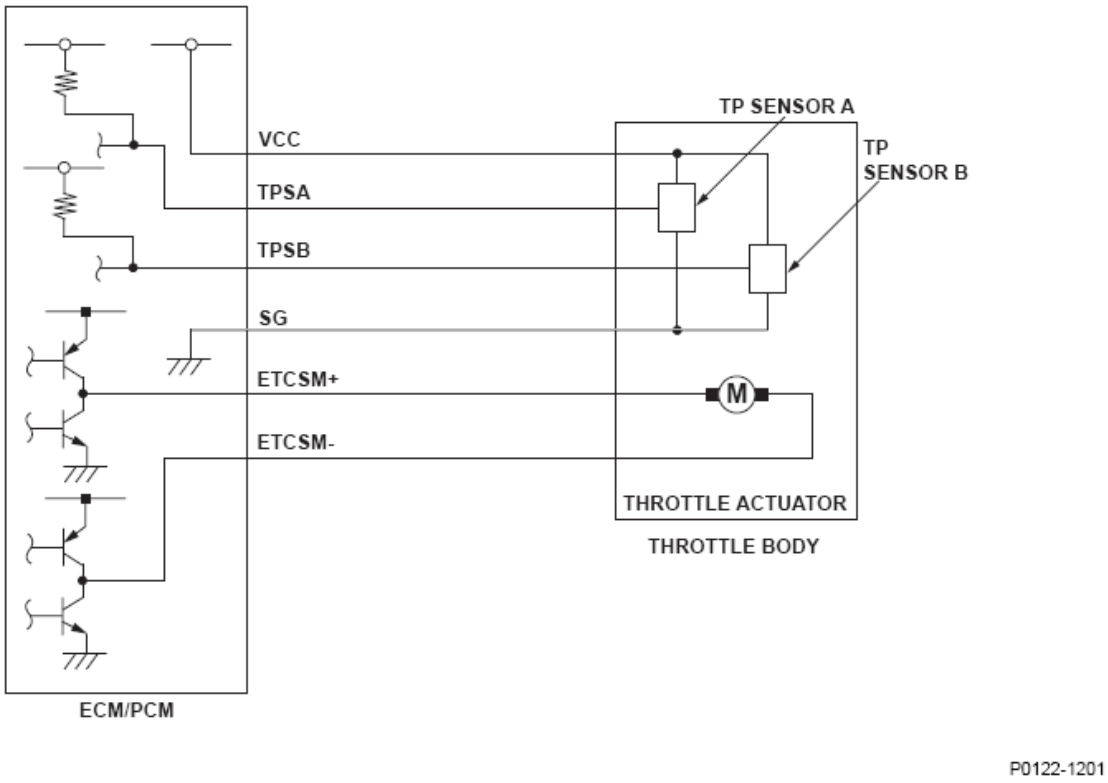

Fig. 58: Throttle Position Sensor - Circuit Diagram

GENERAL DESCRIPTION

The electronic throttle control system controls the throttle valve opening. The system includes the throttle actuator, the throttle valve, throttle position (TP) sensors A and B, the electronic throttle control system (ETCS) control relay, the accelerator pedal position (APP) sensor, and the engine control module (ECM)/powertrain control module (PCM). TP sensor B is a semiconductor type, and it is attached to the throttle body and shaft to determine throttle valve position. The throttle valve position signal from TP sensor B is transmitted to the ECM/PCM for target position feedback control. If the signal from TP sensor B is a fixed value for a set time, the ECM/PCM detects a TP sensor B malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous

Duration	200 milliseconds or more
DTC Type	One drive cycle, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	
	ON (II)

Ignition switch(1)	
Engine start/stop button(2)	ON mode
No active DTCs set (prevents monitor from running)	P0122, P0123, P0223, P2101, P2118, P2122, P2123, P2127, P2128, P2135, P2138, P2176
(1) Without keyless access system (2) With keyless access system	

MALFUNCTION THRESHOLD

The TP sensor B output voltage is 0.3 V or less for at least 200 milliseconds.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected, the MIL comes on and a Pending DTC, a Confirmed DTC, and the freeze data are stored in the ECM/PCM memory.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0223: THROTTLE POSITION (TP) SENSOR B CIRCUIT HIGH VOLTAGE

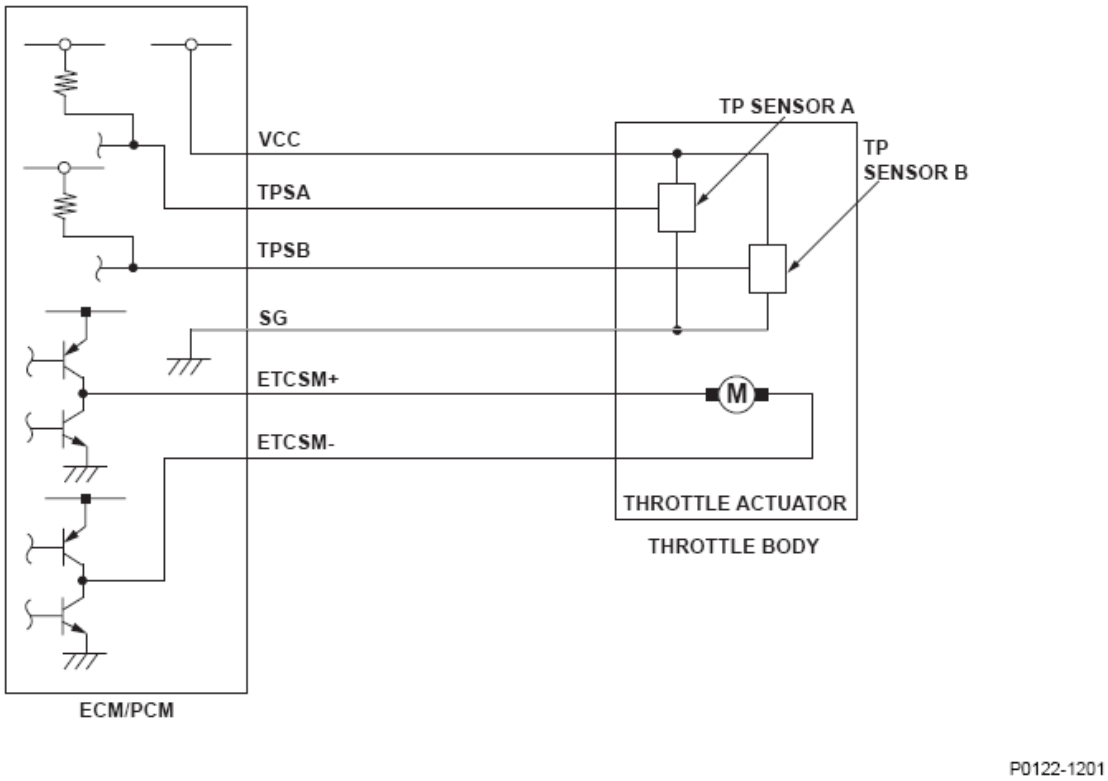

Fig. 59: Throttle Position Sensor - Circuit Diagram

GENERAL DESCRIPTION

The electronic throttle control system controls the throttle valve opening. The system includes the throttle actuator, the throttle valve, throttle position (TP) sensors A and B, the electronic throttle control system (ETCS) control relay, the accelerator pedal position (APP) sensor, and the engine control module (ECM)/powertrain control module (PCM). TP sensor B is a semiconductor type, and it is attached to the throttle body and shaft to determine throttle valve position. The throttle valve position signal from TP sensor B is transmitted to the ECM/PCM for target position feedback control. If the signal from TP sensor B is a fixed value for a set time, the ECM/PCM detects a TP sensor B malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Duration	200 milliseconds or more
DTC Type	One drive cycle, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	
	ON (II)

Ignition switch(1)	
Engine start/stop button(2)	ON mode
No active DTCs set (prevents monitor from running)	P0122, P0123, P0222, P2101, P2118, P2122, P2123, P2127, P2128, P2135, P2138, P2176
(1) Without keyless access system (2) With keyless access system	

