WARNING REGARDING SERVICING OF SUPPLEMENTAL RESTRAINT SYSTEM (SRS) EQUIPPED VEHICLES

- (1) Thoroughly review this manual, especially GROUP 52B – Supplemental Restraint System (SRS) before beginning any service or maintenance of any component of the SRS or any SRS-related component.
- (2) When removing or installing the components indicated in the table of contents by an asterisk (*), use special care not to apply shocks to SRS-related components.

LUBRICANT

Item	Specified lubricant	Quantity dm ³ (ℓ)
Transmission oil	mitsubishi genuine "Dia-Queen" multi gear oil <75W/85W>	2.8 (2.8)
Transfer oil	mitsubishi genuine "Dia-Queen Super" hypoid gear oil (GL-5)	0.62 (0.62)

SPECIAL TOOLS

Tool	Number	Name	Use
 B991113	MB990635 or MB991113	Steering linkage puller	Tie rod end and lower arm disconnection
	Recommended tool MZ203826 by Anzen Jidosha or MZ203827 by Banzai	Engine lifter	Supporting the engine assembly during removal and installation of the transmission
	MB991453	Engine hanger	
	MB991612	Adapter	Removing output shaft
	MB990211	Slide hammer	
	MB991193	Plug	Preventing oil flowing out from and foreign matter entry into transfer.

ON-VEHICLE SERVICE

1. TRANSMISSION OIL CHECK

- (1) Remove the oil filler plug.
- (2) Oil level should be at the lower portion of the filler plug hole.
- (3) Check that the transmission oil is not noticeably dirty, and that it has a suitable viscosity.
- (4) Tighten the filler plug to the specified torque.

Tightening torque: 32 Nm {3.3 kgf·m}

2. TRANSMISSION OIL REPLACEMENT

- (1) Remove the drain plug to drain oil.
- (2) Tighten the drain plug to the specified torque.
- (3) Remove the filler plug and fill with specified oil till the level comes to the lower portion of filler plug hole.

Transmission oil

Specified oil:

MITSUBISHI genuine "Dia-Queen" multi gear oil <75W/85W>

Quantity: 2.8 dm³ (2.8 ℓ)

- (4) Tighten the filler plug to the specified torque.

Tightening torque: 32 Nm {3.3 kgf·m}

3. TRANSFER OIL CHECK

- (1) Remove the oil filler plug.
- (2) Oil level should be at the lower portion of the filler plug hole.
- (3) Check that the transmission oil is not noticeably dirty, and that it has a suitable viscosity.
- (4) Tighten the filler plug to the specified torque.

Tightening torque: 32 Nm {3.3 kgf·m}

4. TRANSFER OIL REPLACEMENT

- (1) Remove the drain plug to drain oil.
- (2) Tighten the drain plug to the specified torque.
- (3) Remove the filler plug and fill with specified oil till the level comes to the lower portion of filler plug hole.

Transfer oil

Specified oil:

MITSUBISHI genuine "Dia-Queen Super" hypoid gear oil (GL-5)

Quantity: 0.62 dm³ (0.62 ℓ)

- (4) Tighten the filler plug to the specified torque.

Tightening torque: 32 Nm {3.3 kgf·m}

TRANSMISSION CONTROL

REMOVAL AND INSTALLATION

Pre-removal and Post-installation Operation

- Air Cleaner Assembly Removal and Installation

Caution: SRS

Be careful not to subject the SRS-ECU to any shocks during removal and installation of the shift cable and select cable assembly.

09M0017

Unit: Nm {kgf·m}

Shift cable and select cable assembly removal steps

- ▶B◀ 1. Shift knob
- ▶B◀ 2. Spring washer
- ▶B◀ 3. Nut
 - Front floor console (Refer to GROUP 52.)
- 4. Snap pin
- 5. Select cable connection (Shift lever side)
- 6. Clip
- 7. Shift cable connection (Shift lever side)
- 8. Snap pin
- ▶A◀ 9. Select cable connection (Transmission side)
- ▶A◀ 10. Shift cable connection (Transmission side)

Shift lever assembly removal steps

- ▶B◀ 1. Shift knob
- ▶B◀ 2. Spring washer
- ▶B◀ 3. Nut
 - Front floor console (Refer to GROUP 52.)
- 4. Snap pin
- 5. Select cable connection (Shift lever side)
- 6. Clip
- 7. Shift cable connection (Shift lever side)
- 12. Shift lever assembly
- 13. Distance piece
- 14. Bushing

**INSTALLATION SERVICE POINTS****►A◄ SHIFT CABLE AND SELECT CABLE ASSEMBLY / SHIFT CABLE CONNECTION / SELECT CABLE CONNECTION**

- (1) Set the transmission side shift lever and the passenger compartment side shift lever to the neutral position.
- (2) For the transmission side, the white and yellow paint marks on the shift and select cable ends should face the snap pins.
- (3) Move the shift lever to all positions and check that the operation is smooth.