MALFUNCTION THRESHOLD

The TP sensor B output voltage is 4.8 V or more for at least 200 milliseconds.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected, the MIL comes on and a Pending DTC, a Confirmed DTC, and the freeze data are stored in the ECM/PCM memory.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0300: RANDOM MISFIRE DETECTED (ENGINE TYPE: J35Z6)

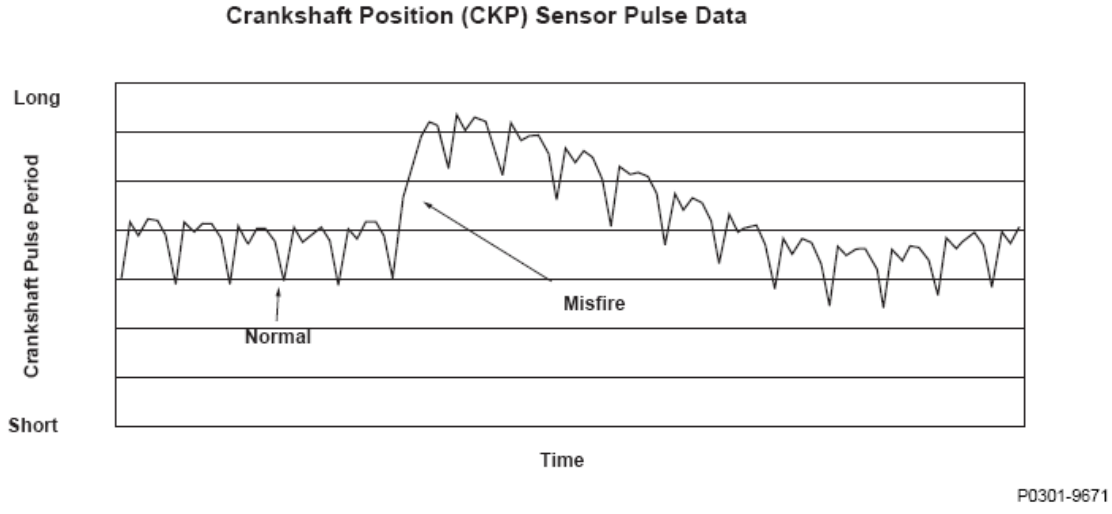

Fig. 60: Crankshaft Position Sensor Pulse Data Waveform

GENERAL DESCRIPTION

The crankshaft vibrates slightly when each cylinder fires. If a misfire occurs, the crankshaft rotation speed changes rapidly. The powertrain control module (PCM) monitors the crankshaft rotation speed based on the output pulses from the crankshaft position (CKP) sensor. By monitoring changes in the crankshaft rotation speed, the PCM counts the number of misfires and determines which cylinder is misfiring. If more than one DTC from P0301 through P0306 has been stored while misfires in multiple cylinders are detected, a malfunction is detected and a DTC is stored. There are two types of misfire detection:

Type 1: When the number of misfires per 200 engine revolutions reaches the level that can damage the warm up three way catalyst (WU-TWC), a DTC is stored and the MIL blinks. When the misfire ceases, the MIL stays on instead of blinking.

Type 2: When the number of misfires per 1,000 engine revolutions reaches the level that affects FTP mode exhaust emissions, a DTC is stored and the MIL comes on.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution		Continuous
Sequence		None
Duration	Type 1	Per 200 revolutions
	Type 2	Per 1,000 revolutions
DTC Type		Two drive cycles, MIL on
OBD Status		PASSED/FAILED/EXECUTING/OUT OF (TEST) CONDITION

ENABLE CONDITIONS

Condition		Minimum	Maximum
Elapsed time after monitor finishing condition except immediate starting the engine		1.0 second	-
Engine coolant temperature		None, unless the initial engine coolant temperature is 14 °F (-10 °C) or less, in which case the monitor will not run until the engine coolant temperature reaches 68 °F (20 °C)	
Engine speed		500 rpm	6,800 rpm
MAP value(1)	750 rpm	25 kPa (7.3 inHg, 184 mmHg)	-
	2,000 rpm	20 kPa (5.9 inHg, 149 mmHg)	-
Fuel feedback		Other than during fuel cut-off operation	
No active DTCs set (prevents monitor from running)		P0107, P0108, P0117, P0118, P0122, P0123, P0222, P0223, P0335, P0339, P1128, P1129, P2227, P2228, P2229	
Other		Test-drive on a flat road to avoid misdetection	
(1) Varies with driving conditions.			

MALFUNCTION THRESHOLD

The number of misfires versus engine revolutions is equal to or greater than the values in the table.

Misfire Type	The number of engine revolutions	The number of misfires
Misfire Type 1 (Severe)	Per 200 revolutions	26 - 89 times(1)
Misfire Type 2 (Light)	Per 1,000 revolutions	40 times
(1) Depending on engine speed and load.		

DRIVING PATTERN

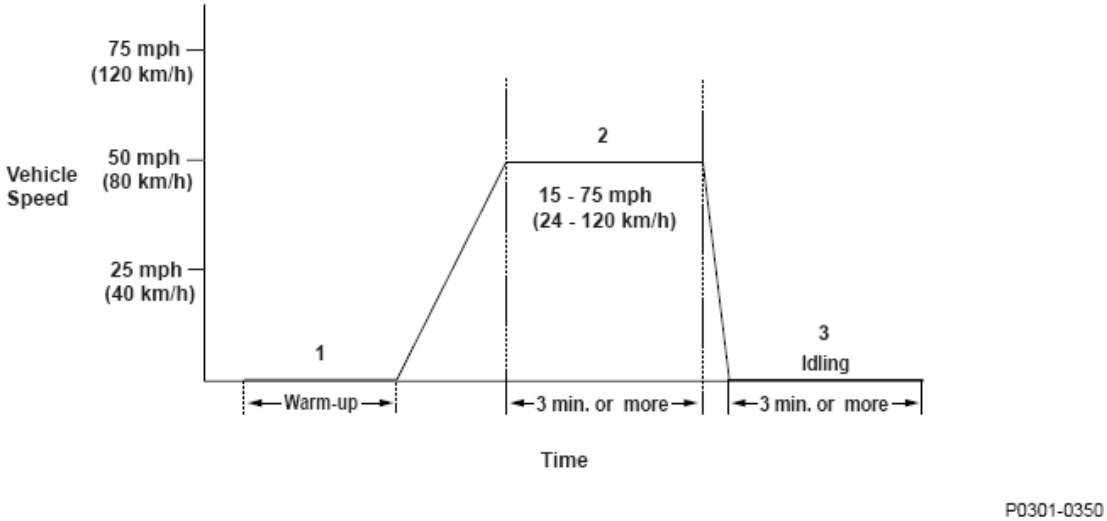

Fig. 61: Vehicle Speed Driving Pattern

1. Start the engine. Hold the engine speed at 3,000 rpm without load (in P or N) until the radiator fan comes on.
2. Drive the vehicle at a speed between 15 - 75 mph (24 - 120 km/h) for at least 3 minutes.
3. Stop the vehicle, and let the engine idle for at least 3 minutes.
   - When freeze data is stored, drive the vehicle under those conditions instead of Driving Pattern step 2 or 3.
   - When you have difficulty duplicating the DTC because of road conditions and traffic situations, repeat the driving pattern several times.
   - Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

Misfire Type 1:

- If a type 1 misfire (catalyst damaging) occurs once, the MIL blinks once per second, a Pending DTC is stored, and the high rpm fuel injection stop system activates. The fuel injection stops, at high rpm only, on the cylinder that has the highest misfire counts. The MIL then continues to blink and the fuel injection stays off at high rpm, until the drive is completed.

- If a type 1 misfire occurs during a second drive cycle, the MIL and fuel injection behave the same and a Confirmed DTC is stored.
- After a type 1 misfire has been detected during two drive cycles, the MIL comes on and stays on beginning with the third drive cycle, unless the Pending DTC has been cleared by the PCM***. Even if the MIL is on, it will start blinking if a type 1misfire occurs.
- If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Misfire Type 2:

If a type 2 misfire (emission-related but not severe enough to immediately damage the catalyst) occurs, a Pending DTC is stored, but the MIL does not come on or blink. If a type 2 misfire occurs during a second drive cycle, the MIL comes on and stays on unless the Pending DTC has been cleared by the PCM***.

*** The Pending DTC is erased if either of these conditions is met:

- The vehicle is operated at least once under the same driving conditions as the first misfire detection, and no misfire is detected.
- 80 drive cycles, regardless of driving conditions, are completed with no misfire detected.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive drive cycles in which the engine conditions are similar to the first time the malfunction was detected. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0300: RANDOM MISFIRE DETECTED (ENGINE TYPE: J37A4)

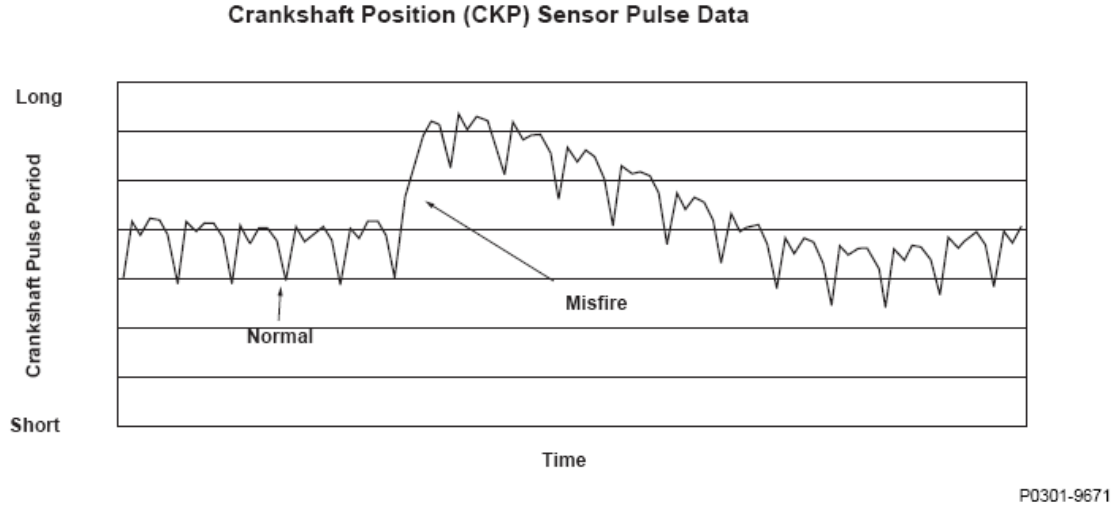

Fig. 62: Crankshaft Position Sensor Pulse Data Waveform

GENERAL DESCRIPTION

The crankshaft vibrates slightly when each cylinder fires. If a misfire occurs, the crankshaft rotation speed changes rapidly. The engine control module (ECM)/powertrain control module (PCM) monitors the crankshaft rotation speed based on the output pulses from the crankshaft position (CKP) sensor. By monitoring changes in the crankshaft rotation speed, the ECM/PCM counts the number of misfires and determines which cylinder is misfiring. If more than one DTC from P0301 through P0306 has been stored while misfires in multiple cylinders are detected, a malfunction is detected and a DTC is stored. There are two types of misfire detection:

Type 1: When the number of misfires per 200 engine revolutions reaches the level that can damage the warm up three way catalyst (WU-TWC), a DTC is stored and the MIL blinks. When the misfire ceases, the MIL stays on instead of blinking.

Type 2: When the number of misfires per 1,000 engine revolutions reaches the level that affects FTP mode exhaust emissions, a DTC is stored and the MIL comes on.

MALFUNCTION THRESHOLD

The number of misfires versus engine revolutions is equal to or greater than the values in the table.

Misfire Type	The number of engine revolutions	The number of misfires
Misfire Type 1 (Severe)	Per 200 revolutions	26 - 89 times(1)
Misfire Type 2 (Light)	Per 1,000 revolutions	44*1 , 55*2 times
(1) Depending on engine speed and load.		

DRIVING PATTERN

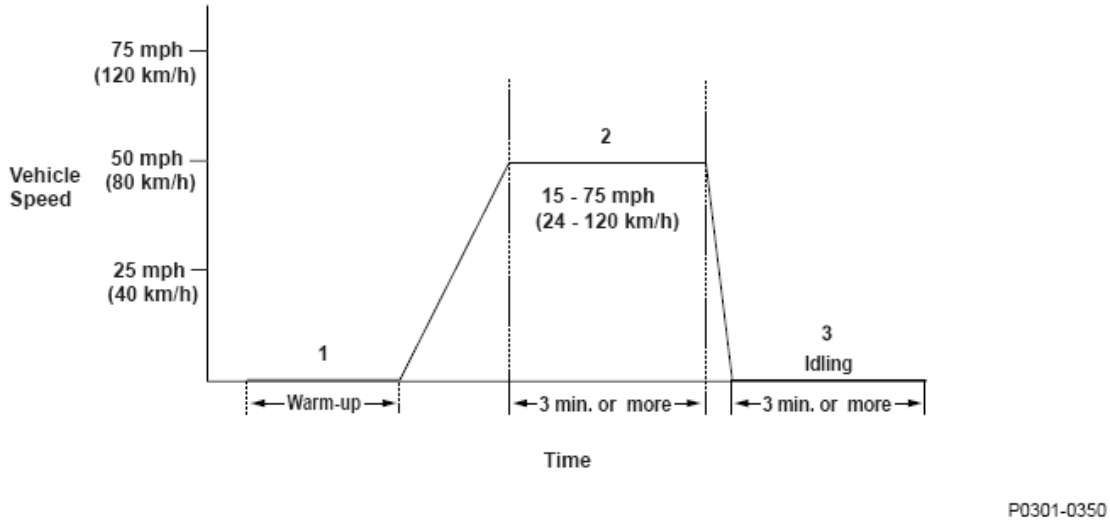

Fig. 63: Vehicle Speed Driving Pattern

1. Start the engine. Hold the engine speed at 3,000 rpm without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
2. Drive the vehicle at a speed between 15 - 75 mph (24 - 120 km/h) for at least 3 minutes.
3. Stop the vehicle, and let the engine idle for at least 3 minutes.
    - When freeze data is stored, drive the vehicle under those conditions instead of Driving Pattern step 2 or 3.
    - When you have difficulty duplicating the DTC because of road conditions and traffic situations, repeat the driving pattern several times.
    - Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

Misfire Type 1:

- If a type 1 misfire (catalyst damaging) occurs once, the MIL blinks once per second, a Pending DTC is stored, and the high rpm fuel injection stop system activates. The fuel injection stops, at high rpm only, on the cylinder that has the highest misfire counts. The MIL then continues to blink and the fuel injection stays off at high rpm, until the drive is completed.
- If a type 1 misfire occurs during a second drive cycle, the MIL and fuel injection behave the same and a Confirmed DTC is stored.
- After a type 1 misfire has been detected during two drive cycles, the MIL comes on and stays on beginning with the third drive cycle, unless the Pending DTC has been cleared by the ECM/PCM***. Even if the MIL is on, it will start blinking if a type 1 misfire occurs.
- If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Misfire Type 2:

If a type 2 misfire (emission-related but not severe enough to immediately damage the catalyst) occurs, a Pending DTC is stored, but the MIL does not come on or blink. If a type 2 misfire occurs during a second drive cycle, the MIL comes on and stays on unless the Pending DTC has been cleared by the ECM/PCM***.