►B◄ NUT / SPRING WASHER / SHIFT KNOB INSTALLATION

- (1) Screw in the nut all the way by hand, turn back half a turn, and then insert the spring washer.
- (2) Screw in the shift knob until it touches the spring washer, and make one more turn. Then turn more to adjust the shift pattern on the shift knob.
- (3) If the above steps are impossible, you can turn back the shift knob by one turn at most after screwing in all the way to adjust the shift pattern.

SHIFT LEVER ASSEMBLY DISASSEMBLY AND REASSEMBLY

Lifting up of the vehicle

- 9. Stabilizer bar connection
- 10. Wheel speed sensor cable connection <Vehicles with ABS>
- 11. Brake hose clamp
- 12. Tie rod end connection
- 13. Lower arm ball joint connection
 - Clutch release bearing connection
- 14. Centermember assembly
- 15. Drive shaft <LH> connection
- 16. Drive shaft <RH> connection
 - Strut assembly <LH> (Refer to GROUP 33A.)

- 17. Output shaft
 - Air hose A (Refer to GROUP 15 – Intercooler.)
- 18. Transmission assembly lower part coupling bolts
- 19. Transmission assembly

Caution

Mounting locations marked by * should be provisionally tightened, and then fully tightened when the body is supporting the full weight of the engine.

**REMOVAL SERVICE POINTS****◀A▶ CLUTCH RELEASE BEARING SEPARATION**

- (1) Remove the cover from the service hole in the clutch housing.
- (2) While pushing the release fork by hand in the direction A, insert a flap-tip screwdriver between the release bearing and the wedge collar.

Caution

Be sure to push the release fork in the direction A before inserting a screwdriver.

- (3) Separate the release bearing from the wedge collar by prying with the screwdriver (turning the screwdriver grip 90°).

NOTE

The release fork is forced to move fully in the direction B by the return spring as soon as it is separated from the wedge collar.

Caution

If it is hard to turn the screwdriver (to pry off the release bearing), remove the screwdriver once and repeat the above procedure after pushing the release fork fully in the direction A two to three times. Forcibly prying can cause the release bearing to be damaged.

**◀B▶ DRIVE SHAFT <LH> / DRIVE SHAFT <RH> DISCONNECTION**

- (1) To disconnect the left-hand drive shaft, insert a lever as shown and pry out the shaft from the transmission. To disconnect the right-hand drive shaft, apply a lever and a hammer as shown and lever out the shaft from the transfer assembly using the hammer as a fulcrum.

NOTE

Remove the drive shafts with the hub and knuckle attached.

Caution

Do not attempt to pull out the drive shaft from the BJ in this stage since it can cause the TJ to be damaged. Be sure to remove the drive shaft first from the transmission side using a lever.

- (2) Suspend the removed drive shaft with a wire so that there are no sharp bends in any of the joints.

◀C▶ OUTPUT SHAFT REMOVAL

- (1) Use the special tools (MB991612, MB990211) to remove the output shaft.
- (2) Use a shop towel to cover the transmission case not to let foreign material get into it.

TRANSFER ASSEMBLY

REMOVAL AND INSTALLATION

Pre-removal and Post-Installation Operation

- Transmission Oil Draining and Supplying (Refer to P.22A-3.)
- Transfer Oil Draining and Supplying (Refer to P.22A-3.)
- Front Exhaust Pipe Removal and Installation (Refer to GROUP 15.)

Removal steps

- Drive shaft (Refer to P.22A-9.)
 - Output shaft (Refer to P.22A-9.)
1. Front propeller shaft (Refer to GROUP 25)
 2. Transfer assembly

REMOVAL SERVICE POINT

◀A▶ TRANSFER ASSEMBLY REMOVAL

Caution

- (1) Use care not to damage the lip of the oil seal in the transfer case.
- (2) Use the special tool to cover the opening in the transfer case to prevent oil from flowing out or foreign materials from entering the case.

FORM-IN-PLACE GASKET

The transmission has several areas where the form-in-place gasket (FIPG) is in use. To ensure that the gasket fully serves its purpose, it is necessary to observe some precautions when applying the gasket. Bead size, continuity and location are of paramount importance. Too thin a bead could cause leaks. Too thick a bead, on the other hand, could be squeezed out of location, causing blocking or narrowing of the fluid feed line. To eliminate the possibility of leaks from a joint, therefore, it is absolutely necessary to apply the gasket evenly without a break, while observing the correct bead size.

DISASSEMBLY

The parts assembled with the FIPG can be easily disassembled without use of a special method. In some cases, however, the sealant between the joined surfaces may have to be broken by lightly striking with a mallet or similar tool. A flat and thin gasket scraper may be lightly hammered in between the joined surfaces. In this case, however, care must be taken to prevent damage to the joined surfaces.

SURFACE PREPARATION

Thoroughly remove all substances deposited on the gasket application surfaces, using a gasket scraper or wire brush. Check to ensure that the surfaces to which the FIPG is to be applied is flat. Make sure that there are no oils, greases and foreign substances deposited on the application surfaces. Do not forget to remove the old sealant remaining in the bolt holes.

FORM-IN-PLACE GASKET APPLICATION

Applied FIPG bead should be of the specified size and without breaks. Also be sure to encircle the bolt hole circumference with a completely continuous bead. The FIPG can be wiped away unless it is hardened. While the FIPG is still moist (in less than 10 minutes), mount the parts in position. When the parts are mounted, make sure that the gasket is applied to the required area only. In addition, do not apply any oil or water to the sealing locations or start the engine until a sufficient amount of time (about one hour) has passed after installation is completed.

The FIPG application procedure may vary on different areas. Observe the procedure described in the text when applying the FIPG.

**DISASSEMBLY SERVICE POINTS****◀A▶ SPRING PIN REMOVAL**

Shift the 5th-reverse shift fork in the direction shown in the illustration.

**◀B▶ 3RD-4TH SPEED SHIFT RAIL / 3RD-4TH SPEED SHIFT FORK / 5TH-REVERSE SPEED SHIFT RAIL / 5TH-REVERSE SPEED SHIFT FORK REMOVAL**

Pull out the shift rails from the shift rail holes in the clutch housing.

**◀C▶ CENTER DIFFERENTIAL / OUTPUT SHAFT / INPUT SHAFT REMOVAL**

Remove the input shaft, output shaft and center differential together.

**ADJUSTMENT BEFORE REASSEMBLY****SPACER SELECTION FOR ADJUSTING INPUT SHAFT END PLAY / OUTPUT SHAFT PRELOAD / DIFFERENTIAL PRELOAD**

(1) Install the input shaft, output shaft and center differential as a set to the clutch housing.

(2) Place two pieces of solder (1.6 mm in diameter and approx. 10 mm in length) on the input shaft rear bearing at the positions shown in the illustration.

- (3) Place two pieces of solder (1.6 mm in diameter and approx. 10 mm in length) on the transmission case at the positions shown in the illustration.
- (4) Install the bearing outer race.
- (5) Install the transmission case and tighten the bolts to the specified torque.

- (6) Remove the transmission case. If the solder is not crushed, repeat the steps (2) through (5) using the solder with larger diameter.

- (7) Measure the thickness of the crushed solder with a micrometer and select spacers that will provide the standard end play/preload value.

Standard value:

Input shaft end play	0 – 0.17 mm
Output shaft end play	0.13 – 0.18 mm
Center differential preload	0.05 – 0.11 mm

REASSEMBLY SERVICE POINTS

►A◄ INPUT SHAFT / OUTPUT SHAFT / CENTER DIFFERENTIAL INSTALLATION

Install the input shaft, output shaft and differential as a unit.

►B◄ 5TH-REVERSE SPEED SHIFT FORK / 5TH-REVERSE SPEED SHIFT RAIL / 3RD-4TH SPEED SHIFT FORK / 3RD-4TH SPEED SHIFT RAIL INSTALLATION

- (1) Install the 3rd-4th speed shift rails and fork, and 5th-reverse speed shift rail and fork.