*** The Pending DTC is erased if either of these conditions is met:

- The vehicle is operated at least once under the same driving conditions as the first misfire detection, and no misfire is detected.
- 80 drive cycles, regardless of driving conditions, are completed with no misfire detected.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive drive cycles in which the engine conditions are similar to the first time the malfunction was detected. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0301: NO. 1 CYLINDER MISFIRE DETECTED (ENGINE TYPE: J35Z6); DTC P0302: NO. 2 CYLINDER MISFIRE DETECTED (ENGINE TYPE: J35Z6); DTC P0303: NO. 3 CYLINDER MISFIRE DETECTED (ENGINE TYPE: J35Z6); DTC P0304: NO. 4 CYLINDER MISFIRE DETECTED (ENGINE TYPE: J35Z6); DTC P0305: NO. 5 CYLINDER MISFIRE DETECTED (ENGINE TYPE: J35Z6); DTC P0306: NO. 6 CYLINDER MISFIRE DETECTED (ENGINE TYPE: J35Z6)

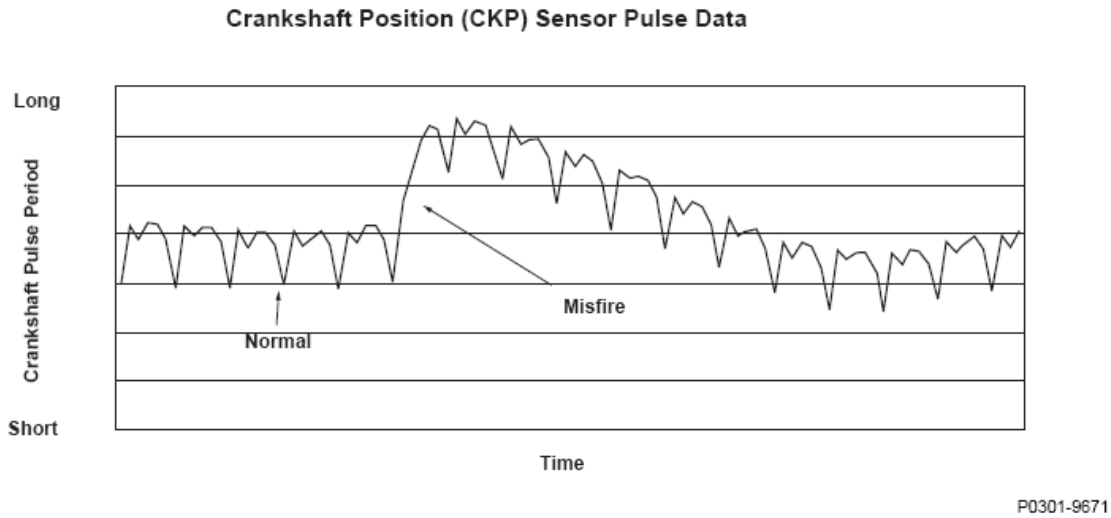

Fig. 64: Crankshaft Position Sensor Pulse Data Waveform

GENERAL DESCRIPTION

The crankshaft vibrates slightly when each cylinder fires. If a misfire occurs, the crankshaft rotation speed changes rapidly. The powertrain control module (PCM) monitors engine misfiring based on the output pulses from the crankshaft position (CKP) sensor, counts the number of misfires, and determines which cylinder is misfiring. If a misfire is detected, a DTC is stored.

There are two types of misfire detection:

Type 1: When the number of misfires per 200 engine revolutions reaches the level that can damage the warm up three way catalyst (WU-TWC), a DTC is stored and the MIL blinks. When the misfire ceases, the MIL stays on instead of blinking.

Type 2: When the number of misfires per 1,000 engine revolutions reaches the level that affects FTP mode exhaust emissions, a DTC is stored and the MIL comes on.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution		Continuous
Sequence		None
Duration	Type 1	Per 200 revolutions
	Type 2	Per 1,000 revolutions
DTC Type		Two drive cycles, MIL on
OBD Status		PASSED/FAILED/EXECUTING/OUT OF (TEST) CONDITION

ENABLE CONDITIONS

Condition	Minimum	Maximum
Elapsed time after monitor		

finishing condition except immediate starting the engine		1.0 second	-
Engine coolant temperature		None, unless the initial engine coolant temperature is 14 °F (-10 °C) or less, in which case the monitor will not run until the engine coolant temperature reaches 68 °F (20 °C)	
Engine speed		500 rpm	6,800 rpm
MAP value(1)	750 rpm	25 kPa (7.3 inHg, 184 mmHg)	-
	2,000 rpm	20 kPa (5.9 inHg, 149 mmHg)	-
Fuel feedback		Other than during fuel cut-off operation	
No active DTCs set (prevents monitor from running)		P0107, P0108, P0117, P0118, P0122, P0123, P0222, P0223, P0335, P0339, P1128, P1129, P2227, P2228, P2229	
Other		Test-drive on a flat road to avoid misdetection	
(1) Varies with driving conditions.			

MALFUNCTION THRESHOLD

The number of misfires versus engine revolutions is equal to or greater than the values in the table.

Misfire Type	The number of engine revolutions	The number of misfires
Misfire Type 1 (Severe)	Per 200 revolutions	26 - 89 times(1)
Misfire Type 2 (Light)	Per 1,000 revolutions	40 times
(1) Depending on engine speed and load.		

DRIVING PATTERN

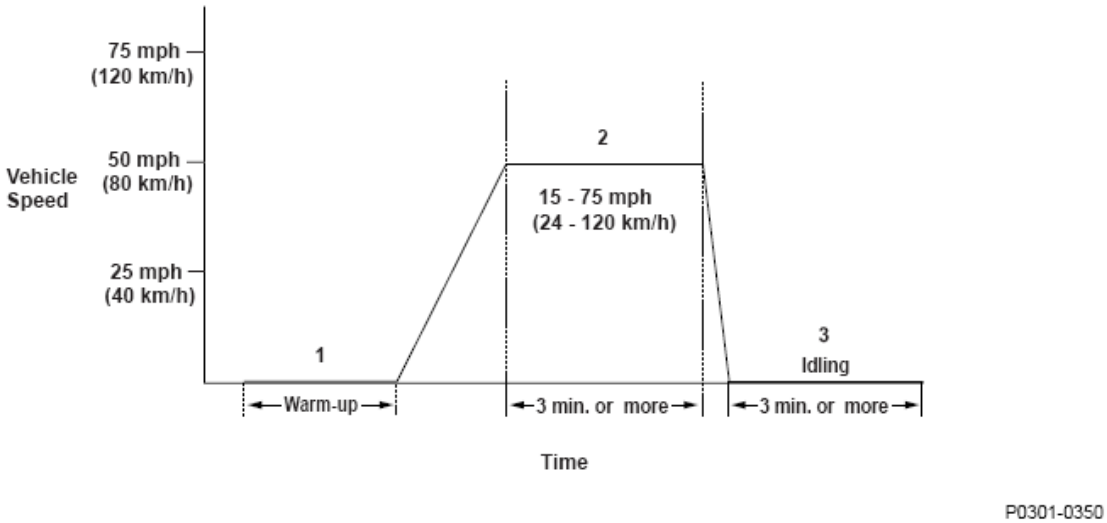

Fig. 65: Vehicle Speed Driving Pattern

1. Start the engine. Hold the engine speed at 3,000 rpm without load (in P or N) until the radiator fan comes on.

2. Drive the vehicle at a speed between 15 - 75 mph (24 - 120 km/h) for at least 3 minutes.
3. Stop the vehicle, and let the engine idle for at least 3 minutes.
    - When freeze data is stored, drive the vehicle under those conditions instead of Driving Pattern step 2 or 3.
    - When you have difficulty duplicating the DTC because of road conditions and traffic situations, repeat the driving pattern several times.
    - Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

Misfire Type 1:

- If a type 1 misfire (catalyst damaging) occurs once, the MIL blinks once per second, a Pending DTC is stored, and the high rpm fuel injection stop system activates. The fuel injection stops, at high rpm only, on the cylinder that has the highest misfire counts. The MIL then continues to blink and the fuel injection stays off at high rpm, until the drive is completed.
- If a type 1 misfire occurs during a second drive cycle, the MIL and fuel injection behave the same and a Confirmed DTC is stored.
- After a type 1 misfire has been detected during two drive cycles, the MIL comes on and stays on beginning with the third drive cycle, unless the Pending DTC has been cleared by the PCM***. Even if the MIL is on, it will start blinking if a type 1 misfire occurs.
- If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Misfire Type 2:

If a type 2 misfire (emission-related but not severe enough to immediately damage the catalyst) occurs, a Pending DTC is stored, but the MIL does not come on or blink. If a type 2 misfire occurs during a second drive cycle, the MIL comes on and stays on unless the Pending DTC has been cleared by the PCM***.

*** The Pending DTC is erased if either of these conditions is met:

- The vehicle is operated at least once under the same driving conditions as the first misfire detection, and no misfire is detected.
- 80 drive cycles, regardless of driving conditions, are completed with no misfire detected.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive drive cycles in which the engine conditions are similar to the first time the malfunction was detected. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0301: NO. 1 CYLINDER MISFIRE DETECTED (ENGINE TYPE: J37A4);

DTC P0302: NO. 2 CYLINDER MISFIRE DETECTED (ENGINE TYPE: J37A4); DTC P0303: NO. 3 CYLINDER MISFIRE DETECTED (ENGINE TYPE: J37A4); DTC P0304: NO. 4 CYLINDER MISFIRE DETECTED (ENGINE TYPE: J37A4); DTC P0305: NO. 5 CYLINDER MISFIRE DETECTED (ENGINE TYPE: J37A4); DTC P0306: NO. 6 CYLINDER MISFIRE DETECTED (ENGINE TYPE: J37A4)

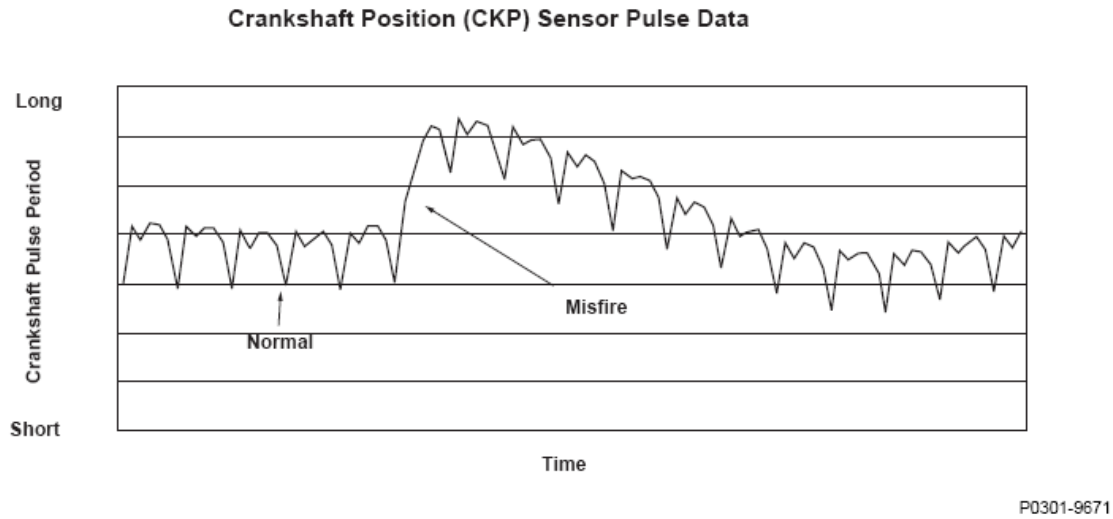

Fig. 66: Crankshaft Position Sensor Pulse Data Waveform

GENERAL DESCRIPTION

The crankshaft vibrates slightly when each cylinder fires. If a misfire occurs, the crankshaft rotation speed changes rapidly. The engine control module (ECM)/powertrain control module (PCM) monitors engine misfiring based on the output pulses from the crankshaft position (CKP) sensor, counts the number of misfires, and determines which cylinder is misfiring. If a misfire is detected, a DTC is stored.

There are two types of misfire detection:

Type 1: When the number of misfires per 200 engine revolutions reaches the level that can damage the warm up three way catalyst (WU-TWC), a DTC is stored and the MIL blinks. When the misfire ceases, the MIL stays on instead of blinking.

Type 2: When the number of misfires per 1,000 engine revolutions reaches the level that affects FTP mode exhaust emissions, a DTC is stored and the MIL comes on.

(3) M/T model

MALFUNCTION THRESHOLD

The number of misfires versus engine revolutions is equal to or greater than the values in the table.

Misfire Type	The number of engine revolutions	The number of misfires
Misfire Type 1 (Severe)	Per 200 revolutions	26 - 89 times(1)
Misfire Type 2 (Light)	Per 1,000 revolutions	44*1 , 55*2 times

(1) Depending on engine speed and load.

DRIVING PATTERN

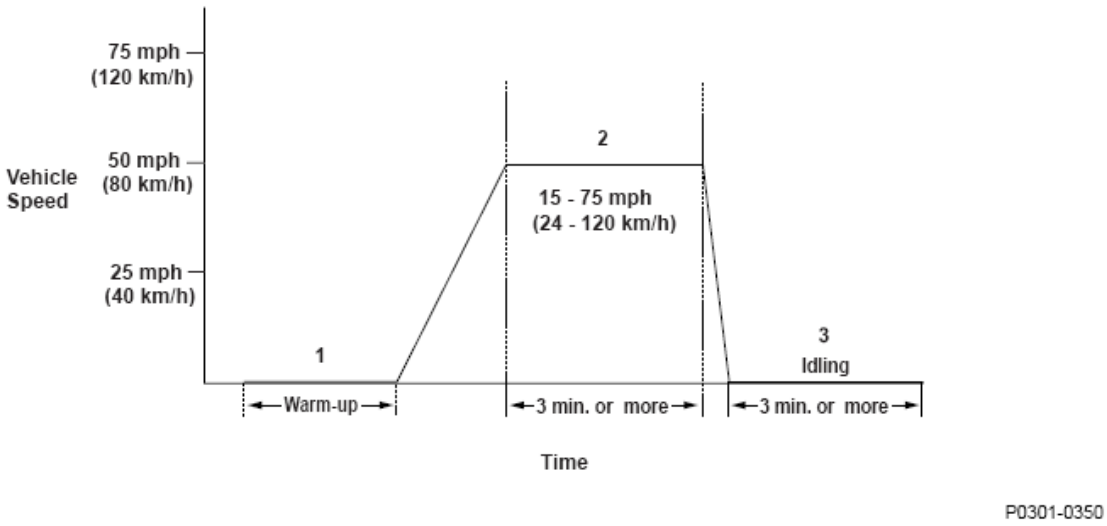

Fig. 67: Vehicle Speed Driving Pattern

1. Start the engine. Hold the engine speed at 3,000 rpm without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
2. Drive the vehicle at a speed between 15 - 75 mph (24 - 120 km/h) for at least 3 minutes.
3. Stop the vehicle, and let the engine idle for at least 3 minutes.
    - When freeze data is stored, drive the vehicle under those conditions instead of Driving Pattern step 2 or 3.
    - When you have difficulty duplicating the DTC because of road conditions and traffic situations, repeat the driving pattern several times.
    - Drive the vehicle in this manner only if the traffic regulations and ambient conditions allow.

DIAGNOSIS DETAILS

Conditions for setting the DTC

Misfire Type 1:

- If a type 1 misfire (catalyst damaging) occurs once, the MIL blinks once per second, a Pending DTC is stored, and the high rpm fuel injection stop system activates. The fuel injection stops, at high rpm only, on the cylinder that has the highest misfire counts. The MIL then continues to blink and the fuel injection stays off at high rpm, until the drive is completed.
- If a type 1 misfire occurs during a second drive cycle, the MIL and fuel injection behave the same and a Confirmed DTC is stored.
- After a type 1 misfire has been detected during two drive cycles, the MIL comes on and stays on beginning with the third drive cycle, unless the Pending DTC has been cleared by the ECM/PCM***. Even if the MIL is on, it will start blinking if a type 1 misfire occurs.
- If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Misfire Type 2:

If a type 2 misfire (emission-related but not severe enough to immediately damage the catalyst) occurs, a Pending DTC is stored, but the MIL does not come on or blink. If a type 2 misfire occurs during a second drive cycle, the MIL comes on and stays on unless the Pending DTC has been cleared by the ECM/PCM***.