- (2) Slide the shift rails into the shift rail holes in the clutch housing.

►C◄ SPRING PIN INSTALLATION

Install the spring pin with its slit directed as shown in the illustration.

►D◄ SPACER INSTALLATION

Install the spacer selected in the section "ADJUSTMENT BEFORE REASSEMBLY".

►E◄ TRANSMISSION CASE INSTALLATION

Apply sealant to the illustrated position of the transmission case.

Specified sealant: THREEBOND 1216

Caution

Squeeze out the sealant uniformly, while making sure that it is not broken or excessively applied.

►F◄ UNDER COVER INSTALLATION

Apply sealant to the illustrated position of the transmission case.

Specified sealant: THREEBOND 1216

Caution

Squeeze out the sealant uniformly, while making sure that it is not broken or excessively applied.

**►G◄ CONTROL HOUSING INSTALLATION**

Apply sealant to the illustrated position of the transmission case.

Specified sealant: THREEBOND 1216

Caution

Squeeze out the sealant uniformly, while making sure that it is not broken or excessively applied.

**►H◄ SPEEDOMETER GEAR INSTALLATION**

Apply transmission oil to the O-ring of the speedometer gear.

Transmission oil: DIA QUEEN MULTI-GEAR OIL 75W/85W

**►I◄ SELECT LEVER INSTALLATION**

Apply grease to the control shaft sliding portion of the select lever shoe.

Specified grease: MOLYWHITE TA No.1 or No.2

►J◄ O-RING INSTALLATION

Lubricate O-ring with transmission oil.

Transmission oil: DIA QUEEN MULTI-GEAR OIL 75W/85W

**INSPECTION****BACK-UP LAMP SWITCH**

Check for continuity between terminals.

Switch condition	Continuity
Pressed	Not exist
Released	Exists

INPUT SHAFT

DISASSEMBLY AND REASSEMBLY

Apply gear oil to all moving parts before installation.

TFM0716

**DISASSEMBLY SERVICE POINTS****◀A▶ BALL BEARING REMOVAL****◀B▶ THRUST PLATE STOPPER REMOVAL**

Using a screwdriver, pry up the position shown in the illustration and remove the thrust plate stopper.

**◀C▶ 5TH SPEED GEAR REMOVAL****◀D▶ 4TH SPEED GEAR SLEEVE REMOVAL**

Install the special tool to the 3rd speed gear and remove the 4th speed gear sleeve.

**◀E▶ BALL BEARING REMOVAL**

**REASSEMBLY SERVICE POINTS****►A◄ OIL SEAL INSTALLATION**

Make sure that the oil seal is pressed into the position shown in the illustration.

**►B◄ BALL BEARING INSTALLATION****►C◄ SNAP RING INSTALLATION**

Select and install a snap ring so that the input shaft front bearing end play will have the standard value.

Standard value: 0 – 0.12 mm

**►D◄ SYNCHRONIZER SPRING INSTALLATION**

Install the synchronizer spring securely to the illustrated position of the outer synchronizer ring.

**►E◄ 3RD-4TH SPEED SYNCHRONIZER HUB INSTALLATION**

Install the synchronizer hub in such a way that it will be oriented in the direction shown.

**Caution**

When the hub is installed, make sure that the synchronizer ring is not caught.

►F◄ SYNCHRONIZER SLEEVE INSTALLATION

- (1) Install the synchronizer sleeve in such a way that it will be oriented in the direction shown.

- (2) When the synchronizer sleeve is installed, make sure that the deep groove portion of the synchronizer hub is aligned with the projecting portion of the sleeve.

**►G◄ SYNCHRONIZER SPRING INSTALLATION****►H◄ 4TH SPEED GEAR SLEEVE INSTALLATION**

►I◄ 5TH SPEED GEAR INSTALLATION

►J◄ THRUST PLATE INSTALLATION

Select and install a thrust plate so that the input shaft 5th speed gear clearance will have the standard value.

Standard value: 0 – 0.09 mm

Caution

Install the plate with its identification stamped surface faced against the thrust plate stopper.

►K◄ THRUST PLATE STOPPER INSTALLATION

Install the thrust plate stopper by pressing the special tools with hand. Make sure that the stopper is not installed aslant.

►L◄ BALL BEARING INSTALLATION

►M◄ SNAP RING INSTALLATION

Select and install a snap ring so that the input shaft rear bearing clearance will have the standard value.