*** The Pending DTC is erased if either of these conditions is met:

- The vehicle is operated at least once under the same driving conditions as the first misfire detection, and no misfire is detected.
- 80 drive cycles, regardless of driving conditions, are completed with no misfire detected.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive drive cycles in which the engine conditions are similar to the first time the malfunction was detected. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0325: KNOCK SENSOR CIRCUIT MALFUNCTION

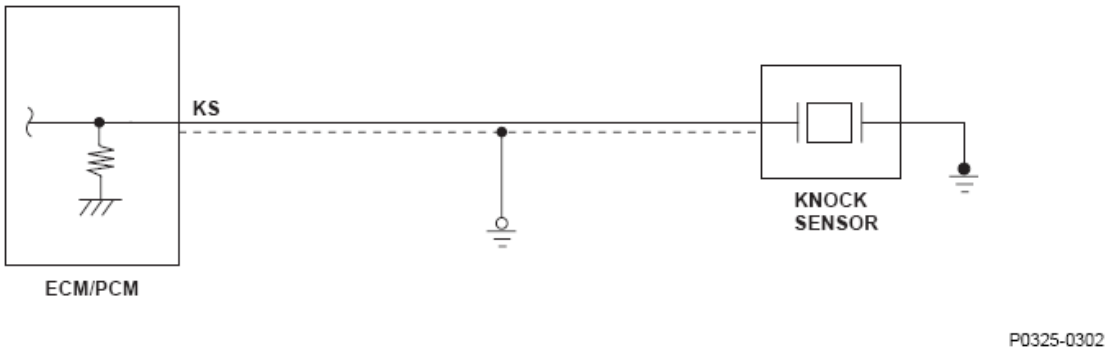

Fig. 68: Knock Sensor - Circuit Diagram

GENERAL DESCRIPTION

The knock sensor is mounted on the engine block and detects engine knocking. The vibrations caused by the knocking are converted into electrical signals through the piezo ceramic element. The engine control module (ECM)/powertrain control module (PCM) controls the ignition timing based on the electrical signal. If the signal from the knock sensor do not vary for a set time, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	5 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	Minimum	Maximum
Engine coolant temperature	140 °F (60 °C)	-
Engine speed	2,000 rpm	-
No active DTCs set (prevents monitor from running)	P0117, P0118	

MALFUNCTION THRESHOLD

No signals from the knock sensor are detected for at least 5 seconds.

DRIVING PATTERN

1. Start the engine. Hold the engine speed at 3,000 rpm without load (A/T in P or N, M/T in neutral) until the radiator fan comes on.
2. Hold the engine speed at 3,000 - 4,000 rpm for at least 10 seconds.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected during the first drive cycle, a Pending DTC is stored in the ECM/PCM memory. If the malfunction returns in the next (second) drive cycle, the MIL comes on and a Confirmed DTC and the freeze data are stored.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0335: CRANKSHAFT POSITION (CKP) SENSOR NO SIGNAL

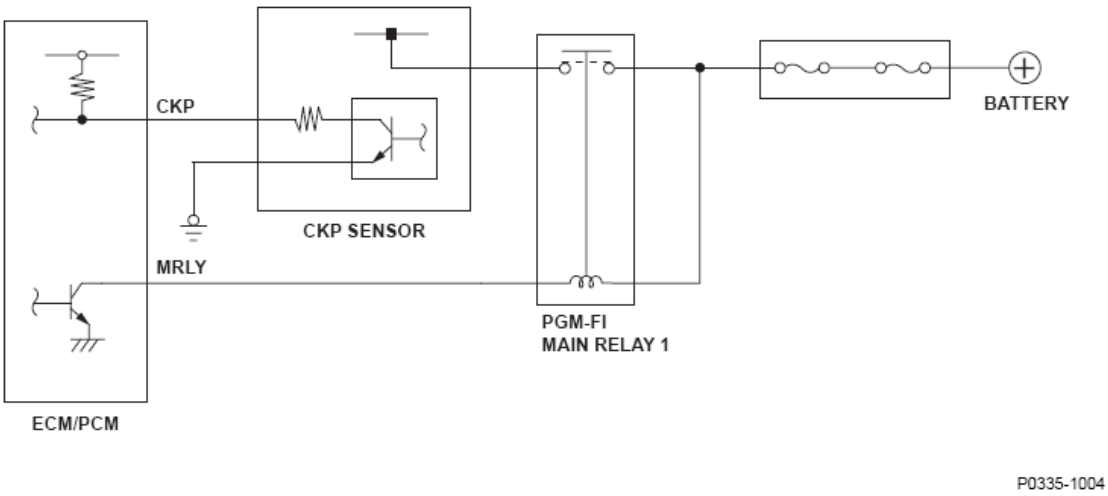

Fig. 69: Crankshaft Position Sensor - Circuit Diagram

GENERAL DESCRIPTION

The crankshaft position (CKP) sensor consists of a rotor and a semiconductor that detects rotor position. When the engine starts, the rotor turns and the magnetic flux in the semiconductor device changes. The changes of magnetic flux are converted into pulsing signals to the engine control module (ECM)/powertrain control module (PCM). The CKP sensor detects injection/ignition timing for each cylinder and engine speed. If no pulsing signals from the CKP sensor are detected, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	2 seconds or more (when the engine speed is 750 rpm)
DTC Type	One drive cycle, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	
State of the engine	Running
No active DTCs set (prevents monitor from running)	P0365, P0369

MALFUNCTION THRESHOLD

No input signals from the CKP sensor are detected while signals from the CMP sensor are detected at least 125 times.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected, the MIL comes on and a Pending DTC, a Confirmed DTC, and the freeze data are stored in the ECM/PCM memory.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0339: CRANKSHAFT POSITION (CKP) SENSOR CIRCUIT INTERMITTENT INTERRUPTION

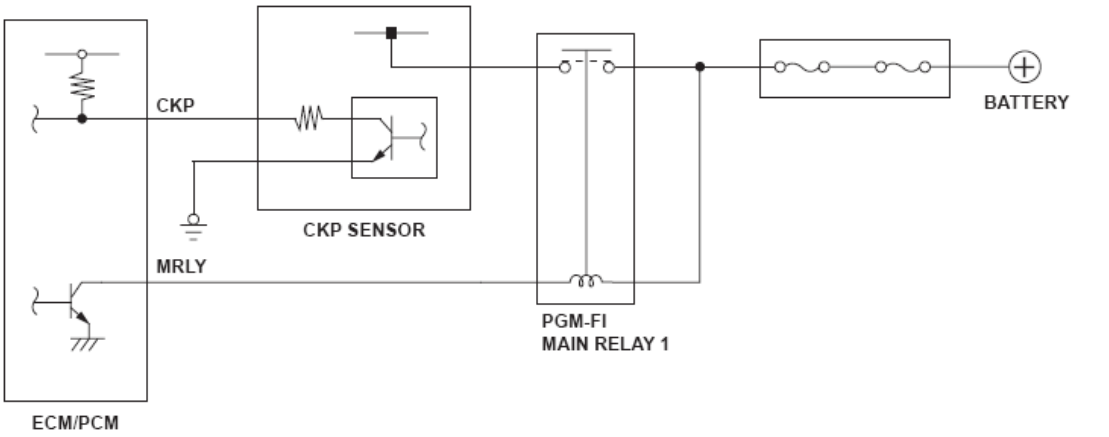

Fig. 70: Crankshaft Position Sensor - Circuit Diagram

GENERAL DESCRIPTION

The crankshaft position (CKP) sensor consists of a rotor and a semiconductor that detects rotor position. When the engine starts, the rotor turns and the magnetic flux in the semiconductor device changes. The changes of magnetic flux are converted into pulsing signals to the engine control module (ECM)/powertrain control module (PCM). The CKP sensor detects injection/ignition timing for each cylinder and engine speed. If an abnormal amount of pulsing signals from the CKP sensor are detected, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	-
DTC Type	One drive cycle, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	Minimum	Maximum
Engine speed	400 rpm	-
No active DTCs set (prevents monitor from running)	P0335	

MALFUNCTION THRESHOLD

Other than 58 pulses are detected during intervals between reference pulses for each crank revolution. This condition has been detected at least 30 times.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected, the MIL comes on and a Pending DTC, a Confirmed DTC, and the freeze data are stored in the ECM/PCM memory.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0351: NO. 1 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION; DTC P0352: NO. 2 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION; DTC P0353: NO. 3 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION; DTC P0354: NO. 4 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION; DTC P0355: NO. 5 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION; DTC P0356: NO. 6 CYLINDER IGNITION COIL CIRCUIT MALFUNCTION

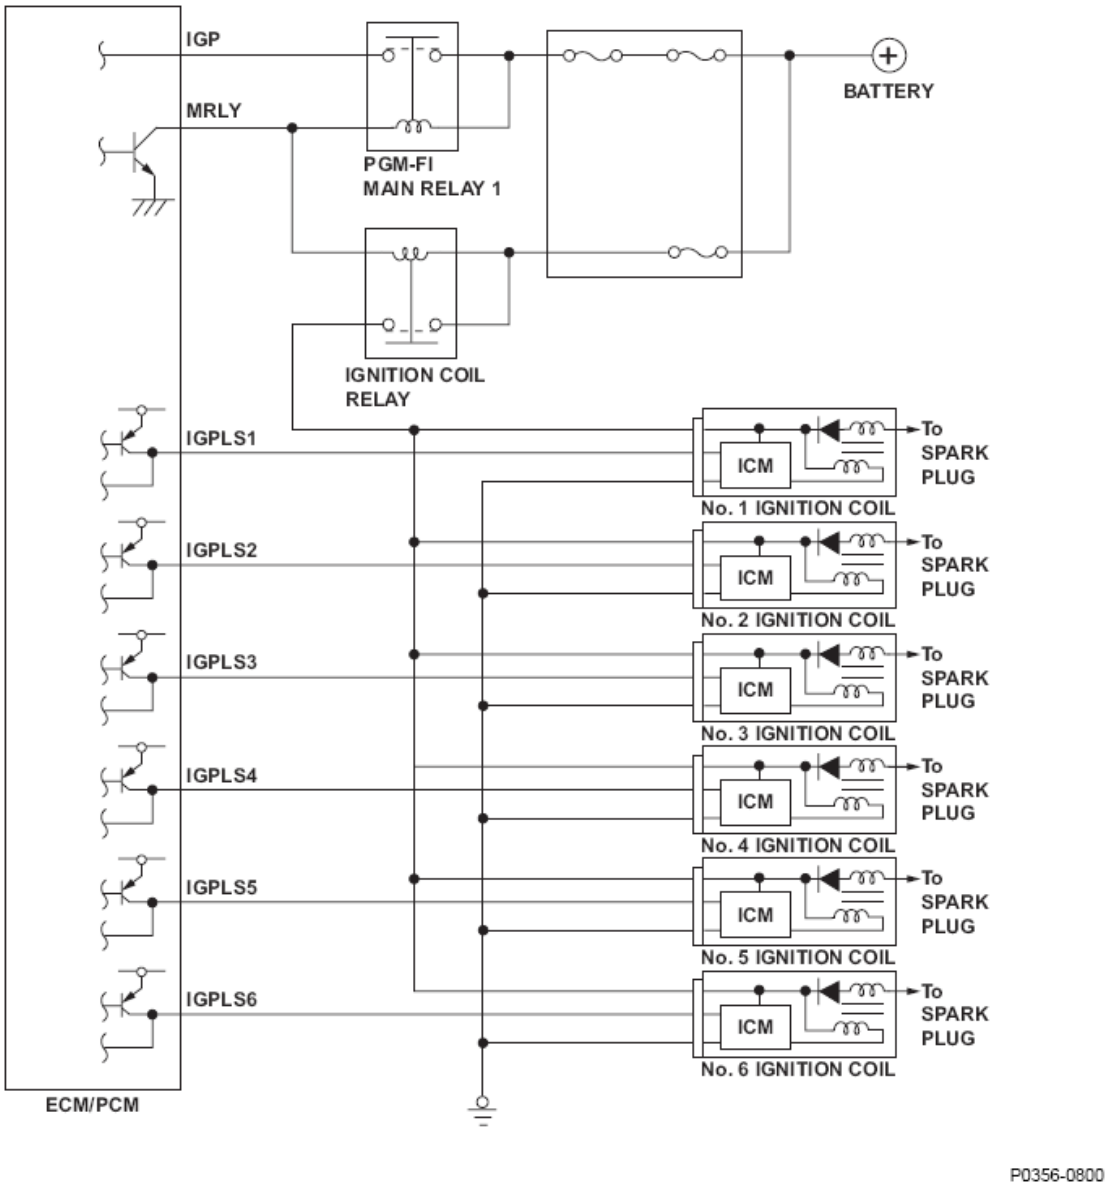

Fig. 71: Ignition Coil - Circuit Diagram

GENERAL DESCRIPTION

The ignition coil is triggered at the optimum time by the engine control module (ECM)/powertrain control module (PCM). The ECM/PCM detects a malfunction when the engine is running and the return signal does not change for a specified time, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	5 seconds or more (when the engine speed is 700 rpm)

DTC Type	One drive cycle, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	
State of the engine	Running
No active DTCs set (prevents monitor from running)	P0335, P0339, P0365, P0369

MALFUNCTION THRESHOLD

The return signal does not change for at least 5 seconds when the ignition coil is triggered.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected, the MIL comes on and a Pending DTC, a Confirmed DTC, and the freeze data are stored in the ECM/PCM memory.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0365: CAMSHAFT POSITION (CMP) SENSOR CIRCUIT NO SIGNAL

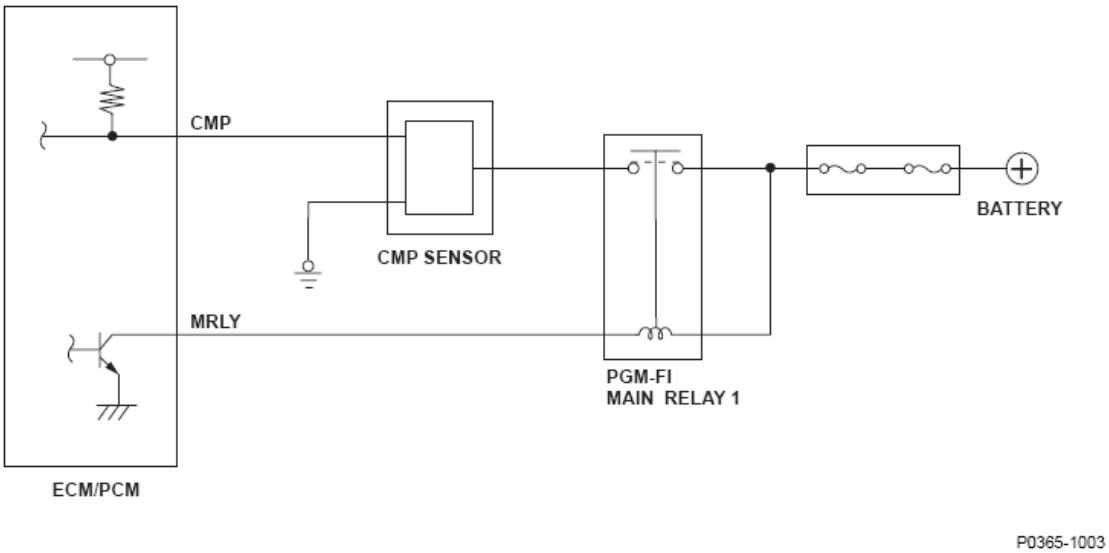

Fig. 72: Camshaft Position Sensor - Circuit Diagram

GENERAL DESCRIPTION

The camshaft position (CMP) sensor consists of a rotor and a semiconductor that detects rotor position. When the rotor turns after starting the engine, the changes of magnetic flux in the semiconductor are converted into pulsing signals to the engine control module (ECM)/powertrain control module (PCM). The CMP sensor detects the top dead center of each cylinder for fuel injection timing. If no CMP sensor pulsing signals are detected, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	2 seconds or more (when the engine speed is 750 rpm)
DTC Type	One drive cycle, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	
State of the engine	Running
No active DTCs set (prevents monitor from running)	P0335, P0339, P0369

MALFUNCTION THRESHOLD

No input signals from the CMP sensor are detected while signals from the CKP sensor are detected at least 300 times.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected, the MIL comes on and a Pending DTC, a Confirmed DTC, and the freeze data are stored in the ECM/PCM memory.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0369: CAMSHAFT POSITION (CMP) SENSOR CIRCUIT INTERMITTENT INTERRUPTION