Standard value: 0 – 0.12 mm

**INSPECTION****INPUT SHAFT**

- (1) Check the outside diameter of the needle bearing mounting portion for damage, abnormal wear and seizure.
- (2) Check the splines for damage and wear.

NEEDLE ROLLER BEARING

- (1) Check to ensure that when the input shaft and gear are combined and made to rotate, they rotate smoothly without looseness and noise.
- (2) Check to ensure that the cage is not deformed.

**SYNCHRONIZER RING**

- (1) Check to ensure that the clutch gear tooth surfaces are not damaged and broken.
- (2) Check to ensure that the cone inside surface is not damaged or worn and that the threads are not crushed.

- (3) Press the synchronizer ring against the gear and check clearance "A". If "A" is less than the limit, replace.

Limit: 0.5 mm

**OUTER SYNCHRONIZER RING / INNER SYNCHRONIZER RING / SYNCHRONIZER CONE**

- (1) Check to ensure that the clutch gear tooth surface and cone surface are not damaged and broken.

- (2) Install the outer ring, inner ring and cone, press them against the gear, and check clearance "A". If "A" is less than the limit, replace.

Limit: 0.5 mm

Caution

When any of the outer ring, inner ring or cone has to be replaced, replace them as a set.

SYNCHRONIZER SLEEVE AND HUB

- (1) Check to ensure that when the synchronizer sleeve and hub are combined and made to slide, they slide smoothly without binding.
- (2) Check to ensure that the front and rear ends of the sleeve inside surface are not damaged.

Caution

When replacement of either the synchronizer sleeve or hub is necessary, make sure that the synchronizer sleeve and hub are replaced as a set.

SYNCHRONIZER SPRING

Check to ensure that the spring is not sagging, deformed or broken.

SPEED GEARS

- (1) Check to ensure that the helical and clutch gear tooth surfaces are not damaged or worn.
- (2) Check to ensure that the synchronizer cone surfaces are not roughened, damaged or worn.
- (3) Check to ensure that the gear inside diameter and front and rear surfaces are not damaged and worn.

OUTPUT SHAFT

DISASSEMBLY AND REASSEMBLY

Apply gear oil to all moving parts before installation.

DISASSEMBLY SERVICE POINTS

◀A▶ TAPER ROLLER BEARING REMOVAL

Use the special tool to remove the taper roller bearing.

**◀B▶ TAPER ROLLER BEARING REMOVAL**

Use the special tools to remove the taper roller bearing.

REASSEMBLY SERVICE POINTS**▶A◀ TAPER ROLLER BEARING INSTALLATION**

Use the special tool to install the taper roller bearing.

**▶B◀ TAPER ROLLER BEARING INSTALLATION**

Use the special tools to install the taper roller bearing.

**▶C◀ SPACER / SIDE GEAR / WASHER / PINION/PINION HOLDER / PINION SHAFT / LOCK PIN / FRONT OUTPUT SHAFT / SNAP RING / CENTER DIFFERENTIAL FLANGE INSTALLATION**

- (1) Install the side gear in the center differential case with the spacer attached.

NOTE

If a new side gear is to be installed, select a spacer with medium thickness (0.8 – 0.9 mm).

- (2) Fit the washer on the back of each pinion. Engage the 4 pinions simultaneously in the side gear. Rotate the gears to place them in position, then install the pinion shaft holder.
- (3) Insert the pinion shafts.
- (4) Install the lock pins in the illustrated direction.

- (5) Install the front output shaft to the side gear and fit the snap ring.
- (6) Attach the spacer on the other side gear, then install the side gear in the center differential case.

NOTE

If a new side gear is to be installed, select a spacer with medium thickness (0.8 – 0.9 mm).

- (7) Install the center differential flange on the case while aligning the mating marks, then secure it temporarily with machine screw.

- (8) Measure the backlash between the side gear and the pinion.

Standard value: 0.025 – 0.150 mm

- (9) If the measurement deviates from the standard value, correct the backlash using a spacer of different thickness and check it again.

NOTE

The backlash must be the same on both sides.

►D◄ CENTER DIFFERENTIAL DRIVE GEAR INSTALLATION

- (1) Apply sealant to the entire threaded portion of the bolt.

Specified sealant:

THREEBOND 1303 or LOKTITE 648

- (2) Tighten the bolts to the specified torque in the illustrated sequence.