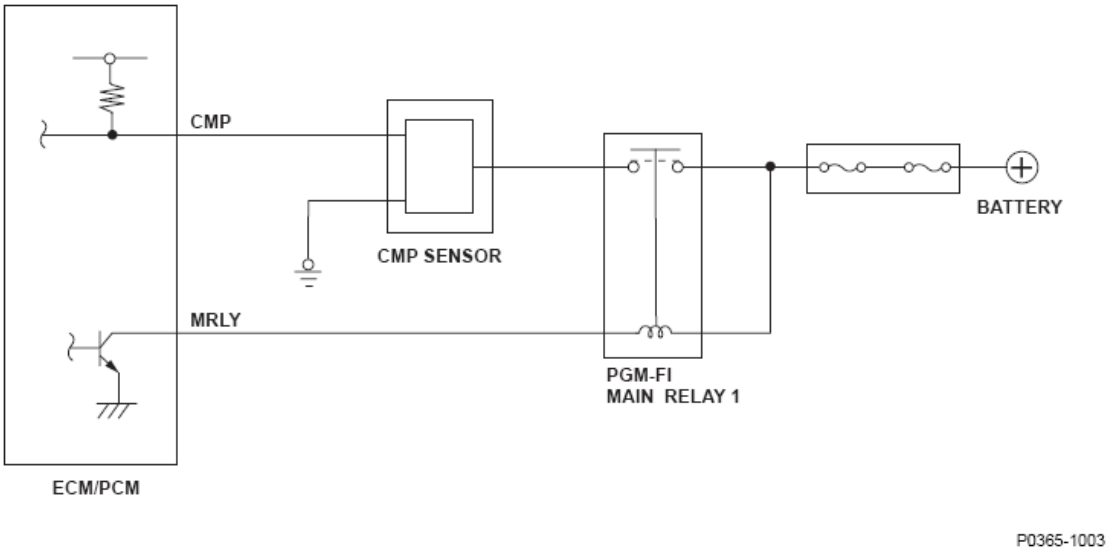

Fig. 73: Camshaft Position Sensor - Circuit Diagram

GENERAL DESCRIPTION

The camshaft position (CMP) sensor consists of a rotor and a semiconductor that detects rotor position. When the rotor turns after starting the engine, the changes of magnetic flux in the semiconductor are converted into pulsing signals to the engine control module (ECM)/powertrain control module (PCM). The CMP sensor detects the top dead center of each cylinder for fuel injection timing. If CMP sensor pulsing signals are detected an abnormal number of times due to noise, the ECM/PCM detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Continuous
Sequence	None
Duration	-
DTC Type	One drive cycle, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition	Minimum	Maximum
Engine speed	400 rpm	-
No active DTCs set (prevents monitor from running)	P0335, P0339, P0365	

MALFUNCTION THRESHOLD

Other than 10 CMP pulses are detected during two crankshaft revolutions. This condition has been detected at least 30 times.

DIAGNOSIS DETAILS

Conditions for setting the DTC

When a malfunction is detected, the MIL comes on and a Pending DTC, a Confirmed DTC, and the freeze data are stored in the ECM/PCM memory.

Conditions for clearing the DTC

The MIL is cleared if the malfunction does not return in three consecutive trips in which the diagnostic runs. The MIL, the Pending DTC, the Confirmed DTC, and the freeze data can be cleared with the scan tool Clear command or by disconnecting the battery.

DTC P0400: EXHAUST GAS RECIRCULATION (EGR) SYSTEM LEAK DETECTED (ENGINE TYPE: J35Z6)

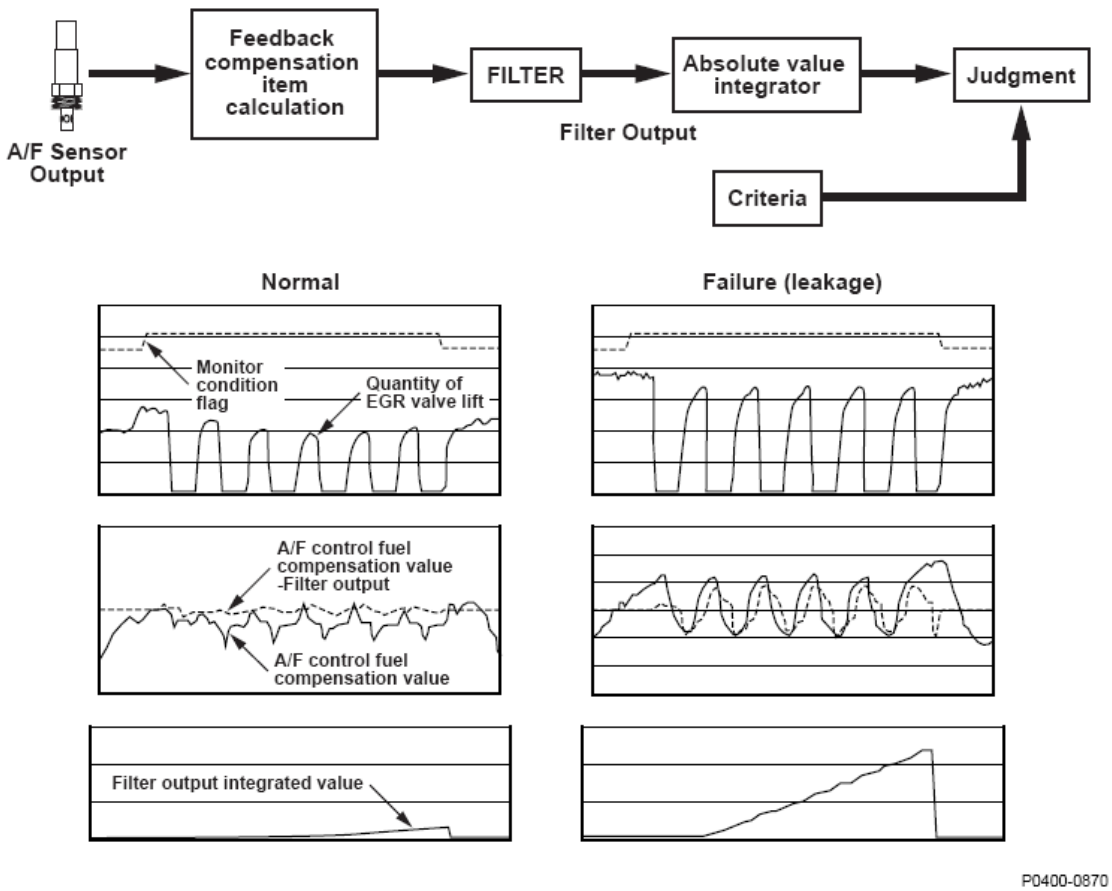

Fig. 74: Exhaust Gas Recirculation System Characteristics Curve (Normal And Failure)

GENERAL DESCRIPTION

The exhaust gas recirculation (EGR) system failure conditions include a sticking lift sensor, restricted passages, and leakage from the external piping. At any specific EGR lift value there is a corresponding air/fuel ratio compensation value. If the air/fuel ratio compensation value is greater than the corresponding EGR lift value, the powertrain control module (PCM) detects a malfunction and stores a DTC.

MONITOR EXECUTION, SEQUENCE, DURATION, DTC TYPE, OBD STATUS

Execution	Once per driving cycle
Sequence	P0404, P2413 are judged as OK
Duration	11 seconds or more
DTC Type	Two drive cycles, MIL on
OBD Status	PASSED/FAILED/NOT COMPLETED (STILL TESTING)

ENABLE CONDITIONS

Condition		Minimum	Maximum
Engine coolant temperature		156 °F (69 °C)	-
Intake air temperature		10 °F (-12 °C)	-
Engine speed		1,100 rpm	3,000 rpm
MAP value	1,600 rpm	47 kPa (13.8 inHg, 350 mmHg)	79 kPa (23.6 inHg, 600 mmHg)
	2,200 rpm	47 kPa (13.8 inHg, 350 mmHg)	73 kPa (21.6 inHg, 550 mmHg)
Vehicle speed		26 mph (41 km/h)	-
Battery voltage		10.5 V	-
Fuel trim		0.73	1.47
Fuel feedback		Closed loop at stoichiometric	
Monitoring priority		P0133, P0153, P0420, P0430
